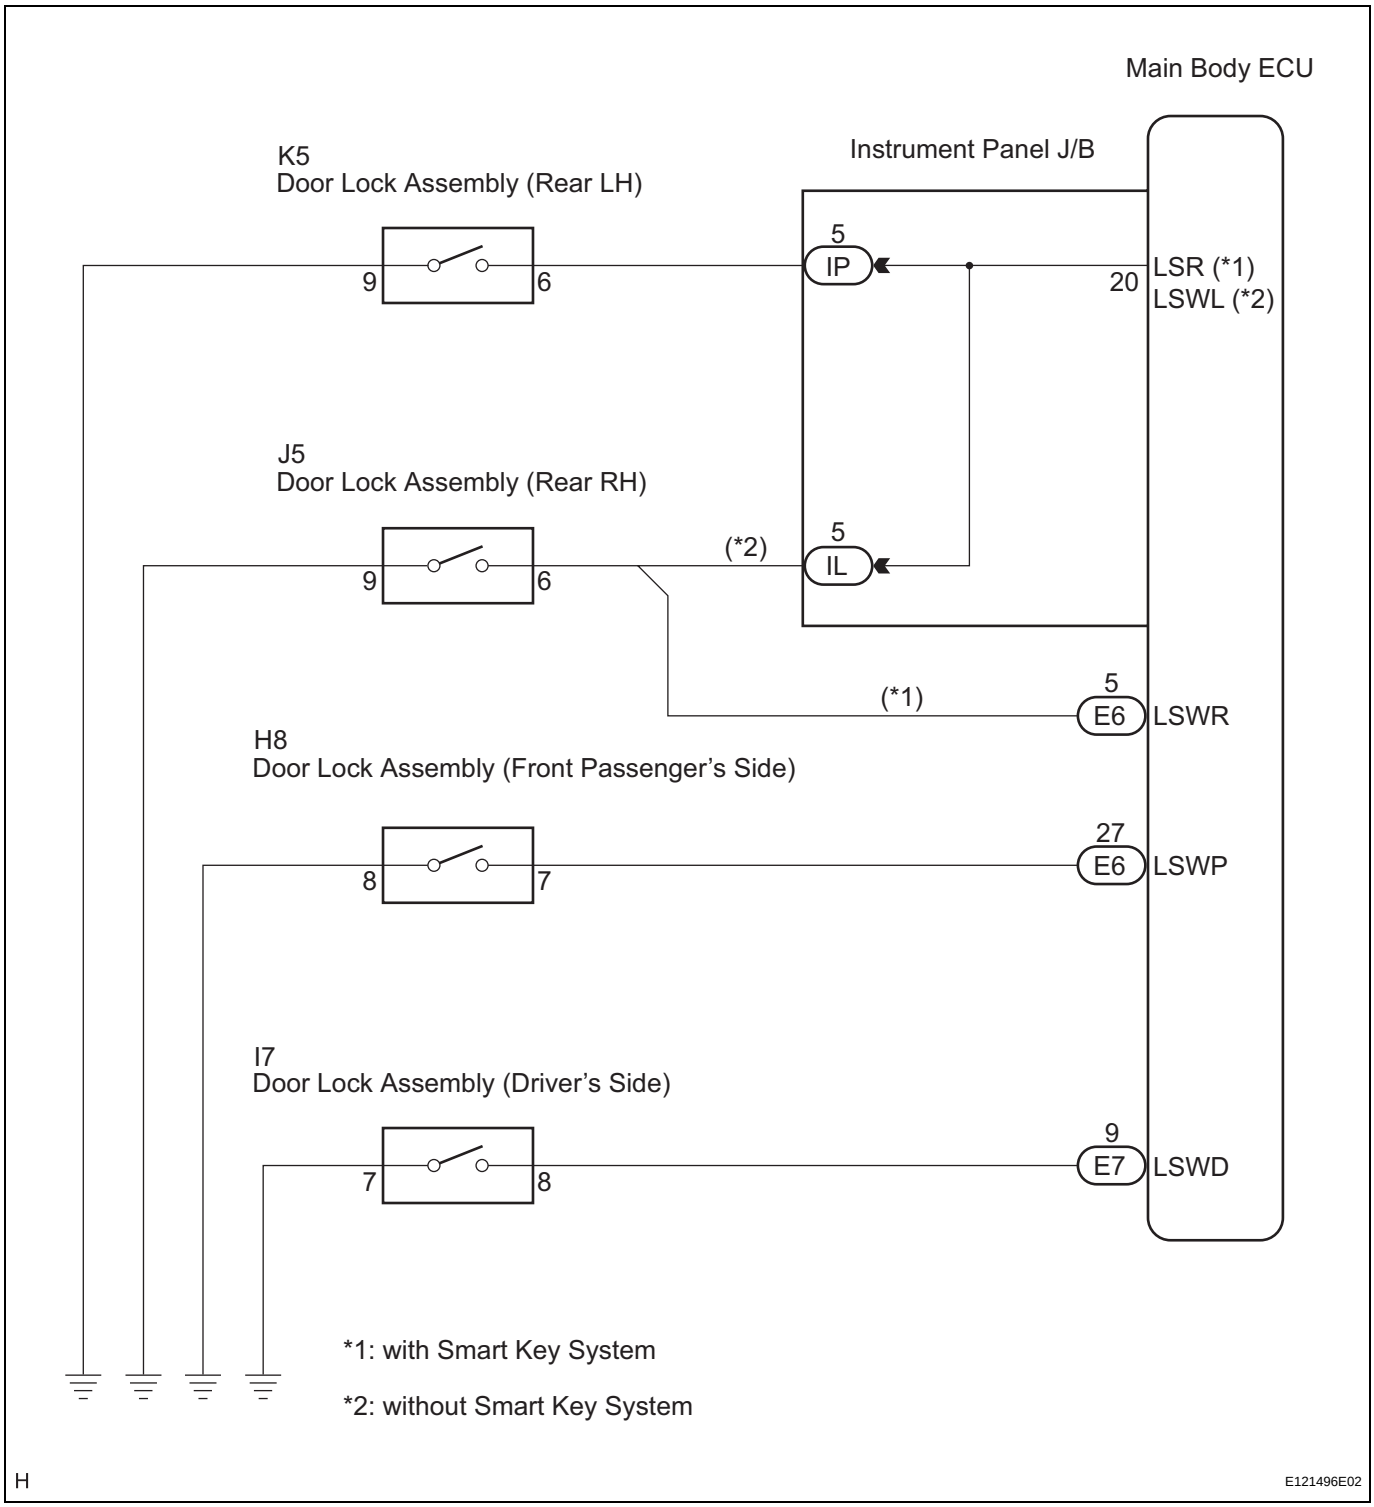
Door LOCK Position Circuit

DESCRIPTION

The main body ECU receives each door lock position switch signal to control the illuminated entry system.

WIRING DIAGRAM



LI

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P LOCK POS SW	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RR LOCK POS SW (with Smart Key System)	Rear right door lock position switch signal / ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL LOCK POS SW (with Smart Key System)	Rear left door lock position switch signal / ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-

OK:
Normal conditions listed above are displayed.

NG → **GO TO POWER DOOR LOCK CONTROL SYSTEM**

OK

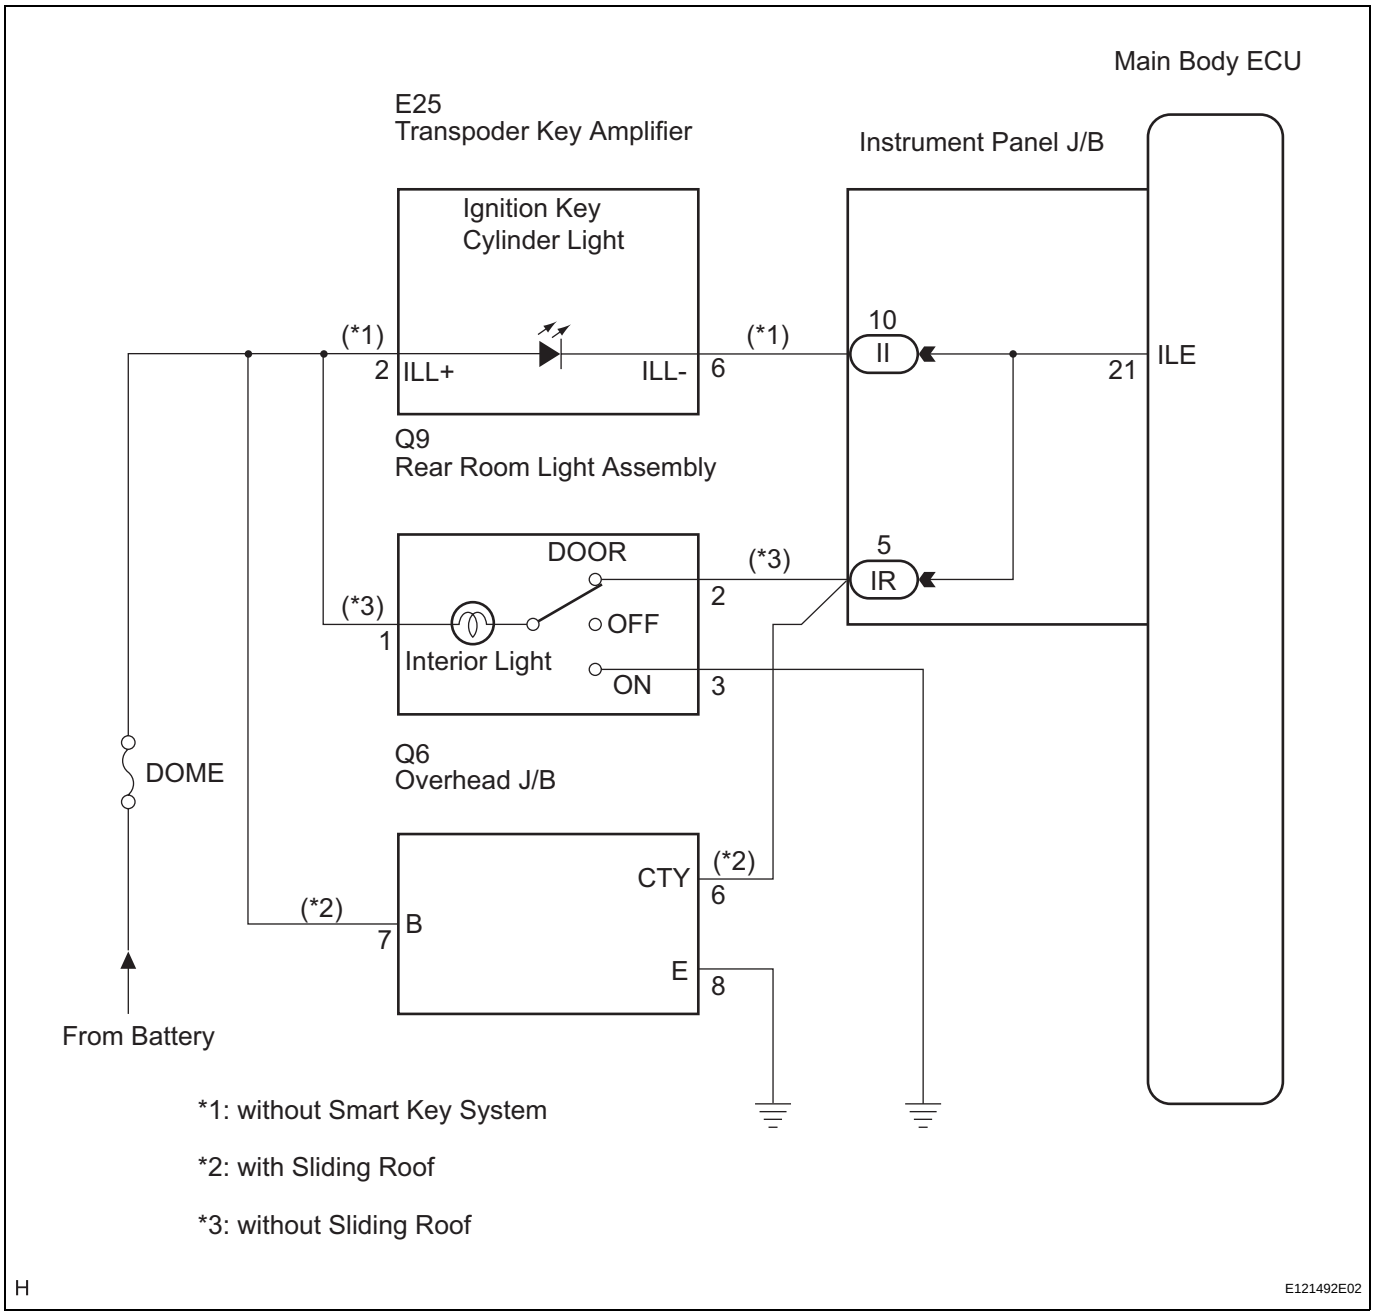
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Interior Light Circuit

DESCRIPTION

The main body ECU controls the illuminated entry system (interior light and ignition key cylinder light).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn intelligent tester main switch on.

(c) Select the item(s) below in the ACTIVE TEST, and check the operation.

MAIN BODY (MAIN BODY ECU):

Item	Test Details	Diagnostic Note
INTERIOR LAMP	Interior light and ignition key cylinder light ON / OFF (Interior light switch in DOOR position and all doors are closed).	-

OK:

Each light illuminates.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

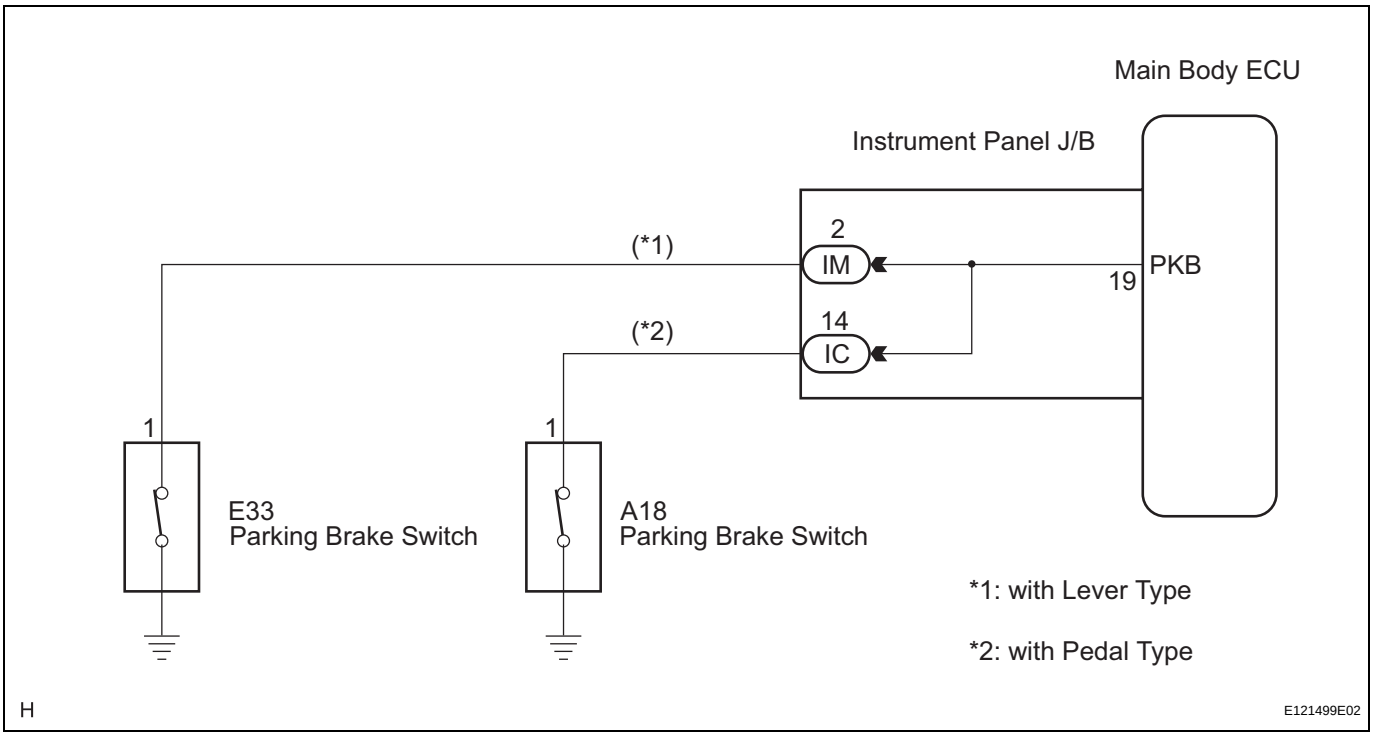
Parking Brake Switch Circuit

DESCRIPTION

The main body ECU receives a parking brake switch signal to control the daytime running light system.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch and turn the intelligent tester main switch on.
(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

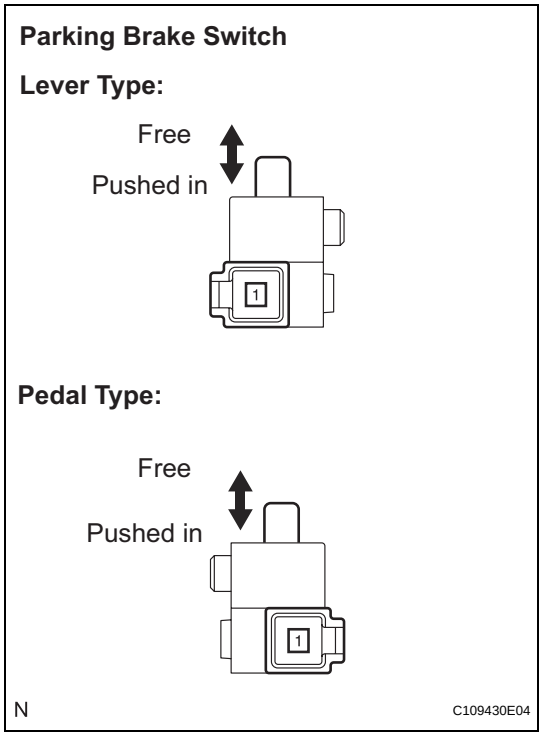
Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
PARKING BRAKE SW	Parking brake SW signal / ON or OFF	ON: Parking brake switch is ON OFF: Parking brake switch is OFF	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT PARKING BRAKE SWITCH ASSEMBLY



(a) Remove the parking brake switch assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	Shaft is pushed in	10 kΩ or higher
1 - Switch body	Shaft is not pushed in	Below 1 Ω

NG → **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK

3 CHECK VEHICLE CONDITION

(a) Check the vehicle condition.

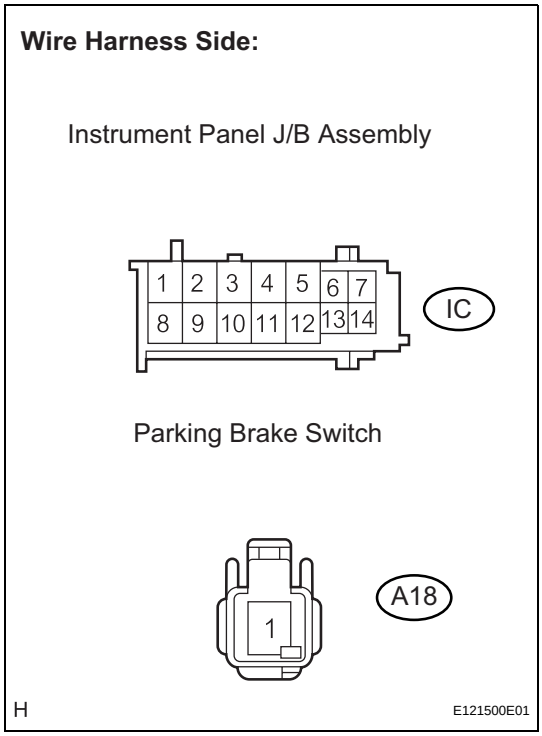
Result

Condition	Proceed to
with Pedal Type Parking Brake	A
with Lever Type Parking Brake	B

B → **Go to step 5**

A

4	CHECK HARNESS AND CONNECTOR (SWITCH - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Disconnect the IC instrument panel J/B assembly connector.
(b) Disconnect the A18 switch connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

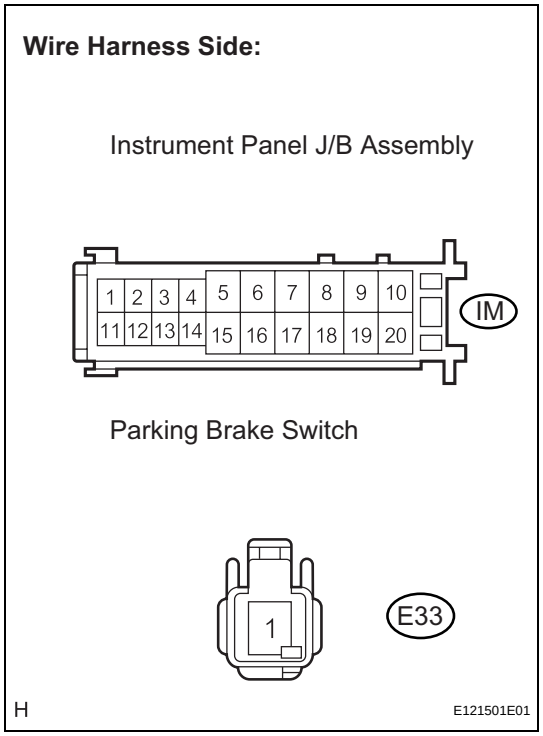
Tester Connection	Condition	Specified Condition
IC-14 - A18-1	Always	Below 1 Ω
IC-14 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

5	CHECK HARNESS AND CONNECTOR (SWITCH - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Disconnect the IM instrument panel J/B assembly connector.
(b) Disconnect the E33 switch connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IM-2 - E33-1	Always	Below 1 Ω
IM-2 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

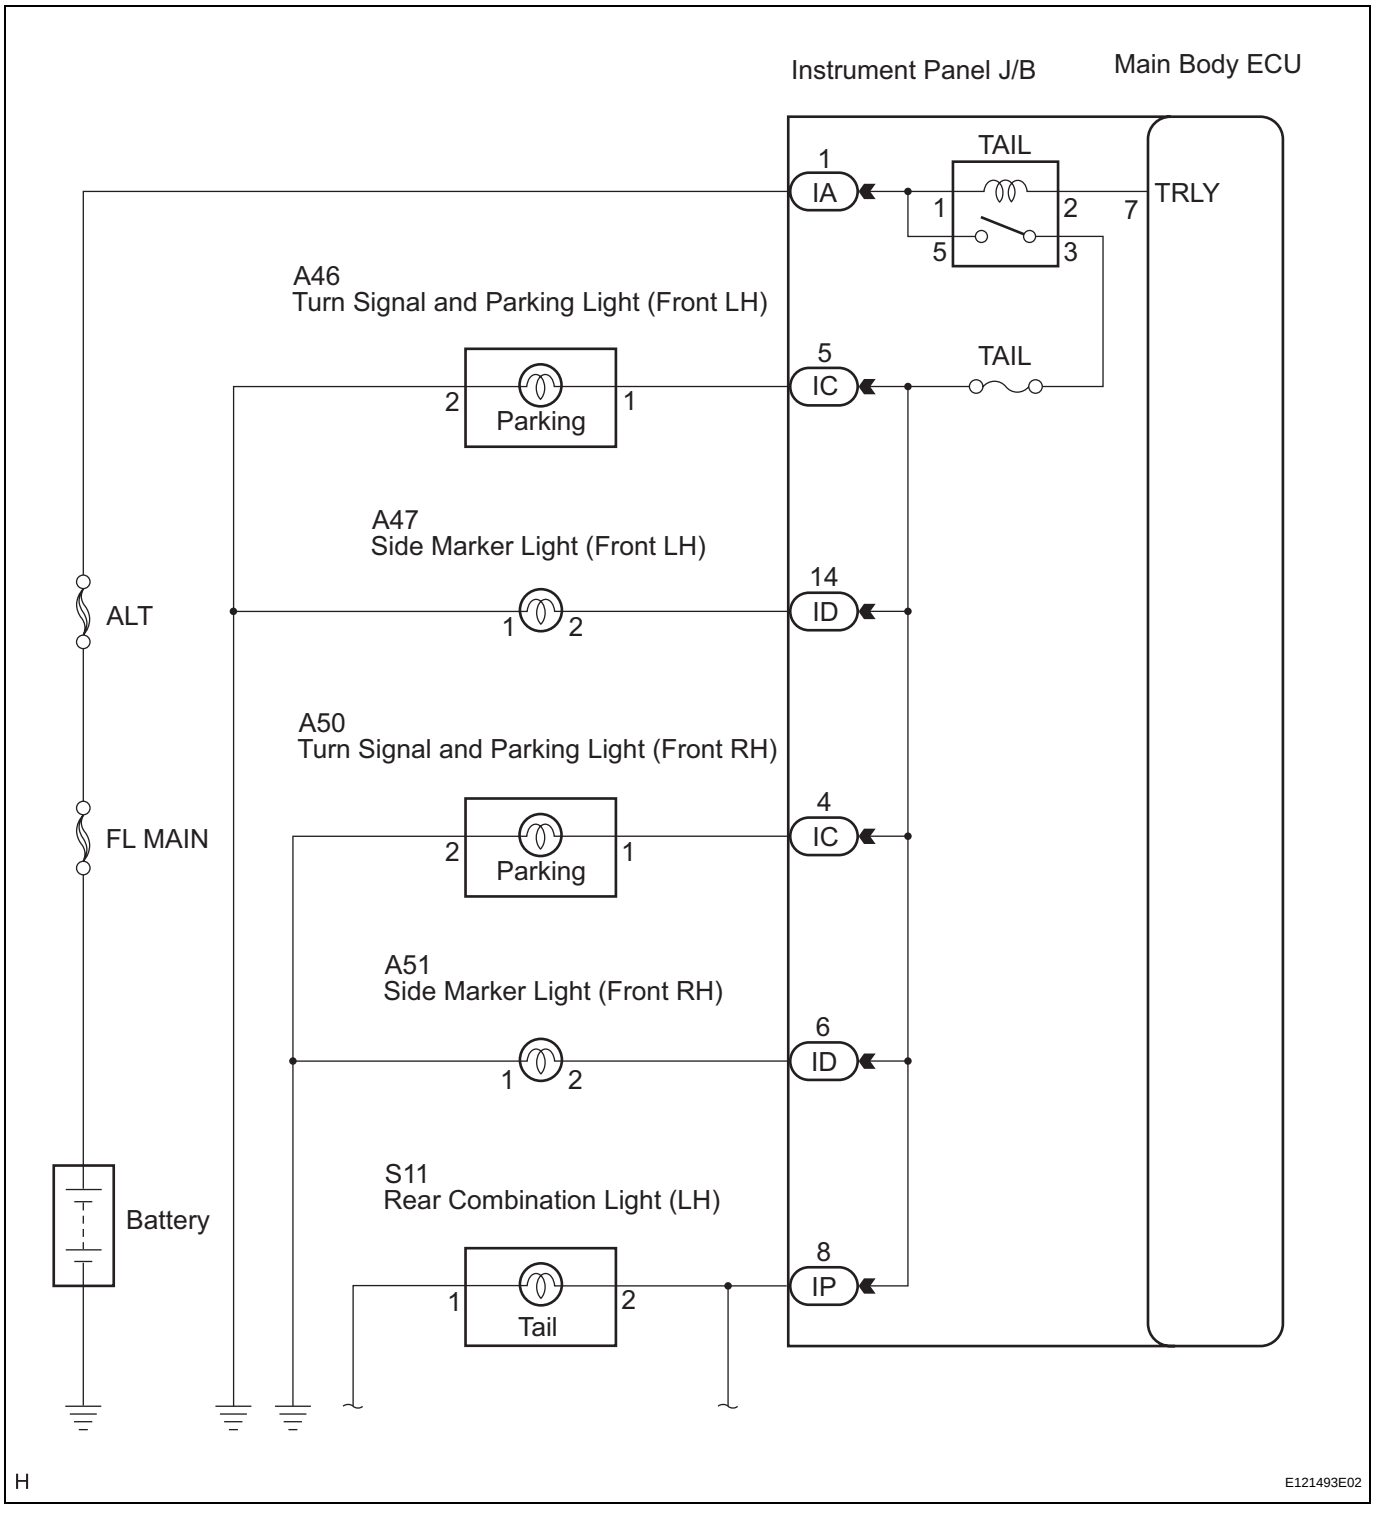
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

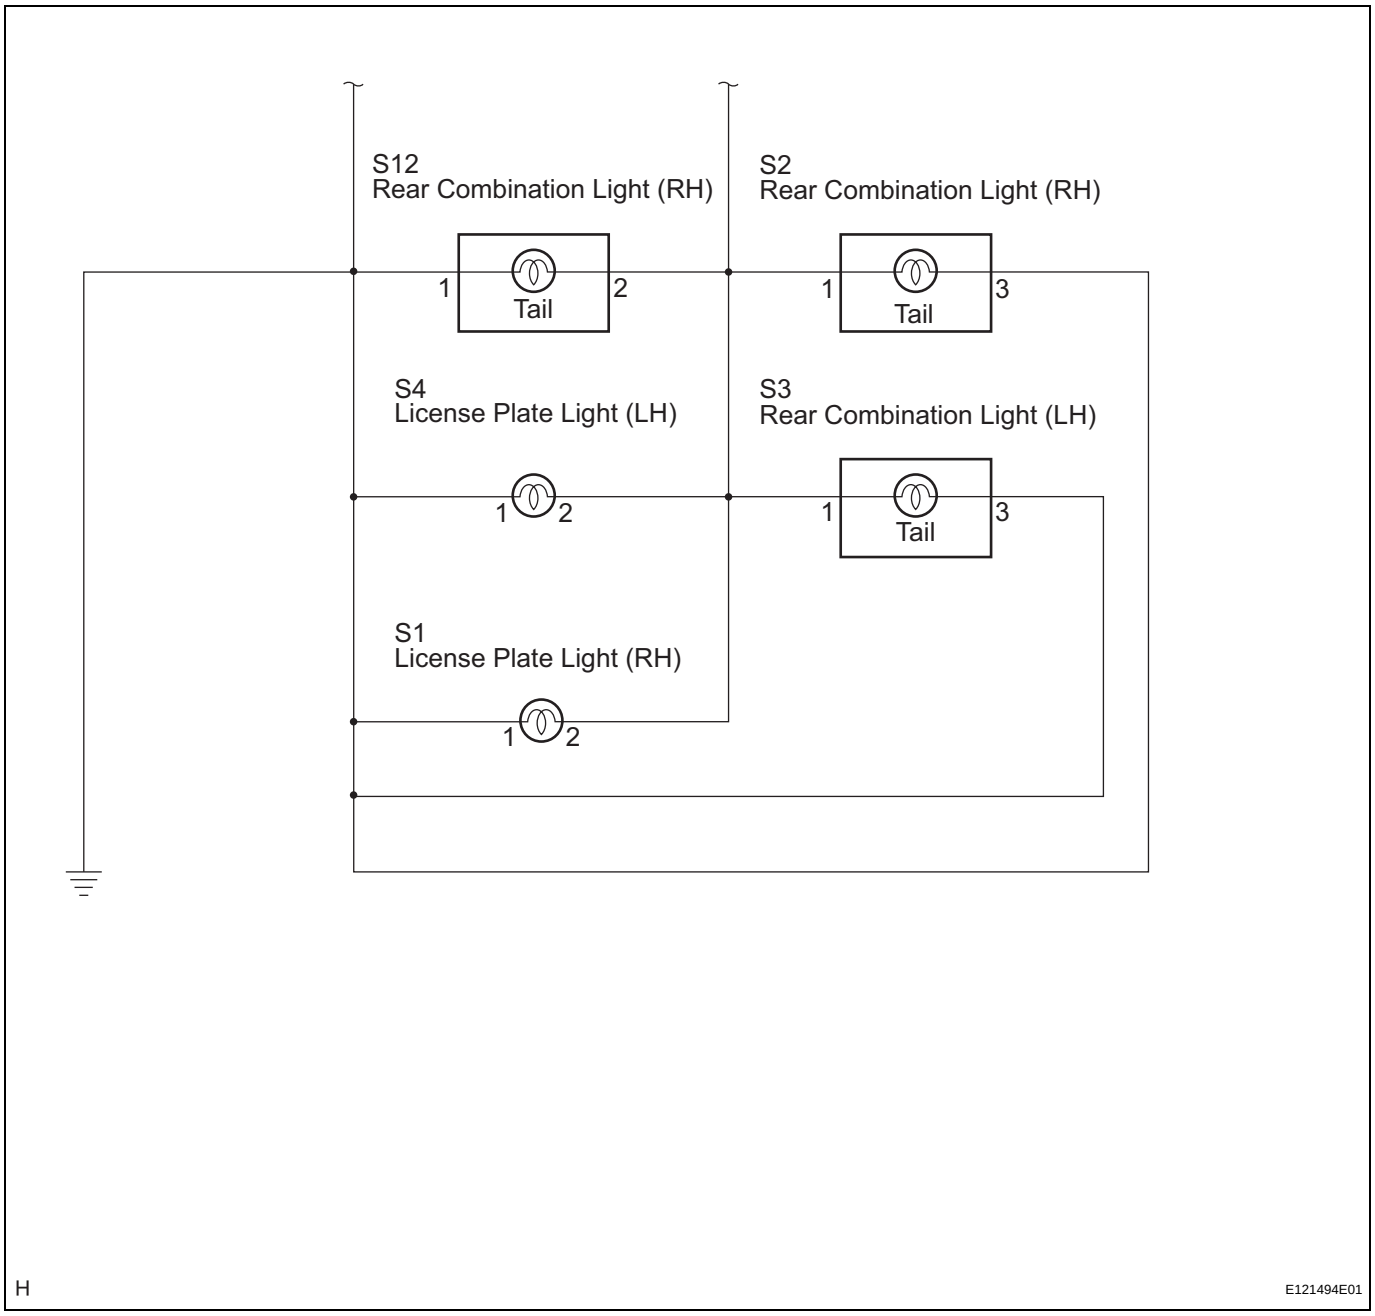
Taillight Relay Circuit

DESCRIPTION

The main body ECU receives a light control switch TAIL signal from the headlight dimmer switch assembly, and turns the taillight relay on.

WIRING DIAGRAM





INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

Item	Test Details	Diagnostic Note
TAIL LIGHT	Taillight relay ON / OFF	-

OK:
Taillight relay operates. (Taillights illuminate.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

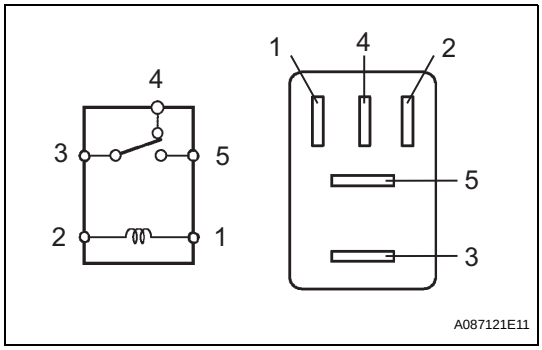
2 INSPECT FUSE (TAIL)

(a) Remove the TAIL fuse from the instrument panel J/B assembly.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 INSPECT TAILLIGHT RELAY



(a) Remove the taillight relay from the instrument panel J/B assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

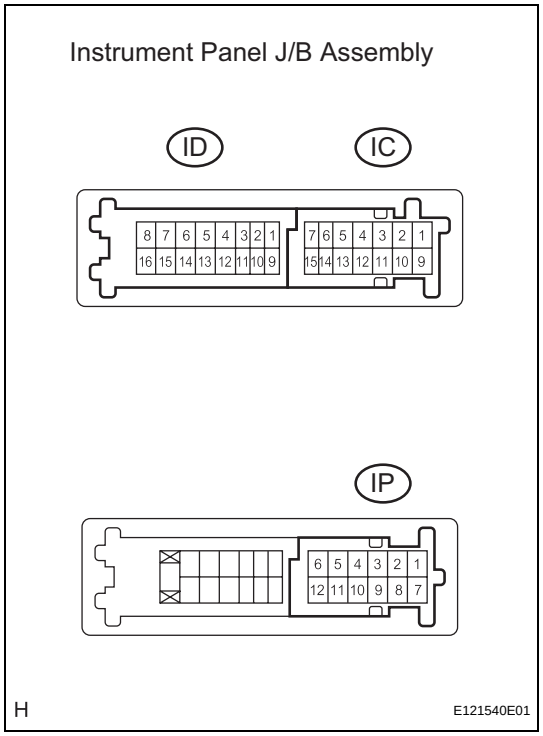
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)
3 - 4	Below 1 Ω
	10 kΩ or higher (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE TAILLIGHT RELAY**

LI

OK

4 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



(a) Measure the voltage according to the value(s) in the table below.

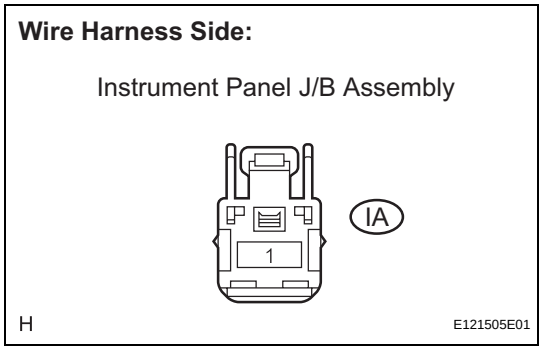
Standard voltage

Tester Connection	Condition	Specified Condition
IC-4 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
IC-5 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ID-6 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ID-14 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
IP-8 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)**

NG

5 CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)



(a) Disconnect the IA instrument panel J/B assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

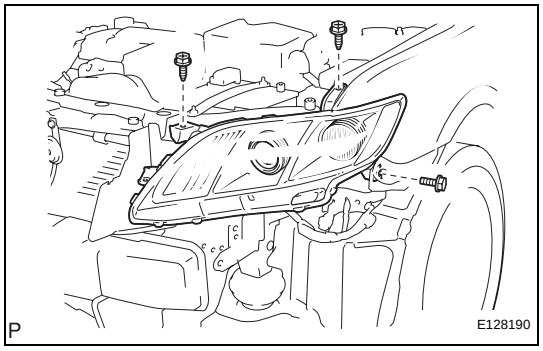
FRONT TURN SIGNAL LIGHT SOCKET
NO. 1 HEADLIGHT BULB
NO. 2 HEADLIGHT BULB
FRONT TURN SIGNAL LIGHT BULB
FRONT SIDE MARKER LIGHT BULB
FRONT SIDE MARKER LIGHT SOCKET
HEADLIGHT UNIT
P
E128161E01

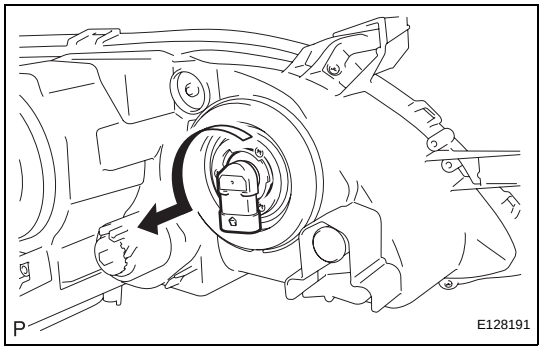
REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-5)**
3. **REMOVE FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-6)**
4. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the bolt and 2 screws.
   (b) Disconnect the connectors and remove the headlight assembly.

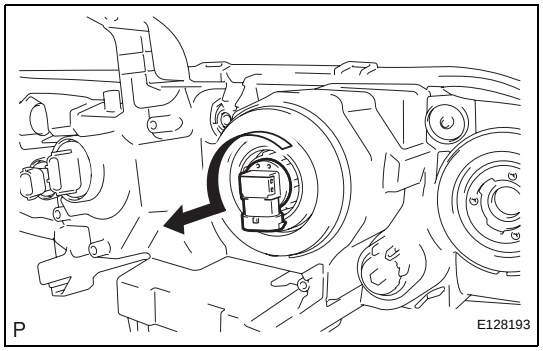


DISASSEMBLY

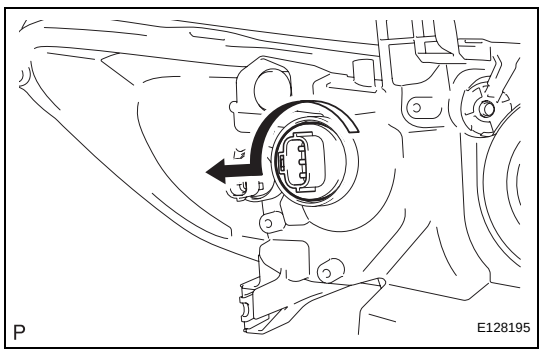
1. **REMOVE NO. 2 HEADLIGHT BULB**
   (a) Remove the No. 2 headlight bulb as shown in the illustration.



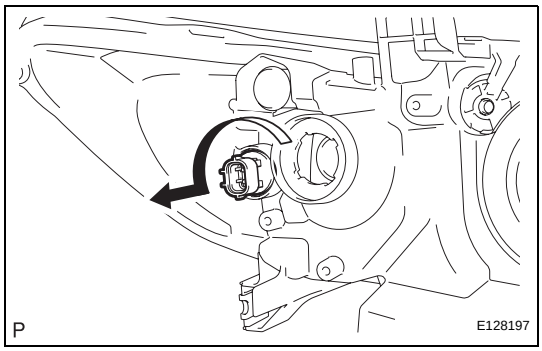
2. **REMOVE NO. 1 HEADLIGHT BULB**
   (a) Remove the No. 1 headlight bulb as shown in the illustration.



3. **REMOVE FRONT TURN SIGNAL LIGHT BULB**
   (a) Turn the front turn signal light bulb and the front turn signal light socket in the direction indicated by the arrow and remove them as a unit.
   (b) Remove the front turn signal light bulb from the front turn signal light socket.



LI



4. REMOVE FRONT SIDE MARKER LIGHT BULB

(a) Turn the front side marker light bulb and the front side marker light socket in the direction indicated by the arrow and remove them as a unit.

(b) Remove the front side marker light bulb from the front side marker light socket.

ADJUSTMENT

HINT:
It is possible that a bulb is incorrectly installed, affecting headlight aim. Bulb installation should be considered prior to performing the adjustment procedure.

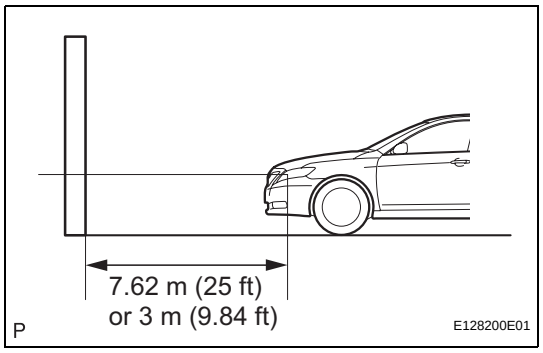
1. VEHICLE PREPARATION FOR HEADLIGHT AIM ADJUSTMENT

(a) Prepare the vehicle according to the following conditions:
- Ensure there is no damage or deformation to the body around the headlights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools, and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.

2. PREPARATION FOR HEADLIGHT AIMING (Using a headlight aim test machine)

(a) Adjust the headlight aim in accordance with the headlight aim test machine instructions.

3. PREPARATION FOR HEADLIGHT AIMING (for Using a Screen)



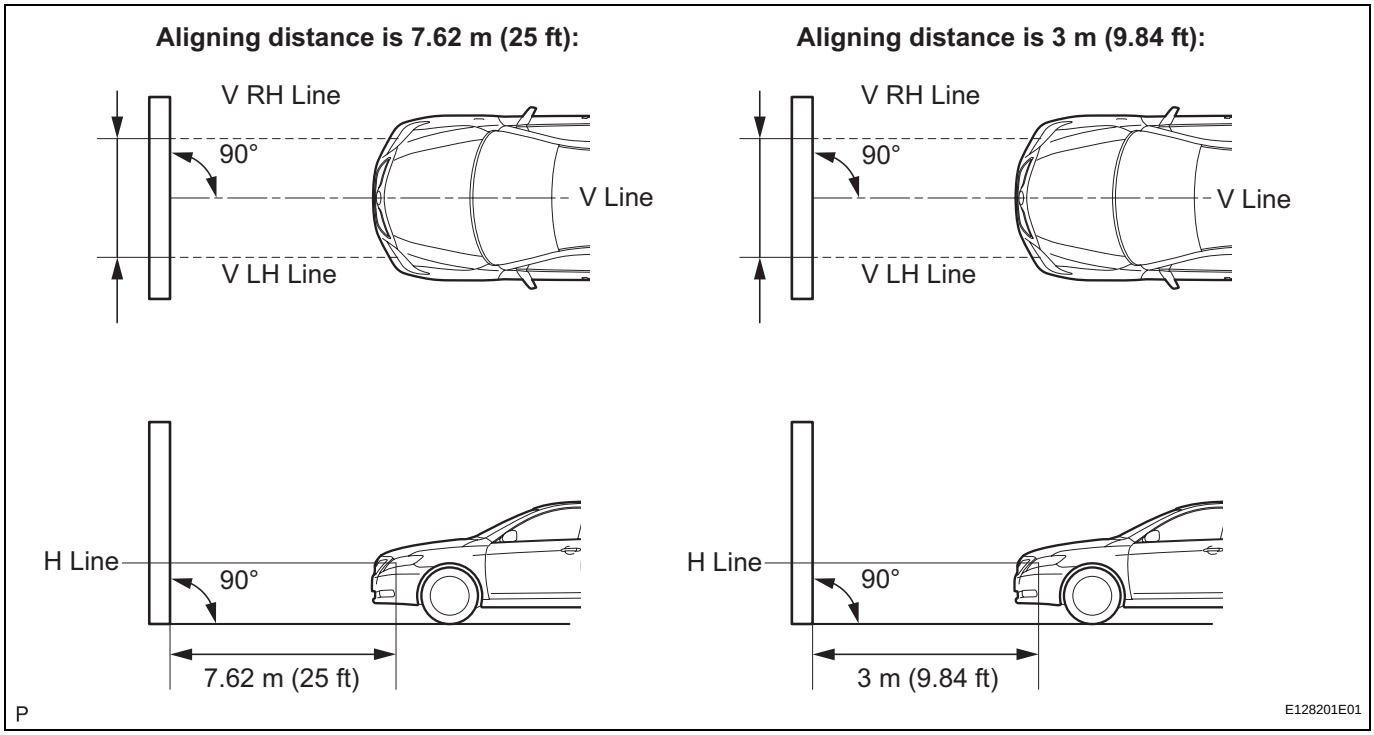
(a) Prepare the vehicle:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft) distance between the vehicle (headlight bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Bounce the vehicle up and down to settle the suspension.

NOTICE:
A distance of 7.62 m (25 ft) between the vehicle (headlight bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft) to allow for checking and adjustment of headlight aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) (height) x 4 m (13.1 ft) (width)) to use as a screen.

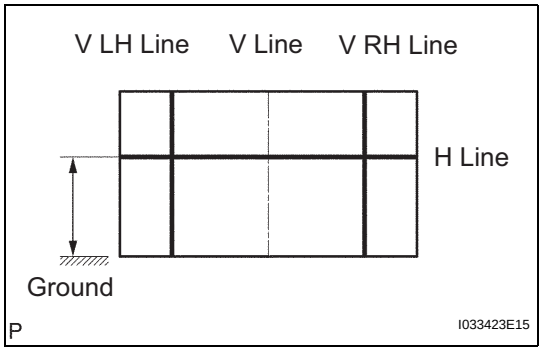
(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.



HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

- The base lines differ for "low-beam inspection" and "high-beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

(1) H Line (Headlight height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low-beam headlights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) headlights):
Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low-beam headlight bulbs).

4. HEADLIGHT AIMING INSPECTION

(a) Cover the headlight or disconnect the connector of the headlight on the opposite side to prevent light from the headlight that is not being inspected from affecting the headlight aiming inspection.

NOTICE:

Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

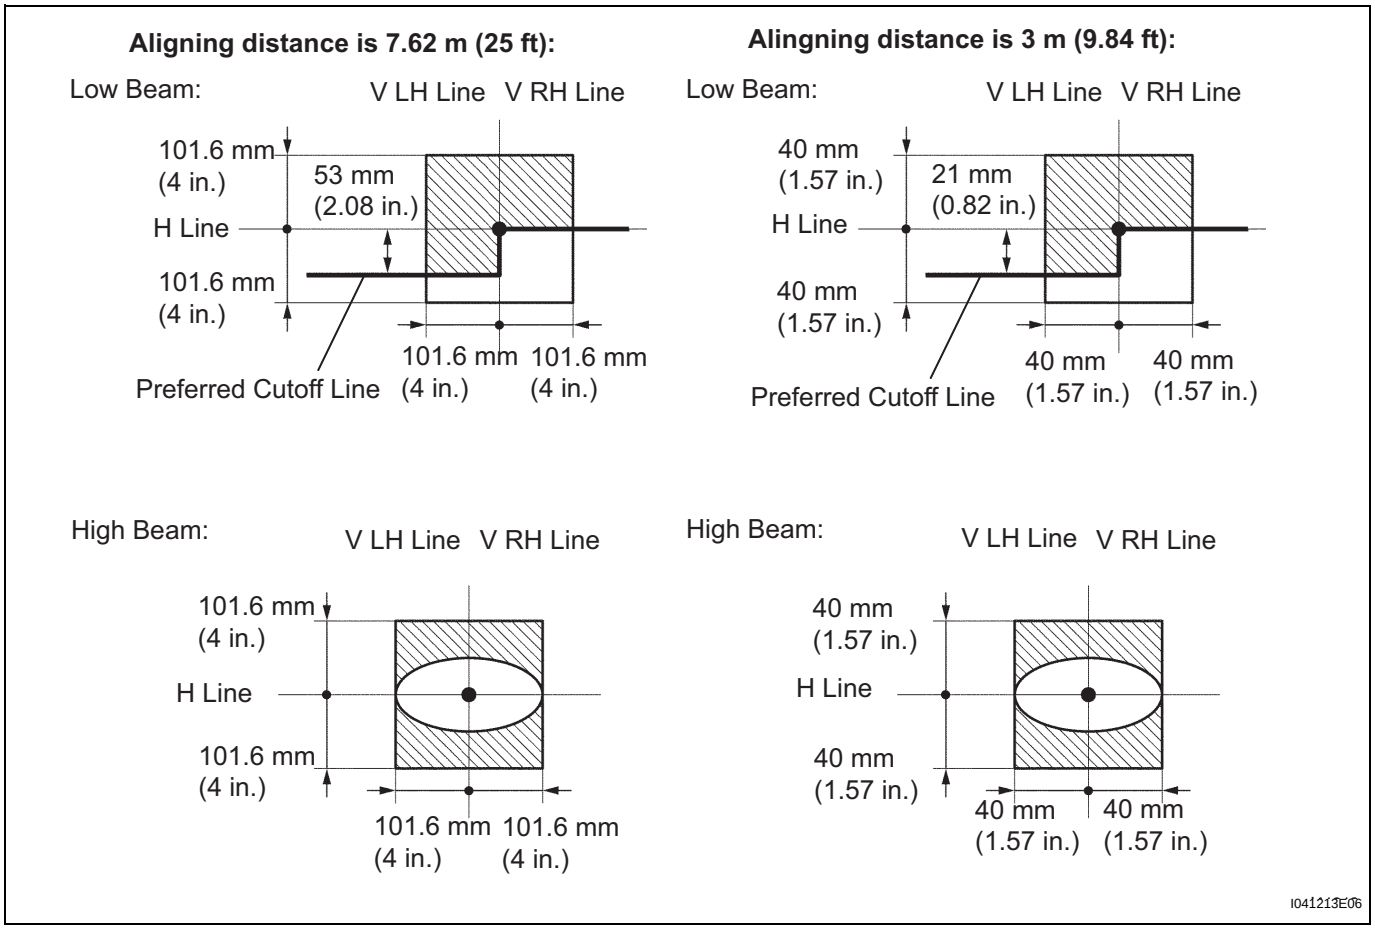
HINT:

When checking the aim of the high-beam, cover the low-beam or disconnect the connector.

(b) Start the engine.

(c) Replacement text:

Turn on the headlight and check if the cutoff line matches the preferred cutoff line in the following illustration.

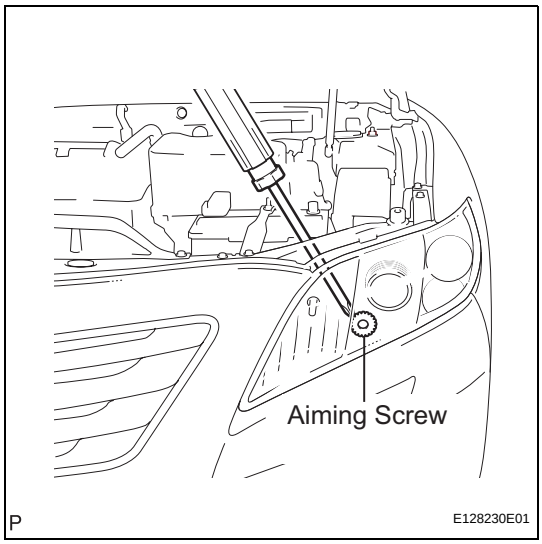


HINT:

- Since the low-beam light and the high-beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. However, check both beams just to make sure.

LI

- If the alignment distance is 7.62 m (25 ft):
  The cutoff line should be within 101.6 mm (4 in.) above or below the H line as well as 101.6 mm (4 in.) left or right of the V line with low-beam (SAE J599).
- If the alignment distance is 3 m (9.84 ft):
  The low beam cutoff line should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).
- If the alignment distance is 7.62 m (25 ft):
  The high beam center of intensity should be within 101.6 mm (4 in.) above or below the H line as well as 101.6 mm (4 in.) left or right of the V line (SAE J599).
- If the alignment distance is 3 m (9.84 ft):
  The high beam center of intensity should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).
- If the alignment distance is 7.62 m (25 ft):
  The low beam cutoff line should be 53 mm (2.08 in.) below the H line (preferred cutoff line target).
- If the alignment distance is 3 m (9.84 ft):
  The low beam cutoff line should be 21 mm (0.82 in.) below the H line (preferred cutoff line target).



5. HEADLIGHT AIMING ADJUSTMENT

(a) Adjust the aim vertically:
Adjust the headlight aim into the specified range by turning aiming screw with a screwdriver.

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

HINT:

- The low-beam light and the high-beam light are a unit. Adjusting the aim on the low-beam to the correct position should also result in the high-beam adjustment being correct.
- If it is not possible to correctly adjust headlight aim, check bulb, headlight unit, and headlight unit reflector installation.
- The headlight aim moves up when turning the aiming screw clockwise, and moves down when turning the aiming screw counterclockwise.

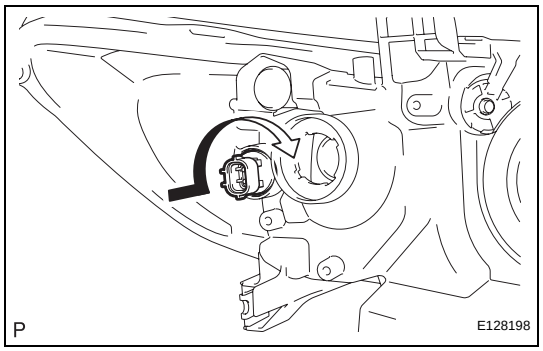
LI

REASSEMBLY

1. INSTALL FRONT SIDE MARKER LIGHT BULB

(a) Install the front side marker light bulb to the front side marker light socket.

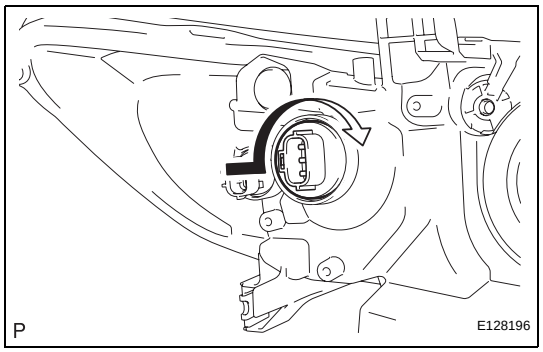
(b) Turn the front side marker light bulb and front side marker light socket in the direction indicated by the arrow and install them as a unit.



2. INSTALL FRONT TURN SIGNAL LIGHT BULB

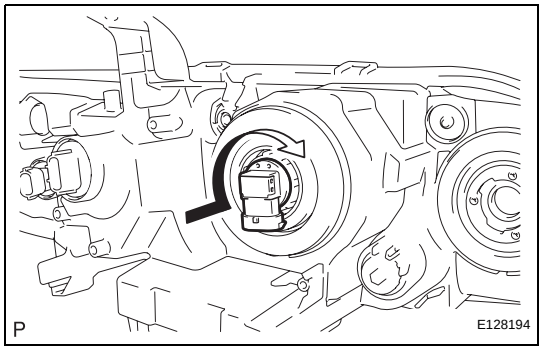
(a) Install the front turn signal light bulb to the front turn signal light socket.

(b) Turn the front turn signal light bulb and front turn signal light socket in the direction indicated by the arrow and install them as a unit.



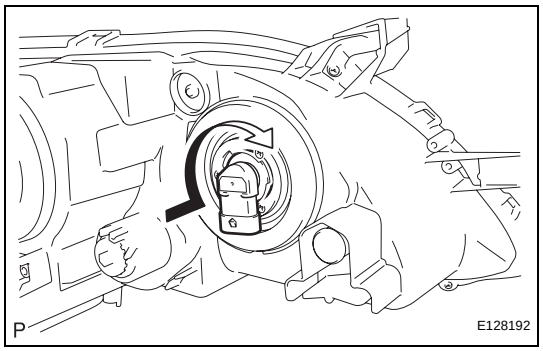
3. INSTALL NO. 1 HEADLIGHT BULB

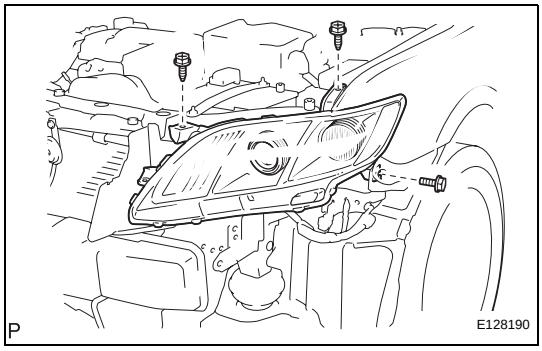
(a) Install the No. 1 headlight bulb as shown in the illustration.



4. INSTALL NO. 2 HEADLIGHT BULB

(a) Install the No. 2 headlight bulb as shown in the illustration.



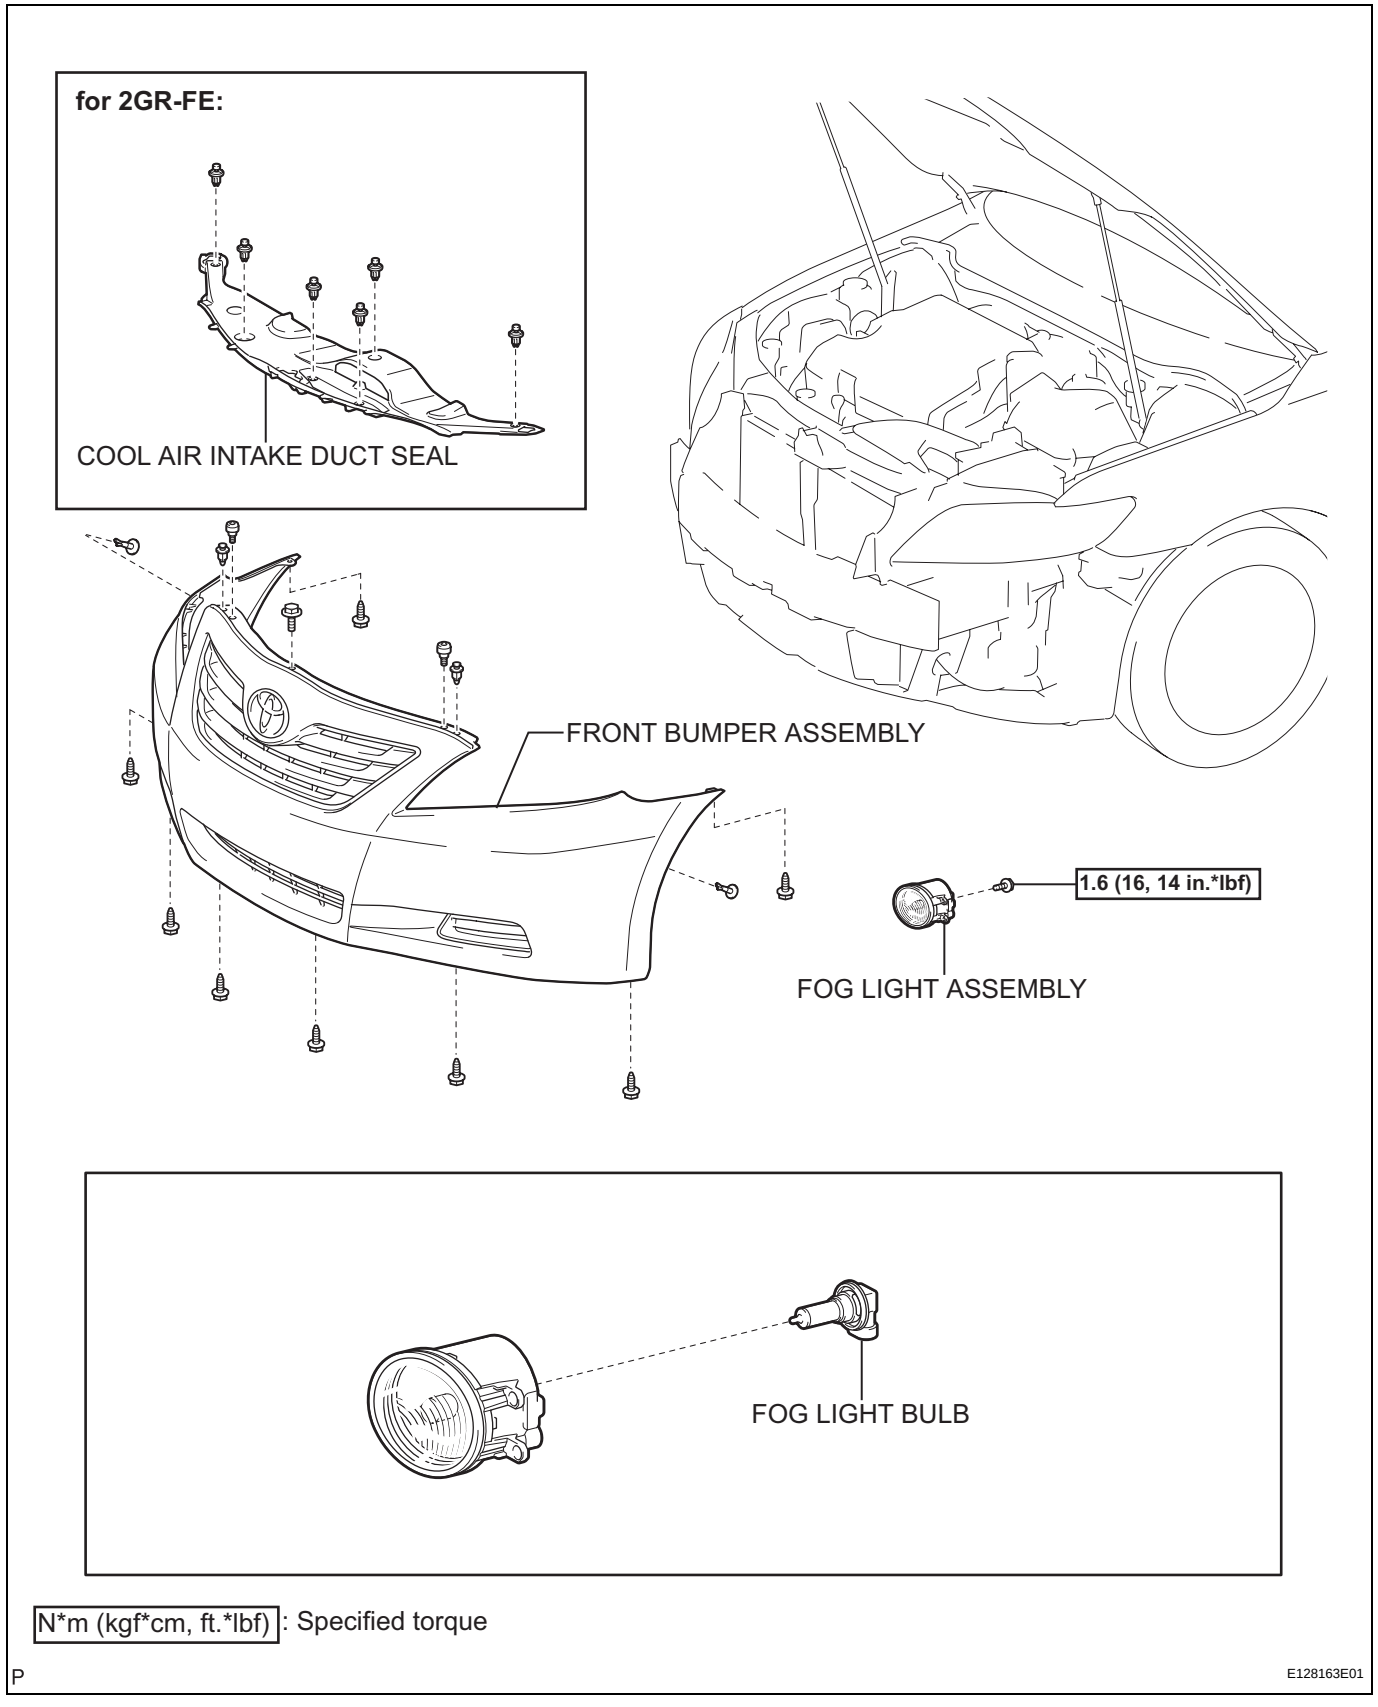


INSTALLATION

1. **INSTALL HEADLIGHT ASSEMBLY**
   (a) Connect the connectors.
   (b) Install the headlight assembly with the bolt and 2 screws.
   Torque: 3.6 N*m (37 kgf*cm, 32 in.*lbf)
2. **INSTALL FRONT BUMPER ASSEMBLY (w/o Fog Light) (See page ET-13)**
3. **INSTALL FRONT BUMPER ASSEMBLY (w/ Fog Light) (See page ET-14)**
4. **INSTALL COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-14)**
5. **VEHICLE PREPARATION FOR HEADLIGHT AIM ADJUSTMENT (See page LI-71)**
6. **PREPARATION FOR HEADLIGHT AIMING (Using a tester) (See page LI-72)**
7. **PREPARATION FOR HEADLIGHT AIMING (Using a screen) (See page LI-72)**
8. **HEADLIGHT AIMING INSPECTION (See page LI-74)**
9. **HEADLIGHT AIMING ADJUSTMENT (See page LI-75)**
10. **VEHICLE PREPARATION FOR FOG LIGHT AIM (w/ Fog Light) (See page LI-79)**
11. **PREPARATION FOR FOG LIGHT AIMING (w/ Fog Light) (See page LI-80)**
12. **FOG LIGHT AIMING INSPECTION (w/ Fog Light) (See page LI-81)**
13. **FOG LIGHT AIMING ADJUSTMENT (w/ Fog Light) (See page LI-82)**

FOG LIGHT ASSEMBLY

COMPONENTS



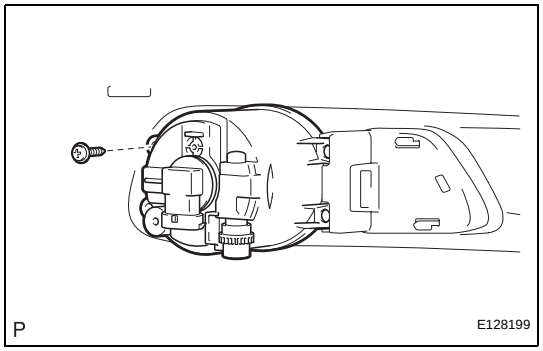
N*m (kgf*cm, ft.*lbf): Specified torque

P

E128163E01

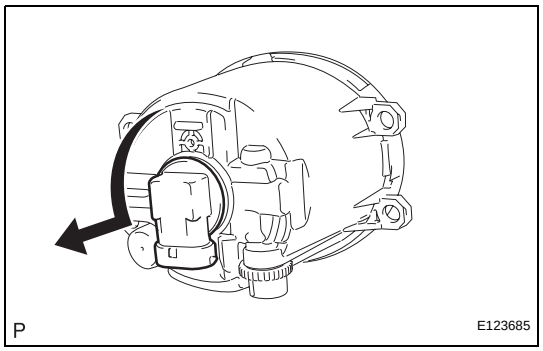
REMOVAL

1. **REMOVE COOL AIR INTAKE DUCT SEAL (for 2GR-FE) (See page ET-4)**
2. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-6)**
3. **REMOVE FOG LIGHT ASSEMBLY**
   (a) Remove the screw and the fog light assembly.



DISASSEMBLY

1. **REMOVE FOG LIGHT BULB**
   (a) Remove the fog light bulb as shown in the illustration.

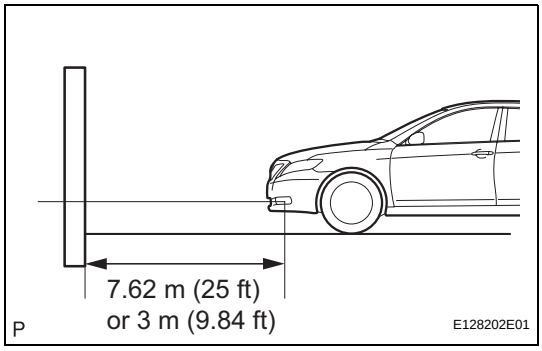


ADJUSTMENT

HINT:
It is possible that a bulb is incorrectly installed, affecting fog light aim. Bulb installation should be considered prior to performing the adjustment procedure.

1. VEHICLE PREPARATION FOR FOG LIGHT AIM

(a) Prepare the vehicle according to the following conditions:
- Ensure there is no damage or deformation to the body around the fog lights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools, and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.
- Vehicles with height adjustable suspension should set the vehicle height to the lowest setting prior to adjusting the fog light aim.



2. PREPARATION FOR FOG LIGHT AIMING

(a) Prepare the vehicle:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the fog lights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft) distance between the vehicle (fog light bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Bounce the vehicle up and down to settle the suspension.

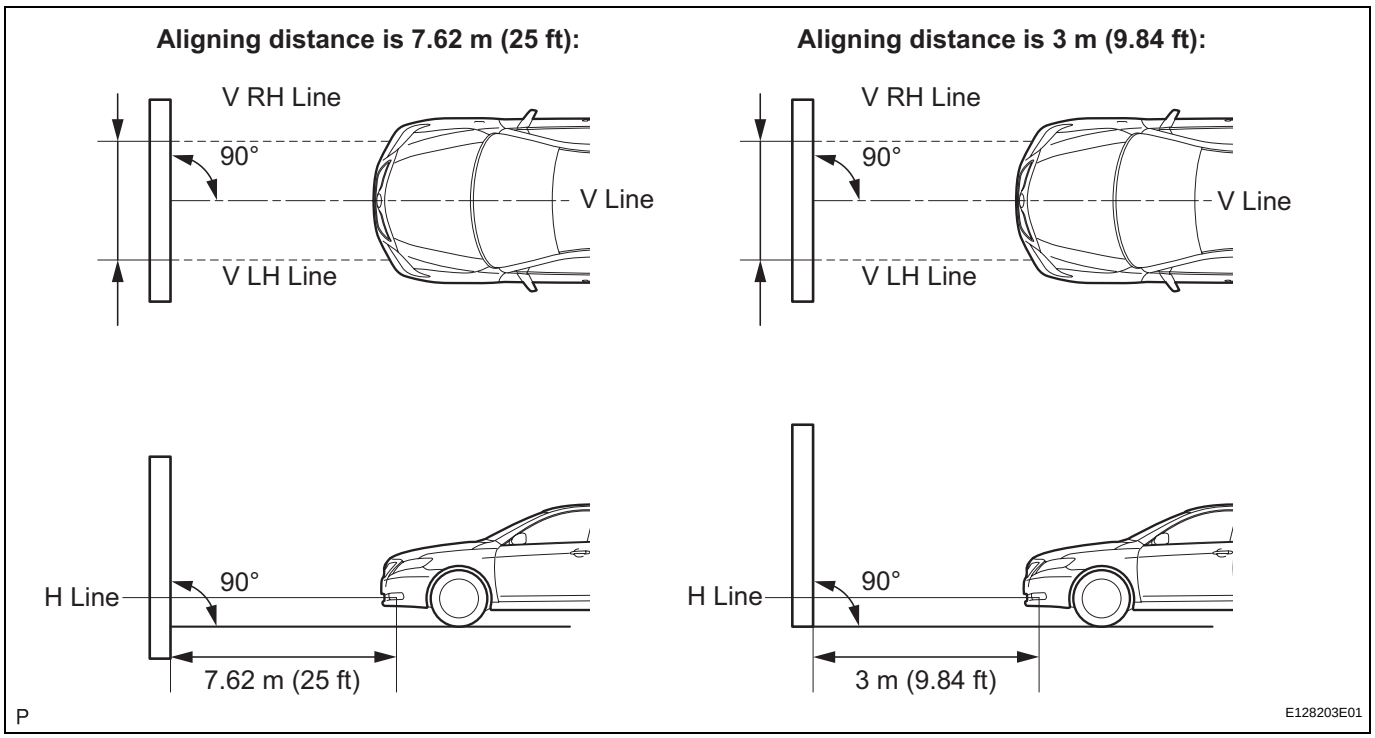
  NOTICE:
  A distance of 7.62 m (25 ft) between the vehicle (fog light bulb center) and the wall is necessary for proper aim adjustment. If unavailable, secure a distance of exactly 3 m (9.84 ft) for check and adjustment. (The target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) (height) x 4 m (13.1 ft) (width)) to use as a screen.

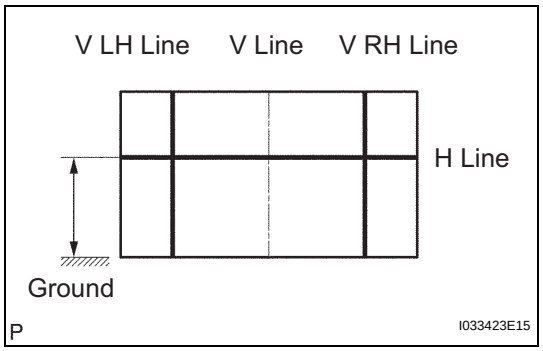
(c) Draw a vertical line down the center of the screen (V line).

LI

(d) Set the screen as shown in the illustration.



HINT:
- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



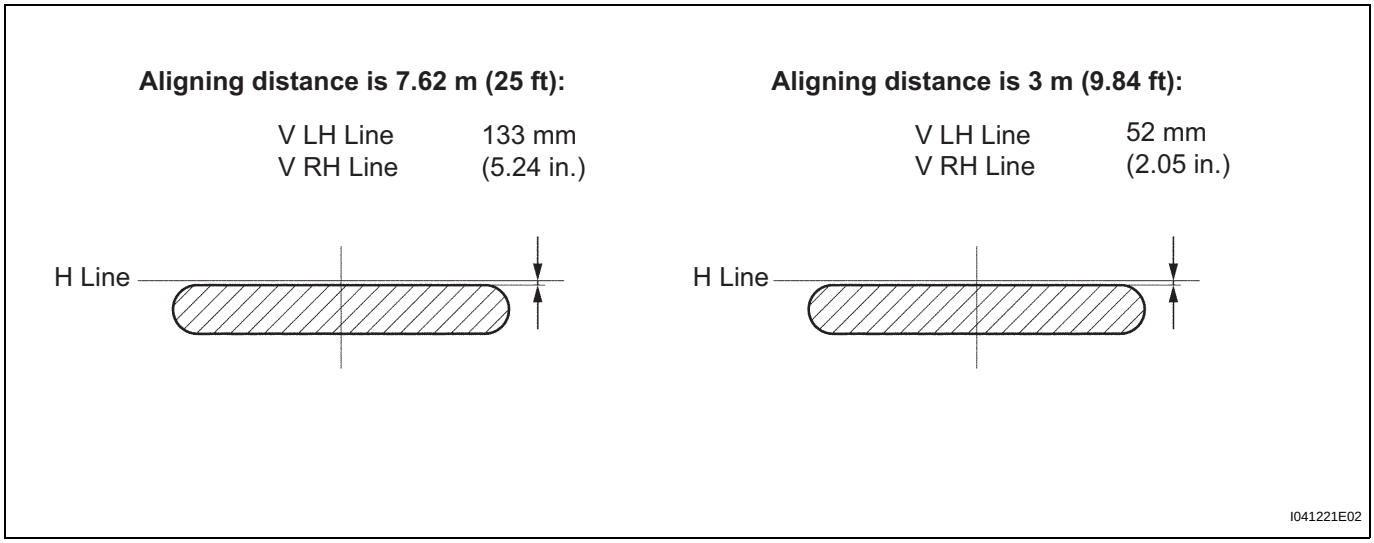
(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.
HINT:
Mark the fog light bulb center marks on the screen. If the center mark cannot be observed on the fog light, use the center of the fog light bulb or the manufacturer's name marked on the fog light as the center mark.
   (1) H Line (Fog light height):
   Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the fog light bulb center marks of the low-beam fog lights.
   (2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) fog lights):
   Draw two vertical lines so that they intersect the H line at each center mark.

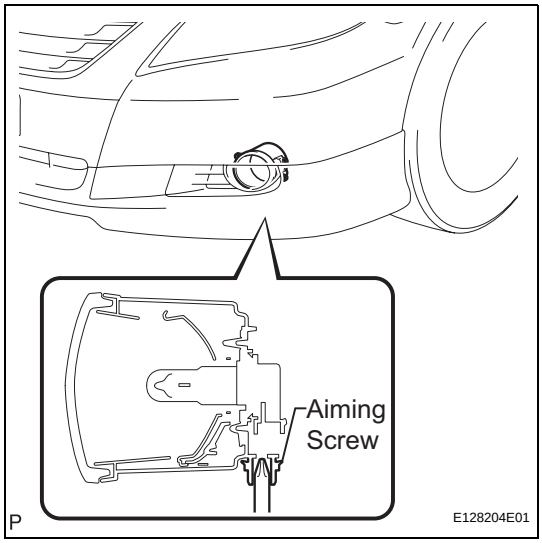
3. FOG LIGHT AIMING INSPECTION

(a) Cover the fog light or disconnect the connector of the fog light on the opposite side to prevent light from the fog light that is not being inspected from affecting the fog light aiming inspection.
NOTICE:
Do not keep the fog light covered for more than 3 minutes. The fog light lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

LI

(b) Start the engine.
(c) Turn on the fog light and check if the cut off line falls within the specified area in the following illustration.

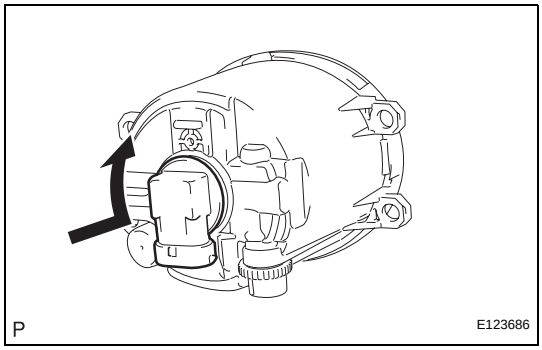




4. FOG LIGHT AIMING ADJUSTMENT

(a) Adjust the aim vertically:
Adjust the aim of each fog light to the specified range by turning each aiming screw with a screwdriver.
NOTICE:
The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.
HINT:
If it is not possible to correctly adjust fog light aim, check bulb, fog light unit, and fog light unit reflector installation.

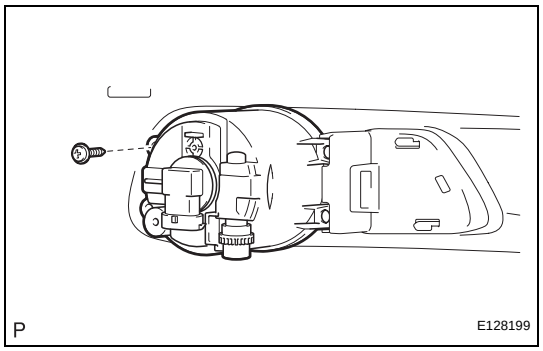
REASSEMBLY



1. INSTALL FOG LIGHT BULB

(a) Install the fog light bulb as shown in the illustration.

LI



INSTALLATION

1. **INSTALL FOG LIGHT ASSEMBLY**
   (a) Install the fog light assembly with the screw.

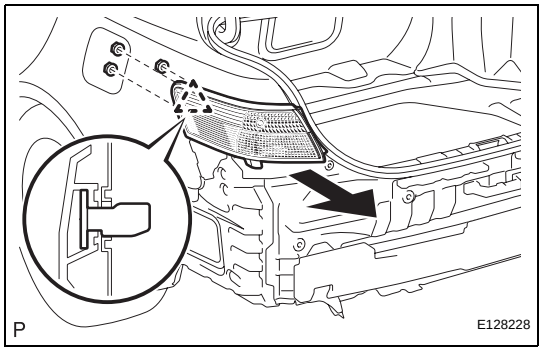
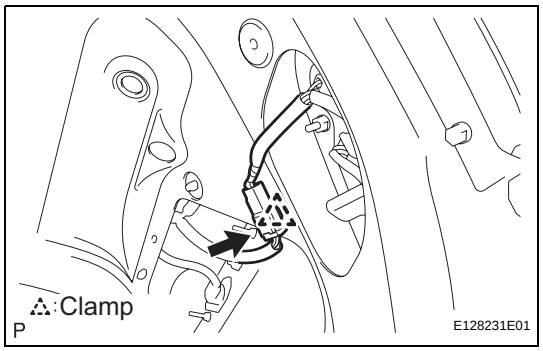
10. **REMOVE REAR COMBINATION LIGHT ASSEMBLY**
    (a) Disconnect the 2 connectors and clamp.

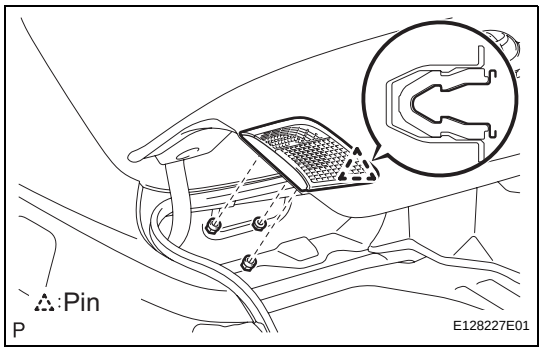
    (b) Remove the 3 nuts.
    (c) Disengage the clip and remove the rear combination light assembly.



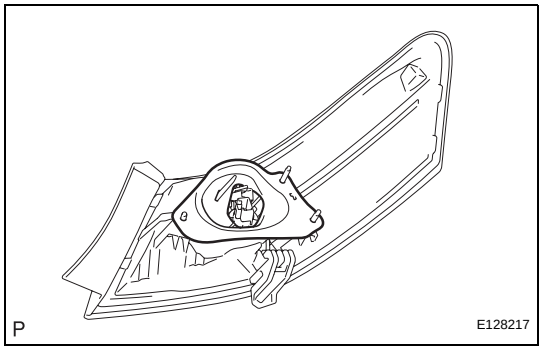
11. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**
12. **REMOVE REAR LIGHT ASSEMBLY**
    (a) Disconnect the connector and clamp.



LI



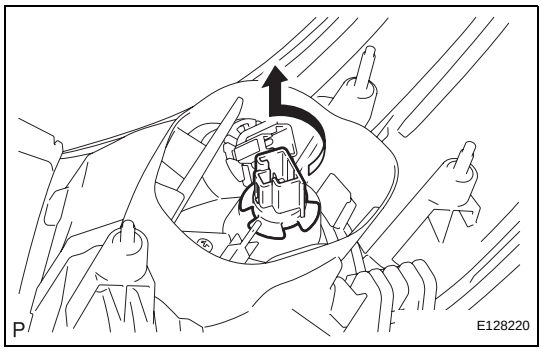
(b) Remove the 3 nuts.
(c) Disengage the pin and remove the rear light assembly.
HINT:
Be careful not to break the engaging portion of the pin when removing the rear light assembly.



DISASSEMBLY

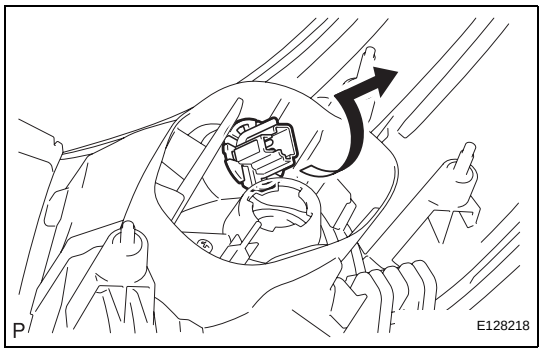
1. REMOVE REAR COMBINATION LIGHT GASKET

(a) Remove the rear combination light gasket.
NOTICE:
- **Be sure to remove the all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.**



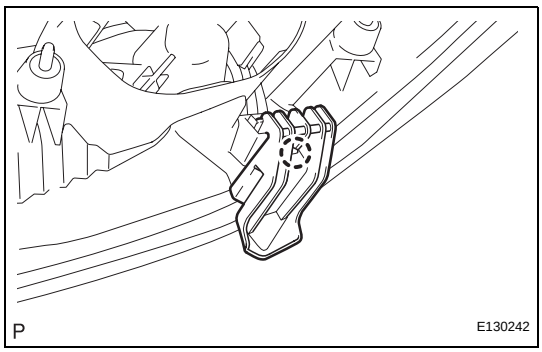
2. REMOVE TAIL AND STOP LIGHT BULB

(a) Turn the tail and stop light bulb and the rear combination light socket in the direction indicated by the arrow and disconnect them as a unit.
(b) Remove the tail and stop light bulb from the tail and stop light socket.



3. REMOVE REAR TURN SIGNAL LIGHT BULB

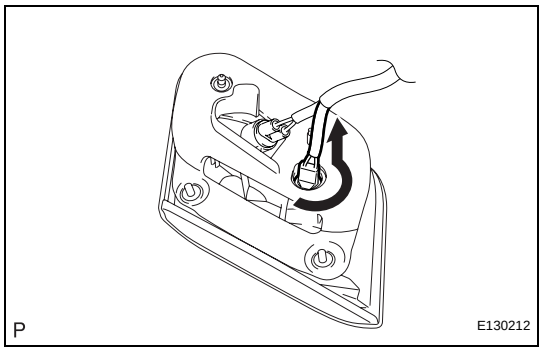
(a) Turn the rear turn signal light bulb and the rear light socket and wire in the direction indicated by the arrow and disconnect them as a unit.
(b) Remove the rear turn signal light bulb from the rear light socket and wire.



4. REMOVE REAR BUMPER RETAINER UPPER

(a) Disengage the claw and remove the rear bumper retainer upper.

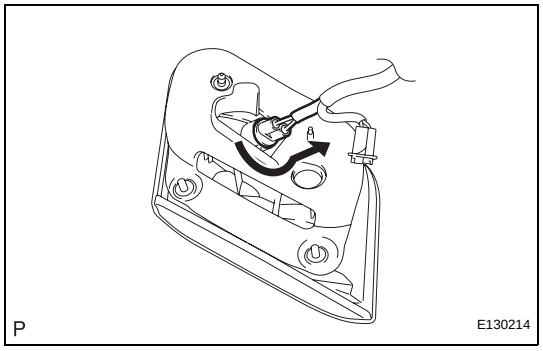
LI



5. REMOVE BACK UP LIGHT BULB

(a) Turn the back up light bulb and the rear light socket and wire in the direction indicated by the arrow and remove them as a unit.

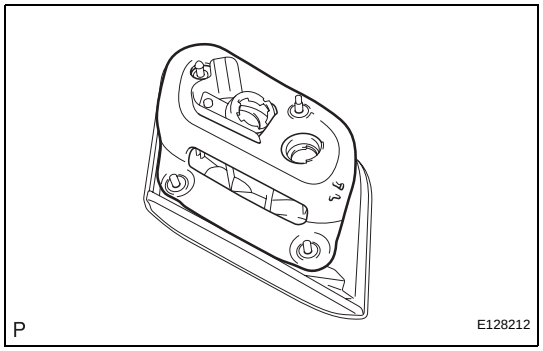
(b) Remove the back up light bulb from the rear light socket and wire.



6. REMOVE TAIL LIGHT BULB

(a) Turn the tail light bulb and the rear light socket and wire in the direction indicated by the arrow and remove them as a unit.

(b) Remove the tail light bulb from the rear light socket and wire.



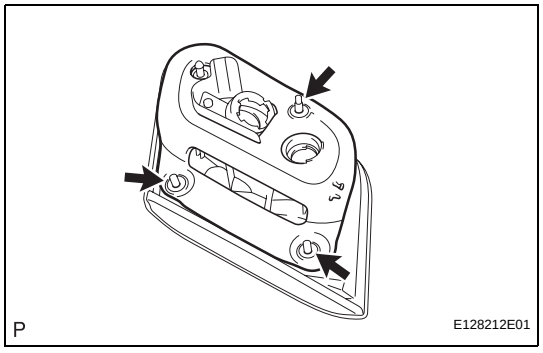
7. REMOVE REAR LIGHT GASKET

(a) Remove the rear light gasket.

NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear light gasket to prevent water ingress.**

REASSEMBLY



1. INSTALL REAR LIGHT GASKET

(a) Remove the release paper from a new rear light gasket.

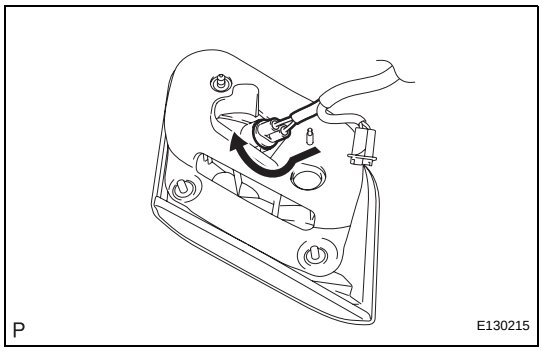
NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear light gasket to prevent water ingress.**

(b) Align the rear light gasket with the 3 stud bolts and install the gasket as shown in the illustration.

2. INSTALL TAIL LIGHT BULB

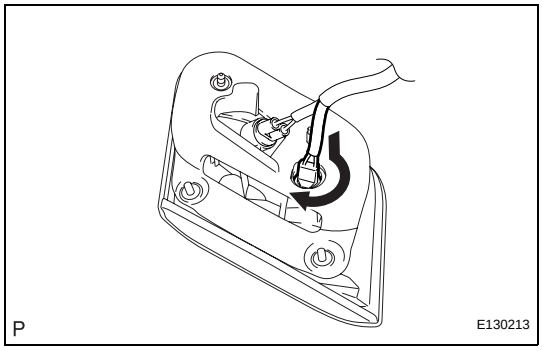
(a) Install the tail light bulb to the rear light socket and wire.



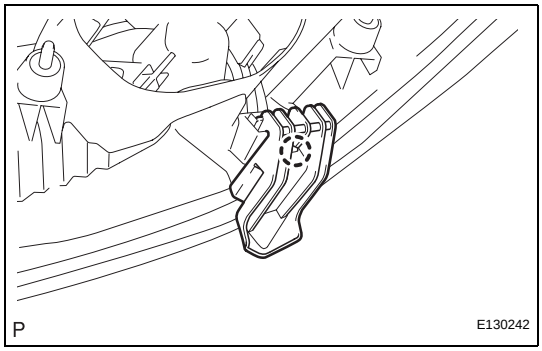
(b) Turn the tail light bulb and rear light socket and wire in the direction indicated by the arrow and install them as a unit.

3. INSTALL BACK UP LIGHT BULB

(a) Install the back up light bulb to the rear light socket and wire.



(b) Turn the back up light bulb and rear light socket and wire in the direction indicated by the arrow and install them as a unit.

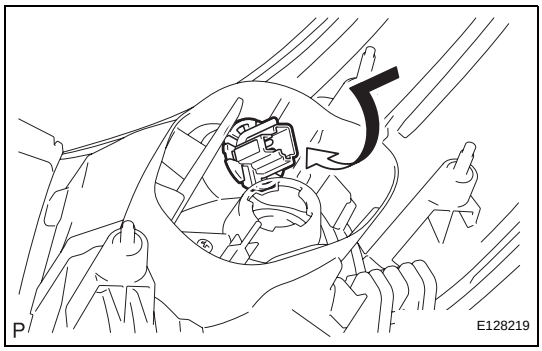


4. INSTALL REAR BUMPER RETAINER UPPER

(a) Engage the claw and install the rear bumper retainer upper.

5. INSTALL REAR TURN SIGNAL LIGHT BULB

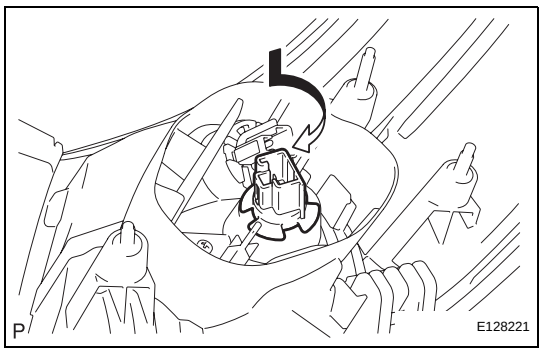
(a) Install the rear turn signal light bulb to the rear turn signal light socket.



(b) Turn the rear turn signal light bulb and rear turn signal light socket in the direction indicated by the arrow and install them as a unit.

6. INSTALL TAIL AND STOP LIGHT BULB

(a) Install the tail and stop light bulb to the tail and stop light socket.



(b) Turn the tail and stop light bulb and tail and stop light socket in the direction indicated by the arrow and install them as a unit.

7. INSTALL REAR COMBINATION LIGHT GASKET

(a) Remove the release paper from a new rear combination light gasket.

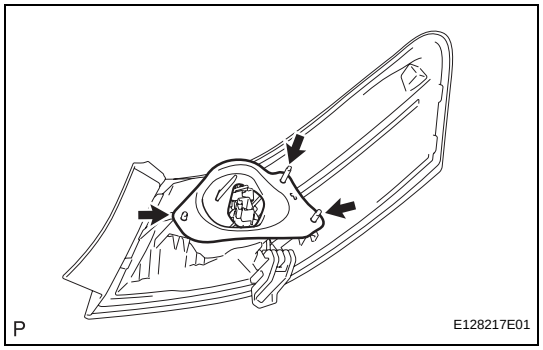
NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**

LI

- **Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.**

(b) Align the rear combination light gasket with the 3 stud bolts and install the gasket as shown in the illustration.

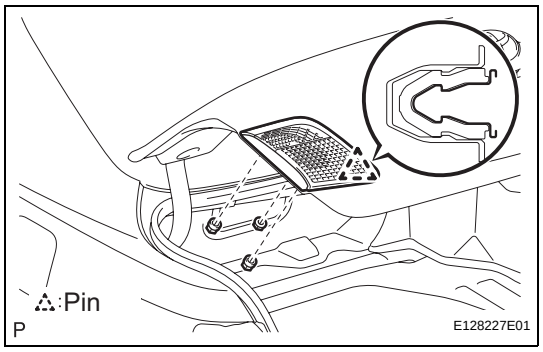


INSTALLATION

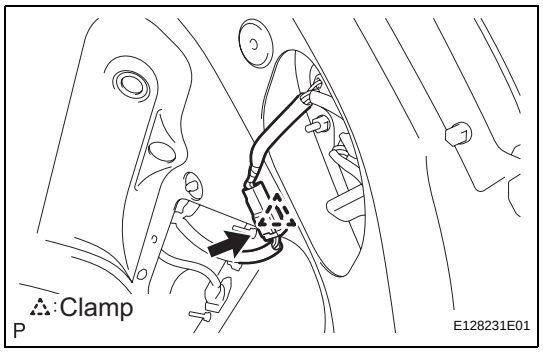
1. INSTALL REAR LIGHT ASSEMBLY

(a) Engage the pin and install the rear light assembly.

(b) Install the 3 nuts.
Torque: 3.6 N*m (37 kgf*cm, 32 in.*lbf)



(c) Connect the connector and clamp.

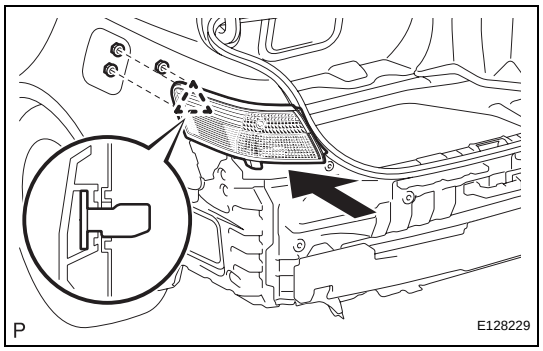


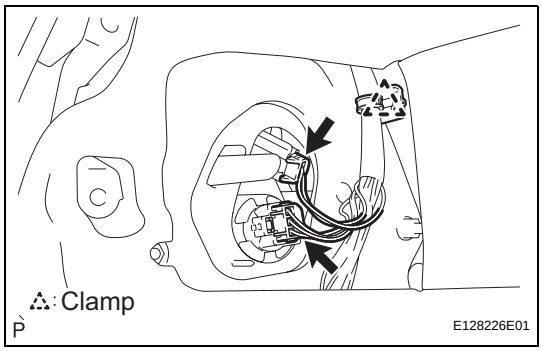
2. INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)

3. INSTALL REAR COMBINATION LIGHT ASSEMBLY

(a) Engage the clip and install the rear combination light assembly.

(b) Install the 3 nuts.
Torque: 3.6 N*m (37 kgf*cm, 32 in.*lbf)





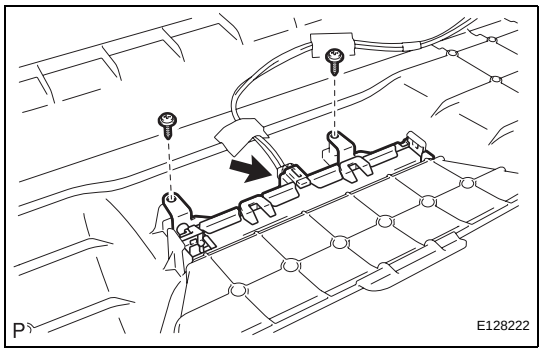
(c) Connect the 2 connectors and clamp.

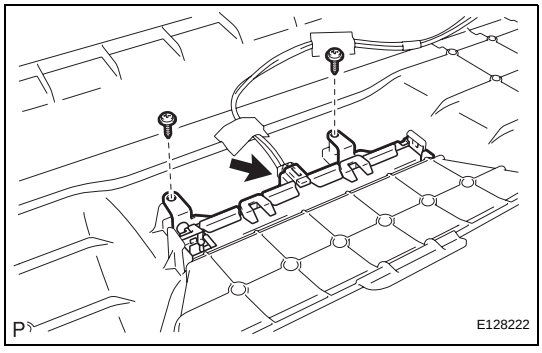
4. **INSTALL REAR FLOOR FINISH PLATE (See page ED-72)**
5. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-72)**
6. **INSTALL LUGGAGE COMPARTMENT SIDE TRAY ASSEMBLY (See page ED-72)**
7. **INSTALL SPARE WHEEL COVER ASSEMBLY**
8. **INSTALL SPARE WHEEL COVER CLAMP**
9. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**
10. **INSTALL REAR BUMPER ASSEMBLY (w/o Rear Lower Spoiler) (See page ET-23)**
11. **INSTALL REAR BUMPER ASSEMBLY (w/ Rear Lower Spoiler) (See page ET-24)**
12. **INSTALL REAR FLOOR BOARD (w/ Rear Lower Spoiler) (See page ET-24)**

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)
2. REMOVE REAR SEAT HEADREST ASSEMBLY
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
4. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)
5. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
6. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
7. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
8. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
9. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
10. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
11. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
12. REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)
13. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
14. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
15. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)
16. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
17. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
18. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
19. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)

20. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-35)**
21. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-35)**
22. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)**
23. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**
24. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-36)**
25. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-36)**
26. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-36)**
27. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-36)**
28. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-37)**
29. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-37)**
30. **REMOVE CENTER STOP LIGHT SET**
    (a) Disconnect the connector.
    (b) Remove the 2 screws and the center stop light set.





INSTALLATION

1. **INSTALL CENTER STOP LIGHT SET**
    (a) Connect the connector.
    (b) Install the center stop light set with the 2 screws.
    Torque: 1.6 N*m (16 kgf*cm, 14 in.*lbf)
2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-38)**
3. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-39)**
4. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-39)**
5. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-39)**

6. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-39)
7. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-40)
8. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)
9. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)
10. INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-40)
11. INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-40)
12. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)
13. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)
14. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
15. CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
16. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)
17. CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
18. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)
19. INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)
20. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)
21. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)
22. INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)
23. INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)
24. INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)
25. INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)

26. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
27. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
28. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
29. **INSTALL REAR SEAT HEADREST ASSEMBLY**
30. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-84)**

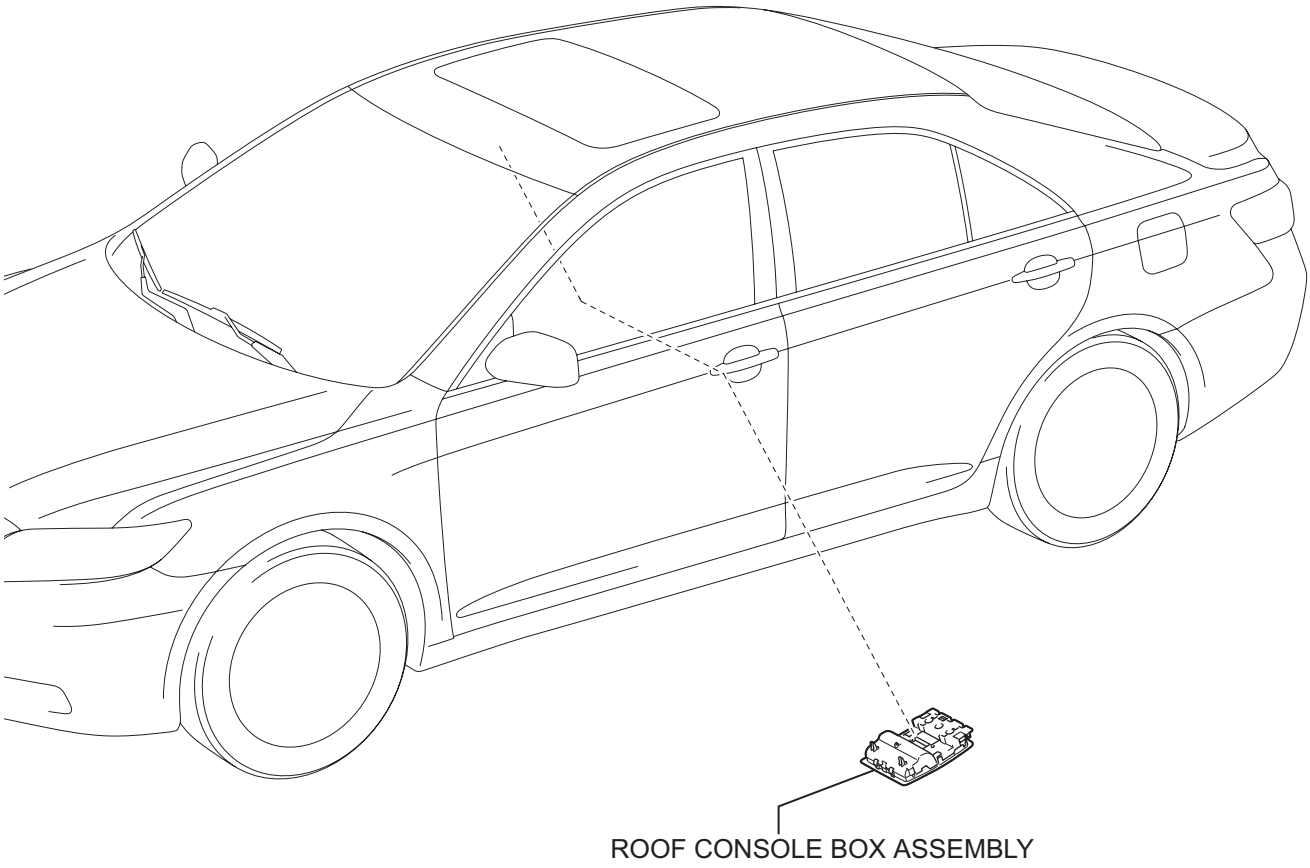
PERSONAL LIGHT ASSEMBLY

COMPONENTS

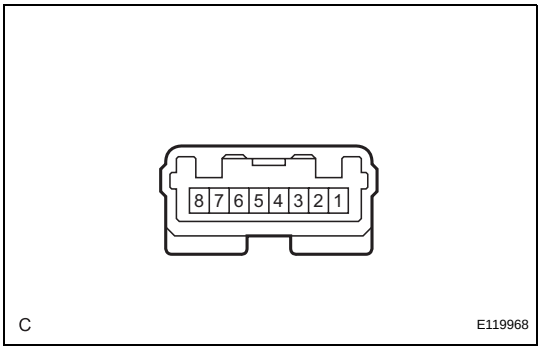


REMOVAL

1. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**

INSPECTION

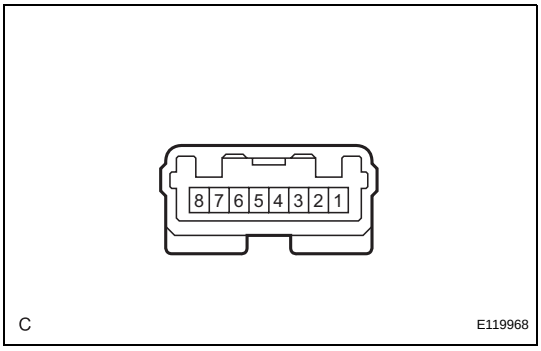
1. **INSPECT ROOF CONSOLE BOX ASSEMBLY (with Sliding Roof)**
   (a) Apply battery voltage to the roof console box assembly.
   (b) Check that the interior light and personal lights come on.
   OK



Measurement Condition	Switch Condition	Specified Condition
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 6	Interior light switch in DOOR	Interior light comes on
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Interior light switch ON	Interior light comes on
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Front RH personal light switch ON	Front RH personal light comes on
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Front LH personal light switch ON	Front LH personal light comes on

If the result is not as specified, replace the roof console box assembly.

2. **INSPECT ROOF CONSOLE BOX ASSEMBLY (without Sliding Roof)**
   (a) Apply battery voltage to the roof console box assembly.
   (b) Check that each personal light comes on.
   OK



Measurement Condition	Switch Condition	Specified Condition
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Front RH personal light switch ON	Front RH personal light comes on
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Front LH personal light switch ON	Front LH personal light comes on

If the result is not as specified, replace the roof console box assembly.

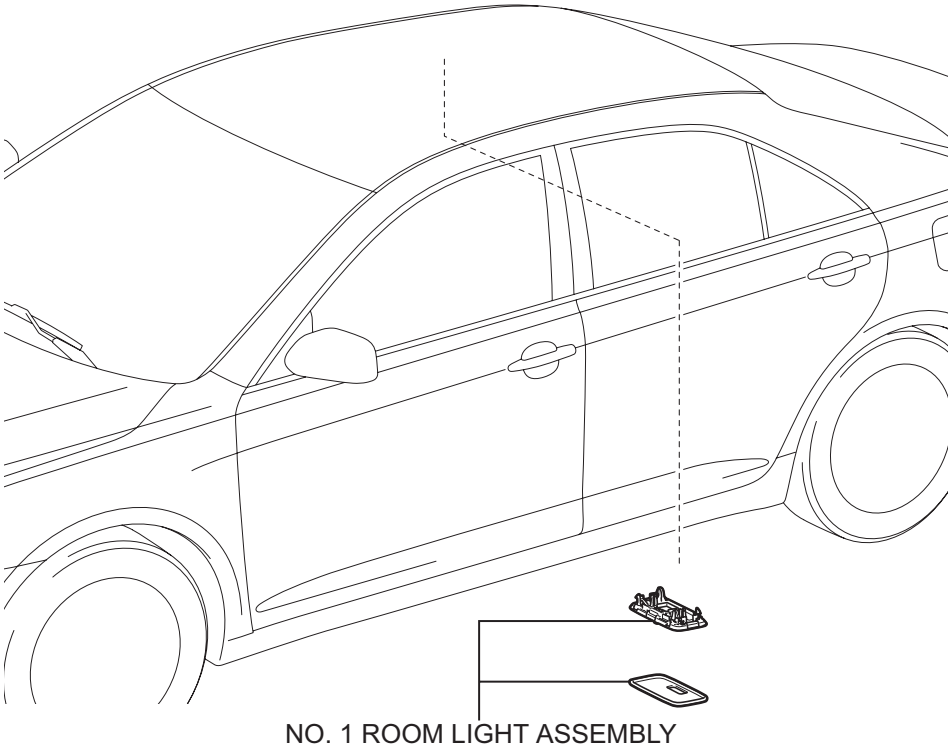
INSTALLATION

1. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-50)**

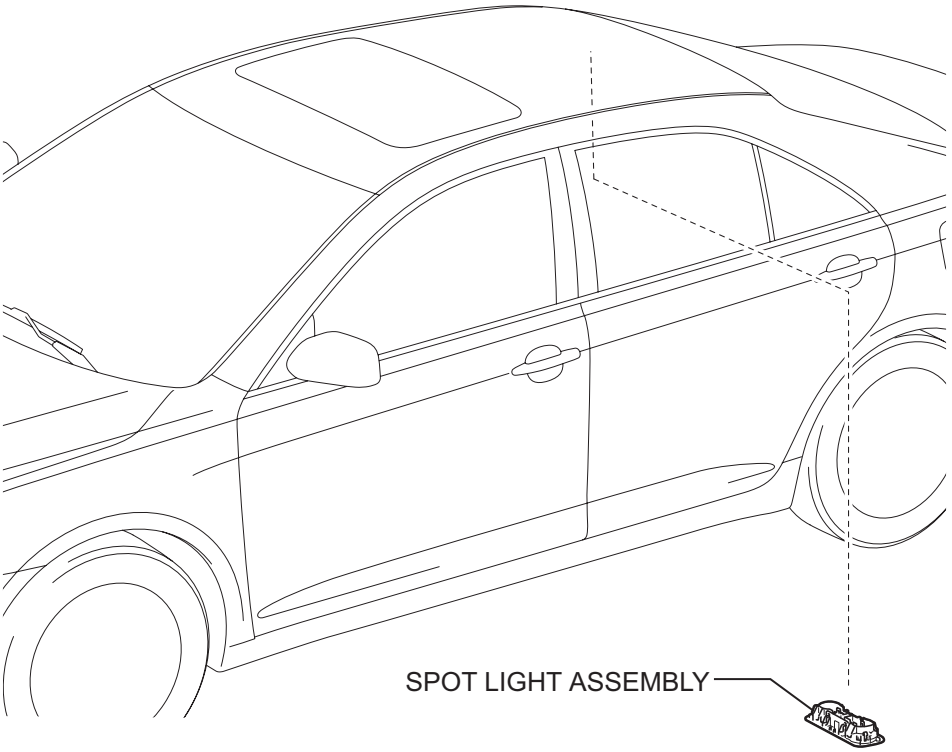
REAR ROOM LIGHT ASSEMBLY

COMPONENTS

without Sliding Roof:



with Sliding Roof:



P

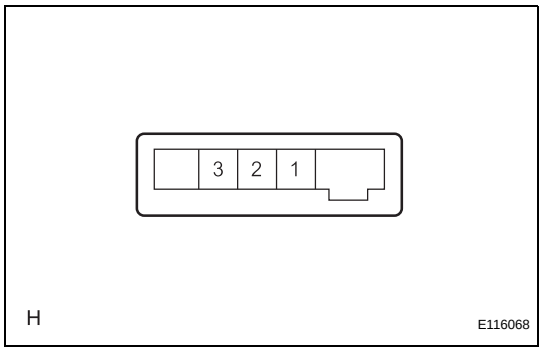
E128185E01

LI

REMOVAL

1. **REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-30)**
2. **REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-30)**

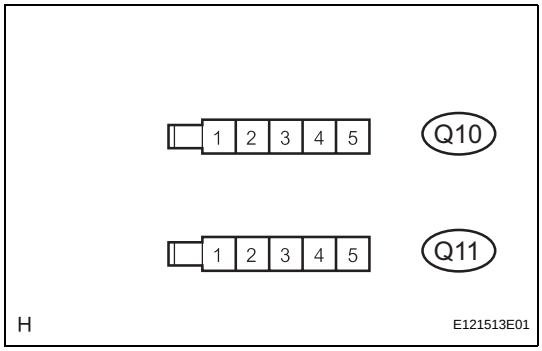
INSPECTION



1. **INSPECT NO. 1 ROOM LIGHT ASSEMBLY (without Sliding Roof)**
   (a) Apply battery voltage to the No. 1 room light assembly connector.
   (b) Check that the interior light comes on.
   OK

Measurement Condition	Switch Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	DOOR	Interior light comes on
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 3	ON	Interior light comes on

If the result is not as specified, replace the room light assembly.



2. **INSPECT SPOT LIGHT ASSEMBLY (with Sliding Roof)**
   (a) Apply battery voltage to the spot light assembly connector.
   (b) Check that the rear personal light comes on.
   OK

Measurement Condition	Switch Condition	Specified Condition
Battery positive (+) → Terminal Q10-2 Battery negative (-) → Terminal Q10-4	Pushed (ON)	Rear RH personal light comes on
Battery positive (+) → Terminal Q10-2 Battery negative (-) → Terminal Q10-3	Always	Rear RH personal light comes on
Battery positive (+) → Terminal Q11-2 Battery negative (-) → Terminal Q11-4	Pushed (ON)	Rear LH personal light comes on
Battery positive (+) → Terminal Q11-2 Battery negative (-) → Terminal Q11-5	Always	Rear LH personal light comes on

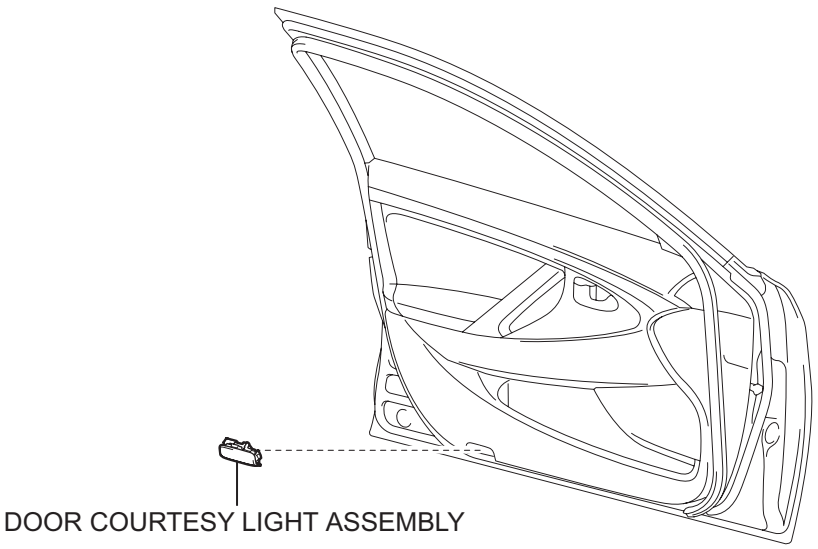
If the result is not as specified, replace the spot light assembly.

INSTALLATION

1. **INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-48)**
2. **INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-48)**

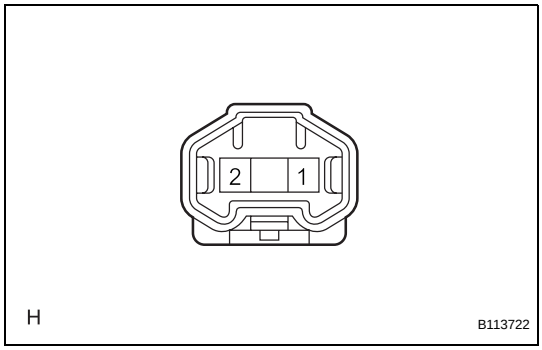
DOOR COURTESY LIGHT

COMPONENTS



P

E128172E01



REMOVAL

1. **REMOVE DOOR COURTESY LIGHT ASSEMBLY (See page ED-15)**

INSPECTION

1. **INSPECT DOOR COURTESY LIGHT ASSEMBLY**
   (a) Apply battery voltage to the door courtesy light assembly connector.
   (b) Check that the door courtesy light comes on.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Door courtesy light comes on

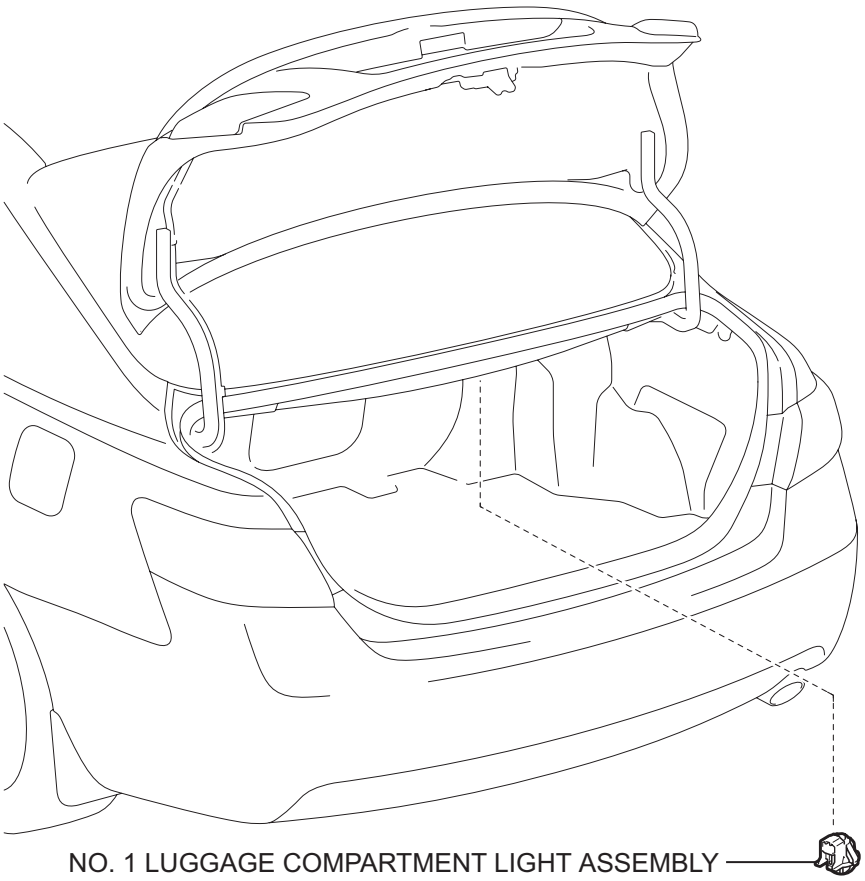
If the result is not as specified, replace the door courtesy light assembly.

INSTALLATION

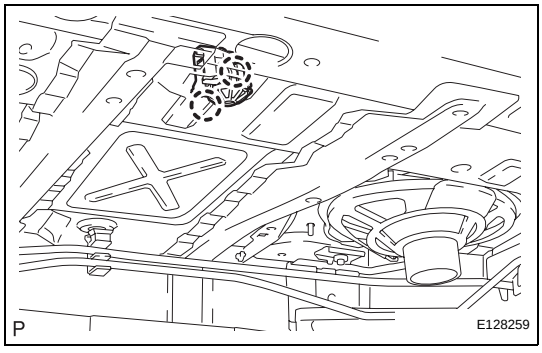
1. **INSTALL DOOR COURTESY LIGHT ASSEMBLY (See page ED-34)**

LUGGAGE COMPARTMENT ROOM LIGHT

COMPONENTS

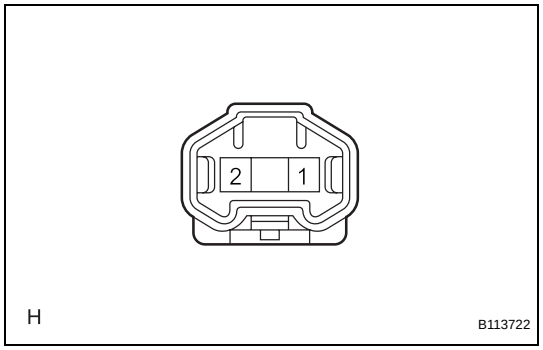


LI



REMOVAL

1. **REMOVE NO. 1 LUGGAGE COMPARTMENT LIGHT ASSEMBLY**
   (a) Disengage the 2 claws and disconnect the No. 1 luggage compartment light assembly.
   (b) Disconnect the connector and remove the No. 1 luggage compartment light assembly.



INSPECTION

1. INSPECT NO. 1 LUGGAGE COMPARTMENT LIGHT ASSEMBLY

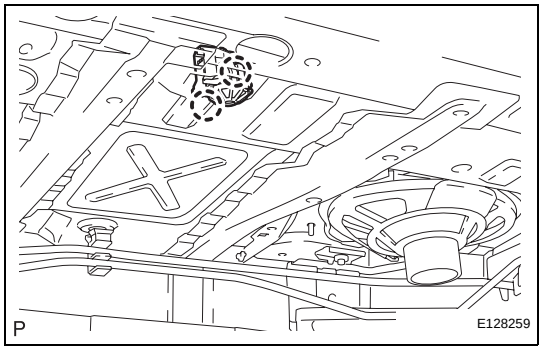
(a) Apply battery voltage to the No. 1 luggage compartment light assembly connector.

(b) Check that the No. 1 luggage compartment light comes on.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Luggage compartment light comes on

If the result is not as specified, replace the luggage compartment light assembly.



INSTALLATION

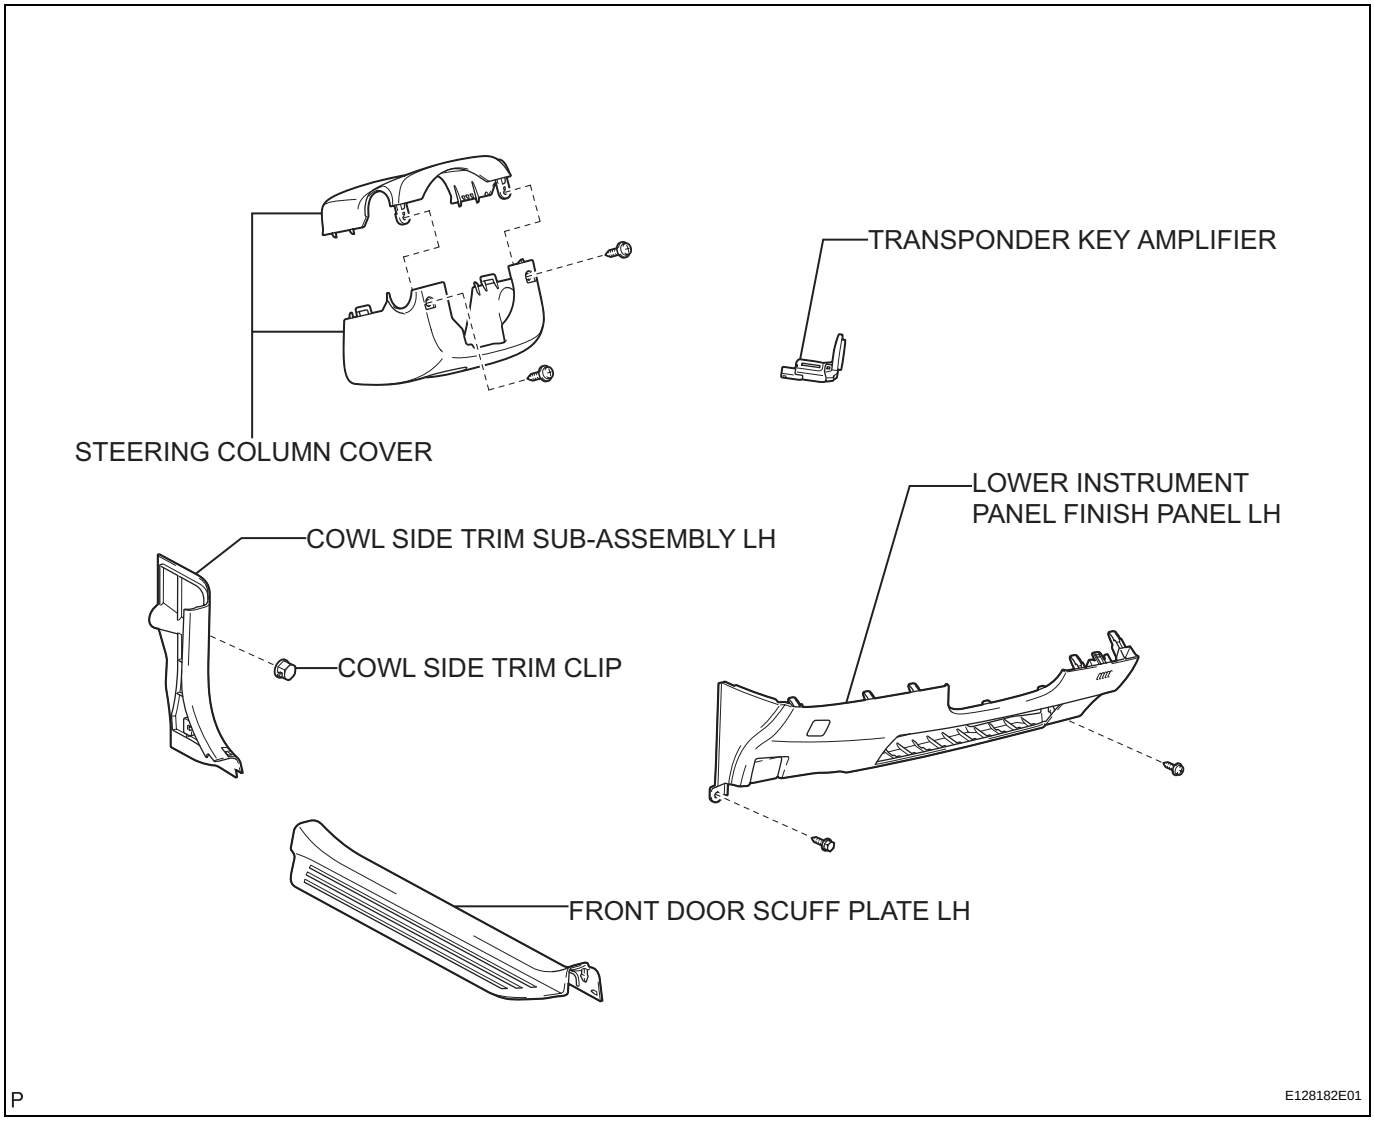
1. INSTALL NO. 1 LUGGAGE COMPARTMENT LIGHT ASSEMBLY

(a) Connect the connector.

(b) Engage the 2 claws and install the No. 1 luggage compartment light assembly.

IGNITION KEY CYLINDER LIGHT

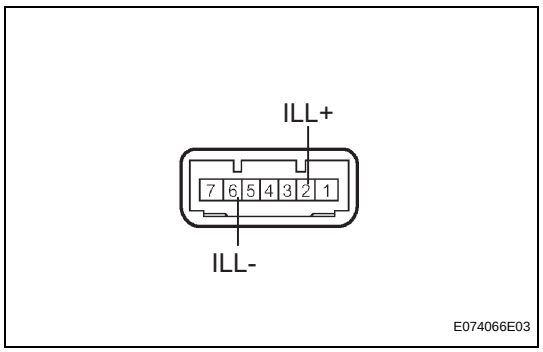
COMPONENTS



REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-26)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-26)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
5. **REMOVE STEERING COLUMN COVER (See page SR-39)**
6. **REMOVE TRANSPONDER KEY AMPLIFIER (See page SR-42)**

INSPECTION



1. **INSPECT TRANSPONDER KEY AMPLIFIER**
   (a) Apply battery voltage to the transponder key amplifier connector.
   (b) Check that the ignition key cylinder light comes on.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 (ILL+) **Battery negative (-) → Terminal 6 (ILL-)**	**Ignition key cylinder light comes on**

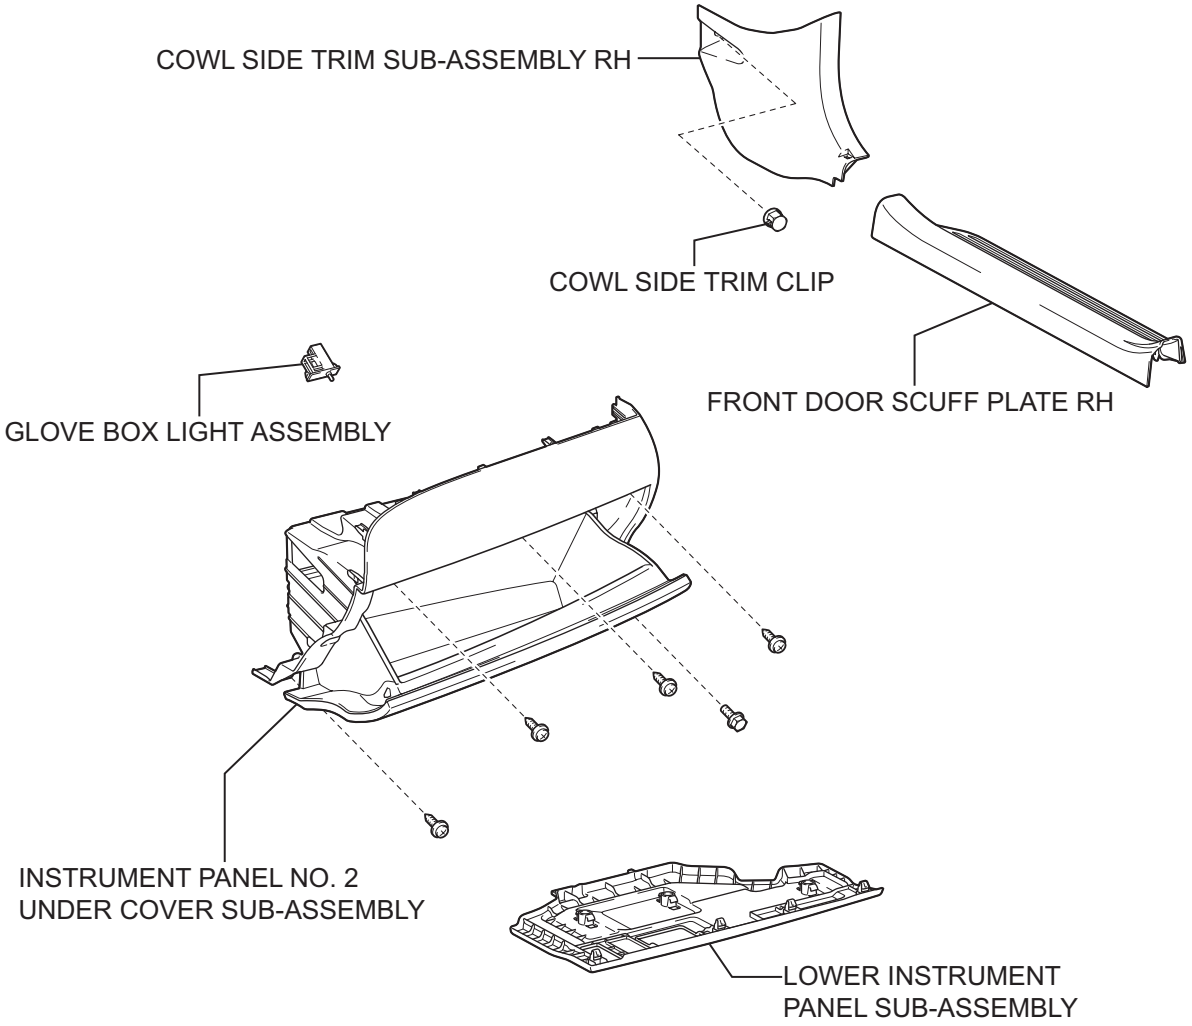
If the result is not as specified, replace the transponder key amplifier.

INSTALLATION

1. **INSTALL TRANSPONDER KEY AMPLIFIER (See page SR-46)**
2. **INSTALL STEERING COLUMN COVER (See page SR-50)**
3. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
5. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
6. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**

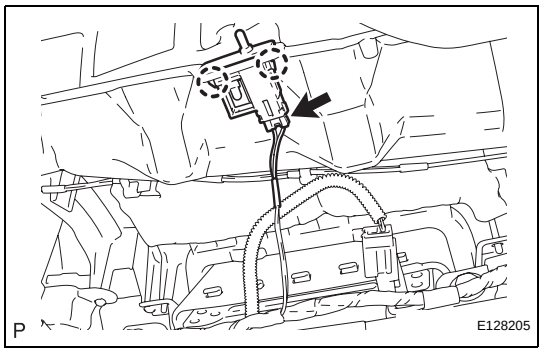
GLOVE BOX LIGHT

COMPONENTS



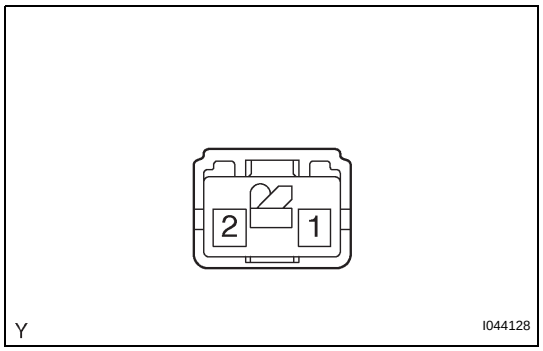
REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
3. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**
4. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**
5. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**
6. **REMOVE GLOVE BOX LIGHT ASSEMBLY**
   (a) Disconnect the connector.
   (b) Disengage the 2 claws and remove the glove box light assembly.



INSPECTION

1. **INSPECT GLOVE BOX LIGHT ASSEMBLY**
   (a) Apply battery voltage to the glove box light assembly connector.
   (b) Check that the glove box light comes on.
   OK

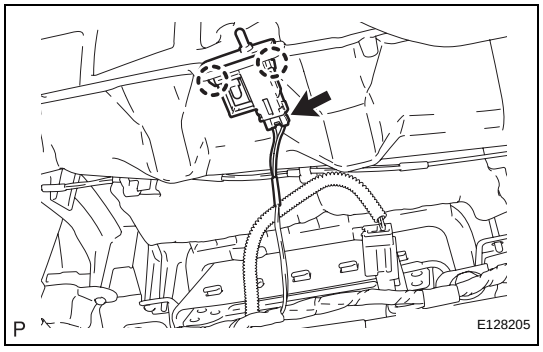


Measurement Condition	Switch Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Glove box light switch ON	Glove box light comes on

If the result is not as specified, replace the glove box light assembly.

INSTALLATION

1. **INSTALL GLOVE BOX LIGHT ASSEMBLY**
   (a) Engage the 2 claws and install the glove box light assembly.
   (b) Connect the connector.
2. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
3. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
4. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
5. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**

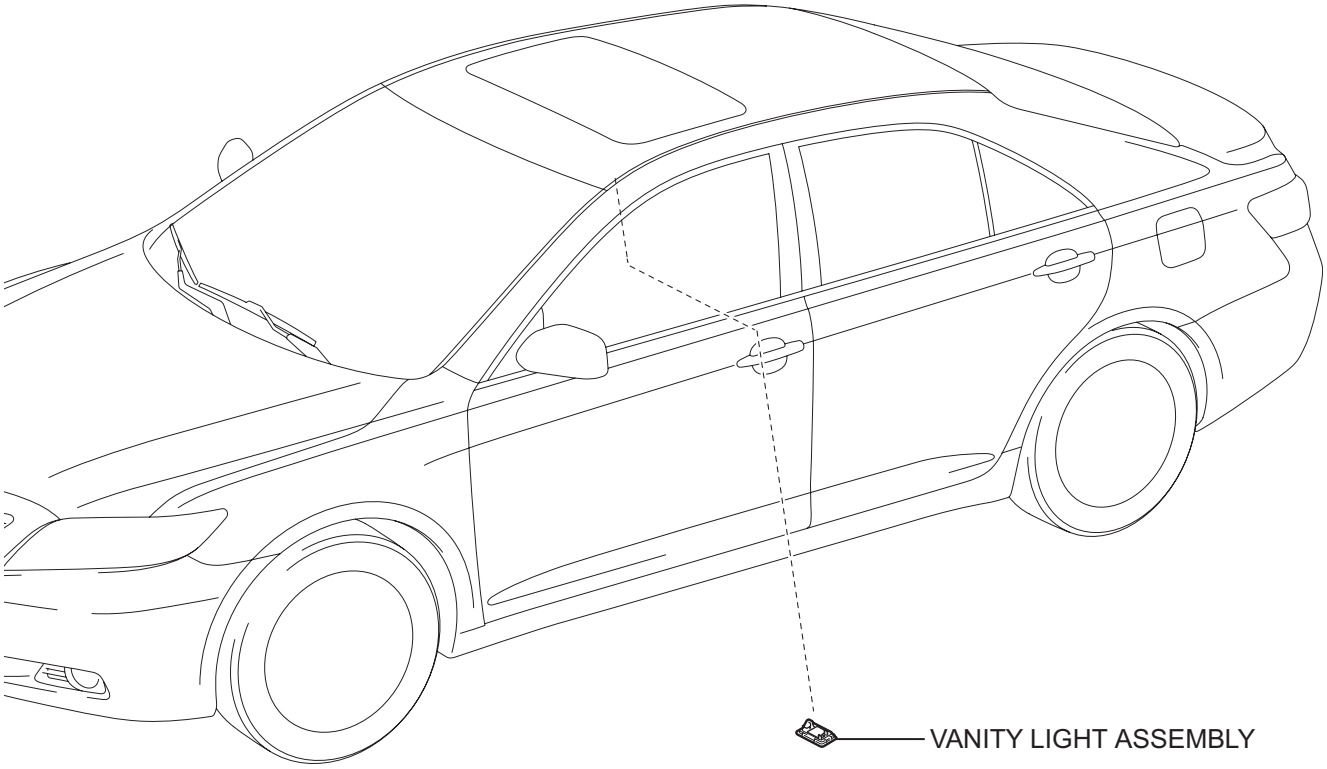


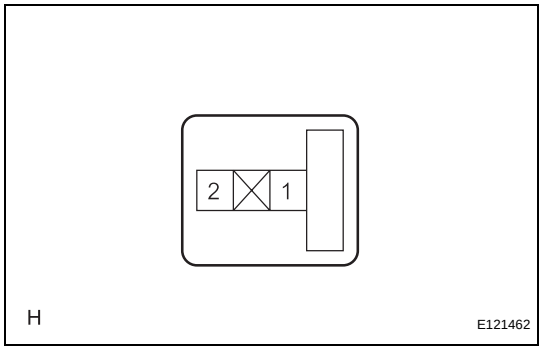
LI

6. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**

VANITY LIGHT

COMPONENTS





REMOVAL

1. **REMOVE VANITY LIGHT ASSEMBLY (See page IR-35)**

INSPECTION

1. **INSPECT VANITY LIGHT ASSEMBLY**
   (a) Apply battery voltage to the vanity light assembly connector.
   (b) Check that the vanity light comes on.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Vanity light comes on

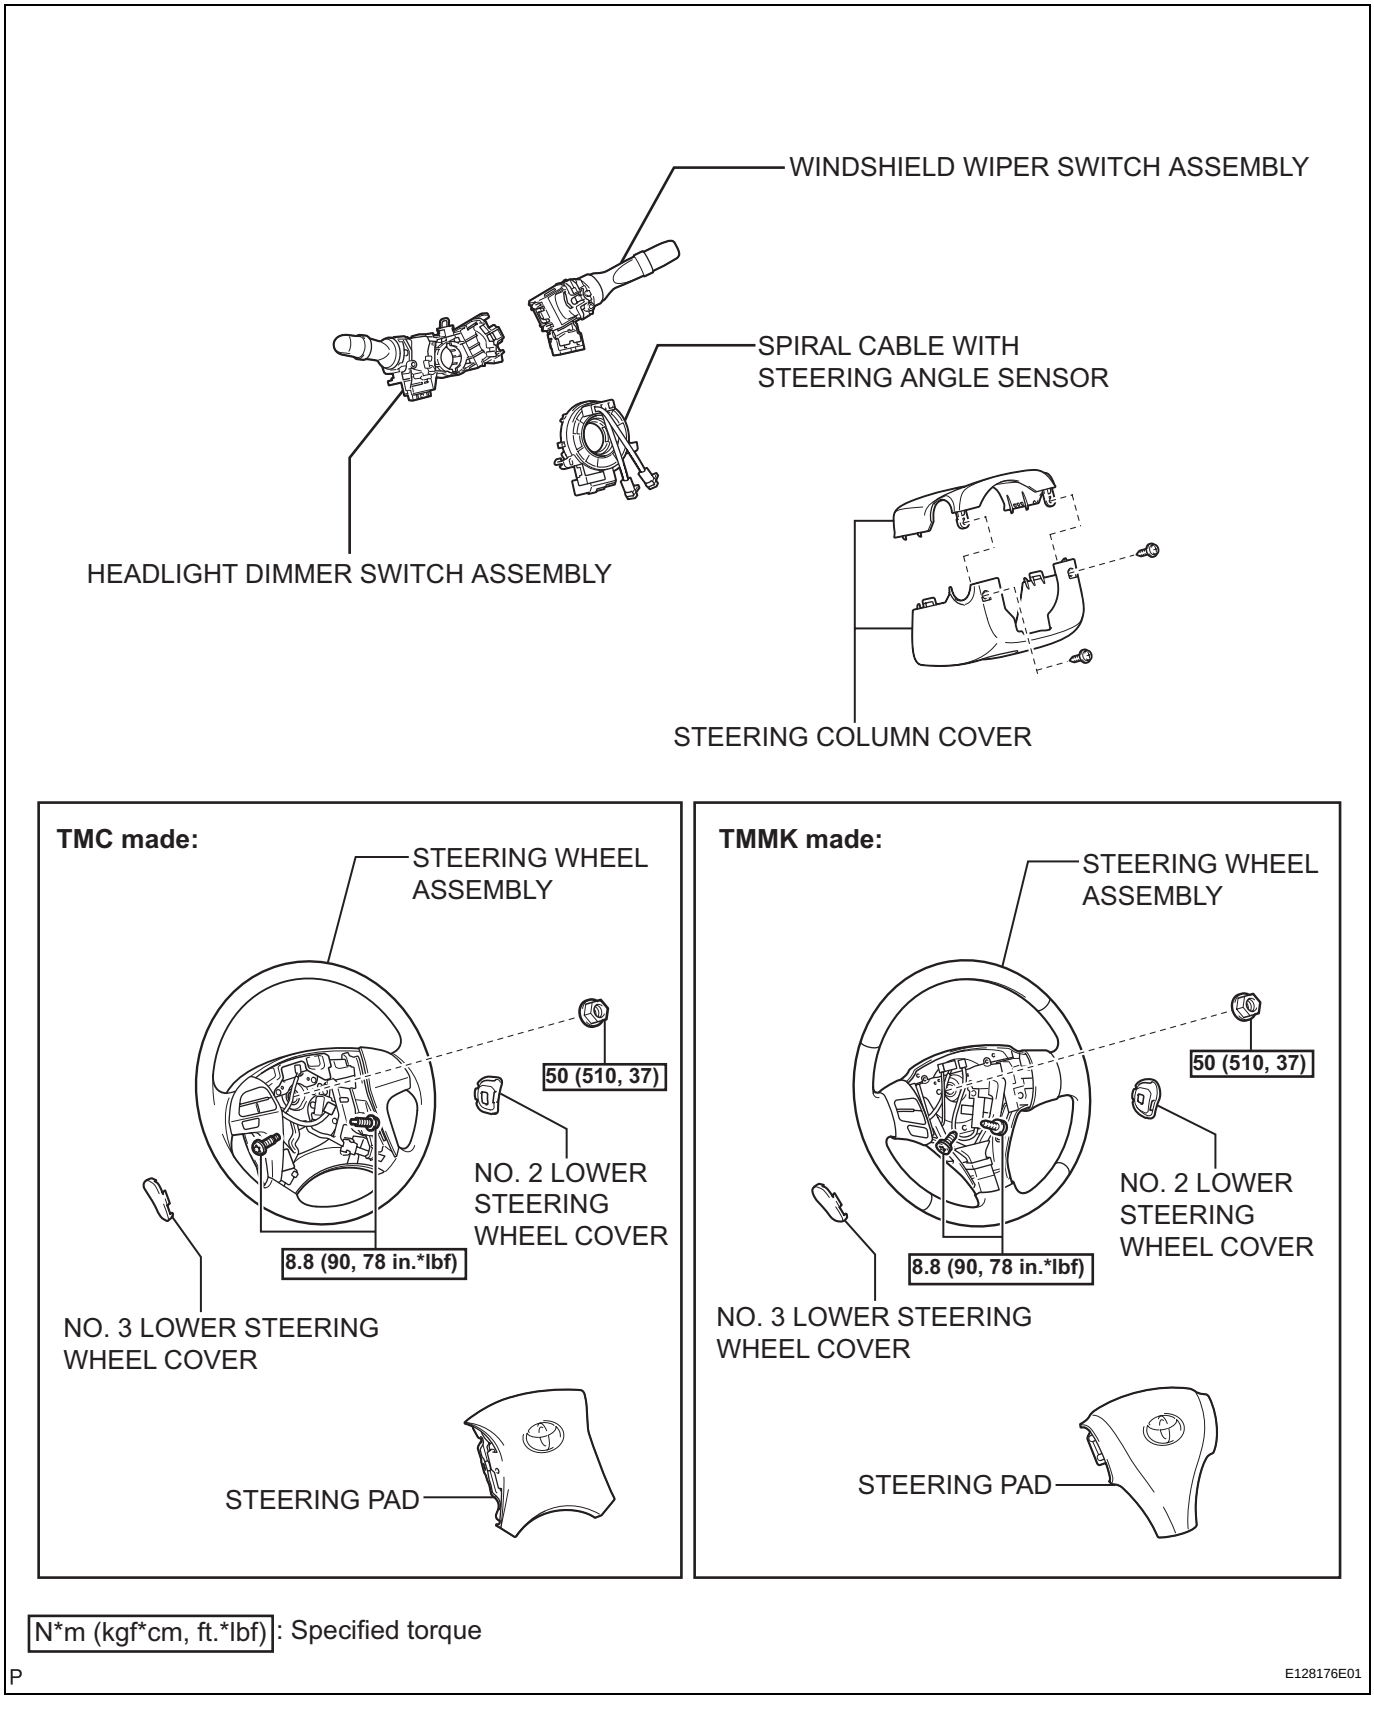
If the result is not as specified, replace the vanity light assembly.

INSTALLATION

1. **INSTALL VANITY LIGHT ASSEMBLY (See page IR-42)**

HEADLIGHT DIMMER SWITCH

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque

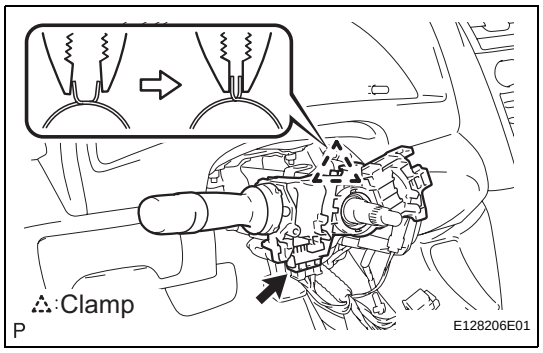
P

E128176E01

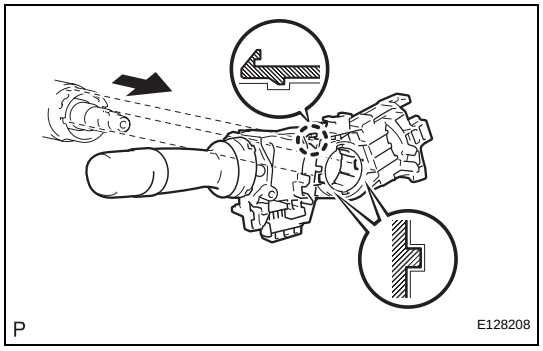
LI

REMOVAL

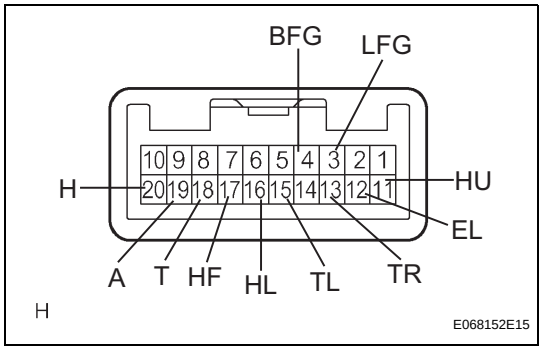
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment. (See page RS-1)
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-349)**
4. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-349)**
5. **REMOVE STEERING PAD (See page RS-350)**
6. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
7. **REMOVE STEERING COLUMN COVER (See page SR-39)**
8. **REMOVE SPIRAL CABLE WITH STEERING ANGLE SENSOR (See page RS-364)**
9. **REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-21)**
10. **REMOVE HEADLIGHT DIMMER SWITCH ASSEMBLY**
    (a) Disconnect the connector.
    (b) Disengage the clamp as shown in the illustration.



(c) Disengage the claw and remove the headlight dimmer switch assembly as shown in the illustration.



LI



INSPECTION

1. INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Light control switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 20 (H) - 18 (T) - 19 (A)	OFF	10 kΩ or higher
12 (EL) - 18 (T)	TAIL	Below 1 Ω
12 (EL) - 20 (H) - 18 (T)	HEAD	Below 1 Ω
12 (EL) - 19 (A)	AUTO	Below 1 Ω

Dimmer switch

Tester Connection	Switch Condition	Specified Condition
17 (HF) - 12 (EL)	FLASH	Below 1 Ω
16 (HL) - 12 (EL)	LOW	Below 1 Ω
11 (HU) - 12 (EL)	HIGH	Below 1 Ω

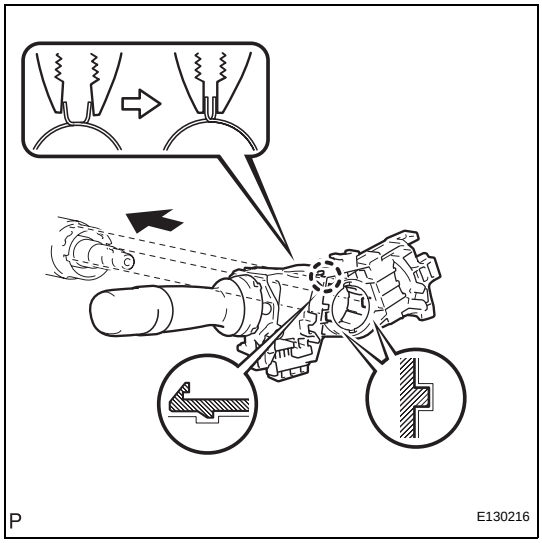
Turn signal switch

Tester Connection	Switch Condition	Specified Condition
13 (TR) - 12 (EL) - 15 (TL)	OFF	10 kΩ or higher
13 (TR) - 12 (EL)	RH	Below 1 Ω
15 (TL) - 12 (EL)	LH	Below 1 Ω

Fog light switch

Tester Connection	Switch Condition	Specified Condition
3 (LFG) - 4 (BFG)	OFF	10 kΩ or higher
3 (LFG) - 4 (BFG)	ON	Below 1 Ω

If the result is not as specified, replace the headlight dimmer switch assembly.

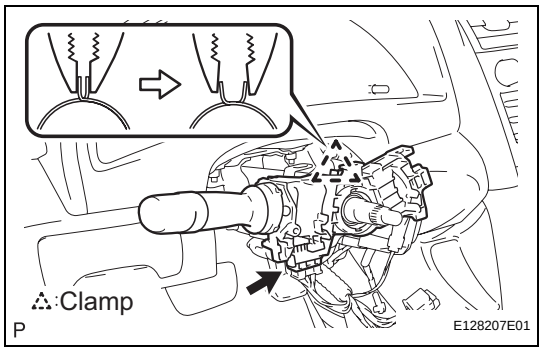


INSTALLATION

1. INSTALL HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Engage the claw while loosening the clamp as shown in the illustration.

LI

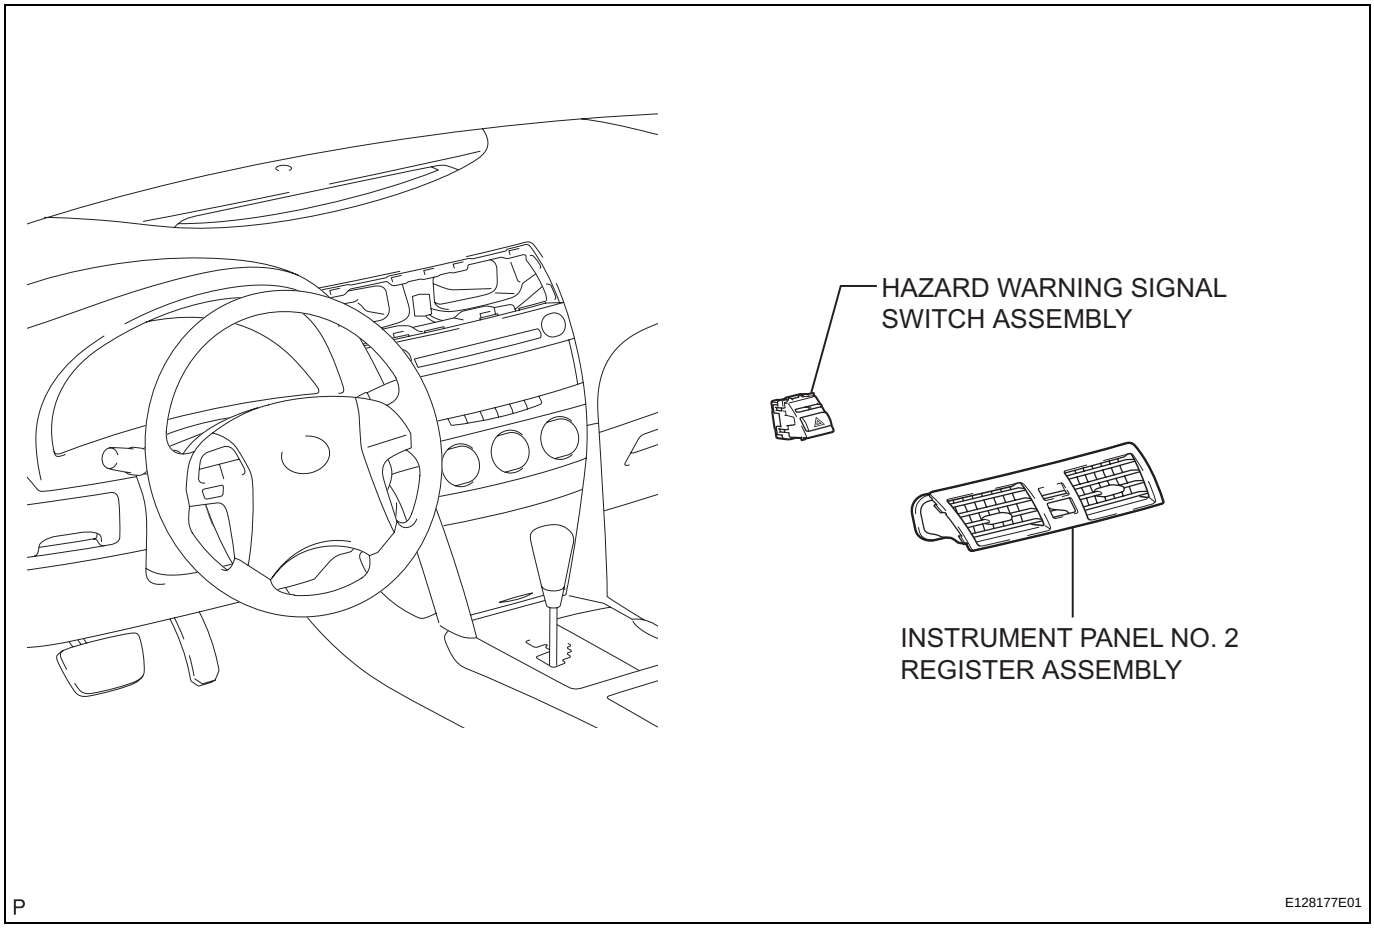


(b) Install the headlight dimmer switch assembly with the clamp.
(c) Connect the connector.

2. **INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-23)**
3. **INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR (See page RS-366)**
4. **INSTALL STEERING COLUMN COVER (See page SR-50)**
5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**
6. **INSPECT STEERING WHEEL CENTER POINT**
7. **INSTALL STEERING PAD (See page RS-350)**
8. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-351)**
9. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-352)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **INSPECT STEERING PAD (See page RS-352)**
12. **INSPECT SRS WARNING LIGHT** (See page RS-32)

HAZARD WARNING SWITCH

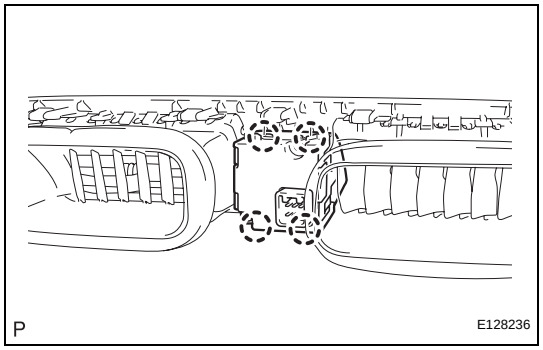
COMPONENTS



REMOVAL

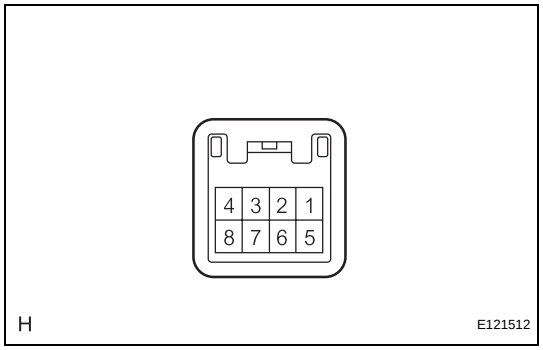
1. **REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)**

2. **REMOVE HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Disengage the 4 claws and remove the hazard warning signal switch assembly.



INSPECTION

1. **INSPECT HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance



Tester Connection	Condition	Specified Condition
5 - 4	OFF	10 kΩ or higher
5 - 4	ON	Below 1 Ω

   If the result is not as specified, replace the hazard warning signal switch assembly.
   (b) Apply battery voltage to the hazard warning signal switch assembly connector.
   OK

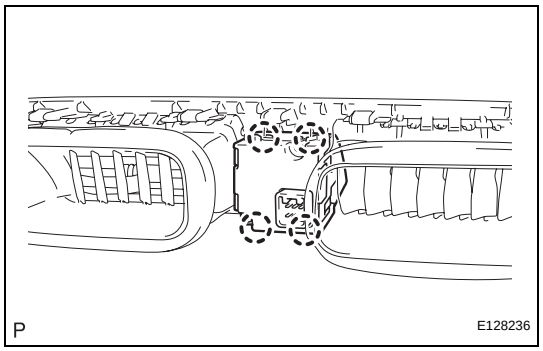
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 7 Battery negative (-) → Terminal 8	Illumination comes on

   If the result is not as specified, replace the hazard warning signal switch assembly.

INSTALLATION

1. **INSTALL HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Engage the 4 claws and install the hazard warning signal switch assembly.

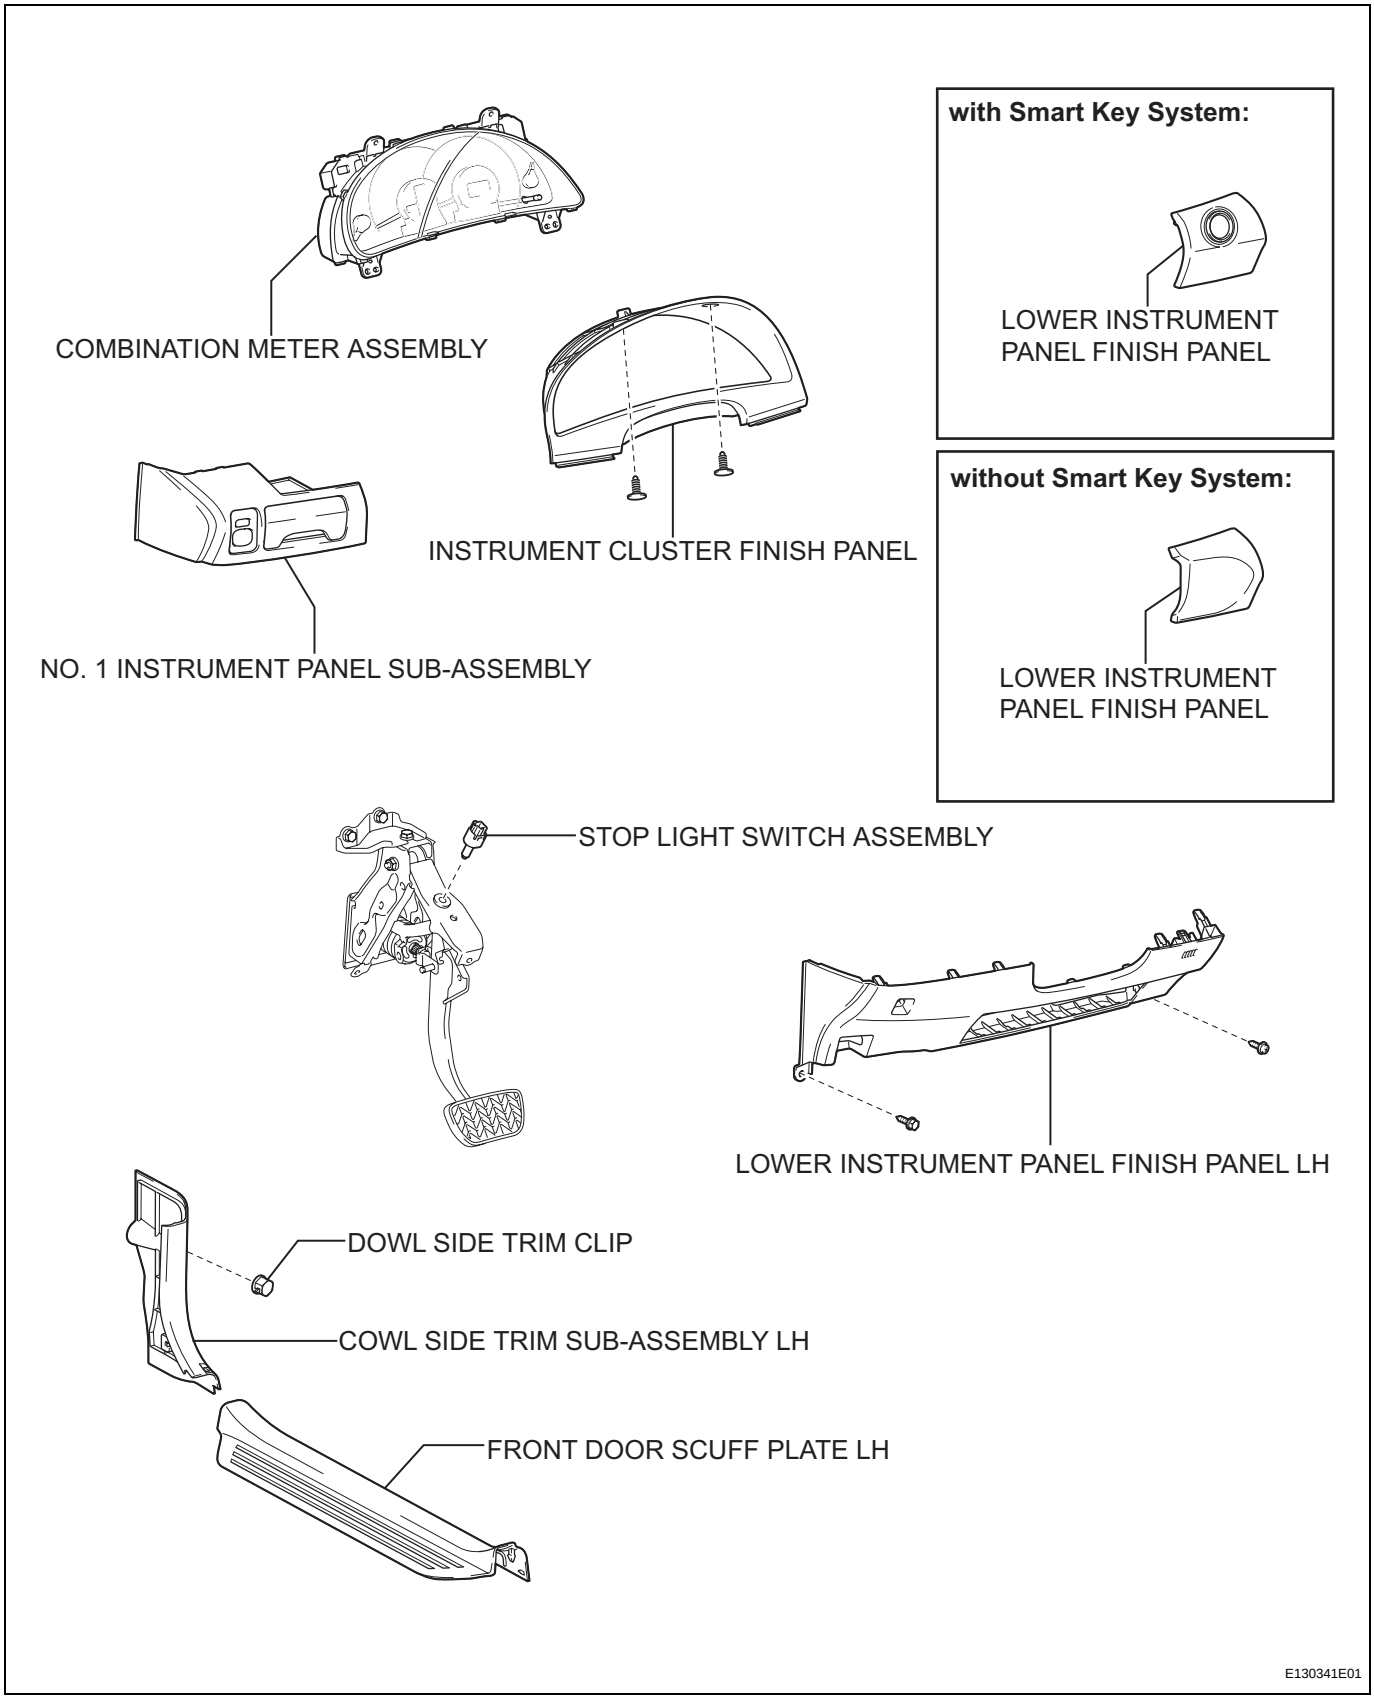
2. **INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)**



LI

STOP LIGHT SWITCH

COMPONENTS

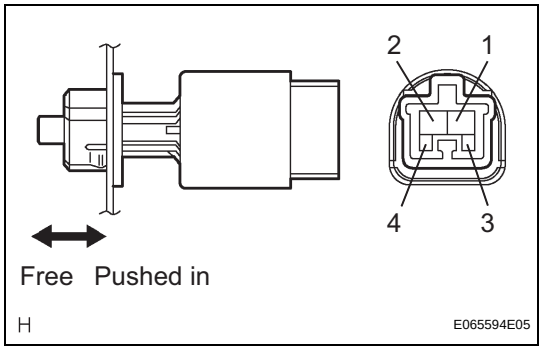


LI

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
4. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
7. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-65)**
8. **REMOVE COMBINATION METER ASSEMBLY (See page ME-65)**
9. **REMOVE STOP LIGHT SWITCH ASSEMBLY (See page BR-71)**

INSPECTION



1. **INSPECT STOP LIGHT SWITCH ASSEMBLY**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

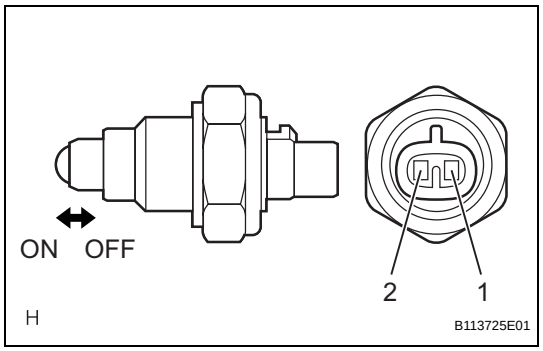
Tester Connection	Switch Position	Specified Condition
1 - 2	Switch pin free	10 kΩ or higher
3 - 4	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	Below 1 Ω
3 - 4	Switch pin pushed in	10 kΩ or higher

If the result is not as specified, replace the stop light switch assembly.

LI

INSTALLATION

1. **INSTALL STOP LIGHT SWITCH ASSEMBLY (See page BR-72)**
2. **INSTALL COMBINATION METER ASSEMBLY (See page ME-67)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-68)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
6. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
7. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-55)**
8. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
9. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**



BACK-UP LIGHT SWITCH

INSPECTION

1. INSPECT BACK-UP LIGHT BULB (for Manual Transmission)

(a) Measure the resistance according to the value(s) in the table below.

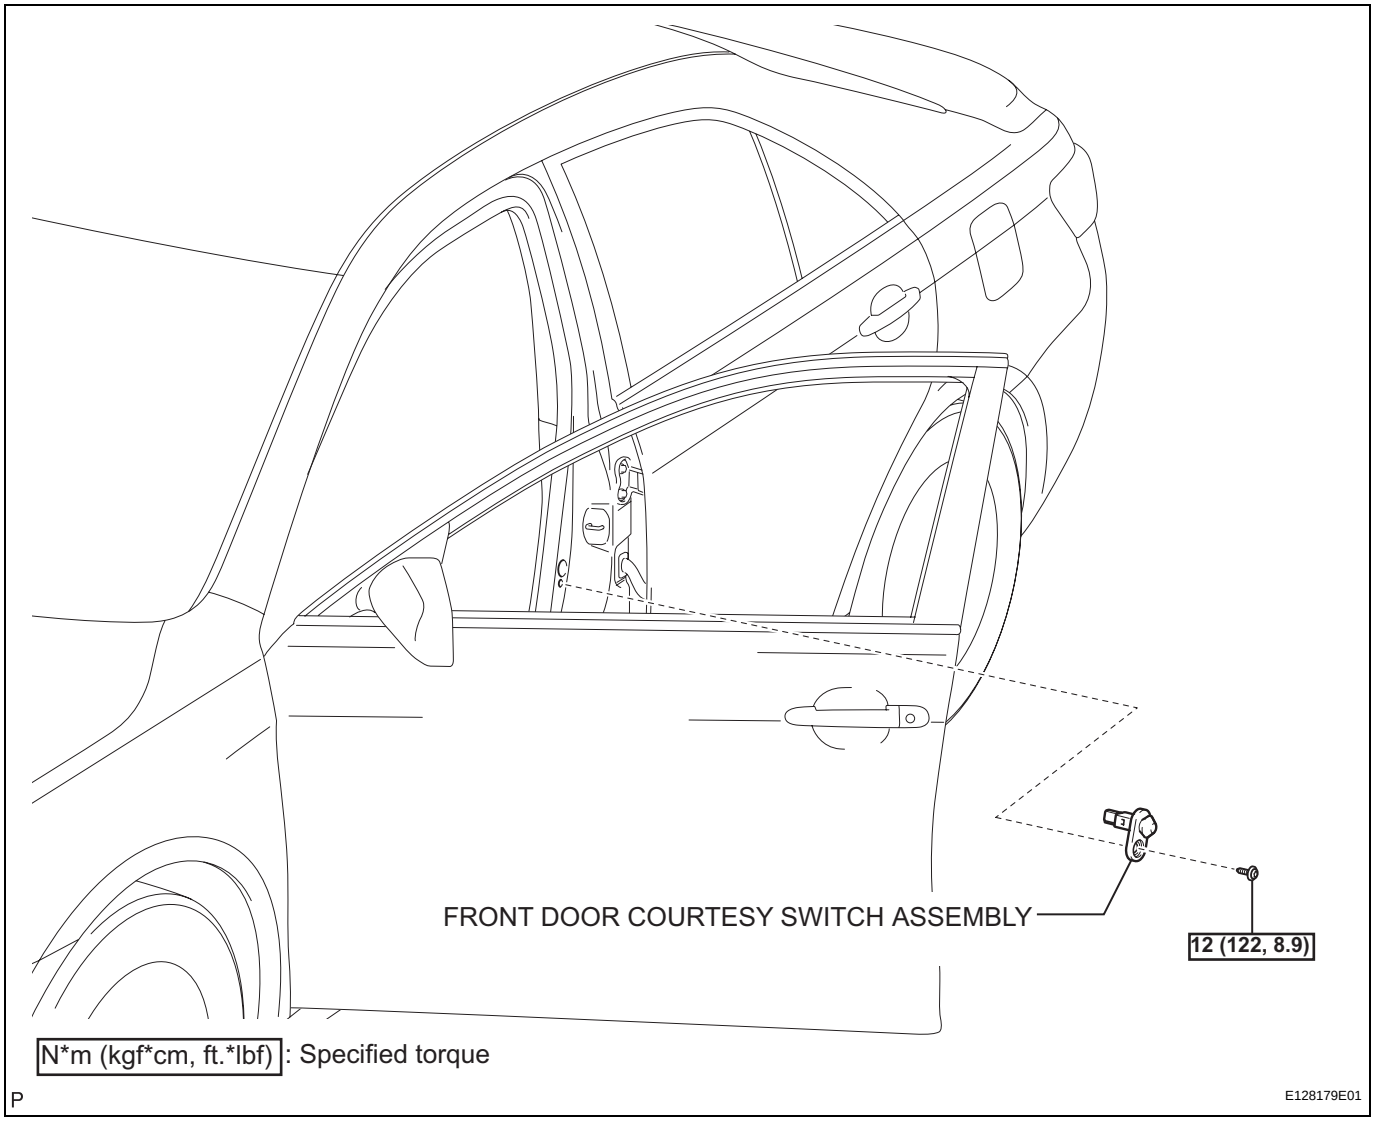
Standard resistance

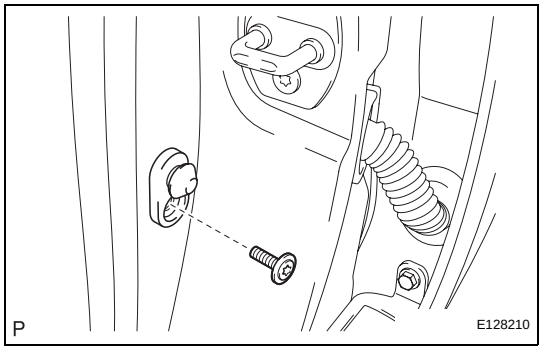
Tester Connection	Switch Operation	Specified Condition
1 - 2	Switch ON (Ball is not pressed)	10 kΩ or higher
1 - 2	Switch OFF (Ball is pressed)	Below 1 Ω

If the result is not as specified, replace the back-up light switch.

FRONT DOOR COURTESY SWITCH

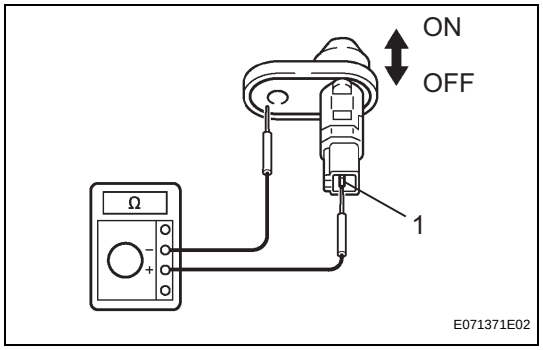
COMPONENTS





REMOVAL

1. **REMOVE FRONT DOOR COURTESY SWITCH ASSEMBLY**
   (a) Using a "TORX" socket wrench (T30), remove the "TORX" bolt.
   (b) Disconnect the connector and remove the front door courtesy switch assembly.



INSPECTION

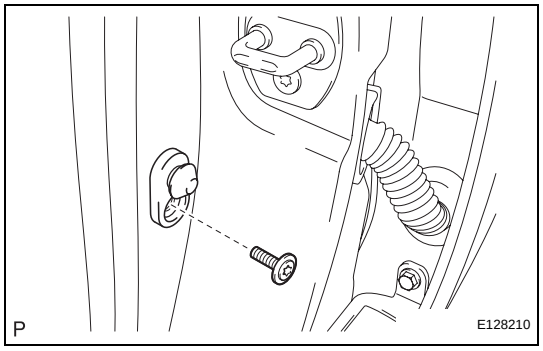
1. INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Operation	Specified Condition
1 - Switch body	Not pushed (ON)	Below 1 Ω
	Pushed (OFF)	10 kΩ or higher

If the result is not as specified, replace the front door courtesy light switch assembly.



INSTALLATION

1. INSTALL FRONT DOOR COURTESY SWITCH ASSEMBLY

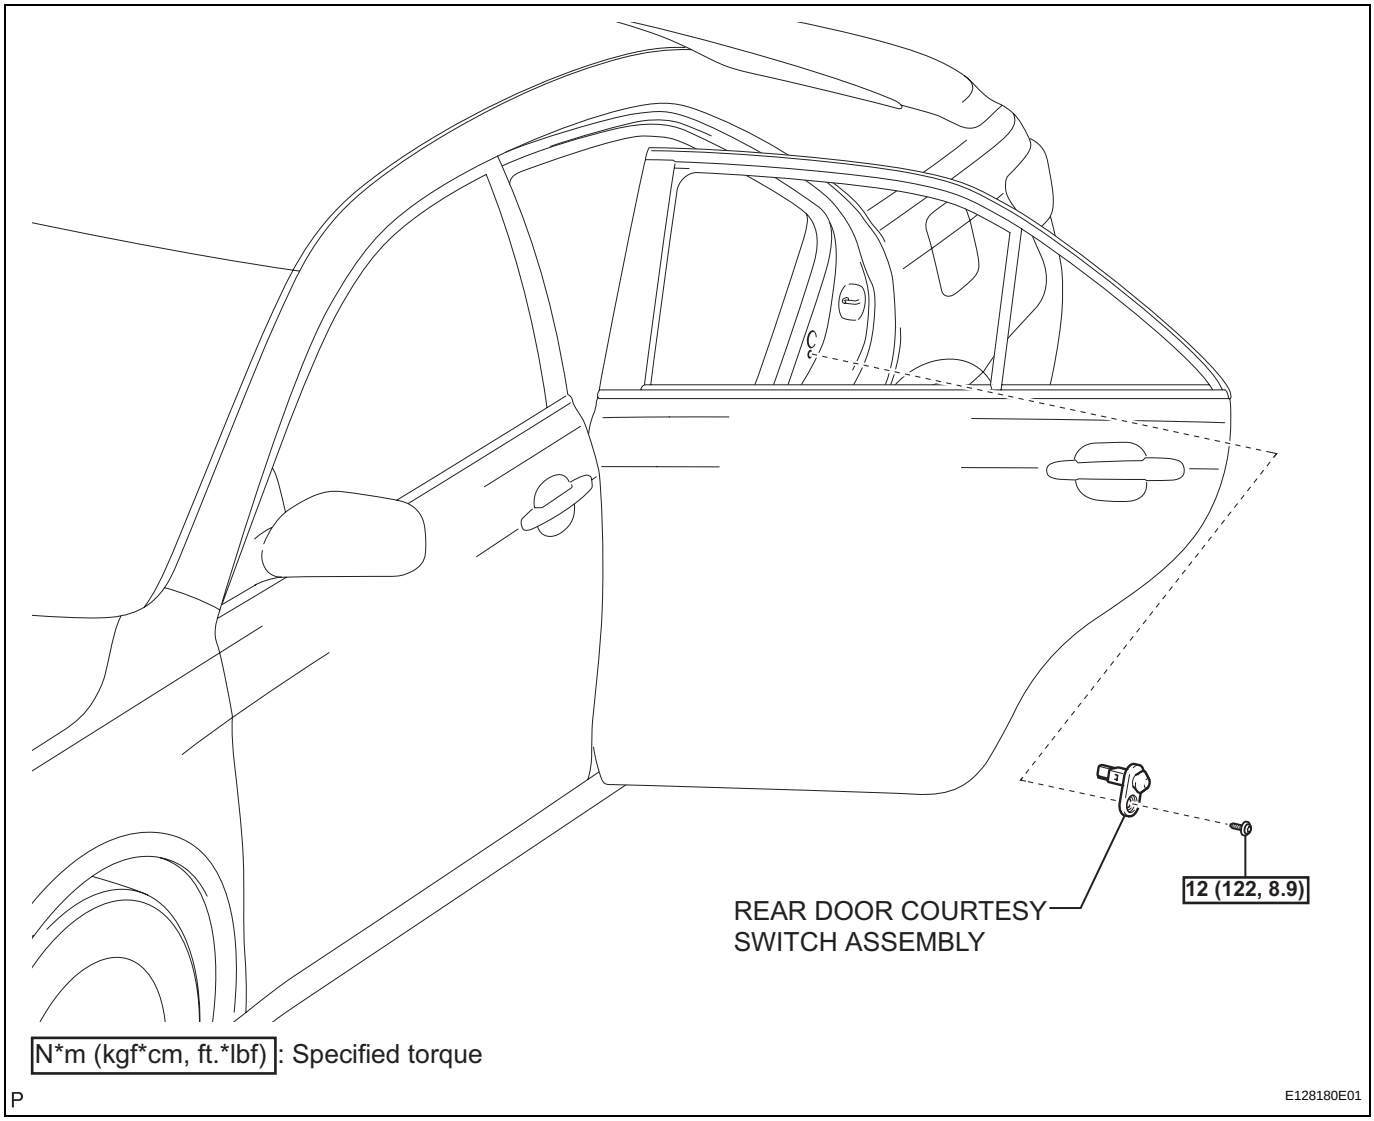
(a) Connect the connector.

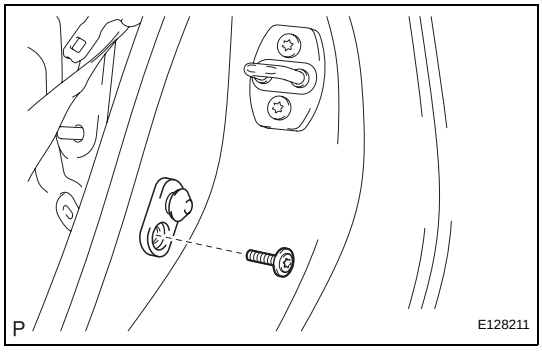
(b) Using a "TORX" socket wrench (T30), install the front door courtesy switch assembly with the "TORX" bolt.

Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf)

REAR DOOR COURTESY SWITCH

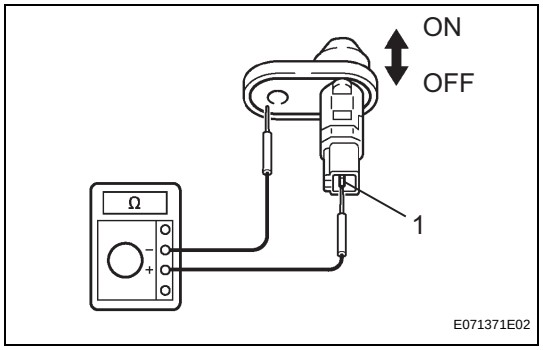
COMPONENTS





REMOVAL

1. **REMOVE REAR DOOR COURTESY SWITCH ASSEMBLY**
   (a) Using a "TORX" socket wrench (T30), remove the "TORX" bolt.
   (b) Disconnect the connector and remove the rear door courtesy switch assembly.



INSPECTION

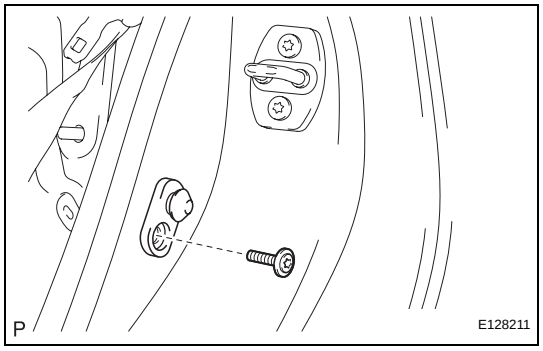
1. INSPECT REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Operation	Specified Condition
1 - Switch body	Not pushed (ON)	Below 1 Ω
	Pushed (OFF)	10 kΩ or higher

If the result is not as specified, replace the rear door courtesy light switch assembly.



INSTALLATION

1. INSTALL REAR DOOR COURTESY SWITCH ASSEMBLY

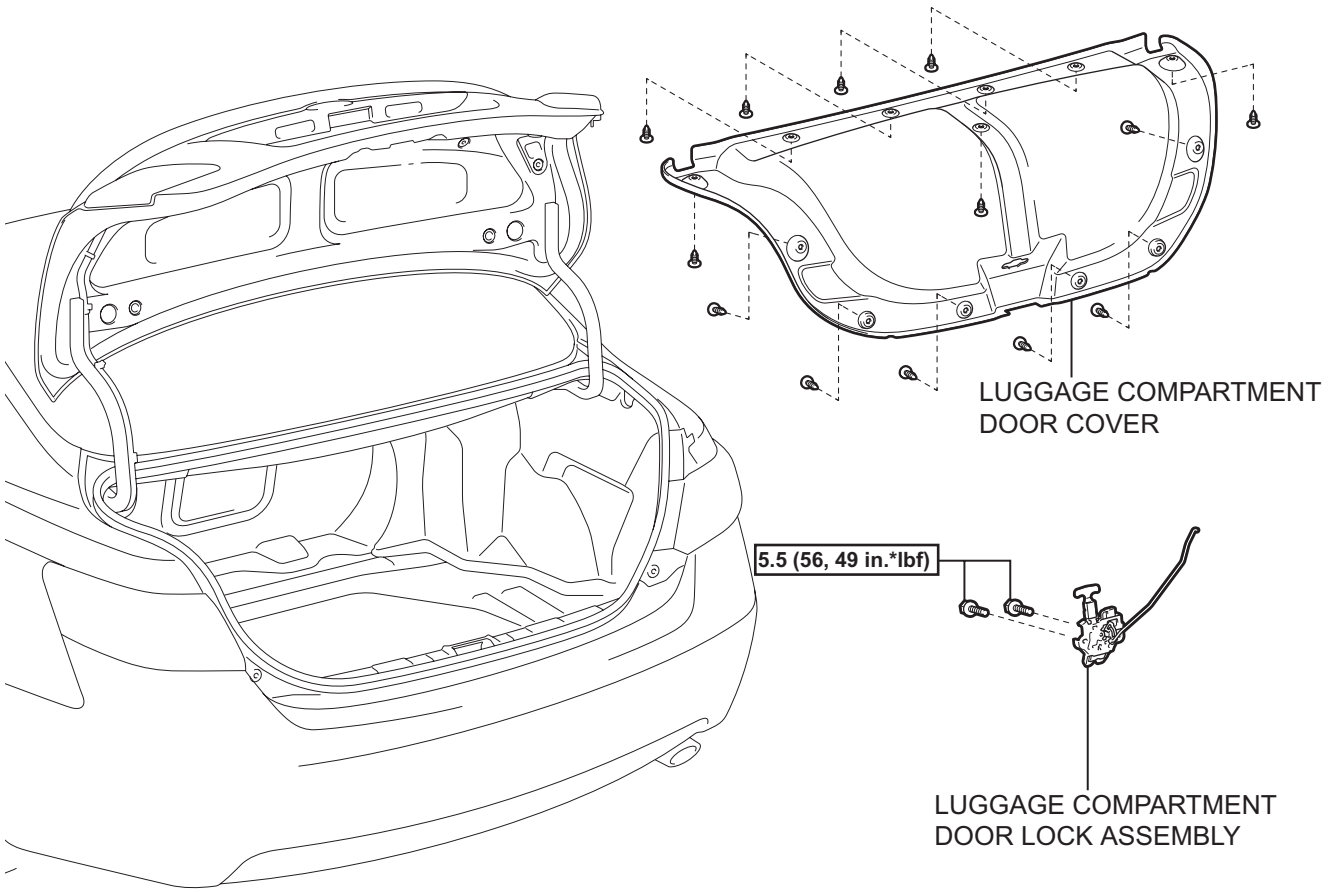
(a) Connect the connector.

(b) Using a "TORX" socket wrench (T30), install the rear door courtesy switch assembly with the "TORX" bolt.

Torque: 12 N*m (122 kgf*cm, 8.9 ft.*lbf)

BACK DOOR COURTESY SWITCH

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque

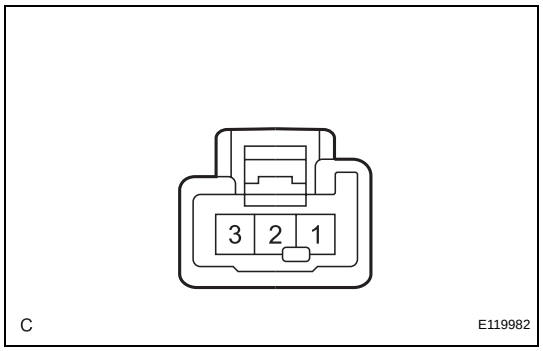
P

B136883E01

REMOVAL

1. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-61)**
2. **REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-63)**

INSPECTION



1. **INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Door is closed	10 kΩ or higher
1 - 2	Door is open	Below 1 Ω

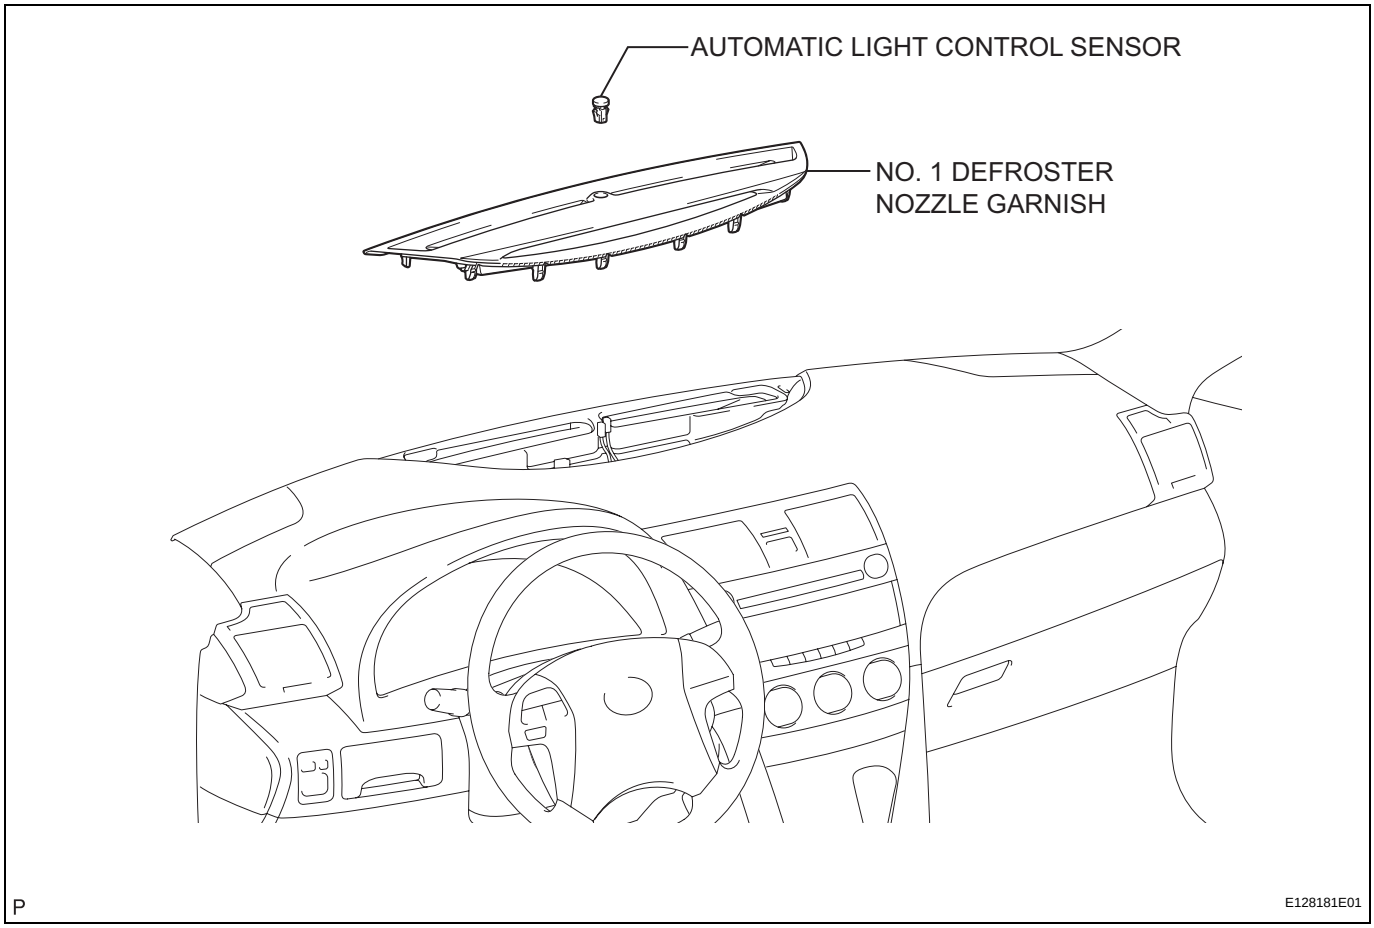
If the result is not as specified, replace the luggage compartment door lock assembly.

INSTALLATION

1. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-64)**
2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-64)**

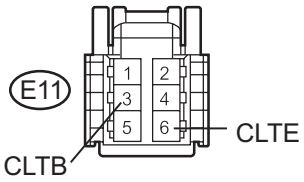
AUTOMATIC LIGHT CONTROL SENSOR

COMPONENTS



Wire Harness Side:

Automatic Light Control Sensor



ON-VEHICLE INSPECTION

1. INSPECT AUTOMATIC LIGHT CONTROL SENSOR (for Manual Air Conditioning System)

(a) Disconnect the E11 automatic light control sensor connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-3 (CLTB) - E11-6 (CLTE)	Ignition switch off	Below 1 V
	Ignition switch on (IG)	10 to 14 V

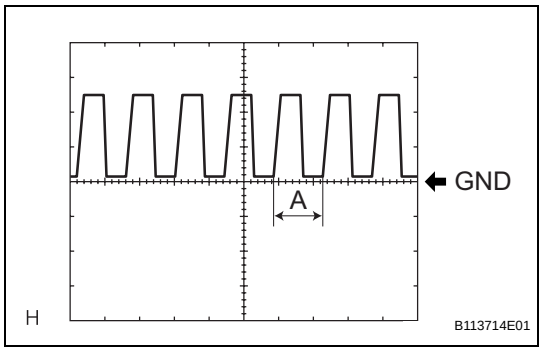
Standard resistance

Tester Connection	Specified Condition
E11-6 (CLTE) - Body ground	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the automatic light control sensor connector.

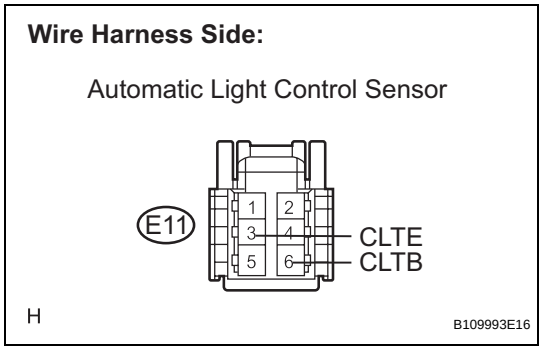
(d) Connect an oscilloscope to the automatic light control sensor connector.



(e) Check the waveform.
OK

Tester Connection	Tool Setting	Condition	Specified Condition
E11-6 (CLTE) - E11-4 (CLTS)	5 V/DIV., 5 ms./ DIV	Ignition switch on (IG), light control switch in AUTO	Correct waveform is as shown

HINT:
If the ambient light becomes brighter, width A becomes narrower.
If the result is not as specified, replace the automatic light control sensor.



2. INSPECT AUTOMATIC LIGHT CONTROL SENSOR (for Automatic Air Conditioning System)

(a) Disconnect the E11 automatic light control sensor connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-6 (CLTB) - E11-3 (CLTE)	Ignition switch off	Below 1 V
	Ignition switch on (IG)	10 to 14 V

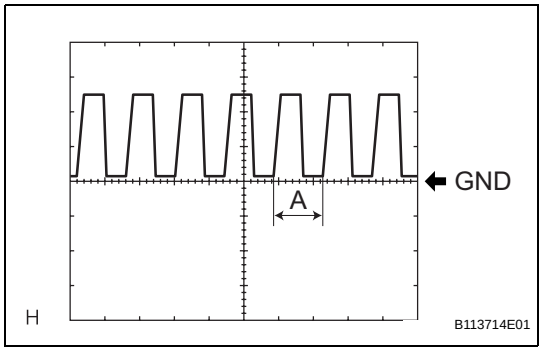
Standard resistance

Tester Connection	Specified Condition
E11-3 (CLTE) - Body ground	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the automatic light control sensor connector.

(d) Connect an oscilloscope to the automatic light control sensor connector.



(e) Check the waveform.
OK

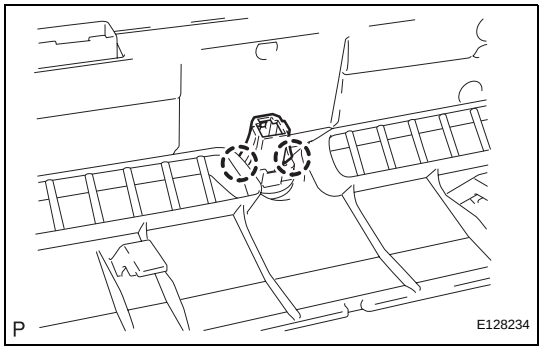
Tester Connection	Tool Setting	Condition	Specified Condition
E11-3 (CLTE) - E11-5 (CLTS)	5 V/DIV., 5 ms./ DIV	Ignition switch on (IG), light control switch in AUTO	Correct waveform is as shown

HINT:
If the ambient light becomes brighter, width A becomes narrower.
If the result is not as specified, replace the automatic light control sensor.

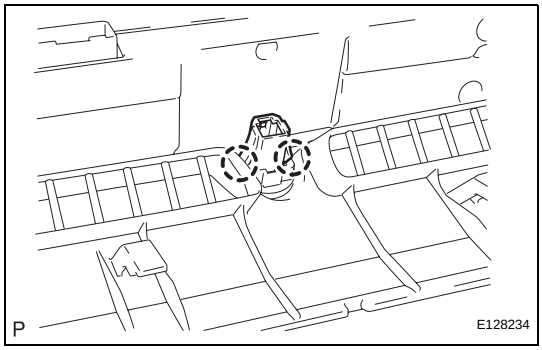
REMOVAL

1. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)**

2. **REMOVE AUTOMATIC LIGHT CONTROL SENSOR**
   (a) Disengage the 2 claws and remove the automatic light control sensor.



INSTALLATION

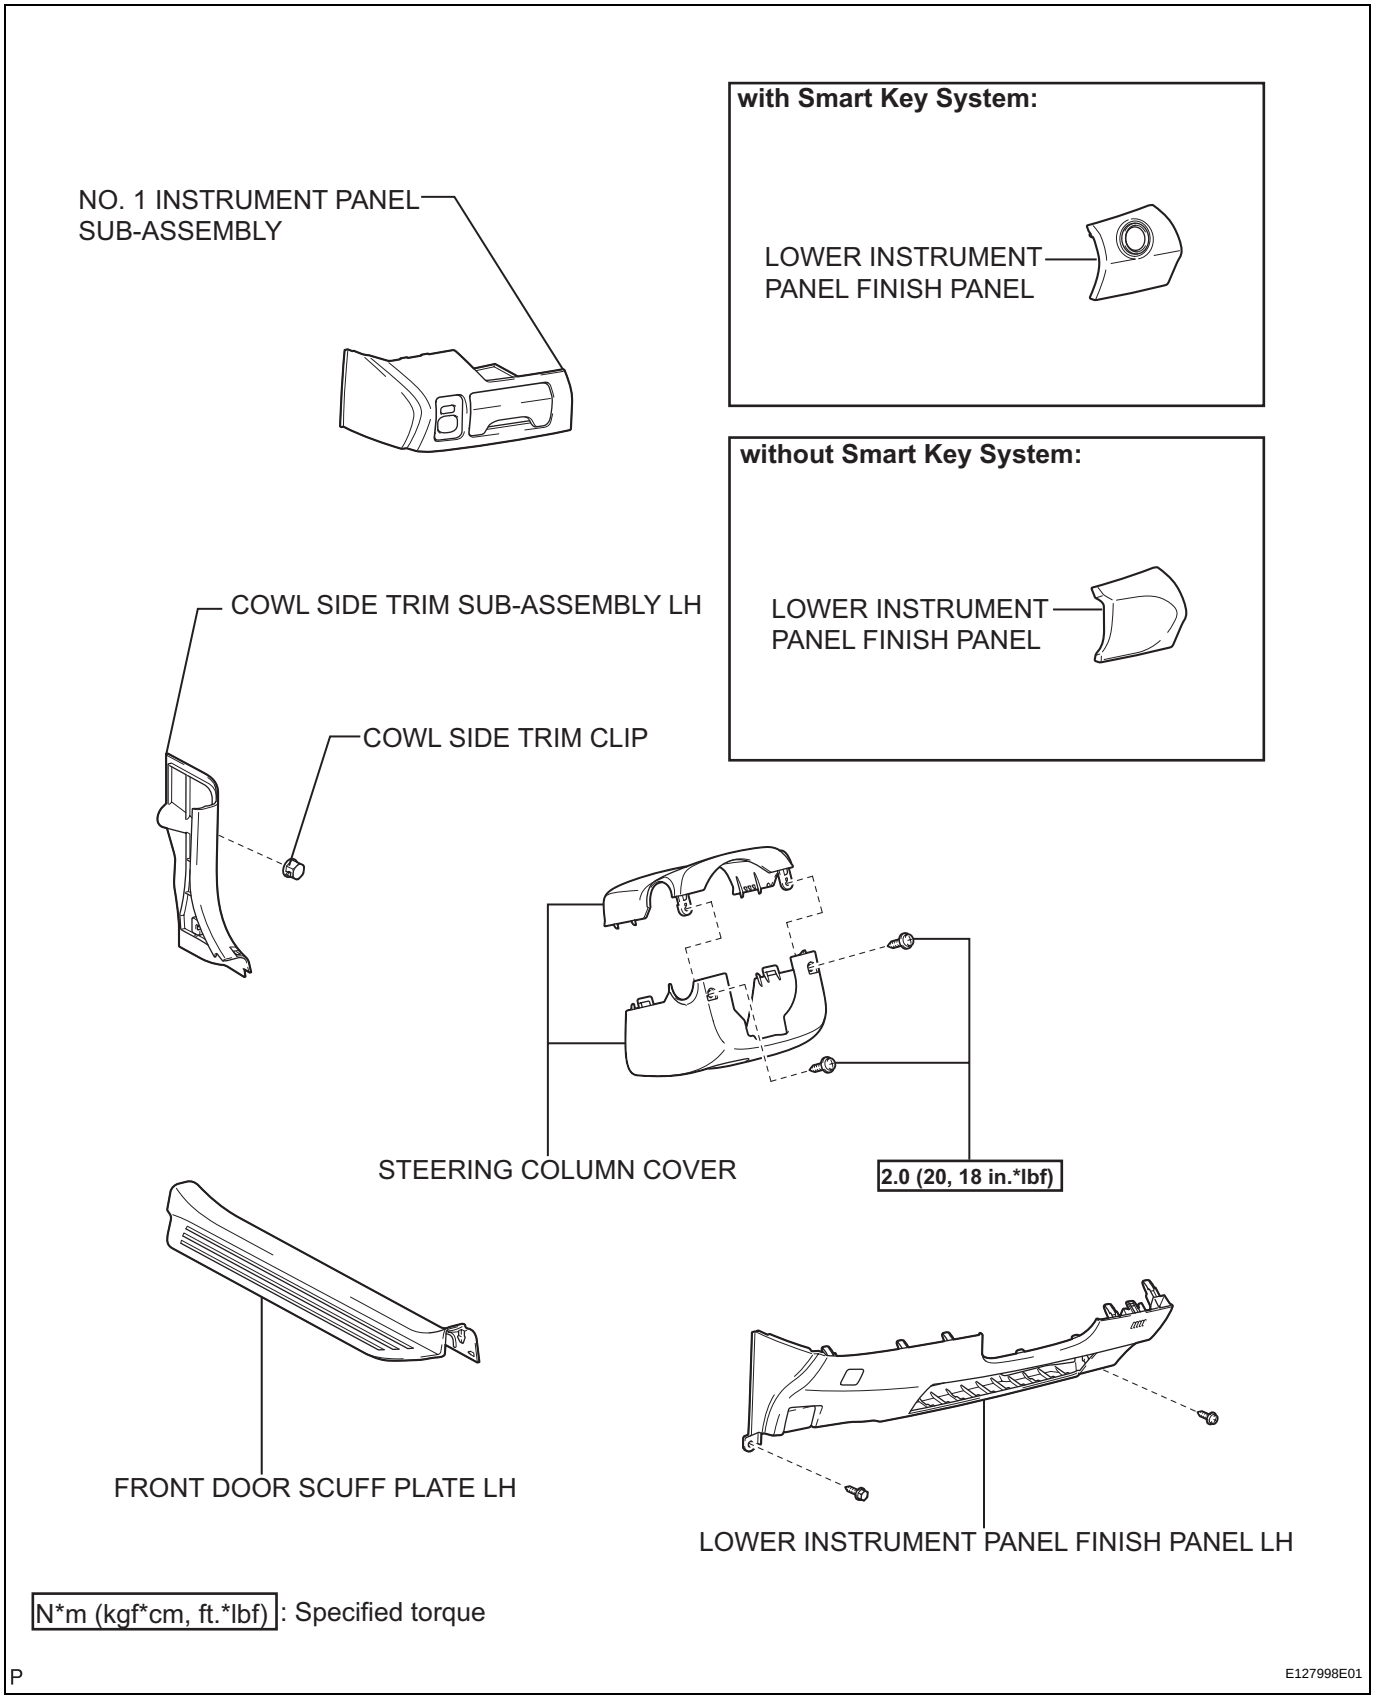


1. **INSTALL AUTOMATIC LIGHT CONTROL SENSOR**
   (a) Engage the 2 claws and install the automatic light control sensor.

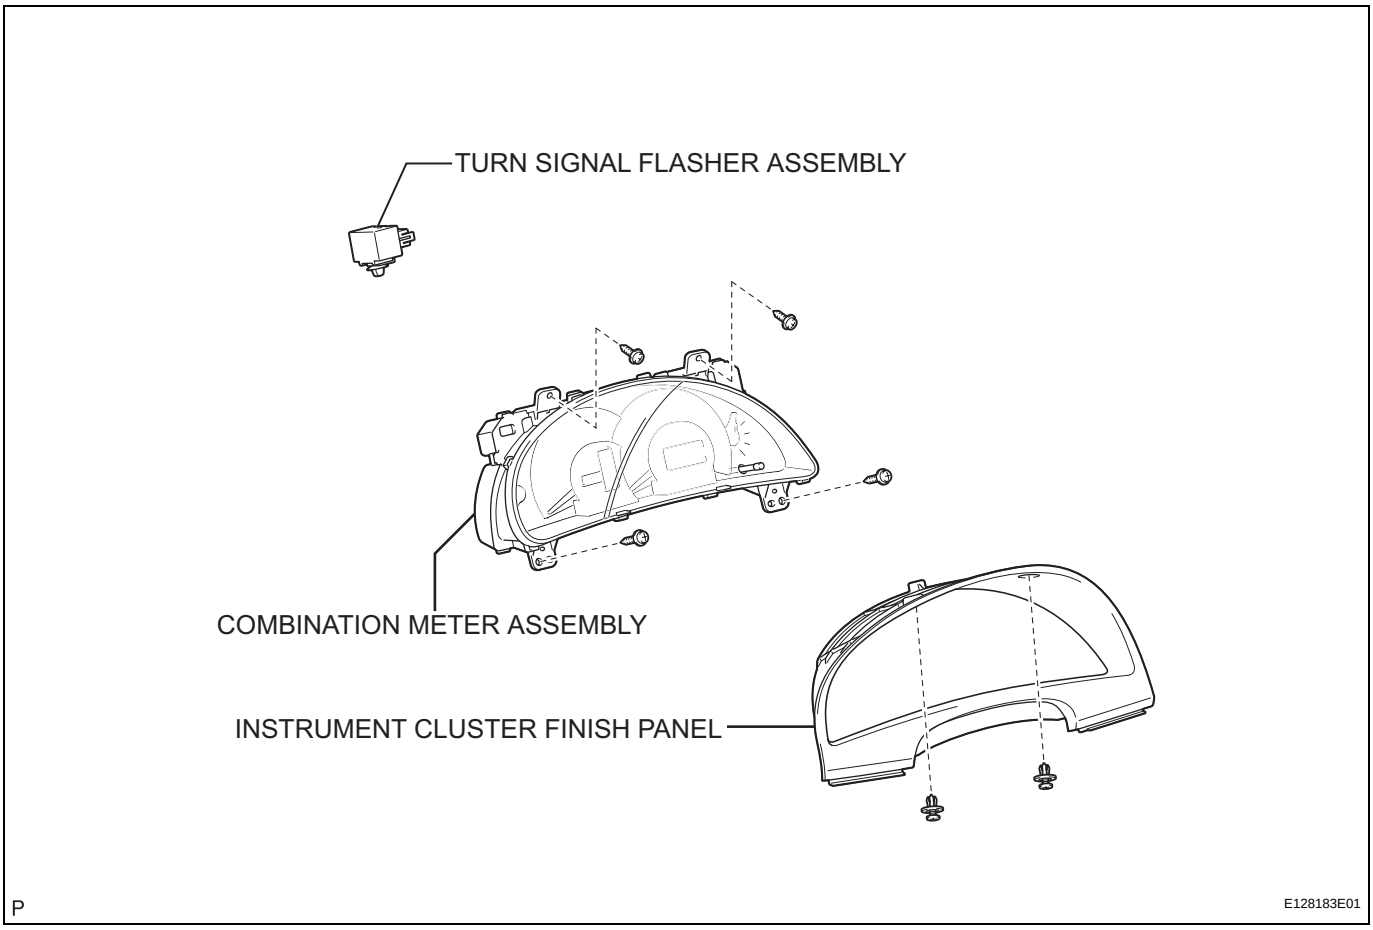
2. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-48)**

TURN SIGNAL FLASHER ASSEMBLY

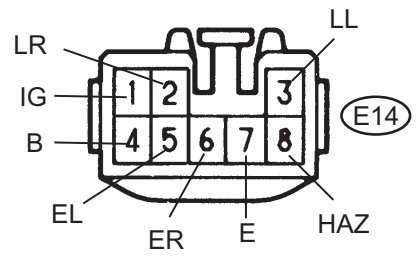
COMPONENTS



LI



Wire Harness Side:



ON-VEHICLE INSPECTION

1. INSPECT TURN SIGNAL FLASHER ASSEMBLY

(a) Disconnect the E14 turn signal flasher assembly connector.

(b) Measure the voltage and resistance according the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E14-1 (IG) - Body ground	Ignition switch off	Below 1 V
E14-1 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V
E14-4 (B) - Body ground	Always	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
E14-5 (EL) - Body ground	Turn signal switch OFF	10 kΩ or higher
E14-5 (EL) - Body ground	Turn signal switch in LH position	Below 1 Ω
E14-6 (ER) - Body ground	Turn signal switch OFF	10 kΩ or higher
E14-6 (ER) - Body ground	Turn signal switch in RH position	Below 1 Ω
E14-7 (E) - Body ground	Always	Below 1 Ω
E14-8 (HAZ) - Body ground	Hazard warning switch OFF	10 kΩ or higher

LI

Tester Connection	Condition	Specified Condition
E14-8 (HAZ) - Body ground	Hazard warning switch ON	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the turn signal flasher assembly connector.

(d) Measure the voltage according to the valve(s) in the table below.

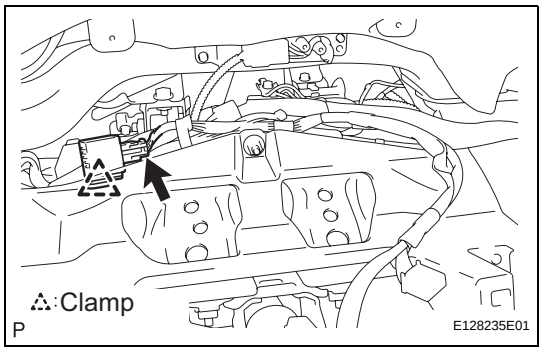
Standard voltage

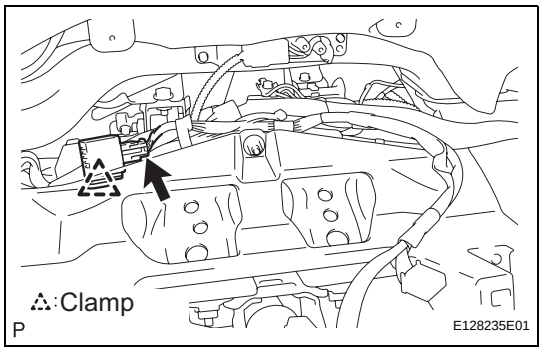
Tester Connection	Condition	Specified Condition
E14-2 (LR) - Body ground	Hazard warning switch OFF	Below 1 V
E14-2 (LR) - Body ground	Hazard warning switch ON	10 to 14 V (60 to 120 times per minute)
E14-2 (LR) - Body ground	Turn signal switch OFF	Below 1 V
E14-2 (LR) - Body ground	Ignition switch on (IG) and turn signal switch in RH position	10 to 14 V (60 to 120 times per minute)
E14-3 (LL)- Body ground	Hazard warning switch OFF	Below 1 V
E14-3 (LL) - Body ground	Hazard warning switch ON	10 to 14 V (60 to 120 times per minute)
E14-3 (LL) - Body ground	Turn signal switch OFF	Below 1 V
E14-3 (LL) - Body ground	Ignition switch on (IG) and turn signal switch in LH position	10 to 14 V (60 to 120 times per minute)
E14-5 (EL) - Body ground	Ignition switch on (IG) and turn signal switch OFF	10 to 14 V
E14-5 (EL) - Body ground	Ignition switch on (IG) and turn signal switch in LH position	Below 1 V
E14-6 (ER) - Body ground	Ignition switch on (IG) and turn signal switch OFF	10 to 14 V
E14-6 (ER) - Body ground	Ignition switch on (IG) and turn signal switch in RH position	Below 1 V
E14-8 (HAZ) - Body ground	Hazard warning switch OFF	10 to 14 V
E14-8 (HAZ) - Body ground	Hazard warning switch ON	Below 1 V

If the result is not as specified, replace the turn signal flasher assembly.

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
4. **REMOVE STEERING COLUMN COVER (See page SR-39)**
5. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
6. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
8. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-65)**
9. **REMOVE COMBINATION METER ASSEMBLY (See page ME-65)**
10. **REMOVE TURN SIGNAL FLASHER ASSEMBLY**
    (a) Disconnect the connector.
    (b) Remove the clamp and the turn signal flasher assembly.

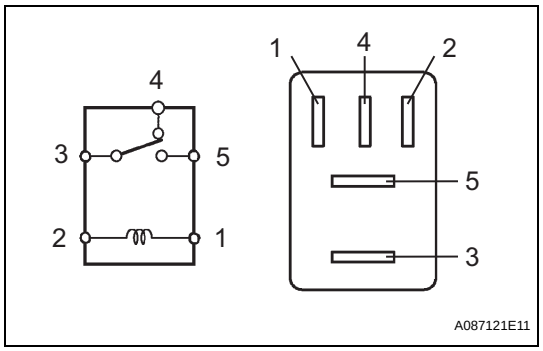




INSTALLATION

1. **INSTALL TURN SIGNAL FLASHER ASSEMBLY**
    (a) Install the clamp and the turn signal flasher assembly.
    (b) Connect the connector.
2. **INSTALL COMBINATION METER ASSEMBLY (See page ME-67)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-68)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
5. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
6. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
7. **INSTALL STEERING COLUMN COVER (See page SR-50)**

8. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-58)**
9. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
10. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**



TAILLIGHT RELAY

ON-VEHICLE INSPECTION

1. INSPECT TAILLIGHT RELAY

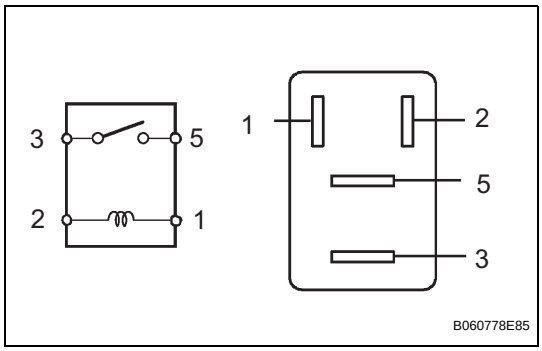
(a) Remove the taillight relay from the instrument panel J/B assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)
3 - 4	Below 1 Ω
	10 kΩ or higher (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the taillight relay.



FOG LIGHT RELAY

ON-VEHICLE INSPECTION

1. INSPECT FOG LIGHT RELAY

(a) Remove the fog light relay from the instrument panel J/B assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

If the result is not as specified, replace the fog light relay.

OUTSIDE VEHICLE

GENERAL MAINTENANCE

Check the parts of the vehicle described below on a daily basis. Performing maintenance checks on the vehicle is the owner's responsibility. The owner may take the vehicle to a service center but it is recommended that the owner perform the checks.
In most cases, special tools are not required.
The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire pressure with a gauge. Make adjustments if necessary.
(b) Check the surfaces of tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION

Check the maintenance schedule in the owner's manual supplement.

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks when they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.
NOTICE:
If you smell gasoline fumes or notice any leaks, locate the cause and repair it.

7. DOORS AND ENGINE HOOD

(a) Check that all of the doors operate smoothly, and that all the latches lock securely.
(b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

INSIDE VEHICLE

GENERAL MAINTENANCE

Check the parts of the vehicle described below on a daily basis. Performing maintenance checks on the vehicle is the owner's responsibility. The owner may take the vehicle to a service center but it is recommended that the owner perform the checks.
In most cases, special tools are not required.
The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink. Also, check that they have enough brightness.

3. WARNING LIGHTS AND BUZZERS

(a) Check that all the warning lights and buzzers are working.

4. HORNS

(a) Check that the horn is working.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPER AND WASHER

(a) Check that the washers are aimed properly. Also, check that the washer fluid hits the center of the operating range of each wiper on the windshield.
(b) Check that the wipers streak or not. Replace the wiper if necessary.

7. WINDSHIELD DEFROSTER

(a) When the heater or air conditioner is on the defroster setting, check that air comes out of the defroster outlet.

8. REAR VIEW MIRROR

(a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check that the steering wheel has the proper free play. Also check for steering difficulty, unusual noises (See page SR-1).

11. SEATS

(a) Check that the seat adjusters, seatback recliner and other front seat controls operate smoothly.
(b) Check that all the latches lock securely in all positions.
(c) Check that the locks hold securely in all positions.
(d) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.
(e) When the rear seatbacks are folded down, check that the latches lock securely.

12. SEAT BELTS

(a) Check that the seat belt system such as the buckles, retractors and anchors operate properly and smoothly.
(b) Check that the belt webbing is not cut, frayed, worn or damaged.

13. ACCELERATOR PEDAL

(a) Check that the pedal operates smoothly. In other words, check that the pedal does not have uneven pedal resistance or become stuck in certain positions.

14. CLUTCH PEDAL

(a) Check that the pedal operates smoothly.
(b) Check if the pedal has the proper free play (See page CL-5).

15. BRAKE PEDAL

(a) Check that the pedal has the proper reserve distance and free play (See page BR-19).
(b) Start the engine and check the brake booster function.

16. BRAKES

(a) In a safe place, check that the vehicle remains straight when applying the brakes.

17. PARKING BRAKE

(a) Check that the pedal or lever has the proper range of motion (See page PB-1).
(b) On a low incline, check that the parking brake alone can stabilize the vehicle.

18. AUTOMATIC TRANSAXLE "PARK" MECHANISM

(a) Check the lock release button of the shift lever for proper and smooth operation.
(b) When the shift lever is in the P position and all brakes are released on a low incline, check that the vehicle is stable.

UNDER HOOD

GENERAL MAINTENANCE

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check that the front of the radiator is clean and free of leaves, dirt and bugs.

(b) Check the hoses for cracks, kinks, rotting or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check that the electrolyte level of all the battery cells is between the upper and lower lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

(a) Check that the brake fluid levels are near the upper level line on the see-through reservoirs.

7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oiliness.

8. POWER STEERING FLUID LEVEL

(a) Check the fluid level in the fluid reservoir.

HINT:

If the fluid is hot, check that the fluid level is within the HOT range on the fluid reservoir. If the fluid is cold, check that the fluid level is within the COLD range.

9. ENGINE OIL LEVEL

(a) Check that the level of engine oil is between "F" and "L" on the dipstick with the engine turned off.

10. AUTOMATIC TRANSAXLE FLUID LEVEL (for U250E)
(See page AX-123)

11. MANUAL TRANSAXLE OIL LEVEL
(See page MX-2)

12. EXHAUST SYSTEM

(a) Check for unusual exhaust sounds or abnormal exhaust fumes. Locate the cause and repair it.

ENGINE

GENERAL MAINTENANCE

HINT:
Inspect these items on a cooled down engine.

1. INSPECT DRIVE BELT

Type	See procedures
2AZ-FE	See page EM-6
2GR-FE	See page EM-6

2. REPLACE ENGINE OIL AND OIL FILTER

Type	See procedures
2AZ-FE	See page LU-1
2GR-FE	See page LU-1

3. REPLACE ENGINE COOLANT

Type	See procedures
2AZ-FE	See page CO-5
2GR-FE	See page CO-5

4. INSPECT EXHAUST PIPES AND MOUNTINGS

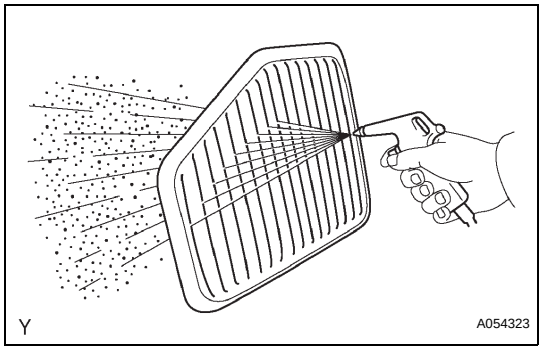
(a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

5. INSPECT SPARK PLUGS

Type	See procedures
2AZ-FE	See page IG-5
2GR-FE	See page IG-5

6. INSPECT BATTERY

Type	See procedures
2AZ-FE	See page CH-4
2GR-FE	See page CH-4



7. INSPECT AIR CLEANER FILTER

(a) Remove the air filter.
(b) Visually check that the air filter is not excessively damaged or oily. If necessary, replace the air filter.
(c) Reinstall the air filter.

8. REPLACE AIR CLEANER FILTER

(a) Replace the air filter with a new one.

9. INSPECT FUEL TANK CAP GASKET

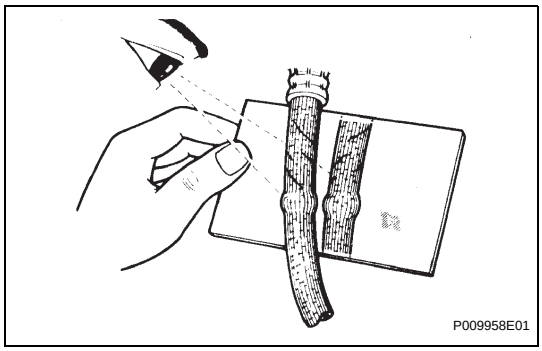
Type	See procedures
2AZ-FE	See page EC-5
2GR-FE	See page EC-5

10. INSPECT FUEL LINES AND CONNECTIONS AND FUEL TANK VAPOR VENT SYSTEM HOSES AND FUEL TANK BANDS

(a) Visually check the fuel lines for cracks, leakage, loose connections, deformation or tank band looseness.

11. INSPECT CHARCOAL CANISTER

Type	See procedures
2AZ-FE	See page EC-9
2GR-FE	See page EC-9



MA

BRAKE

GENERAL MAINTENANCE

1. INSPECT BRAKE LINE PIPES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:
- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all the clamps for tightness and the connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

2. INSPECT BRAKE PEDAL

(See page BR-19)

3. INSPECT PARKING BRAKE

(See page PB-1)

4. INSPECT BRAKE LININGS

(a) Check the brake linings. Also check the brake linings of parking brake.

5. INSPECT FRONT BRAKE

(a) Check the front brake pads and discs (See page BR-50).

6. INSPECT REAR BRAKE

(a) Check the rear brake pads, discs linings and drums (See page BR-62).

7. INSPECT OR CHANGE BRAKE FLUID

(See page BR-6)

Fluid:

SAE J1703 or FMVSS No. 116 DOT3

CHASSIS

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE & GEAR HOUSING

(a) Check the steering wheel free play (See page SR-1).

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

(4) Check that the steering gear housing is not damaged.

(5) Check that the connector are properly connected to the steering gear housing.

2. INSPECT BALL JOINT AND DUST COVER

(a) Inspect the ball joints for excessive looseness.

(1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.

(2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.

(3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.

(4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

(b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

(a) Check the drive shaft boots for loose clamps, grease leakage, kinks or damage.

4. CHECK AUTOMATIC TRANSAXLE FLUID

(a) Visually check the transaxle for fluid leakage. If oil is leaking, find the cause and repair it.

5. CHECK MANUAL TRANSAXLE OIL (FLUID)

(a) Visually check the transmission for oil (fluid) leakage. If oil is leaking, find the cause and repair it.

6. INSPECT FRONT AND REAR SUSPENSION

Type	See procedures
Front Suspension	See page SP-4
Rear Suspension	See page SP-13

BODY

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS ON CHASSIS AND BODY

(a) Where necessary, tighten all the parts of the chassis.
- Front axle and suspension
- Drive train
- Rear axle and suspension
- Brake system
- Engine mounting, etc.

(b) Where necessary, tighten all the parts of the body.
- Seat belt system
- Seat
- Doors and hood
- Body mountings
- Fuel tank
- Exhaust pipe system, etc.

2. REPLACE AIR CONDITIONING FILTER

(a) Remove the glove compartment assembly.
(b) Remove the filter case from the filter outlet.
(c) Remove the filter from the filter case.
(d) Replace the filter with a new one.
(e) Installation is in the reverse order.

3. ROAD TEST

(a) Check the engine and chassis for abnormal noises.
(b) Check that the vehicle does not wander or pull to one side.
(c) Check that the brakes work properly and do not drag.
(d) Do setting of the parking brake shoes.

4. BODY INSPECTION

(a) Check the body exterior for dents, scratches and rust.
(b) Check the underbody for rust and damage.
If necessary, replace or repair.

5. FINAL INSPECTION

(a) Check the operation of the body parts.
(1) Hood
- Auxiliary catch operates properly.
- Hood locks securely when closed.

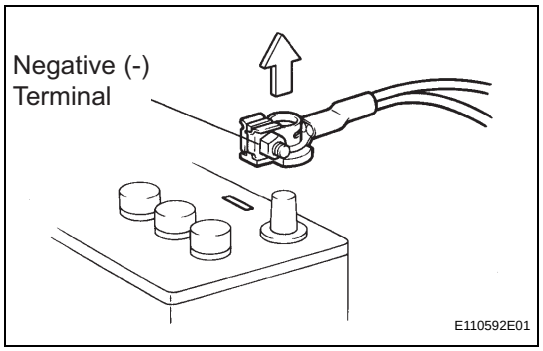
(2) Front and rear doors
- Door locks operate properly.
- Doors close properly.

(3) Back door
- Door lock operates properly.

(4) Seats
- Seat adjusts easily and locks securely in any position.
- Front seatback locks securely in any position.

- Folding-down rear seatbacks lock securely.

(5) Be sure to deliver a clean car. Especially check:
- Steering wheel
- Shift lever knob
- All switch knobs
- Door handles
- Seats



METER / GAUGE SYSTEM

PRECAUTION

1. REMOVAL AND INSTALLATION OF THE BATTERY TERMINAL

(a) Before performing electrical work, disconnect the battery negative (-) terminal in order to prevent a short in the system.

(b) When disconnecting and reconnecting the battery cable, turn the ignition switch and lighting switches off and loosen the terminal nut completely. Perform these operations without prying on the terminal.

2. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

Switch Type / Expression	Ignition Switch (position)	Engine Switch (condition)
Ignition switch off	LOCK	Off
Ignition switch on (IG)	ON	On (IG)
Ignition switch on (ACC)	ACC	On (ACC)
Engine start	START	Start

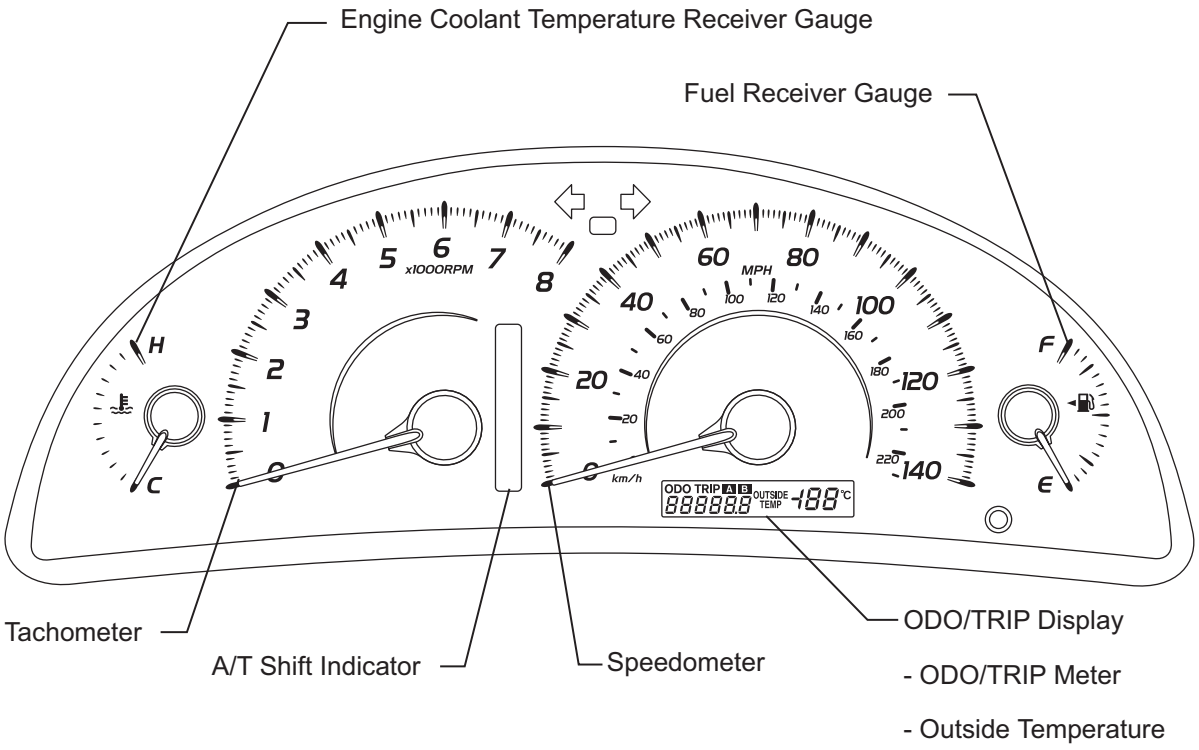
SYSTEM DESCRIPTION

1. METER GAUGE

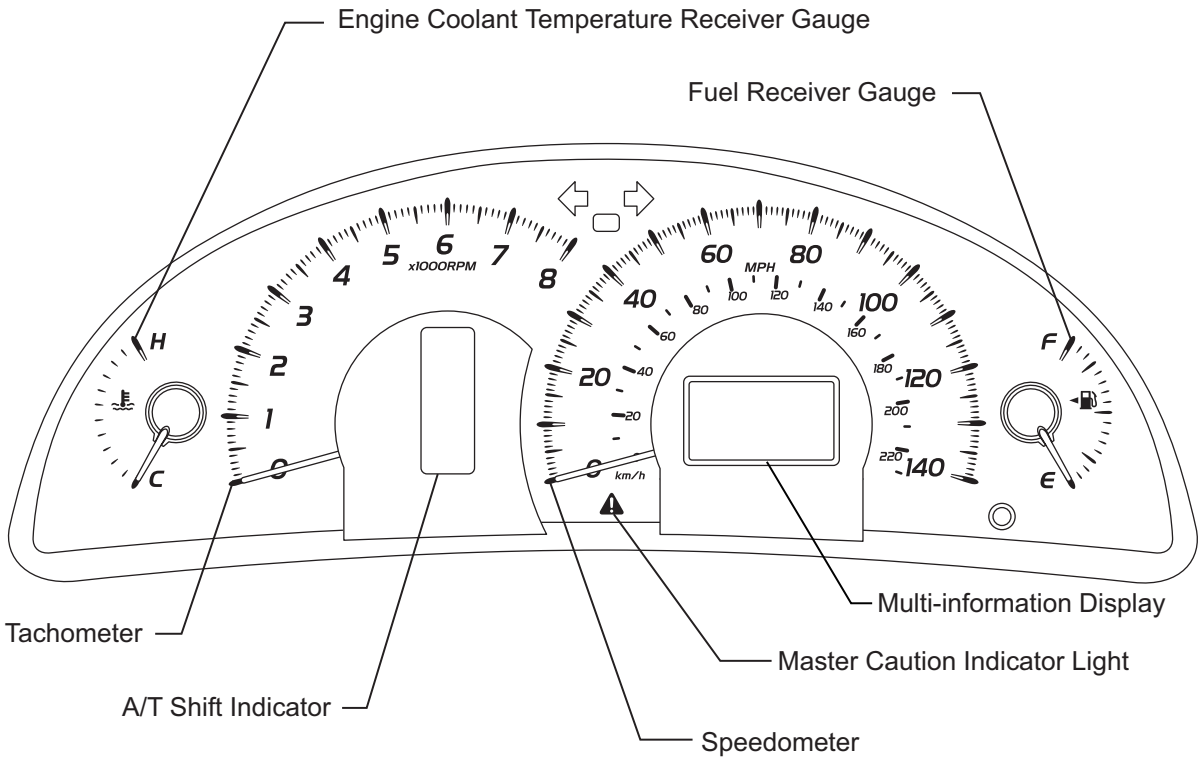
without Multi-information Display:



H

E128076E01

with Multi-information Display:



H

E128139E01

METER GAUGE:

Item	Detail
Speedometer	Indicates the vehicle speed receiving a signal from the skid Control ECU. (CAN (CAN No. 1 Bus))
Tachometer	Indicates the engine speed based on a signal received from the ECM. (CAN (CAN No. 1 Bus))
Engine Coolant Temperature Receiver Gauge	Indicates the engine coolant temperature based on a signal received from the ECM. (CAN (CAN No. 1 Bus))
Fuel Receiver Gauge	Indicates the fuel level based on a signal the fuel sender gauge. (Direct Line)

WARNING/INDICATOR:

Item	Detail
TURN SIGNAL	Receives a turn signal from the turn signal flasher. (Direct Line)
BEAM	Receives a beam signal from the main body ECU. (CAN (CAN No. 1 Bus))
CHARGE	Receives a charge light signal from the alternator L terminal. (Direct Line)
CHECK E/G	Receives a check engine light signal from the ECM. (Direct Line)
DOOR	Open door indicator light comes on receiving a door condition signal from the main body ECU. (CAN (CAN MS Bus))
D-BELT	Receives a driver side seat belt signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
P-BELT	Receives a passenger side seat belt signal from the center airbag sensor assembly via the main body ECU (CAN) and transmits a passenger side seat belt condition signal to the clock assembly. (Direct Line)
HEAD (*1)	Receives a HEAD indicator light signal from main body ECU. (CAN (CAN No. 1 Bus))
TAIL (*2)	Receives a TAIL indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
A/T SHIFT	Receives an A/T shift condition and A/T gear position signal from the park/neutral position switch and the ECM. (CAN (CAN No. 1 Bus))
FUEL	Receives a fuel signal from the fuel sender gauge. (Direct Line)
ABS	Receives an ABS signal from the skid Control ECU. (CAN (CAN No. 1 Bus))

Item	Detail
SLIP (*3)	Receives a SLIP signal from the skid Control ECU. (CAN (CAN No. 1 Bus))
VSC (*3)	Receives a VSC signal from the skid Control ECU. (CAN (CAN No. 1 Bus))
BRAKE	Receives a brake signal from the brake fluid level warning switch (Direct Line) and the skid Control ECU and main body ECU. (CAN (CAN No. 1 Bus))
CRUISE	Receives a cruise signal from the ECM. (CAN (CAN No. 1 Bus))
AIRBAG	Receives an airbag signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
Oil pressure	Receives an oil pressure signal from the engine oil pressure switch. (Direct Line)
Tire pressure (*4)	Receives a tire pressure signal from the tire pressure warning ECU. (Direct Line)
Washer (*5)	Receives a washer signal from the washer level warning switch. (Direct Line)
Maintenance required (*1)	An oil change reminder light comes on/blinks to remind the driver to change the engine oil depending on the vehicle driving distance.

*1: for U.S.A.
*2: except for U.S.A.
*3: with VSC
*4: with Tire Pressure Warning System
*5: with Washer Level Indicator

HINT:

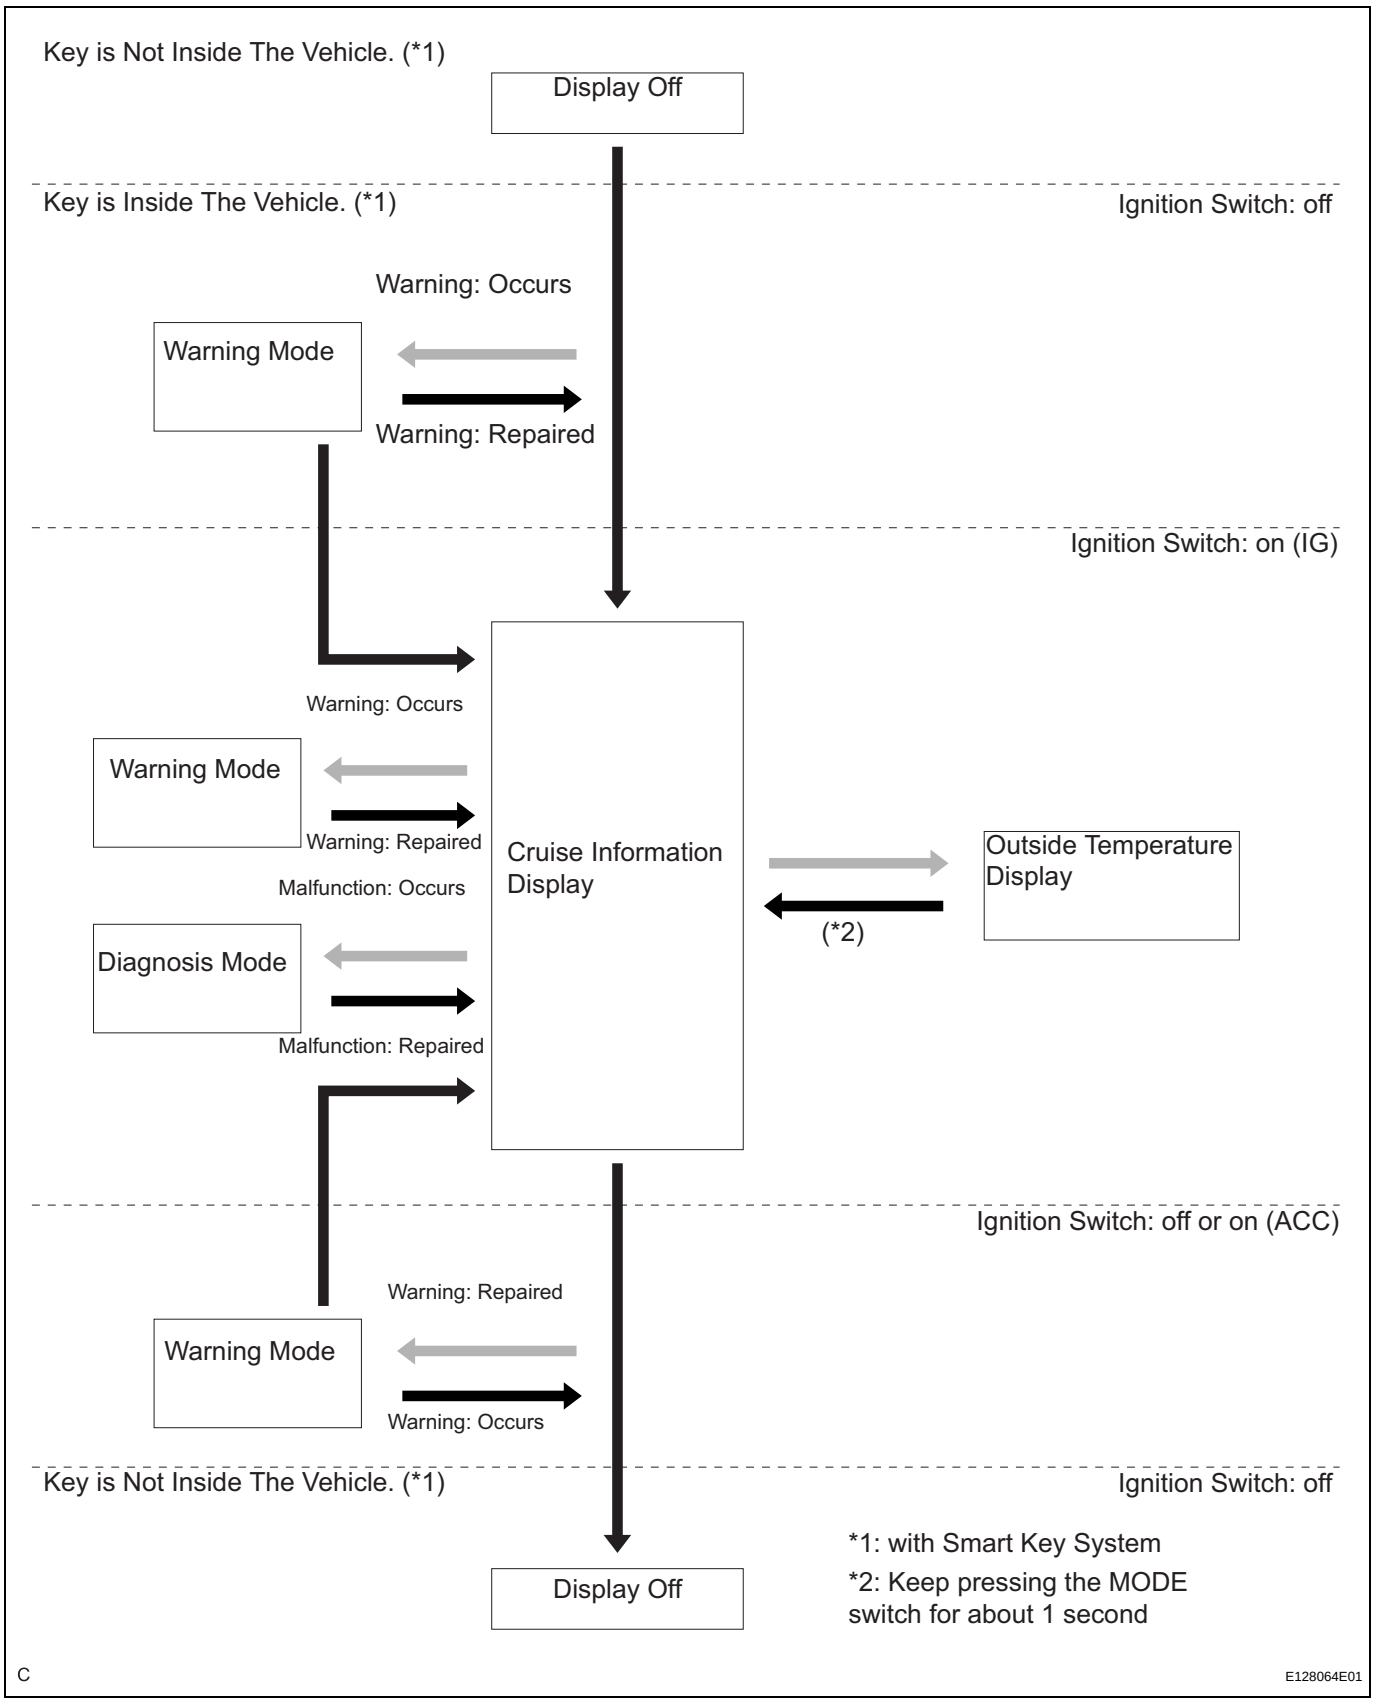
- The multi-information display has been located in the center of the combination meter assembly.
- The display shows a message or animation for each of the functions described in the table below.

MULTI-INFORMATION DISPLAY:

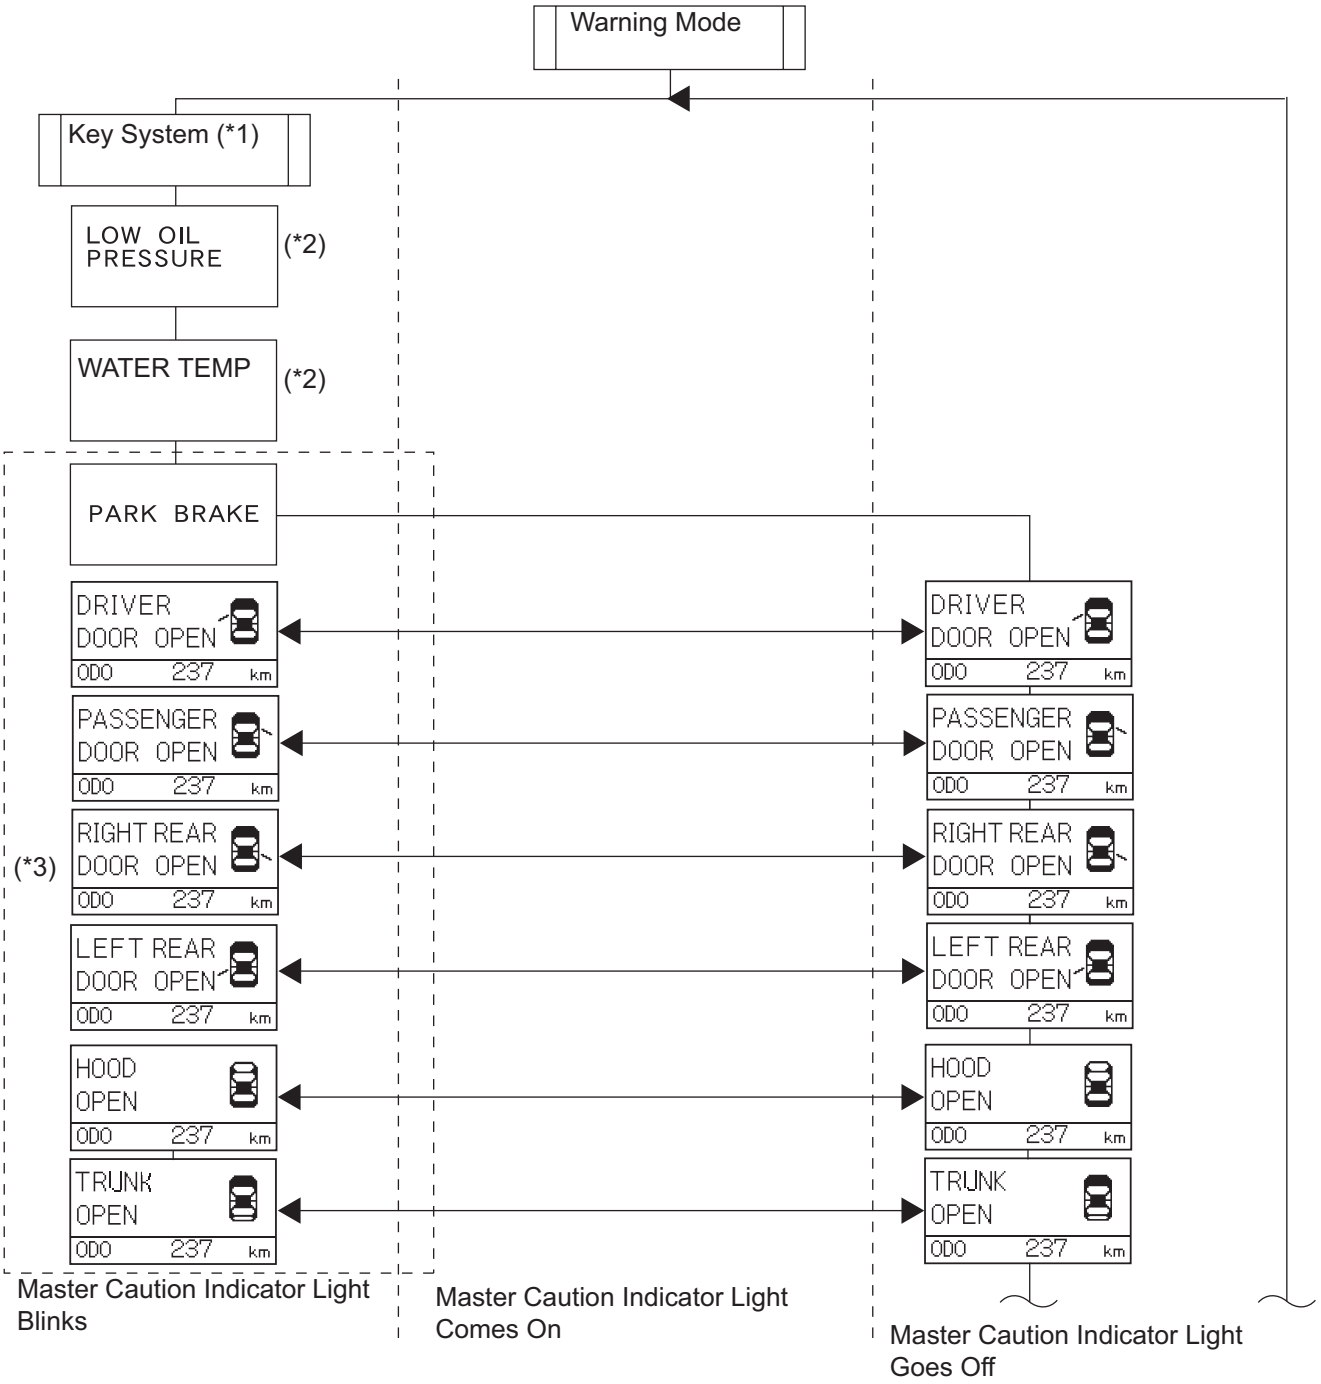
Item	Detail
Door warning	When a door (driver/passenger/rear left/rear right/back/hood) of the vehicle is opened or closed, this item displays a warning message and animation to inform the driver of the condition of the door.
Maintenance required (*1)	• A maintenance required will display the warning message to remind the driver to change the engine oil depending on the vehicle driving distance. • Displays the mode while in the maintenance request reset mode.
ODO/TRIP display	• This display switches between odometer, trip meter A, and trip meter B in accordance with the operation of the ODO/TRIP switch. • It is possible to reset the trip display to keep pressing the trip reset knob for 0.8 second or more.
Outside temperature display	Displays the outside temperature in accordance with the ambient temperature signal from the A/C control amplifier.
Average fuel consumption (after refueling)	• Displays the value that has been calculated by the meter CPU, which is based on the driven distance and the fuel consumption volume after the ignition switch is on (IG). • The average fuel consumption exceeds 99.9 or more, the indication will be "99.9".
Possible running distance	Displays the value that has been calculated by the meter CPU, which is based on the the fuel consumption volume, fuel level, and vehicle speed.
Cruising distance	Displays the cruising distance after starting the engine.
Average vehicle speed	Displays the average vehicle speed after starting the engine.
Warning message	Illuminates or blinks the master warning light and displays a warning message for each type of system failure.
DTC (Diagnostic Trouble Code) display (*3)	Displays the DTCs pertaining to the VSC function.

*1: for U.S.A.
*2: Except for U.S.A.
*3: with VSC

2. MULTI-INFORMATION DISPLAY



ME



*1: with Smart Key System

*2: Warning buzzer sounds when the indication appears.

*3: When the vehicle speed is 5 km/h (3mph) or more, the waring buzzer sounds.

6	CIRCUIT INSPECTION

NEXT

7	REPAIR OR REPLACE

NEXT

8	**CONFIRMATION TEST**

NEXT

END

CUSTOMIZE PARAMETERS

1. COMBINATION METER ASSEMBLY

NOTICE:

Be sure to record the current value before customizing.

HINT:

The following items can be customized using intelligent tester.

METER:

Display (Item)	Default	Contents	Setting
KEY REMND VOLUM	LARGE	Function to change the volume of the key remind warning buzzer	LARGE, MEDIUM, SMALL
KEY REMND SOUND	NORMAL	Function to change the cycle of the key remind warning buzzer	FAST, NORMAL, SLOW
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer.	D/P on, D ON, P on, D/P off

HINT:

This setting is only valid for the buzzer which sounds at the 5 km/h (3 mph) or more.

2. SEAT BELT BUZZER ON/OFF SETTING (Procedure "A")

The seat belt buzzer ON/OFF setting, which is a setting of the buzzer function of the combination meter, can disable the driver and front passenger side seat belt buzzers.

NOTICE:

- **These buzzers should be on for safe driving. Perform these procedures only if it is necessary to set the buzzer off (disabled).**
- **When either the battery cable or the combination meter connector is disconnected, these buzzers are set on (enabled).**
- **Odometer returns to 0 after starting this procedure, although it is not displayed.**

HINT:

"b-oFF" indicates that the buzzer is OFF. "b-on" indicates that the buzzer is ON. The seat belt buzzer ON/OFF setting will be finished (the odometer will display "ODO") if the ODO/TRIP switch is not operated for 10 seconds or more. In this case, perform step 11 to check that the buzzer ON/OFF setting is complete. If it is not complete, start from step 1 again.

(a) Driver and front passenger side seat belt buzzers

(1) Turn the ignition switch on (IG).

(2) Press the ODO/TRIP switch until the odometer displays "ODO".

(3) Ignition switch off.

(4) Turn the ignition switch on (IG).

(5) Press the ODO/TRIP switch immediately (within 6 seconds) and hold it down for 10 seconds or more.

(6) Continue holding down the ODO/TRIP switch and fasten the driver side seat belt.

(7) Check that the odometer displays either "b-on" or "b-oFF".
(8) Press the ODO/TRIP switch to change the display to "b-oFF".
(9) Ignition switch off.
(10) Turn the ignition switch on (IG).
(11) Check that no buzzer sounds.

(b) Front passenger side seat belt buzzer
(1) Turn the ignition switch on (IG).
(2) Press the ODO/TRIP switch until the odometer displays "ODO".
(3) Ignition switch off.
(4) Turn the ignition switch on (IG).
(5) Sit in the front passenger seat. Press the ODO/TRIP switch immediately (within 6 seconds) and hold it down for 10 seconds or more.
(6) Sit in the front passenger seat. Continue holding down the ODO/TRIP switch and fasten the front passenger side seat belt.
(7) Check that the odometer displays either "b-on" or "b-oFF".
(8) Press the ODO/TRIP switch to change the display to "b-oFF".
(9) Ignition switch off.
(10) Turn the ignition switch on (IG).
(11) Check that no buzzer sounds.

INITIALIZATION

1. OIL MAINTENANCE INFORMATION MODE RESET OPERATION

HINT:

- The trip meter reset knob is located on the right side of the combination meter assembly.
- This reset operation is required only for U.S.A..

(a) without multi-information display:

(1) Turn the ignition switch on (IG).

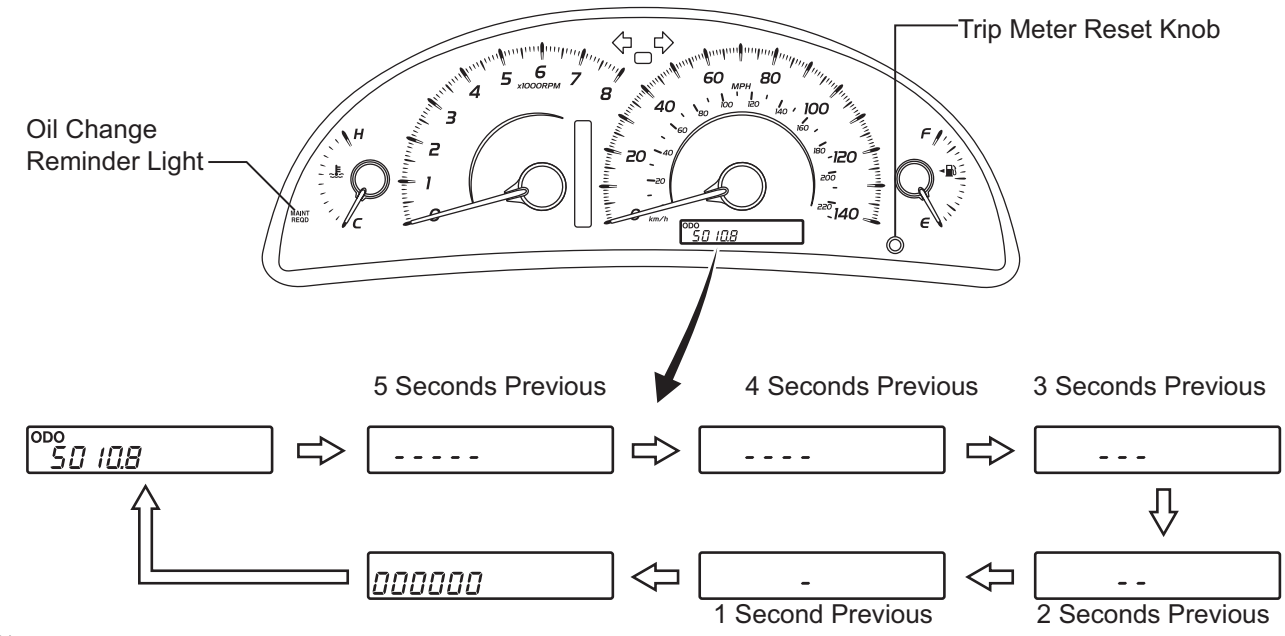
(2) Press the ODO/TRIP switch until the odometer appears.

(3) Ignition switch off.

(4) Turn the ignition switch on (IG).

(5) Turn the ignition switch on (IG) while pressing and holding the trip meter reset knob. Hold the trip meter reset knob until the following conditions are met and 5 seconds have passed.

without Multi-information display:



- When oil change reminder light turns off, the reset is complete.

(b) with multi-information display:

(1) Turn the ignition switch on (IG).

(2) Press the ODO/TRIP switch until the odometer appears.

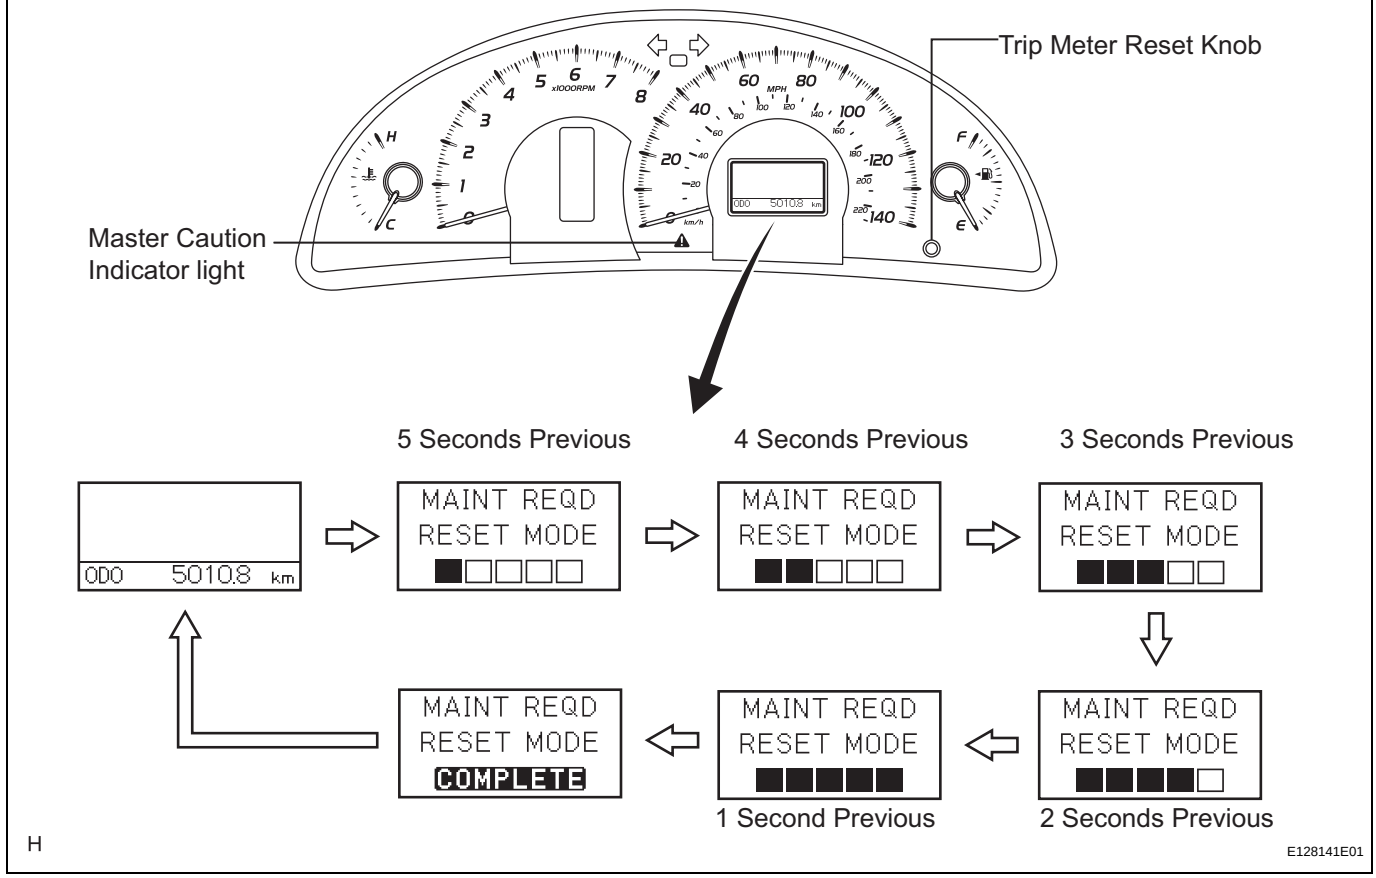
(3) Ignition switch off.

(4) Turn the ignition switch on (IG).

ME

(5) Turn the ignition switch on (IG) while pressing and holding the trip meter reset knob. Hold the trip meter reset knob until the following conditions are met and 5 seconds have passed.

with Multi-information display:



- The multi-information display shows "MAINT REQD RESET MODE".
- The master caution indicator light illuminates.
- When oil change reminder light turns off, the reset is complete.

(6) When "MAINT REQD RESET MODE COMPLETE" disappears and the master caution indicator light turns off, the reset is complete.

PROBLEM SYMPTOMS TABLE

ENTIRE SYSTEM:

Symptom	Suspected area	See page
Entire combination meter does not operate.	Power Source Circuit	ME-42
Meter illumination is always dark.	Meter Illumination Circuit	ME-57
Meter illumination does not dim at night.	Meter Illumination Circuit	ME-59

METER GAUGES:

Symptom	Suspected area	See page
Speedometer malfunction	Speedometer Circuit	ME-44
Tachometer malfunction	Tachometer Circuit	ME-47
Fuel receiver gauge malfunction	Fuel Receiver Gauge Circuit	ME-50
Engine coolant temperature malfunction	Engine Coolant Temperature Receiver Gauge Circuit	ME-54

WARNING LIGHTS:

Symptom	Suspected area	See page
Check engine warning light does not come on.	1. MIL Circuit (for 2AZ-FE)	ES-397
	2. MIL Circuit (for 2GR-FE)	ES-471
	3. Wire Harness or Connector	-
	4. Combination Meter Assembly	ME-63
Charge warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. ECM (for 2AZ-FE)	-
	4. ECM (for 2GR-FE)	-
	5. Combination Meter Assembly	ME-63
Brake warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Brake Warning Light Circuit (without VSC)	BC-91
	4. Brake Warning Light Circuit (with VSC, Bosch Made)	BC-404
	5 Brake Warning Light Circuit (with VSC, Advics Made)	BC-91
	6. Main Body ECU	-
	7. Parking Brake Switch	-
	8. Combination Meter Assembly	ME-63

	4. Main Body ECU	-
	5. Combination Meter Assembly	ME-63
Fuel level warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Fuel Sender Gauge Assembly (for 2AZ-FE)	ME-71
	4. Fuel Sender Gauge Assembly (for 2GR-FE)	ME-74
	5. Combination Meter Assembly	ME-63
Low oil pressure warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Low Oil Pressure Switch	ME-37
	4. Combination Meter Assembly	ME-63
Driver seat belt warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Driver Seat Belt Warning Light Circuit	SB-9
	4. Main Body ECU	-
	5. Center Airbag Sensor Assembly	-
	6. Combination Meter Assembly	ME-63
Front passenger seat belt warning light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Front Passenger Seat Belt Warning Light Circuit	SB-11
	4. Combination Meter Assembly	ME-63
	5. Center Airbag Sensor Assembly	-
	6. Clock Assembly	OT-4
Tire pressure warning light does not come on. (with Tire Pressure Warning System)	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Tire Pressure Warning System	TW-65
	4. Combination Meter Assembly	ME-63
Washer level warning light does not come on (with washer level warning light). (with Washer Level Warning Light)	1. Wire Harness or Connector	-
	2. Combination Meter Assembly	-
	3. Washer Level Switch	-

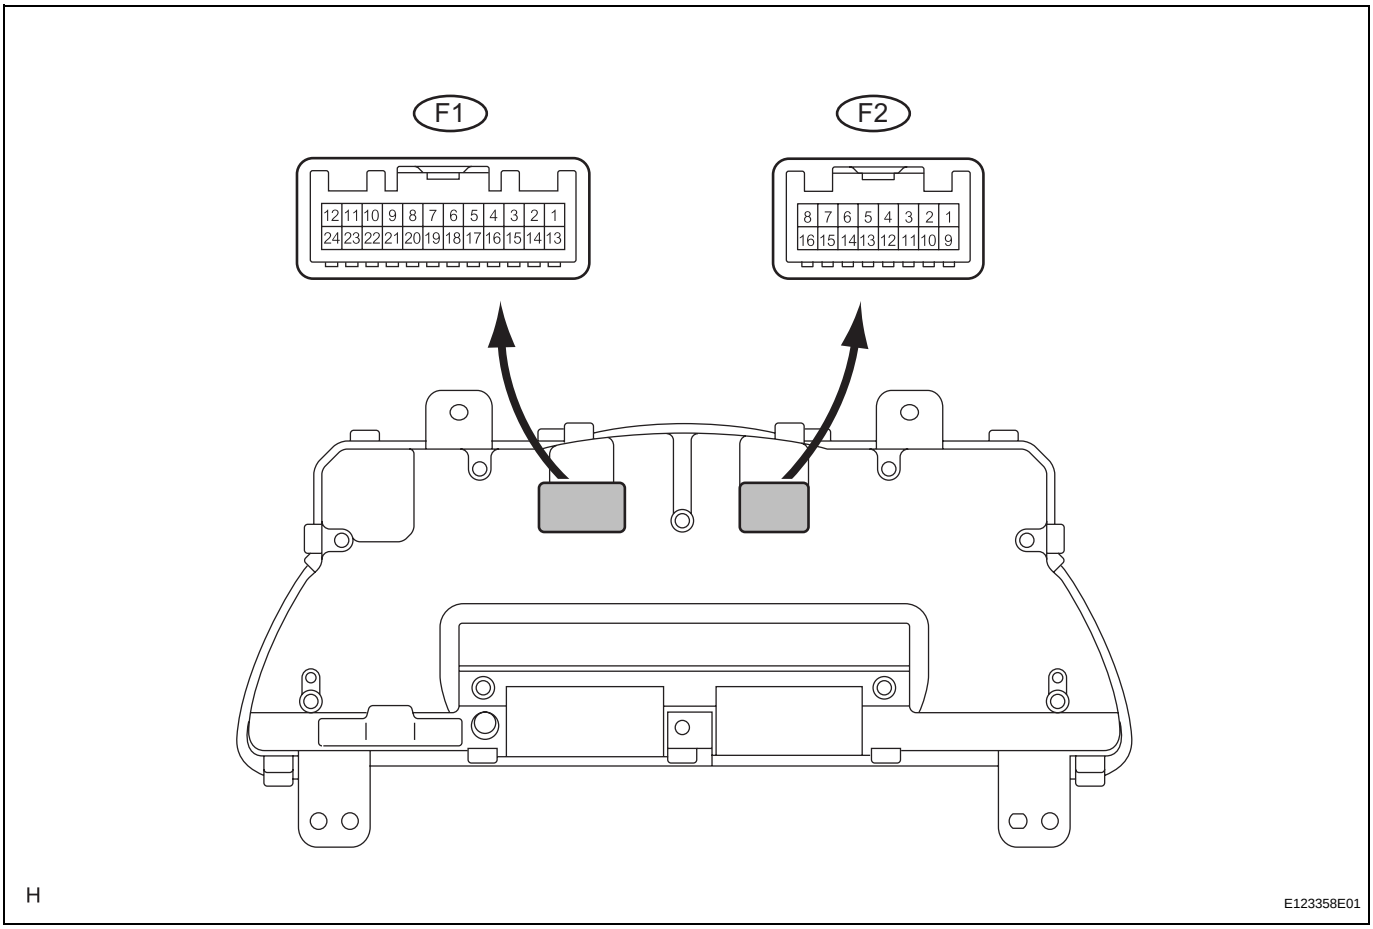
Symptom	Suspected area	See page
VSC warning light does not come on (without Multi-information Display, with VSC).	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. VSC Indicator Light Circuit (with VSC, Bosch Made)	BC-392
	4. VSC Indicator Light Circuit (with VSC, Advics Made)	BC-240
	5. Combination Meter Assembly	ME-63
VSC warning light does not come on (without Multi-information Display, with VSC).	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. VSC Indicator Light Circuit (with VSC, Bosch Made)	BC-392
	4. VSC Indicator Light Circuit (with VSC, Advics Made)	BC-240
	5. Combination Meter Assembly	ME-63

INDICATOR LIGHTS:

Symptom	Suspected area	See page
Shift indicator light does not come on. (for 2AZ-FE, Automatic Transaxle)	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Transmission Range Sensor Circuit	AX-39
	4. ECM	ES-432
	5. Combination Meter Assembly	ME-63
Shift indicator light does not come on. (for 2GR-FE, Automatic Transaxle,)	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Park/Neutral Position Switch Circuit	AX-158
	4. Transmission Control Switch Circuit	AX-154
	5. ECM	ES-518
	6. Combination Meter Assembly	ME-63
Turn indicator light does not come on.	1. Wire Harness or Connector	-
	2. Turn Indicator Light Circuit	LI-12
	3. Combination Meter Assembly	ME-63
SLIP indicator light does not come on (with VSC).	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. SLIP Indicator Light Circuit (with VSC, Bosch Made)	BC-412
	4. SLIP Indicator Light Circuit (with VSC, Advics Made)	BC-259
	5. Combination Meter Assembly	ME-63
SLIP indicator light does not go off (with VSC).	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. SLIP Indicator Light Circuit (with VSC, Bosch Made)	BC-412
	4. SLIP Indicator Light Circuit (with VSC, Advics Made)	BC-259
	5. Combination Meter Assembly	ME-63
CRUISE indicator light does not come on.	1. Combination Meter (LED)	ME-32
	2. Wire Harness or Connector	-
	3. Cruise Main Indicator Light Circuit	CC-34
	4. Combination Meter Assembly	ME-63
High beam indicator light does not come on.	1. Wire Harness of Connector	-
	2. Headlight Dimmer Switch	-
	3. Main Body ECU	-
	4. Combination Meter Assembly	ME-63

TERMINALS OF ECU

1. COMBINATION METER ASSEMBLY



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (F2-1) - Body ground	G - Body ground	Turn indicator light signal	Turn the ignition switch on (IG), turn signal RH indicator light OFF	Below 1 V
			Turn the ignition switch on (IG), turn signal RH indicator light ON	10 to 14 V
B (F2-2) - Body ground	L - Body ground	Turn indicator light signal	Turn the ignition switch on (IG), turn signal LH indicator light OFF	Below 1 V
			Turn the ignition switch on (IG), turn signal LH indicator light ON	10 to 14 V
CHK (F2-4) - Body ground	R - Body ground	Malfunction indicator lamp signal	Turn the ignition switch on (IG), CHECK ENGINE warning light ON	Below 3 V
			Turn the ignition switch on (IG), CHECK ENGINE warning light OFF	10 to 14 V
B/LE (F2-6) - Body ground	LG - Body ground	Brake fluid level warning light signal	Turn the ignition switch on (IG), BRAKE warning light OFF	10 to 14 V
			Turn the ignition switch on (IG), BRAKE warning light ON	Below 1 V
+S (F2-12) - Body ground	V - Body ground	Speed signal (Output)	Turn the wheel slowly	Pulse generation (See waveform 1)
SI (F2-14) - Body ground	V - Body ground	Speed signal (Input)	Turn the ignition switch on (IG), turn the wheel slowly	Pulse generation (See waveform 1)

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
FR (F2-15) - Body ground	GR - Body ground	Fuel signal	Turn the ignition switch on (IG), fuel level is FULL	Below 1 V
			Turn the ignition switch on (IG), fuel level is EMPTY	3 to 7 V
FE (F2-16) - Body ground	P - Body ground	Ground (Fuel ground)	Always	Below 1 V
B2 (F1-1) - Body ground	R - Body ground	Battery	Always	10 to 14 V
B (F1-2) - Body ground	V - Body ground	Battery	Always	10 to 14 V
WLVL (F1-5) (*1) - Body ground	LG - Body ground	Washer level warning switch signal	Turn the ignition switch on (IG), washer level warning light ON	Below 1 V
			Turn the ignition switch on (IG), washer level warning light off	10 to 14 V
TIRE (F1-7) (*2) - Body ground	L - Body ground	Tire pressure warning light signal	Turn the ignition switch on (IG), tire pressure warning light ON	0.9 to 3.2 V
			Turn the ignition switch on (IG), tire pressure warning light off	3.2 V or higher
S (F1-8) - Body ground	O - Body ground	Engine oil pressure warning light signal	Turn the ignition switch on (IG), engine oil pressure warning light OFF	10 to 14 V
			Turn the ignition switch on (IG), engine oil pressure warning light ON	Below 1 V
P/SB (F1-9) - Body ground	P - Body ground	Passenger seat belt warning light signal	Sit on the front passenger seat, turn the ignition switch on (IG), front passenger seat belt warning light OFF	10 to 14 V
			Sit on the front passenger seat, turn the ignition switch on (IG), front passenger seat belt warning light Blinks	10 to 14 V ←→ Below 1 V
ILL- (F1-11) - Body ground	BR - Body ground	Illumination signal	Turn the ignition switch on (IG)	10 to 14 V ←→ Below 1 V
E2 (F1-12) - Body ground	W-B - Body ground	Ground (Power ground)	Always	Below 1 V
IG+ (F1-13) - Body ground	GR - Body ground	Ignition switch signal	Turn the ignition switch off	Below 1 V
			Turn the ignition switch on (IG)	10 to 14 V
CANH (F1-17) - Body ground	B - Body ground	CAN communication signal	-	-
CANL (F1-18) - Body ground	W - Body ground	CAN communication signal	-	-
DISP (F1-22) - Body ground	V - Body ground	Steering pad switch signal	Turn the ignition switch on (IG), DISP switch off	4 to 6 V
			Turn the ignition switch on (IG), DISP switch ON	Below 1 V
CHG- (F1-23) - Body ground	L - Body ground	Charge warning light signal	Turn the ignition switch on (IG), CHARGE warning light OFF	10 to 14 V
			Turn the ignition switch on (IG), CHARGE warning light ON	Below 1 V
ES (F1-24) - Body ground	BR - Body ground	Ground (Signal ground)	Always	Below 1 V

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace harness and connector.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
CG (4) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 kΩ or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	6 kΩ or higher

NOTICE:

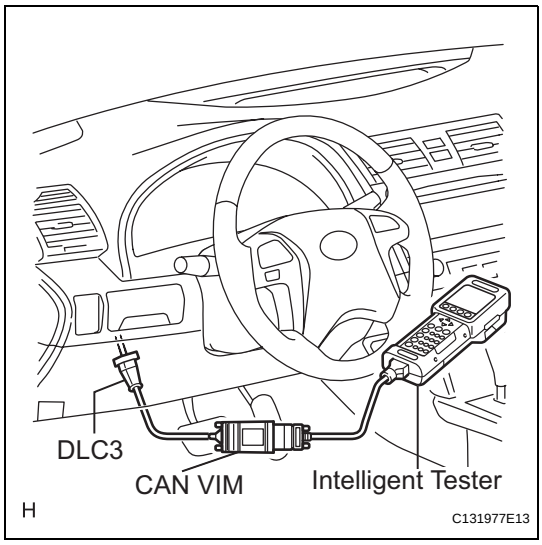
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

If the display shows an error message after having connected the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG), and operated the tester, there is a problem on either the vehicle side or the tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.
(d) Check for DTCs.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch on (IG) and turn the intelligent tester on.
(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.
(d) Erase DTCs by pressing the YES button on the tester.

FAIL-SAFE CHART

ENGINE COOLANT TEMPERATURE GAUGE:

Condition	Response	Recovery
Engine coolant temperature data is interrupted for 3.1 seconds.	The gauge needle indicates between / and C.	Engine coolant temperature data is received.

SHIFT INDICATOR:

Condition	Response	Recovery
Shift position data is interrupted for 3.1 seconds.	All indicator light go off.	Normal data is received.
Gear position data is interrupted for 3 seconds.	The gear position indicator light goes off.	Normal data is received.

ABS & BRAKE:

Condition	Response	Recovery
ABS & brake data is interrupted for 1 second.	The warning light comes on.	Normal data is received.

DOOR:

Condition	Response	Recovery
Each door condition data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

DRIVER SIDE SEAT BELT:

Condition	Response	Recovery
Driver side front seat inner belt assembly data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

TIRE PRESSURE:

Condition	Response	Recovery
Tire pressure data is interrupted for 10 seconds.	The tire pressure indicator light blinks for 60 to 64 seconds, then comes on.	Normal data is received.

OIL MAINTENANCE (*1):

Condition	Response	Recovery
The running distance after performing oil maintenance reminder light resetting procedure.	Oil change reminder light comes on.	Normal data is received.

HEAD (*1)/TAIL (*2):

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

BEAM:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

AIRBAG:

Condition	Response	Recovery
Airbag data is interrupted for 10 seconds.	The warning light comes on.	Normal data is received.
Turn the ignition switch on (IG), then the combination meter (meter CPU) can't detect the voltage of 9 V or more for 60 seconds.		

FRONT PASSENGER SIDE SEAT BELT:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

CRUISE:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

CHARGE:

Condition	Response	Recovery
Regular data is interrupted.	The warning light goes off.	Normal data is received.

MULTI-INFORMATION DISPLAY:

Condition	Response	Recovery
Cruise information data is interrupted for 60 seconds.	The display becomes blank (only measurement units are displayed).	Normal data is received.

*1: for U.S.A.
*2: Except for U.S.A.

DATA LIST / ACTIVE TEST

1. DATA LIST

According to the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten work time.

(a) Warm up the engine.
(b) Ignition switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the ignition switch on (IG).
(e) Turn the tester ON.
(f) Enter following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.
(g) Check values by referring to the table below.

METER:

ITEM	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
TAIL CANCEL SW	TAIL CANCEL switch is ON/OFF	ON: Rheostat knob turns fully clockwise	-
		OFF: Rheostat knob turns fully counterclockwise	-
ODO/TRIP SW	ODO/TRIP switch is ON/OFF	ON: Switch is pushed	-
		OFF: Switch is released	-
P-BELT BUCKL SW	Front passenger buckle switch is ON/OFF	ON: Seat belt is fastened	-
		OFF: Seat belt is unfastened	-
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual vehicle speed (When driving)	If data received from the skid control ECU exceeds the range that can be displayed on the meter, the meter continues to display the maximum value of the range.
TACHO METER	Engine speed/Min.: 0 rpm, Max.: 12,750 rpm	Almost same at the meter rpm (When engine is running)	If data received from the ECM exceeds the range that can be displayed on the meter, the meter continues to display the maximum value of the range.
COOLANT TEMP	Engine coolant temperature 0°C (32°F) to 127.5°C (261.5°F)	After warming up: 78°C (172.4°F) to 105°C (221°F)	•If -40°C (-40°F): sensor circuit open •If 140°C (284°F) or more: sensor circuit shorted
WASHER SW	Washer level warning switch is ON/OFF	ON: Washer level is more than low	-
		OFF: Washer level is less than low	-
MULTI DISP SW	MODE switch in the steering pad is ON/OFF	ON: Mode switch is ON	-
		OFF: Mode switch is OFF	-
+B VOLTAGE VAL	Battery voltage/Min.: 0 V, Max.: 25.5 V	10 to 14 V	-
OIL MAINTENANCE	Oil maintenance warning value: Min.: 0, Max. 25500	The running distance after performing oil maintenance resetting procedure is displayed	If the value is 5,000 or more, perform oil maintenance resetting procedure after changing the oil.
FUEL GAUGE	Fuel input signal Min.: 0, Max. 255	Fuel gauge indicates (F): 35	-
		Fuel gauge indicates (3/4): 85	-
		Fuel gauge indicates (1/2): 145	-
		Fuel gauge indicates (1/4): 186	-
		Fuel gauge indicates (E): 205	-

ITEM	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
AMBIENT TEMP	Outside temperature: Min.: -40°C (-40°F) to 87.5°C (189.5°F)	Almost same as actual outside temperature	The temperature displayed on the multi-information display is -22 to 122°C (-30 to 50 °F)
RHEOSTAT	Light Control Rheostat/Min.: 0, Max.: 100	Light control rheostat switch is Dark (0) → Bright (100)	-
KEY REMND SOUND	The cycle of the key reminder warning buzzer is FAST, NORMAL, SLOW	The customized setting of the cycle of the key reminder warning buzzer is displayed.	-
SEAT-BELT WARN	The volume of the seat belt warning buzzer is D/P ON, D ON, P ON, D/P OFF	The customized setting of the volume of the seat belt warning buzzer is displayed.	-
KEY REMND VOLUM	The volume of the key reminder warning buzzer is LARGE, MEDIUM, SMALL	The customized setting of the volume of the key reminder warning buzzer is displayed.	-

ABS/TRAC/VSC:

ITEM	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
FR/FL/RR/RL WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-
VEHICLE SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-

ENGINE:

ITEM	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
ENGINE SPD	Vehicle speed/Min.: 0 rpm, Max.: 16,383.75 rpm	Almost same as actual vehicle speed (When driving)	-
COOLANT TEMP	Engine coolant temperature: Min.: -40°C (-40°F), Max.: 140°C (284°F)	80 to 100°C (176 to 212°F): After warming up	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted

2. ACTIVE TEST

Performing the ACTIVE TEST using the intelligent tester allows the meters, indicators and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one way to shorten labor time.

It is possible to display the DATA LIST on the intelligent tester during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) From the display on the tester, performing the "ACTIVE TEST".

ME

METER:

Item	Test Details	Diagnostic Note
SPEED METER	0, 40 (24), 80 (48), 120 (72), 160 (96), 200 (120) km/h (mph)	-
TACHOMETER	0, 1,000, 2,000, 3,000, 4,000, 5,000, 6,000, 7,000 (rpm)	-
FUEL GAUGE	EMPTY, 1/2, FULL	-
COOLANT TEMP	LOW, NORM, HIGH	-
A/T INDIC (1) (*1)	A/T shift indicator light L, 2, 3, 4, S, D, N, R, P is OFF/ON	-

DIAGNOSTIC TROUBLE CODE CHART

DTC No.	Detection Item	Trouble Area	See page
U0100	Lost Communication with ECM/ PCM "A"	- ECM - CAN communication system	ME-38
U0129	Lost Communication with Skid Control ECU	- ABS and traction actuator assembly (Skid control ECU) - CAN communication system	ME-40

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Reference: mph (U.S.A.)

Chassis dynamometer indication	Acceptable range
20 mph	20.0 to 23.0 mph
40 mph	40.0 to 43.5 mph
60 mph	60.0 to 64.0 mph
80 mph	80.0 to 84.5 mph
100 mph	100.0 to 105.0 mph
120 mph	120.0 to 125.5 mph
140 mph	140.0 to 146.0 mph
160 mph	160.0 to 166.5 mph

Reference: km/h (Canada)

Chassis dynamometer indication	Acceptable range Data in ( ) is for reference
20 km/h	(17.5 to 21.5 km/h)
40 km/h	38.0 to 42.0 km/h
60 km/h	58.0 to 63.0 km/h
80 km/h	78.0 to 84.0 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119.0 to 125.0 km/h
140 km/h	139.0 to 146.0 km/h
160 km/h	159.0 to 167.0 km/h
180 km/h	179.0 to 188.0 km/h
200 km/h	199.0 to 209.0 km/h
220 km/h	219.0 to 230.0 km/h
240 km/h	239.0 to 251.0 km/h

NOTICE:
Tire wear as well as over or under inflation will cause errors.

(2) Check the deviation from the acceptable range of the speedometer indication.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:
If the indication is not as specified, go to problem symptoms table (See page ME-19).

2. INSPECT TACHOMETER

(a) Connect a tune-up tachometer, and start the engine.

(b) Compare the test results with the tachometer indications.

DC 13.5 V, at 25°C (77°F)

Tune-up tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1,000	(900 to 1,100)
2,000	(1,850 to 2,150)

Tune-up tachometer indication (rpm)	Acceptable range Data in ( ) is for reference
3,000	2,800 to 3,200
4,000	(3,800 to 4,200)
5,000	4,800 to 5,200
6,000	(5,750 to 6,250)
7,000	6,700 to 7,300
8,000	(7,700 to 8,300)

HINT:
If the indication is not as specified, go to the problem symptoms table (See page ME-19).

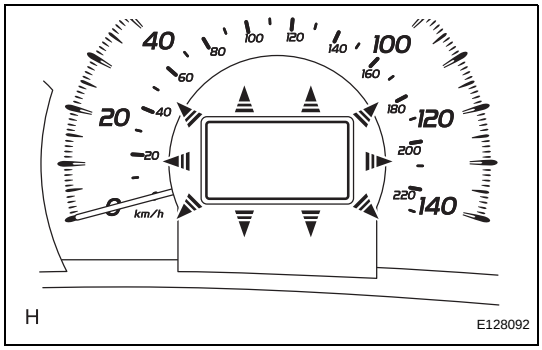
3. INSPECT ENGINE OIL PRESSURE SWITCH

(a) Disconnect the connector from the engine oil pressure switch.
(b) Turn the ignition switch on (IG).
(c) Ground the terminal of the wire harness side connector, then check the low oil pressure warning light or message.

OK

Vehicle Specification	Condition	Result
with multi-information display	**Turn the ignition switch on (IG) and engine idling for 10 seconds or more**	**Warning message is displayed.**
without multi-information display	**Turn the ignition switch on (IG) and engine off**	**Oil pressure warning light comes on.**
	Turn the ignition switch on (IG) and engine idling	**Oil pressure warning light goes off.**

HINT:
If the warning light or message is not displayed, go to the problem symptoms table (See page ME-19).



4. INSPECT MULTI-INFORMATION DISPLAY

(a) Ignition switch off.
(b) Press the "DISP" button and hold it down.
(c) Ignition switch on (IG).

OK:

All the dots in the multi-information display come on.

HINT:
This test is also available on "ACTIVE TEST" (See page ME-32).

(d) Ignition switch off to finish this test mode.

HINT:
If the result is not as specified, replace the combination meter assembly.

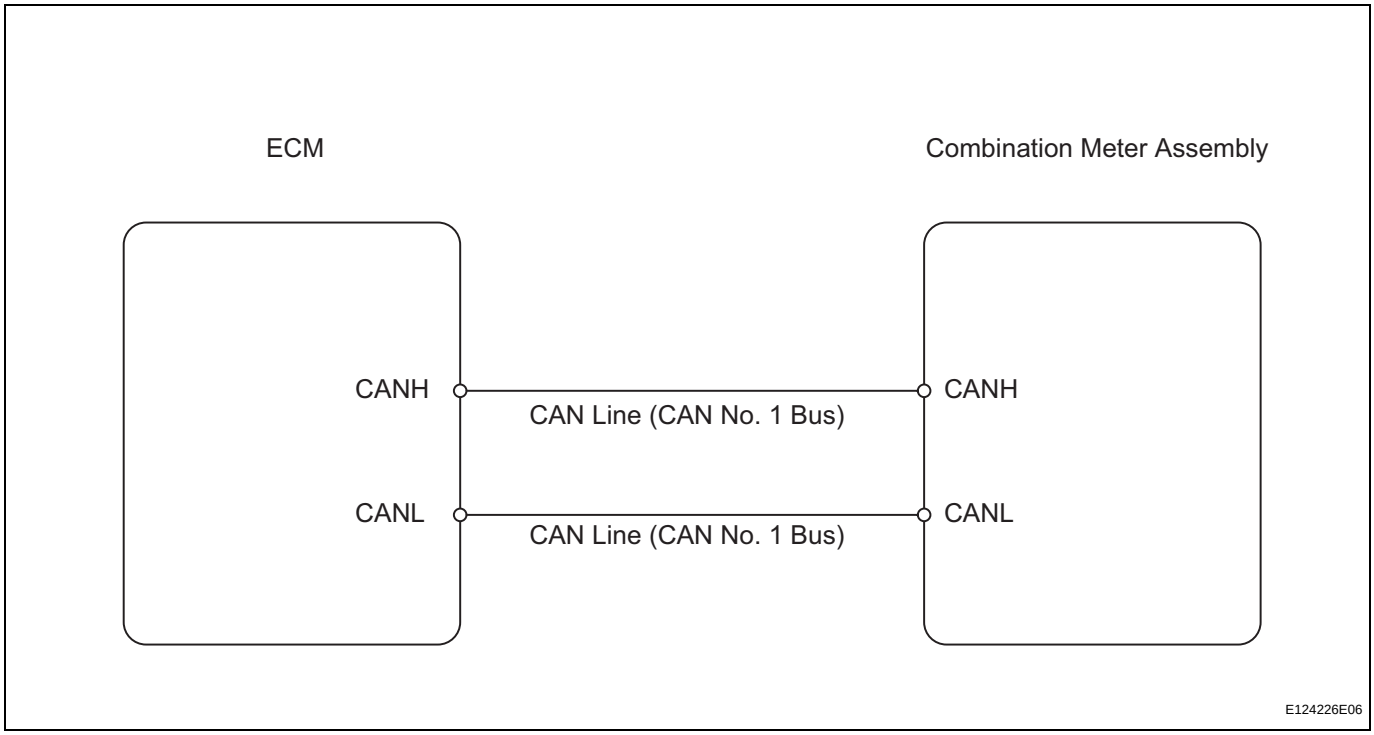
DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly communicates with the ECM via the CAN communication lines (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 5 km/h (3.1 mph) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (No communication to ECM or skid control ECU continues for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD / MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-25).

Result

Result	Proceed to
DTC output	A (See page CA-31)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

GO TO CAN COMMUNICATION SYSTEM

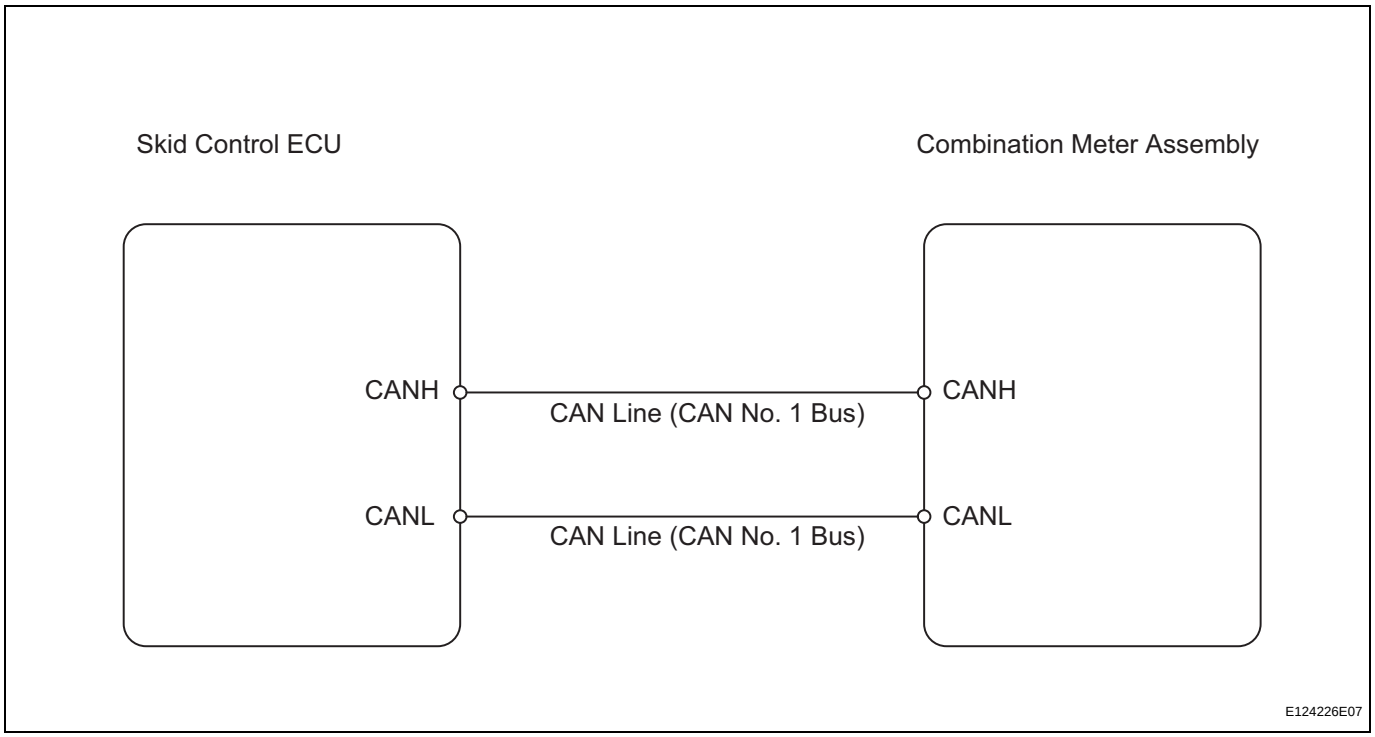
DTC	U0129	Lost Communication with Skid Control ECU

DESCRIPTION

The combination meter assembly communicates with the ABS and traction actuator (skid control ECU) via the CAN communication lines (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0129	When either of following conditions detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with ABS and traction actuator (skid control ECU) continues for 3 seconds or more (No communication with ECM or skid control ECU continues for 60 seconds or more)	• ABS and traction actuator assembly (Skid control ECU) • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD / MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-25).

Result

Result	Proceed to
DTC output	A (See page CA-31)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

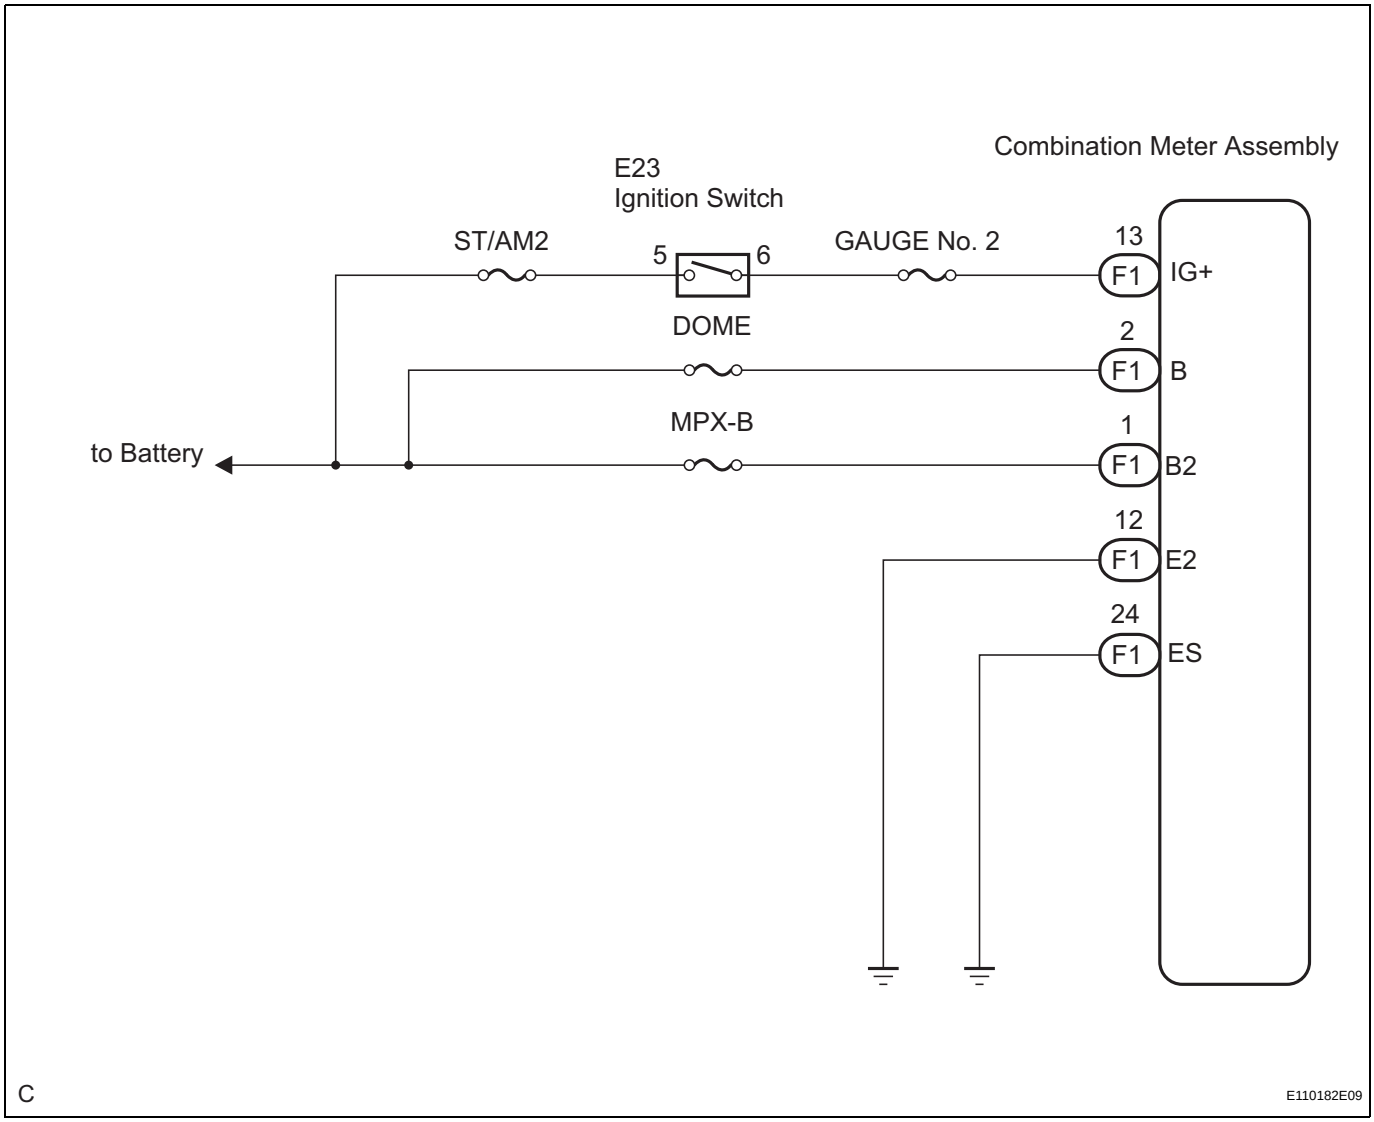
GO TO CAN COMMUNICATION SYSTEM

Entire Combination Meter does not Operate

DESCRIPTION

This circuit is the power source circuit for the meter. This circuit provides two types of power sources; one is a constant power source mainly used as a backup power source, and the other is a power source mainly used for signal transmission. The constant power source is mainly used as a backup power source of the meter CPU, however, it is also used for communication. If a voltage of 12 V is not applied to terminal IG+ when turn the ignition switch on (IG), the indicator will not operate.

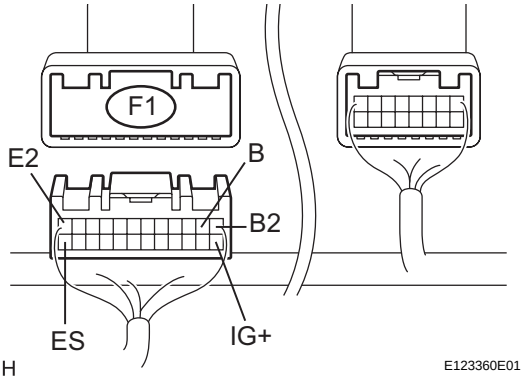
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT COMBINATION METER ASSEMBLY

Combination Meter Assembly Wire Harness View:



(a) Disconnect the F1 connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-12 (E2) - Body ground	Always	Below 1 Ω
F1-24 (ES) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-13 (IG+) - Body ground	Turn the ignition switch on (IG)	10 to 14 V
F1-1 (B2) - Body ground	Always	10 to 14 V
F1-2 (B) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

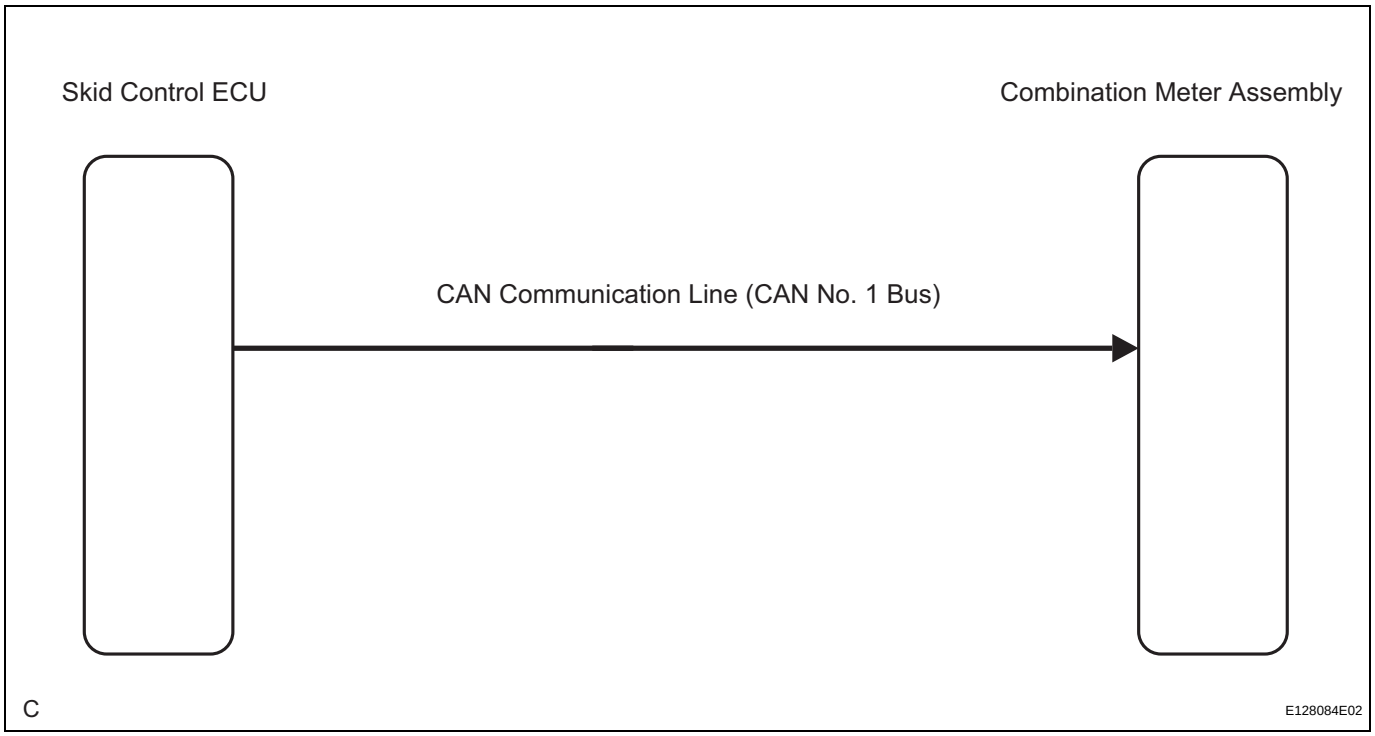
REPLACE COMBINATION METER ASSEMBLY

Speedometer Malfunction

DESCRIPTION

The meter CPU receives vehicle speed signals from the skid control ECU via the CAN communication lines (CAN No. 1 Bus). The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-25).

Result

Result	Proceed to
CAN communication DTC is not output.	A
CAN communication DTC is output.	B (See page CA-31)

B → GO TO CAN COMMUNICATION SYSTEM

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).

ME

(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) Check the values by referring to the values in the table below.

METER:

Item	Test Details	Diagnostic Note
SPEED METER	0, 40, (24), 80 (48), 120 (72), 160 (96), 200 (120) km/h (mph)	-

OK:
Needle indication is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

3	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA TEST.
(e) Check the values by referring to the values in the table below.

METER:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual speed (When driving)	If data received from the skid control ECU exceeds the range that can be displayed on the meter, the meter continues to display the maximum value of the range.

OK:
Vehicle speed displayed on the tester is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG → **Go to step 4**

OK

ME

REPLACE COMBINATION METER ASSEMBLY

4	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / ABS/TRAC/VSC / DATA LIST.

(e) Check the values by referring to the table below.

ABS/TRAC/VSC:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
(FL/FR/RL/RR) WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the tester is almost the same as the actual vehicle speed.

NG → **GO TO BRAKE CONTROL SYSTEM**

OK ↓

5	REPLACE SKID CONTROL ECU

(a) Replace the skid control ECU to a new or a normal one.

OK:

The operation of the speedometer returns to normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK ↓

END

Tachometer Malfunction

DESCRIPTION

The meter CPU receives engine revolution signals from the ECM via the CAN communication lines (CAN No. 1 Bus). The meter CPU displays engine revolution data that is calculated based on the data received from the ECM.

NG → **GO TO SFI SYSTEM**

OK

5	REPLACE ECM

(a) Replace the ECM to a new or a normal one.

OK:

The operation of the tachometer returns to normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

END

Fuel Receiver Gauge Malfunction

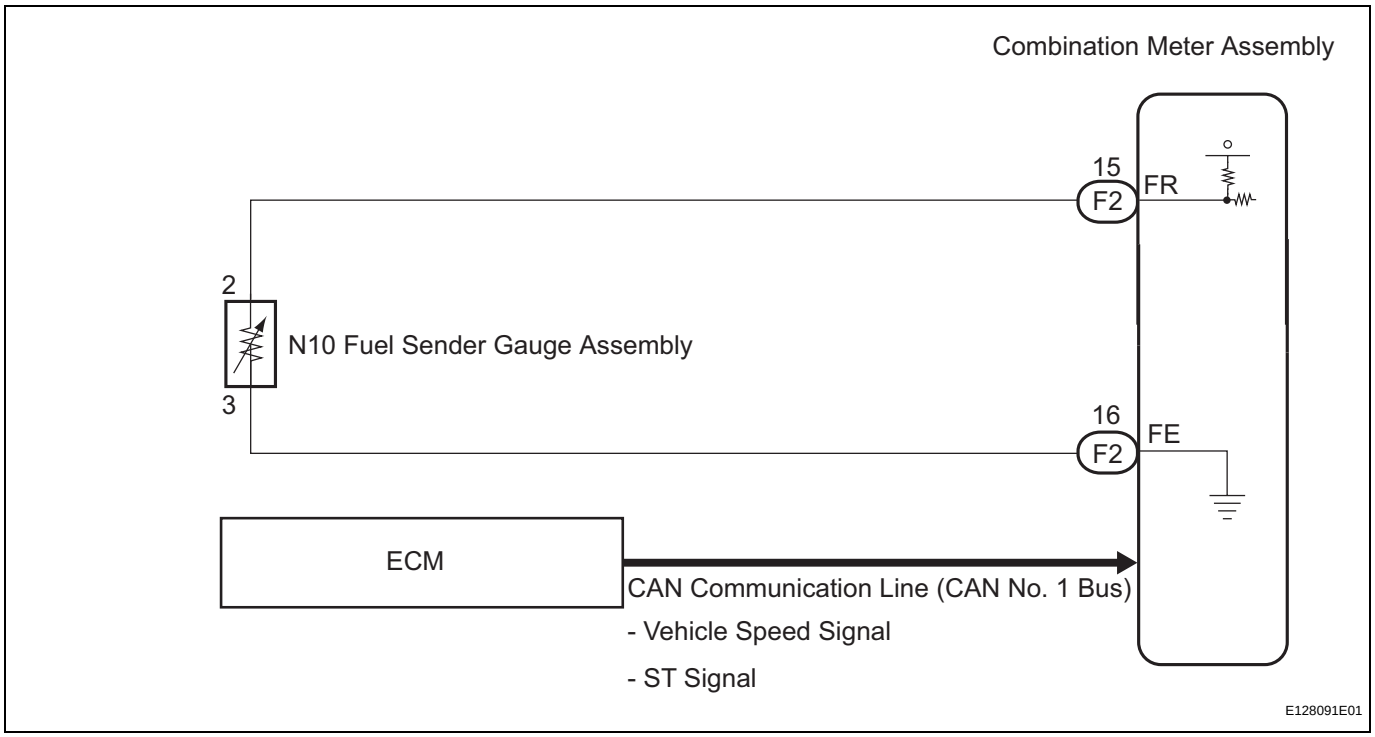
DESCRIPTION

The meter CPU uses the fuel sender gauge assembly to determine the level of the fuel in the fuel tank. The resistance of the fuel sender gauge will vary between approximately 15 Ω with the float at the full position, and 410 Ω with the float at the empty position. The meter outputs battery voltage through two 820 Ω resistors that are mounted in parallel inside the meter ECU. The meter CPU measures the voltage between the variable resistor in the fuel sender gauge and the two resistors mounted in parallel in the meter. Voltage measured at this point will vary as the float of the fuel sender gauge is moved. The highest voltage observed should be approximately half of battery voltage.

HINT:

The fuel level warning light will come on when the fuel level is below 10.5 liters.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-25).

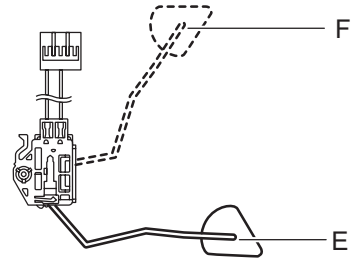
Fuel Sender Gauge Assembly (for 2AZ-FE):



E128086E01

(a) Disconnect the fuel sender gauge connector.
(b) Remove the fuel sender gauge assembly.
(c) Check that the float moves smoothly between F and E.
(d) Measure the resistance between the terminals 2 (S) and 3 (FE) of connector according to the value(s) in the table below.

Standard resistance

Float Level	Resistance (Ω)
F	13.5 to 16.5
Between E and F	13.5 to 414.5 (Gradually changes)
E	405.5 to 414.5

NG → **REPLACE FUEL SENDER GAUGE ASSEMBLY**

OK

6	REPLACE COMBINATION METER ASSEMBLY

(a) Replace the combination meter assembly to a new one or a normal one.

OK:

The operation of the combination meter assembly returns to normal.

NG → **REPLACE ECM**

OK

END

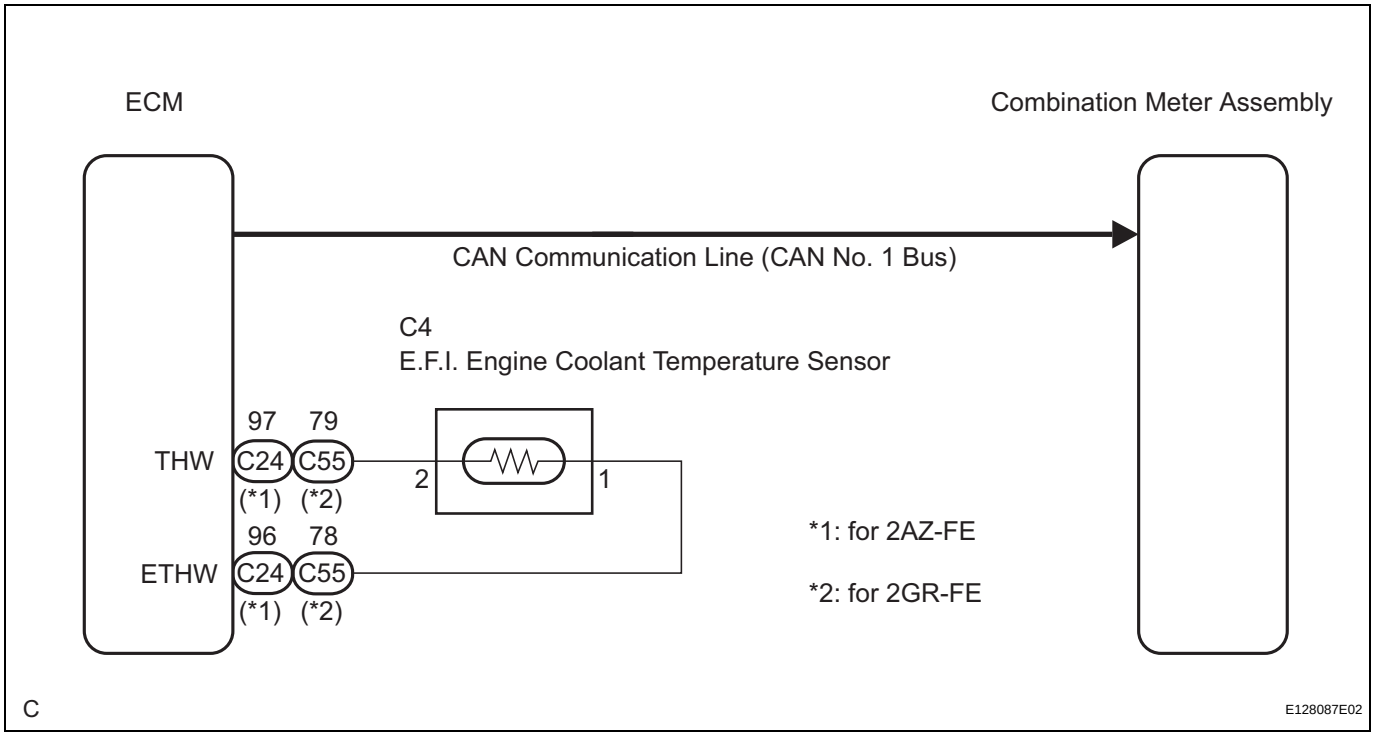
ME

Engine Coolant Temperature Receiver Gauge Malfunction

DESCRIPTION

The meter CPU receives engine coolant temperature signals from the ECM via the CAN communication lines (CAN No. 1 Bus). The meter CPU displays engine coolant temperature that is calculated based on the data received from the ECM.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
If there is an open or short in the engine coolant temperature sensor circuit, the ECM outputs the DTCs. Perform troubleshooting with the "SFI System" (See page ES-38 for 2AZ-FE, ES-63 for 2GR-FE).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-25).

Result

Result	Proceed to
CAN communication DTC is not output.	A
CAN communication DTC is output.	B (See page CA-31)

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) Check the values by referring to the values in the table below.

METER:

Item	Test Details	Diagnostic Note
COOLANT TEMP	LOW, NORMAL, HI	-

OK:
Needle indication is normal.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

3	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.

METER:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
COOLANT TEMP	Engine coolant temperature: 0°C (-40°F) to 127.5°C (284°F)	After warming up: 80 to 95°C (176 to 203°F)	•If -40°C (-40°F): sensor circuit open •If 140°C (284°F) or more: sensor circuit shorted

OK:
Engine coolant temperature value displayed on the tester is almost the same as needle indication.

NG → **Go to step 4**

OK

REPLACE COMBINATION METER ASSEMBLY

4	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / ENGINE / DATA LIST.

(e) Check the values by referring to the values in the table below.

ENGINE:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
WATER TEMP	Engine coolant temperature: -40°C (-40°F) to 140°C (284°F)	80 to 100°C (176 to 212°F): After warming up	•If -40°C (-40°F): sensor circuit open •If 140°C (284°F) or more: sensor circuit shorted

OK:

Engine coolant temperature value displayed on the tester is almost the same as needle indication.

NG → **GO TO SFI SYSTEM**

OK

5	REPLACE COMBINATION METER ASSEMBLY

(a) Replace the combination meter assembly to a new or a normal one.

OK:

The operation of the combination meter assembly returns to normal.

NG → **GO TO SFI SYSTEM**

OK

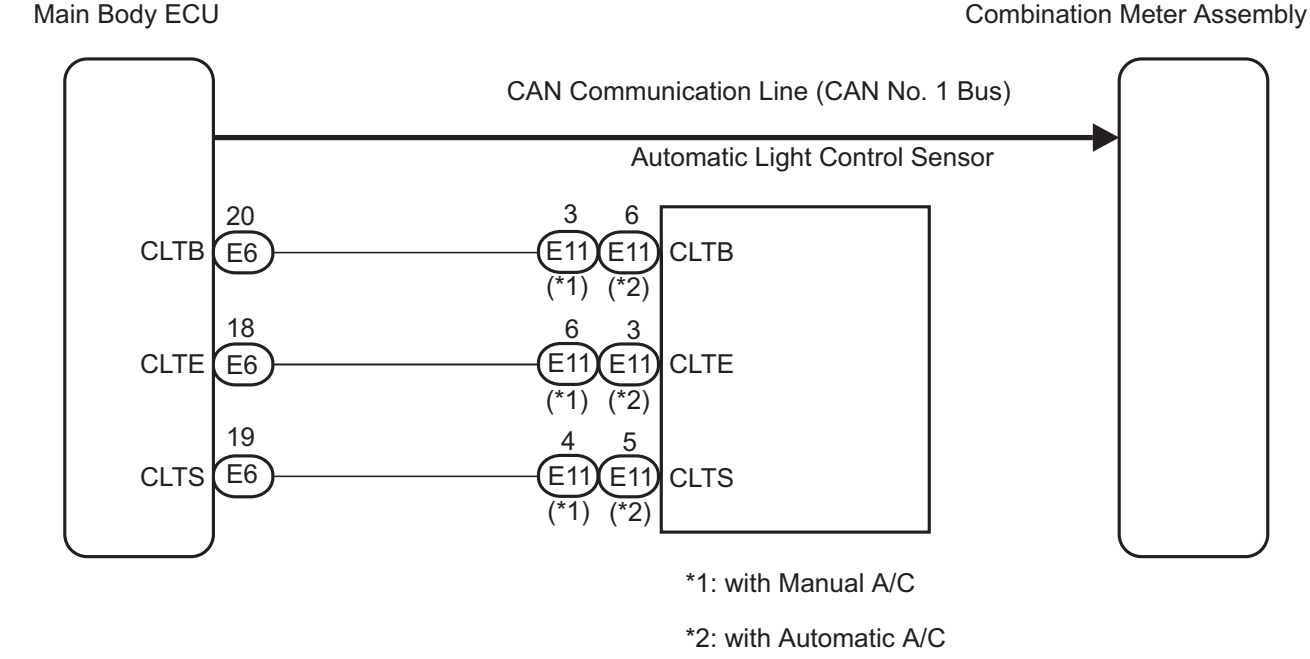
END

Meter Illumination is Always Dark

DESCRIPTION

The meter CPU receives auto dimmer signals from the main body ECU via the CAN communication lines (CAN No. 1 Bus). When the meter CPU receives an auto dimmer signal, it dims the meter illumination. The main body ECU determines whether it is daytime, twilight, or nighttime based on the waveform transmitted from the automatic light control sensor. If the main body ECU determines that it is daytime, the ECU does not send auto dimmer signals. Therefore, the meter illumination (warning and indicator lights) will not dim even if the driver accidentally turns the light control switch to the TAIL or HEAD position in daytime.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if CAN communication DTC is output (See page CA-25).

ME

Result

Result	Proceed to
CAN communication DTC is not output.	A

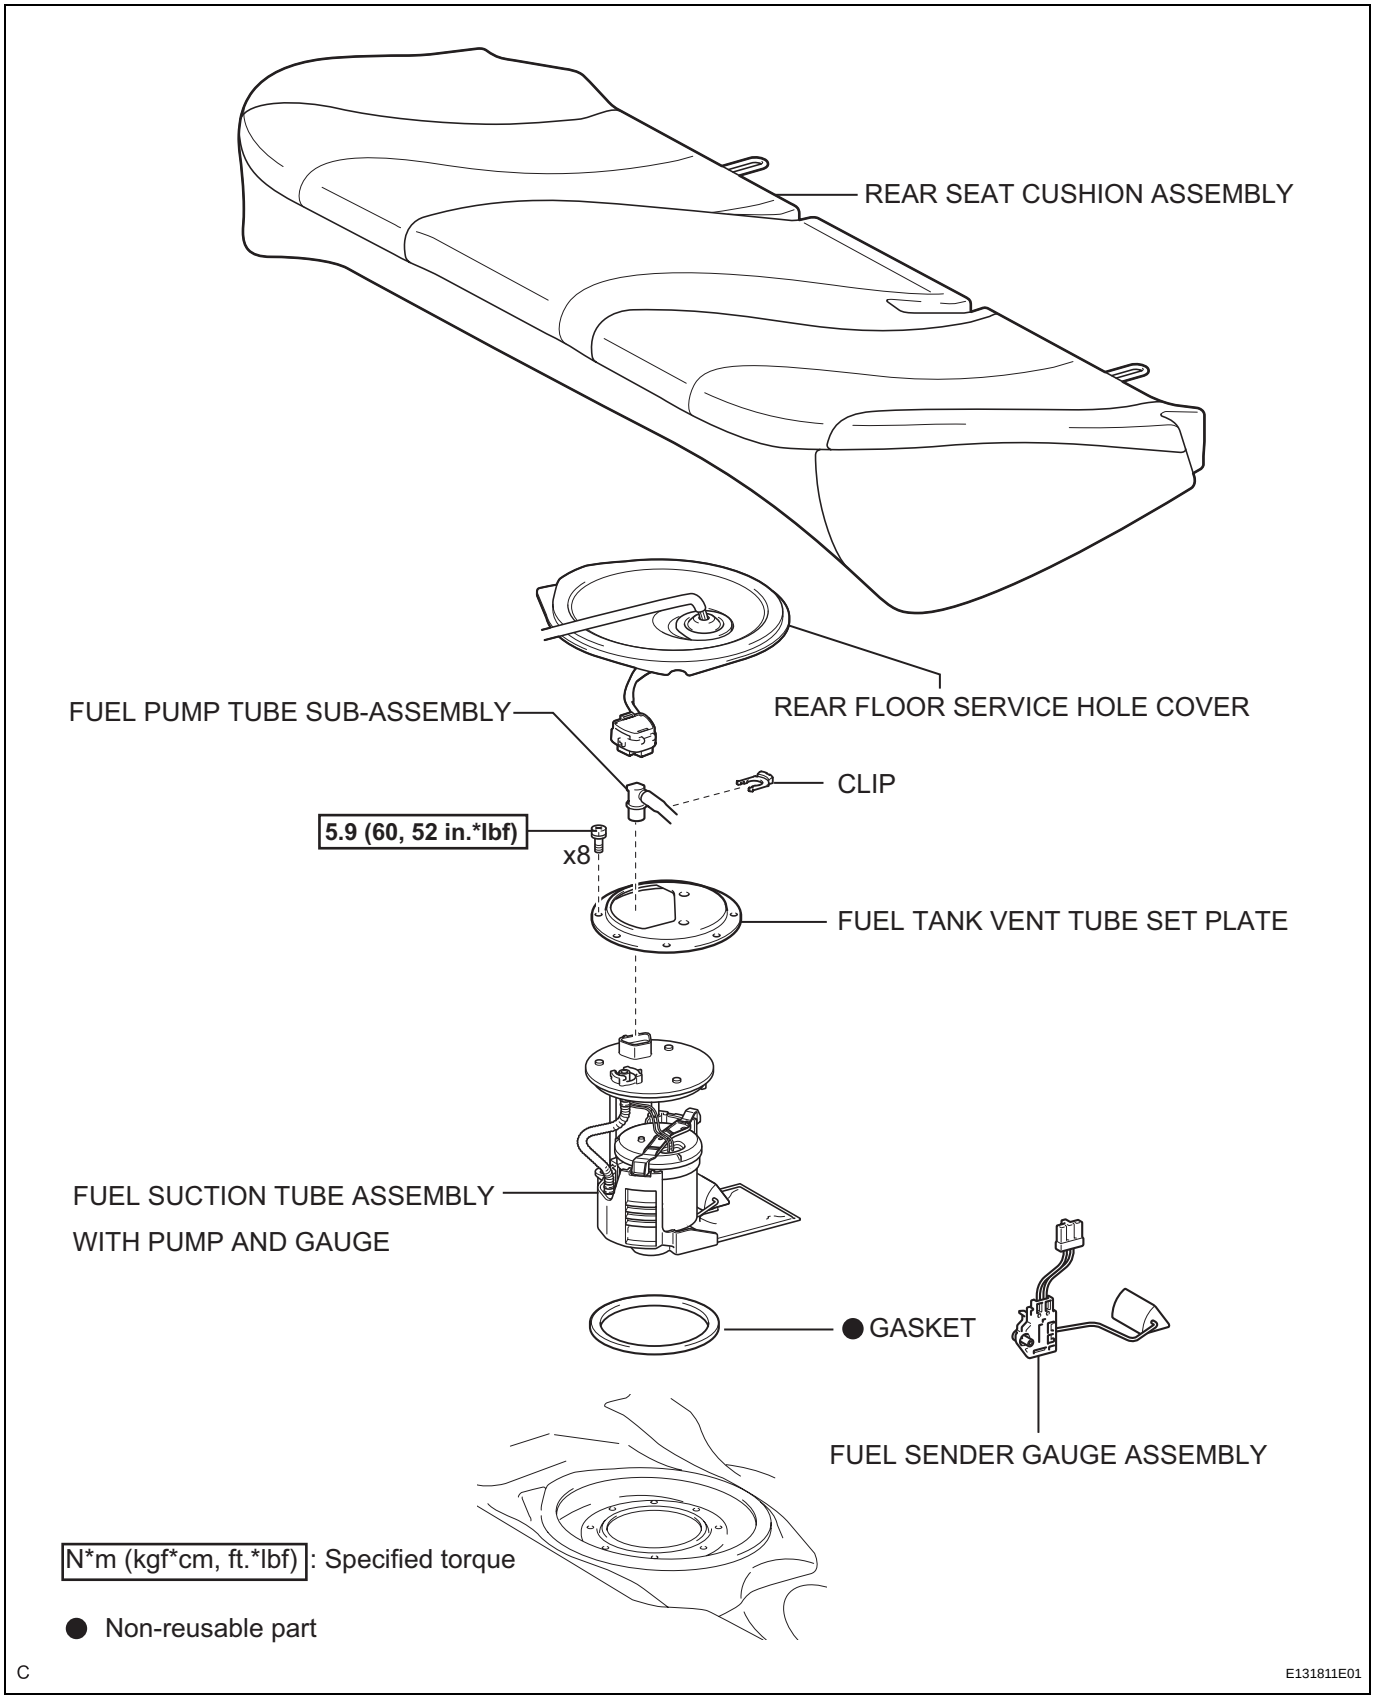
FUEL SENDER GAUGE ASSEMBLY (for 2AZ-FE)

COMPONENTS



ME

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-23)**
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-23)**
8. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-24)**
9. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-24)**
10. **REMOVE FUEL SENDER GAUGE ASSEMBLY (See page FU-24)**

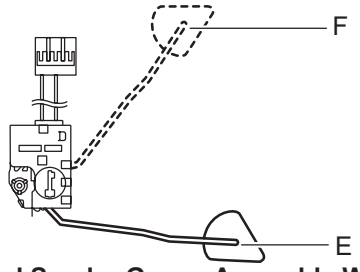
INSPECTION

1. **INSPECT FUEL SENDER GAUGE ASSEMBLY**
   (a) Remove the fuel sender gauge assembly.
   (b) Check that the float moves smoothly between F and E.
   (c) Measure the resistance between the terminals 2 (S) and 3 (FE) of connector according to the value(s) in the table below.
   Standard resistance

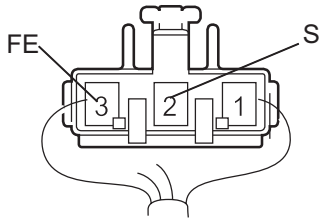
Float Level	Resistance (Ω)
F	13.5 to 16.5
Between E and F	13.5 to 414.5 (Gradually changes)
E	405.5 to 414.5

HINT:
If the value is not as specified, replace the fuel sender gauge assembly.

Fuel Sender Gauge Assembly:



Fuel Sender Gauge Assembly Wire Harness View:



E132666E01

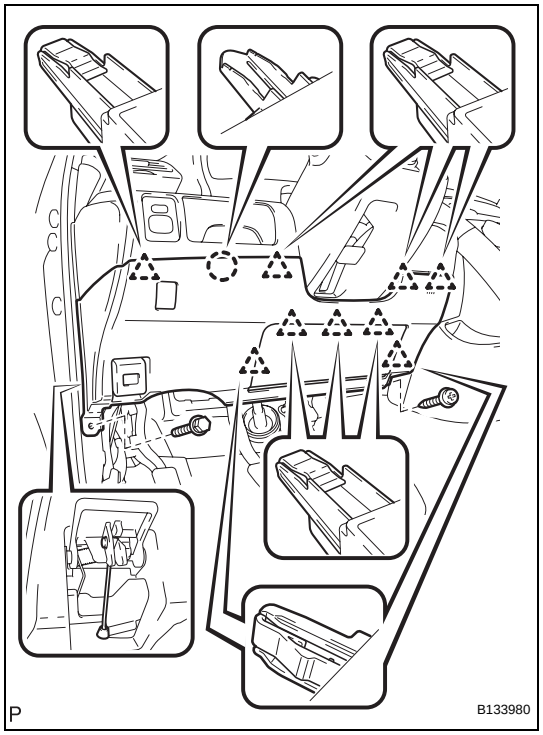
ME

INSTALLATION

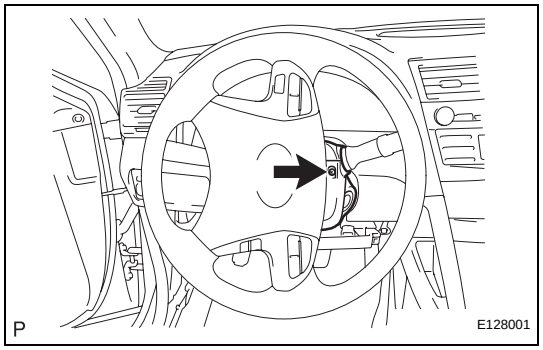
1. **INSTALL FUEL SENDER GAUGE ASSEMBLY (See page FU-30)**
2. **INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-30)**
3. **INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-31)**
4. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-31)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
6. **CHECK FOR FUEL LEAKS (See page FU-8)**
7. **INSTALL REAR FLOOR SERVICE HOLE COVER (See page FU-31)**
8. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
9. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
10. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

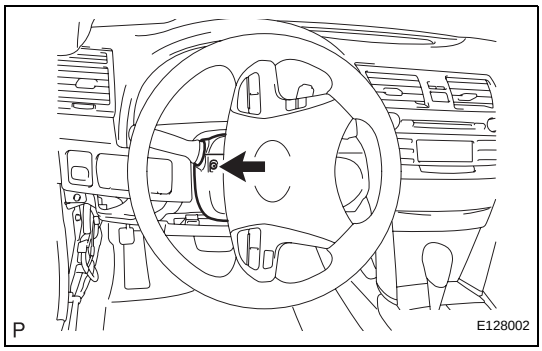
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH**
   (a) Remove the screw and the bolt.
   (b) Disconnect the hood lock control cable assembly.
   (c) Disengage the claw and the 9 clips.
   (d) Remove the air hose, disconnect the connector, and then remove the lower instrument panel finish panel LH.

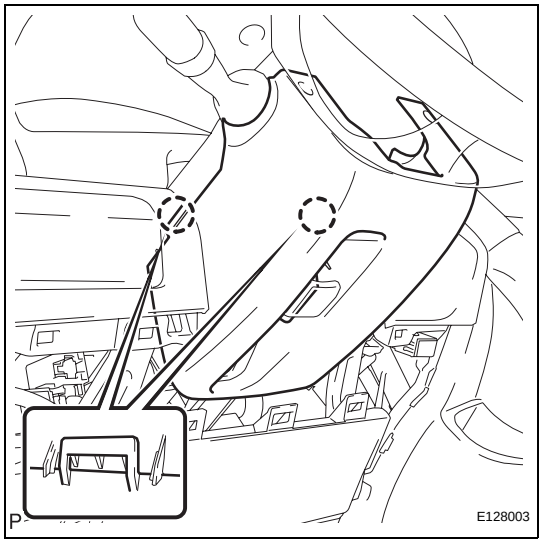


5. **REMOVE STEERING COLUMN COVER**
   (a) Turn the steering wheel assembly to the right and remove the screw as shown in the illustration.

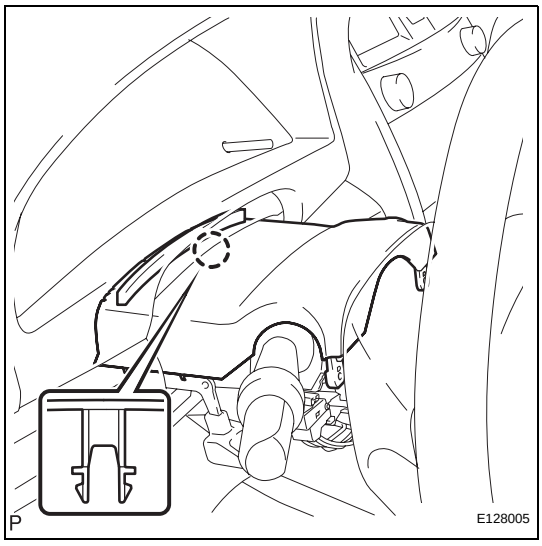




(b) Turn the steering wheel assembly to the left and remove the screw as shown in the illustration.



(c) Disengage the 2 claws and remove the steering column cover lower.

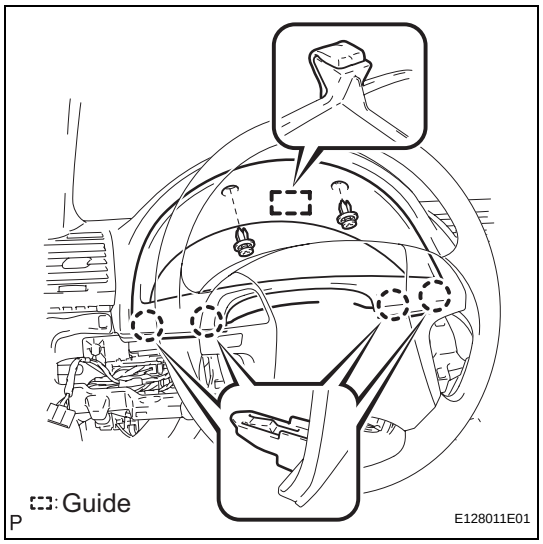


(d) Disengage the claw and remove the steering column cover upper.

6. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**

7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**

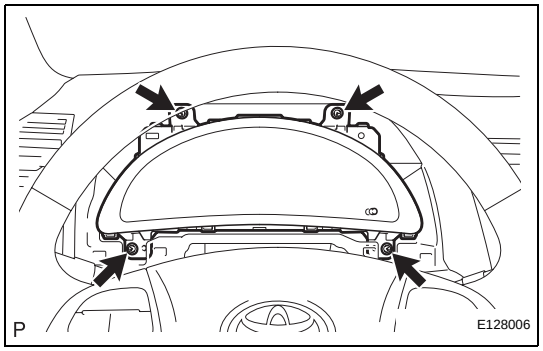
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**



9. REMOVE INSTRUMENT CLUSTER FINISH PANEL

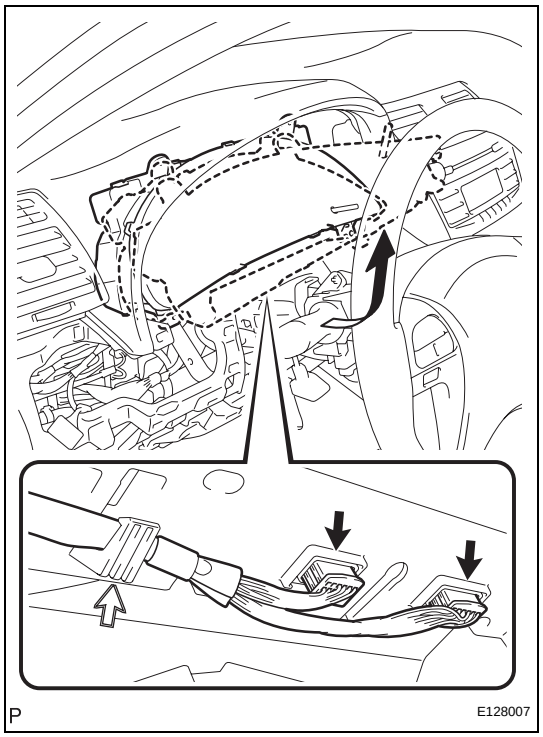
(a) Remove the 2 clips.

(b) Disengage the guide and the 4 claws, and then remove the instrument cluster finish panel.



10. REMOVE COMBINATION METER ASSEMBLY

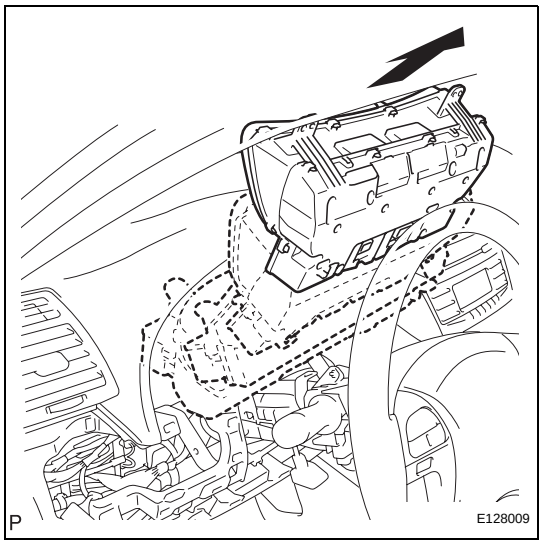
(a) Remove the 4 screws.



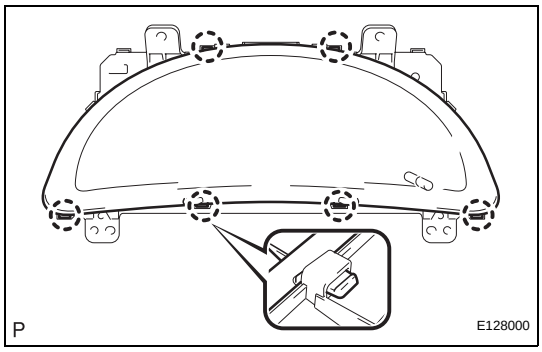
(b) Disconnect the 2 connectors.

(c) Disengage the wire harness from the combination meter assembly.

ME



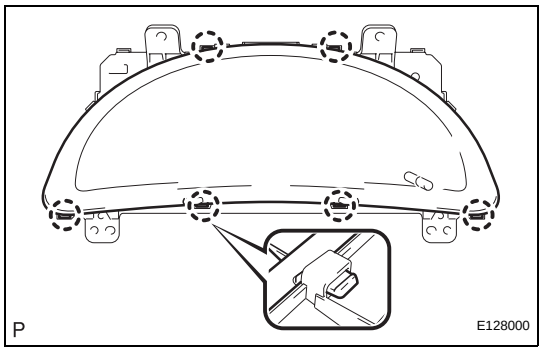
(d) Remove the combination meter assembly as shown in the illustration.



DISASSEMBLY

1. REMOVE COMBINATION METER GLASS

(a) Disengage the 6 claws and remove the combination meter glass.



REASSEMBLY

1. INSTALL COMBINATION METER GLASS

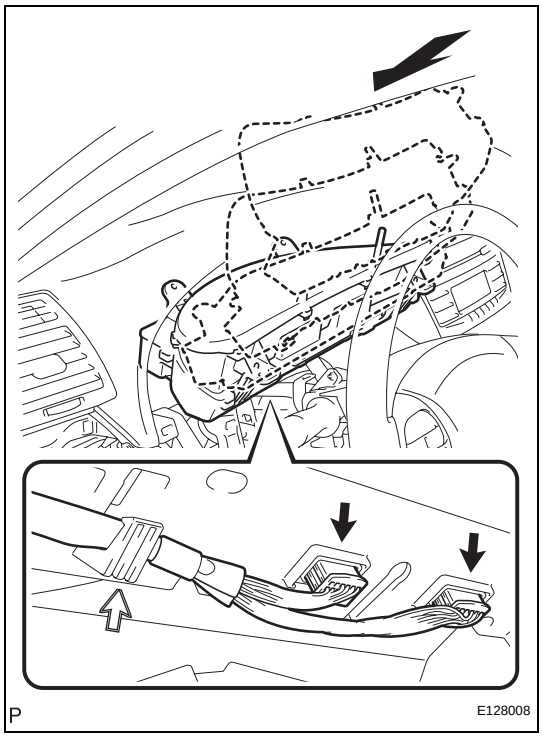
(a) Engage the 6 claws and install the combination meter glass.

INSTALLATION

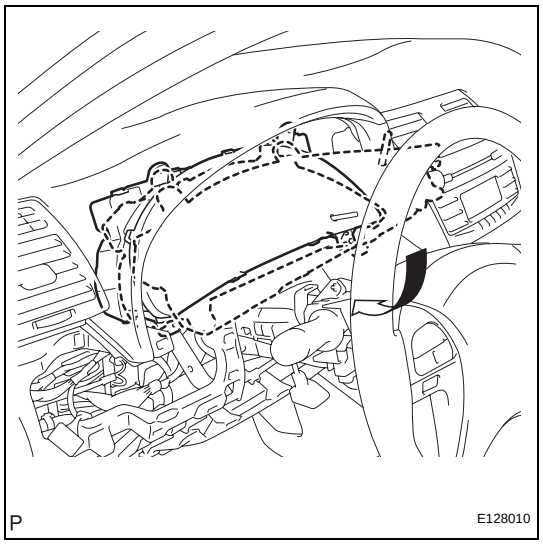
1. INSTALL COMBINATION METER ASSEMBLY

(a) Connect the 2 connectors as shown in the illustration.

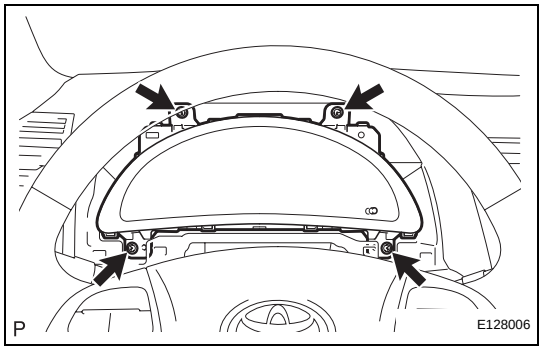
(b) Secure the wire harness to the combination meter assembly.

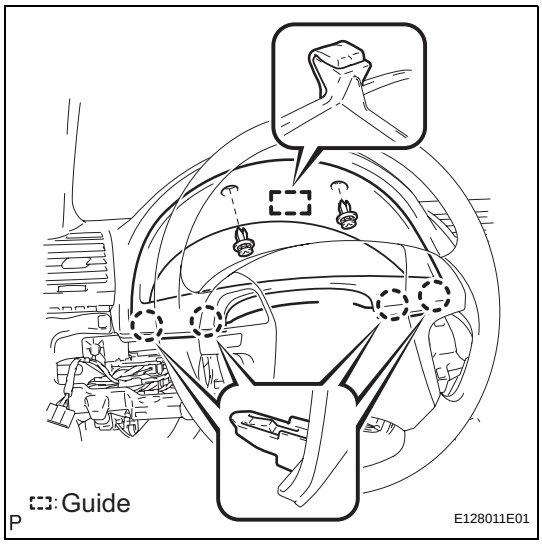


(c) Install the combination meter assembly as shown in the illustration.



(d) Install the 4 screws.





2. INSTALL INSTRUMENT CLUSTER FINISH PANEL

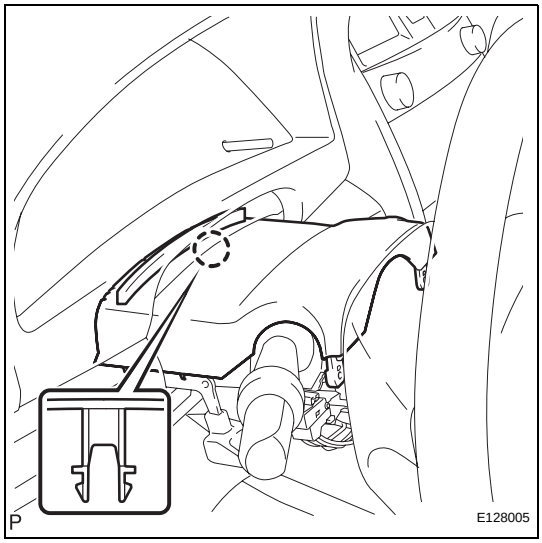
(a) Engage the 4 claws and the guide.

(b) Install the instrument cluster finish panel with the 2 clips.

3. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)

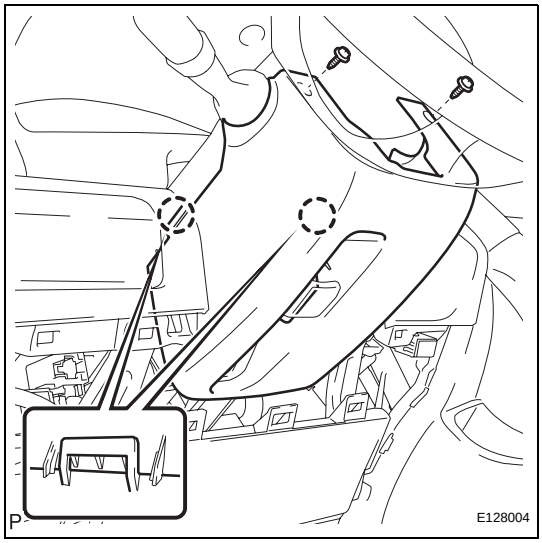
4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)

5. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)



6. INSTALL STEERING COLUMN COVER

(a) Engage the claw and install the upper steering column cover.



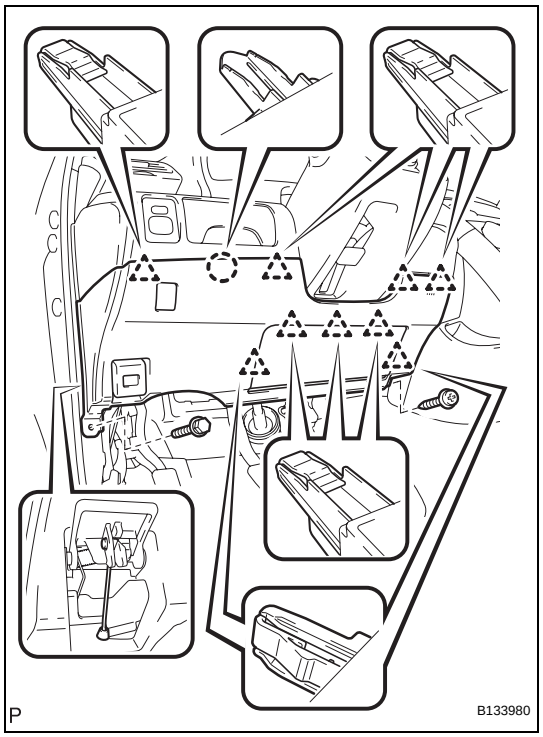
(b) Engage the 2 claws.

(c) Install the lower steering column cover with the 2 screws.

Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

7. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH

(a) Install the air hose and connect the connector.



(b) Engage the claw and the 9 clips.
(c) Connect the hood lock control cable assembly.
(d) Install the lower instrument panel finish panel LH with the screw and bolt.

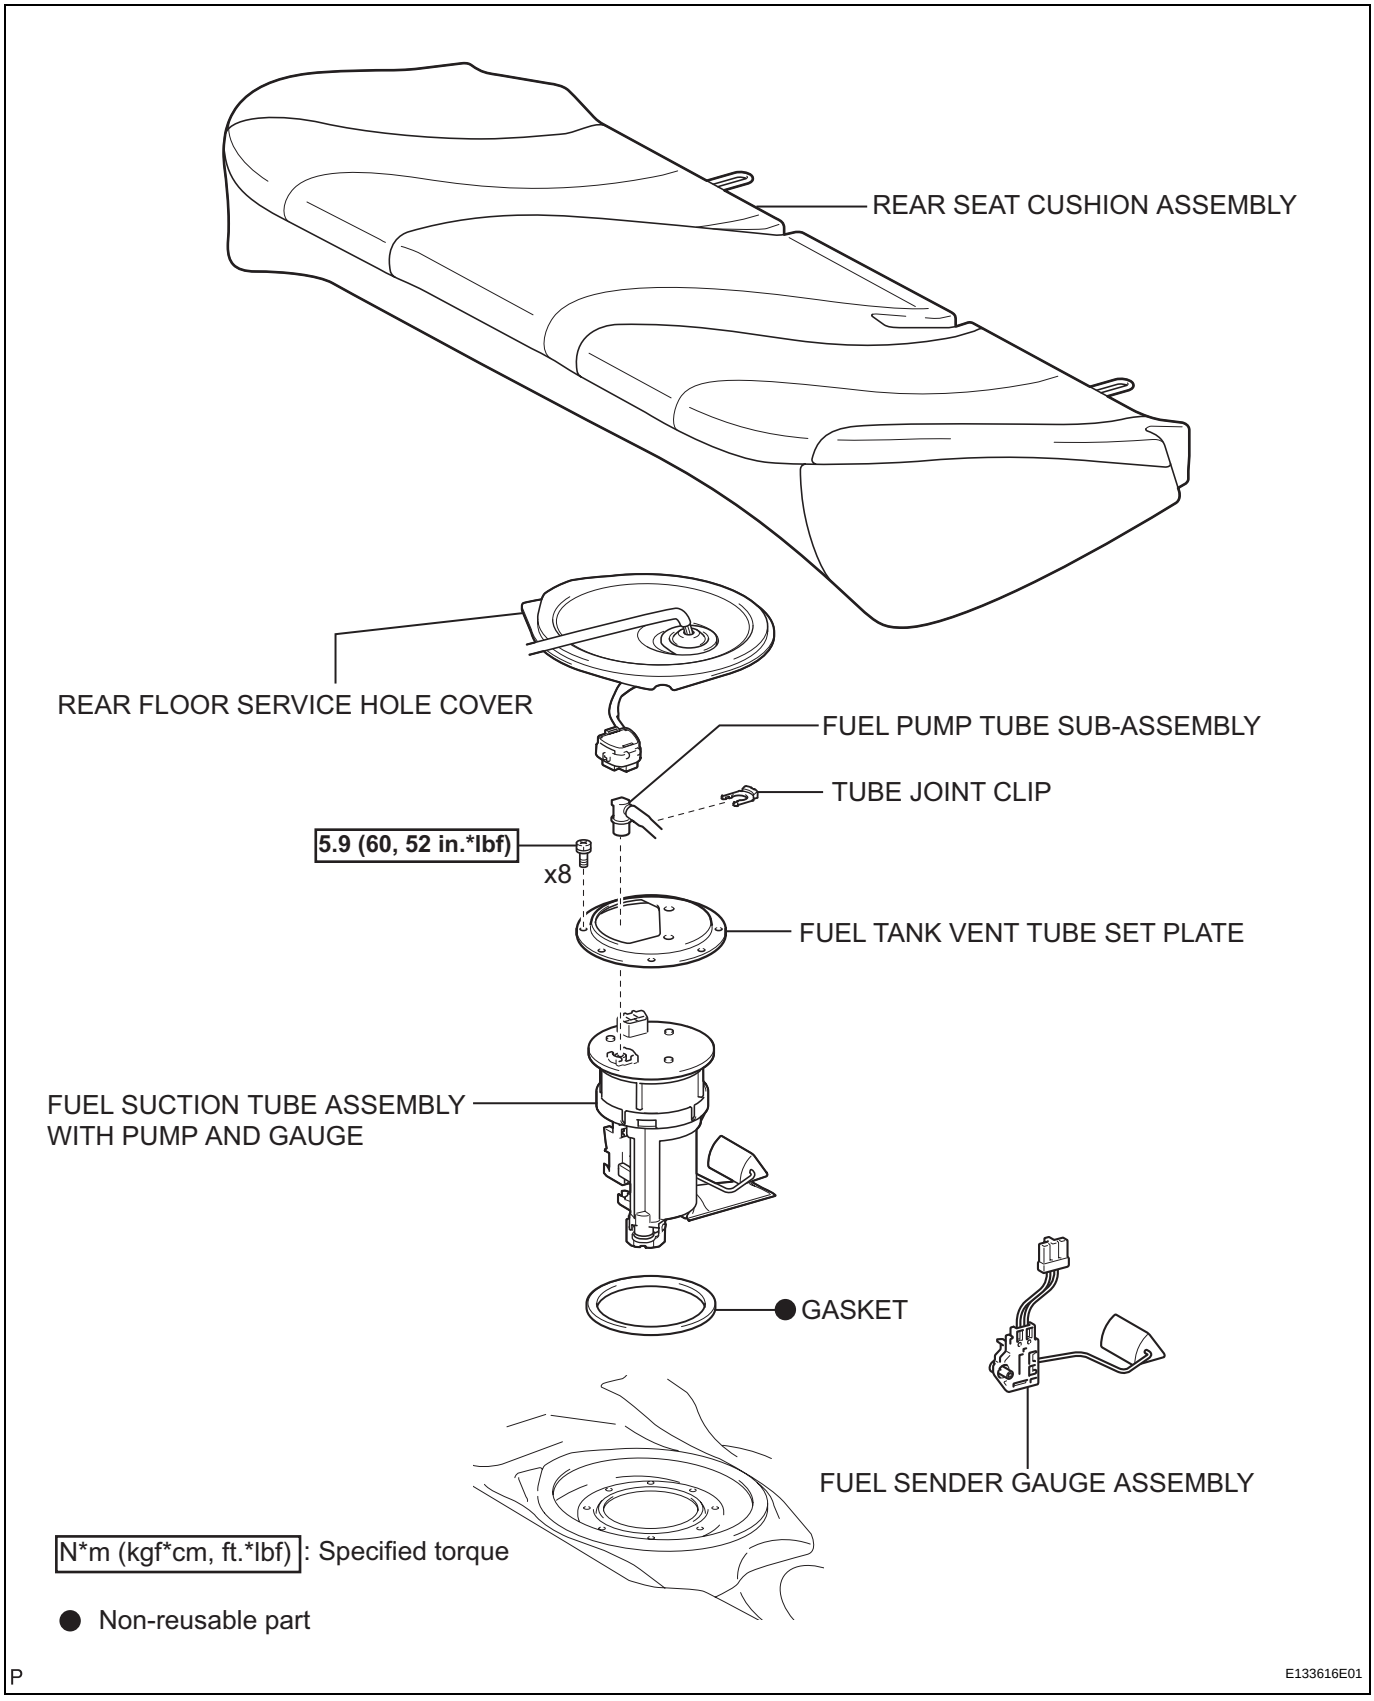
8. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**

9. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**

10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

FUEL SENDER GAUGE ASSEMBLY (for 2GR-FE)

COMPONENTS



ME

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   (See page FU-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
4. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
6. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-27)**
7. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-27)**
8. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-28)**
9. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-28)**
10. **REMOVE FUEL SENDER GAUGE ASSEMBLY (See page FU-28)**

INSPECTION

1. **INSPECT FUEL SENDER GAUGE ASSEMBLY**
   (a) Remove the fuel sender gauge assembly.
   (b) Check that the float moves smoothly between F and E.
   (c) Measure the resistance between the terminals 2 (S) and 3 (FE) of connector according to the value(s) in the table below.
   Standard resistance

Float Level	Resistance (Ω)
F	13.5 to 16.5
Between E and F	13.5 to 414.5 (Gradually changes)
E	405.5 to 414.5

HINT:
If the value is not as specified, replace the fuel sender gauge assembly.

Fuel Sender Gauge Assembly:

ME

INSTALLATION

1. INSTALL FUEL SENDER GAUGE ASSEMBLY (See page FU-31)
2. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-32)
3. INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-32)
4. CONNECT FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-33)
5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
6. CHECK FOR FUEL LEAKS (See page FU-8)
7. INSTALL REAR FLOOR SERVICE HOLE COVER (See page FU-33)
8. INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)
9. INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)
10. INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)

ENGINE OIL PRESSURE SWITCH

ON-VEHICLE INSPECTION

1. INSPECT ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Disconnect the connector from the oil pressure switch assembly.

(b) With the switch still installed, measure the resistance between the terminal of the engine oil pressure switch and engine ground.

Standard resistance:

Engine stopped:

Below 1 Ω

Engine idling:

10 kΩ or higher

HINT:

If the value is not as specified, replace the engine oil pressure switch.

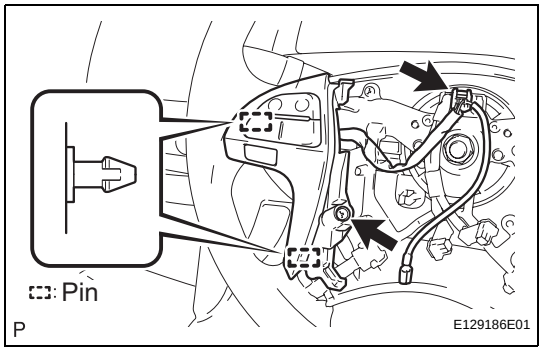
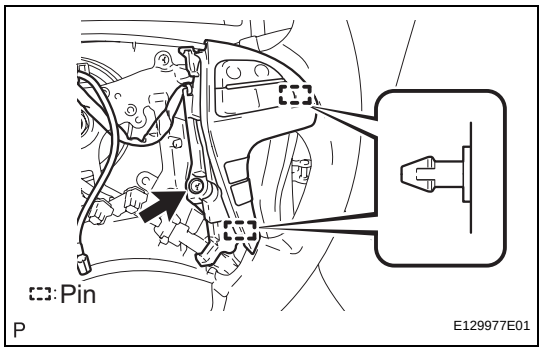
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
3. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
4. **REMOVE STEERING PAD (See page RS-350)**
5. **REMOVE STEERING PAD SWITCH LH (for 4 Spoke)**
   (a) Disconnect the pad switch connector from the spiral cable.
   (b) Remove the screw.
   (c) Disengage the 2 pins and remove the steering pad switch LH.

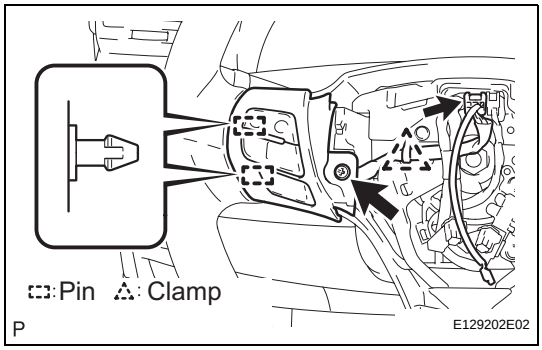


6. **REMOVE STEERING PAD SWITCH ASSEMBLY (for 4 Spoke)**
   (a) Disconnect the pad switch connector from the spiral cable.
   (b) Remove the screw.
   (c) Disengage the 2 pins and remove the steering pad switch.

   (d) Remove the screw.
   (e) Disengage the 2 pins and remove the steering pad switch assembly.

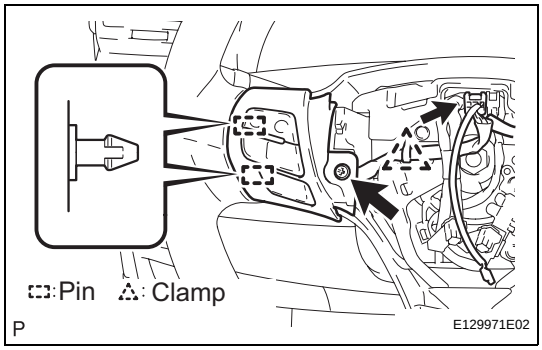


ME



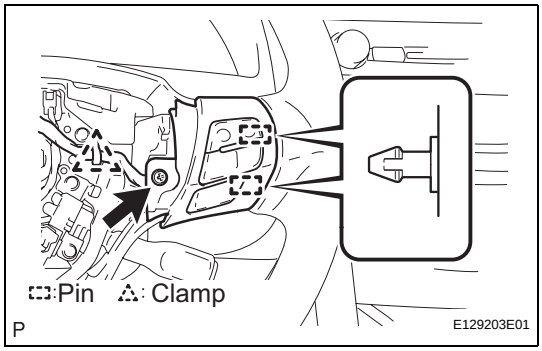
7. REMOVE STEERING PAD SWITCH LH (for 3 Spoke)

(a) Disconnect the pad switch connector from the spiral cable and disengage the clamp.
(b) Remove the screw.
(c) Disengage the 2 pins and remove the steering pad switch LH.



8. REMOVE STEERING PAD SWITCH ASSEMBLY (for 3 Spoke)

(a) Disconnect the pad switch connector from the spiral cable.
(b) Disengage the clamp and remove the screw.
(c) Disengage the 2 pins and remove the steering pad switch.



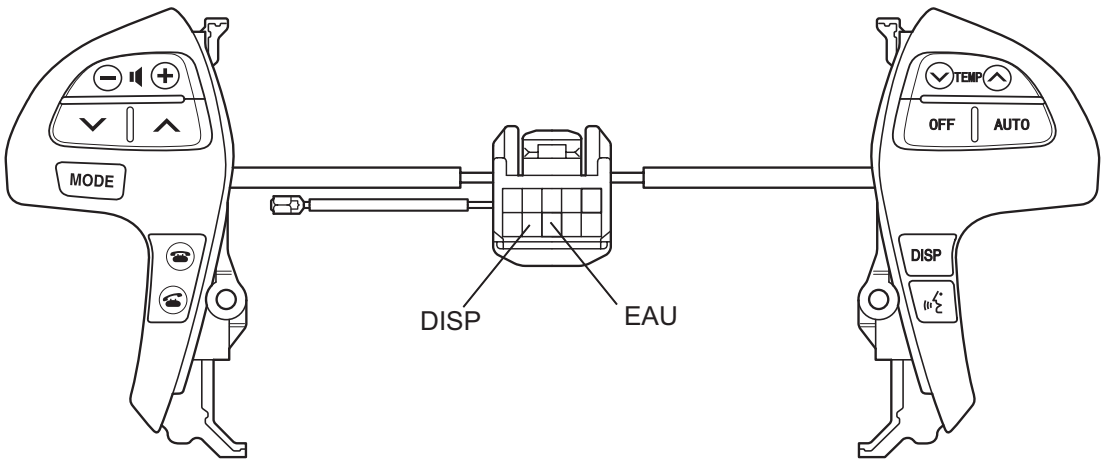
(d) Disengage the clamp and remove the screw.
(e) Disengage the 2 pins and remove the steering pad switch assembly.

INSPECTION

1. INSPECT STEERING PAD SWITCH

(a) Disconnect the steering pad switch connector.

4 Spoke Model:



E128142E01

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
DISP - EAU	DISP switch is not pushed in.	10 kΩ or higher
DISP - EAU	DISP switch is pushed in.	Below 1 Ω

HINT:

- This inspection is needed only for 4 spoke model steering pad switch.
- If the value is not as specified, replace the steering pad switch.

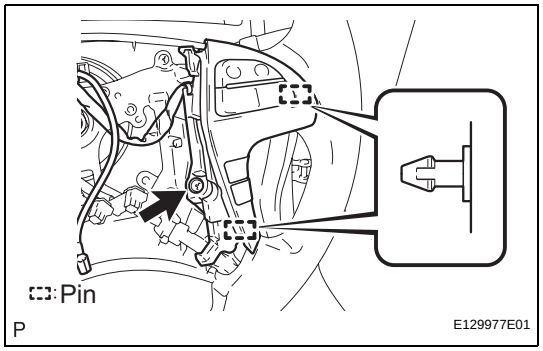
INSTALLATION

1. INSTALL STEERING PAD SWITCH ASSEMBLY (for 4 Spoke)

(a) Engage the 2 pins and install the steering pad switch assembly.

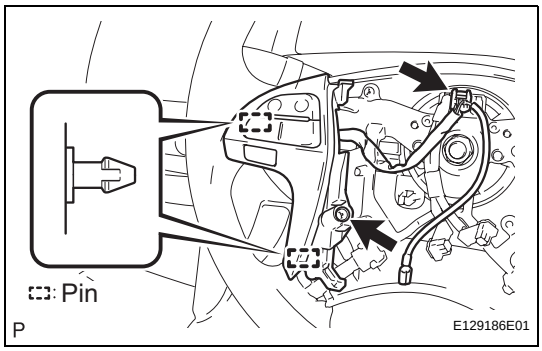
(b) Install the screw.

Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)

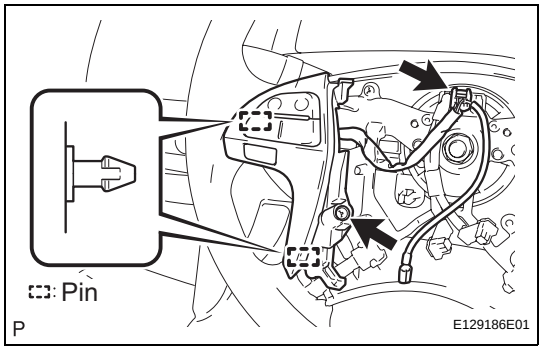


E129977E01

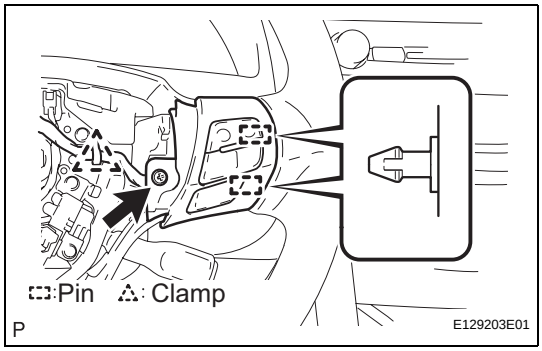
ME



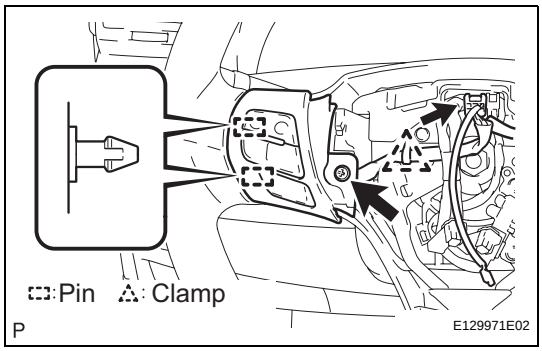
(c) Engage the 2 pins and install the steering pad switch assembly.
(d) Install the screw.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(e) Connect the connector to the spiral cable.



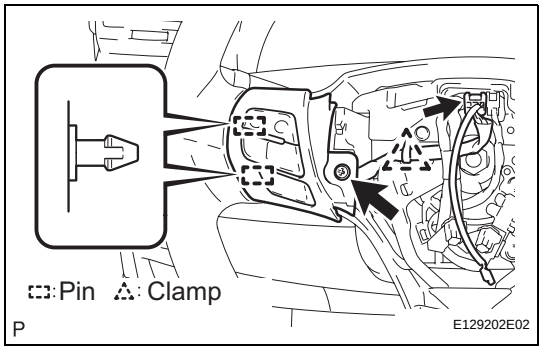
2. INSTALL STEERING PAD SWITCH LH (for 4 Spoke)
(a) Engage the 2 pins and install the steering pad switch LH.
(b) Install the screw.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(c) Connect the connector to the spiral cable.



3. INSTALL STEERING PAD SWITCH ASSEMBLY (for 3 Spoke)
(a) Engage the 2 pins and install the steering pad switch assembly.
(b) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)



(c) Engage the 2 pins and install the steering pad switch assembly.
(d) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(e) Connect the connector to the spiral cable.



4. INSTALL STEERING PAD SWITCH LH (for 3 Spoke)
(a) Engage the 2 pins and install the steering pad switch LH.
(b) Install the screw and engage the clamp.
Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)
(c) Connect the connector to the spiral cable.

5. INSTALL STEERING PAD (See page RS-350)

6. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)

ME

7. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
9. **INSPECT SRS WARNING LIGHT (See page RS-352)**

CALIBRATION

1. SELECT COMPASS DISPLAY MODE

(a) The COMP switch allows you to select the Display or Non-display mode of the compass.

2. SET ZONE

(a) Deviation between the "magnetic north" and "actual north" differs depending on the location. Therefore, adjustment of the magnetism is required. Since the magnetic condition differs depending on the area where the vehicle is used, it is necessary for each user to set the zone (Refer to Compass Zone Map). The zone setting can be changed using the COMP switch of the inner mirror.

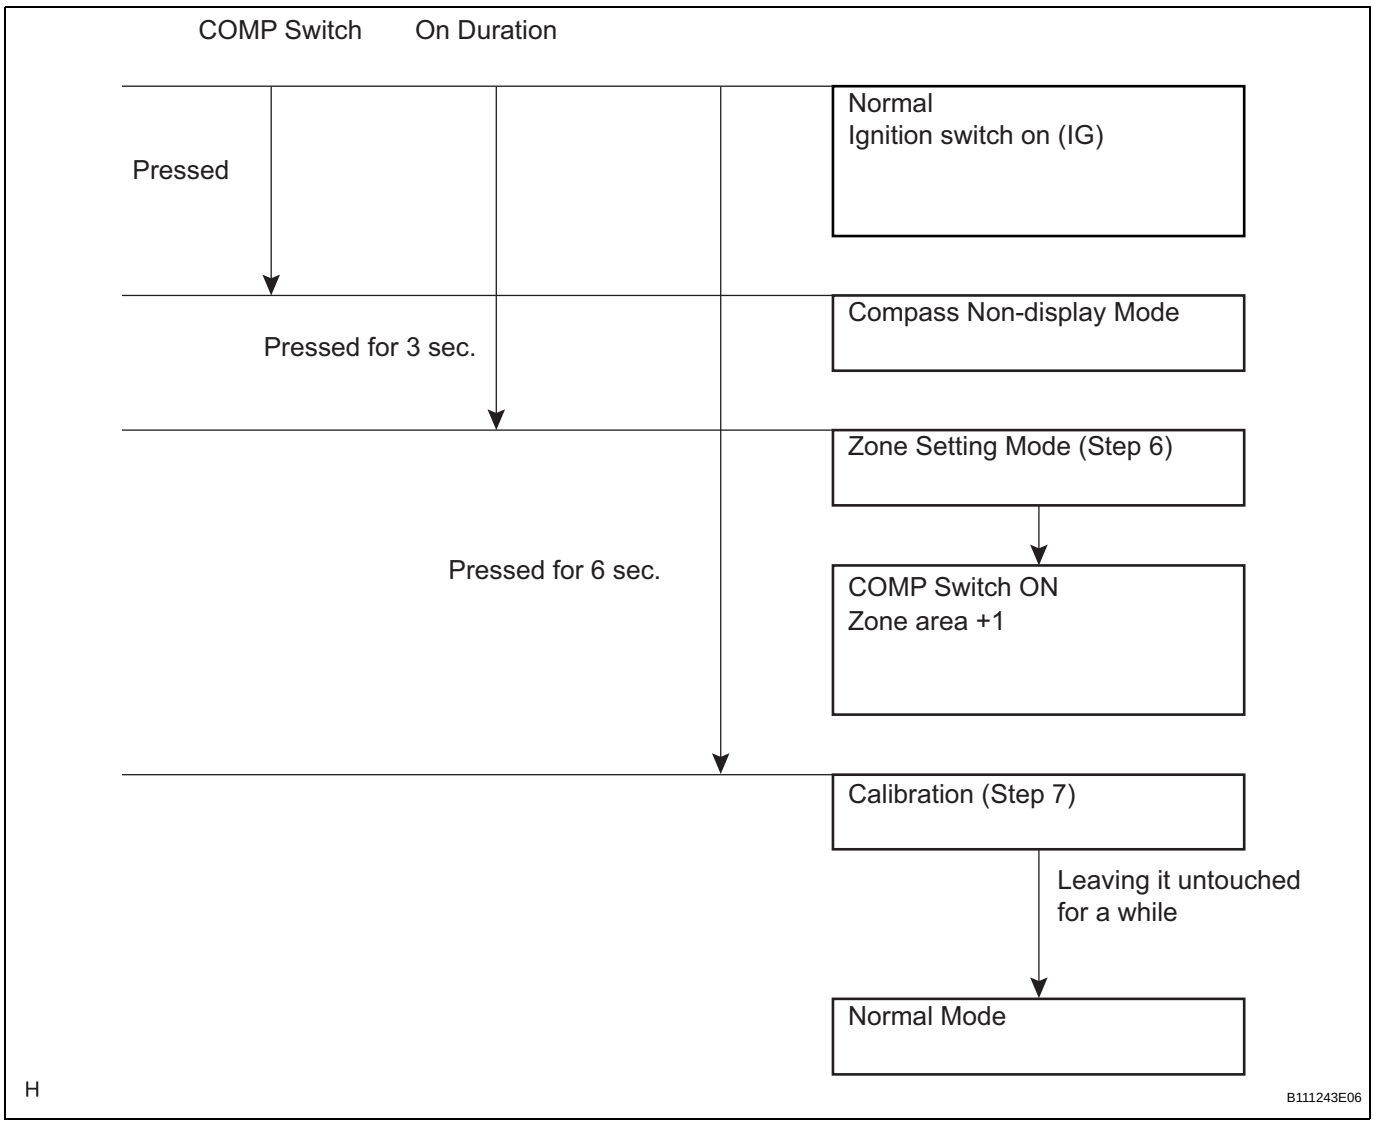
3. PERFORM CALIBRATION

(a) Because each vehicle has its own magnetic field, calibration should be performed for each vehicle. This compass function is used when storing the record of the vehicle's magnetic field.

4. WHEN COMPASS IS MAGNETIZED

(a) A compass could be magnetized during shipping by vessels or freight cars. Therefore, make sure to perform calibration and ensure that calibration is performed properly before delivery. If it cannot be done (cannot be completed in spite of driving around several times), it may be caused by magnetization. Demagnetize the vehicle using a demagnetizer and perform calibration again.

5. SET COMPASS



6. ZONE SETTING MODE

(a) Pressing the COMP switch for 3 seconds in the normal mode will activate the zone setting mode. A number (1 to 15) is displayed on the compass display.
NOTICE:
In the initial state, "8" is displayed.

(b) The displayed number increases by 1 every time the COMP switch is pressed. Referring to the map, check the number for the area where the vehicle will be used and set the zone number.

(c) Leave it untouched for several seconds after setting and check that the compass display shows an azimuthal direction (N, NE, E, SE, S, SW, W or NW) or "C".

7. CALIBRATION SETTING MODE

(a) Pressing the COMP switch for 6 seconds in the normal mode will activate the calibration setting mode.

(b) Drive the vehicle at a slow speed of 8 km/h (5 mph) or less in the circular direction.

(c) Driving around the circle 1 to 3 times will display the azimuthal direction on the display, completing the calibration.

NOTICE:

After the calibration is completed, it is not necessary to perform the above procedures unless the magnetic field strength is drastically changed. If this happens, the azimuthal display will be changed to "C".

Zone Setting Map:

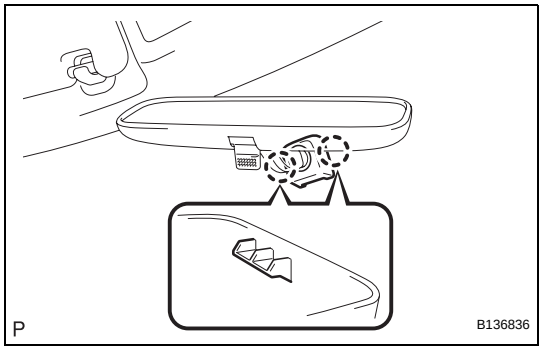
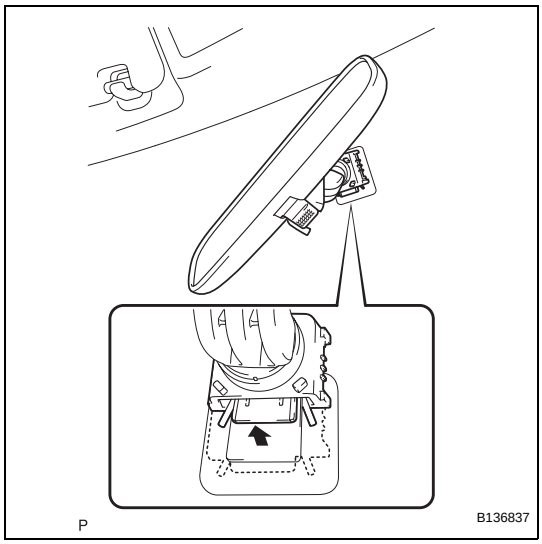
	3. Wire harness	-

REMOVAL

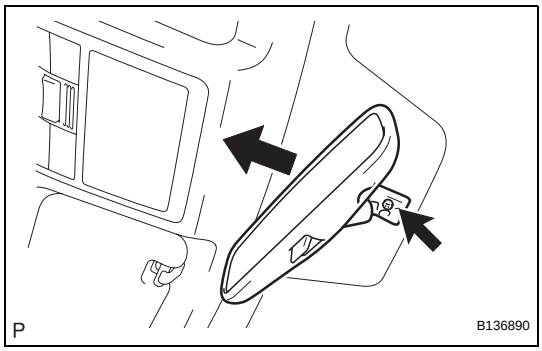


1. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (for TMC Made without EC Mirror)

(a) Disengage the 2 claws and the cover.



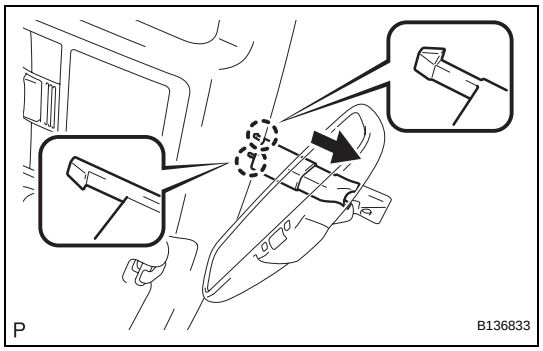
(b) Pull the lever in the direction indicated by the arrow shown in the illustration and slide the inner rear view mirror assembly upward to remove it.



2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (for TMMK Made without EC Mirror)

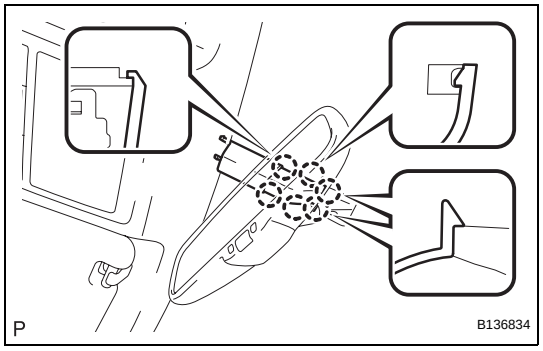
(a) Using a "torx" socket wrench (T20), remove the screw.

(b) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to remove it.

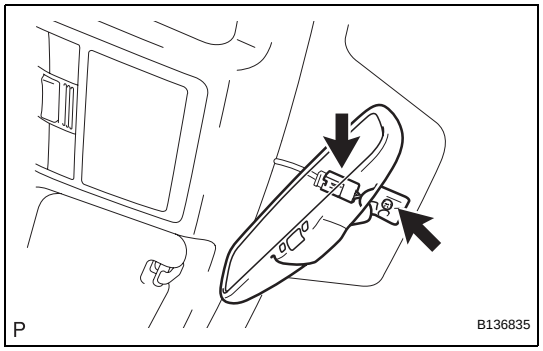


3. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

(a) Disengage the 2 claws and slide the inner rear view mirror stay holder cover as shown in the illustration.



(b) Disengage the 6 claws and remove the inner rear view mirror stay holder cover.

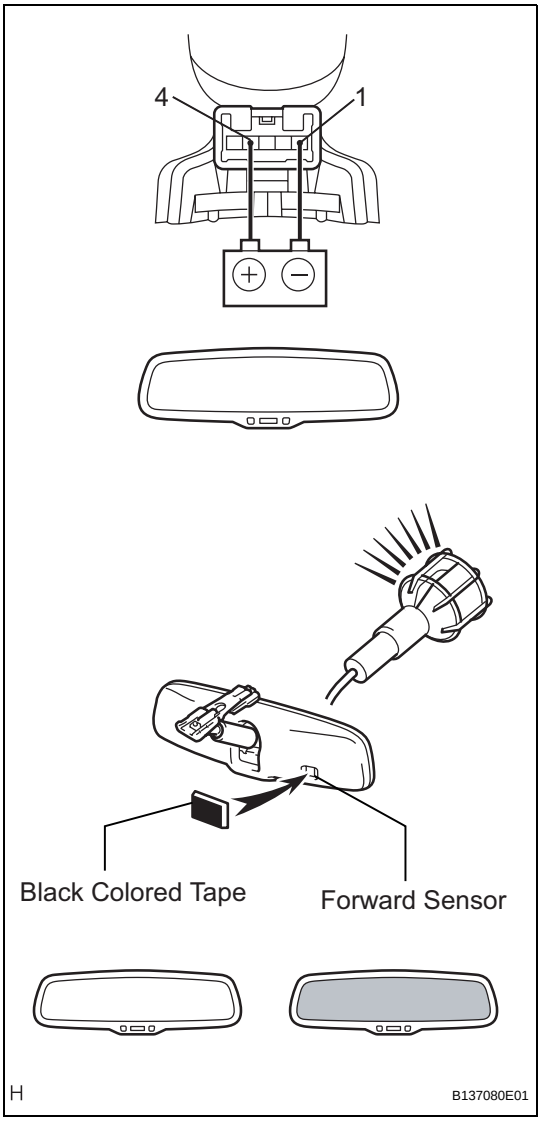


4. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

(a) Disconnect the connector.

(b) Using a "torx" socket wrench (T20), remove the screw and the inner rear view mirror.

MI



INSPECTION

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY

(a) Inspect operation of the electrochromic inner mirror.

(1) Connect the positive (+) lead from the battery to terminal 4 and the negative (-) lead to terminal 1.

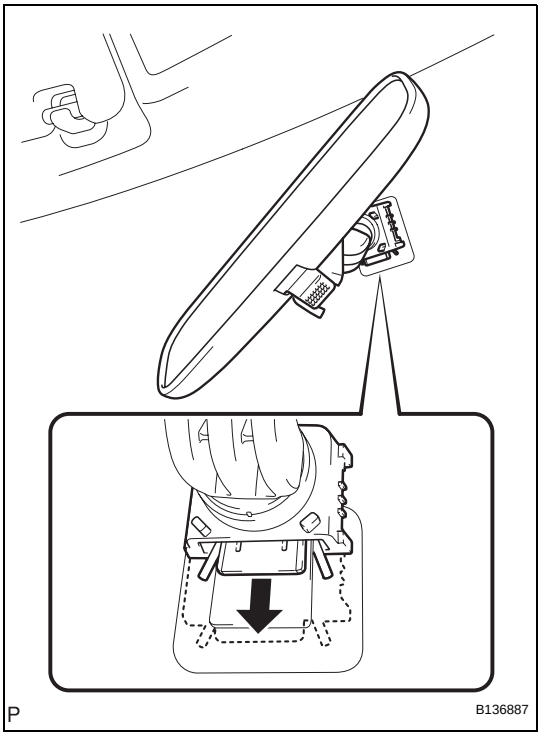
(2) Attach black colored tape to the forward sensor to prevent it from sensing.

(3) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

Standard:

Mirror surface changes from bright to dark.

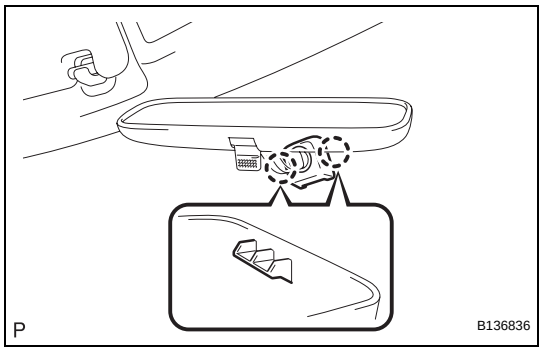
If the result is not as specified, replace the mirror assembly.



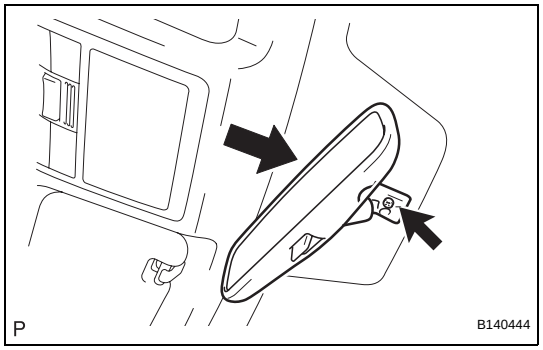
INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (for TMC Made without EC Mirror)

(a) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to install it.



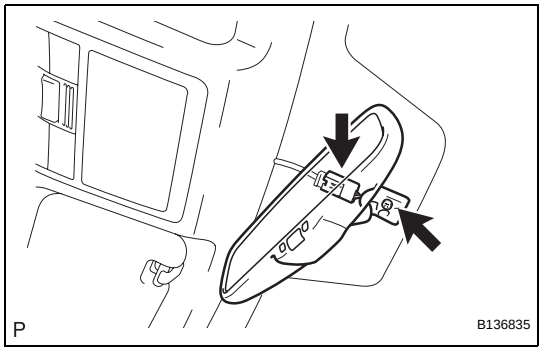
(b) Engage the 2 claws and install the cover.



2. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (for TMMK Made without EC Mirror)

(a) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to install it.

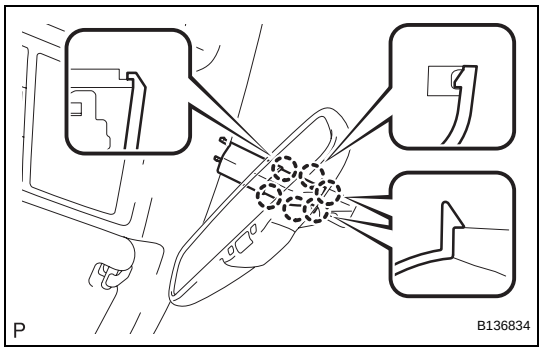
(b) Using a "torx" socket wrench (T20), install the screw.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)



3. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

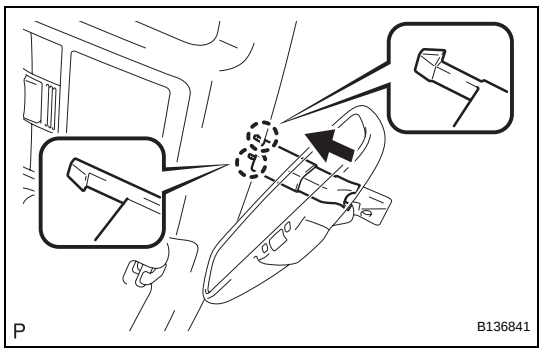
(a) Using a "torx" socket wrench (T20), install the inner rear view mirror with the screw.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

(b) Connect the connector.



4. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

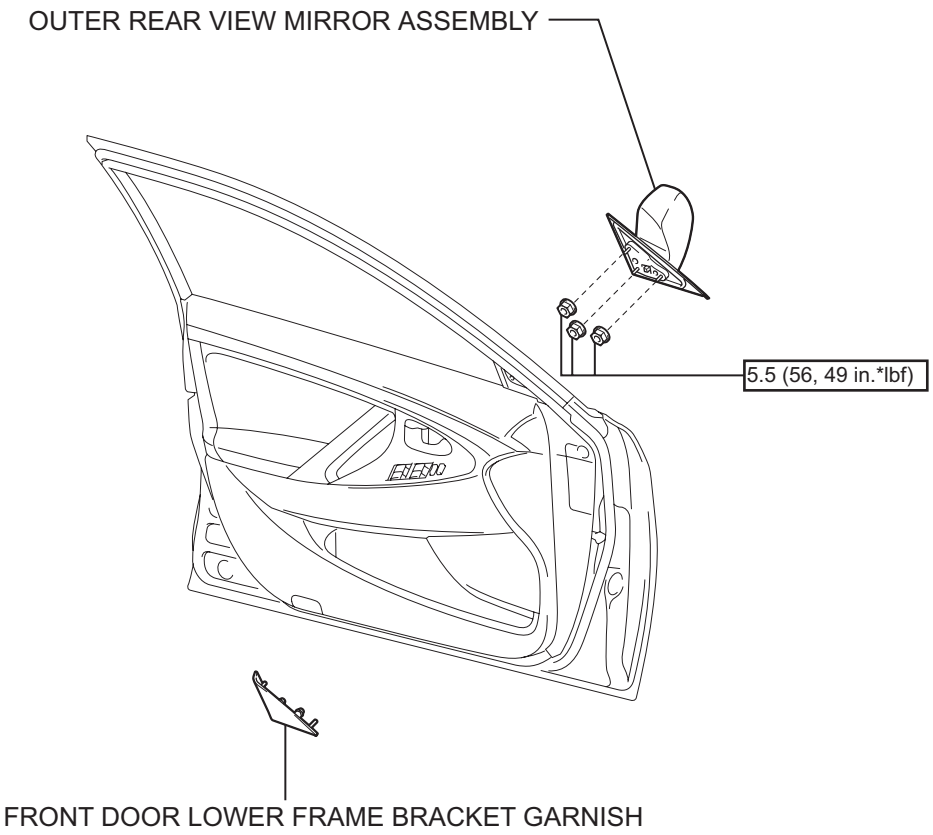
(a) Engage the 6 claws and install the inner rear view mirror stay holder cover.



(b) Engage the 2 claws and install the inner rear view mirror stay holder cover as shown in the illustration.

OUTER REAR VIEW MIRROR

COMPONENTS



N*m (kgf*cm, ft.*lbf): Specified torque

P

B136888E01

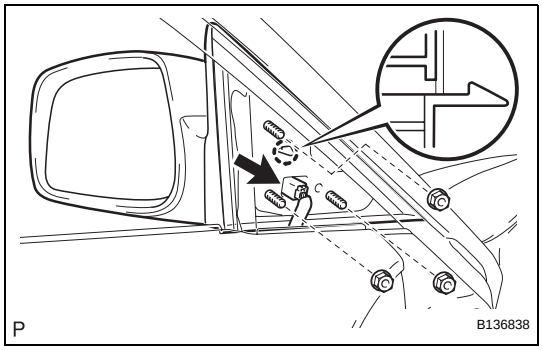
MI

REMOVAL

1. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-14)

2. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY

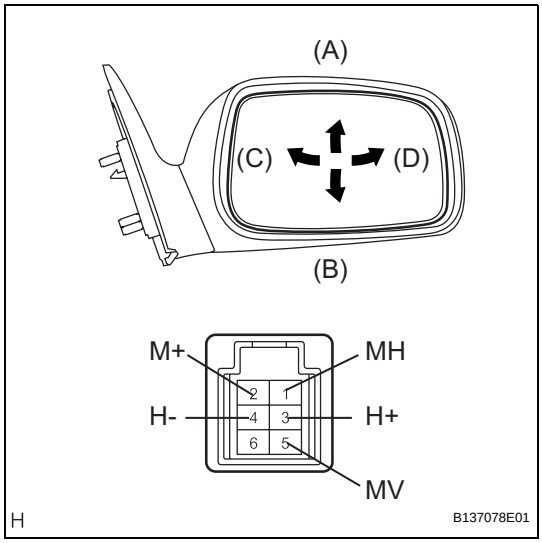
(a) Disconnect the connector.
(b) Remove the 3 nuts.
(c) Disengage the claw and remove the outer rear view mirror assembly.



INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

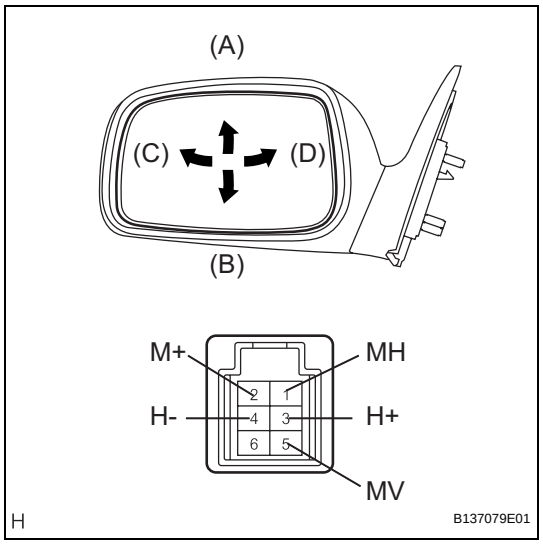
(a) Inspect outer mirror motor operation.
(1) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.
Standard



Measurement Condition	Specified Condition
Battery positive (+) → Terminal 5 (MV) Battery negative (-) → Terminal 2 (M+)	Turns upward (A)
Battery positive (+) → Terminal 2 (M+) Battery negative (-) → Terminal 5 (MV)	Turns downward (B)
Battery positive (+) → Terminal 1 (MH) Battery negative (-) → Terminal 2 (M+)	Turns left (C)
Battery positive (+) → Terminal 2 (M+) Battery negative (-) → Terminal 1 (MH)	Turns right (D)

(b) Inspect outer mirror heater operation.
(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.
Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 (H+) Battery negative (-) → Terminal 4 (H-)	Mirror surface temperature becomes higher



2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Inspect outer mirror motor operation.

(1) Remove the outer rear view mirror assembly.

(2) Apply battery voltage and check operation of the mirror face, as shown in the table and illustration.

Standard

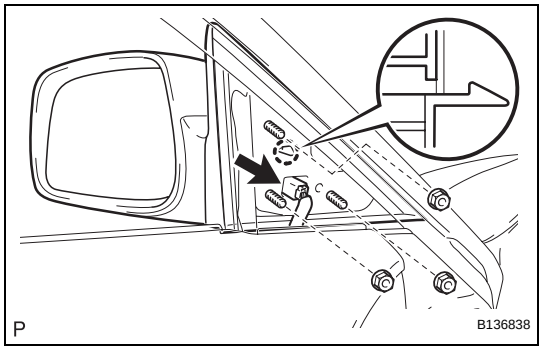
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 5 (MV) Battery negative (-) → Terminal 2 (M+)	Turns upward (A)
Battery positive (+) → Terminal 2 (M+) Battery negative (-) → Terminal 5 (MV)	Turns downward (B)
Battery positive (+) → Terminal 1 (MH) Battery negative (-) → Terminal 2 (M+)	Turns left (C)
Battery positive (+) → Terminal 2 (M+) Battery negative (-) → Terminal 1 (MH)	Turns right (D)

(b) Inspect outer mirror heater operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.

Standard

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 (H+) Battery negative (-) → Terminal 4 (H-)	Mirror surface temperature becomes higher



INSTALLATION

1. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY

(a) Engage the claw to install the outer rear view mirror assembly.

(b) Install the outer rear view mirror assembly with the 3 nuts.

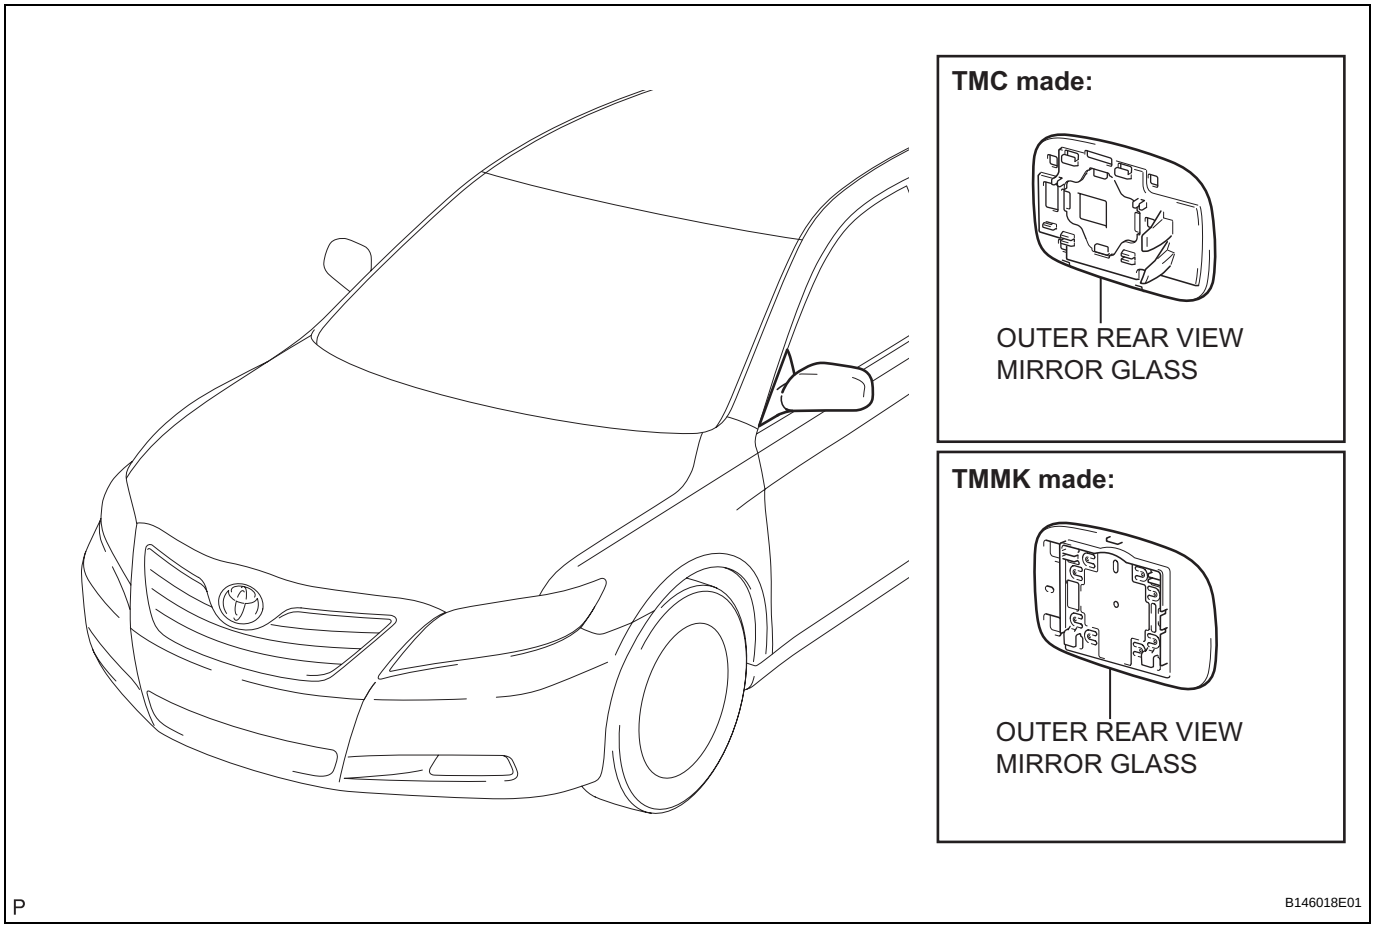
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

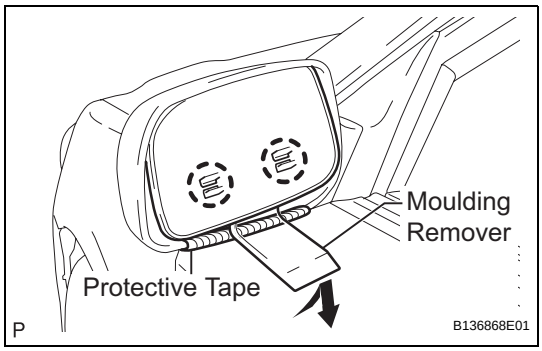
(c) Connect the connector.

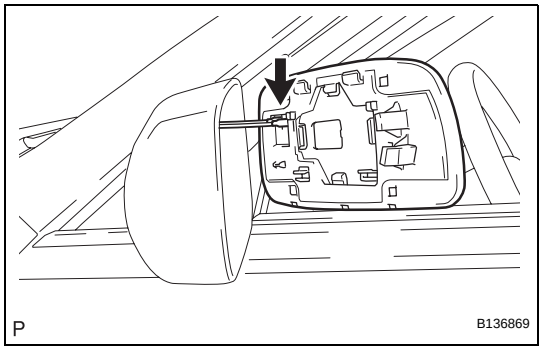
2. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-34)

OUTER REAR VIEW MIRROR GLASS

COMPONENTS







REPLACEMENT

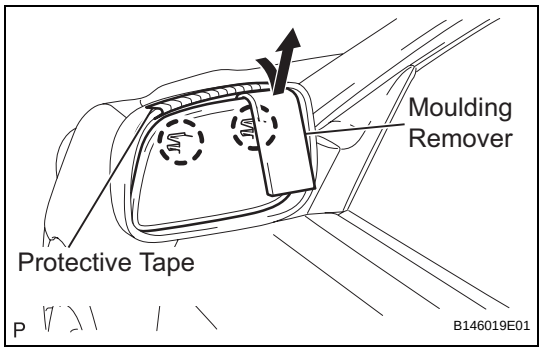
1. REMOVE OUTER REAR VIEW MIRROR GLASS (for TMC Made)

(a) Push the upper part of the mirror surface and tilt it.

(b) Using a moulding remover, disengage the 2 claws at the lower part of the outer rear view mirror, and remove the outer rear view mirror glass.

(c) with Mirror Heater:

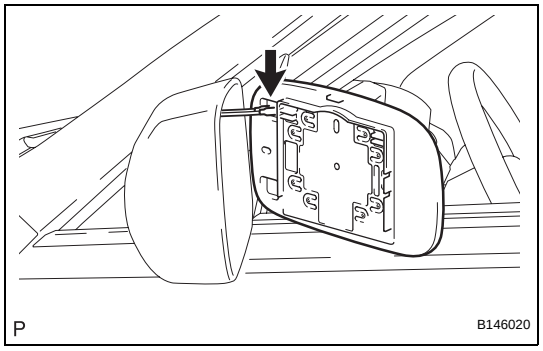
(1) Disconnect the connector and remove the outer rear view mirror glass.



2. REMOVE OUTER REAR VIEW MIRROR GLASS (for TMMK Made)

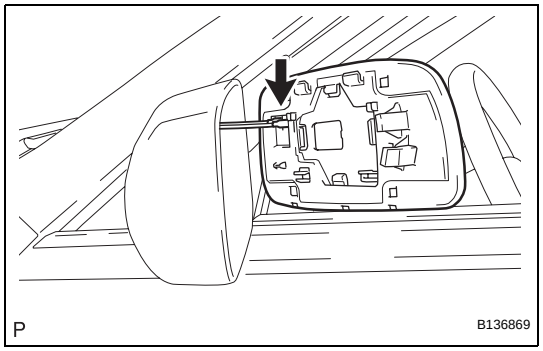
(a) Push the lower part of the mirror surface and tilt it.

(b) Using a moulding remover, disengage the 2 claws at the upper part of the outer rear view mirror, and remove the outer rear view mirror glass.



(c) with Mirror Heater:

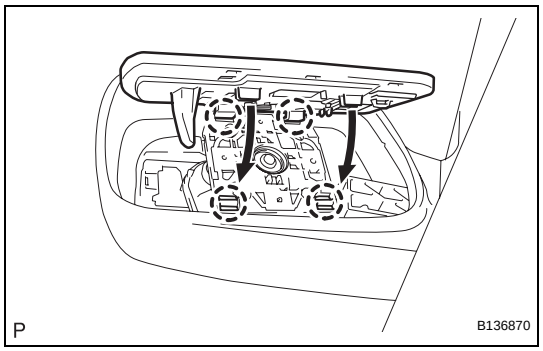
(1) Disconnect the connector and remove the outer rear view mirror glass.



3. INSTALL OUTER REAR VIEW MIRROR GLASS (for TMC Made)

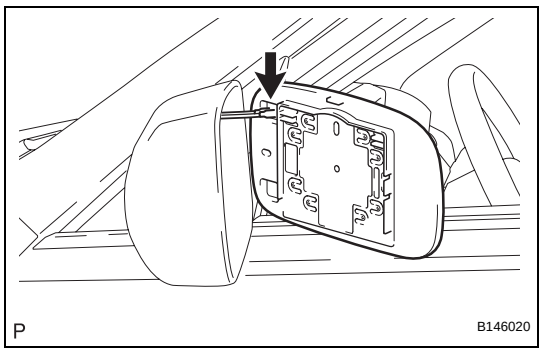
(a) with Mirror Heater:

(1) Connect the connector.



(b) Engage the 2 claws on the upper part of the outer rear view mirror glass to the outer rear view mirror.

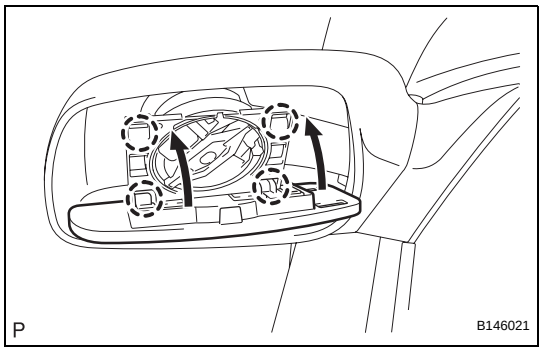
(c) Engage the 2 claws on the lower part of the outer rear view mirror glass to the outer rear view mirror as shown in the illustration.



4. INSTALL OUTER REAR VIEW MIRROR GLASS (for TMMK Made)

(a) with Mirror Heater:

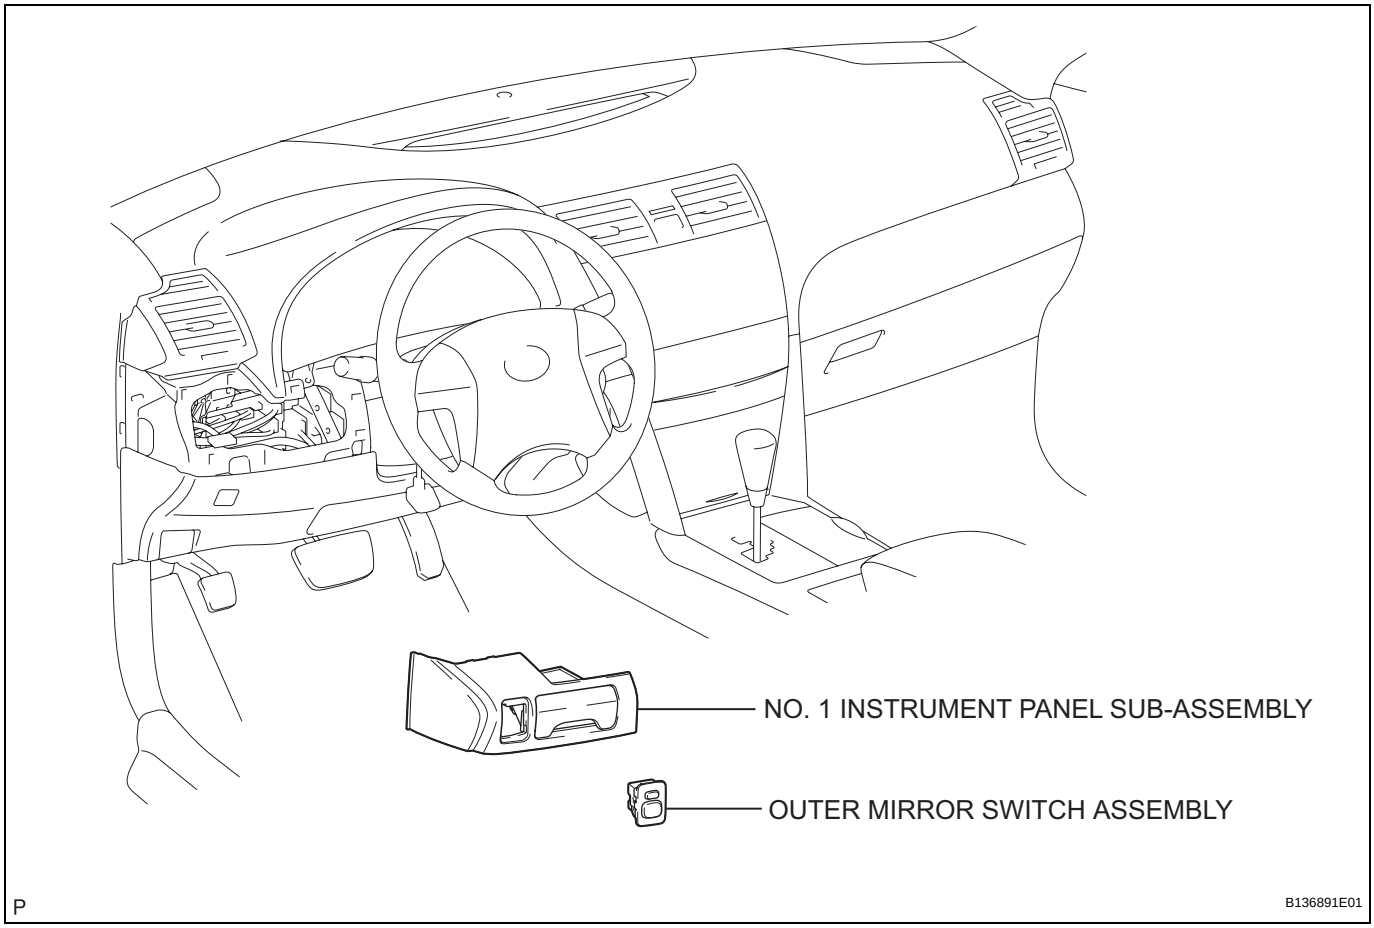
(1) Connect the connector.



(b) Engage the 2 claws on the lower part of the outer rear view mirror glass to the outer rear view mirror.
(c) Engage the 2 claws on the upper part of the outer rear view mirror glass to the outer rear view mirror as shown in the illustration.

OUTER MIRROR SWITCH

COMPONENTS

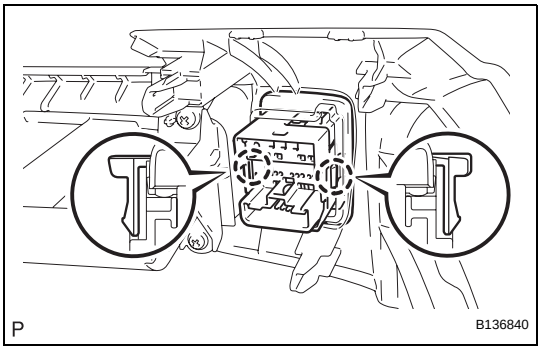


MI

REMOVAL

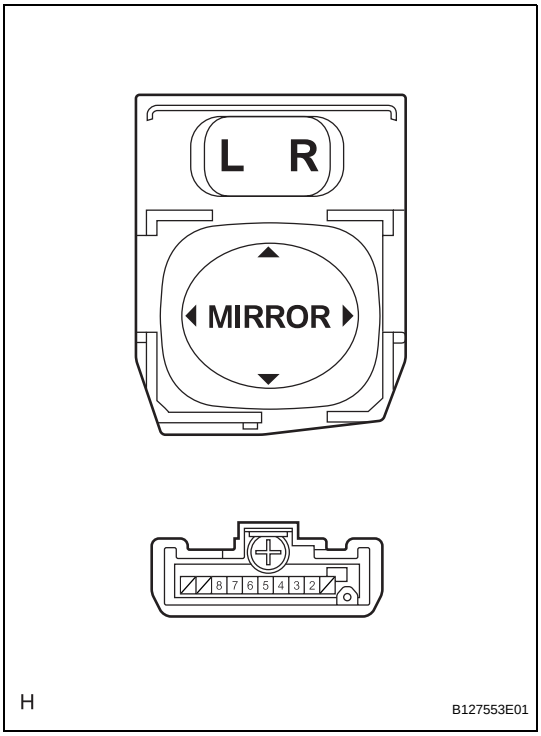
1. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**

2. **REMOVE OUTER MIRROR SWITCH ASSEMBLY**
   (a) Disengage the 2 claws and remove the outer mirror switch assembly.



INSPECTION

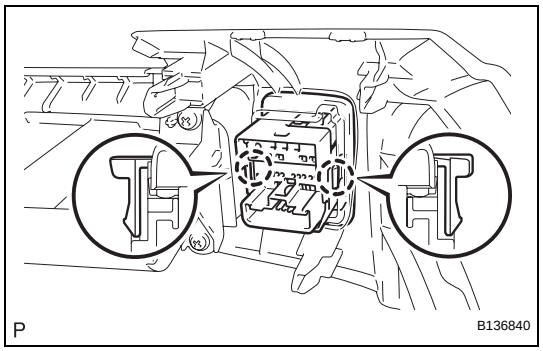
1. **INSPECT OUTER MIRROR SWITCH ASSEMBLY**
   (a) Inspect the outer mirror switch.
      (1) Measure the resistance according to the value(s) in the table below when the switch is operated.
      Standard resistance:
      Select "L" on the left/right adjustment switch



Tester Connection	Switch Position	Specified Condition
4 - 8	UP	Below 1 Ω
6 - 7		
4 - 7	DOWN	
6 - 8		
5 - 8	LEFT	
6 - 7		
5 - 7	RIGHT	
6 - 8		

Select "R" on the left/right adjustment switch

Tester Connection	Switch Position	Specified Condition
3 - 8	UP	Below 1 Ω
6 - 7		
3 - 7	DOWN	
6 - 8		
2 - 8	LEFT	
6 - 7		
2 - 7	RIGHT	
6 - 8		



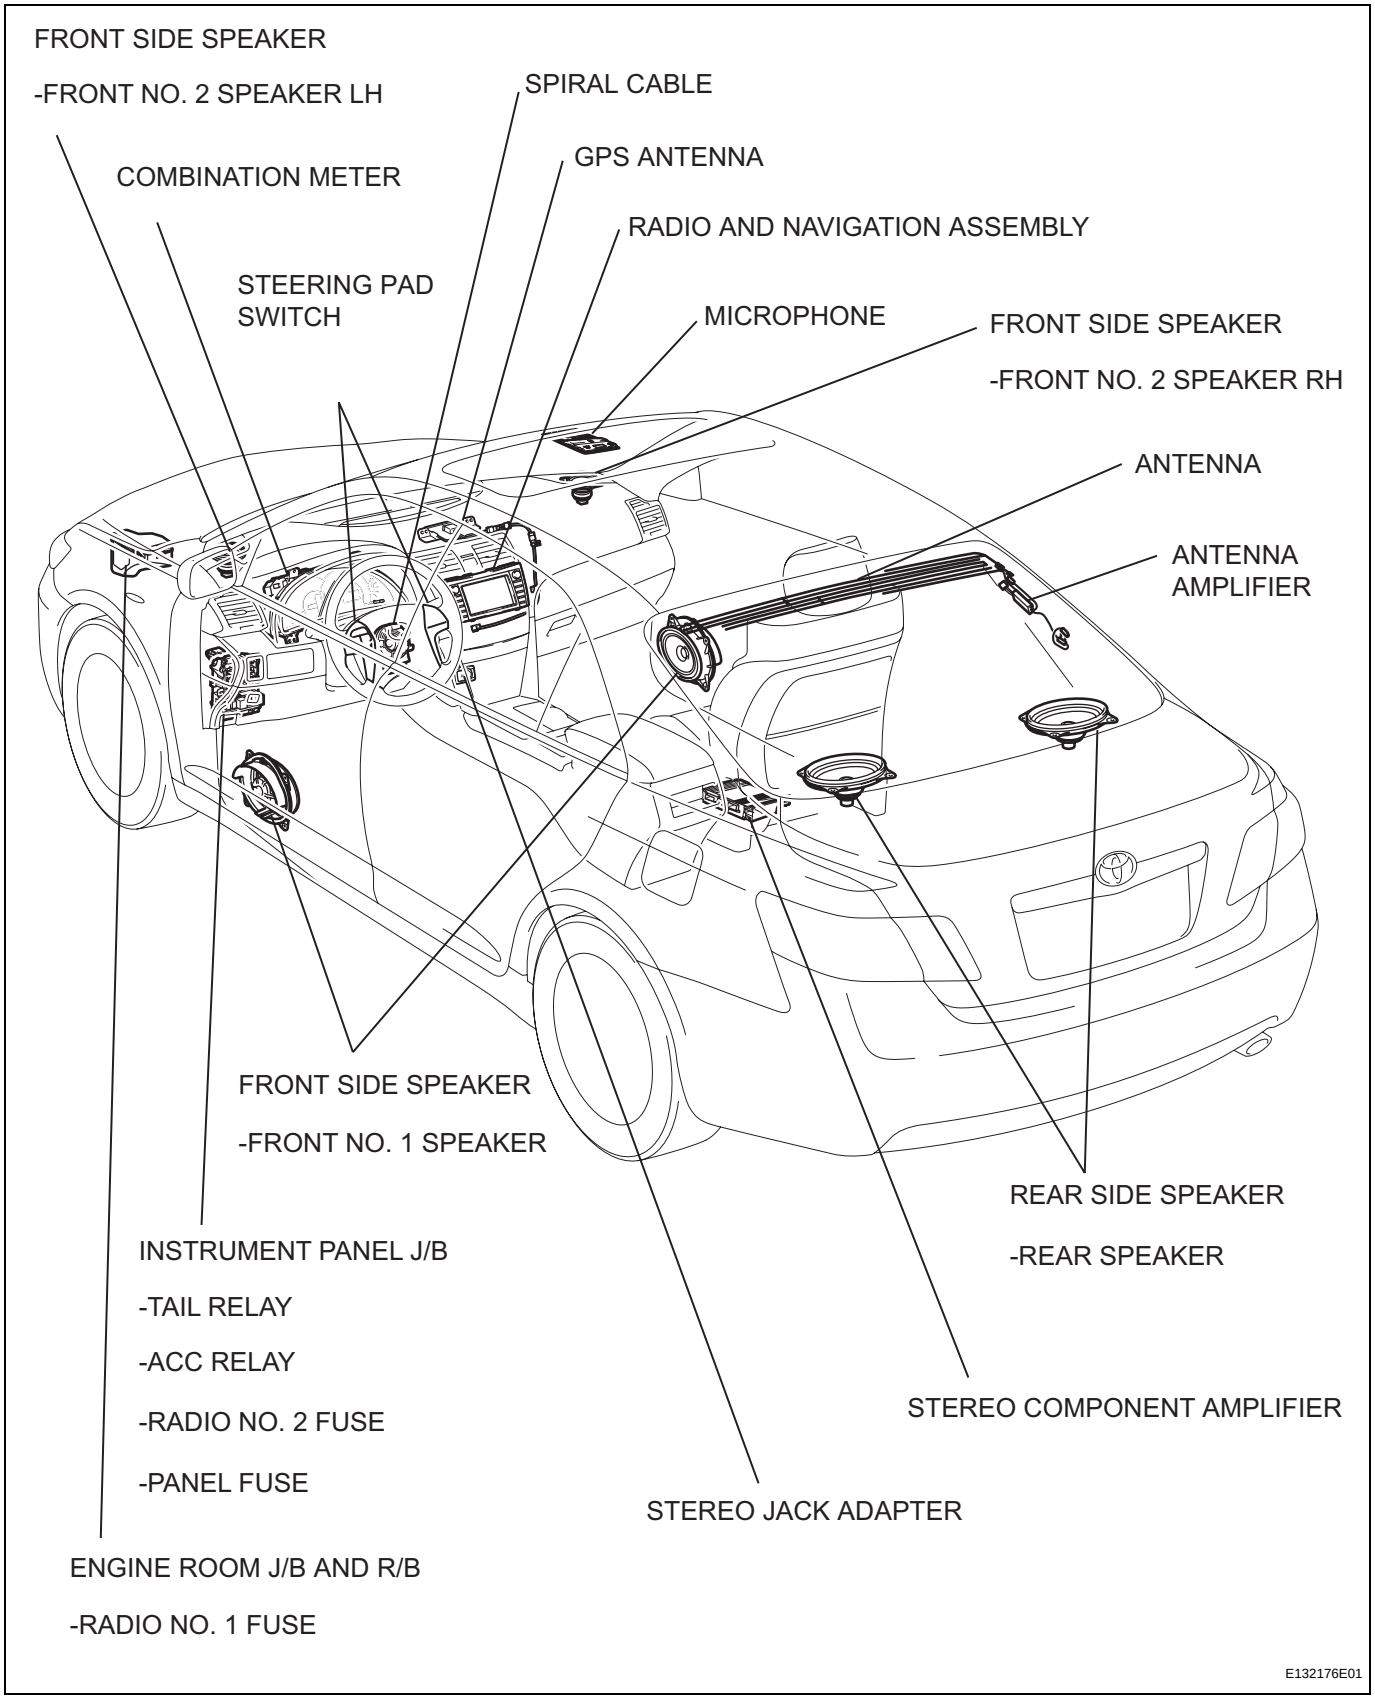
INSTALLATION

1. **INSTALL OUTER MIRROR SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the outer mirror switch assembly.

2. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**

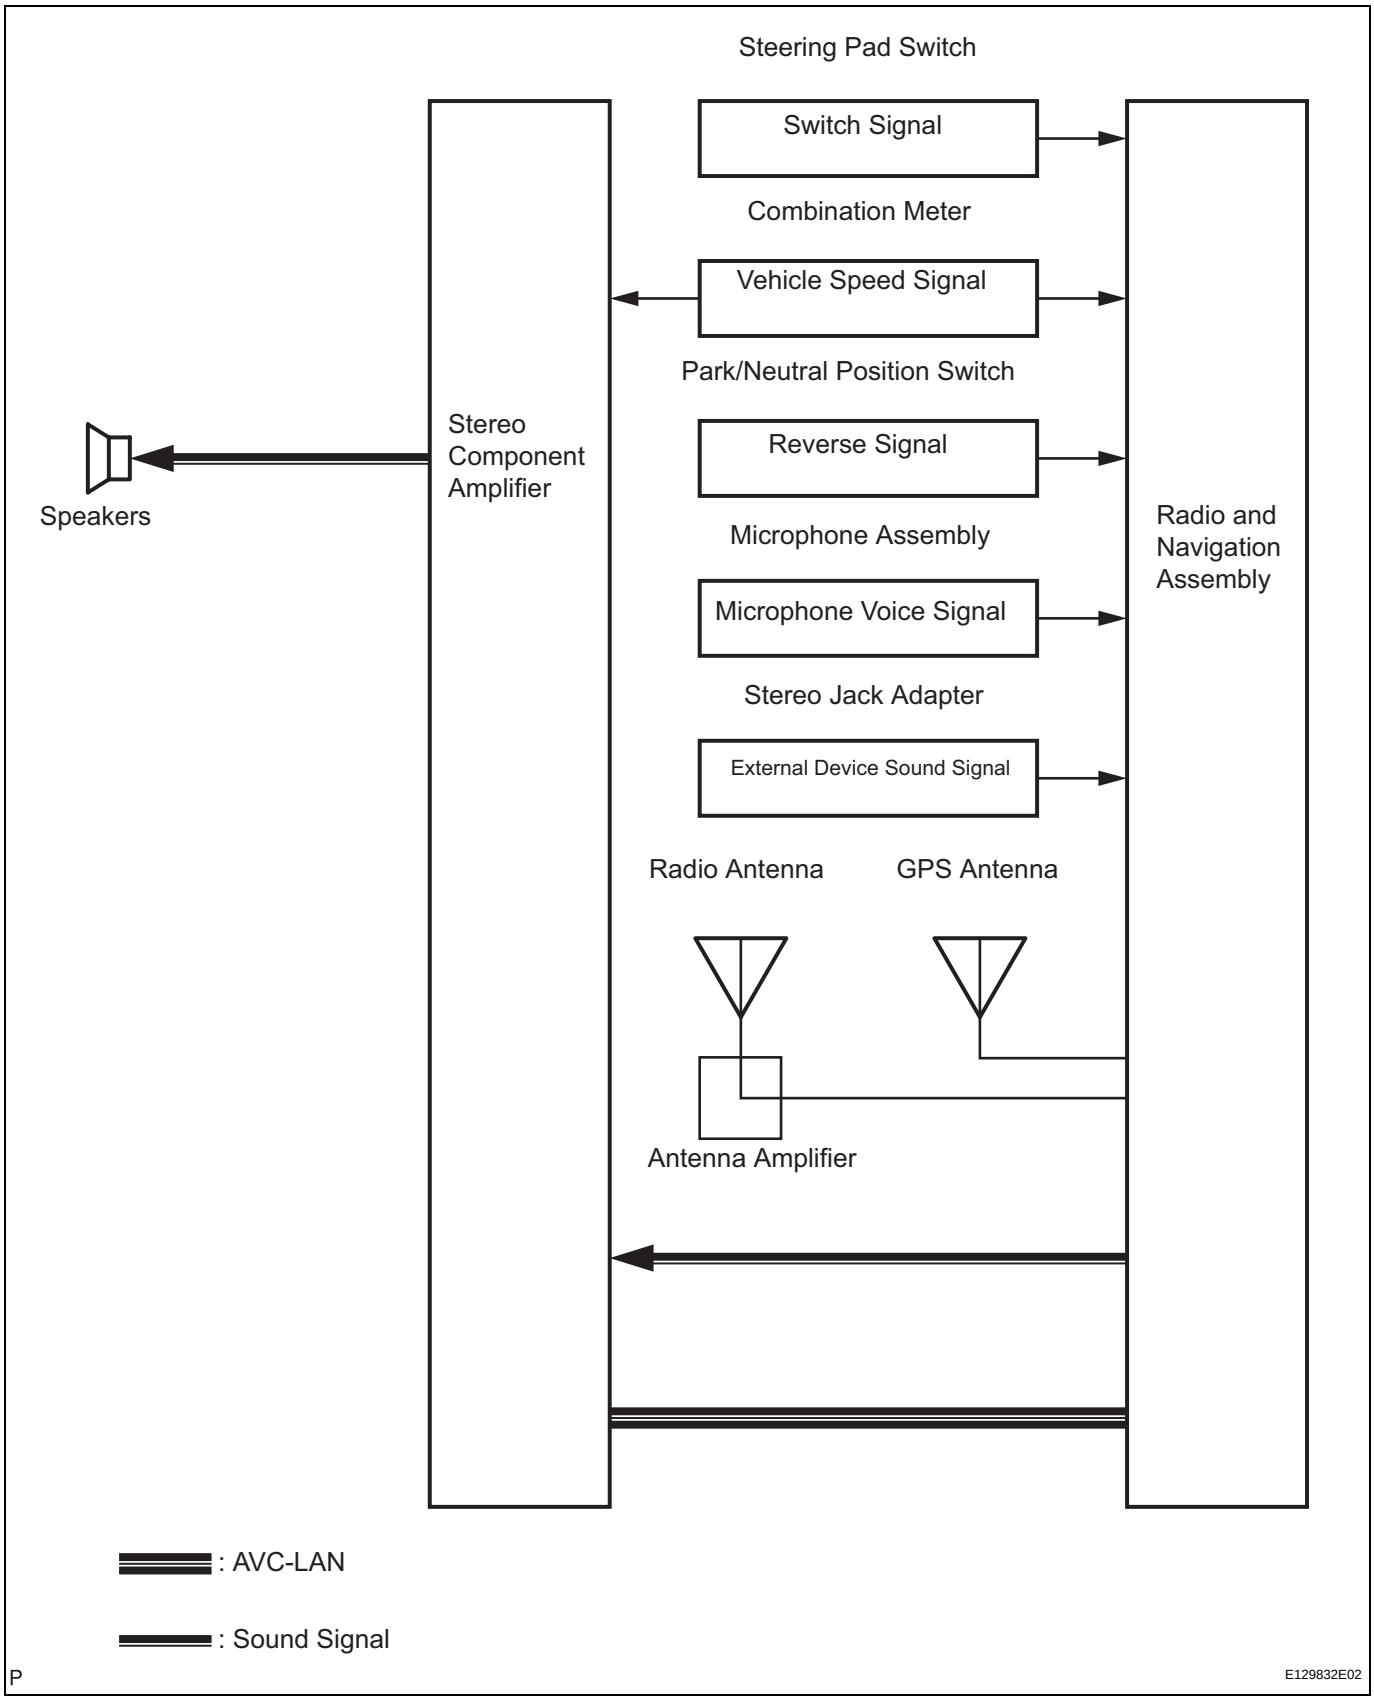
NAVIGATION SYSTEM

PARTS LOCATION



NS

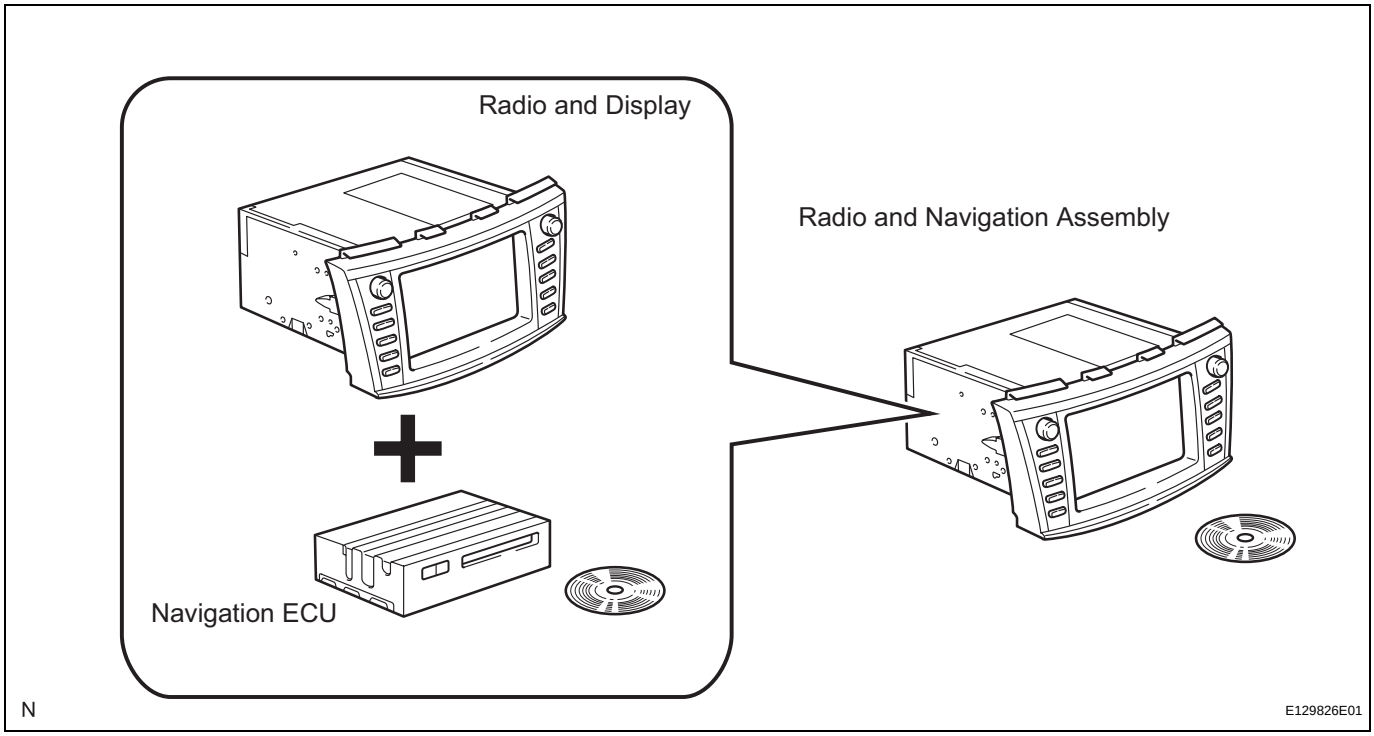
SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. Radio and navigation assembly outline

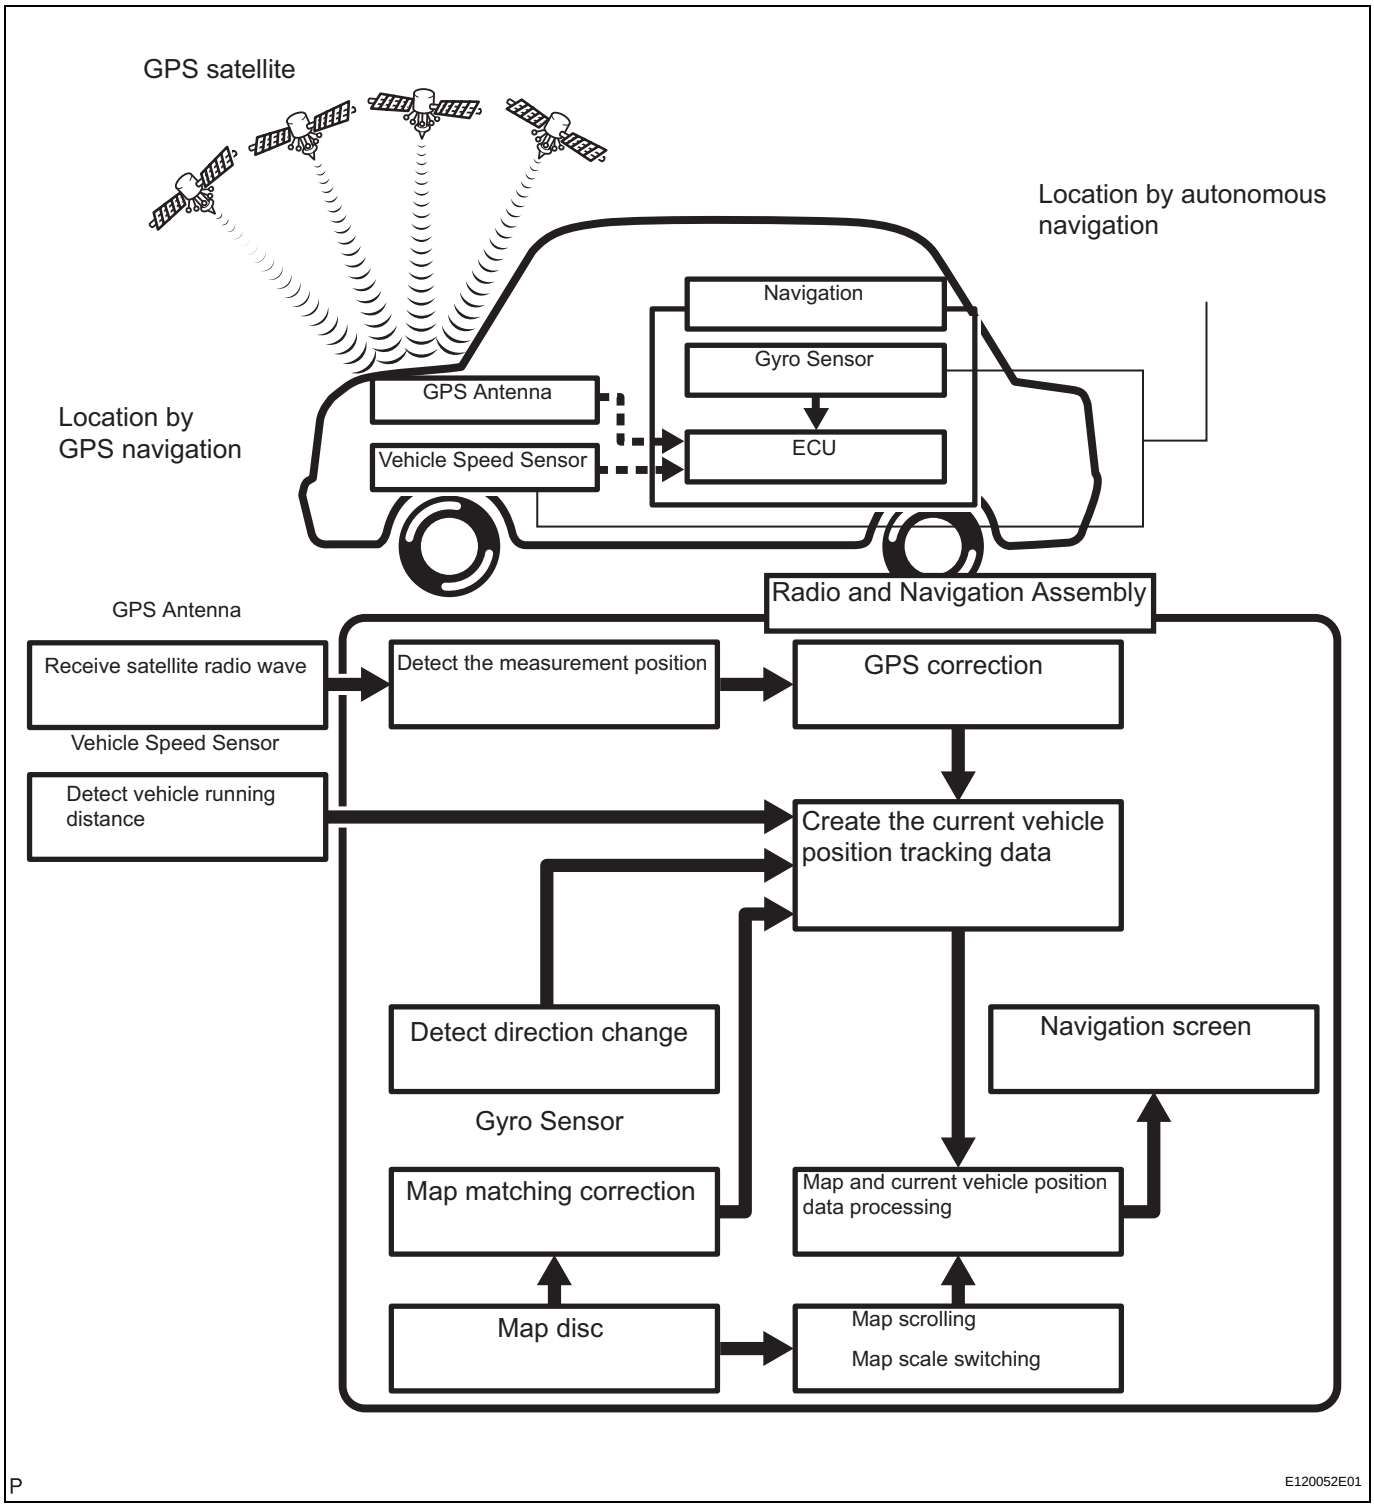
(a) Conventionally, 2 separate devices, a "radio and display" and a "navigation ECU" are used. This model has adopted a new type, combining these devices into a single unit.



2. Navigation system outline

(a) Vehicle position tracking methods

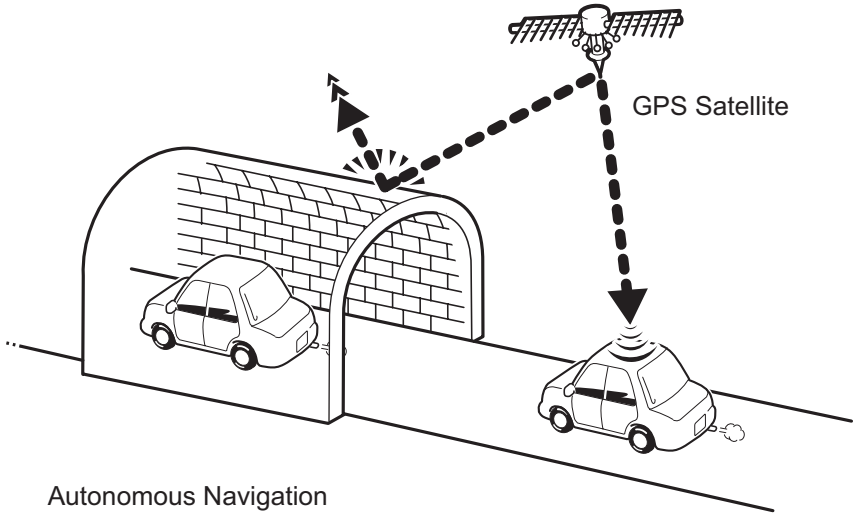
It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.
*GPS (Global Positioning System)



Operation	Description
Vehicle Position Calculation	The radio and navigation assembly calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and the running distance signal from the vehicle speed sensor and creates the driving route.
Map Display Processing	The radio and navigation assembly displays the vehicle track on the map by processing the vehicle position data, vehicle running track, and map data from the map disc.
Map Matching	The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road.
GPS Correction	The vehicle position is matched to the position measured by GPS. Then, the measurement position data from the GPS unit is compared with the vehicle position and running track data. If the position is widely different, the GPS measurement position is used.
Distance Correction	The running distance signal from the vehicle speed sensor includes the error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The radio and navigation assembly automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated.

Navigation is performed even where the GPS radio wave does not reach.

- In a tunnel
- In an indoor parking lot
- Between tall buildings
- Under an overpass
- On a forest or tree-lined path



Autonomous Navigation

Autonomous Navigation and GPS Wave Navigation

P

I100028E07

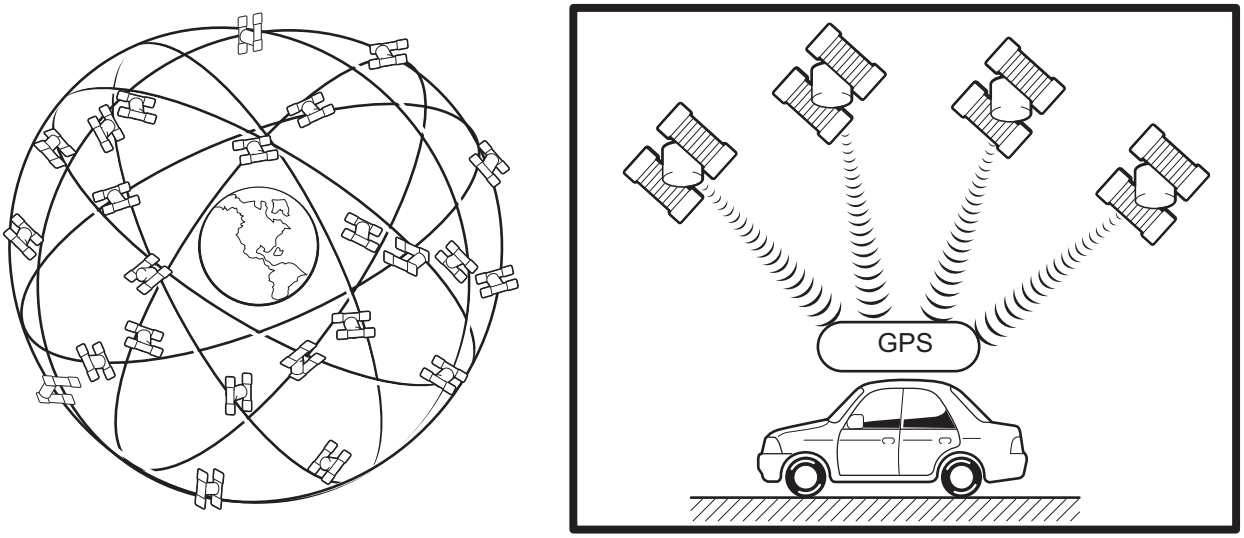
NS

HINT:
The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS radio wave cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decline.

(b) Autonomous navigation
This method determines the relative vehicle position based on the running track determined by the gyro and vehicle speed sensors located in the radio and navigation assembly.
(1) Gyro sensor
Calculates the direction by detecting angular velocity. It is located in the radio and navigation assembly.
(2) Vehicle speed sensor
Used to calculate the vehicle running distance.

(c) GPS navigation (Satellite navigation)
This method detects the absolute vehicle position using radio waves from a GPS satellite.
* GPS satellites were launched by the U.S. Department of Defence for military purposes.

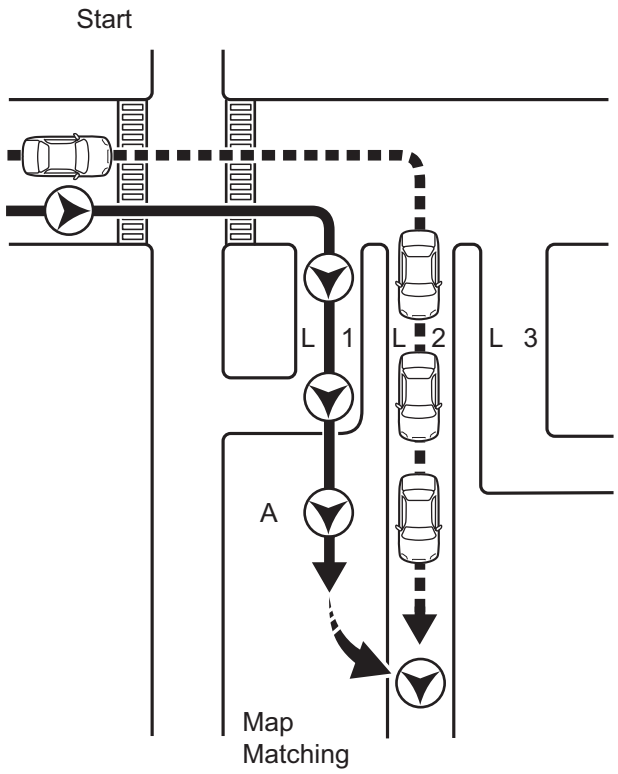
Current longitude/latitude/altitude is determined using the radio wave arrival time from four satellites.

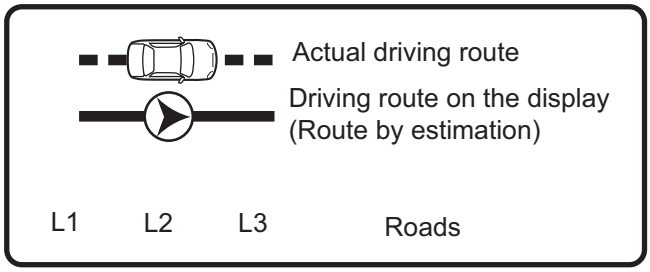


P I100029E03

Number of satellites	Measurement	Description
2 or less	Measurement impossible	Vehicle position cannot be obtained because the number of satellites is not enough.
3	2-dimensional measurement is possible	Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.)
4	3-dimensional measurement is possible	Vehicle position is obtained based on the current longitude, latitude and altitude.

(d) Map matching
The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.





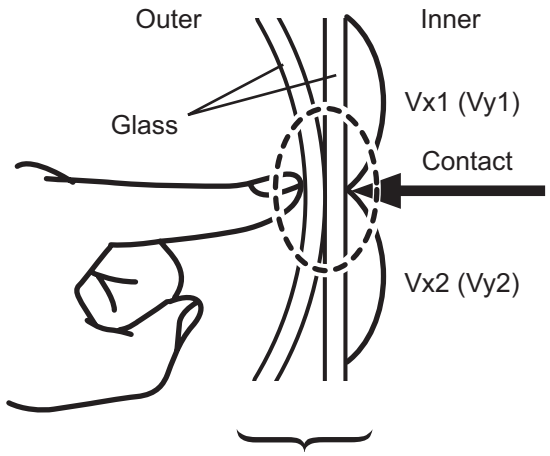
The system compares the shape of the roads L1, L2 and L3 to the estimated running track after the vehicle makes a right turn. At point A, the vehicle position differs enough from the shape of L1 that the display switches to the road L2.

NS

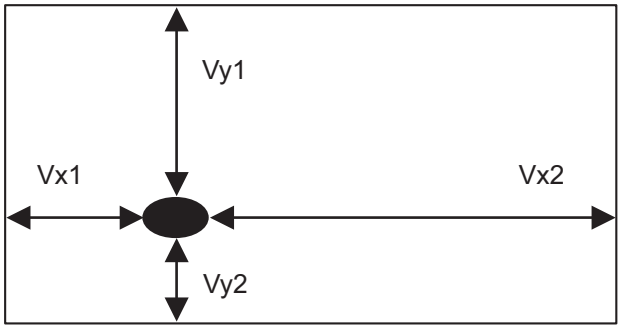
P

I100030E07

(e) Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.



Touch-sensitive switch position



The touch switch detects the voltage ratio and calculates the position on the screen.

P

E106414E03

3. DVD (Digital Versatile Disc) player outline (for navigation map)

(a) The radio and navigation assembly (built-in navigation ECU) uses a laser pickup to read the digital signals recorded on a DVD.
HINT:
- Do not disassemble any part of the radio and navigation assembly (built-in navigation ECU).
- Do not apply oil to the radio and navigation assembly (built-in navigation ECU).
- Do not insert anything but a DVD into the radio and navigation assembly (built-in navigation ECU).

NS

CAUTION:
Do not look directly at the laser pickup because the radio and navigation assembly (built-in navigation ECU) uses an invisible laser beam. Be sure to only operate the navigation system as instructed.

4. CD (Compact Disc) player outline

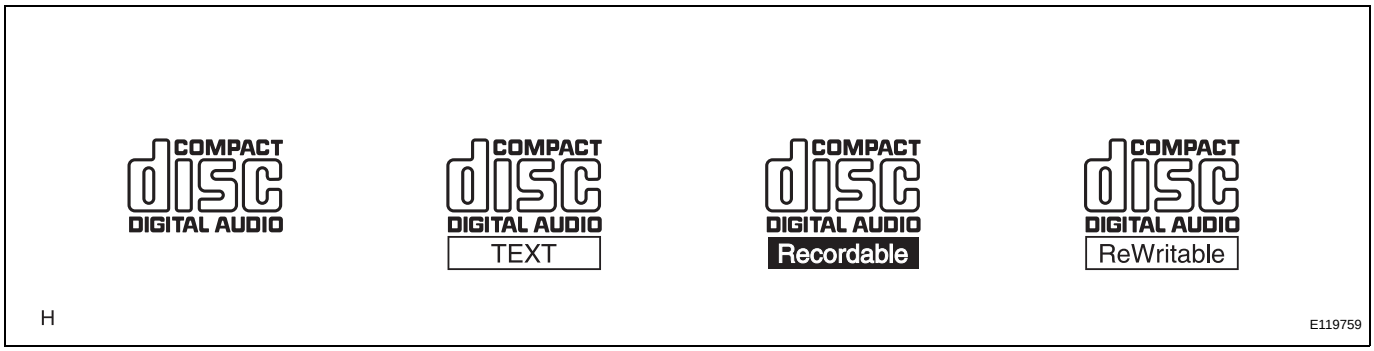
(a) A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and other content.

NOTICE:
- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

CAUTION:
Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to only operate the player as instructed.

(b) Usable discs

(1) This player can only play audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:



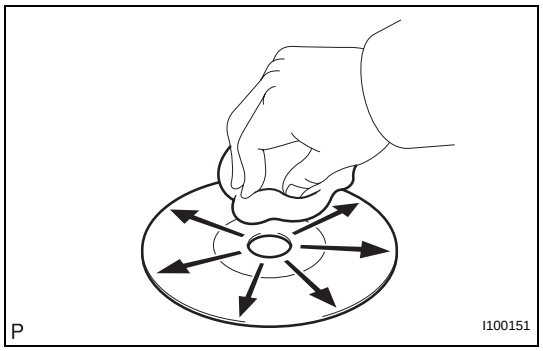
(c) Precautions for use of discs

NOTICE:
- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**

- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

HINT:

- When it is cold or it is raining, if the windows mist up, mist and also dew may form in the player. In such a case, the CD may skip or the CD may stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).



(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

NOTICE:

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.**

5. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

(c) ID3 tag and WMA tag

(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.**
- **If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.**

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form 1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

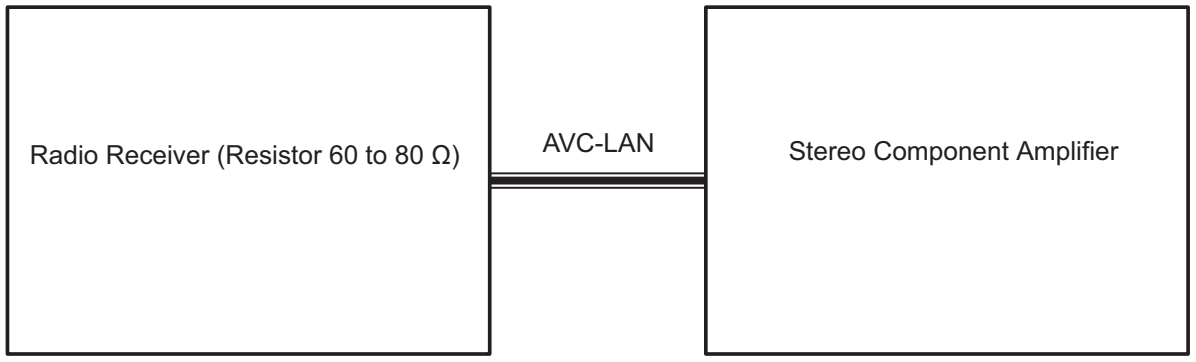
If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

6. AVC-LAN Description

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

Example:



P I100032E09

(b) Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:
(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.
(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.
HINT:
- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.
- If the audio system has a navigation system installed, the multi-display unit acts as the master unit.
If the navigation system is not installed, the audio head unit acts as the master unit instead. If the radio and navigation assembly is installed, it is the master unit.
- The radio and navigation assembly contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

7. Communication system outline
(a) Components of the navigation system communicate with each other via the AVC-LAN.
(b) The radio and navigation assembly has enough resistance (60 to 80 Ω) necessary for communication.
(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.

8. Diagnostic function outline
(a) The audio system has a diagnostic function (the result is indicated on the master unit).
(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

H

E100921

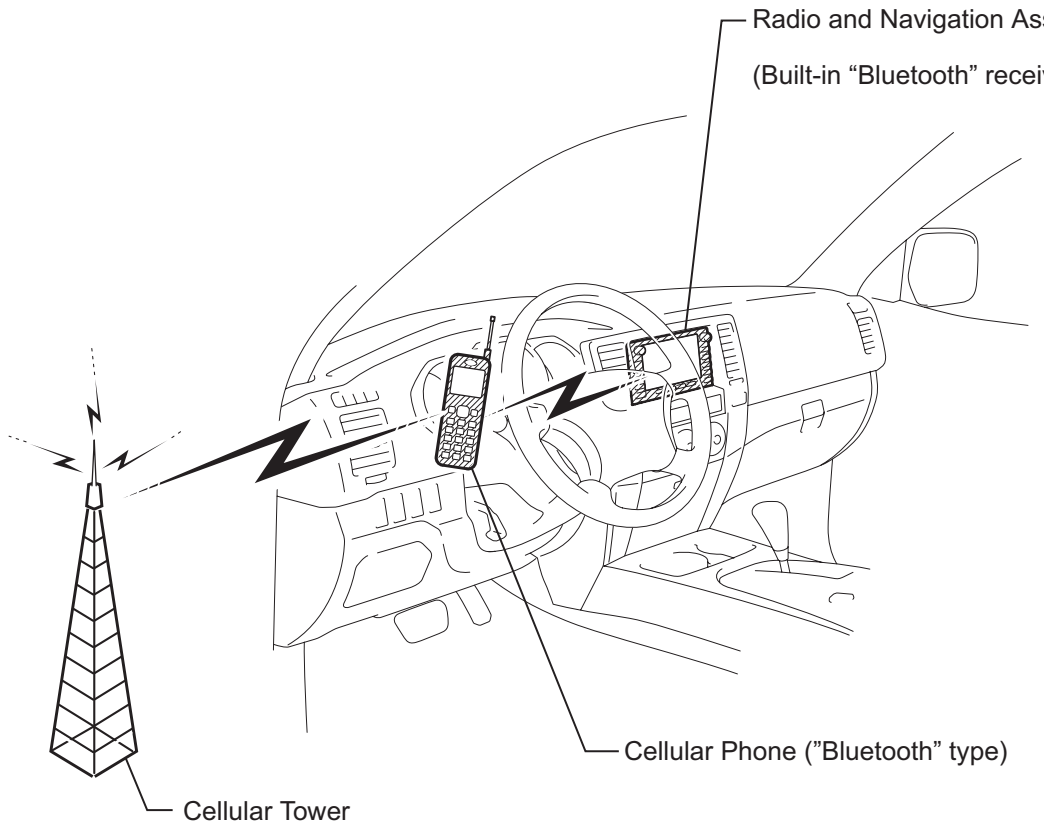
9. "Bluetooth" outline

(a) "Bluethooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone *1) to the radio and navigation assembly (the "Bluetooth" system is built in), and use the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.

*1: Some versions of "Bluetooth" compatible cellular phones may not function.

Example:



P

E121227E02

HINT:

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

HOW TO PROCEED WITH TROUBLESHOOTING

1	**VEHICLE BROUGHT INTO A WORKSHOP**

NEXT

2	**DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION**

(a) Ask the customer about symptoms and confirm malfunctions.

- **THE SCREEN DISPLAYS NOTHING (GO TO STEP 8, AND PROCEED TO "BLACK SCREEN")**
- **OTHER SYMPTOMS (GO TO STEP 3)**

3	**CONFIRM THE SYSTEM NORMAL CONDITION**

- **APPLICABLE (THIS IS NOT A MALFUNCTION)**
- **NOT APPLICABLE (GO TO STEP 4)**

4	**CHECK DTC**

HINT:
If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part.

- **A CODE IS OUTPUT (GO TO STEP 5)**
- **A CODE IS NOT OUTPUT (GO TO STEP 8)**

5	**DTC CLEAR**

(a) Clear the DTCs and finish the diagnostic mode.
HINT:
The currently output DTCs may not indicate actual malfunctions depending on the vehicle conditions.

NEXT

6	RECHECK DTC

HINT:
- If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits.
- Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores past diagnostic trouble codes.
- Refer to the detailed description on the diagnostic screen as necessary (See page NS-30).
- Check the diagnostic trouble code and inspect the area the code indicates.

	A CODE IS OUTPUT (GO TO STEP 7)
	A CODE IS NOT OUTPUT (GO TO STEP 8)

7	DIAGNOSTIC TROUBLE CODE CHART

(a) Find the output code in the diagnostic trouble code chart (See page NS-52).

NEXT	**GO TO STEP 10**

8	PROBLEM SYMPTOMS TABLE

(a) Find the applicable symptom code in the problem symptoms table (See page NS-41).
HINT:
If the symptom does not recur and no code is output, perform the symptom reproduction method (See page IN-40).

	THERE IS AN APPLICABLE SYMPTOM CODE IN THE TABLE (GO TO STEP 10)
	THERE IS NO APPLICABLE SYMPTOM CODE IN THE TABLE (GO TO STEP 9)

9	CHECK THE ECU TERMINAL ARRANGEMENT BASED ON THE MALFUNCTION SYMPTOM

NEXT

10	CHECK THE CIRCUIT

(a) Adjust, repair, or replace as necessary.

NEXT

11	RECHECK THE DIAGNOSTIC TROUBLE CODE

HINT:
After deleting the DTCs, recheck for diagnostic trouble codes.

NEXT

12	PERFORM CONFIRMATION TEST

NEXT

END

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

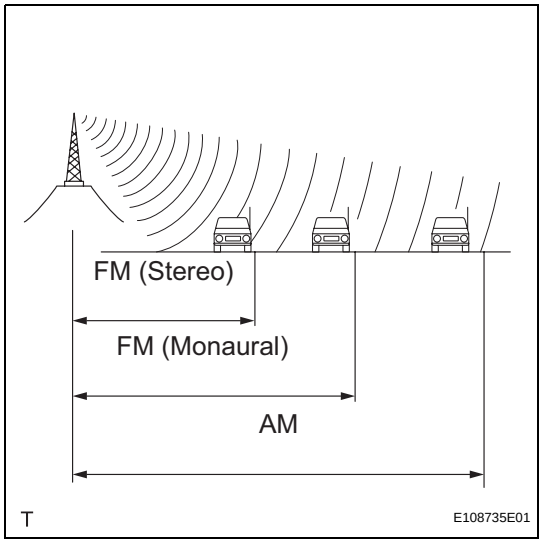
(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	30 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ⟷		FM ⟷	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

E108734E01



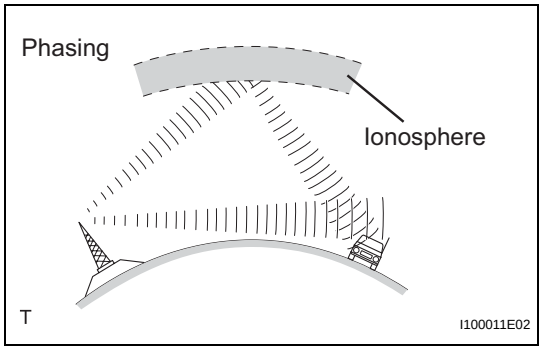
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

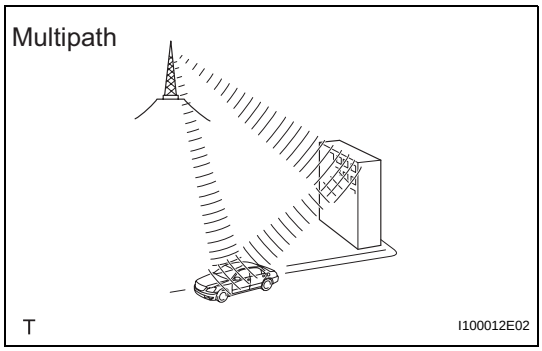
HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

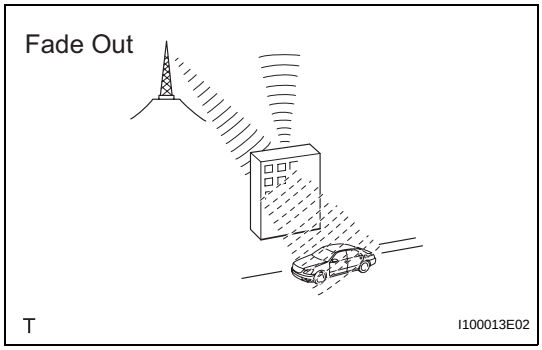


(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.



(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

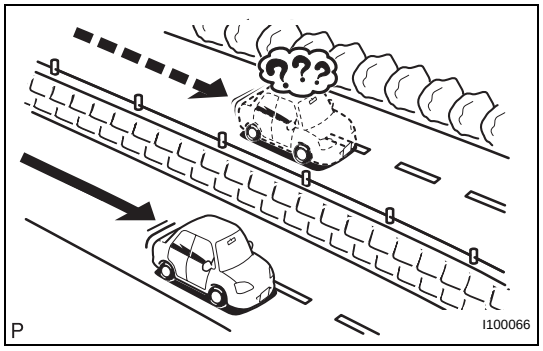
HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

SYSTEM NORMAL CONDITION CHECK

1. CHECK NORMAL CONDITION

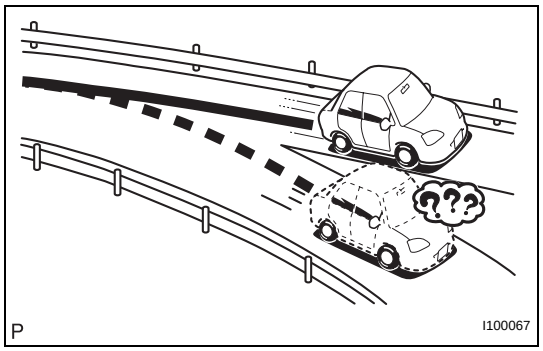
(a) If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

Symptom	Answer
A longer route than expected is chosen.	Depending on the road conditions, the radio and navigation assembly may determine that a longer route is quicker.
Even when distance priority is high, the shortest route is not shown.	Some paths may not be advised due to safety concerns.
When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position.	If the vehicle starts before the navigation system activates, the system may not react.
When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position.	When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate.

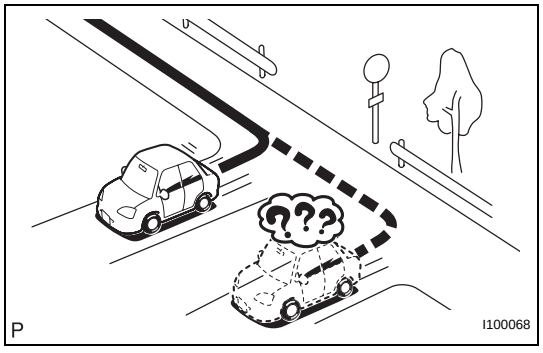


(b) The following symptoms are not a malfunction, but are caused by errors inherent in the GPS, gyro sensor, speed sensor, and radio and navigation assembly.

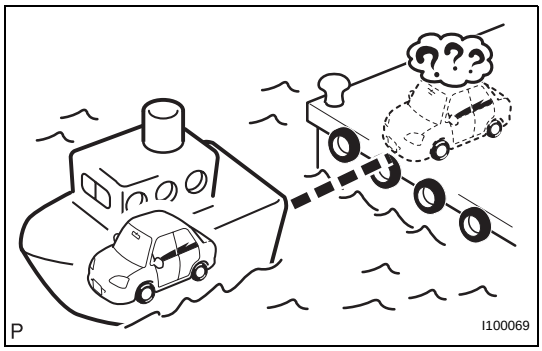
(1) The current position mark may be displayed on a nearby parallel road.



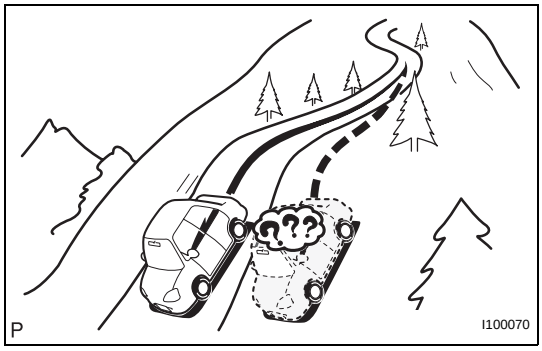
(2) Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



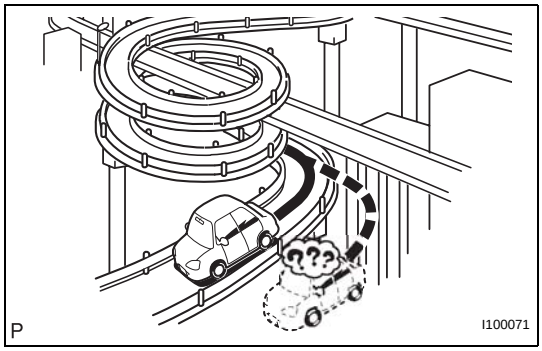
(3) When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



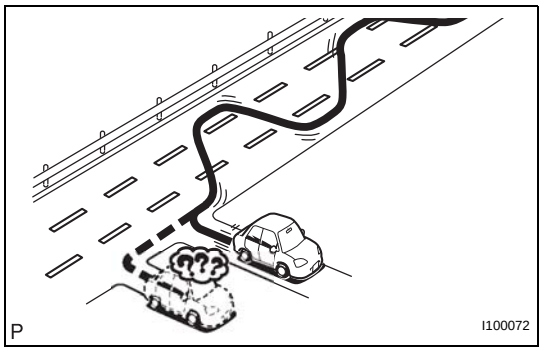
(4) When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.



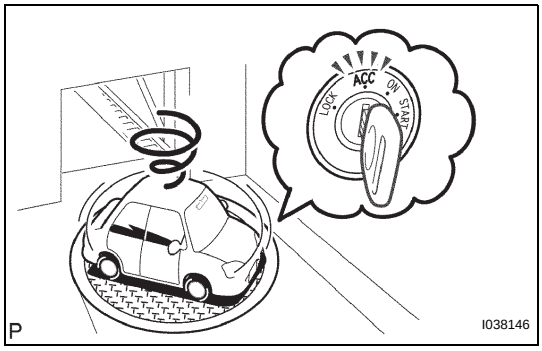
(5) When the vehicle runs on a steep hill, the current vehicle position mark may deviate from the correct position.



(6) When the vehicle makes a continuous turn of 360, 720, 1,080, etc. degrees, the current vehicle position mark may deviate from the correct position.

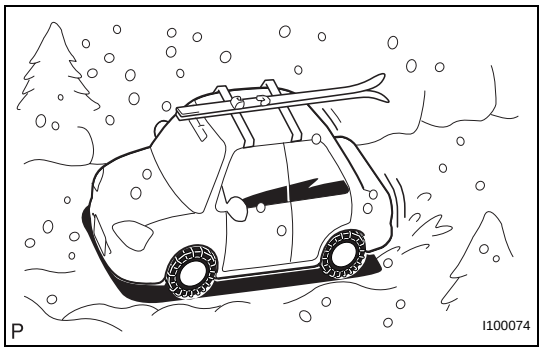


(7) When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

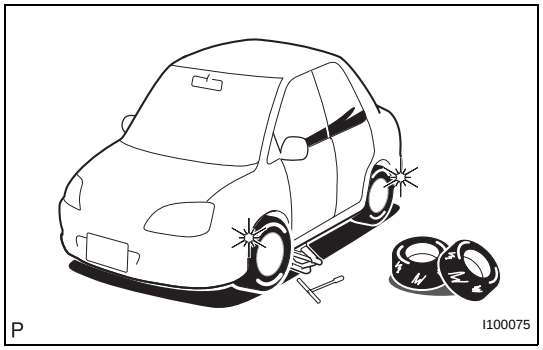


(8) When the ignition switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not point in the correct direction. The same will occur when the vehicle comes out of parking.

NS



(9) When the vehicle runs on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.



(10) When a tire is changed, the current vehicle position mark may deviate from the correct position.
HINT:
- Diameter of the tire may change, causing a speed sensor error.
- Performing the "tire change" in calibration mode will allow the system to correct the current vehicle position faster.

DISPLAY CHECK MODE

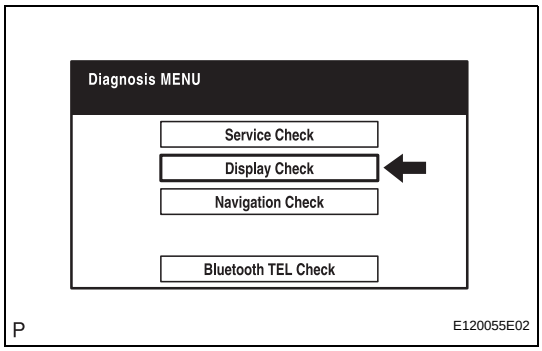
HINT:

- This mode checks the color display on the display.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-46)

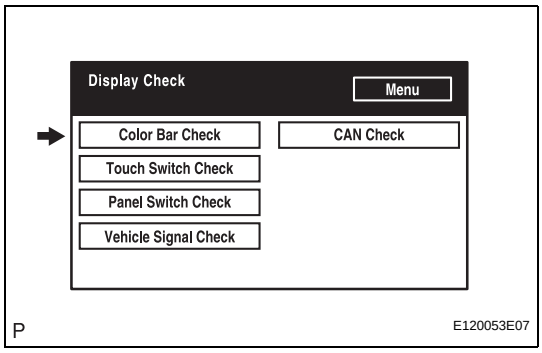
2. DISPLAY CHECK

(a) Select "Display Check" from the "Diagnosis MENU" screen.



3. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Display Check" screen.

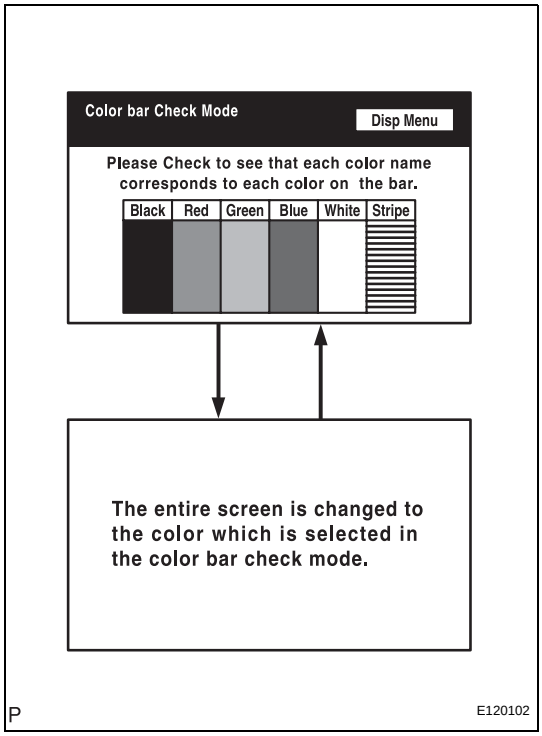


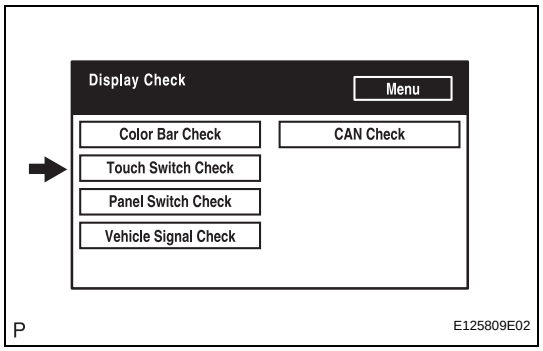
(b) Select a color bar from the "Color Bar Check Mode" screen.

(c) Check the display color.

HINT:

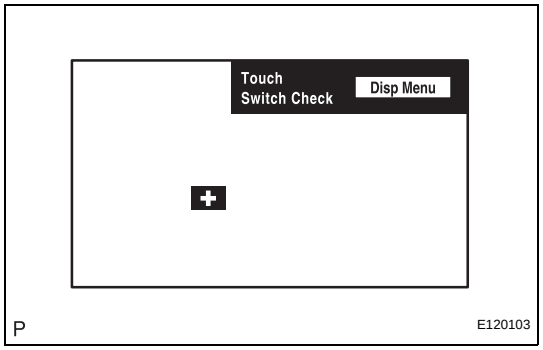
- The entire screen turns to the color or stripe selected.
- Touching the display will return to the "Color Bar Check" screen.



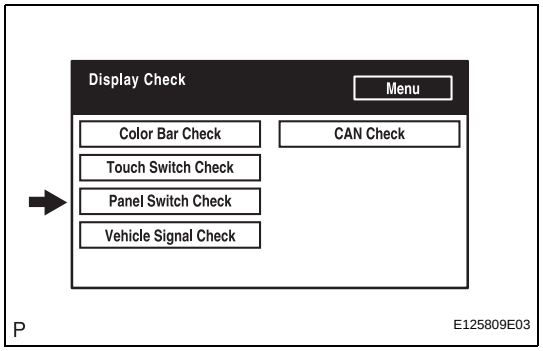


4. TOUCH SWITCH CHECK

(a) Select "Touch Switch Check" from the "Display Check" screen.

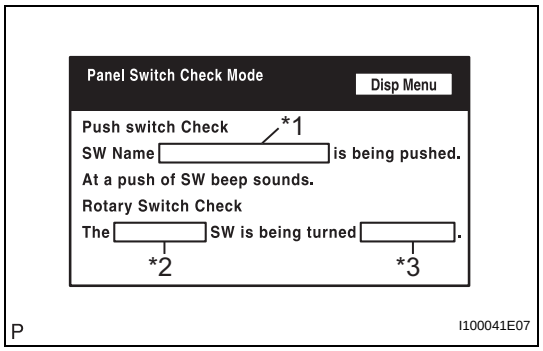


(b) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.
HINT:
- A "+" mark is displayed where the display is touched.
- The "+" mark remains on the display even after the finger is removed.



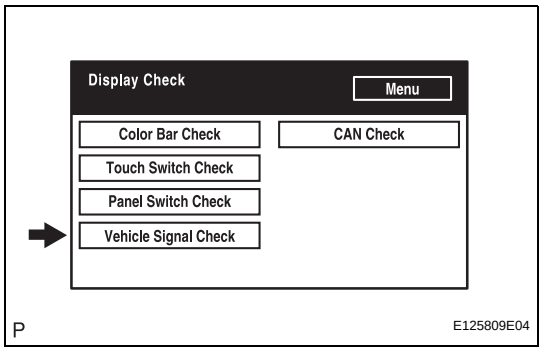
5. PANEL SWITCH CHECK

(a) Select "Panel Switch Check" from the "Display Check" screen.



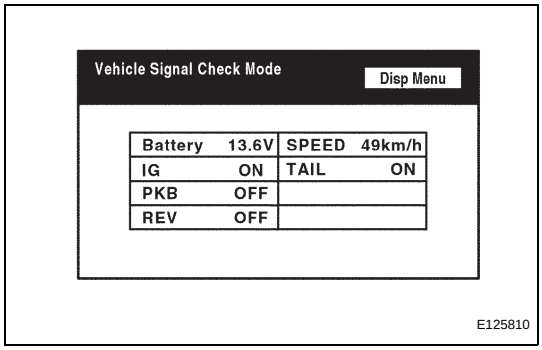
(b) Operate each switch and check that the switch name and condition are correctly displayed.

Display	Contents
Push switch name/*1	• Name of the pressed switch is displayed. • If more than one switch is pressed, "MULTIPLE" is displayed.
Rotary switch name/*2	Name of the rotary switch is displayed.
Rotary switch direction/*3	Direction of the rotary switch is displayed.



6. VEHICLE SIGNAL CHECK

(a) Select "Vehicle Signal Check" from the "Display Check" screen.

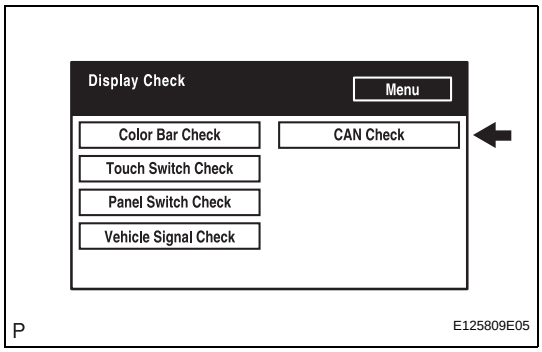


(b) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.
HINT:
- Only conditions having inputs are displayed.
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

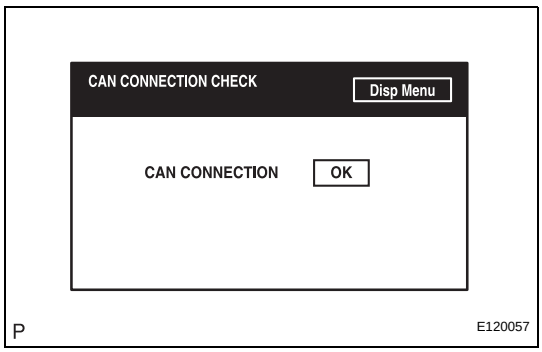
7. CAN CHECK

NOTICE:
This function operates only for the systems connected to the CAN system.

(a) Select "CAN Check" from the "Display Check" screen.



(b) Check the CAN connection check result.
HINT:
For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

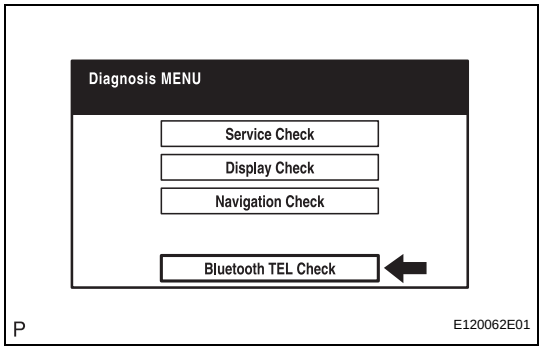


BLUETOOTH TEL CHECK MODE

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. **ENTER DIAGNOSTIC MODE (See page NS-46)**

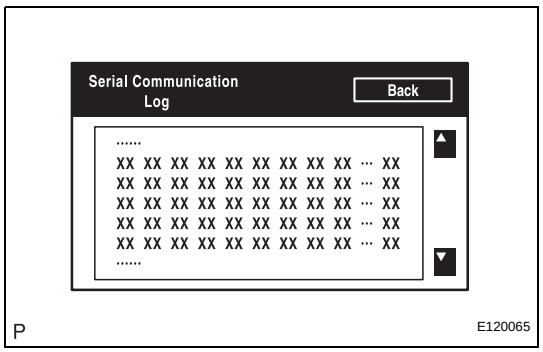
2. **"BLUETOOTH" TEL CHECK**
   (a) Select "'Bluetooth' TEL Check" from the "Diagnosis MENU" screen.

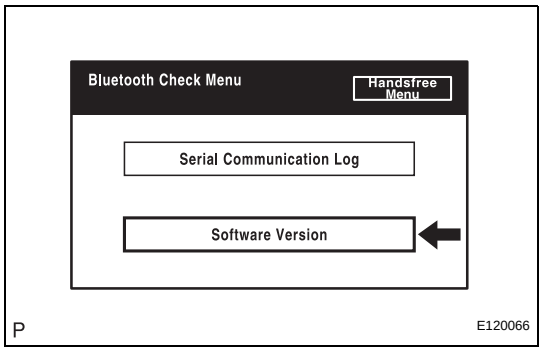


3. **"BLUETOOTH" CHECK**
   (a) Select "'Bluetooth' Check" from the "'Bluetooth' Handsfree Check Menu" screen.

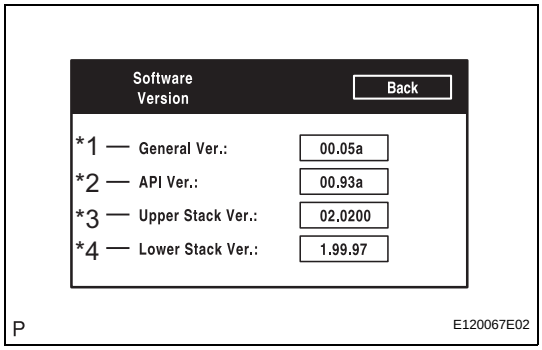
   (b) Select "Serial Communication Log" from the "'Bluetooth' Check Menu" screen.

   (1) The communication log data in the display ECU are displayed on this screen.
   HINT:
   The displayed data can be used as a reference.





(c) Select "Software Version" from the "'Bluetooth' Check Menu" screen.

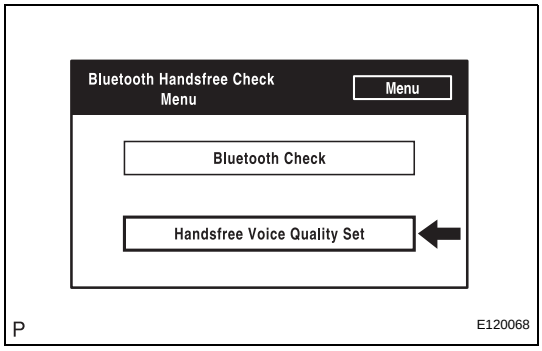


(1) Check the software version of the "Bluetooth" module.

Screen Description:

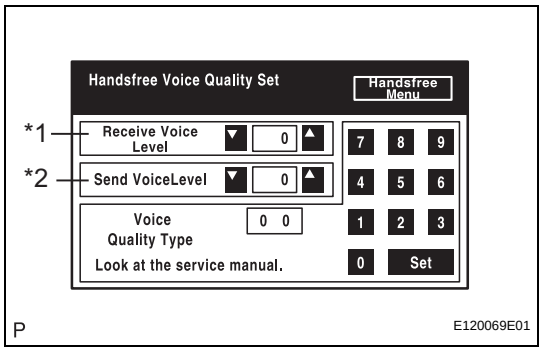
Display	Contents
General Version/*1	• General software version of "Bluetooth" module • If any of the API version, upper stack version, and low stack version is updated, the general version is upgraded.
API Version/*2	API software version is displayed.
Upper Stack Version/*3	Upper Stack version is displayed.
Lower Stack Version/*4	Lower Stack version is displayed.

HINT:
This function is controlled by the built-in display ECU.



4. HANDSFREE VOICE QUALITY SET

(a) Select "Handsfree Voice Quality Set" from the "'Bluetooth' Handsfree Check Menu" screen.



(b) Check the handsfree voice level.

Screen Description:

Display	Contents
Received voice level adjustment/*1	Setting possible for the voice level received from "Bluetooth" compatible phones.
Sent voice level adjustment/*2	Setting possible for the voice level sent to "Bluetooth" compatible phones.

HINT:
This function is controlled by the built-in display ECU.
NOTICE:
"Voice Quality Type" should not be changed.

NAVIGATION CHECK MODE

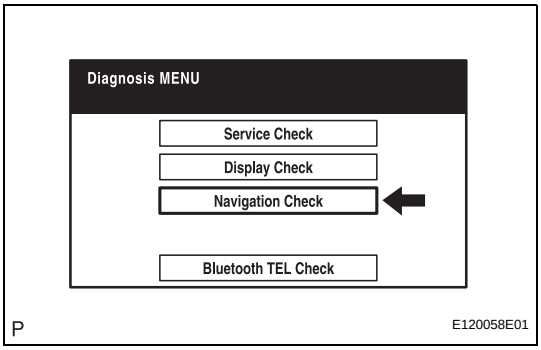
HINT:

- This mode displays GPS satellite information.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-46)

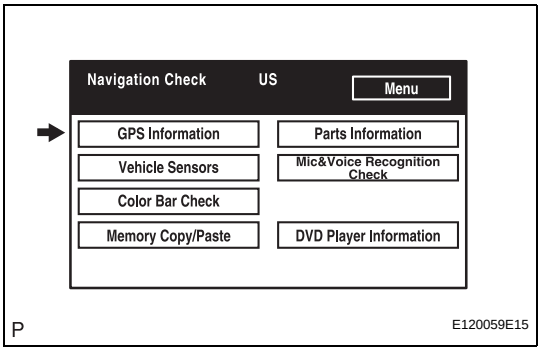
2. NAVIGATION CHECK

(a) Select "Navigation Check" from the "Diagnosis MENU" screen.



3. GPS INFORMATION

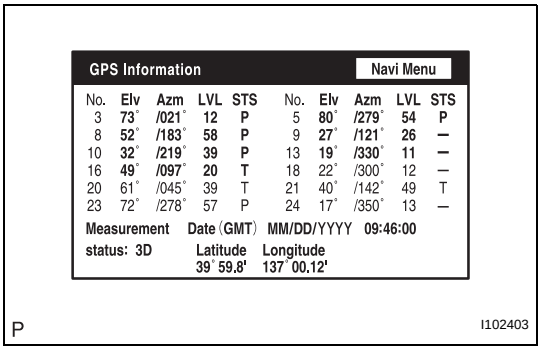
(a) Select "GPS Information" from the "Navigation Check" screen.



(b) When GPS information is displayed, check the GPS conditions.

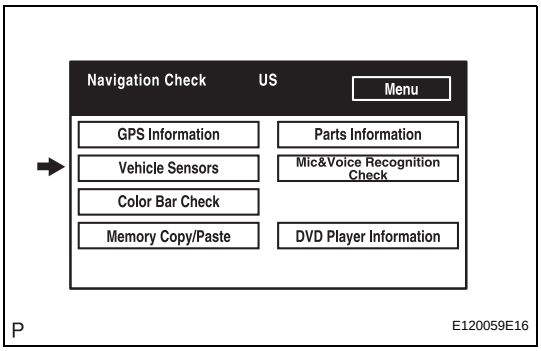
HINT:

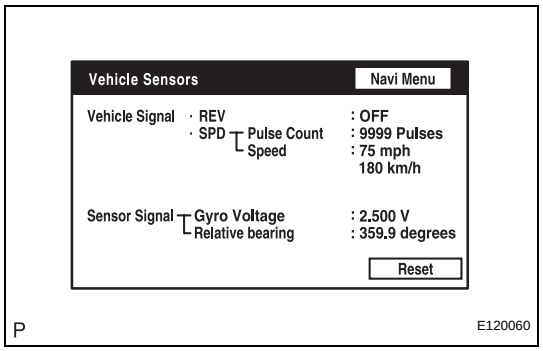
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).



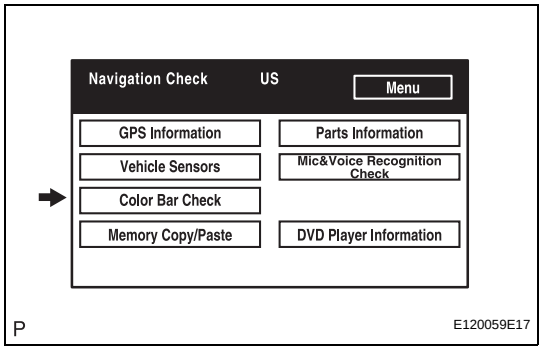
4. VEHICLE SENSORS

(a) Select "Vehicle Sensors" from the "Navigation Check" screen.



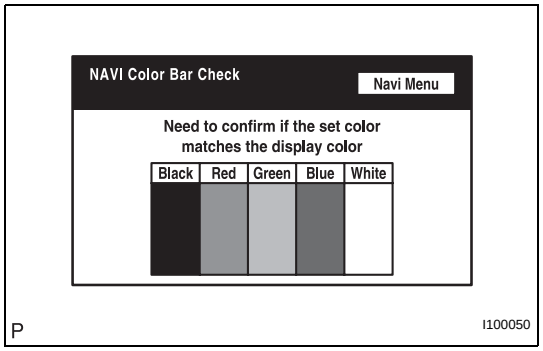


(b) Check all the signals and sensors when vehicle signal information is displayed.
HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the built-in navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

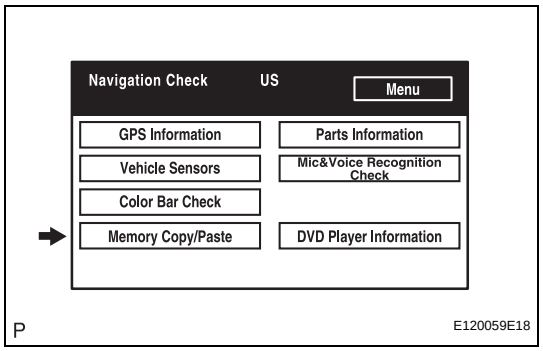


5. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Navigation Check" screen.

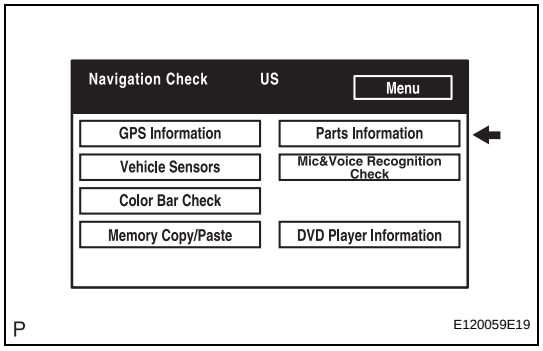


(b) Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.
HINT:
- Colors will not be displayed full-screen as in "Display Check Mode".
- This screen displays the built-in navigation ECU display color.



6. MEMORY COPY/PASTE CHECK

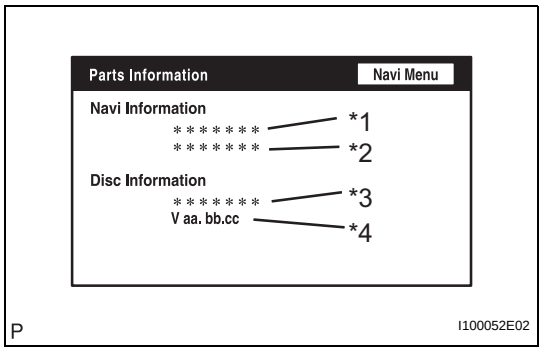
HINT:
This function cannot be used.



7. PARTS INFORMATION

(a) Select "Parts Information" from the "Navigation Check" screen.

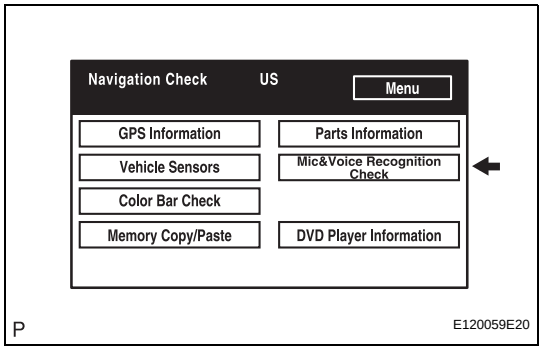
NS



(b) Check the navigation and disc information when the "Parts Information" screen is displayed.

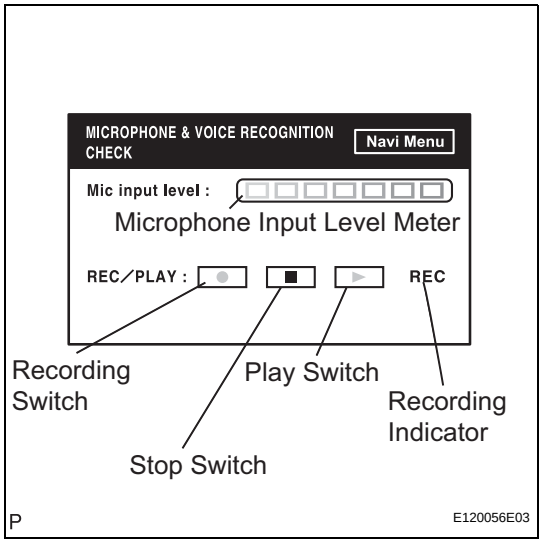
Screen Description:

Display	Contents
Navigation Manufacturer/*1	Radio and navigation assembly manufacturer is displayed.
Navigation Version/*2	Radio and navigation assembly version is displayed.
Disc Manufacturer/*3	Map disc manufacturer is displayed.
Disc Version/*4	Map disc version is displayed.



8. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Display Check" screen to display the "MICROPHONE & VOICE RECOGNITION CHECK" screen.



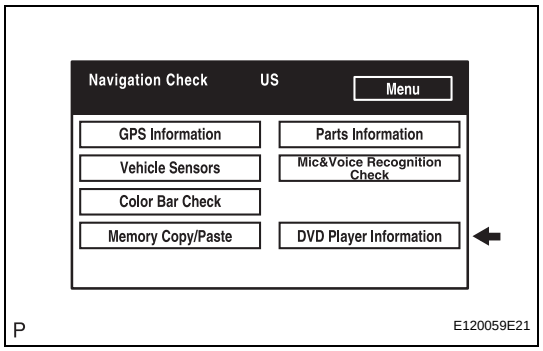
(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

(c) Push the recording switch and perform voice recording.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally.

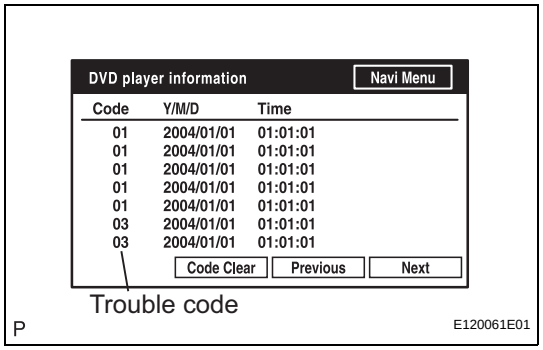
HINT:

- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).
- This function is controlled by the built-in navigation ECU.



9. DVD PLAYER INFORMATION CHECK

(a) Select "DVD Player Information" from the "Navigation Check" screen.



(b) Check for DTCs.
HINT:
- This is a DVD player check function in the radio and navigation assembly (built-in navigation ECU).
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-30).

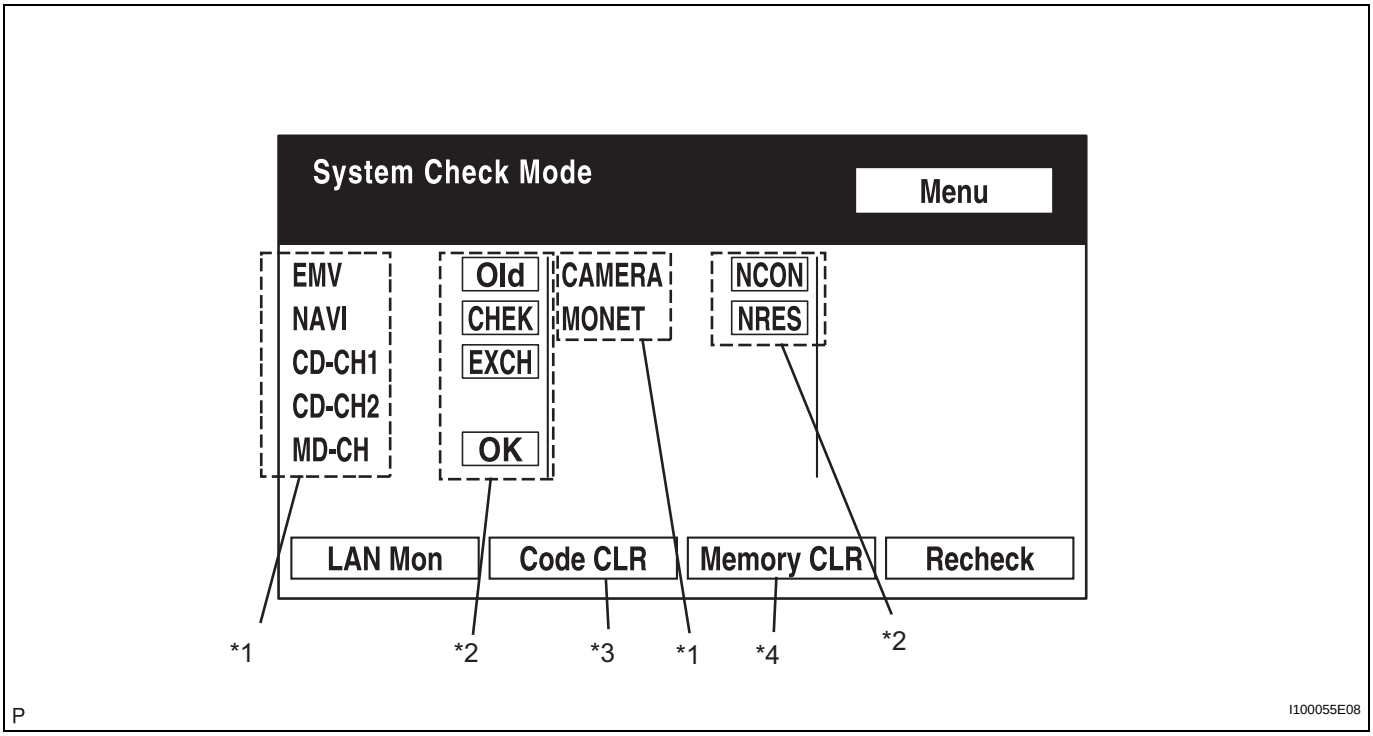
DIAGNOSIS DISPLAY DETAILED DESCRIPTION

HINT:

- This section contains a detailed description of displays within diagnostic mode.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. SYSTEM CHECK

(a) System Check Mode Screen



(1) Device Names and Hardware Address/*1

HINT:

- Registered device names are displayed.
- If a device name is unknown to the system, its physical address is shown instead.

Address No.	Name	Address No.	Name
110	EMV	120	AVX
128	1DIN TV	140	AVN
144	G-BOOK	178	NAVI
17C	MONET	190	AUDIO H/U
1AC	CAMERA-C	1B0	Rr-TV
1C0	Rr-CONT	19D	BT-HF
1C4	PANEL	1C6	G/W
1C8	FM-M-LCD	1D8	CONT-SW
1EC	Body	118	EMVN
1F1	XM	1F2	SIRIUS
230	TV-TUNER	240	CD-CH2
250	DVD-CH	280	CAMERA
360	CD-CH1	3A0	MD-CH

Address No.	Name	Address No.	Name
17D	TEL	440	DSP-AMP
530	ETC	1F6	RSE
1A0	DVD-P	1D6	CLOCK
238	DTV	480	AMP

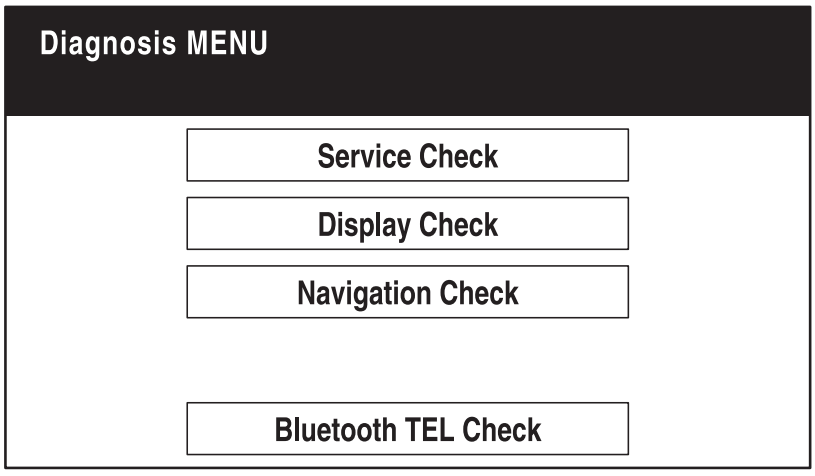
(2) Check Result/*2
HINT:
Result codes for all devices are displayed.

Result	Meaning	Action
OK	The device did not respond with a DTC (excluding communication DTCs from the AVC-LAN).	-
EXCH	The device responds with a "replace"-type DTC.	Look up the DTC in "Unit Check Mode" and replace the device.
CHEK	The device responds with a "check"-type DTC.	Look up the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Look up the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

(3) Code Clear/*3
- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

(4) Memory Clear/*4
- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

(b) Diagnosis MENU Screen

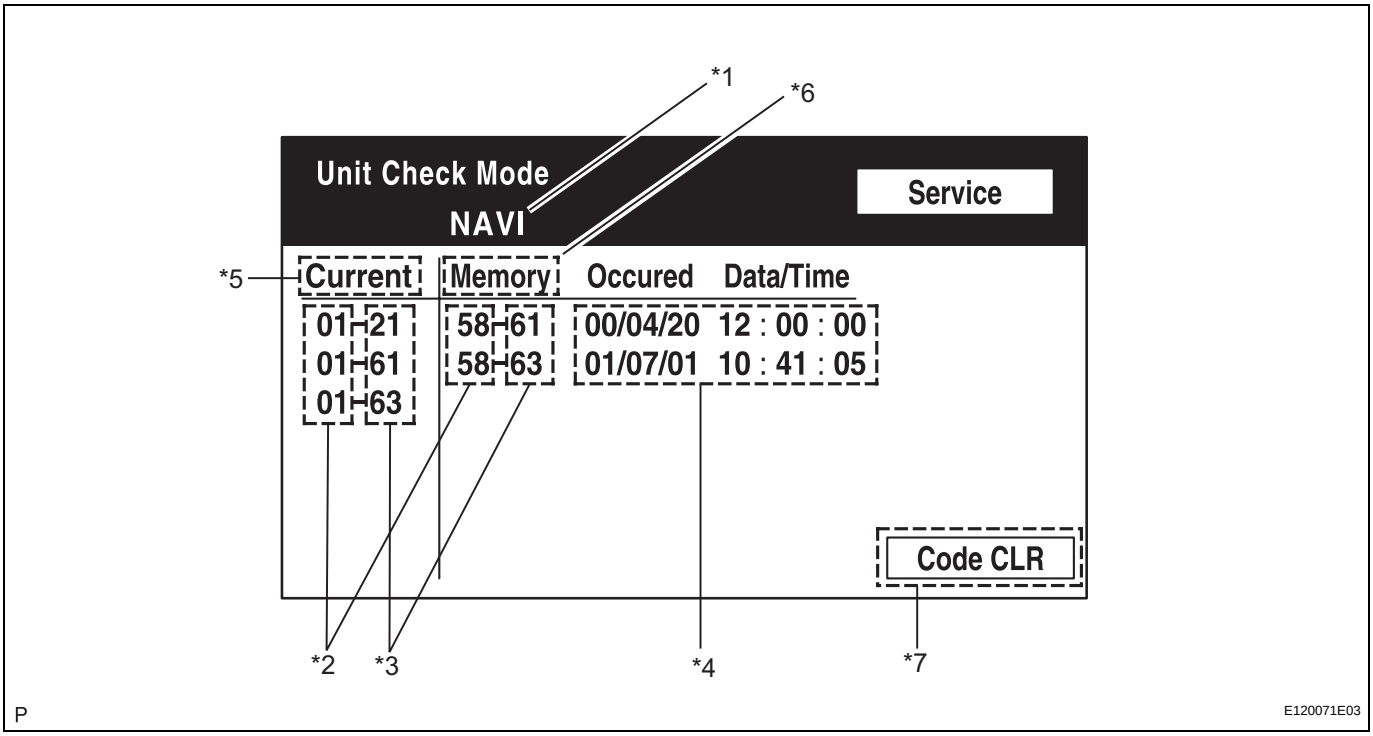


P E120070E01

NS

HINT:
Each item is grayed out or not displayed based on the device settings.

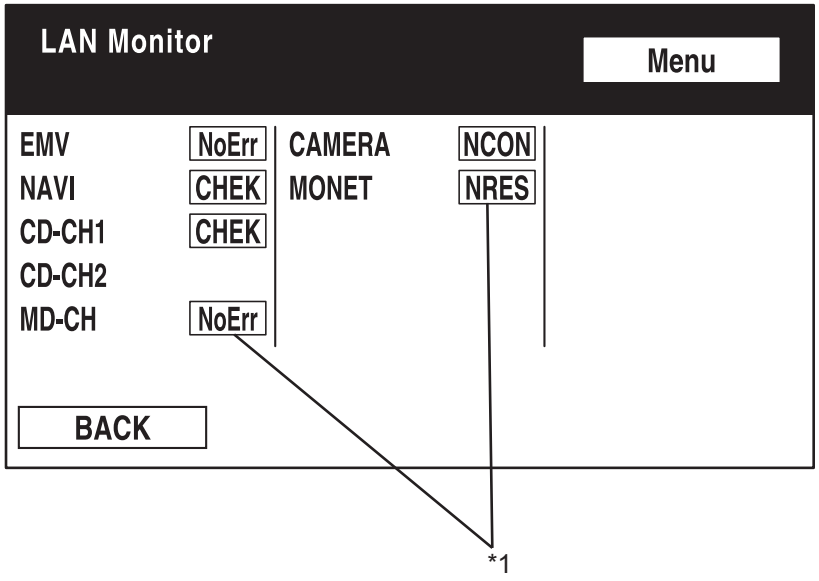
(c) Unit Check Mode Screen



Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target device logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Timestamp/*4	The time and date of past DTCs are displayed. (The year is displayed in 2-digit format.)
Present code/*5	DTCs output at the service check are displayed.
Past code/*6	Diagnostic memory results and recorded DTCs are displayed.
Diagnosis clear switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

(d) LAN Monitor (Original) Screen

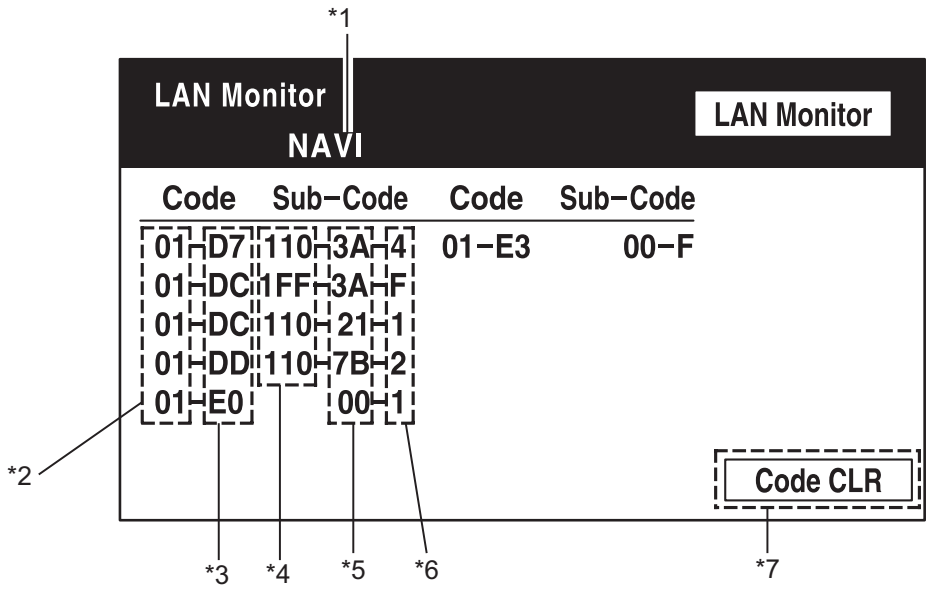


P I100058E04

(1) Check Result/*1
HINT:
Check results of all the devices are displayed.

Result	Meaning	Action
No Err (OK)	There are no communication DTCs.	-
CHEK	The device responds with a "check"-type DTC.	Look up the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Look up the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of the device. 2. Check the AVC-LAN of the device.

(e) LAN Monitor (Individual) Screen



P

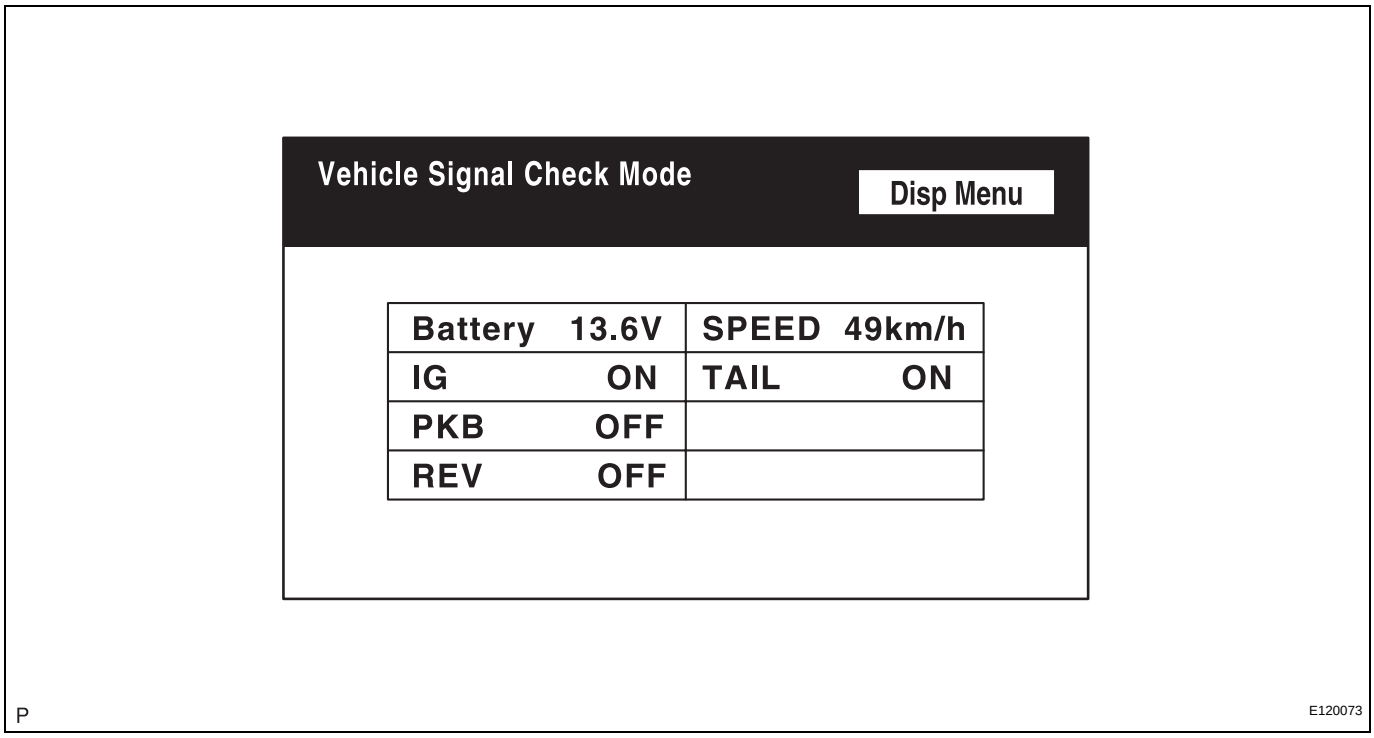
E120072E01

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Sub-code (device address)/*4	Physical address stored with DTC (If there is no address, nothing is displayed.)
Connection check No./*5	Connection check number stored with DTC
DTC occurrence/*6	Number of times the same DTC has been recorded
Diagnosis clear switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

2. DISPLAY CHECK

(a) Vehicle Signal Check Mode Screen



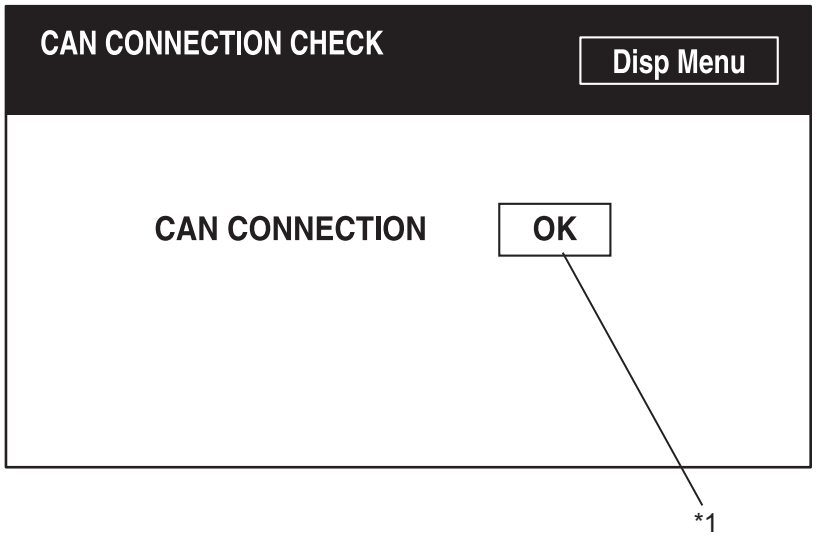
Screen Description:

Name	Contents
Battery	Battery voltage is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
IG	IG switch ON/OFF state is displayed.
TAIL	TAIL signal (Light control switch) ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.

HINT:

- Only items sending a vehicle signal will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

(b) CAN Connection Check Screen



P

E120075E01

Screen Description:

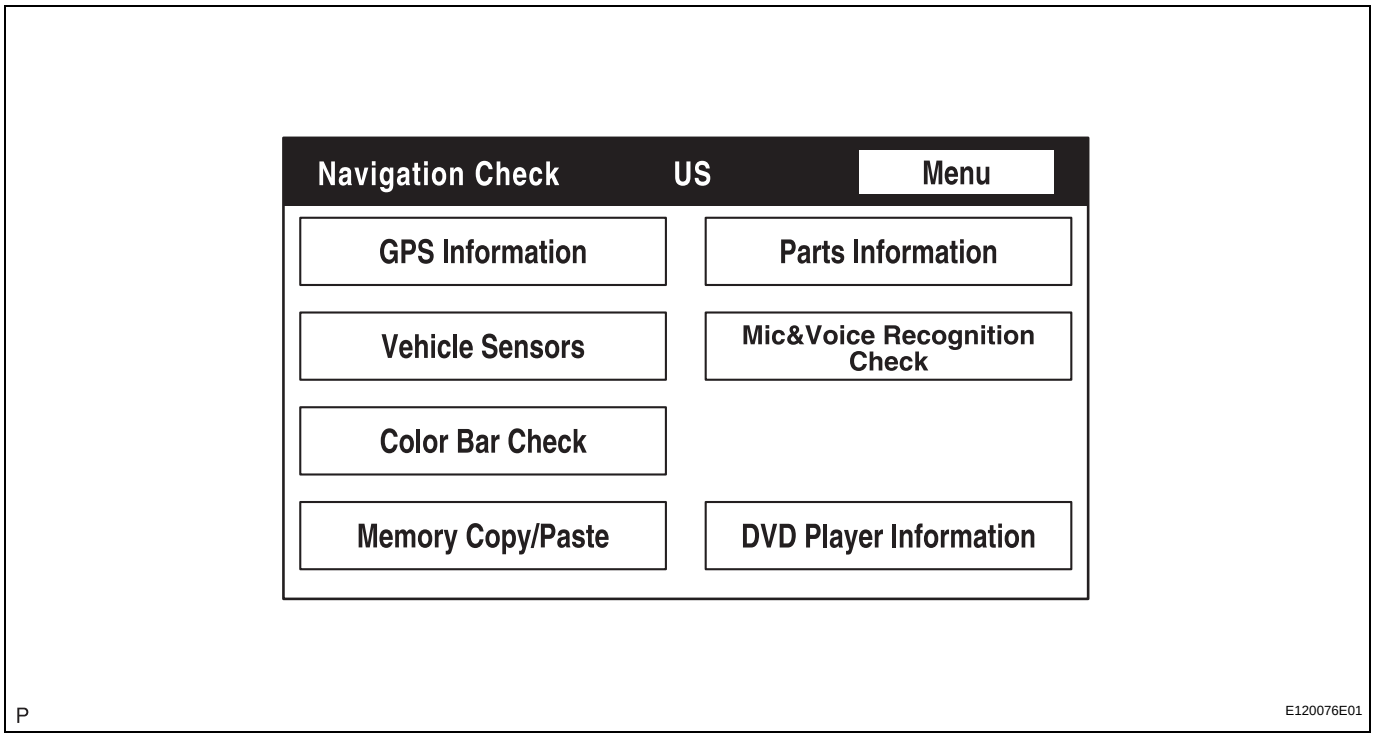
Name	Contents
CAN connection check result/*1	• For systems connected to the CAN system, the results of the CAN connection check are displayed. • "NG" - The ignition switch is on (ACC or IG) and the CAN communication lines are malfunctioning or the CAN bus lines are not connected. • "OK" - The ignition switch is on (ACC or IG) and the CAN communication lines are normal. • Blank - CAN connection check is performed with the ignition switch on (ACC) or off.

HINT:

- This function operates only for the systems connected to the CAN system.
- When the ignition switch is turned off, the bus lines are disconnected, or a malfunction occurs in the bus lines while the CAN connection check result is being displayed, the problem will be reflected on the screen in real time.

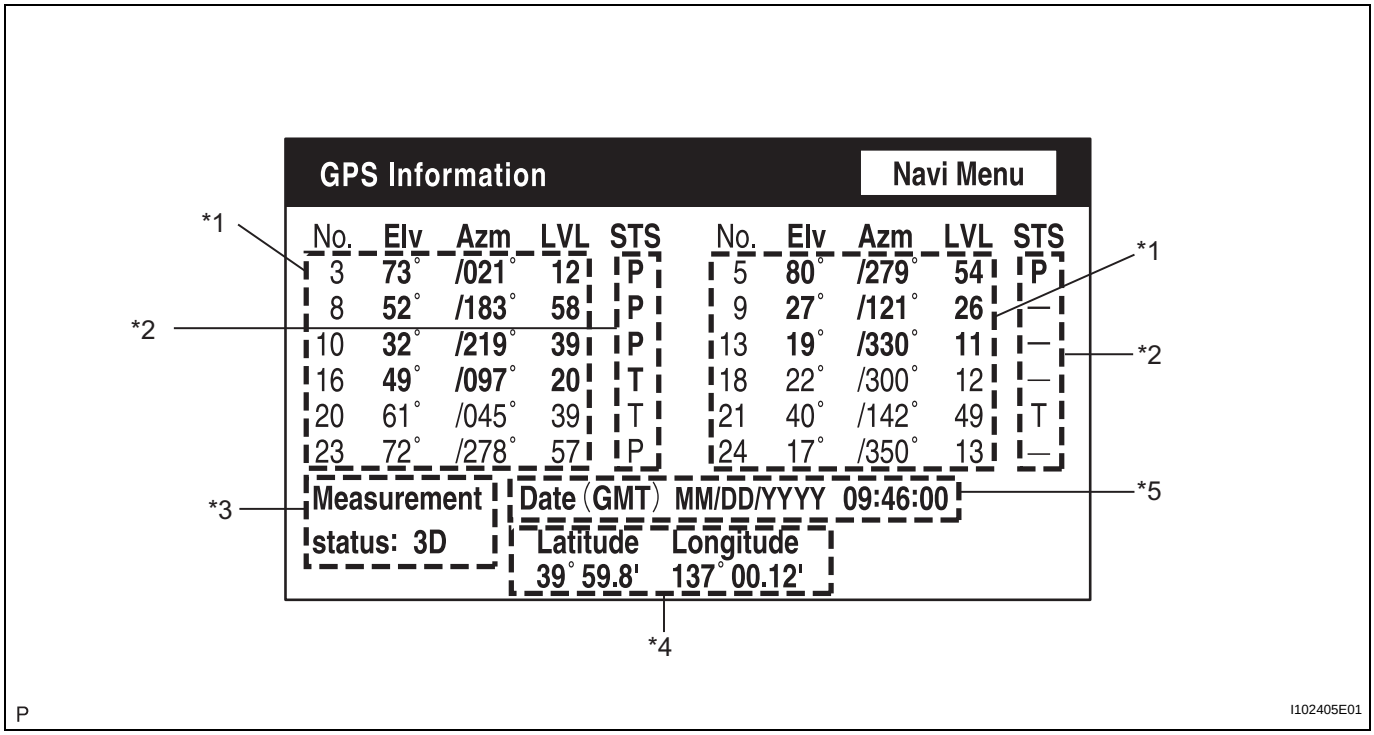
3. NAVIGATION CHECK

(a) Navigation Check Screen



HINT:
Each item is grayed out or not displayed based on the device settings.

(b) GPS Information Screen



(1) Satellite information/*1
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.

NS

(2) Receiving condition/*2

(DENSO model):

Display	Contents
T	The system is receiving a GPS signal, but is not using it for location.
P	The system is using the GPS signal for location.
-	The system cannot receive a GPS signal.

(AISIN AW model):

Display	Contents
01H	The system cannot receive a GPS signal.
02H	The system is tracing a satellite.
03H	The system is receiving a GPS signal, but is not using it for location.
04H	The system is using the GPS signal for location.

Measurement information/*3:

Display	Contents
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.
-	Any other state.

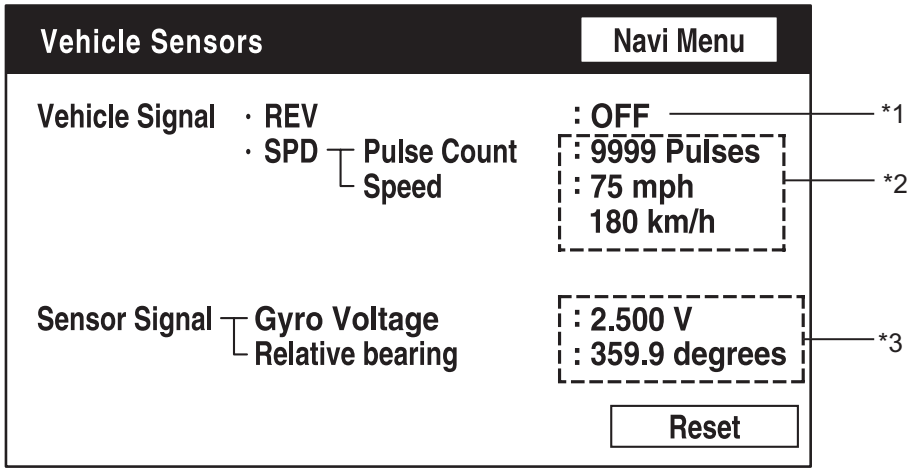
Position information/*4

Display	Contents
Position	Latitude and longitude information on the current position is displayed.

Date information/*5:

Display	Contents
Date	The date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). The last 4 digits are displayed.

(c) Vehicle Sensors Screen



P

E120077E01

NS

Vehicle signal:

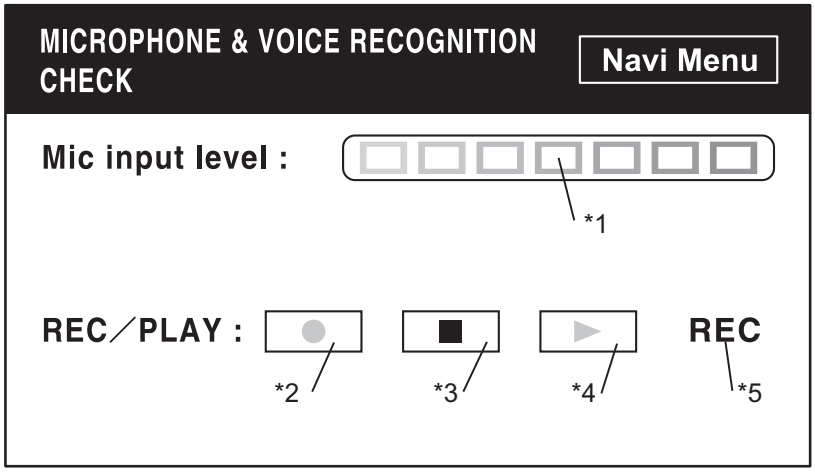
Display	Contents
REV/*1	REV signal ON/OFF state is displayed.
SPD/*2	SPD signal condition is displayed.

Sensor signal:

Display	Contents
Gyro sensor/*3	Gyro sensor output condition is displayed (when the vehicle runs straight or is stationary, the voltage is approximately 2.5 V).

HINT:
Signals are updated once per second only when vehicle sensor signals are changed.

(d) Microphone & Voice Recognition Check Screen



P E125119E01

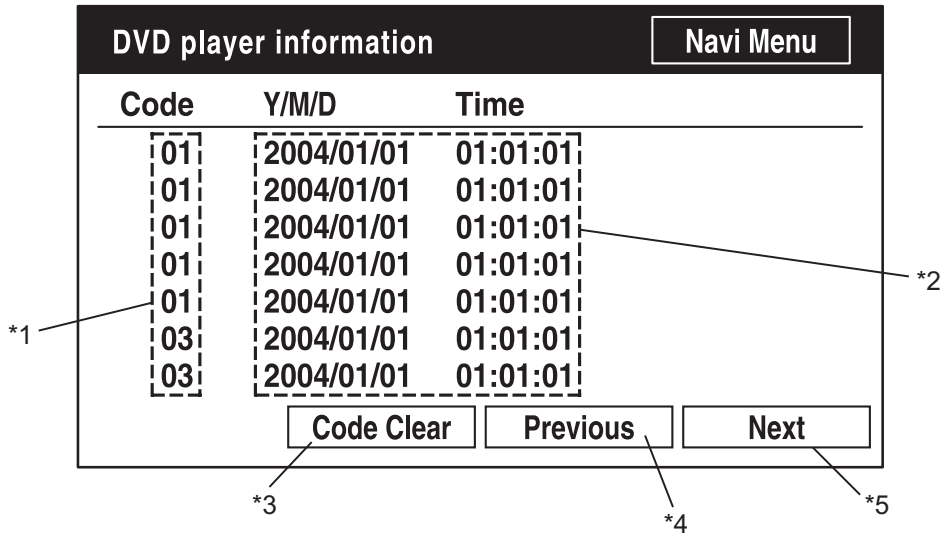
Screen Description:

Display	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.
Recording indicator/*5	Comes on while recording.

HINT:

- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(e) DVD Player Information Screen



P

E120078E01

Screen Description:

Display	Contents
Trouble code/*1	Each code corresponding to the malfunctions is displayed. For details, refer to "Trouble Code Description".
Occurrence time/*2	• The date (year, month, day) and time (hour, minute, second) when the trouble code was detected are displayed as a time stamp. (Greenwich mean time) • The time data to be displayed are received from the GPS receiver.
Trouble code clear switch/*3	All code data being displayed are cleared by pushing this switch for 3 seconds.
Returning switch/*4	The previous page is displayed. If the current displayed page is the first page, this switch cannot be operated.
Proceeding switch/*5	The next page is displayed. If the current displayed page is the last page, this switch cannot be operated.

Trouble Code Description:

Code	Malfunction	Countermeasure
01	Cannot be recognized	Replace radio and navigation assembly.
03	Cannot be read	Follow the inspection procedure for DTC 58-42 (See page NS-83).

HINT:
This is a DVD player check function in the radio and navigation assembly (built-in navigation ECU).

PROBLEM SYMPTOMS TABLE

HINT:

- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check the DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Display function:

Symptom	Suspected area	See page
Pressing PWR switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	NS-101
	2. Radio and navigation assembly power source circuit	NS-191
	3. AVC-LAN circuit	NS-175
	4. Radio and navigation assembly	NS-194
Black screen (No image appears on navigation/audio screen).	1. Proceed to "Black Screen"	NS-146
	2. Illumination circuit	NS-156
	3. AVC-LAN circuit	NS-175
	4. Radio and navigation assembly	NS-194
Illumination for panel switch does not come on with TAIL switch on.	1. Proceed to "Illumination for Panel Switch does not Come on with TAIL Switch ON"	NS-111
	2. Illumination circuit	NS-156
	3. Radio and navigation assembly	NS-194
Display does not dim (Night Screen) with TAIL switch on.	1. Proceed to "Display does not DIM when Light Control Switch is Turned ON"	NS-112
	2. Illumination circuit	NS-156
	3. Radio and navigation assembly	NS-194
Power does not turn off (The screen remains on).	1. Radio and navigation assembly power source circuit	NS-191
	2. Radio and navigation assembly	NS-194
Panel switches do not function.	1. Proceed to "Panel Switches do not Function"	NS-113
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly power source circuit	NS-191
	4. Radio and navigation assembly	NS-194
Touch panel switch does not function.	1. Proceed to "Touch Panel Switch does not Function"	NS-114
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly power source circuit	NS-191
	4. Radio and navigation assembly	NS-194
Display panel does not open, tilt, or tilts improperly.	1. Proceed to "Display Panel does not Open, Tilt, or Tilts Improperly"	NS-115
	2. Radio and navigation assembly power source circuit	NS-191
	3. Radio and navigation assembly	NS-194
Screen is distorted.	1. Radio and navigation assembly power source circuit	NS-191
	2. Radio and navigation assembly	NS-194
Screen flicker or color distortion.	1. Proceed to "Screen Flicker or Color Distortion"	NS-116
	2. Radio and navigation assembly power source circuit	NS-191
	3. Radio and navigation assembly	NS-194
Navigation function switches can be operated while vehicle is running.	Proceed to "Vehicle Speed Signal Circuit between Radio and Navigation Assembly and Combination Meter"	NS-147

Audio function:

Symptom	Suspected area	See page
No sound can be heard from speakers (audio is mute).	1. Proceed to "No Sound can be Heard from Speakers"	NS-102
	2. Stereo component amplifier power source circuit	AV-142
	3. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-172
	4. Proceed to "Sound Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-168
	5. Speaker circuit	NS-163
	6. Stereo component amplifier	AV-150
	7. Radio and navigation assembly	NS-194
Radio broadcast cannot be received or poor reception.	Proceed to "Radio Broadcast cannot be Received or Poor Reception"	NS-108
CD cannot be inserted / played or CD is ejected right after insertion.	Proceed to "CD cannot be Inserted / Played or CD is Ejected Right After Insertion"	NS-104
CD cannot be ejected.	Proceed to "CD cannot be Ejected"	NS-103
CD sound skips.	Proceed to "CD Sound Skips"	NS-106
Abnormal noise occurs.	Proceed to "Noise Occurs"	NS-99
Poor sound quality in all modes (low volume).	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	NS-118
	2. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-172
	3. Stereo component amplifier power source circuit	AV-142
	4. Radio and navigation assembly power source circuit	NS-191
	5. Stereo component amplifier	AV-150
	6. Radio and navigation assembly	NS-194
External device sound cannot be heard or sound quality is bad (Stereo jack is used).	1. Proceed to "Sound Signal Circuit between Radio and Navigation Assembly and Stereo Jack Adapter"	NS-170
	2. Stereo jack adapter	AV-223
	3. Radio and navigation assembly	NS-194
ASL does not function.	Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter"	AV-120

Navigation function:

Symptom	Suspected area	See page
Map disc cannot be inserted.	1. Proceed to "Map Disc cannot be Inserted"	NS-119
	2. Radio and navigation assembly power source circuit	NS-191
	3. Radio and navigation assembly	NS-194
Map disc cannot be ejected.	1. Radio and navigation assembly power source circuit	NS-191
	2. Radio and navigation assembly	NS-194
Vehicle position mark deviates.	1. Proceed to "Vehicle Position Mark Deviates Greatly"	NS-120
	2. GPS antenna	NS-210
	3. Radio and navigation assembly	NS-194
Cursor or map rotates when vehicle is stopped.	1. Proceed to "Cursor or Map Rotates When Vehicle is Stopped"	NS-122
	2. Radio and navigation assembly	NS-194
Vehicle position mark is not updated.	1. Proceed to "Vehicle Position Mark is not Updated"	NS-123
	2. Map disc	-
	3. Radio and navigation assembly	NS-194
Current position display does not appear.	1. Proceed to "Current Position Display does not Appear"	NS-124
	2. Map disc	-
	3. GPS antenna	NS-210
	4. Radio and navigation assembly	NS-194

Symptom	Suspected area	See page
GPS mark is not displayed.	1. Proceed to "GPS Mark is not Displayed"	NS-125
	2. GPS antenna	NS-210
	3. Radio and navigation assembly	NS-194
Voice guidance does not function.	1. Proceed to "Voice Guidance does not Function"	NS-128
	2. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-172
	3. Navigation voice circuit	NS-180
	4. Speaker circuit	NS-163
	5. Map disc	-
	6. Radio and navigation assembly	NS-194
	7. Stereo component amplifier	AV-150
Map display incomplete.	1. Proceed to "Map Display Incomplete"	NS-131
	2. Map disc	-
	3. Radio and navigation assembly	NS-194
Route cannot be calculated.	1. Proceed to "Route cannot be Calculated"	NS-132
	2. Map disc	-
	3. Radio and navigation assembly	NS-194
Voice recognition difficulty.	1. Proceed to "Voice Recognition Difficulty"	NS-133
	2. Radio and navigation assembly	NS-194
Voice is not recognized.	1. Proceed to "Voice is not Recognized"	NS-135
	2. Proceed to "Microphone Circuit between Microphone and Radio and Navigation Assembly"	NS-182
	3. Steering pad switch circuit	NS-151
	4. Microphone	AV-232
	5. Radio and navigation assembly	NS-194
Speed signal does not change in the navigation check mode.	Proceed to "Vehicle Speed Signal Circuit between Radio and Navigation Assembly and Combination Meter"	NS-147
Reverse signal does not change in the navigation check mode.	Reverse signal circuit	NS-177

Steering pad switch function:

Symptom	Suspected area	See page
The system cannot be operated by the steering pad switch.	1. Steering pad switch circuit	NS-151
	2. Radio and navigation assembly	NS-194
Illumination for steering pad switch does not come on with TAIL switch on.	1. Illumination circuit	NS-156
	2. Radio and navigation assembly	NS-194

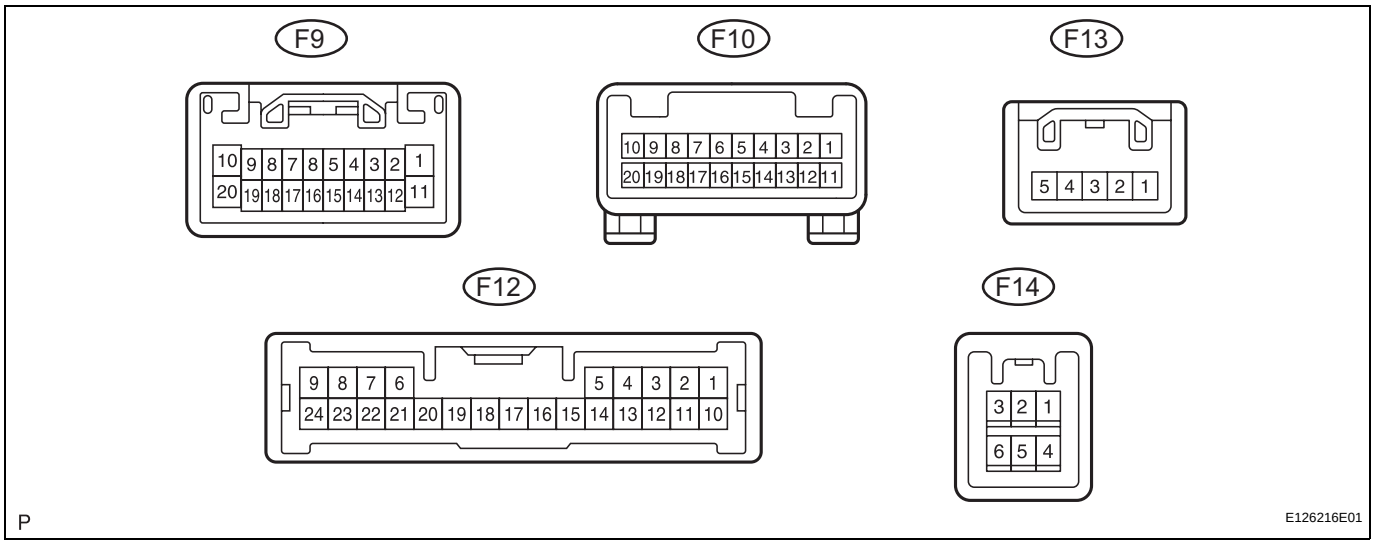
"Bluetooth" function:

Symptom	Suspected area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	NS-137
Cellular phone cannot send / receive.	1. Proceed to "Cellular Phone cannot Send / Receive"	NS-139
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly	NS-194
Cannot call in a certain place.	Proceed to "Cannot Call in a Certain Place"	NS-141
The other caller's voice cannot be heard, is too quiet, or distorted.	1. Proceed to "The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted"	NS-142
	2. Navigation voice circuit	NS-180
	3. Radio and navigation assembly	NS-194
	4. Stereo component amplifier	AV-150

Symptom	Suspected area	See page
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	NS-144
	2. Proceed to "Microphone Circuit between Microphone and Radio and Navigation Assembly"	NS-182
	3. Microphone	AV-232
	4. Radio and navigation assembly	NS-194

TERMINALS OF ECU

1. RADIO AND NAVIGATION ASSEMBLY



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SPD (F13-3) - GND (F9-20)	V - BR	Speed signal from combination meter	See "Vehicle Signal Check" (See page NS-22)	-
REV (F13-5) - GND (F9-20)	R - BR	Reverse signal	See "Vehicle Signal Check" (See page NS-22)	-
SWG (F10-6) - Body ground	P - Body ground	Steering pad switch ground	Always	Below 1 V
SW1 (F10-7) - SWG (F10-6)	O - P	Steering pad switch signal	No switch is pushed → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4 V or more → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
SW2 (F10-8) - SWG (F10-6)	Y - P	Steering pad switch signal	No switch is pushed → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed → VOICE switch pushed	4 V or more → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
IVO+ (F10-11) - GND (F9-20)	R - BR	Voice guidance signal	Voice guidance is playing	A waveform synchronized with sounds is output
IVO- (F10-12) - GND (F9-20)	G - BR	Voice guidance signal	Voice guidance is playing	A waveform synchronized with sounds is output
SLD1 (F10-13) - Body ground	Shielded - Body ground	Voice sound signal shielded ground	Always	Below 1 V
B (F9-1) - GND (F9-20)	L-Y - BR	Battery	Always	10 to 14 V
ILL+ (F9-2) - GND (F9-20)	G - BR	Illumination signal	Turn ignition switch on (IG) Light control switch OFF → TAIL or ON	Below 1V → 10 to 14 V
ATX+ (F9-5) - GND (F9-20)	R - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V
MUTE (F9-7) - GND (F9-20)	O - BR	Mute signal	Audio system is playing → Changing	Above 3.5 V → Below 1 V
R+ (F9-8) - GND (F9-20)	R - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
L+ (F9-9) - GND (F9-20)	B - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (F9-10) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
ACC (F9-11) - GND (F9-20)	GR - BR	Accessory (ON)	Turn ignition switch off → on (ACC or IG)	Below 1 V → 10 to 14 V
ILL- (F9-12) - GND (F9-20)	W-B - BR	Illumination signal	Turn ignition switch on (IG) Light control switch OFF → TAIL or ON	Below 1 V →10 to 14 V
ANT (F9-13) - GND (F9-20)	O - BR	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (F9-15) - GND (F9-20)	G - BR	AVC-LAN communication signal	Turn ignition switch on (ACC)	2 to 3 V
R- (F9-18) - GND (F9-20)	G - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (F9-19) - GND (F9-20)	W - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (F9-20) - Body ground	BR - Body ground	Ground	Always	Below 1 V
MIC- (F12-9) - Body ground	R - Body ground	Microphone voice signal	See "Microphone Check" (See page NS-27)	-
TSW- (F12-12) - GND (F9 -20)	P - BR	Telephone relation switch signal	Always	Below 1 V
MACC (F12-17) - GND (F9-20)	LG - BR	Microphone AMP power supply	Turn ignition switch off → on (IG)	Below 1 V → 5 V
SGND (F12-18) - GND (F9-20)	P - BR	Ground	Always	Below 1 V
MIC+ (F12-19) - GND (F9-20)	G - BR	Microphone voice signal	See "Microphone Check" (See page NS-27)	-
VAR+ (F14-2) - GND (F9-20)	G - BR	Sound signal (Right)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
VAL+ (F14-3) - GND (F9-20)	R - BR	Sound signal (Left)	External device is playing (When stereo jack is used)	A waveform synchronized with sound is output
VA- (F14-5) - Body ground	BR - Body ground	Shielded ground	Always	Below 1 V
ADPG (F14 - 6) - GND (F9-20)	G - BR	External device connection detection signal	External device is connected	Below 1 V

2. STEREO COMPONENT AMPLIFIER (See page AV-15)

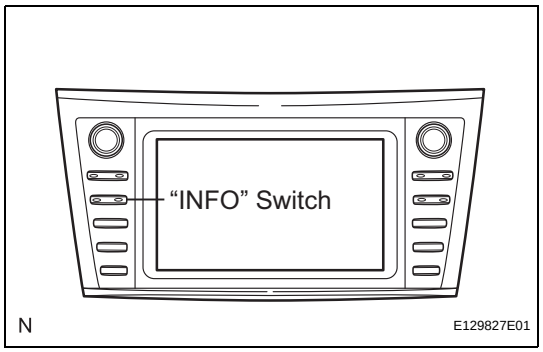
DTC CHECK / CLEAR

HINT:

- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.
- If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (See page NS-175).
- After the ignition switch is turned on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.

1. START DIAGNOSTIC MODE

(a) There are 2 methods to start diagnostic mode. Start the mode by using one of them.

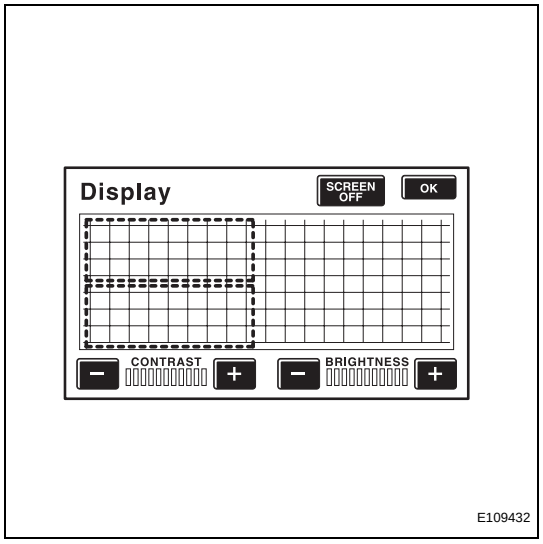


(b) Method 1

(1) Start the engine.

(2) While pressing and holding the "INFO" switch, operate the light control switch: OFF → Turn ON → Turn OFF → Turn ON → Turn OFF → Turn ON → Turn OFF.

(3) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



(c) Method 2

(1) Start the engine.

(2) Switch to the "Display Check" screen.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

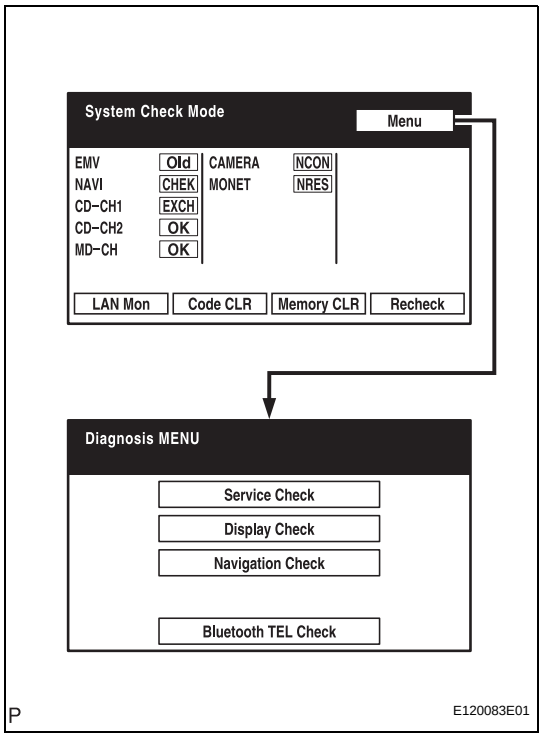
(4) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

2. FINISH DIAGNOSTIC MODE

(a) There are 2 methods to end diagnostic mode. Use one of them.

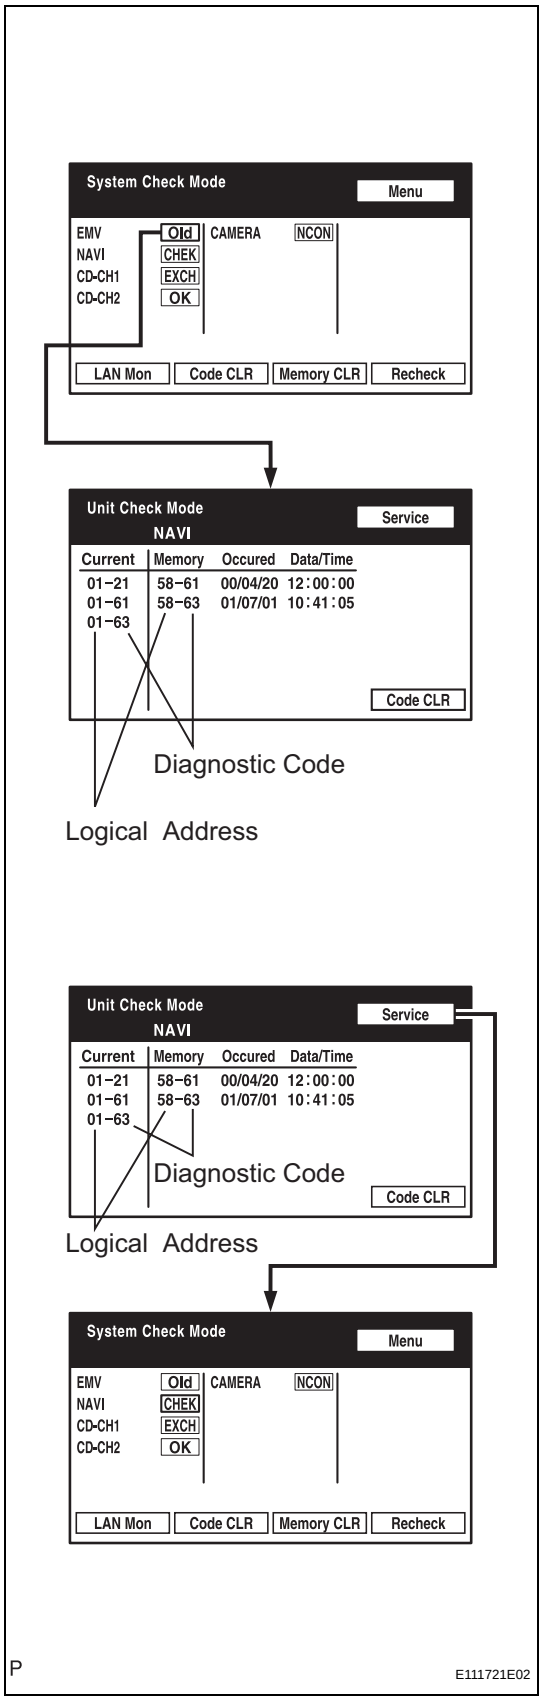
(1) Turn the ignition switch off.

(2) Press and hold the "DISP" switch for 3 seconds.



3. DIAGNOSIS MENU

(a) The "Diagnosis MENU" screen will be displayed by pressing the "Menu" switch on the "System Check Mode" screen.



4. CHECK DTC

(a) Read the system check result.

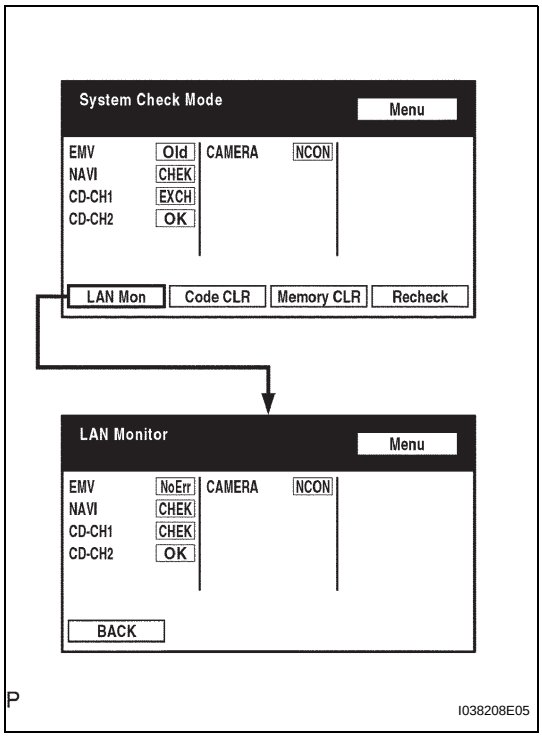
(1) If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result to view the results on the "Unit Check Mode" screen and record them.

HINT:

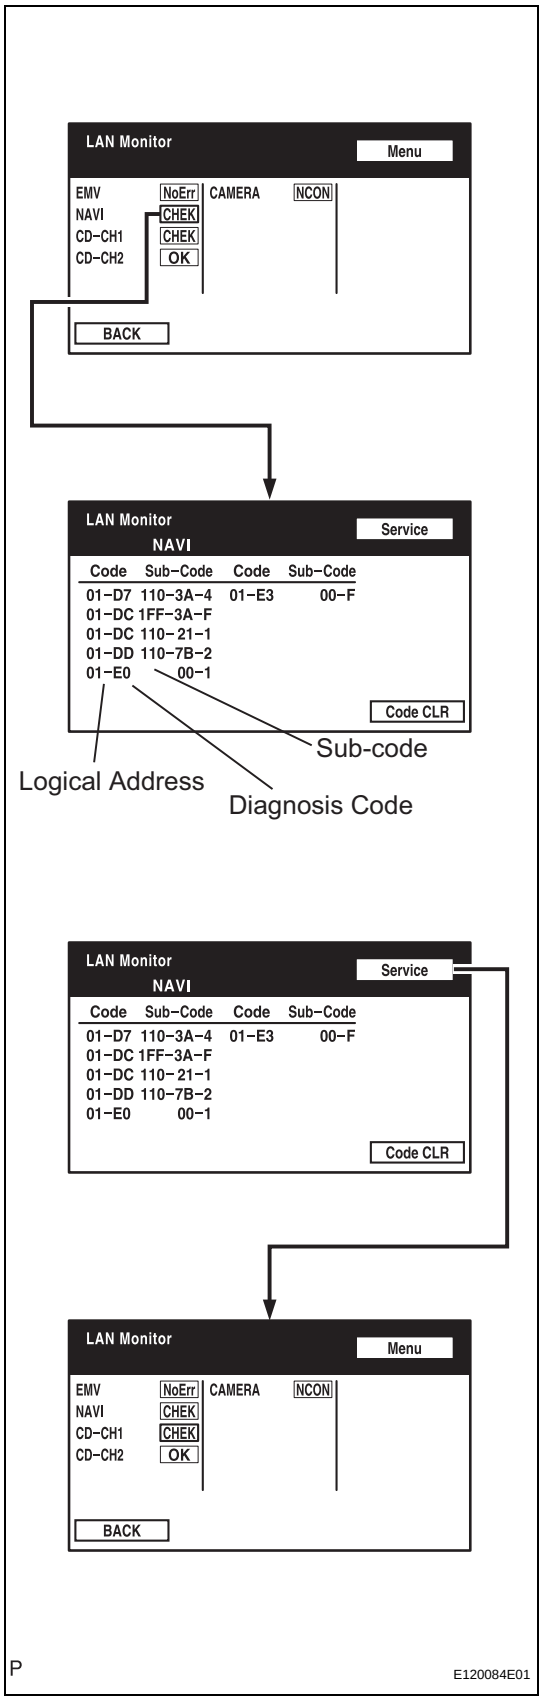
- If all check results are "OK", go to communication DTC check.
- If a device name is not known, its physical address is displayed.

HINT:

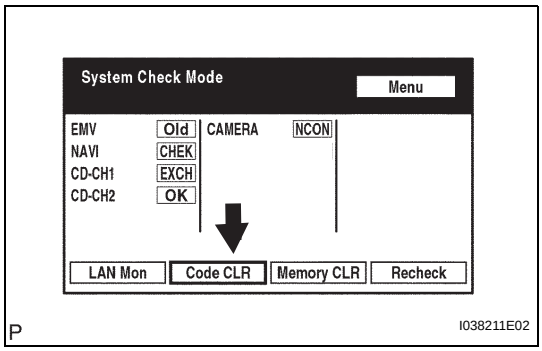
When proceeding to view the results of another device, press the "Service" switch to return to the "System Check Mode" screen. Repeat this step.



(b) Read the communication diagnostic check result.
(1) Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.



(2) If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.
HINT:
- If all check results are "No Err", the system judges that no DTC exists.
- The sub-code (relevant device) will be indicated by its physical address.
- When proceeding to view the results of another device, press the "Service" switch to return to the original "LAN Monitor" screen. Repeat this step.

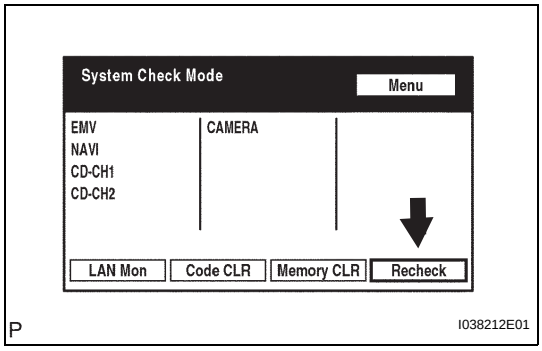


5. DTC CLEAR/RECHECK

(a) Clear DTC

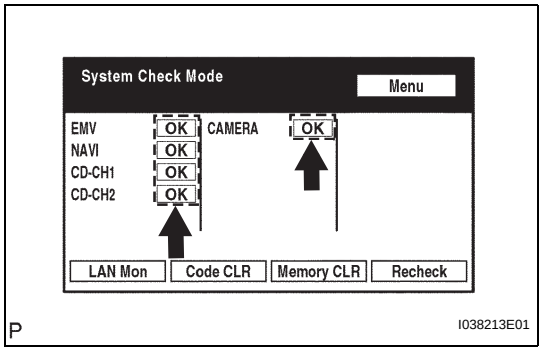
(1) Press the "Code CLR" switch for 3 seconds.

(2) The check results are cleared.

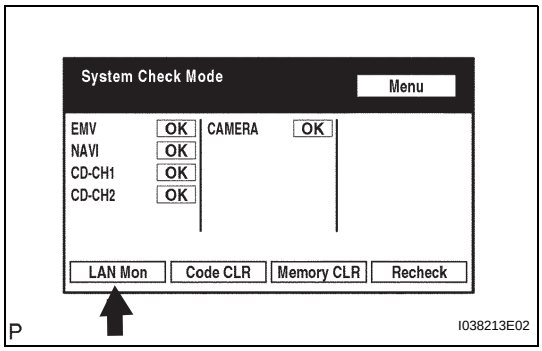


(b) Recheck

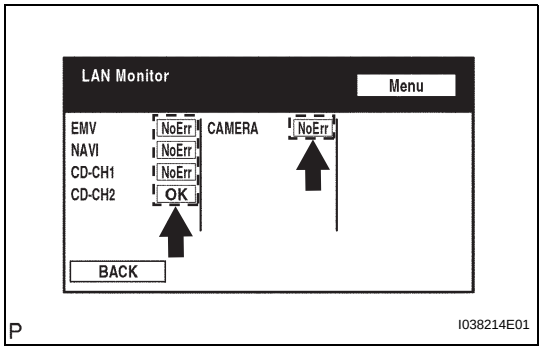
(1) Press the "Recheck" switch.



(2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.



(3) Press the "LAN Mon" switch to change to the "LAN Monitor" screen.



(4) Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

NS

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC No.	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio and navigation assembly	NS-56
01-22	RAM Error	Radio and navigation assembly	NS-56
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-57
01-D6	No Master	1. Radio and navigation assembly power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 4. Component which has stored this code 5. Radio and navigation assembly	NS-59
01-D7	Connection Check Error	1. Radio and navigation assembly power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 4. Component which has stored this code 5. Radio and navigation assembly	NS-59
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-57
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-57
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-57

DTC No.	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-57

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Radio and navigation assembly
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *4	• A component shown by the sub-code is (was) disconnected from the system when turning the ignition switch on (ACC or IG). • The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *4	A component shown by the sub-code is (was) disconnected from the system after engine start.	
01-D9 *1, *4	The device that had functioned before the engine stopped is (was) disconnected from the system when turning the ignition switch is on (ACC or IG).	
01-DA *4	• No response is identified when changing mode. • Detected when sound and image do not change by switch operation.	
01-DB *1, *4	A dual alarm is detected.	
01-DE *3, *4	A slave device has been disconnected after engine start.	

HINT:

- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: This code may be stored if the engine is started and then the ignition switch is turned to the START position again. (Key type ignition switch only)
- *4: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	**CHECK "RADIO AND NAVIGATION ASSEMBLY COMMUNICATION ERROR" IN FLOW CHART**

Refer to the radio and navigation assembly communication error (See page NS-188).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected when the ignition switch is turned on (ACC or IG). • The master device has (had) been disconnected when this code is stored.	• Radio and navigation assembly power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code • Component which has stored this code • Radio and navigation assembly
01-D7 *2	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the ignition switch on (ACC or IG), this code is stored.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

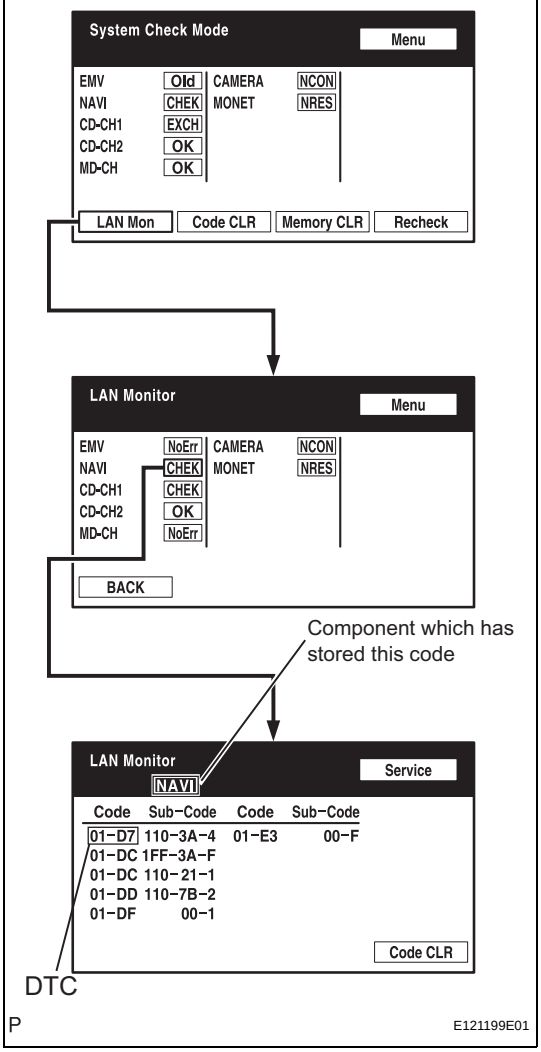
1	CHECK RADIO AND NAVIGATION ASSEMBLY POWER SOURCE CIRCUIT

Refer to the radio and navigation assembly power source circuit (See page NS-191).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:



P E121199E01

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
DSP-AMP	Stereo component amplifier

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

3 CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

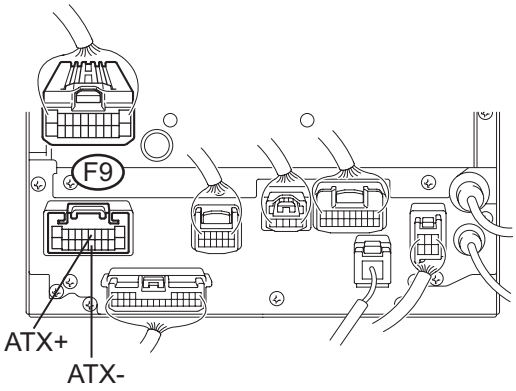
Component	Proceed to
Stereo component amplifier (DSP-AMP)	Stereo component amplifier power source circuit (See page AV-142)

NEXT

NS

4	CHECK RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

5	CHECK HARNESS AND CONNECTOR

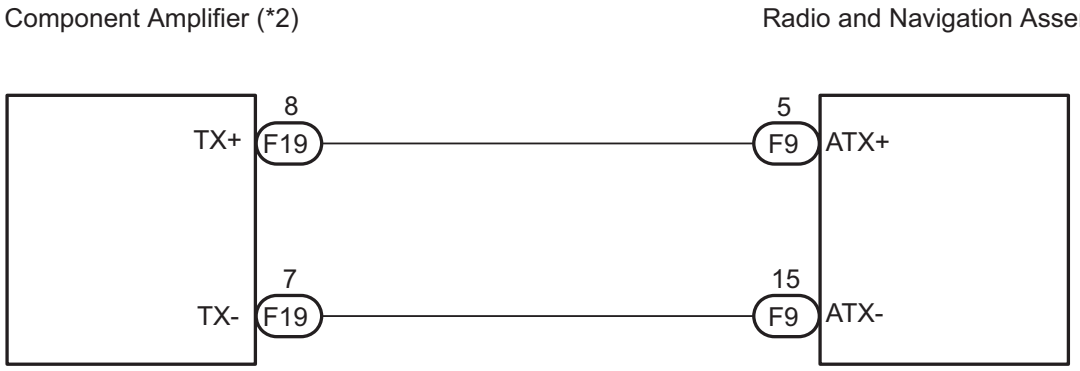
HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.
  (1) Disconnect all connectors between the radio and navigation assembly and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.

OK:

There is no open or short circuit.

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E09

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

NS

DTC 01-DC Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC *1	Transmission to component shown by sub-code failed. (Detecting this DTC does not always mean actual failure.)	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code

HINT:
*1: This code may be stored if the engine is started, idled for 60 seconds and then the ignition switch is turned to the START position again. (Key type ignition switch only)
NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
  (1) Check if "01-DC" is output for the other components.
  (2) If "01-DC" is output for any other components, check if the same physical address is displayed.
  HINT:
  For the list of the components shown by sub-codes, refer to the table in step 2.
  Result

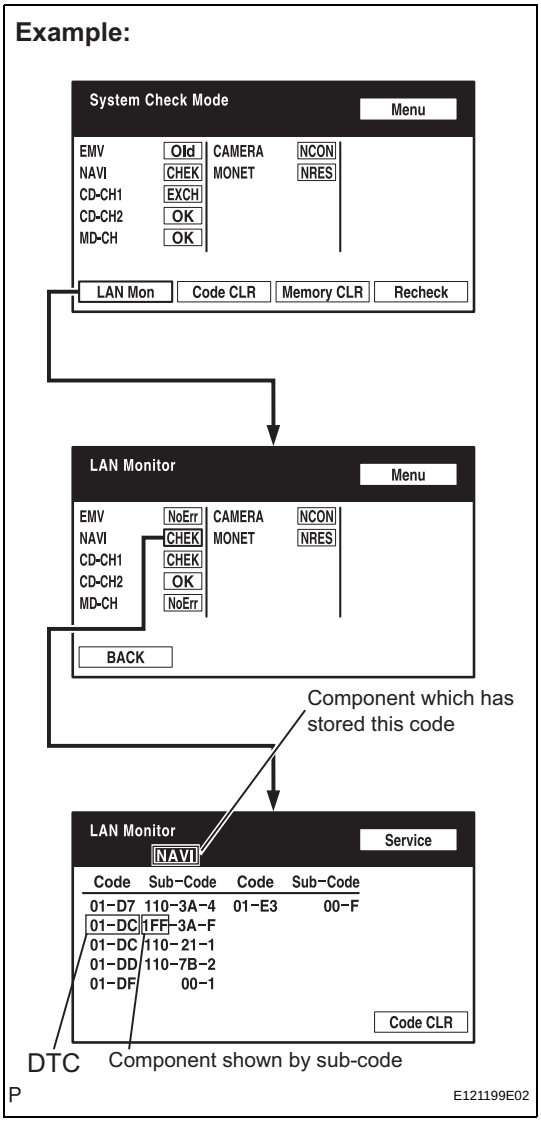
Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

B → **Go to step 4**

A

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:



(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
DSP-AMP (440)	Stereo component amplifier
AVN (140)	Radio and navigation assembly

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

3 CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.

Component Table:

Component	Proceed to
Radio and navigation assembly (AVN)	Radio and navigation assembly communication error (See page NS-188)
Stereo component amplifier (DSP-AMP)	Stereo component amplifier communication error (See page NS-185)

NEXT

END

4	CLEAR DTC

(a) Clear the DTCs (See page NS-46).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.

OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD *1	The device that should be the master has been disconnected after the engine starts.	• Radio and navigation assembly power source circuit • AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code • Radio and navigation assembly • Component which has stored this code
01-E1 *2	The AMP device records that the AMP output does not function even while the source device is operating.	

HINT:

- *1: This code may be stored if the engine is started and the ignition switch is turned to the START position again. (Key type ignition switch only)
- *2: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO AND NAVIGATION ASSEMBLY POWER SOURCE CIRCUIT

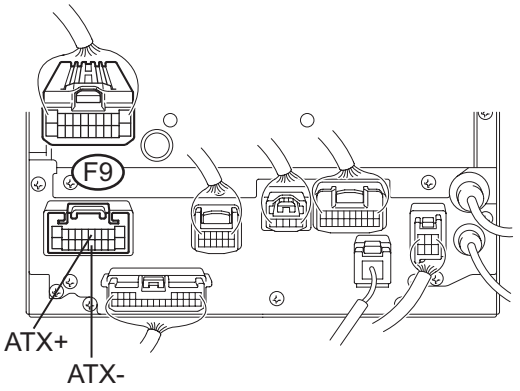
Refer to the radio and navigation assembly power source circuit (See page NS-191).

If the power source circuit is operating normally, proceed to the next step.

NEXT

2	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

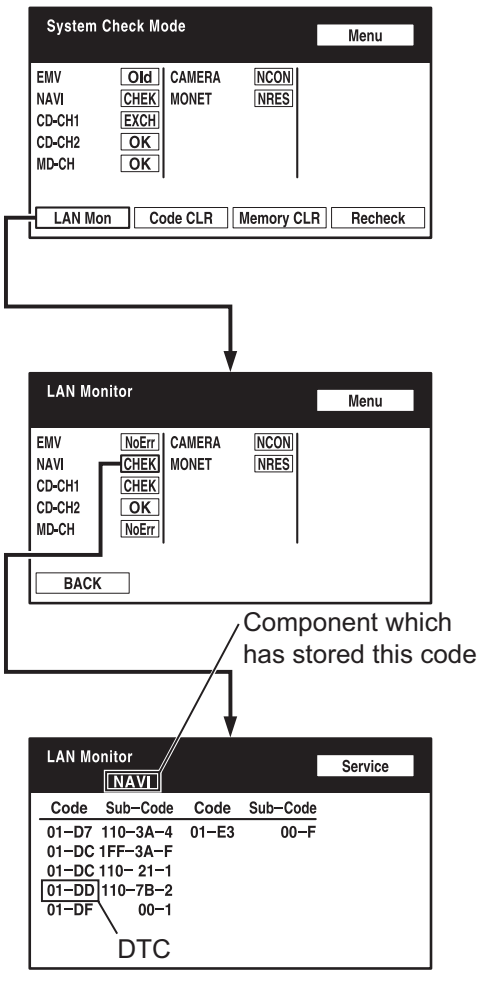
Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

3 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:



P E111829E03

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
DSP-AMP	Stereo component amplifier

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

4 CHECK HARNESS AND CONNECTOR

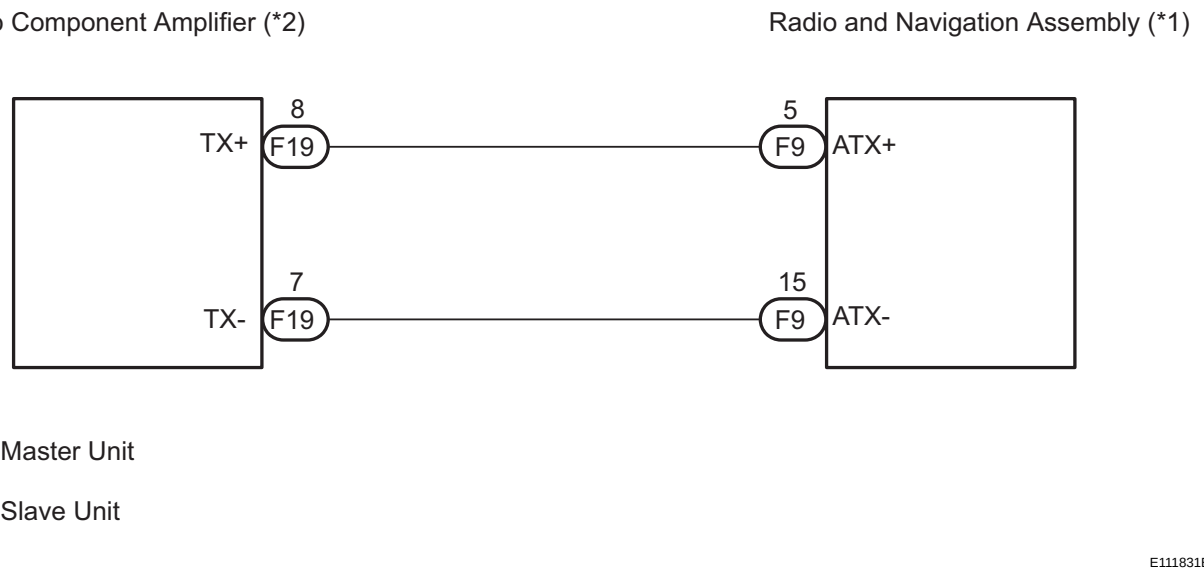
HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.
  (1) Disconnect all connectors between the radio and navigation assembly and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.

NS

OK:
There is no open or short circuit.

AVC-LAN WIRING DIAGRAM



NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	REPLACE RADIO AND NAVIGATION ASSEMBLY

(a) Replace the radio and navigation assembly with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-DF	Master Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DF *1	• The device with a display fails and the master is switched to the audio device. • A communication error between the sub-master (radio receiver) and master occurs.	• Radio and navigation assembly power source circuit • AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code • AVC-LAN circuit between the radio and navigation assembly and the radio receiver • Radio and navigation assembly • Component which has stored this code

HINT:
*1: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the ignition switch on (ACC or IG), this code is stored.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

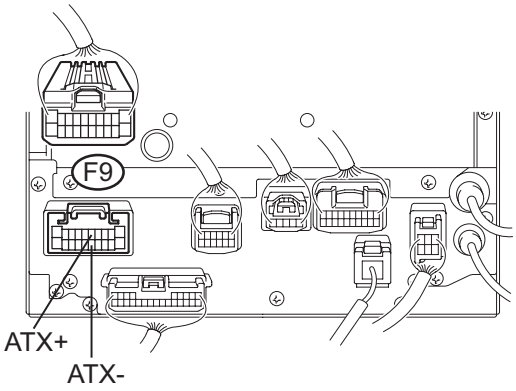
1	CHECK RADIO AND NAVIGATION ASSEMBLY POWER SOURCE CIRCUIT

Refer to the radio and navigation assembly power source circuit (See page NS-191).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

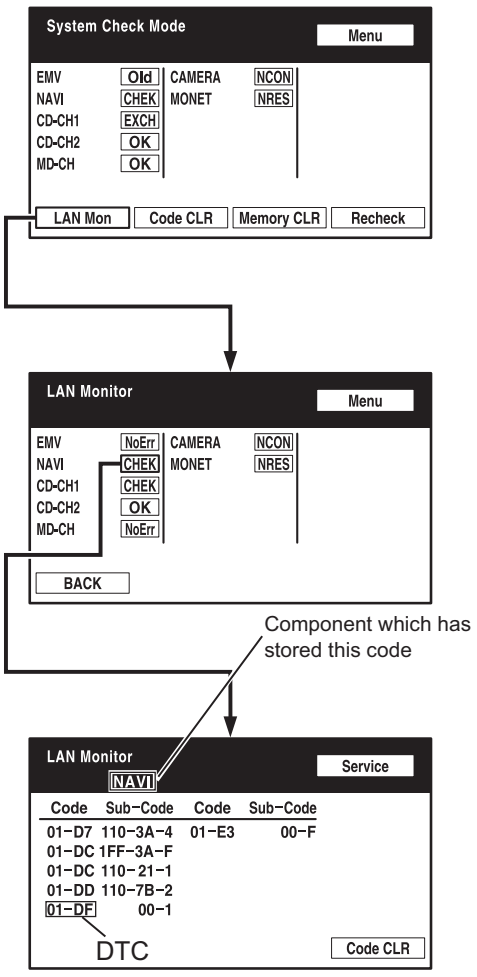
Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

3 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:



P E121199E04

(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
DSP-AMP	Stereo component amplifier

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

4 CHECK HARNESS AND CONNECTOR

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.
  (1) Disconnect all connectors between the radio and navigation assembly and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

DTC	01-E0	Registration Complete Indication Error

DTC	01-E3	Registration Demand Transmission

DTC	01-E4	Multiple Frame Incomplete

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E0	"Registration complete" signal from the master device cannot be received.	-
01-E3	The registration demand signal from the slave device is output. Or the registration demand signal is output by receiving connection confirmation signal from the sub-master device.	-
01-E4	The multiple frame transmission is incomplete.	-

HINT:
Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

INSPECTION PROCEDURE

HINT:
- After the inspection is completed, clear the DTCs.
- These DTCs do not indicate a malfunction.

DTC	01-E2	ON / OFF Indication Parameter Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-E2	The signal for ON/OFF control from the master device has a problem.	Radio and navigation assembly

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	21-10	Panel Switch Error

DTC	23-11	Touch Switch Error

DTC	24-10	Panel Switch Error

DTC	24-11	Touch Switch Error

DTC	25-10	Panel Switch Error

DTC	25-11	Touch Switch Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
21-10	The panel switch detection circuit has a problem.	Radio and navigation assembly
21-11	The touch panel switch has a problem.	
23-10	The panel switch detection circuit has a problem.	
23-11	The touch panel switch has a problem.	
24-10	The panel switch detection circuit has a problem.	
24-11	The touch panel switch has a problem.	
25-10	The panel switch detection circuit has a problem.	
25-11	The touch panel switch has a problem.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	34-10	Error in Picture Circuit

DTC	34-11	No Current in Back-light

DTC	34-12	Excess Current in Back-light

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
34-10	Error in power supply system for picture circuit	Radio and navigation assembly
34-11	Decline in power output from inverter circuit for back-light	
34-12	Excess power output from inverter circuit for back-light	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	57-47	Bluetooth Module Initialization Failed

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
57-47	• "Bluetooth" module is not installed. • Problem with "Bluetooth" module • Problem in communication line to "Bluetooth" module	Radio and navigation assembly

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	58-10	Gyro Error

DTC	80-10	Gyro Error

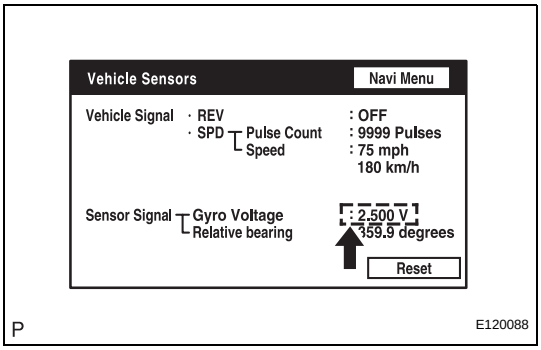
DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-10	Ground short, power supply short, or open circuit in the gyro signal	• Gyro sensor • Radio and navigation assembly
80-10	Ground short, power supply short, or open circuit in the gyro signal	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)



(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) Check the gyro voltage.
Standard voltage:
0.1 to 4.5 V

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

2 CLEAR DTC

(a) Clear the DTCs (See page NS-46).

NEXT

3 RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio and navigation assembly.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	58-11	GPS Receiver Error

DTC	80-11	GPS Receiver Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-11	• RTC, ROM, and RAM of the GPS receiver and TCXO error • GPS receiver is failed.	Radio and navigation assembly
80-11	• RTC, ROM, and RAM of the GPS receiver and TCXO error • GPS receiver is failed.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	58-40	GPS Antenna Error

DTC	58-41	GPS Antenna Power Source Error

DTC	80-40	GPS Antenna Error

DTC	80-41	GPS Antenna Power Source Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-40	GPS antenna error	• Wire harness • GPS antenna • Radio and navigation assembly
58-41	Error of the power source to the GPS antenna	
80-40	GPS antenna error	
80-41	Error of the power source to the GPS antenna	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK HARNESS AND CONNECTOR (GPS ANTENNA - RADIO AND NAVIGATION ASSEMBLY)

(a) Check that the GPS antenna cord is securely connected to the radio and navigation assembly connector.
OK:
The cord is securely connected.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ↓

2	REPLACE GPS ANTENNA

(a) Replace the GPS antenna with a normal one and check if the same problem occurs again.
(1) Clear the DTCs (See page NS-46).
(2) Recheck for DTCs and check if the same trouble occurs again.
OK:
Same problem does not occur.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK ↓

END

DTC	58-42	Map Disc Read Error

DTC	80-42	Map Disc Read Error

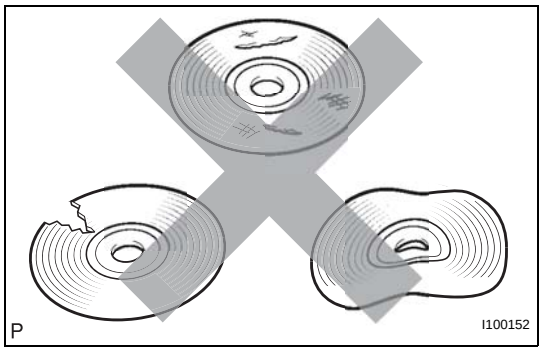
DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-42	• Player error • Scratches or dirt on the disc • Access to an invalid address due to software error	• Map disc • Radio and navigation assembly
80-42	• Player error • Scratches or dirt on the disc • Access to an invalid address due to software error	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1 CHECK MAP DISC

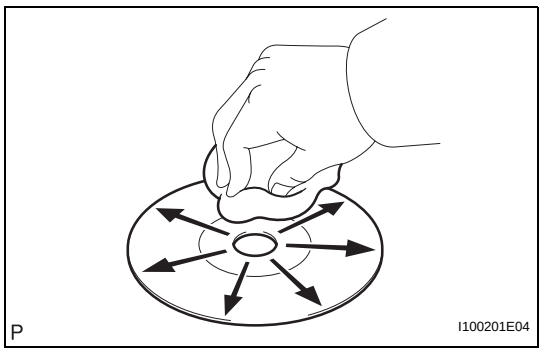


(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on the map disc.

NG → **Go to step 4**

OK

2 DISC CLEANING



(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

3 DTC CLEAR AND RECHECK

(a) Clear the DTCs (See page NS-46).

(b) Recheck for DTCs and check if the same trouble occurs again.
OK:
Same problem does not occur.

OK → **END**

NG

4	REPLACE MAP DISC

(a) Replace the map disc.
(b) Clear the DTCs and recheck for DTCs.
(c) Check if the same trouble occurs again.
OK:
Same problem does not occur.

OK → **END**

NG

REPLACE RADIO AND NAVIGATION ASSEMBLY

DTC	80-43	SPD Signal Error

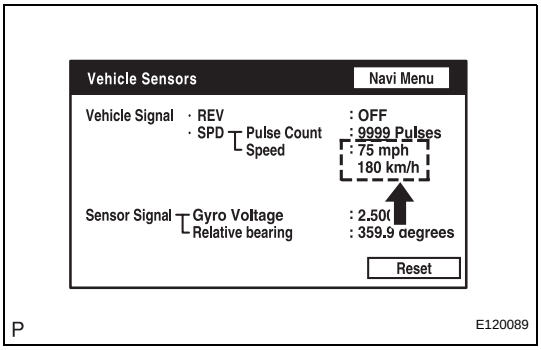
DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-43	A difference between the GPS speed and SPD pulse is detected.	• Speed signal circuit • Radio and navigation assembly
80-43	A difference between the GPS speed and SPD pulse is detected.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)



(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) While driving the vehicle, compare the "SPD" indicator to the reading on the speedometer. Check if these readings are almost equal.
OK:
The readings are almost equal.

OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

NG

2	PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Refer to "Speed signal does not change in the navigation check mode" in the problem symptoms table (See page NS-41).

NEXT

END

DTC	58-44	Player Error

DTC	80-44	Player Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-44	Map player error is detected.	Radio and navigation assembly
80-44	Map player error is detected.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Check if a disc can be inserted or ejected normally.
OK:
A disc can be inserted or ejected normally.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK ↓

2	DTC CLEAR AND RECHECK

(a) Clear the DTCs (See page NS-46).
(b) Recheck for DTCs and check if the same trouble occurs again.
OK:
Same problem does not occur.

OK → **END**

NG ↓

REPLACE RADIO AND NAVIGATION ASSEMBLY

DTC	58-45	High Temperature

DTC	80-45	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
58-45	High map disc player temperature is detected (Over 80°C).	Radio and navigation assembly
80-45	High map disc player temperature is detected (Over 80°C).	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio and navigation assembly has becomes sufficiently low, then start the engine to verify the malfunction symptom.
OK:
Same problem does not occur.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-10	CD Changer Mechanical Error

DTC	63-11	CD Insertion and Ejection Error

DTC	63-12	CD Reading Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-10	A mechanical error in the CD changer is detected while the CD is not being inserted or ejected.	Radio and navigation assembly
63-11	CD insertion or ejection is failed.	
63-12	CD read problem occurs.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	63-41	Wrong Disc

DTC	63-42	Disc cannot be Read

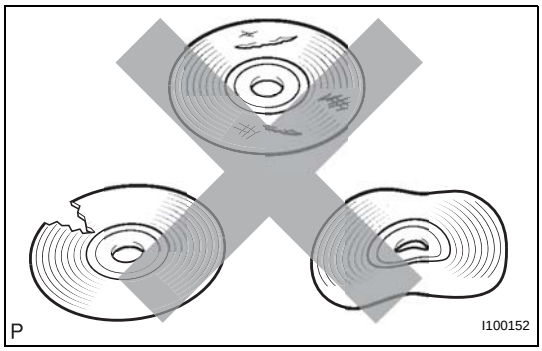
DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-41	An unsuitable disc is inserted.	• CD • Radio and navigation assembly
63-42	The disc cannot be read.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK DISC

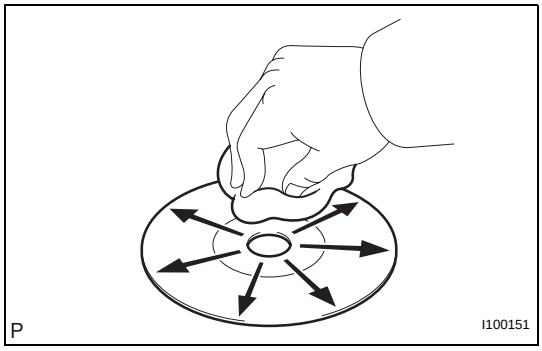


(a) Check that the disc is not deformed or cracked.
OK:
No deformations or cracks on the disc.

NG → **CHANGE DISC**

OK

2	DISC CLEANING



(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

3	CLEAR DTC

(a) Clear the DTCs (See page NS-46).

NEXT

4	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

5	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-46).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-43	CD-ROM Abnormal

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-43	CD-ROM operation is abnormal.	• CD • Radio and navigation assembly

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- CD with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CD IS FAULTY**

OK ↓

2	REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with another and recheck.
(1) Replace the CD with another normal one.
(2) Clear the DTCs (See page NS-46).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK ↓

END

DTC	63-44	CD Abnormal

DTC	63-48	Excess Current

DTC	63-50	Tray Insertion / Ejection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-44	Operation error in the CD mechanism	Radio and navigation assembly
63-48	Excess current is present in the CD changer.	
63-50	Malfunction in insertion/ejection system	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CLEAR DTC

(a) Clear the DTCs (See page NS-46).

NEXT

2	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
HINT:
If DTCs are detected frequently, replace the radio and navigation assembly.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-45	Eject Error

DTC	63-51	Elevator Error

DTC	63-52	Clamp Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-45	Magazine cannot be ejected.	Radio and navigation assembly
63-51	Mechanical error occurs during elevator operation.	
63-52	Error occurs in CD changer clamp.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Check if a disc can be changed, inserted, or ejected normally.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-46	Scratched / Reversed Disc

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-46	Scratches or dirt is found on CD surface or CD is set upside down.	• CD • Radio and navigation assembly

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

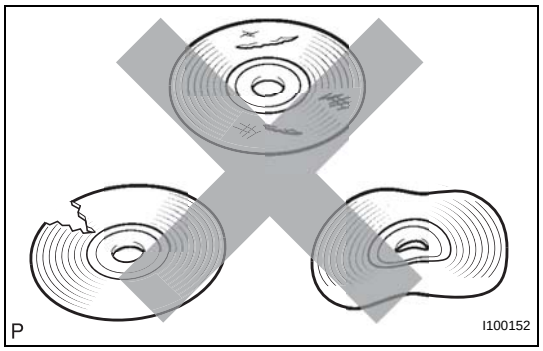
1 CHECK THAT CD IS INSERTED PROPERLY

(a) Check that the CD is not inserted upside down.
OK:
CD is properly inserted.

NG → **INSERT CD PROPERLY**

OK

2 CHECK DISC

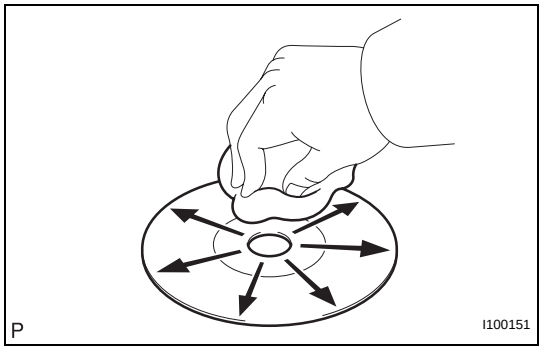


(a) Check that the disc is not deformed or cracked.
OK:
No deformations or cracks on the disc.

NG → **CHANGE DISC**

OK

3 DISC CLEANING



(a) Disc cleaning
(1) If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NEXT

4	CLEAR DTC

(a) Clear the DTCs (See page NS-46).

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

OK → **END**

NG

6	REPLACE DISC WITH ANOTHER AND RECHECK

(a) Replace the disc with another and recheck.
(1) Replace the disc with another normal one.
(2) Clear the DTCs (See page NS-46).
(3) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-47	High Temperature

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-47	Sensor detects that CD unit temperature is high (Over 80°C).	Radio and navigation assembly

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Park the vehicle in a cool place.
(b) Check that the temperature of the radio and navigation assembly becomes sufficiently low, then start the engine. Check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-78	DSP Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-78	An error occurs during the decode process (MP3/ WMA).	-

INSPECTION PROCEDURE

HINT:
After the inspection completed, clear the DTCs.
NOTICE:
- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio and navigation assembly.**

1	CLEAR DTC

(a) Clear the DTCs (See page NS-46).
HINT:
These DTCs do not indicate a malfunction.

NEXT

2	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble occurs again.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

DTC	63-7D	Disc cannot be Played

DTC	63-7E	No Playable Files

DTC	63-7F	Copyright Protection Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
63-7D	• An incompatible MP3/WMA file is used. • Although the file has an extension of ".mp3" or ".wma", the header information cannot be read.	• CD • Radio and navigation assembly
63-7E	• A disc with no music data is used. • Playable files are not on the disc (MP3/WMA).	
63-7F	A copy-protected file, which cannot be played, is used.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	CHANGE DISC

(a) Insert a disc with a playable file and check if the disc can be played correctly.
HINT:
For details on playable files and discs, refer to the Owner's Manual.
OK:
The disc can be played correctly.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

DISC IS FAULTY

Noise Occurs

INSPECTION PROCEDURE

1 **NOISE CONDITION**

(a) Check from which direction the noise comes (front left or right, or rear left or right).
(1) Check from which direction the noise comes.
OK:
The location of the noise source can be determined.

NG → **Go to step 3**

OK

2 **CHECK SPEAKERS**

(a) Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation, or other failures.

Result

Condition	Proceed to
A speaker is installed incorrectly	A
Foreign objects are in the speaker	B
A speaker cone paper is broken	C
No malfunction is found	D

A → **REINSTALL SPEAKER**

B → **REMOVE FOREIGN OBJECT**

C → **REPLACE SPEAKER**

D

3 **CHECK NOISE CONDITIONS**

(a) Check the noise condition.
HINT:
The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

Conditions under which noise occurs	Noise source
Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the vehicle accelerates rapidly on an unpaved road or after the ignition switch is turned on (IG or ACC).	Fuel pump

Conditions under which noise occurs	Noise source
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the blink of the turn signal.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs while the engine is running, and continues even after the engine is stopped.	Water temperature sensor
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the chart's left column, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the noise filter on or for the part.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Noise should be removed in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

OK:

The noise source cannot be determined.

NG → **REPAIR OR REPLACE NOISE SOURCE**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

1	CHECK CABIN

(a) Check that conditions in the cabin are not likely to cause condensation.
HINT:
This problem occurs when the cabin is humid and the temperature rapidly changes. This condition may produce condensation, resulting in a short circuit.
OK:
Condensation is not likely to occur.

NG → **DRY CABIN AND RECHECK CONDITIONS**

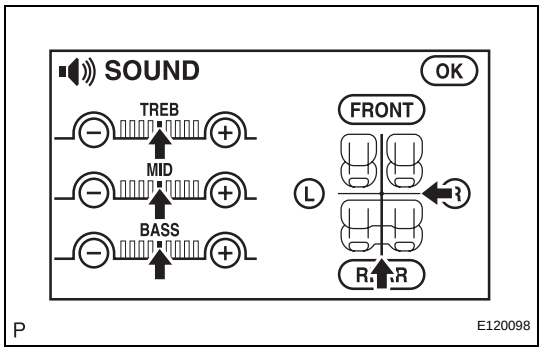
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

No Sound can be Heard from Speakers

INSPECTION PROCEDURE

1	CHECK AUDIO SETTINGS



(a) Enter the sound adjustment screen by pressing the "SOUND" switch on the AUDIO display.
(b) Set volume, fader, and balance to the initial values and check that sound is normal.
OK:
Audio system returns to normal.
HINT:
Sound quality adjustment items vary depending on the type of the amplifier.

OK → **END**

NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

CD cannot be Ejected

INSPECTION PROCEDURE

1	**CHECK OPERATION**

(a) Press the disc eject switch of the radio receiver for 5 seconds or more and check that the CD is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

2	**REPLACE CD WITH ANOTHER AND RECHECK**

(a) Insert another CD and check if it is ejected.
OK:
CD is ejected.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

CD IS FAULTY

CD cannot be Inserted / Played or CD is Ejected Right After Insertion

INSPECTION PROCEDURE

1	CHECK IF A PROPER CD IS INSERTED

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.
OK:
Normal CD
HINT:
- Translucent or uniquely-shaped CDs cannot be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG → **CD IS FAULTY**

OK

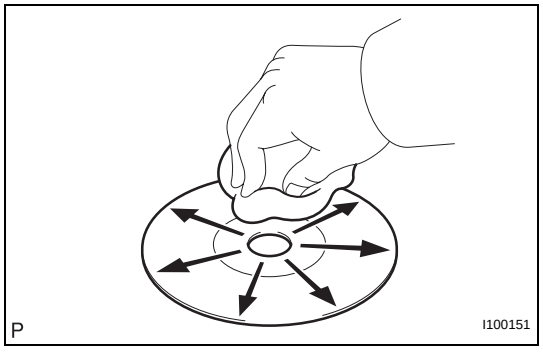
2	CHECK THAT CD IS INSERTED PROPERLY

(a) Check whether or not the CD is inserted upside down.
OK:
CD is properly inserted.

NG → **SET CD PROPERLY**

OK

3	CHECK CD



(a) Clean the disc by wiping it with a soft cloth from the inside to the outside in a radial direction.
OK:
Malfunction disappears.
NOTICE:
Do not use a conventional record cleaner or antistatic preservative.

OK → **CD WAS DIRTY**

NG

4	REPLACE CD WITH ANOTHER AND RECHECK

(a) Replace the CD with a normal one and check that the malfunction disappears.
OK:
Malfunction disappears.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

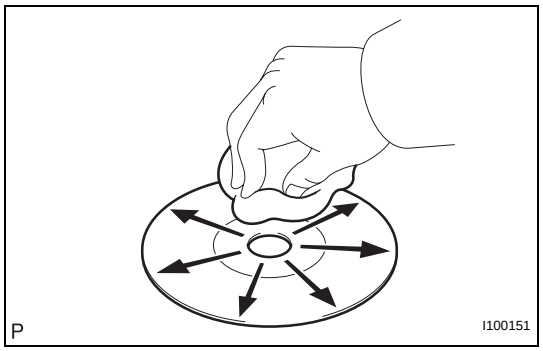
OK

CD IS FAULTY

CD Sound Skips

INSPECTION PROCEDURE

1 CHECK CD

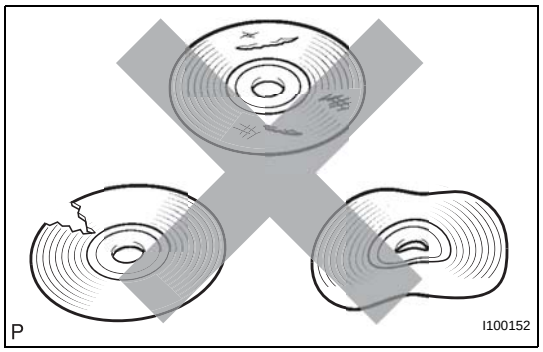


(a) Check the CD.
OK:
The CD is clean.
HINT:
If dirt is on the CD surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.

NG → **CLEAN CD**

OK

2 CHECK CD



(a) Check that the CD is not deformed or cracked.
OK:
No deformation or cracks on the CD.

NG → **CD IS FAULTY**

OK

3 CHECK OPERATION OF ANOTHER CD

(a) Check using another CD.
(1) Check if the problem recurs using another CD.
OK:
The problem does not occur.

OK → **CD IS FAULTY**

NG

4 CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Check the radio and navigation assembly installation condition.
(1) Check that the radio and navigation assembly is properly installed.

NS

OK:
Radio and navigation assembly is properly installed.

NG → **REINSTALL RADIO AND NAVIGATION ASSEMBLY**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Radio Broadcast cannot be Received or Poor Reception

INSPECTION PROCEDURE

1	CHECK RADIO AND NAVIGATION ASSEMBLY

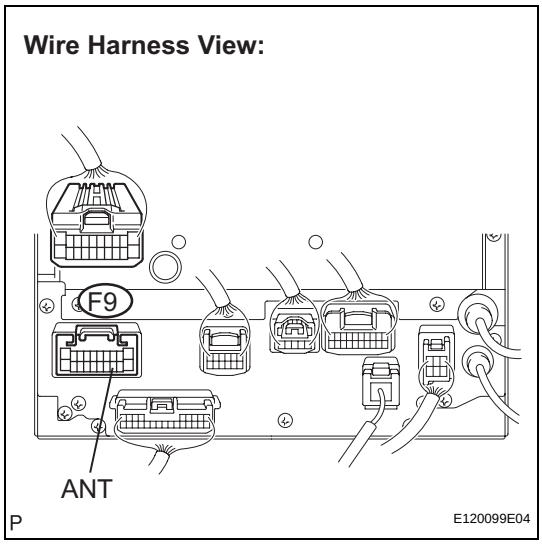
(a) Check the radio's automatic station search function.
(1) Check the radio's automatic station search function by activating it.
OK:
The radio's automatic station search function works properly.

OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

NG

2	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector F9.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester connection	Condition	Specified condition
ANT - Body ground	Ignition SW on (IG) Radio SW ON	10 to 14 V

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

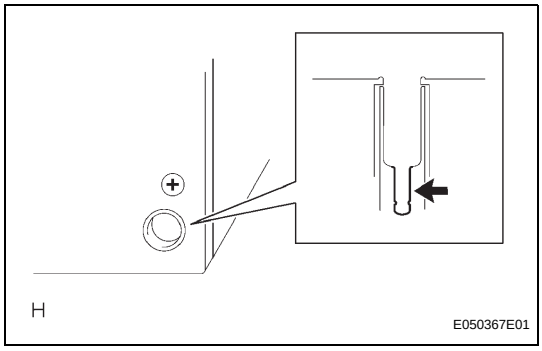
3	CHECK OPTIONAL COMPONENTS

(a) Check optional components (sun-shade film, telephone antenna, etc.).
(1) Check if any optional components, such as sunshade film or telephone antenna that may decrease reception capacity, are installed.
OK:
Optional components are installed.
NOTICE:
Do not remove any optional components installed by the customer without his or her consent.

OK → **REMOVE AND RECHECK OPTIONAL COMPONENTS (SEE NOTICE ABOVE)**

NG

4 CHECK RADIO AND NAVIGATION ASSEMBLY



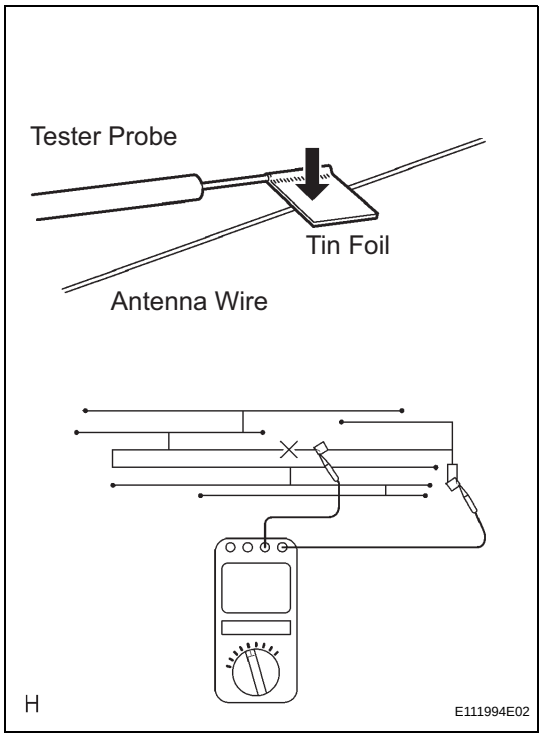
(a) Preparation for check
  (1) Remove the antenna plug from the radio and navigation assembly.

(b) Check for noise
  (1) Turn the ignition switch on (ACC) with the radio and navigation assembly connector connected.
  (2) Turn the radio on and put into AM mode.
  (3) Place a screwdriver, thin wire, or other metal object on the radio receiver's antenna jack and check that noise can be heard from the speaker.
  OK:
  Noise occurs.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

5 CHECK GLASS ANTENNA



(a) Check for continuity of the antenna.
  HINT:
  Check for continuity at the center of each antenna wire as shown in the illustration.
  NOTICE:
  When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.
  OK:
  There is continuity in the antenna.

NG → **REPAIR GLASS ANTENNA**

OK

NS

6	REPLACE ANTENNA AMPLIFIER

(a) Replace the antenna amplifier and check that it operates normally.
OK:
The antenna amplifier operates normally.

OK → **END**

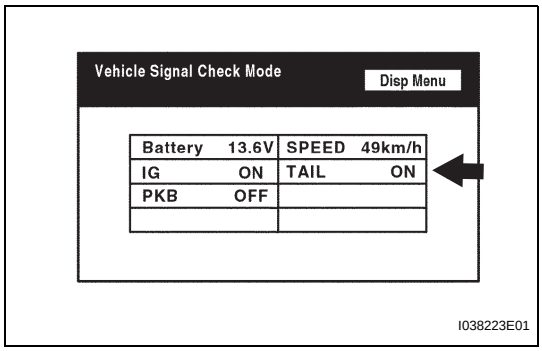
NG

REPLACE RADIO AND NAVIGATION ASSEMBLY

Illumination for Panel Switch does not Come on with Tail Switch ON

INSPECTION PROCEDURE

1	CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)



(a) Enter the "Display Check" mode (Vehicle Signal Check Mode) (See page NS-22).

(b) Check that the display changes between ON and OFF according to the light control switch operation.

OK

Light Control Switch	Display
TAIL or ON	ON
OFF	OFF

HINT:
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

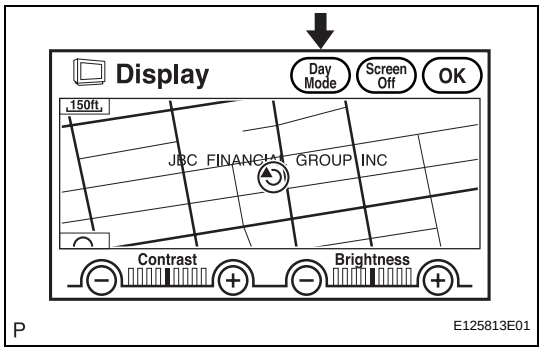
OK ↓

REPLACE RADIO AND NAVIGATION ASSEMBLY

Display does not Dim when Light Control Switch is Turned ON

INSPECTION PROCEDURE

1 CHECK IMAGE QUALITY SETTING



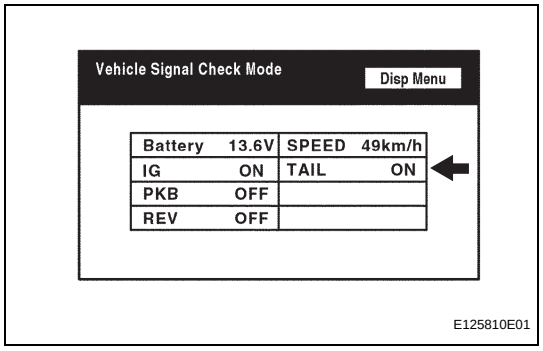
(a) Enter the display adjustment screen by pressing the "DISP" switch.
(b) Turn the light control switch to the TAIL position.
(c) Check if "DAY MODE" on the display adjustment is ON.
OK:
"DAY MODE" is ON.

NG → **Go to step 2**

OK

TURN "DAY MODE" SETTING OFF

2 CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)



(a) Enter the "Display Check" mode (Vehicle Signal Check) (See page NS-22).
(b) Check that the display changes between ON and OFF according to the light control switch operation.
OK

Light Control Switch	Display
TAIL or ON	ON
OFF	OFF

HINT:
The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Panel Switches do not Function

INSPECTION PROCEDURE

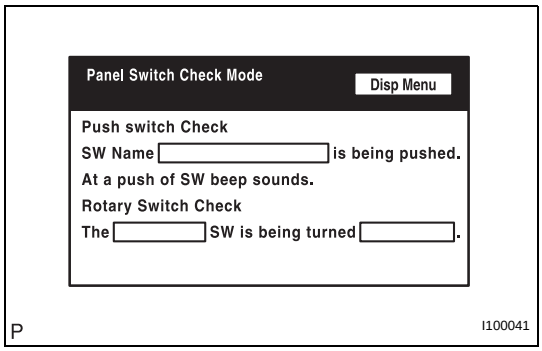
1	CHECK PANEL SWITCH

(a) Check for foreign matter around the switches that might prevent operation.
OK:
No foreign matter is found.

NG → **REMOVE ANY FOREIGN MATTER FOUND**

OK

2	CHECK PANEL SWITCH (DISPLAY CHECK MODE)



(a) Enter the "Display Check" mode (Panel Switch Check) (See page NS-22).
(b) Operate the abnormal switch and check if the switch name and status are correctly displayed.
OK:
The switch name and status are correctly displayed as operated.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Touch Panel Switch does not Function

INSPECTION PROCEDURE

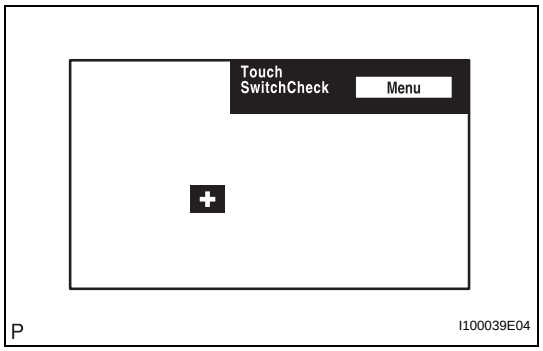
1	CHECK TOUCH PANEL

(a) Check for foreign matter on the display.
OK:
The display is clean.

NG → **CLEAN DISPLAY AND RECHECK TOUCH PANEL**

OK

2	CHECK TOUCH SWITCH (DISPLAY CHECK MODE)



(a) Enter the "Display Check" mode (Touch Switch Check) (See page NS-22).
(b) Touch the display in the area where the switch malfunction occurs.
OK:
A "+" mark appears at the touched position.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

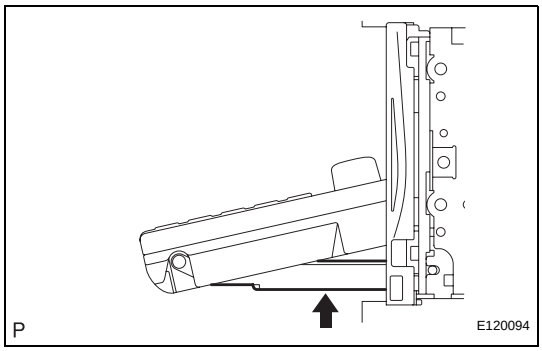
OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Display Panel does not Open, Tilt or Tilts Improperly

INSPECTION PROCEDURE

1	CHECK RADIO AND NAVIGATION ASSEMBLY



(a) Check for foreign matter or obstructions caught in the moving parts of the panel.
OK:
No obstruction or foreign matter found.

NG → **REMOVE ANY OBSTRUCTION OR FOREIGN MATTER FOUND**

OK

2	CHECK OPERATION

(a) Check if the navigation and audio systems function properly.
OK:
Navigation and audio systems function properly.

OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

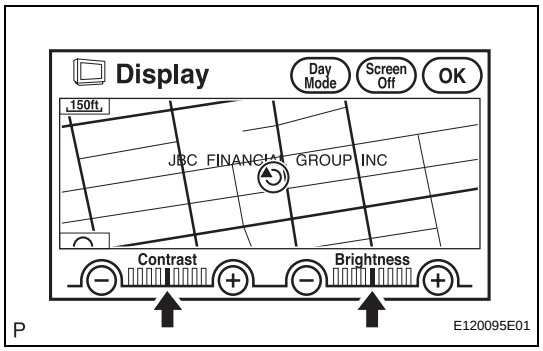
NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Screen Flicker or Color Distortion

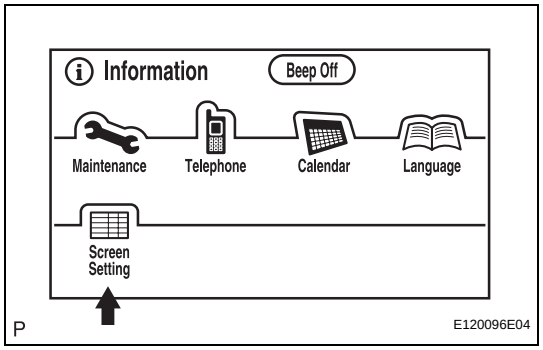
INSPECTION PROCEDURE

1 CHECK DISPLAY SETTING

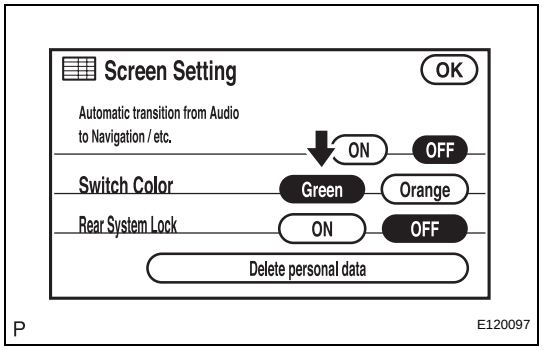


(a) Enter the display adjustment screen by pressing the "DISPLAY" switch.

(b) Reset display settings (contrast, brightness) and check that the screen appears normal.



(c) Press the "INFO" switch and then select "Screen Setting."



(d) Set the "Switch Color" to "Green" (initial setting) and check if the display returns to normal.

OK:

Returns to normal.

NG	**Go to step 2**

OK

END

2 CHECK CABIN

(a) Check that the cabin temperature is warmer than -20°C (-4.0°F).

OK:

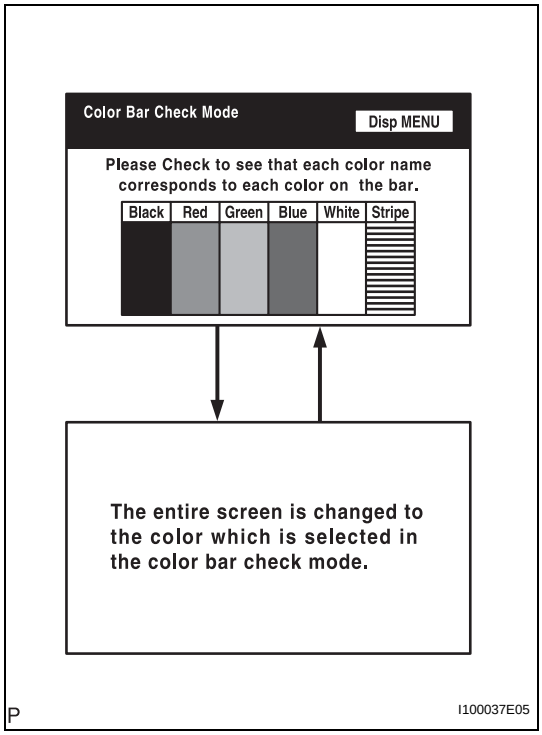
Cabin is warmer than -20°C (-4.0°F).

NG	**HEAT CABIN AND RECHECK TEMPERATURE**

NS

OK

3	CHECK COLOR BAR (DISPLAY CHECK MODE)

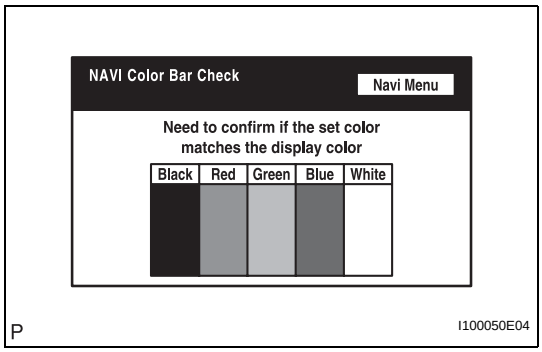


(a) Enter the "Display Check" mode (Color Bar Check) (See page NS-22).
(b) Check that the color bars match the displayed names.
OK:
Color bars match the displayed names.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

4	CHECK NAVI COLOR BAR (NAVIGATION CHECK MODE)



(a) Enter the "Navigation Check" mode (NAVI Color Bar Check) (See page NS-27).
(b) Check that the color bars match the displayed names.
OK:
Color bars match the displayed names.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Poor Sound Quality in All Modes (Low Volume)

INSPECTION PROCEDURE

1	CHECK AUDIO SETTINGS

(a) Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.
OK:
Malfunction disappears.

OK → END

NG

2	COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

(a) Compare with another vehicle of the same model.
(1) Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.
OK:
No difference is found.

OK → END

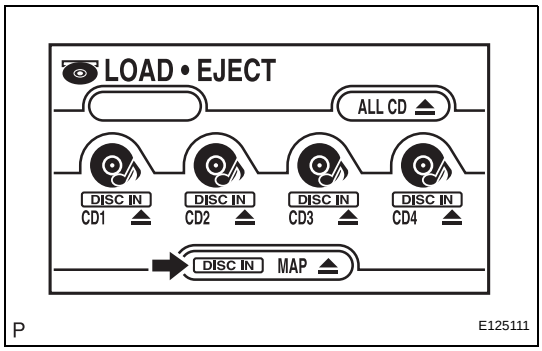
NG

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

MAP Disc cannot be Inserted

INSPECTION PROCEDURE

1	CHECK RADIO AND NAVIGATION ASSEMBLY

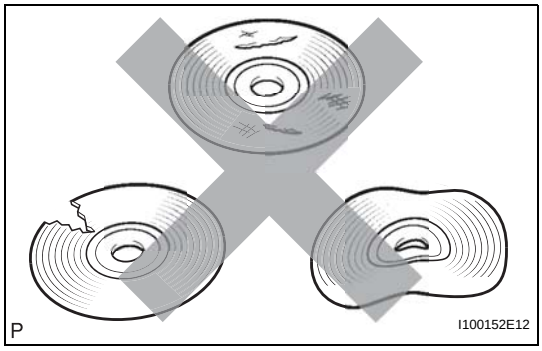


(a) Check if a disc is inserted into the MAP disc slot.
(1) Check if "DISC IN" is displayed.
OK:
"DISC IN" is displayed.

NG → **EJECT DISC**

OK

2	CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

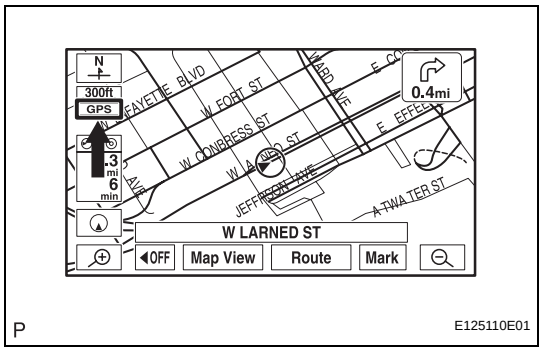
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Vehicle Position Mark Deviates Greatly

INSPECTION PROCEDURE

1 CHECK GPS MARK

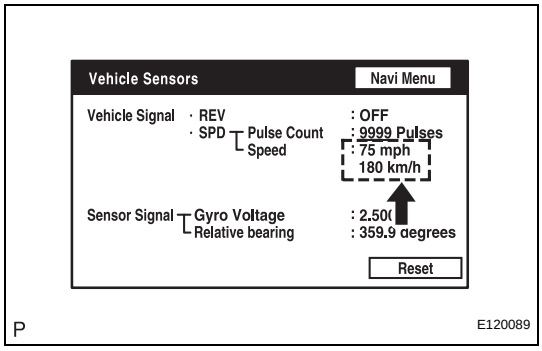


(a) Check that the GPS mark is displayed.
OK:
GPS mark is displayed.

NG → **GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE**

OK

2 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

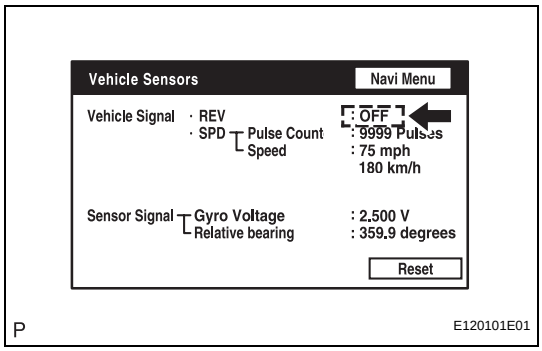


(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.
OK:
The readings are almost equal.

NG → **GO TO "SPEED SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)



(a) Check that the display changes between ON and OFF according to the shift lever operation.
OK

Shift Lever Position	Display
Except Reverse	OFF
Reverse	ON

HINT:
The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → **GO TO "REVERSE SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

NS

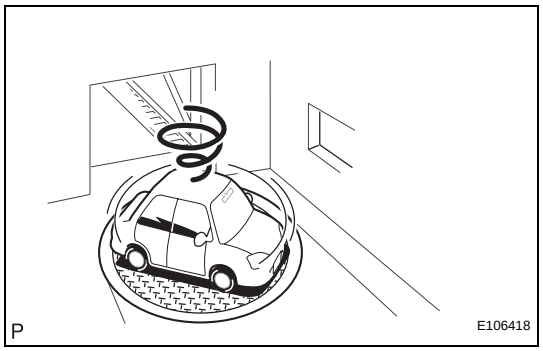
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cursor or MAP Rotates when Vehicle Stopped

INSPECTION PROCEDURE

1	CHECK CONDITION



(a) Check with the customer if the vehicle has been turned by a turntable.
OK:
Vehicle has not been turned by turntable.
HINT:
If the vehicle is turned on a turntable with the ignition switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

NG → **TURN IGNITION SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED**

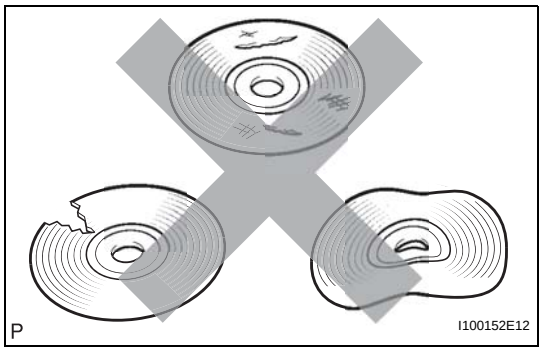
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Vehicle Position Mark is not Updated

INSPECTION PROCEDURE

1 CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

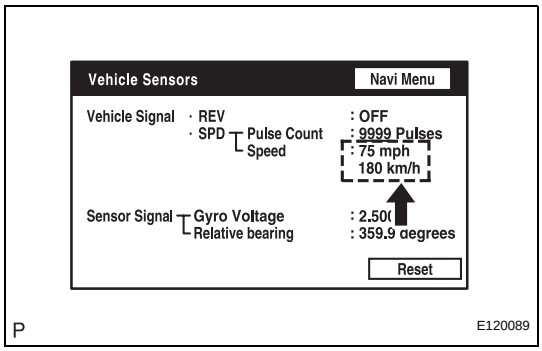
2 CHECK NAVIGATION DISPLAY

(a) Check if a touch scroll can be performed on the map display.
OK:
Touch scroll can be performed.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

3 CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)



(a) Enter the "Navigation Check" mode (Vehicle Sensors) (See page NS-27).
(b) While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.
OK:
The readings are almost equal.

NG → **GO TO "SPEED SIGNAL DOES NOT CHANGE IN NAVIGATION CHECK MODE" IN PROBLEM SYMPTOMS TABLE**

OK

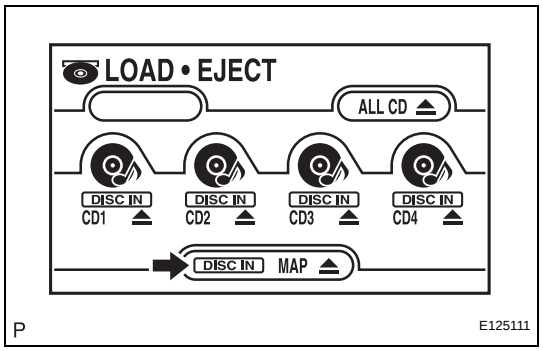
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NS

Current Position Display does not Appear

INSPECTION PROCEDURE

1	CHECK RADIO AND NAVIGATION ASSEMBLY

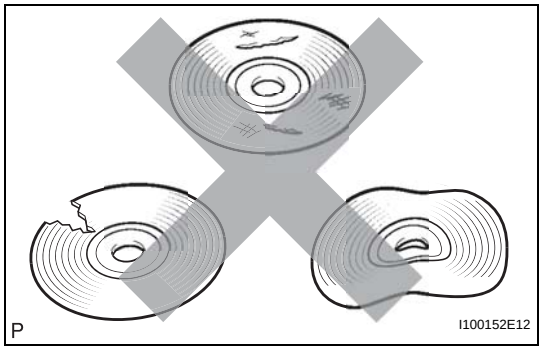


(a) Check if a map disc is inserted into the map disc slot.
OK:
A map disc is inserted.

NG → **INSERT MAP DISC IN MAP SIDE SLOT**

OK

2	CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

GPS Mark is not Displayed

INSPECTION PROCEDURE

1	CHECK CABIN

(a) Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.
HINT:
The GPS uses extremely faint radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.
OK:
Mark appears.

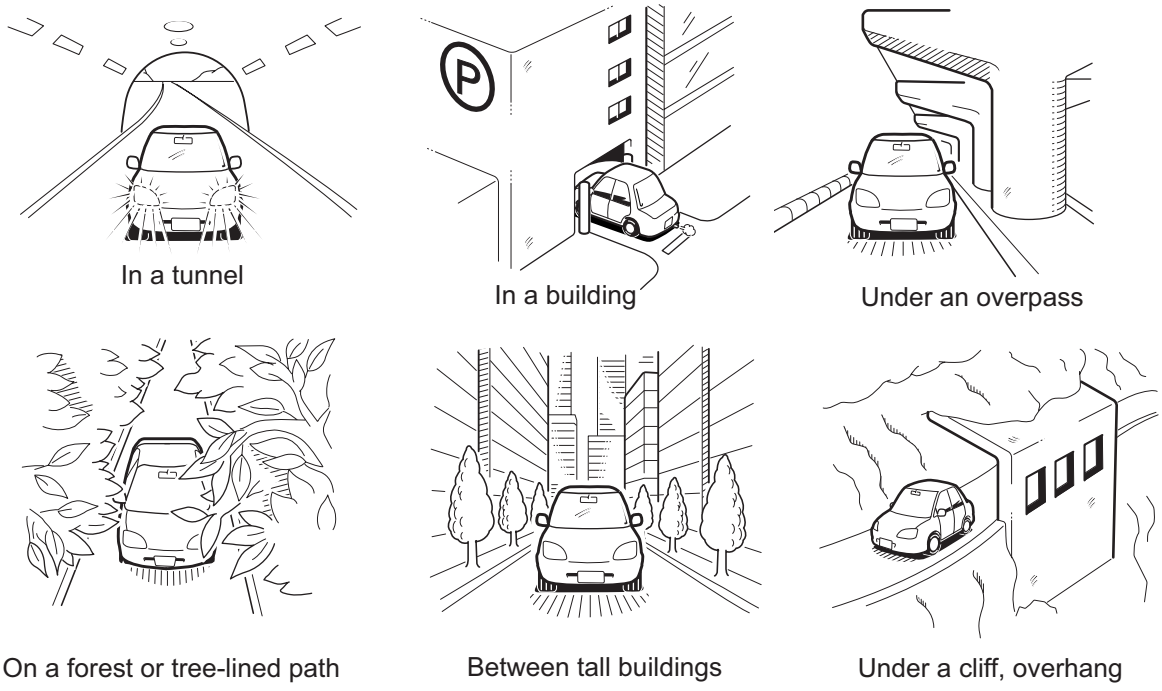
NG → **Go to step 2**

OK

NORMAL OPERATION

2	CHECK SURROUNDINGS

(a) Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.
HINT:
The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction, and time. For illustrated examples, see below.



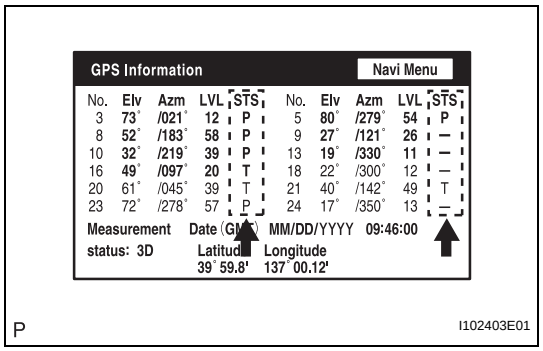
OK:
GPS mark is displayed.

NG → **Go to step 3**

OK

SYSTEM RETURNS TO NORMAL

3 CHECK GPS INFORMATION (NAVIGATION CHECK MODE)



(a) Enter the "Navigation Check" mode (GPS Information) (See page NS-27).
(b) Check how many of the following codes appear in the "STS" column.
For DENSO Made:
T, P
For AISIN AW Made:
08H, 04H
OK:
At least 3 codes appear.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

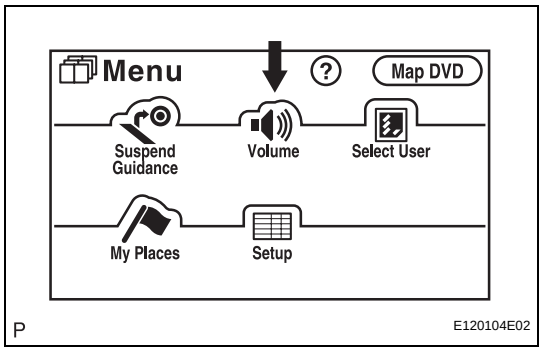
OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

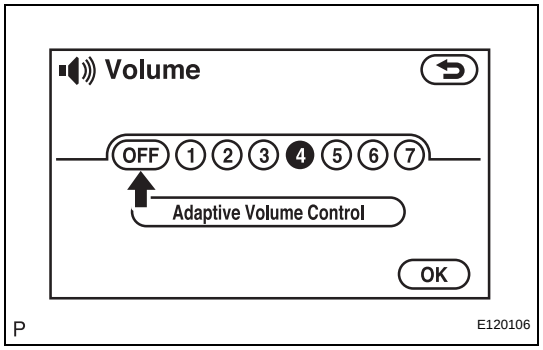
Voice Guidance does not Function

INSPECTION PROCEDURE

1 CHECK NAVIGATION SETTING



(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Volume".

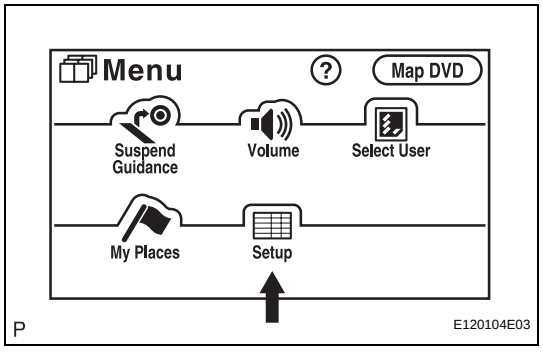


(c) Check that "OFF" is not selected.
OK:
"OFF" is not selected.

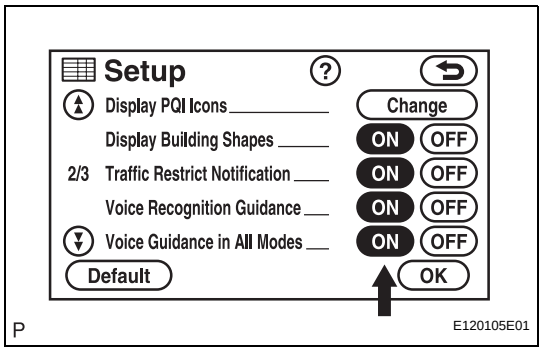
NG → **TURN VOICE GUIDANCE VOLUME UP TO 4 USING VOICE ADJUSTMENT SWITCHES**

OK

2 CHECK NAVIGATION SETTING



(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Set up".

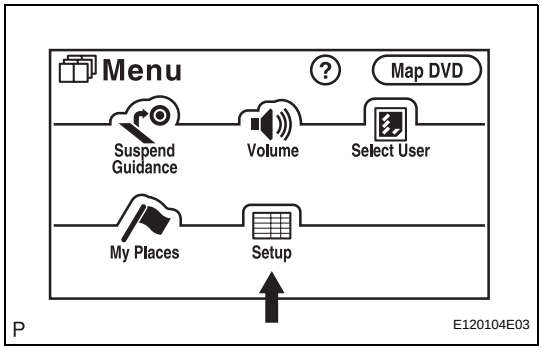


(c) Check that "Voice Guidance in All Modes" is not OFF.
OK:
Voice guidance in all modes is not OFF.

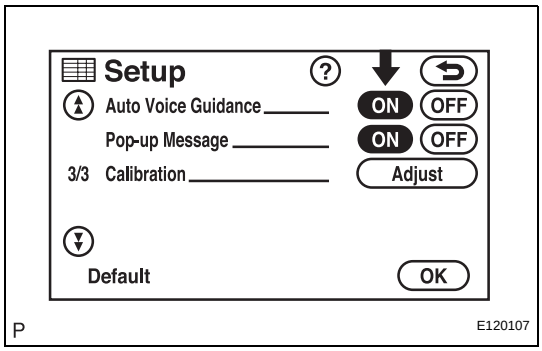
NG → **TURN VOICE GUIDANCE IN ALL MODES "ON"**

OK

3 CHECK NAVIGATION SETTING



(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Setup".

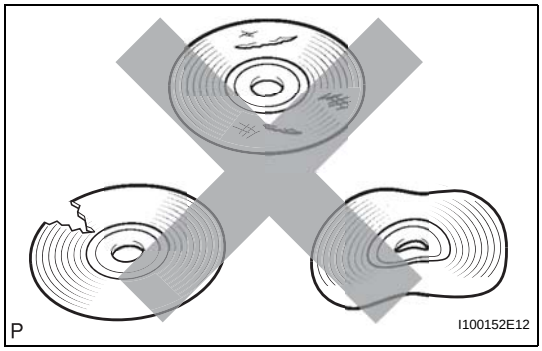


(c) Check that "Auto Voice Guidance" is not OFF.
OK:
Auto voice guidance is not OFF.

NG → **TURN AUTO VOICE GUIDANCE "ON"**

OK

4 CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

5	CHECK RADIO AND NAVIGATION ASSEMBLY

(a) Check that audio sound can be heard from the driver side speaker.
OK:
Audio sound can be heard.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

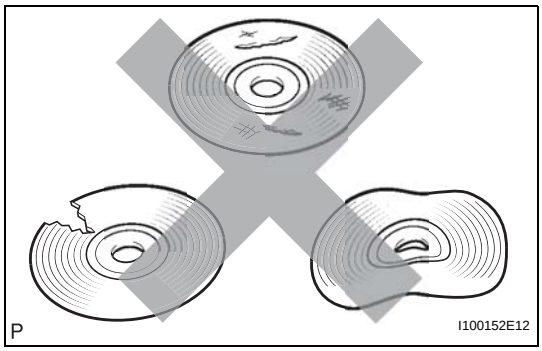
OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

MAP Display Incomplete

INSPECTION PROCEDURE

1	CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

2	CHECK NAVIGATION DISPLAY

(a) Check that displays other than the navigation display are complete.
OK:
No other incomplete displays are found.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

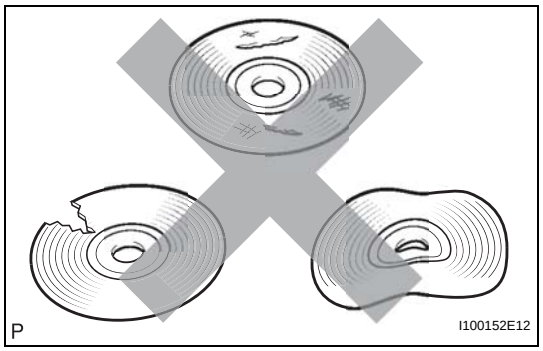
NG

REPLACE RADIO AND NAVIGATION ASSEMBLY

Route cannot be Calculated

INSPECTION PROCEDURE

1	CHECK MAP DISC



(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

2	SET DESTINATION

(a) Set another destination and check if the system can calculate the route correctly.
OK:
Route can be correctly calculated.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

NORMAL OPERATION

Voice Recognition Difficulty

INSPECTION PROCEDURE

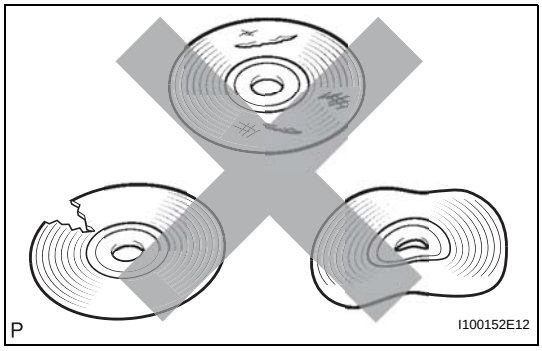
1 **CHECK CONDITION**

(a) Check if the system's voice recognition level is low by using only one particular voice.
OK:
System's voice recognition level is low with any voice.
HINT:
System's voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

NG → **END**

OK

2 **CHECK MAP DISC**

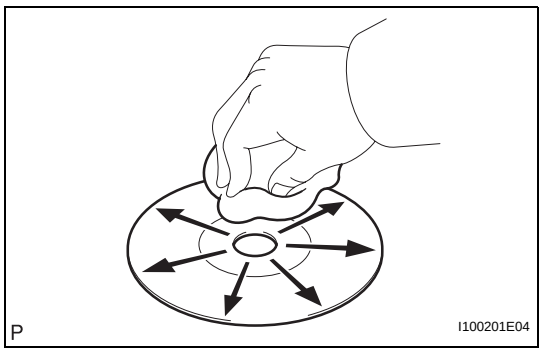


(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

3 **CHECK MAP DISC**

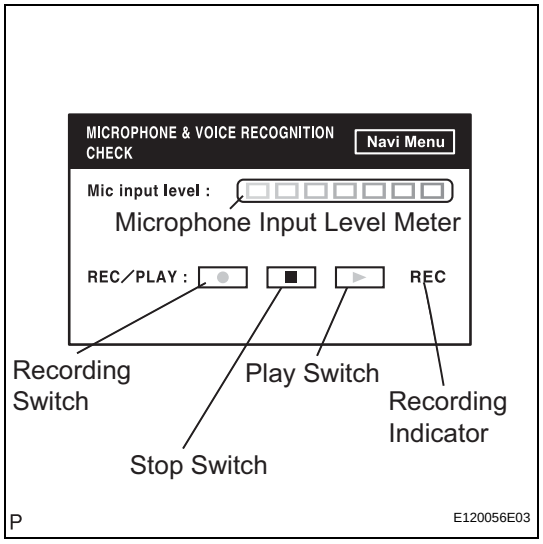


(a) Check for dirt on the map disc surface.
OK:
No dirt is on map disc surface.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.
HINT:
If the disc is dirty, clean the disc by wiping the disc's surface radially with a soft cloth.

NG → **CLEAN MAP DISC**

OK

4	CHECK MICROPHONE (NAVIGATION CHECK MODE)



(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-27).
(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.
(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.
(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

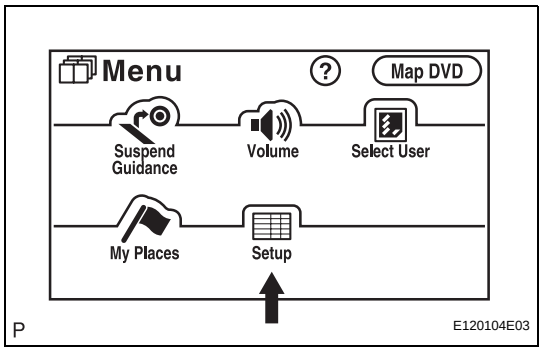
OK

END

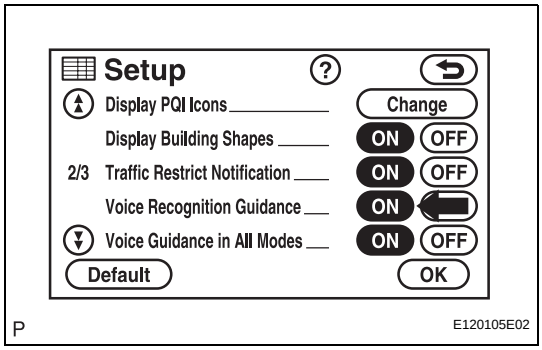
Voice is not Recognized

INSPECTION PROCEDURE

1 CHECK NAVIGATION SETTING



(a) Enter the "Menu" screen by pressing the "MENU" switch.
(b) Select "Setup".

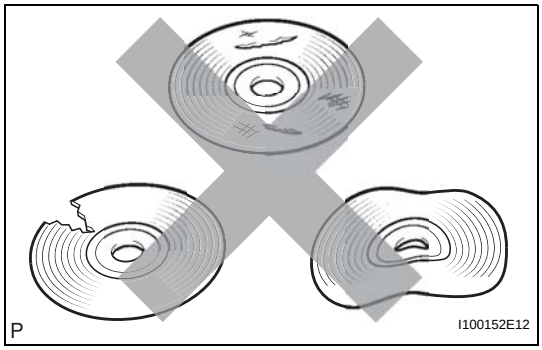


(c) Check that "Voice Recognition Guidance" is not OFF.
OK:
Voice Recognition Guidance is not OFF.

NG → **TURN VOICE RECOGNITION GUIDANCE "ON"**

OK

2 CHECK MAP DISC

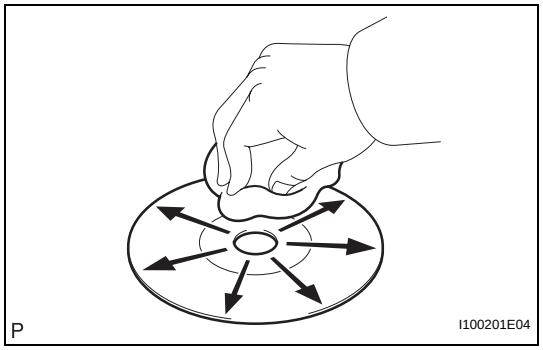


(a) Check that the map disc is not deformed or cracked.
OK:
No deformations or cracks on map disc.

NG → **REPLACE MAP DISC**

OK

3	CHECK MAP DISC

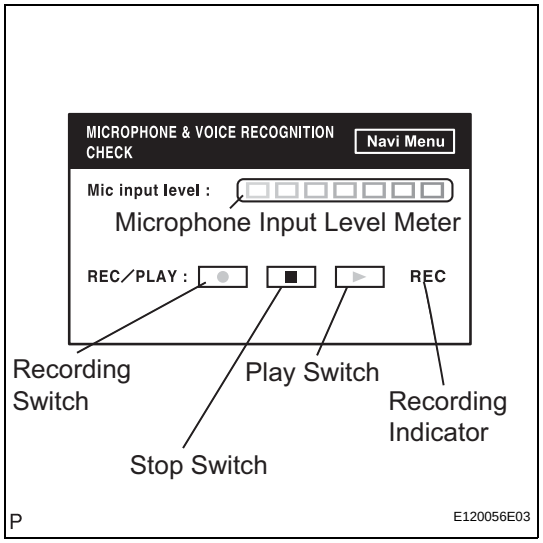


(a) Check for dirt on the map disc surface.
OK:
No dirt is on the map disc surface.
NOTICE:
Do not use a conventional record cleaner or anti-static preservative.
HINT:
If the disc is dirty, clean the disc by wiping the disc's surface radially with a soft cloth.

NG → **CLEAN MAP DISC**

OK

4	CHECK MICROPHONE (NAVIGATION CHECK MODE)



(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-27).
(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.
(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.
(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Cellular Phone Registration Failure, Phone Directory Transfer Failure

INSPECTION PROCEDURE

1	CHECK CURRENT CONDITIONS

(a) Proceed to the next step according to the table below.

Result

Conditions	Proceed to
Another "Bluetooth" compatible cellular phone is present.	A
Another "Bluetooth" compatible vehicle is present.	B
None of the above	C

B → Go to step 3

C → Go to step 4

A

2	CHECK USING ANOTHER CELLULAR PHONE

(a) Check if the system functions using another "Bluetooth" compatible cellular phone.
HINT:
- Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.
- Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

3	CHECK USING ANOTHER "BLUETOOTH" COMPATIBLE VEHICLE

(a) Register the cellular phone with another vehicle and check if the system functions normally.
HINT:
Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

OK:
The system functions.

OK → REPLACE RADIO AND NAVIGATION ASSEMBLY

NG

USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
The phone is "Bluetooth" compatible.

NG → USE A "BLUETOOTH" COMPATIBLE CELLULAR PHONE

OK

5	CHECK CELLULAR PHONE

(a) Check if a call can be made from the cellular phone.
HINT:
When the battery is low, registration or directory transfer cannot be done.
OK:
A call can be made from the cellular phone.

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Cellular Phone cannot Send / Receive

INSPECTION PROCEDURE

1	CHECK "BLUETOOTH" SETTINGS

(a) Check if the "Bluetooth" settings are correct.
OK:
"Bluetooth" settings are correct.

NG → **SET SETTINGS CORRECTLY**

OK ↓

2	CHECK CELLULAR PHONE

(a) Check if the cellular phone is "Bluetooth" compatible.
HINT:
Some versions of "Bluetooth" compatible cellular phones may not function.
OK:
Phone is "Bluetooth" compatible.

NG → **END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)**

OK ↓

3	CHECK SETTINGS

(a) Check if the cellular phone functions.
HINT:
The cellular phone is unable to call under any of the following conditions.
- The cellular phone is locked.
- The directory is being transferred.
- The line is crossed.
- Transmission is regulated.
- The power is off.
- The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).

OK:
None of the above conditions exist.

NG → **SET CORRECTLY**

OK ↓

4	CHECK CELLULAR PHONE

(a) Check if the cellular phone can make a call.

HINT:
When the battery is low, calls cannot be made or received.
OK:
Cellular phone can make a call.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

5	**CHECK RECEPTION**

(a) Set the cellular phone so that it can receive calls.
(b) Place the cellular phone close to the radio and navigation assembly.
(c) Check if the cellular phone has reception according to the radio and navigation assembly.
OK:
Cellular phone has reception.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Cannot Call in a Certain Place

INSPECTION PROCEDURE

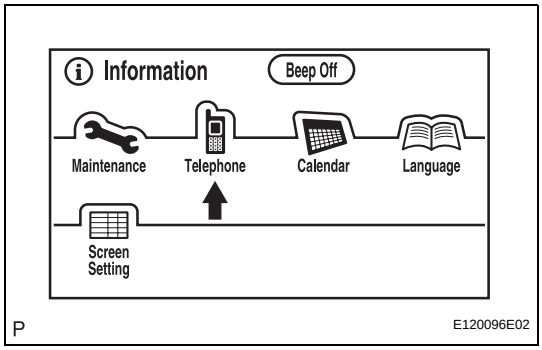
1	CHECK SURROUNDING CONDITIONS

(a) Check if the cellular phone can make calls in a certain place.
OK:
It can make calls.

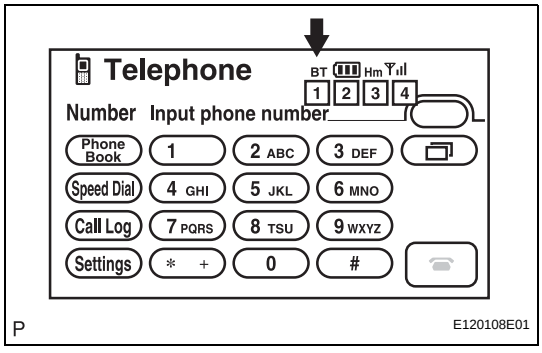
NG → **END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)**

OK

2	CHECK RECEPTION



(a) Enter the "Information" screen by pressing the "INFO" switch.
(b) Select "Telephone".



(c) Check the "Bluetooth" connection indicator ("BT" indicator).

Result

Condition	Procedure
Yellow color	Bring the cellular phone to a location where the "BT" mark turns blue.
Blue color	Replace radio and navigation assembly.
No connection mark is displayed	Select a registered cellular phone or register a "Bluetooth" compatible phone.

NEXT

END

NS

The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted

INSPECTION PROCEDURE

1	CHECK CELLULAR PHONE

(a) Check if the voice on the other side can be heard using a cellular phone.
OK:
Voice can be heard.

NG → **REPAIR OR REPLACE CELLULAR PHONE**

OK

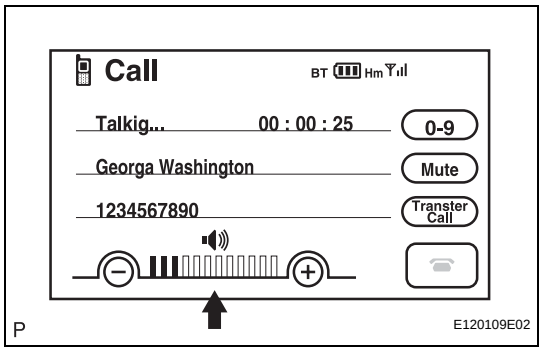
2	CHECK NAVIGATION SYSTEM

(a) Check that navigation sound can be heard from the driver side speaker.
OK:
Audio sound can be heard.

NG → **GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE**

OK

3	CHECK SETTINGS



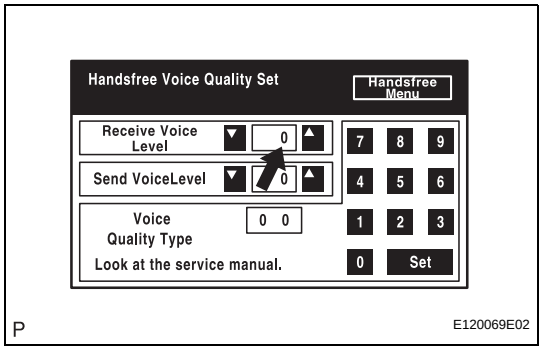
(a) Check if the volume level is set to low on the CALL screen.
OK:
The level is not set low.

NG → **SET VOLUME TO HIGH**

OK

NS

4	CHECK SETTINGS



(a) Enter the "Handsfree Voice Quality Set" mode (See page NS-25).

(b) Check if the Receive Voice Level is set to "0".
HINT:
The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

(c) Check if the Receive Voice Level is set to the minimum or maximum level.
HINT:
When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.
OK:
The Receive Voice Level is set to "0".

NG → **SET RECEIVE VOICE LEVEL TO "0"**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted

INSPECTION PROCEDURE

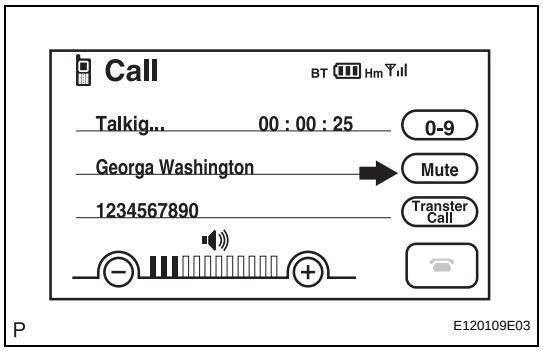
1 CHECK CELLULAR PHONE

(a) Check if the other side can hear your voice properly.
OK:
Your voice can be heard correctly.

NG → **REPLACE CELLULAR PHONE**

OK

2 CHECK SETTINGS

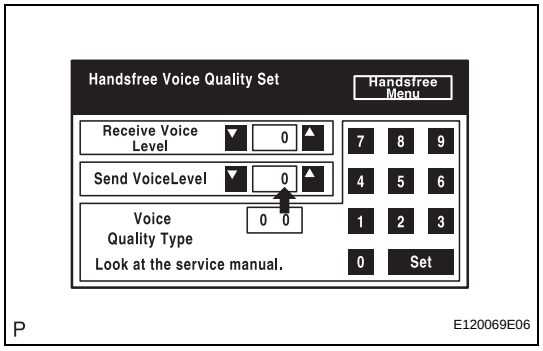


(a) Check if the mute switch is set to ON.
OK:
Mute switch is not set to ON.

NG → **TURN MUTE SWITCH OFF**

OK

3 CHECK SETTINGS



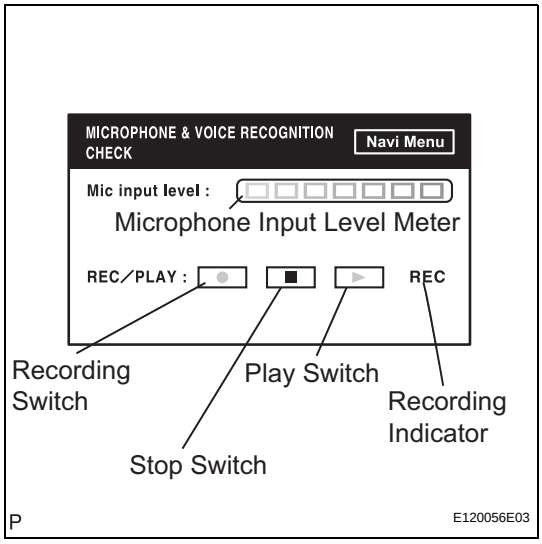
(a) Enter the "Handsfree Voice Quality Set" mode (See page NS-25).
(b) Check if the Send Voice Level is set to "0".
HINT:
The Send Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.
(c) Check if the Send Voice Level is set to the minimum or maximum level.
HINT:
When the Send Voice Level is set to the minimum or maximum level, the sound may be distorted.
OK:
The Send Voice Level is set to "0".

NG → **SET SEND VOICE LEVEL TO "0"**

OK

NS

4	CHECK MICROPHONE (NAVIGATION CHECK MODE)



(a) Enter the "MICROPHONE & VOICE RECOGNITION CHECK" mode (See page NS-27).
(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.
(c) Push the recording switch and perform voice recording.
HINT:
Voice can be recorded up to 5 seconds.
(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.
OK:
All check results are normal.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

Black Screen

INSPECTION PROCEDURE

1 **CHECK DISPLAY SETTING**

(a) Check that the display is not in "Screen OFF" mode.
OK:
The display setting is not in "Screen OFF" mode.

NG → **CHANGE SCREEN TO "SCREEN ON" MODE**

OK ↓

2 **CHECK IMAGE QUALITY SETTING**

(a) Check that the screen color quality can be set.
OK:
Setting is possible.

NG → **Go to step 3**

OK ↓

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

3 **CHECK CABIN**

(a) Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.
HINT:
- A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may short circuit the screen.
- The appropriate cabin temperature is 20 to 30°C (68 to 86°F).

OK:
Condensation is not likely and temperature is not high or extremely low.

NG → **SET CABIN TO APPROPRIATE TEMPERATURE**

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

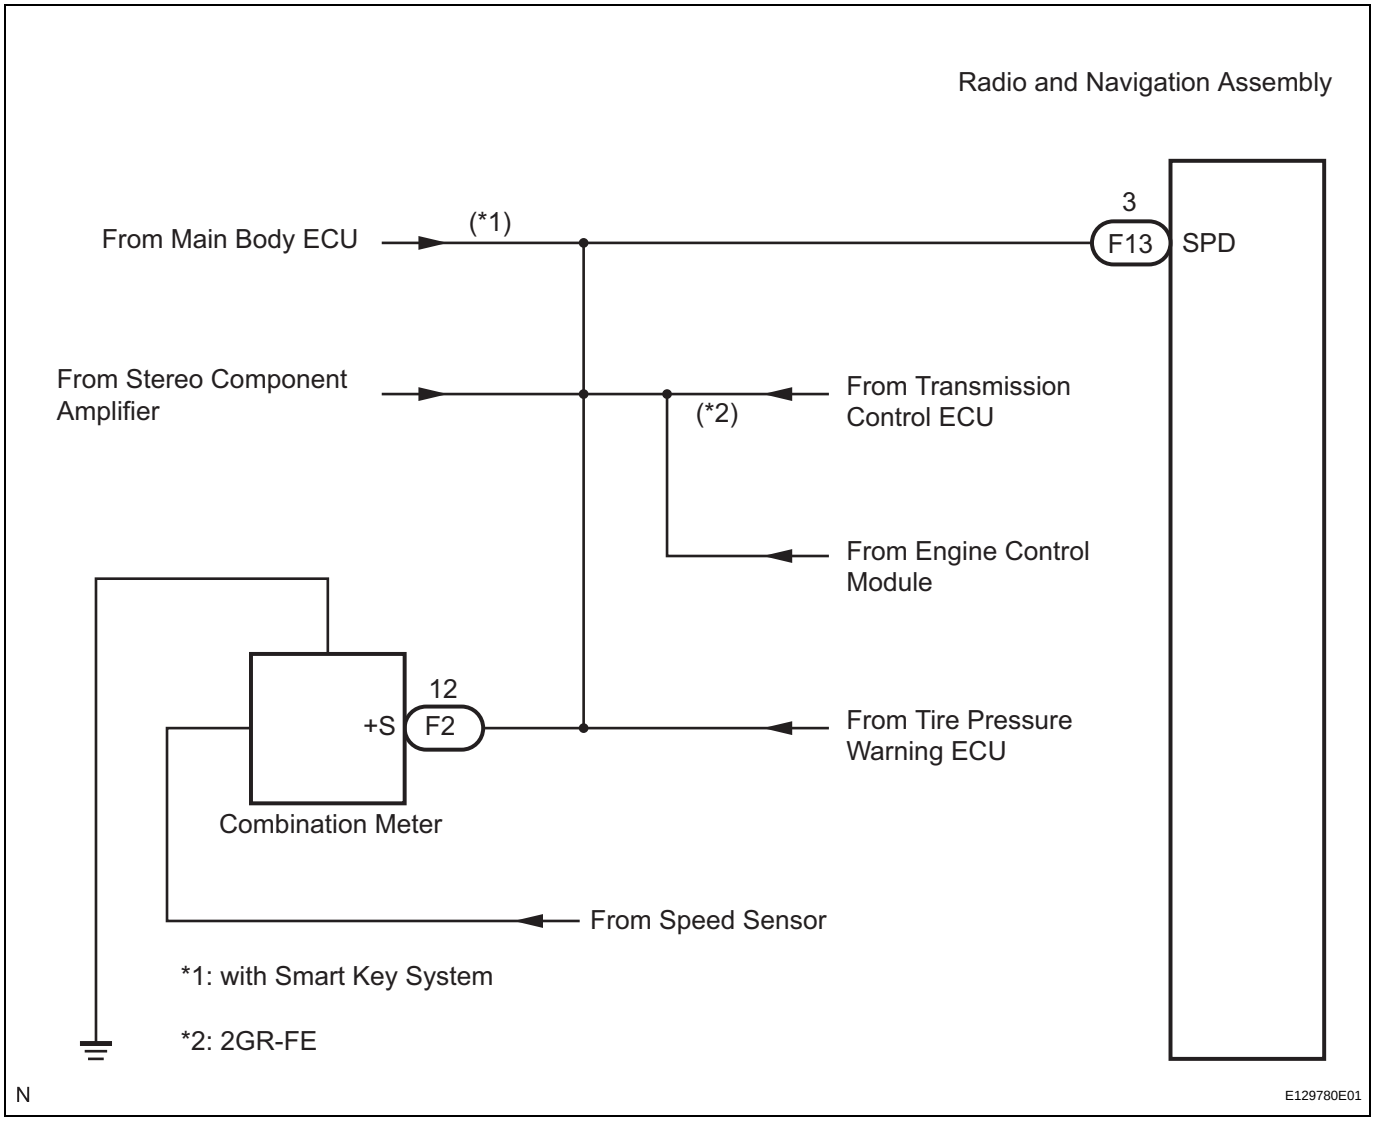
Vehicle Speed Signal Circuit between Radio and Navigation Assembly and Combination Meter

DESCRIPTION

The radio and navigation assembly receives a vehicle speed signal from the combination meter and information about the GPS antenna, and then adjusts vehicle position.
HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram below will not operate normally.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK OPERATION OF SPEEDOMETER

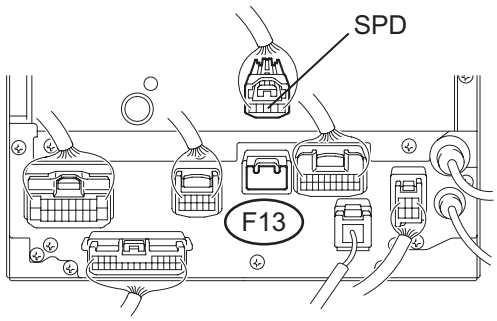
(a) Drive the vehicle and check if the function of the speedometer on the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **GO TO COMBINATION METER SYSTEM**

OK

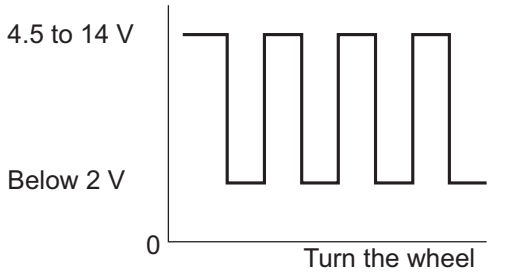
2	INSPECT RADIO AND NAVIGATION ASSEMBLY

Radio and Navigation Assembly Wire Harness View:



P E113510E05

(a) Disconnect the radio and navigation assembly connector F13.
(b) Measure the voltage.
(1) Jack up either one of the drive wheels.
(2) Move the shift lever to the neutral position.
(3) Turn the ignition switch on (IG).



H E110855E01

(4) Measure the voltage between terminal SPD of the wire harness connector and body ground when the drive wheels are turned slowly.
OK:
Voltage pulses as shown in the illustration.

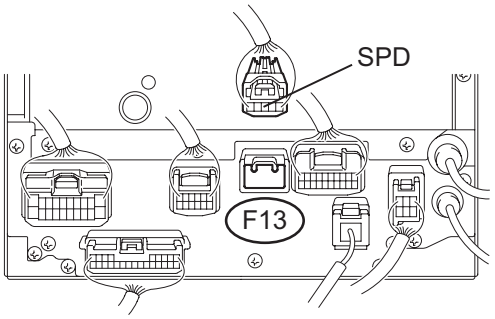
OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

NG

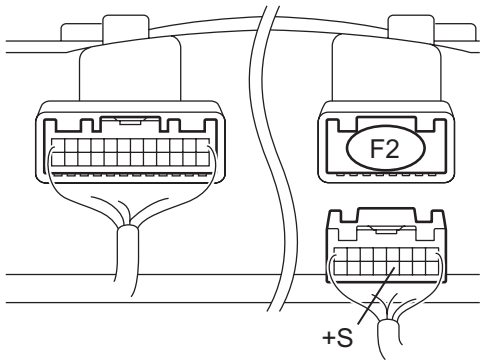
NS

3	CHECK HARNESS AND CONNECTOR (COMBINATION METER - RADIO AND NAVIGATION ASSEMBLY)

Radio and Navigation Assembly Wire Harness View:



Combination Meter Wire Harness View:



P E129818E01

(a) Disconnect the radio and navigation assembly connector F13 and combination meter connector F2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

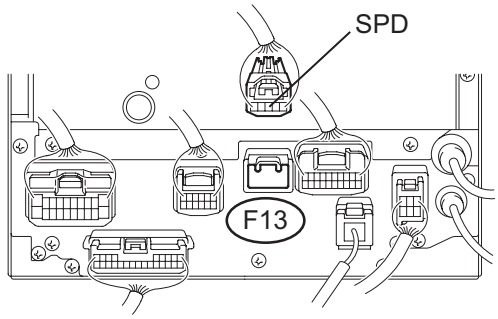
Tester connection	Condition	Specified condition
SPD - +S	Ignition switch off	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (RADIO AND NAVIGATION ASSEMBLY - BODY GROUND)

Radio and Navigation Assembly Wire Harness View:



P E113510E05

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SPD - Body ground	Ignition switch off	10 kΩ or higher

HINT:
If the resistance between terminal SPD and body ground is less than 10 kΩ, there may be a short in a wire harness, connector, or an ECU.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR CHECK EACH ECU**

NS

OK

REPLACE COMBINATION METER

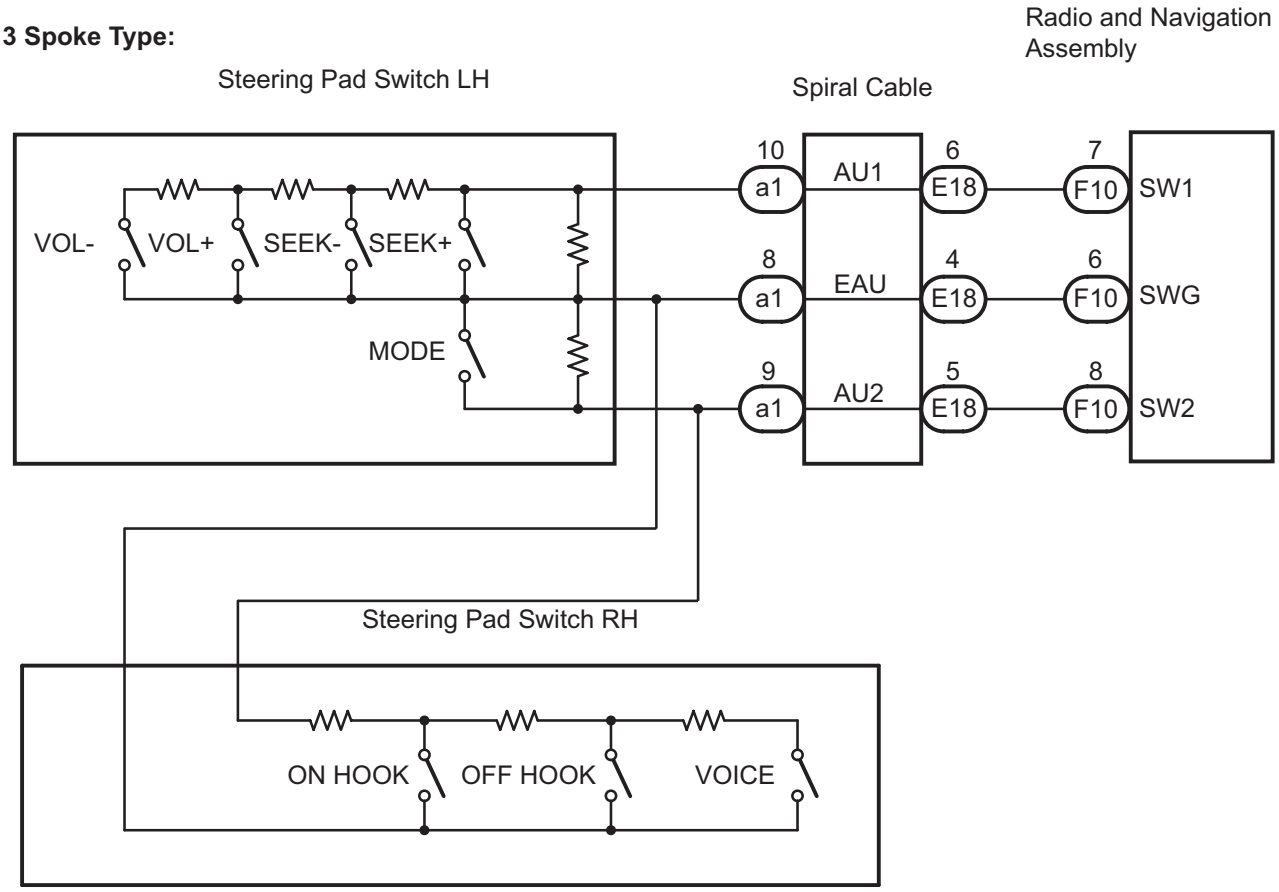
Steering Pad Switch Circuit

DESCRIPTION

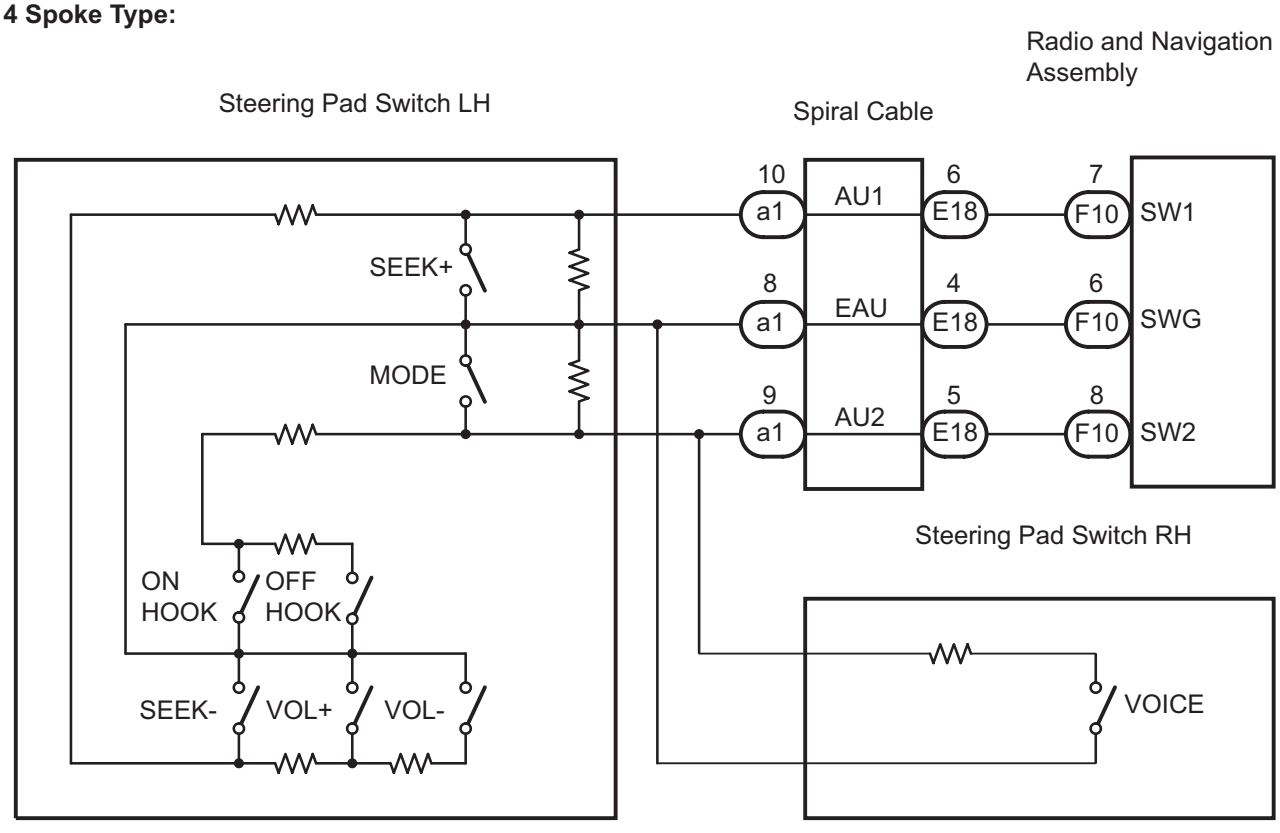
This circuit sends an operation signal from the steering pad switch to the radio and navigation assembly. If there is an open in the circuit, the navigation system cannot be operated using the steering pad switch. If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the radio and navigation assembly cannot be operated using the steering pad switch, and the radio and navigation assembly itself cannot function.

WIRING DIAGRAM

3 Spoke Type:



4 Spoke Type:



P

E129781E02

NS

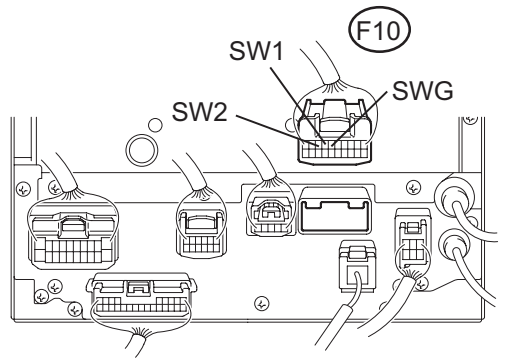
INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) such as the airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

1	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector F10.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SW1 - SWG	No switch is pushed	Approx. 100 kΩ
SW1 - SWG	SEEK+ switch: push	0 to 2.5 Ω
SW1 - SWG	SEEK- switch: push	Approx. 0.3 kΩ
SW1 - SWG	VOL+ switch: push	Approx. 1 kΩ
SW1 - SWG	VOL- switch: push	Approx. 3.1 kΩ
SW2 - SWG	No switch is pushed	Approx. 100 kΩ
SW2 - SWG	MODE switch: push	0 to 2.5 Ω
SW2 - SWG	VOICE switch: push	Approx. 3.1 kΩ
SW2 - SWG	ON HOOK switch: push	Approx. 0.3 kΩ
SW2 - SWG	OFF HOOK switch: push	Approx. 1 kΩ

NG → **Go to step 2**

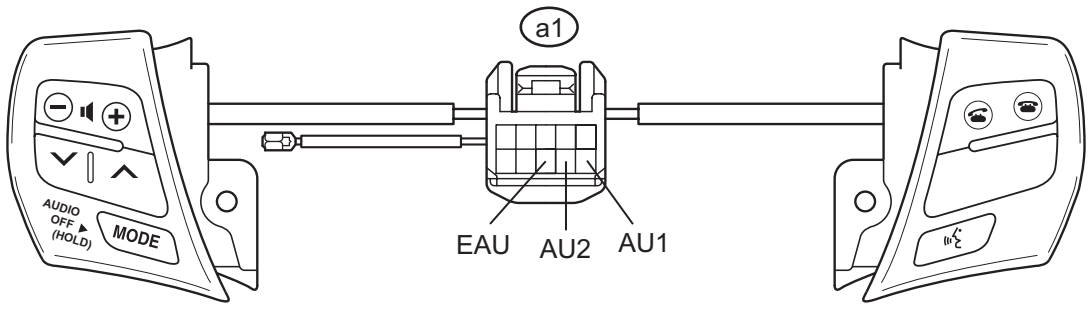
OK →

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

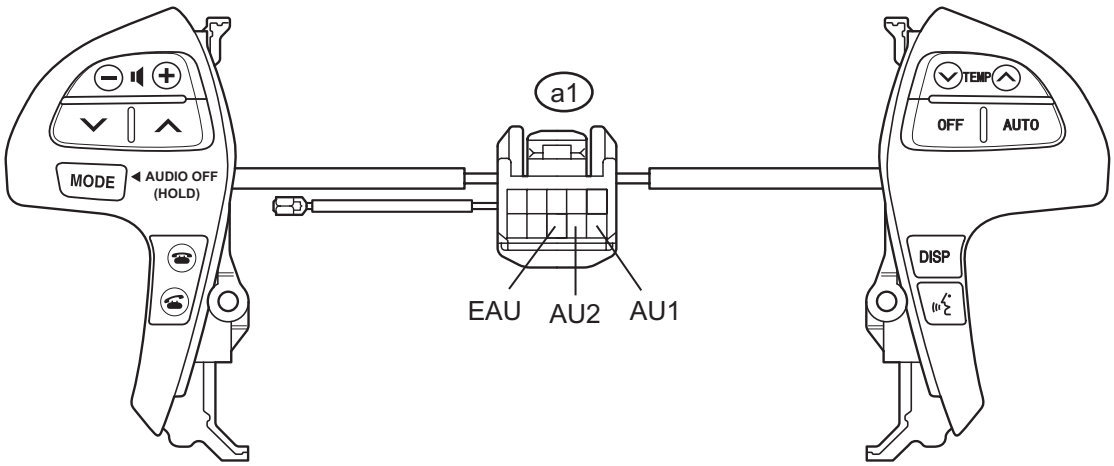
2	INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector a1.

3 Spoke Type:



4 Spoke Type:



P

E129804E01

(b) Measure the resistance according to the value(s) in the table below.

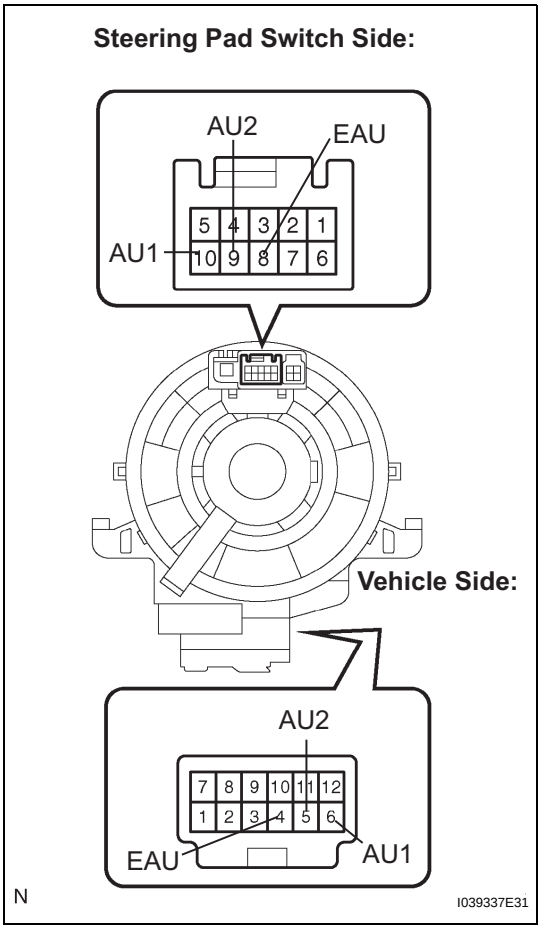
Standard resistance

Tester connection	Condition	Specified condition
AU1 - EAU	No switch is pushed	Approx. 100 kΩ
AU1 - EAU	SEEK+ switch: push	0 to 2.5 Ω
AU1 - EAU	SEEK- switch: push	Approx. 0.3 kΩ
AU1 - EAU	VOL+ switch: push	Approx. 1 kΩ
AU1 - EAU	VOL- switch: push	Approx. 3.1 kΩ
AU2 - EAU	No switch is pushed	Approx. 100 kΩ
AU2 - EAU	MODE switch: push	0 to 2.5 Ω
AU2 - EAU	VOICE switch: push	Approx. 3.1 kΩ
AU2 - EAU	ON HOOK switch: push	Approx. 0.3 kΩ
AU2 - EAU	OFF HOOK switch: push	Approx. 1 kΩ

NG → REPLACE STEERING PAD SWITCH ASSEMBLY

OK

3 INSPECT SPIRAL CABLE



(a) Disconnect the steering pad switch assembly and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Spiral cable position	Specified condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU1 - AU1	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
AU2 - AU2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:

- Removal (See page RS-363)
- Installation (See page RS-366)

NG → REPLACE SPIRAL CABLE

OK

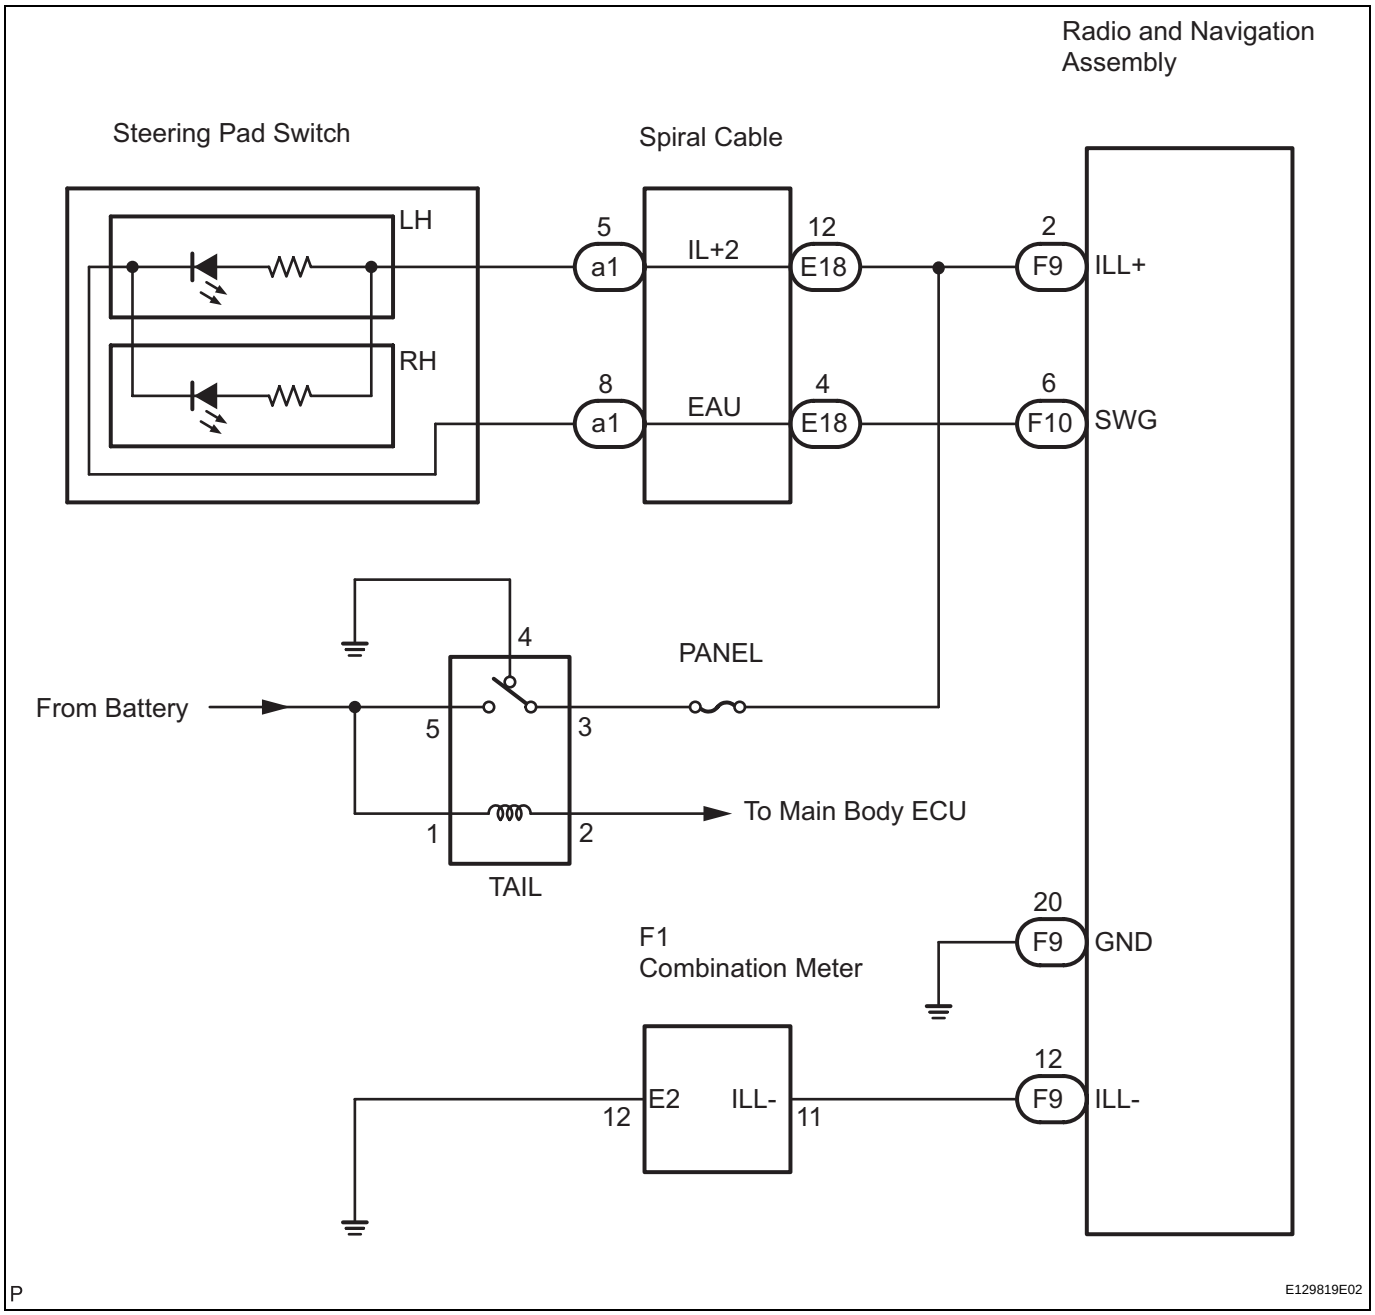
REPAIR OR REPLACE HARNESS OR CONNECTOR (SPIRAL CABLE - RADIO AND NAVIGATION ASSEMBLY)

Illumination Circuit

DESCRIPTION

Power is supplied to the radio and navigation assembly and steering pad switch illumination when the light control switch is in the TAIL or HEAD position.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

The vehicle is equipped with an SRS (Supplemental Restraint System) such as the airbags. Before servicing (including removal or installation of parts), be sure to read the precautionary notice for the Supplemental Restraint System (See page RS-1).

1	CHECK ILLUMINATION

(a) Check if the illumination for the radio and navigation assembly, steering pad switch, glove box or others (Hazard switch, transmission control switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

Result

Condition	Proceed to
Illumination comes on for all components except steering pad switch.	A
Illumination comes on for all components except radio and navigation assembly.	B
No illumination comes on (radio receiver, hazard switch, glove box, etc.)	C
Illumination comes on only for glove box and steering pad switch.	D

B → Go to step 6

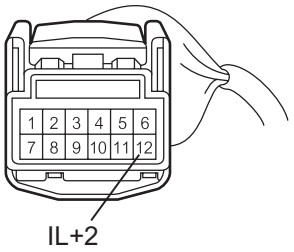
C → GO TO LIGHTING SYSTEM

D → GO TO COMBINATION METER SYSTEM

A

2	CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

Spiral Cable Connector Front View:



H

E120026E07

(a) Disconnect the spiral cable connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
IL+2 - Body ground	Light control switch TAIL or HEAD	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

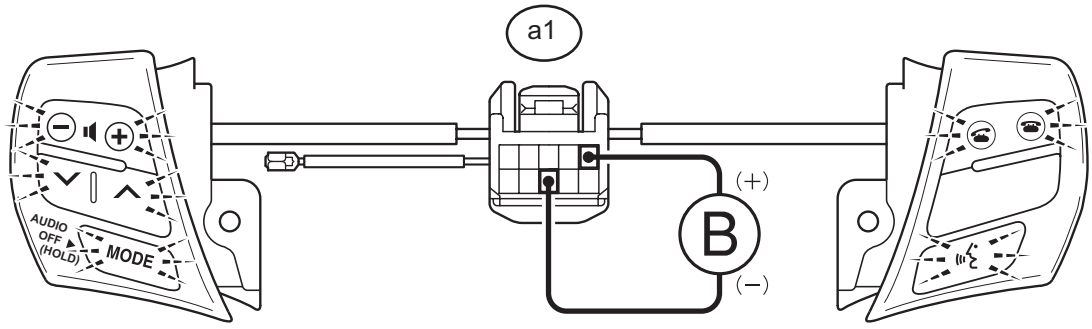
OK

NS

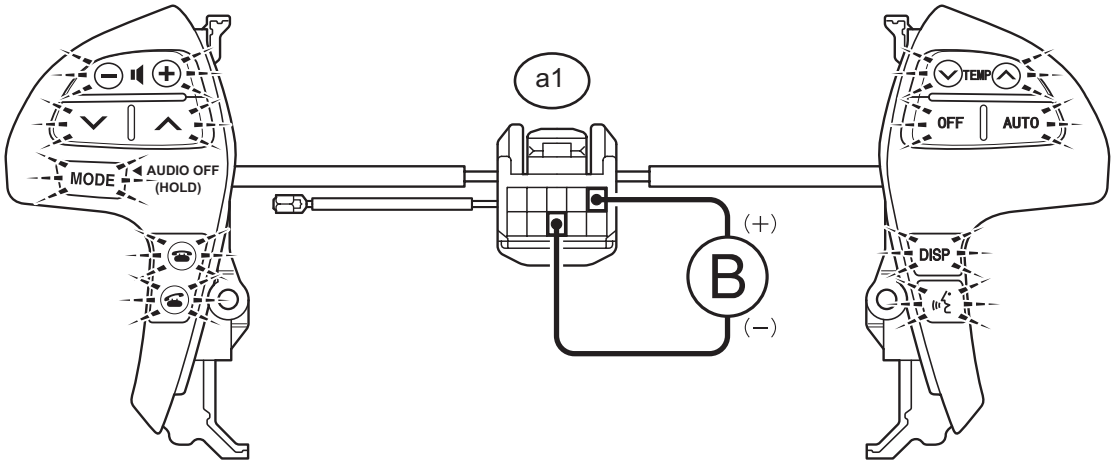
3	CHECK STEERING PAD SWITCH ASSEMBLY

(a) Disconnect the steering pad switch assembly connector.

3 Spoke Type:



4 Spoke Type:



P E129805E01

(b) Connect the positive (+) lead to terminal ILL+ and the negative (-) lead to terminal EAU of the steering pad switch connector.

(c) Check if the illumination for the steering pad switch comes on.

OK:

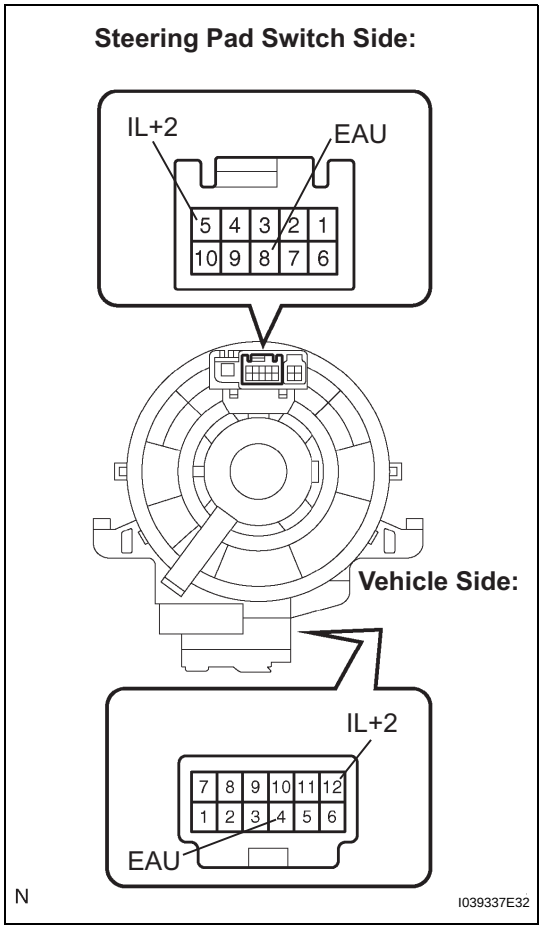
Illumination for the steering pad switch assembly comes on.

NG	**REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

NS

4	INSPECT SPIRAL CABLE



(a) Disconnect the steering pad switch and spiral cable connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Spiral cable position	Specified Condition
EAU - EAU	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
ILL+ - ILL+	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the page shown in the brackets.

HINT:

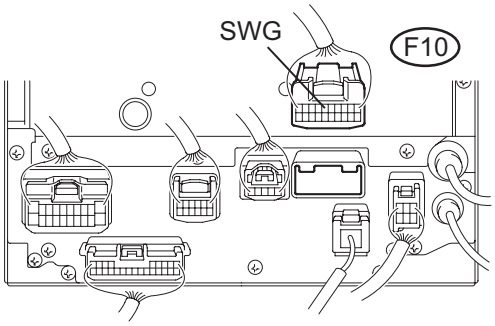
- Removal (See page RS-363)
- Installation (See page RS-366)

NG → **REPLACE SPIRAL CABLE**

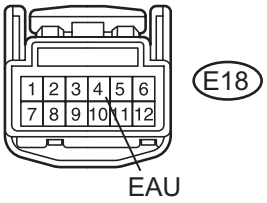
OK

5	CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - RADIO AND NAVIGATION ASSEMBLY)

Radio and Navigation Assembly Wire Harness View:



Spiral Cable Connector Front View:



P E120116E03

(a) Disconnect the connectors from the radio and navigation assembly and spiral cable.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
SWG - EAU	Always	Below 1 Ω
SWG - Body ground	Always	10 kΩ or higher

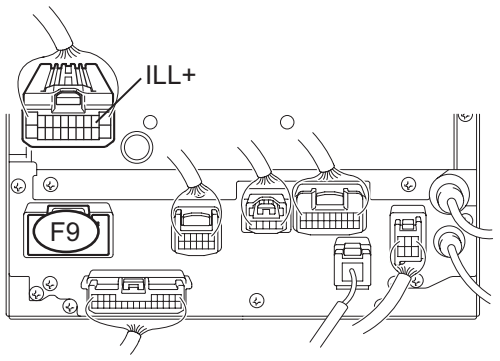
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE RADIO AND NAVIGATION ASSEMBLY

6	CHECK HARNESS AND CONNECTOR (BATTERY - RADIO AND NAVIGATION ASSEMBLY)

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector F9.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

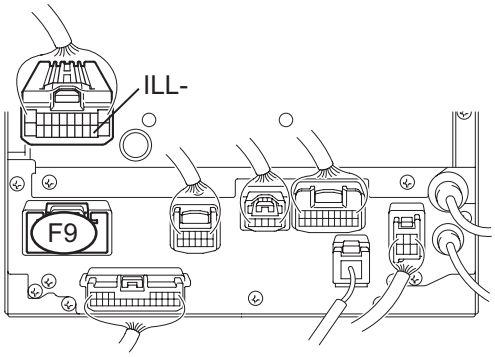
Tester connection	Condition	Specified condition
ILL+ - Body ground	Light control switch TAIL or HEAD	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

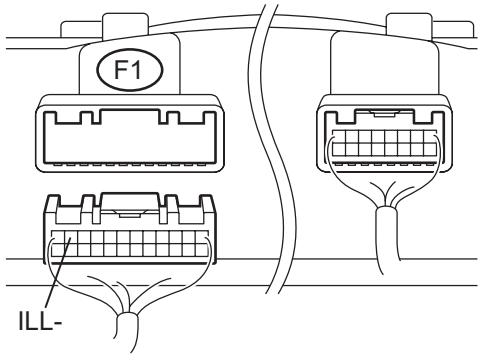
OK

7	CHECK HARNESS AND CONNECTOR (RADIO AND NAVIGATION ASSEMBLY - COMBINATION METER)

Radio and Navigation Assembly Wire Harness View:



Combination Meter Wire Harness View:



(a) Disconnect the radio and navigation assembly and combination meter connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ILL- - ILL-	Always	Below 1 Ω
ILL- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Speaker Circuit

DESCRIPTION

The sound signal that has been amplified by the stereo component amplifier is sent to the speakers from the stereo component amplifier through this circuit.
If there is a short in this circuit, the stereo component amplifier detects it and stops output to the speakers. Thus sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

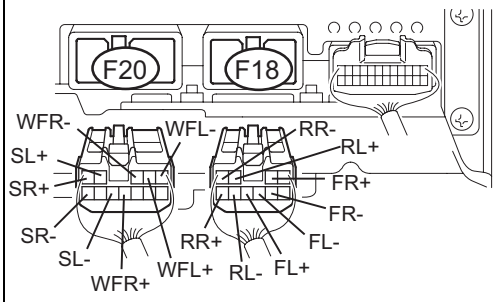
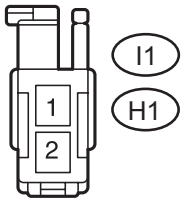
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR

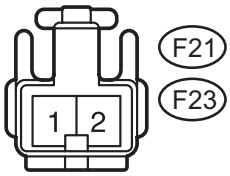
Stereo Component Amplifier Wire Harness View:



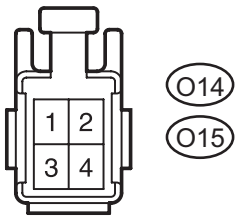
Front No. 1 Speaker Connector Front View:



Front No. 2 Speaker Connector Front View:



Rear Speaker Connector Front View:



P E129821E04

(a) Disconnect the connectors shown in the illustration on the left from the stereo component amplifier and speakers.
(b) Measure the resistance between each of the front No. 2 speakers and the stereo component amplifier to check for an open circuit in the wire harness.
Standard resistance:
Below 1 Ω
(c) Measure the resistance between each of the rear speakers and the stereo component amplifier to check for an open circuit in the wire harness.
Standard resistance:
Below 1 Ω
(d) Measure the resistance between each of the front No. 1 speakers and the stereo component amplifier to check for an open circuit in the wire harness.
Standard resistance:
Below 1 Ω
(e) Measure the resistance between each speaker and body ground to check for a short circuit in the wire harness.
Standard resistance:
10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT FRONT NO. 1 SPEAKER

(a) Resistance check.

NS

(1) Measure the resistance between the terminals of the speaker.
Standard resistance:
1.8 to 2.6 Ω

NG → **REPLACE FRONT NO. 1 SPEAKER**

OK

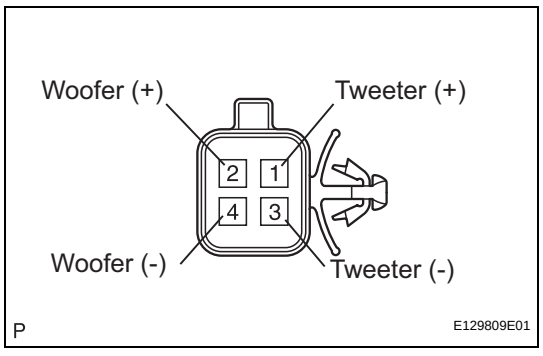
3 INSPECT FRONT NO. 2 SPEAKER

(a) Check that the malfunction disappears when another speaker in good condition is installed.
OK:
Malfunction disappears.
HINT:
- Connect all the connectors to the front No. 2 speakers.
- When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.
- Perform the above inspection on both LH and RH sides.

OK → **REPLACE FRONT NO. 2 SPEAKER**

NG

4 INSPECT REAR SPEAKER



(a) Woofer speaker:
(1) Measure the resistance according to the value(s) in the table below.
NOTICE:
The speaker should not be removed for checking.
Standard resistance

Tester connection	Condition	Specified condition
2 - 4	Always	1.8 to 2.6 Ω

(b) Tweeter speaker:
(1) Check that the malfunction disappears when another rear speaker in good condition is installed.

OK:
Malfunction appears.
HINT:
- Connect all the connectors to the rear speaker.
- When there is a possibility that either the right or left rear speaker is detective, inspect by interchanging the right one with the left one.

NG → **REPLACE REAR SPEAKER**

NS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Sound Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier

DESCRIPTION

The radio and navigation assembly sends a sound signal to the stereo component amplifier through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

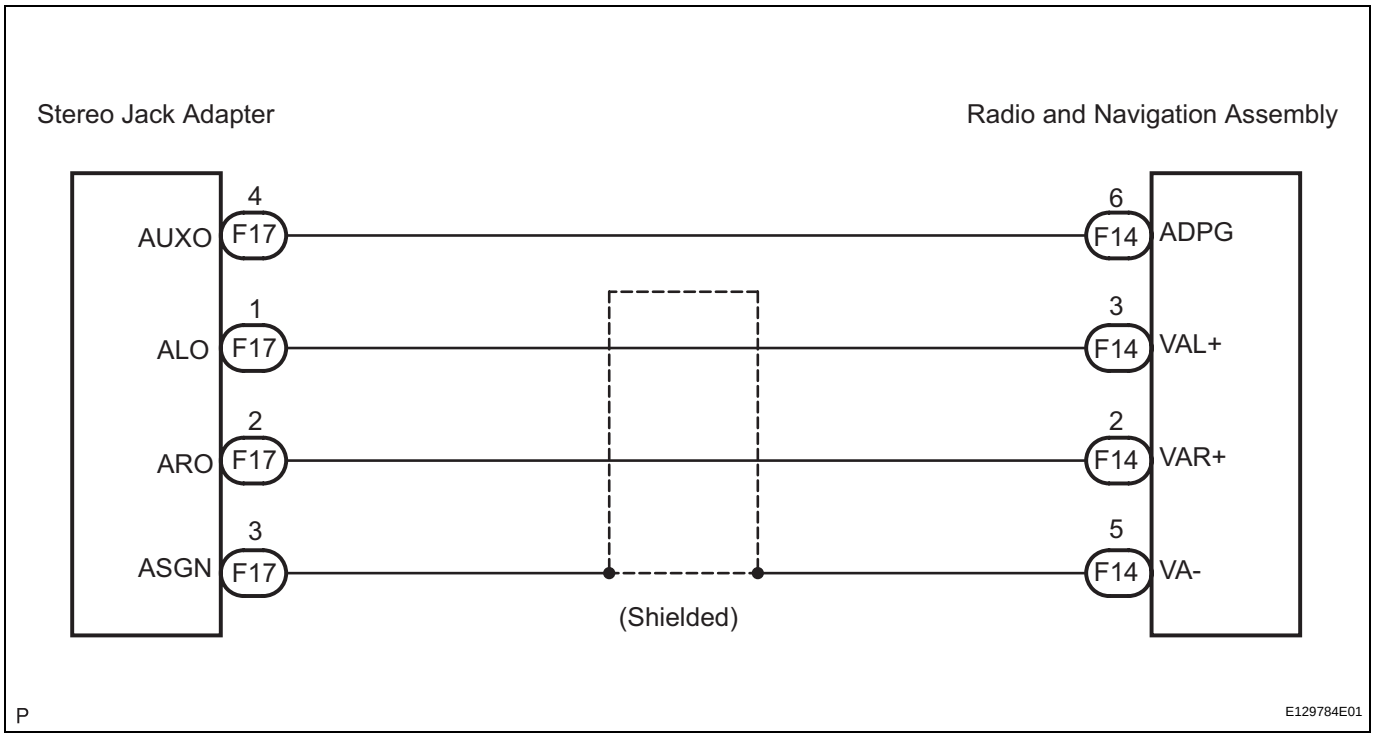
Sound Signal Circuit between Radio and Navigation Assembly and Stereo Jack Adapter

DESCRIPTION

The stereo jack adapter sends an external device sound signal to the radio and navigation assembly through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier, radio and navigation assembly, or speakers.

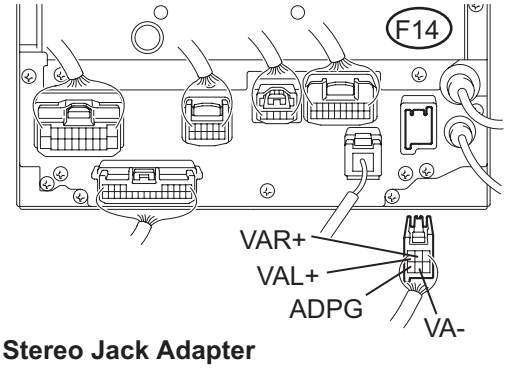
WIRING DIAGRAM



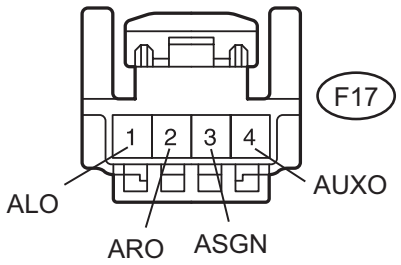
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (RADIO AND NAVIGATION ASSEMBLY - STEREO JACK ADAPTER)

Radio and Navigation Assembly Wire Harness View:



Stereo Jack Adapter Connector Front View:



P E129823E03

(a) Disconnect the connectors from the stereo jack adapter and radio and navigation assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
AUXO - ADPG	Always	Below 1 Ω
ASGN - VA-	Always	Below 1 Ω
ARO - VAR+	Always	Below 1 Ω
ALO - VAL+	Always	Below 1 Ω
AUXO - Body ground	Always	10 kΩ or higher
ASGN - Body ground	Always	10 kΩ or higher
ARO - Body ground	Always	10 kΩ or higher
ALO - Body ground	Always	10 kΩ or higher

NG → **REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier

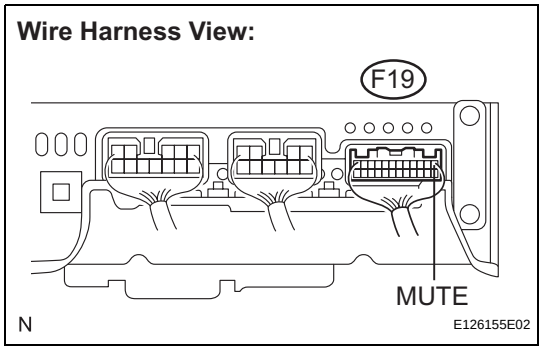
DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute noise. Because of that, the noise produced by changing the sound source ceases.
If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.
If there is a short in the circuit, even though the stereo component amplifier is normal, no sound, or only an extremely small sound, can be produced.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT STEREO COMPONENT AMPLIFIER



(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

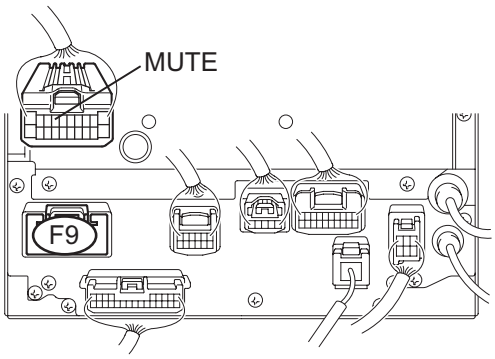
Tester connection	Condition	Specified condition
MUTE - Body ground	Turn ignition switch on (ACC), Audio system is playing → Changing	Above 3.5 V → Below 1 V

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

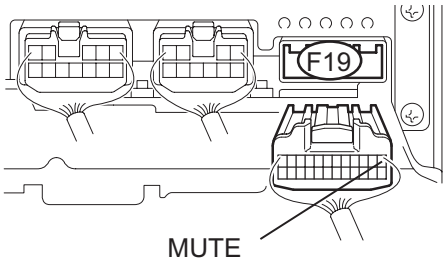
NG

2	CHECK HARNESS AND CONNECTOR (RADIO AND NAVIGATION ASSEMBLY - STEREO COMPONENT AMPLIFIER)

Radio and Navigation Assembly Wire Harness View:



Stereo Component Amplifier Wire Harness View:



P

E129822E02

OK

(a) Disconnect the radio and navigation assembly connector F9 and stereo component amplifier connector F19.

(b) Measure the resistance according to the value(s) in the table below.

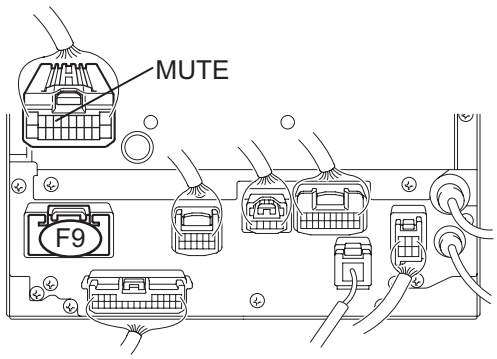
Standard resistance

Tester connection	Condition	Specified condition
MUTE (F9-7) - MUTE (F19-1)	Always	Below 1 Ω
MUTE - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

3	INSPECT STEREO COMPONENT AMPLIFIER (OUTPUT SIGNAL)

Wire Harness View:



(a) Reconnect the stereo component amplifier connector F19.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
MUTE - Body ground	Turn ignition switch on (ACC) Audio system is playing	Above 3.5 V

NG → **REPLACE STEREO COMPONENT AMPLIFIER**

OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

AVC-LAN Circuit

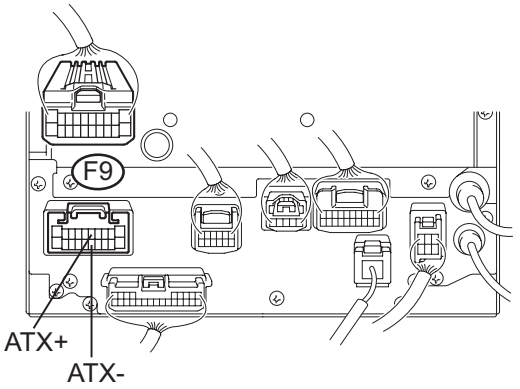
DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers the signal of each switch by communication.
When a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as the communication is discontinued.

INSPECTION PROCEDURE

1	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F19-5) - ATX- (F19-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

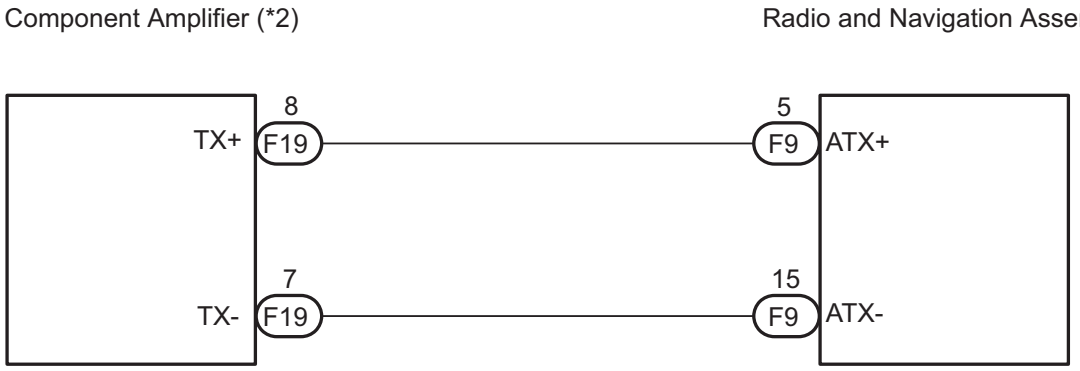
OK

2	CHECK HARNESS AND CONNECTOR

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.
  (1) Disconnect all connectors in all AVC-LAN circuits.
  (2) Check for an open or short in all AVC-LAN circuits.

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E09

OK:
There is no open or short circuit.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

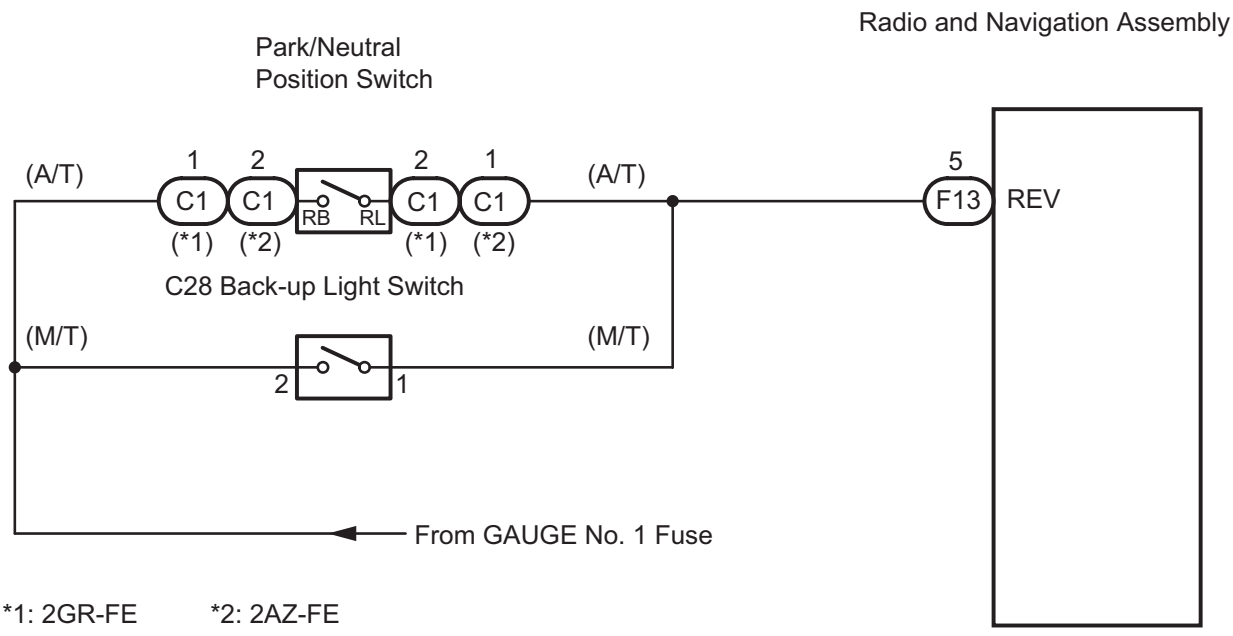
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Reverse Signal Circuit

DESCRIPTION

The radio and navigation assembly receives a reverse signal from the park/neutral position switch and information about the GPS antenna, and then adjusts vehicle position.

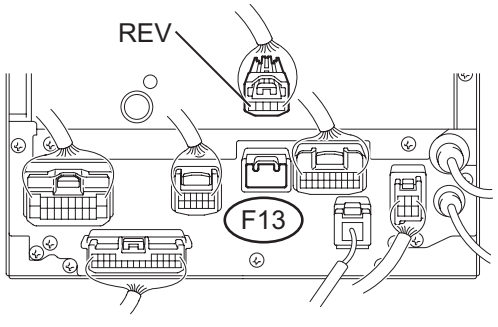
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector F13.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
REV - Body ground	Ignition switch on (IG). Shift lever is moved to R position.	10 to 14 V
REV - Body ground	Ignition switch on (IG). Shift lever is moved to any position except R.	Below 1 V

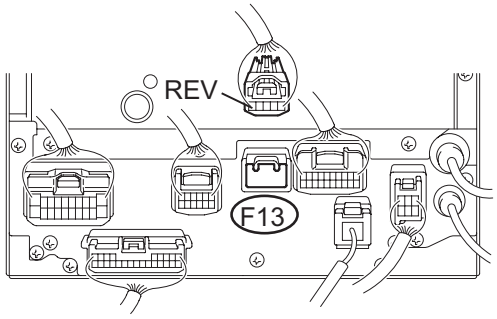
OK → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

NG

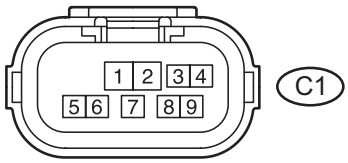
NS

2	CHECK HARNESS AND CONNECTOR

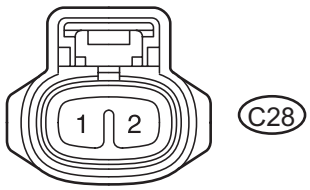
Radio and Navigation Assembly Wire Harness View:



Park/Neutral Position Switch Connector Front View:



Back-up Light Switch Connector Front View:



P E129830E02

(a) Disconnect the radio and navigation assembly connector F13 and park/neutral position switch connector C1 or back-up light switch connector C28.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
REV - C1-1 (*1)	Always	Below 1 Ω
REV - C1-2 (*2)	Always	Below 1 Ω
REV - C28-1 (*3)	Always	Below 1 Ω
REV - Body ground	Always	10 kΩ or higher

*1: 2AZ-FE, A/T
*2: 2GR-FE, A/T
*3: M/T

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK VEHICLE TYPE

(a) Choose type to be inspected.

NS

Result

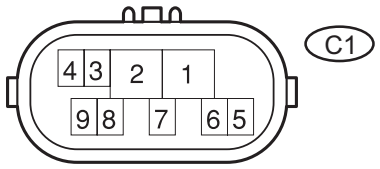
Type	Go to step
A/T	A
M/T	B

B → **Go to step 5**

A

4 INSPECT PARK/NEUTRAL POSITION SWITCH

Park/Neutral Position Switch:



(a) Disconnect the park/neutral position switch connector C1.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
C1-1 - C1-2	Shift lever is moved to R.	Below 1 Ω
C1-1 - C1-2	Shift lever is moved to any position except R.	10 kΩ or higher

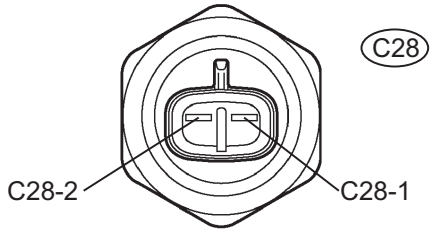
NG → **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

5 INSPECT BACK-UP LIGHT SWITCH

Back-up Light Switch:



(a) Disconnect the buck-up light switch connector C28.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
C28-1 - C28-2	Shift lever is moved to R.	Below 1 Ω
C28-1 - C28-2	Shift lever is moved to any position except R.	10 kΩ or higher

NG → **REPLACE BACK-UP LIGHT SWITCH**

NS

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

Navigation Voice Circuit

DESCRIPTION

This circuit is used when the voice guidance in the navigation system is on.

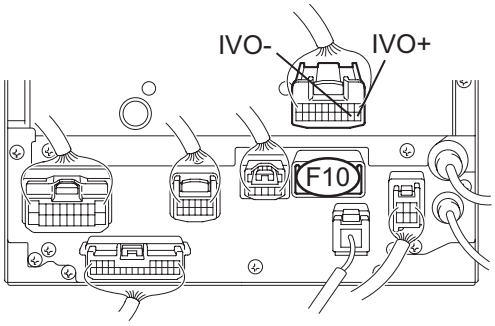
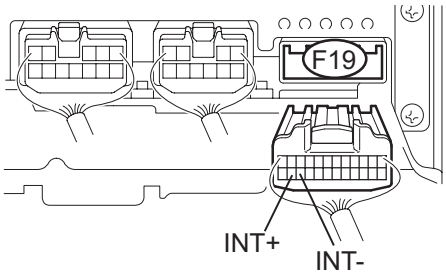
INSPECTION PROCEDURE

1	**CHECK HARNESS AND CONNECTOR (RADIO AND NAVIGATION ASSEMBLY - STEREO COMPONENT AMPLIFIER)**

Radio and Navigation Assembly Wire Harness View:



Stereo Component Amplifier Wire Harness View:



P E129824E01

(a) Disconnect the radio and navigation assembly connector F10 and stereo component amplifier connector F19.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
IVO+ - INT+	Always	Below 1 Ω
IVO- - INT-	Always	Below 1 Ω
IVO+ - Body ground	Always	10 kΩ or higher
IVO- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

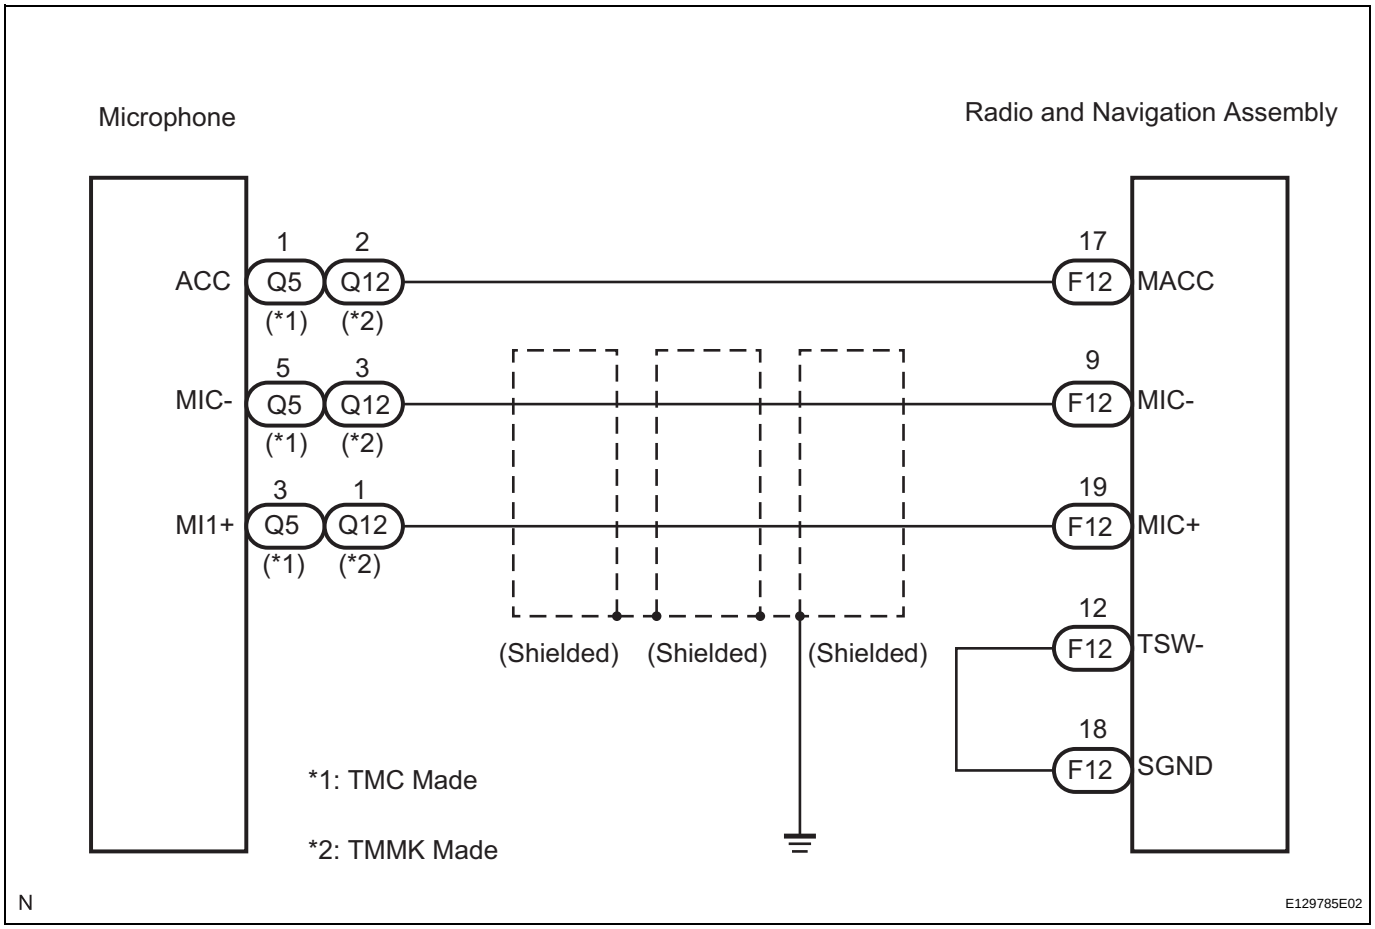
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Microphone Circuit between Microphone and Radio and Navigation Assembly

DESCRIPTION

This circuit sends a microphone signal from the microphone to the radio and navigation assembly. It also supplies power from the radio and navigation assembly to the microphone.

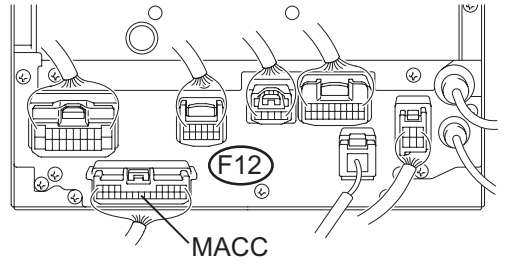
WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

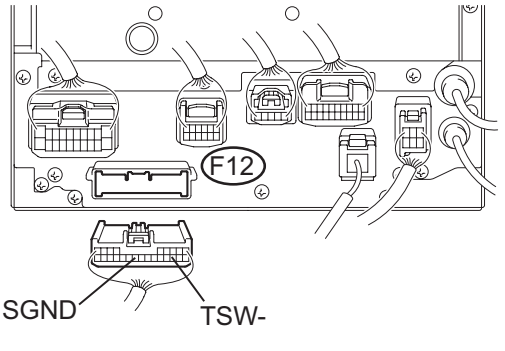
Tester connection	Condition	Specified condition
MACC - Body ground	Ignition SW on (ACC)	4 to 6 V

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

2 CHECK HARNESS AND CONNECTOR

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector F12.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

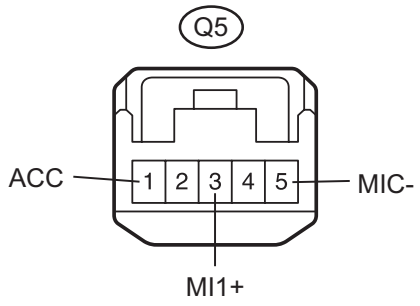
Tester connection	Condition	Specified condition
SGND - TSW-	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

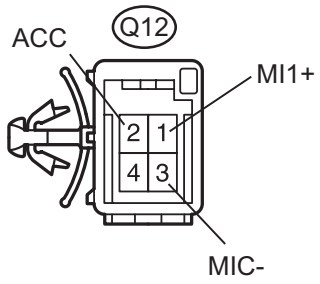
OK

3	CHECK HARNESS AND CONNECTOR (MICROPHONE - RADIO AND NAVIGATION ASSEMBLY)

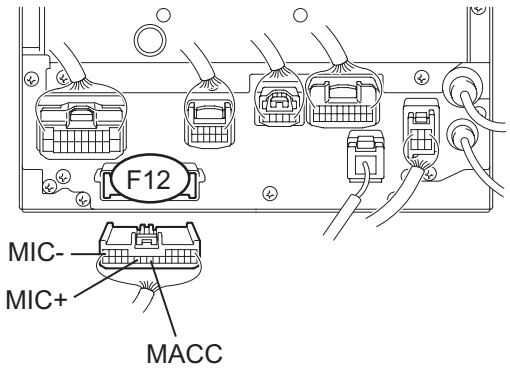
Microphone Connector Front View (TMC Made):



Microphone Connector Front View (TMMK Made):



Radio and Navigation Assembly Wire Harness View:



P E131896E01

(a) Disconnect the microphone connector Q5 or Q12 and radio and navigation assembly connector F12.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ACC - MACC	Always	Below 1 Ω
MI1+ - MIC+	Always	Below 1 Ω
MIC- - MIC-	Always	Below 1 Ω
MACC - Body ground	Always	10 kΩ or higher
MIC+ - Body ground	Always	10 kΩ or higher
MIC- - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

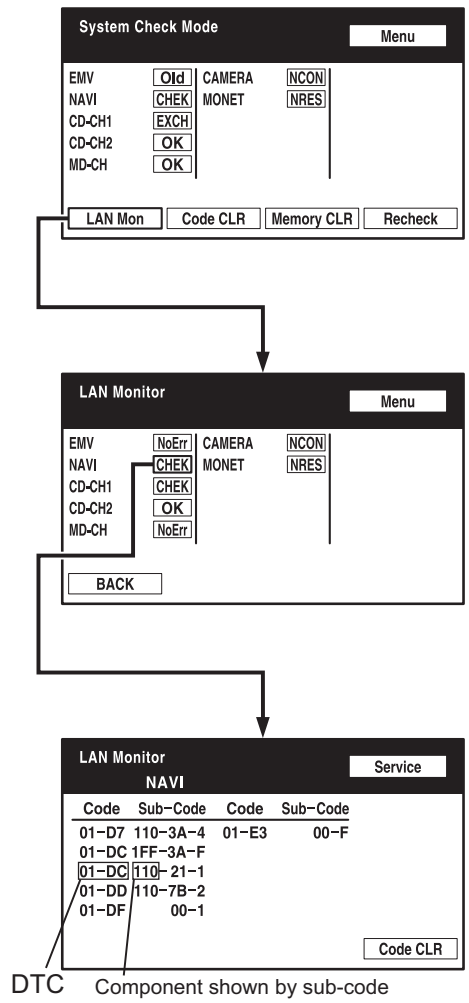
NS

Stereo Component Amplifier Communication Error

INSPECTION PROCEDURE

1 IDENTIFY THE COMPONENT SHOWN BY SUB-CODE

Example:



(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component shown by the sub-code.
HINT:
- "110 (multi-display)" is the component shown by the sub-code in the example shown in the illustration.
- The sub-code will be indicated by its physical address.
- For the component list, refer to "DIAGNOSIS DISPLAY DETAILED DESCRIPTION" (See page NS-30).

NEXT

2 CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

(a) Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.

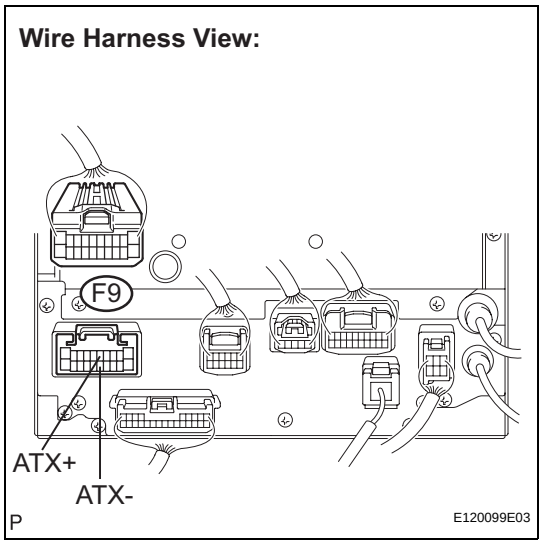
Component Table:

Component	Proceed to
Radio and navigation assembly (140)	Radio and navigation assembly power source circuit (See page NS-191)

NS

NEXT

3	CHECK RADIO AND NAVIGATION ASSEMBLY



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → REPLACE RADIO AND NAVIGATION ASSEMBLY

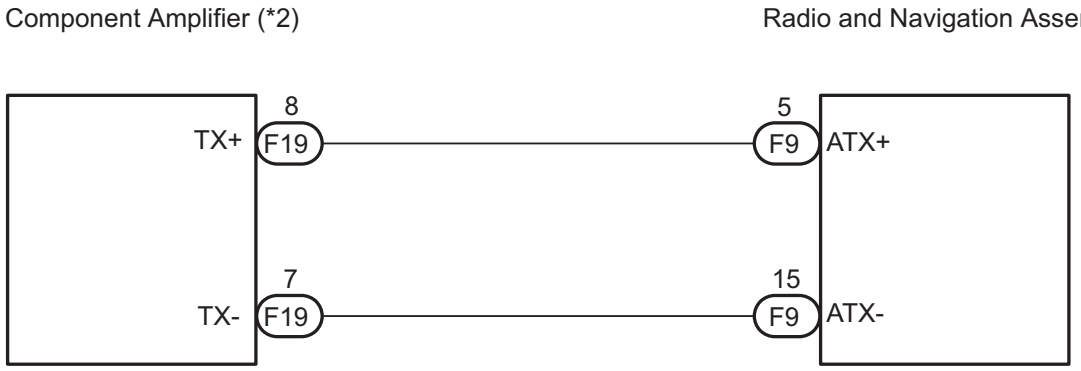
OK

4	CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMPONENT SHOWN BY SUB-CODE)

HINT:
- Start the check from the circuit that is near the component shown by the sub-code first.
- For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the stereo component amplifier and the component shown by the sub-code.
  (1) Disconnect all connectors between the stereo component amplifier and the component shown by the sub-code.
  (2) Check for an open or short in the AVC-LAN circuit between the stereo component amplifier and the component shown by the sub-code.

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E09

OK:
There is no open or short circuit.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	**REPLACE COMPONENT SHOWN BY SUB-CODE**

(a) Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE STEREO COMPONENT AMPLIFIER**

OK

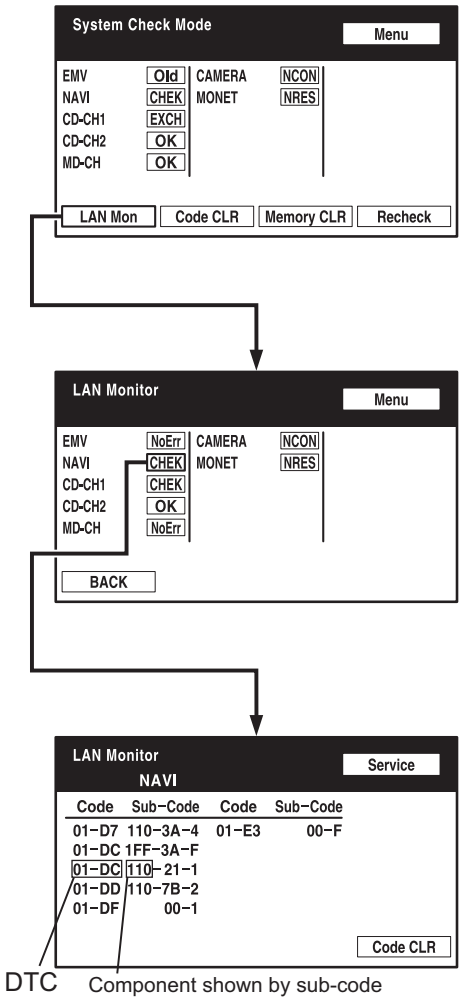
END

Radio and Navigation Assembly Communication Error

INSPECTION PROCEDURE

1 IDENTIFY THE COMPONENT SHOWN BY SUB-CODE

Example:



(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component shown by the sub-code.
HINT:
- "110 (multi-display)" is the component shown by the sub-code in the example shown in the illustration.
- The sub-code will be indicated by its physical address.
- For the component list, refer to "DIAGNOSIS DISPLAY DETAILED DESCRIPTION" (See page NS-30).

NEXT

2 CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

(a) Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.

Component Table:

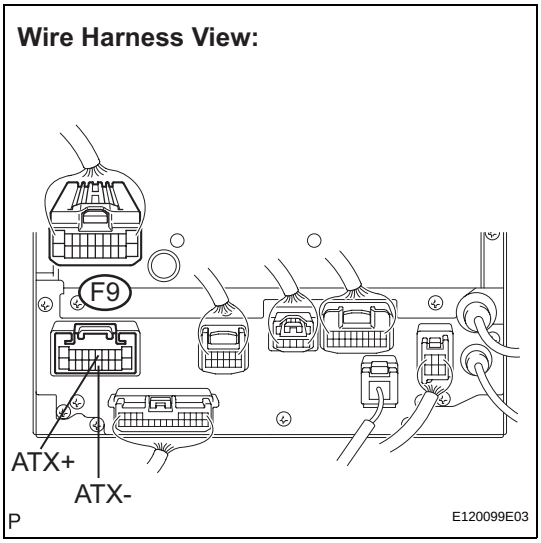
Component	Proceed to
Stereo component amplifier (440)	Stereo component amplifier power source circuit (See page AV-142)

NS

NEXT

3	CHECK RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

4	CHECK HARNESS AND CONNECTOR

HINT:

- Start the check from the circuit that is near the component shown by the sub-code first.
- For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-45).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code.

(1) Disconnect all connectors between the radio and navigation assembly and the component shown by the sub-code.

(2) Check for an open or short in the AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code.

(See page RS-32)

PARKING BRAKE SYSTEM

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

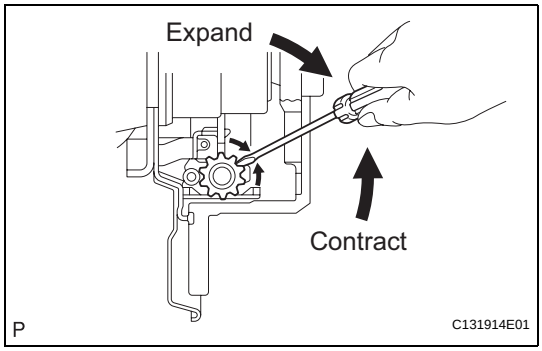
Symptom	Suspected area	See page
Brake drag	1. Parking brake lever travel (Out of adjustment)	PB-1
	2. Parking brake pedal travel (Out of adjustment)	PB-1
	3. Parking brake wire (Sticking) [No. 1 cable]	PB-48
	4. Parking brake wire (Sticking) [No. 2/No. 3 cable]	PB-48
	5. Parking brake shoe clearance (Out of adjustment)	PB-1
	6. Parking brake shoe lining (Cracked or distorted)	PB-60
	7. Tension or return spring (Damaged)	PB-58

ADJUSTMENT

1. REMOVE REAR WHEEL

2. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.
(b) Remove the shoe adjusting hole plug.

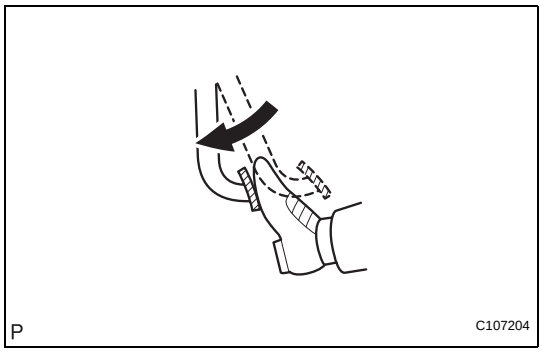


(c) Turn the shoe adjuster and expand the shoe until the disc locks.
(d) Turn and contract the shoe adjuster until the disc can rotate smoothly.
Standard:
Return 8 notches
(e) Check that there is no brake drag against the shoe.
(f) Install the shoe adjusting hole plug.
(g) Remove the hub nuts.

3. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle)

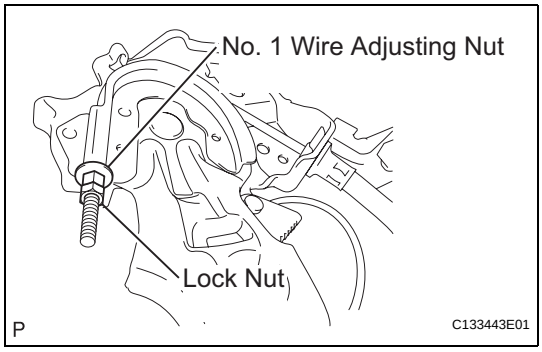
(a) Fully depress the parking brake pedal and release it to engage the parking brake.
(b) Depress the pedal to the floor again, and release it to disengage the parking brake.



(c) Slowly depress the parking brake pedal to the floor, and count the number of clicks.
Parking brake pedal travel:
7 to 10 notches at 300 N (31 kgf, 67 lbf)

5. ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle)

(a) Depress the parking brake pedal. Hold the No. 1 wire adjusting nut using a wrench and loosen the lock nut.
(b) Release the parking brake pedal.

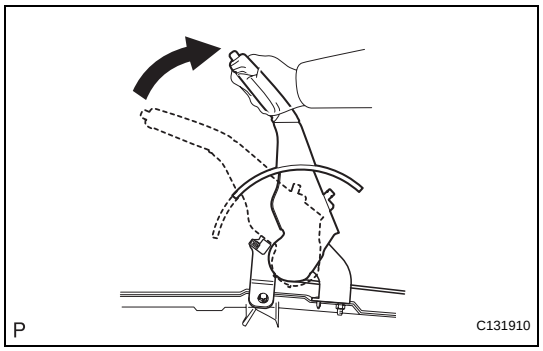


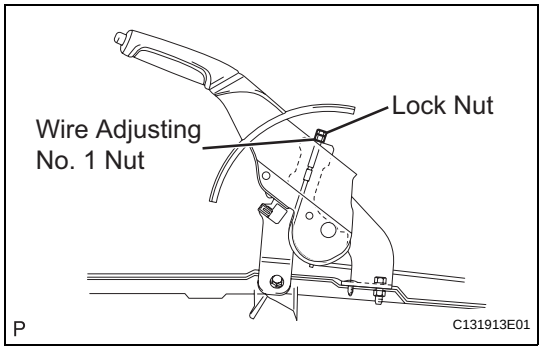
(c) Turn the No. 1 wire adjusting nut until the parking brake pedal travel meets the above specification.
(d) Hold the No. 1 wire adjusting nut using a wrench or an equivalent tool and tighten the lock nut.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
(e) Count the number of clicks after depressing and releasing the parking brake pedal 3 or 4 times.
(f) Check whether the parking brake drags.
(g) When operating the parking brake pedal, check that the parking brake indicator light comes on.

6. INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle)

(a) Pull the parking brake lever firmly.
(b) Release the parking brake lock, and return the parking brake lever to its off position.

PB





(c) Slowly pull the parking brake lever all the way up, and count the number of clicks.
Parking brake lever travel:
7 to 9 notches at 200 N (20 kgf, 45 lbf)

7. ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle)

(a) Pull up the parking brake lever. Hold the No. 1 wire adjusting nut using a wrench and loosen the lock nut.

(b) Release the parking brake lever.

(c) Turn the No. 1 wire adjusting nut until the parking brake lever travel meets the above specification.

(d) Hold the No. 1 wire adjusting nut using a wrench or an equivalent tool and tighten the lock nut.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

(e) Count the number of clicks after depressing and releasing the parking brake lever 3 or 4 times.

(f) Check whether the parking brake drags.

(g) When operating the parking brake lever, check that the parking brake indicator light comes on.

REMOVAL

1. **PRECAUTION**
(See page IP-1)

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent the airbag working. (See page RS-1)

3. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)**
HINT:
Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-16)

4. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

5. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)**
HINT:
Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-30)

6. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

7. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**

8. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**

9. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**

10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**

11. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**

12. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**

13. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**

14. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**

15. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**

16. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)
17. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)
18. REMOVE UPPER CONSOLE PANEL (See page IP-25)
19. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)
20. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)
21. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)
22. REMOVE CONSOLE BOX POCKET (See page IP-28)
23. REMOVE CONSOLE BOX CARPET (See page IP-28)
24. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
25. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
26. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)
27. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
28. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)
29. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
30. REMOVE FLOOR CARPET BRACKET LH (See page AC-155)
31. REMOVE FLOOR CARPET BRACKET RH (See page AC-155)
32. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
33. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
34. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
35. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
36. REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-25)
37. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
38. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

39. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)

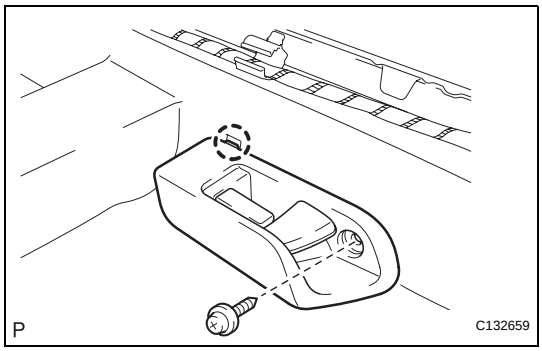
40. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

41. REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-26)

42. REMOVE LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY

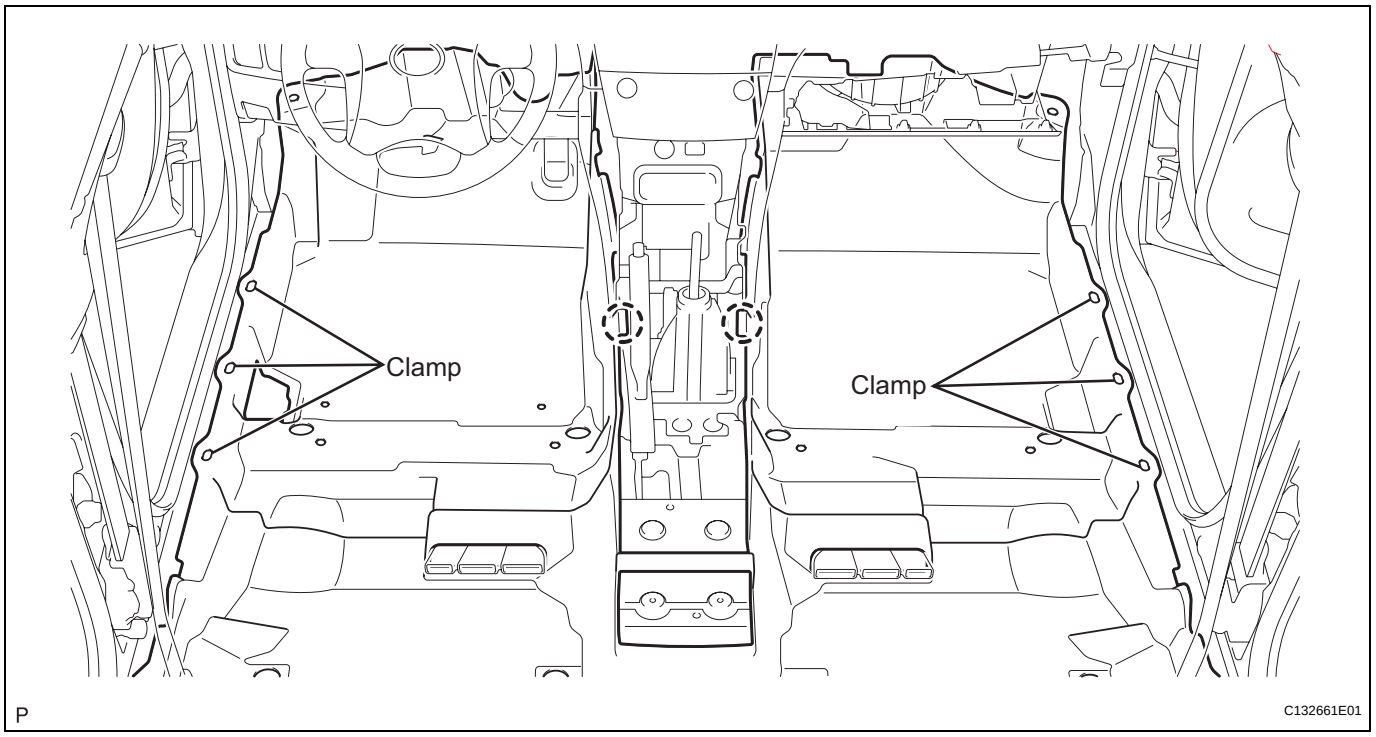
(a) Remove the screw.

(b) Disengage the claw and remove the luggage door open lever sub-assembly.



43. REMOVE FRONT FLOOR CARPET ASSEMBLY

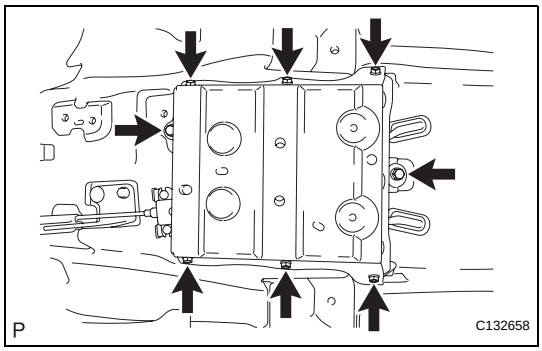
(a) Disengage the 6 clamps and the 2 claws.

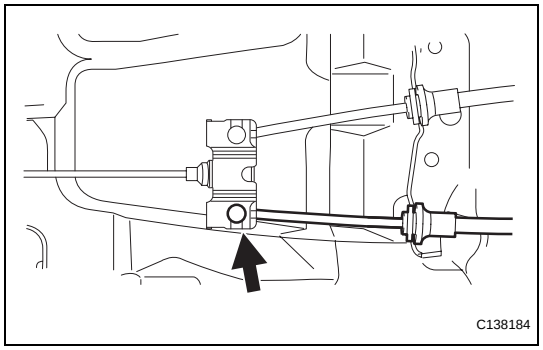


(b) Turn back the front floor carpet assembly until the bolts of the cross member floor No. 4 reinforcement sub-assembly can be seen.

44. REMOVE CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY

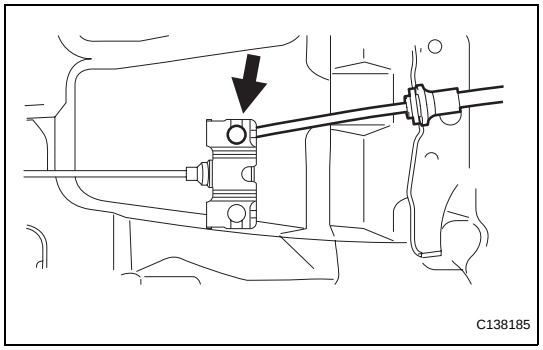
(a) Remove the 8 bolts and the cross member floor No. 4 reinforcement sub-assembly.





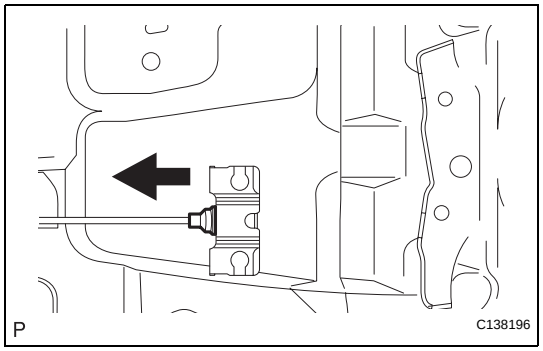
45. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Separate the No. 3 parking brake cable assembly from the parking brake equalizer.



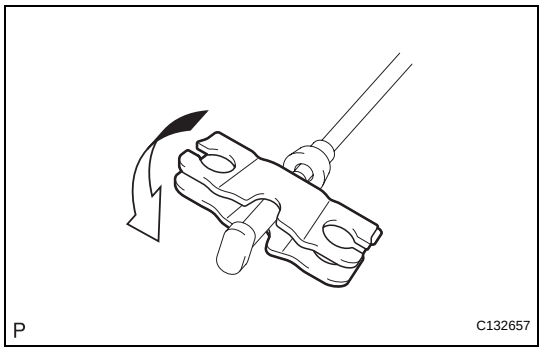
46. SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY

Separate the No. 2 parking brake cable assembly from the parking brake equalizer.

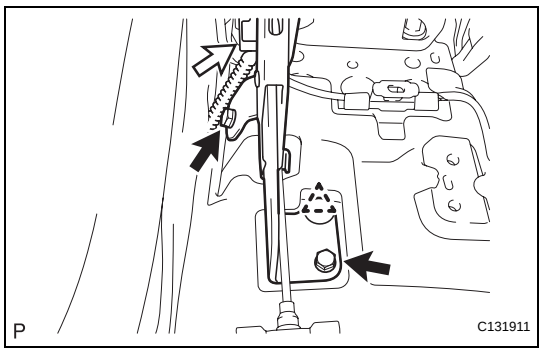


47. REMOVE PARKING BRAKE EQUALIZER

(a) Slide the rubber boot as shown in the illustration.



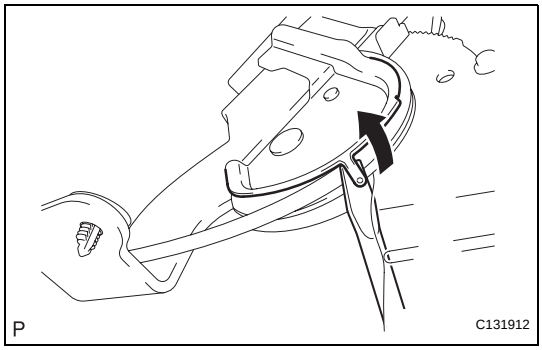
(b) Remove the parking brake equalizer from the No. 1 parking brake cable assembly.



48. REMOVE PARKING BRAKE LEVER SUB-ASSEMBLY

(a) Disconnect the parking brake switch connector.

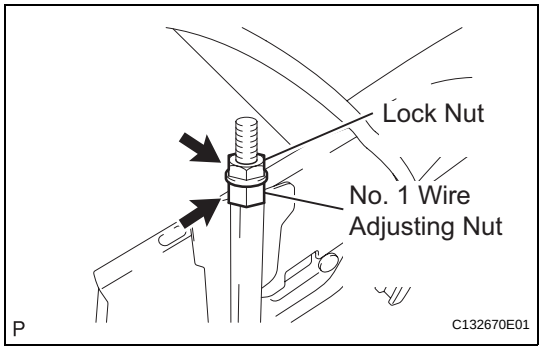
(b) Remove the 2 bolts, the clip, and the parking brake lever.



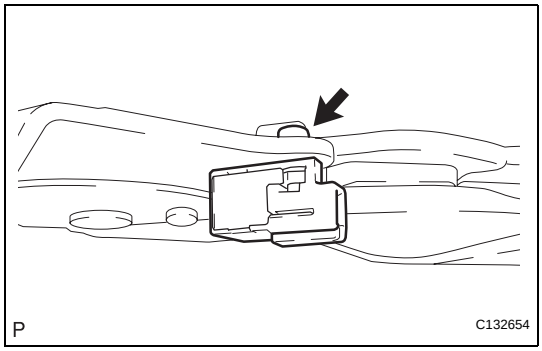
DISASSEMBLY

1. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Using a screwdriver, pull up the parking brake lever claw.



(b) Remove the lock nut, the No. 1 wire adjusting nut, and the No. 1 parking brake cable assembly from the parking brake lever sub-assembly.



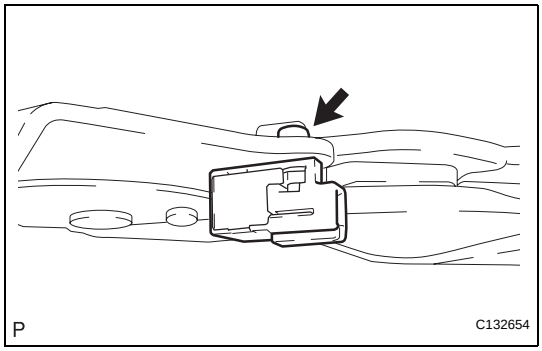
2. REMOVE PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the screw and the parking brake switch assembly.

REASSEMBLY

1. INSTALL PARKING BRAKE SWITCH ASSEMBLY

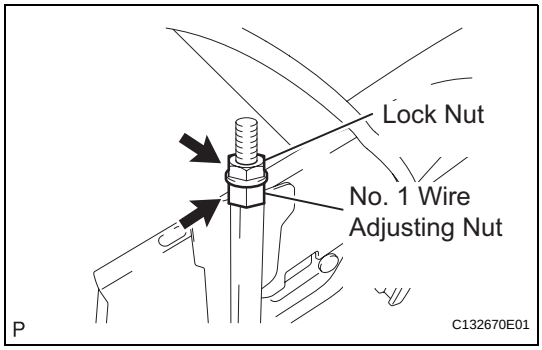
(a) Install the parking brake switch assembly with the screw.
Torque: 1.0 N*m (10 kgf*cm, 9.0 in.*lbf)

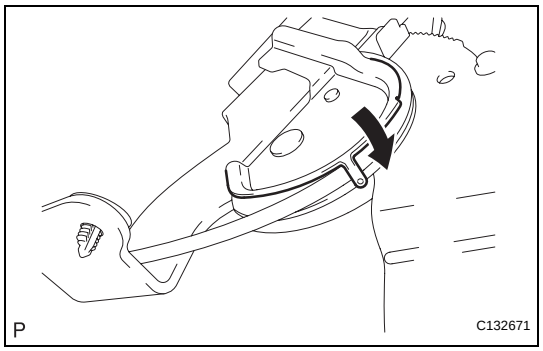


2. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

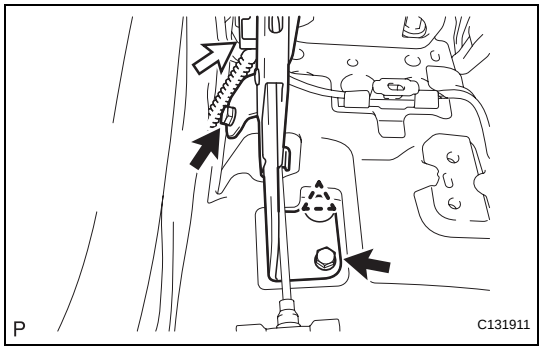
(a) Pass the No. 1 parking brake cable assembly through the parking brake lever sub-assembly.

(b) Temporarily tighten the lock nut and the No. 1 wire adjusting nut.
NOTICE:
Fully tighten the lock nut when adjusting the parking brake lever travel.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)





(c) Bend the parking brake lever claw.



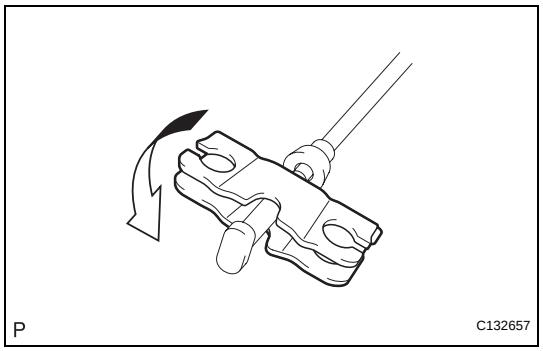
INSTALLATION

1. INSTALL PARKING BRAKE LEVER SUB-ASSEMBLY

(a) Install the parking brake lever sub-assembly with the 2 bolts and the clip.

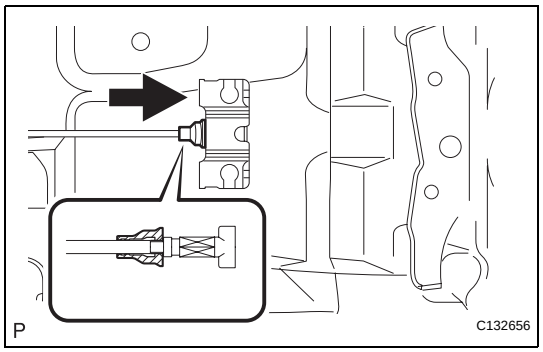
Torque: for TMC made
21 N*m (214 kgf*cm, 15 ft.*lbf)
for TMMK made
22 N*m (224 kgf*cm, 16 ft.*lbf)

(b) Connect the parking brake switch connector.

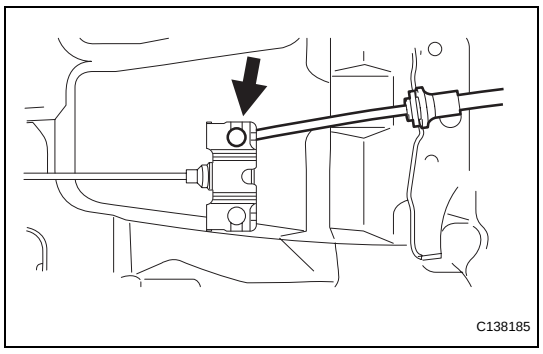


2. INSTALL PARKING BRAKE EQUALIZER

(a) Install the parking brake equalizer to the No. 1 parking brake cable assembly.



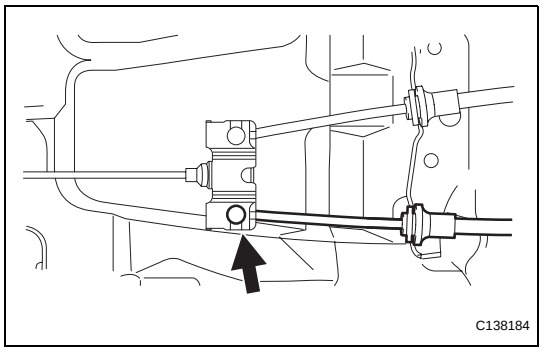
(b) Slide the rubber boot back as shown in the illustration.



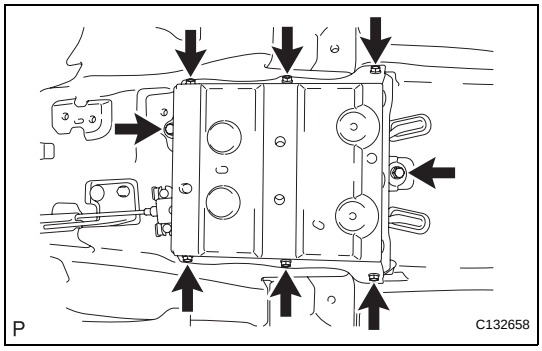
3. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 2 parking brake cable assembly to the parking brake equalizer.

PB



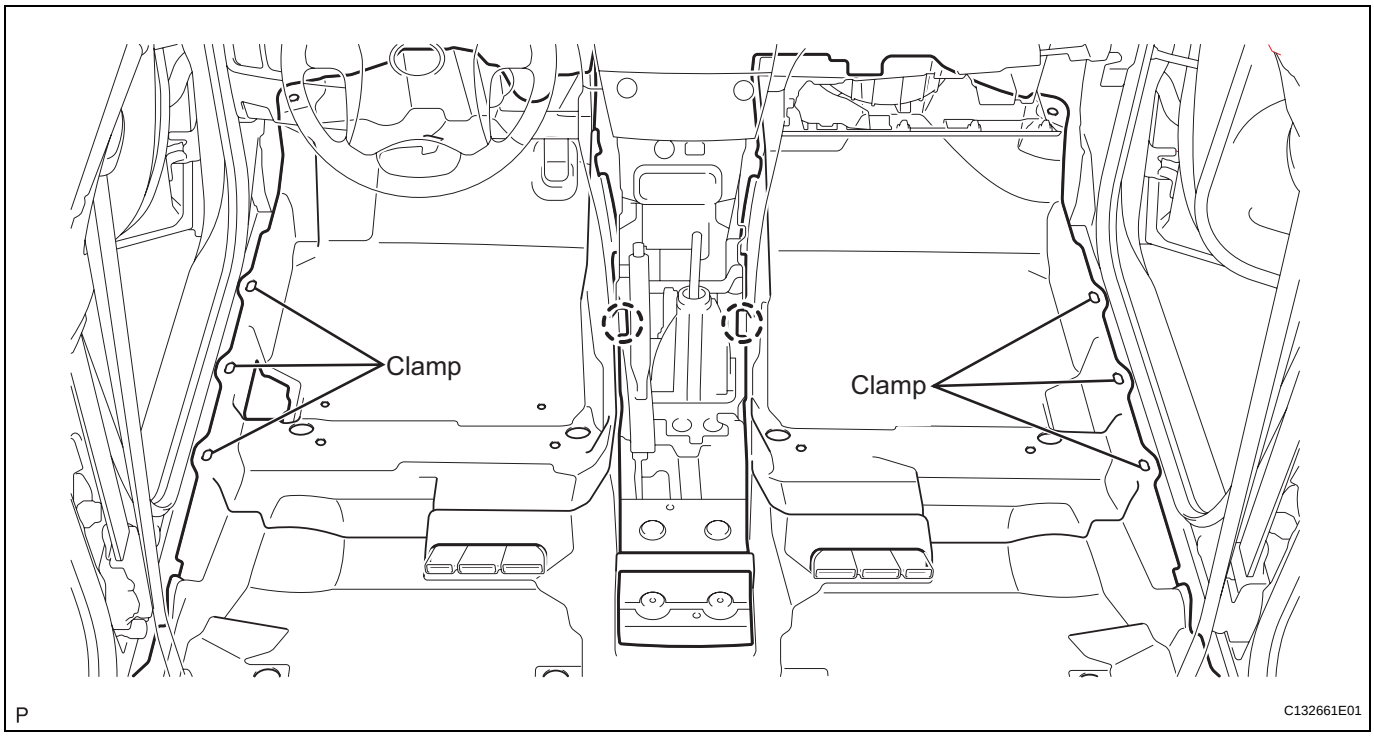
4. **INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY**
   (a) Connect the No. 3 parking brake cable assembly to the parking brake equalizer.

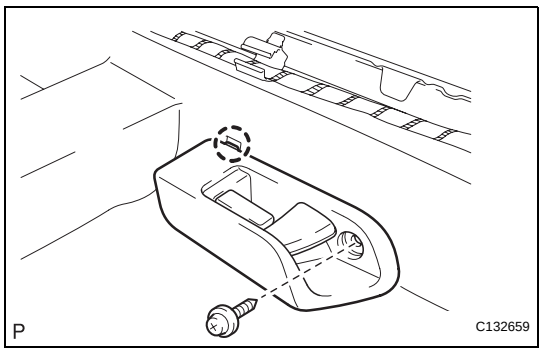


5. **INSTALL CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY**
   (a) Install the cross member floor No. 4 reinforcement sub-assembly with the 8 bolts.

6. **INSTALL FRONT FLOOR CARPET ASSEMBLY**
   (a) Engage the 6 clamps and the 2 claws and install the front floor carpet assembly.

PB





7. **INSTALL LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY**
   (a) Engage the claw and install the luggage door open lever sub-assembly with the screw.

8. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-53)**

9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**

10. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**

11. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-54)
12. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
13. INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-54)
14. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)
15. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)
16. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-55)
17. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)
18. INSTALL FLOOR CARPET BRACKET LH
19. INSTALL FLOOR CARPET BRACKET RH
20. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)
21. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
22. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)
23. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)
24. INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)
25. INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)
26. INSTALL CONSOLE BOX CARPET (See page IP-51)
27. INSTALL CONSOLE BOX POCKET (See page IP-51)
28. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)
29. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)
30. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)
31. INSTALL UPPER CONSOLE PANEL (See page IP-54)
32. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)
33. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)
34. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)

35. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
36. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
37. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
38. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**
39. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
40. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
41. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
42. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
43. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-24)
44. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
45. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-41)
46. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
47. **INSPECT PARKING BRAKE LEVER TRAVEL (See page PB-2)**
48. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**
49. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
50. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    (See page RS-242)
51. **INSPECT SRS WARNING LIGHT**
52. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

53. INSPECT FRONT SEAT ASSEMBLY (for Power Seat)
(See page SE-42)

REMOVAL

1. **PRECAUTION**
(See page IP-1)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent the airbag working. (See page RS-1)
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
4. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
5. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
6. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
9. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**
10. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**
11. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**
12. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**
13. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**
14. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
15. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
16. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-25)**
17. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-26)**
18. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)**
19. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)**
20. **REMOVE CONSOLE BOX POCKET (See page IP-28)**
21. **REMOVE CONSOLE BOX CARPET (See page IP-28)**

22. **REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)**

23. **REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)**

24. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)**

25. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

26. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)**

27. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)**

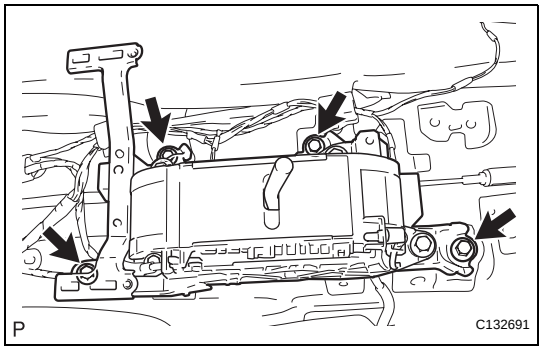
28. **REMOVE NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-154)**

29. **REMOVE FLOOR CARPET BRACKET LH (See page AC-155)**

30. **REMOVE FLOOR CARPET BRACKET RH (See page AC-155)**

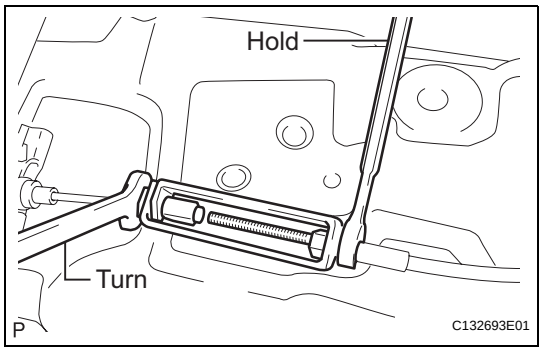
31. **REMOVE YAW RATE AND ACCELERATION SENSOR (w/ VSC) (See page BC-447)**

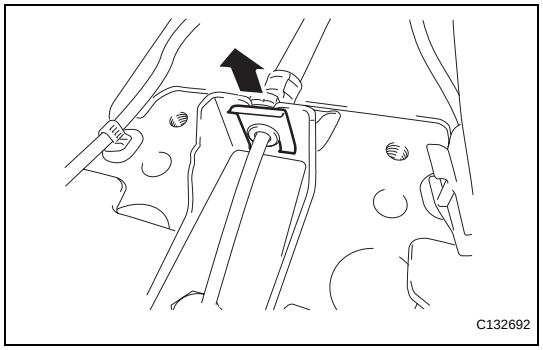
32. **REMOVE FLOOR SHIFT LEVER ASSEMBLY**
    (a) Remove the 4 bolts and the floor shift lever assembly.



33. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**

34. **DISCONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY**
    (a) Using a wrench, hold the lock nut and loosen the turnbuckle.
    (b) Disconnect the No. 4 parking brake cable assembly from the No. 1 parking brake cable assembly.

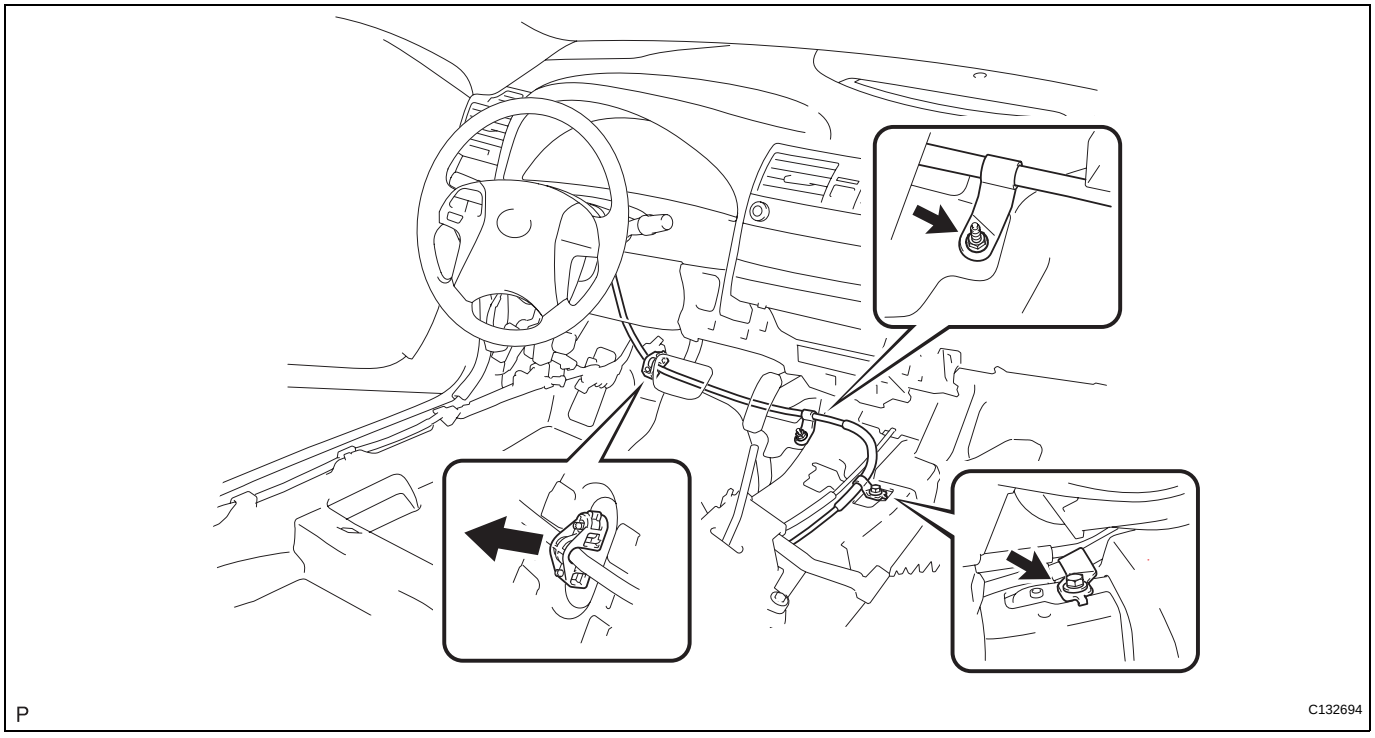




35. REMOVE PARKING BRAKE PEDAL ASSEMBLY

(a) Using needle-nose pliers, remove the clip from the No. 1 parking brake cable assembly.

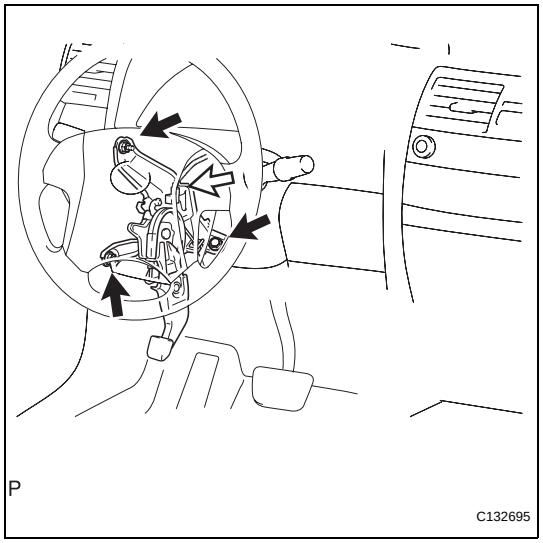
(b) Remove the bolt, nut, and the No. 1 parking brake cable clamp.



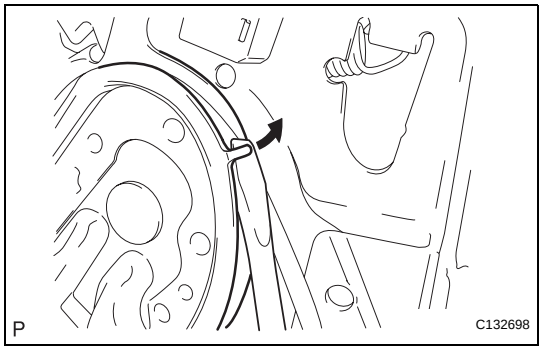
(c) Separate the No. 1 parking brake cable assembly from the body.

(d) Disconnect the parking brake switch connector.

(e) Remove the bolt, 2 nuts, and the parking brake pedal assembly with the No. 1 parking brake cable assembly from the body.



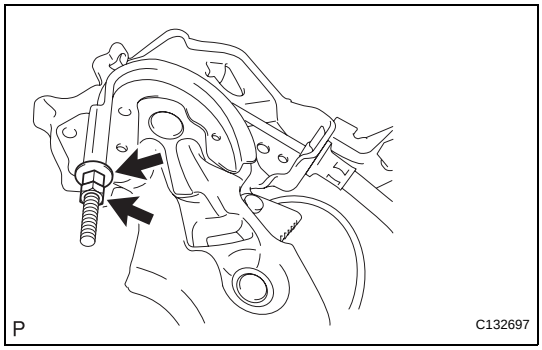
PB



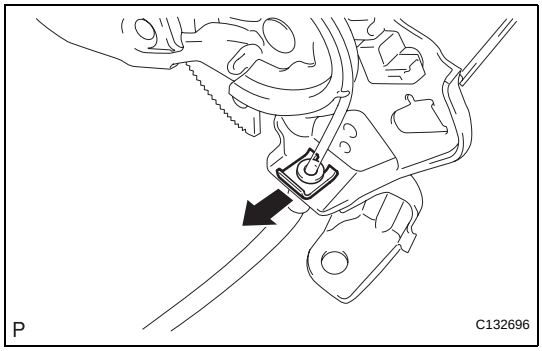
DISASSEMBLY

1. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Using a screwdriver, pull up the parking brake pedal claw.

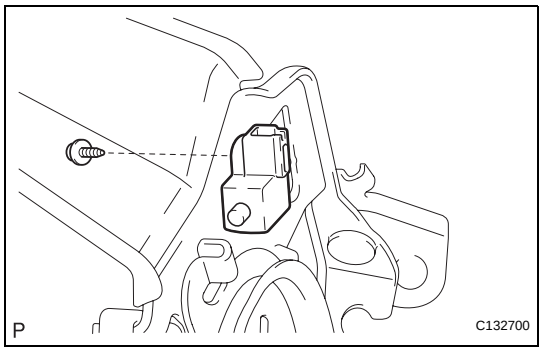


(b) Remove the lock nut and the No. 1 wire adjusting nut.



(c) Using needle nose pliers, remove the clip and the No. 1 parking brake cable from the parking brake pedal assembly.

2. REMOVE PARKING BRAKE SWITCH ASSEMBLY



(a) Remove the screw and the parking brake switch assembly.

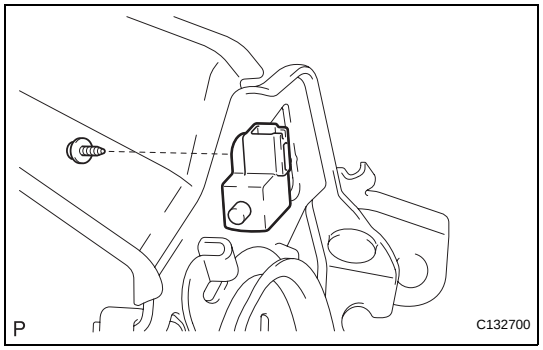
3. REMOVE PARKING PEDAL PAD

(a) Remove the parking pedal pad.

REASSEMBLY

1. INSTALL PARKING PEDAL PAD

(a) Install the parking pedal pad to the parking brake pedal assembly.

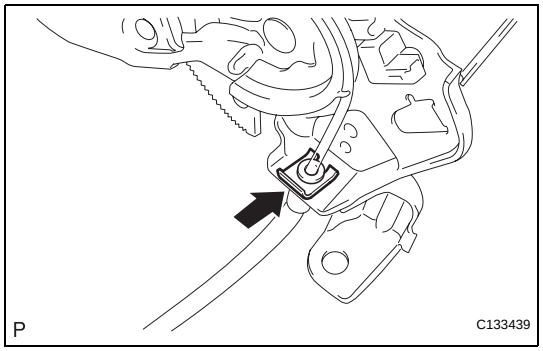


2. INSTALL PARKING BRAKE SWITCH ASSEMBLY

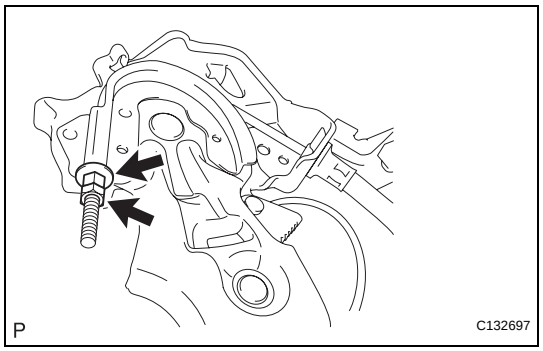
(a) Install the parking brake switch assembly with the screw.
Torque: 1.0 N*m (10 kgf*cm, 9.0 in.*lbf)

3. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

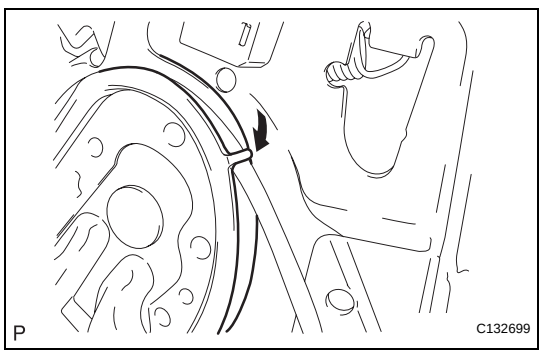
(a) Pass the No. 1 parking brake cable assembly through the pedal guide.



(b) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.

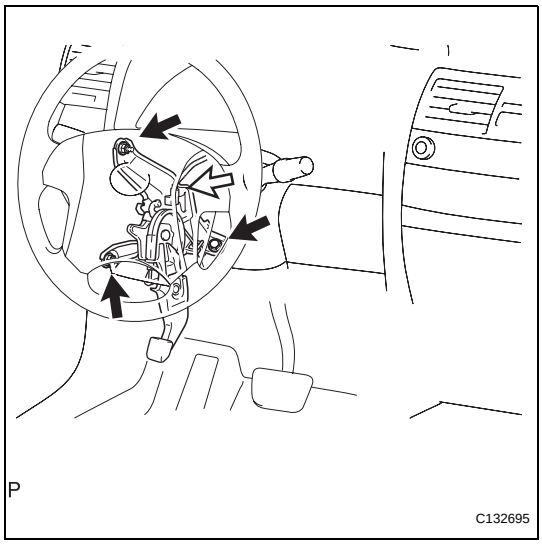


(c) Temporarily tighten the the lock nut and No. 1 wire adjusting nut.
NOTICE:
Fully tighten the lock nut and the No. 1 wire adjusting nut when adjusting the parking brake pedal travel.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(d) Bend the parking brake pedal claw.

PB



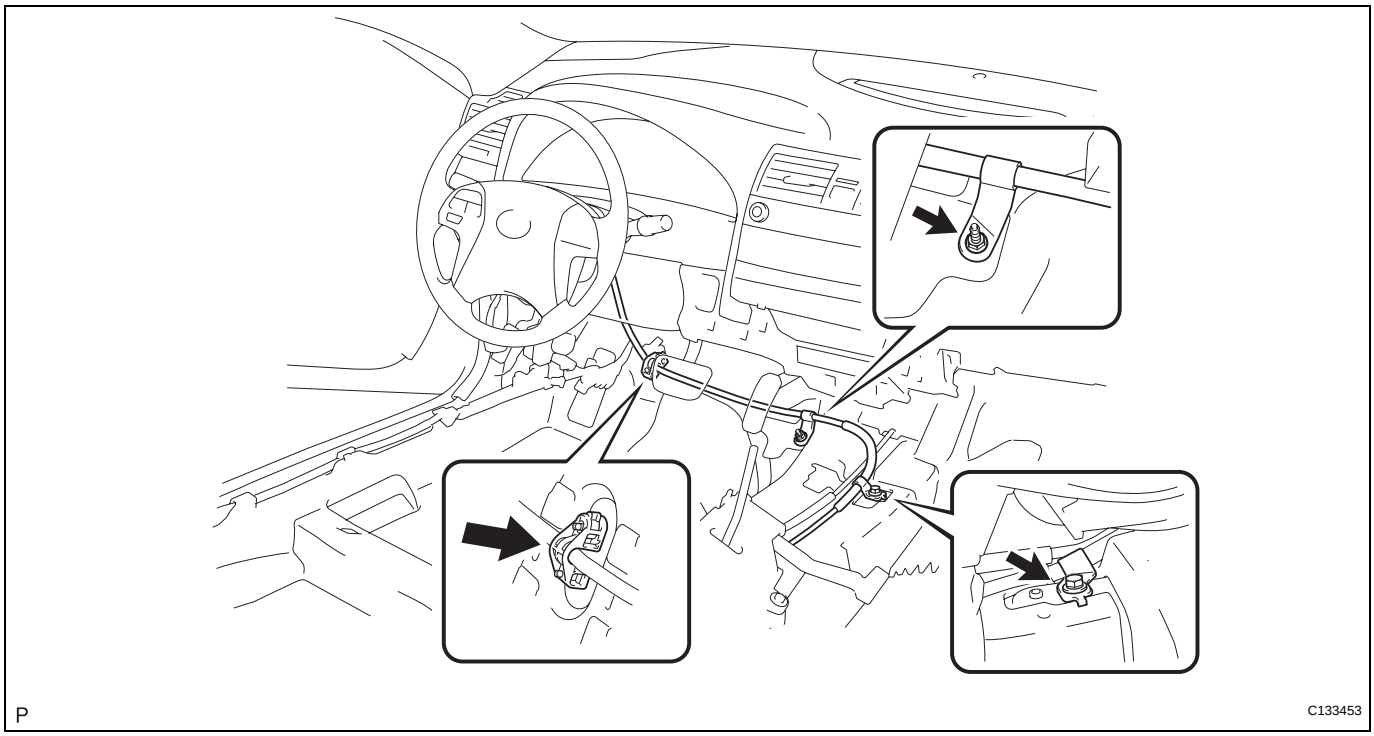
INSTALLATION

1. INSTALL PARKING BRAKE PEDAL ASSEMBLY

(a) Install the parking brake pedal assembly with the bolt and 2 nuts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

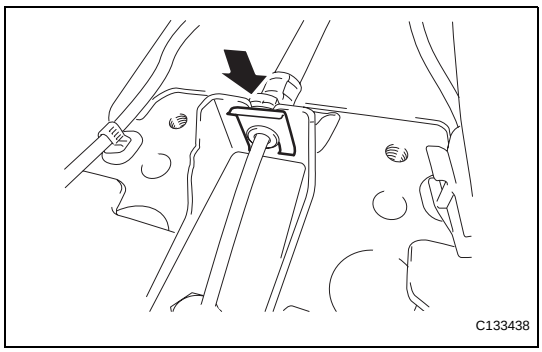
(b) Connect the parking brake switch connector.

(c) Install the No. 1 parking brake cable assembly to the body with the bolt, the nut, and a new No. 1 parking brake cable clamp.



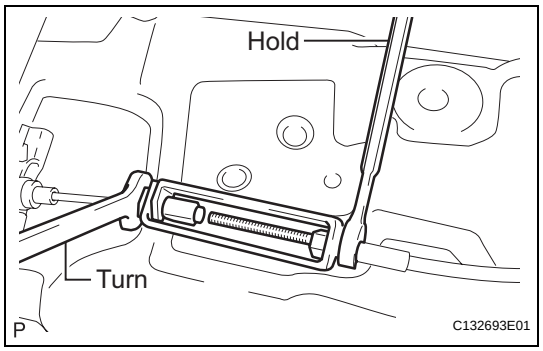
Torque: Bolt
15 N*m (153 kgf*cm, 11 ft.*lbf)
Nut
5.4 N*m (55 kgf*cm, 48 in.*lbf)

(d) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.



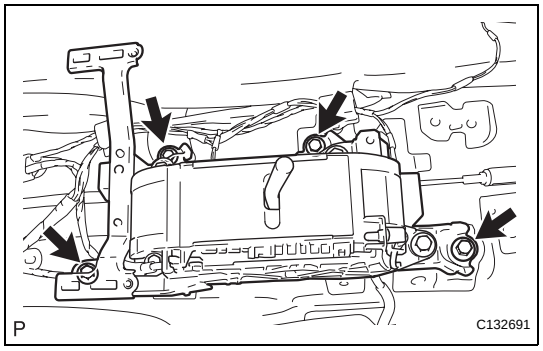
2. CONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 4 parking brake cable assembly to the No. 1 parking brake cable assembly.



(b) Using a wrench, hold the lock nut and tighten the turnbuckle.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

3. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-442)**



4. **INSTALL FLOOR SHIFT LEVER ASSEMBLY**
(a) Install the floor shift lever assembly with the 4 bolts.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
5. **INSTALL YAW RATE AND ACCELERATION SENSOR (w/ VSC) (See page BC-448)**
6. **INSTALL FLOOR CARPET BRACKET LH**
7. **INSTALL FLOOR CARPET BRACKET RH**
8. **INSTALL NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-177)**
9. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
10. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
11. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)**
12. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
13. **INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)**
14. **INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)**
15. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
16. **INSTALL CONSOLE BOX POCKET (See page IP-51)**
17. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)**
18. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)**
19. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-53)**
20. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**
21. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
22. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**

23. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)
24. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)
25. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)
26. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)
27. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)
28. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)
29. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)
30. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)
31. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)
32. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)
33. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)
34. INSPECT PARKING BRAKE PEDAL TRAVEL (See page PB-1)
35. ADJUST PARKING BRAKE PEDAL TRAVEL (See page PB-1)
36. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
37. INSPECT SENSOR SIGNAL (See page BC-448)

REMOVAL

HINT:

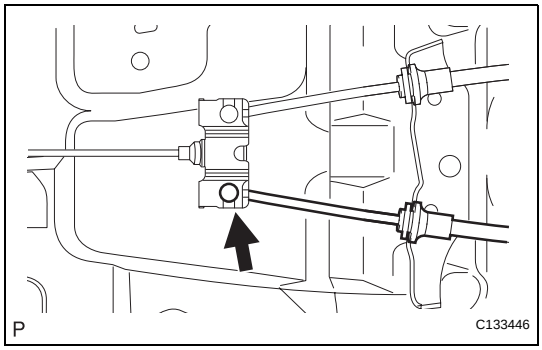
- Use the same procedures for the No. 2 parking brake cable assembly and No. 3 parking brake cable assembly.
- The procedures listed below are for the No. 3 parking brake cable assembly.

1. **PRECAUTION**
   (See page IP-20)
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working. (See page RS-1)
3. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-16)
4. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
5. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-30)
6. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
7. **REMOVE PARKING BRAKE LEVER SUB-ASSEMBLY (for Manual Transaxle)**
   HINT:
   Refer to the procedures up to "REMOVE PARKING BRAKE LEVER". (See page PB-11)
8. **REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Manual Transaxle) (See page PB-15)**
9. **REMOVE PARKING BRAKE PEDAL ASSEMBLY (for Automatic Transaxle)**
   HINT:
   Refer to the procedures up to "REMOVE PARKING BRAKE PEDAL". (See page PB-27)
10. **REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle) (See page PB-30)**

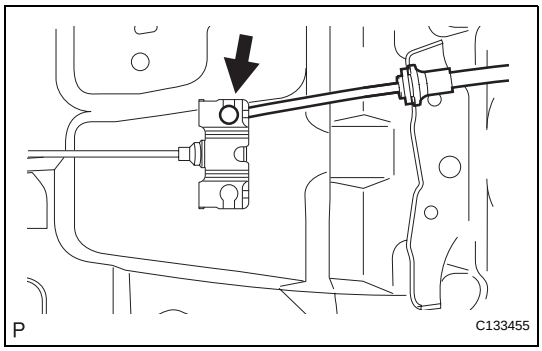
11. **REMOVE LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-13)**

12. **REMOVE FRONT FLOOR CARPET ASSEMBLY (for Automatic Transaxle) (See page PB-14)**

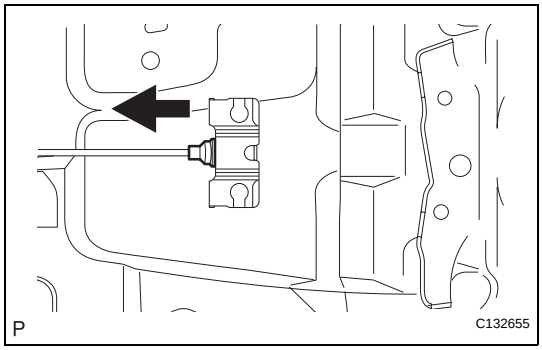
13. **REMOVE CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-14)**



14. **SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Separate the No. 3 parking brake cable assembly from the parking brake equalizer.



15. **SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Separate the No. 2 parking brake cable assembly from the parking brake equalizer.



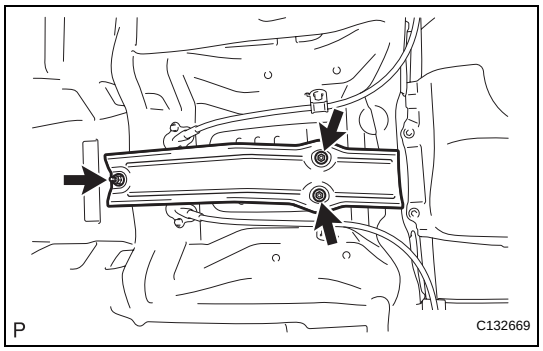
16. **REMOVE NO. 4 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Slide the rubber boot as shown in the illustration.

    (b) Remove the No. 4 parking brake cable assembly from the parking brake equalizer as shown in the illustration.

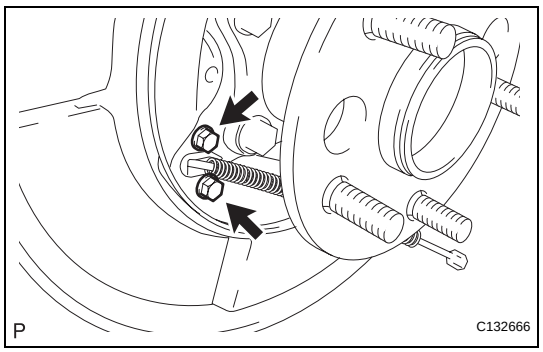
17. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-2)**

18. **REMOVE EXHAUST TAIL PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**

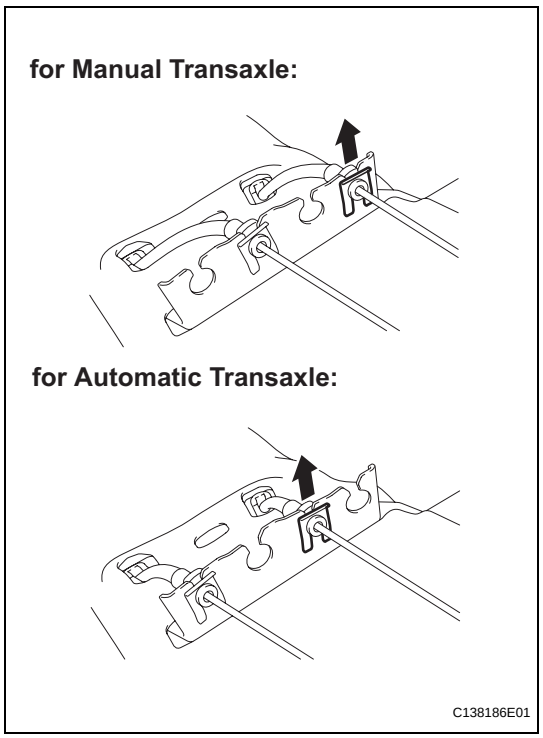
19. **REMOVE EXHAUST CENTER PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**



20. **REMOVE NO. 2 FRONT FLOOR HEAT LOWER INSULATOR (for 2AZ-FE)**
    (a) Remove the 3 nuts and the No. 2 front floor heat lower insulator.
21. **REMOVE REAR WHEEL**
22. **SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-58)**
23. **REMOVE REAR DISC (See page PB-58)**
24. **REMOVE PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-58)**
25. **REMOVE PARKING BRAKE SHOE STRUT (See page PB-58)**
26. **REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-58)**
27. **REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-59)**
28. **REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-59)**
29. **REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the 2 bolts and separate the No. 3 parking brake cable assembly from the backing plate.

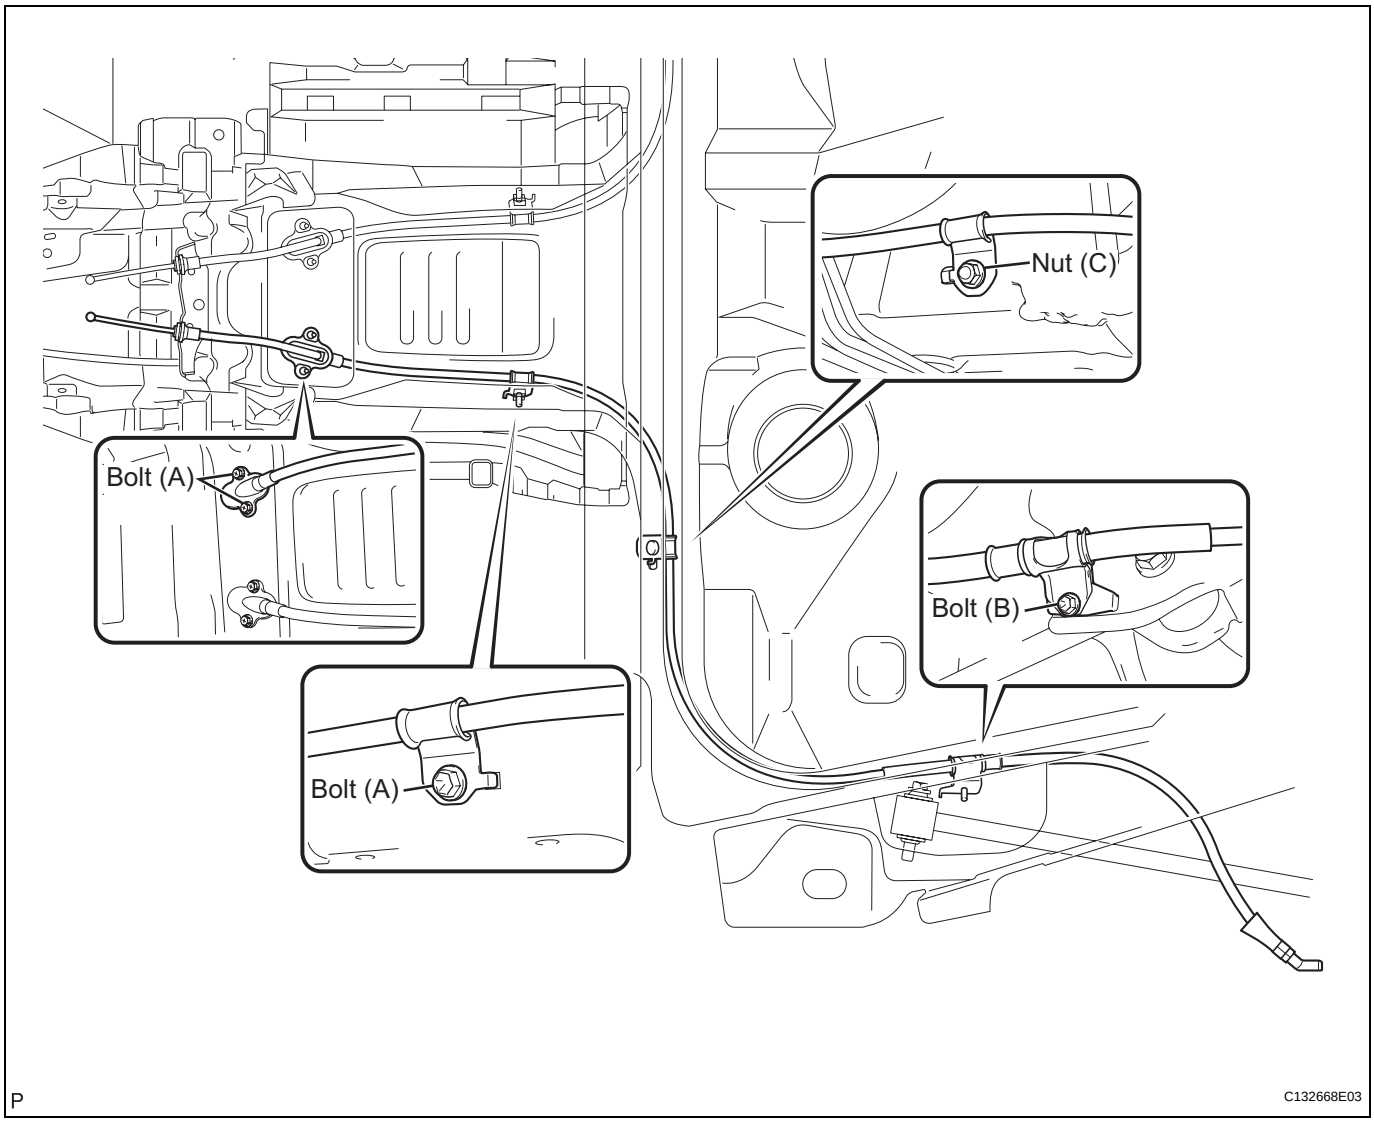


(b) Using needle-nose pliers, remove the clip from the No. 3 parking brake cable assembly.



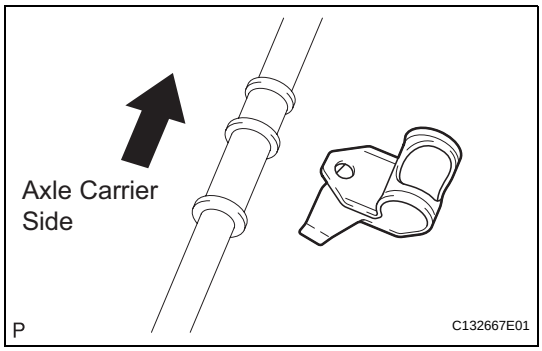
PB

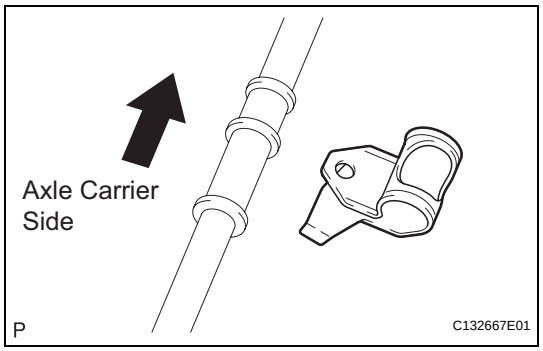
(c) Remove the 3 bolts (A), the bolt (B), and the nut (C), and disengage each claw.



(d) Remove the No. 3 parking brake cable assembly from the body.

(e) Remove the parking brake cable clamp.





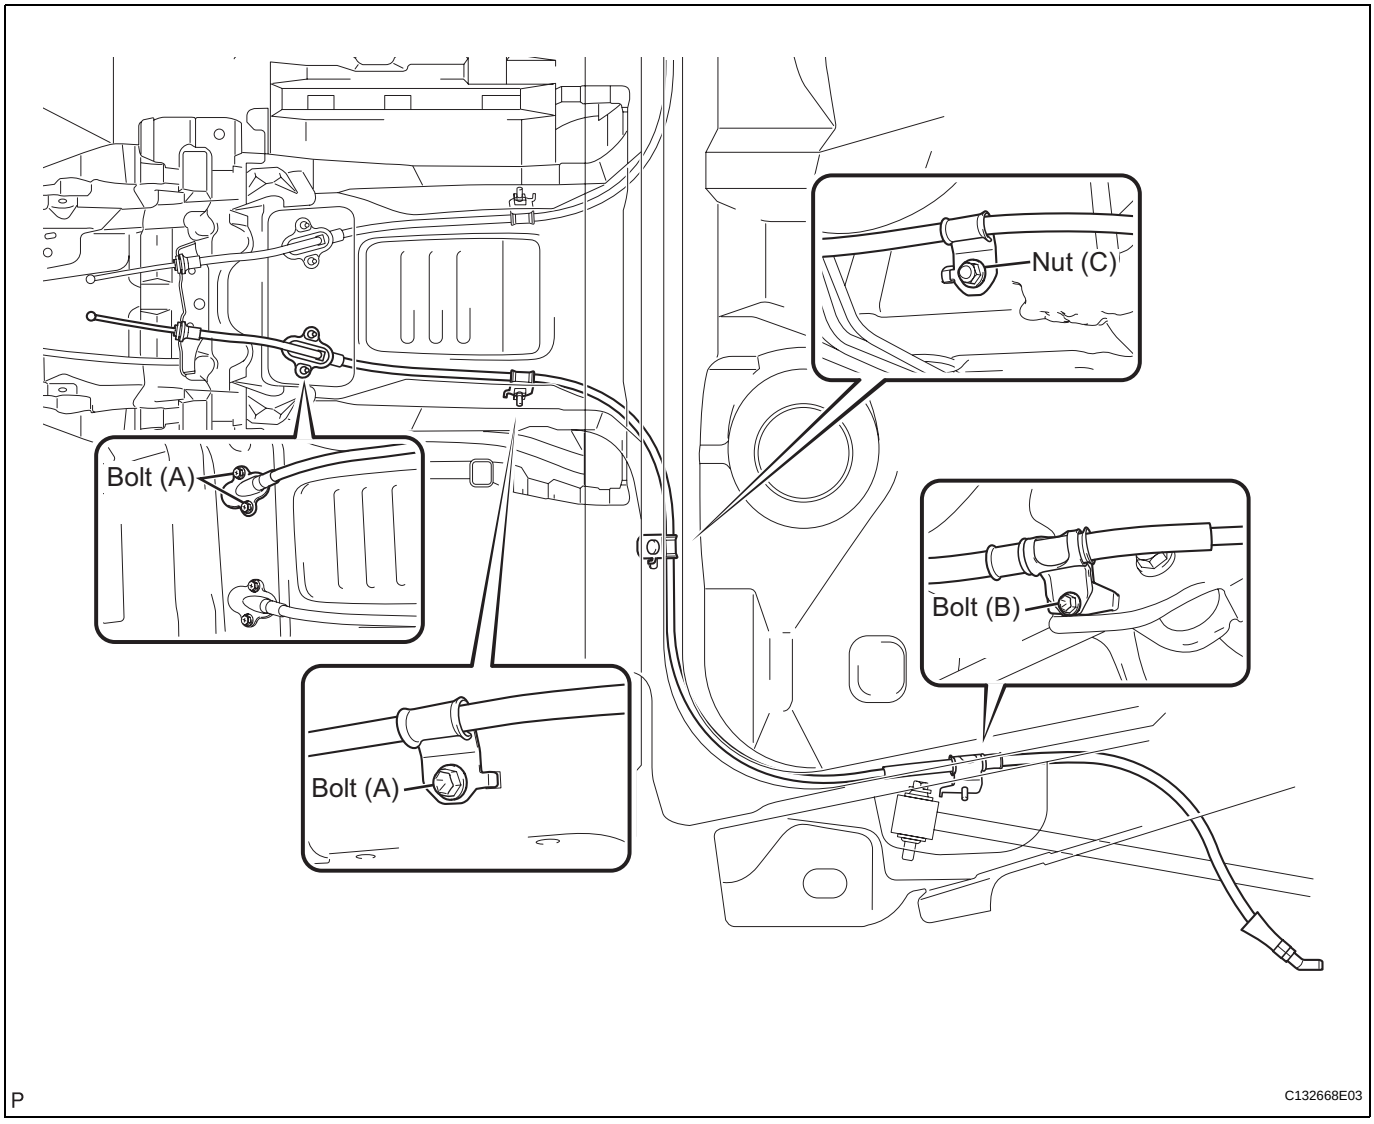
INSTALLATION

1. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

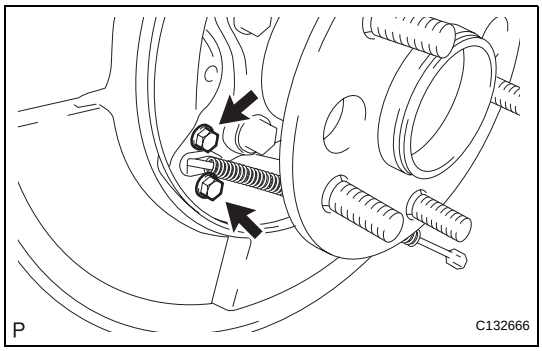
(a) Install the parking brake cable clamp to the No. 3 parking brake cable assembly.

(b) Install the No. 3 parking brake cable assembly with the 3 bolts (A), the bolt (B) and the nut (C), and engage each claw.

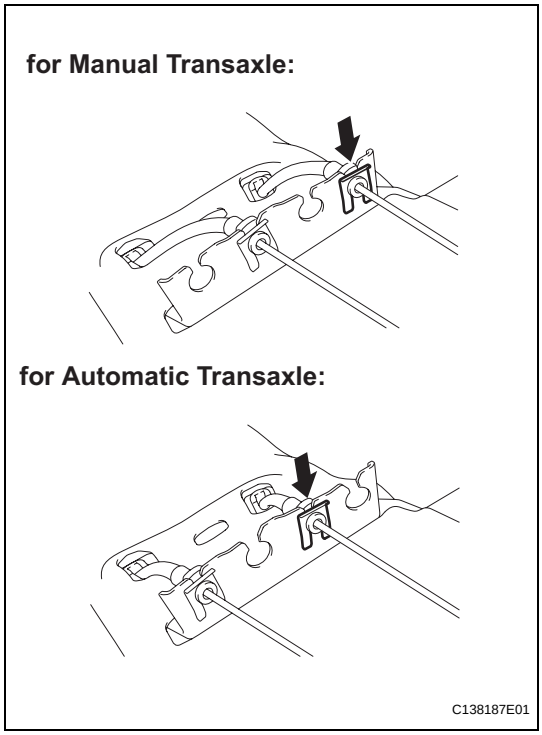
Torque: Bolt (A)
8.5 N*m (87 kgf*cm, 75 in.*lbf)
Bolt (B) and Nut (C)
6.0 N*m (61 kgf*cm, 53 in.*lbf)



PB

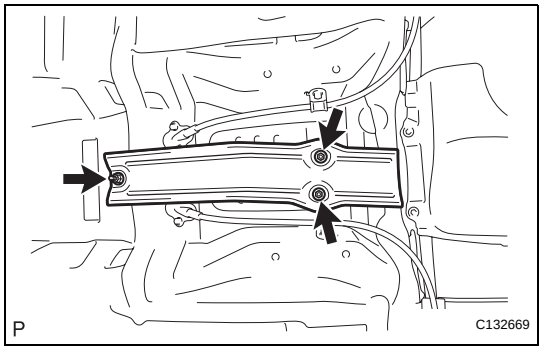


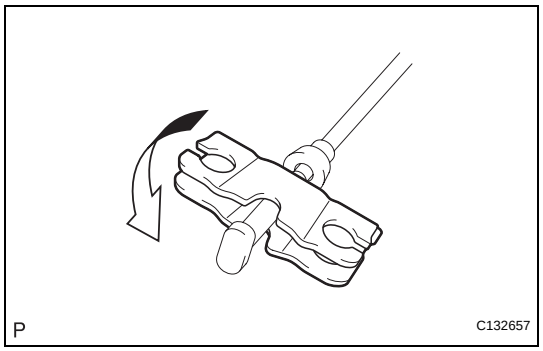
(c) Install the No. 3 parking brake cable assembly to the backing plate with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



(d) Using a brass bar and a hammer, install the clip to the No. 3 parking brake cable assembly.

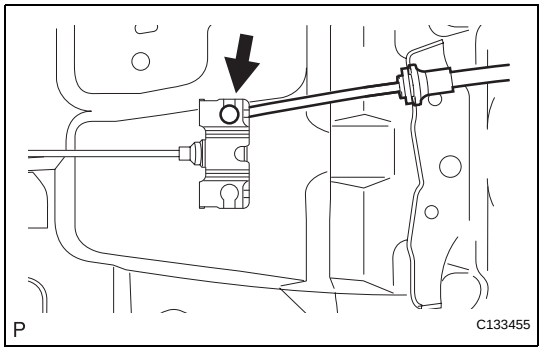
2. **INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-61)**
3. **INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-62)**
4. **INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-62)**
5. **INSTALL PARKING BRAKE SHOE STRUT (See page PB-62)**
6. **INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-62)**
7. **CHECK PARKING BRAKE INSTALLATION (See page PB-63)**
8. **INSTALL REAR DISC (See page PB-63)**
9. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-63)**
10. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-63)**
11. **INSTALL REAR WHEEL**
12. **INSTALL NO. 2 FRONT FLOOR HEAT LOWER INSULATOR (for 2AZ-FE)**
    (a) Install the No. 2 front floor heat lower insulator with the 3 nuts.
    Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)
13. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-4)**
14. **INSTALL EXHAUST CENTER PIPE ASSEMBLY (for 2GR-FE) (See page EX-4)**
15. **INSTALL EXHAUST TAIL PIPE ASSEMBLY (for 2GR-FE) (See page EX-5)**



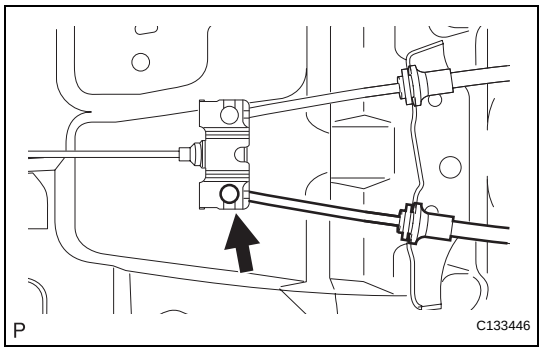


16. **INSTALL NO. 4 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Install the No. 4 parking brake cable assembly to the parking brake equalizer.

    (b) Slide the rubber boot back as shown in the illustration.



17. **CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Connect the No. 2 parking brake cable assembly to the parking brake equalizer.



18. **CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle)**
    (a) Connect the No. 3 parking brake cable assembly to the parking brake equalizer.

19. **INSTALL CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

20. **INSTALL FRONT FLOOR CARPET ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

21. **INSTALL LUGGAGE DOOR LOCK OPEN LEVER SUB-ASSEMBLY (for Automatic Transaxle) (See page PB-18)**

22. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Manual Transaxle) (See page PB-16)**

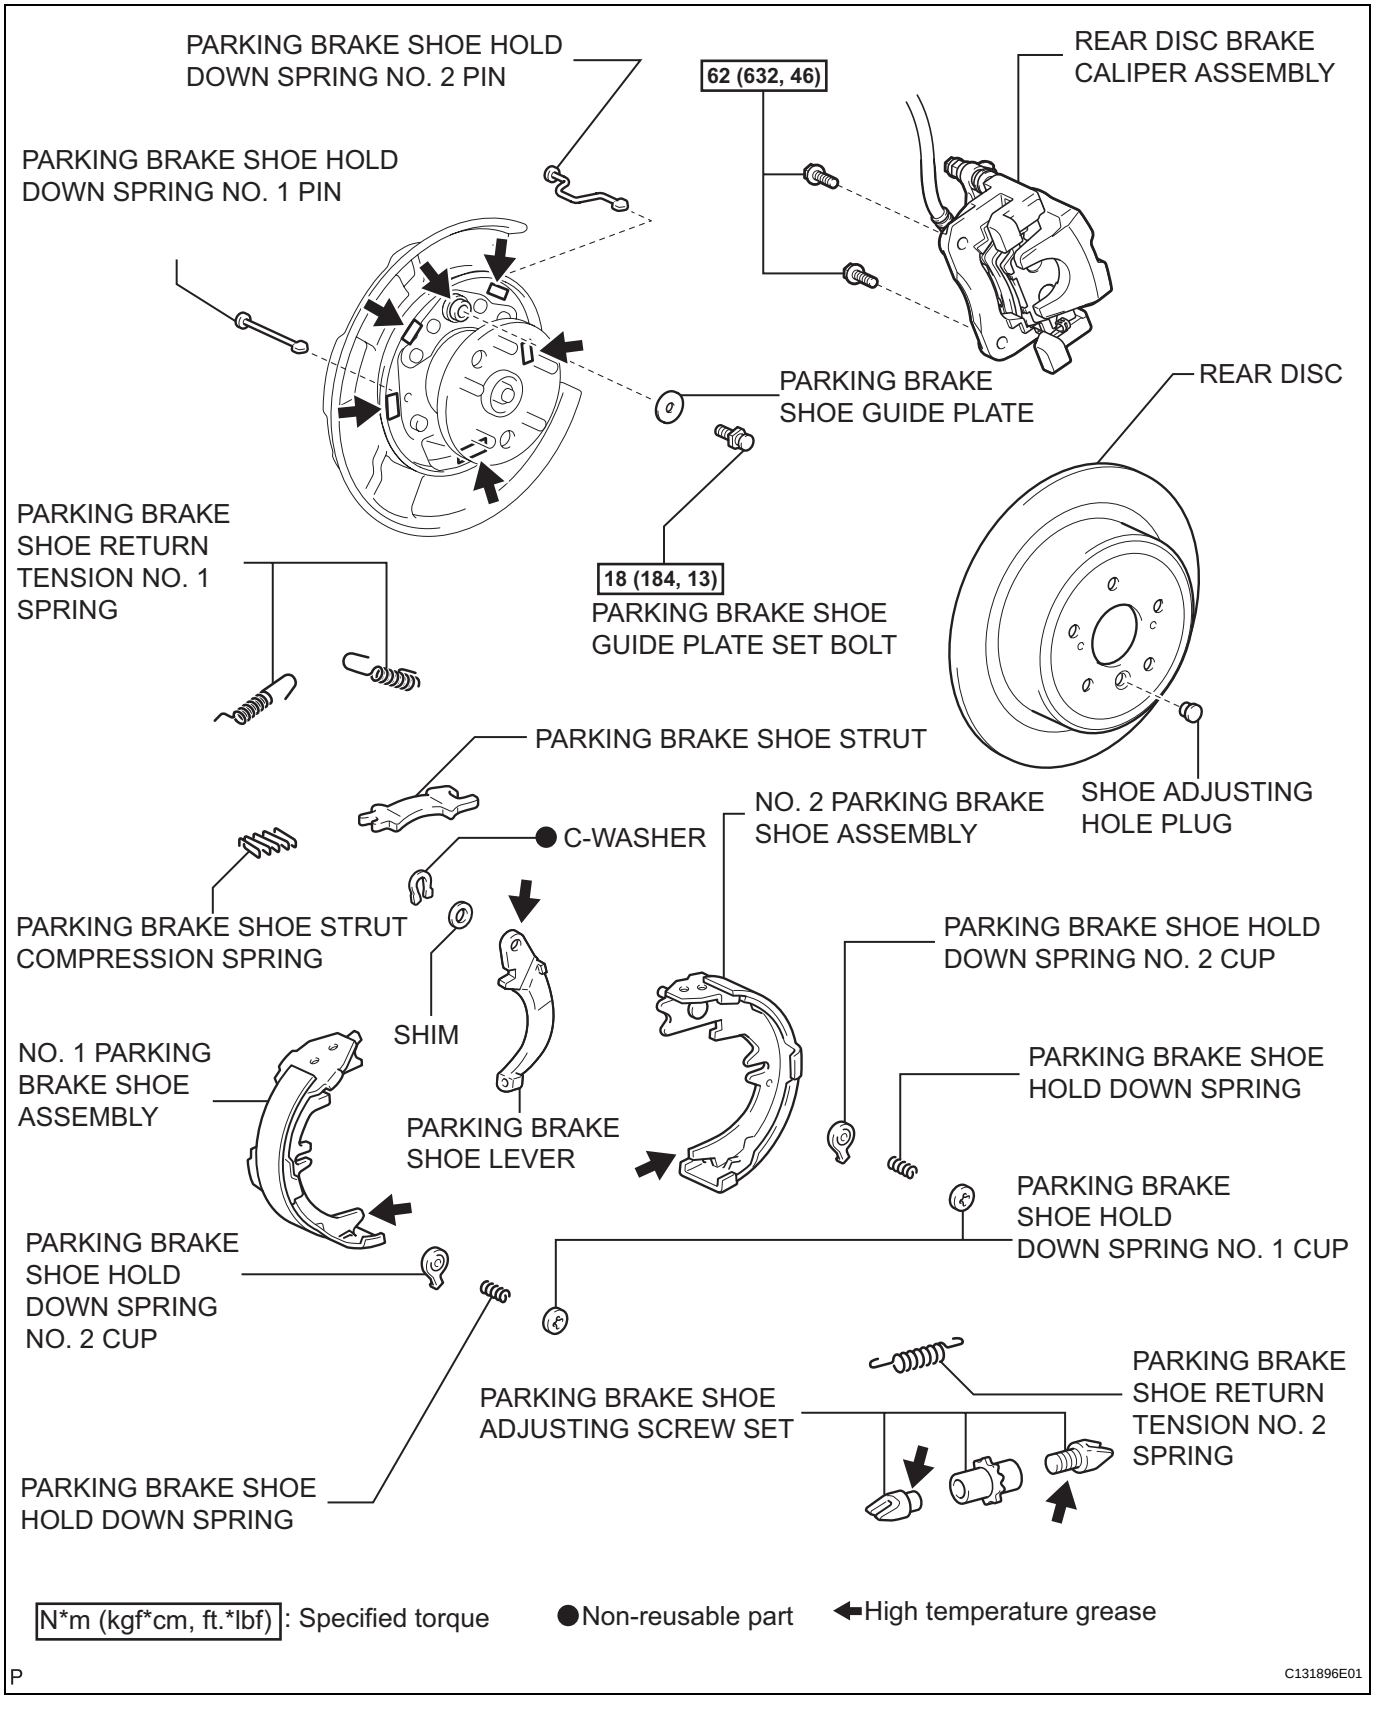
23. **INSTALL PARKING BRAKE LEVER SUB-ASSEMBLY (for Manual Transaxle)**
    HINT:
    Refer to the procedures up to "INSTALL PARKING BRAKE LEVER". (See page PB-17)

PB

24. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY (for Automatic Transaxle) (See page PB-31)**
25. **INSTALL PARKING BRAKE PEDAL ASSEMBLY (for Automatic Transaxle)**
    HINT:
    Refer to the procedures up to "INSTALL PARKING BRAKE PEDAL". (See page PB-32)
26. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-24)
27. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
28. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)**
    HINT:
    Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-41)
29. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
30. **INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**
31. **INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
32. **ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)**
33. **ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)**
34. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
35. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    HINT:
    (See page RS-242)
36. **INSPECT SRS WARNING LIGHT**
37. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**
38. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-42)**
39. **CHECK FOR EXHAUST GAS LEAKS (See page EX-5)**

PARKING BRAKE ASSEMBLY

COMPONENTS



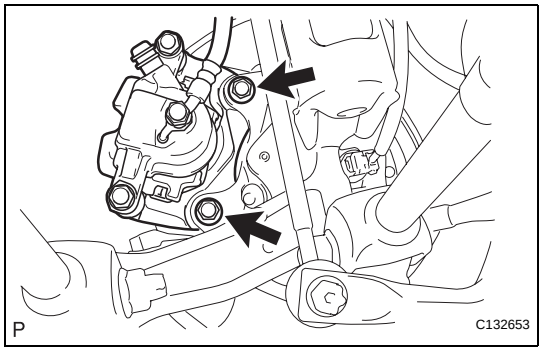
PB

DISASSEMBLY

HINT:

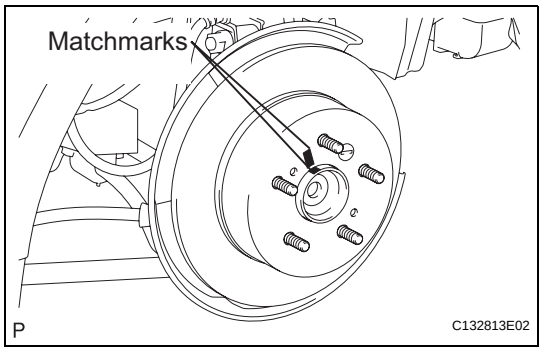
- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL



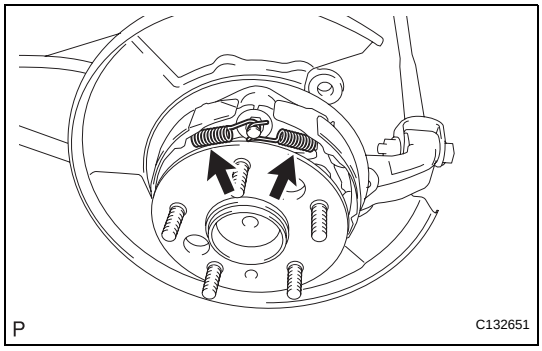
2. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY

(a) Remove the 2 bolts and separate the rear disc brake caliper assembly.
HINT:
Do not disconnect the flexible hose from the disc brake caliper assembly.



3. REMOVE REAR DISC

(a) Release the parking brake and place the matchmarks on the rear disc and the axle hub.
(b) Remove the rear disc.
HINT:
If the disc cannot be removed easily, turn the shoe adjuster until the wheel turns freely.

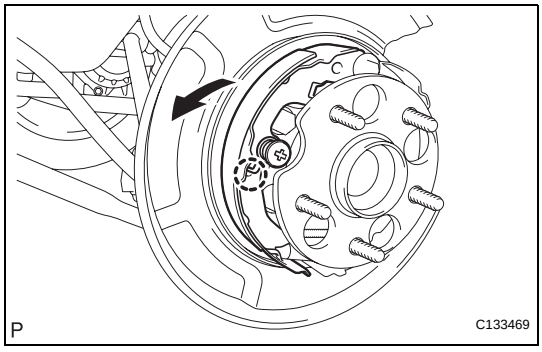


4. REMOVE PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING

(a) Using needle-nose pliers, remove the 2 parking brake shoe return tension No. 1 springs.

5. REMOVE PARKING BRAKE SHOE STRUT

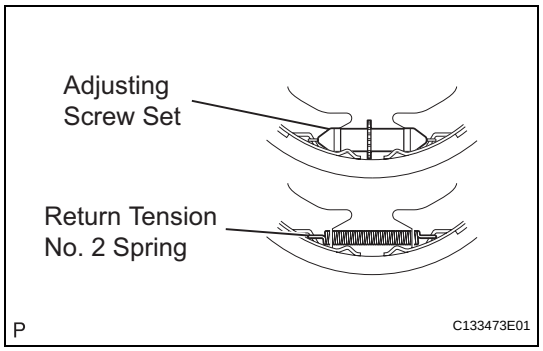
(a) Remove the parking brake shoe strut and the parking brake shoe strut compression spring.



6. REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY

(a) Release the claw of the parking brake shoe hold down spring No. 1 cup.
(b) Remove the No. 1 parking brake shoe assembly as shown in the illustration.
(c) Remove the parking brake shoe hold down spring No. 1 cup, the parking brake shoe hold down spring, the parking brake shoe hold down spring No. 2 cup, and the parking brake shoe hold down spring No. 1 pin.

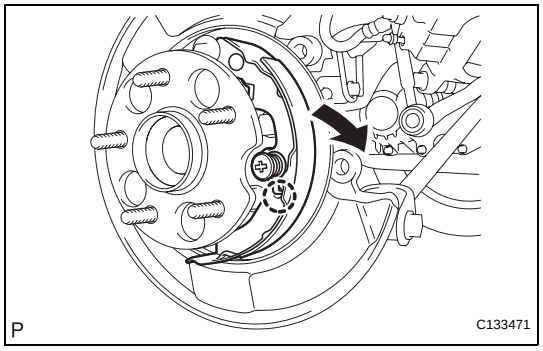
PB



7. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Remove the parking brake shoe adjusting screw set.

(b) Remove the parking brake shoe return tension No. 2 spring.

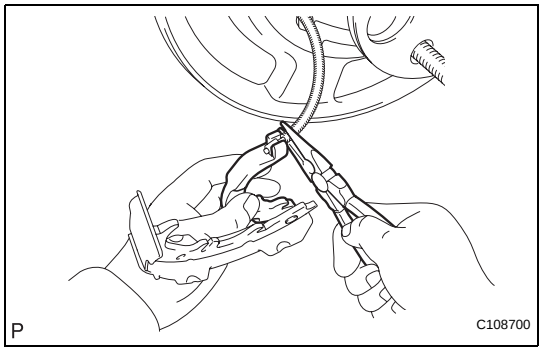


8. REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY

(a) Release the claw of the the parking brake shoe hold down spring No. 1 cup.

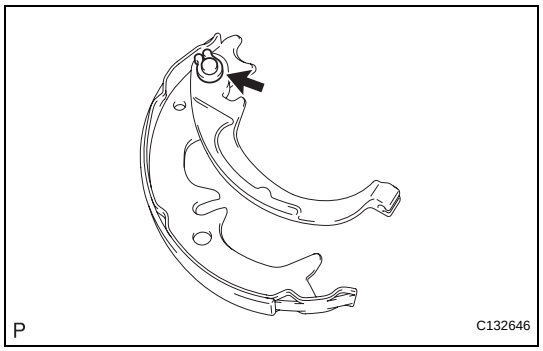
(b) Remove the No. 2 parking brake shoe assembly as shown in the illustration.

(c) Remove the parking brake shoe hold down spring No. 1 cup, the parking brake shoe hold down spring, the parking brake shoe hold down spring No. 2 cup, and the parking brake shoe hold down spring No. 2 pin.



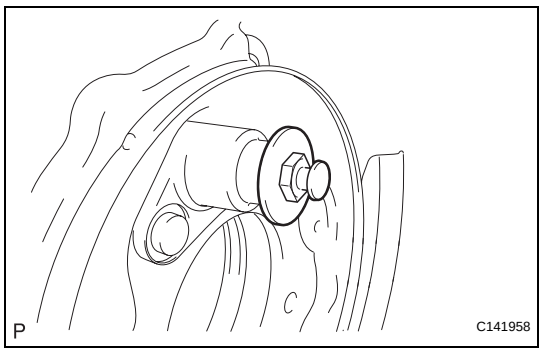
(d) Using needle-nose pliers, disconnect the No. 3 parking brake cable assembly from the parking brake shoe lever.

NOTICE:
Be careful not to damage the No. 3 parking brake cable assembly.



9. REMOVE PARKING BRAKE SHOE LEVER

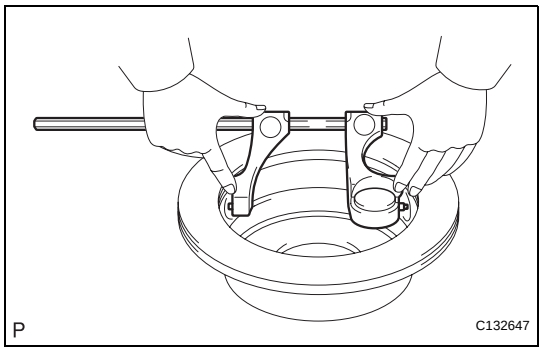
(a) Using a screwdriver, remove the C-washer, shim and the parking brake shoe lever.



10. REMOVE PARKING BRAKE SHOE GUIDE PLATE

(a) Remove the parking brake shoe guide plate set bolt and the parking brake shoe guide plate.

PB



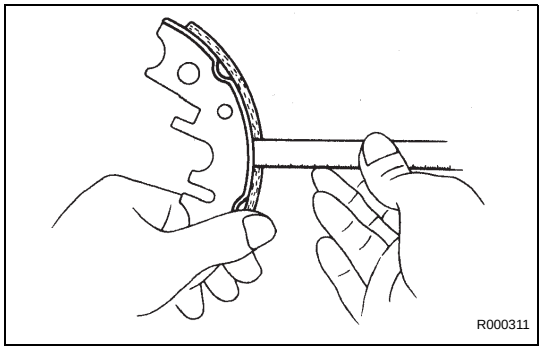
INSPECTION

1. INSPECT BRAKE DISC INSIDE DIAMETER

(a) Using a brake drum gauge or an equivalent tool, measure the inside diameter of the disc.

Standard inside diameter:
170 mm (6.69 in.)
Maximum inside diameter:
171 mm (6.73 in.)

If the inside diameter is more than the maximum, replace the disc.



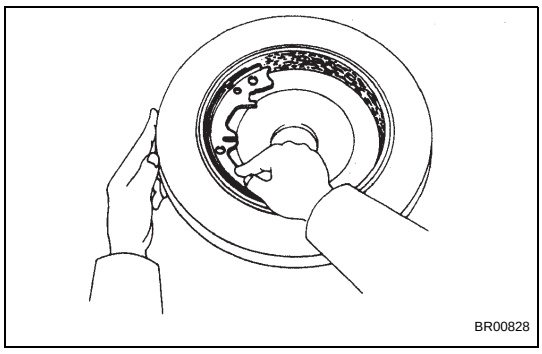
2. INSPECT PARKING BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the thickness of the shoe lining.

Standard thickness:
2.0 mm (0.079 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the lining thickness is less than the minimum, or if there is severe or uneven wear, replace the brake shoe.

NOTICE:
Always replace both the right and left parking brake shoes together.



3. INSPECT BRAKE DISC AND PARKING BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the disc, then grind down the brake shoe lining to fit the disc.
If the contact between the disc and the brake shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe.

PB

REASSEMBLY

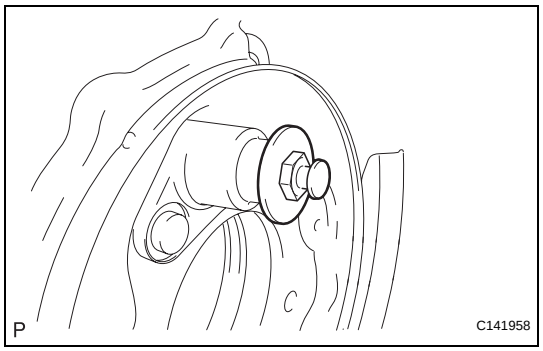
1. APPLY HIGH TEMPERATURE GREASE

(a) Apply high temperature grease to the backing plate which makes contact with the shoe.

2. INSTALL PARKING BRAKE SHOE GUIDE PLATE

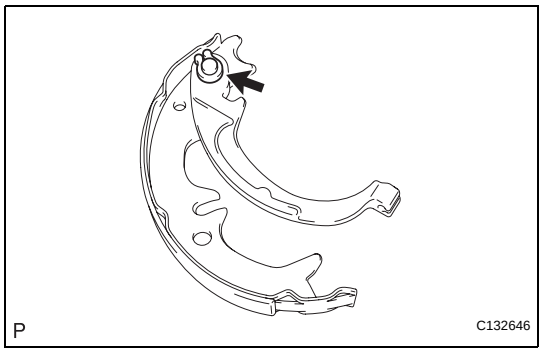
(a) Apply adhesive to the threads of the parking brake shoe guide plate set bolt.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Install the parking brake shoe guide plate with the parking brake shoe guide plate set bolt.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

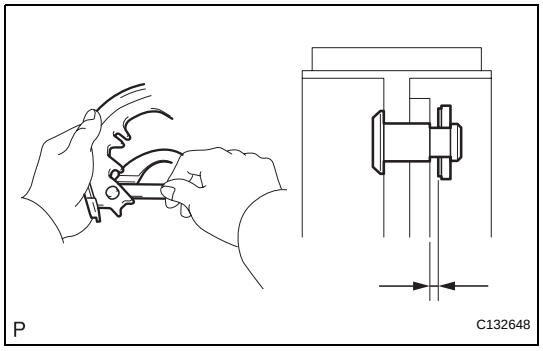


3. INSTALL PARKING BRAKE SHOE LEVER

(a) Install the parking brake shoe lever and shim to the No. 2 parking brake shoe assembly with a new C-washer.



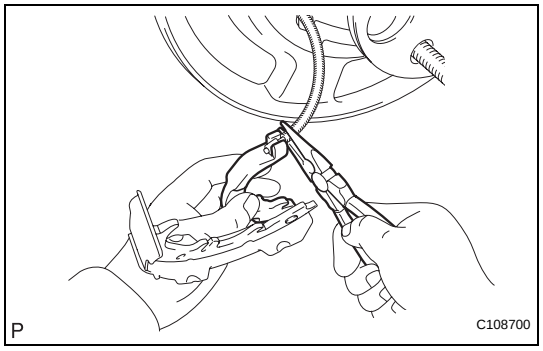
(b) Using a feeler gauge, measure the clearance between the No. 2 parking brake shoe assembly and parking brake shoe lever.
Standard clearance:
Less than 0.35 mm (0.014 in.)
If the clearance is not as specified, replace the shim with one of the correct size.

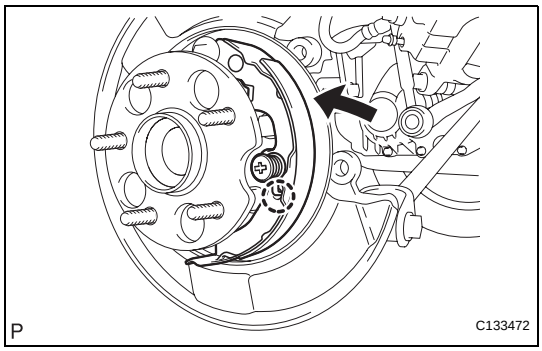


Shim Thickness	Shim Thickness
0.3 mm (0.012 in.)	0.9 mm (0.035 in.)
0.6 mm (0.024 in.)	-

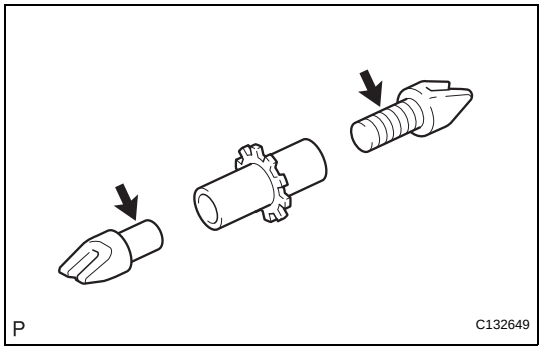
4. INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY

(a) Using needle-nose pliers, connect the No. 3 parking brake cable assembly to the parking brake shoe lever.





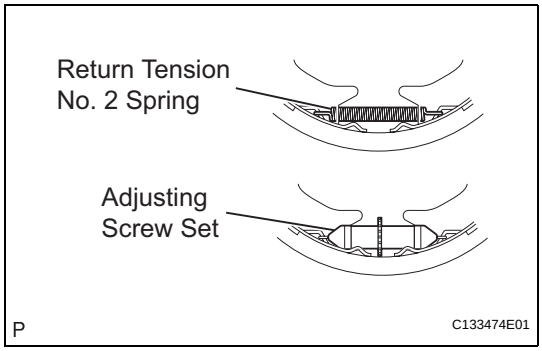
(b) Install the No. 2 parking brake shoe assembly with the parking brake shoe hold down spring No. 2 pin, the parking brake shoe hold down spring No. 2 cup, the parking brake shoe hold down spring and the parking brake shoe hold down spring No. 1 cup.
(c) Engage the claw of the parking brake shoe hold down spring No. 1 cup to the No. 2 parking brake shoe assembly.



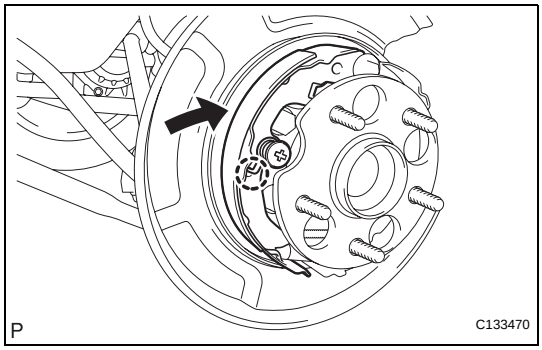
5. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Apply high temperature grease to the parking brake adjusting screw as shown in the illustration.

PB



(b) Install the parking brake shoe return tension No. 2 spring to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.
(c) Install the parking brake shoe adjusting screw set to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.

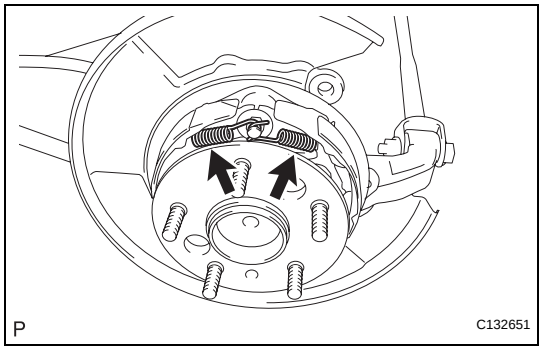


6. INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY

(a) Install the No. 1 parking brake shoe assembly with the parking brake shoe hold down spring No. 1 pin, parking brake shoe hold down spring No. 2 cup, parking brake shoe hold down spring and parking brake shoe hold down spring No. 1 cup.

7. INSTALL PARKING BRAKE SHOE STRUT

(a) Attach the parking brake shoe strut and the parking brake shoe strut compression spring to the No. 1 parking brake shoe assembly and No. 2 parking brake shoe assembly.

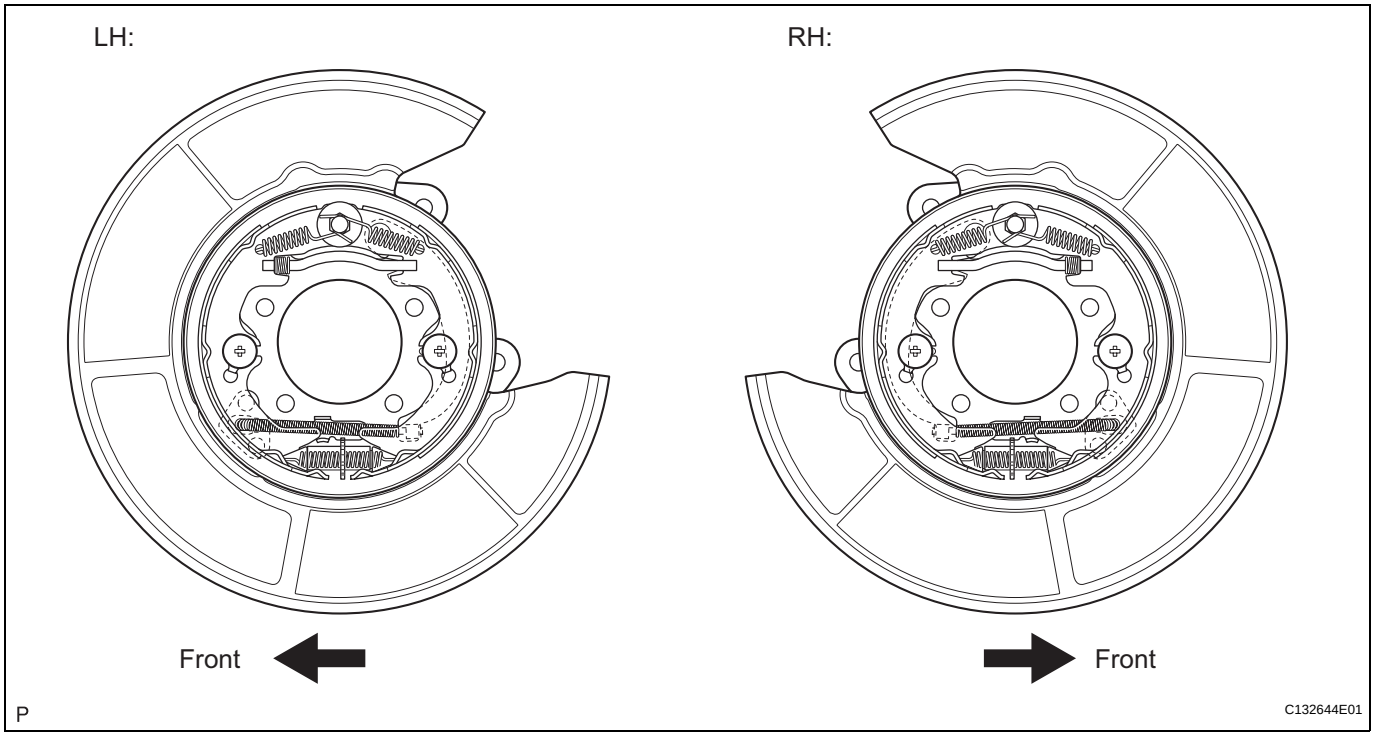


8. INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING

(a) Using needle-nose pliers, install the 2 parking brake shoe return tension No. 1 springs.
HINT:
First install the front side spring and then the rear side spring.

9. CHECK PARKING BRAKE INSTALLATION

(a) Check that each part is installed properly.



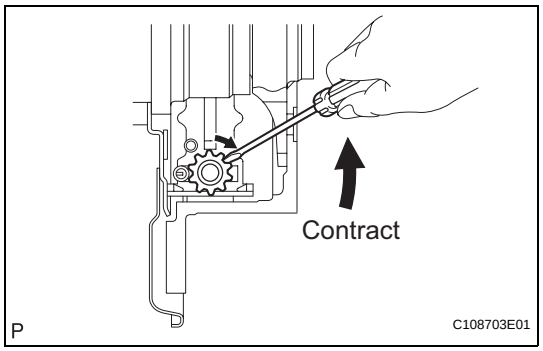
NOTICE:
There should be no oil or grease on the friction surface of the shoe lining and disc.

10. INSTALL REAR DISC

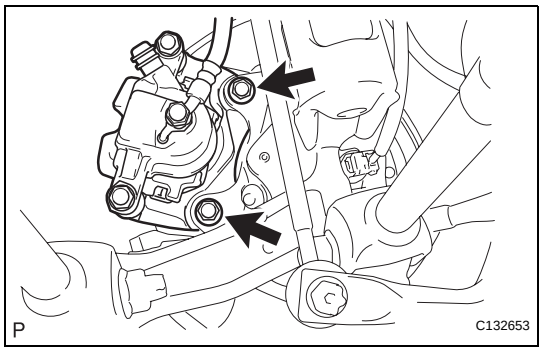
(a) Align the matchmarks and install the rear disc.

11. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.
(b) Remove the shoe adjusting hole plug.
(c) Turn the adjuster and expand the shoes until the disc locks.
(d) Contract the shoe adjuster until the disc rotates smoothly.
Standard:
Return 8 notches
(e) Check that the shoe has no brake drag.
(f) Install the shoe adjusting hole plug.



PB



12. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY

(a) Install the rear disc brake caliper assembly with the 2 bolts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

13. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

14. INSPECT PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)

15. INSPECT PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)

16. ADJUST PARKING BRAKE PEDAL TRAVEL (for Automatic Transaxle) (See page PB-1)

17. ADJUST PARKING BRAKE LEVER TRAVEL (for Manual Transaxle) (See page PB-2)

POWER STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

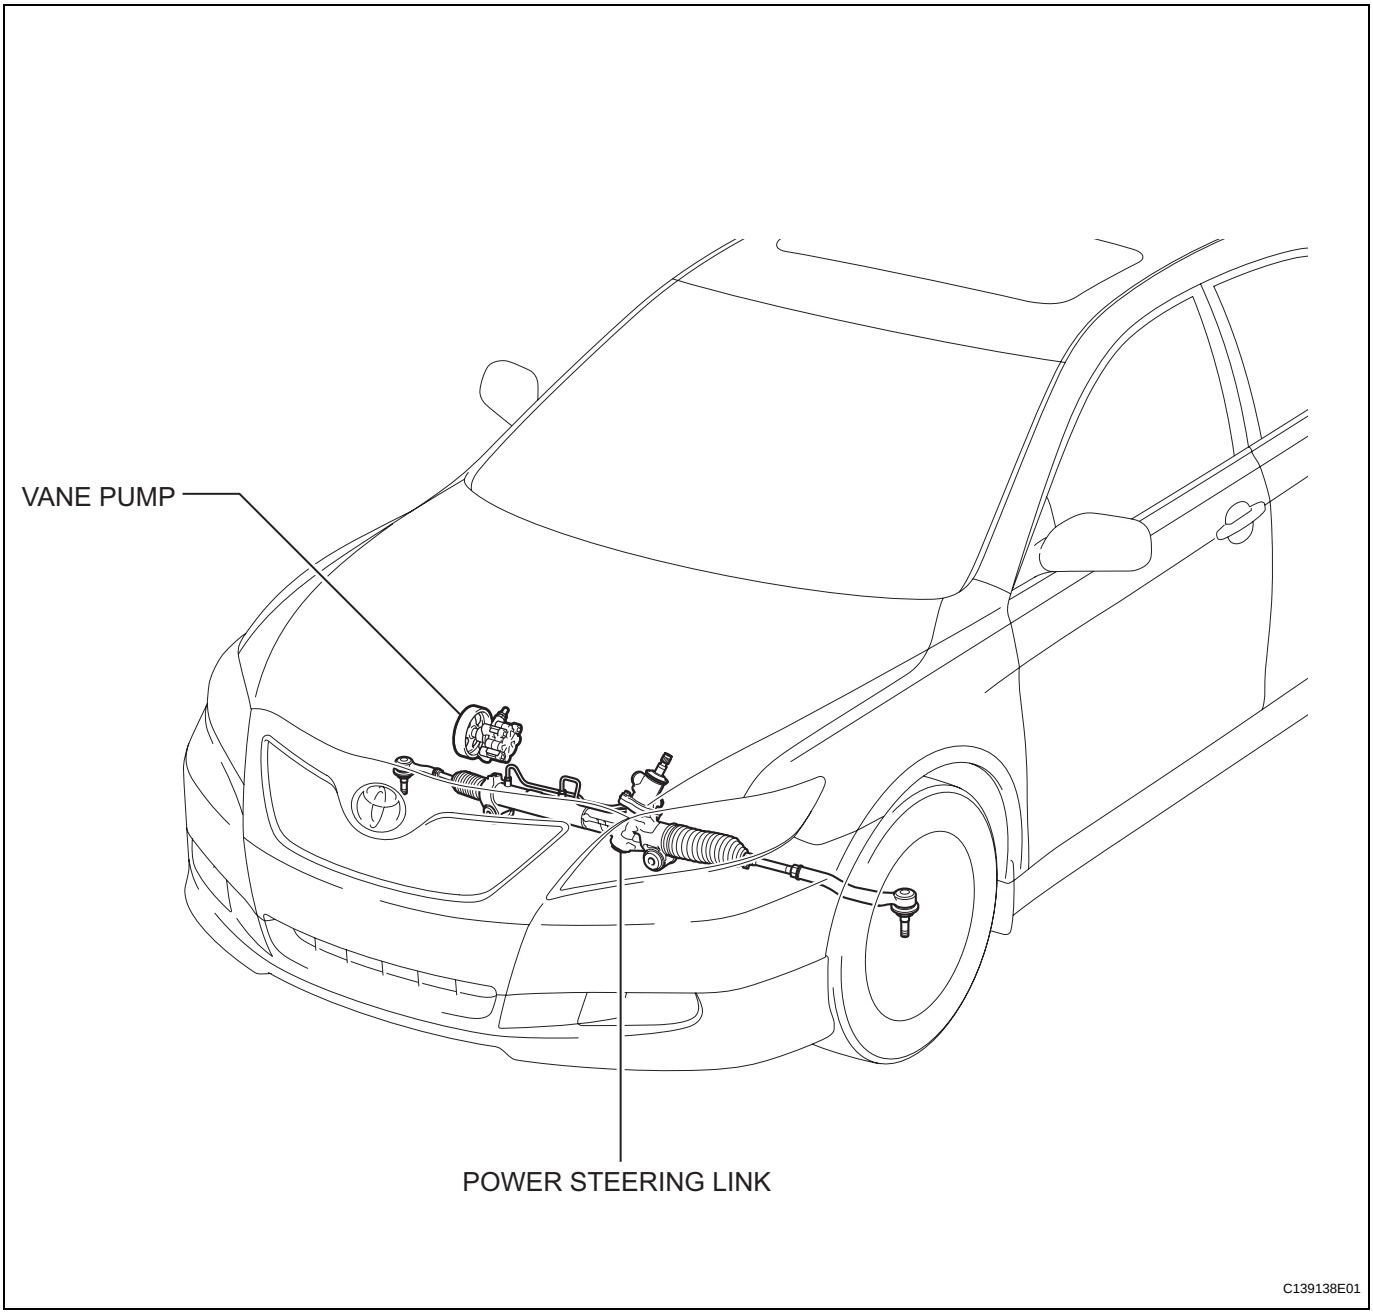
(a) The vehicle is equipped with an SRS (Supplemental Restraint System) such as airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System (See page RS-1).

2. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF POWER STEERING COMPONENTS

(a) Be sure to turn the front wheels straight ahead when removing and installing the power steering link assembly.

(b) If disconnecting the steering sliding yoke and the pinion shaft of the power steering link assembly, be sure to put matchmarks before starting the operation.

PARTS LOCATION



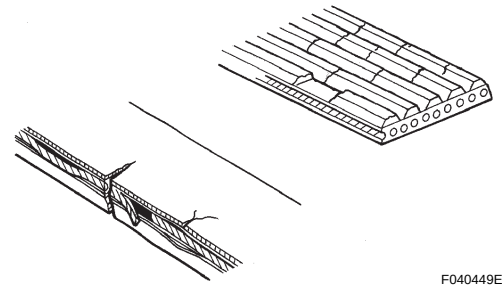
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem. The numbers indicate likely causes of the problem in descending order. Check each part in order. If necessary, repair or replace faulty parts.

POWER STEERING SYSTEM

Symptom	Suspected area	See page
Hard steering	1. Tire (Improperly inflated)	TW-3
	2. Power steering fluid level (Low)	PS-3
	3. Drive belt (Loose) (for 2AZ-FE)	EM-6
	4. Drive belt (Loose) (for 2GR-FE)	EM-6
	5. Front wheel alignment (Incorrect)	SP-4
	6. Steering system joints (Worn)	-
	7. Suspension arm ball joints (Worn)	SP-28
	8. Steering column (Binding)	SR-38
	9. Power steering vane pump (for 2AZ-FE)	PS-10
	10. Power steering vane pump (for 2GR-FE)	PS-24
	11. Power steering gear	PS-40
Poor return	1. Tire (Improperly inflated)	TW-3
	2. Front wheel alignment (Incorrect)	SP-4
	3. Steering column (Binding)	SR-38
	4. Power steering gear	PS-40
Excessive free play	1. Steering system joints (Worn)	-
	2. Suspension arm ball joints (Worn)	SP-28
	3. Front wheel bearing (Worn)	AH-5
	4. Power steering gear	PS-40
Abnormal noise	1. Power steering fluid level (Low)	PS-3
	2. Steering system joints (Worn)	-
	3. Power steering vane pump (for 2AZ-FE)	PS-10
	4. Power steering vane pump (for 2GR-FE)	PS-24
	5. Power steering gear	PS-40

Example:



F040449E03

ON-VEHICLE INSPECTION

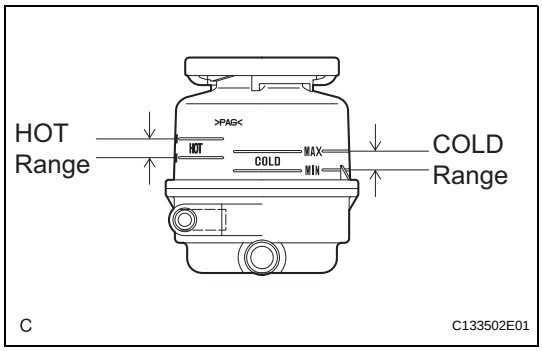
1. INSPECT DRIVE BELT

(a) Visually check the drive belt for excessive wear, frayed cords, etc.
If any defect is found, replace the drive belt.
HINT:
Cracks on the rib side of a belt are considered acceptable. Replace the belt if there are any missing ribs.

2. CHECK POWER STEERING FLUID LEVEL

(a) Keep the vehicle level.

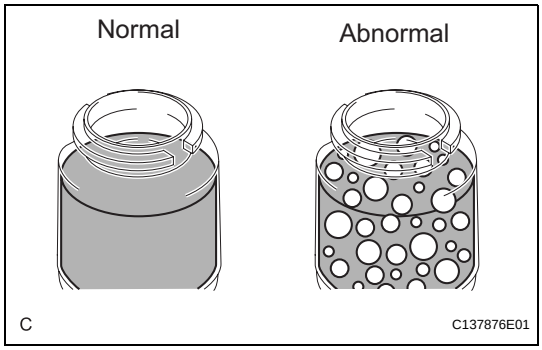
PS



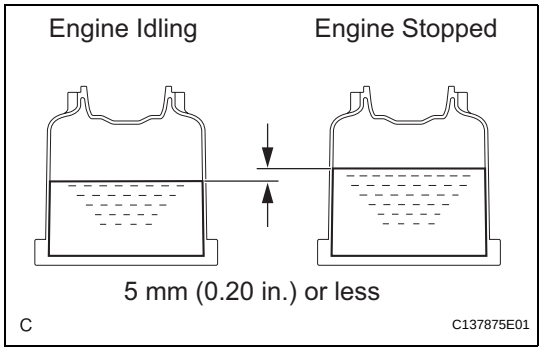
(b) With the engine stopped, check the fluid level in the fluid reservoir.
If necessary, add fluid.
Fluid:
ATF DEXRON II or III, or equivalent
HINT:
If the fluid is hot, check that the fluid level is within the HOT range on the fluid reservoir. If the fluid is cold, check that the fluid level is within the COLD range.

(c) Start the engine and run it at idle.

(d) Turn the steering wheel from lock to lock several times to raise fluid temperature.
Fluid temperature:
70 to 80°C (158 to 176°F)



(e) Check for foaming or emulsification.
If foaming or emulsification is identified, bleed the power steering system (See page PS-7).



(f) With the engine idling, measure the fluid level in the fluid reservoir.

(g) Stop the engine.

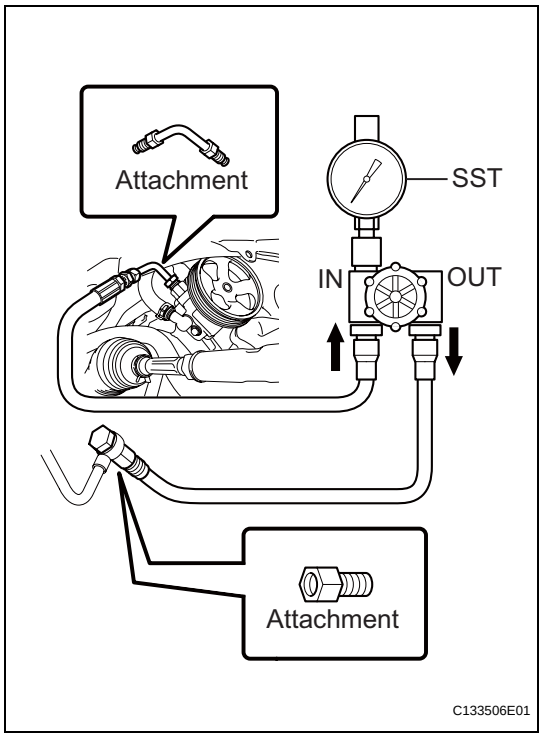
(h) Wait a few minutes and remeasure the fluid level in the fluid reservoir.
Maximum fluid level rise:
5 mm (0.20 in.)
If a problem is found, bleed the power steering system (See page PS-7).

(i) Check the fluid level.

3. INSPECT STEERING FLUID PRESSURE

(a) Disconnect the pressure feed tube assembly from the vane pump assembly (See page PS-10 for 2AZ-FE, PS-24 for 2GR-FE).

PS

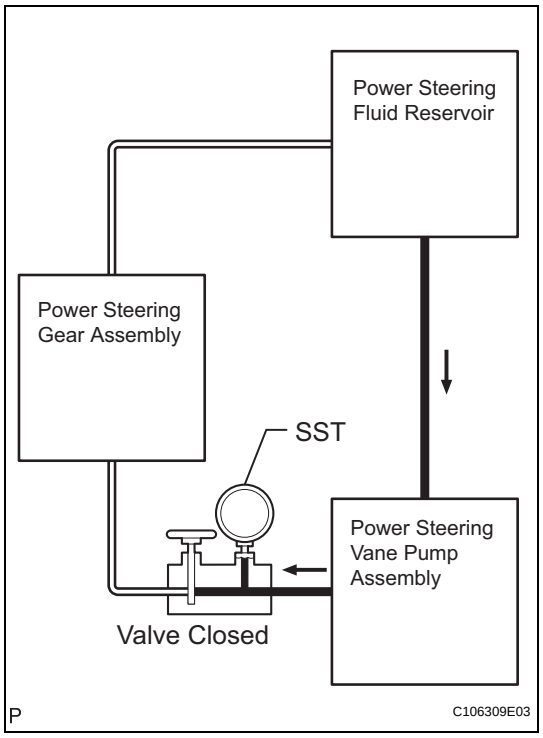


(b) Connect SST as shown in the illustration.
SST 09640-10010 (09641-01010, 09641-01060, 09641-01030)
NOTICE:
Check that the valve of the SST is in the open position.

(c) Bleed the power steering system (See page PS-7).

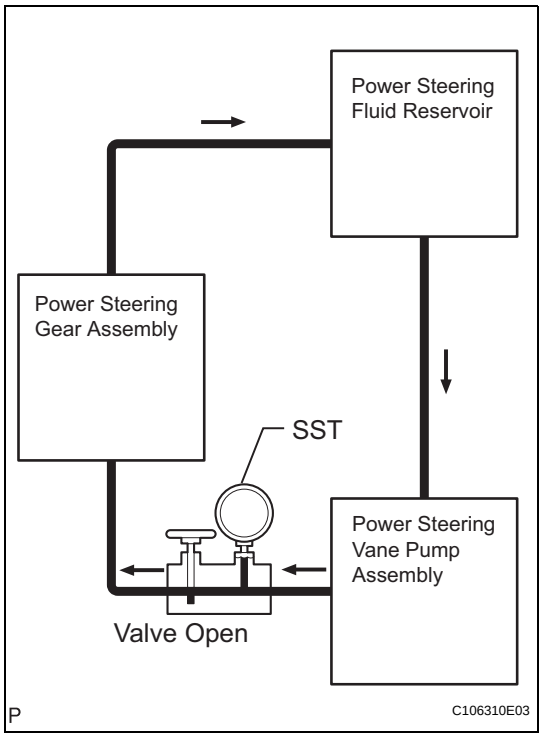
(d) Start the engine and run it at idle.

(e) Turn the steering wheel from lock to lock several times to raise fluid temperature.
Fluid temperature:
70 to 80°C (158 to 176°F)

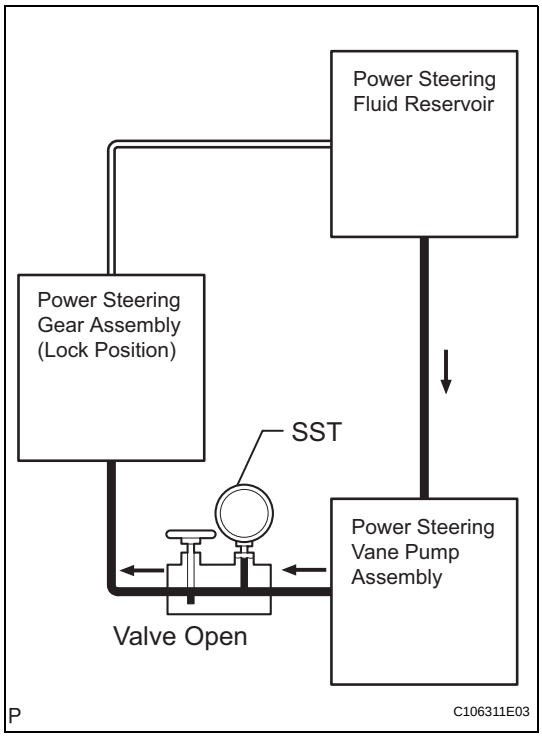


(f) With the engine idling, close the valve of the SST and observe the reading on the SST.
Minimum fluid pressure:
7,800 to 8,300 kPa (79.5 to 84.6 kgf/cm^2, 1,131 to 1,204 psi)
NOTICE:
- **Do not keep the valve closed for more than 10 seconds.**
- **Do not allow the fluid temperature to become too high.**

PS



(g) With the engine idling, open the valve fully.
(h) Measure the fluid pressure at engine speeds of 1,000 rpm and 3,000 rpm.
Fluid pressure difference:
490 kPa (5 kgf/cm^2, 71 psi) or less
NOTICE:
Do not turn the steering wheel.



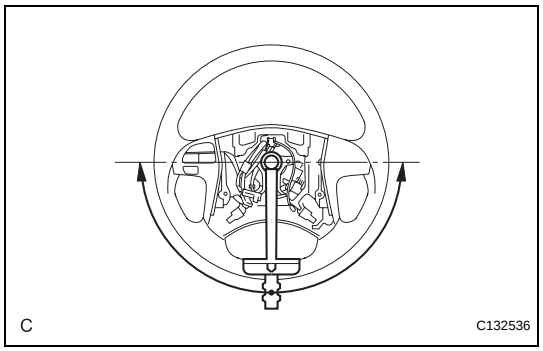
(i) With the engine idling and the valve fully opened, turn the steering wheel left or right to the full lock position. Observe the reading on the SST.
Minimum fluid pressure:
7,800 to 8,300 kPa (79.5 to 84.6 kgf/cm^2, 1,131 to 1,204 psi)
NOTICE:
- **Do not keep the steering wheel in the full lock position for more than 10 seconds.**
- **Do not allow the fluid temperature to become too high.**

(j) Disconnect the SST.
(k) Connect the pressure feed tube assembly to the vane pump assembly (See page PS-20 for 2AZ-FE, PS-34 for 2GR-FE).
(l) Bleed the power steering system (See page PS-7).

4. CHECK STEERING EFFORT

(a) Stop the vehicle on a level, paved surface and turn the wheels straight ahead.
(b) Disconnect the negative (-) battery cable from the battery (See page RS-1).
(c) Remove the steering pad (See page RS-349).
(d) Connect the negative (-) battery cable to the battery.
(e) Using a torque wrench, check if the steering wheel set nut is properly tightened.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
(f) Start the engine and run it at idle.

PS



(g) Turn the steering wheel 90 degrees to the right and check steering effort (torque) while turning the wheel. Check the opposite direction in the same manner.
Torque: Steering effort (Reference)
6.0 N*m (61 kgf*cm, 53 in.*lbf) (LE Grade, XLE Grade)
Steering effort (Reference)
6.8 N*m (69 kgf*cm, 60 in.*lbf) (SE Grade)
HINT:
Check tire type, pressure, and the road surface before making your diagnosis.

(h) Disconnect the negative (-) battery cable from the battery.

(i) Torque the steering wheel set nut.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(j) Install the steering pad (See page RS-350).

(k) Connect the negative (-) battery cable to the battery.

(l) Clear the DTCs (See page RS-41).

(m) Inspect the airbag warning light (See page RS-32).

PS

POWER STEERING FLUID

BLEEDING

1. BLEED POWER STEERING SYSTEM

(a) Check the fluid level (See page PS-3).

(b) Jack up the front of the vehicle and support it with stands.

(c) Turn the steering wheel.

(1) With the engine stopped, turn the steering wheel slowly from lock to lock several times.

(d) Lower the vehicle.

(e) Start the engine.

(1) Run the engine at idle for a few minutes.

(f) Turn the steering wheel.

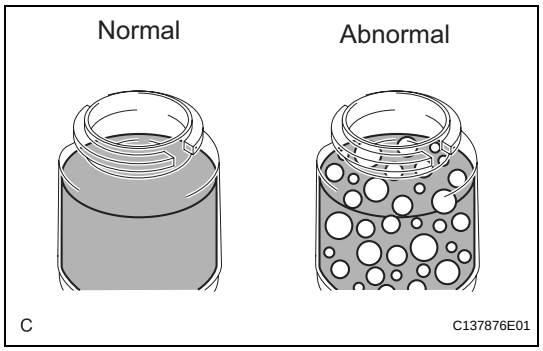
(1) With the engine idling, turn the steering wheel left or right to the full lock position and keep it in that position for 2 to 3 seconds, then turn the steering wheel to the opposite full lock position and keep it there for 2 to 3 seconds.

(2) Repeat this procedure several times.

(g) Stop the engine.

(h) Check for foaming or emulsification.
If the system has to be bled twice because of forming or emulsification, be sure to check for fluid leaks in the system.

(i) Check the fluid level (See page PS-3).



PS

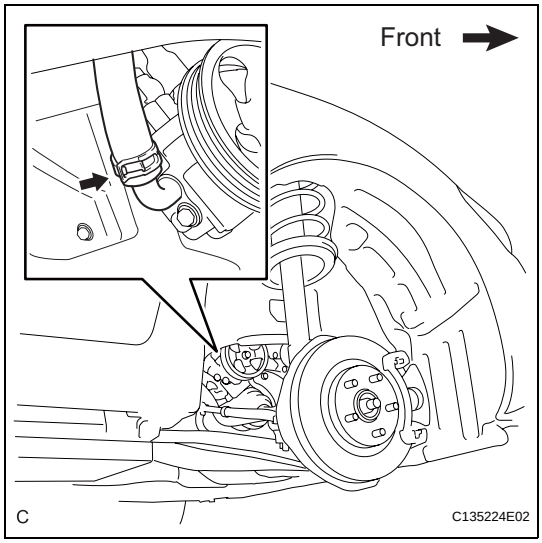
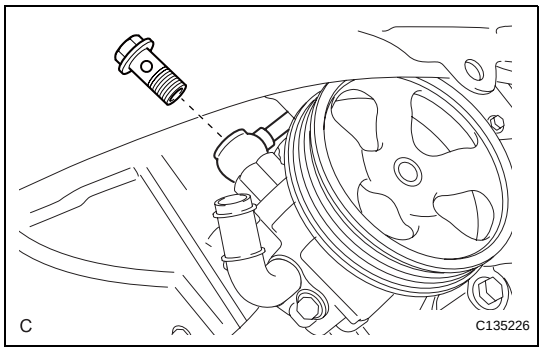
REMOVAL

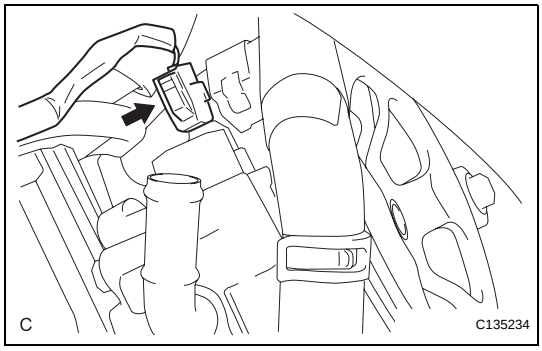
1. **DRAIN POWER STEERING FLUID**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE FRONT FENDER APRON SEAL RH**
5. **REMOVE FAN AND GENERATOR V BELT (See page EM-6)**



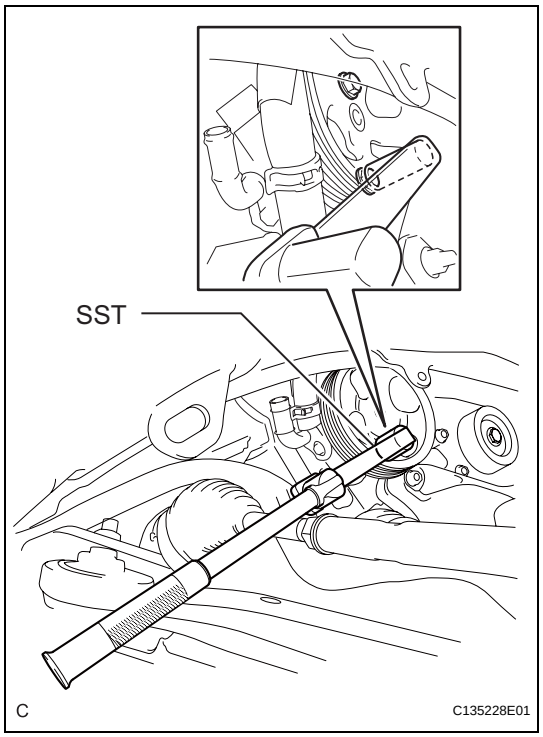
6. **DISCONNECT NO. 1 FLUID RESERVOIR TO PUMP HOSE**
   (a) Slide the clip and disconnect the No. 1 fluid reservoir to pump hose from the vane pump assembly.



7. **DISCONNECT PRESSURE FEED TUBE ASSEMBLY**
   (a) Remove the union bolt and disconnect the pressure feed tube assembly from the vane pump assembly.
   (b) Remove the gasket from the pressure feed tube assembly.

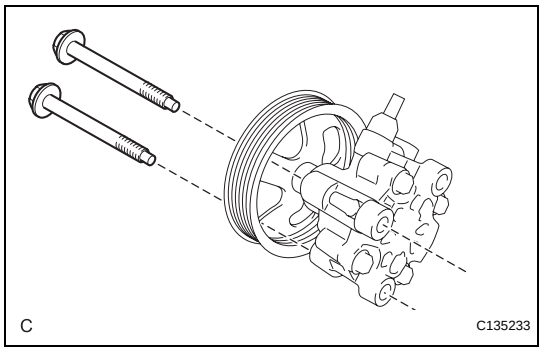


8. **DISCONNECT POWER STEERING FLUID PRESSURE SWITCH CONNECTOR**
   (a) Disconnect the power steering fluid pressure switch connector.



9. REMOVE VANE PUMP ASSEMBLY

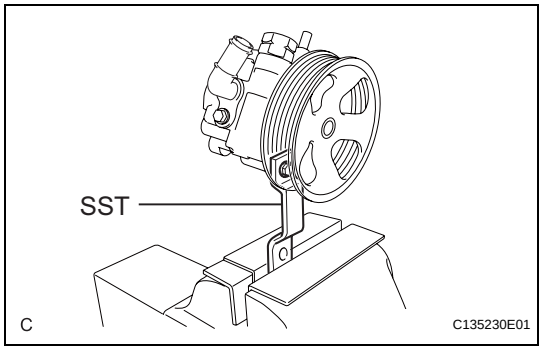
(a) Using SST, loosen the 2 bolts and remove the vane pump assembly.
SST 09249-63010



(b) Remove the 2 bolts from the vane pump assembly.

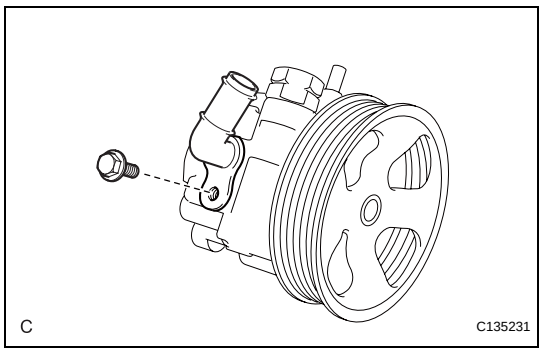
PS

DISASSEMBLY



1. HOLD VANE PUMP ASSEMBLY

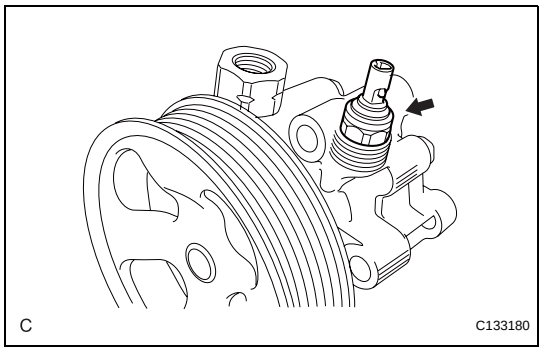
(a) Using SST, hold the vane pump assembly in a vise.
SST 09630-00014 (09631-00132)



2. REMOVE POWER STEERING SUCTION PORT UNION

(a) Remove the bolt and power steering suction port union from the vane pump assembly.

(b) Using a screwdriver, remove the O-ring from the power steering suction port union.

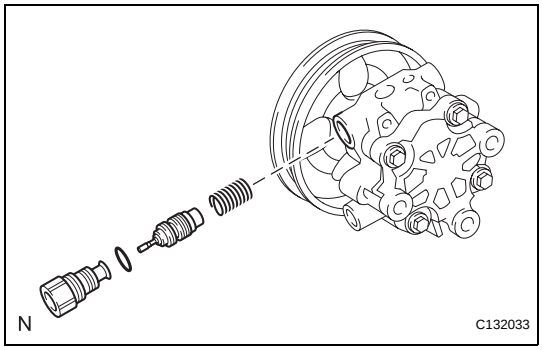


3. REMOVE POWER STEERING FLUID PRESSURE SWITCH

(a) Remove the power steering fluid pressure switch from the vane pump assembly.

NOTICE:

Perform this procedure only when the power steering fluid pressure switch is replaced.

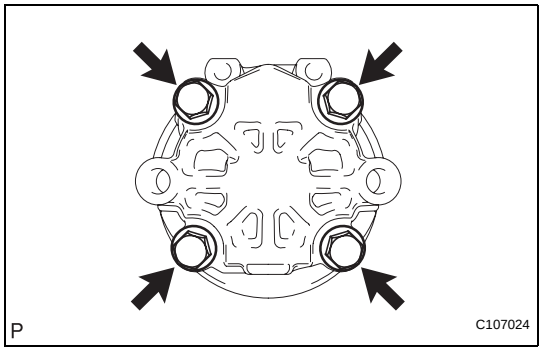


4. REMOVE FLOW CONTROL VALVE ASSEMBLY

(a) Remove the pressure port union.

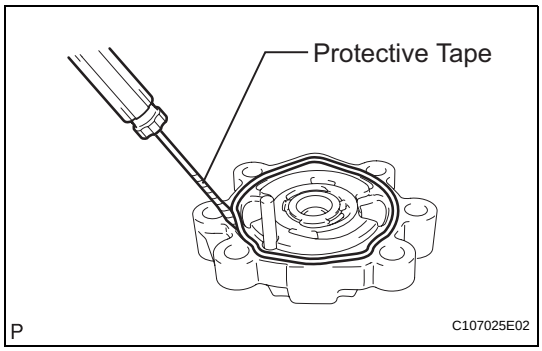
(b) Remove the O-ring from the pressure port union.

(c) Remove the flow control valve assembly and the flow control valve compression spring.



5. REMOVE VANE PUMP REAR HOUSING

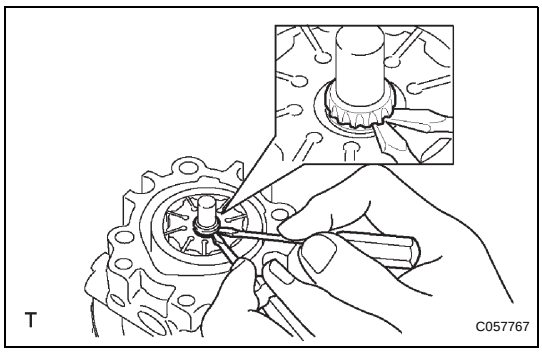
(a) Remove the 4 bolts and vane pump rear housing from the vane pump front housing.



(b) Using a screwdriver, remove the O-ring from the vane pump rear housing.

HINT:

Tape the screwdriver tip before use.

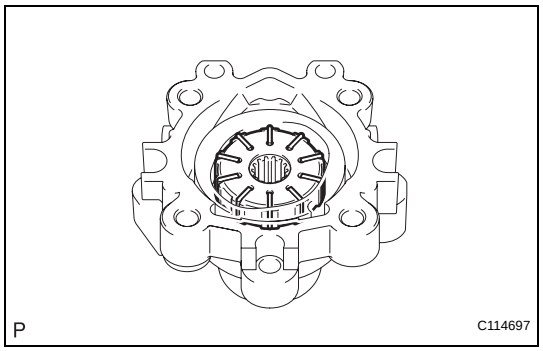


6. REMOVE VANE PUMP SHAFT WITH PULLEY

(a) Using 2 screwdrivers, remove the vane pump shaft snap ring from the vane pump shaft with pulley.

(b) Remove the vane pump shaft with pulley.

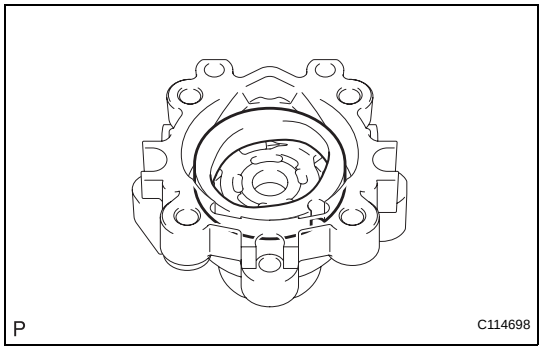
PS



7. REMOVE VANE PUMP ROTOR

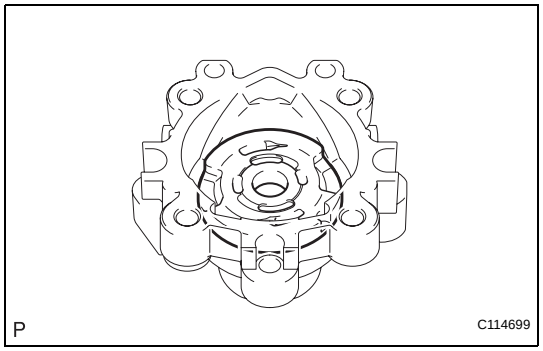
(a) Remove the 10 vane pump plates.

(b) Remove the vane pump rotor.



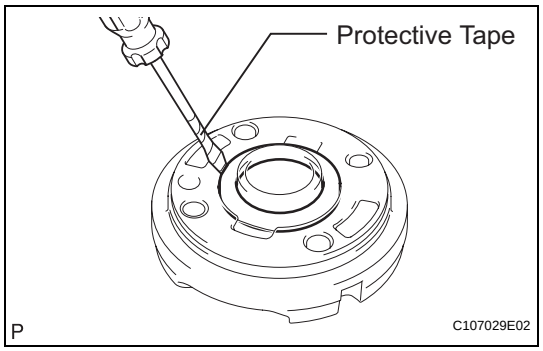
8. REMOVE VANE PUMP CAM RING

(a) Remove the vane pump cam ring from the vane pump front housing.

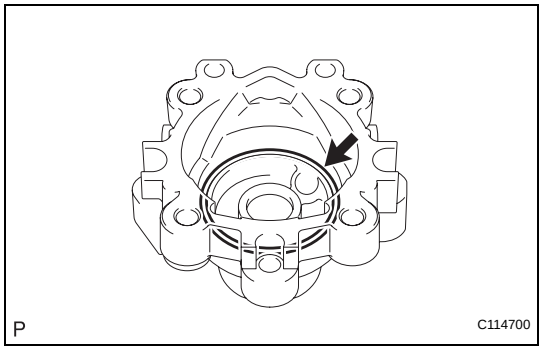


9. REMOVE VANE PUMP FRONT SIDE PLATE

(a) Remove the vane pump front side plate from the vane pump front housing.

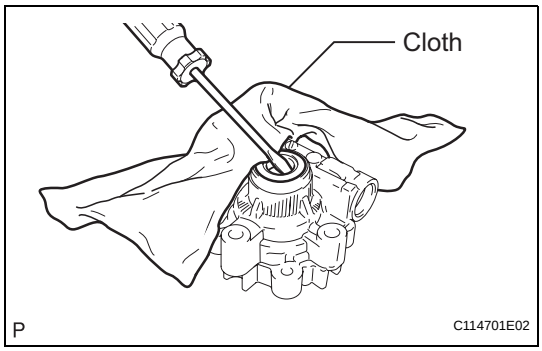


(b) Using a screwdriver, remove the O-ring from the vane pump front side plate.
HINT:
Tape the screwdriver tip before use.



(c) Remove the O-ring from the vane pump front housing.

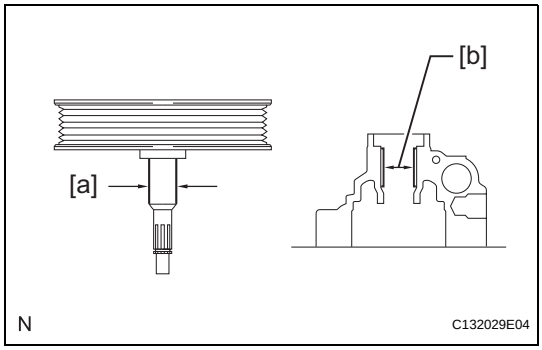
PS



10. REMOVE VANE PUMP HOUSING OIL SEAL

(a) Using a screwdriver and a shop rag or a piece of cloth, remove the vane pump housing oil seal.
NOTICE:
Be careful not to damage the vane pump front housing.

INSPECTION



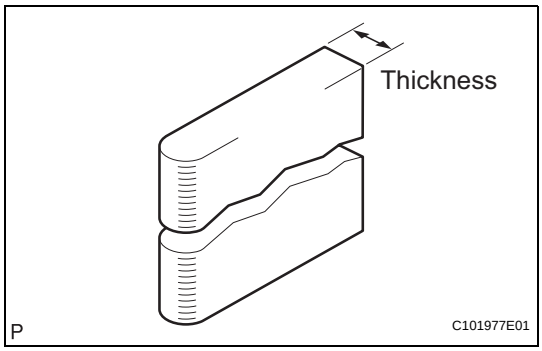
1. INSPECT VANE PUMP SHAFT AND BUSHING IN VANE PUMP FRONT HOUSING

(a) Using a micrometer, measure the outer diameter [a] of the vane pump shaft with pulley.

(b) Using a vernier caliper, measure the inner diameter [b] of the vane pump front housing bushing.

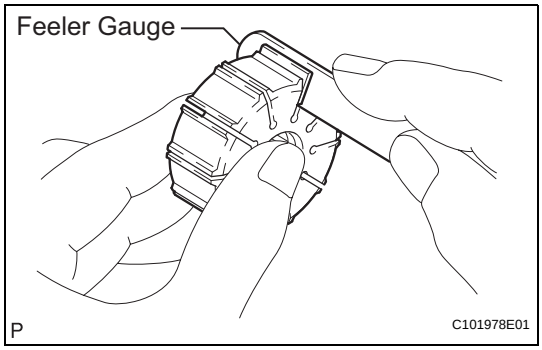
(c) Calculate the oil clearance.
Oil clearance = Inner diameter of the bushing [b] - Outer diameter of the shaft [a].
Maximum oil clearance:
0.07 mm (0.0028 in.)
If oil clearance exceeds the maximum, replace the vane pump assembly.

PS

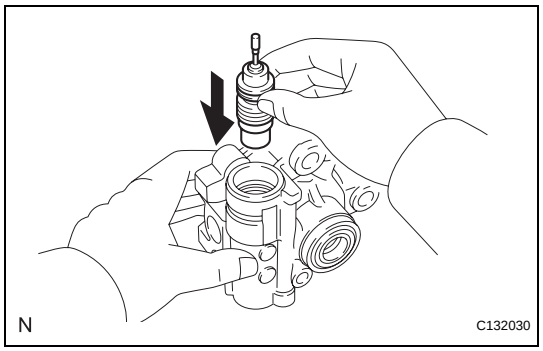


2. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATE CLEARANCE

(a) Using a micrometer, measure the thickness of the vane pump plates.
Standard thickness:
1.405 to 1.411 mm (0.05531 to 0.05555 in.)
If the thickness is not within the specified range, replace the vane pump assembly.

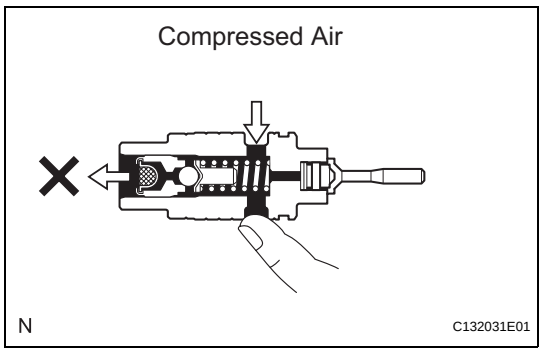


(b) Using a feeler gauge, measure the clearance between the side face of the vane pump rotor groove and the vane pump plates.
Maximum clearance:
0.03 mm (0.0012 in.)
If clearance exceeds the maximum, replace the vane pump assembly.

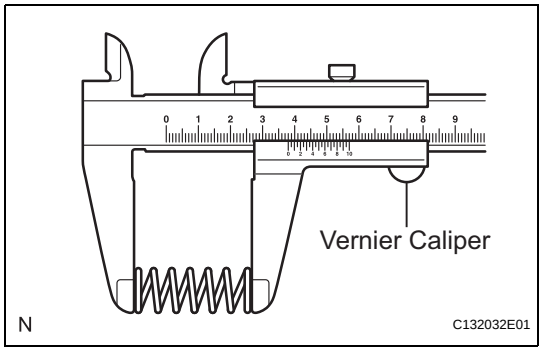


3. INSPECT FLOW CONTROL VALVE ASSEMBLY

(a) Coat the flow control valve assembly with power steering fluid and check that it falls smoothly into the flow control valve due to its own weight.
If the control valve does not fall into the hole smoothly, replace the vane pump assembly.



(b) Check the flow control valve assembly for leakage. Close one of the holes and apply compressed air, 392 to 490 kPa (4 to 5 kgf/cm^2, 57 to 71 psi), into the opposite side hole, and confirm that air does not come out from the end holes.
If air leaks, replace the vane pump assembly.

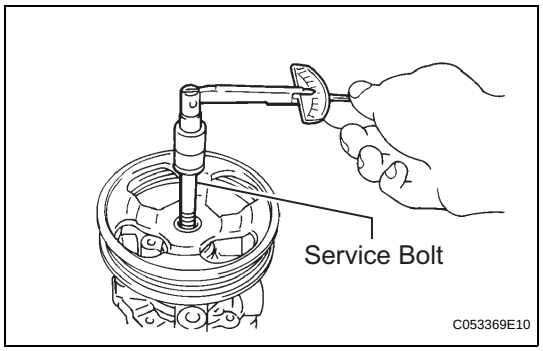


4. INSPECT FLOW CONTROL VALVE COMPRESSION SPRING

(a) Using a vernier caliper, measure the free length of the flow control valve compression spring.
Minimum free length:
29.2 mm (1.150 in.)
If the length is less than the minimum, replace the vane pump assembly.

5. INSPECT PRESSURE PORT UNION

If the union seat in the pressure port union is severely damaged, replace the vane pump assembly.



6. INSPECT TOTAL PRELOAD

(a) Check that the pump rotates smoothly without abnormal noise.

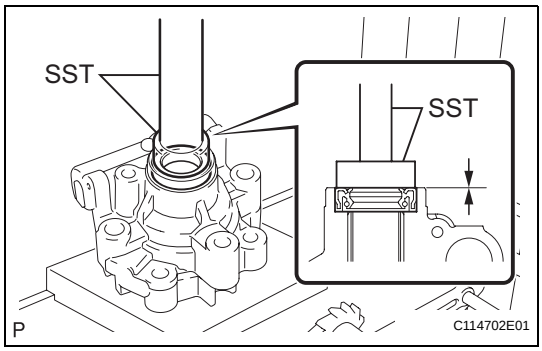
(b) Temporarily install the service bolt.
Recommended service bolt:
Thread diameter:
10 mm (0.39 in.)
Thread pitch:
1.25 mm (0.0492 in.)
Bolt length:
50 mm (1.97 in.)

(c) Using a torque wrench, check the pump rotating torque.
Rotating torque:
0.27 N*m (2.8 kgf*cm, 2.4 in.*lbf) or less
If the rotating torque is not as specified, check the vane pump housing oil seal.

PS

REASSEMBLY

NOTICE:
When installing parts, coat the parts indicated by arrows with power steering fluid (See page PS-8).



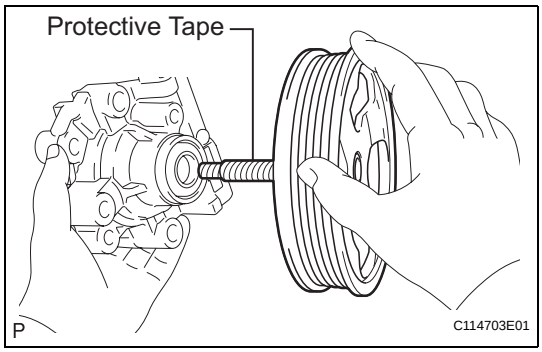
1. INSTALL VANE PUMP HOUSING OIL SEAL

(a) Coat a new vane pump housing oil seal lip with power steering fluid.

(b) Using SST and a press, install the vane pump housing oil seal.

SST 09950-60010 (09951-00280), 09950-70010 (09951-07100)

NOTICE:
Make sure that the oil seal is installed facing in the correct direction as shown in the illustration.



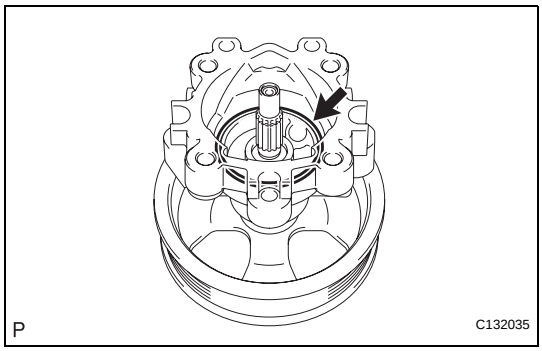
2. INSTALL VANE PUMP SHAFT WITH PULLEY

(a) Coat the inside surface of the bushing in the vane pump front housing with power steering fluid.

(b) Gradually insert the vane pump shaft with pulley.

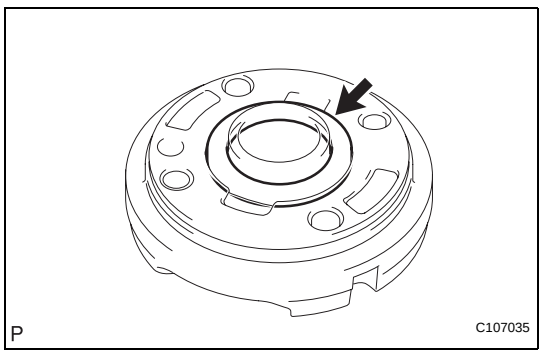
NOTICE:
Do not damage the oil seal lip in the front housing.

HINT:
Wrap protective tape around the spline of the vane pump shaft with pulley in order to prevent damage to the oil seal.



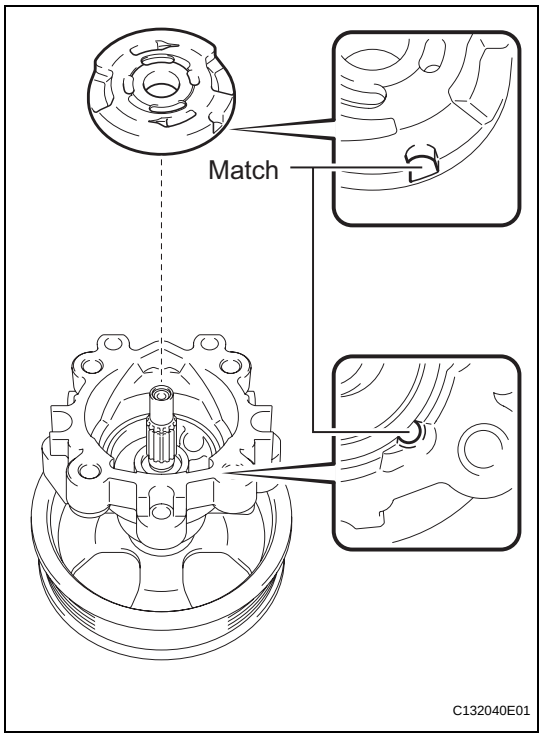
3. INSTALL VANE PUMP FRONT SIDE PLATE

(a) Coat a new O-ring with power steering fluid and install it into the vane pump front housing.

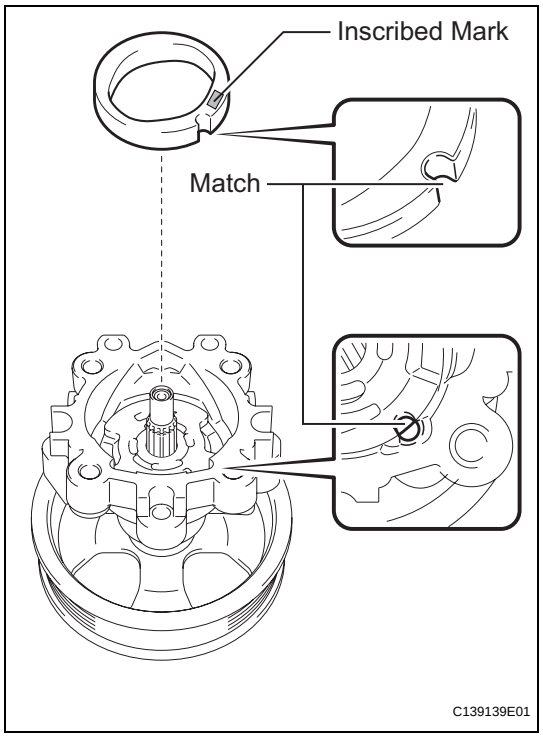


(b) Coat a new O-ring with power steering fluid and install it onto the vane pump front side plate.

PS



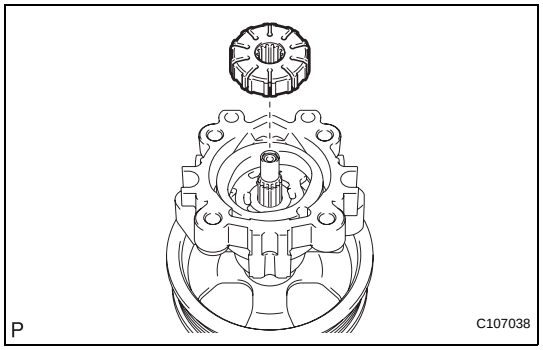
(c) Align the notch of the vane pump front side plate with that of the vane pump front housing, and install the vane pump front side plate.
NOTICE:
Make sure that the vane pump front side plate is installed facing in the correct direction.



4. INSTALL VANE PUMP CAM RING

(a) Align the notch of the cam ring with that of the vane pump front side plate, and install the vane pump cam ring with the inscribed mark facing upward.
NOTICE:
Make sure that the vane pump cam ring is installed facing in the correct direction.

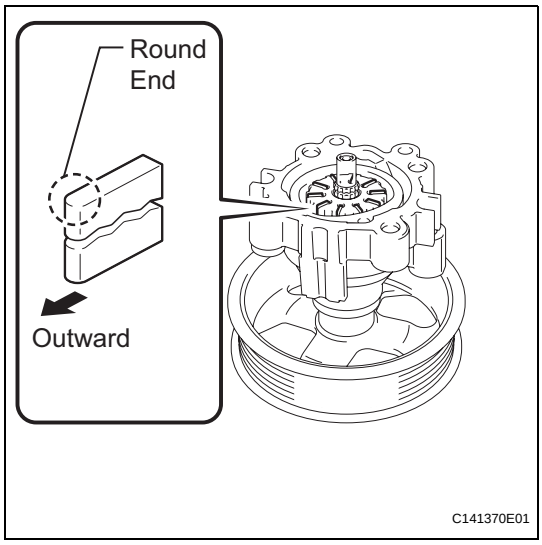
PS



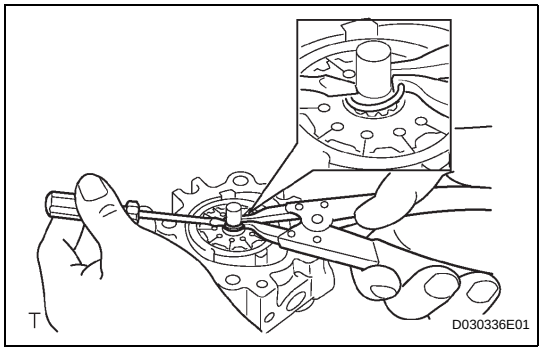
5. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor.
HINT:
Vane pump rotor can be installed in both directions.

(b) Coat the 10 vane pump plates with power steering fluid.

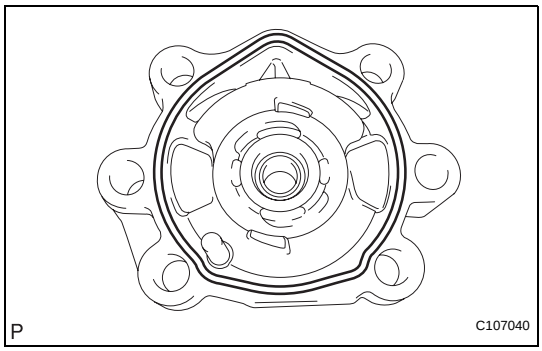


(c) Install the vane pump plates with the round end facing outward.
NOTICE:
Make sure that the vane pump plates are installed facing in the correct direction.



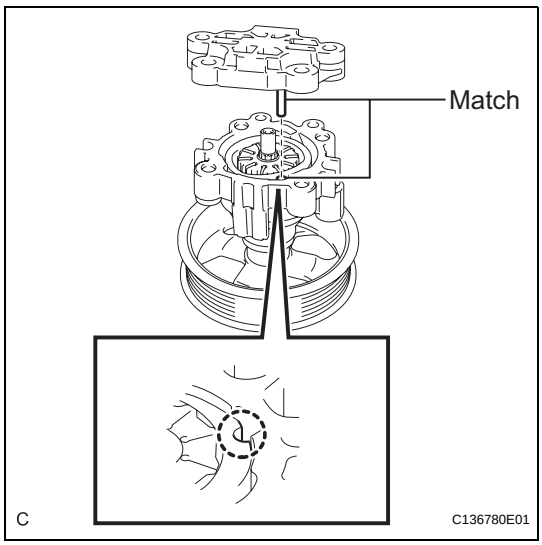
6. INSTALL VANE PUMP SHAFT SNAP RING

(a) Using a screwdriver and a snap ring expander, install a new vane pump shaft snap ring onto the vane pump shaft with pulley.

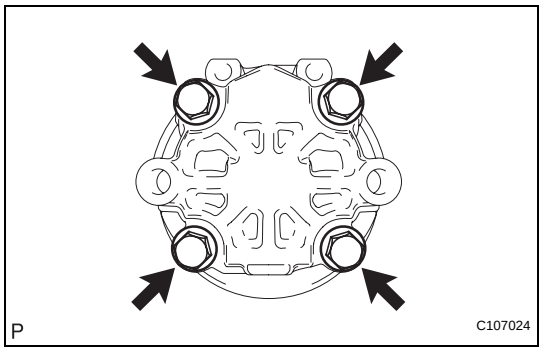


7. INSTALL VANE PUMP REAR HOUSING

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump rear housing.

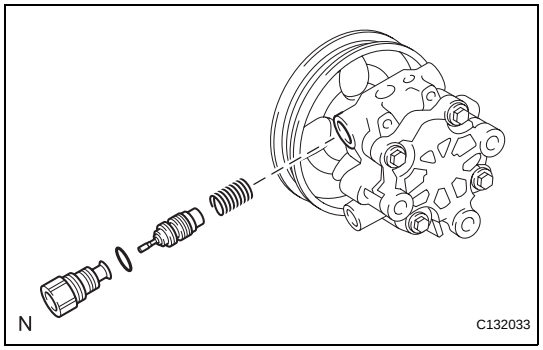


(b) Align the straight pin of the vane pump rear housing with the notches of the vane pump cam ring, vane pump front side plate, and vane pump front housing.



(c) Install the vane pump rear housing with the 4 bolts.
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)

8. INSPECT TOTAL PRELOAD (See page PS-15)



9. INSTALL FLOW CONTROL VALVE ASSEMBLY

(a) Coat the flow control valve assembly with power steering fluid.

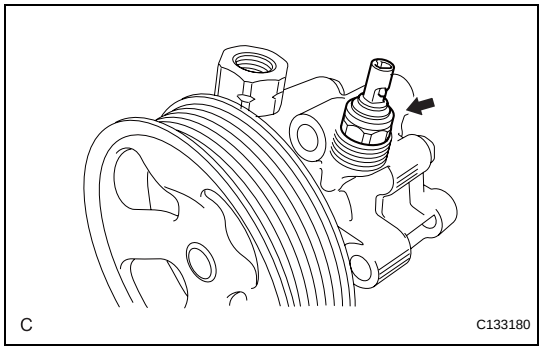
(b) Install the flow control valve compression spring and the flow control valve assembly to the vane pump front housing.

(c) Coat a new O-ring with power steering fluid and install it onto the pressure port union.

(d) Install the pressure port union to the vane pump front housing.
Torque: 69 N*m (704 kgf*cm, 51 ft.*lbf)

10. INSTALL POWER STEERING FLUID PRESSURE SWITCH

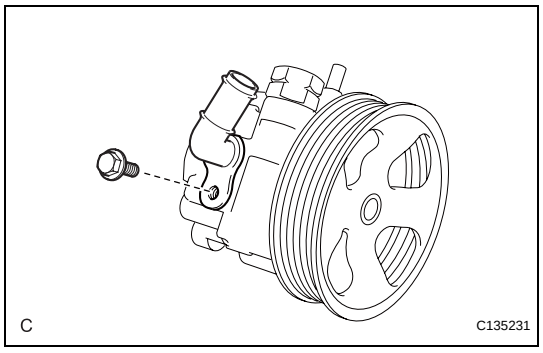
(a) Coat the new O-ring attached to the new power steering fluid pressure switch with power steering fluid.



(b) Install the power steering fluid pressure switch to the vane pump assembly.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
NOTICE:
Do not use a power steering fluid pressure switch that has been subjected an impact; for example, due to it having been dropped.

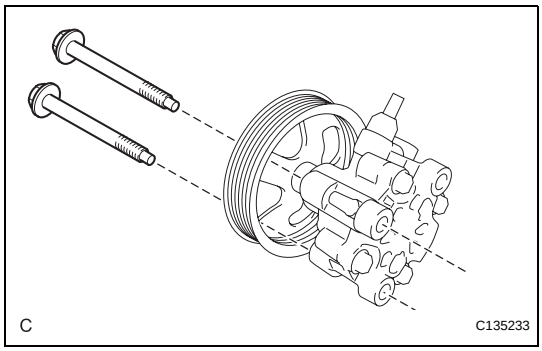
11. INSTALL POWER STEERING SUCTION PORT UNION

(a) Coat a new O-ring with power steering fluid and install it to the power steering suction port union.



(b) Install the power steering suction port union to the vane pump assembly with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

PS

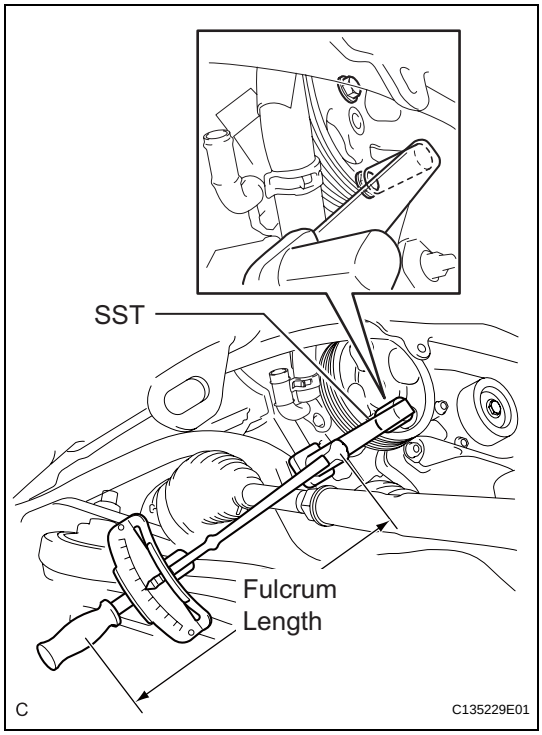


INSTALLATION

1. INSTALL VANE PUMP ASSEMBLY

(a) Temporarily install the 2 bolts to the vane pump assembly.

(b) Install the vane pump assembly.



(c) Using SST, tighten the 2 bolts.

SST 09249-63010

Torque: Without SST

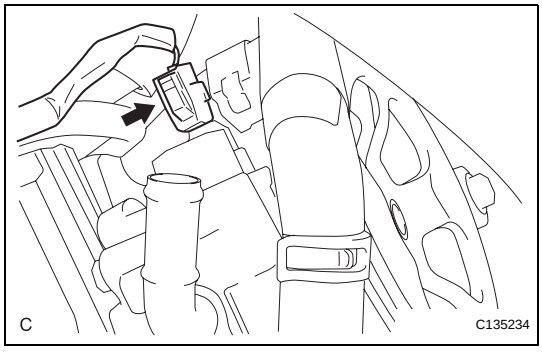
43 N*m (439 kgf*cm, 32 ft.*lbf)

With SST

29 N*m (294 kgf*cm, 21 ft.*lbf)

NOTICE:

- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is accurate when SST is parallel to the torque wrench.**



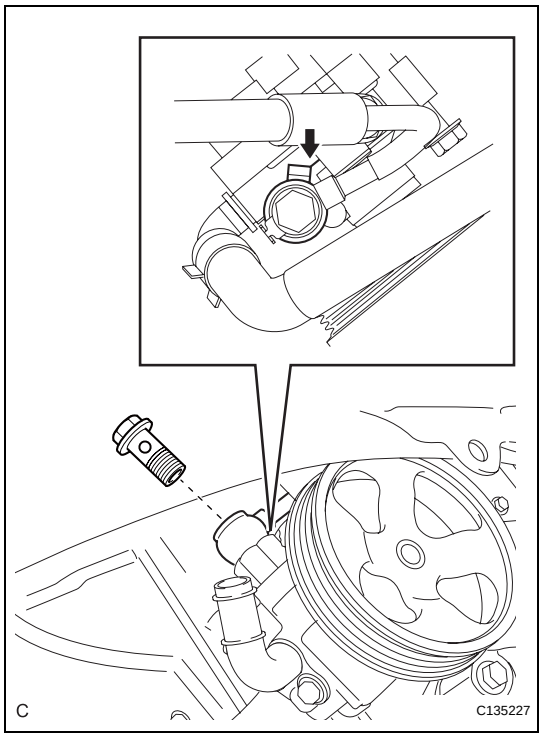
2. CONNECT POWER STEERING FLUID PRESSURE SWITCH CONNECTOR

(a) Connect the connector to the power steering fluid pressure switch.

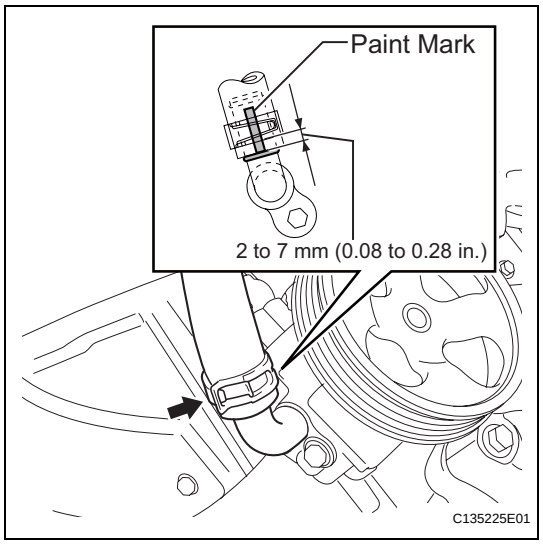
3. CONNECT PRESSURE FEED TUBE ASSEMBLY

(a) Install a new gasket to the pressure feed tube assembly.

PS



(b) Connect the pressure feed tube assembly to the vane pump assembly with the union bolt.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
NOTICE:
Make sure that the stopper of the pressure feed tube assembly contacts the vane pump assembly securely as shown in the illustration.



4. CONNECT NO. 1 FLUID RESERVOIR TO PUMP HOSE

(a) Connect the No. 1 fluid reservoir to pump hose to the vane pump assembly with the clip.
NOTICE:
- **Connect the No. 1 oil reservoir to pump hose with the paint mark facing toward the rear of the vehicle.**
- **Push the No. 1 oil reservoir to pump hose as far as it will go as shown in the illustration.**
- **Install the clip at the position specified in the illustration.**

5. INSTALL FAN AND GENERATOR V BELT (See page EM-6)

6. ADD POWER STEERING FLUID

7. BLEED POWER STEERING FLUID (See page PS-7)

8. CHECK POWER STEERING FLUID LEVEL (See page PS-3)

9. CHECK FOR POWER STEERING FLUID LEAKS

10. INSTALL FRONT FENDER APRON SEAL RH

11. INSTALL ENGINE UNDER COVER RH

12. INSTALL FRONT WHEEL RH
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

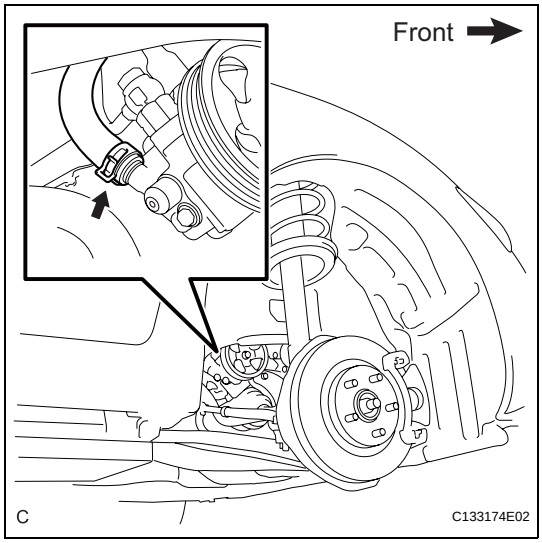
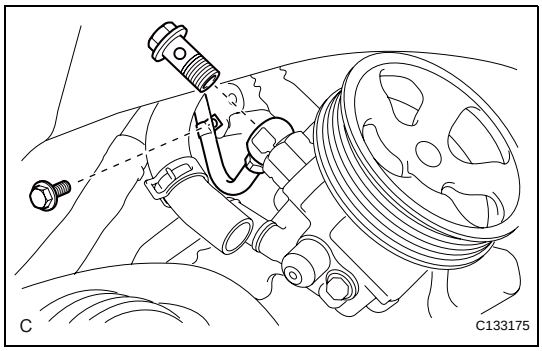
REMOVAL

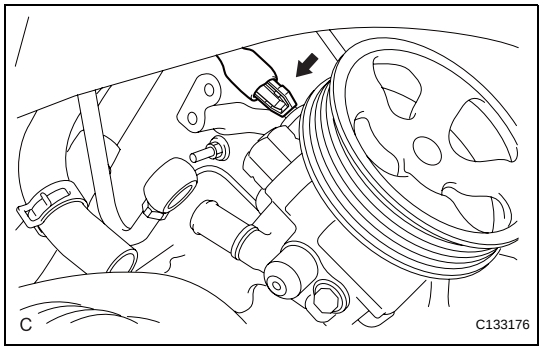
1. **DRAIN POWER STEERING FLUID**
2. **REMOVE FRONT WHEEL RH**
3. **REMOVE FRONT FENDER APRON SEAL RH**
4. **REMOVE V-BANK COVER SUB-ASSEMBLY**
5. **REMOVE FAN AND GENERATOR V BELT (See page EM-6)**



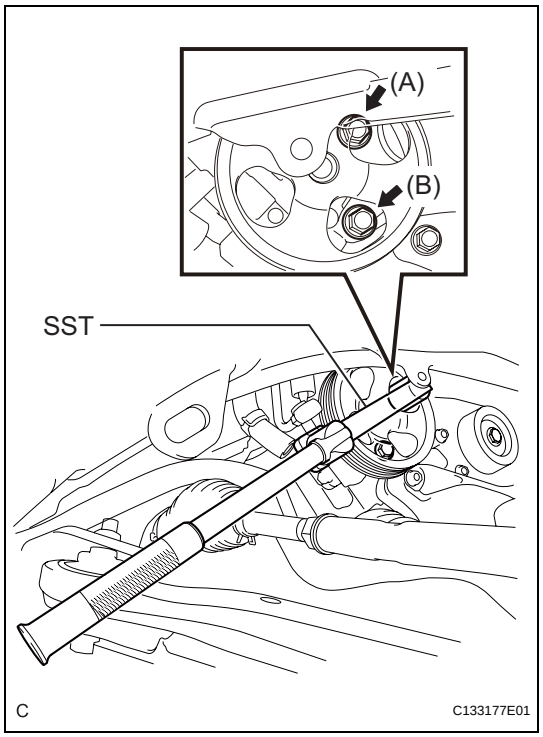
6. **DISCONNECT NO. 1 FLUID RESERVOIR TO PUMP HOSE**
   (a) Slide the clip and disconnect the No. 1 fluid reservoir to pump hose from the vane pump assembly.



7. **DISCONNECT PRESSURE FEED TUBE ASSEMBLY**
   (a) Remove the union bolt and disconnect the pressure feed tube assembly from the vane pump assembly.
   (b) Remove the bolt and separate the pressure feed tube clamp.
   (c) Remove the gasket from the pressure feed tube assembly.

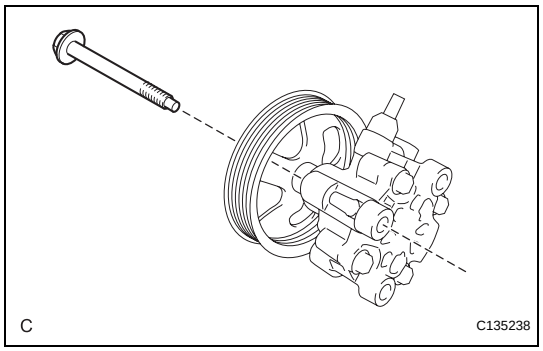


8. **DISCONNECT POWER STEERING FLUID PRESSURE SWITCH CONNECTOR**
   (a) Disconnect the power steering fluid pressure switch connector.



9. REMOVE VANE PUMP ASSEMBLY

(a) Using SST, loosen bolt (A) and remove bolt (B), and then remove the vane pump assembly.
SST 09249-63010



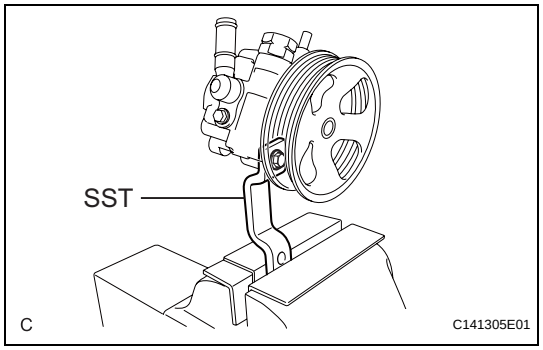
(b) Remove the bolt from the vane pump assembly.

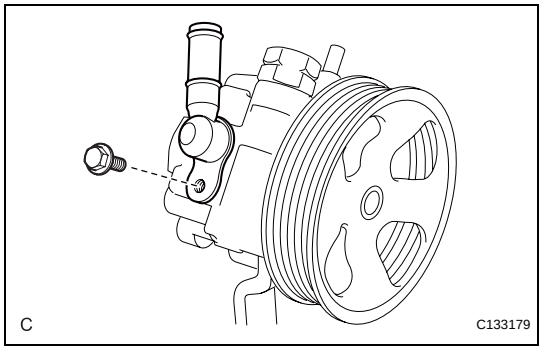
PS

DISASSEMBLY

1. HOLD VANE PUMP ASSEMBLY

(a) Using SST, hold the vane pump assembly in a vise.
SST 09630-00014 (09631-00132)

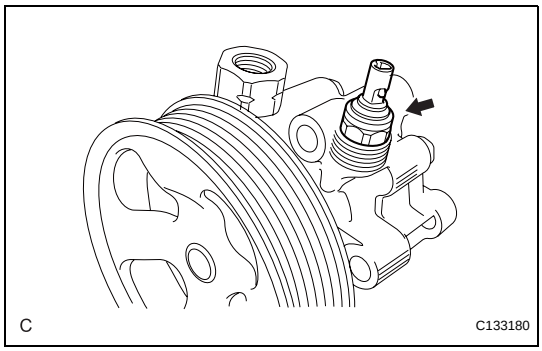




2. REMOVE POWER STEERING SUCTION PORT UNION

(a) Remove the bolt and the power steering suction port union from the vane pump assembly.

(b) Using a screwdriver, remove the O-ring from the power steering suction port union.

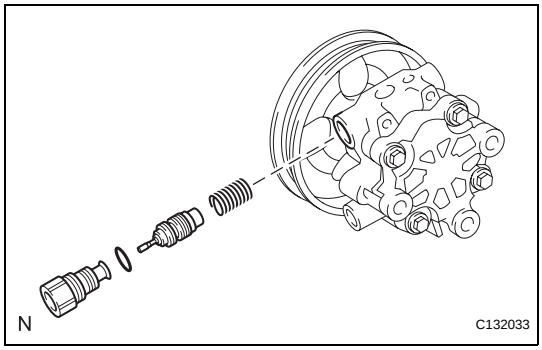


3. REMOVE POWER STEERING FLUID PRESSURE SWITCH

(a) Remove the power steering fluid pressure switch from the vane pump assembly.

NOTICE:

Perform this procedure only when the power steering fluid pressure switch is replaced.

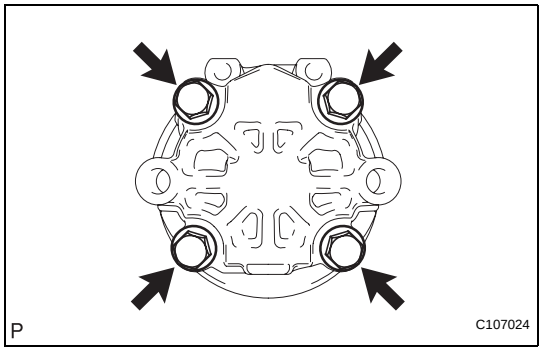


4. REMOVE FLOW CONTROL VALVE ASSEMBLY

(a) Remove the pressure port union.

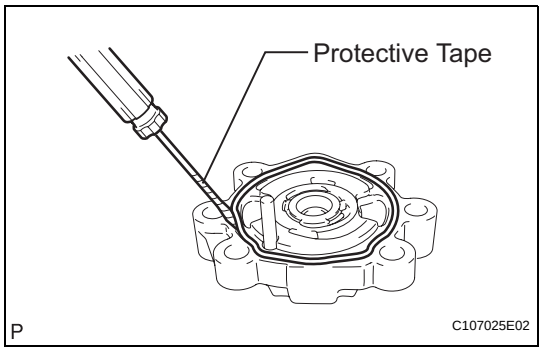
(b) Remove the O-ring from the pressure port union.

(c) Remove the flow control valve assembly and the flow control valve compression spring.



5. REMOVE VANE PUMP REAR HOUSING

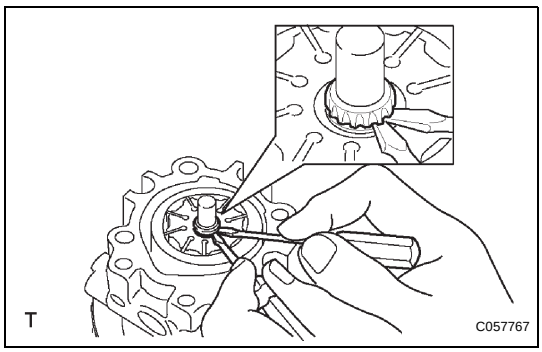
(a) Remove the 4 bolts and vane pump rear housing from the vane pump front housing.



(b) Using a screwdriver, remove the O-ring from the vane pump rear housing.

HINT:

Tape the screwdriver tip before use.

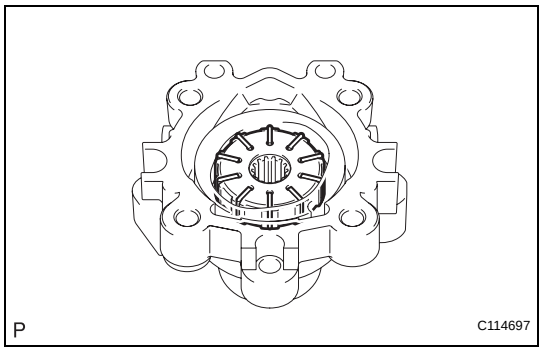


6. REMOVE VANE PUMP SHAFT WITH PULLEY

(a) Using 2 screwdrivers, remove the vane pump shaft snap ring from the vane pump shaft with pulley.

(b) Remove the vane pump shaft with pulley.

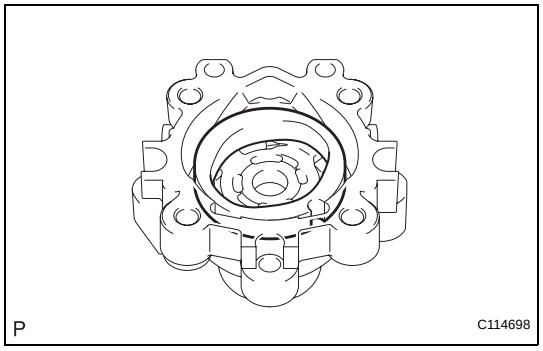
PS



7. REMOVE VANE PUMP ROTOR

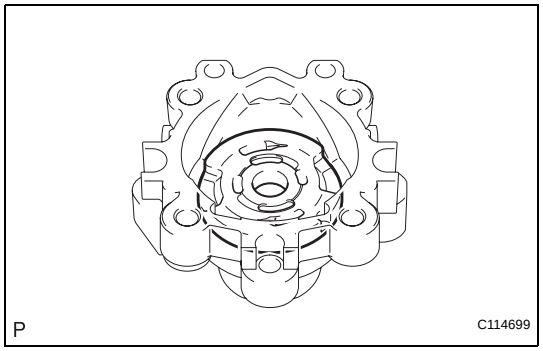
(a) Remove the 10 vane pump plates.

(b) Remove the vane pump rotor.



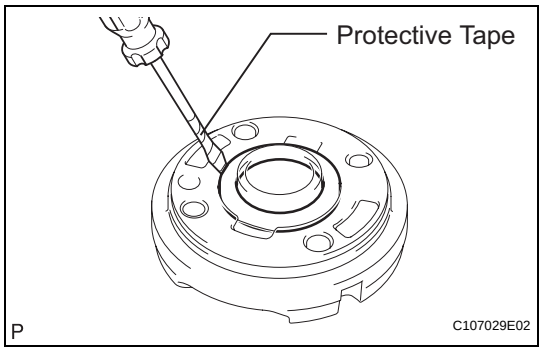
8. REMOVE VANE PUMP CAM RING

(a) Remove the vane pump cam ring from the vane pump front housing.

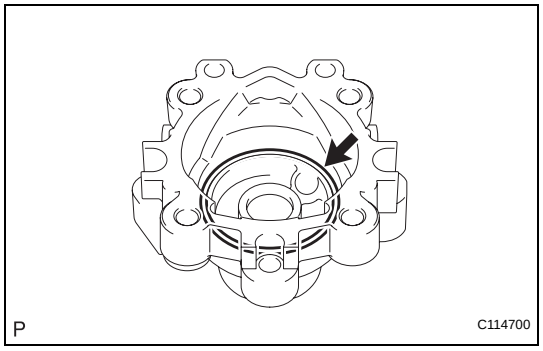


9. REMOVE VANE PUMP FRONT SIDE PLATE

(a) Remove the vane pump front side plate from the vane pump front housing.

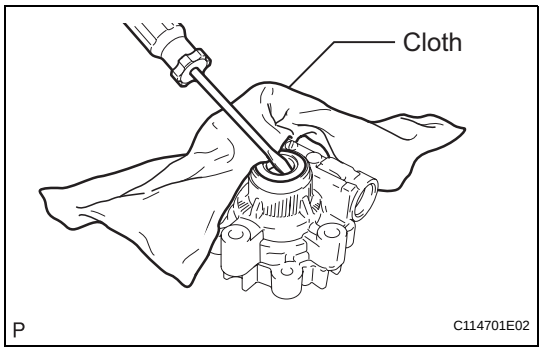


(b) Using a screwdriver, remove the O-ring from the vane pump front side plate.
HINT:
Tape the screwdriver tip before use.



(c) Remove the O-ring from the vane pump front housing.

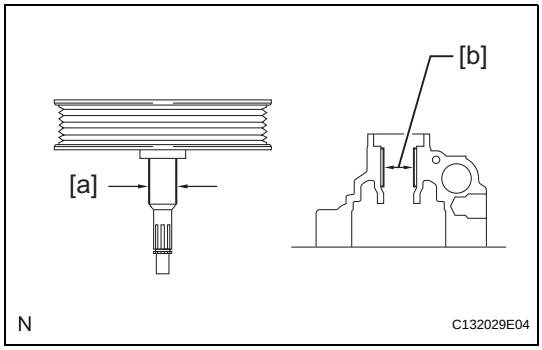
PS



10. REMOVE VANE PUMP HOUSING OIL SEAL

(a) Using a screwdriver and a shop rag or a piece of cloth, remove the vane pump housing oil seal.
NOTICE:
Be careful not to damage the vane pump front housing.

INSPECTION



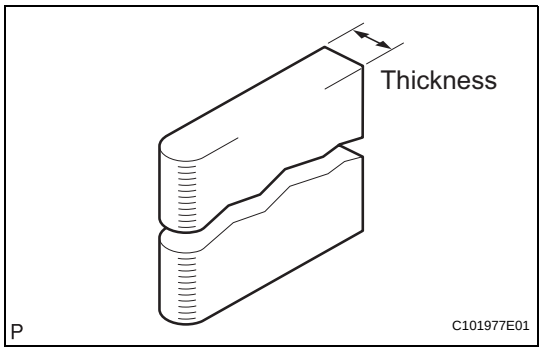
1. INSPECT VANE PUMP SHAFT AND BUSHING IN VANE PUMP FRONT HOUSING

(a) Using a micrometer, measure the outer diameter [a] of the vane pump shaft with pulley.

(b) Using a vernier caliper, measure the inner diameter [b] of the vane pump front housing bushing.

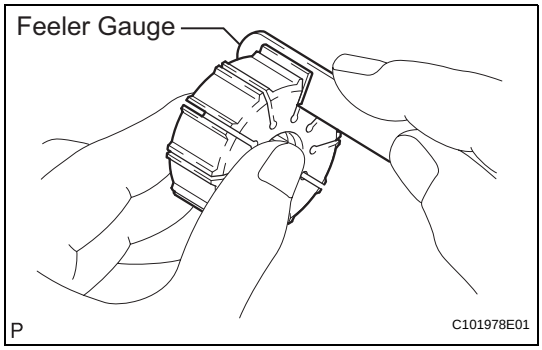
(c) Calculate the oil clearance.
Oil clearance = Inner diameter of the bushing [b] - Outer diameter of the shaft [a].
Maximum oil clearance:
0.07 mm (0.0028 in.)
If oil clearance exceeds the maximum, replace the vane pump assembly.

PS

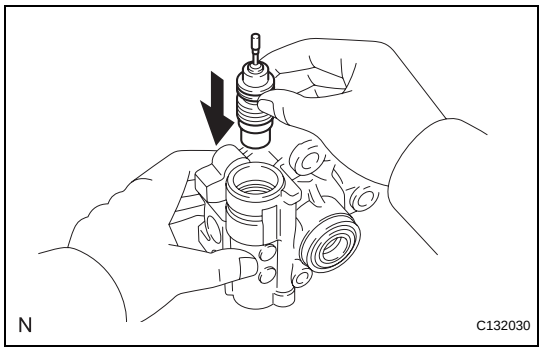


2. INSPECT VANE PUMP ROTOR AND VANE PUMP PLATE CLEARANCE

(a) Using a micrometer, measure the thickness of the vane pump plates.
Standard thickness:
1.405 to 1.411 mm (0.05531 to 0.05555 in.)
If the thickness is not within the specified range, replace the vane pump assembly.

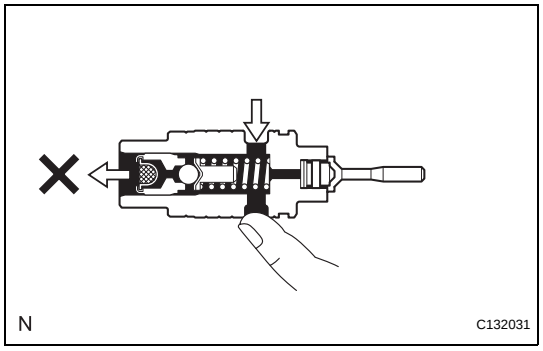


(b) Using a feeler gauge, measure the clearance between the side face of the vane pump rotor groove and the vane pump plates.
Maximum clearance:
0.03 mm (0.0012 in.)
If clearance exceeds the maximum, replace the vane pump assembly.

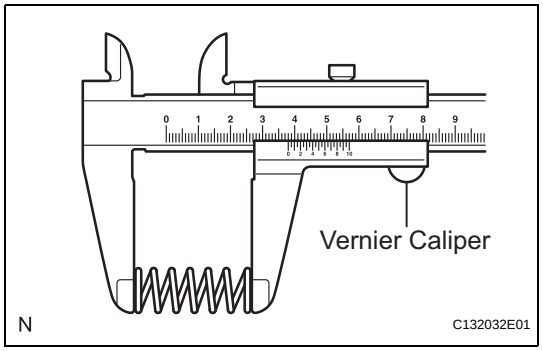


3. INSPECT FLOW CONTROL VALVE ASSEMBLY

(a) Coat the flow control valve assembly with power steering fluid and check that it falls smoothly into the flow control valve due to its own weight.
If the control valve does not fall into the hole smoothly, replace the vane pump assembly.



(b) Check the flow control valve assembly for leakage. Close one of the holes and apply compressed air, 392 to 490 kPa (4 to 5 kgf/cm^2, 57 to 71 psi), into the opposite side hole, and confirm that air does not come out from the end holes.
If air leaks, replace the vane pump assembly.

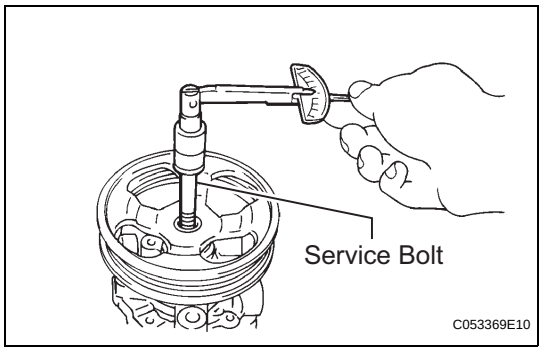


4. INSPECT FLOW CONTROL VALVE COMPRESSION SPRING

(a) Using a vernier caliper, measure the free length of the flow control valve compression spring.
Minimum free length:
29.2 mm (1.150 in.)
If the length is less than the minimum, replace the vane pump assembly.

5. INSPECT PRESSURE PORT UNION

If the union seat in the pressure port union is severely damaged, replace the vane pump assembly.



6. INSPECT TOTAL PRELOAD

(a) Check that the pump rotates smoothly without abnormal noise.

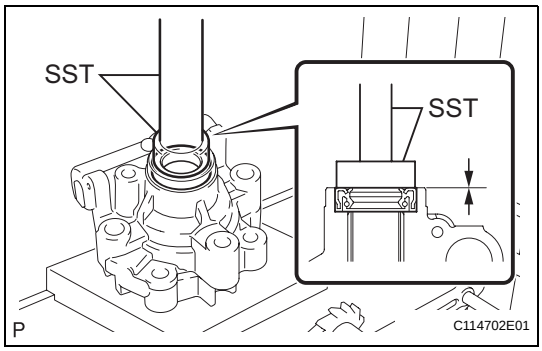
(b) Temporarily install the service bolt.
Recommended service bolt:
Thread diameter:
10 mm (0.39 in.)
Thread pitch:
1.25 mm (0.0492 in.)
Bolt length:
50 mm (1.97 in.)

(c) Using a torque wrench, check the pump rotating torque.
Rotating torque:
0.27 N*m (2.8 kgf*cm, 2.4 in.*lbf) or less
If the rotating torque is not as specified, check the vane pump housing oil seal.

PS

REASSEMBLY

NOTICE:
When installing parts, coat the parts indicated by arrows with power steering fluid (See page PS-22).



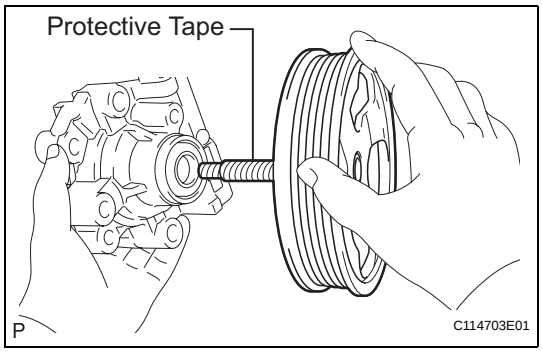
1. INSTALL VANE PUMP HOUSING OIL SEAL

(a) Coat a new vane pump housing oil seal lip with power steering fluid.

(b) Using SST and a press, install the vane pump housing oil seal.

SST 09950-60010 (09951-00280), 09950-70010 (09951-07100)

NOTICE:
Make sure that the oil seal is installed facing in the correct direction as shown in the illustration.



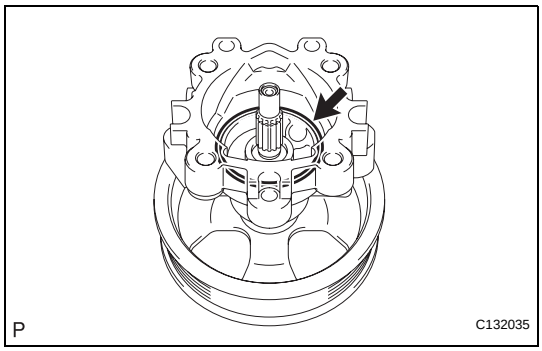
2. INSTALL VANE PUMP SHAFT WITH PULLEY

(a) Coat the inside surface of the busing in the vane pump front housing with power steering fluid.

(b) Gradually insert the vane pump shaft with pulley.

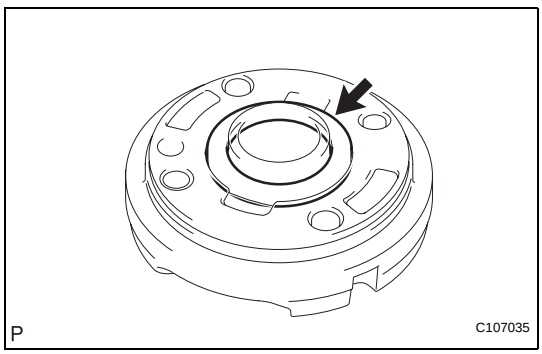
NOTICE:
Do not damage the oil seal lip in the front housing.

HINT:
Wrap protective tape around the spline of the vane pump shaft with pulley in order to prevent damage to the oil seal.



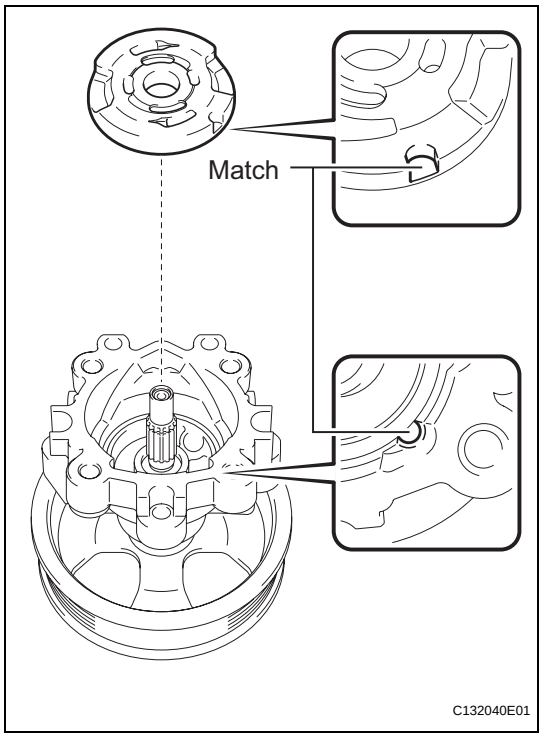
3. INSTALL VANE PUMP FRONT SIDE PLATE

(a) Coat a new O-ring with power steering fluid and install it into the vane pump front housing.

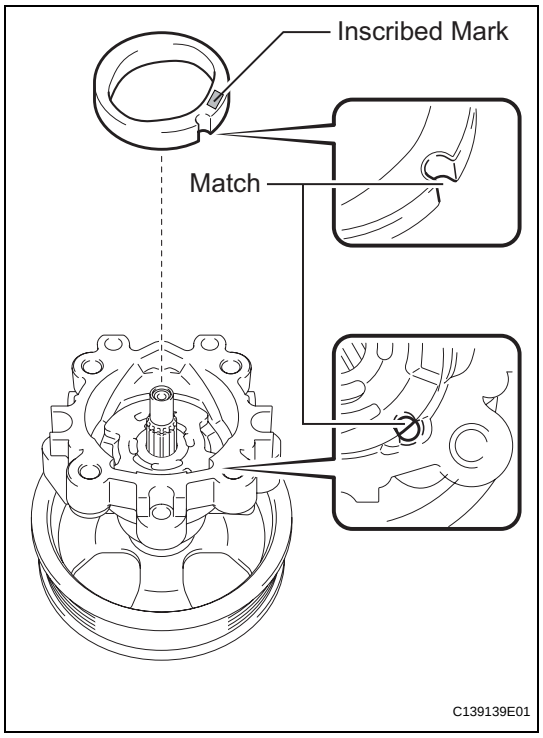


(b) Coat a new O-ring with power steering fluid and install it onto the vane pump front side plate.

PS



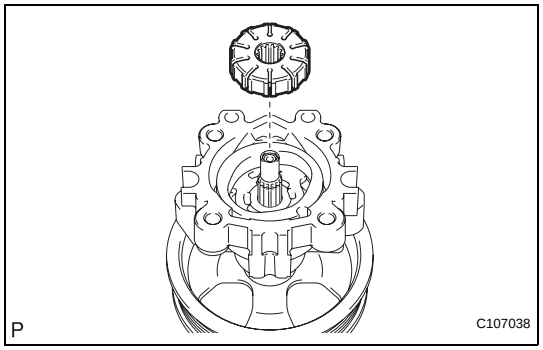
(c) Align the notch of the vane pump front side plate with that of the vane pump front housing, and install the vane pump front side plate.
NOTICE:
Make sure that the vane pump front side plate is installed facing in the correct direction.



4. INSTALL VANE PUMP CAM RING

(a) Align the notch of the cam ring with that of the vane pump front side plate, and install the vane pump cam ring with the inscribed mark facing upward.
NOTICE:
Make sure that the vane pump cam ring is installed facing in the correct direction.

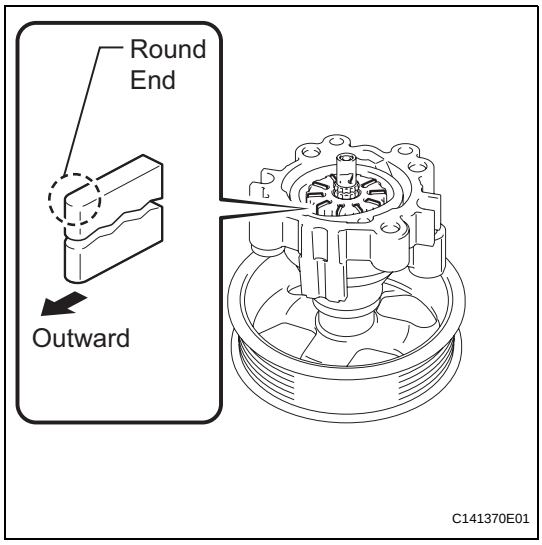
PS



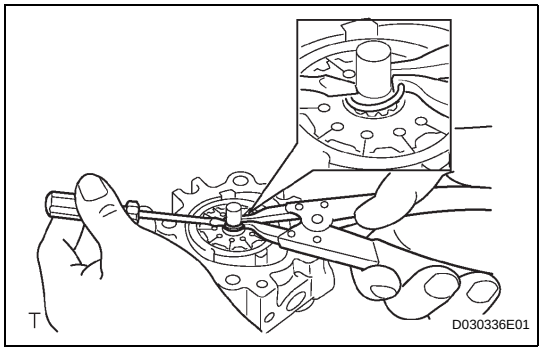
5. INSTALL VANE PUMP ROTOR

(a) Install the vane pump rotor.
HINT:
Vane pump rotor can be installed in both directions.

(b) Coat the 10 vane pump plates with power steering fluid.



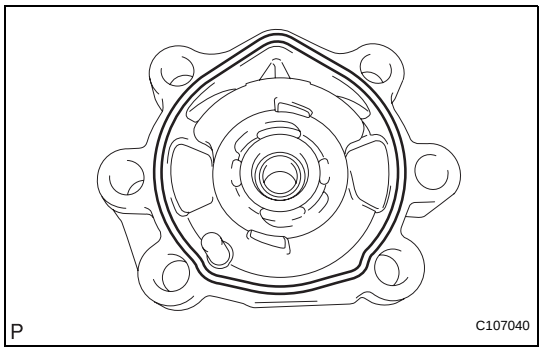
(c) Install the vane pump plates with the round end facing outward.
NOTICE:
Make sure that the vane pump plates are installed facing in the correct direction.



6. INSTALL VANE PUMP SHAFT SNAP RING

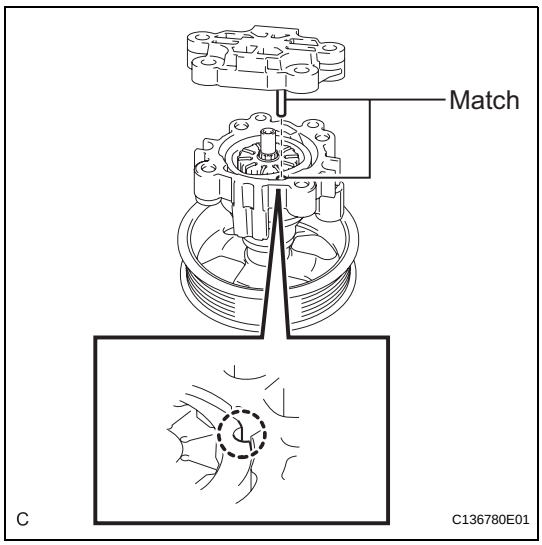
(a) Using a screwdriver and a snap ring expander, install a new vane pump shaft snap ring onto the vane pump shaft with pulley.

PS

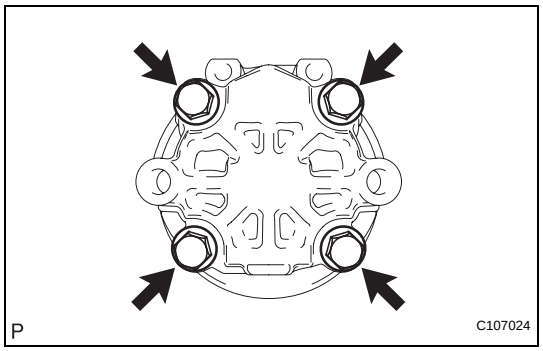


7. INSTALL VANE PUMP REAR HOUSING

(a) Coat a new O-ring with power steering fluid and install it onto the vane pump rear housing.

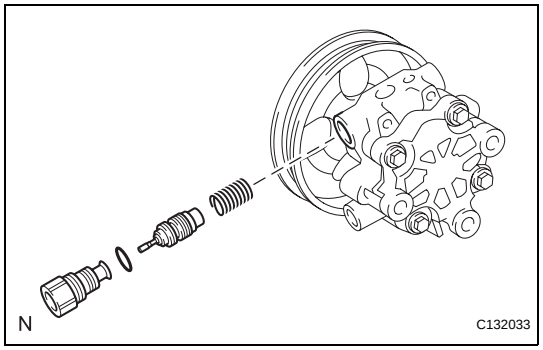


(b) Align the straight pin of the vane pump rear housing with the notches of the vane pump cam ring, vane pump front side plate, and vane pump front housing.



(c) Install the vane pump rear housing with the 4 bolts.
Torque: 22 N*m (224 kgf*cm, 16 ft.*lbf)

8. INSPECT TOTAL PRELOAD (See page PS-29)



9. INSTALL FLOW CONTROL VALVE ASSEMBLY

(a) Coat the flow control valve assembly with power steering fluid.

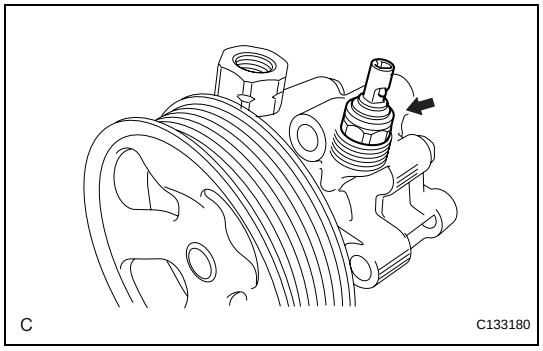
(b) Install the flow control valve compression spring and the flow control valve assembly to the vane pump front housing.

(c) Coat a new O-ring with power steering fluid and install it onto the pressure port union.

(d) Install the pressure port union to the vane pump front housing.
Torque: 69 N*m (704 kgf*cm, 51 ft.*lbf)

10. INSTALL POWER STEERING FLUID PRESSURE SWITCH

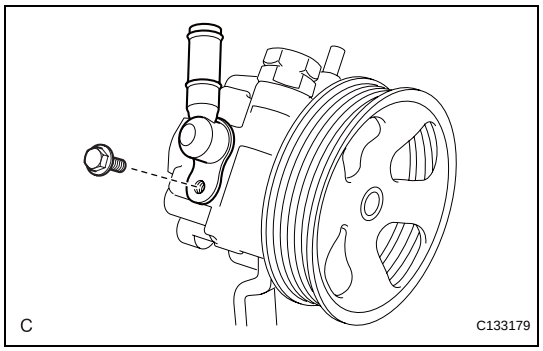
(a) Coat the new O-ring attached to the new power steering fluid pressure switch with power steering fluid.



(b) Install the power steering fluid pressure switch to the vane pump assembly.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
NOTICE:
Do not use a power steering fluid pressure switch that has been subjected an impact; for example, due to it having been dropped.

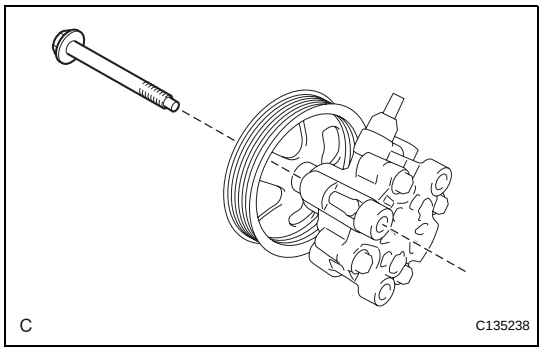
11. INSTALL POWER STEERING SUCTION PORT UNION

(a) Coat a new O-ring with power steering fluid and install it to the power steering suction port union.



(b) Install the power steering suction port union to the vane pump assembly with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

PS

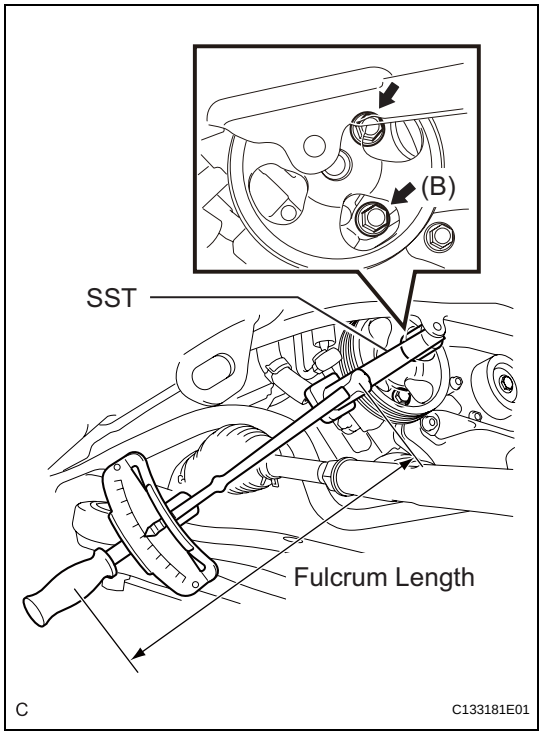


INSTALLATION

1. INSTALL VANE PUMP ASSEMBLY

(a) Temporarily install the bolt to the vane pump assembly.

(b) Install the vane pump assembly.



(c) Using SST, install bolt (B) and tighten the 2 bolts.

SST 09249-63010

Torque: Without SST

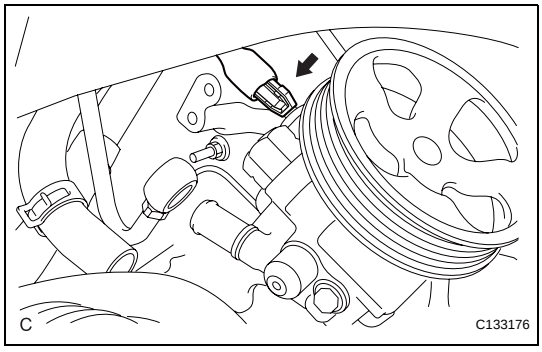
43 N*m (439 kgf*cm, 32 ft.*lbf)

With SST

29 N*m (294 kgf*cm, 21 ft.*lbf)

NOTICE:

- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is accurate when SST is parallel to the torque wrench.**



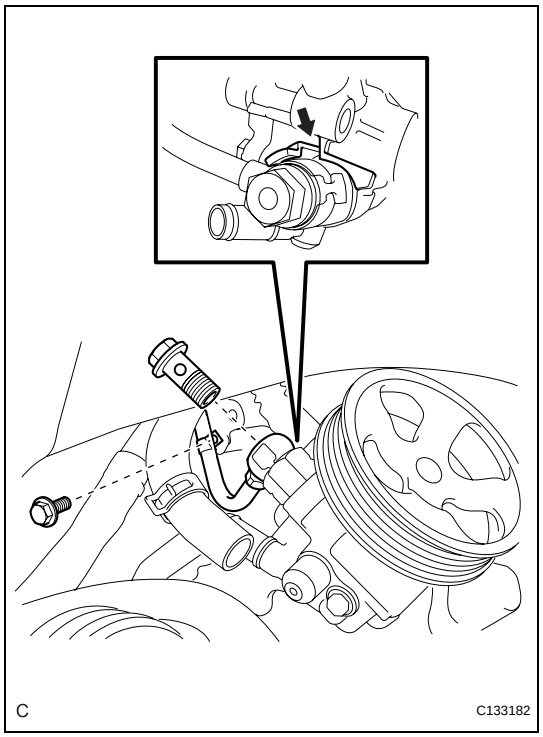
2. CONNECT POWER STEERING FLUID PRESSURE SWITCH CONNECTOR

(a) Connect the connector to the power steering fluid pressure switch.

3. CONNECT PRESSURE FEED TUBE ASSEMBLY

(a) Install a new gasket to the pressure feed tube assembly.

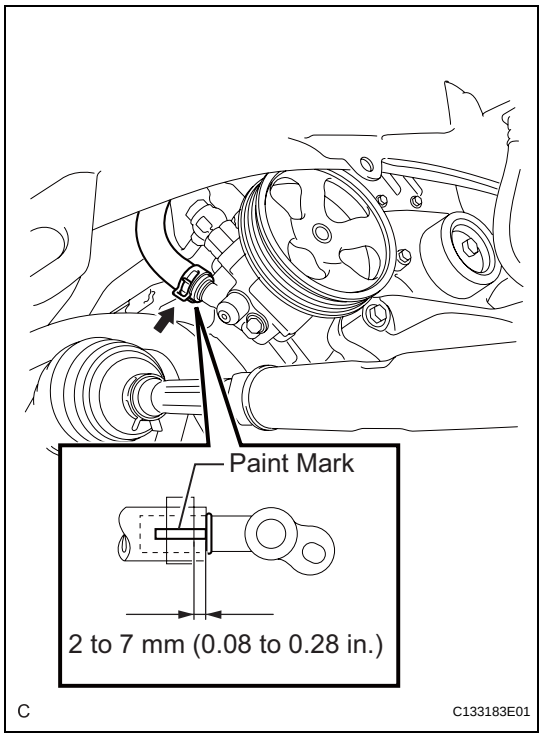
PS



(b) Temporarily connect the pressure feed tube assembly to the vane pump assembly with the union bolt.

(c) Install the pressure feed tube assembly clamp with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
NOTICE:
Install the pressure feed tube assembly clamp in the correct position.

(d) Fully tighten the union bolt.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
NOTICE:
Make sure that the stopper of the pressure feed tube assembly contacts the vane pump assembly securely as shown in the illustration.



4. CONNECT NO. 1 FLUID RESERVOIR TO PUMP HOSE

(a) Connect the No. 1 fluid reservoir to pump hose to the vane pump assembly with the clip.
NOTICE:
- **Connect the No. 1 fluid reservoir to pump hose with the paint mark facing toward the rear of the vehicle.**
- **Push the No. 1 fluid reservoir to pump hose as far as it will go as shown in the illustration.**
- **Install the clip at the position specified in the illustration.**

5. INSTALL FAN AND GENERATOR V BELT (See page EM-7)

6. ADD POWER STEERING FLUID

7. BLEED POWER STEERING FLUID (See page PS-7)

8. CHECK POWER STEERING FLUID LEVEL (See page PS-3)

9. CHECK FOR POWER STEERING FLUID LEAKS

10. INSTALL V-BANK COVER SUB-ASSEMBLY

11. INSTALL FRONT FENDER APRON SEAL RH

12. INSTALL FRONT WHEEL RH
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

PS

REMOVAL

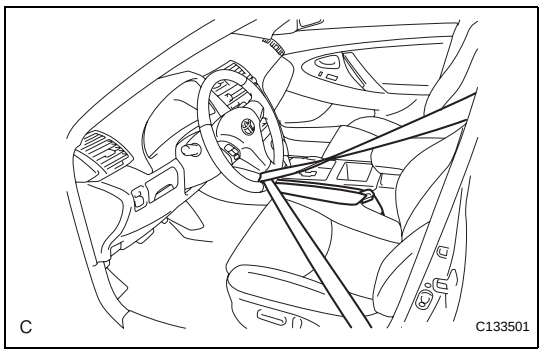
1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

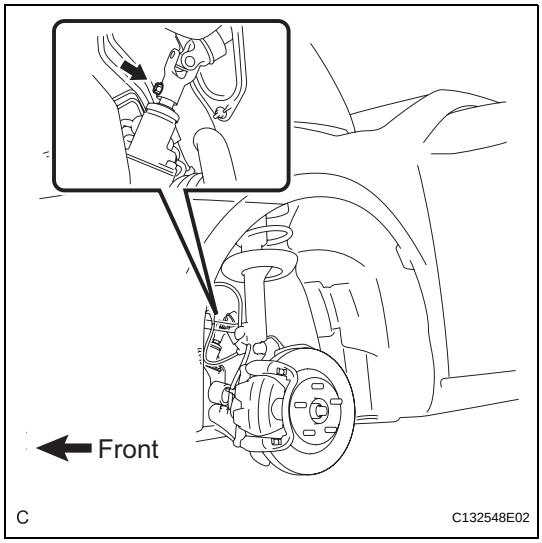
3. REMOVE FRONT WHEELS

4. SEPARATE STEERING SLIDING YOKE

(a) Secure the steering wheel with the seat belt in order to prevent rotation.
HINT:
This operation is useful to prevent damage to the spiral cable.

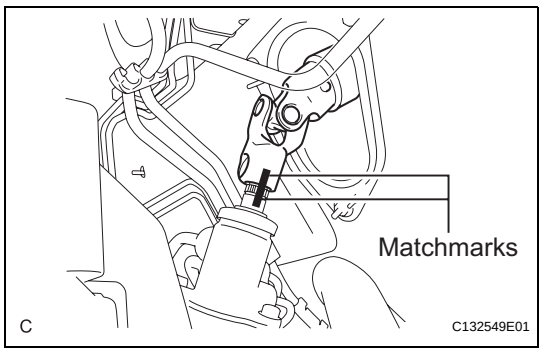


(b) Remove the bolt and slide the steering sliding yoke.
NOTICE:
Do not separate the steering sliding yoke from the power steering link assembly.



(c) Put matchmarks on the steering sliding yoke and the power steering link assembly.

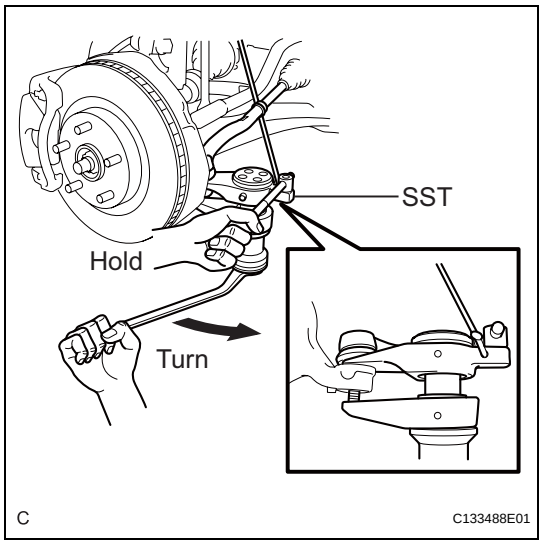
(d) Separate the steering sliding yoke from the power steering link assembly.



5. SEPARATE TIE ROD ASSEMBLY LH

(a) Remove the cotter pin and the nut.

PS

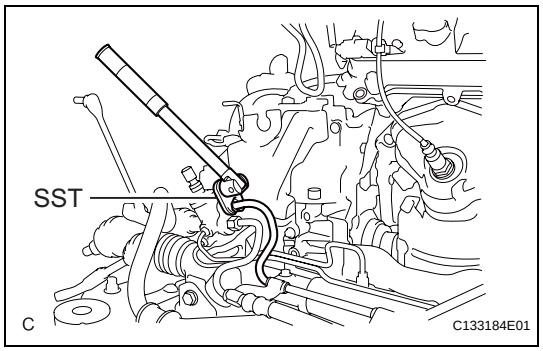


(b) Using SST, separate the tie rod assembly LH from the steering knuckle.
SST 09628-00011
NOTICE:
- **Hang SST with a string, etc. to prevent it from falling.**
- **Do not damage the front disc brake dust cover.**
- **Do not damage the ball joint dust cover.**
- **Do not damage the steering knuckle.**

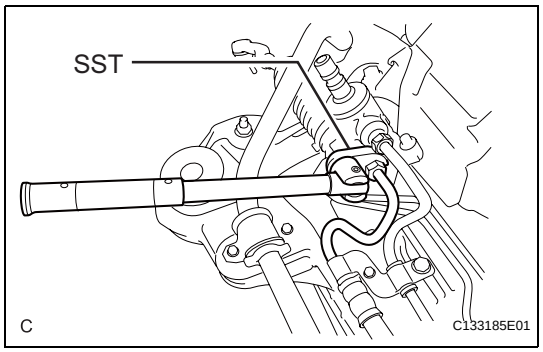
6. SEPARATE TIE ROD ASSEMBLY RH
HINT:
Perform the same procedure as for the LH side.

7. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE
HINT:
Refer to the instructions for removal of the engine assembly (See page EM-94 for 2AZ-FE, EM-23 for 2GR-FE).

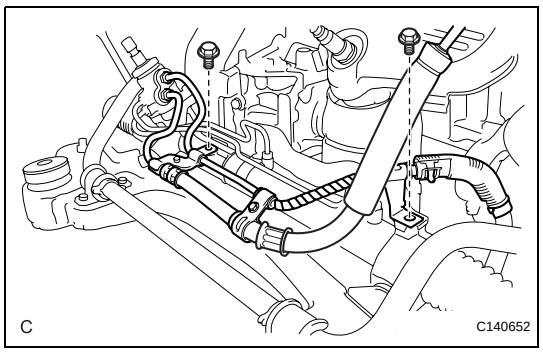
8. DISCONNECT PRESSURE FEED TUBE ASSEMBLY



(a) Using SST, disconnect the pressure feed tube assembly (return tube side) from the power steering link assembly.
SST 09023-12701

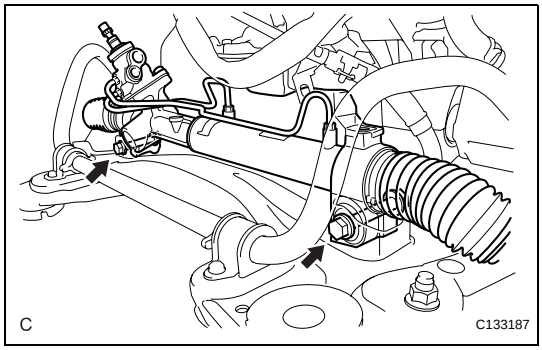


(b) Using SST, disconnect the pressure feed tube assembly (pressure feed tube side) from the power steering link assembly.
SST 09023-12701



(c) Remove the 2 bolts and separate the pressure feed tube clamp.

PS

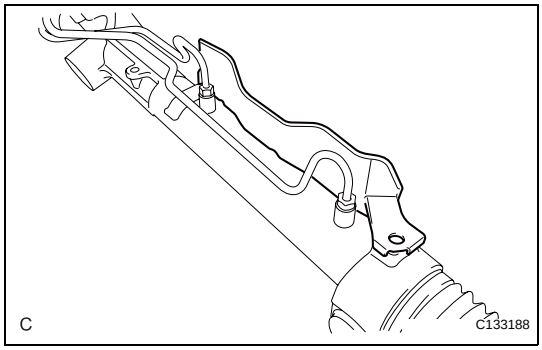


9. REMOVE POWER STEERING LINK ASSEMBLY

(a) Remove the 2 bolts, 2 nuts, and the power steering link assembly.

NOTICE:

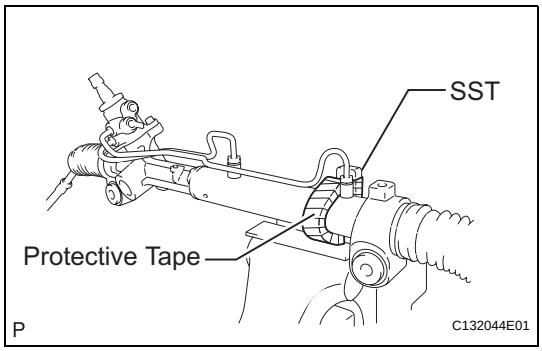
Because the nut has its own stopper, do not turn the nut. Loosen the bolt with the nut fixed.



10. REMOVE POWER STEERING RACK HOUSING HEAT INSULATOR (for 2GR-FE)

(a) Remove the power steering rack housing heat insulator from the power steering link assembly.

DISASSEMBLY



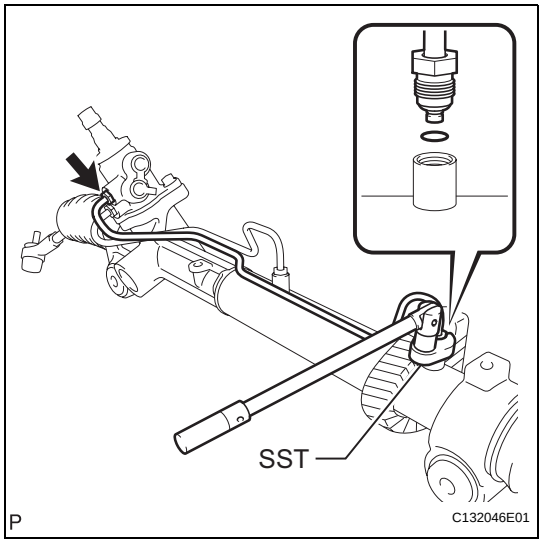
1. SECURE POWER STEERING LINK ASSEMBLY

(a) Using SST, secure the power steering link assembly.

SST 09612-00012

HINT:

Tape the SST before use.



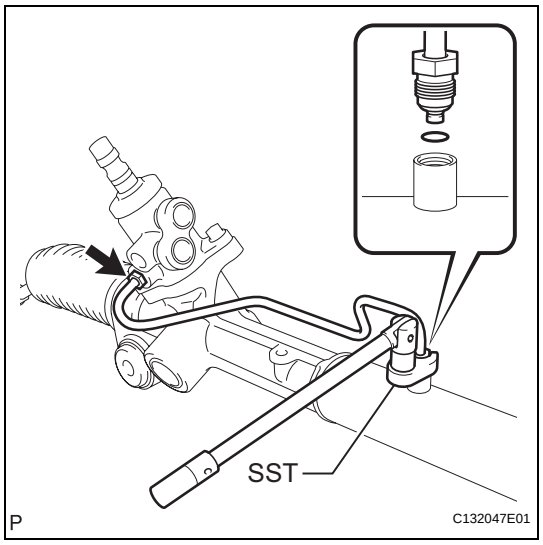
2. REMOVE STEERING LEFT TURN PRESSURE TUBE

(a) Using SST, remove the steering left turn pressure tube.

SST 09023-38201

(b) Remove the 2 O-rings from the steering left turn pressure tube.

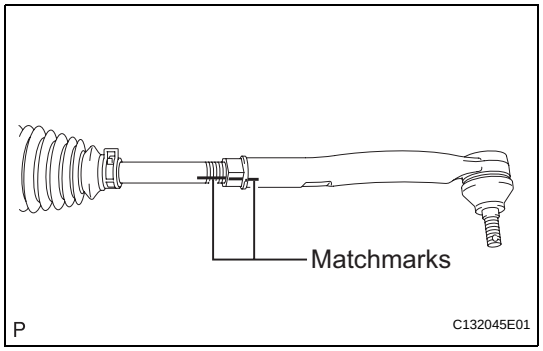
PS



3. REMOVE STEERING RIGHT TURN PRESSURE TUBE

(a) Using SST, remove the steering right turn pressure tube.
SST 09023-38201

(b) Remove the 2 O-rings from the steering right turn pressure tube.



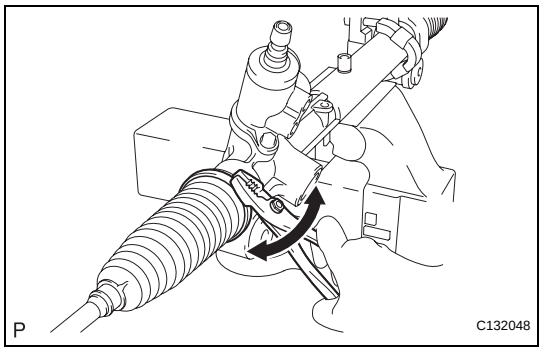
4. REMOVE TIE ROD ASSEMBLY LH

(a) Put matchmarks on the tie rod assembly LH and the steering rack end sub-assembly.

(b) Loosen the lock nut, and remove the tie rod assembly LH and the lock nut.

5. REMOVE TIE ROD ASSEMBLY RH

HINT:
Perform the same procedure as for the LH side.



6. REMOVE STEERING RACK BOOT CLIP

(a) Using pliers, remove the 2 steering rack boot clips.

7. REMOVE NO. 2 STEERING RACK BOOT CLAMP

(a) Using pliers, remove the 2 No. 2 steering rack boot clamps as shown in the illustration.
NOTICE:
Be careful not to damage the No. 2 steering rack boot.

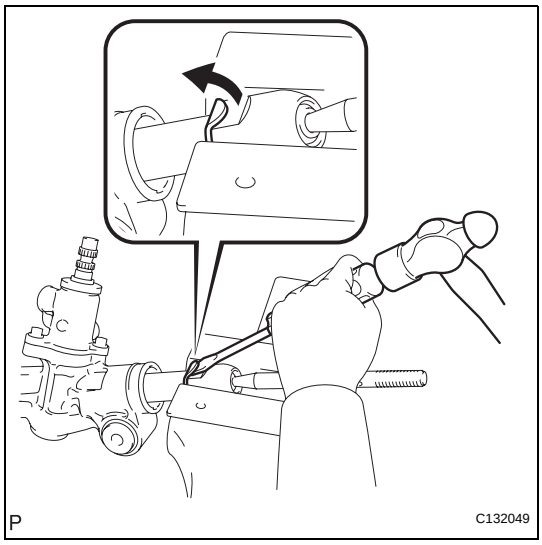
8. REMOVE NO. 2 STEERING RACK BOOT

(a) Remove the No. 2 steering rack boot.

9. REMOVE NO. 1 STEERING RACK BOOT

(a) Remove the No. 1 steering rack boot.

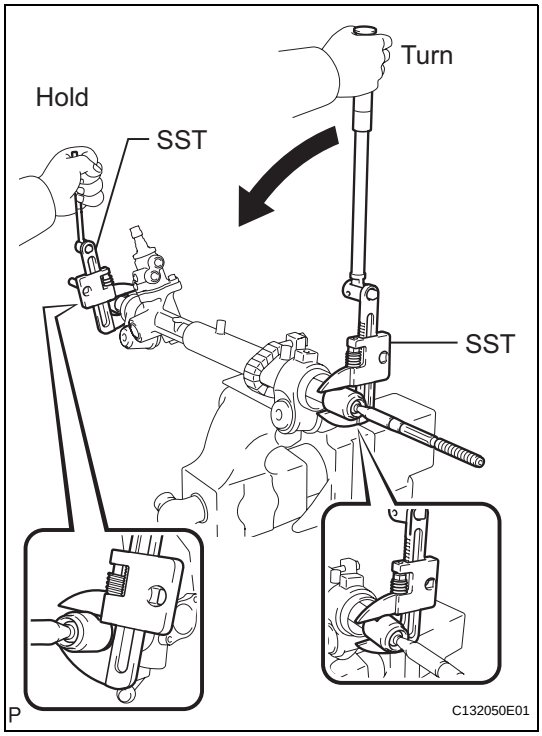
PS



10. REMOVE STEERING RACK END SUB-ASSEMBLY

(a) Using a screwdriver and a hammer, unstake the RH and LH claw washers.

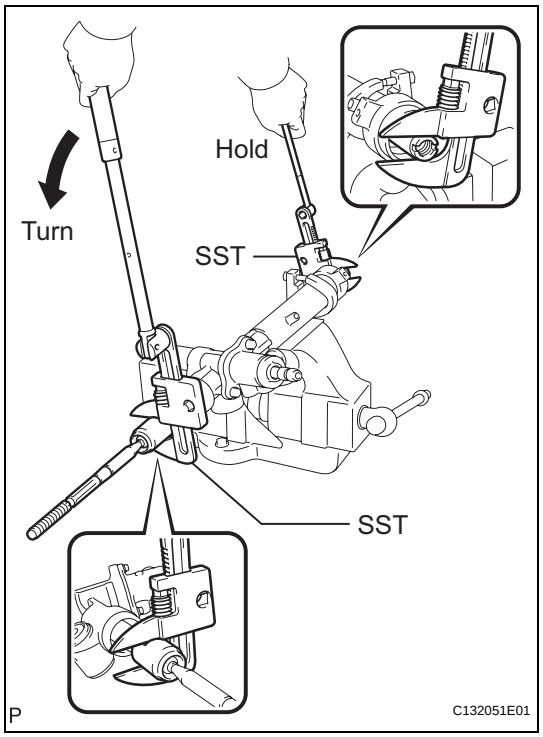
NOTICE:
Avoid any impact to the steering rack.



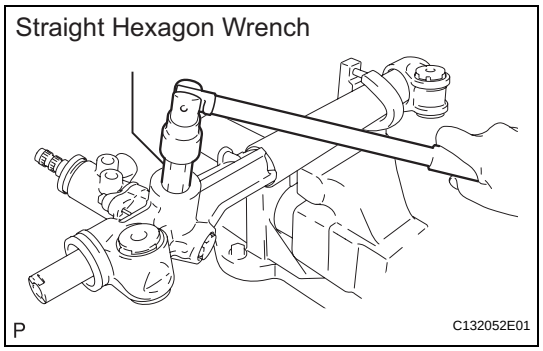
(b) Using SST, remove the steering rack end sub-assembly (RH side) and the claw washer.

SST 09922-10010
NOTICE:
Use SST 09922-10010 as shown in the illustration.

PS

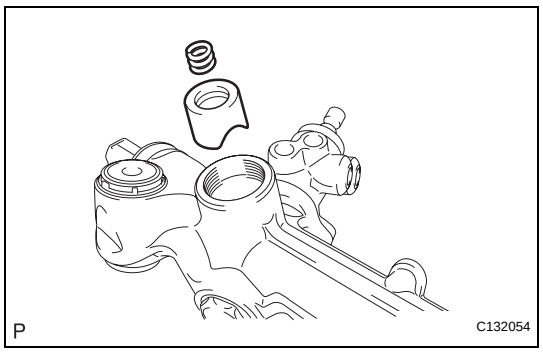


(c) Using SST, remove the steering rack end sub-assembly (LH side) and the claw washer.
SST 09922-10010
NOTICE:
Use SST 09922-10010 as shown in the illustration.
HINT:
Using SST, hold the rack and remove the steering rack end sub-assembly.

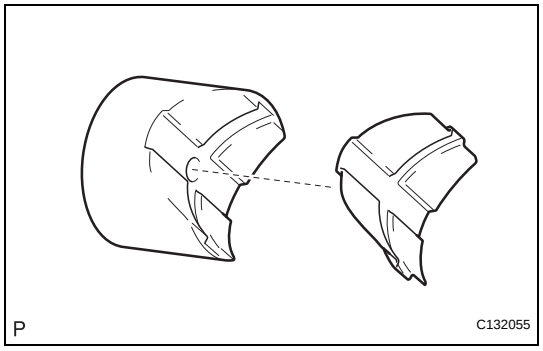


11. REMOVE RACK GUIDE

(a) Using a straight hexagon wrench (24 mm (0.94 in.)), remove the rack guide spring cap.

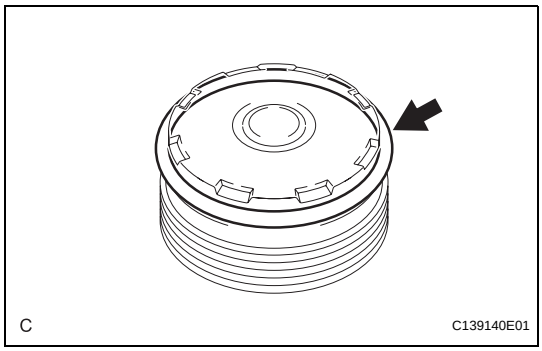


(b) Remove the compression spring and the rack guide sub-assembly.

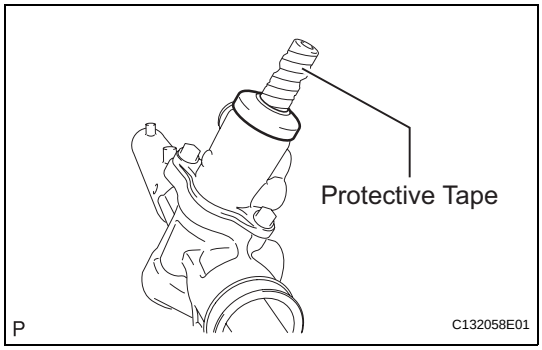


(c) Remove the rack guide base from the rack guide.

PS



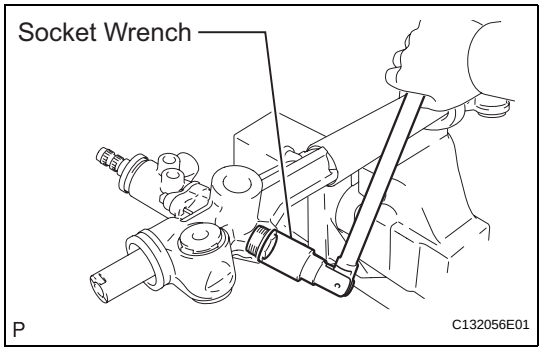
(d) Remove the O-ring from the rack guide spring cap.



12. REMOVE DUST COVER

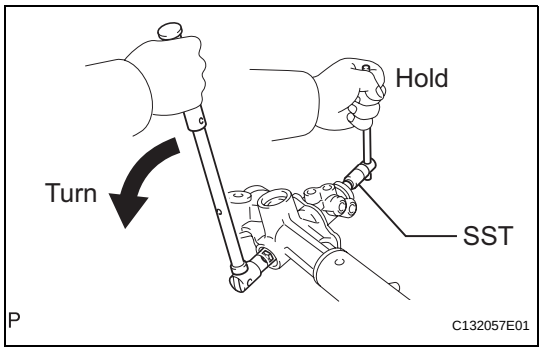
(a) Wrap protective tape around the spline of the control valve in order to prevent damaging the dust cover.

(b) Remove the dust cover.

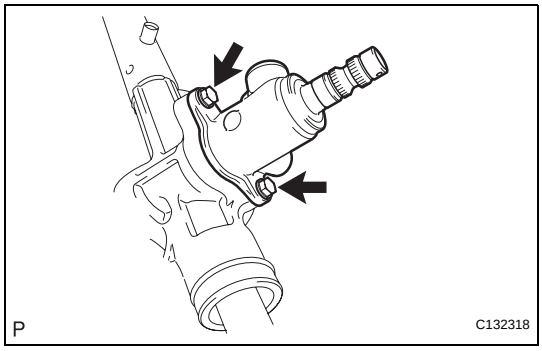


13. REMOVE POWER STEERING CONTROL VALVE ASSEMBLY

(a) Using a socket wrench (27 mm (1.06 in.)), remove the rack housing cap.



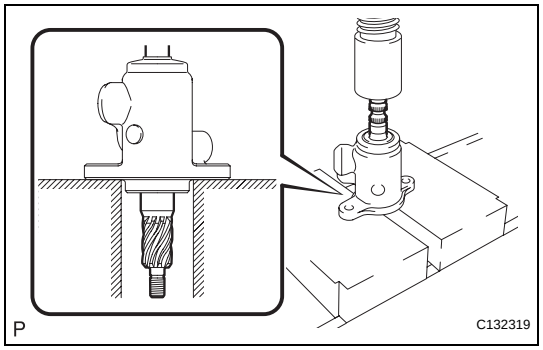
(b) Using SST, hold the control valve shaft and remove the nut.
SST 09616-00011



(c) Remove the 2 bolts and the power steering control valve assembly.

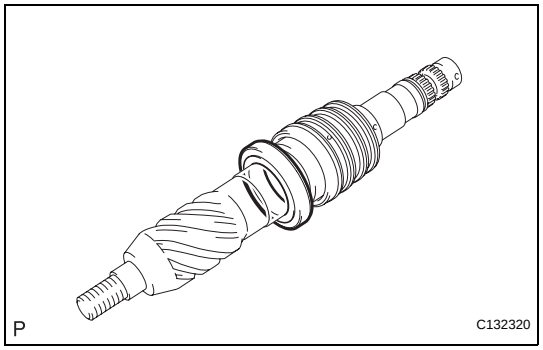
(d) Remove the gasket.

PS



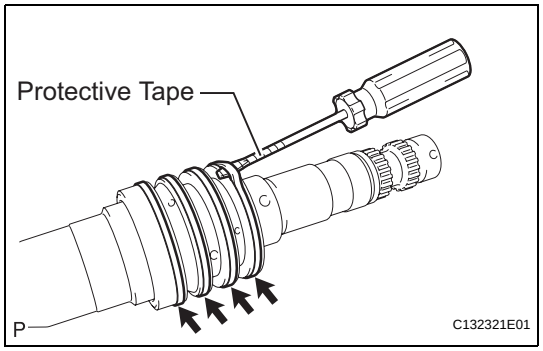
14. REMOVE POWER STEERING CONTROL VALVE SUB-ASSEMBLY

(a) Using a press, remove the power steering control valve sub-assembly.



15. REMOVE POWER STEERING CONTROL VALVE LOWER OIL SEAL

(a) Remove the power steering control valve lower oil seal from the power steering control valve sub-assembly.



16. REMOVE POWER STEERING CONTROL VALVE SPACER

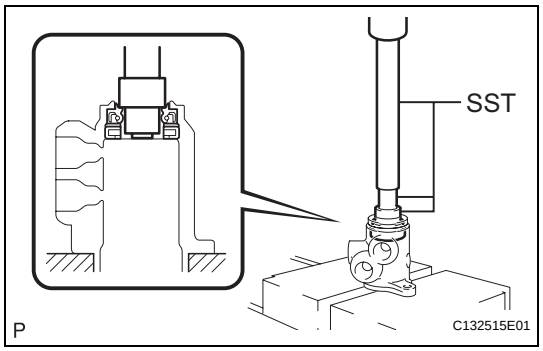
(a) Using a screwdriver, remove the 4 power steering control valve spacers from the power steering control valve sub-assembly.

NOTICE:

Be careful not to damage the spacer grooves on the control valve.

HINT:

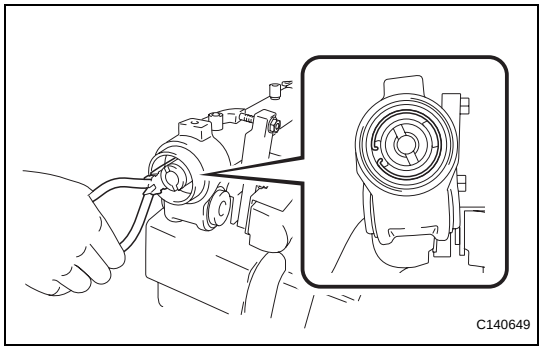
Tape the screwdriver tip before use.



17. REMOVE POWER STEERING CONTROL VALVE UPPER OIL SEAL

(a) Using SST and a press, press out the power steering control valve upper oil seal and the power steering control valve upper bearing from the control valve housing sub-assembly.

SST 09950-70010 (09951-07150), 09950-60010 (09951-00250, 09951-00180, 09952-06010)



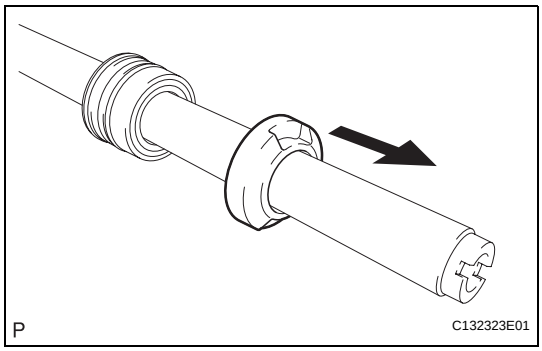
18. REMOVE CYLINDER END STOPPER HOLE SNAP RING

(a) Using needle-nose pliers, remove the cylinder end stopper hole snap ring from the power steering rack housing.

19. REMOVE POWER STEERING RACK SUB-ASSEMBLY

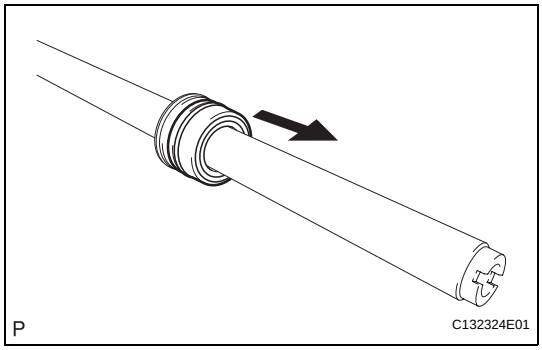
(a) Remove the power steering rack sub-assembly with the cylinder end stopper and power steering rack bushing.

PS



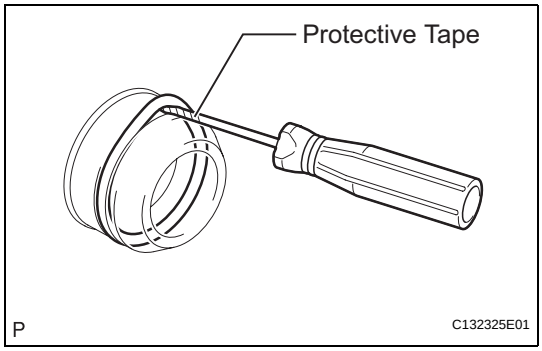
20. REMOVE CYLINDER END STOPPER

(a) Remove the cylinder end stopper from the power steering rack sub-assembly.

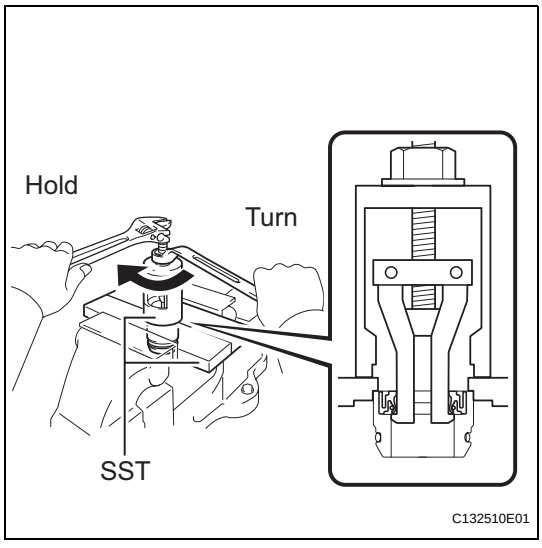


21. REMOVE POWER STEERING RACK BUSHING

(a) Remove the power steering rack bushing from the power steering rack sub-assembly.

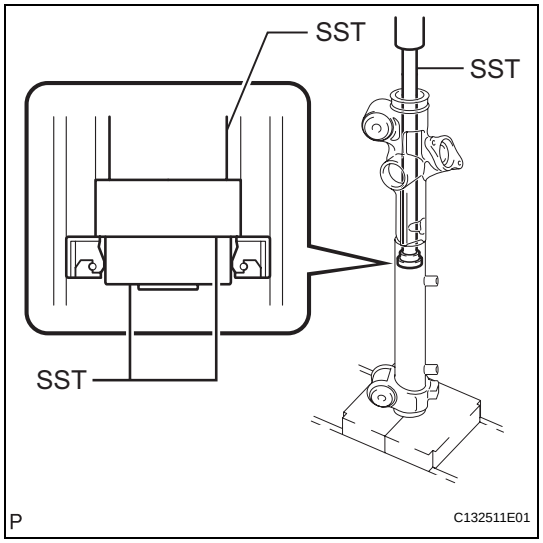


(b) Using a screwdriver, remove the O-ring from the power steering rack bushing.
HINT:
Tape the screwdriver tip before use.



(c) Using SST, remove the rack bushing oil seal from the power steering rack bushing.
SST 09527-21011, 09612-24014 (09613-22011)
NOTICE:
Be careful not to drop the power steering rack bushing.

PS



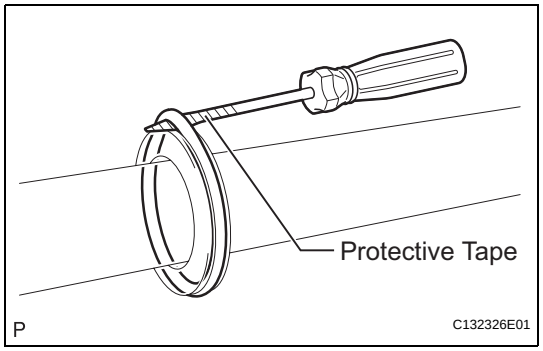
22. REMOVE POWER STEERING CYLINDER TUBE OIL SEAL

(a) Using SST and a press, remove the power steering cylinder tube oil seal.

SST 09950-70010 (09951-07360), 09950-60010 (09951-00290, 09951-00250)

NOTICE:

Be careful not to damage the inside surface of the power steering rack housing.



23. REMOVE POWER PISTON OIL SEAL

(a) Using a screwdriver, remove the power piston oil seal and the O-ring from the power steering rack.

NOTICE:

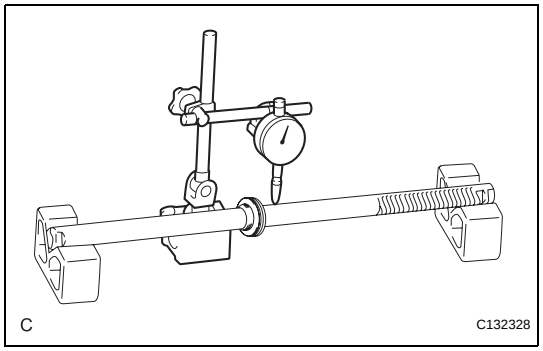
Be careful not to damage the power piston oil seal groove on the power steering rack.

HINT:

Tape the screwdriver tip before use.

PS

INSPECTION



1. INSPECT POWER STEERING RACK

(a) Using a dial indicator, check for runout of the steering rack.

Maximum runout:

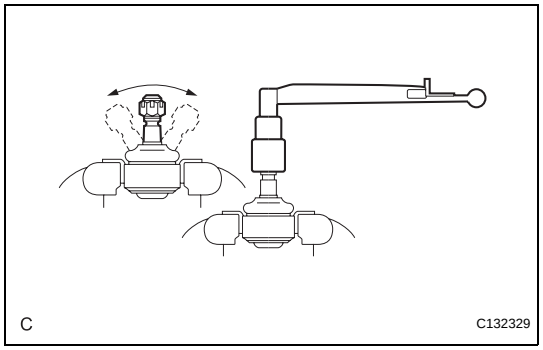
0.3 mm (0.0118 in.)

NOTICE:

Make sure that the steering rack is placed horizontally.

If runout exceeds the maximum, replace the power steering link assembly.

(b) Check the rack surface for wear and damage.



2. INSPECT TIE ROD ASSEMBLY LH

(a) Secure the tie rod assembly LH in a vise.

(b) Install the nut to the stud bolt.

(c) Flip the ball joint back and forth 5 times or more.

(d) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque

0.98 to 3.92 N*m (10 to 40 kgf*cm, 8.7 to 34.7 in.*lbf)

If turning torque is not within the specified range, replace the tie rod assembly LH.

3. INSPECT TIE ROD ASSEMBLY RH

HINT:

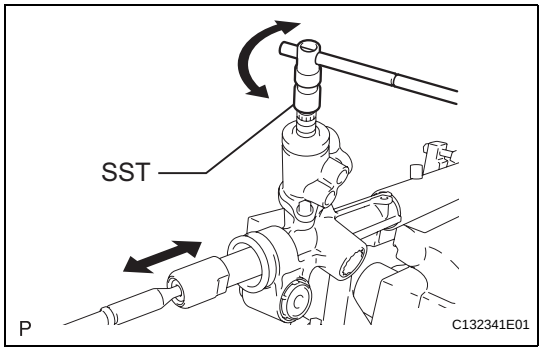
Perform the same procedure as for the LH side.

4. INSPECT TOTAL PRELOAD

(a) Temporarily install the 2 steering rack ends to the power steering rack.

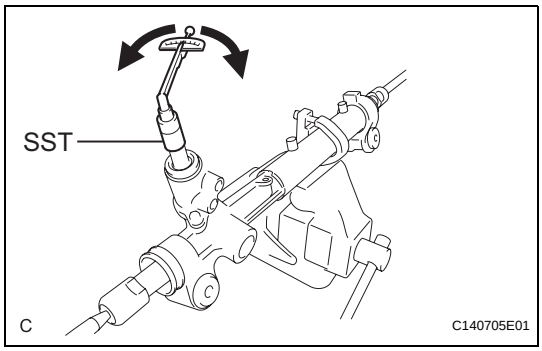
NOTICE:

Do not fully turn the power steering rack without the steering rack ends as it may damage the oil seal in the rack housing.



(b) Using SST, fully turn the power steering rack right and left 10 times to settle it.

SST 09616-00011



(c) Using SST, turn the control valve and measure the preload.

SST 09616-00011

Torque: Standard preload (turning)

1.5 N*m (15.3 kgf*cm, 13.3 in.*lbf) or less

If the preload exceeds the specified value, proceed to INSTALL RACK GUIDE (See page PS-56).

(d) Remove the 2 steering rack ends from the power steering rack.

PS

REASSEMBLY

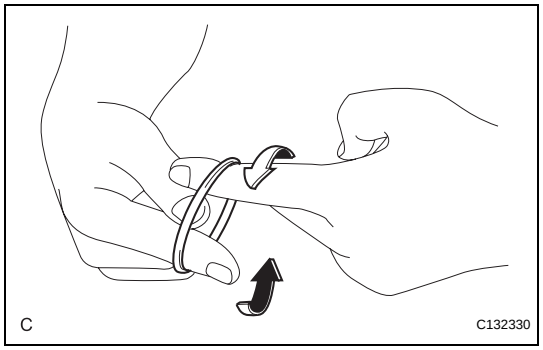
NOTICE:
When installing parts, coat the parts indicated by arrows with power steering fluid, molybdenum disulfide lithium base grease, MP grease or silicon grease (See page PS-36).

1. INSTALL POWER PISTON OIL SEAL

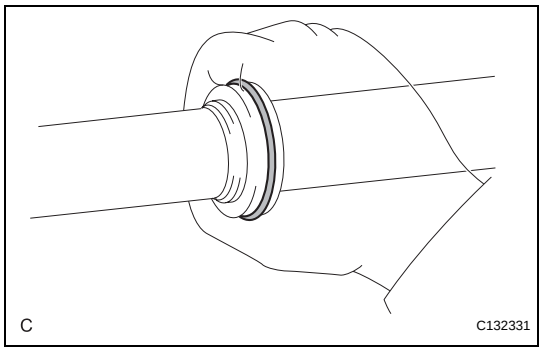
(a) Coat a new O-ring with power steering fluid and install it to the steering rack.

(b) Expand a new power piston oil seal with your fingers.
NOTICE:
Be careful not to expand the oil seal excessively.

(c) Coat the power piston oil seal with power steering fluid.



(d) Install the power piston oil seal to the steering rack, and adjust it with your fingers.



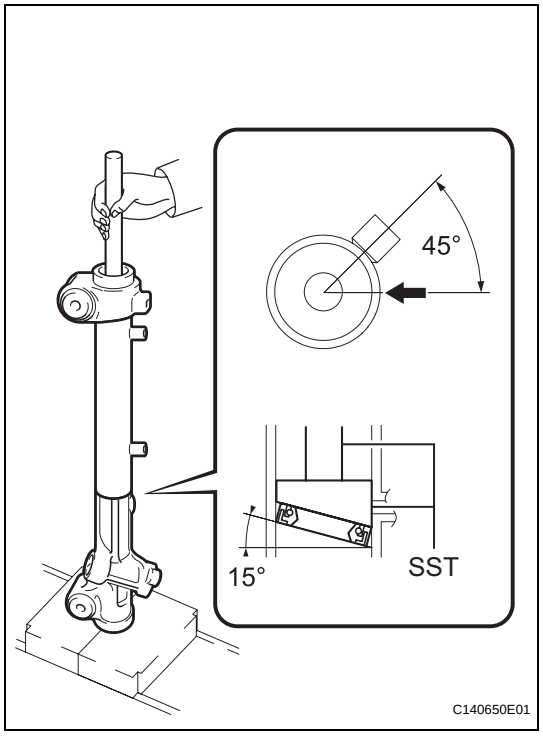
2. INSTALL POWER STEERING CYLINDER TUBE OIL SEAL

(a) Apply power steering fluid to the lip of a new power steering cylinder tube oil seal.

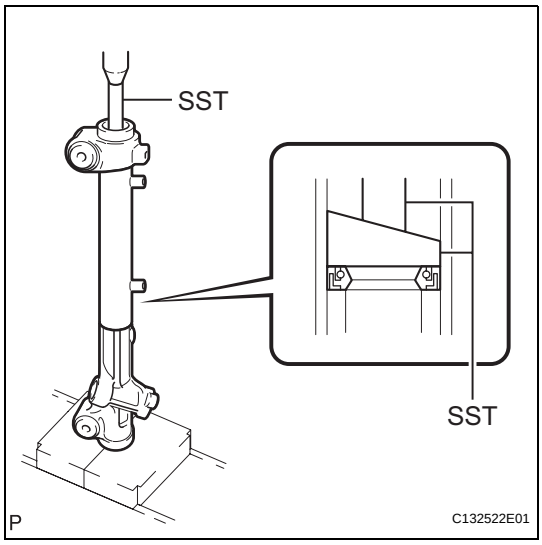
(b) Install the power steering cylinder tube oil seal to the rack housing at a slant.

(c) Using SST, insert the power steering cylinder tube oil seal by pushing the SST in by hand until the oil seal passes the 2 ports.
SST 09950-70010 (09951-07360), 09631-00200
NOTICE:
- **Ensure that the power steering cylinder tube oil seal is installed in the correct direction as shown in the illustration.**
- **Install the power steering cylinder tube oil seal at an angle of approximately 15° so that the lowermost part comes to the point, indicated by the arrow in the illustration, to prevent damage to the side of the oil seal when it passes the 2 ports.**
- **Do not turn the SST when inserting the oil seal.**

(d) Install SST (09631-00200) to SST (09951-07360) upside down.



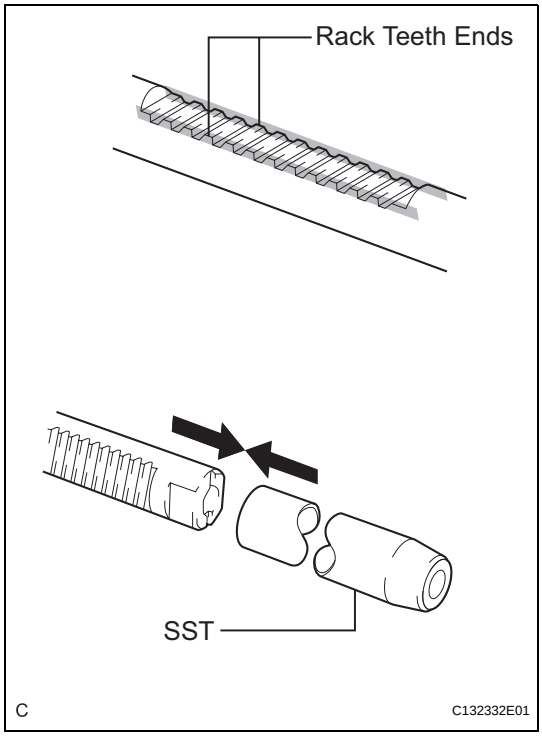
PS



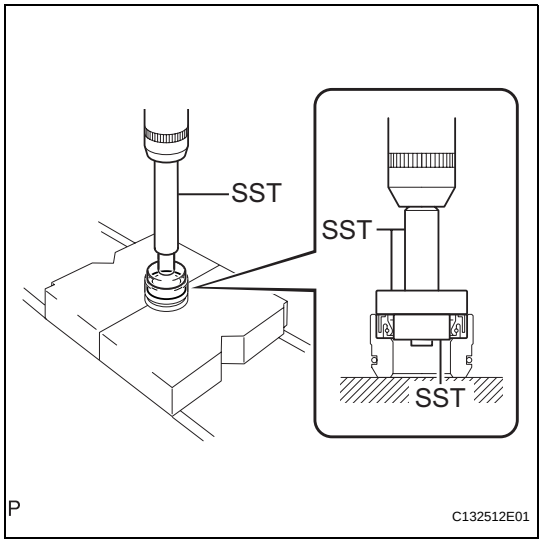
(e) Using SST, level the power steering cylinder tube oil seal by pushing the SST in by hand. Using SST and a press, install the oil seal.
SST 09950-70010 (09951-07360), 09631-00200

3. INSTALL POWER STEERING RACK SUB-ASSEMBLY

(a) Apply molybdenum disulfide lithium base grease to the rack teeth ends.

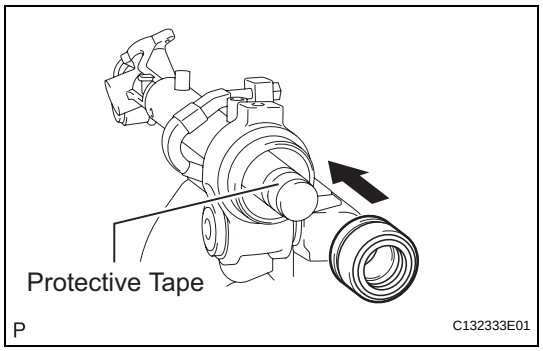


(b) Connect SST to the power steering rack sub-assembly.
SST 09631-33010
(c) Coat SST with power steering fluid.
(d) Install the power steering rack sub-assembly to the power steering rack housing.
(e) Remove SST.

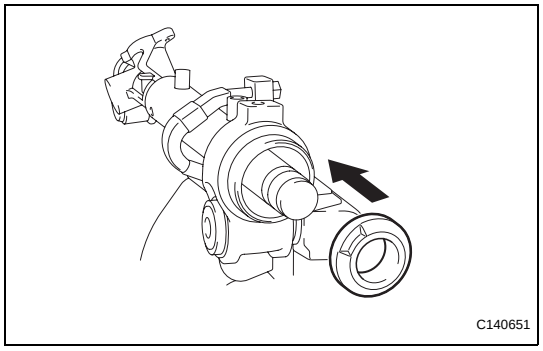


4. INSTALL POWER STEERING RACK BUSHING

(a) Using SST and a press, install the rack bushing oil seal to the power steering rack bushing.
SST 09950-70010 (09951-07100), 09950-60010 (09951-00400, 09951-00250, 09952-06010)
NOTICE:
Ensure that the rack bushing oil seal is installed in the correct direction as shown in the illustration.
(b) Coat a new O-ring with power steering fluid and install it to the rack bushing.
(c) Coat the rack bushing oil seal lip with power steering fluid.

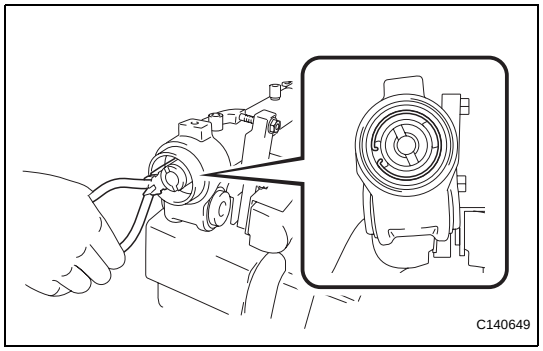


(d) Install the power steering rack bushing to the power steering rack housing.
NOTICE:
Do not damage the rack bushing oil seal.
HINT:
Wrap protective tape around the end of the steering rack in order to prevent damage to the rack bushing oil seal.



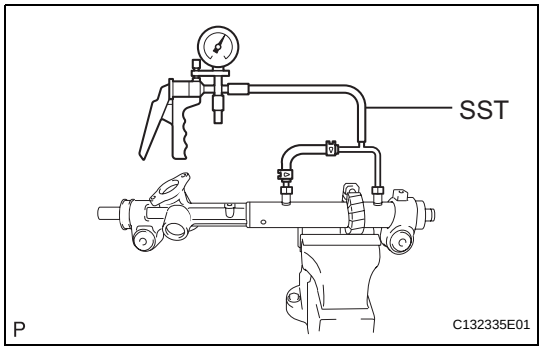
5. INSTALL CYLINDER END STOPPER

(a) Install the cylinder end stopper to the power steering rack housing.



6. INSTALL CYLINDER END STOPPER HOLE SNAP RING

(a) Using needle nose pliers, install the cylinder end stopper hole snap ring to the power steering rack housing.
NOTICE:
- **Make sure that the cylinder end stopper hole snap ring is securely installed in the power steering rack housing groove.**
- **Make sure that the cylinder end stopper hole snap ring claws are aligned with the cylinder end stopper notch.**



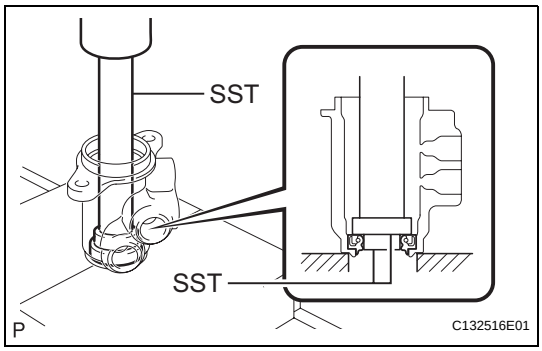
7. AIR TIGHTNESS TEST

(a) Install SST to the power steering rack housing.
SST 09631-12071 (09633-00010)
(b) Apply a vacuum of 53 kPa (398 mmHg, 15.65 in.Hg) for approximately 30 seconds.
(c) Check that there is no change in the vacuum pressure.
If there is a change in the vacuum pressure, check the installation of the oil seals.

8. INSTALL POWER STEERING CONTROL VALVE UPPER OIL SEAL

(a) Coat a new power steering control valve upper oil seal lip with power steering fluid.

PS

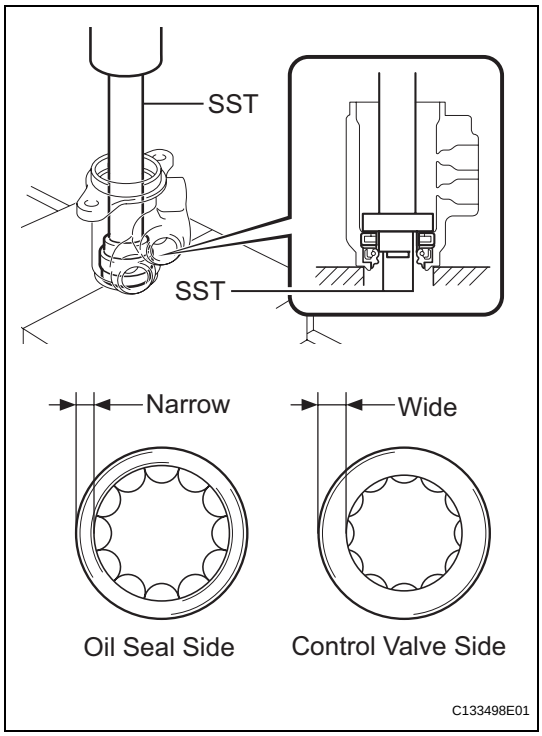


(b) Using SST and a press, press in the power steering control valve upper oil seal.
SST 09950-70010 (09951-07150), 09950-60010 (09951-00180, 09952-06010, 09951-00320)
NOTICE:
Make sure that the power steering control valve upper oil seal is installed in the correct direction as shown in the illustration.

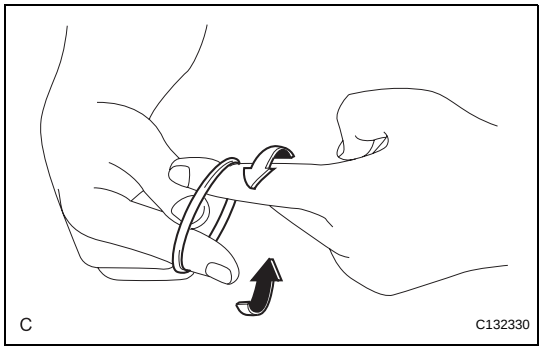
9. INSTALL POWER STEERING CONTROL VALVE UPPER BEARING

(a) Coat the power steering control valve upper bearing with molybdenum disulfide lithium base grease.

(b) Using SST and a press, press in the power steering control valve upper bearing.
SST 09950-70010 (09951-07150), 09950-60010 (09951-00180, 09951-00340)
NOTICE:
Make sure that the power steering control valve upper bearing is installed in the correct direction as shown in the illustration.



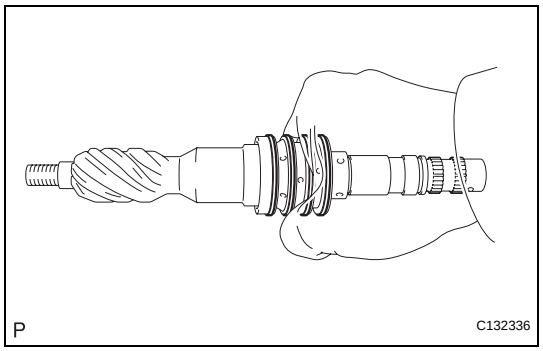
PS



10. INSTALL POWER STEERING CONTROL VALVE SPACER

(a) Expand 4 new power steering control valve spacers with your fingers.
NOTICE:
Be careful not to expand the power steering control valve spacers excessively.

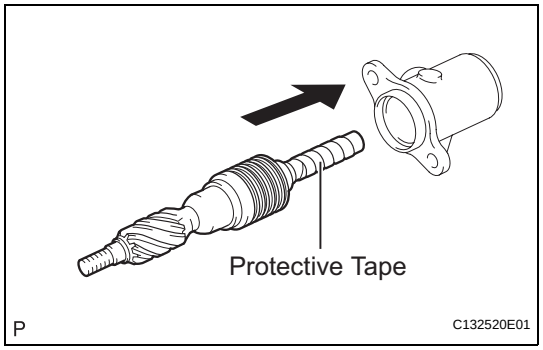
(b) Coat the 4 power steering control valve spacers with power steering fluid.



(c) Install the 4 power steering control valve spacers to the control valve, and adjust them with your fingers.

11. INSTALL POWER STEERING CONTROL VALVE SUB-ASSEMBLY

(a) Coat the power steering control valve sub-assembly with power steering fluid.



(b) Install the power steering control valve sub-assembly into the control valve housing sub-assembly.

NOTICE:

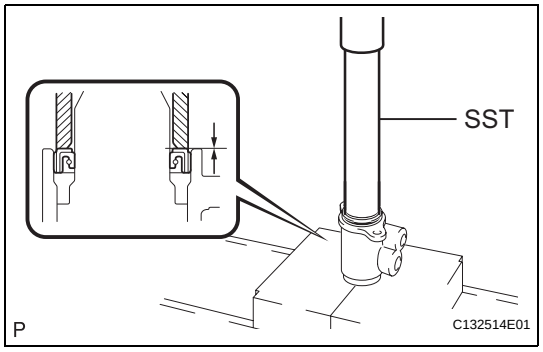
Be careful not to damage the power steering control valve spacers and power steering control valve upper oil seal lip.

HINT:

Wrap protective tape around the spline of the power steering control valve sub-assembly in order to prevent damage to the oil seal.

12. INSTALL POWER STEERING CONTROL VALVE LOWER OIL SEAL

(a) Coat a new power steering control valve lower oil seal lip with power steering fluid.

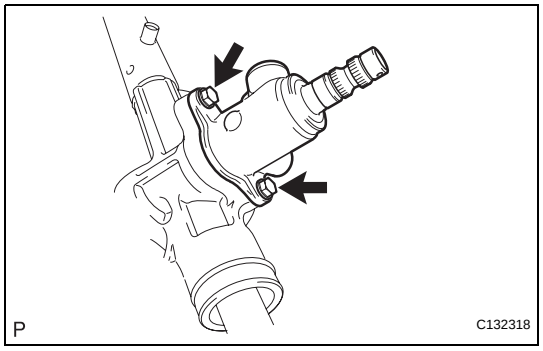


(b) Using SST and a press, install the power steering control valve lower oil seal to the control valve assembly.

SST 09612-22011

NOTICE:

- **Make sure that the power steering control valve lower oil seal is installed in the correct direction as shown in the illustration.**
- **Do not damage the power steering control valve lower oil seal.**

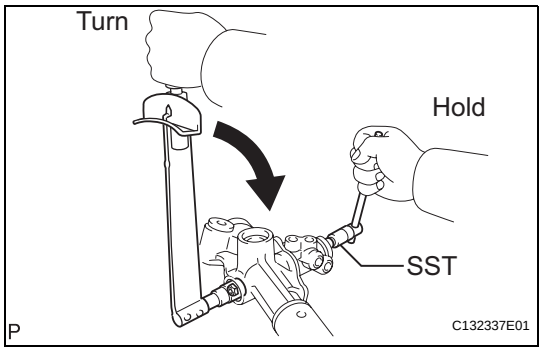


13. INSTALL POWER STEERING CONTROL VALVE ASSEMBLY

(a) Install the power steering control valve assembly and a new gasket to the power steering rack housing with the 2 bolts.

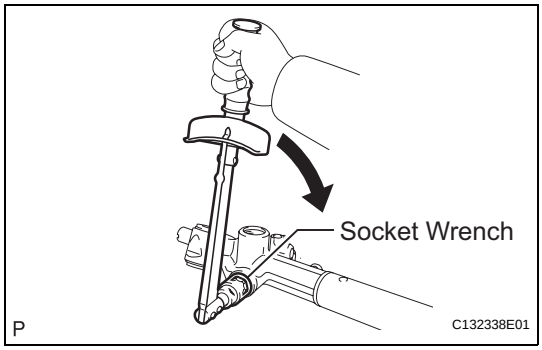
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

PS

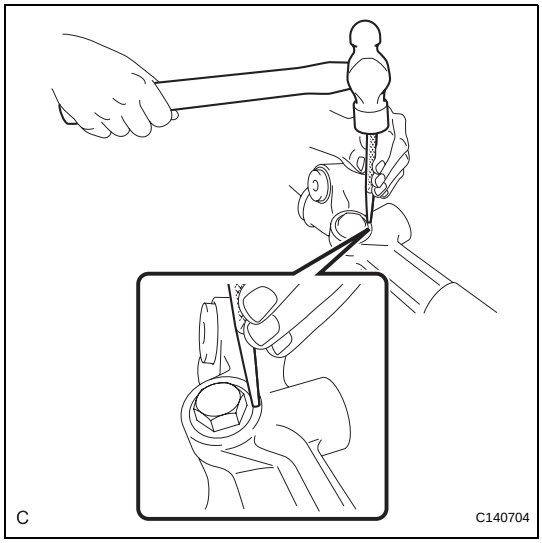


(b) Using SST, hold the control valve shaft and install a new nut.
SST 09616-00011
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)

(c) Apply sealant to 2 or 3 threads of the rack housing cap.
Sealant:
TOYOTA genuine adhesive 1344, THREE BOND 1344 or equivalent

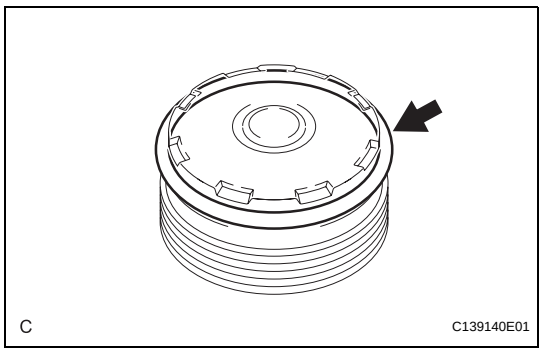


(d) Using a socket wrench (27 mm (1.06 in.)), install the rack housing cap.
Torque: 54 N*m (546 kgf*cm, 40 ft.*lbf)



(e) Using a punch and a hammer, stake the rack housing cap and the power steering rack housing.

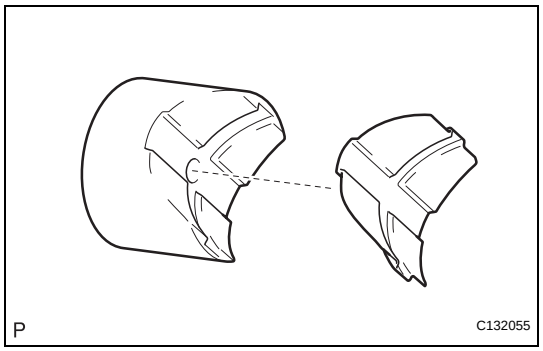
PS



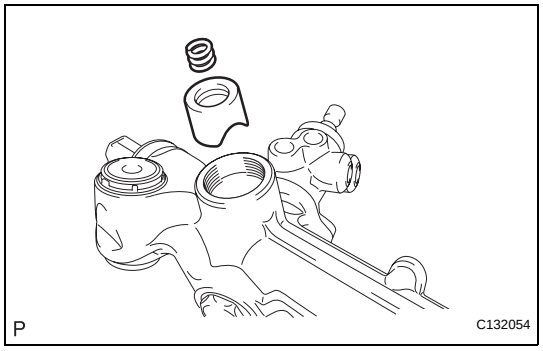
14. INSTALL RACK GUIDE

(a) Coat a new O-ring with molybdenum disulfide lithium base grease and install it to the rack guide spring cap.
NOTICE:
Make sure that no foreign matter, such as aluminum dust, is on the power steering rack housing and rack guide spring cap.

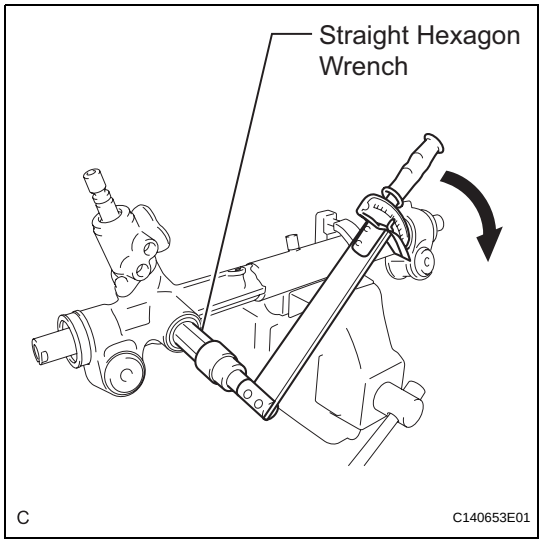
(b) Apply molybdenum disulfide lithium base grease to the rack guide base and rack guide.



(c) Install the rack guide base to the rack guide.
(d) Apply molybdenum disulfide lithium base grease to the compression spring and the contact surface of the rack guide sub-assembly and the power steering rack.

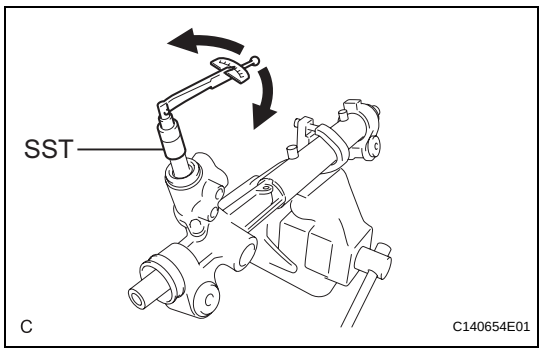


(e) Install the compression spring and rack guide sub-assembly to the power steering rack housing.

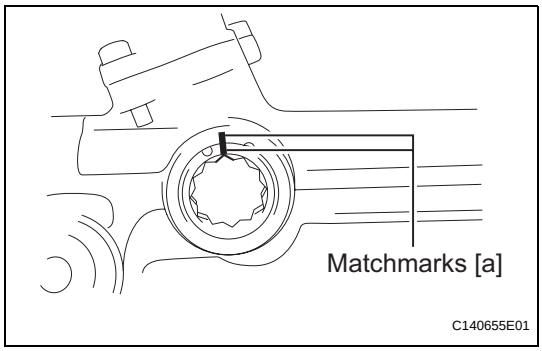


(f) Using a straight hexagon wrench (24 mm (0.94 in.)), install the rack guide spring cap to the power steering rack housing.
Torque: 50 to 70 N*m (514 to 714 kgf*cm, 37 to 52 ft.*lbf)

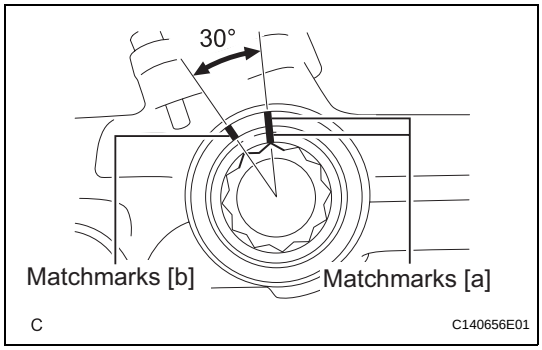
PS



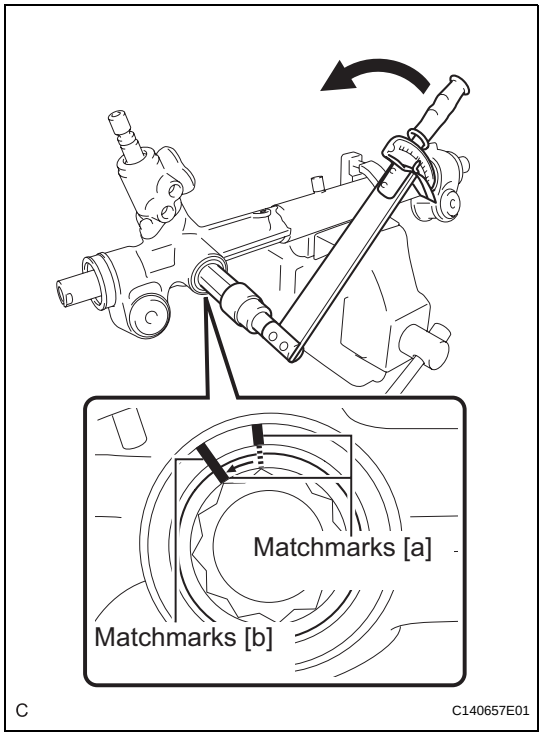
(g) Using SST, turn the control valve and measure the turning torque.
Torque: 6.0 N*m (61 kgf*cm, 54 in.*lbf) or more



(h) Put matchmarks <a> on the power steering rack housing and the rack guide spring cap.

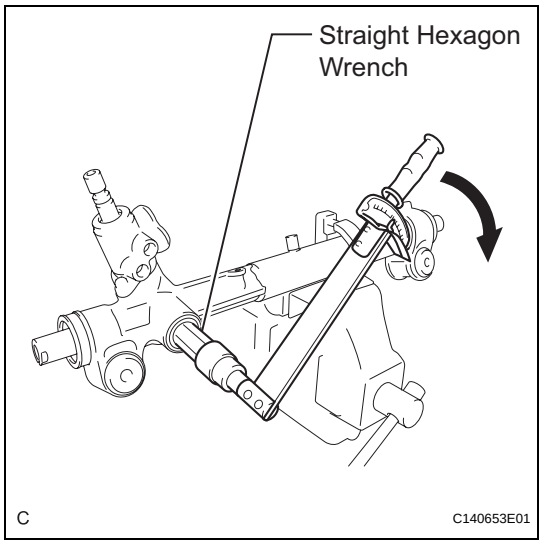


(i) Put matchmarks <b> 30° counterclockwise from matchmarks <a> on the power steering rack housing.



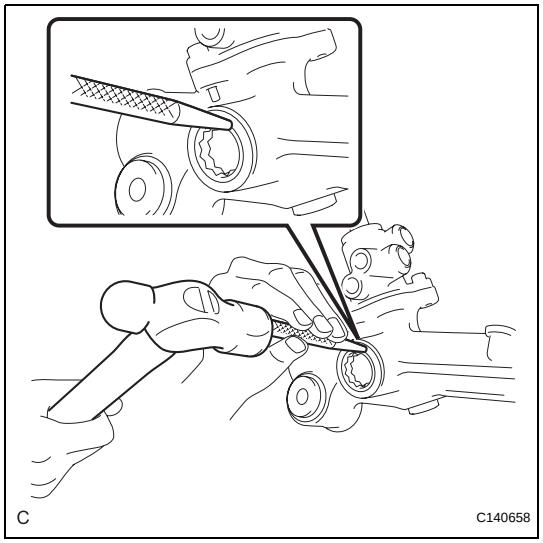
(j) Using a straight hexagon wrench (24 mm (0.94 in.)), loosen the rack guide spring cap until matchmarks <b> and matchmarks <a> on the rack guide spring cap are aligned. Measure the rotating torque required when loosening the rack guide spring cap.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) or more

PS

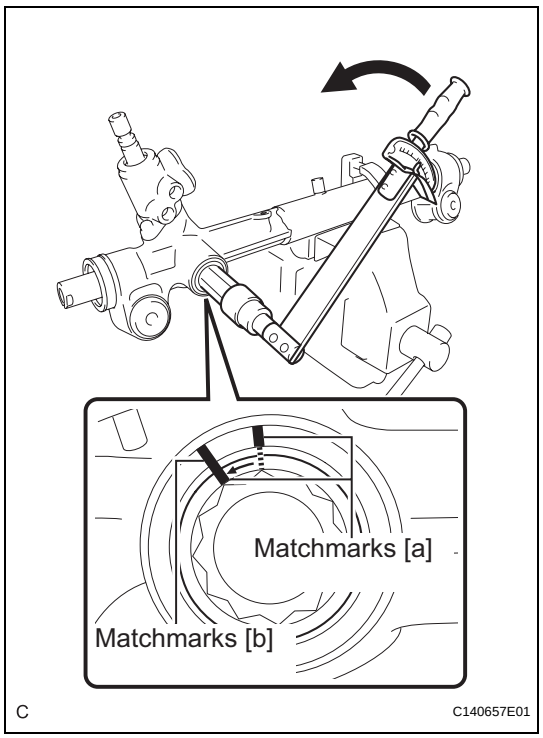


(k) If the rotating torque required when loosening is below the specified value, perform the following procedure to achieve the specified value.

(1) Using a straight hexagon wrench (24 mm (0.94 in.)), re-tighten the rack guide spring cap.
Torque: 50 to 70 N*m (510 to 714 kgf*cm, 37 to 52 ft.*lbf)



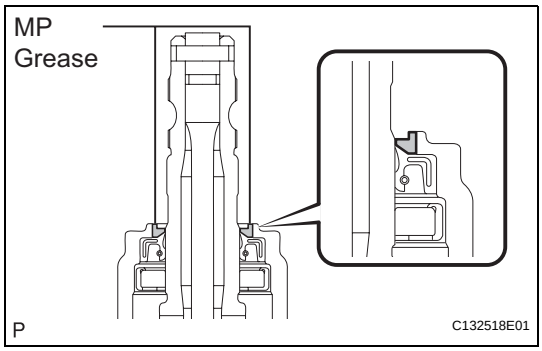
(2) Using a punch and hammer, stake the power steering rack housing and rack guide spring cap at 3 equally spaced positions.
HINT:
Tap the power steering rack housing and rack guide spring cap strongly and repeatedly to stake them securely.



(3) Using a straight hexagon wrench (24 mm (0.94 in.)), loosen the rack guide spring cap until matchmarks <b> and matchmarks <a> on the rack guide spring cap are aligned. Measure the rotating torque required when loosening the rack guide spring cap.
Torque: 10 N*m (102 kgf*cm, 7.4 ft.*lbf) or more

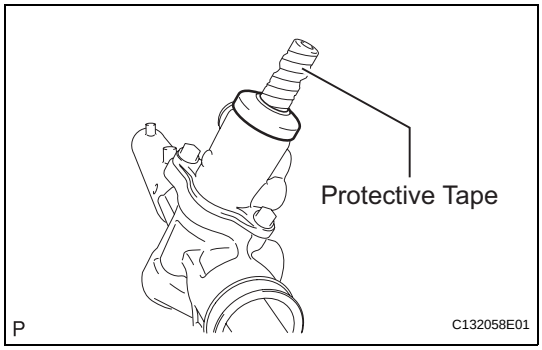
15. INSPECT TOTAL PRELOAD (See page PS-50)

PS



16. INSTALL DUST COVER

(a) Apply MP grease around the control valve shaft as shown in the illustration.

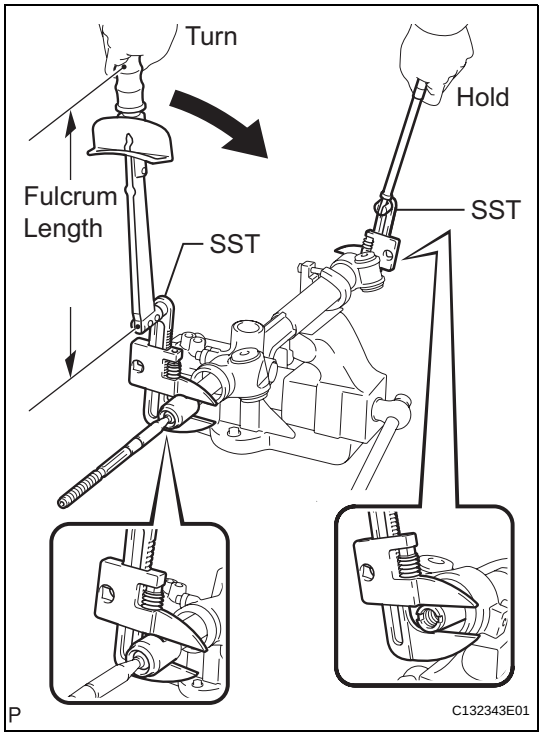


(b) Wrap vinyl tape around the spline of the control valve.

(c) Install the dust cover to the control valve assembly.

17. INSTALL STEERING RACK END SUB-ASSEMBLY

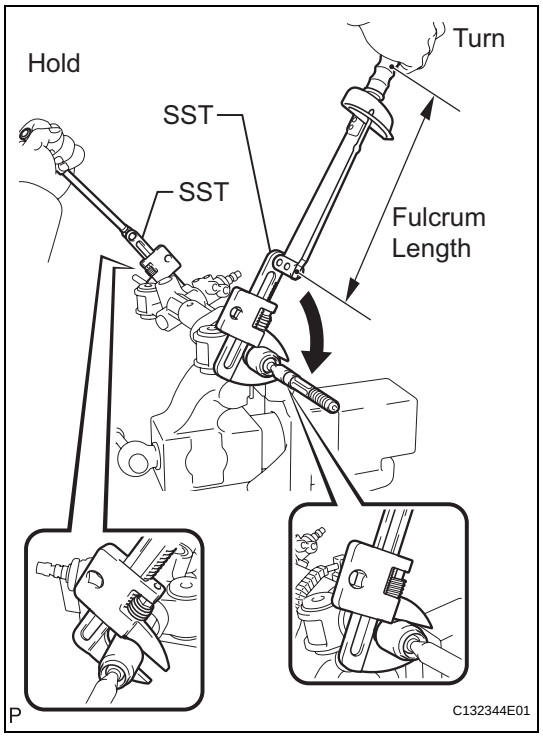
(a) Install 2 new claw washers.
HINT:
Align the claws of the claw washer with the steering rack grooves.



(b) Using SST, install the steering rack end sub-assembly (LH side).
SST 09922-10010
Torque: Without SST
84 N*m (852 kgf*cm, 62 ft.*lbf)
With SST
60 N*m (613 kgf*cm, 44 ft.*lbf)
NOTICE:
- **Use SST 09922-10010 as shown in the illustration.**
- **Use a torque wrench with a fulcrum length of 345 mm (13.58 in.)**
- **This torque value is effective when SST is parallel to the torque wrench.**

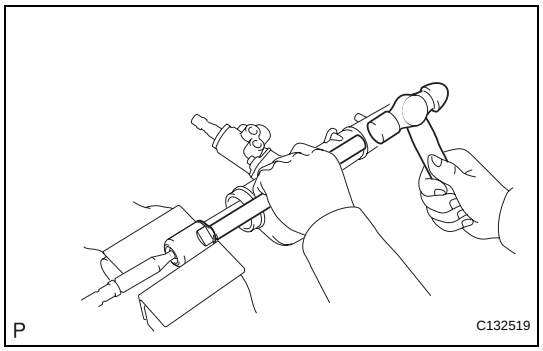
HINT:
Using SST, hold the steering rack and install the steering rack end sub-assembly (LH side).

PS



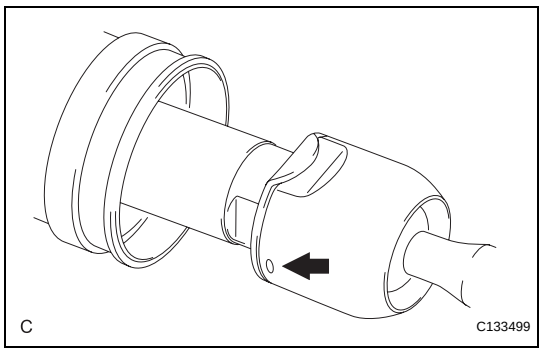
(c) Using SST, install the steering rack end sub-assembly (RH side).
SST 09922-10010
Torque: Without SST
84 N*m (852 kgf*cm, 62 ft.*lbf)
With SST
60 N*m (613 kgf*cm, 44 ft.*lbf)
NOTICE:
- **Use SST 09922-10010 as shown in the illustration.**
- **Use a torque wrench with a fulcrum length of 345 mm (13.58 in.)**
- **This torque value is effective when SST is parallel to the torque wrench.**

HINT:
Using SST, hold the steering rack end sub-assembly (LH side) and install the steering rack end sub-assembly (RH side).

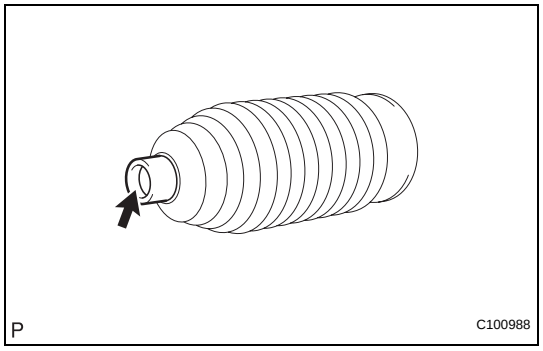


(d) Using a brass bar and a hammer, stake the 2 claw washers.
NOTICE:
Avoid any impact to the steering rack.

PS



(e) Ensure that the holes of the rack ends are not clogged with grease.
HINT:
If the hole is clogged, the pressure inside the boot will change after it is assembled and the steering wheel is turned.



18. INSTALL NO. 2 STEERING RACK BOOT

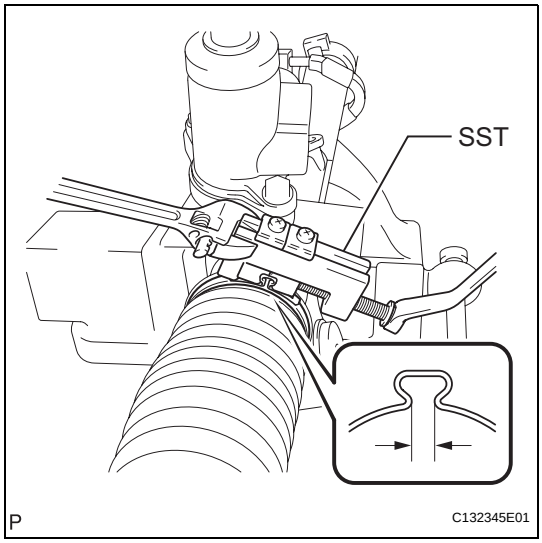
(a) Apply silicon grease to the inside of the small opening of the No. 2 steering rack boot.

(b) Install the No. 2 steering rack boot to the groove on the rack housing.
NOTICE:
Be careful not to damage or twist the No. 2 steering rack boot.

19. INSTALL NO. 1 STEERING RACK BOOT

HINT:

Perform the same procedure as for the No. 2 steering rack boot.



20. INSTALL NO. 2 STEERING RACK BOOT CLAMP

(a) Using SST, tighten the 2 No. 2 steering rack boot clamps as shown in the illustration.

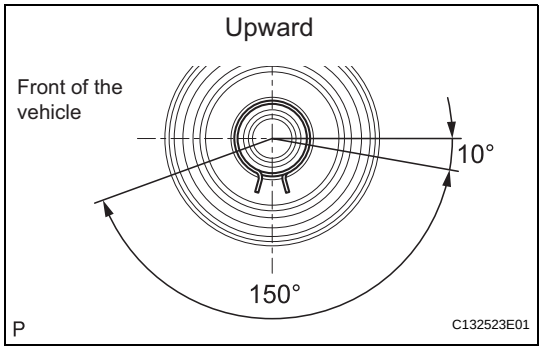
SST 09521-24010

Clearance:

2.0 mm (0.079 in.) or less

NOTICE:

Be careful not to damage the No. 2 steering rack boot.

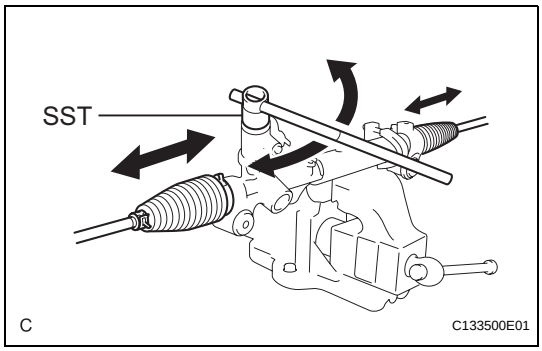


21. INSTALL STEERING RACK BOOT CLIP

(a) Using pliers, install the 2 steering rack boot clips.

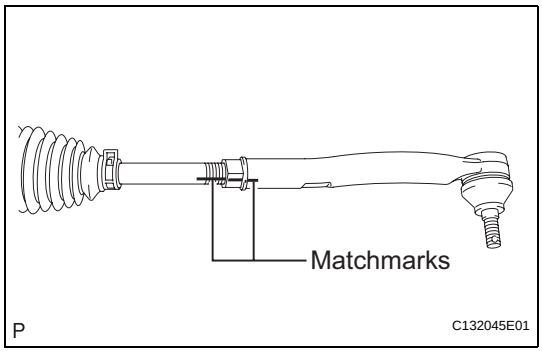
NOTICE:

Make sure that each clip claw is positioned within the area shown in the illustration.



(b) Using SST, turn the pinion and check that the rack boots expand and contract smoothly.

SST 09616-00011



22. INSTALL TIE ROD ASSEMBLY LH

(a) Install the lock nut and the tie rod assembly LH to the steering rack end sub-assembly until the matchmarks are aligned.

HINT:

After adjusting toe-in, torque the lock nut.

23. INSTALL TIE ROD ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

PS

24. INSTALL STEERING RIGHT TURN PRESSURE TUBE

(a) Coat 2 new O-rings with power steering fluid and install them to the steering right turn pressure tube.

(b) Using SST, install the right turn pressure tube to the power steering link assembly.

SST 09023-38201

Torque: Without SST

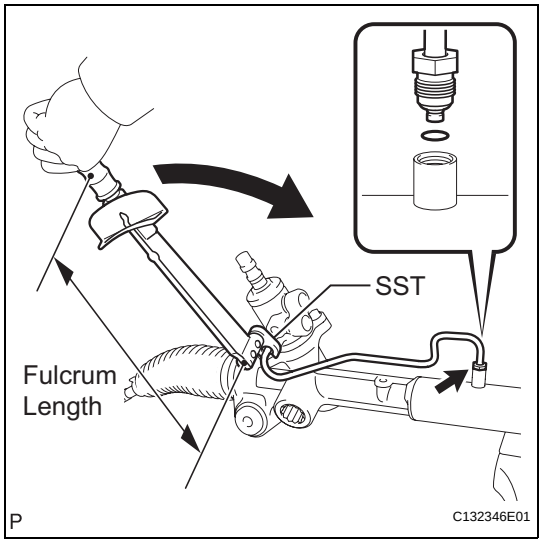
13 N*m (128 kgf*cm, 9 ft.*lbf)

With SST

11 N*m (114 kgf*cm, 8 ft.*lbf)

NOTICE:

- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to the torque wrench.**



25. INSTALL STEERING LEFT TURN PRESSURE TUBE

(a) Coat 2 new O-rings with power steering fluid and install them to the steering left turn pressure tube.

(b) Using SST, install the left turn pressure tube to the power steering link assembly.

SST 09023-38201

Torque: Without SST

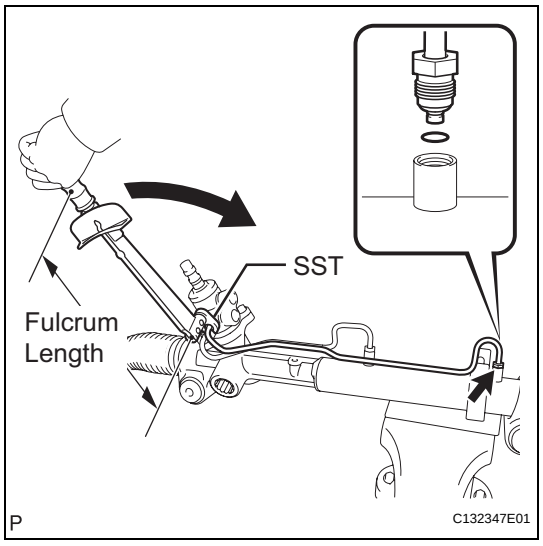
13 N*m (128 kgf*cm, 9 ft.*lbf)

With SST

11 N*m (114 kgf*cm, 8 ft.*lbf)

NOTICE:

- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to the torque wrench.**

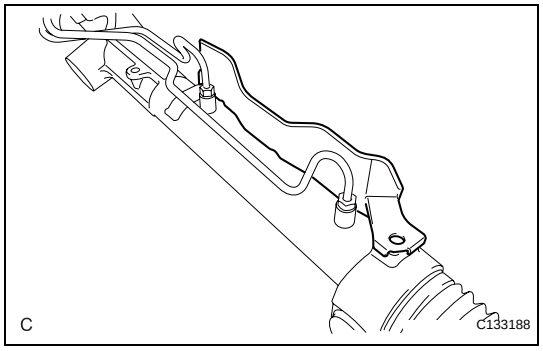


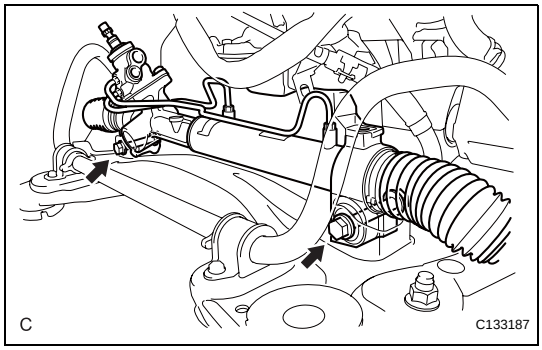
PS

INSTALLATION

1. INSTALL POWER STEERING RACK HOUSING HEAT INSULATOR (for 2GR-FE)

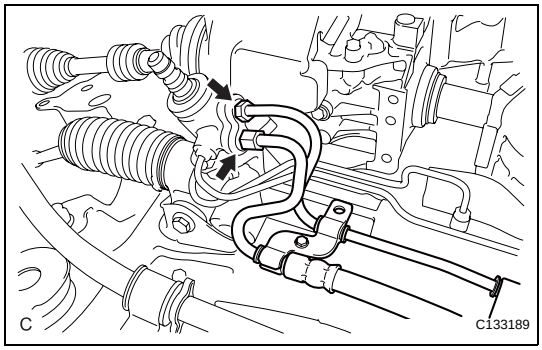
(a) Install the power steering rack housing heat insulator to the power steering link assembly.





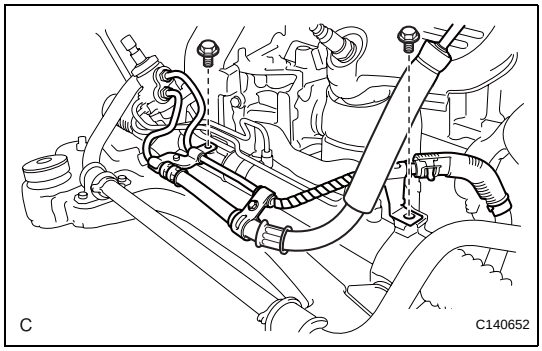
2. INSTALL POWER STEERING LINK ASSEMBLY

(a) Install the power steering link assembly with the 2 bolts and 2 nuts.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)



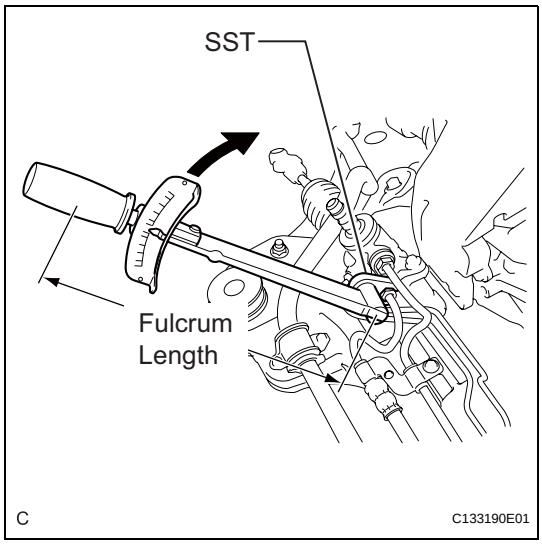
3. CONNECT PRESSURE FEED TUBE ASSEMBLY

(a) Temporarily connect the pressure feed tube assembly to the power steering link assembly.

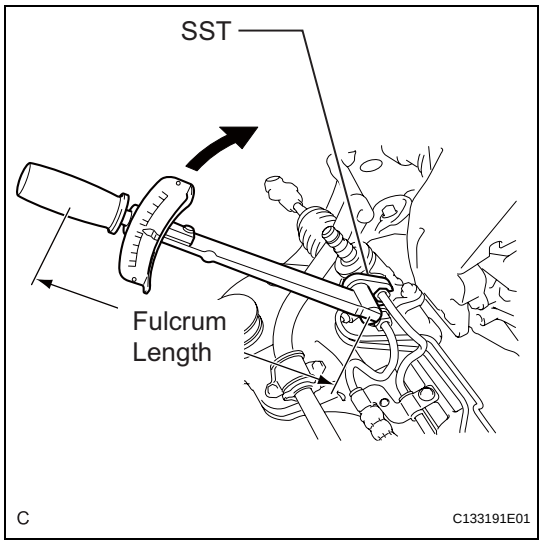


(b) Install the pressure feed tube assembly clamp with the 2 bolts.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

PS



(c) Using SST, tighten the pressure feed tube assembly (pressure feed tube side).
SST 09023-12701
Torque: Without SST
25 N*m (250 kgf*cm, 18 ft.*lbf)
With SST
22 N*m (227 kgf*cm, 16 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to the torque wrench.**

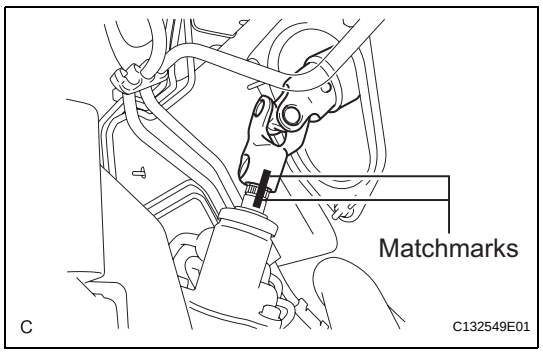


(d) Using SST, tighten the pressure feed tube assembly (return tube side).
SST 09023-12701
Torque: Without SST
25 N*m (250 kgf*cm, 18 ft.*lbf)
With SST
22 N*m (227 kgf*cm, 16 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 300 mm (11.81 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

4. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE
HINT:
Refer to the instructions for installation of the engine assembly (See page EM-107 for 2AZ-FE, EM-37 for 2GR-FE).

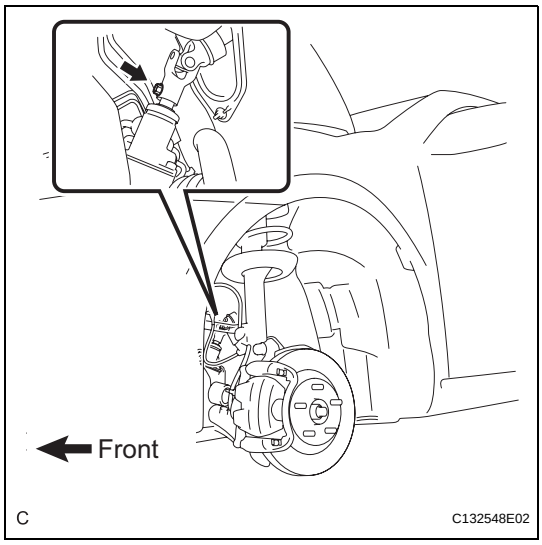
5. CONNECT TIE ROD ASSEMBLY LH
(a) Connect the tie rod assembly LH to the steering knuckle with the nut.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
(b) Install a new cotter pin.
NOTICE:
Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.

6. CONNECT TIE ROD ASSEMBLY RH
HINT:
Perform the same procedure on the other side.



7. CONNECT STEERING SLIDING YOKE
(a) Align the matchmarks on the steering sliding yoke and the steering link assembly.

PS



(b) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

8. **INSTALL FRONT WHEELS**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
10. **BLEED POWER STEERING FLUID (See page PS-7)**
11. **CHECK POWER STEERING FLUID LEVEL (See page PS-3)**
12. **CHECK FOR POWER STEERING FLUID LEAKAGE**

SYSTEM DESCRIPTION

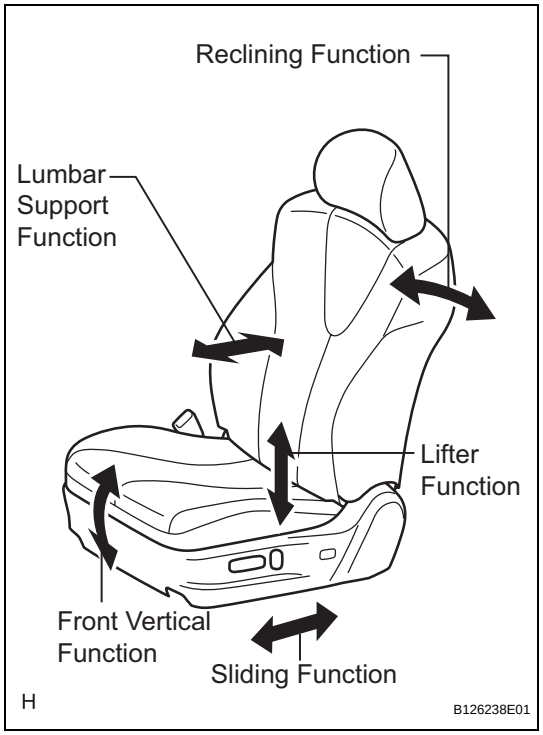
1. FRONT POWER SEAT CONTROL SYSTEM DESCRIPTION

The driver seat and front passenger seat are equipped with slide, reclining, lifter, front vertical, and lumbar support adjustment functions.

2. FUNCTION OF MAIN COMPONENTS

The following functions are available:

Components	Function
Power seat motor assembly (slide motor)	Activated based on a signal from the power seat switch, a motor is activated and slides the seat forward and rearward.
Power seat motor assembly (reclining motor)	Activated based on a signal from the power seat switch, a motor is activated and tilts and reclines the seat.
Power seat motor assembly (front vertical motor)	Activated based on a signal from the power seat switch and raises and lowers the seat cushion front vertically.
Power seat motor assembly (lifter motor)	Activated based on a signal from the power seat switch and raises and lowers the seat vertically.
Lumbar support adjuster motor	Activated based on a signal from the front power seat lumbar switch and adjusts lumbar support.
Front power seat lumbar switch	Based on switches operated, the seat is adjusted accordingly.



OPERATION CHECK

1. CHECK POWER SEAT FUNCTION

(a) Check the basic functions.

(1) Operate the power seat switches and check that the following functions work:

- Sliding
- Reclining
- Lumbar support (Driver side only)
- Front vertical (Driver side only)
- Lifter (Driver side only)

PROBLEM SYMPTOMS TABLE

HINT:

- Inspect the fuses and relays before confirming the suspected areas in the table below.
- Inspect each suspected area in numerical order for the corresponding symptom.

Front Power Seat Control System (Driver Side):

Symptom	Suspected area	See page
Power seat does not operate (slide, front vertical, lifter, reclining).	1. P/SEAT fuse	-
	2. Power seat switch LH	SE-87
	3. Wire harness or connector	-
Only slide operation function does not operate.	1. Power seat switch LH	SE-87
	2. Front seat frame with adjuster LH (slide motor)	SE-90
	3. Wire harness or connector	-
Only front vertical operation function does not operate.	1. Power seat switch LH	SE-87
	2. Front seat frame with adjuster LH (front vertical motor)	SE-90
	3. Wire harness or connector	-
Only lifter operation function does not operate.	1. Power seat switch LH	SE-87
	2. Front seat frame with adjuster LH (lifter motor)	SE-90
	3. Wire harness or connector	-
Only reclining operation function does not operate.	1. Power seat switch LH	SE-87
	2. Front seat frame with adjuster LH (reclining motor)	SE-90
	3. Wire harness or connector	-
Only lumbar support operation function does not operate.	1. Front power seat lumbar switch LH	SE-94
	2. Lumbar support adjuster assembly LH	SE-98
	3. Wire harness or connector	-

Front Power Seat Control System (Front Passenger Side):

Symptom	Suspected area	See page
Power seat does not operate (slide and reclining).	1. P/SEAT fuse	-
	2. Power seat switch RH	SE-89
	3. Wire harness or connector	-
Only slide operation function does not operate.	1. Power seat switch RH	SE-89
	2. Front seat frame with adjuster RH (slide motor)	SE-91
	3. Wire harness or connector	-
Only reclining operation function does not operate.	1. Power seat switch RH	SE-89
	2. Front seat frame with adjuster RH (reclining motor)	SE-91
	3. Wire harness or connector	-

SE

SYSTEM DESCRIPTION

1. GENERAL DESCRIPTION

(a) By operating the seat heater switch, which is located in the console box, the temperature can be controlled within the range of 30 to 40°C (86 to 104°F).

(b) The seat heater switch indicator light provides seat heater on/off status.

(c) The seat heaters of both seats are controlled by the seat heater controls, which are located under the respective seat.

PROBLEM SYMPTOMS TABLE

SEAT HEATER SYSTEM:

Symptom	Suspected area	See page
Seat heater does not operate. (Front LH side)	1. S-HTR fuse	-
	2. Seat heater switch	SE-101
	3. Front seat cushion heater	SE-106
	4. Front seat back heater	SE-111
	5. Wire harness	-
Seat heater does not operate. (Front RH side)	1. S-HTR fuse	-
	2. Seat heater switch	SE-101
	3. Front seat cushion heater	SE-106
	4. Front seat back heater	SE-111
	5. Wire harness	-
Temperature of seat heater cannot be adjusted.	Seat heater switch	SE-101

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

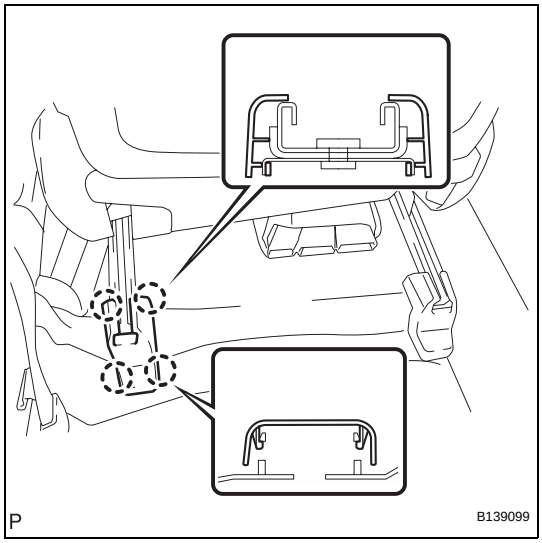
Wait for 90 seconds after disconnecting the cable to prevent the airbag from deploying (See page RS-1).

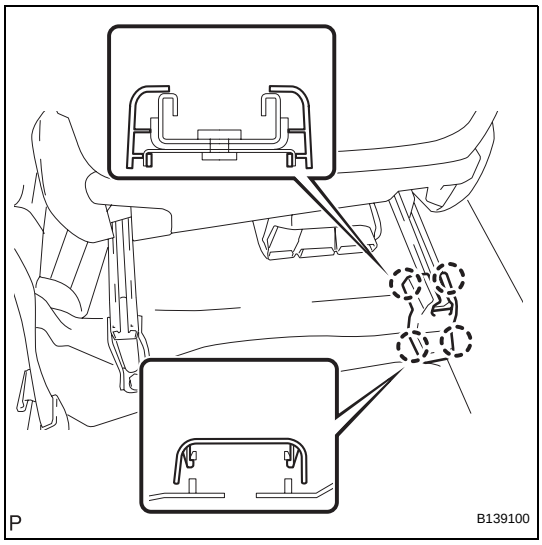
2. REMOVE FRONT SEAT HEADREST ASSEMBLY

3. REMOVE SEAT TRACK COVER

(a) Move the front seat assembly fully forward by operating the slide handle.

(b) Using a screwdriver, disengage the 4 claws and remove the seat track cover.
HINT:
Tape the screwdriver tip before use.



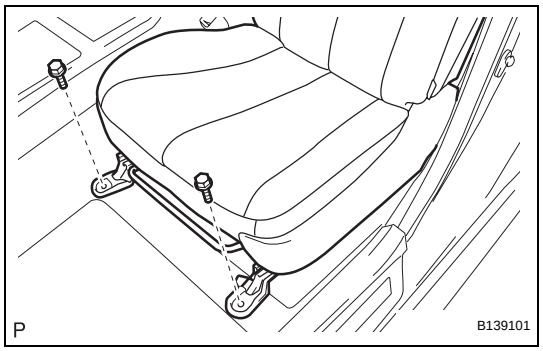


4. REMOVE INNER SEAT TRACK BRACKET COVER

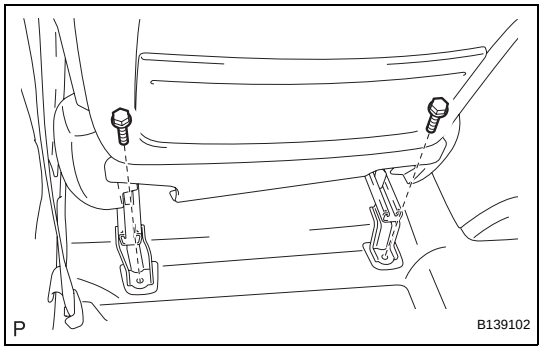
(a) Using a screwdriver, disengage the 4 claws and remove the inner seat track bracket cover.
HINT:
Tape the screwdriver tip before use.

5. REMOVE FRONT SEAT ASSEMBLY

(a) Move the front seat assembly to the rearmost position by operating the slide handle.



(b) Remove the 2 bolts on the front seat track bracket.
(c) Move the front seat assembly fully forward by operating the slide handle.



(d) Remove the 2 bolts on the rear seat track bracket.
(e) Move the front seat assembly to the center position and adjust the seatback to the vertical position by operating the slide and reclining adjuster release handle.
(f) Disconnect the connectors and clamp.
(g) Remove the front seat assembly.

SE

INSTALLATION

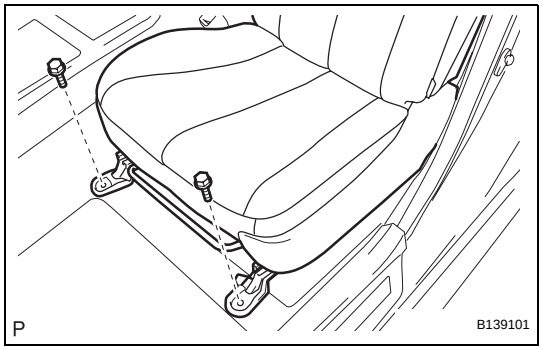
1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat assembly in the vehicle and align the adjuster pin with the hole on the vehicle side.

(b) Connect the connector and clamp.

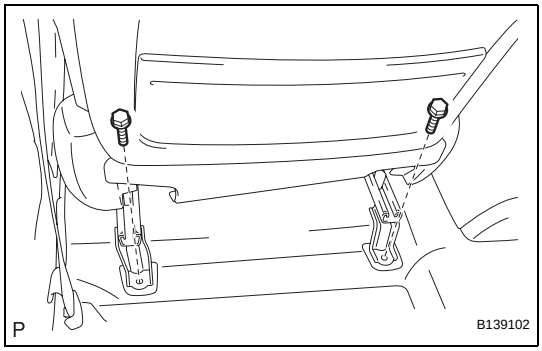
(c) Move the front seat assembly to the rearmost position by operating the slide handle.
NOTICE:
Check that the seat is locked.

SE



(d) Temporarily install the front seat track bracket with the 2 bolts.

(e) Move the front seat assembly fully forward by operating the slide handle.
NOTICE:
Check that the seat is locked.



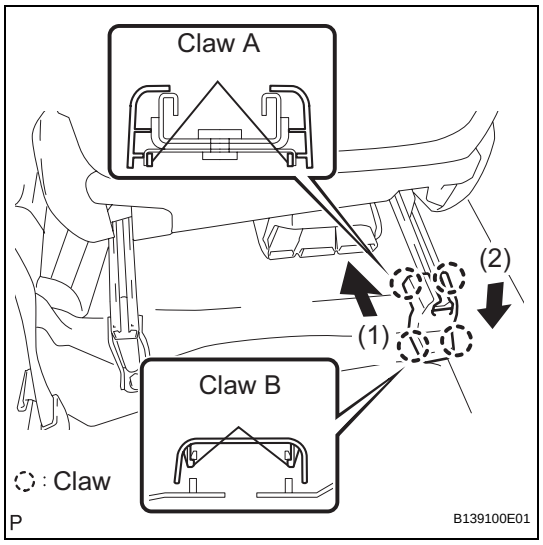
(f) Temporarily install the rear seat track bracket with the 2 bolts.

(g) Move the front seat assembly to the rearmost position by operating the slide handle.
NOTICE:
Check that the seat is locked.

(h) Fully tighten the 2 bolts on the front seat track bracket in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(i) Move the front seat assembly fully forward by operating the slide handle.
NOTICE:
Check that the seat is locked.

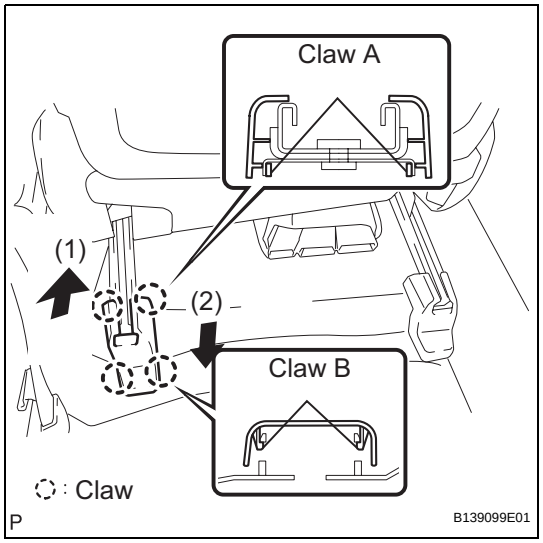
(j) Fully tighten the 2 bolts on the rear seat track bracket in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



2. INSTALL INNER SEAT TRACK BRACKET COVER

(a) Slide the inner seat track bracket cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the seat track bracket cover inner to engage claw B.



3. INSTALL SEAT TRACK COVER

(a) Slide the seat track cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the seat track cover to engage claw B.

4. INSTALL FRONT SEAT HEADREST ASSEMBLY

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. INSPECT SLIDE ADJUSTER LOCK

7. PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)
(See page RS-242)

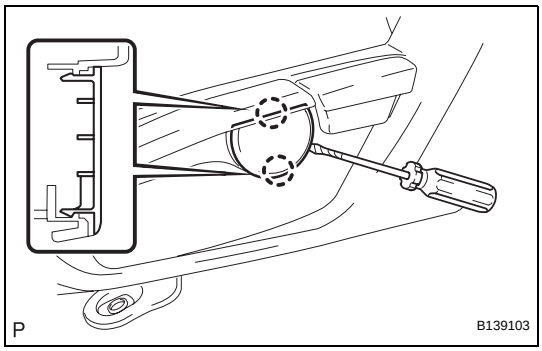
8. INSPECT SRS WARNING LIGHT
Check the SRS warning light (See page RS-32).

SE

SE

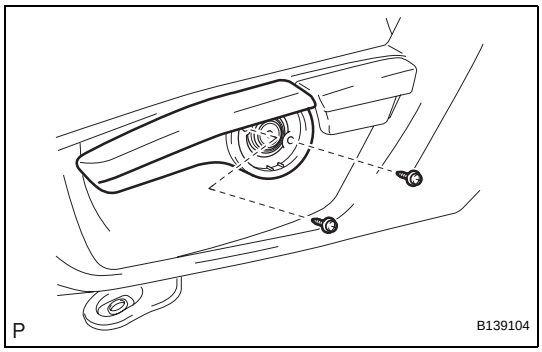
DISASSEMBLY

NOTICE:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.



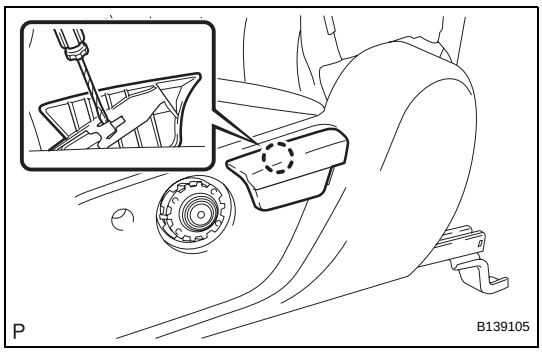
1. REMOVE VERTICAL ADJUSTER COVER LH (for Driver Seat)

(a) Using a screwdriver, disengage the 2 claws and remove the vertical adjuster cover LH.
HINT:
Tape the screwdriver tip before use.



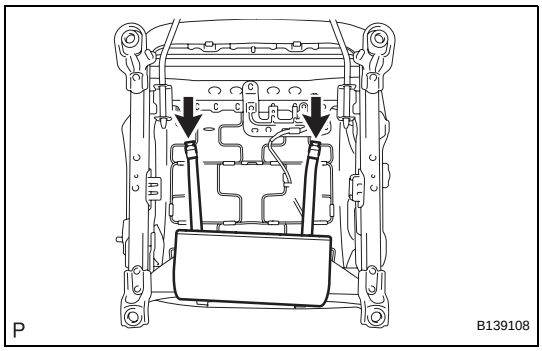
2. REMOVE VERTICAL ADJUSTING HANDLE NO. 2 (for Driver Seat)

(a) Remove the 2 screws and vertical adjusting handle.



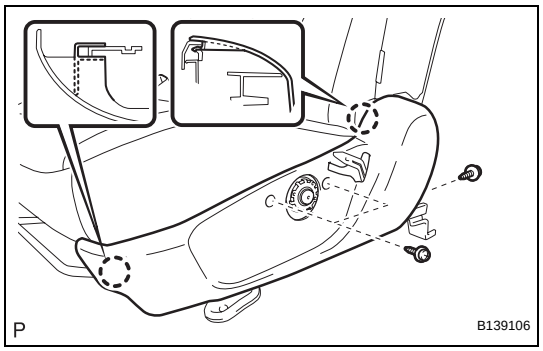
3. REMOVE RECLINING ADJUSTER RELEASE HANDLE

(a) Lift the reclining adjuster release handle.
(b) Using a screwdriver, disengage the claw and remove the reclining adjuster release handle.
HINT:
Tape the screwdriver tip before use.

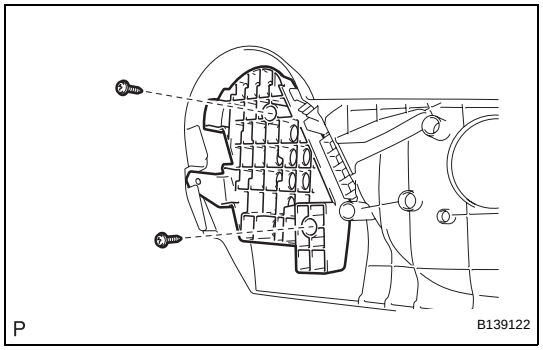


4. REMOVE FRONT SEAT CUSHION SHIELD

(a) Disengage the 2 hooks.

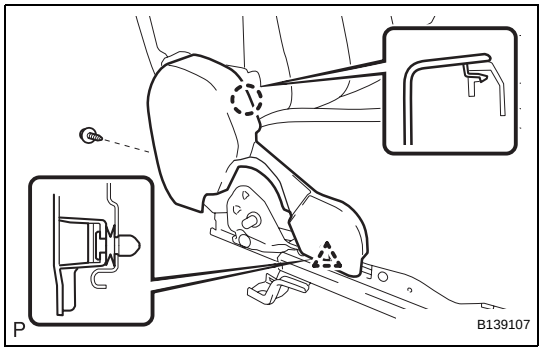


(b) Remove the 3 screws.
(c) Disengage the 2 claws and remove the front seat cushion shield.

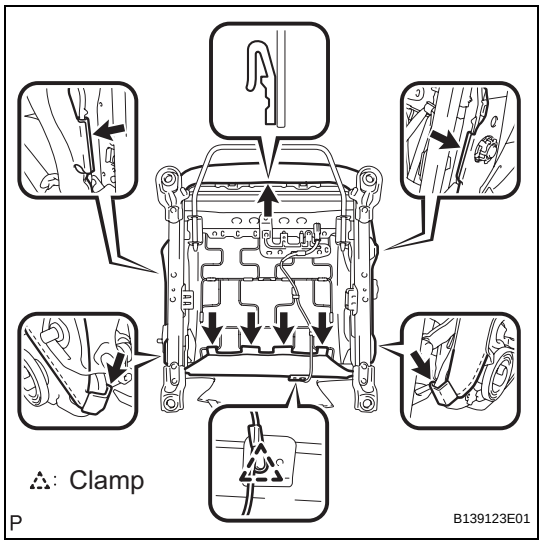


5. REMOVE LOWER SEAT TRACK SPACER
(a) Remove the 2 screws and lower seat track spacer.

6. REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-15)

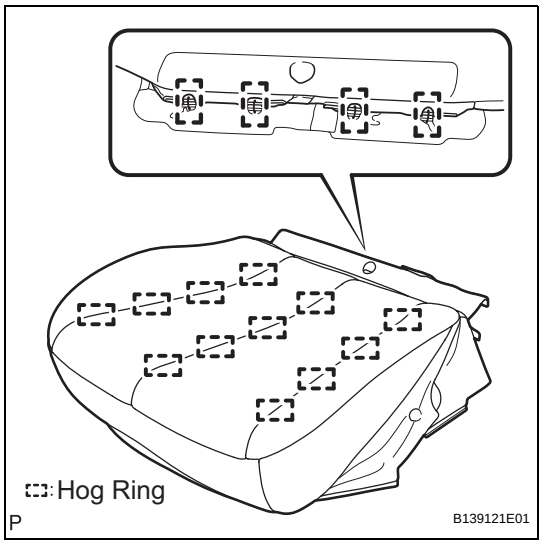


7. REMOVE FRONT INNER SEAT CUSHION SHIELD
(a) Remove the screw.
(b) Disengage the claw and clip, and then remove the front inner seat cushion shield.



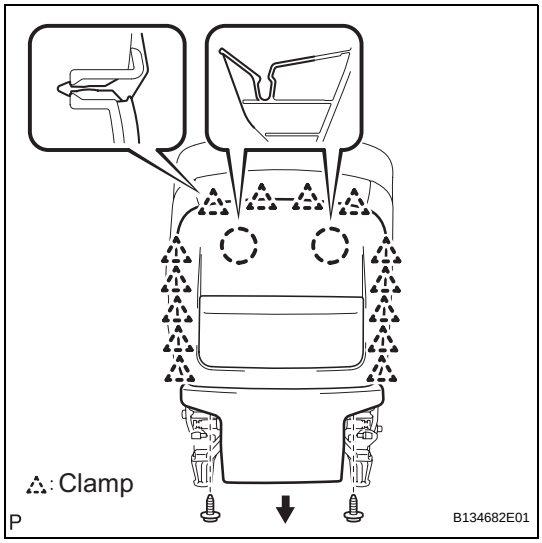
8. REMOVE FRONT SEAT CUSHION COVER WITH PAD
(a) Disengage the clamp.
(b) Disengage the hooks and remove the front seat cushion cover with pad.

SE



9. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 16 hog rings and separate type front seat cushion cover.

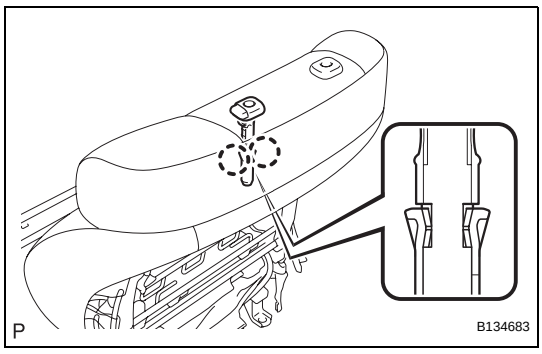


10. REMOVE FRONT SEAT BACK BOARD SUB-ASSEMBLY

(a) Remove the 2 screws.

(b) Disconnect the 14 clamps and front separate type seat back cover.

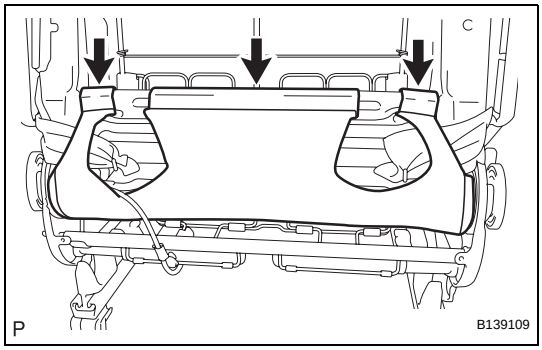
(c) Pull the seat back board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the seat back board.



11. REMOVE FRONT SEAT HEADREST SUPPORT

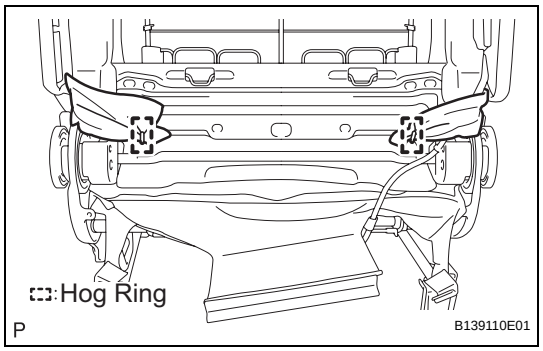
(a) Detach the 2 claws and remove the headrest support.

12. REMOVE FRONT SEAT HEADREST SUPPORT

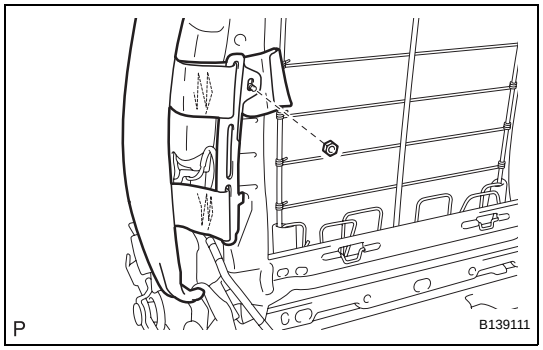


13. REMOVE FRONT SEAT BACK COVER WITH PAD

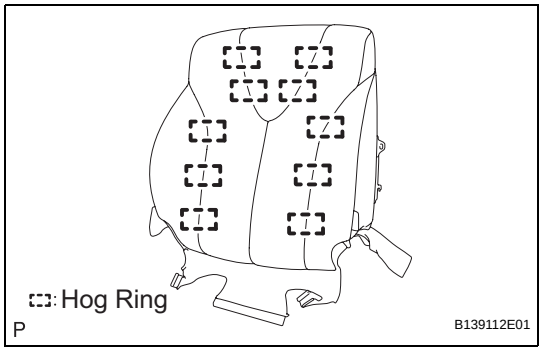
(a) Disengage the 3 hooks.



(b) Remove the 2 hog rings.



(c) Remove the nut and separate the 2 brackets.
(d) Remove the front seat back cover with pad.

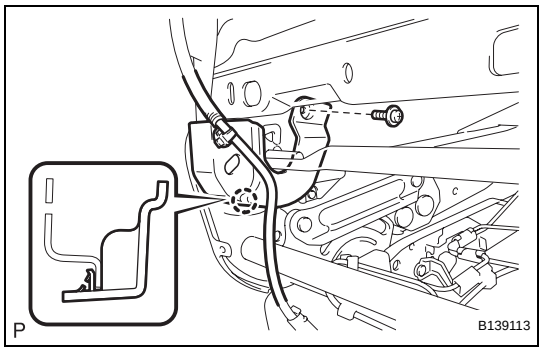


14. REMOVE FRONT SEPARATE TYPE SEAT BACK COVER

(a) Remove the 10 hog rings and front separate type seat back cover.

15. REMOVE RECLINING ADJUSTER INSIDE COVER LH

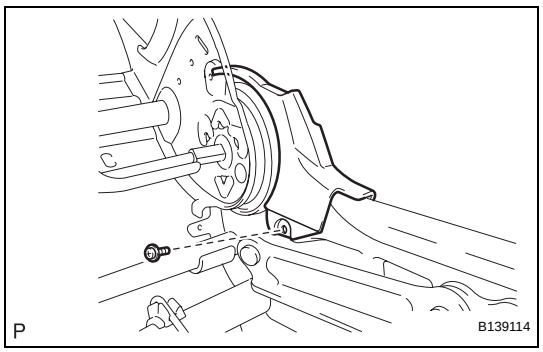
(a) Disconnect the clamp.



(b) Remove the screw.
(c) Disengage the claw and remove the reclining adjuster inside cover LH.

16. REMOVE RECLINING ADJUSTER INSIDE COVER RH

HINT:
Use the same procedures for the RH side and LH side.



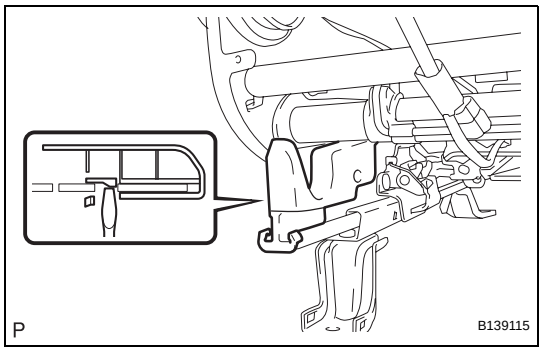
17. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw and reclining adjuster inside cover LH.

18. REMOVE RECLINING ADJUSTER INSIDE COVER RH

HINT:
Use the same procedures for the RH side and LH side.

SE



19. REMOVE FRONT LOWER SEAT CUSHION SHIELD LH

(a) Using a screwdriver, disengage the claw and remove the front lower seat cushion shield LH.

20. REMOVE FRONT LOWER SEAT CUSHION SHIELD RH

HINT:

Use the same procedures for the RH side and LH side.

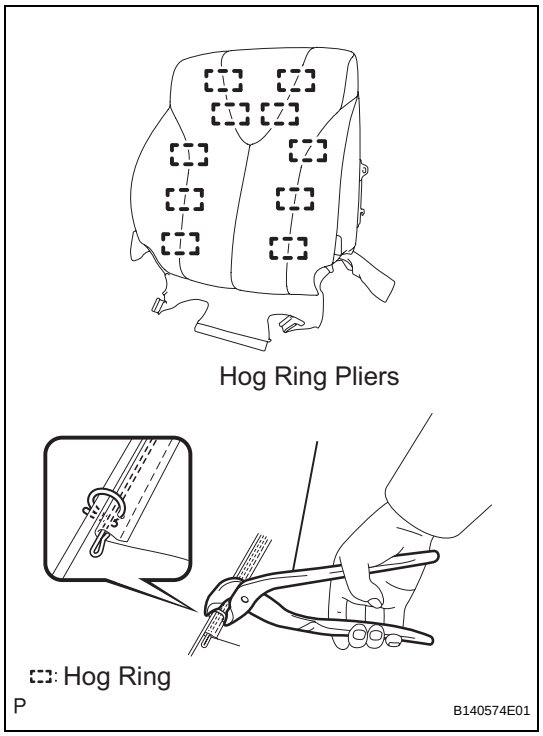
21. REMOVE SEAT POSITION SENSOR (for Driver Seat) (See page RS-461)

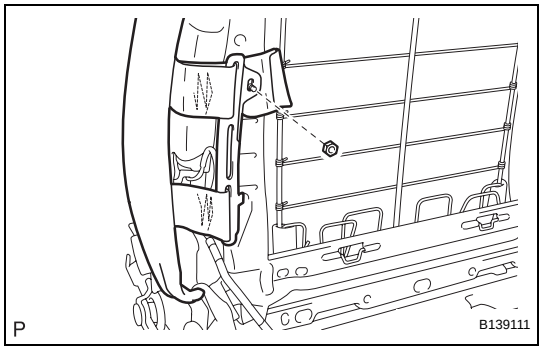
SE

REASSEMBLY

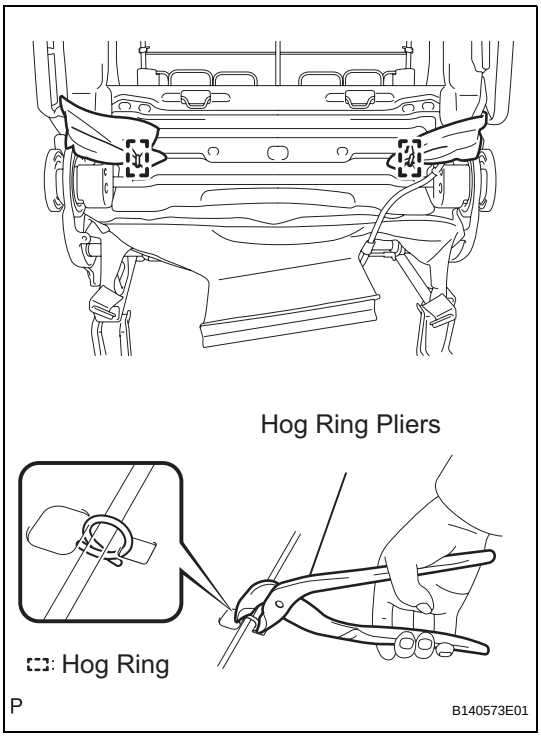
NOTICE:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.

1. **INSTALL SEAT POSITION SENSOR (for Driver Side) (See page RS-464)**
2. **INSTALL FRONT LOWER SEAT CUSHION SHIELD LH**
3. **INSTALL FRONT LOWER SEAT CUSHION SHIELD RH**
4. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
5. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
6. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
7. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
8. **INSTALL FRONT SEPARATE TYPE SEAT BACK COVER**
   (a) Using hog ring pliers, install the front separate type seat back cover to the front separate type seat back pad with 10 new hog rings.
   NOTICE:
   - **Be careful not to damage the cover.**
   - **When installing the hog rings, take care to minimize wrinkles as much as possible.**

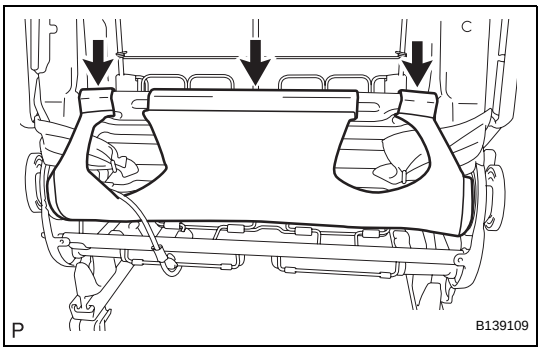




9. **INSTALL FRONT SEAT BACK COVER WITH PAD**
   (a) Fully cover the airbag with the 2 seat back cover brackets and tighten the nut.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
   NOTICE:
   - **For vehicles with side airbags, the seat back cover must be securely installed. Otherwise, the side airbags may not deploy properly.**
   - **Make sure that the strap is not twisted after installing the bracket.**
   - **Install the bracket securely.**

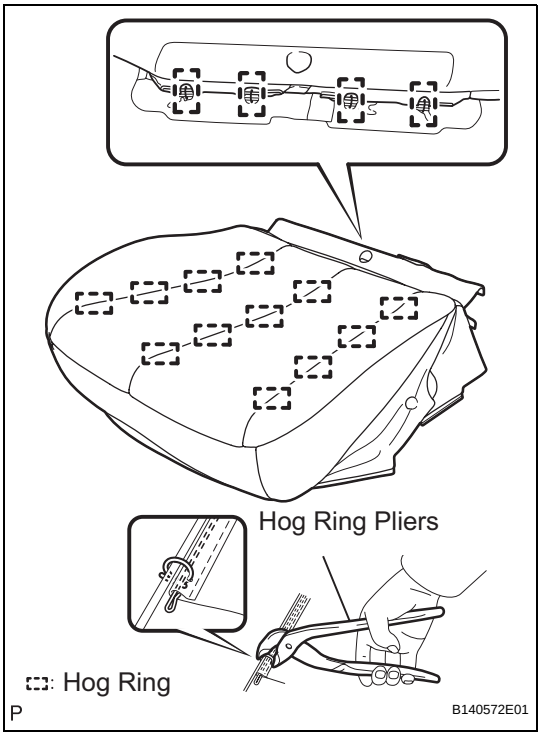


(b) Using hog ring pliers, install the seat back cover (with pad) to the seat frame with 2 new hog rings, and attach the hooks.



(c) Engage the 3 hooks.

10. **INSTALL FRONT SEAT HEADREST SUPPORT**
11. **INSTALL FRONT SEAT HEADREST SUPPORT**
12. **INSTALL FRONT SEAT BACK BOARD SUB-ASSEMBLY**



13. **INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER**
    (a) Using hog ring pliers, install the separate type front seat cushion cover to the seat back pad with 16 new hog rings.
    NOTICE:
    - **Be careful not to damage the cover.**
    - **When installing the hog rings, take care to minimize wrinkles as much as possible.**
14. **INSTALL FRONT SEAT CUSHION COVER WITH PAD**
15. **INSTALL FRONT INNER SEAT CUSHION SHIELD**
16. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-16)**
17. **INSTALL LOWER SEAT TRACK SPACER**
18. **INSTALL FRONT SEAT CUSHION SHIELD (for Driver Seat)**
19. **INSTALL RECLINING ADJUSTER RELEASE HANDLE**

20. INSTALL VERTICAL ADJUSTING HANDLE NO. 2 (for Driver Seat)

21. INSTALL VERTICAL ADJUSTER COVER LH (for Driver Seat)

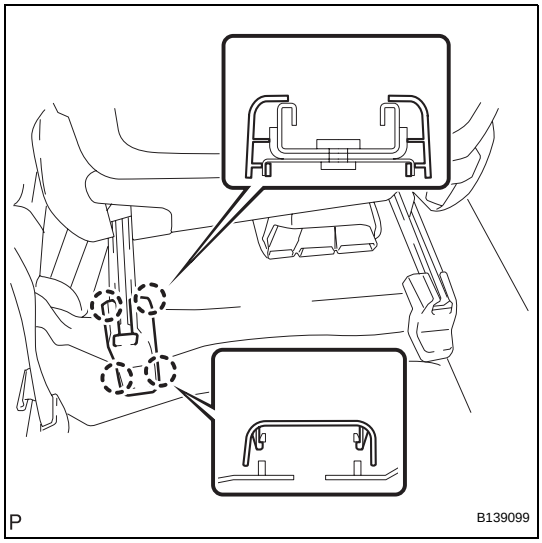
REMOVAL

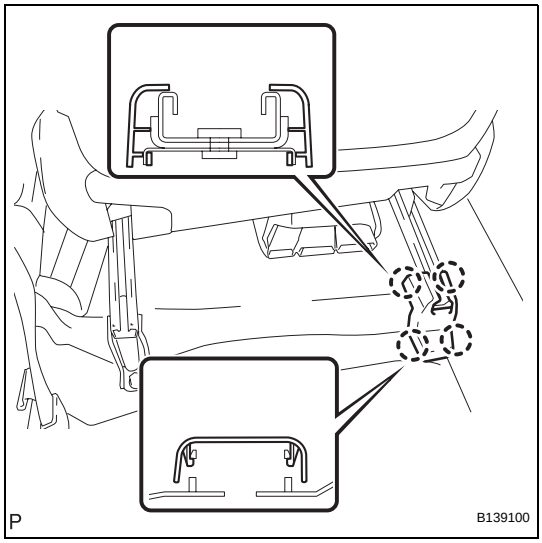
1. REMOVE FRONT SEAT HEADREST ASSEMBLY

2. REMOVE SEAT TRACK COVER

(a) Operate the power seat switch knob and move the seat to the position farthest forward.

(b) Using a screwdriver, detach the 4 claws and remove the seat track cover.
HINT:
Tape the screwdriver tip before use.



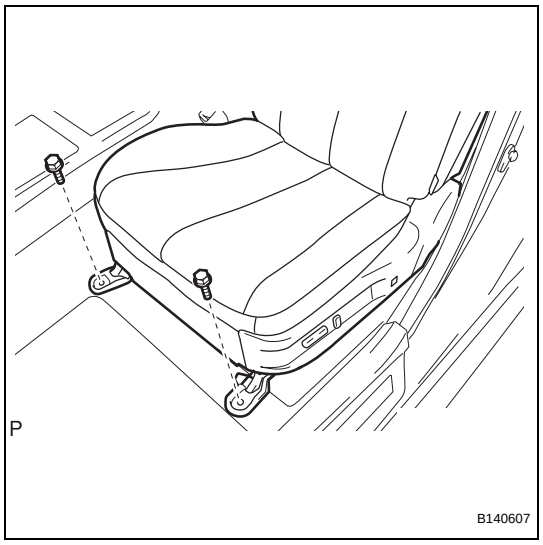


3. REMOVE INNER SEAT TRACK BRACKET COVER

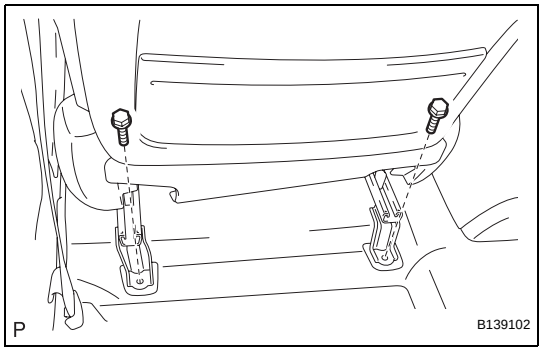
(a) Using a screwdriver, detach the 4 claws and remove the inner seat track bracket cover.

4. REMOVE FRONT SEAT ASSEMBLY

(a) Operate the power seat switch knob and move the seat to the rearmost position.



(b) Remove the 2 bolts on the front seat track bracket.
(c) Operate the power seat switch knob and move the seat to the position farthest forward.

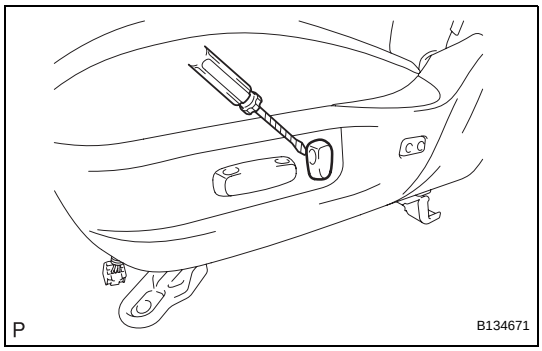


(d) Remove the 2 bolts on the rear seat track bracket.
(e) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent the airbag and seat belt pretensioner from deploying (See page RS-1).
(f) Disconnect the connectors under the seat. Then remove the front seat assembly.

SE

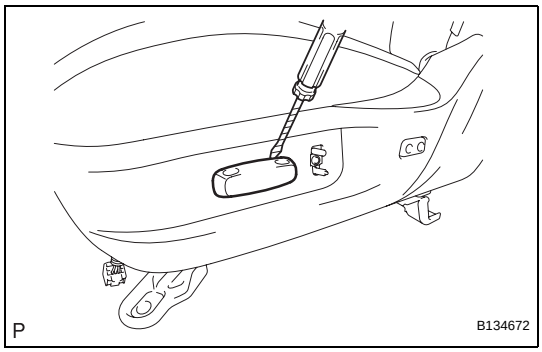
DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.



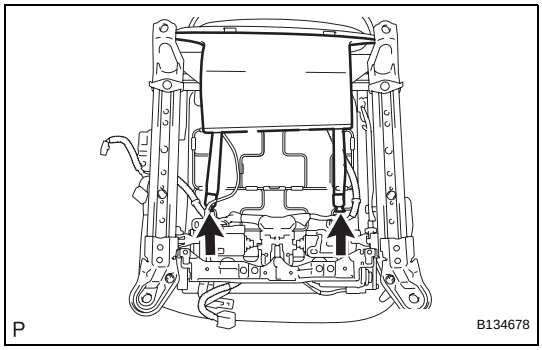
1. REMOVE RECLINING POWER SEAT SWITCH KNOB

(a) Using a screwdriver, detach the reclining power seat switch knob.
HINT:
Tape the screwdriver tip before use.



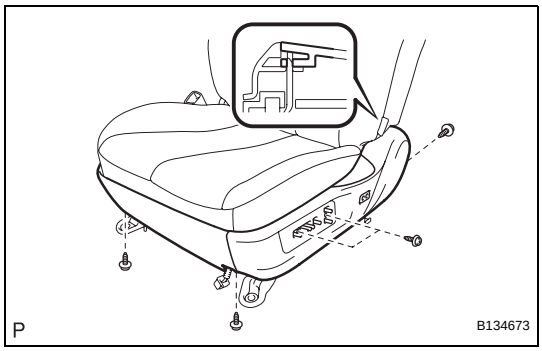
2. REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

(a) Using a screwdriver, detach the slide and vertical power seat switch knob.
HINT:
Tape the screwdriver tip before use.

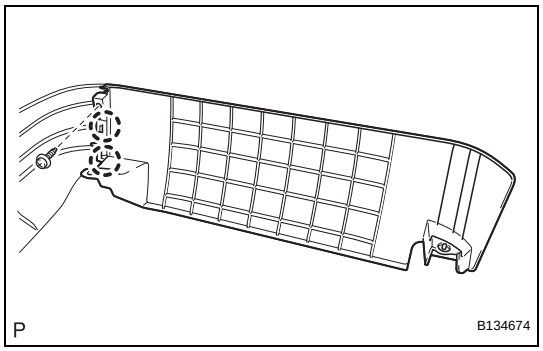


3. REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY

(a) Disconnect the 2 hooks.



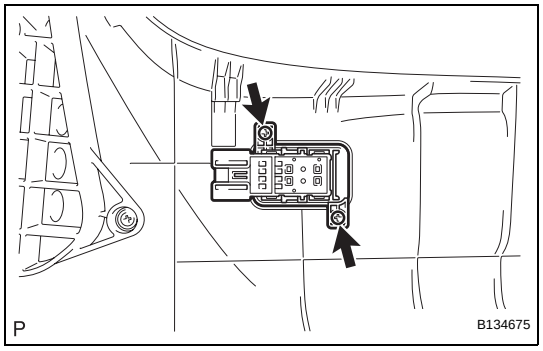
(b) Remove the 5 screws.
(c) Disengage the claw and separate the front seat cushion shield assembly.
(d) Disconnect the connector from the front power seat lumbar switch.



4. REMOVE FRONT INNER NO. 1 SEAT CUSHION SHIELD

(a) Remove the screw.

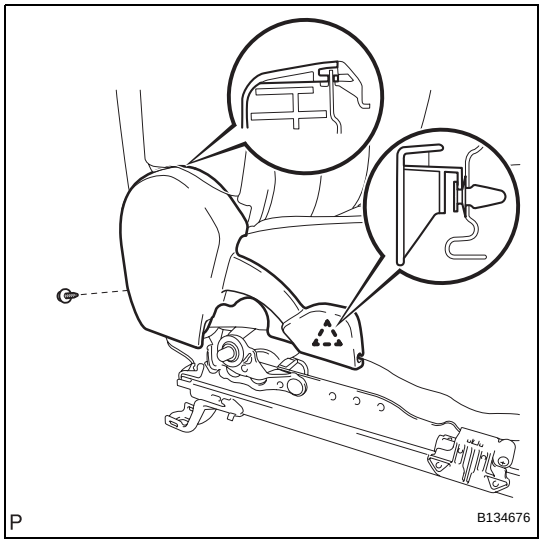
(b) Detach the 2 claws and remove the front inner No. 1 seat cushion shield.



5. REMOVE FRONT LUMBAR POWER SEAT SWITCH

(a) Remove the 2 screws and front lumbar power seat switch.

6. REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-16)



7. REMOVE FRONT INNER SEAT CUSHION SHIELD

(a) Remove the screw.

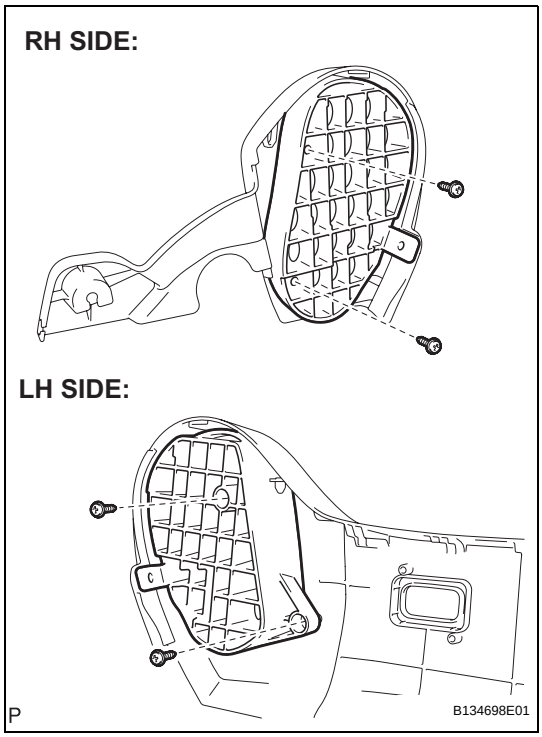
(b) Using a clip remover, detach the clip.

(c) Using a screwdriver, detach the claw and remove the front inner seat cushion shield.

HINT:

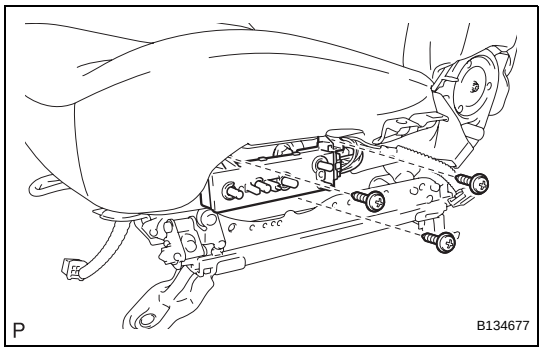
Tape the screwdriver tip before use.

SE



8. REMOVE LOWER SEAT TRACK SPACER

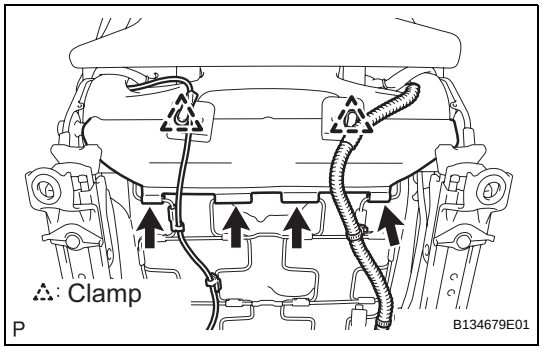
(a) Remove the 2 screws and lower seat track spacer.



9. REMOVE FRONT POWER SEAT SWITCH

(a) Remove the 3 screws.

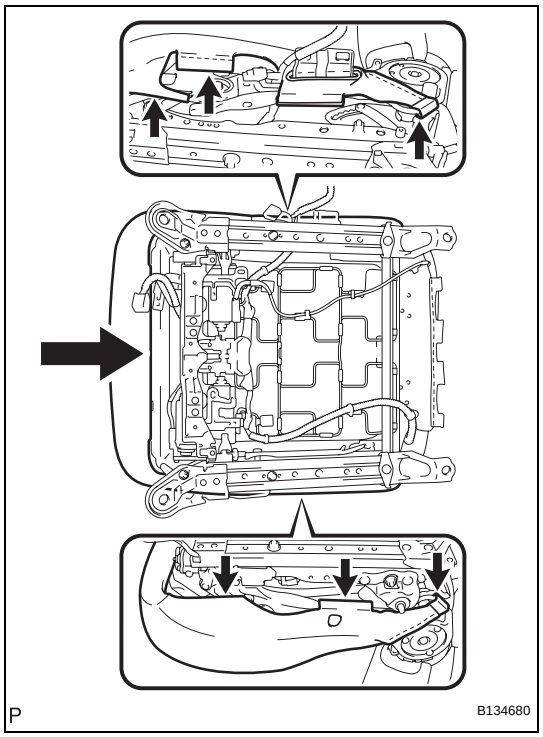
(b) Disconnect the connector and remove the front power seat switch.



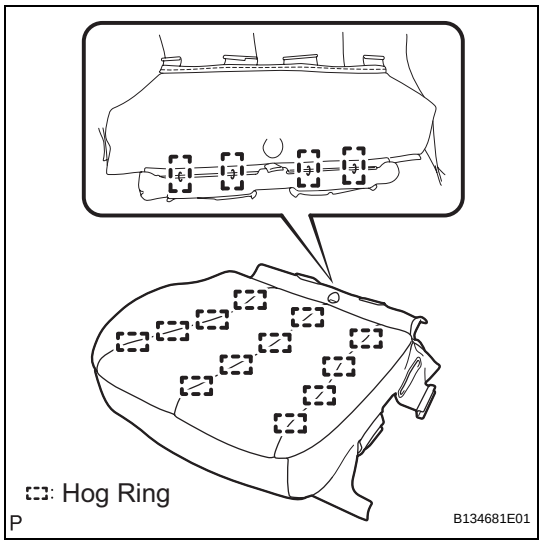
10. REMOVE FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY

(a) Disconnect the 2 clamps.

(b) Remove the 4 hooks.

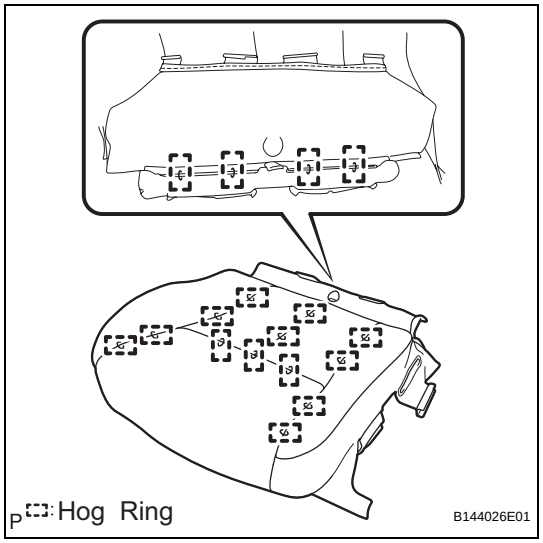


(c) Using a screwdriver, detach the hooks and remove the front separate type seat cushion assembly.



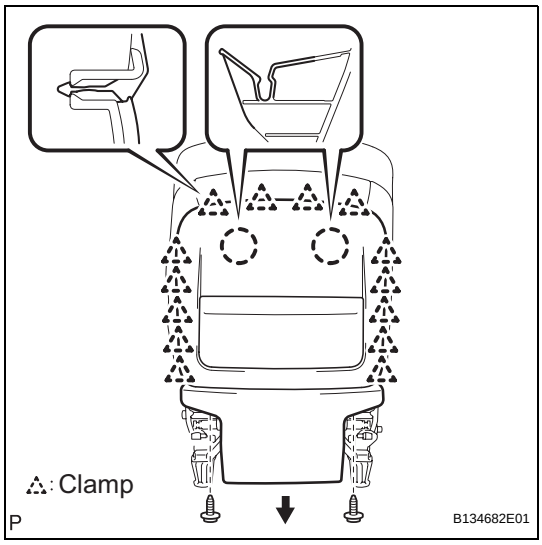
11. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (for Except Sports Seat Type)

(a) Remove the 16 hog rings and front separate type seat cushion cover from the seat cushion pad.



12. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER (for Sports Seat Type)

(a) Remove the 17 hog rings and front separate type seat cushion cover from the seat cushion pad.

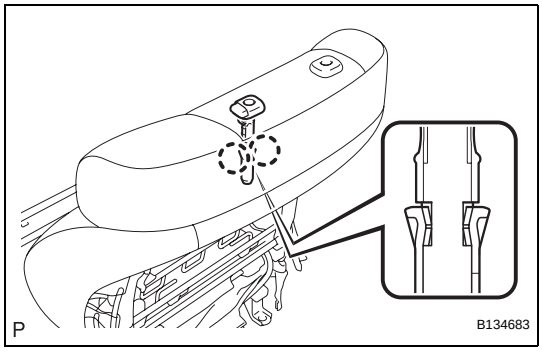


13. REMOVE FRONT SEAT BACK BOARD SUB-ASSEMBLY

(a) Remove the 2 screws.

(b) Disconnect the 14 clamps and front separate type seat back cover.

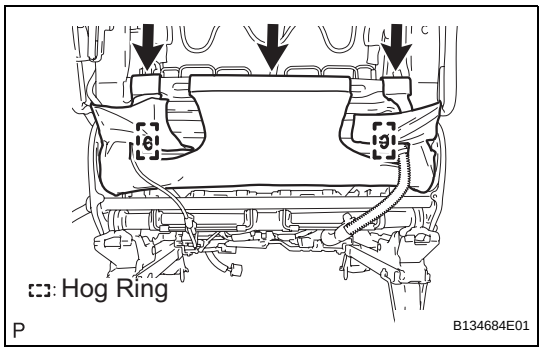
(c) Pull the seat back board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the seat back board.



14. REMOVE FRONT SEAT HEADREST SUPPORT

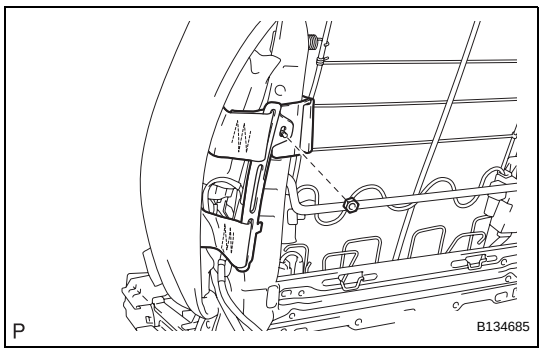
(a) Detach the 2 claws and remove the headrest support.

15. REMOVE FRONT SEAT HEADREST SUPPORT

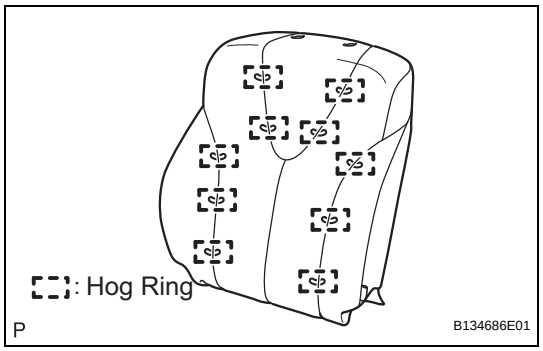


16. REMOVE FRONT SEPARATE TYPE SEAT BACK ASSEMBLY

(a) Remove the 2 hog rings and 3 hooks.

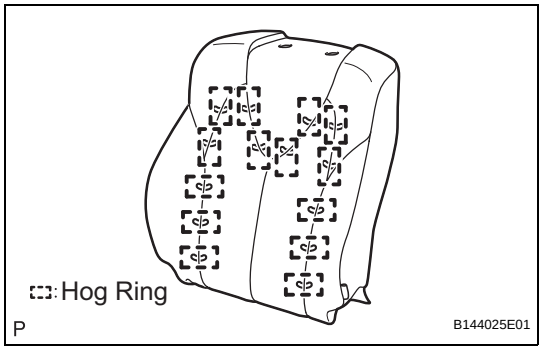


(b) Remove the nut and 2 seat back cover brackets.



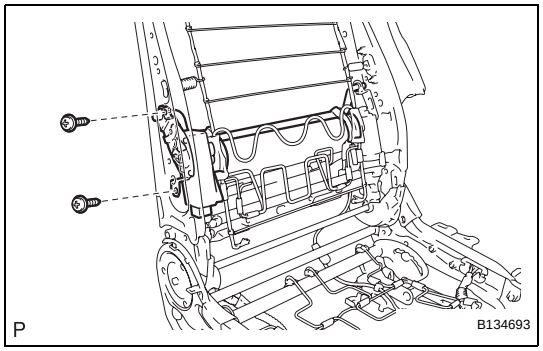
17. REMOVE FRONT SEPARATE TYPE SEAT BACK COVER (for Except Sports Seat Type)

(a) Remove the 10 hog rings and front separate type seat back cover from the seat back pad.



18. REMOVE FRONT SEPARATE TYPE SEAT BACK COVER (for Sports Seat Type)

(a) Remove the 14 hog rings and front separate type seat back cover from the seat back pad.



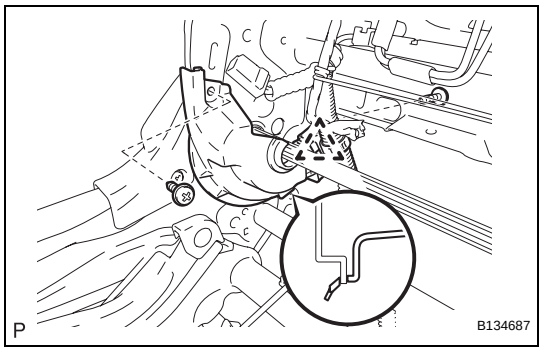
19. REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 screws and lumbar support adjuster assembly.

20. REMOVE RECLINING ADJUSTER INSIDE COVER RH

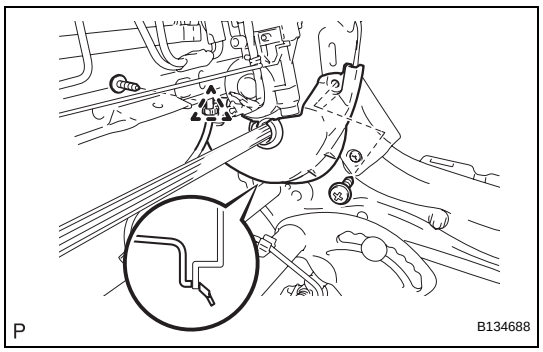
(a) Disconnect the harness.



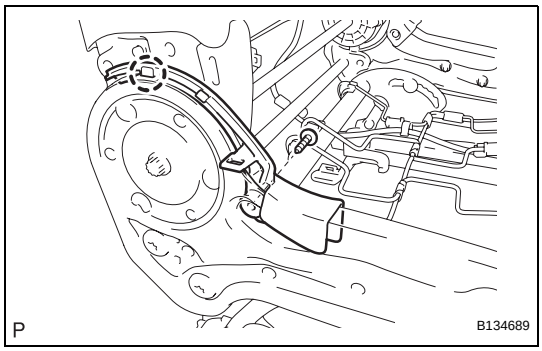
(b) Remove the 2 screws and reclining adjuster inside cover RH.

21. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Disconnect the harness.



(b) Remove the 2 screws and reclining adjuster inside cover LH.

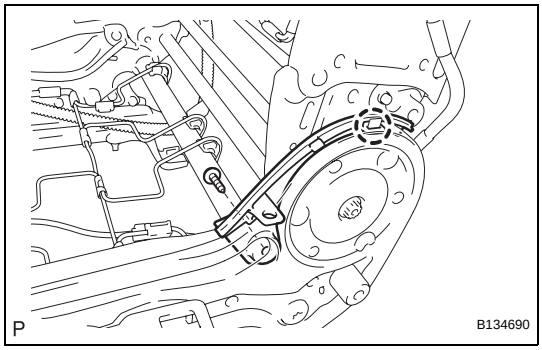


22. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER RH

(a) Remove the screw.

(b) Detach the claw and remove the seat reclining adjuster inside cover RH.

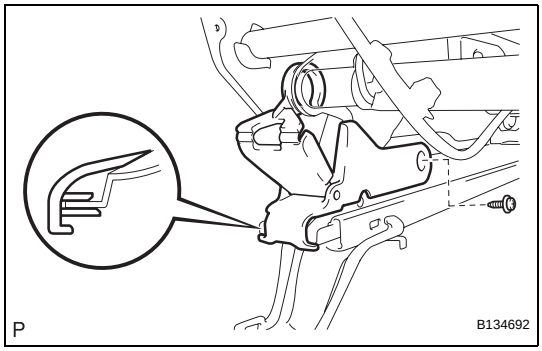
SE



23. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw.

(b) Detach the claw and remove the seat reclining adjuster inside cover LH.



24. REMOVE FRONT LOWER SEAT CUSHION SHIELD LH

(a) Remove the screw and detach the hook of the front lower seat cushion shield LH.

25. REMOVE FRONT LOWER SEAT CUSHION SHIELD

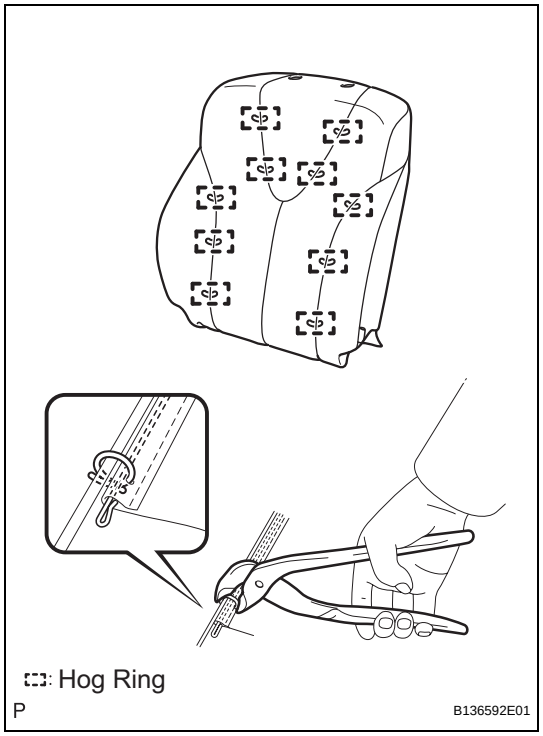
26. REMOVE SEAT POSITION SENSOR (for Driver Side) (See page RS-462)

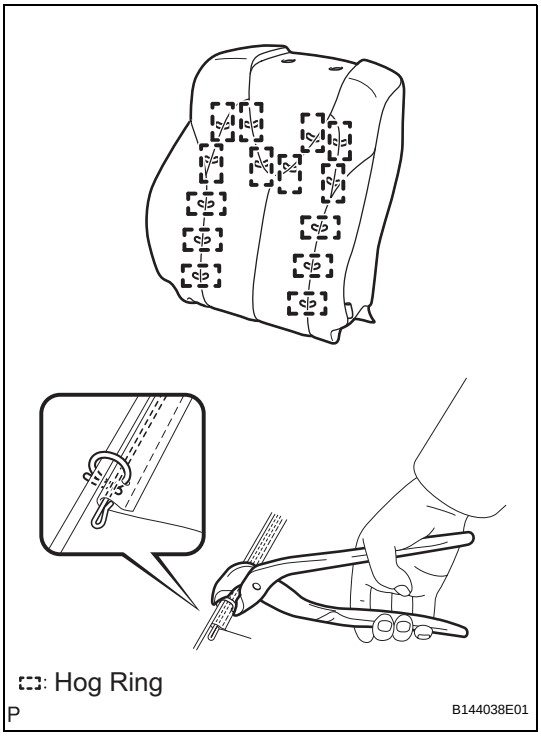
27. REMOVE FRONT SEAT WIRE

REASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seat adjuster may injure your hands.

1. **INSTALL FRONT SEAT WIRE**
2. **INSTALL SEAT POSITION SENSOR (for Driver Side) (See page RS-462)**
3. **INSTALL FRONT LOWER SEAT CUSHION SHIELD**
4. **INSTALL FRONT LOWER SEAT CUSHION SHIELD LH**
5. **INSTALL SEAT RECLINING ADJUSTER INSIDE COVER LH**
6. **INSTALL SEAT RECLINING ADJUSTER INSIDE COVER RH**
7. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
8. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
9. **INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY**
10. **INSTALL FRONT SEPARATE TYPE SEAT BACK COVER (for Except Sports Seat Type)**
    (a) Using hog ring pliers, install the front separate type seat back cover to the front seat back pad with 16 new hog rings.
    NOTICE:
    - **Be careful not to damage the cover.**
    - **When installing the hog rings, take care to minimize wrinkles as much as possible.**



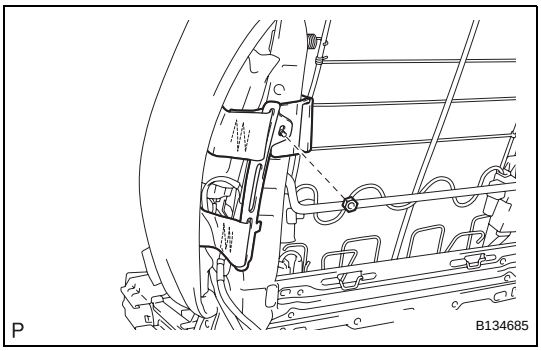


11. INSTALL FRONT SEPARATE TYPE SEAT BACK COVER (for Sports Seat Type)

(a) Using hog ring pliers, install the front separate type seat back cover to the front seat back pad with 14 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**



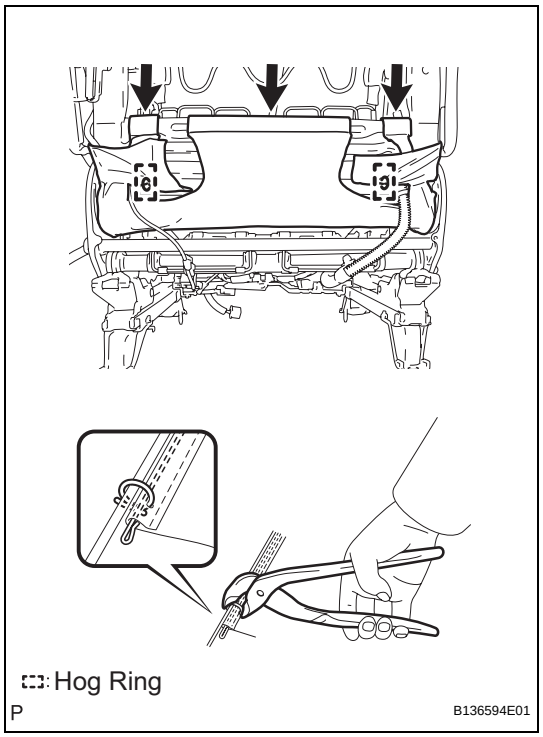
12. INSTALL FRONT SEPARATE TYPE SEAT BACK ASSEMBLY

(a) Fully cover the airbag with the 2 seat back cover brackets and tighten the nut.

Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

NOTICE:

- **For vehicles with side airbags, the seat back cover must be securely installed. Otherwise, the side airbags may not deploy properly.**
- **Make sure that the strap is not twisted after installing the bracket.**
- **Install the bracket securely.**



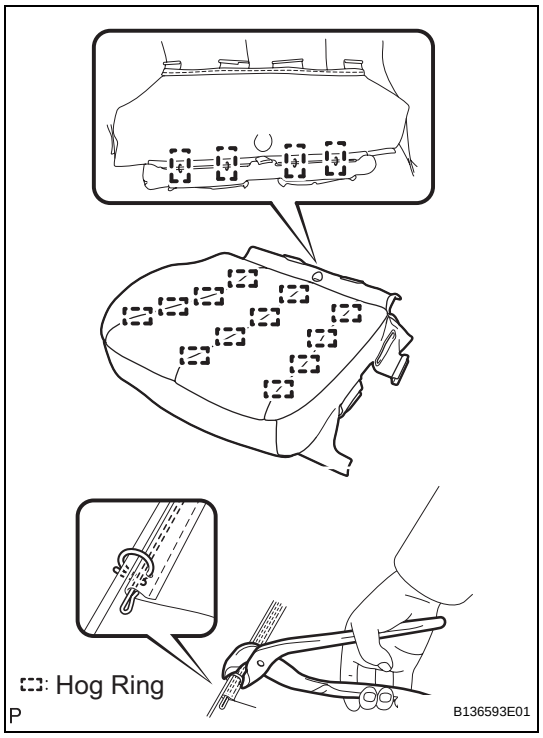
(b) Engage the 3 hooks.
(c) Using hog ring pliers, install 2 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

13. INSTALL FRONT SEAT HEADREST SUPPORT

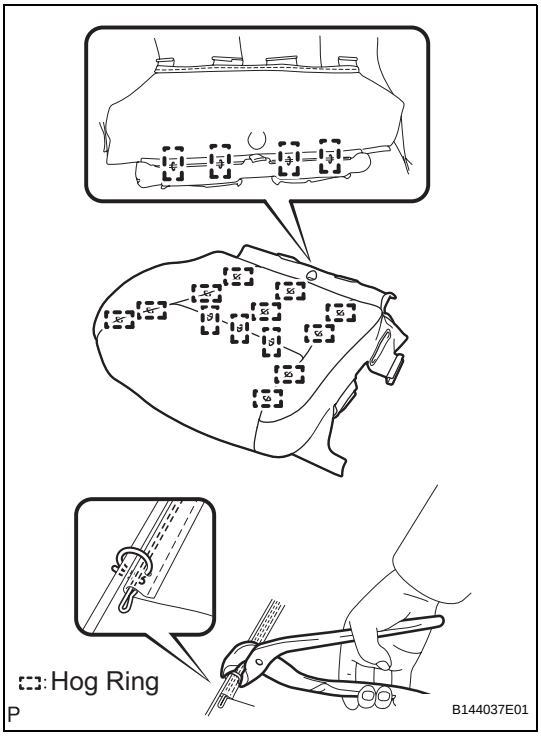
14. INSTALL FRONT SEAT HEADREST SUPPORT

15. INSTALL FRONT SEAT BACK BOARD SUB-ASSEMBLY

SE



16. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (for Except Sports Seat Type)
(a) Using hog ring pliers, install the front separate type seat cushion cover to the front separate type seat pad with 16 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**



17. INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER (for Sports Seat Type)

(a) Using hog ring pliers, install the front separate type seat cushion cover to the front separate type seat pad with 17 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

18. INSTALL FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY

19. INSTALL FRONT POWER SEAT SWITCH

20. INSTALL LOWER SEAT TRACK SPACER

21. INSTALL FRONT INNER SEAT CUSHION SHIELD

22. INSTALL FRONT LUMBAR POWER SEAT SWITCH

23. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-17)

24. INSTALL FRONT INNER NO. 1 SEAT CUSHION SHIELD

25. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

26. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

27. INSTALL RECLINING POWER SEAT SWITCH KNOB

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the seat in the cabin.

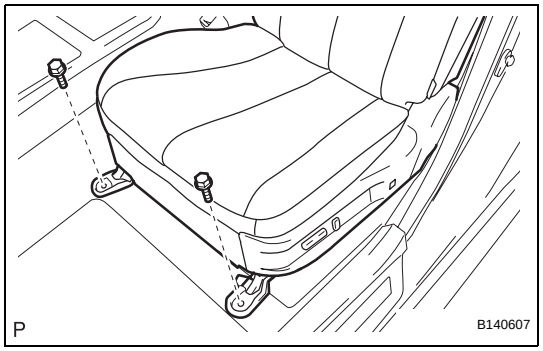
(b) Connect the connectors under the seat.

(c) Connect the cable to the negative (-) battery terminal.

(d) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

NOTICE:

Check that the seat is locked.

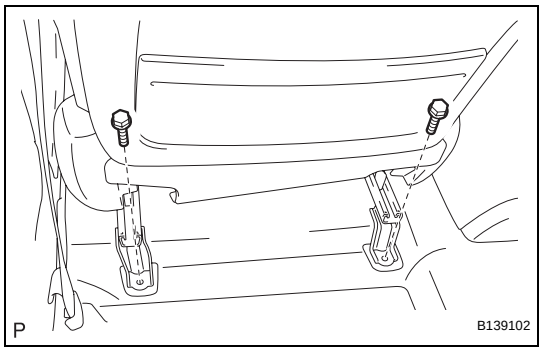


(e) Temporarily install the front side of the front seat assembly with the 2 bolts.

(f) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

NOTICE:

Check that the seat is locked.



(g) Temporarily install the rear side of the front seat assembly with the 2 bolts.

(h) Move the front seat assembly to the rearmost position by operating the slide and vertical power seat switch knob.

NOTICE:

Check that the seat is locked.

(i) Fully tighten the 2 bolts on the front side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.

Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(j) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

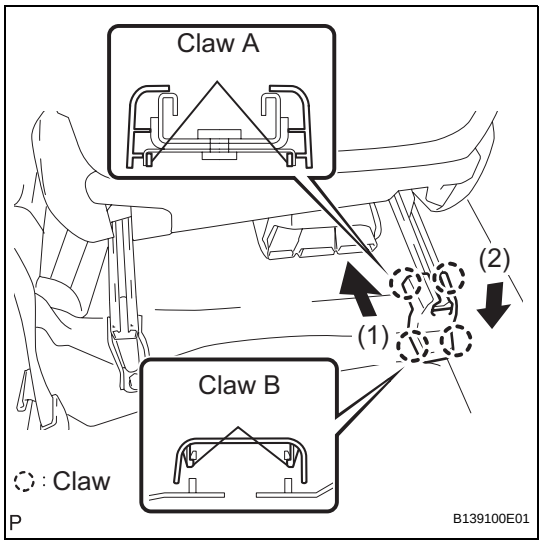
NOTICE:

Check that the seat is locked.

(k) Fully tighten the 2 bolts on the rear side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.

Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

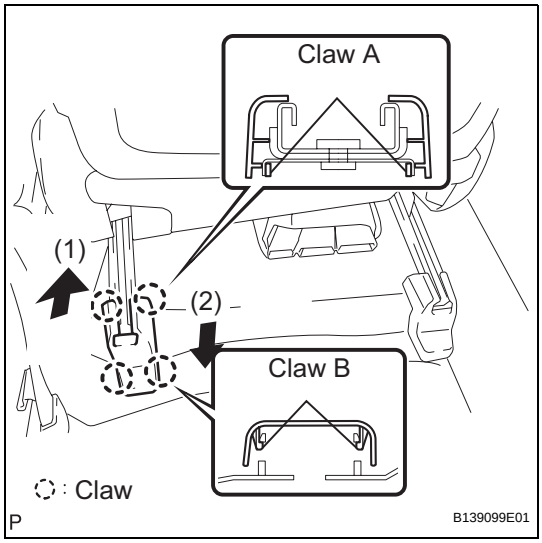
SE



2. INSTALL INNER SEAT TRACK BRACKET COVER

(a) Slide the inner seat track bracket cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the inner seat track bracket cover to engage claw B.



3. INSTALL SEAT TRACK COVER

(a) Slide the seat track cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the seat track cover to engage claw B.

4. INSTALL FRONT SEAT HEADREST ASSEMBLY

5. PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)

(See page RS-242)

6. CHECK SRS WARNING LIGHT

Check the SRS warning light. (See page RS-32)

7. INSPECT FRONT SEAT ASSEMBLY

(a) Check the power seat operation.

(b) Check the seat heater operation (with seat heater system).

(1) Turn the ignition switch on (IG).

(2) Turn the seat heater switch ON.

(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Detach the 2 front hooks of the seat cushion from the vehicle body.

NOTICE:

Follow the instructions below carefully as the cushion frame can be deformed easily.

(1) Choose a hook to detach first. Place your hands near the hook as shown in the illustration. Then lift the seat cushion to detach the hook.

(2) Repeat the step above for the other hook.

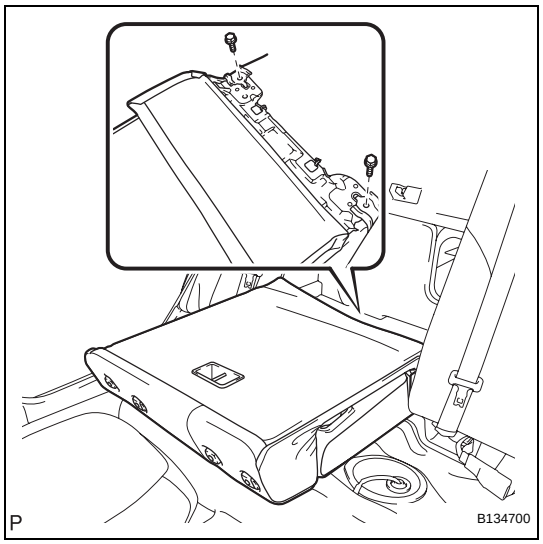
(b) Remove the seat cushion.

2. REMOVE REAR SEAT HEADREST ASSEMBLY

(a) Remove the 2 rear seat headrest assemblies.

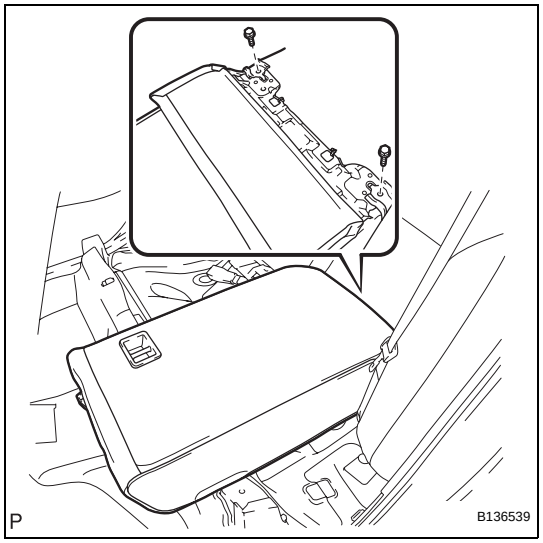
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY

(a) Remove the rear center seat headrest assembly.



4. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH

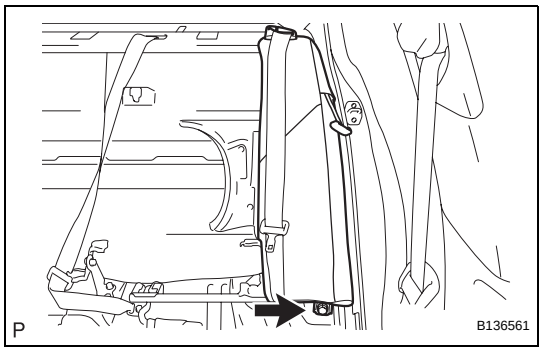
(a) Remove the 2 bolts and separate type rear seat back assembly RH.



5. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH

(a) Remove the 2 bolts and separate type rear seat back assembly LH.

SE



6. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH

(a) Remove the bolt and rear side seat back assembly LH.

7. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH

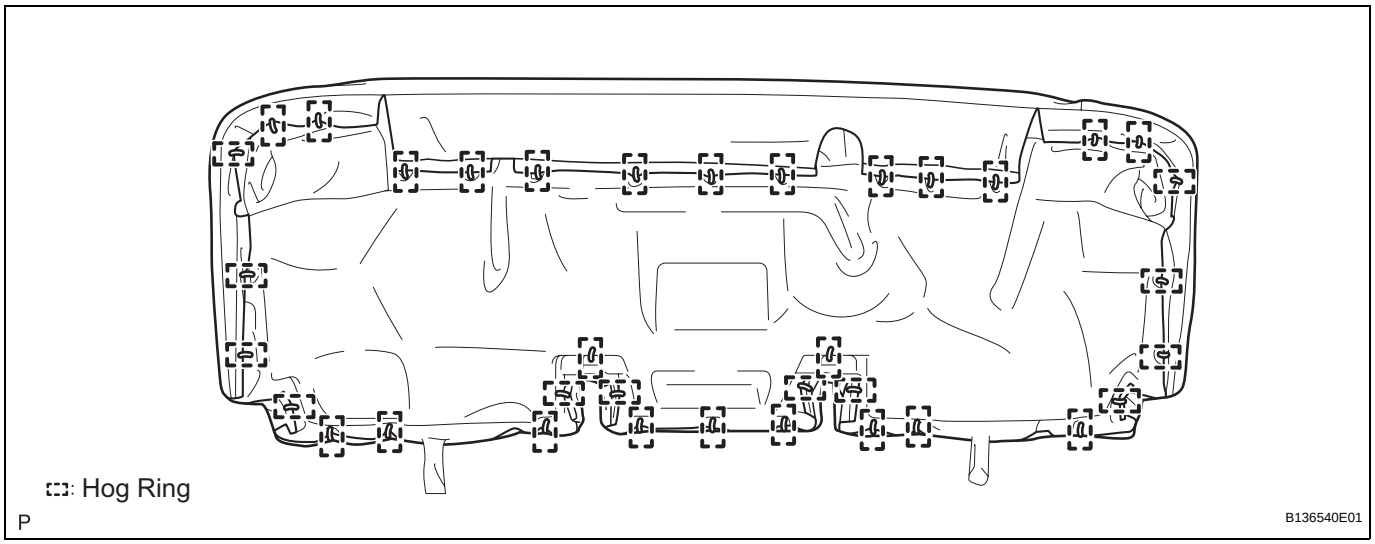
HINT:

Use the same procedures for the RH side and LH side.

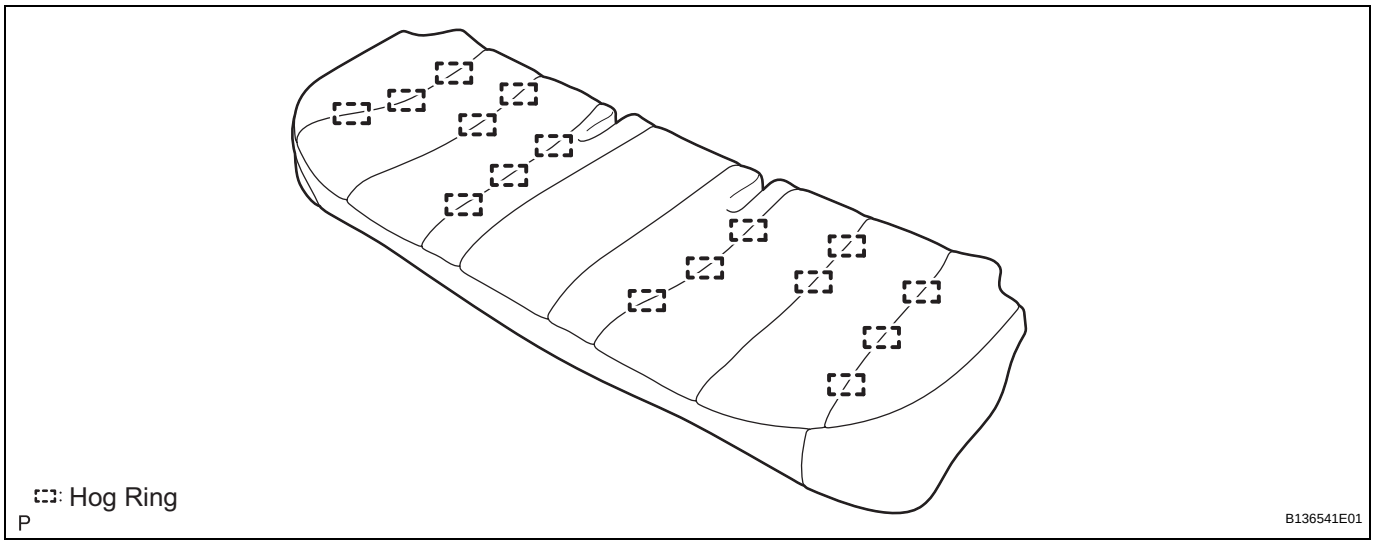
DISASSEMBLY

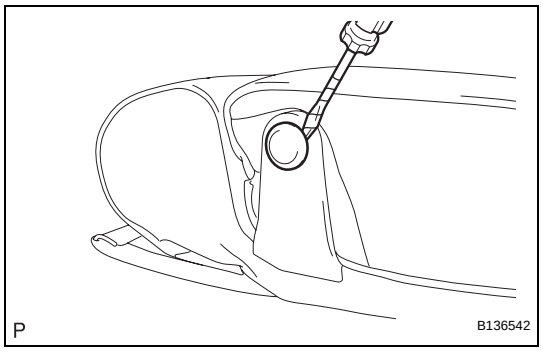
1. REMOVE REAR BENCH TYPE SEAT CUSHION COVER

(a) Remove the 36 hog rings.



(b) Remove the 16 hog rings and rear bench type seat cushion cover.



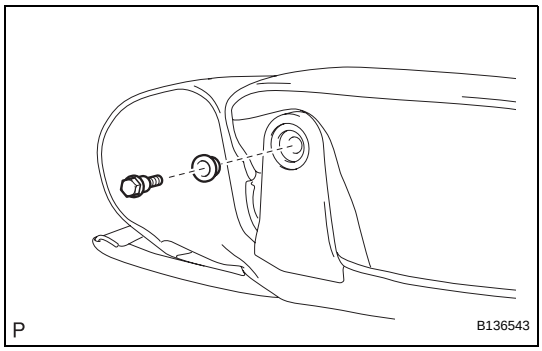


2. REMOVE NO. 1 SEAT ARMREST CAP

(a) Using a screwdriver, remove the No. 1 seat armrest cap.

HINT:

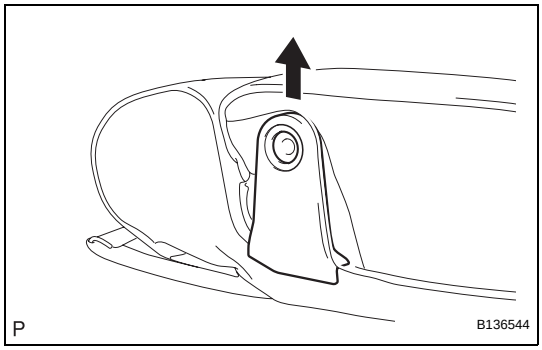
Tape the screwdriver tip before use.



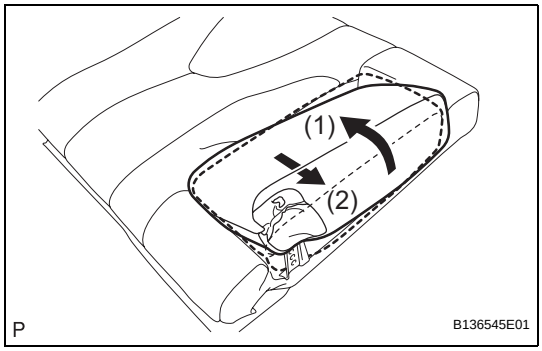
3. REMOVE REAR SEAT BACK HINGE COVER

(a) Remove the bolt and bush.

SE

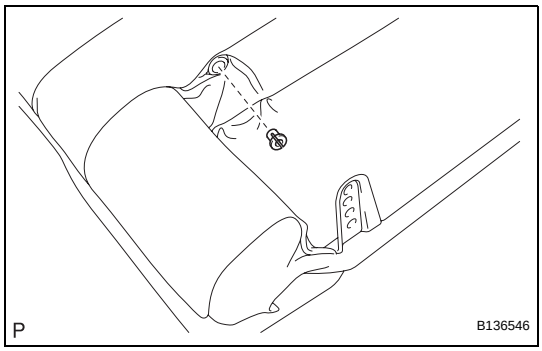


(b) Remove the rear seat back hinge cover.

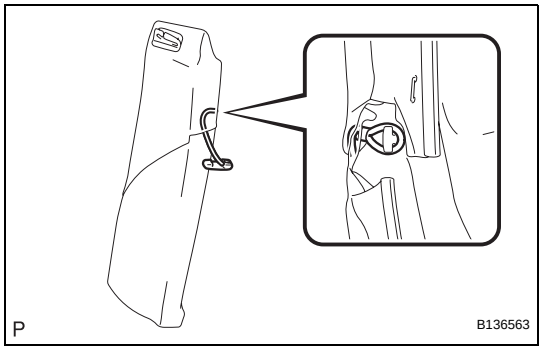


4. REMOVE REAR CENTER SEAT ARMREST ASSEMBLY

(a) Remove the rear center seat armrest assembly as shown in the illustration.

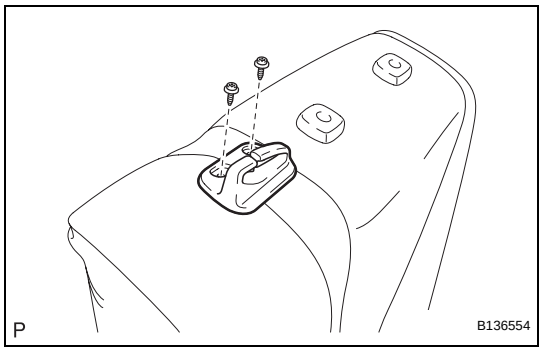


(b) Remove the bush.



5. REMOVE REAR SEAT BELT HOOK

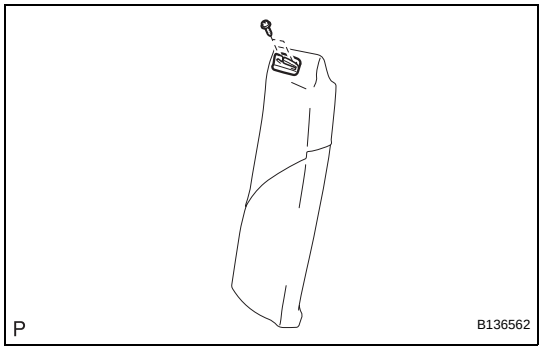
(a) Remove the rear seat belt hook.
HINT:
Use the same procedures for the RH side and LH side.



6. REMOVE REAR SEAT SHOULDER BELT GUIDE LH

(a) Seat Back:

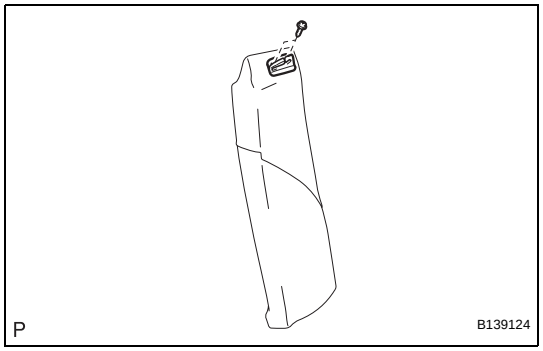
(1) Remove the 2 screws and rear seat shoulder belt guide LH.



(b) Side Seat Back:

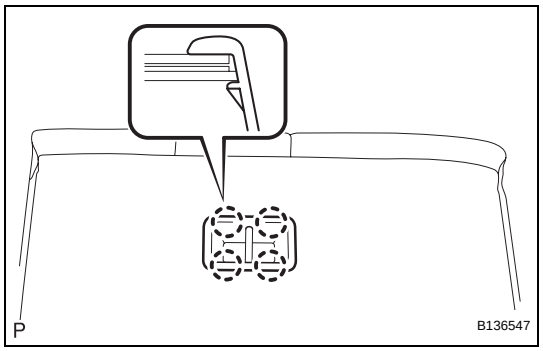
(1) Remove the 2 screws and rear seat shoulder belt guide LH.

SE



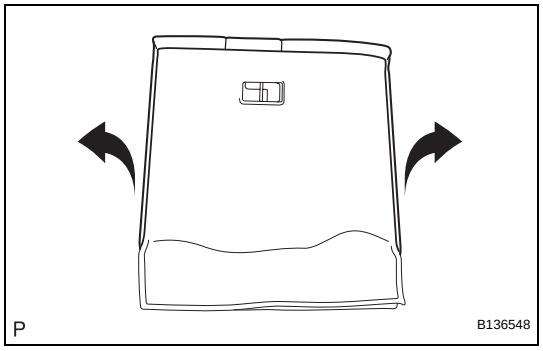
7. REMOVE REAR SEAT SHOULDER BELT GUIDE RH

(a) Remove the 2 screws and rear seat shoulder belt guide RH.



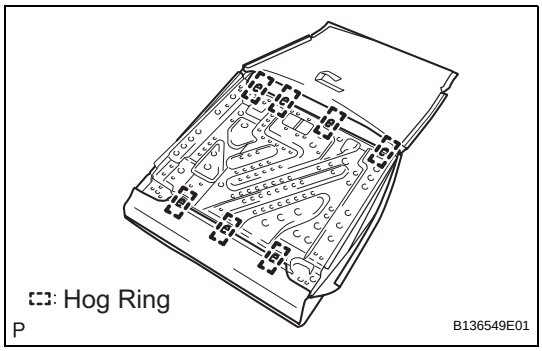
8. REMOVE REAR SEAT BACK LOCK BEZEL UPPER (for RH Side)

(a) Disengage the 4 claws and remove the rear seat back lock bezel upper.



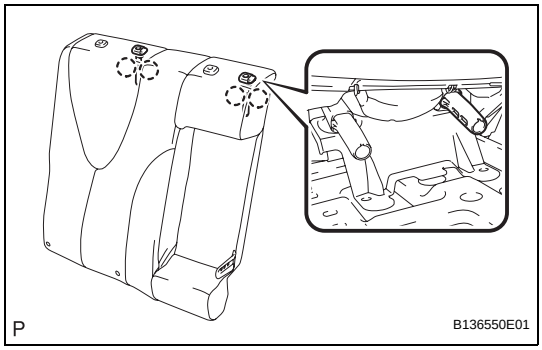
9. REMOVE REAR SEAT HEADREST SUPPORT (for RH Side)

(a) Disengage the 2 hooks and separate the rear separate type seat back cover.



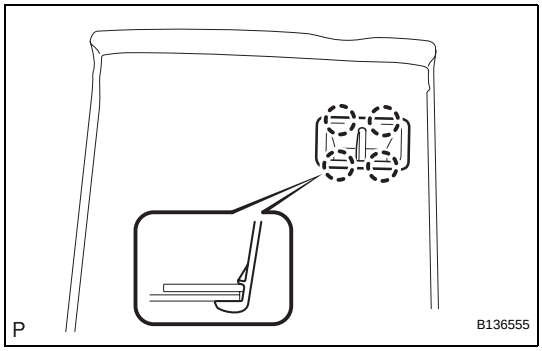
(b) Remove the 7 hog rings.

SE



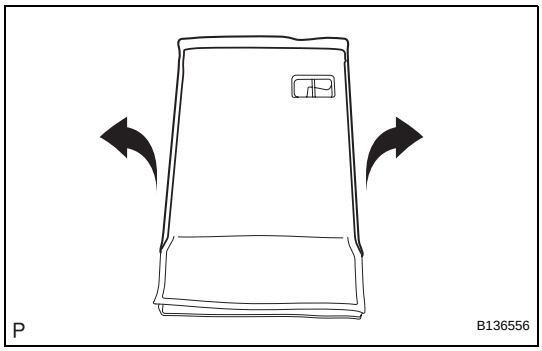
(c) Disengage the 4 claws and remove the 2 rear seat headrest supports.

10. REMOVE REAR SEAT HEADREST SUPPORT (for RH Side)



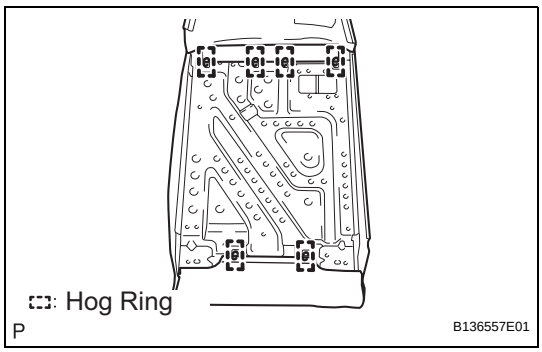
11. REMOVE REAR SEAT BACK LOCK BEZEL UPPER (for LH Side)

(a) Disengage the 4 claws and remove the rear seat back lock bezel upper.

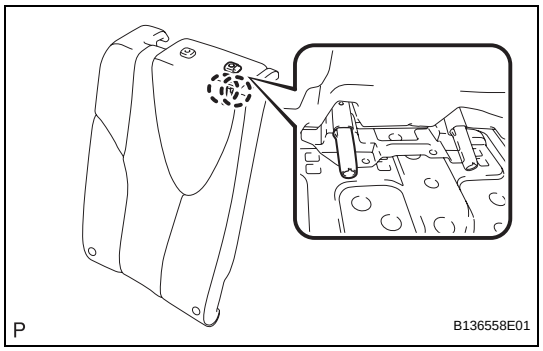


12. REMOVE REAR SEAT HEADREST SUPPORT (for LH Side)

(a) Disengage the 2 hooks and separate the rear separate type seat back cover.

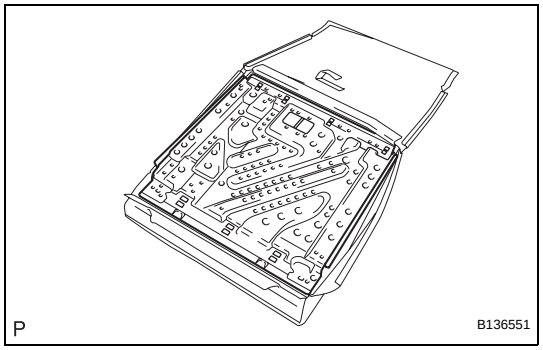


(b) Remove the 6 hog rings.



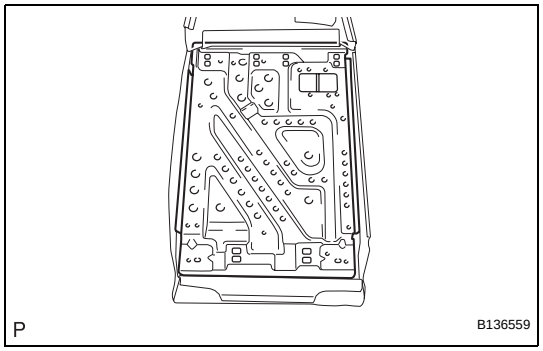
(c) Disengage the 2 claws and remove the rear seat headrest support.

13. REMOVE REAR SEAT HEADREST SUPPORT (for LH Side)



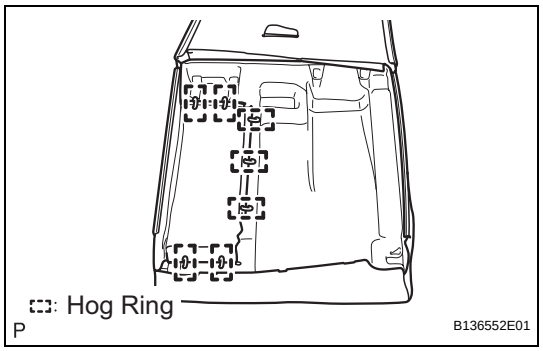
14. REMOVE REAR SEAT BACK FRAME SUB-ASSEMBLY RH

(a) Remove the rear seat back frame sub-assembly RH.



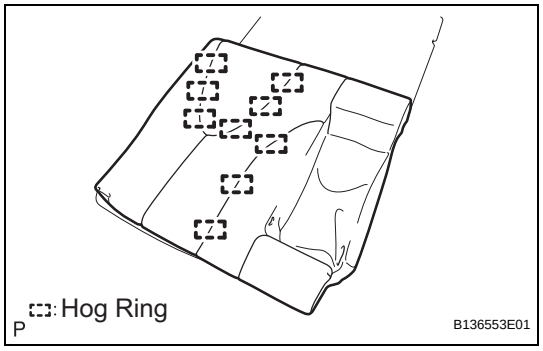
15. REMOVE REAR SEAT BACK FRAME SUB-ASSEMBLY LH

(a) Remove the rear seat back frame sub-assembly LH.

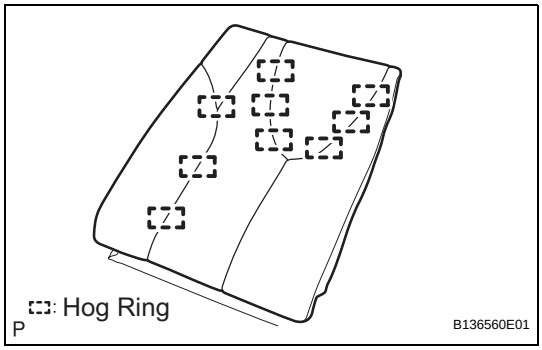


16. REMOVE REAR SEPARATE TYPE SEAT BACK COVER (for RH Side)

(a) Remove the 7 hog rings.



(b) Remove the 9 hog rings and rear separate type seat back cover.

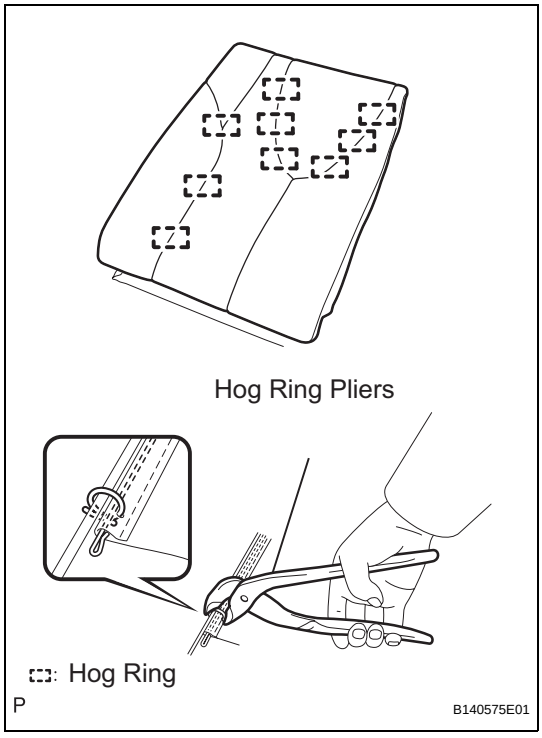


17. REMOVE REAR SEPARATE TYPE SEAT BACK COVER (for LH Side)

(a) Remove the 9 hog rings and rear separate type seat back cover.

SE

REASSEMBLY

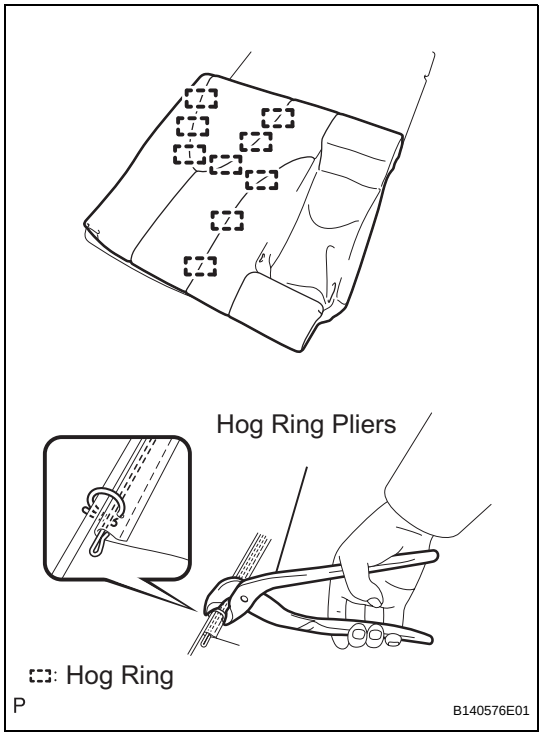


1. INSTALL REAR SEPARATE TYPE SEAT BACK COVER (for LH Side)

(a) Using hog ring pliers, install the rear separate type seat back cover with 9 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

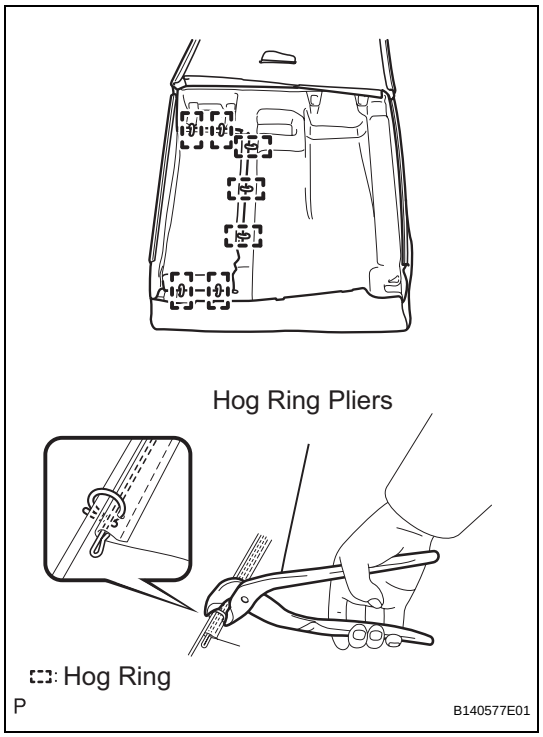


2. INSTALL REAR SEPARATE TYPE SEAT BACK COVER (for RH Side)

(a) Using hog ring pliers, install the rear separate type seat back cover to the seat back pad with 9 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**



(b) Using hog ring pliers, install the rear separate type seat back cover to the seat back pad with 7 new hog rings.

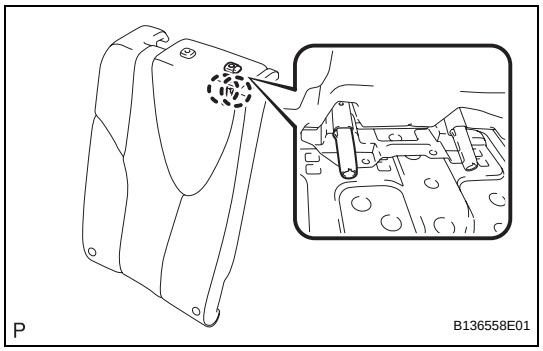
NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

3. INSTALL REAR SEAT BACK FRAME SUB-ASSEMBLY RH

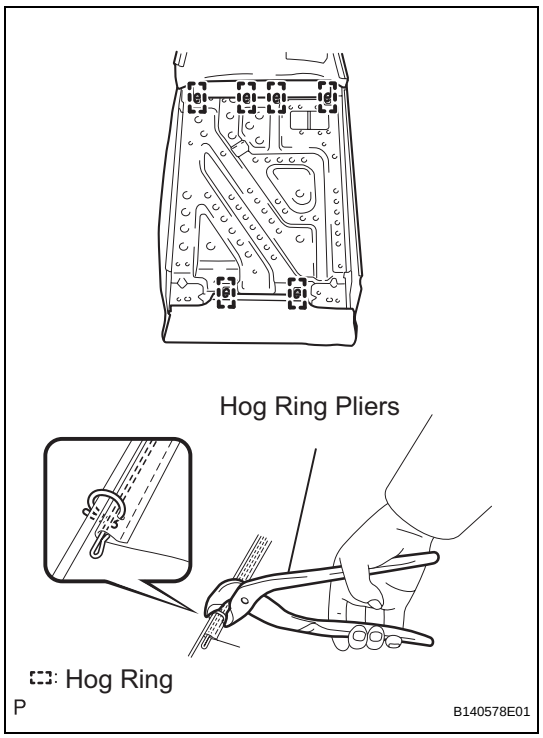
4. INSTALL REAR SEAT BACK FRAME SUB-ASSEMBLY LH

SE



5. INSTALL REAR SEAT HEADREST SUPPORT (for LH Side)

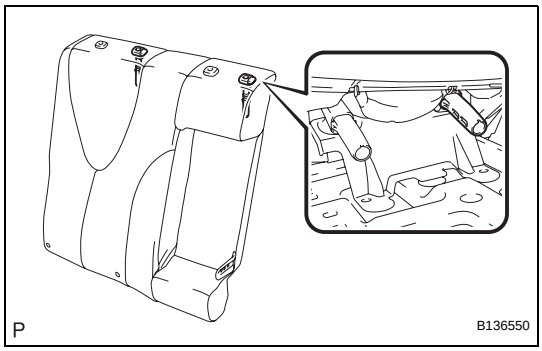
(a) Engage the 2 claws to install the 2 front seat headrest supports.



(b) Using hog ring pliers, install the rear separate type seat back cover to the seat back frame with 6 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**



6. **INSTALL REAR SEAT HEADREST SUPPORT (for LH Side)**
   (a) Engage the 2 claws to install the 2 front seat headrest supports.

SE

   (b) Using hog ring pliers, install the rear separate type seat back cover to the seat back frame with 7 new hog rings.

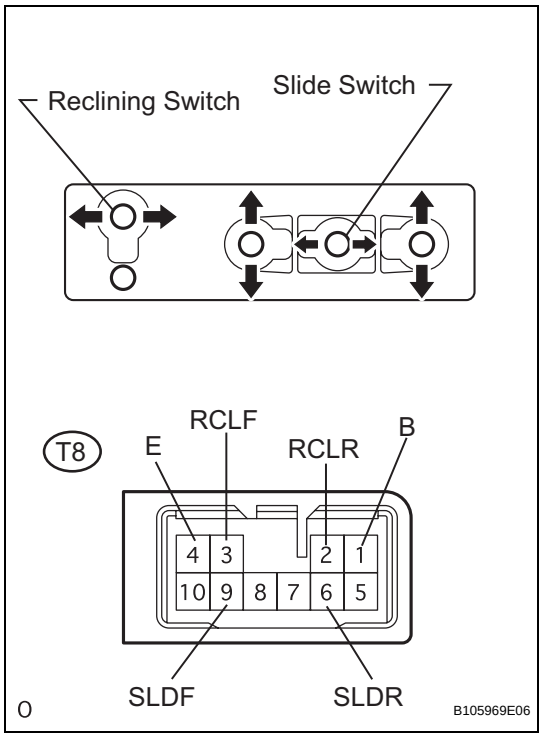
U7-4 (E) - U7-3 (RCLF)	OFF	Below 1 Ω
U7-1 (B) - U7-3 (RCLF)	OFF	10 kΩ or higher
U7-1 (B) - U7-2 (RCLR)	OFF	10 kΩ or higher
U7-1 (B) - U7-2 (RCLR)	REAR	Below 1 Ω
U7-4 (E) - U7-3 (RCLF)	REAR	Below 1 Ω
U7-1 (B) - U7-3 (RCLF)	REAR	10 kΩ or higher
U7-4 (E) - U7-2 (RCLR)	REAR	10 kΩ or higher

If the result is not as specified, replace the switch.



2. INSPECT FRONT POWER SEAT SWITCH RH

(a) Measure the resistance between the specified terminals when each switch is operated.

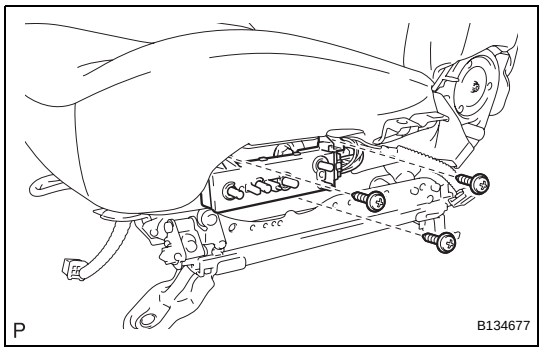
Standard resistance (Slide switch)

Tester Connection	Switch Condition	Specified Condition
T8-1 (B) - T8-9 (SLDF)	FRONT	Below 1 Ω
T8-4 (E) - T8-6 (SLDR)	FRONT	Below 1 Ω
T8-1 (B) - T8-6 (SLDR)	FRONT	10 kΩ or higher
T8-4 (E) - T8-9 (SLDF)	FRONT	10 kΩ or higher
T8-4 (E) - T8-6 (SLDR)	OFF	Below 1 Ω
T8-4 (E) - T8-9 (SLDF)	OFF	Below 1 Ω
T8-1 (B) - T8-6 (SLDR)	OFF	10 kΩ or higher
T8-1 (B) - T8-9 (SLDF)	OFF	10 kΩ or higher
T8-1 (B) - T8-6 (SLDR)	REAR	Below 1 Ω
T8-4 (E) - T8-9 (SLDF)	REAR	Below 1 Ω
T8-1 (B) - T8-9 (SLDF)	REAR	10 kΩ or higher
T8-4 (E) - T8-6 (SLDR)	REAR	10 kΩ or higher

Standard resistance (Reclining switch)

Tester Connection	Switch Condition	Specified Condition
T8-1 (B) - T8-3 (RCLF)	FRONT	Below 1 Ω
T8-4 (E) - T8-2 (RCLR)	FRONT	Below 1 Ω
T8-1 (B) - T8-2 (RCLR)	FRONT	10 kΩ or higher
T8-4 (E) - T8-3 (RCLF)	FRONT	10 kΩ or higher
T8-4 (E) - T8-2 (RCLR)	OFF	Below 1 Ω
T8-4 (E) - T8-3 (RCLF)	OFF	Below 1 Ω
T8-1 (B) - T8- 3 (RCLF)	OFF	10 kΩ or higher
T8-1 (B) - T8-2 (RCLR)	OFF	10 kΩ or higher
T8-1 (B) - T8-2 (RCLR)	REAR	Below 1 Ω
T8-4 (E) - T8-3 (RCLF)	REAR	Below 1 Ω
T8-1 (B) - T8-3 (RCLF)	REAR	10 kΩ or higher
T8-4 (E) - T8-2 (RCLR)	REAR	10 kΩ or higher

If the result is not as specified, replace the switch.



INSTALLATION

1. INSTALL POWER SEAT SWITCH

(a) Install the power seat switch with the 3 screws.

(b) Connect the connector.

2. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

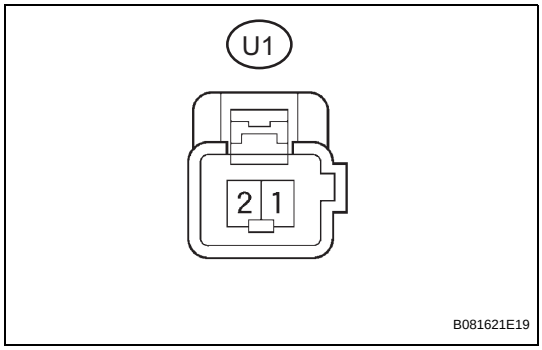
3. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

4. INSTALL RECLINING POWER SEAT SWITCH KNOB

5. INSTALL FRONT SEAT ASSEMBLY (See page SE-41)

6. INSTALL INNER SEAT TRACK BRACKET COVER (See page SE-42)

7. INSTALL SEAT TRACK COVER (See page SE-42)



FRONT SEAT FRAME WITH ADJUSTER

INSPECTION

1. INSPECT FRONT SEAT FRAME WITH ADJUSTER LH

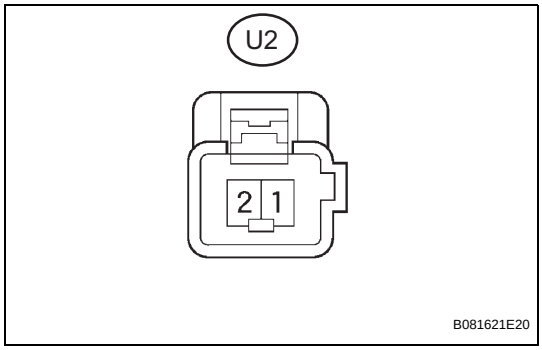
(a) Check operation of the seat frame (slide motor).

(1) Check if the seat frame moves smoothly when the battery is connected to the slide motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → U1-1 Battery negative (-) → U1-2	Forward
Battery positive (+) → U1-2 Battery negative (-) → U1-1	Backward

If the result is not as specified, replace the seat frame with adjuster.



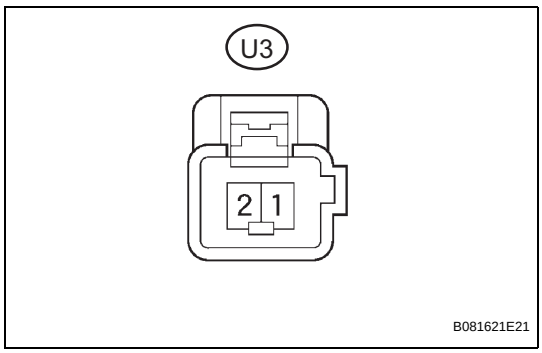
(b) Check operation of the seat frame (front vertical motor).

(1) Check if the seat frame moves smoothly when the battery is connected to the front vertical motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → U2-1 Battery negative (-) → U2-2	Upward
Battery positive (+) → U2-2 Battery negative (-) → U2-1	Downward

If the result is not as specified, replace the seat frame with adjuster.



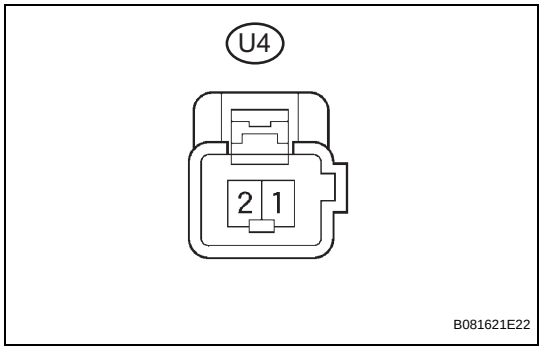
(c) Check operation of the seat frame (reclining motor).

(1) Check if the seat frame moves smoothly when the battery is connected to the reclining motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → U3-2 Battery negative (-) → U3-1	Forward
Battery positive (+) → U3-1 Battery negative (-) → U3-2	Backward

If the result is not as specified, replace the seat frame with adjuster.

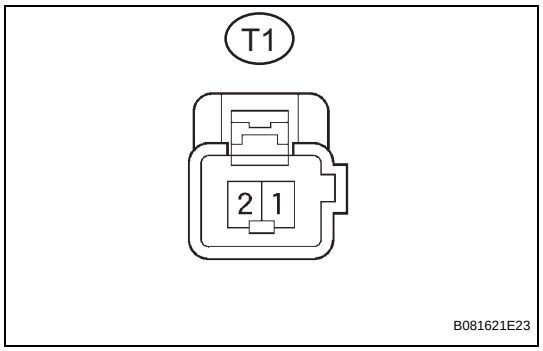


(d) Check operation of the seat frame (lifter motor).
(1) Check if the seat frame moves smoothly when the battery is connected to the lifter motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → U4-2 Battery negative (-) → U4-1	**Upward**
Battery positive (+) → U4-1 Battery negative (-) → U4-2	**Downward**

If the result is not as specified, replace the seat frame with adjuster.

SE

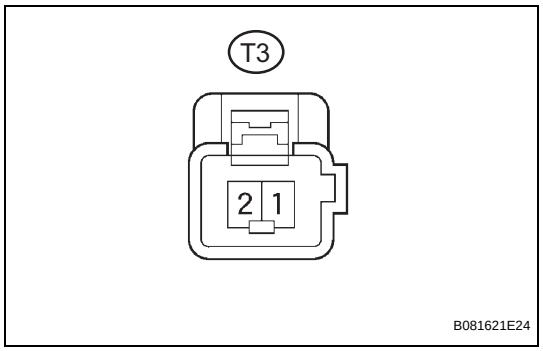


2. INSPECT FRONT SEAT FRAME WITH ADJUSTER RH

(a) Check operation of the seat frame (slide motor).
(1) Check if the seat frame moves smoothly when the battery is connected to the slide motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → T1-2 Battery negative (-) → T1-1	**Forward**
Battery positive (+) → T1-1 Battery negative (-) → T1-2	**Backward**

If the result is not as specified, replace the seat frame with adjuster.



(b) Check operation of the seat frame (reclining motor).
(1) Check if the seat frame moves smoothly when the battery is connected to the reclining motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → T3-2 Battery negative (-) → T3-1	**Forward**
Battery positive (+) → T3-1 Battery negative (-) → T3-2	**Backward**

If the result is not as specified, replace the seat frame with adjuster.

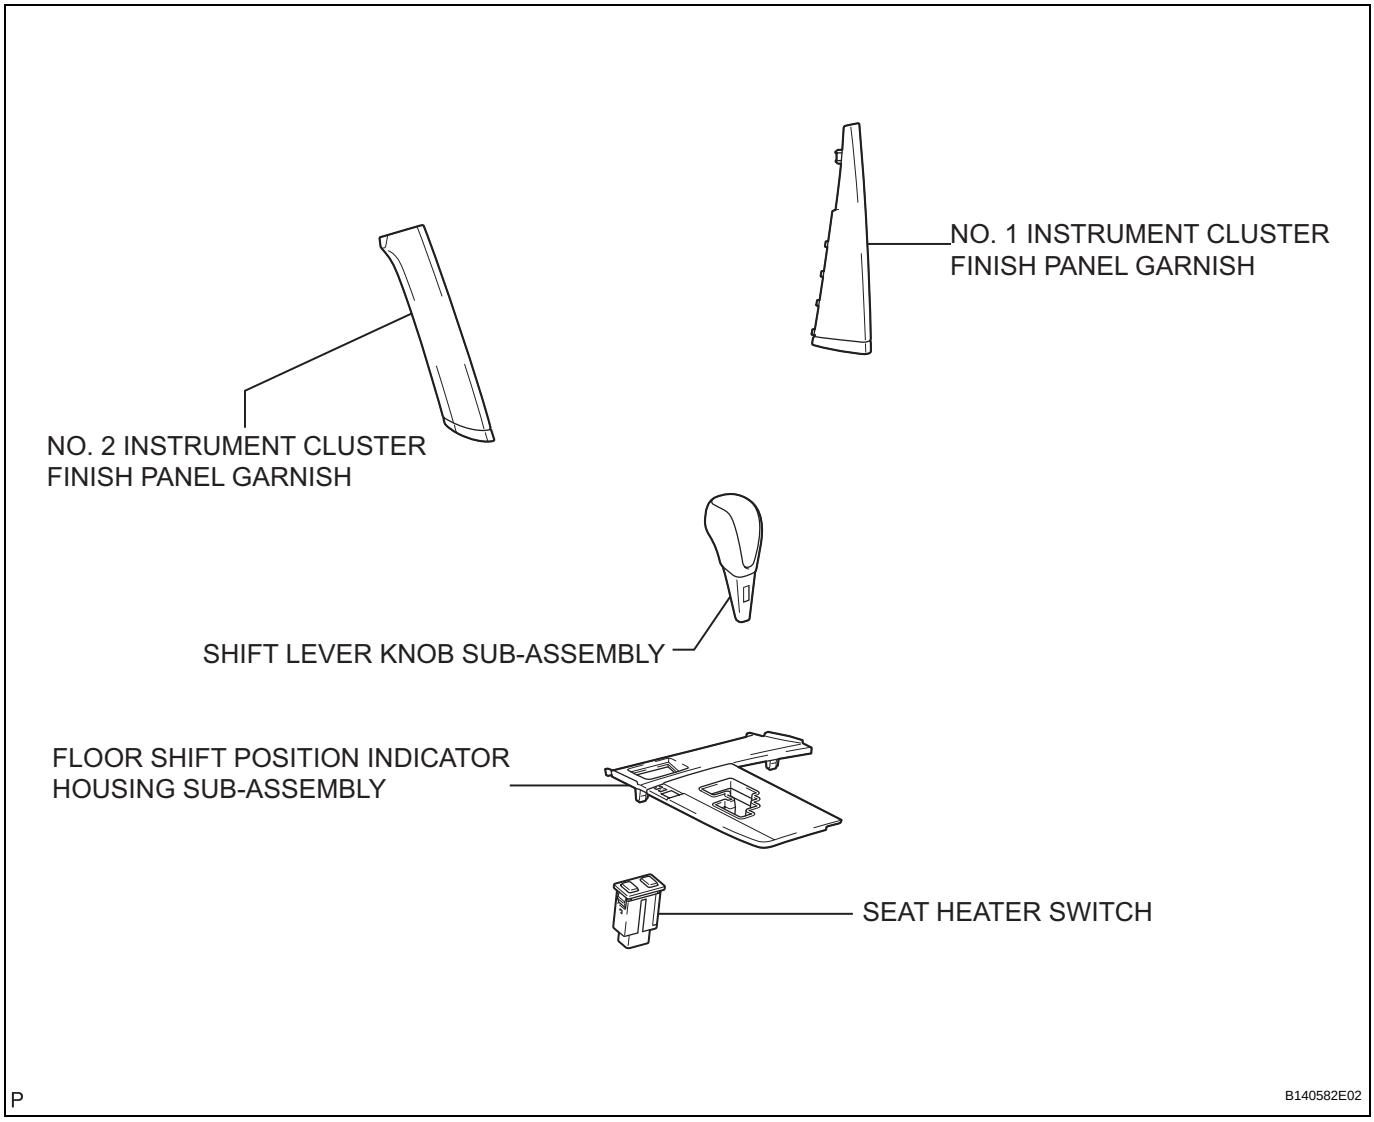
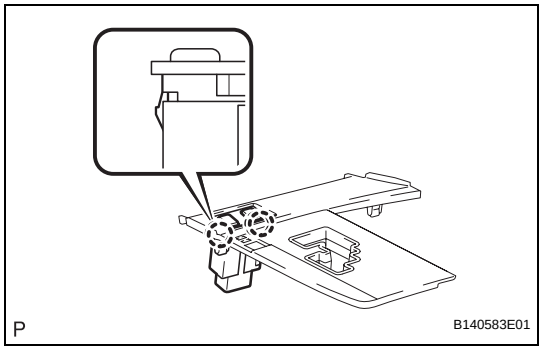
SEAT HEATER SWITCH

COMPONENTS



REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-24)**
2. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
3. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
4. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-25)**
5. **REMOVE SEAT HEATER SWITCH**
   (a) Disengage the 2 claws and remove the seat heater switch.



INSPECTION

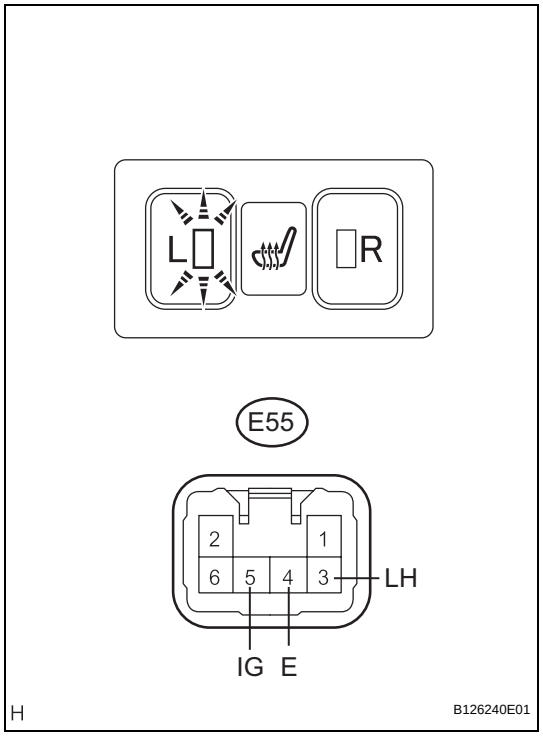
1. **INSPECT SEAT HEATER SWITCH**
   (a) Inspect the driver side seat heater switch operation.
      (1) Measure the resistance according to the value(s) in the table below.
      Standard resistance

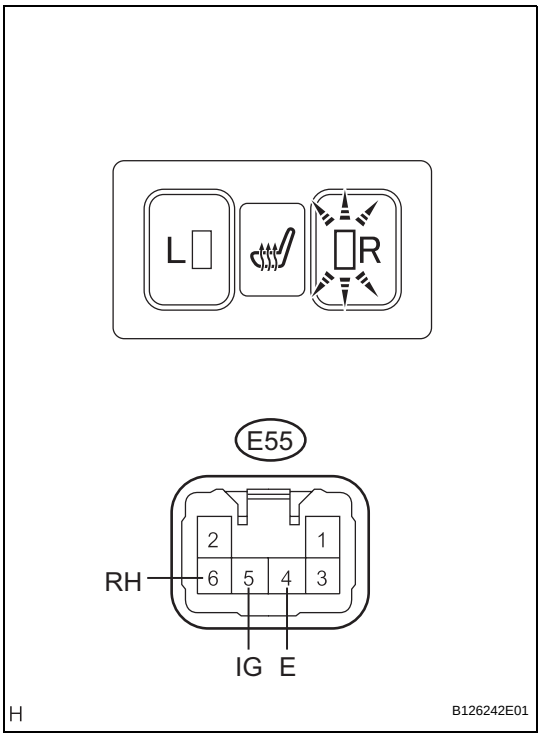
Tester Connection	Switch Position	Specified Condition
E55-3 (LH) - E55-5 (IG)	OFF	10 kΩ or higher
E55-3 (LH) - E55-5 (IG)	ON	Below 1 Ω

      If the result is not as specified, replace the switch.
      (2) Turn the seat heater switch on and check if the seat heater switch indicator comes on.
      OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal E55-5 (IG) Battery negative (-) → Terminal E55-4 (E)	Comes on

      If the result is not as specified, replace the switch.





(b) Inspect the front passenger side seat heater switch operation.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
E55-5 (IG) - E55-6 (RH)	OFF	10 kΩ or higher
E55-5 (IG) - E55-6 (RH)	ON	Below 1 Ω

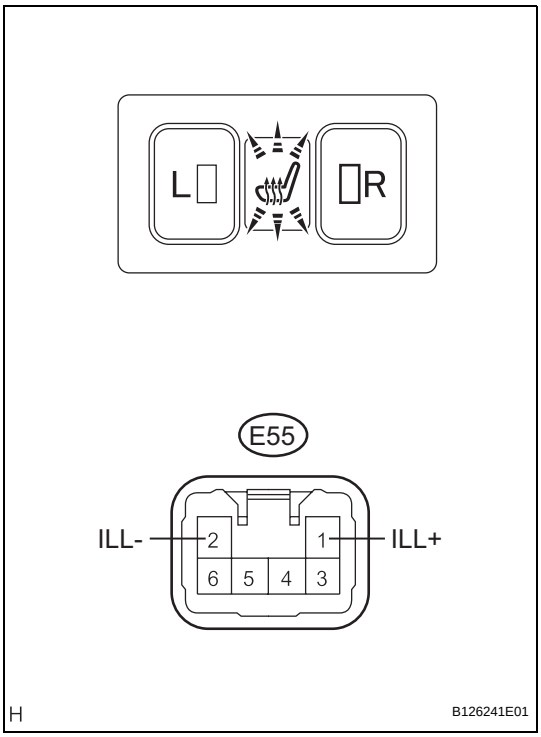
If the result is not as specified, replace the switch.

(2) Turn the seat heater switch on and check if the seat heater switch indicator comes on.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal E55-5 (IG) Battery negative (-) → Terminal E55-4 (E)	Comes on

If the result is not as specified, replace the switch.

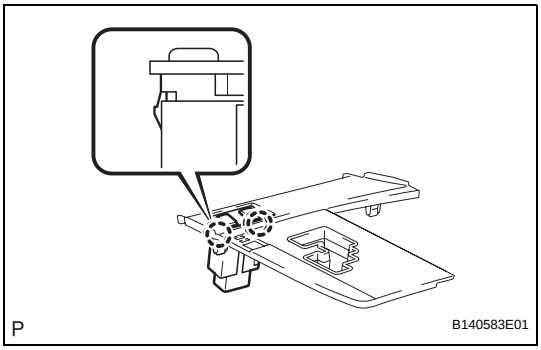


(c) Check if the seat heater switch indicator comes on.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal E55-1 (ILL+) Battery negative (-) → Terminal E55-2 (ILL-)	Comes on

If the result is not as specified, replace the switch.



INSTALLATION

1. **INSTALL SEAT HEATER SWITCH**

(a) Engage the 2 claws and install the seat heater switch.

2. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-53)**

3. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**

4. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
5. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-55)**

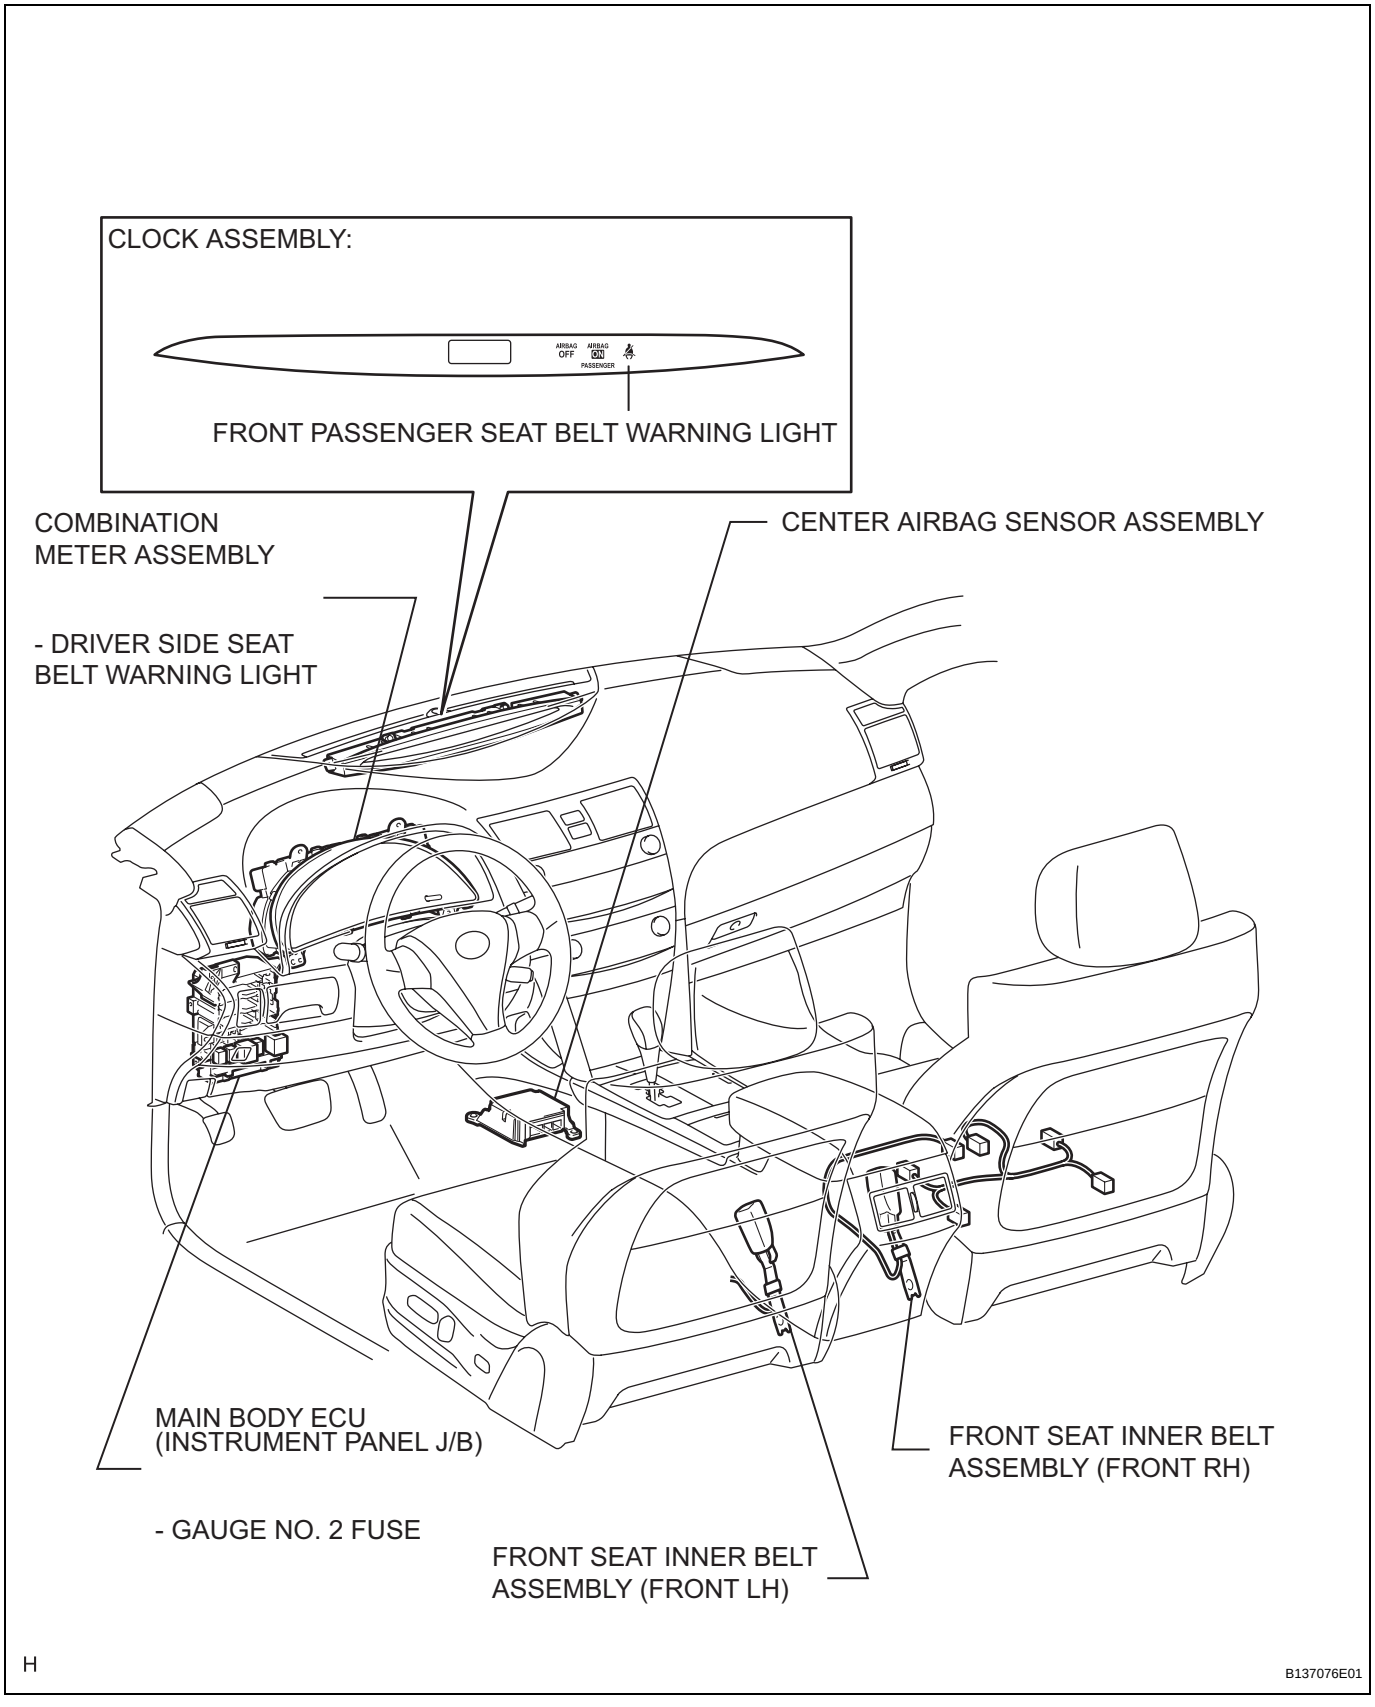
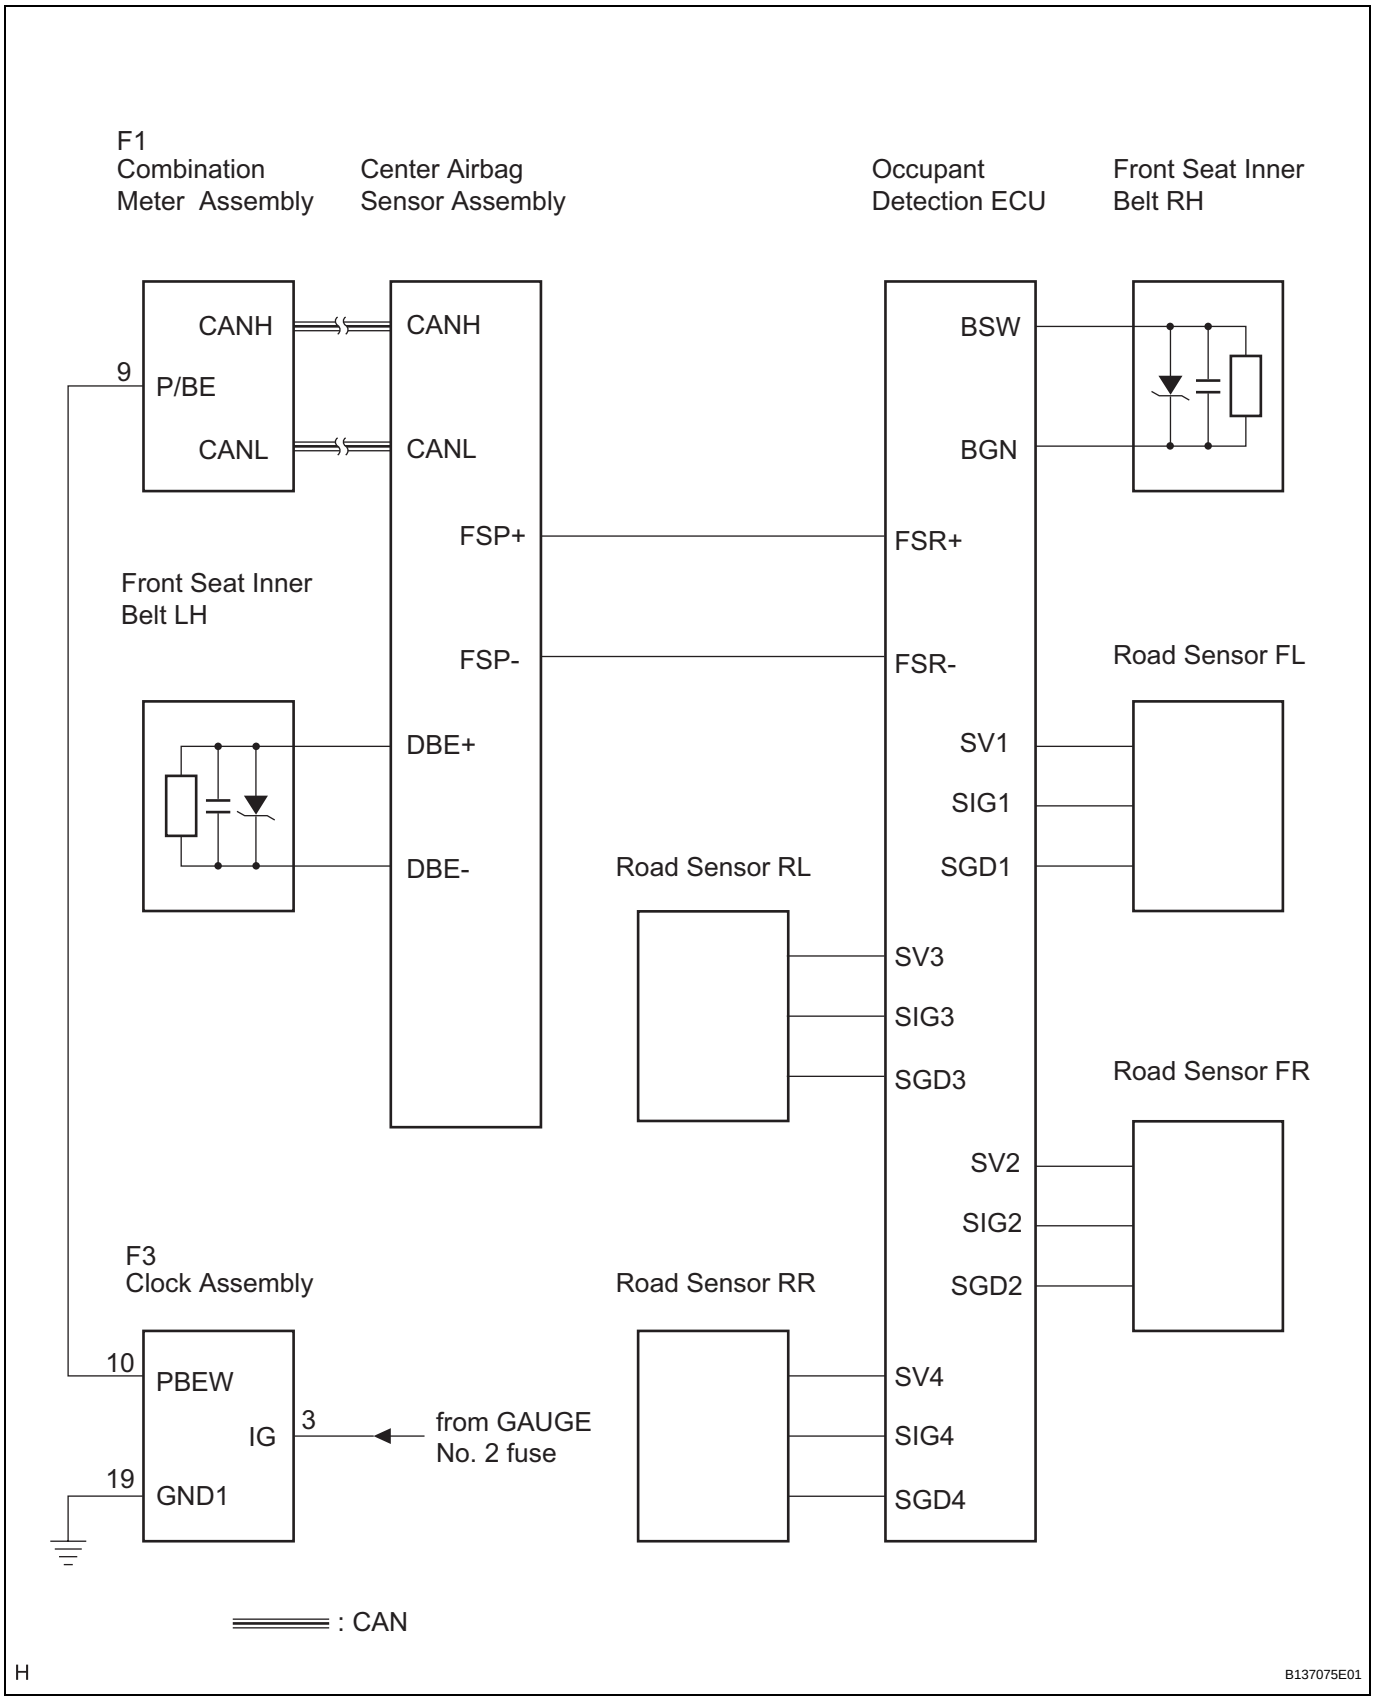
SEAT BELT WARNING SYSTEM

PARTS LOCATION



SB

SYSTEM DIAGRAM



SB

SYSTEM DESCRIPTION

1. Driver seat belt warning light

(a) When the driver seat belt is not fastened with the ignition switch on (IG), the driver seat belt warning light on the combination meter assembly comes on to inform the driver. The center airbag assembly detects the driver seat belt status and sends signals to the combination meter assembly using CAN.

2. Passenger seat belt warning

(a) When the passenger seat belt is not fastened with the ignition switch on (IG) and the passenger seat occupied, check that the passenger seat belt warning light on the clock display blinks. The combination meter assembly displays the passenger seat belt status and whether the passenger seat is occupied.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the seat belt warning system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM (CAN)*

(a) Use the intelligent tester to check if the CAN Communication System (CAN) is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

7	**CONFIRMATION TEST**

NEXT

END

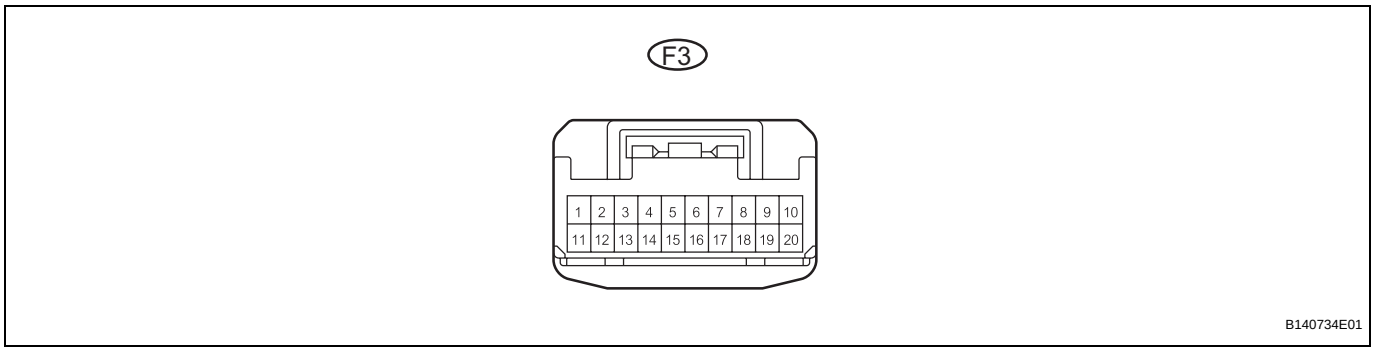
PROBLEM SYMPTOMS TABLE

SEAT BELT WARNING SYSTEM

Symptom	Suspected area	See page
Driver side seat belt warning light does not operate	1. Front seat inner belt LH	SB-9
	2. Center airbag sensor assembly	SB-9
	3. Combination meter assembly	SB-9
	4. Wire harness	SB-9
Front passenger seat belt warning light does not operate	1. Front seat inner belt RH	SB-11
	2. Occupant detection ECU	SB-11
	3. Road sensor	SB-11
	4. Center airbag sensor assembly	SB-11
	5. Combination meter assembly	SB-11
	6. Clock assembly	SB-11
	7. Wire harness	SB-11

TERMINALS OF ECU

1. CLOCK ASSEMBLY



Standard voltage

Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
F3-3 (IG) - Body ground	Power supply	Ignition switch OFF → ON (IG)	Below 1 V → 10 to 14 V

Standard resistance

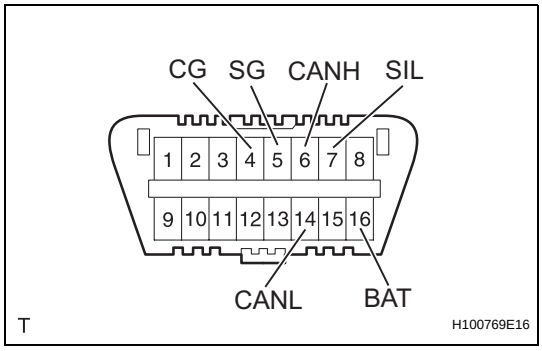
Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
F3-10 (PBEW) - Body ground	Passenger seat belt signal	The passenger seat is occupied, seat belt is fastened → unfastened	Below 1 Ω → 10 kΩ or higher
F3-19 (GND1) - Body ground	Ground	Always	Below 1 Ω

DIAGNOSIS SYSTEM

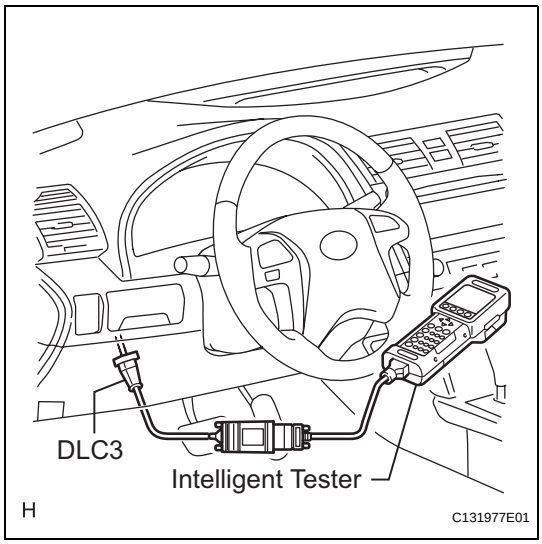
1. DESCRIPTION

(a) The seat belt warning system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



(a) The ECU uses ISO 15765-4 communication. The terminal arrangement of the DLC3 complies with SAE J 1962 and matches the ISO 15765-4 format.



Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch OFF*	6 kΩ or more

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the door.**

SB

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. ACTIVE TEST

Performing the ACTIVE TEST using the intelligent tester allows the meters, indicators and so on to operate without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) From the display on the tester, select the "ACTIVE TEST".

METER:

Item	Test Details	Diagnostic Note
D-BELT REMIND	D-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling
P-BELT REMIND	P-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling

ON-VEHICLE INSPECTION

1. INSPECT DRIVER SIDE SEAT BELT WARNING

(a) Turn the ignition switch on (IG).

(b) When the driver seat belt is not fastened, check that the driver seat belt warning light on the combination meter blinks.

(c) When the driver seat belt is fastened, check that the driver seat belt warning light on the combination meter is off.

2. INSPECT PASSENGER SIDE SEAT BELT WARNING

(a) Turn the ignition switch on (IG).

(b) When the front passenger seat belt is not fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock display blinks.

(c) When the front passenger seat belt is fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock display is off.

3. INSPECT SEAT BELT WARNING BUZZER

HINT:

If the buzzer does not sound, the buzzer cancel setting may be set to ON.

(a) Turn the ignition switch on (IG).

(b) When the vehicle is driven at approximately 25 km/h (16 mph) or more while the driver or front passenger seat belt is not being fastened, check that the buzzer in the combination meter assembly sounds at an interval of 1.2 seconds for 30 seconds.

(c) Check that the buzzer sounds at an interval of 0.4 seconds for 90 seconds.

(d) Check that the buzzer stops 2 minutes after the buzzer starts sounding.

(e) After the buzzer has stopped, turn the ignition switch off and then start the engine again. Drive the vehicle at approximately 25 km/h (16 mph) or more while the driver or front passenger seat belt is not being fastened, and then check that the buzzer sounds again.

(f) After the buzzer has stopped, fasten the driver and front passenger seat belts. Drive the vehicle at approximately 25 km/h (16 mph) or more and unfasten the driver or front passenger seat belt, and then check that the buzzer sounds again.

(g) After the buzzer has stopped, move the shift lever to the R position, and then move it to the D position. Drive the vehicle at approximately 25 km/h (16 mph) or more, and then check that the buzzer sounds again.

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is on (IG), the center airbag sensor assembly transmits front seat inner belt state signals to the combination meter assembly through CAN. If the driver seat belt is not fastened, the combination meter assembly blinks the driver seat belt warning light. If the seat belt is fastened, the warning light goes off.

NOTICE:

The seat belt warning system uses CAN. Before troubleshooting the seat belt warning system, perform "COMMUNICATION FUNCTION CHECK" by following "HOW TO PROCEED WITH TROUBLESHOOTING" to confirm that the communication systems are normal.

D-BELT REMIND	D-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling

OK:
Switch condition (ON/OFF) can be switched by "ACTIVE TEST".

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

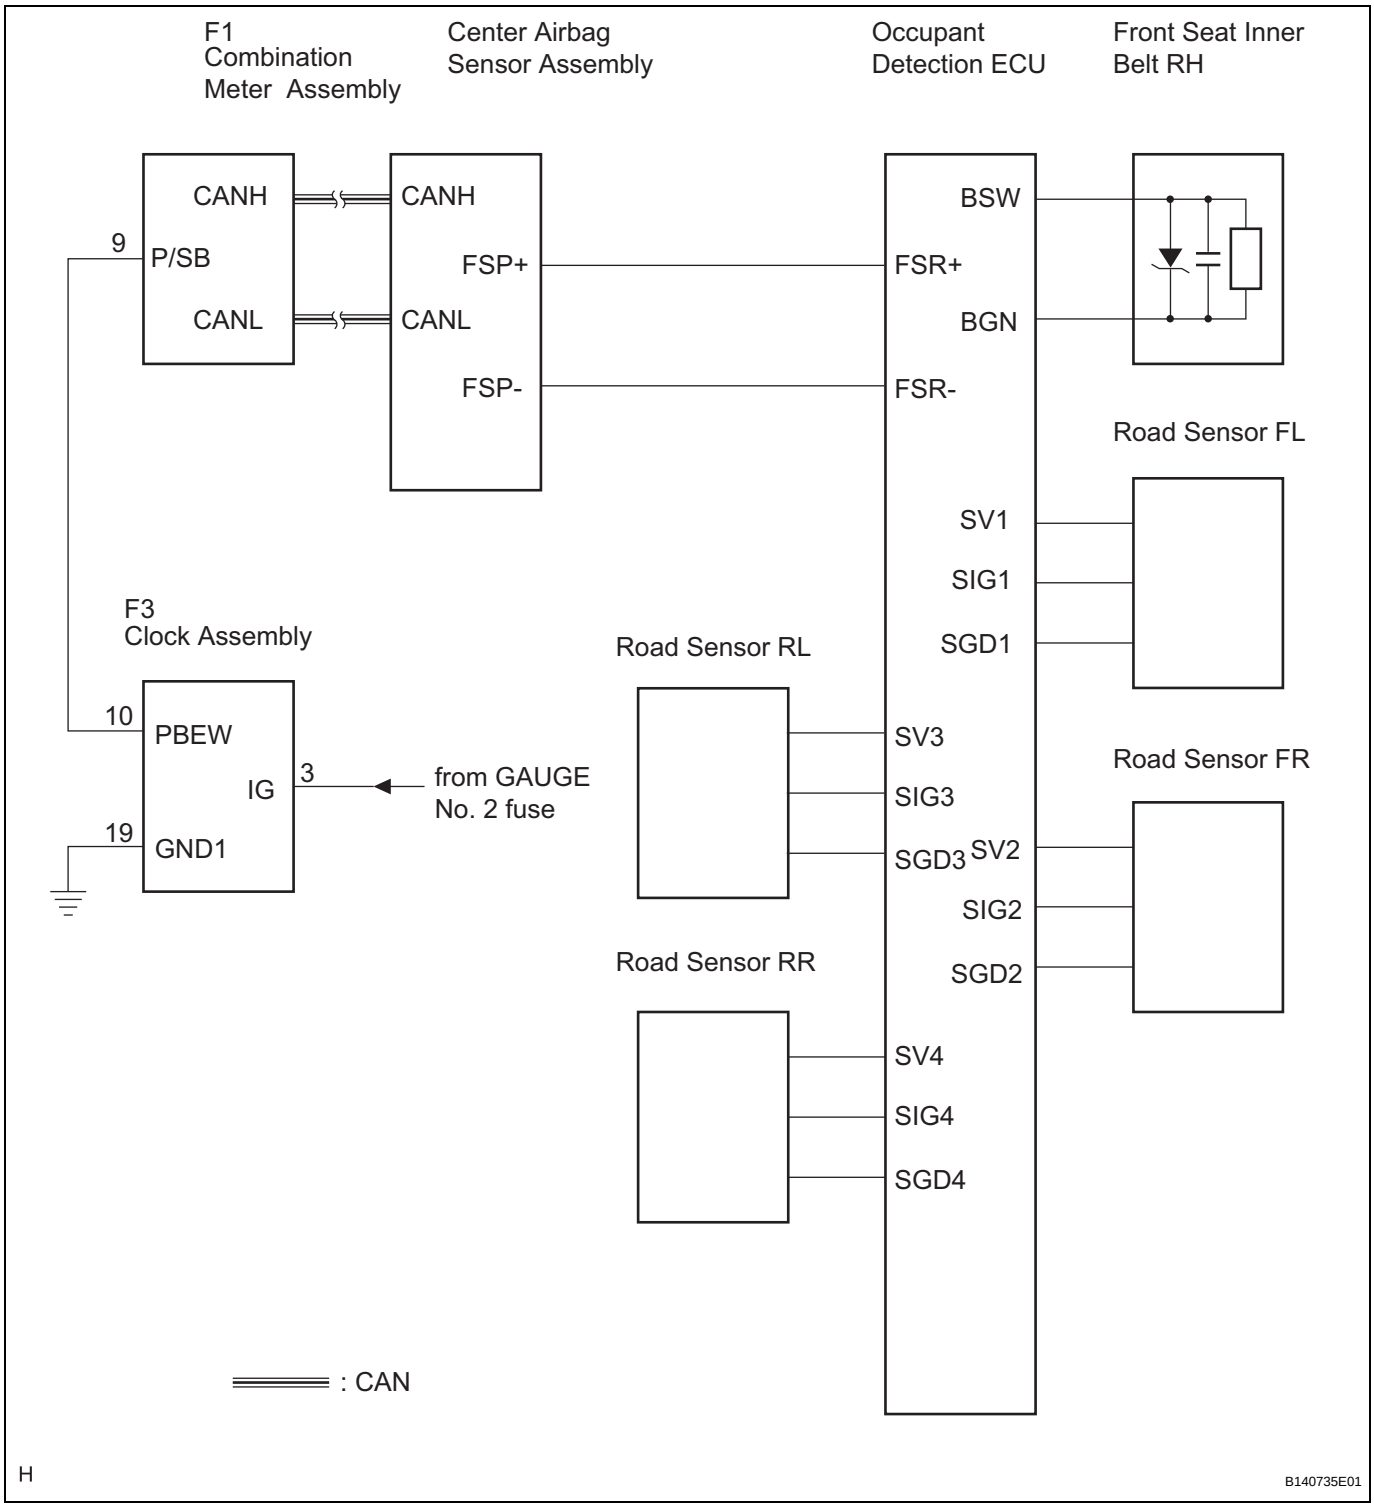
END

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

The occupant detection ECU detects the state of the front seat inner belt assembly RH and road sensor when the front passenger seat is occupied with the ignition switch on (IG). If the front passenger seat belt is not fastened, the front seat belt warning light on the clock display blinks. If the seat belt is fastened, the warning light goes off.

WIRING DIAGRAM



SB

INSPECTION PROCEDURE

1 CHECK FOR DTCs

(a) Check for DTCs.

Result

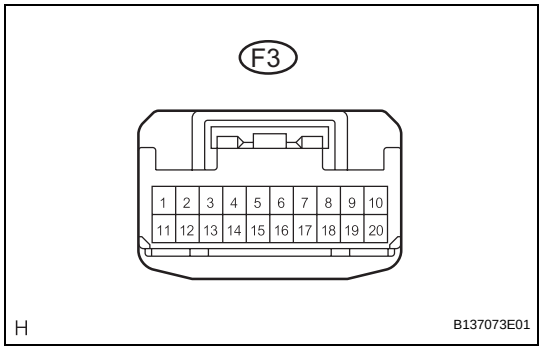
Result	Proceed to
No output DTC	A
Output DTC (CAN communication)	B
Output DTC (Occupant detection)	C

B → GO TO CAN COMMUNICATION SYSTEM

C → GO TO OCCUPANT CLASSIFICATION SYSTEM

A

2 CHECK WIRE HARNESS (BATTERY POSITIVE AND BODY GROUND)



(a) Disconnect the clock assembly connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F3-3 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

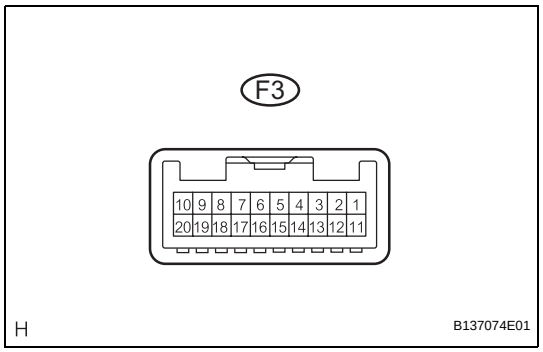
Standard resistance

Tester Connection	Condition	Specified Condition
F3-19 (GND1) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE GAUGE NO. 2 FUSE, HARNESS OR CONNECTOR

OK

3 CHECK CLOCK ASSEMBLY



(a) Disconnect the clock assembly connector.
(b) Apply battery voltage to the connector according to the table below.

Standard

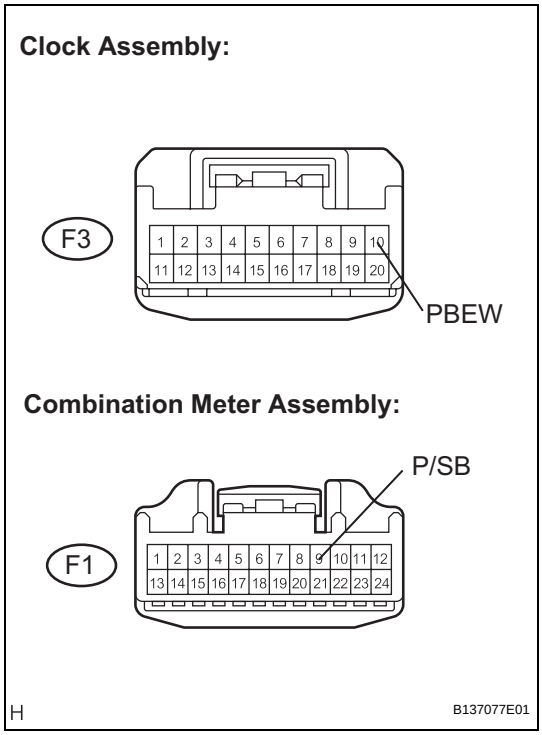
Condition	Specified Condition
Battery positive (+) → Terminal 3 (IG) Battery negative (-) → Terminal 10 (PBEW), 19 (GND1)	Lights up (Seat belt warning light)

NG → REPLACE CLOCK ASSEMBLY

SB

OK

4	CHECK WIRE HARNESS (CLOCK ASSEMBLY - COMBINATION METER ASSEMBLY)



(a) Disconnect the combination meter assembly and clock assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-9 (P/SB) - F3-10 (PBEW)	Always	Below 1 Ω
F1-9 (P/SB) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

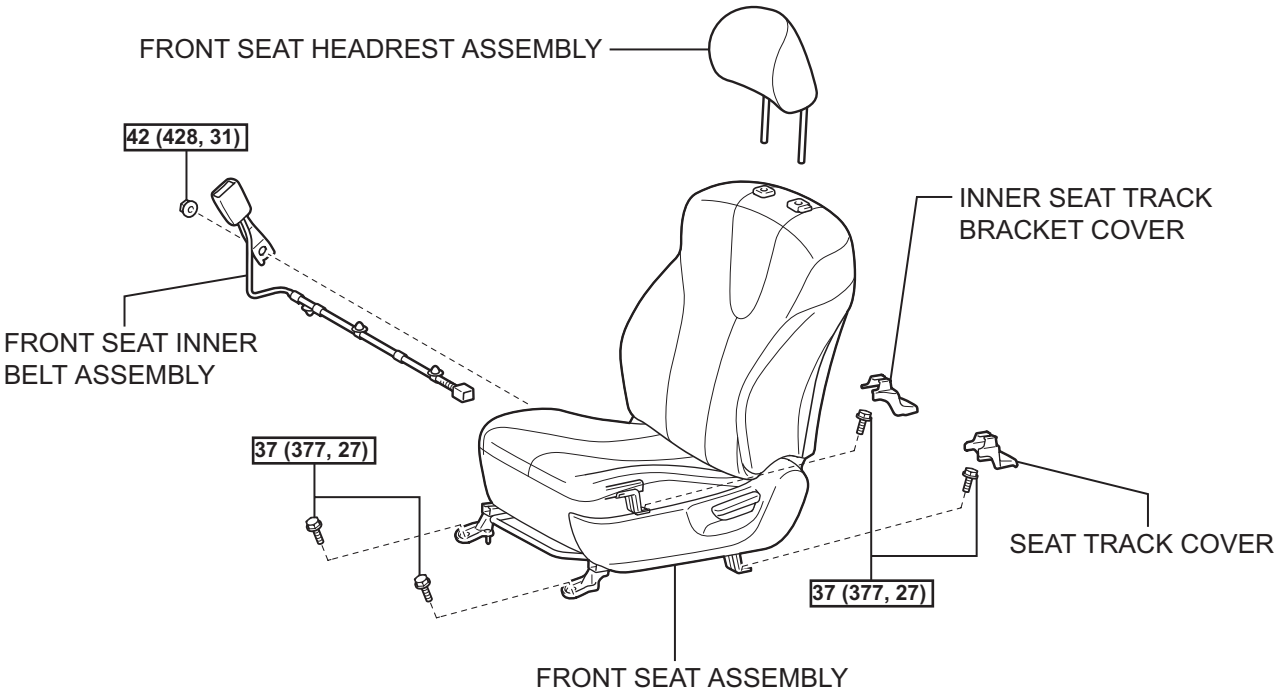
OK

SB → REPLACE COMBINATION METER ASSEMBLY

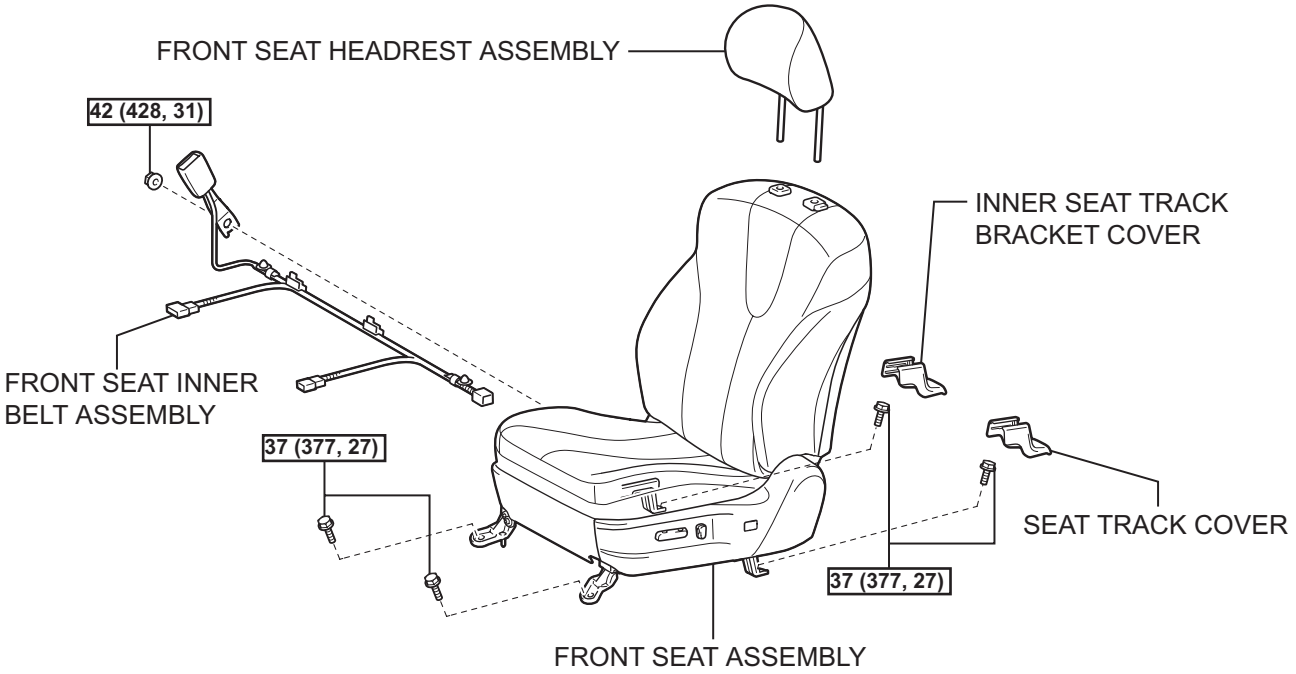
FRONT SEAT INNER BELT ASSEMBLY

COMPONENTS

for Manual Seat:



for Power Seat:



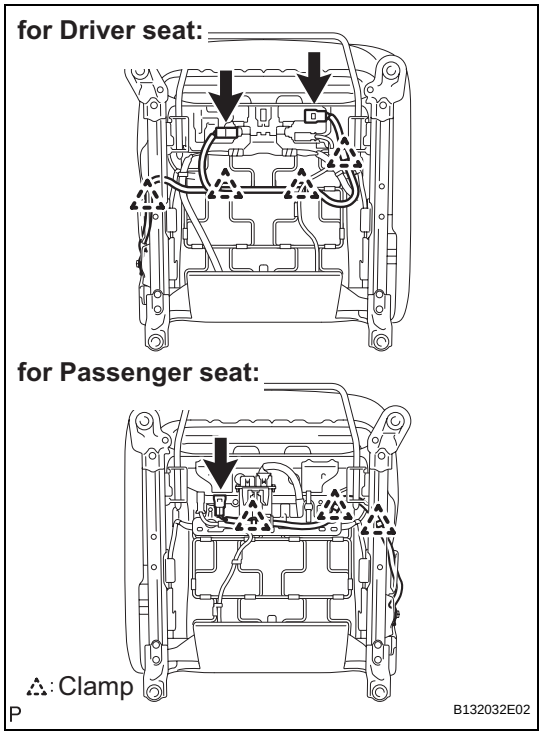
N*m (kgf*cm, ft.*lbf): Specified torque

P

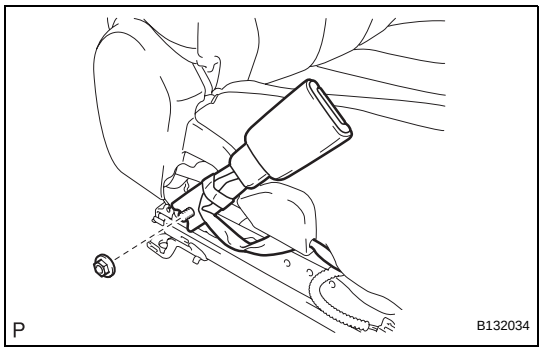
B132031E01

REMOVAL

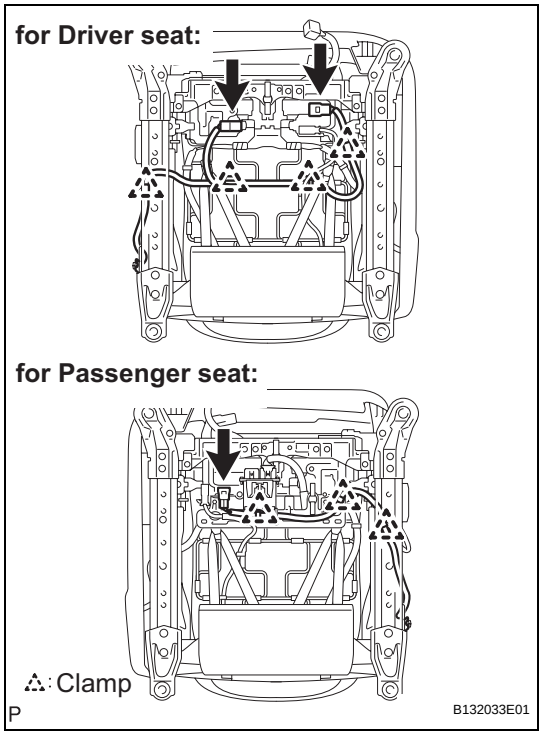
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
3. **REMOVE SEAT TRACK COVER (for Manual Seat) (See page SE-16)**
4. **REMOVE INNER SEAT TRACK BRACKET COVER (for Manual Seat) (See page SE-16)**
5. **REMOVE FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-16)**
6. **REMOVE SEAT TRACK COVER (for Power Seat) (See page SE-30)**
7. **REMOVE INNER SEAT TRACK BRACKET COVER (for Power Seat) (See page SE-30)**
8. **REMOVE FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-30)**
9. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Manual Seat)**
   (a) for Driver seat:
      (1) Disconnect the connectors and disengage the 4 clamps.
   (b) for Passenger seat:
      (1) Disconnect the connector and disengage the 3 clamps.



SB



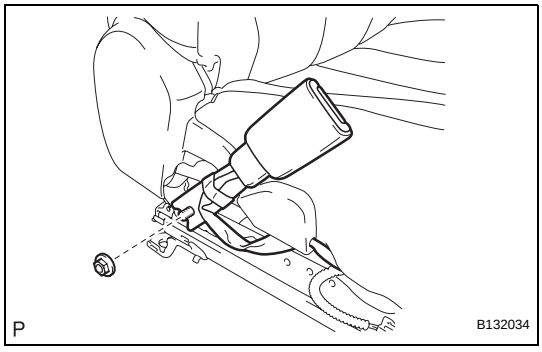
(c) Remove the nut and front seat inner belt assembly.



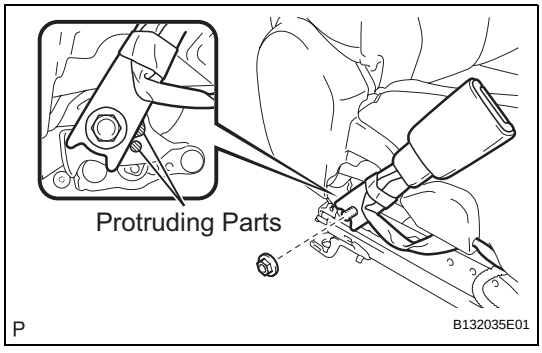
10. REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Power Seat)

(a) for Driver seat:
  (1) Disconnect the connectors and disengage the 4 clamps.

(b) for Passenger seat:
  (1) Disconnect the connector and disengage the 3 clamps.



(c) Remove the nut and front seat inner belt assembly.



INSTALLATION

1. INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Manual Seat)

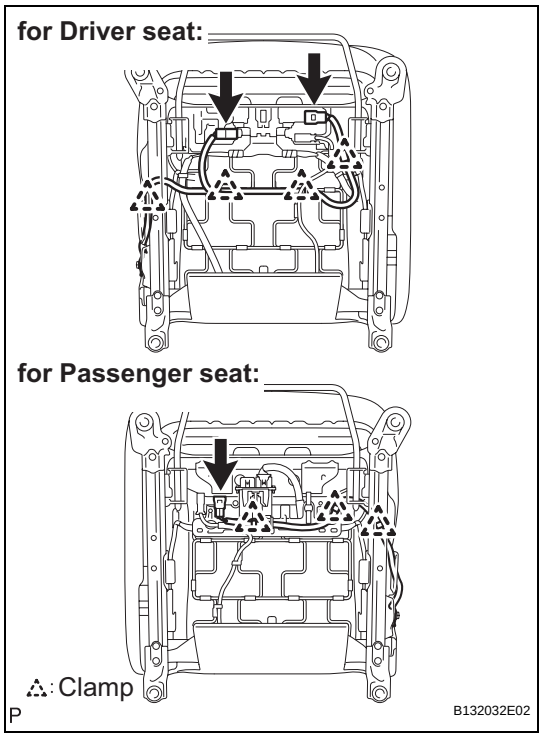
(a) Install the front seat inner belt assembly with the nut.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

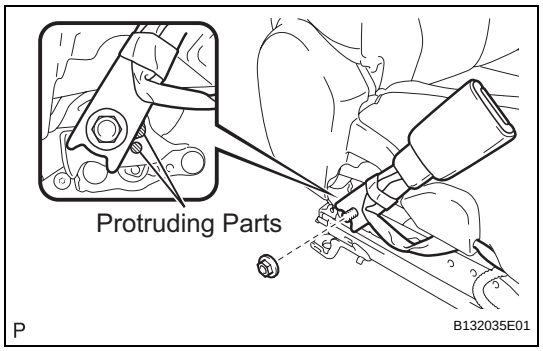
NOTICE:

Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding parts of the front seat adjuster.

SB



(b) for Driver seat:
(1) Connect the connectors and engage the 4 clamps.
(c) for Passenger seat:
(1) Connect the connector and engage the 3 clamps.



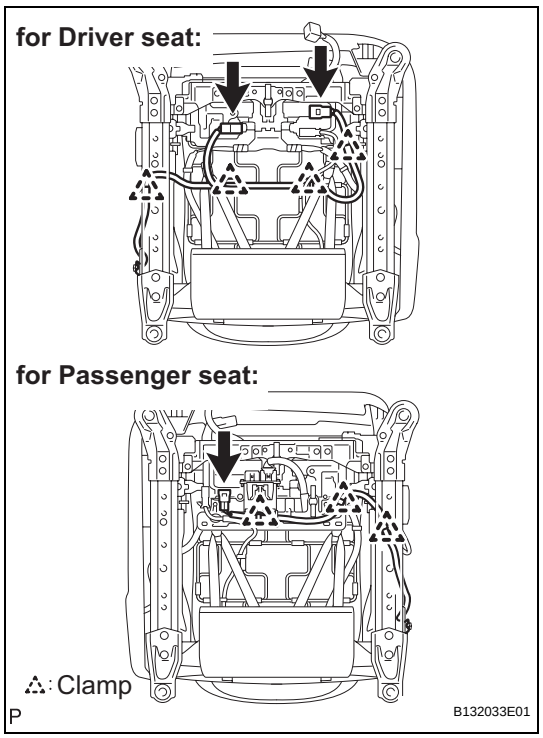
2. INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Power Seat)

(a) Install the front seat inner belt assembly with the nut.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

NOTICE:

Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding parts of the front seat adjuster.



(b) for Driver seat:
(1) Connect the connectors and engage the 4 clamps.
(c) for Passenger seat:
(1) Connect the connector and engage the 3 clamps.

3. INSTALL FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-24)

4. INSTALL INNER SEAT TRACK BRACKET COVER (for Manual Seat) (See page SE-25)

5. INSTALL SEAT TRACK COVER (for Manual Seat) (See page SE-25)

6. INSTALL FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-41)

7. INSTALL INNER SEAT TRACK BRACKET COVER (for Power Seat) (See page SE-42)

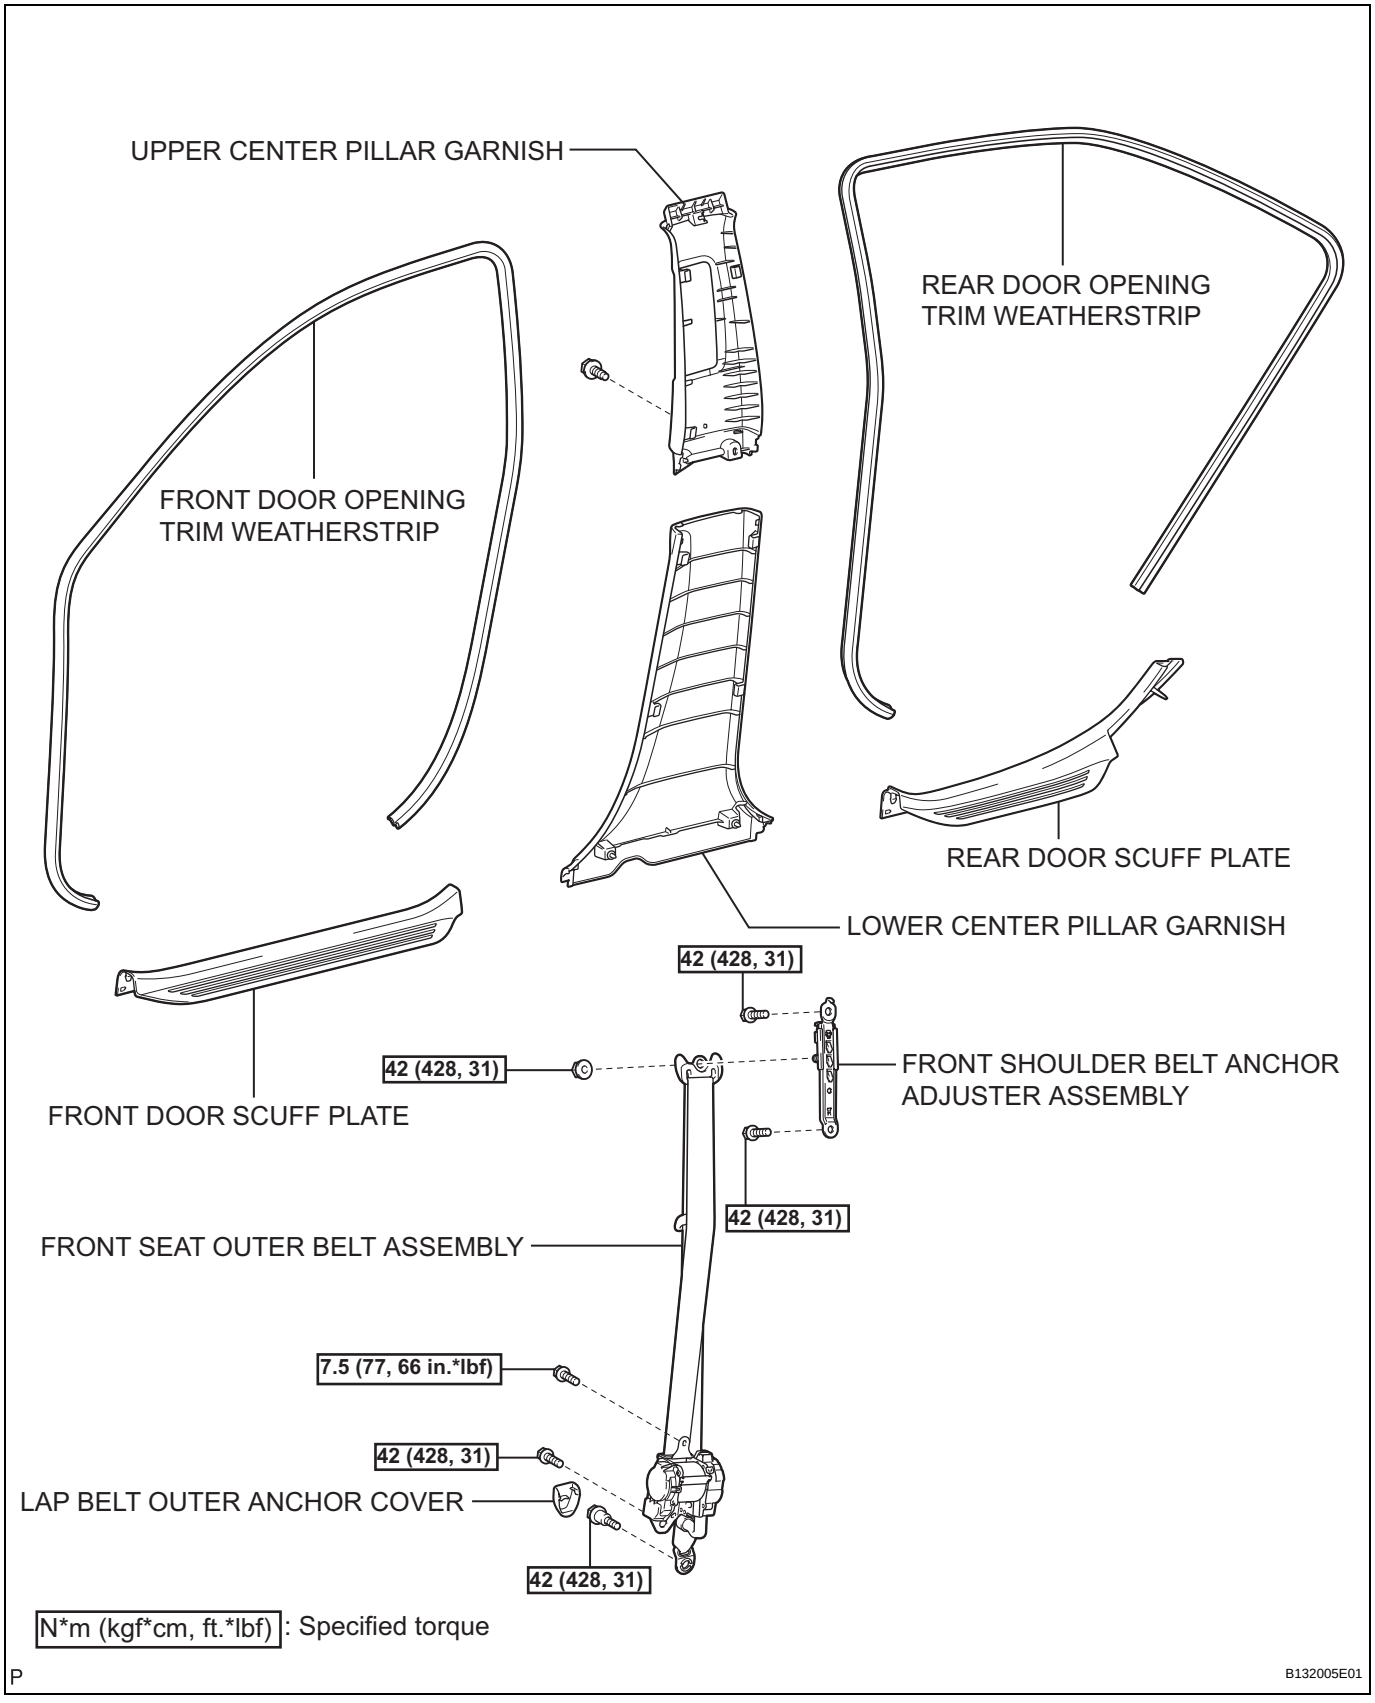
8. INSTALL SEAT TRACK COVER (for Power Seat) (See page SE-42)

SB

9. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
11. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)** (See page RS-242)
12. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**
13. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-42)**
14. **INSPECT SRS WARNING LIGHT** (See page RS-32)

FRONT SEAT OUTER BELT ASSEMBLY

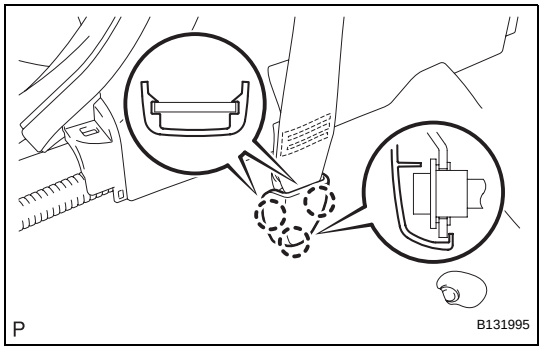
COMPONENTS



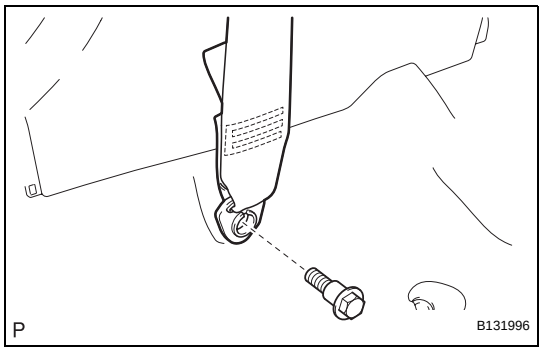
SB

REMOVAL

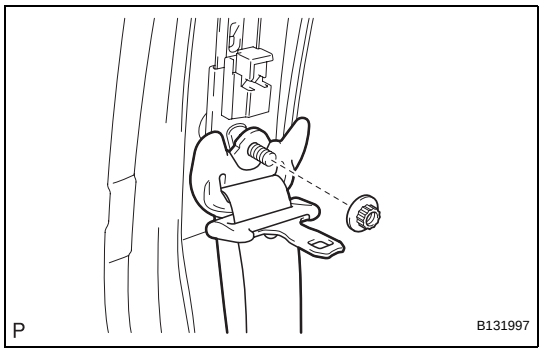
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).



2. **REMOVE LAP BELT OUTER ANCHOR COVER**
   (a) Disengage the 3 claws and remove the lap belt outer anchor cover.

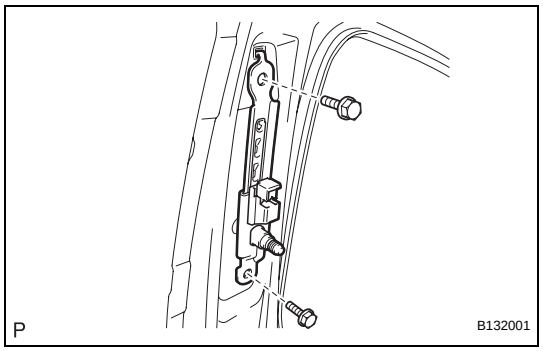


3. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY**
   (a) Remove the bolt and disconnect the floor end of the front seat outer belt assembly.
4. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-24)**
5. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
6. **REMOVE REAR DOOR SCUFF PLATE (See page IR-24)**
7. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
8. **REMOVE LOWER CENTER PILLAR GARNISH (See page IR-25)**
9. **REMOVE UPPER CENTER PILLAR GARNISH (See page IR-26)**



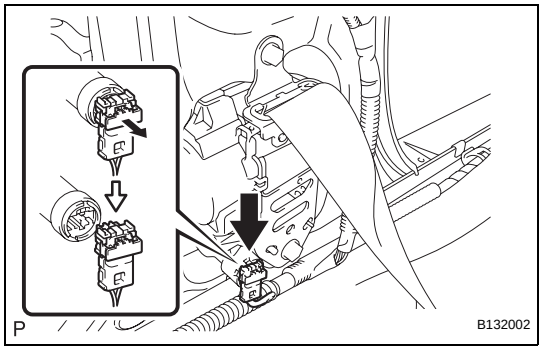
10. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY**
    (a) Remove the nut and disconnect the shoulder anchor of the front seat outer belt assembly.

SB



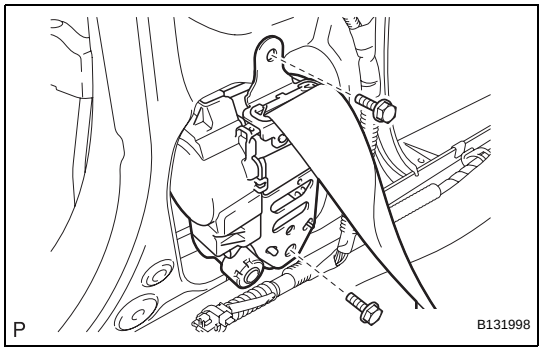
11. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts and the front shoulder belt anchor adjuster assembly.

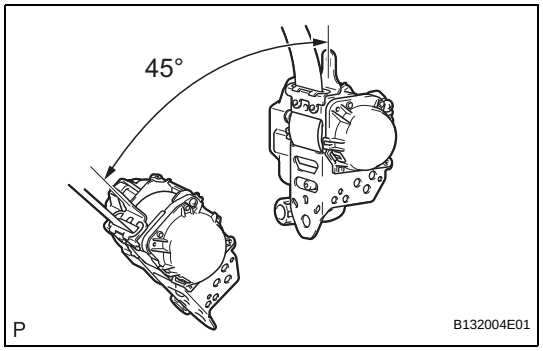


12. REMOVE FRONT SEAT OUTER BELT ASSEMBLY

(a) Using a screwdriver, pull out the locking button in the direction shown by the arrow to release the lock, and disconnect the connector as shown in the illustration.
HINT:
Tape the screwdriver tip before use.



(b) Remove the 2 bolts and the front seat outer belt assembly.

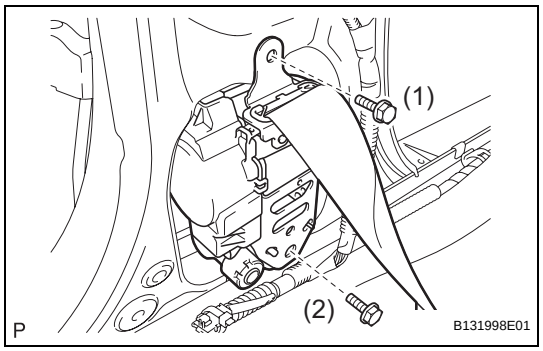


INSTALLATION

1. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

(a) Check the degree of tilt when the ELR begins to lock.

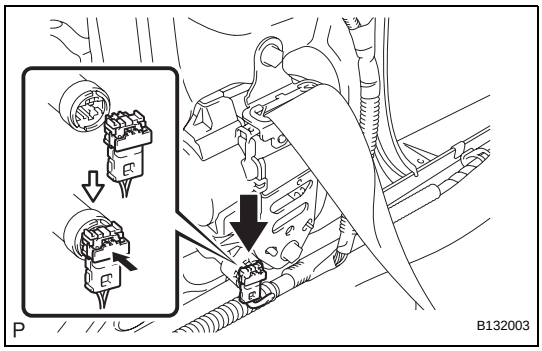
(1) Check that the belt does not lock at less than 15 degrees of tilt in any direction but locks at over 45 degrees of tilt while gently pulling the belt.
NOTICE:
Do not disassemble the retractor.



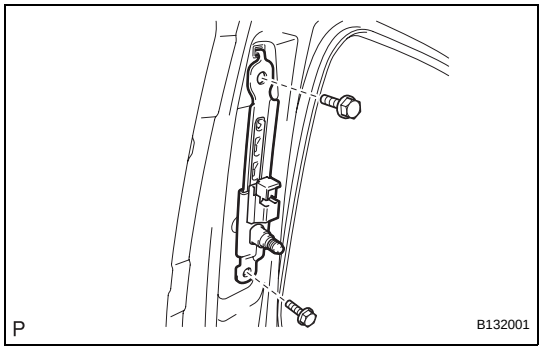
(b) Temporarily install the front seat outer belt assembly with the 2 bolts.

(c) Fully tighten the upper side bolt first, then the lower side bolt to install the front seat outer belt assembly.
Torque: For upper bolt
7.5 N*m (77 kgf*cm, 66 in.*lbf)
For lower bolt
42 N*m (428 kgf*cm, 31 ft.*lbf)

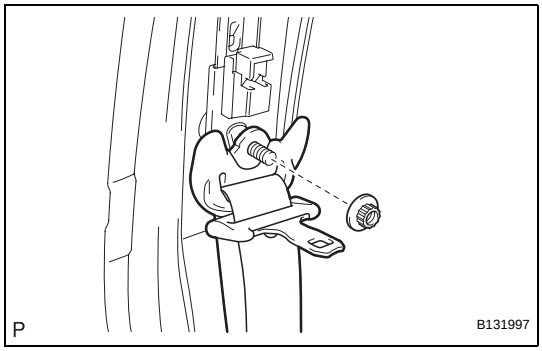
SB



(d) Connect the connector and lock the locking button as shown in the illustration.
NOTICE:
Securely lock the locking button.



2. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY
(a) Install the front shoulder belt anchor adjuster assembly with the 2 bolts.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



3. CONNECT FRONT SEAT OUTER BELT ASSEMBLY
(a) Connect the shoulder anchor of the front seat outer belt assembly with the nut.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

4. INSTALL UPPER CENTER PILLAR GARNISH (See page IR-53)

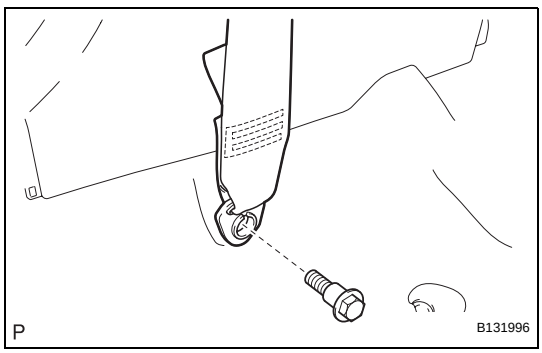
5. INSTALL LOWER CENTER PILLAR GARNISH (See page IR-53)

6. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP (See page IR-55)

7. INSTALL REAR DOOR SCUFF PLATE (See page IR-56)

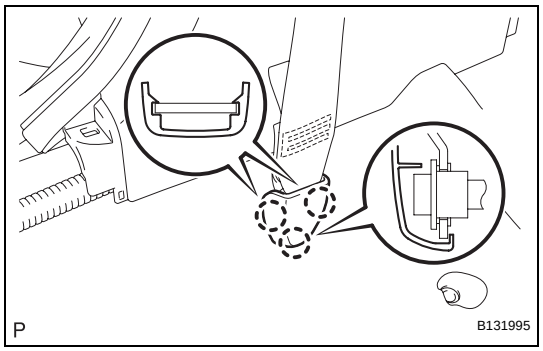
8. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP (See page IR-54)

9. INSTALL FRONT DOOR SCUFF PLATE (See page IR-54)



10. CONNECT FRONT SEAT OUTER BELT ASSEMBLY
(a) Install the floor end of the front seat outer belt assembly with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
(b) Check if the ELR locks.
NOTICE:
The check should be performed with the outer belt assembly installed.
(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

SB



11. INSTALL LAP BELT OUTER ANCHOR COVER

(a) Engage the 3 claws and install the lap belt outer anchor cover.

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

13. INSPECT SRS WARNING LIGHT

(See page RS-32)

DISPOSAL

HINT:
When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt (with a seat belt pretensioner), always deploy the seat belt pretensioner first in accordance with the procedures described below. If any abnormality occurs during deployment of the seat belt pretensioner, contact the SERVICE DEPT. of the TOYOTA MOTOR SALES, U.S.A., INC.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN INSTALLED IN VEHICLE)

NOTICE:

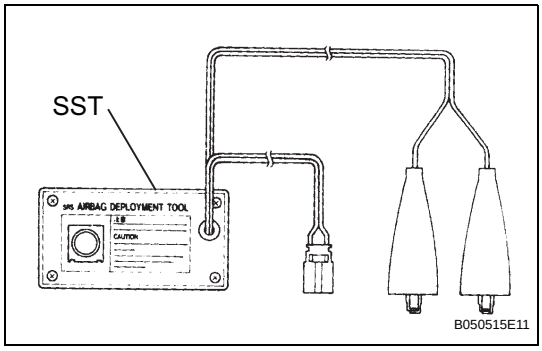
- **Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.**
- **The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.**
- **When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.**
- **When deploying the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical interference.**
- **Be sure to follow the procedures listed below when deploying the seat belt pretensioner.**

(a) Check the function of SST.

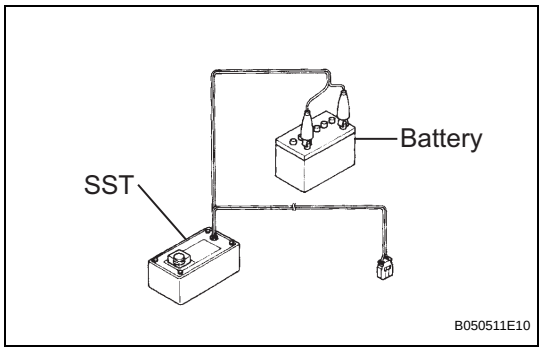
SST 09082-00700, 09082-00770

CAUTION:

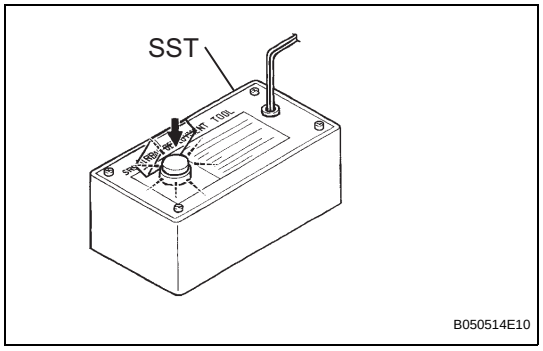
When deploying the seat belt pretensioner, always use the specified SST.



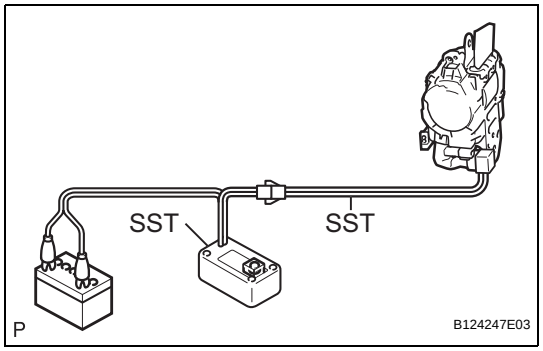
SB



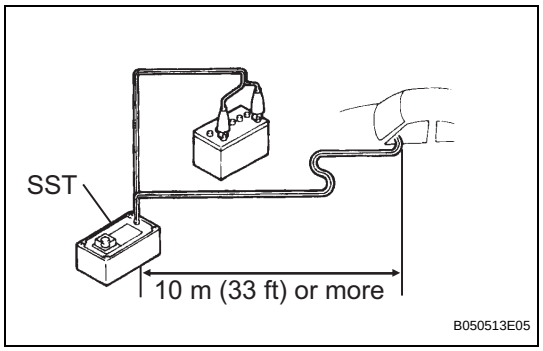
(1) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
HINT:
At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.



(2) Press the SST deployment switch, and check that the LED of the SST deployment switch lights up.
CAUTION:
If the LED is lit when the deployment switch is not pressed, the SST may be malfunctioning. Therefore, do not use the SST.



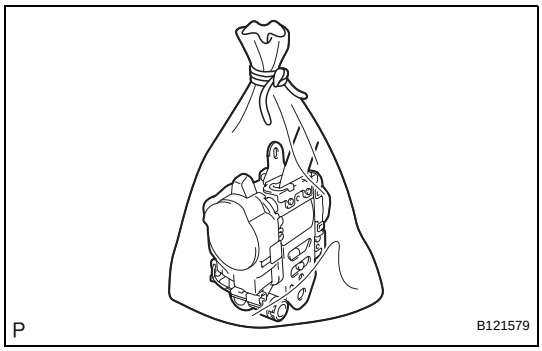
(b) Connect SST.
(1) Connect 2 SST, and then connect them to the front seat outer belt pretensioner.
SST 09082-00700, 09082-00770
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.



(2) Move the SST at least 10 m (33 ft) away from the front of the vehicle.
(3) Close all the doors and windows of the vehicle.
NOTICE:
Do not damage the SST wire harness.

(c) Deploy the front seat outer belt pretensioner.
(1) Confirm that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the negative (-) terminal.
(3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.
HINT:
The seat belt pretensioner will deploy at the same time as the LED of the SST illuminates.

SB



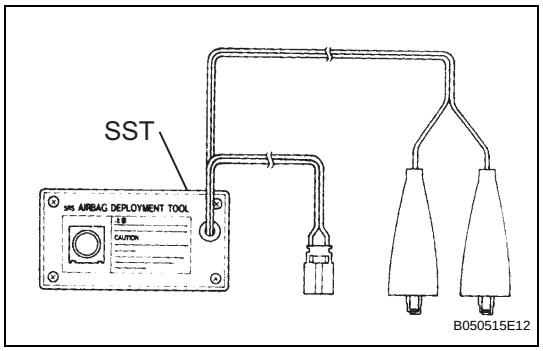
(d) Dispose of the front seat outer belt assembly.
(1) Remove the front seat outer belt assembly and SST.
(2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.

CAUTION:
- **The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.**
- **Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.**

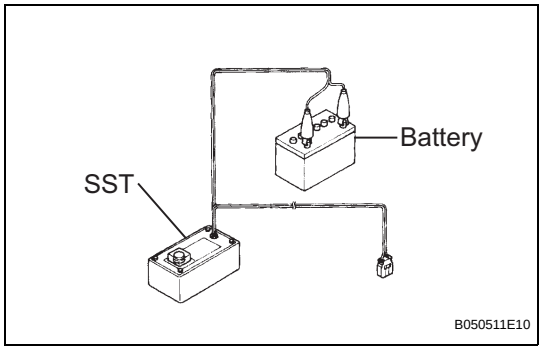
HINT:
When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

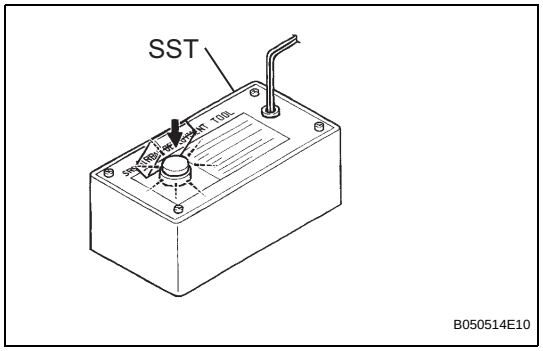
NOTICE:
- **Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.**
- **The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.**
- **When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.**
- **When disposing of a pretensioner equipped front seat outer belt, never deploy the belt in the customer's vehicle.**
- **Be sure to follow the procedures listed below when deploying the seat belt pretensioner.**



(a) Check the function of SST.
SST 09082-00700, 09082-00770
CAUTION:
When deploying the seat belt pretensioner, always use the specified SST.

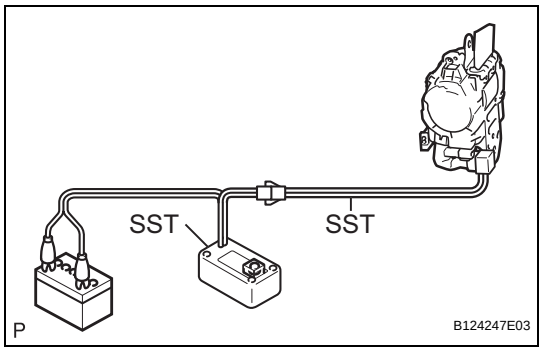


(1) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
HINT:
At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.

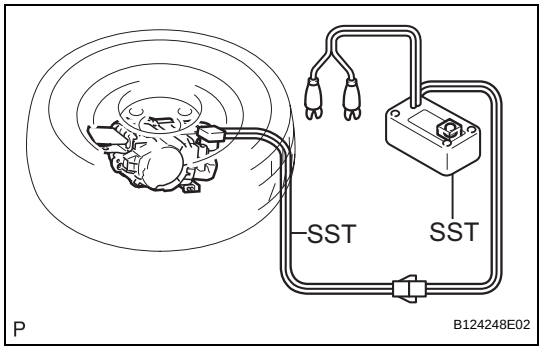


(2) Press the SST deployment switch, and check that the LED of the SST deployment switch lights up.
CAUTION:
If the LED is lit when the deployment switch is not pressed, the SST may be malfunctioning. Therefore, do not use the SST.

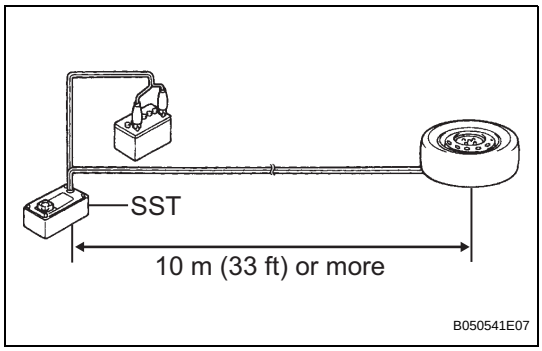
SB

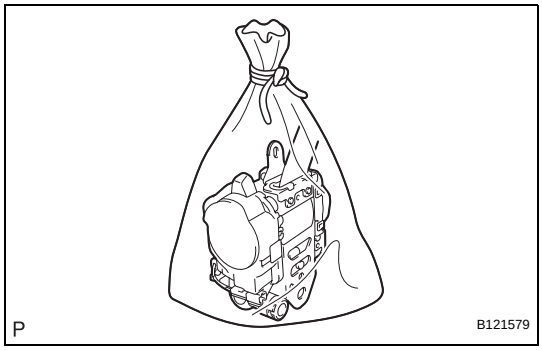


(b) Connect SST.
(1) Connect 2 SST, and then connect them to the front seat outer belt pretensioner.
SST 09082-00700, 09082-00770
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.



(2) Place the outer belt on the ground and cover it with a tire and wheel assembly.
NOTICE:
Position the front seat outer belt assembly as shown in the illustration.
(3) Position and hold the SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Do not damage the SST wire harness.





(c) Deploy the front seat outer belt pretensioner.
  (1) Check that no one is within a 10 m (33 ft) radius of the wheel.
  (2) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
  (3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.
  HINT:
  The seat belt pretensioner will deploy at the same time as the LED of the SST illuminates.

(d) Dispose of the front seat outer belt assembly.
  (1) Remove the wheel and SST.
  (2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.
  CAUTION:
  - **The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.**
  - **Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.**
  - **Always wash your hands with water after completing the operation.**
  - **Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.**
  HINT:
  When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

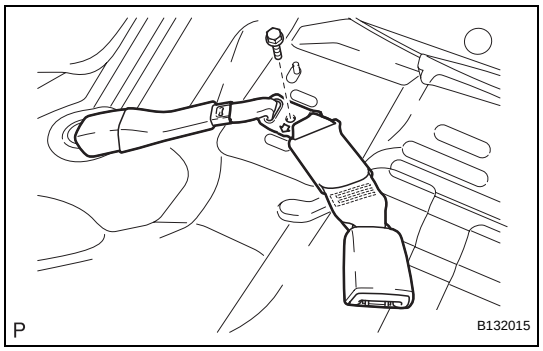
REMOVAL

1. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)**
2. **REMOVE REAR SEAT HEADREST ASSEMBLY**
3. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
4. **REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
5. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)**
6. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)**
7. **REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)**
8. **REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)**
9. **REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)**
10. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)**
11. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)**
12. **REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)**
13. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)**
14. **DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH**
15. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)**
16. **DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH**
17. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)**
18. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
19. **REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)**

20. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY RH

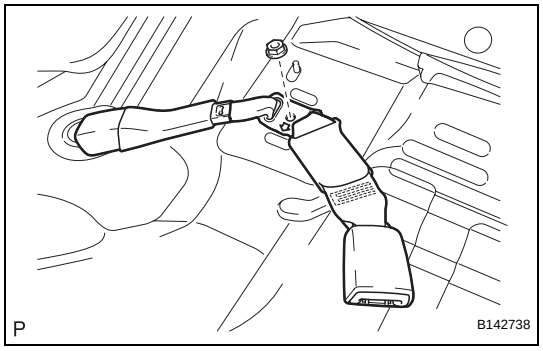
HINT:

Use the same procedures for the RH side and the LH side.



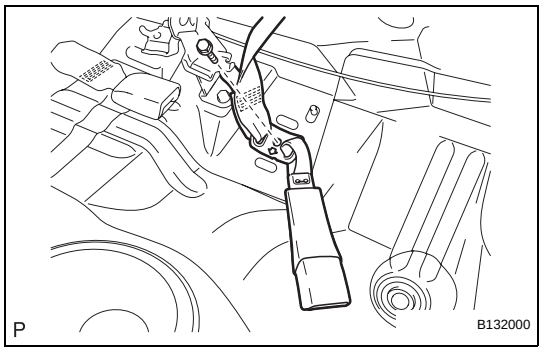
21. REMOVE REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (for TMC Made)

(a) Remove the bolt and the rear seat inner with center belt assembly RH.



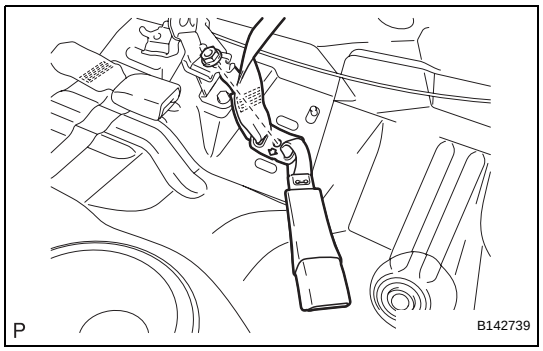
22. REMOVE REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (for TMMK Made)

(a) Remove the nut and the rear seat inner with center belt assembly RH.



23. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made)

(a) Remove the bolt and disconnect the floor end of the rear seat inner with center belt assembly LH.



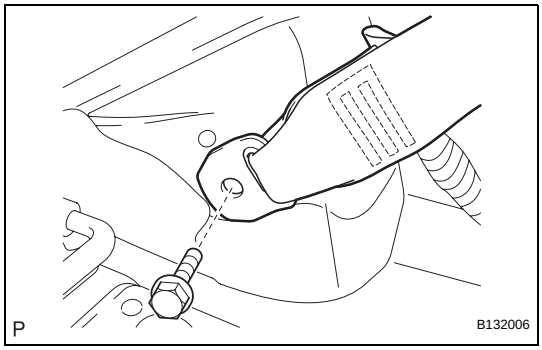
24. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made)

(a) Remove the nut and disconnect the floor end of the rear seat inner with center belt assembly LH.

25. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)

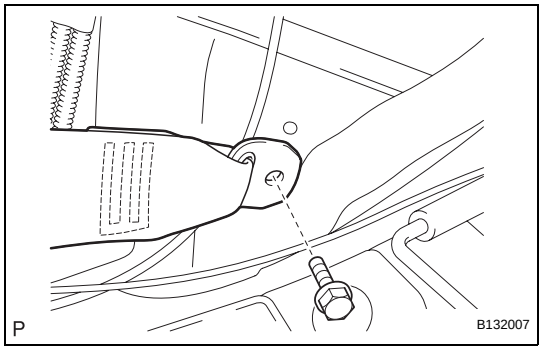
26. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)

SB



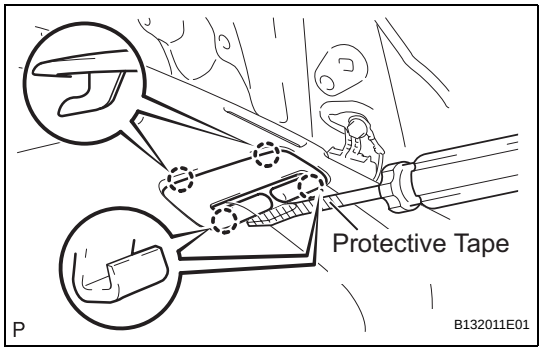
27. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)

(a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.



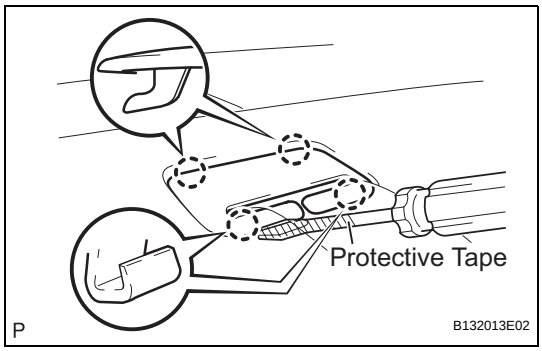
28. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.



29. REMOVE REAR SEAT SHOULDER BELT COVER

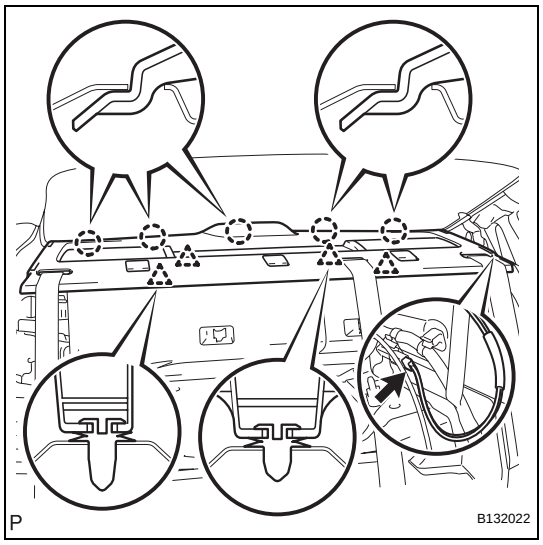
(a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder belt cover.
HINT:
- Tape the screwdriver tip before use.
- Use the same procedures for the RH side and the LH side.



30. REMOVE REAR SEAT SHOULDER BELT HOLE COVER

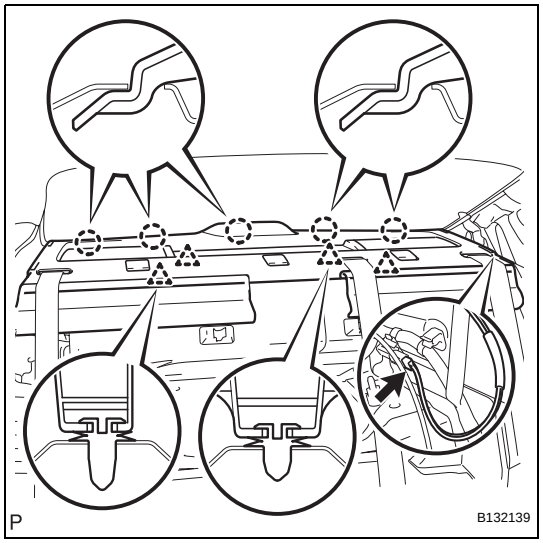
(a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder belt hole cover.
HINT:
Tape the screwdriver tip before use.

SB



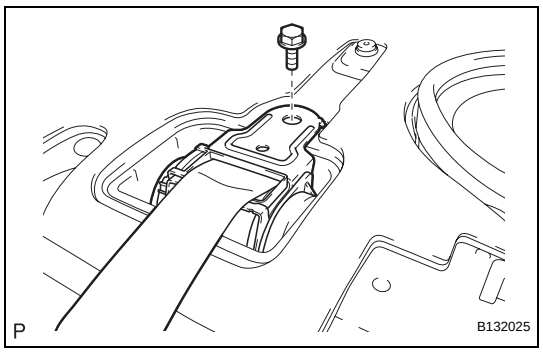
31. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY

(a) Disconnect the connector.
(b) Disengage the 4 clips and the 5 claws.
(c) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly then remove the package tray trim panel assembly.



32. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type)

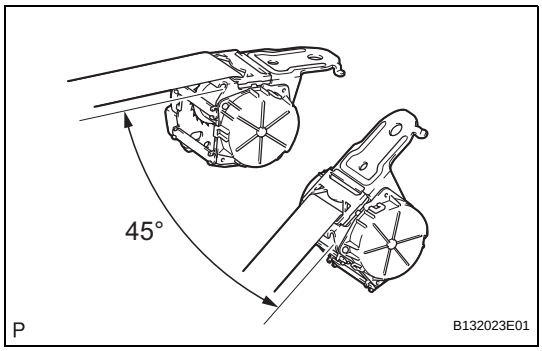
(a) Disconnect the connector.
(b) Disengage the 4 clips and the 5 claws.
(c) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly then remove the package tray trim panel assembly.



33. REMOVE REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH

(a) Remove the bolt and the rear seat inner with center belt assembly LH.

SB



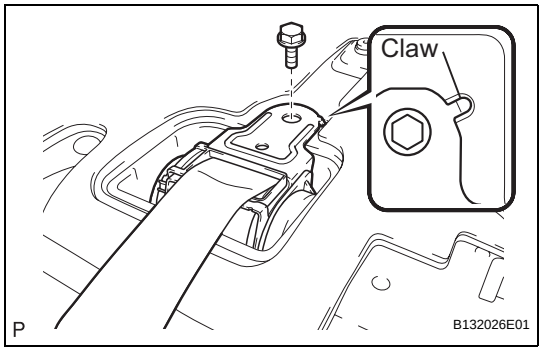
INSTALLATION

1. INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH

(a) Check the degree of the tilt when the ELR begins to lock.

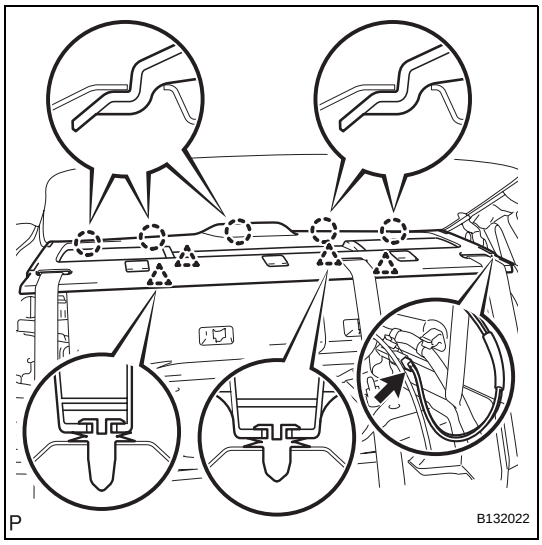
(1) Check that the belt does not lock at less than 15 degrees of tilt in any direction but locks at over 45 degrees of tilt while gently pulling the belt.

NOTICE:
Do not disassemble the retractor.



(b) Align the claw with the seat belt positioning hole and install the rear seat inner with center belt assembly LH with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

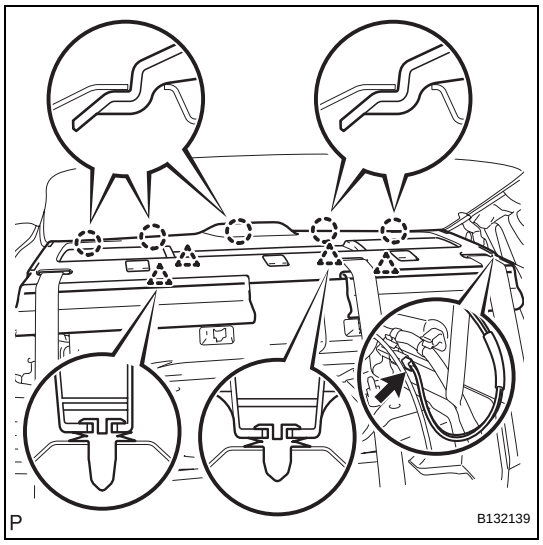


2. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY

(a) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly.

(b) Engage the 4 clips and 5 claws and install the package tray trim panel assembly.

(c) Connect the connector.

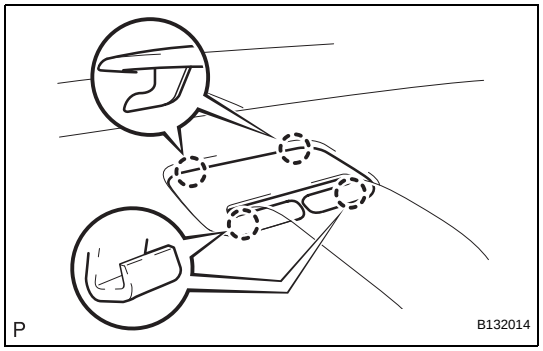


3. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type)

(a) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly.

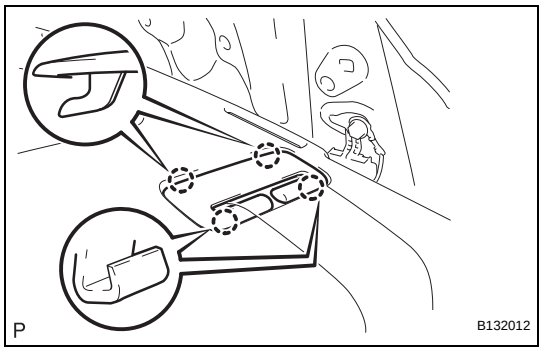
(b) Engage the 4 clips and 5 claws and install the package tray trim panel assembly.

(c) Connect the connector.



4. INSTALL REAR SEAT SHOULDER BELT HOLE COVER

(a) Engage the 4 claws and install the rear seat shoulder belt hole cover.

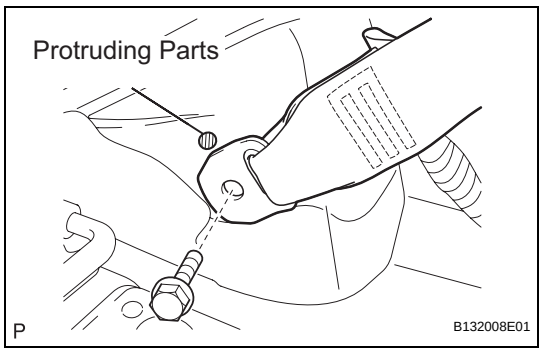


5. INSTALL REAR SEAT SHOULDER BELT COVER

(a) Engage the 4 claws and install the rear seat shoulder belt cover.

HINT:

Use the same procedures for the RH side and the LH side.



6. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)

(a) Connect the floor end of the rear seat outer belt assembly with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

NOTICE:

Do not allow the anchor part of the rear seat outer belt assembly to overlap the protruding parts of the floor panel.

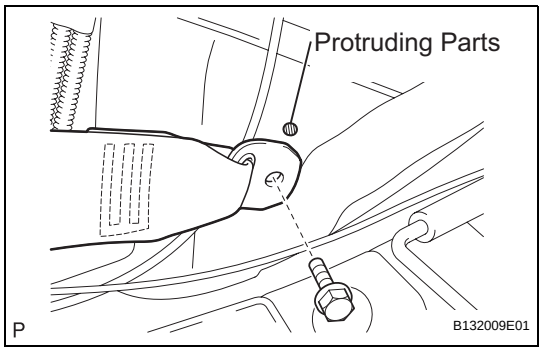
(b) Check if the ELR locks.

NOTICE:

The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

SB



7. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)

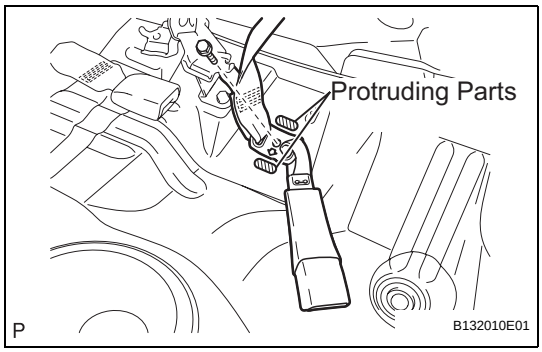
(a) Connect the floor end of the rear seat outer belt assembly with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not allow the anchor part of the rear seat outer belt assembly to overlap the protruding parts of the floor panel.

(b) Check if the ELR locks.
NOTICE:
The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

8. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)

9. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)

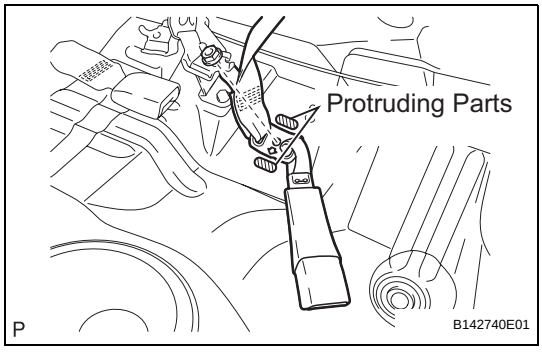


10. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made)

(a) Connect the floor end of the rear seat inner with center belt assembly LH with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not allow the anchor part of the rear seat inner with center belt assembly LH to overlap the protruding parts of the floor panel.

(b) Check if the ELR locks.
NOTICE:
The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.



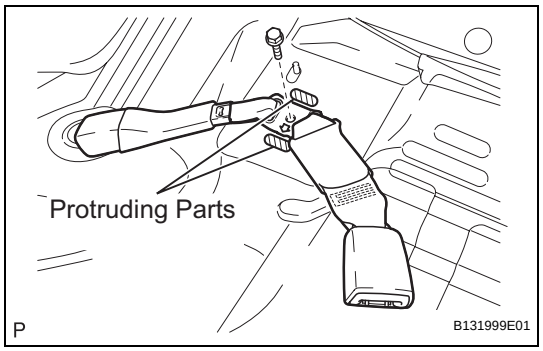
11. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made)

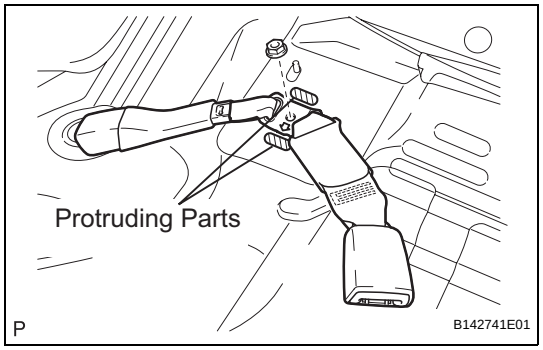
(a) Connect the floor end of the rear seat inner with center belt assembly LH with the nut.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
NOTICE:
Do not allow the anchor part of the rear seat inner with center belt assembly LH to overlap the protruding parts of the floor panel.

(b) Check if the ELR locks.
NOTICE:
The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

SB





12. **INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (for TMC Made)**
    (a) Install the rear seat inner with center belt assembly RH with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
    NOTICE:
    Do not allow the anchor part of the rear seat inner with center belt assembly RH to overlap the protruding parts of the floor panel.

13. **INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH (for TMMK Made)**
    (a) Install the rear seat inner with center belt assembly RH with the nut.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
    NOTICE:
    Do not allow the anchor part of the rear seat inner with center belt assembly RH to overlap the protruding parts of the floor panel.

14. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)**

15. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

16. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**

17. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.

18. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**

19. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**

20. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)**

21. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)**

22. **INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)**

23. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**

24. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**
25. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**
26. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
27. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
28. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
29. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
30. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
31. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
32. **INSTALL REAR SEAT HEADREST ASSEMBLY**
33. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-84)**

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)
2. REMOVE REAR SEAT HEADREST ASSEMBLY
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
4. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)
5. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
6. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
7. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
8. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
9. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
10. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
11. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
12. REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)
13. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)
14. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
15. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)
16. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
17. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
18. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
    HINT:
    Use the same procedures for the RH side and the LH side.
19. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)

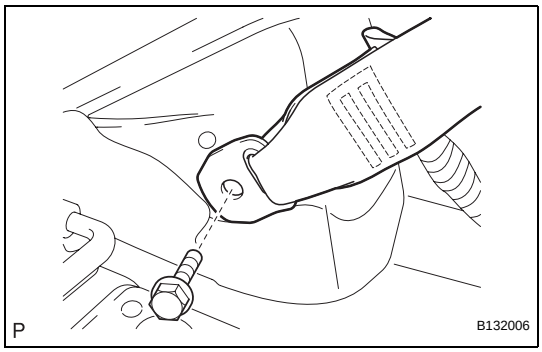
SB

20. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-35)

21. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-35)

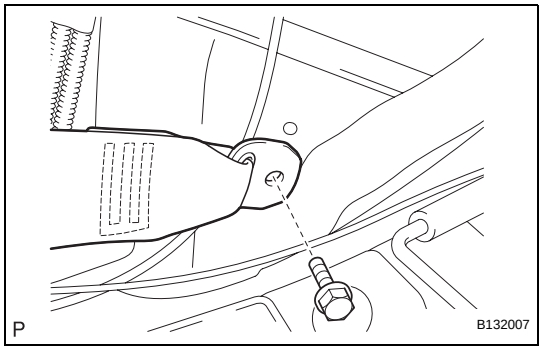
22. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)

23. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)



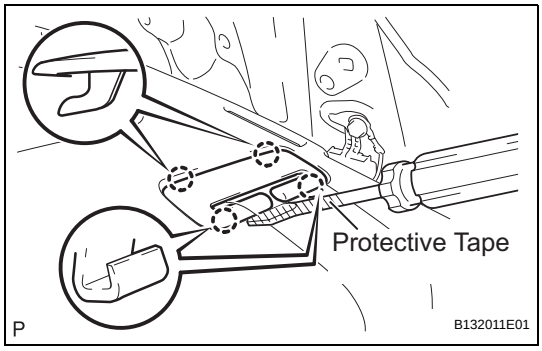
24. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)

(a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.



25. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)

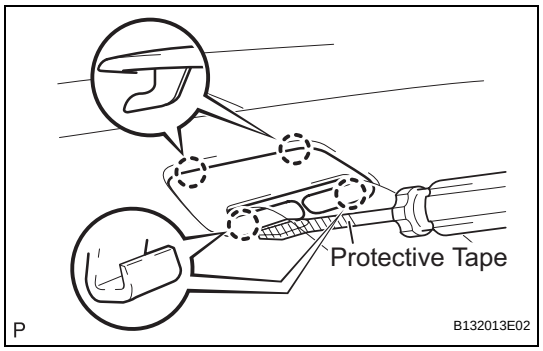
(a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.



26. REMOVE REAR SEAT SHOULDER BELT COVER

(a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder belt cover.
HINT:
- Tape the screwdriver tip before use.
- Use the same procedures for the RH side and the LH side.

SB

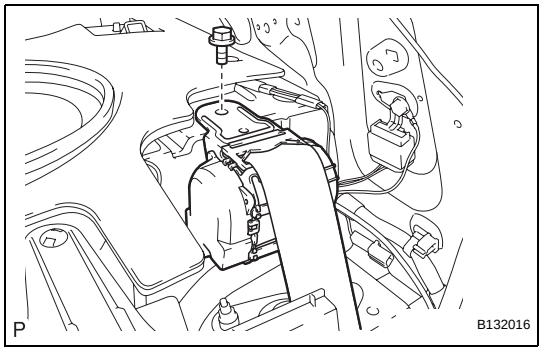


27. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER**
    (a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder hole belt cover.
    HINT:
    Tape the screwdriver tip before use.

28. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-37)**

29. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-37)**

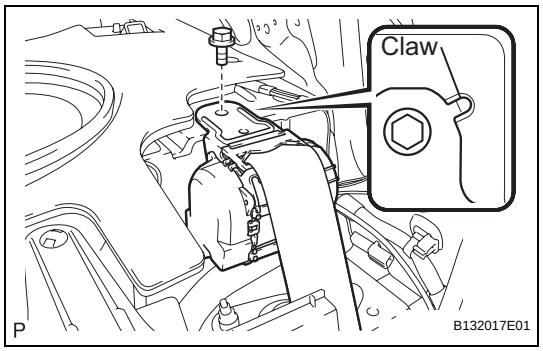
30. **REMOVE REAR SEAT OUTER BELT ASSEMBLY**
    (a) Remove the bolt and the rear seat outer belt assembly.



INSTALLATION

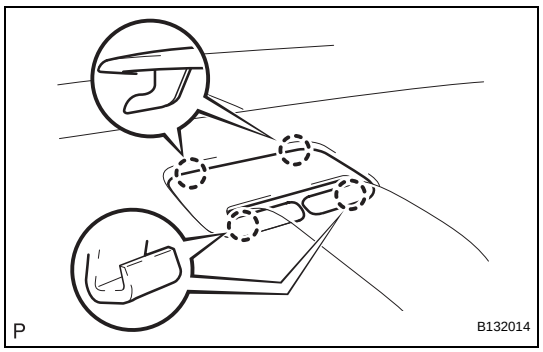
1. **INSTALL REAR SEAT OUTER BELT ASSEMBLY**
    (a) Check the degree of the tilt when the ELR begins to lock.
        (1) Check that the belt does not lock at less than 15 degrees of tilt in any direction but locks at over 45 degrees of tilt while gently pulling the belt.
        NOTICE:
        Do not disassemble the retractor.

    (b) Align the claw with the seat belt positioning hole and install the rear seat outer belt assembly with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



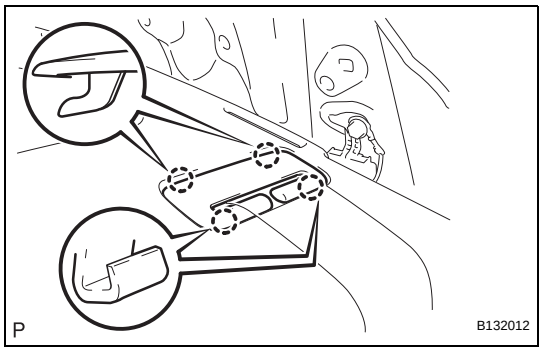
2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-38)**

3. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (for Reclining Seat Type) (See page SB-39)**



4. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER**
    (a) Engage the 4 claws and install the rear seat shoulder belt hole cover.

SB

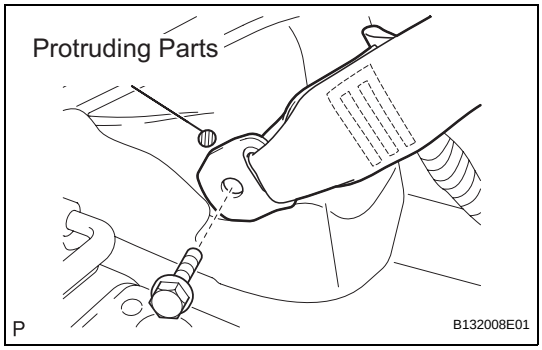


5. INSTALL REAR SEAT SHOULDER BELT COVER

(a) Engage the 4 claws and install the rear seat shoulder belt cover.

HINT:

Use the same procedures for the RH side and the LH side.



6. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)

(a) Connect the floor end of the rear seat outer belt assembly with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

NOTICE:

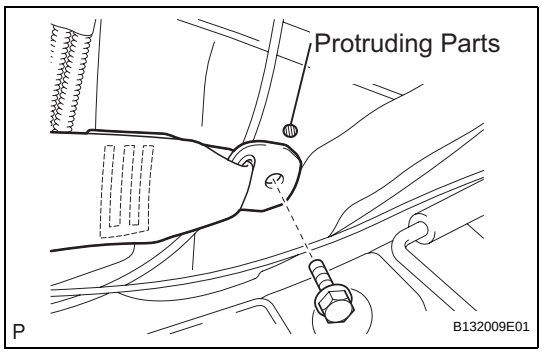
Do not allow the anchor part of the rear seat outer belt assembly to overlap protruding parts of the floor panel.

(b) Check if the ELR locks.

NOTICE:

The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.



7. CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)

(a) Connect the floor end of the rear seat outer belt assembly with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

NOTICE:

Do not allow the anchor part of the rear seat outer belt assembly to overlap protruding parts of the floor panel.

(b) Check if the ELR locks.

NOTICE:

The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

8. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)

9. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)

10. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMC Made) (See page SB-40)

11. CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (for TMMK Made) (See page SB-40)

12. INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-66)

13. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**
14. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
15. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**
16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**
17. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)**
18. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)**
19. **INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)**
20. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**
21. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**
22. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**
23. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
24. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
25. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
26. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
27. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
28. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
29. **INSTALL REAR SEAT HEADREST ASSEMBLY**
30. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-84)**

HOW TO DETERMINE NUT STRENGTH

Nut Type

Present Standard Hexagon Nut	Old Standard Hexagon Nut		Class
	Cold Forging Nut	Cutting Processed Nut	
No Mark			4N
No Mark (w/ Washer)	No Mark (w/ Washer)	No Mark	5N (4T)
			6N
			7N (5T)
			8N
		No Mark	10N (7T)
			11N
			12N

HINT:

- *: Nut with 1 or more marks on one side surface of the nut.
- Use the nut with the same number of the nut strength classification or greater than the bolt strength classification number when tightening parts with a bolt and nut.

Example:

- Bolt = 4T
- Nut = 4N or more

2AZ-FE ENGINE CONTROL SYSTEM

SERVICE DATA

Camshaft timing oil control valve assembly		
Resistance	at 20°C (68°F)	6.9 to 7.9 Ω
Camshaft position sensor		
Standard resistance	1 (G+) - 2(G-)	835 to 1,400 Ω at Cold
	1 (G+) - 2(G-)	1,060 to 1,645 Ω at Hot
Crankshaft position sensor		
Standard resistance	Cold	985 to 1,600 Ω
	Hot	1,265 to 1,890 Ω
Throttle body assembly		
Resistance	at 20°C (68°F)	
	2 (M+) - 1 (M-)	0.3 to 100 kΩ
E.F.I. engine coolant temperature sensor		
Resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Knock sensor		
Resistance	at 20°C (68°F)	120 to 280 kΩ
Circuit opening relay (engine room R/B Unit D)		
Specified condition	1E-8 - 1E-12	Below 1 Ω
	1E-7 - 1E-13	10 kΩ or higher
	1E-7 - 1E-13	Below 1 Ω (when battery voltage is applied to terminals 1G-5 and 1H-9)
EFI relay (engine room R/B Unit D)		
Specified condition	1E-9 - 1E-10	Below 1 Ω
	1E-7 - 1E-12	10 kΩ or higher
	1E-7 - 1E-12	Below 1 Ω (when battery voltage is applied to terminals 1H-10 and 1H-2)
A/F relay (engine room R/B Unit D)		
Specified condition	1E-7 - 1E-10	Below 1 Ω
	1A-3 - 1A-4	10 kΩ or higher
	1A-3 - 1A-4	Below 1 Ω (when battery voltage is applied to terminals 1D-5 and 1H-2)
Accelerator pedal rod		
Standard voltage (ACCEL POS #1)	Released	0.5 to 1.1 V
	Depressed	2.5 to 4.5 V
Standard voltage (ACCEL POS #2)	Released	1.2 to 2.0 V
	Depressed	3.4 to 5.0 V

2GR-FE ENGINE CONTROL SYSTEM

SERVICE DATA

Throttle body		
	Standard throttle valve opening percentage	60% or more
Camshaft timing oil control valve assembly		
Resistance	at 20°C (68°F)	6.9 to 7.9 Ω
Crankshaft position sensor		
	-10 to 50 °C (14 to 122 °F)	1,630 to 2,740 Ω
	50 to 100 °C (122 to 212 °F)	2,065 to 3,225 Ω
Throttle body		
Resistance	at 20°C (68°F)	
	2 (M+) - 1 (M-)	0.3 to 100 kΩ
	5 (VC) - 3 (E2)	1.2 to 3.2 kΩ
E.F.I. engine coolant temperature sensor		
Resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Knock sensor		
Resistance	at 20°C (68°F)	120 to 280 kΩ
Circuit opening relay (engine room R/B Unit D)		
Specified condition	1E-8 - 1E-12	Below 1 Ω
	1E-7 - 1E-13	10 kΩ or higher
	1E-7 - 1E-13	Below 1 Ω (when battery voltage is applied to terminals 1G-5 and 1H-9)
EFI relay (engine room R/B Unit D)		
Specified condition	1E-9 - 1E-10	Below 1 Ω
	1E-7 - 1E-12	10 kΩ or higher
	1E-7 - 1E-12	Below 1 Ω (when battery voltage is applied to terminals 1H-10 and 1H-2)
A/F relay (engine room R/B Unit D)		
Specified condition	1E-7 - 1E-10	Below 1 Ω
	1A-3 - 1A-4	10 kΩ or higher
	1A-3 - 1A-4	Below 1 Ω (when battery voltage is applied to terminals 1D-5 and 1H-2)
IG2 Relay		
Standard resistance	3 - 5	10 kΩ or higher
	3 - 5	Below 1 Ω (Battery voltage applied between terminals 1 and 2)
Acceleration pedal rod		
Standard voltage (ACCEL POS #1)	Released	0.5 to 1.1 V
	Depressed	2.5 to 4.5 V
Standard voltage (ACCEL POS #2)	Released	1.2 to 2.0 V
	Depressed	3.4 to 5.0 V

2AZ-FE ENGINE MECHANICAL

SERVICE DATA

Ignition timing	with Terminals TC and CG of DLC3 connected	8 to 12°BTC at idle
	with Terminals TC and CG of DLC3 disconnected	5 to 15°BTC at idle
Idle speed	M/T	650 to 750 rpm
	A/T	610 to 710 rpm
Compression	Compression pressure	1.360 MPa (13.9 kgf/cm^2, 198 psi)
	Minimum pressure	0.98 MPa (10 kgf/cm^2, 142 psi)
	Difference between each cylinder	100 kPa (1.0 kgf/cm^2, 14 psi)
Valve clearance (cold)	Intake	0.19 to 0.29 mm (0.0075 to 0.0114 in.)
	Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)
Balanceshaft		
Standard thrust clearance		0.050 to 0.090 mm (0.0020 to 0.0035 in.)
Maximum thrust clearance		0.09 mm (0.0035 in.)
Standard oil clearance		0.004 to 0.049 mm (0.0002 to 0.0019 in.)
Maximum oil clearance		0.049 mm (0.0019 in.)
Housing journal bore diameter	Mark 1	26.000 to 26.006 mm (1.0236 to 1.0239 in.)
	Mark 2	26.007 to 26.012 mm (1.0239 to 1.0241 in.)
	Mark 3	26.013 to 26.018 mm (1.0241 to 1.0243 in.)
Journal diameter	Mark 1	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Mark 2	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Mark 3	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Standard bolt length	58.3 to 59.7 mm (2.295 to 2.350 in.)
	Maximum bolt length	60.3 mm (2.374 in.)
Bearing center wall thickness	Mark 1	1.486 to 1.489 mm (0.0585 to 0.0586 in.)
	Mark 2	1.490 to 1.492 mm (0.0586 to 0.0587 in.)
	Mark 3	1.493 to 1.495 mm (0.0587 to 0.0589 in.)
Oil pump drive sprocket	Minimum sprocket diameter (with chain)	48.2 mm (1.898 in.)
Oil pump drive shaft sprocket	Minimum sprocket diameter (with chain)	48.2 mm (1.898 in.)
Crankshaft timing sprocket	Minimum sprocket diameter (with chain)	51.6 mm (2.031 in.)
Chain tensioner slipper	Maximum wear	1.0 mm (0.039 in.)
Chain vibration damper No. 1	Maximum wear	1.0 mm (0.039 in.)
Chain tensioner plate	Maximum wear	0.5 mm (0.020 in.)
Cylinder head set bolt	Standard bolt length	141.3 to 142.7 mm (5.563 to 5.618 in.)
	Maximum bolt length	144.2 mm (5.677 in.)
Chain sub-assembly	Maximum chain elongation	114.5 mm (4.508 in.)
No. 2 Chain sub-assembly	Maximum chain elongation	102.2 mm (4.024 in.)
Camshaft timing gear assembly	Minimum gear or sprocket diameter (with chain)	97.3 mm (3.831 in.)
Camshaft timing sprocket	Minimum gear or sprocket diameter (with chain)	97.3 mm (3.831 in.)
Camshaft (Intake)		
Maximum circle runout		0.03 mm (0.0012 in.)
Standard cam lobe height		47.306 to 47.406 mm (1.8624 to 1.8664 in.)
Maximum cam lobe height		47.196 mm (1.8581 in.)
No. 1 journal diameter		35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Outer journal diameter		22.959 to 22.975 mm (0.9039 to 0.9045 in.)

Standard thrust clearance	Intake	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Maximum thrust clearance		0.110 mm (0.0043 in.)
Standard oil clearance	No. 1 journal bearing mark 1	0.007 to 0.038 mm (0.0003 to 0.0015 in.)
	No. 1 journal bearing mark 2	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
	No. 1 journal bearing mark 3	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
Maximum oil clearance		0.070 mm (0.0028 in.)
Cylinder head journal bore diameter	Mark 1	40.000 to 40.008 mm (1.5748 to 1.5752 in.)
	Mark 2	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
	Mark 3	40.018 to 40.025 mm (1.5755 to 1.5758 in.)
Standard bearing center wall thickness	Mark 1	2.000 to 2.004 mm (0.0787 to 0.0789 in.)
	Mark 2	2.005 to 2.008 mm (0.0789 to 0.0791 in.)
	Mark 3	2.009 to 2.012 mm (0.0791 to 0.0792 in.)
Camshaft journal diameter	Mark 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 2	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 3	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Camshaft No. 2 (Exhaust)		
Maximum circle runout		0.03 mm (0.0012 in.)
Standard cam lobe height		45.983 to 46.083 mm (1.8104 to 1.8143 in.)
Minimum cam lobe height		45.873 mm (1.8060 in.)
No. 1 journal diameter		35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other journal diameter		22.959 to 22.975 mm (0.9039 to 0.9045 in.)
Standard thrust clearance	Exhaust	0.080 to 0.135 mm (0.0032 to 0.0053 in.)
Maximum thrust clearance		0.150 mm (0.0059 in.)
Standard oil clearance	No. 1 journal	0.015 to 0.054 mm (0.0006 to 0.0021 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
Maximum oil clearance		0.100 mm (0.0039 in.)
Cylinder head journal bore diameter	Mark 1	40.000 to 40.008 mm (1.5748 to 1.5752 in.)
	Mark 2	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
	Mark 3	40.018 to 40.025 mm (1.5755 to 1.5758 in.)
Standard bearing center wall thickness	Mark 1	2.000 to 2.004 mm (0.00787 to 0.0789 in.)
	Mark 2	2.005 to 2.008 mm (0.0789 to 0.0791 in.)
	Mark 3	2.009 to 2.012 mm (0.0791 to 0.0792 in.)
Camshaft journal diameter	Mark 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 2	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 3	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Intake manifold	Maximum warpage	0.20 mm (0.0079 in.)
Exhaust manifold	Maximum warpage	0.70 mm (0.0276 in.)
Cylinder head		
Maximum warpage	Cylinder block side	0.05 mm (0.0020 in.)
	Intake manifold side	0.08 mm (0.0031 in.)
	Exhaust manifold side	0.08 mm (0.0031 in.)
Inner compression spring	Free length	47.43 mm (1.867 in.)
	Maximum deviation	1.6 mm (0.063 in.)
Intake valve	Standard overall length	101.71 mm (4.0043 in.)
	Minimum overall length	101.21 mm (3.9846 in.)
	Valve stem diameter	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
	Standard margin thickness	1.05 to 1.45 mm (0.0413 to 0.0571 in.)
	Minimum margin thickness	0.50 mm (0.0197 in.)

Exhaust valve	Standard overall length	101.15 mm (3.9823 in.)
	Minimum overall length	100.70 mm (3.9646 in.)
	Valve stem diameter	5.465 to 5.480 mm (0.2152 to 0.2157 in.)
	Standard margin thickness	1.20 to 1.60 mm (0.0472 to 0.0630 in.)
	Minimum margin thickness	0.50 mm (0.0197 in.)
Intake valve guide bush	Bush inside diameter	5.510 to 5.530 mm (0.2169 to 0.2177 in.)
	Standard bush oil clearance	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
	Minimum bush oil clearance	0.080 mm (0.0031 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Standard oil clearance		0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust valve guide bush	Bush inside diameter	5.510 to 5.530 mm (0.2169 to 0.2177 in.)
	Standard oil clearance	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
	Minimum oil clearance	0.100 mm (0.0039 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Standard oil clearance		0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Valve lifter	Lifter diameter	30.966 to 30.976 mm (1.2191 to 1.2195 in.)
	Lifter bore diameter	31.009 to 31.025 mm (1.2208 to 1.2215 in.)
	Standard oil clearance	0.033 to 0.059 mm (0.0013 to 0.0023 in.)
	Maximum oil clearance	0.070 mm (0.0028 in.)
Connecting rod		
Standard thrust clearance		0.160 to 0.362 mm (0.0063 to 0.0143 in.)
Maximum thrust clearance		0.362 mm (0.0143 in.)
Standard oil clearance		0.032 to 0.063 mm (0.0013 to 0.0025 in.)
Maximum oil clearance		0.063 mm (0.0025 in.)
Connecting rod bearing center wall thickness (Reference)	Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
	Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
	Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)
Connecting rod small end bore diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Connecting rod small end bore diameter (Reference)	Mark A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
	Mark B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
	Mark C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)
Standard oil clearance		0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance		0.011 mm (0.0004 in.)
Maximum rod out-of alignment per 100 mm (3.94 in.)		0.05 mm (0.0020 in.)
Maximum rod twist per 100 mm (3.94 in.)		0.15 mm (0.0059 in.)
Cylinder block	Maximum warpage	0.05 mm (0.0020 in.)
	Standard cylinder bore diameter	88.500 to 88.513 mm (3.4843 to 3.4847 in.)
	Maximum cylinder bore diameter	88.633 mm (3.4894 in.)
Piston		
Standard piston diameter		88.469 to 88.479 mm (3.4830 to 3.4834 in.)
Standard piston oil clearance		0.021 to 0.044 mm (0.0008 to 0.0017 in.)
Maximum piston oil clearance		0.10 mm (0.0039 in.)
Piston pin bore diameter		22.001 to 22.010 mm (0.8662 to 0.8665 in.)
Piston pin bore diameter (Reference)	Mark A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
	Mark B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
	Mark C	22.008 to 22.010 mm (0.8664 to 0.8665 in.)

Piston ring		
Ring groove clearance	No. 1 Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	No. 2 Ring	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
	Oil Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
Standard end gap	No. 1 Ring	0.24 to 0.31 mm (0.0094 to 0.0122 in.)
	No. 2 Ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)
	Oil Ring	0.10 to 0.30 mm (0.0040 to 0.0119 in.)
Maximum end gap	No. 1 Ring	0.89 mm (0.0350 in.)
	No. 2 Ring	1.37 mm (0.0539 in.)
	Oil Ring	0.73 mm (0.0287 in.)
Piston pin		
Standard piston pin diameter		21.997 to 22.006 mm (0.8660 to 0.8664 in.)
Piston pin diameter (Reference)	Mark A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
	Mark B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
	Mark C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)
	Mark A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
	Mark B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
	Mark C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)
Standard oil clearance		0.001 to 0.007 mm (0.0004 to 0.0003 in.)
Maximum oil clearance		0.010 mm (0.0004 in.)
Connecting rod bolt	Standard diameter	7.0 to 7.3 mm (0.276 to 0.287 in.)
	Maximum diameter	7.0 mm (0.276 in.)
Crankshaft		
Standard thrust clearance		0.040 to 0.240 mm (0.0016 to 0.0095 in.)
Maximum thrust clearance		0.30 mm (0.0118 in.)
Thrust washer thickness		1.930 to 1.980 mm (0.0760 to 0.0780 in.)
Cylinder block main journal bore diameter (Reference)	Mark 0	59.000 to 59.002 mm (2.3228 to 2.3229 in.)
	Mark 1	59.003 to 59.004 mm (2.3230 to 2.3230 in.)
	Mark 2	59.005 to 59.006 mm (2.3230 to 2.3231 in.)
	Mark 3	59.007 to 59.009 mm (2.3231 to 2.3232 in.)
	Mark 4	59.010 to 59.011 mm (2.3232 to 2.3233 in.)
	Mark 5	59.012 to 59.013 mm (2.3233 to 2.3234 in.)
	Mark 6	59.014 to 59.016 mm (2.3234 to 2.3235 in.)
Main journal diameter		54.988 to 55.000 mm (2.1648 to 2.1654 in.)
Main journal diameter (Reference)	Mark 0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
	Mark 1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
	Mark 2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
	Mark 3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
	Mark 4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
	Mark 5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)
Standard main bearing center wall thickness (Reference)	Mark 1	1.993 to 1.996 mm (0.0785 to 0.0786 in.)
	Mark 2	1.997 to 1.999 mm (0.0786 to 0.0787 in.)
	Mark 3	2.000 to 2.002 mm (0.0787 to 0.0788 in.)
	Mark 4	2.003 to 2.005 mm (0.0789 to 0.0789 in.)
Maximum circle runout		0.03 mm (0.0012 in.)
Standard oil clearance		0.017 to 0.040 mm (0.0007 to 0.0016 in.)
Maximum oil clearance		0.060 mm (0.0024 in.)
Maximum main journal taper and out-of-round		0.003 mm (0.0001 in.)
Maximum crank pin taper and out-of round		0.003 mm (0.0001 in.)
Crank pin diameter		47.990 to 48.000 mm (1.8894 to 1.8898 in.)

Crankshaft bearing cap set bolt	Standard diameter	7.3 to 7.5 mm (0.287 to 0.295 in.)
	Minimum diameter	7.2 mm (0.284 in.)

SERVICE DATA

Ignition timing	Terminals TC and CG of DLC3 connected	8 to 12° BTDC at idle (Transmission in neutral)
	Terminals TC and CG of DLC3 disconnected	5 to 15° BTDC at idle (Transmission in neutral)
Idle speed		600 to 700 rpm (Transmission in neutral)
Compression	Compression pressure	1.4 MPa (14 kgf/cm^2, 199 psi) or more
	Minimum pressure	0.98 MPa (10 kgf/cm^2, 142 psi)
	Difference between each cylinder	0.1 MPa (1.0 kgf/cm^2, 15 psi) or less
Cylinder head set bolt		
Outside diameter	Standard	10.85 to 11.00 mm (0.4272 to 0.4331 in.)
	Minimum	10.70 mm (0.4213 in.)
Chain		
Elongation	Maximum	136.9 mm (5.390 in.)
No. 2 chain		
Elongation	Maximum	137.6 mm (5.417 in.)
Crankshaft timing gear		
Diameter (w/ chain)	Minimum	61.4 mm (2.417 in.)
Idle sprocket		
Diameter (w/ chain)	Minimum	61.4 mm (2.417 in.)
Idle gear shaft		
Idle gear shaft diameter		22.987 to 23.000 mm (0.9050 to 0.9055 in.)
Idle gear inside diameter		23.020 to 30.030 mm (0.9063 to 0.9067 in.)
Oil clearance	Standard	0.020 to 0.043 mm (0.0008 to 0.0017 in.)
	Maximum	0.093 mm (0.0037 in.)
Chain tensioner assembly No. 2		
Worn depth	Maximum	0.9 mm (0.035 in.)
Chain tensioner assembly No. 3		
Worn depth	Maximum	0.9 mm (0.035 in.)
Chain tensioner slipper		
Worn depth	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No. 1		
Worn depth	Maximum	1.0 mm (0.039 in.)
Chain vibration damper No. 2		
Worn depth	Maximum	1.0 mm (0.039 in.)
Cylinder head sub-assembly		
	Cylinder head lower	0.05 mm (0.0020 in.)
	Intake	0.08 mm (0.0031 in.)
	Exhaust	0.08 mm (0.0031 in.)
Warpage	Maximum	0.10 mm (0.0039 in.)
Intake valve		
Valve stem diameter		5.470 to 5.485 mm (0.2154 to 0.2159 in.)
Margin thickness	Standard	1.0 mm (0.039 in.)
	Maximum	0.5 mm (0.0197 in.)
Overall length	Standard	105.85 mm (4.1673 in.)
	Maximum	105.35 mm (4.1476 in.)
Exhaust valve		
Valve stem diameter		5.465 to 5.480 mm (0.2152 to 0.2158 in.)

Margin thickness	Standard	1.0 mm (0.0394 in.)
	Maximum	0.5 mm (0.0197 in.)
Overall length	Standard	111.40 mm (4.3858 in.)
	Maximum	109.90 mm (4.3268 in.)
Inner compression spring		
Free length		45.46 mm (1.7898 in.)
Deviation	Maximum	1.0 mm (0.039 in.)
Angle (reference)	Maximum	2°
Intake valve guide bush		
Inside diameter		5.510 to 5.530 mm (0.2169 to 0.2177 in.)
Oil clearance	Standard	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
	Maximum	0.08 mm (0.0031 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.3 to 9.7 mm (0.3661 to 0.3819 in.)
Exhaust valve guide bush		
Inside diameter		5.510 to 5.530 mm (0.2169 to 0.2177 in.)
Oil clearance	Standard	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
	Maximum	0.10 mm (0.0039 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.30 to 9.70 mm (0.3661 to 0.3819 in.)
No. 1 camshaft		
Journal diameter	No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
	Other journals	25.959 to 25.975 mm (1.0220 to 1.0226 in.)
Circuit runout	Maximum	0.04 mm (0.0016 in.)
Cam lobe height	Standard	44.316 to 44.416 mm (1.7447 to 1.7487 in.)
	Maximum	44.166 mm (1.7388 in.)
Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
	Maximum No. 1 journal	0.10 mm (0.0039 in.)
	Other journals	0.09 mm (0.0035 in.)
Thrust clearance	Standard	0.08 to 0.13 mm (0.0031 to 0.0051 in.)
	Maximum	0.15 mm
No. 2 camshaft		
Journal diameter	No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
	Other journals	25.959 to 25.975 mm (1.0220 to 1.0226 in.)
Circuit runout	Maximum	0.04 mm (0.0016 in.)
Cam lobe height	Standard	44.262 to 44.362 mm (1.7426 to 1.7465 in.)
	Maximum	44.112 mm (1.7367 in.)
Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
	Maximum No. 1 journal	0.10 mm (0.0039 in.)
	Other journals	0.09 mm (0.0035 in.)
Thrust clearance	Standard	0.08 to 0.13 mm (0.0031 to 0.0051 in.)
	Maximum	0.15 mm
No. 3 camshaft		
Journal diameter	No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
	Other journals	25.959 to 25.975 mm (1.0220 to 1.0226 in.)
Circuit runout	Maximum	0.04 mm (0.0016 in.)

Cam lobe height	Standard	44.316 to 44.416 mm (1.7447 to 1.7487 in.)
	Maximum	44.166 mm (1.7388 in.)
Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
	Maximum No. 1 journal	0.10 mm (0.0039 in.)
	Other journals	0.09 mm (0.0035 in.)
Thrust clearance	Standard	0.08 to 0.13 mm (0.0031 to 0.0051 in.)
	Maximum	0.15 mm
No. 4 camshaft		
Journal diameter	No. 1 journal	35.946 to 35.960 mm (1.4152 to 1.4157 in.)
	Other journals	25.959 to 25.975 mm (1.0220 to 1.0226 in.)
Circuit runout	Maximum	0.04 mm (0.0016 in.)
Cam lobe height	Standard	44.262 to 44.362 mm (1.7426 to 1.7465 in.)
	Maximum	44.112 mm (1.7367 in.)
Oil clearance	Standard No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
	Maximum No. 1 journal	0.10 mm (0.0039 in.)
	Other journals	0.09 mm (0.0035 in.)
Thrust clearance	Standard	0.08 to 0.13 mm (0.0031 to 0.0051 in.)
	Maximum	0.15 mm
Ring pin for cylinder head sub-assembly		
Protrusion height		2.5 to 3.5 mm (0.098 to 0.138 in.)
Straight pin for cylinder head sub-assembly		
Protrusion height		17.5 to 19.5 mm (0.689 to 0.768 in.)
Connecting rod thrust clearance	Standard	0.15 to 0.40 mm (0.0059 to 0.0157 in.)
	Maximum	0.50 mm (0.020 in.)
Connecting rod oil clearance	Standard	0.045 to 0.067 mm (0.0018 to 0.0026 in.)
	Maximum	0.070 mm (0.0028 in.)
Crankshaft thrust clearance	Standard	0.04 to 0.24 mm (0.0016 to 0.0094 in.)
	Maximum	0.30 mm (0.0118 in.)
	Thrust washer thickness	2.43 to 2.48 mm (0.0957 to 0.0976 in.)
Cylinder block warpage	Maximum	0.07 mm (0.0028 in.)
Cylinder bore diameter	Standard	94.000 to 94.012 mm (3.7008 to 3.7013 in.)
	Maximum	94.200 mm (3.7087 in.)
Piston diameter		
	Distance	9.8 mm (0.3858 in.)
	Standard	93.960 to 93.980 mm (3.6992 to 3.7000 in.)
	Maximum	93.830 mm (3.6941 in.)
Oil clearance	Standard	0.02 to 0.052 mm (0.0008 to 0.0020 in.)
	Maximum	0.06 mm
Connecting rod out-of alignment	Maximum	0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
Connecting rod twist	Maximum	0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
Piston pin hole inside diameter		22.001 to 22.010 mm (0.8662 to 0.8665 in.)
Piston pin diameter		21.997 to 22.006 mm (0.8660 to 0.8664 in.)
Oil clearance	Standard	0.001 to 0.007 mm (0.00004 to 0.00028 in.)
	Maximum	0.015 mm (0.0006 in.)
Connecting rod bushing inside diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Oil clearance	Standard	0.005 to 0.011 mm (0.0002 to 0.0004 in.)
	Maximum	0.03 mm (0.0012 in.)

Piston ring groove clearance	No. 1	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	No. 2	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
	Oil	0.070 to 0.150 mm (0.0028 to 0.0059 in.)
Piston ring end gap	Standard No. 1	0.25 to 0.35 mm (0.0098 to 0.0138 in.)
	No. 2	0.50 to 0.60 mm (0.0197 to 0.0236 in.)
	Oil (Side rail)	0.10 to 0.40 mm (0.0039 to 0.0157 in.)
	Maximum No. 1	0.50 mm (0.0197 in.)
	No. 2	0.85 mm (0.0335 in.)
	Oil (Side rail)	0.60 mm (0.0236 in.)
Connecting rod bolt diameter	Standard	7.2 to 7.3 mm (0.283 to 0.287 in.)
	Maximum	7.0 mm (0.276 in.)
Crankshaft bearing cap set bolt diameter	Standard	10.8 to 11.0 mm (0.4252 to 0.4331 in.)
	Maximum	10.7 mm (0.4213 in.)
Crankshaft circle runout	Maximum	0.06 mm (0.0024 in.)
Main journal diameter		60.988 to 61.000 mm (2.4011 to 2.4016 in.)
Main journal taper and out-of-round	Maximum	0.02 mm (0.0008 in.)
Crank pin diameter		52.992 to 53.000 mm (2.0863 to 2.0866 in.)
Crank pin taper and out-of-round	Maximum	0.02 mm (0.0008 in.)
Crankshaft oil clearance	Standard	0.026 to 0.047 mm (0.0010 to 0.0019 in.)
	Maximum	0.050 mm (0.0020 in.)
Straight pin for cylinder block sub-assembly		
Protrusion height	Pin A	23 mm (0.906 in.)
	Pin B	6 mm (0.236 in.)
	Pin C	11 mm (0.433 in.)
	Pin D	9 mm (0.354 in.)

2AZ-FE FUEL

SERVICE DATA

Fuel pressure		304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)
Fuel pressure : at fuel pressure remains for 5 minutes after engine has stopped		147 kPa (1.5 kgf/cm^3, 21 psi) or more
Fuel injector		
Resistance	at 20°C (68°F)	11.6 to 12.4 Ω
Injection volume		76 to 92 cm^2 (4.6 to 5.6 cu in.) per 15 seconds
Difference between each injector		16 cm^2 (0.98 cu in.) or less
Fuel drop		1 drop or less per 12 minutes
Fuel pump		
Resistance	at 20°C (68°F)	0.2 to 3.0 Ω

SERVICE DATA

Line pressure (Wheel locked)		
Engine idling	D position	372 to 412 kPa (3.8 to 4.2 kgf*cm^2, 54 to 60 psi)
	R position	672 to 742 kPa (6.8 to 7.5 kgf*cm^2, 97 to 108 psi)
AT stall (Throttle valve fully open)	D position	931 to 1,031 kPa (9.5 to 10.5 kgf*cm^2, 135 to 150 psi)
	R position	1,768 to 1,968 kPa (18.0 to 20.0 kgf*cm^2, 256 to 285 psi)
Engine stall revolution	D position	2,160 to 2,460 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.5 seconds
Engine idle speed (A/C OFF)	N position	650 to 750 rpm
Drive plate runout	Maximum	0.20 mm (0.0079 in.)
Torque converter runout	Maximum	0.30 mm (0.0118 in.)
Differential oil seal drive in depth	Transaxle housing oil seal	- 0.5 to 0.5 mm (-0.020 to 0.020 in.)
	Differential side bearing retainer oil seal	- 0.5 to 0.5 mm (-0.020 to 0.020 in.)
Shift schedule		
D position (Normal)		
Throttle valve fully open	1 → 2	47 to 54 km/h (29 to 34 mph)
	2 → 3	92 to 101 km/h (57 to 63 mph)
	3 → 4	145 to 160 km/h (90 to 99 mph)
	4 → 5	208 to 226 km/h (129 to 140 mph)
	5 → 4	201 to 218 km/h (125 to 135 mph)
	4 → 3	137 to 151 km/h (85 to 94 mph)
	3 → 2	84 to 93 km/h (52 to 58 mph)
	2 → 1	34 to 40 km/h (21 to 25 mph)
Throttle valve fully closed	4 → 5	68 to 75 km/h (42 to 47 mph)
	5 → 4	36 to 42 km/h (22 to 26 mph)
3 position		
Throttle valve fully open	1 → 2	47 to 54 km/h (29 to 34 mph)
	2 → 3	92 to 101 km/h (57 to 63 mph)
	4 → 3	141 to 155 km/h (85 to 94 mph)
	3 → 2	84 to 93 km/h (52 to 58 mph)
	2 → 1	34 to 40 km/h (21 to 25 mph)
2 position		
Throttle valve fully open	1 → 2	47 to 54 km/h (29 to 34 mph)
	3 → 2	89 to 98 km/h (52 to 58 mph)
	2 → 1	34 to 40 km/h (21 to 25 mph)
L position		
Throttle valve fully open	2 → 1	40 to 46 km/h (25 to 29 mph)
Lock-up point (Throttle valve opening 5%) D position		
5th gear	Lock-up ON	76 to 84 km/h (47 to 52 mph)
	Lock-up OFF	75 to 82 km/h (47 to 51 mph)
4th gear	Lock-up ON	76 to 85 km/h (47 to 53 mph)
	Lock-up OFF	75 to 82 km/h (47 to 51 mph)
Flex lock-up point (Throttle valve opening 5%) D position		

5th gear	Lock-up ON	56 to 63 km/h (35 to 39 mph)
	Lock-up OFF	55 to 62 km/h (34 to 39 mph)
4th gear	Lock-up ON	41 to 47 km/h (25 to 29 mph)
	Lock-up OFF	40 to 46 km/h (25 to 29 mph)
Oil pump		
Body clearance	STD	0.10 to 0.17 mm (0.0039 to 0.0067 in.)
	Maximum	0.17 mm (0.0067 in.)
Tip clearance	STD	0.07 to 0.15 mm (0.0028 to 0.0059 in.)
	Maximum	0.15 mm (0.0059 in.)
Side clearance	STD	0.02 to 0.05 mm (0.0008 to 0.0020 in.)
	Maximum	0.05 mm (0.0020 in.)
Drive gear thickness	Mark A	11.690 to 11.699 mm (0.4602 to 0.4606 in.)
	Mark B	11.700 to 11.709 mm (0.4606 to 0.4610 in.)
	Mark C	11.710 to 11.720 mm (0.4610 to 0.4614 in.)
	Mark D	11.721 to 11.730 mm (0.4615 to 0.4618 in.)
	Mark E	11.731 to 11.740 mm (0.4619 to 0.4622 in.)
Driven gear thickness	Mark A	11.690 to 11.699 mm (0.4602 to 0.4606 in.)
	Mark B	11.700 to 11.709 mm (0.4606 to 0.4610 in.)
	Mark C	11.710 to 11.720 mm (0.4610 to 0.4614 in.)
	Mark D	11.721 to 11.730 mm (0.4615 to 0.4618 in.)
	Mark E	11.731 to 11.740 mm (0.4619 to 0.4622 in.)
Pump body bushing inside diameter	STD	38.113 to 38.138 mm (1.50050 to 1.50149 in.)
	Maximum	38.188 mm (1.50346 in.)
Stator shaft bushing inside diameter	STD	21.500 to 21.526 mm (0.84646 to 0.84748 in.)
	Maximum	21.57 mm (0.8492 in.)
Multiple disc clutch hub		
Inside diameter	STD	23.025 to 23.046 mm (0.9065 to 0.9073 in.)
	Maximum	23.09 mm (0.9091 in.)
Over direct clutch drum sub-assembly		
Inside diameter	STD	23.025 to 23.046 mm (0.9065 to 0.9073 in.)
	Maximum	23.09 mm (0.9091 in.)
Forward clutch		
Pack clearance		0.85 to 1.25 mm (0.0335 to 0.0492 in.)
Return spring free length		26.74 mm (1.0528 in.)
Flange thickness	Mark 0	2.85 mm (0.1122 in.)
	Mark 1	3.00 mm (0.1181 in.)
	Mark 2	3.15 mm (0.1240 in.)
	Mark 3	3.30 mm (0.1299 in.)
	Mark 4	3.45 mm (0.1358 in.)
	Mark 5	3.60 mm (0.1417 in.)
	Mark 6	3.75 mm (0.1476 in.)
Reverse clutch		
Pack clearance		0.60 to 0.82 mm (0.02362 to 0.03228 in.)

Flange thickness	Mark 0	2.9 mm (0.114 in.)
	Mark 1	3.0 mm (0.118 in.)
	Mark 2	3.1 mm (0.122 in.)
	Mark 3	3.2 mm (0.126 in.)

	Mark 5	3.4 mm (0.134 in.)
	Mark 6	3.5 mm (0.138 in.)
	Mark 7	3.6 mm (0.142 in.)
Direct clutch and O/D clutch		
Pack clearance		0.52 mm (0.02047 in.)
Return spring free length		25.91 mm (1.0201 in.)
Flange thickness	Mark 0	2.5 mm (0.098 in.)
	Mark 1	2.6 mm (0.102 in.)
	Mark 2	2.7 mm (0.106 in.)
	Mark 3	2.8 mm (0.110 in.)
	Mark 4	2.9 mm (0.114 in.)
	Mark 5	3.0 mm (0.118 in.)
	Mark 6	3.1 mm (0.122 in.)
2nd brake		
Pack clearance		0.53 to 0.91 mm (0.0209 to 0.0358 in.)
Return spring free length		16.61 mm (0.6539 in.)
Flange thickness	Mark 0	2.9 mm (0.114 in.)
	Mark 1	3.0 mm (0.118 in.)
	Mark 2	3.1 mm (0.122 in.)
	Mark 3	3.2 mm (0.126 in.)
	Mark 4	3.3 mm (0.130 in.)
	Mark 5	3.4 mm (0.134 in.)
	Mark 6	3.5 mm (0.138 in.)
	Mark 7	3.6 mm (0.142 in.)
	Mark 8	3.7 mm (0.146 in.)
2nd brake piston		
Inside diameter		More than 167 mm (6.57 in.)
U/D clutch		
Pack clearance		1.42 to 1.71 mm (0.0559 to 0.0673 in.)
U/D clutch drum bushing inside diameter	STD	32.56 to 32.58 mm (1.2818 to 1.2826 in.)
	Max.	32.63 mm (1.2846 in.)
Return spring free length		17.14 mm (0.6748 in.)
Flange thickness	Mark K	2.9 mm (0.114 in.)
	Mark A	3.0 mm (0.118 in.)
	Mark G	3.1 mm (0.122 in.)
	Mark B	3.2 mm (0.126 in.)
	Mark H	3.3 mm (0.130 in.)
	Mark C	3.4 mm (0.134 in.)
	Mark J	3.5 mm (0.138 in.)
U/D clutch No. 2		
Pack clearance		1.645 to 2.20 mm (0.0648 to 0.0866 in.)
Return spring free length		13.24 mm (0.5213 in.)

Flange thickness	Mark Y	2.8 mm (0.110 in.)
	Mark A	3.0 mm (0.118 in.)
	Mark B	3.2 mm (0.126 in.)
	Mark C	3.4 mm (0.134 in.)
	Mark D	3.6 mm (0.142 in.)
1st & reverse brake		
Pack clearance		0.745 to 1.21 mm (0.0293 to 0.0476 in.)
Return spring free length		17.63 mm (0.6941 in.)
Flange thickness	Mark 1	1.8 mm (0.071 in.)
	Mark 2	1.9 mm (0.075 in.)
	Mark 3	2.0 mm (0.079 in.)
	Mark 4	2.1 mm (0.083 in.)

E351 MANUAL TRANSAXLE

SERVICE DATA

MANUAL TRANSAXLE ASSEMBLY:

Transmission case oil seal driven in depth	3.0 to 4.0 mm (0.1181 to 0.1575 in.)
Front transaxle case cover oil seal drive in depth	-0.5 to 0.5 mm (-0.020 to 0.020 in.)

MANUAL TRANSAXLE UNIT:

5th gear thrust clearance	Standard clearance	0.10 to 0.65 mm (0.0039 to 0.0256 in.)
5th gear radial clearance	Standard clearance	0.009 to 0.050 mm (0.0004 to 0.0020 in.)
Reverse idler gear sub-assembly inside diameter	Standard inside diameter	20.056 to 20.074 mm (0.7896 to 0.7903 in.)
	Maximum inside diameter	20.074 (0.7903 in.)
Reverse idler gear shaft outer diameter	Standard outer diameter	19.984 to 20.000 mm (0.7868 to 0.7874 in.)
	Minimum outer diameter	19.984 mm (0.7868 in.)
No. 3 transmission hub sleeve groove - thickness of the claw part on No. 3 gear shift fork	Standard clearance	0.15 to 0.35 mm (0.0059 to 0.0138 in.)
5th gear inside diameter	Standard inside diameter	34.981 to 34.997 mm (1.3772 to 1.3778 in.)
	Maximum inside diameter	34.997 mm (1.3778 in.)
Front transaxle case cover oil seal driven in depth		-0.5 to 0.5 mm (-0.020 to 0.020 in.)
Transmission case oil seal driven in depth		3.0 to 4.0 mm (0.1181 to 0.1575 in.)
Output shaft rear bearing clearance		3.8 to 4.4 mm (0.150 to 0.173 in.)
Output shaft bearing preload	New bearing	0.8 to 1.6 N*m (8.16 to 16.32 kgf*cm, 7.1 to 14.2 in.*lbf)
	Used bearing	0.5 to 1.0 N*m (5.10 to 10.20 kgf*cm, 4.4 to 8.9 in.*lbf)
Output shaft rear bearing shim thickness	0	1.30 mm (0.0512 in.)

	e	1.95 to 2.00 mm (0.0768 to 0.0787 in.)
	f	2.00 to 2.05 mm 0.0787 to 0.0807 in.)
	g	2.05 to 2.10 mm (0.0807 to 0.0827 in.)
	h	2.10 to 2.15 mm (0.0827 to 0.0846 in.)
	j	2.15 to 2.20 mm (0.0846 to 0.0866 in.)

INPUT SHAFT ASSEMBLY:

4th gear thrust clearance	Standard clearance	0.10 to 0.57 mm (0.0039 to 0.0224 in.)
3rd gear thrust clearance	Standard clearance	0.10 to 0.35 mm (0.0039 to 0.0138 in.)
4th gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051 mm (0.0004 to 0.0020 in.)
3rd gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051 mm (0.0004 to 0.0020 in.)
Input shaft run out	Maximum run out	0.03 mm (0.0012 in.)
Input shaft standard outer diameter	A	35.984 to 36.000 mm (1.4167 to 1.4173 in.)
	B	35.984 to 36.000 mm (1.4167 to 1.4173 in.)
	C	27.957 to 27.972 mm (1.1007 to 1.1013 in.)
Input shaft minimum outer diameter	A	35.984 mm (1.4167 in.)
	B	35.984 mm (1.4167 in.)
	C	27.957 mm (1.1007 in.)
4th gear inside diameter	Standard inside diameter	42.009 to 42.025 mm (1.6539 to 1.6545 in.)
	Maximum inside diameter	42.025 mm (1.6545 in.)

3rd gear inside diameter	Standard inside diameter	43.009 to 43.025 mm (1.6933 to 1.6939 in.)
	Maximum inside diameter	43.025 mm (1.6939 in.)
Between the 4th gear spline end and synchronizer outer ring back clearance		0.75 to 1.65 mm (0.0295 to 0.0650 in.)
Between the 3rd gear spline end and synchronizer outer ring back clearance		0.65 to 1.75 mm (0.0256 to 0.0689 in.)
No. 2 transmission hub sleeve groove - thickness of the claw part on No.1 gear shift fork	Standard clearance	0.11 to 0.69 mm (0.0043 to 0.0272 in.)
No. 2 transmission clutch hub snap ring clearance	Standard clearance	0.1 mm or less (0.0039 in. or less)
No. 2 transmission clutch hub snap ring thickness	H	2.30 to 2.35 mm (0.0906 to 0.0925 in.)
	J	2.35 to 2.40 mm (0.0925 to 0.0945 in.)
	K	2.40 to 2.45 mm (0.0945 to 0.0965 in.)
	L	2.45 to 2.50 mm (0.0965 to 0.0984 in.)
	M	2.50 to 2.55 mm (0.0984 to 0.1004 in.)
	N	2.55 to 2.60 mm (0.1004 to 0.1024 in.)
	P	2.60 to 2.65 mm (0.1024 to 0.1043 in.)
Input shaft rear radial ball bearing snap ring clearance	Standard clearance	0.1 mm or less (0.0039 in. or less)
Input shaft rear radial ball bearing snap ring thickness	1	2.35 to 2.40 mm (0.0925 to 0.0945 in.)
	2	2.40 to 2.45 mm (0.0945 to 0.0965 in.)
	3	2.45 to 2.50 mm (0.0965 to 0.0984 in.)
	4	2.50 to 2.55 mm (0.0984 to 0.1004 in.)
	5	2.55 to 2.60 mm (0.1004 to 0.1024 in.)
	6	2.60 to 2.65 mm (0.1024 to 0.1043 in.)
	7	2.65 to 2.70 mm (0.1043 to 0.1063 in.)
	8	2.70 to 2.75 mm (0.1063 to 0.1083 in.)

OUTPUT SHAFT ASSEMBLY:

1st gear thrust clearance	Standard clearance	0.25 to 0.40 mm (0.0098 to 0.0157 in.)
2nd gear thrust clearance	Standard clearance	0.10 to 0.35 mm (0.0039 to 0.0138 in.)
1st gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051mm (0.0004 to 0.0020in.)
2nd gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051mm (0.0004 to 0.0020in.)
Output shaft run out	Maximum run out	0.03 mm (0.0012 in.)
Output shaft standard outer diameter	A	37.610 to 37.626 mm (1.4807 to 1.4813 in.)
	B	34.502 to 34.512 mm (1.3583 to 1.3587 in.)
Output shaft minimum outer diameter	A	37.610 mm (1.4807 in.)
	B	34.502 mm (1.3583 in.)
2nd gear inside diameter	Standard inside diameter	50.009 to 50.025 mm (1.9689 to 1.9695 in.)
	Maximum inside diameter	50.025 mm (1.9695 in.)
1st gear inside diameter	Standard inside diameter	51.009 to 51.025 mm (2.0082 to 2.0089 in.)
	Maximum inside diameter	51.025 mm (2.0089 in.)
Between the 2nd gear while and No. 2 synchronizer ring back clearance		0.70 to 1.45 mm (0.0276 to 0.0571 in.)
Between the 1st gear while and No. 1 synchronizer ring set back clearance		0.70 to 1.45 mm (0.0276 to 0.0571 in.)
Reverse gear groove - thickness of the claw part on No .1 gear shift fork clearance	Standard clearance	0.15 to 0.35 mm (0.0059 to 0.0138 in.)
2nd gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051 mm (0.0004 to 0.0020 in.)
1st gear radial clearance	KOYO made	0.009 to 0.053 mm (0.0004 to 0.0021 in.)
	NSK made	0.009 to 0.051 mm (0.0004 to 0.0020 in.)
2nd gear thrust clearance	Standard clearance	0.10 to 0.35 mm (0.0039 to 0.0138 in.)

1st gear thrust clearance	Standard clearance	0.25 to 0.40 mm (0.0098 to 0.0157 in.)

SHIFT AND SELECT LEVER SHAFT ASSEMBLY:

Control shaft cover oil seal drive in depth	28.0 to 29.0 mm (1.1022 to 1.142 in.)
Shift lever slotted pin clearance to the No. 1 shift lever inner assembly	0.4 to 0.5 mm (-0.0157 to 0.0197 in.)
Shift lever slotted pin clearance to the No. 2 shift lever inner	5.8 to 6.8 mm (0.228 to 0.268 in.)

DIFFERENTIAL CASE ASSEMBLY:

Front differential side gear backlash	Standard backlash	0.05 to 0.20 mm (0.0020 to 0.0079 in.)
Front differential pinion thrust washer thickness	Minimum thickness	0.9 mm (0.035 in.)
Front differential No. 1 pinion shaft thickness	Minimum diameter	17.975 mm (0.70768 in.)
Front differential side gear backlash	Standard backlash	0.05 to 0.20 mm (0.0020 to 0.0079 in.)
Front differential side gear thrust washer thickness	1	1.00 mm (0.0394 in.)
	2	1.10 mm (0.0433 in.)
	3	1.20 mm (0.0472 in.)
	4	1.30 mm (0.0512 in.)

SUSPENSION

SERVICE DATA

Front wheel alignment	Toe-in (total)	
	A - B	0 +- 2 mm (0 - 0.08 in.)
	Rack end length difference	1.5 mm (0.06 in.) or less

for USA and Canada:

Front wheel alignment	Vehicle height		
	ACV40L-CEAGKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	54 mm (2.13 in.)
	GSV40L-CETGKA	Front A - B	126 mm (4.96 in.)
		Rear C - D	55 mm (2.17 in.)
	ACV40L-AEAGKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	53 mm (2.09 in.)
	GSV40L-AETGKA	Front A - B	126 mm (4.96 in.)
		Rear C - D	54 mm (2.13 in.)
	ACV40L-CEANKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	54 mm (2.13 in.)
	ACV40L-CEMNKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	53 mm (2.09 in.)
	GSV40L-CETNKA	Front A - B	126 mm (4.96 in.)
		Rear C - D	55 mm (2.17 in.)
	ACV40L-AEANKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	53 mm (2.09 in.)
	ACV40L-AEMNKA	Front A - B	125 mm (4.92 in.)
		Rear C - D	52 mm (2.05 in.)
	GSV40L-AETNKA	Front A - B	126 mm (4.96 in.)
		Rear C - D	54 mm (2.13 in.)
	ACV40L-CEASKA	Front A - B	128 mm (5.04 in.)
		Rear C - D	57 mm (2.24 in.)
	ACV40L-CEMSKA	Front A - B	127 mm (5.00 in.)
		Rear C - D	55 mm (2.17 in.)
	GSV40L-CETSKA	Front A - B	129 mm (5.08 in.)
		Rear C - D	58 mm (2.28 in.)

for Mexico:

Front wheel alignment	Vehicle height		
	ACV40L-CEAGKA	Front A - B	115 mm (4.53 in.)
		Rear C - D	40 mm (1.57 in.)
	GSV40L-CETGKA	Front A - B	116 mm (4.57 in.)
		Rear C - D	41mm (1.61 in.)
	ACV40L-CEANKA	Front A - B	115 mm (4.53 in.)
		Rear C - D	40 mm (1.57 in.)

SS

for USA and Canada:

Front wheel alignment	Wheel turning angle		
	ACV40L-CEAGKA	Inside wheel	38°22'+-2° (38.37°+-2°)
		Outside wheel reference	33°33' (33.55°)
	GSV40L-CETGKA	Inside wheel	38°22'+-2° (38.37°+-2°)

TIRE AND WHEEL

SERVICE DATA

Cold tire inflation pressure

Tire size	Front	Rear
P215/60R16 94V	210 kPa (2.1 kgf/cm^2, 31 psi)	210 kPa (2.1 kgf/cm^2, 31 psi)
P215/55R17 93V	220 kPa (2.2 kgf/cm^2, 32 psi)	220 kPa (2.2 kgf/cm^2, 32 psi)

When driving under the above vehicle conditions at sustained high speeds above 160 km/h (100 mph), in countries where such speeds are permitted bylaw, inflate the front and rear tires to 240 kPa (2.4 kgf*cm^2, 35 psi) provided that it does not exceed the maximum cold tire inflation pressure molded on the tire sidewall.

Tire runout	1.4 mm (0.055 in.) or less
Imbalance after adjustment	8.0 g (0.018 lb) or less

Main Body ECU	Sliding Roof Control ECU	Key-off operation signal	LIN

SYSTEM DESCRIPTION

1. GENERAL

This system has the following functions: manual slide open and close; auto slide open and close; manual tilt up and down; auto tilt up and down; jam protection; and key off operation.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Sliding Roof Drive Gear Sub-assembly (Sliding roof ECU)	Sliding roof ECU controls sliding roof motor to rotate forward and backward, which tilts or slides sliding roof glass.
Overhead Junction Block	Output of operation signals from built-in sliding roof switch to sliding roof ECU is handled by overhead junction block.

3. SYSTEM OPERATION

The sliding roof has the following features:

Function	Outline
Manual slide open and close	This function causes sliding roof to open (or close) when OPEN/CLOSE switch is pressed for a maximum of 0.3 seconds. Sliding roof stops as soon as the switch is released.
Auto slide open and close	This function causes sliding roof to fully open (or close) when OPEN/CLOSE switch is pressed for a minimum of 0.3 seconds.
Manual tilt up and down	This function causes sliding roof to tilt up (or tilt down) when UP/DOWN switch is pressed for a maximum of 0.3 seconds.
Auto tilt up and down	This function enables sliding roof to tilt up (or down) when UP/DOWN switch is pressed for a minimum of 0.3 seconds.
Jam protection	The jam protection function automatically stops sliding roof, or stops sliding roof and makes it open halfway (or fully tilted up) if a foreign object gets jammed in sliding roof during auto close operation (or auto tilt down operation).
Key off operation	Key off operation function makes it possible to operate sliding roof for approximately 43 seconds after ignition switch is turned off, if front doors are not opened.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the sliding roof system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Using the intelligent tester, check if the CAN communication system is functioning normally.

Result

Result	Proceed to
DTC is not output	A

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

When replacing the sliding roof drive gear, the sliding roof drive gear requires initialization. If a reset is not executed, the following functions do not operate: auto operation and key off operation.

(a) Turn the ignition switch on (IG).

(b) Make sure that the sliding roof is fully closed.

(c) Push and hold the CLOSE switch or the UP switch until the following movement finishes: Tilt up → approximately 1 second → tilt down → slide open → slide closed.

(d) Check that the sliding roof stops at the fully closed position.

(e) Finish the initialization.

(f) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail.

- **Ignition switch is turned off.**
- **Sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**
- **Another switch is turned on during initialization.**
- **The vehicle experiences a strong vibration during initialization, such as the slamming of a door.**

HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE or UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).

RF

PROBLEM SYMPTOMS TABLE

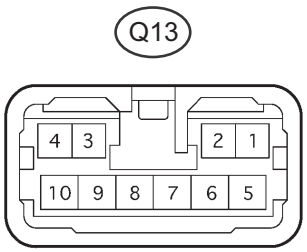
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System

Symptom	Suspected area	See page
Sliding function and tilt function do not operate	Sliding roof ECU power source circuit	RF-28
Either sliding function or tilt function does not operate	Sliding roof control switch circuit	RF-25

TERMINALS OF ECU

1. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU) (TMC MADE)



0

B050671E36

(a) Disconnect the Q13 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

RF

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (Q13-1) - E (Q13-2)	B - W-B	+B power supply	Always	10 to 14 V
IG (Q13-5) - E (Q13-2)	Y - W-B	Ignition switch power supply	Ignition switch off	Below 1 V
IG (Q13-5) - E (Q13-2)	Y - W-B	Ignition switch power supply	Ignition switch on (IG)	10 to 14 V
OPN (Q13-7) - E (Q13-2)	BR - W-B	Sliding roof motor open	OPEN switch OFF	10 kΩ or higher
OPN (Q13-7) - E (Q13-2)	BR - W-B	Sliding roof motor open	OPEN switch ON	Below 1 Ω
CLS (Q13-9) - E (Q13-2)	L - W-B	Sliding roof motor closed	CLOSE switch OFF	10 kΩ or higher
CLS (Q13-9) - E (Q13-2)	L - W-B	Sliding roof motor closed	CLOSE switch ON	Below 1 Ω
UP (Q13-10) - E (Q13-2)	W - W-B	Sliding roof motor up	UP switch OFF	10 kΩ or higher
UP (Q13-10) - E (Q13-2)	W - W-B	Sliding roof motor up	UP switch ON	Below 1 Ω
DWN (Q13-8) - E (Q13-2)	G - W-B	Sliding roof motor down	DOWN switch OFF	10 kΩ or higher
DWN (Q13-8) - E (Q13-2)	G - W-B	Sliding roof motor down	DOWN switch ON	Below 1 Ω
E (Q13-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

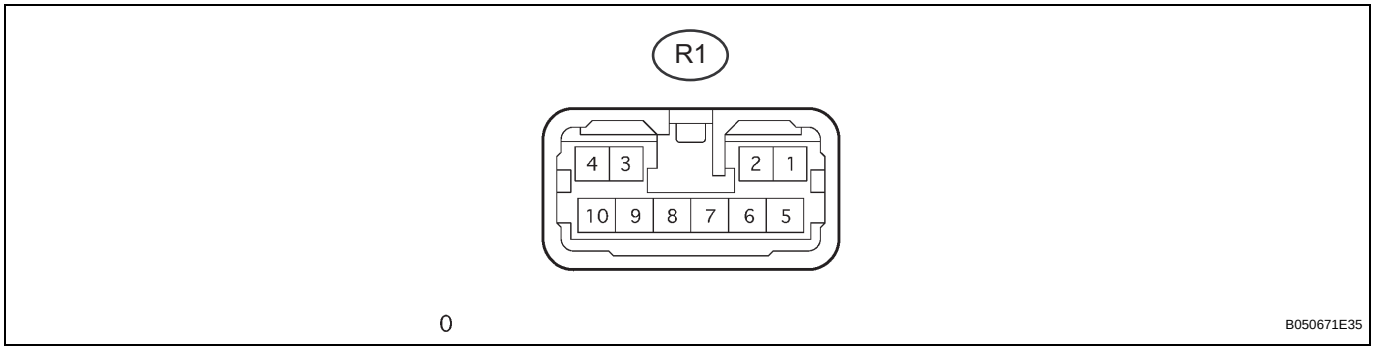
If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the Q13 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
OPN (Q13-7) - E (Q13-2)	BR - W-B	Sliding roof motor open	Ignition switch on (IG), sliding roof closed, OPEN switch OFF	Below 1 V
OPN (Q13-7) - E (Q13-2)	BR - W-B	Sliding roof motor open	Ignition switch on (IG), sliding roof closed, OPEN switch ON	10 to 14 V
CLS (Q13-9) - E (Q13-2)	L - W-B	Sliding roof motor closed	Ignition switch on (IG), sliding roof open, CLOSE switch OFF	Below 1 V
CLS (Q13-9) - E (Q13-2)	L - W-B	Sliding roof motor closed	Ignition switch on (IG), sliding roof open, CLOSE switch ON	10 to 14 V
UP (Q13-10) - E (Q13-2)	W - W-B	Sliding roof motor up	Ignition switch on (IG), sliding roof tilted downward, UP switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UP (Q13-10) - E (Q13-2)	W - W-B	Sliding roof motor up	Ignition switch on (IG), sliding roof tilted downward, UP switch ON	10 to 14 V
DWN (Q13-8) - E (Q13-2)	G - W-B	Sliding roof motor down	Ignition switch on (IG), sliding roof tilted upward, DOWN switch OFF	Below 1 V
DWN (Q13-8) - E (Q13-2)	G - W-B	Sliding roof motor down	Ignition switch on (IG), sliding roof tilted upward, DOWN switch ON	10 to 14 V

If the result is not as specified, the ECU may have a malfunction.

2. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU) (TMMK MADE)



(a) Disconnect the R1 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (R1-1) - E (R1-2)	B - W-B	+B power supply	Always	10 to 14 V
IG (R1-5) - E (R1-2)	Y - W-B	Ignition switch power supply	Ignition switch off	Below 1 V
IG (R1-5) - E (R1-2)	Y - W-B	Ignition switch power supply	Ignition switch on (IG)	10 to 14 V
OPN (R1-10) - E (R1-2)	BR - W-B	Sliding roof motor open	OPEN switch OFF	10 kΩ or higher
OPN (R1-10) - E (R1-2)	BR - W-B	Sliding roof motor open	OPEN switch ON	Below 1 Ω
CLS (R1-8) - E (R1-2)	L - W-B	Sliding roof motor closed	CLOSE switch OFF	10 kΩ or higher
CLS (R1-8) - E (R1-2)	L - W-B	Sliding roof motor closed	CLOSE switch ON	Below 1 Ω
UP (R1-9) - E (R1-2)	W - W-B	Sliding roof motor up	UP switch OFF	10 kΩ or higher
UP (R1-9) - E (R1-2)	W - W-B	Sliding roof motor up	UP switch ON	Below 1 Ω
DWN (R1-7) - E (R1-2)	G - W-B	Sliding roof motor down	DOWN switch OFF	10 kΩ or higher
DWN (R1-7) - E (R1-2)	G - W-B	Sliding roof motor down	DOWN switch ON	Below 1 Ω
E (R1-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the R1 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
OPN (R1-10) - E (R1-2)	BR - W-B	Sliding roof motor open	Ignition switch on (IG), sliding roof closed, OPEN switch OFF	Below 1 V

RF

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
OPN (R1-10) - E (R1-2)	BR - W-B	Sliding roof motor open	Ignition switch on (IG), sliding roof closed, OPEN switch ON	10 to 14 V
CLS (R1-8) - E (R1-2)	L - W-B	Sliding roof motor closed	Ignition switch on (IG), sliding roof open, CLOSE switch OFF	Below 1 V
CLS (R1-8) - E (R1-2)	L - W-B	Sliding roof motor closed	Ignition switch on (IG), sliding roof open, CLOSE switch ON	10 to 14 V
UP (R1-9) - E (R1-2)	W - W-B	Sliding roof motor up	Ignition switch on (IG), sliding roof tilted downward, UP switch OFF	Below 1 V
UP (R1-9) - E (R1-2)	W - W-B	Sliding roof motor up	Ignition switch on (IG), sliding roof tilted downward, UP switch ON	10 to 14 V
DWN (R1-7) - E (R1-2)	G - W-B	Sliding roof motor down	Ignition switch on (IG), sliding roof tilted upward, DOWN switch OFF	Below 1 V
DWN (R1-7) - E (R1-2)	G - W-B	Sliding roof motor down	Ignition switch on (IG), sliding roof tilted upward, DOWN switch ON	10 to 14 V

RF

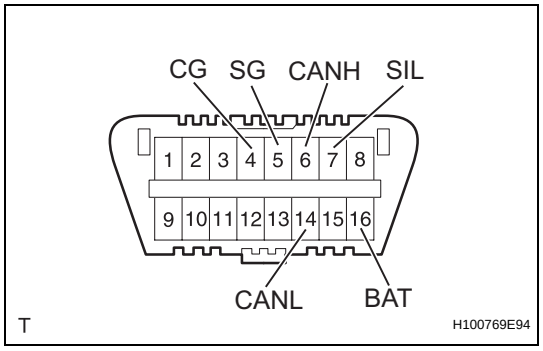
If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Sliding roof system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



HINT:

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

RF

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - CG (4)	CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	CAN bus line	Ignition switch off*	200 Ω or higher
CANH (6) - BAT (16)	CAN bus line	Ignition switch off*	6 kΩ or higher
CANL (14) - BAT (16)	CAN bus line	Ignition switch off*	6 kΩ or higer

NOTICE:

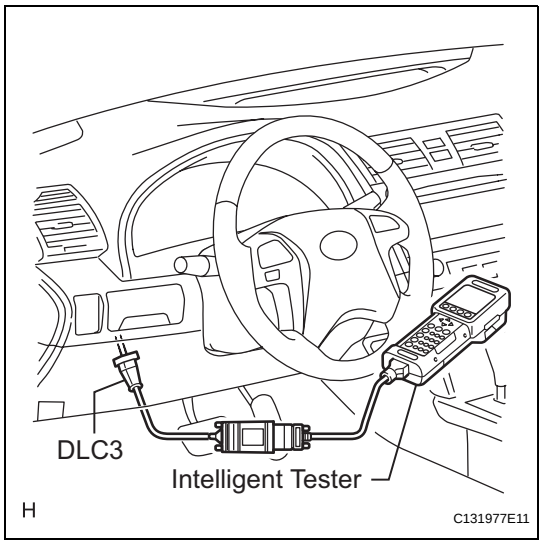
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's Data List allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Read the Data List according to the display on the tester.

SLIDE ROOF:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's Active Test allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Perform the Active Test according to the display on the tester.

SLIDE ROOF:

Item	Test Details	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs. OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN OPEN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

DIAGNOSTIC TROUBLE CODE CHART

If any trouble code is displayed during DTC check, check the circuit corresponding to the code in the table below. Proceed to the page given for the circuit.

Sliding Roof System

DTC No.	Detection Item	Trouble Area	See page
B2341	Sensor (Motor) Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-14
B2342	Switch Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-18
B2343	Position Initialization Incomplete	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-22
B2344	Position Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-14

ON-VEHICLE INSPECTION

1. CHECK AUTO OPERATION

(a) Turn the ignition switch on (IG).

(b) When the roof glass is fully closed, press the OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully opened.

(c) When the roof glass is fully open, press the CLOSE switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully closed.

(d) When the roof glass is fully closed, press the UP switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted upward.

(e) When the roof glass is fully open, press the DOWN switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted downward.

(f) When the auto operation is operating, check that pressing any personal light switch stops the roof glass operation.

HINT:

When pressing the switch for 0.3 seconds or less, the roof glass moves but auto operation does not operate.

2. CHECK SLIDING ROOF OPERATION AFTER IGNITION SWITCH IS TURNED OFF

(a) Turn the ignition switch from on (IG) to off, and check that the sliding roof operates. Then open and close the driver's side door once, and check that the sliding roof does not operate.

(b) Turn the ignition switch from on (IG) to off and wait for approximately 43 seconds. Check that the sliding roof does not operate.

(c) Operate the auto (SLIDE OPEN/CLOSE or TILT UP/DOWN) operation. While the roof glass is in motion, turn the ignition switch from on (IG) to off. Check that the auto operation continues until the roof glass opens or closes fully.

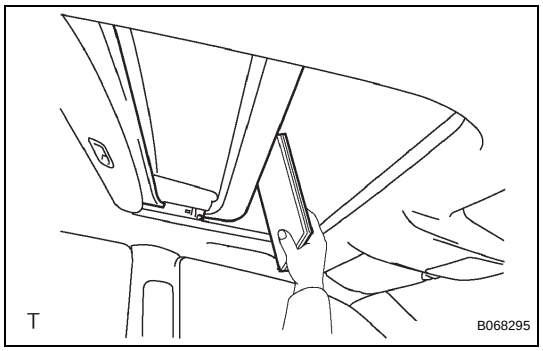
3. CHECK JAM PROTECTION FUNCTION

CAUTION:

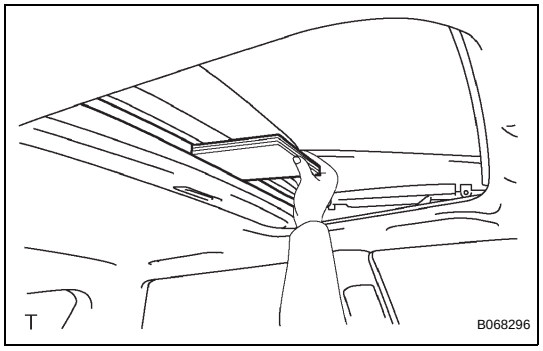
- **Do not use a part of your body, for example, your hand, to check the jam protection.**
- **Do not allow anything to become caught in the sliding roof by accident in this procedure.**
- **Perform the inspection from the inside of the vehicle.**

NOTICE:

- **Do not use hard objects such as a hammer, to avoid damage to the roof.**
- **If the jam protection does not operate, reset the sliding roof drive gear (motor).**



(a) When the sliding roof auto operation is operating and an object is caught between the vehicle body and glass, check that the roof glass opens 218 mm (8.58 in.) from the point of contact with the object, or opens fully if there is not an opening distance of 218 mm (8.58 in.).



(b) When the TILT UP/DOWN function is operating, and an object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

DTC	B2341	Sensor (Motor) Failure

DTC	B2344	Position Failure

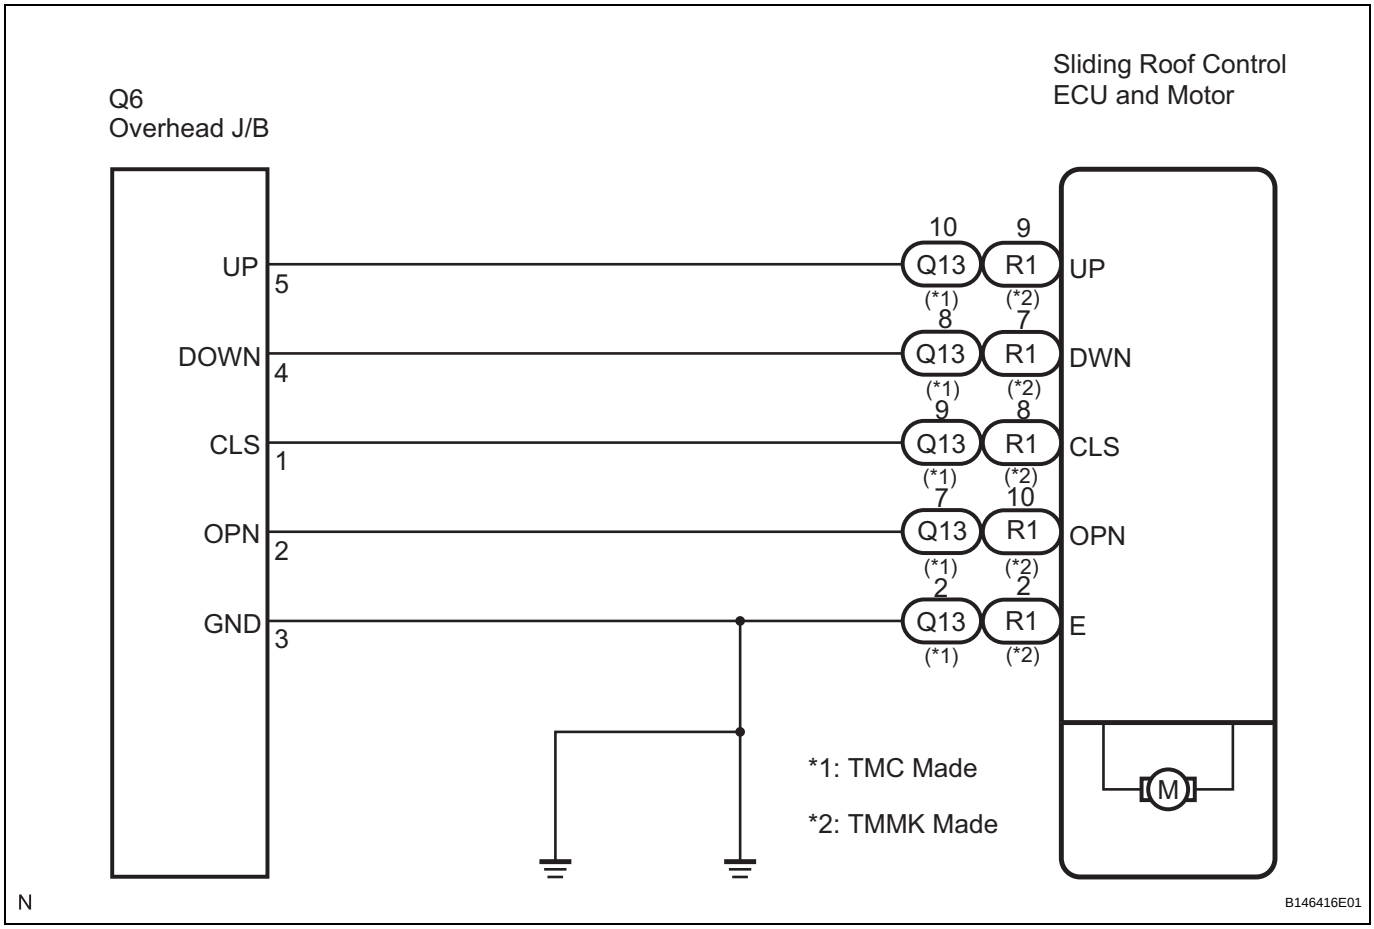
DESCRIPTION

When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the motor, and the sliding roof operation is stopped, DTC B2341 is output. When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the gear, and the sliding roof operation is stopped, DTC B2344 is output.

DTC No.	DTC Detection Condition	Trouble Area
B2341	Sensor (motor) Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness
B2344	Position Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

RF

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, DOWN, CLOSE and UP switches (See page RF-11).
OK:
Auto operation operates normally with OPEN, DOWN, CLOSE and UP switches.

NG → **Go to step 3**

OK

2	DELETE DTC

(a) Delete the DTCs (See page RF-8).

NEXT

END

3	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-4).
OK:
Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 6**

OK

4	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, DOWN, CLOSE and UP switches (See page RF-11).
OK:
Auto operation operates normally with OPEN, DOWN, CLOSE and UP switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

5	DELETE DTC

(a) Delete the DTCs (See page RF-8).

RF

NEXT

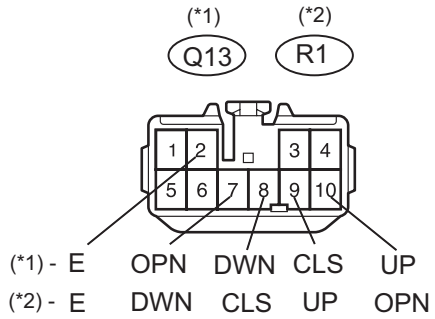
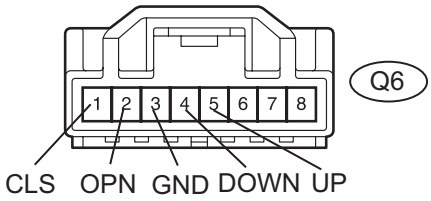
6 CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N B131169E02

(a) Disconnect the Q13 (*1) or R1 (*2) and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q13-2 (E) - Q6-3 (GND) (*1)	Always	Below 1 Ω
Q13-7 (OPN) - Q6-2 (OPN) (*1)	Always	Below 1 Ω
Q13-8 (DWN) - Q6-4 (DOWN) (*1)	Always	Below 1 Ω
Q13-9 (CLS) - Q6-1 (CLS) (*1)	Always	Below 1 Ω
Q13-10 (UP) - Q6-5 (UP) (*1)	Always	Below 1 Ω
R1-2 (E) - Q6-3 (GND) (*2)	Always	Below 1 Ω
R1-7 (DWN) - Q6-4 (DOWN) (*2)	Always	Below 1 Ω
R1-8 (CLS) - Q6-1 (CLS) (*2)	Always	Below 1 Ω
R1-9 (UP) - Q6-5 (UP) (*2)	Always	Below 1 Ω
R1-10 (OPN) - Q6-2 (OPN) (*2)	Always	Below 1 Ω
Q6-1 (CLS) - Body ground	Always	10 kΩ or higher
Q6-2 (OPN) - Body ground	Always	10 kΩ or higher
Q6-3 (GND) - Body ground	Always	Below 1 Ω
Q6-4 (DOWN) - Body ground	Always	10 kΩ or higher
Q6-5 (UP) - Body ground	Always	10 kΩ or higher

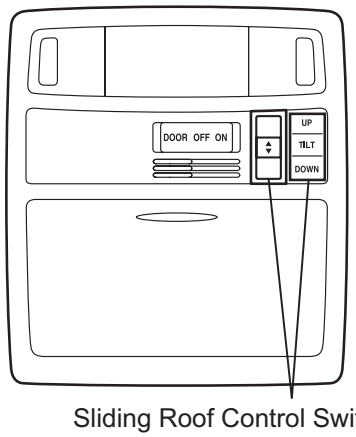
HINT:
- *1: TMC made
- *2: TMMK made

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

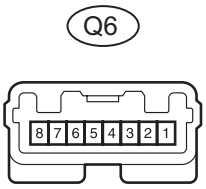
OK

7	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:



Sliding Roof Control Switch



N B131165E02

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

NG → **REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

DTC	B2342	Switch Failure

DESCRIPTION

This DTC is output when the sliding roof drive gear sub-assembly (sliding roof control ECU) detects that the OPEN, CLOSE, UP or DOWN switch in the roof console box assembly (sliding roof control switch) is stuck for 30 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B2342	Sliding roof drive gear sub-assembly (sliding roof control ECU) detects OPEN, CLOSE, UP or DOWN switch in overhead junction block is stuck for 30 seconds or more	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-14).

RF

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (SLIDE OPEN AND TILT UP SWITCH)

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

Sliding roof ECU

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-

OK:

The intelligent tester displays as shown in the table according to the operation of each switch.

NG → **Go to step 4**

OK

2	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP and DOWN switches (See page RF-11).

OK:

Auto operation operates normally with OPEN, CLOSE, UP and DOWN switches.

NG → **Go to step 7**

OK

3	DELETE DTC

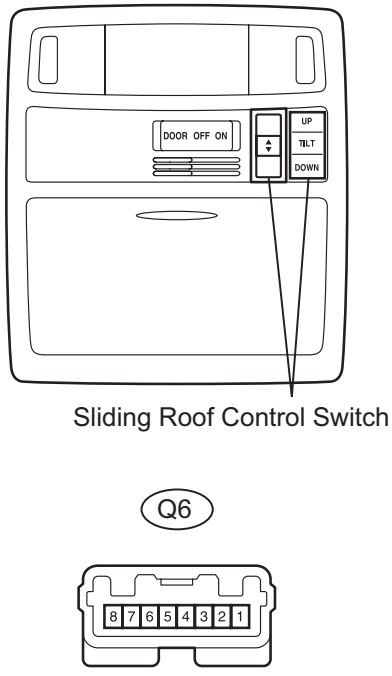
(a) Delete the DTCs (See page RF-8).

NEXT

END

4	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:



Sliding Roof Control Switch

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

OK → Go to step 10

NG

5	REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

(a) Temporarily replace the roof console box assembly (sliding roof control switch) with a new one or normally functioning one (See page LI-105).

NEXT

RF

6	DELETE DTC

(a) Delete the DTCs (See page RF-8).

NEXT

END

7	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-4).

OK:

Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 10**

OK

8	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP and DOWN switches (See page RF-11).

OK:

Auto operation operates normally with OPEN, CLOSE, UP and DOWN switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

9	DELETE DTC

(a) Delete the DTCs (See page RF-8).

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

RF

Sliding Roof Control Switch Circuit

DESCRIPTION

The sliding roof drive gear sub-assembly (sliding roof control ECU) receives slide switch and tilt switch signals and drives its built-in motor.

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-14).

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the sliding roof slides open/close and tilts up/down.

Sliding roof ECU

Item	Test Details	Diagnostic Note
SLIDING ROOF	Operate sliding roof SLIDE CLOSE/TILT UP CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs OFF: Sliding roof is not operating	-
SLIDING ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN OPEN/DOWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

OK:

Sliding roof operates normally.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

2	READ VALUE OF INTELLIGENT TESTER (SLIDING ROOF SWITCH)

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

Sliding roof ECU

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-

OK:

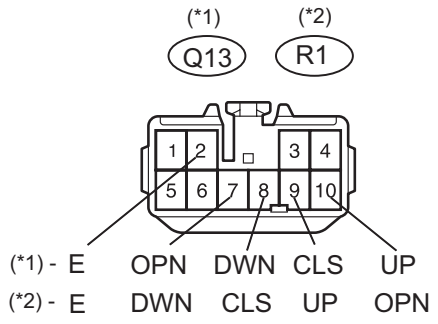
The intelligent tester displays as shown in the table according to the operation of each switch.

OK → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

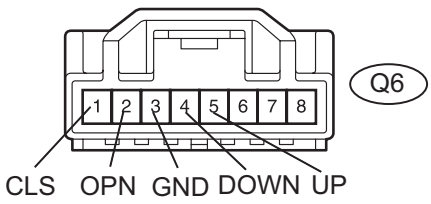
NG

3	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N B131169E02

(a) Disconnect the Q13 (*1) or R1 (*2) and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q13-2 (E) - Q6-3 (GND) (*1)	Always	Below 1 Ω
Q13-7 (OPN) - Q6-2 (OPN) (*1)	Always	Below 1 Ω

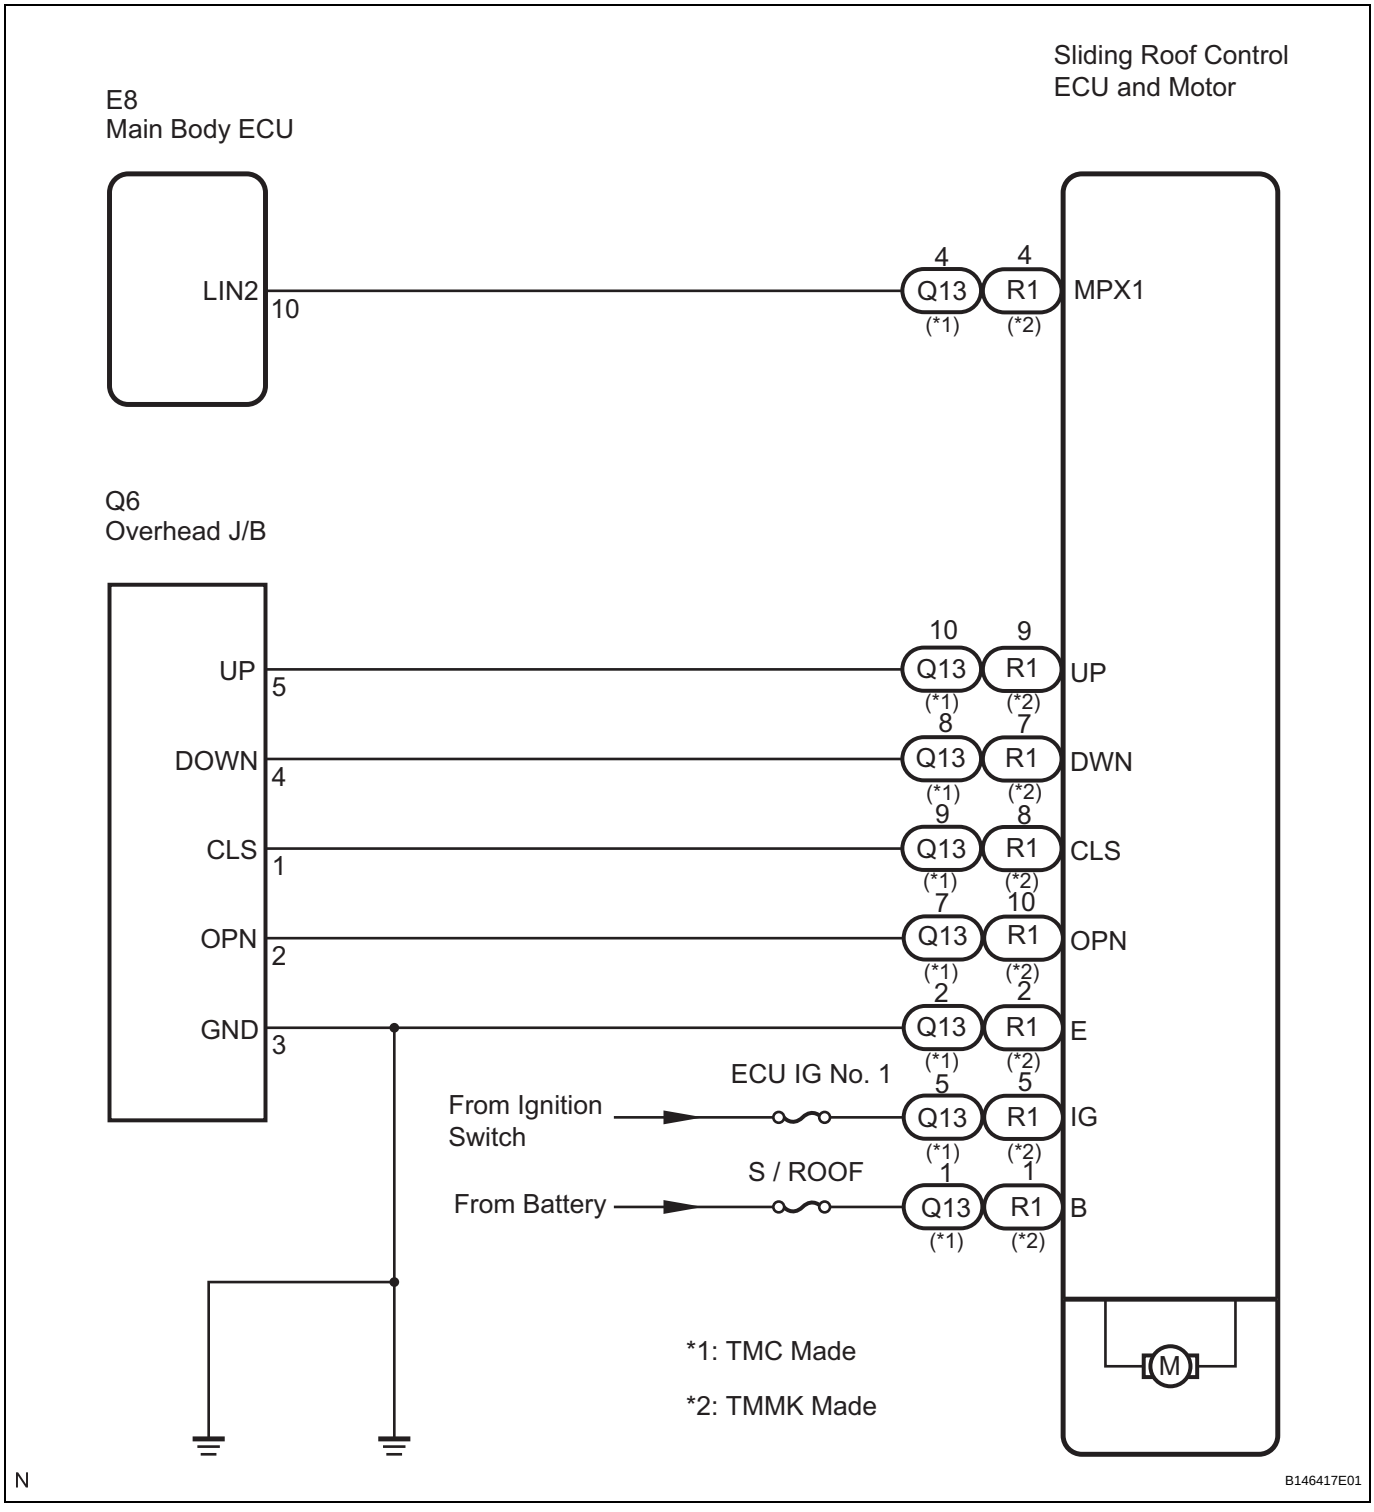
REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Sliding Roof ECU Power Source Circuit

DESCRIPTION

The sliding roof drive gear sub-assembly (sliding roof control ECU) receives signals from the sliding roof switch and activates the sliding roof. However, malfunctions in the fuse, wire harness or sliding roof drive gear sub-assembly (sliding roof control ECU) may cause the sliding roof system to stop operating.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the sliding roof slides open/close and tilts up/down.

Sliding roof ECU

Item	Test Details	Diagnostic Note
SLIDING ROOF	Operate sliding roof SLIDE CLOSE/TILT UP CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs OFF: Sliding roof is not operating	-
SLIDING ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN OPEN/DOWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

OK:
Sliding roof operates normally.

NG → **Go to step 2**

OK →

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

2	INSPECT FUSE (S/ROOF, ECU-IG NO. 1)

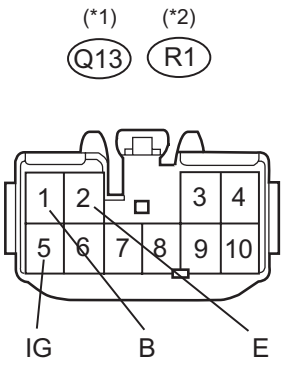
(a) Remove the S/ROOF and ECU-IG No. 1 fuses from the instrument panel J/B.
(b) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK →

3	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - BATTERY AND BODY GROUND)

Sliding Roof Control ECU Connector:



(a) Disconnect the Q13 (*1) or R1 (*2) connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
B (Q13-1) - Body ground (*1)	Always	10 to 14 V
IG (Q13-5) - Body ground (*1)	Ignition switch on (IG)	10 to 14 V
IG (Q13-5) - Body ground (*1)	Ignition switch off	Below 1 V
B (R1-1) - Body ground (*2)	Always	10 to 14 V
IG (R1-5) - Body ground (*2)	Ignition switch on (IG)	10 to 14 V
IG (R1-5) - Body ground (*2)	Ignition switch off	Below 1 V

HINT:

21. **REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**

22. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)**

23. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)**

24. **REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)**

25. **REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)**

26. **REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)**

27. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)**

28. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)**

29. **REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)**

30. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)**

31. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**

32. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)**

33. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**

34. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)
35. REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)
36. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-38)
37. REMOVE DOOR ASSIST GRIP COVER LH (See page ED-38)
38. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-39)
39. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-40)
40. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)
41. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)
42. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
43. REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-25)
44. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-25)
45. REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-26)
46. REMOVE UPPER CENTER PILLAR GARNISH LH (See page IR-26)
47. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)
48. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)
49. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH
50. REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-26)
51. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-26)
52. REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-26)
53. REMOVE UPPER CENTER PILLAR GARNISH RH (See page IR-26)
54. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)
55. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)

56. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**

57. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**

58. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**

59. **REMOVE VISOR ASSEMBLY LH (See page IR-28)**

60. **REMOVE VISOR ASSEMBLY RH (See page IR-29)**

61. **REMOVE VISOR HOLDER (See page IR-29)**

62. **REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**

63. **REMOVE REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**

64. **REMOVE SPOT LIGHT ASSEMBLY (See page IR-30)**

65. **REMOVE SUN ROOF OPENING TRIM MOULDING (See page IR-31)**

66. **REMOVE SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-31)**

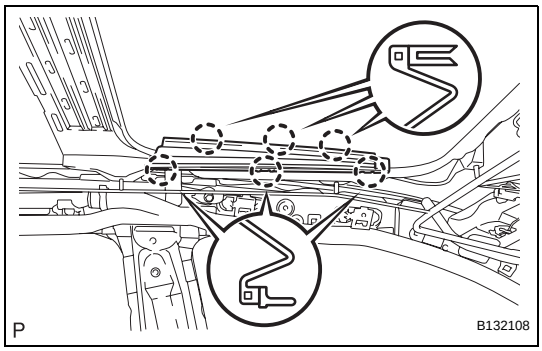
67. **REMOVE ROOF HEADLINING ASSEMBLY (See page IR-32)**

68. **REMOVE FRONT SIDE RAIL SPACER LH**
    (a) Disengage the 2 claws and remove the front side rail spacer LH.

69. **REMOVE FRONT SIDE RAIL SPACER RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

70. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY LH**

71. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

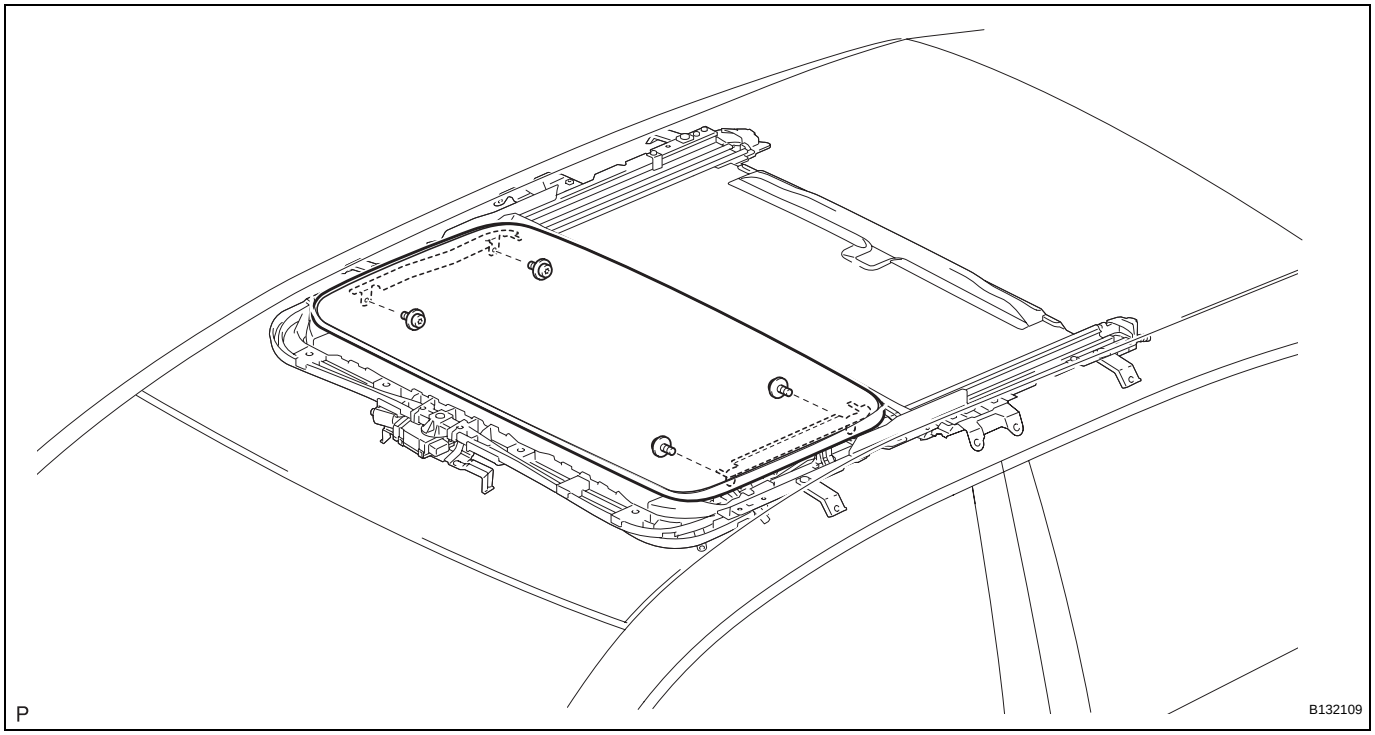


72. **REMOVE SLIDING ROOF SIDE GARNISH LH**
    (a) Disengage the 5 claws and remove the sliding roof side garnish LH.

73. **REMOVE SLIDING ROOF SIDE GARNISH RH**
    HINT:
    Use the same procedures for the RH side and the LH side.

74. REMOVE SLIDING ROOF GLASS SUB-ASSEMBLY

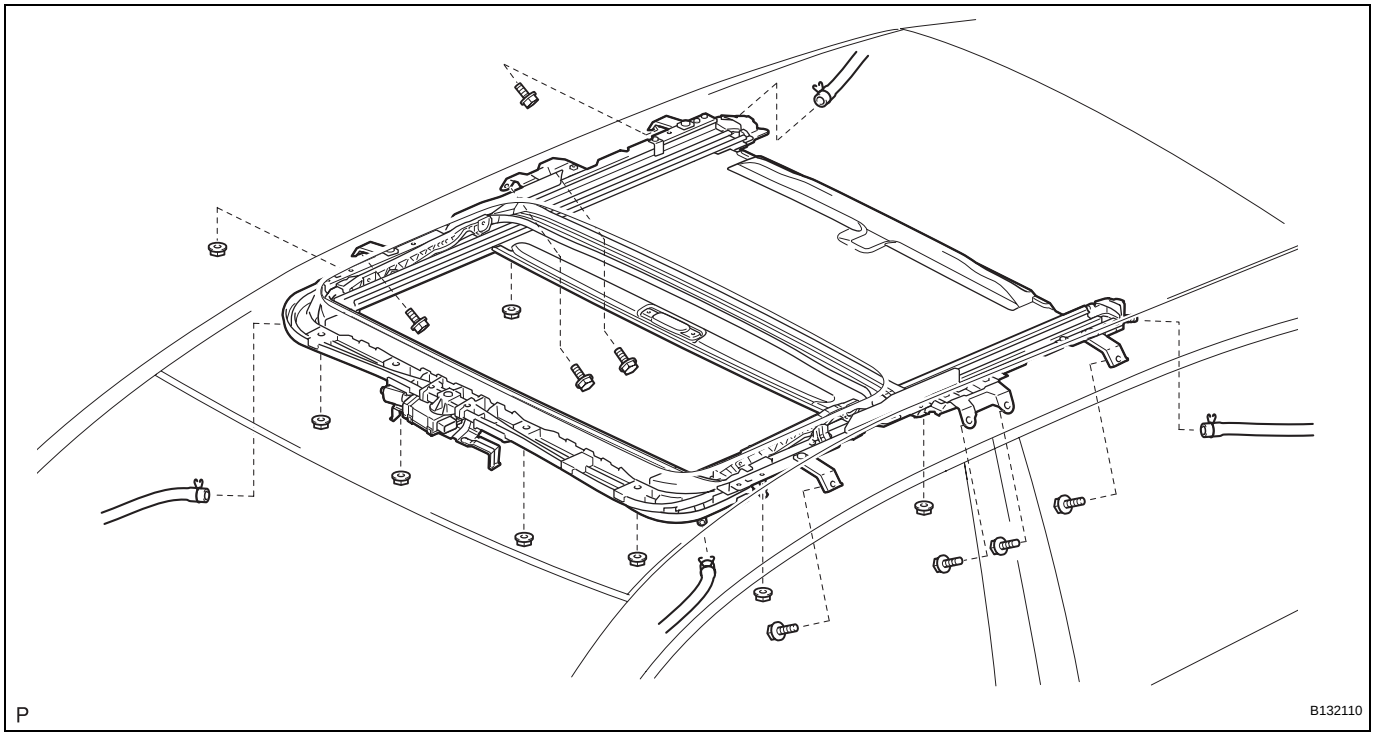
(a) Using a T25 "TORX" driver, remove the 4 screws and sliding roof glass sub-assembly.



75. REMOVE SLIDING ROOF HOUSING SUB-ASSEMBLY

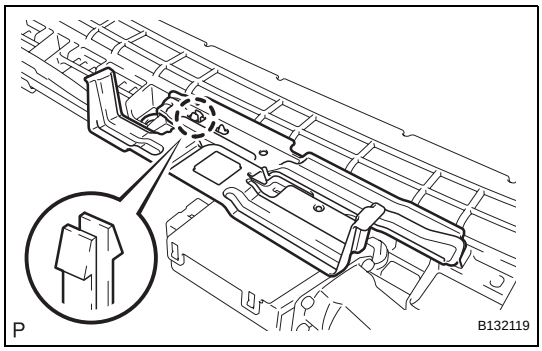
(a) Disconnect the 4 sliding roof drain hoses.

(b) Remove the 8 bolts, 8 nuts, and sliding roof housing sub-assembly.



76. REMOVE SLIDING ROOF WEATHERSTRIP

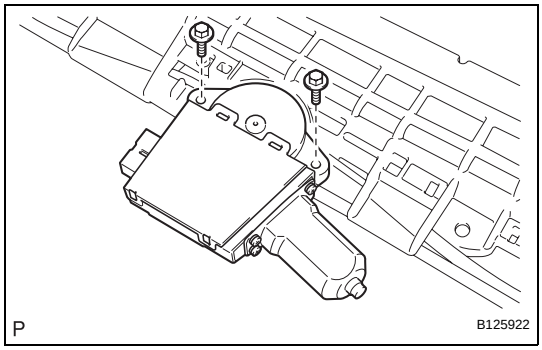
(a) Remove the sliding roof weatherstrip from the sliding roof housing sub-assembly.



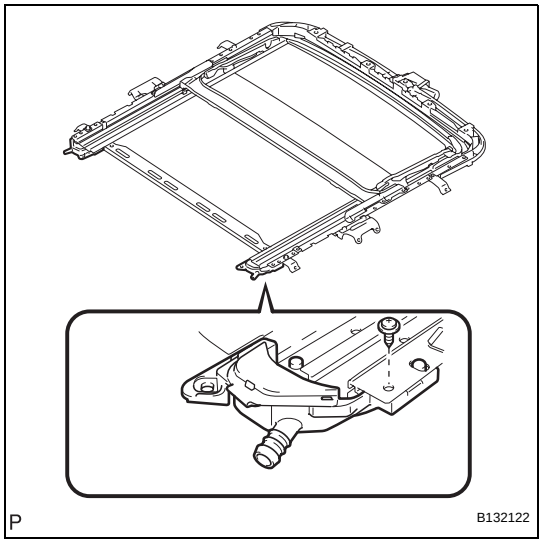
DISASSEMBLY

1. REMOVE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

(a) Disengage the claw and remove the sliding roof drive gear bracket.



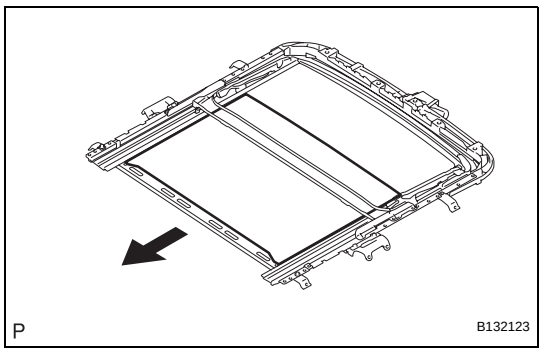
(b) Remove the 2 bolts and sliding roof drive gear sub-assembly.



2. REMOVE SUNSHADE TRIM SUB-ASSEMBLY

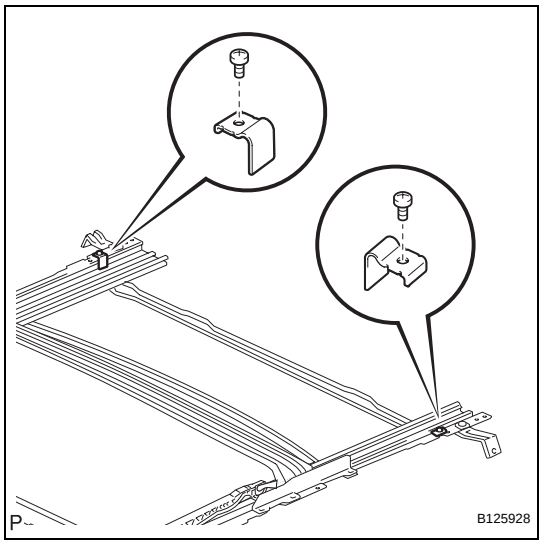
(a) Remove the screw and sliding roof piece sub-assembly LH.
HINT:
Use the same procedures for the RH side and the LH side.

(b) Slide and remove the sunshade trim sub-assembly.

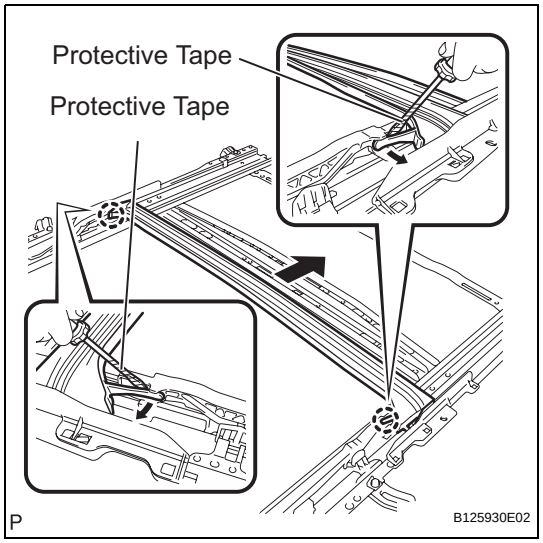


3. REMOVE SLIDING ROOF DRIVE CABLE SUB-ASSEMBLY

NOTICE:
Do not disassemble the sliding roof drive cable sub-assembly except when replacing it.

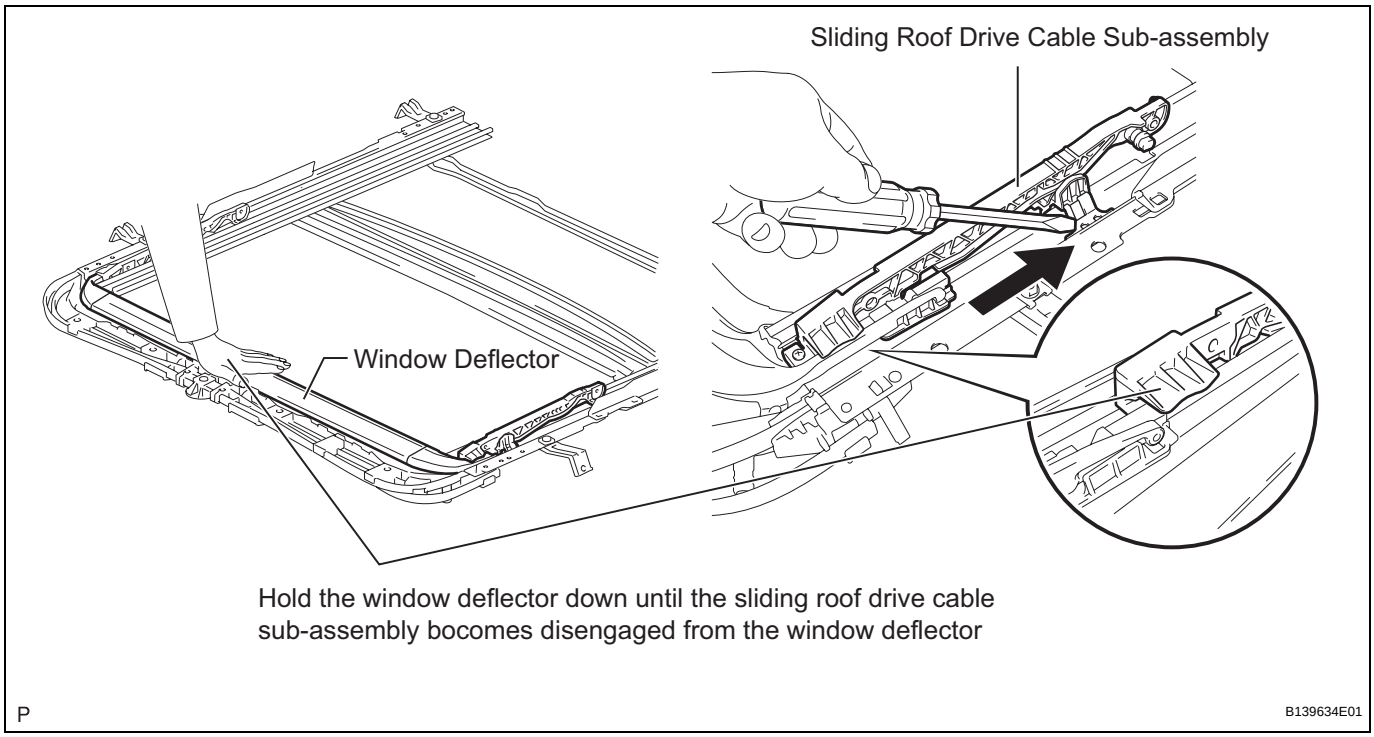


(a) Remove the 2 screws and sliding roof side stoppers.



(b) Using a screwdriver, disengage the 2 claws. Then slide the sliding roof drip channel rearward to remove it.
HINT:
Tape the screwdriver tip before use.

(c) Using a screwdriver, slide the sliding roof drive cable sub-assembly in the direction indicated by the arrow in the illustration to remove it.

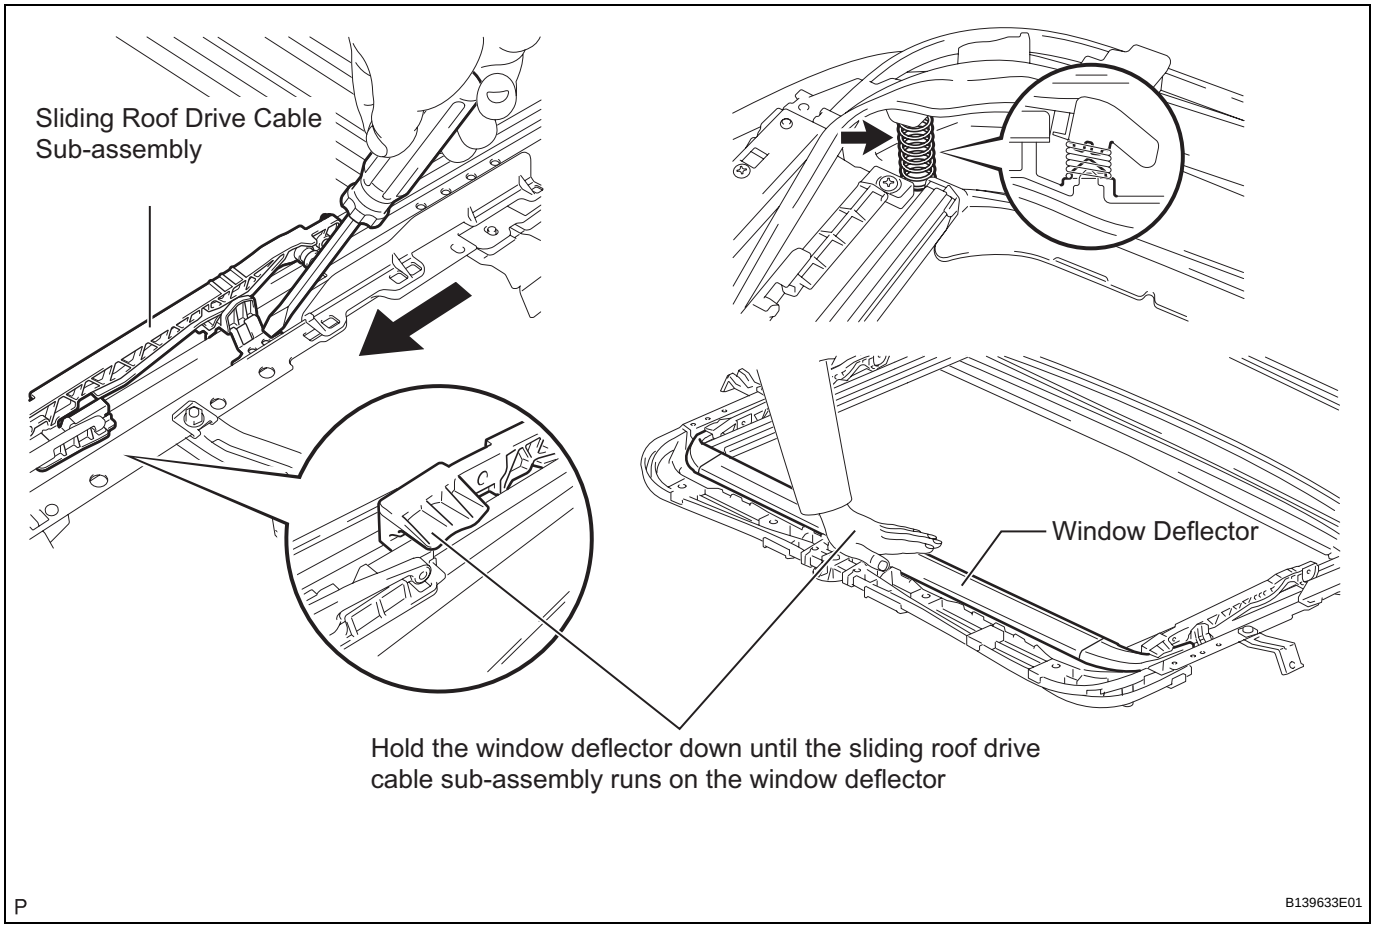


HINT:
Hold the window deflector down, as shown in the illustration, until the sliding roof drive cable sub-assembly becomes disengaged from the window deflector.

REASSEMBLY

1. INSTALL SLIDING ROOF DRIVE CABLE SUB-ASSEMBLY

(a) Using a screwdriver, slide the sliding roof drive cable sub-assembly in the direction indicated by the arrow in the illustration to install it.



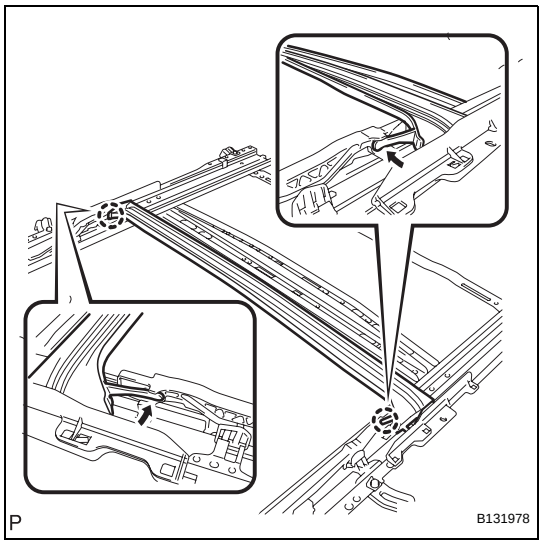
NOTICE:

Make sure that the spring indicated by the arrow in the illustration is securely installed.

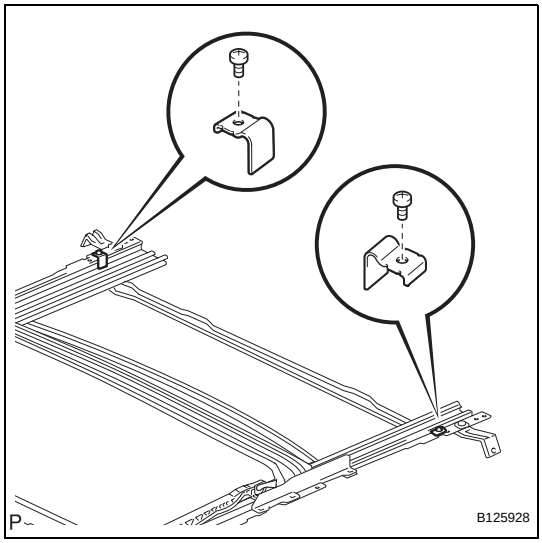
HINT:

Hold the window deflector down, as shown in the illustration, until the sliding roof drive cable sub-assembly runs on the window deflector.

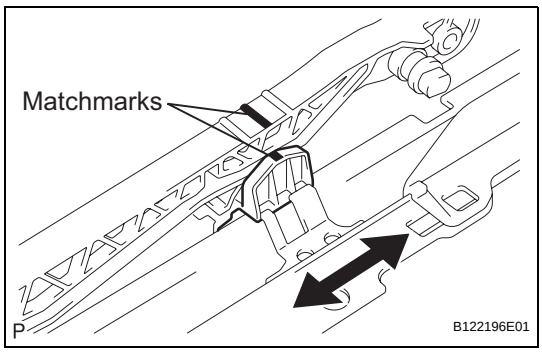
RF



(b) Engage the 2 claws and install the sliding roof drip channel.

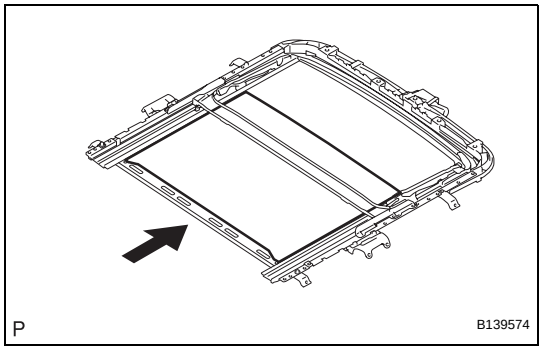


(c) Install the 2 sliding roof side stoppers with the 2 screws.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)



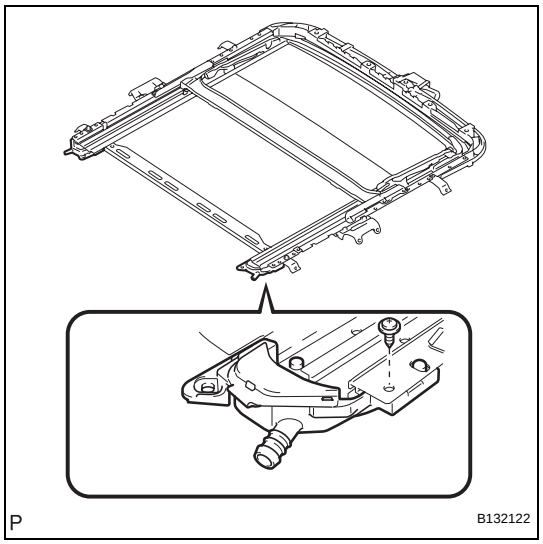
2. ADJUST FULLY CLOSED POSITION

(a) Using a screwdriver, slide the sliding roof drive cable sub-assembly in either direction as indicated by the arrows in the illustration and align the matchmarks.
HINT:
Tape the screwdriver tip before use.

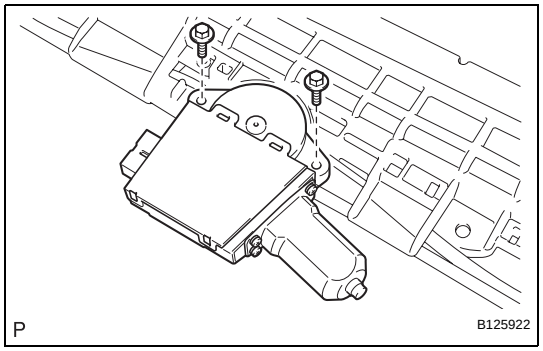


3. INSTALL SUNSHADE TRIM SUB-ASSEMBLY

(a) Insert the sunshade trim into the sliding roof housing sub-assembly.

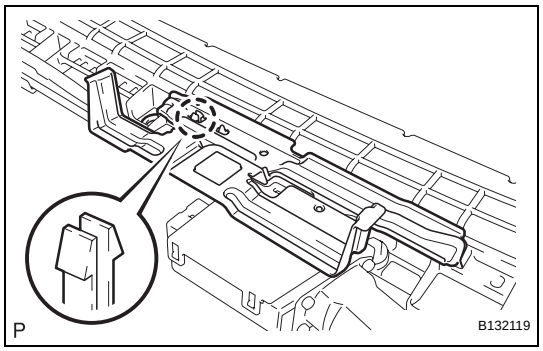


(b) Install the sliding roof piece sub-assemblies LH and RH with the 2 screws.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)



4. INSTALL SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

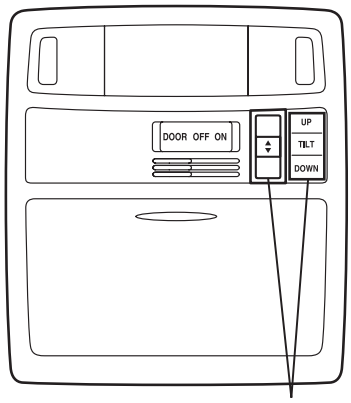
(a) Install the sliding roof drive gear sub-assembly with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



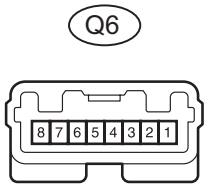
(b) Engage the claw and install the sliding roof drive gear bracket.

RF

Roof Console Box Assembly Connector:



Sliding Roof Control Switch



N

B131165E02

SLIDING ROOF SWITCH ASSEMBLY

ON-VEHICLE INSPECTION

1. INSPECT ROOF CONSOLE BOX ASSEMBLY

(a) Remove the roof console box assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

If the result is not as specified, replace the roof console box assembly.

INSTALLATION

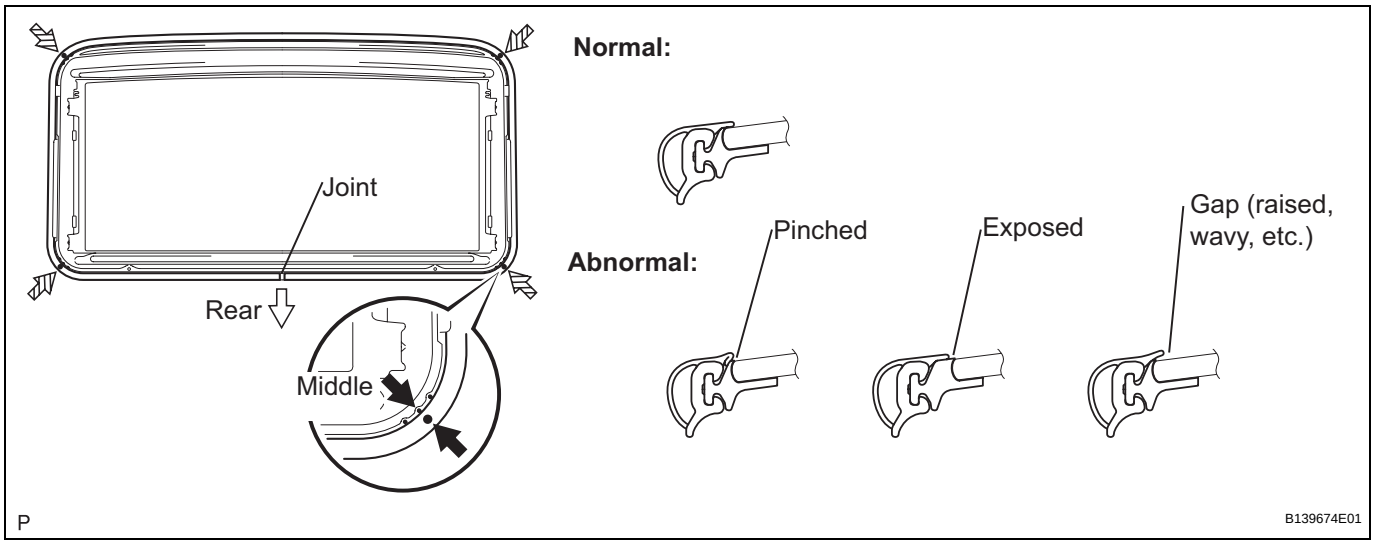
1. INSTALL SLIDING ROOF WEATHERSTRIP

(a) Install the sliding roof weatherstrip as follows:

(1) Position the joint of the weatherstrip at the rear center.

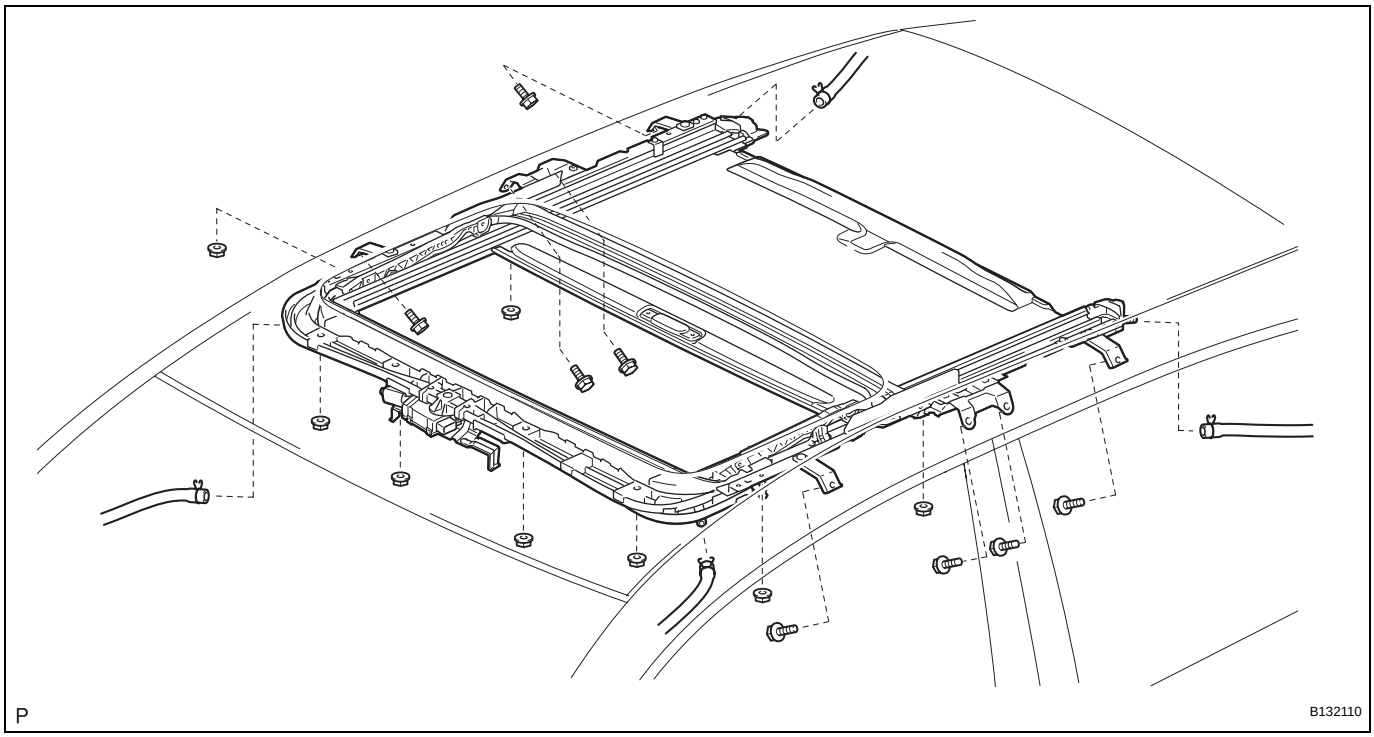
(2) Align the marks on the weatherstrip with the middle marks at the corners of the sliding roof panel and install the weatherstrip.

(3) Install the lip of the weatherstrip firmly.

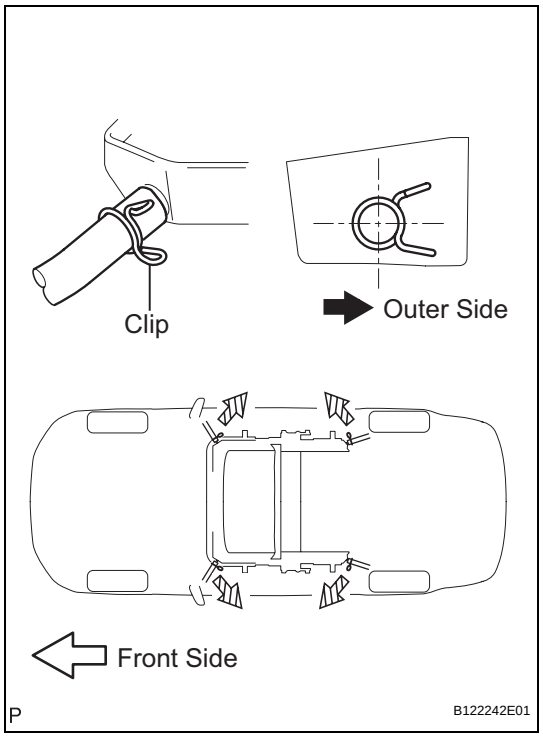


2. INSTALL SLIDING ROOF HOUSING SUB-ASSEMBLY

(a) Install the sliding roof housing sub-assembly with the 8 bolts and 8 nuts.



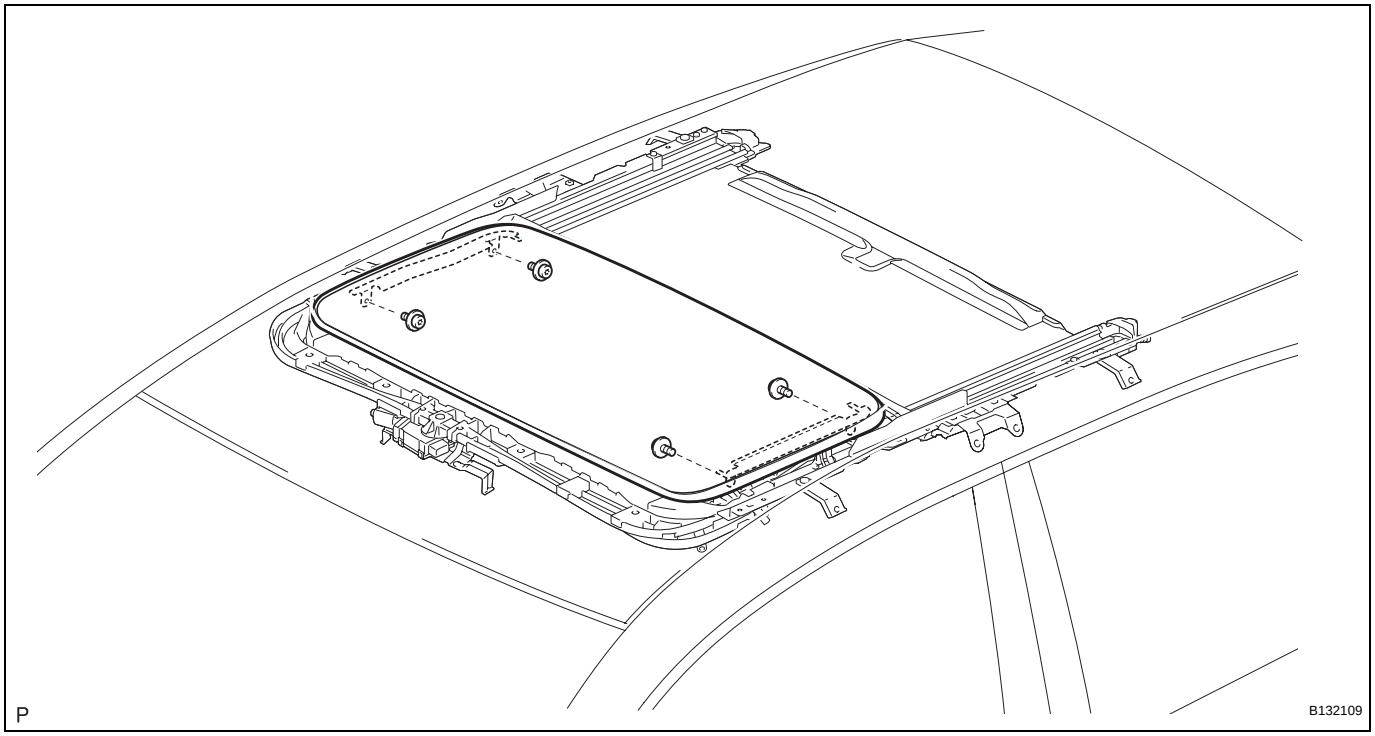
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

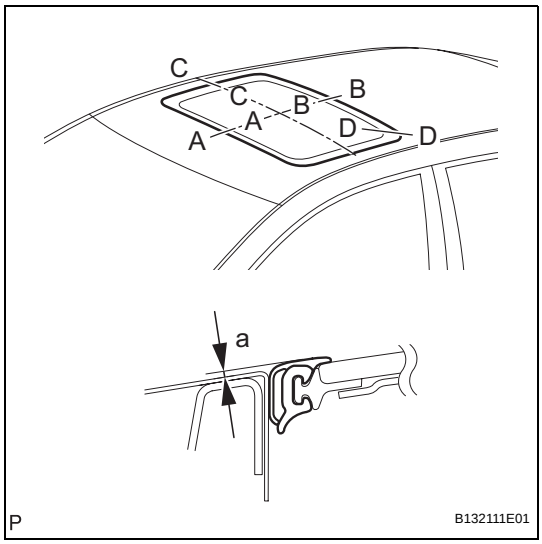


(b) Connect the 4 sliding roof drain hoses.
NOTICE:
The clip must face toward the outside of the vehicle and also be above the lower surface of the sliding roof housing when installing the drain hoses.

3. INSTALL SLIDING ROOF GLASS SUB-ASSEMBLY

(a) Using a T25 "TORX" driver, temporarily install the sliding roof glass sub-assembly with the 4 screws.

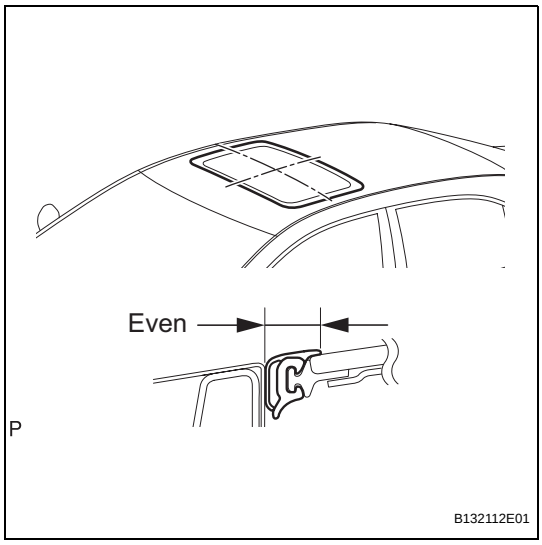




(b) Perform a level check.
(1) Check the difference in level for "a" between the roof panel and the upper surface of the weatherstrip when the sliding roof glass is fully closed.
Standard

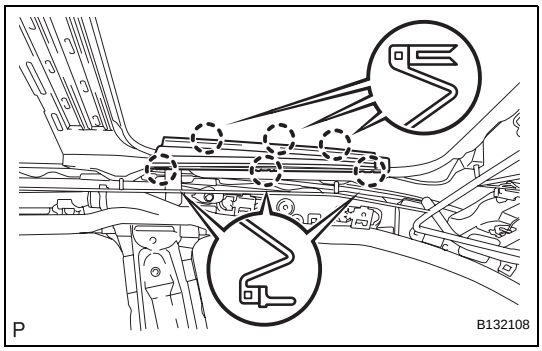
Area	Measurement
A - A	0 + 1.0 mm (0 + 0.039 in.) 0 - 2.0 mm (0 - 0.079 in.)
B - B	0 + 2.0 mm (0 + 0.079 in.) 0 - 1.0 mm (0 - 0.039 in.)
C - C	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
D - D	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.0 mm (0 - 0.039 in.)

HINT:
"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.



(c) Perform a gap check.
(1) Check the gap between the roof panel and roof glass.
NOTICE:
The gap must be even all around.
(d) After adjusting the sliding roof glass, using a T25 "TORX" driver, install the sliding roof glass sub-assembly with the 4 screws.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

4. CHECK FOR WATER LEAKS
(a) After adjusting the sliding roof glass sub-assembly, check for water leaks.
(b) If there are any leaks, readjust the sliding roof glass sub-assembly.



5. INSTALL SLIDING ROOF SIDE GARNISH LH
(a) Engage the 6 claws and install the sliding roof side garnish LH.

6. INSTALL SLIDING ROOF SIDE GARNISH RH
HINT:
Use the same procedures for the RH side and the LH side.

7. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY LH
(See page RS-421)

8. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH
HINT:
Use the same procedures for the RH side and the LH side.

9. INSTALL FRONT SIDE RAIL SPACER LH
(a) Engage the 2 claws and install the front side rail spacer LH.

10. **INSTALL FRONT SIDE RAIL SPACER RH**
HINT:
Use the same procedures for the RH side and the LH side.
11. **INSTALL ROOF HEADLINING ASSEMBLY (See page IR-46)**
12. **INSTALL SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-47)**
13. **INSTALL SUN ROOF OPENING TRIM MOULDING (See page IR-47)**
14. **INSTALL SPOT LIGHT ASSEMBLY (See page IR-48)**
15. **INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-49)**
16. **INSTALL REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-49)**
17. **INSTALL VISOR HOLDER (See page IR-49)**
18. **INSTALL VISOR ASSEMBLY LH (See page IR-50)**
19. **INSTALL VISOR ASSEMBLY RH (See page IR-50)**
20. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-50)**
21. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**
22. **INSTALL FRONT PILLAR GARNISH RH (See page IR-52)**
23. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)**
24. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)**
25. **INSTALL UPPER CENTER PILLAR GARNISH LH (See page IR-53)**
26. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-53)**
27. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-53)**
28. **INSTALL LAP BELT OUTER ANCHOR COVER (See page IR-53)**
29. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-54)**
30. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
31. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
32. **INSTALL UPPER CENTER PILLAR GARNISH RH (See page IR-54)**

33. **INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-54)**
34. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-54)**
35. **INSTALL LAP BELT OUTER ANCHOR COVER (See page IR-54)**
36. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-55)**
37. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
38. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
39. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-54)**
40. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-55)**
41. **INSTALL DOOR ASSIST GRIP COVER LH (See page ED-56)**
42. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-56)**
43. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**
44. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
45. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**
46. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**
47. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)**
48. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)**
49. **INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)**
50. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**
51. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**
52. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**

53. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**

54. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)**
HINT:
Use the same procedures for the RH side and the LH side.

55. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**

56. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**

57. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**

58. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

59. **INSTALL REAR SEAT HEADREST ASSEMBLY**

60. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-84)**

61. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-41)**

62. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Power Seat) (See page SE-42)**

63. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-42)**

64. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

65. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-24)**

66. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-25)**

67. **INSTALL SEAT TRACK COVER LH (for Manual Seat) (See page SE-25)**

68. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

69. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

70. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

71. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

72. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

73. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

74. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

75. **INSTALL SEAT TRACK COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

76. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

77. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

78. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)**
(See page RS-242)

79. **INSPECT SRS WARNING LIGHT**
(See page RS-32)

80. **RESET SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY**
(See page RF-4)

81. **CHECK SLIDING ROOF SYSTEM**
(See page RF-11)

82. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat)**
(See page SE-42)

83. **INSPECT FRONT SEAT ADJUSTER ASSEMBLY (for Manual Seat)**

AIRBAG SYSTEM

PRECAUTION

CAUTION:

- **The vehicle is equipped with a Supplemental Restraint System (SRS). It consists of a driver airbag, front passenger airbag, driver side knee airbag, side airbag, curtain shield airbag, and front seat belt pretensioner. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Further, if a mistake is made in servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the correct procedures indicated in the repair manual.**
- **Wait at least 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery before starting the operation.**
  (The SRS is equipped with a backup power source, so if work is started within 90 seconds after disconnecting the negative (-) terminal cable from the battery, the SRS may be deployed.)
- **Do not expose the steering pad, front passenger airbag assembly, driver side knee airbag assembly, center airbag sensor assembly, front airbag sensor, front seat inner belt assembly, seat position airbag sensor, occupant classification ECU, front seat side airbag assembly, side airbag sensor, curtain shield airbag assembly, rear airbag sensor, or front seat outer belt assembly directly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.**
- **Even in the case of a minor collision when the SRS does not deploy, the steering pad, front passenger airbag assembly, driver side knee airbag assembly, center airbag sensor assembly, front airbag sensor, front seat inner belt assembly, seat position airbag sensor, occupant classification ECU, front seat side airbag assembly, side airbag sensor, curtain shield airbag assembly, rear airbag sensor, or front seat outer belt assembly should be inspected.**
- **Before repair work, remove the airbag sensor if any kind of shock is likely to occur to the airbag sensor during the operation.**
- **Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.**

- **Never disassemble or repair any of the following parts in order to reuse them. If any of these parts have been dropped, or a defect is found (e.g. cracks, dents or any other defects) in any of the housings, brackets or connectors, then replace the part with a new one.**
  (a) Steering Pad
  (b) Front Passenger Airbag Assembly
  (c) Driver Side Knee Airbag Assembly
  (d) Front Seat Side Airbag Assembly
  (e) Curtain Shield Airbag Assembly
  (f) Center Airbag Sensor Assembly
  (g) Front Airbag Sensor
  (h) Front Seat Inner Belt Assembly
  (i) Seat Position Airbag Sensor
  (j) Occupant Classification ECU
  (k) Side Airbag Sensor
  (l) Rear Airbag Sensor
  (m) Front Seat Outer Belt Assembly
- **Use an volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached near the SRS components. Follow the instructions in the caution.**
- **After work on the SRS is completed, perform the SRS warning light check (See page RS-32).**
- **When the negative (-) terminal cable is disconnected from the battery, the memory will be cleared. Because of this, be sure to make a record of the contents memorized in each system before starting work. When work is finished, adjust each system as it was before. Never attempt to avoid erasing vehicle system memories by using a backup power supply from outside the vehicle.**
- **If the vehicle is equipped with a mobile communication system, refer to the precaution in the INTRODUCTION section.**

HINT:
In the airbag system, the center airbag sensor assembly, front airbag sensor LH and RH, side airbag sensor LH and RH, and rear airbag sensor LH and RH are collectively referred to as the airbag sensors.

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

(a) Before starting the following operations, wait for at least 90 seconds after disconnecting the negative (-) terminal cable from the battery:
  (1) Replacement of the airbag sensors.
  (2) Adjustment of the front/rear doors of the vehicle equipped with the side airbag and curtain shield airbag (fitting adjustment).

(b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.

(c) Do not use the airbag sensors which have been dropped during the operation or transportation.

(d) Do not disassemble the airbag sensors.

RS

2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) When the airbag has not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.

(b) When any of the airbags have deployed, replace the airbag sensors and check the installation condition.

3. EXPRESSIONS OF IGNITION SWITCH

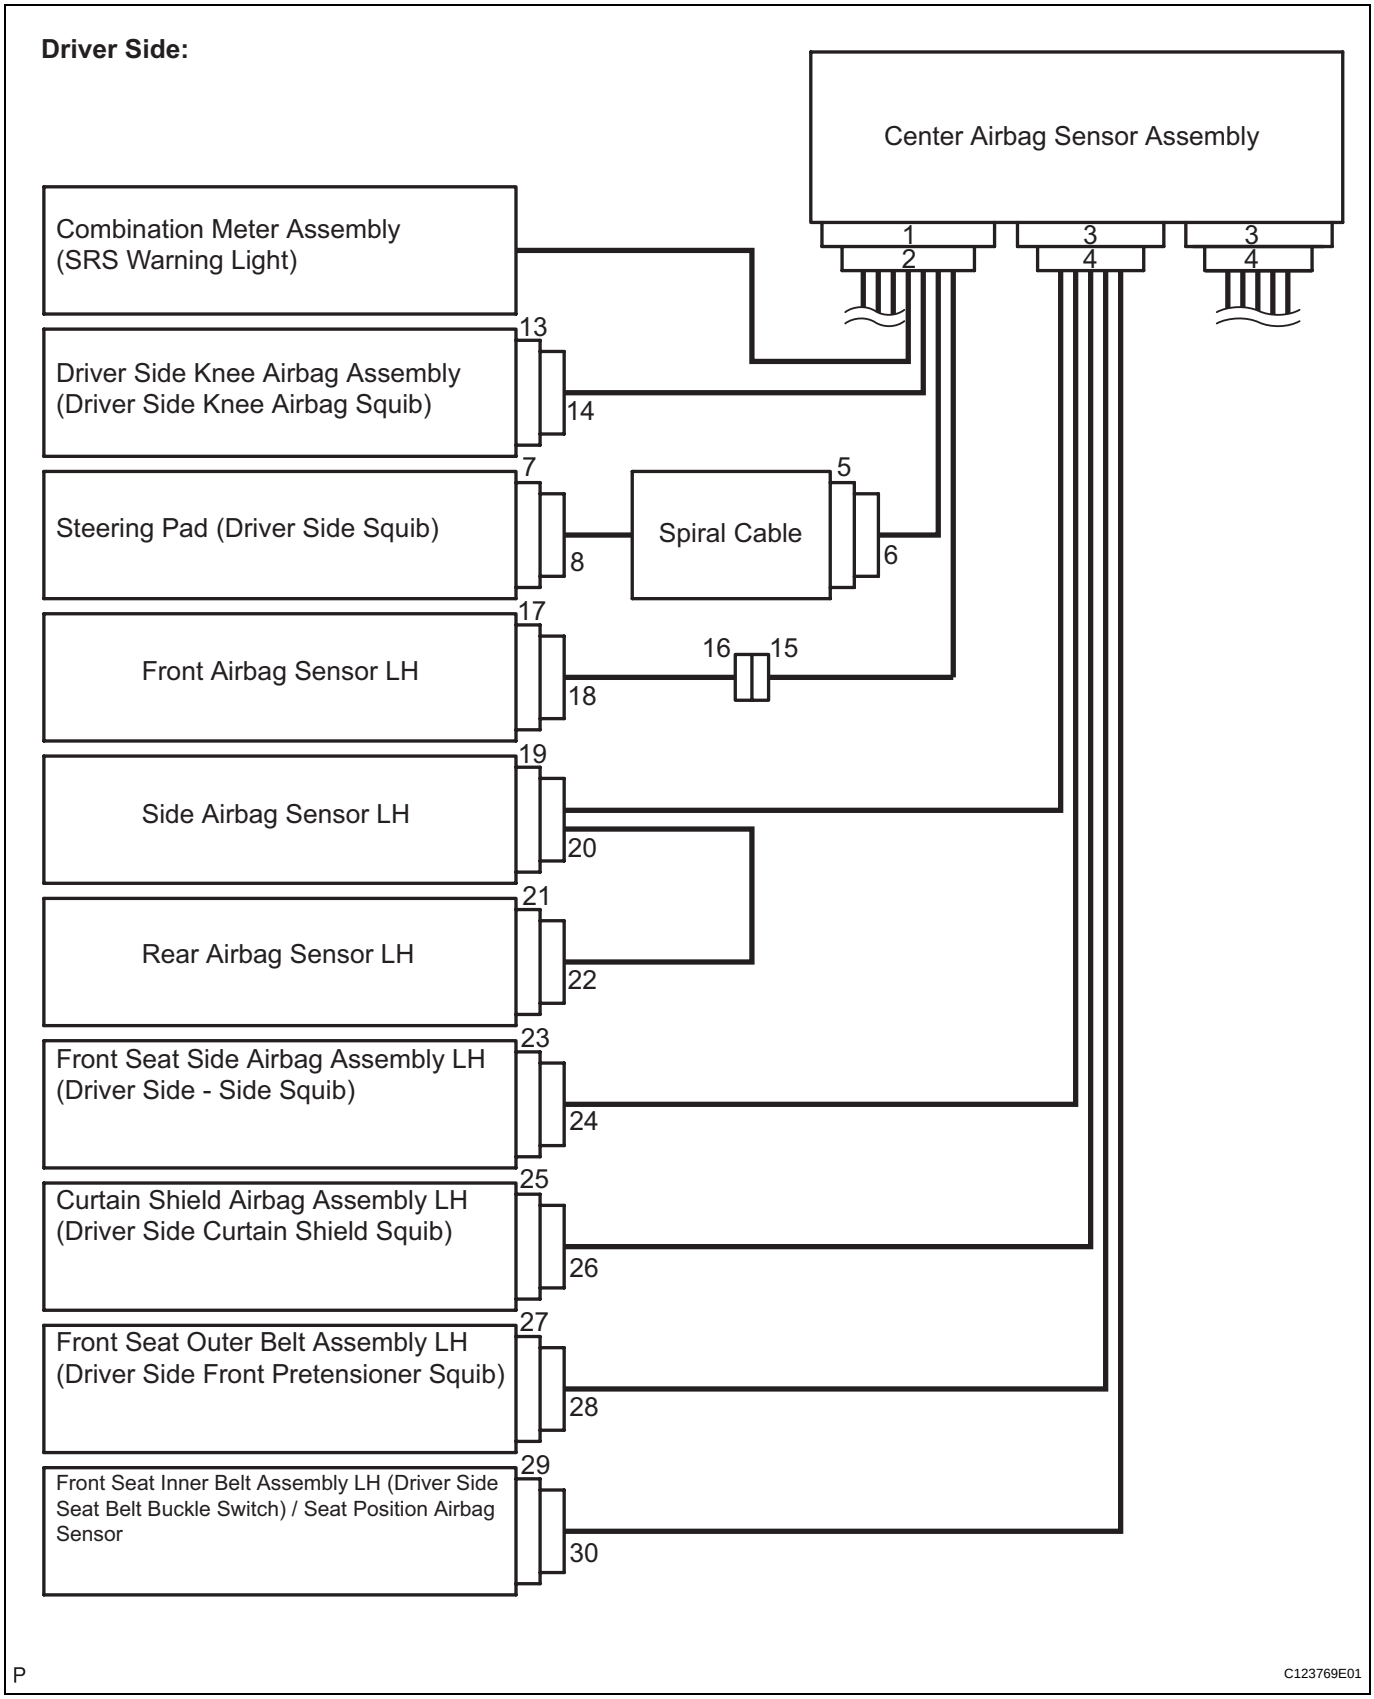
The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

Expression	Switch Type	
	Ignition Switch (position)	Engine Switch (condition)
Ignition Switch off	LOCK	Off
Ignition Switch on (IG)	ON	On (IG)
Ignition Switch on (ACC)	ACC	On (ACC)
Engine Start	START	Start

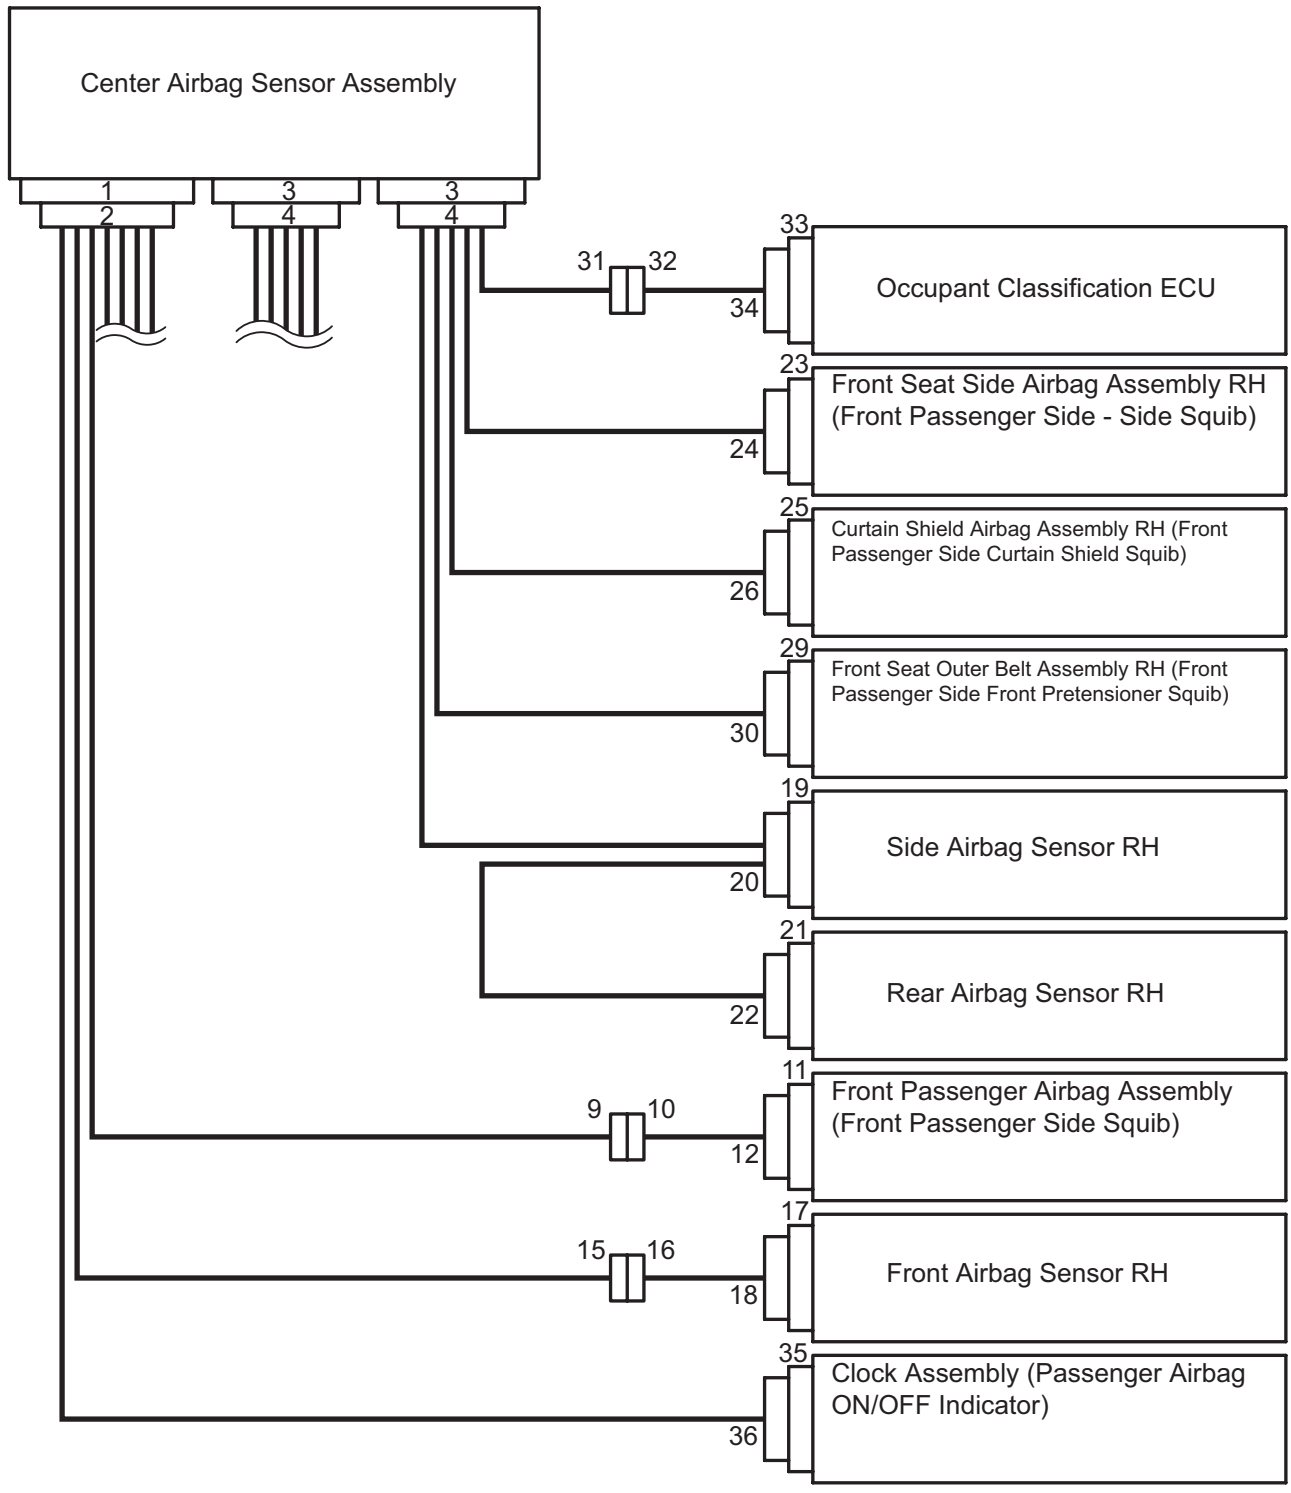
4. SRS CONNECTORS

(a) SRS connectors are located as shown in the following illustration.



RS

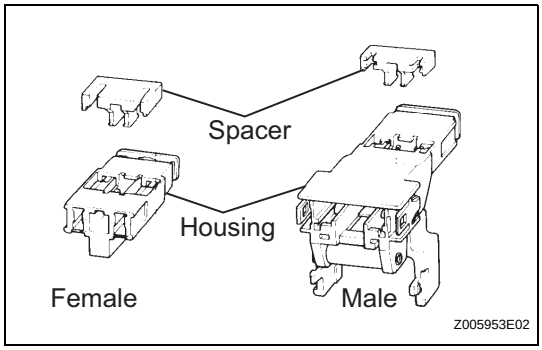
Passenger Side:



No.	Item	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 5, 6, 9, 10, 15, 16, 20, 22, 23, 24, 31, 32
(2)	Activation Prevention Mechanism	Connectors 2, 4, 5, 10, 11, 13, 23, 25, 27
(3)	Half Connection Prevention Mechanism	Connectors 5, 6, 9, 16, 20, 22, 24

RS

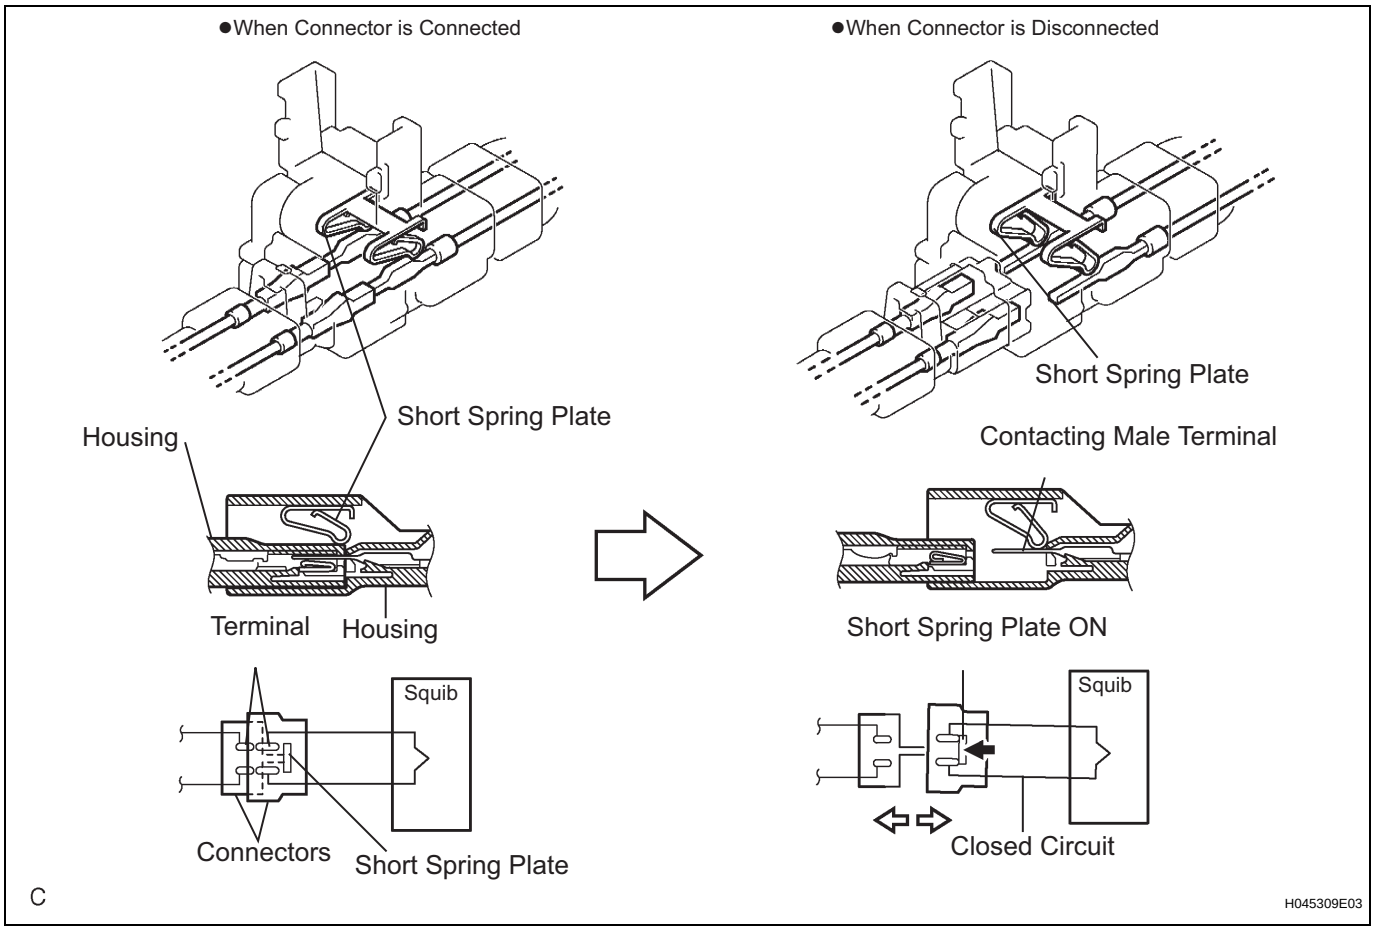
No.	Item	Application
(4)	Connector Position Assurance Mechanism	Connector 18
(5)	Connector Lock Mechanism (1)	Connectors 8, 12, 14, 26, 28
(6)	Connector Lock Mechanism (2)	Connector 2, 4
(7)	Improper Connection Prevention Lock Mechanism	Connector 1, 3



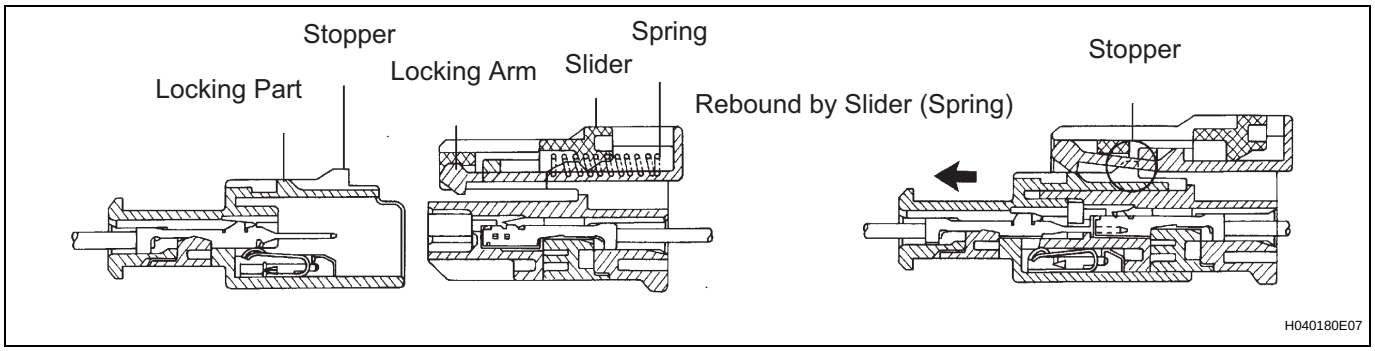
(b) All connectors in the SRS, except the seat position airbag sensor connector, are colored yellow to distinguish them from other connectors. These connectors have special functions, and are specially designed for the SRS. All SRS connectors use durable gold-plated terminals, and are placed in the locations shown on the previous page to ensure high reliability.

(1) Terminal twin-lock mechanism:
All connectors with a terminal twin-lock mechanism have a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.

(2) Activation prevention mechanism:
All connectors with an activation prevention mechanism contain a short spring plate. When these connectors are disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.

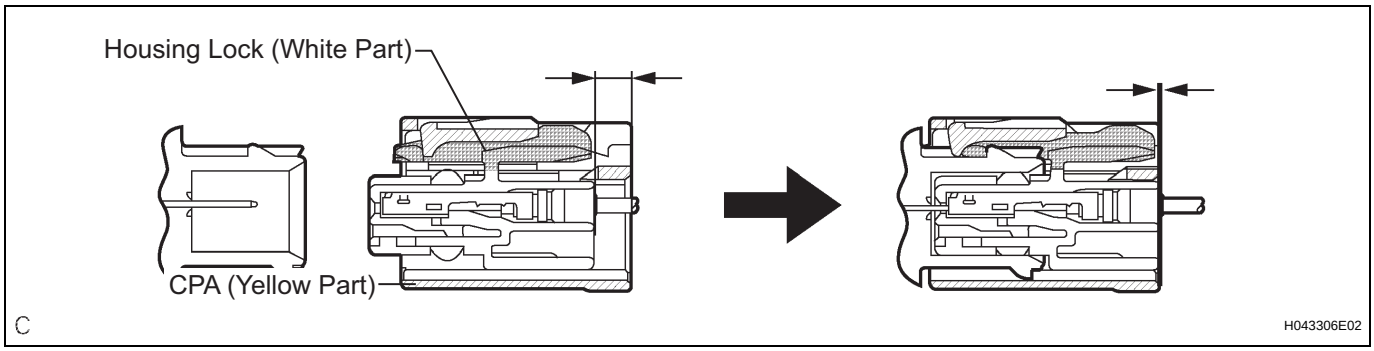


(3) Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected due to the spring operation so that no continuity exists.

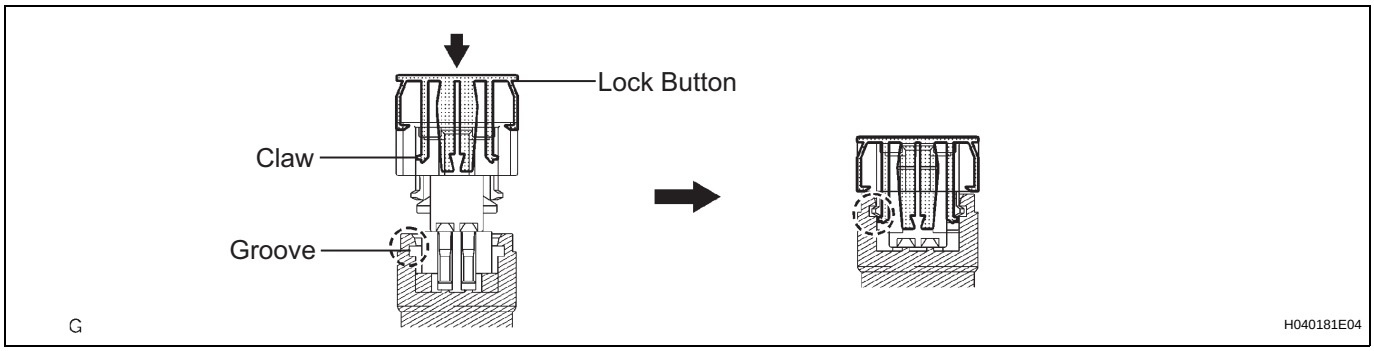


RS

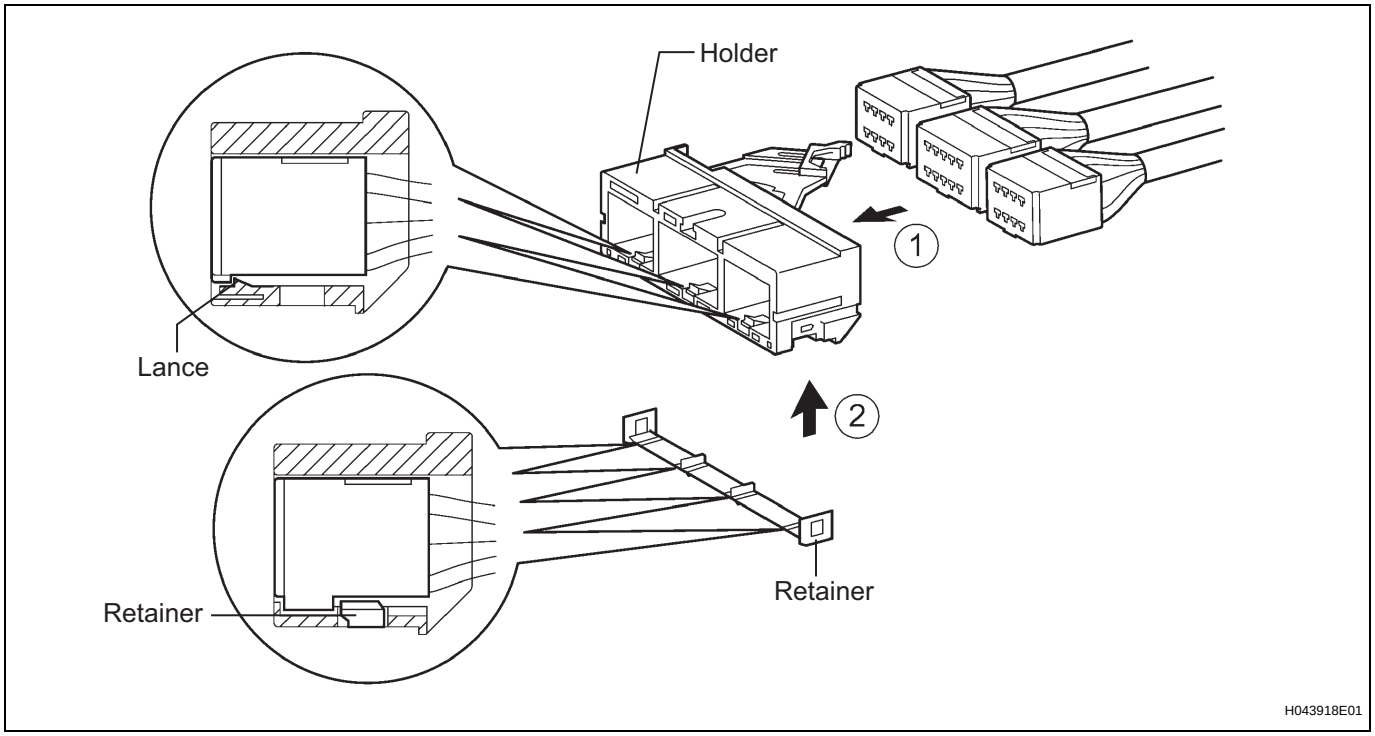
(4) Connector position assurance mechanism:
Only when the housing lock (white part) is completely engaged, the CPA (yellow part) slides, which completes the connector engagement.



(5) Connector lock mechanism (1):
Locking the connector lock button connects the connector securely.

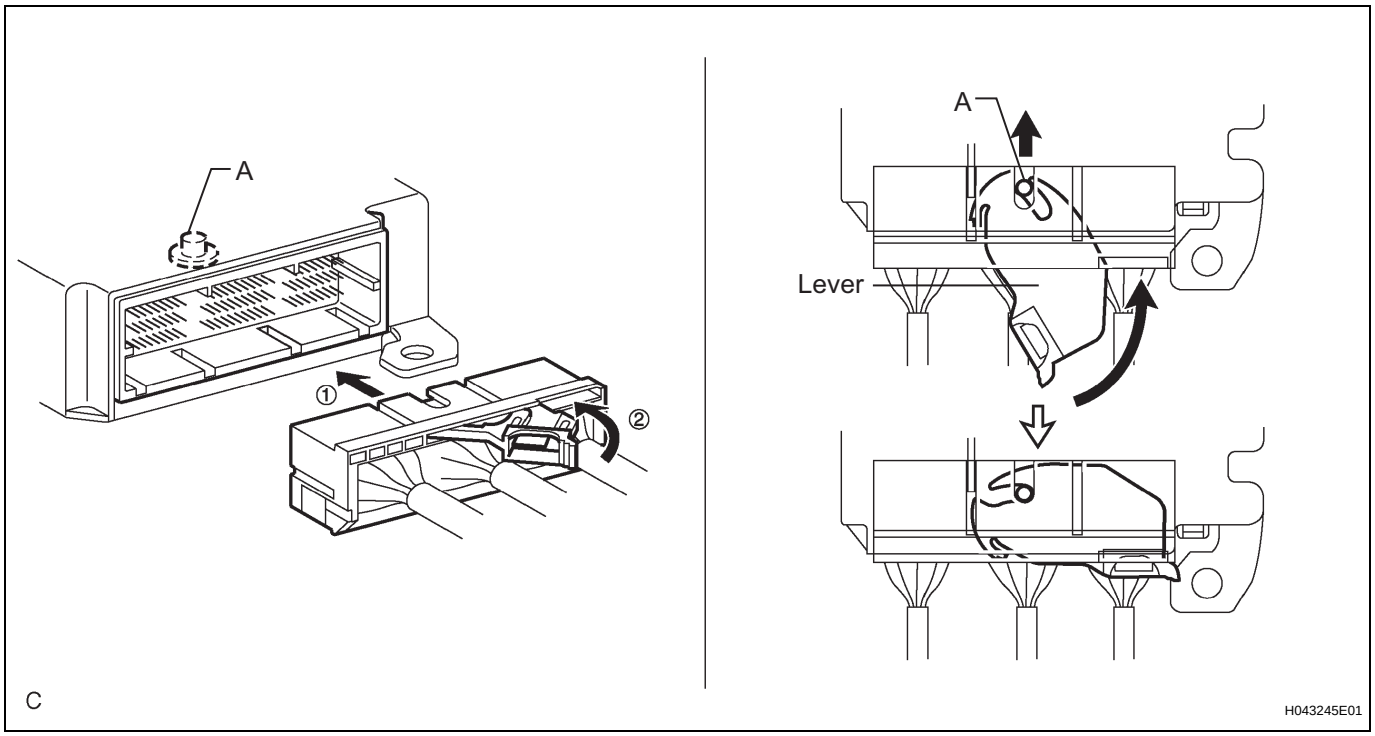


(6) Connector lock mechanism (2):
Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from becoming disconnected.



(7) Improper connection prevention lock mechanism:
When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.

RS



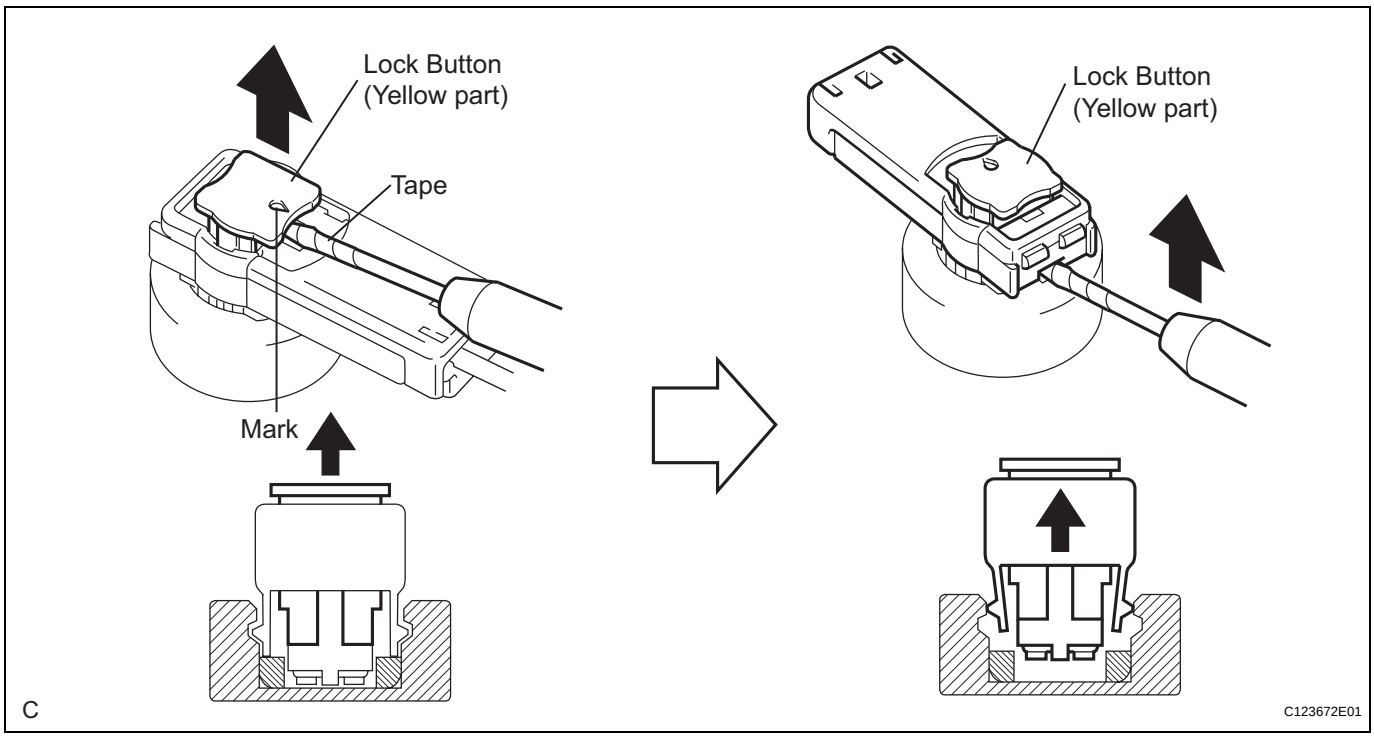
5. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), DRIVER SIDE KNEE AIRBAG ASSEMBLY, CURTAIN SHIELD AIRBAG ASSEMBLY, AND FRONT SEAT OUTER BELT ASSEMBLY

HINT:

Tape up the screwdriver tip before use.

(a) Release the lock button (yellow part) of the connector using a screwdriver.

(b) Insert the screwdriver tip between the connector and the base, and then raise the connector.

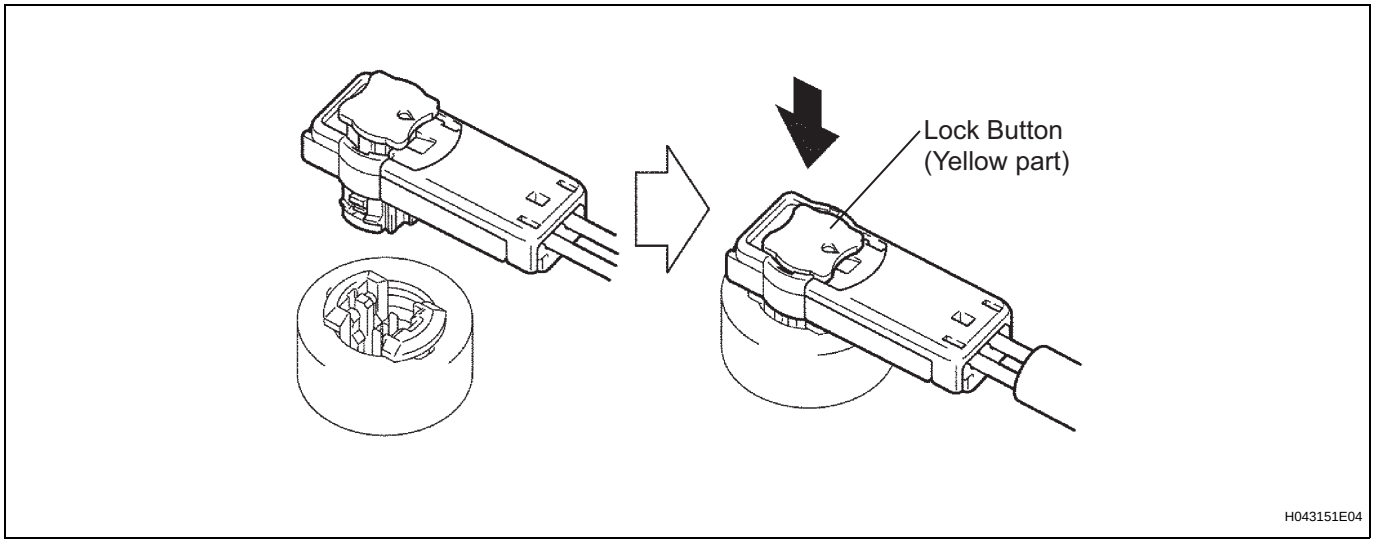


6. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), DRIVER SIDE KNEE AIRBAG ASSEMBLY, CURTAIN SHIELD AIRBAG ASSEMBLY, AND FRONT SEAT OUTER BELT ASSEMBLY

(a) Connect the connector.

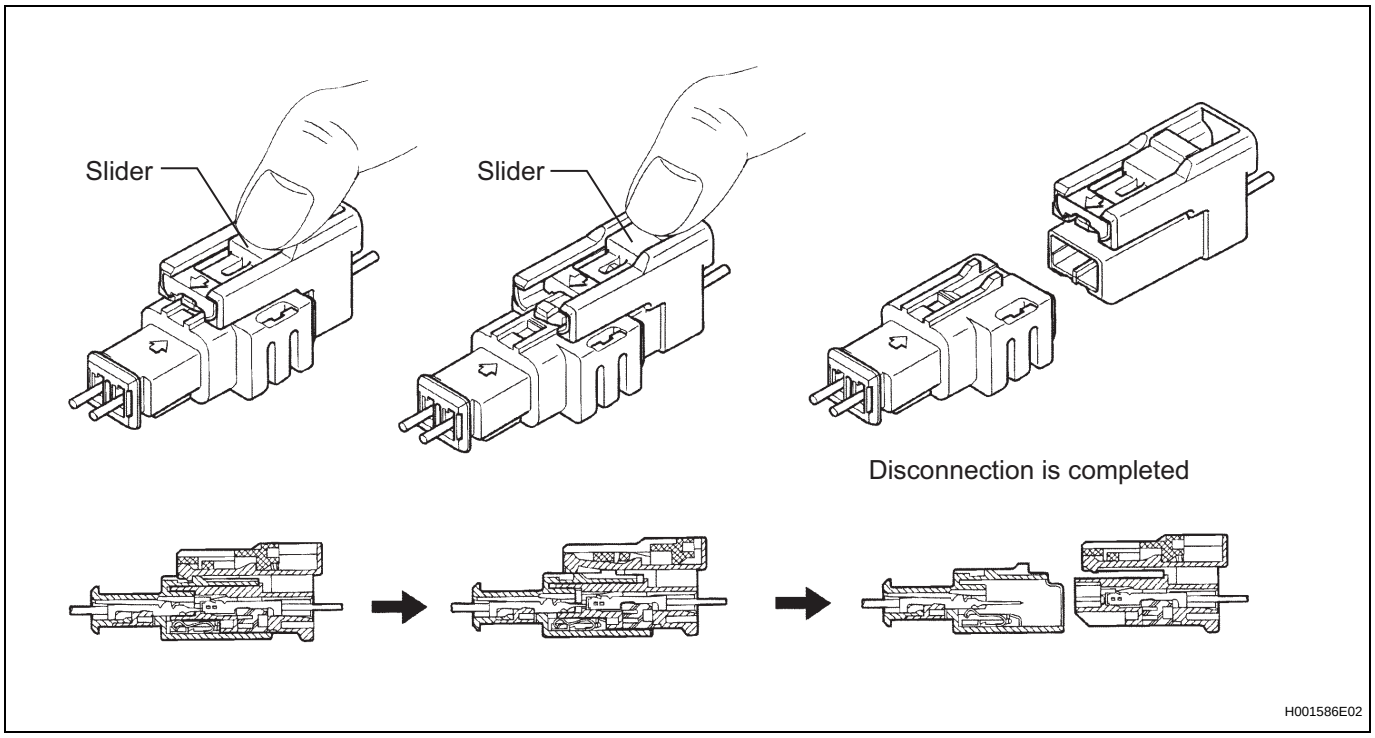
RS

(b) Push down securely on the lock button (yellow part) of the connector. (When locking, a click sound can be heard.)



7. DISCONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE) AND FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

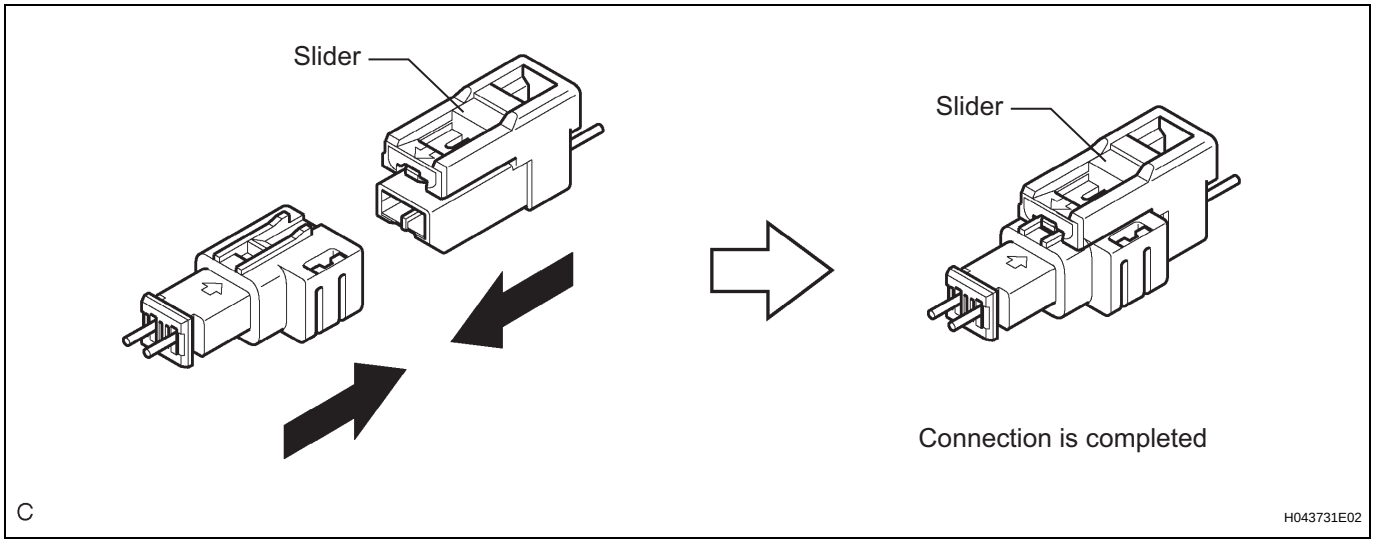
(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



RS

8. CONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE) AND FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

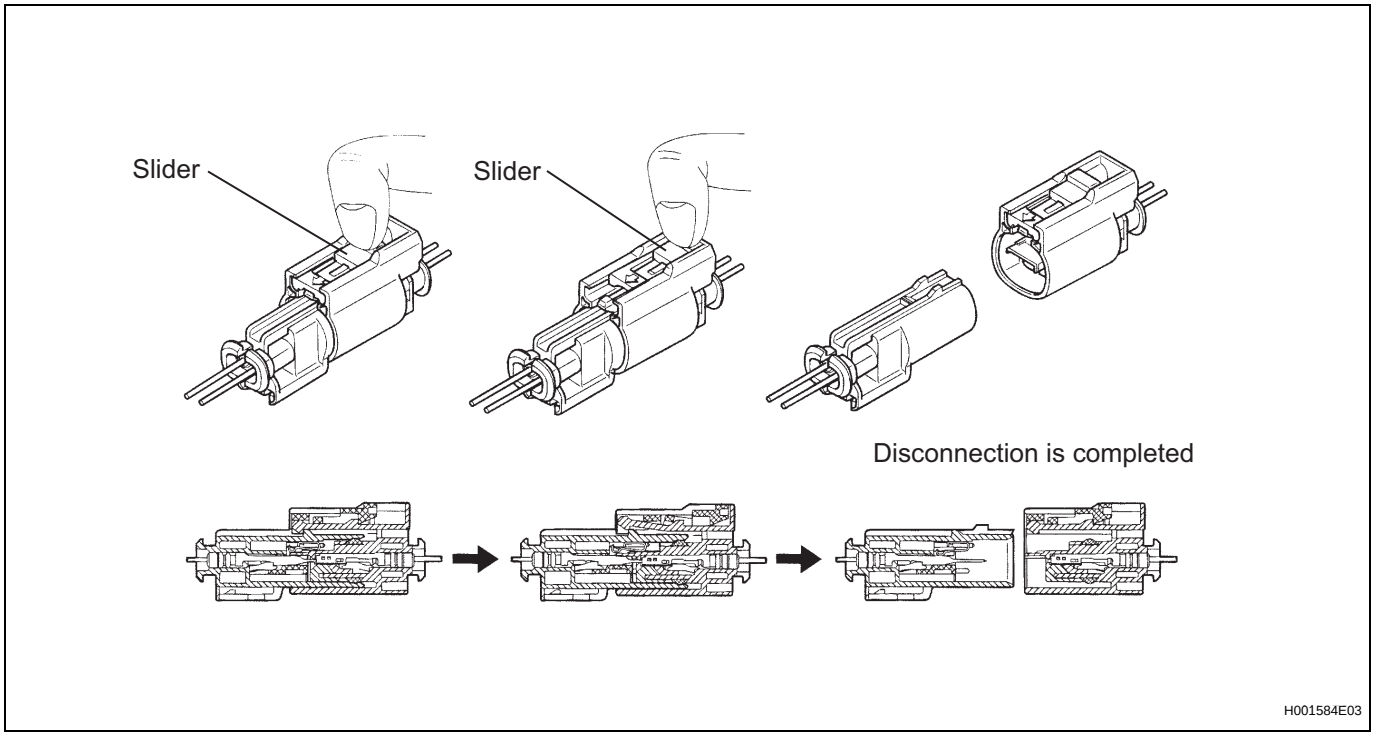
(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.



RS

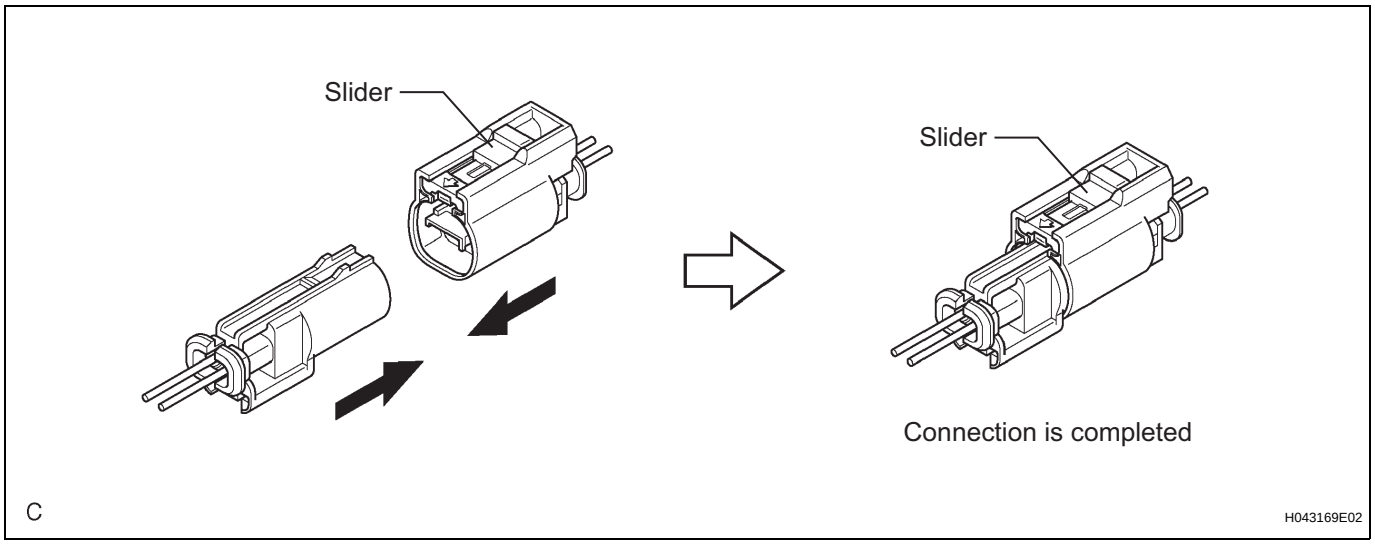
9. DISCONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



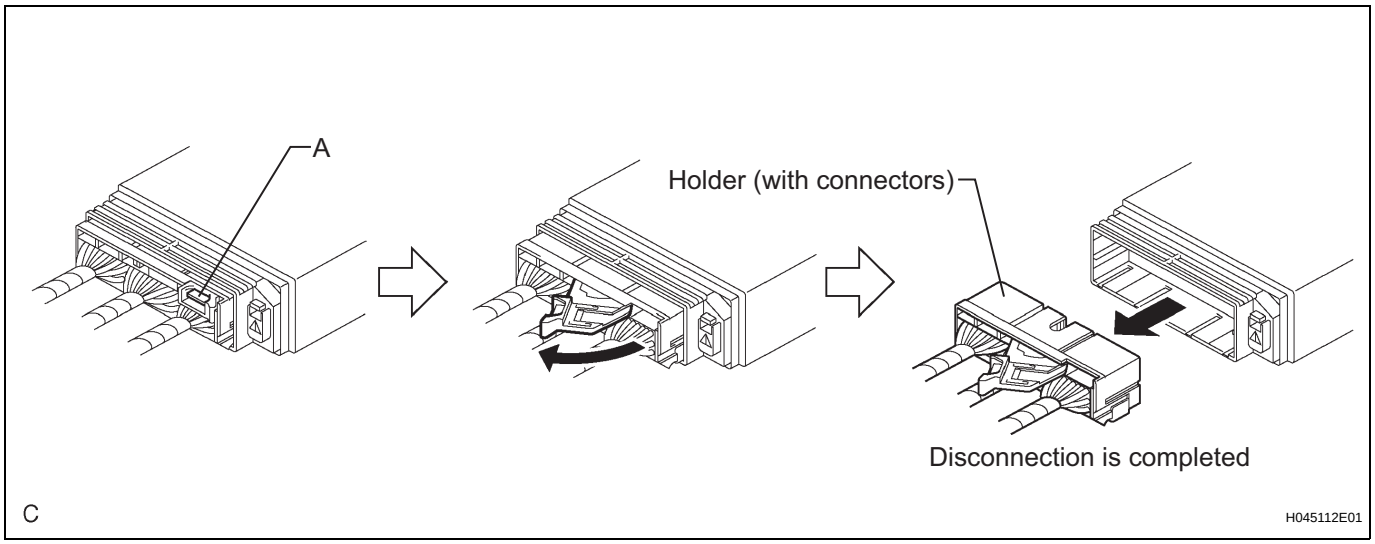
10. CONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.



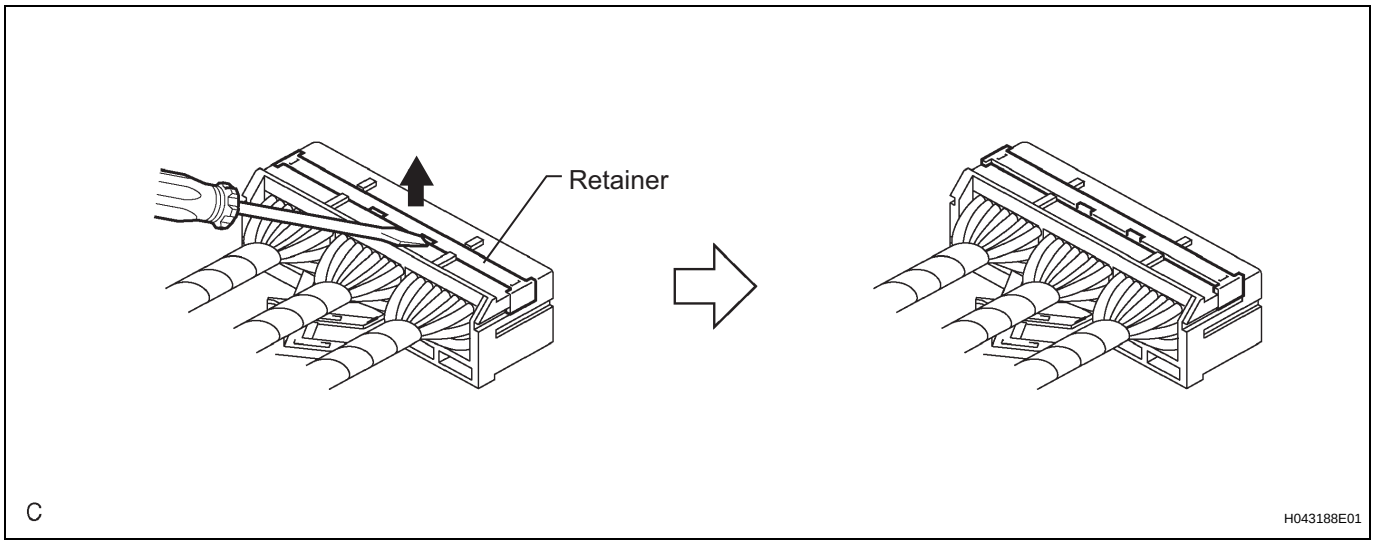
11. DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).

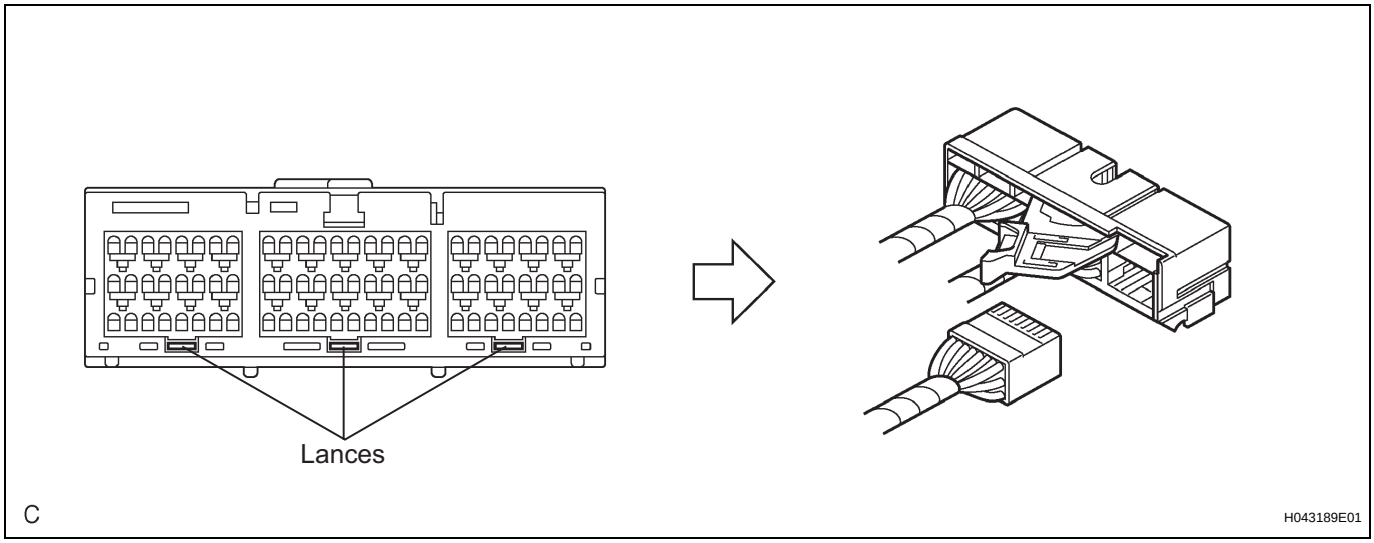


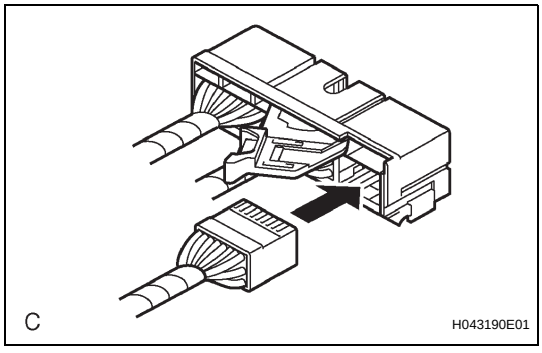
HINT:
Perform the following procedures when replacing the holder.

(b) Remove the holder.
(1) Using a screwdriver, unlock the retainer.



(2) Release the fitting lance and remove the holder.





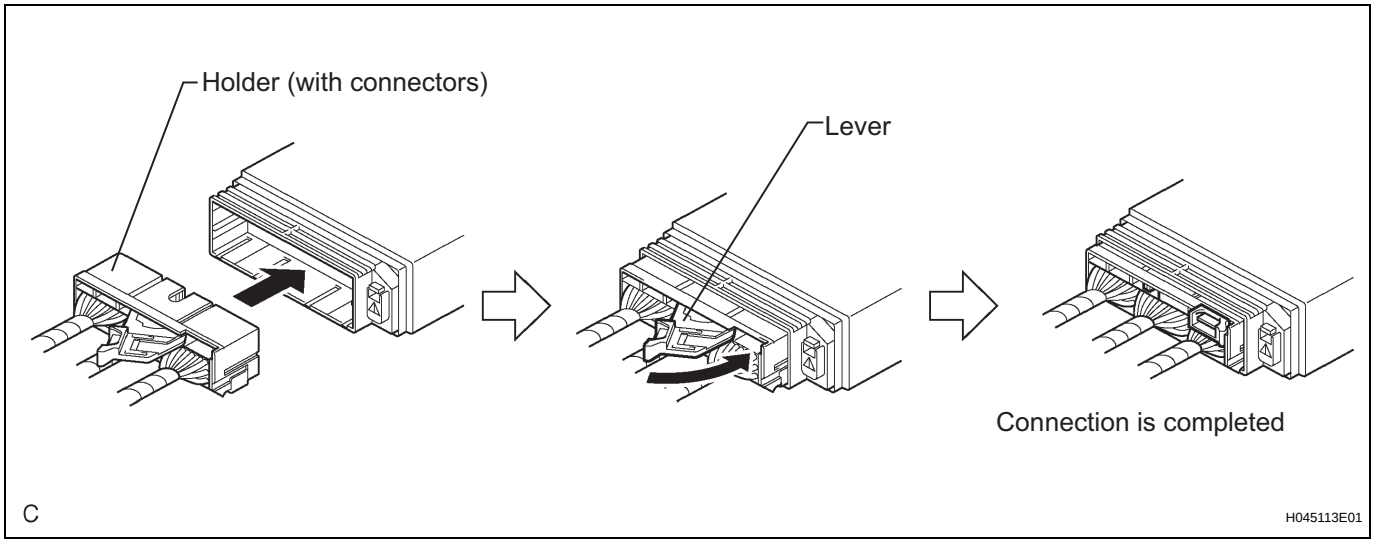
(c) Install the holder.
(1) Install the connectors to the holder. (When locking, a click sound can be heard.)
HINT:
The retainer is locked when the holder is connected.

12. CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Firmly insert the holder (with connectors) into the center airbag sensor assembly until it cannot be pushed any further.

RS

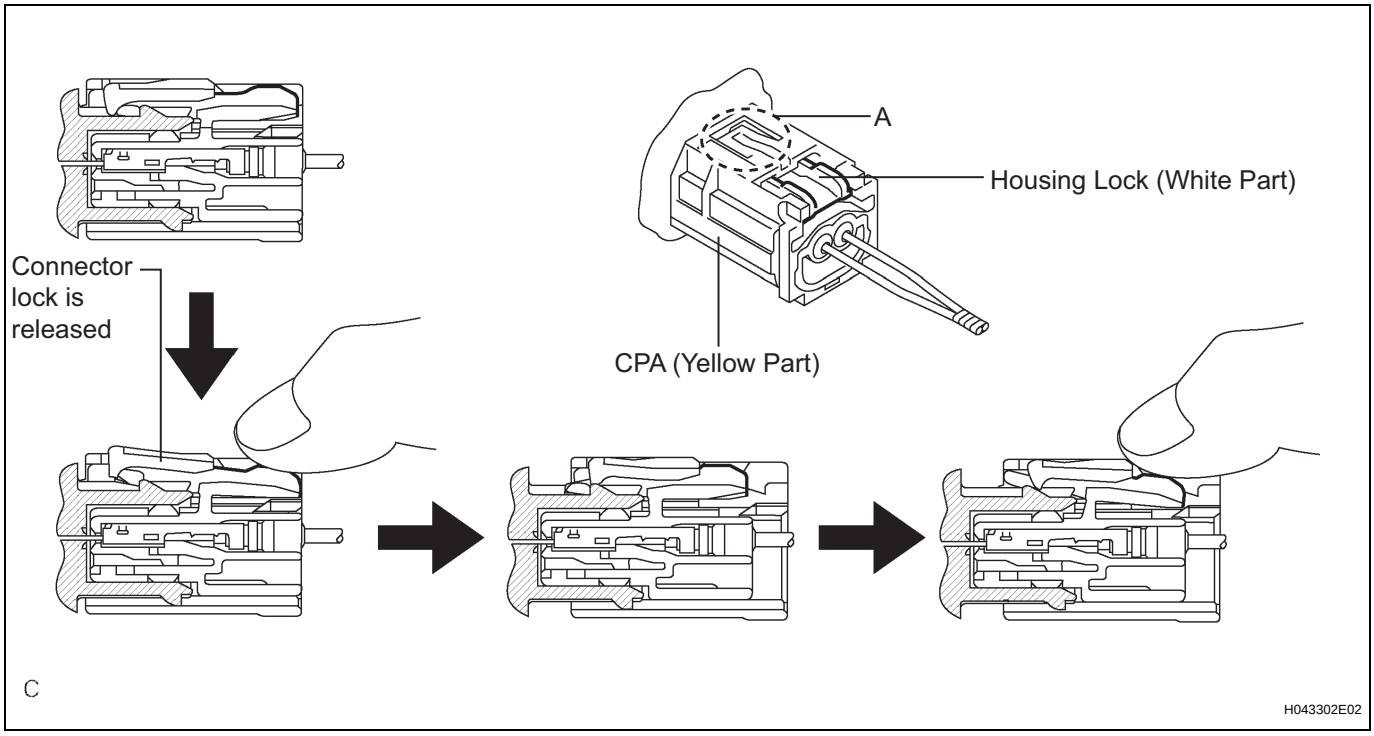
(b) Push the lever to connect the holder (with connectors). (When locking, a click sound can be heard.)
HINT:
The holder slides into the center airbag sensor assembly when it is being connected. Be sure not to hold the holder while connecting, as it may result in an insecure fit.



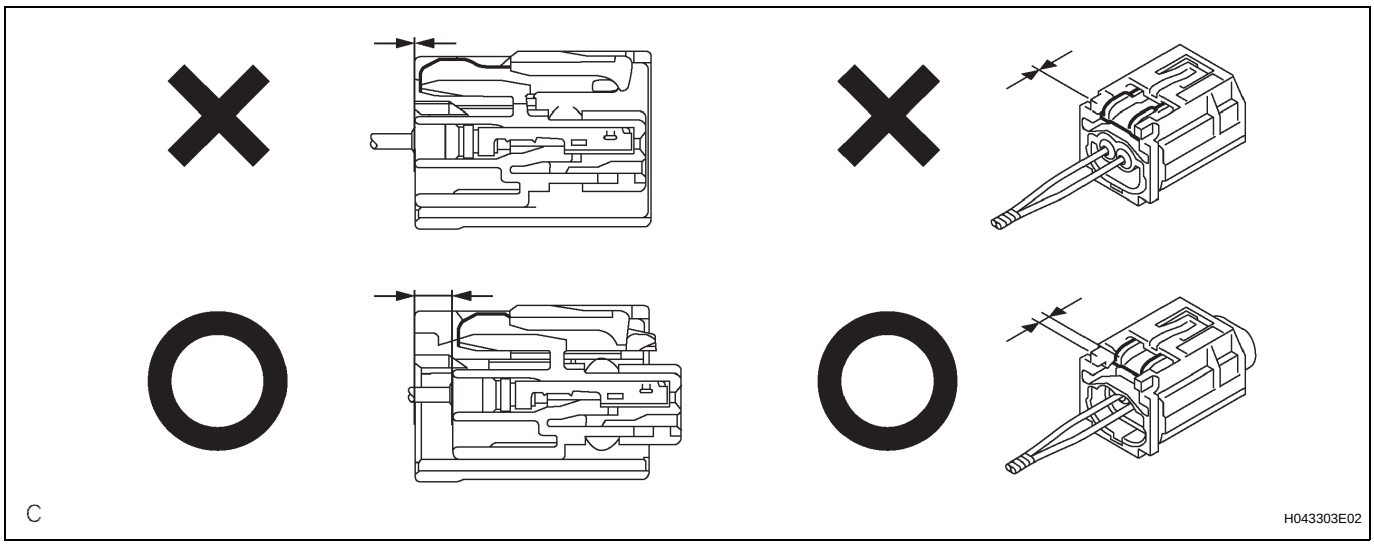
13. DISCONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

(a) Push down the housing lock (white part) and slide the CPA (yellow part). (At this time, the connector cannot be disconnected yet.)

(b) Push down the housing lock (white part) again and disconnect the connector.
HINT:
Do not push down the A part shown in the illustration when disconnecting.

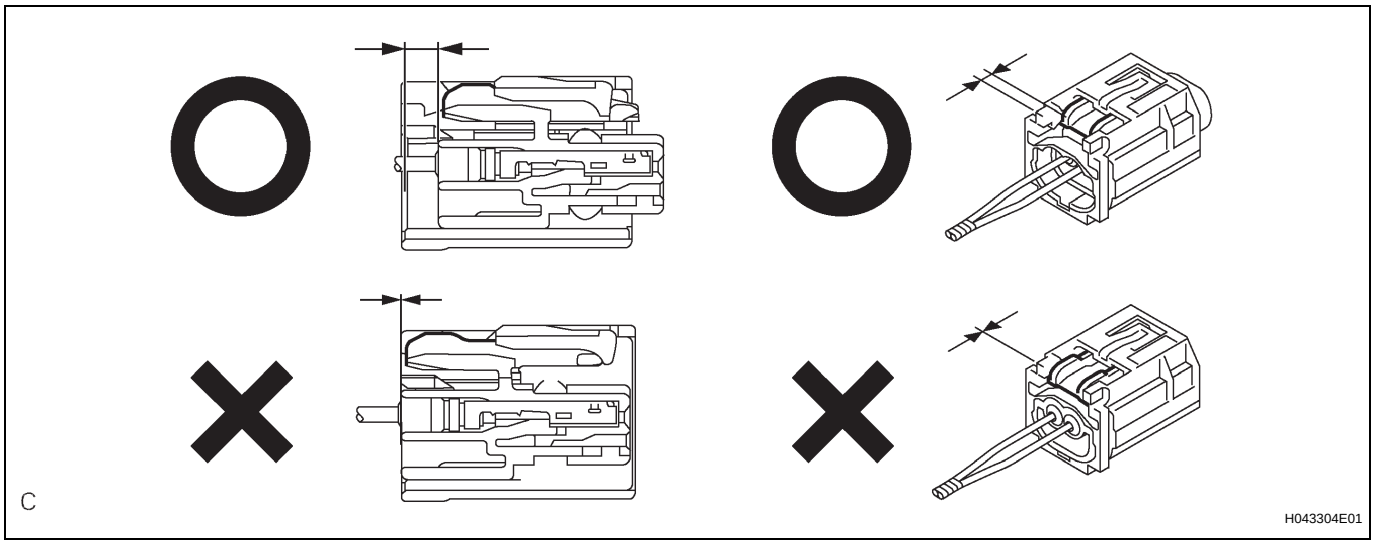


(c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.



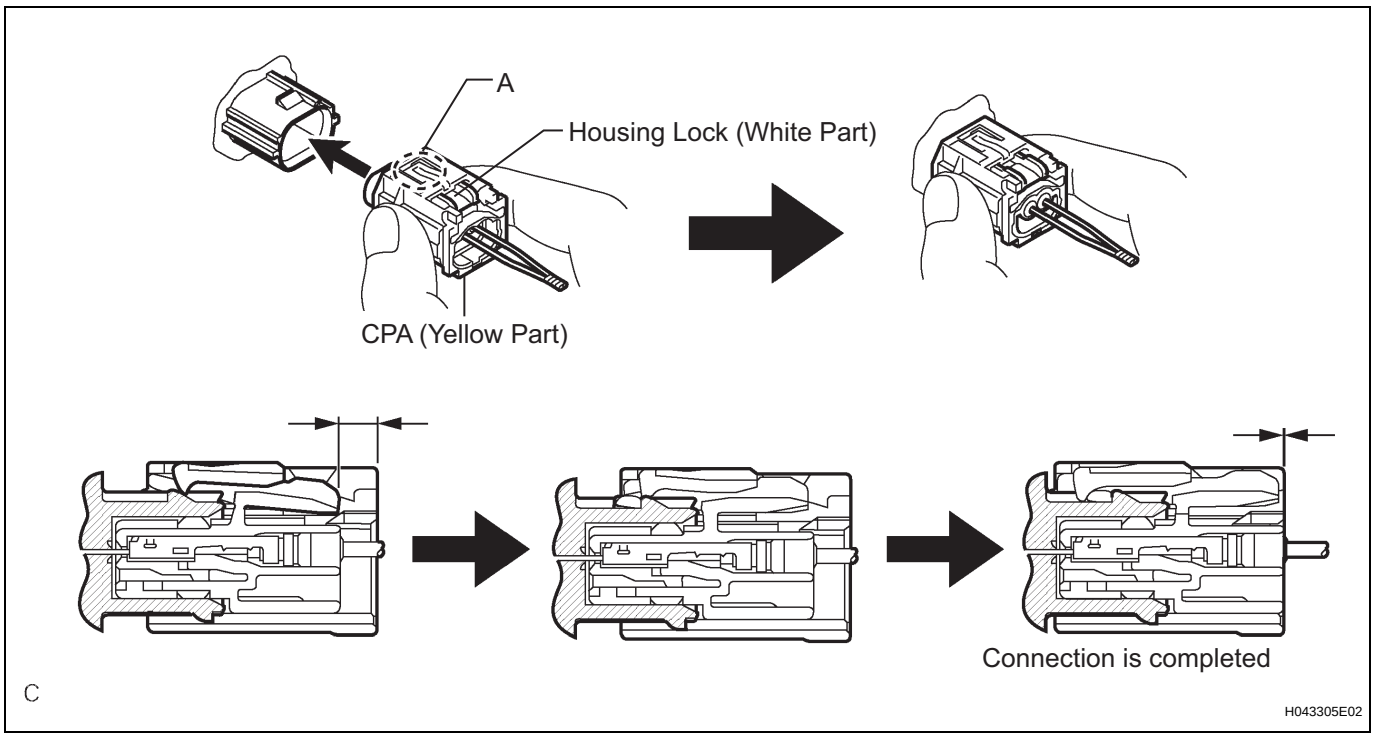
14. CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR

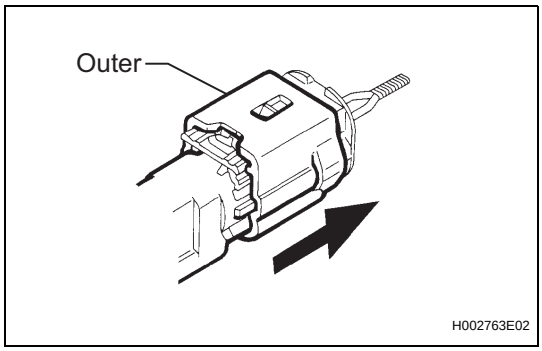
(a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.



(b) Be sure to engage the connectors until they are locked. (When locking, make sure that a click sound can be heard.)
HINT:
When connecting them, the housing lock (white part) slides. Be sure not to hold the housing lock (white part) and A part, as it may result in an insecure fit.

RS

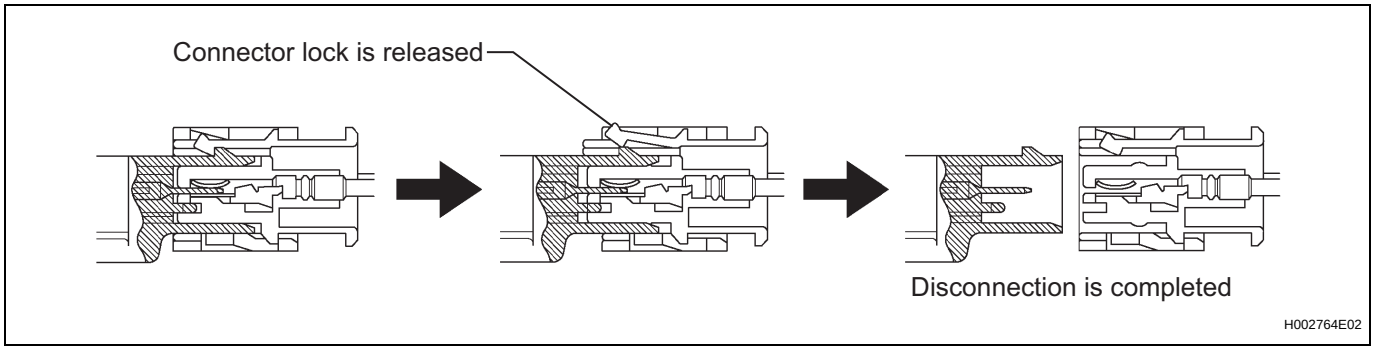




15. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) While holding the sides of the outer connector locking sleeve, slide the outer in the direction shown by the arrow.

(b) When the connector lock is released, the connectors are disconnected.
HINT:
Be sure to hold both outer flank sides. Holding the top and bottom will make disconnection difficult.



16. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) Connect the connector as shown in the illustration (When locking, make sure that the outer returns to its original position and a click sound can be heard).
HINT:
When connecting, the outer will slide. Be sure not to hold the outer while connecting, as it may result in an insecure fit.

SYSTEM DESCRIPTION

1. GENERAL

(a) In conjunction with impact absorbing structure for a front collision, the SRS (Supplemental Restraint System) driver airbag, front passenger airbag, and driver side knee airbag were designed to supplement seat belts in the event of a front collision in order to help reduce shock to the head and chest of the driver and front passenger and knee of the driver. This system is a 3-sensor type airbag system to detect the impact during a front collision using the center airbag sensor assembly and front airbag sensors. It also operates the airbag system and seat belt pretensioner.

(b) In order to detect the extent of the collision during the initial stages of the collision in further details, the front airbag sensors have been changed from mechanical type to electrical type deceleration sensors. Accordingly, the deployment of the driver airbag and front passenger airbag is controlled in two stages according to the severity of the impact.

(c) In conjunction with impact absorbing structure for a side collision, the side airbag and curtain shield airbag were designed to help reduce shock to the driver, front passenger, and rear outer passengers in the event of a side collision.

(d) The curtain shield airbag that helps reduce shock to the front and rear seat occupants with a single curtain shield airbag has been adopted. In conjunction with this system, the side airbag sensors have been installed at the bottom of the center pillars and the rear airbag sensors have been installed at the bottom of the rear pillars.

(e) In this system, a front side collision is detected by the side airbag sensor in order to simultaneously deploy the side and curtain shield airbags. A rear side collision is detected by the rear airbag sensor and the center airbag sensor assembly in order to deploy the curtain shield airbag.

(f) The center airbag sensor assembly sends the airbag deployment signal to the ECM through CAN (Controller Area Network) to operate the fuel pump control.

2. CONSTRUCTION AND OPERATION

(a) FRONT AIRBAG SENSOR

(1) The front airbag sensors are installed on the right and left radiator supports respectively.

(2) The front airbag sensor consists of the deceleration sensor.

(3) The deceleration sensor is built into the front airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a frontal collision. Accordingly, the extent of the initial collision can be detected in detail.

(b) SIDE AIRBAG SENSOR

(1) The side airbag sensors are installed on the bottom of the right and left center pillars respectively.

(2) The side airbag sensor consists of the deceleration sensor and ignition control circuit.

(3) The deceleration sensor is built into the side airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front side collision. Accordingly, the extent of the initial collision can be detected in detail.

(c) REAR AIRBAG SENSOR

(1) The rear airbag sensors are installed on the right and left rear pillars respectively.

(2) The rear airbag sensor consists of the deceleration sensor and ignition control circuit.

(3) The deceleration sensor is built into the rear airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision. Accordingly, the extent of the initial collision can be detected in detail.

(d) CENTER AIRBAG SENSOR ASSEMBLY

(1) General

- The center airbag sensor assembly is installed on the center floor under the instrument panel.
- The center airbag sensor assembly consists of the deceleration sensor, safing sensor, electronic safing sensor, ignition control circuit, and diagnostic circuit.
- The center airbag sensor assembly receives signals from the deceleration sensor and safing sensor built into the center airbag sensor assembly and front airbag sensor. Then the center airbag sensor assembly determines whether the driver airbag, front passenger airbag, driver side knee airbag, and front seat belt pretensioners should be activated, and diagnoses system malfunctions.
- The center airbag sensor assembly causes the front seat side airbag assembly and the curtain shield airbag assembly to deploy when receiving signals from the side airbag sensor.

- The center airbag sensor assembly receives signals from the deceleration sensor and the electronic safing sensor built into the center airbag sensor assembly and the rear airbag sensor, and determines whether the curtain shield airbag should be activated, and diagnoses system malfunctions.
- The center airbag sensor assembly sends the airbag deployment signal to the ECM through CAN to operate the fuel pump control.

(2) Deceleration sensor and ignition control circuit
- The deceleration sensor is built into the center airbag sensor assembly.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor assembly and front airbag sensor. If the calculated values are greater than the specified values, it activates ignition operation.

(3) Safing sensor
- The safing sensor is built into the center airbag sensor assembly. During a front collision, the sensor turns on and outputs an ON signal to the center airbag sensor assembly if a deceleration rate sent to the safing sensor is greater than the specified value.

(4) Electronic safing sensor
- The electronic safing sensor is built into the center airbag sensor assembly. During a side collision, the sensor turns on and outputs an ON signal to the center airbag sensor assembly if a deceleration rate sent to the electronic safing sensor is greater than the specified value.

(5) Backup power source
- The backup power source consists of a power supply capacitor and a DC-DC converter. When the power system does not function during a collision, the power supply capacitor discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

(6) Diagnostic circuit
- This circuit constantly diagnoses system malfunctions. When a malfunction is detected, it turns on the SRS warning light on the combination meter assembly to inform the driver.

(7) Memory circuit
- When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

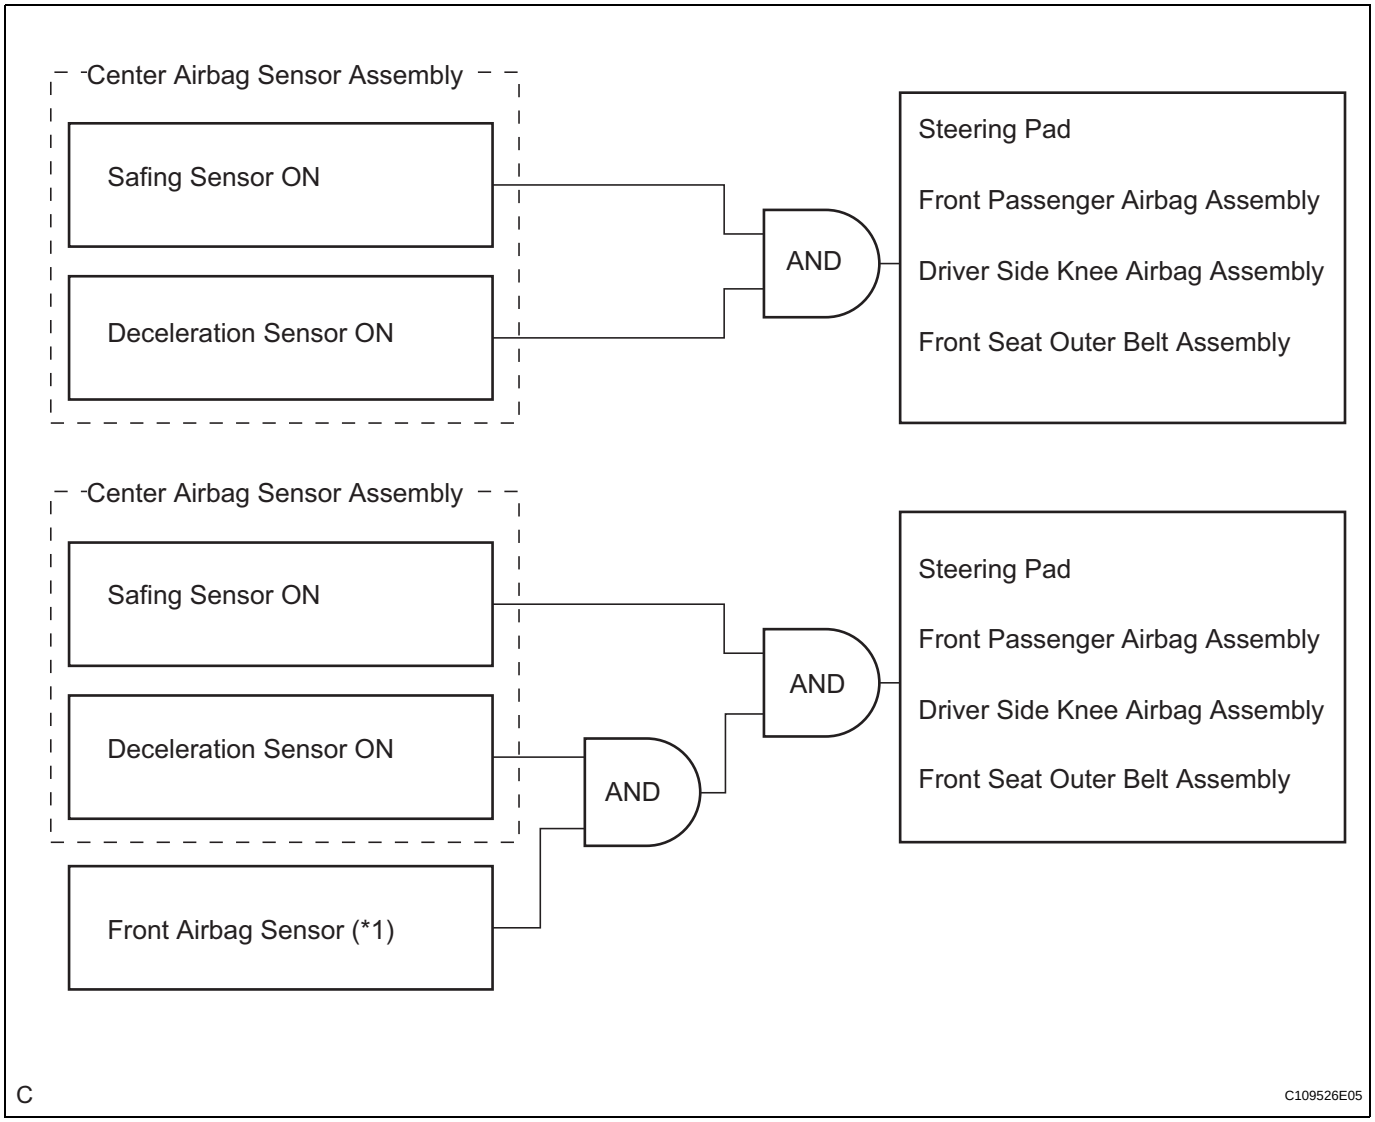
(e) SRS WARNING LIGHT

(1) The SRS warning light is located on the combination meter assembly. It comes on to inform the driver of system trouble when a malfunction is detected in self-diagnosis of the center airbag sensor assembly. Under normal operating conditions when the ignition switch is turned on (IG), it comes on for approximately 6 seconds and then goes off.

3. DEPLOYMENT CONDITION

When the vehicle collides and the shock is greater than the specified value, the SRS is activated automatically. The center airbag sensor assembly includes the safing sensor and deceleration sensor. The safing sensor is designed to turn on at a smaller deceleration rate than the deceleration sensor.

(a) The center airbag sensor assembly determines whether ignition is necessary based on signals from the deceleration sensor and the front airbag sensor (*1). If the safing sensor turns on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.

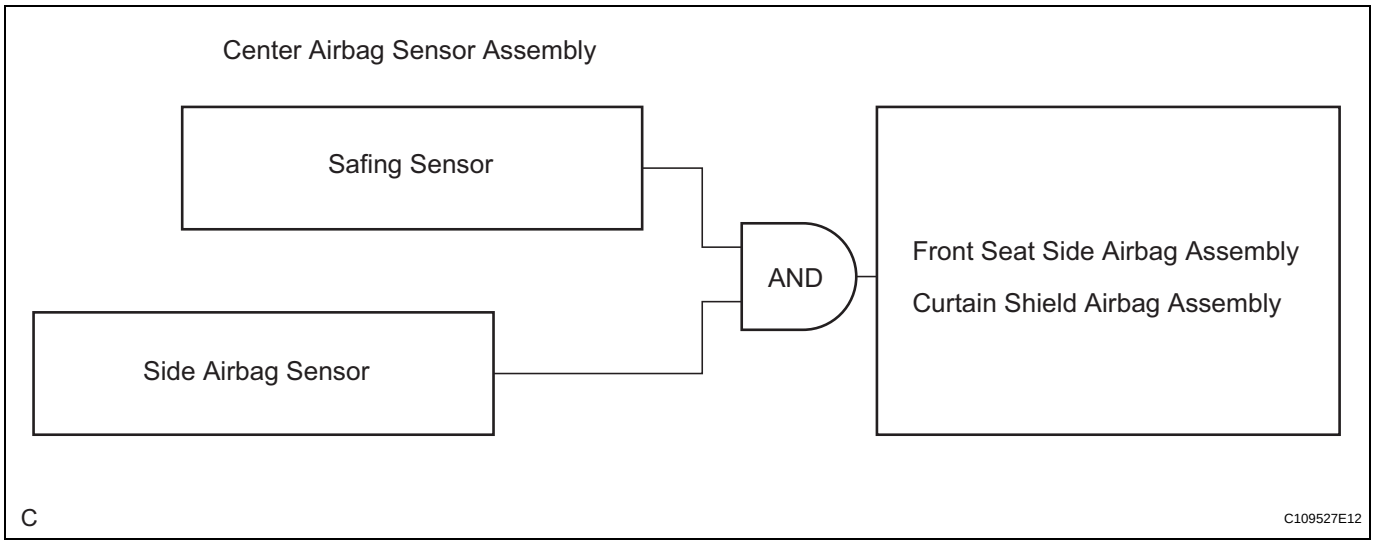


HINT:

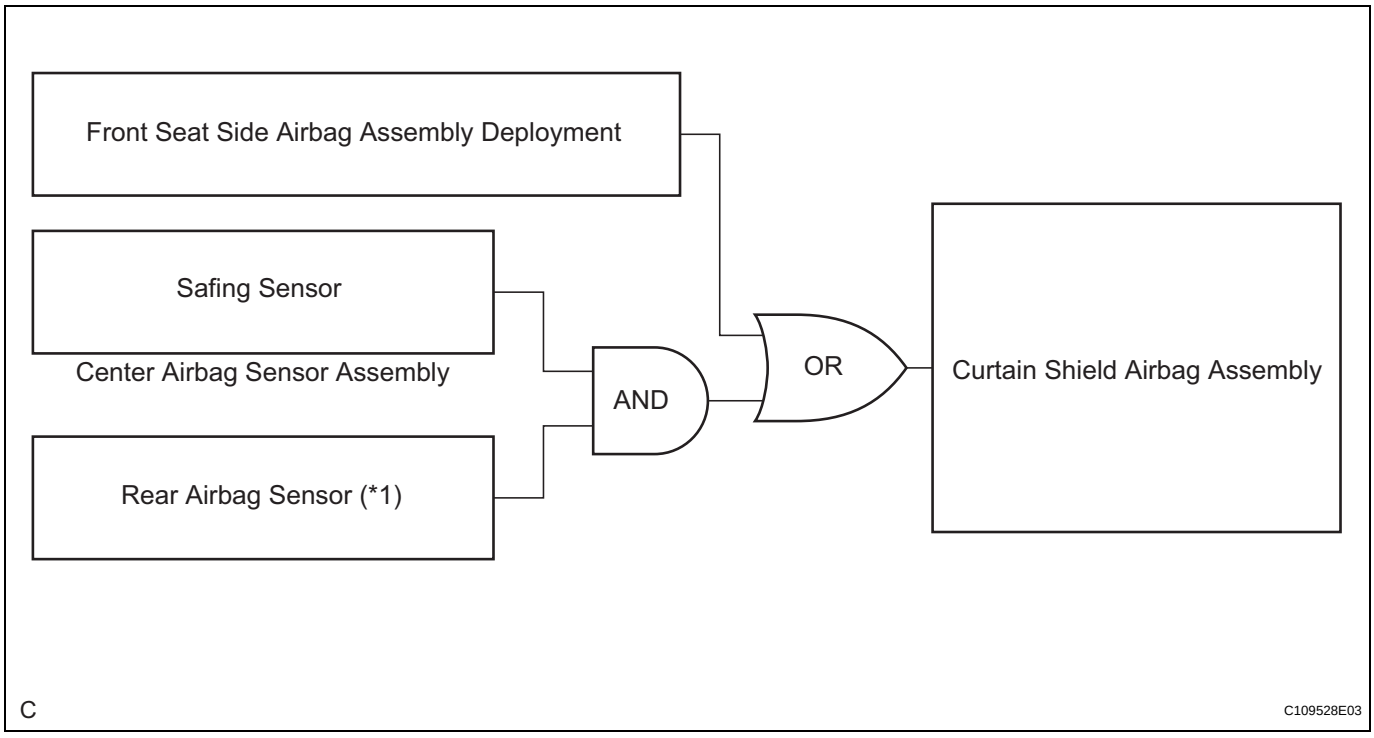
*1: In case of front collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.

RS

(b) The center airbag sensor assembly determines whether ignition is necessary based on signals from the side airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.



(c) The center airbag sensor assembly determines whether ignition is necessary based on signals from the rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below (*1).



HINT:
*1: If the front seat side airbag assembly deploys, the curtain shield airbag assembly will also deploy, regardless of whether the signal is output from the rear airbag sensor.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used in steps 3, 5, 7, 9, and 10.

1 **VEHICLE BROUGHT TO WORKSHOP**

NEXT

2 **CUSTOMER PROBLEM ANALYSIS**

(a) Confirm problem symptoms (See page IN-45).

NEXT

3 **CHECK CAN COMMUNICATION SYSTEM**

(a) Check for DTC outputs.
HINT:
The center airbag sensor assembly is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

PROBLEM SYMPTOMS TABLE

HINT:
Proceed to the troubleshooting for each circuit in the table below.

AIRBAG SYSTEM:

Symptom	Suspected area	See page
The SRS warning light goes off after the primary check, but then comes on.	SRS Warning Light Remains ON	RS-222
With the ignition switch on (IG), the SRS warning light sometimes comes on after approximately 6 seconds.	SRS Warning Light Remains ON	RS-222
The SRS warning light always comes on even when DTC is not output.	SRS Warning Light Remains ON	RS-222
With the ignition switch on (IG), the SRS warning light does not come on.	SRS Warning Light does not Come On	RS-228
Although an SRS warning light operates normally, DTC or a normal system code is not displayed.	Diagnosis Circuit	RS-231
Although terminals TC and CG of DLC3 are not connected, DTC or a normal system code is displayed.	Diagnosis Circuit	RS-231

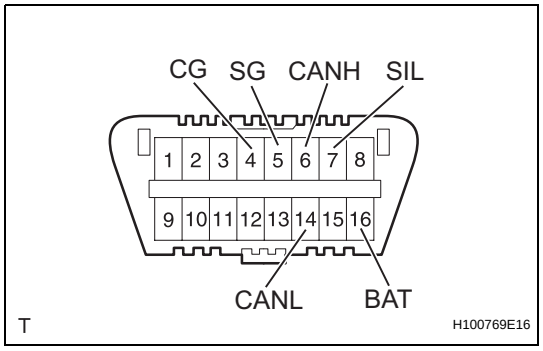
RS



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

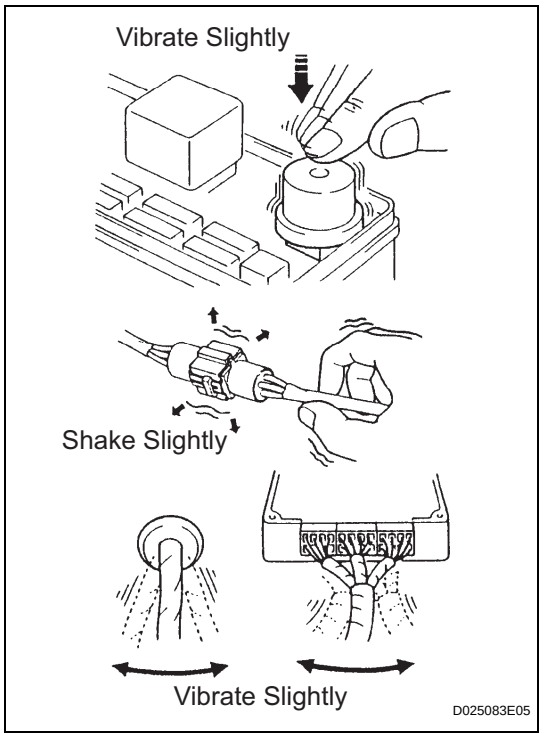
Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off (*)	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off (*)	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off (*)	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off (*)	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off (*)	200 Ω or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches, or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.
HINT:
If the display shows a communication error message when connecting the cable of the intelligent tester to the DLC3, turning the ignition switch on (IG) and operating the intelligent tester, there is a problem on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

2. SYMPTOM SIMULATION

HINT:
The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation.
This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.
HINT:
Shaking the relays too strongly may result in open relays.
(2) Slightly shake the connector vertically and horizontally.
(3) Slightly shake the wire harness vertically and horizontally.
The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

3. FUNCTION OF SRS WARNING LIGHT

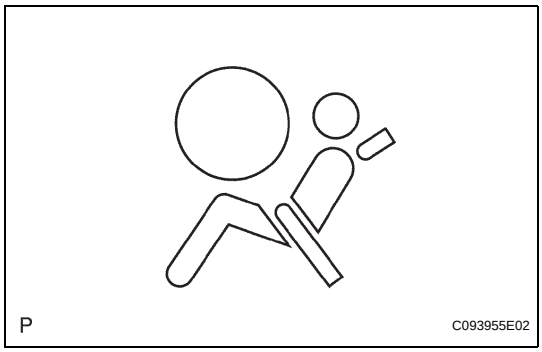
(a) Primary check.
(1) Turn the ignition switch off. Wait for at least 2 seconds, then turn the ignition switch on (IG). The SRS warning light comes on for approximately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.
HINT:
If trouble is detected during the primary check, the SRS warning light remains on even after the primary check period (for approximately 6 seconds) has elapsed.

(b) Constant check.
(1) After the primary check, the center airbag sensor assembly constantly monitors the airbag system for trouble.
HINT:
If trouble is detected during the constant check, the center airbag sensor assembly functions as follows:
- The SRS warning light comes on.
- The SRS warning light goes off, and then comes on. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review.
(1) When the airbag system is normal:
The SRS warning light comes on only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).
(2) When the airbag system has trouble:
- The SRS warning light remains on even after the primary check period has elapsed.

- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light does not come on when turning the ignition switch from off to on (IG).

HINT:
The center airbag sensor assembly keeps the SRS warning light on if the airbag has been deployed.



4. SRS WARNING LIGHT CHECK

(a) Turn the ignition switch on (IG), and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the ignition switch is turned on (IG) (constant check).
HINT:
When any of the following symptoms occur, refer to "Problem Symptoms Table" (See page RS-30).
- The SRS warning light comes on occasionally, after the primary check period has elapsed.
- The SRS warning light comes on, but a DTC is not output.
- The ignition switch is turned from off to on (IG), but the SRS warning light does not come on.

5. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

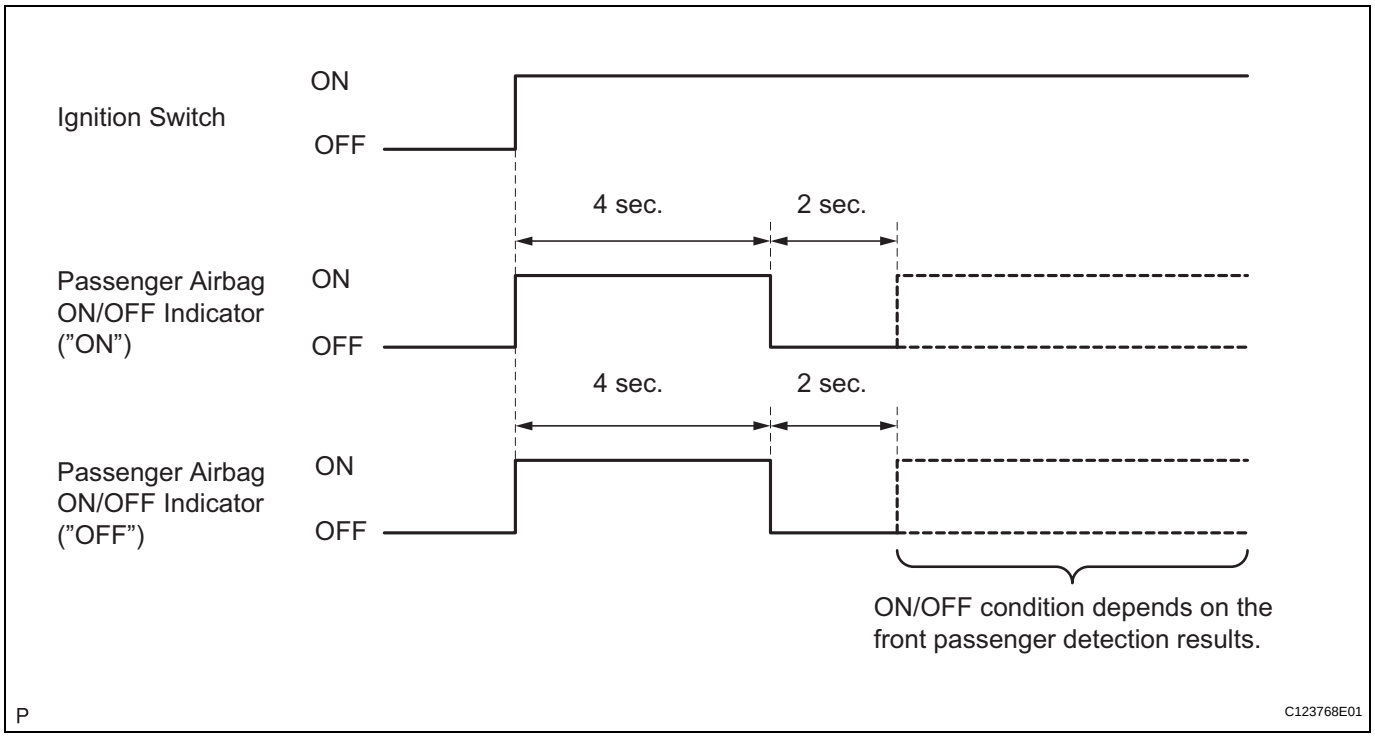
(a) Initial check
(1) Turn the ignition switch on (IG).
(2) The passenger airbag ON/OFF indicator comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
(3) Approximately 6 seconds after the ignition switch is turned on (IG), the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

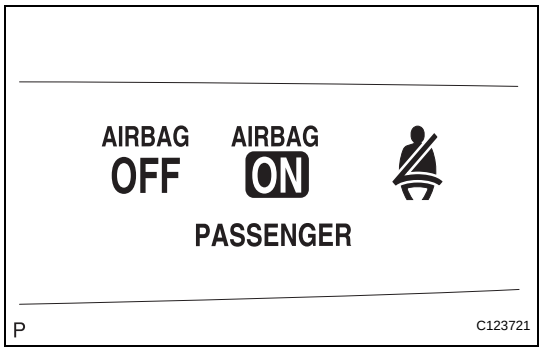
Condition	"ON" indicator	"OFF" indicator
Vacant	OFF	OFF
Adult is seated. (Above 36 kg (79.37 lb))	ON	OFF
Child is seated. (Less than 36 kg (79.37 lb))	OFF	ON
Child restraint system is set. (*)	OFF	ON
Front passenger occupant classification failure	OFF	ON

*: Child restraint system (less than 7 kg (15.43 lb)) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set.
HINT:
- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.

RS

- When the front passenger occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in "AIRBAG SYSTEM" first. Then troubleshoot the occupant classification system if DTC B1650/32 is detected, and troubleshoot the passenger airbag ON/OFF indicator if DTC B1660/43 is detected.





6. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch on (IG).

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
HINT:
Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when the ignition switch is turned on (IG) and approximately 6 seconds pass.

7. ACTIVATION PREVENTION MECHANISM

(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

(1) An activation prevention mechanism is built into the connector (on the center airbag sensor assembly side) of the airbag system squib circuit to prevent accidental airbag activation.

(2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off external electricity to prevent accidental airbag activation.

RS

(b) RELEASE METHOD OF ACTIVATION PREVENTION MECHANISM

(1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm (0.020 in.)) between the terminals and the short spring to break the connection.

(2) Refer to the following illustrations concerning connectors utilizing the activation prevention mechanism and its release method.

CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- **Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.**
- **To prevent the terminal and the short spring from being damaged, always use a piece of paper with the same thickness as the male terminal.**

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Check the DTCs (Present trouble code).

(1) Turn the ignition switch on (IG), and wait for approximately 60 seconds.

(2) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check the DTCs (Past trouble code).

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the ignition switch on (IG), and wait for approximately 60 seconds.

(c) Read the DTCs.

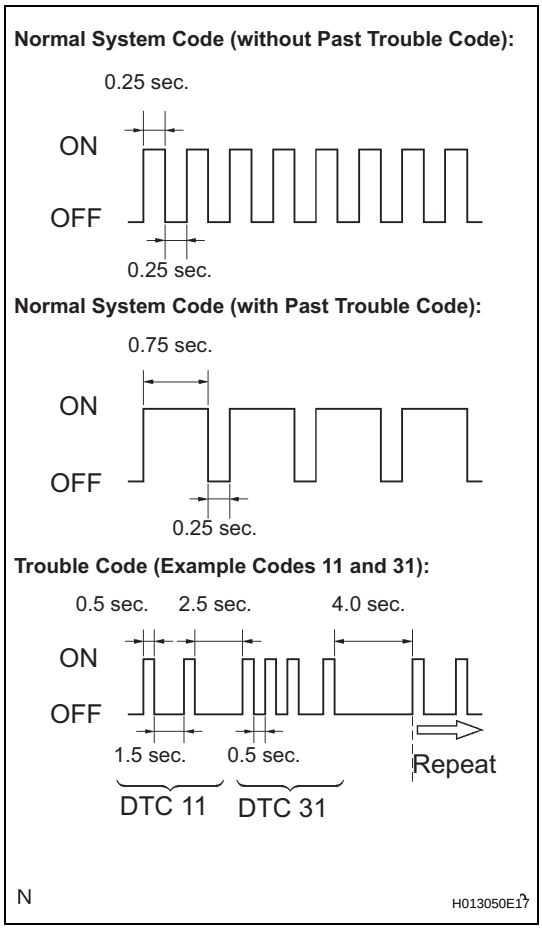
(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and trouble codes 11 and 31 are shown in the illustration.

- Normal system code indication (without past trouble code)
  The light blinks twice per second.
- Normal system code indication (with past trouble code)
  When the past trouble code is stored in the center airbag sensor assembly, the light blinks only once per second.
- Trouble code indication
  The first blinks indicates the first DTC. The second blinks occurs after a 1.5-second pause.

If there are more than 1 code, there will be a 2.5-second pause between each code. After all codes are shown, there will be a 4.0-second pause, and then they will all be repeated.

HINT:

- If 2 or more malfunctions are found, the indication begins with the smaller numbered code.
- If DTCs are indicated without connecting the terminals, proceed to "Diagnosis Circuit" (See page RS-231).



RS

2. DTC CLEAR (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) When the ignition switch is turned off, the DTCs are cleared.
HINT:
Depending on the DTC, the code may not be cleared by turning off the ignition switch. In this case, proceed to the next procedure.

(2) Using SST, connect terminals TC and CG of the DLC3, and then turn the ignition switch on (IG).
SST 09843-18040

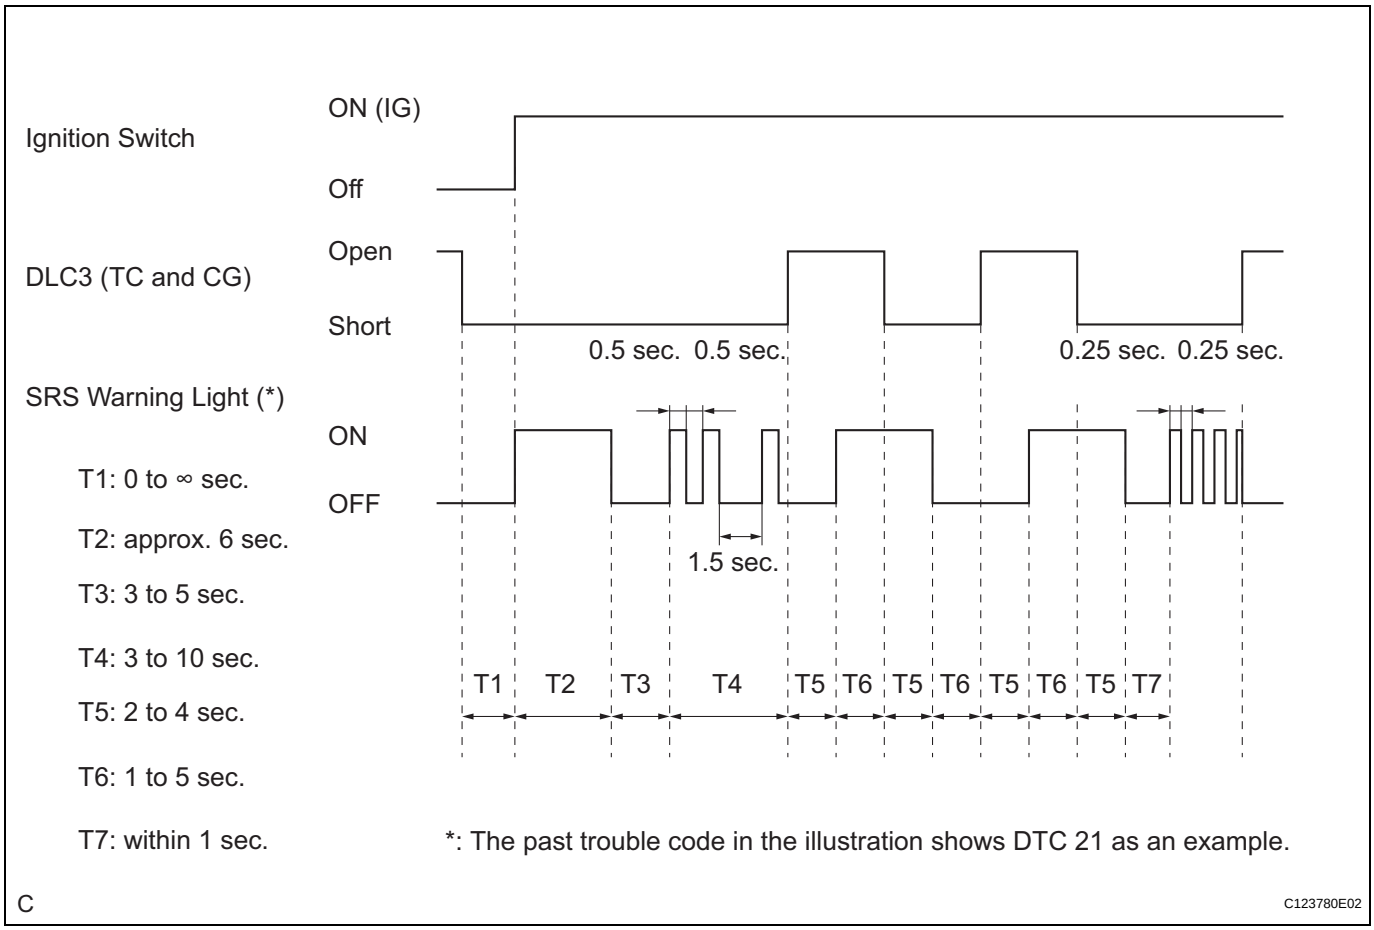
(3) Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.

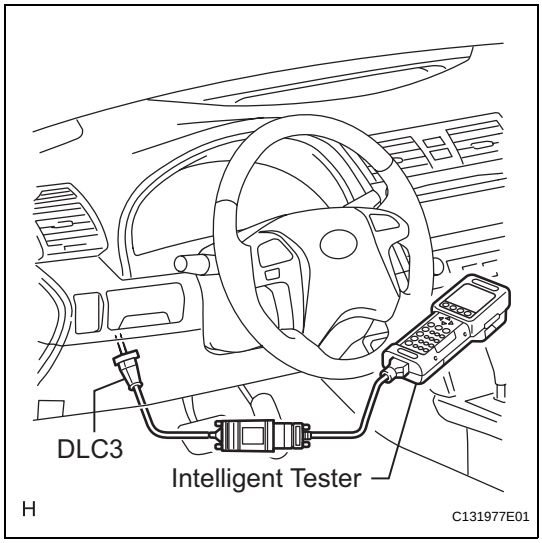
(4) Within 2 to 4 seconds after the SRS warning light comes on, connect terminals TC and CG of the DLC3.

(5) The SRS warning light should go off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Then, disconnect terminal TC within 2 to 4 seconds after the SRS warning light goes off.

(6) The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal TC. Then, reconnect terminals TC and CG within 2 to 4 seconds after the SRS warning light comes on.

(7) Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.
If DTCs are not cleared, repeat this procedure until the codes are cleared.



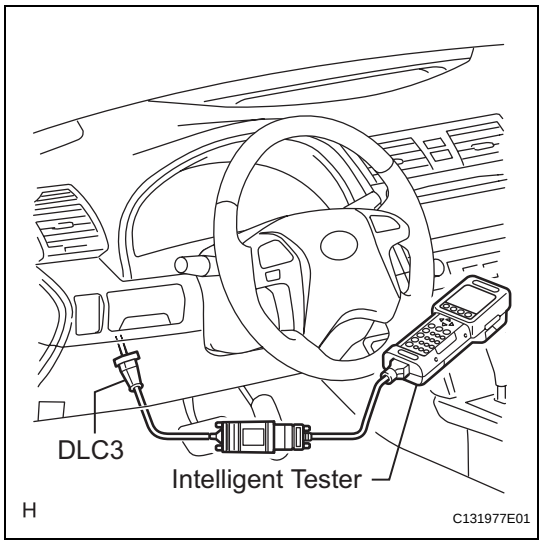


3. DTC CHECK

(a) Check the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Check the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

(b) Clear the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the ignition switch on (IG).
(3) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

RS



CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

(a) Connect the intelligent tester to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Select "SIGNAL CHECK", and proceed with checking using the intelligent tester.

NOTICE:

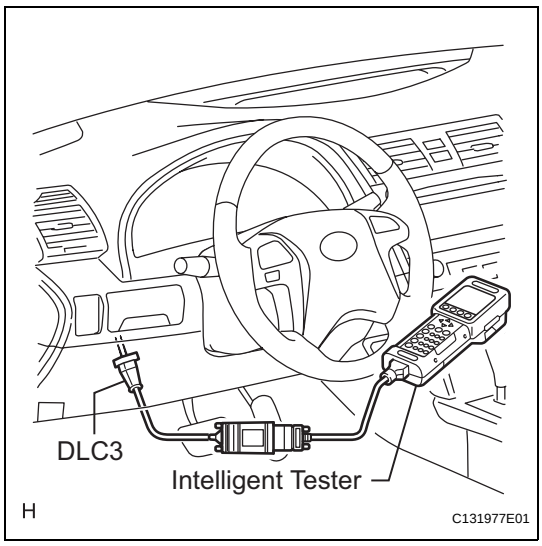
Select "SIGNAL CHECK" from the "DTC CHECK" screen displayed on the intelligent tester to clear the output DTCs (both present and past).

HINT:

- DTCs can be detected more sensitively in check mode than in normal diagnosis mode.
- Perform check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through normal diagnosis mode inspection.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed on the intelligent tester, you can perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.



1. DATA LIST FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / SRS AIRBAG / DATA LIST.
(e) Check the values by referring to the table below.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
D SEAT POSITION	Driver Seat Position/ FORWARD: Seat position is forward BKWARD: Seat position is backward FAIL: Failure detected	FORWARD/BKWARD	-
PASSENGER CLASS	Passenger Classification/ NG: Data is not determined OFF: Vacant CHILD: Child (less than 36 kg (79.37 lb)) is seated AF05: Adult (36 to 54 kg (79.37 to 119.05 lb) is seated AM50: Adult (more than 54 kg (119.05 lb)) is seated FAIL: A failure is detected	OFF/CHILD/AF05/AM50	-
PASSENGER DETECT	Passenger Detection/ NG: Data is not determined NONE: No passenger DETECT: A passenger is seated FAIL: Failure detected	NONE/DETECT	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (refer to the appropriate page).

HINT:

- When the SRS warning light remains on and the DTC output is the normal system code, a voltage source drop is likely to occur. This malfunction is not stored in the memory by the center airbag sensor assembly. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more codes are indicated, the code with the lower number appears first.
- If a code is not listed on the display chart, the center airbag sensor assembly may have failed.
- In the case of any malfunction concerning an open circuit, short to ground, or short to B+ due to a squib, other trouble codes may not be detected. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Mark in the check mode column:
  *1: DTC is not corresponding to the check mode.
  *2: DTC is corresponding to the check mode.

DTC	B1000/31	Center Airbag Sensor Assembly Malfunction

DESCRIPTION

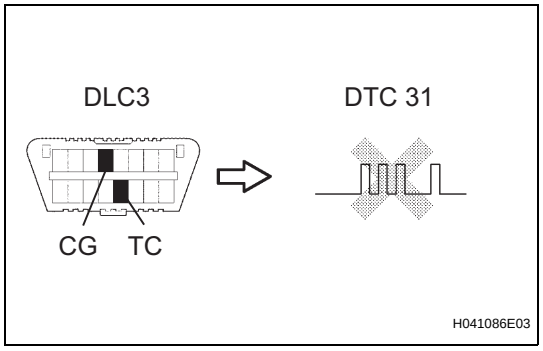
The center airbag sensor assembly consists of the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit, the ignition control, etc.
If the center airbag sensor assembly receives signals from the airbag sensor, it determines whether the SRS should be activated.
DTC B1000/31 is recorded when a malfunction is detected in the center airbag sensor assembly.

DTC No.	DTC Detecting Condition	Trouble Area
B1000/31	Center airbag sensor assembly malfunction	Center airbag sensor assembly

HINT:
When a trouble code is displayed simultaneously with B1000/31, repair the malfunction indicated by this code (except B1000/31) first.

INSPECTION PROCEDURE

1	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).
OK:
DTC B1000/31 is not output.

RS

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

DTC	B1603/83	Front Satellite Sensor Bus RH Initialization Incomplete

DTC	B1612/83	Lost Communication with Front Airbag Sensor RH

DTC	B1613/83	Front Airbag Sensor RH Initialization Incomplete

DESCRIPTION

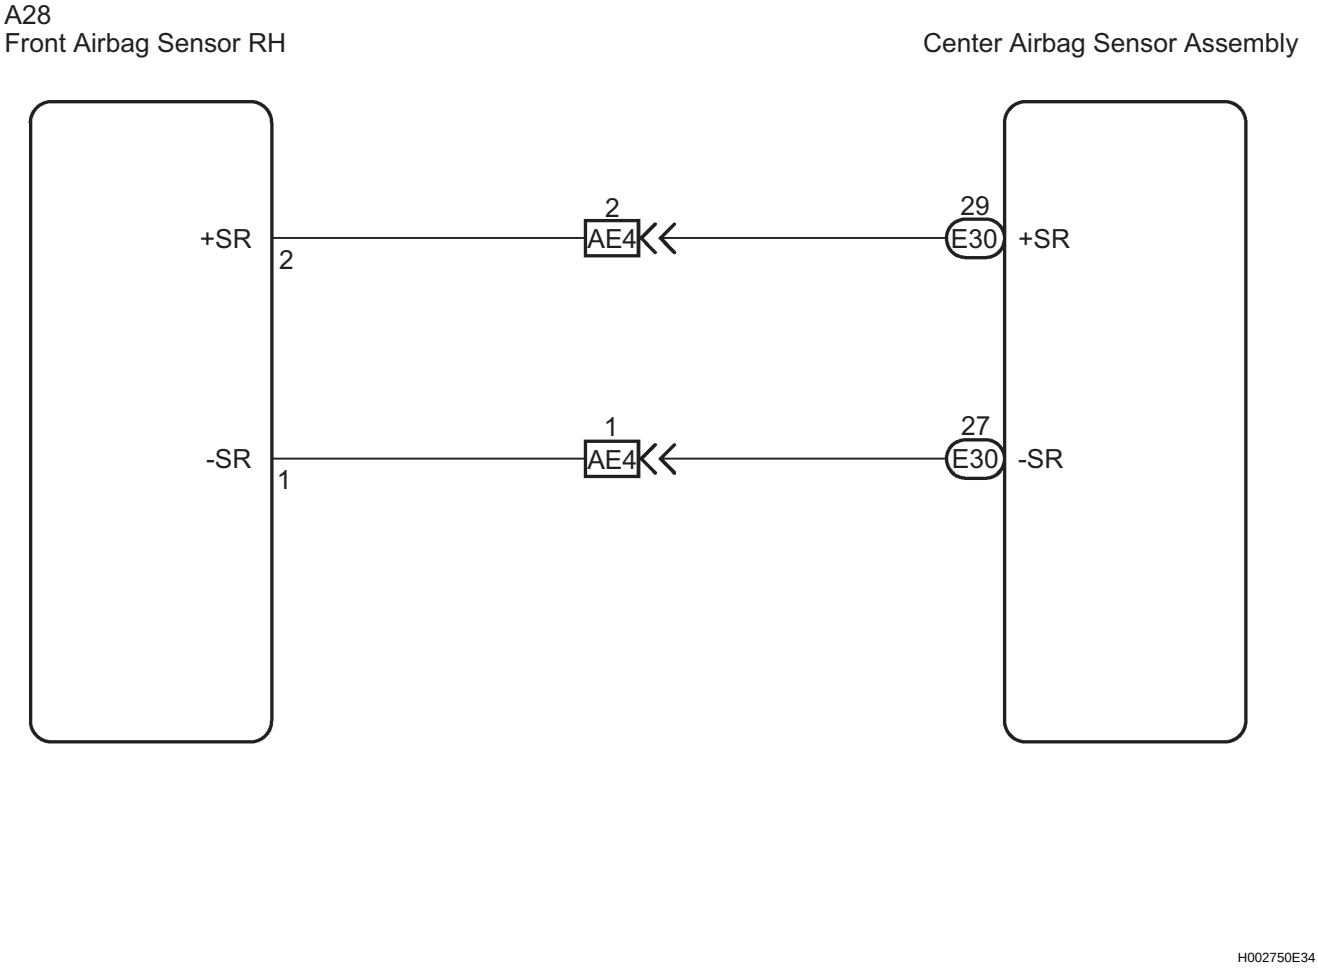
The front airbag sensor RH circuit consists of the center airbag sensor assembly and front airbag sensor RH.

The front airbag sensor RH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1603/83, B1612/83, or B1613/83 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1603/83 B1612/83 B1613/83	• The airbag sensor assembly center receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

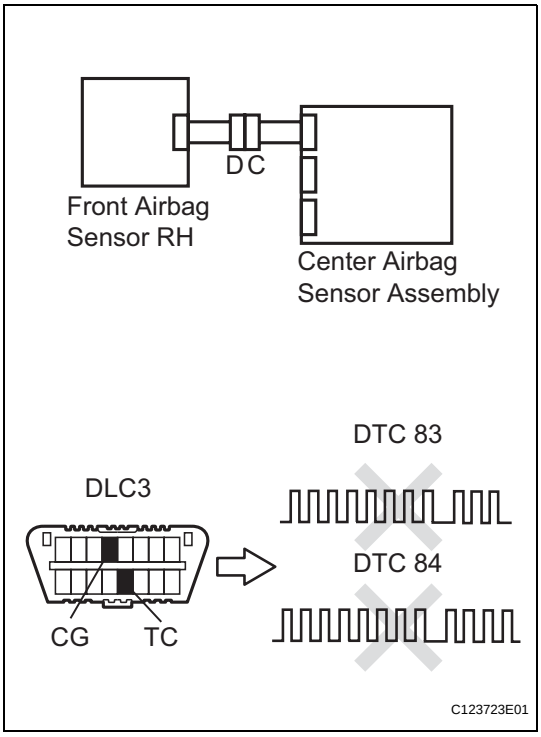
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Turn the ignition switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the ignition switch off and then on (IG) again.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1603, B1613, or 83 is output.	A
DTC B1618/84 is output.	B
DTC B1603, B1613, or 83 and B1618/84 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then on (IG) again.
- Codes other than DTC B1603, B1613, or 83 and B1618/84 may be output at this time, but they are not related to this check.

RS

B → **GO TO DTC B1618/84**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

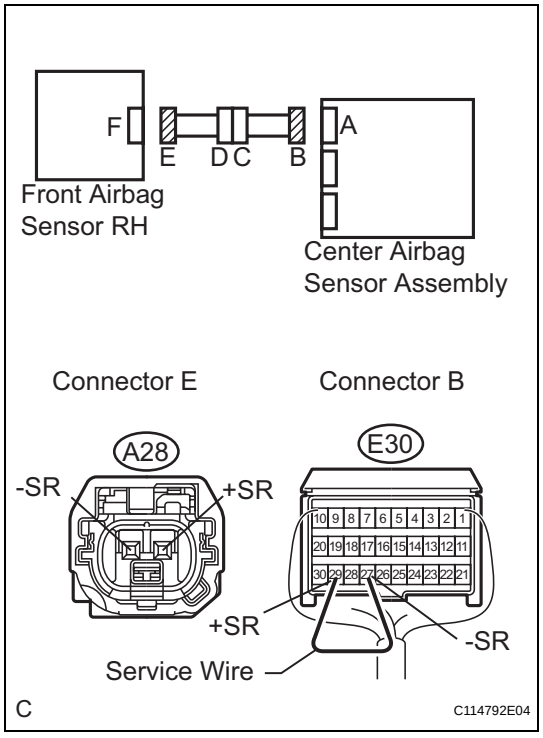
3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and front airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and front airbag sensor RH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)



(a) Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

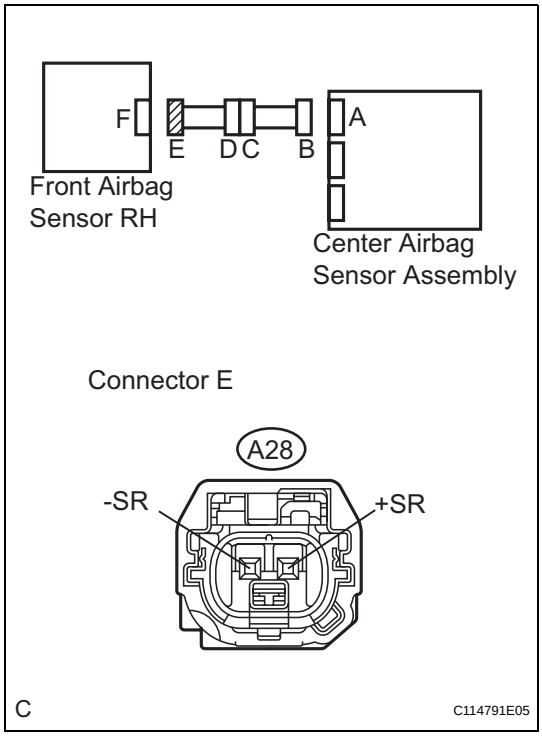
Tester Connection	Condition	Specified Condition
A28-2 (+SR) - A28-1 (-SR)	Always	Below 1 Ω

NG → **Go to step 9**

OK

RS

5 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

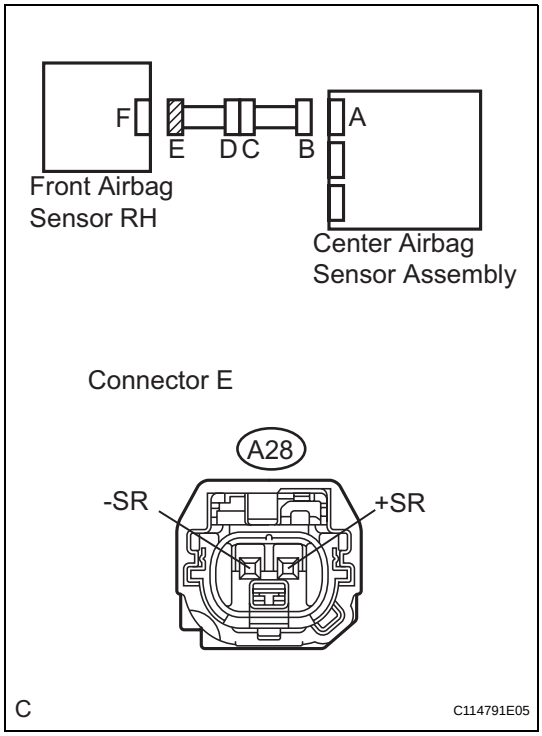
Tester Connection	Condition	Specified Condition
A28-2 (+SR) - A28-1 (-SR)	Always	1 MΩ or higher

NG → **Go to step 10**

OK

RS

6 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

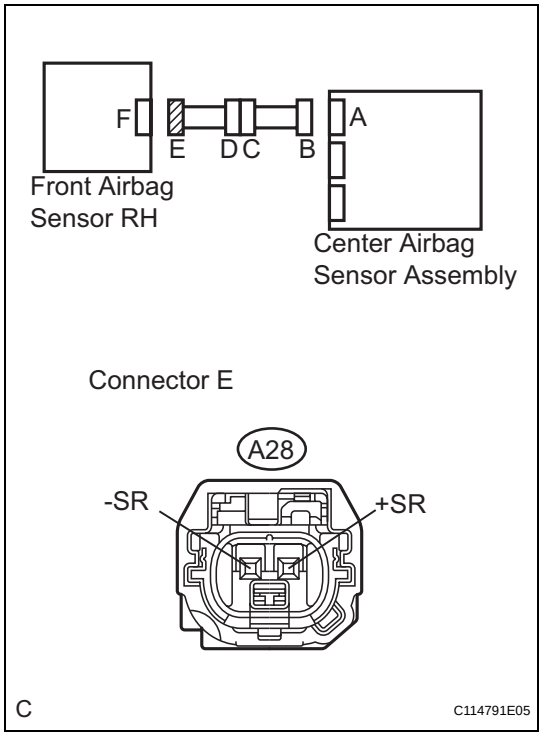
Standard voltage

Tester Connection	Condition	Specified Condition
A28-2 (+SR) - Body ground	Ignition switch on (IG)	Below 1 V
A28-1 (-SR) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **Go to step 11**

OK

7 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

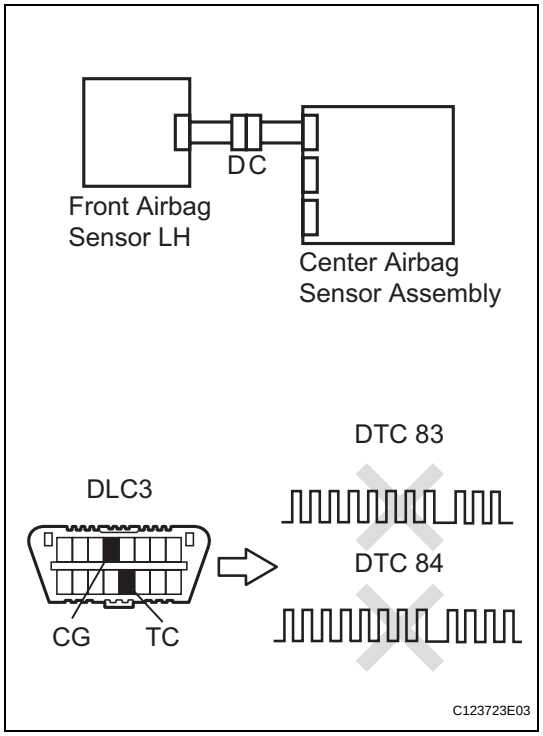
Tester Connection	Condition	Specified Condition
A28-2 (+SR) - Body ground	Always	1 MΩ or higher
A28-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → **Go to step 12**

OK

8 CHECK FRONT AIRBAG SENSOR RH

RS



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1603, B1612, B1613, or 83 is output.	A
DTC B1608, B1617, B1618, or 84 is output.	B
DTC B1603, B1612, B1613, or 83 and B1608, B1617, B1618, or 84 are not output.	C

HINT:
Codes other than DTC B1603, B1612, B1613, or 83 and B1608, B1617, B1618, or 84 may be output at this time, but they are not related to this check.

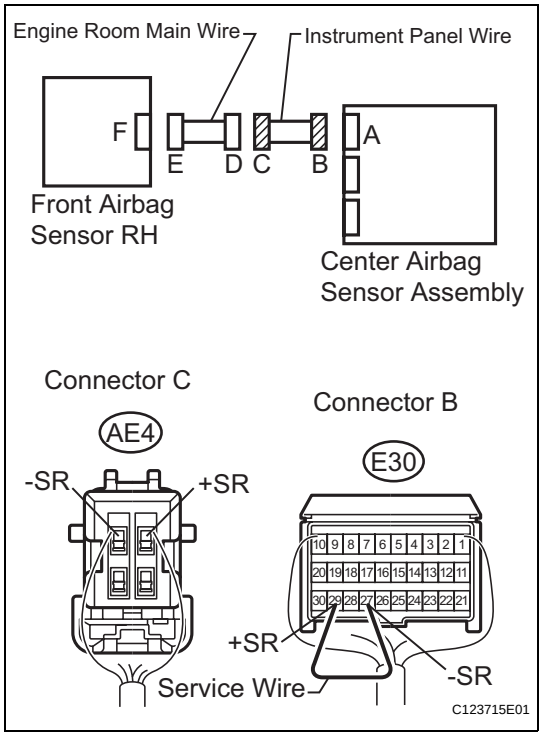
A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

B → **REPLACE FRONT AIRBAG SENSOR RH (See page RS-446)**

C

USE SIMULATION METHOD TO CHECK (See page RS-32)

9 CHECK INSTRUMENT PANEL WIRE (OPEN)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - AE4-1 (-SR)	Always	Below 1 Ω

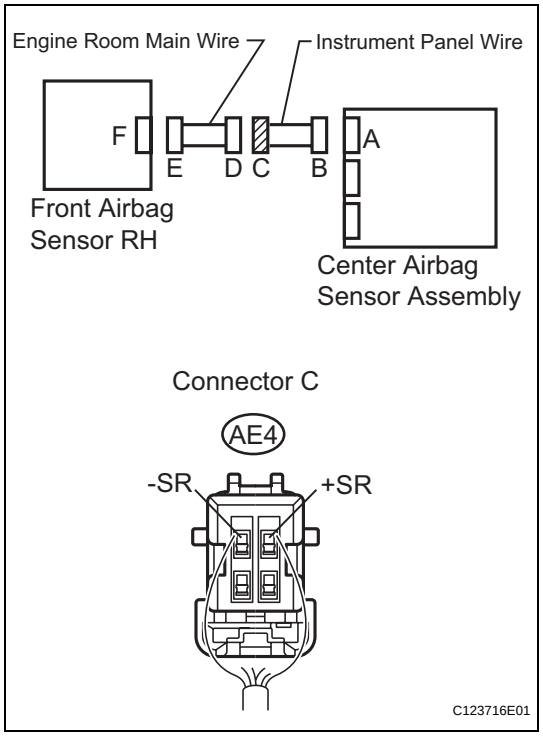
NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

RS

10 CHECK INSTRUMENT PANEL WIRE (SHORT)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - AE4-1 (-SR)	Always	1 MΩ or higher

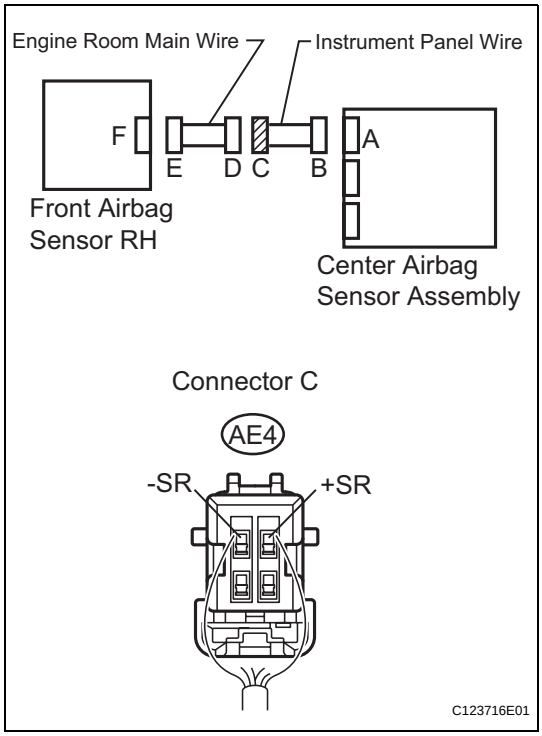
NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

RS

11	CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the engine room main wire.
(d) Connect the negative (-) terminal cable to battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

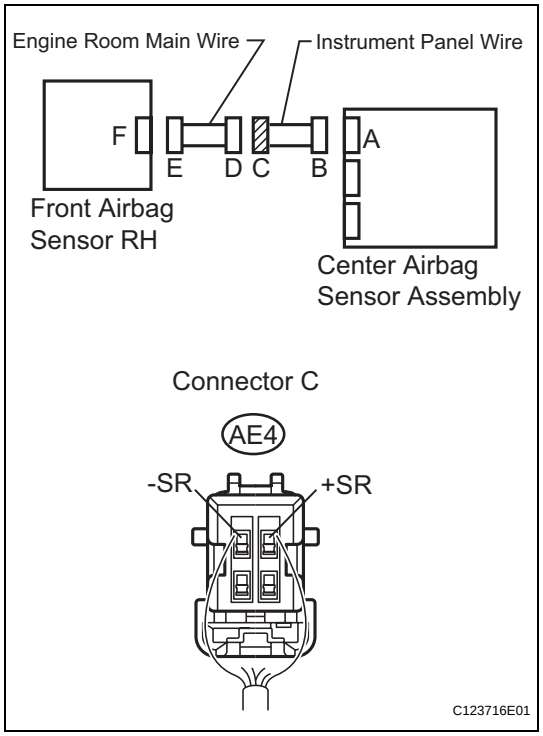
Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - Body ground	Ignition switch on (IG)	Below 1 V
AE4-1 (-SR) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

RS **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

12 CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - Body ground	Always	1 MΩ or higher
AE4-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

RS

DTC	**B1608/84**	**Front Satellite Sensor Bus LH Initialization Incomplete**

DTC	**B1617/84**	**Lost Communication with Front Airbag Sensor LH**

DTC	**B1618/84**	**Front Airbag Sensor LH Initialization Incomplete**

DESCRIPTION

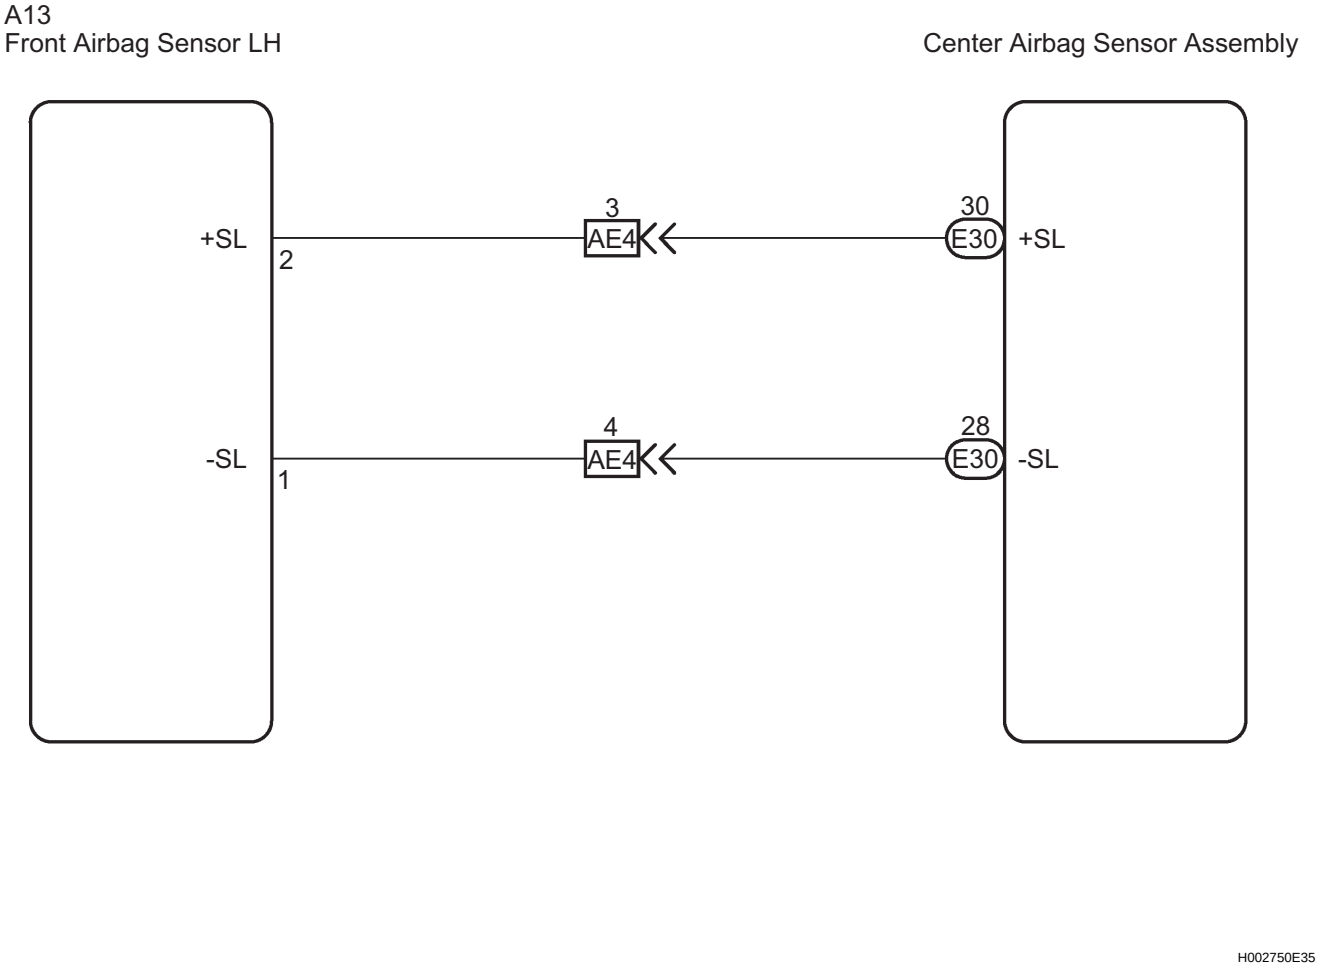
The front airbag sensor LH circuit consists of the center airbag sensor assembly and front airbag sensor LH.

The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1608/84, B1617/84, or B1618/84 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1608/84 B1617/84 B1618/84	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • Front airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

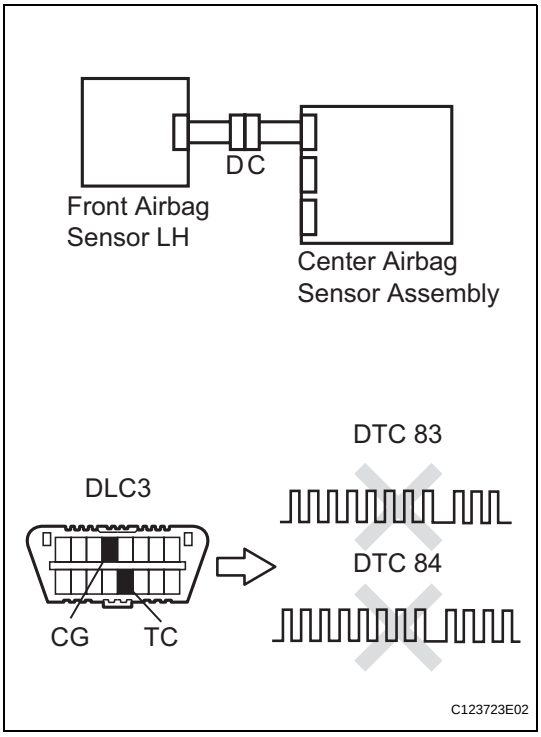
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Turn the ignition switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the ignition switch off and then on (IG) again.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1608, B1618, or 84 is output.	A
DTC B1613/83 is output.	B
DTC B1608, B1618, or 84 and B1613/83 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then on (IG) again.
- Codes other than DTC B1608, B1618, or 84 and B1613/83 may be output at this time, but they are not related to this check.

RS

B → **GO TO DTC B1613/83**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

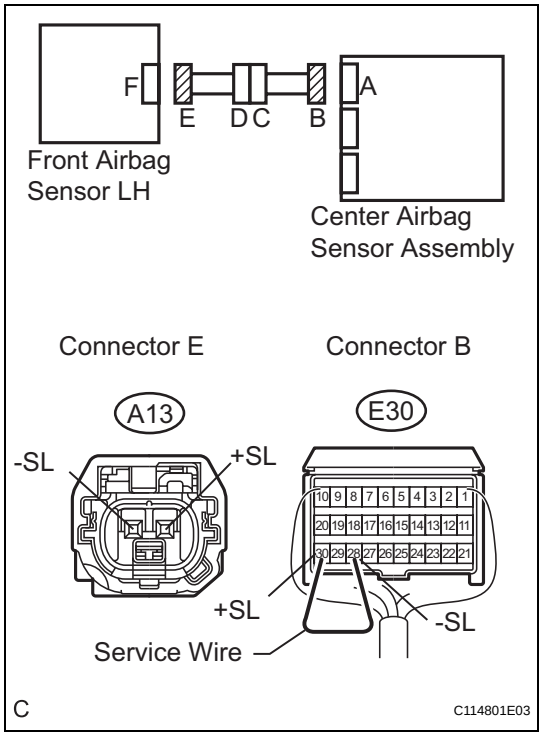
3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and front airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and front airbag sensor LH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK FRONT AIRBAG SENSOR LH (OPEN)



(a) Using a service wire, connect terminals 30 (+SL) and 28 (-SL) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

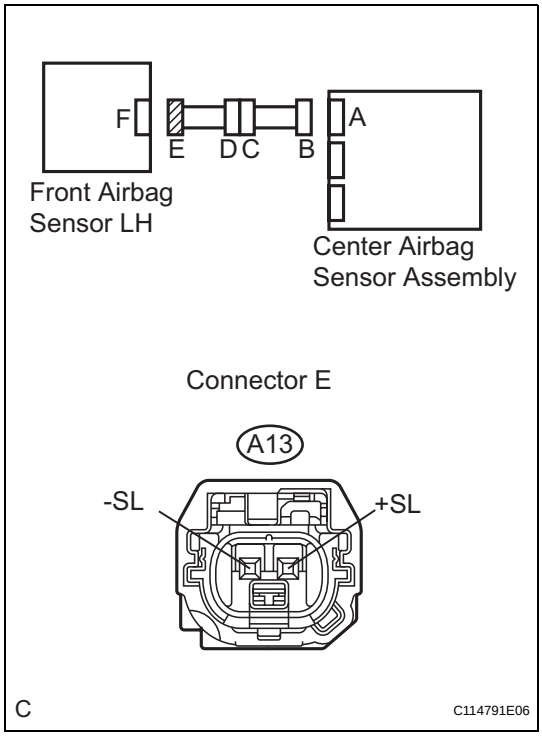
Tester Connection	Condition	Specified Condition
A13-2 (+SL) - A13-1 (-SL)	Always	Below 1 Ω

NG → **Go to step 9**

OK

RS

5 CHECK FRONT AIRBAG SENSOR LH (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

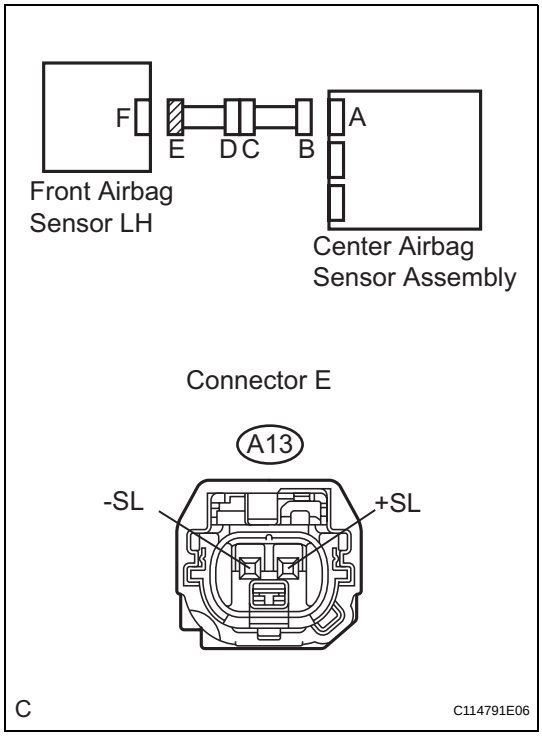
Tester Connection	Condition	Specified Condition
A13-2 (+SL) - A13-1 (-SL)	Always	1 MΩ or higher

NG → **Go to step 10**

OK

RS

6 CHECK FRONT AIRBAG SENSOR LH (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

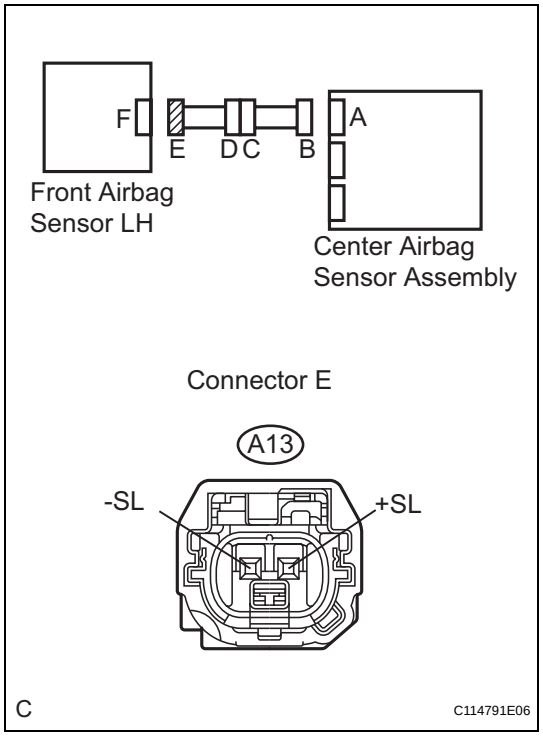
Standard voltage

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - Body ground	Ignition switch on (IG)	Below 1 V
A13-1 (-SL) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **Go to step 11**

OK

7 CHECK FRONT AIRBAG SENSOR LH (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

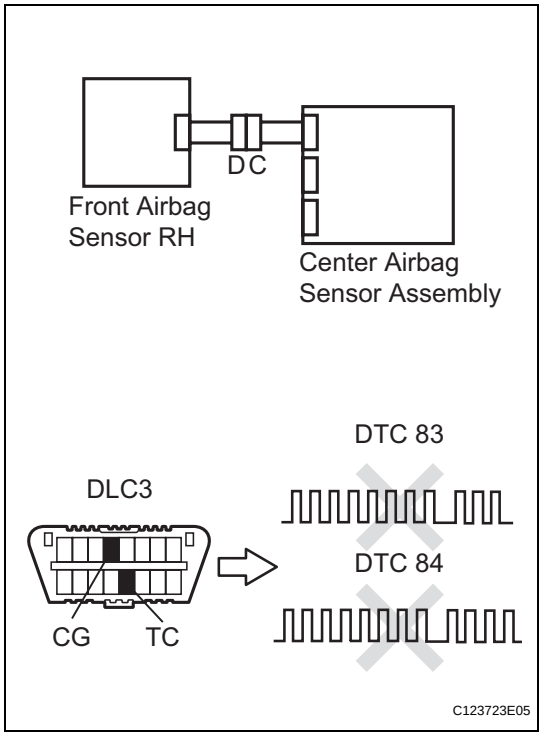
Standard resistance

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - Body ground	Always	1 MΩ or higher
A13-1 (-SL) - Body ground	Always	1 MΩ or higher

NG → **Go to step 12**

OK

8 CHECK FRONT AIRBAG SENSOR LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor RH with LH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1608, B1617, B1618, or 84 is output.	A
DTC B1603, B1612, B1613, or 83 is output.	B

HINT:
Codes other than DTC B1608, B1617, B1618, or 84 and B1603, B1612, B1613, or 83 may be output at this time, but they are not related to this check.

RS

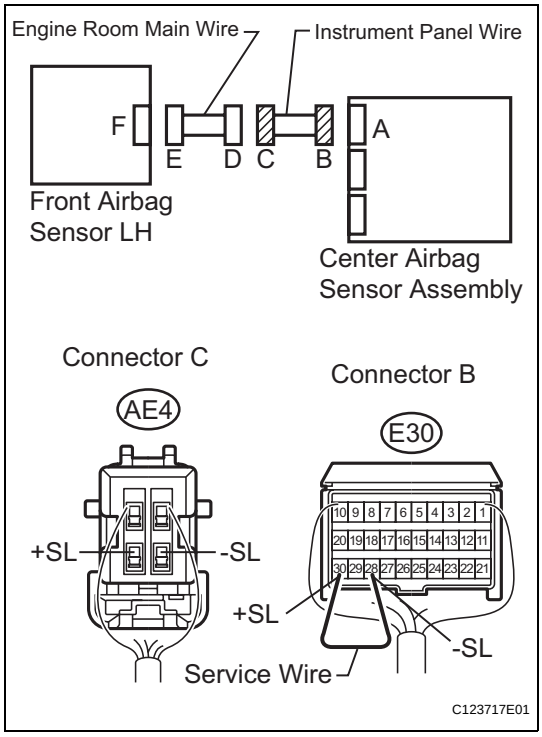
A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

B → **REPLACE FRONT AIRBAG SENSOR LH (See page RS-446)**

C

USE SIMULATION METHOD TO CHECK (See page RS-32)

9 CHECK INSTRUMENT PANEL WIRE (OPEN)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - AE4-4 (-SL)	Always	Below 1 Ω

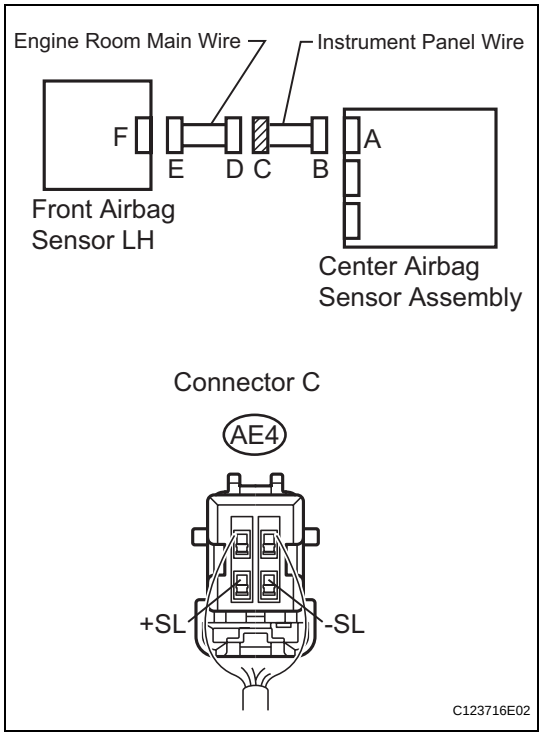
NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

RS

10 CHECK INSTRUMENT PANEL WIRE (SHORT)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

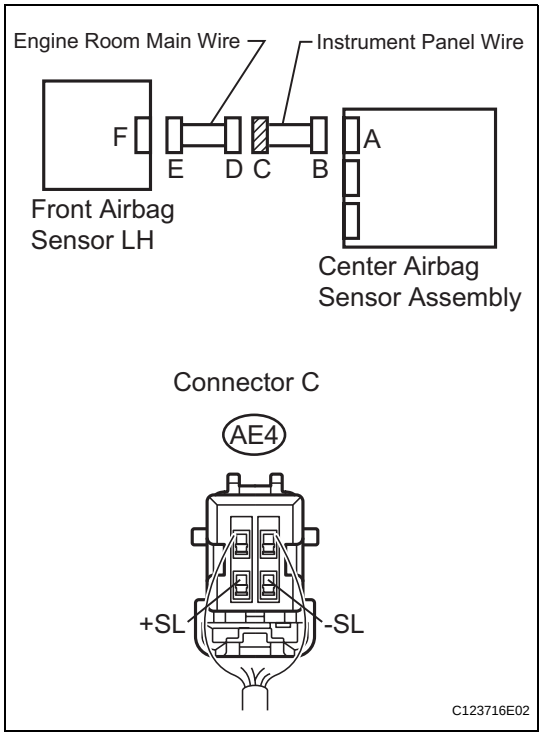
Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - AE4-4 (-SL)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

11	CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the engine room main wire.
(d) Connect the negative (-) terminal cable to battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - Body ground	Ignition switch on (IG)	Below 1 V
AE4-4 (-SL) - Body ground	Ignition switch on (IG)	Below 1 V

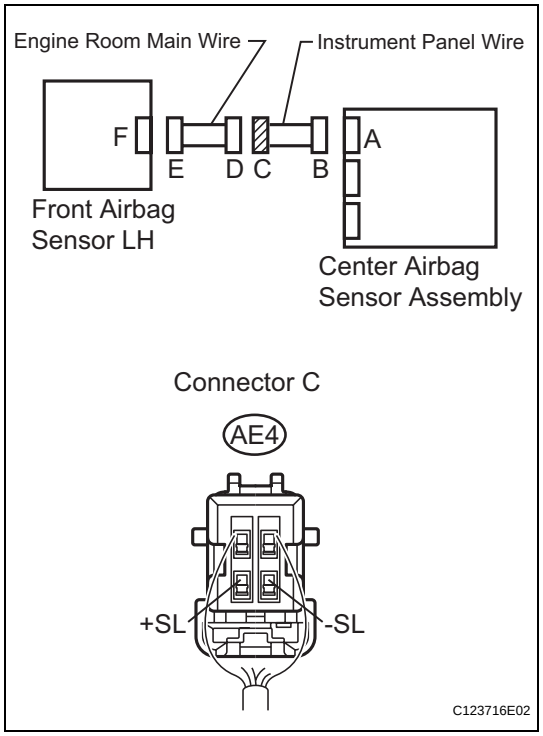
OK

RS **REPAIR OR REPLACE ENGINE ROOM MAIN WIRE**

12 CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)



(a) Disconnect the instrument panel wire connector from the engine room main wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - Body ground	Always	1 MΩ or higher
AE4-4 (-SL) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

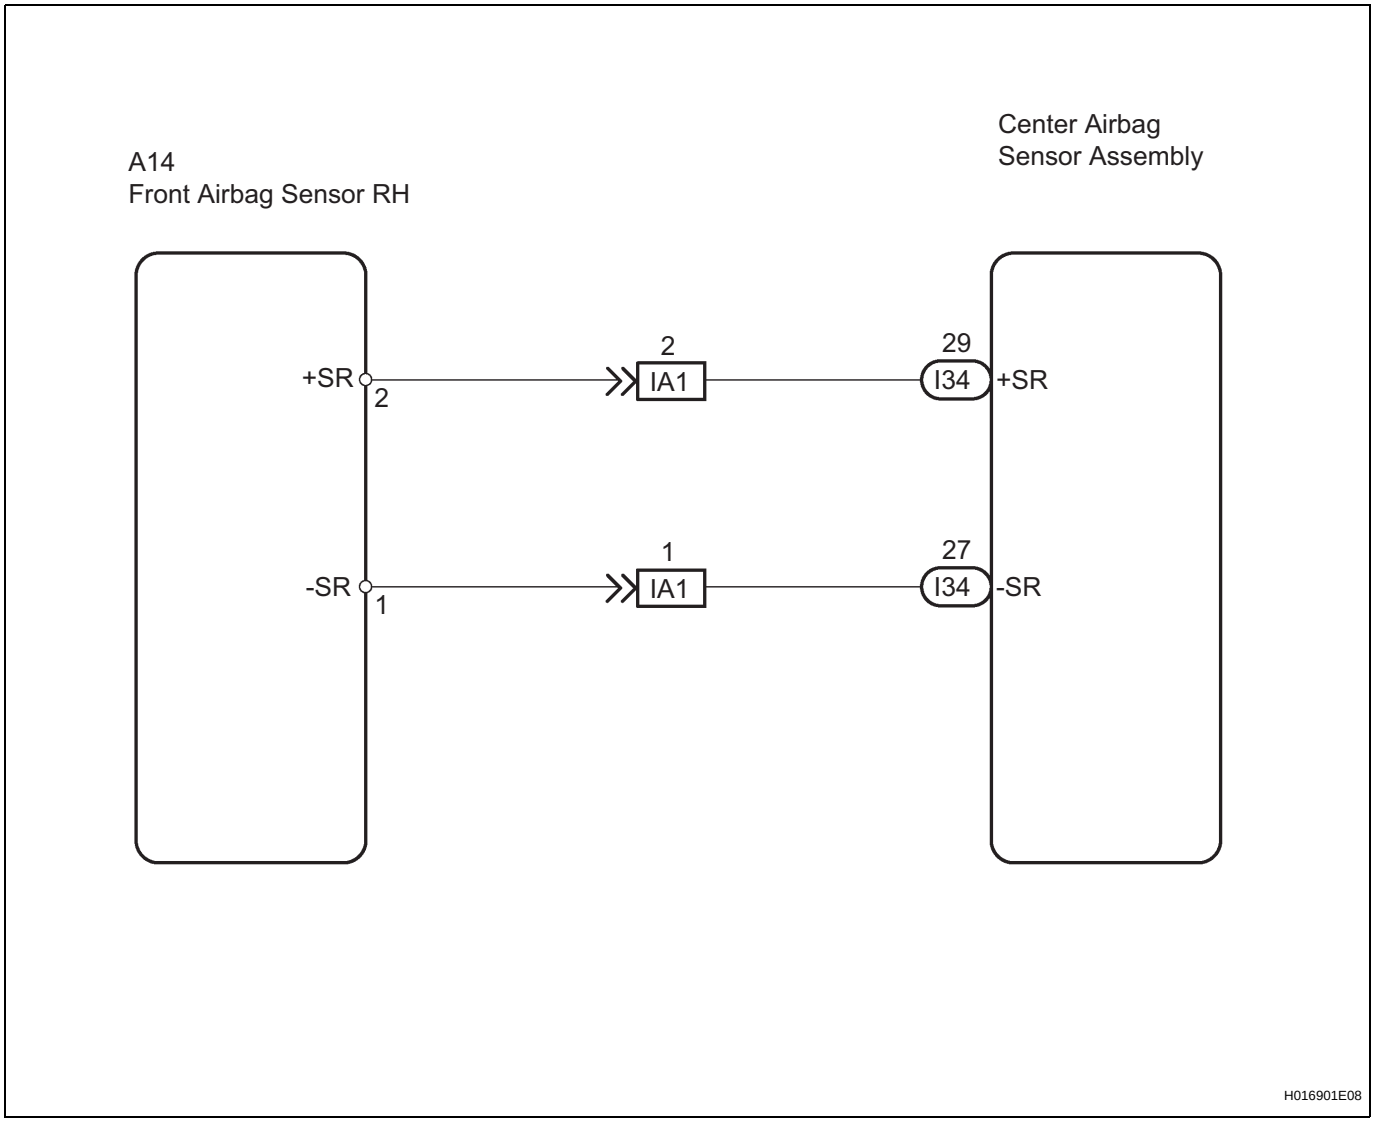
DTC	B1610/13	Front Airbag Sensor RH Malfunction

DESCRIPTION

The front airbag sensor RH consists of the diagnostic circuit, the frontal deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the frontal deceleration sensor, it determines whether the SRS should be activated.
DTC B1610/13 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1610/13	• Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Front airbag sensor RH • Center airbag sensor assembly

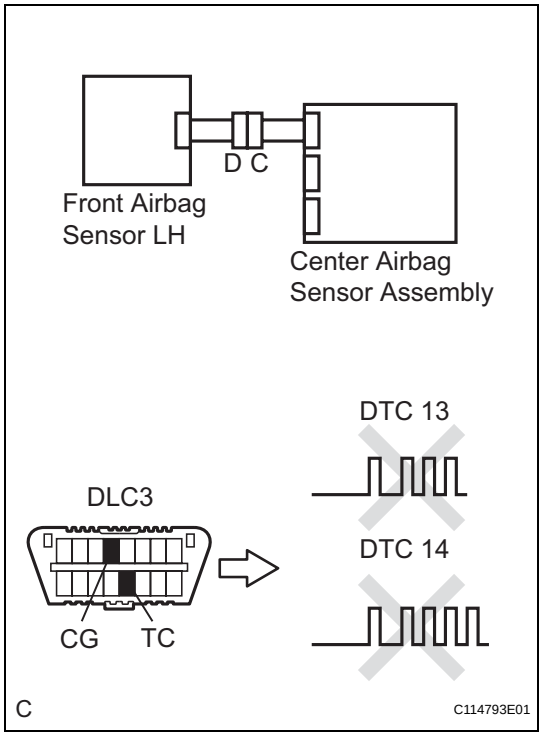
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK FRONT AIRBAG SENSOR RH



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Clear the DTCs stored in the memory (See page RS-41).
(g) Turn the ignition switch off.
(h) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(i) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1610/13 is output.	A
DTC B1615/14 is output.	B
DTC B1610/13 and B1615/14 are not output.	C

HINT:
Codes other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

B → **REPLACE FRONT AIRBAG SENSOR RH (See page RS-446)**

C

RS

INSPECTION PROCEDURE

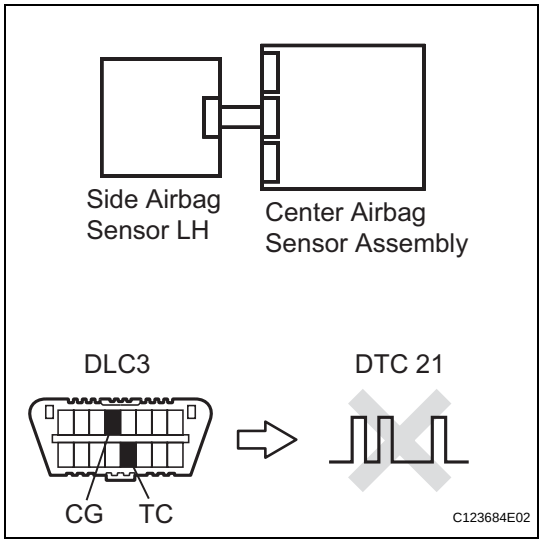
1 CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1620/21 is not output.
HINT:
Codes other than DTC B1620/21 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

2 CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

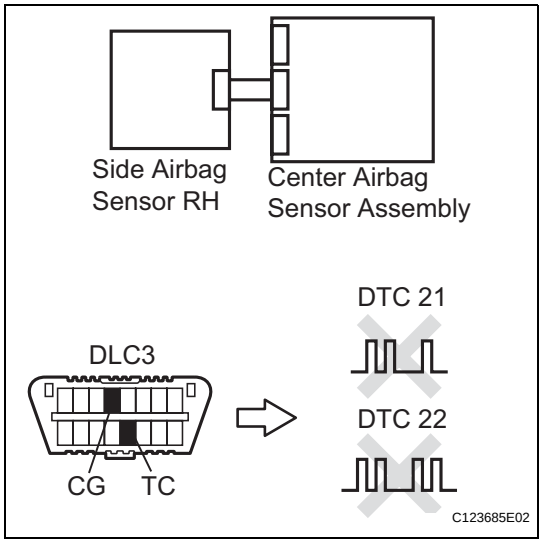
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.

NG → **Go to step 4**

OK

RS

3 CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1620/21 is output.	A

DTC B1620/21 and B1625/22 are not output.	C

HINT:
Codes other than DTC B1620/21 and B1625/22 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

RS

A → **Go to step 5**

B → **REPLACE SIDE AIRBAG SENSOR LH (See page RS-449)**

C

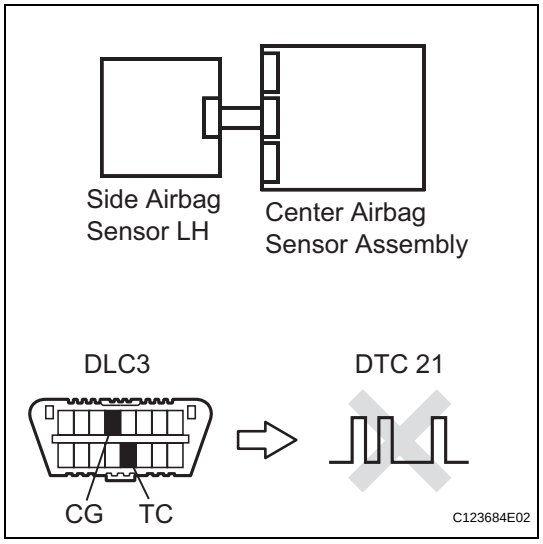
USE SIMULATION METHOD TO CHECK (See page RS-32)

4 REPLACE SIDE AIRBAG SENSOR LH

(a) Replace the side airbag sensor LH (See page RS-449).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1620/21 is not output.

HINT:

Codes other than DTC B1620/21 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

RS

DTC	B1622/81	Lost Communication with Driver Side - Side Airbag Sensor Assembly
DTC	B1623/81	Driver Side - Side Airbag Sensor Assembly Initialization Incomplete
DTC	B1632/81	Lost Communication with Driver Side Rear Airbag Sensor
DTC	B1633/81	Driver Side Rear Airbag Sensor Initialization Incomplete
DTC	B1642/81	Lost Communication with Driver Side Satellite Sensor Bus
DTC	B1643/81	Driver Side Satellite Sensor Bus Initialization Incomplete

DESCRIPTION

The circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH) is composed of the center airbag sensor assembly, side airbag sensor LH, and rear airbag sensor LH.

RS

The side airbag sensor LH and rear airbag sensor LH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1622/81, B1623/81, B1632/81, B1633/81, B1642/81, or B1643/81 is recorded when a malfunction is detected in the circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH).

DTC No.	DTC Detecting Condition	Trouble Area
1622/81 1623/81 1632/81 1633/81 1642/81 1643/81	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH) for 2 seconds. • Side airbag sensor LH malfunction • Rear airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

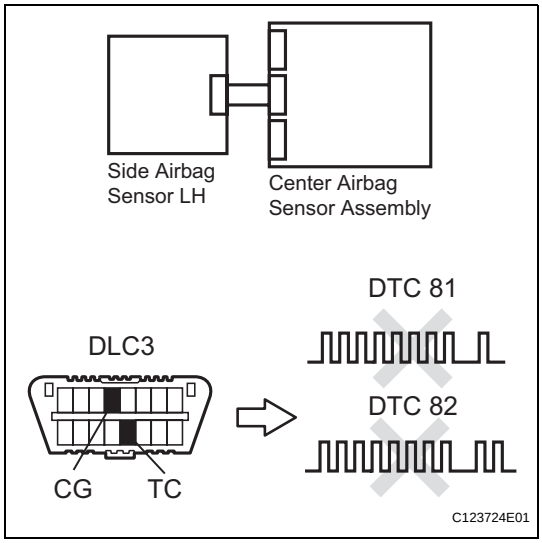
RS

INSPECTION PROCEDURE

1	CHECK PRESENT DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Turn the ignition switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the ignition switch off and then on (IG) again.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Check the present DTCs (See page RS-41).
Result

Result	Proceed to
Present DTC B1623, B1633, B1643, or 81 is output.	A
Present DTC B1628, B1638, B1648, or 82 is output.	B
Present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then on (IG) again.
- Codes other than present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

RS

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

2	CHECK PAST DTC

(a) Check the past DTCs (See page RS-41).
Result

Result	Proceed to
• Past DTC B1632, B1642, or 81 is output. • Past DTC B1622, B1632, B1642, or 81 is not output.	A
Past DTC B1622 is output.	B

HINT:
Codes other than past DTC B1622, B1632, B1642, or 81 may be output at this time, but they are not related to this check.

B → Go to step 20

A

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor LH.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

4	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor LH side) are not damaged.

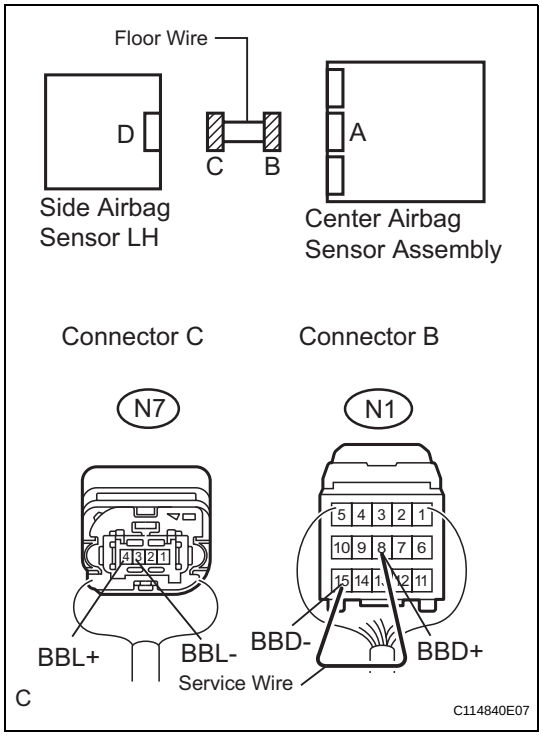
OK:

The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

5 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 8 (BBD+) and 15 (BBD-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

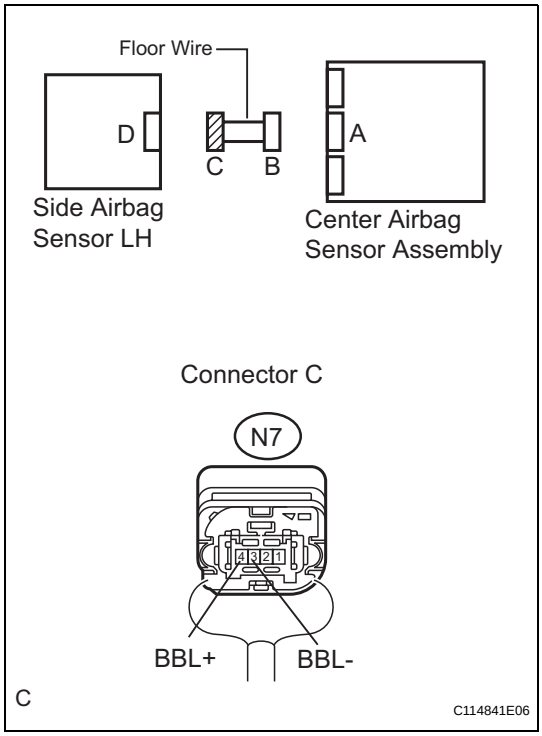
Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

6 CHECK FLOOR WIRE (SHORT)



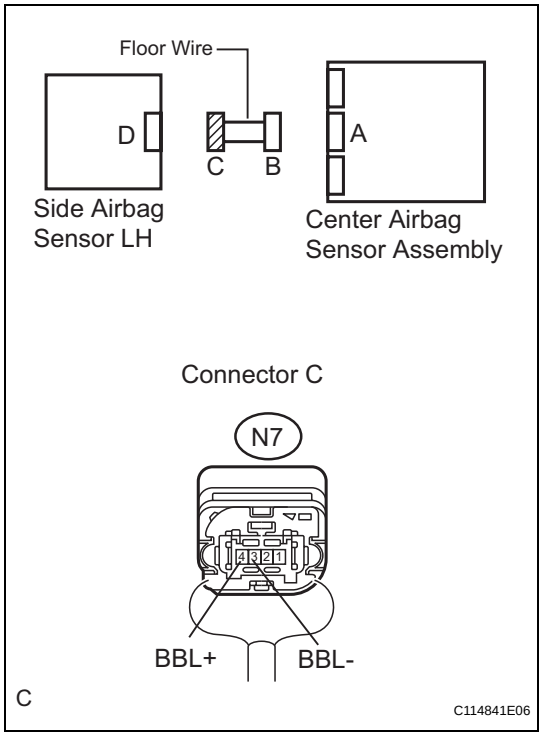
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

7 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

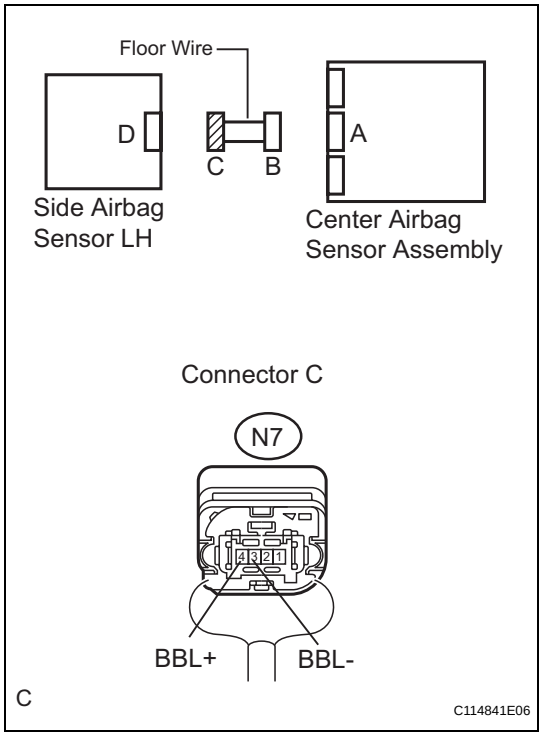
Standard voltage

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Ignition switch on (IG)	Below 1 V
N7-3 (BBL-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

8 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Always	1 MΩ or higher
N7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

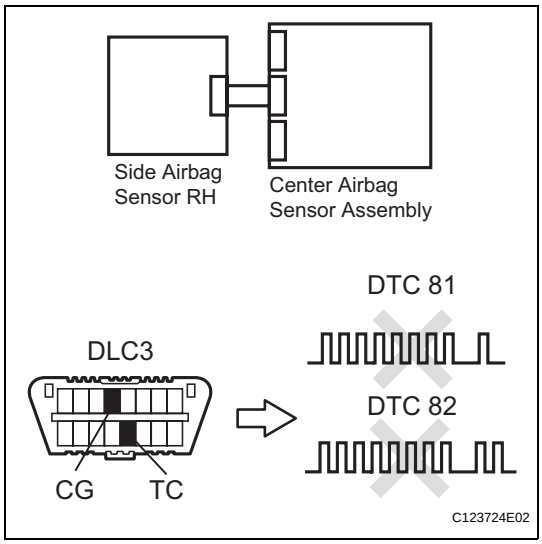
9	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor LH.

NG → **Go to step 11**

OK

10	CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1623, B1633, B1643, or 81 is output.	A
DTC B1628, B1638, B1648, or 82 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

(h) Turn the ignition switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

B → **REPLACE SIDE AIRBAG SENSOR LH (See page RS-449)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

11	CHECK CONNECTION OF CONNECTOR

(a) Check that the connector is properly connected to the rear airbag sensor LH.

RS

OK:
The connector is properly connected.

NG → **CONNECT CONNECTOR PROPERLY**

OK

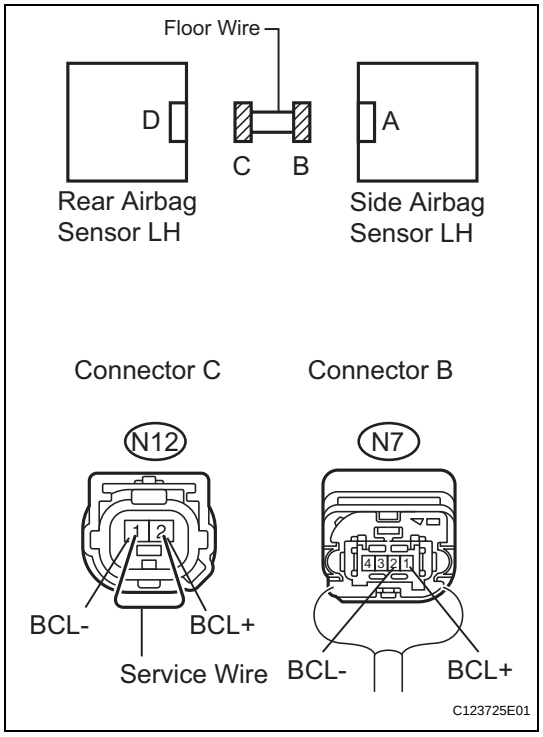
12 CHECK CONNECTOR

(a) Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.
(b) Check that the connector (on the rear airbag sensor LH side) is not damaged.
OK:
The connector is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

13 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

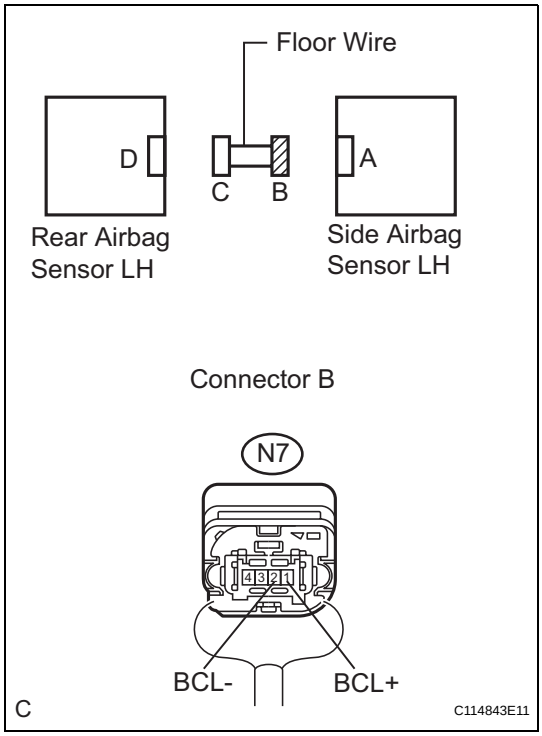
Tester connection	Condition	Specified condition
N7-1 (BCL+) - N7-2 (BCL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

14 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

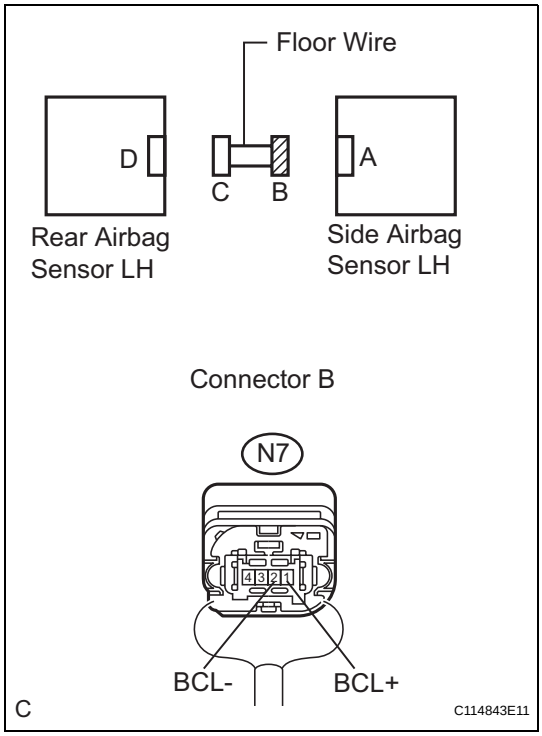
Tester connection	Condition	Specified condition
N7-1 (BCL+) - N7-2 (BCL-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

15 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

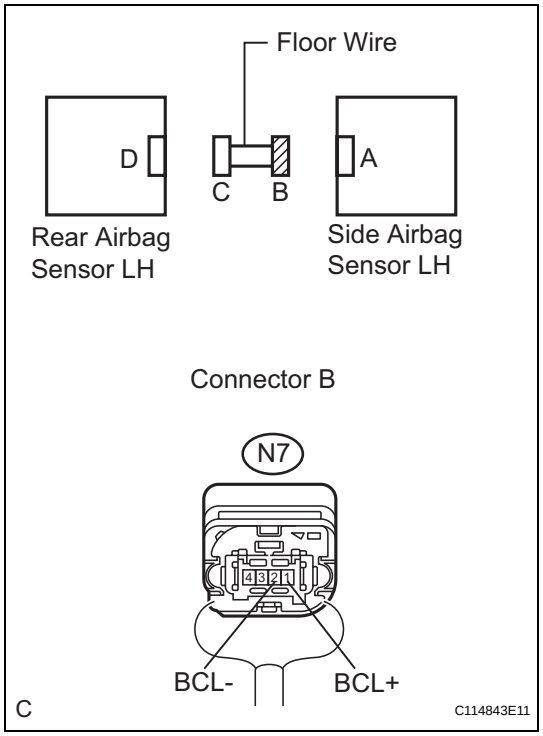
Standard voltage

Tester connection	Condition	Specified condition
N7-1 (BCL+) - Body ground	Ignition switch on (IG)	Below 1 V
N7-2 (BCL-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

16 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-1 (BCL+) - Body ground	Always	1 MΩ or higher
N7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

17 CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Check that the part number of the rear airbag sensor LH is equal to the number of the other side.

OK:

Those numbers are the same.

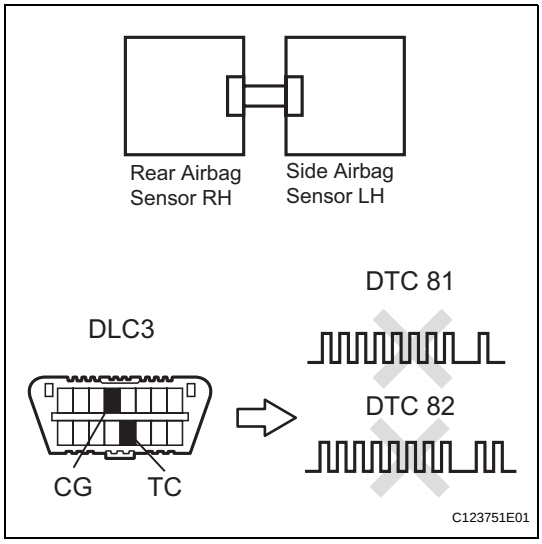
(b) Connect the connectors to the side airbag sensor LH and the rear airbag sensor LH.

NG → **Go to step 19**

OK

RS

18 CHECK REAR AIRBAG SENSOR LH



(a) Interchange the rear airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to

(h) Turn the ignition switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the rear airbag sensor RH and LH to their original positions and connect the connectors to them.

B → **REPLACE REAR AIRBAG SENSOR LH (See page RS-455)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1623, B1633, B1643, or 81 is not output.

RS

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

20	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

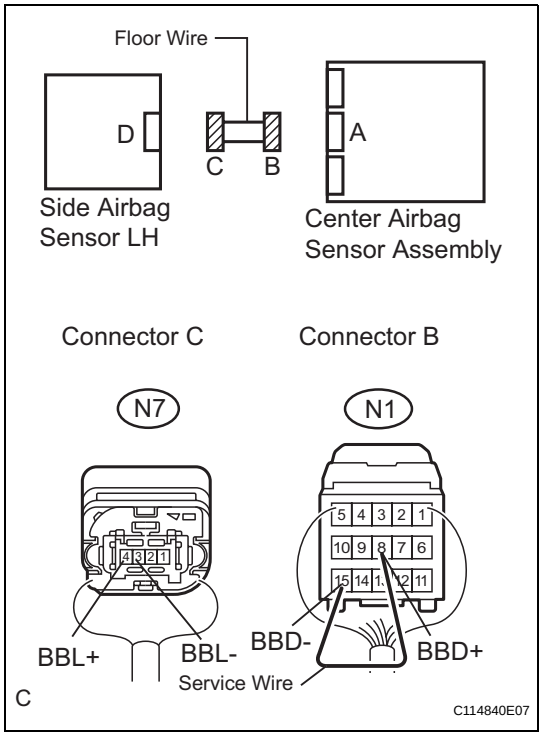
21	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor LH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

22 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 8 (BBD+) and 15 (BBD-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

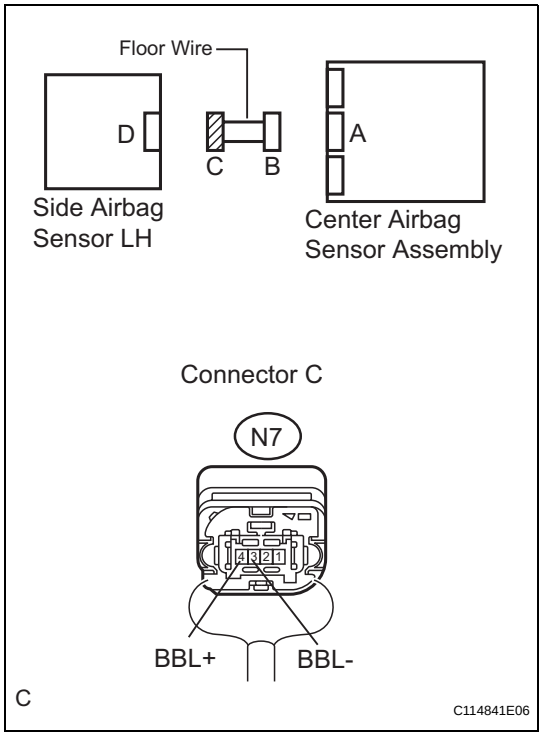
Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

23 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.

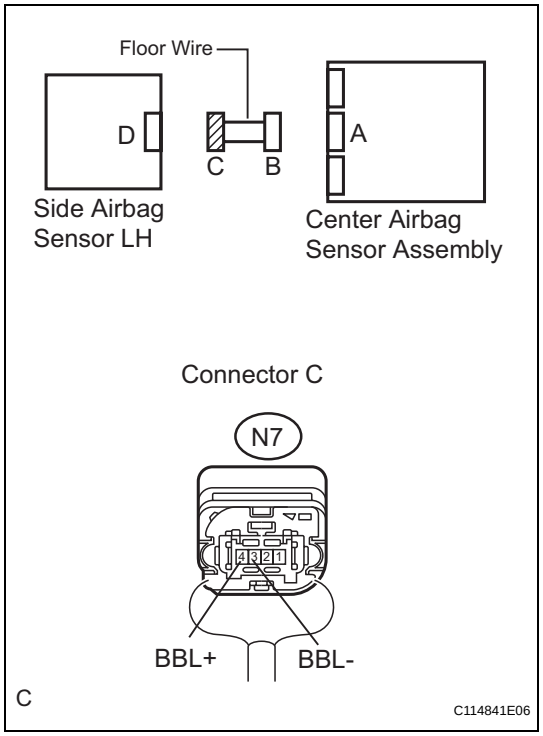
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

24 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

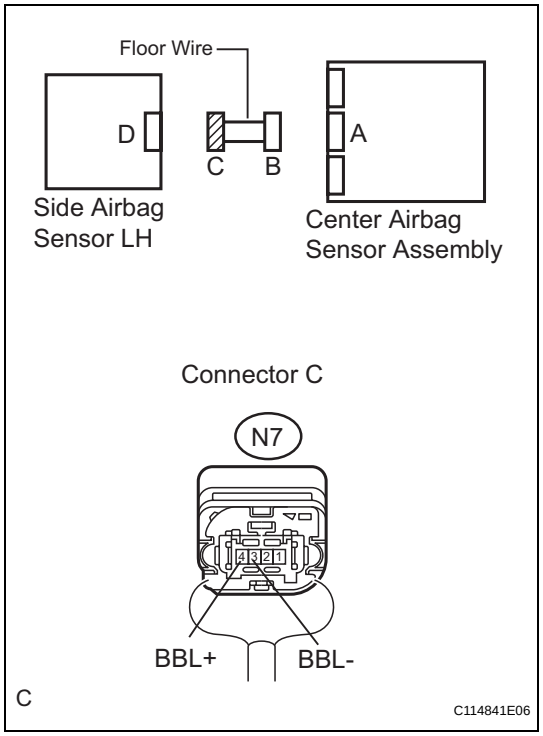
Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Ignition switch on (IG)	Below 1 V
N7-3 (BBL-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

25 CHECK FLOOR WIRE (SHORT TO GROUND)

RS



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Always	1 MΩ or higher
N7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

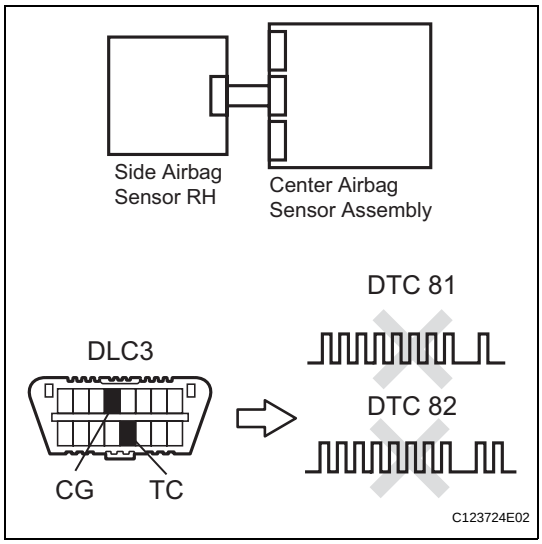
26	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor LH.

NG → **Go to step 28**

OK

27	CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).

DTC	B1625/22	Front Passenger Side - Side Airbag Sensor Malfunction

DESCRIPTION

The side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1625/22 is recorded when a malfunction is detected in the front passenger side - side airbag sensor circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1625/22	• Side airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Side airbag sensor RH • Center airbag sensor assembly

(i) Turn the ignition switch off.
(j) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(k) Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

RS

A → **Go to step 5**

B → **REPLACE SIDE AIRBAG SENSOR RH (See page RS-449)**

C

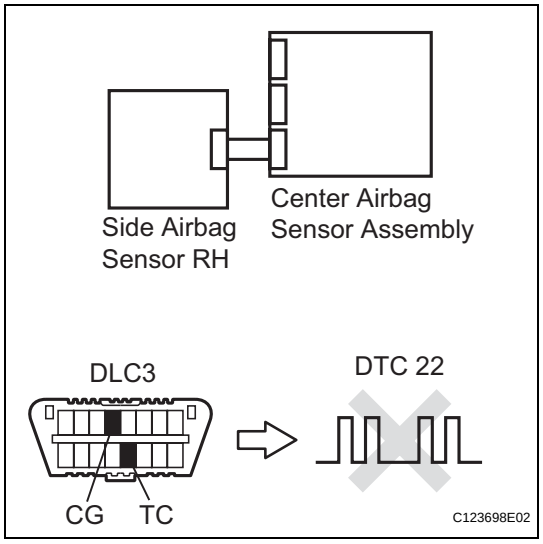
USE SIMULATION METHOD TO CHECK (See page RS-32)

4 REPLACE SIDE AIRBAG SENSOR RH

(a) Replace the side airbag sensor RH (See page RS-449).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1625/22 is not output.

HINT:

Codes other than DTC B1625/22 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

DTC	**B1627/82**	**Lost Communication with Front Passenger Side - Side Airbag Sensor Assembly**

DTC	**B1628/82**	**Front Passenger Side - Side Airbag Sensor Assembly Initialization Incomplete**

DTC	**B1637/82**	**Lost Communication with Passenger Side Rear Airbag Sensor**

DTC	**B1638/82**	**Passenger Side Rear Airbag Sensor Initialization Incomplete**

DTC	**B1647/82**	**Lost Communication with Front Passenger Side Satellite Sensor Bus**

DTC	**B1648/82**	**Front Passenger Side Satellite Sensor Bus Initialization Incomplete**

DESCRIPTION

The circuit for the side collision sensor RH (to determine deployment of the front seat side airbag assembly RH and curtain shield airbag assembly RH) is composed of the center airbag sensor assembly, side airbag sensor RH, and rear airbag sensor RH.

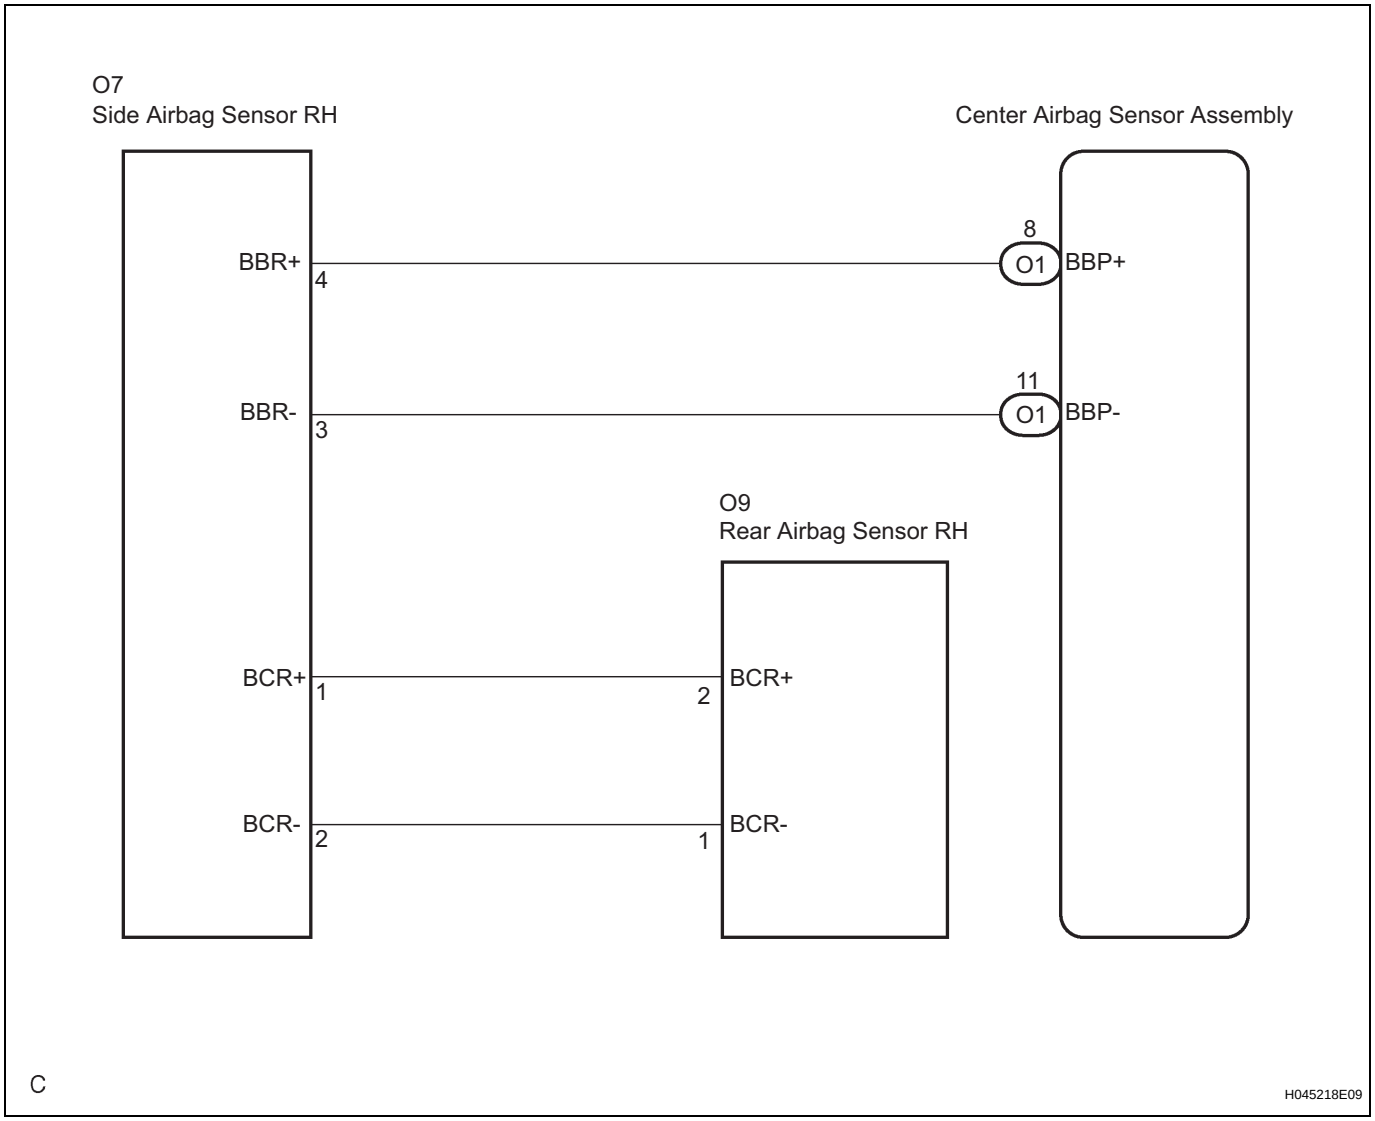
RS

The side airbag sensor RH and rear airbag sensor RH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1627/82, B1628/82, B1637/82, B1638/82, B1647/82, or B1648/82 is recorded when a malfunction is detected in the circuit for the side collision sensor RH.

DTC No.	DTC Detecting Condition	Trouble Area
B1627/82 B1628/82 B1637/82 B1638/82 B1647/82 B1648/82	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat side airbag assembly RH and curtain shield airbag assembly RH) for 2 seconds. • Side airbag sensor RH malfunction • Rear airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

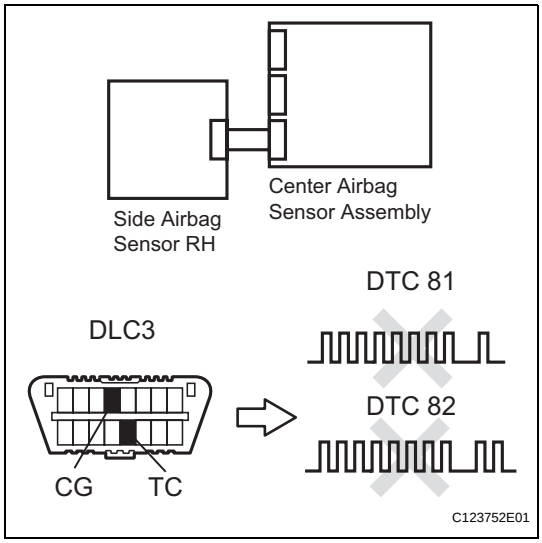
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Turn the ignition switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the ignition switch off and then on (IG) again.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Check the present DTCs (See page RS-41).
Result

Result	Proceed to
Present DTC B1628, B1638, B1648, or 82 is output.	A
Present DTC B1623, B1633 B1643, or 81 is output.	B
Present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the ignition switch off and then on (IG) again.
- Codes other than present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

2	CHECK PAST DTC

(a) Check the past DTCs (See page RS-41).
Result

Result	Proceed to
• Past DTC B1637, B1647, or 82 is output. • Past DTC B1627, B1637, B1647, or 82 is not output.	A
Past DTC B1627 is output.	B

HINT:
Codes other than past DTC B1627, B1637, B1647, or 82 may be output at this time, but they are not related to this check.

RS

B → Go to step 20

A

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor RH.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

4	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor RH side) are not damaged.

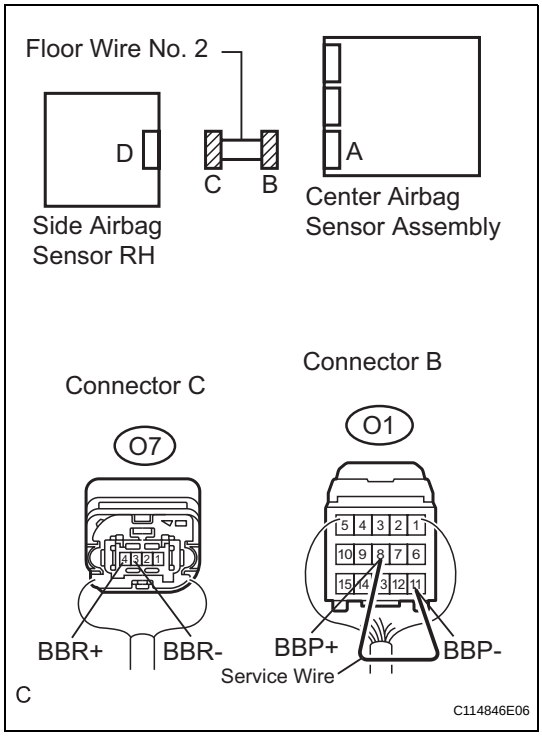
OK:

The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

5 CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Using a service wire, connect terminals 8 (BBP+) and 11 (BBP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

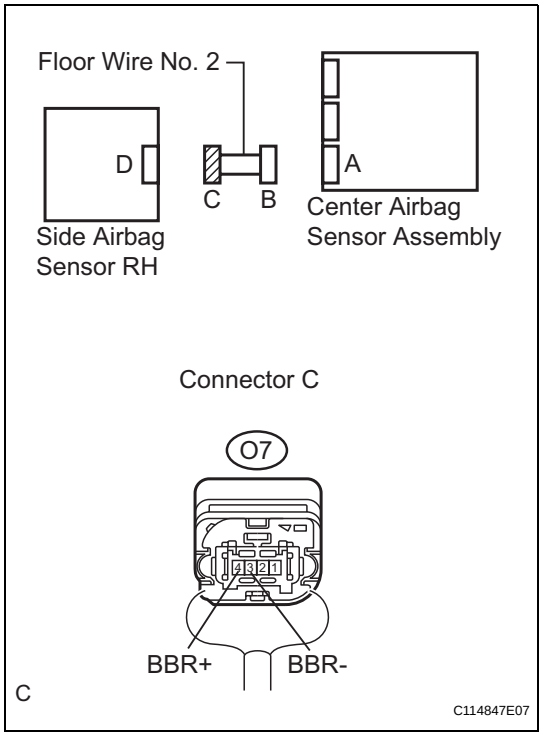
Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

6 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.

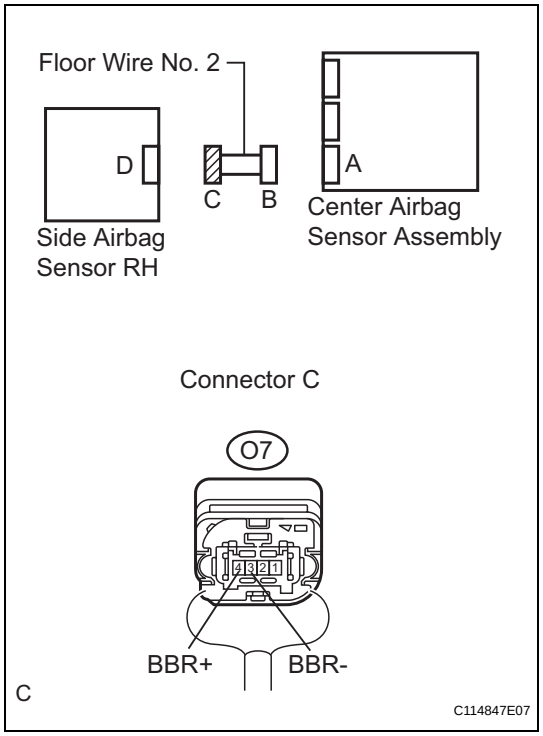
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

7 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

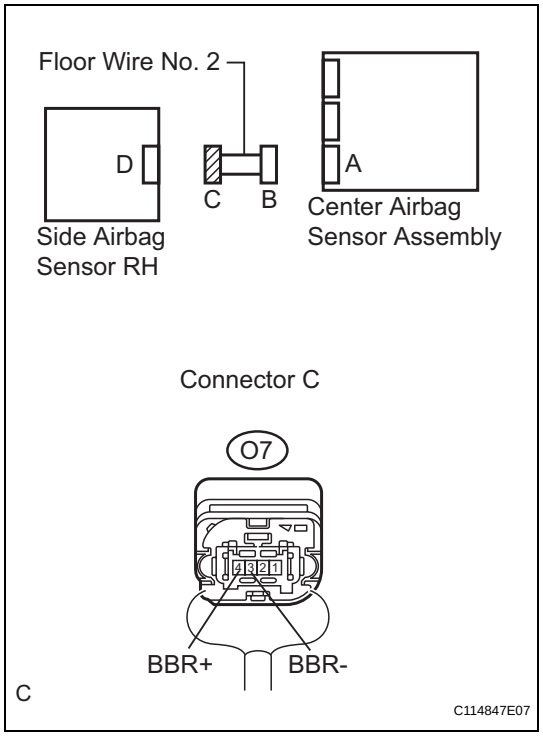
Standard voltage

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Ignition switch on (IG)	Below 1 V
O7-3 (BBR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

8 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Always	1 MΩ or higher
O7-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

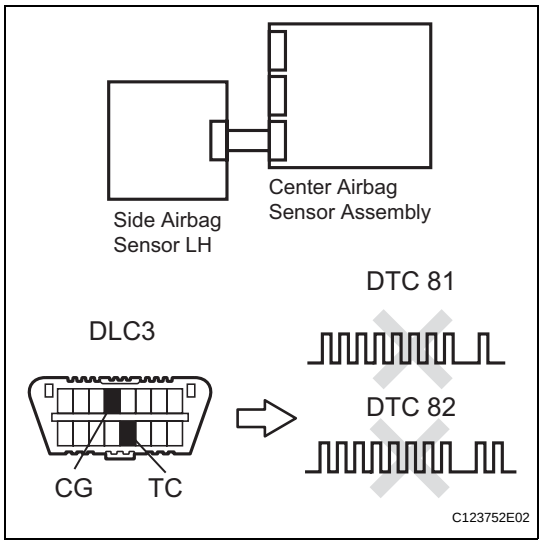
9	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor RH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor RH.

NG → **Go to step 11**

OK

10	CHECK SIDE AIRBAG SENSOR RH



(a) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1628, B1638, B1648, or 82 is output.	A
DTC B1623, B1633, B1643, or 81 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

(h) Turn the ignition switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

B → **REPLACE SIDE AIRBAG SENSOR RH (See page RS-449)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

11	CHECK CONNECTION OF CONNECTOR

(a) Check that the connector is properly connected to the rear airbag sensor RH.
OK:
The connector is properly connected.

RS

NG → CONNECT CONNECTOR PROPERLY

OK

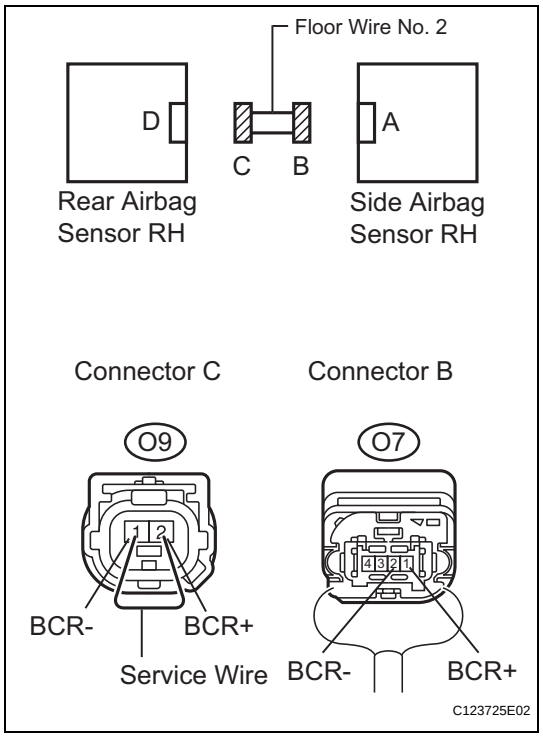
12 CHECK CONNECTOR

(a) Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.
(b) Check that the connector (on the rear airbag sensor RH side) is not damaged.
OK:
The connector is not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

13 CHECK FLOOR WIRE NO. 2 (OPEN)



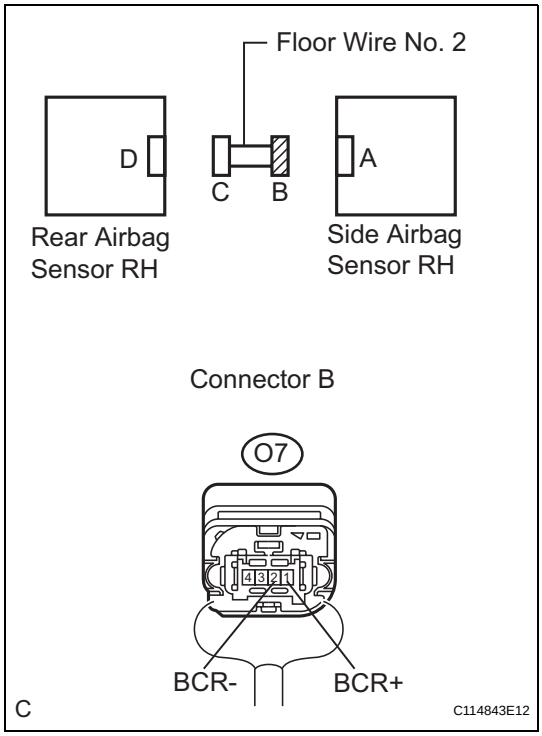
(a) Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O7-2 (BCR-) - O7-1 (BCR+)	Always	Below 1 Ω

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

14 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

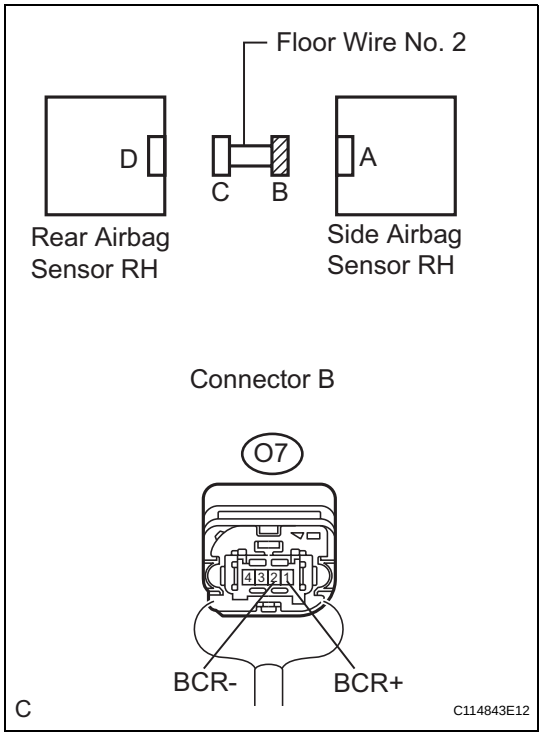
Tester connection	Condition	Specified condition
O7-1 (BCR+) - O7-2 (BCR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

15 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

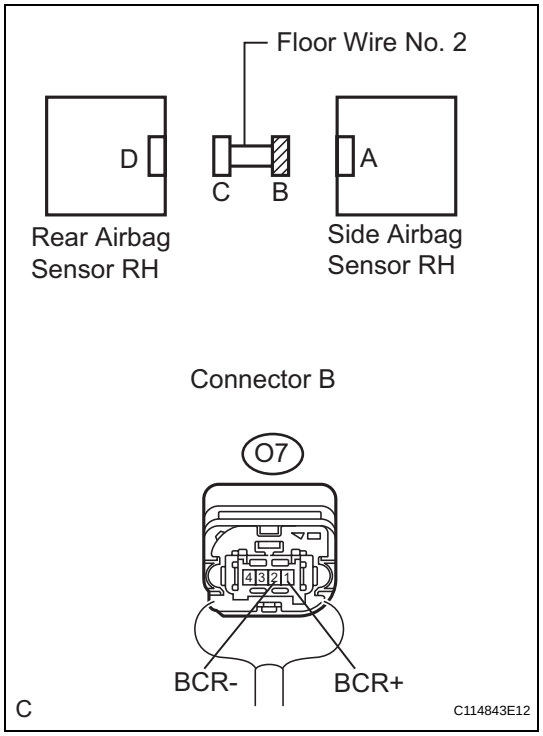
Standard voltage

Tester connection	Condition	Specified condition
O7-1 (BCR+) - Body ground	Ignition switch on (IG)	Below 1 V
O7-2 (BCR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

16 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-1 (BCR+) - Body ground	Always	1 MΩ or higher
O7-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

17 CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Check that the part number of the rear airbag sensor RH is equal to the number of the other side.

OK:

Those numbers are the same.

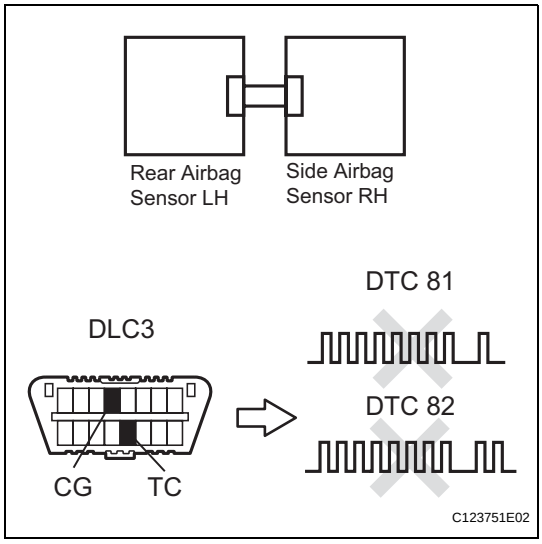
(b) Connect the connectors to the side airbag sensor RH and the rear airbag sensor RH.

NG → **Go to step 19**

OK

RS

18 CHECK REAR AIRBAG SENSOR RH



(a) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1628, B1638, B1648, or 82 is output.	A
DTC B1623, B1633, B1643, or 81 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

(h) Turn the ignition switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the rear airbag sensor LH and RH to their original positions and connect the connectors to them.

B → **REPLACE REAR AIRBAG SENSOR RH (See page RS-455)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

A

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1628, B1638, B1648, or 82 is not output.

RS

HINT:
Codes other than DTC B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

20	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

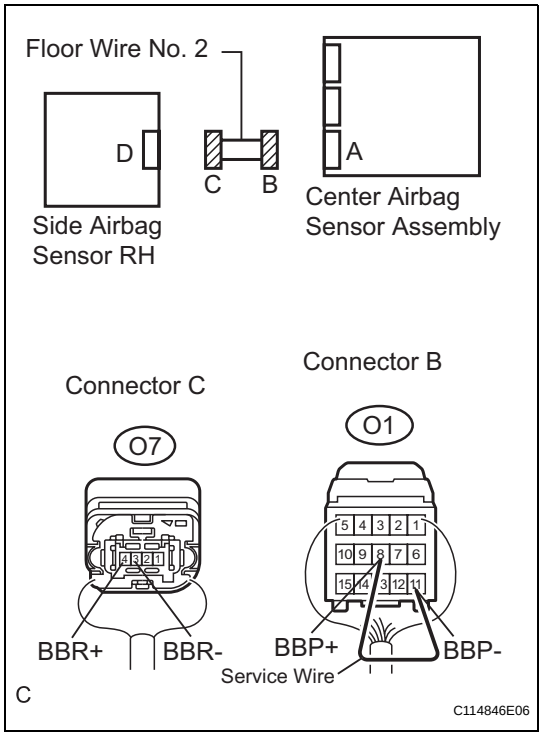
21	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor RH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

22 CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Using a service wire, connect terminals 8 (BBP+) and 11 (BBP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

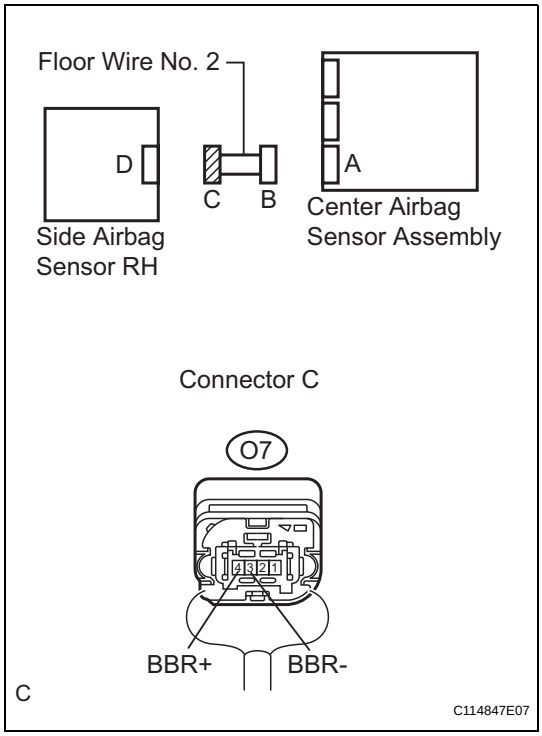
Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

23 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.

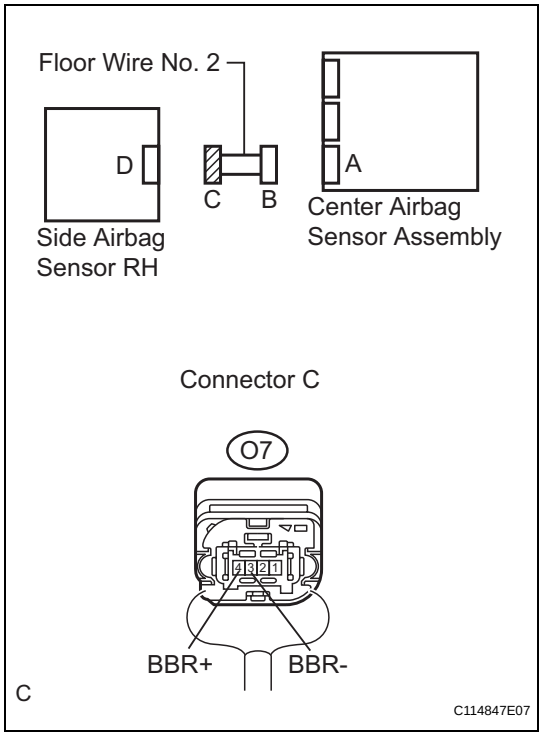
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

24 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

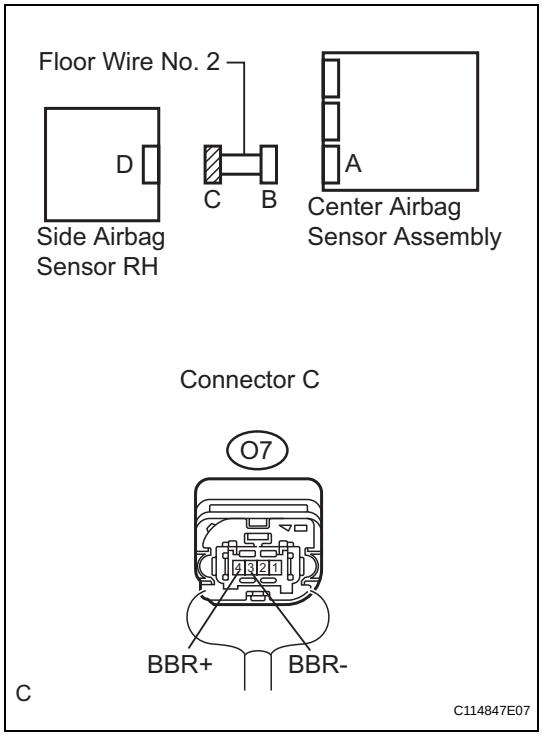
Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Ignition switch on (IG)	Below 1 V
O7-3 (BBR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

25 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)

RS



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Always	1 MΩ or higher
O7-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

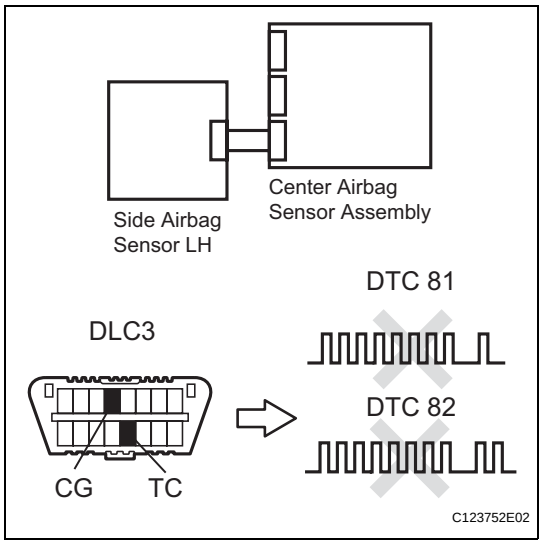
26	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor RH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor RH.

NG → **Go to step 28**

OK

27	CHECK SIDE AIRBAG SENSOR RH



(a) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

USE SIMULATION METHOD TO CHECK (See page RS-32)

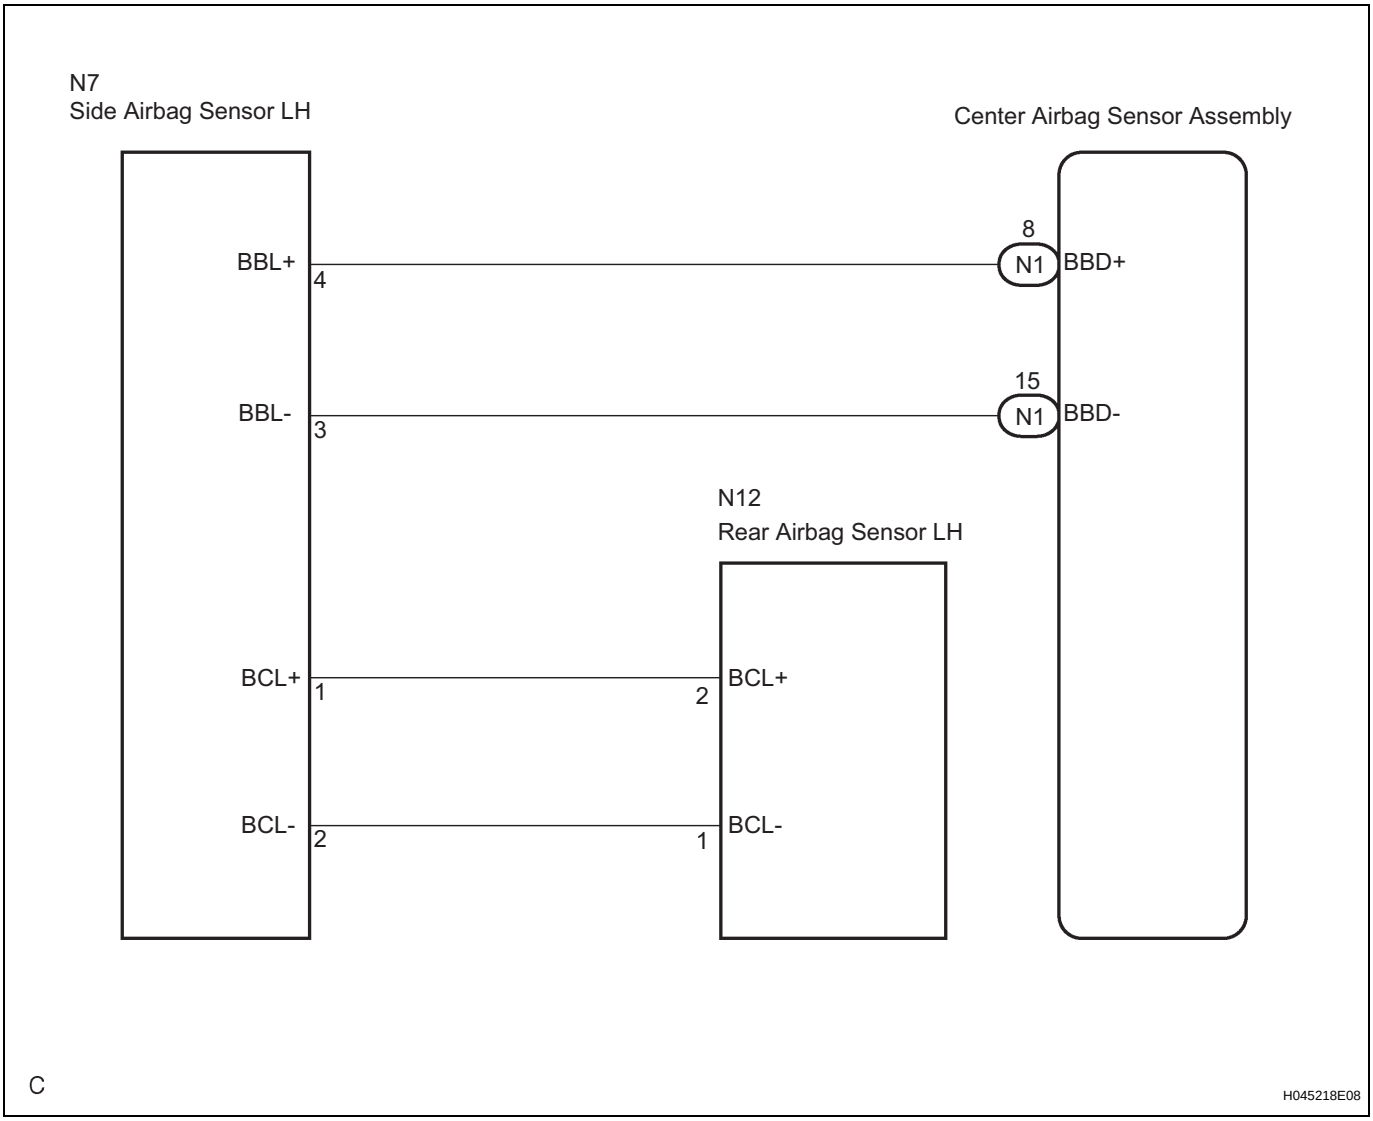
DTC	B1630/23	Driver Side Rear Airbag Sensor Malfunction

DESCRIPTION

The rear airbag sensor LH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1630/23 is recorded when a malfunction is detected in the driver side rear airbag sensor circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1630/23	• Rear airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Rear airbag sensor LH • Center airbag sensor assembly

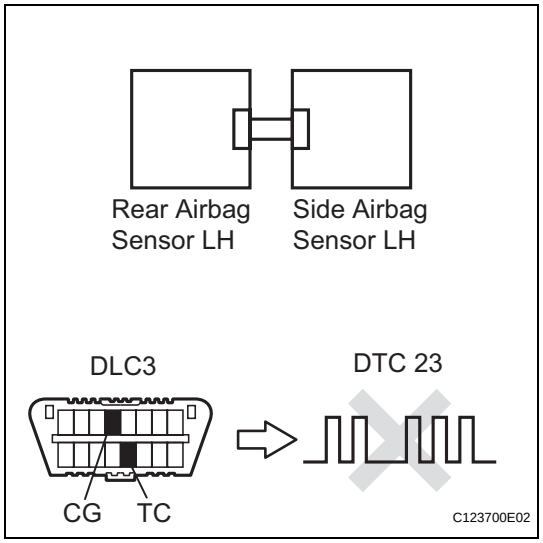
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1630/23 is not output.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

2	CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

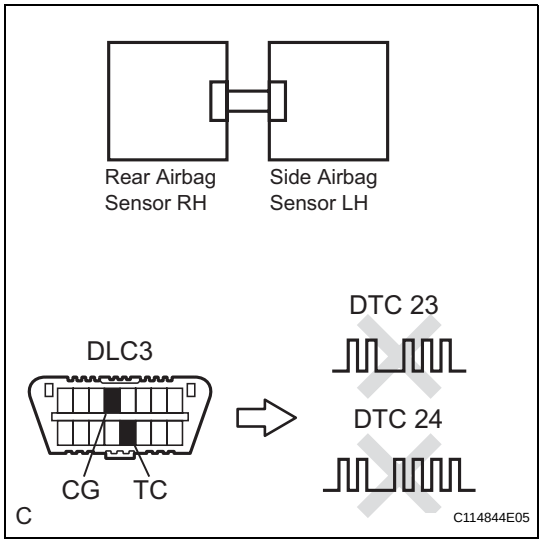
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the rear airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.

NG → **Go to step 4**

OK

RS

3 CHECK REAR AIRBAG SENSOR LH



(a) Interchange the rear airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

DTC	B1650/32	Occupant Classification System Malfunction

DESCRIPTION

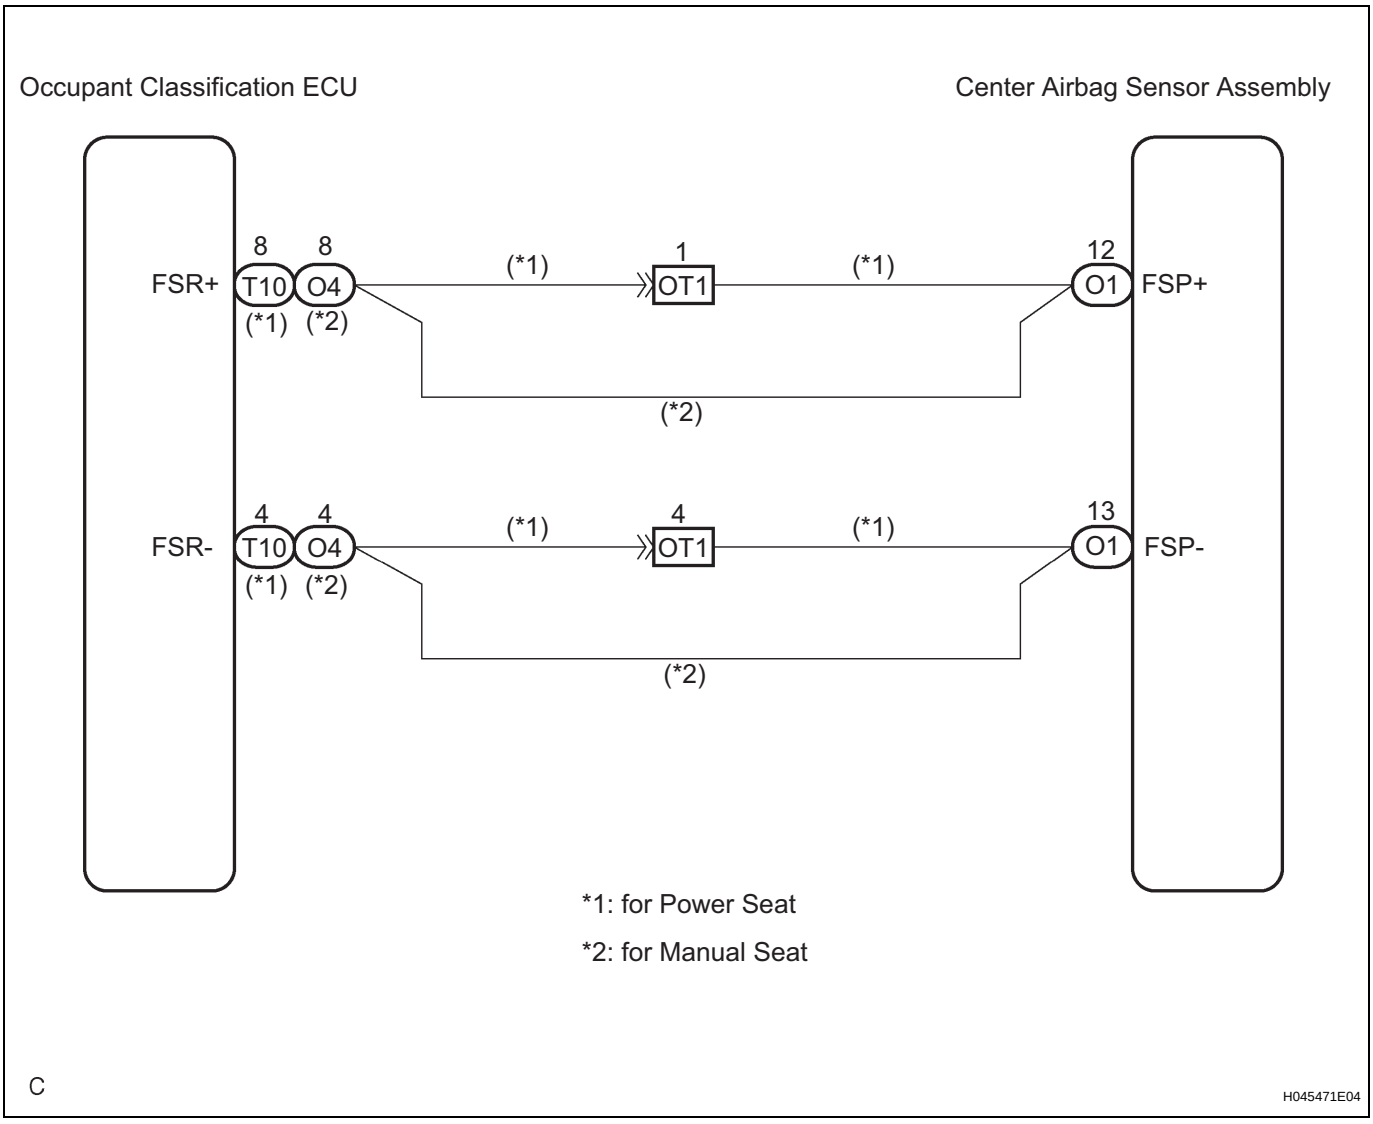
The occupant classification system circuit consists of the center airbag sensor assembly and the occupant classification system.

If the center airbag sensor assembly receives signals from the occupant classification ECU, it determines whether the front passenger airbag assembly, the front seat side airbag assembly RH and front seat outer belt assembly should be operated.

DTC B1650/32 is recorded when a malfunction is detected in the occupant classification system circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1650/32	• Occupant classification system malfunction • The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification system circuit for 2 seconds. • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Occupant classification system • Front seat wire RH (for Power Seat) • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

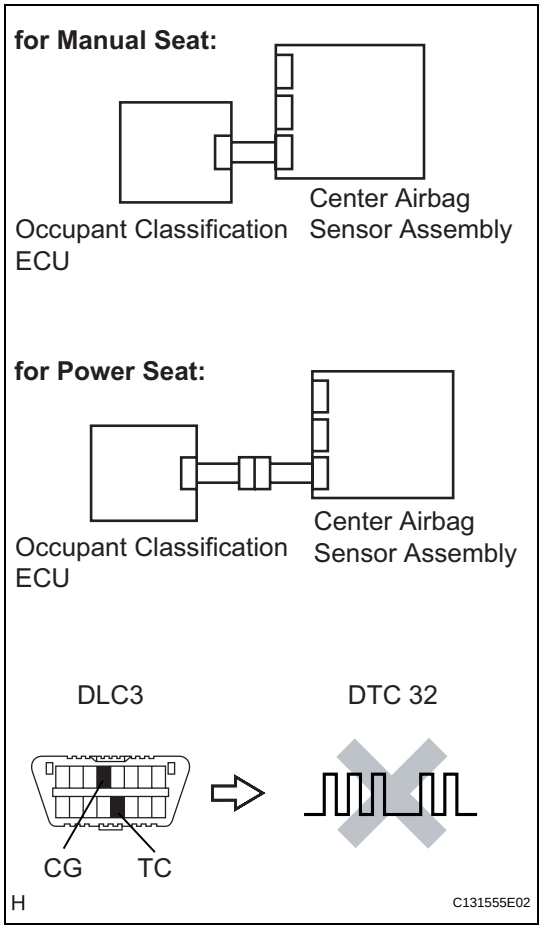
1	CHECK DTC (OCCUPANT CLASSIFICATION ECU)

(a) Turn the ignition switch on (IG), and wait for at least 10 seconds.
(b) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-251).
OK:
DTC is not output.

NG → **GO TO OCCUPANT CLASSIFICATION SYSTEM**

OK

2	CHECK DTC (CENTER AIRBAG SENSOR ASSEMBLY)



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1650/32 is not output.
HINT:
Codes other than DTC B1650/32 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

RS

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the occupant classification ECU.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK ↓

4	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the occupant classification ECU.
(b) Check that the connectors (on the center airbag sensor assembly side and occupant classification ECU side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK ↓

5	CHECK VEHICLE TYPE

(a) Check the front passenger side seat type.
Result

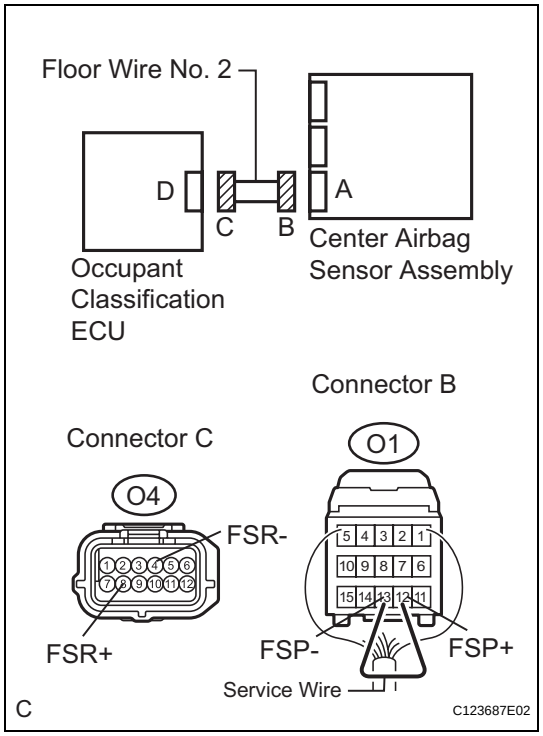
Result	Proceed to
for Manual seat	A
for Power seat	B

B → **Go to step 10**

A ↓

RS

6 CHECK FLOOR WIRE NO. 2 (OPEN)



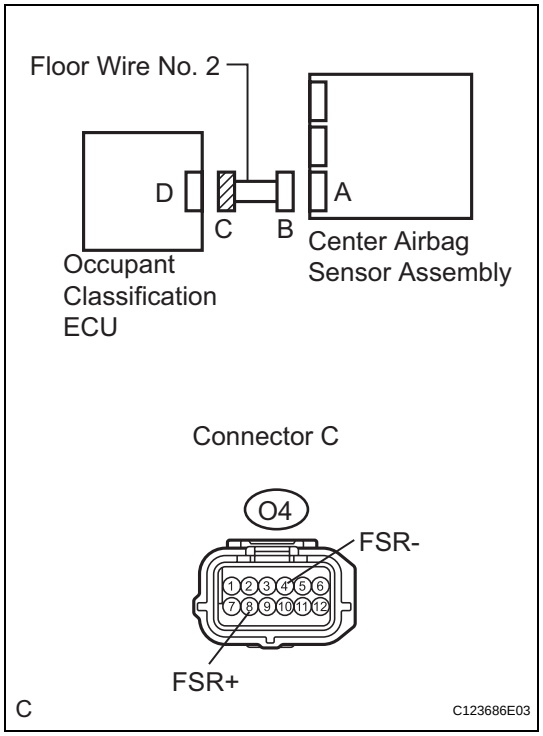
(a) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Terminal Connection	Condition	Specified Condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

7 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

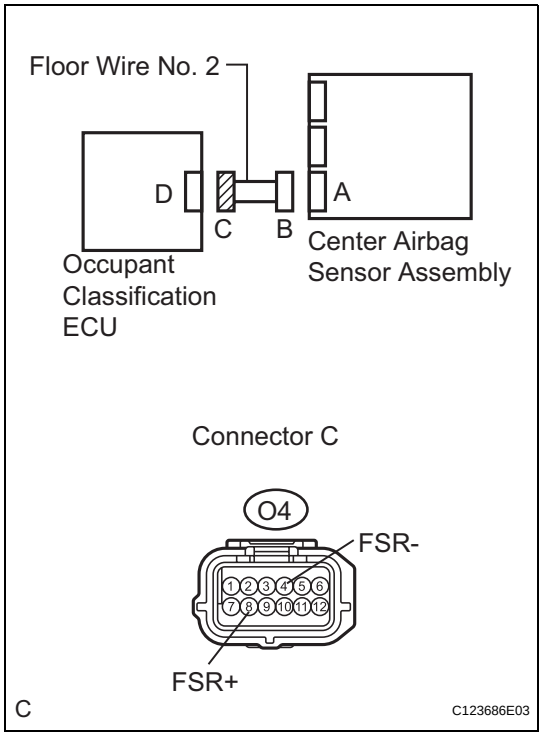
Terminal Connection	Condition	Specified Condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

8 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

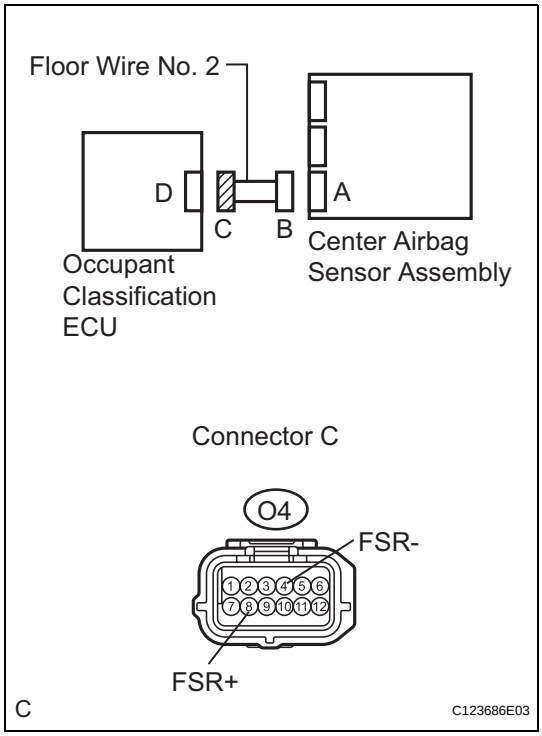
Tester Connection	Condition	Specified Condition
O4-8 (FSR+) - Body ground	Ignition switch ON	Below 1 V
O4-4 (FSR-) - Body ground	Ignition switch ON	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

9 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O4-8 (FSR+) - Body ground	Always	1 MΩ or higher
O4-4 (FSR-) - Body ground	Always	1 MΩ or higher

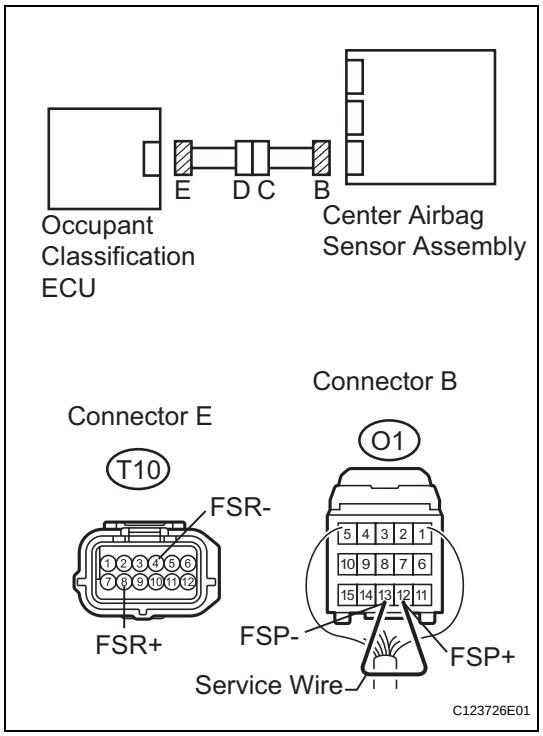
HINT:
After replacing the center airbag sensor assembly, check for DTCs of the center airbag sensor assembly. If the DTC B1650/32 is detected, replace the occupant classification ECU (See page RS-469) and perform "zero point calibration" and "sensitivity check" of the occupant classification system (See page RS-242).

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

10 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)



(a) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminal of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

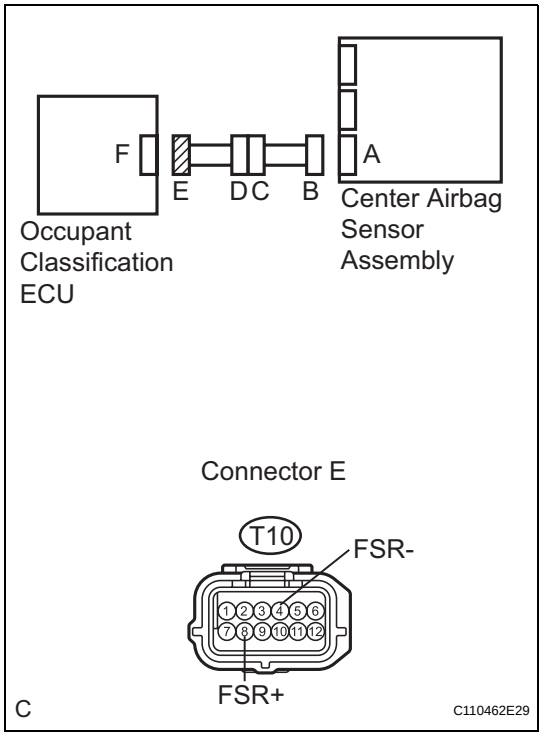
Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	Below 1 Ω

NG → **Go to step 14**

OK

RS

11 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

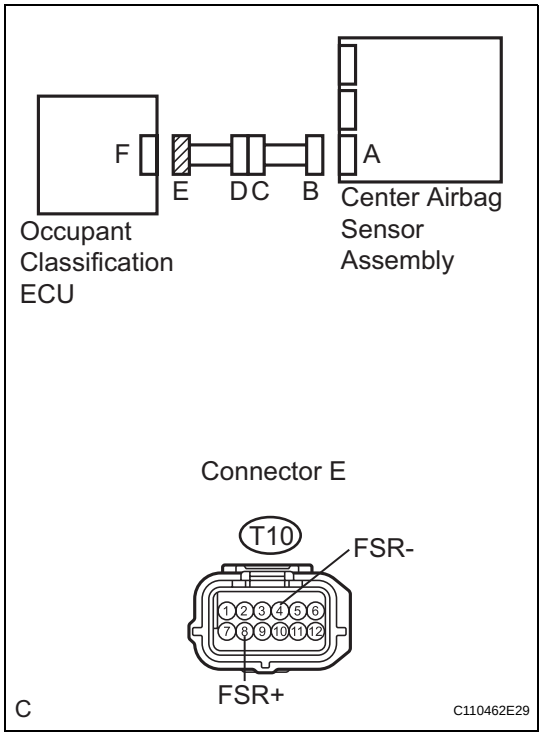
Standard resistance

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	1 MΩ or higher

NG → **Go to step 15**

OK

12 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

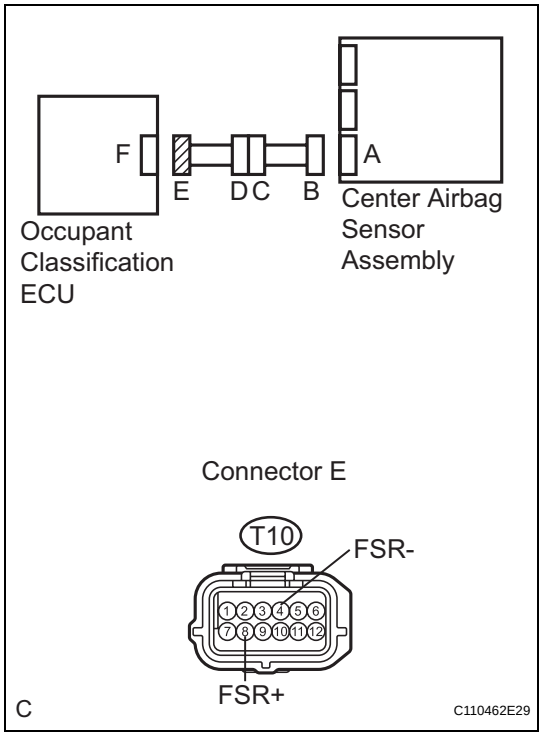
Standard voltage

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - Body ground	Ignition switch on (IG)	Below 1 V
T10-4 (FSR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **Go to step 16**

OK

13	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - Body ground	Always	1 MΩ or higher
T10-4 (FSR-) - Body ground	Always	1 MΩ or higher

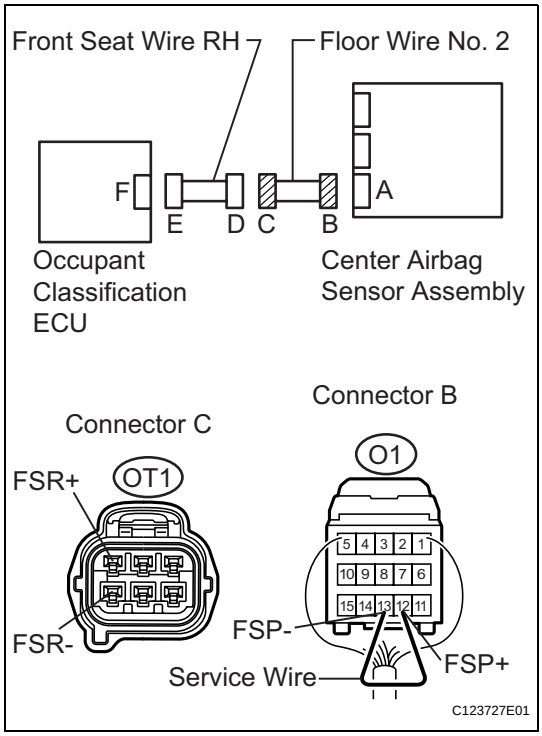
HINT:
After replacing the center airbag sensor assembly, check for DTCs of the center airbag sensor assembly. If the DTC B1650/32 is detected, replace the occupant classification ECU (See page RS-469) and perform "zero point calibration" and "sensitivity check" of the occupant classification system (See page RS-242).

NG → **Go to step 17**

OK →

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

14	CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

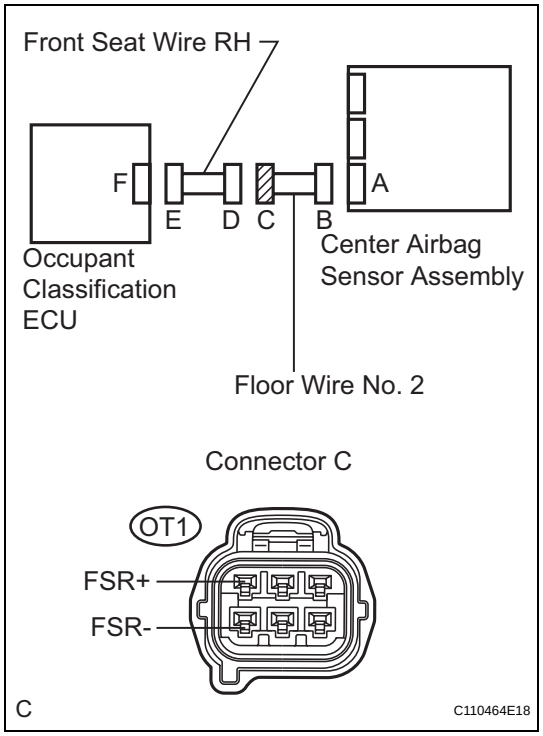
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS **REPAIR OR REPLACE FRONT SEAT WIRE RH**

15	CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

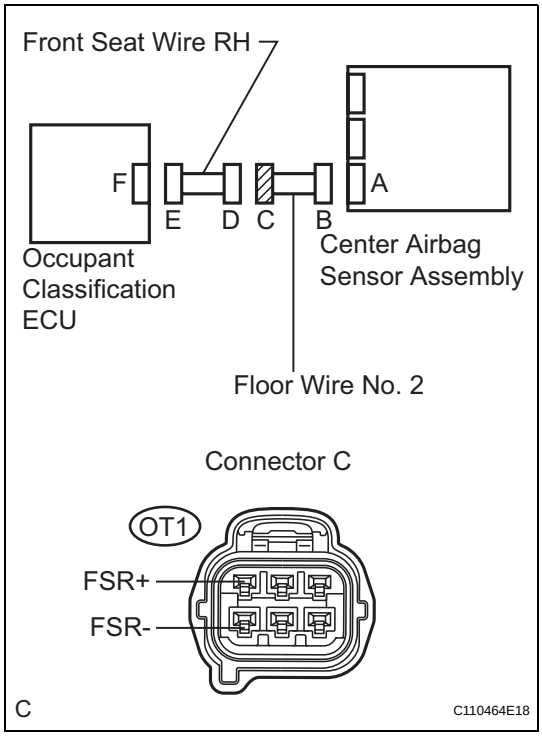
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

16	CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the front seat wire RH connector from the floor wire No. 2.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

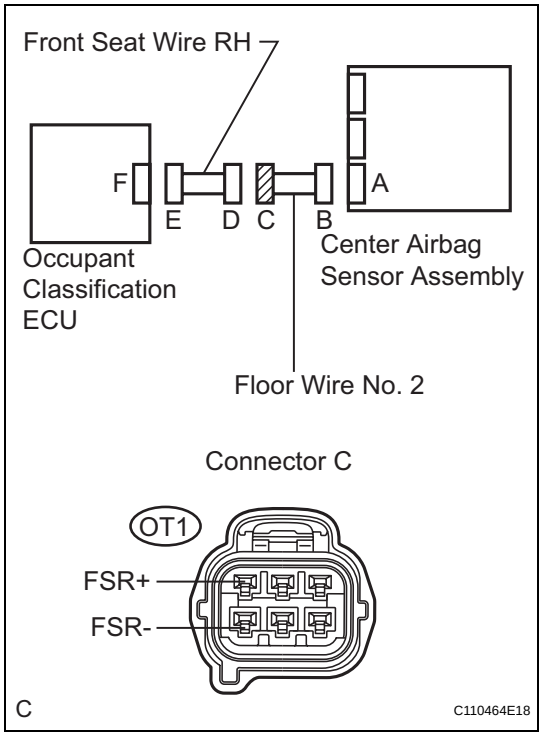
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - Body ground	Ignition switch on (IG)	Below 1 V
OT1-4 (FSR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS **REPAIR OR REPLACE FRONT SEAT WIRE RH**

17	CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - Body ground	Always	1 MΩ or higher
OT1-4 (FSR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

RS

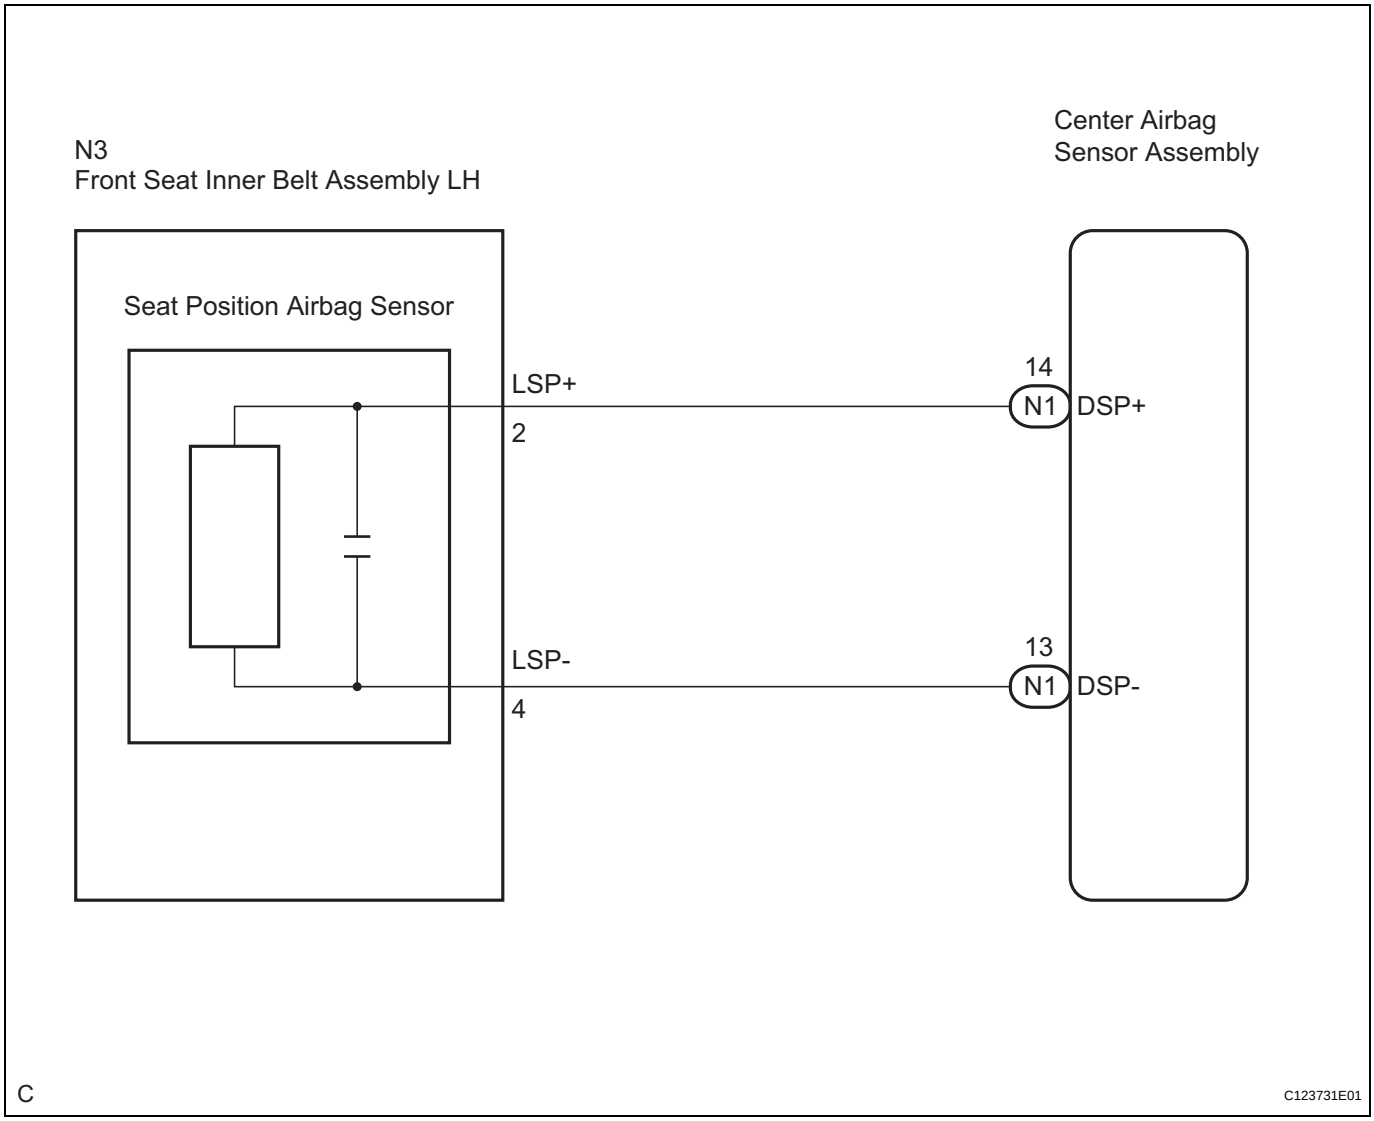
DTC	B1653/35	Seat Position Airbag Sensor Circuit Malfunction

DESCRIPTION

The seat position airbag sensor circuit consists of the center airbag sensor assembly and the seat position airbag sensor.
DTC B1653/35 is recorded when a malfunction is detected in the seat position airbag sensor circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1653/35	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat position airbag sensor circuit for 2 seconds. • Seat position airbag sensor malfunction • Center airbag sensor assembly malfunction	• Floor wire • Seat position airbag sensor • Center airbag sensor assembly

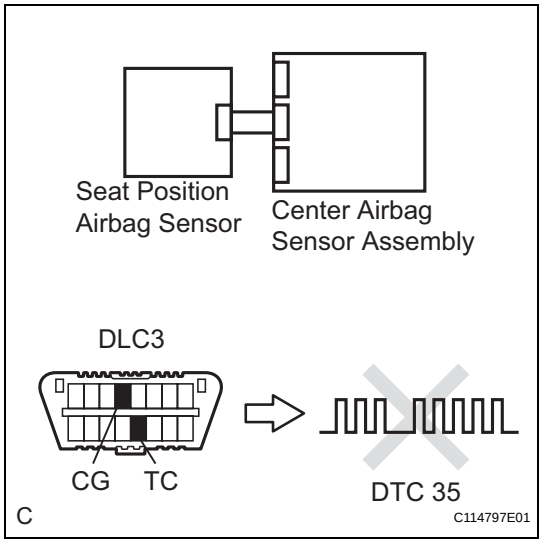
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the seat position airbag sensor.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the seat position airbag sensor.
(b) Check that the connectors (on the center airbag sensor assembly side and seat position airbag sensor side) are not damaged.

OK:

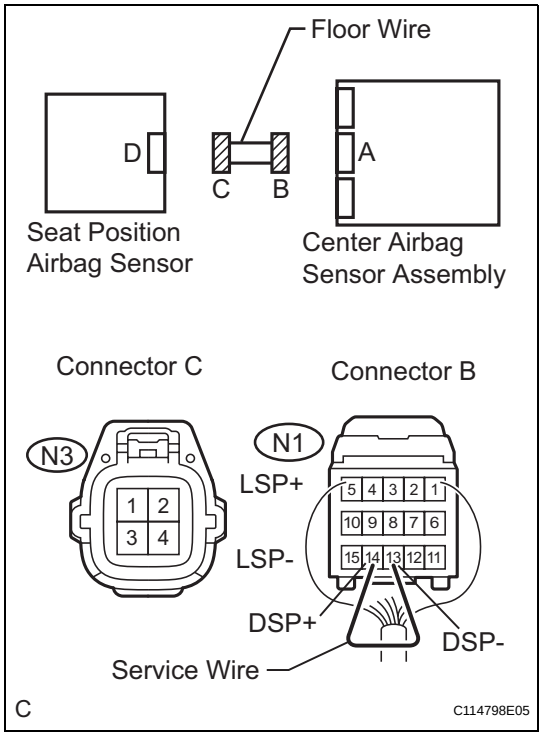
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

4 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 14 (DSP+) and 13 (DSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

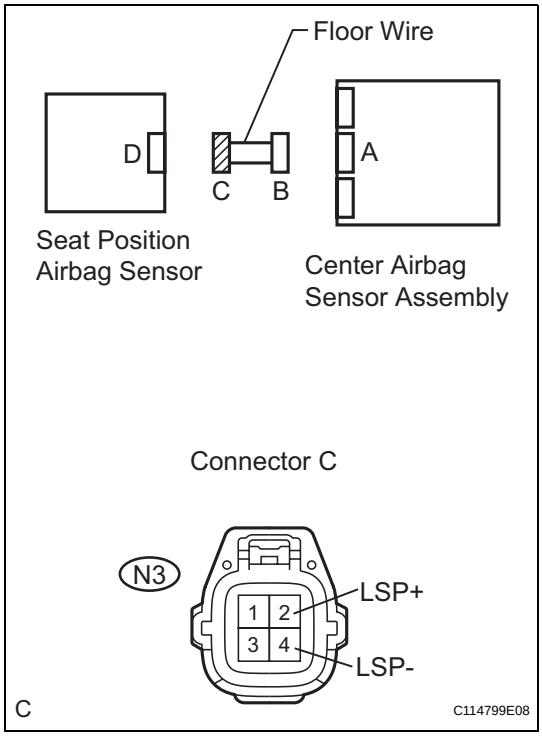
Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - N3-4 (LSP-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (SHORT)



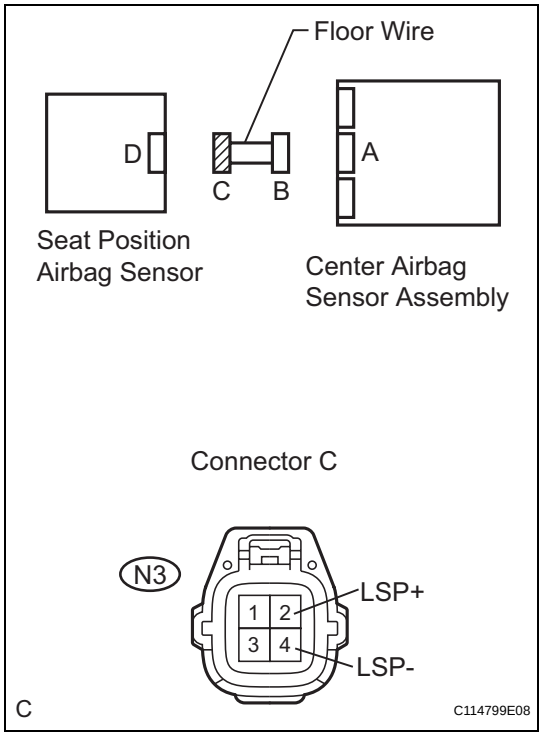
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - N3-4 (LSP-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

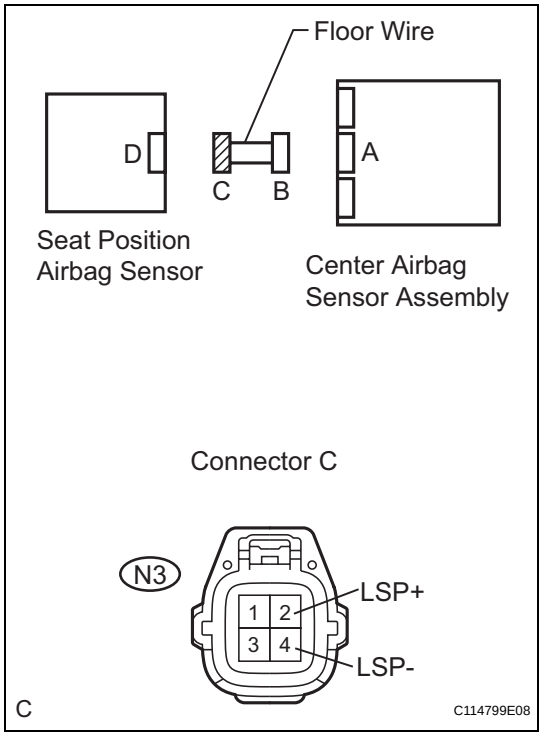
Standard voltage

Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - Body ground	Ignition switch on (IG)	Below 1 V
N3-4 (LSP-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

7 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

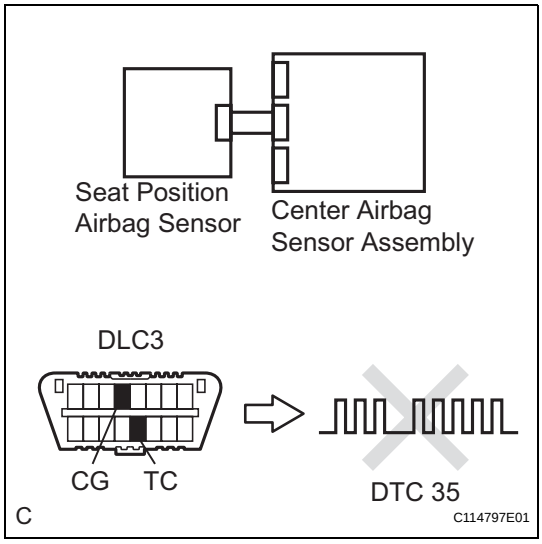
Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - Body ground	Always	1 MΩ or higher
N3-4 (LSP-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

RS

8	CHECK SEAT POSITION AIRBAG SENSOR



(a) Connect the connectors to the center airbag sensor assembly and the seat position airbag sensor.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1653/35 is not output.

HINT:
Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

9	REPLACE SEAT POSITION AIRBAG SENSOR

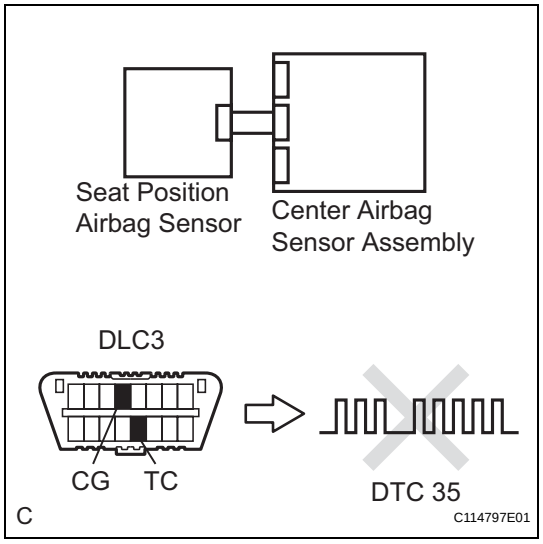
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the seat position airbag sensor (See page RS-460).

HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

RS

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

END

RS

DTC	B1655/37	Driver Side Seat Belt Buckle Switch Circuit Malfunction

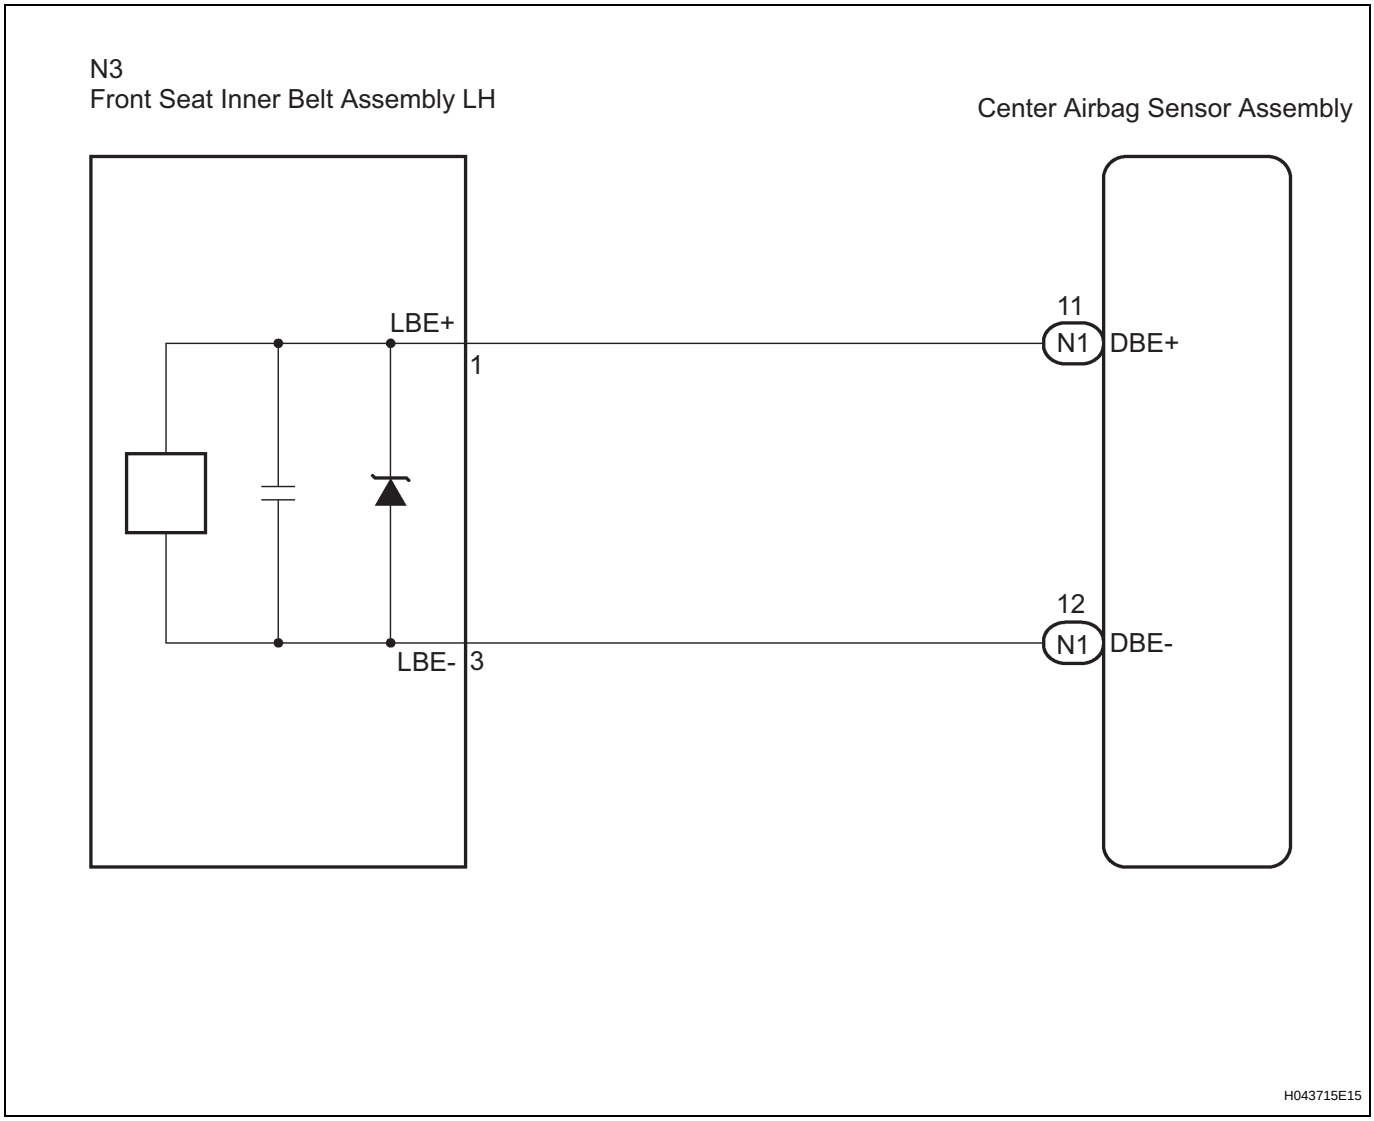
DESCRIPTION

The driver side seat belt buckle switch circuit consists of the center airbag sensor assembly and the front seat inner belt assembly LH.

DTC B1655/37 is recorded when a malfunction is detected in the driver side seat belt buckle switch circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1655/37	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the driver side seat belt buckle switch circuit for 2 seconds. • Front seat inner belt assembly LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat inner belt assembly LH (Driver side seat belt buckle switch) • Center airbag sensor assembly

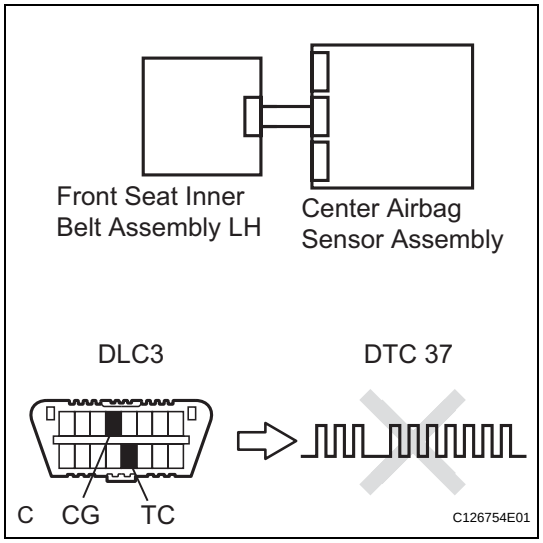
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1 CHECK DTC



(a) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the ignition switch off.
(d) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-44).

OK:

DTC B1655/37 is not output.

HINT:

Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

Ok → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

2 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and front seat inner belt assembly LH.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3 CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the front seat inner belt assembly LH.
(b) Check that the connectors (on the center airbag sensor assembly side and front seat inner belt assembly LH side) are not damaged.

OK:

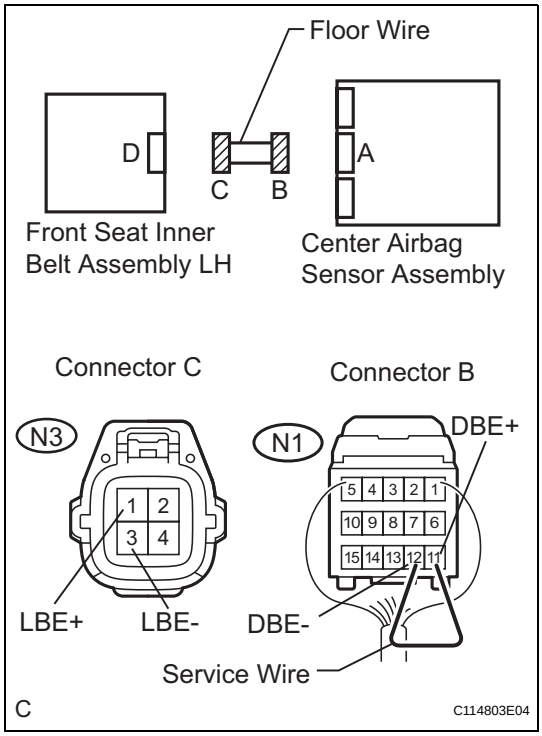
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

4 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 11 (DBE+) and 12 (DBE-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

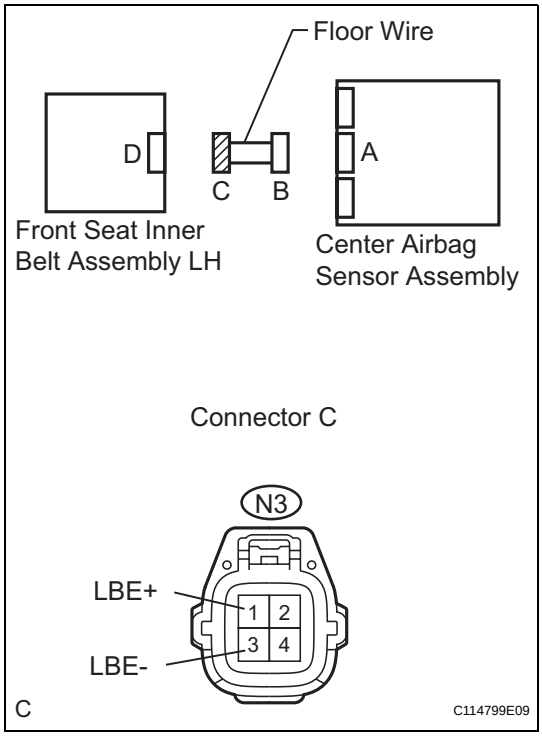
Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - N3-3 (LBE-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.

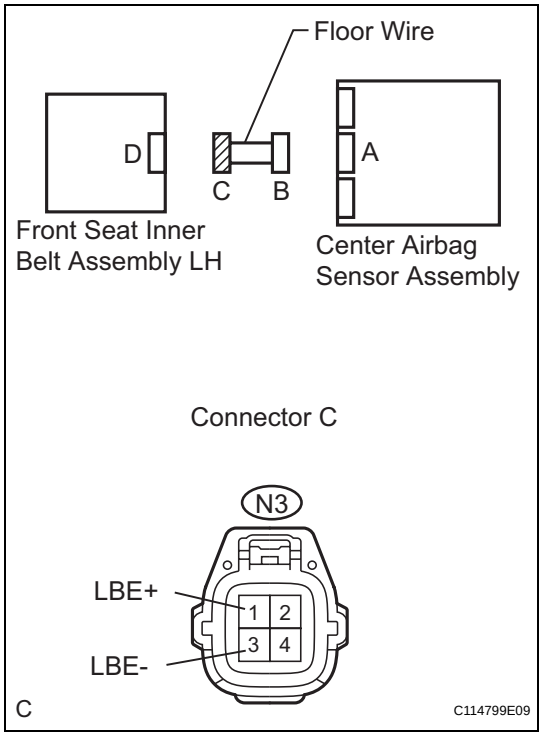
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - N3-3 (LBE-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

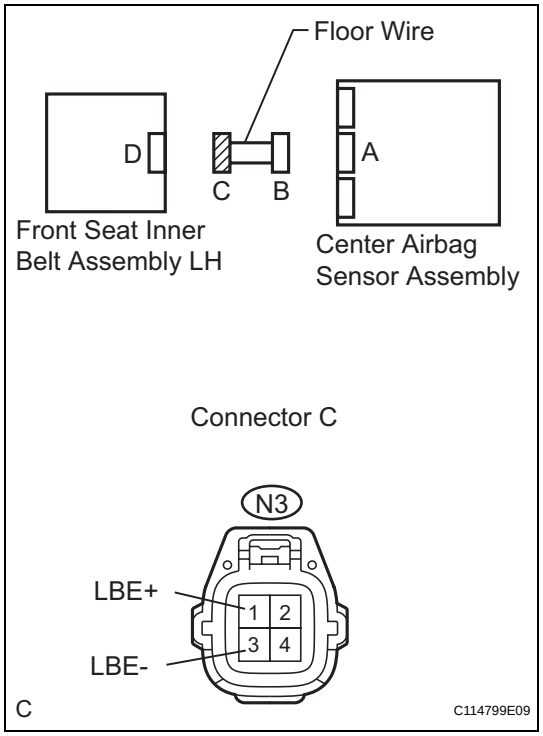
Standard voltage

Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - Body ground	Ignition switch on (IG)	Below 1 V
N3-3 (LBE-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

7 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

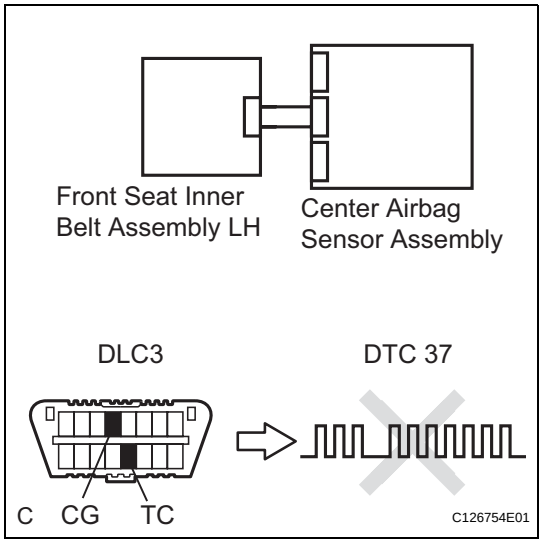
Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - Body ground	Always	1 MΩ or higher
N3-3 (LBE-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

8	CHECK FRONT SEAT INNER BELT ASSEMBLY LH



(a) Connect the connector to the center airbag sensor assembly and the front seat inner belt assembly LH.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
OK:
DTC B1655/37 is not output.
HINT:
Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-32)**

NG

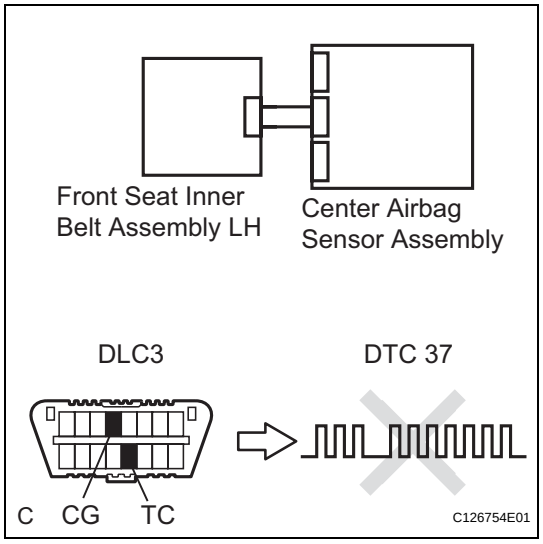
9	REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly LH (See page SB-15).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

RS

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1655/37 is not output.

HINT:

Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

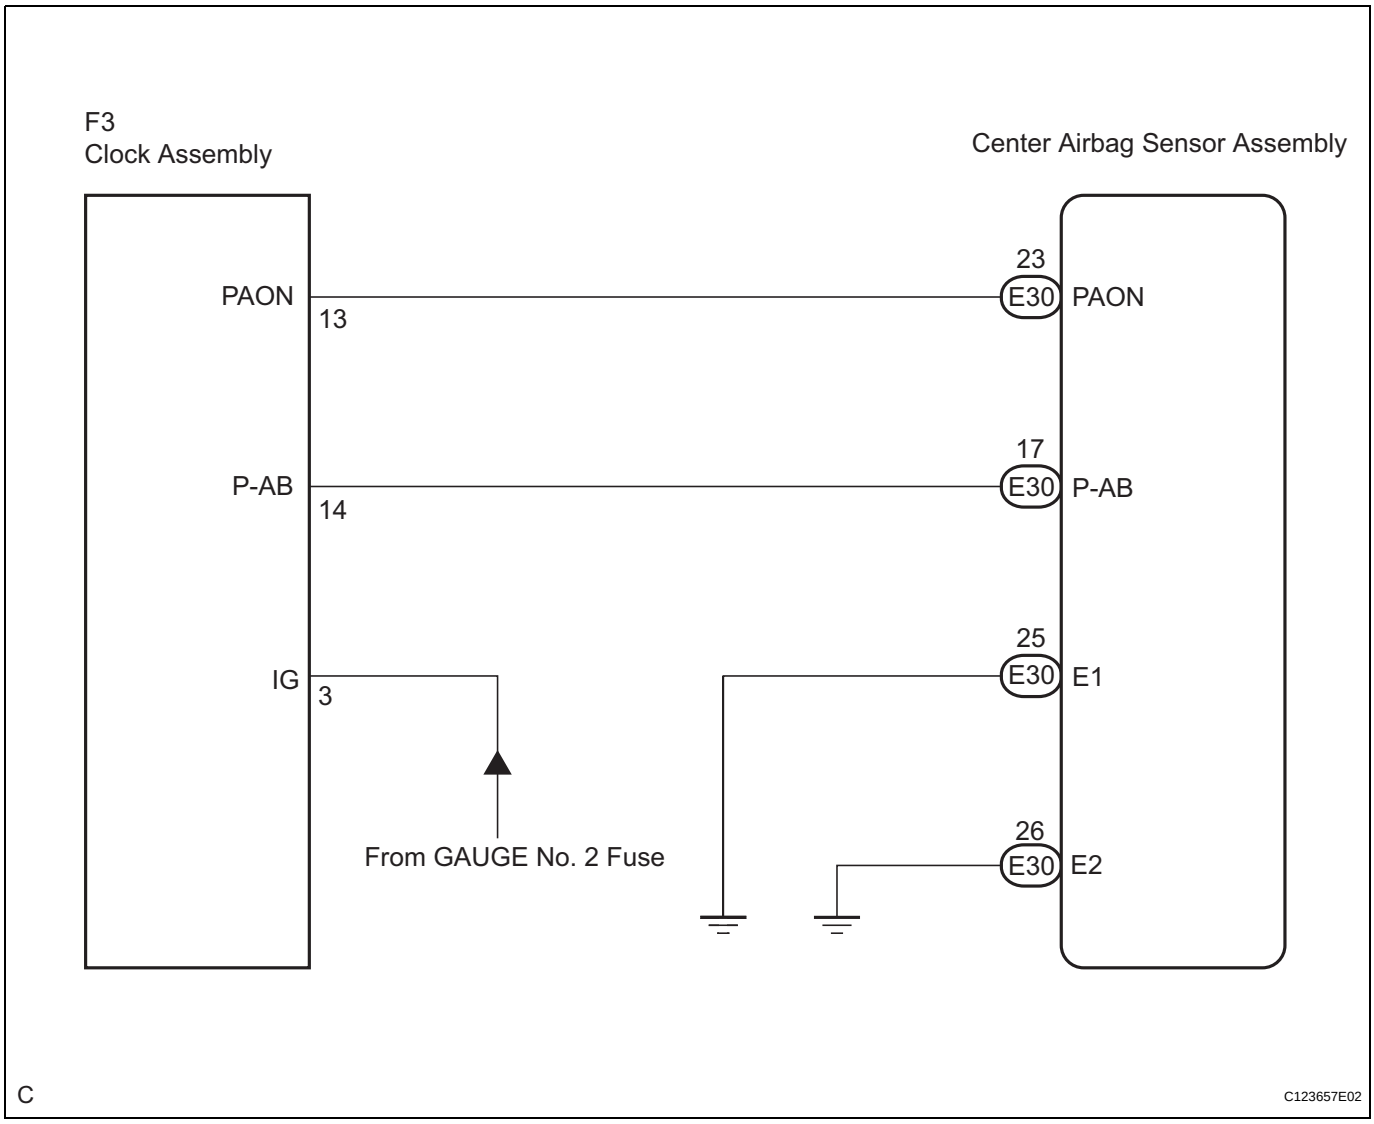
DTC	B1660/43	Passenger Airbag ON / OFF Indicator Circuit Malfunction

DESCRIPTION

The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor assembly and the clock assembly.
The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag assembly and the front seat side airbag assembly RH.
DTC B1660/43 is recorded when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1660/43	• The center airbag sensor assembly receives an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds. • Passenger airbag ON/OFF indicator malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire No. 2 • Clock assembly • Center airbag sensor assembly

WIRING DIAGRAM

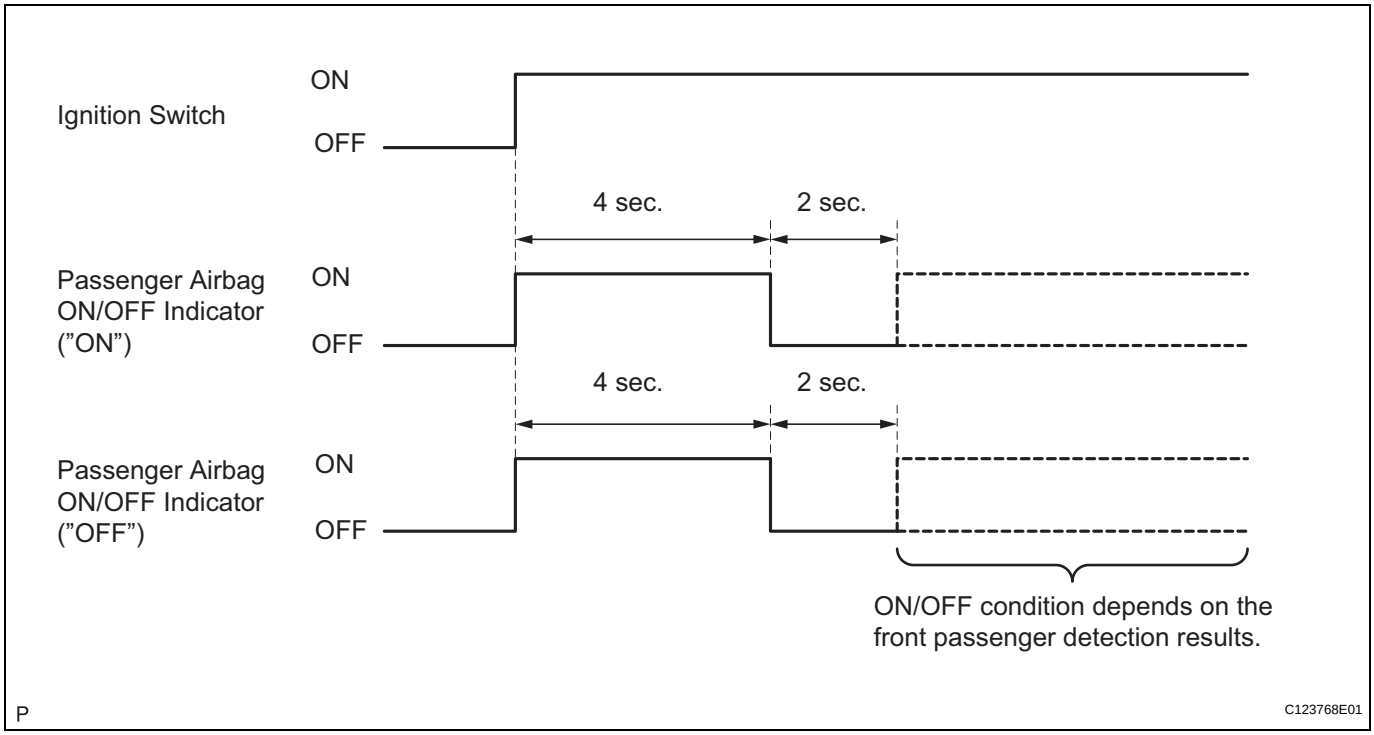


RS

INSPECTION PROCEDURE

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

(a) Turn the ignition switch on (IG).
(b) Check the passenger airbag ON/OFF indicator operation.
HINT:
Refer to the normal condition of the passenger airbag ON/OFF indicator (See page RS-32).



Result

ON/OFF Indicator Illumination	Proceed to
Always ON	A
OFF	B

B → **Go to step 10**

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the clock assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

RS

OK

3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the clock assembly.
(b) Check that the connectors (on the center airbag sensor assembly side and clock assembly side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

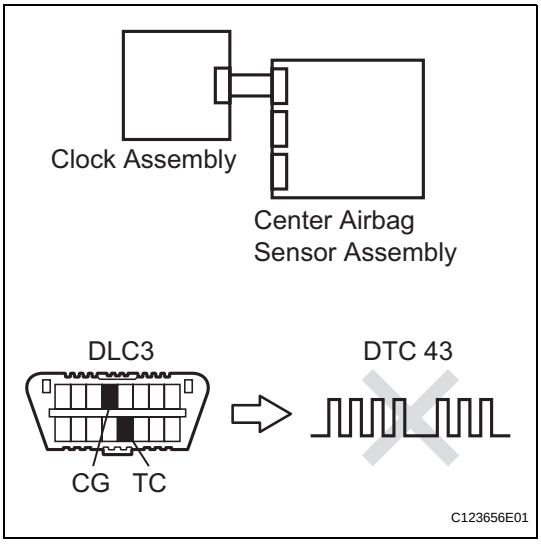
4	CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Connect the connector to the clock assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG).
(d) Check the passenger airbag ON/OFF indicator operation.
OK:
The passenger airbag ON/OFF indicator does not come on.

NG → **Go to step 6**

OK

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connector to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-41).
OK:
DTC B1660/43 is not output.
HINT:
Codes other than DTC B1660/43 may be output at this time, but they are not related to this check.

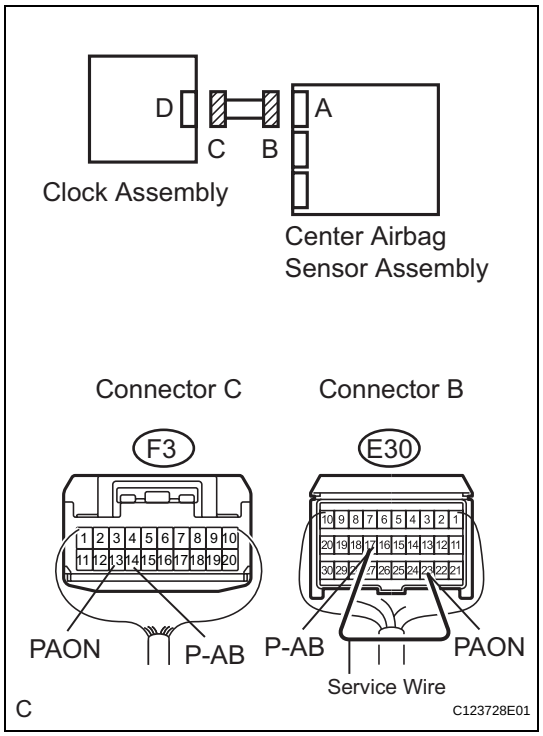
NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

RS

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

6	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (OPEN)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the clock assembly.
(d) Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(e) Measure the resistance according to the value(s) in the table below.
Standard resistance

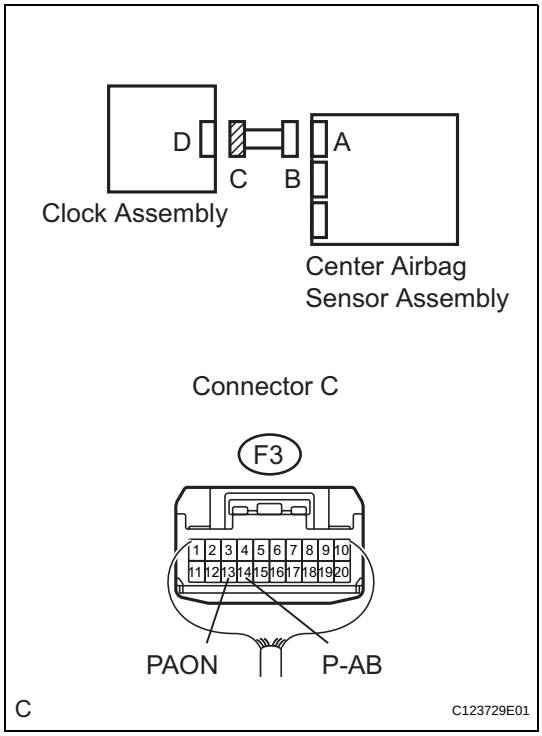
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

RS

7 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

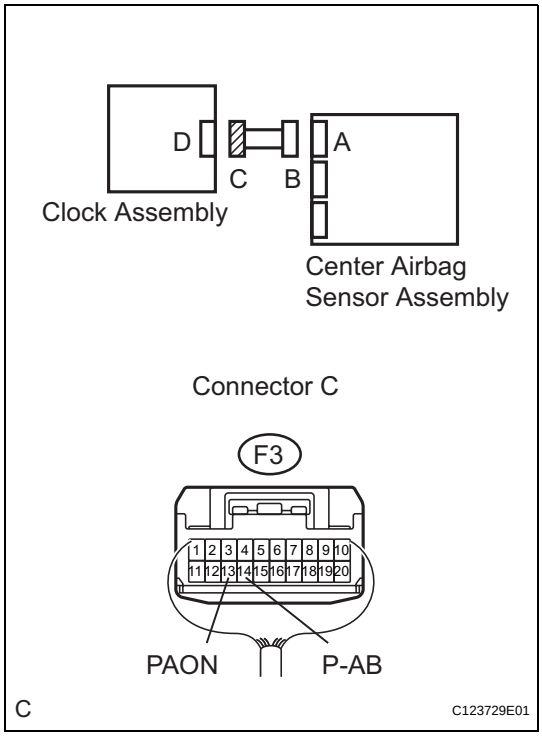
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

8 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

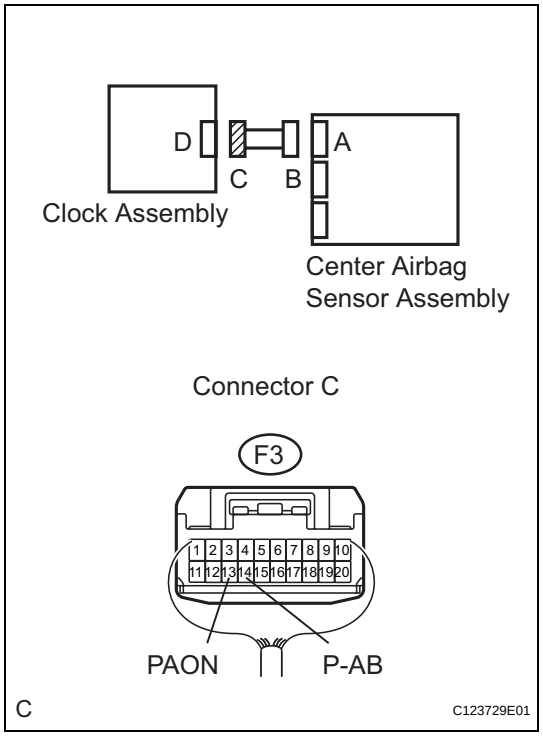
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Always	1 MΩ or higher
F3-14 (P-AB) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

9	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Ignition switch on (IG)	Below 1 V
F3-14 (P-AB) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

REPLACE CLOCK ASSEMBLY (See page OT-4)

RS

10	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the clock assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

11	CHECK CONNECTORS

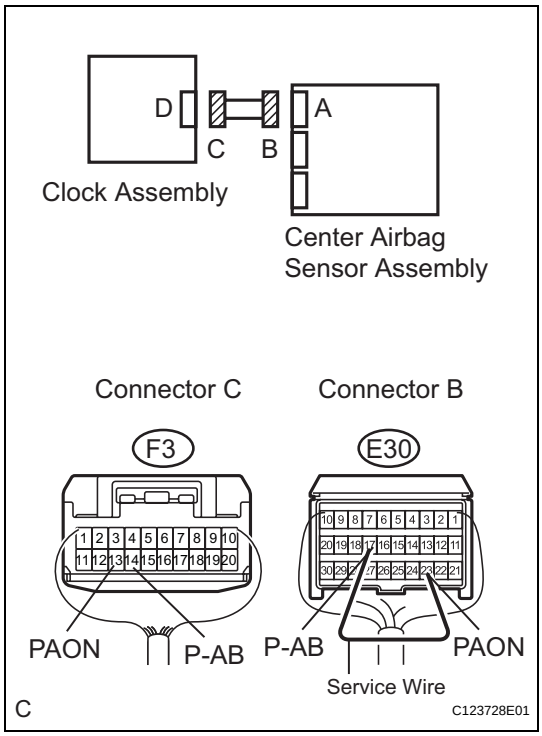
(a) Disconnect the connectors from the center airbag sensor assembly and the clock assembly.
(b) Check that the connectors (on the center airbag sensor assembly side and clock assembly side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

12 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (OPEN)



(a) Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

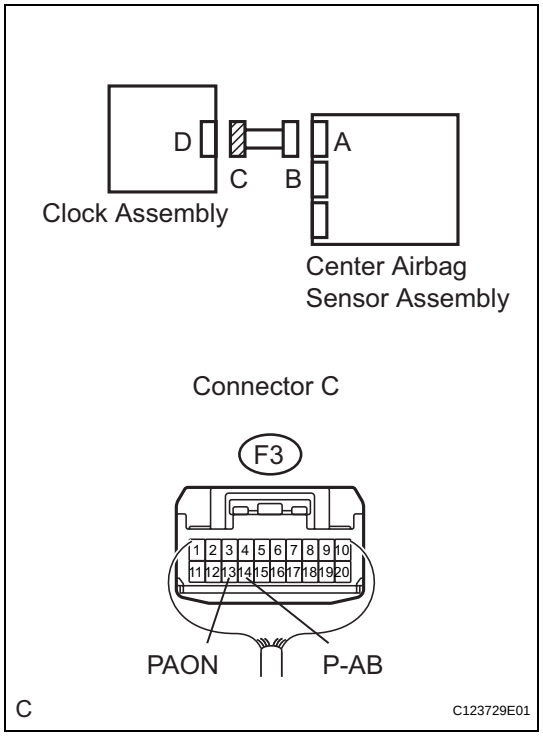
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

13 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

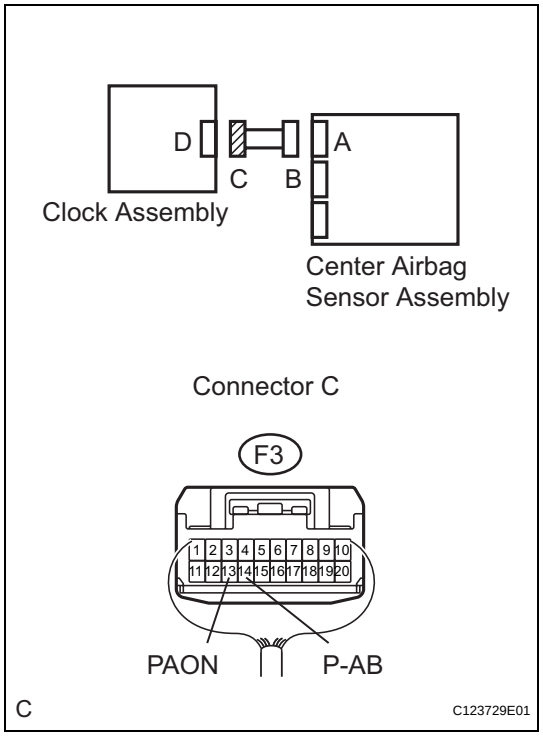
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

14 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO GROUND)

RS



(a) Measure the resistance according to the value(s) in the table below.

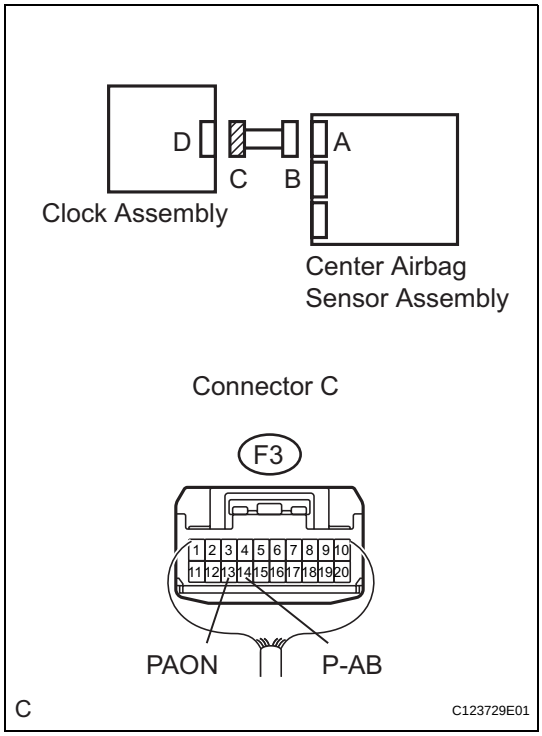
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Always	1 MΩ or higher
F3-14 (P-AB) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

15 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

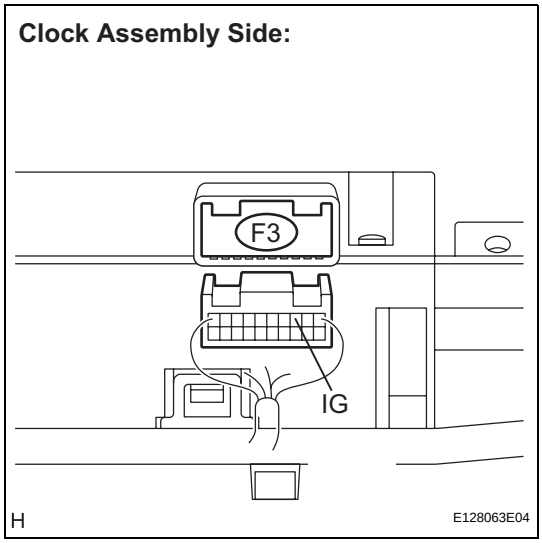
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Ignition switch on (IG)	Below 1 V
F3-14 (P-AB) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

16 CHECK CLOCK ASSEMBLY (SOURCE VOLTAGE)



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

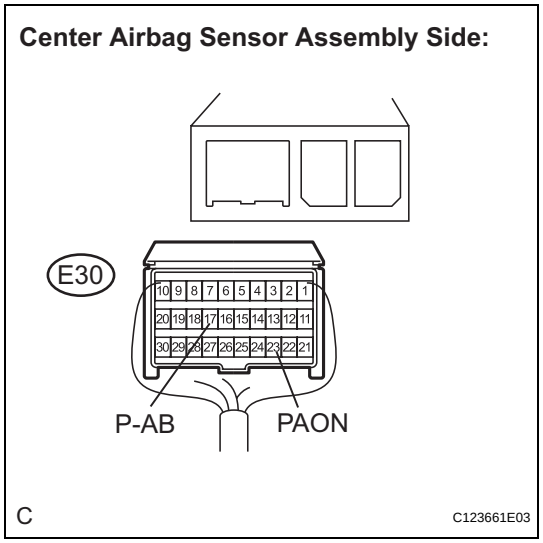
Standard voltage

Tester Connection	Condition	Specified Condition
F3-3 (IG) -Body ground	Ignition switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS (CLOCK ASSEMBLY - BATTERY) OR BATTERY**

OK

17 CHECK PASSENGER AIRBAG ON / OFF INDICATOR



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the clock assembly.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG).
(g) Check the indicator according to the conditions in the table below.

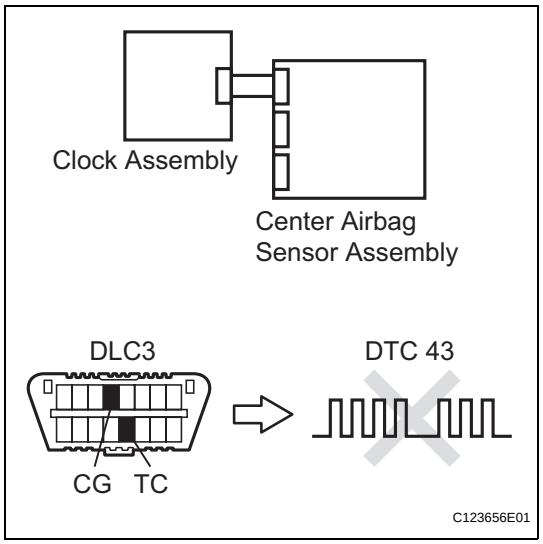
Result

Tester Connection	Condition	Passenger airbag ON/ OFF indicator
E30-23 (PAON) - Body ground	Ignition switch on (IG)	"ON" comes on
E30-17 (P-AB) - Body ground	Ignition switch on (IG)	"OFF" comes on

NG → **REPLACE CLOCK ASSEMBLY (See page OT-4)**

OK

18 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(f) Clear the DTCs stored in the memory (See page RS-41).
(g) Turn the ignition switch off.
(h) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(i) Check for DTCs (See page RS-41).

OK:

DTC B1660/43 is not output.

HINT:

Codes other than DTC B1660/43 may be output at this time, but they are not related to this check.

USE SIMULATION METHOD TO CHECK (See page RS-32)

DTC	B1800/51	Short in Driver Side Squib Circuit

DTC	B1801/51	Open in Driver Side Squib Circuit

DTC	B1802/51	Short to GND in Driver Side Squib Circuit

DTC	B1803/51	Short to B+ in Driver Side Squib Circuit

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.

The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1800/51	• The center airbag sensor assembly receives a line short circuit signal 5 times in the driver side squib circuit during primary check. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	• The center airbag sensor assembly receives an open circuit signal in the driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1802/51	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

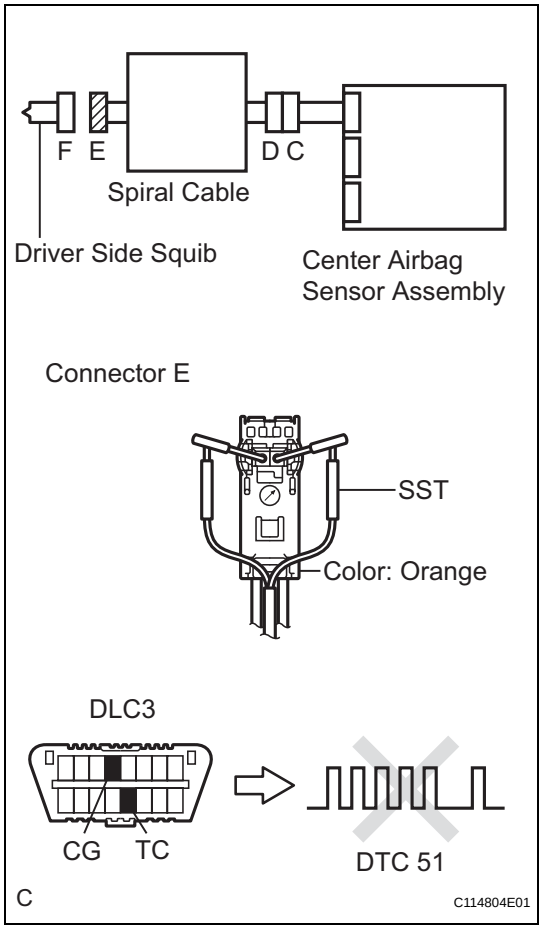
RS

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting the "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK STEERING PAD (DRIVER SIDE SQUIB)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).
CAUTION:
Never connect the tester to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1800, B1801, B1802, B1803, or 51 is not output.
HINT:
Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

OK → **REPLACE STEERING PAD**

NG

2	CHECK CONNECTOR

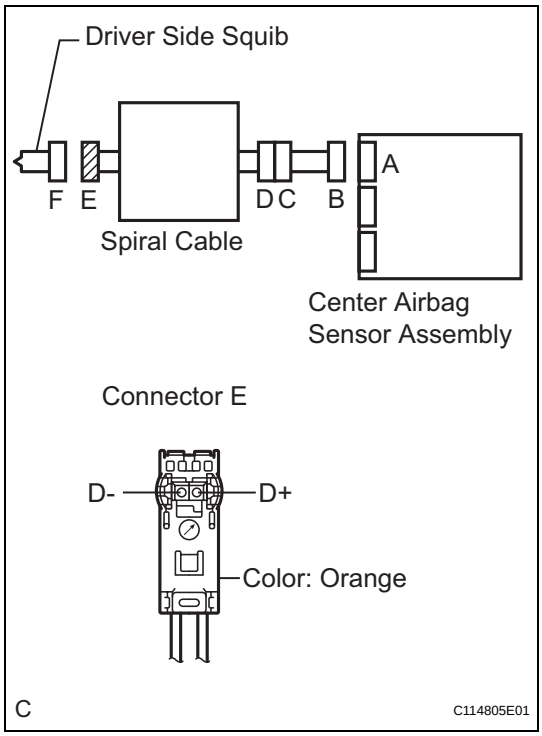
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE (See page RS-363)**

RS

OK

3	CHECK DRIVER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
D+ - Body ground	Ignition switch on (IG)	Below 1 V
D- - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
D+ - Body ground	Always	1 MΩ or higher
D- - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

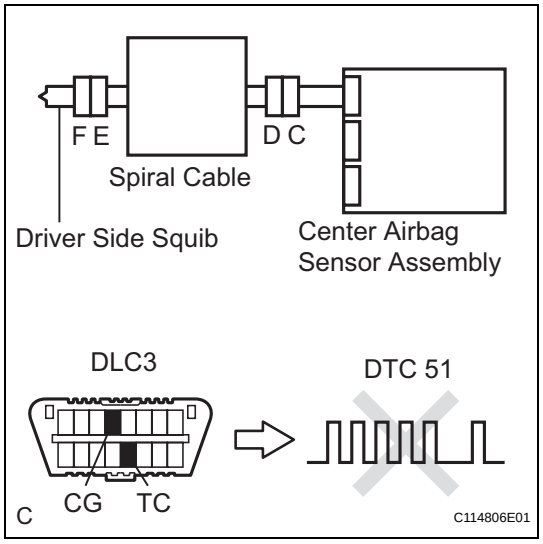
Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or higher

NG → Go to step 5

OK

RS

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1800, B1801, B1802, B1803, or 51 is not output.

HINT:

Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

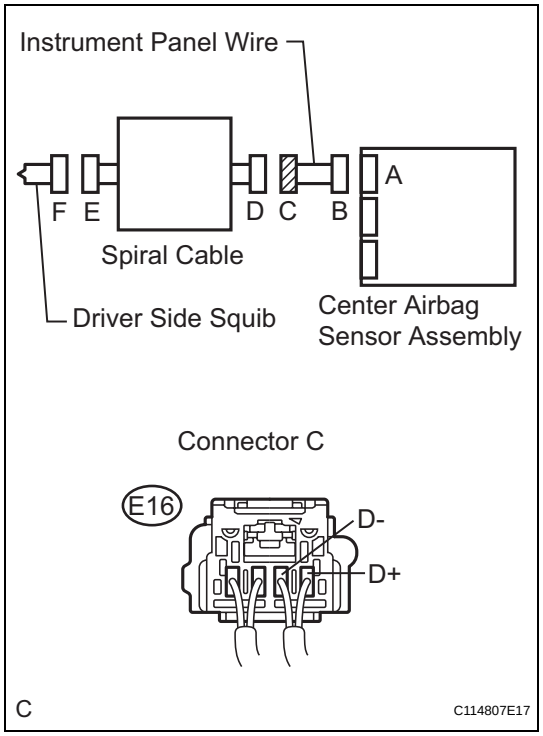
NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

RS

5 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the spiral cable.
(c) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E16-1 (D+) - Body ground	Ignition switch on (IG)	Below 1 V
E16-2 (D-) - Body ground	Ignition switch on (IG)	Below 1 V

(d) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - E16-2 (D-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - Body ground	Always	1 MΩ or higher
E16-2 (D-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

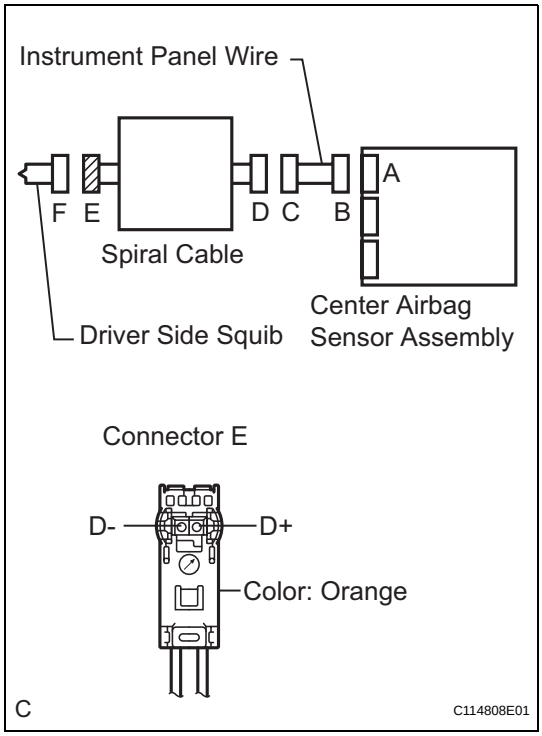
Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - E16-2 (D-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK SPIRAL CABLE



(a) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the ignition switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D+ - Body ground	Ignition switch on (IG)	Below 1 V
D- - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - Body ground	Always	1 MΩ or higher
D- - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or higher

NG → **REPLACE SPIRAL CABLE (See page RS-363)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

DTC	B1805/52	Short in Front Passenger Side Squib Circuit

DTC	B1806/52	Open in Front Passenger Side Squib Circuit

DTC	B1807/52	Short to GND in Front Passenger Side Squib Circuit

DTC	B1808/52	Short to B+ in Front Passenger Side Squib Circuit

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1805/52	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side squib circuit during primary check. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

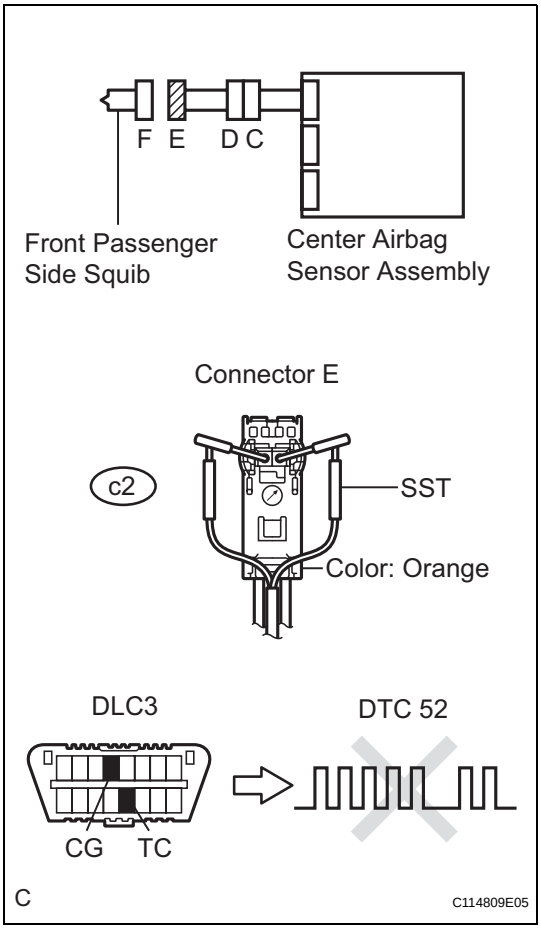
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front passenger airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).
CAUTION:
Never connect the tester to the front passenger airbag assembly (front passenger side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1805, B1806, B1807, B1808, or 52 is not output.
HINT:
Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-392)**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

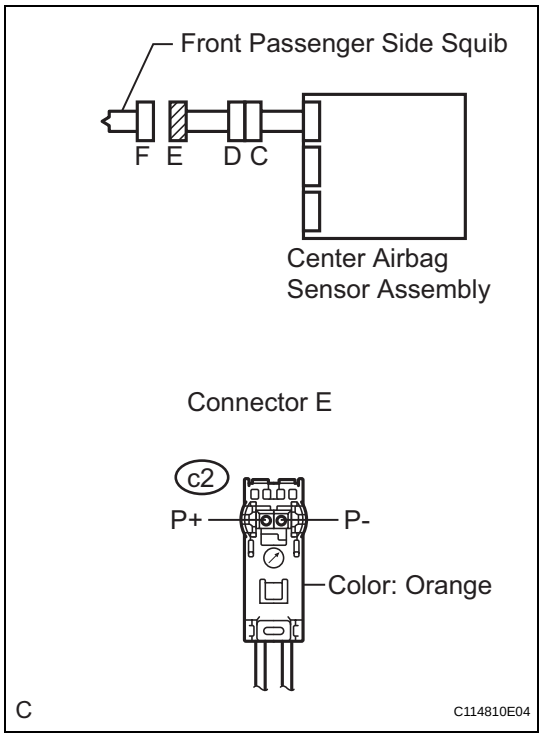
RS

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

3 CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on (IG).
(3) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Ignition switch on (IG)	Below 1 V
c2-2 (P-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Always	1 MΩ or higher
c2-2 (P-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
(1) Release the activation prevention mechanism built into connector B (See page RS-32).
(2) Measure the resistance according to the value(s) in the table below.
Standard resistance

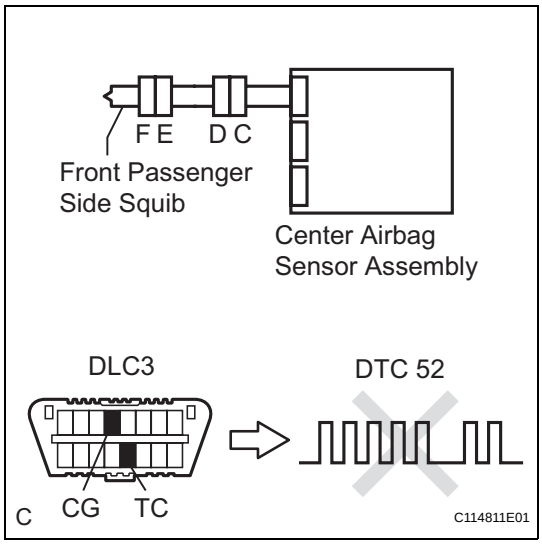
Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	1 MΩ or higher

NG → **Go to step 5**

RS

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1805, B1806, B1807, B1808, or 52 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

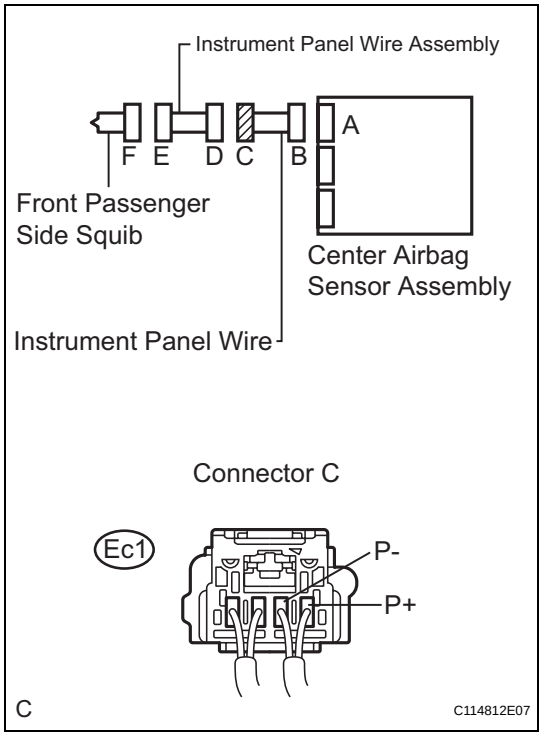
USE SIMULATION METHOD TO CHECK (See page RS-32)

5 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Disconnect the instrument panel wire connector from the instrument panel wire assembly.

(c) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the ignition switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Body ground	Ignition switch on (IG)	Below 1 V
Ec1-2 (P-) - Body ground	Ignition switch on (IG)	Below 1 V

(d) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Ec1-2 (P-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Body ground	Always	1 MΩ or higher
Ec1-2 (P-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Ec1-2 (P-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

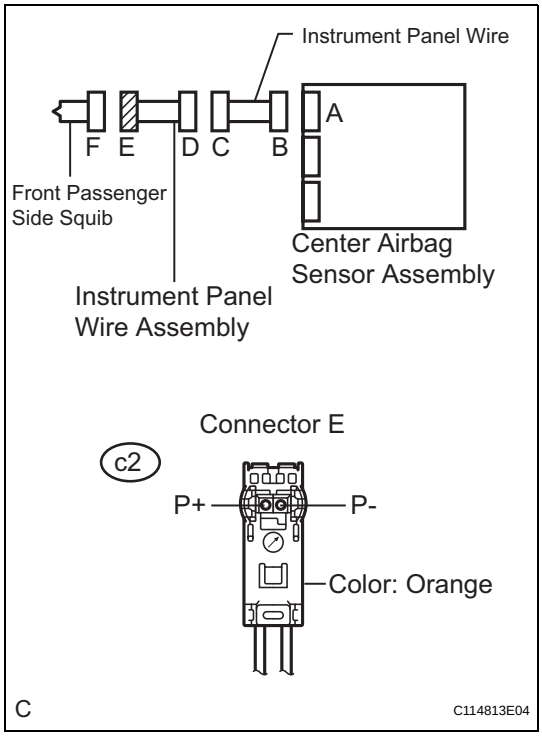
6 CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Ignition switch on (IG)	Below 1 V
c2-2 (P-) - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for a open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Always	1 MΩ or higher
c2-2 (P-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector D (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	1 MΩ or higher

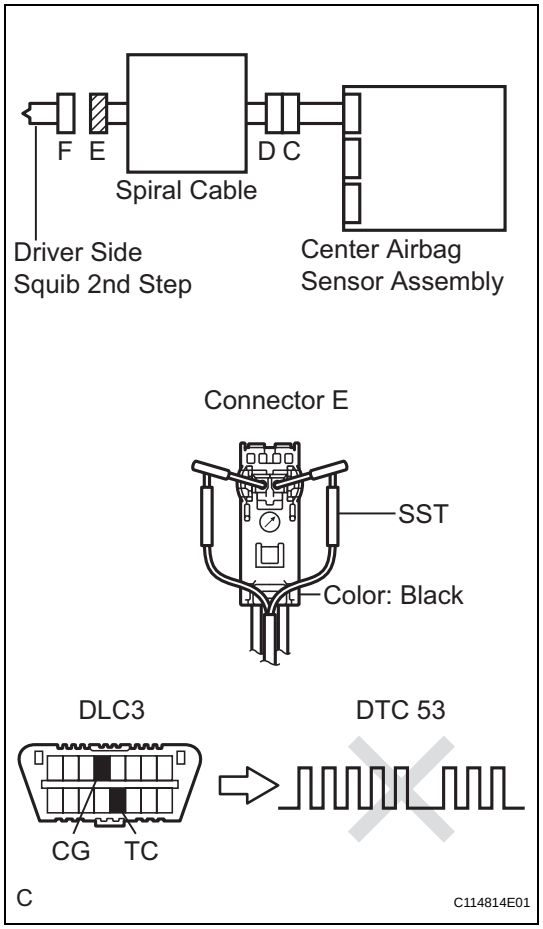
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK STEERING PAD (DRIVER SIDE SQUIB 2ND STEP)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (black connector).

CAUTION:
Never connect the tester to the steering pad (driver side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1810, B1811, B1812, B1813, or 53 is not output.

HINT:
Codes other than DTC B1810, B1811, B1812, B1813, and 53 may be output at this time, but they are not related to this check.

OK → **REPLACE STEERING PAD (See page RS-349)**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.

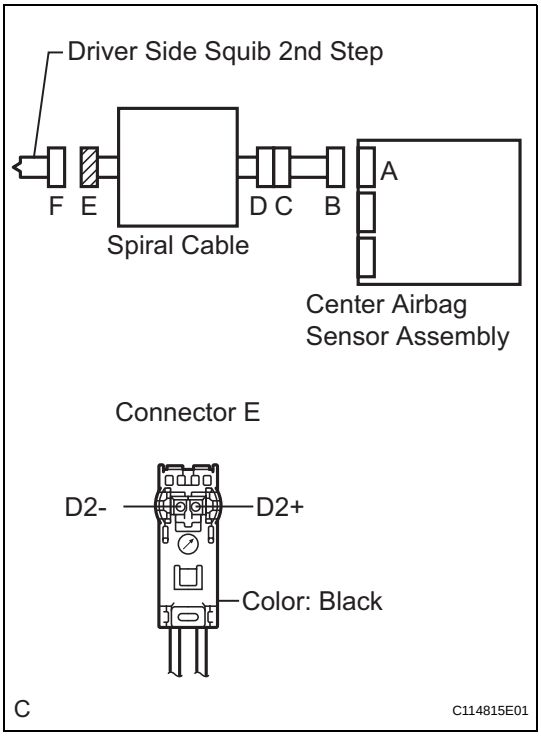
OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

RS

NG → REPLACE SPIRAL CABLE (See page RS-363)

OK

3 CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Ignition switch on (IG)	Below 1 V
D2- - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Always	1 MΩ or higher
D2- - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

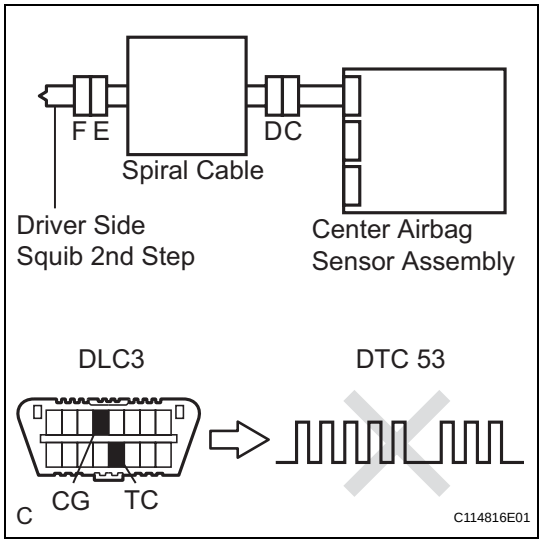
Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or higher

NG → Go to step 5

OK

RS

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1810, B1811, B1812, B1813, or 53 is not output.

HINT:

Codes other than DTC B1810, B1811, B1812, B1813, and 53 may be output at this time, but they are not related to this check.

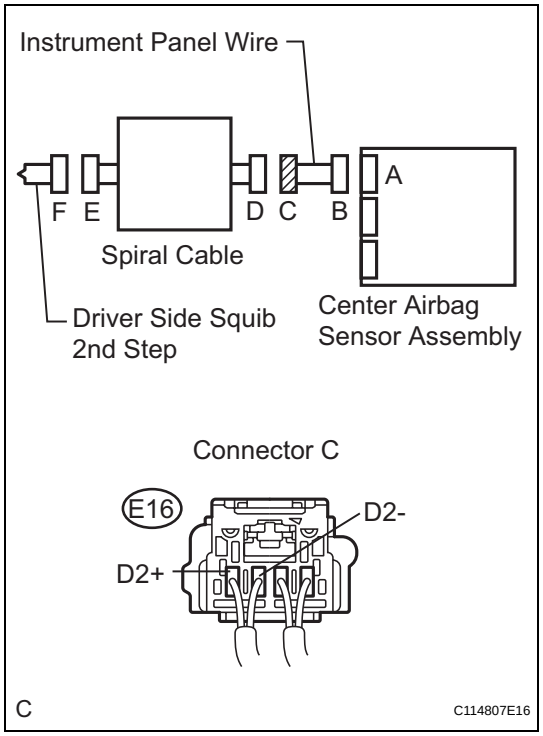
5 CHECK INSTRUMENT PANEL WIRE



(a) Check for a short to B+ in the circuit.
  (1) Restore the released activation prevention mechanism of connector B to the original condition.
  (2) Disconnect the instrument panel wire connector from the spiral cable.
  (3) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (4) Turn the ignition switch on (IG).
  (5) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - Body ground	Ignition switch on (IG)	Below 1 V
E16-3 (D2-) - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - E16-3 (D2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - Body ground	Always	1 MΩ or higher
E16-3 (D2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - E16-3 (D2-)	Always	1 MΩ or higher

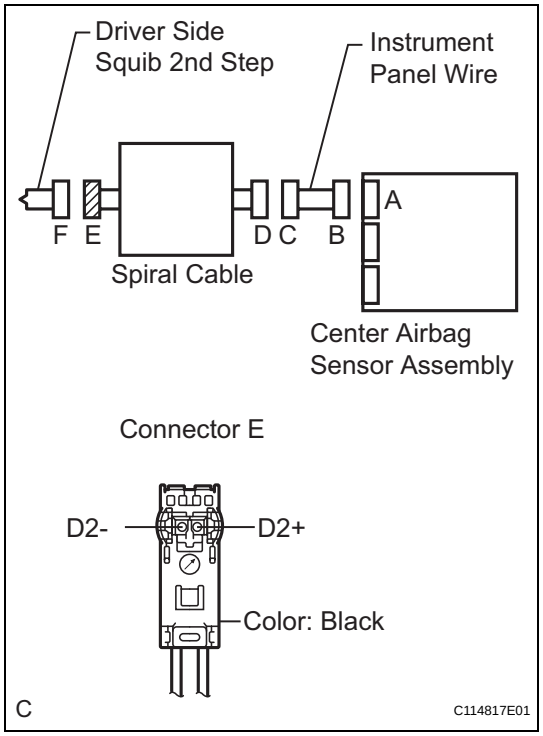
6 CHECK SPIRAL CABLE



(a) Check for a short to B+ in the circuit.
(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on (IG).
(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Ignition switch on (IG)	Below 1 V
D2- - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Always	1 MΩ or higher
D2- - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
(1) Release the activation prevention mechanism built into connector D (See page RS-32).
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or higher

DTC	B1815/54	Short in Front Passenger Side Squib 2nd Step Circuit

DTC	B1816/54	Open in Front Passenger Side Squib 2nd Step Circuit

DTC	B1817/54	Short to GND in Front Passenger Side Squib 2nd Step Circuit

DTC	B1818/54	Short to B+ in Front Passenger Side Squib 2nd Step Circuit

DESCRIPTION

The front passenger side squib 2nd step circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib 2nd step circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1815/54	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side squib 2nd step circuit during primary check. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1816/54	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib 2nd step circuit for 2 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1817/54	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1818/54	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly

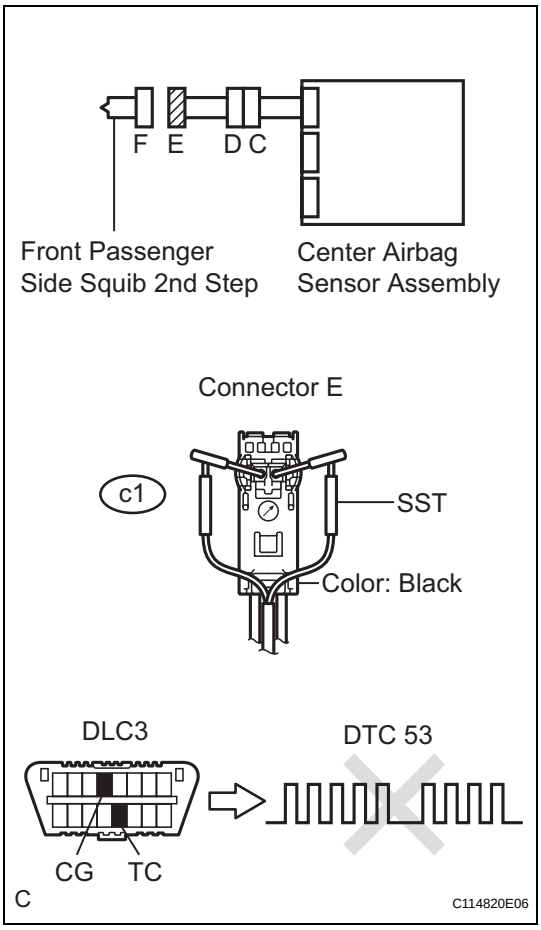
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

RS

1	CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB 2ND STEP)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front passenger airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (black connector).
CAUTION:
Never connect the tester to the front passenger airbag assembly (front passenger side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1815, B1816, B1817, B1818, or 54 is not output.
HINT:
Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-392)**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

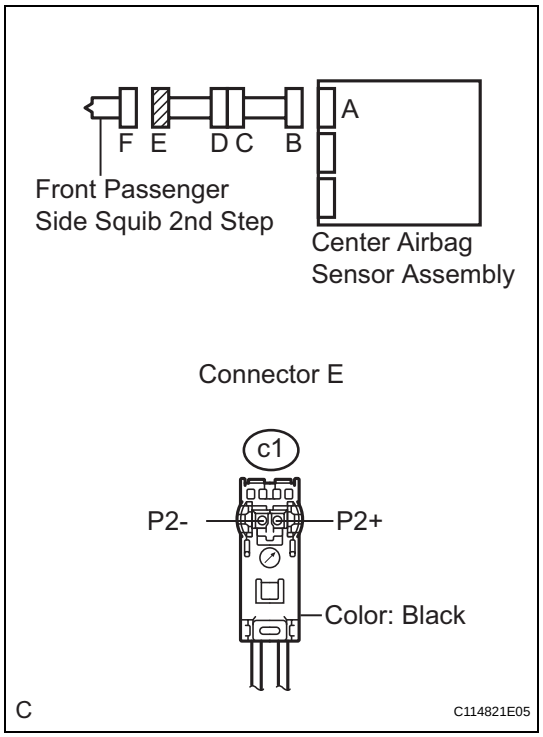
RS

OK:
The lock button is not disengaged, or the claw of the lock is not damaged or deformed.

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

3 CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(2) Turn the ignition switch on (IG).
(3) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Ignition switch on (IG)	Below 1 V
c1-2 (P2-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
(1) Turn the ignition switch off.
(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Always	1 MΩ or higher
c1-2 (P2-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
(1) Release the activation prevention mechanism built into connector B (See page RS-32).
(2) Measure the resistance according to the value(s) in the table below.
Standard resistance

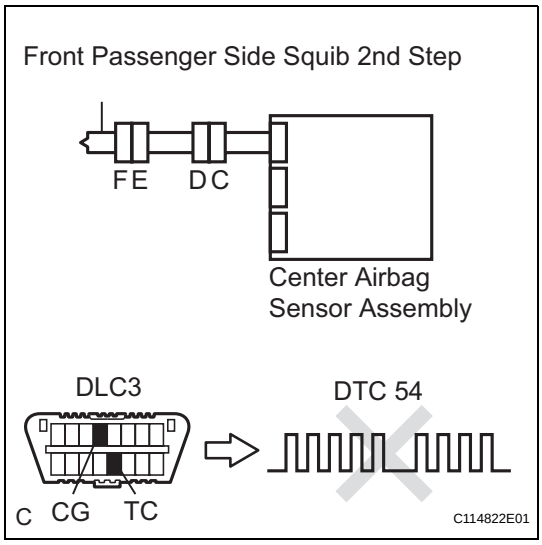
Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	1 MΩ or higher

RS

NG → Go to step 5

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1815, B1816, B1817, B1818, or 54 is not output.

HINT:

Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

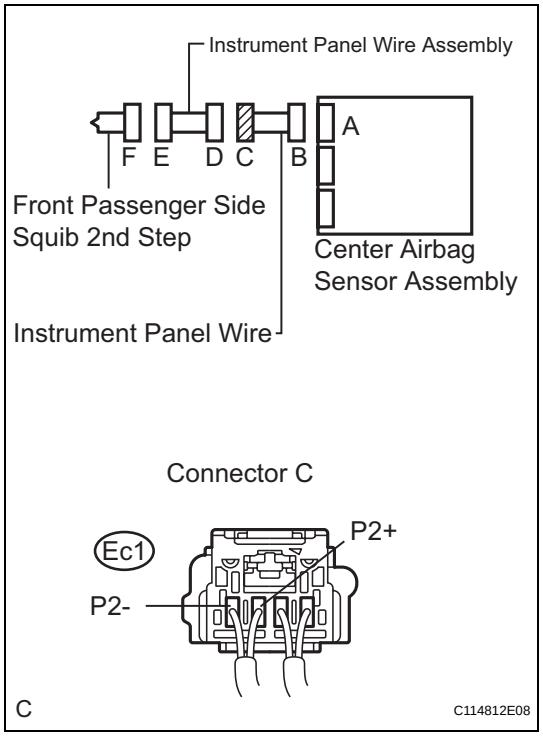
NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

RS

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

5 CHECK INSTRUMENT PANEL WIRE



(a) Check for a short to B+ in the circuit.
  (1) Restore the released activation prevention mechanism of connector B to the original condition.
  (2) Disconnect the instrument panel wire connector from the instrument panel wire assembly.
  (3) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (4) Turn the ignition switch on (IG).
  (5) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
Ec1-3 (P2+) - Body ground	Ignition switch on (IG)	Below 1 V
Ec1-4 (P2-) - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Ec1-4 (P2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Body ground	Always	1 MΩ or higher
Ec1-4 (P2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Ec1-4 (P2-)	Always	1 MΩ or higher

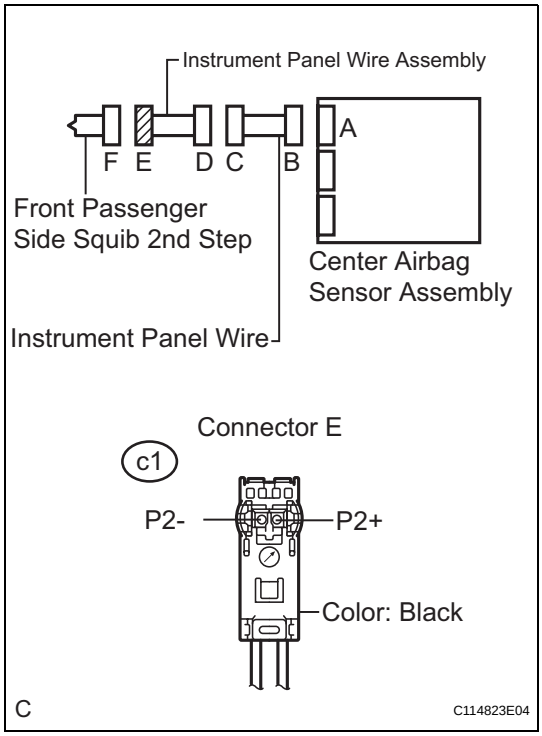
6	CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Ignition switch on (IG)	Below 1 V
c1-2 (P2-) - Body ground	Ignition switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Always	1 MΩ or higher
c1-2 (P2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector D (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	1 MΩ or higher

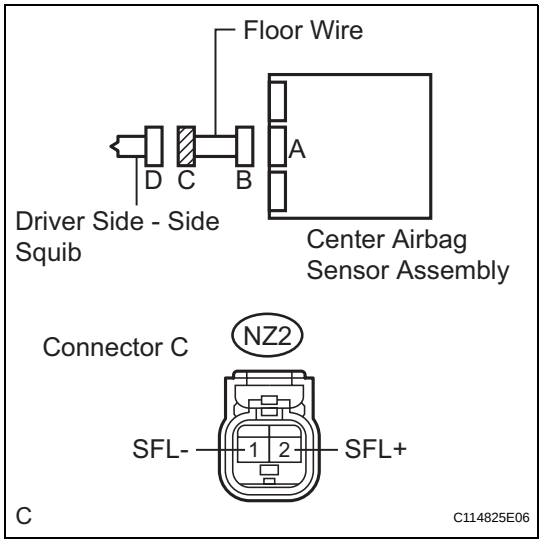
2	CHECK FLOOR WIRE (DRIVER SIDE - SIDE SQUIB CIRCUIT)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - Body ground	Ignition switch on (IG)	Below 1 V
NZ2-1 (SFL-) - Body ground	Ignition switch on (IG)	Below 1 V

(f) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - NZ2-1 (SFL-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - Body ground	Always	1 MΩ or higher
NZ2-1 (SFL-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connector (on the curtain shield airbag assembly LH side) is not damaged.

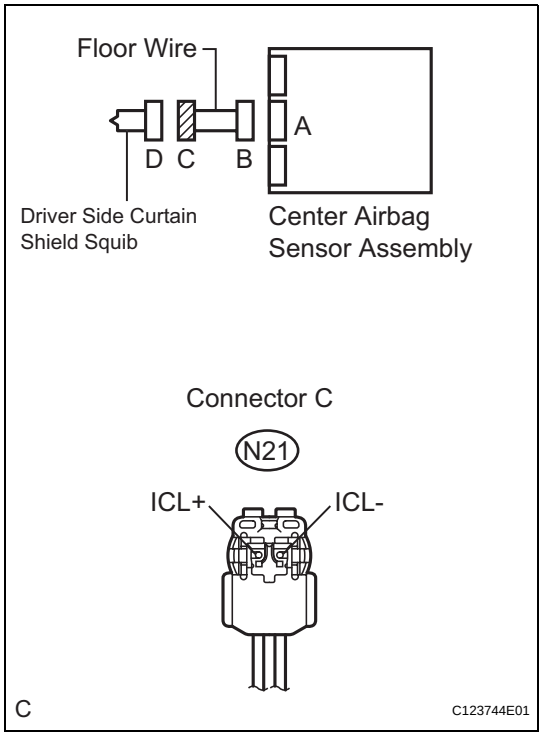
RS

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

3 CHECK FLOOR WIRE (DRIVER SIDE CURTAIN SHIELD SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the ignition switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - Body ground	Ignition switch on (IG)	Below 1 V
N21-2 (ICL-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the ignition switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - N21-2 (ICL-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - Body ground	Always	1 MΩ or higher
N21-2 (ICL-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-32).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

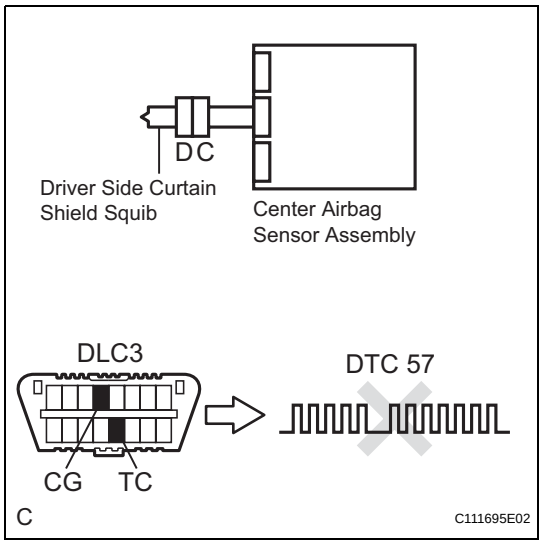
Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - N21-2 (ICL-)	Always	1 MΩ or higher

RS

NG → REPAIR OR REPLACE FLOOR WIRE

OK

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the curtain shield airbag assembly LH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1830, B1831, B1832, B1833, or 57 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832, B1833, and 57 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

DTC	B1835/58	Short in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1836/58	Open in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1837/58	Short to GND in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1838/58	Short to B+ in Front Passenger Side Curtain Shield Squib Circuit

DESCRIPTION

The front passenger side curtain shield squib circuit consists of the center airbag sensor assembly and the curtain shield airbag assembly RH.

The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side curtain shield squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1835/58	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side curtain shield squib circuit during primary check. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1836/58	• The center airbag sensor assembly receives an open circuit signal in the front passenger side curtain shield squib circuit for 2 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1837/58	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side curtain shield squib circuit for 0.5 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1838/58	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side curtain shield squib circuit for 0.5 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly

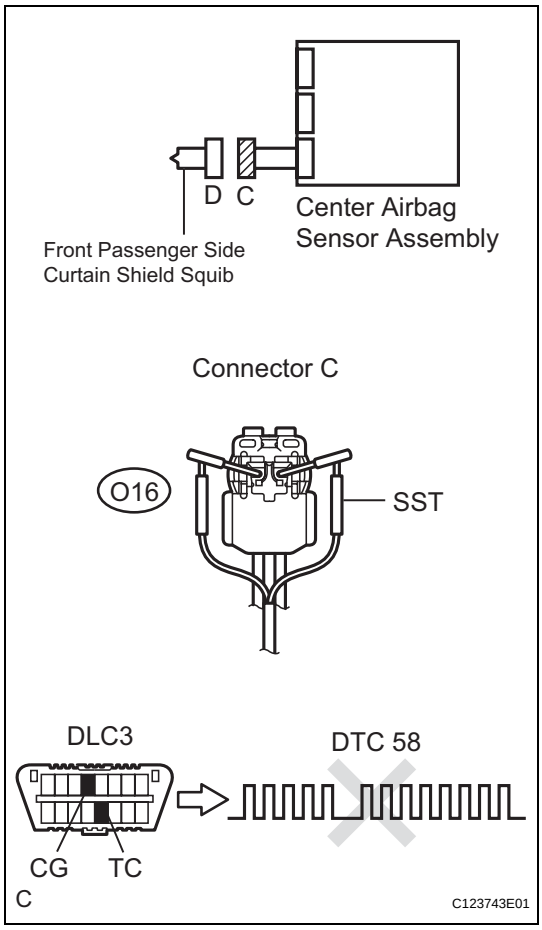
RS

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY RH (FRONT PASSENGER SIDE CURTAIN SHIELD SQUIB)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the curtain shield airbag assembly RH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect the tester to the curtain shield airbag assembly RH (front passenger side curtain shield squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1835, B1836, B1837, B1838, or 58 is not output.
HINT:
Codes other than DTC B1835, B1836, B1837, B1838, and 58 may be output at this time, but they are not related to this check.

OK → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (See page RS-416)**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire No. 2 connectors (on the curtain shield airbag assembly RH side) are not damaged.

RS

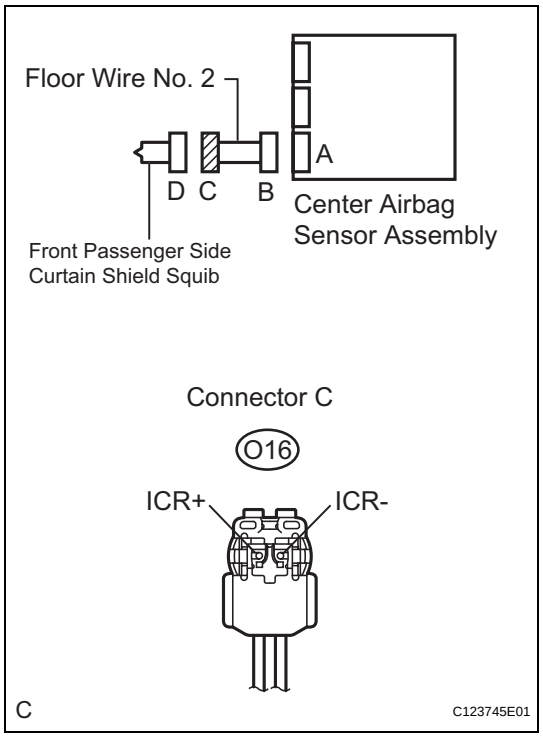
OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

3	CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE CURTAIN SHIELD SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the ignition switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - Body ground	Ignition switch on (IG)	Below 1 V
O16-2 (ICR-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - O16-2 (ICR-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - Body ground	Always	1 MΩ or higher
O16-2 (ICR-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - O16-2 (ICR-)	Always	1 MΩ or higher

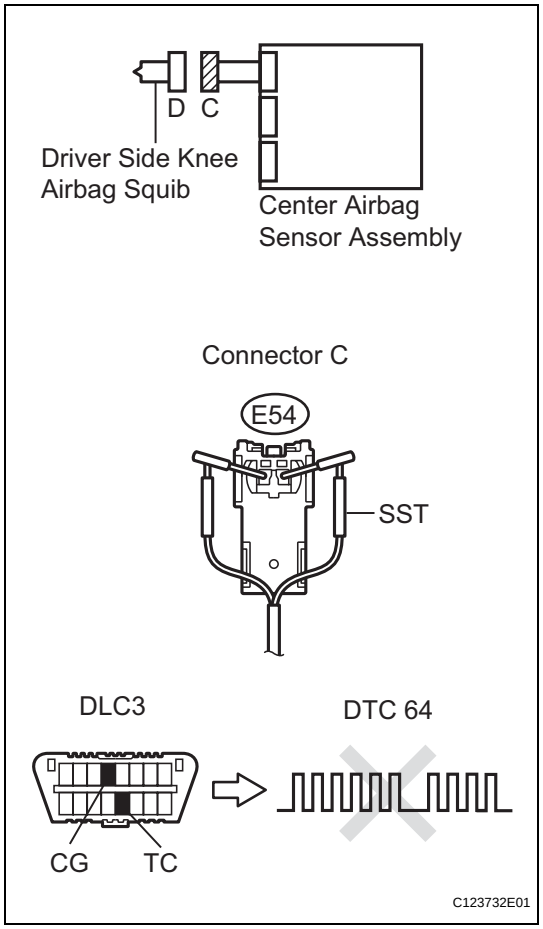
1	CHECK DRIVER SIDE KNEE AIRBAG ASSEMBLY (DRIVER SIDE KNEE AIRBAG SQUIB)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the driver side knee airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.

CAUTION:
Never connect the tester to the driver side knee airbag assembly (driver side knee airbag squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1860, B1861, B1862, B1863, or 64 is not output.

HINT:
Codes other than DTC B1860, B1861, B1862, B1863, and 64 may be output at this time, but they are not related to this check.

OK → **REPLACE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-369)**

NG

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the instrument panel wire connector (on the driver side knee airbag assembly side) is not damaged.

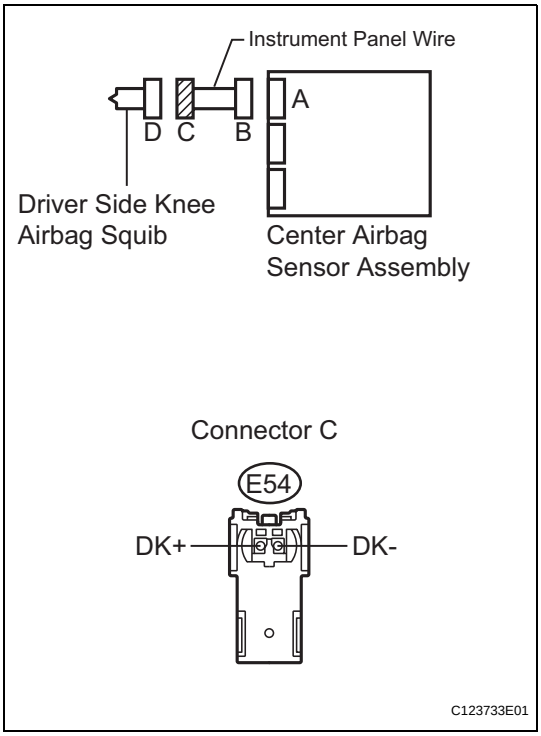
OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

RS

NG → REPAIR OR REPLACE INSTRUMENT PANEL WIRE

OK

3 CHECK INSTRUMENT PANEL WIRE (DRIVER SIDE KNEE AIRBAG SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the ignition switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - Body ground	Ignition switch on (IG)	Below 1 V
E54-2 (DK-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - E54-2 (DK-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - Body ground	Always	1 MΩ or higher
E54-2 (DK-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - E54-2 (DK-)	Always	1 MΩ or higher

OK

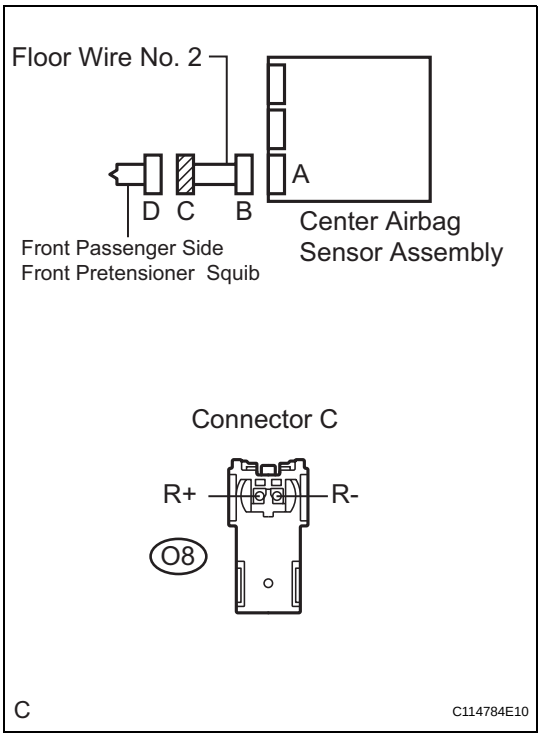
3	CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the ignition switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
O8-1 (R+) - Body ground	Ignition switch on (IG)	Below 1 V
O8-2 (R-) - Body ground	Ignition switch on (IG)	Below 1 V

(c) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O8-1 (R+) - O8-2 (R-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O8-1 (R+) - Body ground	Always	1 MΩ or higher
O8-2 (R-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-32).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

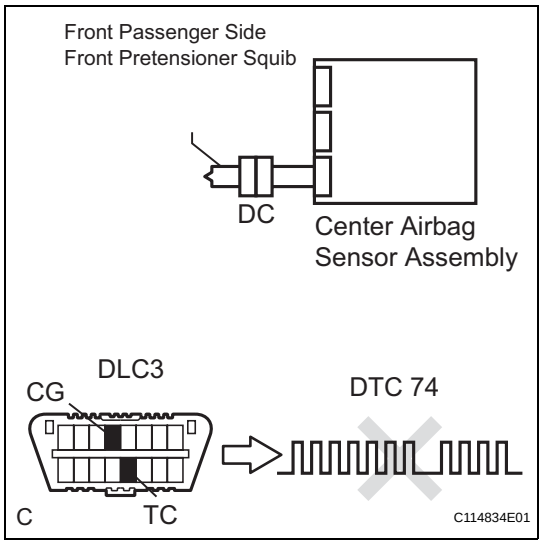
Tester Connection	Condition	Specified Condition
O8-1 (R+) - O8-2 (R-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

RS

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat outer belt assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the ignition switch off.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1905, B1906, B1907, B1908, or 74 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907, B1908, and 74 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-32)

SRS Warning Light Remains ON

DESCRIPTION

The SRS warning light is located on the combination meter assembly.
When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from off to on (IG), and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.
When terminals TC and CG of the DLC3 are connected, the DTC is displayed by blinking of the SRS warning light.
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor assembly in case the source voltage drops.
When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.
A malfunction in this circuit is not recorded in the center airbag sensor assembly. The SRS warning light automatically goes off when the source voltage returns to normal.
The signal to illuminate the SRS warning light is transmitted from the center airbag sensor assembly to the combination meter assembly through the CAN communication system.

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page CA-25).

Result

Condition	Proceed To
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

3	CHECK CONNECTORS

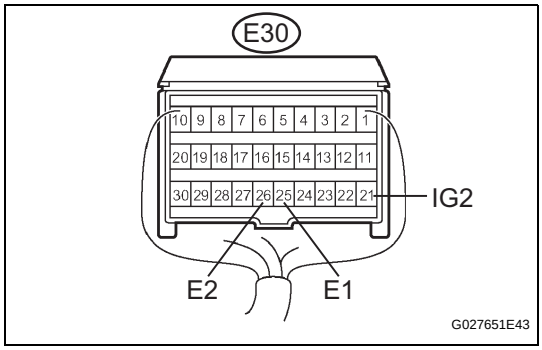
(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and combination meter assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

RS

4 CHECK WIRE HARNESS (SOURCE VOLTAGE OF CENTER AIRBAG SENSOR ASSEMBLY)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch on (IG).
(d) Operate all components of the electrical system (defogger, wipers, headlight, heater blower, etc.).
(e) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E30-21 (IG2) - Body ground	Ignition switch on (IG)	10 to 14 V

(f) Turn the ignition switch off.
(g) Measure the resistance according to the value(s) in the table below.

Standard resistance

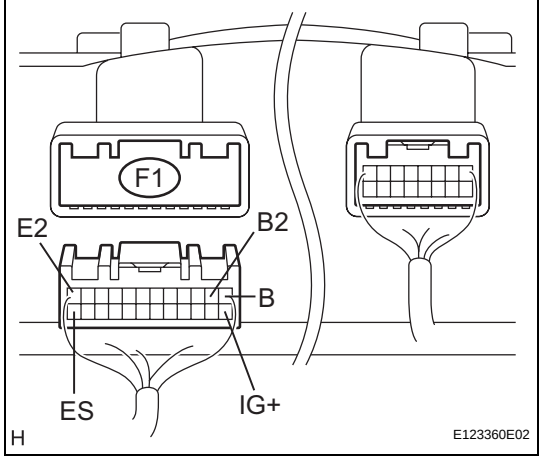
Tester Connection	Condition	Specified Condition
E30-25 (E1) - Body ground	Always	Below 1 Ω
E30-26 (E2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

5 CHECK WIRE HARNESS (SOURCE VOLTAGE OF COMBINATION METER)

Combination Meter Assembly Side:



(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Disconnect the F1 connector from the combination meter assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch on (IG).
(e) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-1 (B) - Body ground	Always	10 to 14 V
F1-2 (B2) - Body ground	Ignition switch on (IG)	10 to 14 V
F1-13 (IG+) - Body ground	Ignition switch on (IG)	10 to 14 V

(f) Turn the ignition switch off.
(g) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-12 (E2) - Body ground	Always	Below 1 Ω
F1-24 (ES) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

6 CHECK SRS WARNING LIGHT

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds, and remains on.

HINT:
The primary check period shows approximately 6 seconds after the ignition switch is turned on (IG).

NG → **GO TO COMBINATION METER SYSTEM**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

SRS Warning Light does not Come ON

DESCRIPTION

See page RS-222.

WIRING DIAGRAM

See page RS-223.

INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

2	CHECK CONNECTOR

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the combination meter assembly.
OK:
The connectors are properly connected.

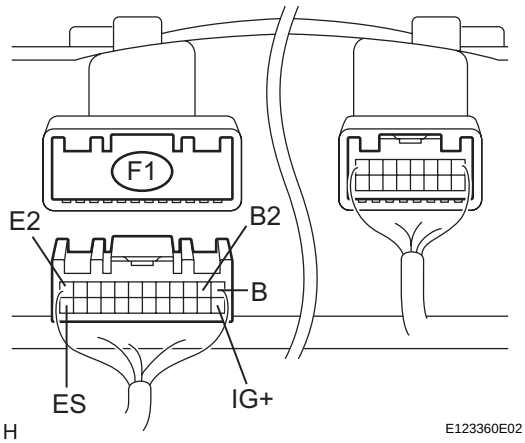
NG → **CONNECT CONNECTOR PROPERLY**

OK

RS

3	CHECK WIRE HARNESS (SOURCE VOLTAGE OF COMBINATION METER)

Combination Meter Assembly Side:



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the F1 connector from the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-1 (B) - Body ground	Always	10 to 14 V
F1-2 (B2) - Body ground	Always	10 to 14 V
F1-13 (IG+) - Body ground	Ignition switch on (IG)	10 to 14 V

(g) Turn the ignition switch off.
(h) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-12 (E2) - Body ground	Always	Below 1 Ω
F1-24 (ES) - Body ground	Always	Below 1 Ω

RS

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds, and remains on.

HINT:
The primary check period is approximately 6 seconds after the ignition switch is turned on (IG).

NG → GO TO COMBINATION METER SYSTEM

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

Diagnosis Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are displayed by blinking of the SRS warning light.
HINT:

- When each warning light stays blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU is suspected.
- A DTC output mode signal is transmitted through CAN communication system to each ECU including the center airbag sensor assembly. Thus when all systems do not enter DTC output mode, there may be an ECM malfunction.

INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page CA-25).

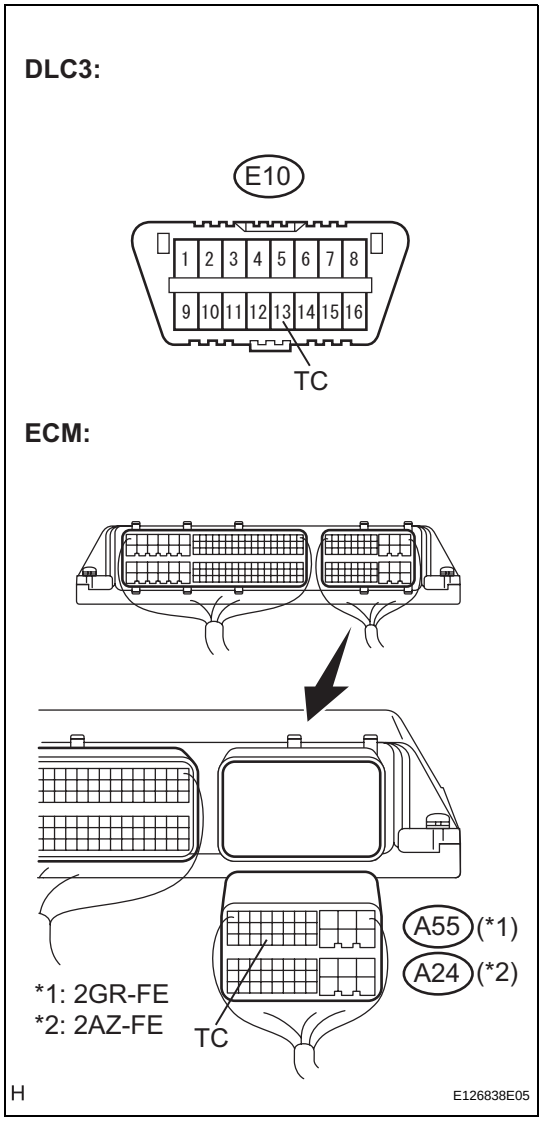
Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

A

2	CHECK WIRE HARNESS (DLC3 - ECM)



(a) Turn the ignition switch off.
(b) Disconnect the connector from ECM.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for 2GR-FE

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A55-27 (TC)	Always	Below 1 Ω

for 2AZ-FE

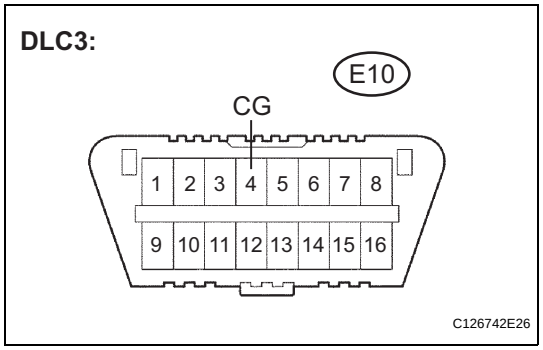
Tester Connection	Condition	Specified Condition
E10-13 (TC) - A24-27 (TC)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS (TC OF DLC3 - TC OF ECM)**

RS

OK

3 CHECK WIRE HARNESS (CG OF DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

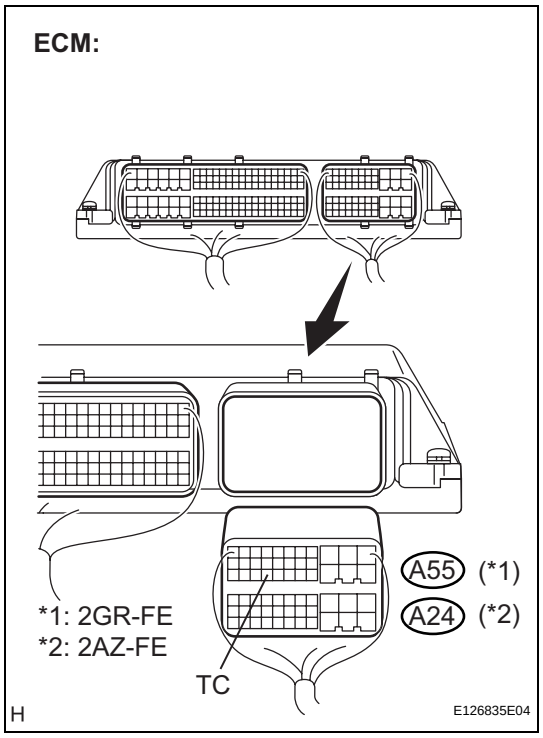
Standard resistance

Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS (CG OF DLC3 - BODY GROUND)**

OK

4 CHECK WIRE HARNESS (TC OF ECM - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for 2GR-FE

Tester Connection	Condition	Specified Condition
A55-27 (TC) - Body ground	Always	1 MΩ or higher

for 2AZ-FE

Tester Connection	Condition	Specified Condition
A24-27 (TC) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS OR EACH ECU**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

RS

OCCUPANT CLASSIFICATION SYSTEM

PRECAUTION

1. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) Perform zero point calibration and sensitivity check if any of the following conditions occur:
- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

NOTICE:
When an accident vehicle is brought into the workshop for repair, check the flatness of the body side that is equipped with the passenger seat. If the flatness is not within +- 3.0 mm (0.118 in.), adjust it to the specified range.

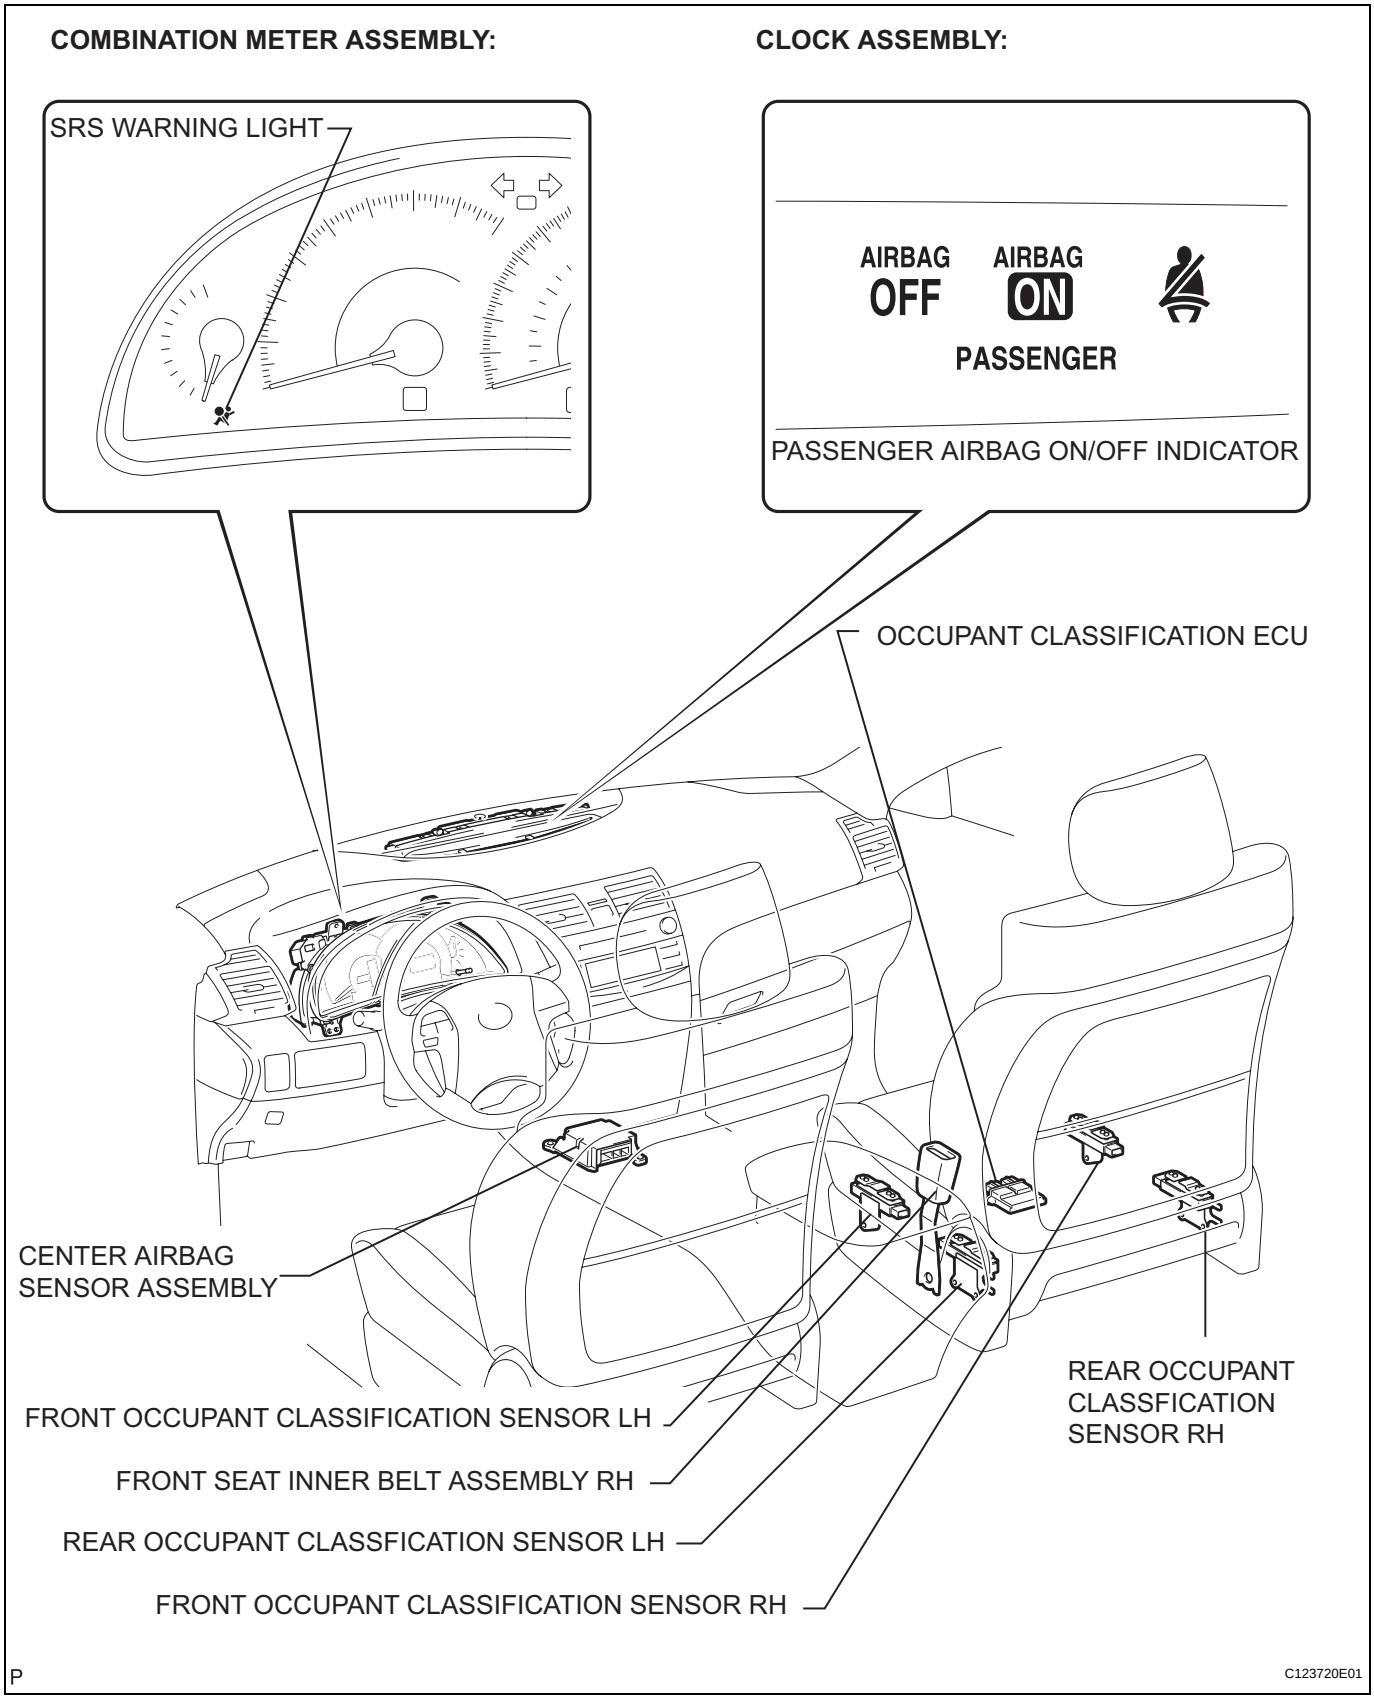
2. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.
The expressions listed in the table below are used in this section.

RS

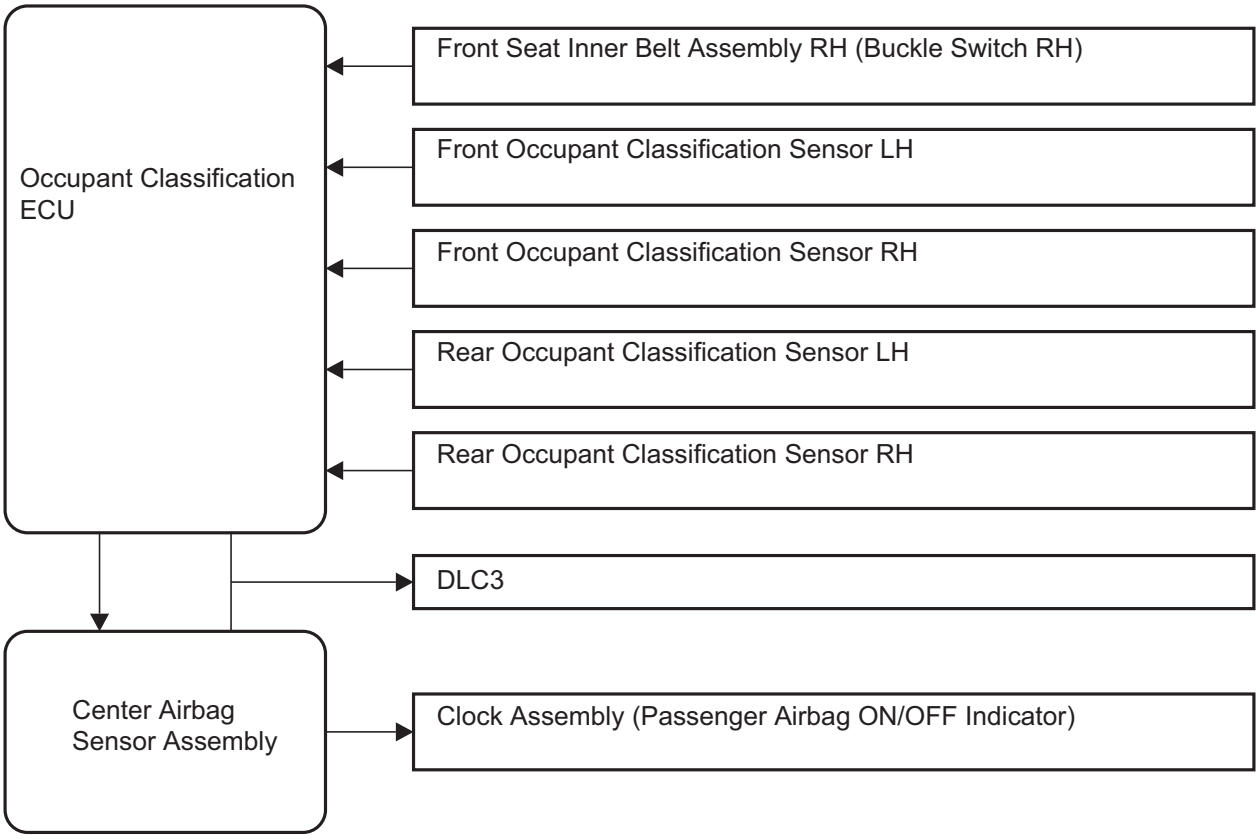
Switch Type		Ignition Switch (position)	Engine Switch (condition)
Expression	Ignition Switch off	LOCK	Off
	Ignition Switch on (IG)	ON	On (IG)
	Ignition Switch on (ACC)	ACC	On (ACC)
	Engine Start	START	Start

PARTS LOCATION



RS

SYSTEM DIAGRAM



C

C110375E01

SYSTEM DESCRIPTION

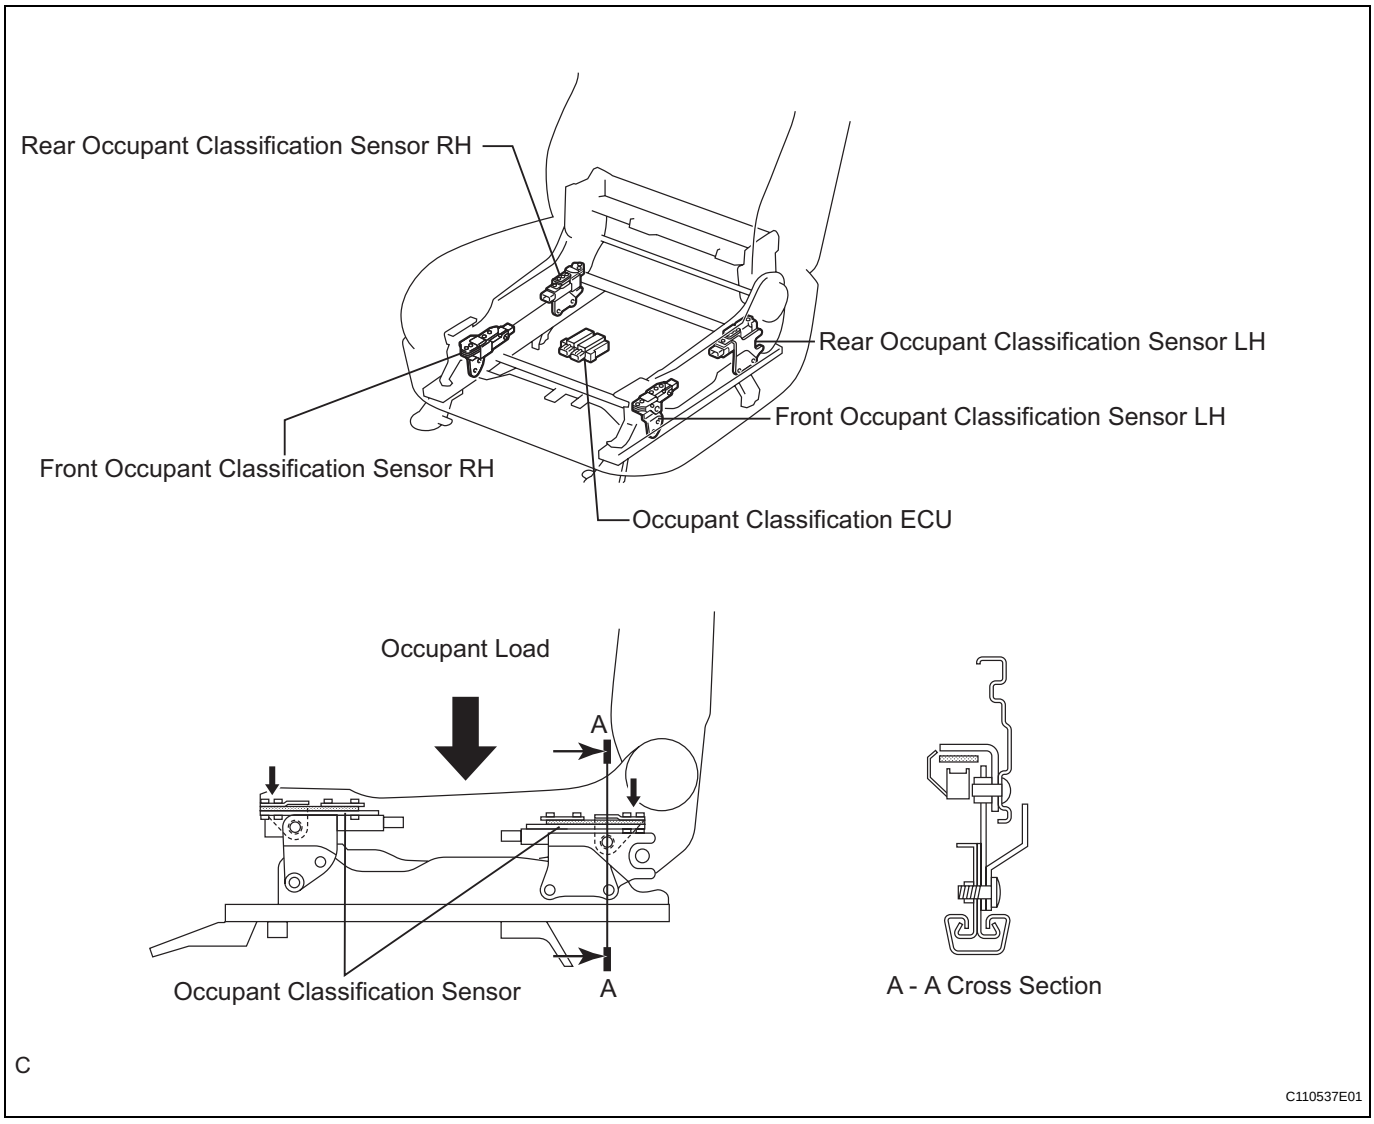
1. DESCRIPTION OF OCCUPANT CLASSIFICATION SYSTEM

(a) GENERAL DESCRIPTION.

(1) In the occupant classification system, the occupant classification ECU calculates the weight of the occupant based on a signal from the occupant classification sensors. This system recognizes the occupant as a child if it detects a weight of less than 36 kg (79.37 lb), and disables the front passenger airbag and front passenger side-side airbag.

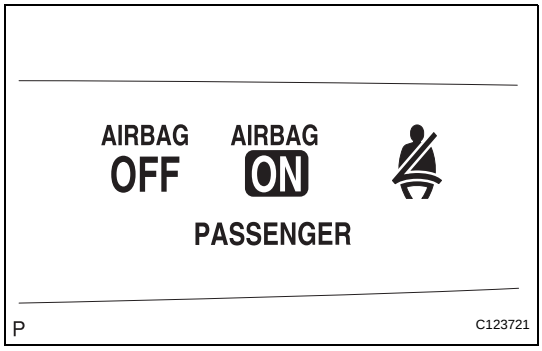
(2) This system is mainly comprised of 4 occupant classification sensors that detect the load on the front passenger seat. The occupant classification ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag and front passenger side-side airbag.

(b) OCCUPANT CLASSIFICATION SENSOR.



RS

(1) The occupant classification sensors are installed on 4 brackets connecting the seat rail and seat frame. Accordingly, when load is applied to the front passenger seat by an occupant sitting in it, the occupant classification sensors register a distortion.



(c) DESCRIPTION FOR PASSENGER AIRBAG ON/OFF INDICATOR.

(1) The passenger airbag ON/OFF indicator is installed on the clock assembly. This indicator informs the driver whether the occupant classification ECU puts the front passenger airbag assembly into an active state or inactive state.

(2) If a malfunction occurs in the occupant classification system, "OFF" indication of the passenger airbag ON/OFF indicator and the SRS warning light come on.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used in steps 4, 6, 8, and 9.

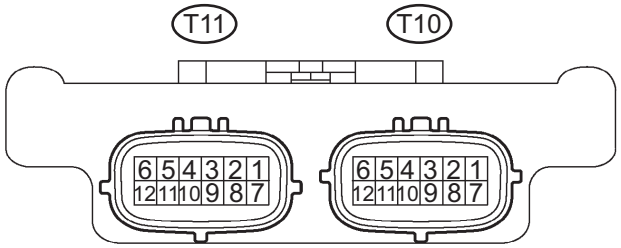
Symptom	Suspected area	See page
The front passenger seat condition differs from the indication by the passenger airbag ON/OFF indicator (DTC is not output).	Trouble in Passenger Airbag ON/OFF Indicator	RS-342

TERMINALS OF ECU

1. OCCUPANT CLASSIFICATION ECU (for Power seat)

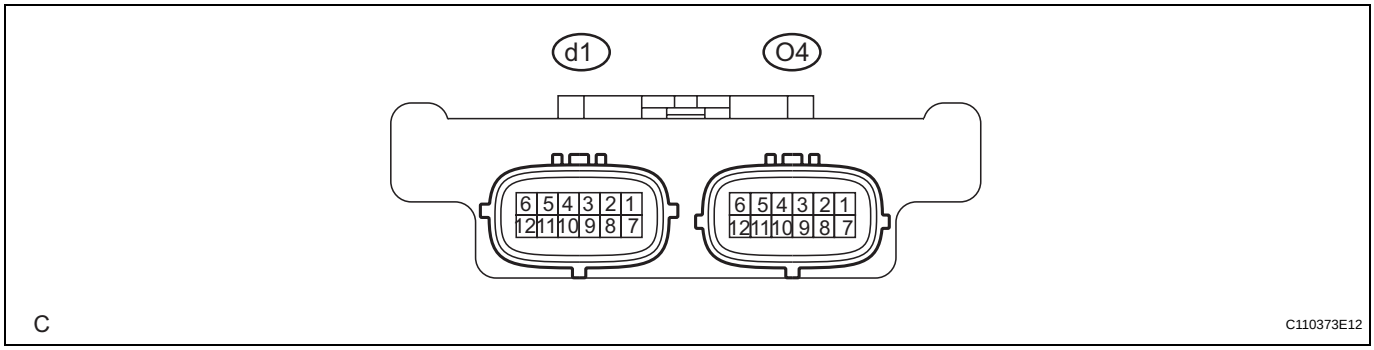


H043128E06

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
T10-1 (+B) - T10-3 (GND)	W - W-B	Battery	Always	10 to 14 V
T10-2 (DIA) - T10-3 (GND)	GR - W-B	Diagnosis (DLC3)	Ignition switch on (IG)	Pulse generation
T10-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
T10-4 (FSR-) - T10-3 (GND)	Y - W-B	Center airbag sensor assembly communication line (-)	Always	Below 1 V
T10-5 (BGND) - T10-3 (GND)	GR - W-B	Passenger side buckle switch ground line	Always	Below 1 V
T10-7 (IG) - T10-3 (GND)	BR - W-B	Power source (ECU-B Fuse)	Ignition switch on (IG)	10 to 14 V
T10-8 (FSR+) - T10-4 (FSR-)	L - Y	Center airbag sensor assembly communication line	Ignition switch on (IG)	Pulse generation
T10-9 (BSW) - T10-5 (BGND)	B - GR	Passenger side buckle switch line	Always	Below 1 V
T11-1 (SGD1) - T10-3 (GND)	G - W-B	Front occupant classification sensor LH ground line	Always	Below 1 V
T11-2 (SGD2) - T10-3 (GND)	O - W-B	Front occupant classification sensor RH ground line	Always	Below 1 V
T11-3 (SGD3) - T10-3 (GND)	W - W-B	Rear occupant classification sensor LH ground line	Always	Below 1 V
T11-4 (SGD4) - T10-3 (GND)	BR - W-B	Rear occupant classification sensor RH ground line	Always	Below 1 V
T11-5 (SVC3) - T11-3 (SGD3)	GR - W	Rear occupant classification sensor LH power supply line	Ignition switch on (IG), a load is applied to rear occupant classification sensor LH	4.5 to 5.1 V
T11-6 (SVC4) - T11-4 (SGD4)	V - BR	Rear occupant classification sensor RH power supply line	Ignition switch on (IG), a load is applied to rear occupant classification sensor RH	4.5 to 5.1 V
T11-7 (SIG1) - T11-1 (SGD1)	P - G	Front occupant classification sensor LH signal line	Ignition switch on (IG), a load is applied to front occupant classification sensor LH	0.2 to 4.9 V
T11-8 (SIG2) - T11-2 (SGD2)	L - O	Front occupant classification sensor RH signal line	Ignition switch on (IG), a load is applied to front occupant classification sensor RH	0.2 to 4.9 V

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
T11-9 (SIG3) - T11-3 (SGD3)	Y - W	Rear occupant classification sensor LH signal line	Ignition switch on (IG), a load is applied to rear occupant classification sensor LH	0.2 to 4.9 V
T11-10 (SIG4) - T11-4 (SGD4)	B - BR	Rear occupant classification sensor RH signal line	Ignition switch on (IG), a load is applied to rear occupant classification sensor RH	0.2 to 4.9 V
T11-11 (SVC1) - T11-1 (SGD1)	R - G	Front occupant classification sensor LH power supply line	Ignition switch on (IG), a load is applied to front occupant classification sensor LH	4.5 to 5.1 V
T11-12 (SVC2) - T11-2 (SGD2)	W - O	Front occupant classification sensor RH power supply line	Ignition switch on (IG), a load is applied to front occupant classification sensor RH	4.5 to 5.1 V

2. OCCUPANT CLASSIFICATION ECU (for Manual seat)



Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
O4-1 (+B) - O4-3 (GND)	LG - W-B	Battery	Always	10 to 14 V
O4-2 (DIA) - O4-3 (GND)	O - W-B	Diagnosis (DLC3)	Ignition switch on (IG)	Pulse generation
O4-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
O4-4 (FSR-) - O4-3 (GND)	B - W	Center airbag sensor assembly communication line (-)	Always	Below 1 V
O4-5 (BGND) - O4-3 (GND)	GR - W-B	Passenger side buckle switch ground line	Always	Below 1 V
O4-7 (IG) - O4-3 (GND)	BR - W-B	Power source (ECU-B Fuse)	Ignition switch on (IG)	10 to 14 V
O4-8 (FSR+) - O4-4 (FSR-)	W - B	Center airbag sensor assembly communication line	Ignition switch on (IG)	Pulse generation
O4-9 (BSW) - O4-5 (BGND)	P - GR	Passenger side buckle switch line	Always	Below 1 V
d1-1 (SGD1) - O4-3 (GND)	G - W-B	Front occupant classification sensor LH ground line	Always	Below 1 V
d1-2 (SGD2) - O4-3 (GND)	O - W-B	Front occupant classification sensor RH ground line	Always	Below 1 V
d1-3 (SGD3) - O4-3 (GND)	W - W-B	Rear occupant classification sensor LH ground line	Always	Below 1 V
d1-4 (SGD4) - O4-3 (GND)	BR - W-B	Rear occupant classification sensor RH ground line	Always	Below 1 V

INITIALIZATION

1. ZERO POINT CALIBRATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation:

HINT:

Perform zero point calibration and sensitivity check if any of the following conditions occur.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

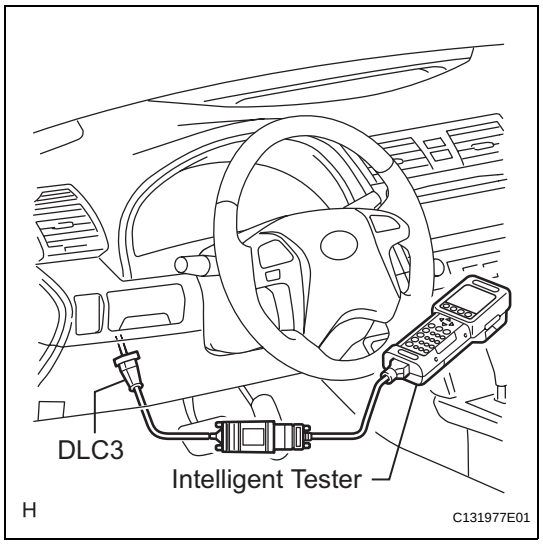
(a) Zero point calibration and sensitivity check procedures.

HINT:

Make sure that zero point calibration has finished normally, and then perform the sensitivity check.

(1) Adjust the seat position according to the table below.

Adjustment Component	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position



(2) Connect the intelligent tester to the DLC3.

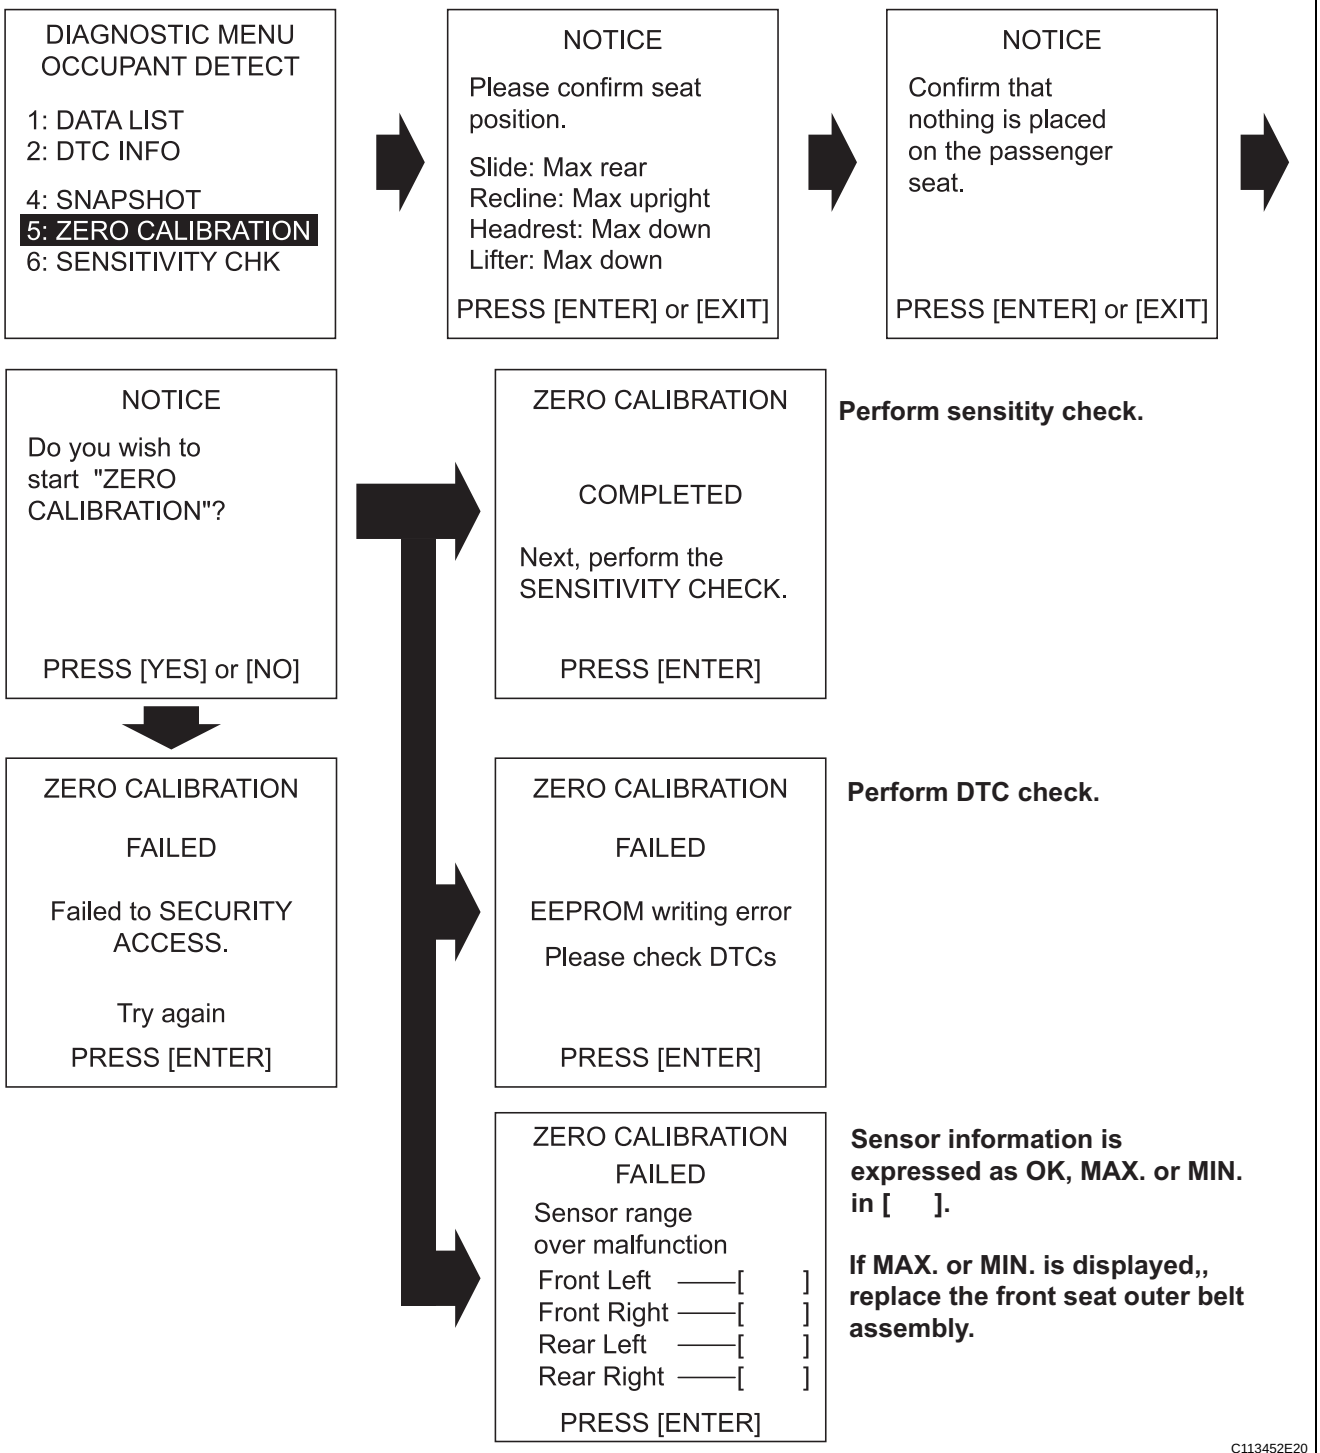
(3) Turn the ignition switch on (IG).

RS

(4) Perform the zero point calibration by following the prompts on the tester screen.

ZERO POINT CALIBRATION PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION" - "CAMRY" - Select the option parts" - "9: OCCUPANT DETECT"
Refer to the following screen flow.



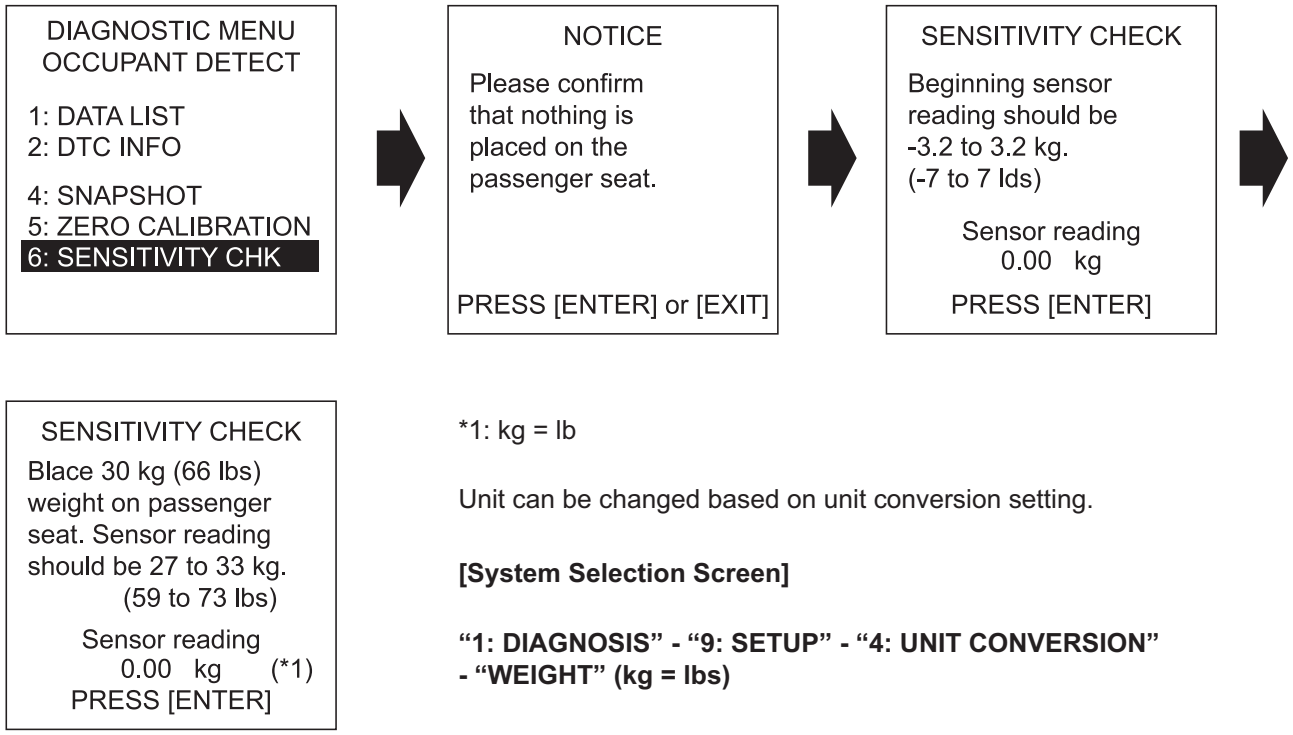
HINT:
Refer to the intelligent tester operator's manual for further details.

OK:
"COMPLETE" is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading within standard value.
Standard value:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (eg. a 30 kg (66.14 lb) of lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard value.

SENSITIVITY CHECK PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION = CAMRY" - Select the option parts - "9: OCCUPANT DETECT" - Refer to the following screen flow.



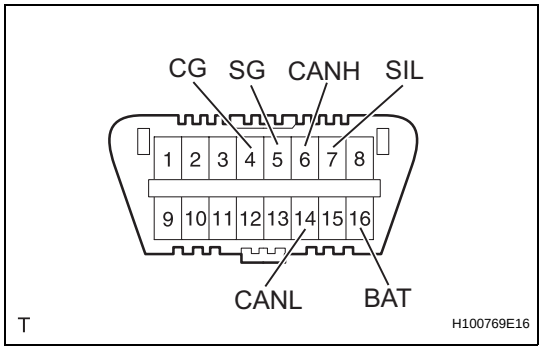
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

HINT:

- When performing the sensitivity check, use a solid metal weight (the check result may not appear properly if the weight made from liquid is used).

- When the sensitivity deviates from the standard value, retighten the bolts of the front passenger seat without deforming the seat rail. After performing this procedure, if the sensitivity is not within the standard value, replace the front seat assembly RH.
- When zero point calibration has not finished normally, replace the front seat assembly RH.

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
d1-5 (SVC3) - d1-3 (SGD3)	GR - W	Rear occupant classification sensor LH power supply line	Ignition switch on (IG), a load is applied to rear occupant classification sensor LH	4.5 to 5.1 V
d1-6 (SVC4) - d1-4 (SGD4)	V - BR	Rear occupant classification sensor RH power supply line	Ignition switch on (IG), a load is applied to rear occupant classification sensor RH	4.5 to 5.1 V
d1-7 (SIG1) - d1-1 (SGD1)	SB - G	Front occupant classification sensor LH signal line	Ignition switch on (IG), a load is applied to front occupant classification sensor LH	0.2 to 4.9 V
d1-8 (SIG2) - d1-2 (SGD2)	L - O	Front occupant classification sensor RH signal line	Ignition switch on (IG), a load is applied to front occupant classification sensor RH	0.2 to 4.9 V
d1-9 (SIG3) - d1-3 (SGD3)	Y - W	Rear occupant classification sensor LH signal line	Ignition switch on (IG), a load is applied to rear occupant classification sensor LH	0.2 to 4.9 V
d1-10 (SIG4) - d1-4 (SGD4)	R - BR	Rear occupant classification sensor RH signal line	Ignition switch on (IG), a load is applied to rear occupant classification sensor RH	0.2 to 4.9 V
d1-11 (SVC1) - d1-1 (SGD1)	R - G	Front occupant classification sensor LH power supply line	Ignition switch on (IG), a load is applied to front occupant classification sensor LH	4.5 to 5.1 V
d1-12 (SVC2) - d1-2 (SGD2)	W - O	Front occupant classification sensor RH power supply line	Ignition switch on (IG), a load is applied to front occupant classification sensor RH	4.5 to 5.1 V



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

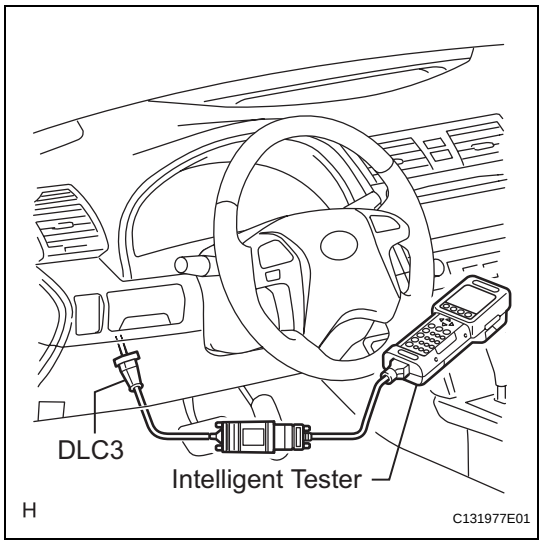
RS

Symbols (Terminal No.)	Terminal Description	Condition	Pulse condition
SIL (7) - SG (5)	Bus "+" Line	During transmission	Pulse generation
CG (4) - Body ground	Chassis Ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off (*)	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off (*)	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off (*)	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off (*)	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off (*)	200 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches, or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

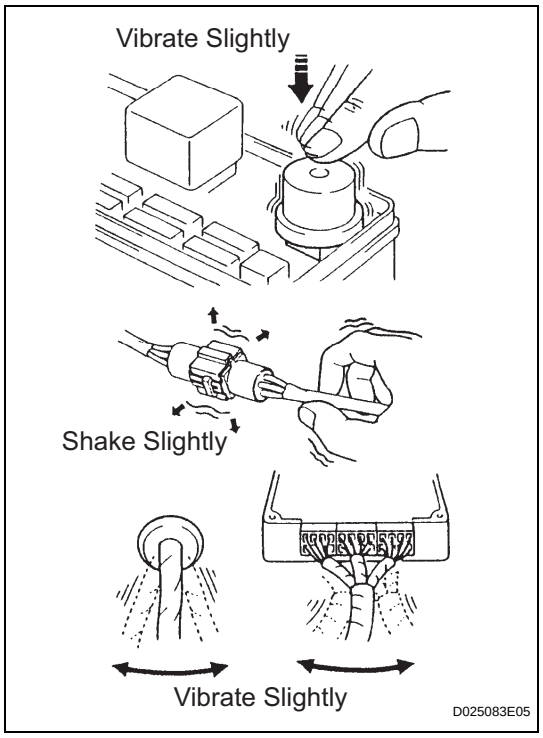


HINT:
If the display shows a communication error message when connecting the cable of the intelligent tester to the DLC3, turning the ignition switch on (IG) and operating the intelligent tester, there is a problem on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

2. SYMPTOM SIMULATION

HINT:
The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation.
This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned on (IG)).
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.
HINT:
Shaking the relays too strongly may result in open relays.
(2) Slightly shake the connector vertically and horizontally.
(3) Slightly shake the wire harness vertically and horizontally.
The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

RS

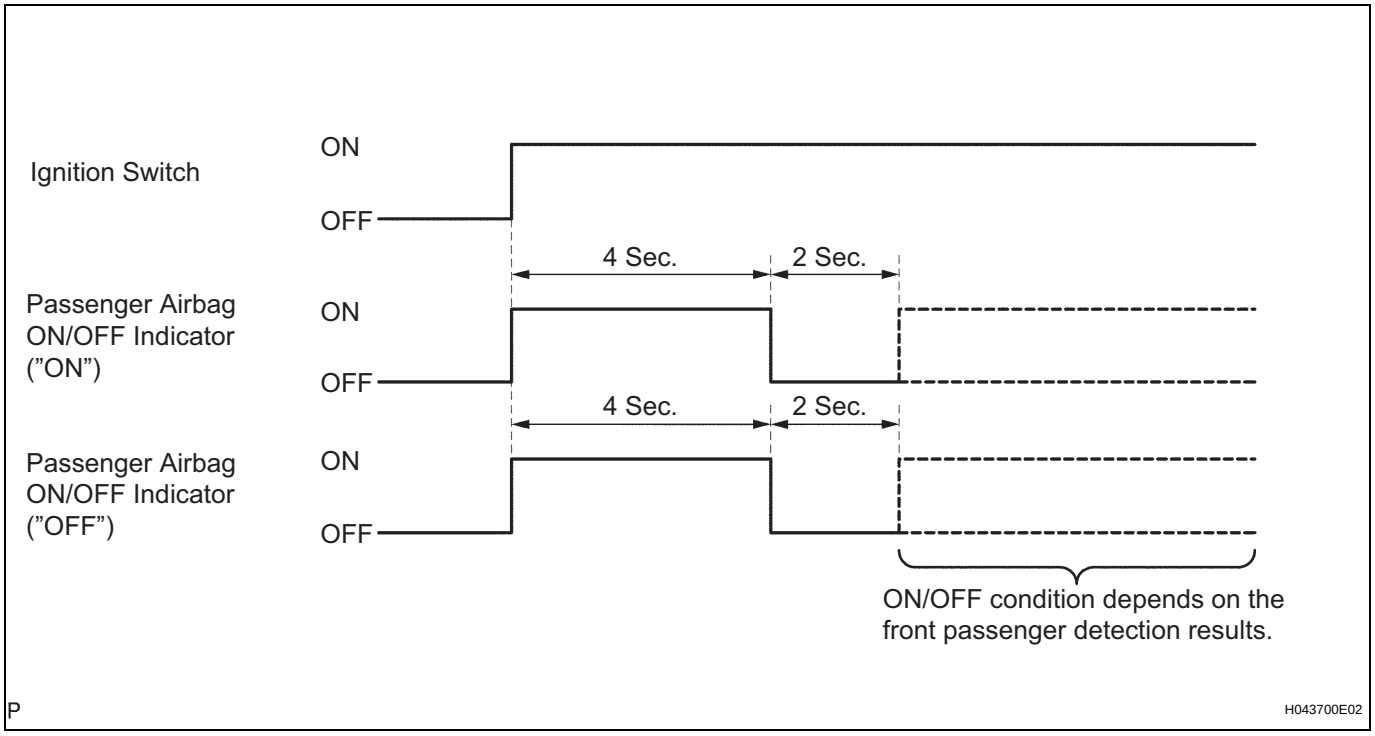
(b) Simulation method for DTC B1794:
Turn the ignition switch from the off to on (IG), hold it for 10 seconds, and back to off again 50 times in a row.
HINT:
DTC B1794 is output if the occupant classification ECU receives the ignition switch off-on (IG)-off signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system.

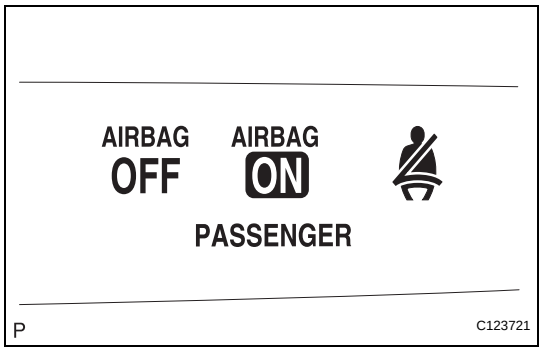
3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check.
(1) Turn the ignition switch on (IG).
(2) The passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
(3) Approximately 6 seconds after the ignition switch is turned to on (IG), the passenger airbag ON/OFF indicator will show ON or OFF depending on the conditions listed below.

Condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated. (Above 36 kg (79.37 lb))	ON	OFF
Child is seated. (Less than 36 kg (79.37 lb))	OFF	ON
Child restraint system is set. (*)	OFF	ON
Front passenger occupant classification system failure	OFF	ON

*: Child restraint system less than 7 kg (15.43 lb) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set.
HINT:
- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in "AIRBAG SYSTEM" first.





4. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the ignition switch on (IG).

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") come on for approximately 4 seconds, then goes off for approximately 2 seconds.

HINT:

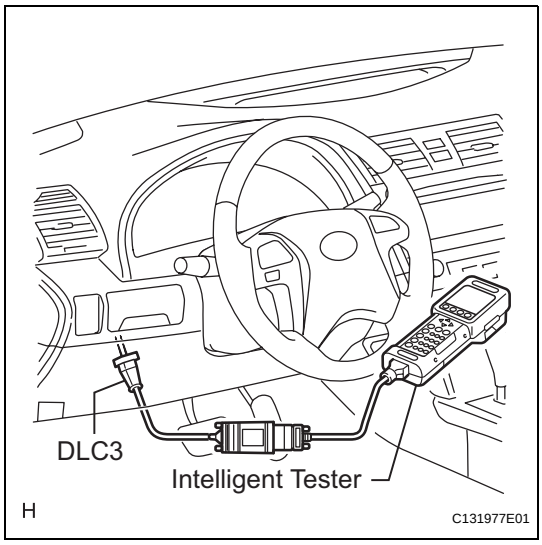
Refer to the table in step 3 regarding the passenger airbag ON/OFF indicator when the ignition switch is turned on (IG) and approximately 6 seconds pass.

RS

DTC CHECK / CLEAR

1. DTC CHECK

HINT:
When DTC B1650/32 is detected as a result of troubleshooting for "AIRBAG SYSTEM", perform troubleshooting for the occupant classification system.

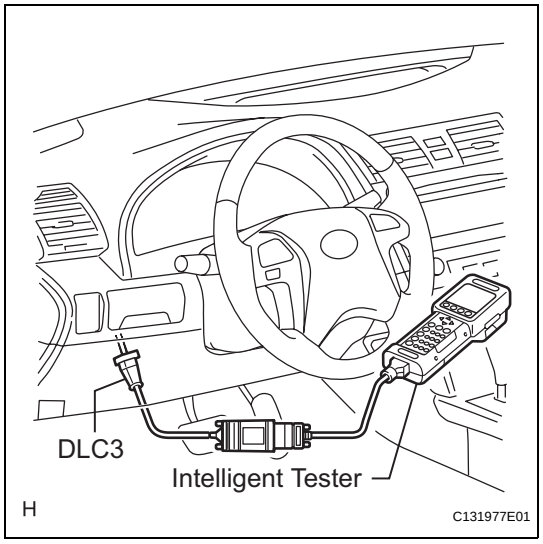


(a) Check for DTCs.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Check the DTCs by following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

(b) Clear DTCs.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the ignition switch on (IG).
  (3) Clear the DTCs by following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed on the intelligent tester, you can perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST is the first step in troubleshooting is one method to save labor time.



1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / OCCUPANT DETECT / DATA LIST.
(e) Check the values by referring to the table below.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
IG SW	Ignition switch condition/ ON: Ignition switch on (IG) OFF: Ignition switch off	ON/OFF	-
P BUCKLE SW	Buckle switch (Passenger side)/ SET: The seat belt is fastened UNSET: The seat belt is not fastened NG: Data is not determined	SET/UNSET	-
PASSENGER CLASS	Passenger classification/ AM50: Adult (more than 54 kg (119.05 lb)) is seated AF05: Adult (36 to 54 kg (79.37 to 119.05 lb)) is seated CHILD: Child (less than 36 kg (79.37 lb)) is seated CRS: Child restraint system (less than 7 kg (15.43 lb)) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set OFF: Vacant	AM50/AF05/CHILD/CRS/OFF	-
SENS RANGE INF	Sensor range information/ OK: The value of a sensor is within the range NG: The value of a sensor is over the range	OK	-
FL SENS RANGE	Front left sensor range information/ OK: Sensor range is -17 to 27 kg (-37.48 to 59.52 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 27 kg (59.52 lb)	OK	-

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
FR SENS RANGE	Front right sensor range information/ OK: Sensor range is -17 to 27 kg (-37.48 to 59.52 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 27 kg (59.52 lb)	OK	-
RL SENS RANGE	Rear left sensor range information/ OK: Sensor range is -17 to 37 kg (-37.48 to 81.57 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 37 kg (81.57 lb)	OK	-
RR SENS RANGE	Rear right sensor range information/ OK: Sensor range is -17 to 37 kg (-37.48 to 81.57 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 37 kg (81.57 lb)	OK	-
FL SENS VOL	Front left sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
FR SENS VOL	Front right sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
RL SENS VOL	Rear left sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
RR SENS VOL	Rear right sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
FL SENS WEIGHT	Front left sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 27 kg (59.52 lb)	-17 to 27 kg (-37.48 to 59.52 lb)	-
FR SENS WEIGHT	Front right sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 27 kg (59.52 lb)	-17 to 27 kg (-37.48 to 59.52 lb)	-
RL SENS WEIGHT	Rear left sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 37 kg (81.57 lb)	-17 to 37 kg (-37.48 to 81.57 lb)	-
RR SENS WEIGHT	Rear right sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 37 kg (81.57 lb)	-17 to 37 kg (-37.48 to 81.57 lb)	-
TOTAL WEIGHT	Total weight information/ Min.: -68 kg (-149.91 lb) Max.: 128 kg (282.19 lb)	-68 to 128 kg (-149.91 to 282.19 lb)	-
#PRESENT CODES	Number of present DTC recorded/ Min.: 0, Max.: 255	0	-
#PAST CODES	Number of past DTC recorded/ Min.: 0, Max.: 255	0	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (Proceed to the page listed for that circuit).

OCCUPANT CLASSIFICATION SYSTEM:

DTC No.	Detection Item	Trouble Area	See page
B1771	Passenger Side Buckle Switch Circuit Malfunction	1. Front seat inner belt assembly RH 2. Occupant classification ECU 3. Floor wire No. 2 4. Front seat wire RH (for Power seat)	RS-255
B1780	Front Occupant Classification Sensor LH Circuit Malfunction	1. Front seat assembly RH (Front occupant classification sensor LH) 2. Occupant classification ECU 3. Front seat wire RH	RS-263
B1781	Front Occupant Classification Sensor RH Circuit Malfunction	1. Front seat assembly RH (Front occupant classification sensor RH) 2. Occupant classification ECU 3. Front seat wire RH	RS-271
B1782	Rear Occupant Classification Sensor LH Circuit Malfunction	1. Front seat assembly RH (Rear occupant classification sensor LH) 2. Occupant classification ECU 3. Front seat wire RH	RS-279
B1783	Rear Occupant Classification Sensor RH Circuit Malfunction	1. Front seat assembly RH (Rear occupant classification sensor RH) 2. Occupant classification ECU 3. Front seat wire RH	RS-287
B1785	Front Occupant Classification Sensor LH Collision Detection	1. Front seat assembly RH (Front occupant classification sensor LH) 2. Occupant classification ECU	RS-295
B1786	Front Occupant Classification Sensor RH Collision Detection	1. Front seat assembly RH (Front occupant classification sensor RH) 2. Occupant classification ECU	RS-299
B1787	Rear Occupant Classification Sensor LH Collision Detection	1. Front seat assembly RH (Rear occupant classification sensor LH) 2. Occupant classification ECU	RS-303
B1788	Rear Occupant Classification Sensor RH Collision Detection	1. Front seat assembly RH (Rear occupant classification sensor RH) 2. Occupant classification ECU	RS-307
B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction	1. Occupant classification ECU 2. Center airbag sensor assembly 3. Floor wire No. 2 4. Front seat wire RH (for Power seat)	RS-311
B1793	Occupant Classification Sensor Power Supply Circuit Malfunction	1. Front seat assembly RH (Occupant classification sensors) 2. Front seat wire RH 3. Occupant classification ECU	RS-325
B1794	Open in Occupant Classification ECU Battery Positive Line	1. Battery 2. ECU-B fuse 3. Floor wire No. 2 4. Front seat wire RH (for Power seat) 5. Occupant classification ECU	RS-332

DTC No.	Detection Item	Trouble Area	See page
B1795	Occupant Classification ECU Malfunction	1. Occupant classification ECU 2. Floor wire No. 2 3. Front seat wire RH (for Power seat) 4. Front seat inner belt assembly RH	RS-337
B1796	Sleep Operation Failure of Occupant Classification ECU	Occupant classification ECU	RS-340

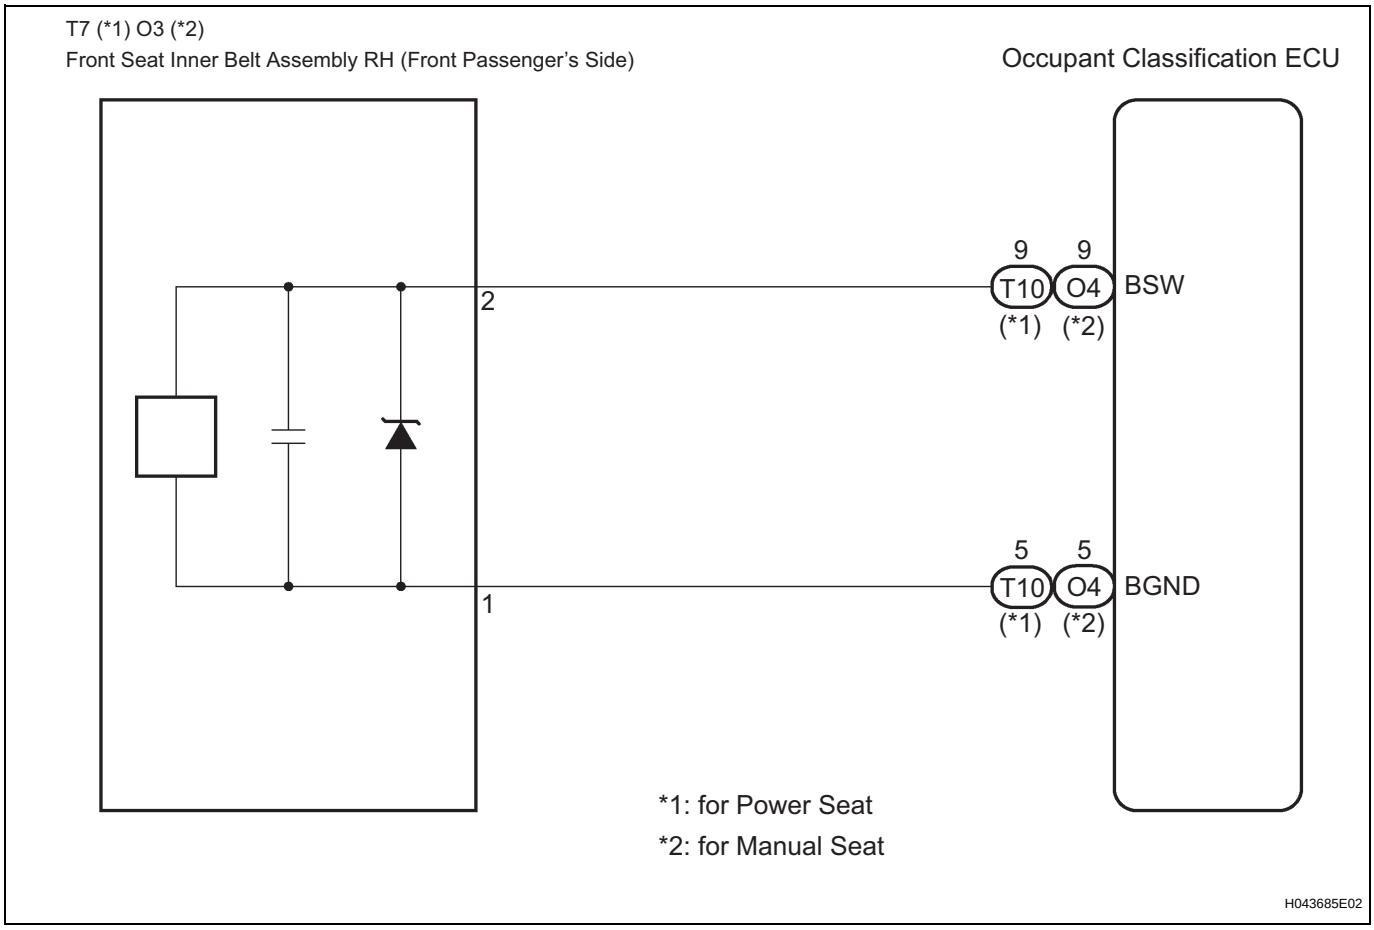
DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.
DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.
Troubleshoot DTC B1771 first when the DTC B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1771	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger side buckle switch circuit for 2 seconds. • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• Front seat inner belt assembly RH • Floor wire No. 2 • Front seat wire RH (for Power seat) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).

OK:

DTC B1771 is not output.

HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.

OK:

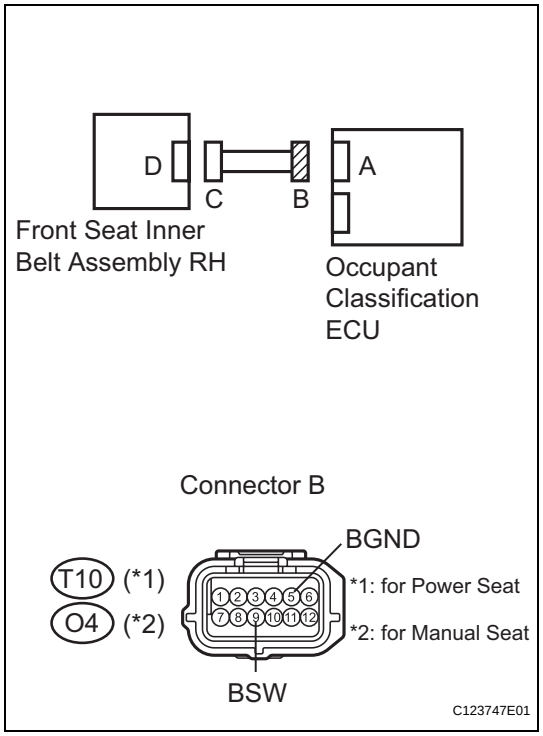
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

RS

3	CHECK WIRE HARNESS (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - Body ground	Ignition switch on (IG)	Below 1 V
T10-5 (BGND) - Body ground	Ignition switch on (IG)	Below 1 V

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - Body ground)	Ignition switch on (IG)	Below 1 V
O4-5 (BGND) - Body ground	Ignition switch on (IG)	Below 1 V

Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

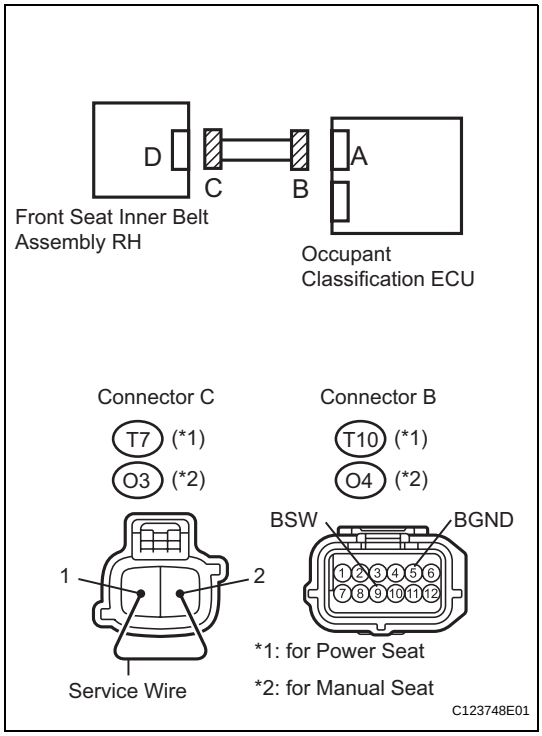
RS

A → REPAIR OR REPLACE FRONT SEAT WIRE RH

B → REPAIR OR REPLACE FLOOR WIRE NO. 2

C

4	CHECK WIRE HARNESS (OPEN)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 2 and 1 of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - T10-5 (BGND)	Always	Below 1 Ω

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - O4-5 (BGND)	Always	Below 1 Ω

Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

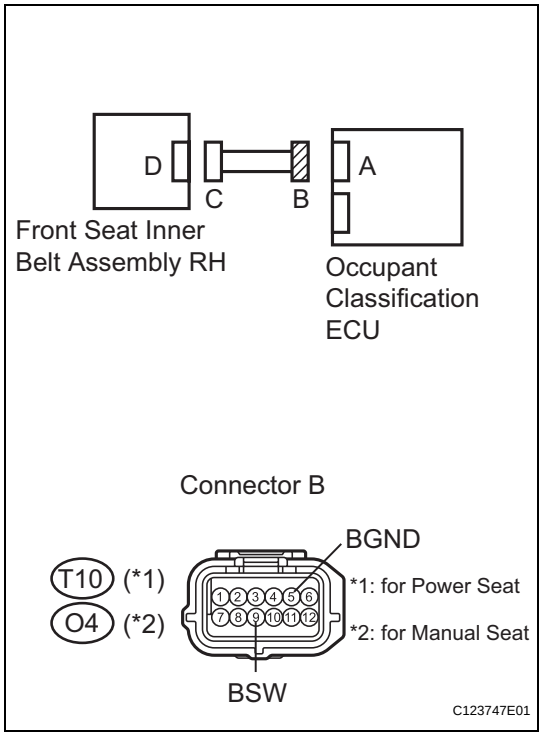
A → REPAIR OR REPLACE FRONT SEAT WIRE RH

B → REPAIR OR REPLACE FLOOR WIRE NO. 2

C

RS

5	CHECK WIRE HARNESS (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - T10-5 (BGND)	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - O4-5 (BGND)	Always	1 MΩ or Higher

Result

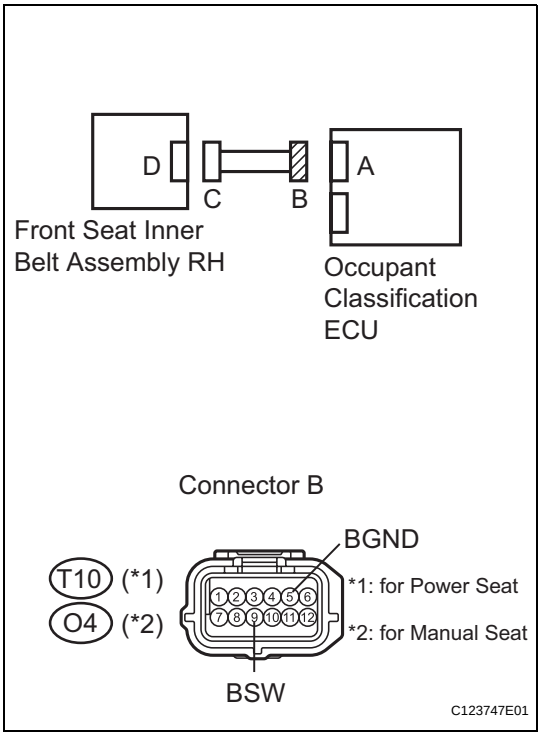
Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A	REPAIR OR REPLACE FRONT SEAT WIRE RH
B	REPAIR OR REPLACE FLOOR WIRE NO. 2

C

RS

6 CHECK WIRE HARNESS (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - Body ground	Always	1 MΩ or Higher
T10-5 (BGND) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - Body ground	Always	1 MΩ or Higher
O4-5 (BGND) - Body ground	Always	1 MΩ or Higher

Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

B → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

C

7 CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG).
(h) Check the DTCs (See page RS-251).

OK:

DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

RS

OK → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

NG

8	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat inner belt assembly RH (See page SB-15).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch on (IG).
(f) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(g) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(h) Turn the ignition switch off.
(i) Turn the ignition switch on (IG).
(j) Check the DTCs (See page RS-251).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **END**

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

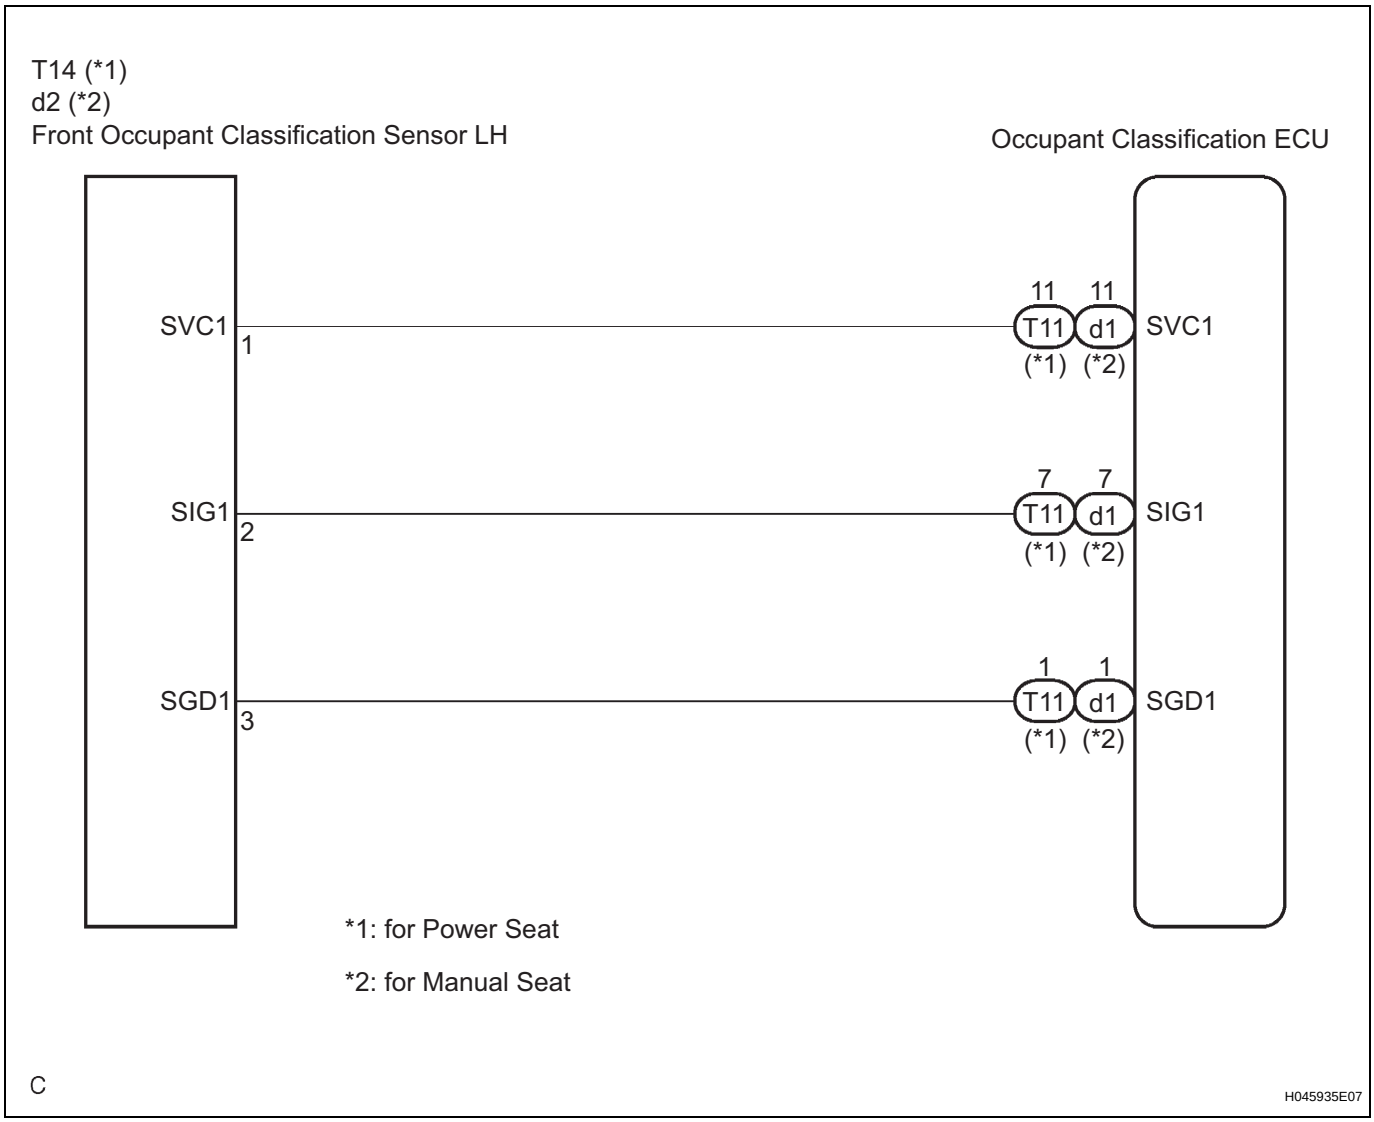
DTC	B1780	Front Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The front occupant classification sensor LH circuit consists of the occupant classification ECU and the front occupant classification sensor LH.
DTC B1780 is recorded when a malfunction is detected in the front occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1780	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front occupant classification sensor LH circuit for 2 seconds. • Front occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat assembly RH (Front occupant classification sensor LH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.

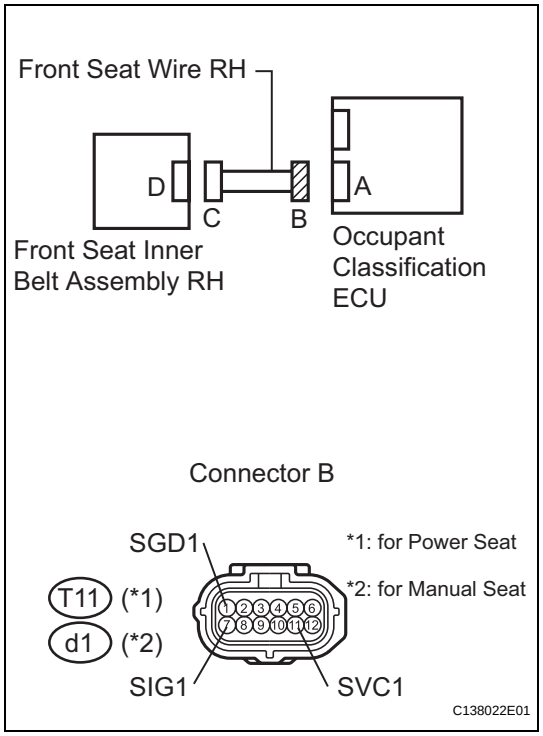
2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor LH.
OK:
The connectors are properly connected.

NG	CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-1 (SGD1) - Body ground	Ignition switch on (IG)	Below 1 V
T11-7 (SIG1) - Body ground	Ignition switch on (IG)	Below 1 V
T11-11 (SVC1) - Body ground	Ignition switch on (IG)	Below 1 V

for Manual seat

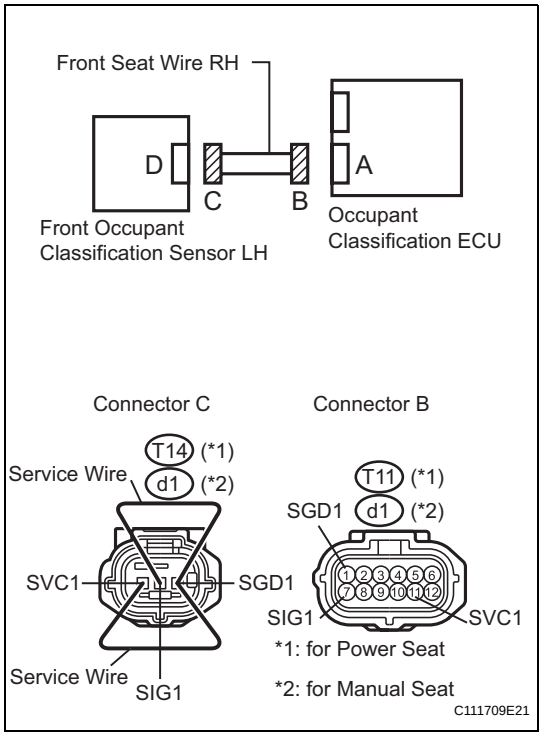
Tester connection	Condition	Specified condition
d1-1 (SGD1) - Body ground	Ignition switch on (IG)	Below 1 V
d1-7 (SIG1) - Body ground	Ignition switch on (IG)	Below 1 V
d1-11 (SVC1) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the ignition switch off.

(b) Disconnect the negative (-) terminal cable from the battery.

(c) Using a service wire, connect terminals 1 (SVC1) and 3 (SGD1), and connect terminals 2 (SIG1) and 3 (SGD1) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-7 (SIG1) - T11-1 (SGD1)	Always	Below 1 Ω
T11-11 (SVC1) - T11-1 (SGD1)	Always	Below 1 Ω

for Manual seat

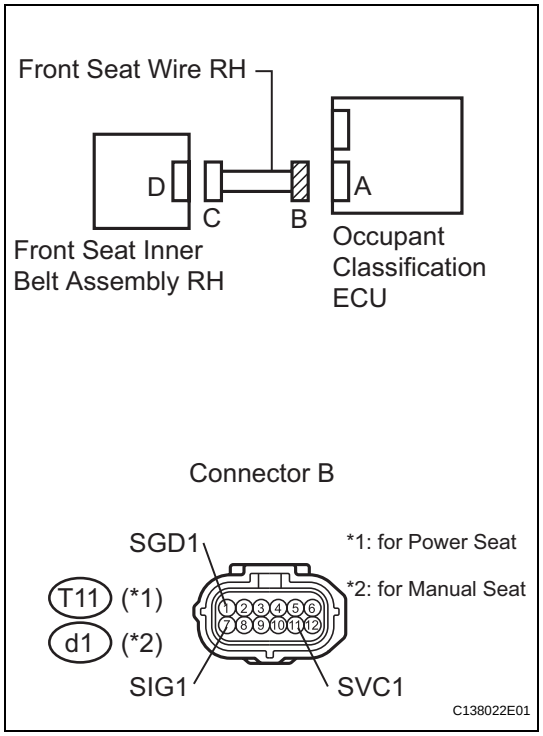
Tester connection	Condition	Specified condition
d1-7 (SIG1) - d1-1 (SGD1)	Always	Below 1 Ω
d1-11 (SVC1) - d1-1 (SGD1)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T11-7 (SIG1) - T11-1 (SGD1)	Always	1 MΩ or Higher
T11-11 (SVC1) - T11-1 (SGD1)	Always	1 MΩ or Higher
T11-7 (SIG1) - T11-11 (SVC1)	Always	1 MΩ or Higher

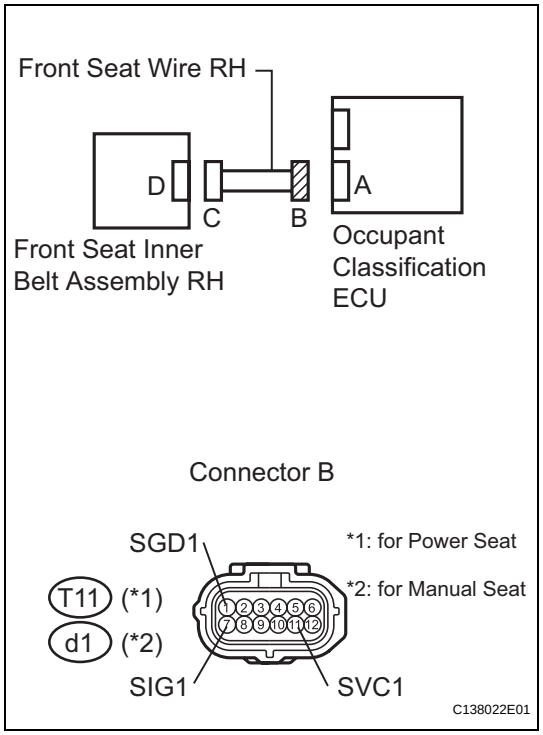
for Manual seat

Tester connection	Condition	Specified condition
d1-7 (SIG1) - d1-1 (SGD1)	Always	1 MΩ or Higher
d1-11 (SVC1) - d1-1 (SGD1)	Always	1 MΩ or Higher
d1-7 (SIG1) - d1-11 (SVC1)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T11-1 (SGD1) - Body ground	Always	1 MΩ or Higher
T11-7 (SIG1) - Body ground	Always	1 MΩ or Higher
T11-11 (SVC1) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-1 (SGD1) - Body ground	Always	1 MΩ or Higher
d1-7 (SIG1) - Body ground	Always	1 MΩ or Higher
d1-11 (SVC1) - Body ground	Always	1 MΩ or Higher

(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor RH.

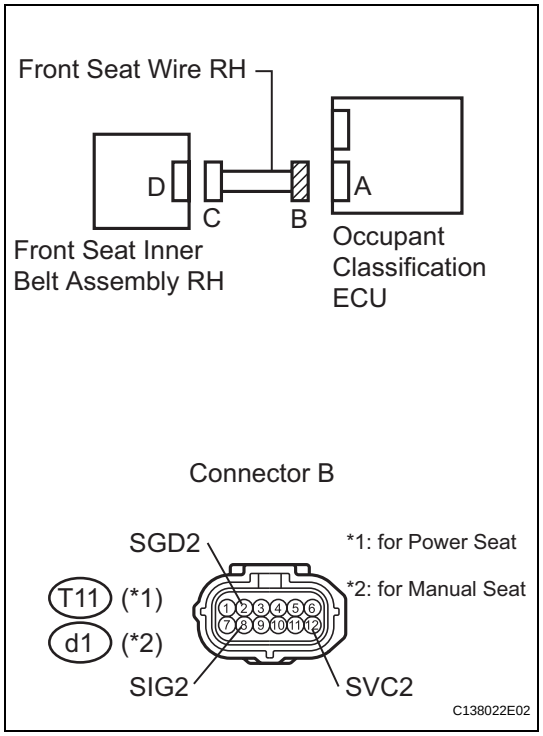
OK:

The connectors are properly connected.

NG	CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-2 (SGD2) - Body ground	Ignition switch on (IG)	Below 1 V
T11-8 (SIG2) - Body ground	Ignition switch on (IG)	Below 1 V
T11-12 (SVC2) - Body ground	Ignition switch on (IG)	Below 1 V

for Manual seat

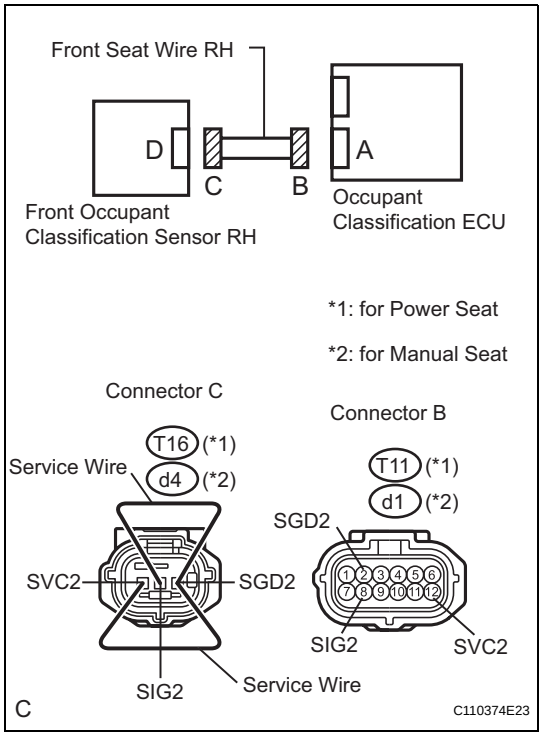
Tester connection	Condition	Specified condition
d1-2 (SGD2) - Body ground	Ignition switch on (IG)	Below 1 V
d1-8 (SIG2) - Body ground	Ignition switch on (IG)	Below 1 V
d1-12 (SVC2) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the ignition switch off.

(b) Disconnect the negative (-) terminal cable from the battery.

(c) Using a service wire, connect terminals 1 (SVC2) and 3 (SGD2), and connect terminals 2 (SIG2) and 3 (SGD2) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-8 (SIG2) - T11-2 (SGD2)	Always	Below 1 Ω
T11-12 (SVC2) - T11-2 (SGD2)	Always	Below 1 Ω

for Manual seat

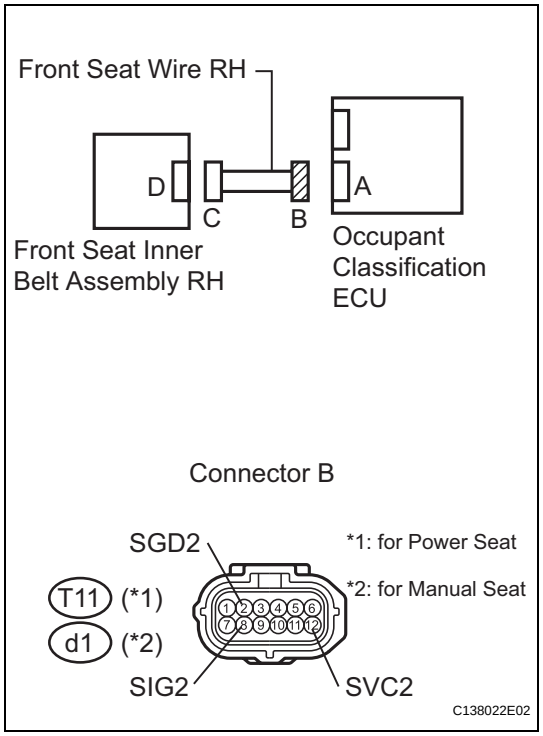
Tester connection	Condition	Specified condition
d1-8 (SIG2) - d1-2 (SGD2)	Always	Below 1 Ω
d1-12 (SVC2) - d1-2 (SGD2)	Always	Below 1 Ω

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-8 (SIG2) - T11-2 (SGD2)	Always	1 MΩ or Higher
T11-12 (SVC2) - T11-2 (SGD2)	Always	1 MΩ or Higher
T11-8 (SIG2) - T11-12 (SVC2)	Always	1 MΩ or Higher

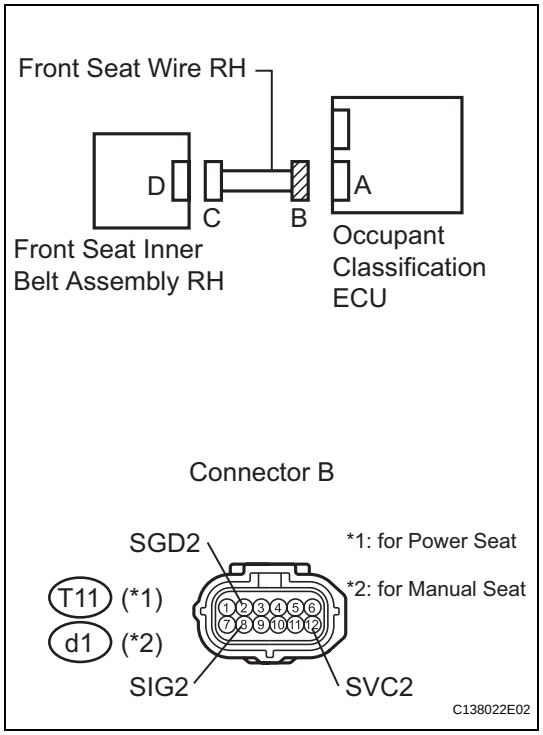
for Manual seat

Tester connection	Condition	Specified condition
d1-8 (SIG2) - d1-2 (SGD2)	Always	1 MΩ or Higher
d1-12 (SVC2) - d1-2 (SGD2)	Always	1 MΩ or Higher
d1-8 (SIG2) - d1-12 (SVC2)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-2 (SGD2) - Body ground	Always	1 MΩ or Higher
T11-8 (SIG2) - Body ground	Always	1 MΩ or Higher
T11-12 (SVC2) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-2 (SGD2) - Body ground	Always	1 MΩ or Higher
d1-8 (SIG2) - Body ground	Always	1 MΩ or Higher
d1-12 (SVC2) - Body ground	Always	1 MΩ or Higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG).
(h) Check the DTCs (See page RS-251).
OK:
DTC B1781 is not output.
HINT:
Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

NG

RS

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1781 is not output.
HINT:
Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-30 for power seat or SE-16 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

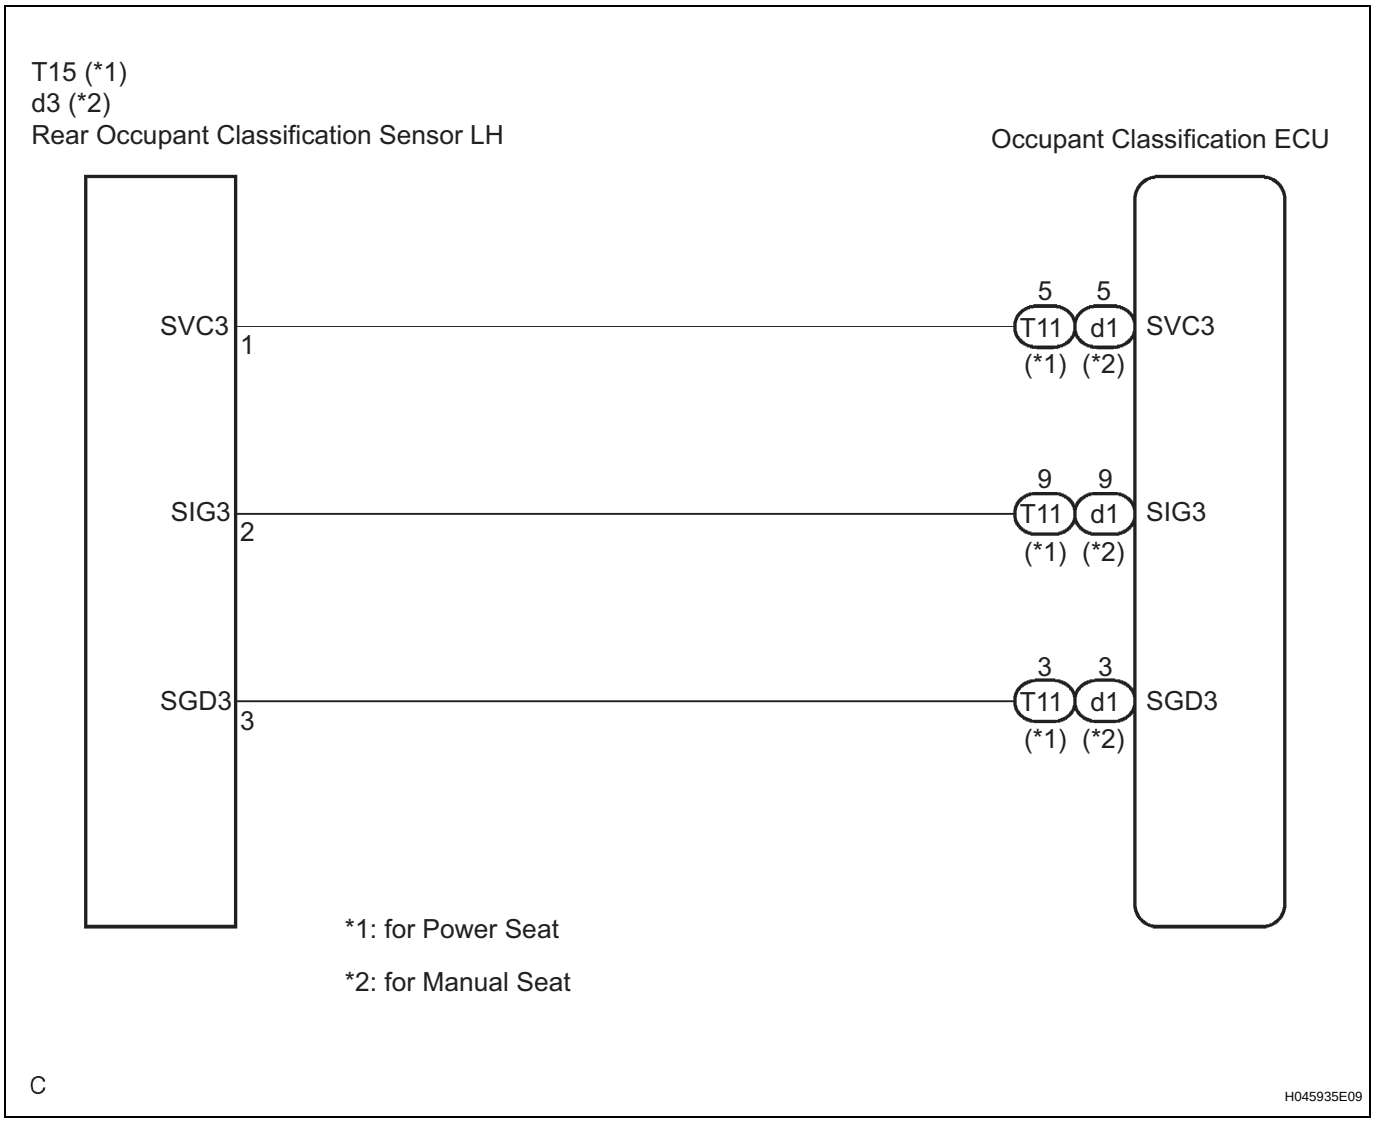
DTC	B1782	Rear Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The rear occupant classification sensor LH circuit consists of the occupant classification ECU and the rear occupant classification sensor LH.
DTC B1782 is recorded when a malfunction is detected in the rear occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1782	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear occupant classification sensor LH circuit for 2 seconds. • Rear occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat assembly RH (Rear occupant classification sensor LH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).

OK:

DTC B1782 is not output.

HINT:

Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK (See page RS-248)

NG

RS

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor LH.

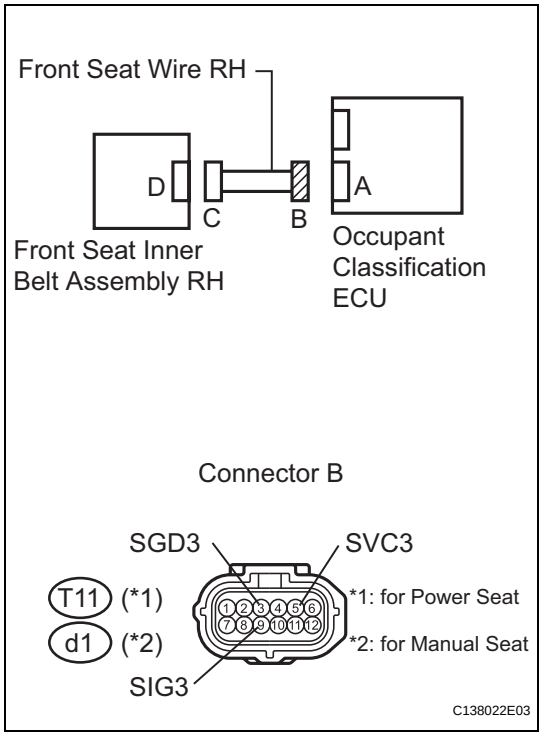
OK:

The connectors are properly connected.

NG	CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-3 (SGD3) - Body ground	Ignition switch on (IG)	Below 1 V
T11-5 (SVC3) - Body ground	Ignition switch on (IG)	Below 1 V
T11-9 (SIG3) - Body ground	Ignition switch on (IG)	Below 1 V

for Manual seat

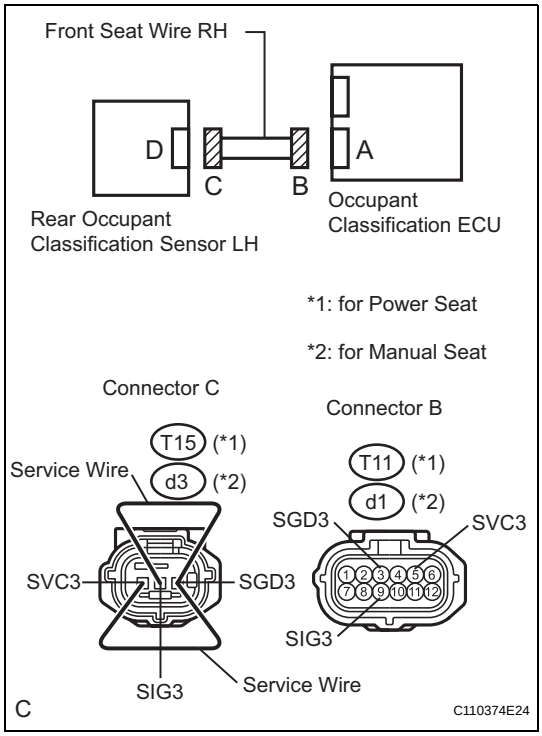
Tester connection	Condition	Specified condition
d1-3 (SGD3) - Body ground	Ignition switch on (IG)	Below 1 V
d1-9 (SIG3) - Body ground	Ignition switch on (IG)	Below 1 V
d1-5 (SVC3) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the ignition switch off.

(b) Disconnect the negative (-) terminal cable from the battery.

(c) Using a service wire, connect terminals 1 (SVC3) and 3 (SGD3), and connect terminals 2 (SIG3) and 3 (SGD3) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-3 (SGD3)	Always	Below 1 Ω
T11-9 (SIG3) - T11-3 (SGD3)	Always	Below 1 Ω

for Manual seat

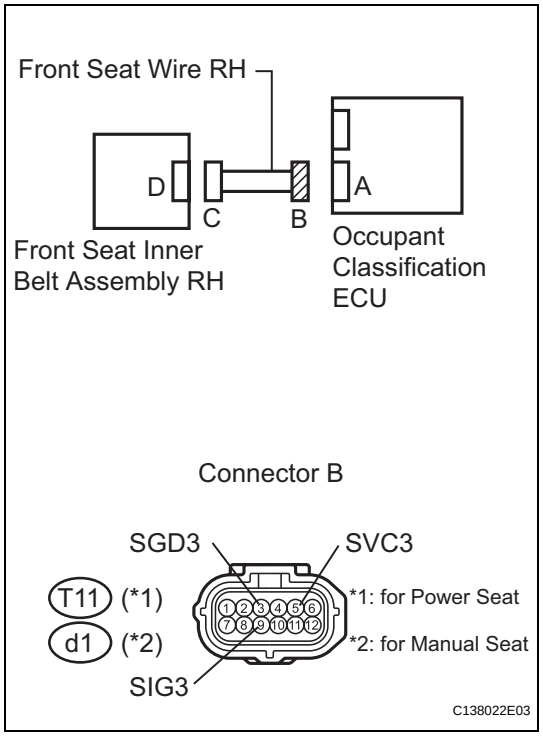
Tester connection	Condition	Specified condition
d1-9 (SIG3) - d1-3 (SGD3)	Always	Below 1 Ω
d1-5 (SVC3) - d1-3 (SGD3)	Always	Below 1 Ω

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-3 (SGD3)	Always	1 MΩ or Higher
T11-9 (SIG3) - T11-3 (SGD3)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-9 (SIG3)	Always	1 MΩ or Higher

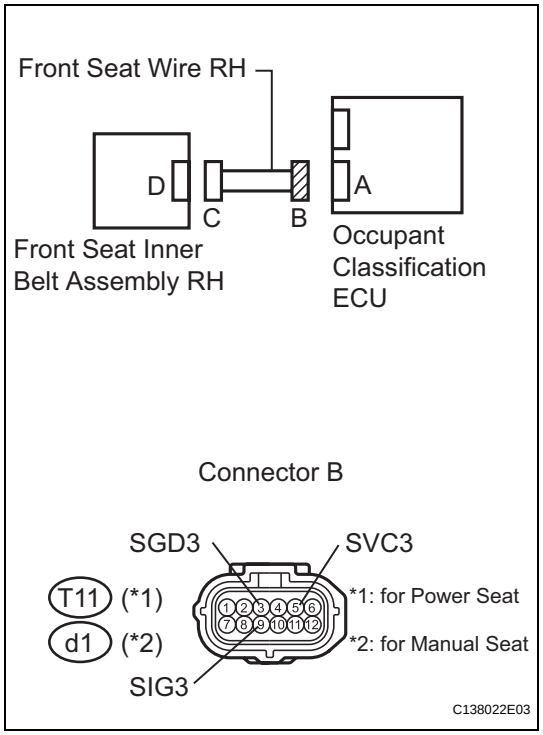
for Manual seat

Tester connection	Condition	Specified condition
d1-9 (SIG3) - d1-3 (SGD3)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-3 (SGD3)	Always	1 MΩ or Higher
d1-9 (SIG3) - d1-5 (SVC3)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-3 (SGD3) - Body ground	Always	1 MΩ or Higher
T11-5 (SVC3) - Body ground	Always	1 MΩ or Higher
T11-9 (SIG3) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-3 (SGD3) - Body ground	Always	1 MΩ or Higher
d1-9 (SIG3) - Body ground	Always	1 MΩ or Higher
d1-5 (SVC3) - Body ground	Always	1 MΩ or Higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

DTC	B1785	Front Occupant Classification Sensor LH Collision Detection

DESCRIPTION

DTC B1785 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor LH if an accident occurs.
DTC B1785 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1785 can be cleared by "zero point calibration" and "sensitivity check".
Therefore, if DTC B1785 is output, first perform "zero point calibration" and "sensitivity check".

DTC No.	DTC Detecting Condition	Trouble Area
B1785	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor LH sensed large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor LH)

WIRING DIAGRAM

See page RS-263.

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).

RS

(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1785 is not output.
HINT:
Codes other than DTC B1785 may be output at this time, but they are not related to this check.

OK → **END**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-16 for power seat or SE-30 for manual seat).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

RS

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.

DTC	B1786	Front Occupant Classification Sensor RH Collision Detection

DESCRIPTION

DTC B1786 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor RH if an accident occurs.
DTC B1786 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1786 can be cleared by "zero point calibration" and "sensitivity check".
Therefore, if DTC B1786 is output, first perform "zero point calibration" and "sensitivity check".

DTC No.	DTC Detection Condition	Trouble Area
B1786	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor RH sensed large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor RH)

WIRING DIAGRAM

See page RS-271.

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).

RS

(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1786 is not output.
HINT:
Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → **END**

NG

4 REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-30 for power seat or SE-16 for manual seat).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

RS

5 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 8**

OK

6 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 8**

OK

7	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1786 is not output.
HINT:
Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → END

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1787	Rear Occupant Classification Sensor LH Collision Detection

DESCRIPTION

DTC B1787 is output when the occupant classification ECU receives a collision detection signal sent by the rear occupant classification sensor LH if an accident occurs.
DTC B1787 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1787 can be cleared by "zero point calibration" and "sensitivity check".
Therefore, if DTC B1787 is output, first perform "zero point calibration" and "sensitivity check".

DTC No.	DTC Detecting Condition	Trouble Area
B1787	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Rear occupant classification sensor LH sensed large load	• Occupant classification ECU • Front seat assembly RH (Rear occupant classification sensor LH)

WIRING DIAGRAM

See page RS-279.

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).

RS

(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1787 is not output.
HINT:
Codes other than DTC B1787 may be output at this time, but they are not related to this check.

OK → **END**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-30 for power seat or SE-16 for manual seat).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

RS

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 8**

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 8**

OK

7	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1787 is not output.
HINT:
Codes other than DTC B1787 may be output at this time, but they are not related to this check.

OK → END

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

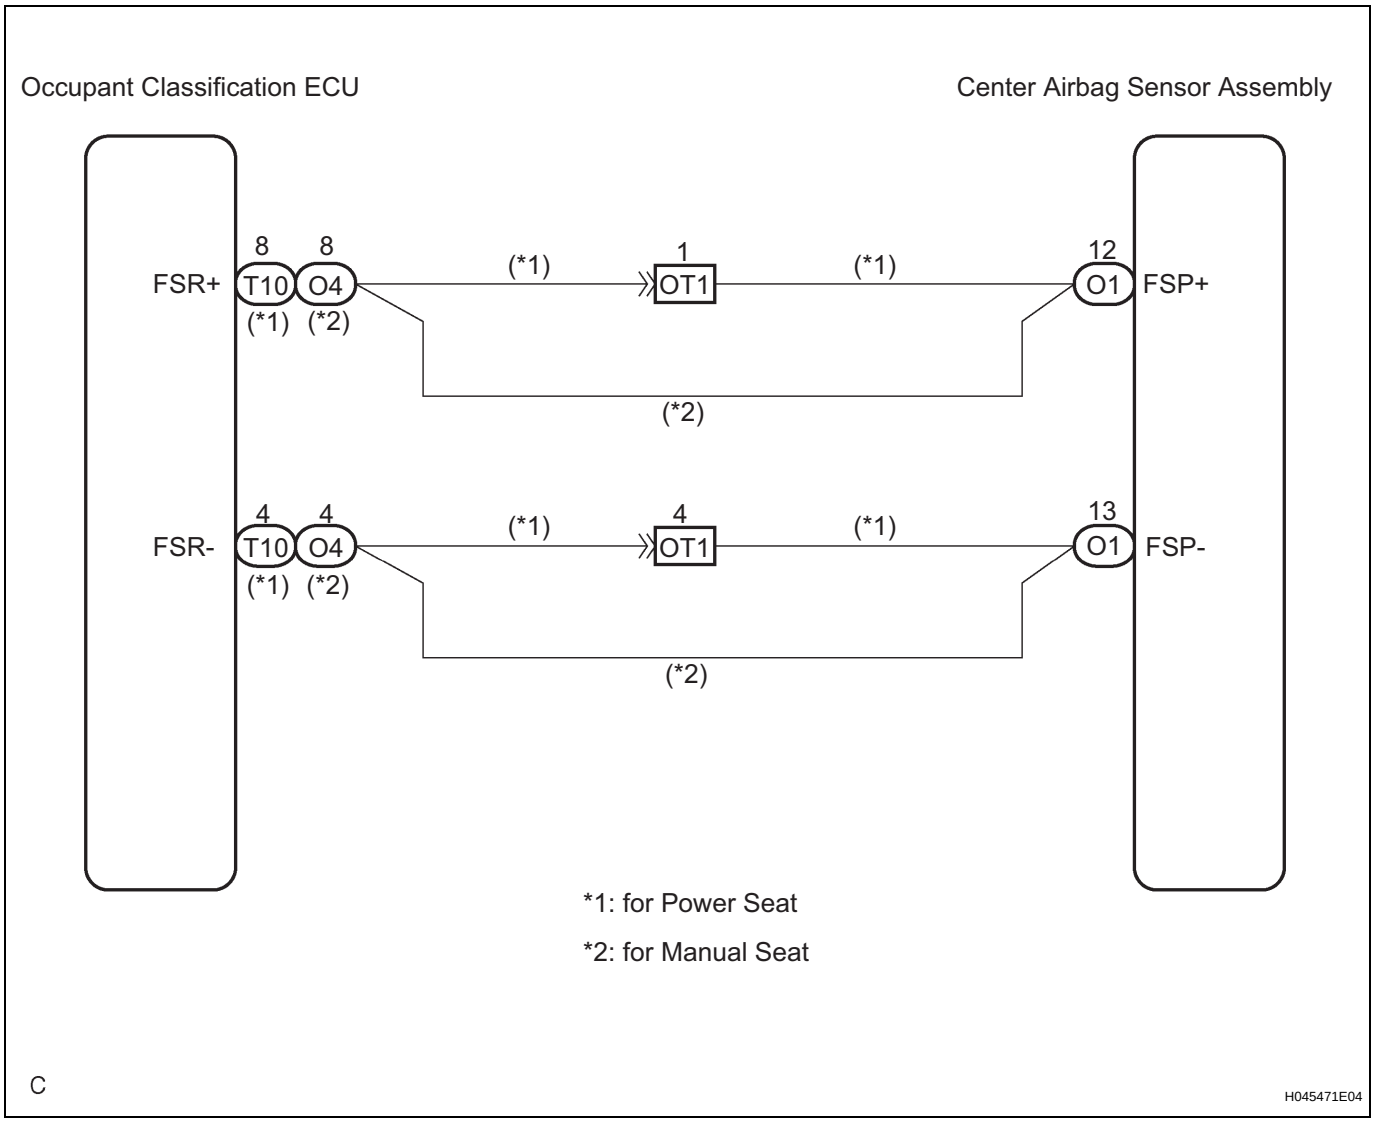
DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.
DTC B1790 is recorded when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1790	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the center airbag sensor assembly communication circuit for 2 seconds. • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• Occupant classification ECU • Center airbag sensor assembly • Floor wire No. 2 • Front seat wire RH (for Power seat)

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).

OK:

DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK (See page RS-248)

NG

RS

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.

OK:

The connectors are properly connected.

NG	CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3	CHECK VEHICLE CONDITION

(a) Check the passenger seat type.

Result:

A:

for Manual seat

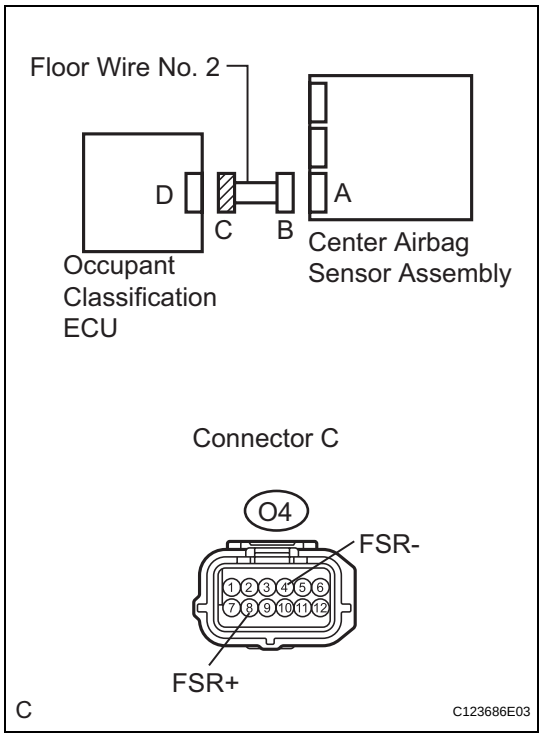
B:

for Power seat

B → Go to step 13

A

4	CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Disconnect the connector from the center airbag sensor assembly and occupant classification ECU.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value (s) in the table below.

Standard voltage

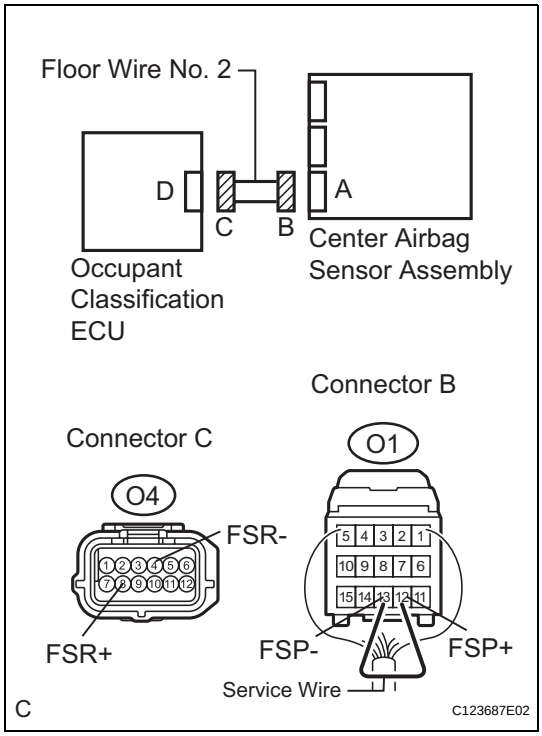
Tester connection	Condition	Specified condition
O4-8 (FSR+) - Body ground	Ignition switch on (IG)	Below 1 V
O4-4 (FSR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

RS

5 CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance

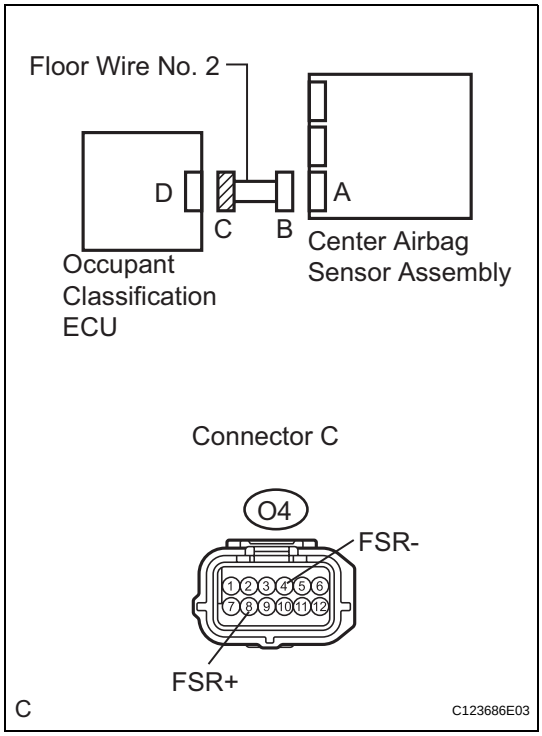
Tester connection	Condition	Specified condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

6 CHECK FLOOR WIRE NO. 2 (SHORT)



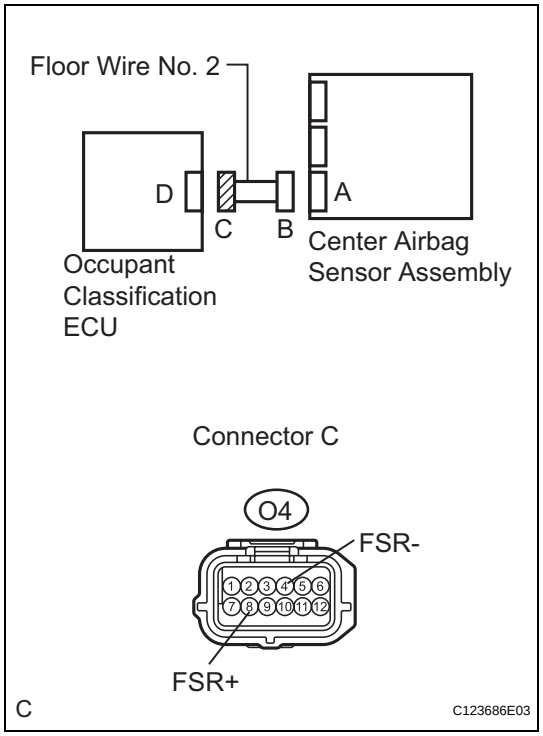
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

7 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O4-8 (FSR+) - Body ground	Always	1 MΩ or Higher
O4-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

8 RECHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the intelligent tester to the DLC3.
(c) Connect the negative (-) terminal cable to the battery.
(d) Turn the ignition switch on (IG).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-251).
(f) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(g) Turn the ignition switch off.
(h) Turn the ignition switch on (IG).
(i) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

RS

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

RS

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

12	RECHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-251).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).
OK:
DTC B1790 is not output.

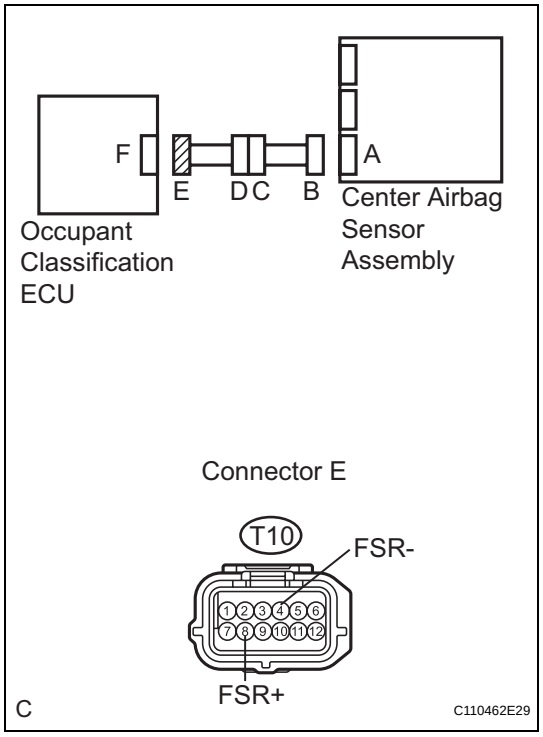
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

END

13 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (TO B+)



(a) Disconnect the connector from the center airbag sensor assembly and occupant classification ECU.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

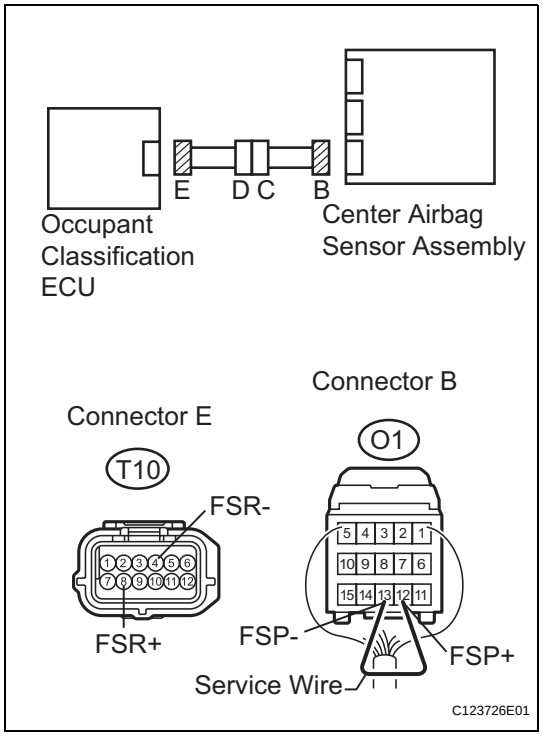
Tester connection	Condition	Specified condition
T10-8 (FSR+) - Body ground	Ignition switch on (IG)	Below 1 V
T10-4 (FSR-) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **Go to step 22**

OK

RS

14 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance

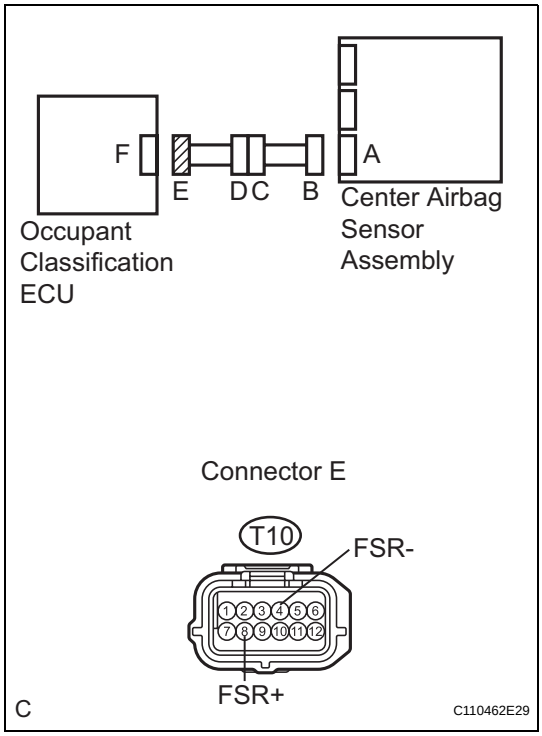
Tester connection	Condition	Specified condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	Below 1 Ω

NG → **Go to step 23**

OK

RS

15 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)



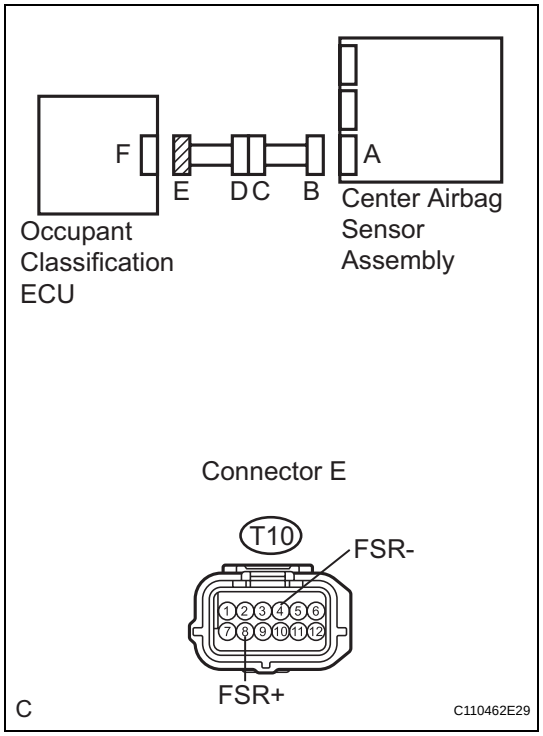
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	1 MΩ or Higher

NG → **Go to step 24**

OK

16 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
T10-8 (FSR+) - Body ground	Always	1 MΩ or Higher
T10-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 25**

OK

17 RECHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the intelligent tester to the DLC3.
(c) Connect the negative (-) terminal cable to the battery.
(d) Turn the ignition switch on (IG).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-251).
(f) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(g) Turn the ignition switch off.
(h) Turn the ignition switch on (IG).
(i) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).

OK:

DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

OK

RS

18	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

19	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

20	PERFORM SENSITIVITY CHECK

RS

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

21	RECHECK DTC

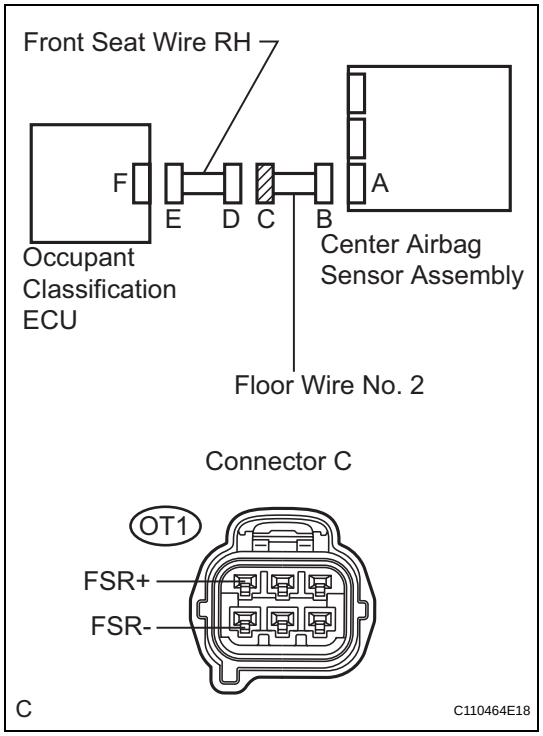
(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-251).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)

OK

END

22 CHECK FLOOR WIRE NO. 2 (TO B+)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the front seat wire RH connector from the floor wire No. 2.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
OT1-1 (FSR+) - Body ground	Ignition switch on (IG)	Below 1 V
OT1-4 (FSR-) - Body ground	Ignition switch on (IG)	Below 1 V

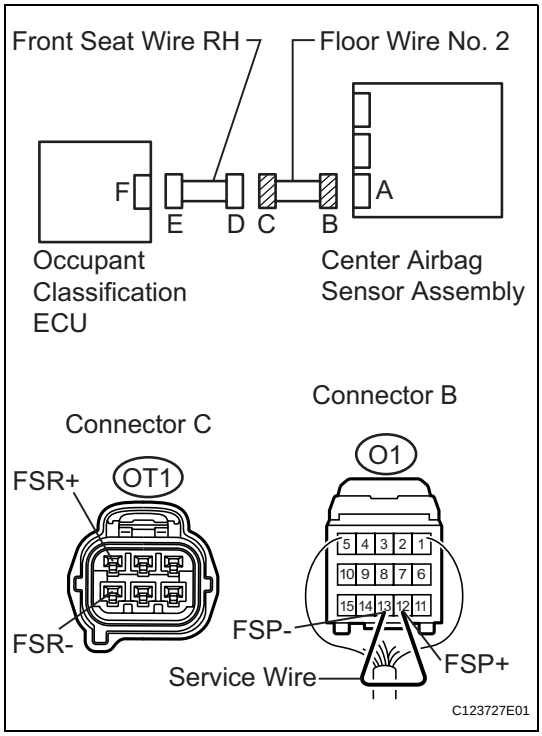
NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

RS

23	CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

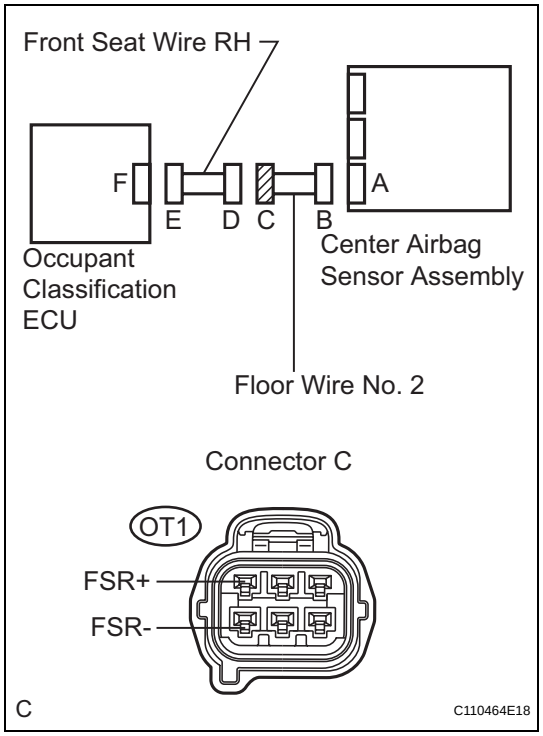
Tester connection	Condition	Specified condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS **REPAIR OR REPLACE FRONT SEAT WIRE RH**

24	CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

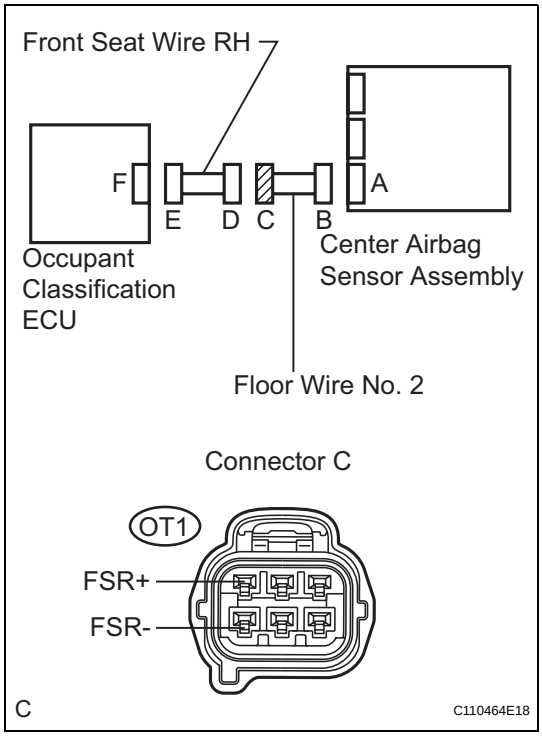
Tester connection	Condition	Specified condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

25	CHECK FLOOR WIRE NO. 2 (TO GROUND)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
OT1-1 (FSR+) - Body ground	Always	1 MΩ or Higher
OT1-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS **REPAIR OR REPLACE FRONT SEAT WIRE RH**

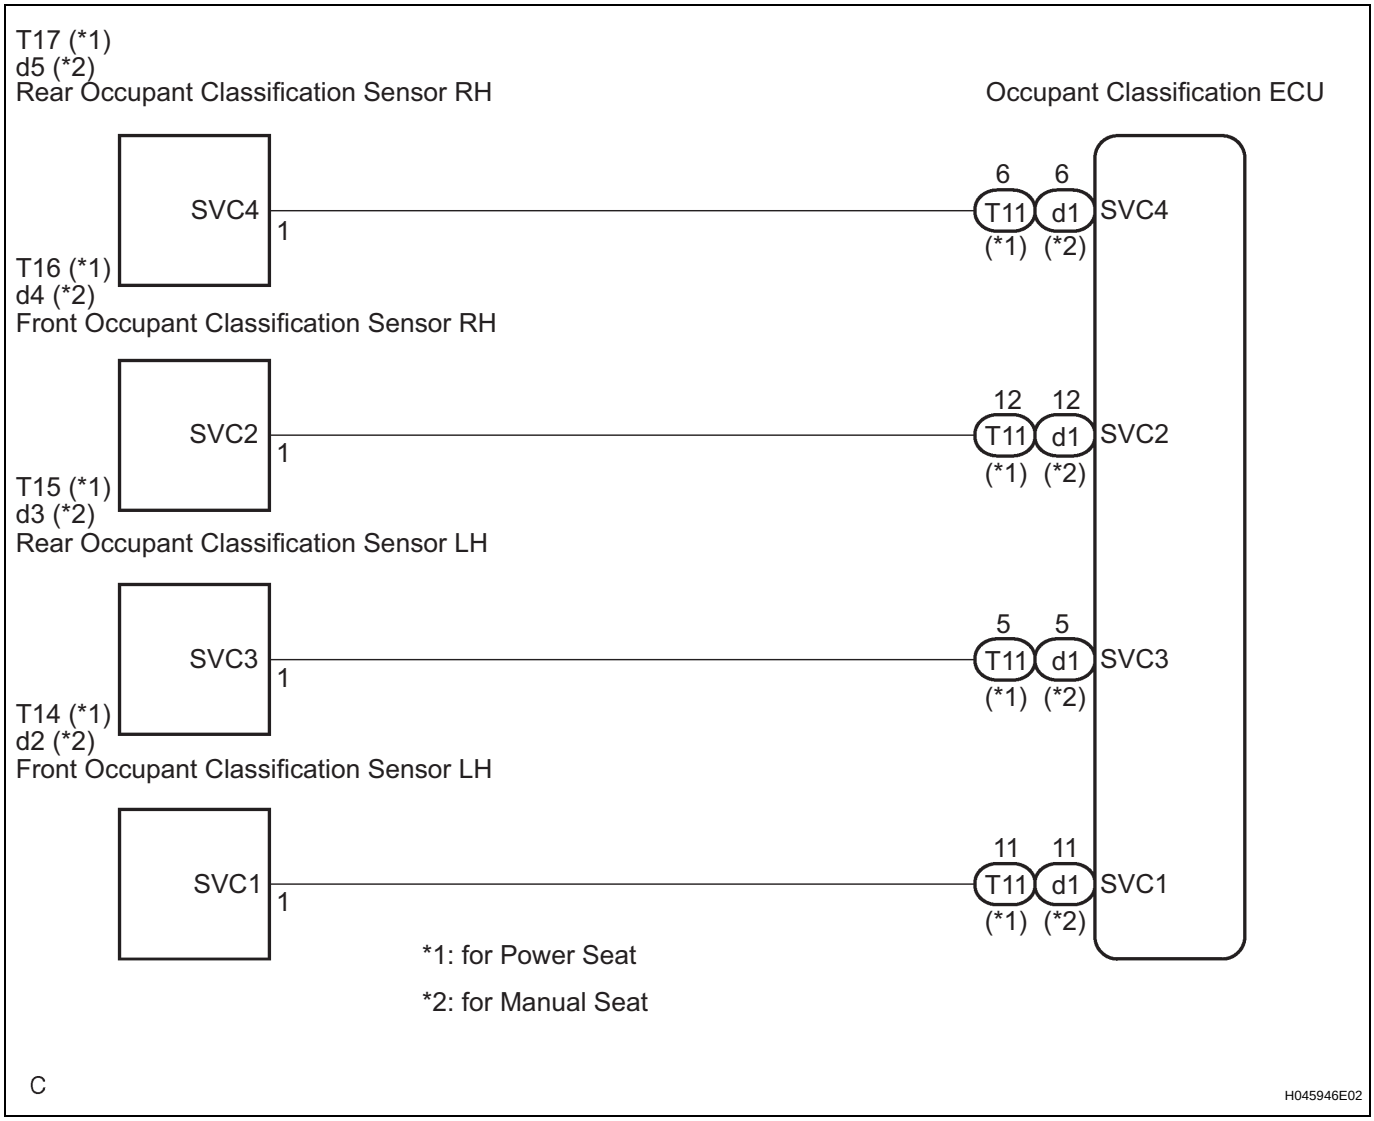
DTC	B1793	Occupant Classification Sensor Power Supply Circuit Malfunction

DESCRIPTION

The occupant classification sensor power supply circuit consists of the occupant classification ECU and the occupant classification sensors.
DTC B1793 is recorded when a malfunction is detected in the occupant classification sensor power supply circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1793	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification sensor power supply circuit for 2 seconds. • Occupant classification ECU malfunction	• Front seat assembly RH (Occupant classification sensors) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).

OK:

DTC B1793 is not output.

HINT:

Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK (See page RS-248)

NG

RS

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

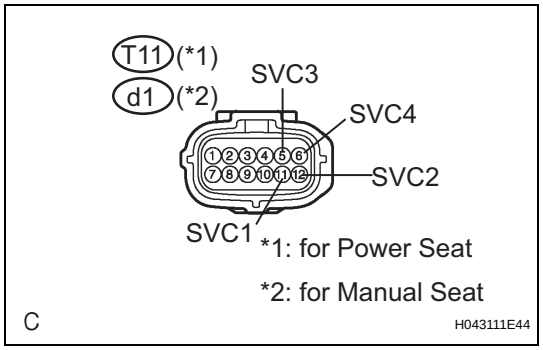
OK:

The connectors are properly connected.

NG	CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3 CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - Body ground	Ignition switch on (IG)	Below 1 V
T11-6 (SVC4) - Body ground	Ignition switch on (IG)	Below 1 V
T11-11 (SVC1) - Body ground	Ignition switch on (IG)	Below 1 V
T11-12 (SVC2) - Body ground	Ignition switch on (IG)	Below 1 V

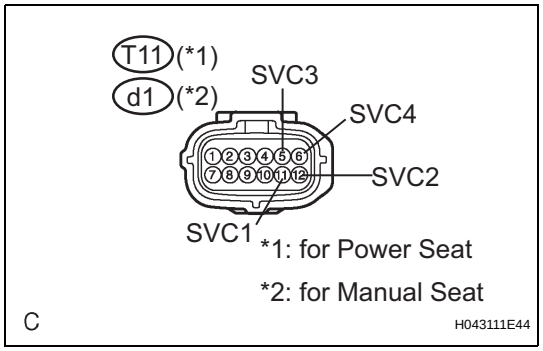
for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - Body ground	Ignition switch on (IG)	Below 1 V
d1-6 (SVC4) - Body ground	Ignition switch on (IG)	Below 1 V
d1-11 (SVC1) - Body ground	Ignition switch on (IG)	Below 1 V
d1-12 (SVC2) - Body ground	Ignition switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - Body ground	Always	1 MΩ or Higher
T11-6 (SVC4) - Body ground	Always	1 MΩ or Higher
T11-11 (SVC1) - Body ground	Always	1 MΩ or Higher

RS

Tester connection	Condition	Specified condition
T11-12 (SVC2) - Body ground	Always	1 MΩ or Higher

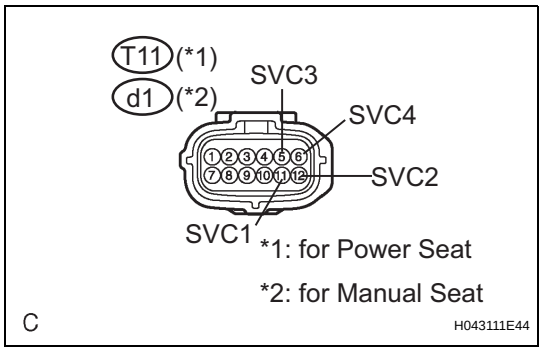
for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - Body ground	Always	1 MΩ or Higher
d1-6 (SVC4) - Body ground	Always	1 MΩ or Higher
d1-11 (SVC1) - Body ground	Always	1 MΩ or Higher
d1-12 (SVC2) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (OPEN)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T15-1 (SVC3)	Always	Below 1 Ω
T11-6 (SVC4) - T17-1 (SVC4)	Always	Below 1 Ω
T11-11 (SVC1) - T14-1 (SVC1)	Always	Below 1 Ω
T11-12 (SVC2) - T16-1 (SVC2)	Always	Below 1 Ω

for Manual seat

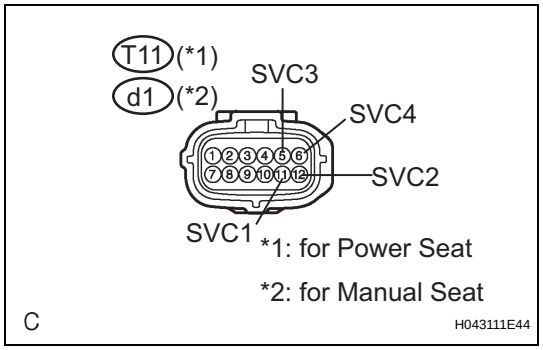
Tester connection	Condition	Specified condition
d1-5 (SVC3) - d3-1 (SVC3)	Always	Below 1 Ω
d1-6 (SVC4) - d5-1 (SVC4)	Always	Below 1 Ω
d1-11 (SVC1) - d2-1 (SVC1)	Always	Below 1 Ω
d1-12 (SVC2) - d4-1 (SVC2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

6	CHECK FRONT SEAT WIRE RH (SHORT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-6 (SVC4)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-11 (SVC1)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-12 (SVC2)	Always	1 MΩ or Higher
T11-6 (SVC4) - T11-11 (SVC1)	Always	1 MΩ or Higher
T11-6 (SVC4) - T11-12 (SVC2)	Always	1 MΩ or Higher
T11-11 (SVC1) - T11-12 (SVC2)	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - d1-6 (SVC4)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-11 (SVC1)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-12 (SVC2)	Always	1 MΩ or Higher
d1-6 (SVC4) - d1-11 (SVC1)	Always	1 MΩ or Higher
d1-6 (SVC4) - d1-12 (SVC2)	Always	1 MΩ or Higher
d1-11 (SVC1) - d1-12 (SVC2)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG).
(d) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG).
(h) Check the DTCs (See page RS-251).

OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-251).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).

RS

(c) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(d) Turn the ignition switch off.
(e) Turn the ignition switch on (IG).
(f) Check the DTCs (See page RS-251).
OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-30 for power seat or SE-16 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

RS

DTC	B1794	Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

This circuit consists of the occupant classification ECU and the power source circuit (battery, fuse, and wire harness).

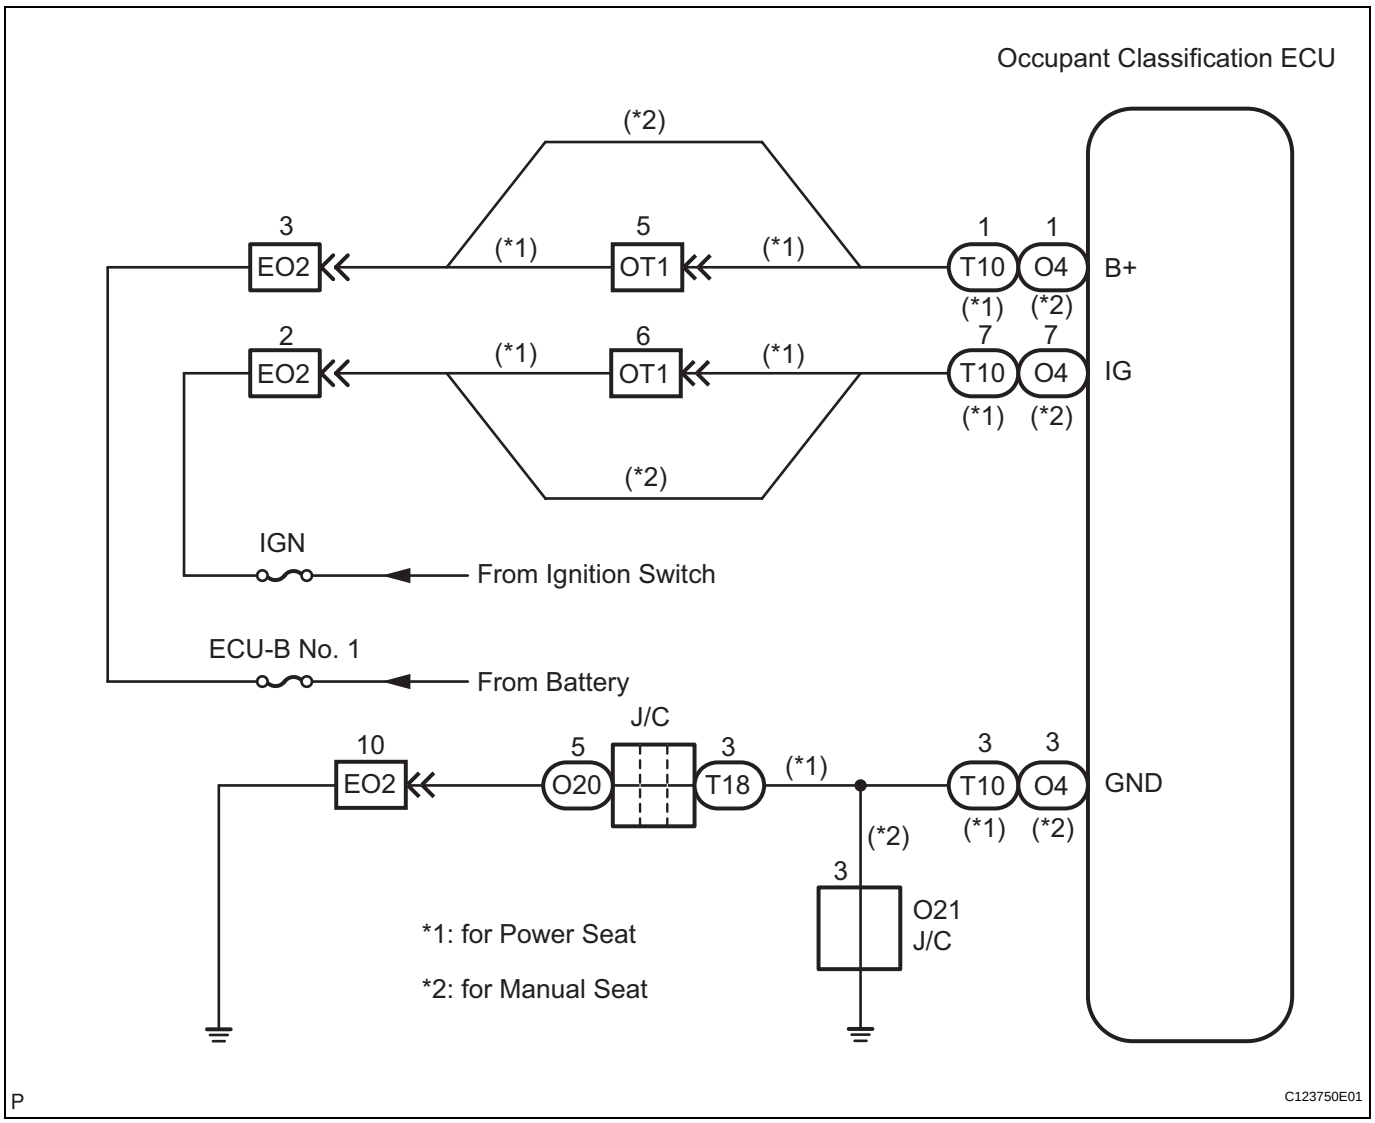
DTC B1794 is recorded when a malfunction is detected in the occupant classification ECU or the power source circuit.

HINT:

If DTC B1794 is output after switching the ignition switch off-on (IG)-off 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system, the DTC is output again. This DTC is output when a malfunction is detected even after being cleared unless the normal system code is input.

DTC No.	DTC Detecting Condition	Trouble Area
B1794	• The ignition switch is turned from off to on (IG), hold if for 10 seconds or more, and back to off again 50 times in a row when a malfunction occurs in the circuit for the occupant classification system. • Occupant classification ECU malfunction	• Battery • ECU-B Fuse • Floor wire No. 2 • Front seat wire RH (for Power seat) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **REPLACE BATTERY**

OK

2	CHECK FUSE

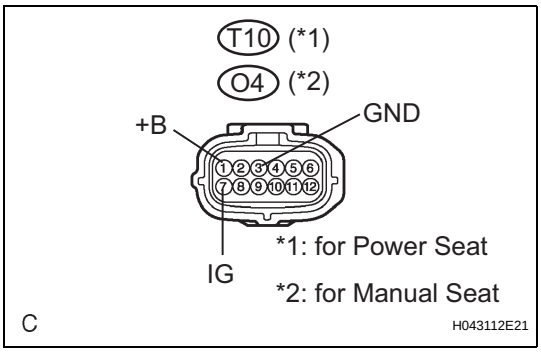
(a) Check the ECU-B fuse.
Standard resistance:
Below 1 Ω

RS

NG → REPLACE FUSE

OK

3 CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage and resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-1 (+B) - Body ground	Always	10 to 14 V
T10-3 (GND) - Body ground	Always	Below 1 Ω
T10-7 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

for Manual seat

Tester connection	Condition	Specified condition
O4-1 (+B) - Body ground	Always	10 to 14 V
O4-3 (GND) - Body ground	Always	Below 1 Ω
O4-7 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE WIRE HARNESS

OK

4 CHECK DTC

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Connect the connector to the occupant classification ECU.
(d) Connect the intelligent tester to the DLC3.
(e) Connect the negative (-) terminal cable to the battery.
(f) Turn the ignition switch on (IG).
(g) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(h) Clear the DTCs stored in the occupant classification ECU (See page RS-251).

RS

HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.

(i) Turn the ignition switch off.
(j) Turn the ignition switch on (IG), and wait for at least 10 seconds.
(k) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-251).
OK:
B1794 is not output.
HINT:
Codes other than DTC B1794 may be output at this time, but they are not related to this check.

NG → **USE SIMULATION METHOD TO CHECK (See page RS-248)**

OK

5	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform the "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is recorded when a malfunction is detected in the occupant classification ECU.
Troubleshoot the DTC B1771 first when the DTC B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1795	• Occupant classification ECU circuit malfunction • The occupant classification ECU receives a short circuit to ground signal in the passenger side buckle switch circuit for 2 seconds. • Occupant classification ECU malfunction	• Front seat wire RH (for Power seat) • Floor wire No. 2 • Front seat inner belt assembly RH • Occupant classification ECU

INSPECTION PROCEDURE

1 CHECK DTC

(a) Turn the ignition switch on (IG), and wait for at least 10 seconds.
(b) Check the DTCs (See page RS-251).
Result:
A:
DTC B1771 and B1795 are output.
B:
DTC B1795 is output.
HINT:
Codes other than DTC B1771 and B1795 may be output at this time, but they are not related to this check.

A → **GO TO DTC B1771**

B

2 CHECK FUSE

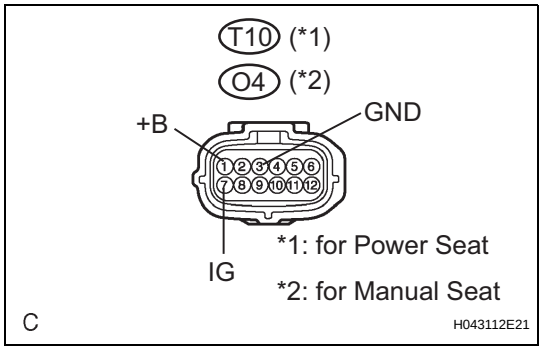
(a) Check the ECU-B fuse.
Resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

RS

3 CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Disconnect the connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the ignition switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T10-1 (+B) - Body ground	Always	10 to 14 V
T10-7 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

for Manual seat

Tester connection	Condition	Specified condition
O4-1 (+B) - Body ground	Always	10 to 14 V
O4-7 (IG) - Body ground	Ignition switch on (IG)	10 to 14 V

(g) Turn the ignition switch off.
(h) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-3 (GND) - Body ground	Always	Below 1 Ω

for Manual seat

Tester connection	Condition	Specified condition
O4-3 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-251).

HINT:
Perform the inspection using parts from a normal vehicle if possible.

RS

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1796	Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

During sleep mode, the occupant classification ECU reads the condition of each sensor while the ignition switch is off.
In this mode, if occupant classification ECU detects an internal malfunction, DTC B1796 is output.

DTC No.	DTC Detecting Condition	Trouble Area
B1796	• Occupant classification ECU malfunction	• Occupant classification ECU

INSPECTION PROCEDURE

1	CHECK DTC

(a) Turn the ignition switch on (IG).
(b) Clear the DTCs stored in the memory (See page RS-251).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch off, and wait for at least 10 seconds.
(d) Turn the ignition switch on (IG).
(e) Check the DTCs (See page RS-251).
OK:
DTC B1796 is not output.
HINT:
Codes other than DTC B1796 may be output at this time, but they are not related to this check.

OK → USE SIMULATION METHOD TO CHECK

NG

2	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

3	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.

RS

(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETED" is displayed.

NEXT

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

Trouble in Passenger Airbag ON / OFF Indicator

DESCRIPTION

The occupant classification system detects the front passenger seat condition. It then informs a passenger of the front passenger airbag assembly and front seat side airbag assembly condition (activated/not activated) by the passenger airbag ON/OFF indicator.
HINT:
Approximately 6 seconds after the ignition switch is turned to the on (IG), the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

Front passenger seat condition	ON Indicator	OFF Indicator
Adult is seated.	ON	OFF
Child is seated.	OFF	ON
Vacant	OFF	OFF
Occupant classification system failure	OFF	ON

INSPECTION PROCEDURE

1 CHECK SRS WARNING LIGHT

(a) Turn the ignition switch on (IG), and check the SRS warning light condition.
HINT:
If this trouble occurs, the SRS warning light is off. If the light is on, a DTC is output. Troubleshoot for the output DTC.
OK:
After the primary check period, SRS warning light goes off.
HINT:
The primary check period is approximately 6 seconds after the ignition switch is turned on (IG).

NG → **GO TO DTC CHART (See page RS-45)**

OK

2 PERFORM ZERO POINT CALIBRATION

(a) Turn the ignition switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETE" is displayed.

NG → **Go to step 4**

OK

3	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

OK → **END**

NG

4	RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT

(a) Turn the ignition switch off.
(b) Loosen the 4 installation bolts of the front seat assembly RH.
(c) Tighten the 4 installation bolts of the front seat assembly RH to the specified torque.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETE" is displayed.

NG → **Go to step 7**

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

OK → **END**

NG

7	CHECK CONNECTORS

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.

(c) Check that the connectors are properly connected to the occupant classification ECU and the 4 occupant classification sensors.
OK:
The connectors are properly connected.
(d) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(e) Check that the connectors are not damaged or deformed.
OK:
The connectors are normal.

NG → **REPAIR OR REPLACE CONNECTOR, THEN GO TO STEP 1**

OK

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-251).
(f) Turn the ignition switch off.
(g) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-251).
OK:
DTC is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-441)**

OK

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-469).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

RS

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-242).
OK:
"COMPLETE" is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

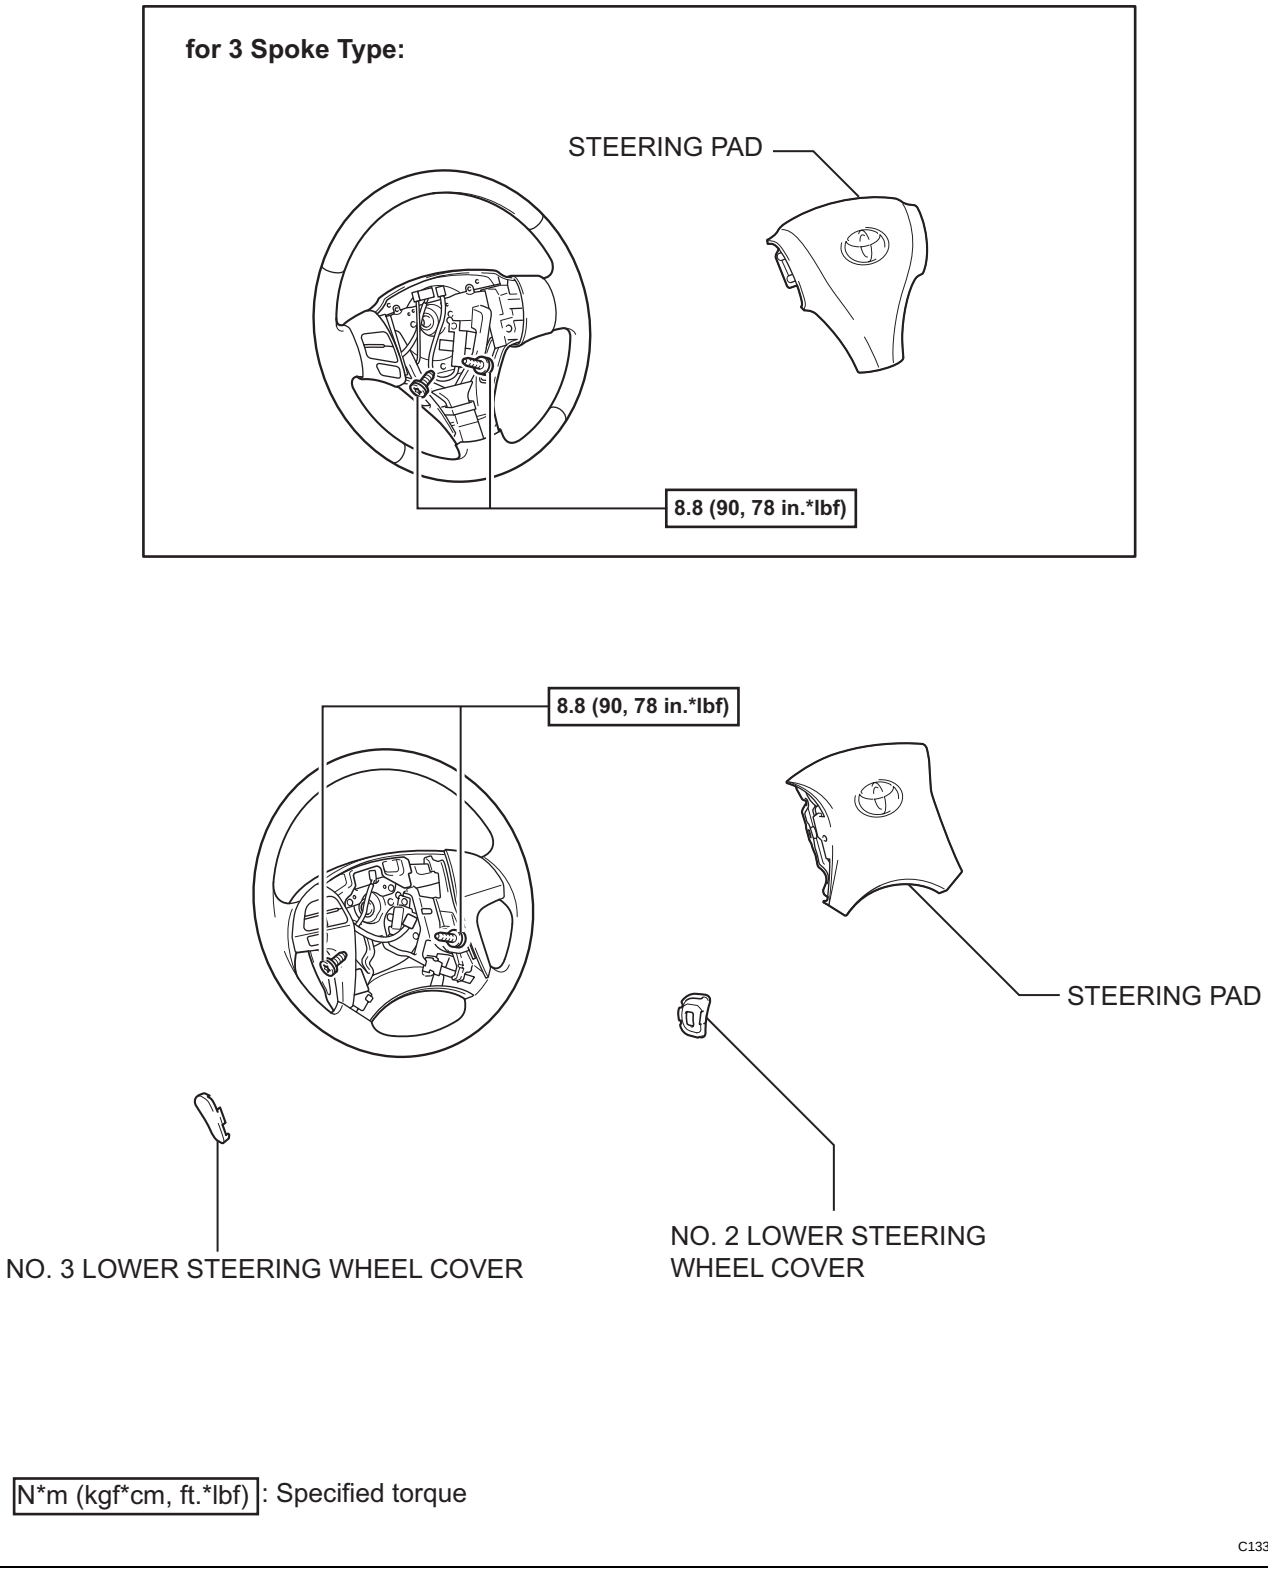
(a) Using the intelligent tester, perform "sensitivity check" (See page RS-242).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

STEERING PAD

COMPONENTS



RS

N*m (kgf*cm, ft.*lbf): Specified torque

P

C133853E01

ON-VEHICLE INSPECTION

1. INSPECT STEERING PAD (VEHICLE NOT INVOLVED IN COLLISION)

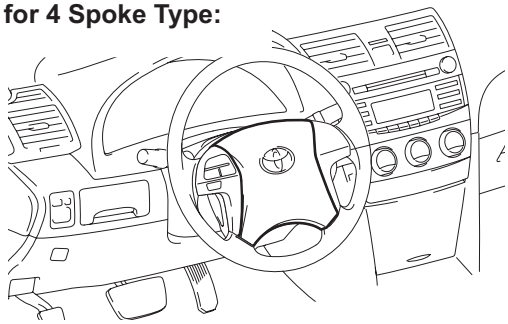
(a) Perform a diagnostic system check (See page RS-32).

(b) With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

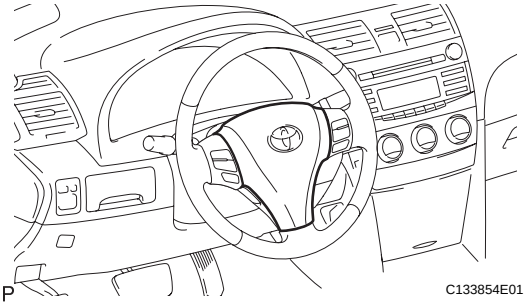
2. INSPECT STEERING PAD (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-32).

for 4 Spoke Type:



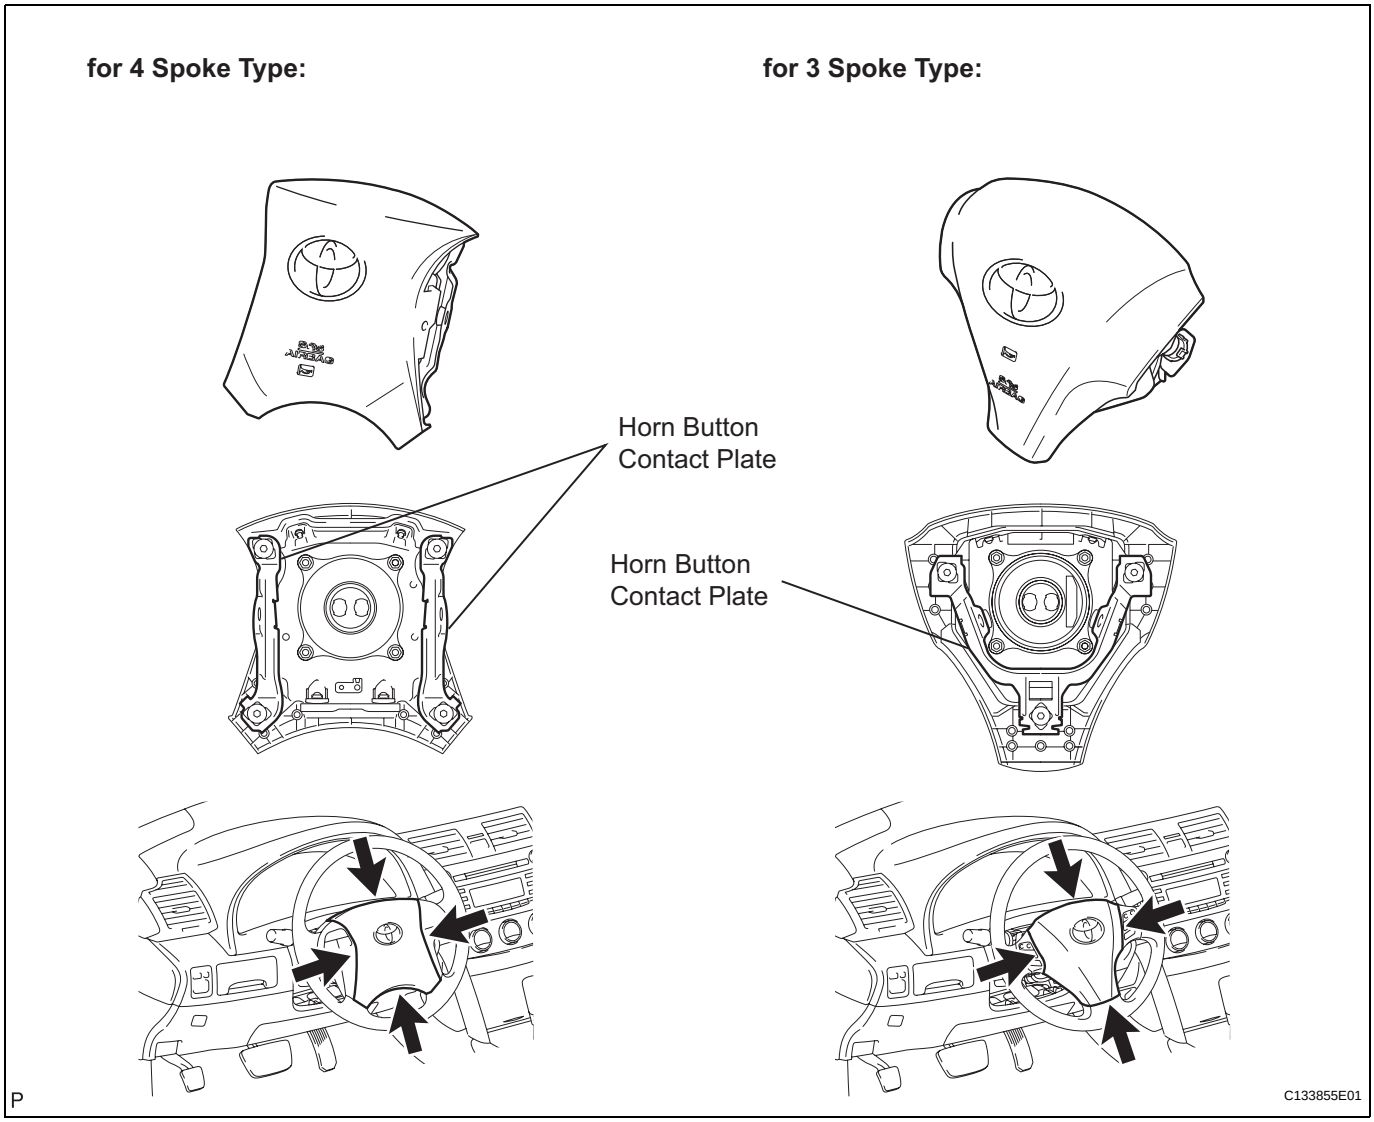
for 3 Spoke Type:



P C133854E01

RS

(b) With the steering pad removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad or steering wheel assembly with a new one:



- Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.
- Cracks or other damage to the connectors.
- Deformation of the steering wheel assembly.
- Deformation of the horn button contact plate of the steering pad.
- There should be no interference between the steering pad and steering wheel assembly, and the clearance should be uniform all the way around when the new steering pad is installed on the steering wheel assembly.

CAUTION:
Be sure to follow the correct removal and installation procedures.

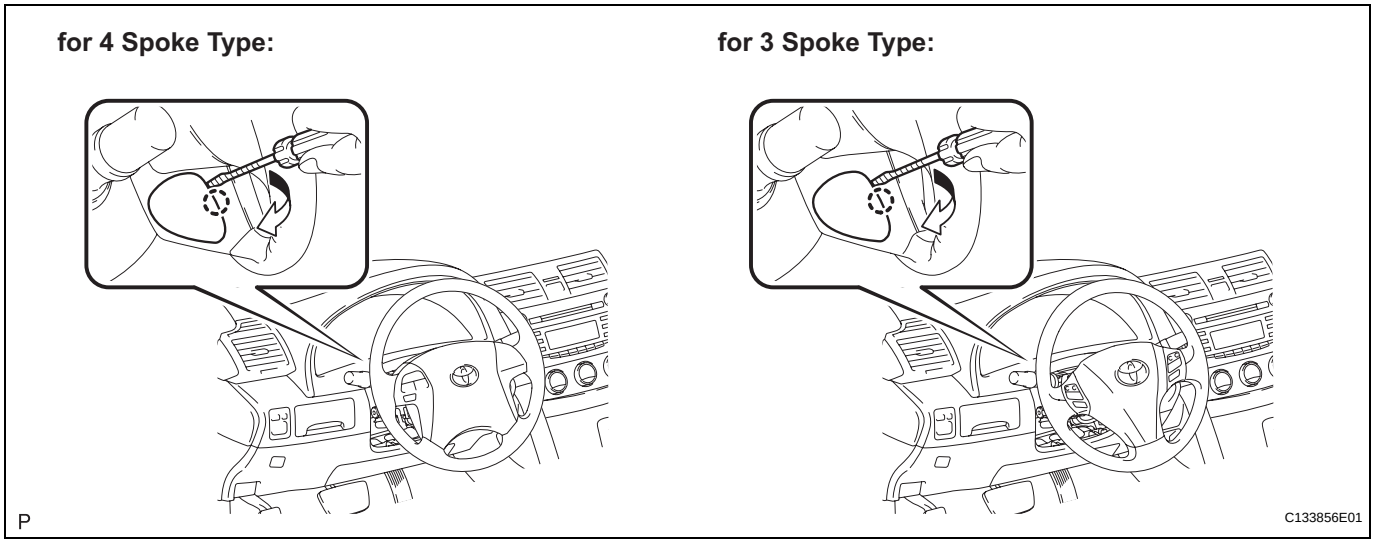
RS

REMOVAL

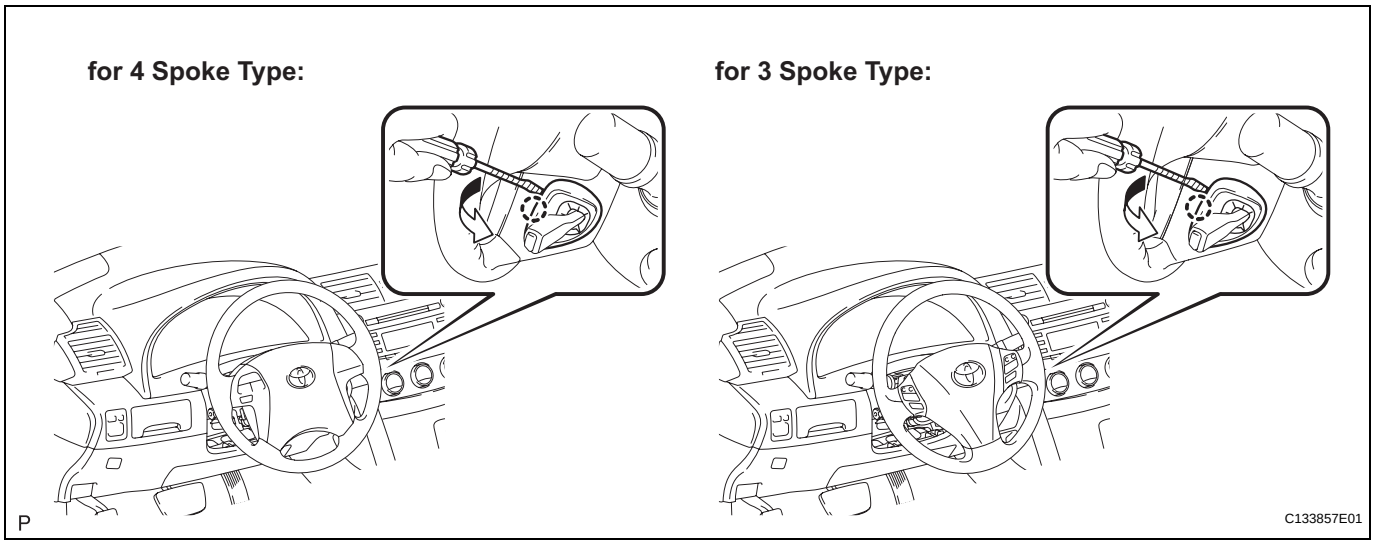
1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).

2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

3. **REMOVE NO. 3 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver, remove the No. 3 lower steering wheel cover.
   HINT:
   Tape up the screwdriver tip before use.



4. **REMOVE NO. 2 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver, remove the No. 2 lower steering wheel cover.

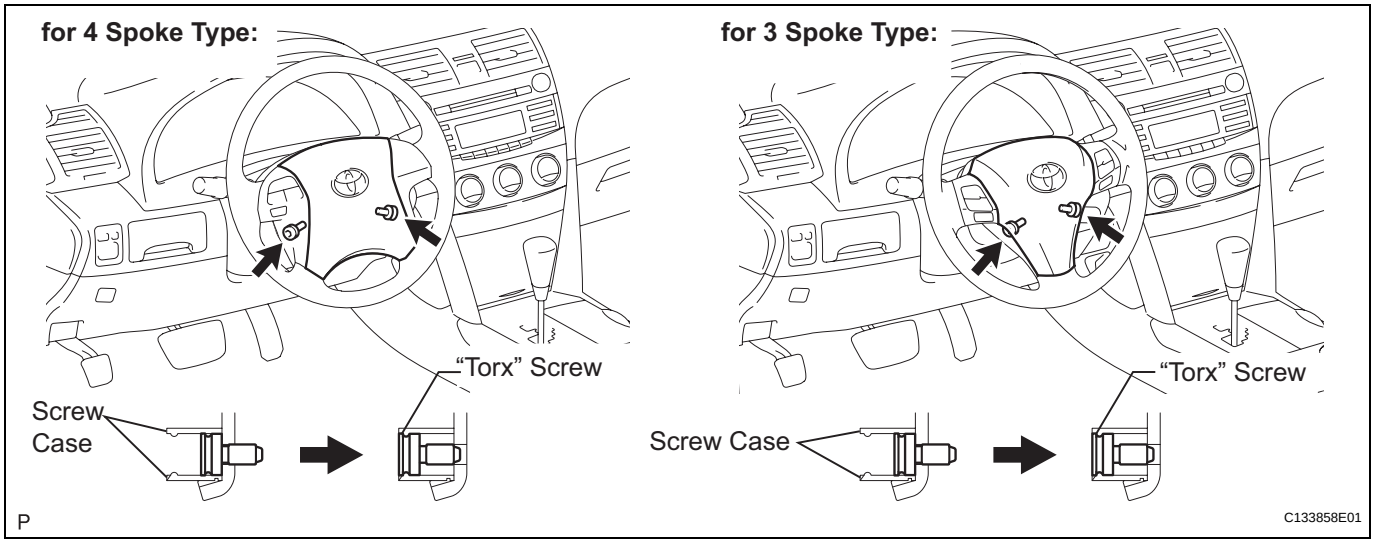


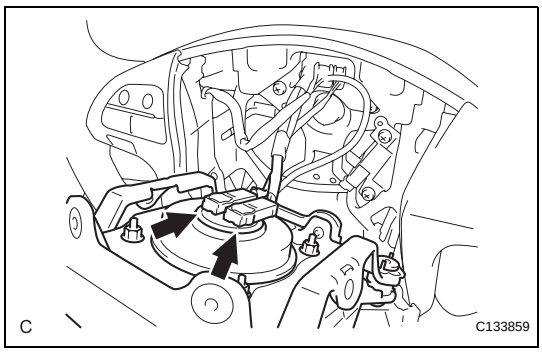
HINT:
Tape up the screwdriver tip before use.

RS

5. REMOVE STEERING PAD

(a) Using a "torx" socket wrench (T30), loosen the 2 "torx" screws until the groove along the screw circumference catches on the screw case.





(b) Pull out the steering pad from the steering wheel assembly and support the steering pad with one hand as shown in the illustration.

NOTICE:

When removing the steering pad, do not pull the airbag wire harness.

(c) Disconnect the horn connector from the steering pad.

(d) Disconnect the 2 airbag connectors and remove the steering pad.

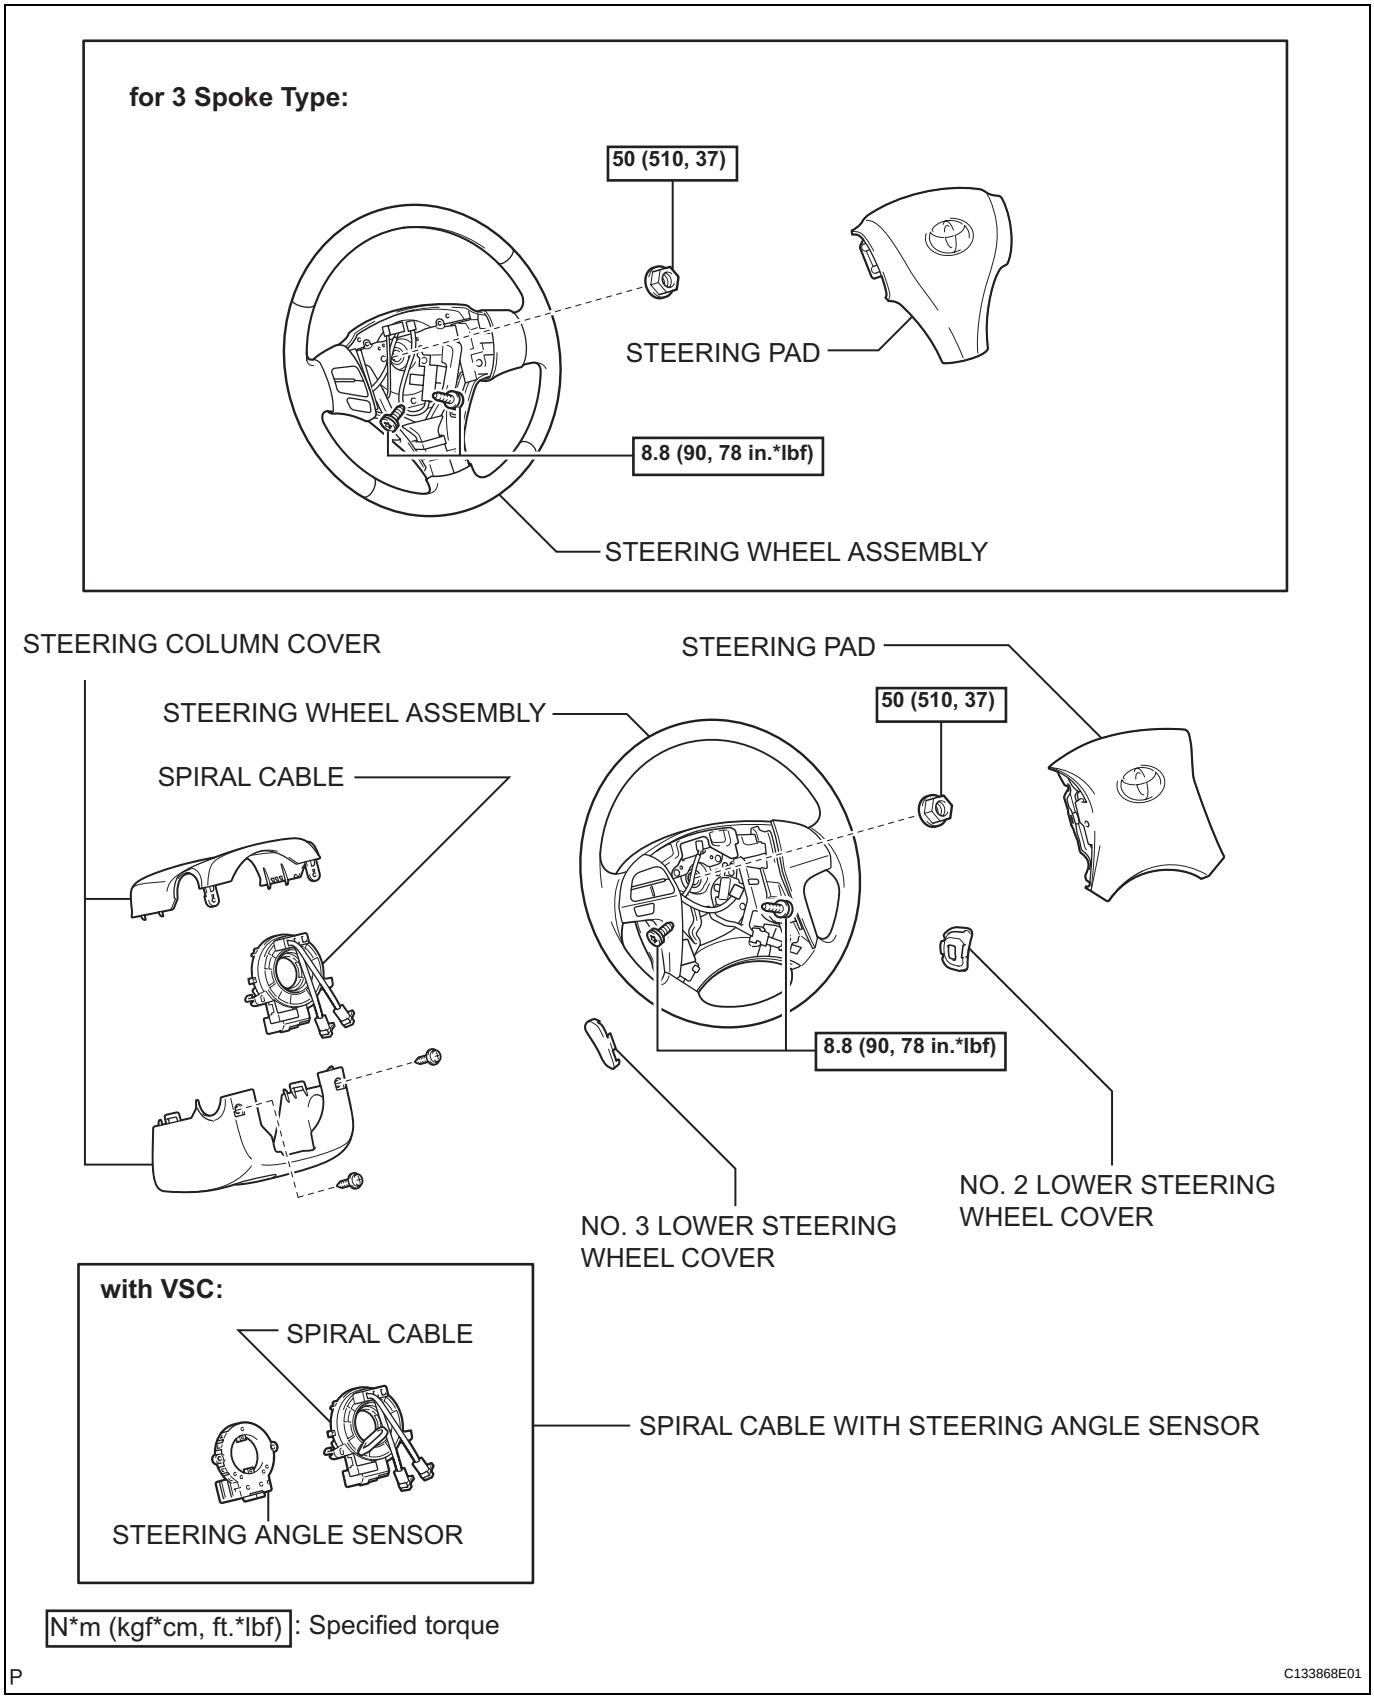
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

RS

SPIRAL CABLE

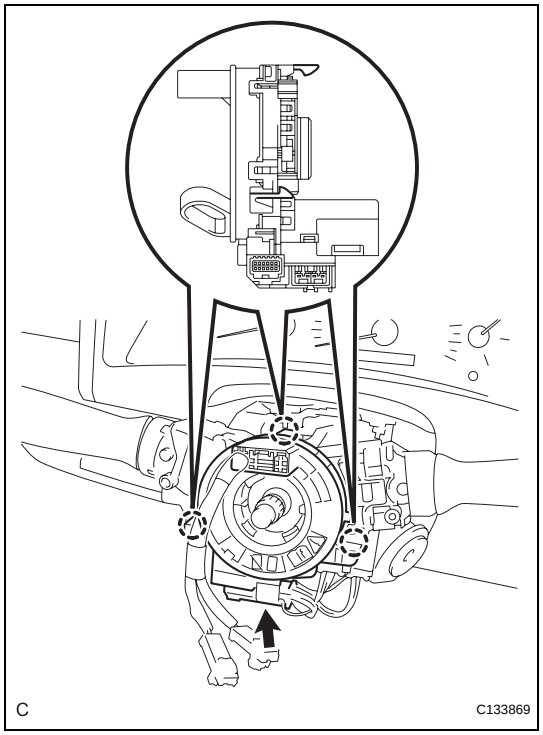
COMPONENTS



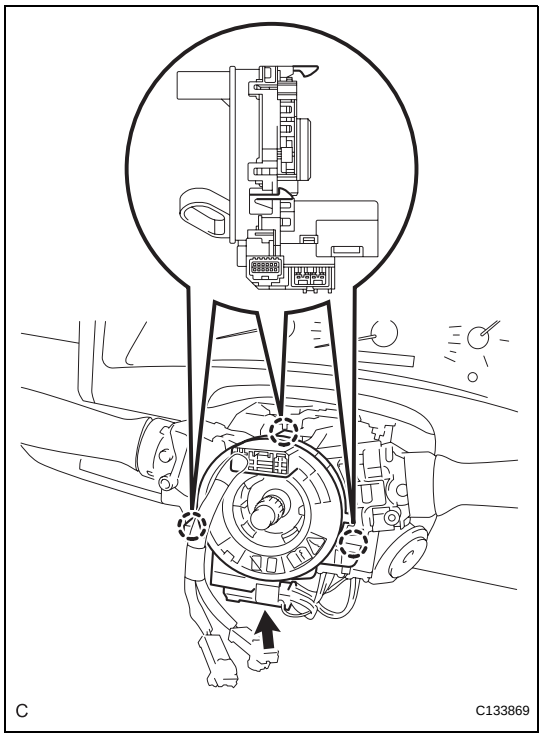
RS

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-349)**
4. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-349)**
5. **REMOVE STEERING PAD (See page RS-350)**
6. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
7. **REMOVE STEERING COLUMN COVER (See page SR-39)**
8. **REMOVE SPIRAL CABLE (w/o VSC)**
   (a) Disconnect the connectors from the spiral cable.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (b) Disengage the 3 claws and remove the spiral cable.



RS



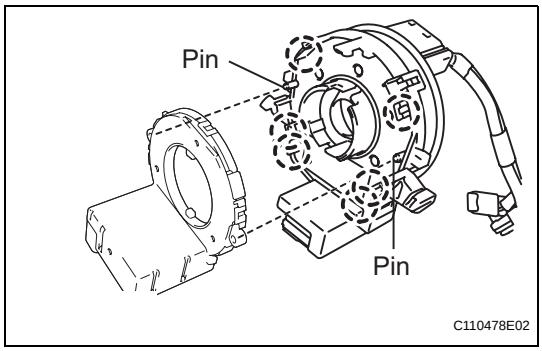
9. REMOVE SPIRAL CABLE WITH STEERING ANGLE SENSOR (w/ VSC)

(a) Disconnect the connectors from the spiral cable with steering angle sensor.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

(b) Disengage the 3 claws and remove the spiral cable with steering angle sensor.



10. REMOVE SPIRAL CABLE (w/ VSC)

(a) Disengage the 6 claws and remove the spiral cable from the steering angle sensor.

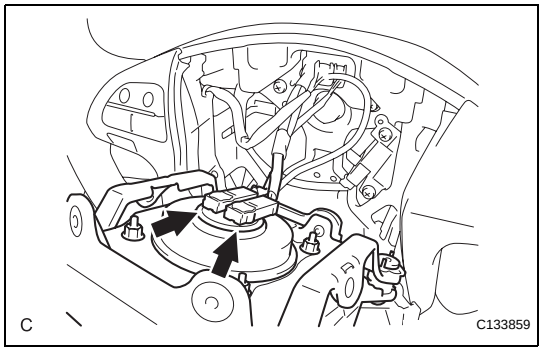
INSTALLATION

1. INSTALL STEERING PAD

(a) Check that the ignition switch is off.

(b) Check that the battery negative (-) terminal is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Support the steering pad with one hand as shown in the illustration.

(d) Connect the 2 airbag connectors to the steering pad.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

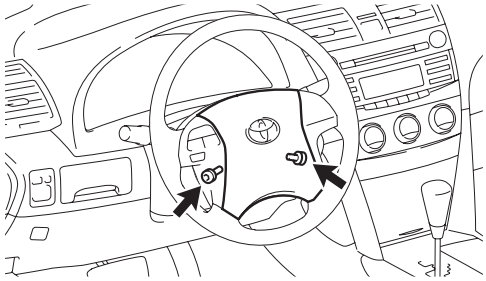
(e) Connect the horn connector to the steering pad.

(f) Confirm that the circumference groove of the "torx" screw fits in the screw case, and place the steering pad onto the steering wheel assembly.

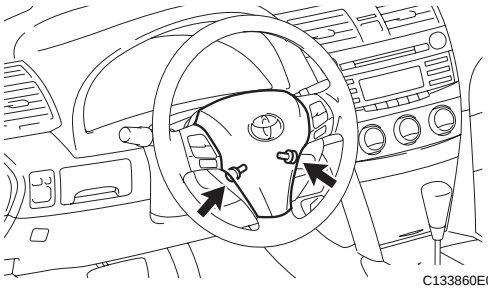
(g) Using a "torx" socket wrench (T30), tighten the 2 "torx" screws.

Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

for 4 Spoke Type:



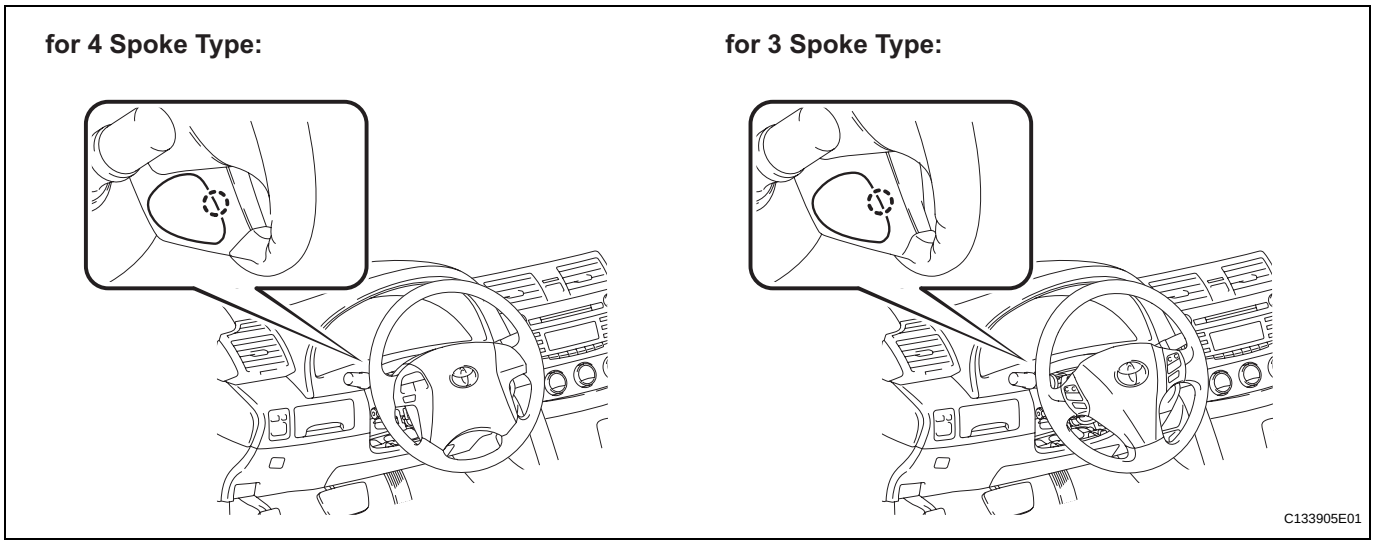
for 3 Spoke Type:



RS

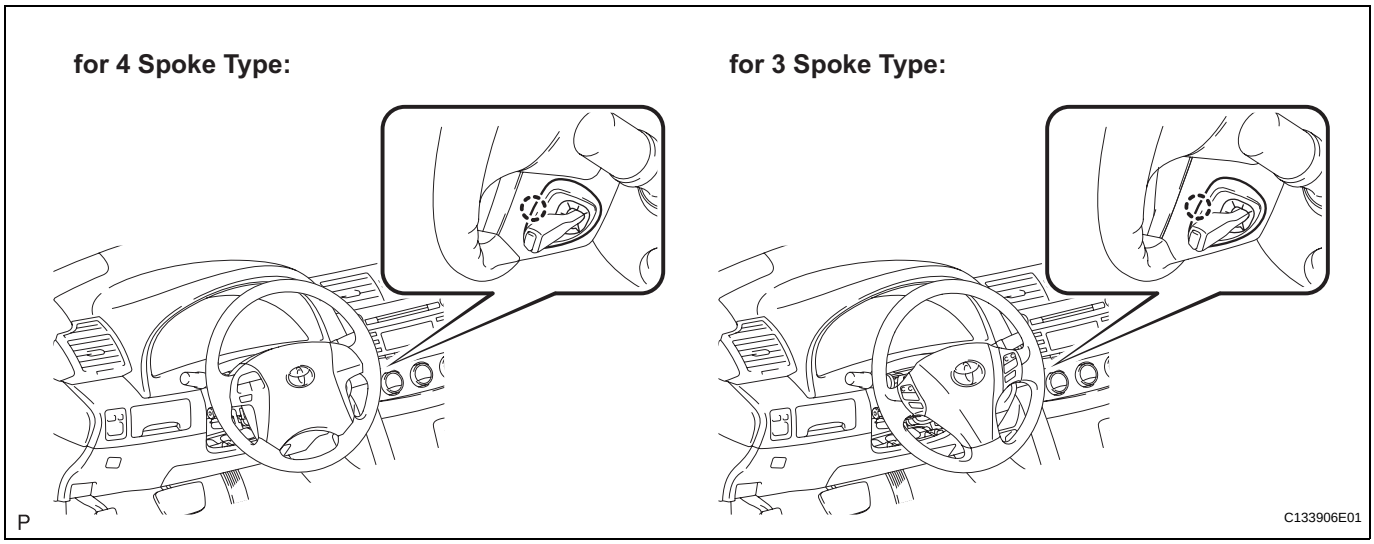
2. INSTALL NO. 3 LOWER STEERING WHEEL COVER

(a) Install the No. 3 lower steering wheel cover.



3. INSTALL NO. 2 LOWER STEERING WHEEL COVER

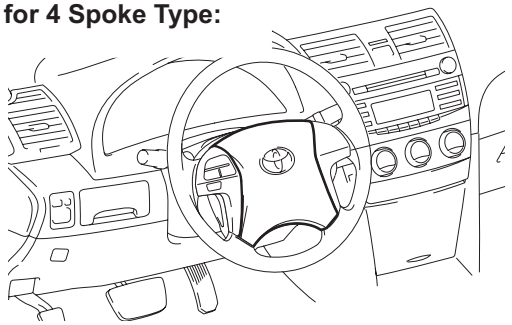
(a) Install the No. 2 lower steering wheel cover.



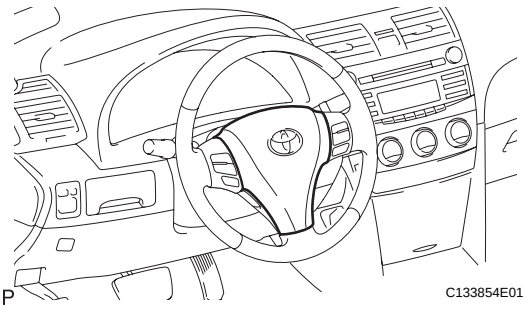
4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

RS

for 4 Spoke Type:



for 3 Spoke Type:



P C133854E01

5. INSPECT STEERING PAD

(a) With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

(b) Make sure that the horn sounds.
HINT:
If the horn does not sound, inspect the horn system (See page HO-2).

6. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

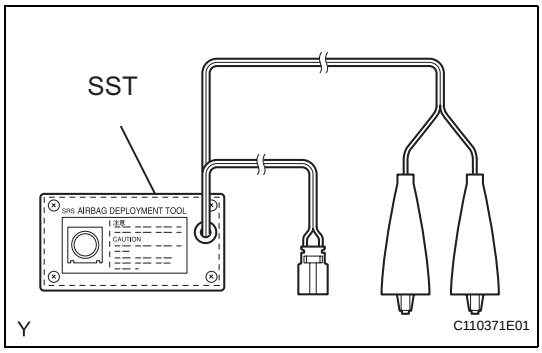
- **Never dispose of a steering pad that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the steering pad.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

RS

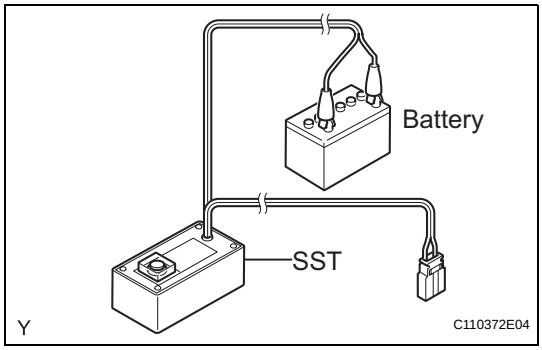
1. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

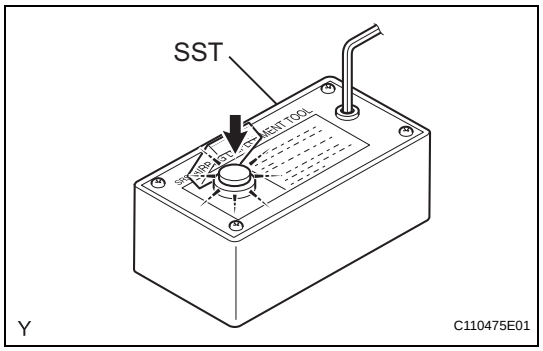
HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST.
SST 09082-00700
CAUTION:
When deploying the airbag, always use the specified SST:
SRS Airbag Deployment Tool



(1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.



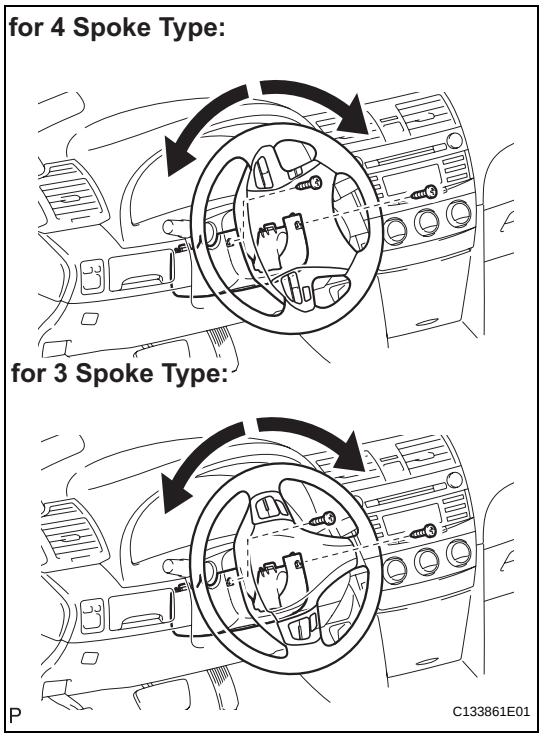


(2) Check the function of the SST.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so replace the SST with a new one.**

(3) Disconnect the SST from the battery.

(b) Precaution (See page RS-1).

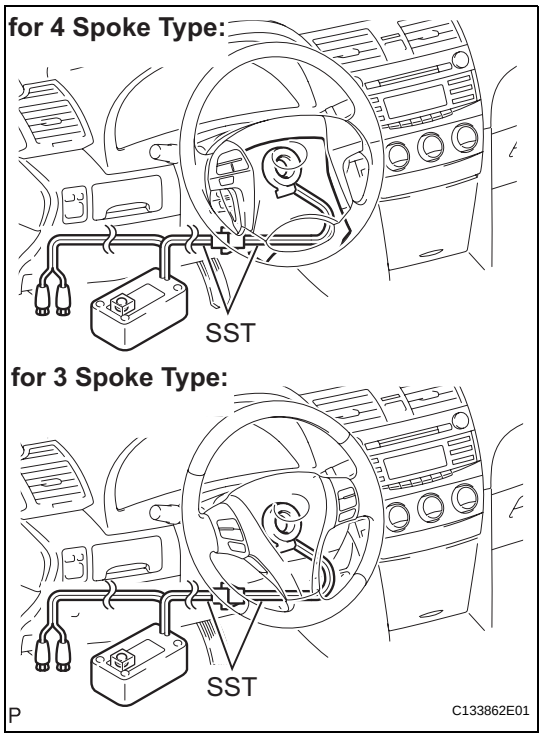
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



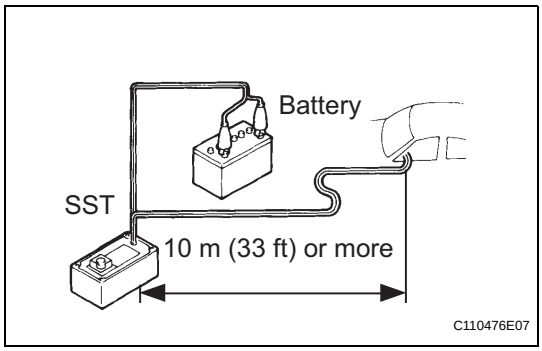
(d) Remove the steering column cover (lower).
(1) While turning the steering wheel assembly to the right and left, remove the 2 screws and steering column cover (lower).

(e) Install the SST.
CAUTION:
Check that there is no looseness in the steering wheel assembly and steering pad.
(1) Disconnect the airbag connector (yellow colored one) from the spiral cable.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

RS



(2) Connect the SST connector to the airbag connector of the spiral cable.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(3) Move the SST at least 10 m (33 ft) away from the vehicle front side window.
(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

RS

HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

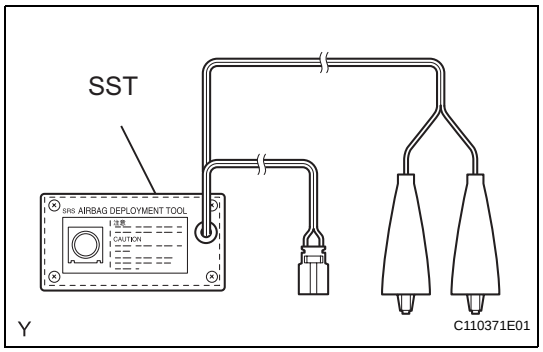
2. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

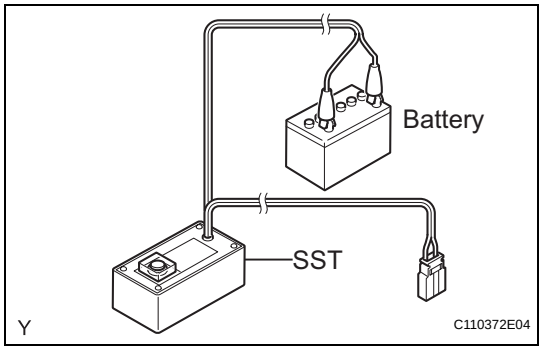
- **When disposing of the steering pad, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

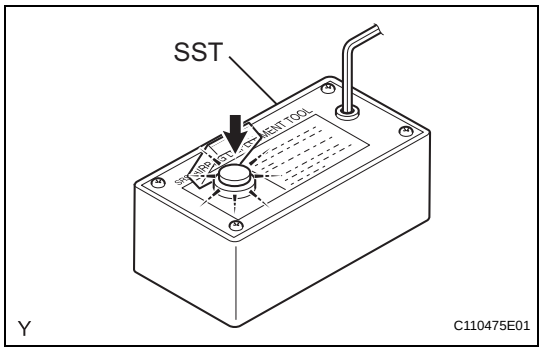
(a) Check the function of the SST.
SST 09082-00700
CAUTION:
When deploying the airbag, always use the specified SST:
SRS Airbag Deployment Tool



(1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.



(2) Check the function of the SST.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so replace the SST with a new one.**

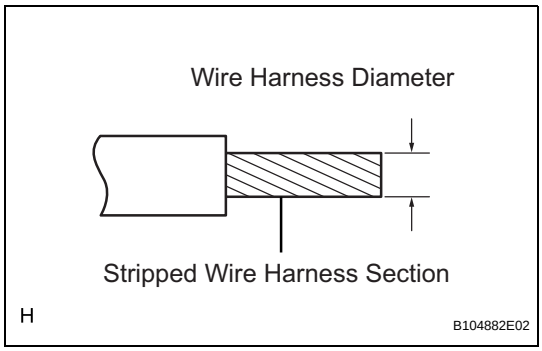


(3) Disconnect the SST from the battery.

(b) Remove the steering pad (See page RS-349).
CAUTION:
- **When removing the steering pad, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.**

RS

- **When storing the steering pad, keep the airbag deployment side facing upward.**



(c) Using a service-purpose wire harness for the vehicle, tie down the steering pad to the disc wheel.

Wire harness:

Stripped wire harness section

1.25 mm^2 or more (0.0019 in.^{2} or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 in.^{2}).

HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x (Diameter)^2 divided by 4

(1) Install the 2 bolts with washers into the 2 bolt holes on the steering pad.

Bolt:

L:

35.0 mm (1.378 in.)

M:

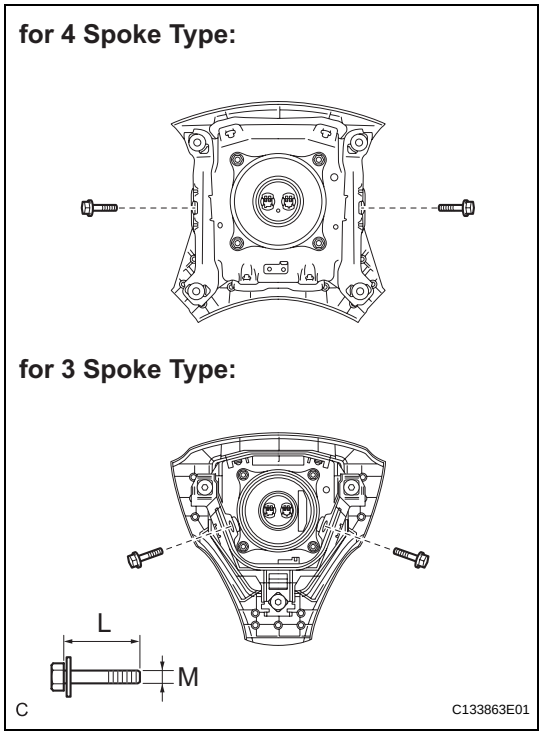
6.0 mm (0.236 in.)

Pitch:

1.0 mm (0.039 in.)

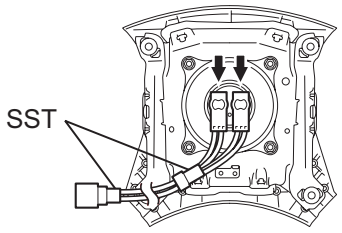
NOTICE:

- **Tighten the bolts by hand until they become difficult to turn.**
- **Do not tighten the bolts excessively.**

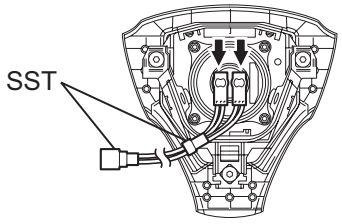


RS

for 4 Spoke Type:



for 3 Spoke Type:

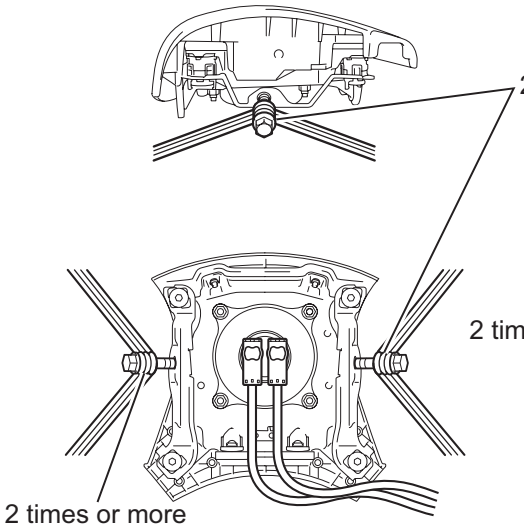


C C133864E01

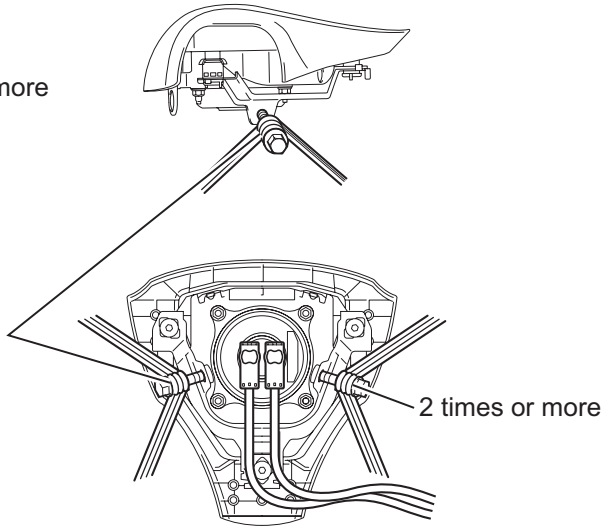
(2) After connecting the SST below to each other, connect them to the steering pad.
SST 09082-00802 (09082-10801, 09082-30801)

(3) Using 3 wire harnesses, wind wire harness at least 2 times each around each of the bolts installed on the left and right sides of the steering pad.

for 4 Spoke Type:



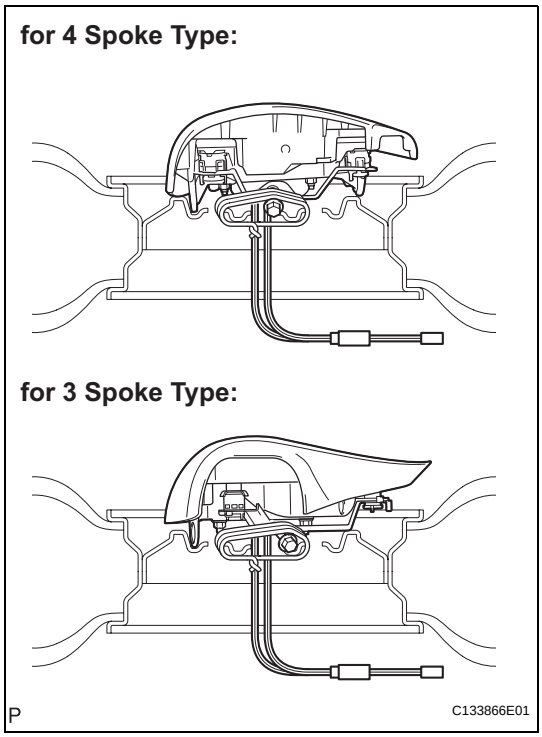
for 3 Spoke Type:



P C133865E01

CAUTION:
- **Tightly wind the wire harness around the bolts so that there is no slack.**
- **Make sure that the wire harness is tight. If there is slack in the wire harness, the steering pad may become loose due to the shock when the airbag is deployed.**

RS



(4) Face the airbag deployment side of the steering pad upward on top of a tire and wheel set. Separately tie the left and right sides of the steering pad to the disc wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole of the disc wheel.

CAUTION:

- **Make sure that the wire harness is tight. If there is slack in the wire harness, the steering pad may become loose due to the shock when the airbag is deployed.**
- **Always tie down the steering pad with the airbag deployment side facing upward.**

NOTICE:

The disc wheel will be damaged by the airbag deployment, so use an extra disc wheel.

(d) Install the SST.

CAUTION:

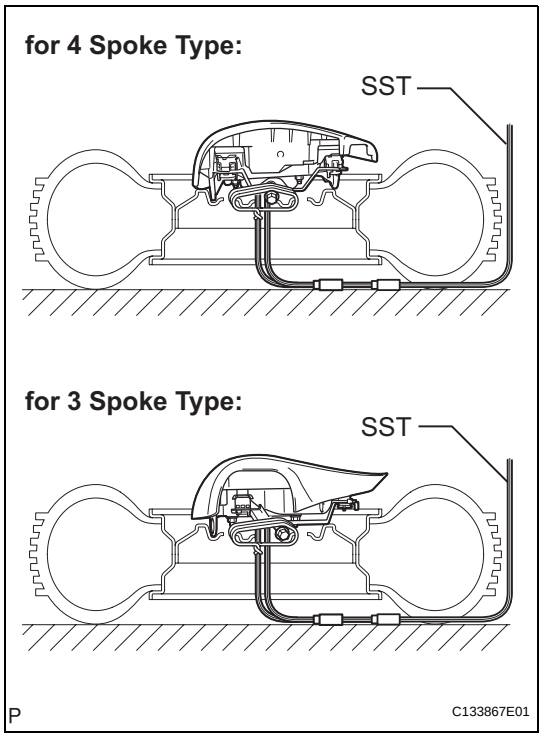
Place the disc wheel on level ground.

(1) Connect the SST connector.

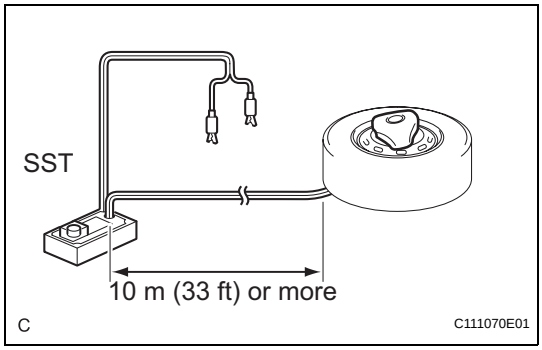
SST 09082-00700

NOTICE:

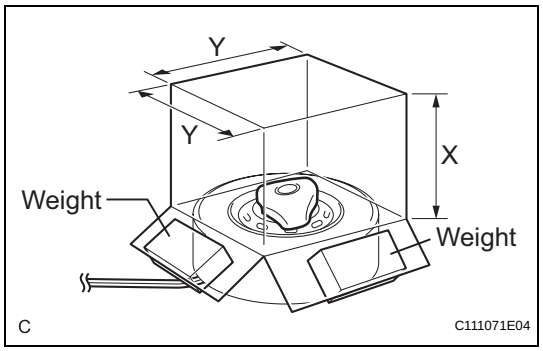
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.



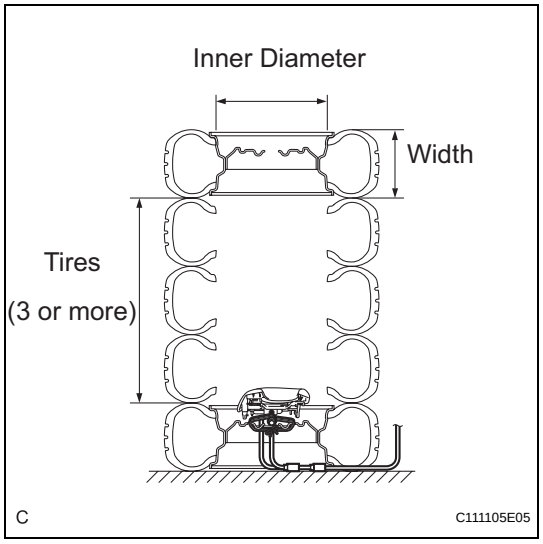
(2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the disc wheel.



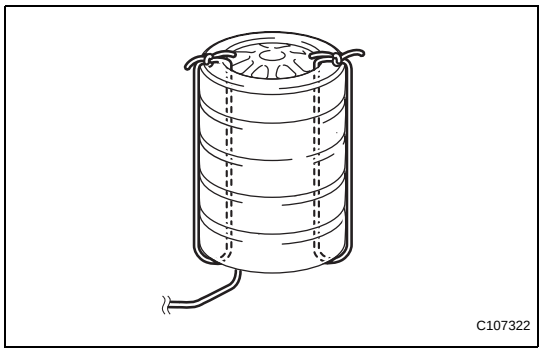
RS



(e) Cover the steering pad (Using a cardboard box).
(1) Cover the steering pad with the cardboard box.
(2) Place weights on the cardboard box in 4 places totalling at least 190 N (19 kg, 43 lb).
Cardboard box size:
Must exceed the following dimensions
X:
460 mm (18.11 in.)
Y:
650 mm (25.59 in.)
NOTICE:
- **When dimension Y of the cardboard box exceeds the diameter of the disc wheel with tire which the steering pad is tied to, X should be the following size.**
X = 460 mm (18.11 in.) + width of tire
- **If a cardboard box which is smaller than the specified size is used, the cardboard box will be broken by the shock from the airbag deployment.**

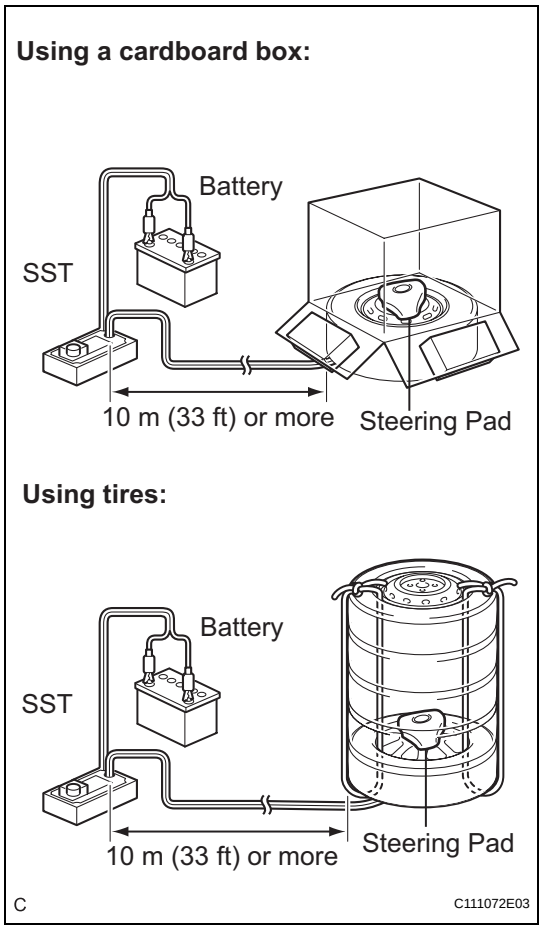


(f) Cover the steering pad (Using tires).
(1) Place at least 3 tires without disc wheels on the tire with disc wheel which the steering pad is tied to.
(2) Place the tire with a disc wheel on top of them.
Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)
CAUTION:
Do not use tires with disc wheels except for on the top and bottom.
NOTICE:
- **The tires may be damaged by the airbag deployment, so use an extra tire.**
- **Do not place the SST connector under the tire because it could be damaged.**



(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

RS



(g) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the disc wheel which the steering pad is tied to.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the steering pad.
CAUTION:
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the steering pad from the disc wheel.
(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it as other general part disposal.

RS

INSPECTION

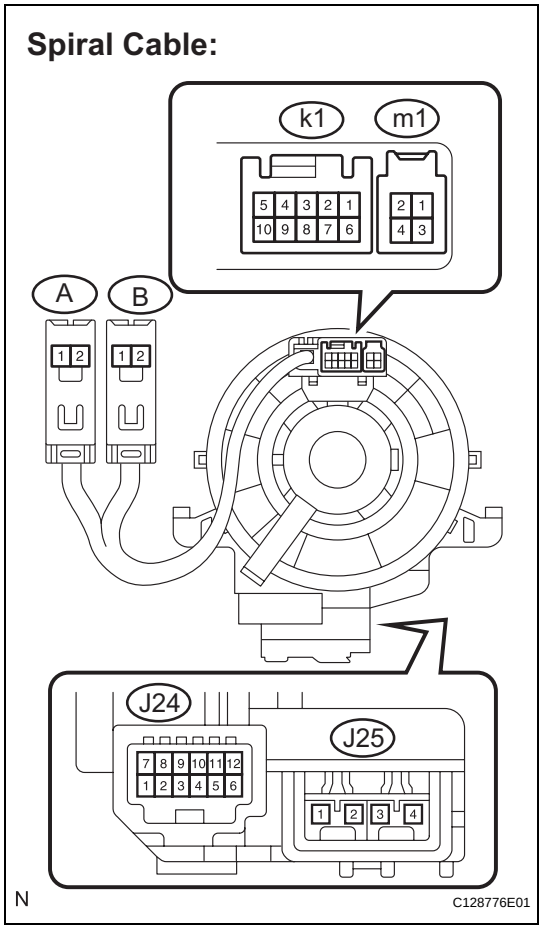
1. INSPECT SPIRAL CABLE

(a) If there are any defects as mentioned below, replace the spiral cable with a new one:
Scratches, cracks, dents or chips on the connector or the spiral cable.

(b) Inspect the spiral cable.

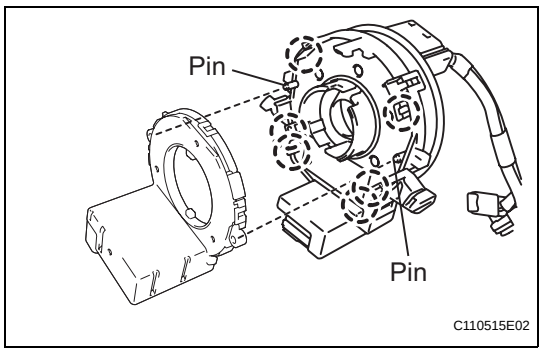
(1) Measure the resistance according to the value(s) in the table below.

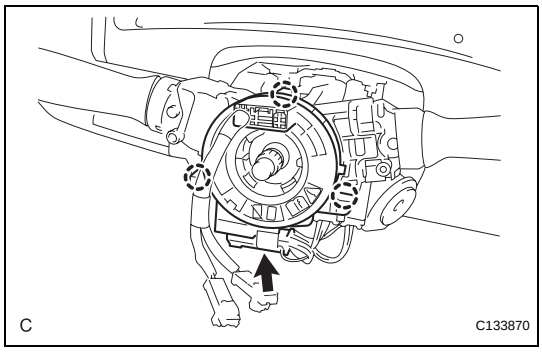
Standard resistance



Tester connection	Condition	Specified condition
k1-1- m1-2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-1- J24-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-2- J24-9 (SUP)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-3- J24-10 (SDN)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-4- J24-11 (DIST)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-5- J24-12 (IL+2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-6- m1-4	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-6- J24-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-7- J24-3 (DISP)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-8- J24-4 (EAU)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-9- J24-5 (AU2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
k1-10- J24-6 (AU1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
m1-1- J24-7 (R/N)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

Tester connection	Condition	Specified condition
m1-2- J24-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
m1-3- J24-1 (CCS)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
m1-4- J24-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
A-1 (D-) - J25-2 (D-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
A-2 (D+) - J25-1 (D+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
B-1 (D2-) - J25-3 (D2-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
B-2 (D2+) - J25-4 (D2+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	





INSTALLATION

1. INSTALL SPIRAL CABLE (w/ VSC)

(a) Engage the 6 claws and install the spiral cable to the steering angle sensor.

2. INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR (w/ VSC)

(a) Check that the front wheels are facing straight ahead.

(b) Set the turn signal switch to the neutral position.
NOTICE:
If it is not in the neutral position, the pin of the turn signal switch may be snapped.

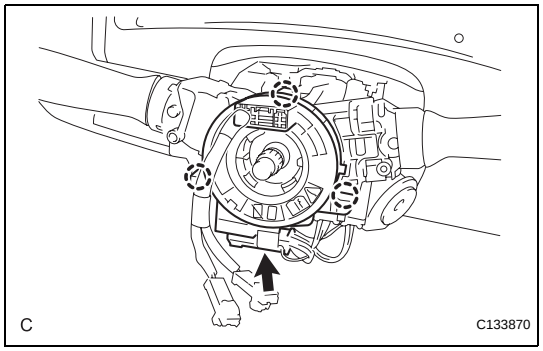
(c) Engage the 3 claws and install the spiral cable with steering angle sensor.
NOTICE:
When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.

(d) Connect the connectors to the spiral cable with steering angle sensor.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

3. INSTALL SPIRAL CABLE (w/o VSC)

(a) Check that the front wheels are facing straight ahead.

(b) Set the turn signal switch to the neutral position.
NOTICE:
If it is not in the neutral position, the pin of the turn signal switch may be snapped.

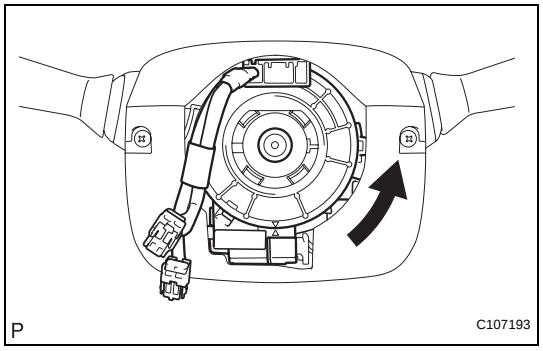


(c) Engage the 3 claws and install the spiral cable.
NOTICE:
When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.

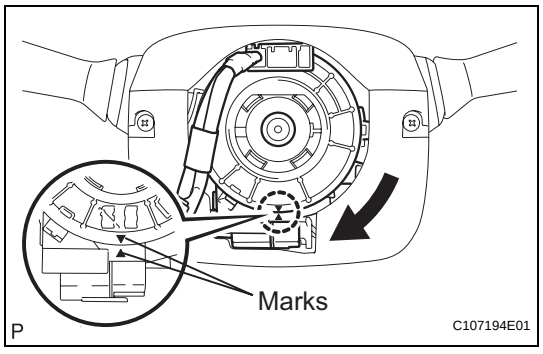
(d) Connect the connectors to the spiral cable.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

4. **INSTALL STEERING COLUMN COVER (See page SR-50)**

5. **ADJUST SPIRAL CABLE**
(a) Check that the ignition switch is off.
(b) Check that the battery negative (-) cable is disconnected.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Rotate the spiral cable counterclockwise slowly by hand until it feels firm.
NOTICE:
Do not turn the spiral cable by the airbag wire harness.



(d) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.
NOTICE:
Do not turn the spiral cable by the airbag wire harness.
HINT:
The spiral cable will rotate approximately 2.5 turns to both the left and right from the center.

6. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**

7. **INSPECT STEERING WHEEL CENTER POINT**

8. **INSTALL STEERING PAD (See page RS-350)**

9. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-351)**

10. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-352)**

RS

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

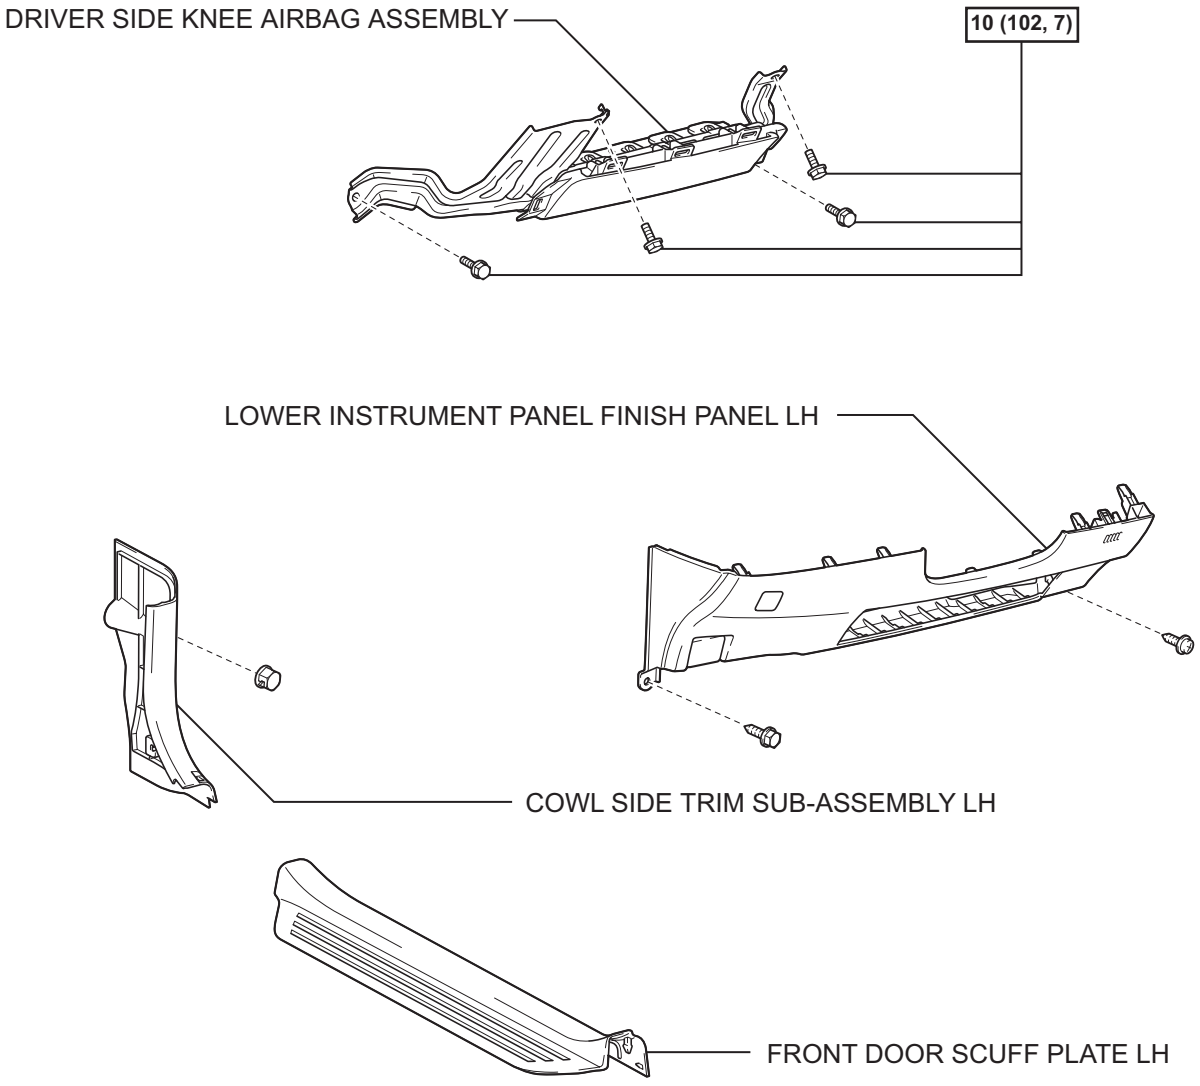
12. INSPECT STEERING PAD (See page RS-352)

13. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

DRIVER SIDE KNEE AIRBAG ASSEMBLY

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

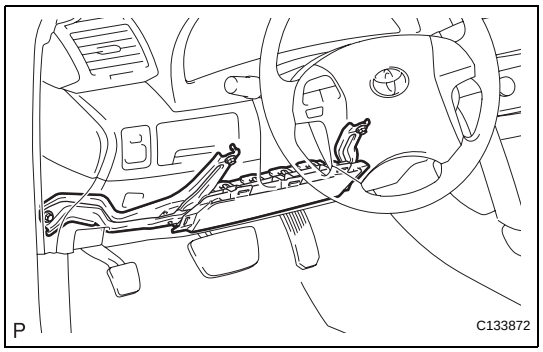
P

C133871E01

ON-VEHICLE INSPECTION

1. INSPECT DRIVER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

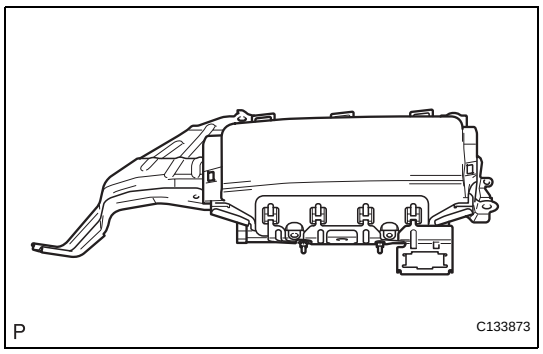
(a) Perform a diagnostic system check (See page RS-32).



(b) With the driver side knee airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the driver side knee airbag assembly with a new one:
Cuts, minute cracks or marked discoloration on the driver side knee airbag assembly.

2. INSPECT DRIVER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-32).



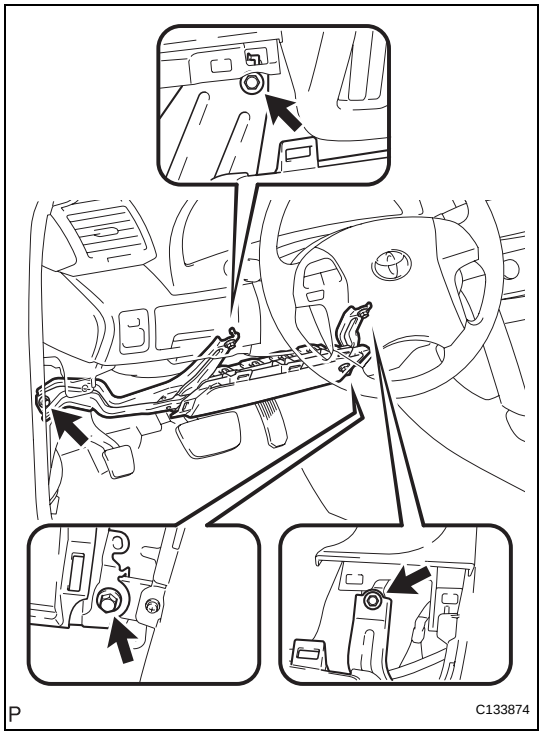
(b) With the driver side knee airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the driver side knee airbag assembly with a new one:
- Cuts, minute cracks or marked discoloration on the driver side knee airbag assembly.
- Cracks or other damage to the connector.
- Deformation or cracks on the instrument panel reinforcement.

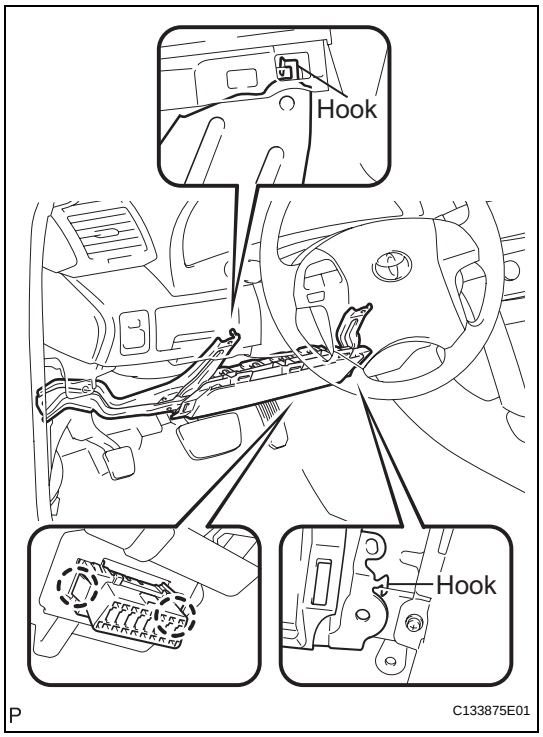
CAUTION:
Be sure to follow the correct removal and installation procedures.

RS

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
4. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-20)**
6. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY**
   (a) Remove the 4 bolts.
   (b) Disconnect the airbag connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.





(c) Disengage the 2 claws and remove the DLC3 connector.
(d) Disengage the 2 hooks and remove the driver side knee airbag assembly.

INSTALLATION

1. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

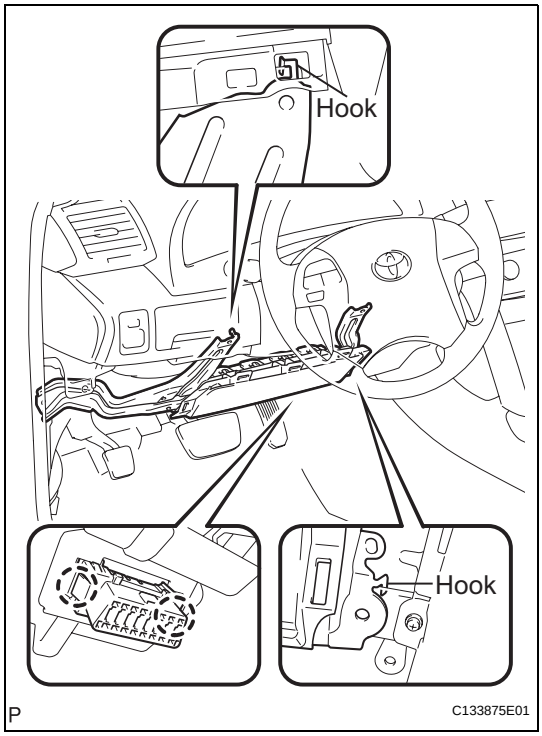
(a) Check that the ignition switch is off.

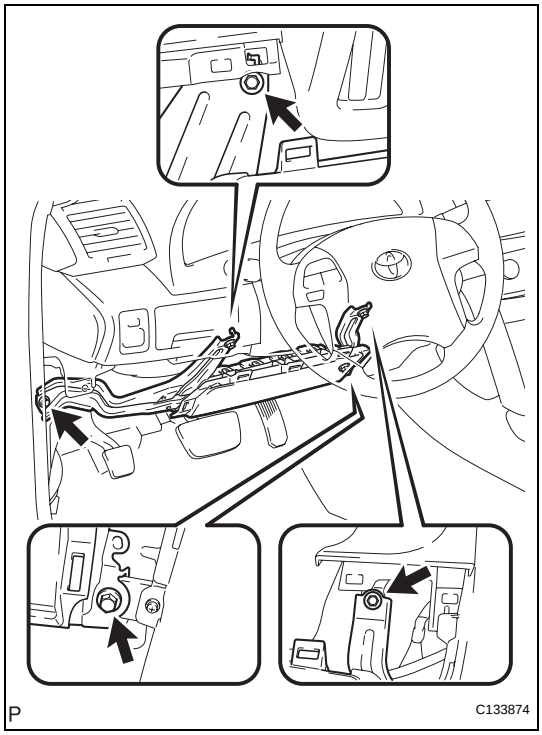
(b) Check that the battery negative (-) cable is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

(c) Temporarily install the driver side knee airbag assembly with the 2 hooks.

(d) Engage the 2 claws and install the DLC 3 connector.





(e) Install the driver side knee airbag assembly with the 4 bolts.

Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

(f) Connect the driver side knee airbag connector.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-58)

3. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)

4. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the driver side knee airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

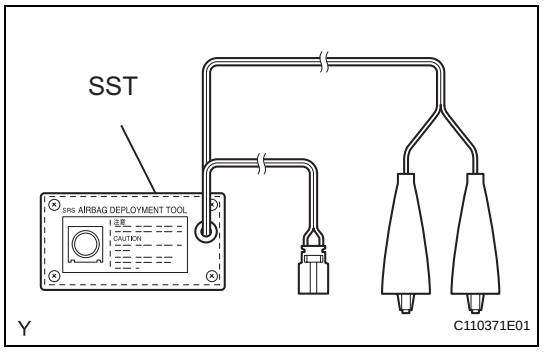
CAUTION:

- **Never dispose of a driver side knee airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the driver side knee airbag assembly.**
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

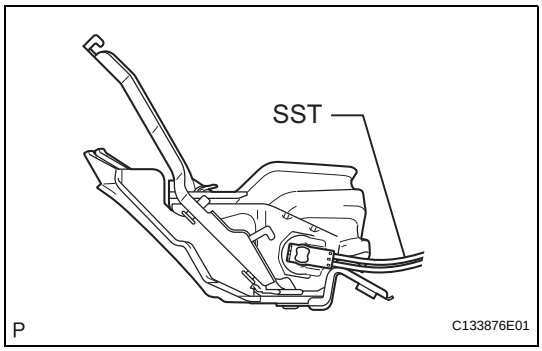
RS

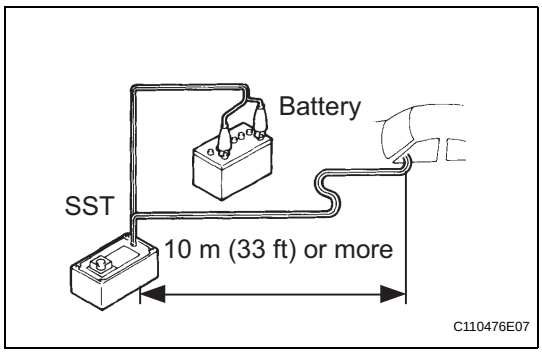
1. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.



(a) Check the function of the SST (See page RS-353).
(b) Precaution (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Remove the driver side knee airbag assembly (See page RS-369).





(e) Install the SST.

(1) Connect the SST connector to the driver side knee airbag assembly.

SST 09082-00700, 09082-00770

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Install the driver side knee airbag assembly (See page RS-370).

NOTICE:

Take care not to damage the SST wire harness.

(3) Move the SST at least 10 m (33 ft) away from the vehicle front side window.

(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

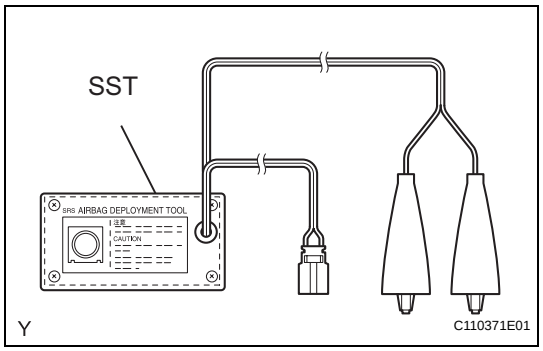
The airbag is deployed as the LED of the SST activation switch comes on.

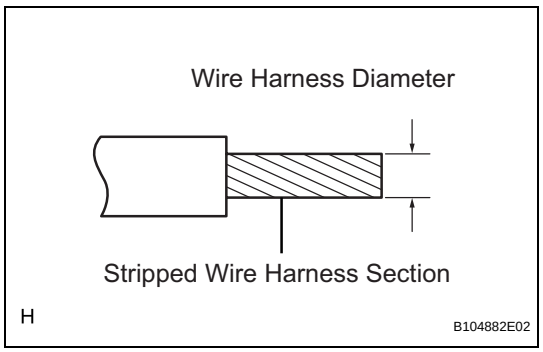
2. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the driver side knee airbag assembly, never use the customer's vehicle to deploy the airbag.**

RS





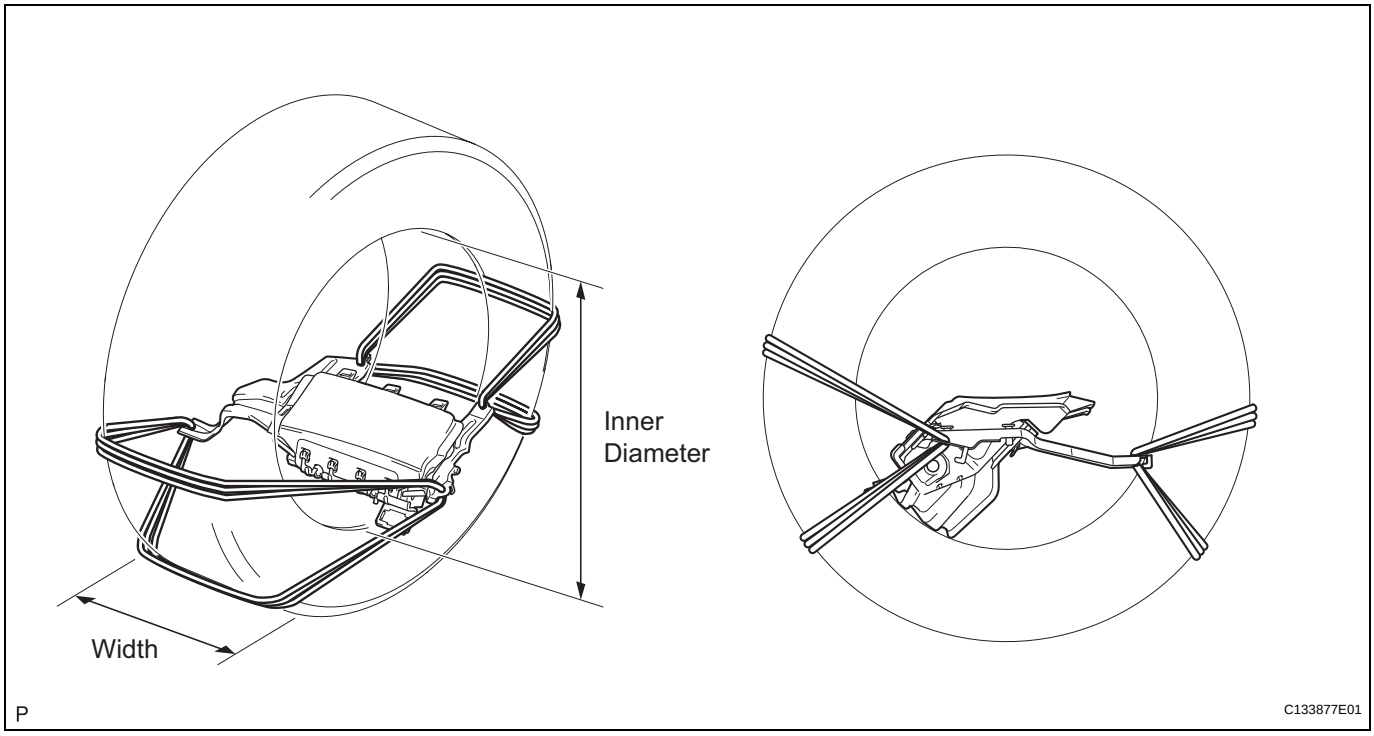
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST (See page RS-355).
(b) Remove the driver side knee airbag assembly (See page RS-369).
CAUTION:
- **When removing the driver side knee airbag assembly, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the driver side knee airbag assembly, keep the airbag deployment side facing upward.**

(c) Using a service-purpose wire harness for the vehicle, tie down the driver side knee airbag assembly to the tire.
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)
CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the driver side knee airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x $(Diameter)^2$ divided by 4
(1) Position the driver side knee airbag assembly inside the tire with the airbag deployment side facing inside.
Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)

RS

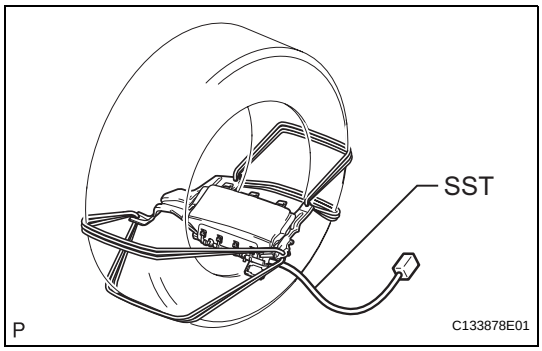


CAUTION:

- **Make sure that the wire harness is tight. If there is slack in the wire harness, the driver side knee airbag assembly may become loose due to the shock when the airbag is deployed.**
- **Always tie down the driver side knee airbag assembly with the airbag deployment side facing inside the tire.**

NOTICE:

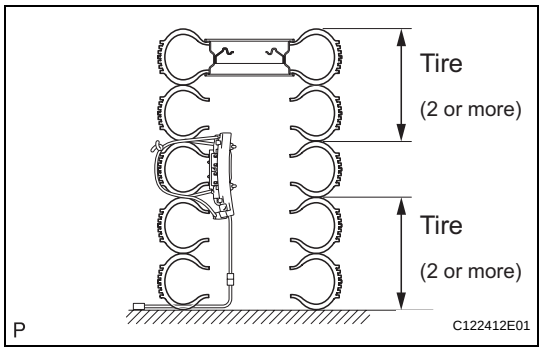
The tire may be damaged by the airbag deployment, so use an extra tire.

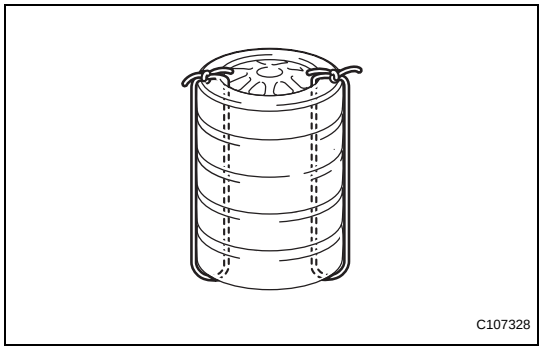


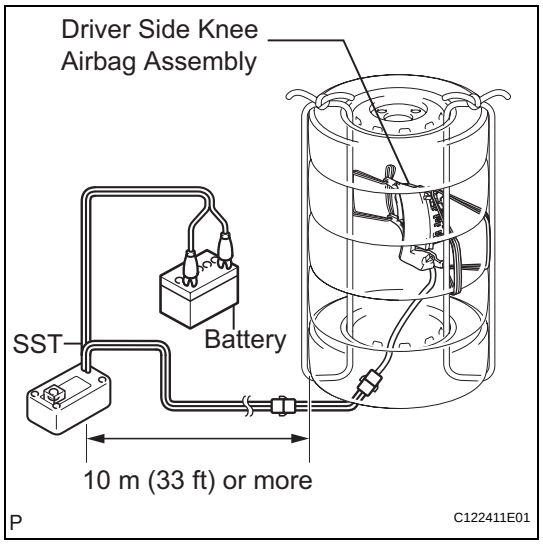
(d) Install the SST.

(1) Connect the SST connector to the driver side knee airbag assembly.

SST 09082-00770



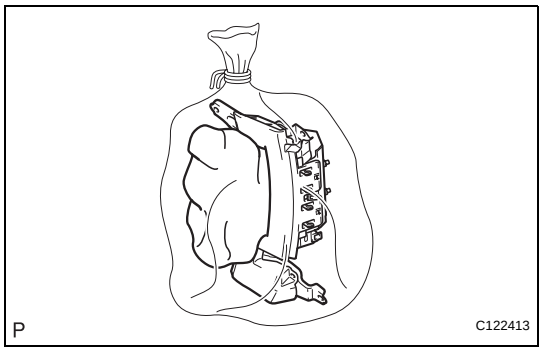




(e) Place the tires.
  (1) Place at least 2 tires under the tire which the driver side knee airbag assembly is tied to.
  (2) Place at least 2 tires over the tire which the driver side knee airbag assembly is tied to. The top tire should have the disc wheel installed.
  NOTICE:
  - **The tire may be damaged by the airbag deployment, so use an extra tire.**
  - **Do not place the SST connector under the tire because it could be damaged.**
  (3) Tie the tires together with 2 wire harnesses.
  CAUTION:
  Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

(f) Install the SST.
  (1) Connect the SST connector.
  SST 09082-00700
  NOTICE:
  To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
  (2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.
(g) Deploy the airbag.
  (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
  (2) Check that no one is within a 10 m (33 ft) radius of the tire which the driver side knee airbag assembly is tied to.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  When deploying the airbag, make sure that no one is near the tire.
  HINT:
  The airbag is deployed as the LED of the SST activation switch comes on.

RS



(h) Dispose of the driver side knee airbag assembly.
CAUTION:
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the driver side knee airbag assembly from the tire.
(2) Place the driver side knee airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

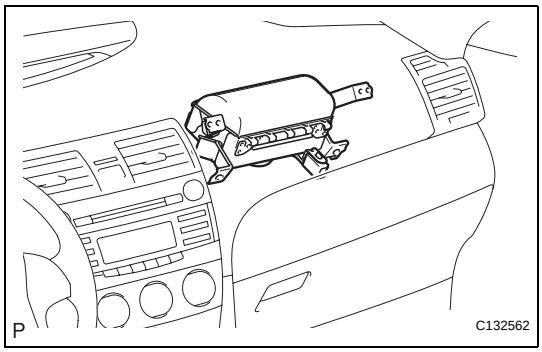
ON-VEHICLE INSPECTION

1. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

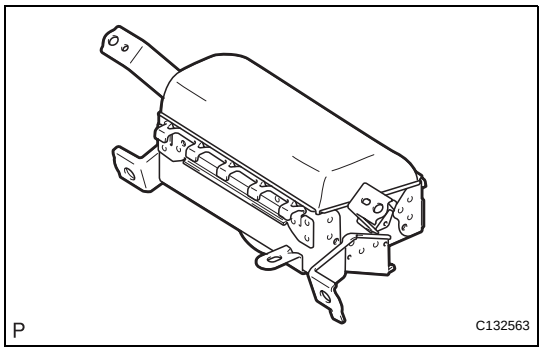
(a) Perform a diagnostic system check (See page RS-32).



(b) With the front passenger airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the instrument panel with a new one:
Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag assembly.

2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-32).



(b) With the front passenger airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one:
- Cuts, minute cracks or marked discoloration on the front passenger airbag assembly.
- Cracks or other damage to the connectors.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

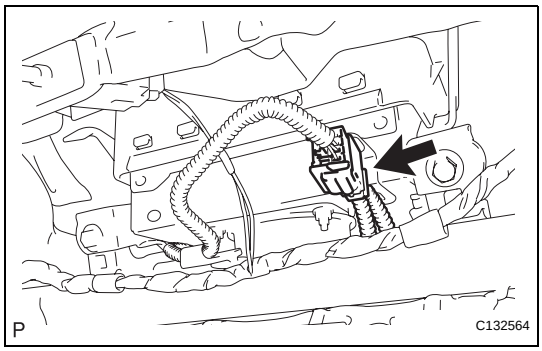
CAUTION:
Be sure to follow the correct removal and installation procedures.

RS

REMOVAL

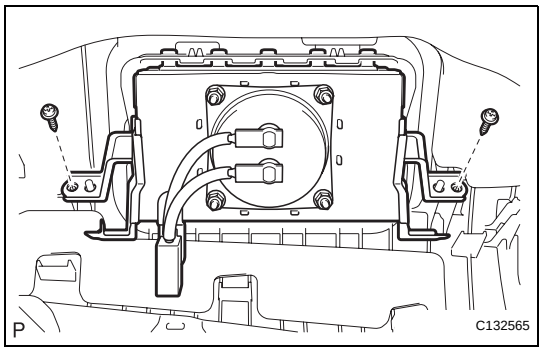
1. **TABLE OF BOLT, SCREW AND NUT**
   HINT:
   See page IP-1
2. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
3. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
5. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-349)**
6. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-349)**
7. **REMOVE STEERING PAD (See page RS-350)**
8. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-38)**
9. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
10. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
11. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
12. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
13. **REMOVE STEERING COLUMN COVER (for TMC Made) (See page IP-21)**
14. **REMOVE STEERING COLUMN COVER (for TMMK Made) (See page IP-21)**
15. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-39)**
16. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-22)**
17. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-22)**
18. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-22)**
19. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-22)**
20. **REMOVE COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-23)**

21. **REMOVE COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-23)**
22. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
23. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
24. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**
25. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-23)**
26. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-24)**
27. **DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
    (a) Disconnect the connector.



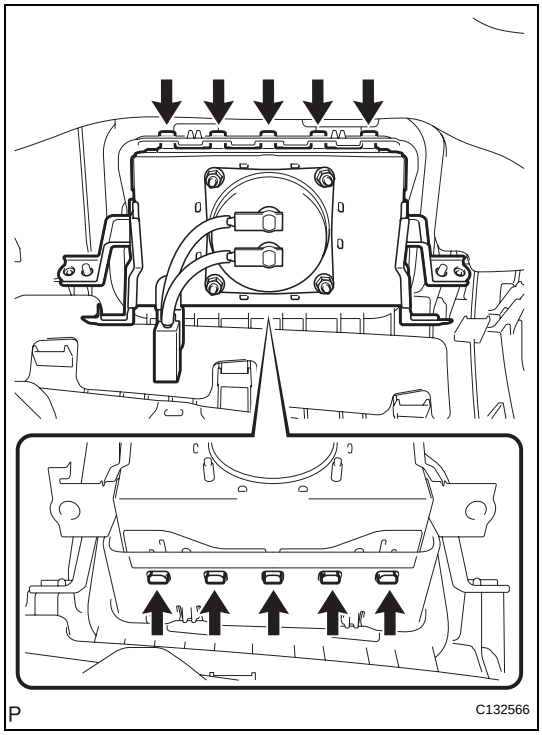
28. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)**
29. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)**
30. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
31. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
32. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)**
33. **REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)**
34. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)**
35. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)**
36. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-27)**
37. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-27)**
38. **REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-27)**
39. **REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-146)**
40. **REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-195)**

41. REMOVE CONSOLE BOX POCKET (See page NS-195)
42. REMOVE CONSOLE BOX CARPET (See page IP-28)
43. REMOVE CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-28)
44. REMOVE CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-29)
45. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-29)
46. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
47. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-30)
48. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-30)
49. REMOVE FRONT PILLAR GARNISH LH (See page IR-27)
50. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-31)
51. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-31)
52. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-155)
53. REMOVE FRONT PILLAR GARNISH RH (See page IR-27)
54. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-31)
55. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-32)
56. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page AV-156)
57. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-32)
58. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-32)
59. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-34)

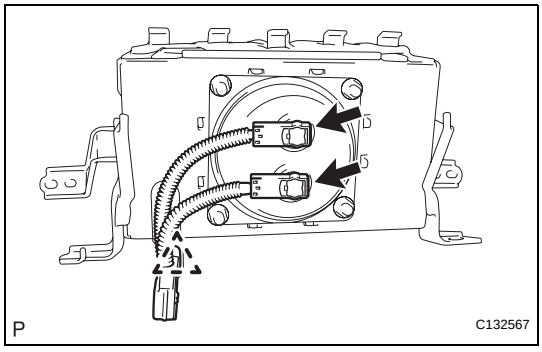


60. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY

(a) Remove the 2 screws.



(b) Disengage the 10 hooks and remove the front passenger airbag assembly from the instrument panel.



61. REMOVE INSTRUMENT PANEL WIRE ASSEMBLY

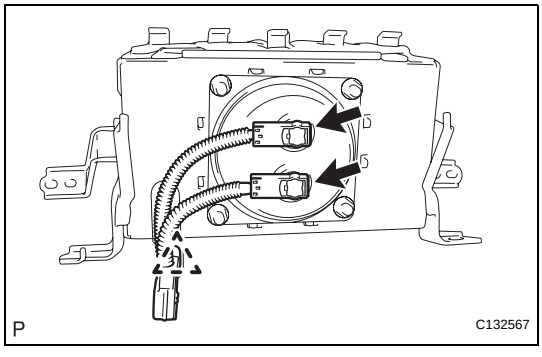
(a) Disconnect the 2 connectors.

(b) Remove the clamp and the instrument panel wire assembly from the front passenger airbag assembly.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

INSTALLATION



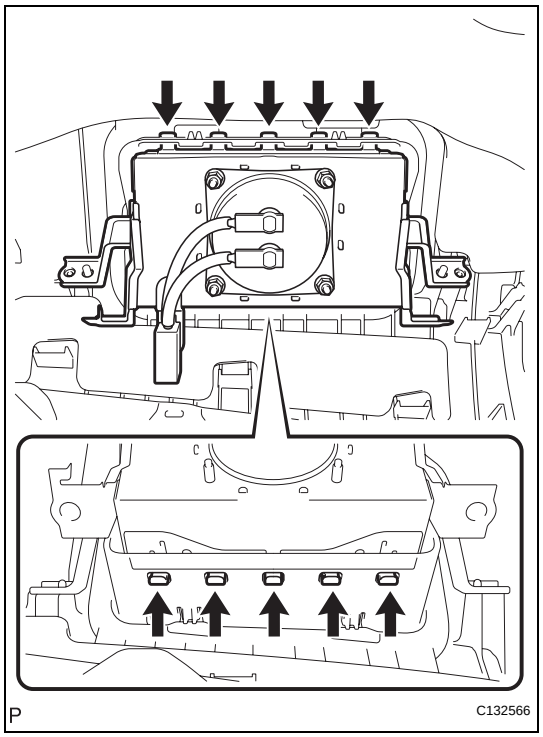
1. INSTALL INSTRUMENT PANEL WIRE ASSEMBLY

(a) Connect the 2 connectors.

(b) Install the clamp and the instrument panel wire assembly on the front passenger airbag assembly.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

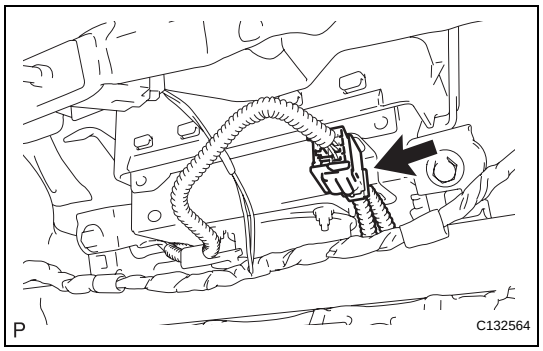


2. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY**
   (a) Engage the 10 hooks and install the front passenger airbag assembly on the instrument panel.

   (b) Install the 2 screws.

3. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMC Made) (See page IP-44)**
4. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for TMMK Made) (See page IP-45)**
5. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-48)**
6. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-156)**
7. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-48)**
8. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-48)**
9. **INSTALL FRONT PILLAR GARNISH LH (See page IR-51)**
10. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page AV-157)**
11. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-49)**
12. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-49)**
13. **INSTALL FRONT PILLAR GARNISH RH (See page IR-52)**
14. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-49)**

15. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
16. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMC Made) (See page IP-50)**
17. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (for TMMK Made) (See page IP-50)**
18. **INSTALL CONSOLE BOX ASSEMBLY (for TMC Made) (See page IP-51)**
19. **INSTALL CONSOLE BOX ASSEMBLY (for TMMK Made) (See page IP-51)**
20. **INSTALL CONSOLE BOX CARPET (See page IP-51)**
21. **INSTALL CONSOLE BOX POCKET (See page IP-51)**
22. **INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-147)**
23. **INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-196)**
24. **INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-52)**
25. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-52)**
26. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-52)**
27. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
28. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
29. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
30. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
31. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
32. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
33. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
34. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**



35. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
    (a) Connect the connector.
36. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMC Made) (See page IP-55)**
37. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (for TMMK Made) (See page IP-56)**
38. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-56)**
39. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
40. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
41. **INSTALL COMBINATION METER ASSEMBLY (for TMC Made) (See page IP-56)**
42. **INSTALL COMBINATION METER ASSEMBLY (for TMMK Made) (See page IP-56)**
43. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-57)**
44. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/o Smart Key System) (See page IP-57)**
45. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (w/ Smart Key System) (See page IP-57)**
46. **INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-57)**
47. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-50)**
48. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-367)**
49. **INSTALL STEERING COLUMN COVER (for TMC Made) (See page IP-58)**
50. **INSTALL STEERING COLUMN COVER (for TMMK Made) (See page IP-58)**
51. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**
52. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
53. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
54. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
55. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-51)**
56. **INSTALL STEERING PAD (See page RS-350)**

57. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-351)**

58. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-352)**

59. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

60. **INSPECT STEERING PAD (See page RS-352)**

61. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-352).

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the front passenger airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the TOYOTA MOTOR SALES, U.S.A., INC.

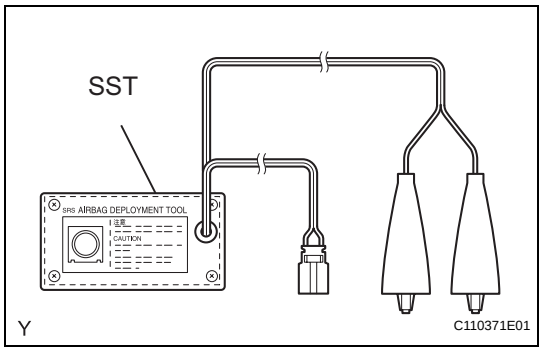
CAUTION:

- **Never dispose of a front passenger airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag assembly.**
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

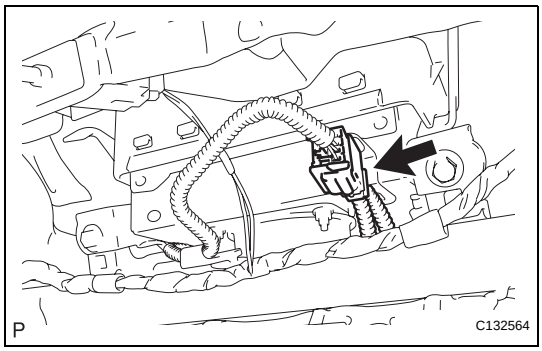
RS

1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

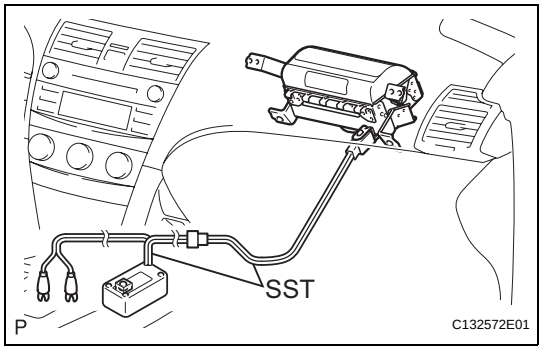
HINT:
Prepare a battery as the power source to deploy the airbag.



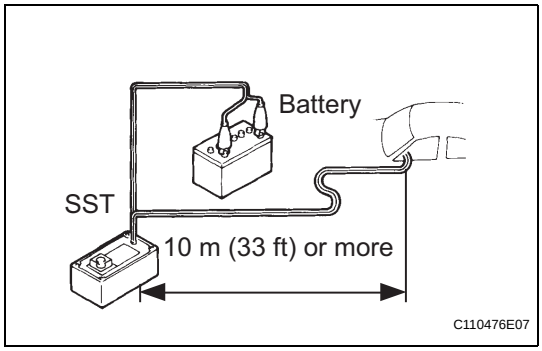
(a) Check the function of the SST (See page RS-353).
(b) Precaution (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Install the SST.
(1) Remove the lower instrument panel sub-assembly (See page IP-23).



(2) Disconnect the connector.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.



(3) Connect the SST connector to the instrument panel wire assembly.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(4) Move the SST at least 10 m (33 ft) away from the vehicle front side window.
(5) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(6) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

(e) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

RS

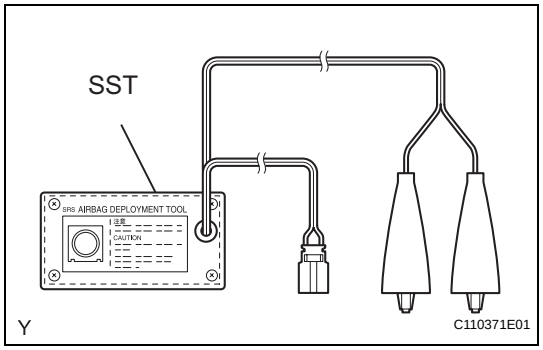
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the front passenger airbag assembly, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

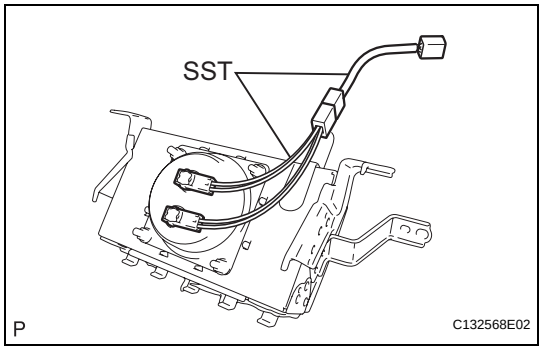


(a) Check the function of the SST (See page RS-355).

(b) Remove the front passenger airbag assembly (See page RS-392).

CAUTION:

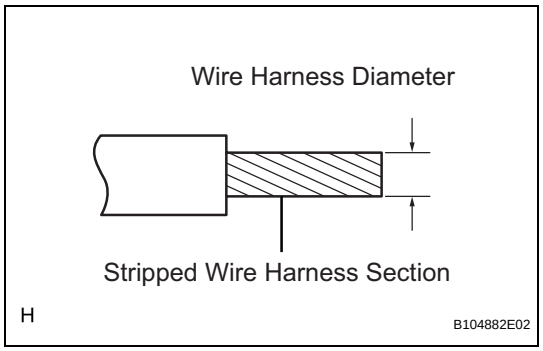
- **When removing the front passenger airbag assembly, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.**



(c) Install the SST.

(1) After connecting the SST below to each other, connect them to the front passenger airbag assembly.

SST 09082-00700, 09082-00802 (09082-10801, 09082-30801)



(d) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.

Wire harness:

Stripped wire harness section

1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:
To calculate the area of the stripped wire harness section:

RS

Area = 3.14 x (Diameter)^2 divided by 4

(1) Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size:

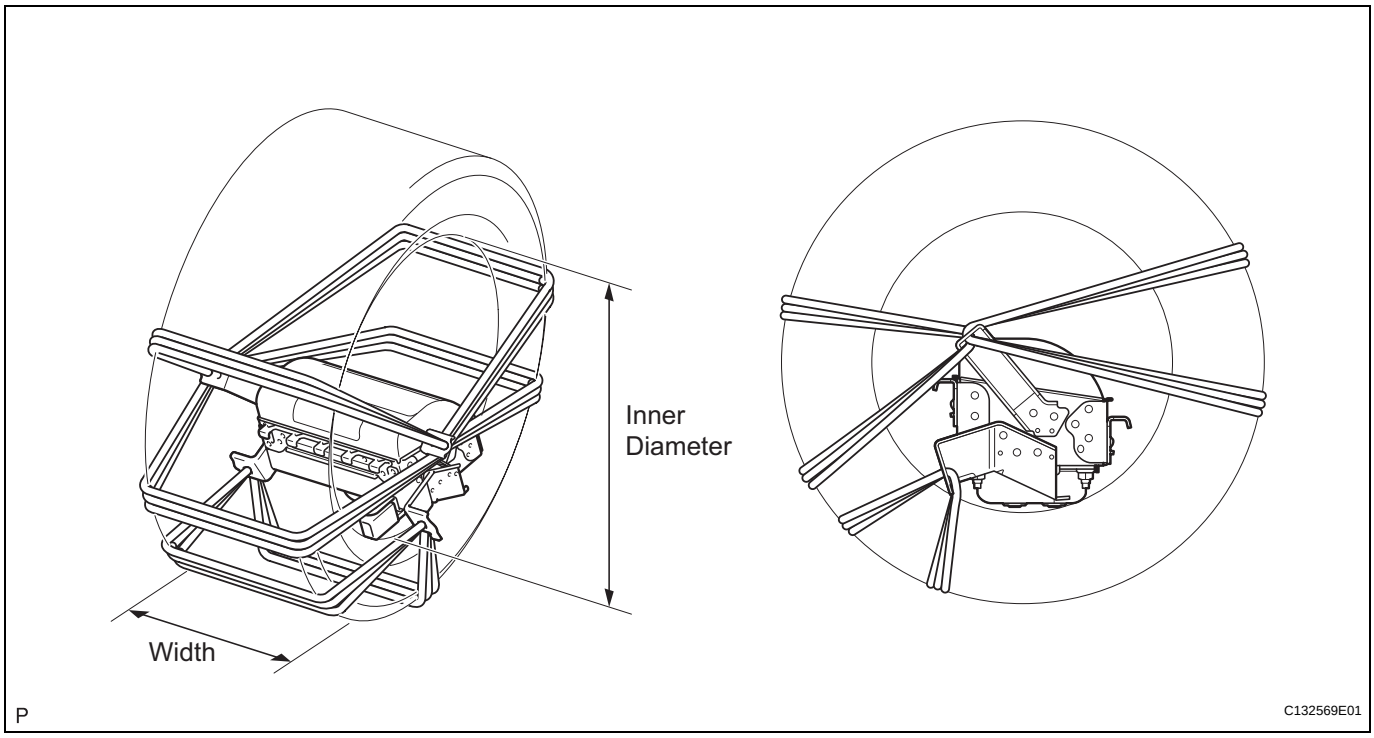
Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (14.17 in.)

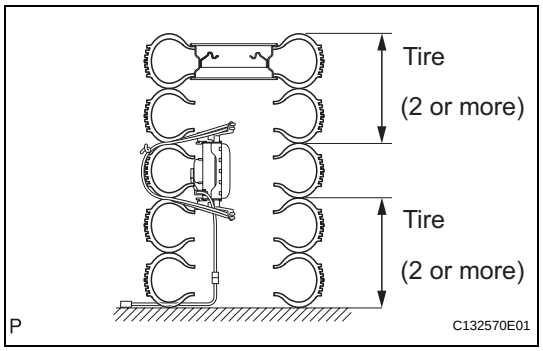


CAUTION:

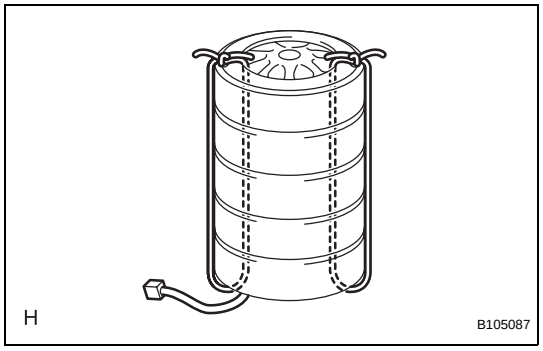
- **Make sure that the wire harness is tight. If there is slack in the wire harness, the front passenger airbag assembly may become loose due to the shock when the airbag is deployed.**
- **Always tie down the front passenger airbag assembly with the airbag deployment side facing inside the tire.**

NOTICE:

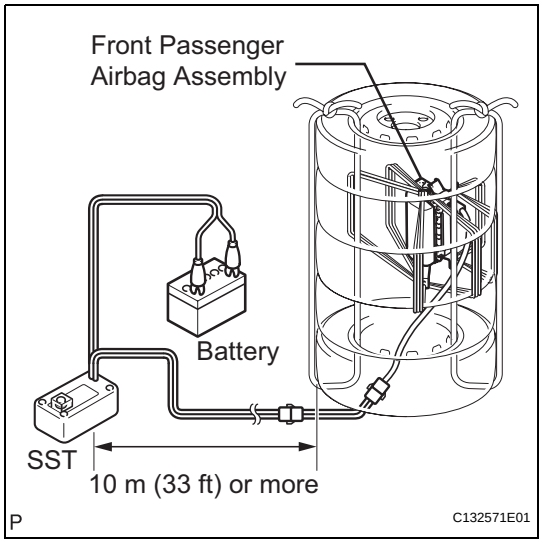
The tire will be marked by the airbag deployment, so use an extra tire.



(e) Place the tires.
(1) Place at least 2 tires under the tire which the front passenger airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the front passenger airbag assembly is tied to. The top tire should have a disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.



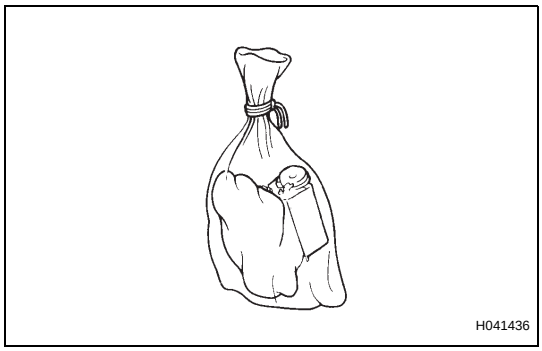
(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.



(f) Install the SST.
(1) Connect the SST connector.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
(2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.

(g) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire which the front passenger airbag assembly is tied to.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

RS



(h) Dispose of the front passenger airbag assembly.
CAUTION:
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

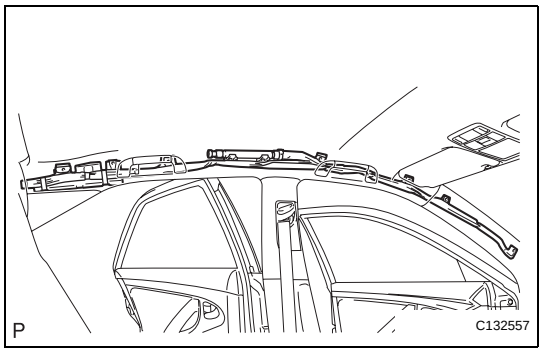
(1) Remove the front passenger airbag assembly from the tire.
(2) Place the front passenger airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

ON-VEHICLE INSPECTION

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-32).

(b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front pillar garnish or roof headlining assembly with a new one:
Cuts, minute cracks or marked discoloration on the front pillar garnish or roof headlining assembly around the curtain shield airbag assembly.

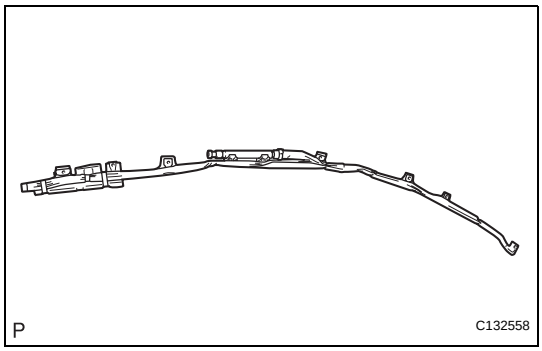


2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-32).

(b) With the curtain shield airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag assembly with a new one:
- Cuts, minute cracks or marked discoloration on the curtain shield airbag assembly.
- Cracks or other damage to the connectors.

CAUTION:
Be sure to follow the correct removal and installation procedures.



RS

REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
4. **REMOVE SEAT TRACK COVER LH (for Manual Seat) (See page SE-16)**
5. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-16)**
6. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-16)**
7. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
8. **REMOVE SEAT TRACK COVER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
9. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
10. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
    HINT:
    Use the same procedures for the RH side and the LH side.
11. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
12. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-30)**
13. **REMOVE SEAT TRACK COVER RH (for Power Seat) (See page SE-30)**
14. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-30)**
15. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

16. **REMOVE SEAT TRACK COVER RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

17. **REMOVE SEAT TRACK COVER LH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

18. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

19. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-24)**

20. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**

21. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-24)**

22. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**

23. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-77)**

24. **REMOVE REAR SEAT HEADREST ASSEMBLY**

25. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**

26. **REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**

27. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)**

28. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)**

29. **REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)**

30. **REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)**

31. **REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)**

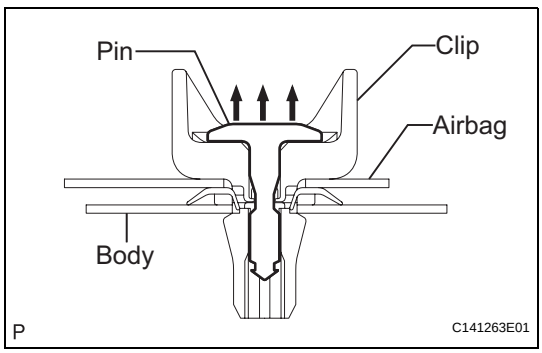
32. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)**

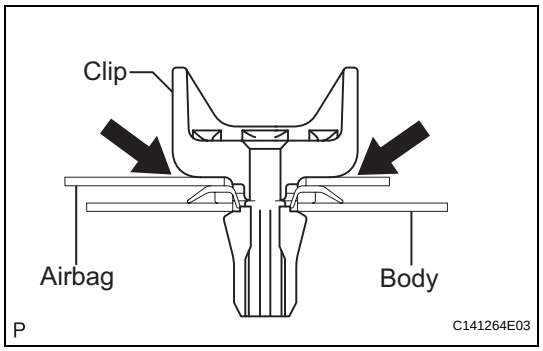
33. **REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)**

RS

34. **REMOVE CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-64)**
35. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-68)**
36. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
37. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-38)**
38. **REMOVE DOOR ASSIST GRIP COVER LH (See page ED-38)**
39. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-39)**
40. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-40)**
41. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
42. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
43. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
44. **REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-25)**
45. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-25)**
46. **REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-25)**
47. **REMOVE UPPER CENTER PILLAR GARNISH LH (See page IR-26)**
48. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
49. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
50. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
51. **REMOVE LAP BELT OUTER ANCHOR COVER (See page IR-26)**
52. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-26)**
53. **REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-26)**

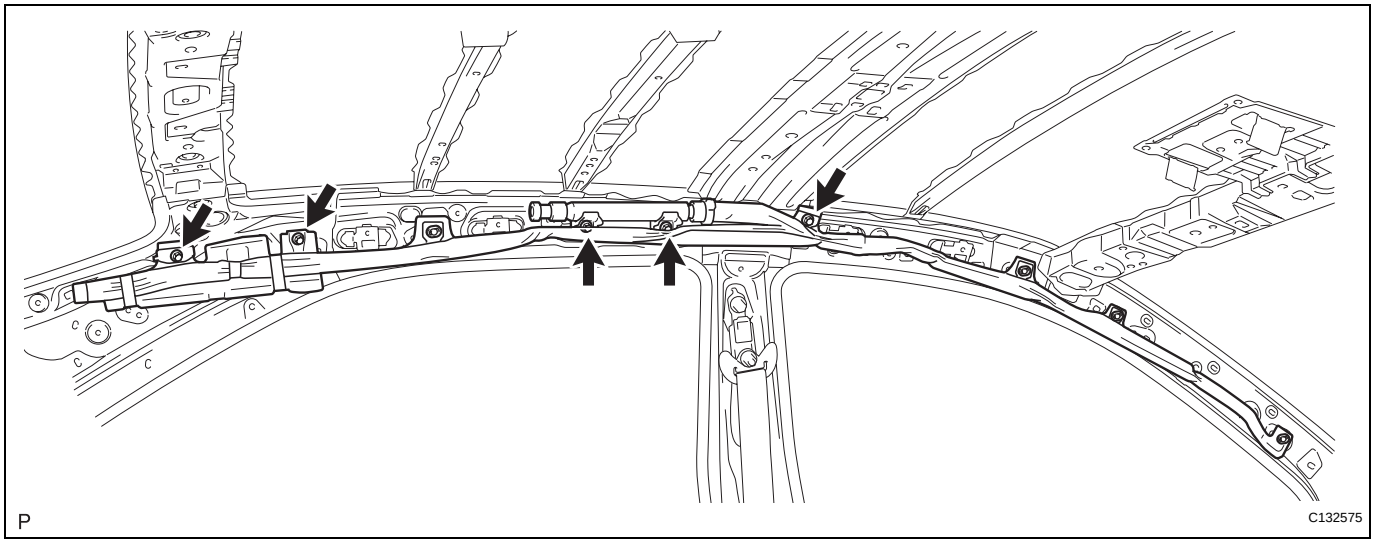
54. **REMOVE UPPER CENTER PILLAR GARNISH RH (See page IR-26)**
55. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-26)**
56. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-26)**
57. **REMOVE FRONT PILLAR GARNISH LH (See page IR-27)**
58. **REMOVE FRONT PILLAR GARNISH RH (See page IR-27)**
59. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-28)**
60. **REMOVE VISOR ASSEMBLY LH (See page IR-28)**
61. **REMOVE VISOR ASSEMBLY RH (See page IR-29)**
62. **REMOVE VISOR HOLDER (See page IR-29)**
63. **REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**
64. **REMOVE REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-29)**
65. **REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-30)**
66. **REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-30)**
67. **REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) (See page IR-31)**
68. **REMOVE SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-31)**
69. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-31)**
70. **REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-32)**
71. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY**
    (a) Disconnect the connector.
    NOTICE:
    When handling the airbag connector, take care not to damage the airbag wire harness.
    (b) Remove the 4 clips.
    (1) Using a clip remover, remove the pin.





(2) Using needle-nose pliers, remove the clip and curtain shield airbag from the body as shown in the illustration.

(c) Remove the 5 bolts and curtain shield airbag assembly.



(d) Remove the 4 clips and 4 spacers from the curtain shield airbag assembly.

NOTICE:

If clips and spacers are removed, always replace them with new ones even though they may not appear to be damaged.

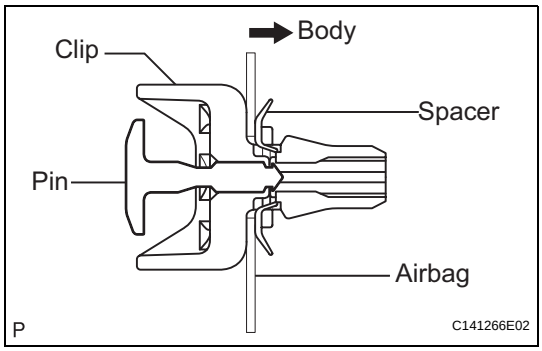
INSTALLATION

HINT:
- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.



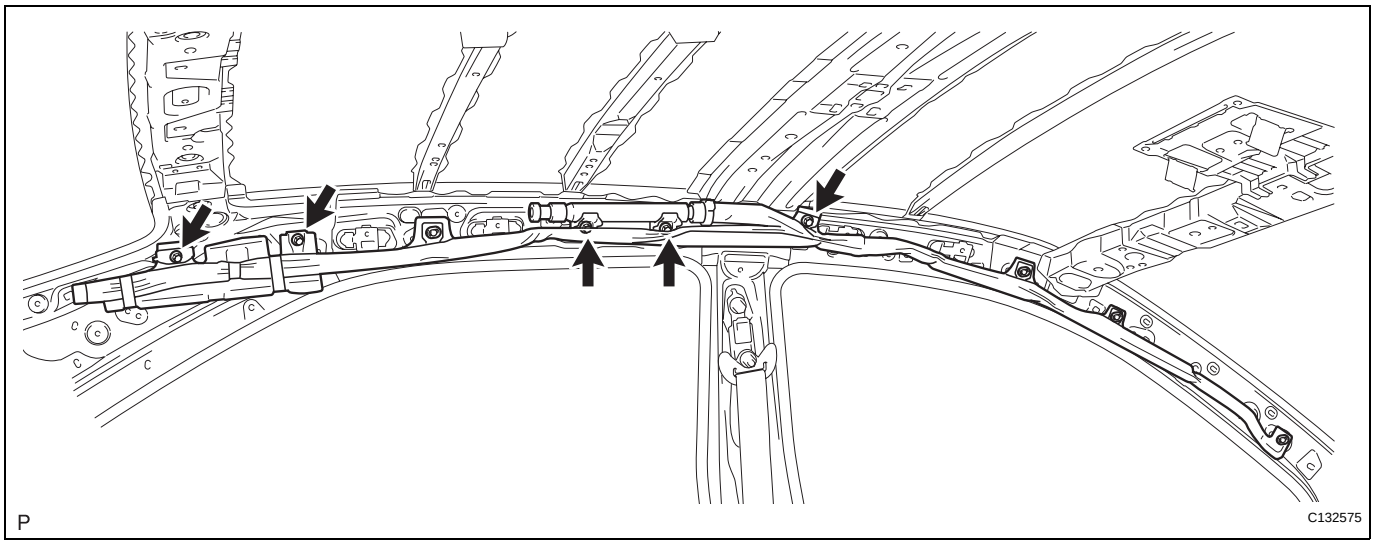
1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Install a 4 new clips and 4 new spacers to the curtain shield airbag assembly as shown in the illustration.

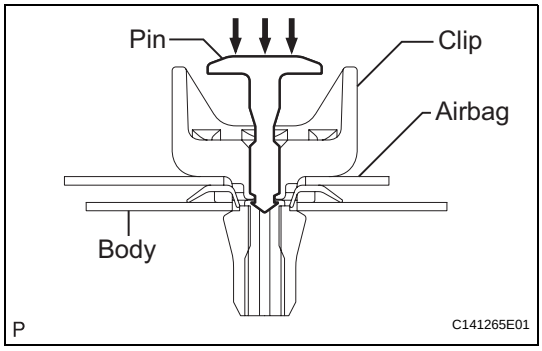
NOTICE:
- **Do not push in the pin.**
- **Make sure that the clips are installed in the correct direction.**
- **Make sure that the spacers are installed properly, in the correct direction, and that they are not damaged.**

(b) Install the curtain shield airbag assembly with the 5 new bolts.

Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)



NOTICE:
Do not twist the curtain shield airbag assembly when installing it.



(c) Install the 4 clips with the curtain shield airbag assembly to the body panel as shown in the illustration.

NOTICE:
Make sure that the pins of the clips are pushed in firmly.

(d) Mark the clips.

HINT:
Mark the clips to make sure that they are not reused.

(e) Connect the connector.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-45)
3. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-46)
4. INSTALL SUNSHADE TRIM HOLDER (w/ Rear Sunshade) (See page IR-47)
5. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) (See page IR-47)
6. INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-48)
7. INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-48)
8. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-49)
9. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-49)
10. INSTALL VISOR HOLDER (See page IR-49)
11. INSTALL VISOR ASSEMBLY LH (See page IR-50)
12. INSTALL VISOR ASSEMBLY RH (See page IR-50)
13. INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-50)
14. INSTALL FRONT PILLAR GARNISH LH (See page IR-51)
15. INSTALL FRONT PILLAR GARNISH RH (See page IR-52)
16. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-52)
17. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-52)
18. INSTALL UPPER CENTER PILLAR GARNISH LH (See page IR-53)
19. INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-53)
20. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-53)
21. INSTALL LAP BELT OUTER ANCHOR COVER (See page IR-53)
22. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-54)
23. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)
24. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)

25. **INSTALL UPPER CENTER PILLAR GARNISH RH (See page IR-54)**
26. **INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-54)**
27. **CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-54)**
28. **INSTALL LAP BELT OUTER ANCHOR COVER (See page IR-54)**
29. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-55)**
30. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-55)**
31. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-55)**
32. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-54)**
33. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-55)**
34. **INSTALL DOOR ASSIST GRIP COVER LH (See page ED-56)**
35. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-56)**
36. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (for Reclining Seat Type) (See page SE-69)**
37. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (for Reclining Seat Type)**
    HINT:
    Use the same procedures for the RH side and the LH side.
38. **INSTALL CENTER SEAT BACK ASSEMBLY (for Reclining Seat Type) (See page SE-71)**
39. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-72)**
40. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**
41. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**
42. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
43. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type)**

44. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**

45. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**

46. **INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**

47. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

48. **INSTALL REAR SEAT HEADREST ASSEMBLY**

49. **INSTALL REAR SEAT CUSHION ASSEMBLY**

50. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-55)**

51. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-56)**

52. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-56)**

53. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-56)**

54. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-41)**

55. **INSTALL SEAT TRACK COVER RH (for Power Seat) (See page SE-42)**

56. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-42)**

57. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

58. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

59. **INSTALL SEAT TRACK COVER LH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

60. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

61. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

62. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-24)**

63. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-25)**

64. **INSTALL SEAT TRACK COVER LH (for Manual Seat) (See page SE-25)**

65. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

66. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

67. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

68. **INSTALL SEAT TRACK COVER RH (for Manual Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

69. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

70. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

71. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
HINT:
(See page RS-242)

72. **INSPECT SRS WARNING LIGHT**
(a) Inspect the SRS warning light (See page RS-222).

73. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-42)**

74. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

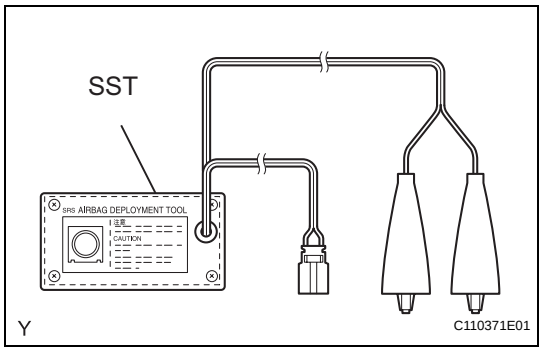
CAUTION:

- **Never dispose of a curtain shield airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag assembly.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

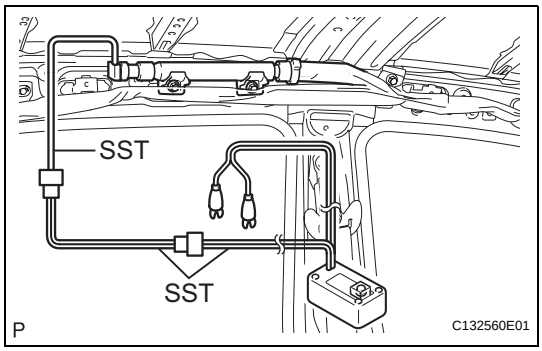
RS

1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

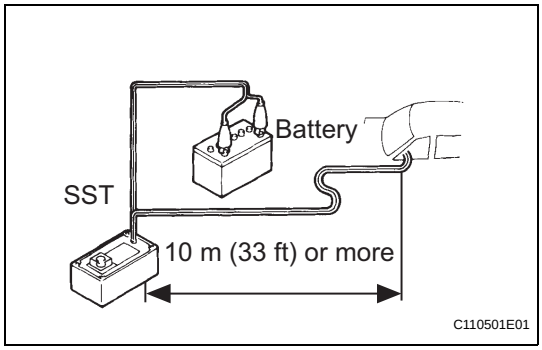
HINT:
Prepare a battery as the power source to deploy the airbag.



(a) Check the function of the SST (See page RS-353).
(b) Precaution (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Remove the roof headlining assembly (See page IR-22).
(e) Install the SST.
(1) Disconnect the connector from the curtain shield airbag assembly.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.



(2) After connecting the SST below to each other, connect them to the curtain shield airbag assembly.
SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(3) Move the SST at least 10 m (33 ft) away from the vehicle rear side window.
(4) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

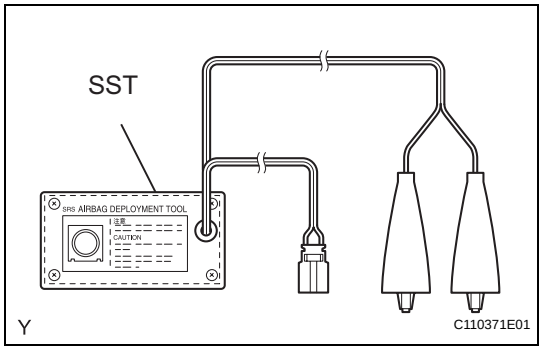
(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)
NOTICE:
- **When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

RS

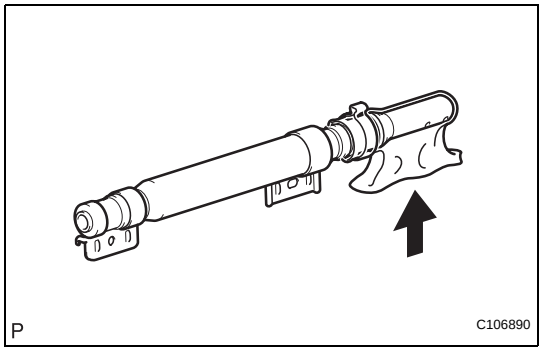
HINT:
Prepare a battery as the power source to deploy the airbag.



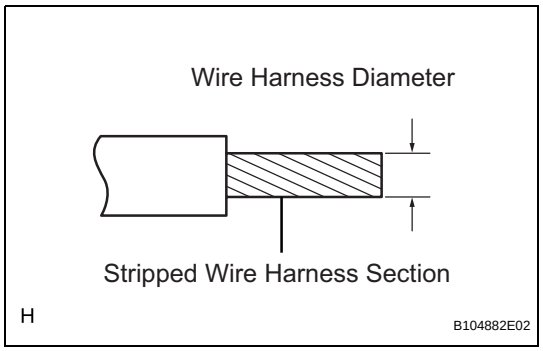
(a) Check the function of the SST (See page RS-353).

(b) Remove the curtain shield airbag assembly (See page RS-416).

CAUTION:
When removing the curtain shield airbag assembly, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.



(c) Cut off the deployment section of the curtain shield airbag assembly.

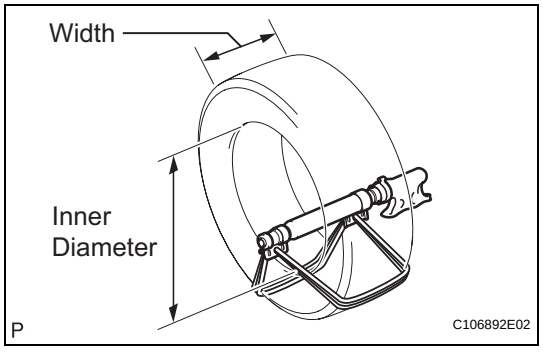


(d) Using a service-purpose wire harness for the vehicle, tie down the curtain shield airbag assembly to the tire.

Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 in.^{2} or more)

CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 in.^{2}).

HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x (Diameter)^2 divided by 4

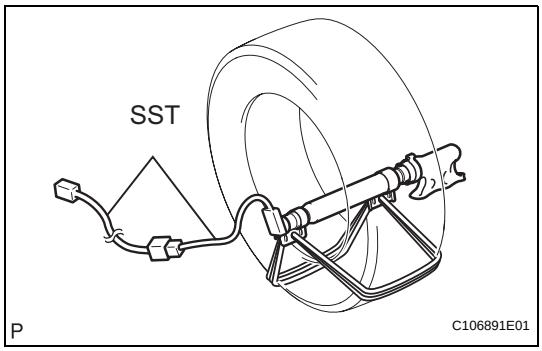


(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)

RS

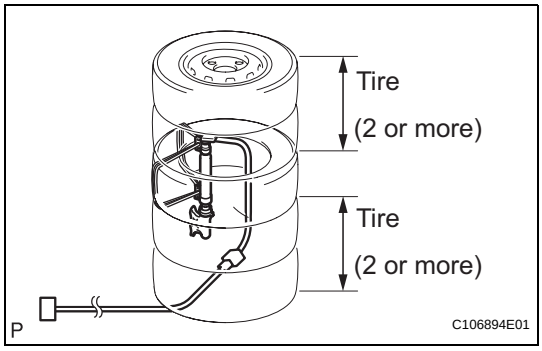
CAUTION:
Make sure that the wire harness is tight. If there is slack in the wire harness, the curtain shield airbag assembly may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airbag deployment, so use an extra tire.

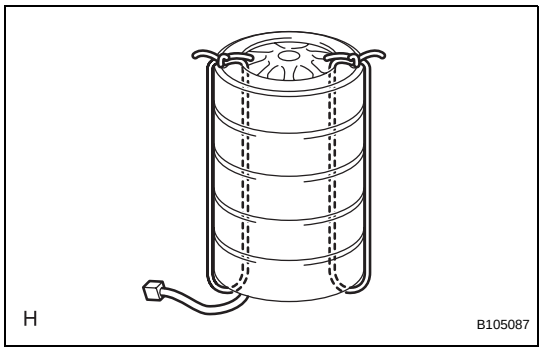


(e) Install the SST.
(1) After connecting the SST below to each other, connect them to the curtain shield airbag assembly.
SST 09082-00802 (09082-10801, 09082-20801)

(f) Place the tires.
CAUTION:
Do not place the deployment direction of the curtain shield airbag assembly facing toward the ground.

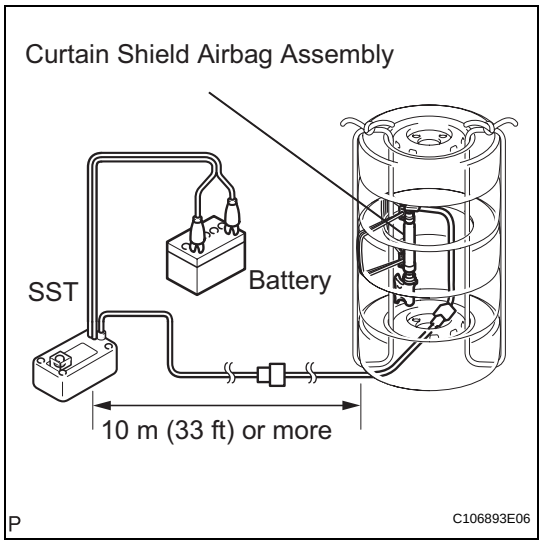
(1) Place at least 2 tires under the tire which the curtain shield airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the curtain shield airbag assembly is tied to. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.





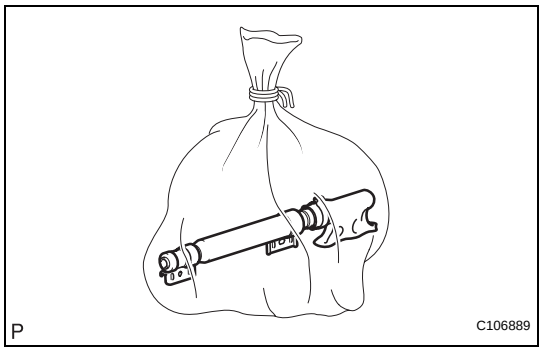
(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

RS



(g) Install the SST.
  (1) Connect the SST connector.
  SST 09082-00700
  NOTICE:
  To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
  (2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.

(h) Deploy the airbag.
  (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
  (2) Check that no one is within a 10 m (33 ft) radius of the tire which the curtain shield airbag assembly is tied to.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  When deploying the airbag, make sure that no one is near the tire.
  HINT:
  The airbag is deployed as the LED of the SST activation switch comes on.



(i) Dispose of the curtain shield airbag assembly.
CAUTION:
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

  (1) Remove the curtain shield airbag assembly from the tire.
  (2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

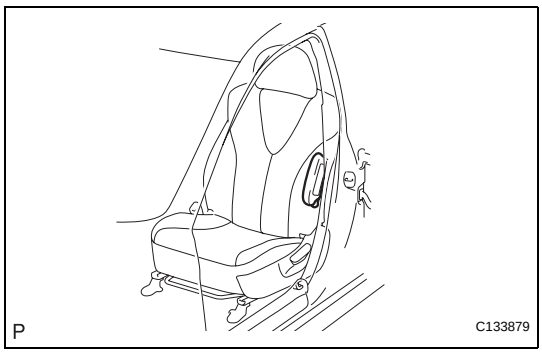
FRONT SEAT SIDE AIRBAG ASSEMBLY

ON-VEHICLE INSPECTION

1. FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-32).

(b) With the front seat side airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat assembly with a new one:
Cuts, minute cracks or marked discoloration on the front seatback assembly around the front seat side airbag assembly.

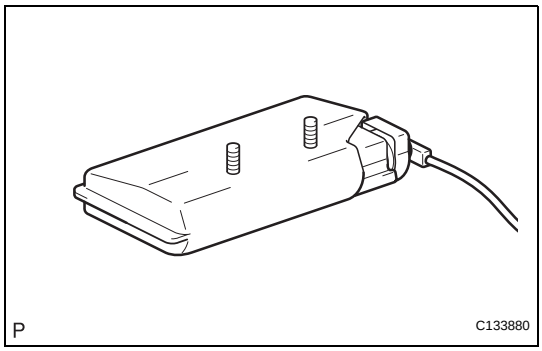


2. FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-32).

(b) With the front seat side airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat side airbag assembly with a new one:
- Cuts, minute cracks or marked discoloration on the front seat side airbag assembly.
- Cracks or other damage to the wire harness or connector.

CAUTION:
Be sure to follow the correct removal and installation procedures.



RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the front seat side airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

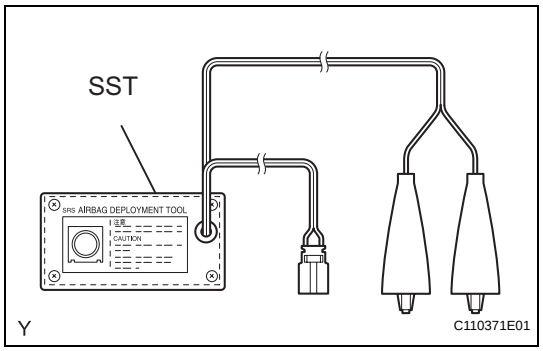
CAUTION:

- **Never dispose of a front seat side airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front seat side airbag assembly.**
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

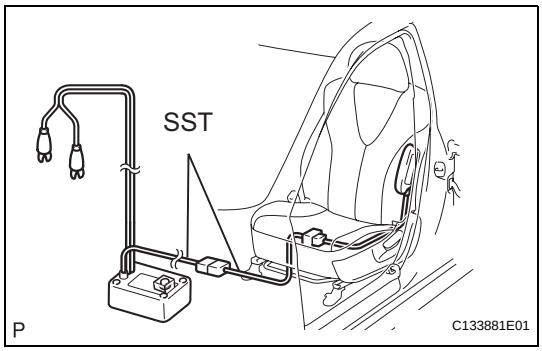
RS

1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.

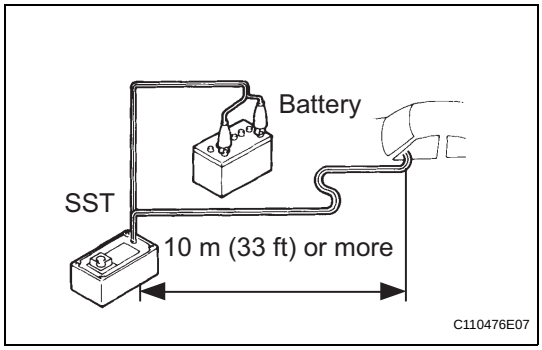


(a) Check the function of the SST (See page RS-353).
(b) Precaution (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Remove the front seat assembly (See page SE-16 for Manual Seat, SE-30 for Power Seat).
(e) Install the SST.
(1) Disconnect the connector (yellow colored one) from the front seat side airbag assembly.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.



(2) Connect the SST connector to the front seat side airbag assembly connector.
SST 09082-00700, 09082-00750
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Install the front seat assembly (See page SE-24 for Manual Seat, SE-41 for Power Seat).



(4) Move the SST at least 10 m (33 ft) away from the vehicle front side window.

(5) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.

(6) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

(f) Deploy the airbag.

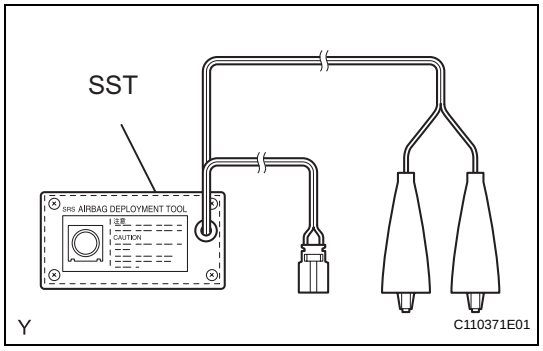
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

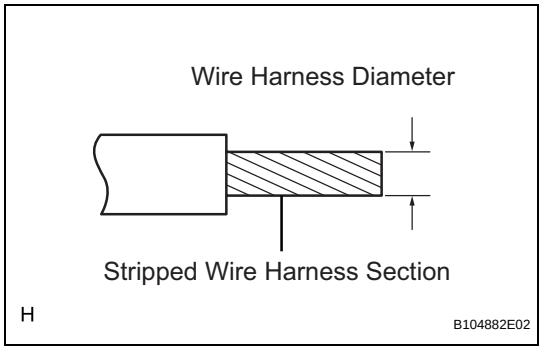
2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)
NOTICE:
- **When disposing of the front seat side airbag assembly, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

RS



HINT:
Prepare a battery as the power source to deploy the airbag.

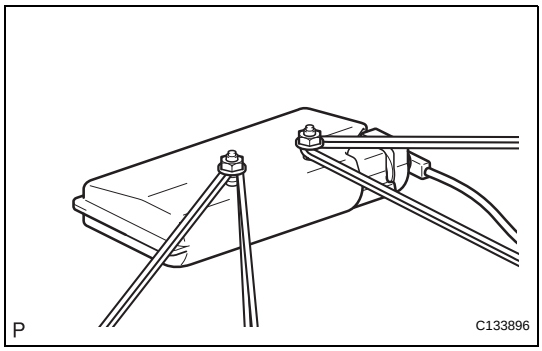
(a) Check the function of the SST (See page RS-355).
(b) Remove the front seat side airbag assembly.
  (1) Remove the front seat assembly (See page SE-16 for Manual Seat, SE-30 for Power Seat).
  (2) Remove the 2 nuts and the front seat side airbag assembly from the seatback assembly (See page SE-17 for Manual Seat, SE-31 for Power Seat).
  CAUTION:
  - **When removing the front seat side airbag assembly, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
  - **When storing the front seat side airbag assembly, keep the airbag deployment side facing upward.**



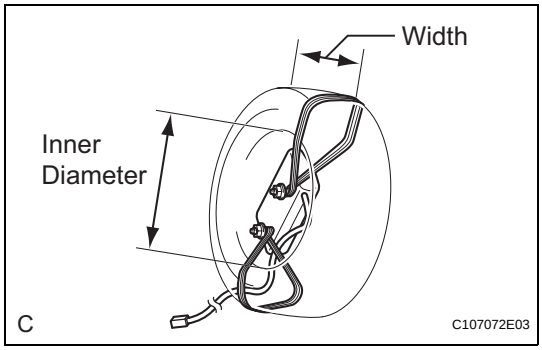
(c) Using a service-purpose wire harness for the vehicle, tie down the front seat side airbag assembly to the tire.
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x $(Diameter)^2$ divided by 4
CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the front seat side airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

  (1) Install the 2 nuts to the front seat side airbag assembly.

RS

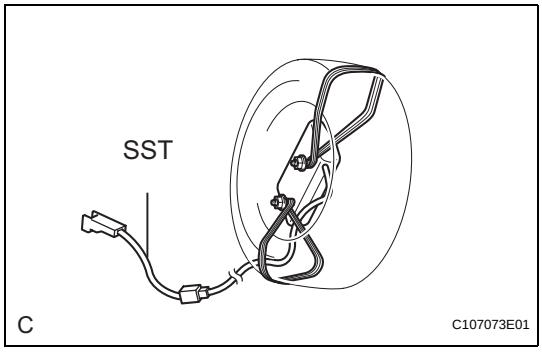


(2) Wind the wire harness around the stud bolts of the front seat side airbag assembly as shown in the illustration.

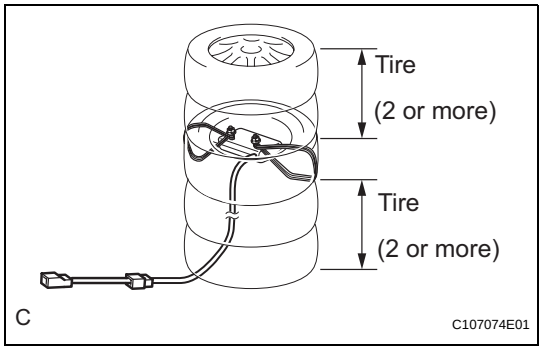


(3) Position the front seat side airbag assembly inside the tire .
Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)
CAUTION:
- **Make sure that the wire harness is tight. If there is slack in wire harness, the front seat side airbag assembly may become loose due to the shock when the airbag is deployed.**
- **Always tie down the front seat side airbag assembly with the airbag deployment direction facing inside the tire.**

NOTICE:
The tire will be marked by the airbag deployment, so use an extra tire.

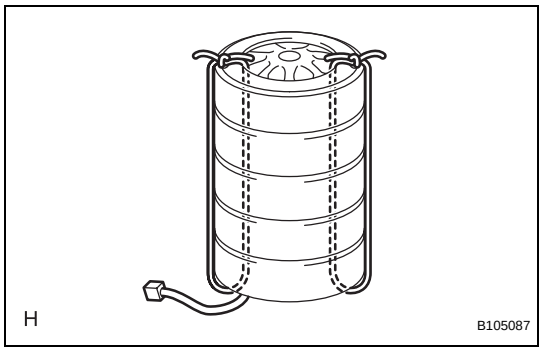


(d) Install the SST.
(1) Connect the SST connector to the front seat side airbag assembly connector.
SST 09082-00750

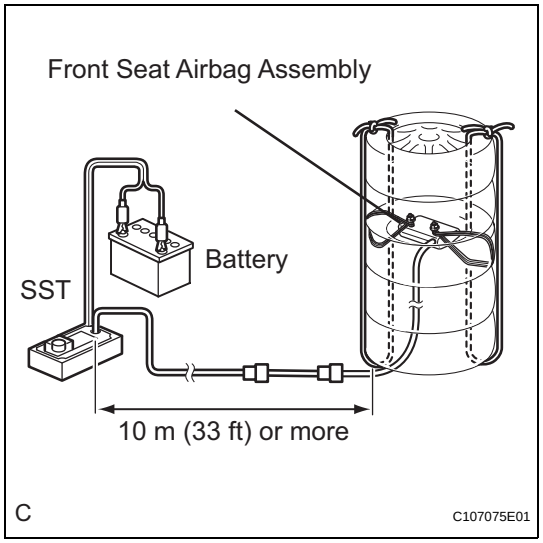


(e) Place the tires.
(1) Place at least 2 tires under the tire which the front seat side airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the front seat side airbag assembly is tied to. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.

RS

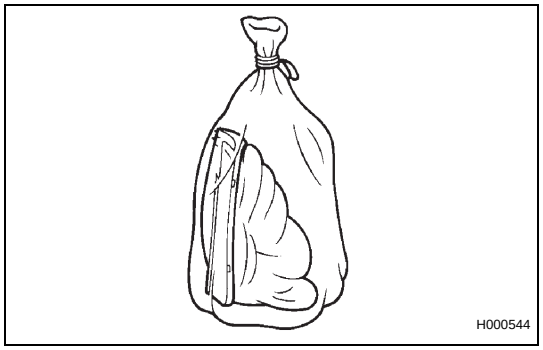


(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.



(f) Install the SST.
(1) Connect the SST connector.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
(2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.

(g) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire which the front seat side airbag assembly is tied to.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.



(h) Dispose of the front seat side airbag assembly.
CAUTION:
- **The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the front seat side airbag assembly from the tire.

RS

(2) Place the front seat side airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

ON-VEHICLE INSPECTION

1. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-32).

2. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (See page RS-32).

3. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)**
   (a) Replace the center airbag sensor assembly.
   CAUTION:
   Be sure to follow the correct removal and installation procedures.
   HINT:
   The center airbag sensor assembly should be replaced after any of the airbags has deployed, as it has been subjected to the impact.

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-24)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-24)**
5. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-24)**
6. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-25)**
7. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-25)**
8. **REMOVE UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-25)**
9. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-26)**
10. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-26)**
11. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
12. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**

15. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-26)**
16. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-26)**
17. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-23)**
18. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-23)**
19. **REMOVE CONSOLE BOX POCKET (See page IP-28)**

20. REMOVE CONSOLE BOX CARPET (See page IP-28)

21. REMOVE CONSOLE BOX ASSEMBLY (See page IP-28)

22. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-30)

23. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-29)

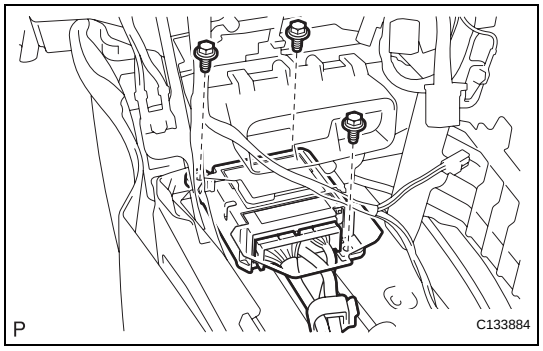
24. REMOVE NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-154)

25. REMOVE CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn back the carpet.

(b) Disconnect the holder (with connectors).

(c) Remove the 3 bolts and center airbag sensor assembly.



INSTALLATION

1. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY**
   (a) Check that the ignition switch is off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

   (c) Install the center airbag sensor assembly with the 3 bolts.
   Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
   NOTICE:
   - **If the center airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the center airbag sensor assembly, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

   (d) Check that there is no looseness in the installation parts of the center airbag sensor assembly.
   (e) Connect the holder (with connectors).
   (f) Check that the water-proof sheet is properly set.
2. **INSTALL NO. 1 CONSOLE BOX DUCT (for Automatic Air Conditioning System) (See page AC-177)**
3. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-50)**
4. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-49)**
5. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-51)**
6. **INSTALL CONSOLE BOX CARPET (See page IP-51)**

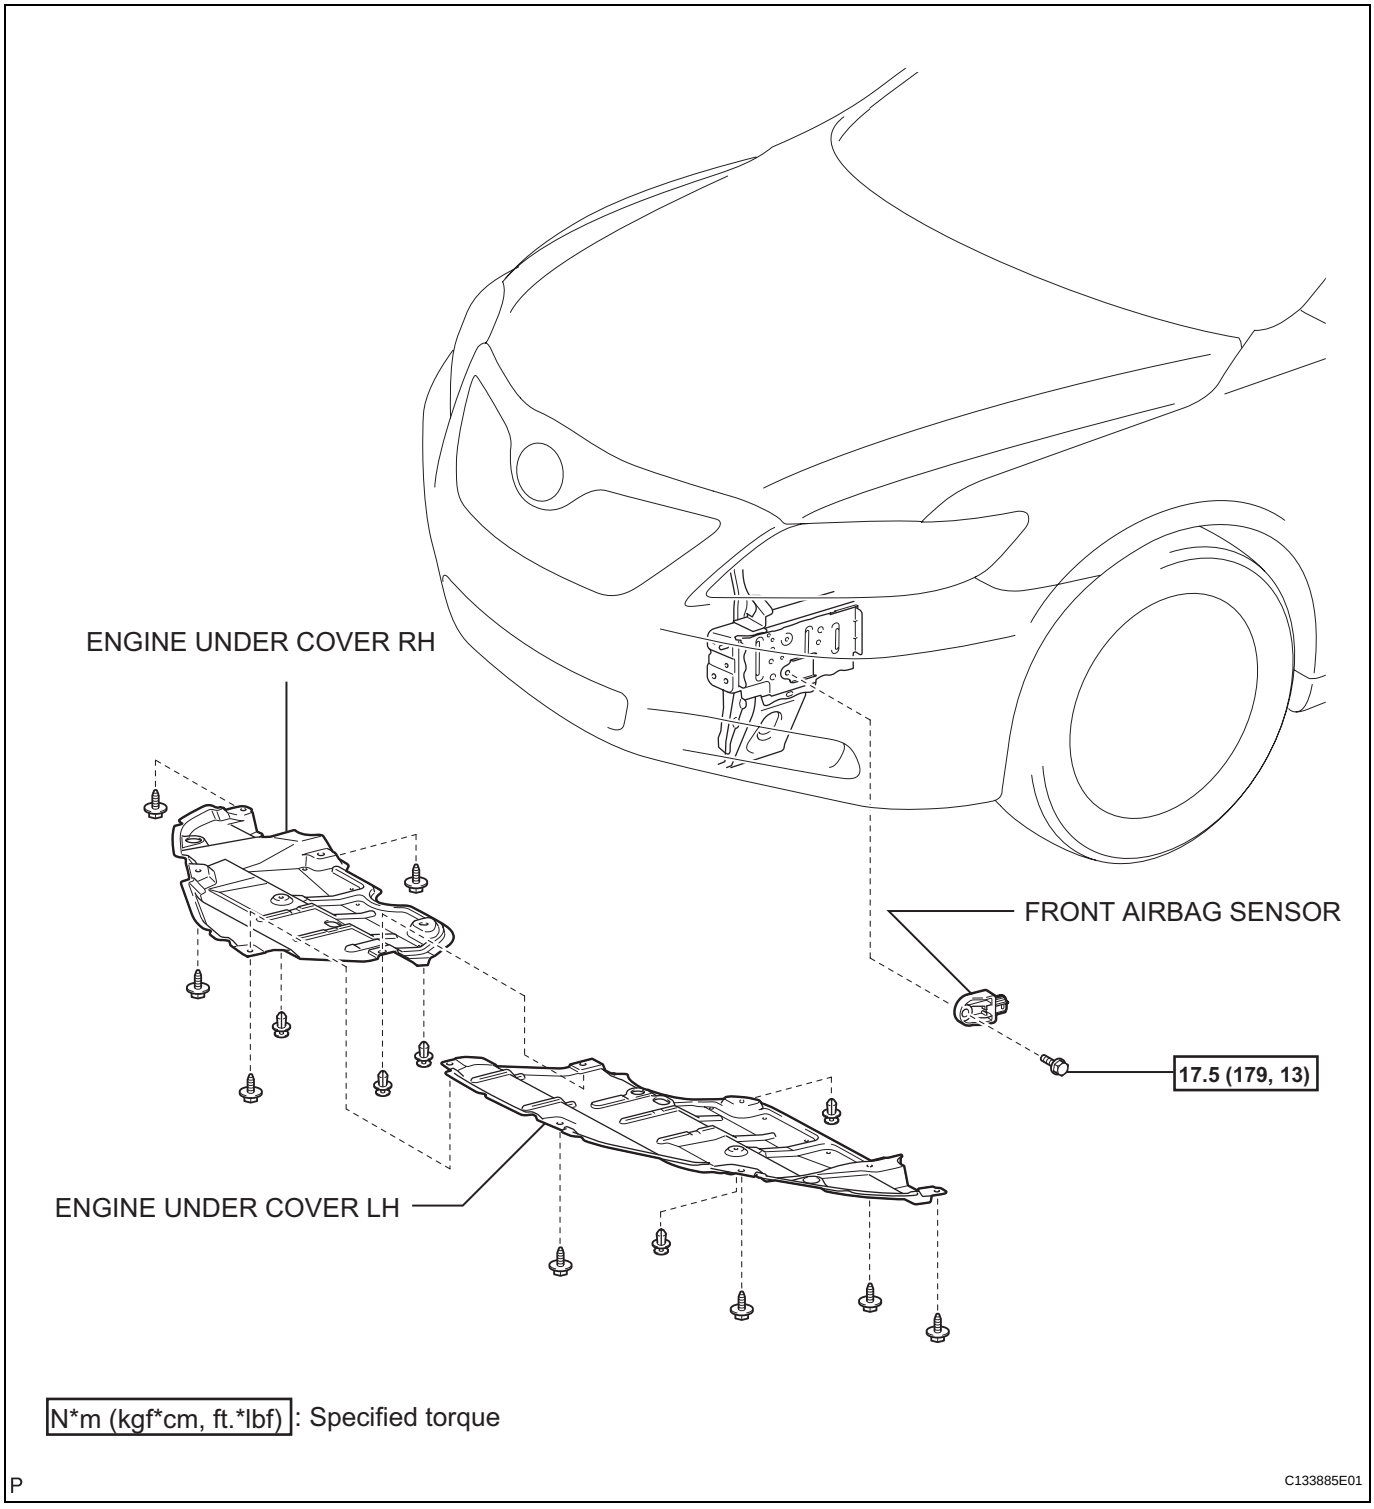
12. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-58)**
13. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**

14. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
15. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-52)**
16. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Manual Transaxle) (See page IP-53)**
17. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
18. **INSTALL UPPER CONSOLE PANEL (for Manual Transaxle) (See page IP-54)**
19. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-53)**
20. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-54)**
21. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-55)**
22. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) (See page IP-55)**
23. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) (See page IP-55)**
24. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
25. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-32).

FRONT AIRBAG SENSOR

COMPONENTS



RS

ON-VEHICLE INSPECTION

1. **INSPECT FRONT AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-32).

2. **INSPECT FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (See page RS-32).
   (b) When the front bumper of the vehicle or its area is damaged, check if there is any damage to the front airbag sensor. If there are any defects as mentioned below, replace the front airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   Be sure to follow the correct removal and installation procedures.

3. **INSPECT FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)**
   (a) Replace the front airbag sensor.
   CAUTION:
   Be sure to follow the correct removal and installation procedures.
   HINT:
   The front airbag sensor on the impacted side should be replaced after the steering pad, front passenger airbag assembly or driver side knee airbag assembly has deployed.

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

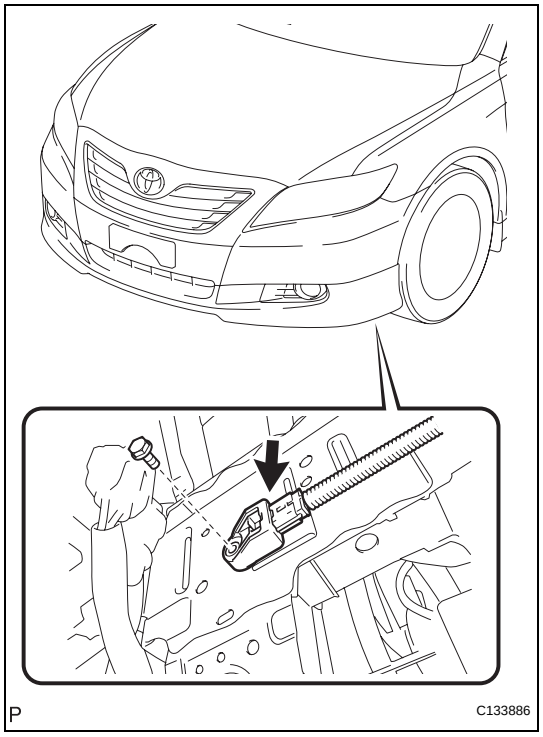
3. REMOVE ENGINE UNDER COVER RH

4. REMOVE ENGINE UNDER COVER LH

5. REMOVE FRONT AIRBAG SENSOR

(a) Remove the bolt and front airbag sensor from the body.

(b) Disconnect the connector from the front airbag sensor.



RS

INSTALLATION

HINT:

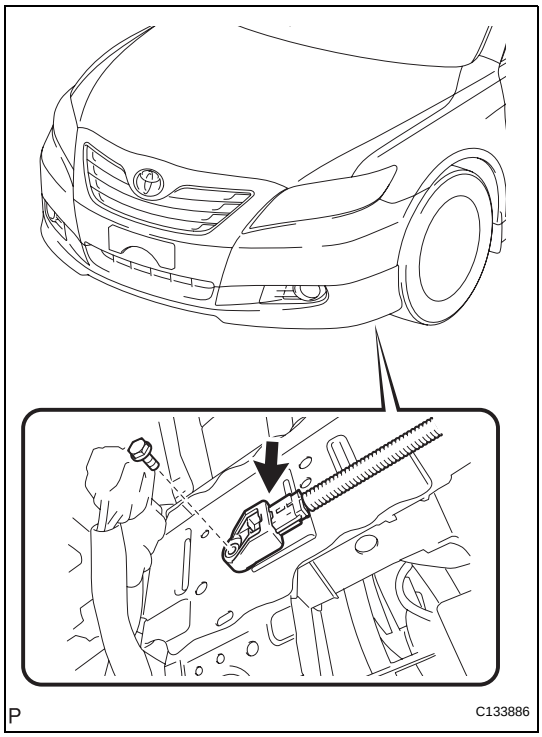
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the battery negative (-) cable is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Connect the connector.

(d) Install the front airbag sensor with the bolt.
Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
NOTICE:
- **If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **When installing the front airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

(e) Check that there is no looseness in the installation parts of the front airbag sensor.

2. INSTALL ENGINE UNDER COVER LH

3. INSTALL ENGINE UNDER COVER RH

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

5. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

RS

SIDE AIRBAG SENSOR

COMPONENTS

ON-VEHICLE INSPECTION

1. **INSPECT SIDE AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-32).

2. **INSPECT SIDE AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (See page RS-32).
   (b) When the center pillar of the vehicle or its area is damaged, check if there is any damage to the side airbag sensor. If there are any defects as mentioned below, replace the side airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   Be sure to follow the correct removal and installation procedures.

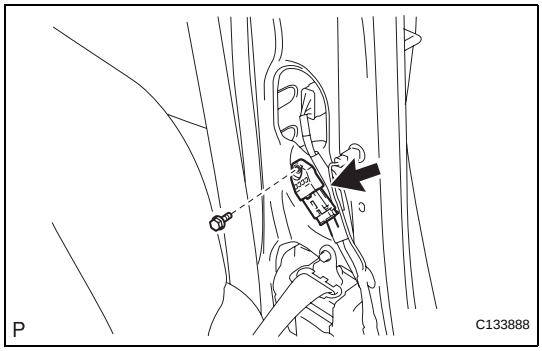
3. **INSPECT SIDE AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)**
   (a) Replace the side airbag sensor.
   CAUTION:
   Be sure to follow the correct removal and installation procedures.
   HINT:
   The side airbag sensor on the impacted side should be replaced after the front seat side airbag assembly and curtain shield airbag assembly have deployed.

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-24)**
4. **REMOVE REAR DOOR SCUFF PLATE (See page IR-24)**
5. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
6. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
7. **REMOVE LOWER CENTER PILLAR GARNISH (See page IR-25)**
8. **REMOVE SIDE AIRBAG SENSOR**
   (a) Remove the bolt and side airbag sensor from the body.
   (b) Disconnect the connector from the side airbag sensor.



RS

INSTALLATION

HINT:

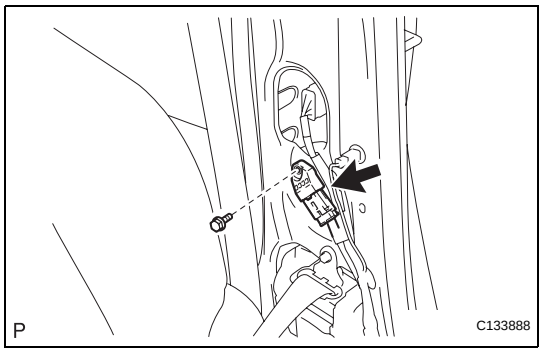
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL SIDE AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the battery negative (-) cable is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Install the side airbag sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
NOTICE:
- **If the side airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **When installing the side airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

(d) Check that there is no looseness in the installation parts of the side airbag sensor.

(e) Connect the connector.

2. INSTALL LOWER CENTER PILLAR GARNISH (See page IR-53)

3. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP

4. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP

5. INSTALL REAR DOOR SCUFF PLATE (See page IR-56)

6. INSTALL FRONT DOOR SCUFF PLATE (See page IR-54)

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

8. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

ON-VEHICLE INSPECTION

1. **INSPECT REAR AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-32).

2. **INSPECT REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (See page RS-32).
   (b) When the quarter panel of the vehicle or its area is damaged, check if there is any damage to the rear airbag sensor. If there are any defects as mentioned below, replace the rear airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   Be sure to follow the correct removal and installation procedures.

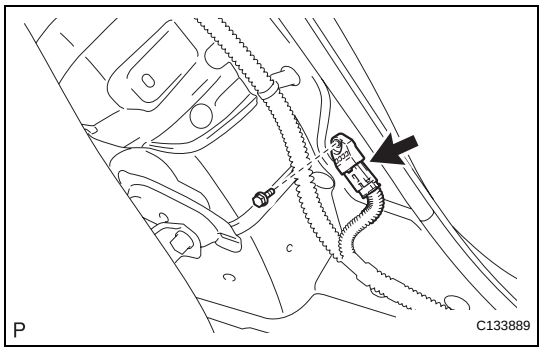
3. **INSPECT REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)**
   (a) Replace the rear airbag sensor.
   CAUTION:
   Be sure to follow the correct removal and installation procedures.
   HINT:
   The rear airbag sensor on the impacted side should be replaced after the curtain shield airbag assembly has deployed.

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)**
4. **REMOVE BENCH TYPE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)**
5. **REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-77)**
6. **REMOVE REAR DOOR SCUFF PLATE (for Fold Down Seat Type) (See page IR-24)**
7. **REMOVE REAR DOOR SCUFF PLATE (for Reclining Seat Type) (See page IR-24)**
8. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP (for Fold Down Seat Type)**
9. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP (for Reclining Seat Type)**
10. **REMOVE ROOF SIDE INNER GARNISH (for Fold Down Seat Type) (See page IR-26)**
11. **REMOVE REAR SIDE SEAT BACK ASSEMBLY (for Fold Down Seat Type) (See page SE-48)**
12. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY (for Reclining Seat Type) (See page SE-68)**
13. **REMOVE REAR SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
14. **REMOVE REAR SEAT HEADREST ASSEMBLY CENTER (for Fixed Seat Type)**
15. **REMOVE REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-77)**

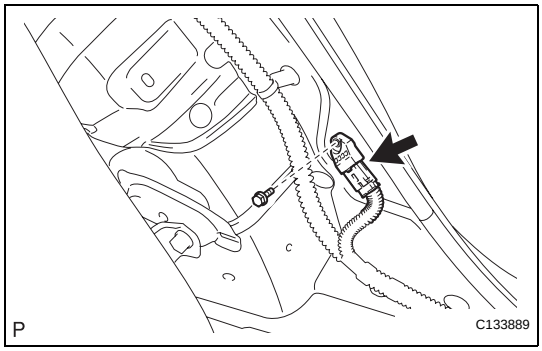


16. REMOVE REAR AIRBAG SENSOR

(a) Disconnect the connector.

(b) Remove the bolt and rear airbag sensor.

INSTALLATION



1. **INSTALL REAR AIRBAG SENSOR**
   (a) Check that the ignition switch is off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Install the rear airbag sensor with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **If the rear airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the rear airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
   (d) Check that there is no looseness in the installation parts of the rear airbag sensor.
   (e) Connect the connector.
2. **INSTALL REAR SEATBACK ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
3. **INSTALL REAR SEAT HEADREST ASSEMBLY CENTER (for Fixed Seat Type)**
4. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Fixed Seat Type)**
5. **INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY (for Reclining Seat Type) (See page SE-69)**
6. **INSTALL REAR SIDE SEAT BACK ASSEMBLY (for Fold Down Seat Type) (See page SE-57)**
7. **INSTALL ROOF SIDE INNER GARNISH (for Fold Down Seat Type) (See page IR-52)**
8. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP (for Reclining Seat Type)**
9. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP (for Fold Down Seat Type)**
10. **INSTALL REAR DOOR SCUFF PLATE (for Reclining Seat Type) (See page IR-56)**
11. **INSTALL REAR DOOR SCUFF PLATE (for Fold Down Seat Type) (See page IR-56)**
12. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Seat Type) (See page SE-84)**
13. **INSTALL BENCH TYPE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**

RS

14. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**

15. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

16. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-32).

RS

ON-VEHICLE INSPECTION

1. INSPECT SEAT POSITION SENSOR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-32).

2. INSPECT SEAT POSITION SENSOR (VEHICLE INVOLVED IN COLLISION)

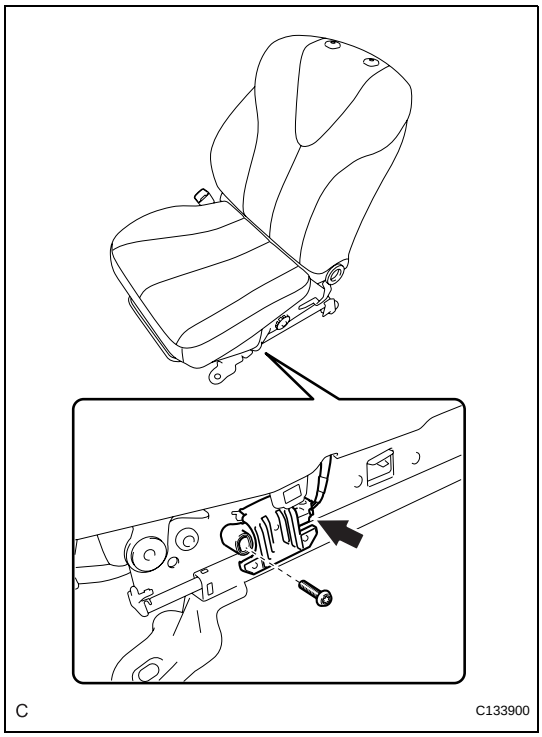
(a) Perform a diagnostic system check (See page RS-32).

(b) Even if the airbag was not deployed, check if there is any damage to the seat position sensor.
If there are any defects as mentioned below, replace the seat position sensor with a new one:
- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.

CAUTION:
Be sure to follow the correct removal and installation procedures.

REMOVAL

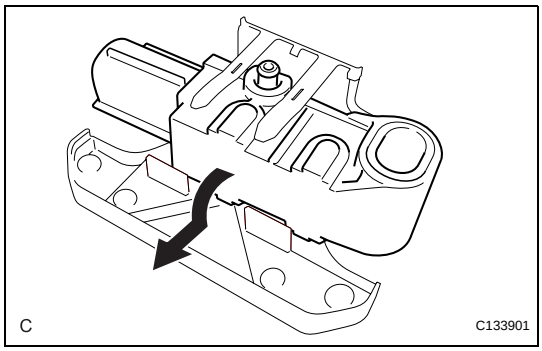
1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
4. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
5. **REMOVE SEAT TRACK COVER LH (for Manual Seat) (See page SE-16)**
6. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-30)**
7. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-16)**
8. **REMOVE SEAT TRACK COVER RH (for Power Seat) (See page SE-30)**
9. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-16)**
10. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-30)**
11. **REMOVE VERTICAL ADJUSTER COVER (for Manual Seat) (See page SE-17)**
12. **REMOVE VERTICAL ADJUSTING HANDLE (for Manual Seat) (See page SE-17)**
13. **REMOVE RECLINING ADJUSTER RELEASE HANDLE (for Manual Seat) (See page SE-18)**
14. **REMOVE FRONT SEAT CUSHION SHIELD (for Manual Seat) (See page SE-18)**



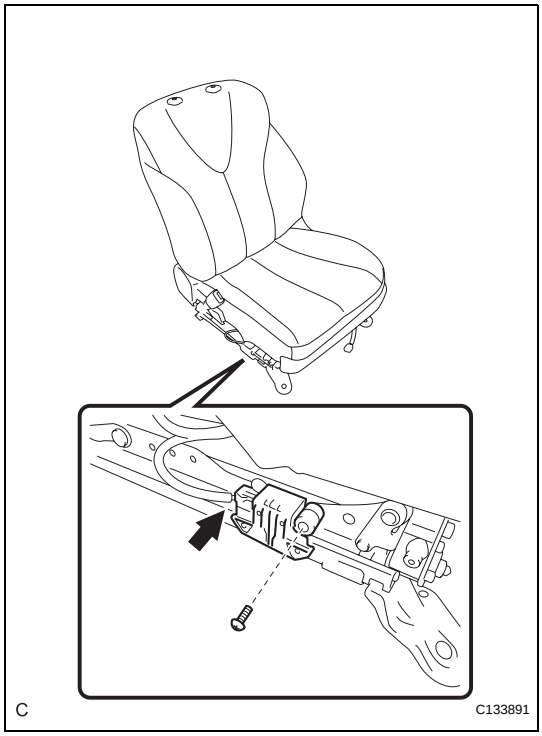
15. REMOVE SEAT POSITION SENSOR (for Manual Seat)

(a) Disconnect the connector.

(b) Using a "torx" socket wrench (T30), remove the "torx" screw and seat position sensor with the seat slide position sensor protector.



(c) Remove the seat position sensor from the seat slide position sensor protector as shown in the illustration.

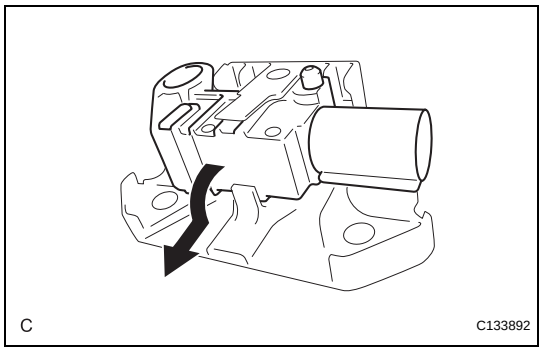


16. REMOVE SEAT POSITION SENSOR (for Power Seat)

(a) Disconnect the connector.

(b) Using a "torx" socket wrench (T30), separate the "torx" screw and seat position sensor with the seat slide position sensor protector.

RS



(c) Remove the seat position sensor from the seat slide position sensor protector as shown in the illustration.

INSTALLATION

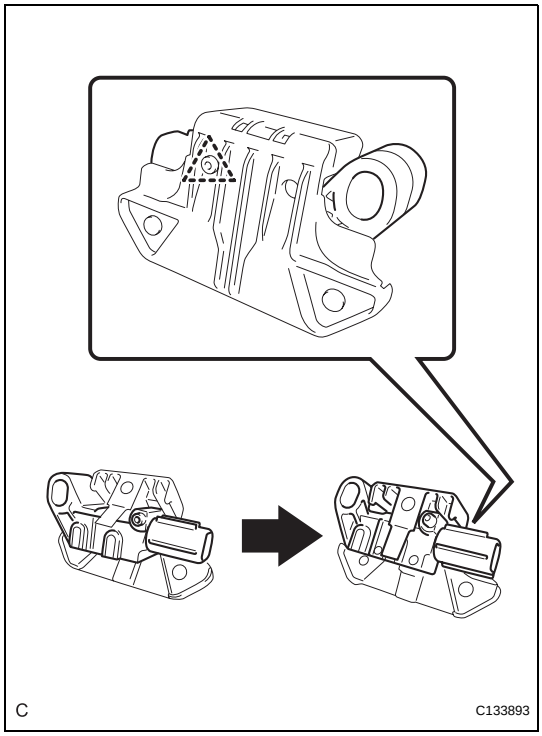
1. INSTALL SEAT POSITION SENSOR (for Power Seat)

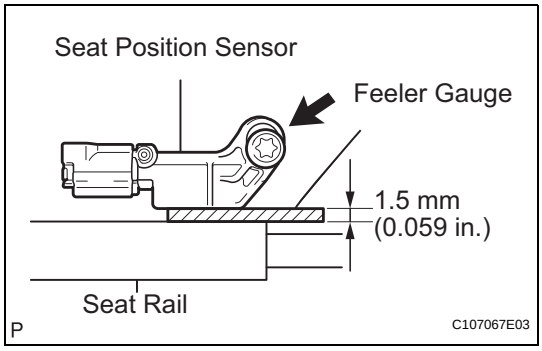
(a) Check that the ignition switch is off.

(b) Check that the negative battery (-) cable is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

(c) Engage the pin and install the seat position sensor to the seat slide position sensor protector as shown in the illustration.





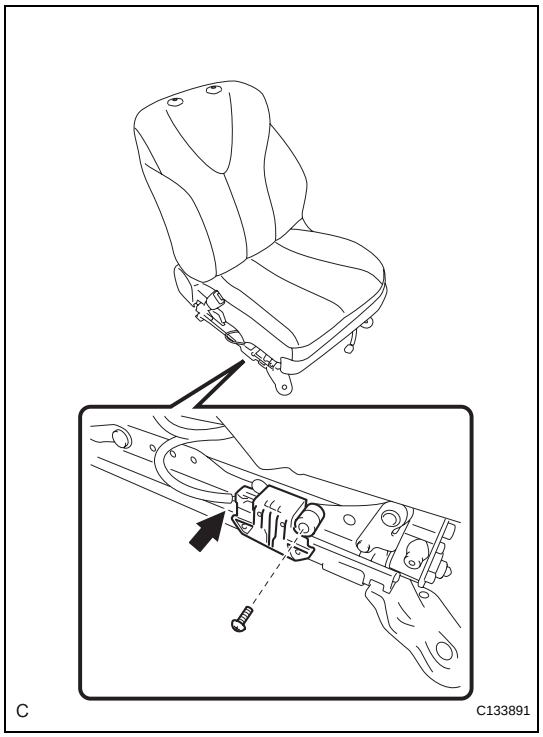
(d) Using a feeler gauge 1.5 mm (0.059 in.), temporarily install the seat position sensor.

NOTICE:

- **If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.**
- **When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

HINT:

Be sure that a clearance between the seat position sensor and the seat rail is within 1.1 mm (0.043 in.) to 1.9 mm (0.075 in.).



(e) Using a "torx" socket wrench (T30), tighten the "torx" screw to install the seat position sensor.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(f) Make sure that a clearance between the seat position sensor and the seat rail is within 1.1 mm (0.043 in.) to 1.9 mm (0.075 in.).

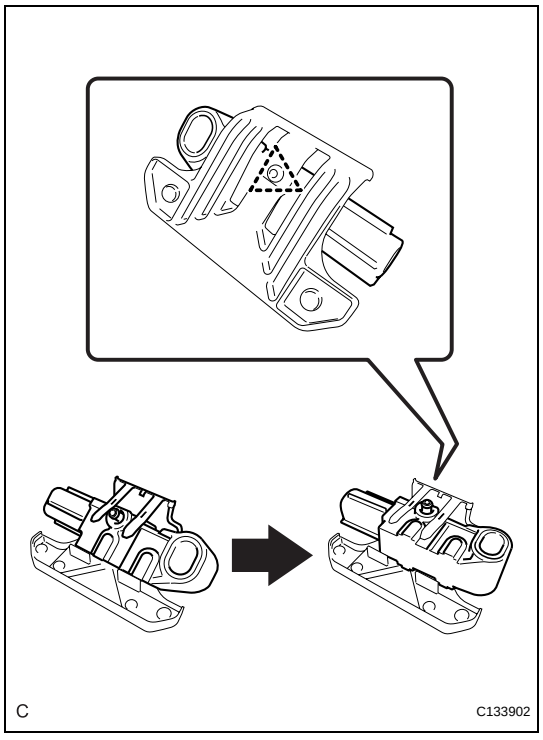
(g) Check that there is no looseness in the installation parts of the seat position sensor.

(h) Connect the connector.

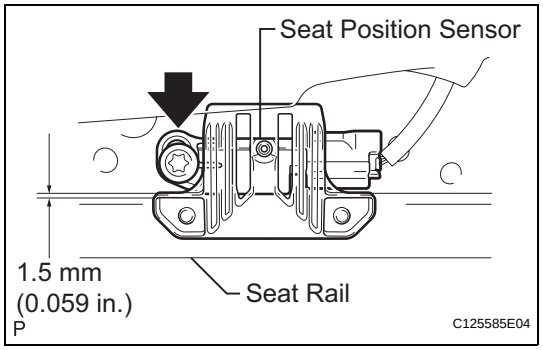
2. INSTALL SEAT POSITION SENSOR (for Manual Seat)

(a) Check that the ignition switch is off.

(b) Check that the negative battery (-) cable is disconnected.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Engage the pin and install the seat position sensor to the seat slide position sensor protector as shown in the illustration.

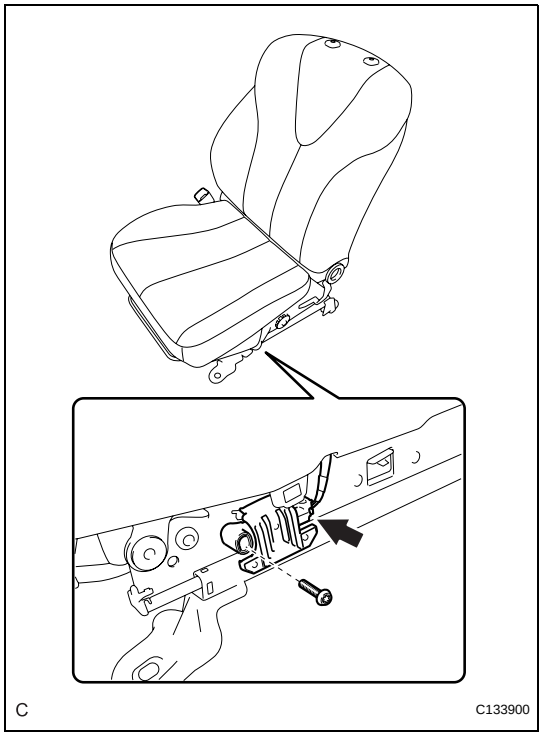


(d) Using a feeler gauge 1.5 mm (0.059 in.), temporarily install the seat position sensor.
NOTICE:
- **If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.**

RS

- **When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

HINT:
Be sure that a clearance between the seat position sensor and the seat rail is within 1.1 mm (0.043 in.) to 1.9 mm (0.075 in.).



(e) Using a "torx" socket wrench (T30), tighten the "torx" screw to install the seat position sensor.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(f) Make sure that a clearance between the seat position sensor and the seat rail is within 1.1 mm (0.043 in.) to 1.9 mm (0.075 in.).

(g) Check that there is no looseness in the installation parts of the seat position sensor.

(h) Connect the connector.

3. **INSTALL FRONT SEAT CUSHION SHIELD (for Manual Seat)**
4. **INSTALL RECLINING ADJUSTER RELEASE HANDLE (for Manual Seat)**
5. **INSTALL VERTICAL ADJUSTING HANDLE (for Manual Seat)**
6. **INSTALL VERTICAL ADJUSTER COVER (for Manual Seat)**
7. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-41)**
8. **INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat) (See page SE-24)**
9. **INSTALL SEAT TRACK COVER RH (for Power Seat) (See page SE-42)**
10. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Manual Seat) (See page SE-25)**
11. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-42)**
12. **INSTALL SEAT TRACK COVER LH (for Manual Seat) (See page SE-25)**
13. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
14. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
15. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
16. **INSPECT POWER SEAT OPERATION (for Power Seat)**
17. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

18. INSPECT SEAT HEATER OPERATION (w/ Seat Heater System) (See page SE-42)

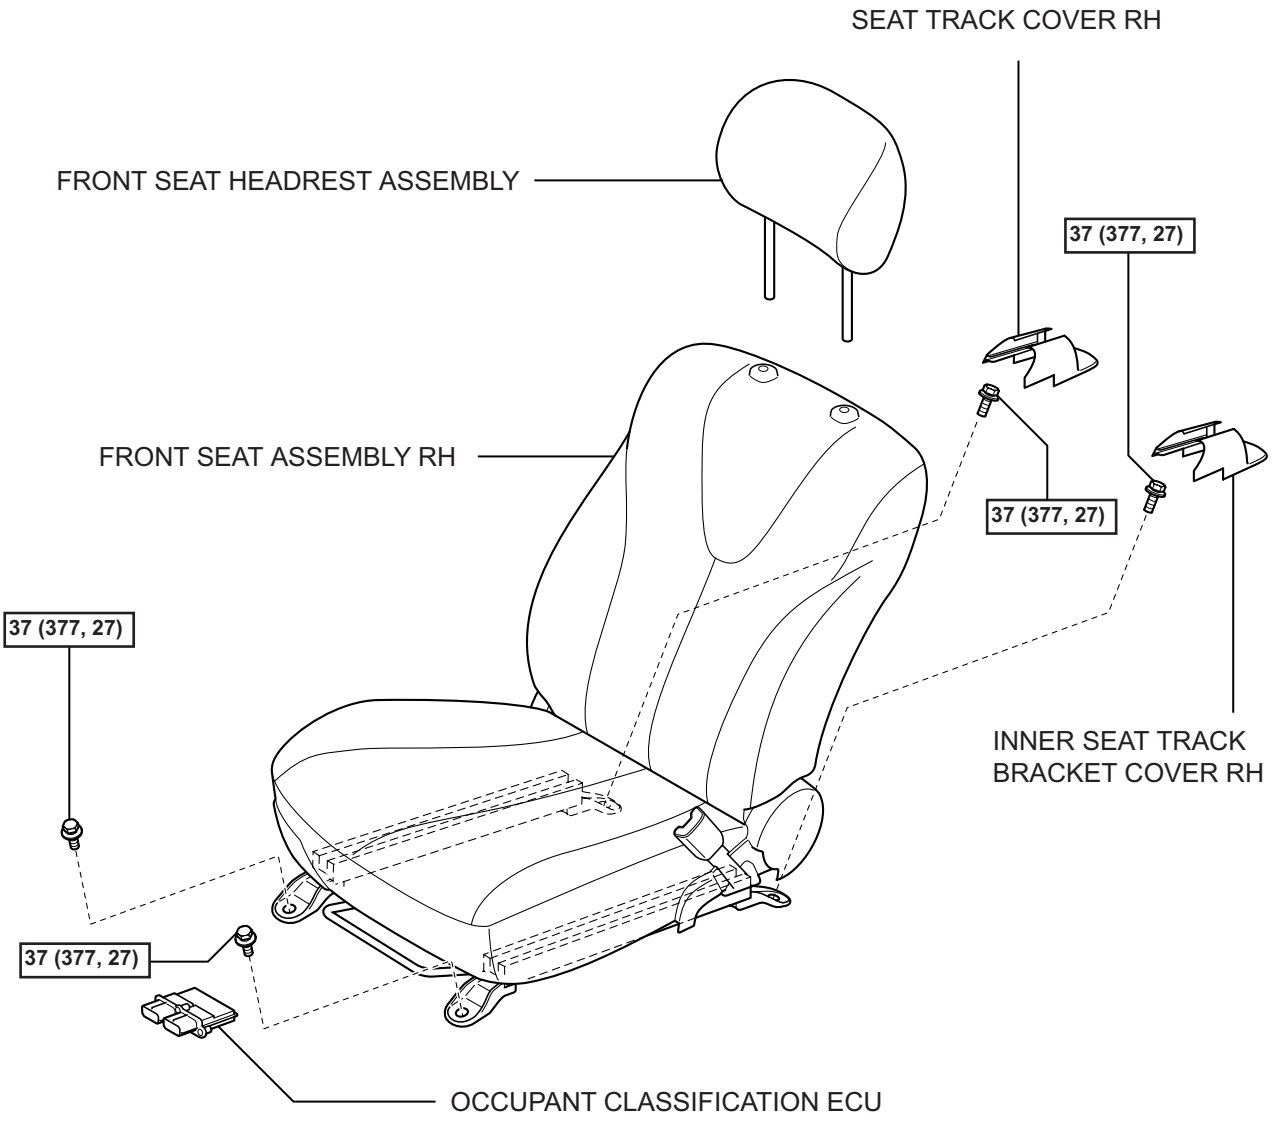
19. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

OCCUPANT CLASSIFICATION ECU

COMPONENTS

for Manual Seat:



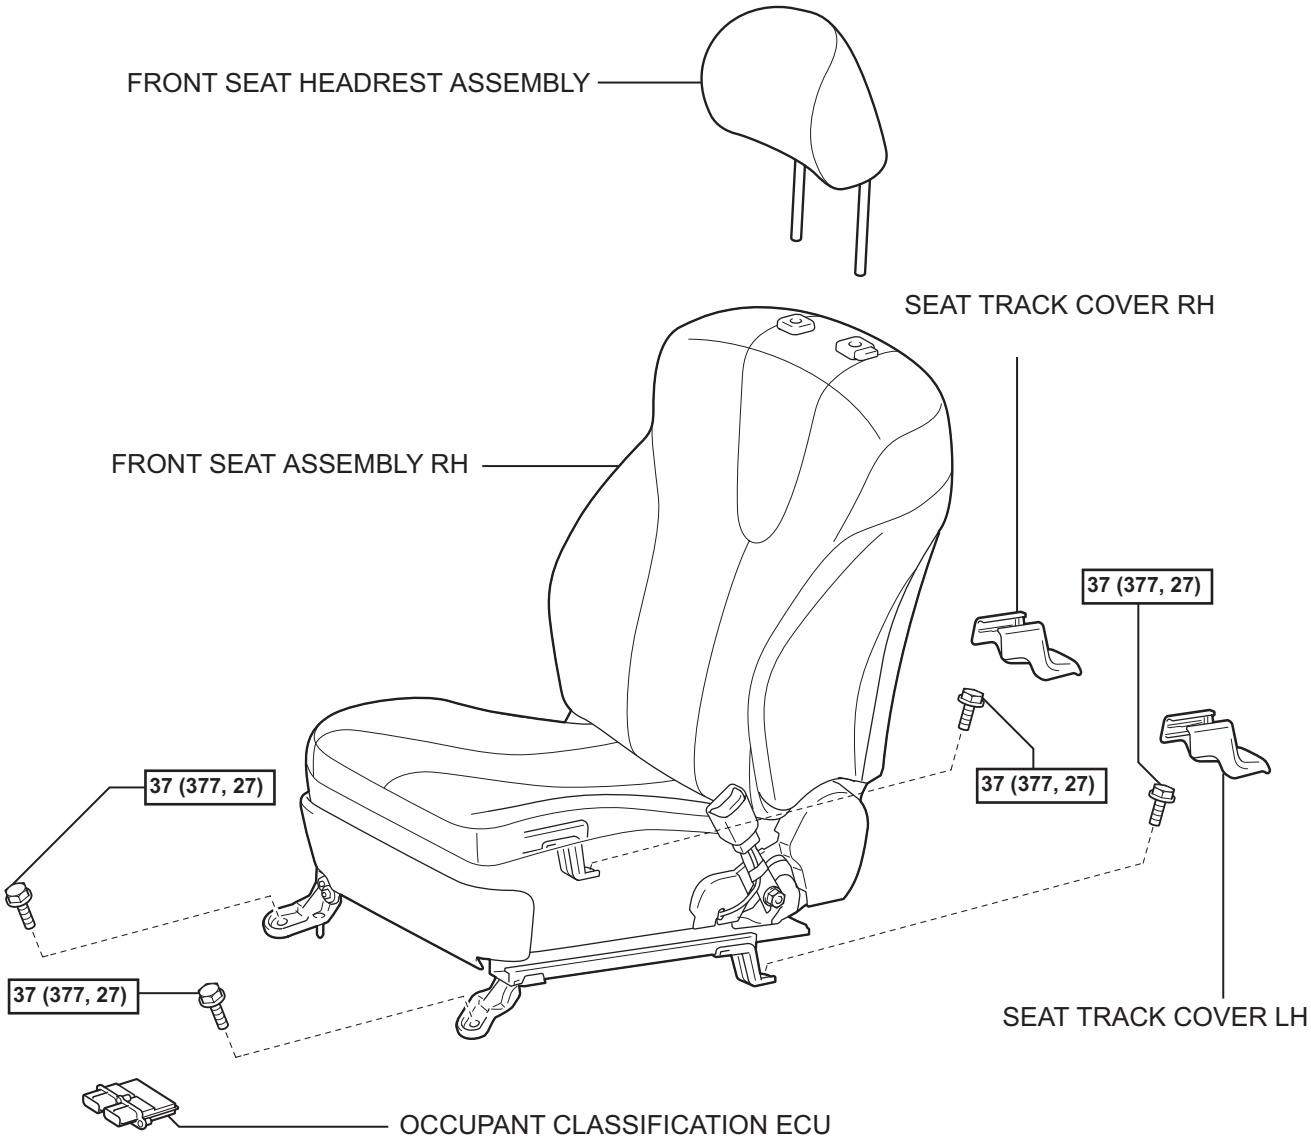
N*m (kgf*cm, ft.*lbf): Specified torque

C

C133894E01

RS

for Power Seat:



N*m (kgf*cm, ft.*lbf): Specified torque

C138924E01

ON-VEHICLE INSPECTION

1. INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-248).

2. INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-248).

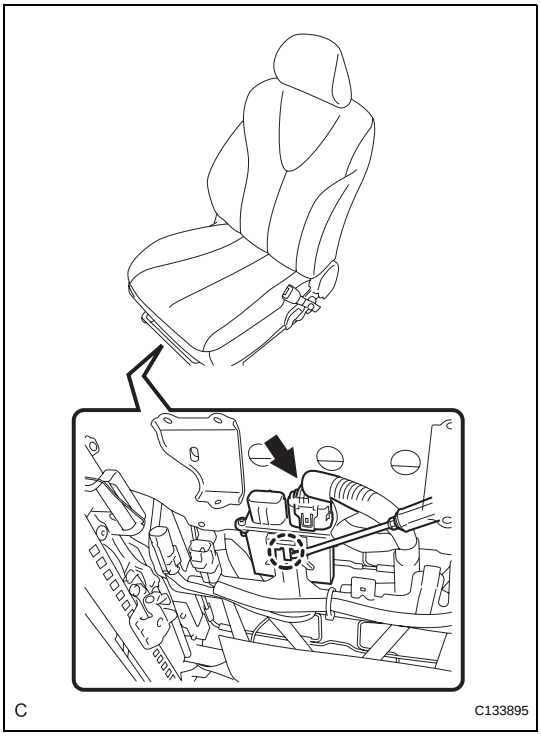
(b) Even if the airbag was not deployed, check if there is any damage to the occupant classification ECU. If there are any defects as mentioned below, replace the occupant classification ECU with a new one:

- Cracks, dents or chips on the case.
- Cracks or other damage to the connector.

CAUTION:
Be sure to follow the correct removal and installation procedures.

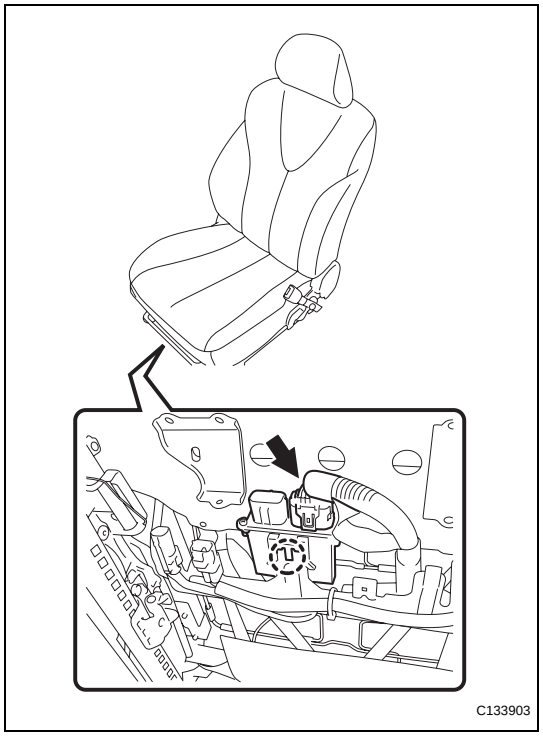
REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
4. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
5. **REMOVE SEAT TRACK COVER RH (for Manual Seat) (See page SE-16)**
6. **REMOVE SEAT TRACK COVER RH (for Power Seat) (See page SE-30)**
7. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-16)**
8. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-30)**
9. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-16)**
10. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat) (See page SE-30)**
11. **REMOVE OCCUPANT CLASSIFICATION ECU**
    (a) Disconnect the connector from the occupant classification ECU.
    (b) Using a screwdriver, disengage the claw and remove the occupant classification ECU.



RS

INSTALLATION



1. **INSTALL OCCUPANT CLASSIFICATION ECU**
   (a) Check that the ignition switch is off.
   (b) Check that the negative battery (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Engage the claw.
   (d) Connect the connector and install the occupant classification ECU.
   NOTICE:
   - **If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the occupant classification ECU with a new one.**
   - **When installing the occupant classification ECU, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
2. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat) (See page SE-41)**
3. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-24)**
4. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-25)**
5. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-25)**
6. **INSTALL SEAT TRACK COVER RH (for Power Seat) (See page SE-42)**
7. **INSTALL SEAT TRACK COVER RH (for Manual Seat) (See page SE-25)**
8. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
9. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
11. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    HINT:
    (See page RS-242)
12. **INSPECT POWER SEAT OPERATION (for Power Seat)**
13. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

14. INSPECT SEAT HEATER OPERATION (w/ Seat Heater System) (See page SE-42)

15. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-32).

STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR STEERING SYSTEM

(a) Care must be taken when replacing parts. Incorrect replacement may affect the performance of the steering system and result in driving hazards.

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with SRS (Supplemental Restraint System) such as airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System (See page RS-1).

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem. The numbers indicate likely causes of the problem in descending order. Check each part in order. If necessary, repair or replace the faulty parts.

STEERING SYSTEM

Symptom	Suspected area	See page
Hard steering	1. Tires (Improperly inflated)	TW-3
	2. Front wheel alignment (Incorrect)	SP-4
	3. Steering system joints (Worn)	-
	4. Suspension arm ball joints (Worn)	SP-28
	5. Steering column (Binding)	SR-38
	6. Power steering gear	PS-40
Poor return	1. Tires (Improperly inflated)	TW-3
	2. Front wheel alignment (Incorrect)	SP-4
	3. Steering column (Binding)	SR-38
	4. Power steering gear	PS-40
Excessive free play	1. Steering system joints (Worn)	-
	2. Suspension arm ball joints (Worn)	SP-28
	3. Intermediate shaft, universal joint, sliding yoke (Worn)	-
	4. Front wheel bearing (Worn)	AH-5
	5. Power steering gear	PS-40
Abnormal noise	1. Steering system joints (Worn)	-
	2. Power steering gear	PS-40

ON-VEHICLE INSPECTION

1. INSPECT STEERING WHEEL FREE PLAY

(a) Stop the vehicle and align the tires facing straight ahead.

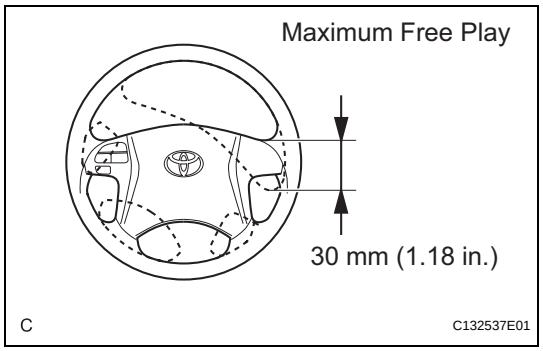
(b) Gently turn the steering wheel right and left by hand, and check the steering wheel free play.

Maximum free play:

30 mm (1.18 in.)

HINT:

If the free play exceeds the maximum, check the steering column, steering intermediate shaft, steering sliding yoke, or steering gear.



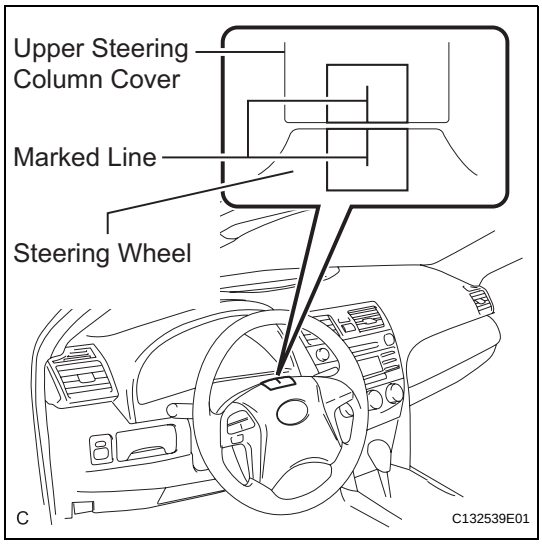
ADJUSTMENT

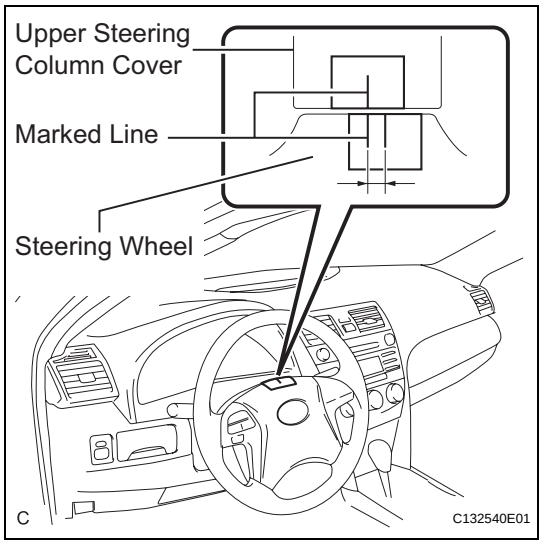
1. STEERING OFF CENTER ADJUSTMENT PROCEDURE

HINT:
This is the adjustment procedure for steering off center.

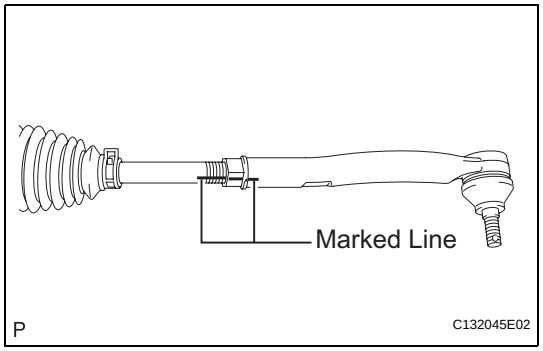
(a) Inspect steering wheel off center.
  (1) Apply masking tape on the top center of the steering wheel and steering column upper cover.
  (2) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), and hold the steering wheel to maintain the course.

  (3) Draw a line on the masking tape as shown in the illustration.
  (4) Turn the steering wheel to the center position.
  HINT:
  Look at the upper surface of the steering wheel, steering spoke, and SRS airbag line to find the center position.

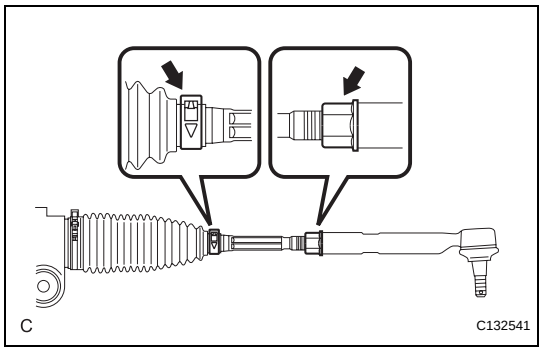




(5) Draw a new line on the masking tape on the steering wheel as shown in the illustration.
(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.
(7) Convert the measured distance to steering angle.
HINT:
- Measured distance 1 mm (0.04 in.) = Steering angle of approximately 1 degree.
- Make a note of the steering angle.



(b) Adjust steering angle.
(1) Draw a line on the RH and LH tie rod ends and rack ends respectively where it can be easily seen.
(2) Using a paper gauge, measure the distance from the RH and LH tie rod ends to the rack end screws.
HINT:
- Measure both the RH and LH sides.
- Make a note of the measured values.



(3) Remove the RH and LH boot clips from the rack boots.
(4) Loosen the RH and LH lock nuts.
(5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.
HINT:
One 360 degree turn of the rack end (1.5 mm (0.059 in.) horizontal movement) equals to 12 degrees of steering angle.
(6) Tighten the RH and LH lock nuts to the specified torque.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is within 1.5 mm (0.059 in.).
(7) Install the RH and LH boot clips.

SR

ELECTRIC STEERING LOCK

PRECAUTION

1. PRECAUTIONS WHEN WORKING ON ELECTRIC STEERING LOCK

(a) After replacing the steering lock actuator assembly (steering lock ECU), perform the key ID code registration.

(b) If the steering lock actuator assembly is replaced, open and close the driver's door. The engine may not start until the driver's door is opened or closed.
HINT:
Opening and closing the driver's door causes the steering lock actuator assembly (steering lock ECU) to memorize the correct steering lock bar position.

(c) If checking for DTCs of the smart access system with push-button start function or if checking the DATA LIST with the engine switch off, make sure that the driver's door is open.
HINT:
When the engine switch is off, the main body ECU may be in a sleep mode. If the main body ECU is in this sleep mode, it will not be possible for the intelligent tester to communicate with it. Opening and closing the driver's door will cause the ECU to exit the sleep mode.

Steering Lock ECU	• Certification ECU • Main Body ECU • ID Code Box	Lock / Unlock relay drive status	LIN
Steering Lock ECU	• Certification ECU • Main Body ECU • ID Code Box	Engine start control status	LIN

SYSTEM DESCRIPTION

1. DESCRIPTION

(a) The steering lock system locks or unlocks the steering lock by activating the steering lock bar with a motor. The steering lock ECU activates the motor based on signals from the certification ECU and main body ECU.

(b) A LIN (Local Interconnect Network) is used for communication between different ECUs in this system.

2. FUNCTIONS OF COMPONENTS

(a) The steering lock ECU controls the system based on information from the following components.

Item	Function
Steering lock actuator assembly	Consists of a motor, lock bar, lock and unlock position sensors, etc. Activated by the steering lock ECU.
Steering lock ECU	Included in the steering lock actuator assembly. This ECU activates the steering lock motor based on permission signals from the main body ECU and certification ECU. Detects steering lock or unlock state and transmits this status to other ECUs.
Main body ECU	Permits the steering lock ECU to supply power to activate the motor. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
Certification ECU	Orders the steering lock ECU to lock / unlock the steering. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
IG2 relay	Controlled by the main body ECU. This ECU sends IG signals to the steering lock ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used at steps 2, 6, 9 and 12.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CHECK AND CLEAR DTCS

NEXT

3	PROBLEM SYMPTOM CONFIRMATION

- SYMPTOM DOES NOT OCCUR (Go to step 4)
- SYMPTOM OCCURS (Go to step 5)

4	SYMPTOM SIMULATION

NEXT

5	CHECK CAN COMMUNICATION SYSTEM

HINT:
Check that there are no problems in the CAN communication system before troubleshooting the steering lock system.

NEXT

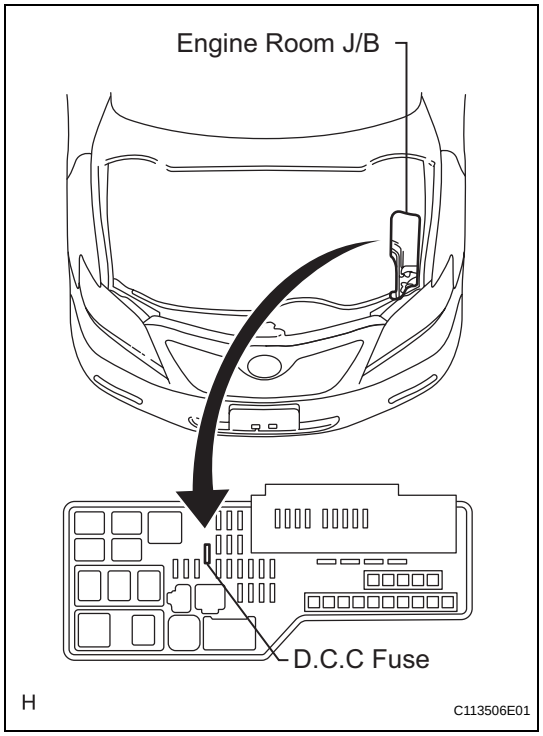
INITIALIZATION

HINT:
In vehicles equipped with the smart access system with push-button start function, the starting function may not operate after recharging or while jump-starting a discharged battery. This condition is most common if the battery voltage drops below 9 V. The following procedure has been developed to address this condition.



1. INITIALIZATION PROCEDURE

(a) Confirm that the D.C.C. fuse is installed.
HINT:
If the D.C.C. fuse is not installed, install it at this time.
(b) Move the shift lever to the P position.
(c) Turn the engine switch off.
(d) Open the driver's door.
HINT:
Opening the driver's door will start an initialization process between the steering lock ECU and the engine room J/B.
(e) Depress the brake pedal.
(f) Press the "START STOP" switch.

SR

PROBLEM SYMPTOMS TABLE

Inspect the suspected areas in numerical order by referring to the corresponding pages when any of the following symptoms occurs:

ELECTRIC STEERING LOCK FUNCTION:

Symptom	Suspected area	See page
Steering wheel cannot be unlocked (the engine cannot be started).	1. Initialization	SR-9
	2. Check for DTCs in the smart access system with push-button start.	ST-26
	3. Check for DTCs in the engine immobiliser system.	EI-24
	4. Check that the LCK/UNLCK REC item in the DATA LIST of the certification ECU displays YES within 10 seconds after starting the engine. (If it displays NO, see "No steering unlock" command in this table.)	SR-14
	5. Check the input signal from the IGE terminal of the steering lock ECU.	SR-24
	6. Steering lock ECU power source circuit.	SR-30
	7. Replace the steering lock ECU.	SR-42
Steering wheel cannot be unlocked (no steering unlock command).	1. Check that the S CODE MACH item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	2. Check that the L CODE MACH item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	3. Replace the certification ECU.	-
Steering wheel cannot be locked.	1. Check for DTCs in the smart access system with push-button start.	ST-26
	2. Check for DTCs in the engine immobiliser system.	EI-24
	3. With the engine switch off and the shift in the P position, open and close the driver's door. After that, check that the LCK/UNLCK REC item in the DATA LIST of the certification ECU displays YES within 10 seconds. (If it displays NO, see "No steering lock" command in this table.)	SR-14
	4. Check the input signal from the IGE terminal of the steering lock ECU.	SR-24
	5. Steering lock ECU power source circuit.	SR-30
	6. Replace the steering lock ECU.	SR-42
Steering wheel cannot be locked (no steering lock command).	1. Courtesy light switch circuit	LI-52
	2. Check that the S CODE MACH item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	3. Check that the L CODE MACH item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	4. Replace the certification ECU.	-

SR

DIAGNOSIS SYSTEM

1. DESCRIPTION

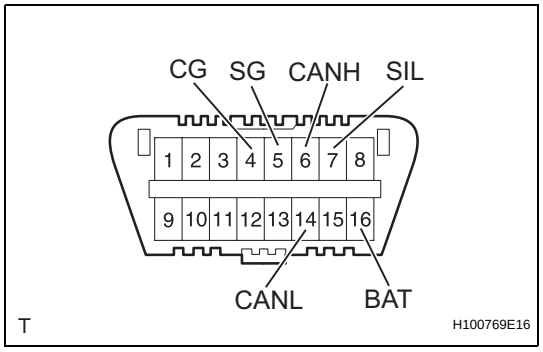
(a) DIAGNOSTIC SYSTEM

When troubleshooting a vehicle with a diagnostic system, the only difference from the usual troubleshooting procedure is connecting the intelligent tester to the vehicle and reading various data output from the vehicle's steering lock ECU. The steering lock ECU records DTCs when the computer detects a malfunction in the computer itself or in system circuits.

To check the DTCs, connect the intelligent tester to the DLC3 on the vehicle. The intelligent tester enables the DTCs to be cleared, the indicators to be activated, and the DATA LIST to be checked.

(b) The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the tester. The diagnosis information from the steering lock ECU is transmitted to the tester via the certification ECU to the tester using the controller area network (CAN).

2. CHECK DLC3



(a) The certification ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

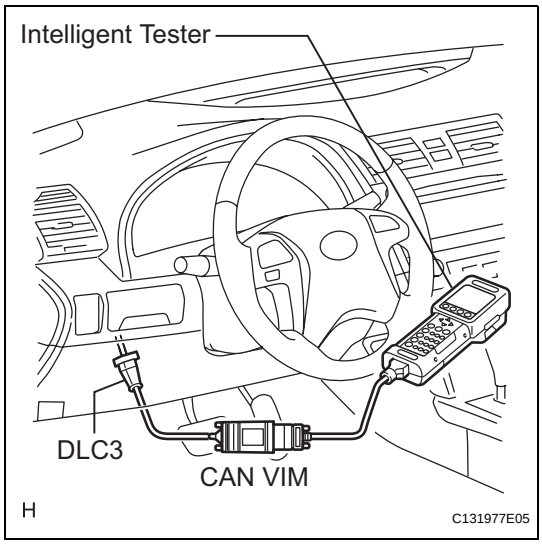
SR

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine Switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine Switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine Switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine Switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine Switch off*	6 kΩ or higher

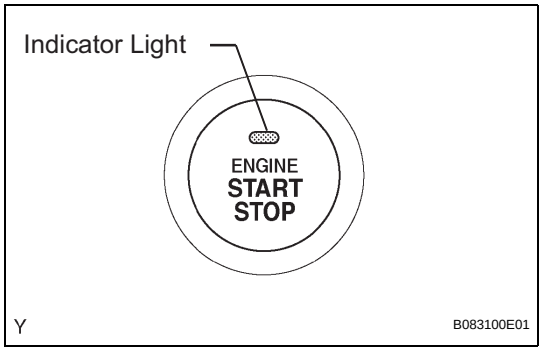
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, and other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester to the DLC3, turn the engine switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. WARNING FUNCTION OF ENGINE SWITCH INDICATOR

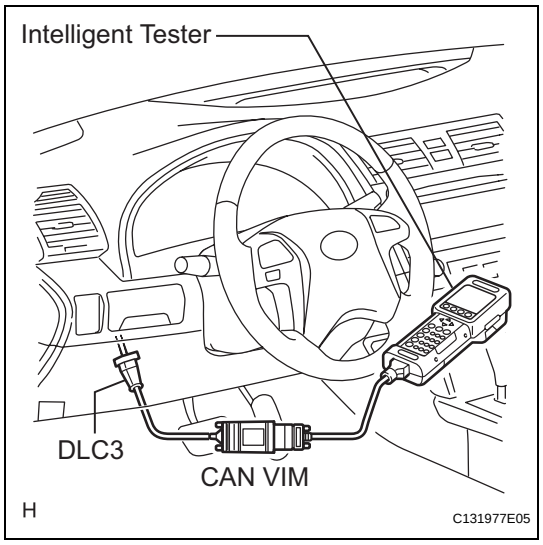
(a) The steering lock ECU blinks the LED indicator of the engine switch when any of the following problems occurs in the system:

Detection Item	Indicator Light Blink Pattern	Indication Status	Countermeasure
Steering lock is still not released	• Blinks green at 1-second intervals • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the engine switch while turning the steering wheel left or right.
Malfunction in smart access system with push-button start	• Blinks amber at 2-second intervals • Goes off 15 seconds after the engine switch is turned off while blinking	• There is a short in the devices activating the motor. • There is a problem in the steering lock ECU or power source control ECU.	Troubleshoot by following "HOW TO PROCEED WITH TROUBLESHOOTING" (See page SR-7).

4. WARNING FUNCTION OF COMBINATION METER

(a) The steering lock ECU displays a warning on the combination meter when any of the following problems occurs in the system.

Detection Item	Display	Indication Status	Countermeasure
Steering lock is still not released	"S/T is not Unlocked" • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the engine switch while turning the steering wheel left or right.
Malfunction in push start system	"Check S/T Lock" • Goes off 15 seconds after the engine switch is turned off while blinking	• There is a short in the devices activating the motor. • There is a problem in the steering lock ECU or power source control ECU.	Troubleshoot by following "HOW TO PROCEED WITH TROUBLESHOOTING" (See page SR-7).



DTC CHECK / CLEAR

1. CHECK FOR DTCS

(a) Prepare the intelligent tester.

(b) Connect the intelligent tester to the DLC3 at the lower part of the instrument panel.

(c) Turn the engine switch on (IG) and turn the intelligent tester on.

(d) Use the intelligent tester to check for DTCs, and note or print the result (see the operator's manual for operating instructions).

(e) Confirm the details of the DTCs (See page SR-15).

2. CLEAR DTCS

(a) Operate the intelligent tester to clear the DTCs (see the operator's manual for operating instructions).

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By accessing the DATA LIST displayed on the intelligent tester, it is possible to perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST is the first step in troubleshooting and is one method to save labor time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG) and turn the intelligent tester on.

(c) Operate the intelligent tester according to the steps on the display and select DATA LIST.

SMART ACCESS:

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note

IG (LIN)	LIN bus IG status / ON or OFF	ON: LIN bus IG ON status OFF: LIN bus IG OFF status	-
STEERING LOCK	Steering lock condition / Set or Unset	Set: Steering lock is set Unset: Steering lock is not set	This status changes depending on the state of some sensors.
STEERING UNLOCK	Steering unlock condition / Set or Unset	Set: Steering unlock is set Unset: Steering unlock is not set	This status changes depending on the state of some sensors.

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST is one of the methods to save labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the engine switch on (IG) and turn the intelligent tester on.

(c) Following the display on the intelligent tester, perform the ACTIVE TEST.

BODY:

Item	Test Details	Diagnostic Note
SECURITY INDIC	Security Indicator / ON or OFF	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the parts listed for that code in the table below and proceed to the appropriate page.
HINT:
The steering lock ECU does not store DTCs regarding the past problems.

ELECTRIC STEERING LOCK:

DTC No.	Detection Item	Trouble Area	See page
B2781	Open / Short in Steering Lock ECU	Steering lock actuator assembly (Steering lock ECU)	SR-17
B2782	Power Source Control ECU Malfunction	1. Wire harness 2. Steering lock actuator assembly (Steering lock ECU) 3. Main body ECU	SR-18
B2788	IG2 Signal Malfunction	1. IG2 relay 2. Wire harness 3. Main body ECU 4. Steering lock actuator assembly (Steering lock ECU)	SR-21

DTC	B2781	Open / Short in Steering Lock ECU

DESCRIPTION

If the steering lock ECU determines that there is a malfunction inside the ECU, it outputs this DTC. The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the tester. The diagnosis information from the steering lock ECU is transmitted to the tester via the certification ECU to the tester using the controller area network (CAN).

DTC No.	DTC Detecting Condition	Trouble Area
B2781	• Steering lock motor drive circuit is defective. • Both lock and unlock position sensors detect "ON".	Steering lock actuator assembly (Steering lock ECU)

INSPECTION PROCEDURE

1	REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

HINT:
The steering lock ECU and steering lock actuator assembly are supplied as a unit.

(a) Replace the steering lock actuator assembly (See page SR-42).

NEXT

SR

END

DTC	B2782	Power Source Control ECU Malfunction

DESCRIPTION

The main body ECU (*) controls the power supply to activate the steering lock motor. This prevents the steering from being locked while the vehicle is moving.
HINT:
*: The power source control ECU is not a physical part. This code refers to the power source control function performed by the main body ECU.

DTC No.	DTC Detecting Condition	Trouble Area
B2782	Steering lock motor drive control circuit is defective.	• Wire harness • Steering lock actuator assembly (Steering lock ECU) • Main body ECU

WIRING DIAGRAM

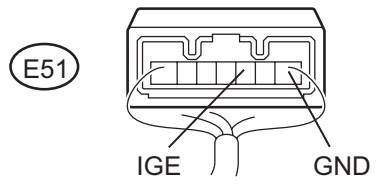
INSPECTION PROCEDURE

1	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E51-1 (GND)	The specified condition should be checked after performing the following: 1. Engine switch off 2. Turn the engine switch on (ACC or IG)	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E51-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to the P position 2. Turn the engine switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

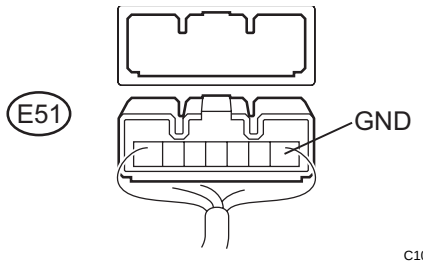
HINT:
The steering lock ECU and steering lock actuator assembly are supplied as a unit.

OK → **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

NG

2 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)

Steering Lock Actuator Assembly:



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-1 (GND) - Body ground	Always	Below 1 Ω

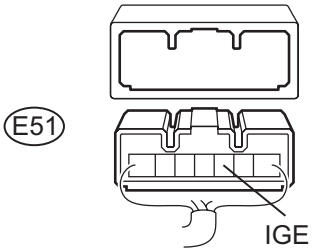
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

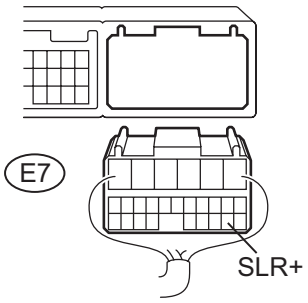
SR

3	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E01

(a) Disconnect the E7 connector from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

SR

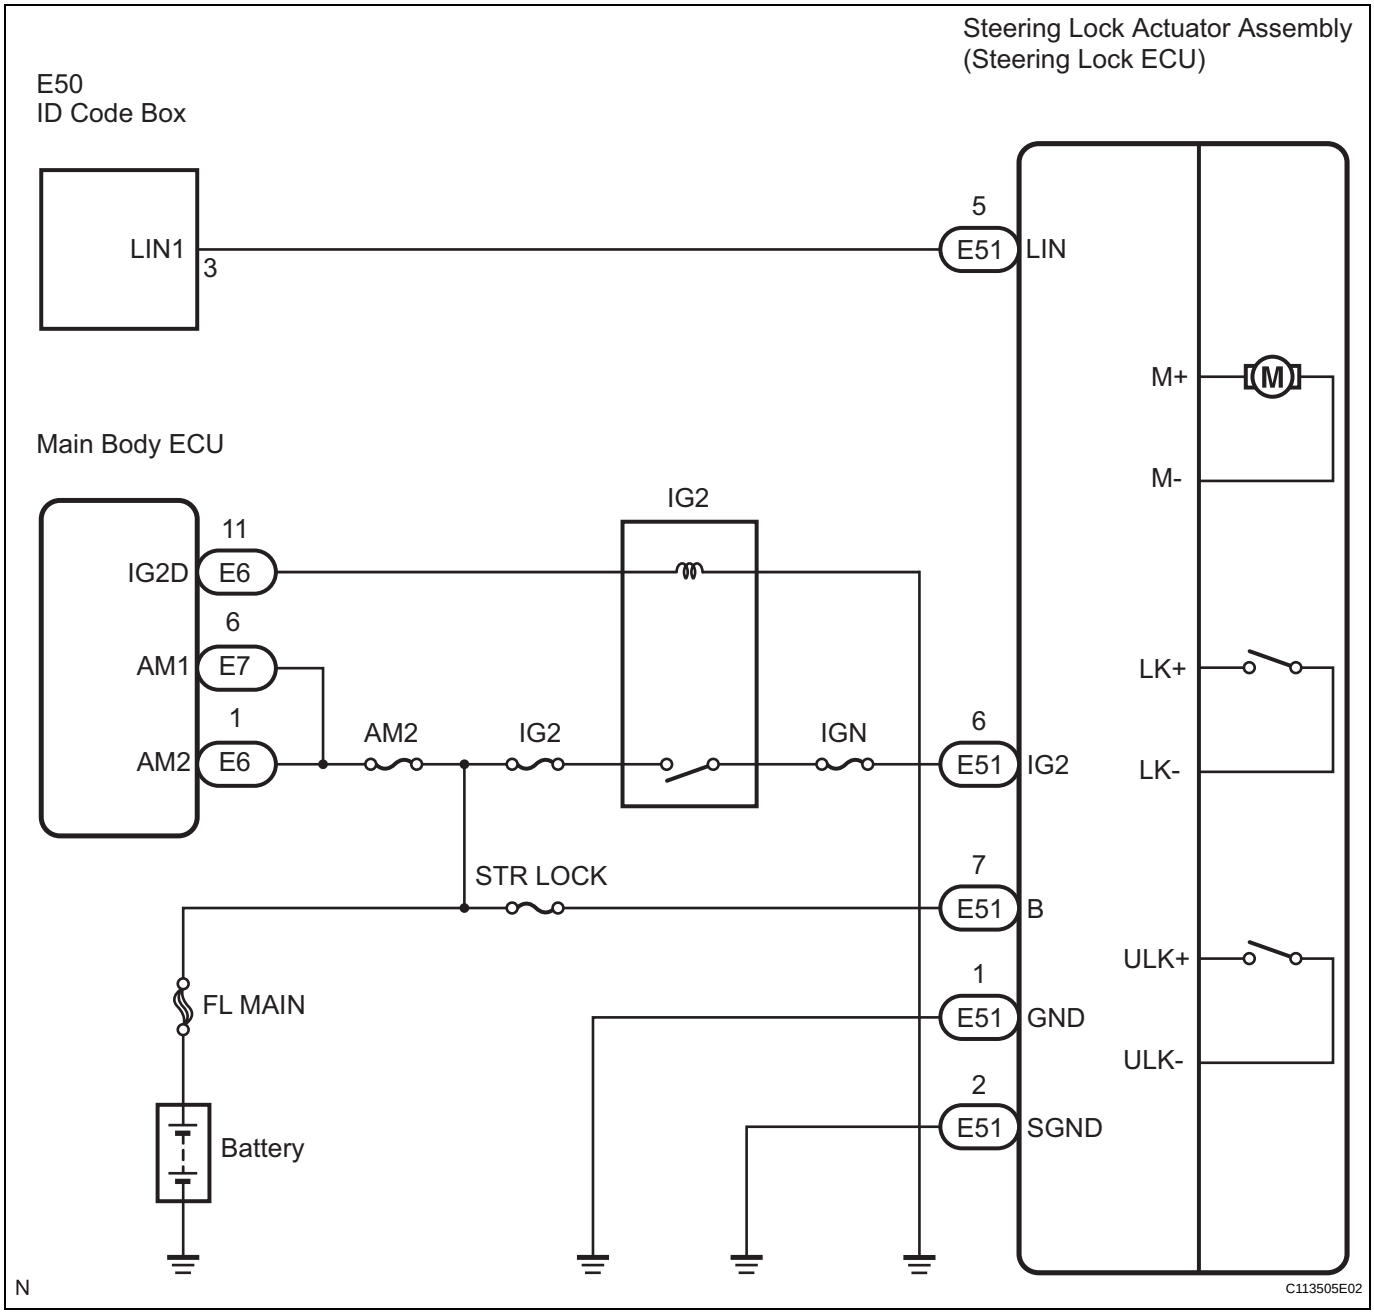
DTC	B2788	IG2 Signal Malfunction

DESCRIPTION

The steering lock ECU receives power from the IG2 relay. When the digital signal from the certification ECU and the voltage from the IG2 relay are received by the steering lock ECU, the steering will be unlocked. The steering lock ECU will not lock the steering when power from the IG2 relay is present (this prevents the steering from being locked while the vehicle is moving).

DTC No.	DTC Detecting Condition	Trouble Area
B2788	Different information is obtained from IG2 signals received directly from the IG2 circuit, and from IG2 signals sent via LIN communication for a period of 1 second.	• IG2 relay • Wire harness • Main body ECU • Steering lock actuator assembly (Steering lock ECU)

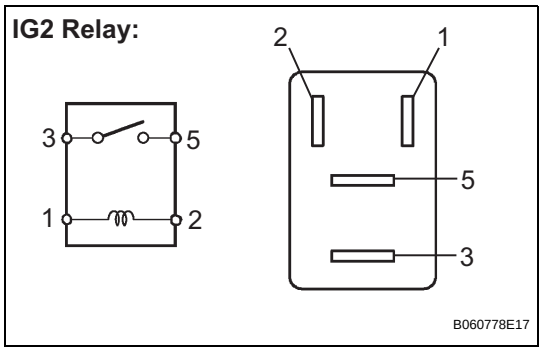
WIRING DIAGRAM



SR

INSPECTION PROCEDURE

1 **INSPECT IG2 RELAY**



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

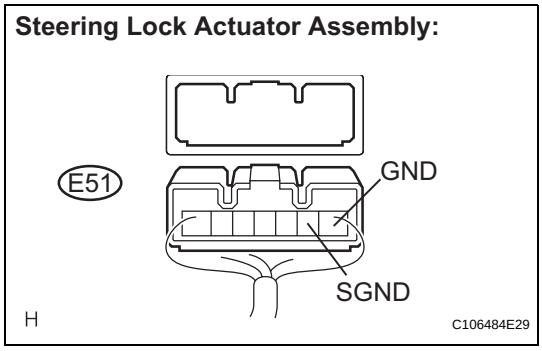
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE IG2 RELAY**

OK

2 **CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

SR



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.

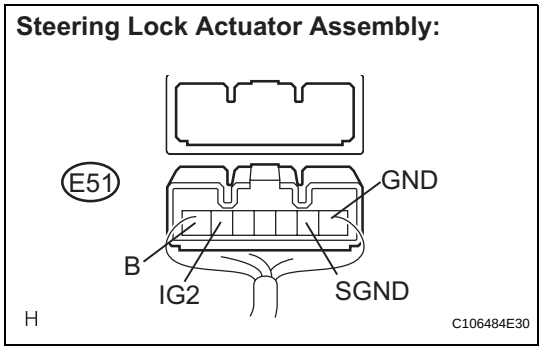
Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-1 (GND) - Body ground	Always	Below 1 Ω
E51-2 (SGND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 **CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)**



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection (Symbols)	Condition	Specified condition
E51-6 (IG2) - E51-1 (GND)	Engine switch on (IG)	10 to 14 V
E51-6 (IG2) - E51-2 (SGND)	Engine switch on (IG)	10 to 14 V

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
*E51-6 (IG2) - E51-7 (B)	Engine switch off	10 kΩ or higher

*: This measurement is performed with the engine switch off to check for a short between IG2 and battery voltage.

OK → **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

NG

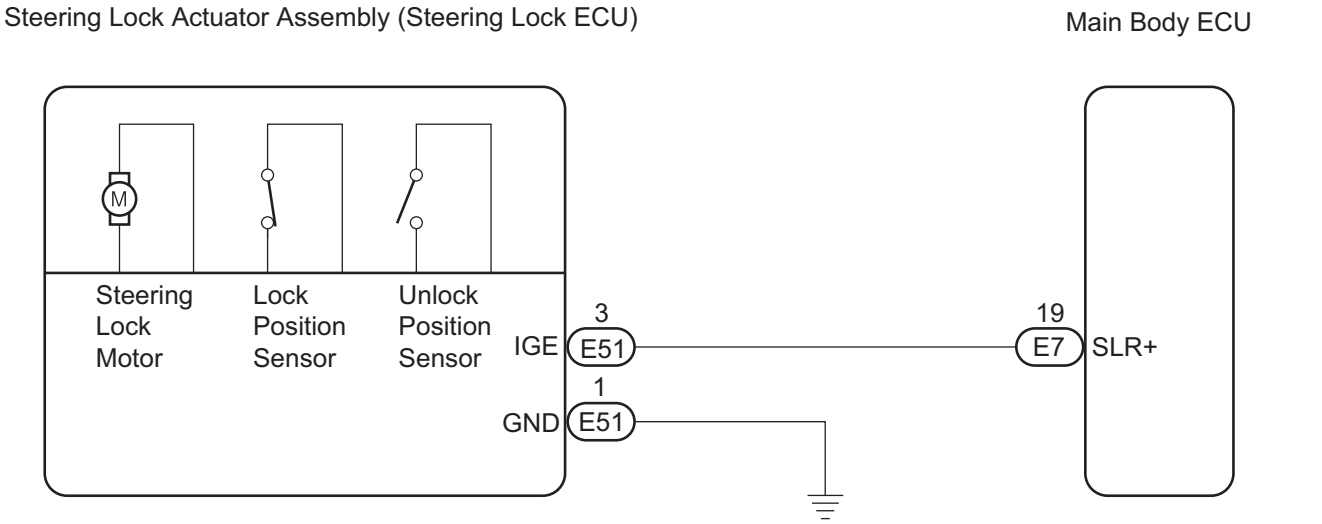
REPAIR OR REPLACE HARNESS OR CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)

Steering Lock Motor Drive Power Circuit

DESCRIPTION

The steering lock ECU is connected to the main body ECU and certification ECU. The steering lock ECU cannot activate the motor unless it receives permission signals from both ECUs. (The main body ECU permits the steering lock ECU to supply power to activate the motor.)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK VEHICLE CONDITION

(a) Check the problem symptom of the steering lock system.

Result

Condition	Proceed to
Steering lock cannot be released	A
Steering cannot be locked	B

B → Go to step 6

A

2	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG), and turn the intelligent tester on.

(c) Select the item below in the DATA LIST, and read its value displayed on the intelligent tester.

SMART ACCESS

Item	Measurement Item / Range (Display)	Normal Condition
LCK/UNLCK REC	Steering lock command reception record / YES or NO	YES: Steering lock / unlock signal received NO: Steering lock / unlock signal not received

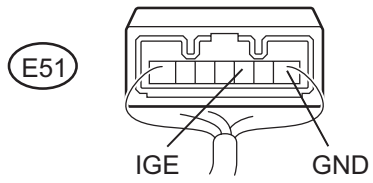
(d) Check if steering unlock command signal has been received.
OK:
"YES" is displayed on the tester display.

NG → **CHECK SMART ACCESS SYSTEM WITH PUSH-BUTTON START**

OK

3 INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

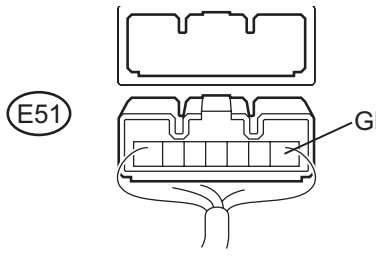
Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E51-1 (GND)	1. Engine switch off 2. Turn the engine switch on (ACC or IG)	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

4 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)

Steering Lock Actuator Assembly:



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

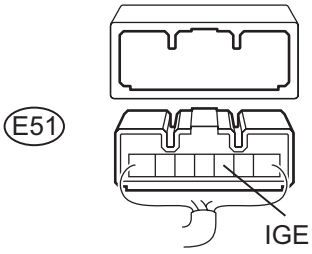
Tester connection (Symbols)	Condition	Specified condition
E51-1 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

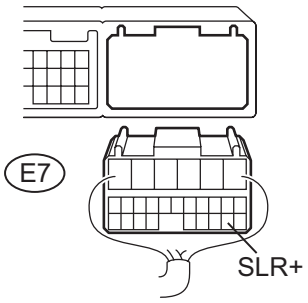
OK

5	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E01

(a) Disconnect the E7 connector from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

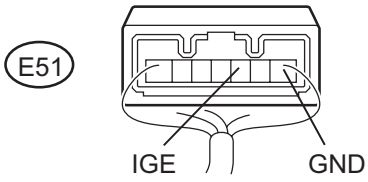
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

6	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



H C106483E22

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

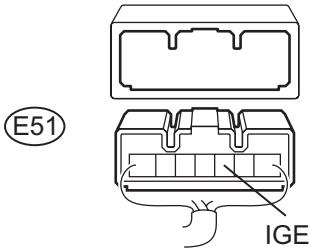
Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E51-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to the P position 2. Turn the engine switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

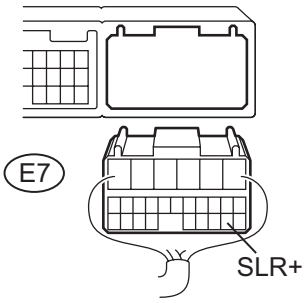
NG

7	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E01

(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Disconnect the E7 connector from the main body ECU.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

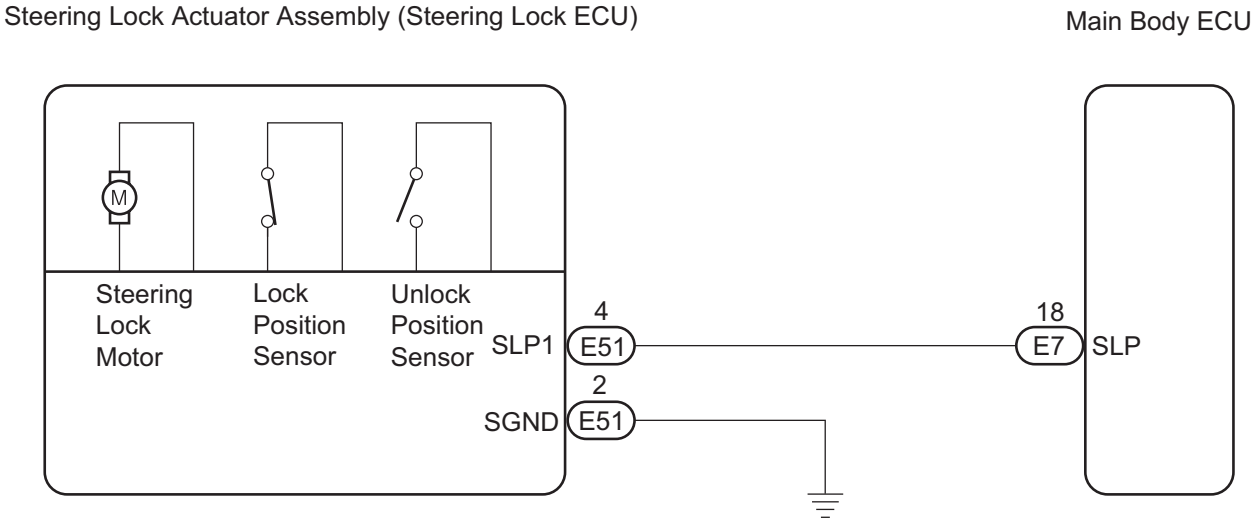
SR

Unlock Position Sensor Signal Circuit

DESCRIPTION

The unlock position sensor is one of the components in the steering lock actuator. The sensor switch contact closes when the steering lock is released. The steering lock release signal is then sent to the main body ECU. Receiving the signal, the ECU permits engine start. (This prevents the engine from being started with the steering locked.)

WIRING DIAGRAM

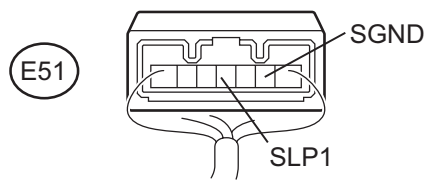


SR

INSPECTION PROCEDURE

1	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

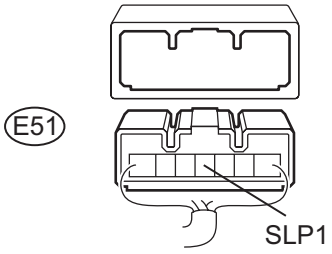
Tester connection (Symbols)	Condition	Specified condition
E51-4 (SLP1) - E51-2 (SGND)	1. Engine switch off 2. Turn the engine switch on (ACC or IG)	Below 1 V

OK → **CHECK PUSH BUTTON START FUNCTION**

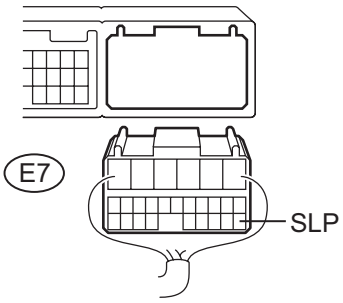
NG

2	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E02

(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Disconnect the E7 connector from the main body ECU.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
E51-4 (SLP1) - E7-18 (SLP)	Always	Below 1 Ω
E51-4 (SLP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

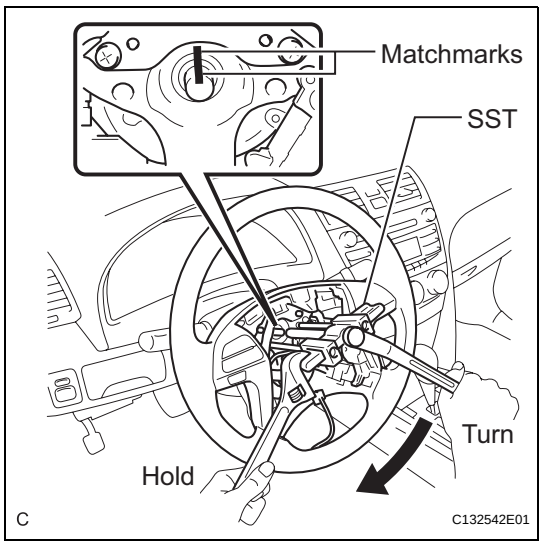
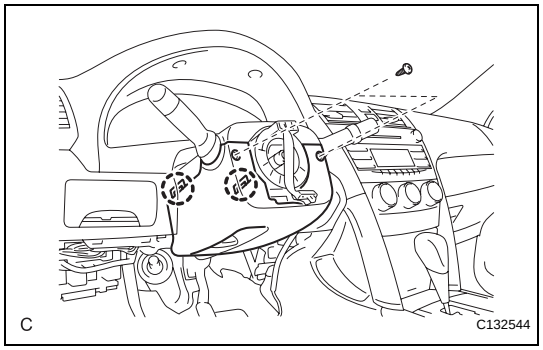
REMOVAL

1. **PRECAUTION**
   HINT:
   (See page RS-1)
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   HINT:
   (See page RS-1)
4. **REMOVE FRONT WHEEL LH**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-24)**
6. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-25)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-20)**
8. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-21)**
9. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**
10. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-349)**
11. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-349)**
12. **REMOVE STEERING PAD (See page RS-350)**
13. **REMOVE STEERING WHEEL ASSEMBLY**
    (a) Remove the steering wheel assembly set nut.
    (b) Put matchmarks on the steering wheel assembly and the steering main shaft.
    (c) Disconnect the connectors from the spiral cable.
    (d) Using SST, remove the steering wheel assembly.
    SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)

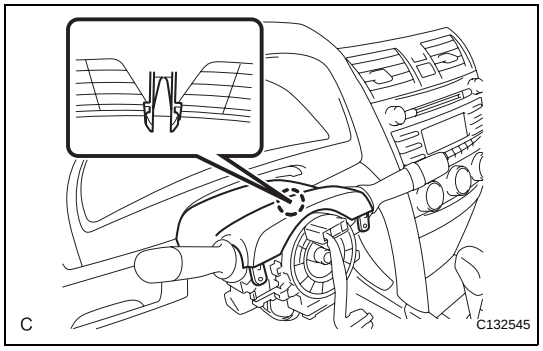




14. REMOVE STEERING COLUMN COVER

(a) Remove the 2 screws.

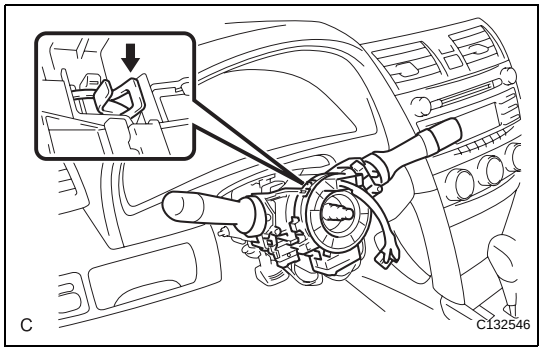
(b) Disengage the 2 claws to remove the steering column cover lower.



(c) Disengage the claw to remove the steering column cover upper.

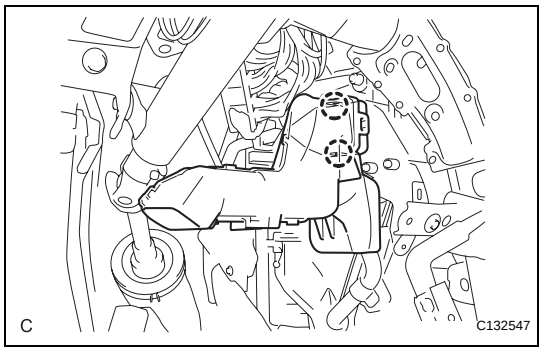
15. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

(a) Disconnect the connectors from the turn signal switch assembly with spiral cable sub-assembly.



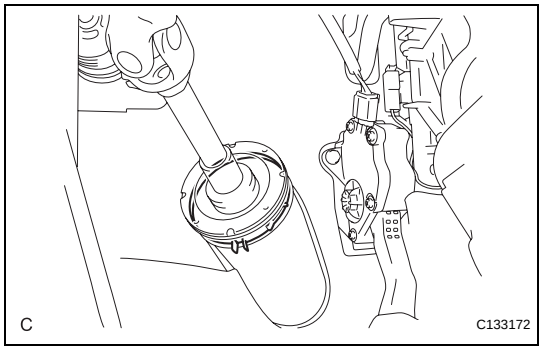
(b) Using pliers, grip the claws of the clip and remove the turn signal switch assembly with spiral cable sub-assembly.

SR



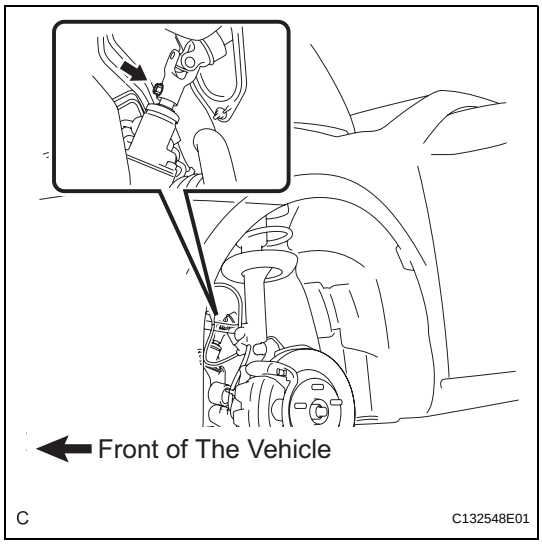
16. REMOVE NO. 1 AIR DUCT

(a) Disengage the 2 claws and remove the No. 1 air duct.

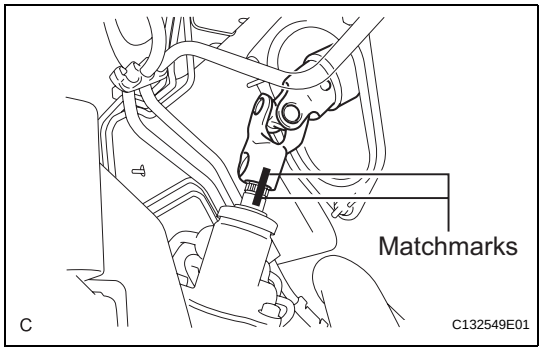


17. REMOVE STEERING COLUMN ASSEMBLY (for TMC Made)

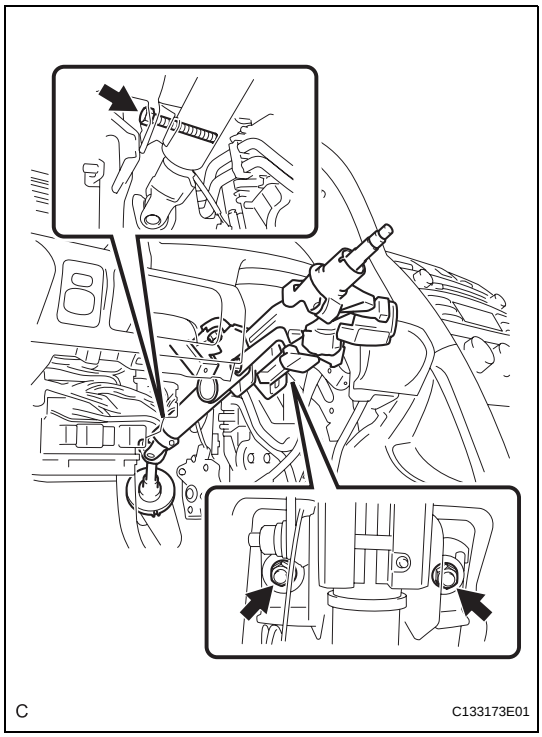
(a) Remove the clamp from the steering column hole shield.



(b) Remove the bolt and slide the steering intermediate shaft assembly.
NOTICE:
Do not separate the steering intermediate shaft assembly from the power steering link assembly.

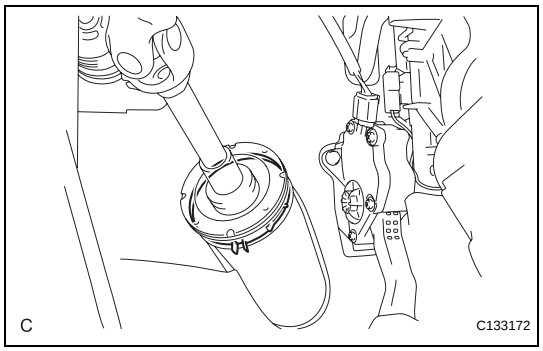


(c) Put matchmarks on the steering intermediate shaft assembly and the power steering link assembly.
(d) Separate the steering intermediate shaft assembly from the power steering link assembly.
(e) Disconnect the connectors and wire harness clamps from the steering column assembly.



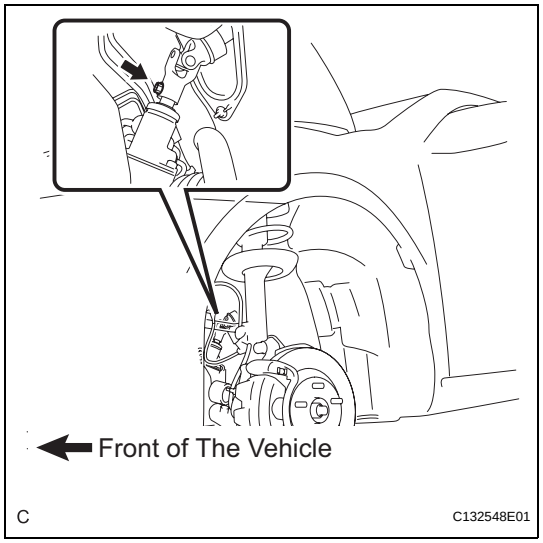
(f) Remove the bolt, 2 nuts, and the steering column assembly.

SR

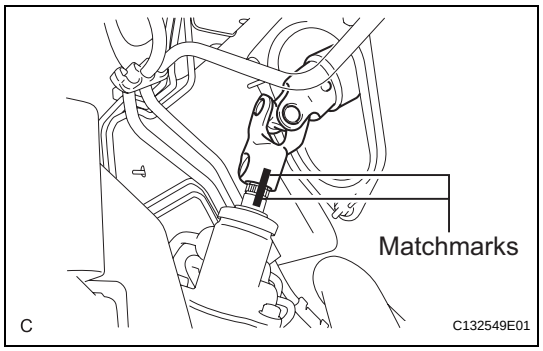


18. REMOVE STEERING POST ASSEMBLY (for TMMK Made)

(a) Remove the clamp from the steering column hole shield.

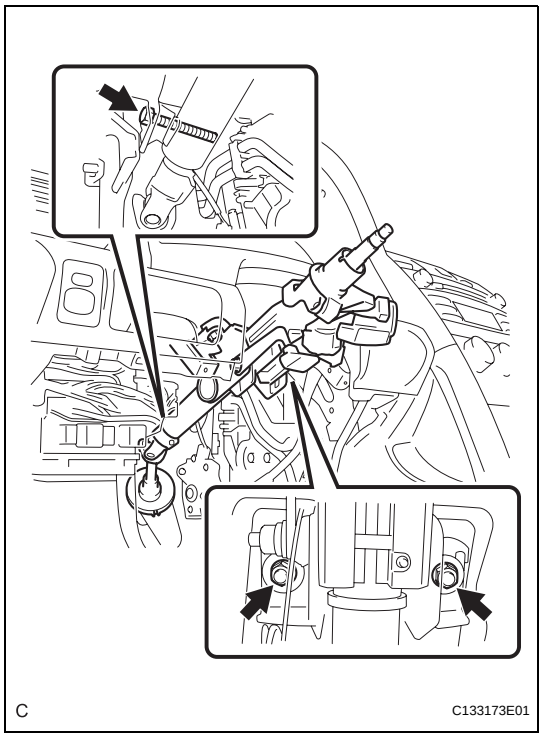


(b) Remove the bolt and slide the steering sliding yoke.
NOTICE:
Do not separate the steering sliding yoke from the power steering link assembly.

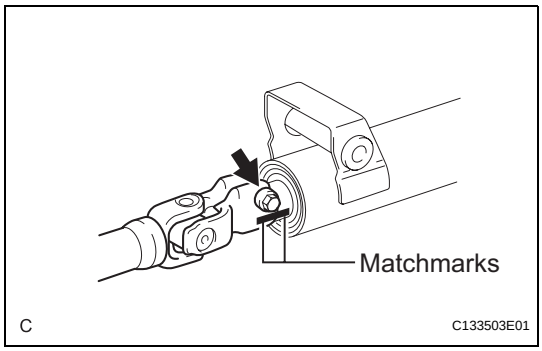


(c) Put matchmarks on the steering sliding yoke and the power steering link assembly.
(d) Separate the steering sliding yoke from the power steering link assembly.
(e) Disconnect the connectors and wire harness clamps from the steering column assembly.

SR



(f) Remove the bolt, 2 nuts, and the steering post assembly.



19. REMOVE STEERING INTERMEDIATE SHAFT ASSEMBLY (for TMC Made)

(a) Put matchmarks on the steering intermediate shaft assembly and the steering column assembly.

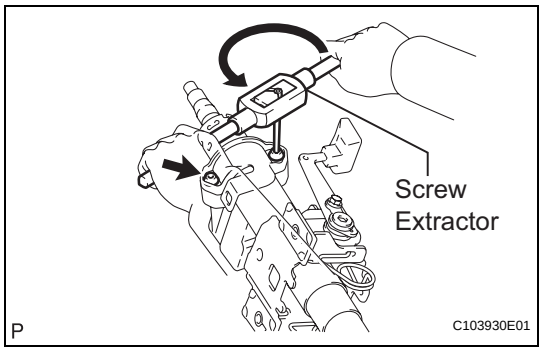
(b) Remove the bolt and the steering intermediate shaft assembly from the steering column assembly.

DISASSEMBLY

NOTICE:
When using a vise, do not overtighten it.

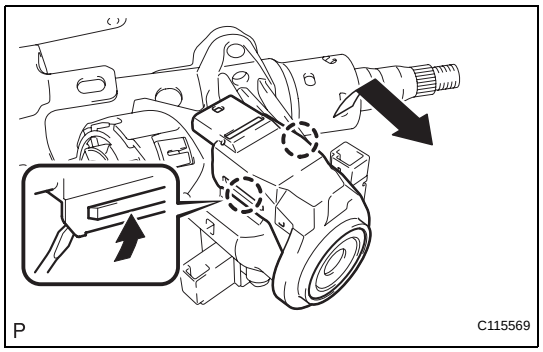
1. REMOVE STEERING LOCK ACTUATOR ASSEMBLY (w/ Smart Key System)

(a) Secure the steering column assembly in a vise.
(b) Using a center punch, mark the center of the 2 tapered-head bolts.
(c) Using a 3 to 4 mm (0.12 to 0.16 in.) drill, drill a hole in the 2 tapered-head bolts.
(d) Using a screw extractor, remove the 2 tapered-head bolts, and then remove the steering lock actuator assembly and the steering lock bracket from the steering column assembly.



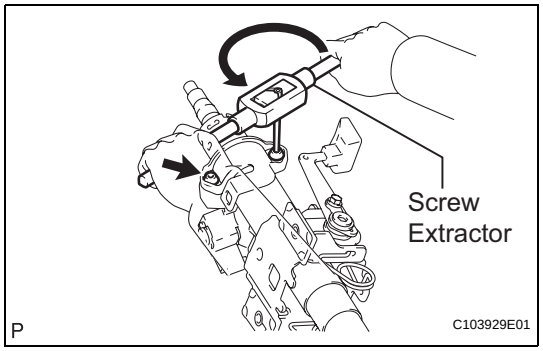
2. REMOVE TRANSPONDER KEY AMPLIFIER (w/o Smart Key System)

(a) Using a screwdriver, widen the claws hanging onto the upper bracket by approximately 1.0 mm (0.039 in.).
(b) Pull out the transponder key amplifier with the claw open.
NOTICE:
Using excessive force may damage the case.



3. REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (w/o Smart Key System)

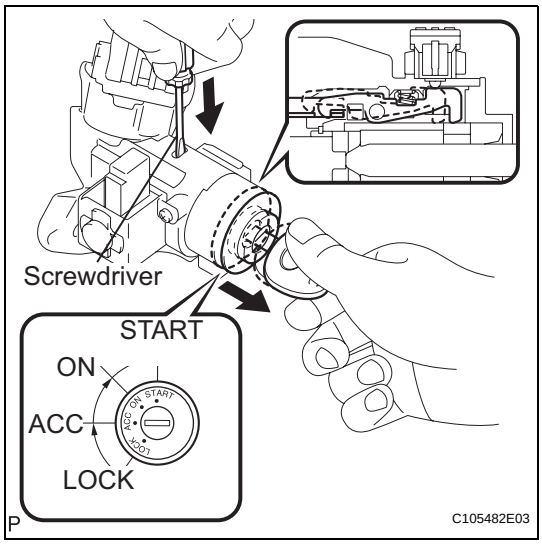
(a) Secure the steering column assembly in a vise.
(b) Using a center punch, mark the center of the 2 tapered-head bolts.
(c) Using a 3 to 4 mm (0.12 to 0.16 in.) drill, drill a hole in the 2 tapered-head bolts.
(d) Using a screw extractor, remove the 2 tapered-head bolts, and then remove the steering column upper with switch bracket assembly and the steering lock bracket from the steering column assembly.



4. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY (w/o Smart Key System)

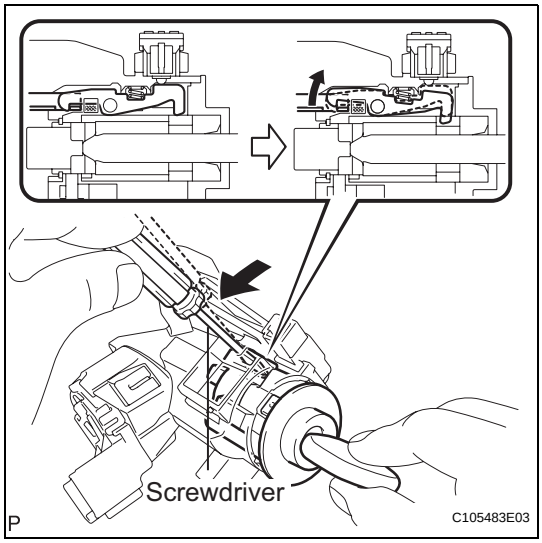
(a) Turn the ignition switch lock cylinder assembly to the ACC position.

SR



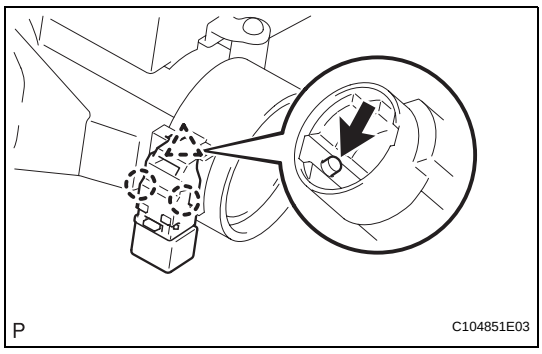
(b) Push a screwdriver into the hole of the steering column upper with switch bracket assembly shown in the illustration and pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column upper with switch bracket assembly.

NOTICE:
Make sure to pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column bracket assembly upper. Failure to do so will affect later work operations.



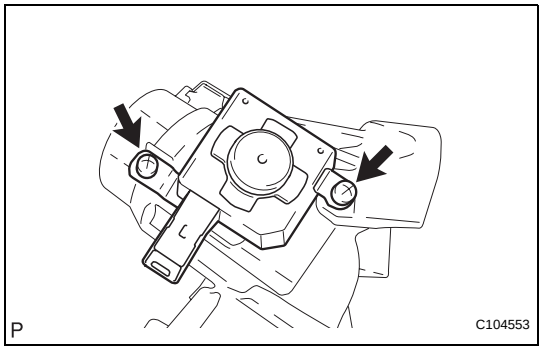
(c) Insert a screwdriver into the hole of the steering column upper with switch bracket assembly. Push the screwdriver downward as shown in the illustration to disengage the claw of the ignition switch lock cylinder assembly. Pull out the ignition switch lock cylinder assembly.

SR



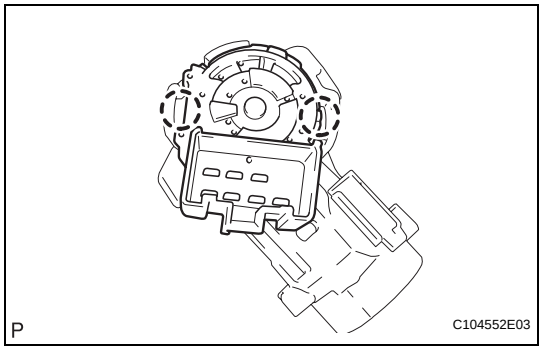
5. REMOVE UN-LOCK WARNING SWITCH ASSEMBLY (w/o Smart Key System)

(a) Remove the un-lock warning switch assembly by pushing up the center part and releasing the 2 claws.



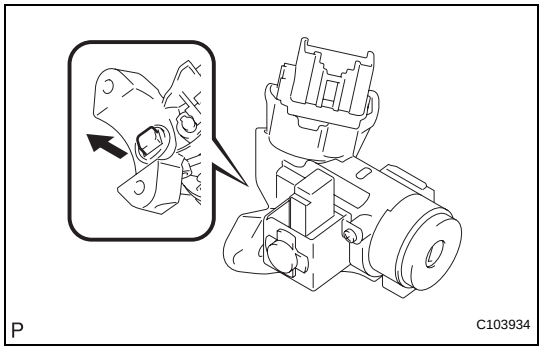
6. REMOVE KEY INTERLOCK SOLENOID (for Automatic Transaxle without Smart Key System)

(a) Remove the 2 screws and the key interlock solenoid from the steering lock sub-assembly.



7. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY (w/o Smart Key System)

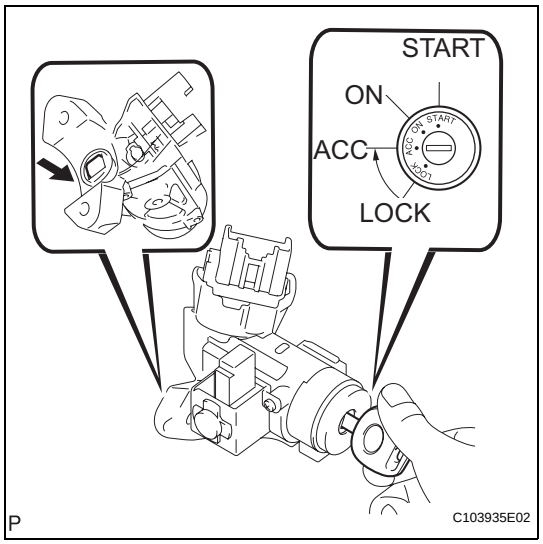
(a) Disengage the 2 claws and remove the ignition or starter switch assembly from the steering lock sub-assembly.



INSPECTION

1. INSPECT STEERING LOCK OPERATION (w/o Smart Key System)

(a) Check that the steering lock mechanism is activated when the key is removed.



(b) Check that the steering lock mechanism is deactivated when the key is inserted and turned to the ACC position.
HINT:
If there is any abnormality, replace the ignition switch lock cylinder assembly.

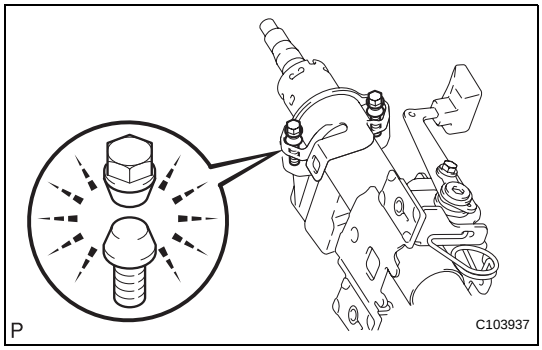
SR

REASSEMBLY

1. INSTALL STEERING LOCK ACTUATOR ASSEMBLY (w/ Smart Key System)

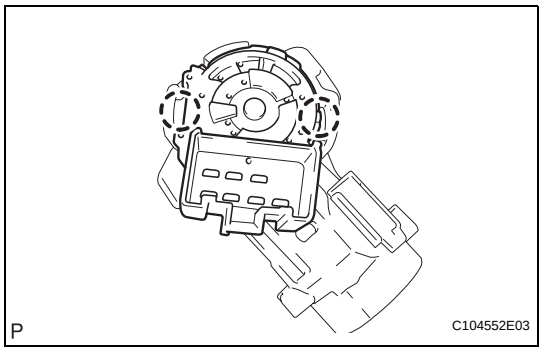
(a) Temporarily install the steering lock actuator assembly and the steering lock bracket with 2 new tapered-head bolts.

(b) Tighten the 2 tapered-head bolts until the bolt heads break off.



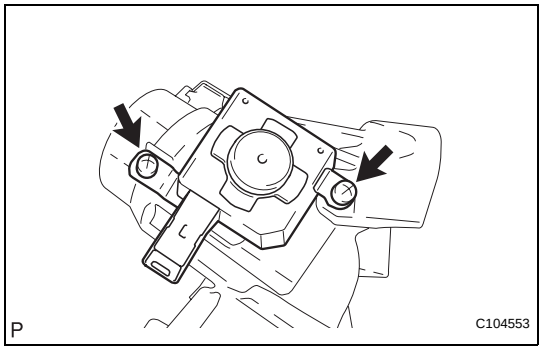
2. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY (w/o Smart Key System)

(a) Engage the 2 claws to install the ignition or starter switch assembly to the steering lock sub-assembly.



3. INSTALL KEY INTERLOCK SOLENOID (for Automatic Transaxle without Smart Key System)

(a) Install the key interlock solenoid to the steering lock sub-assembly with the 2 screws.

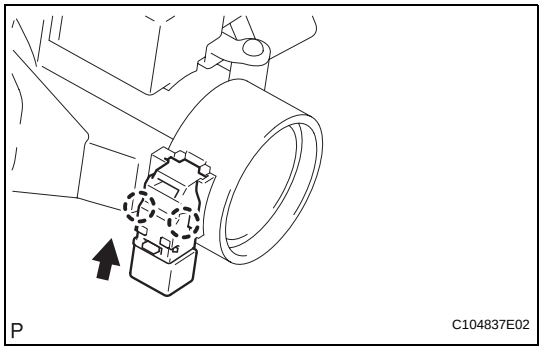


4. INSTALL UN-LOCK WARNING SWITCH ASSEMBLY (w/o Smart Key System)

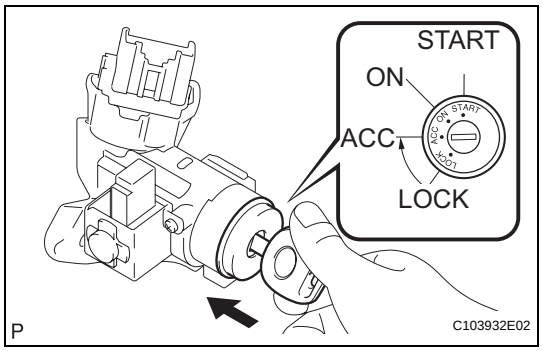
(a) Engage the 2 claws to install the un-lock warning switch assembly to the steering lock sub-assembly.

5. INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY (w/o Smart Key System)

(a) Make sure that the ignition switch lock cylinder assembly is in the ACC position.



SR



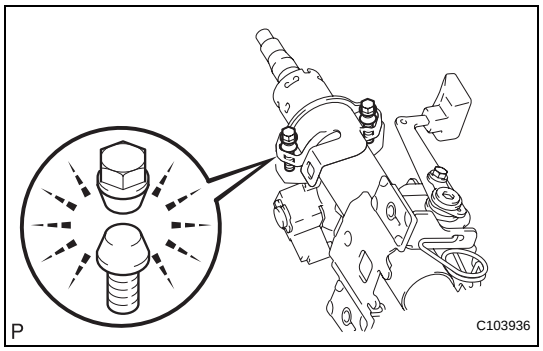
(b) Install the ignition switch lock cylinder assembly to the steering lock sub-assembly.
(c) Make sure that the ignition switch lock cylinder assembly is securely installed.

6. INSPECT STEERING LOCK OPERATION (w/o Smart Key System)

7. INSTALL STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (w/o Smart Key System)

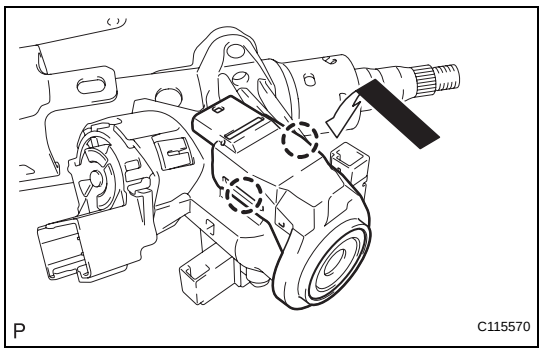
(a) Temporarily install the steering column upper with switch bracket assembly and the steering lock bracket with 2 new tapered-head bolts.

(b) Tighten the 2 tapered-head bolts until the bolt heads break off.



8. INSTALL TRANSPONDER KEY AMPLIFIER (w/o Smart Key System)

(a) Align the transponder key amplifier with the installation position of the upper bracket with the amplifier inclined.



(b) Push the transponder key amplifier up and install it to the upper bracket.
NOTICE:
Do not push the amplifier up with excessive force.

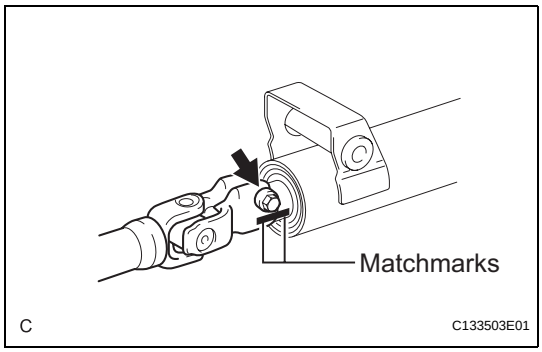
SR

INSTALLATION

1. INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY (for TMC Made)

(a) Align the matchmarks on the steering intermediate shaft assembly and the steering column assembly.

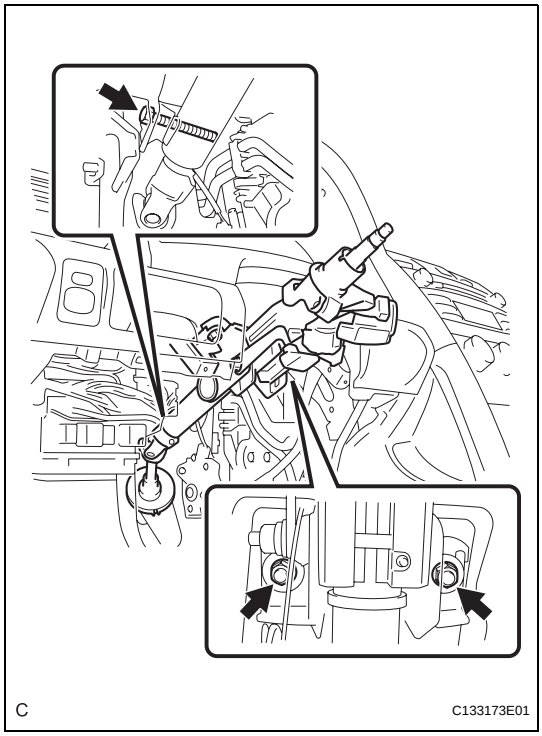
(b) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)



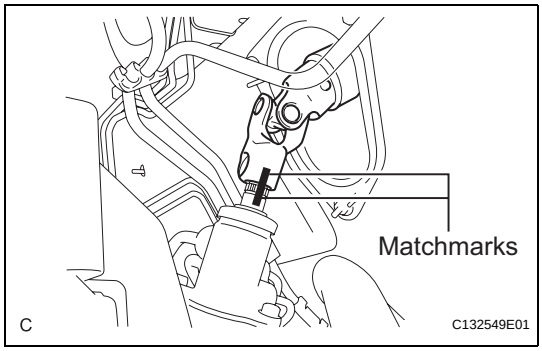
2. INSTALL STEERING COLUMN ASSEMBLY (for TMC Made)

(a) Install the steering column assembly with the bolt and 2 nuts.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

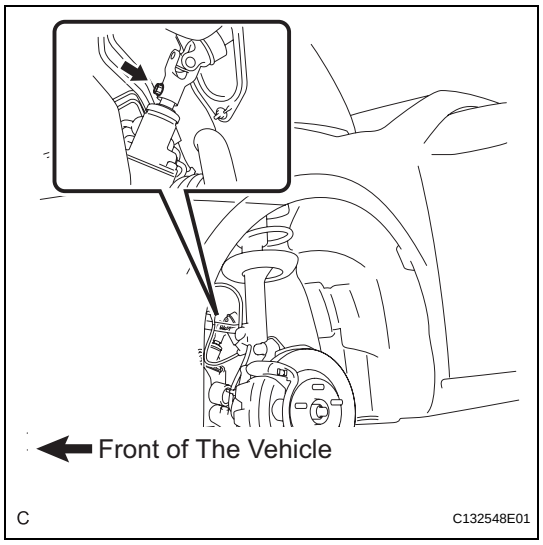
(b) Connect the connectors and wire harness clamps to the steering column assembly.



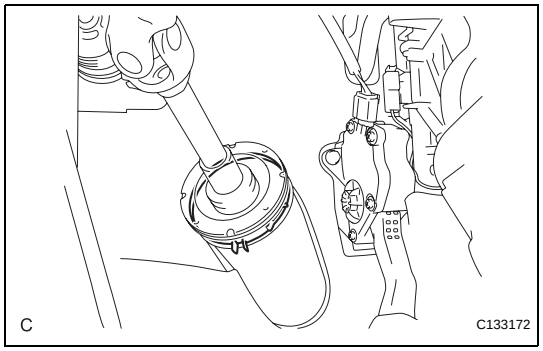
(c) Align the matchmarks on the steering intermediate shaft assembly and the power steering link assembly.



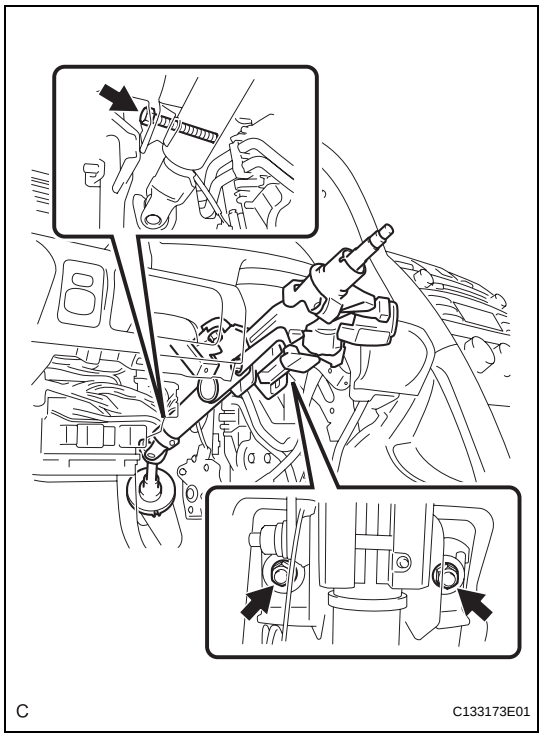
SR



(d) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)



(e) Install the clamp to the steering column hole shield.

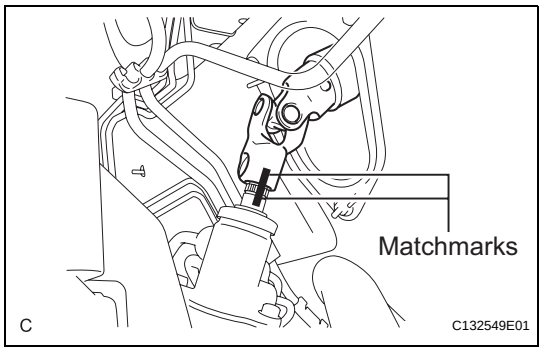


3. INSTALL STEERING POST ASSEMBLY (for TMMK Made)

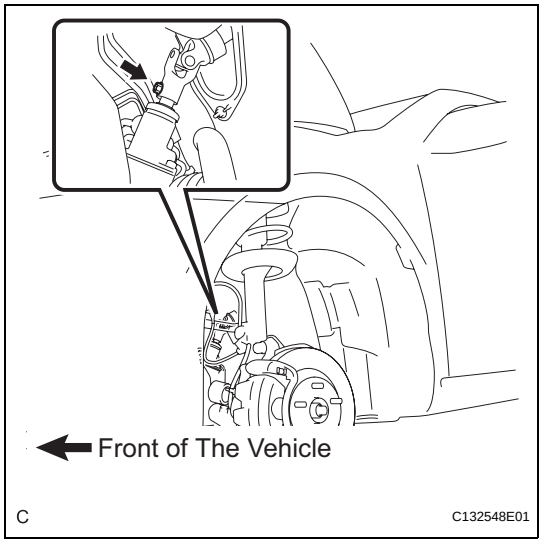
(a) Install the steering post assembly with the bolt and 2 nuts.
Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)

(b) Connect the connectors and wire harness clamps to the steering post assembly.

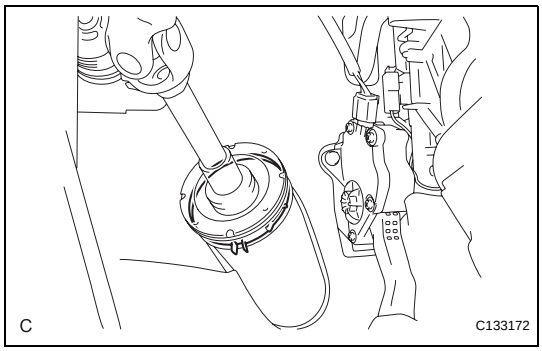
SR



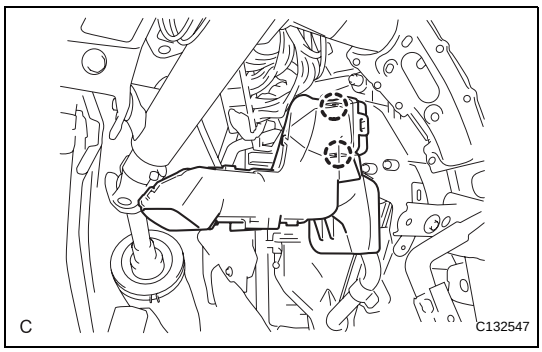
(c) Align the matchmarks on the steering sliding yoke and the power steering link assembly.



(d) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)



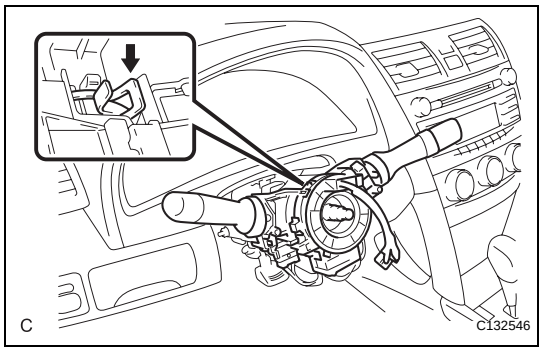
(e) Install the clamp to the steering column hole shield.



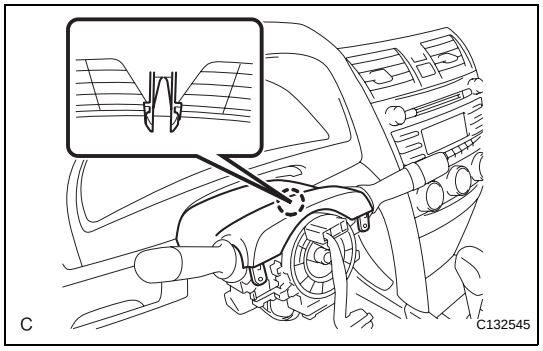
4. INSTALL NO. 1 AIR DUCT

(a) Engage the 2 claws to install the No. 1 air duct.

5. PLACE FRONT WHEELS FACING STRAIGHT AHEAD



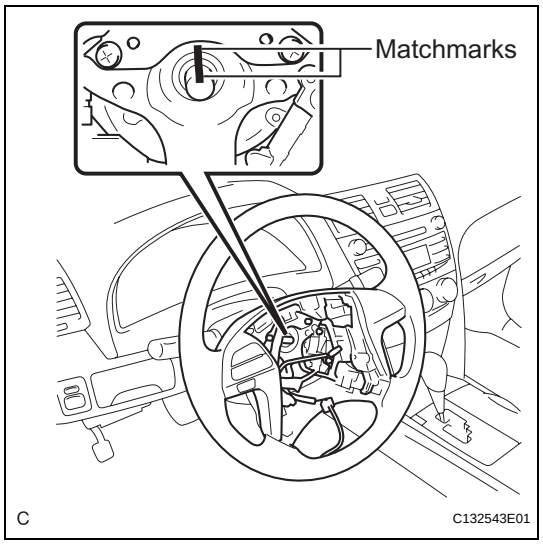
6. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY**
   (a) Install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.
   (b) Connect the connectors to the turn signal switch assembly with spiral cable sub-assembly.



7. **INSTALL STEERING COLUMN COVER**
   (a) Engage the claw to install the steering column cover upper.

   (b) Engage the 2 claws to install the steering column cover lower.
   (c) Install the 2 screws.

8. **ADJUST SPIRAL CABLE SUB- ASSEMBLY (See page RS-367)**



9. **INSTALL STEERING WHEEL ASSEMBLY**
   (a) Align the matchmarks on the steering wheel assembly and steering main shaft.
   (b) Install the steering wheel assembly set nut.
   Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
   (c) Connect the connectors to the spiral cable sub-assembly.

10. **INSPECT STEERING WHEEL CENTER POINT**

11. **INSTALL STEERING PAD (See page RS-350)**

12. **INSPECT STEERING PAD (See page RS-352)**

13. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-352)**

14. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-351)**

15. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-370)**

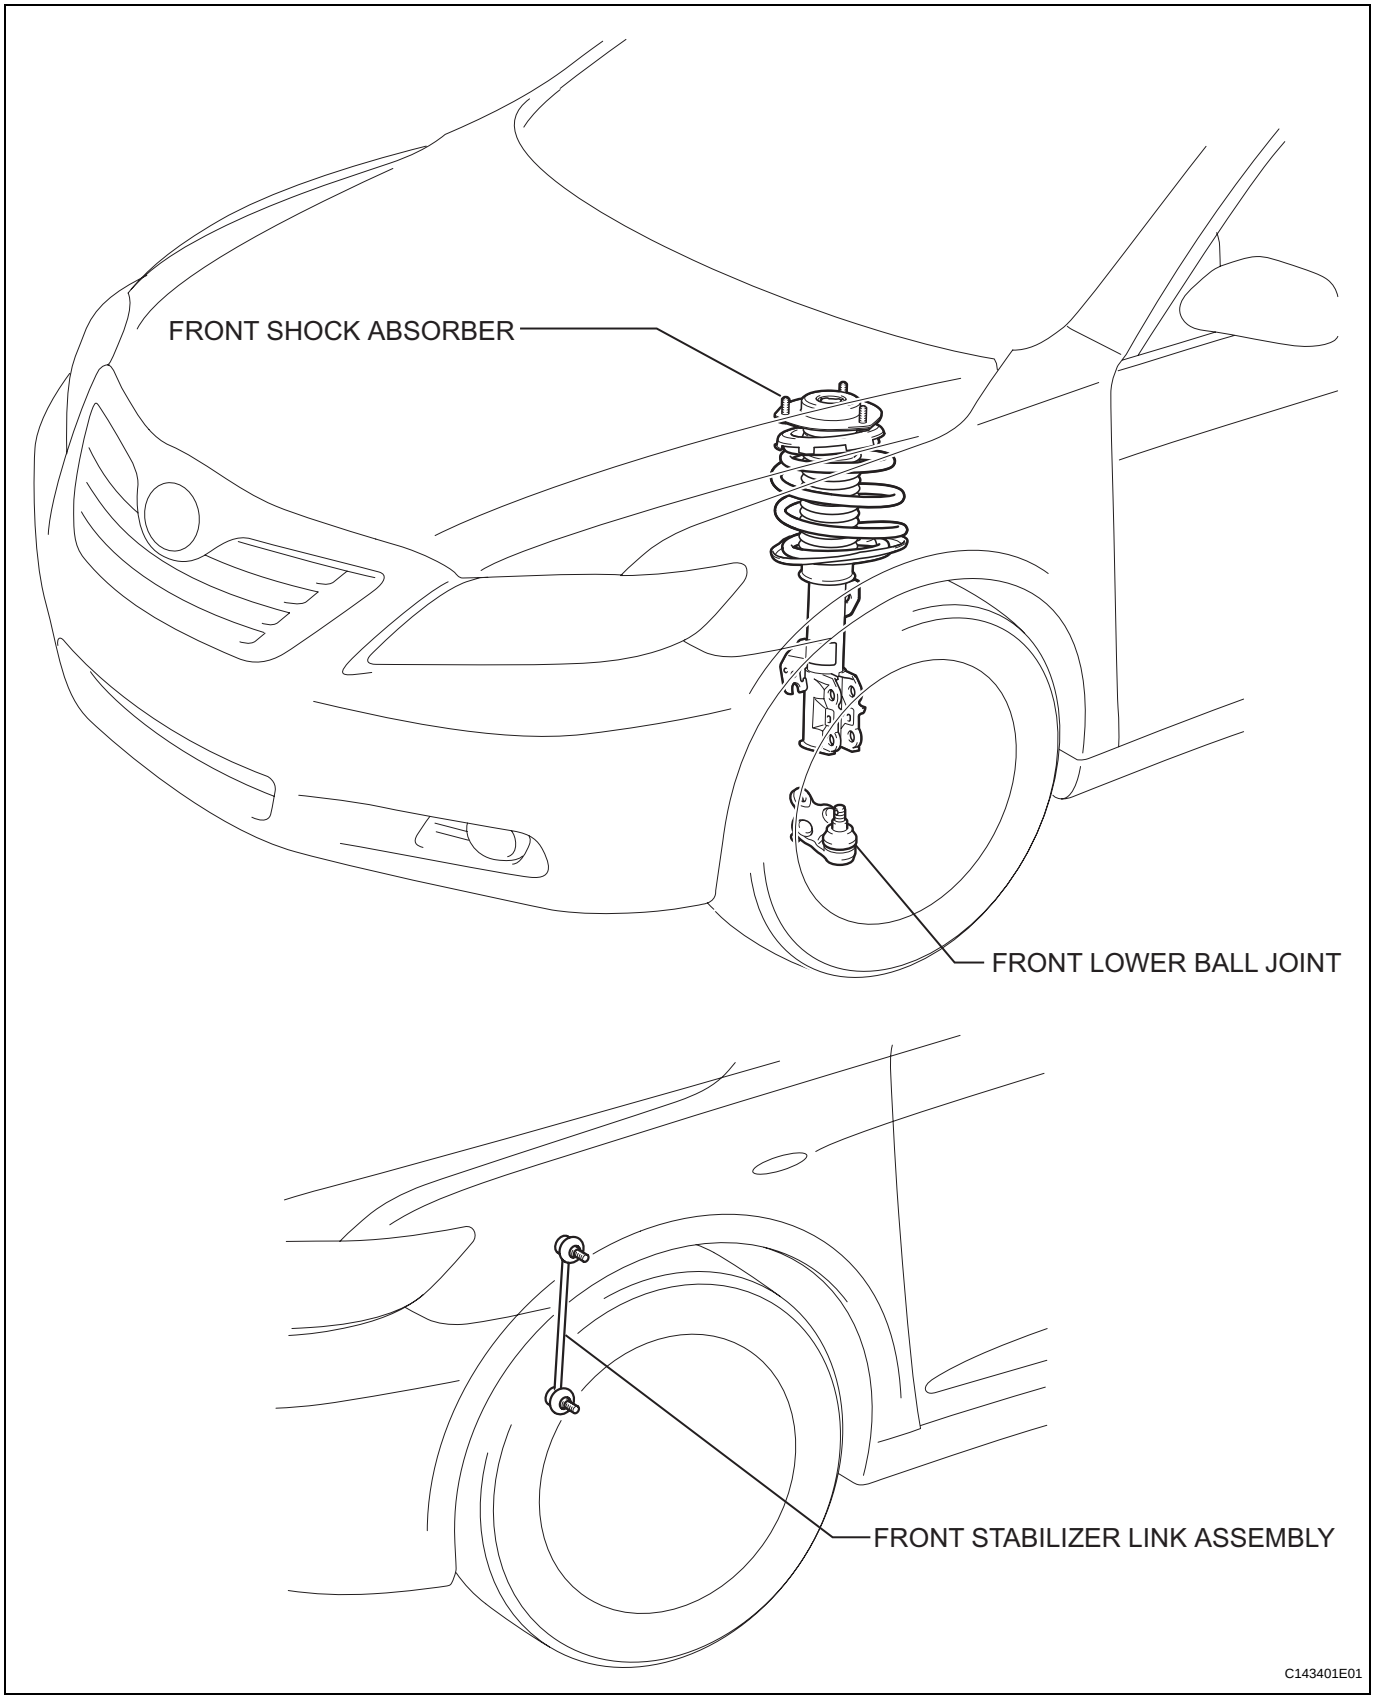
16. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMC Made) (See page IP-58)**

SR

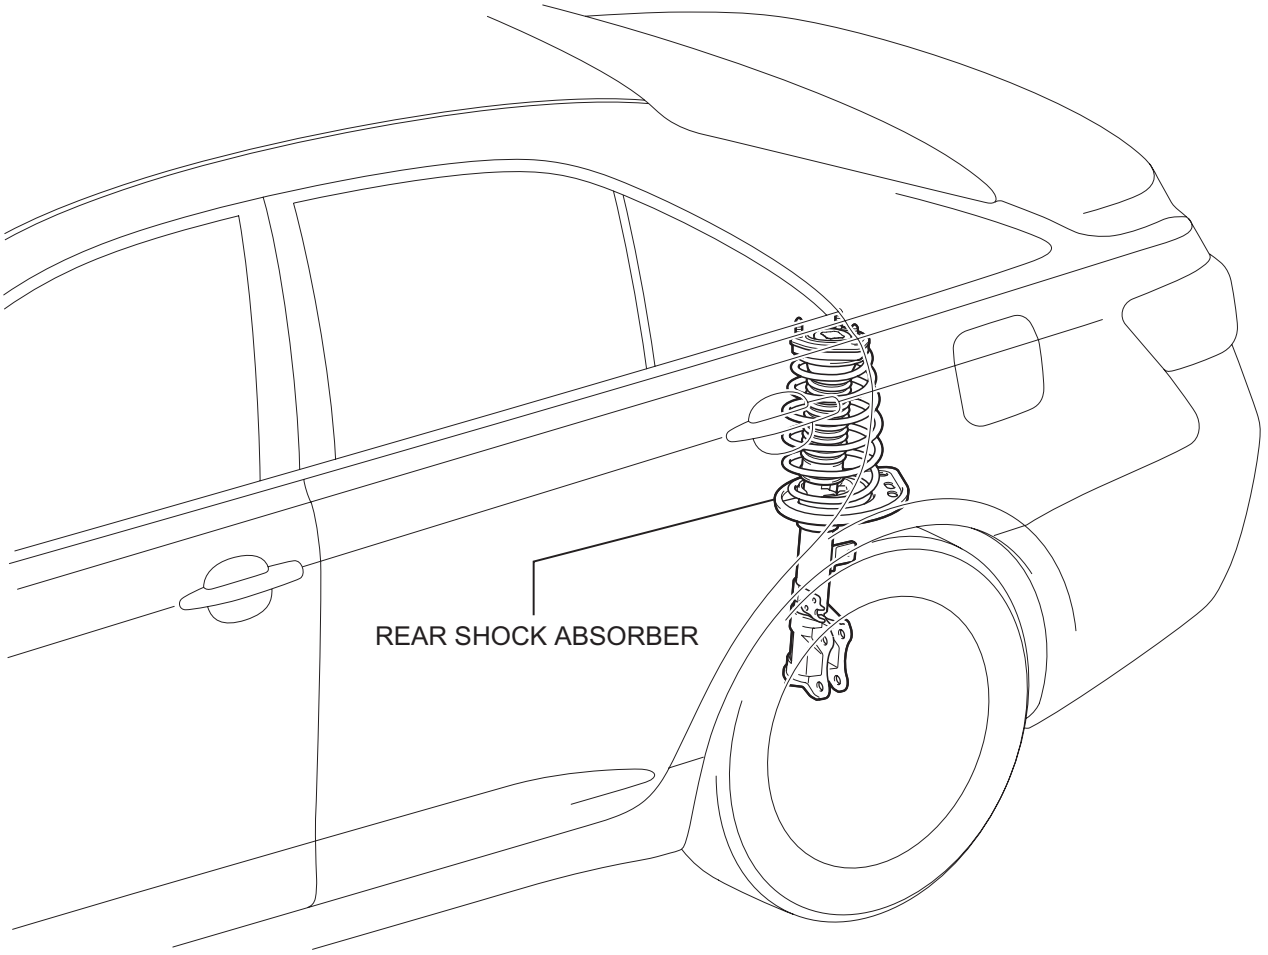
17. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for TMMK Made) (See page IP-59)**
18. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-54)**
19. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-54)**
20. **INSTALL FRONT WHEEL LH**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
21. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
22. **INSPECT SRS WARNING LIGHT**
    HINT:
    (See page RS-32)

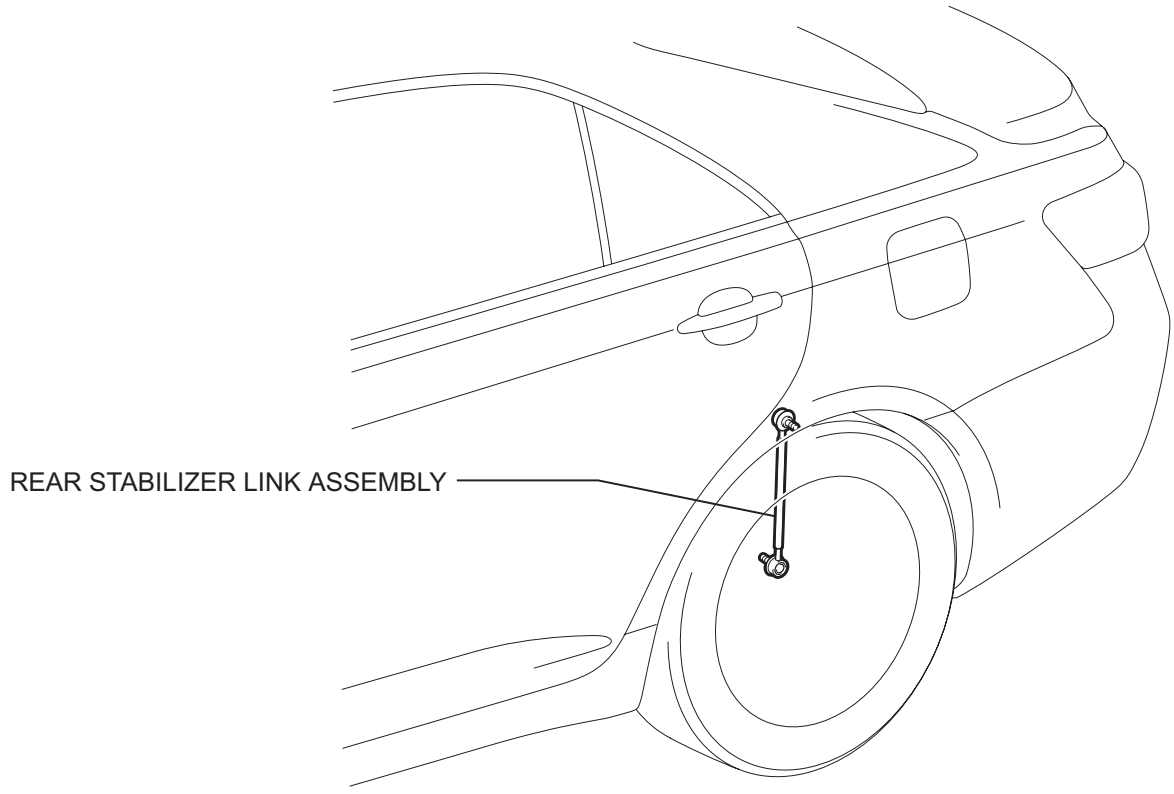
SUSPENSION SYSTEM

PARTS LOCATION



SP





C143402E01

PROBLEM SYMPTOMS TABLE

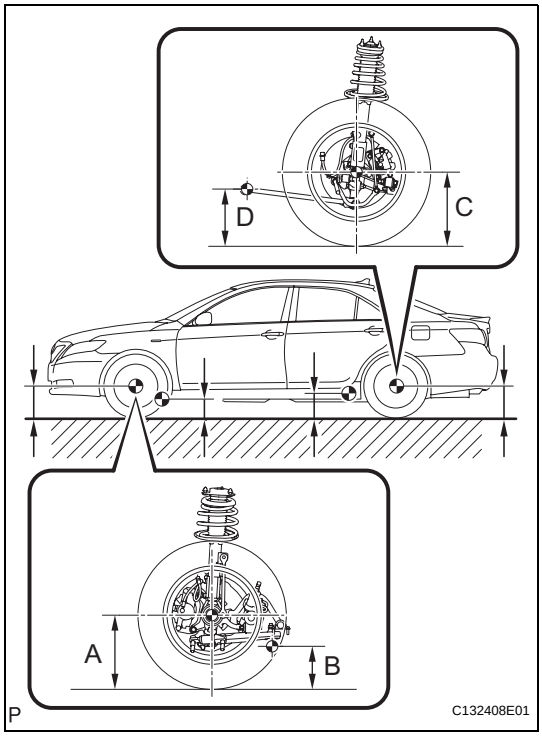
SUSPENSION SYSTEM

Symptom	Suspected area	See page
Bottoming	1. Vehicle (Overloaded)	-
	2. Spring (Weak)	SP-18
	3. Shock absorber (Worn)	SP-18
Sways/pitches	1. Tire (Worn or improperly inflated)	TW-3
	2. Stabilizer bar (Bent or broken)	SP-32
	3. Shock absorber (Worn)	SP-18
Front wheel shimmy	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel (Out of balance)	TW-3
	3. Shock absorber (Worn)	SP-18
	4. Wheel alignment (Incorrect)	SP-4
	5. Lower ball joint (Worn)	SP-27
	6. Hub bearing (Worn)	AH-5
	7. Steering gear (Out of adjustment or broken)	PS-49
Rear wheel shimmy	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel (Out of balance)	TW-3
	3. Shock absorber (Worn)	SP-41
	4. Wheel alignment (Incorrect)	SP-13
	5. Hub bearing (Worn)	AH-14
Abnormal tire wear	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel alignment (Incorrect)	TW-3
	3. Shock absorber (Worn)	SP-18
	4. Suspension parts (Worn)	-

FRONT WHEEL ALIGNMENT

ADJUSTMENT

1. INSPECT TIRES (See page TW-3)



2. MEASURE VEHICLE HEIGHT

(a) Bounce the vehicle up and down at the corners to stabilize the suspension. Inspect the vehicle height.

Vehicle height
for USA and Canada:

Model	Front A - B	Rear C - D
ACV40L-CEAGKA	125 mm (4.92 in.)	54 mm (2.13 in.)
GSV40L-CETGKA	126 mm (4.96 in.)	55 mm (2.17 in.)
ACV40L-AEAGKA	125 mm (4.92 in.)	53 mm (2.09 in.)
GSV40L-AETGKA	126 mm (4.96 in.)	54 mm (2.13 in.)
ACV40L-CEANKA	125 mm (4.92 in.)	54 mm (2.13 in.)
ACV40L-CEMNKA	125 mm (4.92 in.)	53 mm (2.09 in.)
GSV40L-CETNKA	126 mm (4.96 in.)	55 mm (2.17 in.)
ACV40L-AEANKA	125 mm (4.92 in.)	53 mm (2.09 in.)
ACV40L-AEMNKA	125 mm (4.92 in.)	52 mm (2.05 in.)
GSV40L-AETNKA	126 mm (4.96 in.)	54 mm (2.13 in.)
ACV40L-CEASKA	128 mm (5.04 in.)	57 mm (2.24 in.)
ACV40L-CEMSKA	127 mm (5.00 in.)	55 mm (2.17 in.)
GSV40L-CETSKA	129 mm (5.08 in.)	58 mm (2.28 in.)

for Mexico:

Model	Front A - B	Rear C - D
ACV40L-CEAGKA	115 mm (4.53 in.)	40 mm (1.57 in.)
GSV40L-CETGKA	116 mm (4.57 in.)	41 mm (1.61 in.)
ACV40L-CEANKA	115 mm (4.53 in.)	40 mm (1.57 in.)

Measuring points:

A:
Ground clearance of front wheel center

B:
Ground clearance of lower suspension arm No. 2 bushing set bolt center

C:
Ground clearance of rear wheel center

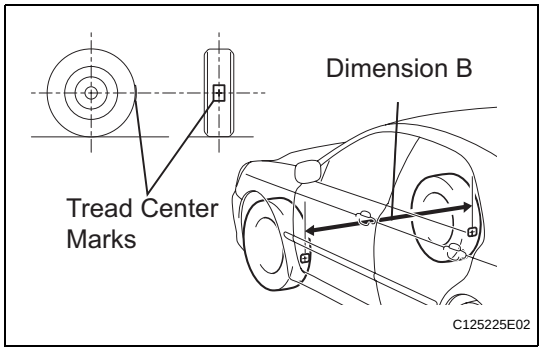
D:
Ground clearance of strut rod set bolt center

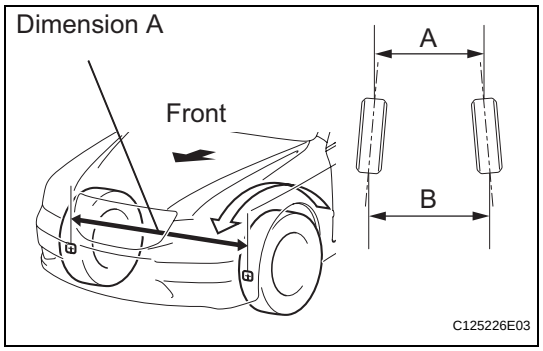
NOTICE:

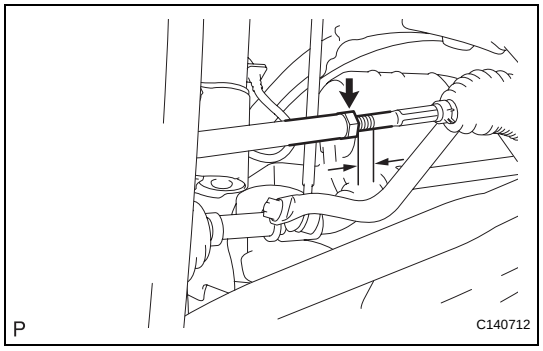
- **Before inspecting the wheel alignment, adjust the vehicle height to the specified value.**
- **Be sure to perform measurement on a level surface.**
- **If it is necessary to go under the vehicle for measurement, confirm that the parking brake is applied and the vehicle is secured with chocks.**

3. INSPECT TOE-IN

(a) Bounce the vehicle up and down at the corners to stabilize the suspension.







(b) Release the parking brake and move the shift lever to the neutral position.

(c) Push the vehicle straight ahead approximately 5 m (16.4 ft). (*1)

(d) Put tread center marks on the rearmost points of the front wheels and measure the distance between the marks (dimension B).

(e) Slowly push the vehicle straight ahead to cause the front wheels to rotate 180° using the front tire valve as a reference point.
HINT:
Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the procedure from *1 again.

(f) Measure the distance between the tread center marks on the front side of the wheels.
Toe-in

Toe-in (total)	**-**
A - B:	**0 +- 2 mm (0 +- 0.08 in.)**

HINT:
If toe-in is not within the specified range, adjust it at the rack ends.

4. ADJUST TOE-IN

(a) Measure the thread lengths of the right and left rack ends.
Standard:
Difference in thread length between the right and left rack ends is 1.5 mm (0.06 in.) or less.

(b) Remove the rack boot set clips.

(c) Loosen the tie rod end lock nuts.

(d) Adjust the rack ends if the difference in thread length between the right and left rack ends is not within the specified range.
(1) Extend the shorter rack end if the measured toe-in deviates toward the outside.
(2) Shorten the longer rack end if the measured toe-in deviates toward the inside.

(e) Turn the right and left rack ends by equal amounts to adjust the toe-in.
HINT:
Try to adjust the toe-in to the center of the specified range.

(f) Make sure that the lengths of the right and left rack ends are the same.

(g) Tighten the tie rod end lock nuts.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)

SP

NOTICE:
Temporarily tighten the lock nut while holding the hexagonal part of the steering rack end so that the lock nut and the steering rack end do not turn together. Hold the flats on the tie rod end and tighten the lock nut.

(h) Place the boots on the seats and install the clips.
HINT:
Make sure that the boots are not twisted.

5. INSPECT WHEEL ANGLE

(a) Put tread center marks on the rearmost points of the turning radius gauge.

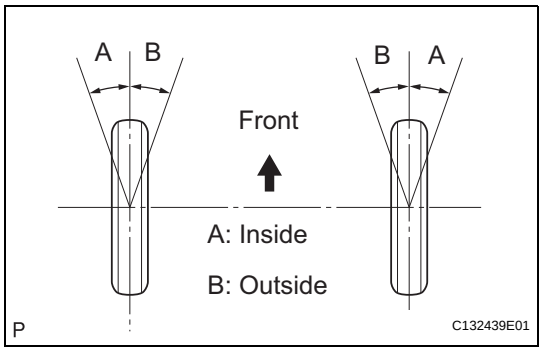
(b) Turn the steering wheel fully to the left and right and measure the turning angle.
Wheel turning angle
for USA and Canada:

Model	Inside wheel	Outside wheel reference
ACV40L-CEAGKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
GSV40L-CETGKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-AEAGKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
GSV40L-AETGKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-CEANKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-CEMNKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
GSV40L-CETNKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-AEANKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-AEMNKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
GSV40L-AETNKA	38°22' +-2° (38.37° +-2°)	33°33' (33.55°)
ACV40L-CEASKA	38°42' +-2° (38.70° +-2°)	33°46' (33.77°)
ACV40L-CEMSKA	38°42' +-2° (38.70° +-2°)	33°46' (33.77°)
GSV40L-CETSKA	38°18' +-2° (38.30° +-2°)	33°32' (33.53°)

for Mexico:

Model	Inside wheel	Outside wheel reference
ACV40L-CEAGKA	38°18' +-2° (38.30° +-2°)	33°41' (33.68°)
GSV40L-CETGKA	38°18' +-2° (38.30° +-2°)	33°41' (33.68°)
ACV40L-CEANKA	38°18' +-2° (38.30° +-2°)	33°41' (33.68°)

If the right and left inside wheel angles differ from the specified value, check the right and left rack end lengths.

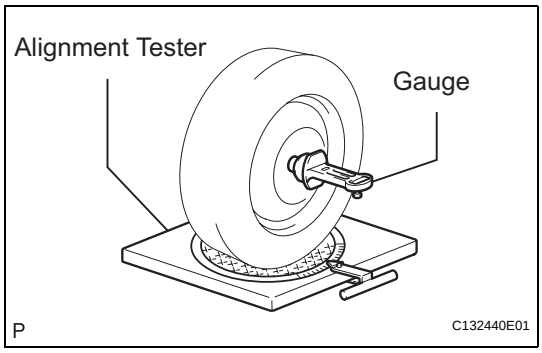


6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Put the front wheel on the center of the alignment tester.

(b) Remove the center ornament.

(c) Set the camber-caster-king pin gauge and attachment at the center of the axle hub or drive shaft.



(d) Inspect the camber, caster, and steering axis inclination.

Camber

for USA and Canada:

Model	Camber	Right-left difference
ACV40L-CEAGKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-AEAGKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
GSV40L-AETGKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-CEMNKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
GSV40L-CETNKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-AEANKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-AEMNKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
GSV40L-AETNKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-CEASKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
ACV40L-CEMSKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less
GSV40L-CETSKA	-0°40' +-45' (-0.67° +-0.75°)	45' (0.75°) or less

for Mexico:

Model	Camber	Right-left difference
ACV40L-CEAGKA	-0°35' +-45' (-0.58° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	-0°35' +-45' (-0.58° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	-0°35' +-45' (-0.58° +-0.75°)	45' (0.75°) or less

Caster

for USA and Canada:

Model	Caster	Right-left difference
ACV40L-CEAGKA	3°00' +-45' (3.00° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
ACV40L-AEAGKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
GSV40L-AETGKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	3°00' +-45' (3.00° +-0.75°)	45' (0.75°) or less
ACV40L-CEMNKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
GSV40L-CETNKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
ACV40L-AEANKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
ACV40L-AEMNKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
GSV40L-AETNKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
ACV40L-CEASKA	3°00' +-45' (3.00° +-0.75°)	45' (0.75°) or less
ACV40L-CEMSKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less
GSV40L-CETSKA	2°55' +-45' (2.92° +-0.75°)	45' (0.75°) or less

for Mexico:

Model	Caster	Right-left difference
ACV40L-CEAGKA	2°45' +-45' (2.75° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	2°40' +-45' (2.67° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	2°45' +-45' (2.75° +-0.75°)	45' (0.75°) or less

Steering axis inclination

for USA and Canada:

Model	Steering axis inclination	Right-left difference
ACV40L-CEAGKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less

Model	Steering axis inclination	Right-left difference
ACV40L-AEAGKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
GSV40L-AETGKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-CEMNKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
GSV40L-CETNKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-AEANKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-AEMNKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
GSV40L-AETNKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-CEASKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
ACV40L-CEMSKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less
GSV40L-CETSKA	12°15' +-45' (12.25° +-0.75°)	45' (0.75°) or less

for Mexico:

Model	Steering axis inclination	Right-left difference
ACV40L-CEAGKA	12°00' +-45' (12.00° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	12°00' +-45' (12.00° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	12°00' +-45' (12.00° +-0.75°)	45' (0.75°) or less

NOTICE:
- **Perform the inspection while the vehicle is unloaded.**
- **The maximum tolerance of the right and left difference for the camber and caster is 45' (0.75°) or less.**

(e) Remove the camber-caster-king pin gauge and attachment.
(f) Install the center ornament.
(g) If the caster and steering axis inclination are not within the specified range after the camber has been correctly adjusted, recheck the suspension parts for damage and/or wear.

7. ADJUST CAMBER

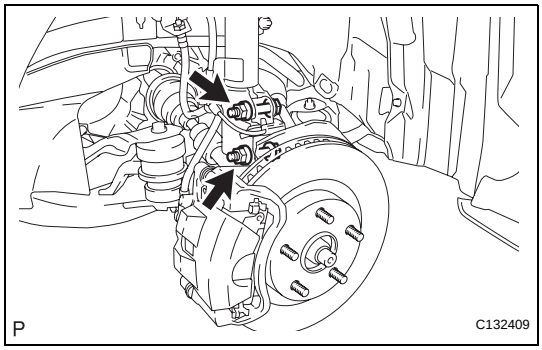
NOTICE:
Inspect toe-in after the camber has been adjusted.

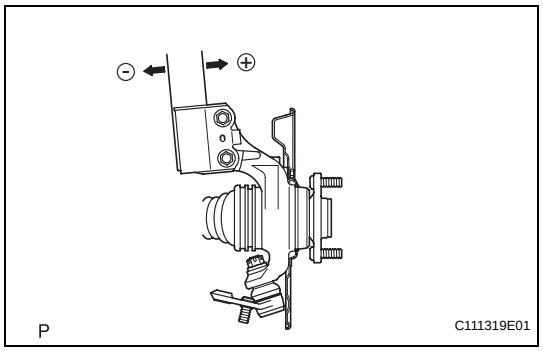
(a) Remove the front wheel.

(b) Remove the 2 nuts on the lower side of the front shock absorber.

NOTICE:
Keep the bolts inserted.

(c) Clean the installation surfaces of the front shock absorber and the steering knuckle.
(d) Temporarily install the 2 nuts (Step A).

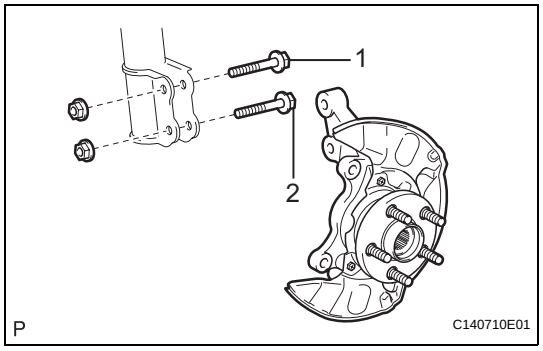




(e) Fully push or pull the front axle hub in the direction of the required adjustment (Step B).

(f) Tighten the nuts.
Torque: 210 N*m (2,141 kgf*cm, 155 ft.*lbf)
NOTICE:
Keep the bolts from rotating when tightening the nuts.

(g) Install the front wheel.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



(h) Check the camber.
If the measured value is not within the specification, calculate the required adjustment amount using the formula below.
Camber adjustment amount = center of the specified range center - measured value
Check the combination of installed bolts. Select appropriate bolts from the table below to adjust the camber to the specified values.
HINT:
Try to adjust the camber to the center of the specified values.

Move the axle toward (+) in step (B)	Move the axle toward (-) in step (B)
Refer to table (1) (Move the axle toward the positive side)	Refer to table (2) (Move the axle toward the negative side)

SP

Table (1) (Move the axle toward the positive side)

Installed Bolt / Adjusting Value

C138332E02

SP

The body and suspension may be damaged if the camber is not correctly adjusted according to the above table.

NOTICE:

Replace the nut with a new one when replacing the bolt.

(i) Repeat the steps mentioned above. In step (A), replace 1 or 2 selected bolts.

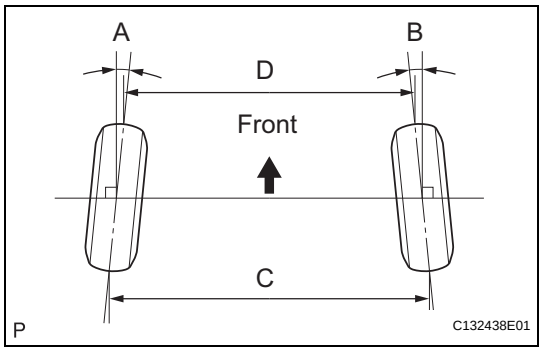
HINT:

Replace one bolt at a time when replacing 2 bolts.

REAR WHEEL ALIGNMENT

ADJUSTMENT

1. **INSPECT TIRES (See page TW-3)**
2. **MEASURE VEHICLE HEIGHT (See page SP-4)**
3. **INSPECT TOE-IN**



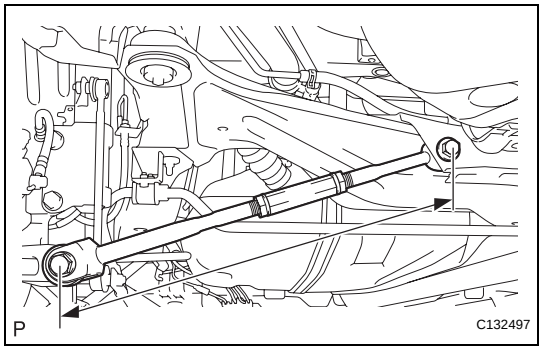
(a) Bounce the vehicle up and down at the corners to stabilize the suspension. Inspect the toe-in.

Toe-in

Toe-in (total)	-
A + B: C - D:	0° +- 24' (0° +- 0.4°) 4 +- 2 mm (0.16 +- 0.08 in.)

If the toe-in is not within the specified range, inspect the suspension parts and replace them if necessary.

4. **ADJUST TOE-IN**

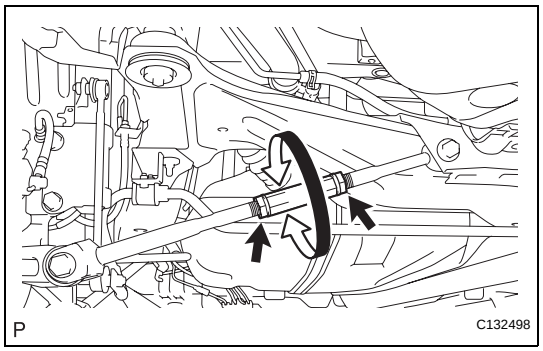


(a) Measure the lengths of the right and left rear No. 2 suspension arms.

Difference in the length between the right and left rear No. 2 suspension arms:

1.5 mm (0.06 in.) or less

If the left-right difference is larger than 1.5 mm (0.06 in.), adjust it by following the procedures below.



(b) Loosen the lock nuts.

(c) Turn the right and left adjusting tubes by an equal amount to adjust toe-in.

HINT:

- Try to adjust toe-in to the center of the specified range.
- One turn of each adjusting tube will adjust toe-in by approximately 10.8 mm (0.425 in.).

(d) Tighten the lock nuts.

Torque: 56 N*m (571 kgf*cm, 41 ft.*lbf)

5. **INSPECT CAMBER**

Camber

for USA and Canada:

Model	Camber	Right-left difference
ACV40L-CEAGKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
ACV40L-AEAGKA	-1°15' +-45' (-1.25° +-0.75°)	45' (0.75°) or less
GSV40L-AETGKA	-1°15' +-45' (-1.25° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
ACV40L-CEMNKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
GSV40L-CETNKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
ACV40L-AEANKA	-1°15' +-45' (-1.25° +-0.75°)	45' (0.75°) or less
ACV40L-AEMNKA	-1°15' +-45' (-1.25° +-0.75°)	45' (0.75°) or less
GSV40L-AETNKA	-1°15' +-45' (-1.25° +-0.75°)	45' (0.75°) or less

SP

Model	Camber	Right-left difference
ACV40L-CEASKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
ACV40L-CEMSKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less
GSV40L-CETSKA	-1°18' +-45' (-1.30° +-0.75°)	45' (0.75°) or less

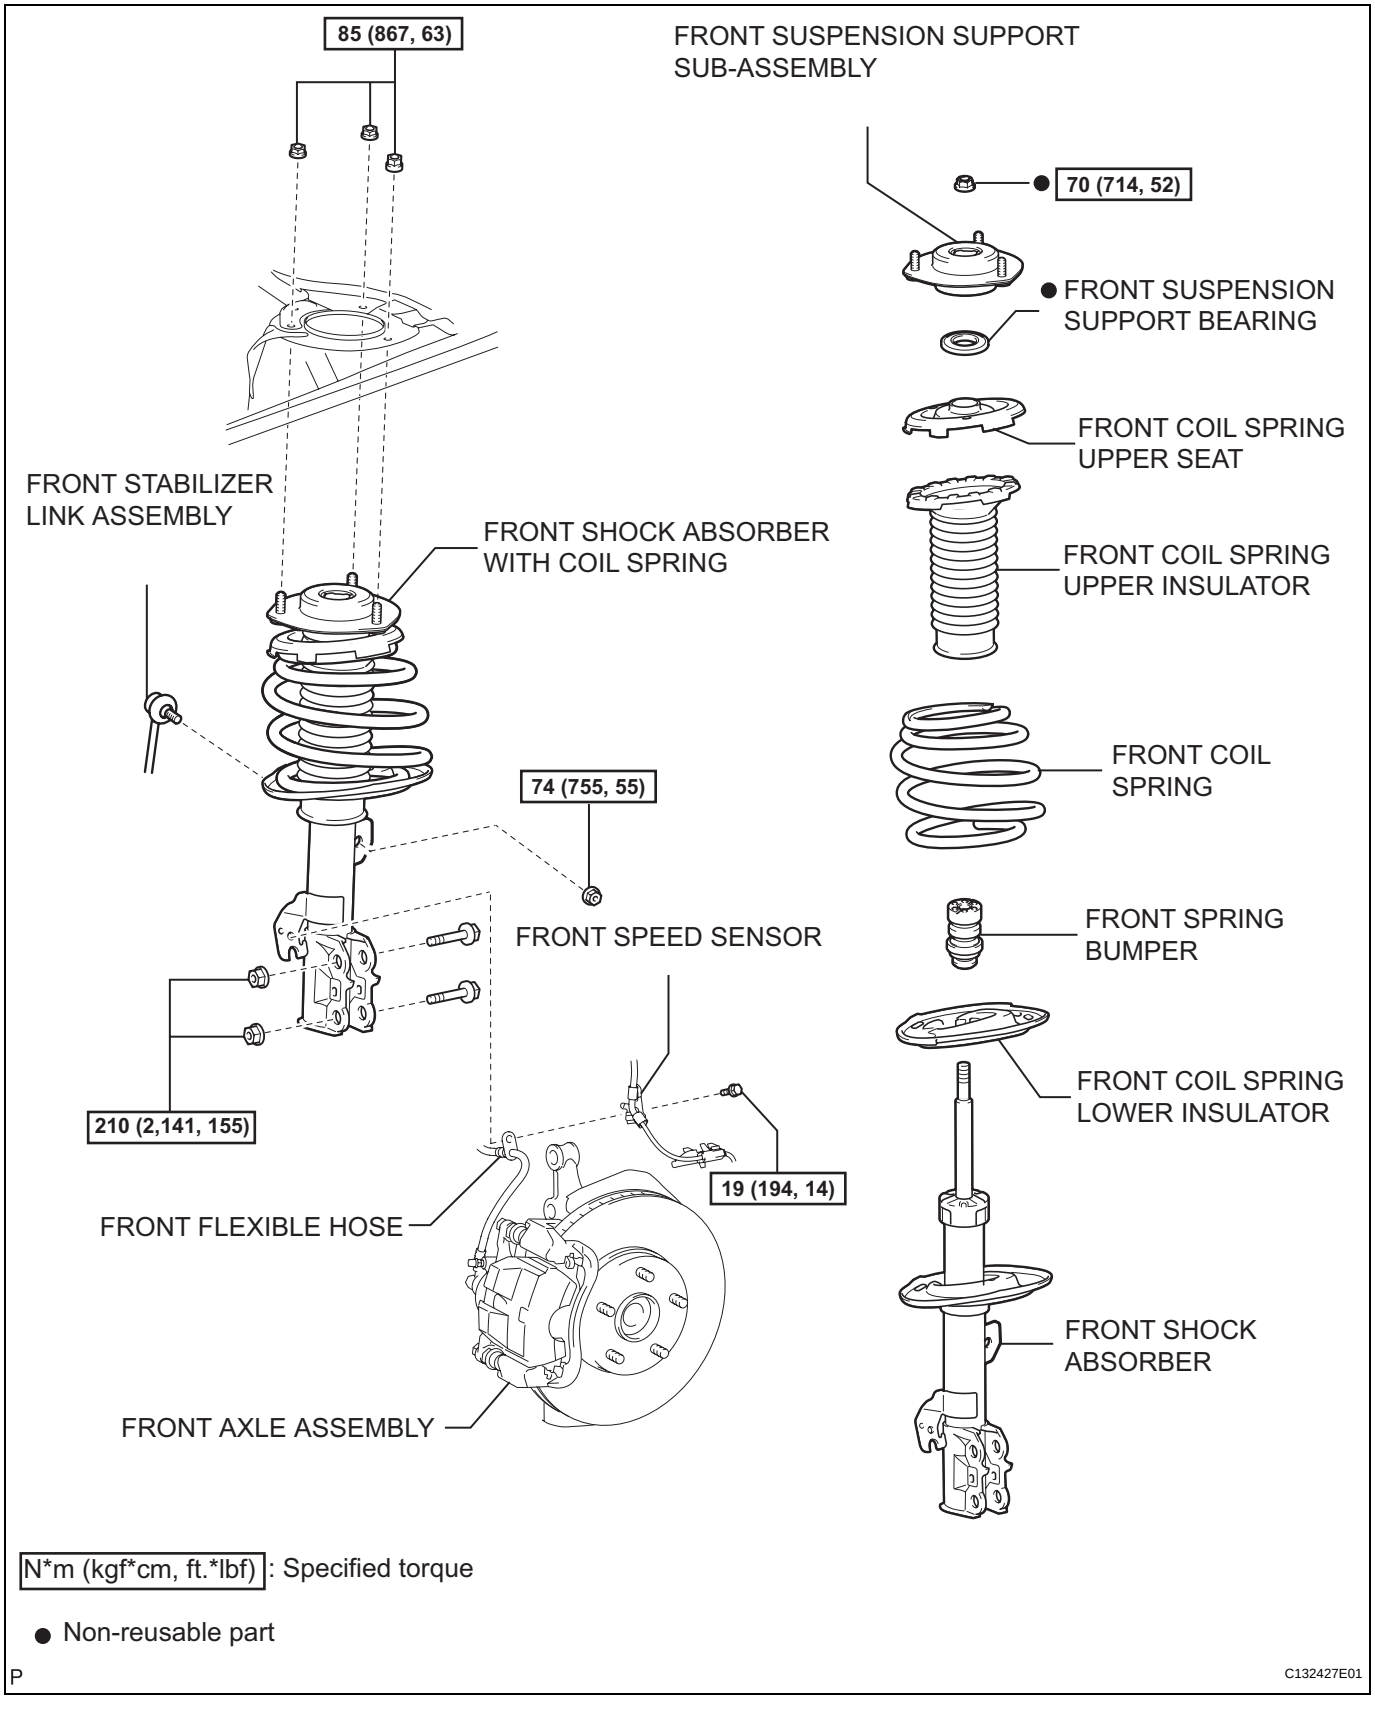
for Mexico:

Model	Camber	Right-left difference
ACV40L-CEAGKA	-1°06' +-45' (-1.10° +-0.75°)	45' (0.75°) or less
GSV40L-CETGKA	-1°06' +-45' (-1.10° +-0.75°)	45' (0.75°) or less
ACV40L-CEANKA	-1°06' +-45' (-1.10° +-0.75°)	45' (0.75°) or less

HINT:
Camber is not adjustable. If the measurement is not within the specification range, inspect the suspension parts for damage and/or wear, and replace them if necessary.

FRONT SHOCK ABSORBER

COMPONENTS



SP

REMOVAL

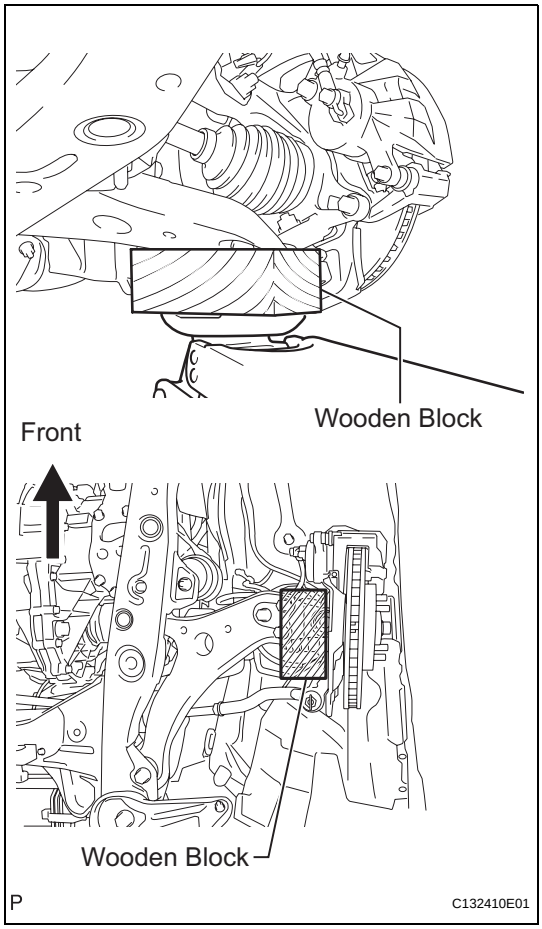
HINT:

- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

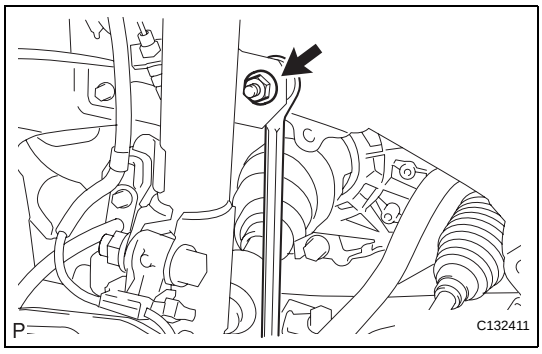
1. REMOVE FRONT WHEEL

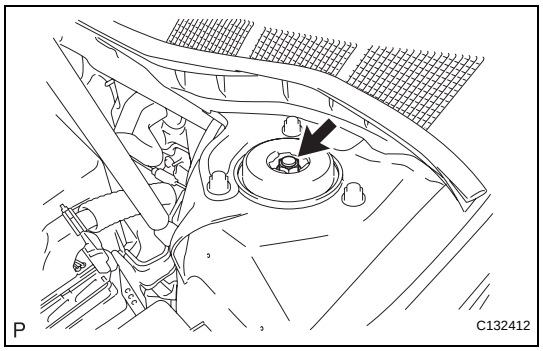
2. SEPARATE FRONT STABILIZER LINK ASSEMBLY

(a) Support the front No. 1 suspension lower arm with a jack using a wooden block to avoid damage.



(b) Remove the nut and separate the front stabilizer link assembly from the front shock absorber.
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.



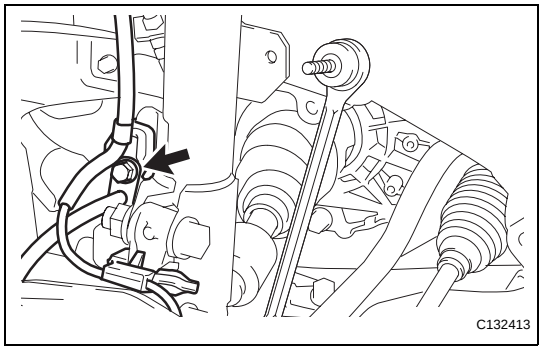


3. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Loosen the lock nut of the front shock absorber with coil spring.

NOTICE:

- **Do not remove the lock nut.**
- **Only loosen the nut when disassembling the front shock absorber with coil spring.**

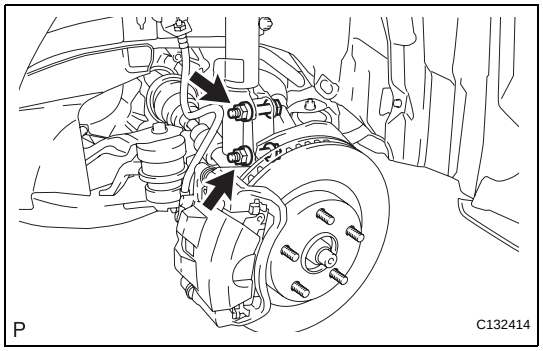


(b) Remove the bolt and disconnect the front flexible hose and front speed sensor wire harness from the front shock absorber with coil spring.

NOTICE:

Be sure to remove the front speed sensor from the front shock absorber with coil spring.

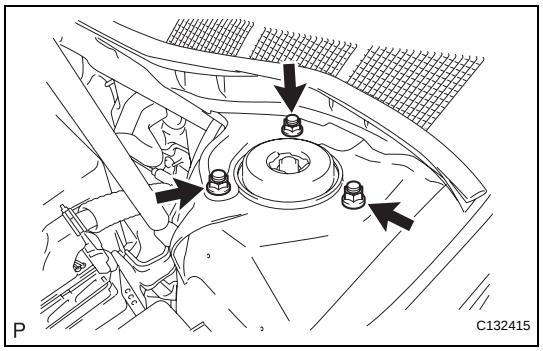
SP



(c) Remove the 2 nuts on the lower side of the front shock absorber with coil spring.

NOTICE:

- **When removing the nuts, keep the bolts from rotating.**
- **Keep the bolts inserted to secure the front axle assembly.**



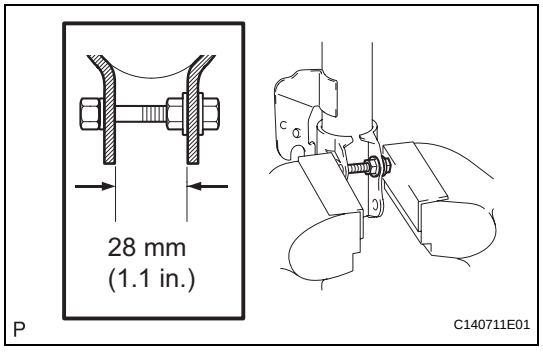
(d) Remove the 3 nuts on the upper side of the front shock absorber with coil spring.

(e) Lower the front axle assembly, and remove the 2 bolts on the lower side of the front shock absorber.

(f) Remove the front shock absorber with coil spring.

NOTICE:

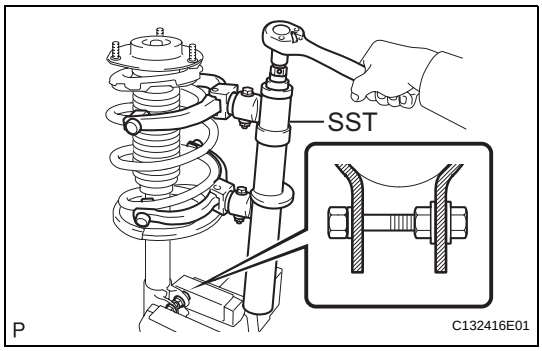
Make sure that the front speed sensor is disconnected from the front shock absorber with coil spring.



DISASSEMBLY

1. FIX FRONT SHOCK ABSORBER WITH COIL SPRING

(a) As shown in the illustration, secure the front shock absorber with coil spring in a vise using aluminum plates by clamping onto a double nutted bolt affixed to the bracket at the bottom of the absorber.



2. REMOVE FRONT SHOCK ABSORBER

(a) Using SST, compress the front coil spring.

SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

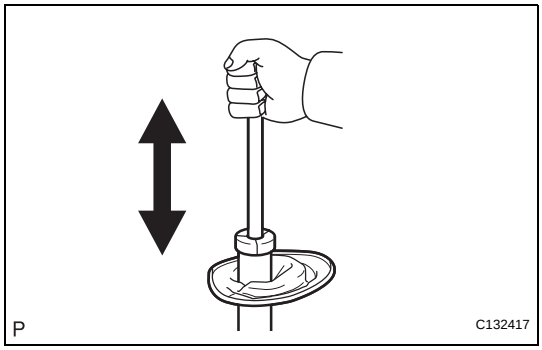
Do not use an impact wrench.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

(b) Remove the front suspension support sub-assembly, front suspension support bearing, front coil spring upper seat, front coil spring upper insulator, front coil spring, front spring bumper, and front coil spring lower insulator from the front shock absorber.

SP



INSPECTION

1. INSPECT FRONT SHOCK ABSORBER

(a) Compress and extend the shock absorber rod 4 or more times.

Standard:

There is no abnormal resistance or sound and operation resistance is normal.

HINT:

If there is any abnormality, replace the front shock absorber with a new one.

REASSEMBLY

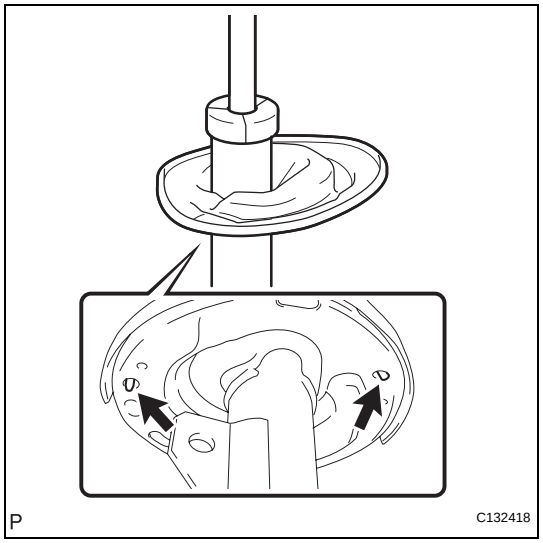
1. INSTALL FRONT SHOCK ABSORBER

(a) Install the front spring bumper to the piston rod.

(b) Install the front coil spring lower insulator onto the front shock absorber.

NOTICE:

Align the 2 protrusions of the front coil spring lower insulator and the 2 holes in the front shock absorber.



(c) Using SST, compress the front coil spring.

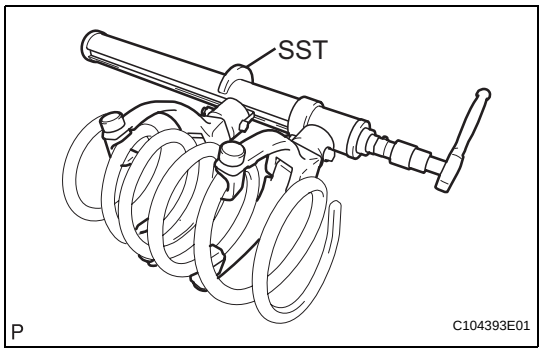
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not use an impact wrench.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.



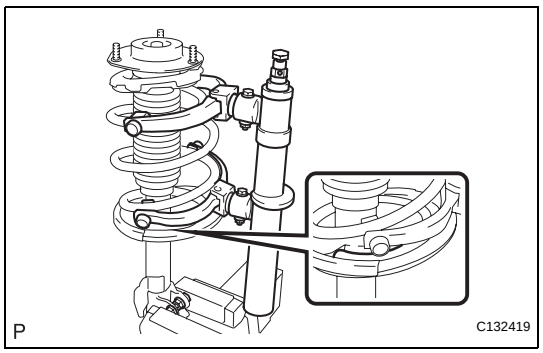
(d) Install the front coil spring to the front shock absorber.

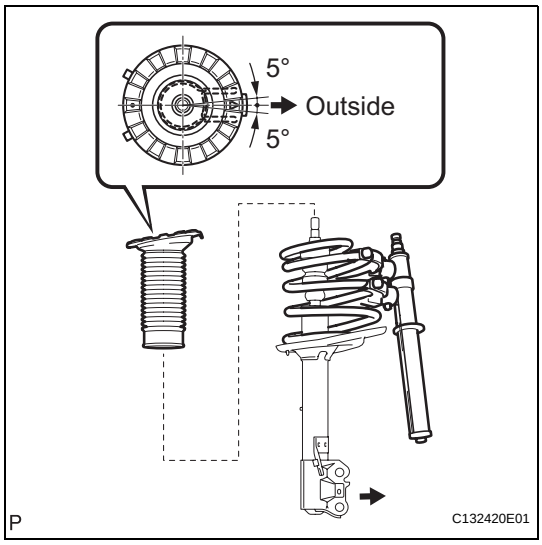
NOTICE:

The smaller diameter end of the front coil spring must face upward.

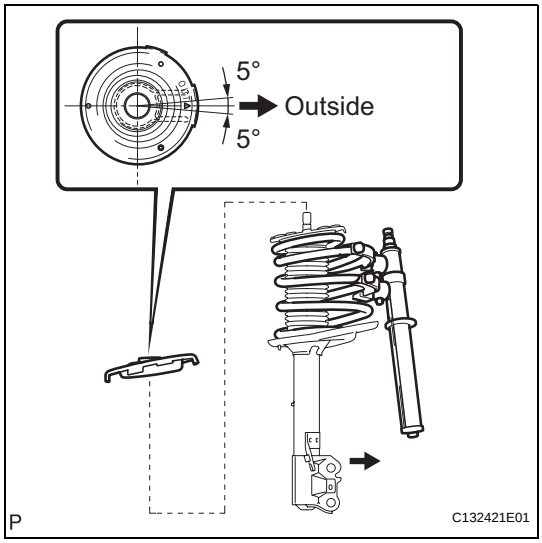
HINT:

Fit the lower end of the front coil spring into the gap of the insulator.

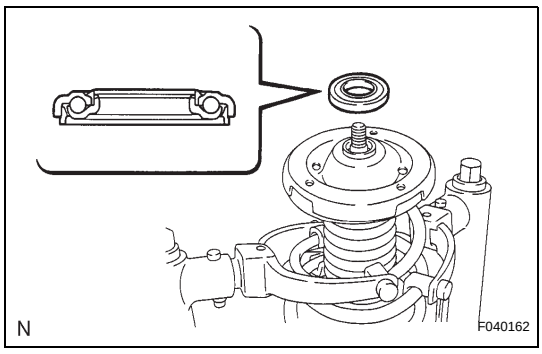




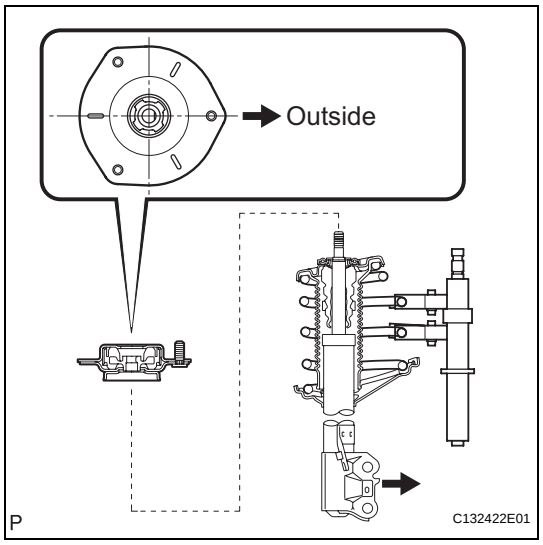
(e) Install the front coil spring upper insulator as shown in the illustration.
HINT:
Any misalignment between the front shock absorber lower bracket and the matchmark must be +-5°.



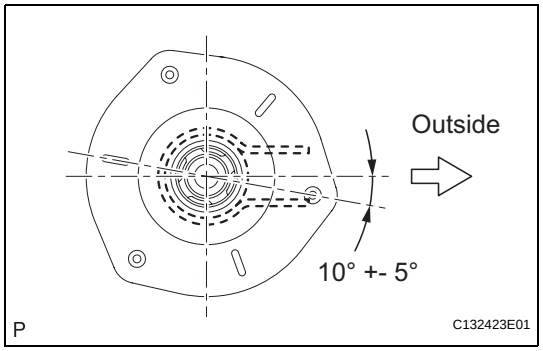
(f) Install the front coil spring upper seat with the mark facing to the outside of the vehicle.
HINT:
Any misalignment between the front shock absorber lower bracket and the matchmark must be +-5°.



(g) Install a new front suspension support bearing as shown in the illustration.
HINT:
If there is foreign matter inside the front suspension support bearing, replace it with a new one.



(h) Install the front suspension support sub-assembly. Temporarily tighten a new lock nut.
NOTICE:
Check that the flats on the piston rod and the flats on the front suspension support sub-assembly are aligned.



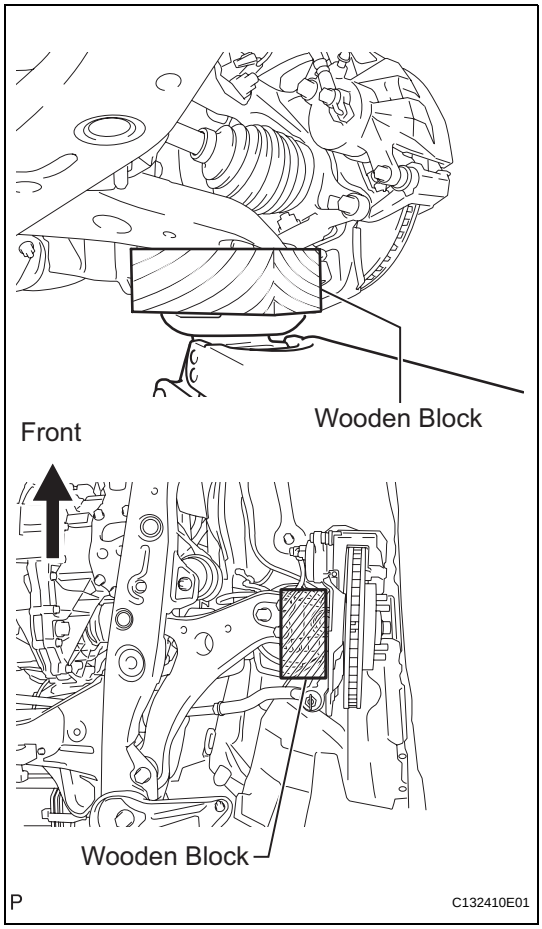
(i) Remove the SST slowly in order to release the coil spring.
NOTICE:
Do not use an impact wrench.
HINT:
Any misalignment between the front shock absorber lower bracket and the arrows must be +-5°.

INSTALLATION

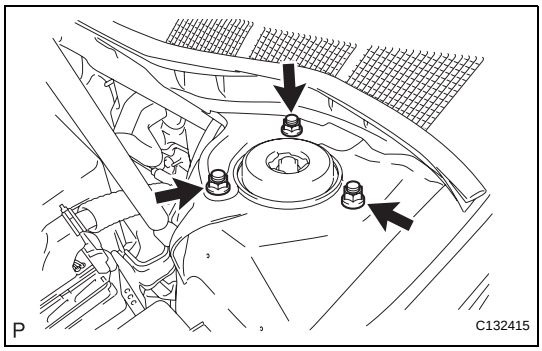
1. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

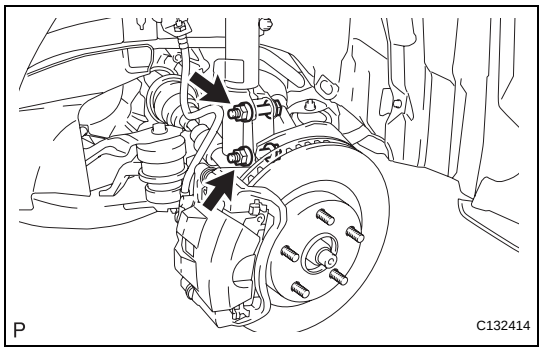
(a) Install the front shock absorber with coil spring to the front axle assembly and insert the 2 bolts from the front side of the vehicle.

(b) Slowly jack up the vehicle using a wooden block and install the front shock absorber with coil spring (upper side) to the vehicle.

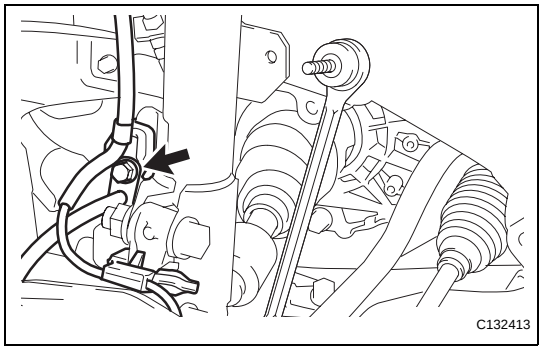


(c) Install the 3 nuts to the upper side of the front shock absorber with coil spring.
Torque: 85 N*m (867 kgf*cm, 63 ft.*lbf)

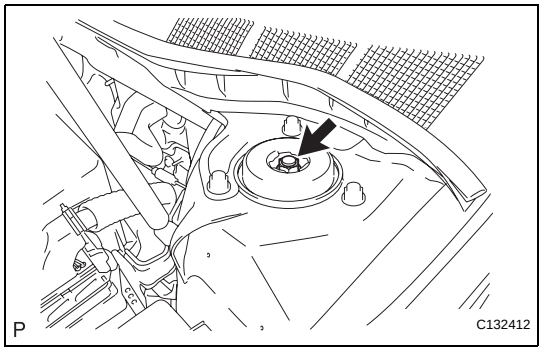




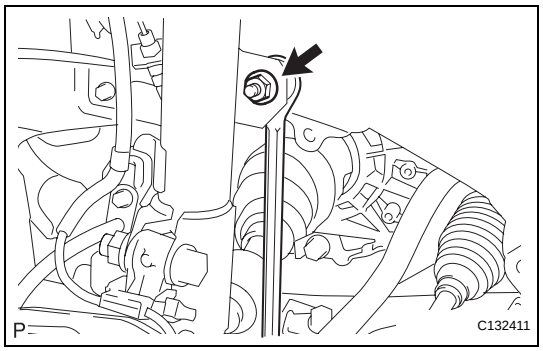
(d) Install the 2 nuts to the lower side of the front shock absorber with coil spring.
Torque: 210 N*m (2,140 kgf*cm, 155 ft.*lbf)
NOTICE:
When installing the nuts, keep the bolts from rotating.



(e) Install the front flexible hose and front speed sensor wire harness with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not twist the front speed sensor wire harness when installing it.



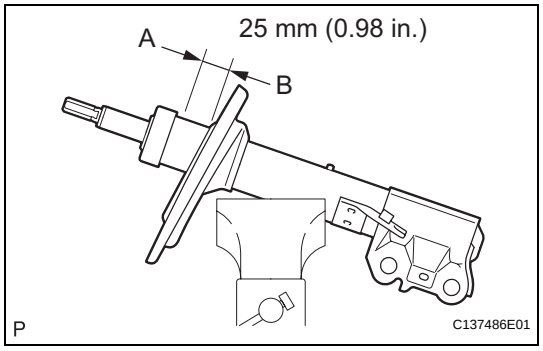
(f) Fully tighten the lock nut.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)



2. INSTALL FRONT STABILIZER LINK ASSEMBLY
(a) Install the front stabilizer link assembly with the nut.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

3. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-4)



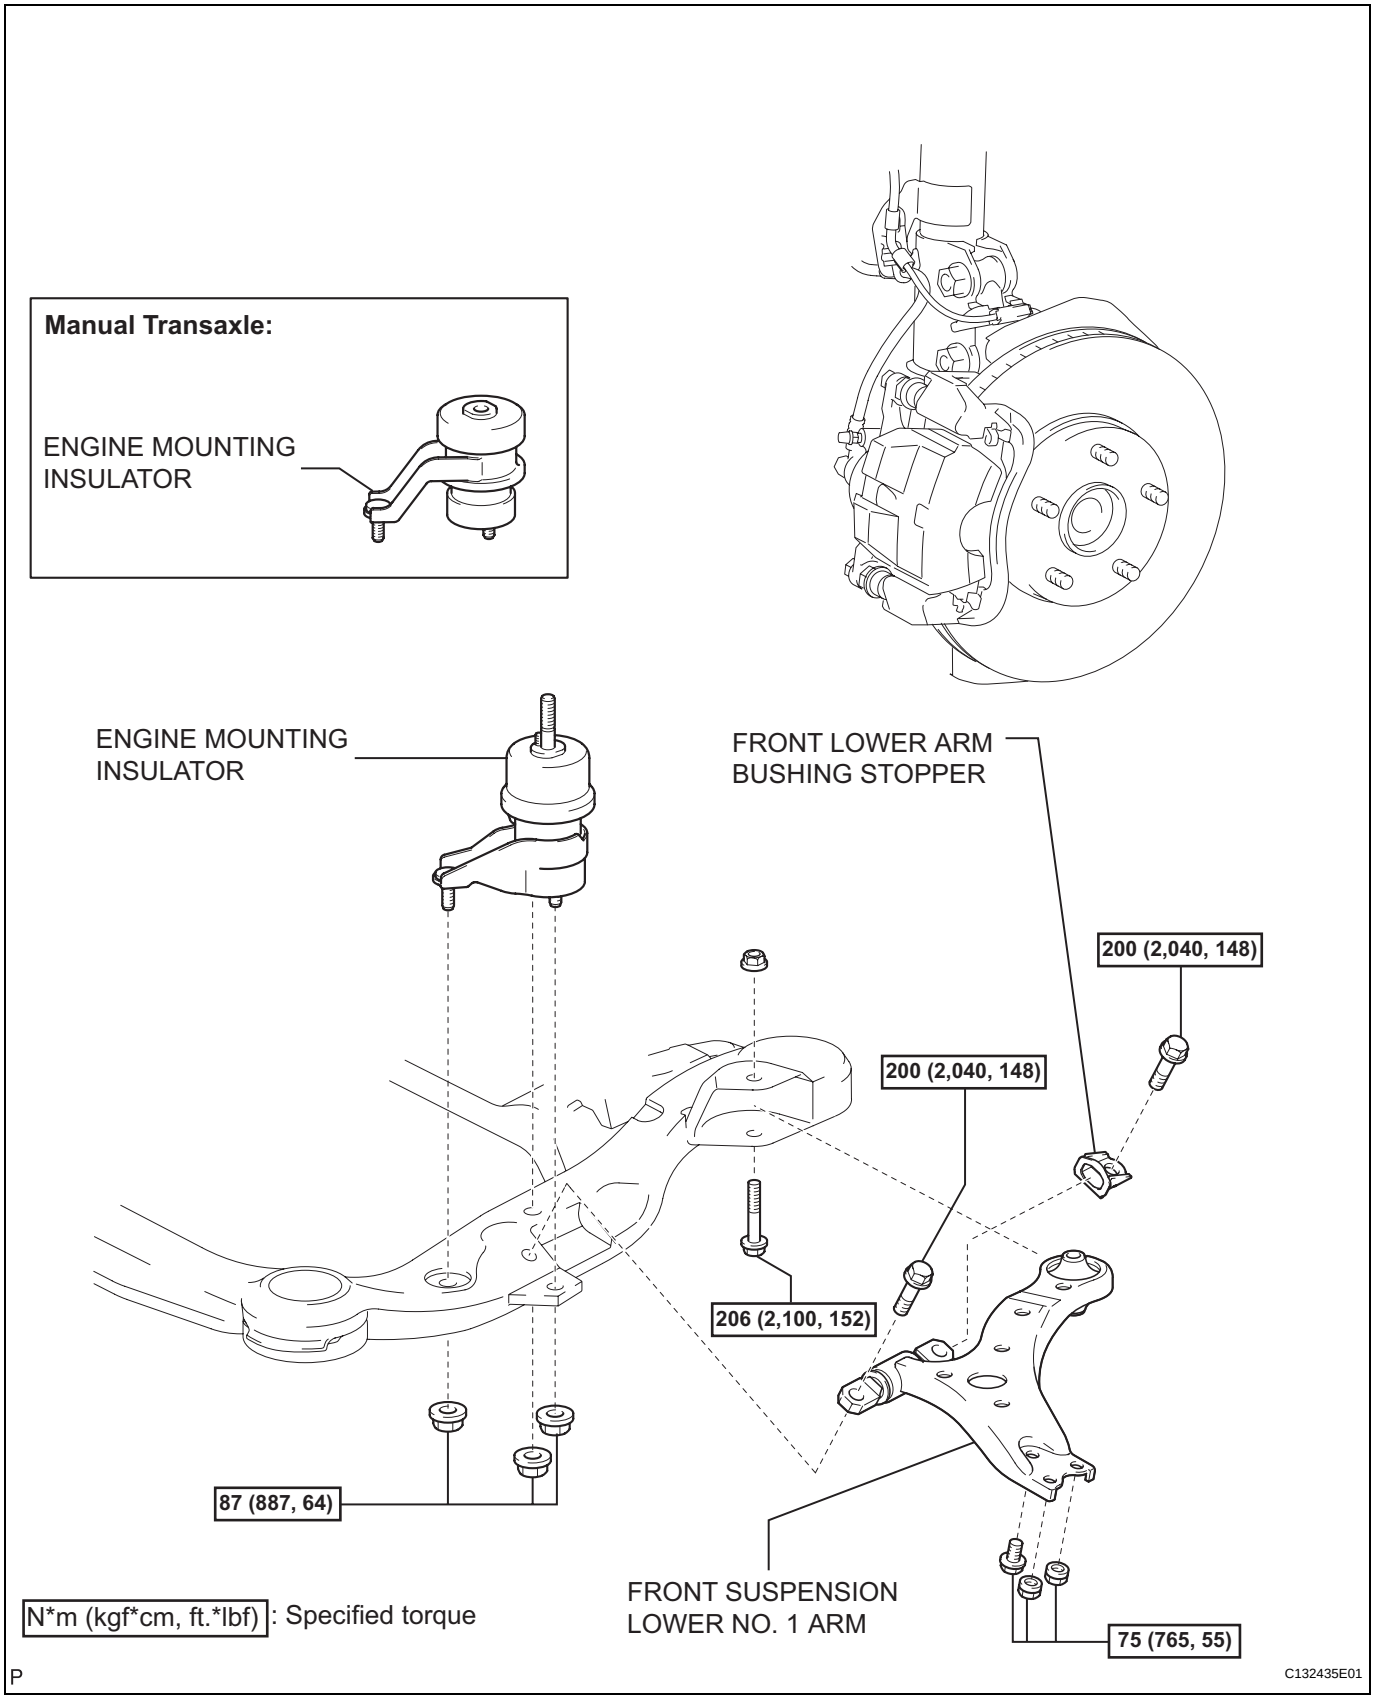
DISPOSAL

1. DISPOSE OF FRONT SHOCK ABSORBER
(a) Fully extend the shock absorber rod.
(b) Using a drill, make a hole in the cylinder between A and B as shown in the illustration to discharge the gas inside.
CAUTION:
- **Be careful when drilling because shards of metal may fly about. Always use the proper safety equipment.**

- **The gas is colorless, odorless and non-poisonous.**

FRONT SUSPENSION LOWER NO. 1 ARM

COMPONENTS



REMOVAL

HINT:

- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

1. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

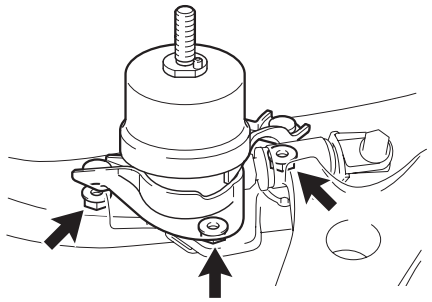
HINT:

Refer to the instructions for installation of the engine assembly (See page EM-94 for 2AZ-FE, EM-23 for 2GR-FE).

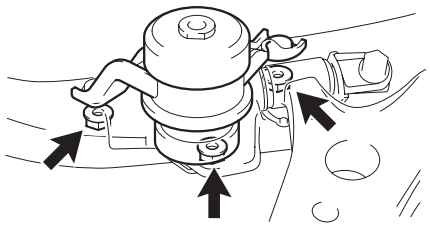
2. REMOVE ENGINE MOUNTING INSULATOR

(a) Remove the 3 nuts and the engine mounting insulator.

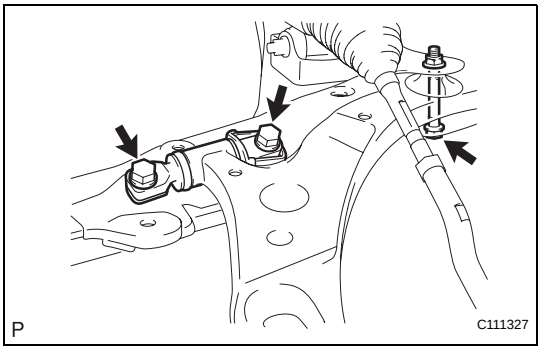
Automatic Transaxle:



Manual Transaxle:



P C138032E01



P C111327

3. REMOVE FRONT SUSPENSION LOWER NO. 1 ARM

(a) Remove the 3 bolts and the nut on the front suspension lower No. 1 arm and remove it from the front frame assembly.

(b) Remove the front lower arm bushing stopper.

INSTALLATION

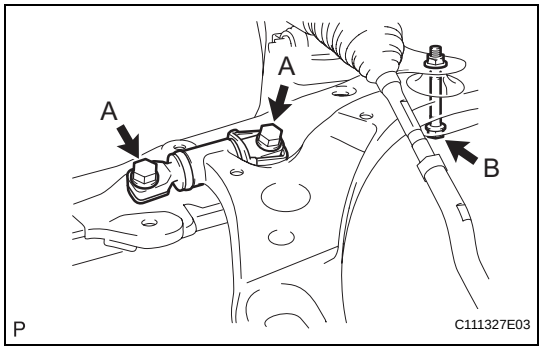
1. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM

(a) Install the front lower arm bushing stopper.

(b) Install the front suspension lower No. 1 arm to the front frame assembly with the 3 bolts and the nut, but do not tighten them yet.

(c) Tighten the 3 bolts in numerical order shown in the illustration.

Torque: 200 N*m (2,040 kgf*cm, 148 ft.*lbf) (bolt A)
206 N*m (2,100 kgf*cm, 152 ft.*lbf) (bolt B)



2. INSTALL ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator with the 3 nuts.

Torque: 87 N*m (887 kgf*cm, 64 ft.*lbf)

3. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT:

Refer to the instructions for removal of the engine assembly (See page EM-107 for 2AZ-FE, EM-37 for 2GR-FE).

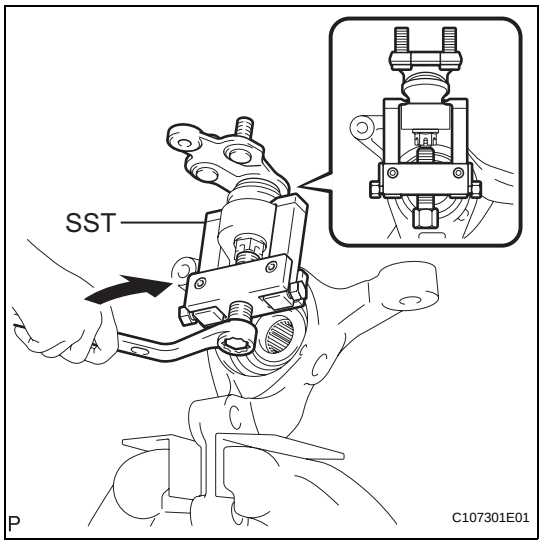
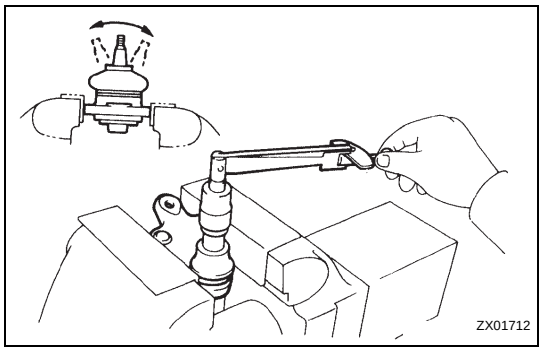
REMOVAL

HINT:

- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT AXLE HUB NUT (See page DS-7)**
3. **SEPARATE FRONT SPEED SENSOR (See page DS-7)**
4. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
5. **REMOVE FRONT DISC (See page BR-49)**
6. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-8)**
7. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-8)**
8. **REMOVE FRONT AXLE ASSEMBLY (See page DS-8)**
9. **REMOVE FRONT WHEEL NO. 1 BEARING DUST DEFLECTOR (See page AH-7)**
10. **REMOVE FRONT AXLE HUB HOLE SNAP RING (See page AH-7)**
11. **REMOVE FRONT AXLE HUB (See page AH-7)**
12. **REMOVE FRONT DISC BRAKE DUST COVER (See page AH-8)**
13. **REMOVE FRONT AXLE HUB BEARING (See page AH-8)**
14. **REMOVE FRONT LOWER BALL JOINT**
    (a) Secure the steering knuckle in a vise using aluminum plates.
    (b) Remove the cotter pin and nut.
    (c) Using SST, remove the front lower ball joint.
    SST 09628-62011
    NOTICE:
    - **Do not damage the dust cover of the ball joint.**
    - **Do not damage the steering knuckle.**





INSPECTION

1. INSPECT FRONT LOWER BALL JOINT

(a) Inspect the turning of the ball joint.

(1) Secure the front lower ball joint assembly in a vise using aluminum plates.

(2) Install the nut to the front lower ball joint assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: 1.0 to 3.4 N*m (10 to 35 kgf*cm, 9 to 30 in.*lbf)

HINT:

If the turning torque is not within the specified range, replace the front lower ball joint assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

SP

INSTALLATION

1. **INSTALL FRONT LOWER BALL JOINT**
   (a) Install the front lower ball joint to the steering knuckle with the nut.
   Torque: 123 N*m (1,250 kgf*cm, 91 ft.*lbf)
   NOTICE:
   Prevent oil from adhering to the screw and tapered parts.
   (b) Install a new cotter pin.
   NOTICE:
   If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.
2. **INSTALL FRONT AXLE HUB BEARING (See page AH-9)**
3. **INSTALL FRONT DISC BRAKE DUST COVER (See page AH-9)**
4. **INSTALL FRONT AXLE HUB (See page AH-9)**
5. **INSTALL FRONT AXLE HUB HOLE SNAP RING (See page AH-9)**
6. **INSTALL FRONT WHEEL NO. 1 BEARING DUST DEFLECTOR (See page AH-10)**
7. **INSTALL FRONT AXLE ASSEMBLY (See page DS-21)**
8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-21)**
9. **CONNECT TIE ROD END SUB-ASSEMBLY (See page DS-21)**

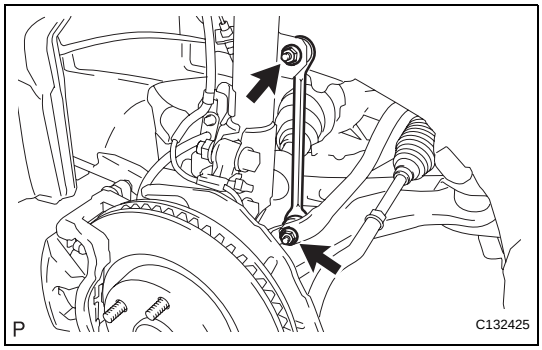
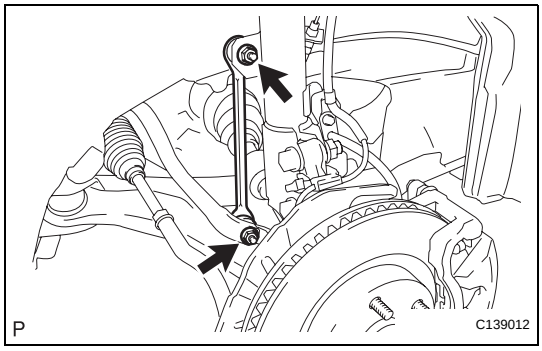
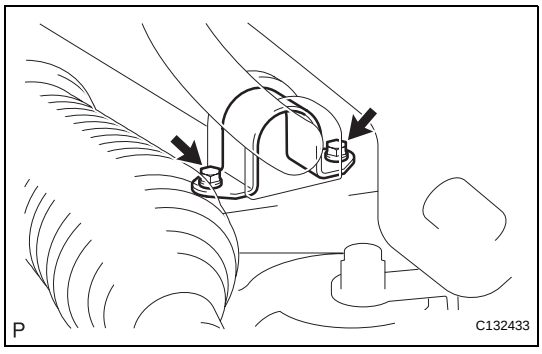
5. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page PS-40)**
6. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Remove the 2 nuts and the front stabilizer link assembly LH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.

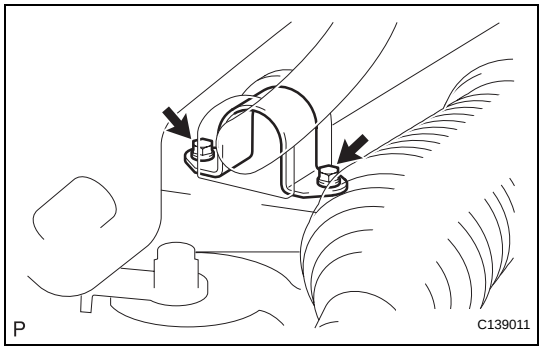


7. **REMOVE FRONT STABILIZER LINK ASSEMBLY RH**
   (a) Remove the 2 nuts and the front stabilizer link assembly RH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud.



8. **REMOVE ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   Refer to the instructions for removal of the engine assembly (See page EM-100 for 2AZ-FE, EM-29 for 2GR-FE).
9. **REMOVE FRONT NO. 1 STABILIZER BRACKET LH**
   (a) Remove the 2 bolts and the front No. 1 stabilizer bracket LH from the front frame assembly.





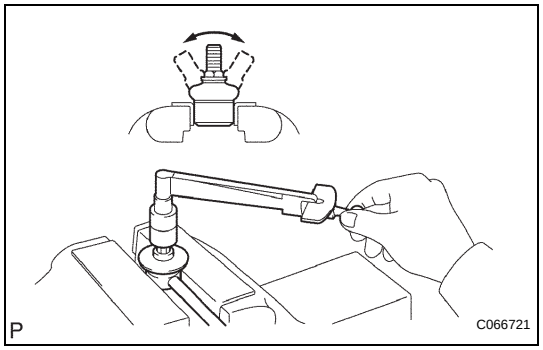
10. REMOVE FRONT NO. 1 STABILIZER BRACKET RH

(a) Remove the 2 bolts and the front No. 1 stabilizer bracket RH from the front frame assembly.

11. REMOVE FRONT NO. 1 STABILIZER BAR BUSHING

(a) Remove the 2 front No. 1 stabilizer bar bushings from the front stabilizer bar.

12. REMOVE FRONT STABILIZER BAR



INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Inspect the turning of the ball joint.

(1) Secure the front stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the front stabilizer link assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

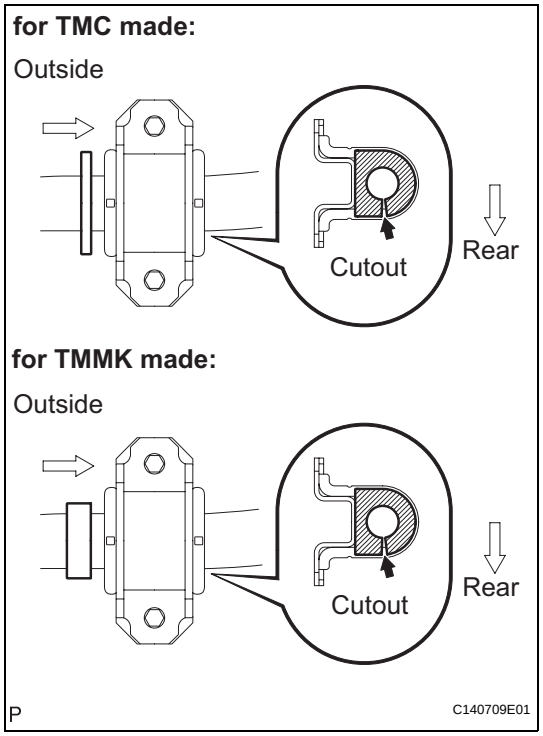
Torque: 0.05 to 2.0 N*m (0.5 to 20 kgf*cm, 0.4 to 18 in.*lbf)

HINT:

If the turning torque is not within the specified range, replace the front stabilizer link assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.



INSTALLATION

1. INSTALL FRONT NO. 1 STABILIZER BAR BUSHING

(a) Install the 2 front stabilizer bar bushings No. 1 to the outside of the bushing stopper on the front stabilizer bar.

NOTICE:

Make sure that the cutout of the front stabilizer bar bushing No. 1 faces the rear side as shown in the illustration.

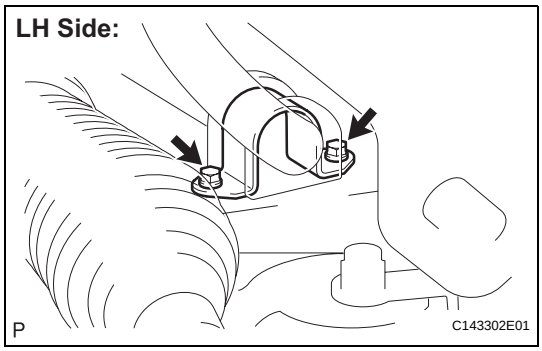
2. INSTALL FRONT NO. 1 STABILIZER BRACKET LH

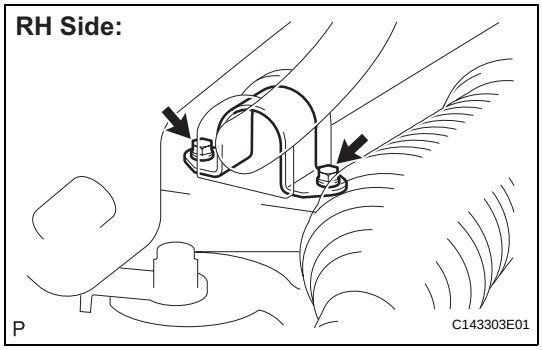
(a) Install the front No. 1 stabilizer bracket LH.

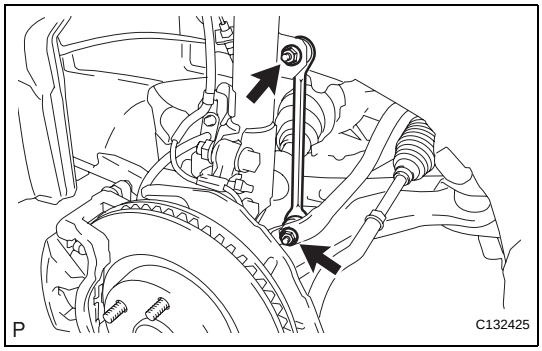
3. INSTALL FRONT NO. 1 STABILIZER BRACKET RH

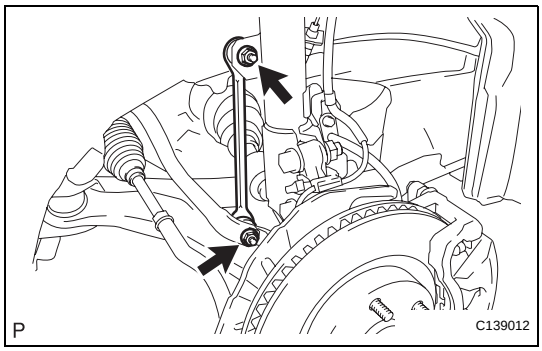
(a) Install the front No. 1 stabilizer bracket RH.

SP









4. **INSTALL FRONT STABILIZER BAR**
   (a) Install the front stabilizer bar with the 2 bolts. (LH Side)
   Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

   (b) Install the front stabilizer bar with the 2 bolts. (RH Side)
   Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

5. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   Refer to the instructions for installation of the engine assembly (See page EM-107 for 2AZ-FE, EM-37 for 2GR-FE)

6. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Install the front stabilizer link assembly LH with the 2 nuts.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   (a) Install the front stabilizer link assembly RH with the 2 nuts.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a hexagon (6 mm) wrench to hold the stud.

8. **CONNECT TIE ROD END SUB-ASSEMBLY (See page PS-64)**

9. **CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-47)**

10. **PLACE FRONT WHEELS FACING STRAIGHT**

11. **INSTALL FRONT WHEELS**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

13. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page SP-4)

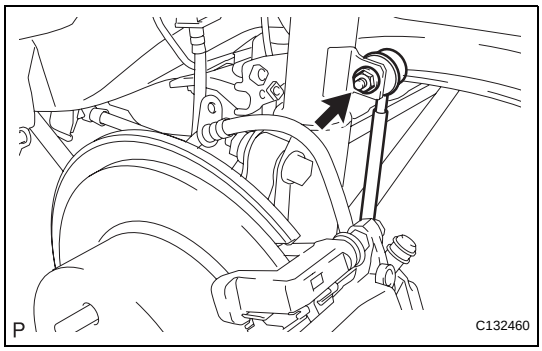
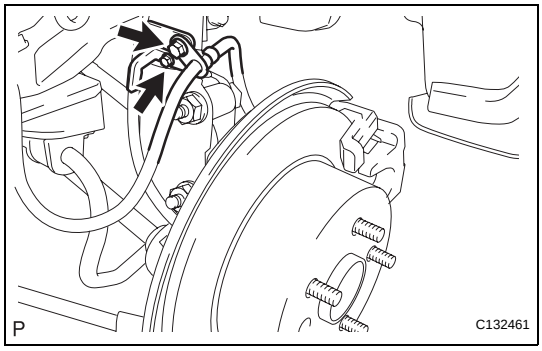
REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY (for Fixed Type) (See page SE-77)
2. REMOVE REAR SEAT HEADREST ASSEMBLY (for Fixed Type)
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY (for Fixed Type)
4. REMOVE REAR SEAT BACK ASSEMBLY (for Fixed Type) (See page SE-77)
5. REMOVE REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-47)
6. REMOVE REAR SEAT HEADREST ASSEMBLY (for Fold Down Seat Type)
7. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY (for Fold Down Seat Type)
8. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-47)
9. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-47)
10. REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-48)
11. REMOVE REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-48)
12. REMOVE REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-62)
13. REMOVE REAR SEAT HEADREST ASSEMBLY (for Reclining Seat Type)
14. REMOVE REAR SEAT BACK COVER (for Reclining Seat Type) (See page SE-63)
15. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-63)
16. REMOVE SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-64)
17. REMOVE REAR WHEEL



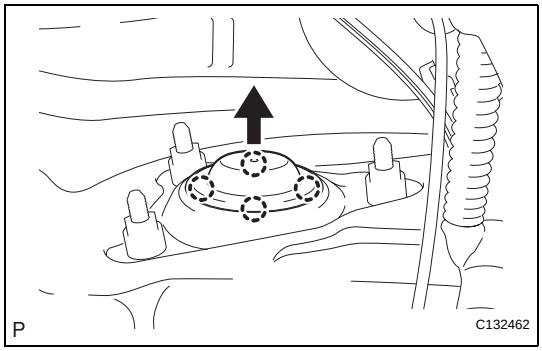
18. SEPARATE REAR STABILIZER LINK ASSEMBLY LH

(a) Remove the nut and separate the rear stabilizer link assembly from the front shock absorber LH.
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



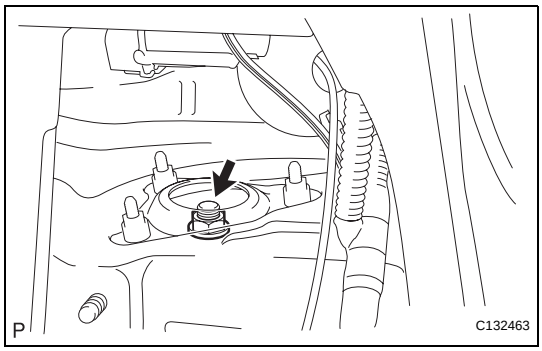
19. SEPARATE REAR SPEED SENSOR

(a) Remove the 2 bolts, and disconnect the rear brake flexible hose and rear speed sensor from the rear shock absorber with coil spring and rear axle carrier.
NOTICE:
Be sure to remove the rear speed sensor from the rear shock absorber with coil spring.



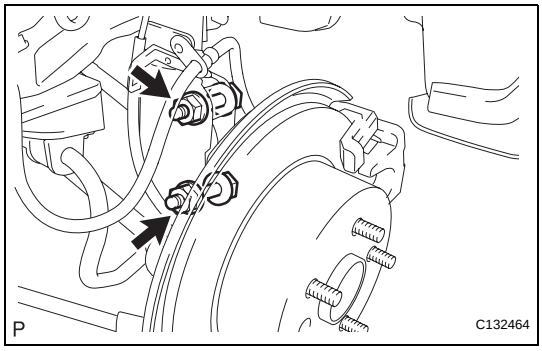
20. REMOVE REAR SUSPENSION SUPPORT NO. 1 COVER

(a) Remove the 4 claws and the rear suspension support No. 1 cover.

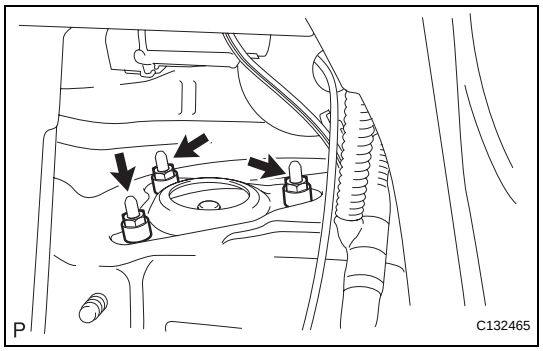


21. REMOVE REAR SHOCK ABSORBER WITH COIL SPRING

(a) Loosen the lock nut of the rear shock absorber with coil spring.
NOTICE:
- **Do not remove the lock nut.**
- **Only loosen the nut when disassembling the rear shock absorber with coil spring.**



(b) Remove the 2 nuts and 2 bolts on the lower side of the rear shock absorber with coil spring.
NOTICE:
- **When removing the nuts, keep the bolts from rotating.**
- **Keep one bolt inserted to secure the hub and disc rotor.**



(c) Remove the 3 nuts on the upper side of the rear shock absorber with coil spring.

(d) Lower the rear axle carrier, and remove the 2 bolts on the lower side of the rear shock absorber with coil spring.

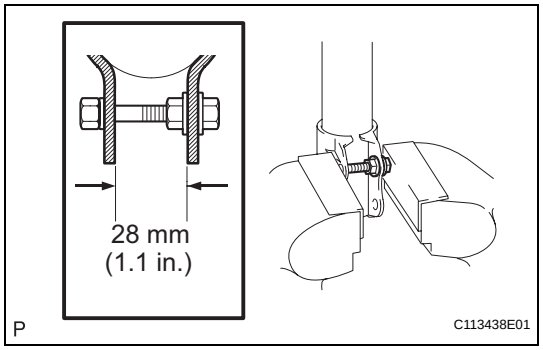
NOTICE:

Make sure that the rear speed sensor is disconnected from the rear shock absorber with coil spring.

DISASSEMBLY

1. FIX REAR SHOCK ABSORBER WITH COIL SPRING

(a) As shown in the illustration, secure the rear shock absorber with coil spring in a vise using aluminum plates by closing the vise onto the double nutted bolt affixed to the bracket at the bottom of the absorber.



2. REMOVE REAR SHOCK ABSORBER

(a) Using SST, compress the rear coil spring.

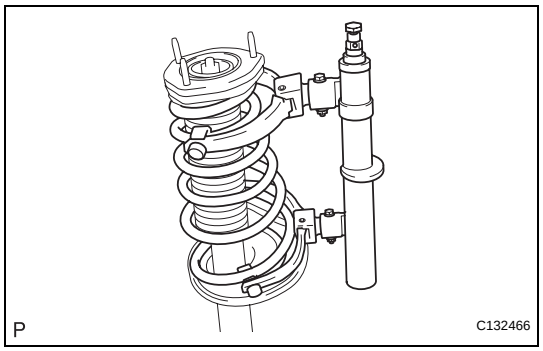
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not use an impact wrench.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.



(b) Remove the nut, rear shock absorber collar and rear suspension support assembly.

(c) Remove the rear coil spring, rear No. 1 spring bumper, and rear coil spring lower insulator.

INSPECTION

1. INSPECT REAR SHOCK ABSORBER

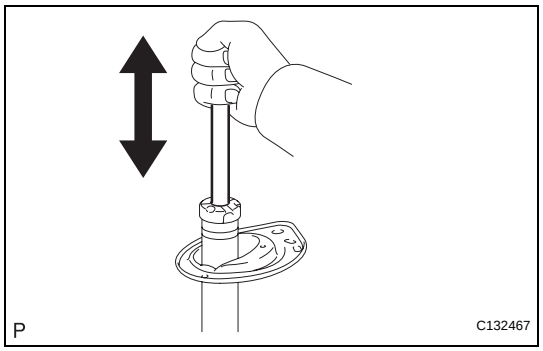
(a) Compress and extend the shock absorber rod 4 or more times.

Standard:

There is no abnormal resistance or sound and operation resistance is normal.

HINT:

If there is any abnormality, replace the rear shock absorber with a new one.

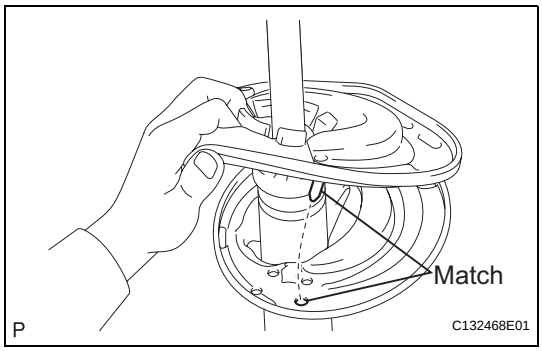


REASSEMBLY

1. INSTALL REAR SHOCK ABSORBER

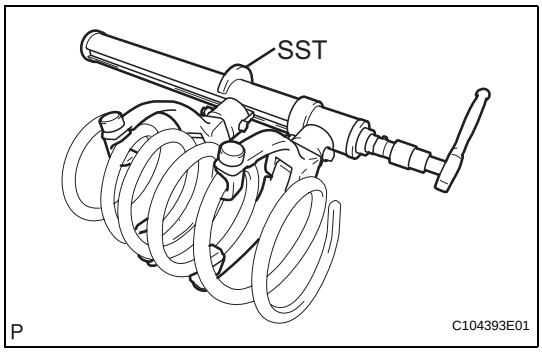
(a) Install the rear No. 1 spring bumper to the piston rod.

(b) Install the rear coil spring lower insulator onto the rear shock absorber.

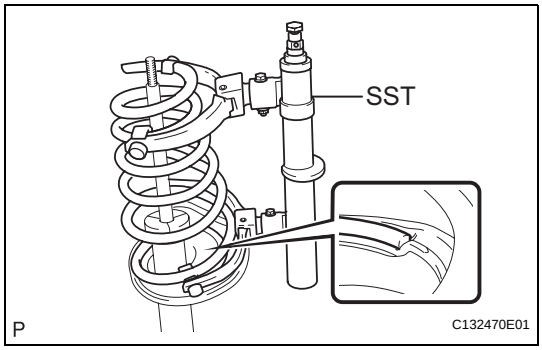


SP

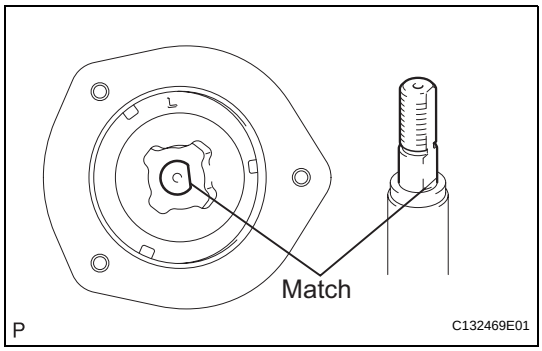
(c) Using SST, compress the rear coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
NOTICE:
Do not use an impact wrench.

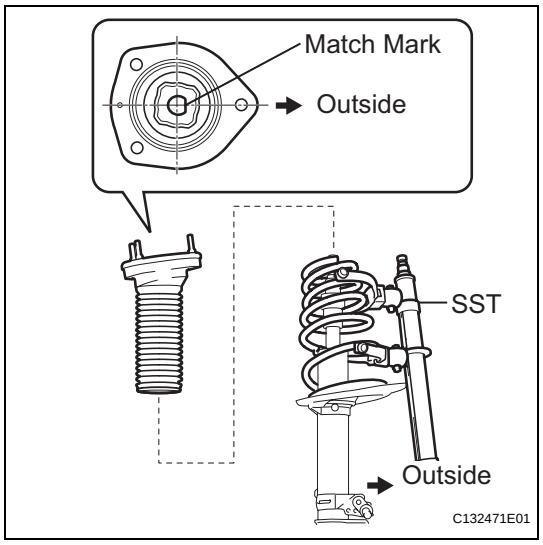


(d) Install the rear coil spring to the rear shock absorber.
NOTICE:
The smaller diameter end must face upward.
HINT:
- Fit the lower end of the rear coil spring into the gap of the lower seat.
- If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

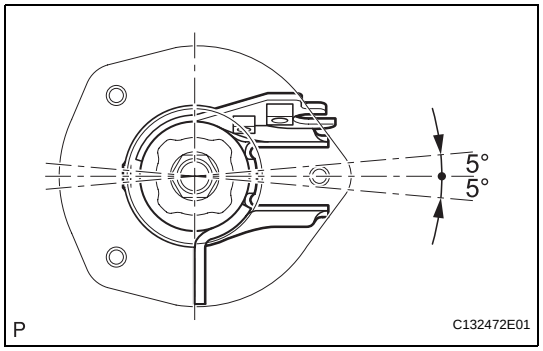


(e) Install the rear suspension support assembly.
NOTICE:
Align the notches of the piston rod and the rear suspension support assembly as shown in the illustration before installing the rear suspension support assembly.





(f) Align the notches of the shock absorber with the notch of the rear suspension support assembly so that the notches face the outside of the vehicle.
(g) Install the rear shock absorber collar.
(h) Loosely tighten a new lock nut to the rear suspension piston rod.



(i) Release the spring while adjusting the rear suspension support assembly to the position shown in the illustration, and remove the SST from the rear coil spring.
NOTICE:
Do not use an impact wrench.
HINT:
When lining up the rear suspension support assembly's stud bolts at the middle point between the two sides of the bracket, the maximum permissible degree of error is plus or minus 5°.

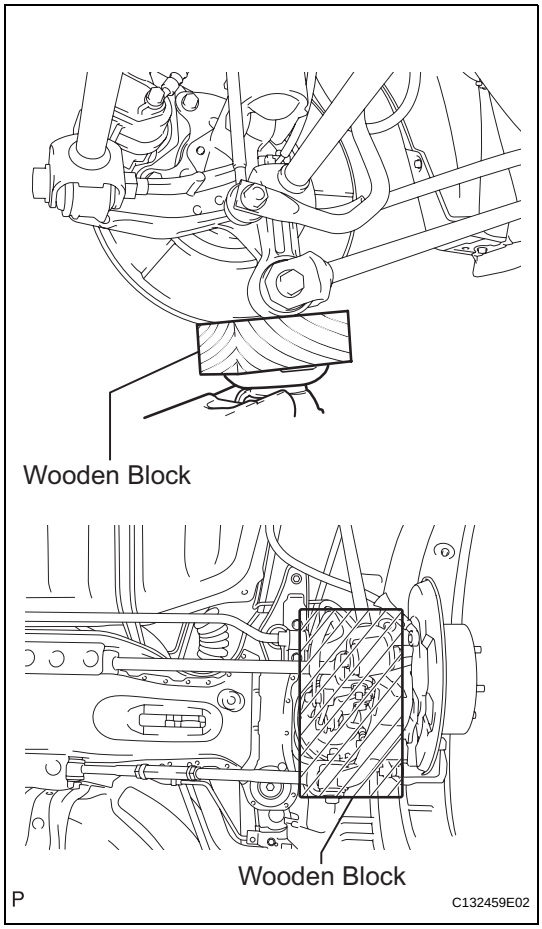
SP

INSTALLATION

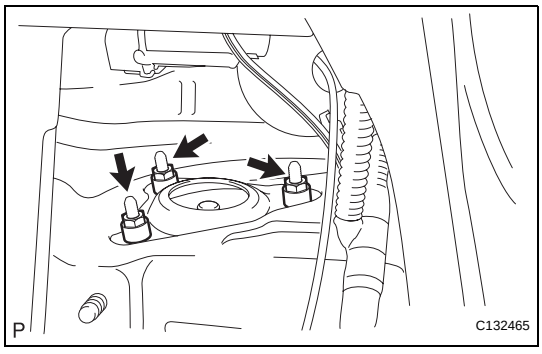
1. INSTALL REAR SHOCK ABSORBER WITH COIL SPRING

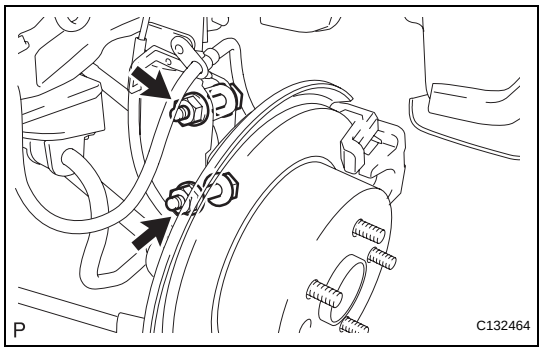
(a) Install the rear shock absorber with coil spring to the rear axle carrier assembly and insert the 2 bolts from the rear of the vehicle.

(b) Slowly jack up the vehicle using a wooden block and install the rear shock absorber with coil spring (upper side) to the vehicle.

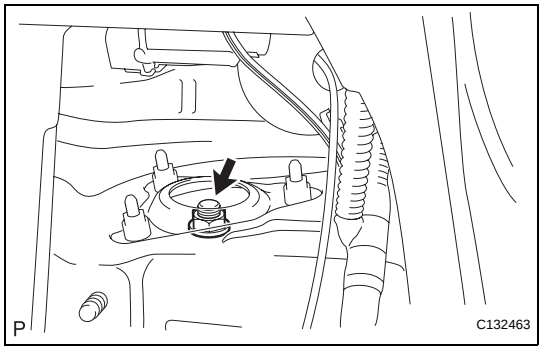


(c) Install the 3 nuts to the upper side of the rear shock absorber with coil spring.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



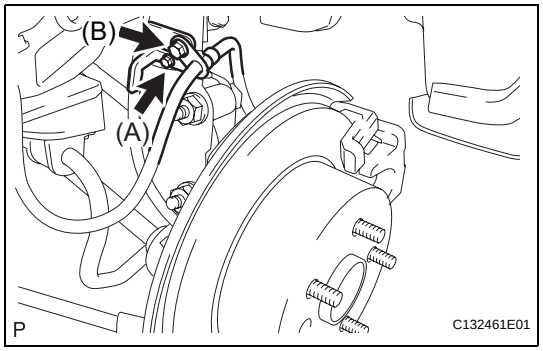


(d) Install the 2 nuts and 2 bolts to the lower side of the rear shock absorber with coil spring.
Torque: 180 N*m (1,840 kgf*cm, 133 ft.*lbf)
NOTICE:
When installing the nuts, keep the bolts from rotating.



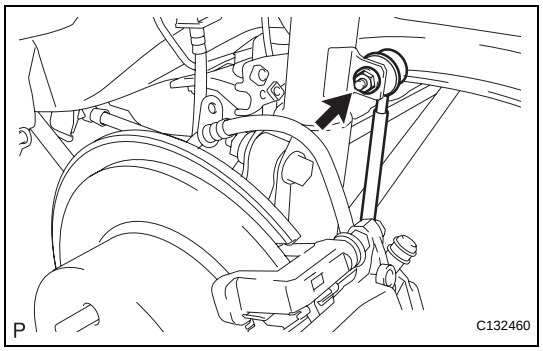
(e) Fully tighten the lock nut.
Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

SP



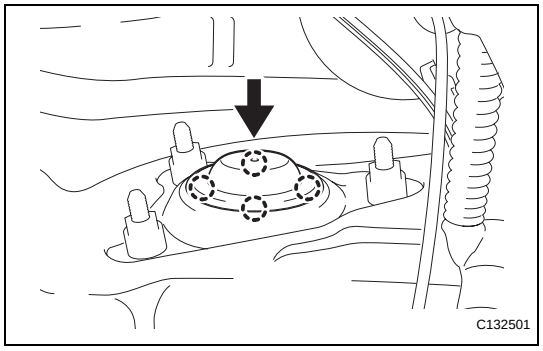
2. CONNECT REAR SPEED SENSOR

(a) Install the rear brake flexible hose and rear speed sensor wire harness with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf) (bolt A)
19 N*m (194 kgf*cm, 14 ft.*lbf) (bolt B)



3. INSTALL REAR STABILIZER LINK ASSEMBLY LH

(a) Install the rear stabilizer link assembly LH to the rear shock absorber with the nut.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



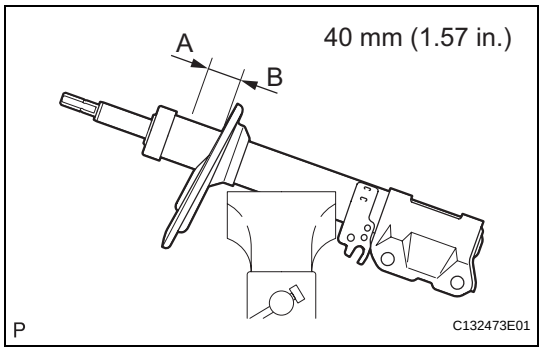
4. INSTALL REAR SUSPENSION SUPPORT NO. 1 COVER

(a) Engage the 4 claws and install the rear suspension support No. 1 cover.

5. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

6. INSTALL REAR SEAT BACK ASSEMBLY (for Fixed Type) (See page SE-84)

7. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fixed Type) (See page SE-84)**
8. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY (for Fixed Type)**
9. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Fixed Type)**
10. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
11. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
12. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Fold Down Seat Type) (See page SE-57)**
13. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Fold Down Seat Type) (See page SE-57)**
14. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Fold Down Seat Type) (See page SE-58)**
15. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY (for Fold Down Seat Type)**
16. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Fold Down Seat Type)**
17. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY RH (for Reclining Seat Type) (See page SE-71)**
18. **INSTALL SEPARATE TYPE REAR SEAT BACK ASSEMBLY LH (for Reclining Seat Type) (See page SE-71)**
19. **INSTALL REAR SEAT BACK COVER (for Reclining Seat Type)**
20. **INSTALL REAR SEAT CUSHION ASSEMBLY (for Reclining Seat Type) (See page SE-73)**
21. **INSTALL REAR SEAT HEADREST ASSEMBLY (for Reclining Seat Type)**
22. **CHECK ABS SPEED SENSOR SIGNAL**
    ABS: See page BC-19
    VSC (for BOSCH): BC-290
    VSC (for ADVICS): BC-123
23. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
    (See page SP-13)



DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER

(a) Fully extend the shock absorber piston rod.

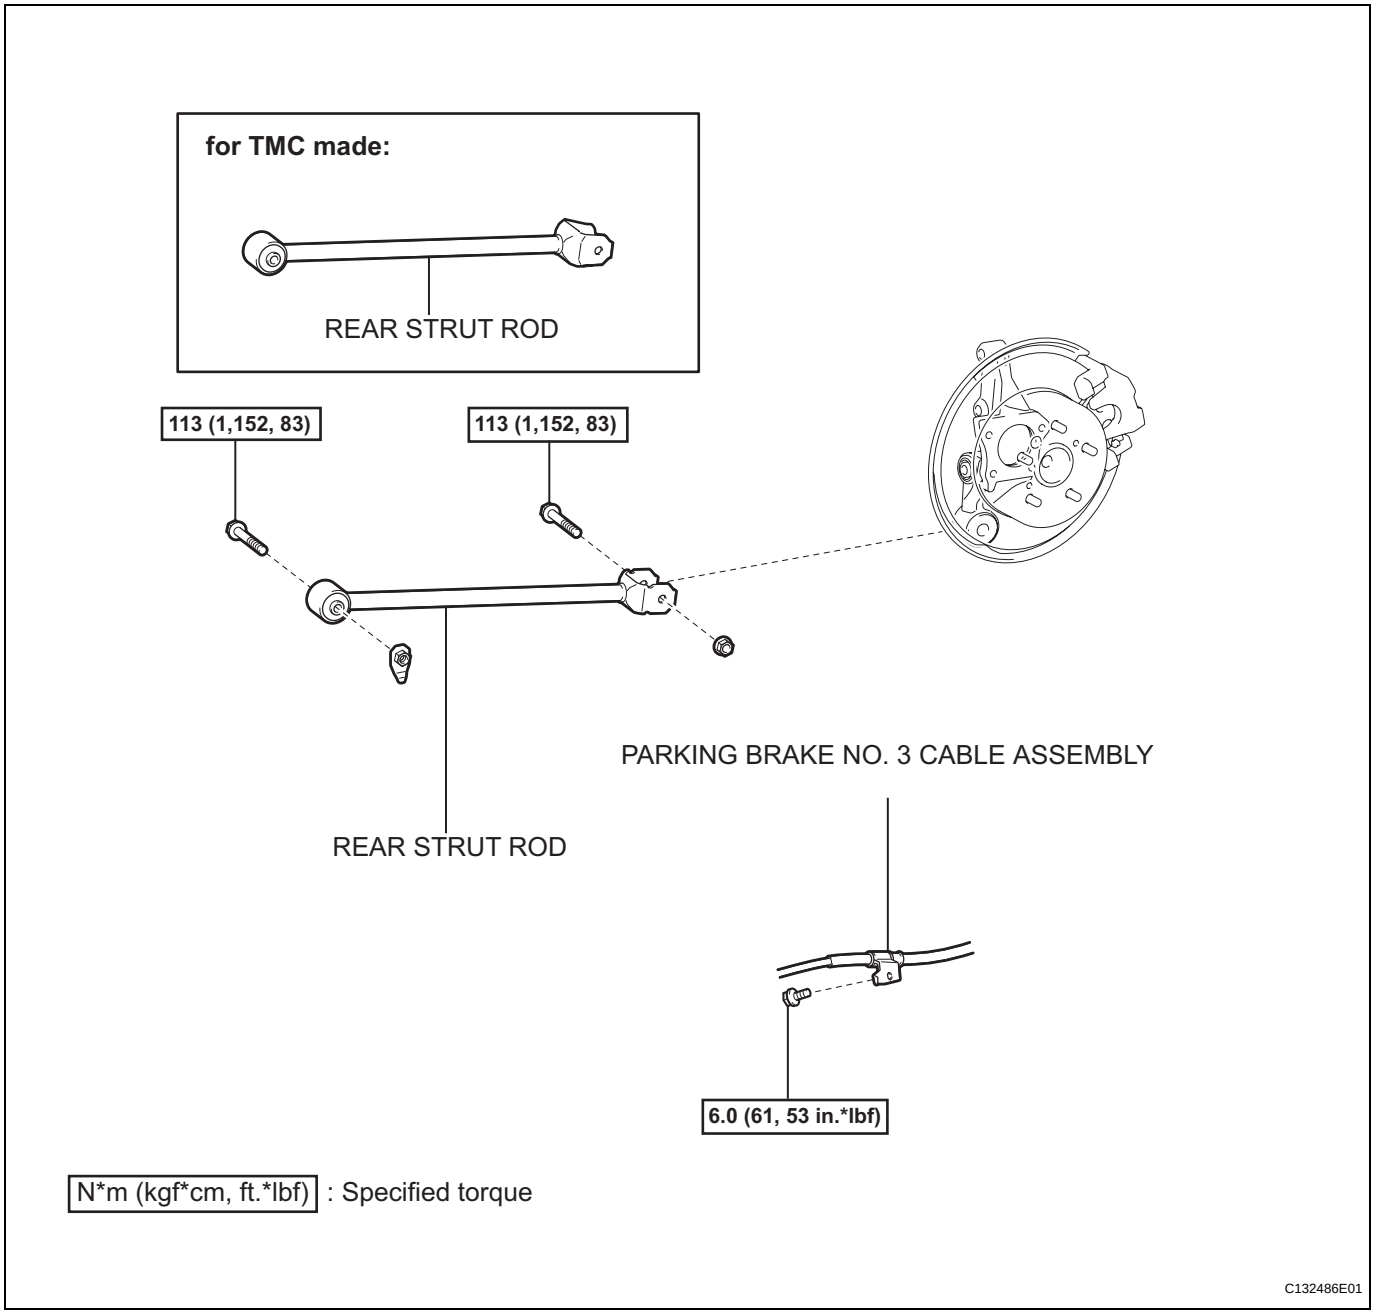
(b) Using a drill, make a hole in the cylinder between A and B as shown in the illustration to discharge the gas inside.

CAUTION:

- **Be careful when drilling because shards of metal may fly about. Always use the proper safety equipment.**
- **The gas is colorless, odorless and non-poisonous.**

REAR STRUT ROD

COMPONENTS



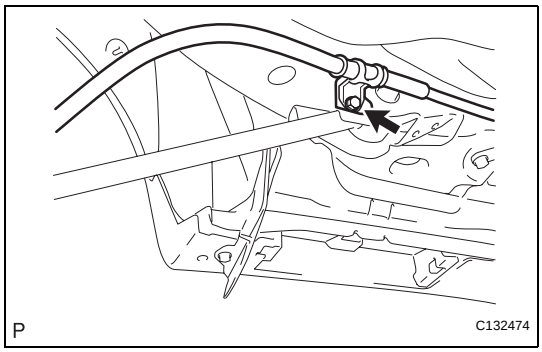
SP

REMOVAL

1. REMOVE REAR WHEEL

2. SEPARATE PARKING BRAKE NO. 3 CABLE ASSEMBLY

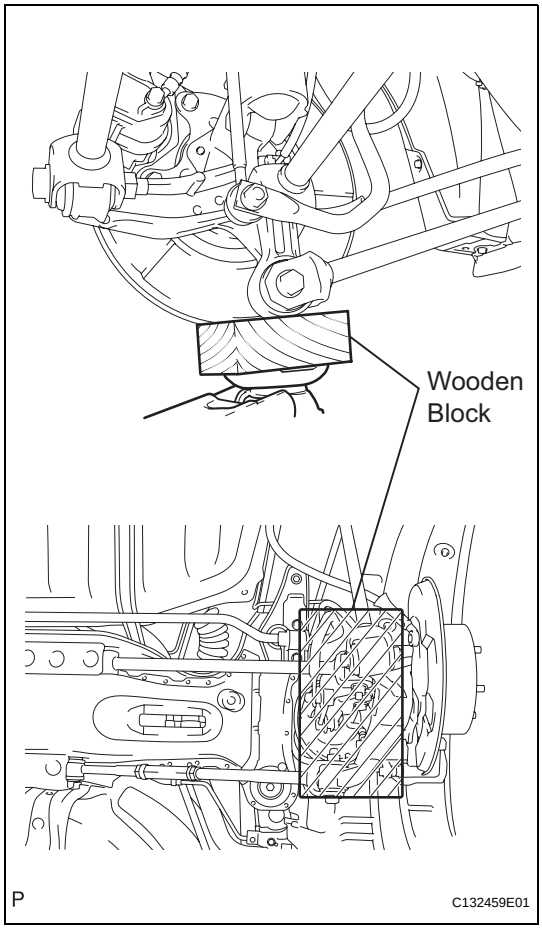
(a) Remove the bolt, and separate the parking brake No. 3 cable assembly.



SP

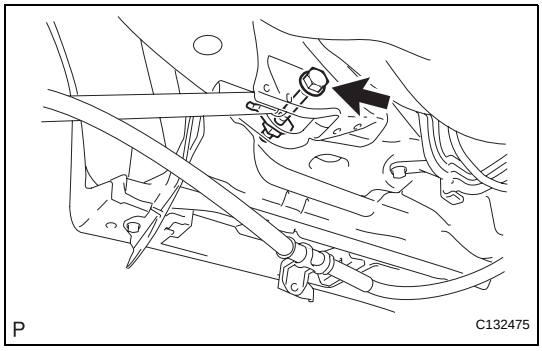
3. REMOVE REAR STRUT ROD

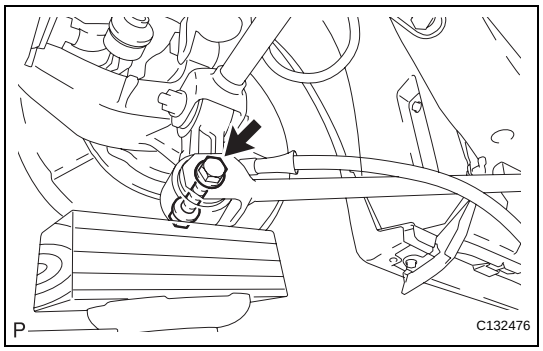
(a) Support the rear axle carrier with a jack.



(b) Remove the bolt and nut, and disconnect the strut rod (front side).

NOTICE:
When removing the bolt, keep the nut from rotating.

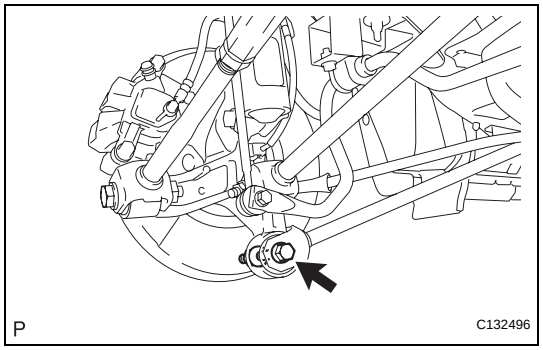




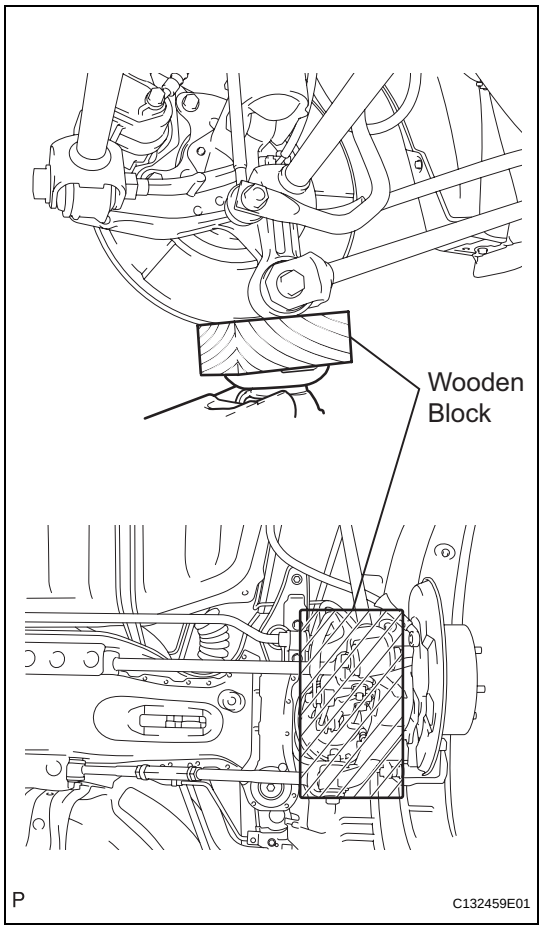
(c) Remove the bolt, nut and strut rod from the rear axle carrier.
NOTICE:
When removing the bolt, keep the nut from rotating.

INSTALLATION

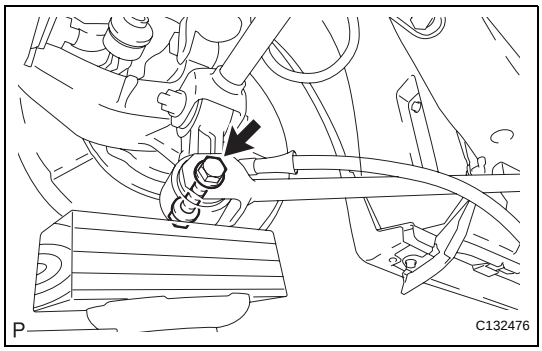
1. TEMPORARILY TIGHTEN REAR STRUT ROD



(a) Install the rear strut rod (rear side), bolt and nut, and temporarily tighten the bolt.
NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.



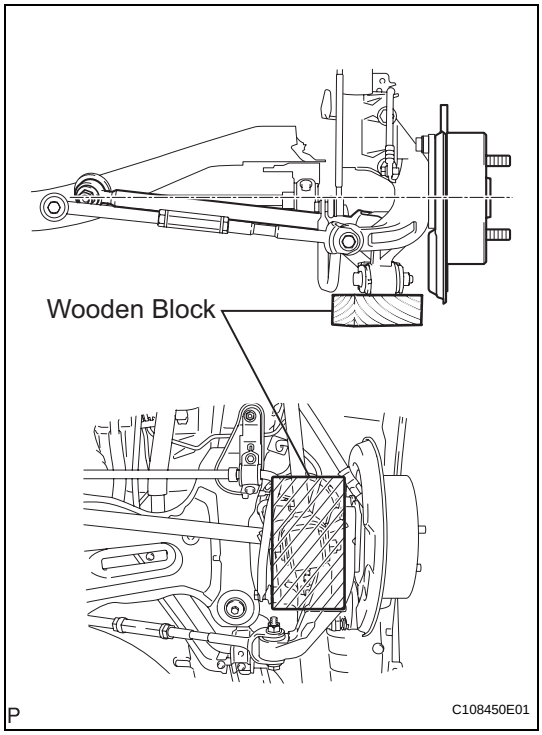
(b) Support the rear axle carrier.



(c) Connect the rear strut rod (inner side) with the bolt and nut.
NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

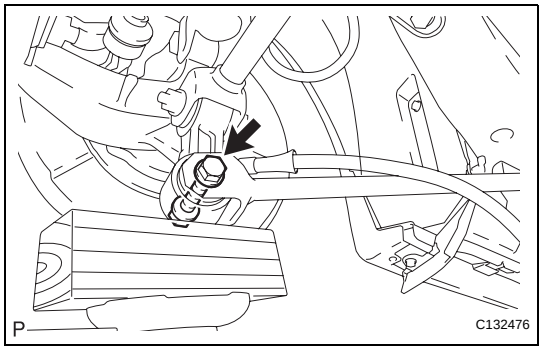
2. STABILIZE SUSPENSION

(a) Jack up the rear axle carrier, placing a wooden block to avoid damage. Apply load to the suspension so that the installed bolt of the rear suspension No. 1 arm (inner side of vehicle) is horizontally aligned with the center of the rear axle hub.

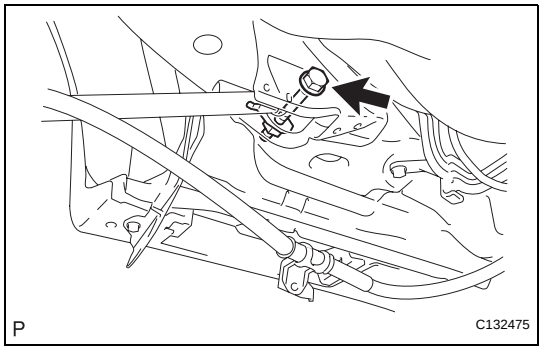


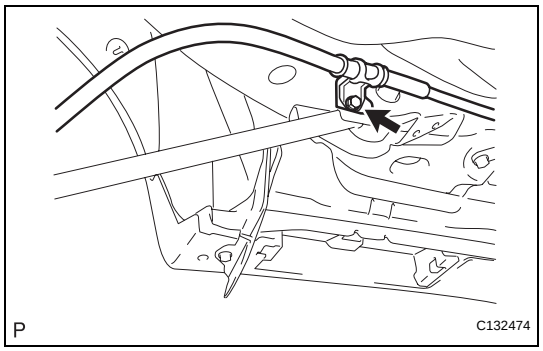
3. FULLY TIGHTEN REAR STRUT ROD

(a) Fully tighten the bolt.
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)



(b) Fully tighten the bolt.
Torque: 113 N*m (1,152 kgf*cm, 83 ft.*lbf)





4. CONNECT PARKING BRAKE NO. 3 CABLE ASSEMBLY

(a) Install the parking brake No. 3 cable assembly with the bolt.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

5. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

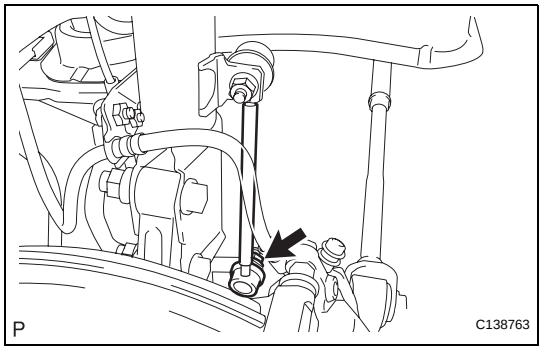
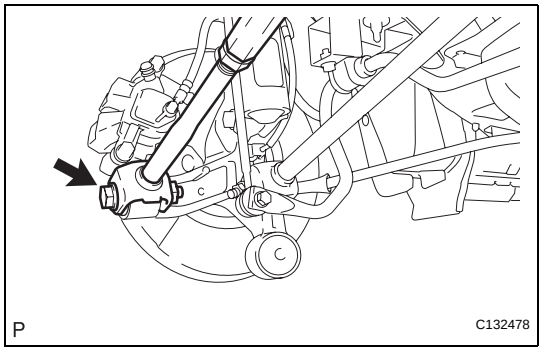
REMOVAL

NOTICE:
Check if an old gasket still remains on the pipe. If so, remove it. Also, check if any bolts or nuts are rusted. If so, replace them.

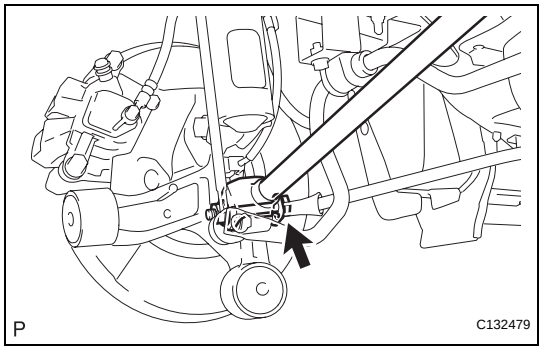
1. **REMOVE REAR WHEEL**
2. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-2)**
3. **REMOVE TAIL EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**
5. **SEPARATE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the nut and separate the rear stabilizer link assembly LH (lower side) from the rear stabilizer bar.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



6. **SEPARATE REAR STABILIZER LINK ASSEMBLY RH**
   HINT:
   Separate the RH side using the same procedures as for the LH side.
7. **REMOVE REAR STABILIZER BAR NO. 2 BRACKET (See page SP-68)**
8. **REMOVE REAR STABILIZER BAR NO. 1 BRACKET (See page SP-68)**
9. **REMOVE REAR STABILIZER BAR**
10. **REMOVE REAR STABILIZER BUSHING (See page SP-68)**
11. **SEPARATE REAR STRUT ROD (See page SP-48)**
12. **SEPARATE REAR NO. 2 SUSPENSION ARM LH**
    (a) Remove the bolt, nut and separate the rear suspension No. 2 arm (outer side) from the rear axle carrier.
    NOTICE:
    When removing the bolt, keep the nut from rotating.



13. **SEPARATE REAR NO. 2 SUSPENSION ARM RH**
    HINT:
    Separate the RH side using the same procedures as for the LH side.



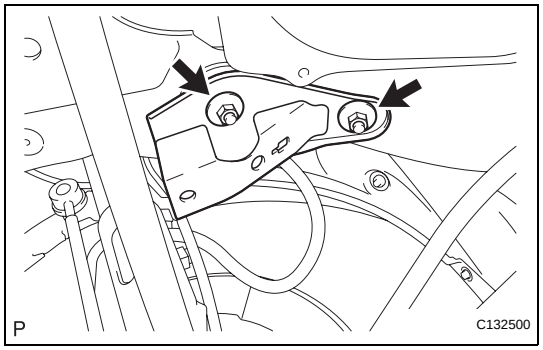
14. SEPARATE REAR NO. 1 SUSPENSION ARM LH

(a) Remove the bolt, nut and the rear No. 1 suspension arm (outer side) from the rear axle carrier.

NOTICE:
When removing the bolt, keep the nut from rotating.

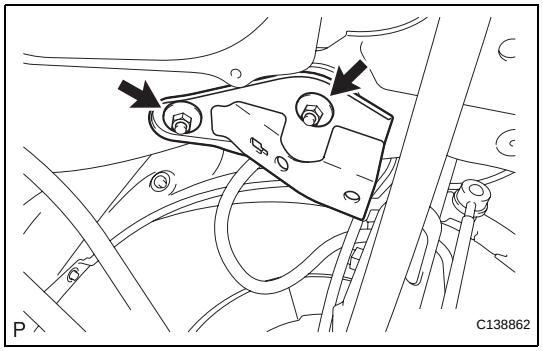
15. SEPARATE REAR NO. 1 SUSPENSION ARM RH

HINT:
Separate the RH side using the same procedures as for the LH side.



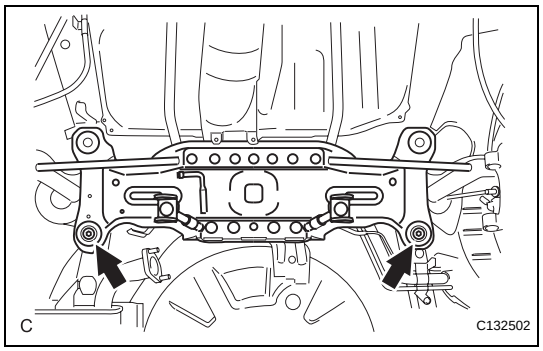
16. REMOVE REAR SUSPENSION MEMBER LOWER STOPPER LH

(a) Remove the 2 nuts and the rear suspension member lower stopper LH.



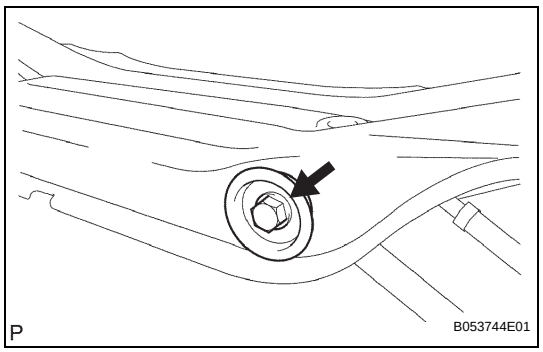
17. REMOVE REAR SUSPENSION MEMBER LOWER STOPPER RH

(a) Remove the 2 nuts and the rear suspension member lower stopper RH.



18. REMOVE REAR SUSPENSION MEMBER SUB-ASSEMBLY

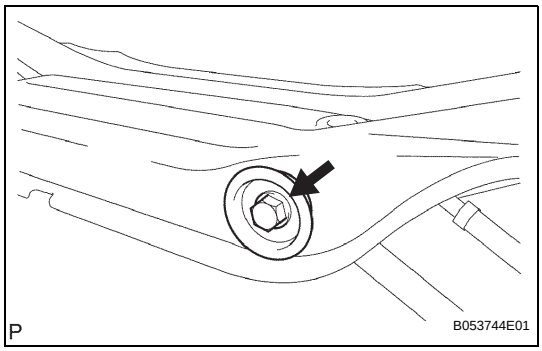
(a) Support the rear suspension member with a jack.
(b) Remove the 2 bolts, and the rear suspension member sub-assembly.



19. REMOVE REAR NO. 1 SUSPENSION ARM LH

(a) Remove the bolt and rear No. 1 suspension arm assembly LH.

SP

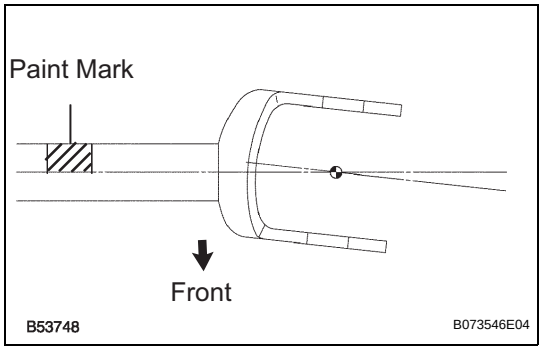


INSTALLATION

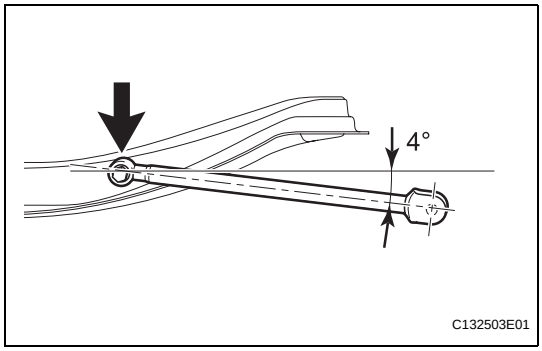
1. INSTALL REAR NO. 1 SUSPENSION ARM LH

(a) Install the rear No. 1 suspension arm (inner side) with the bolt, and temporarily tighten the bolt.

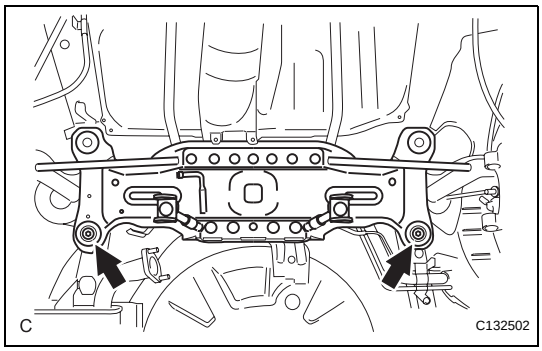
(1) Install the rear No. 1 suspension arm so that the bracket leans toward the front side of the vehicle as shown in the illustration.



(2) Ensure that the paint mark faces the rear side of the vehicle.



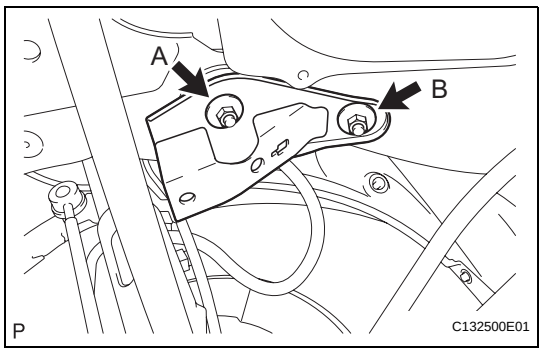
(b) Set the rear No.1 suspension arm in the position shown in the illustration, and fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)



2. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY

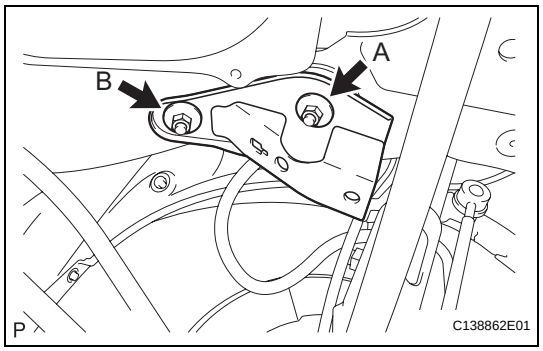
(a) Raise the rear suspension member with a jack.

(b) Install the rear suspension member with the 2 bolts.
Torque: 56 N*m (571 kgf*cm, 41 ft.*lbf)



3. INSTALL REAR SUSPENSION MEMBER LOWER STOPPER LH

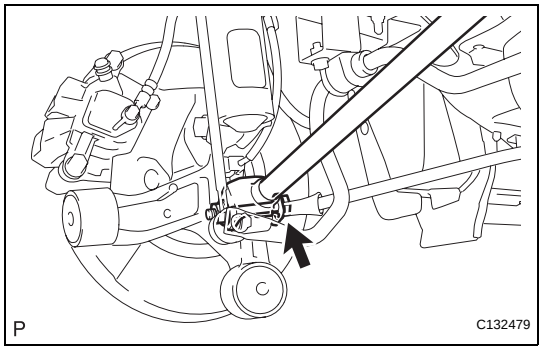
(a) Install the rear suspension member lower stopper LH with the 2 nuts.
Torque: Nut A
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut B
38 N*m (388 kgf*cm, 28 ft.*lbf)



4. INSTALL REAR SUSPENSION MEMBER LOWER STOPPER RH

(a) Install the rear suspension member lower stopper RH with the 2 nuts.

Torque: Nut A
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut B
38 N*m (388 kgf*cm, 28 ft.*lbf)



5. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM LH

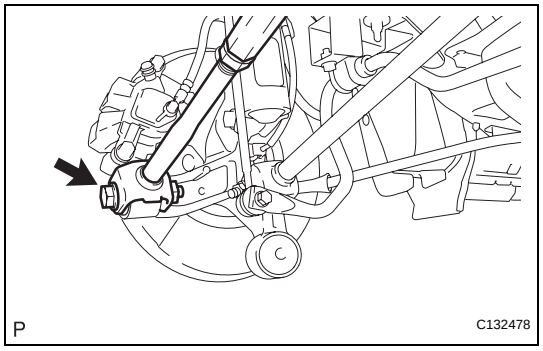
(a) Connect the rear No.1 suspension arm (outer side) to the rear axle carrier with the bolt and nut and temporarily tighten the bolt and nut.

NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

HINT:
Insert the bolt from the front of the vehicle and temporarily install the bolt.

6. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM RH

HINT:
Temporarily tighten the RH side using the same procedures as for the LH side.



7. TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM LH

(a) Connect the rear No. 2 suspension arm (outer side) to the rear axle carrier with the bolt and nut and temporarily tighten the bolt.

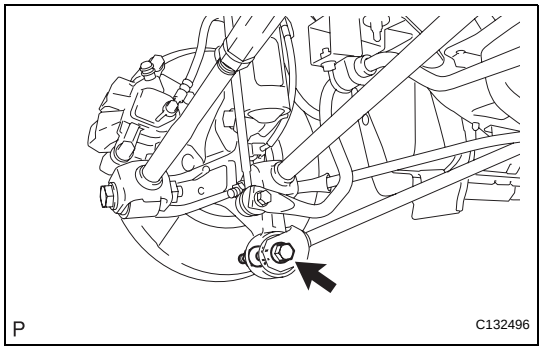
NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

HINT:
Insert the bolt from the rear of the vehicle and temporarily install the bolt.

8. TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM RH

HINT:
Temporarily tighten the RH side using the same procedures as for the LH side.

SP



9. TEMPORARILY TIGHTEN REAR STRUT ROD

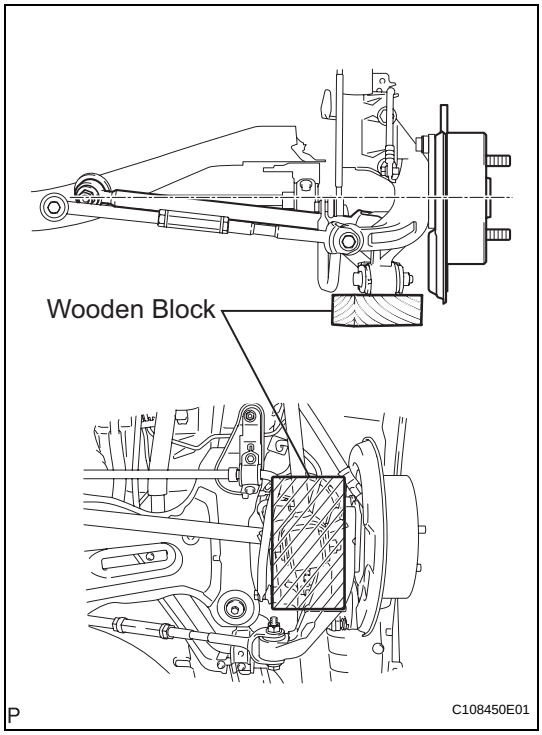
(a) Connect the strut rod assembly rear to the axle carrier with the bolt and nut and temporarily tighten the bolt.

NOTICE:

When temporarily tightening the bolt, keep the nut from rotating.

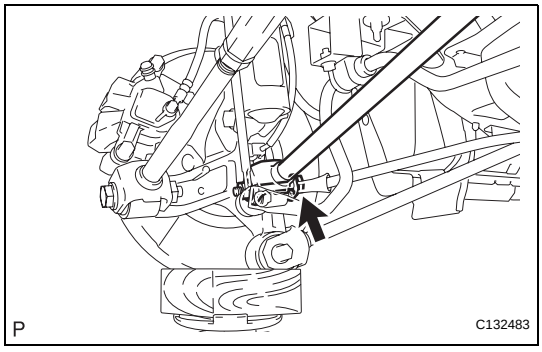
HINT:

Insert the bolt from the inside of the vehicle and temporarily install the bolt.



10. STABILIZE SUSPENSION

(a) Jack up the rear axle carrier, placing a wooden block to avoid damage. Apply load to the suspension so that the installed bolt of the rear No. 1 suspension arm (inner side) is horizontally aligned with the center of the rear axle hub.



11. FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM LH

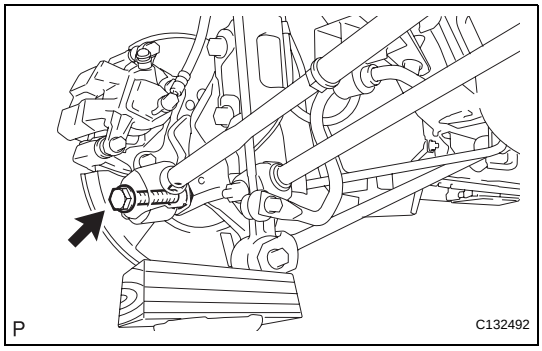
(a) Fully tighten the bolt.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

12. FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM RH

HINT:

Fully tighten the RH side using the same procedures as for the LH side.



13. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM LH

(a) Fully tighten the bolt.

Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

14. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM RH

HINT:

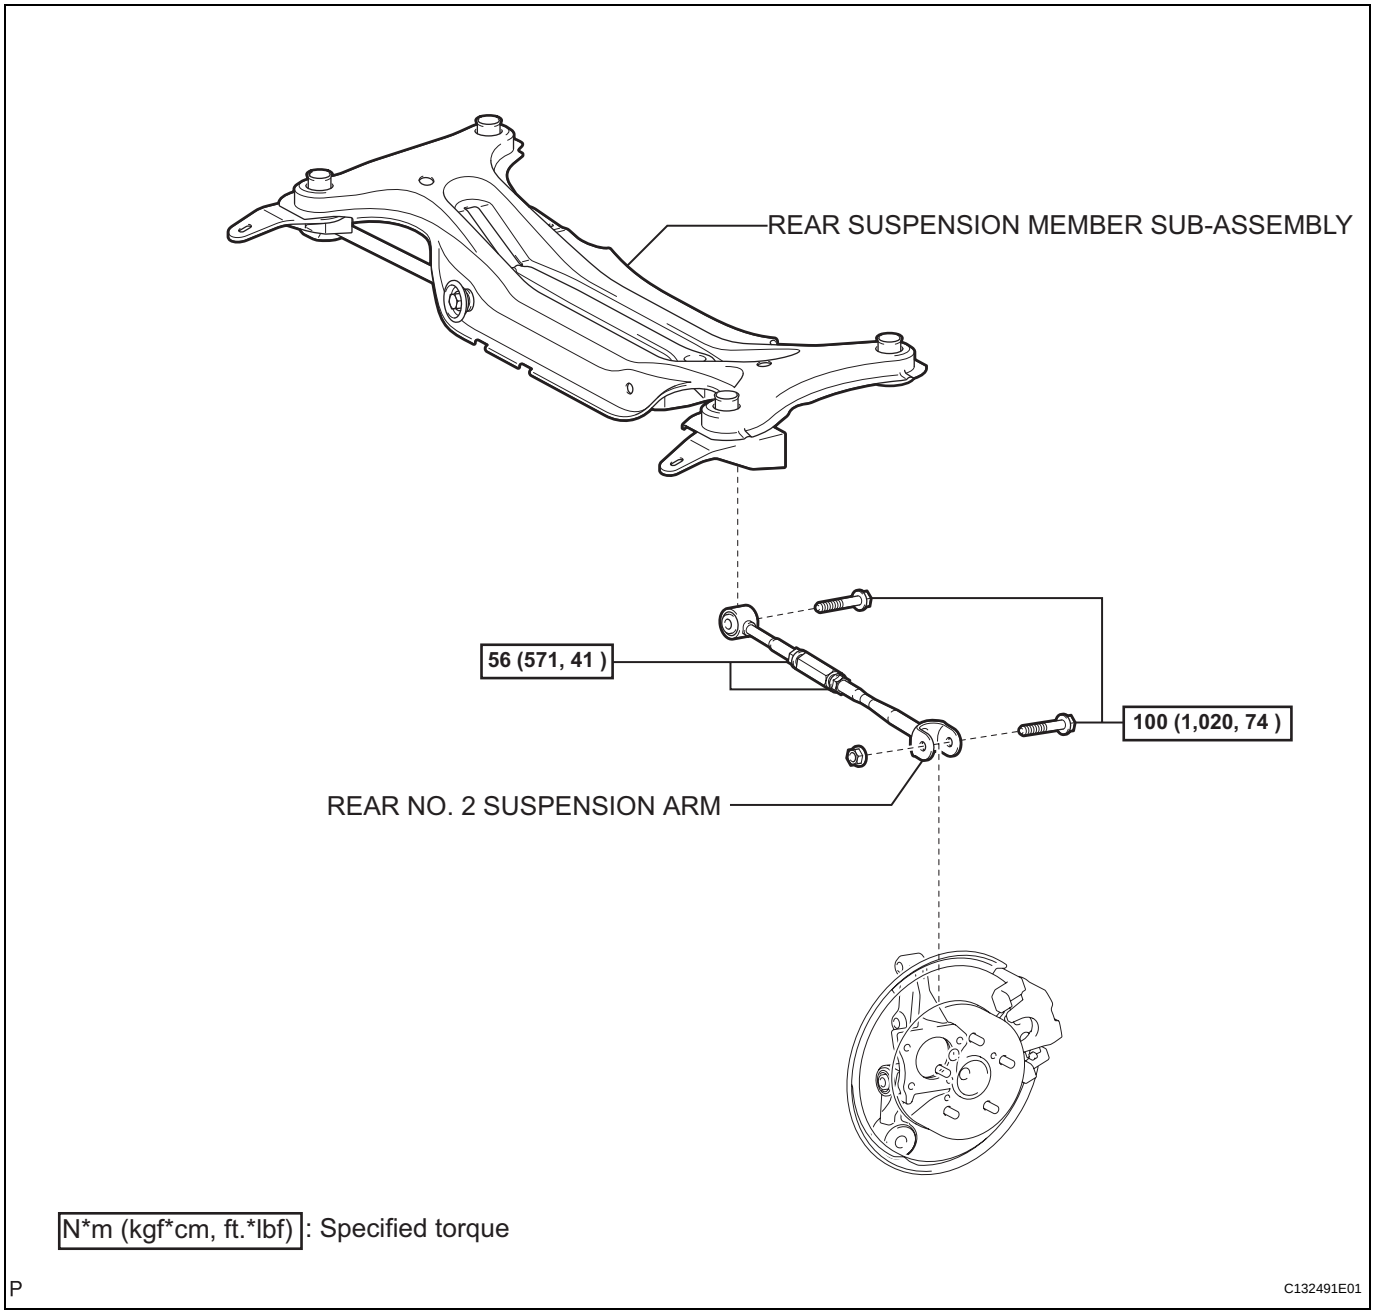
Fully tighten the RH side using the same procedures as for the LH side.

15. FULLY TIGHTEN REAR STRUT ROD (See page SP-50)

16. **INSTALL REAR STABILIZER BUSHING (See page SP-69)**
17. **INSTALL REAR STABILIZER BAR NO. 2 BRACKET (See page SP-69)**
18. **INSTALL REAR STABILIZER BAR NO. 1 BRACKET (See page SP-69)**
19. **INSTALL REAR STABILIZER BAR**
20. **INSTALL REAR STABILIZER LINK ASSEMBLY LH (See page SP-70)**
21. **INSTALL REAR STABILIZER LINK ASSEMBLY RH (See page SP-70)**
22. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-4)**
23. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-4)**
24. **INSTALL TAIL EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-5)**
25. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
26. **CHECK FOR EXHAUST GAS LEAKAGE (See page EX-5)**
27. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT** (See page SP-13)

REAR NO. 2 SUSPENSION ARM

COMPONENTS

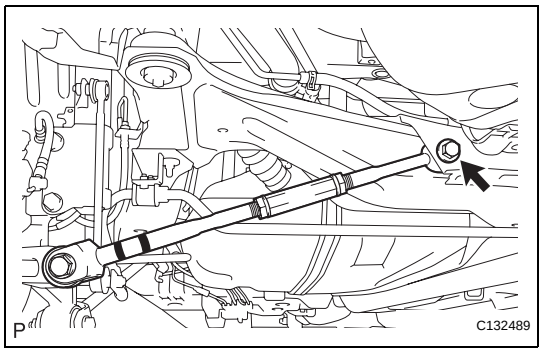


REMOVAL

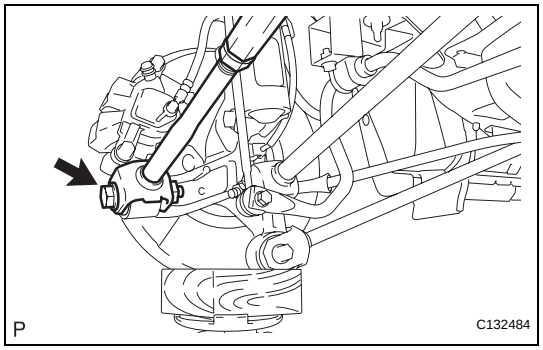
1. REMOVE REAR WHEEL

2. REMOVE REAR NO. 2 SUSPENSION ARM

(a) Remove the bolt, and disconnect the rear No. 2 suspension arm (inner side).



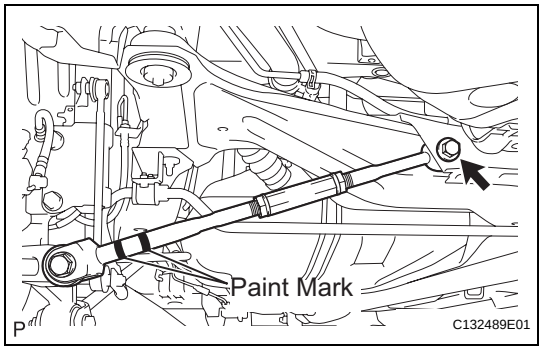
(b) Remove the bolt, nut and the rear No. 2 suspension arm (outer side) from the rear axle carrier.
NOTICE:
When removing the bolt, keep the nut from rotating.



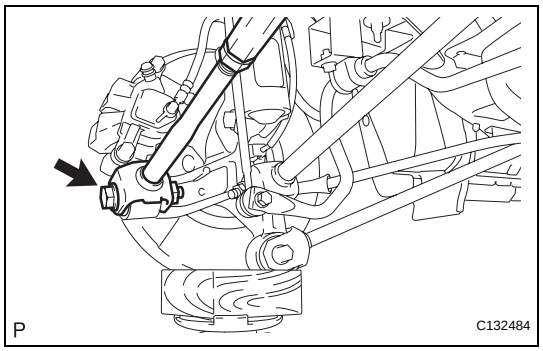
INSTALLATION

1. TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM

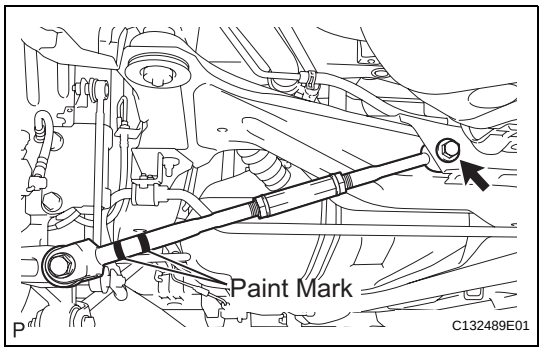
(a) Install the rear No. 2 suspension arm (inner side) with the bolt, and temporarily tighten the bolt.
HINT:
Ensure that the paint mark faces to the rear of the vehicle.



(b) Connect the rear No. 2 suspension arm (outer side) to the rear axle carrier with the bolt and nut, and temporarily tighten the bolt.
NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

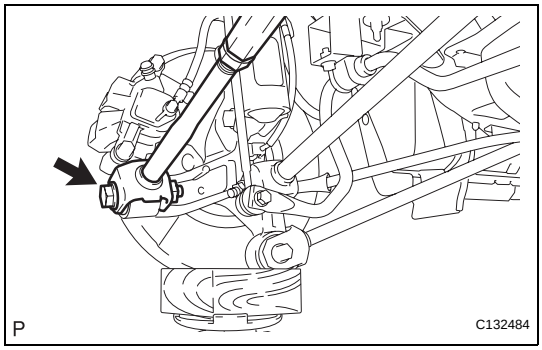


2. STABILIZE SUSPENSION (See page SP-50)



3. FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM

(a) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)



(b) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

4. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

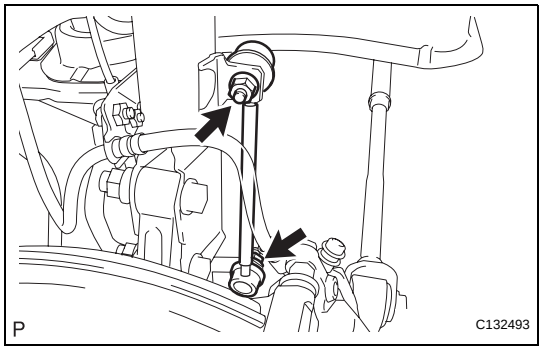
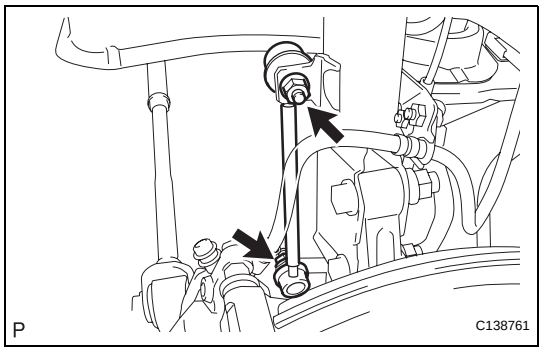
REMOVAL

NOTICE:
Check if an old gasket still remains on the pipe. If so, remove it. Also, check if any bolts or nuts are rusted. If so, replace them.

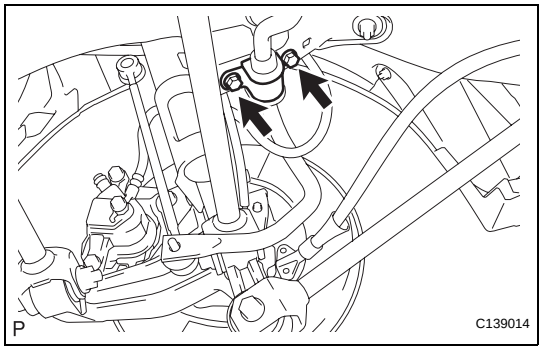
1. **REMOVE REAR WHEELS**
2. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-2)**
3. **REMOVE TAIL EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-2)**



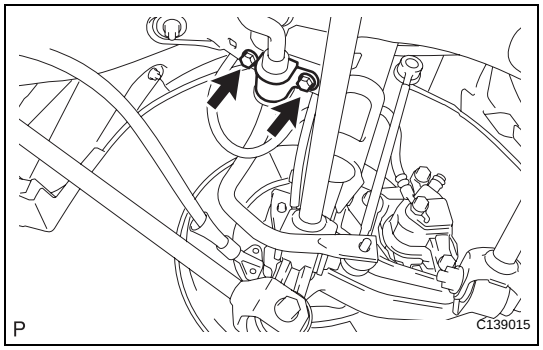
5. **REMOVE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the 2 nuts and rear stabilizer link assembly LH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



6. **REMOVE REAR STABILIZER LINK ASSEMBLY RH**
   (a) Remove the 2 nuts and rear stabilizer link assembly RH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



7. **REMOVE REAR STABILIZER BAR NO. 2 BRACKET**
   (a) Remove the 2 bolts and rear stabilizer bar No. 2 bracket.



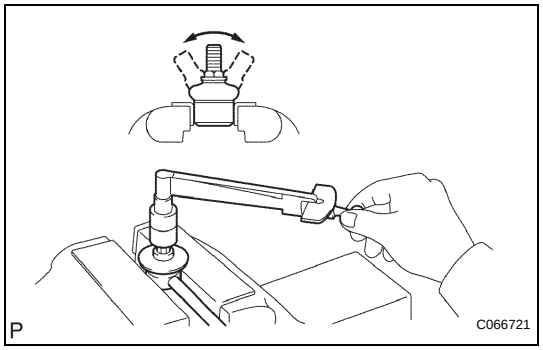
8. REMOVE REAR STABILIZER BAR NO. 1 BRACKET

(a) Remove the 2 bolts and rear stabilizer bar No. 1 bracket.

9. REMOVE REAR STABILIZER BUSHING

(a) Remove the 2 rear stabilizer bushings from the rear stabilizer bar.

10. REMOVE REAR STABILIZER BAR



INSPECTION

1. INSPECT REAR STABILIZER LINK ASSEMBLY

(a) Inspect the turning of the ball joint.

(1) Secure the rear stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the rear stabilizer link assembly stud.

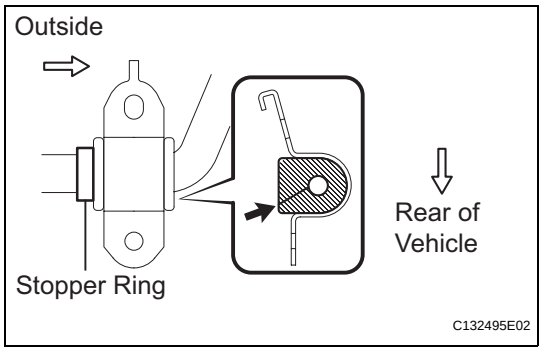
(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque
0.05 to 1.0 N*m (0.5 to 10 kgf*cm, 0.4 to 8.9 in.*lbf)

HINT:
If the turning torque is not within the specified range, replace the rear stabilizer link assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.



INSTALLATION

1. INSTALL REAR STABILIZER BUSHING

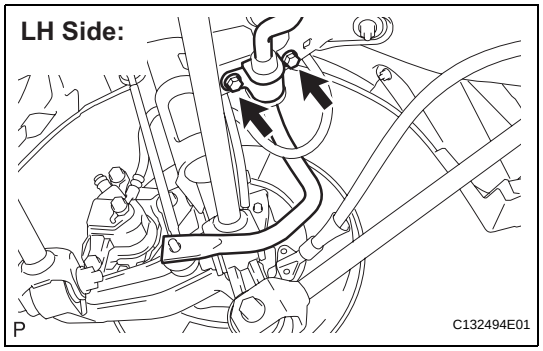
(a) Install the 2 rear stabilizer bushings to the outside of the stopper ring on the stabilizer bar.

2. INSTALL REAR STABILIZER BAR NO. 2 BRACKET

(a) Install the rear stabilizer bar No. 2 bracket.

3. INSTALL REAR STABILIZER BAR NO. 1 BRACKET

(a) Install the rear stabilizer bar No. 1 bracket.

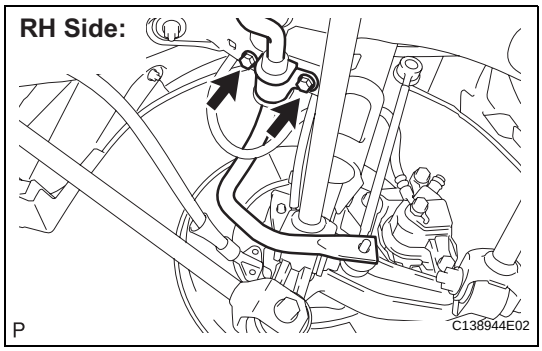


4. INSTALL REAR STABILIZER BAR

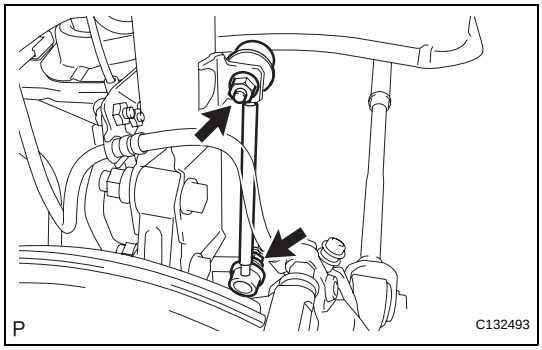
(a) Install the rear stabilizer bar with the 2 bolts. (LH Side)

Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)

SP

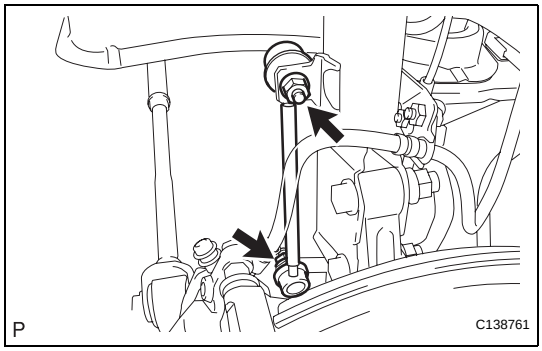


(b) Install the rear stabilizer bar with the 2 bolts. (RH Side)
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



5. INSTALL REAR STABILIZER LINK ASSEMBLY LH

(a) Install the rear stabilizer link assembly LH with the 2 nuts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



6. INSTALL REAR STABILIZER LINK ASSEMBLY RH

(a) Install the rear stabilizer link assembly RH with the 2 nuts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.

7. INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2AZ-FE) (See page EX-4)

8. INSTALL CENTER EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-4)

9. INSTALL TAIL EXHAUST PIPE ASSEMBLY (for 2GR-FE) (See page EX-5)

10. INSTALL REAR WHEELS
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

11. INSPECT EXHAUST GAS LEAKAGE (See page EX-5)

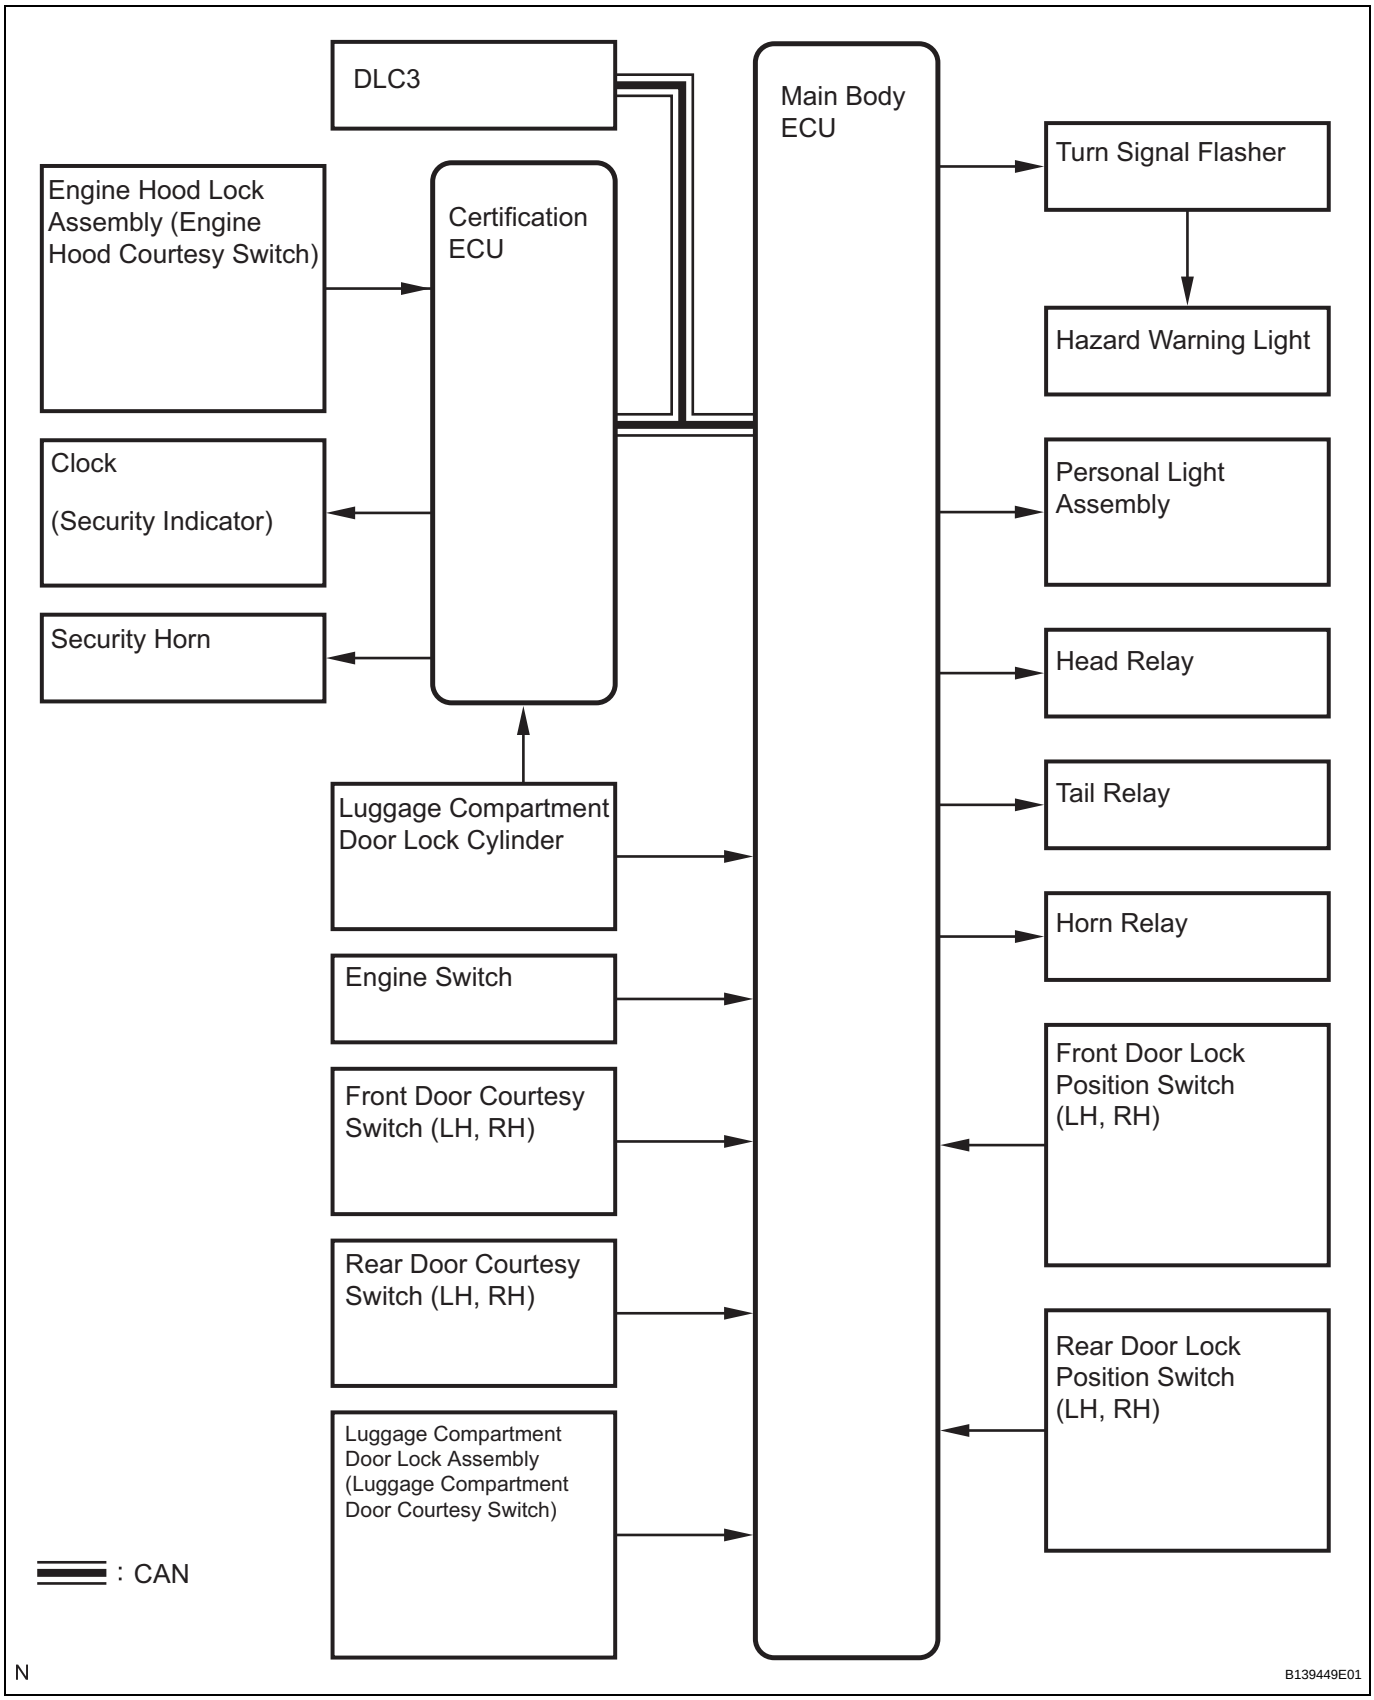
SYSTEM DIAGRAM



TD

SYSTEM DESCRIPTION

1. OUTLINE OF THEFT DETERRENT SYSTEM

- The theft deterrent system will operate when somebody attempts to forcibly enter the vehicle, unlock any door or luggage compartment door, or open the engine hood or the luggage compartment door without using the key.
  This system causes the lights to light up or blink and the horns to sound in order to deter break-in and theft.
- The theft deterrent system has 2 modes; one is the active arming mode (see ACTIVE ARMING MODE) and the other is passive arming mode (see PASSIVE ARMING MODE). The passive arming mode can be switched ON/OFF using the specified method.
- Each mode has 4 states; a disarmed state, an arming preparation state, an armed state and an alarm sounding state.

(a) Disarmed state:
- The alarm function is not operating.
- The theft deterrent system is not operating.

(b) Arming preparation state:
- The time until the system goes into the armed state.
- The theft deterrent system is not operating.

(c) Armed state:
- The theft deterrent system is operating.

(d) Alarm sounding state:
- Alarm function is operating.

Alarm time:
Approx. 60 sec.

Refer to table below for alarm method and time:

Alarm Method	Headlight	Blinking
	Taillight	Blinking
	Hazard Warning Light	Blinking
	Interior Light	Illuminating
	Vehicle Horn	Sounding (approx. 0.4 second cycles)
	Security Horn	Sounding (approx. 0.4 second cycles)
Alarm Time	Approx. 60 sec.	

HINT:
If any of the doors are unlocked when the key is not in the actuation area during the armed state, a forced door lock signal will be output (see FORCED DOOR LOCK CONTROL).

2. FUNCTION OF MAIN COMPONENT

Component	Function
Security indicator	Informs driver of theft deterrent system status.
Security horn	Sounds when attempted brake-in or theft is detected.
Headlights	Blink when attempted break-in or theft is detected.
Taillights	Blink when attempted break-in or theft is detected.
Hazard warning lights	Blinking when attempted break-in or theft is detected.

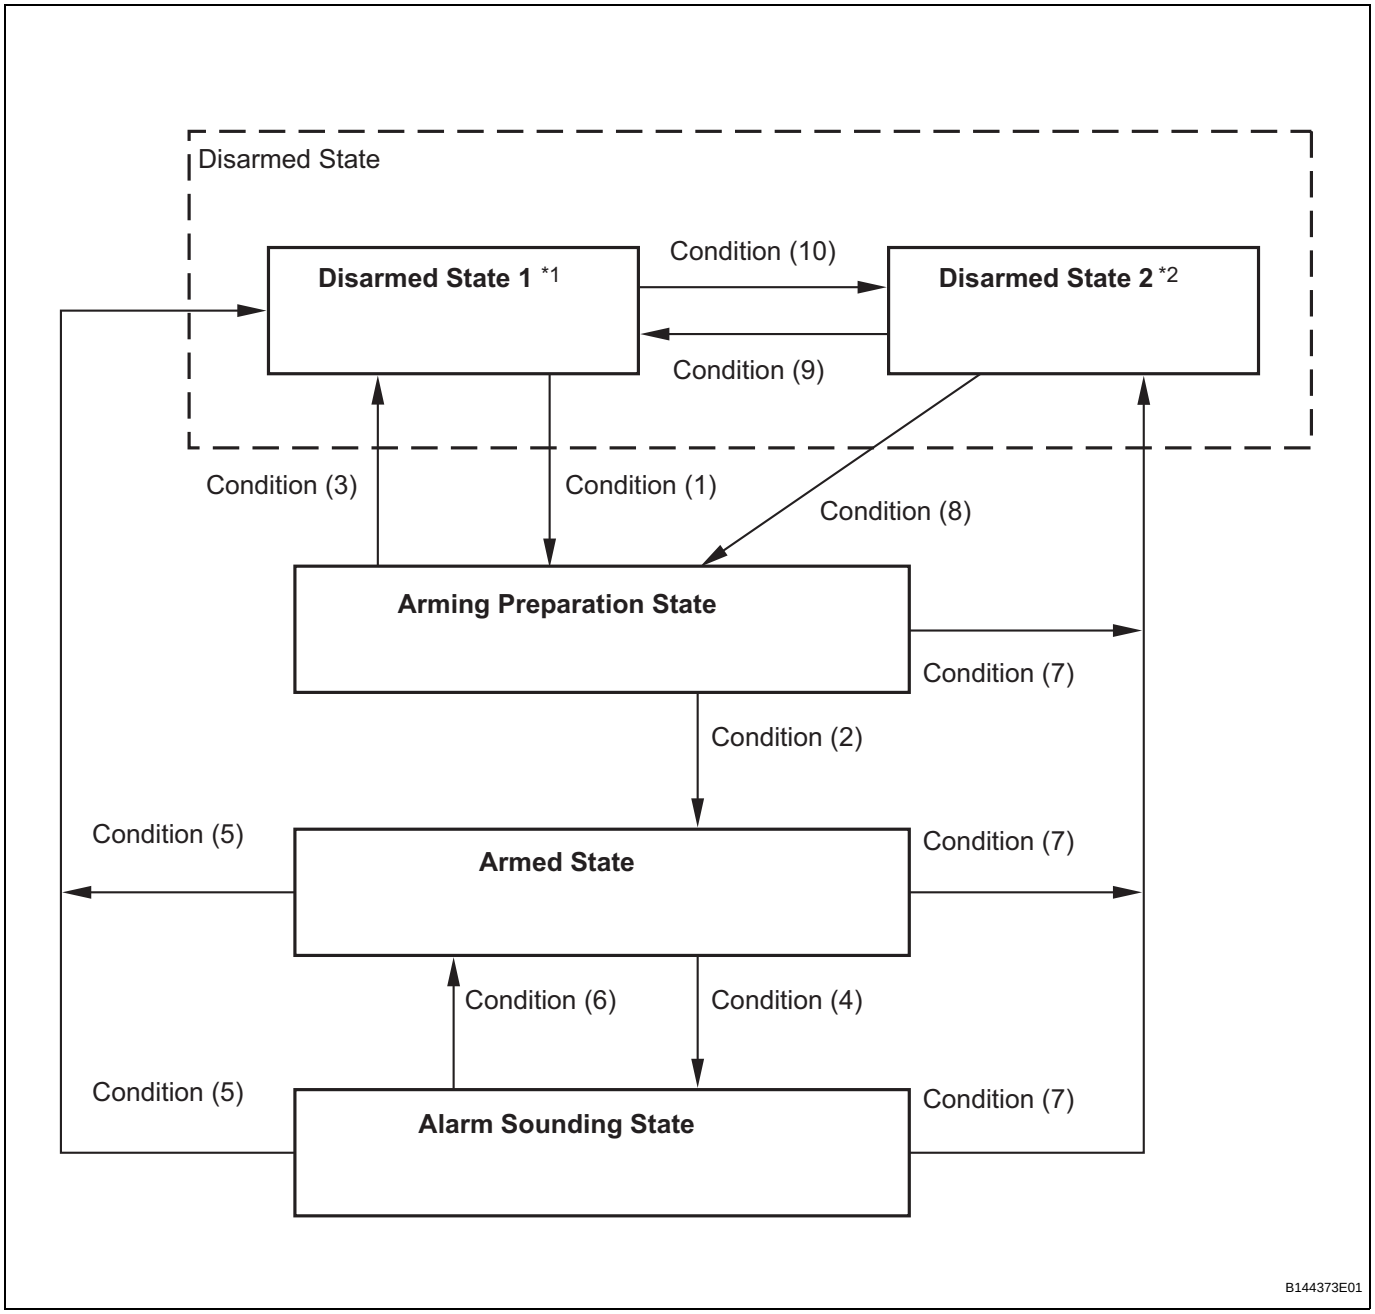
Component	Function
Interior light	Lights up when attempted break-in or theft is detected.
Vehicle horns	Sounds when attempted break-in or theft is detected.
Door courtesy light switch	Detects door status (open or closed).
Door lock position switch	Detects door status (locked or unlocked).
Engine hood courtesy switch	Detects engine hood status (open or closed).
Luggage compartment door courtesy switch	Detects luggage compartment door status (open or closed).
Luggage compartment door lock cylinder	Detects luggage compartment door status (locked or unlocked).
Certification ECU	• Receives engine hood courtesy switch status. • Sends operation signal to security indicator and security horn.

3. ACTIVE ARMING MODE

HINT:

Active arming mode starts the alarm control immediately after the doors are locked.

(a) Active arming mode:
This system activates as described in the diagram below when one of items for each condition is met.



HINT:
- *1: Disarmed state 1 is the normal disarmed state.
- *2: Disarmed state 2 is set from either the disarmed state 1 or the arming preparation state.

Condition	Item
Condition (1)	In the disarmed state 1, when the key is not in the actuation area, the system state is switched if one of the following conditions is met. 1. With all doors, engine hood and luggage compartment door closed, lock all doors by key operation. 2. With all doors, engine hood and luggage compartment door closed, lock all doors by wireless operation. 3. With engine hood and luggage compartment door closed and all doors locked with any door still opened, close the open door.

TD

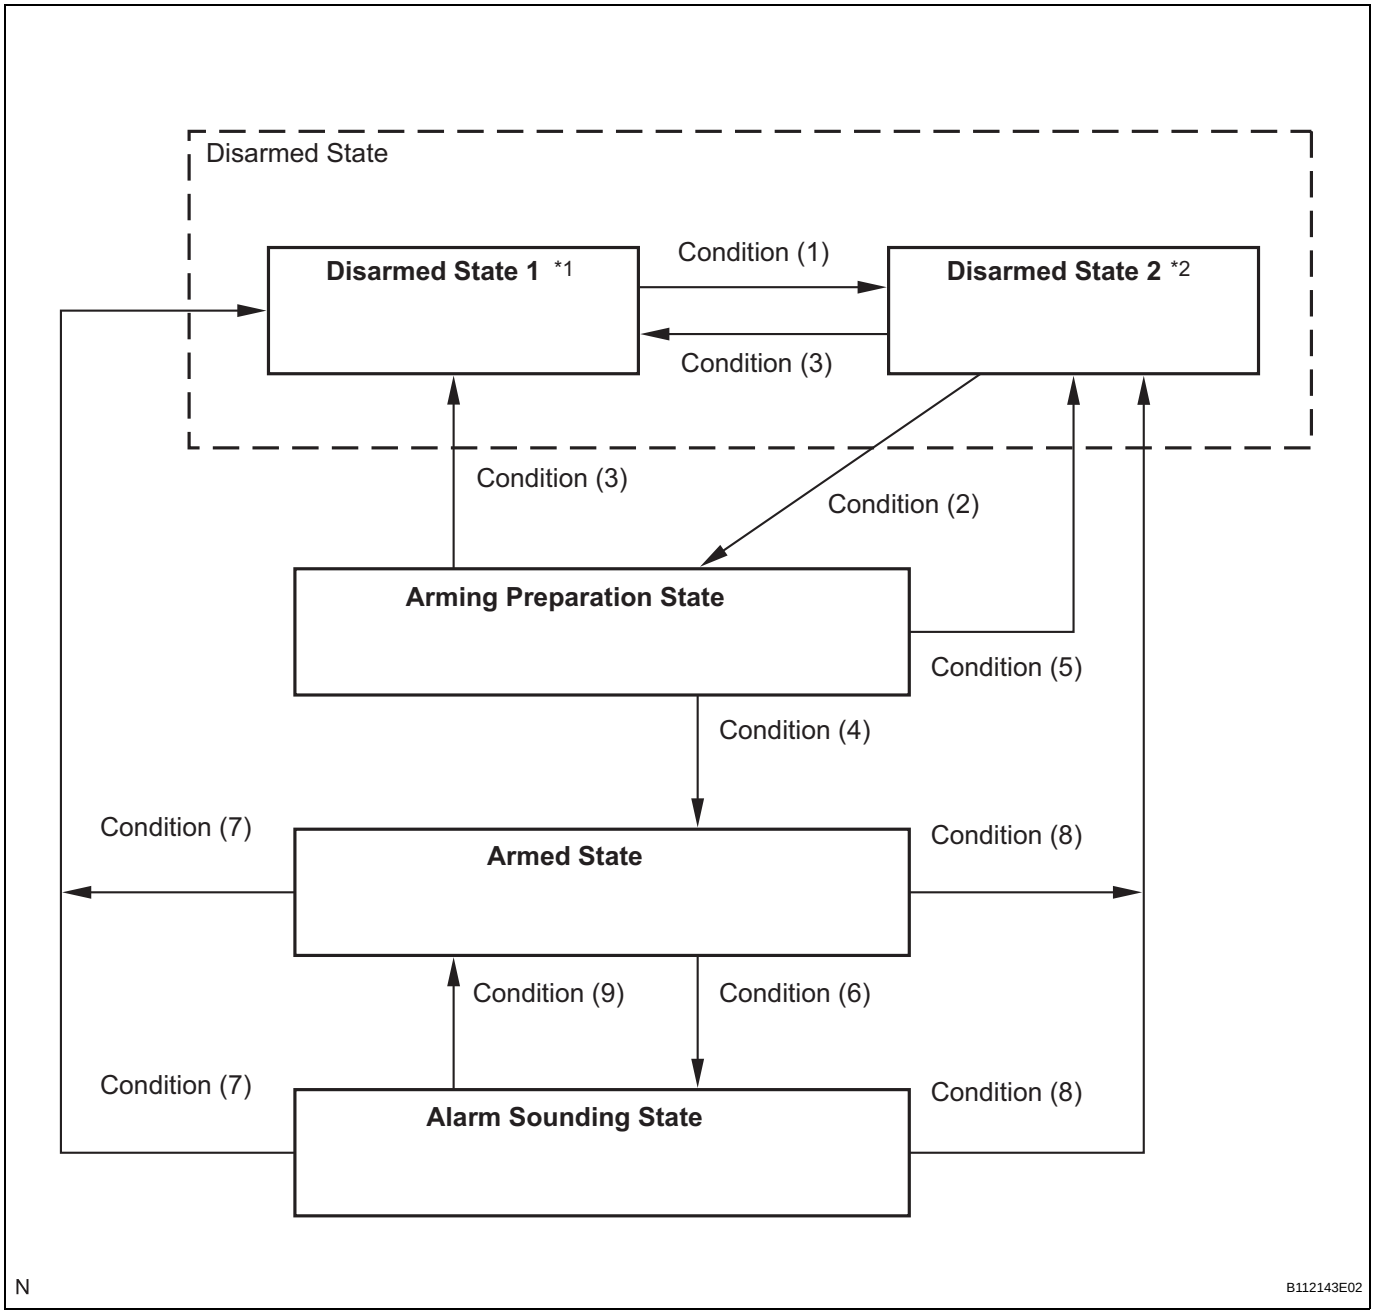
Condition	Item
Condition (2)	After condition (1) is met, allow approx. 30 seconds to elapse.
Condition (3)	1. Unlock any door. 2. Open any door, engine hood, or luggage compartment door. 3. Turn the engine switch on (IG or ACC). 4. Reconnect battery.
Condition (4)	1. Open engine hood. 2. Open luggage compartment door. 3. Reconnect battery. 4. Open any door. 5. Unlock any door when all doors are locked without wireless operation.
Condition (5)	1. Unlock only driver's door or all doors by wireless operation. 2. Unlock only driver's door or all doors by key operation. 3. Turn the engine switch on (IG) and run the engine more than 2 seconds.
Condition (6)	After approx. 60 seconds, alarm stops and system returns to armed state.
Condition (7)	1. Open the luggage compartment door by wireless operation. 2. Unlock the luggage compartment door by key operation.
Condition (8)	1. Close the engine hood when the luggage compartment door is closed. 2. Close the luggage compartment door when the engine hood is closed.
Condition (9)	1. Unlock any door. 2. Open any door. 3. Turn the engine switch from off to on (IG or ACC). 4. Reconnect the battery.
Condition (10)	In the disarmed state 1, when the key is not in the actuation area, the system state is switched if one of the following conditions is met. 1. With all doors closed, and the engine hood or luggage compartment door is opened, lock all doors by wireless operation. 2. With all doors closed, and the engine hood or luggage compartment door is opened, lock all doors by key operation. 3. With the engine hood or luggage compartment door is opened and all doors locked with any door still opened, close the open door.

4. PASSIVE ARMING MODE

HINT:

- Passive arming mode starts the alarm control after the key is out of the actuation area and doors are closed.
- Passive arming mode can be switched ON/OFF by the specified method.
- The alarm is initially set (when shipped from factory) to active arming mode (not passive arming mode).
- During passive arming mode, the theft deterrent system goes into the armed state even if the doors are not locked.
- Detecting that the doors are unlocked does not set off the alarm during passive arming mode.
- A forced door lock signal is not output during passive arming mode (see FORCED DOOR LOCK CONTROL).
- Although the theft deterrent system detects that the doors are opened during passive arming mode, the alarm will not go off immediately because an entry delay time is set.
- If the condition (1) of active arming mode is met during passive arming mode, the theft deterrent system will switch to active arming mode.

(a) Passive arming mode:
This system activates as described in the diagram below when one of items for each condition is met.



HINT:

- *1: Disarmed state 1 is the normal disarmed state.
- *2: Disarmed state 2 is set from either the disarmed state 1 or the arming preparation state.

Condition	Item
Condition (1)	1. With any door open, turn the engine switch off. 2. With the engine switch off, open any door.
Condition (2)	All doors, engine hood and luggage compartment door are closed.
Condition (3)	1. Unlock only driver's door or all doors by wireless operation. 2. Unlock only driver's door or all doors by key operation. 3. Reconnect battery. 4. Turn the engine switch on (IG or ACC).

TD

Condition	Item
Condition (4)	After condition (1) is met, allow approx. 30 seconds to elapse.
Condition (5)	1. Open any door. 2. Open engine hood. 3. Open luggage compartment door. 4. Unlock luggage compartment door.
Condition (6)	1. Open any door and allow entry delay time*1 to elapse. 2. Open engine hood. 3. Open luggage compartment door. 4. Reconnect battery. 5. Turn the engine switch off. After 5 seconds or more elapsed, turn the engine switch on (IG).
Condition (7)	1. Unlock only driver's door or all doors by wireless operation. 2. Unlock only driver's door or all doors by key operation. 3. Turn the engine switch on (IG) and run the engine more than 2 seconds.
Condition (8)	1. Open luggage compartment door by wireless operation. 2. Unlock luggage compartment door by key operation.
Condition (9)	After approx. 60 sec., alarm stops and system returns to armed state.

HINT:

*1: When any door is opened while all the doors are closed during passive arming mode, the entry delay time starts. If the switch condition (armed state → disarmed state 1 or 2) is met during the entry delay time, the theft deterrent system will return to disarmed state 1 or 2. However, if the switch condition for disarmed state 1 or 2 is not met, the theft deterrent system will recognize it as a theft and set off the alarm. Entry delay time of 0, 14 or 30 sec. can be selected by the customizing function.

5. FORCED DOOR LOCK CONTROL

(a) The forced door lock control prevents the vehicle from being tampered with. Immediately after a door is unlocked (alarm starts), the door is forced to lock by a forced door lock signal.

(1) Conditions that force the doors to lock:
When the key is not in the actuation area and both of the following conditions are met.

- The theft deterrent system is in the alarm sounding state of active arming mode.
- Any door is unlocked.

TD

6. ALARM MEMORY FUNCTION

(a) If the alarm is set off (tampering is detected) while the theft deterrent system is armed, it will be recorded by the alarm memory function. Whenever the theft deterrent system is cancelled, the alarm memory function causes the taillights to light up for 2 seconds in order to inform you that the alarm has been set off.

(1) Conditions of the alarm memory function that cause the taillights to light up:
When the theft deterrent system has entered into the alarm sounding state (tampering has been detected) even once, the taillights will light up for 2 seconds if any of the following conditions is met.
- Switched to the disarmed state from the armed state during active arming mode.
- Switched to the disarmed state 1 from the armed state during passive arming mode.

HINT:
Active arming mode: See ACTIVE ARMING MODE.
Passive arming mode: See PASSIVE ARMING MODE.

7. PANIC ALARM CONTROL

(a) The panic alarm control makes it possible to voluntarily set off the panic alarm by pressing the PANIC switch on the wireless transmitter.

(1) Conditions that cause the panic alarm control to set off the panic alarm:
The panic alarm control sets off the panic alarm by pressing the PANIC switch on the wireless transmitter under the following conditions:
- The engine switch off.
- The theft deterrent system is not in the alarm sounding state. (This condition is common both to active arming mode and to passive arming mode.)

(2) Conditions that cause the panic alarm control to shut off the alarm:
The panic alarm control shuts off the panic alarm when any of the following conditions is met during panic alarm operation:
- The engine switch on (IG).
- The panic alarm switch is turned on again.
- Any of the switches on the wireless transmitter (LOCK/UNLOCK or LUGGAGE OPEN) is pressed.
- The panic alarm ends (approx. 60 sec. have passed).

- The theft deterrent system switches to the alarm sounding state. Under this condition, the theft deterrent system is controlling the alarm rather than the panic alarm control. In order to cancel this alarm, refer to the theft deterrent system alarm sounding state cancellation procedure. (This condition is common both to active arming mode to passive arming mode.)

HINT:
Active arming mode: See ACTIVE ARMING MODE.
Passive arming mode: See PASSIVE ARMING MODE.

8. SECURITY INDICATOR OUTPUT

(a) The certification ECU outputs a signal to light up the security indicator, according to the state of the theft deterrent system. However, some of the actual lighting conditions of the security indicator are different from the output signals of the certification ECU.

Output:

State of Theft Deterrent System*	Security Indicator	
	Output Signals from certification ECU	Actual Lighting Condition
Disarmed state 1, 2	OFF	OFF (Immobiliser system unset) BLINKING (Immobiliser system set)
Arming preparation state	ON	ON
Armed state	OFF	BLINKING
Alarm sounding state	ON	ON

Blinking cycle:

Time	Security Indicator
0.2 sec.	ON
1.8 sec.	OFF

HINT:

- *: The above condition is common both to active arming mode and to passive arming mode.
- When the immobiliser system is set, the security indicator blinks during both the disarmed state and the armed state, due to the output signals from the immobiliser system.

TD

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use this procedure to troubleshoot the theft deterrent system.
- The intelligent tester should be used in step 3.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer to confirm the trouble (See page IN-45).

NEXT

3	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check for normal function of the multiplex communication system.
   (1) (ECU unconnected, communication line malfunctioning) If no code is output, proceed to A.
   (2) (ECU unconnected, communication line malfunctioning) If any code is output, proceed to B.

B → Go To CAN COMMUNICATION SECTION

A

4	SYMPTOM SIMULATION

NEXT

5	PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → Go to step 7

A

6	PERFORM TROUBLESHOOTING ACCORDING TO MALFUNCTION SYMPTOM

(a) System description (See page TD-5)

(b) Terminals of ECU (See page TD-17)

7	ADJUST, REPAIR OR REPLACE

NEXT

8	CONFIRMATION TEST

NEXT

END

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.**
- **Be sure to record the current settings before customization.**
- **When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: For the system, "the wireless function does not operate", first check that the wireless function is not set to "OFF", then perform troubleshooting).**

THEFT DETERRENT SYSTEM

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
PASSIVE MODE (Passive Arming Mode)	OFF	PASSIVE MODE is a function that switches theft deterrent system from arming preparation state to armed state 30 seconds after key is not in the actuation area and all doors, engine hood and luggage compartment door are closed, even if doors are not locked by wireless or door key lock operation In PASSIVE MODE, if you do not perform following operations within 14 seconds after door is opened during armed state, theft deterrent system will judge that condition as a theft and switch to alarm sounding state – Unlock any door by key or wireless operation – Turn the engine switch on (IG) – Open luggage compartment door by key or wireless operation	ON/OFF
WARN BY HORN (Warning by horn)	ON	Function that makes vehicle horn and theft deterrent horn be able to be used as a warning device	ON/OFF
ENTRY DELAY (Entry delay time)	14 s	Function that changes entry delay time (time before warning starts) for PASSIVE MODE	0 s/14 s/30 s

PROBLEM SYMPTOMS TABLE

HINT:

- Troubleshooting of the theft deterrent system is based on the premise that the door lock control system and the wireless door lock control system are operating normally. Accordingly, before troubleshooting the theft deterrent system, first make certain that the door lock control system and the wireless door lock control system are operating normally.
- The following is the troubleshooting procedure for the theft deterrent system of a vehicle with the smart key system.
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.

Theft deterrent system:

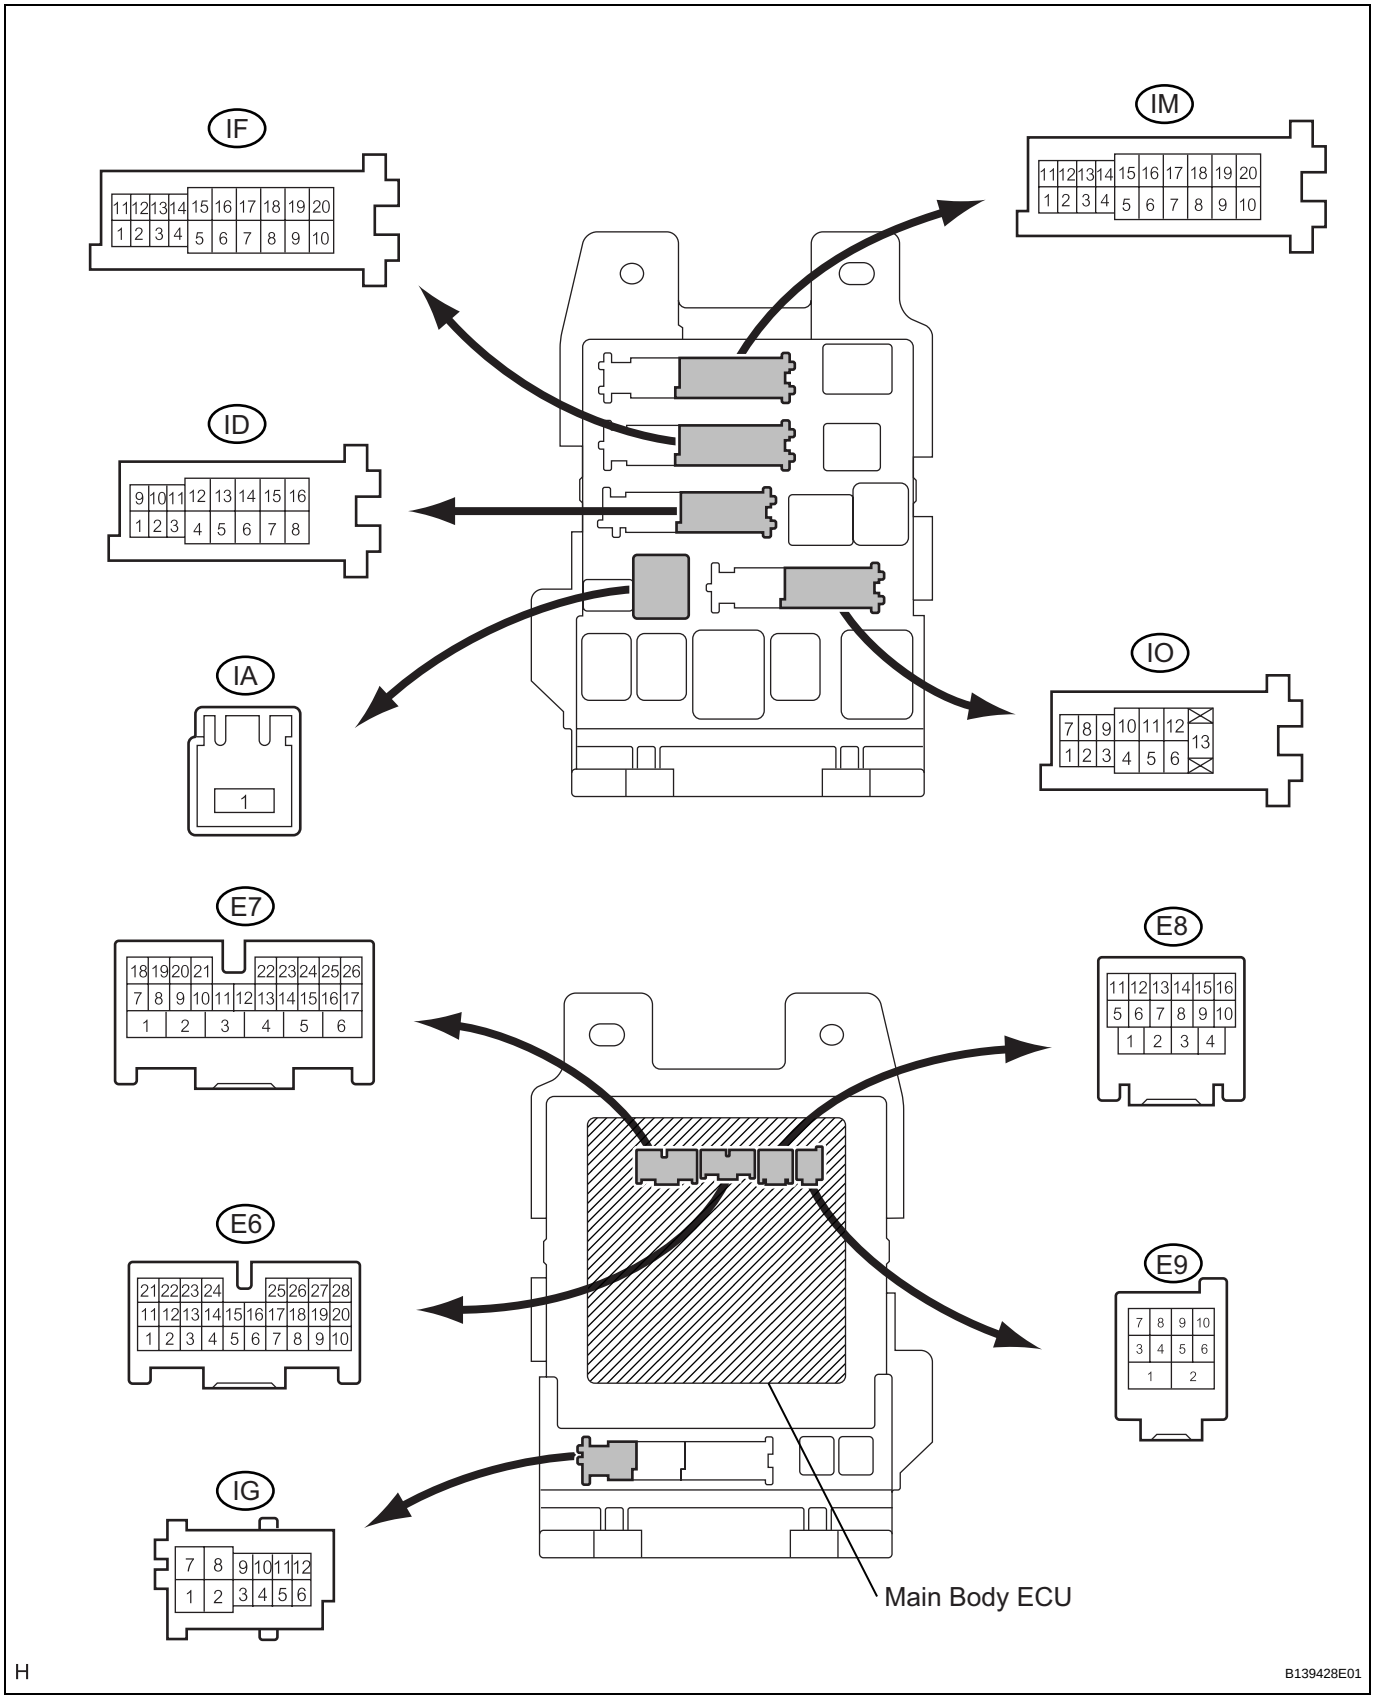
Symptom	Suspected area	See page
Theft deterrent system cannot be set	1. Security indicator light circuit	TD-34
	2. ECU power source circuit	TD-37
	3. Door key lock / unlock switch circuit	DL-53
	4. Door courtesy switch circuit	LI-52
	5. Luggage compartment door courtesy switch circuit	DL-44
	6. Engine hood courtesy switch circuit	TD-22
	7. Replace certification ECU	-
	8. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Security indicator does not blink when theft deterrent system is set	1. Security indicator light circuit	TD-34
	2. Replace certification ECU	-
	3. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Alarm sounding state cannot be canceled when engine switch turned on (IG)	1. Ignition switch circuit	TD-30
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Theft deterrent system can be set even when a door is open	1. Door courtesy switch circuit	LI-52
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Vehicle horns (low pitched, high pitched) do not sound while theft deterrent system is in warning operation	1. Horn circuit	TD-25
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Hazard warning lights do not flash while theft deterrent system is in warning operation	1. Wire harness	-
	2. Turn signal flasher	LI-138
	3. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Interior light does not light up while theft deterrent system is in warning operation	1. Interior light circuit	LI-57
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Security horn does not sound while theft deterrent system is in warning operation	1. Security horn circuit	TD-27
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

Symptom	Suspected area	See page
Hazard warning lights flash even when theft deterrent system is not set	1. Wire harness	-
	2. Turn signal flasher	LI-138
	3. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
Interior light comes on even when theft deterrent system is not set	1. Interior light circuit	LI-57
	2. If the symptom(s) still occur after the above areas are inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the main body ECU (instrument panel J/B) connectors.



(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCTY (E6-5) - Body ground	GR - Body ground	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
ACC (IA-1) - Body ground	B - Body ground	Ignition power supply (ACC signal)	Ignition switch on (ACC) → off	10 to 14 V → Below 1 V
IG (IA-1) - Body ground	B - Body ground	Ignition power supply (IG signal)	Ignition switch on (IG) → off	10 to 14 V → Below 1 V
BATB (IA-1) - Body ground	B - Body ground	+B (power battery system) power supply	Always	10 to 14 V
ALTB (ID-16) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the main body ECU (instrument panel J/B) connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.

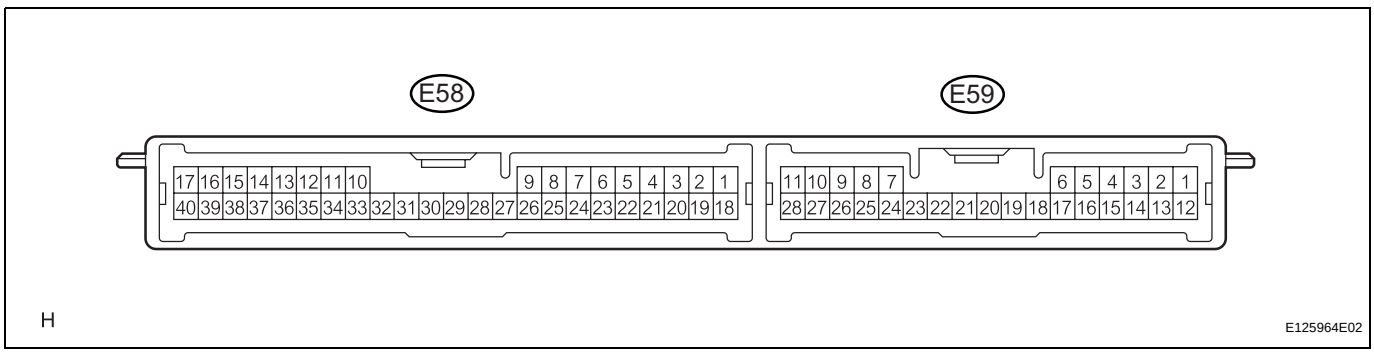
TD

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
HAZ (E8-4) - Body ground	W - Body ground	Turn signal flasher relay signal	System is in alarm sounding state	Below 1 V
HORN (ID-11) - Body ground	B - Body ground	Vehicle horn drive	Vehicle horn is sounding (Theft deterrent system is in alarm sounding state)	Pulse generation (0 V ← → 12 V)

If the result is not as specified, the ECU may have a malfunction.

2. CHECK CERTIFICATION ECU ASSEMBLY

(a) Disconnect the E58 and E59 ECU connectors.



(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - E (E58-17)	W - W-B	Battery power supply	Always	10 to 14 V
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
HSW (E59-24) - Body ground	R - Body ground	Engine hood courtesy switch	Engine hood OPEN (OFF) → CLOSED (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E58 and E59 ECU connectors.

(d) Measure the voltage of the connector.

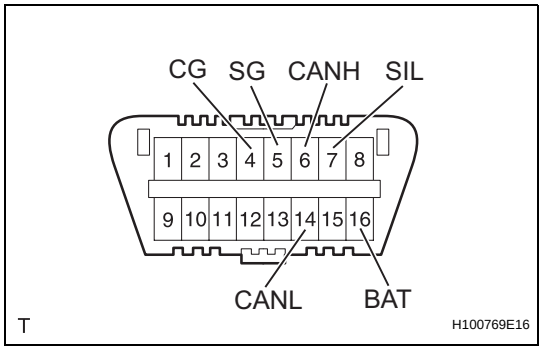
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IND (E58-2) - Body ground	Y - Body ground	Security indicator output	Security indicator light up (It lights up only in arming preparation state or alarm sounding state. It flashes when immobiliser is operating.)	3 to 6 V
SH (E59-20) - Body ground	P - Body ground	Security horn drive	Security horn is sounding (Theft deterrent system is in alarm sounding state)	Pulse generation (0 V ← → 12 V)

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The main body ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



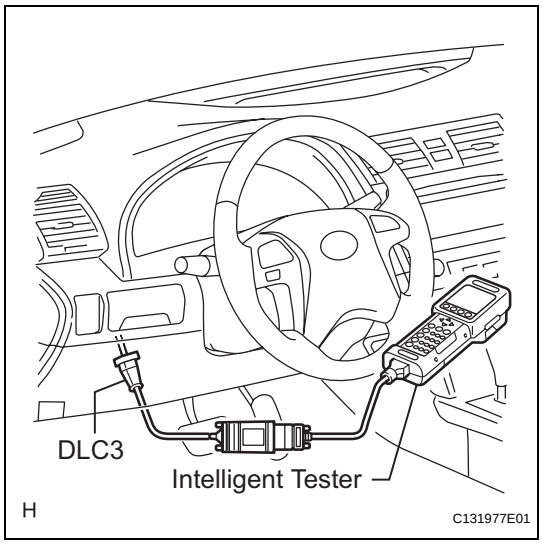
TD

Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Engine switch off*	54 to 67 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Engine switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Engine switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Engine switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Engine switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the engine switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the engine switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle or in the tester.
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch on ON.

(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / MAIN BODY or SMART / DATA LIST.

(d) Read the DATA LIST according to the display on the tester.

MAIN BODY (Main body ECU):
