RUST-RESISTANT BODY

■ DESCRIPTION

A highly rust-resistant body has been achieved through the wider application of anti-corrosion steel sheets, unitized door frames, modification to front wheel arch and rear wheel inner housing, application of wax, sealer, and undercoating, and adoption of chip-resistant paint.

■ ANTI-CORROSION STEEL SHEET

Anti-corrosion steel sheet is used for the front door, center door, and side panels. The application ratio of this material has been increased from 17.6% to 35% to enhance the vehicle's overall rust resistance.

: Anti-Corrosion Steel Sheet
