■ BODY MOUNTING

As with the previous model, body mountings No. 1 to No. 8 are used. (But the short wheel base model does not have No. 4 body mounting.) Closed-section cross members are used for all mountings except No. 1 to provide high rigidity. For G.C.C. countries, floating type rubber mountings which cut down vibration transmitted to the body are used for No. 6, 7 and 8 to reduce vibration and noise.
