■ INTAKE AND EXHAUST SYSTEM

1. Air Cleaner

Two resonators have been provided in the engine side pipe, above the air cleaner, to reduce intake noise and the noise level in the passenger compartment.

2. Exhaust Pipe

- All of the front exhaust pipe and part of the tail pipe (exhaust outlet) use stainless steel for improved rust resistance and durability. The curled exhaust outlet enhances rust resistance as well as appearance.
- The exhaust outlet has been moved from the rear to the side.

: Stainless steel portion
