CHASSIS

The chassis of the new Coaster is based on the previous model; however, its driving stability, comfort, and performance have been further improved through detailed modifications to the steering, suspension, transmission, and brakes.

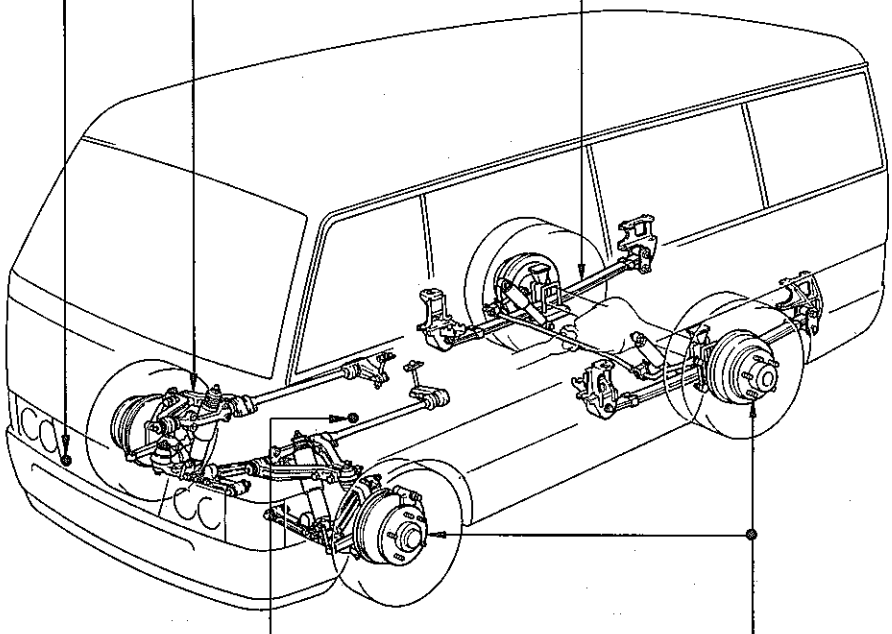

MAJOR COMPONENTS

Steering

- Recirculating ball type steering is used for all models.
- Power steering is used for all models.

Suspension

- Torsion bar type double wishbone independent front suspension is used for all models.
- Leaf spring type rigid rear suspension is used for all models.

Transmission

Three types of transmission are used.

Transmission / Engine	Manual		Automatic
	M152	M155	A441E
3B	●		
14B	●		
1HZ		●	●

Brakes

- For Australia, the front disc brakes and rear drum brakes are standard equipment.
- For other countries, front and rear drum brakes are standard, and front disc brakes are available as an option.
