A441E AUTOMATIC TRANSMISSION (G.C.C. and General Countries only)

Based on the A441L automatic transmission, the A441E automatic transmission is an Electronically Controlled Transmission (ECT) developed for the high output 1HZ engine which features computer controlled up-shift, down-shift and lock-up timing and other functions. This automatic transmission has the following features.

- N to D squat control system has been adopted to reduce the shock when the transmission is shifted to the D range from the N range.
- A fail-safe system permits safe driving even if the electrical circuitry malfunctions.
- A on-board diagnosis system has been adopted, which causes the O/D (overdrive) OFF indicator light to blink, informing the driver of the location of malfunction.
