9. Fuel System

General

- The fuel injector is shaped to form a long nozzle. This shortens the distance from the fuel injector to the intake valve, which prevents the fuel from adhering to the intake port walls and reduces exhaust emissions. Depending on the type of fuel that is used, a 4-hole type (for leaded gasoline) or a 12-hole type (for unleaded gasoline) fuel injector is provided.
- A compact and lightweight fuel pump is used.
- A quick connector is used to connect the fuel pipe with the fuel hose for excellent serviceability.
