## ■ INSTRUMENT PANEL SUB-ASSEMBLY

- The instrument panel sub-assembly has been designed to leave a refined impression with a feeling of a change for the better.
- The functions of the instrument panel sub-assembly are arranged facing the driver's side. Concentrating the functions in a reachable area improves usability. Furthermore, grouping the function switches provides a layout that considers usability as the passengers come and go.
- Unifying the meter hood with the instrument panel sub-assembly improves the feeling of quality.

### 1) Center Accessory Compartment

The center accessory compartment has an open layout for easy placement of a mobile phone, music player, and other small object in consideration of usability and convenience. Placement of the center accessory compartment near No. 1 power outlet socket assembly makes it possible to store a mobile phone, music player, or other device while charging it.

### 2) Large Bottom Center Tray (Instrument Panel Under Tray Sub-assembly)

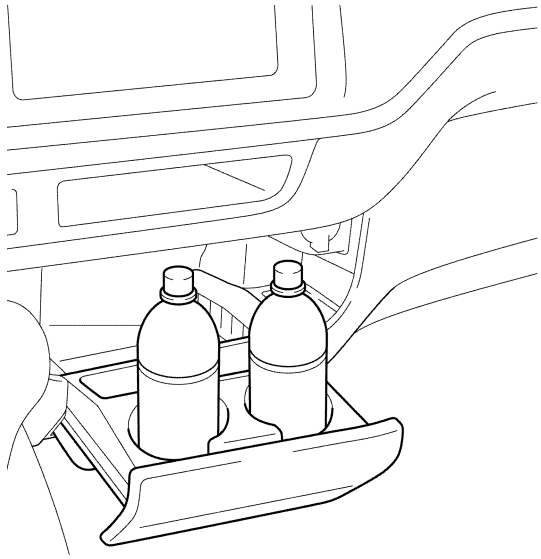

- A large bottom center tray (instrument panel under tray sub-assembly) of large-capacity has been adopted for an improves storage. In addition, like the center accessory compartment, the tray is located near No. 1 power outlet socket assembly, which makes it possible to store a mobile phone, music player, or other device while charging it.
- For convenience, the large bottom center tray (instrument panel under tray sub-assembly) can be pulled out to hold up a 500 mL bottle or other object.
