■ FLOOR AND REAR DESIGN

- A slip resistant material, shape and surface processing have been adopted for the center step (center door step mat plate) and floor mat in consideration of boarding and alighting. Furthermore, the center step (center door step mat plate) of some specification models matches the color and pattern of the floor mat to widen the look of the floor surface and provide a modern design suitable for an entrance to welcome passengers.
- The depth of the center door step has been expanded to improve boarding and alighting.
