WIPER AND WASHER SYSTEM

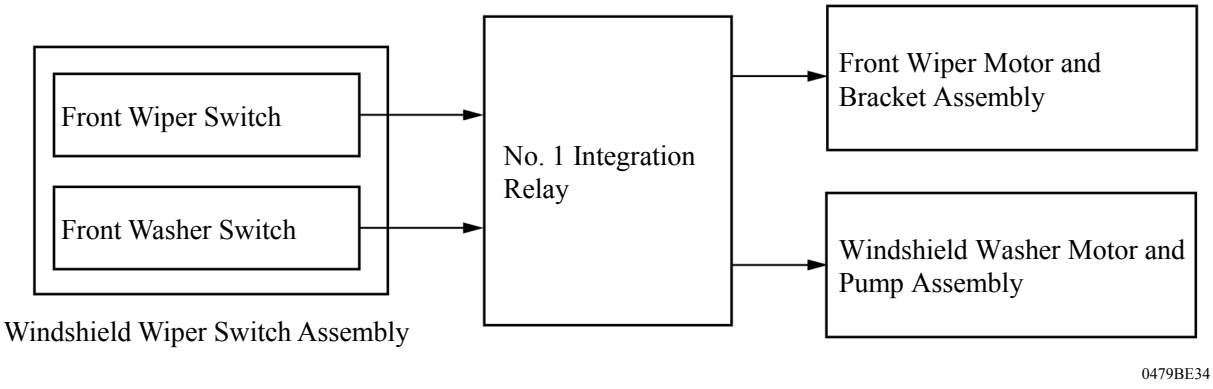

■ GENERAL

1. Outline

- An intermittent wiper which has a washer-linked wiper function is used for the front wiper system. This system is controlled by the No. 1 integration relay.
- A rear wiper system has been provided depending on the specifications.
- An intermittent wiper function is used for the rear wiper system.
- A 4-pole type motor is used in the front wiper motor and bracket assembly to reduce the weight.
