■ AUTOMATIC DOOR SYSTEM (MODELS WITH FOLDING TYPE CENTER DOOR)

1. General

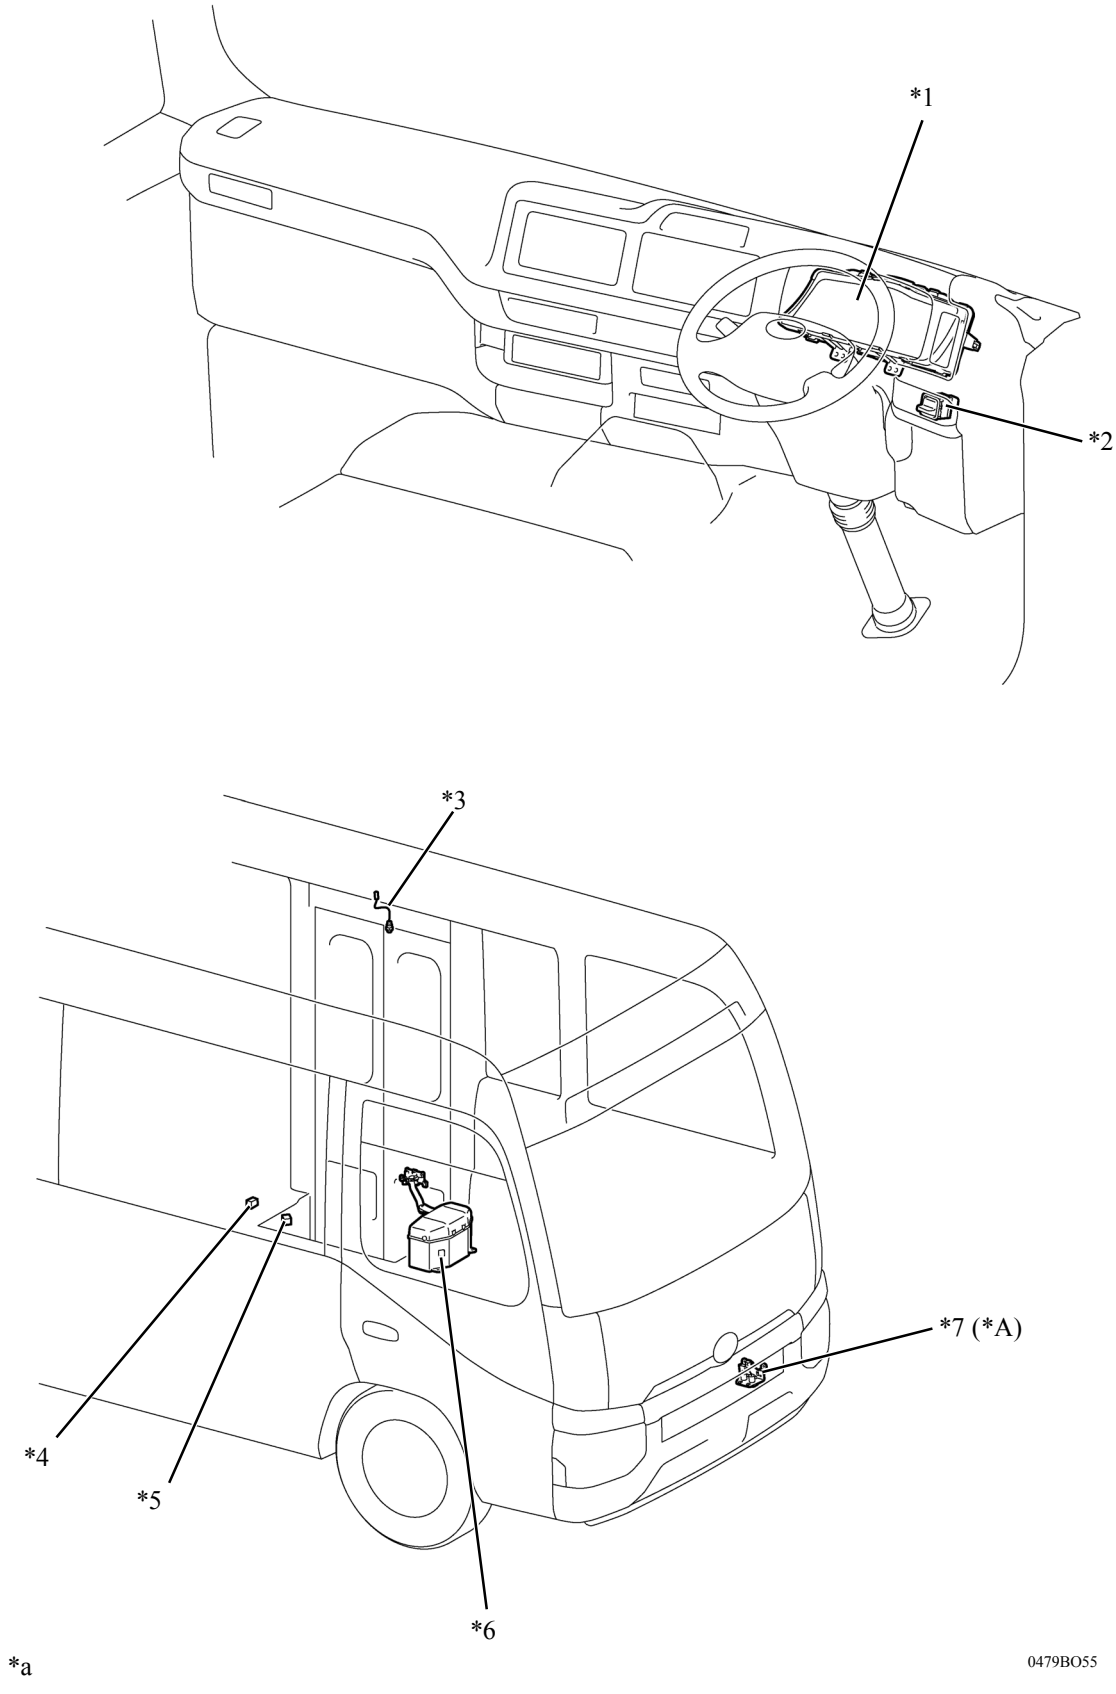

- Following expansion of the entrance, some of the structural components of the automatic door regulator motor assembly and No. 1/ No. 2 door inside handle bezel were changed.
- The depth of center-door step was expanded to improve boarding and alighting.
- Following a change of the combination meter assembly, the allocation of the system-related indicator light and warning light on the automatic door was changed.
- Following a design change of the instrument panel sub-assembly, the door control switch was changed.
- The design of the automatic door emergency switch assembly (door control switch assembly) was changed.
