FOREWORD

This is Volume 1 of the 2010 COROLLA manual. There are four volumes to this manual. The sections included in each volume are indicated by black type in the Section Index. Use the Section Index of each volume to find the volume with the section you need.
This manual applies to the models listed below. It covers all information in the previously issued Pub. No. RM12R0U, and includes all production changes effective July, 2009 or later.

Applicable models	ZRE142 series
	AZE141 series

Please note that the publications below have also been prepared as relevant service manuals for the components and system in these vehicles.

MANUAL NAME	PUB. NO.
2010 COROLLA Electrical Wiring Diagram	EM12R1U

All information in this manual is based on the latest product information at the time of publication. However, specifications and procedures are subject to change without notice. For the most current information available, refer to the Toyota Technical Information System (TIS) online at dealership locations or on the Internet at http://techinfo.toyota.com.
If you find any failures in this manual, you are kindly requested to inform us by using the report form on the next page.

Title: FOREWORD / CAUTION / SECTION: FOREWORD: CAUTION (2010 Corolla)		

CAUTION

This contents does not include all the necessary items about repair and service. This manual is made for the use of persons who have special techniques and certifications. If non-specialized or uncertified technicians perform repairs or service only using this manual or without proper equipment or tools, this may cause severe injury to you or other persons nearby and also cause damage to your customer's vehicle.
In order to prevent dangerous operation and damage to your customer's vehicle, be sure to follow the instructions shown below.

- This contents must be read thoroughly. It is especially important to have a good understanding of all the contents written in the PRECAUTION of "INTRODUCTION" section.
- The service method written in this manual is very effective to perform repair and service. When performing the operations following the procedures using this manual, be sure to use tools specified and recommended. If using non-specified or tools other than recommended tools and service methods, be sure to confirm the safety of the technicians and that there is no possibility of causing personal injury or damage to the customer's vehicle before starting the operation.
- If part replacement is necessary, the part must be replaced with the same part number or equivalent part. Do not replace it with an inferior quality part.
- It is important to note that this manual contains various "Cautions" and "Notices" that must be carefully observed in order to reduce the risk of personal injury during service or repair, or reduce the possibility that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that these "Cautions" and "Notices" are not exaggerations and are possible hazardous consequences that might result from failure to follow these instructions.

Title: INTRODUCTION: REPAIR INSTRUCTION: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. PROCEDURES NECESSARY WHEN BATTERY TERMINAL IS DISCONNECTED/RECONNECTED

NOTICE:

It may not be possible to release the steering lock or start the engine when the battery voltage is low. If this occurs, initialization of the steering lock system is required. INFO

2. PROCEDURES NECESSARY WHEN ECU OR OTHER PARTS ARE REPLACED

REPLACEMENT PART	NECESSARY PROCEDURE	EFFECT / INOPERATIVE FUNCTION WHEN NECESSARY PROCEDURES ARE NOT PERFORMED	NOTE
ECM	Vehicle Identification Number (VIN) registration	MIL comes on	Using the Techstream.
	ECU communication ID registration	Engine start	-
• Automatic transmission assembly*1 • Engine assembly*1 • ECM*1	Reset memory	• Large shift shock • The deterioration of fuel efficiency	Use the Techstream.
Tire pressure warning ECU	1. Register transmitter IDs 2. Initialize tire pressure warning system	• When DTC detection conditions of "transmitter ID not received" DTC are met, TPWS indicator blinks for 1 minute, and then illuminates. • Tire pressure monitoring function	-
Tire pressure warning valve and transmitter	1. Register transmitter IDs 2. Initialize tire pressure warning system	1. When DTC detection conditions of "transmitter ID not received" DTC are met,	Even if only one wheel is replaced, IDs for all 4 wheels must be registered.

REPLACEMENT PART	NECESSARY PROCEDURE	EFFECT / INOPERATIVE FUNCTION WHEN NECESSARY PROCEDURES ARE NOT PERFORMED	NOTE
		TPWS indicator blinks for 1 minute, and then illuminates. 2. Tire pressure monitoring function of replaced wheel	
Brake actuator assembly (Skid control ECU)	Perform yaw rate and acceleration sensor zero point calibration	• VSC OFF indicator light blinks • VSC disabled or malfunctioning	Perform yaw rate and acceleration sensor zero point calibration with the ignition switch ON (engine stopped).
• Yaw rate and acceleration sensor • Front wheel alignment adjustment	1. Clear zero point calibration data 2. Perform yaw rate and acceleration sensor zero point calibration	• VSC OFF indicator light blinks • VSC disabled or malfunctioning	Perform yaw rate and acceleration sensor zero point calibration with the ignition switch ON (engine stopped).
• Power steering ECU*2 • Steering column*2	Perform rotation angle sensor initialization and torque sensor zero point calibration	• P/S warning light comes on • EPS control	DTC (C1515/C1525) will be stored when the power steering ECU is replaced.
Power steering ECU*3	1. Assist map writing 2. Torque sensor zero point calibration	• P/S warning light comes on • EPS control	DTC (C1515) will be stored when the power steering ECU is replaced.
Steering column*3	Torque sensor zero point calibration	Steering effort is different between turning steering wheel to left and right	-
• Door control transmitter*5 • Door control receiver*5	1. Perform identification code registration (key code) 2. Refer to wireless door lock control system "REGISTRATION" procedures	Wireless door lock control system	-

REPLACEMENT PART	NECESSARY PROCEDURE	EFFECT / INOPERATIVE FUNCTION WHEN NECESSARY PROCEDURES ARE NOT PERFORMED	NOTE
Transponder key ECU*5	1. Key code registration 2. ECU communication ID registration	Engine start	-
key*5	Key code registration	Engine start	-
Steering lock actuator (Steering lock ECU)*4	ECU code registration	Engine start	-
• Certification ECU*4 • Electrical key transmitter*4	Key ID registration	• Wireless door lock control system • Smart key system • Engine start	-
ID code box*4	1. ECU code registration 2. ECU communication ID registration	Engine start	-
Occupant classification ECU	• Perform zero point calibration • Perform sensitivity check • Registration ECU data	• Occupant classification system • Passenger airbag ON/OFF indicator • Airbag system (Front passenger side) • Seat belt warning system (Front passenger side)	-
• Sliding roof drive gear (Sliding roof ECU) • Sliding roof housing • Sliding roof drive cable	Perform sliding roof drive gear reset	• Automatic open/close function of roof glass • Jam protection function • Operation function after ignition switch off	Necessary when removed and installed (Not necessary when the sliding roof drive gear (sliding roof ECU) is removed and installed together with the sliding roof housing.)

*2: for 2AZ-FE
*3: for 2ZR-FE
*4: w/ Smart Key System

*5: w/o Smart Key System

3. VEHICLE IDENTIFICATION NUMBER (VIN) REGISTRATION

NOTICE:

The Vehicle Identification Number (VIN) must be input into a replacement ECM.

HINT:

The VIN is a 17-digit alphanumeric vehicle identification number. The Techstream is required to register the VIN.

(a) Description

HINT:

This registration section consists of two parts: Read VIN and Write VIN.

(1) Read VIN: This process allows the VIN stored in the ECM to be read in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(2) Write VIN: This process allows the VIN to be input into the ECM. If the ECM is changed, or the ECM VIN and vehicle VIN do not match, the VIN can be registered, or overwritten in the ECM by following procedure.

(b) Read VIN

(1) Confirm the vehicle VIN.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch to ON.

(4) Turn the Techstream on.

(5) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Read.

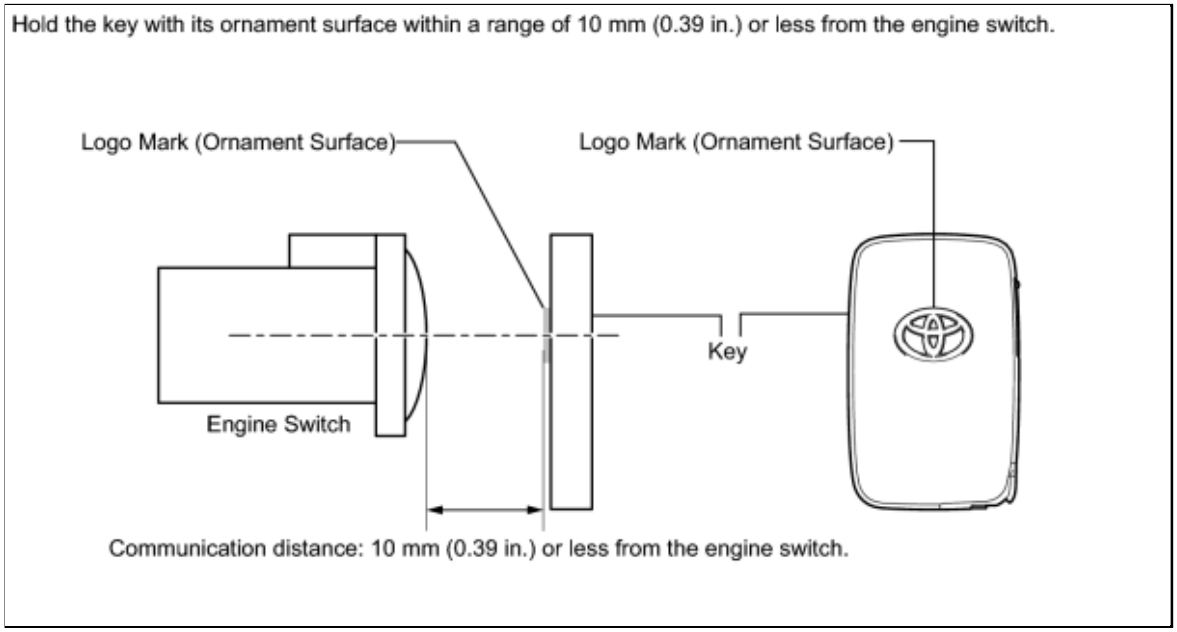
(c) Write VIN

(1) Confirm the vehicle VIN.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch to ON.

(4) Turn the Techstream on.



(5) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Write.

4. DESCRIPTION OF CODE REGISTRATION (Engine Immobiliser System (w/ Smart Key System))

HINT:

- The ID codes are the same as recognition codes for the wireless transmitter and the engine immobiliser function. Registering an ID code enables the smart key system, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is necessary when the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU), steering lock ECU, or key is replaced with a new one.

(a) Vehicles with the smart key system do not have a key slot. Therefore, hold the key close to the engine switch to register the key, as shown in the illustration.

5. PART REPLACEMENT AND KEY REGISTRATION (Engine Immobiliser System (w/ Smart Key System))

(a) The following table shows ECU replacement and key registration procedures for cases in which a malfunctioning ECU has been identified through the troubleshooting of the smart key system.

HINT:

- The following procedures can be performed:
  - New key ID registration
  - Additional key ID registration
  - Key ID erasure
  - All key ID erasure
  - ECU code registration
- If the customer has not brought all the registered keys, replacement of the ID code box (immobiliser code ECU) is also required.
- A maximum of 4 keys can be registered.

6. KEY REGISTRATION (Engine Immobiliser System (w/ Smart Key System))

(a) PROCEDURE "A"

New key ID registration (when replacing the certification ECU (smart key ECU assembly) and ID code box (immobiliser code ECU), or when replacing the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU) and steering lock ECU)

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration **HINT:** **The engine switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.**
2. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode).**
3. Verification of unregistered key*1	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on the driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)

PROCESS	PROCEDURE
4. Registration of ID code	• Perform operation according to prompts on the Techstream screen
5. End of registration	• Finish new key ID code registration

- *1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"

New key ID registration (when replacing the certification ECU (smart key ECU assembly))

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration **HINT:** **The engine switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.**
2. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode).**
3. Confirmation of all registered keys*1	1. Hold the registered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that wireless door lock buzzer sounds once (short beep)
4. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
5. Verification of unregistered key*2	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on the driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
5. Registration of ID code	• Perform operation according to prompts on the Techstream screen

PROCESS	PROCEDURE
6. End of registration	• Finish new key ID code registration

- *1: Repeat this process for each key registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. If the key confirmation procedure for a key is performed, the security indicator light comes on and remains on until all the keys are confirmed.
- *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys is not finished within the specified time, perform the registration procedures again from 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"

Additional key ID registration

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration
2. Confirmation of registered key*1	1. Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode)** 2. Hold the registered key close to the engine switch (For details, refer to "Description of Code Registration") 3. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
4. Verification of unregistered key*2	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
5. Registration of ID code	• Perform operation according to prompts on the Techstream screen
6. End of registration	• Finish additional key ID code registration

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the registration procedures again from process 1.
- *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for

each key within 30 seconds. If the procedure for any of the keys is not finished within the specified time, perform the registration procedures again from 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"

Key ID erasure

HINT:

Erase all registered key codes except one.

PROCESS	PROCEDURE
1. Start of erasure	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Erasure
2. Confirmation of registered key*1 **HINT:** **Select the key that will not be erased.**	1. Perform operation according to prompts on the Techstream screen 2. Hold the registered key close to engine switch (For details, refer to "Description of Code Registration") 3. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
4. Erasure of ID code	• Perform operation according to prompts on the Techstream screen
5. End of erasure	• Finish key ID code erasure

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedures again from process 1.

(e) PROCEDURE "E"

All key ID erasure

HINT:

All the key codes registered in the vehicle are erased.

PROCESS	PROCEDURE
1. Start of erasure	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Turn the Techstream on while turning driver side door courtesy light switch on and off repeatedly at 1.5-second intervals or less 4. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Erasure

PROCESS	PROCEDURE
2. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
3. Erasure of ID code	• Perform operation according to prompts on the Techstream screen
4. End of erasure	• Finish key ID code erasure

(f) PROCEDURE "F"

ECU code registration

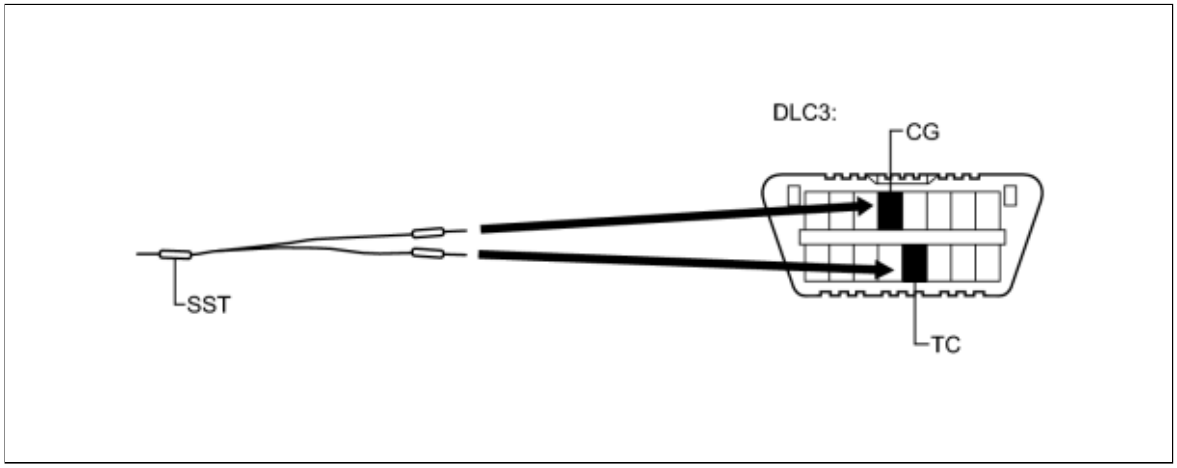
PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / ECU Communication ID Registration
2. Confirmation of registered key*1	1. Hold the registered key close to engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Registration of ECU code	• Perform operation according to prompts on the Techstream screen
4. End of registration	• Finish ECU code registration

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedures again from process 1.

(g) PROCEDURE "G"

ECU communication ID registration

NOTICE:



- The ECU communication ID should be registered when the ID code box (immobiliser code ECU) is replaced in order to match these ECU communication IDs.
- The engine cannot be started unless the ECU communication IDs match.
- After the registration, pressing the engine switch may not start the engine on the first try. If so, press the engine switch again.
- Erase DTC B2799 (code for ECM's immobiliser communication error) by either of the following:

  - Use the Techstream.

  - Disconnect the battery for 30 seconds.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the engine switch on (IG) and leave it as is for 30 minutes.

HINT:

Do not start the engine.

(3) Turn the engine switch off and disconnect terminals TC and CG.

(4) Check that the engine starts and stays running for more than 3 seconds.

(h) PROCEDURE "H"

ECU communication ID registration

NOTICE:

The ECU communication ID should be registered when the ECM is replaced in order to match the ECU communication IDs.

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	OFF
2. Hold an already registered key close to the engine switch and turn the engine switch on (IG) with the brake pedal depressed	
3. Check that the engine starts and stays running for more than 3 seconds	
4. Next	
5. End	

7. DESCRIPTION OF CODE REGISTRATION (Engine Immobiliser System (w/o Smart Key System))

HINT:

The key has 2 codes: the key code (immobiliser code) and the wireless code. Both of these codes need to be registered. For the wireless code registration procedures, refer to Wireless Door Lock Control System.

(a) When adding master keys or sub keys (Additional registration):

(1) Register the key code (immobiliser code) in the transponder key ECU assembly.

TARGET ECU	REFER TO

TARGET ECU	REFER TO

(b) When replacing the transponder key ECU assembly (New registration):

(1) Register the key code (immobiliser code) in the transponder key ECU assembly.

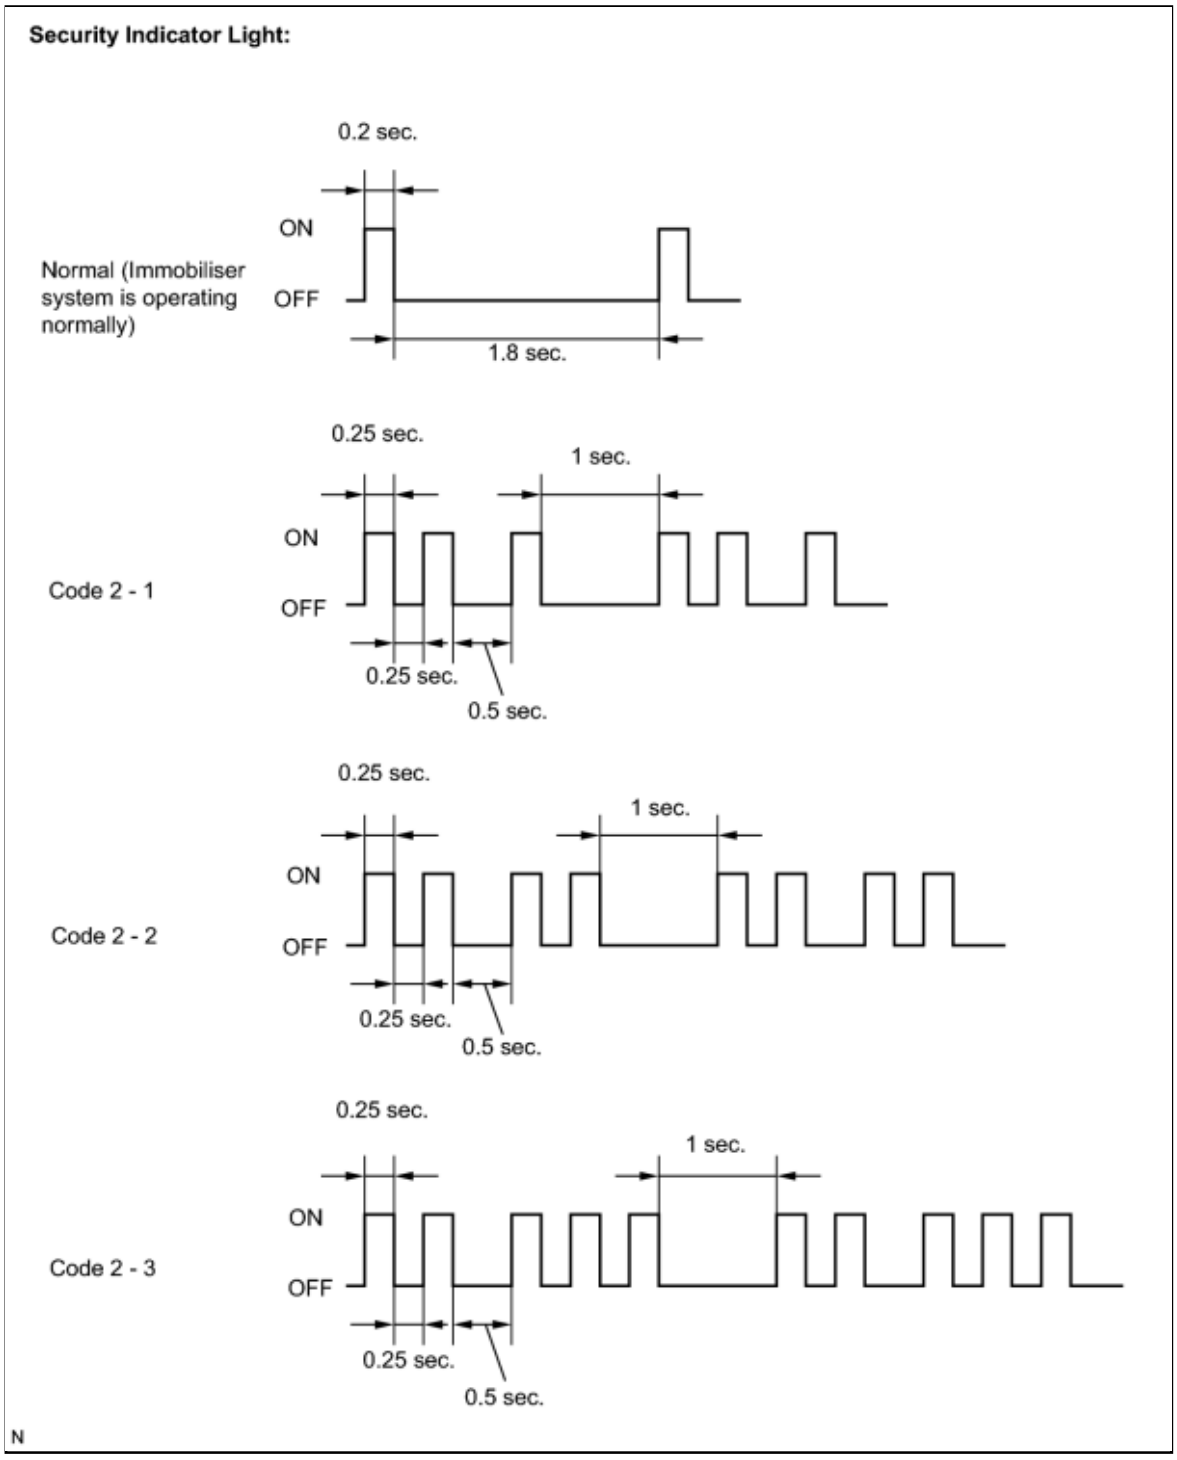
8. KEY REGISTRATION (Engine Immobiliser System (w/o Smart Key System))

(a) New key code registration (Procedure "A"):

NOTICE:

Make sure that no key codes are registered in the transponder key ECU assembly.

HINT:



- In this mode, a maximum of 3 key codes for 2 master keys and 1 sub-key can be registered. The master keys and sub-key can be registered in any order because the transponder key ECU assembly can distinguish between different types of keys.
- New key codes must be registered with the battery connected. The ignition switch can be either on or off.
- When a new transponder key ECU assembly is installed, key codes must be registered in the transponder key ECU assembly.

Automatic Key Code Registration (New Registration)

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	Blinking **HINT:** **Until first key is inserted**
2. Insert the master key into the ignition key cylinder.	ON
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility 4. Select Key Registration **HINT:** **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**	OFF for 1 second and then ON
4. Remove the key and then select Next on the Techstream.	ON
5. Insert the master key to be registered and then select Next on the Techstream.	OFF for 1 second and then ON
6. Remove the key and then select Next on the Techstream.	ON
7. Insert the sub-key to be registered and then select Next on the Techstream.	OFF for 1 second and then ON for 0.5 seconds and then OFF
8. Remove the key.	Blinking
9. End (Procedure "E")	

HINT:

- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the new key code registration fails, code 2-1 will be output through the security indicator light. Trying to re-register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the maximum limit, code 2-3 will be output through the security indicator light. The output details are shown below.

(b) Finish the automatic key code registration mode. The automatic key code registration mode can be forced to end when at least 1 key code (immobiliser code) for the master key has been registered.

HINT:

Follow the instruction on the Techstream screen to end new key code registration mode.

9. REGISTRATION OF ADDITIONAL KEY (Engine Immobiliser System (w/o Smart Key System))

(a) Additional registration (Procedure "B"):

HINT:

- A maximum of 5 key codes and 3 sub-key codes can be registered.
- Registration mode will end if any step is not completed within the specified time.
- When the ignition cylinder or the key cylinder set is replaced, remove the transmitter module from the original master key. Then install this transmitter module to a new key and use the new key as the master key. If necessary, use this master key to register other keys.

NOTICE:

When the ignition key cylinder has been replaced, locking and unlocking doors are possible with the new master key's transmitter module (removed from the original master key). However, the new master key will not be able to lock and unlock doors through the door key cylinder. Keep the original master key. If the battery in the new master key's transmitter module fails, the original master key can be used to lock and unlock doors through the door key cylinder.

Additional Registration

PROCEDURE	TIME TO COMPLETE OPERATION	SECURITY INDICATOR LIGHT CONDITION
1. Start	-	Blinking **HINT:** **Until first key is inserted**
2. Insert the already registered master key into the ignition key cylinder and turn the ignition switch to ON.	-	OFF
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility 4. Select Key Registration **HINT:** **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**	Within 120 sec.	ON
4. Remove the master key.	Within 20 sec. **HINT:** **After the Techstream instruction**	ON
5. Insert the key to be registered in the ignition key cylinder.	Within 10 sec.	Blinking
6. Wait for 60 sec. after the key is registered. **HINT:** **The security indicator light goes off.**	-	OFF
7. Remove the key.	-	Blinking
8. End		

HINT:

- A brief outline of key code registration procedures is shown above. For detailed information, refer to the Techstream screen.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the key code registration has failed in automatic key code registration mode, code 2-1 will be output through the security indicator light. Trying to re-register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the maximum limit, code 2-3 will be output through the security indicator light. The details are shown in procedure "A".

10. ERASURE OF KEY CODE (Engine Immobiliser System (w/o Smart Key System))

(a) Key code erasure (Procedure "C").

HINT:

- Performing this procedure will erase all key codes except for the master key, which is used for erasing the key codes. In order to use a key whose code has been erased, a new key code must be registered
- This procedure will be canceled if each step is not completed within the specified time.

1. Start	-	Blinking **HINT:** **Until first key is inserted**
2. Insert the already registered master key in the ignition key cylinder and turn the ignition switch to ON.	-	OFF
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility 4. Select Transponder Code Erasure **HINT:** **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**	Within 120 sec.	ON for 1 sec. then OFF
4. Remove the master key.	Within 10 sec. **HINT:** **After the Techstream instruction**	ON
5. End		

HINT:

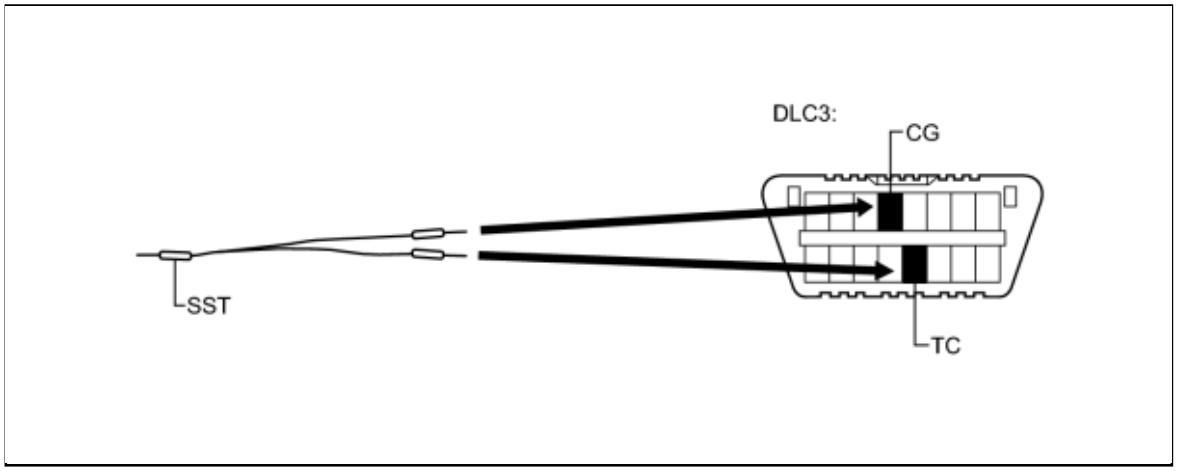
- A brief outline of key code registration procedures is shown above. For detailed information, refer to the Techstream screen.

- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.

11. ECU COMMUNICATION ID REGISTRATION (Engine Immobiliser System (w/o Smart Key System))

(a) ECU communication ID registration (Procedure "D"):

NOTICE:



- When the transponder key ECU assembly is replaced, the ECU communication ID of the ECM must be registered into the transponder key ECU assembly to match their ECU communication IDs.
- The engine cannot be started unless the ECU communication IDs match.
- Do not turn the ignition switch from on to off 20 times or more before registering the ECU communication ID. Turning the ignition switch from on to off 20 times or more will result in the engine not starting unless the transponder key ECU assembly is replaced with a new one.
- After the registration, turning the ignition switch to the START position may not start the engine on the first try. If so, turn the ignition switch to the START position again.
- After the engine is started, erase DTC B2799 (code for ECM's immobiliser communication error) by either of the following:

  - Using the Techstream.

  - Disconnecting the battery for 30 seconds.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON and leave the vehicle as is for 30 minutes.

HINT:

Do not start the engine.

(3) Check that the engine starts.

(b) ECU communication ID registration (Procedure "E"):

NOTICE:

The ECU communication ID should be registered when the ECM and transponder key ECU assembly are replaced or when the ECM only is replaced in order to match the ECU communication ID.

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	OFF
2. Insert an already registered key into the ignition key cylinder.	
3. Start the engine.	
4. Check that the engine starts and stays on for more than 3 seconds.	
6. End	

12. RESET MEMORY (INITIALIZATION for U341E)

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.
- The RESET MEMORY can be performed only with the Techstream.

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and the Techstream main switch on.

(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Reset Memory. Then, press "Next".

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST  **described earlier.**

HINT:

The ECM is learned by performing the ROAD TEST.

13. RESET MEMORY (INITIALIZATION for U250E)

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.
- The RESET MEMORY can be performed only with the Techstream.

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and the Techstream main switch on.

(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Reset Memory. Then, press "Next".

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST INFO described earlier.

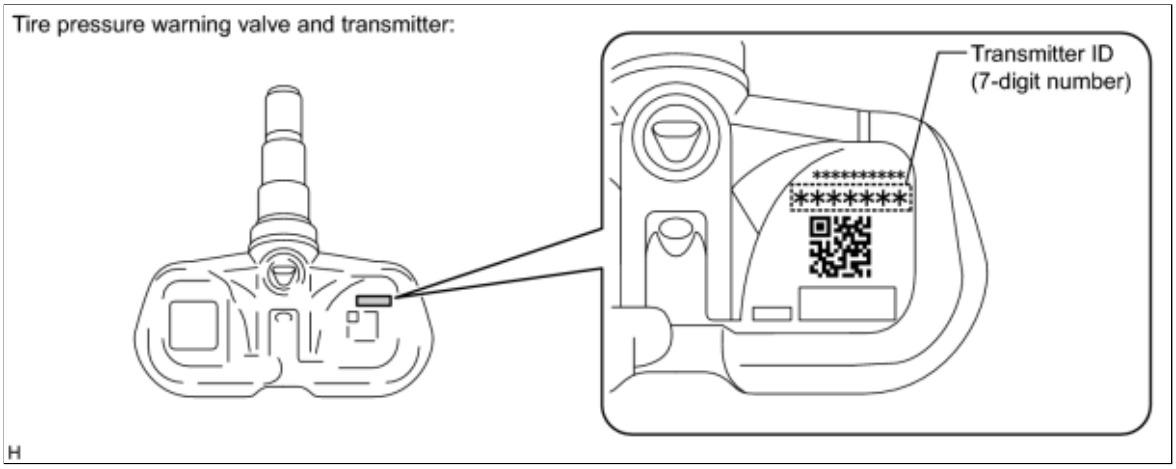
HINT:

The ECM is learned by performing the ROAD TEST.

14. DESCRIPTION OF CODE REGISTRATION (Tire Pressure Warning System)

It is necessary to register the transmitter ID in the tire pressure warning ECU when replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU.

Prepare all transmitter ID data before starting registration.



(a) Before registration

(1) When replacing the tire pressure warning ECU:

- Read the registered transmitter IDs that are stored in the old ECU using the Techstream and note them down.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valve and transmitters INFO .

(2) When replacing a tire pressure warning valve and transmitter:

- Take note of the 7-digit number (transmitter ID) written on the tire pressure warning valve and transmitter.

NOTICE:

- The transmitter ID is written on the tire pressure warning valve and transmitter. It will be unable to be read after installing the tire pressure warning valve and transmitter on the tire and wheel. Therefore, take a note of the transmitter ID before installing the tire pressure warning valve and transmitter.
- The ID registration must be performed for all tire pressure warning valve and transmitters. Check the Data List, replace the exchanged ID with a new ID, and make a new DATA LIST of all 4 tires for the vehicle.

15. REGISTER TRANSMITTER ID (USING TECHSTREAM) (Tire Pressure Warning System)

(a) Set the all tire pressure to the specified value INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / ID Registration.

(g) Perform the following procedure displayed on the screen.

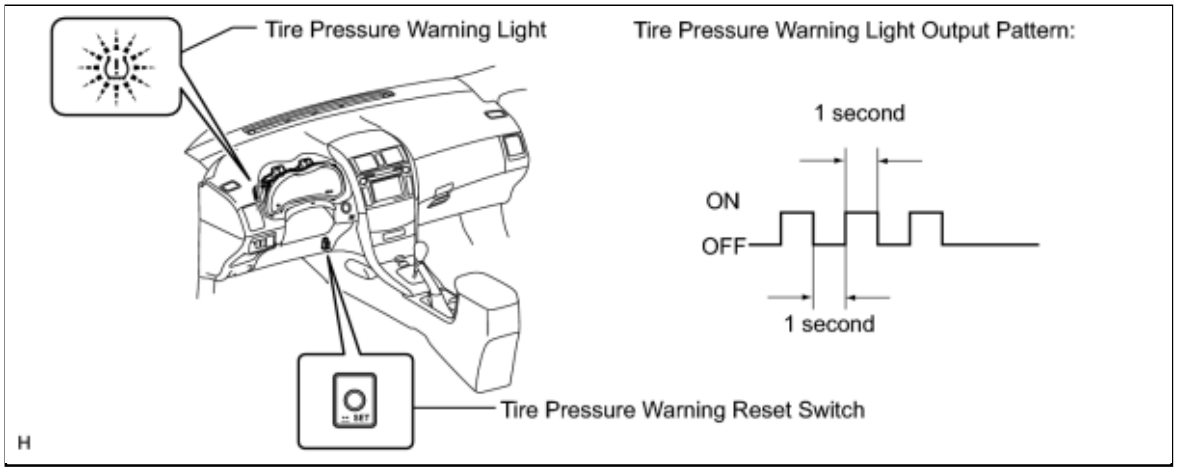
(h) Confirmation of transmitter ID registration.

(1) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(2) Read the "ID Tire Inflation Pressure" values.

(3) Confirm that the data of tire pressure of all tires are displayed on the Techstream.

NOTICE:



- It takes about 2 or 3 minutes to display the updated tire pressure data. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 INFO .
- If the IDs have not been registered, DTC C2171/71 is set in the tire pressure warning ECU after 3 minutes or more.
- If normal pressure values are displayed, the IDs have been registration correctly.
- If the tire pressure values are not displayed after a few minutes, the IDs may be incorrect or the system may have a malfunction.
- After all IDs are registered, DTC C2126/26 (Transmitter ID not Received) is set in the tire pressure warning ECU and the tire pressure warning light blinks for 1 minute and then comes on. When the tire pressure warning ECU successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126/26 is deleted and the tire pressure warning light goes off.

16. INITIALIZATION PROCEDURE (Tire Pressure Warning System)

(a) Adjust all tire (except spare tire) to the standard tire inflation pressure, as indicated on the tire and loading information label on the vehicle.

(b) Turn the ignition switch to ON.

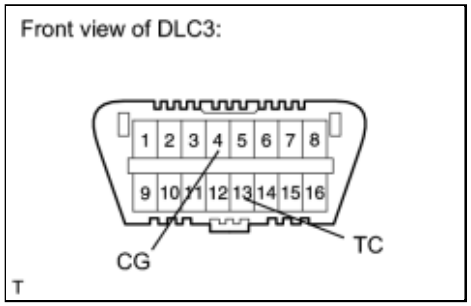
(c) Push and hold the tire pressure warning reset switch for 3 seconds or more so that the tire pressure warning light blinks 3 times.

(d) Turn the ignition switch off.

(e) Connect the Techstream to the DLC3.

(f) Turn the ignition switch to ON.

(g) Turn the Techstream on.



(h) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(i) Check that the initialization has been completed.

(j) Confirm that the tire pressure data of all wheels are displayed on the Techstream.

NOTICE:

- The initialization is normally completed within 2 or 3 minutes.
- If the initialization has not been completed successfully, DTC C2177/77 is set after a vehicle speed 8 km/h (5 mph) or more continues for 20 minutes or more.
- The initialization can be terminated by connecting terminals TC and CG of the DLC3.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

- The initialization is completed when the "ID Tire Information Pressure" display shows the correct pressures.
- *: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 INFO .

17. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When Using the Techstream) (Vehicle Stability Control System)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

(a) Clear the zero point calibration data.

(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.

(5) Turn the ignition switch to ON.

(6) Turn the Techstream on.

(7) Select the skid control ECU to clear the zero point calibration data using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Reset Memory.

(8) Turn the ignition switch off.

NOTICE:

If the ignition switch is turned to ON for more than 15 seconds with the shift lever in P (for automatic transaxle model) or the parking brake applied (for manual transaxle model) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights.

(b) Perform zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the ignition switch off.

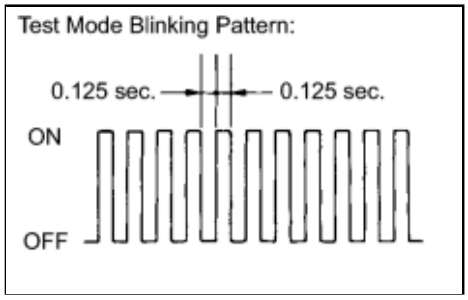
(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in P (for automatic transaxle model) or the parking brake is not applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.



(5) Turn the ignition switch to ON.

(6) Turn the Techstream on.

(7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Test Mode.

(8) After the system enters Test Mode, keep the vehicle stationary on a level surface for 2 seconds or more.

(9) Check that the VSC OFF indicator light comes on for several seconds and then blinks in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the VSC OFF indicator light does not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

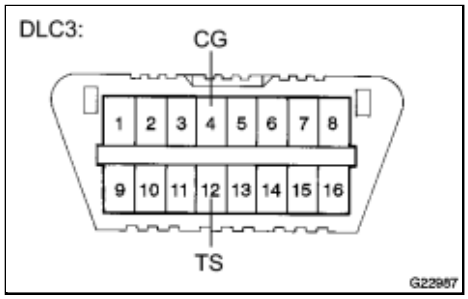
(10) Turn the ignition switch off and disconnect the Techstream.

18. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When not Using the Techstream) (Vehicle Stability Control System)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

(a) Clear the zero point calibration data.



(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Turn the ignition switch to ON.

(5) The warning and indicator light come on for 3 seconds to indicate that the initial check is completed.

(6) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.

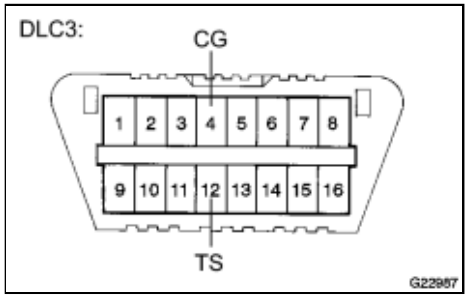
SST: 09843-18040

(7) Check that the VSC OFF indicator light comes on.

NOTICE:

If the ignition switch is turned to ON for more than 15 seconds with the shift lever in P (for automatic transaxle model) or the parking brake applied (for manual transaxle model) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights.

(b) Perform zero point calibration of the yaw rate and acceleration sensor.



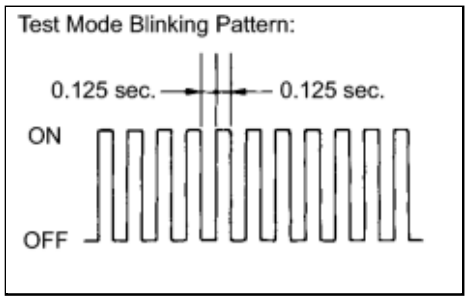
(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in P (for automatic transaxle model) or the parking brake is not applied (for manual transaxle model).



(4) Using SST, connect terminals TS and CG of the DLC3.

SST: 09843-18040

(5) Turn the ignition switch to ON.

(6) Keep the vehicle stationary on a level surface for 2 seconds or more.

(7) Check that the VSC OFF indicator light comes on for several seconds and then blinks in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the VSC OFF indicator light does not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(8) Turn the ignition switch off and disconnect SST from the DLC3.

19. ROTATION ANGLE SENSOR INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION (Power Steering System (for 2AZ-FE))

NOTICE:

Clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point if any of the following has occurred:

- The power steering ECU has been replaced.
- The steering column assembly has been replaced.
- Steering effort differs between left and right.

(a) Inspection before calibration.

(1) Turn the ignition switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch to ON.

(4) Turn the Techstream on.

(5) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Data List.

(6) Check the values by referring to the table below.

Power Steering ECU

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG Power Supply	ECU power source voltage / Min.: 0 V, Max.: 20.1531 V	11 to 14 V	Ignition switch to ON

Standard voltage:
11 to 14 V

NOTICE:

If the IG power supply voltage is 9 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.

(b) Rotation angle sensor calibration value clear, rotation angle sensor initialization, and torque sensor zero point calibration.

NOTICE:

- If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.
- If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor cannot be initialized. Clear the DTC before starting initialization.

(1) Turn the ignition switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch to ON.

(4) Turn the Techstream on.

(5) Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Set the steering wheel to the center point and align the front tires straight ahead.
- Do not turn the steering wheel sharply.
- Do not touch the steering wheel during the torque sensor zero point calibration (for 3 seconds).

20. ASSIST MAP WRITING (USING TECHSTREAM) (Power Steering System (for 2ZR-FE))

HINT:

Perform the assist map writing when the power steering ECU is replaced.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Assist Map.

(f) Wait for 7 seconds or more.

(g) Check for DTCs.

HINT:

If DTC C1581 is output, perform the troubleshooting for DTC C1581 INFO .

21. TORQUE SENSOR ZERO POINT CALIBRATION (USING TECHSTREAM) (Power Steering System (for 2ZR-FE))

NOTICE:

Perform the torque sensor zero point calibration if any of the following conditions occur:

- The steering column assembly (containing the torque sensor) has been replaced.
- The power steering ECU has been replaced.
- There is a difference in steering effort between turning right and left.

(a) Perform the torque sensor zero point calibration.

NOTICE:

If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.

(1) Set the steering wheel to the center point and align the front wheels straight ahead.

(2) Turn the ignition switch off.

(3) Connect the Techstream to the DLC3.

(4) Turn the ignition switch to ON.

(5) Turn the Techstream on.

(6) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Do not touch the steering wheel during the torque sensor zero point calibration.
- Do not start the engine.
- Perform the calibration only when the vehicle is stopped.

(7) Check for DTCs INFO .

NOTICE:

- After zero point calibration is completed normally, confirm that DTC is not output.
- If DTC C1515, C1516 or C1534 is output, perform troubleshooting for the corresponding DTC.

Result:

RESULT	SEE PROCEDURE
DTC C1515 is output.	INFO
DTC C1516 is output.	INFO
DTC C1534 is output.	INFO

22. REGISTRATION OF RECOGNITION CODE (MANUAL OPERATION) (Wireless door lock control system (w/o Smart Key System))

HINT:

- Register a new recognition code when replacing the door control transmitter or the door control receiver.
- Add mode is used to retain the already registered codes while registering a new recognition code. This mode is used when adding a transmitter. If the number of registered codes exceeds 6, the previously registered code will be correspondingly erased in order, starting from the code registered first.
- Rewrite mode is used to erase all the previously registered codes and register only new recognition codes. This mode is used when exchanging the transmitter or the door control receiver for new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition code.
- Prohibition mode is used to erase all the registered codes and cancel the wireless door lock function. Use this mode when the transmitter is lost.
- All of the steps in the following registration procedure must be performed in sequential order continuously.

(a) The following conditions should be met.

(1) No key is inserted in the ignition key cylinder.

(2) Only driver side door is opened.

(b) Perform the following operations to select the desired mode.

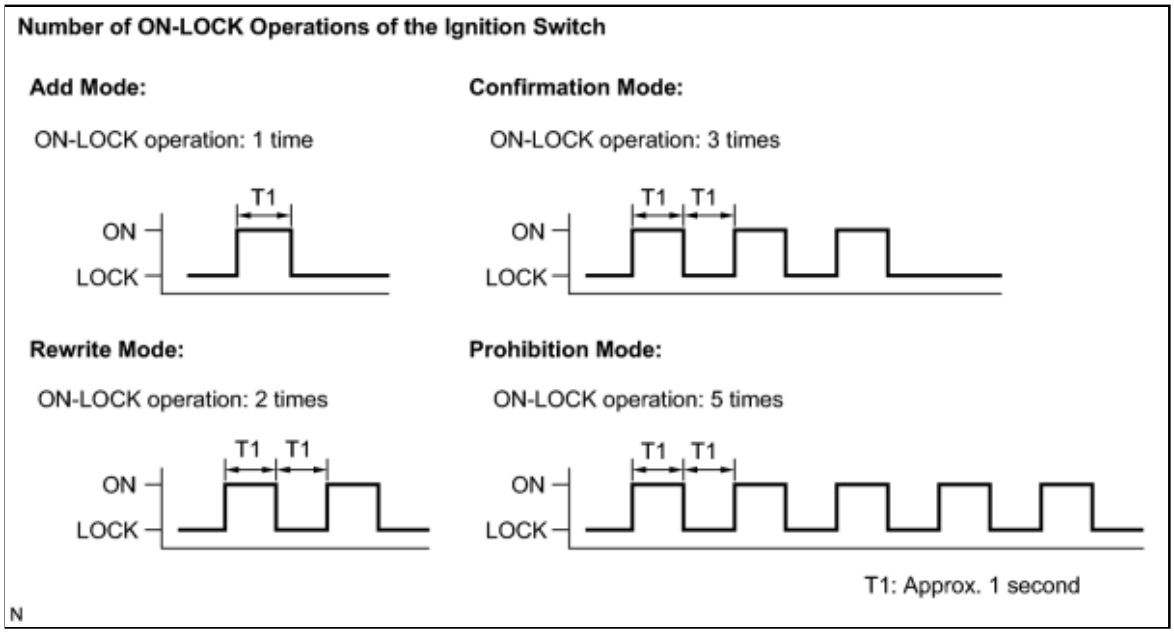
(1) Insert and remove the key from the ignition switch twice within 5 seconds. (End in removed)

(2) After the above operation, close and open the driver's door twice. (End in open)

Then insert the key into the ignition key cylinder and remove it.

HINT:

Complete this procedure within 40 seconds.



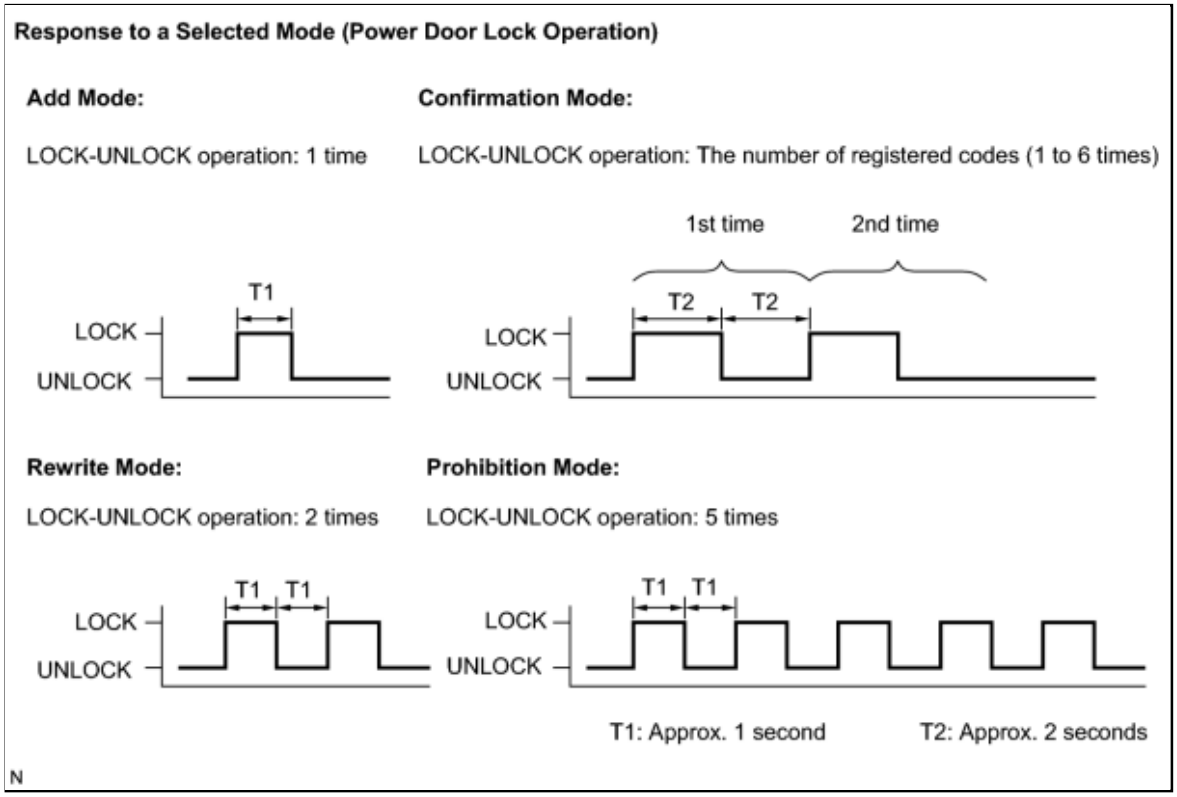
(3) After the above operations, close and open the driver side door twice. (End in open)

Then insert the key into the ignition key cylinder and close the door.

HINT:

Complete this procedure within 40 seconds.

(4) Turn the ignition switch from LOCK to ON and back to LOCK at approximately 1 second intervals 1 to 5 times to select a mode (see the illustration). Then remove the key from the ignition key cylinder.



HINT:

Complete this procedure within 40 seconds.

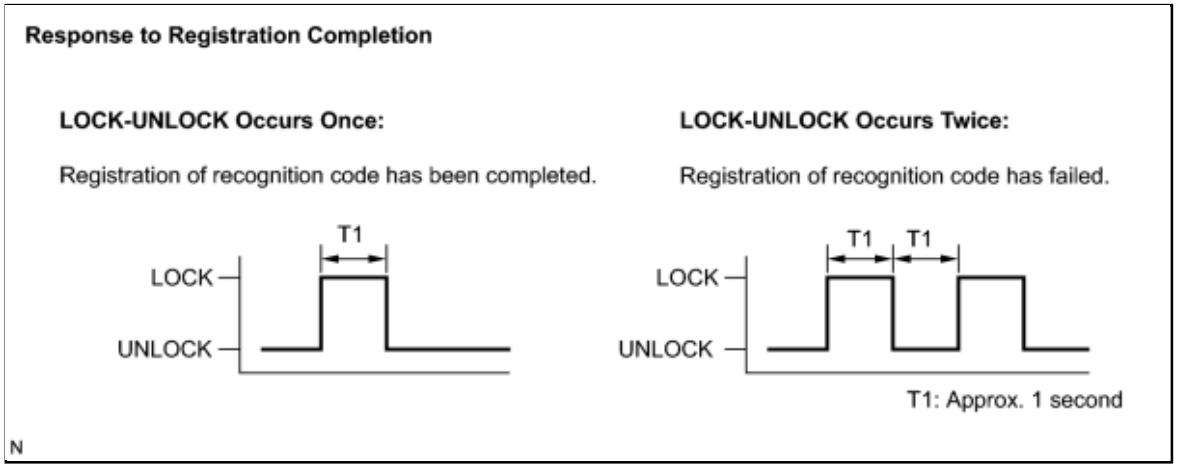
NOTICE:

If the number of the ON-LOCK operations of the ignition switch is 0, 4, 6 or more, there will be no response to inform which mode has been selected.

(5) After selecting a mode, the main body ECU automatically performs the power door LOCK- UNLOCK operation within 5 seconds to inform the selected mode (see the illustration).

HINT:

- In confirmation mode, the LOCK- UNLOCK operation will occur once for each recognition code that has been registered. For example, if 2 recognition codes have been registered, the LOCK-UNLOCK operation will occur 2 times.
- In confirmation mode and prohibition mode, once a LOCK-UNLOCK operation response has occurred, the registration procedure will end.



(c) Register new recognition codes (Add mode or Rewrite mode):

(1) Within 45 seconds after add mode or rewrite mode has been selected, press the LOCK and UNLOCK switches on the transmitter switch simultaneously for 1.0 to 1.5 seconds.

Then, press either one of the switches for more than 1.0 second (Procedure "A").

(2) Within 5 seconds after the transmitter switch has been released, the LOCK-UNLOCK operation will be automatically performed once if the registration of the recognition code of the transmitter is completed correctly.

If the LOCK-UNLOCK operation is performed twice, registration of the recognition code has failed. Perform the registration procedure from the beginning (Procedure "B").

(3) If multiple transmitters need to be registered, repeat procedures "A" and "B" within 45 seconds each.

HINT:

- Up to 6 recognition codes can be registered at once.
- If even one of the following conditions is satisfied, registration mode will end.
    - 40 seconds have elapsed after a recognition code has been registered.
    - Any of the doors are opened.
    - The key is inserted into the ignition key cylinder.
    - 6 recognition codes are registered.

23. REGISTRATION OF RECOGNITION CODE (USING TECHSTREAM) (Wireless door lock control system (w/o Smart Key System))

HINT:

- Register a new recognition code when replacing the door control transmitter or the door control receiver.
- Add mode is used to retain the already registered codes while registering a new recognition code. This mode is used when adding a transmitter. If the number of registered codes exceeds 6, the previously registered code will be correspondingly erased in order, starting from the code registered first.
- Rewrite mode is used to erase all the previously registered codes and register only new recognition codes. This mode is used when exchanging the transmitter or the door control receiver for new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition code.
- Prohibition mode is used to erase all the registered codes and cancel the wireless door lock function. Use this mode when the transmitter is lost.
- All of the steps in the following registration procedure must be performed in sequential order continuously.

(a) Turn the ignition switch to ON.

(b) Select either add or rewrite mode according to the Techstream display.

(c) The number of registered codes is indicated.

(d) Registration of the door control transmitter.

(1) If either add mode or rewrite mode has been selected, press the LOCK and UNLOCK switches on the transmitter simultaneously.

(2) Within 3 seconds of releasing the LOCK and UNLOCK switches, press either of the switches on the door control transmitter.

NOTICE:

- Do not press the LOCK and UNLOCK switches simultaneously for more than 1.5 seconds.
- Perform this operation within 1 meter of the driver's seat to register the transmitter.
- Do not push other transmitter switches during the transmitter registration process.

(3) The main body ECU automatically performs the power door LOCK-UNLOCK operation once in order to indicate whether registration has been completed correctly or not.

(4) If continuing registration, the next recognition code must be registered in the door control transmitter within 30 seconds.

HINT:

Up to 6 recognition codes can be registered.

(e) Completing registration mode.

(1) Registration mode will end when any of the following occurs:

- 30 seconds or more have elapsed after a code is registered.
- The Techstream is used to finish registration.
- The Techstream is disconnected.
- The ignition switch is turned off.

(f) Perform the following after registration is completed.

(1) Perform the wireless door lock control operation check INFO .

HINT:

If the wireless door lock control does not operate, perform the registration procedure again.

24. ZERO POINT CALIBRATION (Occupant Classification System)

(a) Zero point calibration procedures

(1) Check that all of the following conditions are met:

- The vehicle is parked on a flat surface.
- No objects are placed on the front passenger seat.
- The front passenger seat belt buckle switch is OFF.

(2) Adjust the seat position according to the table below.

ADJUSTMENT ITEM	POSITION
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

(3) Connect the Techstream to the DLC3.

(4) Turn the ignition switch to ON.

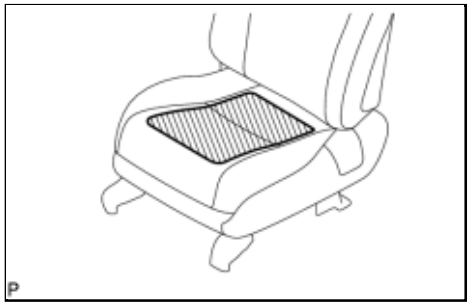
(5) Enter the following menus: Body Electrical / Occupant Detection / Utility / Zero Point Calibration.

(6) Perform the zero point calibration by following the prompts on the Techstream screen.

HINT:

- Refer to the Techstream operator's manual for further details.
- If the zero point calibration is performed when the calibration conditions are not satisfied, DTC B1797 is

output.



- If the zero point calibration has failed, DTC B1797 is output.
- If After Exchange is selected before the previous ECU data are stored in the Techstream, the display screen returns to CONDITION SELECT ECU: Occupant Detect.

ITEM	PROCEDURE
DTC	Perform DTC check and repair
Write error	Replace front seat cushion assembly (with occupant classification ECU and occupant classification sensor)
Temperature	Check value of THERMISTOR TEMP in ECU DATA LIST
Pressure	Check value of FILTERED PRESS in ECU DATA LIST
Crash counter	-

25. SENSITIVITY CHECK (Occupant Classification System)

(a) Sensitivity check procedures

(1) Turn the ignition switch off.

(2) Place a 20 kg (44.0 lb) weight on the front passenger seat.

NOTICE:

- Do not allow the weight to come into contact with the seatback when placing it on the seat cushion.
- Place the weight in the area shown in the illustration.

(3) Turn the ignition switch to ON, and wait for at least 6 seconds.

(4) Check that the passenger airbag ON/OFF indicator indicates OFF.

OK:

The passenger airbag ON/OFF indicator indicates OFF.

(5) Add a 30 kg (66.1 lb) weight to the front passenger seat (total 50 kg (110.2 lb)).

NOTICE:

- Do not allow the weight to come into contact with the seatback when placing it on the seat cushion.
- Place the weight in the area shown in the illustration.

(6) Check that the passenger airbag ON/OFF indicator indicates ON.

OK:

The passenger airbag ON/OFF indicator indicates ON.

26. REGISTRATION ECU DATA (Occupant Classification System)

NOTICE:

- If any DTCs related to the occupant classification ECU are output, troubleshoot those DTCs by referring to Diagnostic Trouble Code Chart.
- When ECU data saving or loading operations cannot be performed, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

HINT:

- When the occupant classification ECU is replaced, the previous ECU data must be saved in the Techstream and loaded into the new ECU by following the procedure below.
- Until the data from the previous ECU are loaded into the new occupant classification ECU, these data are not cleared even when the Techstream is turned off.
- ECU EXCHANGE PROCEDURE (Before Exchange) describes the procedure to save the data in the Techstream from the occupant classification ECU installed on the vehicle. ECU EXCHANGE PROCEDURE (After Exchange) describes the procedure to load the data from the previous ECU, stored in the Techstream, into the new ECU.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Store the occupant classification ECU data in the Techstream by following the prompts on the Techstream screen.

HINT:

If the ECU data cannot be stored in the Techstream, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

(d) Turn the ignition switch to ON.

(e) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Load the data from the previous ECU stored in the Techstream into the newly installed ECU by following the prompts on the Techstream screen.

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

27. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (Sliding Roof System)

NOTICE:

When removing the sliding roof drive gear sub-assembly, the sliding roof drive gear sub-assembly (sliding roof control ECU) requires initialization. If a reset is not executed, the following functions do not operate: auto operation, key off operation and jam protection function.

(a) Turn the ignition switch to ON.

(b) Make sure that the sliding roof is fully closed.

(c) Press the TILT UP switch until the sliding roof stops at the fully tilt up position. Then release the switch.

(d) Press and hold the TILT UP switch until the following movement finishes and then release the switch: approximately 10 seconds → tilt up (approximately 5 mm) → tilt down (approximately 5 mm).

(e) Within 5 seconds after finishing the previous step, press and hold the TILT UP switch until the following movement finishes and then release the switch: approximately 5 seconds → tilt down → fully closed → slide open → fully open → slide close → fully closed.

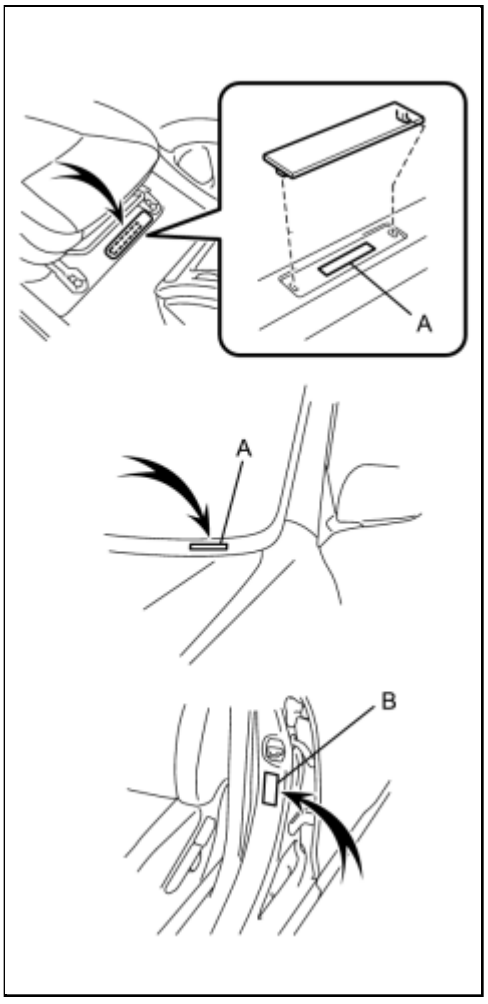
(f) Finish the initialization.

(g) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail:

- One of the following electric loads is given to the vehicle during the initialization: Cranking the engine, Power window operation, Rear defogger operation, Blower operation, Power seat operation, Power door lock operation or Headlight illumination.
- The ignition switch is turned off.
- Another switch is turned on during initialization.
- The vehicle experiences a strong vibration during initialization, such as slamming of a door.



HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE/UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear sub-assembly (sliding roof control ECU).

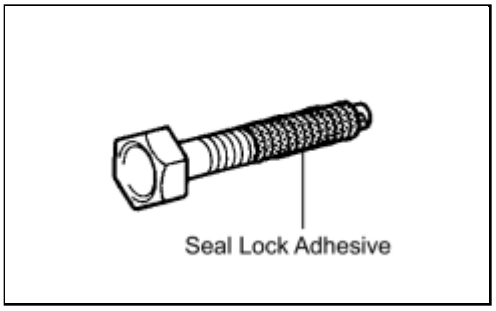
Title: INTRODUCTION: REPAIR INSTRUCTION: PRECAUTION (2010 Corolla)		

PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS



1	Attire	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting an operation.
3	Safety procedure	• When working with 2 or more persons, be sure to check the safety of one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others.

		• When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring equipment	Before starting an operation, prepare a tool stand, SST, measuring equipment, oil, and any replacement parts required.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing any parts, check the general condition of the assembly and for deformation and damage. • If the procedure is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to ensure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.
6	Removed parts	• Place the removed parts in a separate box to avoid mixing them up with the new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.

(b) JACKING UP AND SUPPORTING VEHICLE

(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.

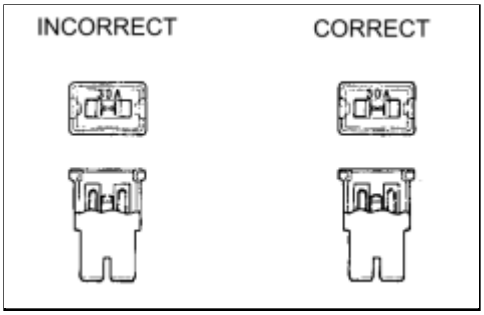
(c) PRECOATED PARTS

(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.

(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.

(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriately to that part.

(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.



(d) GASKETS

(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS

(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.

(f) FUSES

(1) When inspecting a fuse, check that the wire of the fuse is not broken.

(2) If the wire of a fuse is broken, confirm that there are no shorts in its circuit.

(3) When a fuse is replaced, a fuse with the same amperage rating must be used.

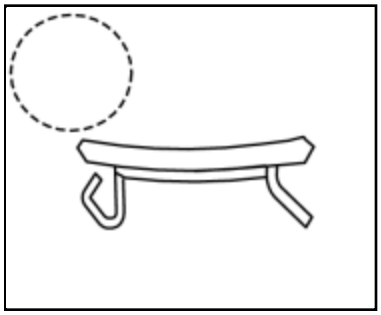
(g) CLIPS

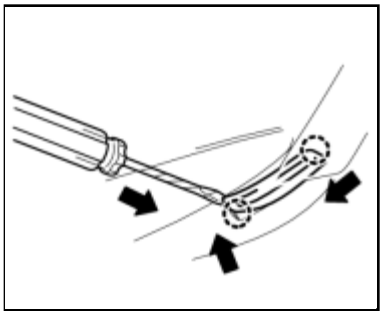
(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

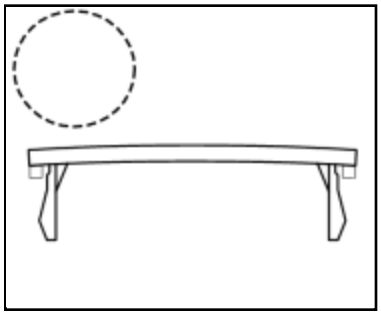
HINT:

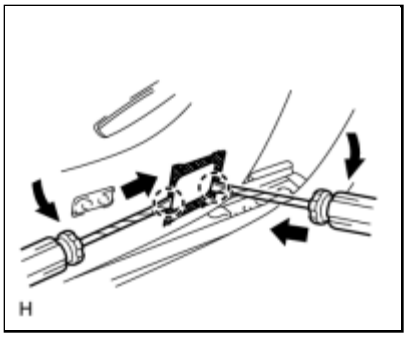
If clips are damaged during a procedure, always replace the damaged clips with new ones.

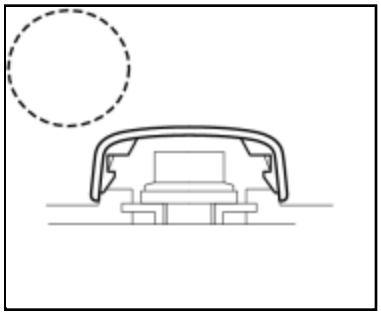
SHAPE (EXAMPLE)	REMOVAL/INSTALLATION
	 Remove the clips with a clip remover or pliers.
	 Remove the clips with a clip remover or screwdriver.

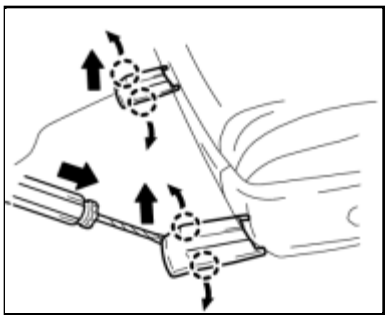












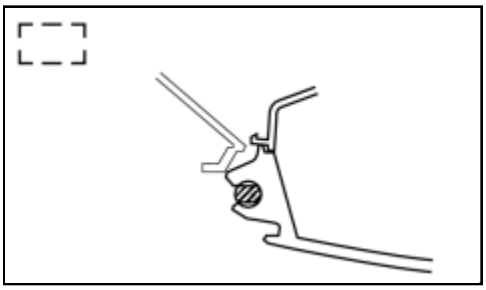
SHAPE (EXAMPLE)	REMOVAL/INSTALLATION
	 Remove the clips with a wide scraper to prevent panel damage.
	 Remove the clips by pushing the center pin through and prying out the shell.
	 Remove the clips by unscrewing the center pin and prying out the shell.
	 Remove the clips by prying out the pin and then prying out the shell.

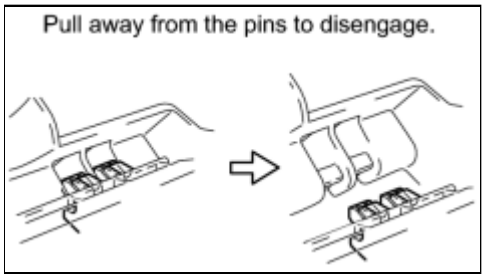
(h) CLAWS

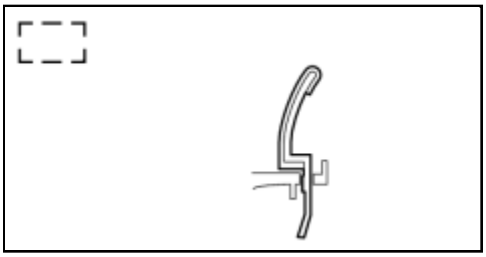
(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

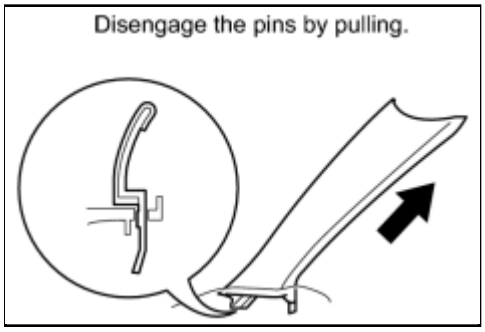
HINT:

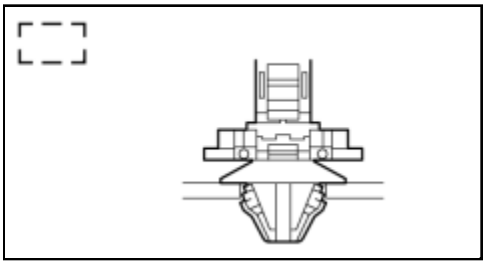
If claws are damaged during a procedure, always replace the cap or cover that has damaged claws with a new one.

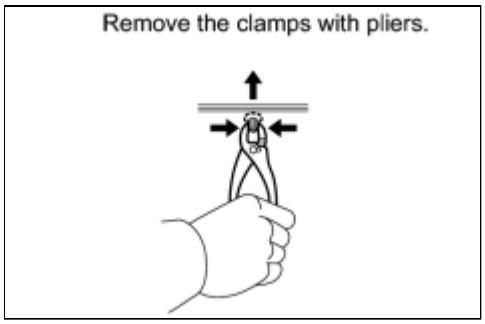


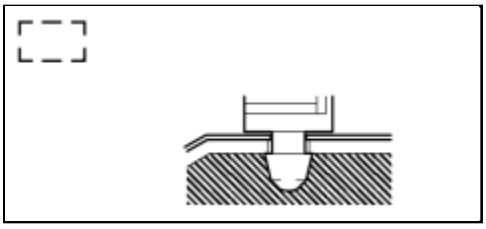


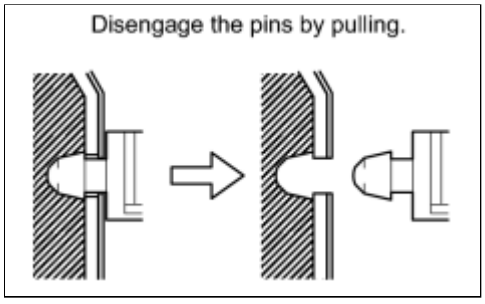








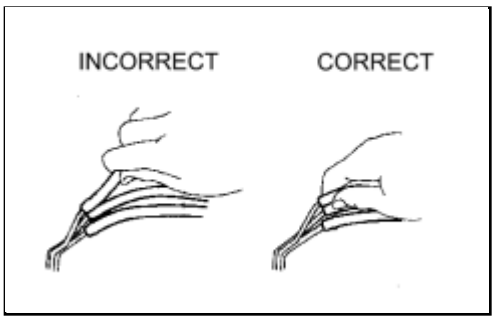




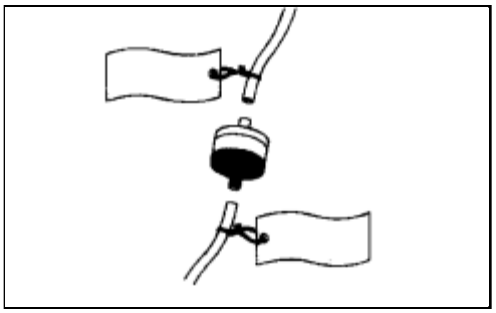
SHAPE (EXAMPLE)	ILLUSTRATION	PROCEDURE
		Using a screwdriver, disengage the claws and remove the cap or cover.
		Using a screwdriver, disengage the claws and remove the cap or cover.
		Using a screwdriver, detach the claws and remove the cap or cover.

(i) HINGES, GUIDES, CLAMPS, PINS, ETC.

(1) The removal and installation methods of typical hinges, guides, clamps and pins used for vehicle body parts are shown in the table below.



HINT:

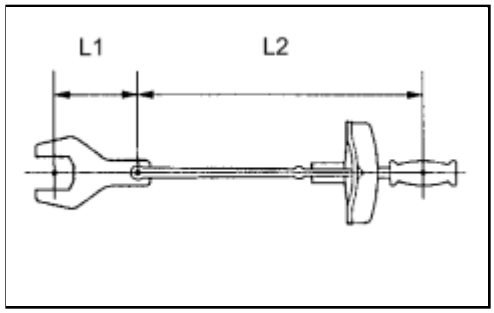


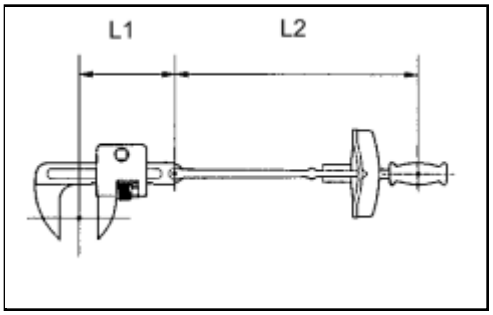
If clamps are damaged during a procedure, always replace the cap or cover that has damaged clamps with a new one.

SHAPE (EXAMPLE)	REMOVAL/INSTALLATION
	
	
	
	

(j) REMOVAL AND INSTALLATION OF VACUUM HOSES

(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may damage the hose.





(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, air may leak. Use a step-down adapter if necessary.

(k) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with the torque wrench.

Formula

$$T' = (L2/(L1 + L2)) * T$$

T'	Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}
T	Torque {N*m (kgf*cm, ft.*lbf)}
L1	Length of SST or extension tool {cm (in.)}

L2	Length of torque wrench {cm (in.)}

NOTICE:

If an extension tool or SST is combined with a torque wrench and used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

This vehicle is equipped with a Supplemental Restraint System (SRS).

CAUTION:

- Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.
- Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check for DTCs before disconnecting the battery.

(2) Work must be started at least 90 seconds after the ignition switch is turned off and after the cable is disconnected from the negative (-) battery terminal.

The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.

When the cable is disconnected from the negative (-) battery terminal, the clock and audio system memory is erased. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.

CAUTION:

Never use a back-up power source (battery or other) to avoid erasing the system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

(3) If the vehicle has been involved in a minor collision where the SRS does not deploy, the steering pad, front passenger airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and front seat outer belt assembly should be inspected before further use of the vehicle.

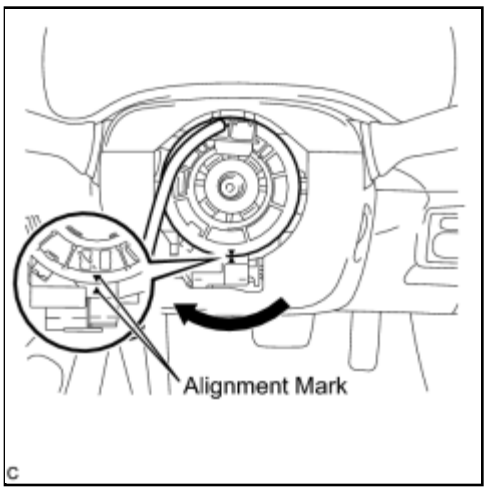
(4) Never use the SRS parts from another vehicle. When replacing parts, use new parts.

(5) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.

(6) Never disassemble and attempt to repair any airbag sensor assemblies or airbag assemblies.

1. Steering pad
2. Front passenger airbag assembly
3. Front seat side airbag assembly
4. Curtain shield airbag assembly

5. Front seat outer belt assembly



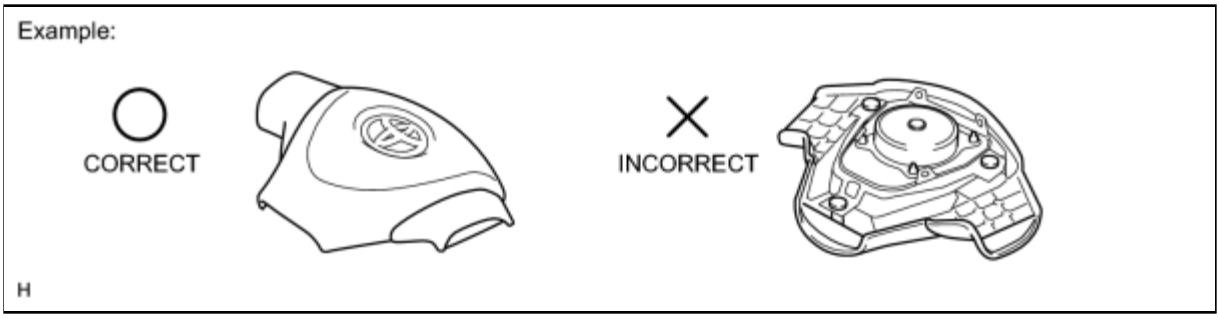
(7) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.

(8) Do not directly expose the airbag sensor assemblies or airbag assemblies to hot air or flames.

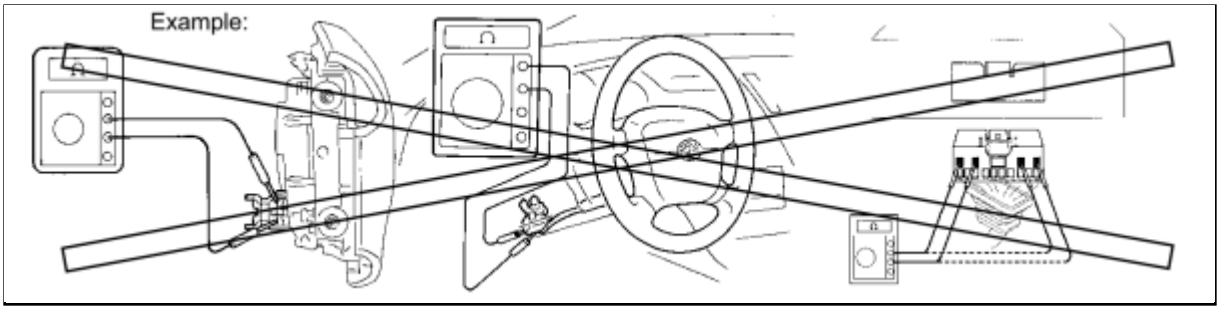
(9) Use a voltmeter/ohmmeter with high impedance (minimum = 10 kΩ) for troubleshooting electrical circuits.

(10) Information labels are attached to the SRS components. Follow the instructions on the labels.

(11) After work on the SRS is completed, check the SRS warning light.



(b) SPIRAL CABLE



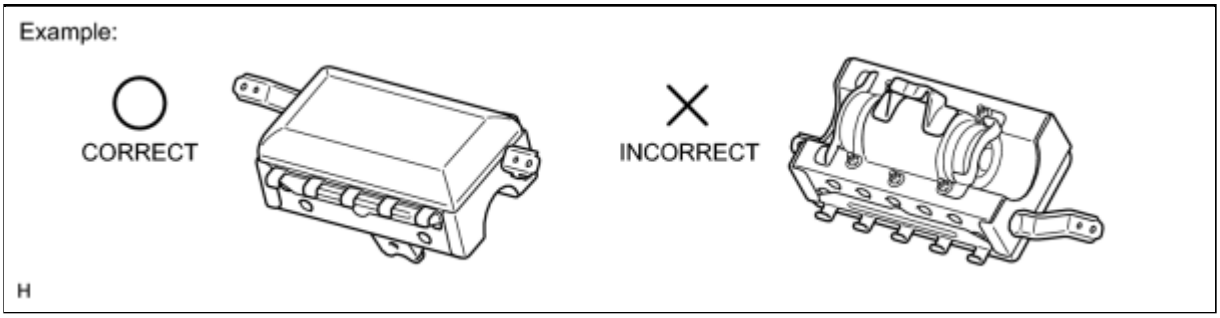
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as otherwise cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel INFO .

(c) STEERING PAD

(1) Always place a removed or new steering pad surface upward as shown in the illustration. Placing the steering pad with the pad surface facing down could cause a serious accident if the airbag deploys. Also, do not place anything on top of the steering pad.

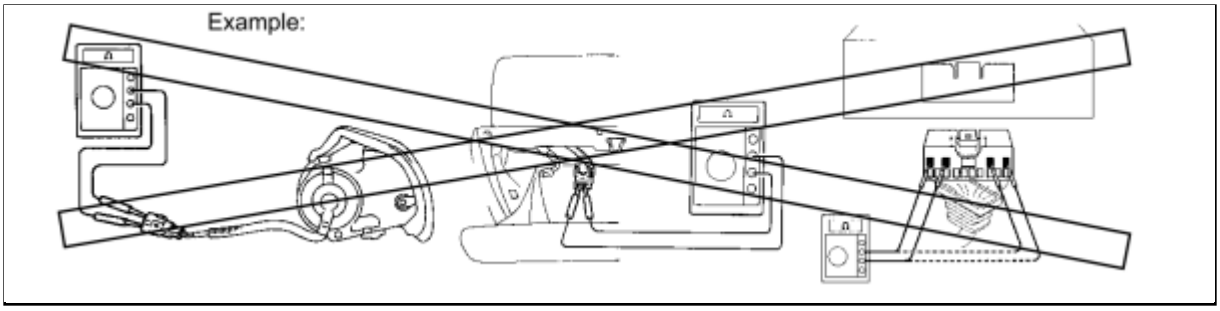
(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the steering pad.



(4) Store the steering pad in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.



(6) When disposing of the vehicle or the steering pad by itself, the airbag should be deployed using SST before disposal INFO . Deploy the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

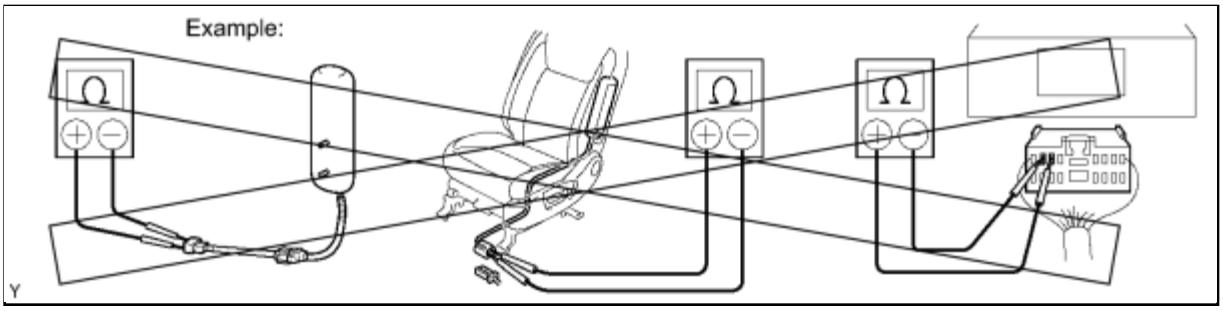
(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag deployment direction facing downword could cause a serious accident if the airbag deploys.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor



assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

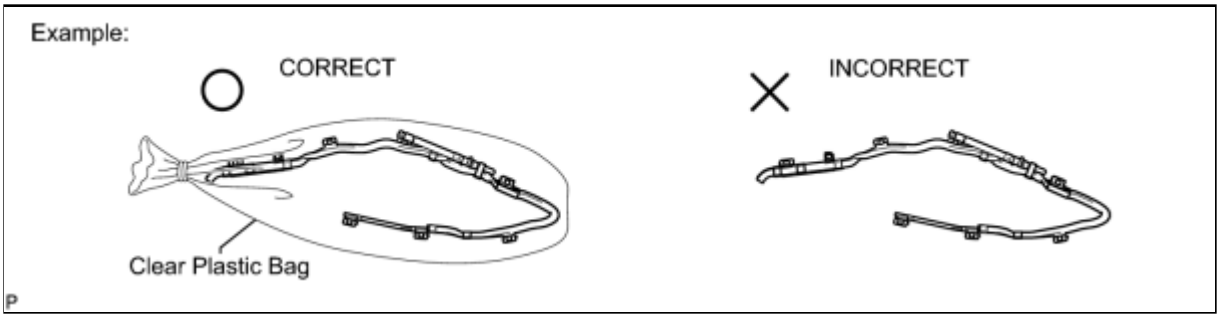
(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO . Deploy the airbag in a safe place away from electrical noise.

(e) FRONT SEAT SIDE AIRBAG ASSEMBLY

(1) Always place a removed or new front seat side airbag assembly with the airbag deployment direction facing upword.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the front seat side airbag assembly.



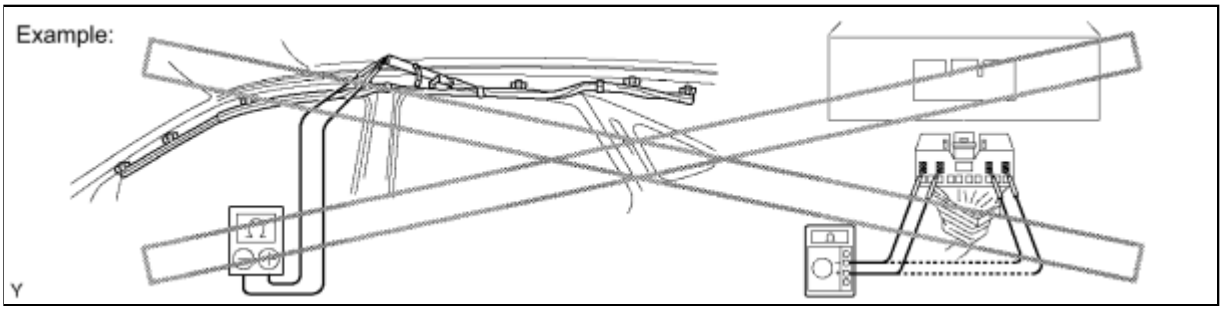
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO . Deploy the airbag in a safe place away from electrical noise.

(f) CURTAIN SHIELD AIRBAG ASSEMBLY

(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.



CAUTION:

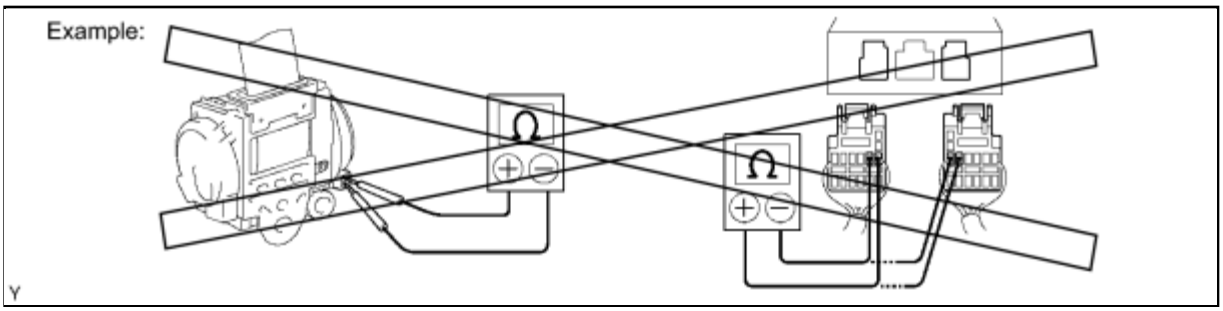
The plastic bag should be disposed of after use.

NOTICE:

Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to deploy, which could cause serious injury.

(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.



(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal INFO . Deploy the airbag in a safe place away from electrical noise.

(g) FRONT SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)

(1) Never measure the resistance of the front seat outer belt assembly. This may cause the pretensioner of the front seat outer belt assembly to activate, which could cause serious injury.

(2) Never disassemble the front seat outer belt assembly.

(3) Never install the front seat outer belt assembly on another vehicle.

(4) Store the front seat outer belt assembly in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) Before using an electric welder anywhere on the vehicle, disconnect the center airbag sensor assembly connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or the front seat outer belt assembly unit by itself, the front seat outer belt assembly should be activated before disposal INFO . Activate the front seat outer belt assembly in a safe place away from electrical noise.

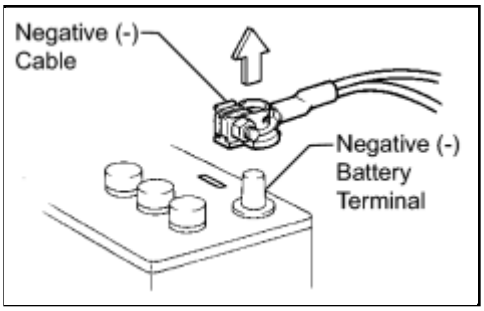
(7) As the front seat outer belt assembly is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the front seat outer belt

assembly.

(8) Grease, detergents, oil or water should not be applied to the front seat outer belt assembly.

(h) CENTER AIRBAG SENSOR ASSEMBLY

(1) Never reuse a center airbag sensor assembly that has been involved in a collision where the SRS has deployed.



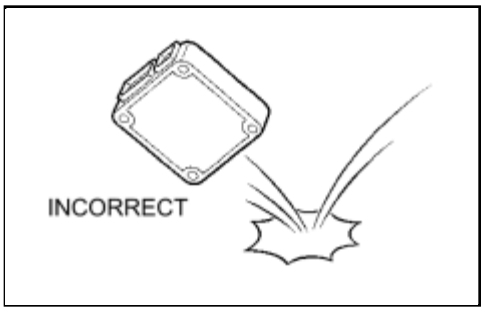
(2) The connectors to the center airbag sensor assembly should be connected or disconnected with the sensor installed to the vehicle. If the connectors are connected or disconnected while the center airbag sensor assembly is not installed, the SRS may activate.

(3) Work must be started at least 90 seconds after the ignition switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the bolts of the center airbag sensor assembly.

(i) WIRE HARNESS AND CONNECTOR

(1) All the connectors in the system are a standard yellow color. If an SRS wire harness has an open circuit or a connector is broken, replace it.

3. ELECTRONIC CONTROL



(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

(1) Before performing electrical work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.

(2) When disconnecting the cable, turn the ignition switch and headlight switch off and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.

(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.

(b) HANDLING OF ELECTRONIC PARTS

(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.

(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector itself.

(3) Do not drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.

(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.

(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.

(6) When measuring the resistance between terminals of a wire connector, insert the tester probe carefully to prevent terminals from bending.

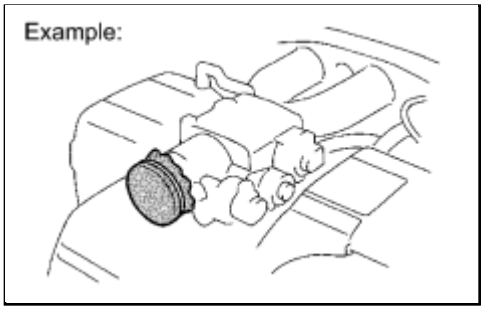
4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS

(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources.

(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS



(1) Prepare a fire extinguisher before starting the operation.

(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, and do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.

(3) Avoid using electric motors, work lights and other electric equipment that can cause sparks or high temperatures.

(4) Avoid using iron hammers as they may create sparks.

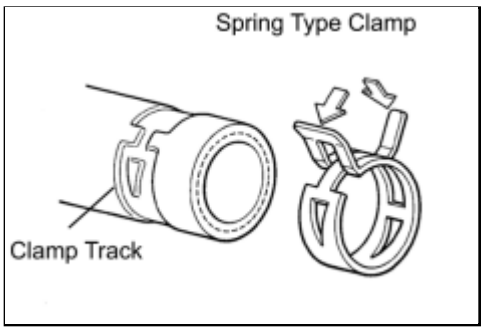
(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.

5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal particles enter intake system parts, this may damage the engine.

(b) When removing and installing intake system parts, cover the openings of the removed parts and engine openings. Use adhesive tape or other suitable materials.

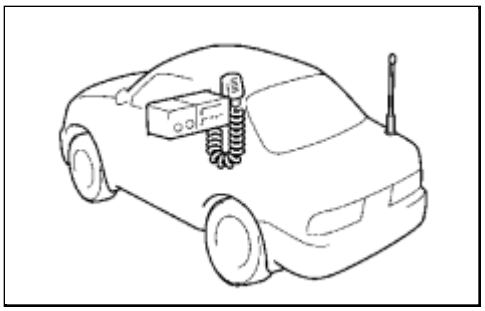
(c) When installing intake system parts, check that no metal particles have entered the engine or installed parts.



6. HANDLING OF HOSE CLAMPS

(a) Before removing a hose, check the clamp position so that it can be reinstalled in the same position.

(b) Replace any deformed or dented clamps with new ones.



(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.

(d) For a spring type clamp, you may want to spread the tabs slightly after installation by pushing in the direction of the

arrows as shown in the illustration.

7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.

(b) Install an antenna and feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensor locations, refer to the section on the applicable components.

(c) Keep the antenna and feeder separate from other wirings as much as possible. This will prevent signals sent from the communication equipment from affecting vehicle equipment and vice-versa.

(d) Check that the antenna and feeder are correctly adjusted.

(e) Do not install high-powered mobile communication system.

8. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRAC) AND VEHICLE STABILITY CONTROL (VSC) SYSTEMS

When testing with a 2-wheel drum tester such as a speedometer tester, a combination speedometer and brake tester, or a chassis dynamometer, or when jacking up the front wheels and turning the wheels, perform the following procedure to enter inspection mode and disable the TRAC and VSC systems.

HINT:

- The vehicle may slip unexpectedly out of the dynamometer because of TRAC and VSC operations.
- Pressing the VSC OFF switch (for vehicles with the VSC OFF switch) does not disable TRAC and VSC operation completely.

NOTICE:

- Make sure that the VSC warning light is blinking.
- Secure the vehicle with chains for safety.

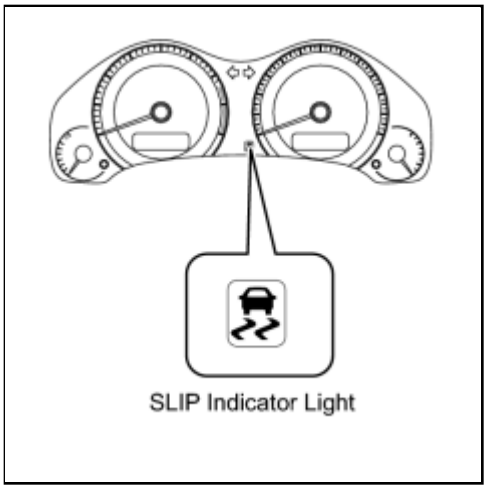
(a) Activating inspection mode (Not using the Techstream)

HINT:

- Perform steps "D" to "H" within 30 seconds.
- Perform steps "F" and "G" within 15 seconds each.

(1) Ensure that the ignition switch is off and the engine is stopped. (Step "A")

(2) Make sure that the shift lever is in P. (Step "B")



(3) Start the engine. (Step "C")

(4) Apply the parking brake by pulling the parking brake lever. (Step "D")

(5) Depress and release the brake pedal twice. (Step "E")

(6) While holding the brake pedal down, release and apply the parking brake twice. (Step "F")

(7) With the parking brake applied, depress and release the brake pedal twice. (Step "G")

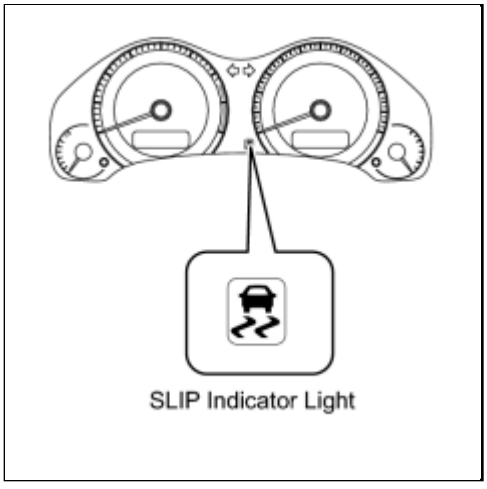
(8) Check if the SLIP indicator light comes on. (Step "H")

HINT:

- If the SLIP indicator light does not come on in step "H", repeat the steps from "A" to "H".
- Turning the ignition switch off ends inspection mode.

(b) Activating inspection mode (Using the Techstream)

(1) Ensure that the ignition switch is off and the engine is stopped. (Step "A")



(2) Make sure that the shift lever is in P. (Step "B")

(3) Connect the Techstream to the DLC3. (Step "C")

(4) Start the engine. (Step "D")

(5) Turn the Techstream main switch on. (Step "E")

(6) Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Inspection Mode. (Step "F")

(7) Check that the SLIP indicator light comes on. (Step "G")

HINT:

- If the SLIP indicator light does not come on in step "G", repeat the steps from "A" to "G".
- Turning the ignition switch off ends inspection mode.

9. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause converter overheating and create a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.

(b) Avoid idling the engine for more than 20 minutes.

(c) Avoid performing unnecessary spark tests.

(1) Perform a spark test only when absolutely necessary. Perform this test as rapidly as possible.

(2) While testing, never race the engine unless instructed.

(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

10. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition Switch off	LOCK	Off
	Ignition Switch ON	ON	On (IG)
	Ignition Switch ACC	ACC	On (ACC)
	Engine Start	START	Start

Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:

Perform troubleshooting in accordance with the procedure below. The following is an outline of basic troubleshooting procedure. Confirm the troubleshooting procedure for the circuit you are working on before beginning troubleshooting.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3.	**INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4.	SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.

(b) Warm up the engine to the normal operating temperature.

(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result:

RESULT	PROCEED TO
DTC is output	A
DTC is not output	B

B ▶ **Go to step 6**

A

▼

5.	DTC CHART

(a) Check the results obtained in step 4. Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT ▶ **Go to step 7**

6.	PROBLEM SYMPTOMS CHART

(a) Check the results obtained in step 4. Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT

▼

7.	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Identify the malfunctioning circuit or part.

NEXT

8.	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9.	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement of components, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction first occurred.

NEXT **END**

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
  - The following 5 items are important points in the problem analysis:

What	Vehicle model, system name

When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in this vehicle has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

By using these functions, the problem areas can be narrowed down and troubleshooting can be more effective. Diagnostic functions are incorporated in the following system in this vehicle.

- In the DTC check, it is very important to determine whether the problem indicated by the DTC either: 1) still occurs, or 2) occurred in the past but has returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedure listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

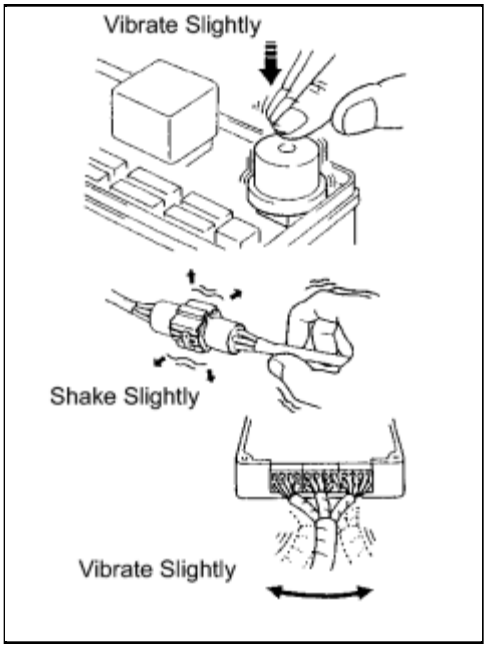
If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B ▶ **END**

A ▶ **TROUBLESHOOTING OF EACH PROBLEM SYMPTOM**

The problem still occurs in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION



HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:
With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied to a stationary vehicle. Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.

To reproduce DTCs, it is necessary to satisfy the respective DTC detection conditions.

(a) VIBRATION METHOD: When a malfunction seems to occur as a result of vibration.

(1) PART AND SENSOR

Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether the malfunction occurs.

NOTICE:

Applying strong vibration to relays may open the relays.

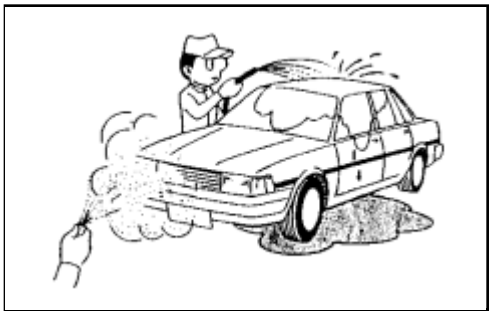
(2) CONNECTORS

Slightly shake the connector vertically and horizontally.

(3) WIRE HARNESS

Slightly shake the wire harness vertically and horizontally.

HINT:



The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

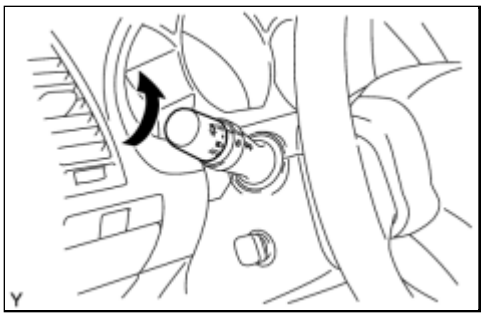
(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.

(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.

NOTICE:

- Do not heat to more than 60°C (140°F). Exceeding this temperature may damage the components.
- Do not apply heat directly to the parts in the ECU.

(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.



(1) Sprinkle water onto the vehicle and check if the malfunction occurs.

NOTICE:

- Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.
- Never apply water directly onto the electronic components.

HINT:

If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

(d) HIGH ELECTRICAL LOAD METHOD: When a malfunction seems to occur when an electrical load is excessive.

(1) Turn on the heater blower, headlights, rear window defogger and all other electrical loads. Check if the malfunction recurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns is shown in the table below.

ITEM	DESCRIPTION
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspected areas of the problem
See page	Indicates the page where the inspection procedure for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When no DTC is output but the problem still occurs, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptom are shown in the table. The suspected areas are listed in order of probability. A description of each of the table columns is shown in the following table.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom occurs. It is possible that the problem occurs outside the detection range of the diagnostic system, or that the problem occurs in a completely different system.

ITEM	DESCRIPTION
Symptom	-
Suspected Area	Indicates the circuit or part which needs to be checked.
See page	Indicates the page where the inspection procedure is located.

7. INSPECTION

A description of the main points for inspection of suspected areas is shown in the following table.

ITEM	DESCRIPTION
Description	The major role and operation of the circuit or system and its component parts are explained.
DTC No., DTC Detection Condition and Trouble Area	Indicates the diagnostic trouble codes, DTC detection conditions and suspected areas for a problem.
Wiring Diagram	This is a wiring diagram for the circuit or system. This diagram can be used together with the Electrical Wiring Diagram to thoroughly understand the circuit. Wire colors are indicated by alphabetical codes. B = Black, L = Blue, R = Red, BR = Brown, LG = Light Green, V = Violet, G = Green, O = Orange, W = White, GR = Gray, P = Pink, Y = Yellow, SB = Sky Blue The first letter indicates the basic wire color and the second letter indicates the color of the stripe.
Inspection Procedure	This shows the procedure not only to determine whether the circuit is normal or abnormal, but also to determine whether the problem is located in the sensors, actuators, wire harness or ECU.
Illustration of the ECU connector during the check	The illustration shows whether the connector being checked is connected or disconnected. The connections for an electrical tester are indicated by (+) or (-) after the terminal name. For inspections between a connector and body ground, information about the ground is not shown in the illustration.

Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: ELECTRONIC CIRCUIT INSPECTION PROCEDURE (2010 Corolla)		

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

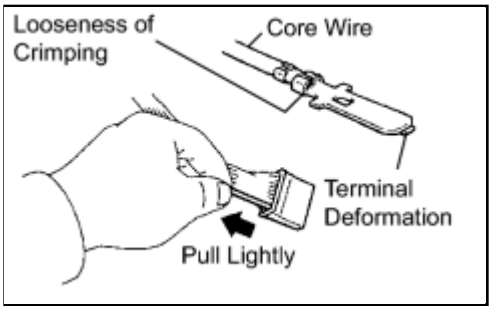
(1) Unless otherwise stated, all resistance measurements are standard values measured at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.

(b) HANDLING CONNECTORS

(1) When disconnecting a connector, first squeeze the mating connector housing halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

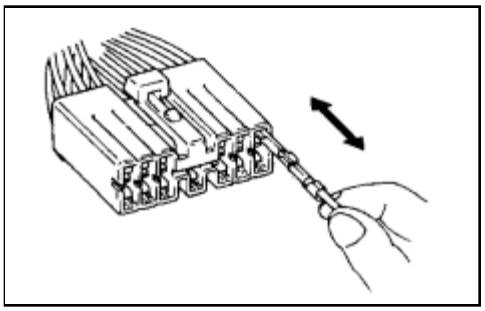
(3) Before connecting a connector, check that there are no deformations, damage, looseness or missing terminals.



(4) When connecting a connector, press firmly until it locks with a "click" sound.

(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.

NOTICE:

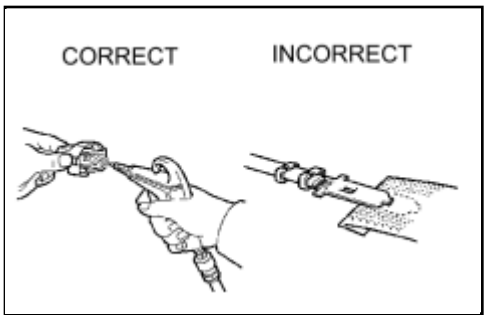


- As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.
- Do not damage the terminals by moving the inserted tester needle.

(c) CHECKING CONNECTORS

(1) Checking when a connector is connected: Squeeze the connectors together to confirm that they are fully connected and locked.

(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Check visually for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated, or deformed terminals.

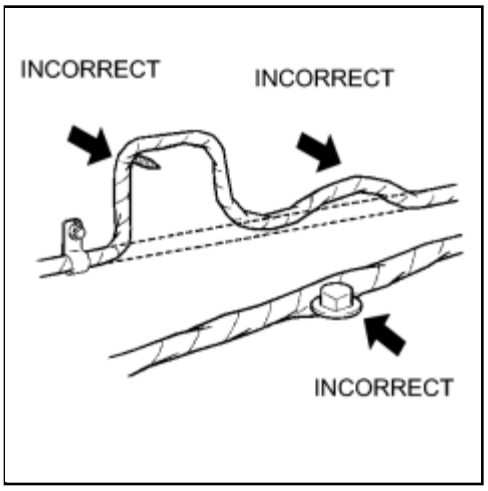


(3) Checking the contact pressure of the terminal: Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.

NOTICE:

When testing a gold-plated female terminal, always use a gold-plated male terminal.

(d) REPAIR METHOD OF CONNECTOR TERMINAL



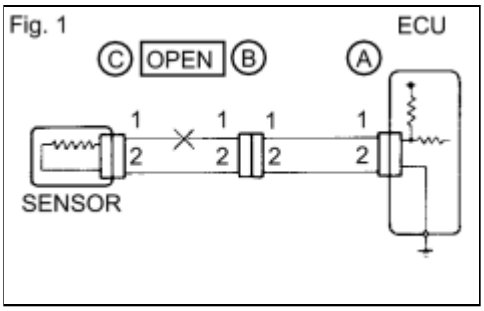
(1) If there is any foreign matter on the terminal, clean the contact point with compressed air or a cloth. Never rub the contact point using sandpaper as the plating may come off.

(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.

(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.

(e) HANDLING OF WIRE HARNESS

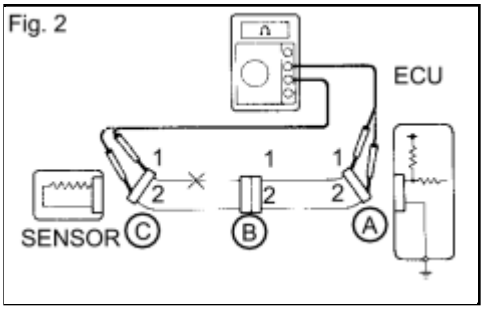
(1) If removing a wire harness, check the wiring and clamps before proceeding so that it can be restored in the same way.



(2) Never twist, pull or slacken the wire harness more than necessary.

(3) The wire harness should never come into contact with any high temperature part, rotating, moving, vibrating, or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.

(4) When installing parts, never pinch the wire harness.



(5) Never cut or break the cover of the wire harness. If it is cut or broken, replace it or repair it with insulating tape.

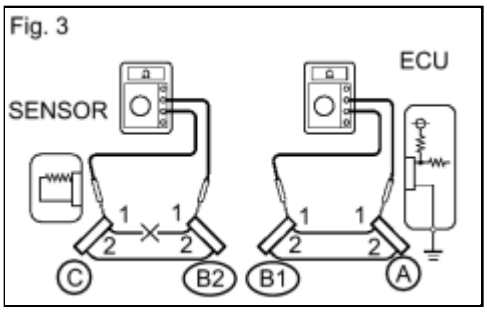
2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, measure the resistance and voltage as follows:

(b) Check the resistance.

(1) Disconnect connectors A and C and measure the resistance between the terminals of the connectors.

Standard Resistance (Fig. 2):



TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

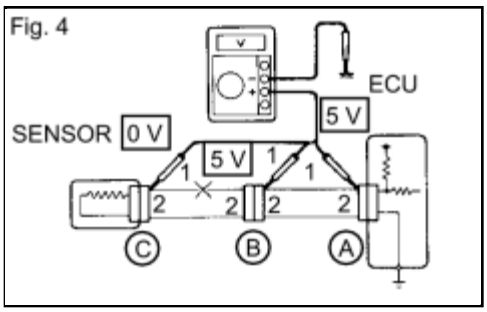
HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the preceding values, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance between the terminals of the connectors.

Standard Resistance (Fig. 3):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 2 - Connector C terminal 2	10 kΩ or higher



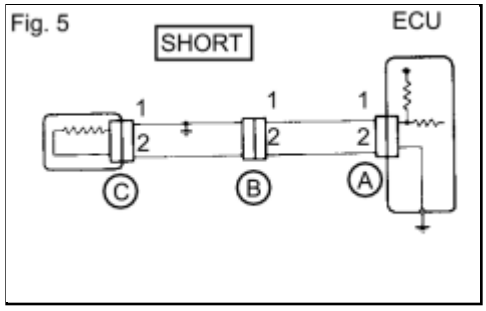
If the results match the values specified above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

(c) Check the voltage.

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.

With each connector still connected, measure the voltage between body ground and the following terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

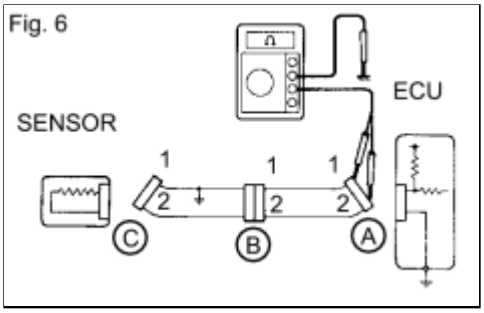
Fig. 4



Standard Voltage (Fig. 4):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the values specified above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.



3. CHECK FOR SHORT CIRCUIT

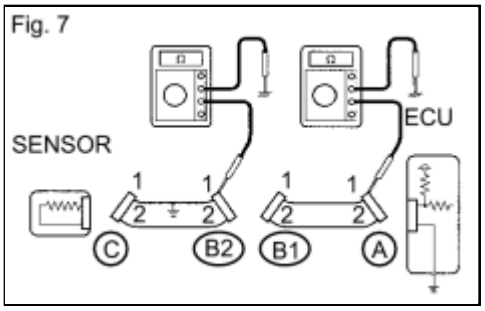
Fig. 5

(a) If the wire harness is shorted to ground (Fig. 5), locate the shorted section by conducting following resistance check to body ground.

(b) Check the resistance to body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard Resistance (Fig. 6):



TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

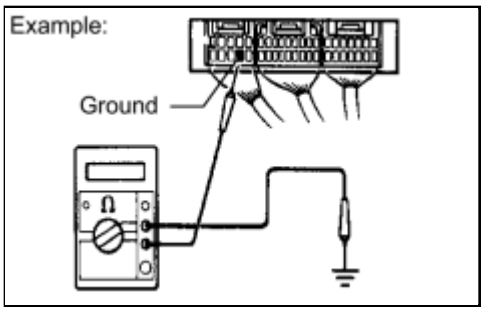
HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the values specified above, a short circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard Resistance (Fig. 7):

TESTER CONNECTION	SPECIFIED CONDITION
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 2 - Body ground	Below 1 Ω

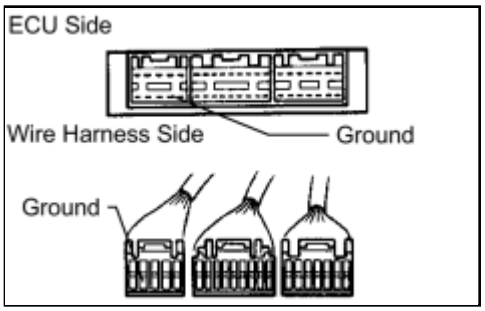


If the results match the values specified above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.
- When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch ON.
- Check that the connectors are fully seated. Check for loose, corroded or broken wires.



(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.

Standard resistance:

Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bent terminals, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

Title: INTRODUCTION: HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS: GENERAL INFORMATION (2010 Corolla)		

GENERAL INFORMATION

A large number of ECU controlled systems are used in this vehicle. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnosis and necessary repairs.

(For using the Techstream*)

HINT:

***: The Techstream is the name for the diagnostic tester in North America.**

- Before using the Techstream, read the operator's manual thoroughly.
- If the Techstream cannot communicate with the ECU controlled systems when connected to the DLC3 with the ignition switch ON and the Techstream turned on, there is a problem on the vehicle side or the Techstream side.
    i. If communication is possible when the Techstream is connected to another vehicle, inspect the diagnosis data link line (bus (+) line), CANH and CANL lines, and the power circuits for the vehicle ECUs.
    ii. If communication is still not possible when the Techstream is connected to another vehicle, the problem is probably in the Techstream itself. Perform the Self Test procedure outlined in Techstream's instruction manual.

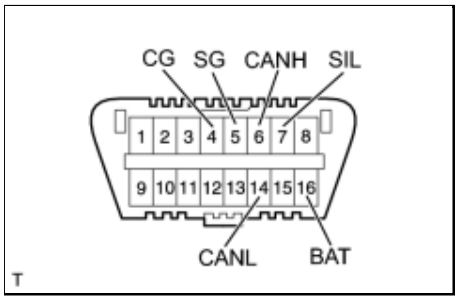
1. TROUBLESHOOTING PROCEDURES

- The troubleshooting procedures consist of diagnosis procedures for when a DTC is stored and diagnosis procedures for when no DTC is stored. The basic idea is explained in the following table.

PROCEDURE TYPE	DETAILS	TROUBLESHOOTING METHOD
DTC Based Diagnosis	The diagnosis procedure is based on the DTC that is stored.	The malfunctioning part is identified based on the DTC detection conditions using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.
Symptom Based Diagnosis (No DTCs stored)	The diagnosis procedure is based on problem symptoms.	The malfunctioning part is identified based on the problem symptoms using a process of elimination. The possible trouble areas are eliminated one-by-one by use of the Techstream and inspection of related parts.

- Vehicle systems are complex and use many ECUs that are difficult to inspect independently. Therefore, a process of elimination is used, where components that can be inspected individually are inspected, and if no problems are found in these components, the related ECU is identified as the problem and replaced.
- It is extremely important to ask the customer about the environment and the conditions present when the problem occurred (Customer Problem Analysis). This makes it possible to simulate the conditions

and confirm the symptom. If the symptom cannot be confirmed or the DTC does not recur, the malfunctioning part may not be identified using the troubleshooting procedure, and the ECU for the related system may be replaced even though it is not defective. If this happens, the original problem will not be solved.



- In order to prevent endless expansion of troubleshooting procedures, the troubleshooting procedures are written with the assumption that multiple malfunctions do not occur simultaneously for a single problem symptom.
- To identify the malfunctioning part, troubleshooting procedures narrow down the target by separating components, ECUs and wire harnesses during the inspection. If the wire harness is identified as the cause of the problem, it is necessary to inspect not only the connections to components and ECUs but also all of the wire harness connectors between the component and the ECU.

2. DESCRIPTION

(a) Each system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

3. CHECK DLC3

(a) The vehicle ECUs use ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

SYMBOL	TERMINAL NO.	NAME	REFERENCE TERMINAL	RESULT	CONDITION
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery positive	Body ground	11 to 14V	Always
CANH	6	CAN "High" line	14 - CANL	54 to 69 Ω	Ignition switch off*
			Battery positive	6 kΩ or higher	Ignition switch off*
			4 - CG	200 Ω or higher	Ignition switch off*
CANL	14	CAN "Low" line	Battery positive	6 kΩ or higher	Ignition switch off*
			4 - CG	200 Ω or higher	Ignition switch off*

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches, or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Title: INTRODUCTION: HOW TO USE THIS MANUAL: GENERAL INFORMATION (2010 Corolla)		

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.

(b) Repair operations can be separated mainly into the following 3 processes:

(1) Diagnosis

(2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting

(3) Final Inspection

(c) The following procedure is omitted from this manual. However, this procedure must be performed.

(1) Use a jack or lift to perform operations.

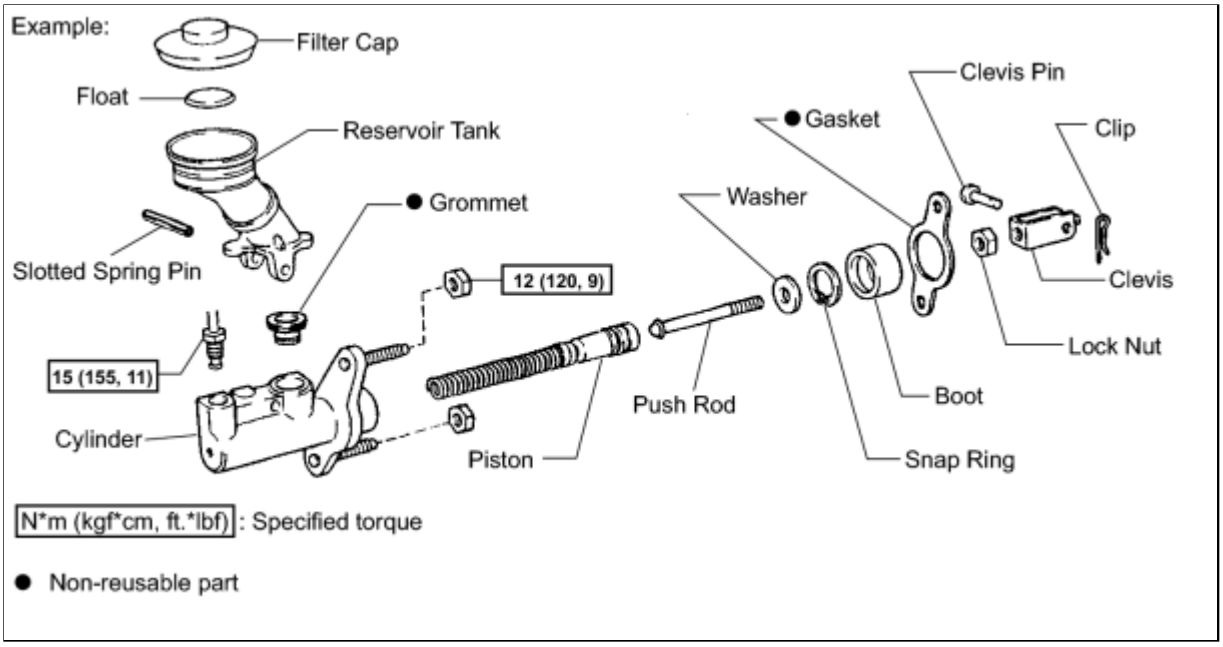
(2) Clean all removed parts.

(3) Perform a visual check before and after performing any work.

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help find the item to be repaired.

3. PREPARATION



(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the work procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.

- The following illustration is an example.

(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedure.

HINT:

There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	How to perform the task Also has information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedure is presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.

HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Other units from the metric system and the English systems are also provided.

- Example:

Torque: 30 N·m (310 kgf·cm, 22ft·lbf)

Title: INTRODUCTION: REPAIR INSTRUCTION: VEHICLE LIFT AND SUPPORT LOCATIONS (2010 Corolla)		

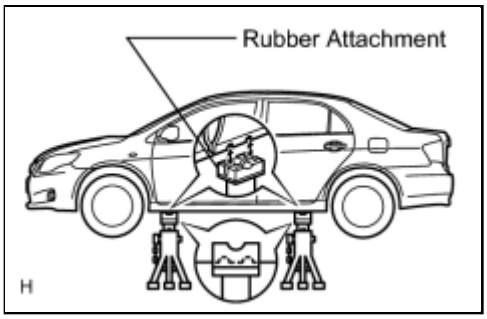
VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP

(a) As a rule, the vehicle must be unloaded when jacking up. Never jack up or lift up a vehicle loaded with heavy items.

(b) When removing any heavy components like the engine or transaxle, the center of gravity of the vehicle will move. Place a balance weight so as to keep the vehicle from rolling, or support a vehicle jacking position using a transmission jack.

2. NOTICE FOR USING 4 POST LIFT



(a) Follow the instruction manual for safe operation.

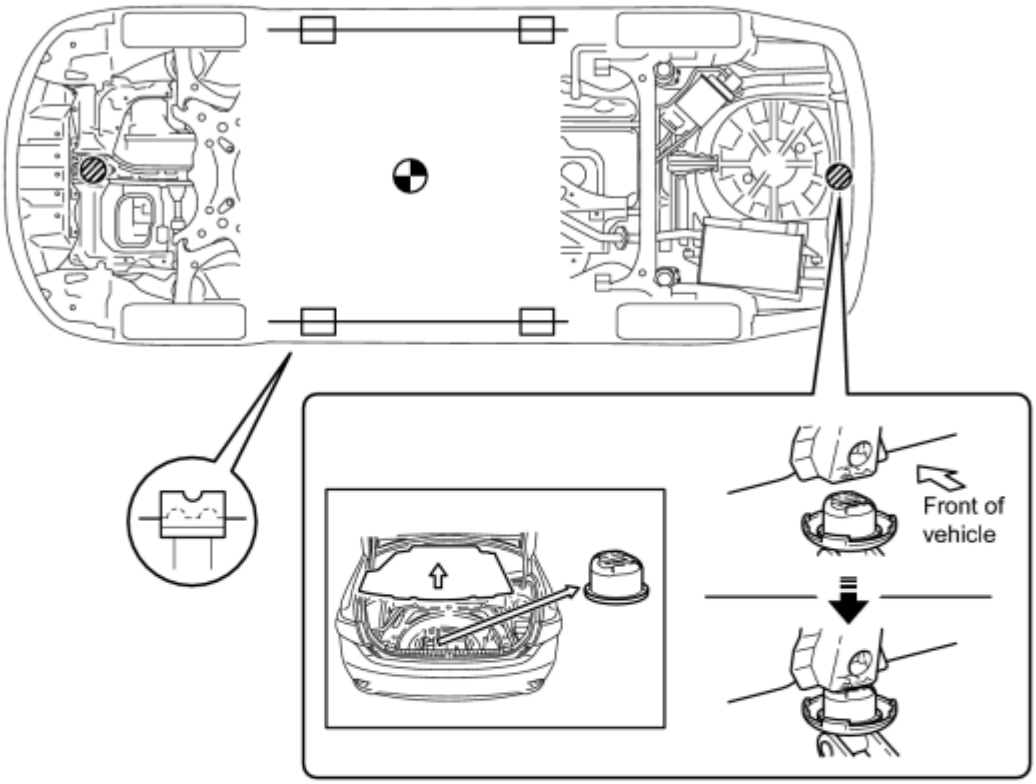
(b) Do not damage tires or wheels while driving onto the lift.

(c) Using wheel stoppers, secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in a flat place using wheel stoppers at all times.

(b) Use safety stands with rubber attachments as shown in the illustration.



(c) Securely support the specified locations with a jack and safety stands.

(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) Do not work or leave the vehicle supported only by a jack. Be sure to support the vehicle with safety stands.

(f) When jacking up only the front wheels or only the rear wheels, place wheel stoppers on both sides of the wheels that contact ground.

(g) When lowering the vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When lowering the vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.

Remove the jack attachment from the the spare tire cover in the trunk, then align the concave portion with the rear jack position and jack up the vehicle.

NOTICE:

Set the jack attachment with the arrow facing towards the front of the vehicle.

4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow the lift instruction manual for safe operation.

(b) Use a cradle with a rubber attachment as shown in the illustration.

(c) Set the vehicle so as to make its center of gravity as close as possible to the center of the lift.

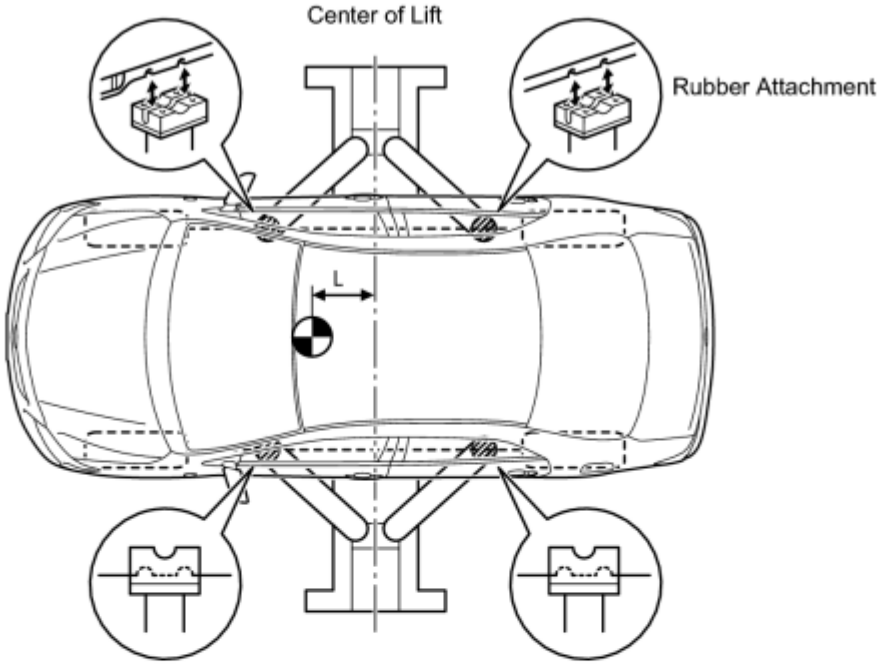
(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.

(e) Be sure to lock the swing arm during the operation.

(f) Lift the vehicle up until the tires are off the ground, and shake the vehicle to ensure that it is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

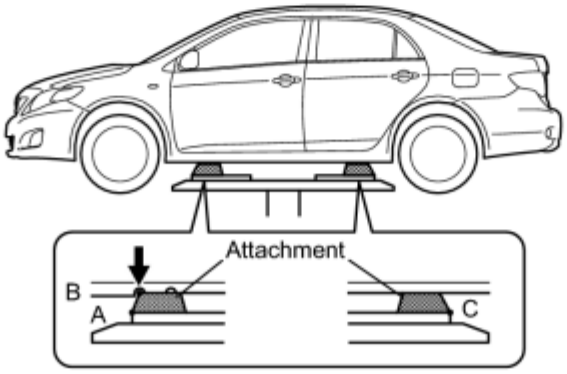
(a) Follow the lift instruction manual for safe operation.



(b) Use a plate lift attachment.

(c) Be sure to set the vehicle to the specified position.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the cushion ends of the plate with the attachment lower ends (A and C). • Align the attachment upper end (B) with the rocker flange front side notch.



(d) Lift the vehicle up until the tires are slightly off the ground a bit, and shake the vehicle to make sure that the vehicle is stable.

Title: INTRODUCTION: REPAIR INSTRUCTION: CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

1. POWER DOOR LOCK CONTROL SYSTEM

Main Body

TESTER DISPLAY	DEFAULT	CONTENT	SETTING
Unlock Key Twice	ON	Function that unlocks only driver side door when driver side door key cylinder is turned to UNLOCK once, and unlock all doors when it is turned to UNLOCK twice. For OFF setting, turning it once unlocks all doors.	ON / OFF
Auto Lock/Shift*	ON	Function that locks all doors when shift lever is shifted from P to any other position with engine running and all doors closed	ON / OFF
Auto Unlock/Shift*	ON	Function that unlocks all doors when shift lever is shifted to P from any other position while the ignition switch is ON	ON / OFF

5. ENTRY UNLOCK MODE SWITCHING FUNCTION

(a) To change the vehicle to entry unlock mode switching function, make sure that the engine switch is off and simultaneously press and hold the electrical key's LOCK switch and another electrical key switch for 5 seconds.

- Driver door unlock default setting:

  When the switches are pressed and held for 5 seconds, the entry door unlock mode changes in the following order: driver door mode, all door mode.

NOTICE:

After pressing and holding the switches for 5 seconds, wait 5 seconds before performing the same procedure again.

- Driver door unlock mode:

  When the driver door's touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.
- All door unlock mode:

  When the touch sensor is touched, all doors unlock.

(b) The certification ECU (smart key ECU assembly) receives this signal from the entry door control receiver and changes the smart key system to the entry unlock mode.

(c) The certification ECU (smart key ECU assembly) sounds the wireless door lock buzzer and combination meter buzzer to inform the user that the mode has been switched.

MODE	WIRELESS DOOR LOCK BUZZER	COMBINATION METER BUZZER
Driver Door (Default)	Sounds 3 times	Sounds once
All Doors (Customized)	Sounds 2 times	Sounds once

HINT:

The function only changes the entry unlock mode of the smart key system. It does not switch the unlocking of

the wireless door lock control.

6. ELECTRICAL KEY CANCEL

The electrical key cancel operation disables the following functions:

- Entry Unlock / Lock
- Entry Luggage Compartment Open
- Key Lock-in Prevention
- Warning

(a) The operation procedures are as follows:

Precondition:

Engine switch off, driver side door closed and unlocked.

(1) Unlock the driver side door once with the UNLOCK switch of the key.

(2) Open the driver door within 5 seconds.

(3) Unlock the driver side door twice with the UNLOCK switch of the key within 5 seconds.

(4) Close and open the driver door twice within 30 seconds.

(Driver door: Close → Open → Close → Open)

(5) Unlock the driver side door twice with the UNLOCK switch of the key within 5 seconds.

(6) Close and open the driver door within 30 seconds.

(Driver door: Close → Open)

(7) Close the driver door within 5 seconds.

When electrical key cancel is activated, the wireless door lock buzzer sounds twice.

To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

7. SMART KEY SYSTEM (for Start Function)

Smart Key / Access

ABBREVIATIONS USED IN MANUAL

ABBREVIATION	MEANING
ABS	Anti-Lock Brake System
A/C	Air Conditioner
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
A.D.D	Automatic Disconnecting Differential
A/F	Air-Fuel Ratio
AHC	Active Height Control Suspension
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSY	Assembly
A/T, ATM	Automatic Transmission (Transaxle)
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
AWD	All Wheel Drive Vehicle
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery

ABBREVIATION	MEANING
BDC	Bottom Dead Center
B/L	Bi-Level
B/S	Bore-Stroke Ratio
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
CAN	Controller Area Network
CB	Circuit Breaker
CCo	Catalytic Converter for Oxidation
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
C/V	Check Valve
CV	Control Valve
CW	Curb Weight
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
D/INJ	Direct Injection
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft

ABBREVIATION	MEANING
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
EBD	Electric Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission
ECU	Electronic Control Unit
ED	Electro-Deposited Coating
EDU	Electronic Driving Unit
EDIC	Electric Diesel Injection Control
EFI	Electronic Fuel Injection
E/G	Engine
EGR	Exhaust Gas Recirculation
EGR-VM	EGR-Vacuum Modulator
ELR	Emergency Locking Retractor
EPS	Electric Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance
ETCS-i	Electronic Throttle Control System-intelligent
EVAP	Evaporative Emission Control
EVP	Evaporator
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
FE	Fuel Economy
FF	Front-Engine-Front-Wheel-Drive
F/G	Fuel Gauge

ABBREVIATION	MEANING
FIPG	Formed In Place Gasket
FL	Fusible Link
F/P	Fuel Pump
FPU	Fuel Pressure Up
FR	Front
F/W	Flywheel
FW/D	Flywheel Damper
FWD	Front-Wheel-Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
GSA	Gear Shift Actuator
H/B	Hatchback
H-FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Headlight)
HPU	Hydraulic Power Unit
HSG	Housing
HT	Hard Top
HV	Hybrid Vehicle
HWS	Heated Windshield System
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
I/P	Instrument Panel
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block

ABBREVIATION	MEANING
J/C	Junction Connector
KD	Kick-Down
KDSS	Kinetic Dynamic Suspension System
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left-Hand
LHD	Left-Hand Drive
LIN	Local Interconnect Network
L/H/W	Length, Height, Width
LLC	Long-Life Coolant
LNG	Liquefied Natural Gas
LO	Low
LPG	Liquefied Petroleum Gas
LSD	Limited Slip Differential
LSP & BV	Load Sensing Proportioning and Bypass Valve
LSPV	Load Sensing Proportioning Valve
MAP	Manifold Absolute Pressure
MAX.	Maximum
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MG1	Motor Generator No. 1
MG2	Motor Generator No. 2
MMT	Multi-mode Manual Transmission
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
M/T, MTM	Manual Transmission (Transaxle)
MT	Mount
MTG	Mounting

ABBREVIATION	MEANING
N	Neutral
NA	Natural Aspiration
NO.	Number
O2S	Oxygen Sensor
OC	Oxidation Catalyst
OCV	Oil Control Valve
O/D	Overdrive
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On-board Refilling Vapor Recovery
O/S	Oversize
P & BV	Proportioning and Bypass Valve
PBD	Power Back Door
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PROM	Programmable Read Only Memory
PS	Power Steering
PSD	Power Slide Door
PTC	Positive Temperature Coefficient
PTO	Power Take-Off
PZEV	Partial Zero Emission Vehicle
P/W	Power Window
R & P	Rack and Pinion
RAM	Random Access Memory
R/B	Relay Block
RBS	Recirculating Ball Type Steering
R/F	Reinforcement
REAS	Relative Absorber System

ABBREVIATION	MEANING
RFS	Rigid Front Suspension
RH	Right-Hand
RHD	Right-Hand Drive
RLY	Relay
ROM	Read Only Memory
RR	Rear
RRS	Rigid Rear Suspension
RSE	Rear Seat Entertainment
RWD	Rear-Wheel Drive
SC	Supercharger
SCV	Swirl Control Valve (for gasoline engine)
	Suction Control Valve (for diesel engine)
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SPV	Spill Control Valve
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold-Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
TACH	Tachometer
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer-Controlled System

ABBREVIATION	MEANING
TCM	Transmission Control Module
TCV	Timing Control Valve (for diesel engine)
	Tumble Control Valve (for gasoline engine)
TDC	Top Dead Center
TEMP.	Temperature
TFT	TOYOTA Free-Tronic
TIS	Total Information System for Vehicle Development
T/M	Transmission
TMC	TOYOTA Motor Corporation
TMMIN	PT. TOYOTA Motor Manufacturing Indonesia
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.
TMT	TOYOTA Motor Thailand Co. Ltd.
TRAC/TRC	Traction Control System
TURBO	Turbocharge
TVIP	TOYOTA Vehicle Intrusion Protection
TWC	Three-Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VDIM	Vehicle Dynamics Integrated Management
VENT	Ventilator
VIM	Vehicle Interface Module
VGRS	Variable Gear Ratio Steering
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT-i	Variable Valve Timing-intelligent
W/	With
WGN	Wagon
W/H	Wire Harness

ABBREVIATION	MEANING
W/O	Without
1ST	First
2ND	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3RD	Third
4TH	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5TH	Fifth

Title: INTRODUCTION: TERMS: GLOSSARY OF SAE AND TOYOTA TERMS (2010 Corolla)		

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATION	SAE TERM	TOYOTA TERM ( )-ABBREVIATION
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM)

SAE ABBREVIATION	SAE TERM	TOYOTA TERM ( )-ABBREVIATION
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Light
MST	Manifold Surface Temperature	-

SAE ABBREVIATION	SAE TERM	TOYOTA TERM ( )-ABBREVIATION
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-

SAE ABBREVIATION	SAE TERM	TOYOTA TERM ( )-ABBREVIATION
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC_{RO}
TWC+OC	Three-Way + Oxidation Catalytic Converter	$CC_R + CCo$
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-
3GR	Third Gear	-
4GR	Fourth Gear	-

Title: TOC2: TOC2: FOREWORD (2010 Corolla)		

FOREWORD

This is Volume 2 of the 2010 COROLLA manual. There are four volumes to this manual. The sections included in each volume are indicated by black type in the Section Index. Use the Section Index of each volume to find the volume with the section you need.
This manual applies to the models listed below. It covers all information in the previously issued Pub. No. RM12R0U, and includes all production changes effective July, 2009 or later.

Applicable models	ZRE142 series
	AZE141 series

Please note that the publications below have also been prepared as relevant service manuals for the components and system in these vehicles.

MANUAL NAME	PUB. NO.
2010 COROLLA Electrical Wiring Diagram	EM12R1U

All information in this manual is based on the latest product information at the time of publication. However, specifications and procedures are subject to change without notice. For the most current information available, refer to the Toyota Technical Information System (TIS) online at dealership locations or on the Internet at http://techinfo.toyota.com.
If you find any failures in this manual, you are kindly requested to inform us by using the report form on the next page.

Title: TOC2: TOC2: CAUTION (2010 Corolla)		

CAUTION

This contents does not include all the necessary items about repair and service. This manual is made for the use of persons who have special techniques and certifications. If non-specialized or uncertified technicians perform repairs or service only using this manual or without proper equipment or tools, this may cause severe injury to you or other persons nearby and also cause damage to your customer's vehicle.
In order to prevent dangerous operation and damage to your customer's vehicle, be sure to follow the instructions shown below.

- This contents must be read thoroughly. It is especially important to have a good understanding of all the contents written in the PRECAUTION of "INTRODUCTION" section.
- The service method written in this manual is very effective to perform repair and service. When performing the operations following the procedures using this manual, be sure to use tools specified and recommended. If using non-specified or tools other than recommended tools and service methods, be sure to confirm the safety of the technicians and that there is no possibility of causing personal injury or damage to the customer's vehicle before starting the operation.
- If part replacement is necessary, the part must be replaced with the same part number or equivalent part. Do not replace it with an inferior quality part.
- It is important to note that this manual contains various "Cautions" and "Notices" that must be carefully observed in order to reduce the risk of personal injury during service or repair, or reduce the possibility that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that these "Cautions" and "Notices" are not exaggerations and are possible hazardous consequences that might result from failure to follow these instructions.

Title: MAINTENANCE: BODY: GENERAL MAINTENANCE (2010 Corolla)		

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS ON CHASSIS AND BODY

(a) Where necessary, tighten all the parts of the chassis.

- Front axle and suspension
- Drive train
- Rear axle and suspension
- Brake system
- Engine mounting, etc.

(b) Where necessary, tighten all the parts of the body.

- Seat belt system
- Seat
- Doors and hood
- Body mountings
- Fuel tank
- Exhaust pipe system, etc.

2. REPLACE AIR CONDITIONING FILTER

(a) Remove the glove compartment assembly.

(b) Remove the filter case from the filter outlet.

(c) Remove the filter from the filter case.

(d) Replace the filter with a new one.

(e) Installation is in the reverse order.

3. ROAD TEST

(a) Check the engine and chassis for abnormal noises.

(b) Check that the vehicle does not wander or pull to one side.

(c) Check that the brakes work properly and do not drag.

(d) Settle the parking brake shoes.

4. BODY INSPECTION

(a) Check the body exterior for dents, scratches and rust.

(b) Check the underbody for rust and damage.

If necessary, replace or repair.

5. FINAL INSPECTION

(a) Check the operation of the body parts.

(1) Hood

- Auxiliary catch operates properly.
- Hood locks securely when closed.

(2) Front and rear doors

- Door locks operate properly.
- Doors close properly.

(3) Trunk

- Trunk opens and closes properly.

(4) Seats

- Seat adjusts easily and locks securely in any position.
- Front seatbacks lock securely in any position.
- Folding-down rear seatbacks lock securely.

(5) Be sure to deliver a clean car. Especially check:

- Steering wheel
- Shift lever knob
- All switch knobs
- Door handles
- Seats

Title: MAINTENANCE: BRAKE: GENERAL MAINTENANCE (2010 Corolla)		

GENERAL MAINTENANCE

1. INSPECT BRAKE LINE PIPES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:

- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all the clamps for tightness and the connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

GENERAL MAINTENANCE

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

(a) Check the steering wheel free play INFO .

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

(4) Check that the steering gear housing is not damaged.

2. INSPECT BALL JOINT AND DUST COVER

(a) Inspect the ball joints for excessive looseness.

(1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.

(2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.

(3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.

(4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

(b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

(a) Check the drive shaft boots for loose clamps, grease leakage, kinks or damage.

4. CHECK AUTOMATIC TRANSAXLE FLUID

(a) Visually check the automatic transaxle for fluid leakage. If oil is leaking, find the cause and repair it.

5. CHECK MANUAL TRANSAXLE FLUID

(a) Visually check the manual transaxle for fluid leakage. If oil is leaking, find the cause and repair it.

Title: MAINTENANCE: INSIDE VEHICLE: GENERAL MAINTENANCE (2010 Corolla)		

GENERAL MAINTENANCE

These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink. Also, check that they have enough brightness.

3. WARNING LIGHTS AND BUZZERS

(a) Check that all the warning lights and buzzers are working.

4. HORNS

(a) Check that the horn is working.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPER AND WASHER

(a) Check that the washers are aimed properly. Also, check that the washer fluid hits the center of the operating range of each wiper on the windshield.

(b) Check that the wipers streak or not. Replace the wiper if necessary.

7. WINDSHIELD DEFROSTER

(a) When the air conditioning is on the defroster setting, check that air comes out of the defroster outlet.

8. REAR VIEW MIRROR

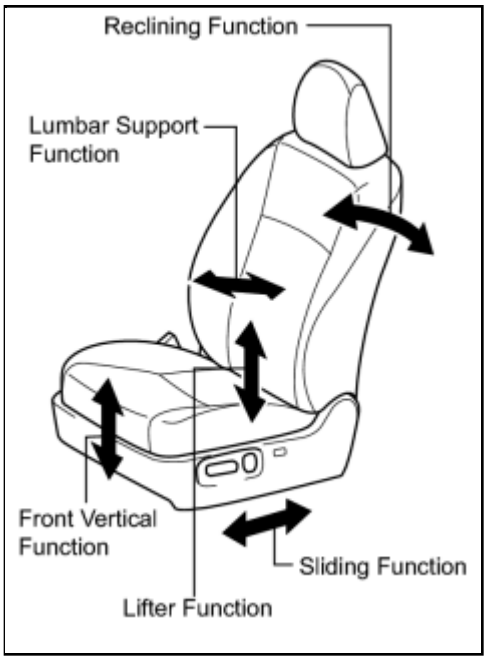
(a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check that the steering wheel has the proper free play. Also check for steering difficulty and unusual noises INFO .



11. SEATS

(a) Check that the seat adjusters, seatback recliner and other front seat controls operate smoothly.

(b) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.

(c) Check that all the latches lock securely in all positions. (for Manual Seat)

(d) Check that the locks hold securely in all positions. (for Manual Seat)

(e) Check the basic functions. (for Power Seat)

(1) Operate the power seat switches and check that the following functions work:

- Sliding
- Reclining
- Front vertical
- Lumbar support
- Lifter

12. SEAT BELTS

(a) Check that the seat belt system such as the buckles, retractors and anchors operate properly and smoothly.

(b) Check that the belt webbing is not cut, frayed, worn or damaged.

13. ACCELERATOR PEDAL

(a) Check that the pedal operates smoothly. Check that the pedal does not have uneven resistance or stick in certain positions.

14. CLUTCH PEDAL

(a) Check that the pedal operates smoothly.

(b) Check that the pedal has the proper free play INFO .

15. BRAKE PEDAL

(a) Check that the pedal operates smoothly.

(b) Check that the pedal has the proper reserve distance and free play INFO .

(c) Start the engine and check the brake booster function INFO .

16. BRAKES

(a) In a safe place, check that the vehicle remains straight when applying the brakes.

17. PARKING BRAKE

(a) Check that the lever has the proper range of motion INFO .

(b) On a low incline, check that the parking brake alone can hold the vehicle in place.

18. AUTOMATIC TRANSAXLE "PARK" MECHANISM

(a) Check the shift lock release button for proper and smooth operation.

(b) When the shift lever is in P and all brakes are released on a low incline, check that the vehicle is held in place.

GENERAL MAINTENANCE

These are maintenance and inspection items that are considered to be the owner's responsibility.

The owner can do them or they can have them done at a service center.

These items include those that should be checked on a daily basis, those that in most cases do not require special tools, and those that are considered to be reasonable for the owner to do.

General maintenance items and procedures are as follows:

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time (months) elapsed, whichever reaches the specification first.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire pressure with a gauge. Make adjustments if necessary.

(b) Check the surfaces of tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION

Check the maintenance schedule in the owner's manual supplement.

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks when they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.

NOTICE:

If you smell gasoline fumes or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

(a) Check that all of the doors operate smoothly, and that all the latches lock securely.

(b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

GENERAL MAINTENANCE

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance unless noted.
- Failing to check each maintenance item could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check that the front of the radiator is clean and free of leaves, dirt and bugs.

(b) Check the hoses for cracks, kinks, rotting or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check that the electrolyte level of all the battery cells is between the upper and lower lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

(a) Check that the brake fluid levels are near the upper level line on the see-through reservoirs.

7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oil.

8. ENGINE OIL LEVEL

(a) Check that the level of engine oil is between "F" and "L" on the dipstick with the engine turned off.

9. AUTOMATIC TRANSAXLE FLUID LEVEL

Title: AUDIO / VIDEO: FRONT DOOR SPEAKER: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT FRONT NO. 1 SPEAKER

HINT:

Remove interior parts so that the front No. 1 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 1 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 1 speaker.

(c) Speaker resistance check

(1) Disconnect the front No. 1 speaker connector.

(2) Measure the resistance between the terminals of the speaker.

Standard Resistance:

for 8 Speakers

Except for 8 Speakers

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	1.5 to 2.2 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.2 to 4.8 Ω

If the result is not as specified, replace the front No. 1 speaker.

2. INSPECT FRONT NO. 2 SPEAKER (for 6 Speakers)

HINT:

Remove interior parts so that the front No. 2 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 2 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 2 speaker.

3. INSPECT FRONT NO. 3 SPEAKER (for 8 Speakers)

HINT:

Remove interior parts so that the front No. 3 speaker can be seen.

(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the front No. 3 speaker.

(b) Visually check the speaker.

OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the front No. 3 speaker.

(c) Speaker resistance check

(1) Disconnect the front No. 3 speaker connector.

(2) Measure the resistance between the terminals of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	1.5 to 2.5 Ω

If the result is not as specified, replace the front No. 3 speaker.

4. REMOVE FRONT ARMREST UPPER BASE PANEL (w/ Power Window) INFO

5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO

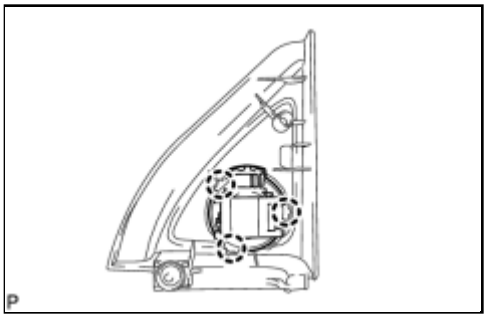
6. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY

(a) Disconnect the connector.

(b) Using a drill bit with a diameter of less than 4 mm (0.158 in.), drill out the 3 rivet heads and remove the front No. 1 speaker assembly.

NOTICE:

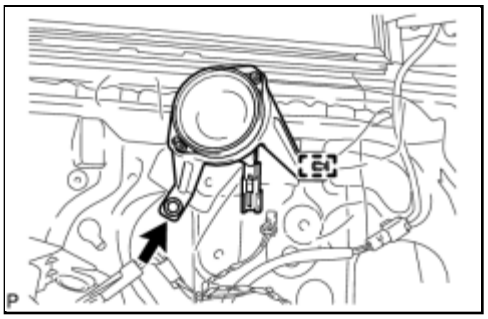
- Do not touch the cone part of the speaker.
- Do not drill the rivet at an angle as this will cause damage to the drill and drill hole. Line up the drill and rivet, and carefully drill out the rivet head.
- Be careful as the cut rivet will be very hot.



(c) Continue drilling and push out the remaining rivet fragments.

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the inside of the door.

7. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Front No. 2 Speaker) INFO

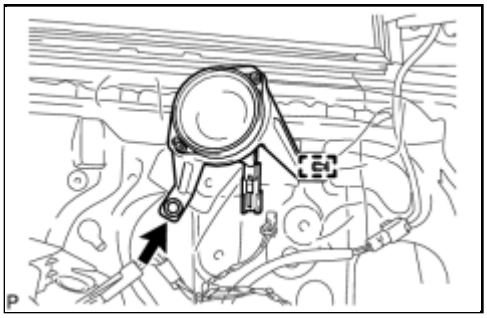


8. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (w/ Front No. 2 Speaker)

(a) Disengage the 3 claws and remove the front No. 2 speaker assembly.

9. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY (w/ Front No. 3 Speaker)

(a) Disconnect the connector.



(b) Remove the screw.

(c) Disengage the clamp and remove the front No. 3 speaker assembly.

Title: AUDIO / VIDEO: REAR PACKAGE TRAY SPEAKER: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT REAR SPEAKER

HINT:

Remove interior parts so that the rear speaker can be seen.

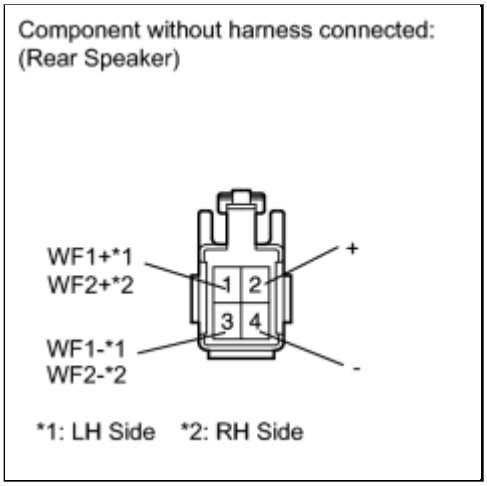
(a) Check the speaker installation.

OK:

The speaker is securely installed.

If the result is not as specified, reinstall the rear speaker.

(b) Visually check the speaker.



OK:

The cone paper of the speaker is not torn.

If the result is not as specified, replace the rear speaker.

(c) Speaker resistance check

(1) Disconnect the rear speaker connector.

(2) for 8 Speakers:

Measure the resistance between the terminals of the speaker.

Standard Resistance:

for Tweeter

for Woofer

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (WF1+) - 3 (WF1-)*1	Always	5.9 to 7.1 Ω
1 (WF2+) - 3 (WF2-)*2	Always	5.9 to 7.1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (+) - 4 (-)	Always	1.8 to 2.6 Ω

*1: LH Side

*2: RH Side

If the result is not as specified, replace the rear speaker.

(3) Except for 8 Speakers:

Measure the resistance between the terminals of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	3.2 to 4.8 Ω

If the result is not as specified, replace the rear speaker.

Title: AUDIO / VIDEO: WINDOW GLASS ANTENNA WIRE: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT WINDOW GLASS ANTENNA WIRE

(a) Check for continuity of the antenna.

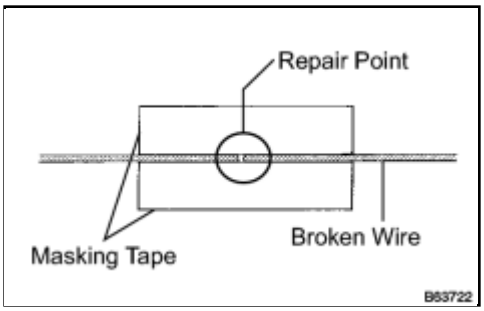
HINT:

Check for continuity at the center of each antenna wire as shown in the illustration.

NOTICE:

- When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients.
- When measuring voltage, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger as shown in the illustration.

OK:



There is continuity in the antenna.

If the result is not specified, repair the window glass antenna wire.

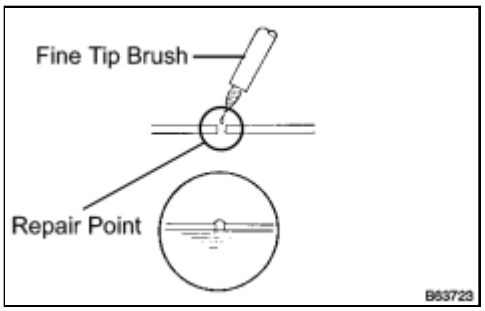
REPAIR



1. REPAIR WINDOW GLASS ANTENNA WIRE

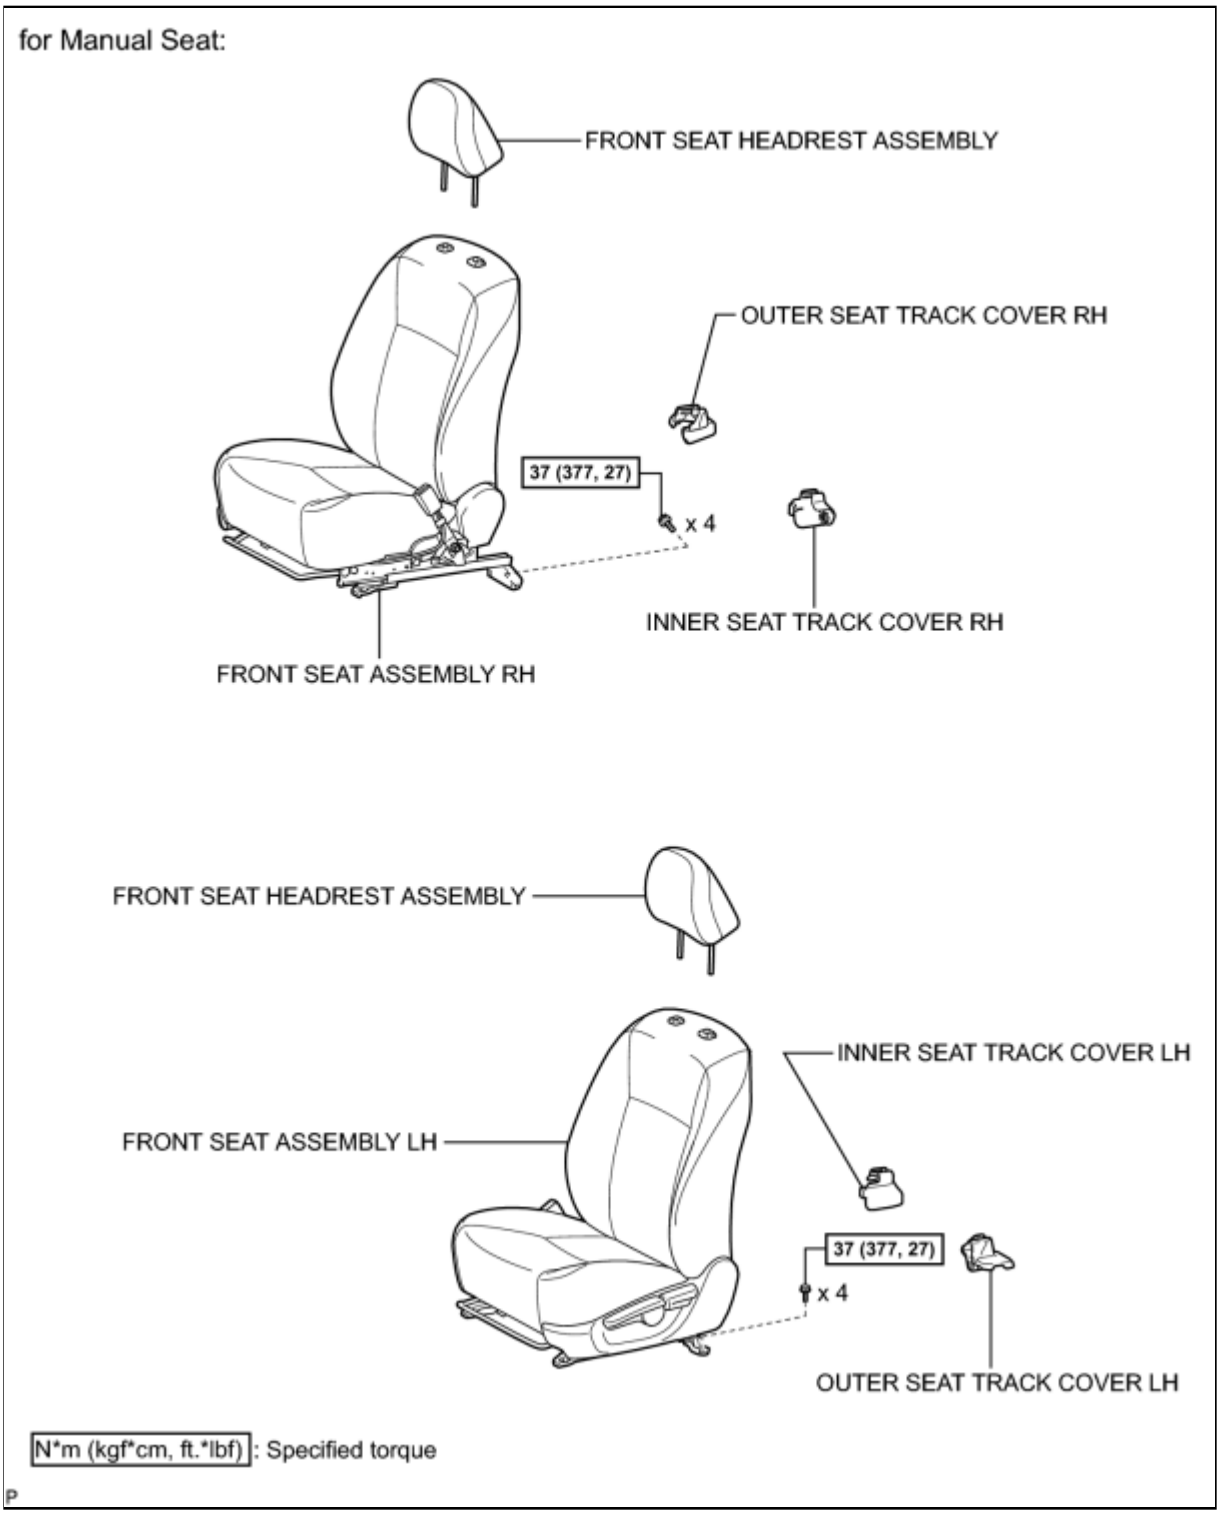
(a) Clean the broken wire tips with grease, wax or silicone remover.

(b) Place masking tape along both sides of the wire to be repaired.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the repair agent to the wire.

(e) After a few minutes, remove the masking tape.



NOTICE:

Do not repair the antenna wire for at least 24 hours.

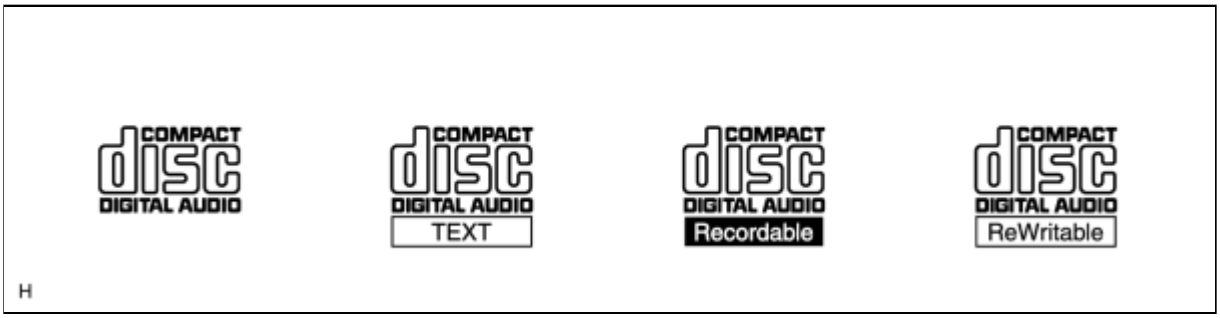
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. DISC PLAYER OUTLINE

(a) A CD player uses a laser pickup to read digital signals recorded on CDs. By converting the digital signals to analog, music and other content can be played.

CAUTION:



Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:

- Do not disassemble any part of the CD player.
- Do not apply oil to the CD player.
- Do not insert anything but a CD into the CD player.

(b) Usable discs

(1) The CD player can only play audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:

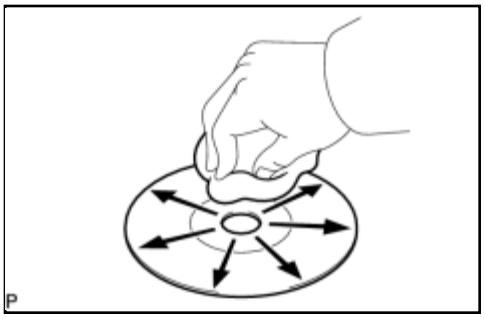
H

(c) Precautions for use of discs

NOTICE:

- Copy-protected CDs cannot be played.
- CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.
- Unfinalized CD-Rs and CD-RWs cannot be played.
- Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.
- Hold discs by the outer edge and center hole with the label side up.
- Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.
- If discs have adhesive tape, stickers, CD-R labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.
- Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)
- Do not use odd-shaped CDs because these may cause player malfunctions.
- Do not use discs whose recording portion is transparent or translucent because they may not be

inserted, ejected, or played normally.



HINT:

- When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

NOTICE:

- Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.
- Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.

2. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8 and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps)

	• Compatible with 2 channel playback only

(c) ID3 tag and WMA tag

(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

- CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.
- If there are fingerprints or scratches on the disc, the disc may not play or the CD may skip.
- Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.
- Keep CD-Rs and CD-RWs in an opaque case.

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any unlisted format, the contents of the files may not play normally or the file names or folder names may not display correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

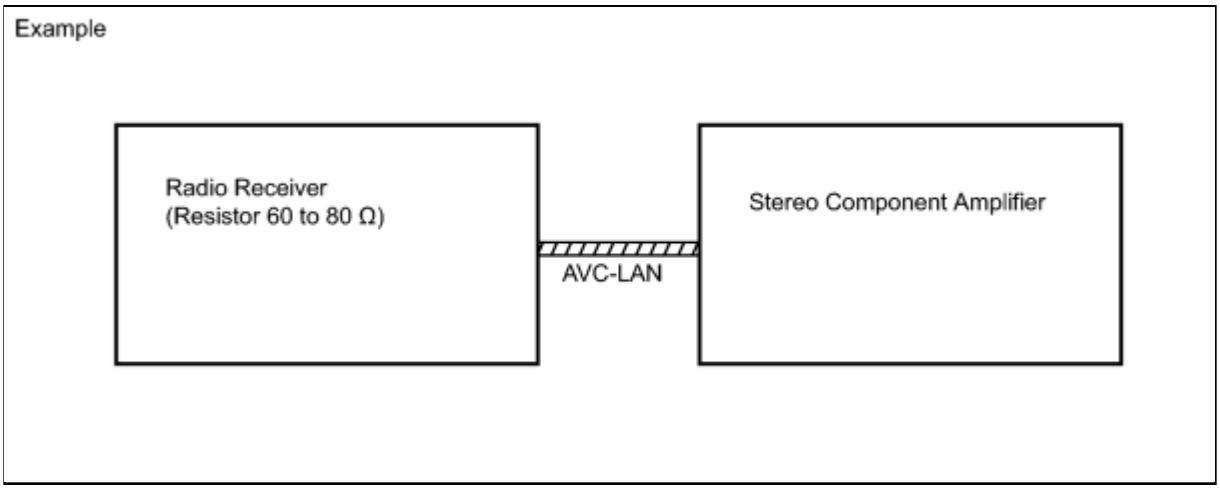
(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)

Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.



(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

3. AVC-LAN DESCRIPTION

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

(b) Purpose:

Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:

(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.

(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.

HINT:

- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.
- The radio receiver contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.

- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

4. COMMUNICATION SYSTEM OUTLINE

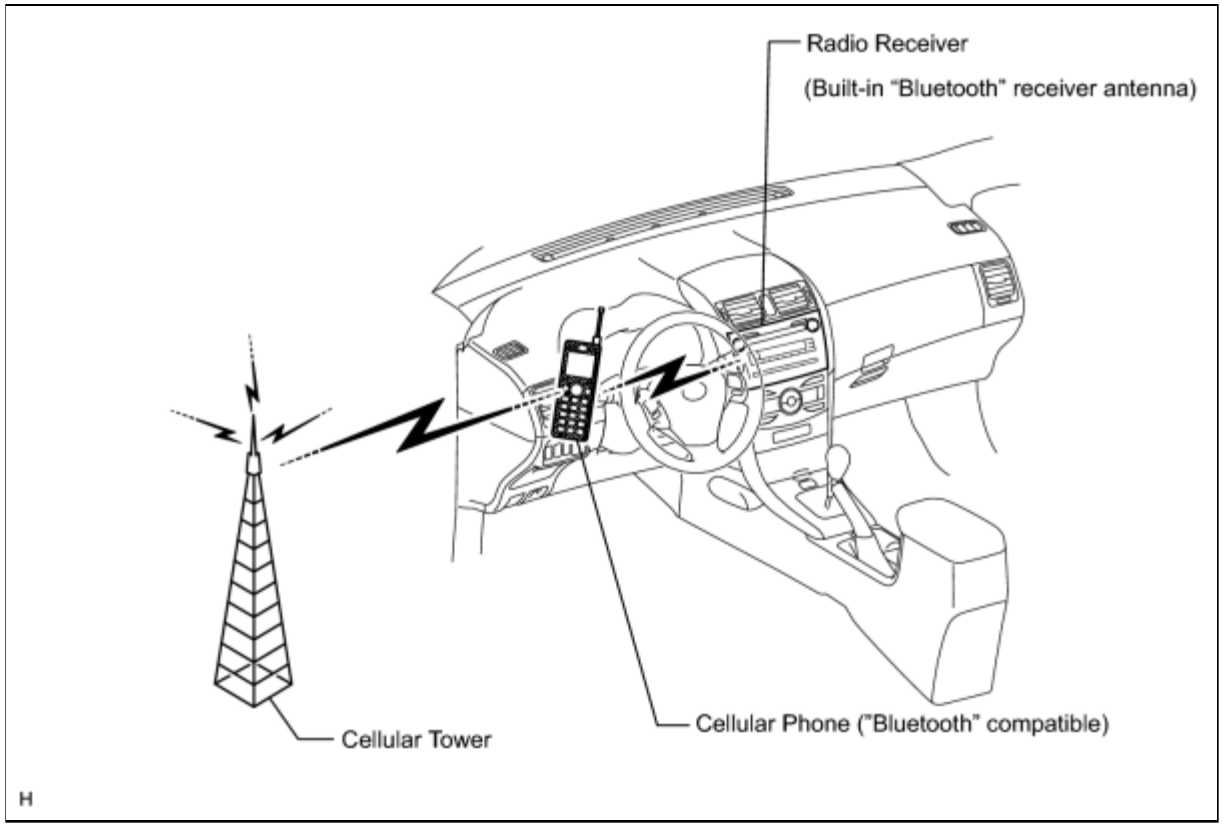
(a) Components of the audio system communicate with each other via the AVC-LAN.

(b) The master component of the AVC-LAN is a radio receiver with a 60 to 80 Ω resistor. This is essential for communication.

(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

5. DIAGNOSTIC FUNCTION OUTLINE

(a) The audio system has a diagnostic function (the result is indicated on the master unit).



(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

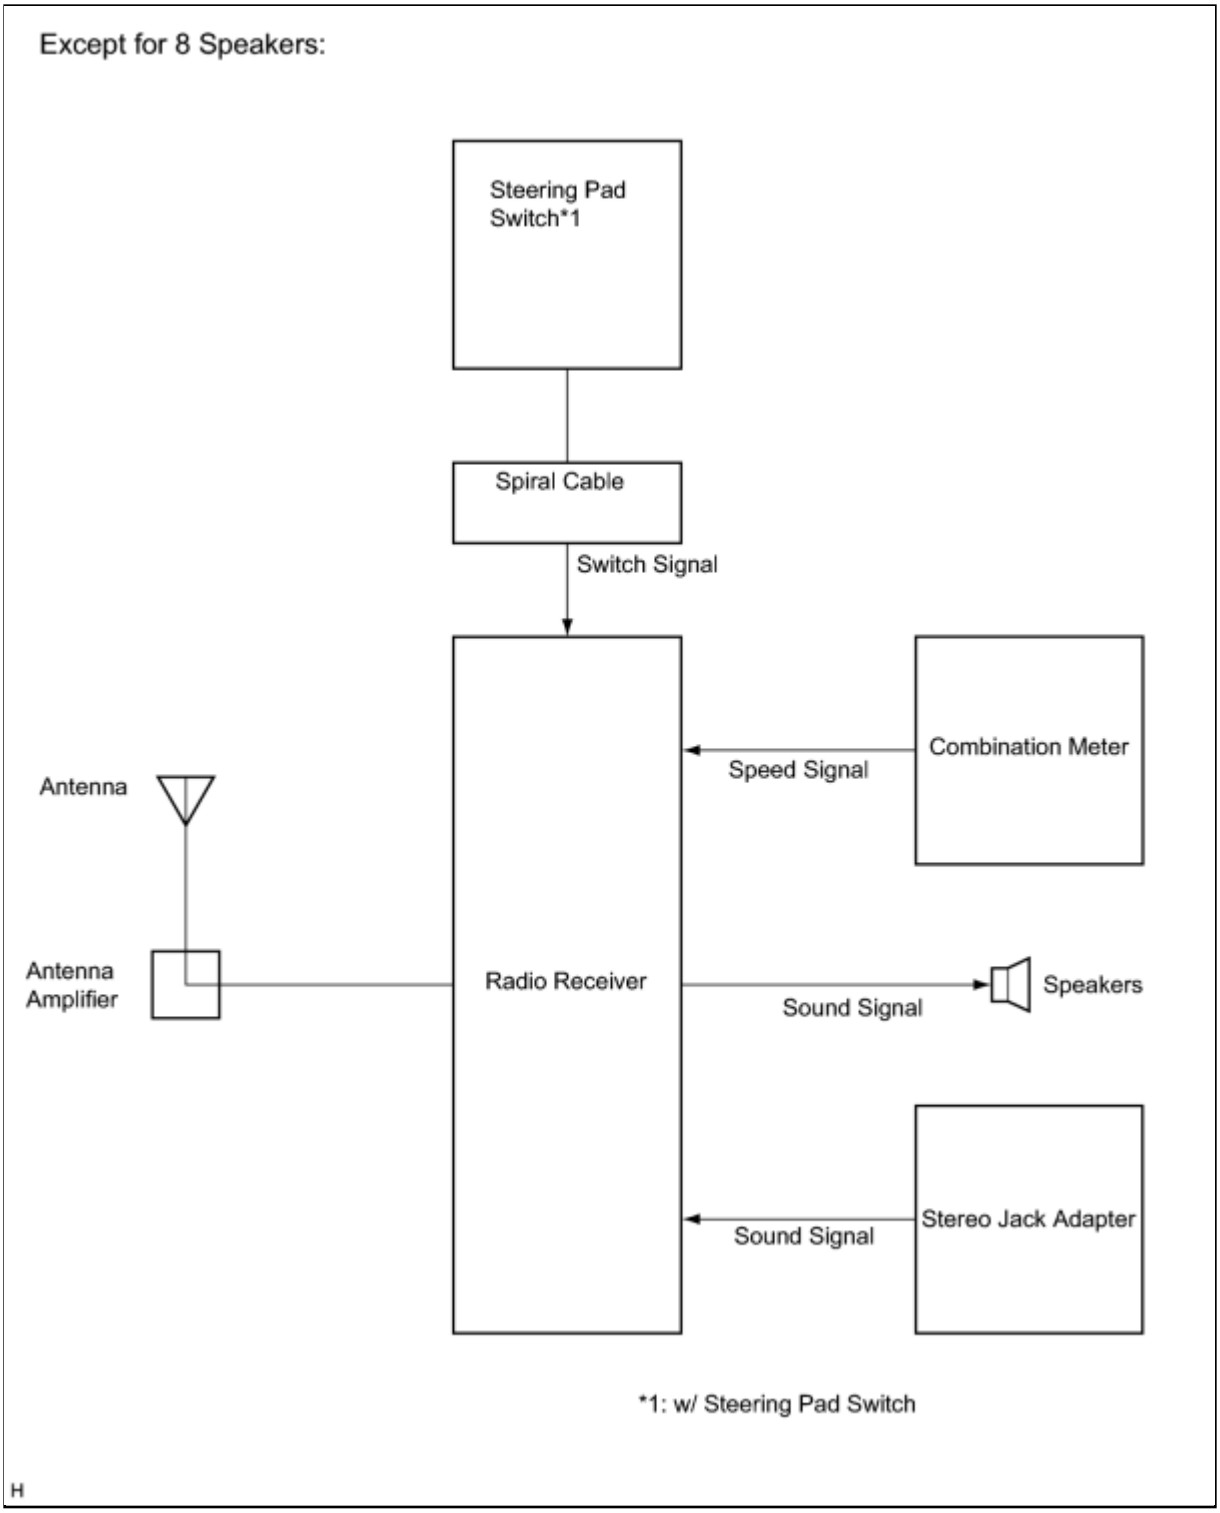
6. "BLUETOOTH" OUTLINE

(a) "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone[*1]) to the radio receiver (the "Bluetooth" system is built in), and use the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.

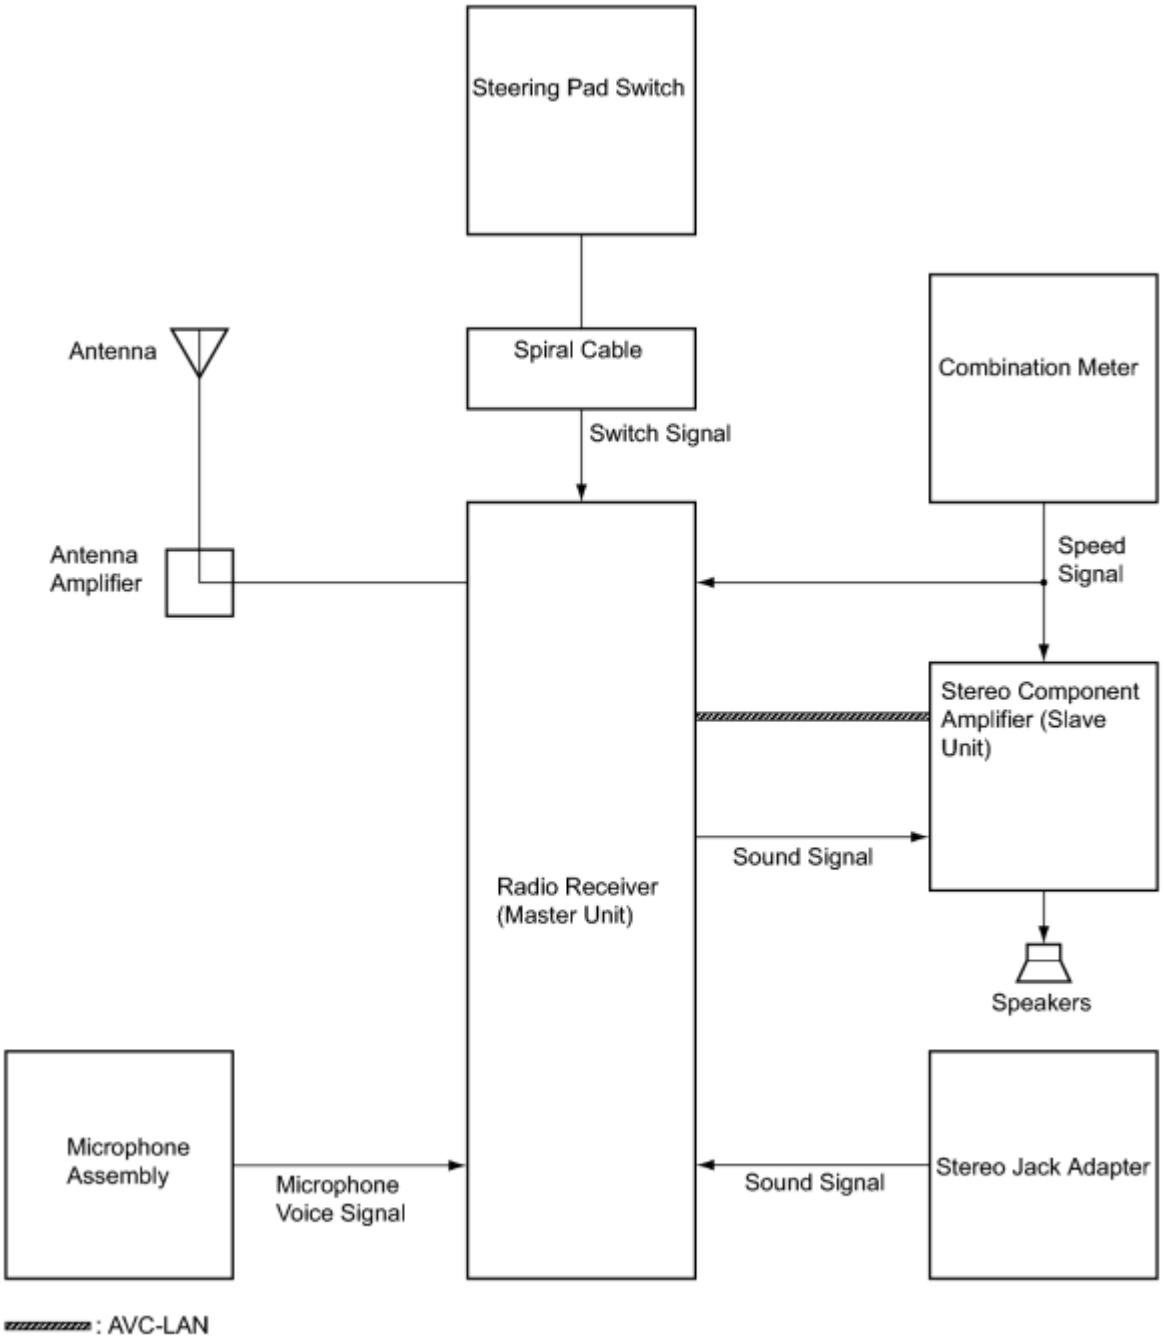
[*1]: Some versions of "Bluetooth" compatible cellular phones may not function.

HINT:



The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

7. ASL (Automatic Sound Levelizer) FUNCTION OUTLINE



(a) The ASL (Automatic Sound Levelizer) function automatically adjusts the sound data in order to enable to hear the clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.). Vehicle speed signals are received from the combination meter and used for the ASL (Automatic Sound Levelizer).

5.	CHECK FOR DTC

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs.

(c) Recheck for DTCs by simulating the operation indicated by the DTCs.

HINT:

- If the system cannot enter diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the malfunctioning part.
- Even if the symptom malfunction is not confirmed, check the DTCs. This is because the system stores past DTCs.
- Check and clear past DTCs. Then recheck for DTCs.

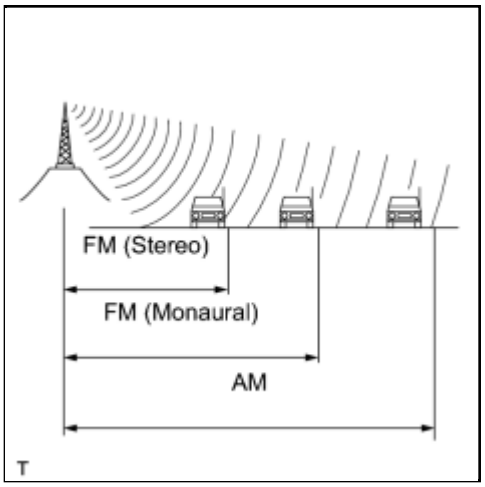
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: IDENTIFICATION OF NOISE SOURCE (2010 Corolla)		



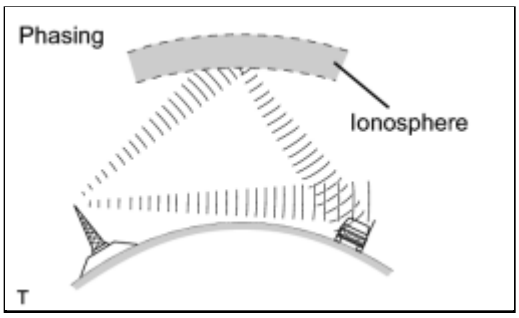
IDENTIFICATION OF NOISE SOURCE

1. Radio Description

(a) Radio frequency band

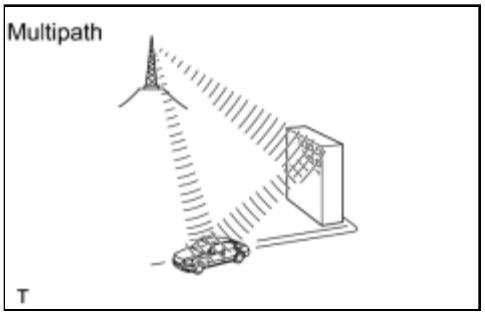
(1) Radio broadcasts use the radio frequency bands shown in the table below.

(b) Service area



(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

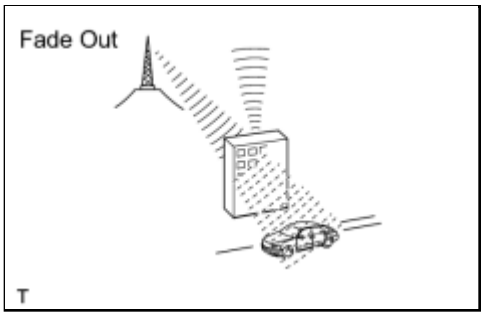
(c) Radio reception problems



HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

(1) Phasing



AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

(2) Multipath

Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

(3) Fade out

Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

(d) Noise problem

Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

RADIO FREQUENCY	NOISE OCCURRENCE CONDITION	PRESUMABLE CAUSE
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Signal phasing
FM	Noise occurs while driving in a specified area	Multipath resulting from a change in FM frequency

Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DTC CHECK / CLEAR

HINT:

If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part INFO **.**

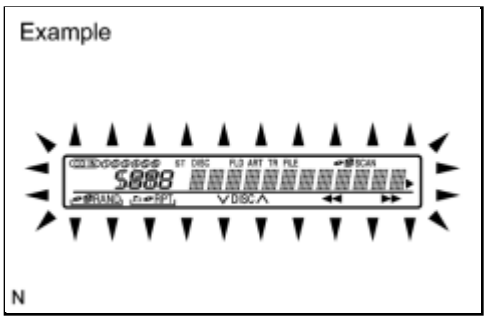
1. STARTING DIAGNOSTIC MODE

(a) Turn the ignition switch to ACC.

(b) Turn off the audio system.

(c) While pressing the preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.

HINT:



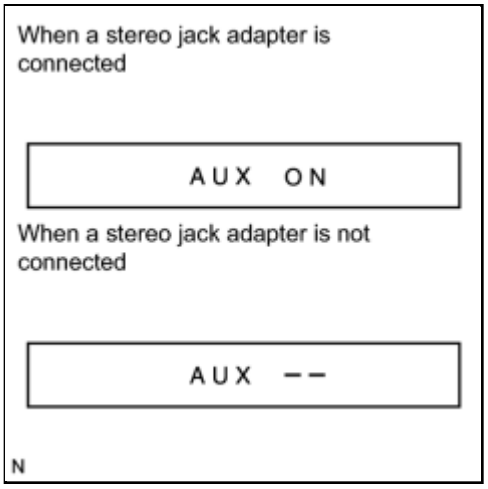
A beep is emitted 3 times and the diagnostic function is activated. The system enters the all element illumination mode and the switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:

Illumination status of all switches and operations of the panel switches can be checked.

(a) Check that all elements are on.



(b) When pressing each panel switch, check that a beep is emitted.

HINT:

Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.

3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.

(b) Check if the stereo jack adapter is recognized.

HINT:

- Vehicles that do not have a stereo jack adapter also have this function.
- This function is not to check connection status to an external device, but to check recognition of the stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.

HINT:

For details of the service check mode, refer to "6. Check DTC" and "7. DTC Clear/Recheck".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the ignition switch off.

6. CHECK DTC

HINT:

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference:

In the system check mode, the system check and the diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

TERM	MEANING
Component code (Physical address)	Three-digit code (in hexadecimal) given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) given to each function and device unit in each device comprising AVC-LAN.

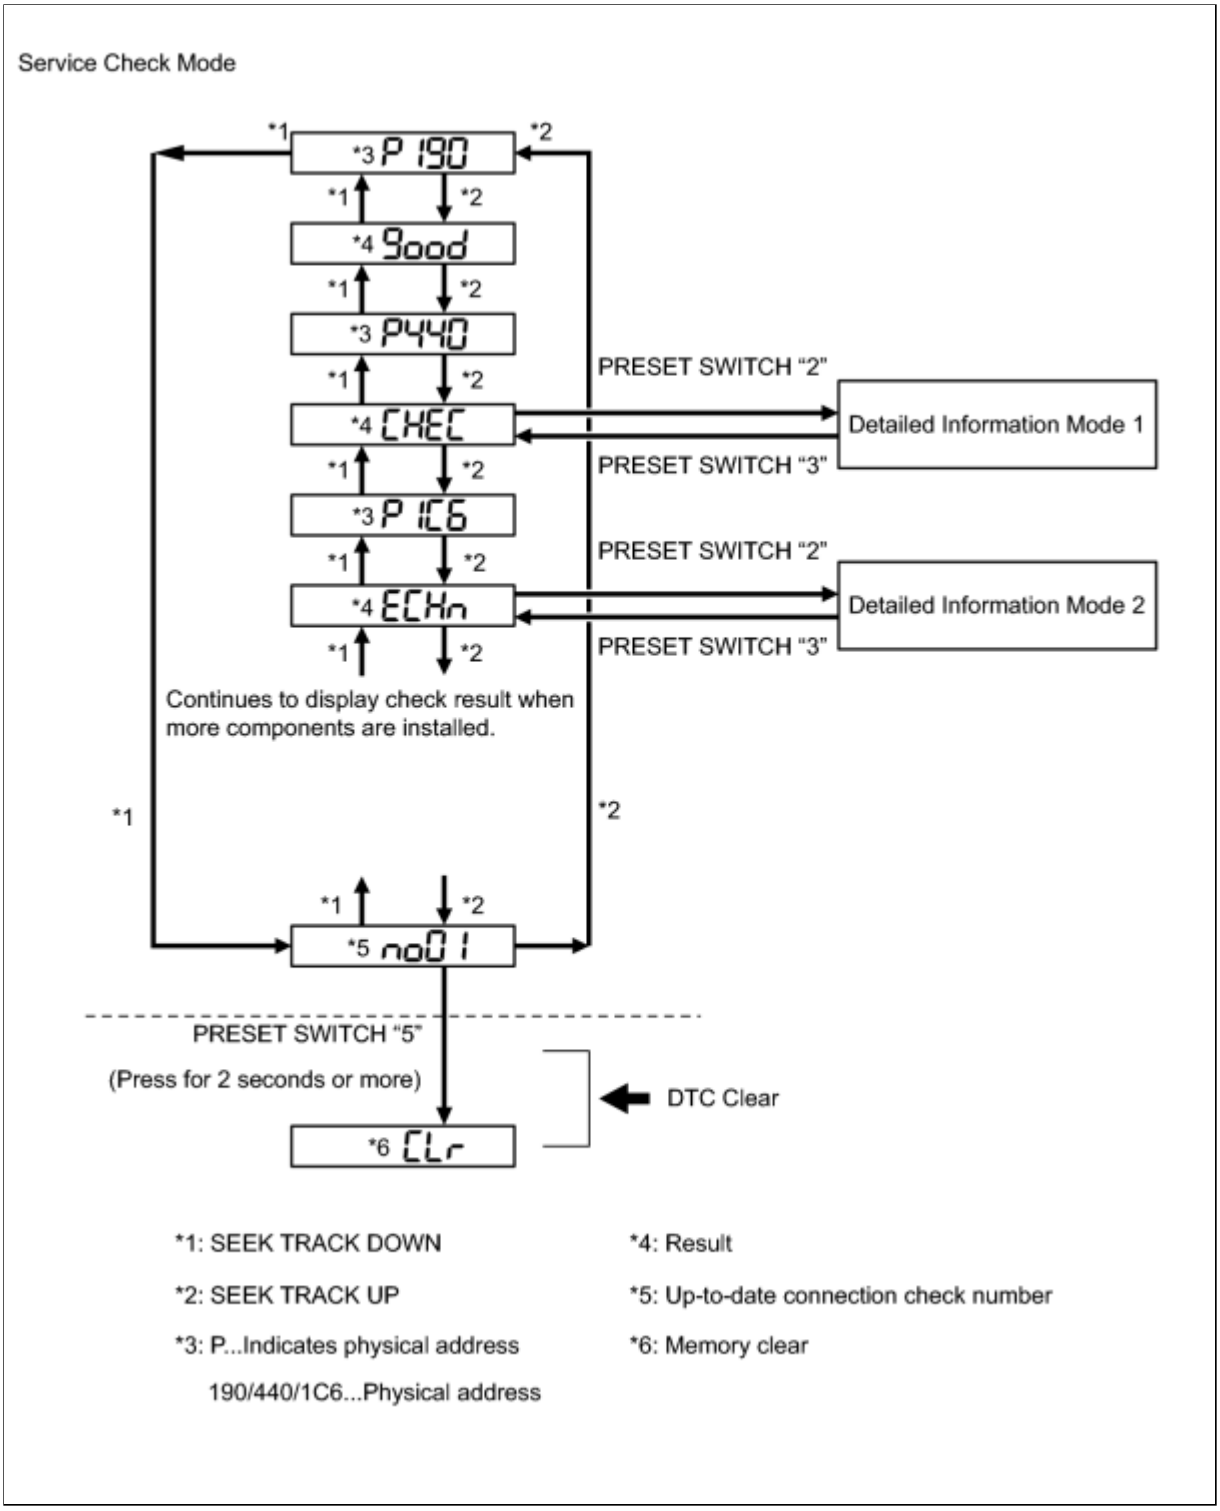
(b) Service check result display

DISPLAY	PREVIOUS TERM	MEANING	ACTION TO BE TAKEN
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to the "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
OLd	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result	Check the power source circuit and the communication circuit of the component indicated by the

DISPLAY	PREVIOUS TERM	MEANING	ACTION TO BE TAKEN
		Request", and "Diagnostic Memory Request".	component code (physical address).

(c) Device name and physical address

PHYSICAL ADDRESS NO.	NAME
190	Radio receiver
440	Stereo component amplifier



(d) Service check mode

(1) Press the "SEEK TRACK" switch to see the check result of each component.

(2) The component code (physical address) is displayed first, and then the check result follows.

HINT:

- If all check results are "good", the system judges that no DTC exists.
- If the preset switch "1" is pressed in the service check mode, service check is performed again.
- This illustration is only an example and may differ for each optional part and output DTCs.

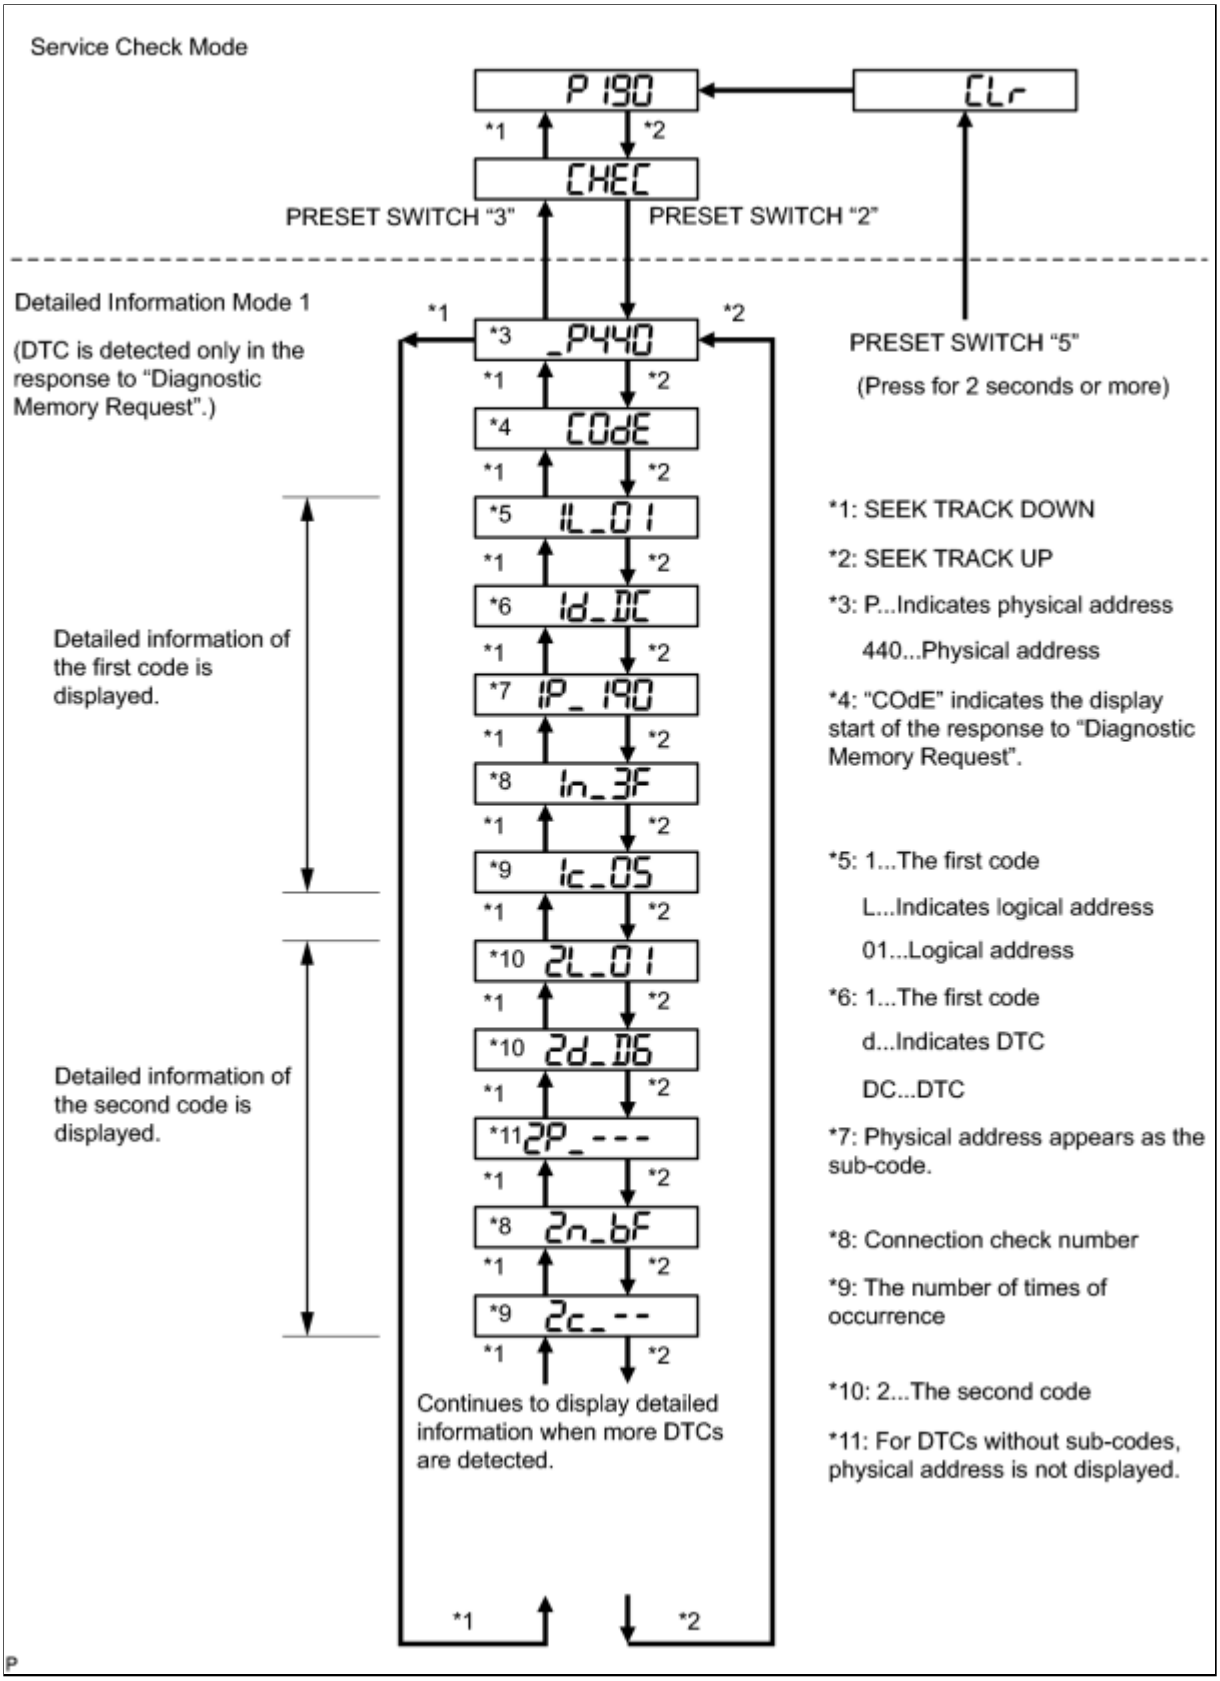
(e) Detailed information mode 1

HINT:

- "Detailed Information Mode 1" is displayed when there is no response to "System Check Result Request" and DTC is detected only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 1".

(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.



(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Select between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:

- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

HINT:

- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

(f) Detailed information mode 2

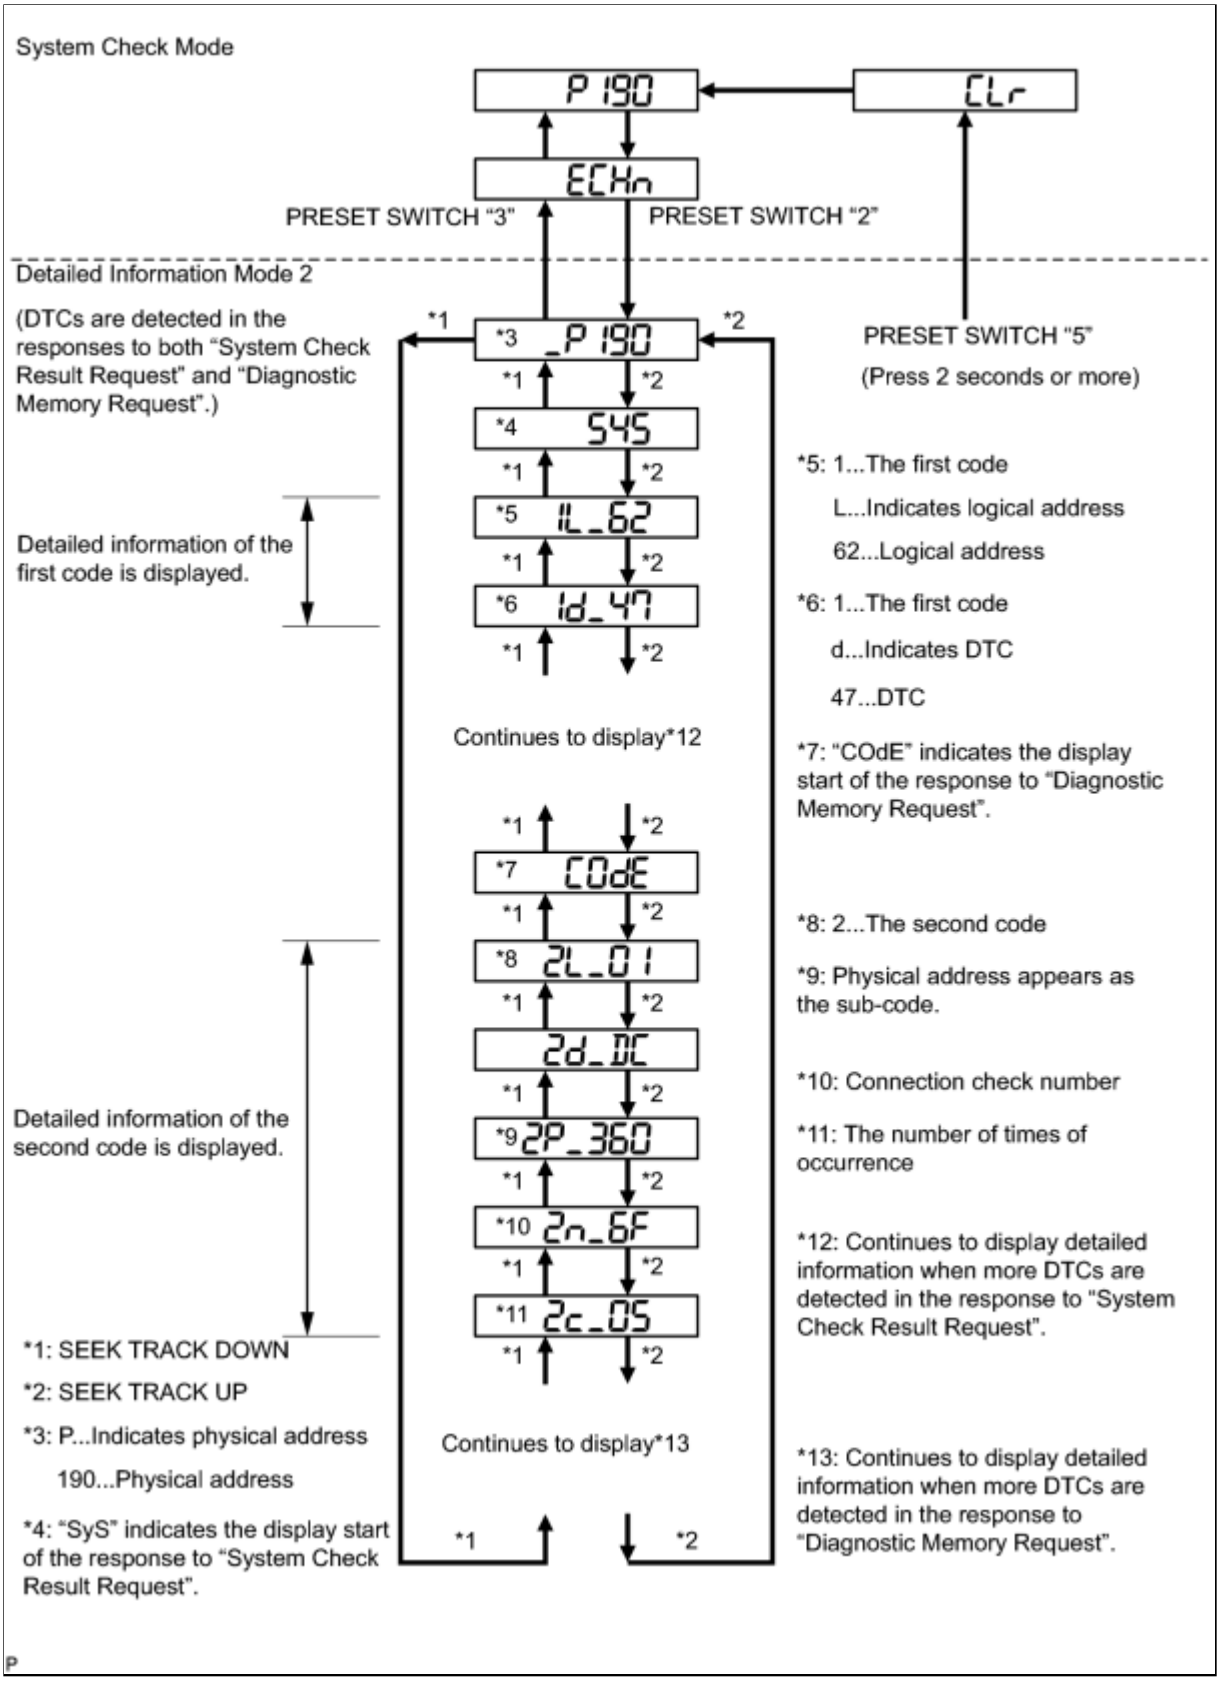
HINT:

- "Detailed Information Mode 2" is displayed when DTCs are detected in the responses to both "System Check Result Request" and "Diagnostic Memory Request".

- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 2".

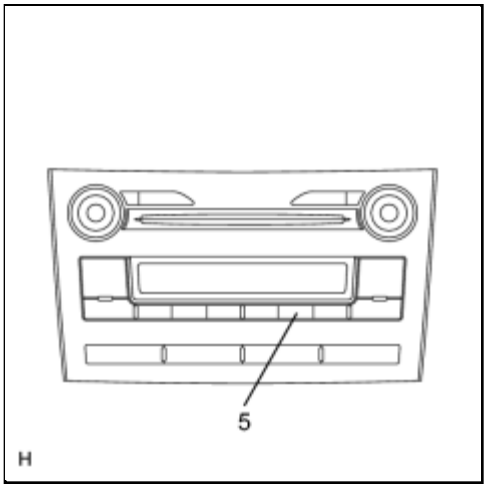
(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.



(3) Press the preset switch "3" to go to the "Service Check Mode".

(4) Select between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 2", refer to the following:

- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.



HINT:

- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" are the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the previously detected DTCs).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
- After the DTC memory is cleared, the "Service Check Mode" is restored.

(b) Clearing the specified DTC Memory (when clearing the specified memory of the previously detected DTC).

(1) When the preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.

HINT:

- A beep sound is emitted once when the DTC memory is completely cleared.
- When the DTC memory is cleared, only the component code (physical address) is displayed for the target component.
- After the DTC memory is cleared, the "Service Check Mode" is restored.
- To check DTCs, press the preset switch "1" and perform the system check again.

(c) Press the preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

DTC	**01-D7**	**Connection Check Error**

DESCRIPTION

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-D6 *1	When either of the following conditions is met: • The device that stores (stored) the code has (had) been disconnected while the ignition switch is ON or ACC. • The master device has (had) been disconnected when this code is stored.	• Radio receiver power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio receiver and the component which has stored this code • Component which has stored this code • Radio receiver
01-D7 *2	When either of the following conditions is met: • The device that stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:

- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the ignition switch ON or ACC, this code is stored.

NOTICE:

- Before starting troubleshooting, be sure to clear the DTCs stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.
- The radio receiver is the master unit.
- Be sure to clear and recheck for the DTCs after the inspection is completed to confirm that no DTCs are output.

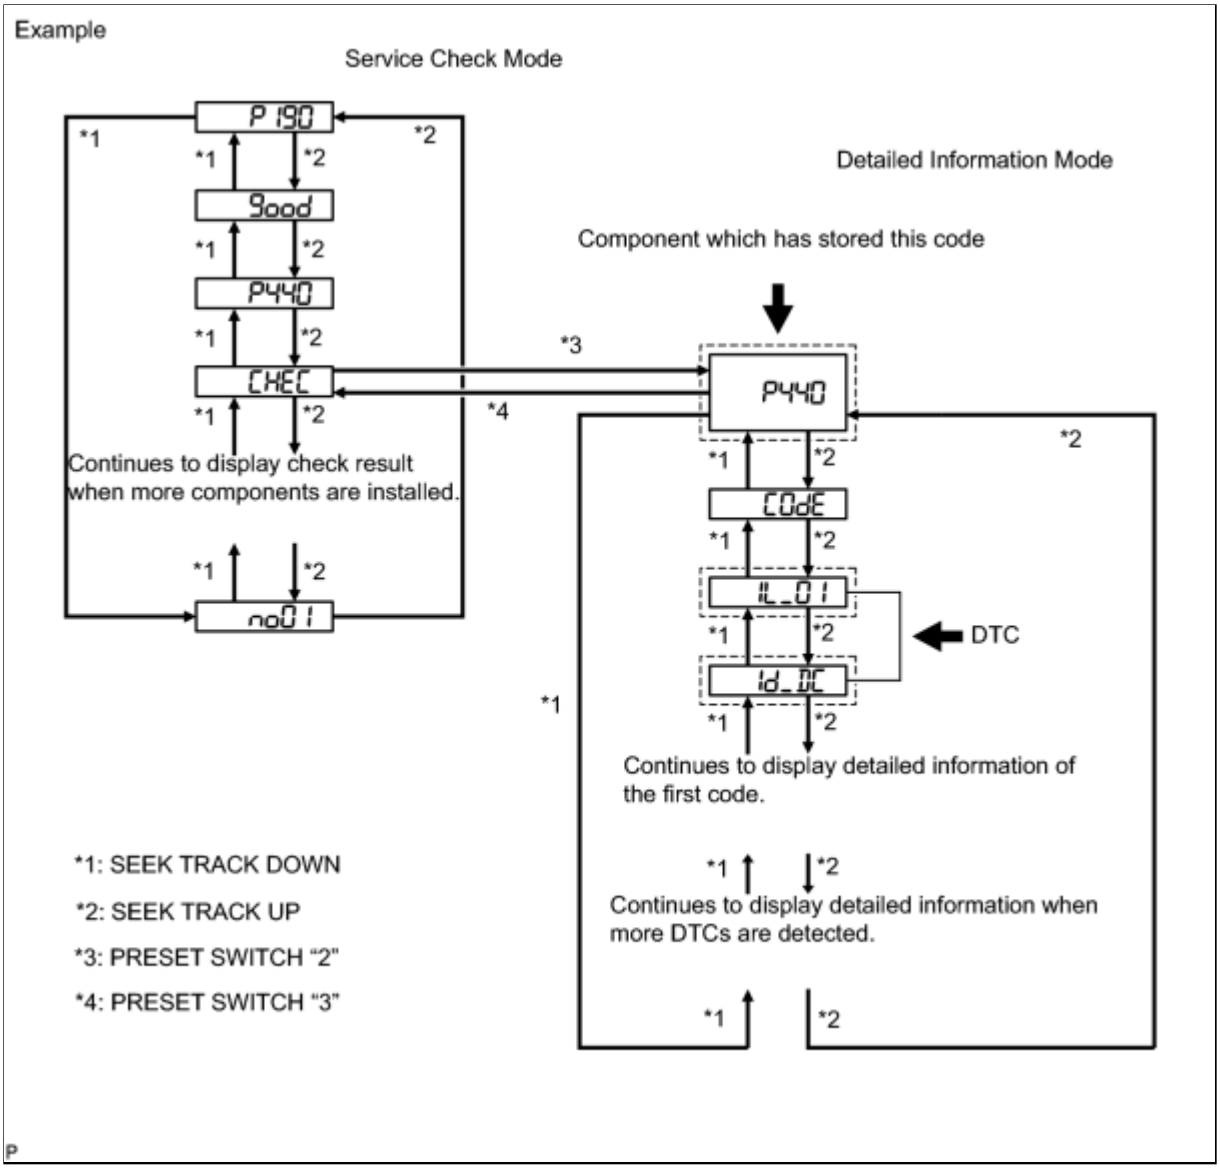
INSPECTION PROCEDURE

NOTICE:

Be sure to read Description before performing the following procedures.

PROCEDURE

1.	**CHECK RADIO RECEIVER POWER SOURCE CIRCUIT**



Refer to Radio Receiver Power Source Circuit INFO .

If the power source circuit is operating normally, proceed to the next step.

NEXT

2.	**IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE**

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change the mode to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table

COMPONENT	PHYSICAL ADDRESS
Stereo component amplifier	440

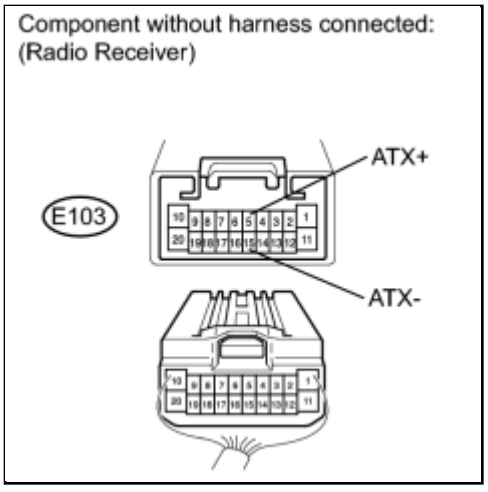
HINT:

- "P440" set by the stereo component amplifier shown in the preceding illustration as an example.
- For details of the DTC display, refer to DTC Check/Clear INFO .

NEXT

3.	**CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE**

(a) Inspect the power source circuit of the component which has stored this code.



If the power source circuit is operating normally, proceed to the next step.

4.	**INSPECT RADIO RECEIVER**

(a) Disconnect the radio receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E103-5 (ATX+) - E103-15 (ATX-)	Always	60 to 80 Ω

NG ▶ REPLACE RADIO RECEIVER

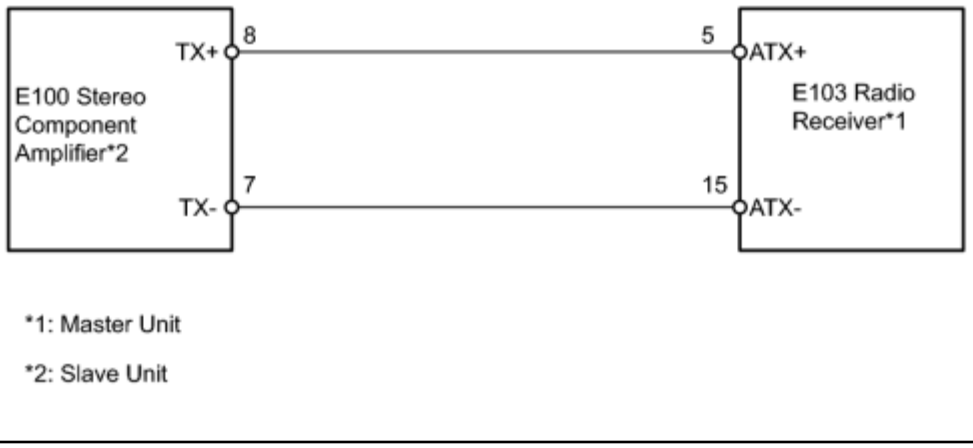
5.	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:

For details of the connectors, refer to Terminals of ECU INFO **.**

(a) Referring to the following AVC-LAN Wiring Diagram, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.



(1) Disconnect all connectors between the radio receiver and the component which has stored this code.

(2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.

OK:

There is no open or short circuit.

*2: Slave Unit

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.	**REPLACE COMPONENT WHICH HAS STORED THIS CODE**

(a) Replace the component which has stored this code with a known good one and check if the same problem occurs again.

OK:

Same problem does not occur.

NG ▶ **REPLACE RADIO RECEIVER**

OK ▶ **END**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
01-DD *1	The device that should be the master has been disconnected after engine start.	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code
01-E1 *2	The AMP device records that the AMP output does not function even while the source device operates.	

HINT:

***1: This code may be stored if the engine is started and the ignition switch is turned to START again. (Key type ignition switch only)**

***2: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.**

NOTICE:

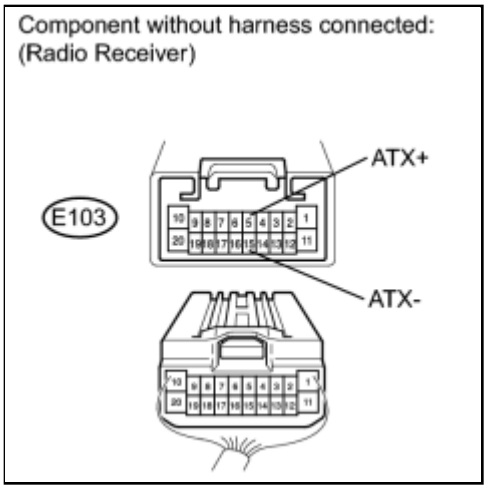
- Before starting troubleshooting, be sure to clear the DTCs stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.
- The radio receiver is the master unit.
- Be sure to clear and recheck for the DTCs after the inspection is completed to confirm that no DTCs are output.

INSPECTION PROCEDURE

NOTICE:

Be sure to read Description before performing the following procedures.

PROCEDURE



1.	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to Radio Receiver Power Source Circuit INFO .

If the power source circuit is operating normally, proceed to the next step.

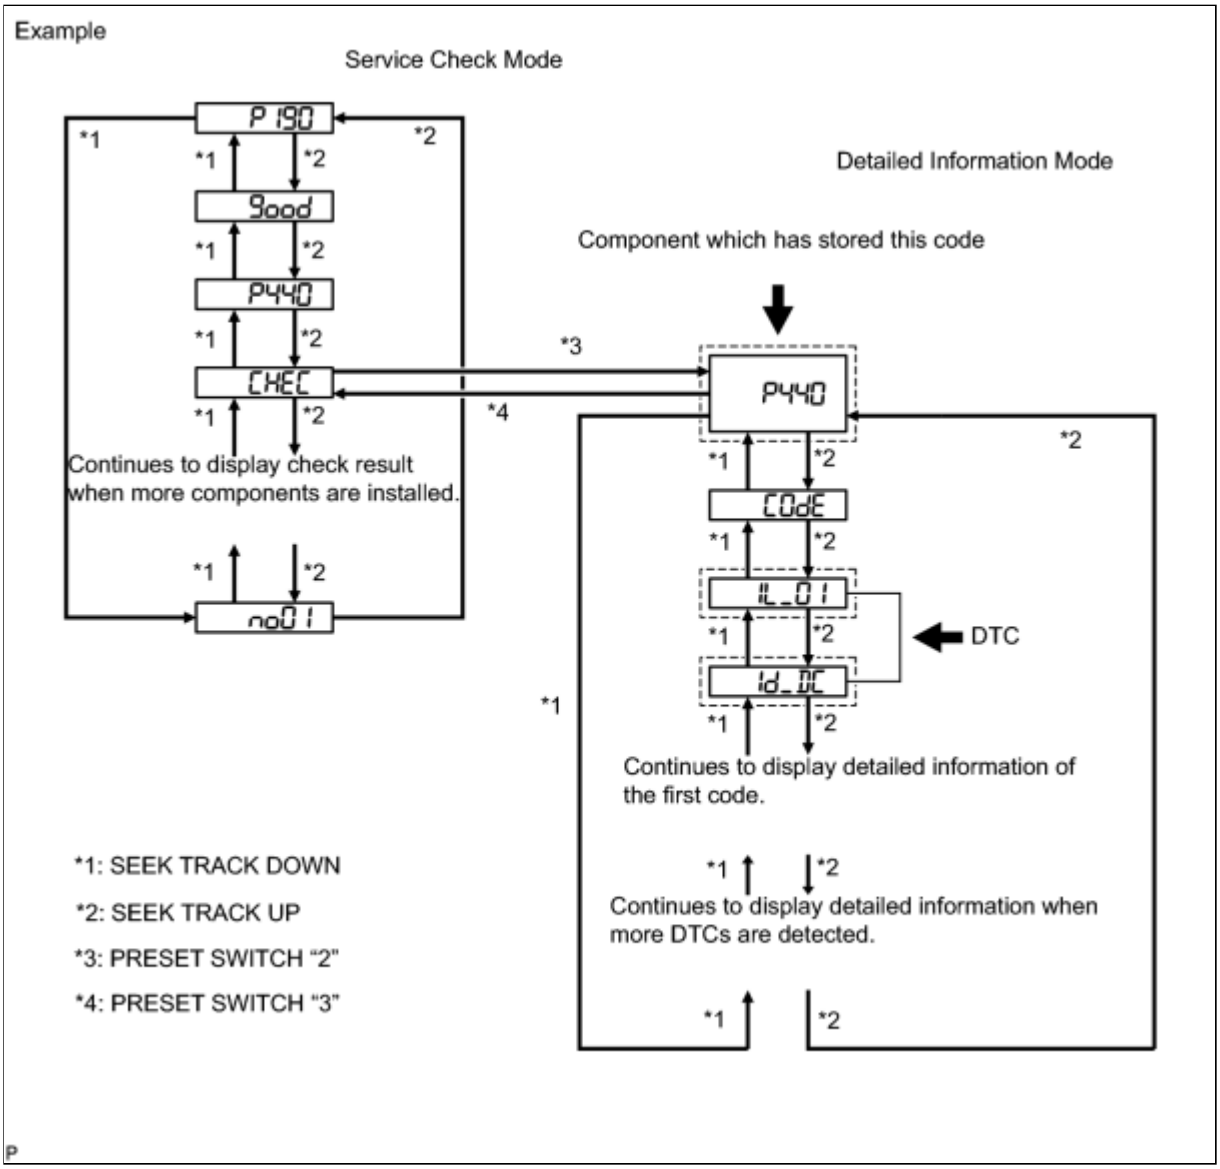
NEXT

2.	INSPECT RADIO RECEIVER

(a) Disconnect the radio receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E103-5 (ATX+) - E103-15 (ATX-)	Always	60 to 80 Ω

NG ▶ **REPLACE RADIO RECEIVER**

OK

3.	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

(b) Press the preset switch "3" to change the mode to "Detailed Information Mode".

(c) Identify the component which has stored this code.

Component Table

COMPONENT	PHYSICAL ADDRESS
Stereo component amplifier	440

HINT:

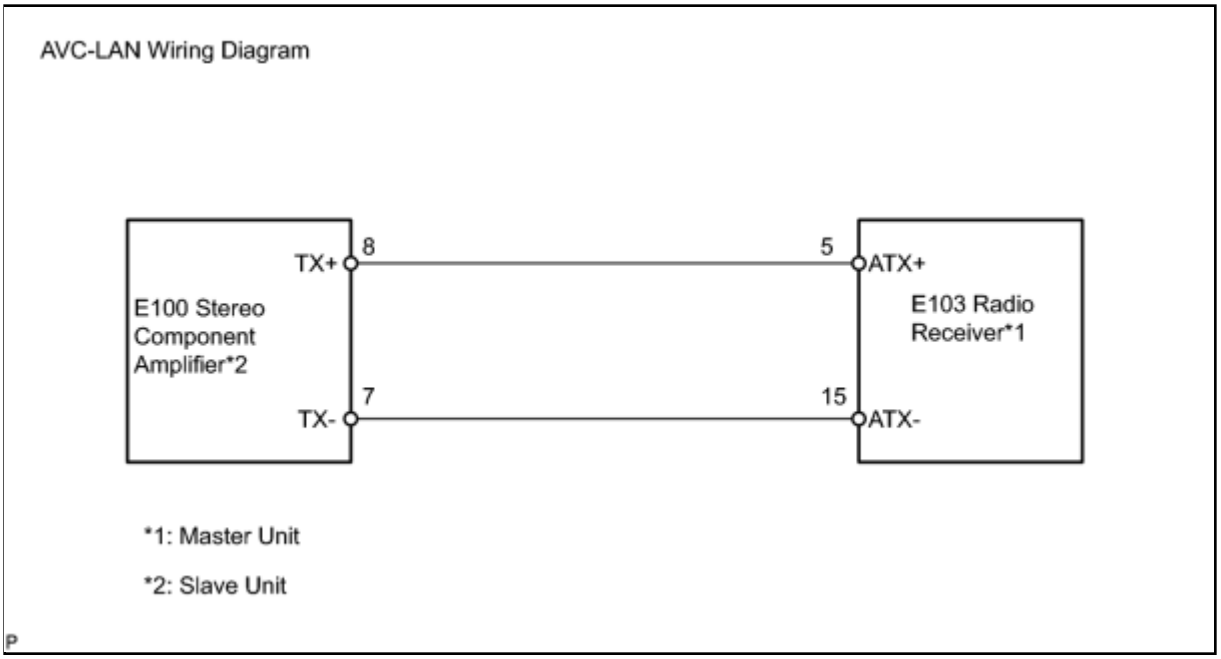
- "P440" set by the stereo component amplifier is shown in the preceding illustration as an example.
- For details of the DTC display, refer to DTC Check/Clear INFO .

NEXT

4.	**CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)**

HINT:

For details of the connectors, refer to Terminals of ECU INFO .



(a) Referring to the following AVC-LAN Wiring Diagram, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.

(1) Disconnect all connectors between the radio receiver and the component which has stored this code.

(2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.

OK:

There is no open or short circuit.

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5.	**REPLACE RADIO RECEIVER**

(a) Replace the radio receiver with a known good one and check if the same problem occurs again.

OK:

Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK → **END**

C0-40	Antenna is not connected	• Antenna cord • Satellite radio antenna • Radio receiver
C0-41	Short in antenna circuit	

INSPECTION PROCEDURE

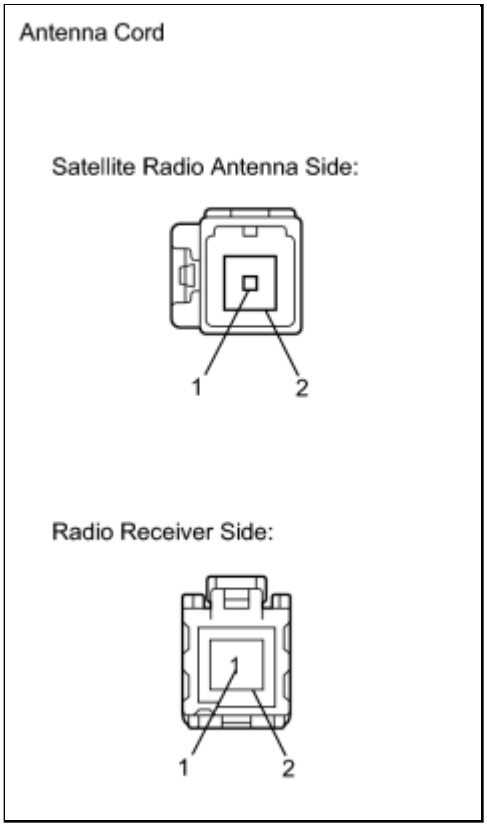
HINT:

After the inspection is completed, clear the DTCs.

PROCEDURE

1.	**CHECK CONNECTOR CONNECTION CONDITION**

(a) Check that the satellite radio antenna cord is securely connected to the radio receiver connector.



OK:

The cord is securely connected.

NG ▶ **RECONNECT CONNECTOR CORRECTLY**

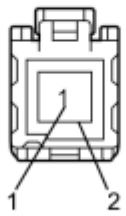
OK ▼

2.	CHECK ANTENNA CORD

(a) Disconnect the satellite radio antenna connector and the radio receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 1	Always	Below 1 Ω
2 - 2	Always	Below 1 Ω
1 - Body ground	Always	10 kΩ or higher
2 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE ANTENNA CORD**

OK ▼

3.	INSPECT SATELLITE RADIO ANTENNA

Component without harness connected:
(Satellite Radio Antenna)

(a) Disconnect the satellite radio antenna connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	27.5 to 47.5 Ω

NG ▶ **REPLACE SATELLITE RADIO ANTENNA**

OK ▼

4.	REPLACE RADIO RECEIVER

(a) Replace the radio receiver with a known good one and check if the same problem occurs again.

(1) Clear the DTCs INFO .

(2) Recheck for DTCs and check if the same trouble occurs again.

OK:

Same problem does not occur.

NG ▶ **REPLACE SATELLITE RADIO ANTENNA**

OK

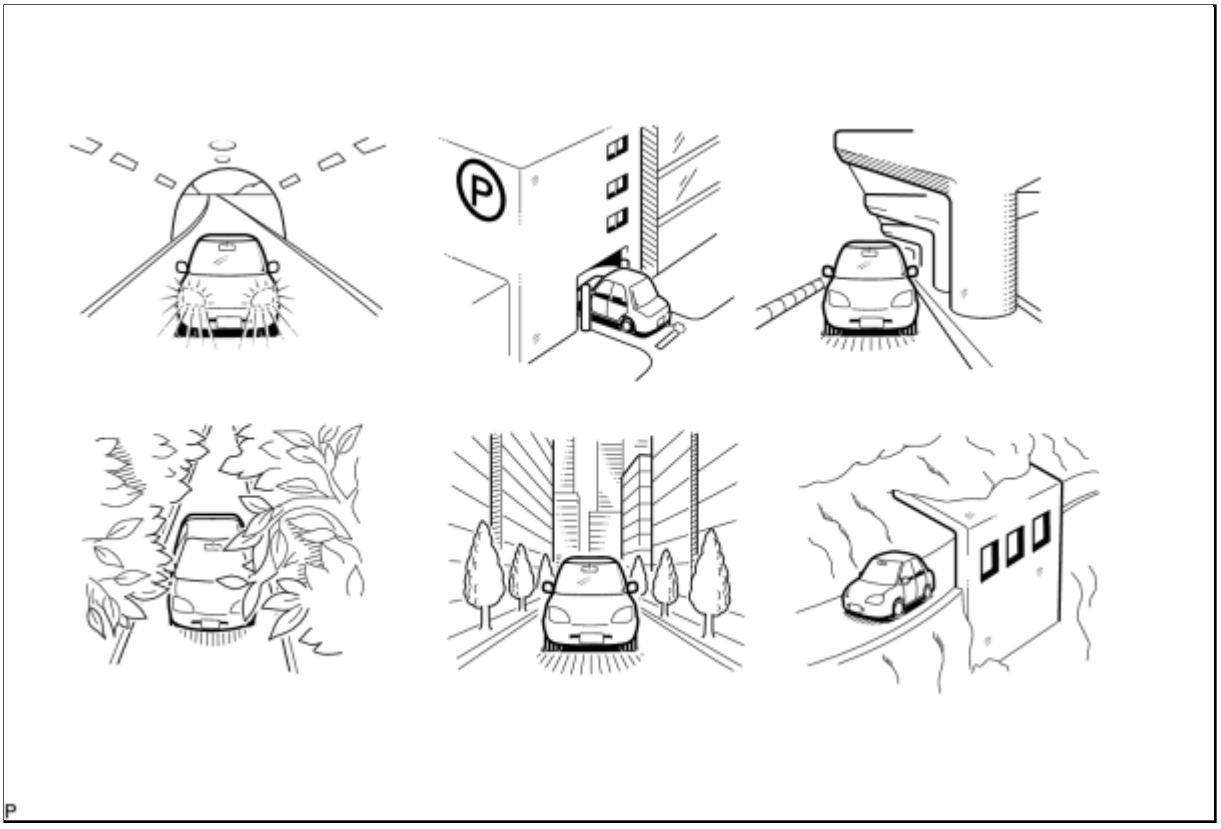
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Satellite Radio Broadcast cannot be Received (2010 Corolla)		

Satellite Radio Broadcast cannot be Received

INSPECTION PROCEDURE



NOTICE:

- Some satellite radio broadcast require payment. A contract must be made between a satellite radio company and the user. If the contract expires, the broadcast will not be able to be listened to or viewed.
- After replacing the radio receiver assembly of vehicles subscribed to pay-type satellite radio broadcasts, the XM Radio ID registration is necessary.

PROCEDURE

1.	**CHECK SURROUNDINGS**

(a) Check if the vehicle is in an environment where reception is difficult due to something blocking the area above the vehicle.

HINT:

If the area above the vehicle is blocked, such as when in a building or tunnel, reception may not be possible.

OK:
Area above the vehicle is not blocked.

NG ▶ **END (MOVE VEHICLE TO LOCATION WHERE RECEPTION IS BETTER)**

OK ▼

2.	**CHECK RADIO RECEIVER**

(a) Check if CH001 (free broadcast) can be received.

OK:
CH001 can be received.

NG ▶ **CHECK DISPLAY**

OK

3.	CHECK DISPLAY SETTING

(a) Check the display screen.

Result:

RESULT	PROCEED TO
"UPDATING" is displayed	A
"-----" is displayed	B
None of the displays above are shown	C

C → **CHECK DISPLAY**

B → **THERE IS NO SONG/PROGRAM TITLE OR ARTIST NAME/FEATURE ASSOCIATED WITH CHANNEL AT THAT TIME**

A

4.	CHECK CONTRACT CONDITIONS

(a) Check if the pay-type contract has been extended, or if the contract period has ended.

OK:

Pay-type contract is valid.

NG → **TO RECEIVE PAY-TYPE BROADCASTS, CONTRACT MUST BE MADE WITH SATELLITE RADIO TUNER COMPANY**

OK

5.	PERFORM ACTIVATION REFRESH

(a) Perform activation refresh by referring to the satellite radio service web site (http://www.xmradio.com/refresh/).

HINT:

The XM radio ID that is necessary to perform activation refresh can be displayed when CH000 is selected on the satellite radio.

OK:

Malfunction disappears.

NG ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▶ **END**

6.	CHECK DISPLAY

(a) Check the display screen.

Result:

RESULT	PROCEED TO
"ANTENNA" is displayed	A
"NO SIGNAL" is displayed	B
"LOADING" is displayed	B
"OFF AIR" is displayed	C
After "---" is displayed, display automatically switches to CH001	D
None of the displays above are shown	E

E ▶ **CONFIRM CURRENTLY SELECTED CHANNEL**

D ▶ **CHANNEL BROADCAST HAS ENDED CONDITION (CONFIRM WITH RADIO STATION)**

C ▶ **CHANNEL IS CURRENTLY NOT BEING BROADCAST. BROADCAST CAN BE LISTENED TO OR VIEWED WHEN IT IS BACK ON AIR CONDITION (CONFIRM WITH RADIO STATION)**

B ▶ **END (MOVE VEHICLE TO LOCATION WHERE**

RECEPTION IS BETTER)

A

7.	CHECK CONNECTION OF ANTENNA CABLE

(a) Check if the satellite radio antenna cable is securely connected to the satellite radio tuner.

OK:

Satellite radio antenna cable is securely connected.

NG ▶ SECURELY CONNECT SATELLITE RADIO ANTENNA CABLE

OK ▶ REPLACE SATELLITE RADIO ANTENNA

8.	CONFIRM CURRENTLY SELECTED CHANNEL

(a) Confirm if CH000 is currently selected.

OK:

CH000 is selected.

NG ▶ PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE

OK ▶ END (CH000 HAS NO SOUND. SELECT ANOTHER CHANNEL)

1.	**CHECK RADIO RECEIVER**

(a) Check radio condition.

Result:

RESULT	PROCEED TO
Broadcast cannot be selected	A
Broadcast can be selected, but selection can not be memorized	B

B ▶ **CHECK RADIO RECEIVER**

A ▶ **REPLACE RADIO RECEIVER**

2.	**CHECK RADIO RECEIVER**

(a) Check the number of preset channels.

OK:

18 channels have already been preset.

NG ▶ CHECK BATTERY

OK ▶ END (ONLY 18 CHANNELS CAN BE PRESET)

3.	CHECK BATTERY

(a) Check if the battery was replaced.

OK:

Battery was not replaced.

NG ▶ ADD PRESET CHANNEL INTO MEMORY AGAIN

OK ▶ REPLACE RADIO RECEIVER

4.	ADD PRESET CHANNEL INTO MEMORY AGAIN

(a) Check if the preset channels that have been cleared can be added into memory again.

OK:

Preset channels can be added into memory.

Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Noise Occurs (2010 Corolla)		

Noise Occurs

INSPECTION PROCEDURE

PROCEDURE

1.	**NOISE CONDITION**

(a) Check from which direction the noise comes (front left or right, rear left or right).

(1) Check from which direction the noise comes.

OK:

The location of the noise source can be determined.

NG ▶ **CHECK NOISE CONDITIONS**

OK ▼

2.	**CHECK SPEAKERS**

(a) Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation, or other malfunctions.

Result:

CONDITION	PROCEED TO
A speaker is installed incorrectly	A
Foreign objects are in the speaker	B
A speaker cone paper is broken	C
No malfunction is found	D

C ▶ **REPLACE SPEAKER**

B REMOVE FOREIGN OBJECT

A REINSTALL SPEAKER

D

3.	CHECK NOISE CONDITIONS

(a) Check the noise condition.

HINT:

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

CONDITION UNDER WHICH NOISE OCCURS	NOISE SOURCE
Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the blink of the turn signal.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the chart's left column, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the respective noise filter.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Troubleshoot noises in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

OK:

The noise source cannot be determined.

NG ▶ **REPAIR OR REPLACE NOISE SOURCE**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Pressing Power Switch does not Turn on System

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK VEHICLE CONDITION**

(a) Check that conditions in the cabin are not likely to cause condensation.

HINT:

This problem occurs if the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.

OK:

Condensation is not likely being produced.

NG ▶ **DRY OUT CABIN AND RECHECK CONDITION**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK RADIO RECEIVER**

(a) Check radio receiver setting.

(1) Check that the volume is not set to "0".

(2) Check that "MUTE" is off.

OK:

The volume is not set to "0" and "MUTE" is off.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK IF A PROPER CD IS INSERTED**

(a) Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.

OK:

Normal CD.

HINT:

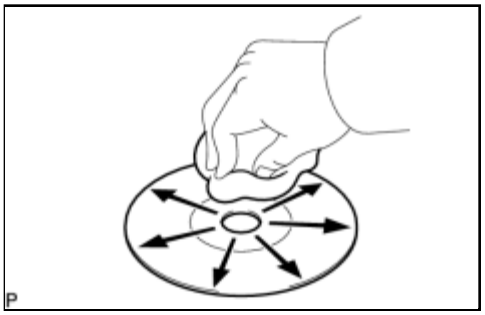
- Translucent or uniquely-shaped CDs cannot be played.
- CDs with adhesive paper labels should not be played.
- Commercial audio CDs can be played.
- CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.
- For details on playable CDs, refer to the Owner's Manual.

NG ▶ **CHANGE DISC**

OK ▼

2.	**CHECK THAT CD IS INSERTED PROPERLY**

(a) Check whether or not the CD is inserted upside down.



OK:

CD is properly inserted.

NG ▶ **INSERT CD PROPERLY**

OK

3.	CHECK CD

(a) Clean the disc by wiping it with a soft cloth from the inside to the outside in a radial direction.

OK:

Malfunction disappears.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

NG ▶ **REPLACE CD AND RECHECK**

OK ▶ **END**

4.	REPLACE CD AND RECHECK

(a) Replace the CD with a known good one and check that the malfunction disappears.

OK:

Malfunction disappears.

Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Radio Broadcast cannot be Received or Poor Reception (2010 Corolla)		

Radio Broadcast cannot be Received or Poor Reception

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK RADIO RECEIVER**

(a) Check the radio's automatic station search function.

(1) Check the radio's automatic station search function by activating it.

OK:

The radio's automatic station search function works properly.

NG ▶ **CHECK OPTIONAL COMPONENTS**

OK ▶ **REPLACE RADIO RECEIVER**

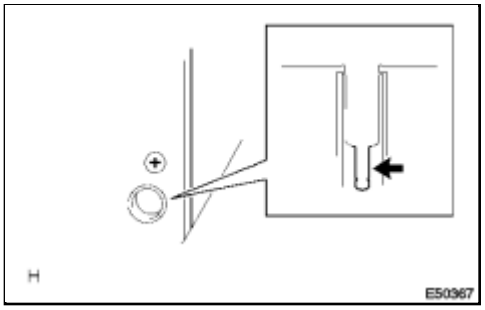
2.	**CHECK OPTIONAL COMPONENTS**

(a) Check optional components (sun-shade film, telephone antenna, etc.).

(1) Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

OK:

Optional components are installed.



NOTICE:

Do not remove any optional components installed by the customer without his or her consent.

NG ▶ **CHECK RADIO RECEIVER**

OK ▶ **REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)**

3.	**CHECK RADIO RECEIVER**

(a) Preparation for check

(1) Remove the antenna plug from the radio receiver.

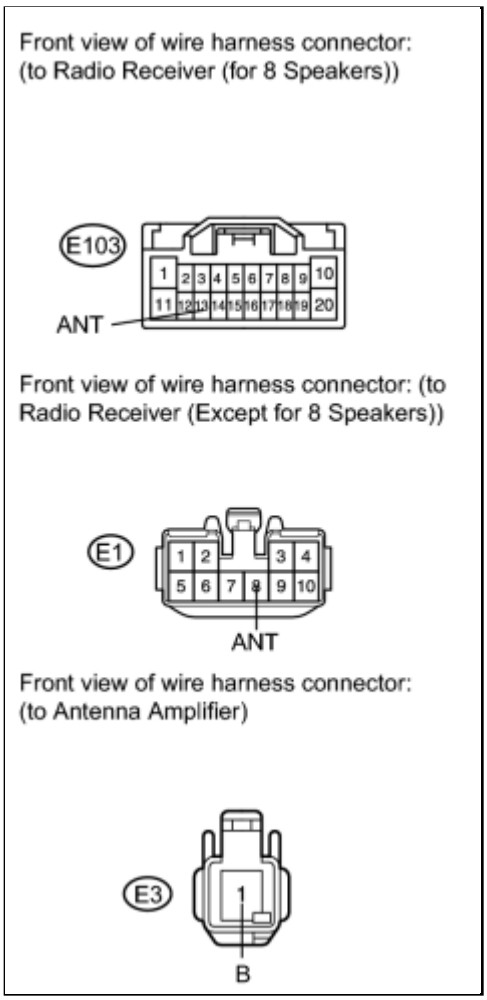
(b) Check for noise

(1) Turn the ignition switch to ACC with the radio receiver connector connected.

(2) Turn the radio on and tune into AM mode.

(3) Place a screwdriver, thin wire, or other metal object on the radio receiver's antenna jack and check that noise can be heard from the speaker.

OK:



Noise can be heard from the speaker.

NG ▶ **REPLACE RADIO RECEIVER**

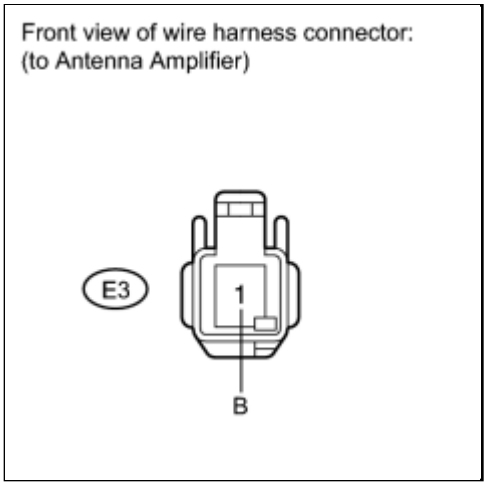
OK ▼

4.	**CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - ANTENNA AMPLIFIER)**

(a) Disconnect the radio receiver connector and the antenna amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E103-13 (ANT) - E3-1 (B)*1	Always	Below 1 Ω
E1-8 (ANT) - E3-1 (B)*2	Always	Below 1 Ω
E103-13 (ANT) - Body ground*1	Always	10 kΩ or higher
E1-8 (ANT) - Body ground*2	Always	10 kΩ or higher

- *1: for 8 Speakers
- *2: Except for 8 Speakers

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	INSPECT RADIO RECEIVER

(a) Reconnect the radio receiver connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E3-1 (B) - Body ground	Ignition switch ON Radio switch ON	11 to 14 V

NG ▶ **REPLACE RADIO RECEIVER**

OK ▼

6.	CHECK ANTENNA CORD

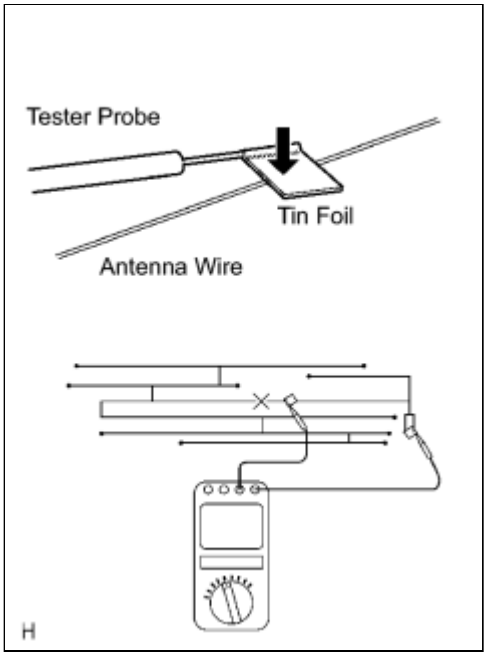
(a) Remove the antenna plug of the radio receiver and antenna.

(b) Measure the resistance between the antenna and radio receiver to check for an open circuit in the antenna cord.

Standard resistance:

Below 1 Ω

(c) Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.



Standard resistance:

10 kΩ or higher

NG ▶ REPLACE ANTENNA CORD

OK ▼

7.	CHECK GLASS ANTENNA

(a) Check for continuity of the antenna.

HINT:

Check for continuity at the center of each antenna wire as shown in the illustration.

NOTICE:

When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring resistance, wrap a piece of tin foil around the tip of the negative probe and press the foil against the wire with your finger, as shown in the illustration.

OK:

There is continuity in the antenna.

NG ▶ REPAIR GLASS ANTENNA

OK ▼

8.	REPLACE AMPLIFIER ANTENNA

(a) Replace the amplifier antenna and check if radio broadcasts can be received normally.

OK:

Radio broadcasts can be received.

NG ▶ REPLACE RADIO RECEIVER

OK ▼

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CD**

(a) Check the CD.

OK:

The CD is clean.

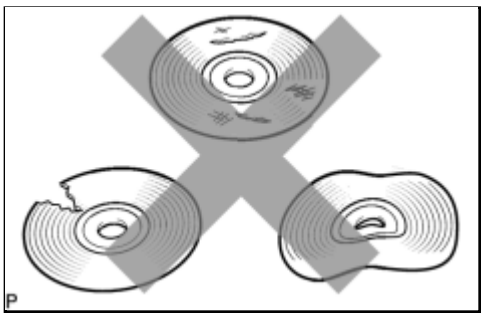
HINT:

If dirt is on the CD surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NOTICE:

Do not use a conventional record cleaner or anti-static preservative.

NG ▶ **CLEAN CD**



OK ▼

2.	**CHECK CD**

(a) Check that the CD is not deformed or cracked.

OK:

No deformation or cracks on the CD.

NG ▶ CHANGE DISC

OK ▼

3.	CHECK OPERATION

(a) Check if the problem recurs using a known good CD.

OK:
The problem does not occur.

NG ▶ CHECK RADIO RECEIVER

OK ▶ END

4.	CHECK RADIO RECEIVER

(a) Check the radio receiver installation condition.

(1) Check that the radio receiver is properly installed.

OK:
Radio receiver is properly installed.

NG ▶ REINSTALL RADIO RECEIVER PROPERLY

OK ▶ REPLACE RADIO RECEIVER

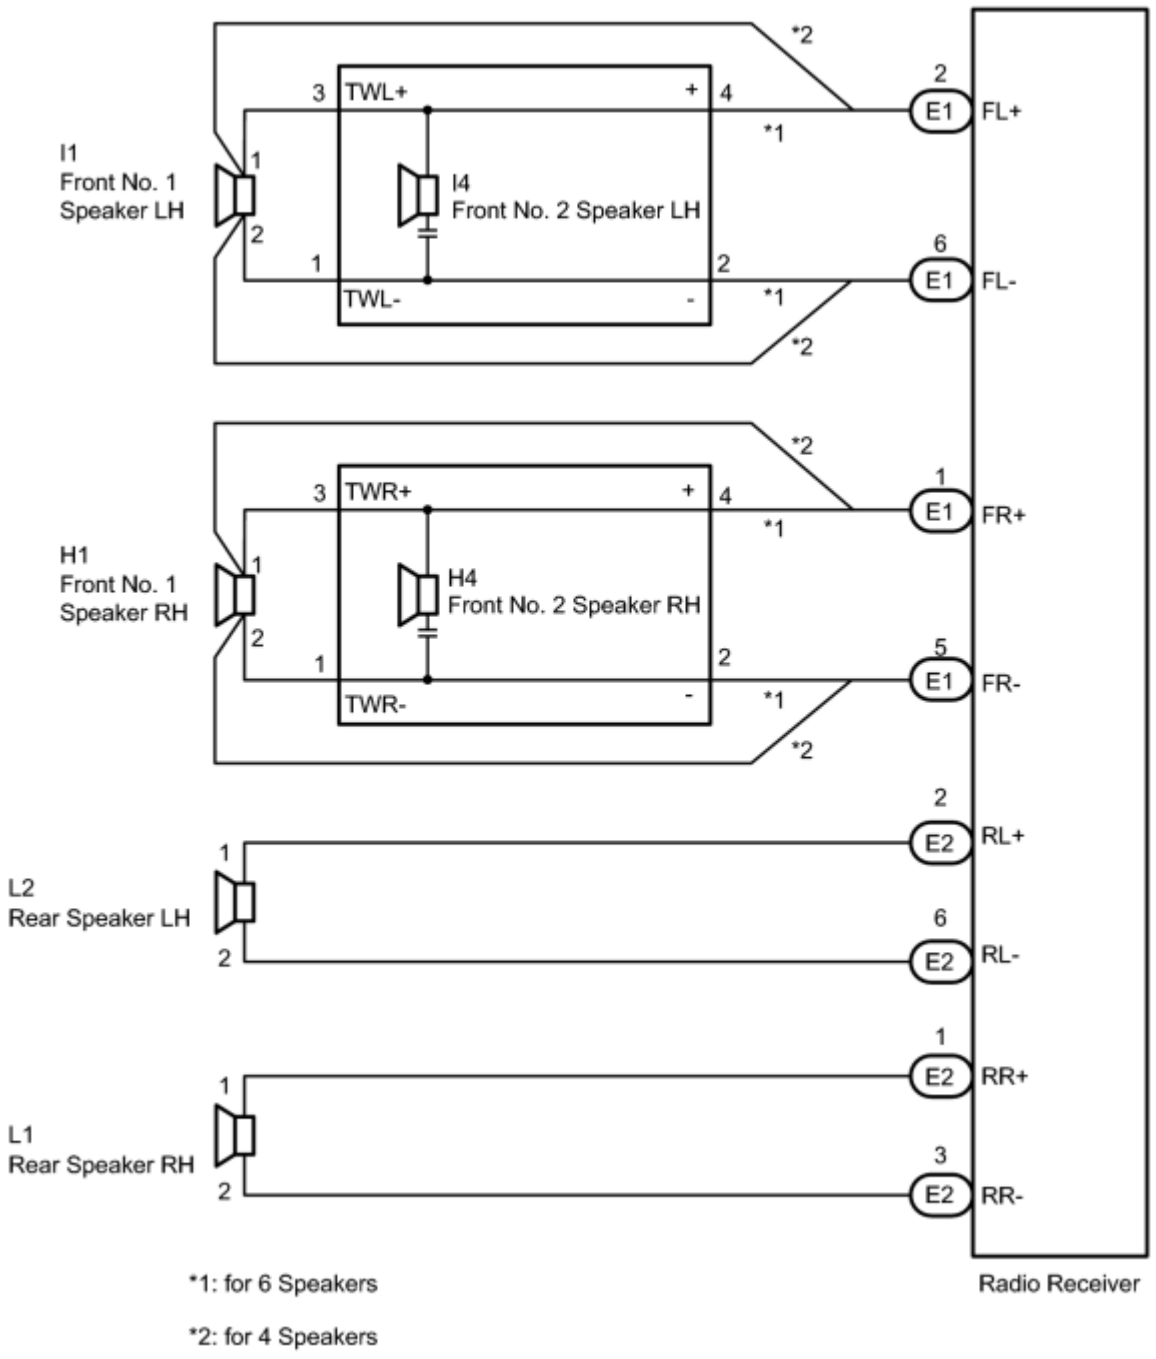
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Speaker Circuit (2010 Corolla)		

Speaker Circuit

DESCRIPTION



- If the vehicle has a built-in type amplifier, a sound signal is sent from the radio receiver to the speakers via the "Except for 8 Speakers" circuit.
- If the vehicle has a separate type amplifier, a sound signal from the radio receiver is amplified by the stereo component amplifier and then transmitted to the speaker via the "for 8 Speakers" circuit.

If there is a short in this circuit, the stereo component amplifier detects it and stops output to the speakers.

Thus sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier or speakers.

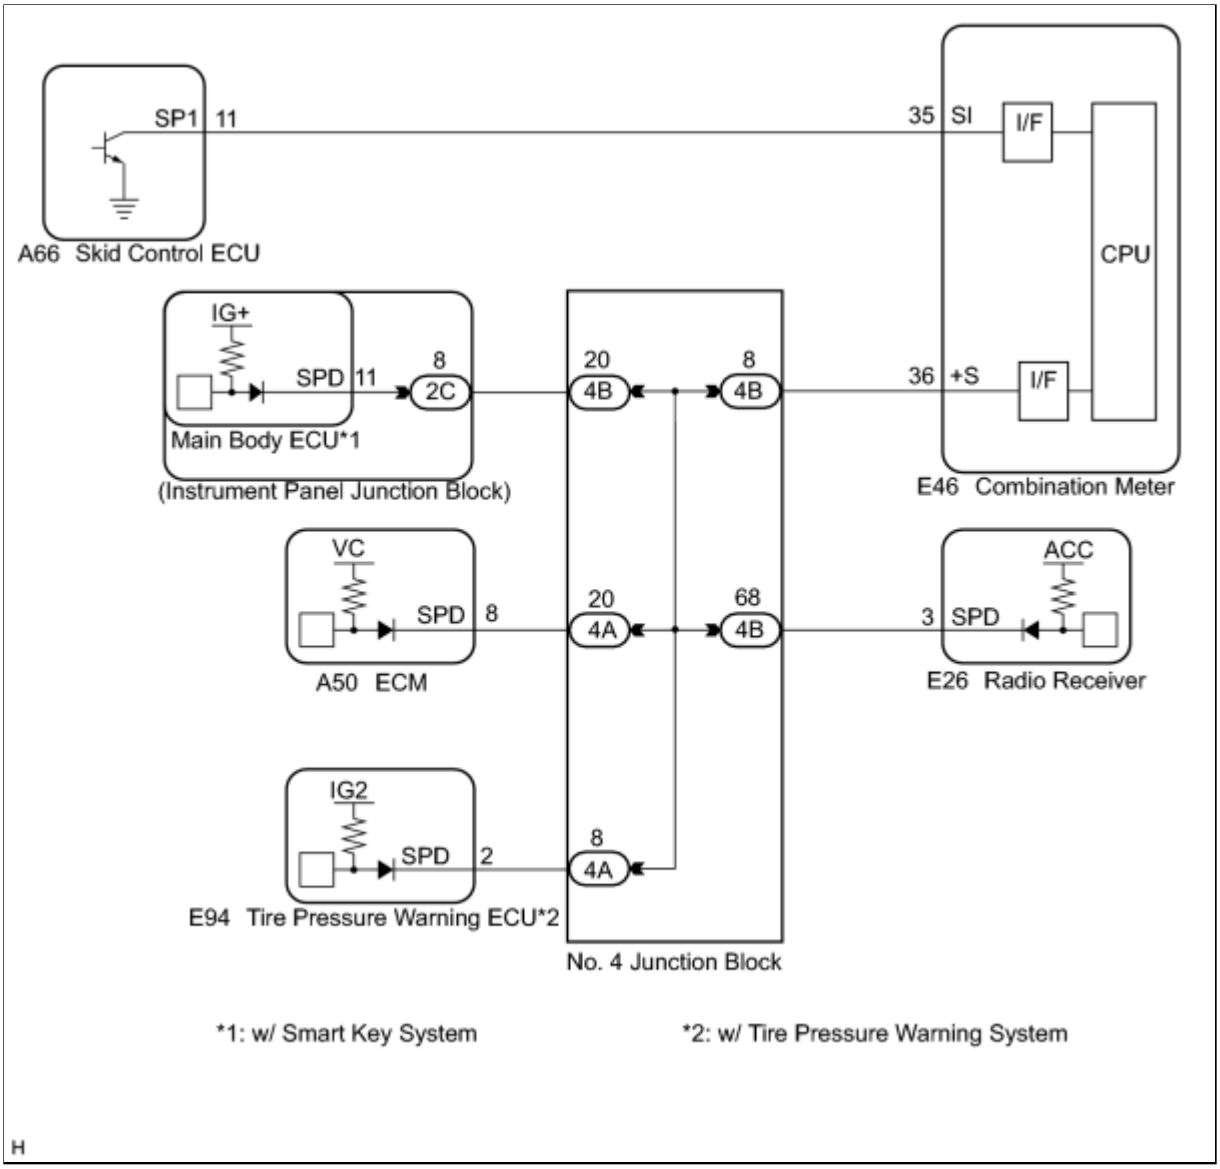
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Vehicle Speed Signal Circuit between Radio Receiver and Combination Meter (2010 Corolla)		

Vehicle Speed Signal Circuit between Radio Receiver and Combination Meter

DESCRIPTION

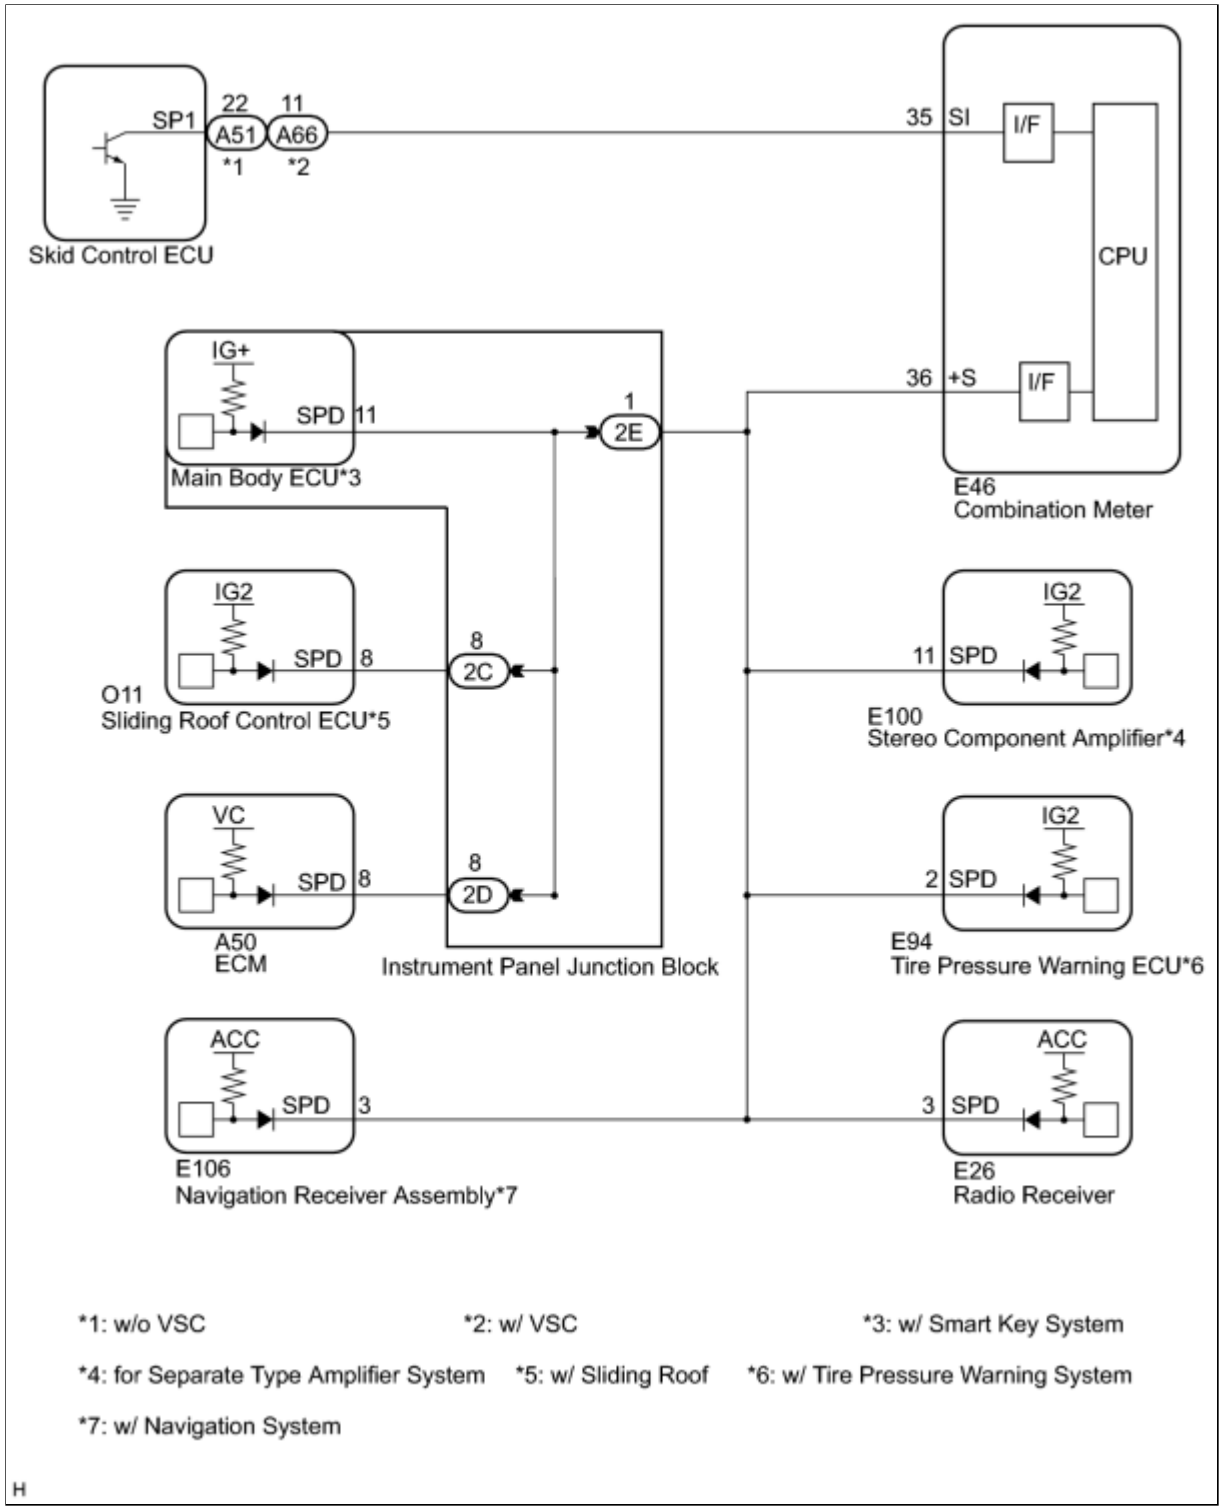
The circuit is necessary for the ASL (Automatic Sound Levelizer) built into the radio receiver.

Speed signals are received from the combination meter and used for the ASL.



The ASL function automatically adjusts the sound volume in order to enable clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

HINT:



- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)**

(a) Check the output waveform.

(1) Remove the combination meter assembly with the connector still connected.

(2) Connect an oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the ignition switch to ON.

(4) Turn the wheel slowly.

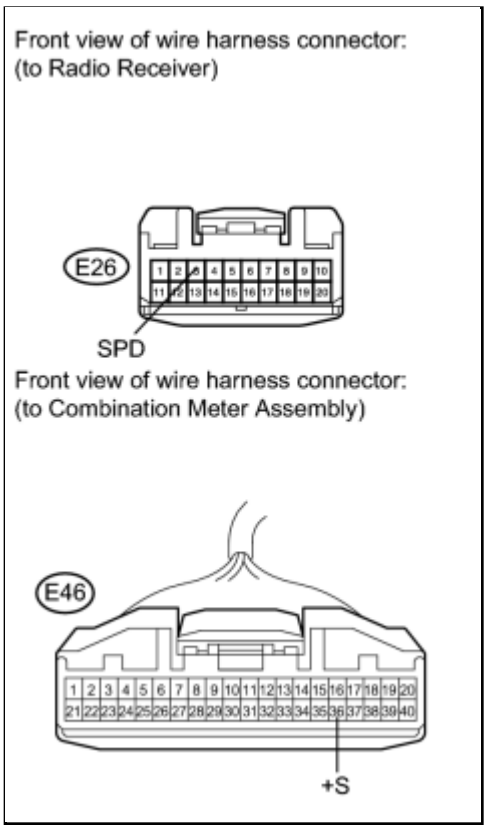
(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.

HINT:



When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

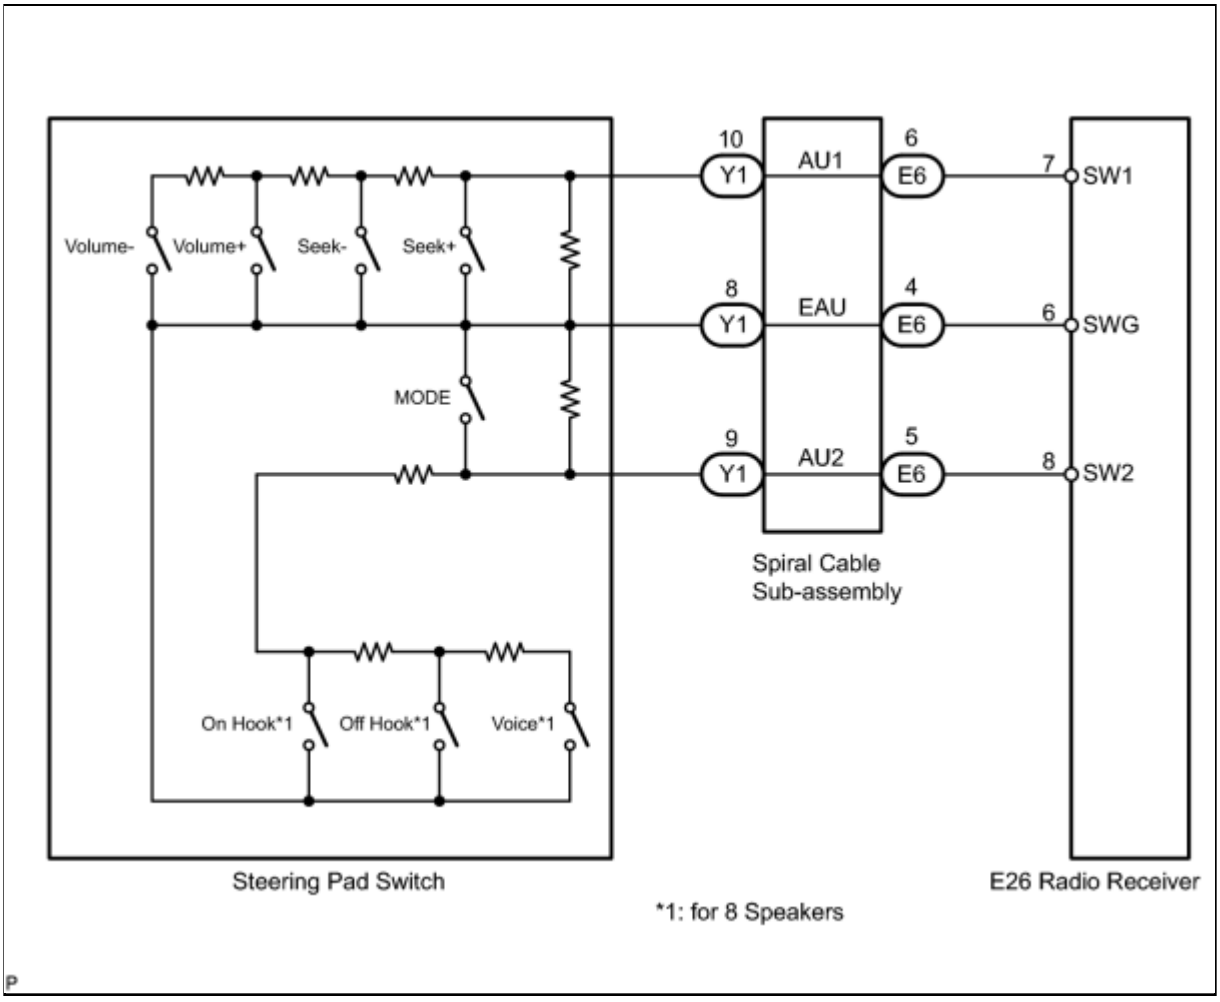
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Steering Pad Switch Circuit (2010 Corolla)		

Steering Pad Switch Circuit

DESCRIPTION



This circuit sends an operation signal from the steering pad switch to the radio receiver.

If there is an open in the circuit, the audio system cannot be operated using the steering pad switch.

If there is a short in the circuit, the same condition as to when a switch is continuously depressed occurs.

Therefore, the radio receiver cannot be operated using the steering pad switch, and also the radio receiver itself cannot function.

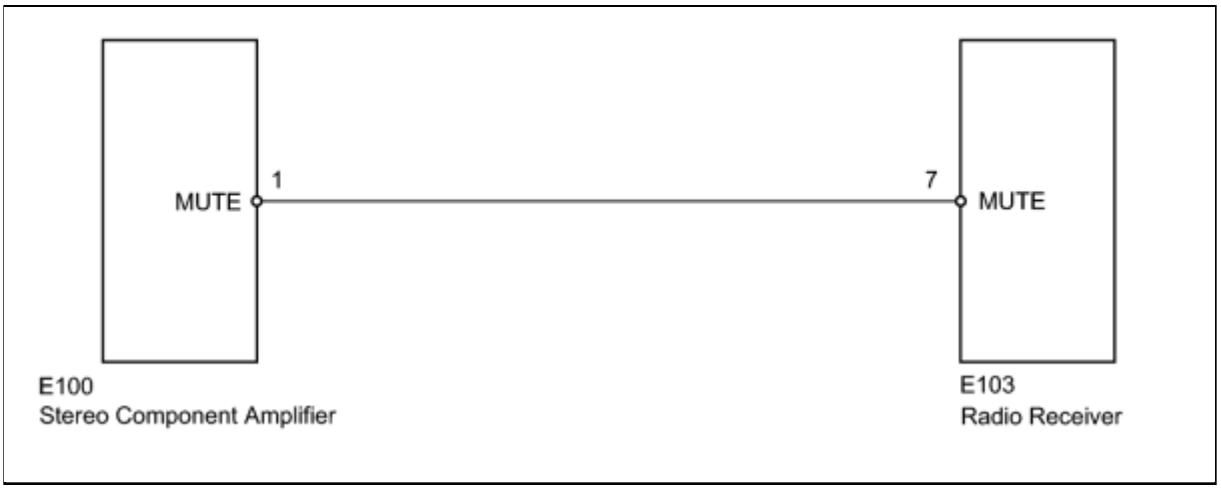
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier (2010 Corolla)		

Mute Signal Circuit between Radio Receiver and Stereo Component Amplifier



DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute noise. Because of that, the noise produced by changing the sound source ceases.

If there is an open in the circuit, noise can be heard from the speakers when changing the sound source.

If there is a short in the circuit, even though the stereo component amplifier is functioning, no sound, or only an extremely faint sound, can be heard.

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT RADIO RECEIVER**

(a) Disconnect the radio receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E103-5 (ATX+) - E103-15 (ATX-)	Always	60 to 80 Ω

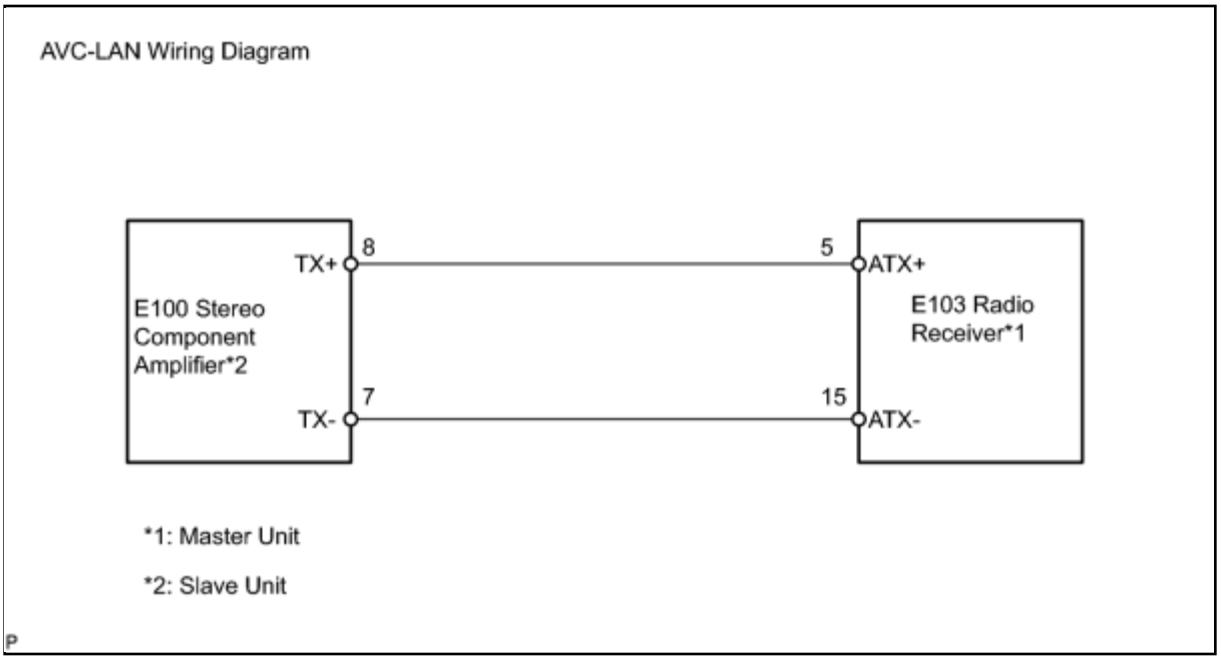
NG ▶ **REPLACE RADIO RECEIVER**

OK

2.	CHECK HARNESS AND CONNECTOR

HINT:

For details of the connectors, refer to Terminals of ECU INFO **.**



(a) Referring to the following AVC-LAN Wiring Diagram, check all AVC-LAN circuits.

(1) Disconnect all connectors in all AVC-LAN circuits.

(2) Check for an open or short in all AVC-LAN circuits.

OK:

There is no open or short circuit.

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	INSPECT MALFUNCTIONING PARTS

(a) Disconnect and reconnect each slave unit one by one until the master unit returns to

normal operation.

HINT:

- Check all slave units.
- When disconnecting a slave unit causes the master unit to return to normal operation, this indicates that the slave unit is malfunctioning. Replace the malfunctioning slave unit.

OK:
Master unit returns to normal operation.

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▶ **REPLACE MALFUNCTIONING PARTS**

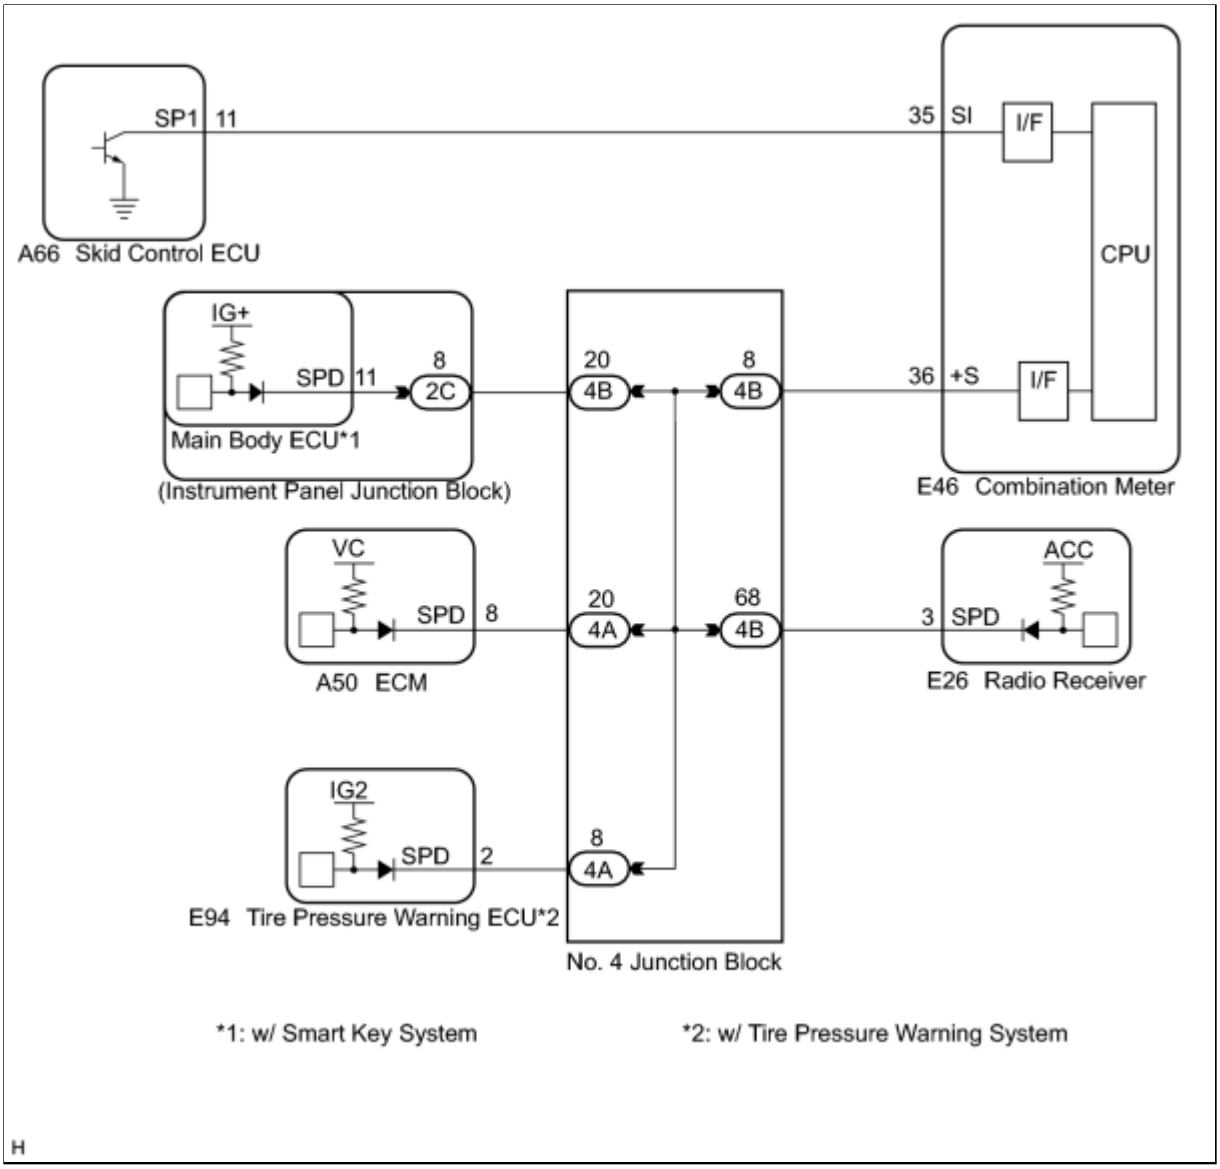
Title: AUDIO / VIDEO: AUDIO AND VISUAL SYSTEM: Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter (2010 Corolla)		

Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter

DESCRIPTION

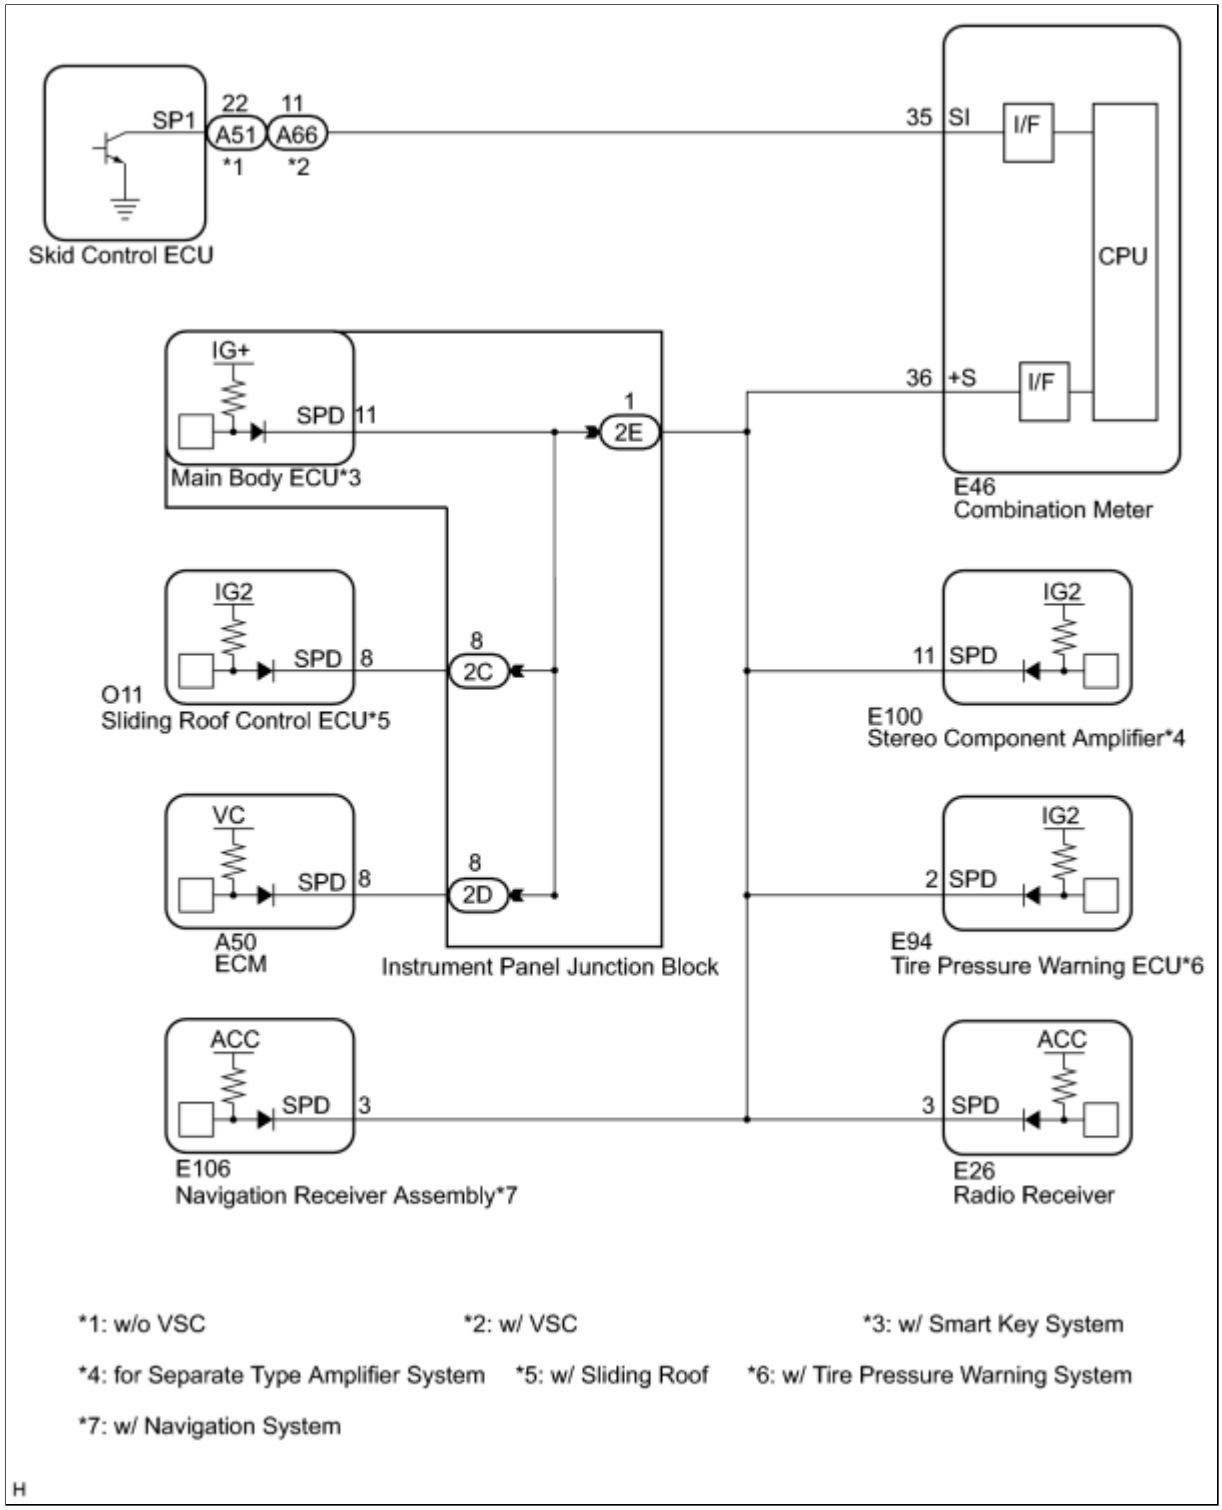
The circuit is necessary for the ASL (Automatic Sound Levelizer) built into the stereo component amplifier.

Speed signals are received from the combination meter and used for the ASL.



The ASL function automatically adjusts the sound volume in order to clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

HINT:



- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)**

(a) Check the output waveform.

(1) Remove the combination meter assembly with the connector still connected.

(2) Connect an oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the ignition switch to ON.

(4) Turn the wheel slowly.

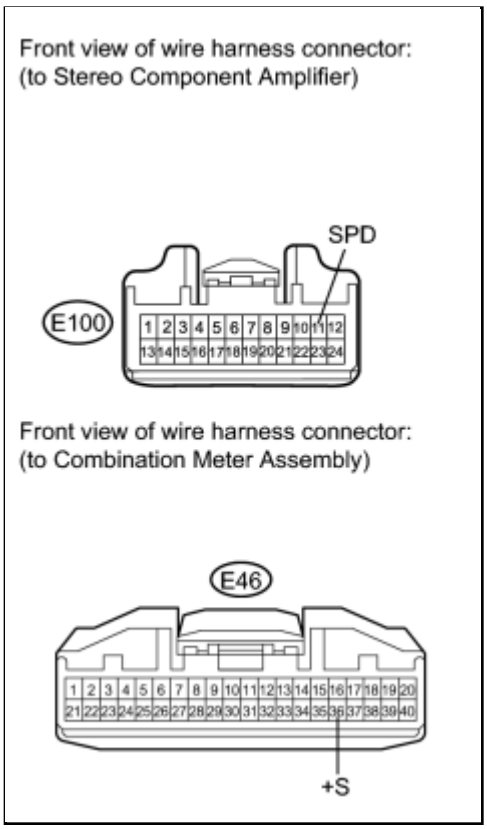
(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.

HINT:



When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG ▶ **GO TO METER / GAUGE SYSTEM**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMBINATION METER ASSEMBLY)**

(a) Disconnect the stereo component amplifier connector and combination meter assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E100-11 (SPD) - E46-36 (+S)	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE STEREO COMPONENT AMPLIFIER**

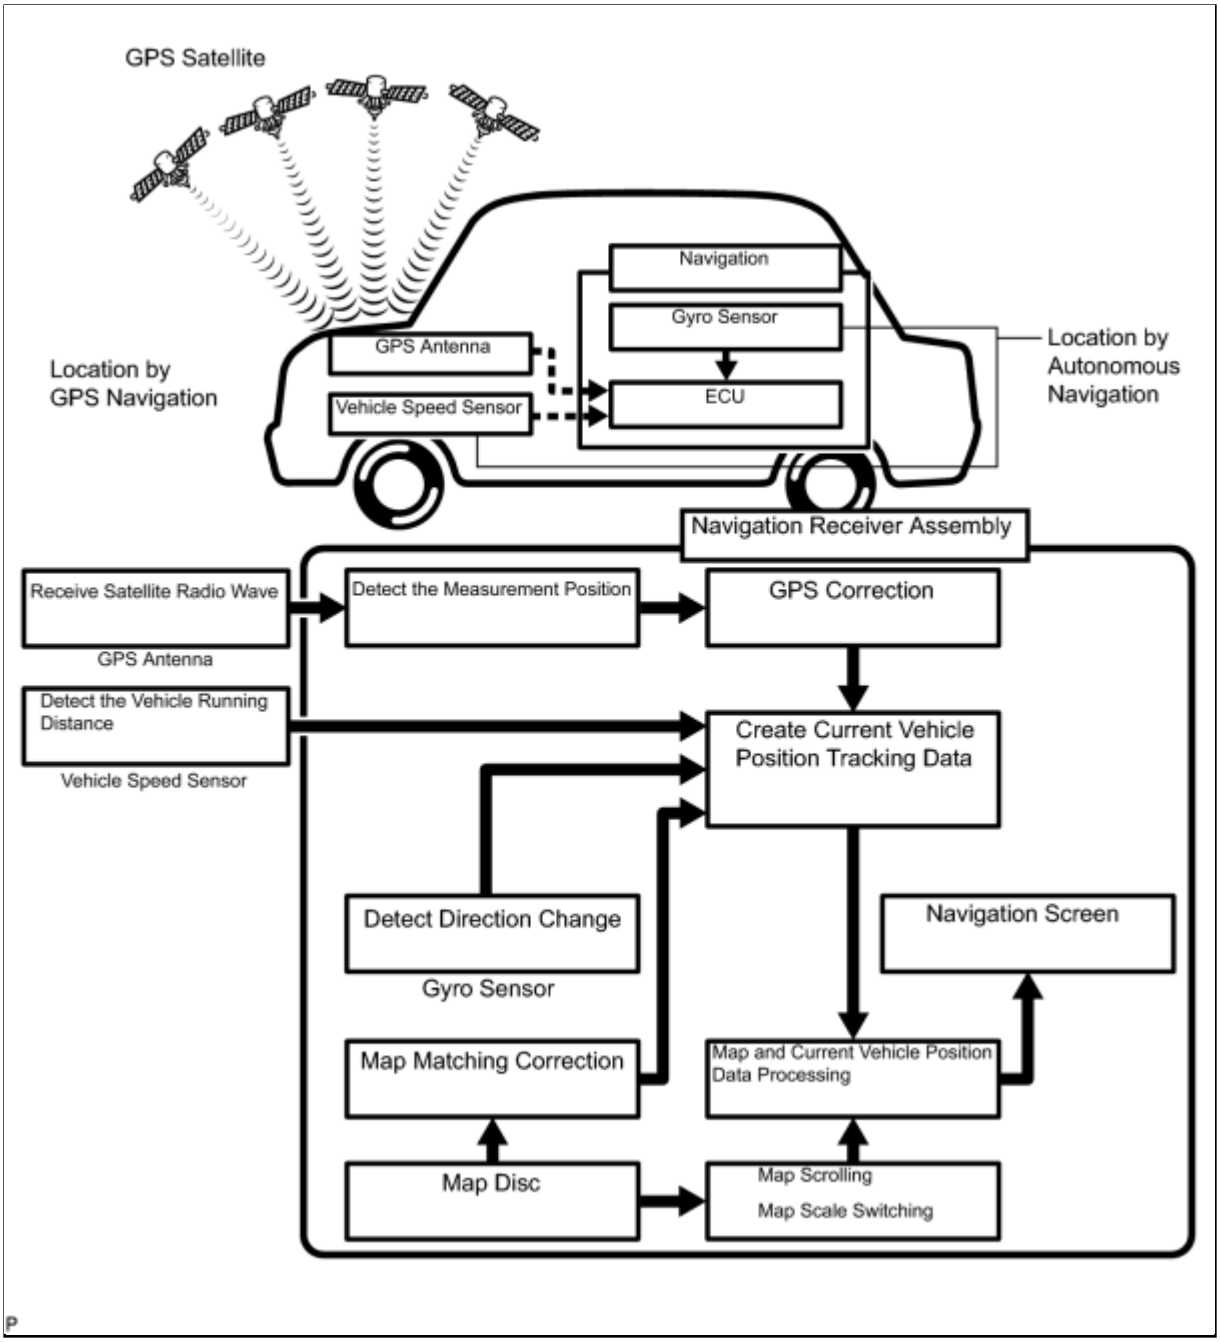
Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION



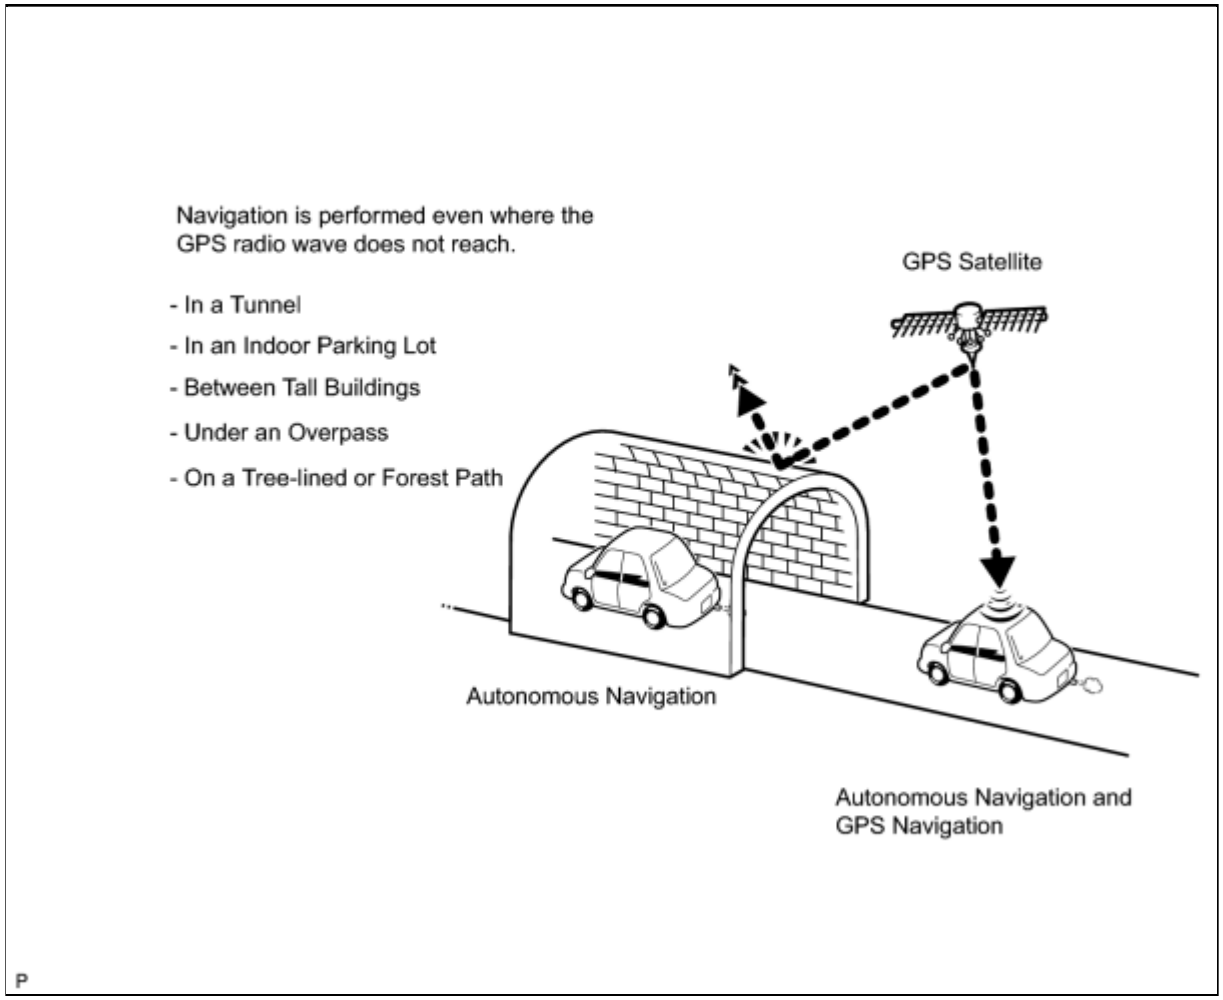
1. NAVIGATION SYSTEM OUTLINE

(a) Vehicle position tracking methods

(1) It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.

HINT:

***: GPS (Global Positioning System)**



OPERATION	DESCRIPTION
Vehicle Position Calculation	The navigation receiver assembly calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and running distance signal from the vehicle speed sensor and creates the driving route.
Map Display Processing	The navigation receiver assembly processes the vehicle position data, vehicle running track, and map data from the map disc.
Map Matching	The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road.
GPS Correction	The vehicle position is matched to the position measured by the GPS. Then, the measurement position data from the GPS unit is compared with the vehicle position and running track data. If the position is very different, the GPS measurement

OPERATION	DESCRIPTION
	position is used.
Distance Correction	The running distance signal from the vehicle speed sensor includes error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The navigation ECU automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated.

HINT:

The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS radio wave cannot be received. When only autonomous navigation is used, the mapping accuracy may slightly decline.

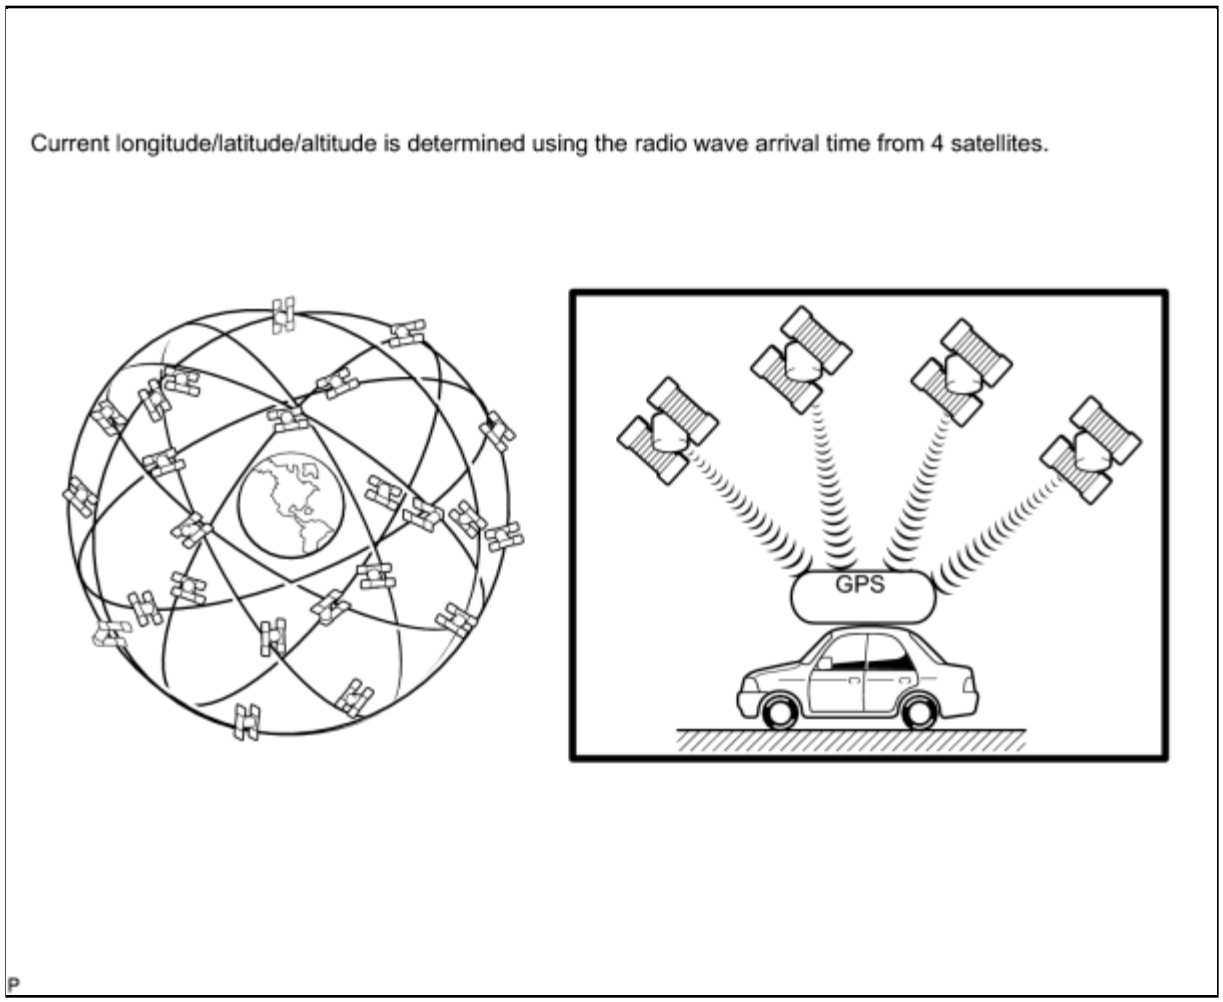
(b) Autonomous navigation

This method determines the relative vehicle position based on the running track determined by the gyro and vehicle speed sensors located in the navigation receiver assembly.

(1) Gyro sensor

Calculates the direction by detecting angular velocity. It is located in the navigation receiver assembly.

(2) Vehicle speed sensor

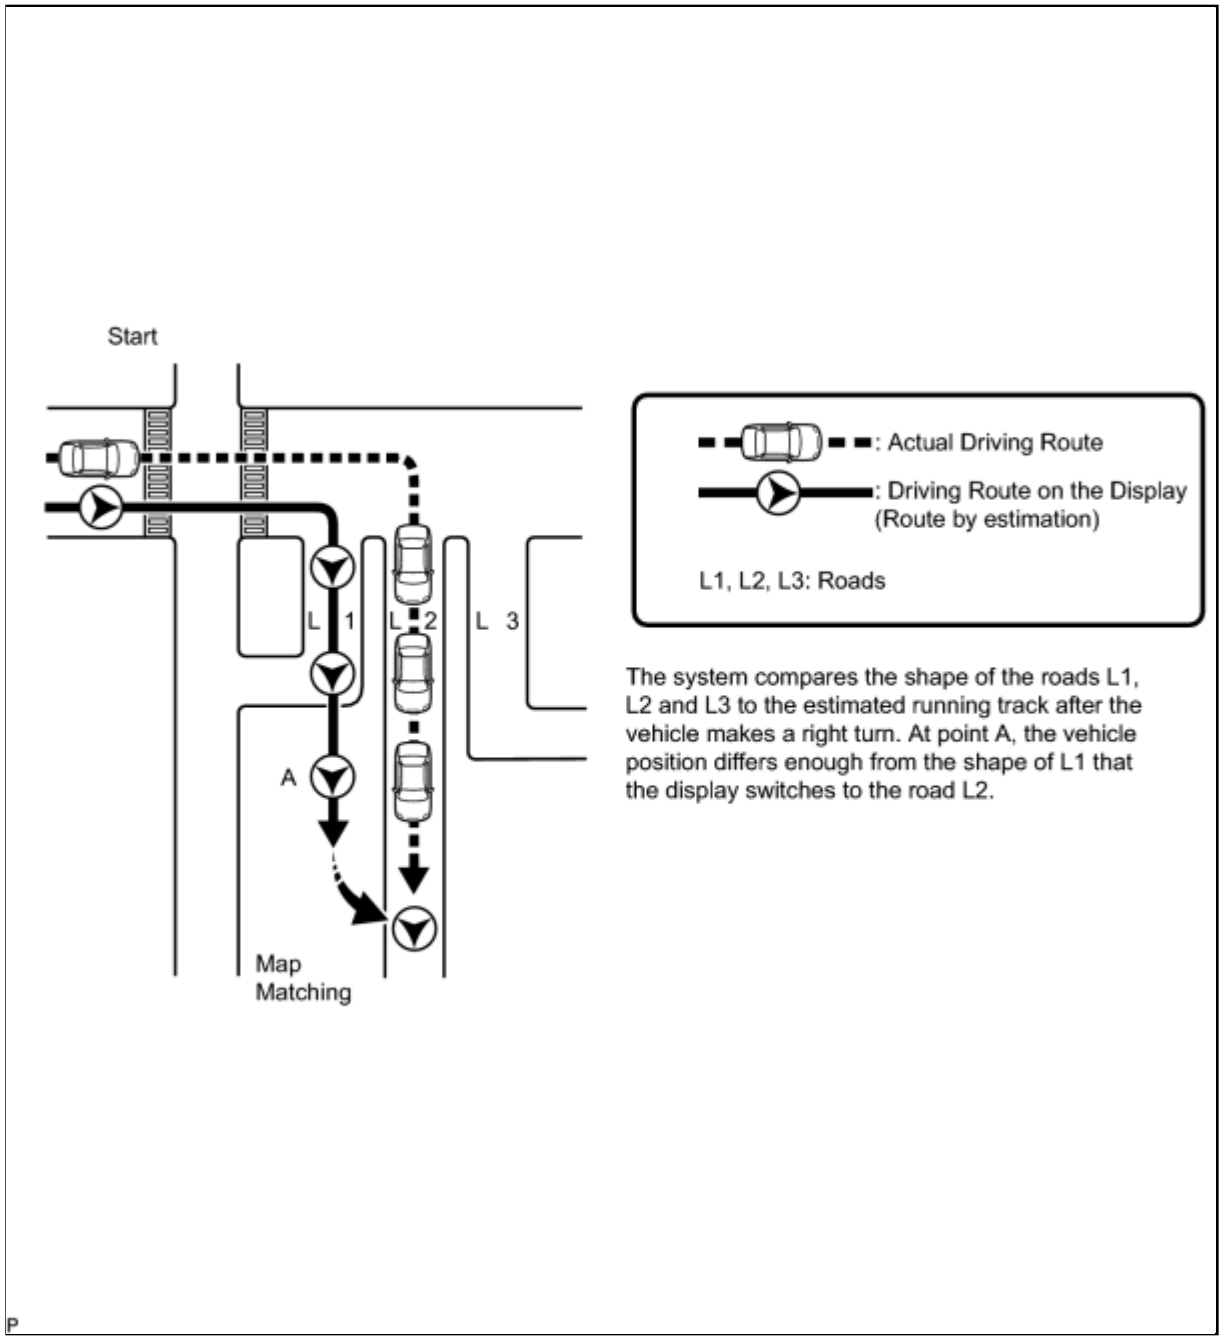


Used to calculate the vehicle running distance.

(c) GPS navigation (satellite navigation)

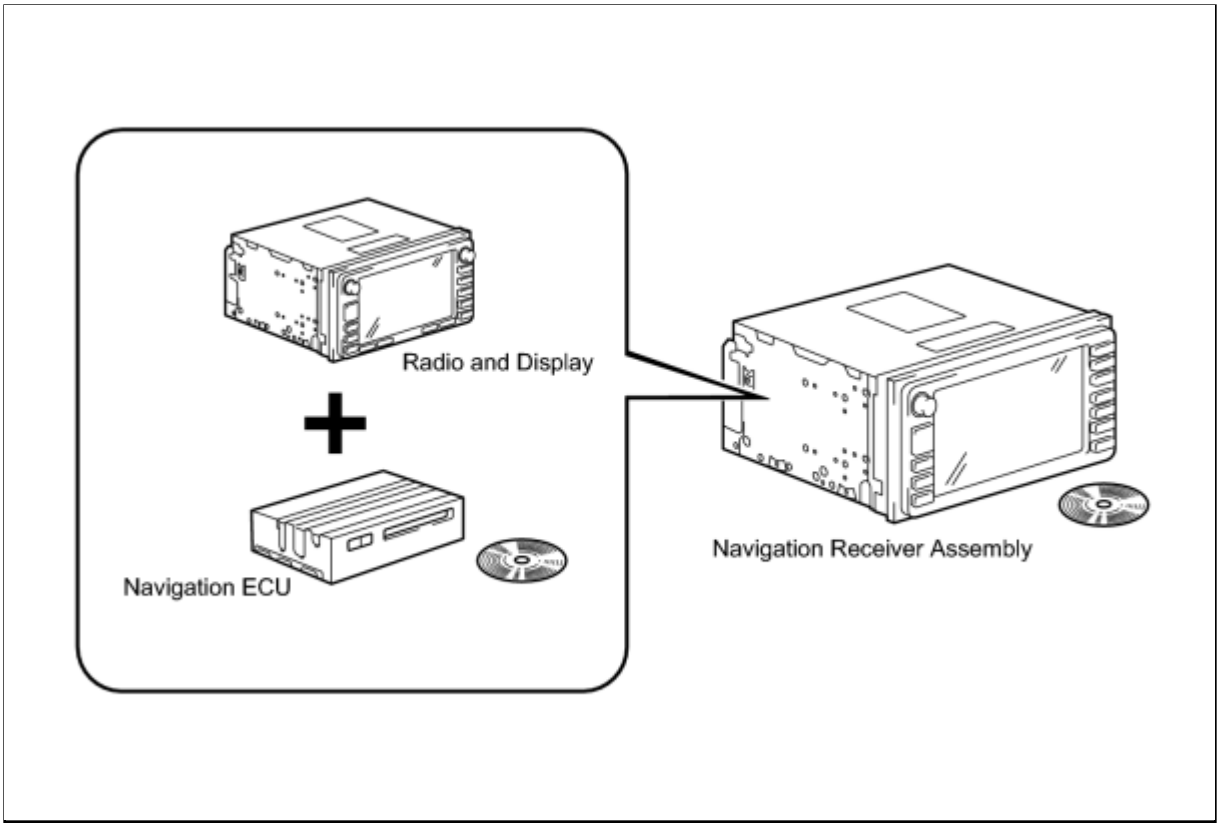
This method detects the absolute vehicle position using radio waves from a GPS satellite*.

HINT:



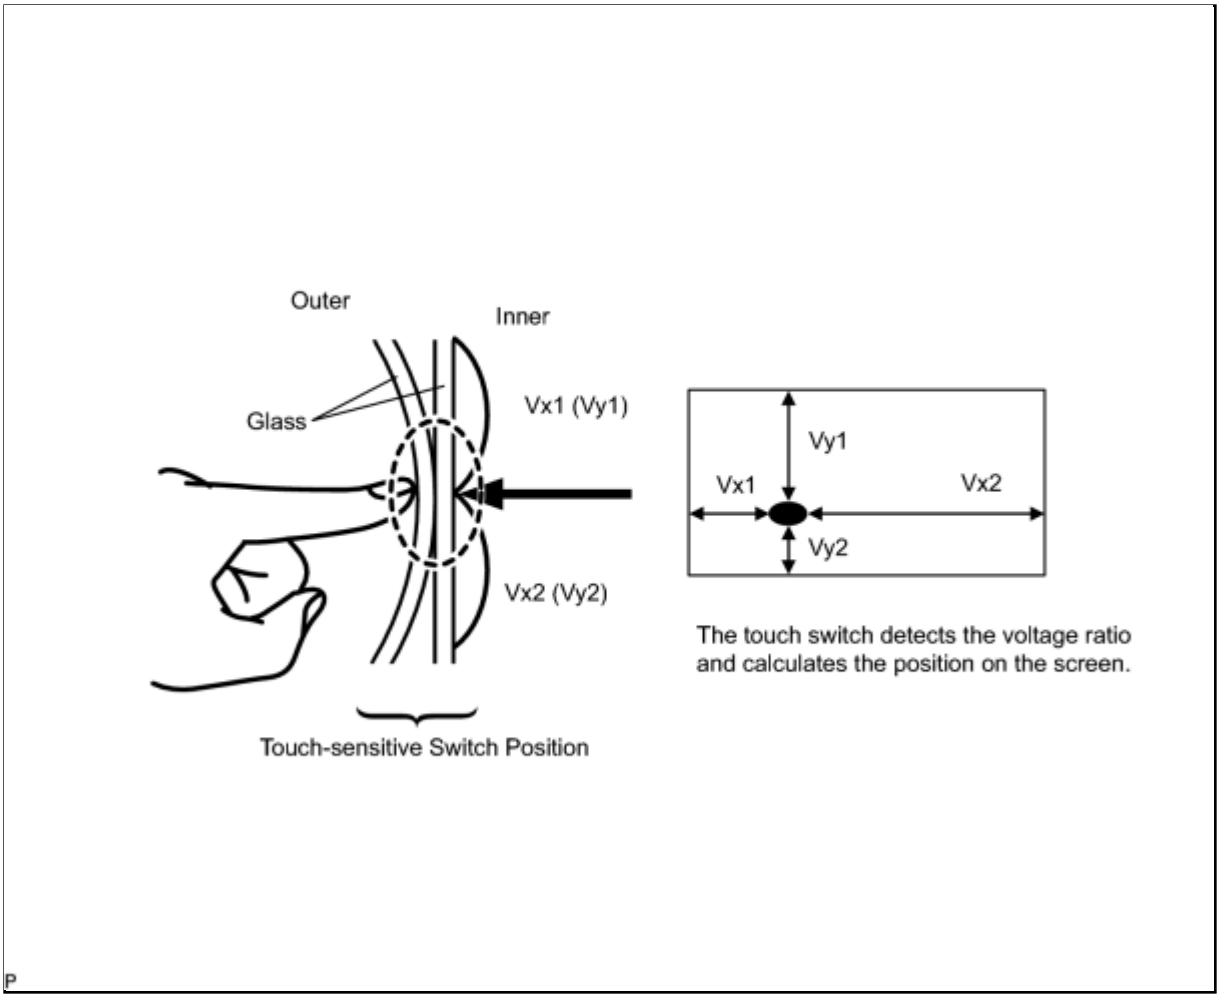
***: GPS satellites were launched by the U.S. Department of Defense for military purposes.**

NUMBER OF SATELLITES	MEASUREMENT	DESCRIPTION
2 or less	Measurement impossible	The vehicle position cannot be obtained because the number of satellites is not enough.
3	2-dimensional measurement is possible	The vehicle position is obtained based on current longitude and latitude (this is less precise than 3-dimensional measurement).
4	3-dimensional measurement is possible	The vehicle position is obtained based on current longitude, latitude and altitude.



(d) Map matching

The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.



2. NAVIGATION RECEIVER ASSEMBLY OUTLINE

(a) Conventionally, 2 separate devices, a "radio and display" and a "navigation ECU" are used. This model has adopted a new type, combining these devices into a signal unit.

(b) Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

P

3. DVD (Digital Versatile Disc) PLAYER OUTLINE (for Navigation Map)

(a) The navigation receiver assembly (built-in navigation ECU) uses a laser pickup to read the digital signals recorded on a DVD.

CAUTION:

Because the navigation system uses an invisible laser beam, do not look directly at the laser pickup. Be sure to only operate the navigation as instructed.

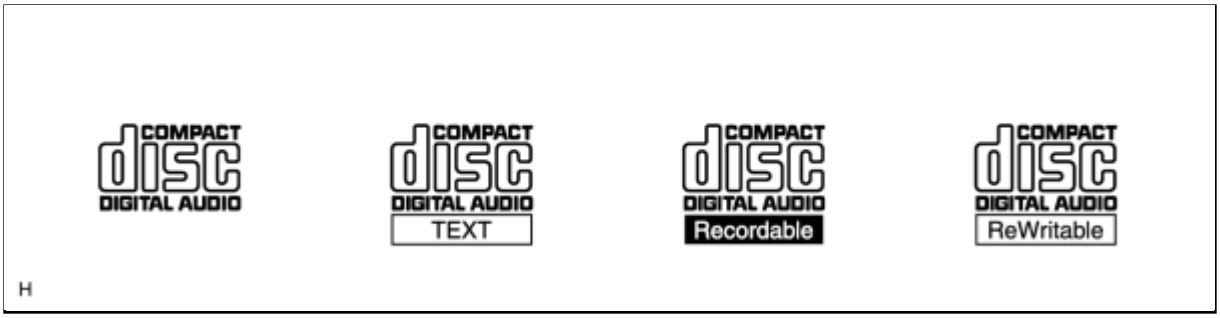
NOTICE:

- Do not disassemble any part of the navigation receiver assembly (built-in navigation ECU).
- Do not apply oil to the navigation receiver assembly (built-in navigation ECU).
- Do not insert anything but a DVD into the navigation receiver assembly (built-in navigation ECU).

4. CD (Compact Disc) player outline

(a) A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and other content.

NOTICE:



- Do not disassemble any part of the CD player.
- Do not apply oil to the CD player.
- Do not insert anything but a CD into the CD player.

CAUTION:

Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

(b) Usable discs

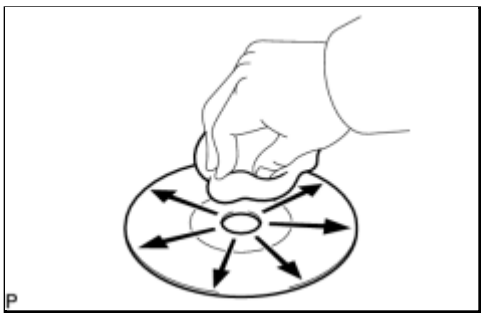
(1) This player can play only audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:

(c) Precautions for use of discs

NOTICE:

- Copy-protected CDs cannot be played.
- CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.
- Unfinalized CD-Rs and CD-RWs cannot be played.
- DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.
- Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.
- Hold discs by the outer edge and center hole with the label side up.
- Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.
- If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.
- Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)
- Do not use odd-shaped CDs because these may cause player malfunctions.
- Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.

HINT:



- When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses

from the inside to the outside in a radial direction.

NOTICE:

- Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.
- Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.

5. MP3/WMA OUTLINE

(a) Playable MP3 file standards

COMPATIBLE STANDARD	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

COMPATIBLE STANDARD	WMA VER. 7, 8, AND 9
Compatible sampling frequency	44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

(c) ID3 tag and WMA tag

(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

- CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.
- If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.
- Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.
- Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form 1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

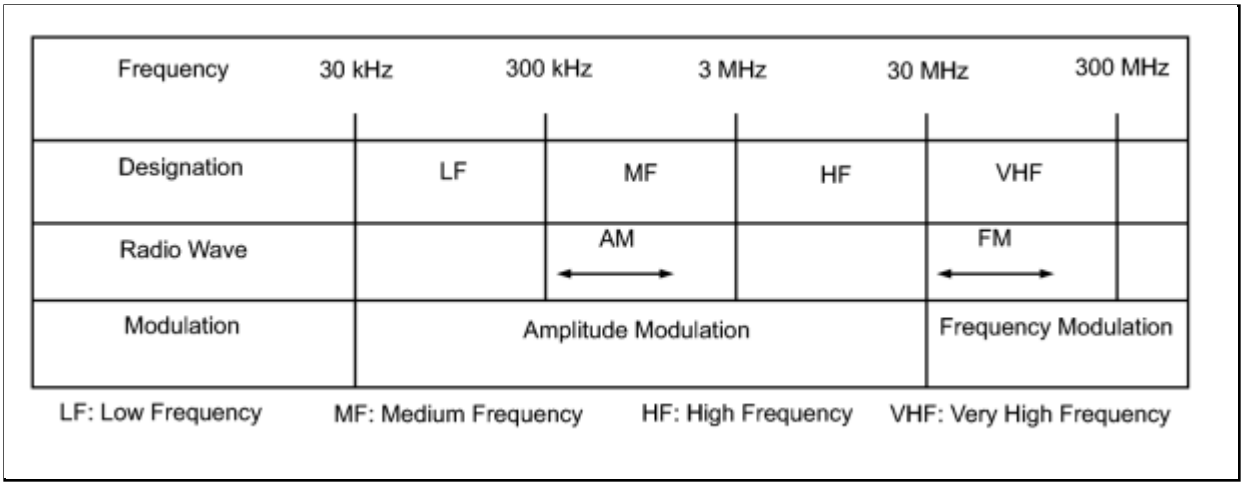
(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

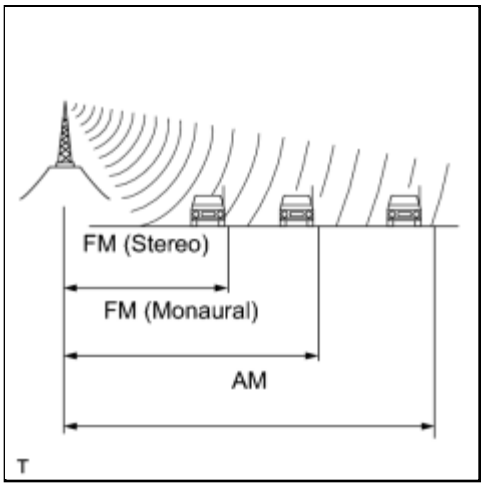
(f) File names

(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".



NOTICE:

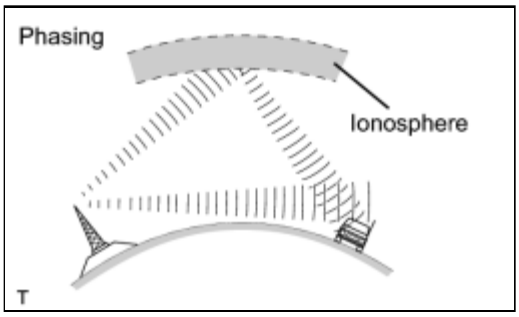


If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

6. RADIO DESCRIPTION

(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.



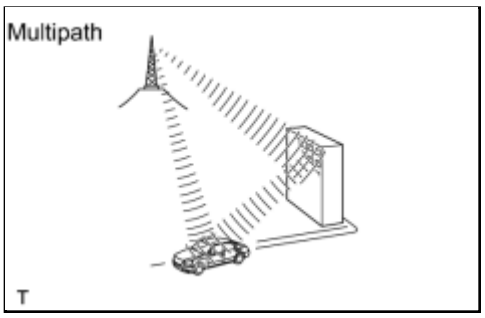
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

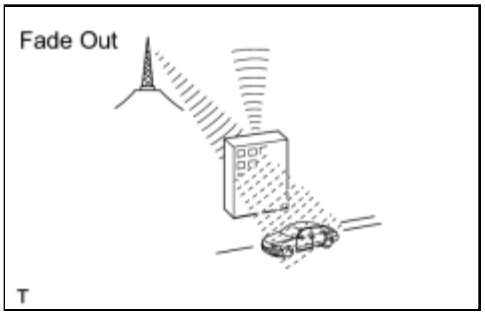
(c) Radio reception problems

HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.



(1) Phasing



AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

(2) Multipath

Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same

transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

(3) Fade out

Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem

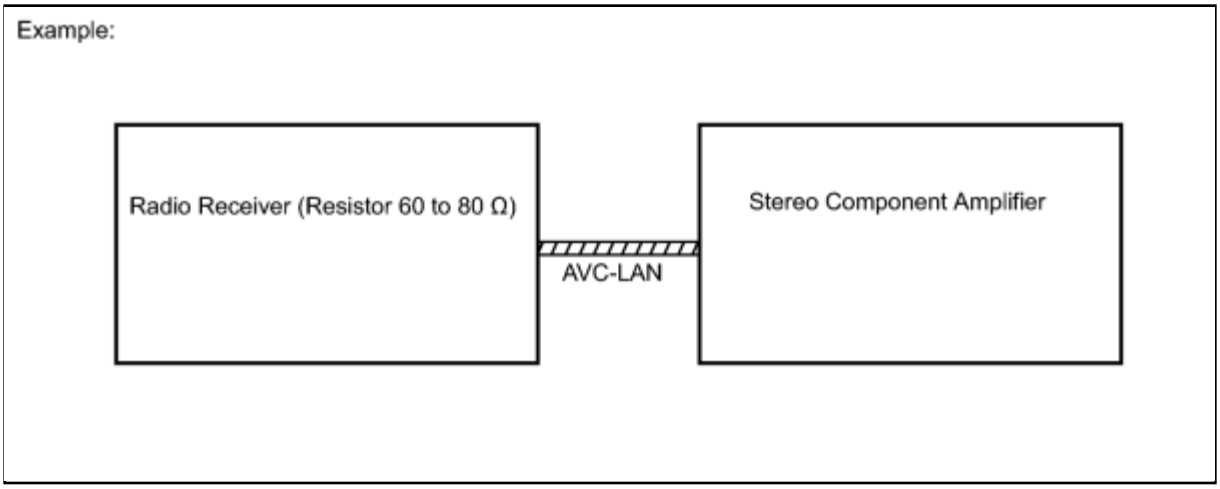
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

RADIO FREQUENCY	NOISE OCCURRENCE CONDITION	PRESUMABLE CAUSE
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

HINT:

If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

7. ASL (Automatic Sound Levelizer) FUNCTION OUTLINE



(a) The ASL (Automatic Sound Levelizer) function automatically adjusts the sound data in order to maintain clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.). Vehicle speed signals are received from the combination meter and used for the ASL (Automatic Sound Levelizer).

8. AVC-LAN DESCRIPTION

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united

standard developed by manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

(b) Purpose:

Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multimedia interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:

(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.

(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.

HINT:

- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.
- The multi-display unit acts as the master unit.

9. COMMUNICATION SYSTEM OUTLINE

(a) Components of the navigation system communicate with each other via the AVC-LAN.

(b) The navigation receiver assembly has enough resistance (60 to 80 Ω) necessary for transmitting communication signals. This is essential for communication.

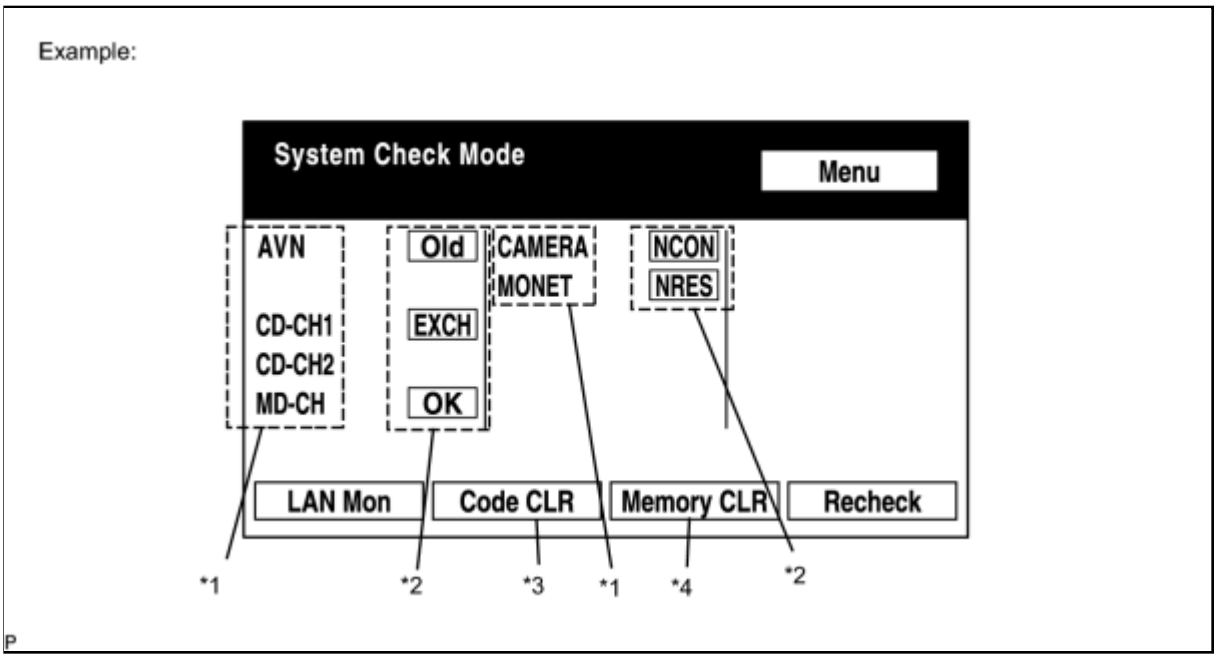
(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.

10. DIAGNOSTIC FUNCTION OUTLINE

(a) The navigation system has a diagnostic function (the result is indicated on the master unit).

(b) Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

(c) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.



11. DIAGNOSIS DISPLAY DETAILED DESCRIPTION

HINT:

- This section contains a detailed description of displays within diagnostic mode.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.

(a) SYSTEM CHECK

(1) System Check Mode Screen

*1 : Device Names and Hardware Address

HINT:

- Registered device names are displayed.
- If a device name is unknown to the system, its physical address is shown instead.

ADDRESS NO.	NAME	ADDRESS NO.	NAME
110	EMV	120	AVX
128	1DIN TV	140	AVN
144	G-BOOK	178	NAVI
17C	MONET	190	AUDIO H/U
1AC	CAMERA-C	1B0	Rr-TV
1C0	Rr-CONT	19D	BT-HF
1C4	PANEL	1C6	G/W
1C8	FM-M-LCD	1D8	CONT-SW
1EC	Body	118	EMVN
1F1	XM	1F2	SIRIUS

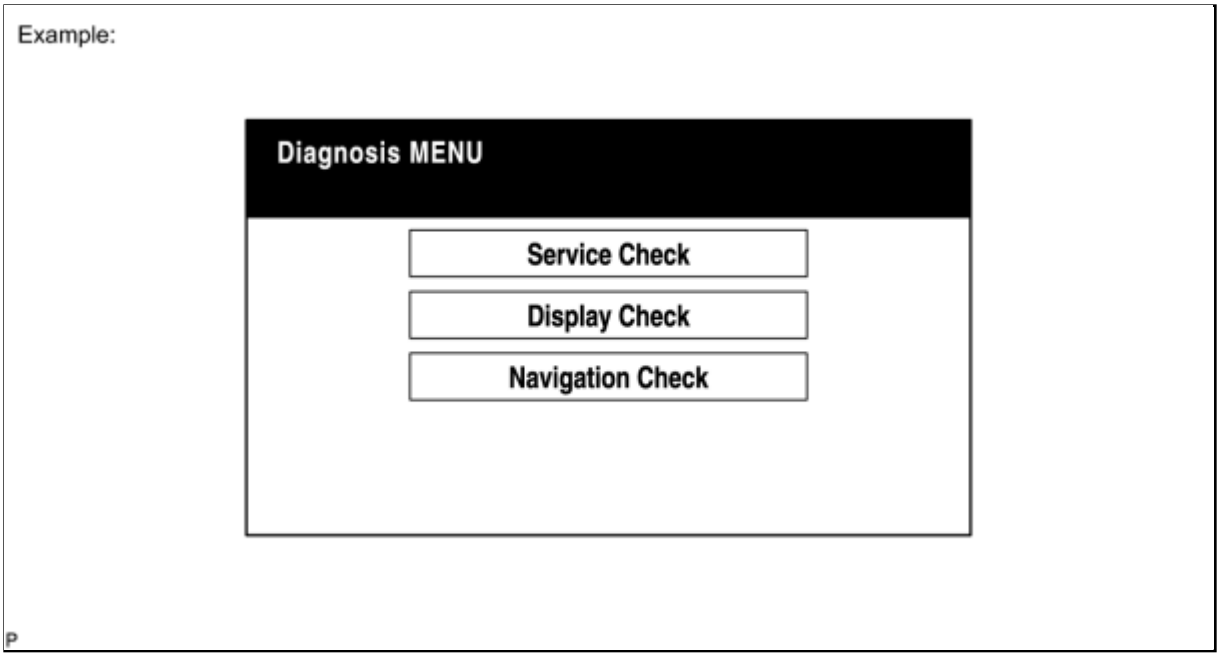
ADDRESS NO.	NAME	ADDRESS NO.	NAME
230	TV-TUNER	240	CD-CH2
250	DVD-CH	280	CAMERA
360	CD-CH1	3A0	MD-CH
17D	TEL	440	DSP-AMP
530	ETC	1F6	RSE
1A0	DVD-P	1D6	CLOCK
238	DTV	480	AMP

*2: Check Result

HINT:

Result codes for all devices are displayed.

RESULT	MEANING	ACTION
OK	Device did not respond with DTC (excluding communication DTCs from AVC-LAN).	-
EXCH	Device responds with "replace" type DTC.	Look up DTC in "Unit Check Mode" and replace device.
CHEK	Device responds with "check" type DTC.	Look up DTC in "Unit Check Mode".
NCON	Device was previously present, but does not respond in diagnostic mode.	- Check power supply wire harness of device. - Check AVC-LAN of device.
Old	Device responds with "old" type DTC.	Look up DTC in "Unit Check Mode".
NRES	Device responds in diagnostic mode, but gives no DTC information.	- Check power supply wire harness of device. - Check AVC-LAN of device.

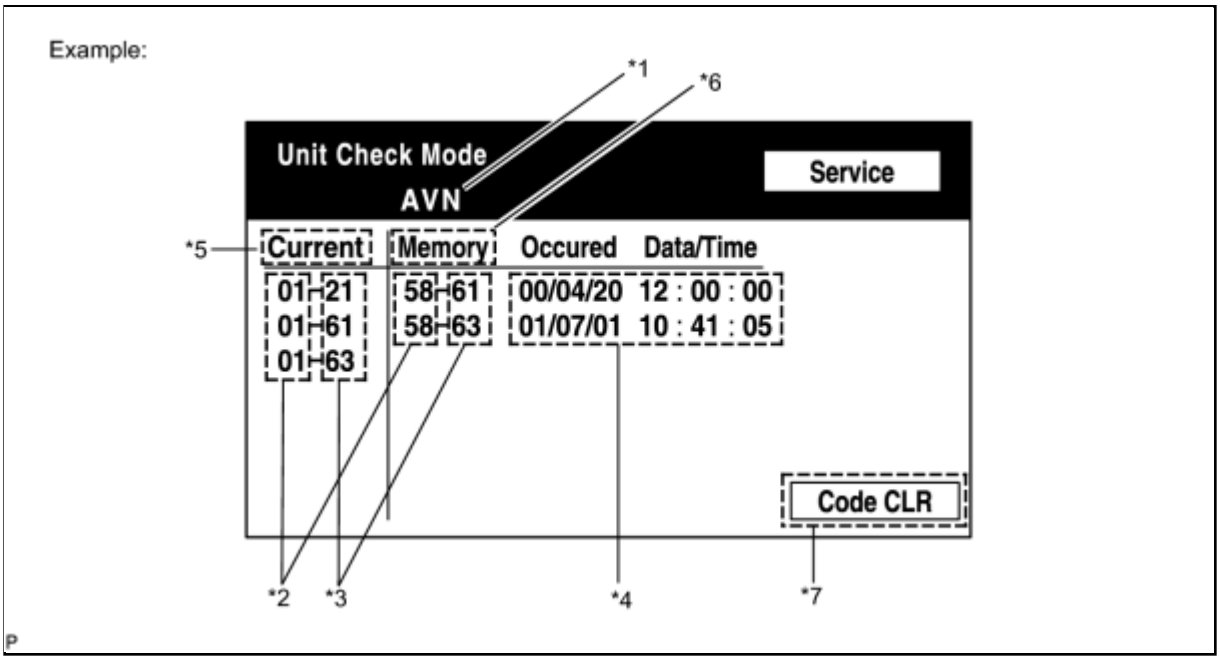


*3: Code Clear

- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

*4: Memory Clear

- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

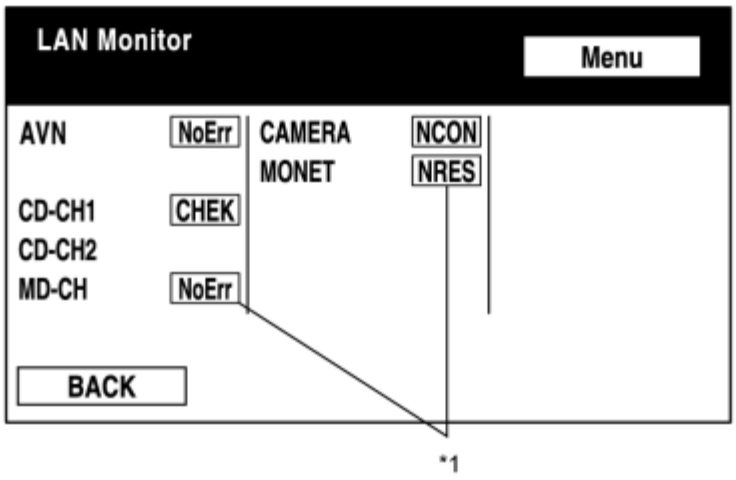


(2) Diagnosis MENU Screen

HINT:

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

(3) Unit Check Mode Screen



Screen Description

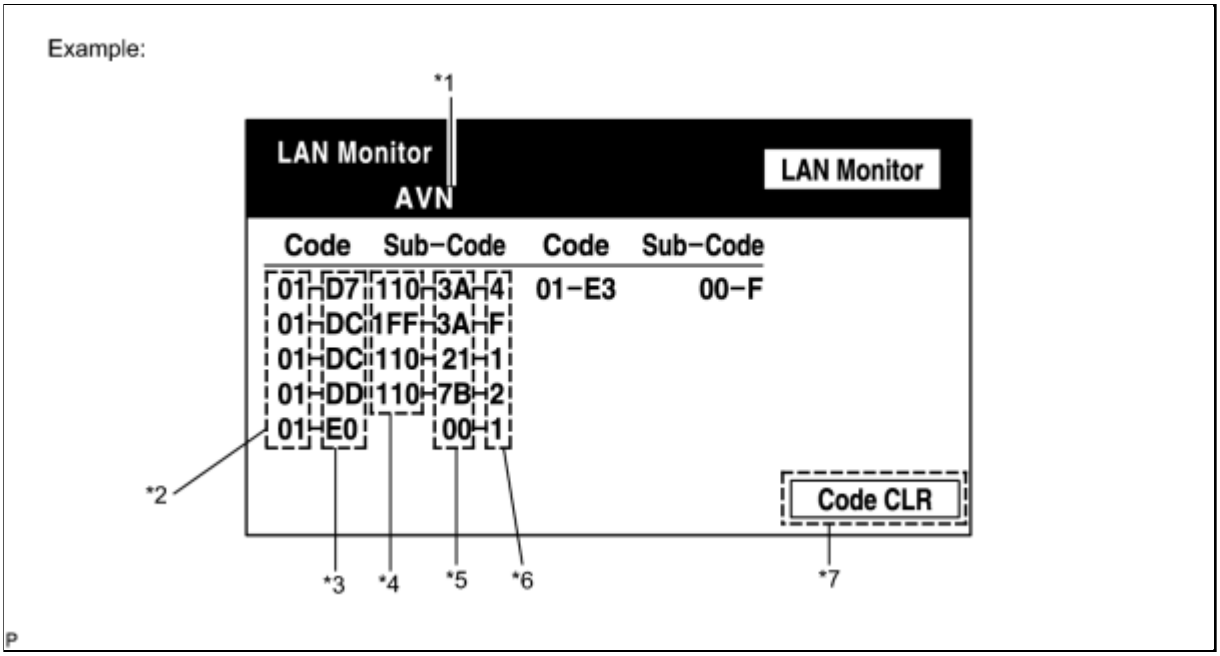
DISPLAY	CONTENT
*1: Device name	Target device
*2: Segment	Target device logical address
*3: DTC	DTC (Diagnostic Trouble Code)

DISPLAY	CONTENT
*4: Timestamp	Time and date of past DTCs are displayed (year is displayed in 2-digit format).
*5: Present Code	DTCs output at service check are displayed.
*6: Past Code	Diagnostic memory results and stored DTCs are displayed.
*7: Diagnosis Clear Switch	Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared).

(4) LAN Monitor (Original) Screen

Example:

*1: Check Result



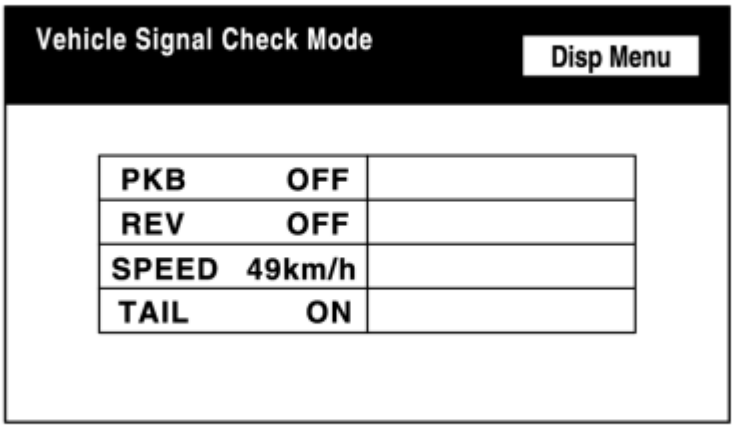
HINT:

Check results of all the devices are displayed.

RESULT	MEANING	ACTION
No Err (OK)	There are no communication DTCs.	-
CHEK	Device responds with "check" type DTC.	Look up DTC in "Unit Check Mode".
NCON	Device was previously present, but does not respond in diagnostic mode.	1. Check power supply wire harness of device. 2. Check AVC-LAN of device.
Old	Device responds with "old" type DTC.	Look up DTC in "Unit Check Mode".

RESULT	MEANING	ACTION
NRES	Device responds in diagnostic mode, but gives no DTC information.	1. Check power supply wire harness of device. 2. Check AVC-LAN of device.

(5) LAN Monitor (Individual) Screen



Screen Description

DISPLAY	CONTENT
*1: Device name	Target device
*2: Segment	Target logical address
*3: DTC	DTC (Diagnostic Trouble Code)
*4: Sub-code (device address)	Physical address stored with DTC (if there is no address, nothing is displayed).
*5: Connection check No.	Connection check number stored with DTC
*6: DTC occurrence	Number of times same DTC has been stored
*7: Diagnosis Clear Switch	Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared).

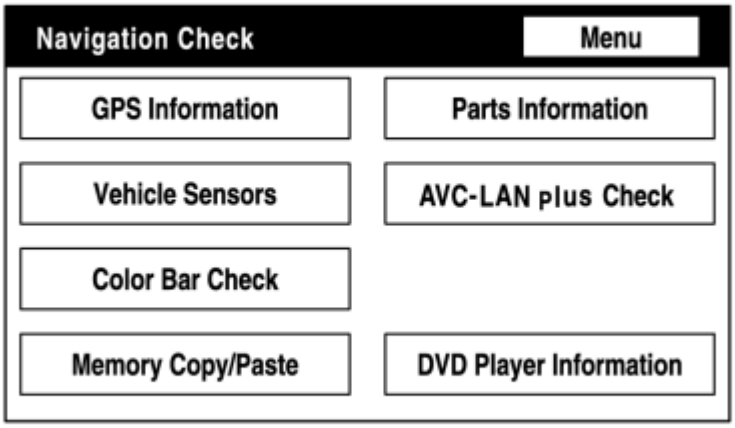
(b) DISPLAY CHECK

(1) Vehicle Signal Check Mode Screen

Example:

Screen Description

NAME	CONTENT
Battery	Battery voltage is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
IG	Engine switch ON/OFF state is displayed.
ADIM/TCAN	Brightness state DIM (with) / BRIGHT (without) is displayed.
TAIL	TAIL signal (Light control switch) ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.



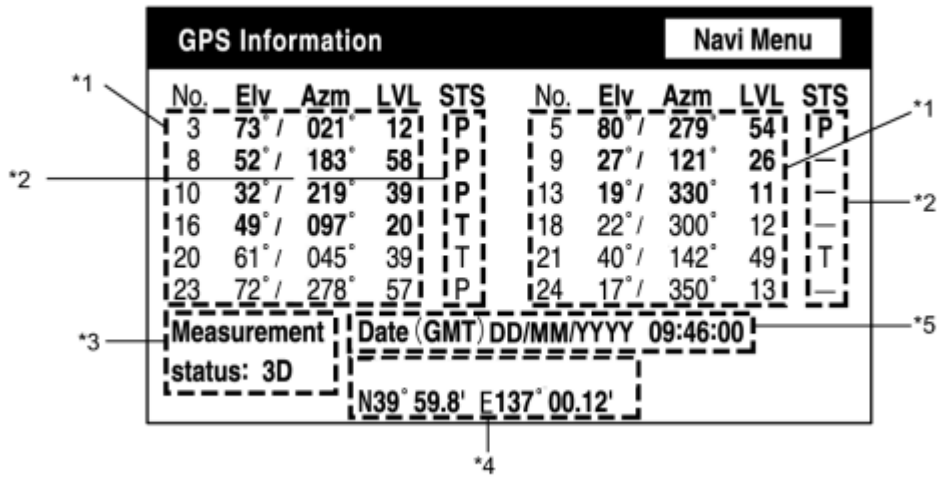
HINT:

- Only items sending vehicle signals will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

(c) NAVIGATION CHECK

(1) Navigation Check Screen

Example:



HINT:

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

(2) GPS Information Screen

Example:

*1 : Satellite information

Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.

*2 : Receiving condition

DENSO Model

DISPLAY	CONTENT
T	System is receiving GPS signal, but is not using it for location.
P	System is using GPS signal for location.
-	System cannot receive GPS signal.

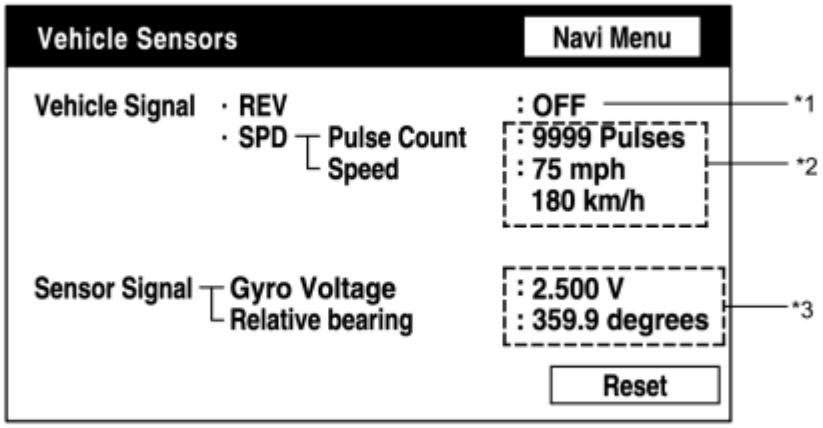
AISIN AW Model

DISPLAY	CONTENT
01H	System cannot receive a GPS signal.
02H	System is tracing a satellite.
03H	System is receiving a GPS signal, but is not using it for location.
04H	System is using the GPS signal for location.

*3: Measurement information

DISPLAY	CONTENT
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.
-	Any other state.

*4: Position information



DISPLAY	CONTENT
Position	Latitude and longitude information on current position is displayed.

*5: Date information

DISPLAY	CONTENT
Date	Date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). Last 4 digits are displayed.

(3) Vehicle Sensors Screen

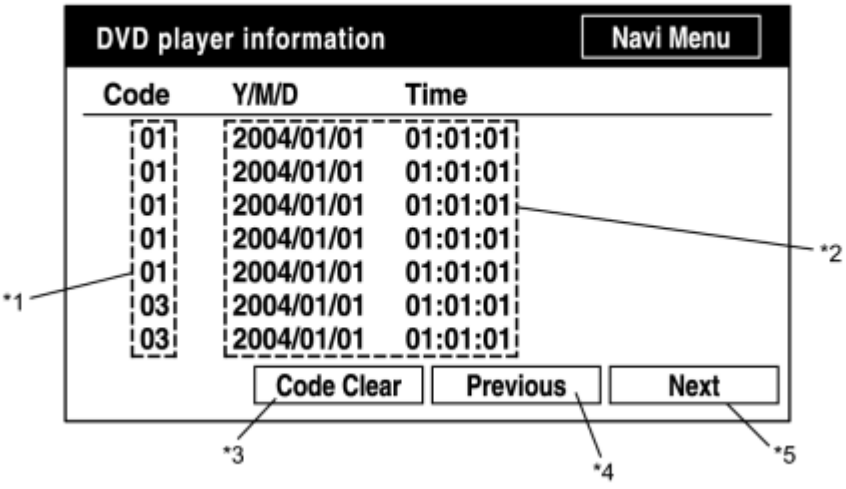
Example:

P

Vehicle Signal

DISPLAY	CONTENT
*1: REV	REV signal ON/OFF state is displayed.
*2: SPD	SPD signal condition is displayed.

Sensor Signal



DISPLAY	CONTENT
*3: Gyro sensor	Gyro sensor output condition is displayed (when vehicle is driven straight or is stationary, voltage is approximately 2.5 V).

HINT:

Signals are updated once per second only when vehicle sensor signals are changed.

(4) DVD player information Screen

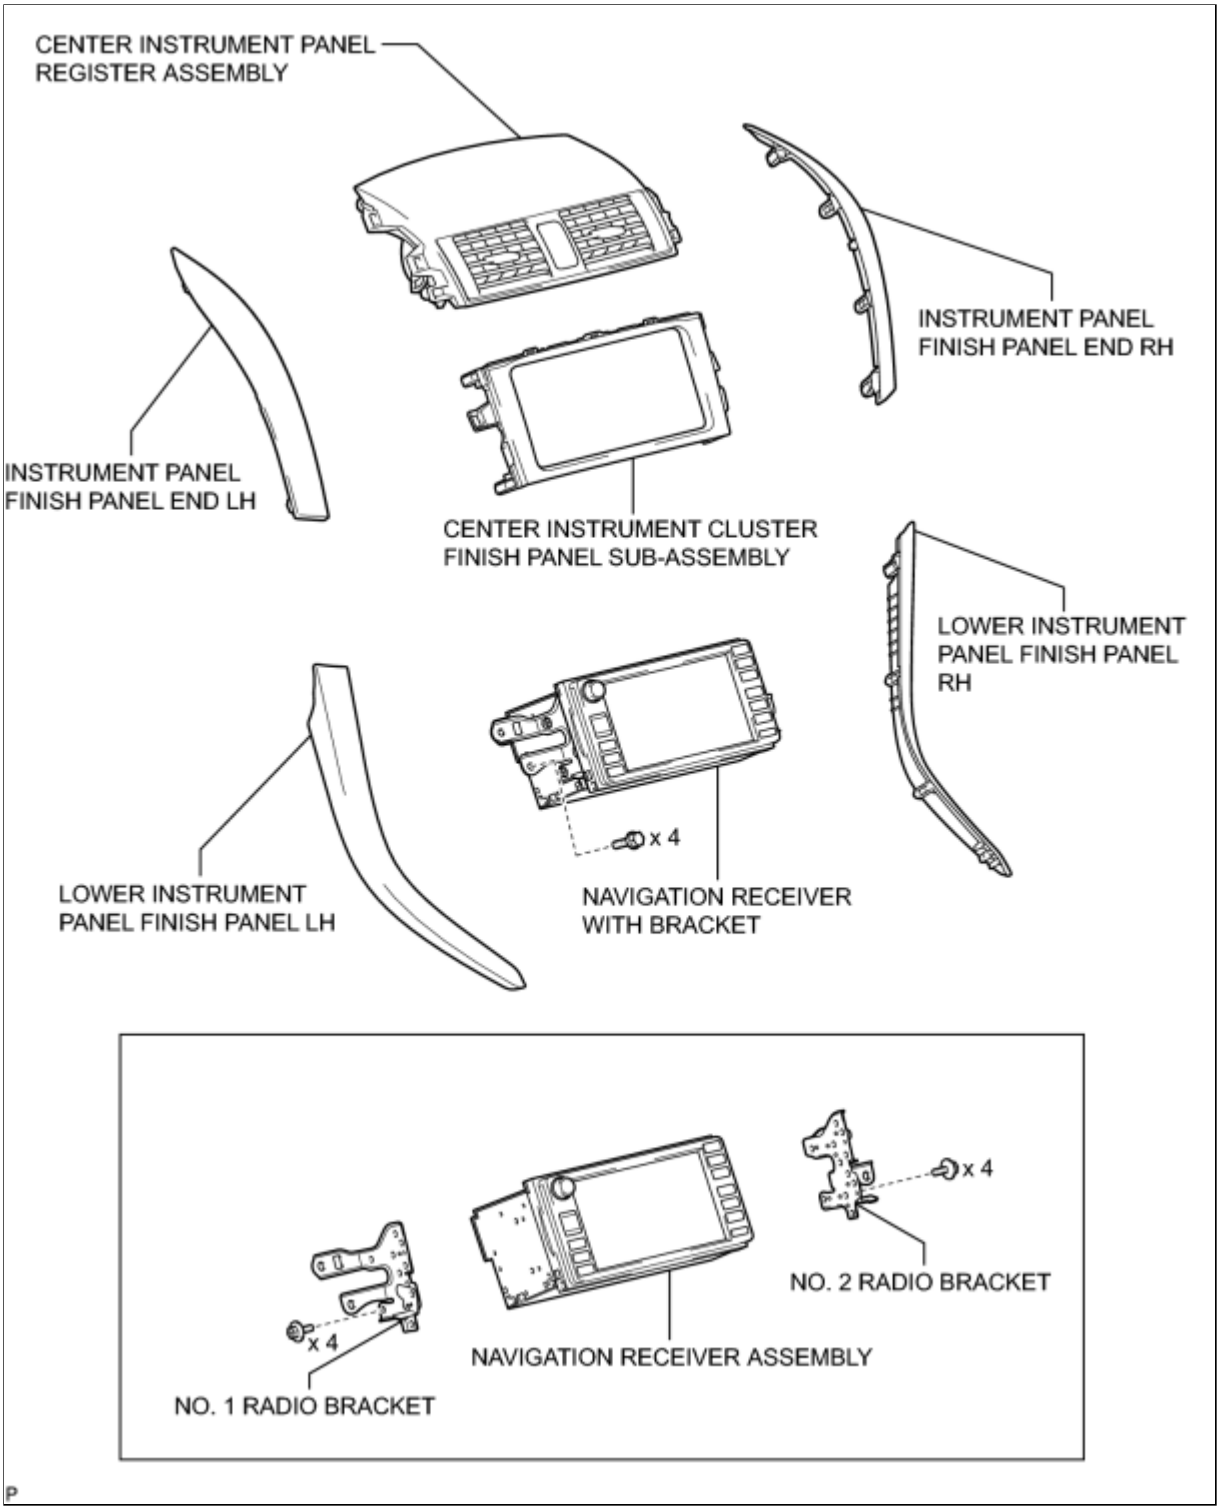
Example:

Screen Description

DISPLAY	CONTENTS
*1: Trouble code	Each code corresponding to malfunctions is displayed. For details, refer to "Trouble Code Description".
*2: Occurrence time	• Date (year, month, day) and time (hour, minute, second) when trouble code was stored are displayed as time stamp (Greenwich mean time). • Time data to be displayed is received from GPS receiver.
*3: Trouble code clear switch	All code data being displayed is cleared by pushing this switch for 3 seconds.
*4: Returning switch	Previous page is displayed. If current displayed page is first page, this switch cannot be operated.
*5: Proceeding switch	Next page is displayed. If current displayed page is last page, this switch cannot be operated.

Trouble Code Description

CODE	MALFUNCTION	COUNTERMEASURE
01	Cannot be recognized	Replace navigation receiver assembly.
03	Cannot be read	Follow inspection procedure for DTC 58-42 INFO .



HINT:

There is a DVD player check function in the navigation ECU.

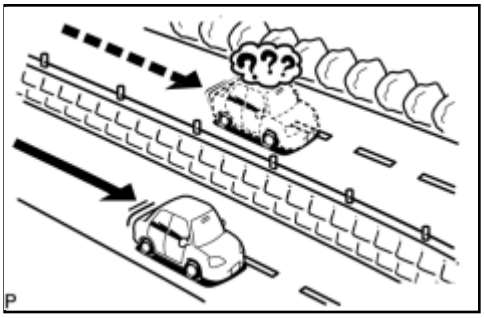
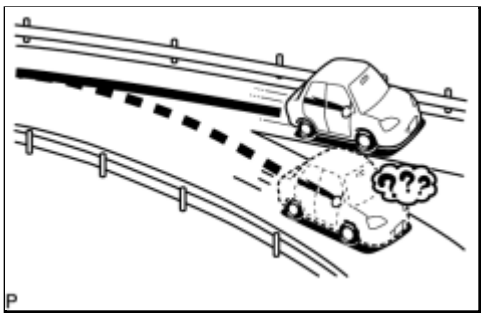
Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: OPERATION CHECK (2010 Corolla)		



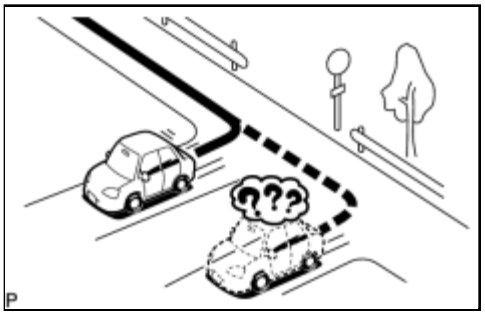
OPERATION CHECK

1. CHECK SYSTEM NORMAL CONDITION

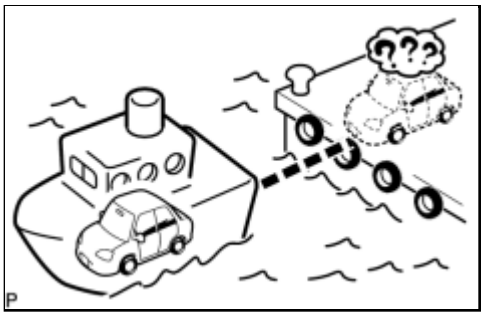
(a) If the cause of a symptom is any of the following, the corresponding symptom is normal, it is not a malfunction.



SYMPTOM	ANSWER
A longer route than expected is chosen.	Depending on the road conditions, the navigation receiver assembly may determine that a longer route is quicker.
Even when distance priority is high, the shortest route is not shown.	Some paths may not be advised due to safety concerns.
When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position.	If the vehicle starts before the navigation system activates, the system may not react.
When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position.	When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate.

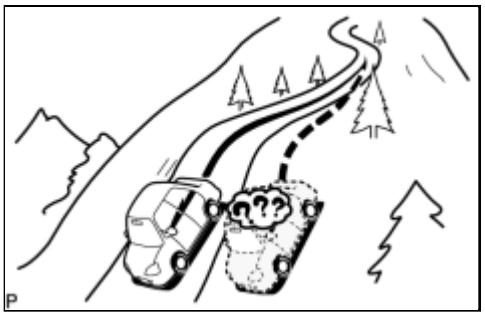


(b) The following symptoms are not a malfunction, but are caused by errors inherent in the GPS, gyro sensor, speed sensor, or navigation receiver assembly.

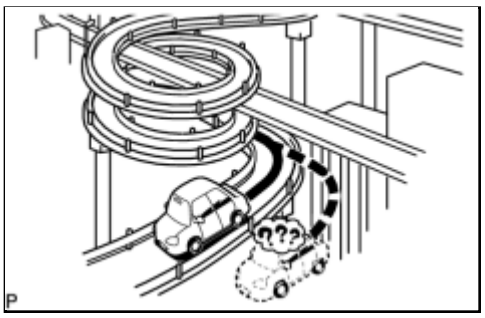


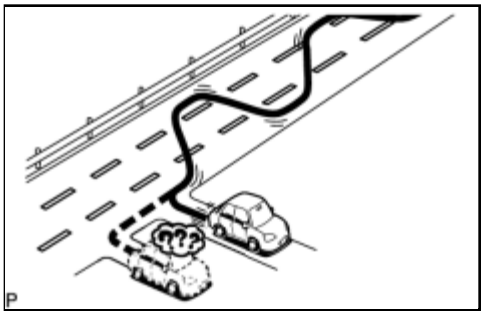
(1) The current position mark may be displayed on a nearby parallel road.

(2) Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.

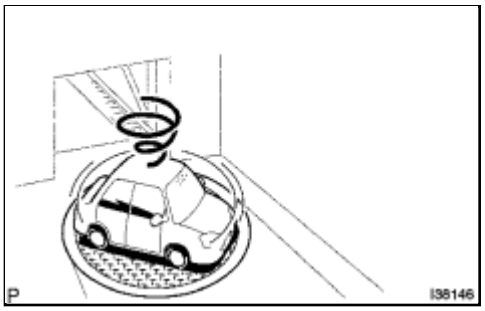


(3) When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.





(4) When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.

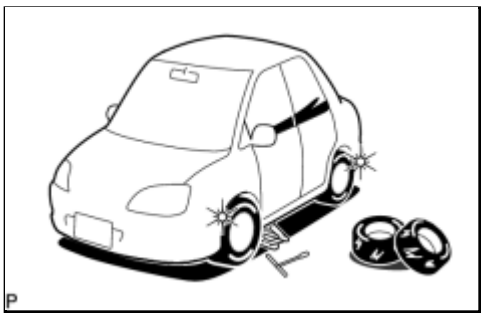


(5) When the vehicle is driven on a steep hill, the current vehicle position mark may deviate from the correct position.

(6) When the vehicle makes a continuous turn of 360°, 720°, 1080°, etc., the current vehicle position mark may deviate from the correct position.

(7) When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

(8) When the ignition switch is turned to ACC or ON on a turntable while parking, the current vehicle position mark may not point in the correct direction. The same will occur when the vehicle starts to move.

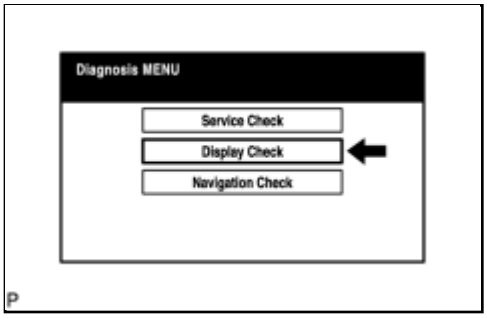


(9) When the vehicle is driven on a snowy road or a mountain path with tire chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

(10) When a tire is changed, the current vehicle position mark may deviate from the correct position.

HINT:

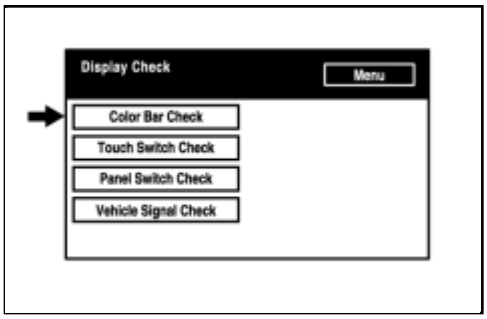
- The diameter of the tire may change, causing a speed sensor error.
- Performing the "tire change" in calibration mode will allow



the system to correct the current vehicle position faster.

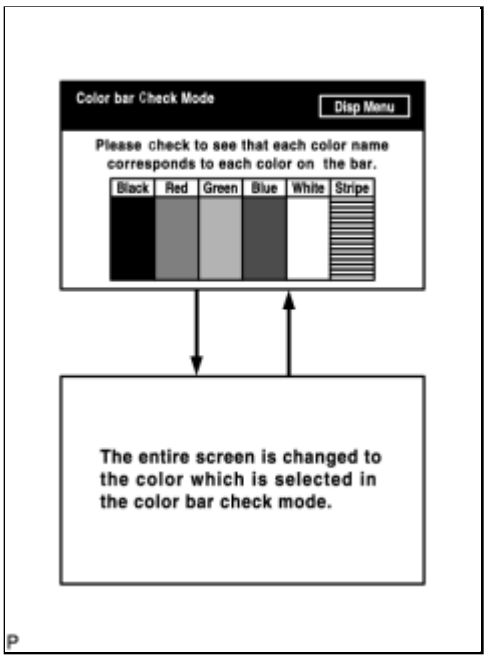
2. CHECK DISPLAY CHECK

HINT:



- This mode checks the color display on the multi-display.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.

(a) Enter diagnostic mode INFO .

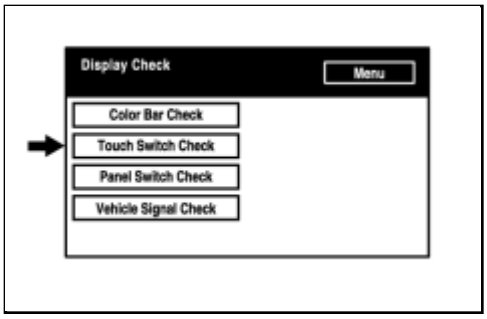


(b) Select "Display Check" from the "Diagnosis MENU" screen.

(c) Color Bar Check

(1) Select "Color Bar Check" from the "Display Check" screen.

(2) Select a color bar from the "Color Bar Check Mode" screen.

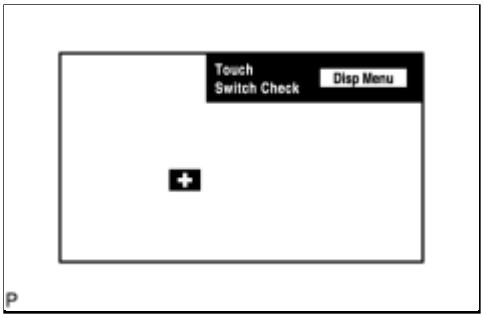


(3) Check the display color.

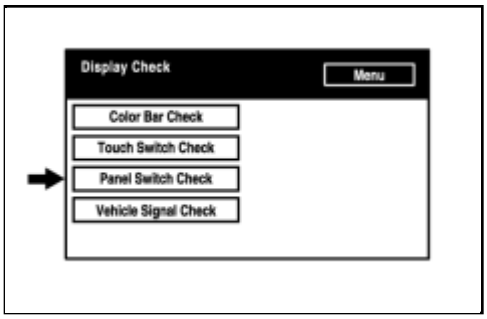
HINT:

- The entire screen turns to the color or stripe selected.
- Touch the display to return to the "Color Bar Check Mode" screen.

(d) Touch Switch Check



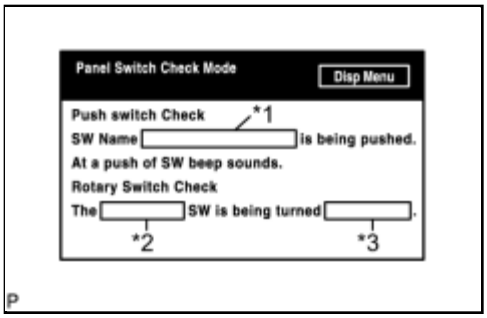
(1) Select "Touch Switch Check" from the "Display Check" screen.



(2) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

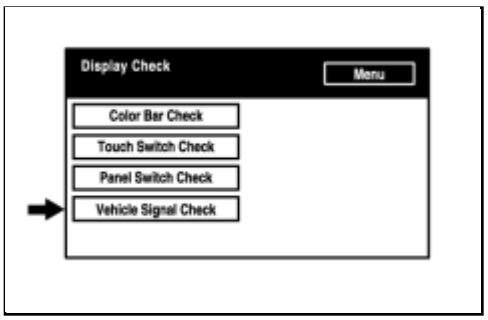
HINT:

A "+" mark is displayed where the display is touched.

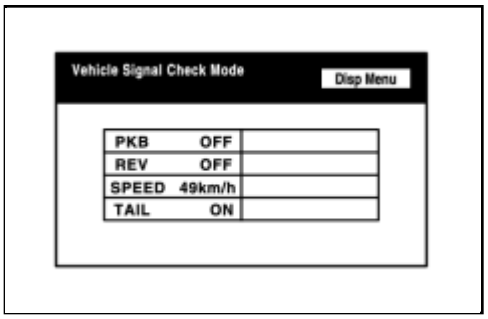


(e) Panel Switch Check

(1) Select "Panel Switch Check" from the "Display Check" screen.



(2) Operate each switch and check that the switch name and condition are correctly displayed.



DISPLAY	CONTENT
*1: Pushed switch name	• Name of the pressed switch is displayed. • If more than one switch is pressed, "MULTIPLE" is displayed.
*2: Rotary switch name	Name of the rotary switch is displayed.
*3: Rotary switch direction	Direction of the rotary switch is displayed.

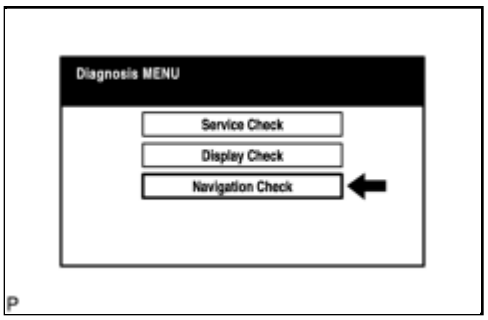
(f) Vehicle Signal Check

(1) Select "Vehicle Signal Check" from the "Display Check" screen.

(2) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

HINT:

- Only conditions having inputs are displayed.
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description INFO .

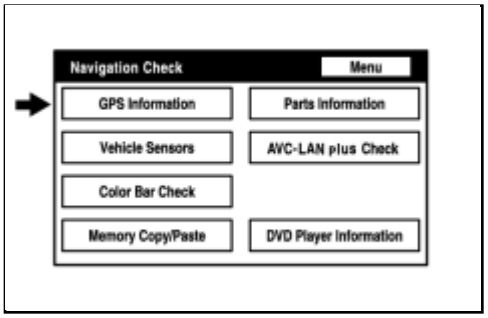


3. CHECK NAVIGATION CHECK

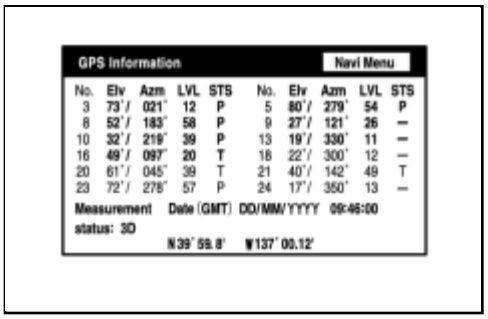
HINT:

- This mode displays GPS satellite information.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.

(a) Enter diagnostic mode INFO .



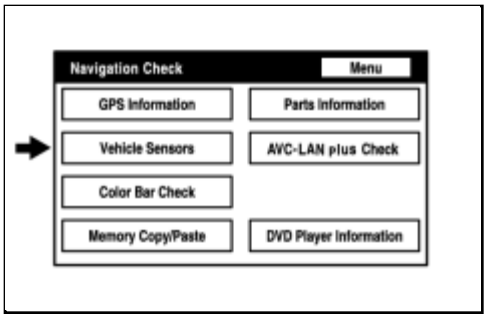
(b) Navigation Check



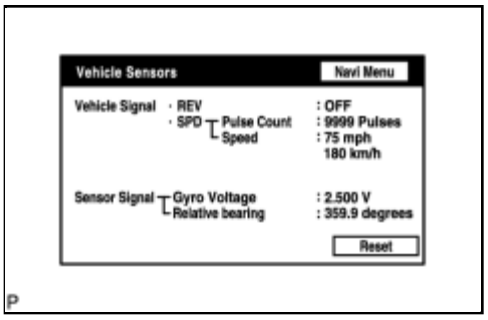
(1) Select "Navigation Check" from the "Diagnosis MENU" screen.

(c) GPS Information

(1) Select "GPS Information" from the "Navigation Check" screen.



(2) When GPS information is displayed, check the GPS conditions.

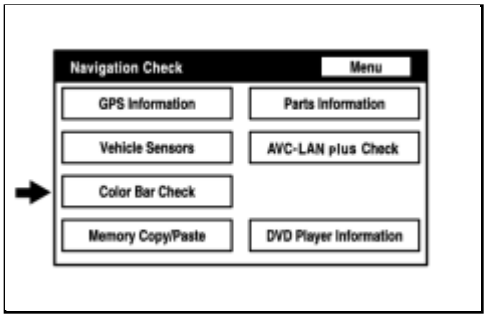


HINT:

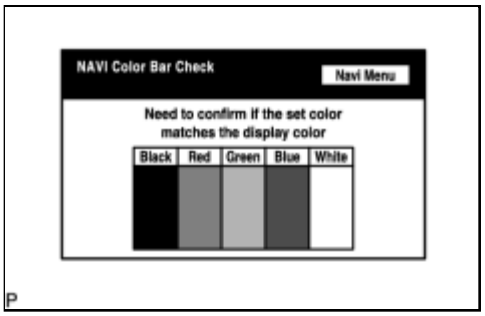
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description INFO .

(d) Vehicle Sensors

(1) Select "Vehicle Sensors" from the "Navigation Check" screen.



(2) Check all the signals and sensors when vehicle signal information is displayed.

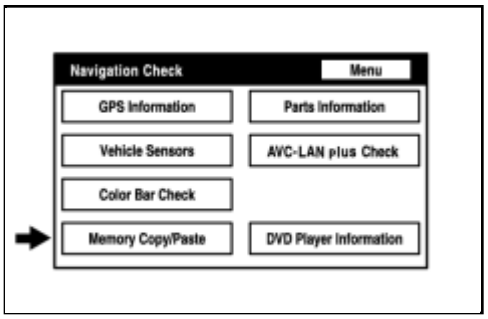


HINT:

- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the built-in navigation ECU.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description INFO .

(e) Color Bar Check

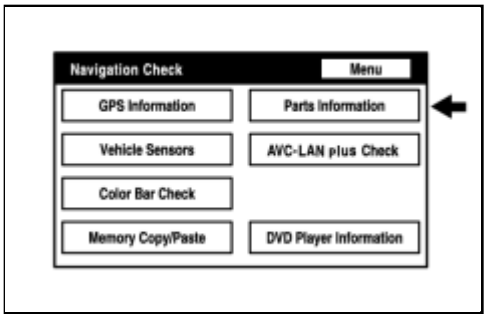
(1) Select "Color Bar Check" from the "Navigation Check" screen.



(2) Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.

HINT:

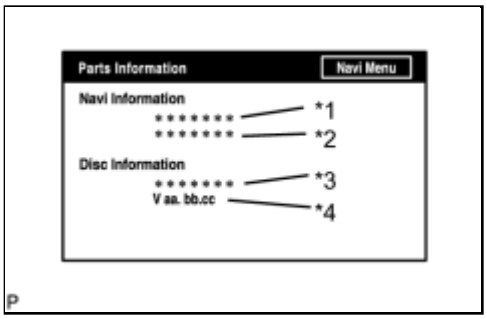
- Colors will not be displayed full-screen as in "Display Check Mode".
- This screen displays the built-in navigation ECU display color.



(f) Memory Copy/Paste

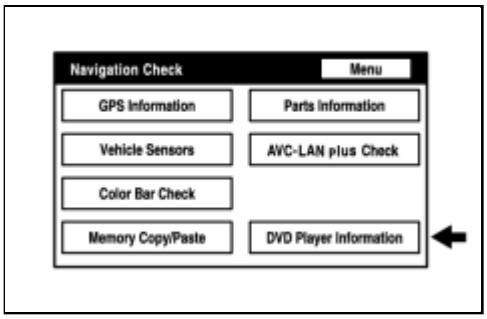
HINT:

This function cannot be used.



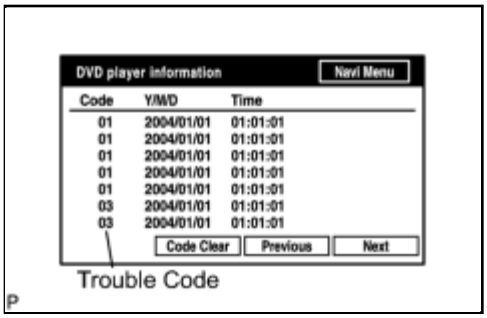
(g) Parts Information

(1) Select "Parts Information" from the "Navigation Check" screen.



(2) Check the navigation and disc information when the "Parts Information" screen is displayed.

Screen Description



DISPLAY	CONTENT
*1: Navigation Manufacturer	Navigation receiver assembly manufacturer is displayed.
*2: Navigation Version	Navigation receiver assembly version is displayed.
*3: Disc Manufacturer	Map disc manufacturer is displayed.
*4: Disc Version	Map disc version is displayed.

(h) DVD Player Information

(1) Select "DVD Player Information" from the "Navigation Check" screen.

(2) Check for DTCs.

HINT:

- This is the DVD player check function in the navigation ECU.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description INFO .

6.	RECHECK FOR DTC

HINT:

- Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores past diagnostic trouble codes.
- Refer to the detailed description on the diagnostic screen as necessary INFO .
- Check the diagnostic trouble code and inspect the area the code indicates.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

DTC CHECK / CLEAR

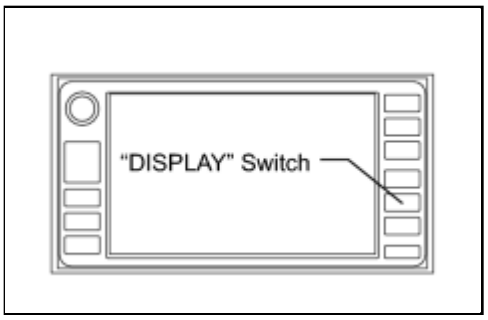
HINT:

- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.
- After the ignition switch is turned to ON, check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.

1. START DIAGNOSTIC MODE

(a) There are 2 methods to start diagnostic mode. Start the mode by using one of them.

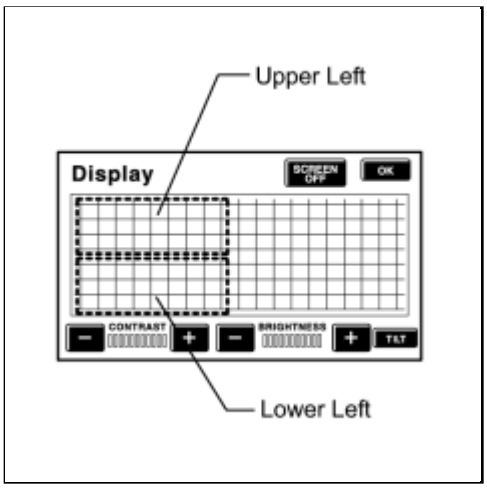
(b) Method 1



(1) Start the engine.

(2) While pressing and holding the "INFO" switch, operate the light control switch: OFF → Turn ON → Turn OFF → Turn ON → Turn OFF → Turn ON → Turn OFF.

(3) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



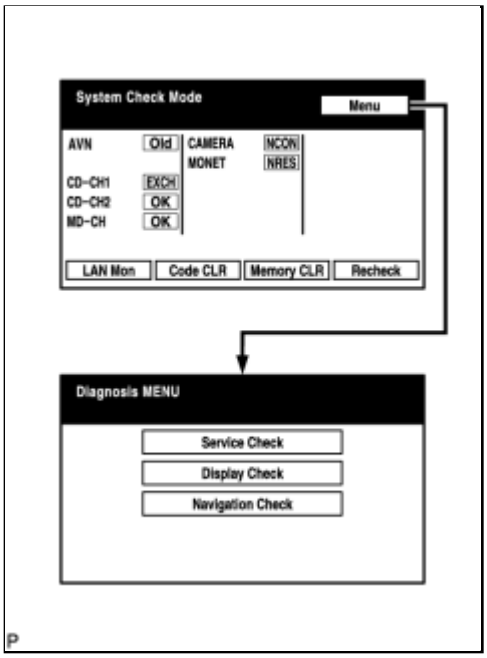
(c) Method 2

(1) Start the engine.

(2) Press the "DISPLAY" switch.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

(4) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



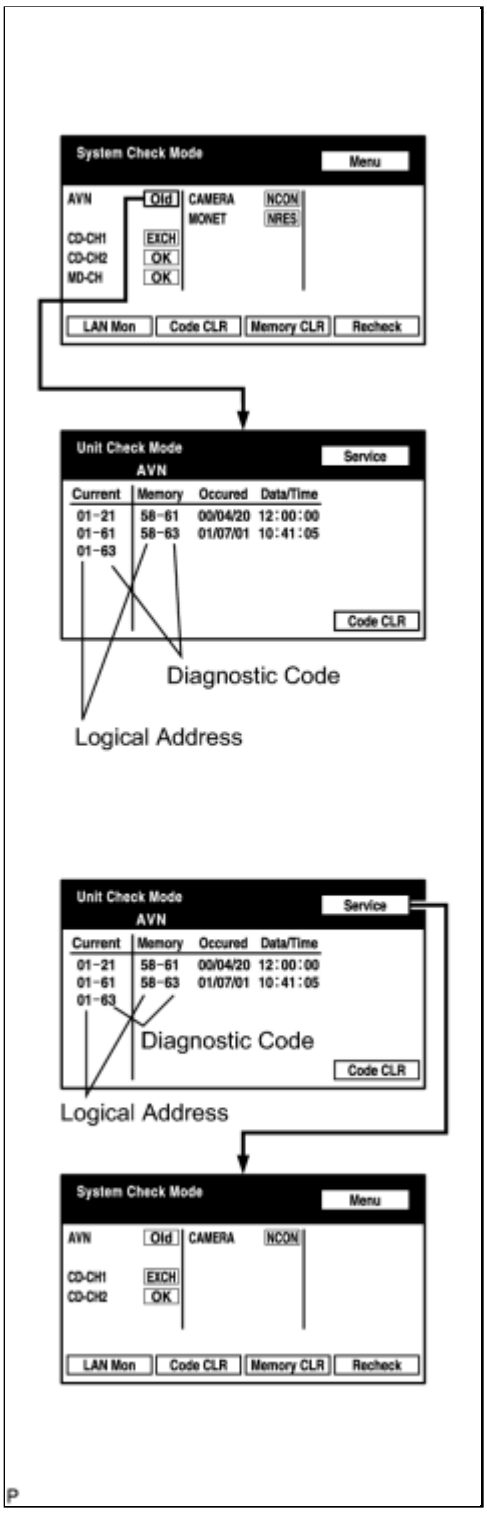
2. FINISH DIAGNOSTIC MODE

(a) There are 2 methods to end diagnostic mode. Use one of them.

(1) Turn the ignition switch off.

(2) Press and hold the "DISP" switch for 3 seconds.

3. DIAGNOSIS MENU



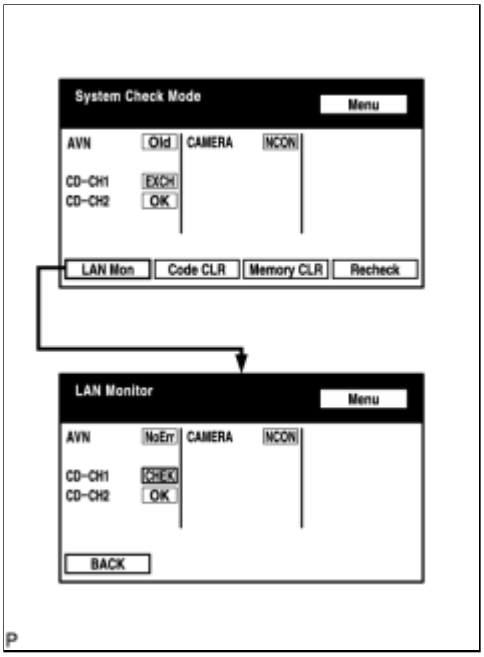
(a) The "Diagnosis MENU" screen will be displayed by pressing the "Menu" switch on the "System Check Mode" screen.

4. CHECK DTC

(a) Read the system check result.

(1) If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result to view the results on the

"Unit Check Mode" screen and record them.



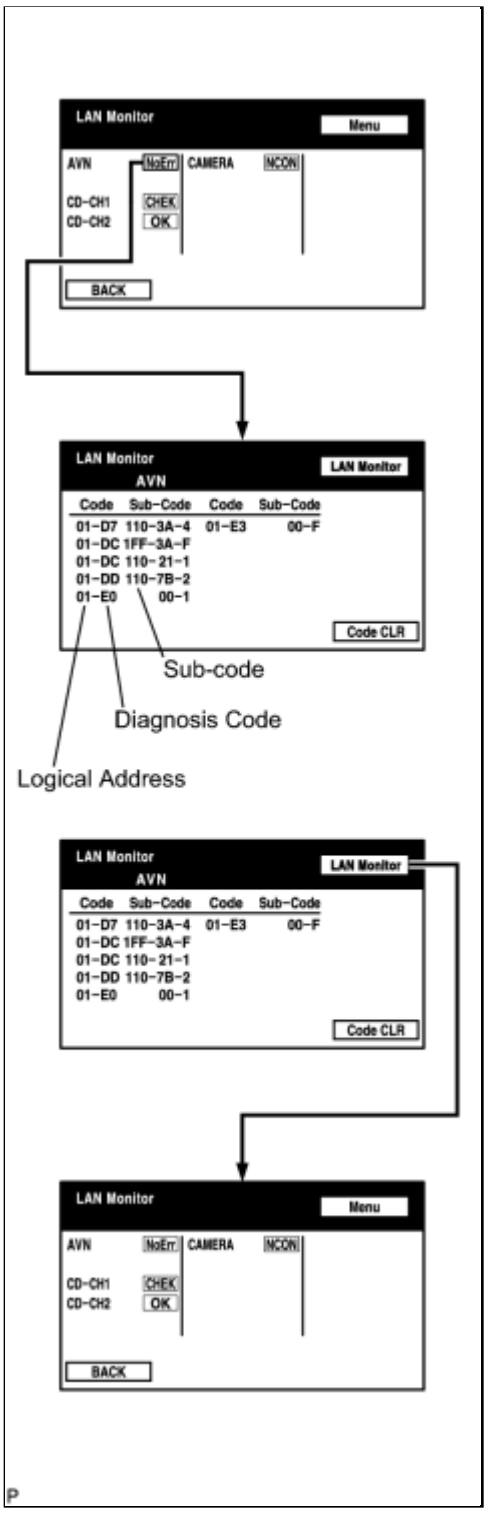
HINT:

- If all check results are "OK", go to communication DTC check.
- If a device name is not known, its physical address is displayed.

HINT:

When proceeding to view the results of another device, press the "Service" switch to return to the "System Check Mode" screen. Repeat this step.

(b) Read the communication diagnostic check result.

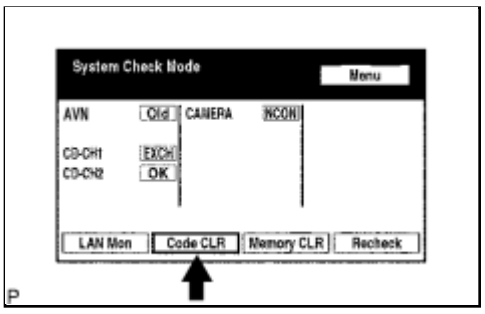


(1) Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.

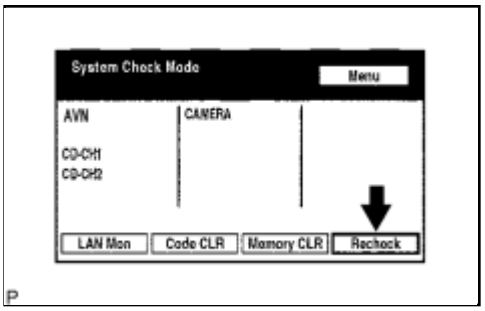
(2) If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.

HINT:

- If all check results are "No Err", the system judges that no DTC exists.
- The sub-code (relevant device) will be indicated by its physical address.
- When proceeding to view the results of another device, press the "Service" switch to return to the original "LAN Monitor" screen. Repeat this step.

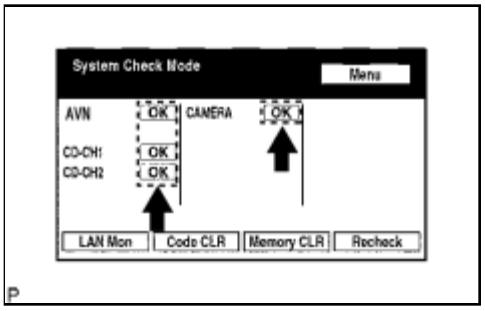


5. DTC CLEAR/RECHECK

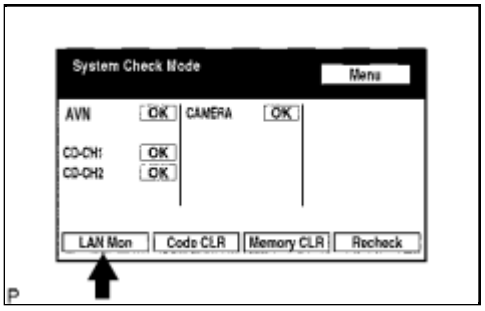


(a) Clear DTC

(1) Press the "Code CLR" switch for 3 seconds.

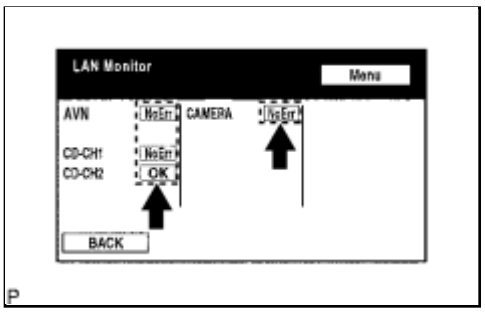


(2) The check results are cleared.



(b) Recheck

(1) Press the "Recheck" switch.



(2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

(3) Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

(4) Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

3.	**CHECK NOISE CONDITIONS**

(a) Check the noise condition.

HINT:

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

CONDITION UNDER WHICH NOISE OCCURS	NOISE SOURCE
Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped.	Generator
Noise occurs during A/C or heater operation.	Blower motor
Noise occurs when the horn switch is pressed and released or when pressed and held.	Horn
Noise occurs synchronously with the blink of the turn signal.	Flasher
Noise occurs during window washer operation.	Washer
Noise occurs during wiper operation.	Wiper
Noise occurs when the brake pedal is depressed.	Stop light switch
Others	Static electricity

HINT:

- In the chart's left column, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the noise filter on or for the part.
- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Noise should be removed in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise

problem easier.

Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: Vehicle Speed Signal Circuit between Navigation Receiver Assembly and Combination Meter (2010 Corolla)		

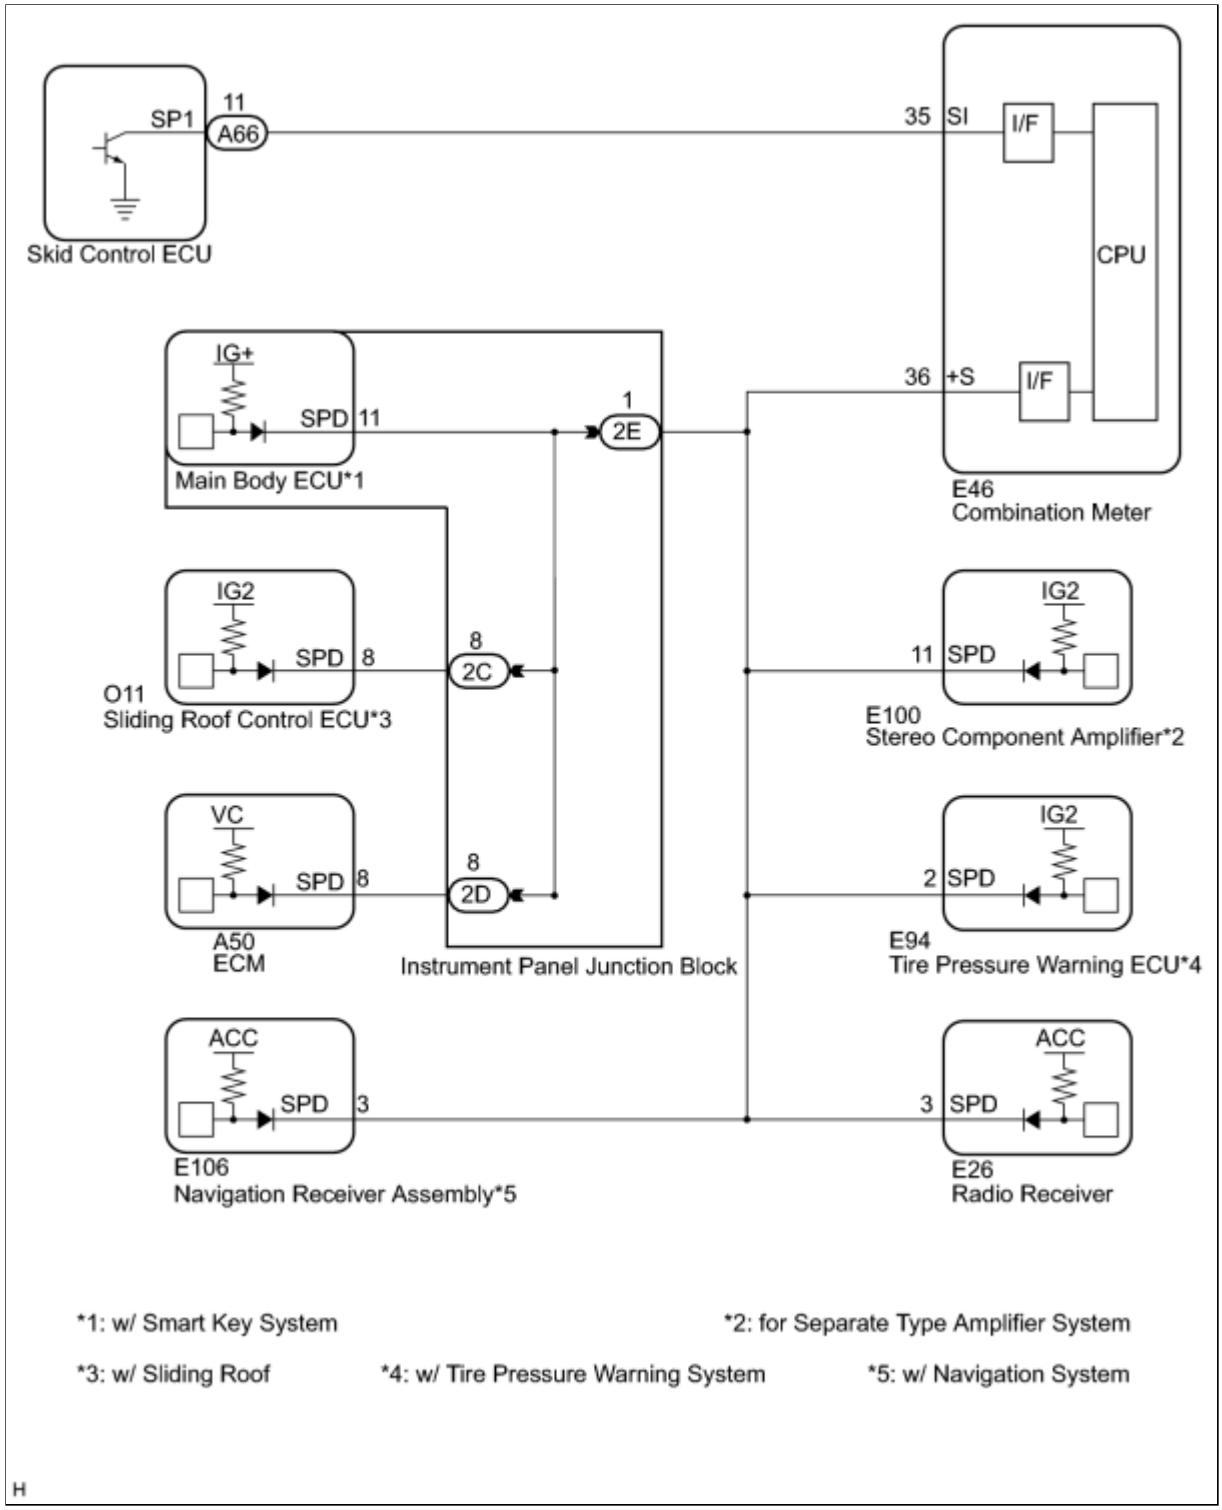
Vehicle Speed Signal Circuit between Navigation Receiver Assembly and Combination Meter

DESCRIPTION

Navigation function:

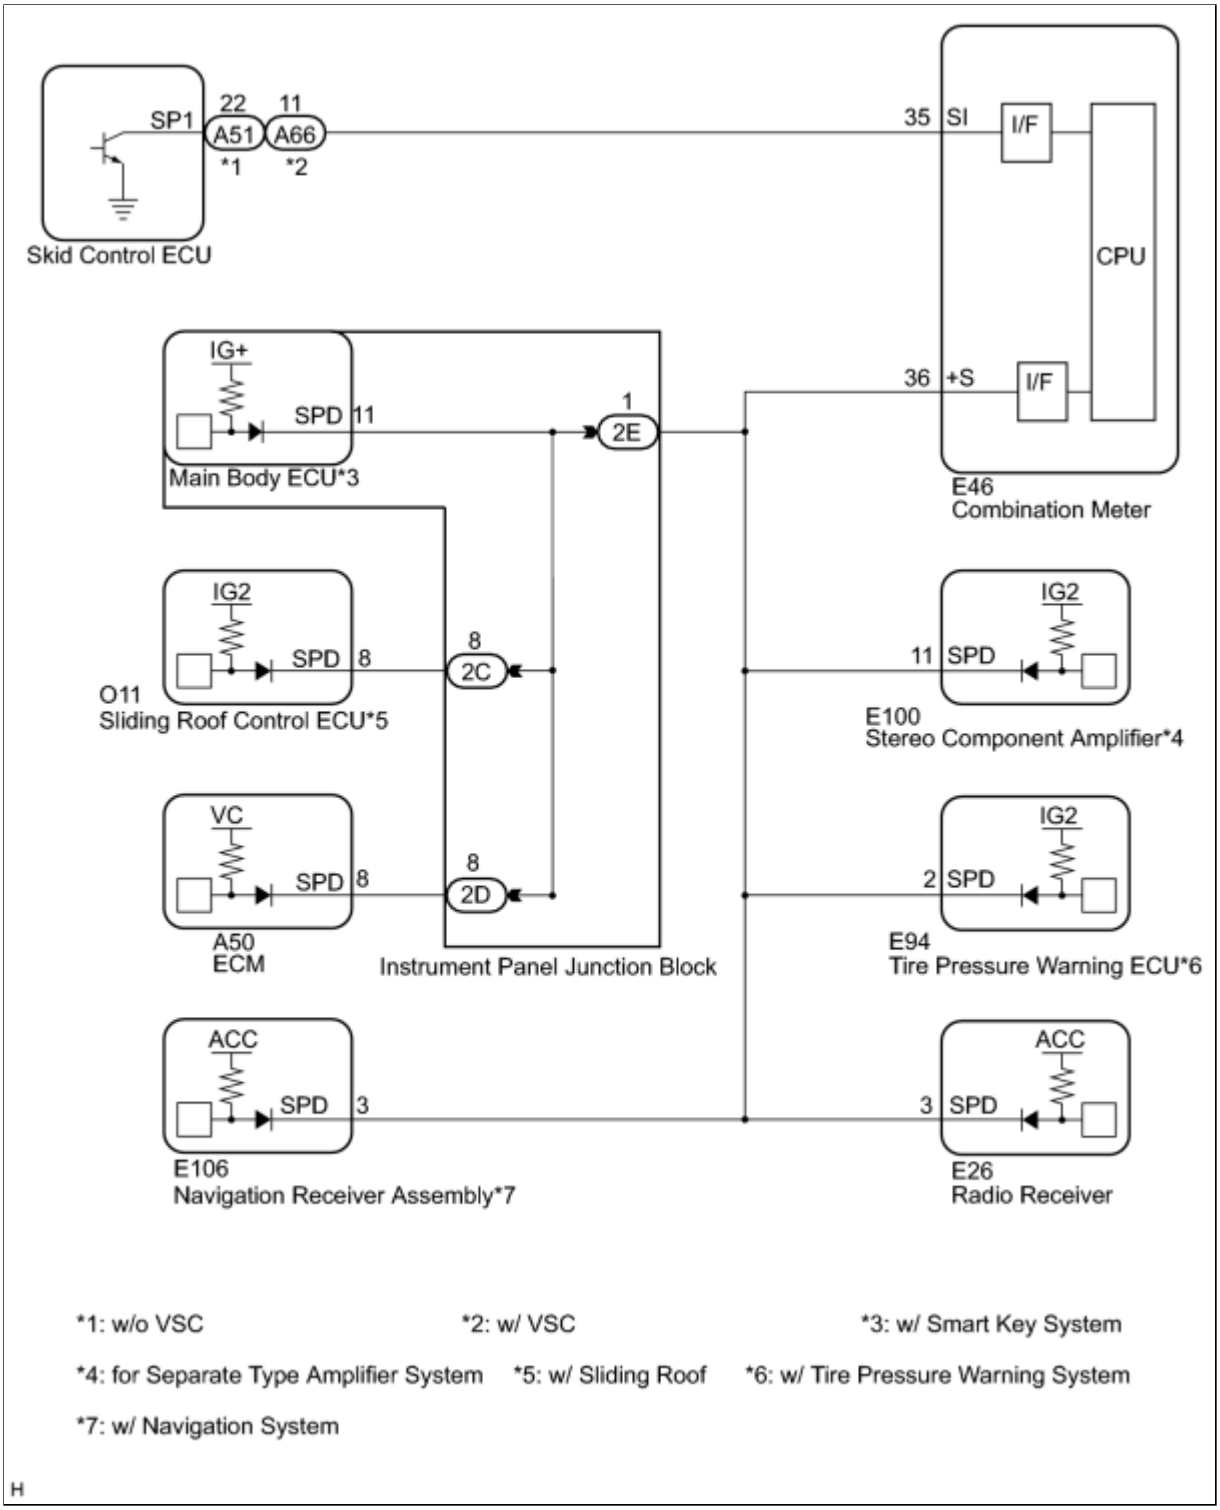
The navigation receiver assembly receives a vehicle speed signal from the combination meter and information about the GPS antenna, and then adjusts vehicle position.

ASL function:



The circuit is necessary for the ASL (Automatic Sound Levelizer) built into the radio receiver. Speed signals are received from the combination meter and used for the ASL. The ASL function automatically adjusts the sound volume in order to maintain clear audio sound even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

HINT:



- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram will not operate normally.

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT COMBINATION METER (OUTPUT WAVEFORM)**

(a) Check the output waveform.

(1) Remove the combination meter with the connector still connected.

(2) Connect an oscilloscope to terminal E46-36 (+S) and body ground.

(3) Turn the ignition switch to ON.

(4) Turn a drive wheel slowly.

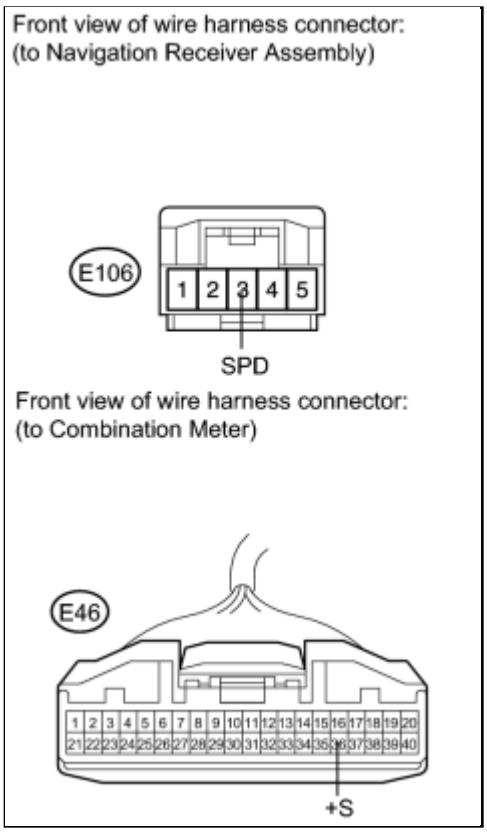
(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.

HINT:



When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

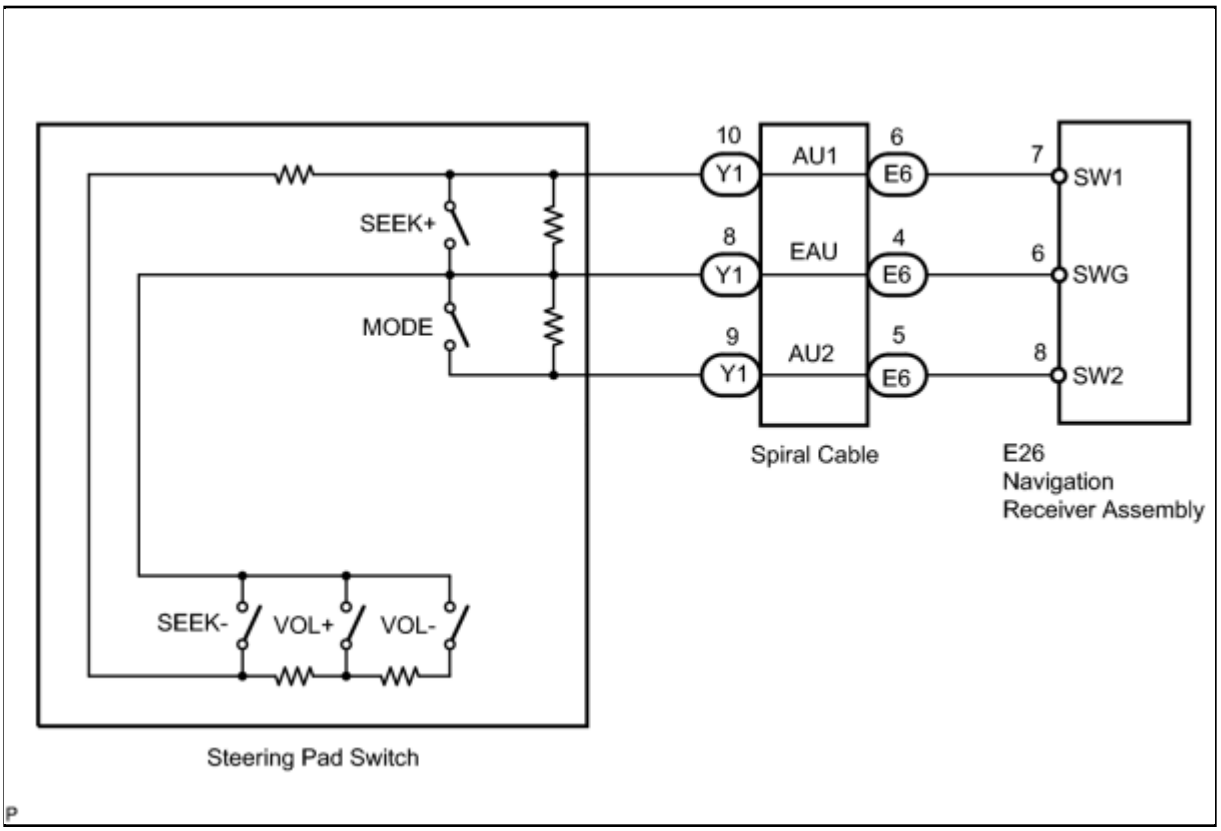
Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: Steering Pad Switch Circuit (2010 Corolla)		

Steering Pad Switch Circuit



DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the navigation receiver assembly.

If there is an open in the circuit, the navigation system cannot be operated using the steering pad switch.

If there is a short in the circuit, the resulting condition is the same as that when the switch were continuously pressed. Therefore, the navigation receiver assembly cannot be operated using the steering pad switch, and the navigation receiver assembly itself cannot function.

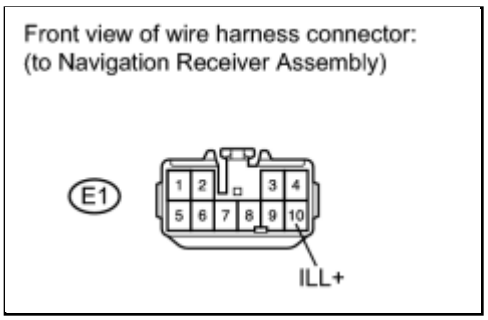
5.	**INSPECT STEERING PAD SWITCH ASSEMBLY**

(a) Disconnect the steering pad switch assembly connector.

(b) Connect a positive (+) lead to terminal IL+2 and a negative (-) lead to terminal EAU of the steering pad switch connector.

(c) Check if the illumination for the steering pad switch comes on.

OK:



Illumination for the steering pad switch assembly comes on.

NG ▶ **REPLACE STEERING PAD SWITCH ASSEMBLY**

2.	**INSPECT FRONT NO. 1 SPEAKER**

(a) Resistance check

(1) Measure the resistance between the terminals of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I1-1 - I1-2	Always	3.2 to 4.8 Ω
H1-1 - H1-2	Always	3.2 to 4.8 Ω

NG ▶ **REPLACE FRONT NO. 1 SPEAKER**

OK ▼

3.	**INSPECT FRONT NO. 2 SPEAKER**

(a) Check that the malfunction disappears when another speaker in good condition is installed.

OK:

Malfunction disappears.

HINT:

- Connect all the connectors to the front No. 2 speaker.
- When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.
- Perform the above inspection on both LH and RH sides.

NG ▶ **REPLACE FRONT NO. 2 SPEAKER**

OK ▼

4.	**INSPECT REAR SPEAKER**

(a) Resistance check

(1) Measure the resistance between the terminals of the speaker.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L2-1 - L2-2	Always	Approximately 4 Ω
L1-1 - L1-2	Always	Approximately 4 Ω

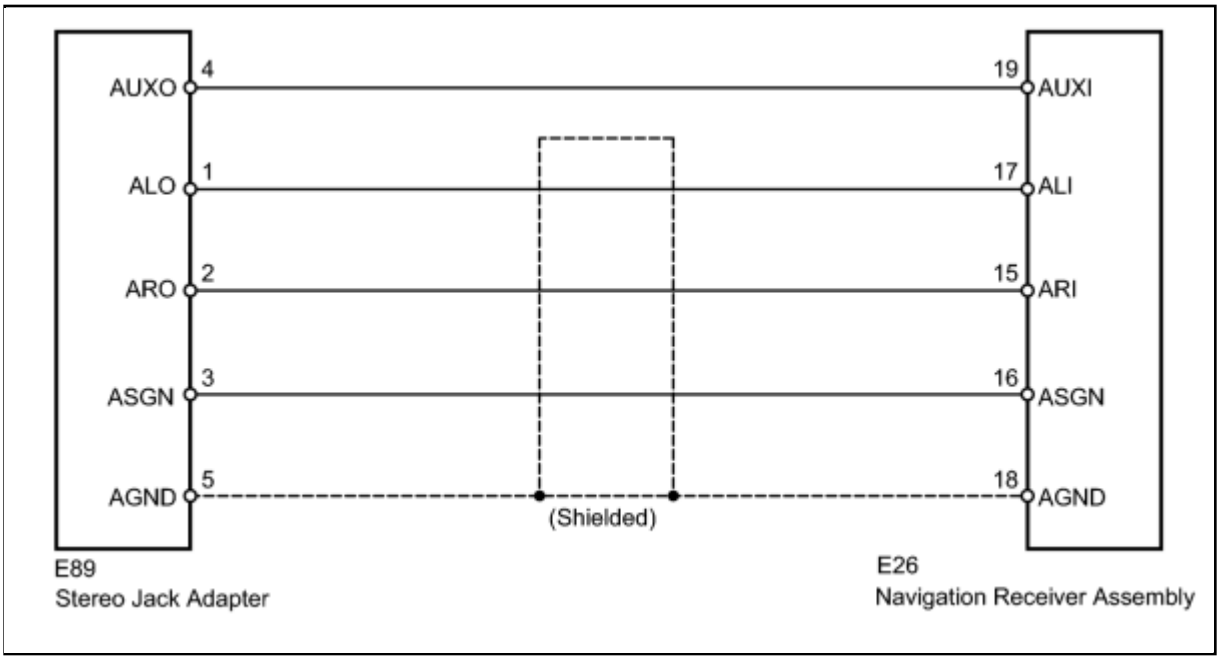
Title: NAVIGATION / MULTI INFO DISPLAY: NAVIGATION SYSTEM: Sound Signal Circuit between Navigation Receiver Assembly and Stereo Jack Adapter (2010 Corolla)		

Sound Signal Circuit between Navigation Receiver Assembly and Stereo Jack Adapter



DESCRIPTION

The stereo jack adapter sends an external device sound signal to the navigation receiver assembly through this circuit.

The sound signal that has been sent is amplified by the stereo component amplifier and then is sent to the speakers.

If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier, navigation receiver assembly, or speakers.

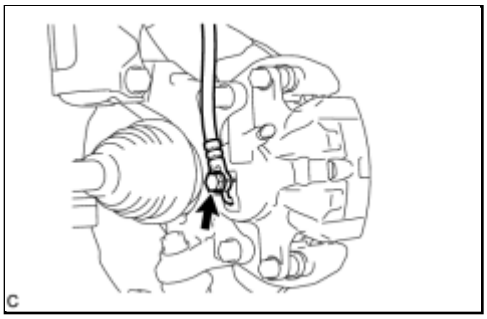
NOTICE:

If both RH side hose and LH side hose are disconnected at the same time, be sure to place identification marks indicating the position on each side.

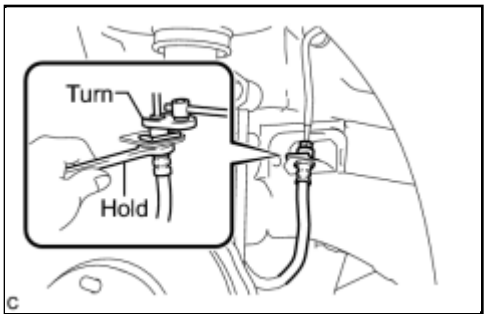
HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.



1. DRAIN BRAKE FLUID

NOTICE:

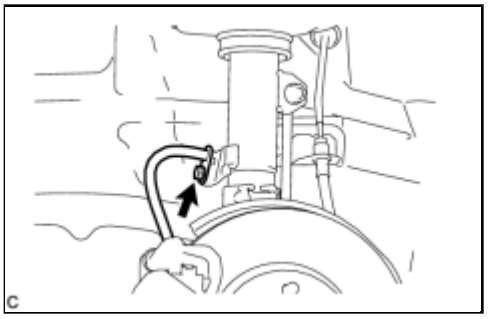


Immediately wash off any brake fluid that comes into contact with any painted surfaces.

2. REMOVE FRONT WHEEL

3. REMOVE FRONT FLEXIBLE HOSE

(a) Remove the union bolt and gasket, and separate the front flexible hose.



(b) Using a union nut wrench (10 mm), disconnect the brake line while holding the front flexible hose with a wrench.

NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the clip or bracket.

(c) Remove the clip.

(d) Remove the bolt and the front flexible hose from the absorber bracket.

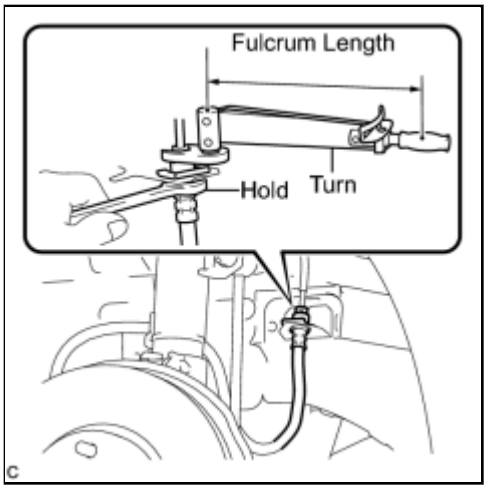
INSTALLATION

NOTICE:



- Because the left and right hoses are not interchangeable, verify the part number when installing the flexible hoses.
- If the hoses are to be reused, connect them after checking the identification marks placed when each hose was disconnected.

1. INSTALL FRONT FLEXIBLE HOSE

(a) Connect the front flexible hose to the disc brake cylinder assembly with the union bolt and a new gasket.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

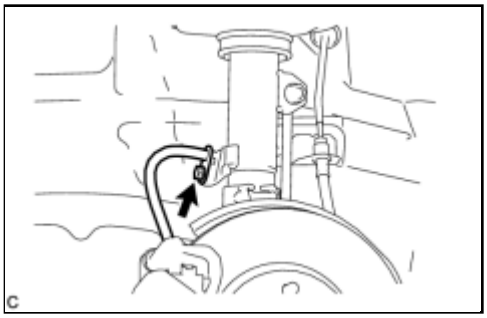
(b) Install a new clip to the front flexible hose.

NOTICE:

Install the clip as far as it will go.

(c) Using a union nut wrench (10 mm), connect the brake line to the front flexible hose while holding the flexible hose with a wrench.

without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)



with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt or dust to enter the brake line from the clip or

bracket.

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

(d) Install the front flexible hose to the absorber bracket with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

HINT:

Install the speed sensor harness bracket first and then the front flexible hose.

2. FILL RESERVOIR WITH BRAKE FLUID INFO

3. BLEED BRAKE LINE INFO

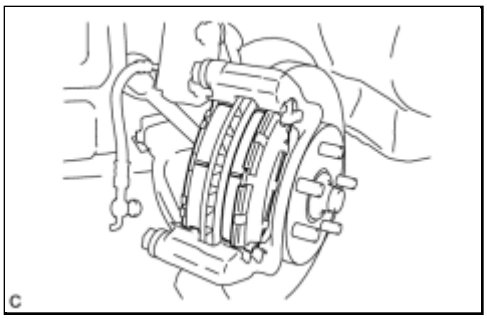
Immediately wash off any brake fluid that comes into contact with any painted surfaces.

3. DISCONNECT FRONT FLEXIBLE HOSE

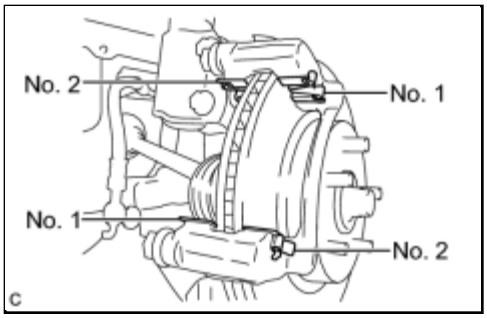


(a) Remove the union bolt and gasket, and separate the front flexible hose from the disc brake cylinder assembly.

4. REMOVE DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the front disc brake cylinder slide pin and remove the 2 bolts and disc brake cylinder assembly.

5. REMOVE FRONT DISC BRAKE PAD

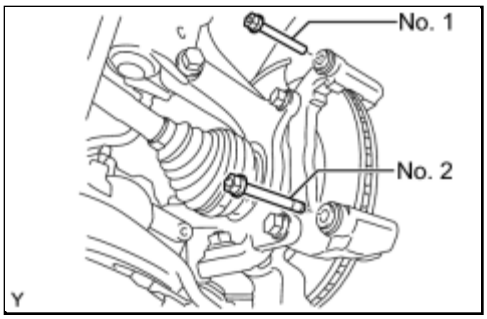


(a) Remove the 2 disc brake pads from the disc brake cylinder mounting.

6. REMOVE FRONT ANTI-SQUEAL SHIM

(a) Remove the 2 No. 1 anti-squeal shims and 2 No. 2 anti-squeal shims from the brake pads.

7. REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE

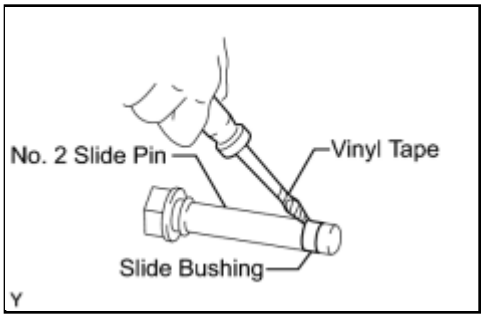


(a) Remove the 2 No. 1 disc brake pad support plates and 2 No. 2 disc brake pad support plates from the front disc brake cylinder mounting.

NOTICE:

Each front disc brake pad support plate has a different shape. Be sure to put an identification mark on each front disc brake pad support plate so that it can be reinstalled to its original position.

8. REMOVE FRONT DISC BRAKE CYLINDER SLIDE PIN

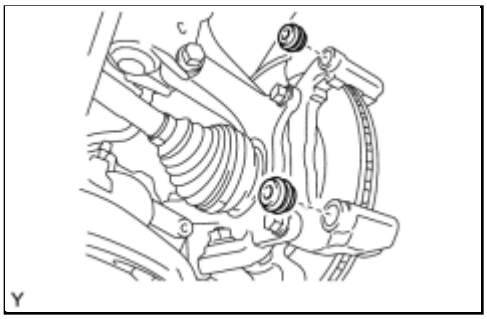


(a) Remove the No. 1 front disc brake cylinder slide pin and No. 2 front disc brake cylinder slide pin from the disc brake cylinder mounting.

9. REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSHING

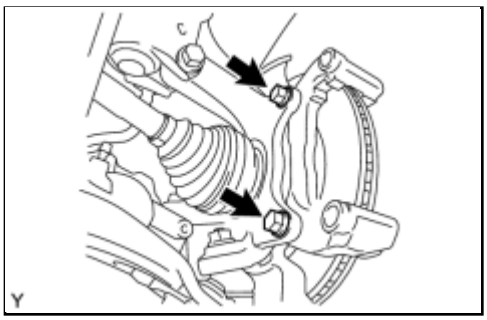
(a) Using a screwdriver, remove the front disc brake cylinder slide bushing from the No. 2 front disc brake cylinder slide pin.

NOTICE:



Do not damage the No. 2 front disc brake cylinder slide pin.

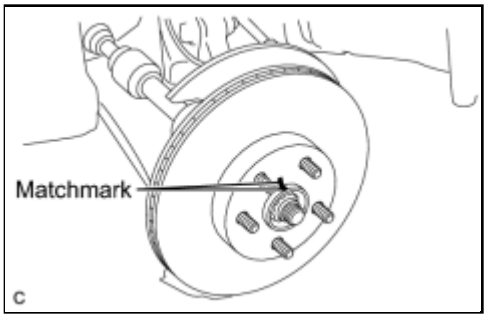
HINT:



Tape the screwdriver tip before use.

10. REMOVE FRONT DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 front disc brake bushing dust boots from the disc brake cylinder mounting.



11. REMOVE FRONT DISC BRAKE CYLINDER MOUNTING

(a) Remove the 2 bolts and front disc brake cylinder mounting from the steering knuckle.

12. REMOVE FRONT DISC

2. REMOVE FRONT DISC BRAKE PISTON

(a) Place a piece of cloth between the piston and disc brake cylinder.

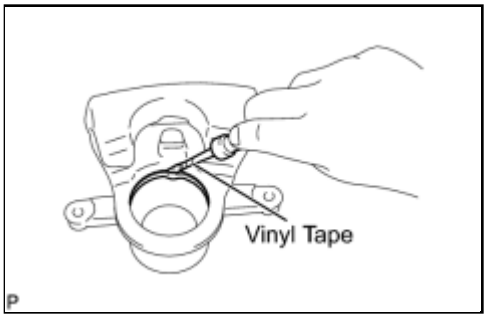
(b) Apply compressed air to remove the piston from the disc brake cylinder.

CAUTION:

Do not place your fingers in front of the piston when using compressed air.

NOTICE:

Do not allow any brake fluid to spatter.



3. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the disc brake cylinder.

NOTICE:

Do not damage the inner surface or piston seal groove of the cylinder.

HINT:

Title: BRAKE (FRONT): FRONT BRAKE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

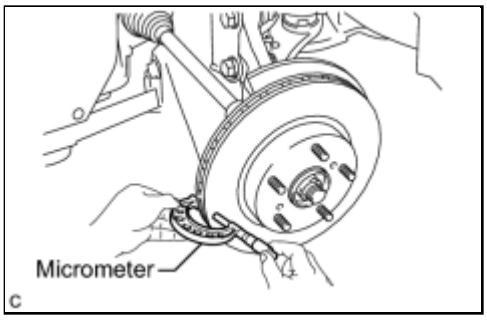
(a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the disc brake cylinder and piston.

2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
12.0 mm (0.472 in.)
Minimum thickness:
1.0 mm (0.0394 in.)

If the pad lining thickness is less than the minimum, replace the disc brake pads.



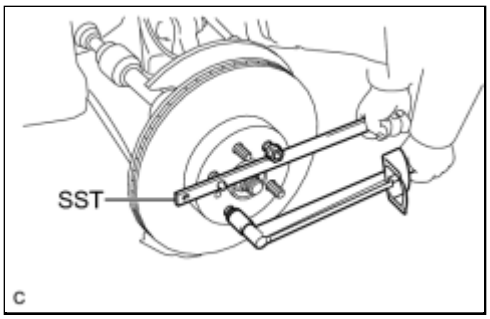
HINT:

Be sure to check the wear of the front disc after replacing the brake pads with new ones.

3. INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the disc brake pad support has sufficient rebound, no deformation, cracks or wear, and that all rust and dirt are cleaned off. If necessary, replace the disc brake pad support plate.

4. INSPECT DISC THICKNESS

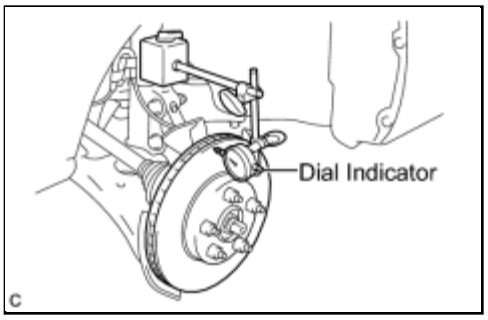


(a) Using a micrometer, measure the disc thickness.

Standard thickness:
22.0 mm (0.866 in.)
Minimum thickness:
19.0 mm (0.748 in.)

If the disc thickness is less than the minimum, replace the front disc.

5. INSPECT DISC RUNOUT



(a) Inspect the front axle hub bearing looseness and front axle hub runout INFO .

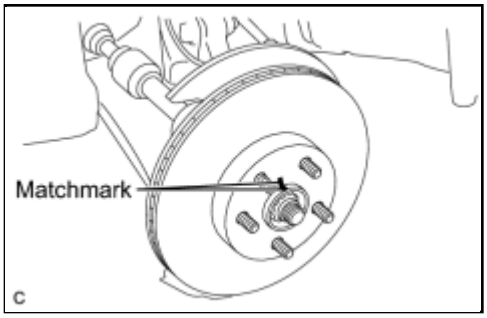
(b) Using SST to hold the disc, tighten the disc with the 5 nuts.

SST: 09330-00021

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the front disc.

Maximum disc runout:
0.05 mm (0.00197 in.)



If the runout exceeds the maximum value, change the installation position of the disc to minimize the runout. If the runout exceeds the maximum even when the installation position is changed, grind the disc. If the disc thickness is less than the minimum, replace the front disc.

(d) Remove the 5 nuts and front disc.

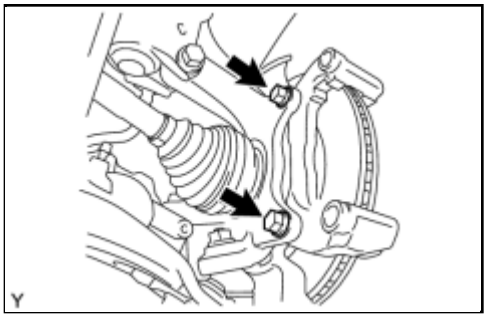
INSTALLATION

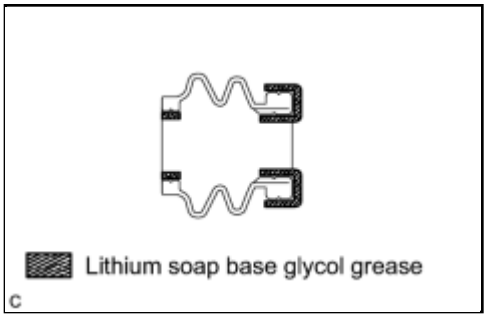
1. INSTALL FRONT DISC



(a) Align the matchmarks of the disc and axle hub, and install the disc.

NOTICE:

When replacing the disc with a new one, select the installation position where the front disc has the minimal runout.

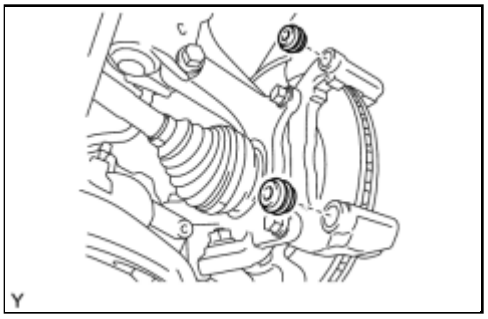


2. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

(a) Install the disc brake cylinder mounting to the steering knuckle with the 2 bolts.

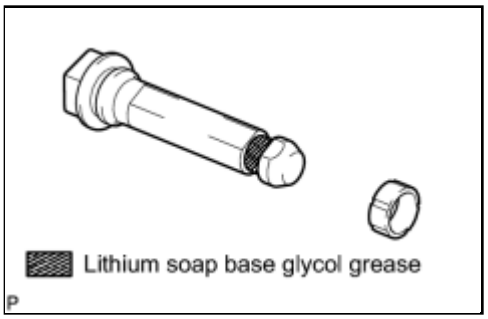
Torque: 107 N·m (1089 kgf·cm, 79ft·lbf)

3. INSTALL FRONT DISC BRAKE BUSHING DUST BOOT



(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of 2 new front disc brake bushing dust boots.

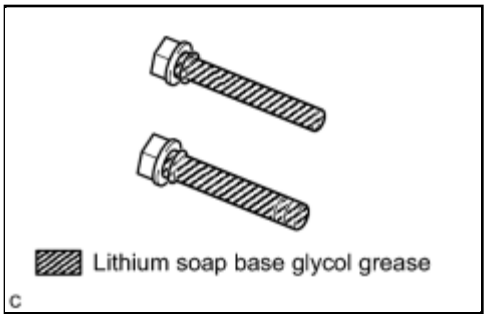
HINT:



Apply at least 0.3 g (0.01 oz.) of lithium soap base glycol grease to each front disc brake bushing dust boot.

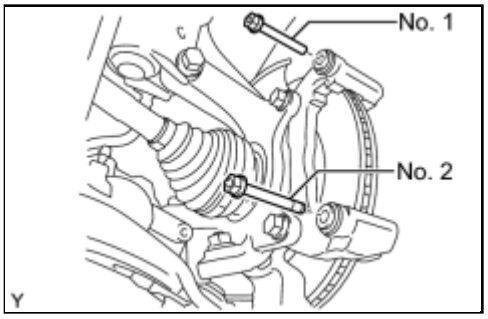
(b) Install the 2 front disc brake bushing dust boots to the

disc brake cylinder mounting.



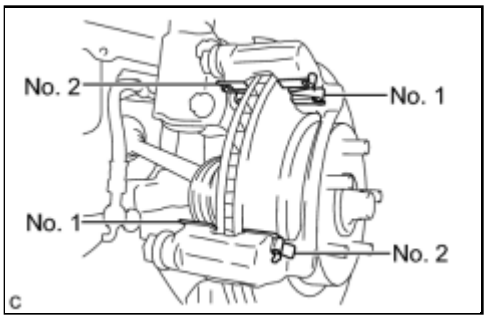
4. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSHING

(a) Apply a light layer of lithium soap base glycol grease to the contact surface of the No. 2 front disc brake cylinder slide pin.



(b) Install a new front disc brake cylinder slide bushing to the No. 2 front disc brake cylinder slide pin.

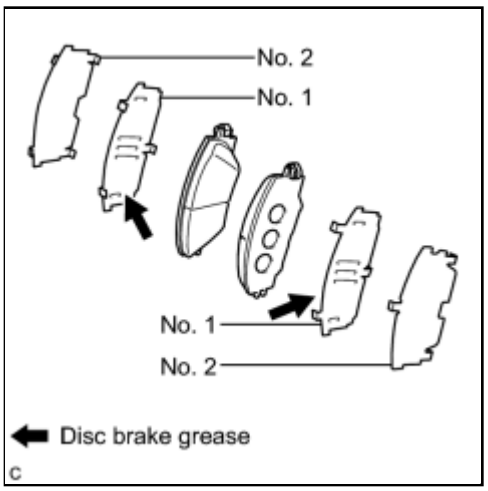
5. INSTALL FRONT DISC BRAKE CYLINDER SLIDE PIN



(a) Apply a light layer of lithium soap base glycol grease to the sliding and sealing surfaces of the No. 1 front disc brake cylinder slide pin and No. 2 front disc brake cylinder slide pin.

(b) Install the No. 1 front disc brake cylinder slide pin and No. 2 front disc brake cylinder slide pin to the cylinder mounting.

6. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE



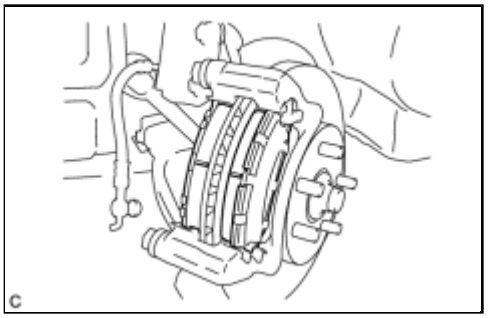
(a) Install the 2 No. 1 front disc brake pad support plates and 2 No. 2 front disc brake pad support plates to the front disc brake cylinder mounting.

NOTICE:

Be sure to install each front disc brake pad support plate in the correct position and direction.

7. INSTALL FRONT ANTI-SQUEAL SHIM

(a) Apply disc brake grease to both sides of each No. 1 anti-squeal shim.

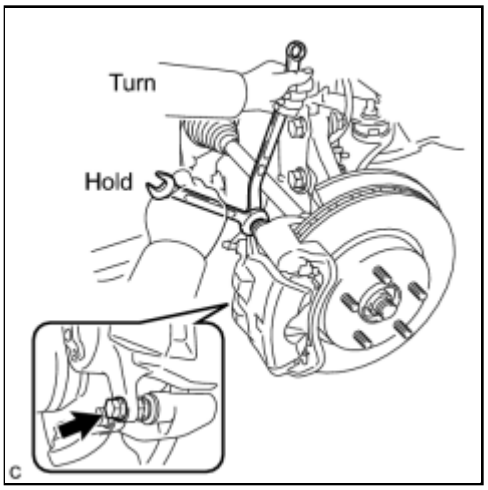


NOTICE:

- When replacing worn pads, the anti-squeal shims must be replaced together with the pads.
- Install the shims in the correct positions and directions.
- Apply disc brake grease to the area that contacts the anti-squeal shims.
- Disc brake grease can seep out slightly from the area where the anti-squeal shim is installed.
- Make sure that disc brake grease is not applied onto the lining surface.

(b) Install the No. 1 anti-squeal shim and No. 2 anti-squeal shim to each brake pad.

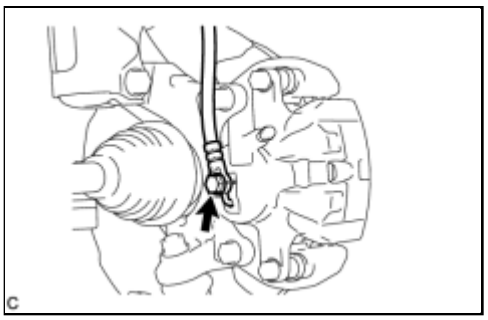
8. INSTALL FRONT DISC BRAKE PAD



(a) Install the 2 disc brake pads to the disc brake cylinder mounting.

NOTICE:

There should be no oil or grease on the friction surfaces of the disc brake pads or the front disc.



9. INSTALL DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the front disc brake cylinder slide pin and install the disc brake cylinder assembly to the disc brake cylinder mounting with the 2 bolts.

Torque: 34 N·m (347 kgf·cm, 25ft·lbf)

10. CONNECT FRONT FLEXIBLE HOSE

(a) Connect the front flexible hose to the disc brake cylinder assembly with the union bolt and a new gasket.

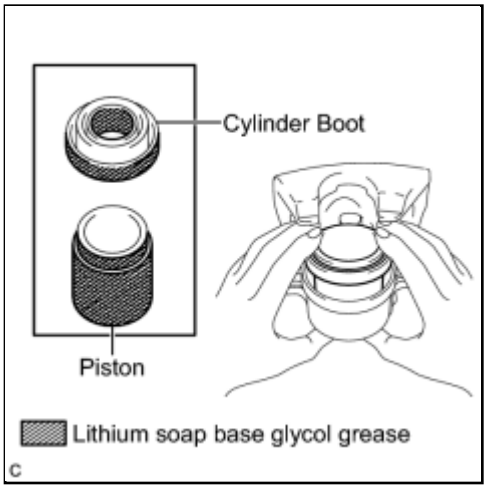
2. INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP

3. INSTALL PISTON SEAL



(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new piston seal.

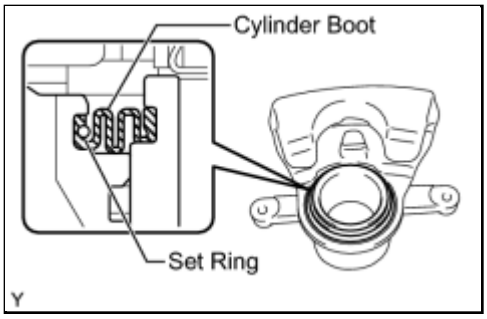
(b) Install the piston seal to the disc brake cylinder assembly.

NOTICE:

Securely install the piston seal into the groove of the disc brake cylinder.

4. INSTALL FRONT DISC BRAKE PISTON

(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new cylinder boot.



(b) Install the cylinder boot to the front disc brake piston.

(c) Apply a light layer of lithium soap base glycol grease to the contact surfaces of the front disc brake piston, and install it to the disc brake cylinder assembly.

NOTICE:

Do not install the front disc brake piston forcibly in the disc brake cylinder assembly.

5. INSTALL CYLINDER BOOT

(a) Install the cylinder boot to the disc brake cylinder assembly.

NOTICE:

Securely install the cylinder boot to the groove of the disc brake cylinder and piston.

(b) Using a screwdriver, install a new set ring.

NOTICE:

- Securely install the set ring to the outer groove of the cylinder boot.
- Do not damage the cylinder boot.

Title: BRAKE (REAR): REAR BRAKE FLEXIBLE HOSE: REMOVAL (2010 Corolla)		

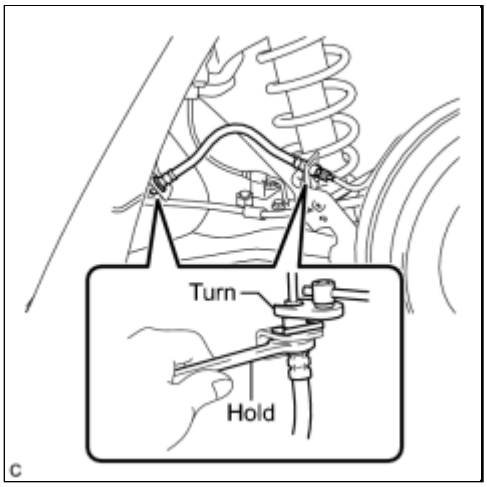
REMOVAL

NOTICE:

If both the RH side hose and LH side hose are disconnected at the same time, be sure to place identification marks indicating the position on each side.

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.

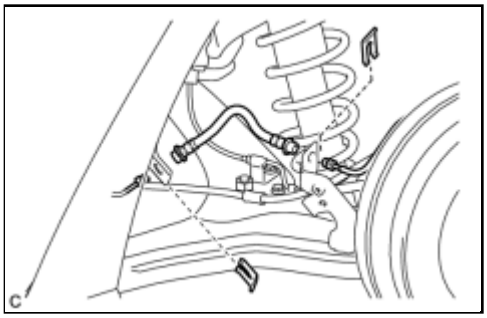


1. REMOVE REAR WHEEL

2. DRAIN BRAKE FLUID

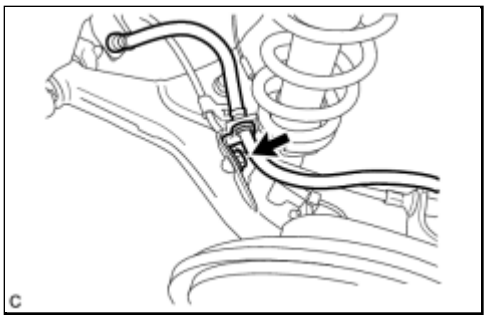
NOTICE:

Immediately wash off any brake fluid that comes into contact with any painted surfaces.



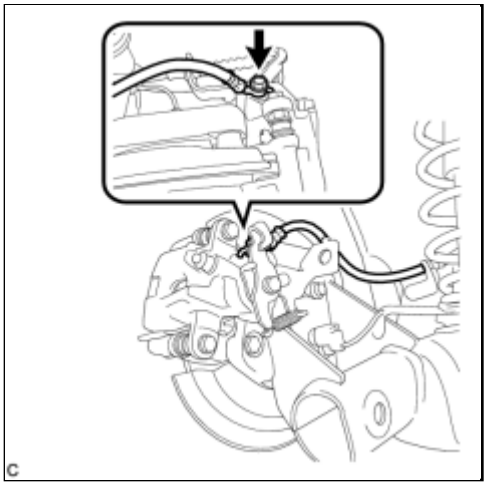
3. REMOVE REAR FLEXIBLE HOSE (for Drum Type)

(a) Using a union nut wrench (10 mm), disconnect the 2 brake lines while holding the rear flexible hose with a wrench.

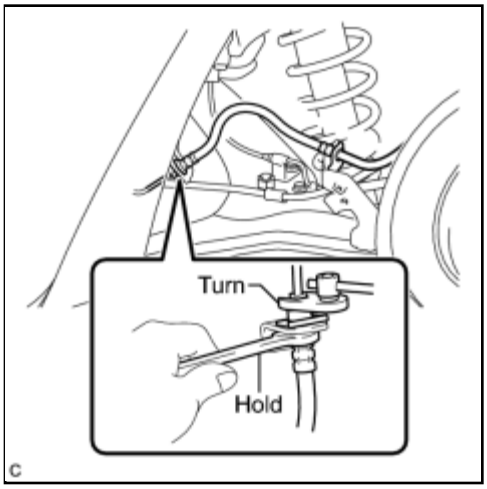


NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.



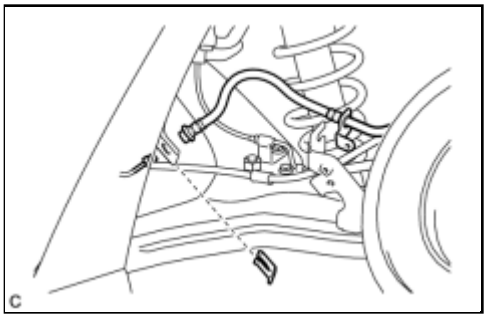
(b) Remove the 2 clips and rear flexible hose.



4. REMOVE REAR FLEXIBLE HOSE (for Disc Type)

(a) Remove the bolt and separate the rear flexible hose from the rear axle beam.

(b) Remove the union bolt and gasket, and separate the rear flexible hose from the rear disc brake cylinder assembly.



(c) Using a union nut wrench (10 mm), disconnect the brake line while holding the rear flexible hose with a wrench.

NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.

(d) Remove the clip and rear flexible hose.

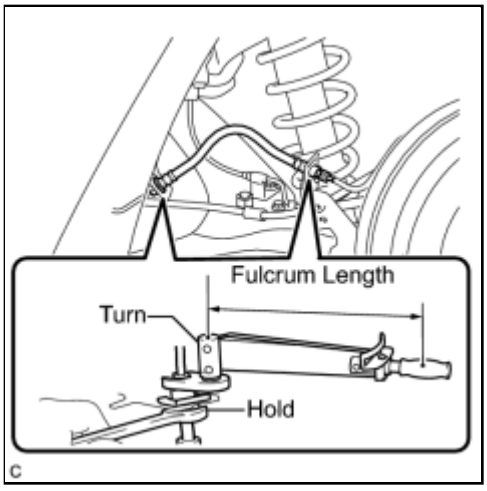
Title: BRAKE (REAR): REAR BRAKE FLEXIBLE HOSE: INSTALLATION (2010 Corolla)		

INSTALLATION

NOTICE:

- Because the left and right rear flexible hoses are not interchangeable, verify the part number when installing the flexible hoses.
- If the hoses are to be reused, connect them after checking the identification marks placed when each hose was disconnected.



1. INSTALL REAR FLEXIBLE HOSE (for Drum Type)

(a) Install the rear flexible hose with 2 new clips.

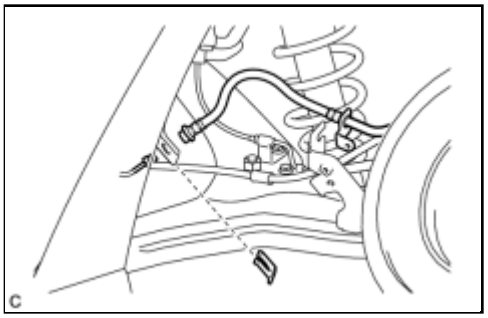
NOTICE:

Install the clip as far as it will go.

(b) Using a union nut wrench (10 mm), connect the 2 brake lines to the rear flexible hose while holding the rear flexible hose with a wrench.

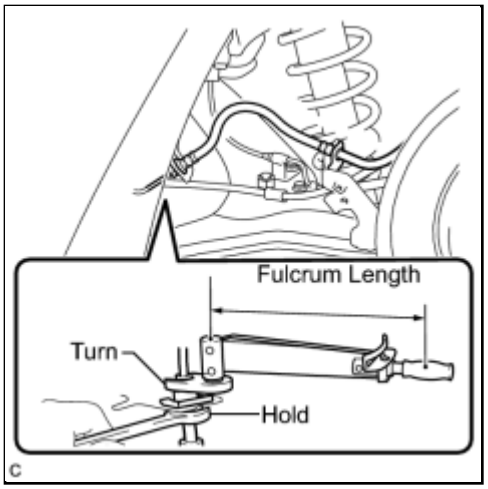
without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)



NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.
- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

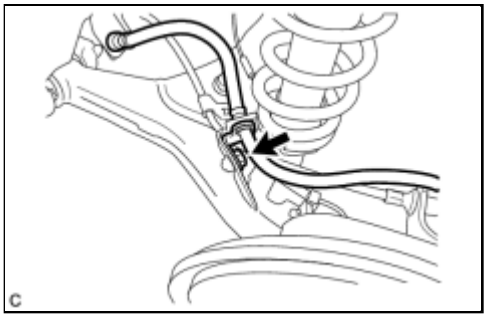


2. INSTALL REAR FLEXIBLE HOSE (for Disc Type)

(a) Install the rear flexible hose with a new clip.

NOTICE:

Install the clip as far as it will go.



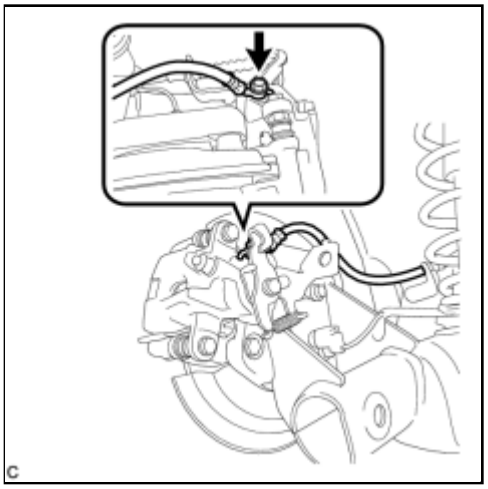
(b) Using a union nut wrench (10 mm), connect the brake line to the rear flexible hose while holding the rear flexible hose with a wrench.

without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Do not kink or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.
- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.



(c) Install the rear flexible hose to the rear axle beam with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(d) Install the rear flexible hose to the rear disc brake cylinder assembly with a new gasket and the union bolt.

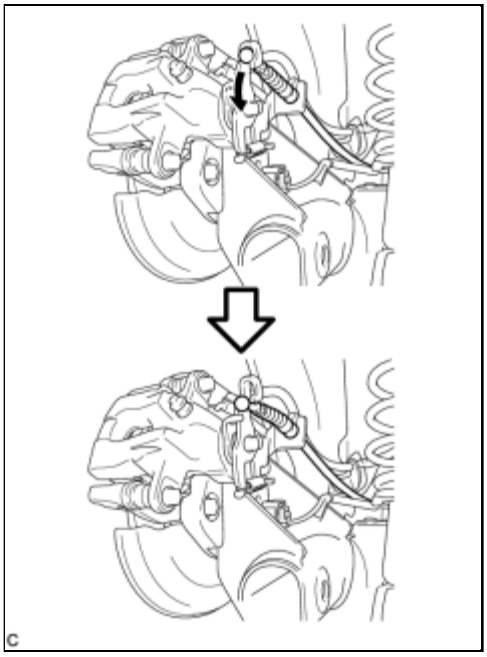
10. LOOSEN PARKING BRAKE CABLE

(a) Loosen the lock nut and adjusting nu to completely release the parking brake cable.

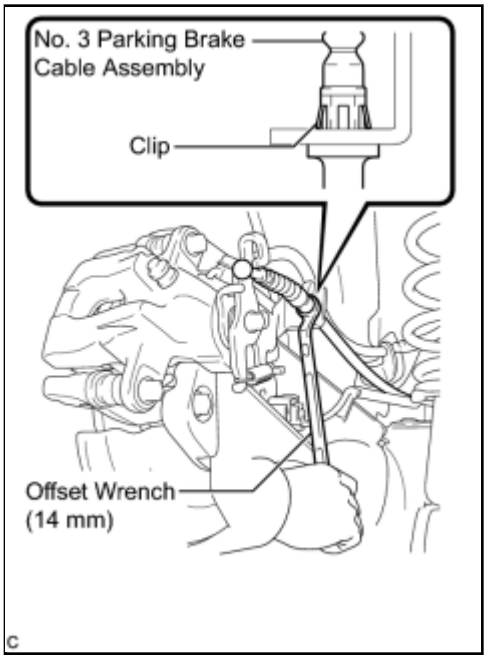


11. REMOVE PARKING BRAKE LEVER PROTECTOR INFO

12. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

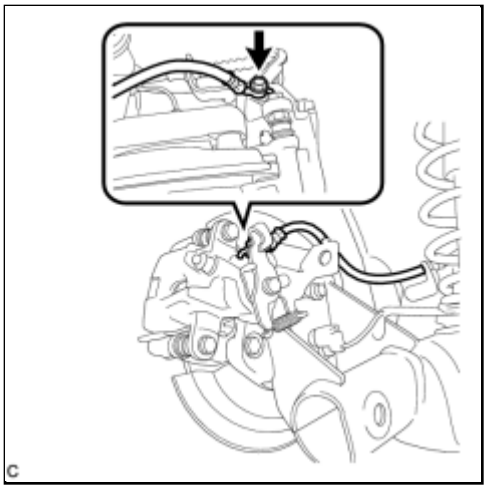
(a) Disengage the clamp from the No. 3 parking brake cable assembly.

(b) Remove the bolt.



(c) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

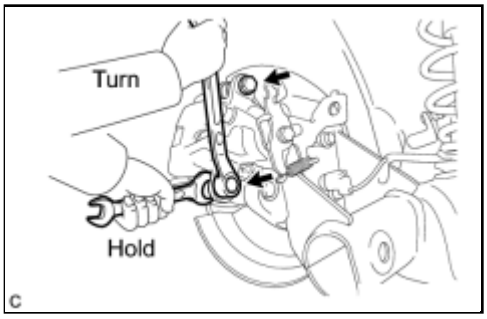
(d) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.



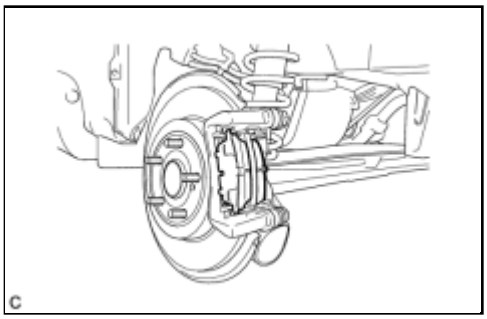
HINT:

Insert an offset wrench (14 mm) at the base of the No. 3 parking brake cable assembly as shown in the illustration to disengage the

clip. Pull out the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.



13. SEPARATE REAR BRAKE FLEXIBLE HOSE

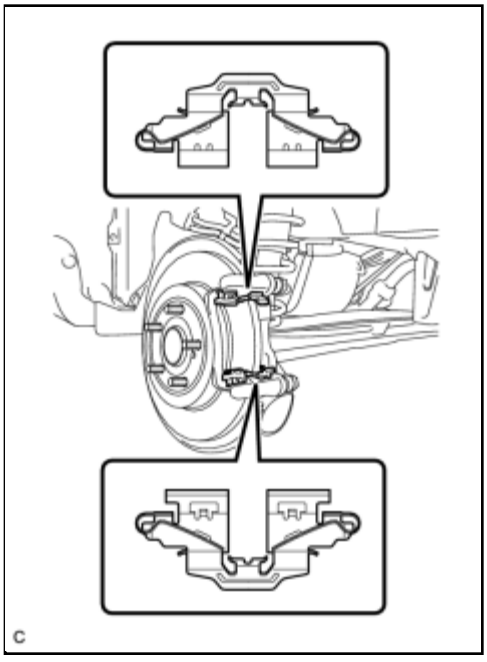


(a) Remove the union bolt and gasket, and separate the rear brake flexible hose from the rear disc brake cylinder assembly.

14. REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY

(a) Hold the rear disc brake slide pin and remove the 2 bolts and rear disc brake cylinder assembly.

15. REMOVE REAR DISC BRAKE PAD

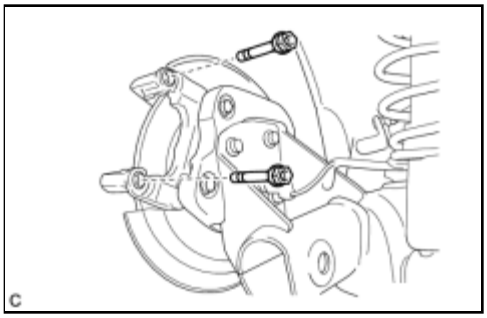


(a) Remove the 2 disc brake pads from the rear disc brake cylinder mounting.

16. REMOVE REAR DISC BRAKE ANTI-SQUEAL SHIM

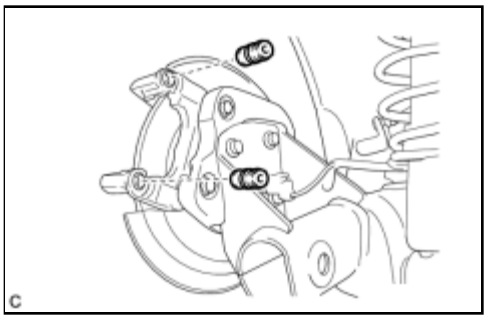
(a) Remove the 4 anti-squeal shims from each brake pad.

17. REMOVE REAR DISC BRAKE PAD SUPPORT PLATE



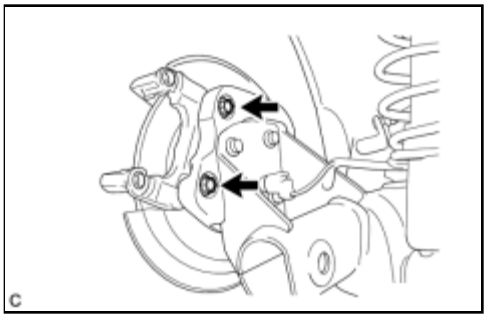
(a) Remove the rear disc brake pad support plate (upper) and rear disc brake pad support plate (lower) from the disc brake cylinder mounting.

NOTICE:



Each rear disc brake pad support plate has a different shape. Be sure to put an identification mark on each rear disc brake pad support plate so that it can be installed to its original position.

18. REMOVE REAR DISC BRAKE PAD GUIDE PIN

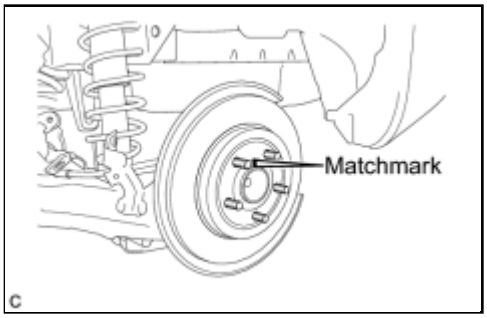


(a) Remove the 2 rear disc brake pad guide pins from the disc brake cylinder mounting.

19. REMOVE REAR DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 rear disc brake bushing dust boots from the rear disc brake cylinder mounting.

20. REMOVE REAR DISC BRAKE CYLINDER MOUNTING

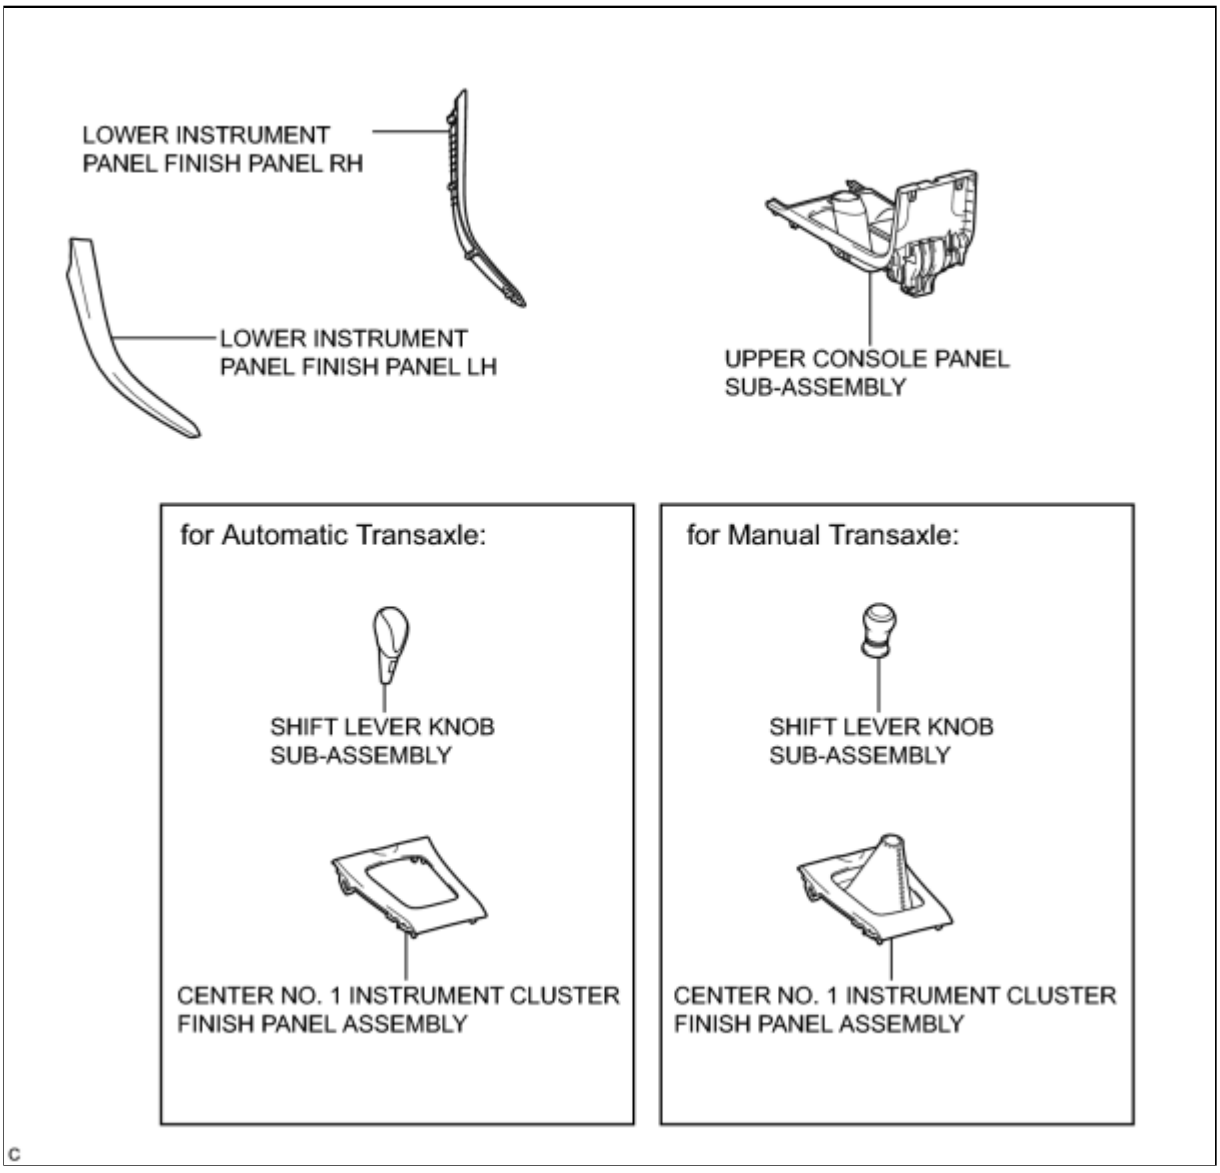


(a) Remove the 2 bolts and the rear disc brake cylinder mounting from the axle beam.

21. REMOVE REAR DISC

(a) Remove the rear disc.

HINT:



Place matchmarks on the disc and axle hub.

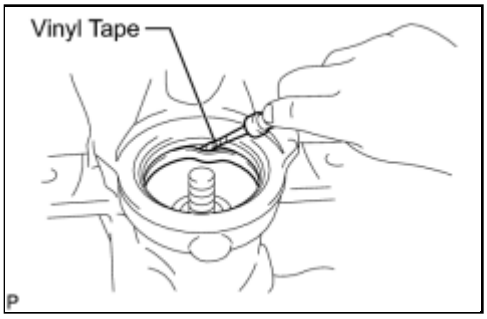
1. REMOVE REAR DISC BRAKE PISTON

(a) Using SST, remove the piston by turning it counterclockwise.

SST: 09960-10010

09963-00400



NOTICE:

- Do not damage the piston.
- Do not allow any brake fluid to spatter.

2. REMOVE CYLINDER BOOT

(a) Remove the cylinder boot from the piston.

3. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the rear disc brake cylinder.

NOTICE:

Do not damage the inner surface or piston seal groove of the cylinder.

HINT:

Tape the screwdriver tip before use.

Title: BRAKE (REAR): REAR BRAKE (for Disc Type): INSPECTION (2010 Corolla)		

INSPECTION

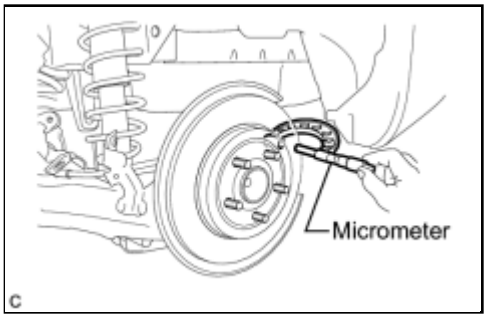
1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the disc brake cylinder and piston.

2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
9.5 mm (0.374 in.)
Minimum thickness:
1.0 mm (0.0394 in.)



If the pad lining thickness is equal to the minimum or less, replace the brake pads with a disc brake pad kit.

HINT:

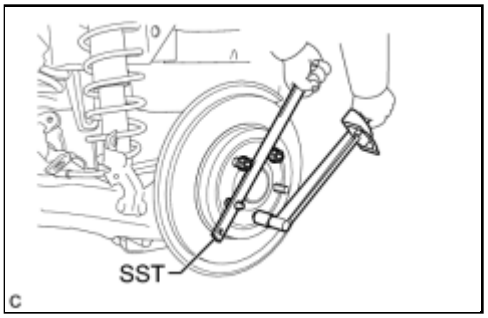
Be sure to check the wear of the rear disc after replacing the brake pads with new ones.

3. INSPECT REAR DISC BRAKE PAD SUPPORT PLATE

(a) Make sure that the rear disc brake pad support plates have sufficient rebound, no deformation, cracks or wear, and that all rust and dirt are removed. If necessary, replace the rear disc brake pad support plates.

4. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.



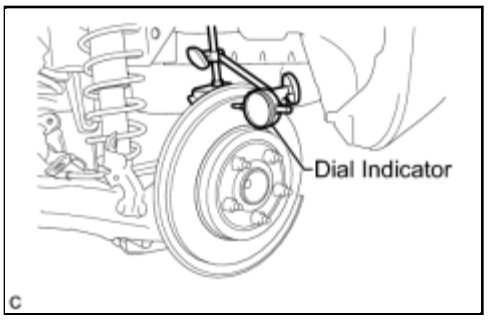
Standard Thickness:
9.0 mm (0.354 in.)
Minimum Thickness:
7.5 mm (0.295 in.)

If the disc thickness is less than the minimum, replace the rear disc.

5. INSPECT DISC RUNOUT

(a) Inspect the rear axle hub bearing looseness and axle hub runout INFO .

(b) While holding the disc using SST, tighten the disc with the



5 hub nuts.

SST: 09330-00021

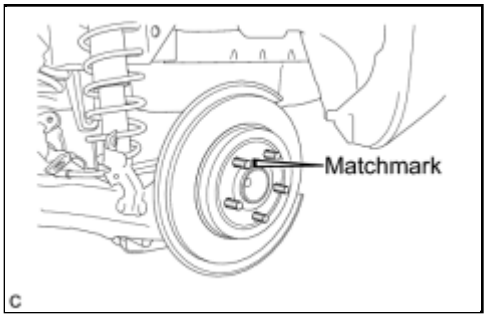
Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

(c) Using a dial indicator, measure the disc runout 10 mm (0.394 in.) away from the outer edge of the rear disc.

Maximum disc runout:
0.15 mm (0.00591 in.)

NOTICE:

Keep the magnet of the dial indicator away from the axle hub and speed sensor.



If the runout exceeds the maximum value, change the installation position of the disc to minimize the runout. If the runout exceeds the maximum even when the installation position is changed, grind the disc. If the disc thickness is less than the minimum, replace the rear disc.

(d) Remove the 5 nuts and rear disc.

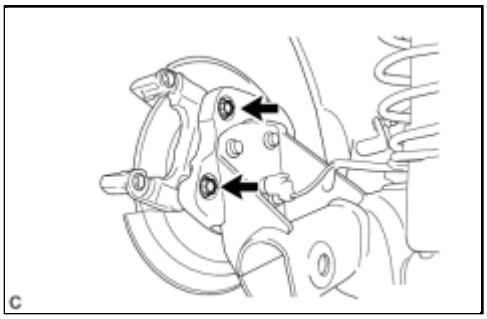
Title: BRAKE (REAR): REAR BRAKE (for Disc Type): INSTALLATION (2010 Corolla)		

INSTALLATION

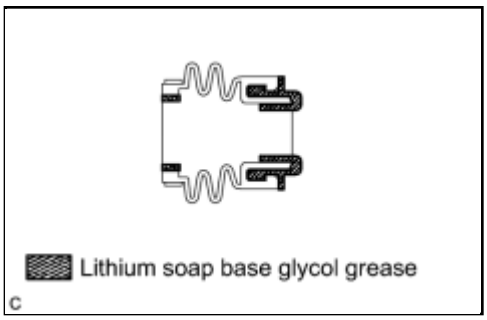
1. INSTALL REAR DISC



(a) Align the matchmarks of the disc and axle hub and install the disc.

NOTICE:

When replacing the disc with a new one, select the installation position where the rear disc has minimal runout.

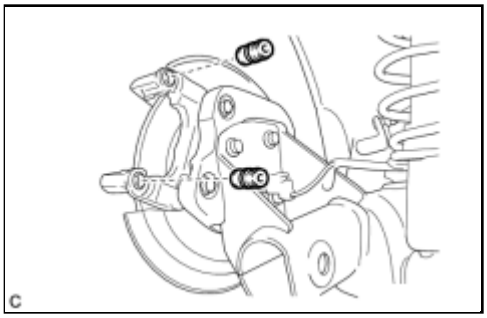


2. INSTALL REAR DISC BRAKE CYLINDER MOUNTING

(a) Install the rear disc brake cylinder mounting to the axle beam with the 2 bolts.

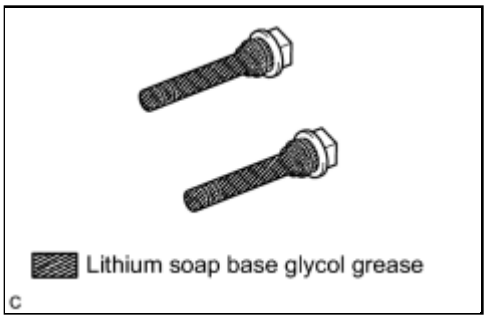
Torque: 63 N·m (642 kgf·cm, 46ft·lbf)

3. INSTALL REAR DISC BRAKE BUSHING DUST BOOT



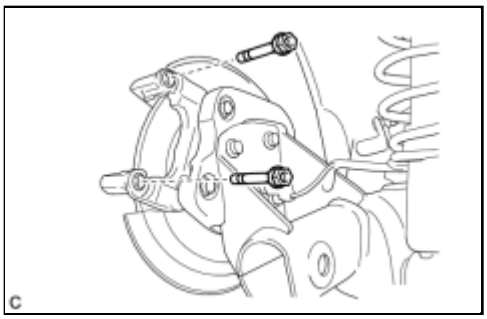
(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of 2 new rear disc brake bushing dust boots.

HINT:



Apply at least 0.3 g (0.01 oz.) of lithium soap base glycol grease to each rear disc brake bushing dust boot.

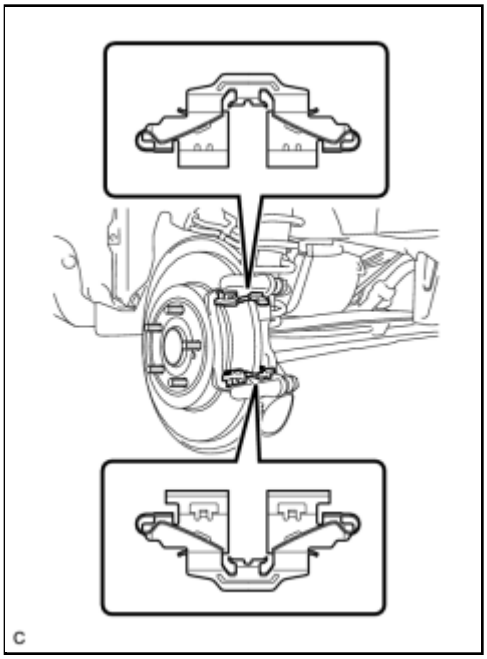
(b) Install the 2 rear disc brake bushing dust boots to the rear



disc brake cylinder mounting.

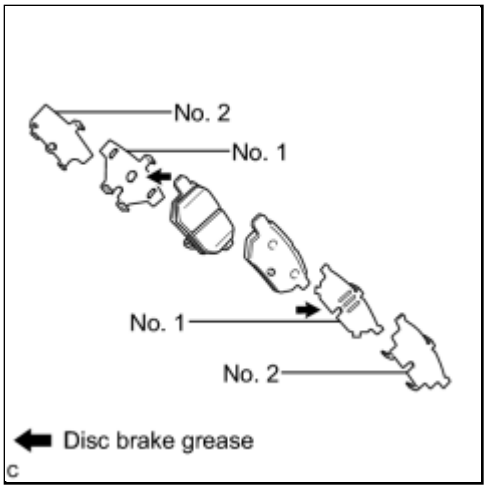
4. INSTALL REAR DISC BRAKE PAD GUIDE PIN

(a) Apply a light layer of lithium soap base glycol grease to the sliding and sealing surfaces of the 2 rear disc brake pad guide pins.



(b) Install the 2 rear disc brake pad guide pins to the rear disc brake cylinder mounting.

5. INSTALL REAR DISC BRAKE PAD SUPPORT PLATE



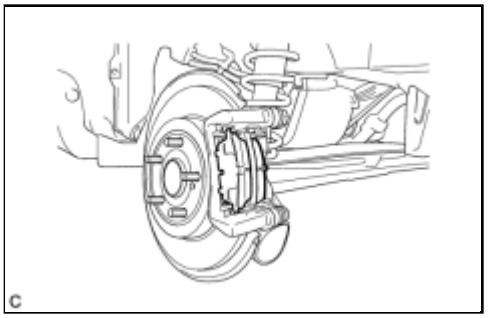
(a) Install the 2 rear disc brake pad support plates to the rear disc brake cylinder mounting.

NOTICE:

Be sure to install each rear disc brake pad support plate in the correct position and direction.

6. INSTALL REAR DISC BRAKE ANTI-SQUEAL SHIM

(a) Apply disc brake grease to the 2 No. 1 anti-squeal shims.



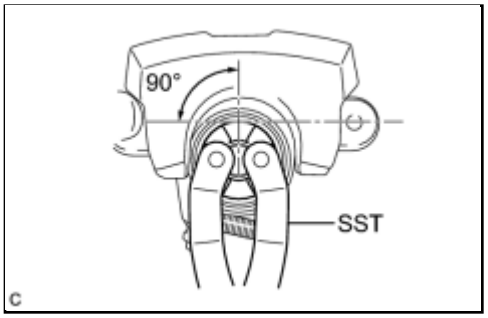
(b) Install the No. 1 anti-squeal shim and No. 2 anti-squeal shim to each brake pad.

NOTICE:

- When replacing worn pads, the anti-squeal shims must be replaced together with the pads.
- Apply disc brake grease to the area that contacts the anti-squeal shim.
- Disc brake grease may seep out slightly from the areas where the anti-squeal shims are installed.
- Make sure that disc brake grease is not applied onto the lining surface.

7. INSTALL REAR DISC BRAKE PAD

(a) Install the 2 rear disc brake pads to the rear disc brake

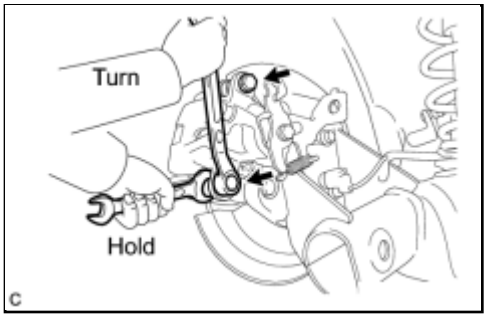


cylinder mounting.

NOTICE:

There should be no oil or grease on the friction surfaces of the disc brake pads or the rear disc.

8. INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY



(a) To compensate for pad wear when reusing the pad, use SST to push and turn the piston (LH side: counterclockwise, RH side: clockwise) to the position where the protrusion on the pad lines up properly with the piston groove.

SST: 09960-10010

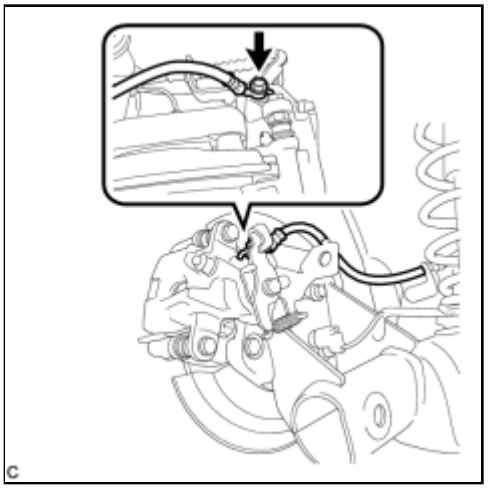
09963-00400

NOTICE:

Place the disc between the 2 brake pads and determine the piston return value.

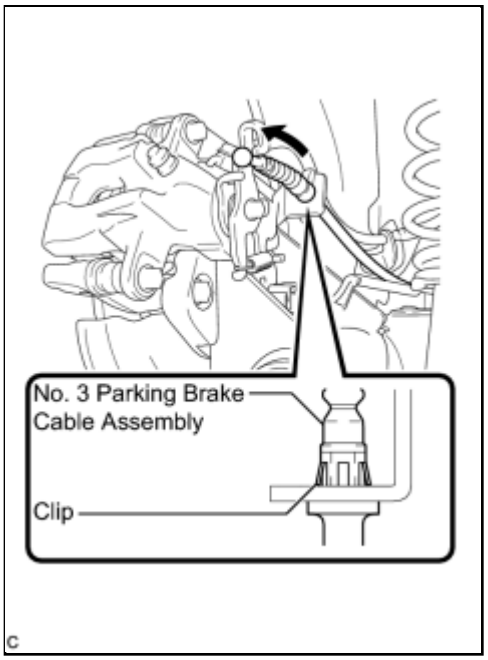
(b) Hold the rear disc brake cylinder slide pin, and install the rear disc brake cylinder assembly to the rear disc brake cylinder mounting with the 2 bolts.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)



9. CONNECT REAR BRAKE FLEXIBLE HOSE

(a) Connect the flexible hose to the rear disc brake cylinder assembly with the union bolt and a new gasket.

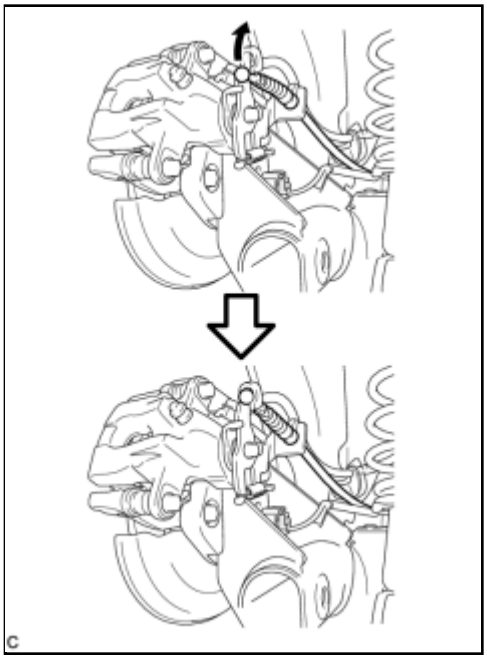


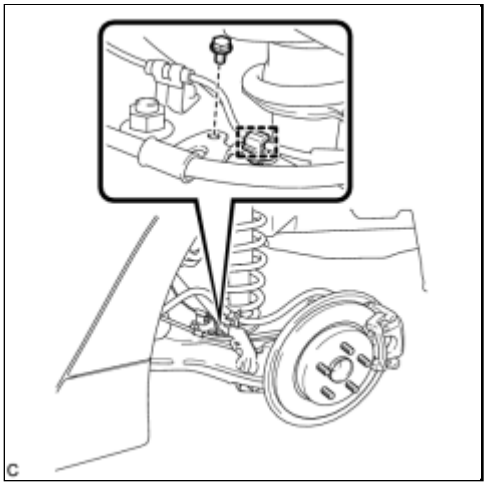
Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

HINT:

Install the flexible hose lock securely into the lock hole in the disc brake cylinder.

10. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY





(a) Install the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly LH.

HINT:

Be sure to engage the No. 3 parking brake cable assembly clip onto the rear disc brake cylinder assembly LH as shown in the illustration.

(b) Connect the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly LH.

(c) Install the bolt.

Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

(d) Engage the clamp to the No. 3 parking brake cable assembly.

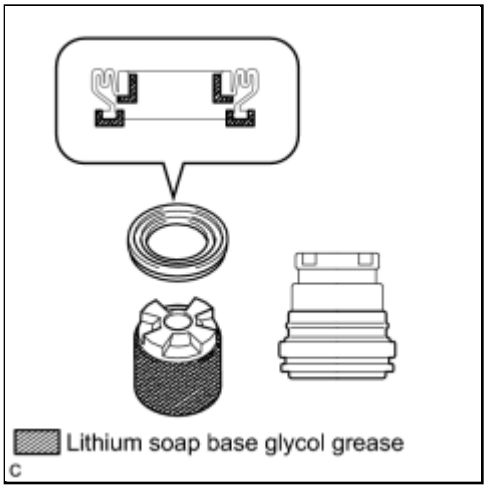
HINT:

Fully tighten the rear disc brake bleeder plug after bleeding any air left in the system.

2. INSTALL REAR DISC BRAKE BLEEDER PLUG CAP

3. INSTALL PISTON SEAL



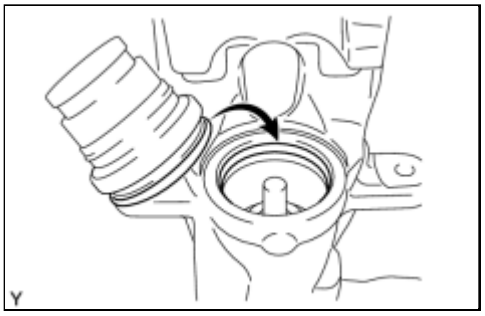
(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new piston seal.

(b) Install the piston seal to the disc brake cylinder assembly.

NOTICE:

Securely install the piston seal to the groove of the disc brake cylinder.

4. INSTALL CYLINDER BOOT

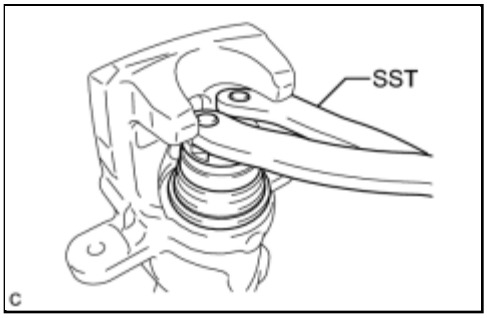


(a) Apply a light layer of lithium soap base glycol grease to the entire circumference of a new cylinder boot.

(b) Install the cylinder boot to the piston as shown in the illustration.

NOTICE:

Do not install the cylinder boot after installing the piston into the disc brake cylinder.

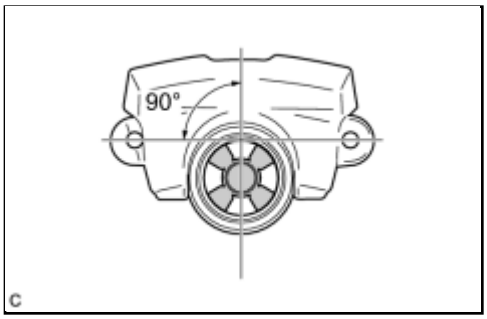


5. INSTALL REAR DISC BRAKE PISTON

(a) Install the seal portion of the cylinder boot into the groove portion of the rear disc brake cylinder.

NOTICE:

Securely install the cylinder boot to the groove of the rear disc brake cylinder.

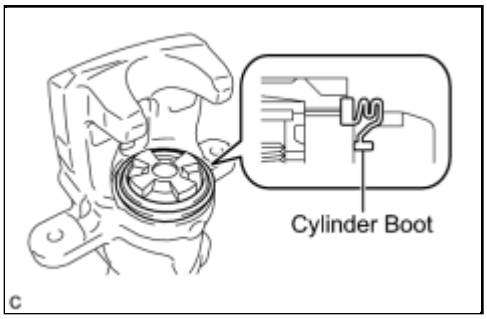


(b) Using SST, screw the piston to the end by turning it clockwise as far as possible.

SST: 09960-10010

09963-00400

NOTICE:

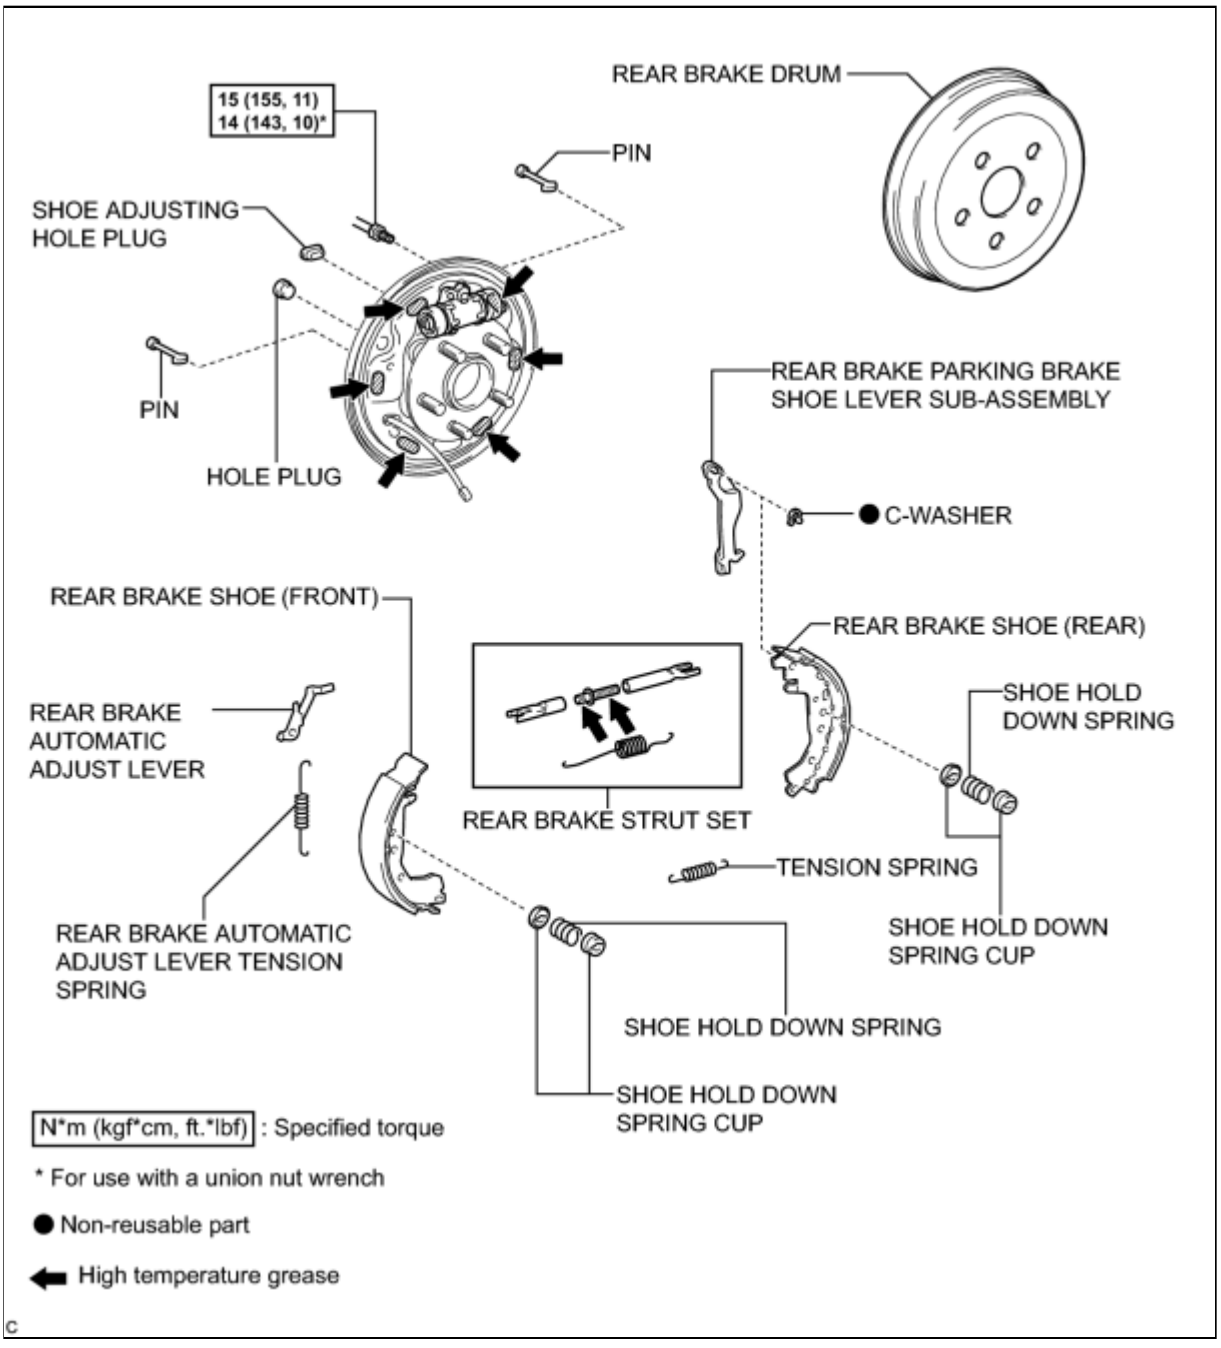


- Securely install the cylinder boot to the groove of the piston.
- Do not damage the piston or cylinder boot.

(c) Using SST, slowly turn the piston counterclockwise until the piston groove is positioned as shown in the illustration.

HINT:

When installing the disc brake cylinder to the disc cylinder mounting, align the piston groove with the protrusion on the brake pad.



(d) Make sure that the cylinder boot is securely installed into the groove of the disc brake cylinder and disc brake piston.

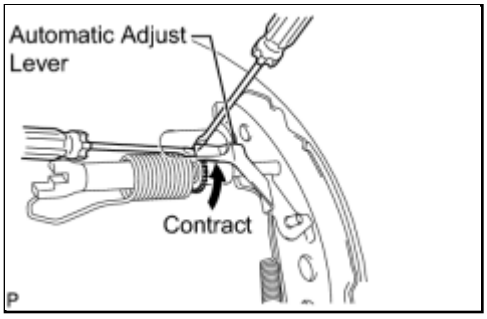
Title: BRAKE (REAR): REAR BRAKE (for Drum Type): REMOVAL (2010 Corolla)		

REMOVAL



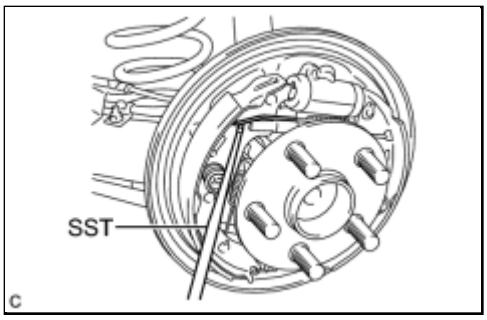
HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.
- The rear wheel brake cylinder assemblies can be disassembled and inspected with the rear wheel brake cylinder assemblies installed to the backing plate. It is not necessary to remove the rear wheel brake cylinder assemblies from the backing plates except when the rear wheel brake cylinder assemblies should be replaced.

1. REMOVE REAR WHEEL

2. REMOVE REAR BRAKE DRUM

(a) Release the parking brake and remove the rear brake drum.



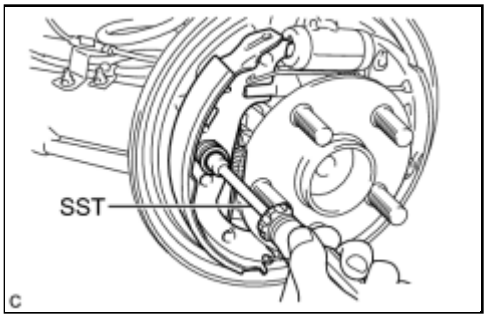
HINT:

If the rear brake drum cannot be removed easily, perform the following procedure.

(1) Remove the shoe adjusting hole plug and insert a screwdriver through the hole into the backing plate, and hold the automatic adjust lever away from the adjuster.

(2) Using another screwdriver, contract the brake shoe by turning the adjusting bolt.

3. REMOVE REAR BRAKE SHOE (for Front Side)

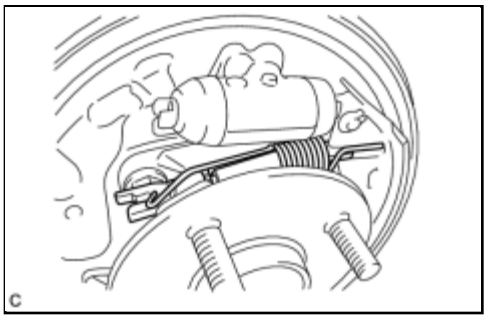


(a) Using SST, separate the shoe return spring from the rear brake shoe.

SST: 09921-00010

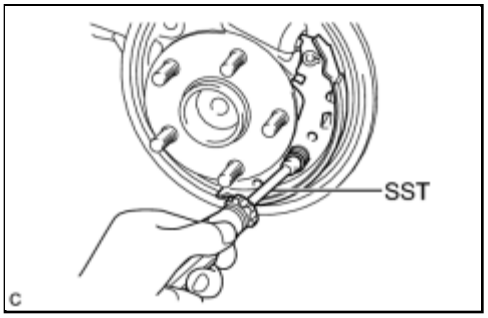
NOTICE:

Do not damage the wheel cylinder boot.



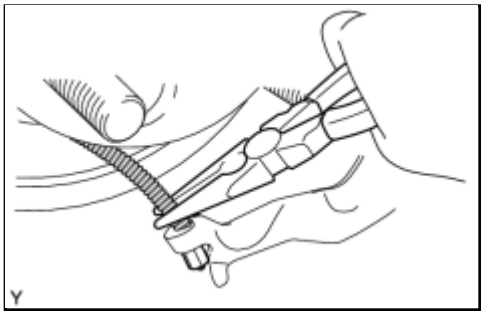
(b) Using SST, remove the 2 shoe hold down spring cups, shoe hold down spring, pin and rear brake shoe.

SST: 09718-00011



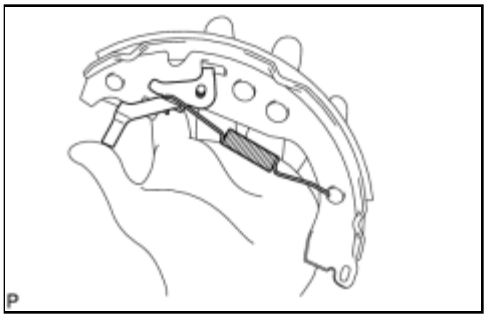
(c) Remove the tension spring.

4. REMOVE REAR BRAKE STRUT SET



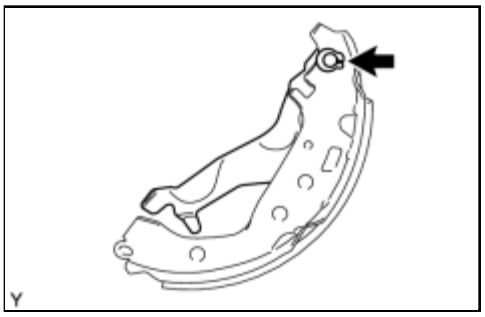
(a) Remove the shoe return spring from the rear brake shoe and remove the rear brake shoe strut set.

5. REMOVE REAR BRAKE SHOE (for Rear Side)



(a) Using SST, remove the 2 shoe hold down spring cups, shoe hold down spring, pin and rear brake shoe.

SST: 09718-00011



(b) Using needle-nose pliers, separate the parking brake cable.

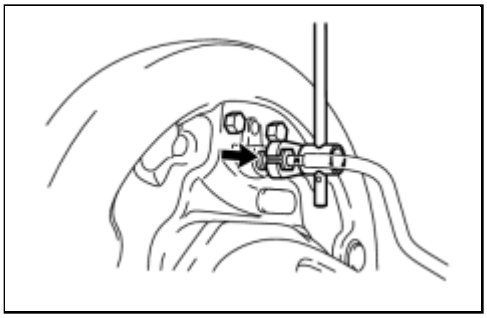
6. REMOVE REAR BRAKE AUTOMATIC ADJUST LEVER

(a) Remove the rear brake automatic adjust lever tension spring and rear brake automatic adjust lever.

7. REMOVE REAR BRAKE PARKING BRAKE SHOE LEVER SUB-ASSEMBLY

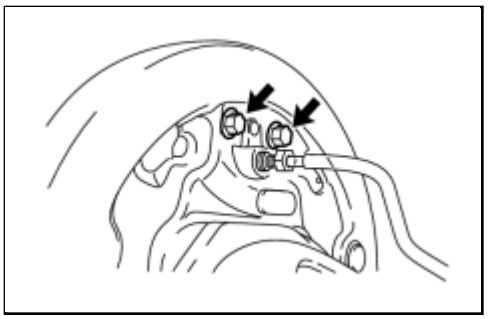
(a) Using a screwdriver, remove the C-washer and rear brake parking brake shoe lever sub-assembly.

8. DRAIN BRAKE FLUID



NOTICE:

Immediately wash off any brake fluid that comes into contact with any painted surfaces.

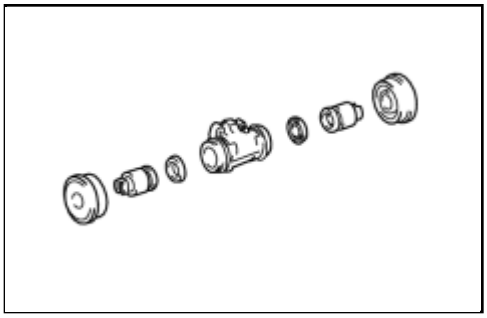


9. REMOVE REAR DRUM BRAKE BLEEDER PLUG CAP

10. REMOVE REAR DRUM BRAKE BLEEDER PLUG

11. REMOVE REAR WHEEL BRAKE CYLINDER ASSEMBLY

(a) Using a union nut wrench (10 mm), disconnect the brake line from the rear brake wheel cylinder assembly.



(b) Remove the 2 bolts and rear wheel brake cylinder assembly from the backing plate.

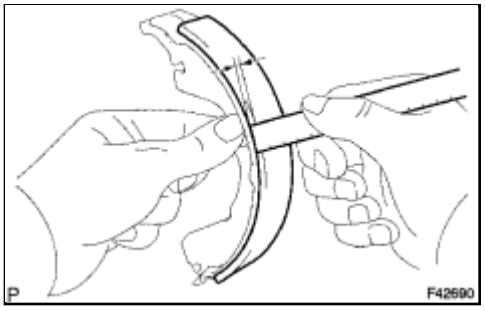
INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust and scoring. If necessary, replace the brake cylinder assembly or piston.

2. INSPECT BRAKE DRUM INSIDE DIAMETER



(a) Using a brake drum gauge or an equivalent tool, measure the inside diameter of the drum.

Standard inside diameter:
228.6 mm (9.00 in.)
Maximum inside diameter:
229.6 mm (9.04 in.)

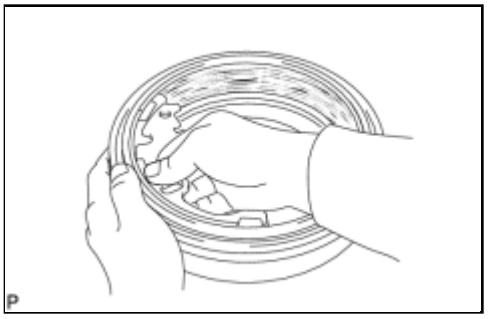
If the inside diameter is more than the maximum, replace the drum.

3. INSPECT REAR BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the thickness of the shoe lining.

Standard thickness:
5.0 mm (0.197 in.)
Minimum thickness:
1.0 mm (0.0394 in.)

If the lining thickness is less than the minimum, or if there is severe or uneven wear, replace the brake shoe.

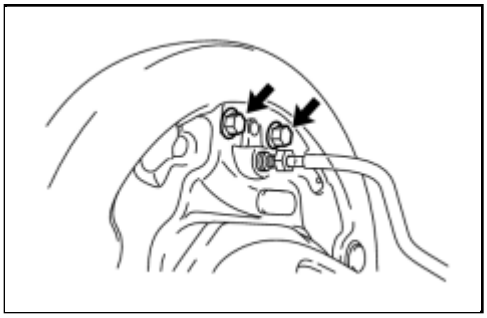


NOTICE:

Always replace both the right and left drum brake shoes together.

4. INSPECT BRAKE DRUM AND DRUM BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the drum, then grind down the brake shoe lining to fit the drum.



If the contact between the drum and the brake shoe lining is improper, repair it using a brake shoe grinder or replace the brake shoe.

INSTALLATION

1. INSTALL REAR WHEEL BRAKE CYLINDER ASSEMBLY

(a) Install the rear wheel brake cylinder assembly to the backing plate with the 2 bolts.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(b) Using a union nut wrench (10 mm), connect the brake line to the rear wheel brake cylinder assembly.

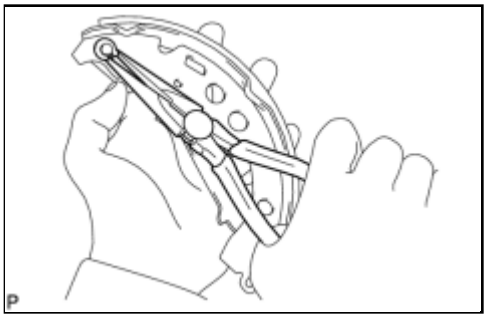
without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

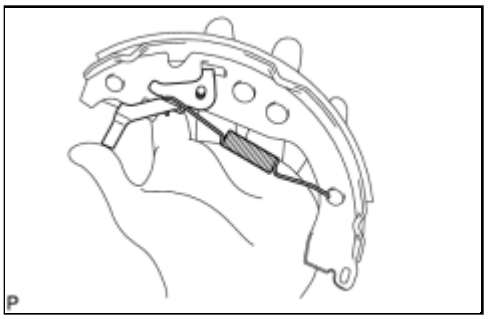
- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

2. TEMPORARILY TIGHTEN REAR DRUM BRAKE BLEEDER PLUG



HINT:

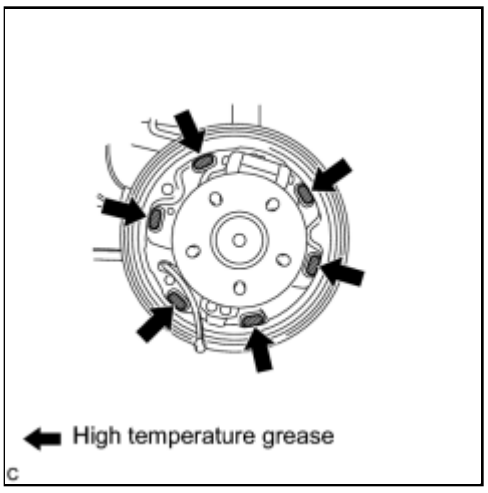
Fully tighten the rear drum brake bleeder plug after bleeding any air left in the system.



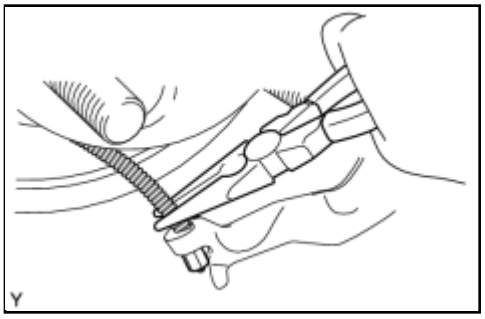
3. INSTALL REAR DRUM BRAKE BLEEDER PLUG CAP

4. INSTALL REAR BRAKE PARKING BRAKE SHOE LEVER SUB-ASSEMBLY

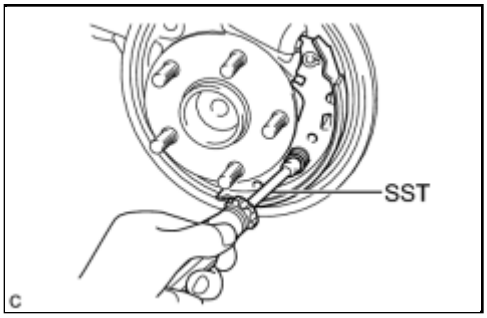
(a) Using needle-nose pliers, install the rear brake parking brake shoe lever sub-assembly with a new C-washer.



5. INSTALL REAR BRAKE AUTOMATIC ADJUST LEVER



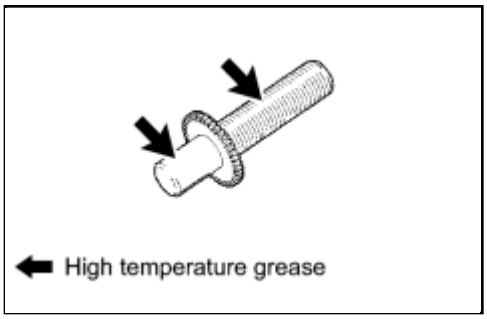
(a) Install the rear brake automatic adjust lever and automatic adjust lever tension spring to the rear brake shoe (front).

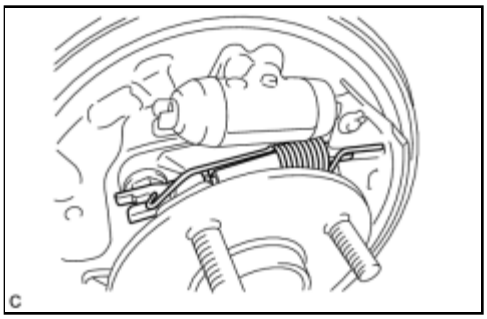


6. INSTALL REAR BRAKE SHOE (for Rear Side)

(a) Apply high temperature grease to the surface of the backing plate that contacts the shoes as shown in the illustration.

(b) Using needle-nose pliers, install the parking brake cable to the rear brake parking brake shoe lever sub-assembly.

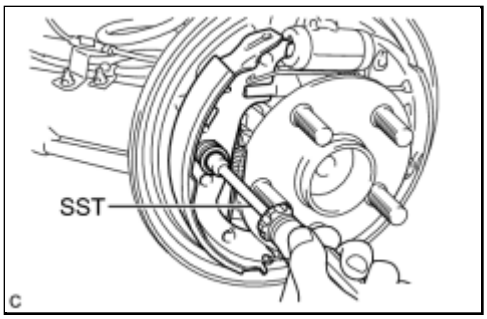




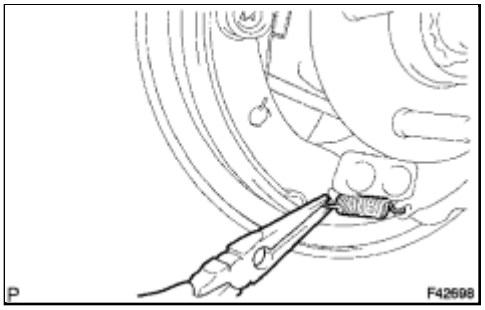
(c) Using SST, install the rear brake shoe, pin, shoe hold down spring and shoe hold down spring cup.

SST: 09718-00011

7. INSTALL REAR BRAKE STRUT SET



(a) Apply high temperature grease to the adjustment bolt.



(b) Install the rear brake strut set to the rear brake shoe.

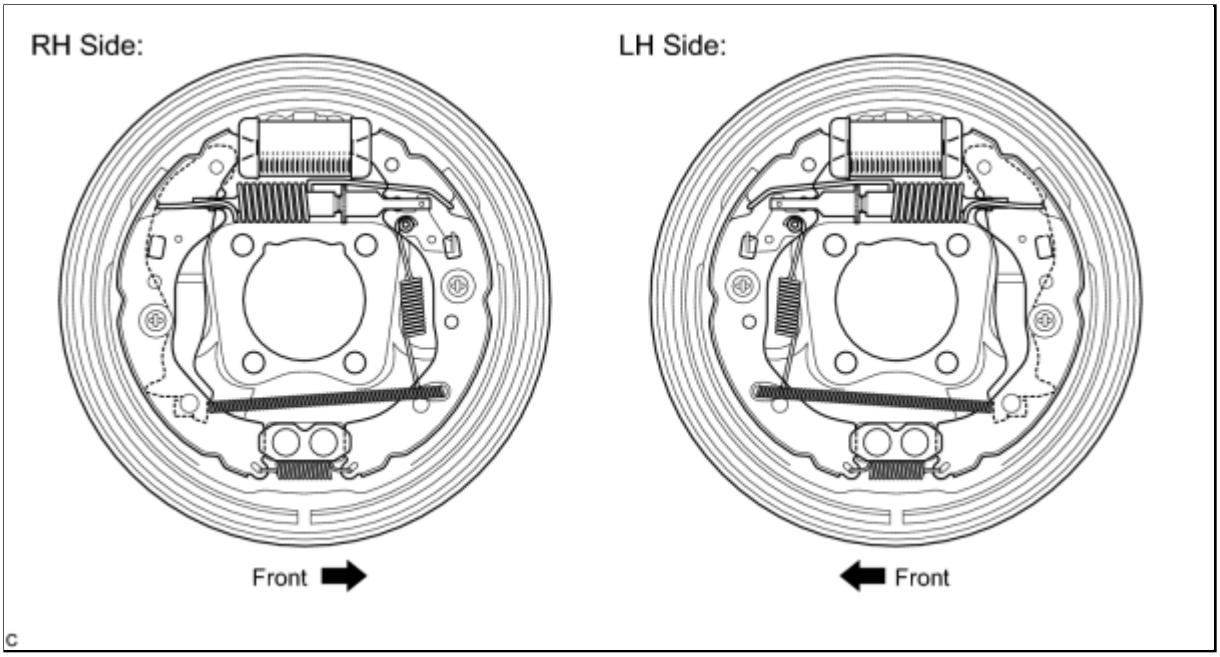
SST: 09718-00011

(b) Using needle-nose pliers, install the tension spring to the rear brake shoe.

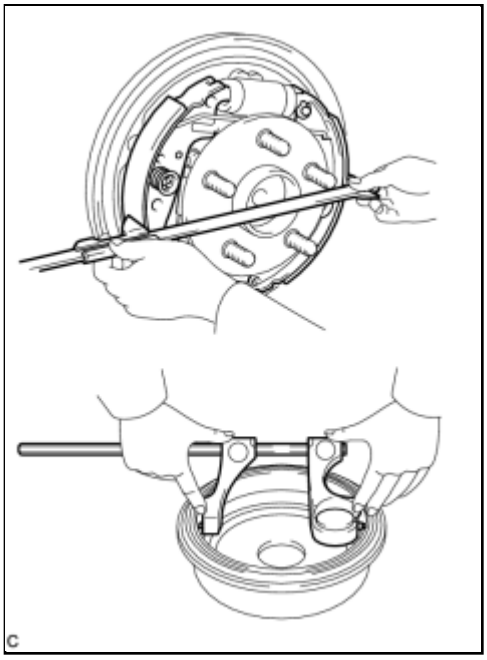
(c) Using SST, install the shoe return spring to the rear brake shoe.



SST: 09921-00010

NOTICE:

Do not damage the wheel cylinder boot.



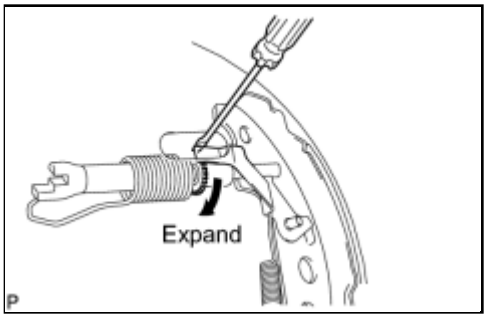
9. INSPECT REAR DRUM BRAKE

(a) Inspect that each part is installed properly as shown in the illustration.

NOTICE:

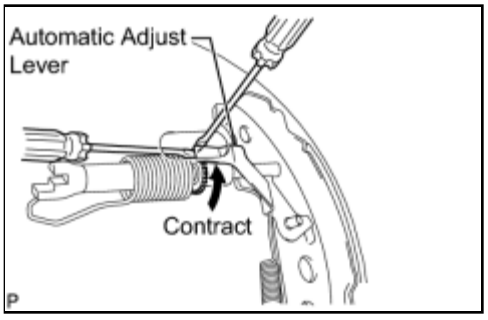
There should be no oil or grease adhering to the friction surfaces of the shoe lining or the drum.

(b) Measure the brake drum inner diameter and the diameter of the brake shoes. Check that the difference between the diameters is equal to the specified shoe clearance.



Shoe clearance:
0.6 mm (0.0236 in.)

10. INSTALL REAR BRAKE DRUM



(a) Install the rear brake drum.

11. ADJUST REAR DRUM BRAKE SHOE CLEARANCE

(a) Temporarily install the 2 wheel nuts.

(b) Remove the shoe adjusting hole plug, and turn the adjuster to expand the shoe until the drum locks.

(c) Hold the automatic adjust lever away from the adjuster, and contract the brake shoe by turning the adjust bolt using another screwdriver until the drum can rotate smoothly.

REASSEMBLY

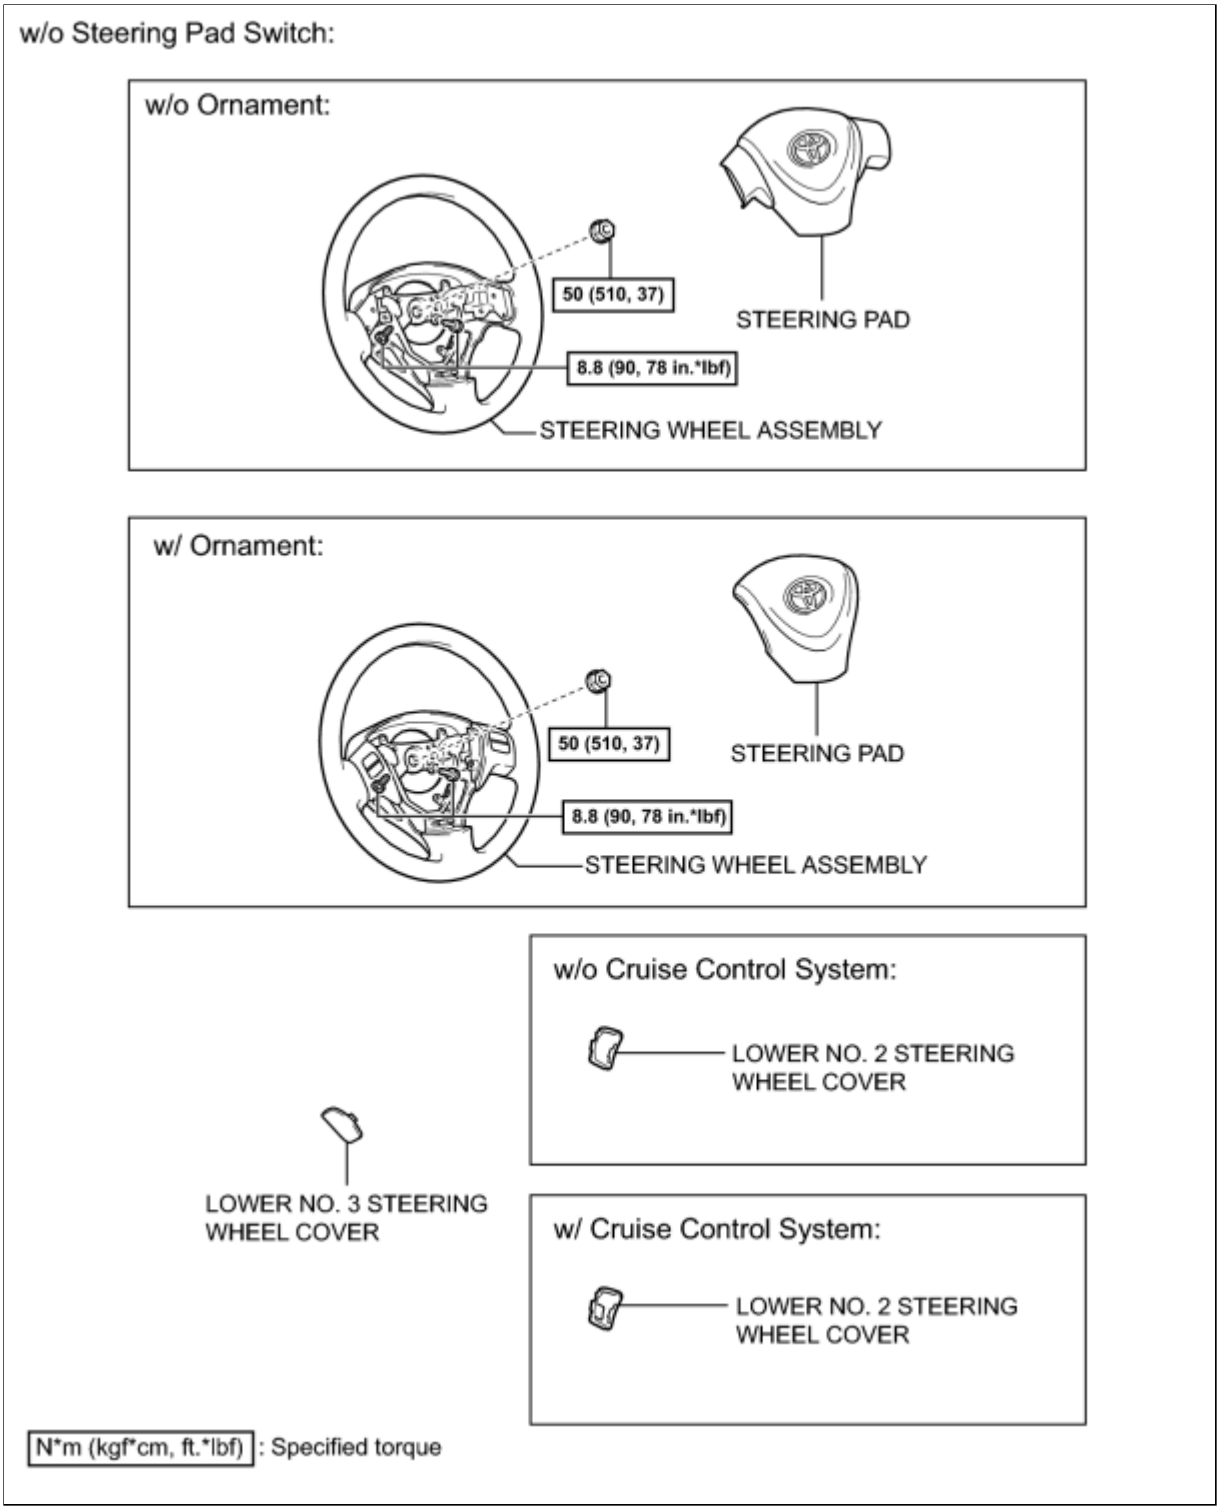
1. INSTALL REAR WHEEL BRAKE CYLINDER COMPRESSION SPRING

(a) Install the rear wheel brake cylinder compression spring to the rear wheel brake cylinder assembly.

2. INSTALL REAR WHEEL CYLINDER CUP KIT

(a) Apply lithium soap base glycol grease to 2 new wheel cylinder cups and the 2 pistons.

(b) Install the 2 wheel cylinder cups to each piston.



(c) Install the 2 pistons to the wheel brake cylinder.

(d) Install 2 new wheel cylinder boots to the rear wheel brake cylinder assembly.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition switch off	LOCK	off
Ignition switch ON	ON	on (IG)
Ignition switch ACC	ACC	on (ACC)
Engine start	START	start

2. TROUBLESHOOTING PRECAUTIONS

(a) When there is a malfunction with terminal contact points or part installation problems, removal and installation of the suspected parts may return the system to normal either completely or temporarily.

(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting any connector or removing and installing parts.

(c) Since the system may be influenced by malfunctions in systems other than the VSC system, be sure to check for DTCs in other systems.

3. HANDLING PRECAUTIONS

(a) Do not remove or install VSC parts such as the steering angle sensor or yaw rate and acceleration sensor except when required, as they cannot be adjusted correctly after removal or installation.

(b) Be sure to perform preparation before work and confirmation after work is completed by following the directions in the repair manual when working on the VSC system.

(c) Be sure to remove and install the ECU, brake actuator and each sensor, etc. with the ignition switch off unless it is specified in the inspection procedure.

(d) If the ECU, brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after any parts have been reinstalled. Check for DTCs using the Techstream, and also check that system functions and signals received by the ECU are normal using Test Mode.

4. DTC PRECAUTION

(a) Warnings for some DTCs will not be cleared by just replacing the malfunctioning parts. If a

warning is still displayed after completing a repair, turn the ignition switch off before beginning the clear DTC procedure.

NOTICE:

If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CHASSIS DYNAMOMETER PRECAUTION

(a) Enter Test Mode to disable TRAC and VSC control when using a chassis dynamometer INFO .

HINT:

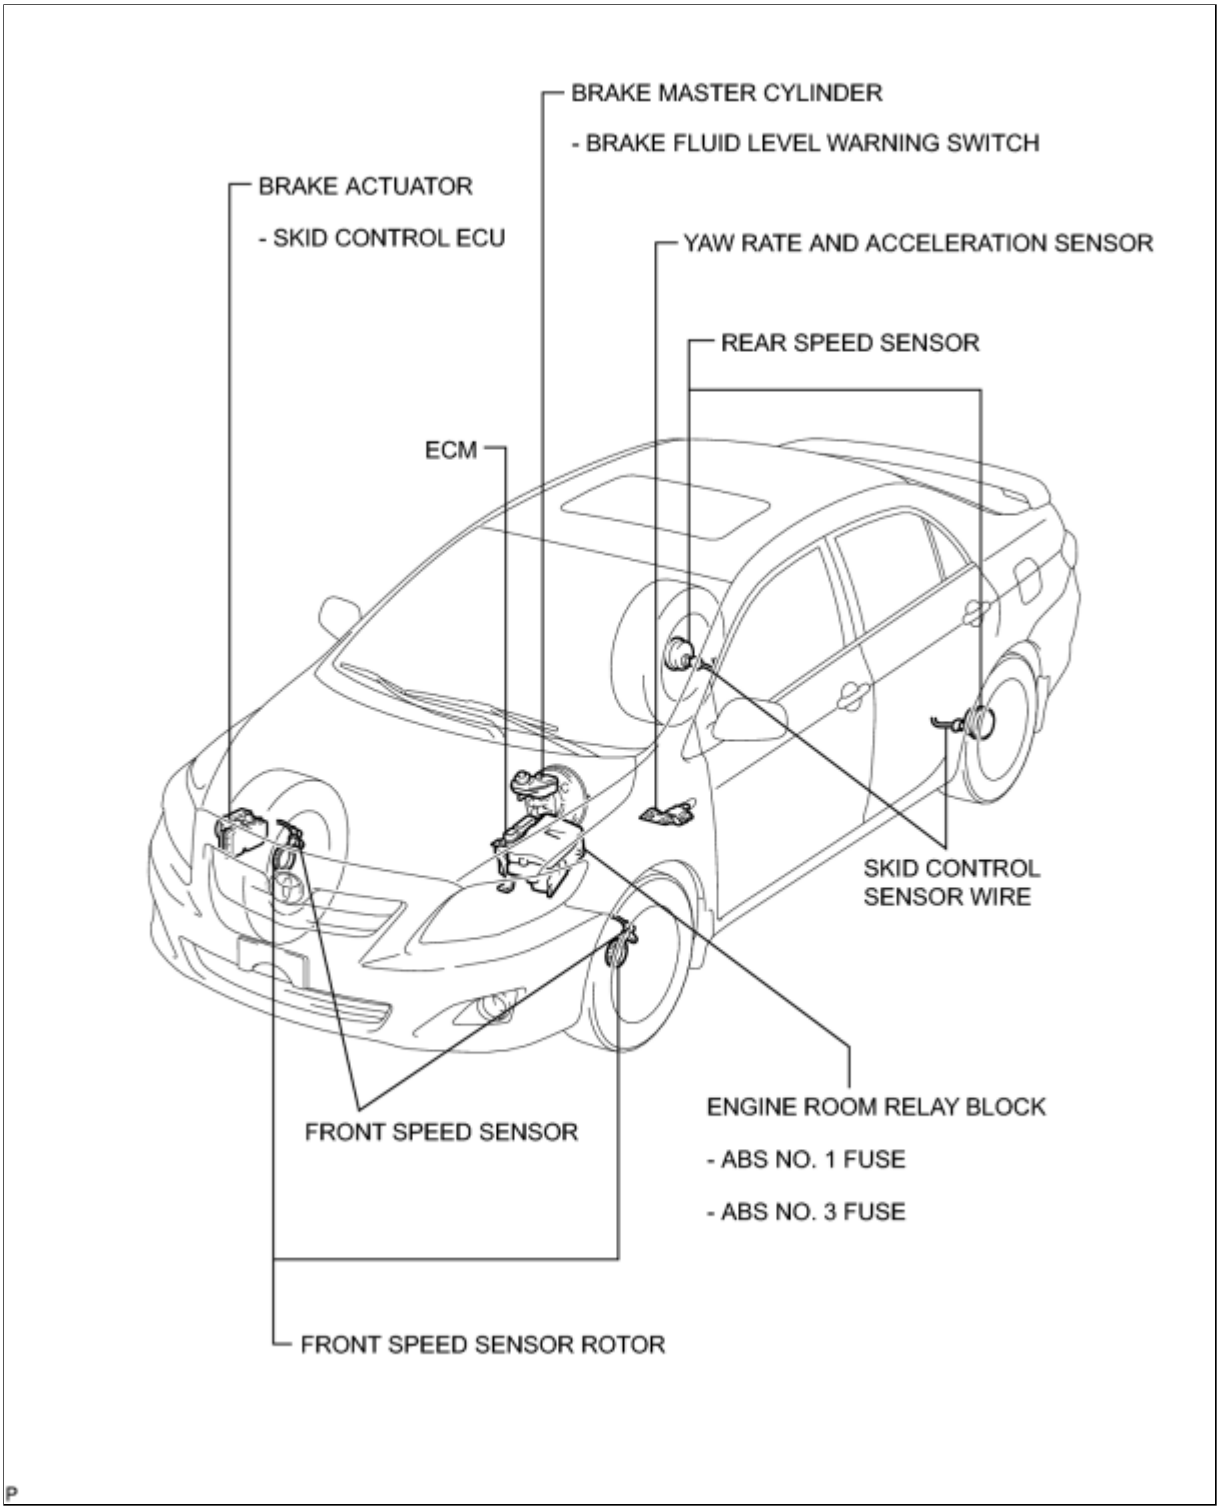
- The vehicle may unexpectedly move off of the dynamometer because of TRAC and VSC operation.
- Pressing the VSC OFF switch does not disable TRAC and VSC operation completely.

NOTICE:

- Make sure that the VSC OFF indicator light is blinking (Test Mode is activated).
- Secure the vehicle with lock chains for safety.

6. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for data communication between the skid control ECU, the steering angle sensor, the yaw rate and acceleration sensor and other ECUs. If there are any problems in the CAN communication line, corresponding DTCs in the communication line are output.



(b) If any CAN communication line DTCs are output, repair the malfunction in the communication line and troubleshoot the VSC system while data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used because the data being transmitted will be corrupted.

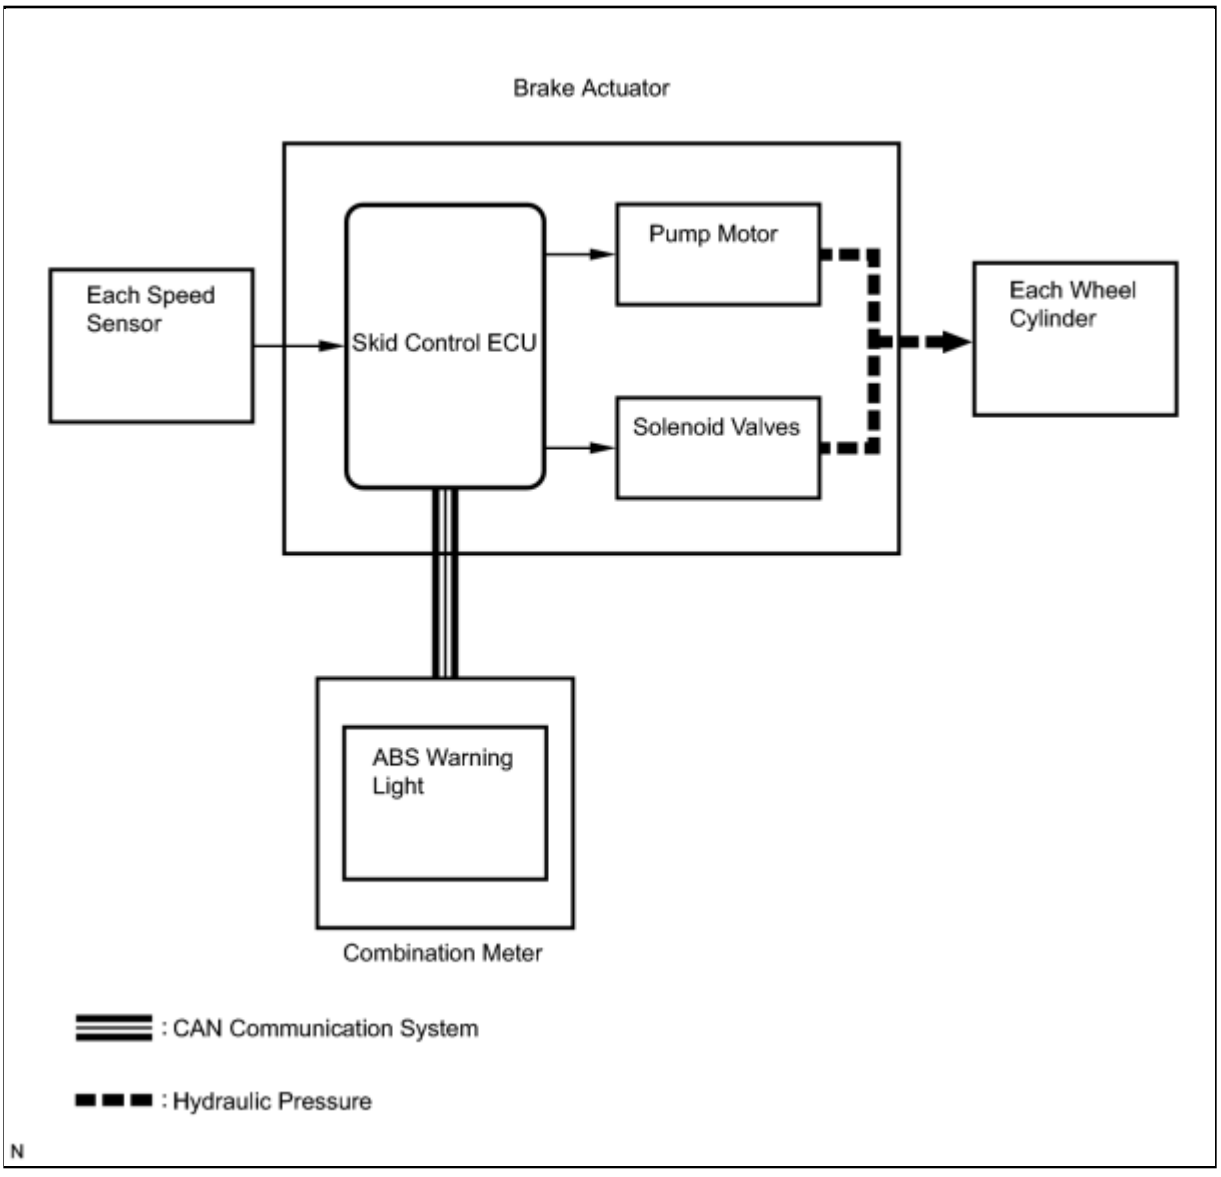
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION



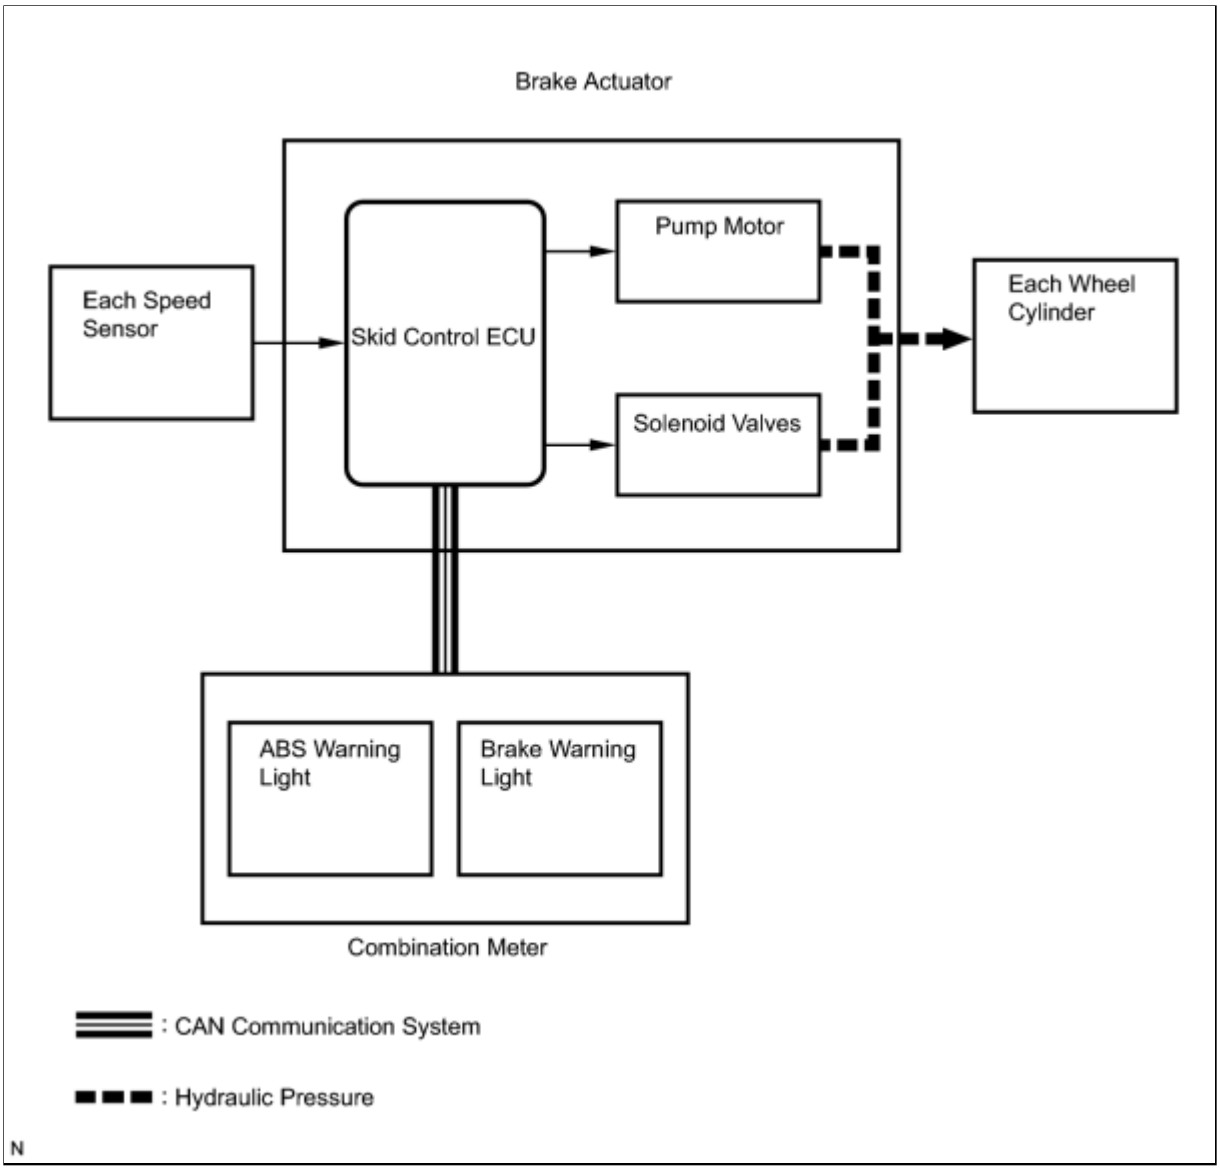
1. FUNCTION DESCRIPTION

HINT:

- The skid control ECU is located within the brake actuator assembly.
- The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU through CAN communication.

(a) ABS (Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



(1) Operation description

The skid control ECU detects wheel lock based on speed signals received from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

(b) EBD (Electronic Brake force Distribution)

The EBD control utilizes the ABS to properly distribute brake force between the front and rear wheels in accordance with driving conditions.

When braking while cornering, it also controls the brake force distribution between the right and left wheels, helping to maintain vehicle behavior.

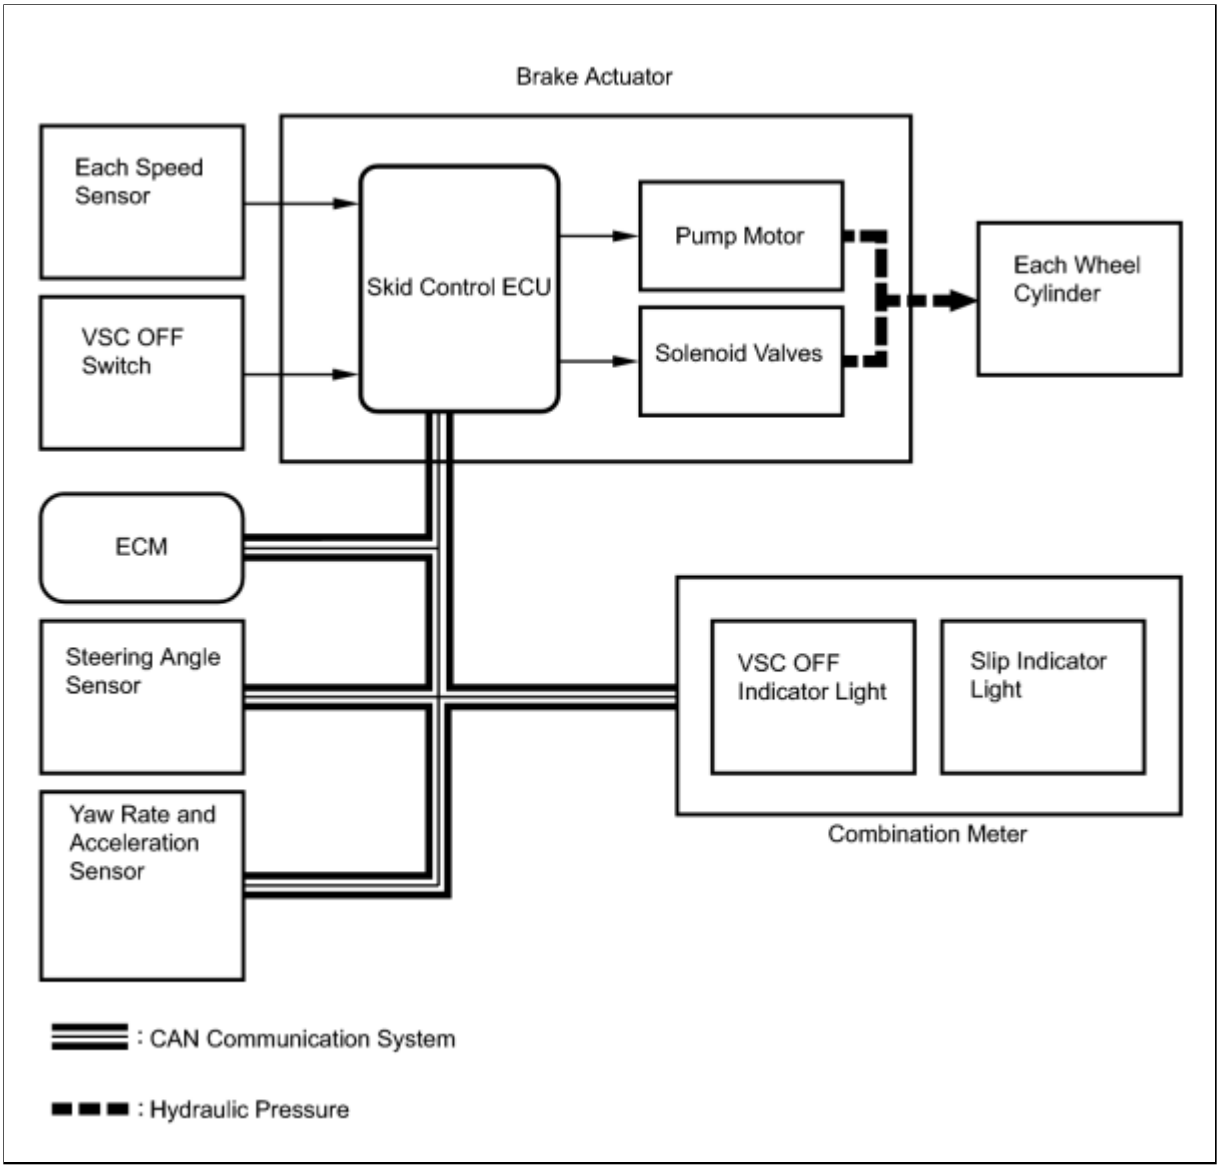
(1) Operation description

The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.

The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The ABS warning and brake warning lights will come on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)

The primary purpose of the brake assist system is to provide auxiliary brake force to assist a driver who cannot generate a large enough brake force during emergency braking, thus helping to maximize the brake performance of the vehicle.



(1) Operation description

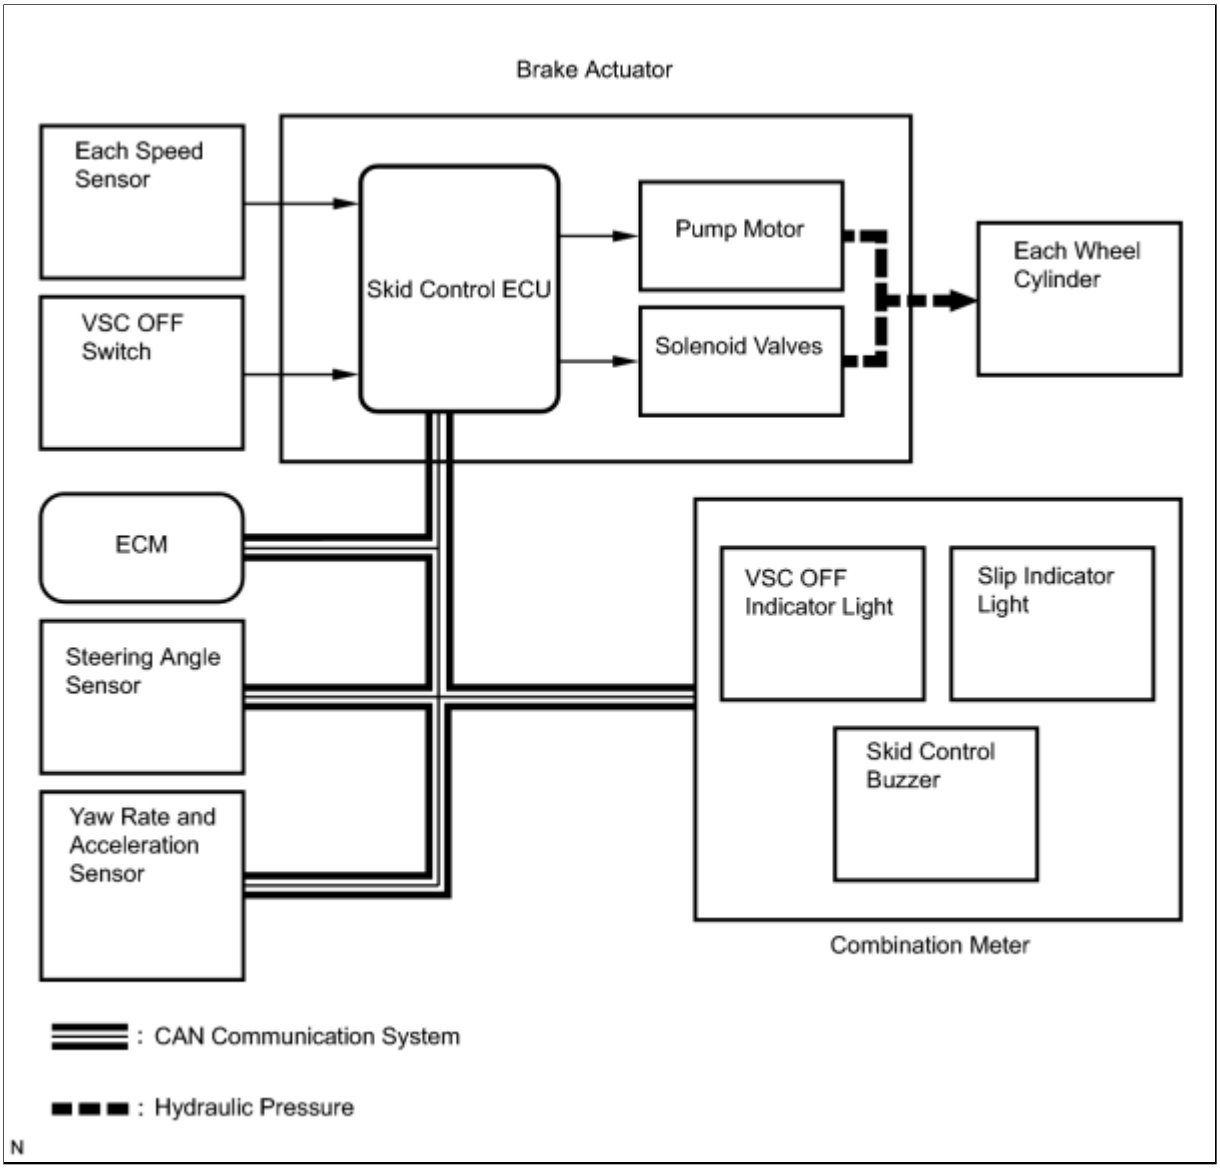
The skid control ECU receives a speed signal from each speed sensor and a fluid pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary. If brake assist is necessary, the skid control ECU sends control signals to the pump motor and solenoid valves. The pump motor and the solenoid valves then control the pressure applied to each wheel cylinder.

The ABS warning light will come on to indicate a malfunction in the BA system.

(d) TRAC (Traction Control)

The TRAC system helps prevent the drive wheels from slipping when the driver depresses the accelerator pedal excessively when starting off or accelerating on a slippery surface.

(1) Operation description



The skid control ECU detects wheelspin by receiving signals from each speed sensor and the ECM via CAN communication. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump motor and solenoid valves.

The slip indicator light blinks when the system is operating. When there is a malfunction in the TRAC system, the VSC OFF indicator light blinks and slip indicator light comes on.

The VSC OFF switch is used to disable traction control operation.

(e) VSC (Vehicle Stability Control)

The VSC system helps prevent the vehicle from slipping sideways as a result of strong front or rear wheel skid during cornering.

(1) Operation description

The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the ECM in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the pump and solenoid valves.

The slip indicator light blinks, and the skid control buzzer sounds when the system is operating. If a malfunction occurs in the VSC system, the VSC OFF indicator light blinks and slip indicator light comes on.

The VSC OFF switch is used to disable VSC control operation.

2. ABS with EBD, BA, TRAC and VSC OPERATION

(a) The skid control ECU calculates vehicle stability based on signals from the speed sensor, yaw rate and acceleration sensor, and steering angle sensor. In addition, it evaluates the results to determine whether any control actions (control of the engine output torque using electronic throttle control or wheel brake pressure using the brake actuator assembly) should be implemented.

(b) The slip indicator light blinks and the skid control buzzer sounds to inform the driver that the VSC

system is operating. The slip indicator light also blinks when traction control is operating, and the operation being performed is displayed.

3. FAIL SAFE

(a) When a malfunction occurs in the ABS with BA, TRAC and VSC systems, the ABS warning and slip indicator lights come on and the VSC OFF indicator light blinks, and ABS with BA, TRAC and VSC operations are prohibited. In addition, when there is a malfunction that disables EBD operation, the brake warning light also comes on and EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually.

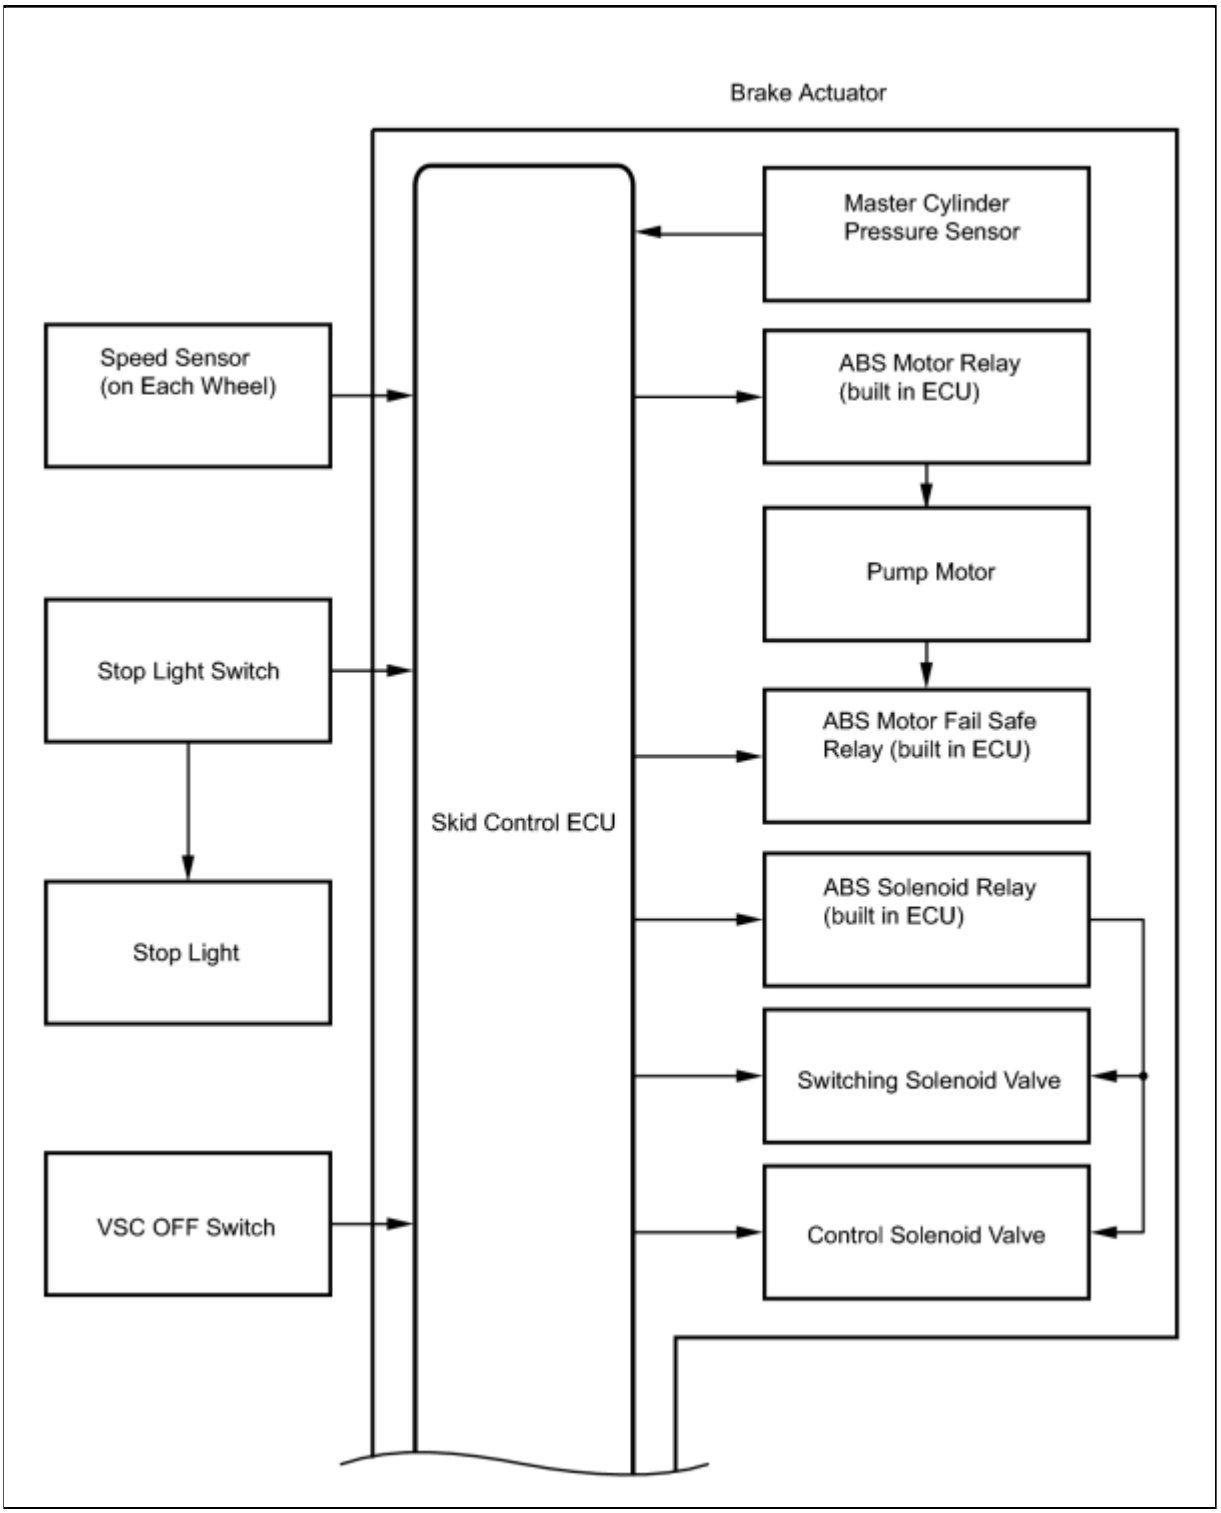
This is to avoid sudden vehicle instability.

4. INITIAL CHECK

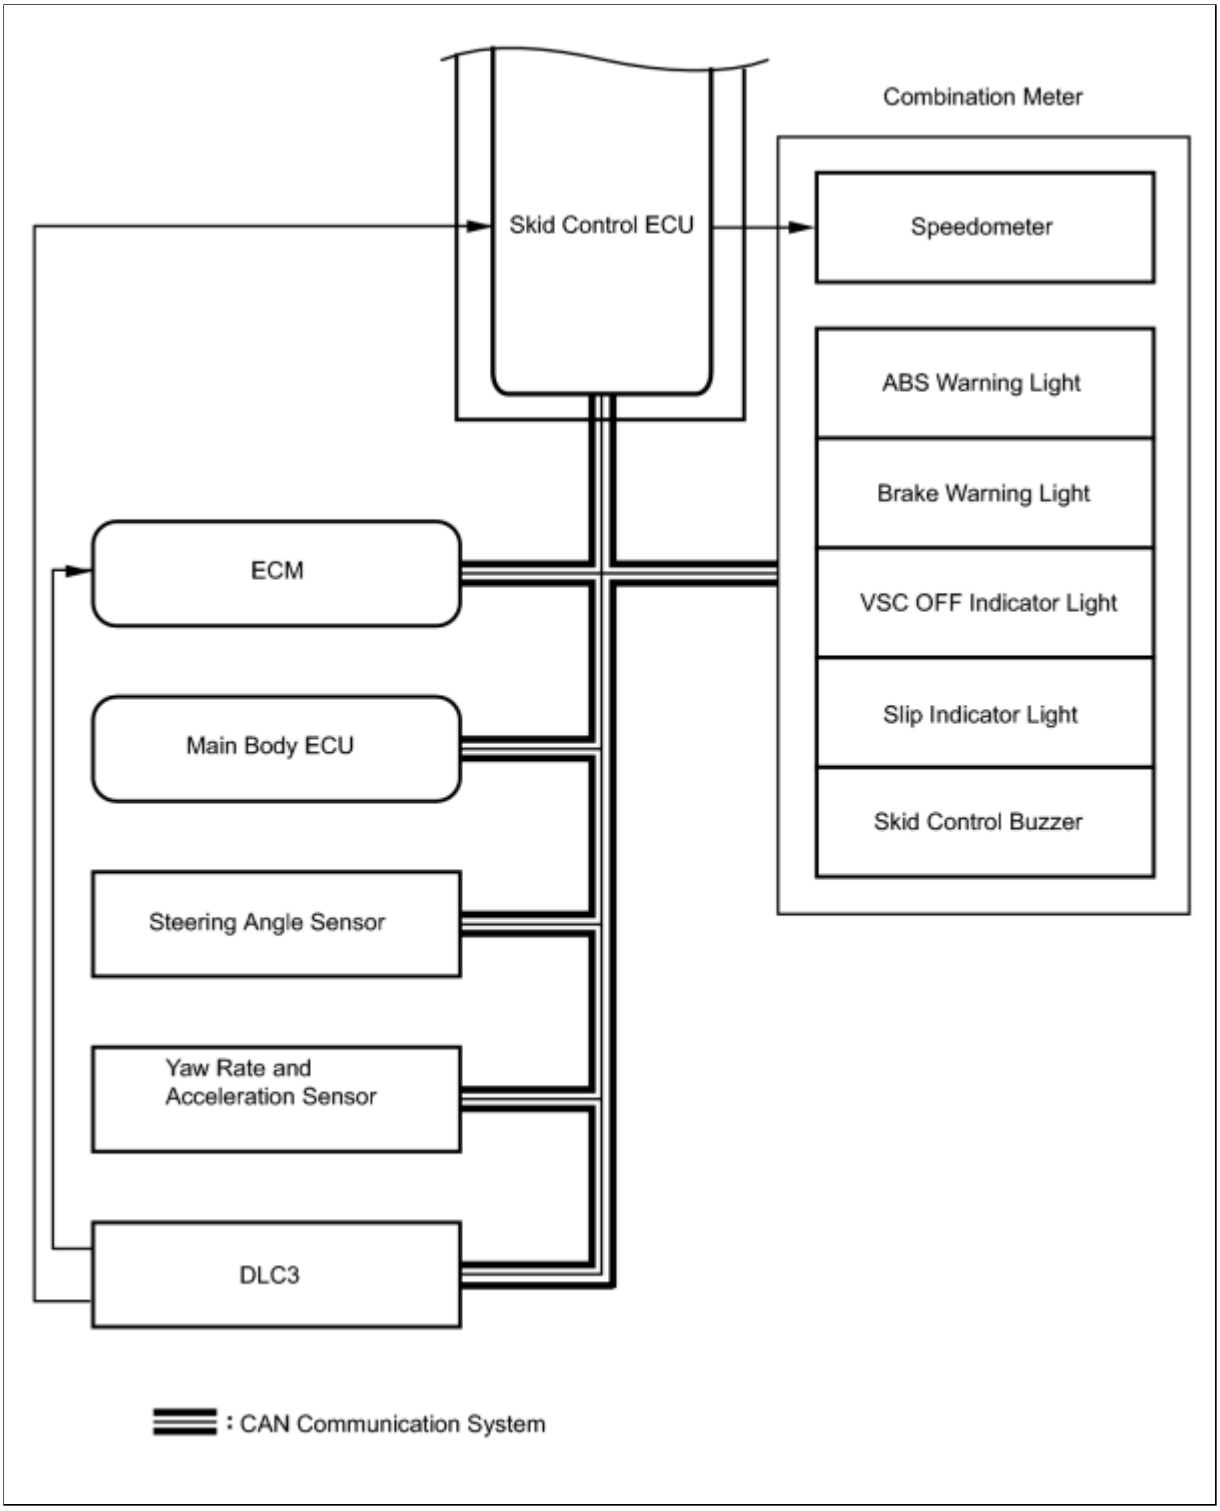
(a) When the vehicle speed first reaches approximately 6 km/h (4 mph) or more after the ignition switch is turned to ON, each solenoid valve and motor of the brake actuator are sequentially activated to perform an electrical check. During the initial check, the operating sound of the solenoid valves and motor can be heard from the engine compartment, but this is not a malfunction.

5. INSPECTION MODE

(a) TRAC and VSC operation can be disabled by operating the Techstream 



.



6. FUNCTION OF COMPONENTS

COMPONENT	FUNCTION
Speed sensor	Detects the wheel speed and sends the signal to the skid control ECU.
Yaw rate and acceleration sensor	• The acceleration sensor measures the capacity of the condenser that changes the distance between the electrodes depending on G force, which occurs when the vehicle is accelerated, and converts the measured value into electrical signals. • The yaw rate sensor detects the vehicle's angular velocity (yaw rate) in the vertical direction based on the amount and direction of the piezoelectric ceramics deflection. • Sends signals to the skid control ECU via CAN communication.
Steering angle sensor	• Installed in the combination switch. • Detects the steering amount and direction and sends the signals to the skid control ECU via CAN communication. • Has a magnetic resistance element which detects the rotation of the magnet housed in the detection gear in order to detect the changes of magnetic resistance and the steering amount and direction.
Stop light switch	Detects the brake operating conditions and inputs the result to the skid control ECU.
Main body ECU	Detects the parking brake operating conditions and inputs the result to the skid control ECU via CAN communication.
Master cylinder pressure sensor	• Detects the fluid pressure in the master cylinder. • Housed in the brake actuator assembly.

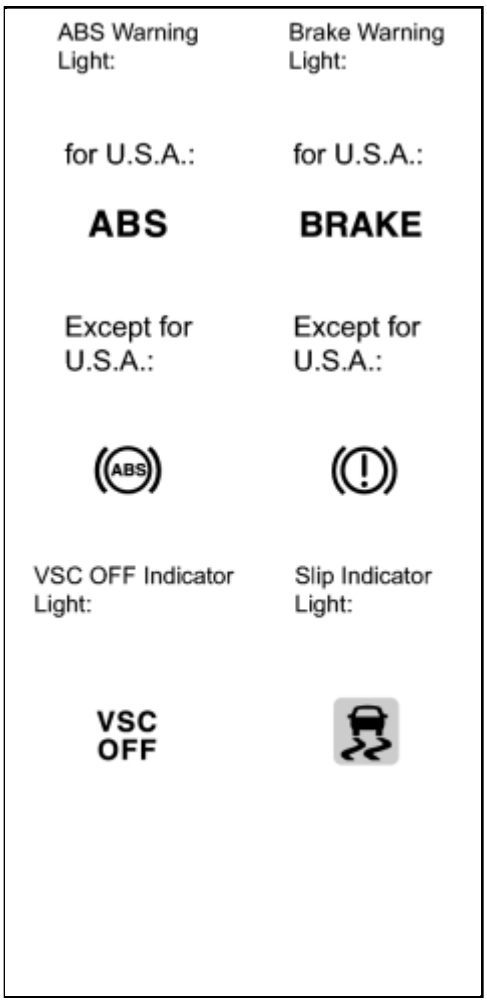
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: TEST MODE PROCEDURE (2010 Corolla)		

TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.



NOTICE:

When releasing the parking brake, move the shift lever to P for safety (for automatic transaxle model) or set the chocks to hold the vehicle for safety (for manual transaxle model).

HINT:

When the parking brake is applied or the level of the brake fluid is low, the brake warning light will come on.

(b) When the ignition switch is turned to ON, check that the ABS warning, brake warning, VSC OFF indicator and slip indicator lights come on for approximately 3 seconds.

HINT:

- If the skid control ECU stores any DTCs, the ABS warning, brake warning and slip indicator lights will come on and the VSC OFF indicator light will blink.
- If any of the indicators remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

TROUBLE AREA	SEE PROCEDURE

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When Using the Techstream)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:

- If the ignition switch is turned from ON to ACC or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.
- During Test Mode (signal check), the skid control ECU records all DTCs of the sensor check function. By performing Test Mode (signal check), the codes are cleared if a normal condition is confirmed. The remaining codes are the codes where a malfunction was found.

(a) Procedure to enter Test Mode.

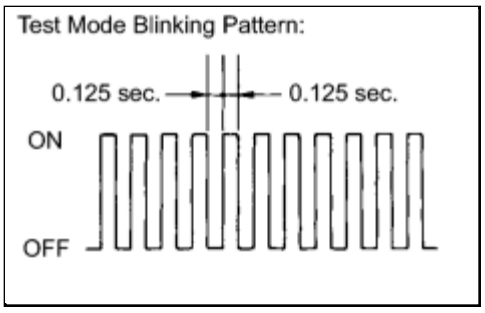
(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.

(5) Turn the ignition switch to ON.



(6) Turn the Techstream on.

(7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Signal Check.

(8) Check that the ABS warning and VSC OFF indicator lights come on for several seconds and then blink in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the ABS warning and VSC OFF indicator lights do not blink, inspect the TS and CG terminal circuit and ABS warning and VSC OFF indicator light circuits.

TROUBLE AREA	SEE PROCEDURE
TS and CG terminal circuit	INFO

(9) Check the ABS sensors.

HINT:

Check that the ABS warning light is blinking in the Test Mode blinking pattern before performing the ABS sensor check.

3. ACCELERATION SENSOR CHECK (When Using the Techstream)

(a) Keep the vehicle stationary on a level surface for 1 second or more.

HINT:

The acceleration sensor check can be performed with the master cylinder pressure sensor check below.

4. MASTER CYLINDER PRESSURE SENSOR CHECK (When Using the Techstream)

(a) Keep the vehicle stationary and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.

HINT:

- Confirm that the ABS warning light comes on.
- While the ABS warning light is illuminated, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time brake pedal operation above is performed.
- If the master cylinder pressure sensor check is not completed, depressing the brake pedal causes further decreases in the vacuum in the brake booster, making the sensor check difficult to complete.
- If the vacuum remaining in the booster is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient vacuum.
- If the brake pedal is strongly depressed when the vacuum in the booster is insufficient, the brake warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient vacuum.

5. SPEED SENSOR CHECK (When Using the Techstream)

(a) Check the speed sensor signal.

(1) Drive the vehicle straight-ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

HINT:

- The sensor check may not be completed if wheelspin occurs.
- The ABS warning light blinks when the sensor check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor check.

(b) Stop the vehicle.

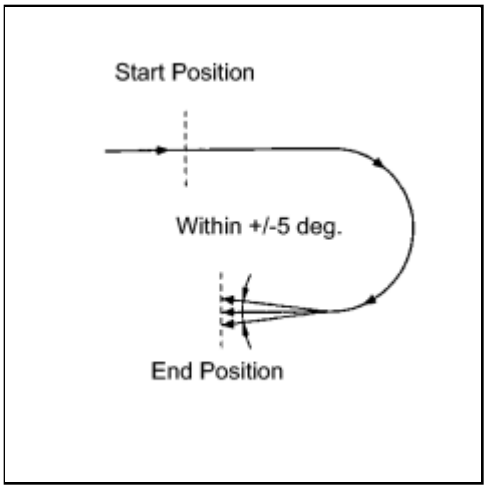
NOTICE:

- Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.
- The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.
- After the ABS warning light goes off, if the vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

HINT:

When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while the vehicle is stationary.

(c) Check the VSC sensor.



HINT:

Check that the VSC OFF indicator light blinks before performing the VSC sensor check.

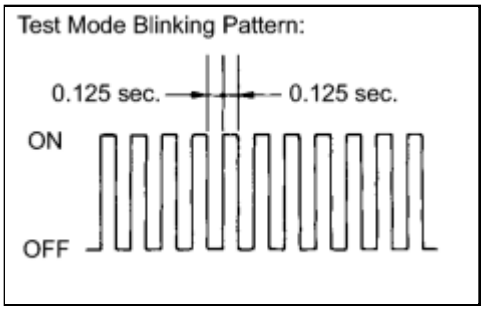
6. YAW RATE SENSOR CHECK (When Using the Techstream)

(a) Check the output of the yaw rate sensor.

(1) Keep the vehicle stationary on a level surface for 1 second or more.

(2) Move the shift lever from P to D (for automatic transaxle model) or release the parking brake (for manual transaxle model) and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.

(3) Stop the vehicle and move the shift lever to P (for automatic transaxle model) or apply the parking brake (for manual transaxle model). Check that the skid control buzzer sounds for 3 seconds.



HINT:

- If the skid control buzzer sounds, the sensor check has completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit INFO , then perform the sensor check again.
- If the skid control buzzer still does not sound, the yaw rate sensor may be malfunctioning. Check

for DTCs.

- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +/-5° of its start position.
- Do not spin the wheels.
- Do not turn the ignition switch off while turning.
- Do not move the shift lever to P (for automatic transaxle model) or do not apply the parking brake (for manual transaxle model) while turning, but changing the vehicle speed, stopping, or driving in reverse is acceptable.
- Complete the turn within 20 seconds.

7. END OF SENSOR CHECK (When Using the Techstream)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

8. READ DTC OF SENSOR CHECK FUNCTION (When Using the Techstream)

(a) Read the DTC(s) by following the Techstream screen.

NOTICE:

- If only DTCs other than the Test Mode sensor check DTCs are displayed, repair the malfunction and clear the DTCs.
- If the Test Mode sensor check DTCs and other DTCs are displayed or if only the Test Mode sensor check DTCs are displayed, repair the malfunction, clear the DTCs, and perform the Test Mode inspection again.

HINT:

See the list of DTCs (See procedure "A").

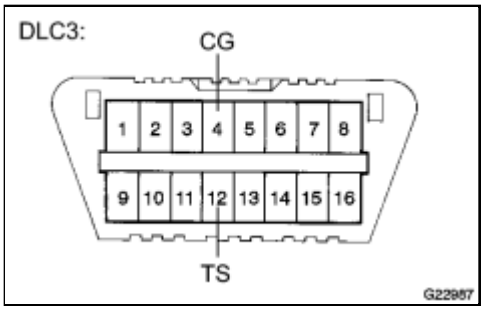
(b) Turn the ignition switch off and disconnect the Techstream.

9. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When not Using the Techstream)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

HINT:



- If the ignition switch is turned from ON to ACC or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.
- During Test Mode (signal check), the skid control ECU records all DTCs of the sensor check function. By performing Test Mode (signal check), the codes are cleared if a normal condition is confirmed. The remaining codes are the codes where a malfunction was found.

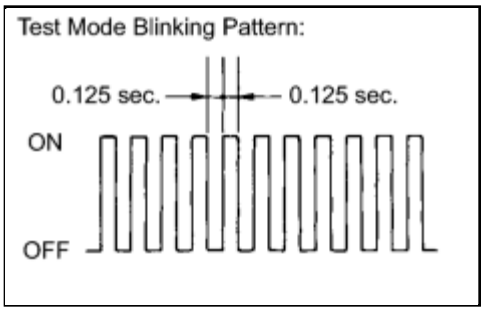
(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Using SST, connect terminals TS and CG of the DLC3.



SST: 09843-18040

(5) Turn the ignition switch to ON.

(6) Check that the ABS warning and VSC OFF indicator lights come on for several seconds and then blink in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the ABS warning and VSC OFF indicator lights do not blink, inspect the TS and CG terminal circuit and ABS warning and VSC OFF indicator light circuits.

(7) Check the ABS sensors.

HINT:

Check that the ABS warning light is blinking in the Test Mode blinking pattern before performing ABS sensor check.

10. ACCELERATION SENSOR CHECK (When not Using the Techstream)

(a) Keep the vehicle stationary on a level surface for 1 second or more.

HINT:

The acceleration sensor check can be performed with the master cylinder pressure sensor check below.

11. MASTER CYLINDER PRESSURE SENSOR CHECK (When not Using the Techstream)

(a) Keep the vehicle stationary and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.

HINT:

- Confirm that the ABS warning light comes on.
- While the ABS warning light is illuminated, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.
- If the master cylinder pressure sensor check is not completed, depressing the brake pedal causes further decreases in the vacuum in the brake booster, making the sensor check difficult to complete.
- If the vacuum remaining in the booster is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient vacuum.
- If the brake pedal is strongly depressed when the vacuum in the booster is insufficient, the brake warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient vacuum.

12. SPEED SENSOR CHECK (When not Using the Techstream)

(a) Check the speed sensor signal.

(1) Drive the vehicle straight-ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

HINT:

- The sensor check may not be completed if wheelspin occurs.
- The ABS warning light blinks when the sensor check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor check.

(b) Stop the vehicle.

NOTICE:

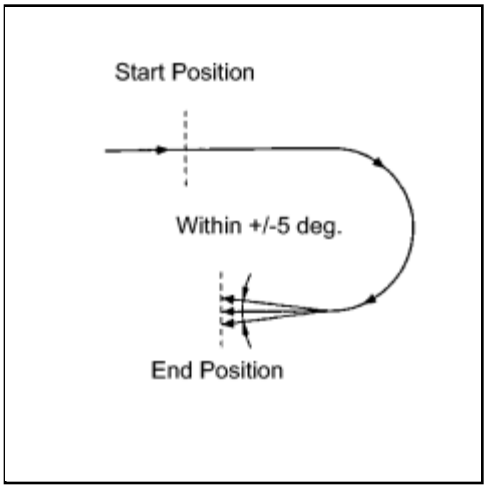
- Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.
- The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.
- After the ABS warning light goes off, if the vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the

ABS will not operate.

HINT:

When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while the vehicle is stationary.

(c) Check the VSC sensor.



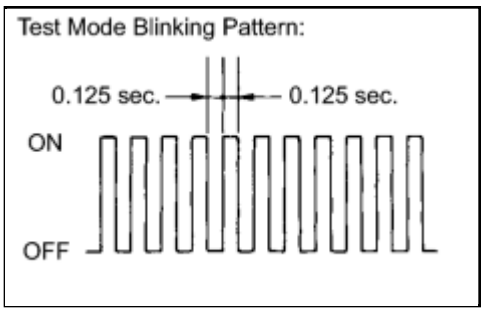
HINT:

Check that the VSC OFF indicator light blinks before performing the VSC sensor check.

13. YAW RATE SENSOR CHECK (When not Using the Techstream)

(a) Check the output of the yaw rate sensor.

(1) Keep the vehicle stationary on a level surface for 1 second or more.



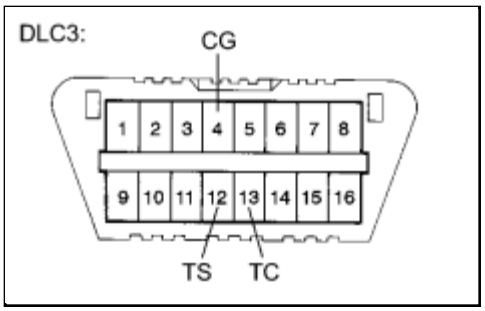
(2) Move the shift lever from P to D (for automatic transaxle model) or release the parking brake (for manual transaxle model) and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.

(3) Stop the vehicle and move the shift lever to P (for automatic transaxle model) or apply the parking brake (for manual transaxle model). Check that the skid control buzzer sounds for 3 seconds.

HINT:

- If the skid control buzzer sounds, the sensor check has completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit INFO , then perform the sensor check again.
- If the skid control buzzer still does not sound, the yaw rate sensor may be malfunctioning. Check for DTCs.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +/-5° of its start position.
- Do not spin the wheels.
- Do not turn the ignition switch off while turning.
- Do not move the shift lever to P (for automatic transaxle model) or do not apply the parking brake (for manual transaxle model) while turning, but changing the vehicle speed, stopping, or driving in reverse is acceptable.
- Complete the turn within 20 seconds.

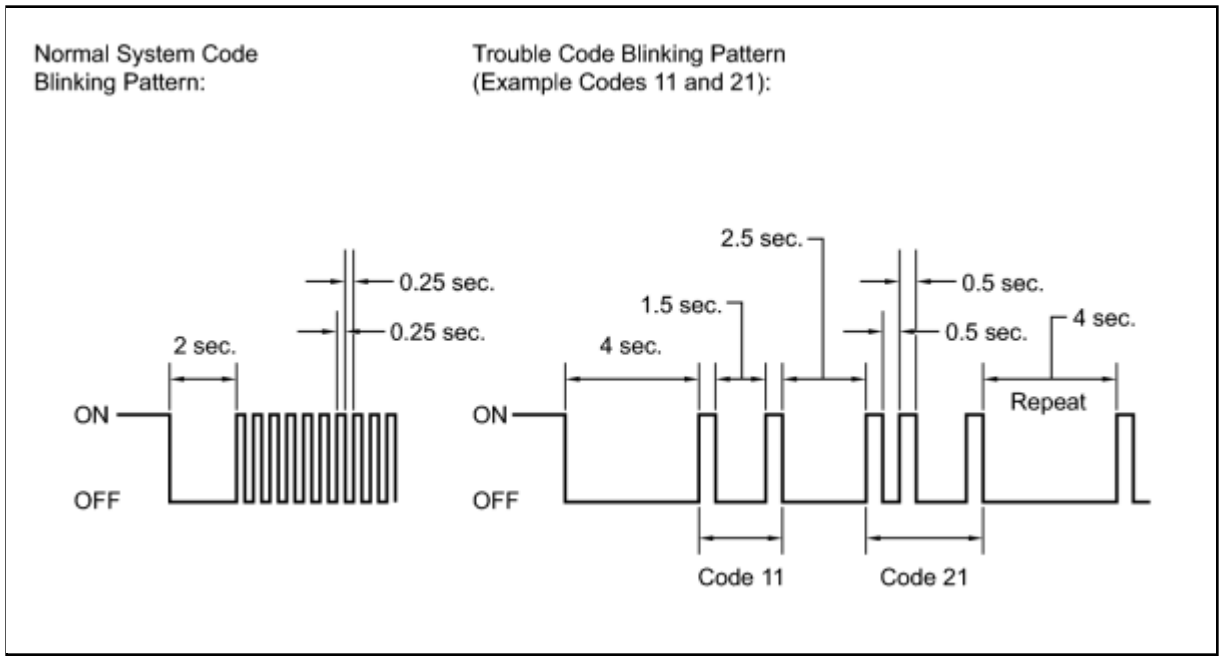
14. END OF SENSOR CHECK (When not Using the Techstream)



(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.
- If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS will not operate.



15. READ DTC OF SENSOR CHECK FUNCTION (When not Using the Techstream)

(a) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(b) Count the number of blinks of the ABS warning and VSC OFF indicator lights.

NOTICE:

- If only DTCs other than the Test Mode sensor check DTCs are displayed, repair the malfunction and clear the DTCs.
- If the Test Mode sensor check DTCs and other DTCs are displayed or if only the Test Mode

sensor check DTCs are displayed, repair the malfunction, clear the DTCs, and perform the Test Mode inspection again.

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(c) After performing the check, disconnect SST from terminals TS and CG, and TC and CG of the DLC3 and turn the ignition switch off.

(d) Turn the ignition switch to ON.

HINT:

- If the ignition switch is not turned to ON after SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned to ON with terminals TS and CG connected, the previous Test Mode will continue.

CHECK FOR INTERMITTENT PROBLEMS

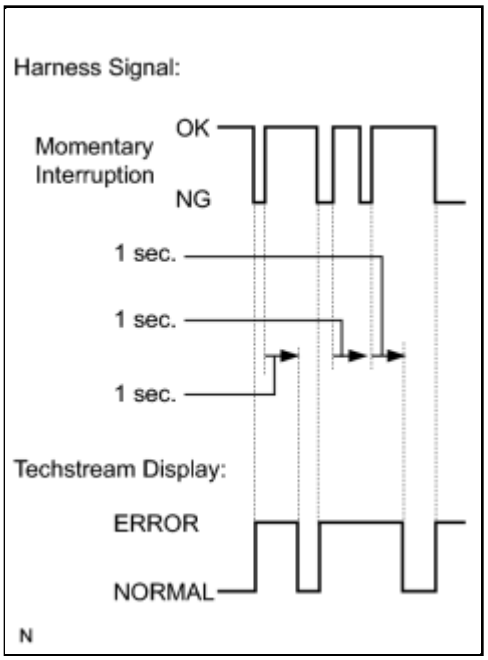
1. CHECK FOR INTERMITTENT PROBLEMS

HINT:

A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected using the ECU Data List function of the Techstream.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.



(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Follow the directions on the Techstream to display the Data List and select areas where momentary interruptions should be monitored.

HINT:

- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned to ON (initial check).
- If the status remains on (ERROR displayed), check for continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the Techstream remains on for 1 second after the harness signal changes from momentary interruptions (open circuit) to normal condition.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: CALIBRATION (2010 Corolla)		

CALIBRATION

1. DESCRIPTION

- After replacing the VSC relevant components or performing front wheel alignment adjustment, clear and read the sensor calibration data.
- Follow the chart below to perform calibration.

REPLACING PARTS / OPERATION	NECESSARY OPERATION
Brake actuator assembly (Skid control ECU)	Yaw rate and acceleration sensor zero point calibration
Yaw rate and acceleration sensor	1. Clearing zero point calibration data 2. Yaw rate and acceleration sensor zero point calibration
Front wheel alignment adjustment	1. Clearing zero point calibration data 2. Yaw rate and acceleration sensor zero point calibration

2. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When Using the Techstream)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

(a) Clear the zero point calibration data.

(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.

(5) Turn the ignition switch to ON.

(6) Turn the Techstream on.

(7) Select the skid control ECU to clear the zero point calibration data using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Reset Memory.

(8) Turn the ignition switch off.

NOTICE:

If the ignition switch is turned to ON for more than 15 seconds with the shift lever in P (for automatic transaxle model) or the parking brake applied (for manual transaxle model) after zero point of the yaw

rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights.

(b) Perform zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the ignition switch off.

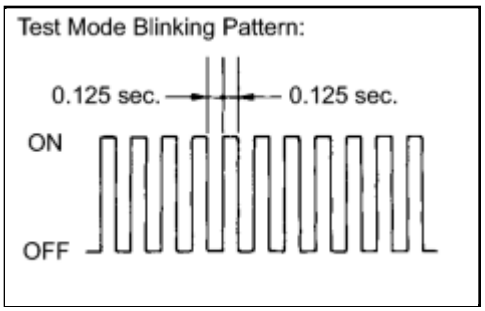
(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in P (for automatic transaxle model) or the parking brake is not applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.



(5) Turn the ignition switch to ON.

(6) Turn the Techstream on.

(7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Test Mode.

(8) After the system enters Test Mode, keep the vehicle stationary on a level surface for 2 seconds or more.

(9) Check that the VSC OFF indicator light comes on for several seconds and then blinks in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the VSC OFF indicator light does not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

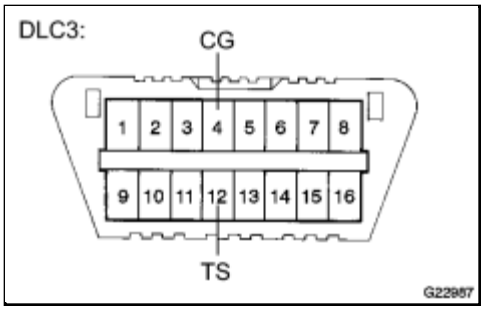
(10) Turn the ignition switch off and disconnect the Techstream.

3. OBTAIN ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (When not Using the Techstream)

NOTICE:

- While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not start the engine.)
- Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).

(a) Clear the zero point calibration data.



(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Turn the ignition switch to ON.

(5) The warning and indicator light come on for 3 seconds to indicate that the initial check is completed.

(6) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.

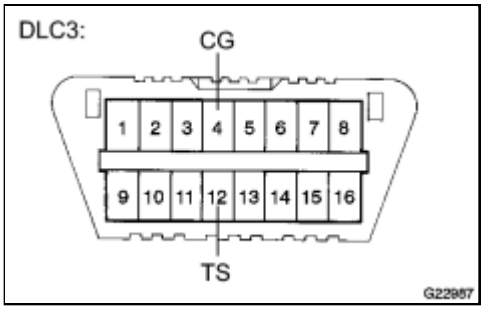
SST: 09843-18040

(7) Check that the VSC OFF indicator light comes on.

NOTICE:

If the ignition switch is turned to ON for more than 15 seconds with the shift lever in P (for automatic transaxle model) or the parking brake applied (for manual transaxle model) after zero point of the yaw rate and acceleration sensor has been cleared, only the zero point of the yaw rate sensor will be stored. If the vehicle is driven under these conditions, the skid control ECU will store the zero point calibration for the acceleration sensor as not being completed. The skid control ECU will then also indicate this as a malfunction of the VSC system using the indicator lights.

(b) Perform zero point calibration of the yaw rate and acceleration sensor.



(1) Turn the ignition switch off.

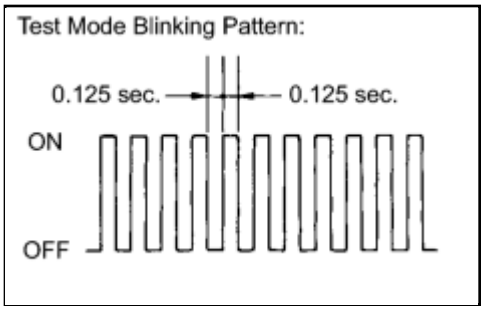
(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

NOTICE:

DTCs C1210/36 and C1336/39 will be recorded if the shift lever is not in P (for automatic transaxle model) or the parking brake is not applied (for manual transaxle model).

(4) Using SST, connect terminals TS and CG of the DLC3.



SST: 09843-18040

(5) Turn the ignition switch to ON.

(6) Keep the vehicle stationary on a level surface for 2 seconds or more.

(7) Check that the VSC OFF indicator light comes on for several seconds and then blinks in Test Mode.

HINT:

- The slip indicator light remains on during Test Mode because traction control operation is prohibited (The slip indicator light goes off when the VSC OFF switch is on).
- If the VSC OFF indicator light does not blink, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(8) Turn the ignition switch off and disconnect SST from the DLC3.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

If there are no DTCs output and the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake actuator assembly, sensors, etc., turn the ignition switch off.

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with a diagnosis system, the only difference from the usual troubleshooting procedure is connecting the Techstream to the vehicle and reading various data output from the vehicle's skid control ECU.

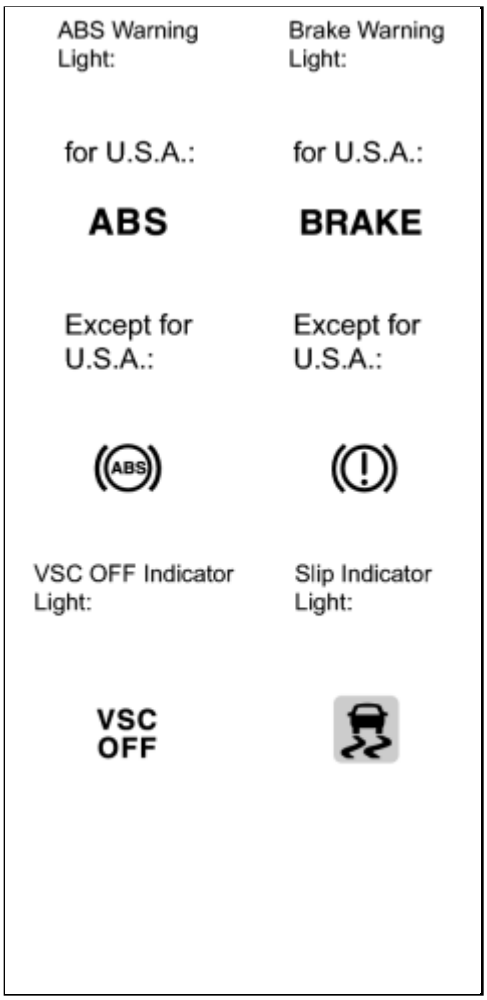
The skid control ECU records DTCs when it detects a malfunction in the ECU itself or in its circuits.

To check the DTCs, connect the Techstream to the DLC3 on the vehicle. The Techstream enables you to clear the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding to the next step.



(b) Check the DLC3 INFO .

2. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS warning, brake warning, VSC OFF indicator and slip indicator lights will come on in order to warn the driver.

The table below indicates which lights will come on when there is a malfunction in a particular function.

ITEM / TROUBLE AREA	ABS	EBD	BA	TRAC	VSC	SKID CONTROL ECU
ABS warning light	○	○	○	-	-	○
Brake warning light	-	○	-	-	-	○
VSC OFF indicator light	● (VSC OFF switch OFF)	● (VSC OFF switch OFF)	● (VSC OFF switch OFF)	● (VSC OFF switch OFF)	● (VSC OFF switch OFF)	● (VSC OFF switch OFF)

Slip indicator light	○	○	○	○	○	○

○: Light ON

●: Light ON (Blinking)

-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning and VSC OFF indicator lights, or by connecting the Techstream.
- This system has a Test Mode (signal check) function INFO .

The DTCs can be read by connecting the Techstream and observing the blinking pattern of the ABS warning and VSC OFF indicator lights.

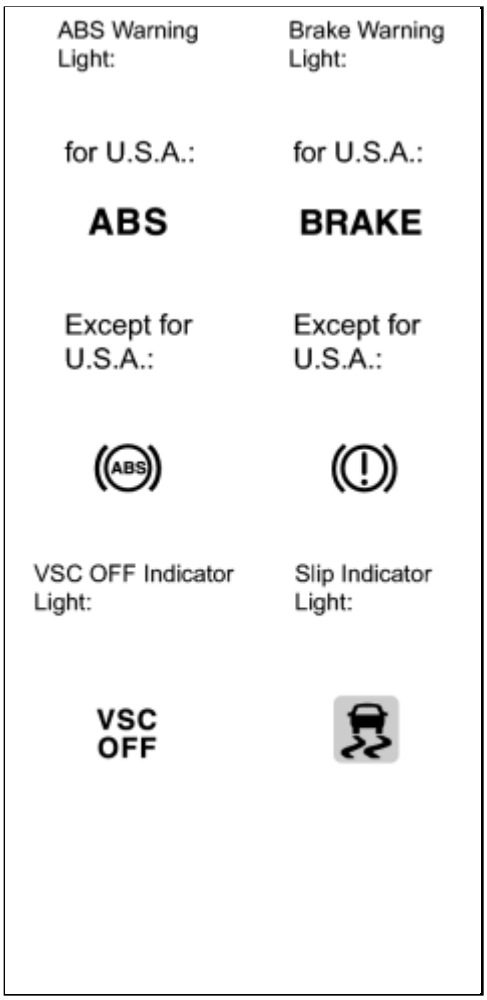
3. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

When releasing the parking brake, move the shift lever to P for safety (for automatic transaxle model) or set the chocks to hold the vehicle for safety (for manual transaxle model).

HINT:



When the parking brake is applied or the brake fluid level is low, the brake warning light will come on.

(b) When the ignition switch is turned to ON, check that the ABS warning, brake warning, VSC OFF indicator and slip indicator lights come on for approximately 3 seconds.

HINT:

If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS warning, brake warning, VSC OFF indicator and slip indicator light circuits.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

TROUBLE AREA	SEE PROCEDURE
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light circuit (Remains on)	INFO
Brake warning light circuit (Does not come on)	INFO

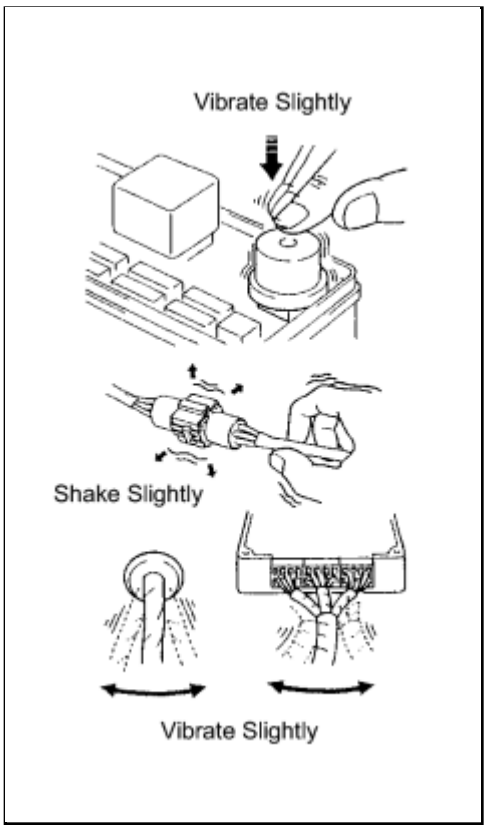
4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he/she proceeds to troubleshooting without confirming the problem symptoms, he/she will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to ON).

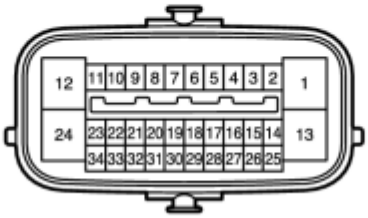
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

(2) Slightly shake the connector vertically and

horizontally.

HINT:

Shaking the relays too strongly may result in open relays.



(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (When Using the Techstream)

(a) Check for DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

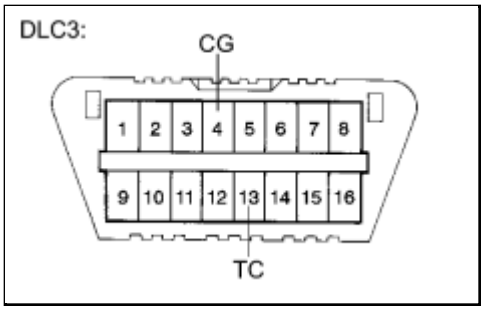
(4) Read the DTCs following the prompts on the Techstream screen. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) Check the details of the DTCs INFO .

(b) Clear the DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.



(3) Turn the Techstream on.

(4) Operate the Techstream to clear the codes. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) According to the Techstream display, select the trouble code data display with the clear button.

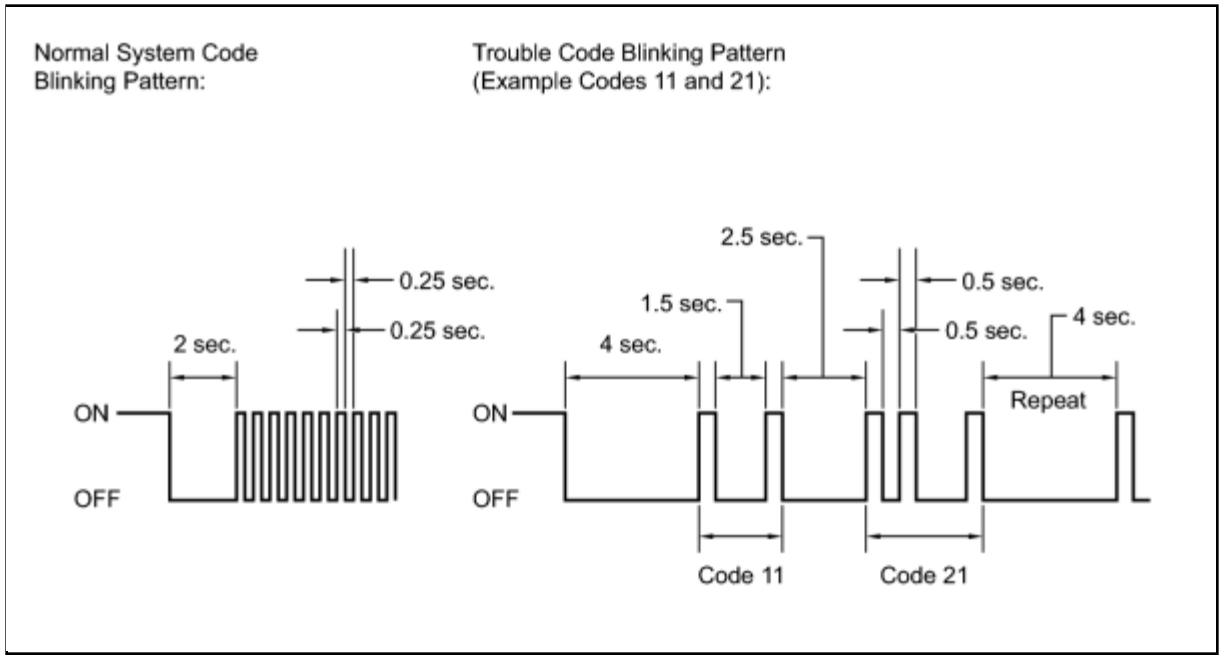
2. DTC CHECK/CLEAR (When not Using the Techstream)

(a) Check for DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON.



(3) Observe the blinking pattern of the ABS warning and VSC OFF indicator lights in order to identify the DTC.

HINT:

If no code appears, inspect the TC and CG terminal circuit, and ABS warning and VSC OFF indicator light circuits.

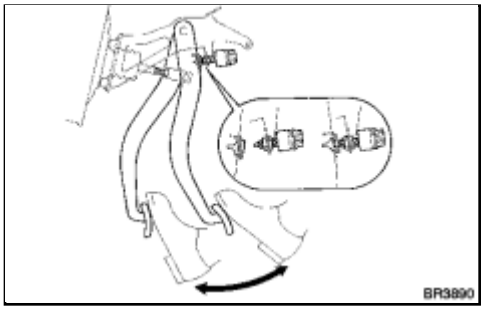
*1: This DTC is output when the VSC system detects a malfunction in the ABS.

(6) After completing the check, disconnect terminals TC and CG of the DLC3 to turn off the display.

If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.



(b) Clear the DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON.

(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light indicates a normal system code.

(5) Remove SST from the terminals of the DLC3.

HINT:

The DTCs cannot be cleared by disconnecting the negative cable from the battery terminal or the ECU-IG NO. 1 fuse.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch to ON.

(b) Check that the ABS warning and VSC OFF indicator lights go off within approximately 3 seconds after turning the ignition switch to ON.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to ON since the last time the ABS was activated.

HINT:

- If the vehicle is stopped, at a low speed (7 km/h (4.3 mph) or less), or if a DTC is detected, the skid control ECU will stop counting the number of times the ignition switch has been turned from off to ON.
- Freeze Frame Data at the time the ABS operates:

  The skid control ECU stores and updates data whenever the ABS system operates.

  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is cleared.
- Freeze Frame Data at the time a DTC is detected:

  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

2. CHECK FREEZE FRAME DATA

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(e) According to the Techstream display, select the trouble code data display with Freeze Frame Data.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.

(g) According to the Techstream display, read the Data List.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with sensor signals or the brake actuator system, the skid control ECU prohibits power supply to the brake actuator and informs the ECM of the VSC system malfunction.

  The brake actuator turns off the solenoids and the ECM stops its VSC control according to signals from the skid control ECU. The vehicle will operate in a manner similar to a vehicle that is not equipped with ABS, TRAC and VSC systems.

  ABS control will be prohibited, but EBD control will continue to the extent that EBD control is possible. If EBD control is impossible, the brake warning light will come on to warn the driver INFO .
- If a VSC system component malfunctions before VSC control begins, VSC control will be prohibited. If a system component malfunctions during VSC control, the system will gradually stop performing the control so as not to trigger a sudden change in vehicle operation.

  If it is impossible to control the systems, the warning light will come on to inform the driver of system control termination INFO .

ABS, EBD and BA System

MALFUNCTIONING AREA	CONTROL METHOD
ABS system	ABS, BA, TRAC and VSC control prohibited
BA system	ABS, BA, TRAC and VSC control prohibited
EBD system	ABS, EBD, BA, TRAC and VSC control prohibited

HINT:

A malfunction in either the ABS or BA system will result in identical operation with ABS, BA, TRAC and VSC system control being prohibited.

TRAC and VSC System

MALFUNCTIONING AREA	CONTROL METHOD
Engine control system (TRAC and VSC systems)	Before control: Disables control During control: Uses only the brakes to effect control
Brake control system (VSC system)	Before control: Disables control During control: Uses only the engine to effect control

MALFUNCTIONING AREA	CONTROL METHOD
Brake control system (TRAC system)	Before control: Disables control During control: Disables control (by gradually ending control)

HINT:

As for the TRAC and VSC systems, different systems prohibit different controls depending on the malfunctioning part.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

Turn the ignition switch off before removing any parts.

HINT:

- If no malfunction is found when inspecting parts, inspect the skid control ECU and ground points for poor connect.
- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective DTC Code in the DTC chart.
- When 2 or more DTCs are detected, perform circuit inspection one by one until the problem is identified.
- For DTCs indicated by the warning light or indicator light, refer to the DTC charts in DTC Check/Clear.
- Inspect the fuses and relays before investigating the trouble areas as shown in the table below.

Even after the trouble areas are repaired, the ABS warning light will not go off unless the following operations are performed:

- *1:
  a. Drive the vehicle at 20 km/h (12 mph) for 30 seconds or more and check that the ABS warning light goes off.
  b. Clear the DTCs.
- *2:
  a. Turn the ignition switch to ON.
  b. Keep the vehicle stationary for 5 seconds or more and depress the brake pedal lightly 2 or 3 times.
  c. Drive the vehicle at the vehicle speed of 50 km/h (31 mph) and depress and hold

the brake pedal firmly for approximately 3 seconds.

d. Repeat the above operation 3 times or more and check that the ABS warning light goes off.

e. Clear the DTCs.

DTC	**C1210**	**Zero Point Calibration of Yaw Rate Sensor Undone**

DTC	**C1336**	**Zero Point Calibration of Acceleration Sensor Undone**

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2). If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123 (Lost Communication with Yaw Rate Sensor Module) and U0124 (Lost Communication with Lateral Acceleration Sensor Module) are output.

The DTCs are also output when the calibration has not been completed.

DTC	**C1276**	**Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

DTCs C1271 to C1276 will be cleared when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs from C1271 to C1276 are output only in Test Mode.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1271 C1272	Detected only during Test Mode.	• Front speed sensor RH/LH • Sensor installation • Speed sensor rotor
C1275 C1276	Detected only during Test Mode.	Speed sensor rotor

HINT:

- DTCs C1271 and C1275 are for the front speed sensor RH.
- DTCs C1272 and C1276 are for the front speed sensor LH.

DTC	**C1232**	**Acceleration Sensor Stuck Malfunction**

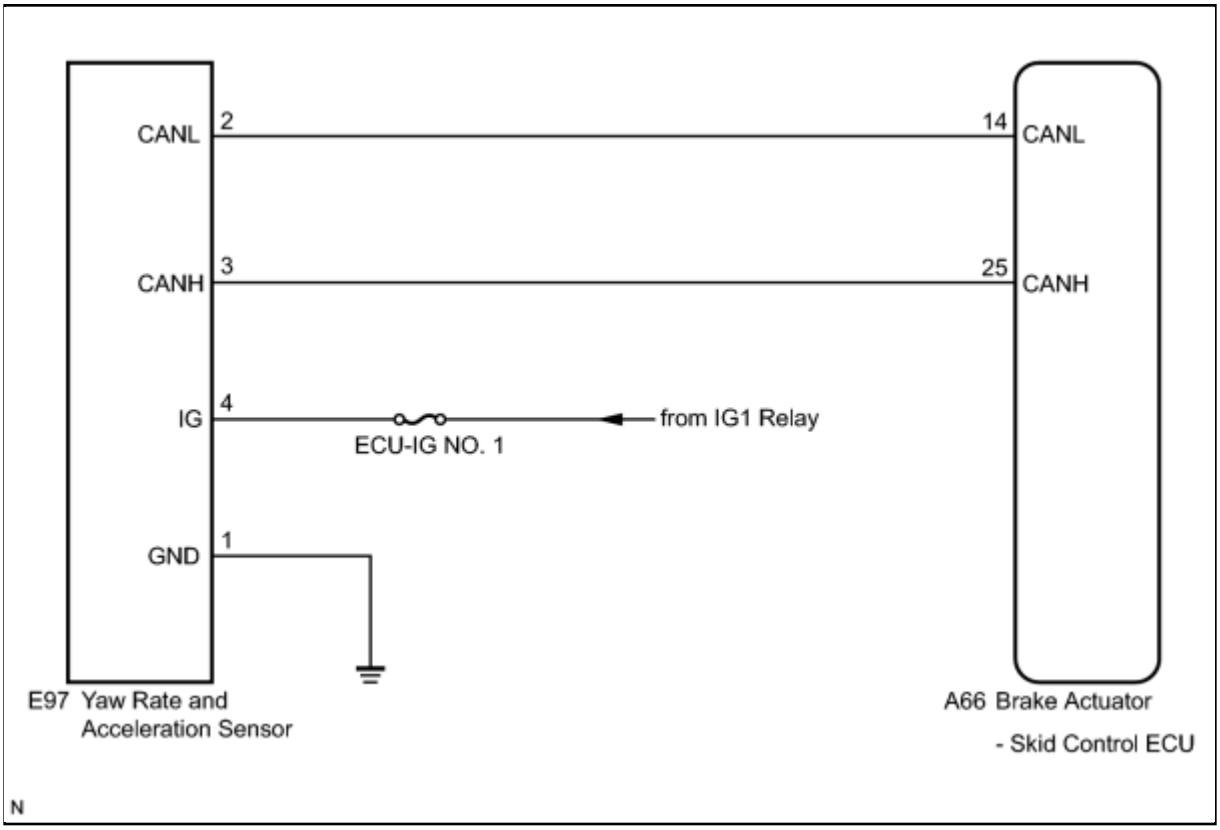
DTC	**C1243**	**Acceleration Sensor Stuck Malfunction**

DTC	**C1245**	**Acceleration Sensor Output Malfunction**

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).



If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123 (Lost Communication with Yaw Rate Sensor Module) and U0124 (Lost Communication with Lateral Acceleration Sensor Module) are set.

These DTCs are also output when calibration has not been completed.

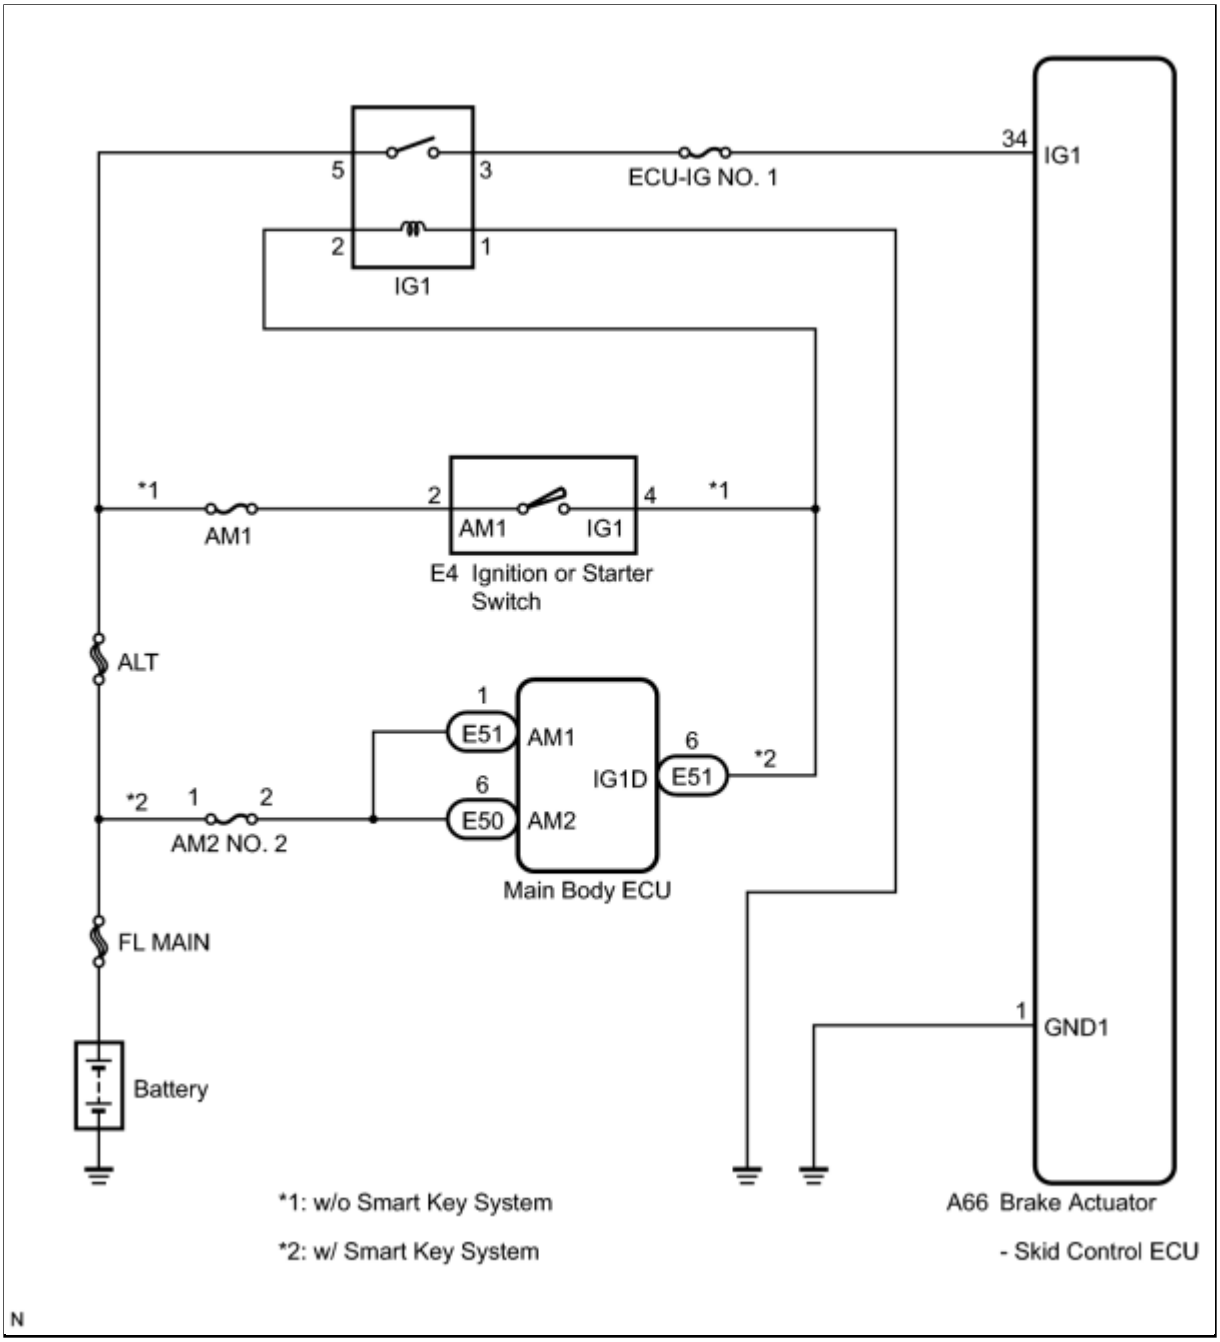
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1241: Low Power Supply Voltage Malfunction (2010 Corolla)		

DTC	**C1241**	**Low Power Supply Voltage Malfunction**

DESCRIPTION



If a malfunction is detected in the power supply circuit, the skid control ECU (housed in the actuator assembly) stores this DTC and the fail safe function prohibits ABS operation.

This DTC is stored when the IG1 terminal voltage deviates from the DTC detection condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

The DTC is cancelled when the IG1 terminal voltage returns to normal.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1241	Any of the following is detected: 1. At a vehicle speed of 3 km/h (2 mph) or more, the IG1 terminal voltage is less than 9.5 V for 10 seconds or more. 2. When the solenoid relay remains ON and the IG1 terminal voltage is less than 9.5 V, the relay contact is open for 0.22 seconds or more. 3. With the IG1 terminal voltage 9.5 V or less, the vehicle speed sensor power supply decreases for 60 seconds or more. 4. When the motor fail safe relay is ON after the motor relay turns ON, the IG1 terminal voltage is 9.5 V or less and the actuator pump drive motor is OFF for 0.22 seconds or more.	• ECU-IG NO. 1 fuse • Battery • Charging system • Power source circuit • Internal power supply circuit of the skid control ECU

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1290: Steering Angle Sensor Zero Point Malfunction (2010 Corolla)		

DTC	**C1290**	**Steering Angle Sensor Zero Point Malfunction**

DESCRIPTION

The skid control ECU acquires steering angle sensor zero point every time the ignition switch is turned to ON and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores the previous zero point.

If front wheel alignment or the steering wheel position is adjusted without disconnecting the cable from the negative (-) battery terminal, or if yaw rate and acceleration sensor zero point is not acquired after the adjustments have been completed, the skid control ECU detects the difference between the previous zero point and newly acquired zero point and outputs this DTC to indicate a poor adjustment.

Warning operation for the steering angle sensor zero point malfunction will be cancelled by turning the ignition switch off.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1290	The newly acquired steering angle sensor zero point vastly differs from the previous one.	• Yaw rate and acceleration sensor zero point calibration incomplete • Poor adjustment of the center position of the steering wheel • Poor adjustment of front wheel alignment

INSPECTION PROCEDURE

NOTICE:

When replacing the brake actuator assembly, perform zero point calibration INFO **.**

PROCEDURE

1.	**PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR**

(a) Perform zero point calibration of the yaw rate and acceleration sensor INFO .

HINT:

- When the stored zero point of the yaw rate and acceleration sensor is cleared, steering angle sensor zero point will also be cleared.
- If the zero point and output value of the yaw rate and acceleration sensor and the output value of the speed sensors are not normal, steering angle sensor zero point cannot be acquired normally even if the vehicle is driven straight ahead at 35 km/h (22 mph) or more.

NEXT

2.	**CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION**

(a) Turn the ignition switch off.

(b) Start the engine.

(c) Drive the vehicle straight ahead at 35 km/h (22 mph) or more for at least 5 seconds.

(d) Check that the steering wheel is centered while driving straight ahead.

HINT:

If front wheel alignment and steering position are adjusted as a result of an abnormal center position of the steering wheel, acquire yaw rate and acceleration sensor zero point again after adjusting front wheel alignment and steering position again.

OK:
The steering wheel is centered.

NG ▶ **ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION**

OK

3.	**RECONFIRM DTC**

(a) Turn the ignition switch off.

(b) Clear the DTCs INFO.

(c) Start the engine.

(d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 35 km/h (22 mph) or more.

(e) Check if the same DTC is recorded INFO .

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1381: Acceleration Sensor Power Supply Voltage Malfunction (2010 Corolla)		

DTC	**C1381**	**Acceleration Sensor Power Supply Voltage Malfunction**

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123 (Lost Communication with Yaw Rate Sensor Module) and U0124 (Lost Communication with Lateral Acceleration Sensor Module) are set.

These DTCs are also output when calibration has not been completed.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1381	At a vehicle speed of more than 3 km/h (2 mph), an acceleration sensor power source malfunction signal is received for 10 seconds or more.	• Yaw rate and acceleration sensor power source circuit • Yaw rate and acceleration sensor

When U0123, U0124 and/or U0126 is output together with C1381, inspect and repair the trouble areas indicated by U0123, U0124 and/or U0126 first INFO .

PROCEDURE

1.	**INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)**

(a) Make sure that there is no looseness at the locking part and the connecting part of the connector.

(b) Disconnect the yaw rate and acceleration sensor connector.

(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

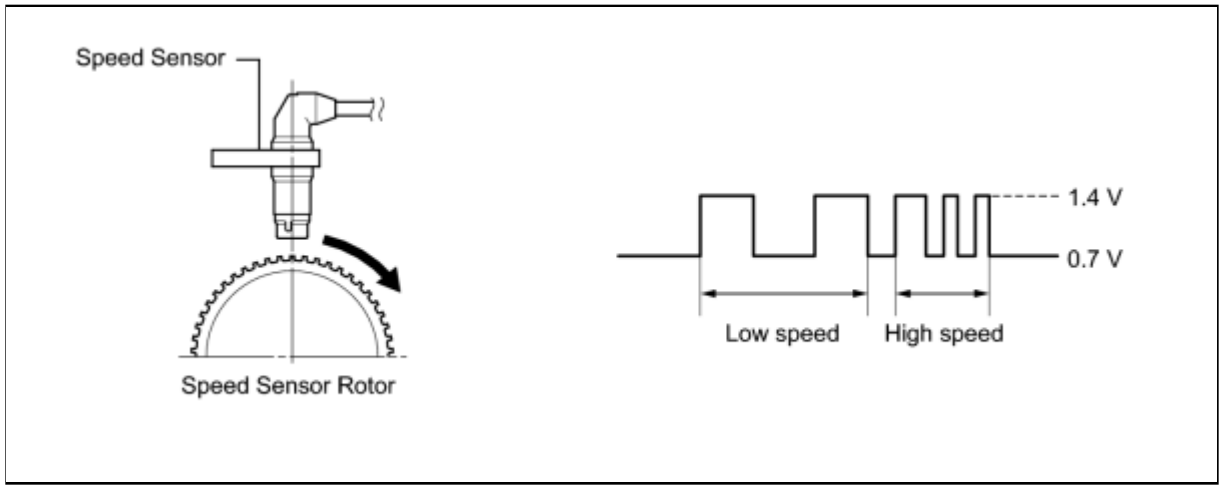
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1413,C1414: Front Speed Sensor RH Output Malfunction (2010 Corolla)		



DTC	**C1413**	**Front Speed Sensor RH Output Malfunction**

DTC	**C1414**	**Front Speed Sensor LH Output Malfunction**

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for the ABS control system.

Speed sensor rotors have 48 serrations. The hall IC type speed sensor uses the frequency of output pulses to detect the vehicle speed. Because the sensor outputs digital pulses, it can detect vehicle speeds even when the vehicle is nearly stationary.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1413 C1414	Any of the following is detected: 1. An open in the sensor signal circuit of a malfunctioning area occurs 255 times or more. 2. At a vehicle speed 20 km/h (12 mph) or more, noise occurs in the sensor signals from the abnormal wheel for 5 seconds or more. 3. At a vehicle speed 10 km/h (6 mph) or more, noise occurs once per rotor rotation for 15 seconds or more.	• Front speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Brake actuator assembly (Skid control ECU)

HINT:

- DTC C1413 is for the front speed sensor RH.
- DTC C1414 is for the front speed sensor LH.

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
FR Wheel Speed	FR wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326.4 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer
FL Wheel Speed	FL wheel speed sensor reading /min.: 0 km/h (0 mph), max.: 326.4 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer

(e) Check that there is no difference between the speed value output from the speed sensor displayed on the Techstream and the speed value displayed on the speedometer when driving the vehicle.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire inflation, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart INFO .

OK:

The speed value output from the speed sensor displayed on the Techstream is the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1417: High Power Supply Voltage Malfunction (2010 Corolla)		

DTC	**C1417**	**High Power Supply Voltage Malfunction**

DESCRIPTION

If a malfunction is detected in the power supply circuit, the skid control ECU (housed in the actuator assembly) stores this DTC and the fail safe function prohibits ABS operation.

This DTC is stored when the IG1 terminal voltage deviates from the DTC detection condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

The DTC is cleared when the IG1 terminal voltage returns to normal.

DTC	**C1424**	**Master Cylinder Pressure Sensor Output Malfunction**

DESCRIPTION

The master cylinder pressure sensor is connected to the skid control ECU in the brake actuator assembly.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1421	Either of the following is detected: 1. With the IG1 terminal voltage between 9.5 and 17.4 V, the VCM terminal voltage is not between 4.4 and 5.6 V for 1.2 seconds or more. 2. When the VCM terminal voltage is between 4.4 and 5.6 V, the PMC terminal voltage is not between 0.19 and 4.57 V for 1.2 seconds or more.	Brake actuator assembly (Master cylinder pressure sensor)
C1423	The PMC terminal voltage is less than 0.27 V for 5 seconds or more.	Brake actuator assembly (Master cylinder pressure sensor)
C1424	Any of the following is detected: 1. Noise occurs in the PMC terminal 7 times or more within 5 seconds. 2. When the vehicle speed drops from 40 km/h (25 mph) to 0 km/h (0 mph), the master cylinder pressure does not change by at least 0.048 MPa. 3. At a vehicle speed of 7 km/h (4.3 mph) or more, the PMC	Brake actuator assembly (Master cylinder pressure sensor)

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
	terminal voltage is between 0.86 and 1.0 V and does not change by at least 0.048 MPa for 60 seconds or more. 4. At a vehicle speed of 7 km/h (4.3 mph) or more, the PMC terminal voltage is 1.0 V or more and does not change by at least 0.048 MPa for 30 seconds or more. 5. All of the following are detected 8 times continuously each time the ignition switch is turned to ON. (8-trip) • Vehicle speed is 7 km/h (4.3 mph) or more • Stop light switch is on • Difference between the master cylinder pressure and the sensor input value is 20 MPa/s or less. • A condition where the sensor input value is apparently larger than the estimated master cylinder pressure based on the deceleration rate continues for 1 second or more, and repeats 5 times or more during each trip.

HINT:

- If a speed signal of 6 km/h (4 mph) or more is input to the skid control ECU with the ignition switch ON and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (no trouble codes are output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1436: Yaw Rate Sensor Malfunction (2010 Corolla)		

DTC	**C1436**	**Yaw Rate Sensor Malfunction**

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor via the CAN communication system.

The yaw rate sensor has a built-in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).

If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123 (Lost Communication with Yaw Rate Sensor Module) and U0124 (Lost Communication with Lateral Acceleration Sensor Module) are set.

These DTCs are also output when calibration has not been completed.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: VEHICLE STABILITY CONTROL SYSTEM: C1439,C1445: Steering Angle Sensor Initialization Incomplete (2010 Corolla)		

DTC	**C1439**	**Steering Angle Sensor Initialization Incomplete**

DTC	**C1445**	**Vehicle Driven with Steering Angle Sensor not Initialized**

DESCRIPTION

The skid control ECU acquires the steering angle sensor zero point every time the ignition switch is turned to ON and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores previous zero points.

Warning of the steering angle sensor zero point malfunction will be cancelled by turning the ignition switch off.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1439	After the steering angle sensor zero point calibration is cleared due to, for example, fluctuations in the power source, the steering angle sensor zero point calibration cannot be obtained for 60 seconds of continuous driving.	• Steering angle sensor • Yaw rate and acceleration sensor • Brake actuator assembly (Skid control ECU)
C1445	Steering angle sensor zero point calibration cannot be obtained when the vehicle is driven without a record of steering angle sensor zero point calibration at a speed of 35 km/h (22 mph) or more for 30 seconds or more without the brake pedal being depressed.	• Steering angle sensor • Yaw rate and acceleration sensor • Brake actuator assembly (Skid control ECU)

INSPECTION PROCEDURE

NOTICE:

- When replacing the brake actuator assembly, perform zero point calibration INFO .

- Before proceeding with the inspection, explain to the customer that the output DTC is related to temporary loss of the steering angle zero point calibration, such as when the power source voltage drops when the battery is removed, and confirm that this condition occurred.

HINT:

- When U0073, U0123, U0124 and/or U0126 is output together with C1439 and/or C1445, inspect and repair the trouble areas indicated by U0073, U0123, U0124 and/or U0126 first INFO .
- When the speed sensor or the yaw rate and acceleration sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. DTC	**C1440**	**Unusual Bank Angle Detected**

DESCRIPTION

If the skid control ECU determines that the vehicle is being driven at a steep bank angle, the skid control ECU stores DTC C1440 while VSC operation is temporarily disabled.

It is not a malfunction if the system and sensor circuits are normal and if the normal VSC operation resumes, which automatically clears DTC 1440, after the vehicle is returned to a normal position.

VSC OFF Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

If the skid control ECU stores a DTC, the VSC OFF indicator light blinks in the combination meter.

Pressing the VSC OFF switch turns off traction control and pressing and holding this switch turns off traction and VSC controls. If VSC control turns off, the VSC OFF indicator light will come on.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition switch off	LOCK	off
Ignition switch ON	ON	on (IG)
Ignition switch ACC	ACC	on (ACC)
Engine start	START	start

2. TROUBLESHOOTING PRECAUTIONS

(a) When there is a malfunction in the terminal contact points or part installation problems, removal and installation of the suspected parts may return the system to normal either completely or temporarily.

(b) In order to determine the malfunctioning area, be sure to check the conditions at the time the malfunction occurred, such as DTC output and the Freeze Frame Data, and record it before disconnecting any connector or removing and installing parts.

(c) Since the system may be influenced by malfunctions in systems other than the ABS system, be sure to check for DTCs in other systems.

3. HANDLING PRECAUTIONS

(a) Be sure to remove and install the ECU, brake actuator and each sensor, etc. with the ignition switch off unless it is specified in the inspection procedure.

(b) If the ECU, brake actuator or a sensor has been removed and installed, it is necessary to check the system for problems after any parts have been reinstalled. Check for DTCs using the Techstream, and also check that system functions and signals received by the ECU are normal using Test Mode.

4. DTC PRECAUTION

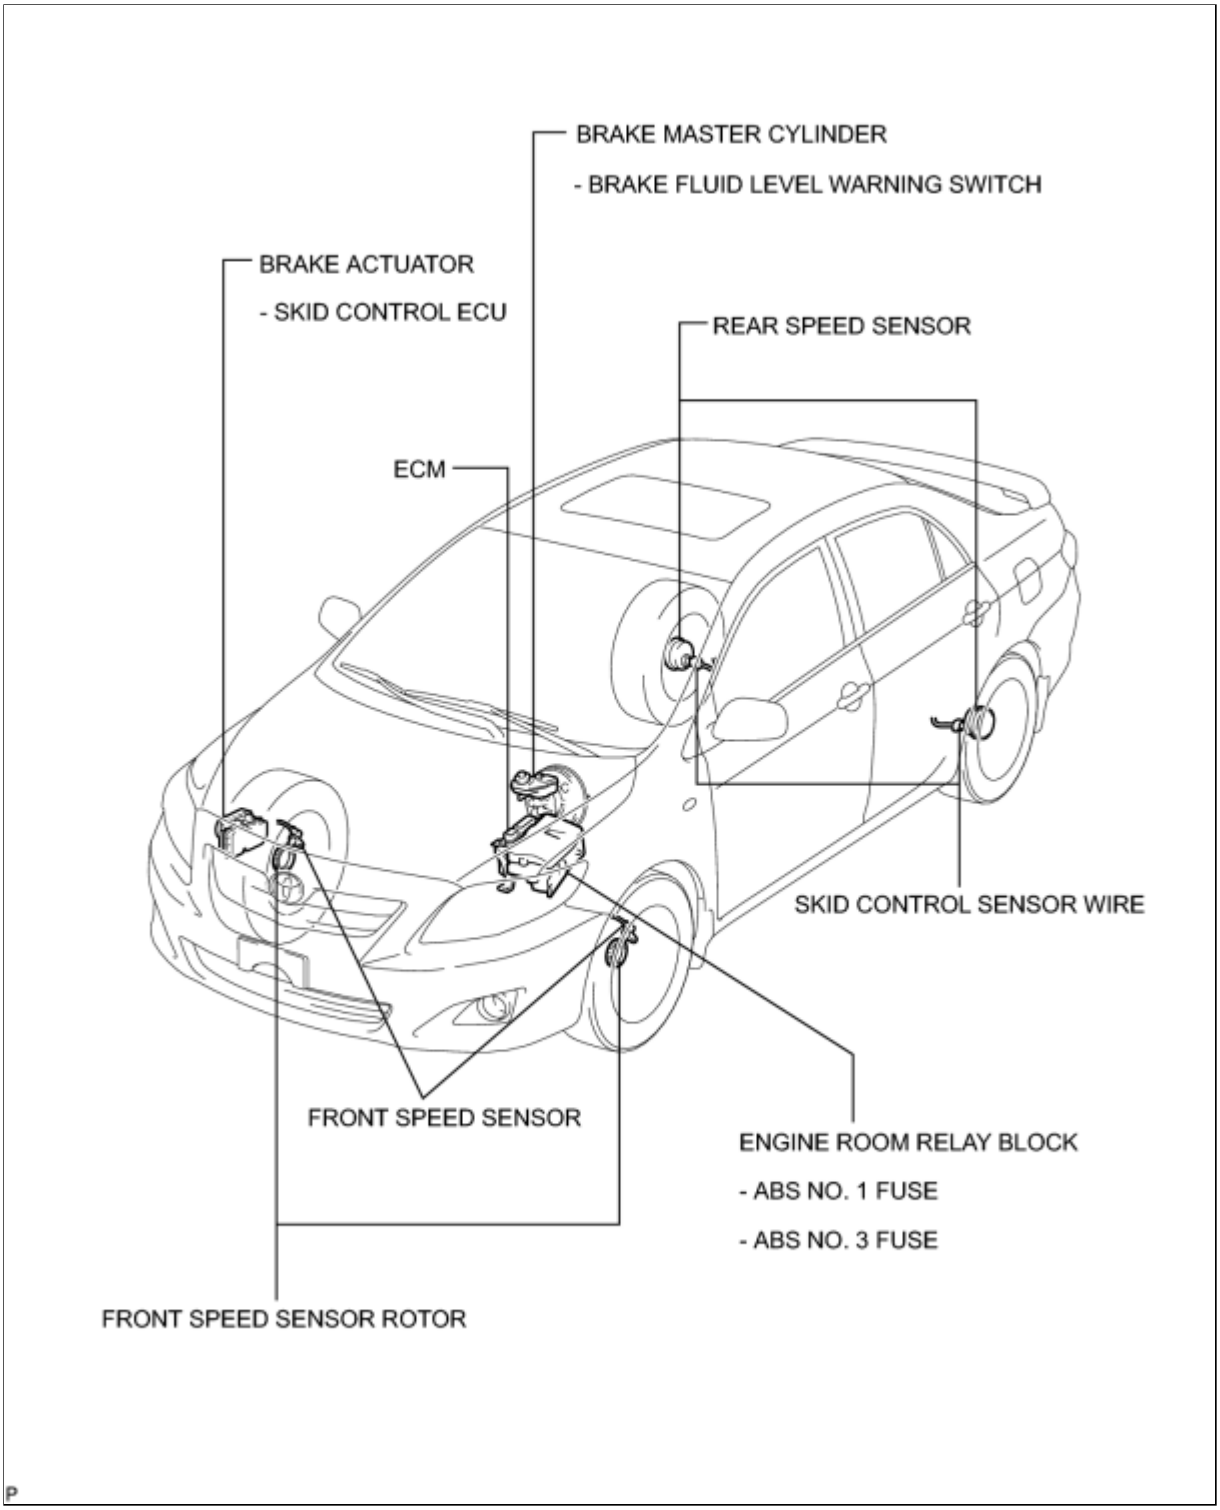
(a) Warnings for some DTCs will not be cleared by just replacing the malfunctioning parts. If a warning is still displayed after completing a repair, turn the ignition switch off before beginning the clear DTC procedure.

NOTICE:

If a DTC for a malfunctioning part reappears after it was cleared, then it has been stored again.

5. CAN COMMUNICATION SYSTEM PRECAUTIONS

(a) The CAN communication system is used for data communication between the skid control ECU and other ECUs. If there are any problems in the CAN communication line, corresponding DTCs in the communication line are output.



(b) If any CAN communication line DTCs are output, repair the malfunction in the communication line and troubleshoot the ABS system while data communication is normal.

(c) In order to enable CAN communication, a specific type of wiring is used for the CAN communication lines. The wiring used for each communication line is a twisted pair of wires that have an equal length. A bypass wire should not be used because the data being transmitted will be corrupted.

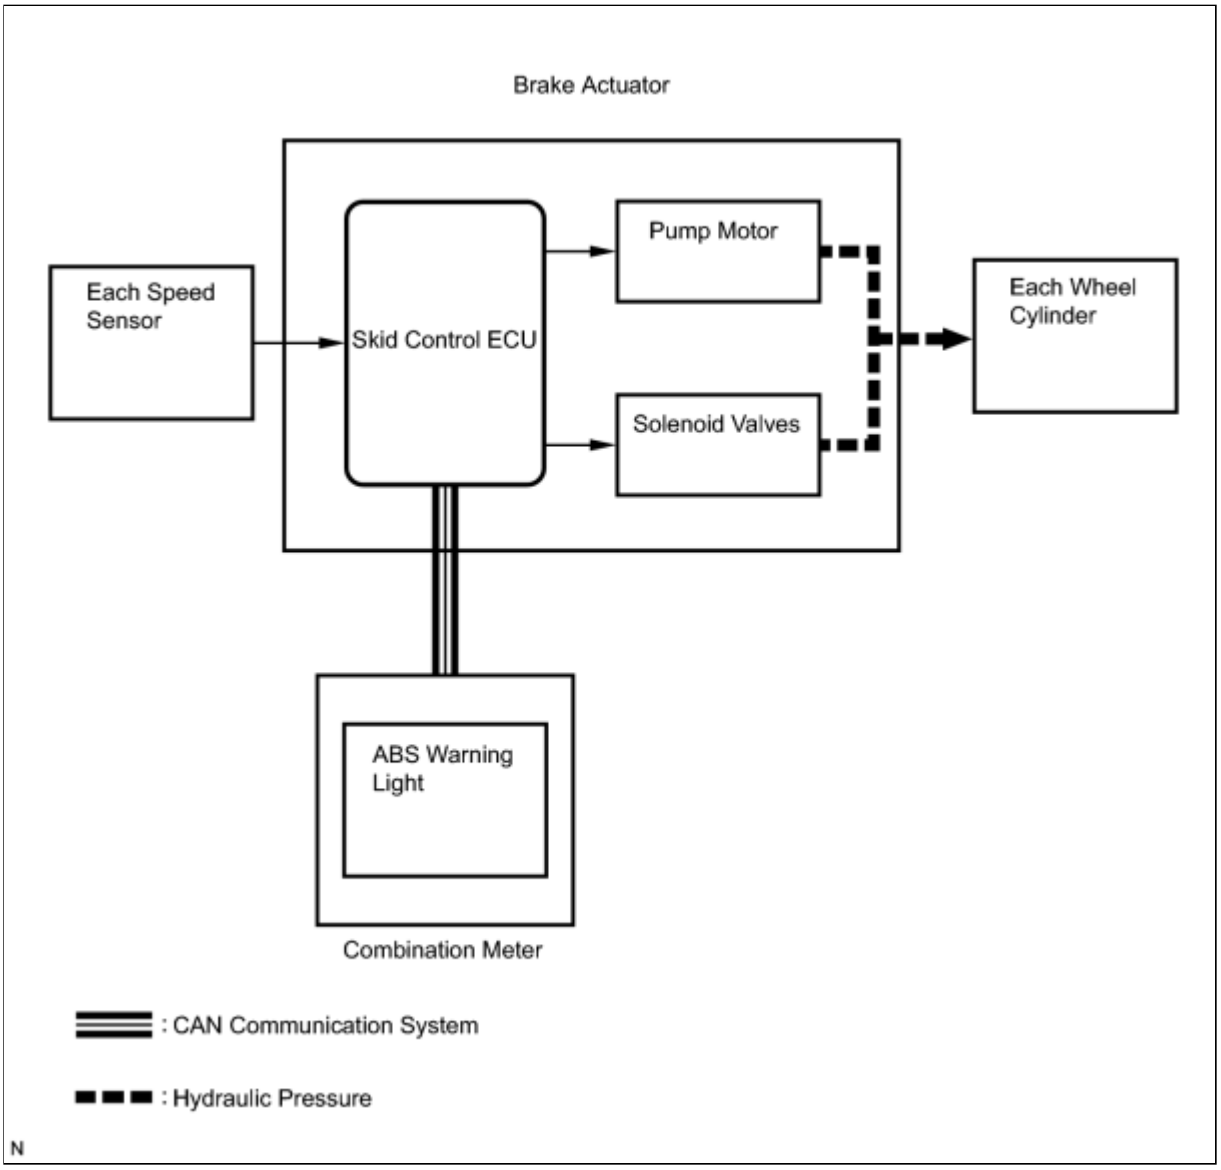
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION



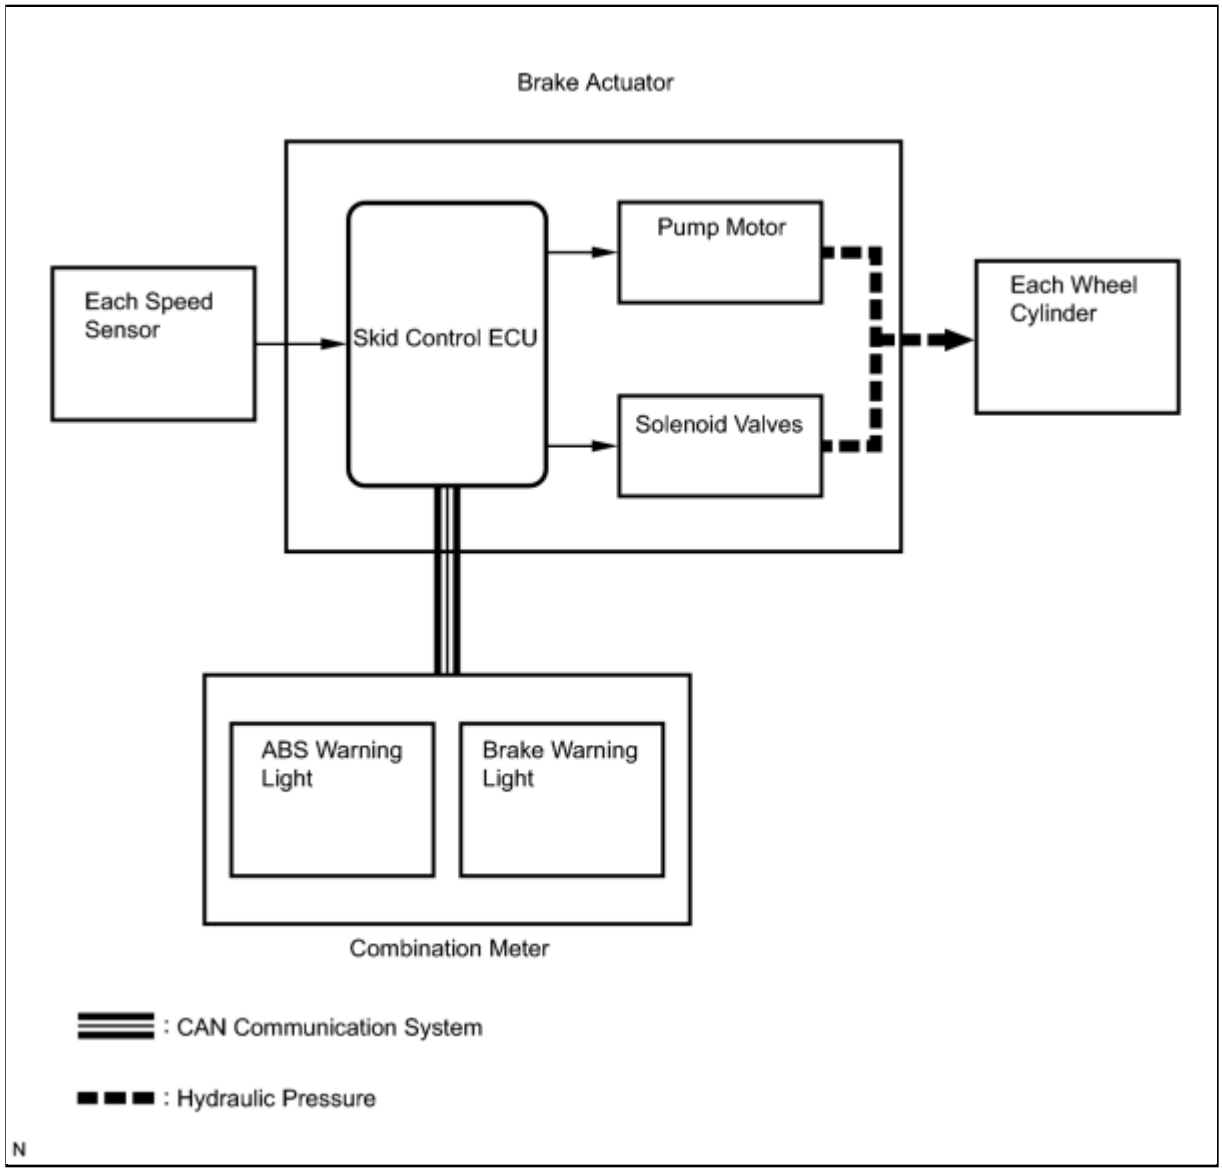
1. FUNCTION DESCRIPTION

HINT:

The skid control ECU is located within the brake actuator assembly.

(a) ABS (Anti-lock Brake System)

The ABS helps prevent the wheels from locking when the brakes are applied firmly or when braking on a slippery surface.



(1) Operation description

The skid control ECU detects wheel lock based on speed signals received from the wheel speed sensors. Based on this information, the skid control ECU controls the pump motor and solenoid valves. The pump motor and solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

(b) EBD (Electronic Brake force Distribution)

The EBD control utilizes the ABS to properly distribute brake force between the front and rear wheels in accordance with driving conditions.

In addition, when braking while cornering, it also controls the brake force distribution between the right and left wheels, helping to maintain vehicle behavior.

(1) Operation description

The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves. The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels. The ABS

warning and brake warning lights will come on if there is a malfunction in the EBD system.

(c) BA (Brake Assist)

The primary purpose of the brake assist system is to provide auxiliary brake force to assist a driver who cannot generate a large enough brake force during emergency braking, thus helping to maximize the brake performance of the vehicle.

(1) Operation description

The brake assist mechanism installed on the control valve of the brake booster determines an emergency brake application based on the speed and the amount the brake pedal is depressed. This mechanism generates a stronger braking force as needed.

2. ABS with EBD and BA OPERATION

(a) Based on the signals received from the 4 wheel speed sensors, the skid control ECU calculates the deceleration and speed of each wheel, while monitoring for wheel lock. If wheel lock is occurring, the ECU controls the solenoid valves in the brake actuator in order to adjust the hydraulic pressure applied to the brakes at each wheel.

3. FAIL SAFE

(a) When a malfunction occurs in the ABS system, the ABS warning light comes on, and operation is prohibited. In addition, when a malfunction which disables EBD operation occurs, the brake warning light also comes on, and operation is prohibited.

4. INITIAL CHECK

(a) When the vehicle speed first reaches approximately 6 km/h (4 mph) or more after the ignition switch is turned to ON, each solenoid valve and motor of the brake actuator assembly are sequentially activated to perform an electrical check. During the initial check, the operating sound of the solenoid valves and motor can be heard from the engine compartment, but this is not a malfunction.

5. FUNCTION OF COMPONENTS

COMPONENT	FUNCTION
Speed sensor	Detects speed of each wheel and inputs the data into the skid control ECU.
Stop light switch	Detects the brake operating conditions and inputs the result to the skid control ECU.
Main body ECU	Detects the parking brake operating conditions and inputs the result to the skid control ECU via CAN communication.
Skid control ECU	• Housed in the brake actuator assembly. • Processes the signals sent from each sensor to control the ABS, EBD and BA.
ABS motor relay	• Supplies power to the pump motor. • Housed in the skid control ECU.
ABS solenoid relay	• Supplies power to each solenoid. • Housed in the skid control ECU.

COMPONENT	FUNCTION
Brake actuator assembly	• Composed of the holding solenoid valves, pressure reduction solenoid valves, pump motor, reservoir, etc., and adjusts the hydraulic pressure applied to each wheel cylinder. • Houses the skid control ECU.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS and/or EBD system has occurred. • Blinks to output DTCs.
Brake warning light	• Comes on to inform the driver that the parking brake is on when the system is normal or the brake fluid level has decreased. • Comes on to inform the driver that a malfunction in the EBD system has occurred.
ECM	Detects the engine information and inputs the result to the skid control ECU via CAN communication.

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When Using the Techstream)

HINT:

- If the ignition switch is turned from ON to ACC or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.
- During Test Mode (signal check), the skid control ECU records all DTCs of the sensor check function. By performing Test Mode (signal check), the codes are cleared if a normal condition is confirmed. The remaining codes are the codes where a malfunction was found.

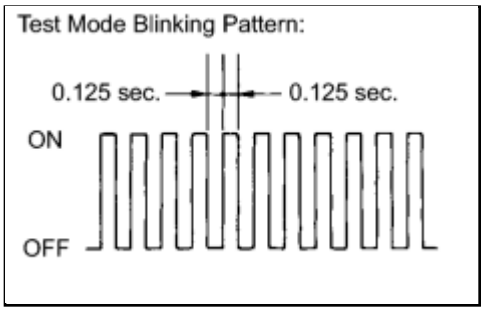
(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is applied (for manual transaxle model).

(4) Connect the Techstream to the DLC3.



(5) Turn the ignition switch to ON.

(6) Turn the Techstream on.

(7) Switch the skid control ECU to Test Mode using the Techstream. Enter the following menus: Chassis / ABS/VSC/TRAC / Utility / Signal Check.

(8) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.

HINT:

If the ABS warning light does not blink, inspect the TS and CG terminal circuit and ABS warning light circuit.

(9) Check the ABS sensors.

HINT:

Check that the ABS warning light is blinking in Test Mode and perform the check.

3. SPEED SENSOR CHECK (When Using the Techstream)

(a) Drive the vehicle straight-ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

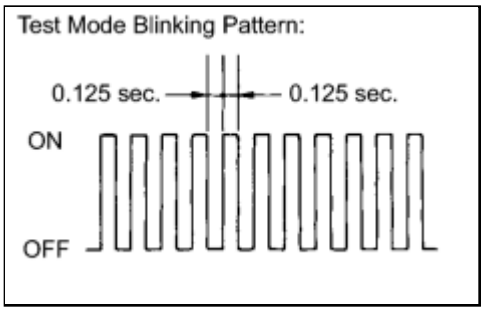
HINT:

- The sensor check may not be completed if wheel spin occurs.
- The ABS warning light blinks when the sensor check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor check.

(b) Stop the vehicle.

NOTICE:

- The speed sensor check may not be completed if the speed sensor check is started while turning



the steering wheel or spinning the wheels.

- After the ABS warning light goes off, if the vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

HINT:

When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while the vehicle is stationary.

4. END OF SENSOR CHECK (When Using the Techstream)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

5. READ DTC OF SENSOR CHECK FUNCTION (When Using the Techstream)

(a) Read the DTC(s) by following the Techstream screen.

NOTICE:

- If only DTCs other than the Test Mode sensor check DTCs are displayed, repair the malfunction and clear the DTCs.
- If the Test Mode sensor check DTCs and other DTCs are displayed or if only the Test Mode sensor check DTCs are displayed, repair the malfunction, clear the DTCs, and perform the Test Mode inspection again.

HINT:

See the list of DTC (See procedure "A").

(b) Turn the ignition switch off and disconnect the Techstream.

6. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (When not Using the Techstream)

HINT:

- If the ignition switch is turned from ON to ACC or off during Test Mode (signal check), DTCs recorded during the sensor check will be cleared.

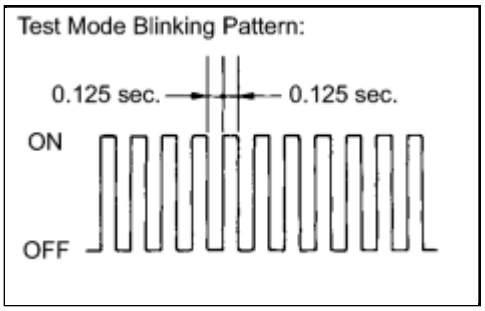
(a) Procedure to enter Test Mode.

(1) Turn the ignition switch off.

(2) Check that the steering wheel is centered.

(3) Check that the shift lever is in P (for automatic transaxle model) or the parking brake is

applied (for manual transaxle model).



(4) Using SST, connect terminals TS and CG of the DLC3.

SST: 09843-18040

(5) Turn the ignition switch to ON.

(6) Check that the ABS warning light comes on for several seconds and then blinks in Test Mode.

HINT:

If the ABS warning light does not blink, inspect the TS and CG terminal circuit, and ABS warning light circuit.

HINT:

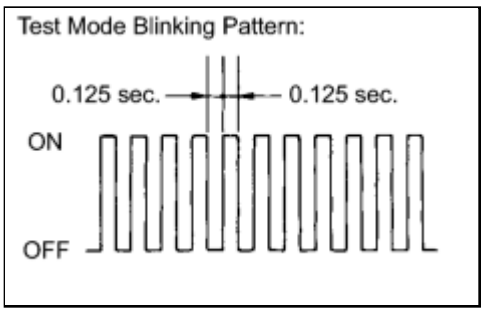
- The sensor check may not be completed if wheel spin occurs.
- The ABS warning light blinks when the sensor check has been completed and the brake pedal is depressed.
- The ABS warning light comes on immediately after a malfunction has been detected during the speed sensor check.

(b) Stop the vehicle.



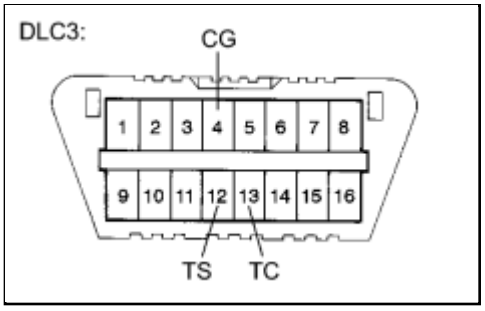
NOTICE:

- The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.
- After the ABS warning light goes off, if the vehicle speed exceeds 80 km/h (50 mph), a sensor check code will be stored again. Decelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).
- If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.

HINT:

When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while the vehicle is stationary.

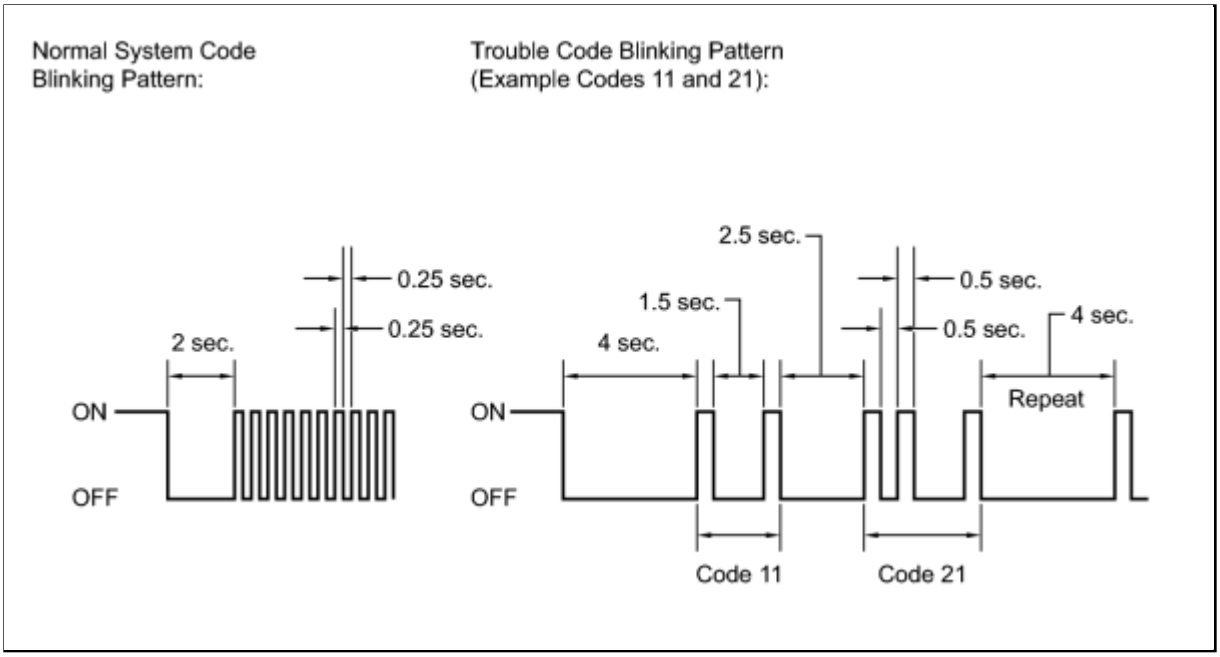
8. END OF SENSOR CHECK (When not Using the Techstream)



(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

If the sensor check has not been completed, the ABS warning light will blink while driving and the ABS will not operate.



9. READ DTC OF SENSOR CHECK FUNCTION (When not Using the Techstream)

(a) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(b) Count the number of blinks of the ABS warning light.

NOTICE:

- If only DTCs other than the Test Mode sensor check DTCs are displayed, repair the malfunction and clear the DTCs.
- If the Test Mode sensor check DTCs and other DTCs are displayed or if only the Test Mode sensor check DTCs are displayed, repair the malfunction, clear the DTCs, and perform the Test Mode inspection again.

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTCs (See procedure "A").

(c) After performing the check, disconnect SST from terminals TS and CG, and TC and CG of the DLC3, and turn the ignition switch off.

(d) Turn the ignition switch to ON to cancel Test Mode.

HINT:

- If the ignition switch is not turned to ON after SST is removed from the DLC3, the previous Test Mode will continue.
- If the ignition switch is turned to ON with terminals TS and CG connected, the previous Test Mode will continue.

CHECK FOR INTERMITTENT PROBLEMS

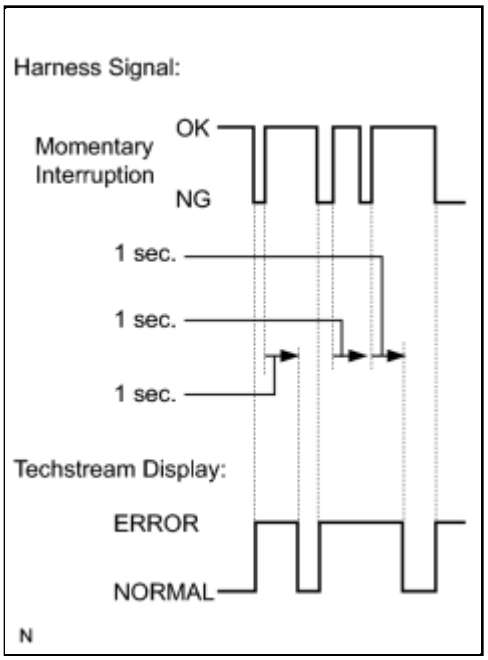
1. CHECK FOR INTERMITTENT PROBLEMS

HINT:

A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected using the ECU Data List function of the Techstream.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

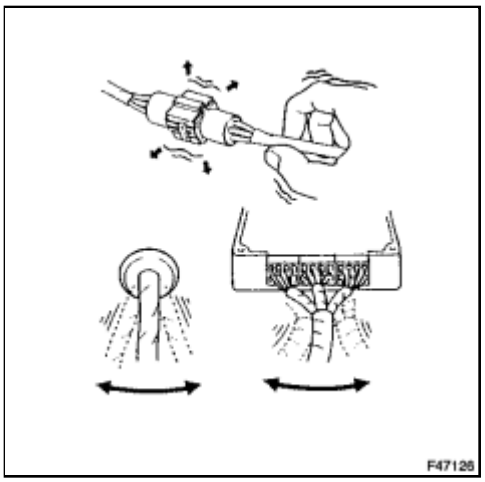


(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Follow the directions on the Techstream to display the Data List and select areas where momentary interruption should be monitored.

HINT:



- A momentary interruption (open circuit) cannot be detected for 3 seconds after the ignition switch is turned to ON (initial check).
- If the status remains on (ERROR displayed), check for continuity between the ECU and the sensors, or between ECUs.
- The ERROR display on the Techstream remains on for 1 second after the harness signal changed from momentary interruption (open circuit) to normal condition.

ABS/VSC/TRAC

(f) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between ECUs.

OK:

NORMAL display appears.

HINT:

The connector and/or wire harness has a momentary interruption (open circuit) if the display changes. Repair or replace the connector and/or wire harness as one of them is faulty.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

If there are no DTCs output and the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the brake actuator assembly, sensors, etc., turn the ignition switch off.

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

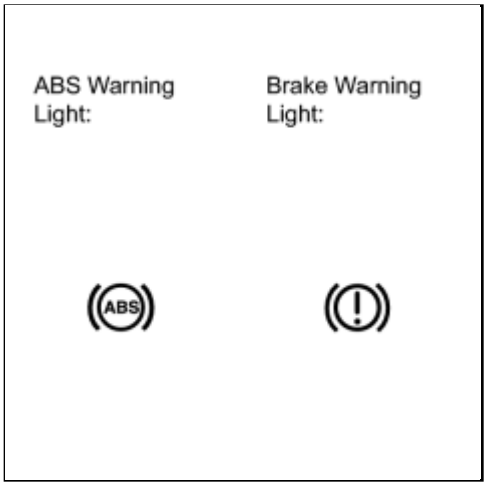
When troubleshooting a vehicle with a diagnosis system, the only difference from the usual troubleshooting procedure is connecting the Techstream to the vehicle and reading various data output from the vehicle's skid control ECU.

The skid control ECU records DTCs when it detects a malfunction in the ECU itself or in its circuits.

To check the DTCs, connect the Techstream to the DLC3 on the vehicle. The Techstream enables you to clear the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the battery voltage.

Standard Voltage:
11 to 14 V



If the voltage is below 11 V, recharge the battery before proceeding to the next step.

(b) Check the DLC3 INFO .

2. DIAGNOSIS

(a) If the skid control ECU detects a malfunction, the ABS warning and brake warning lights will come on in order to warn the driver.

The table below indicates which lights will come on when there is a malfunction in a particular function.

ITEM / TROUBLE AREA	ABS	EBD	BA	SKID CONTROL ECU
ABS warning light	○	○	-	○
Brake warning light	-	○	-	○

○: Light ON

-: Light OFF

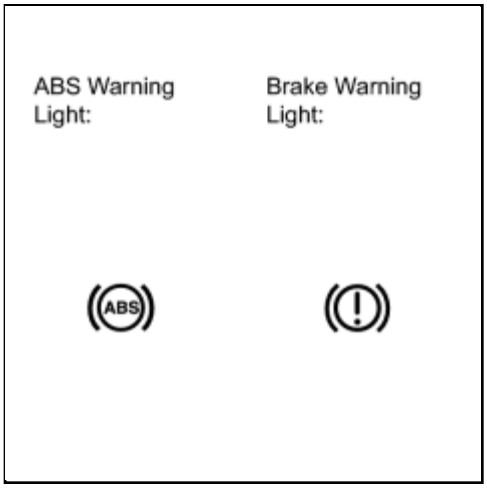
- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning light or by connecting the Techstream.
- This system has a Test Mode (signal check) function INFO .

The DTCs can be read by connecting the Techstream and observing the blinking pattern of the ABS warning light.

3. WARNING LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:



When releasing the parking brake, move the shift lever to P for safety (for automatic transaxle model) or set the chocks to hold the vehicle for safety (for manual transaxle model).

HINT:

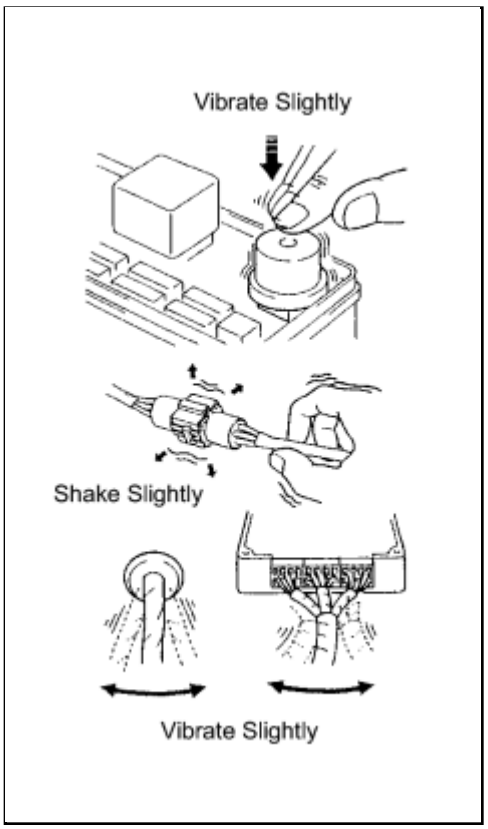
When the parking brake is applied or the brake fluid level is low, the brake warning light comes on.

(b) When the ignition switch is turned to ON, check that the ABS warning and brake warning lights come on for approximately 3 seconds.

HINT:

If the warning light check result is not normal, proceed to troubleshooting for the ABS warning and brake warning light circuits.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.



TROUBLE AREA	SEE PROCEDURE
ABS warning light circuit (Remains on)	INFO
ABS warning light circuit (Does not come on)	INFO
Brake warning light circuit (Remains on)	INFO
Brake warning light circuit (Does not come on)	INFO

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he/she proceeds to troubleshooting without confirming the problem symptoms, he/she will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned to ON).

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (When Using the Techstream)

(a) Check for DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

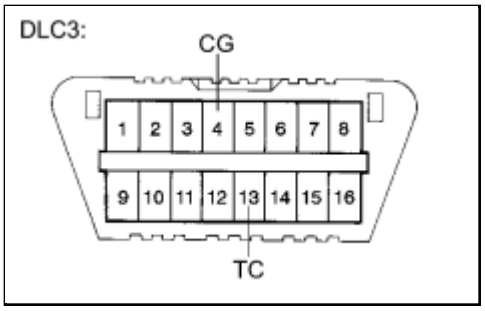
(4) Read the DTCs following the prompts on the Techstream screen. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) Check the details of the DTCs INFO.

(b) Clear the DTCs.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.



(3) Turn the Techstream on.

(4) Operate the Techstream to clear the codes. Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(5) According to the Techstream display, select the trouble code data display with the clear button.

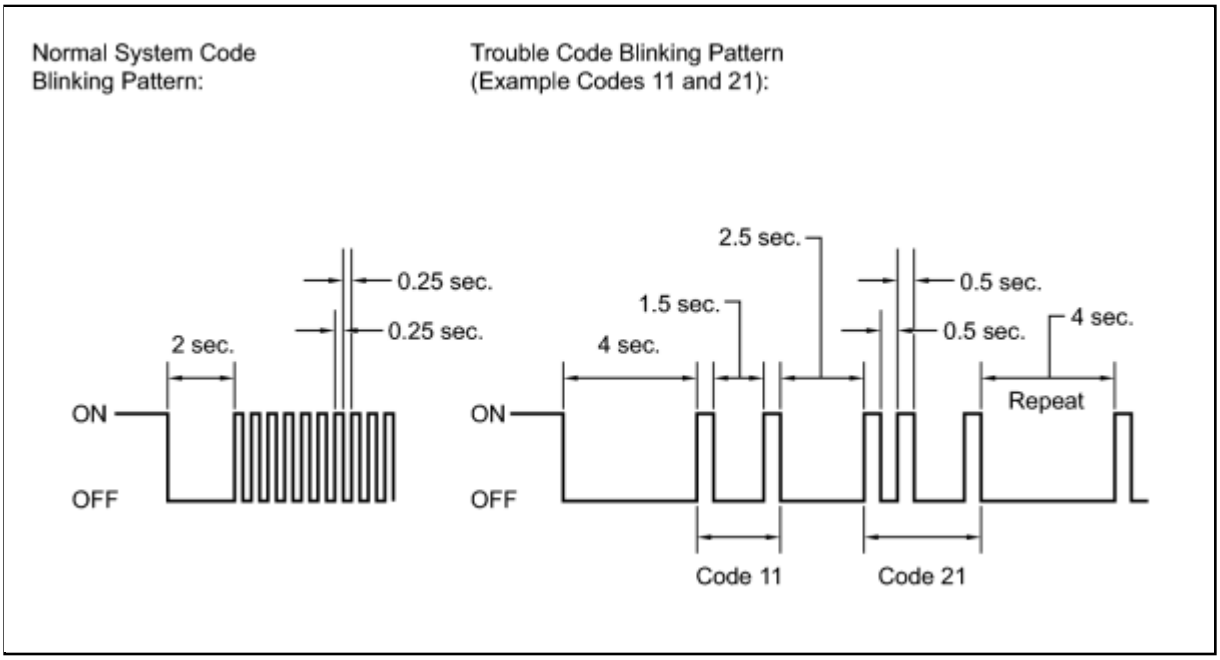
2. DTC CHECK/CLEAR (When not Using the Techstream)

(a) Check for DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON.



(3) Observe the blinking pattern of the ABS warning light in order to identify the DTC.

HINT:

If no code appears, inspect the TC and CG terminal circuit, and ABS warning light circuit.

TROUBLE AREA	SEE PROCEDURE
TC and CG terminal circuit	INFO
ABS warning light circuit (Remains on)	INFO

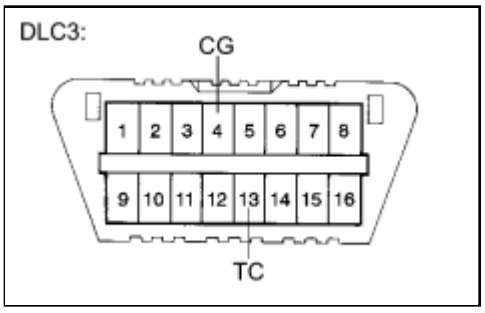
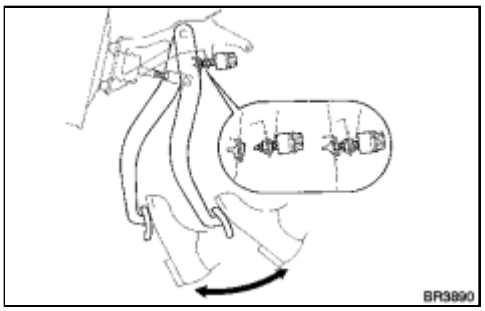
(4) As an example, the illustration below shows the blinking patterns of the normal system code and trouble codes 11 and 21 for the ABS warning light.



(5) The codes are explained in the code table INFO .

(6) After completing the check, disconnect terminals TC and CG of the DLC3 to turn off the display.

If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.



(b) Clear the DTCs.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON.

(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.

(4) Check that the warning light indicates a normal system code.

(5) Remove SST from the terminals of the DLC3.

HINT:

The DTCs cannot be cleared by disconnecting the negative cable from the battery terminal or the ECU-IG NO. 1 fuse.

3. END OF DTC CHECK/CLEAR

(a) Turn the ignition switch to ON.

(b) Check that the ABS warning light goes off within approximately 3 seconds.

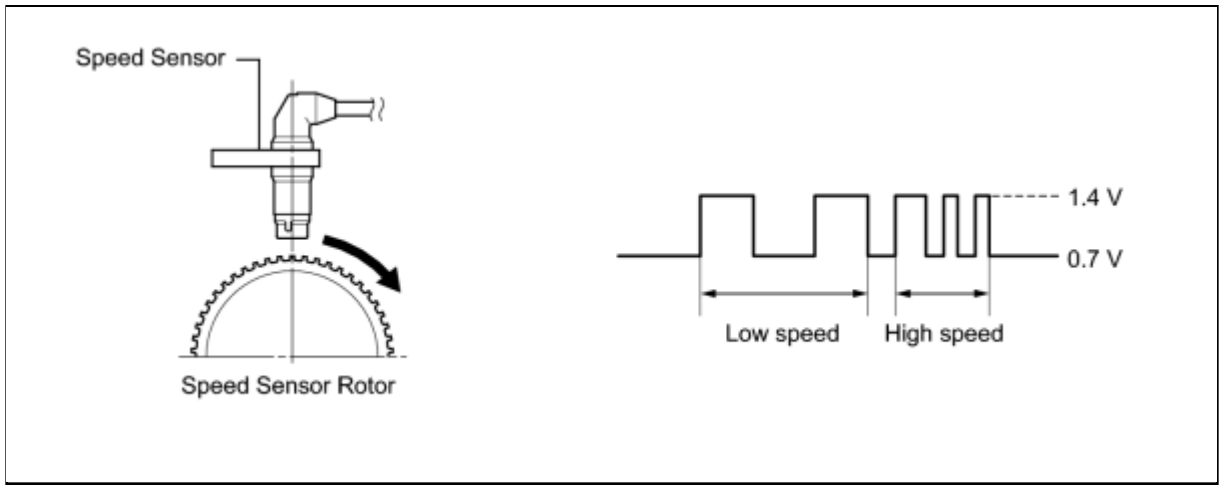
DTC	**C1271/71**	**Low Output Signal of Front Speed Sensor RH (Test Mode DTC)**



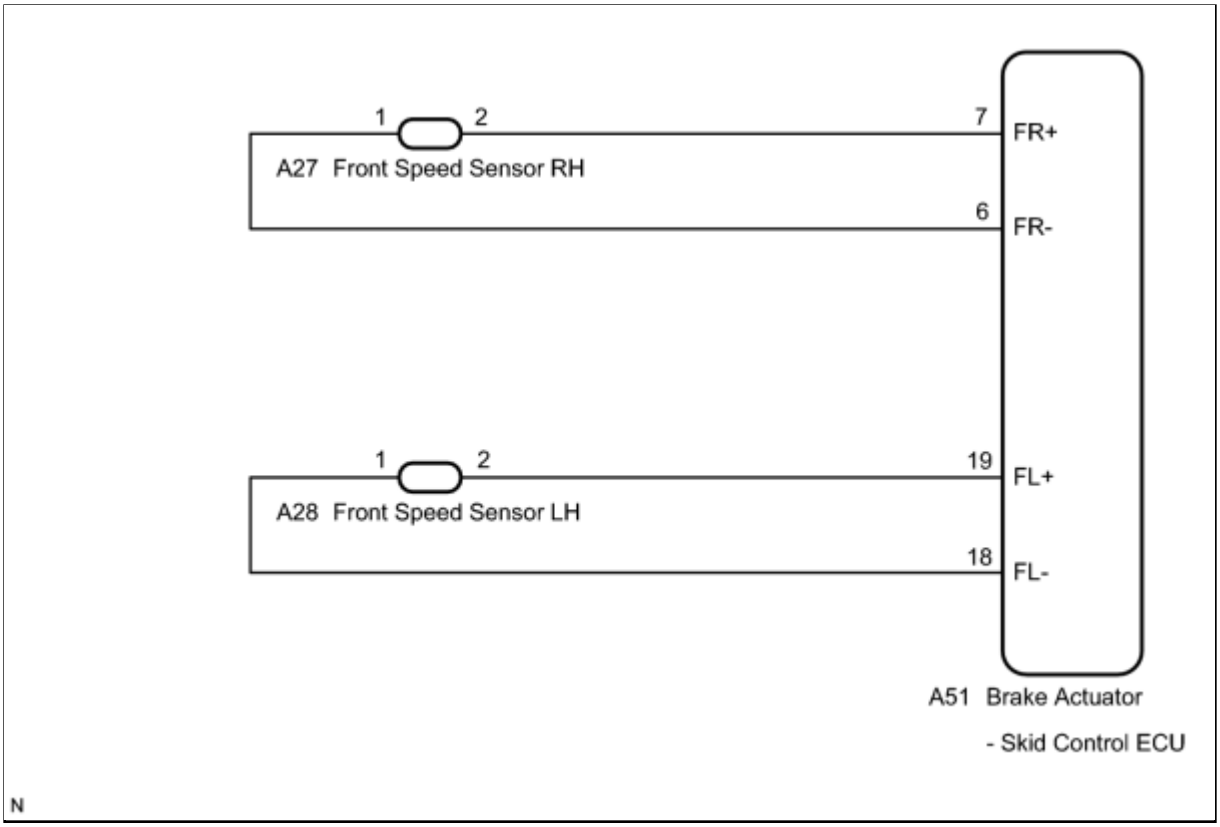
DTC	**C1272/72**	**Low Output Signal of Front Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for the ABS control system.

Speed sensor rotors have 48 serrations. The hall IC type speed sensor use the frequency of output pulses to detect the vehicle speed. Because the sensor outputs digital pulses, it can detect vehicle speeds even when the vehicle is nearly stationary.

DTCs C1271/71 and C1272/72 will be deleted when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1271/71 and C1272/72 are output only in Test Mode.



DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C0200/31 C0205/32	Any of the following is detected: 1. At a vehicle speed of 10 km/h (6 mph) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruptions of the sensor signal from the abnormal wheel occurs 255 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more. 4. With the IG1 terminal voltage 9.5 V or more, the sensor power supply voltage decreases for 0.5 seconds or more.	• Front speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)
C1271/71 C1272/72	Detected only during Test Mode.	• Front speed sensor RH/LH • Sensor installation • Speed sensor rotor

HINT:

- DTCs C0200/31 and C1271/71 are for the front speed sensor RH.
- DTCs C0205/32 and C1272/72 are for the front speed sensor LH.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA

1. FREEZE FRAME DATA

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the ignition switch has been turned from off to ON since the last time the ABS was activated.

HINT:

- If the vehicle is stopped, at a low speed (7 km/h (4.3 mph) or less), or if a DTC is detected, the skid control ECU will stop counting the number of times the ignition switch has been turned from off to ON.
- Freeze Frame Data at the time the ABS operates:

  The skid control ECU stores and updates data whenever the ABS system operates.

  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is cleared.
- Freeze Frame Data at the time a DTC is detected:

  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

2. CHECK FREEZE FRAME DATA

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Codes.

(e) According to the Techstream display, select the trouble code data display with Freeze Frame Data.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. FAIL SAFE OPERATION

- If there is a problem with sensor signals or the brake actuator system, the skid control ECU will prohibit power supply to the brake actuator and terminate ABS control.

  ABS control will be prohibited, but EBD control will continue to the extent that EBD control is possible. If EBD control is impossible, the brake warning light will come on to warn the driver INFO .
- If an ABS system component malfunctions before ABS control begins, ABS control will be prohibited. If an ABS system component malfunctions during ABS control, the system will gradually stop performing the control so as not to trigger a sudden change in vehicle operation.

  If it is impossible to control the systems, the warning light will come on to inform the driver of system control termination INFO .

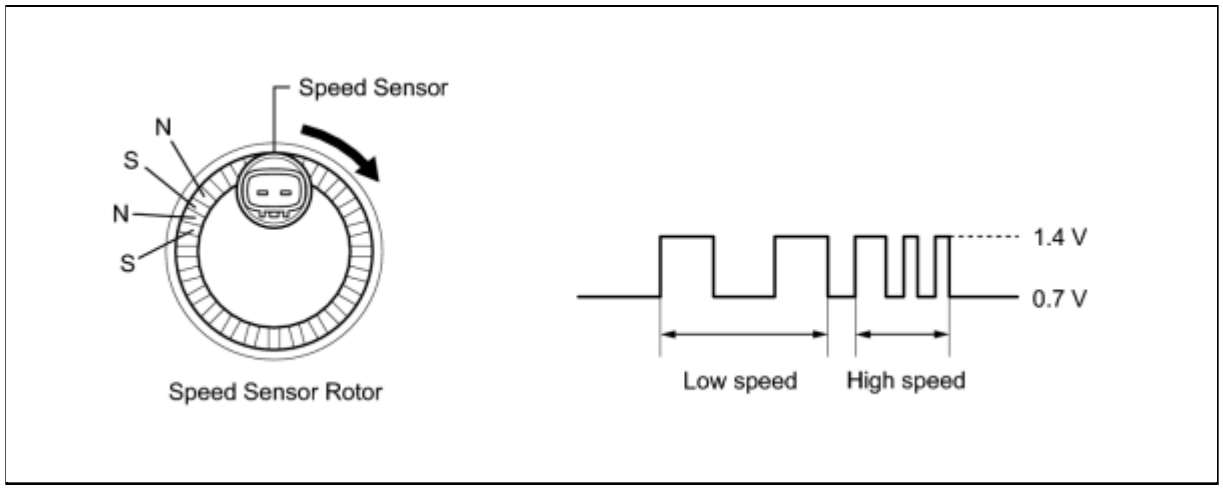
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: C0210/33,C0215/34,C1273/73,C1274/74: Rear Speed Sensor RH Circuit (2010 Corolla)		

DTC	**C0210/33**	**Rear Speed Sensor RH Circuit**

DTC	**C0215/34**	**Rear Speed Sensor LH Circuit**

DTC	**C1273/73**	**Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)**



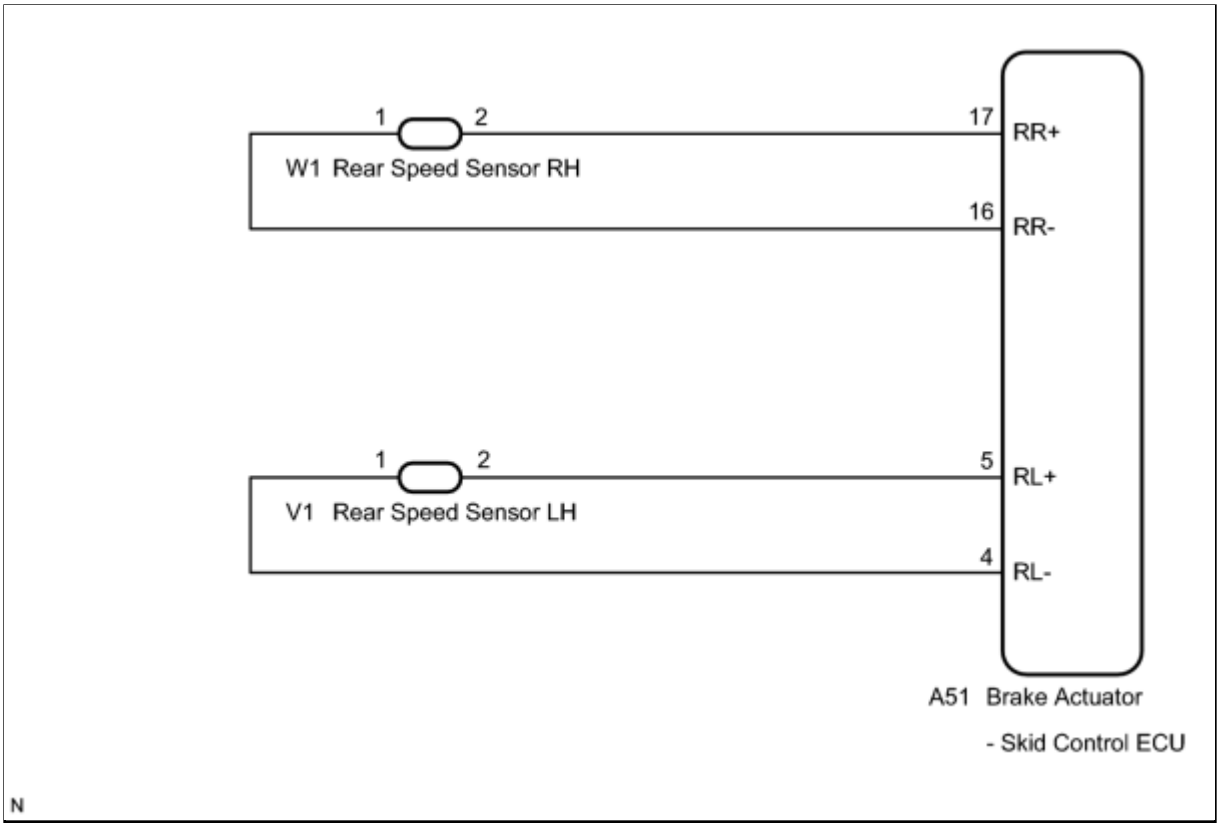
DTC	**C1274/74**	**Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for the ABS control system.

Speed sensor rotors have rows of alternating N and S magnetic poles. The hall IC type speed sensor use the frequency of output pulses to detect the vehicle speed. Because the sensor outputs digital pulses, it can detect vehicle speeds even when the vehicle is nearly stationary..

DTCs C1273/73 and C1274/74 will be deleted when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1273/73 and C1274/74 are output only in Test Mode.



DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C0210/33 C0215/34	Any of the following is detected: 1. At a vehicle speed of 10 km/h (6 mph) or more, an open or short in the sensor signal circuit continues for 1 second or more. 2. Momentary interruptions of the sensor signal from the abnormal wheel occurs 255 times or more. 3. An open in the speed sensor signal circuit continues for 0.5 seconds or more. 4. With the IG1 terminal voltage 9.5 V or more, the sensor power supply voltage decreases for 0.5 seconds or more.	• Rear speed sensor RH/LH • Speed sensor circuit • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)
C1273/73 C1274/74	Detected only during Test Mode.	• Rear speed sensor RH/LH • Sensor installation • Speed sensor rotor

HINT:

- DTCs C0210/33 and C1273/73 are for the rear speed sensor RH.
- DTCs C0215/34 and C1274/74 are for the rear speed sensor LH.

RR Wheel Speed	RR wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326.4 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer
RL Wheel Speed	RL wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326.4 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer

(e) Check that there is no difference between the speed value output from the speed sensor

displayed on the Techstream and the speed value displayed on the speedometer when driving the vehicle.

HINT:

Factors that affect the indicated vehicle speed include tire size, tire inflation, and tire wear. The speed indicated on the speedometer has an allowable margin of error. This can be tested using a speedometer tester (calibrated chassis dynamometer). For details about testing and the margin of error, see the reference chart INFO .

OK:

The speed value output from the speed sensor displayed on the Techstream is the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

NOTICE:

Turn the ignition switch off before removing parts.

HINT:

- If no malfunction is found when inspecting parts, inspect the skid control ECU and ground points for poor contact.
- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, refer to the page for the respective DTC Code in the DTC chart.
- When 2 or more DTCs are detected, perform circuit inspection one by one until the problem is identified.
- Inspect the fuses and relays before investigating the trouble areas as shown in the table below.

PROCEDURE

1.	**RECONFIRM DTC**

HINT:

These codes are detected when a problem is determined in the brake actuator assembly.

The solenoid circuits are in the brake actuator assembly.

Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if any DTCs are output before replacing the brake actuator assembly.

(a) Clear the DTCs INFO.

(b) Start the engine.

(c) Drive the vehicle at a speed of 20 km/h (12 mph) or more.

(d) Check if the same DTC is recorded INFO.

Result:

DTCs (C0226/21, C0236/22, C0246/23 and/or C0256/24) are output	B

HINT:

- If a speed signal of 6 km/h (4 mph) or more is input to the skid control ECU with the ignition switch ON and the stop light switch off, the ECU performs self diagnosis of the motor and solenoid circuits.
- If the normal system code is output (no trouble codes are output), slightly jiggle the connectors, wire harness, and fuses of the brake actuator assembly. Make sure that no DTCs are output.
- If any DTCs are output while jiggling a connector or wire harness of the brake actuator assembly (skid control ECU), inspect and repair the connector or wire harness.
- It is suspected that the DTCs were output due to a bad connection of the connector terminal.

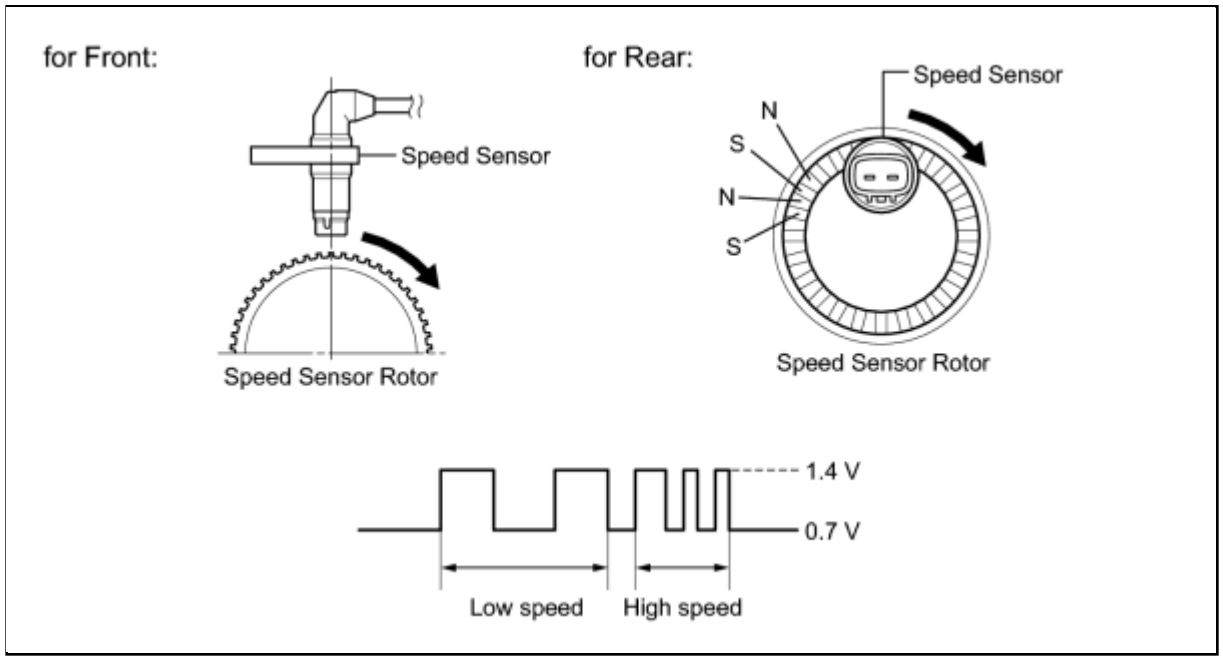
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**

DESCRIPTION



The speed sensor detects the wheel speed and sends the appropriate signals to the skid control ECU. These signals are used for the ABS control system.

Speed sensor rotors have 48 serrations (for front) or rows of alternating N and S magnetic poles (for rear). The hall IC type speed sensor use the frequency of output pulses to detect the vehicle speed. Because the sensor outputs digital pulses, it can detect vehicle speeds even when the vehicle is nearly stationary.

When foreign matter or oil adheres to the speed sensor tip or speed sensor rotor, these DTCs are output. An abnormal waveform input from the sensor determines these conditions.

These DTCs may be detected when a malfunction occurs in the connector terminals or wire harness of the speed sensor circuit.

DTCs C1275/75 to C1278/78 will be deleted when the speed sensor sends a vehicle speed signal or when Test Mode ends. DTCs C1275/75 to C1278/78 are output only in Test Mode.

C1235/35 C1236/36 C1238/38 C1239/39	Either of the following is detected: 1. At a vehicle speed of 20 km/h (12 mph) or more, the IG1 terminal voltage is 17.4 V or less, and noise occurs in the sensor signal from the abnormal wheel for 5 seconds or more. 2. At a vehicle speed of 10 km/h (6 mph) or more, the IG1 terminal voltage is 17.4 V or less, and noise is input once per rotor rotation for 15 seconds or more.	• Speed sensor • Speed sensor rotor • Sensor installation • Brake actuator assembly (Skid control ECU)

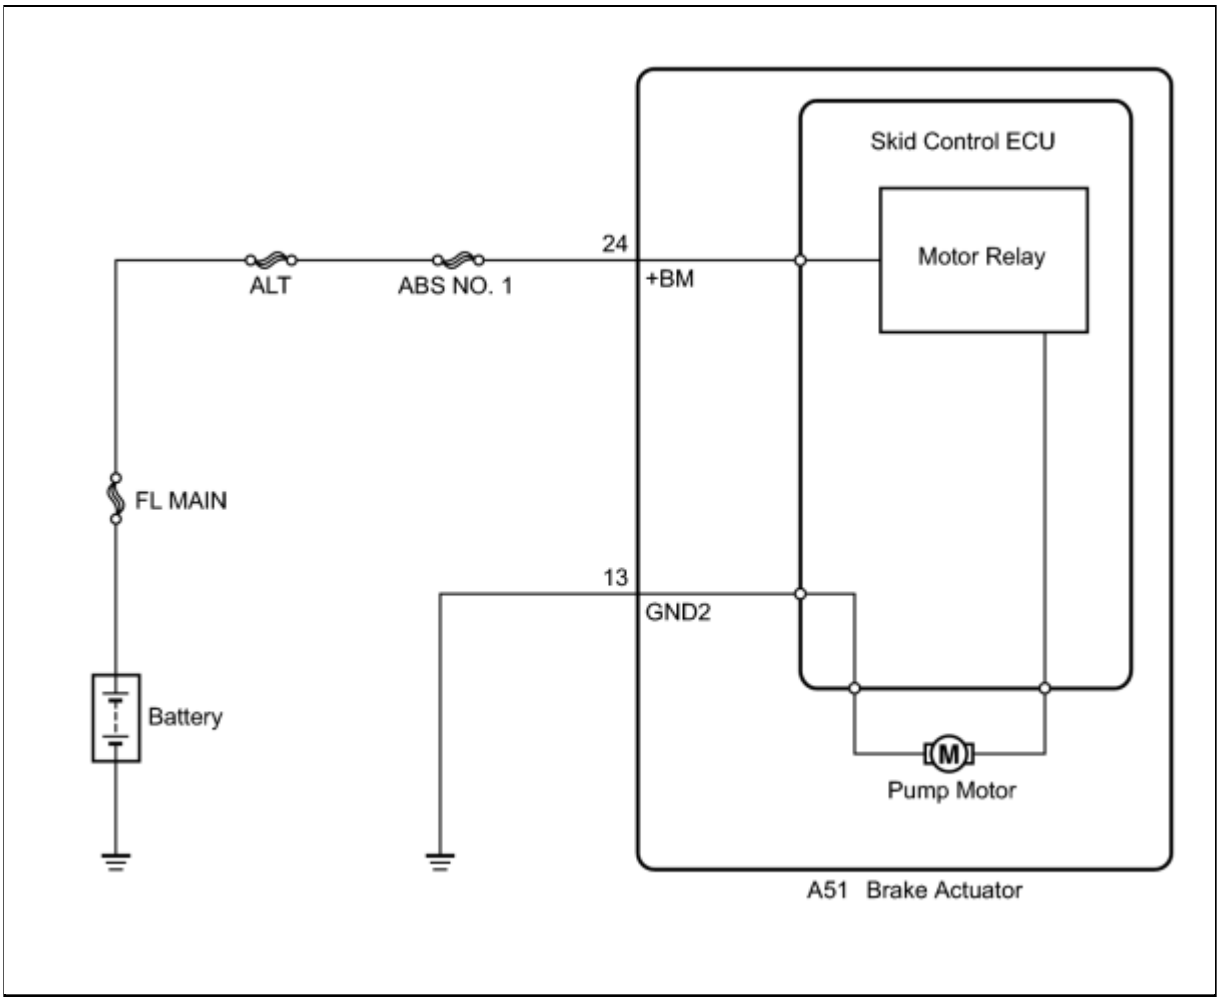
DTC	**C0273/13**	**Open in ABS Motor Relay Circuit**

DTC	**C0274/14**	**Short to B+ in ABS Motor Relay Circuit**



DESCRIPTION

The ABS motor relay supplies power to the ABS pump motor. While the ABS is activated, the ECU turns the motor relay on and operates the ABS pump motor.

If the voltage supplied to the motor relay (+BM) is below the DTCs detection threshold due to low voltage from the battery or alternator, these DTCs may be stored.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C0273/13	Either of the following is detected: 1. All of the following conditions continue for 0.1 seconds or more. - The IG1 terminal voltage is 9.5 V or more. - While initial check, or ABS or BA is operating. - Relay contact is open when the relay is ON. 2. Both of the following conditions continue for 0.1 seconds. - The IG1 terminal voltage is less than 9.5 V. - Relay contact remains open when the relay is ON.	• ABS NO. 1 fuse • ABS motor relay circuit • Brake actuator assembly (ABS motor relay)
C0274/14	When the motor relay is OFF, the motor relay remains closed for 4 seconds or more.	• ABS motor relay circuit • Brake actuator assembly (ABS motor relay)

DTC	**C0278/11**	**Open in ABS Solenoid Relay Circuit**

DTC	**C0279/12**	**Short to B+ in ABS Solenoid Relay Circuit**

DESCRIPTION

The ABS solenoid relay supplies power to the ABS solenoid.

The solenoid relay is turned on 1.5 seconds after the ignition switch is turned to ON, and is turned off if an open or short in the solenoid is detected by self diagnosis performed when the vehicle starts running.

The ABS solenoid relay is housed in the skid control ECU in the actuator assembly.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C0278/11	Either of the following is detected: 1. Both of the following conditions continue for 0.2 seconds or more. ○ The IG1 terminal voltage is 9.5 V or more. ○ The solenoid relay contact is open when the relay is ON. 2. Both of the following conditions continue for 0.2 seconds or more. ○ The IG1 terminal voltage becomes lower than 9.5 V when the relay is turned on. ○ The relay contact remains open.	• ABS NO. 3 fuse • ABS solenoid relay circuit • Brake actuator assembly (ABS solenoid relay)
C0279/12	Immediately after the ignition switch is turned to ON, the solenoid relay contact is closed for 4.5 seconds when the relay is turned off.	• ABS solenoid relay circuit • Brake actuator assembly (ABS solenoid relay)

INSPECTION PROCEDURE

HINT:

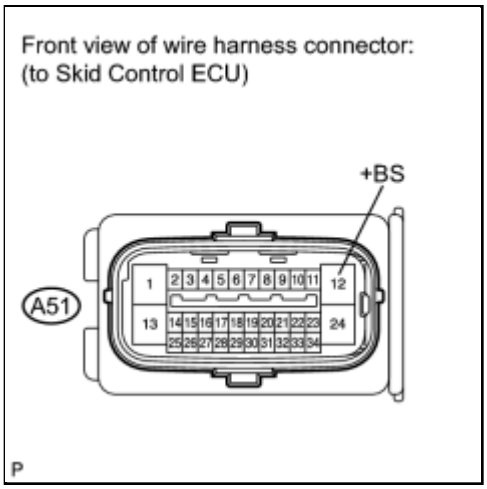
When C1241/41 is output together with C0278/11 and/or C0279/12, inspect and repair the trouble areas indicated by C1241/41 first INFO .

PROCEDURE

1.	**INSPECT ABS NO. 3 FUSE**

(a) Remove the ABS NO. 3 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ABS NO. 3 (30 A) fuse	Always	Below 1 Ω

NG ▶ **REPLACE ABS NO. 3 FUSE**

2.	**INSPECT SKID CONTROL ECU (+BS TERMINAL)**

(a) Install the ABS NO. 3 fuse.

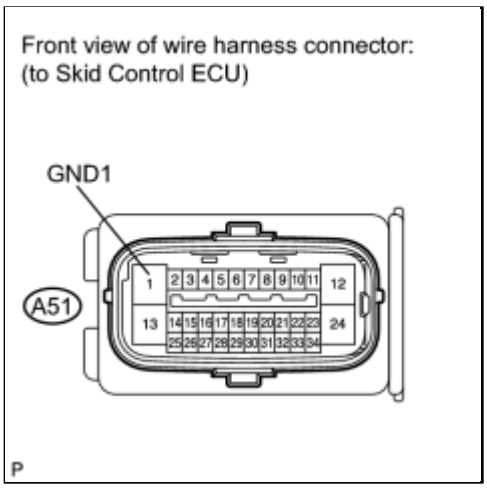
(b) Disconnect the skid control ECU connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-12 (+BS) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BS CIRCUIT)**



OK ▼

3.	**INSPECT SKID CONTROL ECU (GND1 TERMINAL)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-1 (GND1) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND1 CIRCUIT)**

OK ▼

4.	**RECONFIRM DTC**

HINT:

This code is detected when a problem is identified in the brake actuator assembly.

The solenoid circuit is in the brake actuator assembly.

Therefore, solenoid circuit inspection and solenoid unit inspection cannot be performed. Be sure to check if the DTC is output before replacing the brake actuator assembly.

(a) Reconnect the skid control ECU connector.

(b) Clear the DTCs INFO .

(c) Start the engine.

(d) Drive the vehicle at a speed of 20 km/h (12 mph) or more for 30 seconds or more.

(e) Check if the same DTC is recorded INFO .

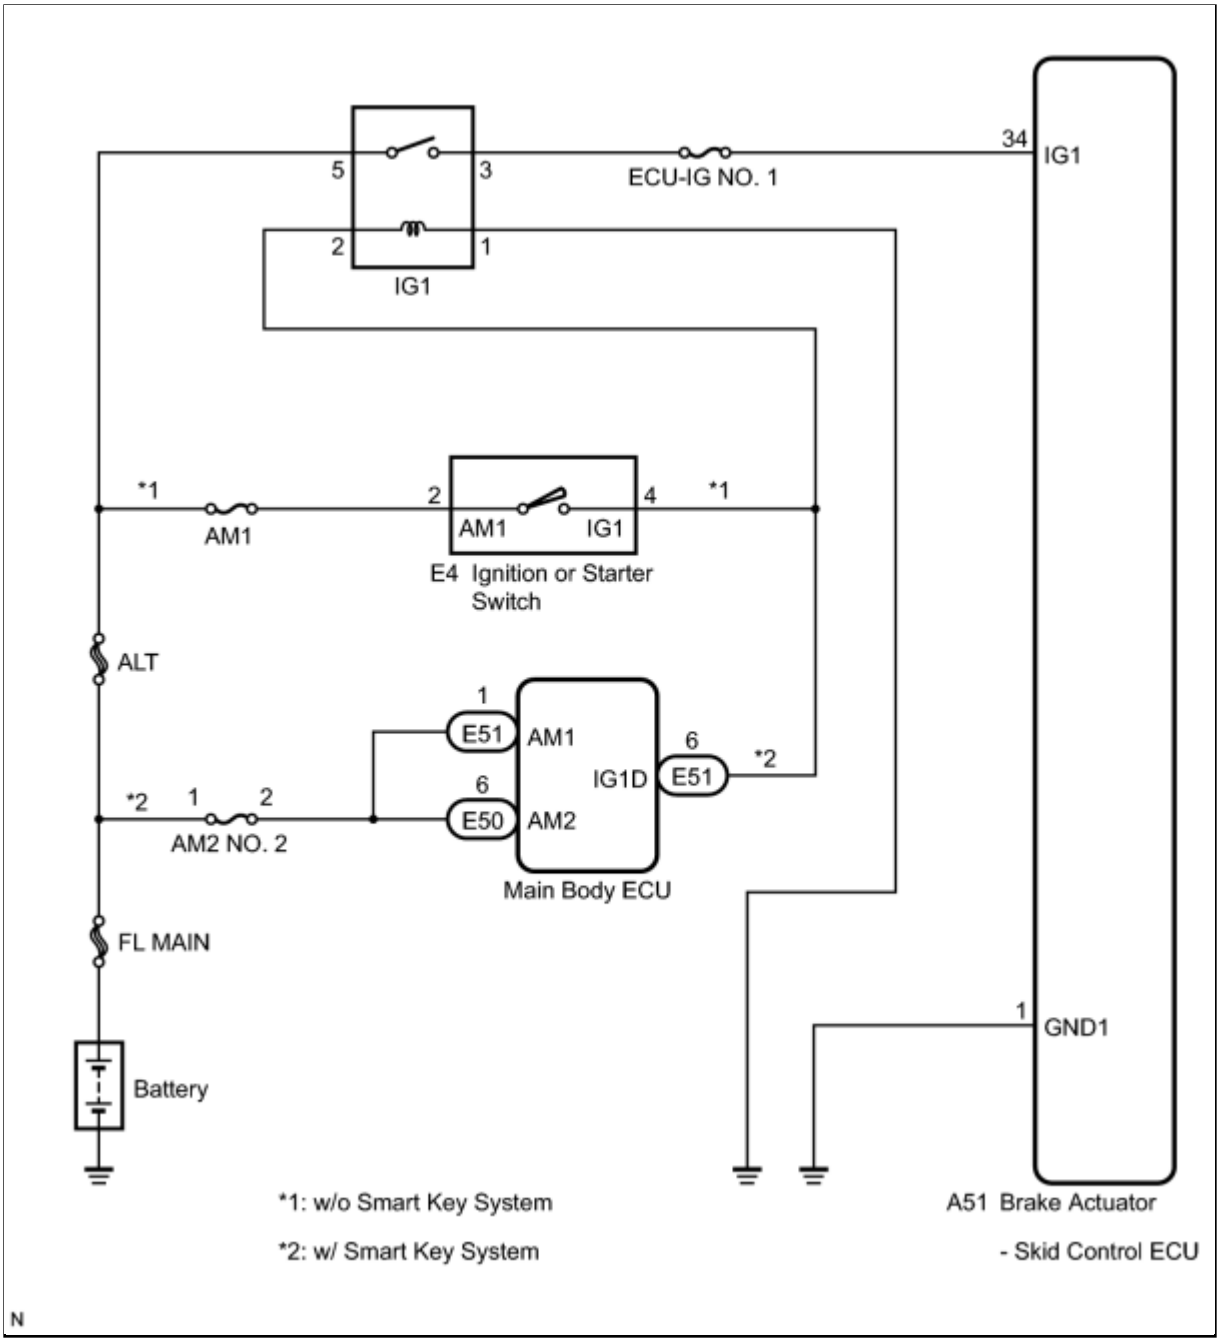
DTC	**C1241/41**	**Low Battery Positive Voltage or Abnormally High Battery Positive Voltage**

DESCRIPTION



If a malfunction is detected in the power supply circuit, the skid control ECU (housed in the actuator assembly) stores this DTC and the fail safe function prohibits ABS operation.

This DTC is stored when the IG1 terminal voltage deviates from the DTC detection condition due to a malfunction in the power supply or charging circuit such as the battery or alternator circuit, etc.

The DTC is cancelled when the IG1 terminal voltage returns to normal.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
C1241/41	Any of the following is detected: 1. At a vehicle speed of 3 km/h (2 mph) or more, the IG1 terminal voltage is less than 9.5 V for 10 seconds or more. 2. When the solenoid relay remains ON and the IG1 terminal voltage is less than 9.5 V, the relay contact is open for 0.2 seconds or more. 3. Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: ANTI-LOCK BRAKE SYSTEM: TC and CG Terminal Circuit (2010 Corolla)		

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the ECU to display the DTC by blinking the ABS warning light.

WIRING DIAGRAM

HINT:

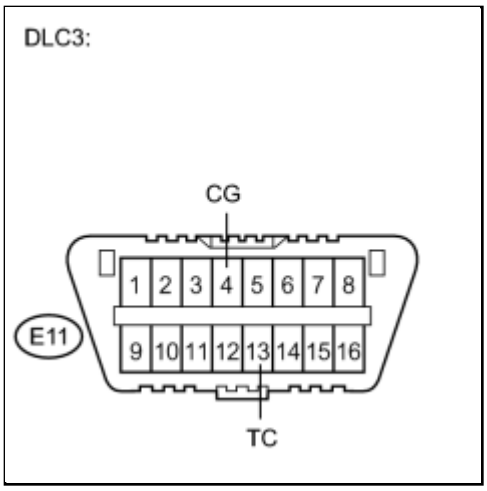
When the warning lights continue to blink, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in one or more ECUs is suspected.

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output INFO.



Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ INSPECT CAN COMMUNICATION SYSTEM

A ▼

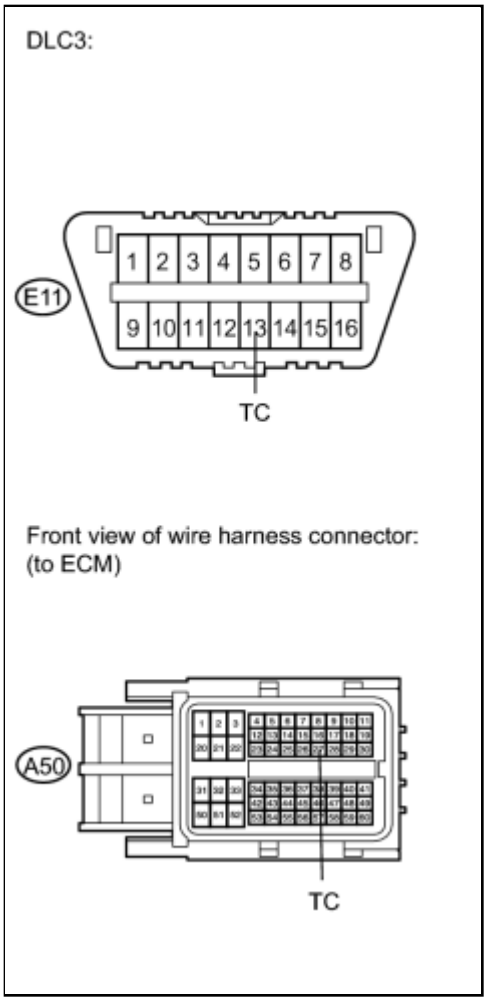
2.	INSPECT DLC3

(a) Turn the ignition switch to ON.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-13 (TC) - E11-4 (CG)	Ignition switch ON	11 to 14 V



Result:

RESULT	PROCEED TO
NG	A
OK	B

B ▶ CHECK ECM (TC of DLC3 INPUT)

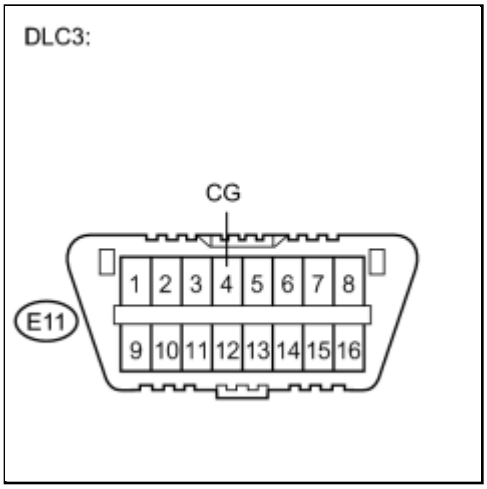
A ▼

3.	CHECK HARNESS AND CONNECTOR (TC of DLC3 - ECM)

(a) Turn the ignition switch off.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-13 (TC) - A50-27 (TC)	Always	Below 1 Ω
E11-13 (TC) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

E11-4 (CG) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**CHECK ECM (TC of DLC3 INPUT)**

(a) Turn the ignition switch off.

(b) Reconnect the ECM connector.

(c) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(d) Turn the ignition switch to ON.

(e) Check that the check engine warning light is blinking.

Result:

RESULT	PROCEED TO
Check engine warning light is blinking	A
Check engine warning light is not blinking	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part INFO **.**

Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: BRAKE ACTUATOR (w/ VSC): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CONNECT TECHSTREAM

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / ABS/VSC/ TRAC / Active Test.

HINT:

Refer to the Techstream Operator's Manual for further details.

2. INSPECT ACTUATOR MOTOR OPERATION

NOTICE:

Do not keep the motor relay on continuously for more than 5 seconds. If it needs to be operated repeatedly, set an interval of more than 20 seconds between operations.

(a) Enter the following menus: Active Test / Motor Relay.

(b) Turn the motor relay on and check for the actuator motor operation sound.

(c) Turn the motor relay off.

(d) Fully depress the brake pedal and hold it for approximately 15 seconds. Check that the pedal's initial depth is maintained for the entire 15 seconds.

(e) With the pedal still depressed turn the motor relay on and check that the pedal does not pulsate.

(f) Turn the motor relay off and release the brake pedal.

3. INSPECT FRONT RIGHT WHEEL OPERATION

NOTICE:

Do not turn on a solenoid in a manner different than that shown in the following steps.

(a) Enter the following menus: Active Test / ABS Solenoid (SFRH) and ABS Solenoid (SFRR).

(b) Depress the brake pedal and hold it.

(c) Turn the SFRH and SFRR solenoids on simultaneously and check that the pedal cannot be depressed.

NOTICE:

Each solenoid operates for 2 seconds and turns off automatically. If it needs to be operated repeatedly, set an interval of more than 20 seconds between operations.

(d) Turn the SFRH and SFRR solenoids off simultaneously and check that the pedal can be depressed.

(e) Turn the motor relay on and check that the pedal returns.

NOTICE:

Do not keep the motor relay on continuously for more than 5 seconds. If it needs to be operated repeatedly, set an interval of more than 20 seconds between operations.

(f) Turn the motor relay off and release the brake pedal.

4. INSPECT OTHER WHEEL OPERATION

(a) Using the same procedure, check the solenoids of the other wheels.

HINT:

- Front left wheel: SFLH, SFLR
- Rear right wheel: SRRH, SRRR
- Rear left wheel: SRLH, SRLR

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

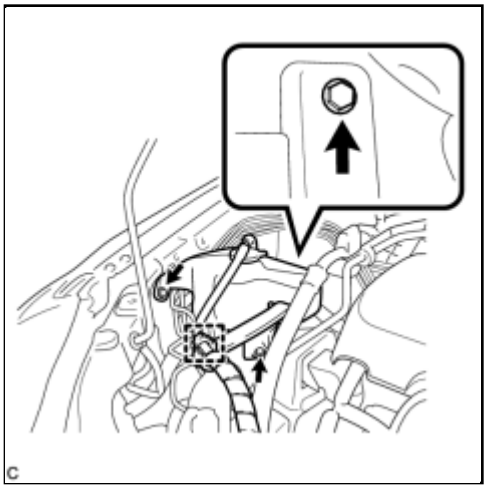
2. REMOVE FRONT WHEEL RH

3. REMOVE ENGINE UNDER COVER RH

4. REMOVE V-RIBBED BELT (for 2ZR-FE) INFO

5. REMOVE V-RIBBED BELT (for 2AZ-FE) INFO

6. REMOVE GENERATOR ASSEMBLY (for 2AZ-FE) INFO



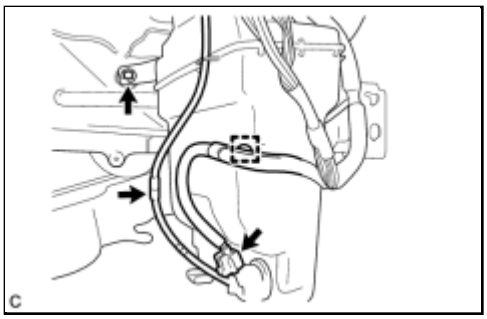
7. REMOVE GENERATOR ASSEMBLY (for 2ZR-FE) INFO

8. DRAIN BRAKE FLUID

NOTICE:

If brake fluid leaks onto any painted surface, immediately clean it off completely.

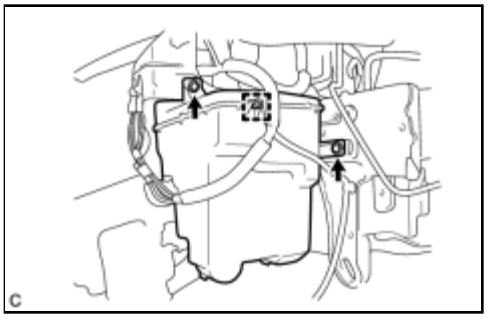
9. REMOVE RADIATOR RESERVE TANK SUB-ASSEMBLY



(a) Remove the 3 bolts and radiator reserve tank sub-assembly.

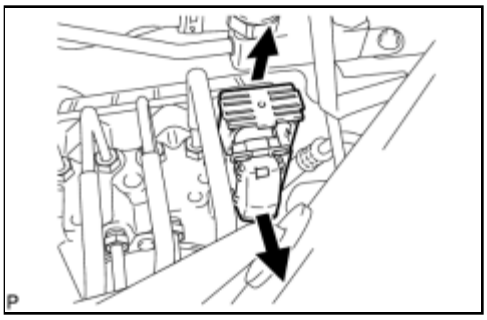
10. REMOVE RADIATOR GRILLE PROTECTOR INFO

11. REMOVE NO. 4 ENGINE UNDER COVER (for 2AZ-FE) INFO



12. REMOVE FRONT BUMPER ASSEMBLY INFO

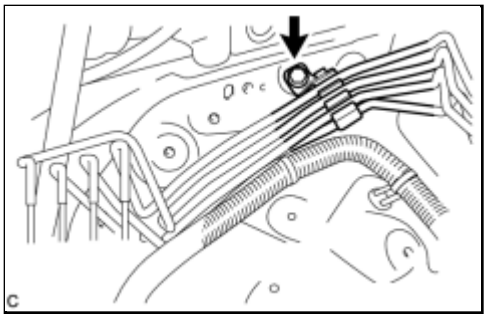
13. REMOVE WINDSHIELD WASHER JAR ASSEMBLY



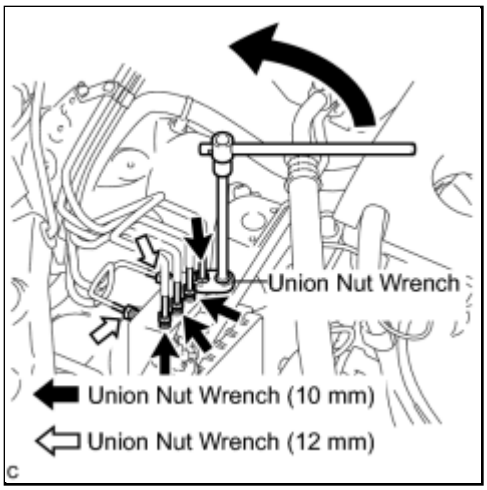
(a) Remove the bolt and disconnect the motor connectors.

(b) Separate the washer hoses from the windshield washer jar assembly.

(c) Remove the 2 bolts, clamp and windshield washer jar assembly from the body.

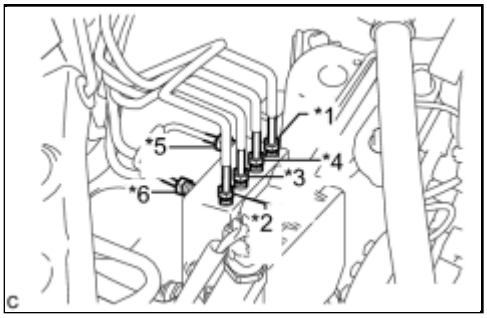


14. REMOVE BRAKE ACTUATOR WITH BRACKET



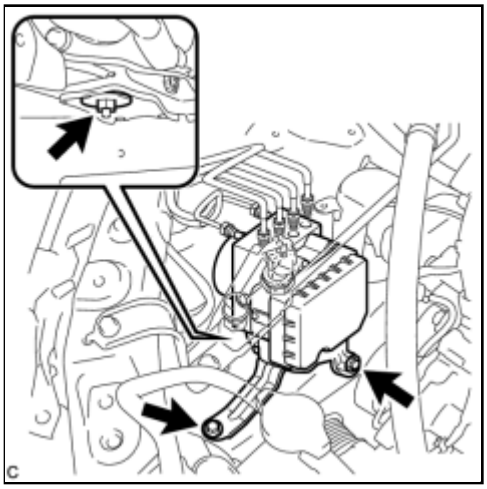
(a) Release the lock lever and disconnect the brake actuator connector.

NOTICE:



Be careful not to allow brake fluid to enter the removed connector.

(b) Remove the bolt.

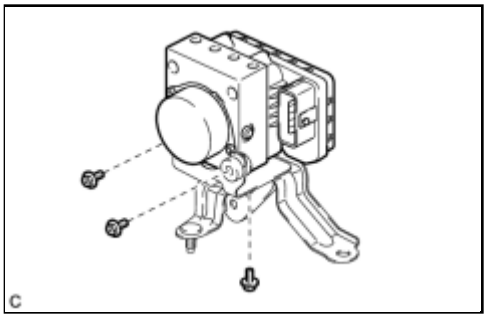


(c) Using a union nut wrench (10 mm), disconnect the 6 brake lines from the actuator assembly.

(d) Use tags or make a memo to identify the places to reconnect.

HINT:

- *1: To front wheel cylinder RH
- *2: To front wheel cylinder LH
- *3: To rear wheel cylinder RH
- *4: To rear wheel cylinder LH
- *5: From 1st master cylinder chamber
- *6: From 2nd master cylinder chamber

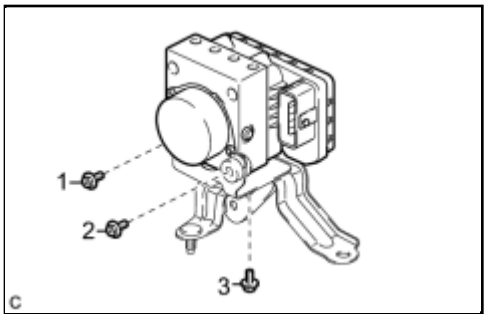


(e) Remove the 2 bolts, nut and the brake actuator with bracket from the body.

NOTICE:

- Do not damage the brake lines or wire harness.
- Do not carry the brake actuator assembly by the connector.

15. REMOVE BRAKE ACTUATOR



(a) Remove the 3 bolts and brake actuator from the brake actuator bracket assembly.

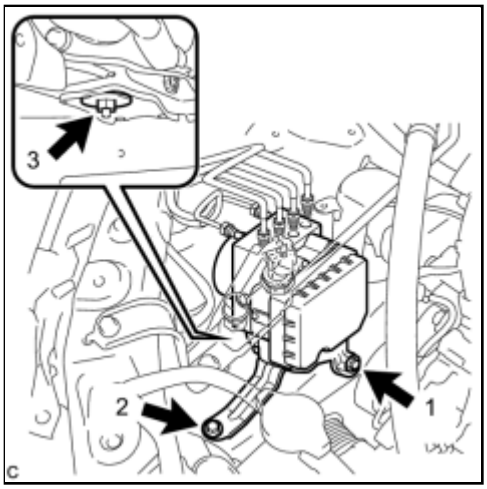
Title: BRAKE CONTROL / DYNAMIC CONTROL SYSTEMS: BRAKE ACTUATOR (w/ VSC): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL BRAKE ACTUATOR



(a) Install the brake actuator to the brake actuator bracket assembly with the 3 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

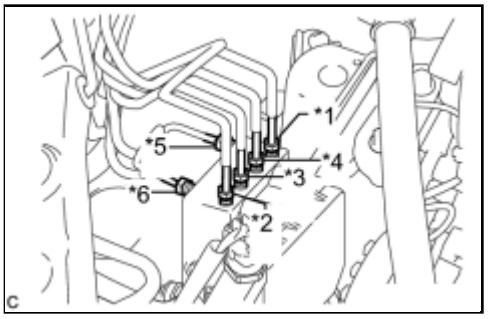
NOTICE:

- If installing a new brake actuator, do not remove the hole plugs before connecting the brake lines because the new brake actuator is filled with brake fluid.
- Do not carry the brake actuator by the connector.
- Tighten the 3 bolts in the order shown in the illustration.

2. INSTALL BRAKE ACTUATOR WITH BRACKET

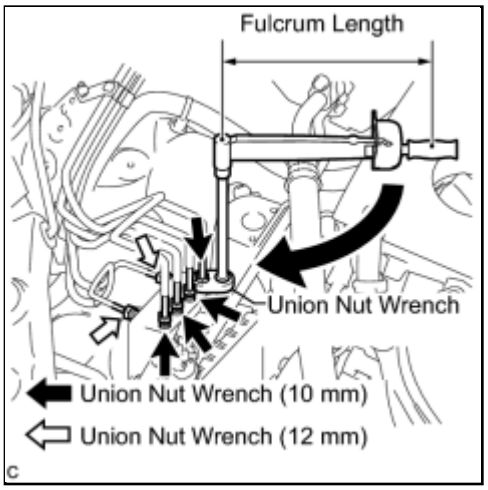
(a) Install the brake actuator with bracket to the body with the 2 bolts and nut.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)



NOTICE:

- Do not damage the brake lines or wire harness.
- Tighten the 2 bolts and nut in the order shown in the illustration.



(b) Temporarily tighten each brake line to the correct positions of the brake actuator with bracket as shown in the illustration.

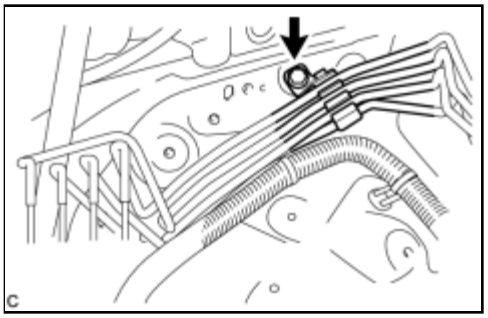
HINT:

- *1: To front wheel cylinder RH
- *2: To front wheel cylinder LH
- *3: To rear wheel cylinder RH

- *4: To rear wheel cylinder LH
- *5: From 1st master cylinder chamber
- *6: From 2nd master cylinder chamber

(c) Using a union nut wrench (10 mm) and union nut wrench (12 mm), fully tighten each brake line.

without a union nut wrench (10 mm) - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)



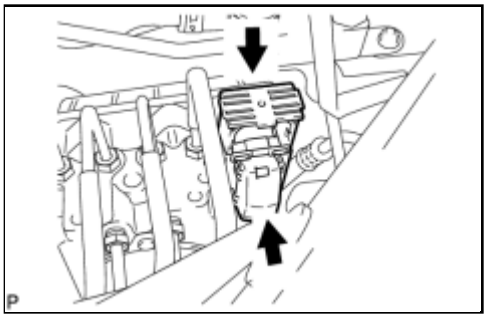
with a union nut wrench (10 mm) - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

without a union nut wrench (12 mm) - Torque: 20 N·m (200 kgf·cm, 14ft·lbf)

with a union nut wrench (12 mm) - Torque: 18 N·m (178 kgf·cm, 13ft·lbf)

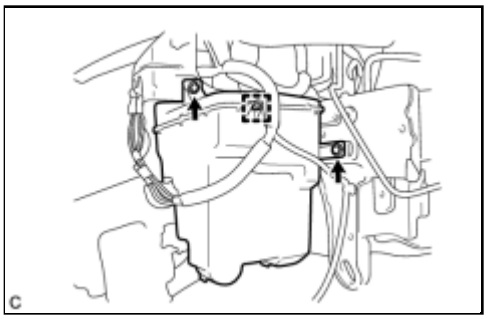
NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.



(d) Install the brake line clamp with the bolt.

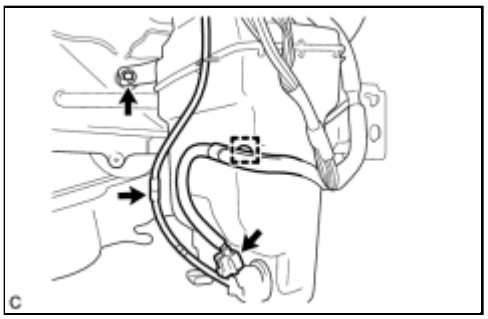
Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)



(e) Connect the actuator connector.

NOTICE:

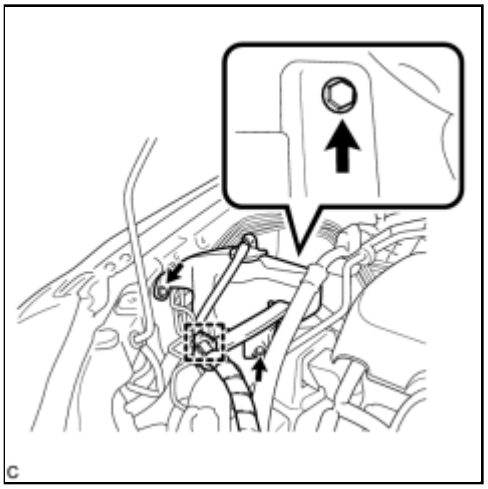
Make sure that the connector is locked securely.



3. INSTALL WINDSHIELD WASHER JAR ASSEMBLY

(a) Install the windshield washer jar assembly and clamp to the body with the 2 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)



(b) Install the bolt and connect the washer hoses and motor connectors.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

4. INSTALL RADIATOR RESERVE TANK SUB-ASSEMBLY

(a) Install the radiator reserve tank sub-assembly with the 3 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

5. INSTALL FRONT BUMPER ASSEMBLY INFO

6. INSTALL RADIATOR GRILLE PROTECTOR INFO

7. INSTALL NO. 4 ENGINE UNDER COVER INFO

- If the sensor rotor needs to be replaced, replace it together with the front drive outboard joint shaft assembly. (for TMC Made)
- If the sensor rotor needs to be replaced, replace it together with the front drive shaft assembly. (for TMMC, NUMMI Made)

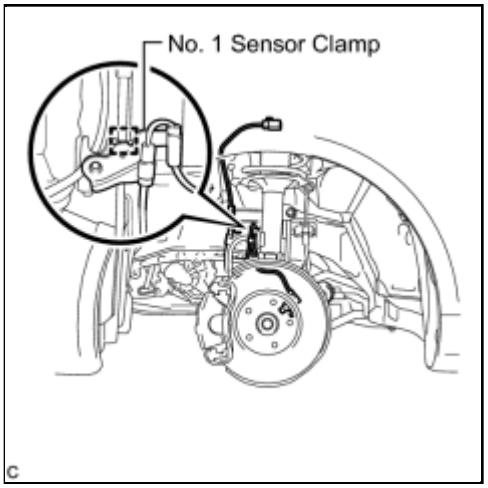
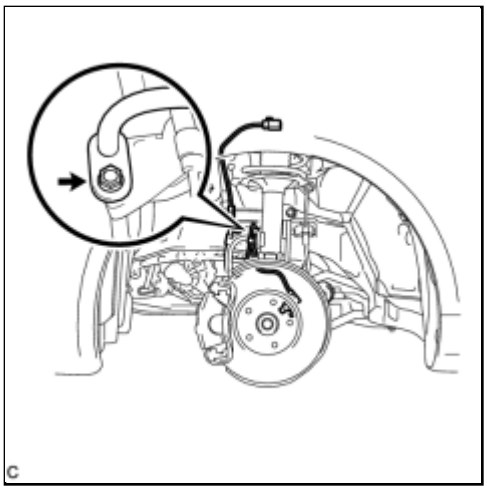
1. INSTALL FRONT SPEED SENSOR (for TMC Made)



(a) Install the front speed sensor with the bolt.

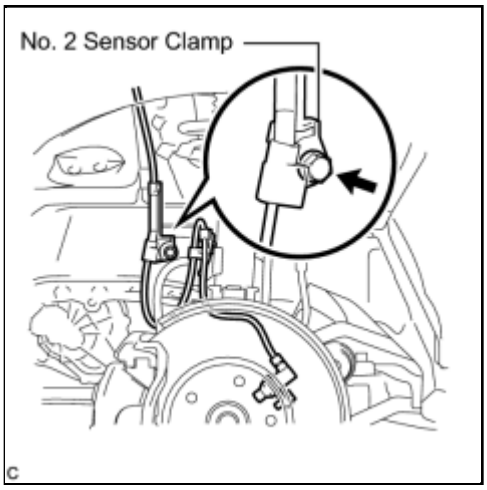


Torque: 8.5 N·m (87 kgf·cm, 76in·lbf)

NOTICE:

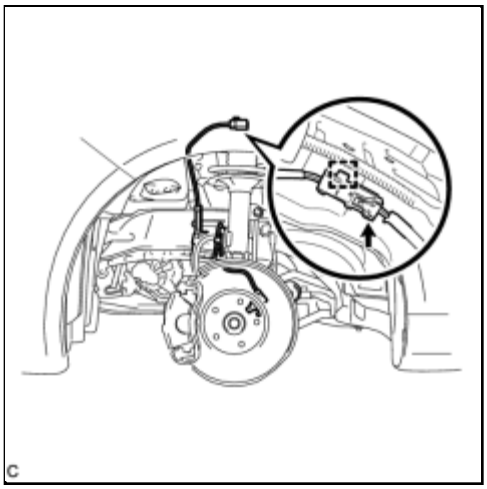
- Prevent foreign matter from attaching to the sensor tip.
- Do not file the sensor installation hole or surface because the gap between the magnet rotor and front speed sensor is important.

(b) Temporarily install the No. 1 sensor clamp to the shock absorber.



(c) Install the brake flexible hose with the bolt.

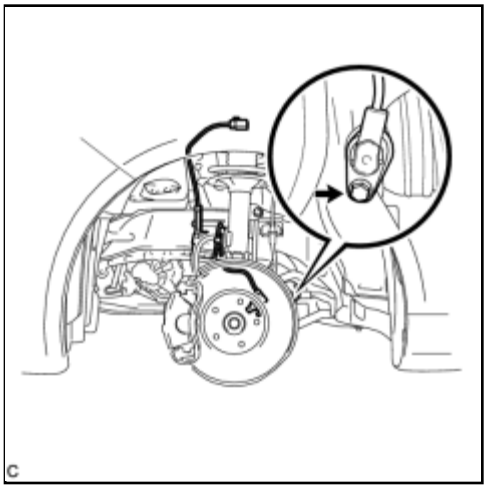
Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



NOTICE:

- Do not twist the front speed sensor wire harness during installation.
- Tighten the brake flexible hose and front speed sensor together with the bolt. Make sure that the front speed sensor is positioned over the flexible hose.

(d) Install the No. 2 sensor clamp to the body with the bolt.

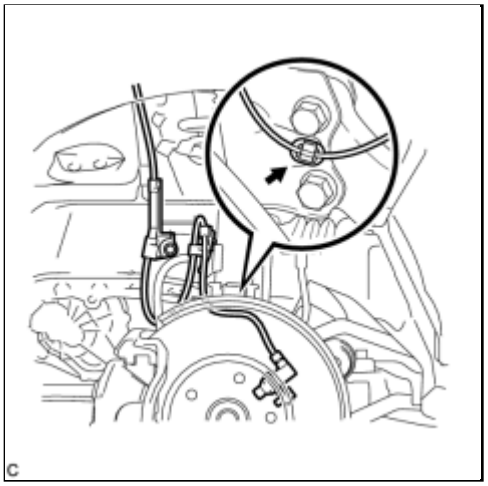


Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

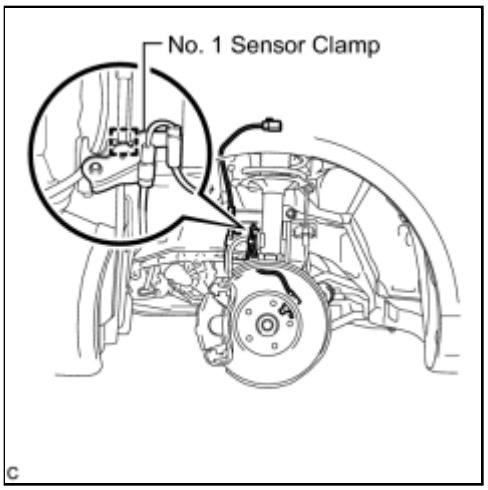
(e) Install the front speed sensor wire harness clamp.

(f) Connect the speed sensor connector.

2. INSTALL FRONT SPEED SENSOR (for TMMC, NUMMI Made)

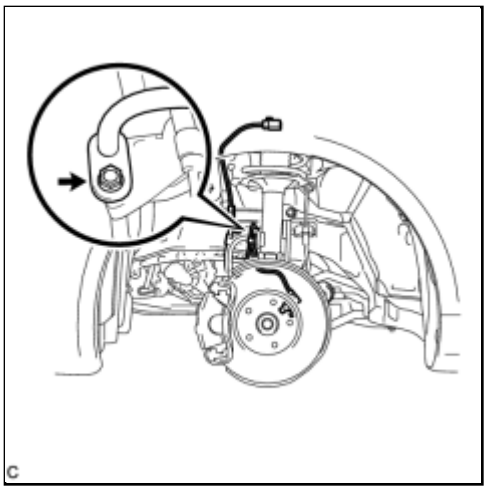


(a) Install the front speed sensor with the bolt.



Torque: 8.5 N·m (87 kgf·cm, 76in·lbf)

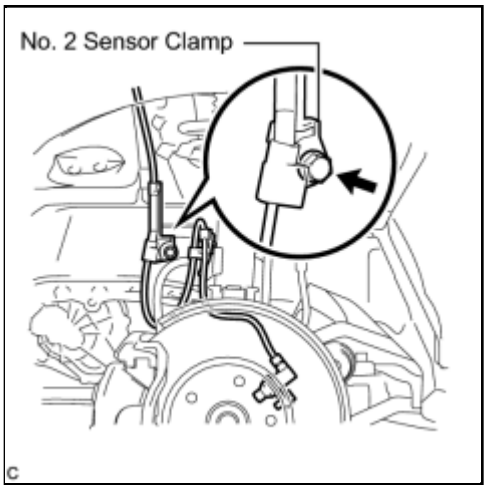
NOTICE:



- Prevent foreign matter from attaching to the sensor tip.
- Do not file the sensor installation hole or surface because the gap between the magnet rotor and front speed sensor is important.

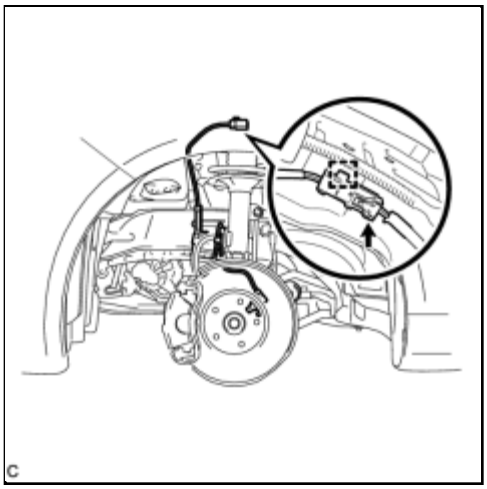
(b) Install with the clamp to the shock absorber.

(c) Temporarily install the No. 1 sensor clamp to the shock absorber.



(d) Install the brake flexible hose with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



NOTICE:

- Do not twist the front speed sensor wire harness during installation.
- Tighten the brake flexible hose and front speed sensor together with the bolt. Make sure that the front speed sensor is positioned over the flexible hose.

(e) Install the No. 2 sensor clamp to the body with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

(f) Install the front speed sensor wire harness clamp.

(g) Connect the speed sensor connector.

Title: BRAKE SYSTEM (OTHER): BRAKE BOOSTER: ON-VEHICLE INSPECTION (2010 Corolla)		

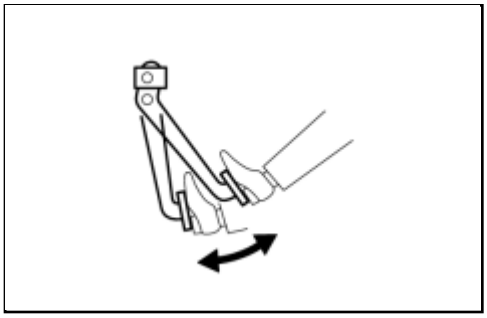
ON-VEHICLE INSPECTION

1. INSPECT BRAKE BOOSTER ASSEMBLY

(a) Airtightness check

(1) Start the engine and stop it after 1 or 2 minutes. Slowly depress the brake pedal several times.

HINT:



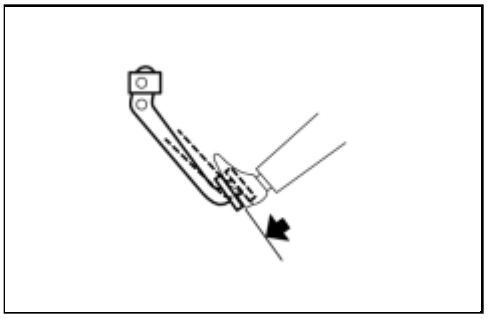
If the pedal can be depressed to the floor the first time, but on the 2nd and 3rd times cannot be depressed as far, the booster is airtight.

(2) Depress the brake pedal while the engine is running, and stop the engine with the brake pedal depressed.

HINT:

If there is no change in the pedal reserve distance while holding the pedal for 30 seconds, the booster is airtight.

(b) Operation check



(1) Depress the brake pedal several times with the ignition switch off and check that there is no change in the pedal reserve distance when the pedal is depressed.

(2) Depress and hold down the pedal, and start the engine.

HINT:

If the pedal goes down slightly, operation is normal.

Title: BRAKE SYSTEM (OTHER): BRAKE FLUID: BLEEDING (2010 Corolla)		

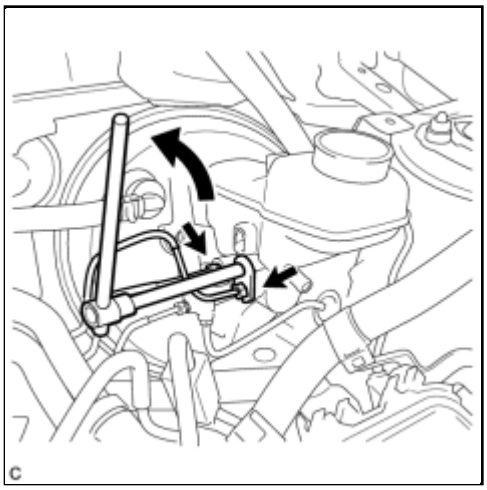
BLEEDING

HINT:

If any work is performed on the brake system or if air in the brake lines is suspected, bleed air from the brake system.

NOTICE:

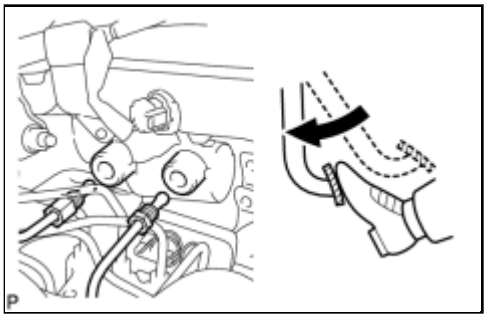
- Move the shift lever to P and apply the parking brake before bleeding the brakes.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.
- If brake fluid leaks onto any painted surface, immediately wash it off.



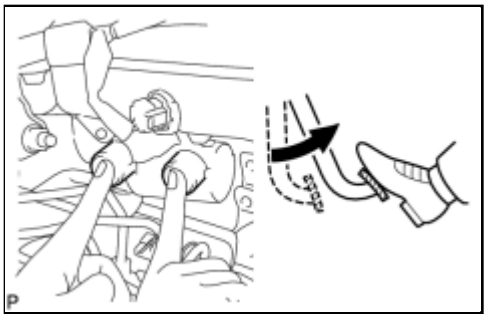
1. REMOVE CENTER COWL TOP VENTILATOR LOUVER INFO

2. FILL RESERVOIR WITH BRAKE FLUID INFO

3. BLEED BRAKE MASTER CYLINDER

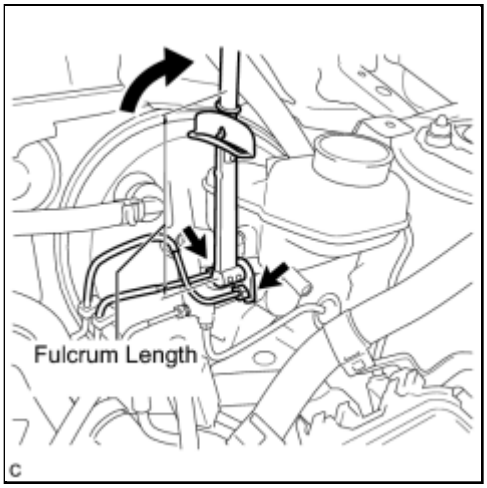


NOTICE:



- If the master cylinder is reinstalled or if the reservoir becomes empty, bleed the master cylinder.
- To prevent brake fluid from damaging painted surface, cover any surrounding parts with a piece of cloth.

(a) Using a union nut wrench (10 mm or 12 mm), disconnect the 2 brake lines from the master cylinder.



(b) Slowly depress the brake pedal and hold it*1.

(c) Cover the 2 outer holes with fingers, and release the brake pedal*2.

(d) Repeat *1 and *2 3 or 4 times.

(e) Using a union nut wrench (10 mm or 12 mm), connect the 2 brake lines to the master cylinder.

w/o VSC without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

w/o VSC with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

w/ VSC without a union nut wrench - Torque: 20 N·m (200 kgf·cm, 14ft·lbf)

w/ VSC with a union nut wrench - Torque: 18 N·m (178 kgf·cm, 13ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

4. BLEED BRAKE LINE INFO

5. BLEED BRAKE ACTUATOR (w/ VSC)

NOTICE:

After bleeding the brake system, if the specified height or feel of the brake pedal cannot be obtained, bleed the brake actuator assembly with the Techstream by following the procedure below.

(a) Depress the brake pedal more than 20 times with the ignition switch off.

(b) Connect the Techstream to the DLC3, and then turn the ignition switch to ON.

NOTICE:

Do not start the engine.

(c) Turn the Techstream on and select "Air Bleeding" on the screen.

NOTICE:

- Refer to the Techstream operator's manual for further details.
- Bleed air by following the steps displayed on the Techstream.

(d) Bleed air according to "Step 1: Increase Line" on the Techstream display.

NOTICE:

- Make sure that the master cylinder reservoir tank does not run out of brake fluid.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

(1) Connect a vinyl tube to either one of the bleeder plugs.

(2) Depress the brake pedal several times, and then loosen the bleeder plug connected to the vinyl tube with the pedal depressed*3.

(3) When fluid stops coming out, tighten the bleeder plug, and then release the brake pedal*4.

(4) Repeat *3 and *4 until all the air in the fluid is completely bled out.

(5) Tighten the bleeder plug completely.

Front bleeder plug - Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)
Rear bleeder plug (for Drum Brake) - Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)
Rear bleeder plug (for Disc Brake) - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(6) Repeat the above procedure for the rest of the wheels to bleed the brake lines.

(e) Bleed the suction line according to "Step 2: Inhalation Line" on the Techstream display.

NOTICE:

- Bleed the suction line by following the steps displayed on the Techstream.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

(1) Connect a vinyl tube to the bleeder plug at the right front wheel or the right rear wheel and loosen the bleeder plug.

(2) Operate the brake actuator assembly to bleed air using the Techstream*5.

NOTICE:

- During this step, be sure to release the brake pedal.
- The actuator operation stops automatically in 4 seconds.

(3) Check that the actuator operation has stopped by referring to the Techstream display, and tighten the bleeder plug*6.

(4) Repeat *5 and *6 until all the air in the fluid is completely bled out.

(5) Tighten the bleeder plug completely.

Front bleeder plug - Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)
Rear bleeder plug (for Drum Brake) - Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)
Rear bleeder plug (for Disc Brake) - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(6) For the rest of the wheels, bleed air in the same way as stated in the above procedure.

(f) Bleed the pressure reduction line according to "Step 3: Decrease Line" on the Techstream display.

NOTICE:

- Bleed the pressure reduction line by following the steps displayed on the Techstream.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

(1) Connect a vinyl tube to either one of the bleeder plugs.

(2) Loosen the bleeder plug*7.

(3) While keeping the brake pedal fully depressed, operate the brake actuator assembly using the Techstream.

NOTICE:

- The actuator operation stops automatically in 4 seconds. When performing this procedure continuously, an interval of at least 20 seconds is required.
- After the operation is completed, the brake pedal goes down slightly. This is a normal phenomenon when the solenoid opens.
- During this procedure, the pedal seems heavy, but completely depress it so that the brake fluid comes out from the bleeder plug.
- Be sure to keep the brake pedal depressed. Never depress and release the pedal repeatedly.

(4) Tighten the bleeder plug, and then release the brake pedal*8.

(5) Repeat steps *7 to *8 until all the air in the fluid is completely bled out.

(6) Tighten the bleeder plug completely.

Front bleeder plug - Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)
Rear bleeder plug (for Drum Brake) - Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)
Rear bleeder plug (for Disc Brake) - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(7) Repeat the above procedure for the rest of the brakes to bleed the brake lines.

(g) Bleed the brake lines again according to "Step 4: Increase Line" on the Techstream display.

NOTICE:

- Bleed air by following the steps displayed on the Techstream.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

(1) Connect a vinyl tube to either one of the bleeder plugs.

(2) Depress the brake pedal several times, and then loosen the bleeder plug connected to the vinyl tube with the pedal depressed*9.

(3) When fluid stops coming out, tighten the bleeder plug, and then release the brake pedal*10.

(4) Repeat *9 and *10 until all the air in the fluid is completely bled out.

(5) Tighten the bleeder plug completely.

Front bleeder plug - Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)
Rear bleeder plug (for Drum Brake) - Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)
Rear bleeder plug (for Disc Brake) - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(6) Repeat the above procedure for each brake to bleed the brake lines.

(h) Finish "Air Bleeding" on the Techstream, and then turn the Techstream off.

(i) Disconnect the Techstream from the DLC3.

(j) Turn the ignition switch off.

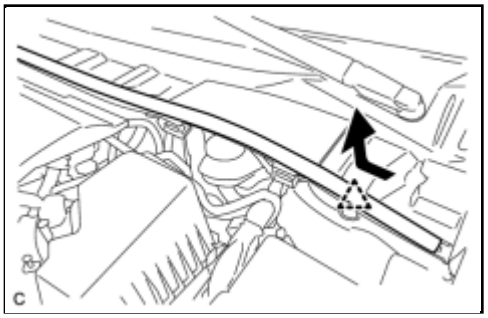
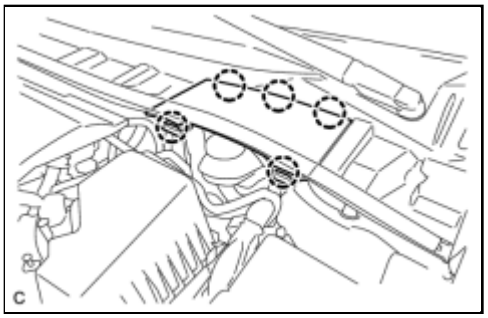
REPLACEMENT



HINT:

If any work is performed on the brake system or if air in the brake lines is suspected, bleed the brake system.



NOTICE:

- Move the shift lever to P and apply the parking brake before bleeding the brakes.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.
- If brake fluid leaks onto any painted surface, immediately wash it off.

1. REMOVE CENTER COWL TOP VENTILATOR LOUVER

(a) Slide the hood to cowl top seal and disengage the clip as shown in the illustration.

(b) Disengage the 5 claws and remove the center cowl top ventilator louver.

2. FILL RESERVOIR WITH BRAKE FLUID

(a) Fill the reservoir with brake fluid.

Brake Fluid:

SAE J1703 or FMVSS No. 116 DOT 3

NOTICE:

Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

3. BLEED BRAKE LINE

NOTICE:

- Bleed the brake line of the wheel farthest from the master cylinder first.
- Add brake fluid to keep the level between the MIN and MAX lines of the reservoir while bleeding the brakes.

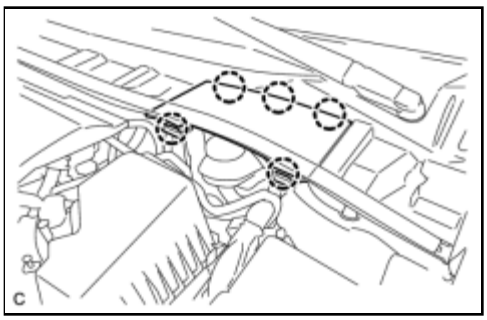
(a) Connect a vinyl tube to the bleeder plug.

(b) Depress the brake pedal several times, and then loosen the bleeder plug with the pedal depressed*1.

(c) When fluid stops coming out, tighten the bleeder plug, and then release the brake pedal*2.

(d) Repeat *1 and *2 until all the air in the fluid is completely bled out.

(e) Tighten the bleeder plug completely.



Front bleeder plug - Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)
Rear bleeder plug (for Drum Brake) - Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)
Rear bleeder plug (for Disc Brake) - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(f) Repeat the above procedure for each wheel to bleed the brake line.

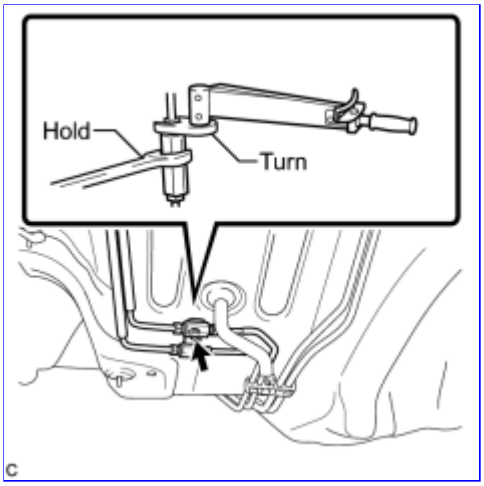
Title: BRAKE SYSTEM (OTHER): BRAKE LINE: PRECAUTION (2010 Corolla)		

PRECAUTION

1. TROUBLESHOOTING PRECAUTION

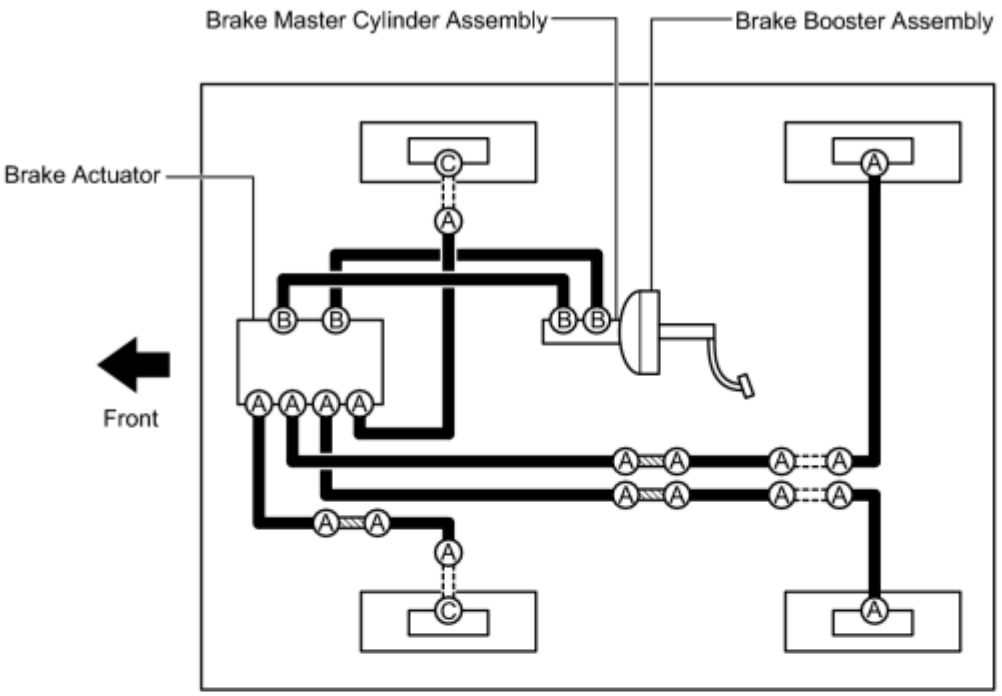


NOTICE:

- Since the brake lines are classified as critical safety related parts, be sure to disassemble and inspect the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.
- When removing brake components, cover the brake line connections to prevent foreign matter such as dust or dirt from entering the lines.
- Do not damage or deform the brake lines when removing or installing them.
- When installing a grommet to the body, ensure that the brake line passes through the center of the grommet.
- When installing a brake line or flexible hose, ensure that they are free from twists or bends.
- If the cap of a flexible hose does not match the groove on the bracket, twist the hose slightly to insert it.
- Flexible hoses must be free from shock absorber oil, grease, etc.
- When installing a brake line to a plastic clamp, ensure that the brake line is not loose or pinched.
- Do not reuse any clips or plastic clamps removed from a flexible hose.
- After installing a brake line or flexible hose, ensure that they do not interfere with any other components.
- When disconnecting and connecting a flexible hose and brake line:

  a. Hold the flexible hose with a wrench and disconnect the brake line with a union nut wrench without deforming the line.
  b. Remove the clip.
  c. Install a new clip.
  d. Connect the brake line with a union nut wrench without deforming the line.

- When connecting a brake line and way:



a. Support the way to prevent deformation of the brake line and connect the brake line to the way with a union nut wrench.
b. Support the way to prevent deformation of the brake line and install the bolt to secure the way to the body.

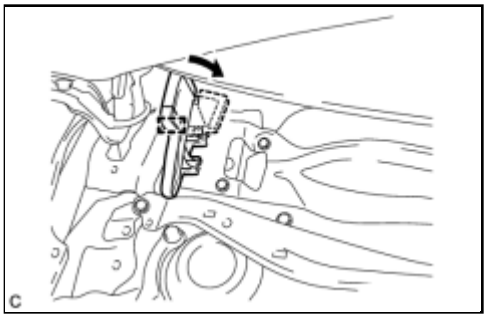
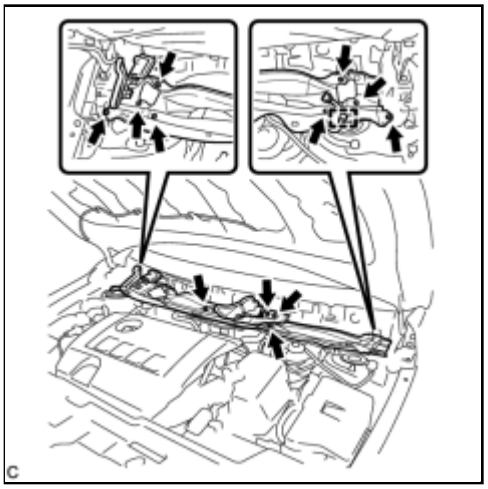
(b) Disengage the clamp.



(c) Remove the 12 bolts and outer cowl top panel.

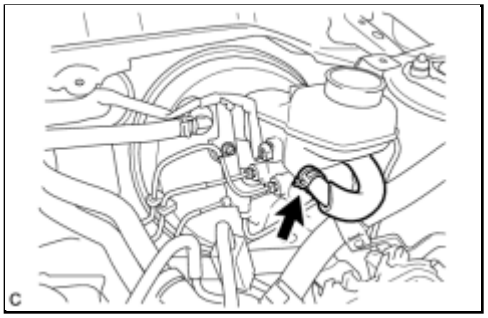
15. REMOVE OUTER COWL TOP PANEL (except TMC Made)



(a) Disengage the clamp and bend the water guard plate RH as shown in the illustration.

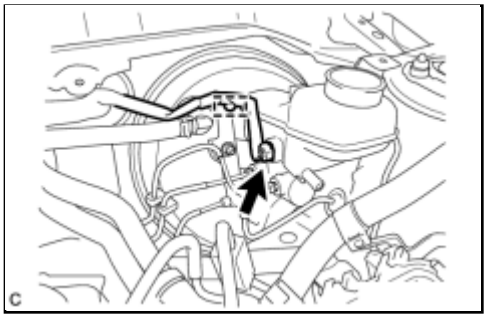
(b) Disengage the clamp and bend the No. 1 heater air duct splash shield seal.

(c) Disengage the clamp.



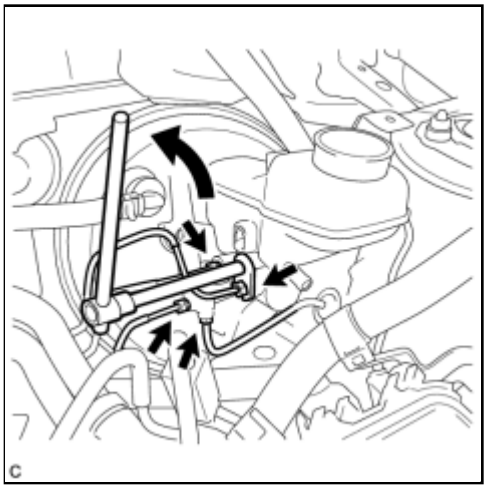
(d) Remove the 12 bolts and outer cowl top panel.

16. REMOVE SUSPENSION TOWER DAMPER ASSEMBLY (w/ Front Strut Bar) INFO



17. DRAIN BRAKE FLUID

18. DISCONNECT CLUTCH TUBE (for Manual Transaxle)



(a) Move the clip and disconnect the clutch tube.

19. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

(a) Disconnect the connector and disengage the clamp.

(b) Using a union nut wrench (10 mm or 12 mm), disconnect

the 4 brake lines from the brake master cylinder sub-assembly.

(c) Remove the 2 nuts, brake tube way and brake master cylinder sub-assembly.

NOTICE:

- The master cylinder requires careful handling. Do not allow the master cylinder to receive any impact, such as from being dropped. Do not reuse a master cylinder that has been dropped.
- Do not strike or pinch the master cylinder piston, and do not cause any damage to the master cylinder piston by any other means.
- Make sure to release the vacuum from the brake booster before removing the master cylinder from the brake booster.
- When installing the master cylinder to the brake booster, or when removing the master cylinder from the brake booster, make sure that the master cylinder is kept horizontal or its tip faces downward (the piston faces upward) to prevent the master cylinder piston from falling off.
- Do not allow any foreign objects to contaminate the master cylinder piston. If a foreign object gets on the piston, remove it by using a piece of cloth and then apply an even layer of lithium soap base glycol grease around the circumference (sliding part) of the piston.
- Do not use any other type of grease or fluid.

(d) Remove the O-ring from the brake master cylinder sub-assembly.

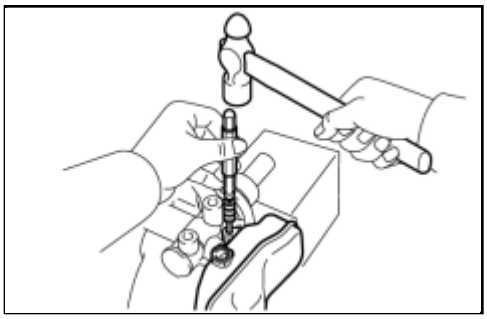
DISASSEMBLY

1. REMOVE BRAKE MASTER CYLINDER RESERVOIR FILLER CAP ASSEMBLY

(a) Remove the brake master cylinder reservoir filler cap assembly from the brake master cylinder reservoir assembly.

2. REMOVE BRAKE MASTER CYLINDER RESERVOIR STRAINER



(a) Remove the brake master cylinder reservoir strainer from the brake master cylinder reservoir assembly.

3. REMOVE BRAKE MASTER CYLINDER RESERVOIR ASSEMBLY

(a) Mount the brake master cylinder sub-assembly in a vise.

NOTICE:

Place aluminum plates on the vise to prevent damage to the brake master cylinder sub-assembly.

(b) Using a pin punch and a hammer, tap out the straight pin and remove the brake master cylinder reservoir assembly.

4. REMOVE MASTER CYLINDER RESERVOIR GROMMET

(a) Remove the 2 master cylinder reservoir grommets from the brake master cylinder reservoir assembly.

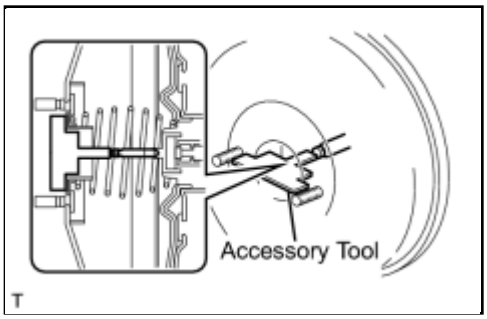
Title: BRAKE SYSTEM (OTHER): BRAKE MASTER CYLINDER: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD

NOTICE:

Make an adjustment with no vacuum in the brake booster assembly. (Depress the brake pedal several times with the engine stopped.)



HINT:

- Adjustment of the brake booster push rod is required when the brake master cylinder sub-assembly is replaced with a new one.
- Adjustment is not necessary when the removed brake master cylinder sub-assembly is reused and the brake booster assembly is replaced with a new one.

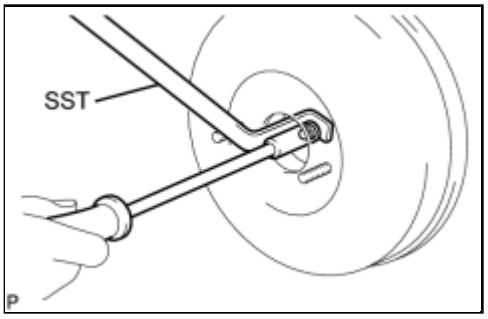
(a) Apply chalk to the tip of the accessory tool.

HINT:

An accessory tool is enclosed with a new brake master cylinder sub-assembly.

(b) Place the accessory tool on the brake booster assembly.

(c) Measure the clearance between the brake booster push rod and accessory tool.



Standard clearance:
0 mm (0 in.)

HINT:

Adjust the clearance in the following cases:

- If there is a clearance between the accessory tool and the shell of the brake booster (floating accessory tool), the push rod is protruding too far.
- If the chalk does not stick on the tip of the brake booster push rod, the push rod protrusion is insufficient.

(d) If the clearance is not as specified, adjust the push rod length by holding the rod using SST and turning the tip of

the rod using a socket driver (7 mm).

SST: 09737-00020

HINT:

Check the push rod clearance again after adjustment.

Title: BRAKE SYSTEM (OTHER): BRAKE MASTER CYLINDER: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSPECT AND ADJUST BRAKE BOOSTER PUSH ROD INFO

2. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

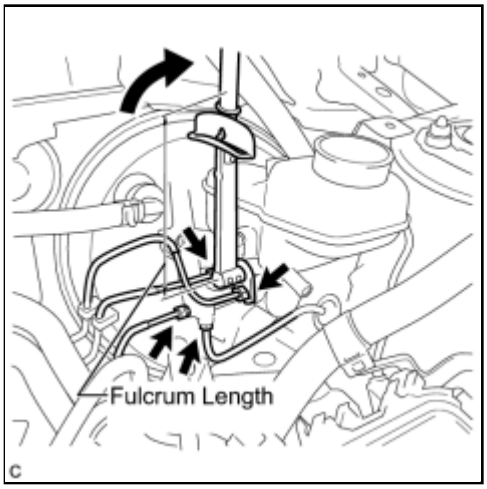
(a) Install a new O-ring to the brake master cylinder sub-assembly.

(b) Install the brake master cylinder sub-assembly and brake tube way to the brake booster assembly with the 2 nuts.

Torque: 13 N·m (132 kgf·cm, 10ft·lbf)

NOTICE:

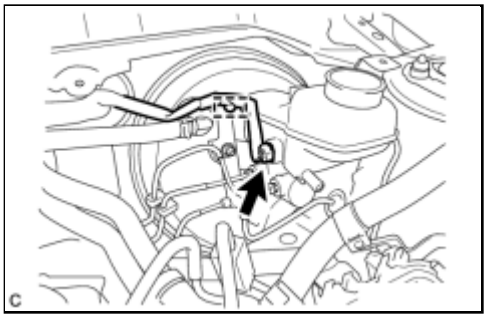
- The master cylinder requires careful handling. Do not allow the master cylinder to receive any impact, such as from being dropped. Do not reuse a master cylinder that has been dropped.
- Do not strike or pinch the master cylinder piston, and do not cause any damage to the master cylinder piston by any other means.
- When installing the master cylinder to the brake booster, or when removing the master cylinder from the brake booster, make sure that the master cylinder is kept horizontal or its tip faces downward (the piston faces upward) to prevent the master cylinder piston from falling off.
- Do not allow any foreign objects to contaminate the master cylinder piston. If a foreign object gets on the piston, remove it by using a piece of cloth and then apply an even layer of lithium soap base glycol grease around the circumference (sliding part) of the piston.
- Do not use any other type of grease or fluid.



(c) Using a union nut wrench (10 mm or 12 mm), connect the 4 brake lines to the brake master cylinder sub-assembly.

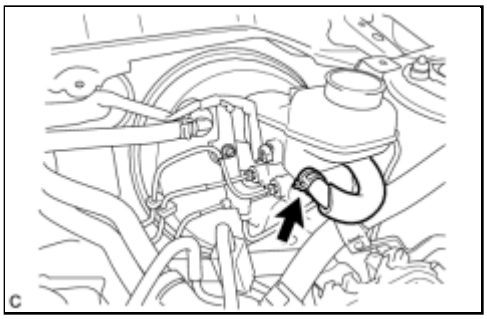
w/o VSC without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

w/o VSC with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)



w/ VSC without a union nut wrench - Torque: 20 N·m (200 kgf·cm, 14ft·lbf)

w/ VSC with a union nut wrench - Torque: 18 N·m (178 kgf·cm, 13ft·lbf)



NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

(d) Engage the clamp and connect the connector.

1. INSTALL MASTER CYLINDER RESERVOIR GROMMET

(a) Apply lithium soap base glycol grease to 2 new master cylinder reservoir grommets.

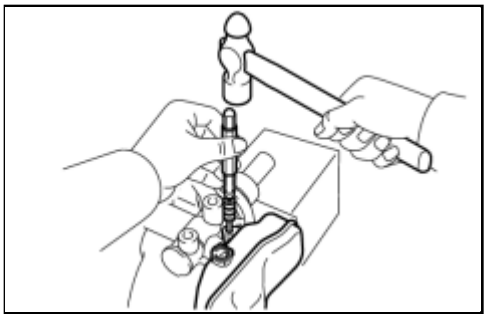
(b) Install the 2 master cylinder reservoir grommets to the brake master cylinder reservoir assembly.

2. INSTALL BRAKE MASTER CYLINDER RESERVOIR ASSEMBLY

(a) When installing a new brake master cylinder reservoir assembly, cut off the clutch tube tip of the brake master cylinder reservoir assembly as shown in the illustration (for Manual Transaxle).

Length of clutch tube tip:
22 to 24 mm (0.866 to 0.945 in.)

NOTICE:



- Do not allow any foreign matter to enter the brake master cylinder reservoir assembly.
- Make sure that fluid supply is not hindered after cutting the tube.

(b) Install the brake master cylinder reservoir assembly to the master cylinder body.

(c) Mount the brake master cylinder sub-assembly in a vise.

NOTICE:

Place aluminum plates on the vise to prevent damage to the brake master cylinder sub-assembly.

(d) Using a pin punch and a hammer, tap in the straight pin.

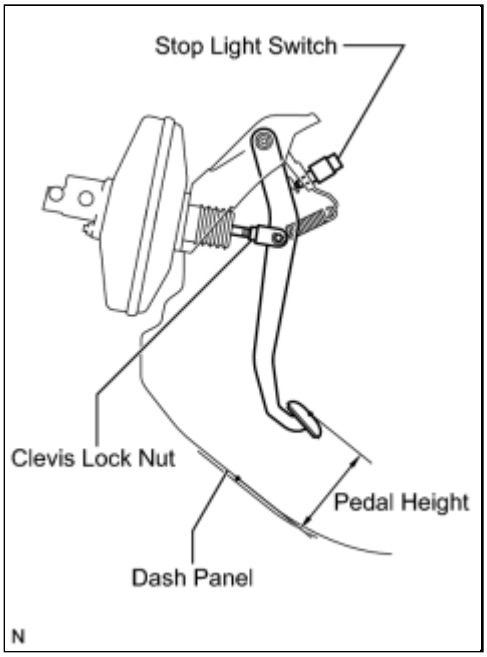
Title: BRAKE SYSTEM (OTHER): BRAKE PEDAL: ADJUSTMENT (2010 Corolla)		



ADJUSTMENT

1. INSPECT AND ADJUST BRAKE PEDAL HEIGHT

(a) Check the brake pedal height.

(1) Turn back the carpet.

(2) Turn back the dash silencer from the slit provided on the dash silencer.

(3) Measure the shortest distance between the brake pedal surface and dash panel.

Pedal height from floor panel:
141.4 to 151.4 mm (5.57 to 5.96 in.)

(b) Adjust the brake pedal height.

(1) Disconnect the stop light switch connector.

(2) Remove the stop light switch assembly.

(3) Loosen the push rod clevis lock nut.

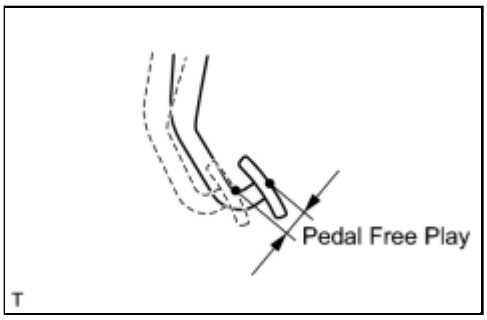
(4) Adjust the brake pedal height by turning the push rod.

(5) Tighten the push rod clevis lock nut.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

(6) Insert the stop light switch into the adjuster mounting until the switch body touches the brake pedal.

NOTICE:



Do not depress the brake pedal.

(7) Adjust the stop light switch INFO .

(8) Connect the stop light switch connector.

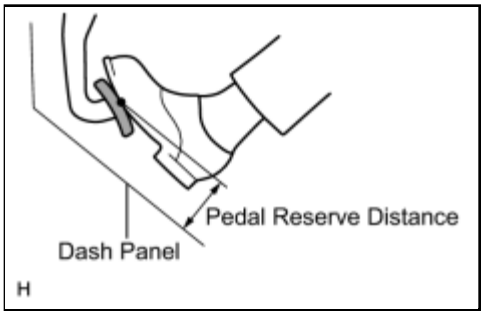
2. INSPECT BRAKE PEDAL FREE PLAY

(a) Stop the engine. Depress the brake pedal several times until no vacuum is left in the brake booster. Release the brake pedal.

(b) Depress the pedal until a slight resistance is felt. Measure the distance as shown in the illustration.

Pedal free play:

1.0 to 6.0 mm (0.0394 to 0.236 in.)



If the pedal free play is not as specified, check the stop light switch clearance INFO . If the pedal free play is as specified, proceed to the Inspect brake pedal reserve distance procedure.

3. INSPECT BRAKE PEDAL RESERVE DISTANCE

HINT:

Measure the distance at the same point used for the brake pedal height inspection.

(a) Release the parking brake lever.

(b) With the engine running, depress the brake pedal and measure the pedal reserve distance as shown in the illustration.

Pedal Reserve Distance from the Dash Panel at 294 N (30 kgf, 66 lbf):

	SPECIFIED CONDITION
w/ ABS	81 mm (3.19 in.)
w/ VSC	87 mm (3.43 in.)

If the distance is not as specified, troubleshoot the brake system INFO .

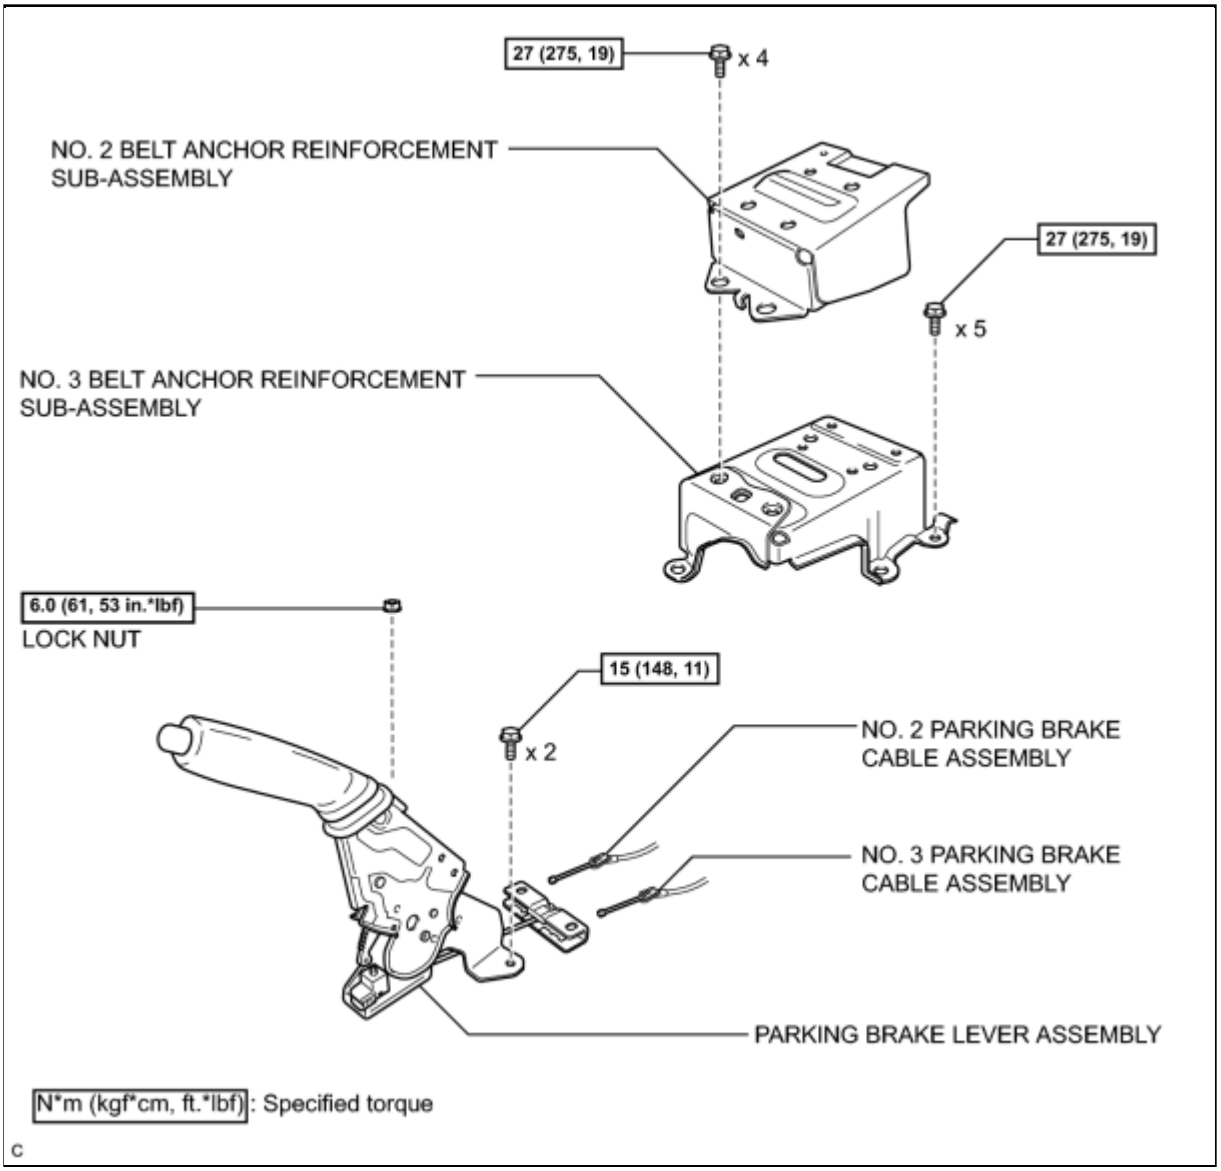
Title: BRAKE SYSTEM (OTHER): BRAKE SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. TROUBLESHOOTING PRECAUTION



NOTICE:

- Care must be taken to replace each part properly as it could affect the performance of the brake system and result in a driving hazard. Replace the parts with those having the same part number or equivalent.
- It is very important to keep parts and the area clean when repairing the brake system.
- If the vehicle is equipped with a mobile communication system, refer to the Precaution in the introduction section INFO .
- Care must be taken when using magnets as they could affect the performance of the speed sensors.
- Since the brake lines are classified as critical safety related parts, be sure to disassemble and inspect the components if a brake fluid leak is found. If any abnormality is found, replace the component with a new one.
- When removing brake components, cover the brake line connections to prevent foreign matter such as dust or dirt from entering the lines.
- Do not damage or deform the brake lines during the removal and installation procedures.
- Do not allow brake fluid to adhere to any painted surface such as the vehicle body. If brake fluid leaks onto any painted surface, immediately wash it off.

REMOVAL

CAUTION:

Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing INFO .

HINT:

- Use the same procedure for the No. 2 parking brake cable assembly and No. 3 parking brake cable assembly.
- The procedure listed below is for the No. 3 parking brake cable assembly.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ Front Seat Side Airbag)

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

2. REMOVE REAR WHEELS

3. REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)

HINT:

Refer to the instructions for Removal of the front seat assembly INFO .

4. REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)

HINT:

Refer to the instructions for Removal of the front seat assembly INFO .

5. REMOVE FRONT SEAT ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

6. REMOVE CONSOLE BOX ASSEMBLY

HINT:

Refer to the instructions for Removal of the front console box INFO .

7. REMOVE NO. 2 BELT ANCHOR REINFORCEMENT SUB-ASSEMBLY INFO

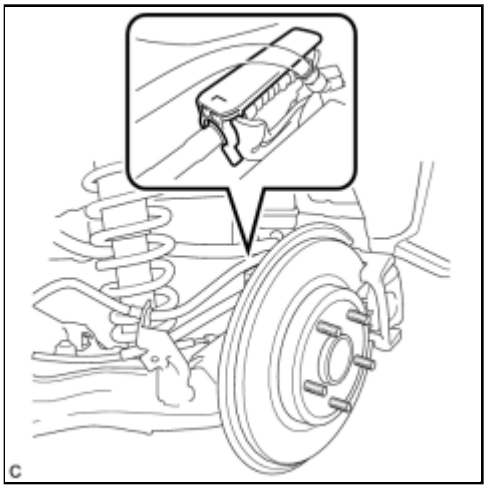
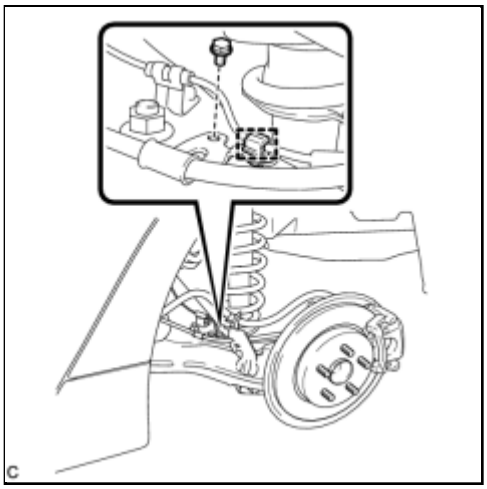
(a) Remove the 3 nuts and front No. 1 floor heat insulator.



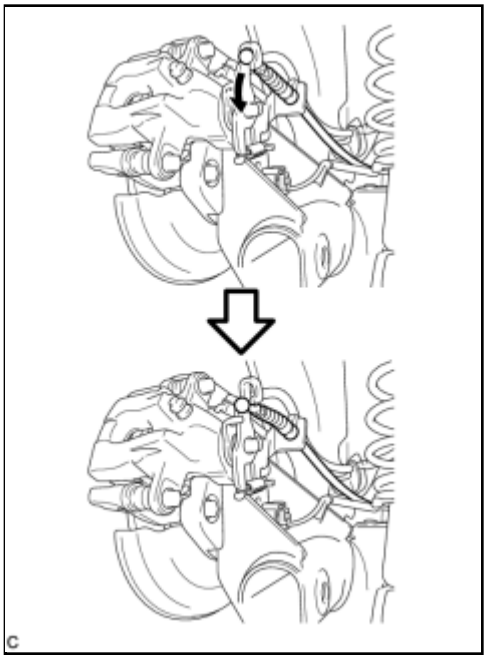
17. REMOVE FRONT NO. 2 FLOOR HEAT INSULATOR



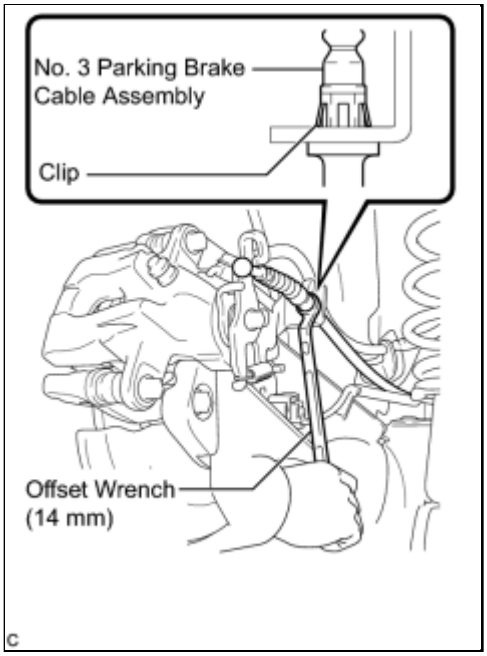
(a) Remove the 2 nuts and front No. 2 floor heat insulator.

18. REMOVE PARKING BRAKE LEVER PROTECTOR

(a) Remove the parking brake lever protector from the No. 3 parking brake cable assembly.



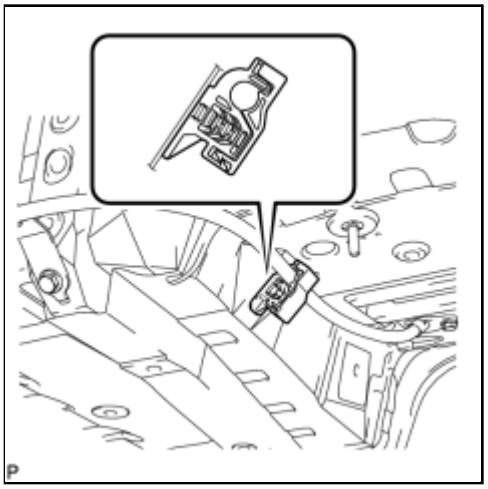
19. REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY

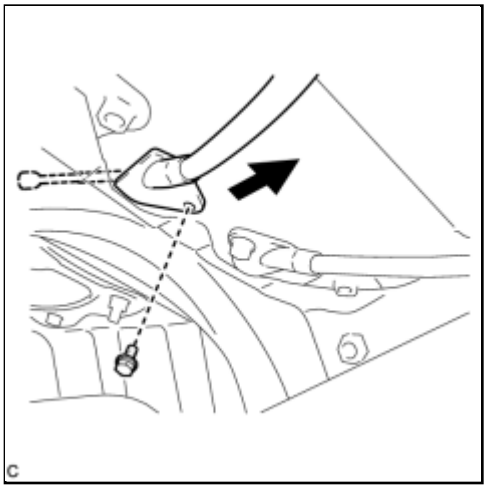


(a) Disengage the clamp from the No. 3 parking brake cable assembly.

(b) Remove the bolt.

(c) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

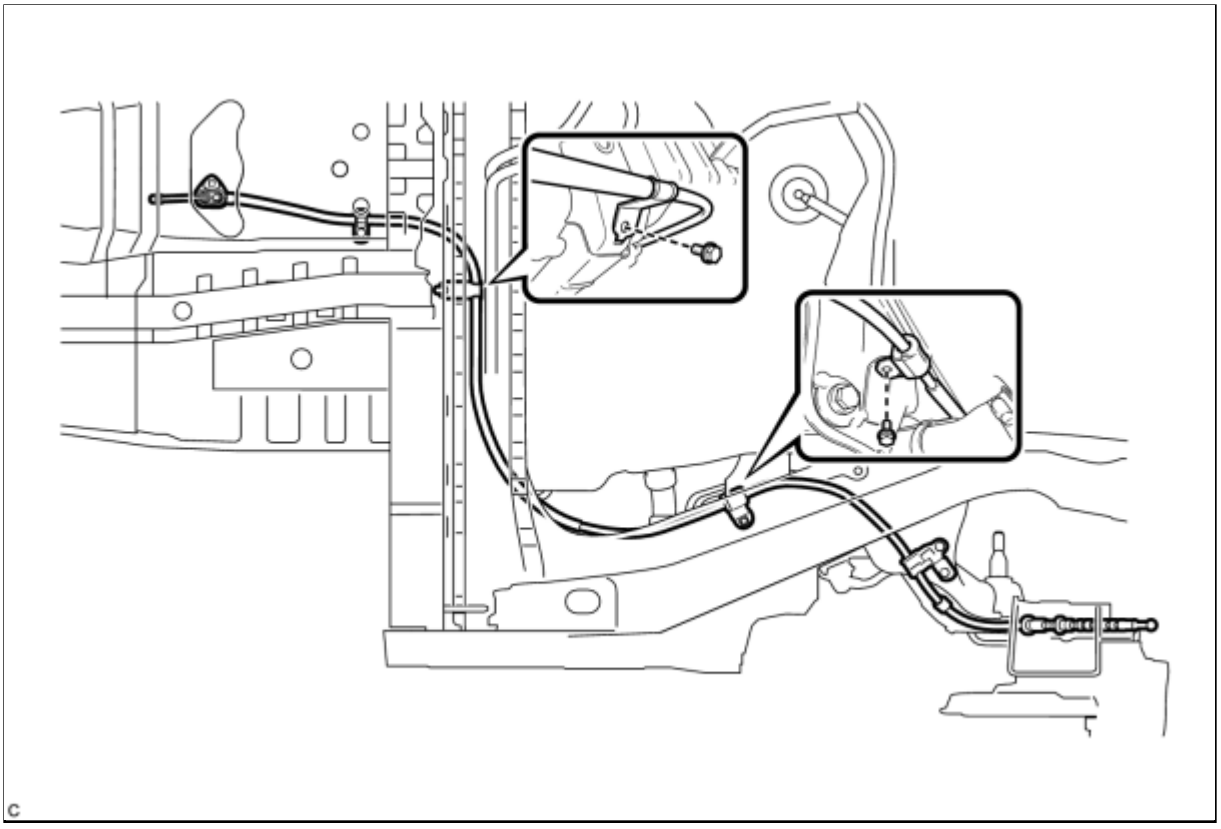




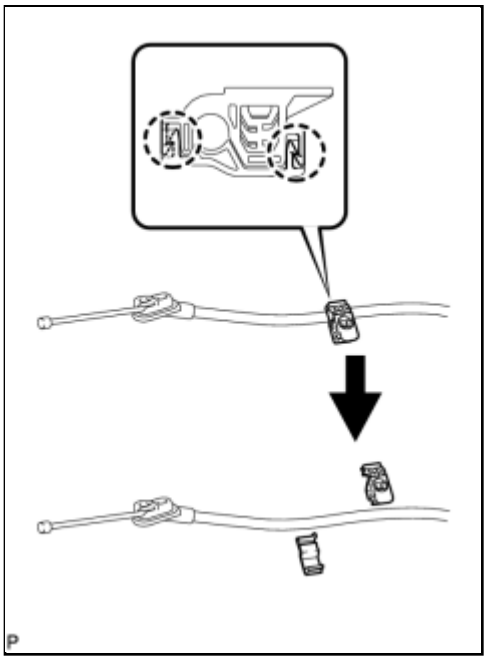
(d) Remove the No. 3 parking brake cable assembly.

HINT:

Insert an offset wrench (14 mm) at the base of the No. 3 parking brake cable assembly as shown in the illustration to disengage the clip. Pull out the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.



(e) Separate the No. 3 parking brake cable clamp.



(f) Remove the bolt and pull out the No. 3 parking brake cable assembly to the outside of the body.

(g) Remove the 2 bolts and the No. 3 parking brake cable assembly.

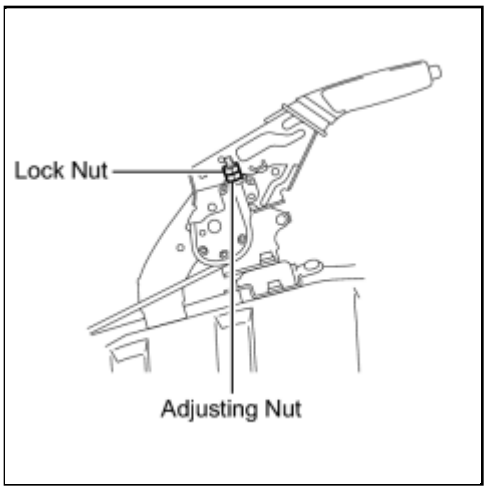
Title: PARKING BRAKE: PARKING BRAKE SYSTEM: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

1. INSPECT PARKING BRAKE LEVER TRAVEL

(a) Pull the parking brake lever firmly.

(b) Release the parking brake lock, and return the parking brake lever to its off position.



(c) Slowly pull the parking brake lever all the way up, and count the number of clicks.

Parking brake lever travel:
6 to 9 notches at 200 N (20 kgf, 45.0 lbf)

2. ADJUST PARKING BRAKE LEVER TRAVEL

(a) Remove the upper console box assembly INFO .

(b) Completely release the parking brake lever.

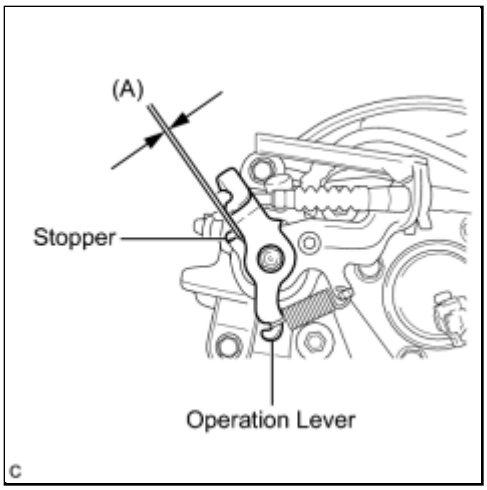
(c) Loosen the lock nut and the adjusting nut to completely release the parking brake cable.

(d) Fully depress the brake lever 3 to 5 times with the engine stopped.

(e) Turn the adjusting nut until the parking brake lever travel is corrected to within the specified range.

Parking brake lever travel:
6 to 9 notches at 200 N (20 kgf, 45.0 lbf)

(f) Using a wrench or an equivalent tool, hold the adjusting nut and tighten the lock nut.



Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

(g) Operate the parking brake lever 3 to 4 times, and check the parking brake lever travel.

(h) Check whether the parking brake drags or not.

(i) Install the upper console box assembly INFO .

3. INSPECT REAR DISC BRAKE CYLINDER OPERATION LEVER AND STOPPER CLEARANCE (for Rear Disc Brake)

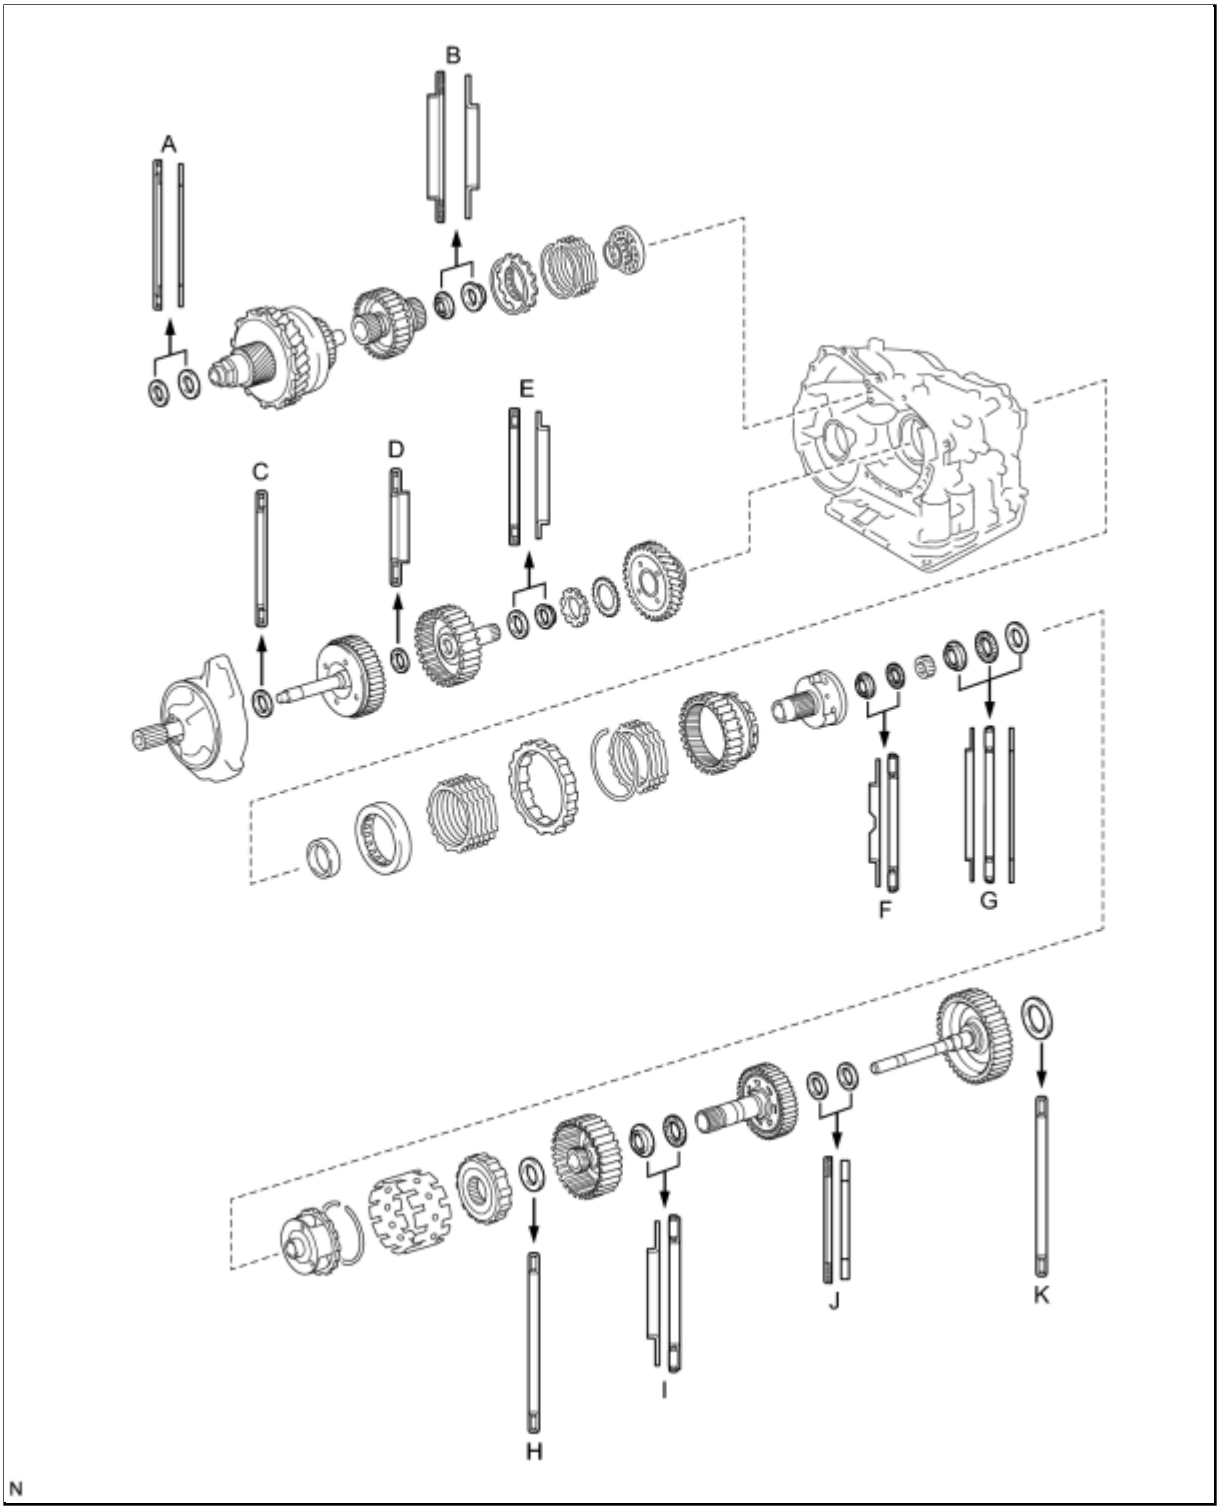
(a) Release the parking brake lever and check that the clearance measurement between the rear disc brake cylinder operation lever and the stopper is within the specified range.

Clearance (A):
0.5 mm (0.0197 in.) or less

If the clearance is not within the specified range, replace the rear disc brake caliper assembly.

4. INSPECT BRAKE WARNING LIGHT

(a) When operating the parking brake lever, check that the brake warning light illuminates.



Standard:
The brake warning light always illuminates at the first click.

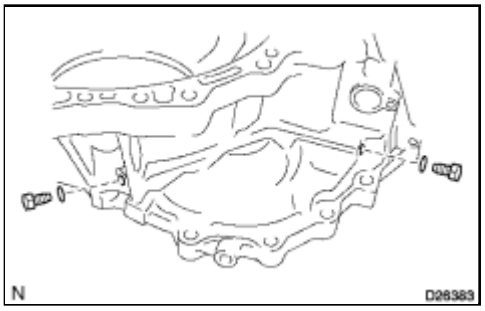
2. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the differential gear lube apply tube and transaxle apply tube clamp to the transaxle housing with the bolt.

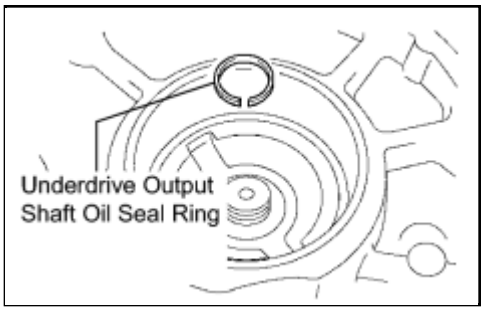


Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

NOTICE:

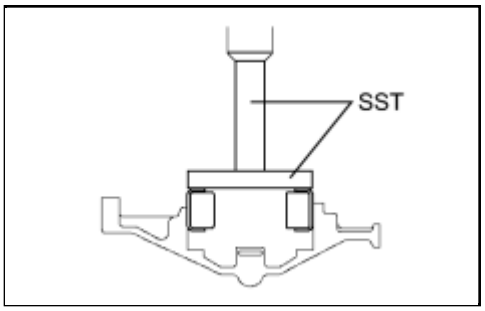
Make sure to insert the pipe to the stopper.

3. INSTALL NO. 1 TRANSAXLE CASE PLUG



(a) Install a new O-ring to each No. 1 transaxle case plugs.

(b) Install the 2 No. 1 transaxle case plugs to the transaxle rear housing.

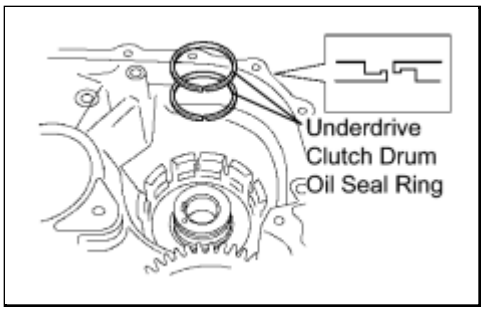


Torque: 7.4 N·m (75 kgf·cm, 65in·lbf)

4. INSTALL UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

(a) Coat a new oil seal ring with ATF and install it to the transaxle housing.

5. INSTALL UNDERDRIVE CYLINDRICAL ROLLER BEARING



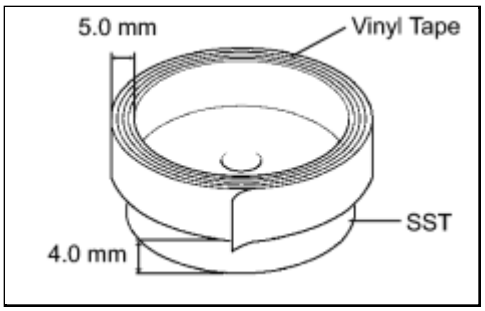
(a) Coat the underdrive cylindrical roller bearing with ATF.

(b) Using SST and a press, install the underdrive cylindrical roller bearing.

SST: 09950-60020
SST: 09950-70010
09951-00780
09951-07100

NOTICE:
Do not apply excessive pressure to it.

6. INSTALL UNDERDRIVE CLUTCH DRUM OIL SEAL RING

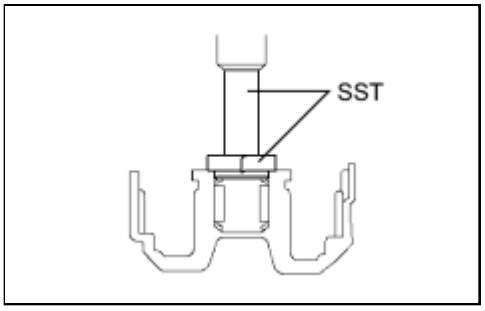


(a) Coat 2 new oil seal rings with ATF, and install them to the transaxle rear cover.

NOTICE:

- Do not expand the gap of the oil seal ring excessively.
- Securely engage the hooks. Confirm that the rings rotate smoothly.

7. INSTALL NEEDLE ROLLER BEARING



(a) Wrap vinyl tape around SST 4.0 mm (0.157 in.) above the bottom end until the thickness of the wrapped tape is about 5.0 mm (0.197 in.).

NOTICE:

Clean SST to remove deposited oil before wrapping the vinyl tape.

(b) Coat a new needle roller bearing with ATF.

(c) Using SST and a press, install the needle roller bearing to the transaxle case.

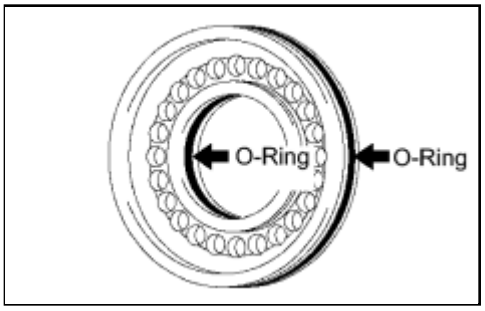
SST: 09950-60010

09951-00320

SST: 09950-70010

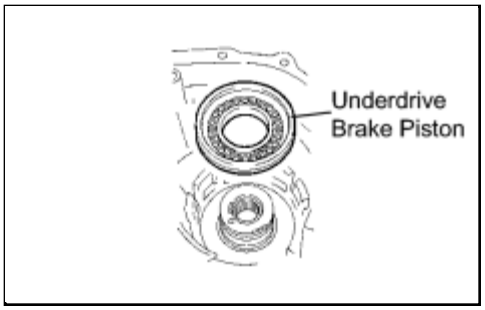
09951-07100

NOTICE:



When the wrapped vinyl tape contacts the transaxle case, stop the press.

8. INSTALL UNDERDRIVE BRAKE PISTON

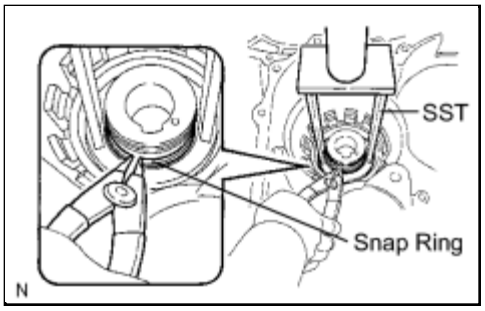


(a) Coat 2 new O-rings with ATF, and install them to the underdrive brake piston.

NOTICE:

- Install the O-rings carefully so that they are not twisted or pinched.
- Apply sufficient ATF to the O-rings prior to installation.

(b) Coat the underdrive brake piston with ATF.



(c) Install the underdrive brake piston to the transaxle case.

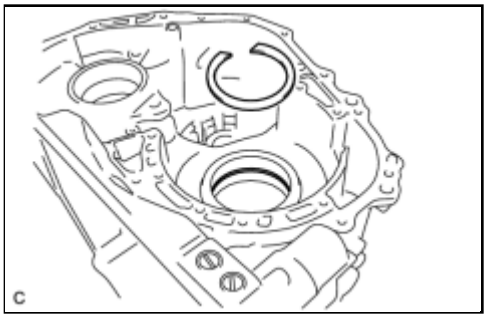
NOTICE:

Be careful not to damage the O-rings.

9. INSTALL UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

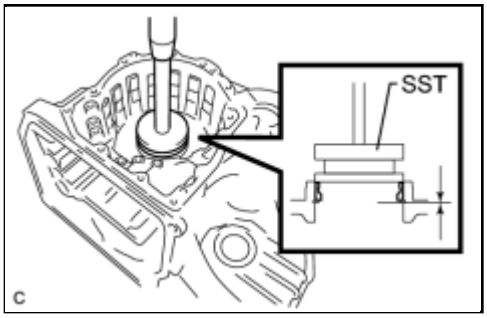
(a) Place SST on the return spring and compress the return spring with a press.

SST: 09387-00020



(b) Using a snap ring expander, install the snap ring to the transaxle case.

NOTICE:

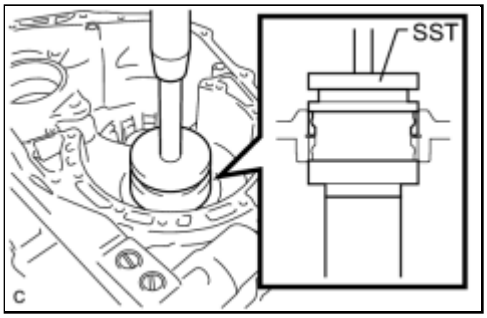


- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.
- Do not expand the snap ring excessively.
- After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.
- The snap ring should be securely engaged in the groove of the transaxle case.

10. INSTALL COUNTER DRIVE GEAR BEARING

(a) Install the snap ring to the transaxle case.

(b) Using SST and a press, install the bearing outer race (rear side) to the transaxle case.



SST: 09316-12010
SST: 09950-60020
09951-00810
SST: 09950-70010
09951-07150

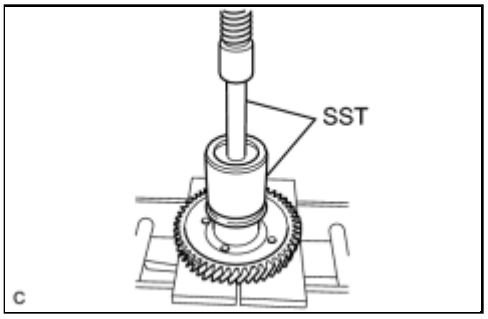
NOTICE:

- Ensure that the snap ring is securely installed.
- Do not apply excessive pressure to the bearing outer race.

(c) Using SST and a press, install the bearing outer race (front side) to the transaxle case.

SST: 09316-12010
SST: 09502-24010
SST: 09523-36010
SST: 09950-60020
09951-00810
SST: 09950-70010
09951-07150

NOTICE:



- Do not apply excessive pressure to the bearing outer race.
- Install the bearing outer race with a press while holding the bearing outer race with SST (09502-24010, 09523-36010).

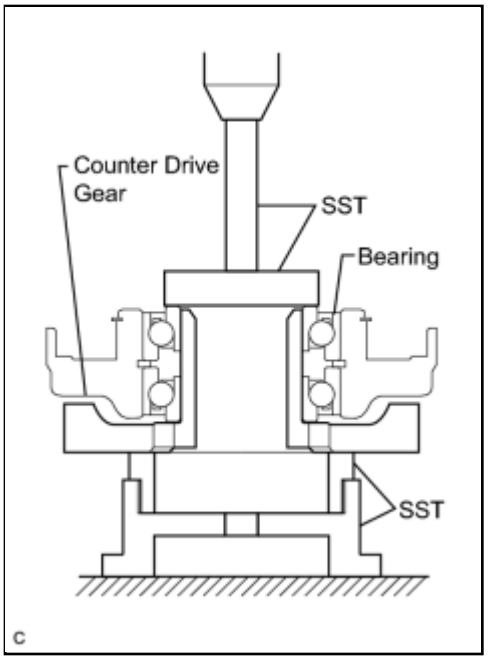
(d) Install the 2 angular balls to the transaxle case.

11. INSTALL COUNTER DRIVE GEAR

(a) Coat the counter drive gear with ATF.

(b) Using SST and a press, install the tapered roller bearing

inner race (front side) to the counter drive gear.



SST: 09649-17010

SST: 09950-70010

09951-07150

NOTICE:

Do not apply excessive pressure to the bearing inner race.

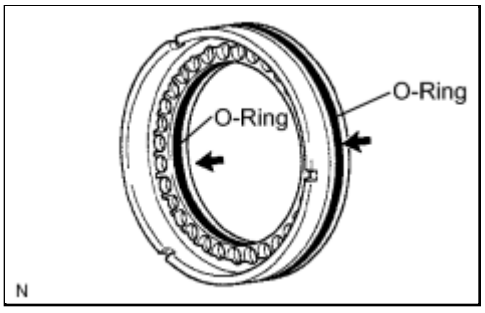
(c) Using SST and a press, install the counter drive gear and bearing inner race (rear side) to the transaxle case.

SST: 09223-15030

SST: 09527-17011

SST: 09950-60020

09951-00720



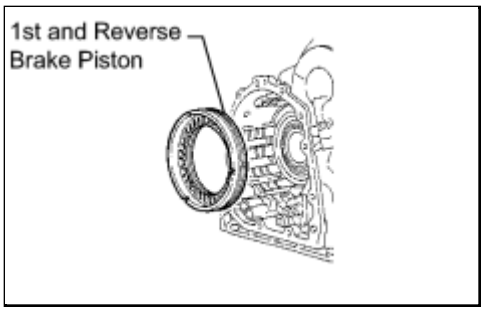
SST: 09950-70010

09951-07150

NOTICE:

Do not apply excessive pressure to the counter drive gear and bearing inner race.

12. INSTALL 1ST AND REVERSE BRAKE PISTON

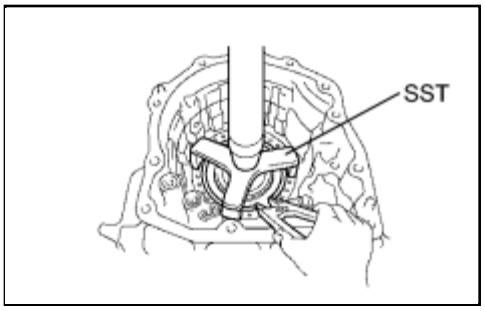


(a) Coat 2 new O-rings with ATF.

(b) Install the 2 O-rings to the 1st and reverse brake piston.

NOTICE:

- Install the O-rings carefully so that they are not twisted or pinched.
- Apply sufficient ATF to the O-rings prior to installation.



(c) Coat the 1st and reverse brake piston with ATF, and install it to the transaxle case.

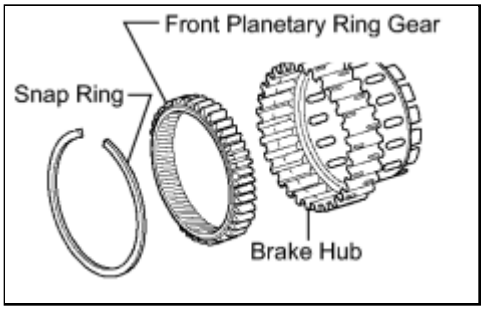
NOTICE:

Be careful not to damage the O-rings.

13. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Install the return spring.

(b) Place SST on the return spring and compress the return spring with a press.



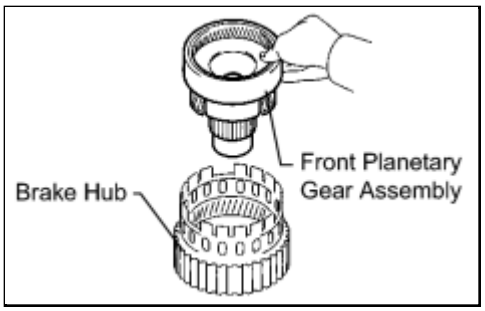
SST: 09387-00070

(c) Using a snap ring expander, install the snap ring to the transaxle case.

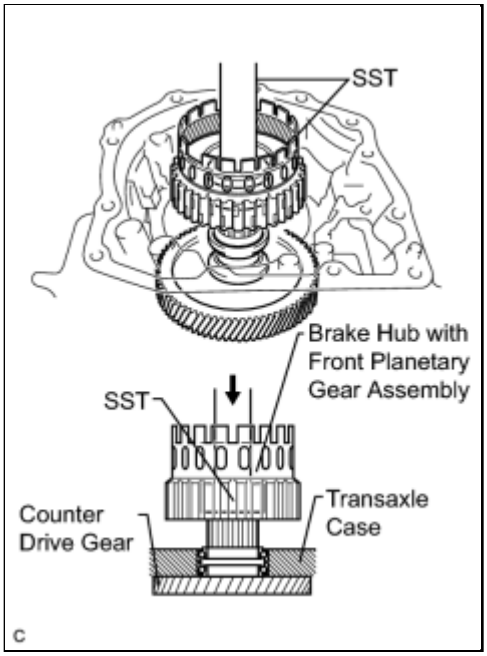
NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.
- Do not expand the snap ring excessively.
- After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.
- The snap ring should be securely engaged in the groove of the cylinder.

14. INSTALL FRONT PLANETARY RING GEAR



(a) Using a screwdriver, install the front planetary ring gear and snap ring to the brake hub.



NOTICE:

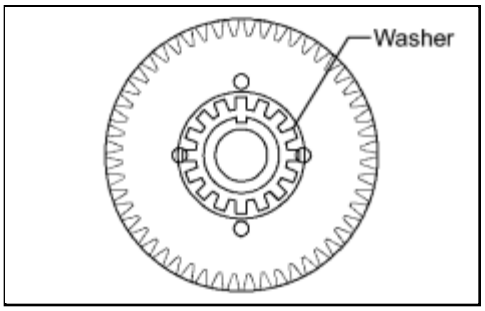
Confirm that the snap ring is engaged in the groove of the brake hub correctly.

15. INSTALL FRONT PLANETARY GEAR ASSEMBLY

(a) Install the front planetary gear assembly to the brake hub.

(b) Using SST and a press, press-fit the front planetary gear assembly.

SST: 09950-60010



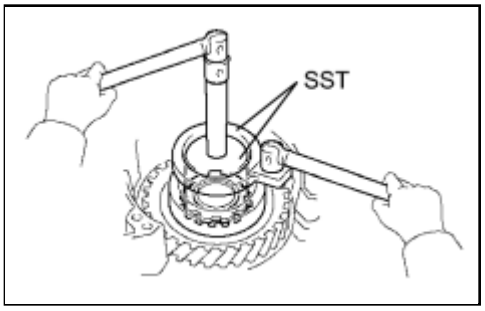
09951-00500

SST: 09950-70010

09951-07100

NOTICE:

- Do not apply excessive pressure to the front planetary gear assembly.
- Press the inner race of the counter drive angular ball bearing (front side), counter drive gear, and front planetary gear assembly to the position where no pre-load is applied to each tapered roller bearing (left and right).



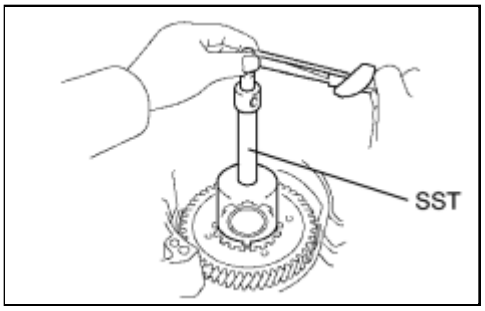
(c) Install a new washer as shown in the illustration.

(d) Using SST, install the nut.

SST: 09387-00030

SST: 09387-00080

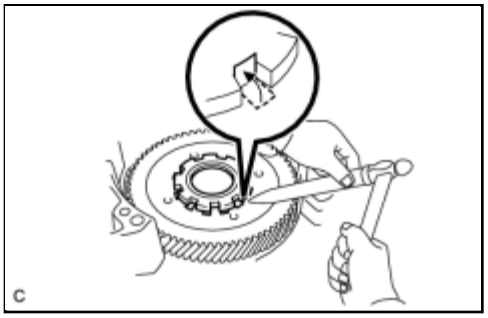
Torque: 185 N·m (1886 kgf·cm, 136ft·lbf)



(e) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm. If the measured value is not within the specified range, gradually tighten the nut until the turning torque falls within the specified range.

SST: 09387-00080

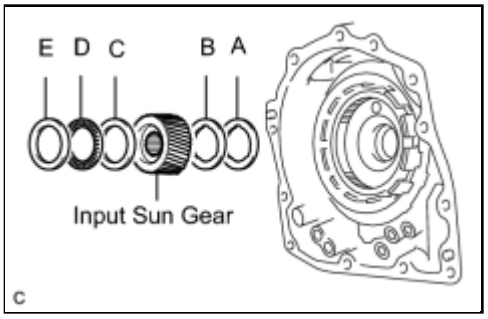
Torque: 350 N·m (3569 kgf·cm, 258ft·lbf)(a limit)



Bearing Turning Torque:

0.19 to 0.4 N*m (1.9 to 4.1 kgf*cm, 1.7 to 3.5 in.*lbf)

HINT:



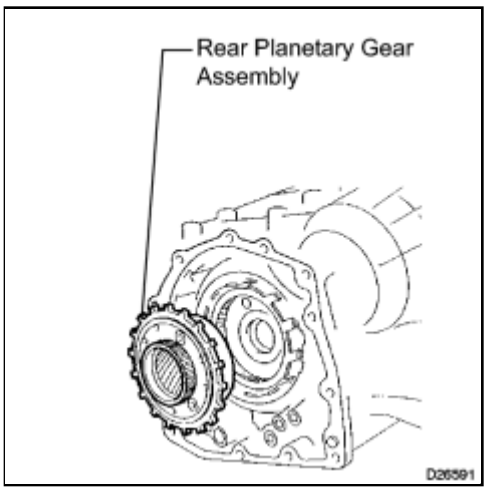
Use a torque wrench with a fulcrum length of 160 mm (6.30 in.) to measure the turning torque.

(f) Using a chisel and hammer, stake the front lock washer.

16. INSTALL INPUT SUN GEAR

(a) Coat the 2 thrust bearings with ATF.

(b) Install the input sun gear, 2 thrust needle roller bearings, 2 No. 2 thrust bearing races, and No. 3 thrust bearings to the transaxle case.

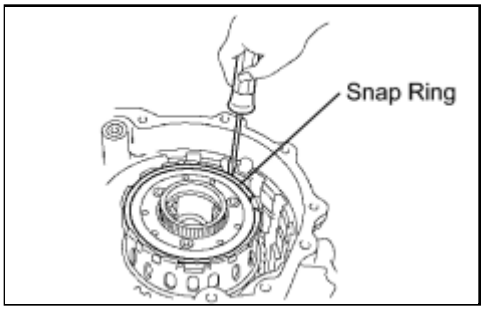


NOTICE:

Ensure that the parts are installed in the correct order and direction.

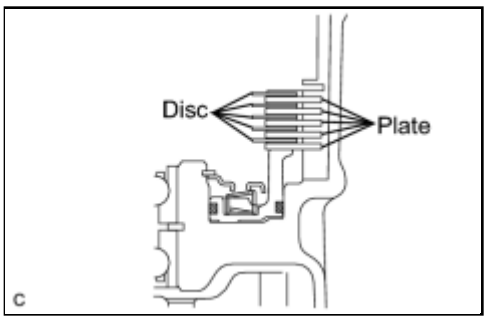
Thrust Bearing and Bearing Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing Race, A	34.5 (1.358)	56.82 (2.2370)
Thrust Bearing, B	32.4 (1.276)	56.62 (2.2291)
Bearing Race, C	40.3 (1.587)	58.0 (2.284)
Thrust Bearing, D	38.6 (1.520)	60.0 (2.362)
Bearing Race, E	38.6 (1.520)	58.0 (2.284)



17. INSTALL REAR PLANETARY GEAR ASSEMBLY

(a) Install the rear planetary gear assembly to the brake hub.



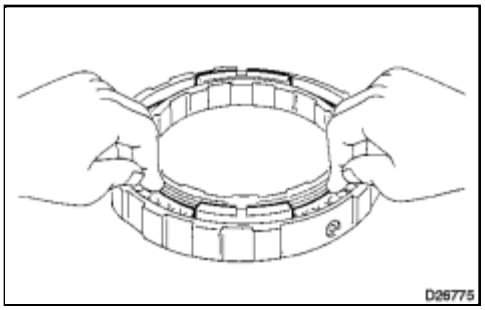
(b) Using a screwdriver, install the snap ring.

NOTICE:

Confirm that the snap ring is engaged in the groove of the 1st and reverse brake hub correctly.

18. INSTALL 1ST AND REVERSE BRAKE DISC

(a) Coat the 5 discs with ATF.



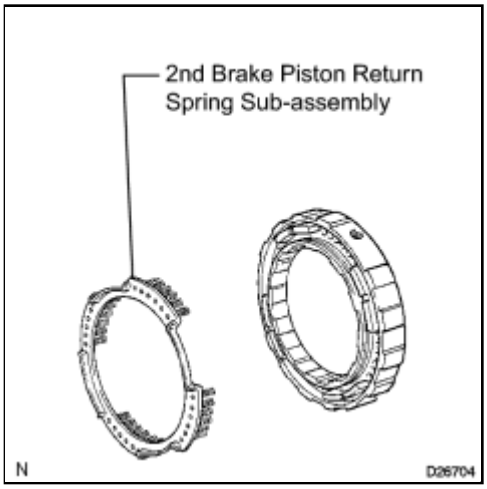
(b) Install the 5 plates and 5 discs.

NOTICE:

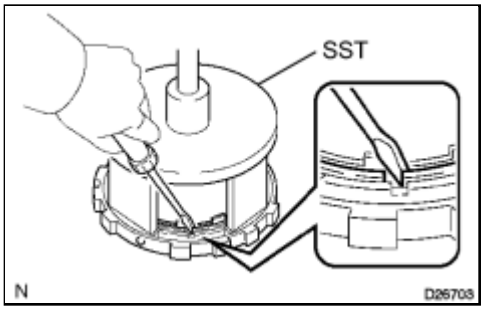
Be sure to install the plates and disks in the correct order.

19. INSPECT PACK CLEARANCE OF 1ST AND REVERSE BRAKE INFO

20. INSTALL 2ND BRAKE PISTON



(a) Coat the 2nd brake piston with ATF, and install it to the 2nd brake cylinder.



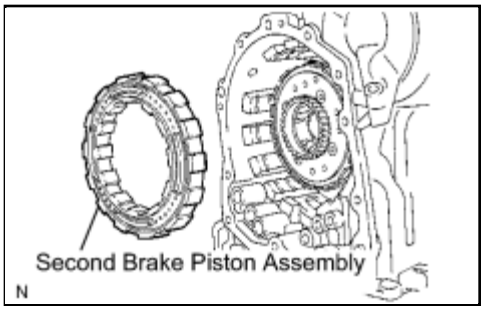
21. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Install the 2nd brake piston return spring sub-assembly.

NOTICE:

Ensure that all springs are fitted in the piston correctly.

(b) Place SST on the piston return spring, and compress it with a press.

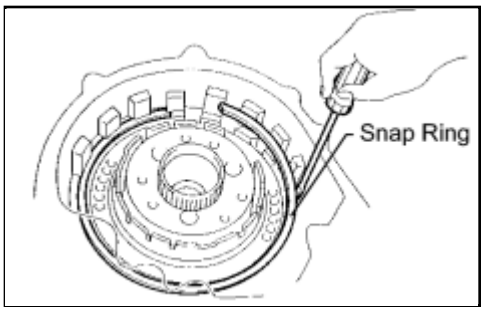


SST: 09387-00060

(c) Using a screwdriver, install the snap ring.

NOTICE:

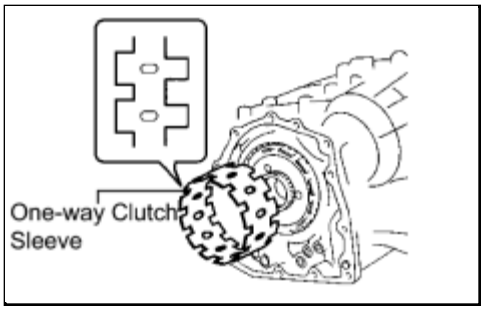
Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.



22. INSTALL 2ND BRAKE PISTON ASSEMBLY

(a) Install the 2nd brake piston assembly to the transaxle case.

(b) Install the snap ring and measure the inside diameter.

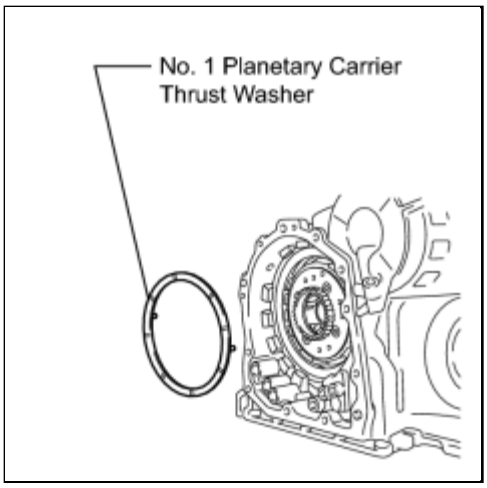


Inside diameter:
More than 172 mm (6.77 in.)

NOTICE:

- Make sure to install the tapered snap ring in the correct direction.
- If the diameter does not meet the specified value, replace the snap ring with a new one.
- After installing the snap ring, confirm that there is no clearance between the 2nd brake cylinder and the contact surface of the cylinder in the transaxle case.

23. INSTALL ONE-WAY CLUTCH SLEEVE



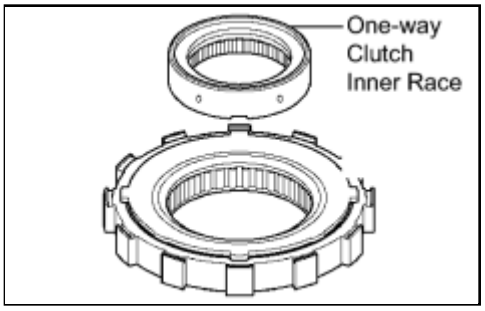
(a) Install the one-way clutch sleeve to the 2nd brake cylinder assembly.

NOTICE:

Check the positioning direction of the outer sleeve.

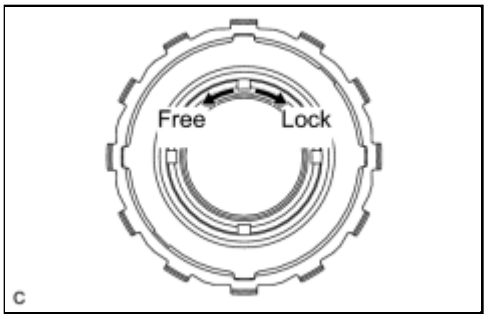
24. INSTALL NO. 1 PLANETARY CARRIER THRUST WASHER

(a) Coat the No. 1 planetary carrier thrust washer with ATF, and install it onto the planetary sun gear assembly.



NOTICE:

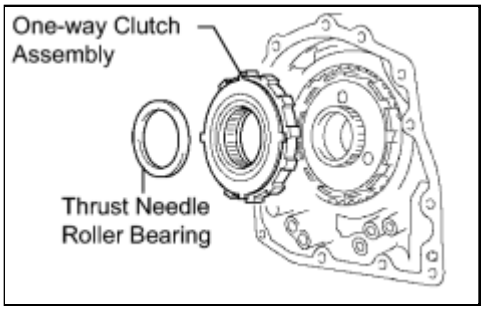
After installing the washer, confirm that the projections on the washer are securely fitted in the holes of the planetary sun gear assembly.



25. INSTALL ONE-WAY CLUTCH ASSEMBLY

(a) Install the one-way clutch inner race to the one-way clutch.

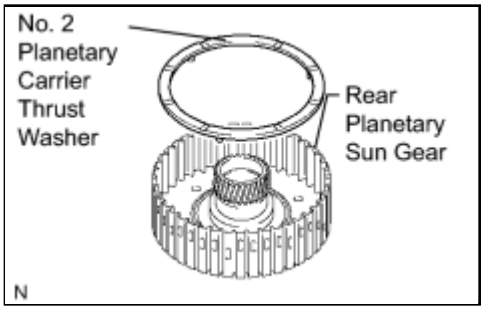
NOTICE:



- Check the direction of the inner race.
- Confirm that the identification mark can be seen.

(b) Make sure that the one way clutch turns freely counterclockwise and locks when turned clockwise.

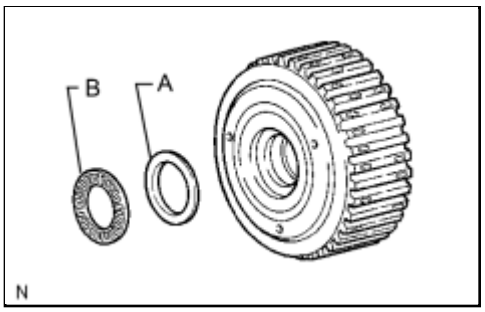
(c) Install the one-way clutch and thrust needle roller bearing to the one-way clutch sleeve outer.



Bearing Diameter

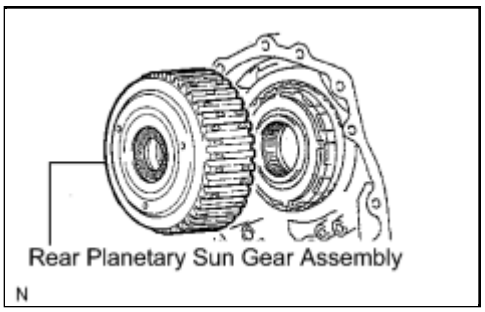
	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing	53.6 (2.110)	69.6 (2.740)

NOTICE:



Install the thrust bearing properly so that uncolored race will be visible.

26. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY

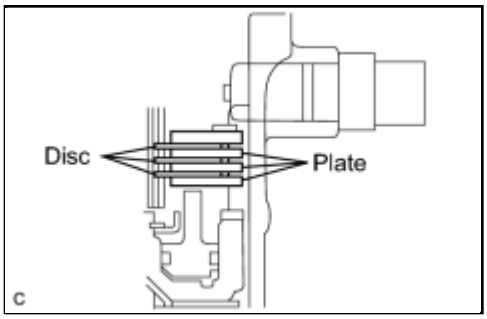


(a) Coat the No. 2 planetary carrier thrust washer with ATF, and install it onto the rear planetary sun gear.

(b) Coat the bearing with petroleum jelly, and install it onto the rear planetary sun gear.

Bearing Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Race, A	33.1 (1.303)	45.4 (1.787)
Bearing, B	31.85 (1.254)	45.2 (1.78)



(c) Install the rear planetary sun gear assembly to the rear planetary gear.

NOTICE:

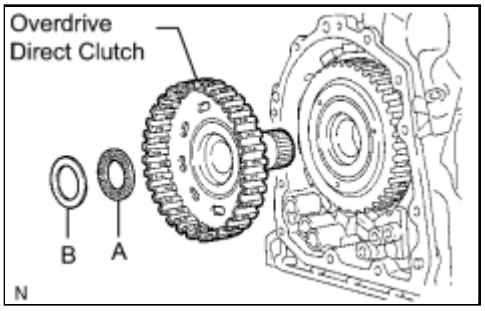
After installing the rear planetary sun gear assembly, confirm that the B1 discs engage.

27. INSTALL 2ND BRAKE CLUTCH DISC

(a) Coat the 3 discs with ATF.

(b) Install the 3 discs and 3 plates to the transaxle case.

(c) Install the snap ring.



28. INSPECT PACK CLEARANCE OF 2ND BRAKE INFO

29. INSTALL OVERDRIVE DIRECT CLUTCH HUB SUB-ASSEMBLY

(a) Install the direct clutch hub to the planetary gear assembly.

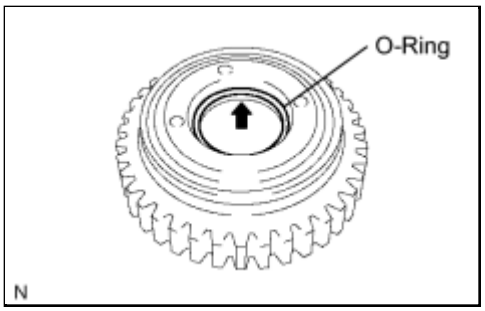
NOTICE:

Be careful not to damage the bushing inside the overdrive

clutch hub during installation.

(b) Coat the thrust bearing with ATF.

(c) Install the bearing race and the thrust bearing to the direct clutch hub.



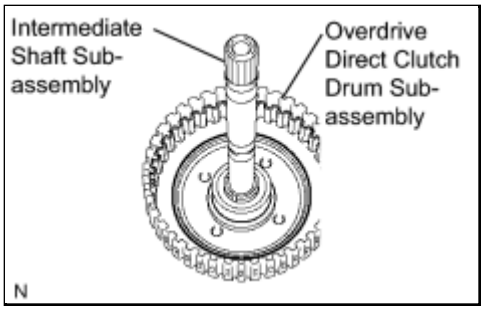
NOTICE:

When installing the bearing, hold the side of the overdrive clutch hub.

Bearing and Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing, A	25.0 (0.984)	39.5 (1.555)
Race, B	23.6 (0.929)	37.0 (1.457)

30. INSTALL OVERDRIVE DIRECT CLUTCH O-RING

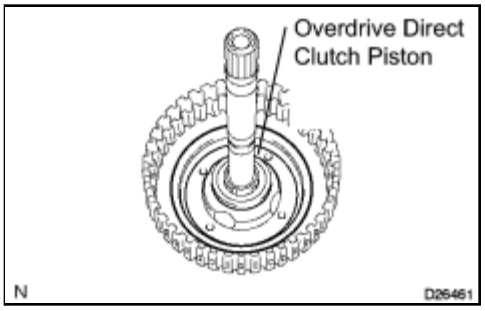


(a) Coat a new O-ring with ATF, and install it to the direct clutch drum.

NOTICE:

Ensure that the O-ring is not twisted or pinched.

31. INSTALL OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

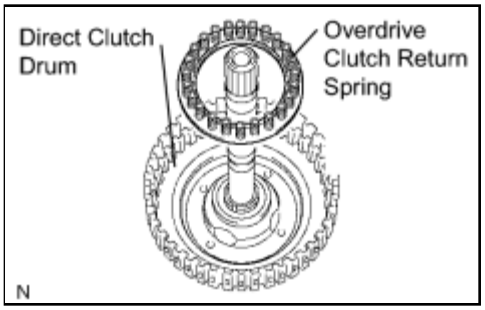


(a) Coat the direct clutch drum with ATF, and install it to the intermediate shaft.

NOTICE:

- Be careful not to damage the O-ring.
- Be careful not to damage the lip seal of the direct clutch drum.

32. INSTALL OVERDRIVE DIRECT CLUTCH PISTON

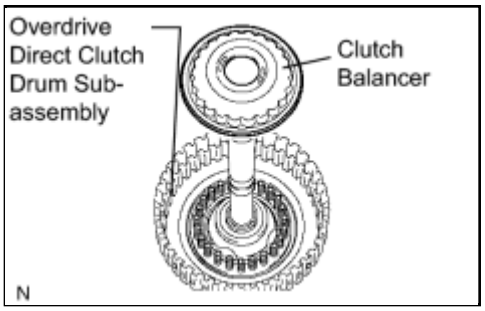


(a) Coat the overdrive direct clutch piston with ATF, and install it to the overdrive direct clutch drum sub-assembly.

NOTICE:

Be careful not to damage the lip seal of the direct clutch piston.

33. INSTALL OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

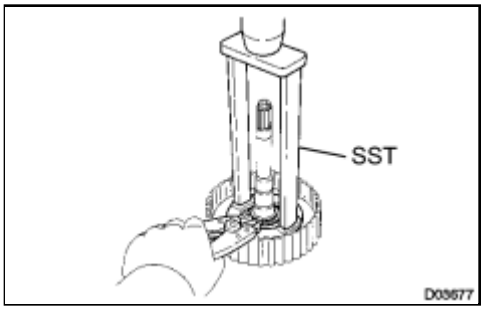


(a) Install the overdrive clutch return spring sub-assembly to the overdrive direct clutch drum sub-assembly.

NOTICE:

When installing the spring sub-assembly, ensure that all springs are fitted in the piston correctly.

(b) Coat the clutch balancer with ATF.

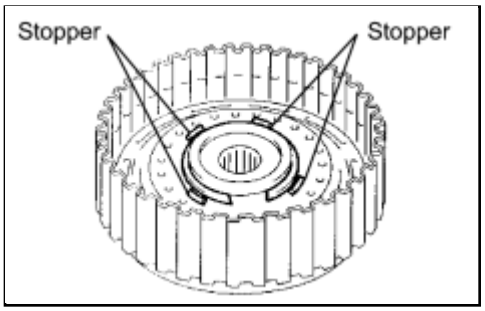


(c) Install the clutch balancer to the overdrive direct clutch drum sub-assembly.

NOTICE:

- Be careful not to damage the lip seal of the direct clutch balancer.
- Ensure that the clutch balancer is not pinched and there are no other defects at the sealing lip.
- Apply enough ATF to the sealing lip prior to installation.

(d) Place SST on the clutch balancer and compress the piston return spring with a press.

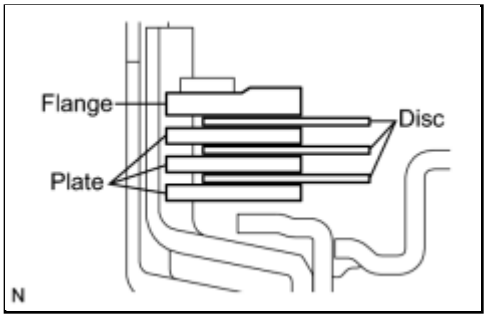


SST: 09387-00020

(e) Using a snap ring expander, install the snap ring to the direct clutch drum.

NOTICE:

- Stop the press when the spring seat is lowered to the place 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.



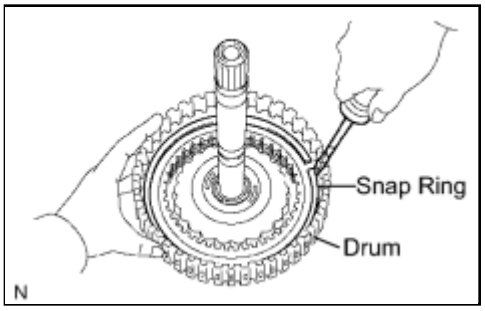
(f) Position the end gap of the snap ring in the piston as shown in the illustration.

NOTICE:

Ensure that the end gap of the snap ring is not aligned with any of the stoppers.

34. INSTALL OVERDRIVE DIRECT CLUTCH DISC

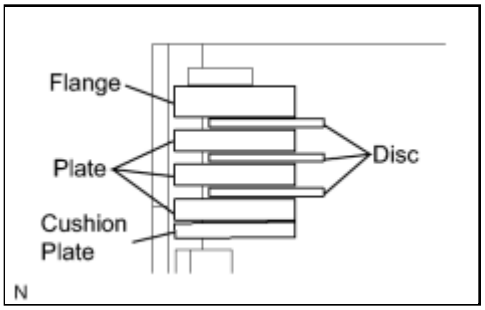
(a) Coat the 3 discs with ATF.



(b) Install the 3 plates, 3 discs and flange to the intermediate shaft.

NOTICE:

Be sure to install the plates, disks and flange in the correct order.

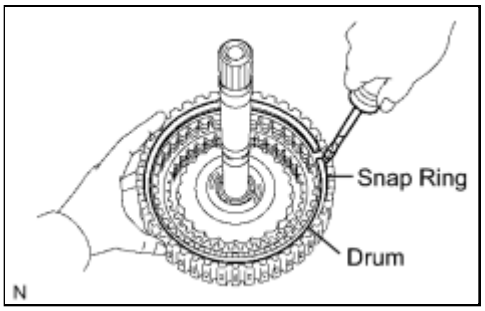


(c) Using a screwdriver, install the snap ring.

NOTICE:

The snap ring should be securely engaged in the groove of the drum.

35. INSTALL DIRECT MULTIPLE DISC CLUTCH DISC



(a) Coat the 3 discs with ATF.

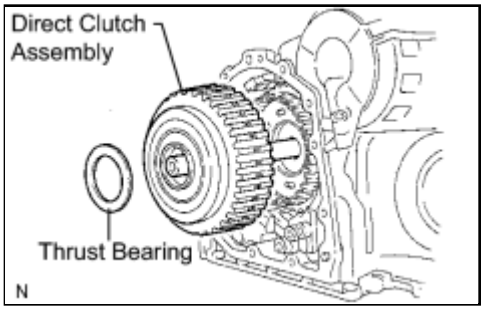
(b) Install the cushion plate, 3 plates, 3 discs and flange to the intermediate shaft.

NOTICE:

- Install the cushion plate with the mark on the white surface facing the plate.
- Be sure to install the cushion plate, plates, disks and flange in the correct order.

(c) Using a screwdriver, install the snap ring.

NOTICE:

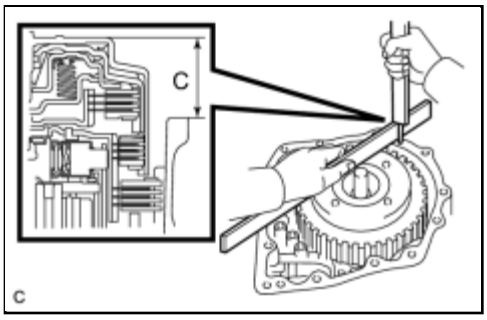


The snap ring should be securely engaged in the groove of the drum.

36. INSPECT PACK CLEARANCE OF DIRECT CLUTCH INFO

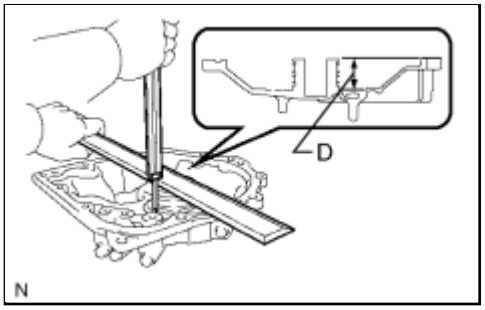
37. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH INFO

38. INSTALL DIRECT CLUTCH ASSEMBLY



(a) Coat the thrust bearing with ATF.

(b) Install the direct clutch assembly and thrust bearing to the rear planetary sun gear assembly.



NOTICE:

The disc in the direct clutch should be completely matched with the hub attached outside the rear planetary sun gear. Otherwise, the rear cover cannot be installed.

(c) Clean the contact surfaces of the transaxle case and the rear cover.

(d) As shown in the illustration, place a straightedge on the direct clutch drum and measure the distance between the transaxle case and the straightedge using a vernier caliper (Dimension C).

(e) Using a vernier caliper and a simple straightedge, measure the dimension shown in the illustration.

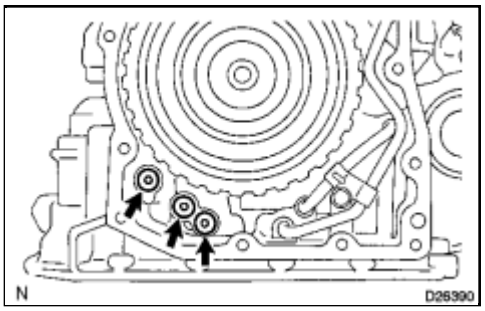
(f) Calculate the end play value using the following formula. Select a thrust bearing which satisfies the specified end play value and install it.

End play:

0.199 to 0.970 mm (0.00783 to 0.0382 in.)

NOTICE:

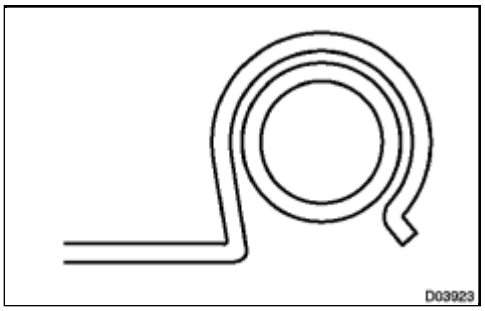
Make sure that the uncolored race side is facing the direct clutch assembly.



HINT:

End play = Dimension D - Dimension C

Bearing Thickness and Diameter

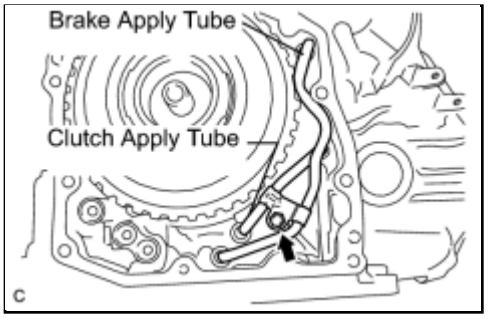


THICKNESS	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
3.6 (0.142)	55.9 (2.201)	76.0 (2.992)
3.9 (0.154)	55.9 (2.201)	76.6 (3.016)

39. INSTALL NO. 1 GOVERNOR APPLY GASKET

(a) Install 3 new No. 1 governor apply gaskets to the transaxle case.

40. INSTALL BRAKE APPLY TUBE

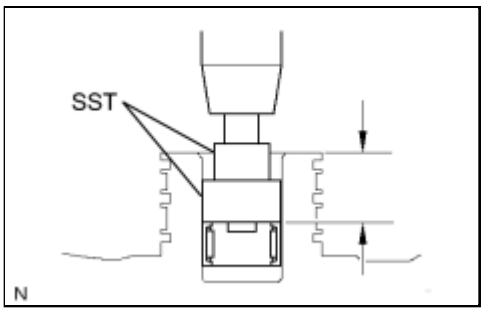


(a) Install the clamp to the brake apply tube.

NOTICE:

Make sure to install the clamp to the apply tube before installing the apply tube to the transaxle case. This prevents the apply tube from being deformed or damaged.

(b) Install the clutch apply tube.



(c) Install the brake apply tube to the transaxle case with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

NOTICE:

Each pipe should be securely inserted until it reaches the stopper.

41. INSTALL NEEDLE ROLLER BEARING

(a) Using SST and a press, install the needle roller bearing to the transaxle rear cover.

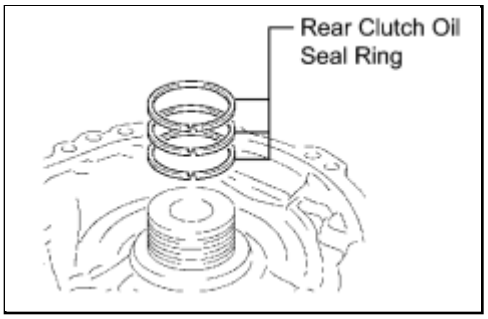
SST: 09950-60010

09951-00230

09952-06010

09951-00360

Press fit depth:



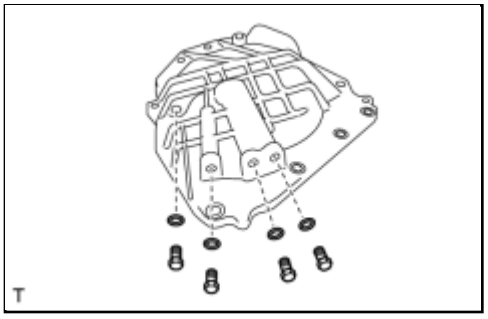
20.55 to 21.25 mm (0.8091 to 0.8366 in.)

NOTICE:

- Face the inscribed side of the bearing race up.
- Keep pressing until the specified value is obtained.

(b) Coat the needle roller bearing with ATF.

42. INSTALL REAR CLUTCH OIL SEAL RING

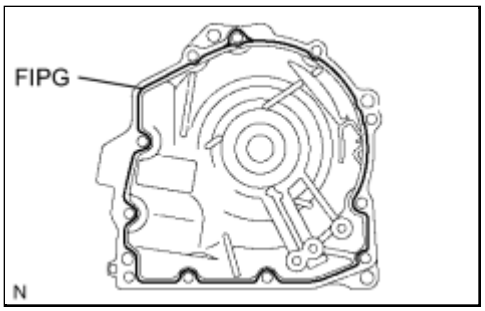


(a) Coat 3 new rear clutch oil seal rings with ATF, and install them to the transaxle rear cover.

NOTICE:

The rear clutch oil seal rings should be securely engaged in the grooves of the drum.

43. INSTALL NO. 1 TRANSAXLE CASE PLUG

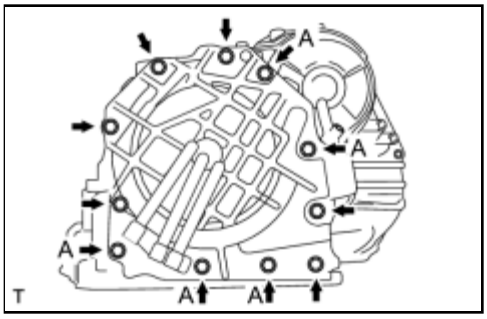


(a) Install a new O-ring to each No. 1 transaxle case plug.

(b) Install the 4 No. 1 transaxle case plugs to the transaxle rear cover.

Torque: 7.4 N·m (75 kgf·cm, 65in·lbf)

44. INSTALL TRANSAXLE REAR COVER SUB-ASSEMBLY



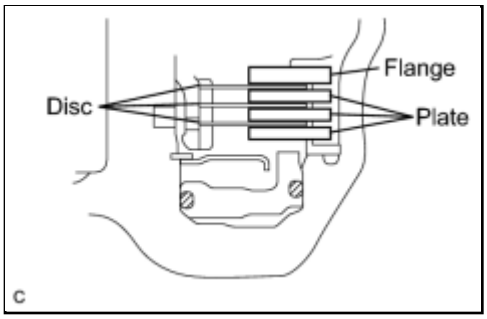
(a) Remove any packing material and keep the contact surfaces of the transaxle rear cover and the transaxle case away from oil.

(b) Apply FIPG to the cover.

FIPG:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or Equivalent

NOTICE:

Apply FIPG in a continuous bead (width 1.2 mm (0.0472 in.)) along the sealing surface.



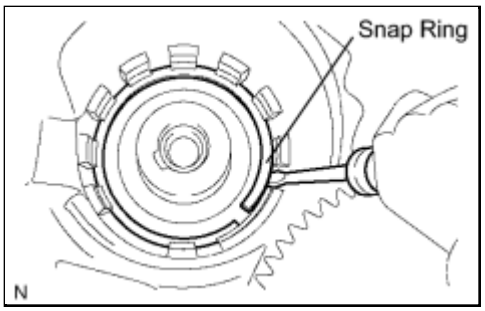
(c) Apply adhesive to the threads of bolt A.

Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

(d) Install the 11 bolts.

Bolt A - Torque: 19 N·m (190 kgf·cm, 14ft·lbf)
Other bolts - Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

45. INSTALL NO. 2 UNDERDRIVE CLUTCH DISC



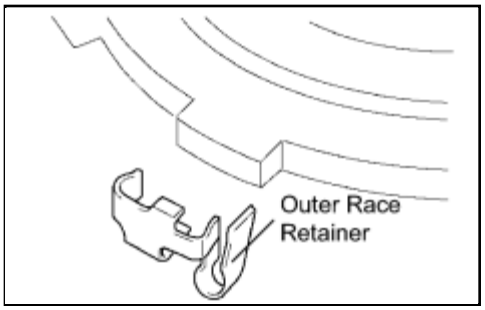
(a) Coat the 3 discs with ATF.

(b) Install the 3 discs, 3 plates and flange to the transaxle case.

NOTICE:

Be sure to install the disks, plates and flange in the correct order.

(c) Using a screwdriver, install the snap ring.

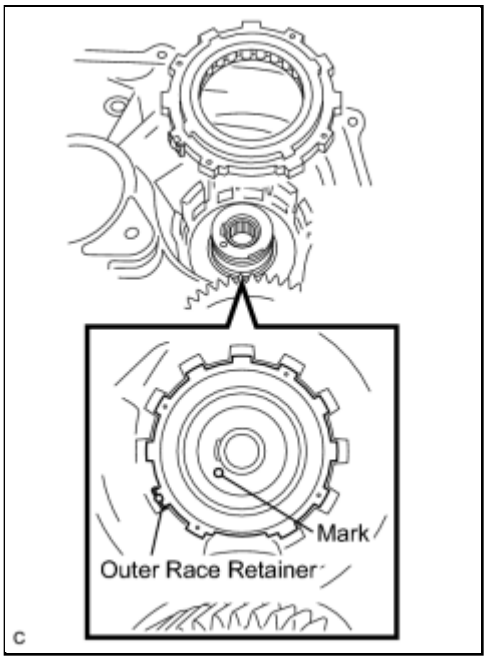


NOTICE:

The snap ring should be securely engaged in the groove of the drum.

46. INSPECT PACK CLEARANCE OF UNDERDRIVE BRAKE INFO

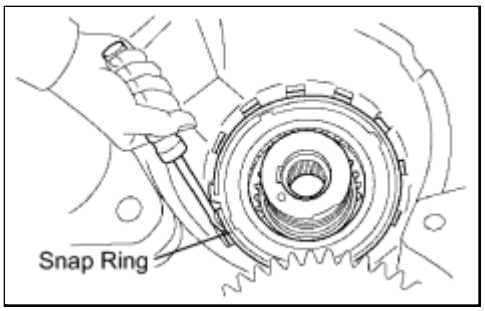
47. INSPECT UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY INFO



48. INSTALL UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

(a) Install the outer race retainer to the one-way clutch.

NOTICE:

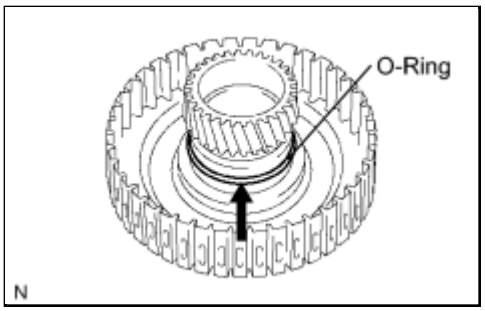


Securely install the outer race retainer onto the tooth of the one-way clutch.

(b) Install the one-way clutch to the transaxle case.

NOTICE:

Ensure that the outer race retainer and the mark on the transaxle case are aligned.

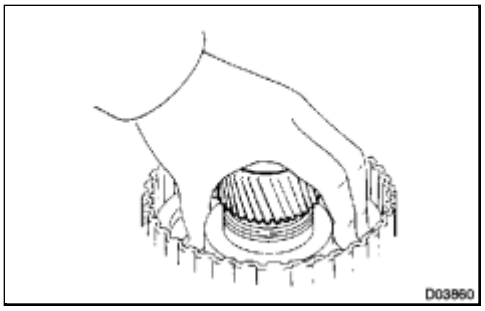


(c) Using a screwdriver, install the snap ring to the transaxle case.

NOTICE:

The snap ring should be securely engaged in the groove of the transaxle case.

49. INSTALL UNDERDRIVE CLUTCH DRUM O-RING



(a) Coat a new O-ring with ATF, and install it to the underdrive clutch drum.

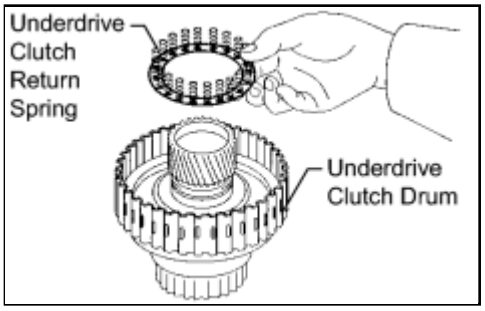
NOTICE:

Install the O-ring carefully so that it is not twisted or pinched.

50. INSTALL UNDERDRIVE CLUTCH PISTON SET

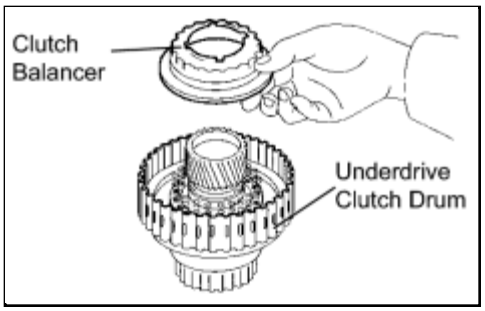
(a) Coat the underdrive clutch piston with ATF, and install it to the underdrive clutch piston drum.

NOTICE:



- Be careful not to damage the O-ring.
- Be careful not to damage the lip seal of the piston.

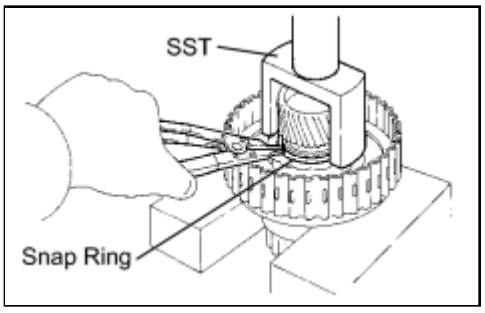
51. INSTALL UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY



(a) Install the return spring to the underdrive clutch drum.

NOTICE:

After installing the spring sub-assembly, check all of the springs are fitted in the piston correctly.



(b) Coat the clutch balancer with ATF.

(c) Install the clutch balancer to the underdrive clutch drum.

NOTICE:

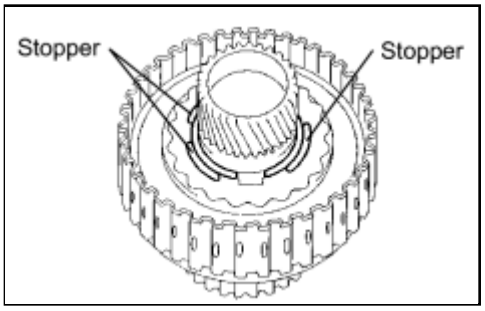
Be careful not to damage the lip seal of the clutch balancer.

(d) Place SST on the clutch balancer and compress the piston return spring with a press.

SST: 09350-32014

09351-32070

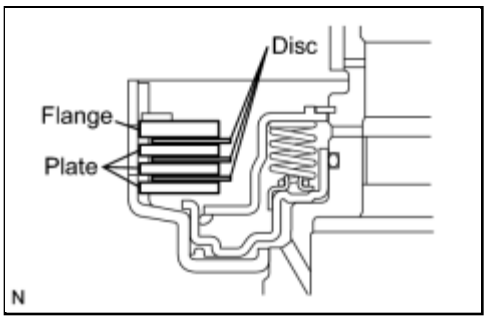
(e) Using a snap ring expander, install the snap ring to the underdrive clutch drum.



NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.

(f) Position the end gap of the snap ring in the underdrive clutch drum as shown in the illustration.

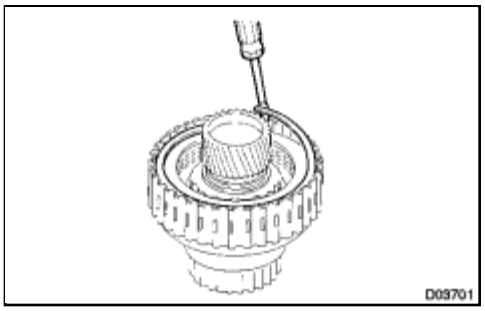


NOTICE:

The end gap of the snap ring should not be aligned with any of the stoppers.

52. INSTALL NO. 1 UNDERDRIVE CLUTCH DISC

(a) Coat the 3 discs with ATF.



(b) Install the 3 plates, 3 discs, and flange to the underdrive clutch drum.

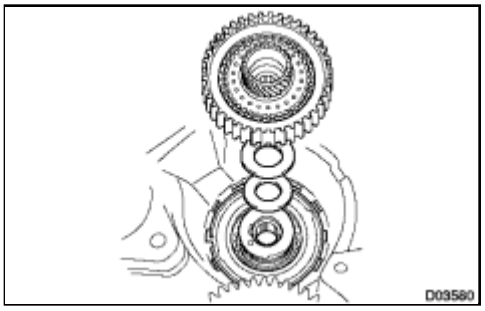
NOTICE:

Be careful about the order of discs, plates, and flange.

53. INSTALL NO. 2 UNDERDRIVE CLUTCH FLANGE HOLE SNAP RING

(a) Using a screwdriver, install the No. 2 underdrive clutch flange hole snap ring.

(b) Check that the end gap of the snap ring is not aligned with one of the cutouts.



NOTICE:

The snap ring should be securely engaged in the groove of the drum.

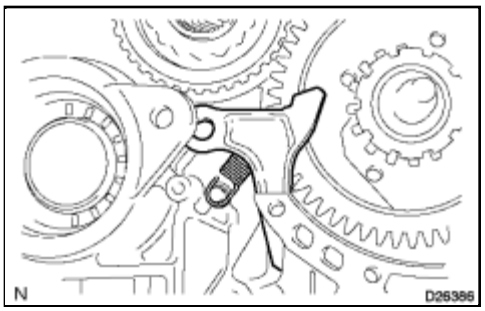
54. INSTALL UNDERDRIVE CLUTCH ASSEMBLY

(a) Coat the bearing and bearing race with ATF, and install them onto the underdrive clutch.

Bearing and Bearing Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing	37.73 (1.4854)	58.0 (2.284)
Race	29.9 (1.177)	55.5 (2.185)

(b) Install the underdrive clutch assembly to the transaxle case.

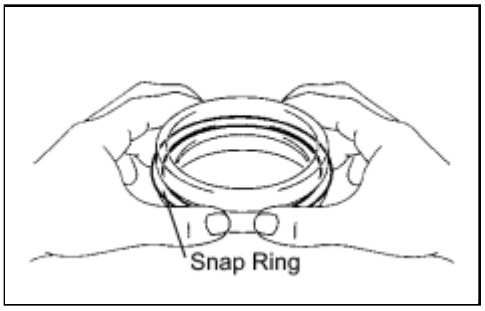


NOTICE:

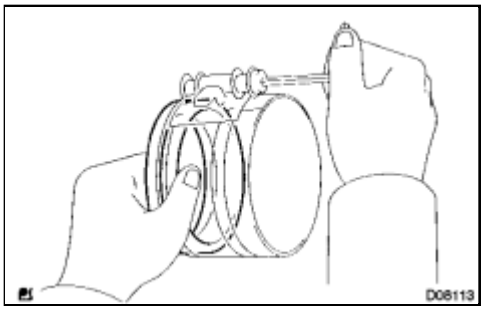
When installing the underdrive clutch drum sub-assembly, do not damage the oil seal ring.

55. INSTALL PARKING LOCK PAWL

(a) Install the pawl pin and spring to the parking lock pawl.

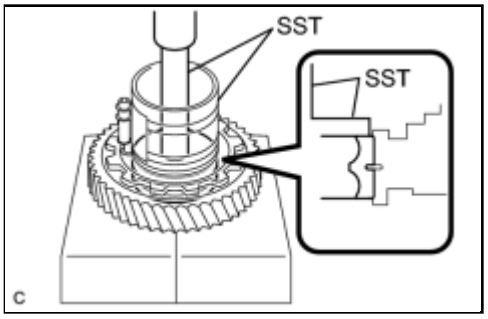


(b) Temporarily install the parking lock pawl, pin and spring to the transaxle case as shown in the illustration.



56. INSTALL UNDERDRIVE PLANETARY RING GEAR

(a) Install a new snap ring to the outer race of the tapered roller bearing.



HINT:

If replacing the bearing, also replace the counter driven gear with a new one.

(b) Using a piston ring compressor, squeeze the snap ring.

(c) Using SST and a press, press in the outer race of the angular ball bearing.

NOTICE:

Press the counter driven gear while rotating it.

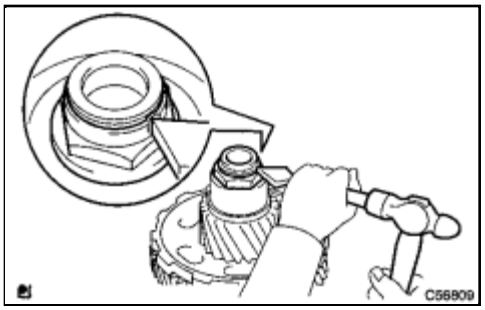
60. INSTALL FRONT PLANETARY GEAR NUT

(a) Clamp the underdrive planetary gear in a soft jaw vise.

NOTICE:

Be careful not to damage the differential drive pinion.

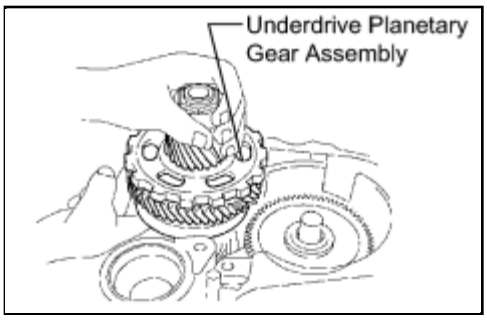


(b) Using a socket wrench, install a new gear nut.

Torque: 280 N·m (2855 kgf·cm, 207ft·lbf)

HINT:

Use a torque wrench with a fulcrum length of 750 mm (29.53 in.).

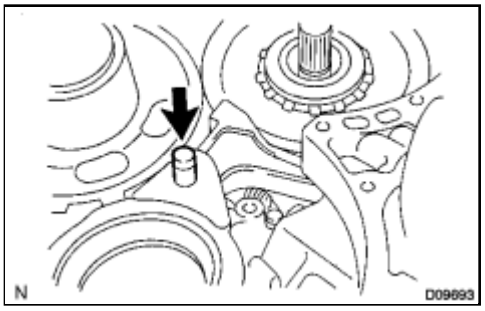


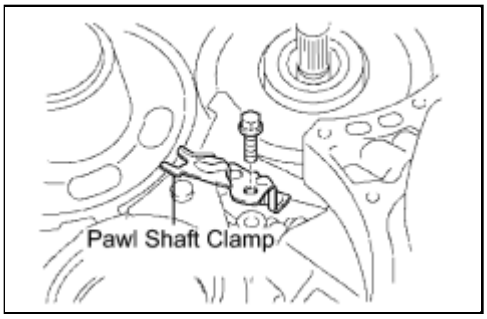
(c) Using a chisel and hammer, stake the gear nut.

CAUTION:

Be sure that there are no cracks on the nut.

61. INSTALL UNDERDRIVE PLANETARY GEAR ASSEMBLY

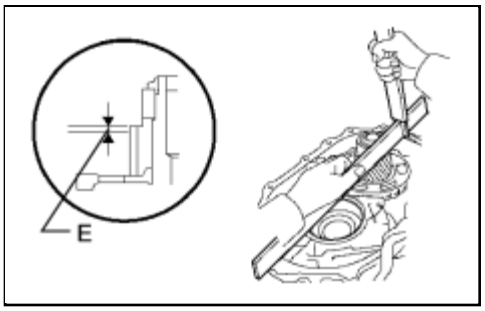




(a) Install the underdrive planetary gear assembly to the transaxle case.

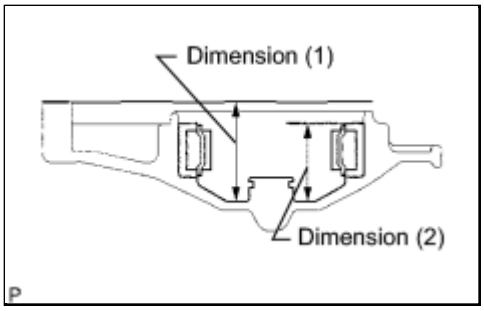
NOTICE:

Firmly engage all the discs of the underdrive clutch with the hub splines of the underdrive planetary gear assembly and securely assemble them.



(b) Install the parking lock pawl shaft.

(c) Install the pawl shaft clamp with the bolt.



Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

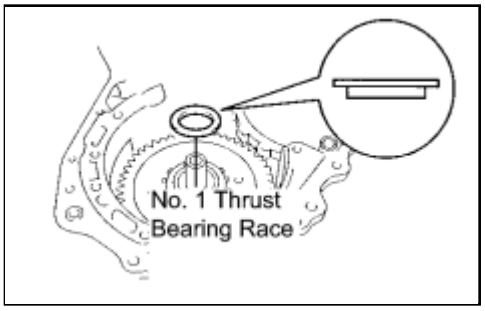
(d) Using a straightedge and a vernier caliper as shown in the illustration, measure the gap between the top of the differential drive pinion in the underdrive planetary gear and contact surface of the transaxle case and housing (Dimension E).

NOTICE:

Take a note of dimension E because it is necessary for the following process.

(e) As shown in the illustration, measure the 2 places of the transaxle housing, and calculate dimension F using the following formula.

NOTICE:

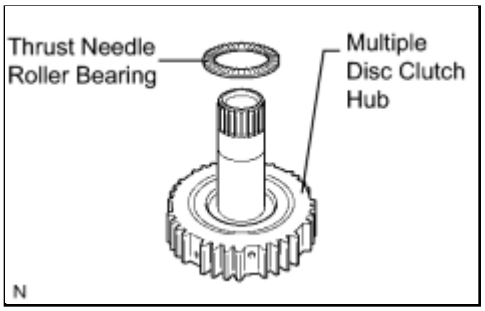


Take a note of dimension F because it is necessary for the following process.

HINT:

Dimension F = Dimension (1) - Dimension (2)

62. INSTALL MULTIPLE DISC CLUTCH HUB

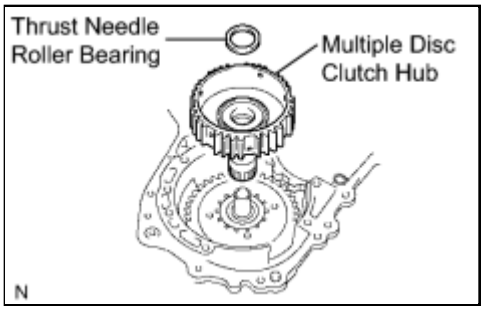


(a) Install the No. 1 thrust bearing race to the transaxle case

while checking its direction.

Bearing Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing Race	34.5 (1.359)	48.5 (1.909)

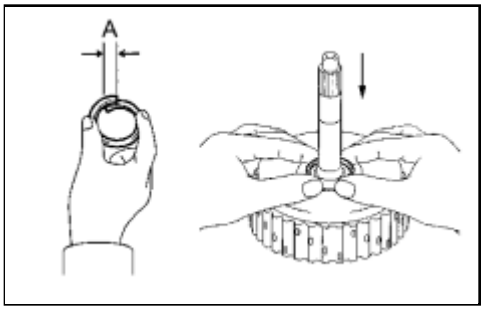


(b) Coat the thrust needle roller bearing and race with ATF, and install them onto the multiple disc clutch hub.

Thrust Bearing and Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Thrust Bearing	36.3 (1.429)	52.2 (2.055)

(c) Coat the needle roller bearing with ATF.



(d) Install the needle roller bearing to the multiple disc clutch hub.

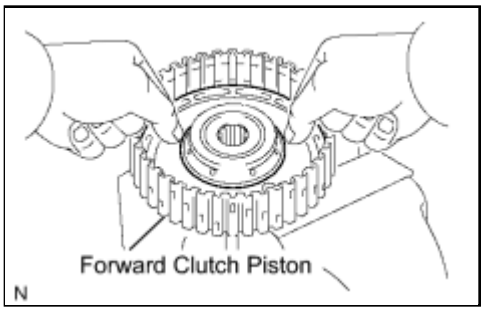
Bearing Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing	23.5 (0.925)	44.0 (1.732)

(e) Install the multiple disc clutch hub to the transaxle case.

63. INSTALL INPUT SHAFT OIL SEAL RING

(a) Compress a new input shaft oil seal ring from both sides to adjust dimension A.



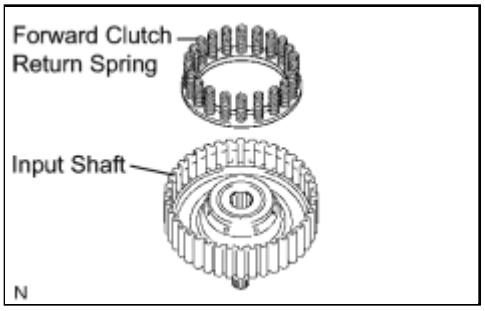
Dimension A:
5 mm (0.197 in.)

(b) Coat the oil seal ring with ATF and install it to the input shaft.

NOTICE:

Do not expand the gap of the oil seal ring too much. Securely engage the hooks.

64. INSTALL FORWARD CLUTCH PISTON SUB-ASSEMBLY

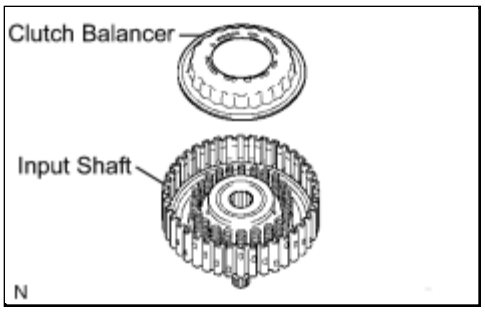


(a) Coat the forward clutch piston with ATF, and install it to the input shaft.

NOTICE:

Be careful not to damage the lip seal of the forward clutch piston.

65. INSTALL FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

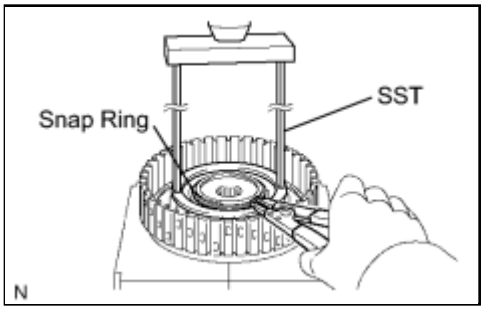


(a) Install the return spring to the input shaft.

NOTICE:

After installing the spring sub-assembly, check that all of the springs are fitted to piston correctly.

(b) Coat the clutch balancer with ATF.

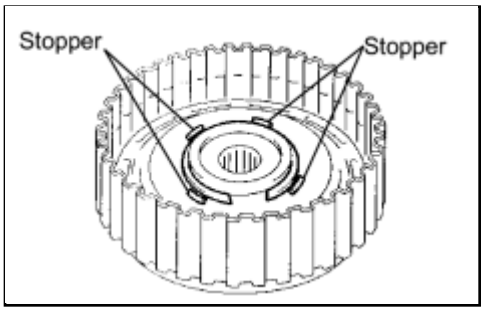


(c) Install the clutch balancer to the input shaft.

NOTICE:

- Be careful not to damage the lip seal of the forward clutch balancer.
- Install the clutch balancer carefully not to pinch or damage at the sealing lip.
- Apply sufficient ATF to the sealing lip prior to installation.

(d) Place SST on the clutch balancer, and compress the clutch balancer with a press.

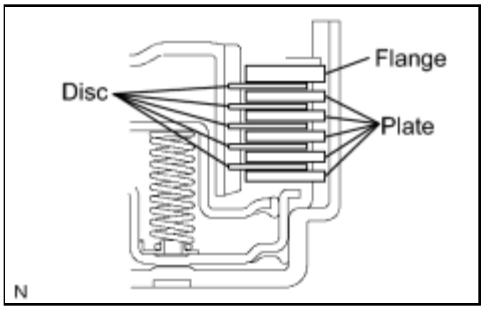


SST: 09387-00020

(e) Install the snap ring with a snap ring expander.

NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.



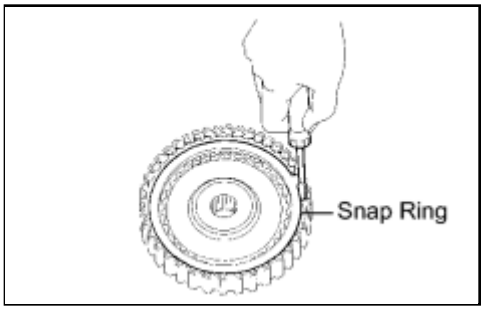
(f) Position the end gap of the snap ring in the piston as shown in the illustration.

NOTICE:

The end gap of the snap ring should not be aligned with any of the stoppers.

66. INSTALL FORWARD MULTIPLE DISC CLUTCH DISC

(a) Coat the 5 discs with ATF.



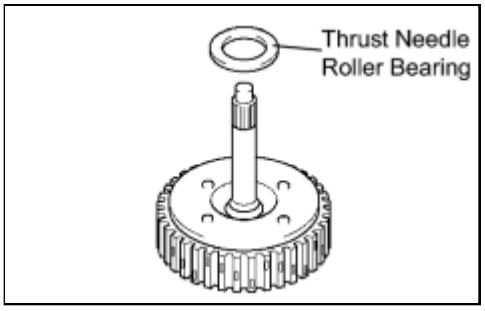
(b) Install the 5 plates, 5 discs, and flange to the input shaft.

NOTICE:

Be careful about the order of discs, plates, and flange.

(c) Using a screwdriver, install the snap ring.

(d) Check that the end gap of the snap ring is not aligned with one of the cutouts.



NOTICE:

The snap ring should be securely engaged in the groove of the drum.

67. INSPECT PACK CLEARANCE OF FORWARD CLUTCH INFO

68. INSPECT FORWARD MULTIPLE DISC CLUTCH DISC INFO

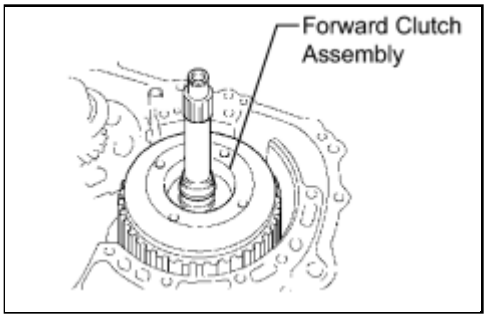
69. INSTALL FORWARD CLUTCH ASSEMBLY

(a) Coat the thrust needle roller bearing with ATF.

(b) Install the thrust needle roller bearing to the forward clutch.

Thrust Bearing Diameter

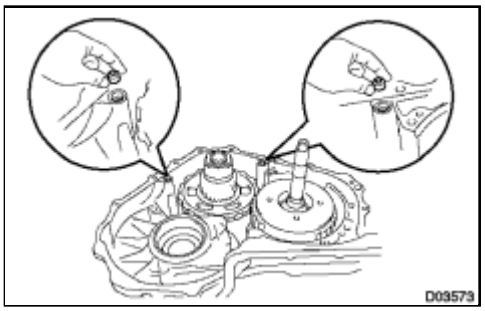
	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Thrust Bearing	33.85 (1.3327)	52.2 (2.0551)



NOTICE:

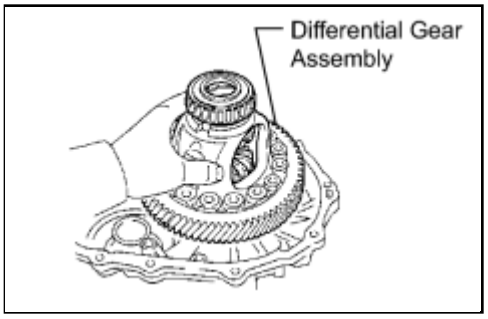
Install the thrust bearing properly so that the tempered side of the race will be visible.

(c) Install the forward clutch to the forward clutch assembly.



NOTICE:

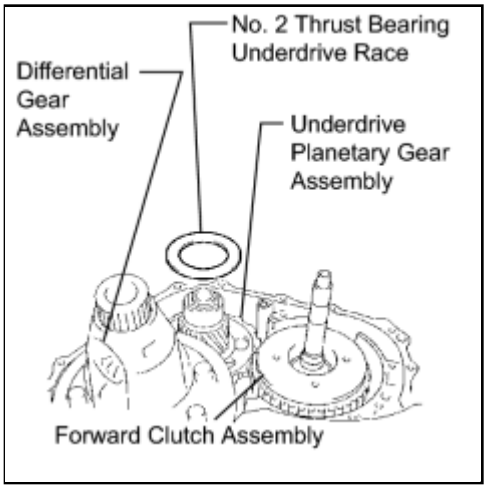
- Align the splines of all discs in the forward clutch with those of the multiple clutch hub to assemble them securely.
- Be careful not to damage the bush inside the forward clutch



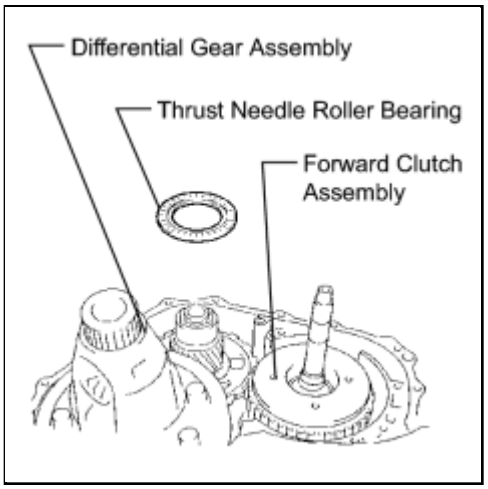
hub during installation.

70. INSTALL OVERDRIVE BRAKE GASKET

(a) Install 2 new overdrive brake gaskets.



71. INSTALL DIFFERENTIAL GEAR ASSEMBLY



(a) Install the differential gear assembly to the transaxle case.

72. INSTALL NO. 2 THRUST BEARING UNDERDRIVE RACE

(a) Install the No. 2 thrust bearing underdrive race to the underdrive planetary gear assembly.

73. INSTALL THRUST NEEDLE ROLLER BEARING

(a) Coat the thrust needle roller bearing with ATF.

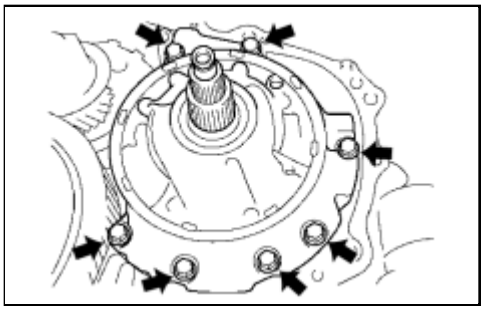
(b) Calculate the end play value using the following formula and values of Dimensions E and F that ware measured when installing the cylindrical roller bearing and underdrive planetary gear. Select an appropriate No. 2 underdrive planetary gear thrust bearing race which satisfies the specified end play value, and install it.

End play:
0.198 to 0.693 mm (0.00779 to 0.02728 in.)

HINT:

End play = Dimension F - Dimension E - Thrust bearing thickness 2.5 mm (0.0984 in.) - No. 2 underdrive thrust bearing race thickness.

Race Thickness: mm (in.)



F - E (MM (IN.))	THICKNESS (MM (IN.))
Less than 7.339 (0.28894)	3.5 (0.138)

F - E (MM (IN.))	THICKNESS (MM (IN.))
7.339 (0.28894) or more	3.9 (0.154)

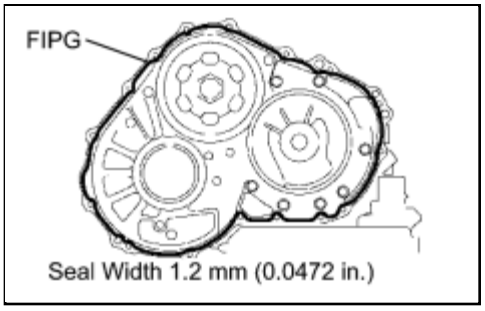
Bearing and Bearing Race Diameter

	INSIDE (MM (IN.))	OUTSIDE (MM (IN.))
Bearing	53.0 (2.087)	78.2 (3.079)
Bearing race	52.1 (2.051)	75.5 (2.972)

74. INSTALL OIL PUMP ASSEMBLY

(a) Install the oil pump to the transaxle case with the 7 bolts.

Torque: 22 N·m (225 kgf·cm, 16ft·lbf)



(b) Coat the O-ring of the oil pump with ATF.

NOTICE:

Confirm that the input shaft rotates smoothly by hand after installing the oil pump.

75. INSTALL TRANSAXLE HOUSING

(a) Remove any FIPG material and keep the contact surfaces of the transaxle case and transaxle housing away from oil.

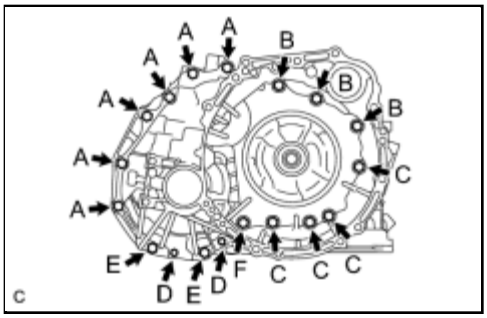
(b) Apply FIPG to the transaxle case.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

(c) Install the transaxle housing to the transaxle case with the 18 bolts.

Bolt A - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



Bolt B - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

Bolt C - Torque: 22 N·m (225 kgf·cm, 16ft·lbf)

Bolt D - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

Bolt E - Torque: 33 N·m (336 kgf·cm, 24ft·lbf)

Bolt F - Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

HINT:

Apply seal packing or equivalent to bolts C and F.

Seal packing:

Toyota Genuine Seal Packing 1344, Three Bond 1344 or equivalent

Bolt length

Bolt B, C, D, F

50 mm (1.969 in.)

Bolt A, E

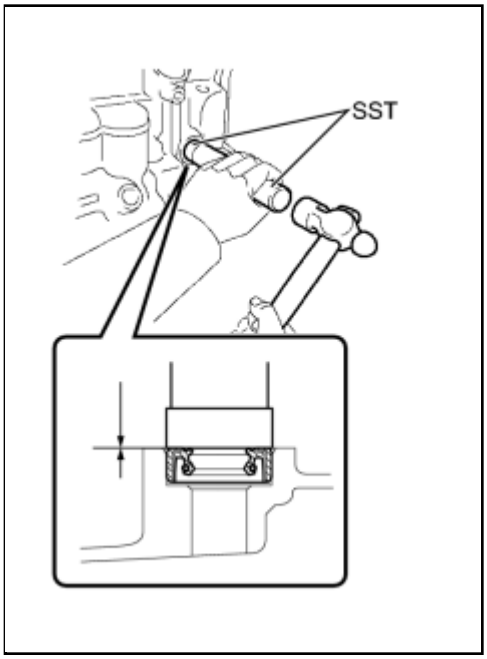
NOTICE:

Apply seal packing to new bolts and tighten them within 10 minutes of application.

76. INSPECT INPUT SHAFT END PLAY

INFO



77. SECURE AUTOMATIC TRANSAXLE ASSEMBLY

(a) Secure the transaxle assembly onto wooden blocks.

78. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Coat a new oil seal with MP grease.

(b) Using SST and hammer, install the oil seal to the transaxle case.

SST: 09950-60010

09951-00230

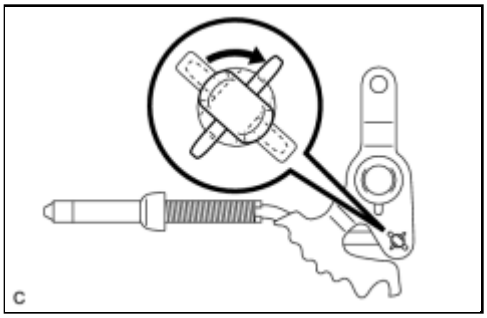
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

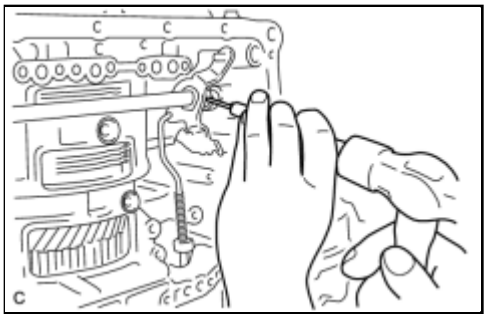
79. INSTALL PARKING LOCK ROD SUB-ASSEMBLY

(a) Install the parking lock rod to the manual valve lever.

HINT:

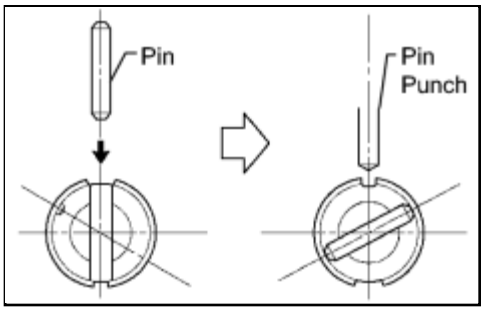


Align the dial with the notches on the manual valve lever and turn the dial 90° to install the parking lock rod.



80. INSTALL MANUAL VALVE LEVER SUB-ASSEMBLY

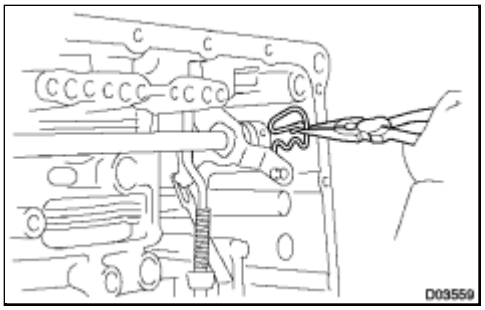
(a) Install a new spacer and the manual valve lever shaft to the transaxle case.



NOTICE:

Do not damage the oil seal while installing the shaft to the transaxle case.

(b) Using a pin punch and hammer, drive in a new pin.

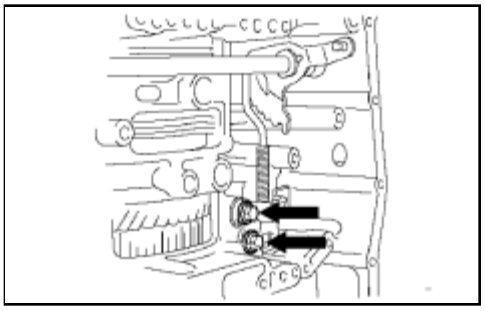


(c) Turn the spacer and the lever shaft to align the smaller hole of the spacer with the staking position mark on the lever shaft.

(d) Using a pin punch, stake the spacer through the small hole.

(e) Check that the spacer does not turn.

81. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING



(a) Using needle-nose pliers, install the retainer spring.

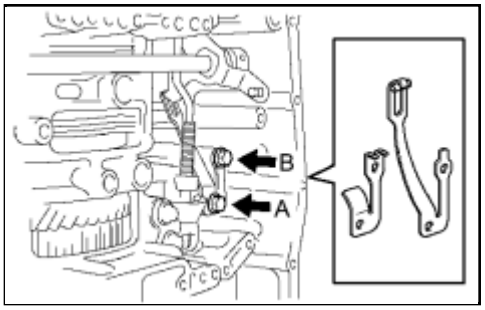
NOTICE:

Securely attach the spring onto the shaft.

82. INSTALL PARKING LOCK PAWL BRACKET

(a) Install the parking lock pawl bracket with the 2 bolts.

Torque: 20 N·m (205 kgf·cm, 15ft·lbf)



Bolt length:

25 mm (0.984 in.)

NOTICE:

Be sure the parking rod is placed between the parking pawl and the guide of the parking bracket after the parking bracket is installed.

83. INSTALL MANUAL DETENT SPRING SUB-ASSEMBLY

(a) Install the manual detent spring sub-assembly with the 2 bolts.

NOTICE:

Make sure to install the manual detent spring and cover in this order.

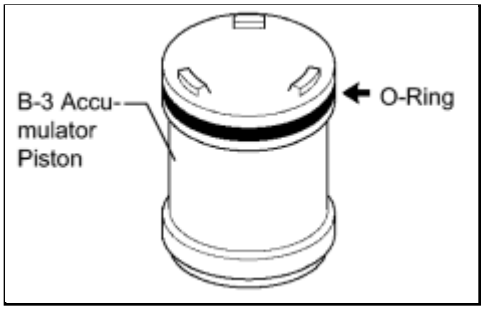
HINT:

Tighten bolt A first, then B.

Bolt A - Torque: 20 N·m (205 kgf·cm, 15ft·lbf)

Bolt B - Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

Bolt length:



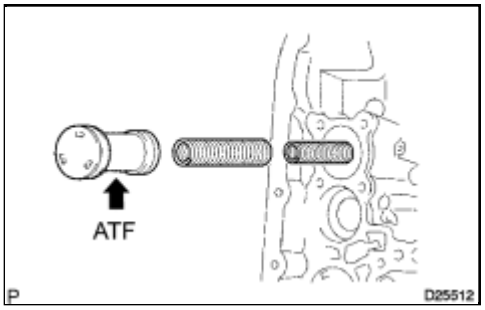
Bolt A

27 mm (1.06 in.)

Bolt B

16 mm (0.630 in.)

84. INSTALL B-3 ACCUMULATOR PISTON

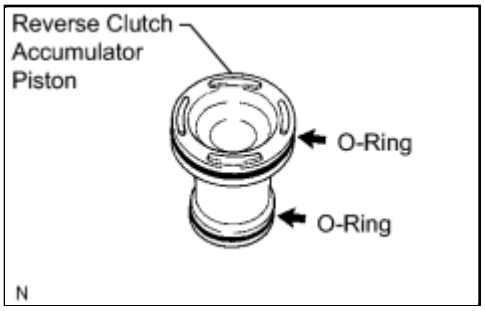


(a) Coat a new O-ring with ATF, and install it to the B-3 accumulator piston.

NOTICE:

Install the O-ring to the accumulator piston, being careful not to twist or pinch it. Apply enough ATF to the O-ring prior to installation. Be sure to confirm the installation position.

(b) Coat the piston and springs with ATF, and install them to the transaxle case.



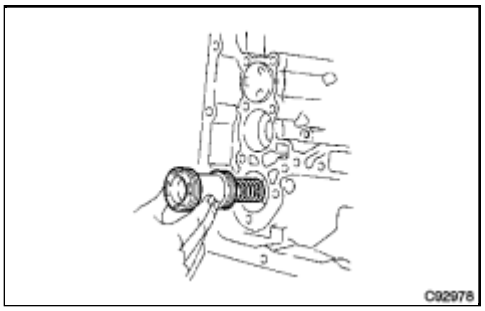
NOTICE:

Install the correct springs to the B-3 accumulator piston after confirming the color and dimension of the springs.

Accumulator Spring

FREE LENGTH / OUTER DIAMETER (MM (IN.))	COLOR
Inner: 62.00 (2.4409) / 15.50 (0.610)	Purple
Outer: 74.23 (2.9224) / 21.70 (0.854)	Purple

85. INSTALL REVERSE CLUTCH ACCUMULATOR PISTON



(a) Coat 2 new O-rings with ATF, and install them to the reverse clutch accumulator piston.

NOTICE:

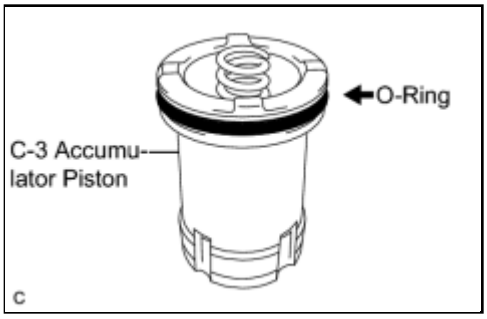
Install the O-rings to the accumulator piston, being careful not to twist or pinch it. Apply enough ATF to the O-rings prior to installation. Be sure to confirm the installation positions.

(b) Coat the piston and spring with ATF, and install them to the transaxle case.

NOTICE:

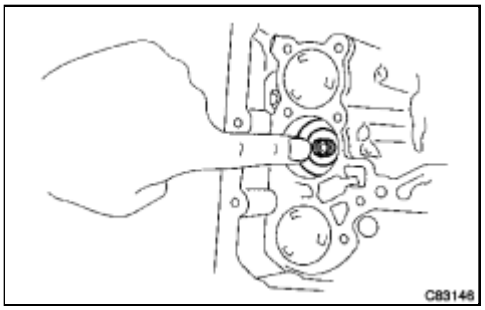
Install the correct spring to the reverse clutch accumulator piston after confirming the color or dimension of the spring.

Accumulator Spring



FREE LENGTH / OUTER DIAMETER (MM (IN.))	COLOR
60.96 (2.3999) / 14.10 (0.555)	Yellow

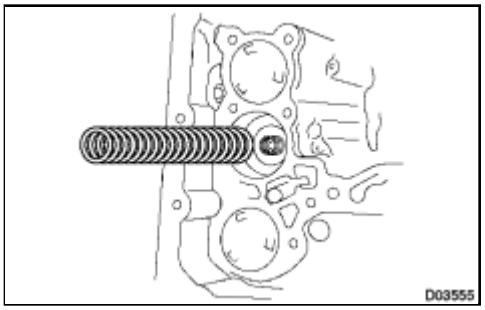
86. INSTALL C-3 ACCUMULATOR PISTON



(a) Coat a new O-ring with ATF, and install it to the C-3 accumulator piston.

NOTICE:

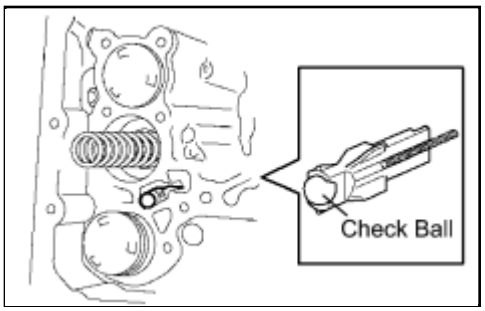
Install the O-ring to the accumulator piston, being careful not to twist or pinch it. Apply enough ATF to the O-ring prior to



installation. Be sure to confirm the installation position.

(b) Coat the piston with ATF, and install it to the transaxle case.

(c) Install the spring to the C-3 accumulator piston.



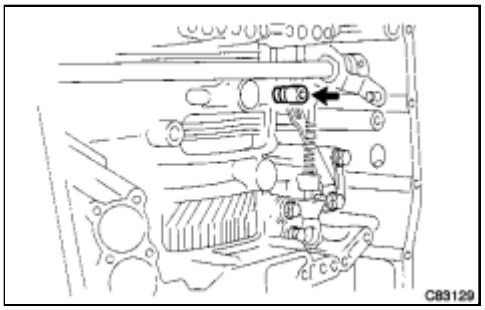
NOTICE:

Install the correct spring to the C-3 accumulator piston after confirming the color and dimension of the spring.

Accumulator Spring

FREE LENGTH / OUTER DIAMETER (MM (IN.))	COLOR
72.20 (2.8425) / 19.0 (0.748)	No color

87. INSTALL CHECK BALL BODY



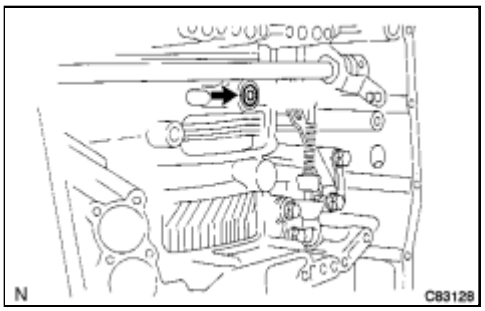
(a) Coat the check ball body with ATF.

(b) Install the check ball body and spring.

NOTICE:

Regarding the installation of the spring and the check ball body, be sure to place the spring into ball body. Be sure to install the parts in the correct direction.

88. INSTALL BRAKE DRUM GASKET

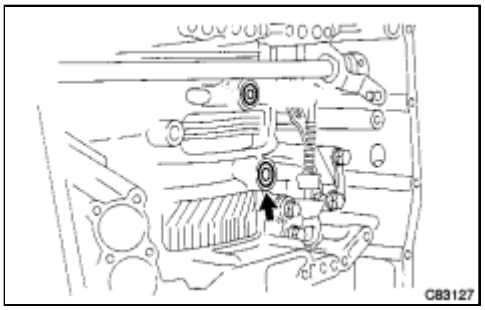


(a) Coat a new brake drum gasket with ATF, and install it to the transaxle case.

NOTICE:

Do not damage the lip portion of the brake drum gasket when inserting the gasket to the case. Apply sufficient ATF to the gasket prior to installation. Be sure to install the parts in the correct direction.

89. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET



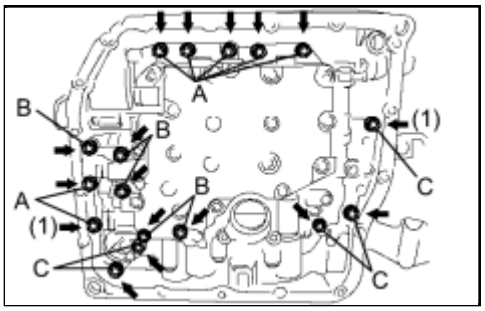
(a) Coat a new transaxle case 2nd brake gasket with ATF, and install it to the transaxle case.

NOTICE:

Do not damage the lip portion of the transaxle case 2nd brake gasket when inserting the gasket to the case. Apply sufficient ATF to the gasket prior to installation. Be sure to install the parts in the correct direction.

90. INSTALL NO. 1 GOVERNOR APPLY GASKET

(a) Coat a new No. 1 governor apply gasket with ATF, and install it to the transaxle case.



NOTICE:

Do not damage the lip portion of the No. 1 governor apply gasket when inserting the gasket to the case. Apply sufficient ATF to the gasket prior to installation. Be sure to install the parts in the correct direction.

91. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the manual valve lever position. Install the valve body to the transaxle case with the 17 bolts.

Torque: 11 N·m (110 kgf·cm, 8ft·lbf)

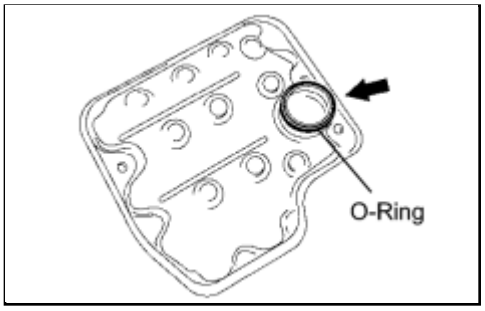
Bolt length:

Bolt A

25 mm (0.984 in.)

Bolt B

57 mm (2.244 in.)

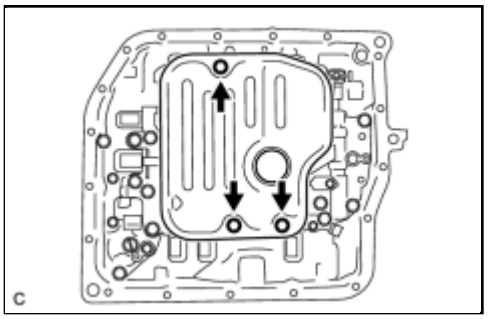


Bolt C

41 mm (1.614 in.)

NOTICE:

- Push the valve body against the accumulator piston spring and the check ball body to install it.
- When installing the valve body to the transaxle case, do not hold the solenoids.
- Temporarily tighten the bolts marked by (1) in the illustration first because they are positioning bolts.



92. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new O-ring with ATF, and install it to the oil strainer.

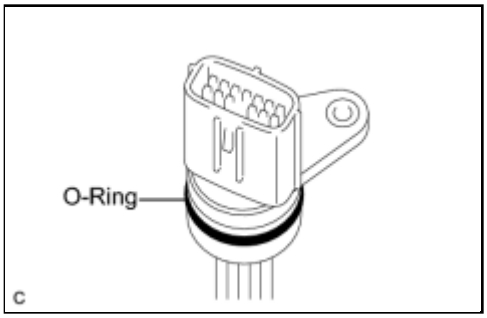
NOTICE:

Install the O-ring carefully to avoid twists or pinches. Apply sufficient ATF to the O-ring prior to installation.

(b) Install the oil strainer to the valve body with the 3 bolts.

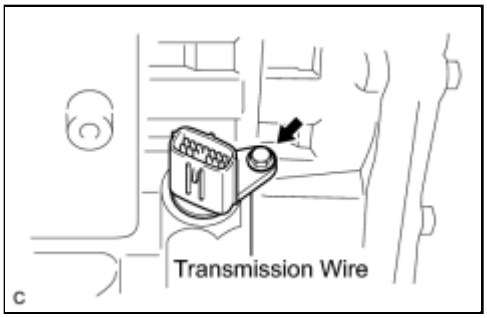
Torque: 11 N·m (110 kgf·cm, 8ft·lbf)

NOTICE:



Apply ATF to the bolts prior to installation.

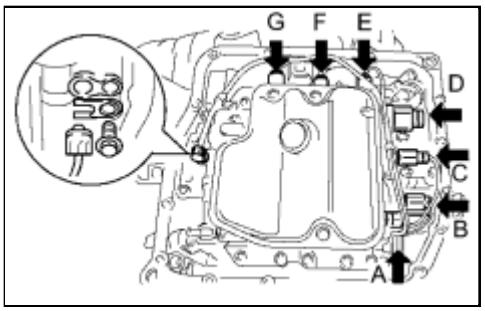
93. INSTALL TRANSMISSION WIRE



(a) Coat a new O-ring with ATF, and install it to the transmission wire.

NOTICE:

Install the O-ring carefully to avoid twists or pinches. Apply



enough ATF to the O-ring prior to installation.

(b) Install the transmission wire retaining bolt.

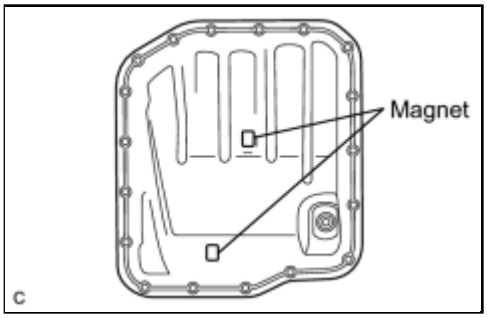
Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

94. CONNECT TRANSMISSION WIRE

(a) Coat the ATF temperature sensor O-ring with ATF.

(b) Install the ATF temperature sensor with the lock plate and bolt.

Torque: 6.6 N·m (67 kgf·cm, 58in·lbf)



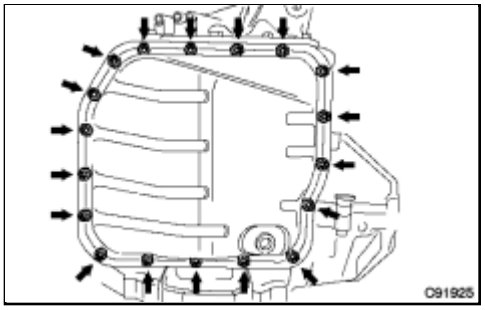
(c) Connect the 7 solenoid connectors.

NOTICE:

- Connect the connectors to A, B, C, D, E, F and G, starting with shorter connectors first.
- Apply ATF to the bolt prior to installation.

95. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets to the oil pan.



(b) Apply seal packing or equivalent to the 18 bolts.

Seal packing:
Toyota Genuine Seal Packing 1344, Three Bond 1344 or Equivalent

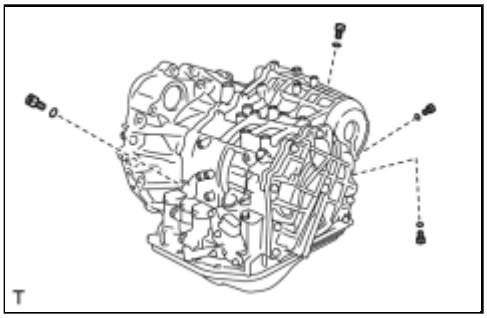
NOTICE:

- Apply seal packing to new bolts and tighten them within 10 minutes of application.
- Completely remove any oil or grease from the gasket contact surface of the transaxle case and the oil pan before installing the oil pan to the case.

(c) Install a new oil pan gasket and the oil pan to the transaxle case with the 18 bolts.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

NOTICE:



- Apply seal packing to new bolts and tighten them within 10 minutes of application.
- Completely remove any oil or grease from the gasket contact surface of the transaxle case and the oil pan before installing the oil pan to the case.

(d) Install a new gasket to the drain plug.

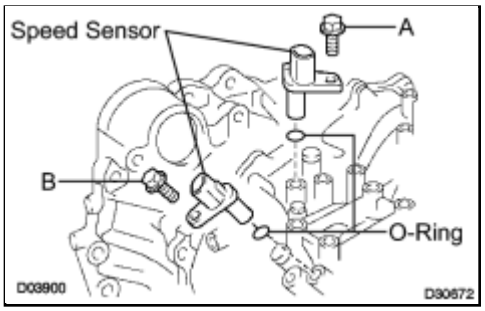
(e) Install the drain plug.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

96. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Coat 4 new O-rings with ATF, and install them to the 4 No. 1 transaxle case plugs.

(b) Install the 4 No. 1 transaxle case plugs to the transaxle case.

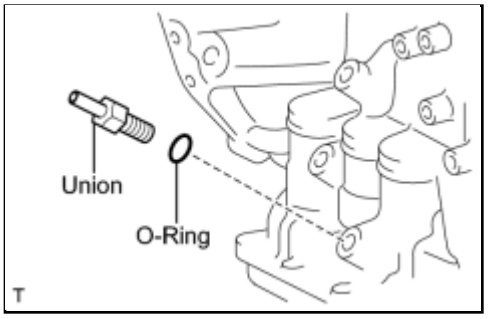


Torque: 7.4 N·m (75 kgf·cm, 65in·lbf)

97. INSTALL SPEED SENSOR

(a) Coat 2 new O-rings with ATF, and install them to the 2 speed sensors.

(b) Apply adhesive to the bolts threads.

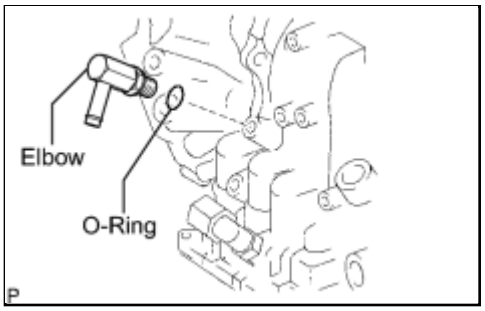


Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or Equivalent

(c) Install the 2 speed sensors to the transaxle case with the 2 bolts.

Bolt A - Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)
Bolt B - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

98. INSTALL OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

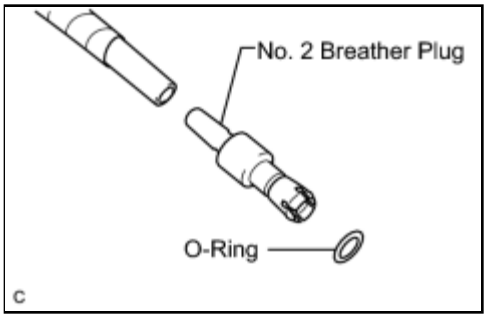


(a) Coat a new O-ring with ATF, and install it to the union.

(b) Install the union to the transaxle case.

Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

99. INSTALL OIL COOLER TUBE ELBOW (INLET OIL COOLER ELBOW)

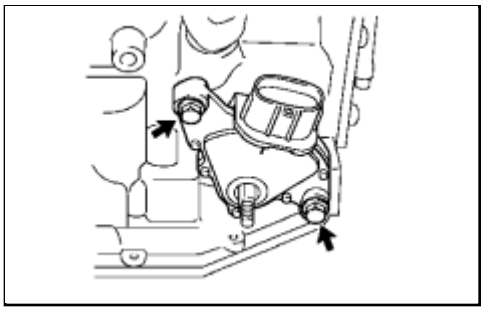


(a) Coat a new O-ring with ATF, and install it to the elbow.

(b) Install the elbow to the transaxle case.

Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

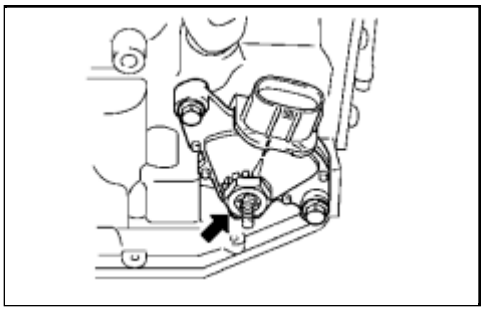
100. INSTALL NO. 2 BREATHER PLUG



(a) Coat a new O-ring with ATF.

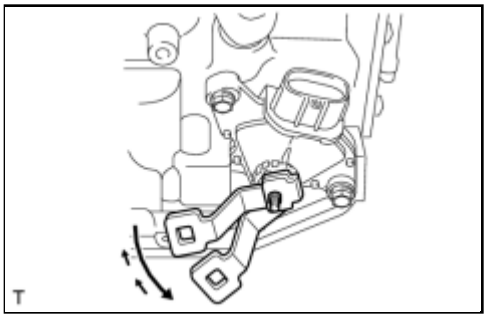
(b) Install the hose and the O-ring to the breather plug.

(c) Install the No. 2 breather plug hose to the transaxle case.



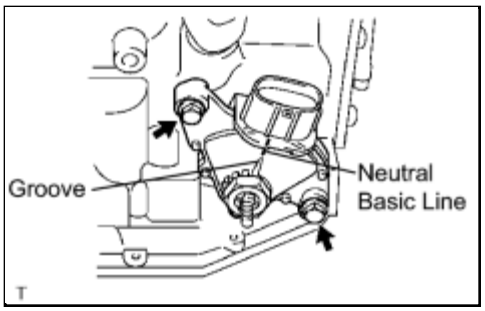
101. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch onto the manual valve lever shaft and temporarily install the 2 adjusting bolts.



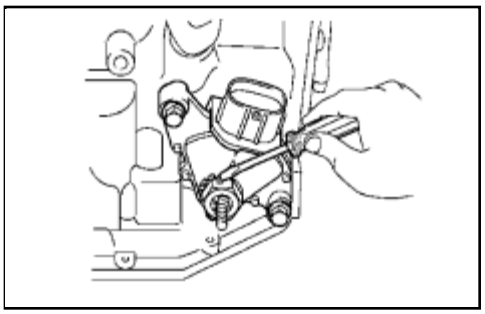
(b) Install a new nut stopper and nut.

Torque: 6.9 N·m (70 kgf·cm, 61in·lbf)

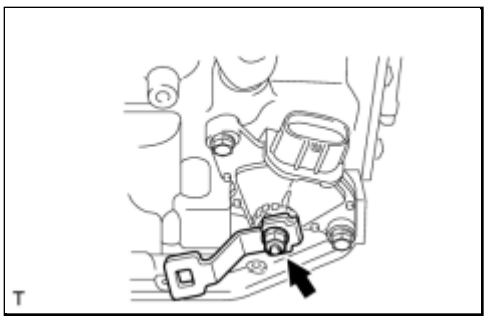


(c) Temporarily install the control shaft lever.

(d) Turn the lever counterclockwise until it stops, and then turn it clockwise 2 notches.



(e) Remove the control shaft lever.

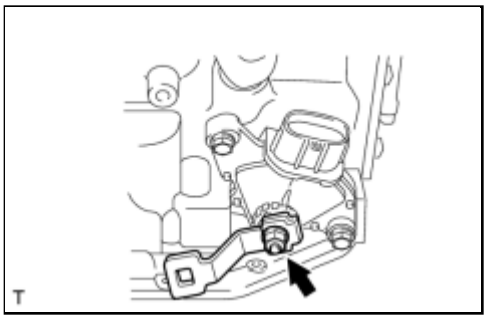


(f) Align the groove with the neutral basic line.

(g) Hold the switch in that position and tighten the 2 bolts.

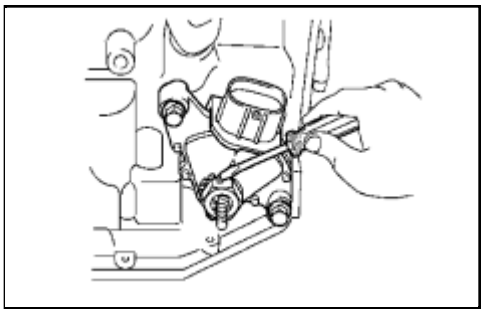
Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

(h) Using a screwdriver, stake the nut with the nut stopper.



(i) Install the control shaft lever, washer and nut.

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)



Last Modified: 3-10-2010	6.4 A	**From:** 200901

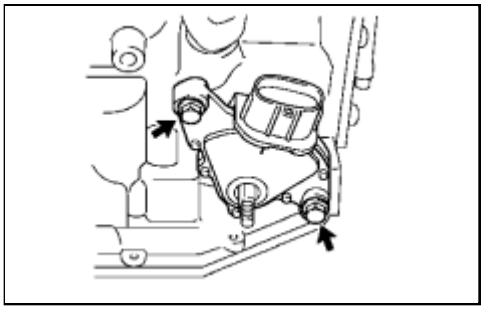
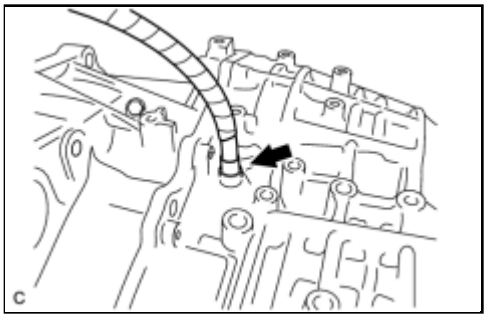
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE UNIT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

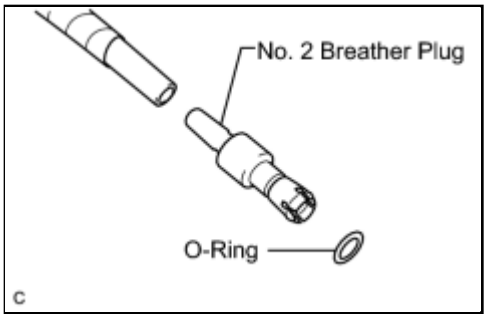


1. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Remove the nut, washer and control shaft lever.

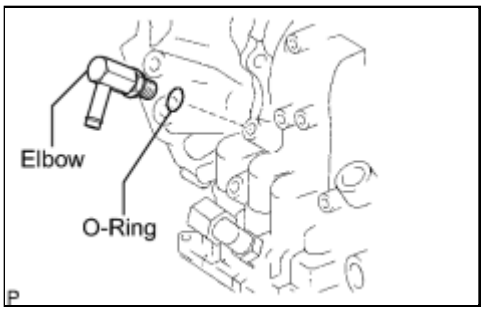


(b) Using a screwdriver, unstake the lock plate, and remove the lock nut and nut stopper.



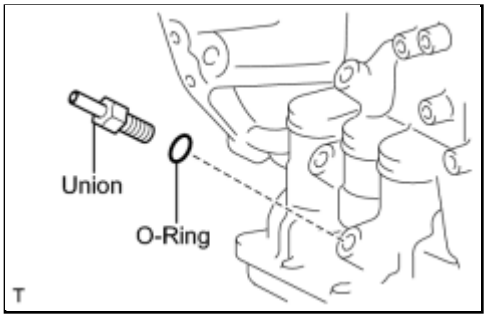
(c) Remove the 2 bolts and pull out the park/neutral position switch.

2. REMOVE NO. 2 BREATHER PLUG



(a) Remove the No. 2 breather plug from the transaxle case.

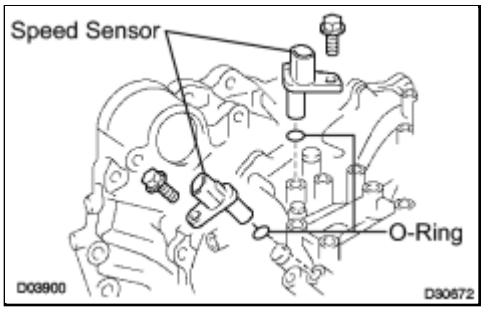
(b) Remove the hose and O-ring from the No. 2 breather plug.



3. REMOVE OIL COOLER TUBE ELBOW (INLET OIL COOLER ELBOW)

(a) Remove the elbow.

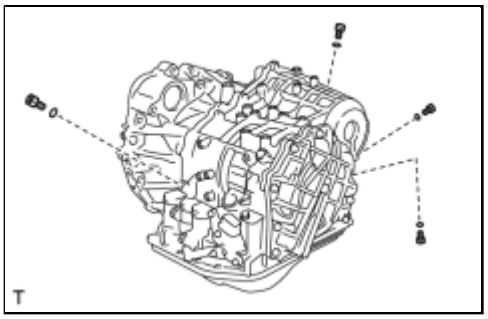
(b) Remove the O-ring from the elbow.



4. REMOVE OIL COOLER TUBE UNION (OUTLET OIL COOLER UNION)

(a) Remove the union.

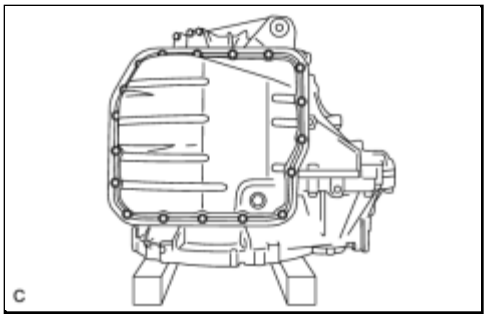
(b) Remove the O-ring from the union.



5. REMOVE SPEED SENSOR

(a) Remove the 2 bolts and the 2 speed sensors from the transaxle assembly.

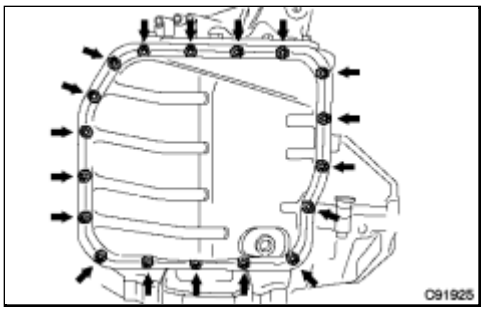
(b) Remove the 2 O-rings from the 2 speed sensors.



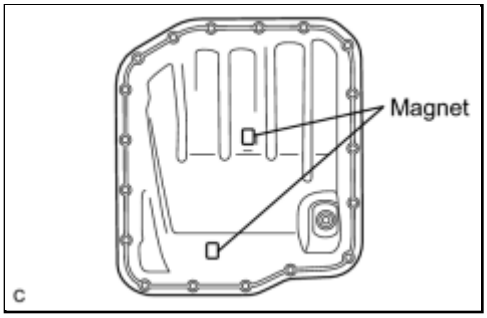
6. REMOVE NO. 1 TRANSAXLE CASE PLUG

(a) Remove the 4 No. 1 transaxle case plugs from the transaxle case.

(b) Remove the O-ring from each No. 1 transaxle case plug.



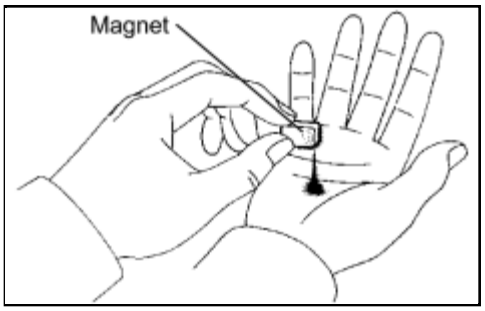
7. SECURE AUTOMATIC TRANSAXLE ASSEMBLY



(a) Secure the transaxle assembly onto wooden blocks.

8. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Remove the drain plug and drain plug gasket from the oil pan.



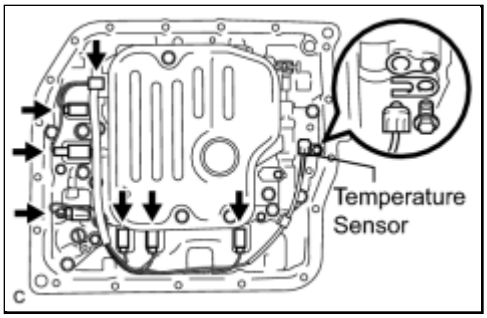
(b) Remove the 18 bolts, oil pan and gasket.

(c) Remove the 2 transmission oil cleaner magnets from the oil pan.

9. INSPECT TRANSMISSION OIL CLEANER MAGNET

(a) Remove the magnets and use them to collect any steel chips. Examine the chips and particles in the pan and on the magnet to determine what type of wear has occurred in the transaxle.

Result:

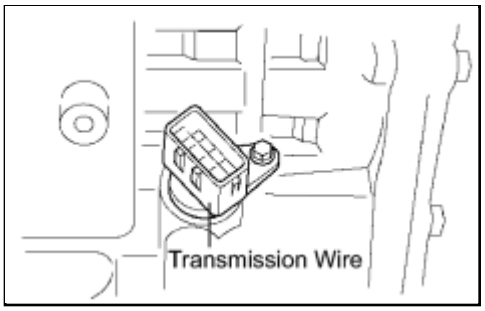


Steel (magnetic)

bearing, gear, and plate wear

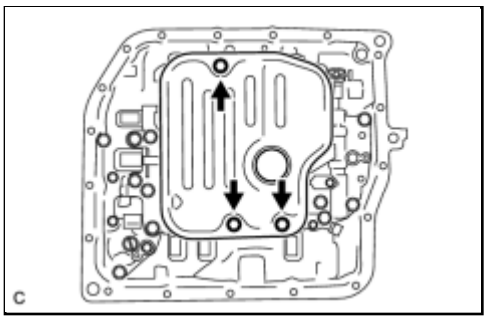
Brass (non-magnetic)

bushing wear



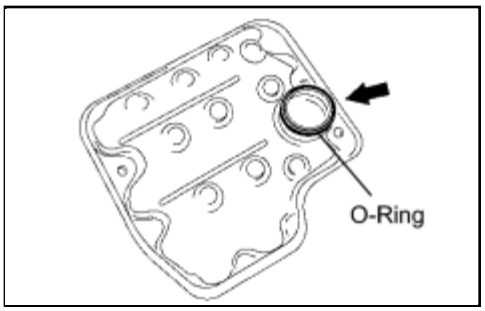
10. DISCONNECT TRANSMISSION WIRE

(a) Disconnect the 7 connectors from the shift solenoid valves.



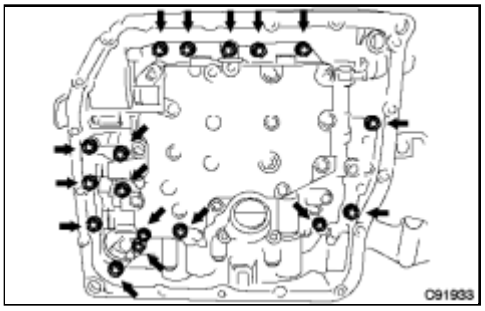
(b) Remove the bolt, lock plate, and ATF temperature sensor.

11. REMOVE TRANSMISSION WIRE

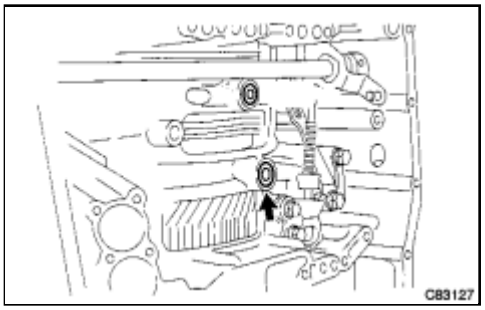


(a) Remove the bolt and transmission wire from the transaxle case.

12. REMOVE VALVE BODY OIL STRAINER ASSEMBLY



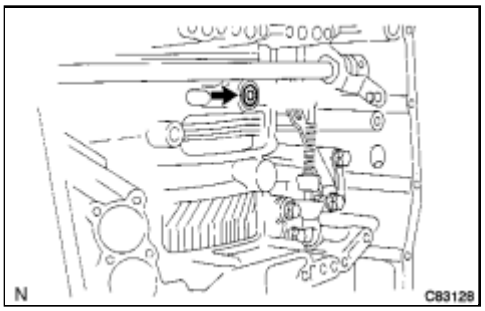
(a) Remove the 3 bolts and oil strainer.



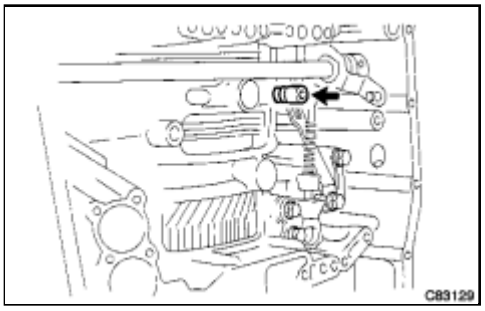
(b) Remove the O-ring from the oil strainer.

13. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

(a) Support the valve body assembly and remove the 17 bolts and valve body assembly.

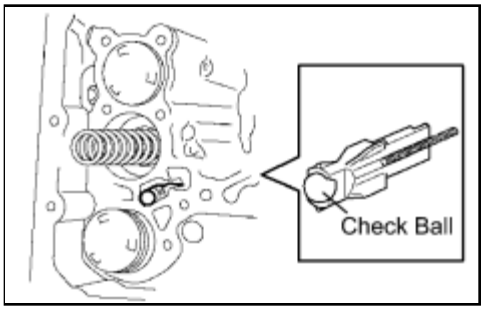


14. REMOVE NO. 1 GOVERNOR APPLY GASKET



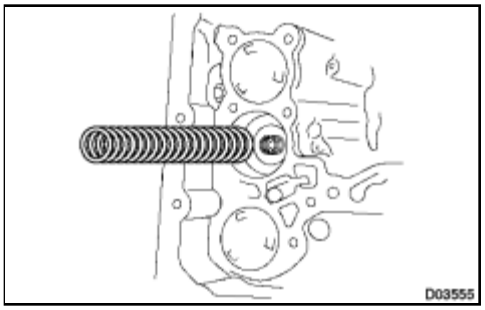
(a) Remove the No. 1 governor apply gasket from the transaxle case.

15. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET



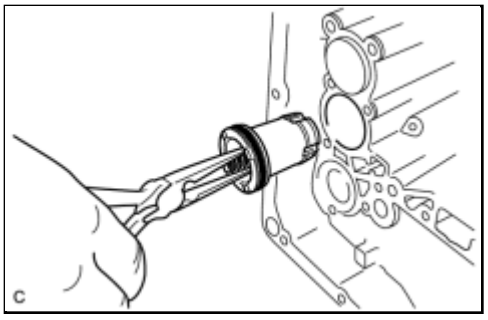
(a) Remove the transaxle case 2nd brake gasket from the transaxle case.

16. REMOVE BRAKE DRUM GASKET

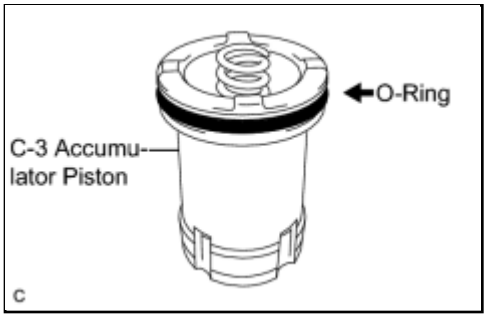


(a) Remove the brake drum gasket from the transaxle case.

17. REMOVE CHECK BALL BODY

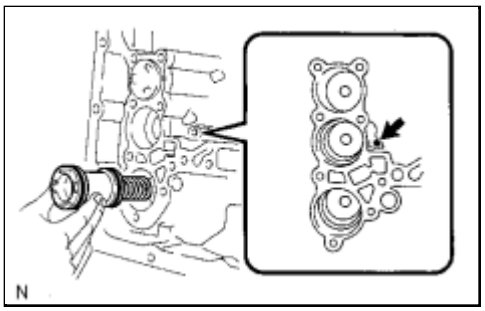


(a) Remove the check ball body and spring from the transaxle case.



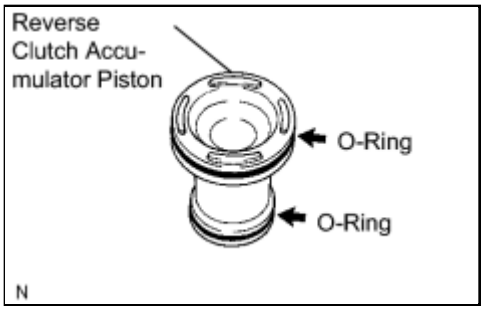
18. REMOVE C-3 ACCUMULATOR PISTON

(a) Remove the spring from the C-3 accumulator piston.



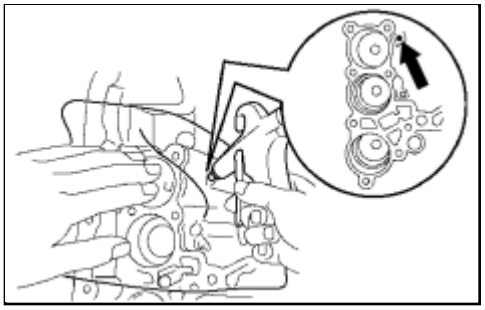
(b) Using needle-nose pliers, remove the C-3 accumulator piston from the transaxle case.

(c) Remove the O-ring from the C-3 accumulator piston.



19. REMOVE REVERSE CLUTCH ACCUMULATOR PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the oil hole and remove the reverse accumulator piston and spring.

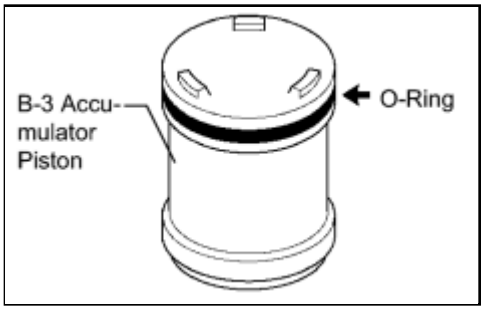


NOTICE:

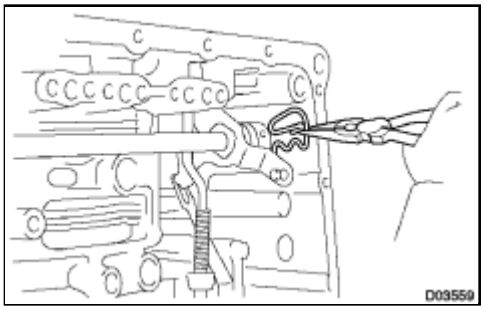
- Applying compressed air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Take care not to splash ATF when applying compressed air.

(b) Remove the 2 O-rings from the reverse clutch accumulator piston.

20. REMOVE B-3 ACCUMULATOR PISTON



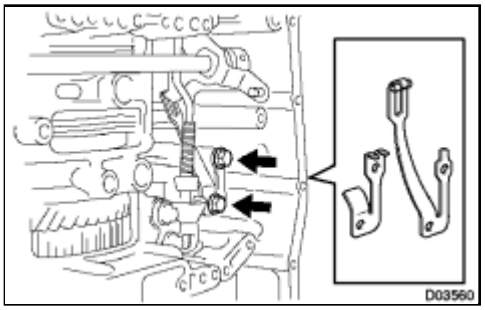
(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the oil hole and remove the B-3 accumulator piston and 2 springs.



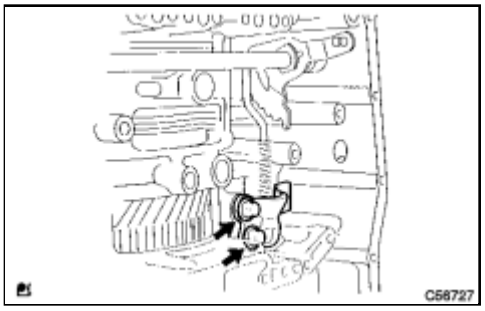
NOTICE:

- Applying compressed air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Take care not to splash ATF when applying compressed air.

(b) Remove the O-ring from the B-3 accumulator piston.

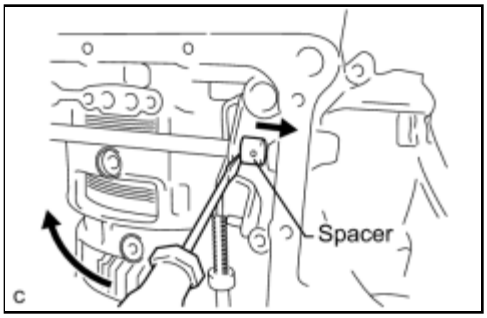


21. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING



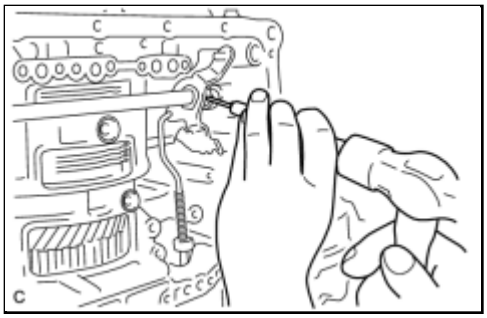
(a) Using needle-nose pliers, remove the manual valve lever shaft retainer spring.

22. REMOVE MANUAL DETENT SPRING SUB-ASSEMBLY



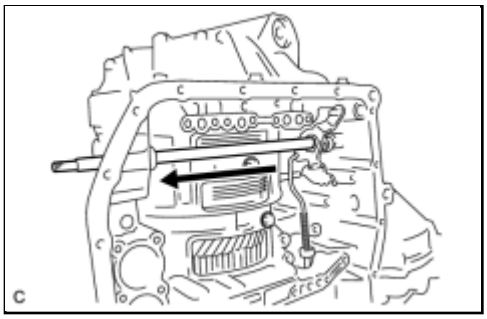
(a) Remove the 2 bolts and manual detent spring sub-assembly.

23. REMOVE PARKING LOCK PAWL BRACKET



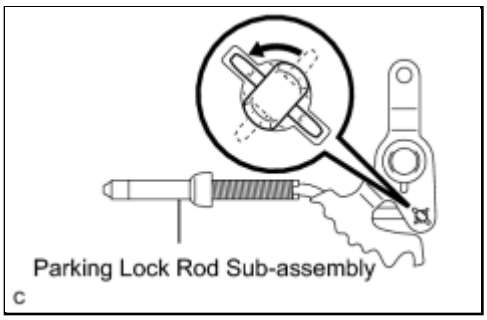
(a) Remove the 2 bolts and parking lock pawl bracket.

24. REMOVE MANUAL VALVE LEVER SUB-ASSEMBLY



(a) Using a screwdriver, slide the spacer.

(b) Using a pin punch (φ3 mm) and hammer, drive out the pin.

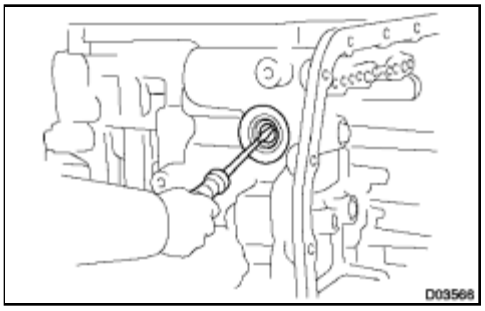


HINT:

Slowly drive out the pin so that it will not fall into the transaxle case.

(c) Remove the manual valve lever shaft, manual valve lever and spacer.

25. REMOVE PARKING LOCK ROD SUB-ASSEMBLY

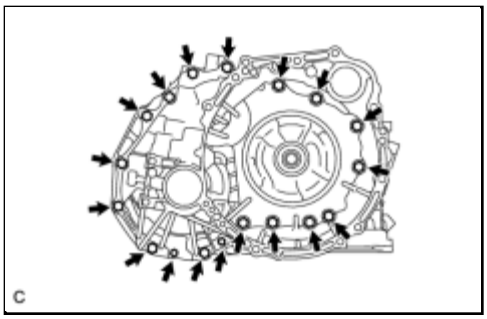


(a) Remove the parking lock rod sub-assembly from the manual valve lever sub-assembly.

HINT:

Align the dial with the notches on the manual valve lever sub-assembly to remove the parking lock rod sub-assembly.

26. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL



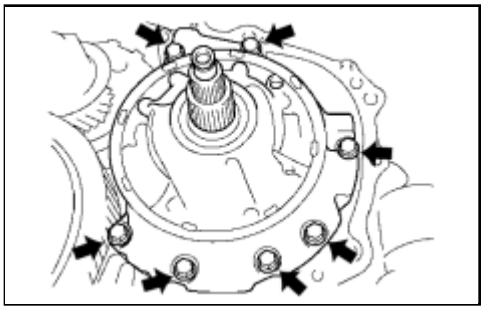
(a) Using a screwdriver, remove the oil seal from the transaxle case.

27. SECURE AUTOMATIC TRANSAXLE ASSEMBLY

(a) Secure the transaxle case with the oil pump facing up.

28. INSPECT INPUT SHAFT END PLAY INFO

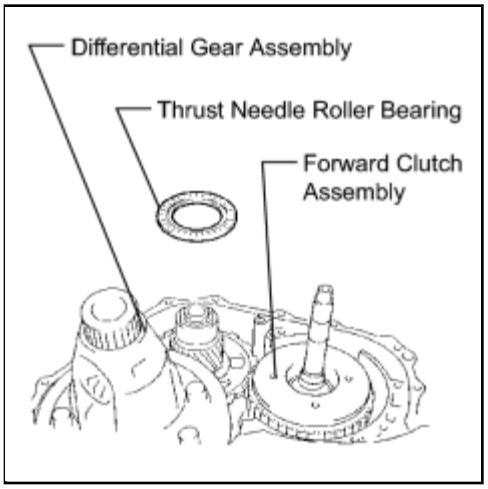
29. REMOVE TRANSAXLE HOUSING



(a) Remove the 18 bolts.

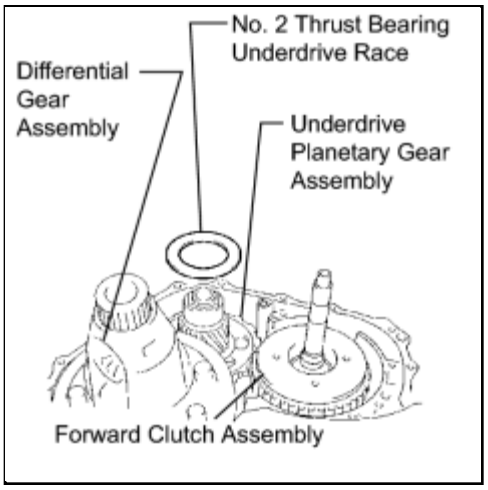
(b) Tap on the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.

NOTICE:



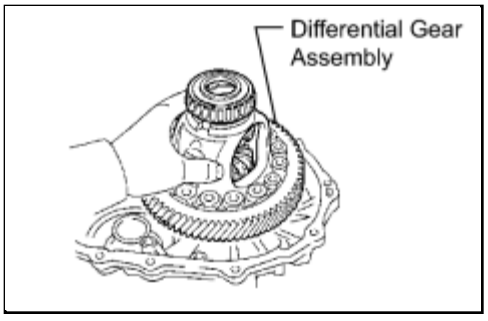
The differential may be accidentally removed when the transaxle housing is removed.

30. REMOVE OIL PUMP ASSEMBLY



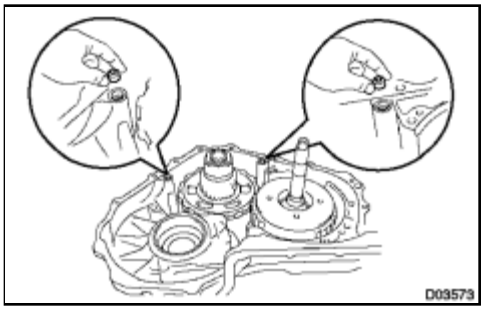
(a) Remove the 7 bolts and oil pump from the transaxle case.

31. REMOVE THRUST NEEDLE ROLLER BEARING



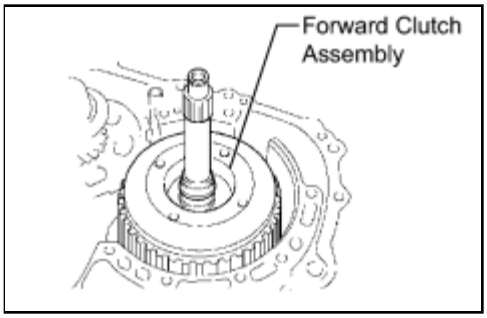
(a) Remove the thrust needle roller bearing from the underdrive planetary gear assembly.

32. REMOVE NO. 2 THRUST BEARING UNDERDRIVE RACE



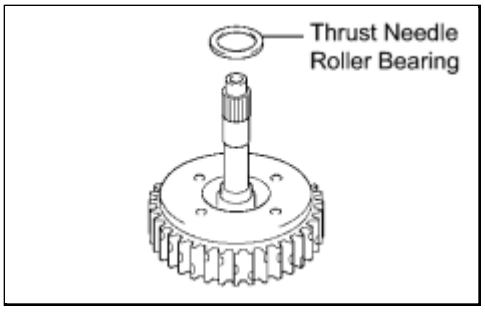
(a) Remove the No. 2 thrust bearing underdrive race from the underdrive planetary gear assembly.

33. REMOVE DIFFERENTIAL GEAR ASSEMBLY



(a) Remove the differential gear assembly from the transaxle case.

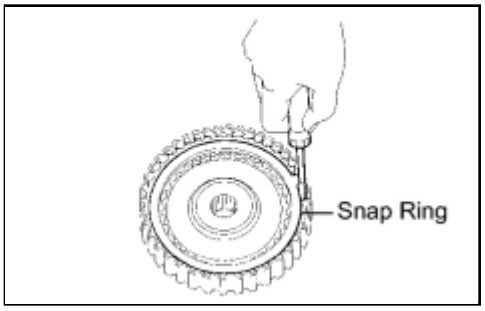
34. REMOVE OVERDRIVE BRAKE GASKET

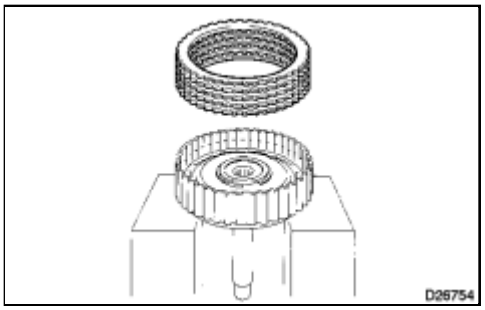


(a) Remove the 2 overdrive brake gaskets from the transaxle case.

35. REMOVE FORWARD CLUTCH ASSEMBLY

(a) Remove the forward clutch assembly from the transaxle case.

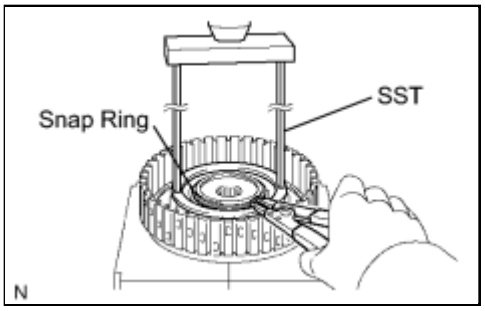




(b) Remove the thrust needle roller bearing from the forward clutch.

36. INSPECT PACK CLEARANCE OF FORWARD CLUTCH INFO

37. REMOVE FORWARD MULTIPLE DISC CLUTCH DISC

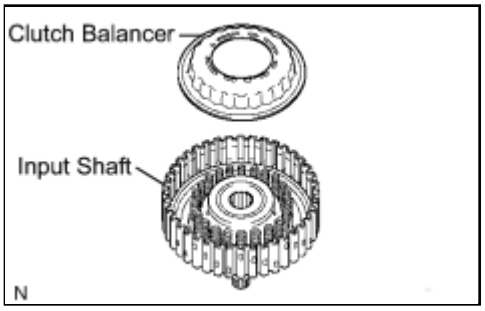


(a) Using a screwdriver, remove the snap ring.

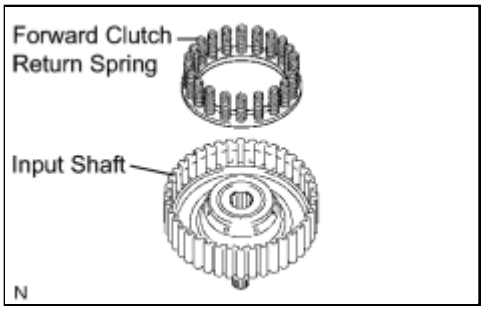
(b) Remove the flange, 5 discs and 5 plates from the input shaft assembly.

38. REMOVE FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the spring retainer and compress the return spring with a press.



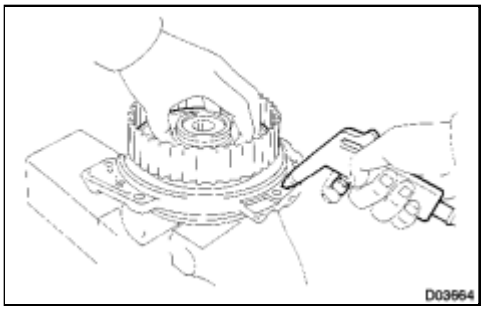
SST: 09387-00020



(b) Using a snap ring expander, remove the snap ring.

NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.

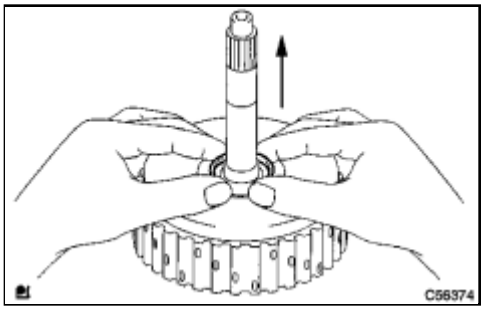


(c) Remove the clutch balancer from the input shaft.

(d) Remove the forward clutch return spring from the input shaft.

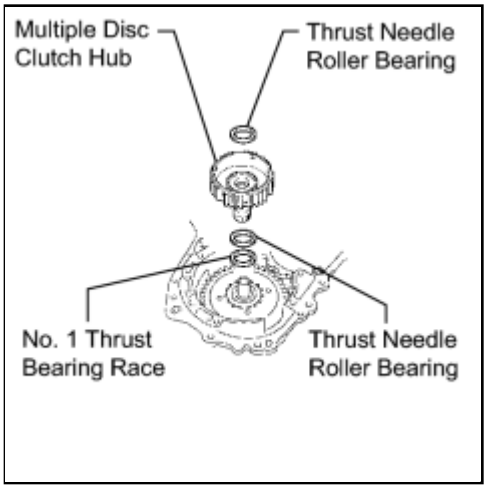
39. REMOVE FORWARD CLUTCH PISTON SUB-ASSEMBLY

(a) Place the forward clutch drum onto the oil pump.



(b) Holding the forward clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

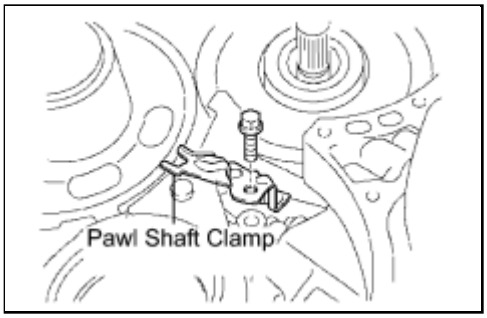
HINT:



If the piston is slanted and cannot be removed, either blow air again with the protruding side pushed, or remove the piston using needle nose pliers with the tips taped.

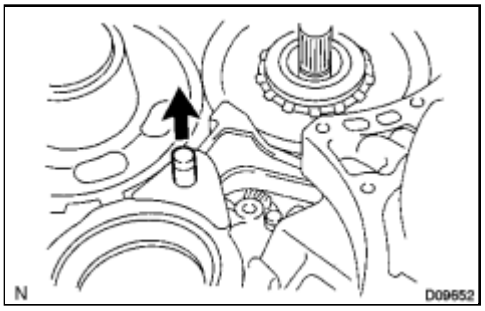
40. REMOVE INPUT SHAFT OIL SEAL RING

(a) Remove the input shaft oil seal ring from the input shaft.

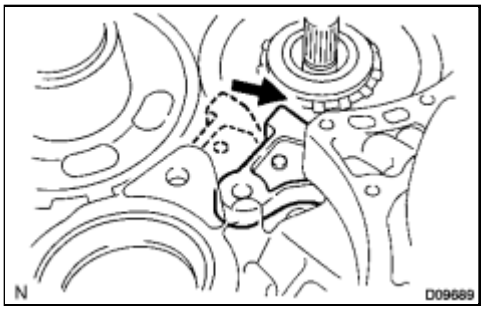


41. REMOVE MULTIPLE DISC CLUTCH HUB

(a) Remove the thrust needle roller bearing, multiple disc clutch hub, thrust needle roller bearing and No. 1 thrust bearing race from the transaxle case.



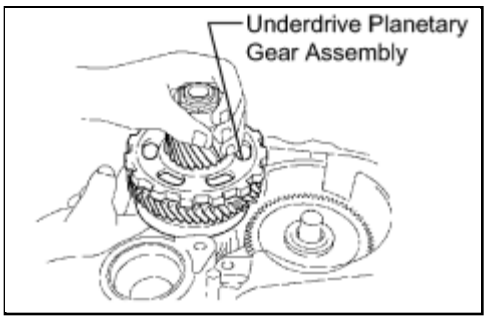
42. INSPECT MULTIPLE DISC CLUTCH HUB INFO



43. REMOVE UNDERDRIVE PLANETARY GEAR ASSEMBLY

(a) Remove the bolt and pawl shaft clamp from the transaxle case.

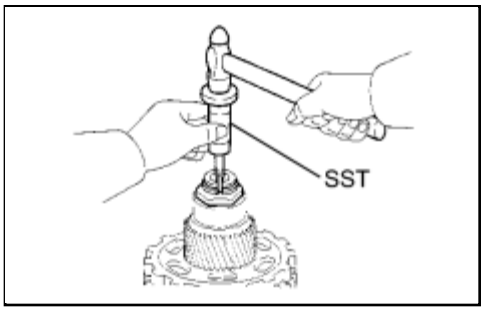
(b) Remove the parking lock pawl shaft from the transaxle case.



(c) Push the parking lock pawl.

HINT:

Failure to do so will cause interference when the underdrive planetary gear is removed.



(d) Remove the underdrive planetary gear assembly from the transaxle case.

NOTICE:

Do not drop the underdrive planetary gear assembly.

44. REMOVE FRONT PLANETARY GEAR NUT

(a) Using SST and a hammer, loosen the staked part of the gear nut.

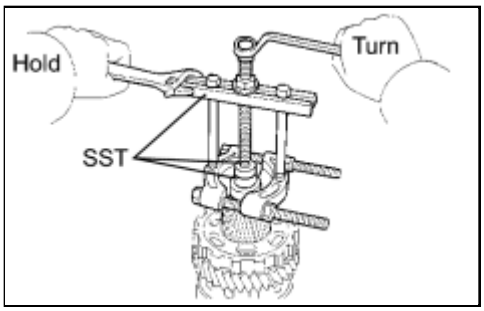
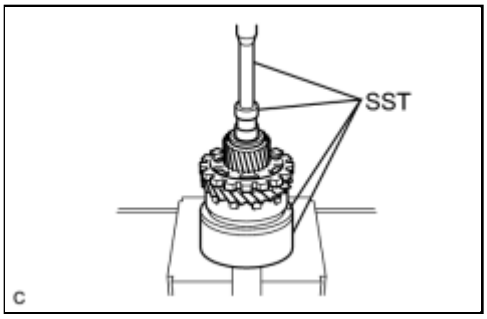
(b) Clamp the underdrive planetary gear in a soft jaw vise.



NOTICE:

Be careful not to damage the differential drive pinion.

(c) Using a socket wrench, remove the gear nut.



45. REMOVE CYLINDRICAL ROLLER BEARING RACE INNER

(a) Using SST, remove the cylindrical roller bearing race inner.

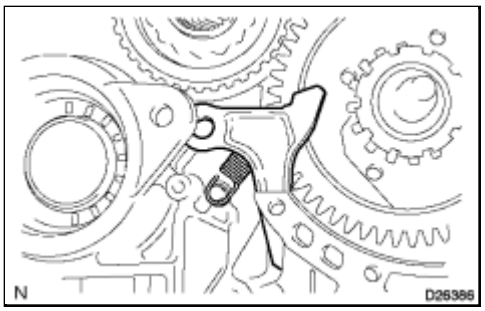
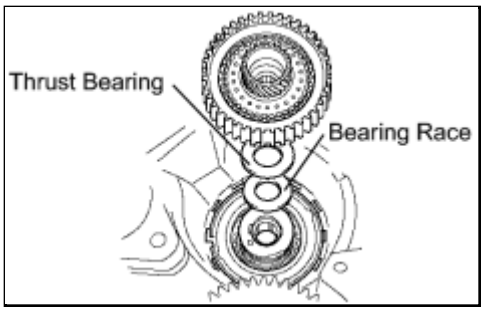
47. REMOVE UNDERDRIVE PLANETARY RING GEAR

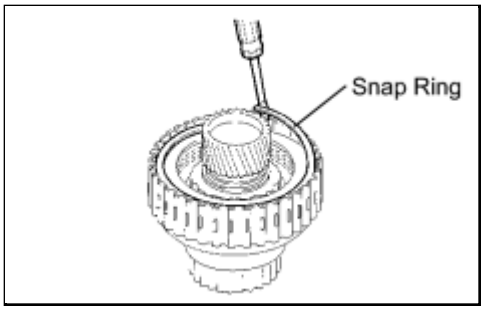


(a) Using snap ring pliers, remove the snap ring.



(b) Remove the underdrive planetary ring gear from the counter driven gear.

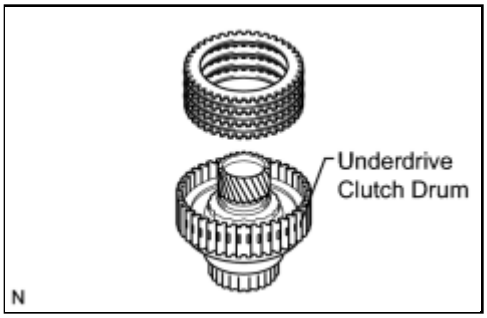
48. REMOVE PARKING LOCK PAWL



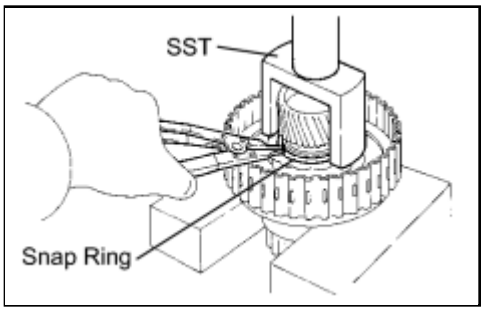
(a) Remove the spring, pawl pin and parking lock pawl.

49. REMOVE UNDERDRIVE CLUTCH ASSEMBLY

(a) Remove the underdrive clutch assembly, thrust bearing, and bearing race from the transaxle case.



50. REMOVE NO. 2 UNDERDRIVE CLUTCH FLANGE HOLE SNAP RING



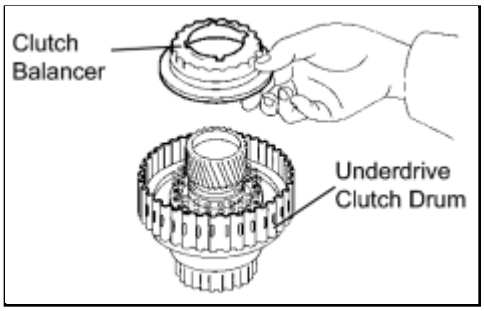
(a) Using a screwdriver, remove the No. 2 underdrive clutch flange hole snap ring.

51. REMOVE NO. 1 UNDERDRIVE CLUTCH DISC

(a) Remove the flange, 3 discs, and 3 plates from the underdrive clutch drum.

52. REMOVE UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

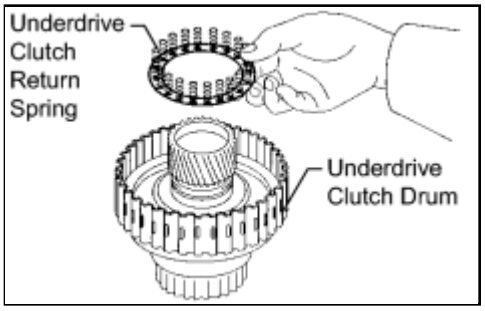
(a) Place SST on the clutch balancer and compress the spring with a press.



SST: 09350-32014

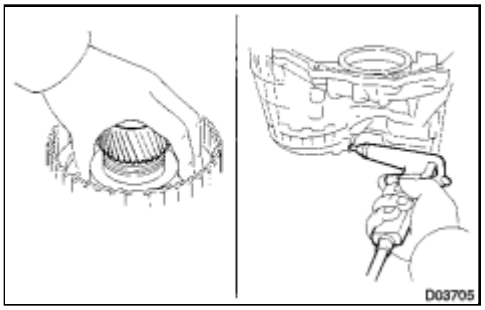
09351-32070

(b) Using a snap ring expander, remove the snap ring.



NOTICE:

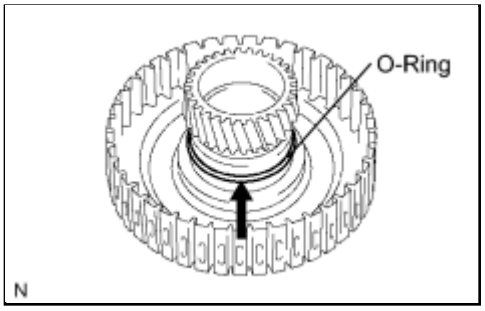
- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.



(c) Remove the clutch balancer from the underdrive clutch drum.

(d) Remove the return spring from the underdrive clutch drum.

53. REMOVE UNDERDRIVE CLUTCH PISTON SET

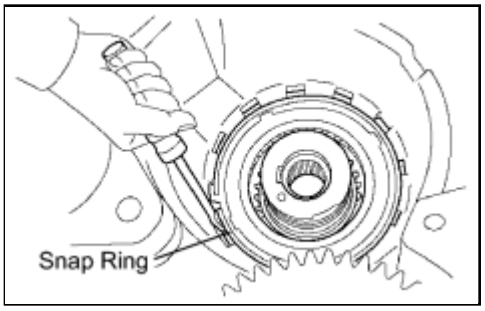


(a) Remove the underdrive clutch from the transaxle case.

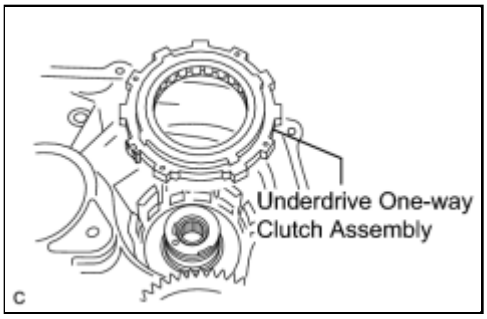
NOTICE:

Be careful not to damage the oil seal ring.

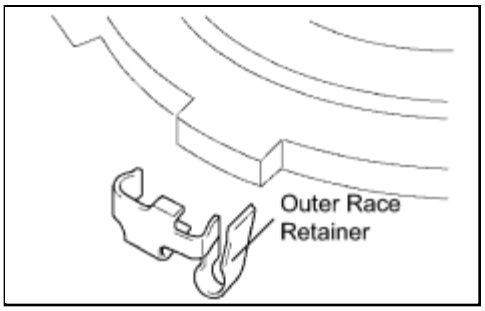
(b) Holding the underdrive clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle case to remove the underdrive clutch piston.



54. REMOVE UNDERDRIVE CLUTCH DRUM O-RING

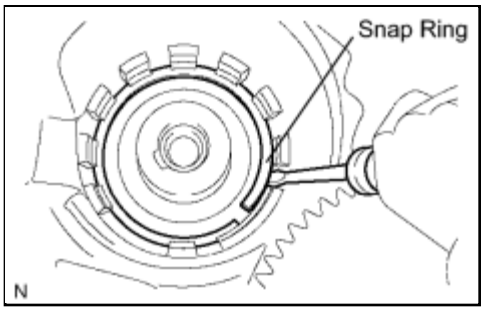


(a) Using a screwdriver, remove the O-ring from the underdrive clutch drum.

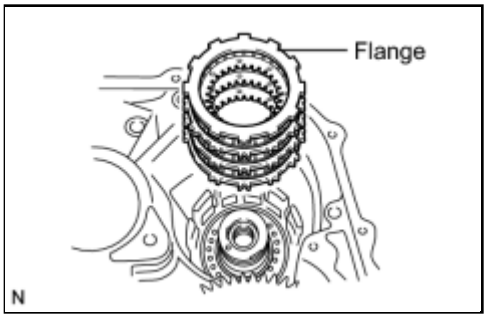


55. REMOVE UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

(a) Using a screwdriver, remove the snap ring from the transaxle case.



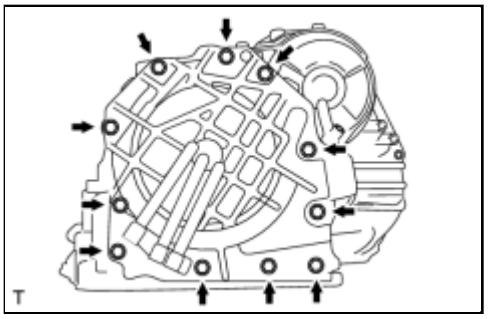
(b) Remove the underdrive one-way clutch from the transaxle case.



(c) Remove the outer race retainer from the one-way clutch.

56. REMOVE NO. 2 UNDERDRIVE CLUTCH DISC

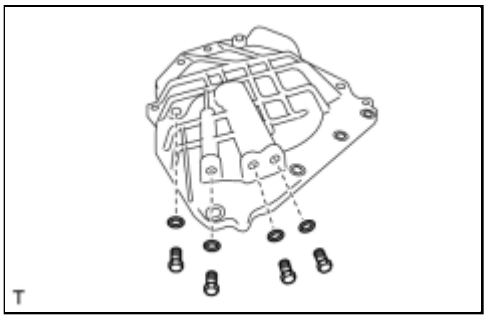
(a) Using a screwdriver, remove the snap ring.



(b) Remove the flange, 3 discs and 3 plates from the

transaxle case.

57. INSPECT NO. 2 UNDERDRIVE CLUTCH DISC INFO

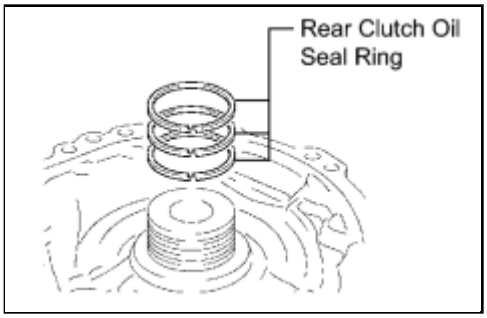


58. REMOVE TRANSAXLE REAR COVER SUB-ASSEMBLY

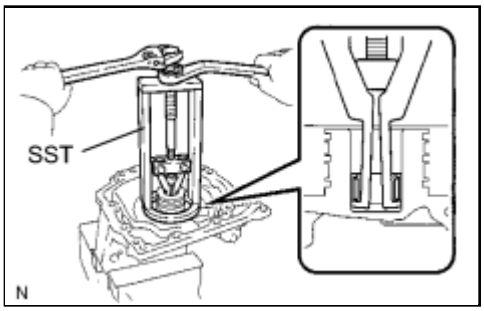
(a) Remove the 11 bolts.

(b) Tap on the circumference of the rear cover with a plastic hammer to remove the transaxle rear cover from the transaxle case.

59. REMOVE NO. 1 TRANSAXLE CASE PLUG



(a) Remove the 4 No. 1 transaxle case plugs from the transaxle rear cover.



(b) Remove the O-ring from each No. 1 transaxle case plug.

60. REMOVE REAR CLUTCH OIL SEAL RING

(a) Remove the 3 rear clutch oil seal rings from the transaxle rear cover.

61. REMOVE NEEDLE ROLLER BEARING

(a) Using SST, remove the needle roller bearing from the transaxle rear cover.

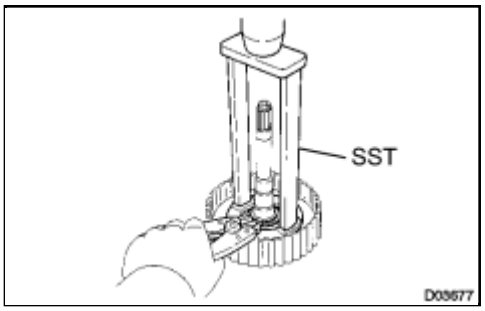
68. INSPECT DIRECT MULTIPLE DISC CLUTCH DISC INFO

69. REMOVE OVERDRIVE DIRECT CLUTCH DISC

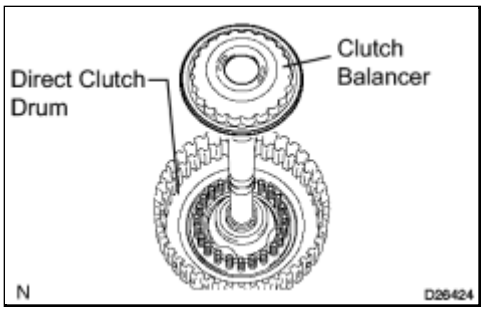


(a) Using a screwdriver, remove the snap ring from the intermediate shaft.

(b) Remove the flange, 3 discs and 3 plates from the intermediate shaft.

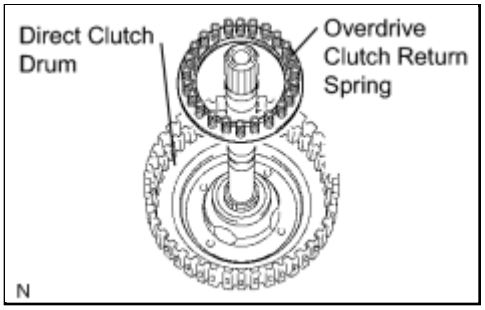
70. INSPECT OVERDRIVE DIRECT CLUTCH DISC INFO

71. REMOVE OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY



(a) Place SST on the clutch balancer and compress the spring with a press.

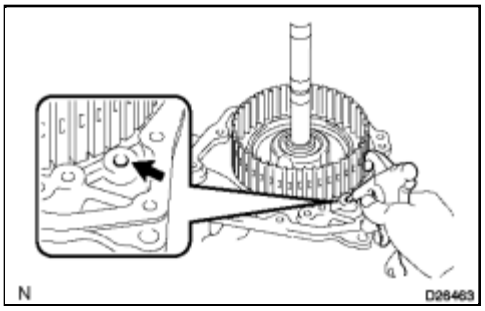
SST: 09387-00020



(b) Using a snap ring expander, remove the snap ring from the direct clutch drum.

NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove. This prevents the spring seat from being deformed.
- Do not expand the snap ring excessively.

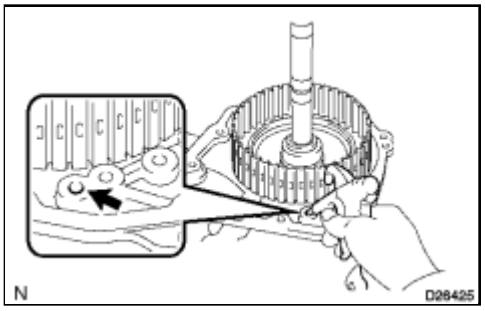


(c) Remove the clutch balancer from the overdrive direct clutch drum.

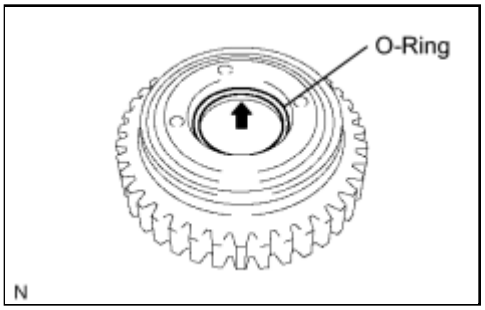
(d) Remove the overdrive clutch return spring from the overdrive direct clutch drum.

72. INSPECT OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY INFO

73. REMOVE OVERDRIVE DIRECT CLUTCH PISTON



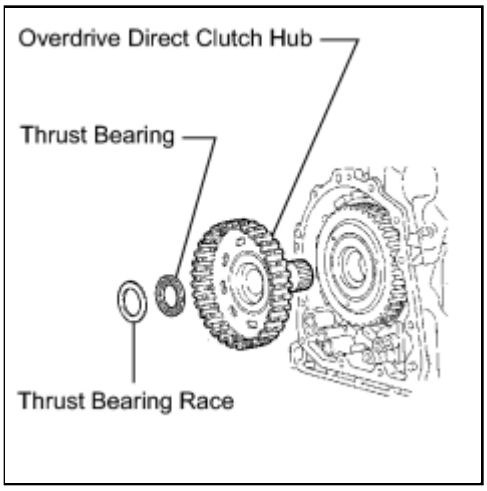
(a) Install the intermediate shaft on the transaxle rear cover.



(b) Holding the direct clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the transaxle rear cover to remove the direct clutch piston.

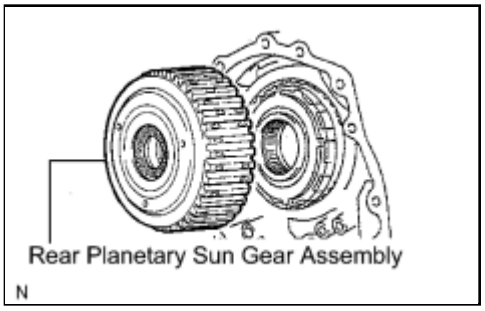
74. REMOVE OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Holding the direct clutch drum by hand, apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the transaxle rear cover to remove the direct clutch drum.

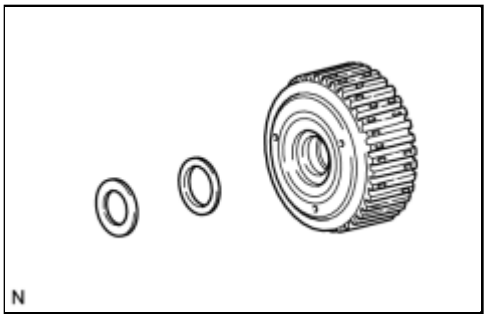


75. REMOVE OVERDRIVE DIRECT CLUTCH O-RING

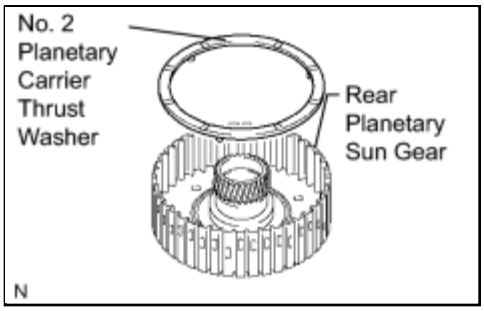
(a) Using a screwdriver, remove the O-ring from the direct clutch drum.



76. REMOVE OVERDRIVE DIRECT CLUTCH HUB SUB-ASSEMBLY

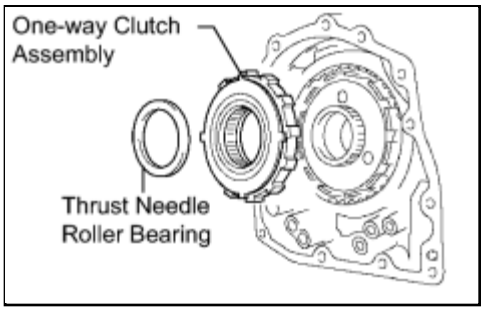


(a) Remove the thrust bearing race, thrust bearing, and overdrive direct clutch hub from the planetary gear assembly.

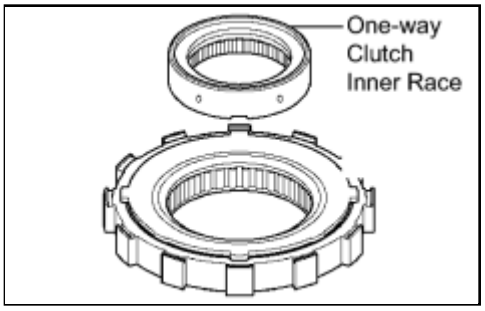


77. REMOVE REAR PLANETARY SUN GEAR ASSEMBLY

(a) Remove the rear planetary sun gear assembly from the transaxle case.

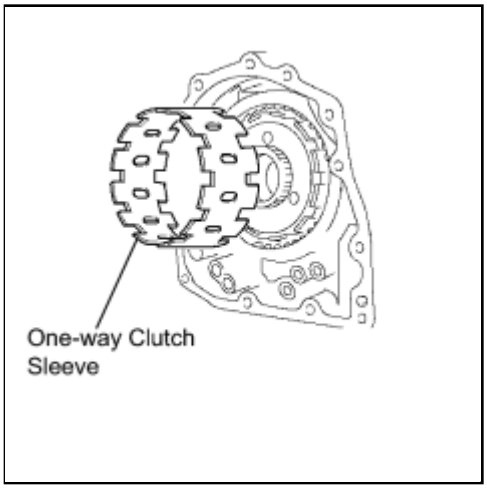


(b) Remove the thrust needle roller bearing and thrust bearing race from the rear planetary sun gear assembly.



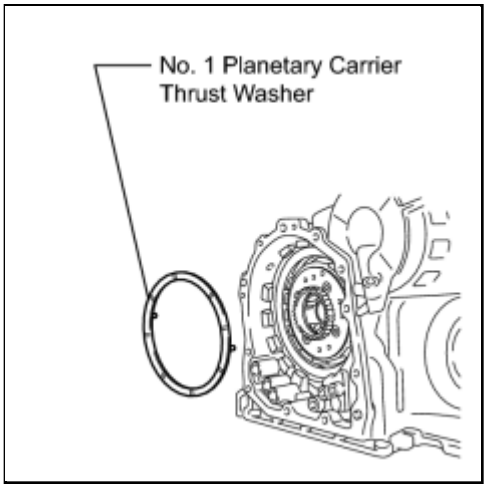
(c) Remove the No. 2 planetary carrier thrust washer from the rear planetary sun gear assembly.

78. REMOVE ONE-WAY CLUTCH ASSEMBLY



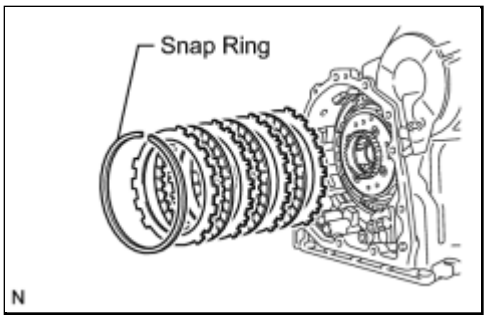
(a) Remove the one-way clutch assembly and the thrust needle roller bearing from the transaxle case.

(b) Remove the one-way clutch inner race from the one-way



clutch assembly.

79. REMOVE ONE-WAY CLUTCH SLEEVE

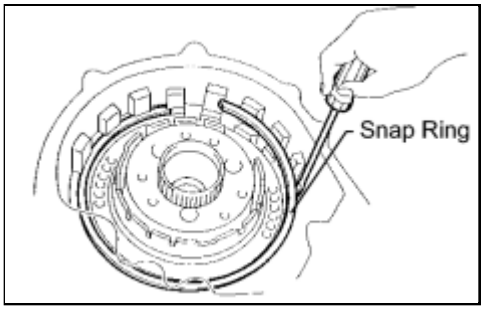


(a) Remove the one-way clutch sleeve from the transaxle case.

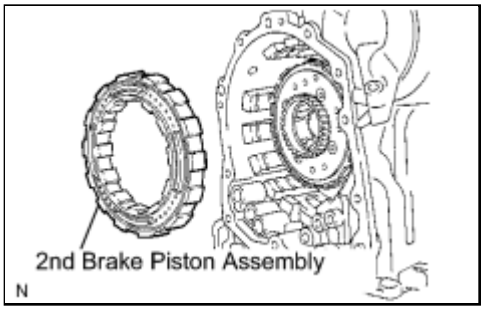
80. REMOVE NO. 1 PLANETARY CARRIER THRUST WASHER

(a) Remove the No. 1 planetary carrier thrust washer from the planetary gear assembly.

81. REMOVE 2ND BRAKE DISC



(a) Using a screwdriver, remove the snap ring.

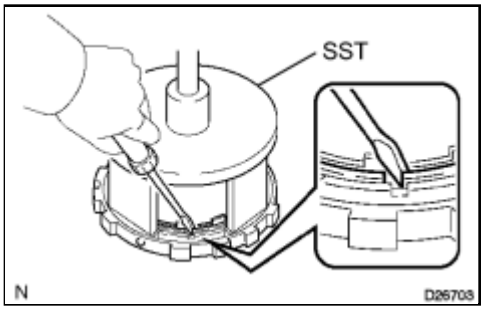


(b) Remove the flange, 3 discs and 3 plates from the transaxle case.

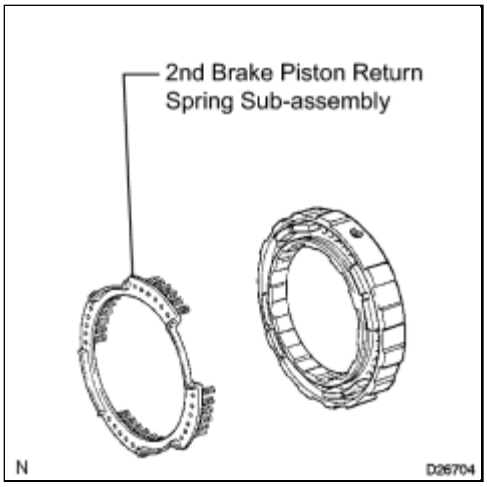
82. INSPECT 2ND BRAKE DISC INFO

83. REMOVE 2ND BRAKE PISTON ASSEMBLY

(a) Using a screwdriver, remove the snap ring.



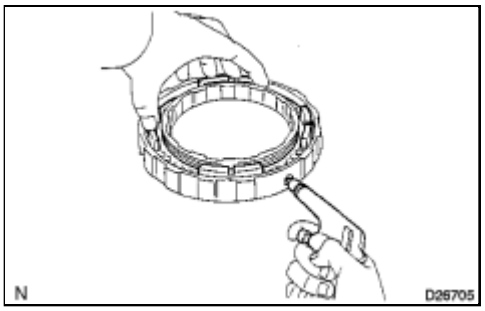
(b) Remove the 2nd brake piston assembly from the transaxle case.



84. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the return spring and compress it with a press.

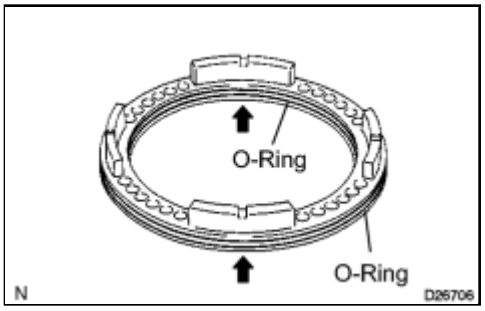
SST: 09387-00060



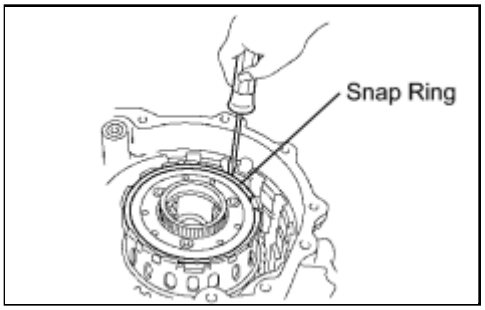
(b) Using a screwdriver, remove the snap ring.

(c) Remove the 2nd brake piston return spring sub-assembly.

85. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY INFO

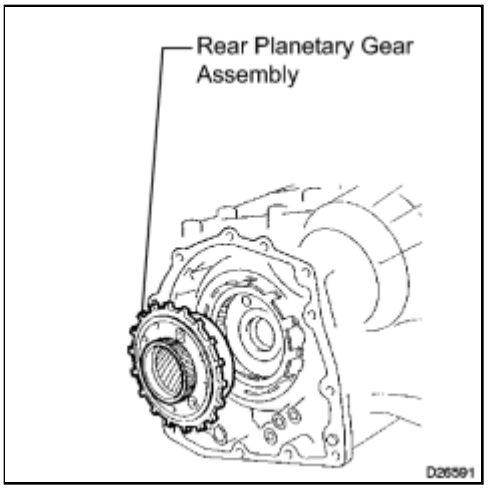


86. REMOVE 2ND BRAKE PISTON



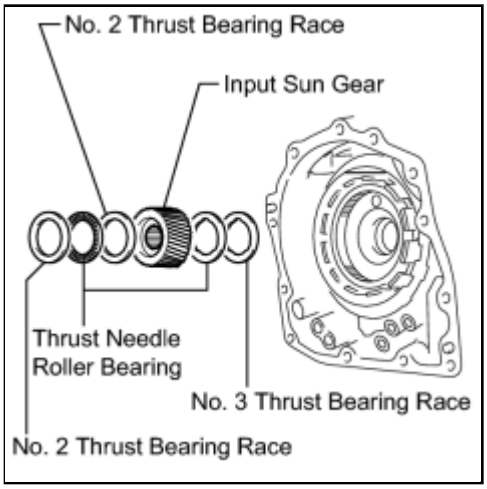
(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.

87. REMOVE 2ND BRAKE PISTON O-RING

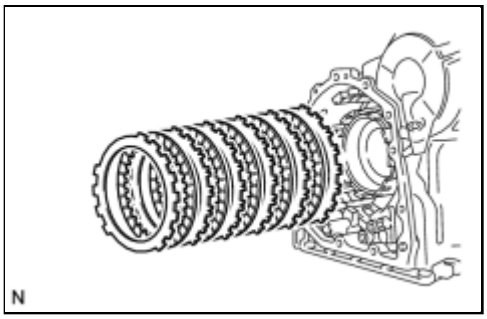


(a) Remove the 2 O-rings from the 2nd brake piston.

88. REMOVE REAR PLANETARY GEAR ASSEMBLY



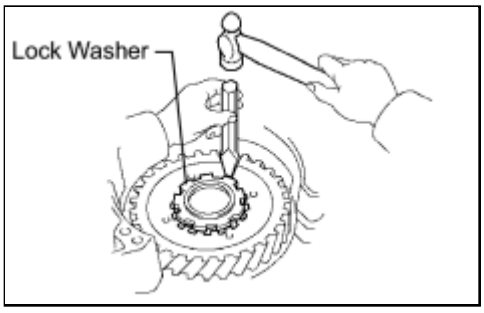
(a) Using a screwdriver, remove the snap ring.



(b) Remove the rear planetary gear assembly from the transaxle case.

89. REMOVE INPUT SUN GEAR

(a) Remove the 2 thrust needle roller bearings, No. 2 thrust bearing races, No. 3 thrust bearing race, and input sun gear from the transaxle case.



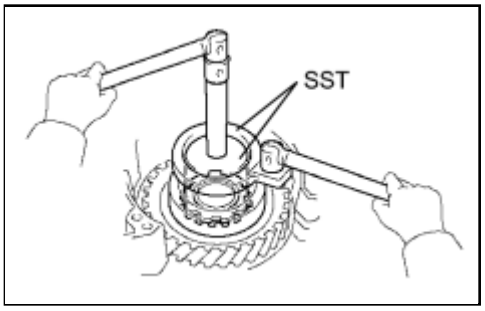
90. REMOVE 1ST AND REVERSE BRAKE DISC

(a) Remove the flange, 5 discs and 5 plates from the transaxle case.

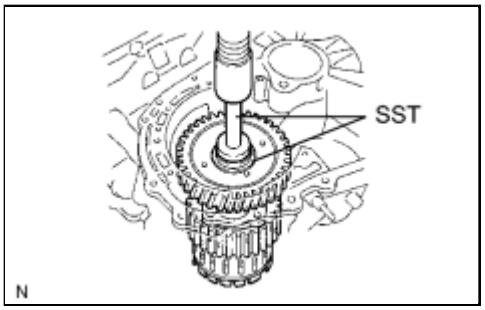
91. INSPECT 1ST AND REVERSE BRAKE DISC INFO

92. REMOVE FRONT PLANETARY GEAR ASSEMBLY

(a) Using a chisel and hammer, unstake the lock washer.



NOTICE:

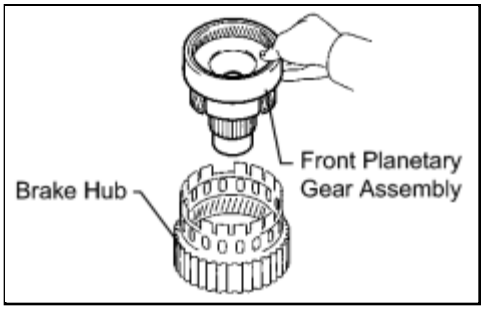


Push down all claws of the washer. If the claws are not pushed down, SST cannot be fully pressed against the nut, and the nut cannot be loosened.

(b) Using SST, remove the nut and washer.

SST: 09387-00030

SST: 09387-00080



(c) Using SST and a press, remove the front planetary gear assembly from the counter drive gear.

(d) Remove the front planetary gear assembly from the brake hub.

93. REMOVE FRONT PLANETARY RING GEAR

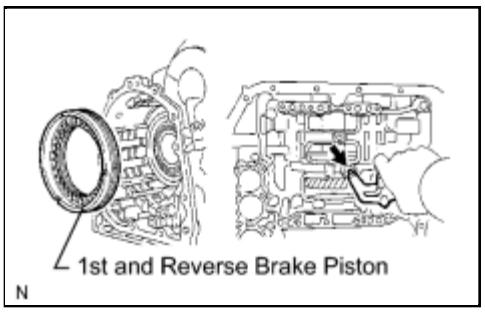
(a) Using a screwdriver, remove the snap ring and front planetary ring gear from the brake hub.

94. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Place SST on the return spring, and compress the return spring with a press.

SST: 09387-00070

(b) Using a snap ring expander, remove the snap ring.



NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.

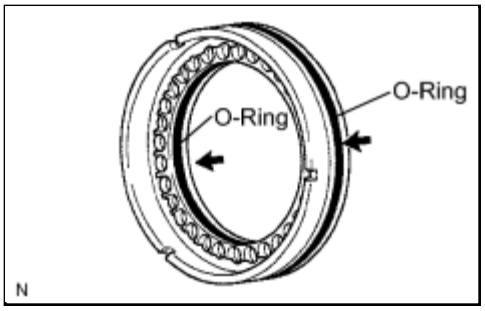
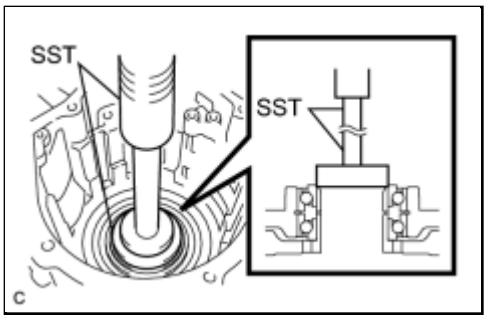
(c) Remove the return spring.

95. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY INFO



96. REMOVE 1ST AND REVERSE BRAKE PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the transaxle case to remove the 1st and reverse brake piston.

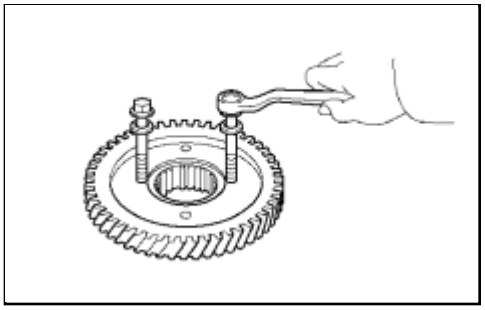


NOTICE:

- Applying compressed air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Take care not to splash ATF when applying compressed air.

(b) Remove the 2 O-rings from the 1st and reverse brake piston.

97. REMOVE COUNTER DRIVE GEAR BEARING



(a) Using SST and a press, remove the counter drive gear from the transaxle case.

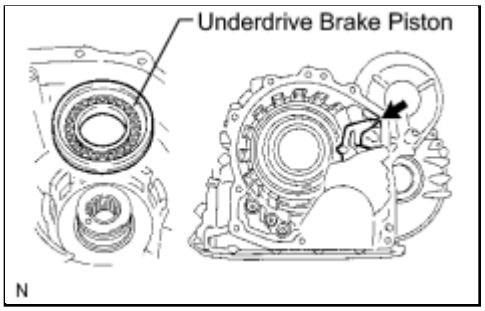
(a) Place SST on the return spring, and compress the return spring with a press.

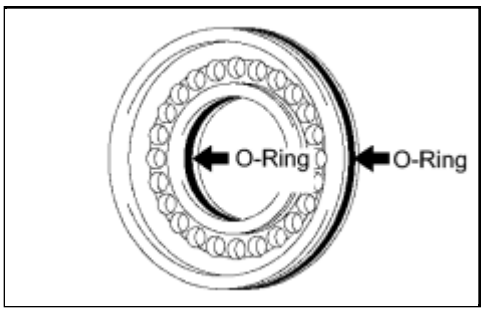
SST: 09387-00020

(b) Using a snap ring expander, remove the snap ring.



NOTICE:

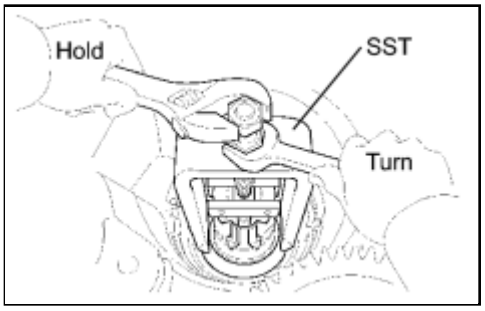
- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.
- Do not expand the snap ring excessively.



(c) Remove the return spring.

100. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY INFO

101. REMOVE UNDERDRIVE BRAKE PISTON



(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the transaxle case to remove the underdrive brake piston.

(b) Remove the 2 O-rings from the underdrive brake piston.

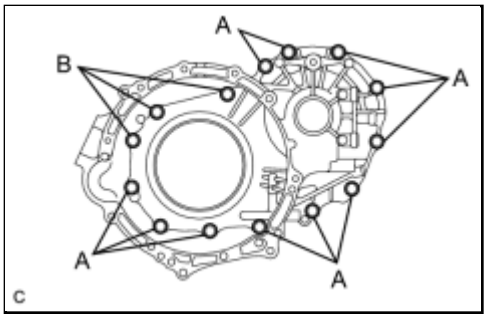
REASSEMBLY



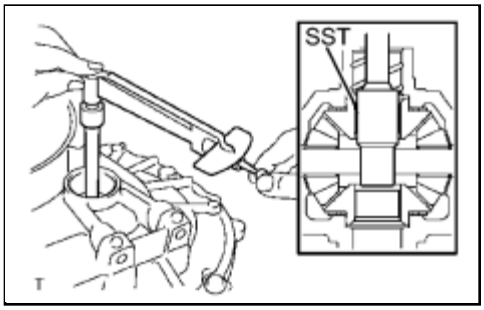
1. BEARING POSITION

(a) Check each bearing position and installation direction.

2. INSPECT DIFFERENTIAL CASE TAPERED ROLLER BEARING PRELOAD

(a) Coat the front differential case and bearing with ATF and install them to the transaxle case.

(b) Install the transaxle housing with the 14 bolts.



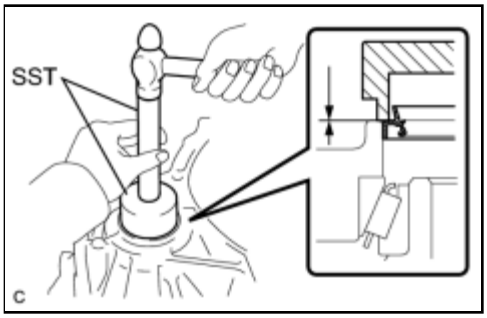
Bolt A - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)
Bolt B - Torque: 22 N·m (224 kgf·cm, 16ft·lbf)

(c) Using SST and a small torque wrench, measure the preload of the differential gear.

Preload:

BEARING	STANDARD
New	0.98 to 1.57 N*m (10.0 to 16.0 kgf*cm, 8.7 to 13.9 in.*lbf)
Used	0.49 to 0.78 N*m (5.0 to 8.0 kgf*cm, 4.3 to 6.9 in.*lbf)

If the preload is not within the specifications, remove the differential from the transaxle case.



Select a new transaxle case side adjusting shim in accordance with the following table.

Adjusting Shim Thickness:

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
01	1.90 (0.0748)	11	2.40 (0.0945)
02	1.95 (0.0768)	12	2.45 (0.0965)
03	2.00 (0.0787)	13	2.50 (0.0984)
04	2.05 (0.0807)	14	2.55 (0.1004)
05	2.10 (0.0827)	15	2.60 (0.1024)
06	2.15 (0.0846)	16	2.65 (0.1043)
07	2.20 (0.0866)	17	2.70 (0.1063)

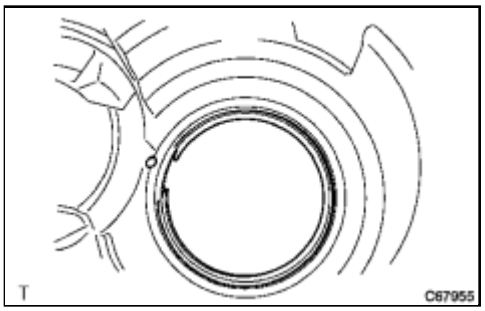
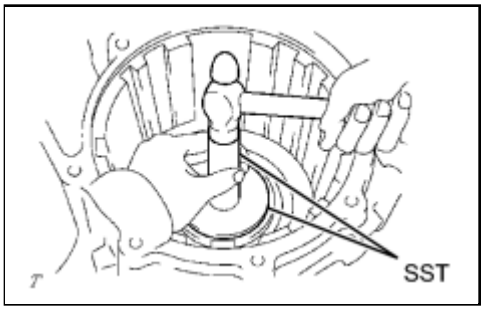
7. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the differential gear lube apply tube to the transaxle housing.



8. INSTALL BEARING LOCK PLATE

(a) Install the bearing lock plate to the transaxle housing with the bolt.



Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

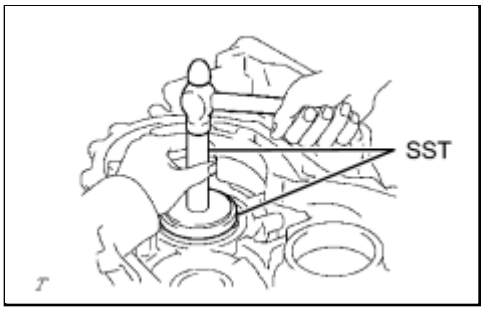
9. INSTALL COUNTER DRIVE GEAR HOLE SNAP RING

(a) Using a screwdriver, install the counter drive gear hole snap ring to the transaxle case.

10. INSTALL COUNTER DRIVE GEAR BEARING LH

(a) Using SST and a hammer, install the counter drive gear bearing outer race LH to the transaxle case.

SST: 09950-60020



09951-00890

SST: 09950-70010

09951-07150

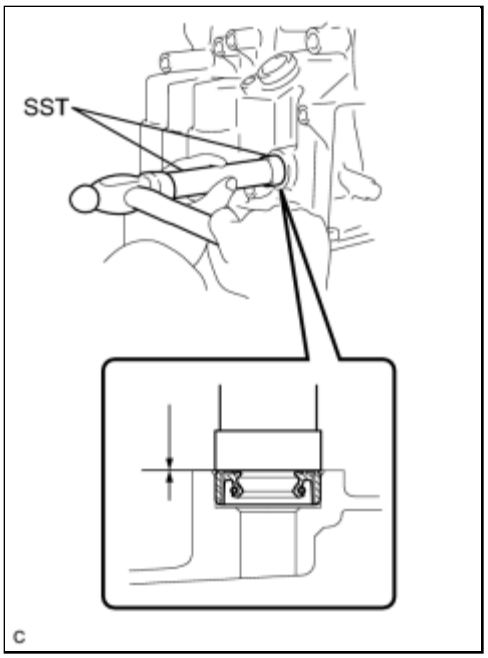
(b) Install the counter drive gear bearing inner race LH and angular ball to the transaxle case.

11. INSTALL COUNTER DRIVE GEAR BEARING RH

(a) Using SST and a hammer, install the counter drive gear bearing outer race RH to the transaxle case.

SST: 09950-60020

09951-00890



SST: 09950-70010

09951-07150

(b) Install the counter drive gear bearing RH to the transaxle case.

12. INSTALL MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Coat the lip of a new manual valve lever shaft oil seal with MP grease.

(b) Using SST and a hammer, install the new manual valve lever shaft oil seal.

SST: 09950-60010

09951-00220

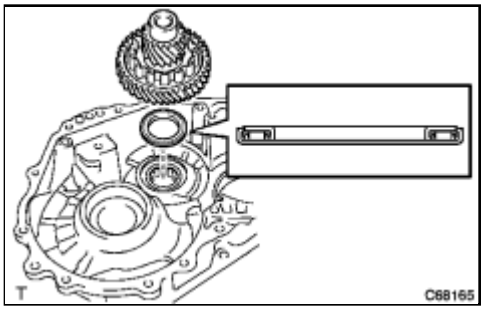
NOTICE:

When replacing the counter driven gear, replace the counter drive gear in the transaxle case as well.

Press in the differential drive pinion until it comes into contact with the counter driven gear.

14. INSTALL DIFFERENTIAL DRIVE PINION PLUG

(a) Using SST and a plastic hammer, install a new differential drive pinion plug to the differential drive pinion.

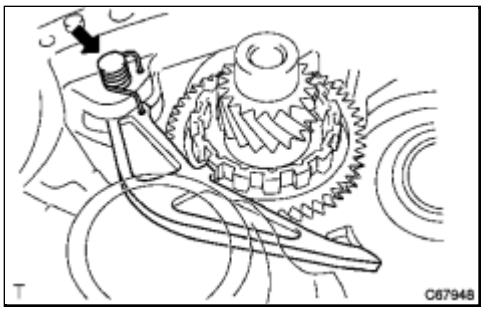


SST: 09221-25026

09221-00071

Standard clearance:

2.5 to 3.5 mm (0.0984 to 0.137 in.)

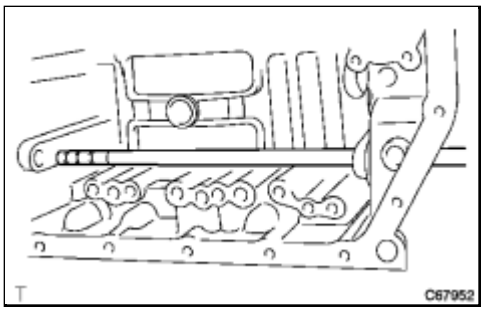


15. INSTALL COUNTER DRIVEN GEAR

(a) Install the counter driven gear and drive pinion thrust bearing LH to the transaxle case.

16. INSTALL PARKING LOCK PAWL

(a) Coat the parking lock pawl shaft with ATF.

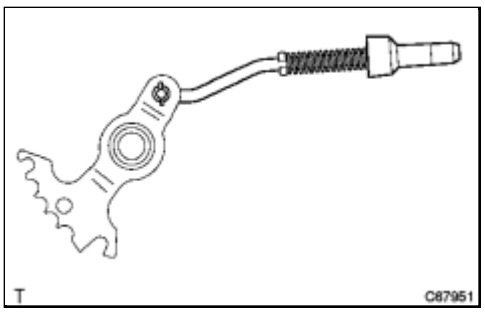


(b) Install the parking lock pawl, parking lock pawl shaft torsion spring and parking lock pawl shaft to the transaxle case.

NOTICE:

Check that the parking lock pawl moves smoothly.

17. INSTALL MANUAL VALVE LEVER SHAFT

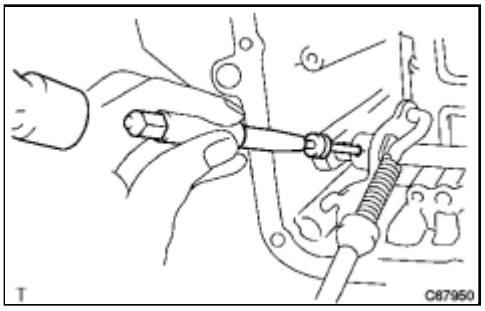


(a) Install the manual valve lever shaft to the transaxle case.

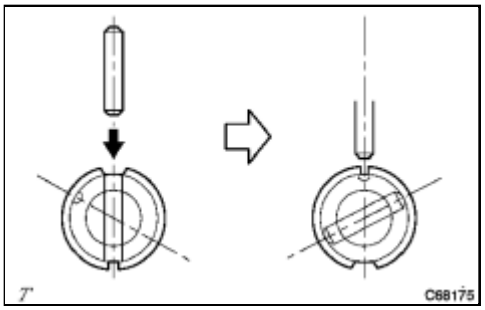
NOTICE:

Do not damage the oil seal lip.

18. INSTALL PARKING LOCK ROD SUB-ASSEMBLY



(a) Install the parking lock rod to the manual valve lever.

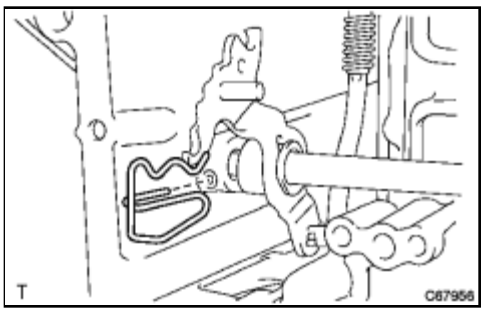


19. INSTALL MANUAL VALVE LEVER SUB-ASSEMBLY

(a) Coat the manual valve lever sub-assembly with ATF.

(b) Install the manual valve lever and a new manual valve lever spacer to the manual valve lever shaft.

(c) Using a pin punch and hammer, drive in the pin.

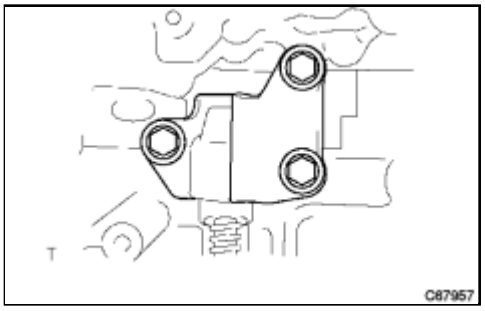


(d) Turn the spacer and lever shaft to align the small hole for locating the staking position mark on the lever shaft.

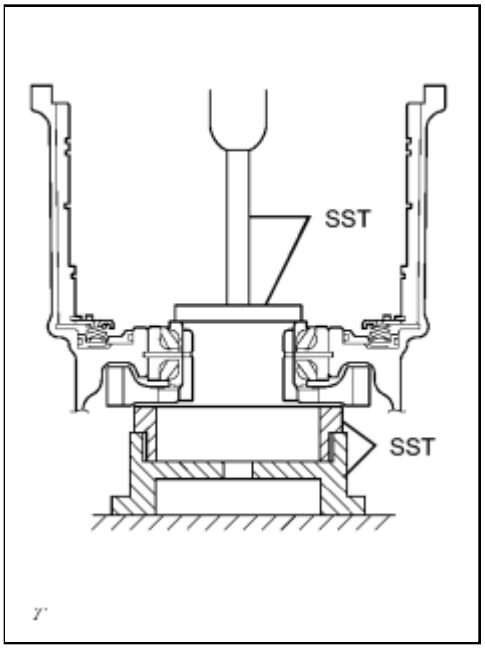
(e) Using a pin punch, stake the spacer through the small hole.

(f) Check that the spacer does not turn.

20. INSTALL MANUAL VALVE LEVER SHAFT RETAINER SPRING



(a) Install the manual valve lever shaft retainer spring to the manual valve lever shaft.

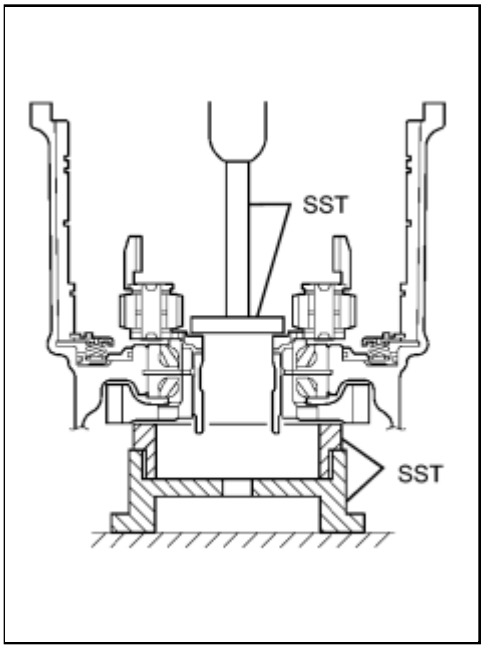


21. INSTALL PARKING LOCK PAWL BRACKET

(a) Install the parking lock pawl bracket, parking lock rod and cam guide sleeve to the transaxle case with the 3 bolts.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

22. INSTALL COUNTER DRIVE GEAR



(a) Using SST and a press, install the counter drive gear to the transaxle case.

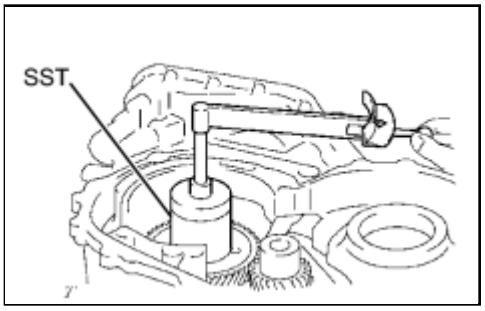
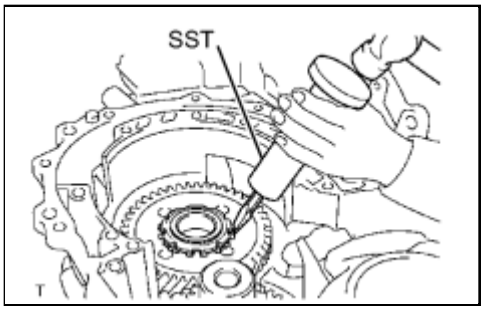
24. INSTALL COUNTER DRIVE GEAR NUT

(a) Secure the counter driven gear with the parking lock pawl.



(b) Using SST, install a new lock washer and nut.

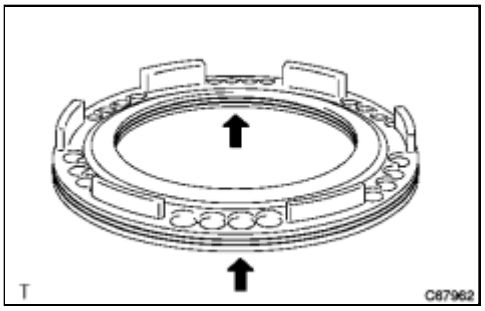
SST: 09387-00120



Torque: 280 N·m (2855 kgf·cm, 207ft·lbf)

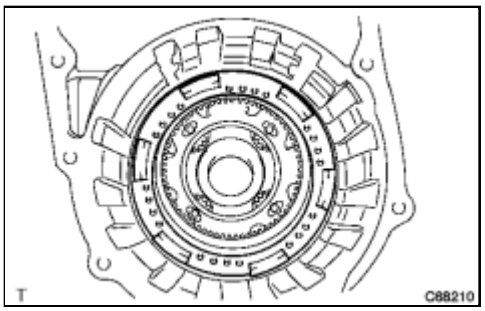
(c) Using SST and a small torque wrench, measure the rotating torque while turning the counter drive gear at 60 turns per minute.

SST: 09387-00120



Rotating torque:
0.20 to 0.49 N*m (2.0 to 5.0 kgf*cm, 1.8 to 4.3 in.*lbf)

(d) Using SST and a hammer, stake the lock nut washer.

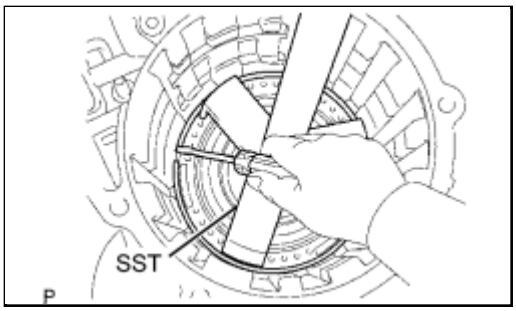


SST: 09930-00010

25. INSTALL NO. 2 1ST AND REVERSE BRAKE PISTON O-RING

(a) Coat 2 new No. 2 1st and reverse brake piston O-rings with ATF, and install them to the No. 2 1st and reverse brake piston.

26. INSTALL NO. 2 1ST AND REVERSE BRAKE PISTON

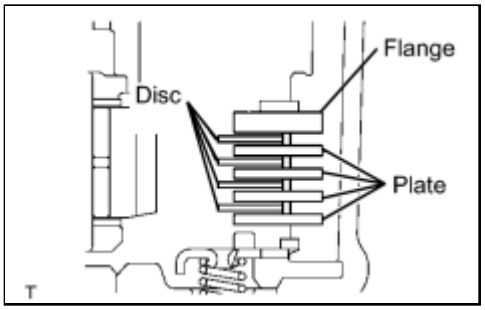


(a) Coat the No. 2 1st and reverse brake piston with ATF, and install it to the transaxle case.

NOTICE:

Do not damage the oil seal lip.

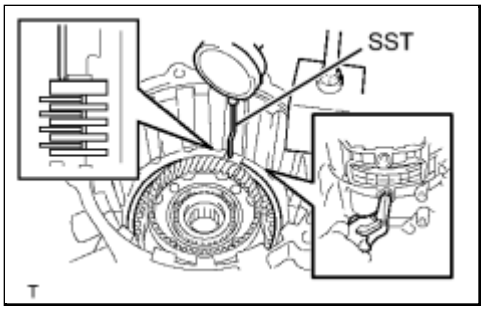
27. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY



(a) Install the 1st and reverse brake return spring sub-assembly to the transaxle case.

(b) Using SST, a press and a screwdriver, install the snap ring.

SST: 09387-00070



28. INSTALL 1ST AND REVERSE BRAKE DISC

(a) Install the 4 plates, 4 discs and flange to the transaxle case.

(b) Using a screwdriver, install the snap ring.

29. INSPECT PACK CLEARANCE OF 1ST AND REVERSE BRAKE

(a) Using SST and a dial indicator, measure the 1st and reverse brake clearance while pressing the discs and plates from the rear side.

SST: 09350-36010

09350-06110

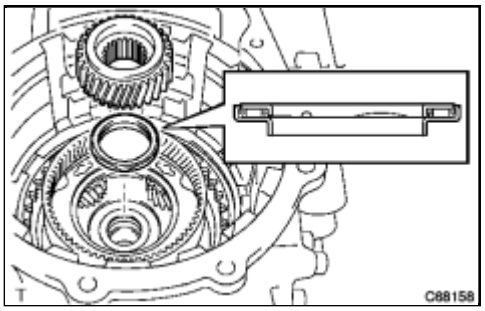
Pack clearance:

0.81 to 1.20 mm (0.0318 to 0.0472 in.)

NOTICE:

If the clearance is not within the specified range, select a new brake flange.

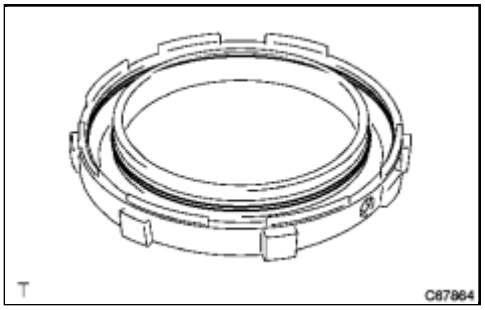
HINT:



There are 4 different thicknesses of flanges available.

Flange Thickness:

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
-	3.4 (0.134)	2	3.8 (0.150)
1	3.6 (0.142)	3	4.0 (0.157)

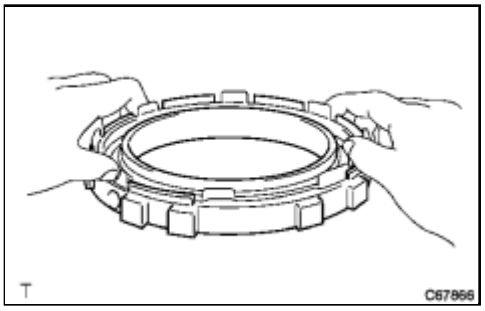


(b) Check that the 1st and reverse brake piston moves when compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) is applied to the oil hole.

30. INSTALL FRONT PLANETARY SUN GEAR

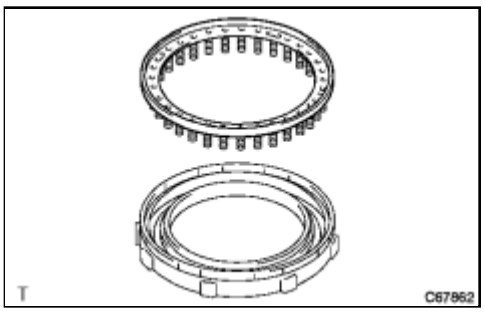
(a) Install the planetary sun gear and needle roller bearing to the planetary gear assembly.

31. INSTALL 2ND BRAKE CYLINDER O-RING



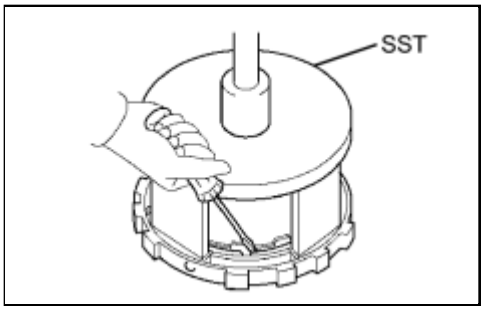
(a) Coat 2 new 2nd brake cylinder O-rings with ATF, and install them into the 2nd brake cylinder.

NOTICE:
Do not damage the O-rings.



32. INSTALL 2ND BRAKE PISTON

(a) Coat the 2nd brake piston with ATF, and install it into the 2nd brake cylinder.



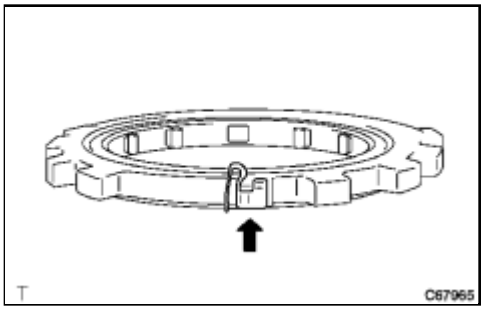
CAUTION:
Do not damage the O-rings when pressing the 2nd brake piston into the 2nd brake cylinder by hand.

33. INSTALL 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Install the piston return spring.

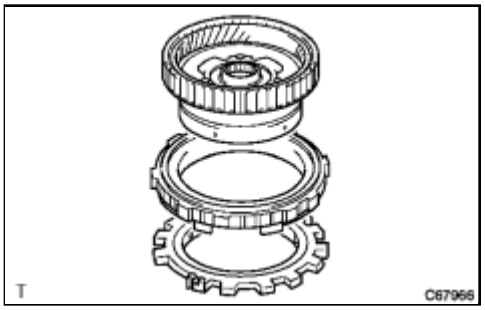
(b) Place SST on the piston return spring, and compress the piston return spring with a press.

SST: 09387-00060



(c) Using a screwdriver, install the snap ring.

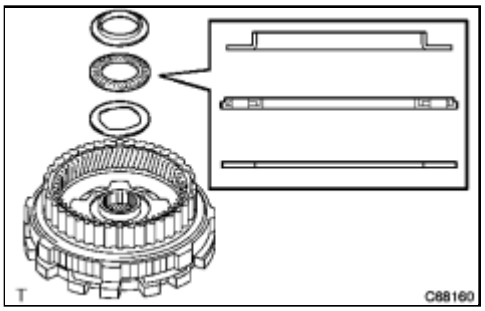
NOTICE:



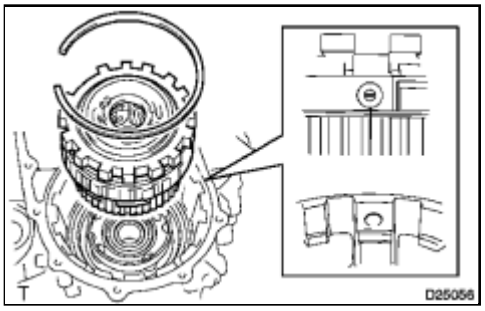
Make sure that the end gap of the snap ring is not aligned with the piston return spring claw.

34. INSTALL OUTER RACE RETAINER

(a) Install the outer race retainer to the No. 2 one-way clutch.



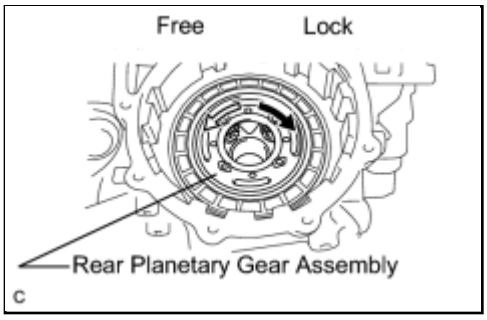
35. INSTALL NO. 2 ONE-WAY CLUTCH



(a) Install the No. 2 one-way clutch and 2nd brake piston assembly to the rear planetary gear assembly.

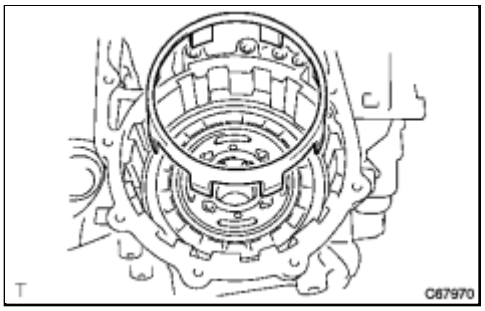
36. INSTALL REAR PLANETARY GEAR THRUST NEEDLE ROLLER BEARING

(a) Install the No. 2 thrust bearing race, the planetary gear thrust needle roller bearing and thrust bearing race to the rear planetary gear assembly.



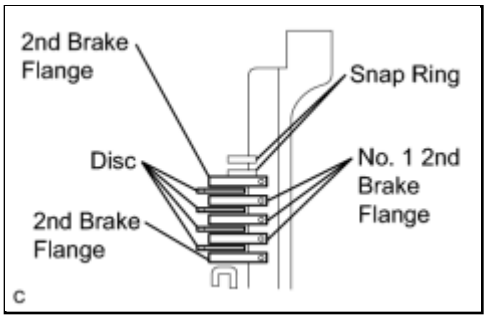
37. INSTALL REAR PLANETARY GEAR ASSEMBLY

(a) Install the rear planetary gear assembly to the transaxle case.



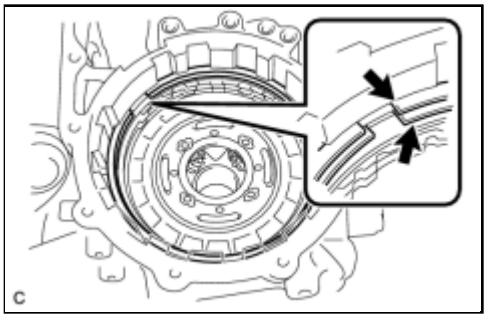
(b) Using a screwdriver, install the snap ring.

38. INSPECT NO. 2 ONE-WAY CLUTCH



(a) Check that the rear planetary gear assembly turns freely counterclockwise and locks when turned clockwise.

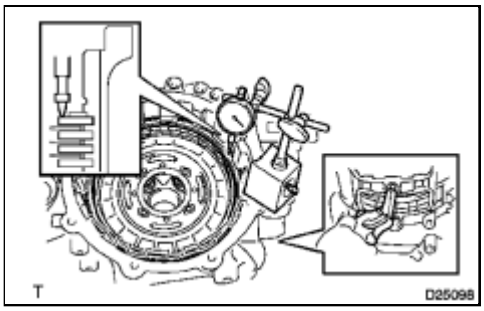
39. INSTALL 2ND BRAKE PISTON SLEEVE



(a) Install the 2nd brake piston sleeve to the transaxle case.

40. INSTALL 2ND BRAKE DISC

(a) Install the 4 discs, 3 No. 1 2nd brake flanges and 2 2nd brake flanges to the transaxle case.



(b) Using a screwdriver, install the 2 snap rings to the transaxle case.

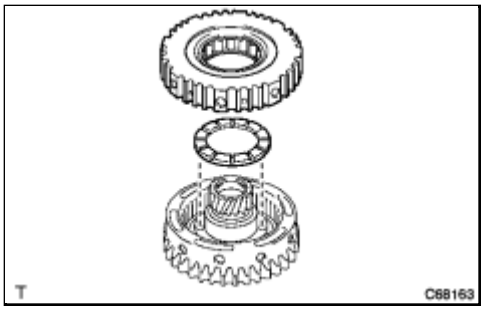
41. INSPECT PACK CLEARANCE OF 2ND BRAKE

(a) Using a dial indicator, measure the 2nd brake pack clearance while applying and releasing compressed air (392 to 785 kPa, 4.0 to 8.0 kgf/cm2, 57 to 114 psi).

Pack clearance:
0.85 to 1.24 mm (0.0334 to 0.0488 in.)

NOTICE:

If the clearance is not within the specified range, select a new brake flange.

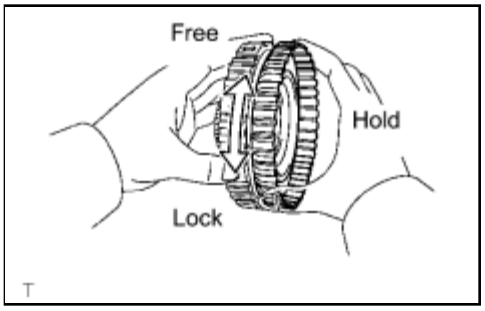


HINT:

There are 4 different thicknesses of flanges available.

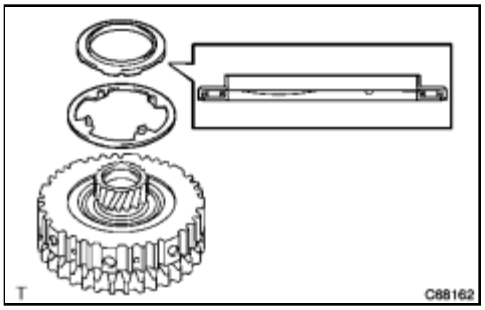
Flange Thickness:

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)



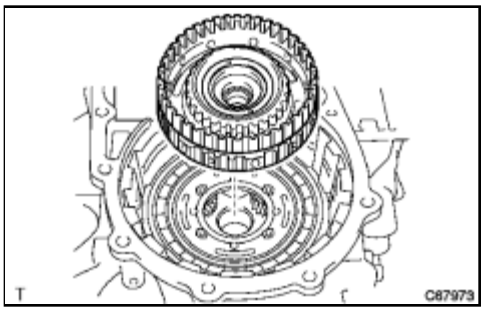
42. INSTALL ONE-WAY CLUTCH ASSEMBLY

(a) Install the No. 2 thrust washer to the rear planetary gear assembly.



(b) Install the one-way clutch assembly to the rear planetary sun gear assembly.

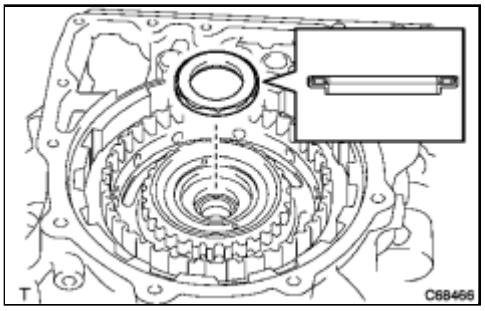
43. INSPECT ONE-WAY CLUTCH ASSEMBLY



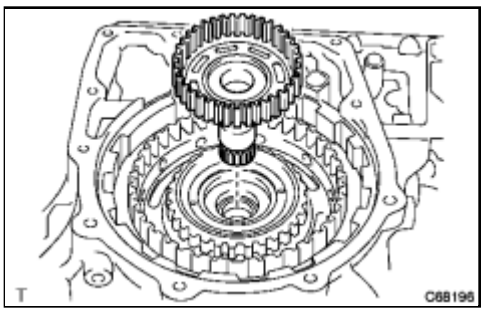
(a) Hold the rear planetary sun gear, turn the one-way clutch and check that the one-way clutch turns freely counterclockwise and locks when turned clockwise.

44. INSTALL REAR PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

(a) Install the thrust needle roller bearing and the washer to the rear planetary sun gear.



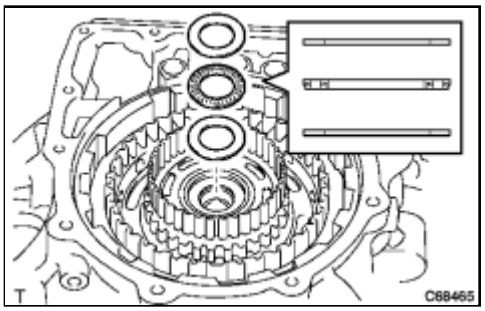
45. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY



(a) Install the rear planetary sun gear assembly.

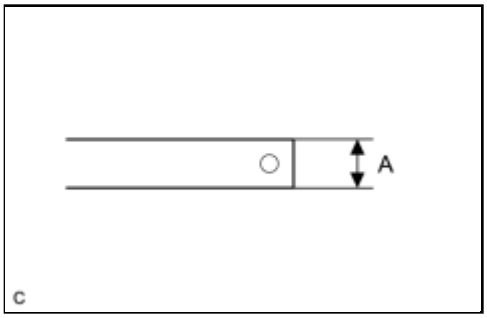
46. INSTALL REAR NO. 2 PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

(a) Install the rear No. 2 planetary sun gear thrust needle roller bearing to the rear planetary sun gear.

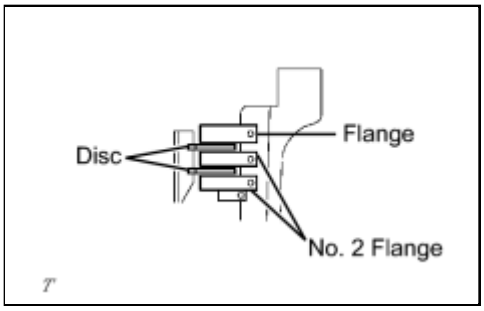


47. INSTALL DIRECT CLUTCH HUB

(a) Install the direct clutch hub.

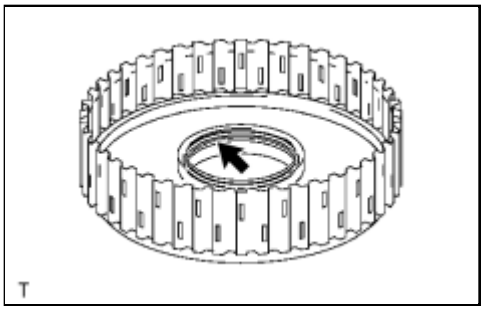


48. INSTALL THRUST NEEDLE ROLLER BEARING



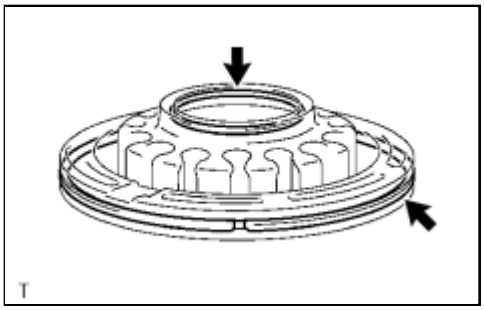
(a) Install the No. 3 thrust bearing race, the thrust needle roller bearing and the C-2 hub thrust bearing race to the direct clutch hub.

49. INSTALL 2ND COAST AND OVERDRIVE BRAKE DISC



(a) Measure the flange thickness. (Dimension A)

(b) Install the 2 discs, 2 No. 2 flanges and flange to the transaxle case.

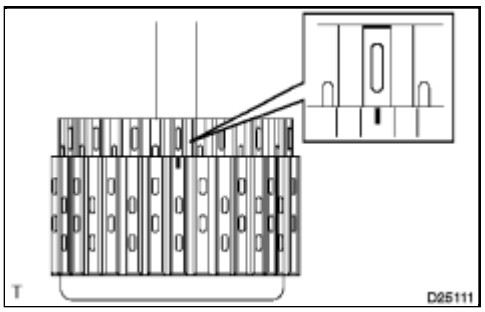


50. INSTALL DIRECT CLUTCH DRUM O-RING

(a) Coat a new O-ring with ATF and install it to the direct clutch drum.

NOTICE:
Do not damage the O-ring.

51. INSTALL DIRECT CLUTCH PISTON O-RING

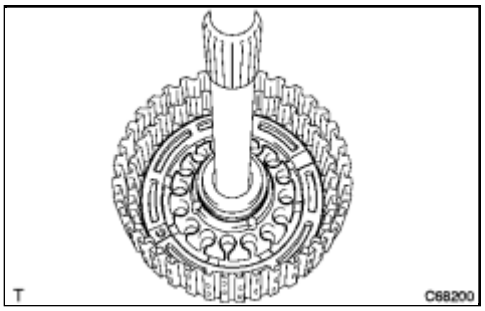


(a) Coat 2 new O-rings with ATF and install them to the direct clutch piston.

NOTICE:
Do not damage the O-rings.

52. INSTALL DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Coat the direct clutch drum with ATF.

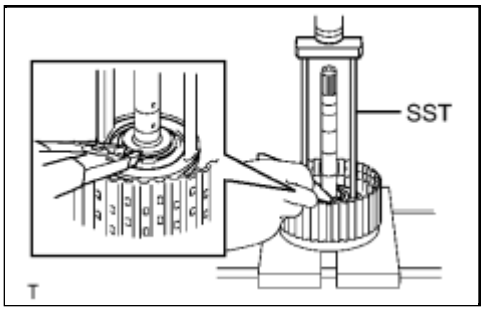


(b) Align a cutout on the intermediate shaft assembly with the matchmark on the direct clutch drum and install the direct clutch drum to the intermediate shaft assembly.

NOTICE:

Do not damage the O-ring or the lip of the clutch drum.

53. INSTALL DIRECT CLUTCH PISTON SUB-ASSEMBLY



(a) Coat the direct clutch piston with ATF and install it to the intermediate shaft.

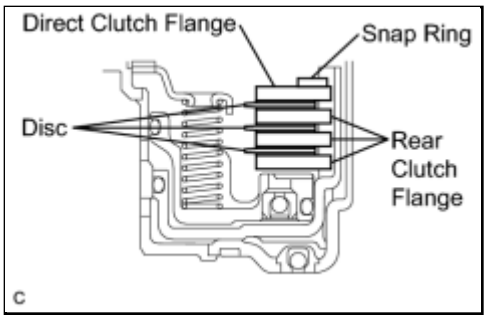
NOTICE:

Do not damage the O-ring or the direct clutch piston.

54. INSTALL DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Install the direct clutch return spring onto the direct clutch piston.

(b) Place SST on the piston return spring and compress the springs with a press.

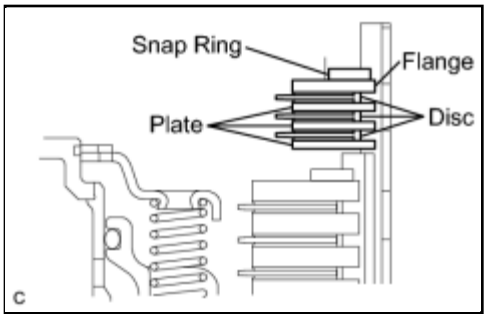


SST: 09387-00020

(c) Using snap ring pliers, install the snap ring to the direct clutch drum.

NOTICE:

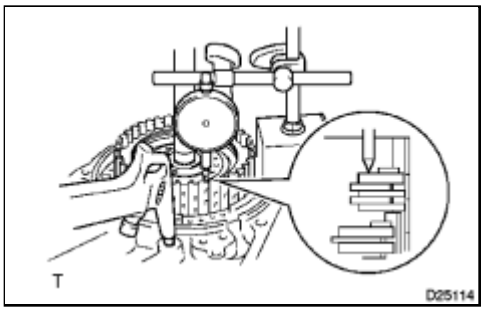
- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.
- Do not expand the snap ring excessively.



55. INSTALL DIRECT CLUTCH DISC

(a) Coat the 3 rear clutch flanges, 3 discs and direct clutch flange with ATF and install them to the intermediate shaft.

(b) Install the snap ring to the intermediate shaft.



56. INSTALL REVERSE CLUTCH DISC

(a) Coat the 3 plates, 3 discs and flange with ATF, and install them to the intermediate shaft.

(b) Install the snap ring to the intermediate shaft.

57. INSPECT PACK CLEARANCE OF REVERSE CLUTCH

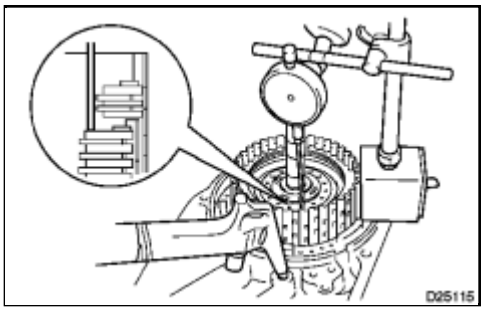
(a) Install the intermediate shaft and thrust needle roller bearing to the rear transaxle cover.

(b) Using a dial indicator, measure the reverse clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:
0.62 to 1.16 mm (0.0244 to 0.0456 in.)

NOTICE:

If the clearance is not within the specified range, select a new clutch flange.



HINT:

There are 4 different thicknesses of flanges available.

Flange Thickness:

NO.	THICKNESS (MM (IN.))	NO.	THICKNESS (MM (IN.))
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

58. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the intermediate shaft and thrust needle roller bearing to the transaxle rear cover.

(b) Using a dial indicator and measuring terminal (SST), measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

SST: 09350-36010

09350-06110

HINT:

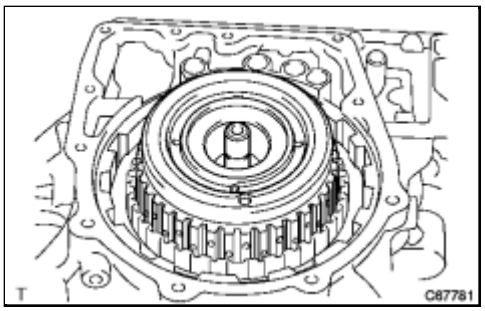
The direct and reverse clutch will come out as compressed air is applied.

Therefore, while performing the check, press on the input shaft of the direct and reverse clutch using a press or the equivalent so that the pressure is not applied to the direct and reverse clutch.

Pack clearance:
0.62 to 1.02 mm (0.0244 to 0.0402 in.)

NOTICE:

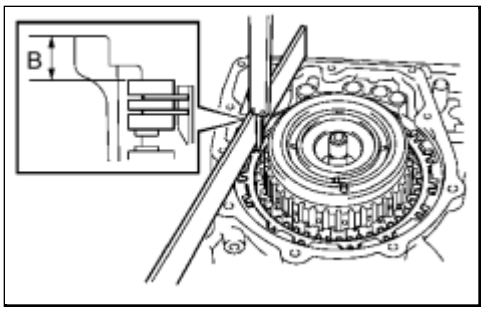
If the clearance is not within the specified range, select a new clutch flange.



HINT:

There are 4 different flange thicknesses.

Flange Thickness:



NO.	THICKNESS (MM (IN.))	NO.	THICKNESS (MM (IN.))
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

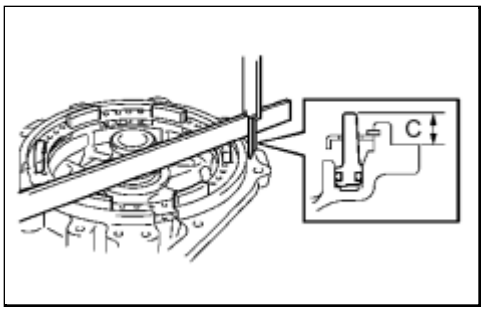
59. INSTALL INTERMEDIATE SHAFT ASSEMBLY

(a) Install the intermediate shaft assembly to the transaxle case.

60. INSPECT 2ND COAST AND OVERDRIVE BRAKE CLEARANCE

(a) As shown in the illustration, place a straightedge on the transaxle case and measure the distance between the 2nd coast and overdrive brake flange and the straightedge using a vernier caliper. (Dimension B)

(b) As shown in the illustration, place a straightedge on the overdrive brake piston and measure the distance between the transaxle rear cover and straightedge using a vernier caliper. (Dimension C)



Calculate the piston stroke value using the following formula.

Formula:

(Dimension A + Dimension B) - Dimension C

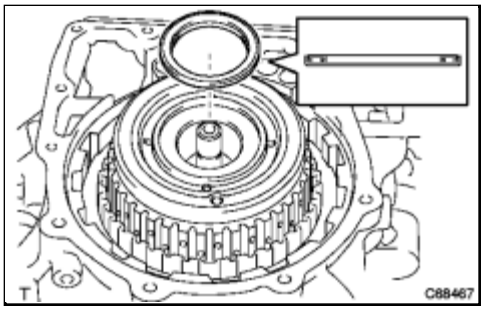
Pack clearance:

2.10 to 2.49 mm (0.0826 to 0.0980 in.)

NOTICE:

If the clearance is not within the specified range, select a new brake flange.

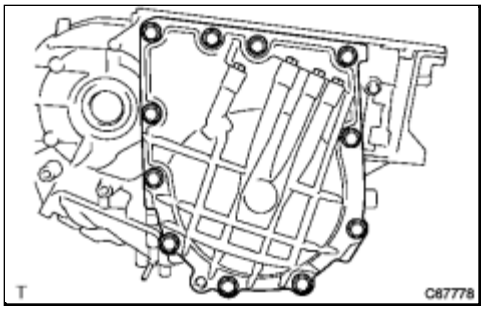
HINT:



There are 4 different thicknesses of flanges available.

Flange Thickness:

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
4	4.0 (0.1575)	6	4.4 (0.1732)

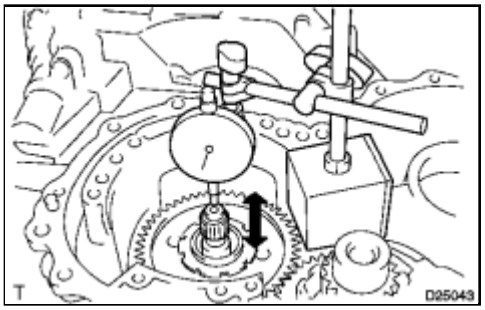


5	4.2 (0.1654)	7	4.6 (0.1811)

61. INSTALL REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING

(a) Install the bearing to the intermediate shaft.

62. INSPECT INTERMEDIATE SHAFT ASSEMBLY



(a) Install the rear transaxle cover with the 11 bolts.

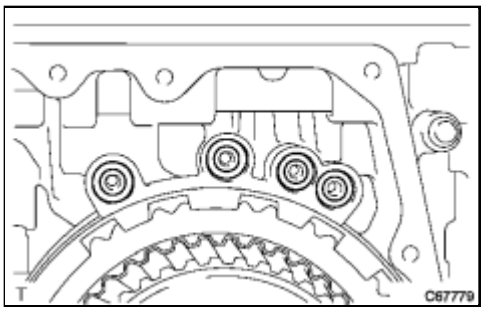
Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

(b) Using a dial indicator, measure the intermediate shaft end play.

End play:
0.21 to 0.96 mm (0.00826 to 0.0377 in.)

If the end play is not as specified, select and replace the rear clutch drum thrust needle roller bearing.

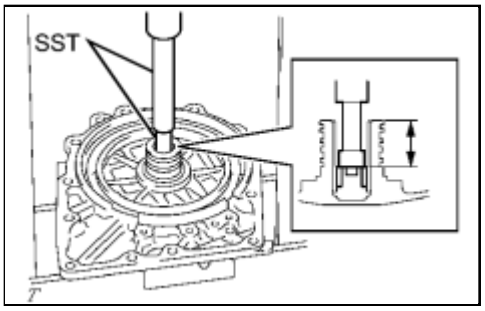
HINT:



There are 2 different thicknesses of trust needle roller bearings available.

COLOR	THICKNESS (MM (IN.))
Brown	0.785 (0.0309)

Black	1.1 (0.0433)



(c) Remove the 11 bolts and the rear transaxle cover.

63. INSTALL TRANSAXLE CASE GASKET

(a) Install 4 new gaskets to the transaxle case.

64. INSTALL REAR TRANSAXLE COVER NEEDLE ROLLER BEARING

(a) Coat a new needle roller bearing with ATF.

(b) Using SST and a press, install the needle roller bearing into the rear transaxle cover.

SST: 09950-60010

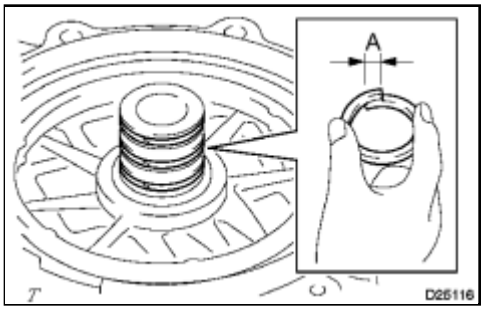
09951-00190

09952-06010

SST: 09950-70010

09951-07100

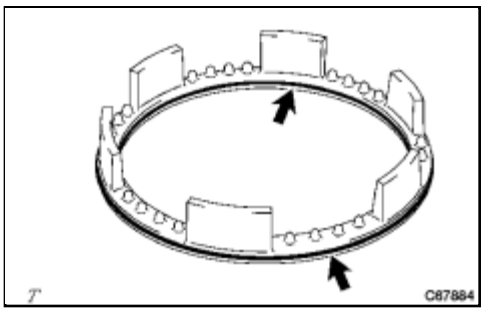
Standard clearance:



25.1 mm (0.988 in.)

65. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Compress the 3 oil seal rings from both sides to reduce dimension A.

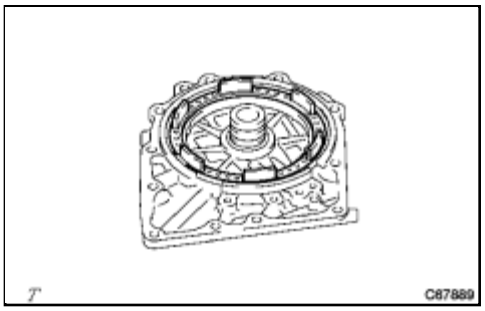


Dimension A:

5.0 mm (0.197 in.)

(b) Coat 3 oil seal rings with ATF and install them to the rear transaxle cover.

66. INSTALL 2ND COAST AND OVERDRIVE O-RING



(a) Coat 2 new O-rings with ATF and install them to the 2nd coast and overdrive brake piston.

NOTICE:

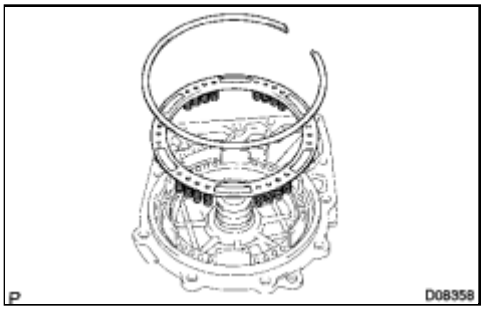
Do not damage the O-rings.

67. INSTALL 2ND COAST AND OVERDRIVE BRAKE PISTON

(a) Coat the piston with ATF and install it to the rear transaxle cover.

NOTICE:

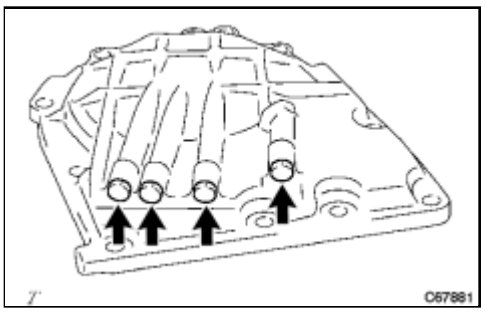
Do not damage the O-rings.



68. INSTALL OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using SST and a press, install the overdrive brake return spring and snap ring to the rear transaxle cover.

SST: 09387-00070



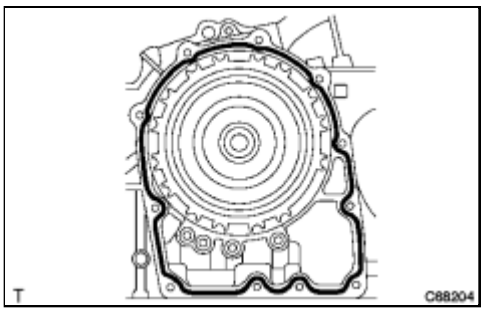
NOTICE:

- Stop the press when the spring seat is lowered 1 to 2 mm (0.0393 to 0.0787 in.) from the snap ring groove to prevent the spring seat from being deformed.

- Do not expand the snap ring excessively.

69. INSTALL REAR TRANSAXLE COVER PLUG

(a) Coat 4 new O-rings with ATF, and install them to the 4 rear transaxle cover plugs.



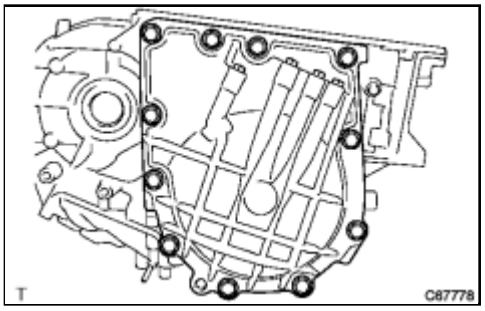
(b) Install the 4 rear transaxle cover plugs to the rear transaxle cover.

Torque: 7.4 N·m (76 kgf·cm, 66in·lbf)

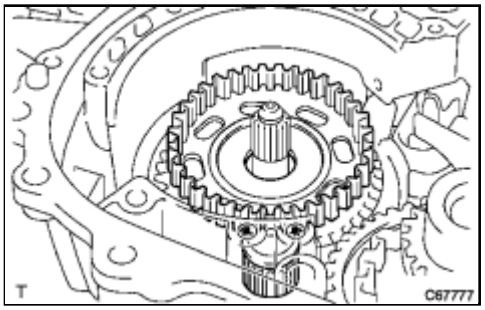
NOTICE:

Do not damage the O-rings.

70. INSTALL REAR TRANSAXLE COVER ASSEMBLY



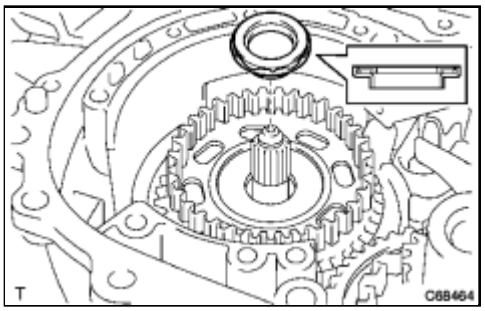
(a) Apply seal packing to the transaxle case.



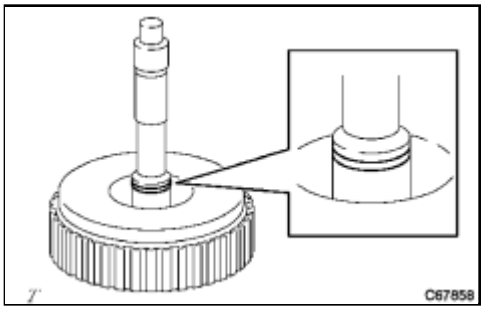
Seal packing:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

(b) Install the rear transaxle cover with the 11 bolts.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

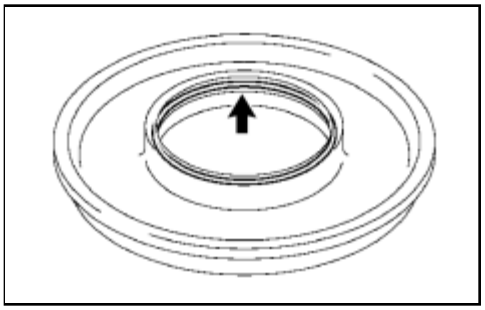


71. INSTALL FORWARD CLUTCH HUB SUB-ASSEMBLY



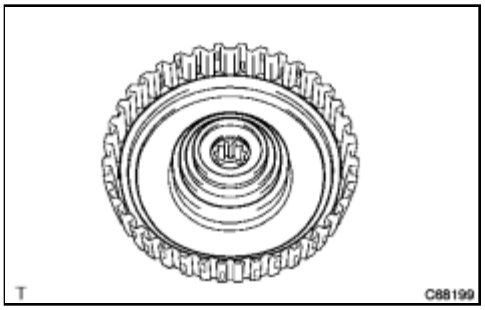
(a) Install the forward clutch hub sub-assembly onto the transaxle case.

72. INSTALL FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING



(a) Install the bearing to the forward clutch hub.

73. INSTALL INPUT SHAFT OIL SEAL RING

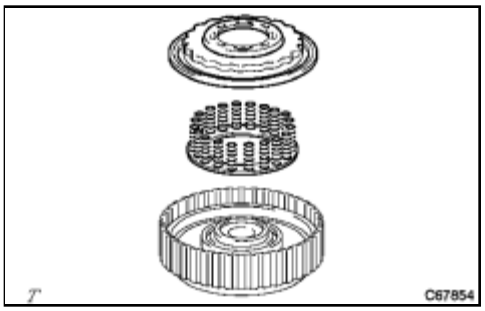


(a) Coat a new input shaft oil seal ring with ATF, and install it to the input shaft.

74. INSTALL FORWARD CLUTCH PISTON O-RING

(a) Coat a new clutch piston O-ring with ATF, and install it to the forward clutch piston.

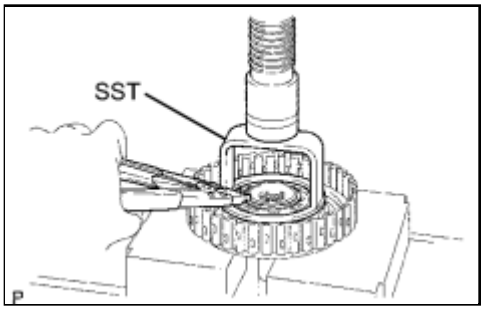
75. INSTALL FORWARD CLUTCH PISTON



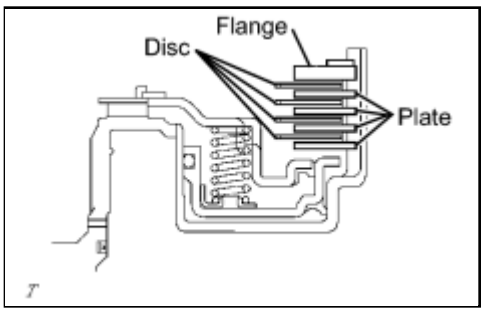
(a) Install the forward clutch piston to the input shaft.

NOTICE:

Do not damage the O-ring.



76. INSTALL FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

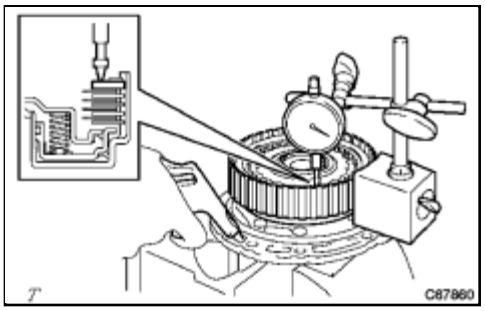


(a) Install the return spring and clutch balancer to the input shaft.

(b) Using SST, a press and snap ring pliers, install the snap ring to the input shaft.

SST: 09320-89010

77. INSTALL FRONT CLUTCH DISC



(a) Install the 4 plates, 4 discs and flange.

(b) Using a screwdriver, install the snap ring to the input shaft.

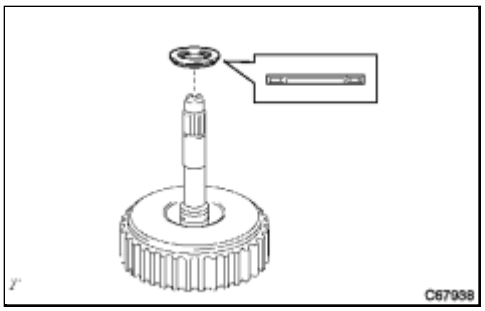
78. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Using a dial indicator, measure the pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm2, 57 psi).

Pack clearance:
1.41 to 1.80 mm (0.0555 to 0.0708 in.)

NOTICE:

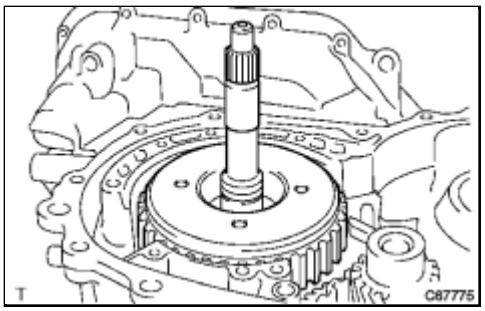
If the clearance is not within the specified range, install a new brake flange.



HINT:

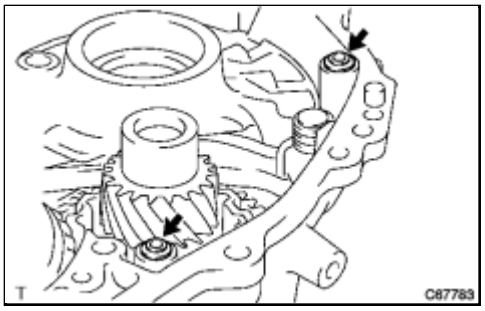
There are 4 different thicknesses of flanges available.

Flange Thickness:



NO.	THICKNESS (MM (IN.))	NO.	THICKNESS (MM (IN.))
-	3.0 (0.118)	2	3.4 (0.134)
1	3.2 (0.126)	3	3.6 (0.142)

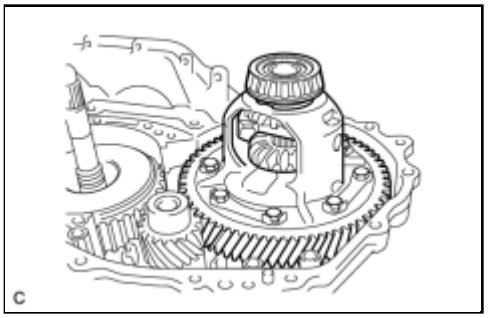
79. INSTALL STATOR SHAFT THRUST NEEDLE ROLLER BEARING



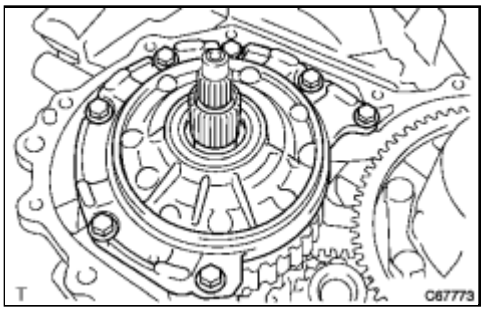
(a) Install the bearing to the input shaft assembly.

80. INSTALL INPUT SHAFT ASSEMBLY

(a) Install the input shaft assembly to the transaxle case.



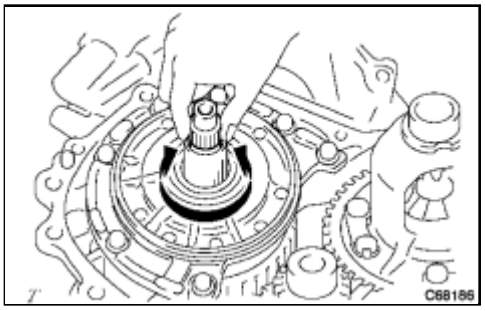
81. INSTALL OVERDRIVE BRAKE GASKET



(a) Install 2 new gaskets to the transaxle case.

82. INSTALL DIFFERENTIAL GEAR ASSEMBLY

(a) Install the differential gear assembly to the transaxle case.

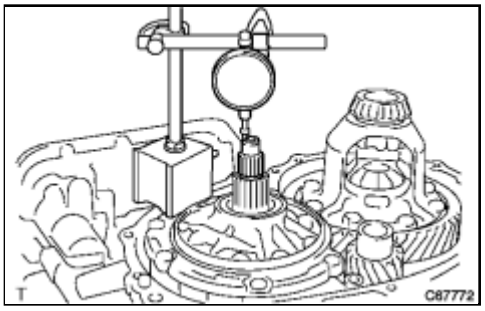


83. INSTALL OIL PUMP ASSEMBLY

(a) Install the oil pump with the 7 bolts.

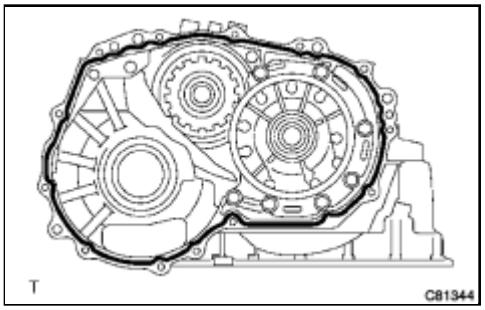
Torque: 22 N·m (224 kgf·cm, 16ft·lbf)

84. INSPECT INPUT SHAFT ASSEMBLY



(a) Make sure that the input shaft turns smoothly.

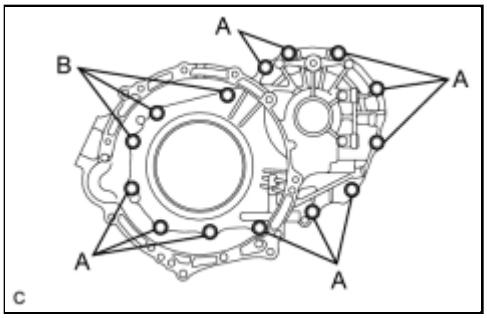
85. INSPECT INPUT SHAFT END PLAY



(a) Measure the end play in the axial direction.

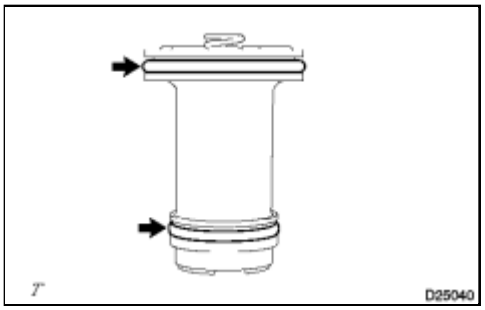
End play:
0.38 to 1.29 mm (0.0149 to 0.0507 in.)

If the end play is not as specified, replace the forward clutch hub thrust needle roller bearing and the stator shaft thrust needle bearing.



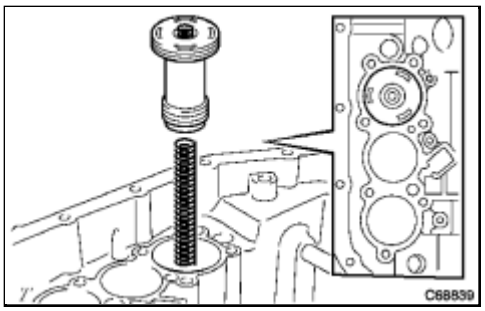
86. INSTALL TRANSAXLE HOUSING

(a) Apply seal packing to the transaxle case.



Seal packing:
Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

(b) Install the transaxle housing with the 14 bolts.

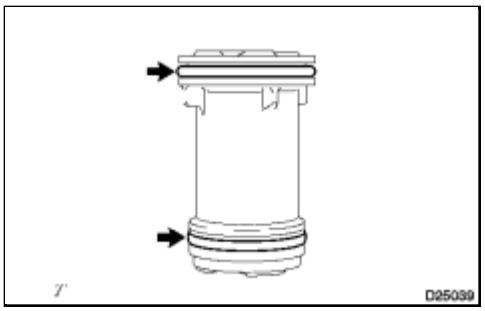


Bolt A - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)
Bolt B - Torque: 22 N·m (224 kgf·cm, 16ft·lbf)

87. INSTALL C-2 ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF and install them to the C-2 accumulator piston.

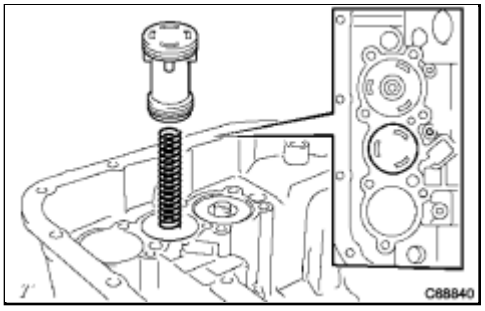
NOTICE:
Do not damage the O-rings.



(b) Install the spring and C-2 accumulator piston.

Accumulator Spring:

SPRING	FREE LENGTH/ OUTER DIAMETER (MM (IN.))	COLOR
C-2	66.20 to 67.60 (2.606 to 2.661) 17.20 (0.677)	-

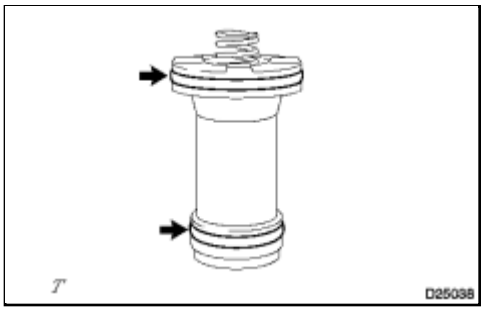


88. INSTALL C-3 ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF and install them to the C-3 accumulator piston.

NOTICE:

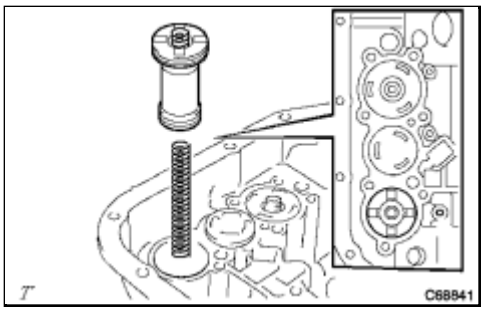
Do not damage the O-rings.



(b) Install the spring and C-3 accumulator piston.

Accumulator Spring:

SPRING	FREE LENGTH/ OUTER DIAMETER (MM (IN.))	COLOR
C-3	87.30 (3.437) 18.70 (0.736)	Orange

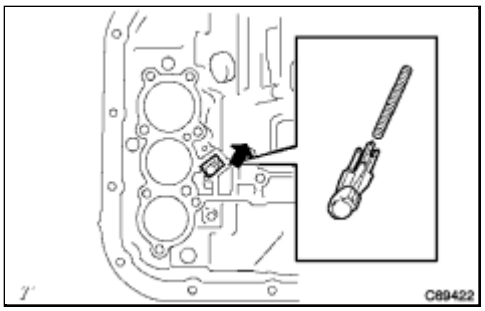


89. INSTALL B-2 ACCUMULATOR PISTON

(a) Coat 2 new O-rings with ATF and install them to the B-2 accumulator piston.

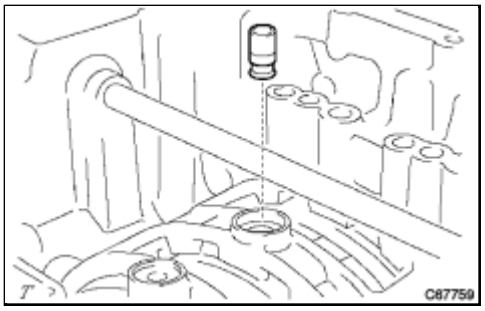
NOTICE:

Do not damage the O-rings.



(b) Install the spring and B-2 accumulator piston.

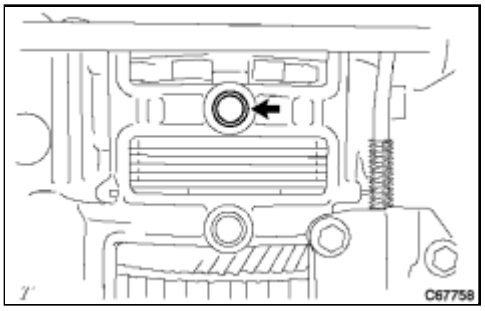
Accumulator Spring:



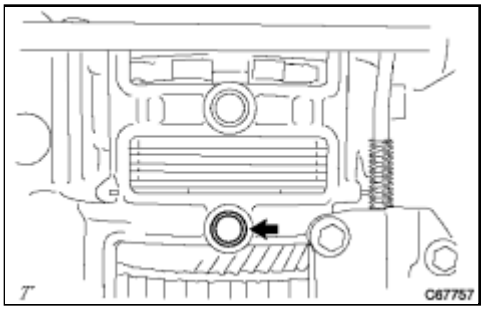
SPRING	FREE LENGTH/ OUTER DIAMETER (MM (IN.))	COLOR
B-2	66.90 (2.633) 15.50 (0.610)	White

90. INSTALL CHECK BALL BODY

(a) Install the spring and check ball body.



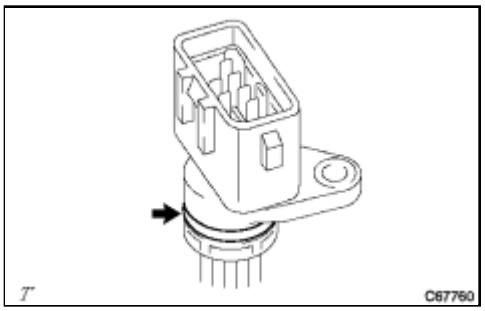
91. INSTALL BRAKE DRUM GASKET



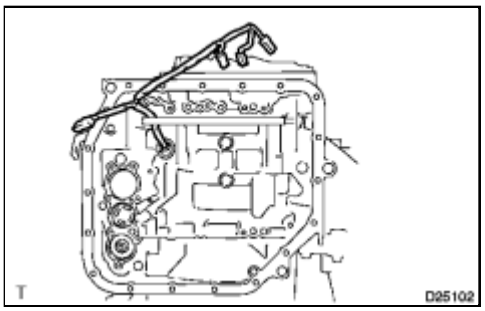
(a) Install a new brake drum gasket.

92. INSTALL TRANSAXLE CASE GASKET

(a) Coat a new transaxle case gasket with ATF, and install it to the transaxle case.



93. INSTALL TRANSAXLE CASE 2ND BRAKE GASKET

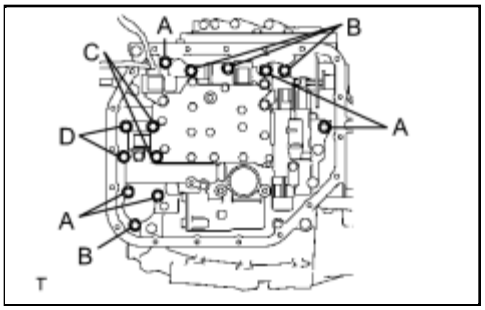


(a) Coat a new transaxle case 2nd brake gasket with ATF, and install it to the transaxle case.

94. INSTALL TRANSMISSION WIRE

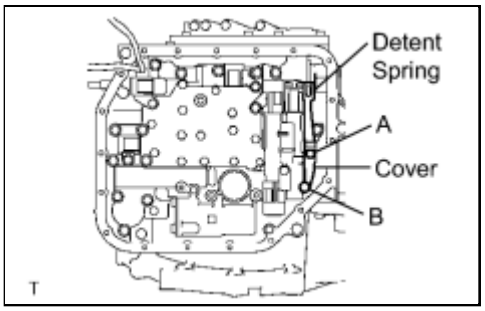
(a) Coat a new O-ring with ATF, and install it into the transmission wire.

(b) Insert the transmission wire to the transaxle.



(c) Install the transmission wire with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)



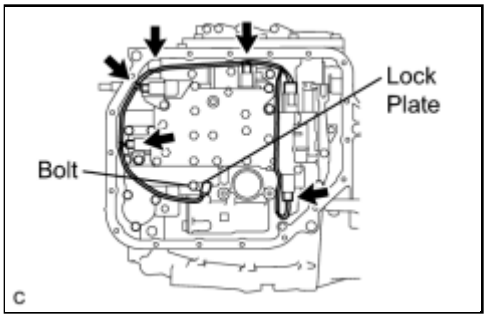
95. INSTALL TRANSMISSION VALVE BODY ASSEMBLY

(a) Align the groove of the manual valve with the pin of the manual valve lever.

(b) Temporarily install the valve body with the 13 bolts.

Bolt length:
Bolt A: 32 mm (1.26 in.)
Bolt B: 22 mm (0.866 in.)
Bolt C: 55 mm (2.17 in.)
Bolt D: 45 mm (1.77 in.)

(c) Temporarily install the detent spring and detent spring cover with the 2 bolts.



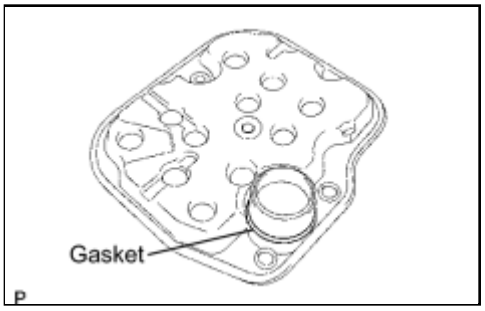
Bolt length:
Bolt A: 14 mm (0.551 in.)
Bolt B: 45 mm (1.77 in.)

(d) Check that the manual valve lever is in contact with the center of the roller at the tip of the detent spring.

(e) Tighten the 15 bolts.

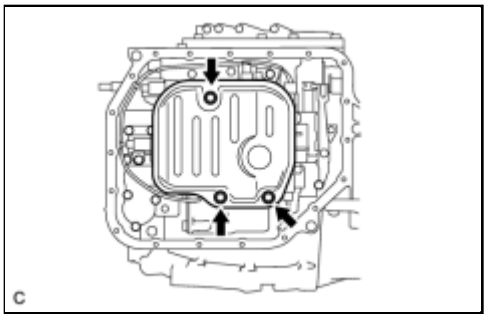
Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

(f) Connect the 5 solenoid connectors.



(g) Install the ATF temperature sensor with the lock plate and bolt.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

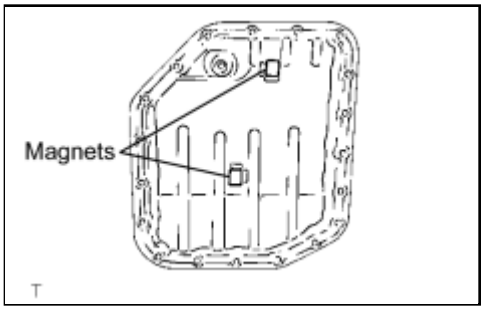


Bolt length:

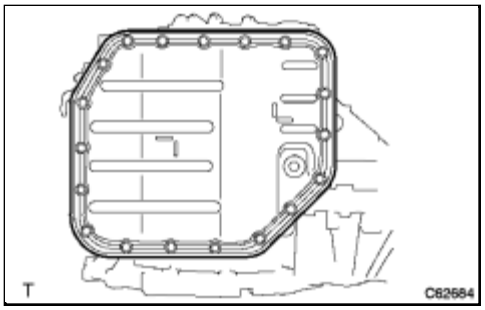
55 mm (2.17 in.)

96. INSTALL VALVE BODY OIL STRAINER ASSEMBLY

(a) Coat a new gasket with ATF, and install it to the oil strainer.



(b) Install the valve body oil strainer assembly to the automatic transaxle with the 3 bolts.

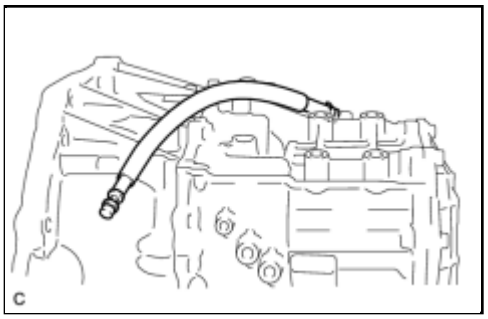


Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

97. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets to the oil pan.

(b) Install a new oil pan gasket to the oil pan.



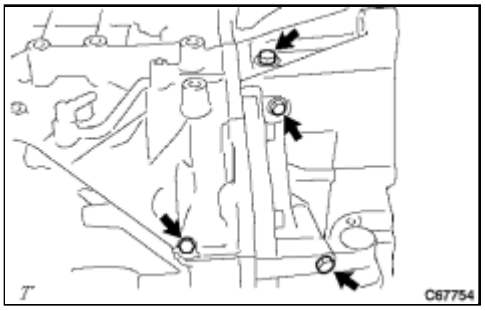
(c) Install the oil pan with the 19 bolts.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

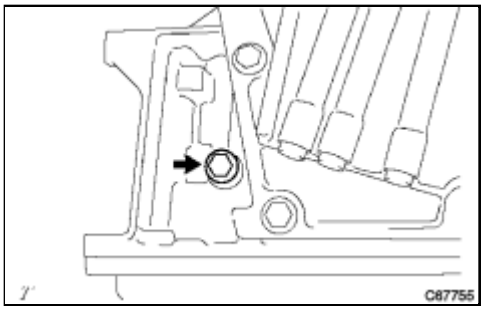
98. INSTALL BREATHER PLUG

(a) Install the breather plug to the transaxle case.

99. INSTALL BREATHER PLUG HOSE



(a) Install the breather plug hose to the breather plug.

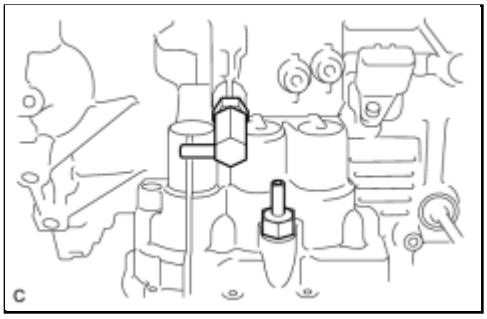


100. INSTALL NO. 1 TRANSAXLE CASE PLUG

(a) Coat 5 new O-rings with ATF, and install them to the 5 No. 1 transaxle case plugs.

(b) Install the 4 No. 1 transaxle case plugs to the transaxle housing and transaxle case.

Torque: 7.4 N·m (76 kgf·cm, 66in·lbf)



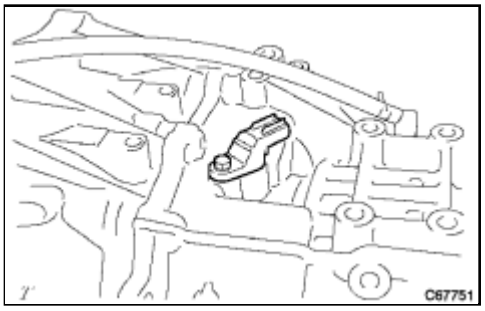
(c) Install the No. 1 transaxle case plug to the transaxle case.

Torque: 7.4 N·m (76 kgf·cm, 66in·lbf)

101. INSTALL OIL COOLER TUBE UNION

(a) Coat 2 new O-rings with ATF, and install them into the 2 oil cooler tube unions.

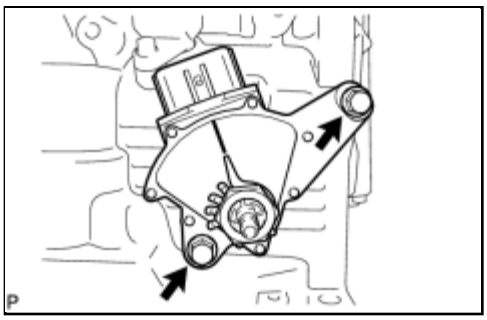
(b) Install the 2 oil cooler tube unions to the transaxle case.



Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

102. INSTALL SPEED SENSOR

(a) Coat a new O-ring with ATF, and install it to the speed sensor.

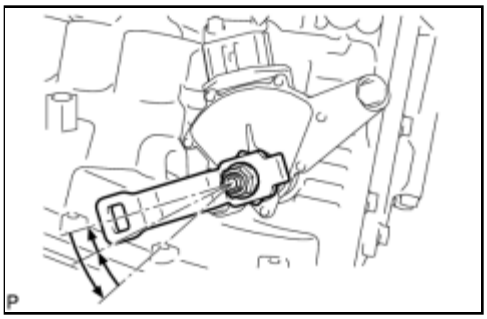


(b) Install the speed sensor to the transaxle case with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

103. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

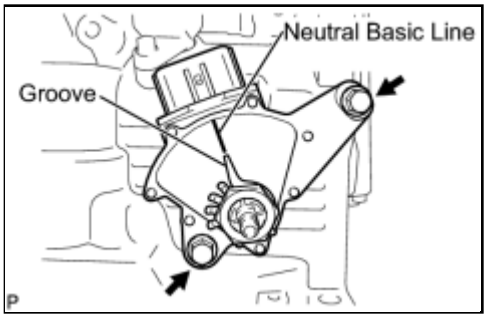
(a) Install the park/neutral position switch assembly to the automatic transaxle.



(b) Temporarily install the 2 bolts.

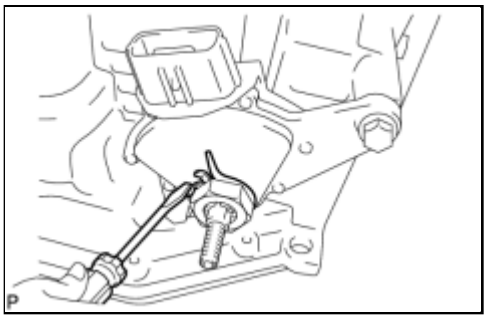
(c) Replace the lock plate with a new one and tighten the manual valve shaft nut.

Torque: 6.9 N·m (70 kgf·cm, 61in·lbf)



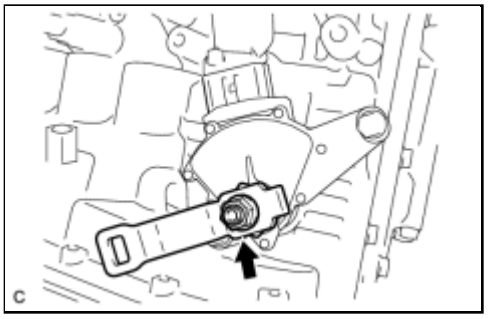
(d) Temporarily install the control shaft lever.

(e) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.



(f) Remove the control shaft lever.

(g) Align the groove with the neutral basic line.

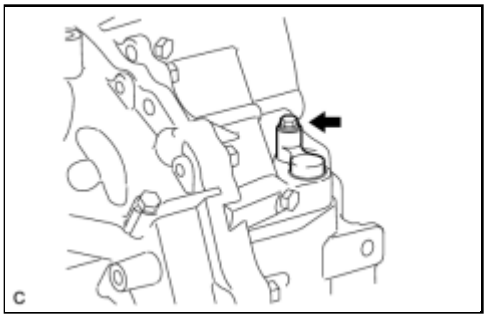


(h) Hold the switch in this position and tighten the 2 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

(i) Using a screwdriver, stake the nut with the lock plate.

(j) Install the control shaft lever with the nut and washer.

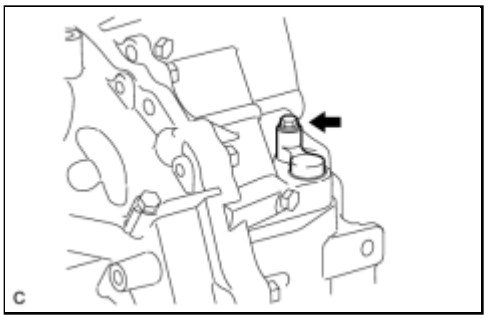


Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

104. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Coat a new O-ring with ATF and install it to the speedometer driven hole cover sub-assembly.

(b) Install the speedometer driven hole cover sub-assembly to the transaxle housing.



Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

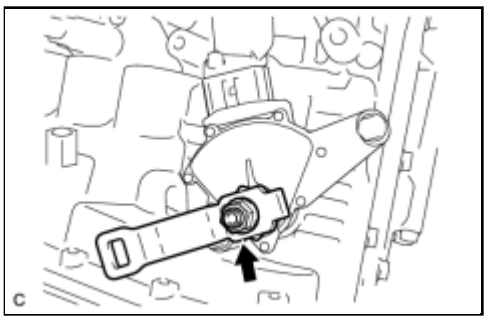
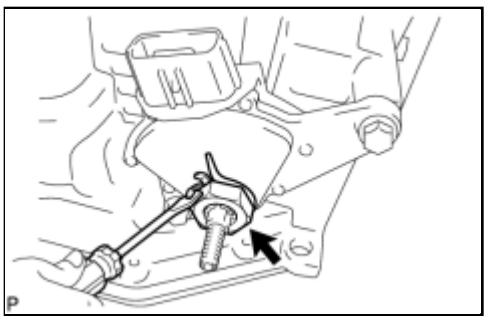
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE UNIT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY



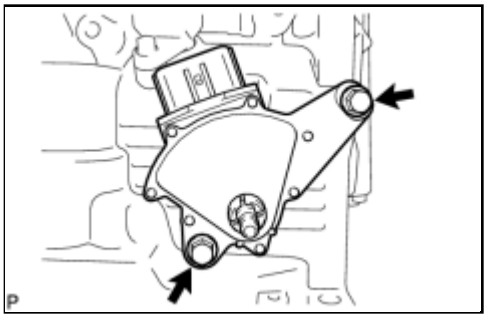
1. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY



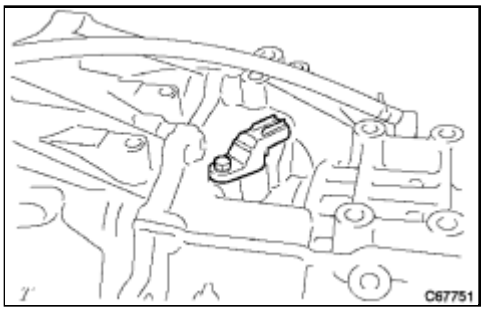
(a) Remove the bolt and speedometer driven hole cover sub-assembly from the transaxle housing.

(b) Remove the O-ring from the speedometer driven hole cover sub-assembly.

2. REMOVE PARK/NEUTRAL POSITION SWITCH ASSEMBLY

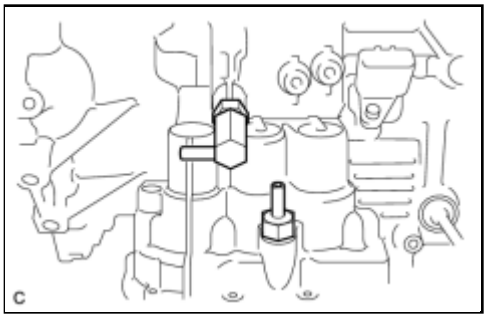


(a) Remove the nut and washer and remove the control shaft lever.



(b) Using a screwdriver, pry out the lock plate and remove the manual valve shaft nut.

(c) Remove the 2 bolts and pull out the park/neutral position

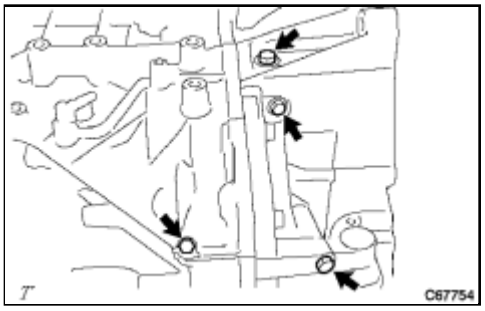


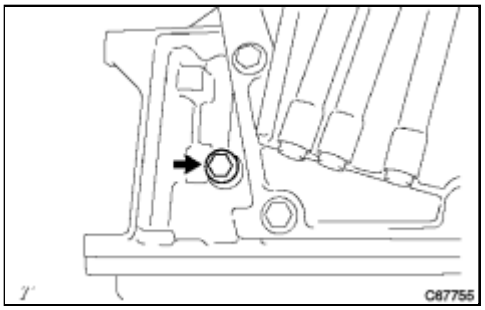
switch assembly.

3. REMOVE SPEED SENSOR

(a) Remove the bolt and speed sensor from the transaxle case.

4. REMOVE OIL COOLER TUBE UNION



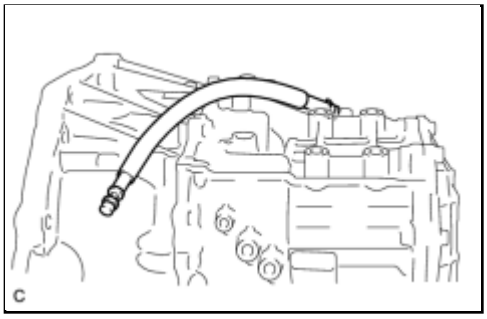


(a) Remove the 2 oil cooler tube unions from the transaxle case.

(b) Remove the O-ring from oil cooler tube union.

5. REMOVE NO. 1 TRANSAXLE CASE PLUG

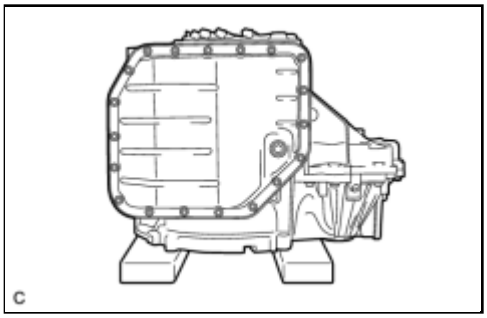
(a) Remove the 4 No. 1 transaxle case plugs from the transaxle housing and transaxle case.



(b) Remove the No. 1 transaxle case plug from the transaxle case.

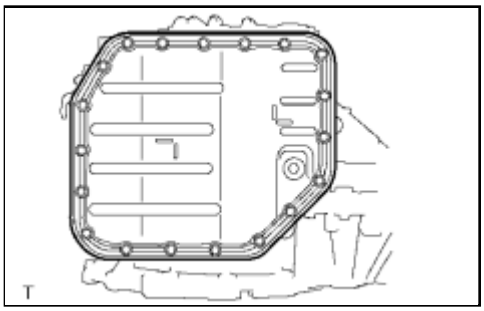
(c) Remove the O-ring from No. 1 transaxle case plug.

6. REMOVE BREATHER PLUG HOSE



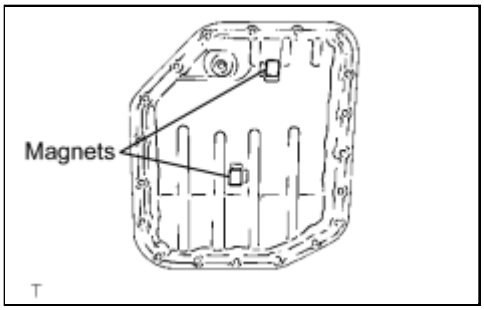
(a) Remove the breather plug hose from the breather plug.

7. REMOVE BREATHER PLUG



(a) Remove the breather plug from the transaxle case.

8. SECURE AUTOMATIC TRANSAXLE ASSEMBLY



(a) Secure the transaxle onto wooden blocks.

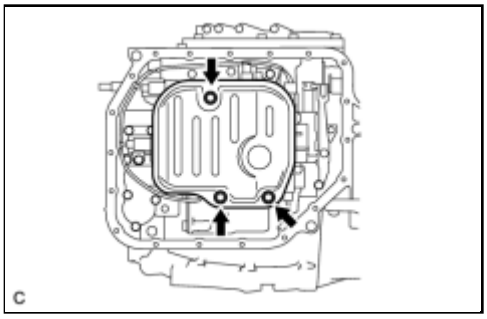
9. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Remove the 19 bolts and remove the oil pan and oil pan gasket.

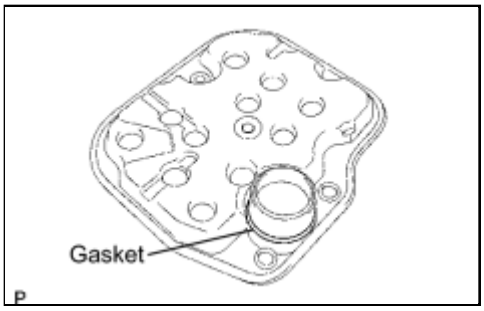
(b) Remove the 2 oil cleaner magnets from the oil pan.

(c) Examine the particles in the oil pan.

(1) Collect any steel chips with the removed magnets.



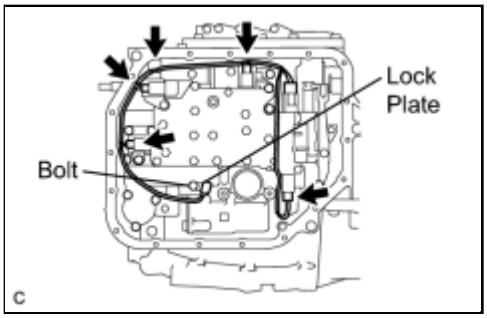
Carefully look at the foreign matter and particles in the oil pan and on the magnets to predict the type of wear which might be found in the transaxle.



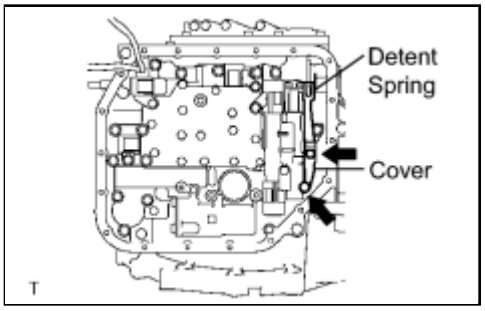
Steel (magnetic): bearing, gear and clutch plate wear

Brass (non-magnetic): bearing wear

10. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

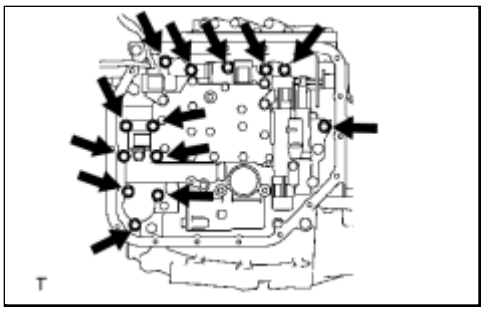


(a) Remove the 3 bolts and remove the oil strainer assembly.



(b) Remove the oil strainer gasket from the oil strainer assembly.

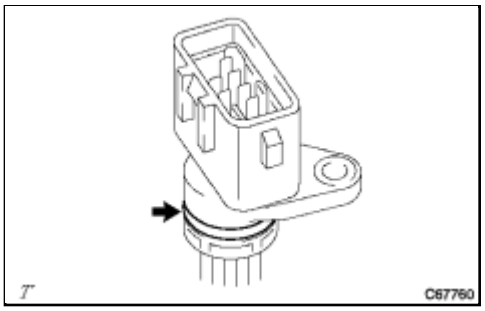
11. REMOVE TRANSMISSION VALVE BODY ASSEMBLY



(a) Disconnect the 5 solenoid connectors.

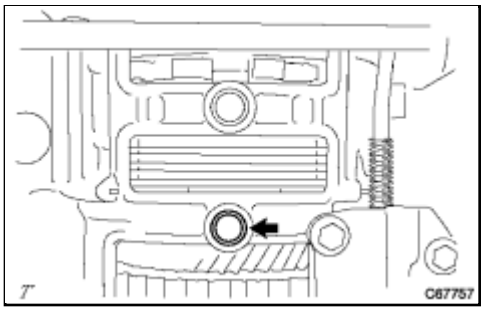
(b) Remove the bolt and lock plate and remove the ATF temperature sensor.

(c) Remove the 2 bolts and remove the detent spring cover and detent spring.

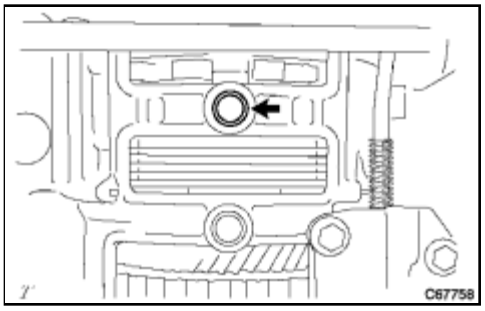


(d) Remove the 13 bolts and the valve body assembly from the transaxle case.

12. REMOVE TRANSMISSION WIRE

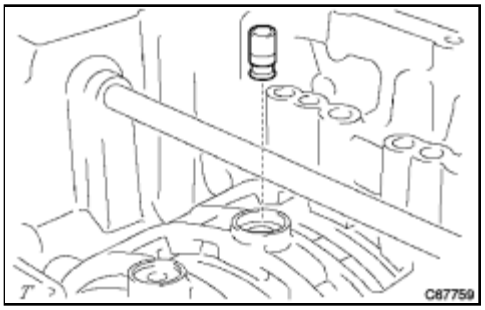


(a) Remove the bolt and the transmission wire from the transaxle case.



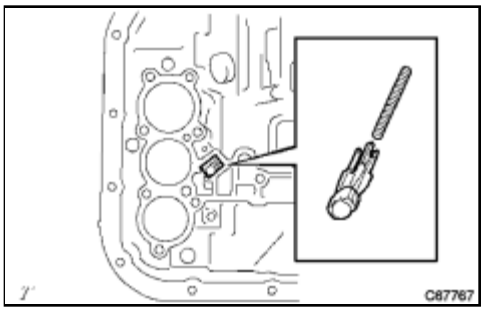
(b) Remove the O-ring from the transmission wire.

13. REMOVE TRANSAXLE CASE 2ND BRAKE GASKET



(a) Remove the transaxle case 2nd brake gasket from the transaxle case.

14. REMOVE TRANSAXLE CASE GASKET

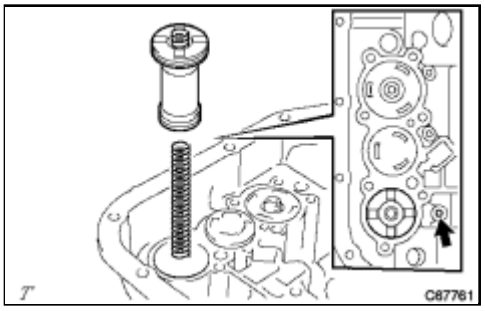


(a) Remove the transaxle case gasket from the transaxle case.

15. REMOVE BRAKE DRUM GASKET

(a) Remove the brake drum gasket from the transaxle case.

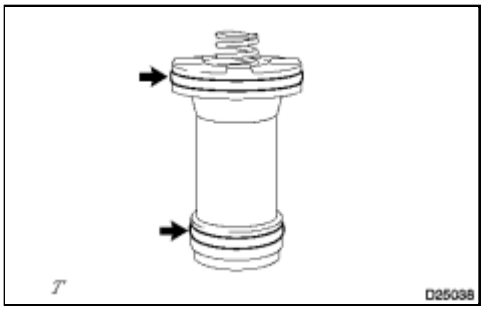
16. REMOVE CHECK BALL BODY



(a) Remove the check ball body and spring from the transaxle case.

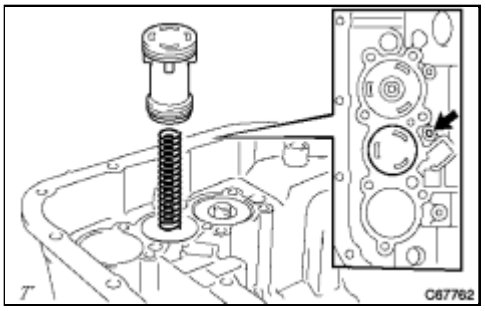
17. REMOVE B-2 ACCUMULATOR PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the oil hole and remove the B-2 accumulator piston and spring.



NOTICE:

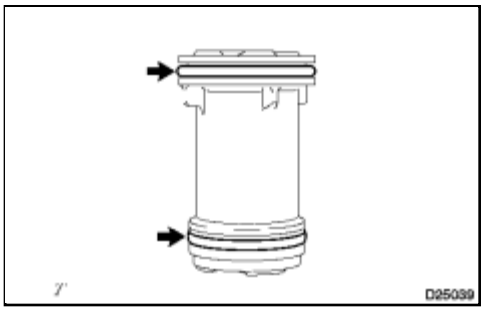
- Blowing air may cause the piston to jump out. When



removing the piston, hold it by hand using a piece of cloth.

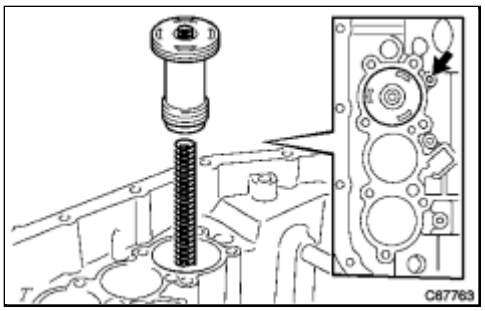
- Do not splash ATF with compressed air.

(b) Remove the 2 O-rings from the B-2 accumulator piston.



18. REMOVE C-3 ACCUMULATOR PISTON

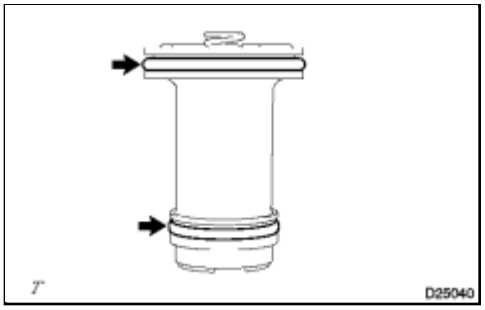
(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the oil hole and remove the C-3 accumulator piston and spring.



NOTICE:

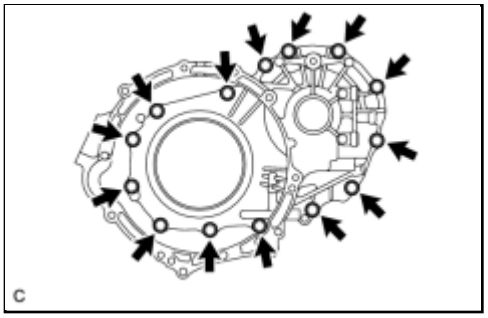
- Blowing air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

(b) Remove the 2 O-rings from the C-3 accumulator piston.



19. REMOVE C-2 ACCUMULATOR PISTON

(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the oil hole and remove the C-2 accumulator piston and the spring.



NOTICE:

- Blowing air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

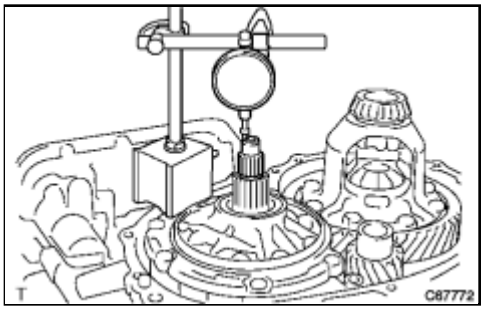
(b) Remove the 2 O-rings from the C-2 accumulator piston.

20. REMOVE TRANSAXLE HOUSING

(a) Remove the 14 bolts.

(b) Tap around the circumference of the transaxle housing with a plastic hammer to remove the transaxle housing from the transaxle case.

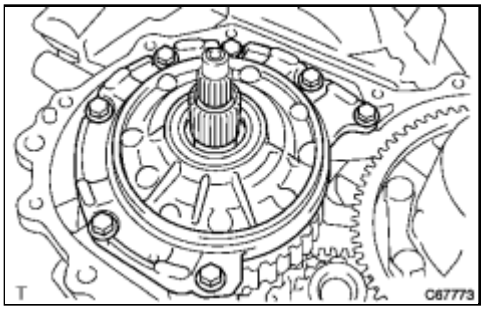
NOTICE:



The differential gear assembly may be accidentally removed when the transaxle housing is removed.

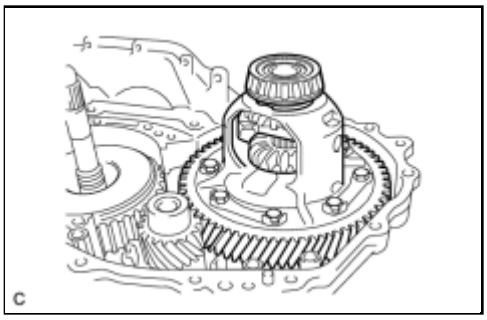
21. INSPECT INPUT SHAFT END PLAY

(a) Measure the end play in the axial direction.



End play:
0.38 to 1.29 mm (0.0149 to 0.0507 in.)

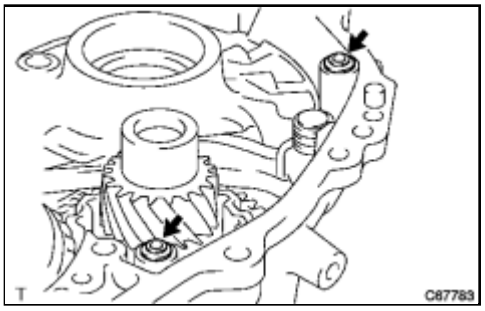
If the end play is not as specified, replace the stator shaft thrust needle roller bearing and the forward clutch hub



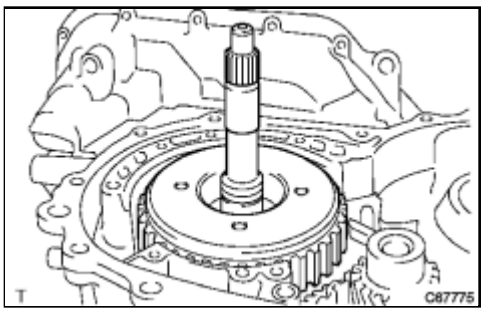
thrust needle roller bearing.

22. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 7 bolts and the oil pump assembly from the transaxle case.



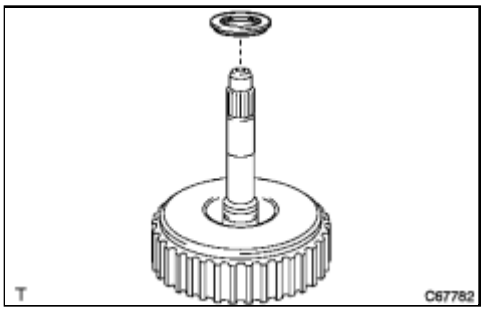
23. REMOVE DIFFERENTIAL GEAR ASSEMBLY



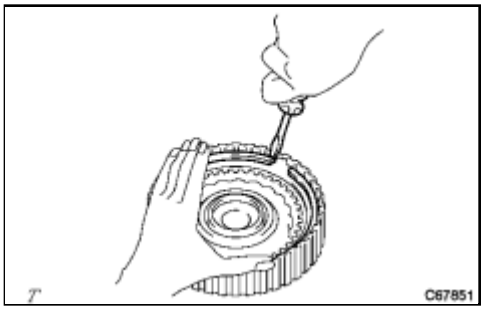
(a) Remove the differential gear assembly from the transaxle case.

24. REMOVE OVERDRIVE BRAKE GASKET

(a) Using a screwdriver, remove the 2 overdrive brake gaskets from the transaxle case.



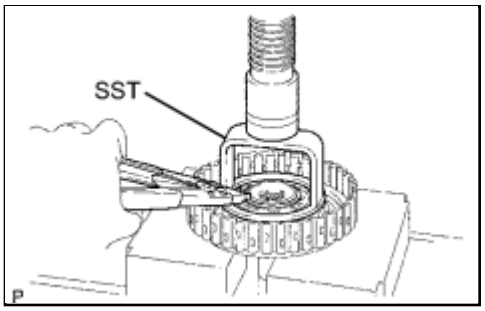
25. REMOVE INPUT SHAFT ASSEMBLY



(a) Remove the input shaft assembly from the transaxle case.

26. REMOVE STATOR SHAFT THRUST NEEDLE ROLLER BEARING

(a) Remove the stator shaft thrust needle roller bearing from the input shaft.

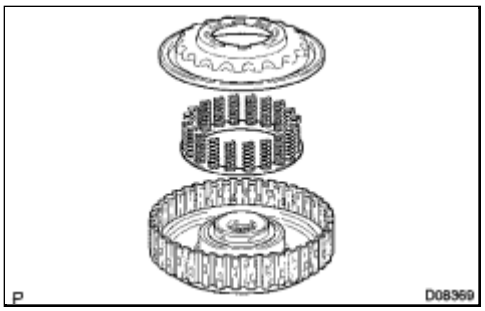


27. REMOVE FRONT CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates from the input shaft.

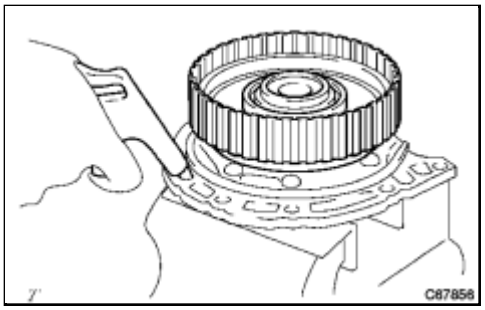
28. REMOVE FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY



(a) Using SST on the clutch balancer, compress the return spring with a press.

SST: 09320-89010

NOTICE:

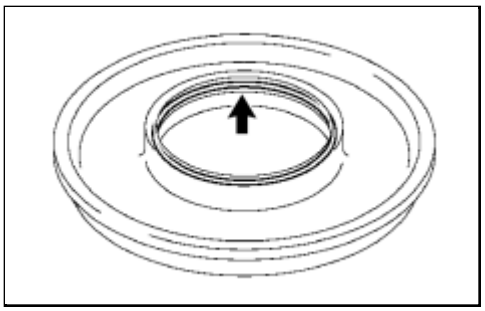


Do not compress the return spring excessively.

(b) Using a snap ring expander, remove the snap ring.

(c) Remove the clutch balancer and piston return spring.

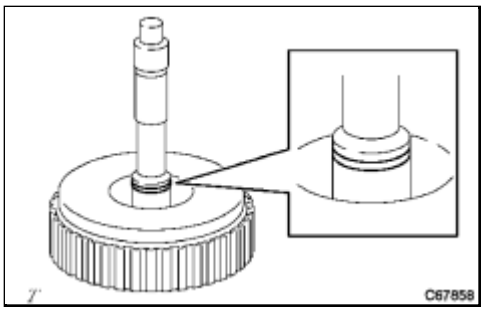
29. REMOVE FORWARD CLUTCH PISTON



(a) Place the input shaft onto the oil pump.

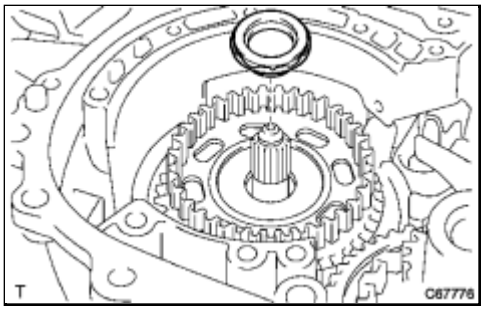
(b) Holding the forward clutch piston by hand, apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil pump to remove the forward clutch piston.

HINT:



If the piston cannot be removed because it is tilted, either apply compressed air again while keeping the piston level or remove the piston using needle-nose pliers with their tips wrapped in protective tape.

30. REMOVE FORWARD CLUTCH PISTON O-RING



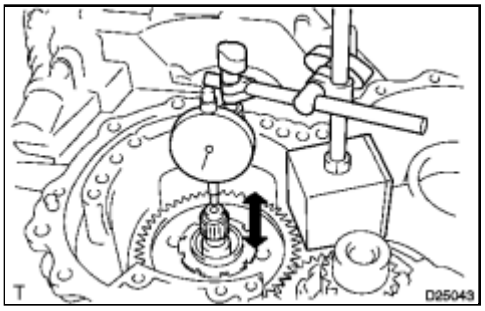
(a) Using a screwdriver, remove the clutch piston O-ring from the forward clutch piston.

31. REMOVE INPUT SHAFT OIL SEAL RING

(a) Using a screwdriver, remove the input shaft oil seal ring from the input shaft.

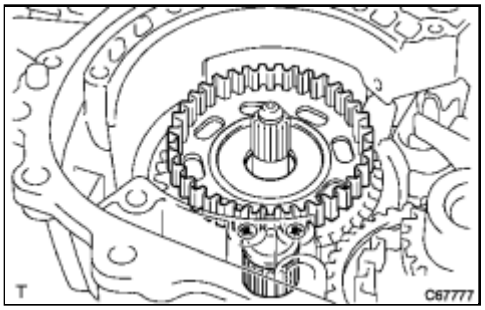
32. REMOVE FORWARD CLUTCH HUB THRUST NEEDLE ROLLER BEARING

(a) Remove the forward clutch hub thrust needle roller bearing from the forward clutch hub.



33. INSPECT INTERMEDIATE SHAFT ASSEMBLY

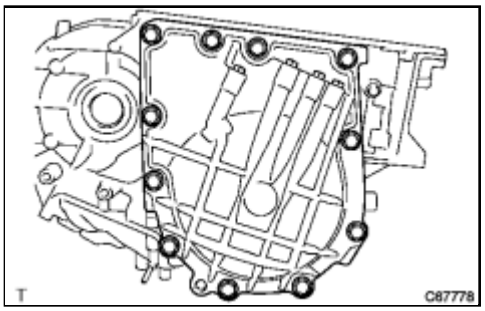
(a) Using a dial indicator, measure the intermediate shaft end play.



End play:

0.21 to 0.96 mm (0.00826 to 0.0377 in.)

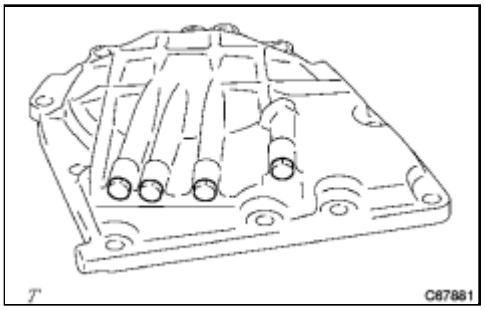
If the end play is not as specified, select and replace the rear clutch drum thrust needle roller bearing.



34. REMOVE FORWARD CLUTCH HUB SUB-ASSEMBLY

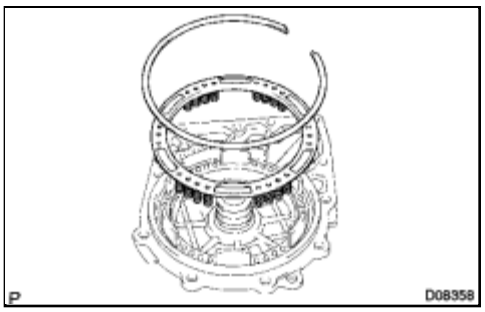
(a) Remove the forward clutch hub from the transaxle case.

35. REMOVE REAR TRANSAXLE COVER ASSEMBLY



(a) Remove the 11 bolts.

(b) Tap around the circumference of the rear transaxle cover with a plastic hammer to remove the rear transaxle cover from the transaxle case.



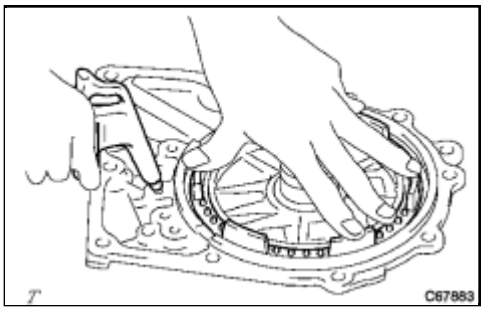
36. REMOVE REAR TRANSAXLE COVER PLUG

(a) Remove the 4 rear transaxle cover plugs from the rear transaxle cover.

(b) Using a screwdriver, remove the O-ring from each rear transaxle cover plug.

37. REMOVE OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using SST, a press and a screwdriver, remove the snap ring.



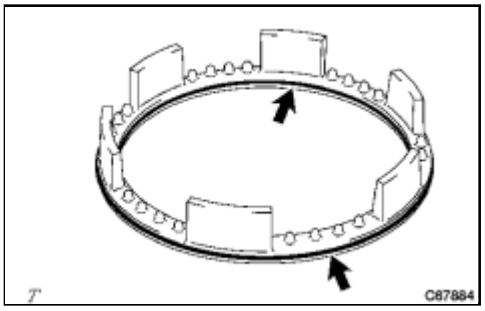
SST: 09387-00070

NOTICE:

Stop the press when the overdrive brake piston is lowered 1 to 2 mm (0.0394 to 0.0787 in.) from the snap ring groove to prevent the overdrive brake piston from being deformed.

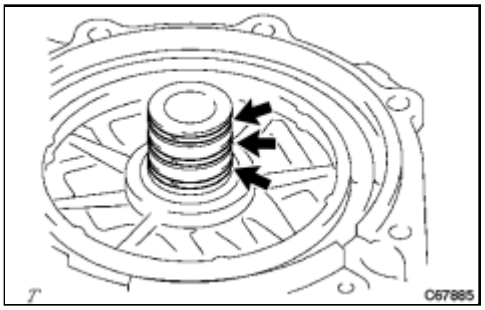
(b) Remove the overdrive brake return spring from the rear transaxle cover.

38. REMOVE 2ND COAST AND OVERDRIVE BRAKE PISTON



(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the rear transaxle cover to remove the overdrive brake piston.

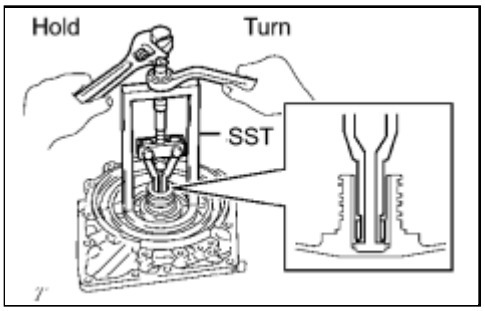
NOTICE:



- Blowing air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

39. REMOVE 2ND COAST AND OVERDRIVE O-RING

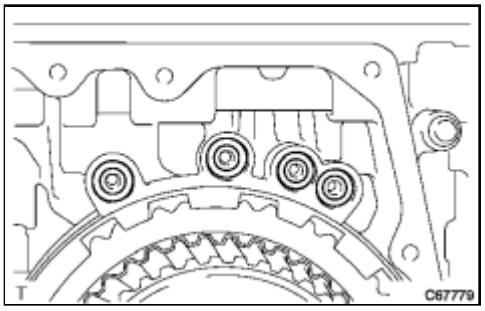
(a) Using a screwdriver, remove the 2 O-rings from the 2nd coast and overdrive brake piston.



40. REMOVE CLUTCH DRUM OIL SEAL RING

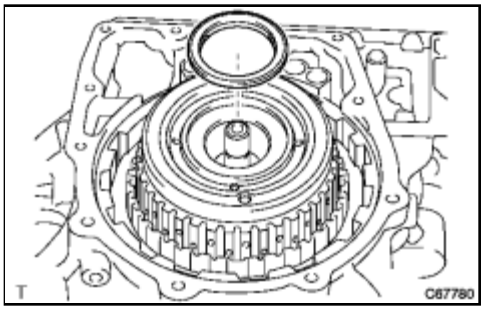
(a) Remove the 3 oil seal rings from the rear transaxle cover.

41. REMOVE REAR TRANSAXLE COVER NEEDLE ROLLER BEARING



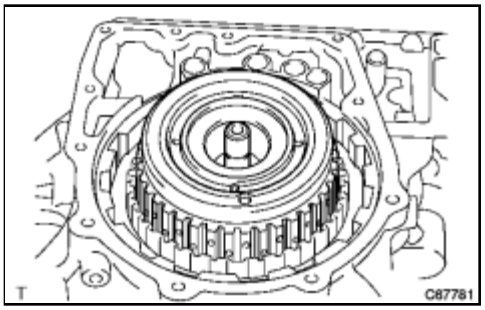
(a) Using SST, remove the bearing from the rear transaxle cover.

SST: 09387-00041



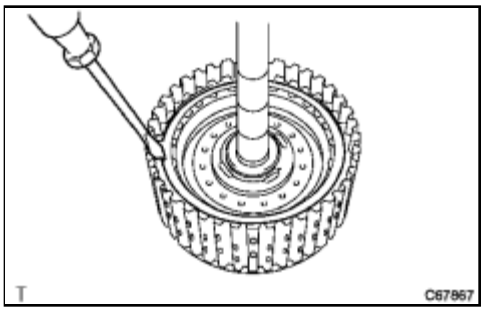
09387-01021

42. REMOVE TRANSAXLE CASE GASKET



(a) Remove the 4 transaxle case gaskets.

43. REMOVE REAR CLUTCH DRUM THRUST NEEDLE ROLLER BEARING

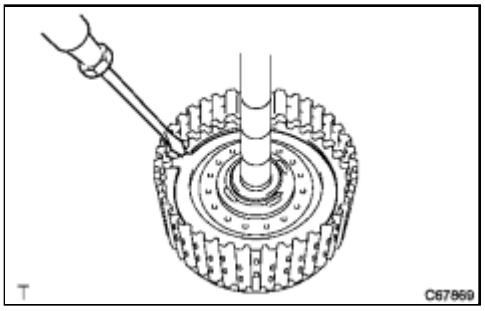


(a) Using a magnetic pick-up tool, remove the rear clutch drum thrust needle roller bearing.

44. REMOVE INTERMEDIATE SHAFT ASSEMBLY

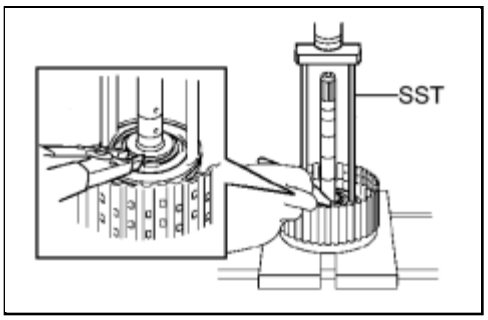
(a) Remove the intermediate shaft assembly from the transaxle case.

45. REMOVE REVERSE CLUTCH DISC



(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 3 discs and 3 plates.

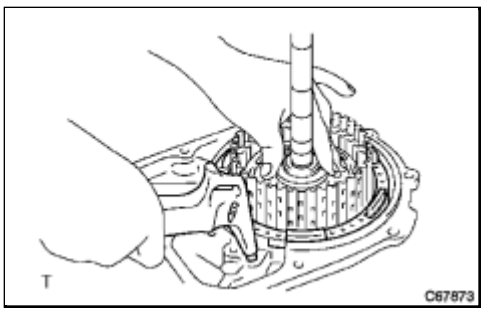


46. REMOVE DIRECT CLUTCH DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the direct clutch flange, 3 discs and 3 rear clutch flanges.

47. REMOVE DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY



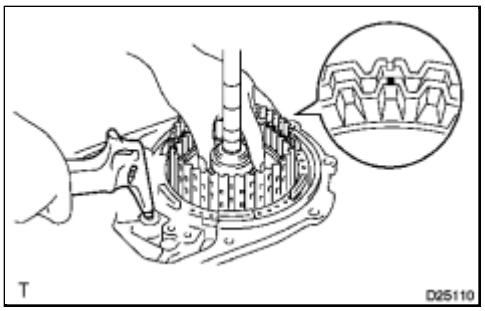
(a) Using SST and a press.

SST: 09387-00020

(b) Using snap ring pliers, remove the snap ring.

(c) Remove the direct clutch return spring sub-assembly from the intermediate shaft.

48. REMOVE DIRECT CLUTCH PISTON SUB-ASSEMBLY



(a) Install the intermediate shaft onto the rear transaxle cover.

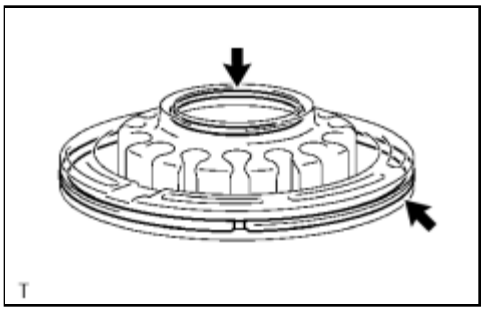
(b) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole shown in the illustration and remove the direct clutch piston from the intermediate shaft.

NOTICE:

- Blowing air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

49. REMOVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

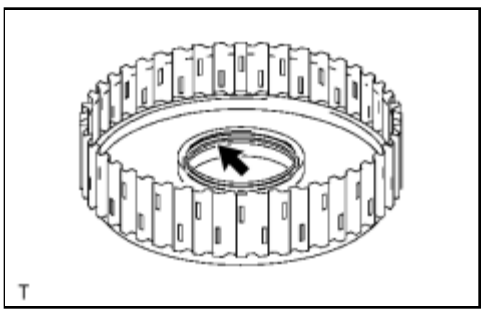
(a) Install the intermediate shaft onto the rear transaxle cover.



(b) Put a matchmark on the direct clutch drum in the same position as the cutout of the intermediate shaft assembly.

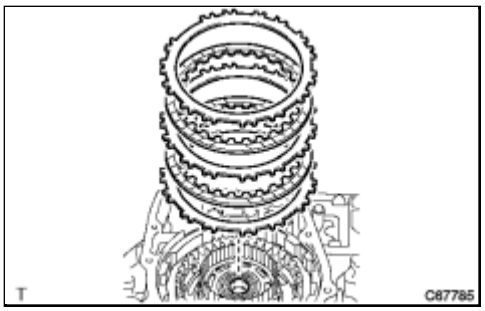
(c) Apply compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi) to the oil hole shown in the illustration and remove the direct clutch drum from the intermediate shaft.

NOTICE:



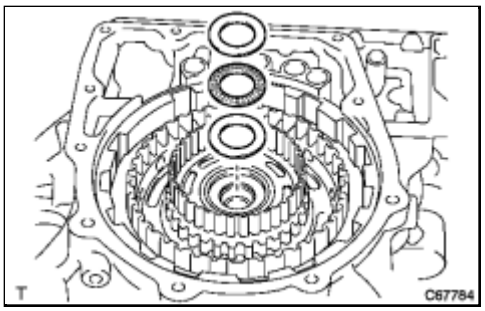
- Blowing air may cause the drum to jump out. When removing the drum, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

50. REMOVE DIRECT CLUTCH PISTON O-RING



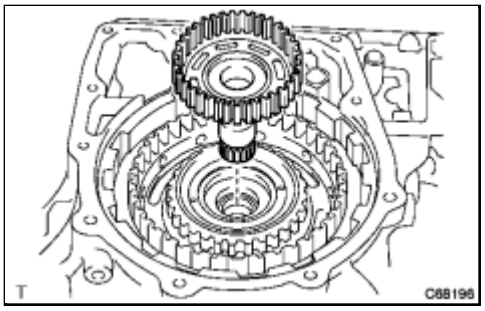
(a) Using a screwdriver, remove the 2 piston O-rings from the direct clutch piston.

51. REMOVE DIRECT CLUTCH DRUM O-RING



(a) Using a screwdriver, remove the direct clutch drum O-ring from the direct clutch drum.

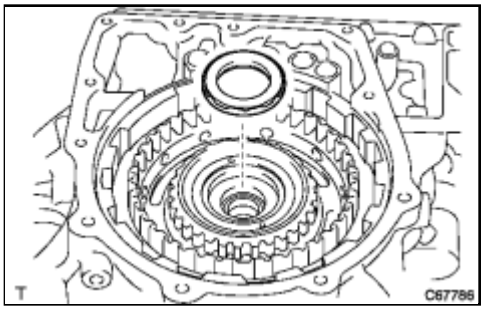
52. REMOVE 2ND COAST AND OVERDRIVE BRAKE DISC



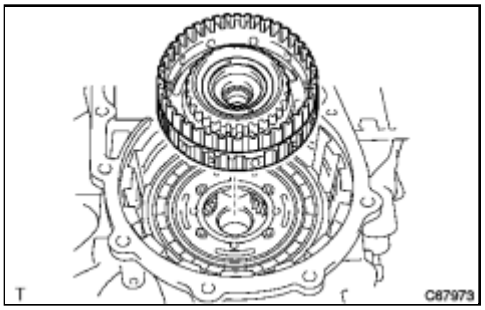
(a) Remove the flange, 2 discs and 2 No. 2 flanges from the transaxle.

53. REMOVE THRUST NEEDLE ROLLER BEARING

(a) Using a magnetic pick-up tool, remove the C-2 hub thrust bearing race, the thrust needle roller bearing and the No. 3 thrust bearing race from the direct clutch hub.



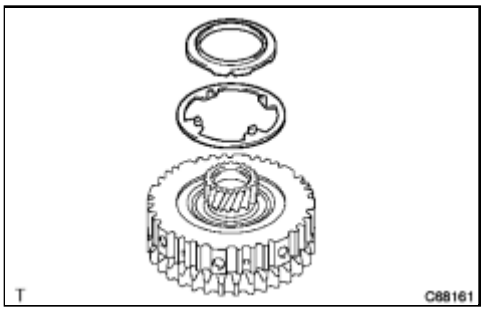
54. REMOVE DIRECT CLUTCH HUB



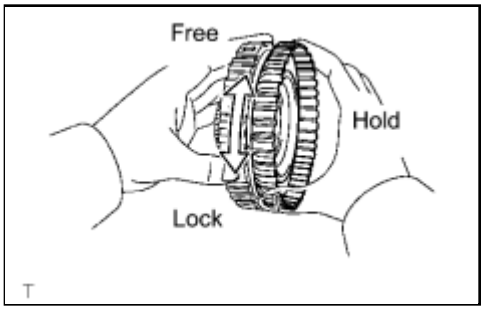
(a) Remove the direct clutch hub from the transaxle case.

55. REMOVE REAR NO. 2 PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

(a) Using a magnetic pick-up tool, remove the rear No. 2 planetary sun gear thrust needle roller bearing from the rear planetary sun gear assembly.



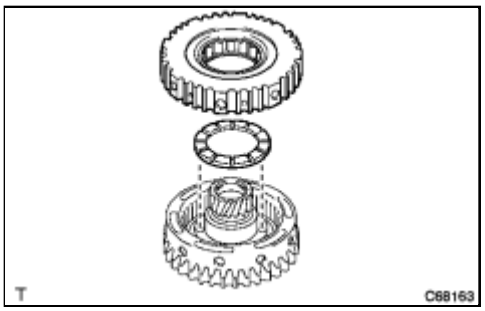
56. REMOVE REAR PLANETARY SUN GEAR ASSEMBLY



(a) Remove the rear planetary sun gear from the transaxle case.

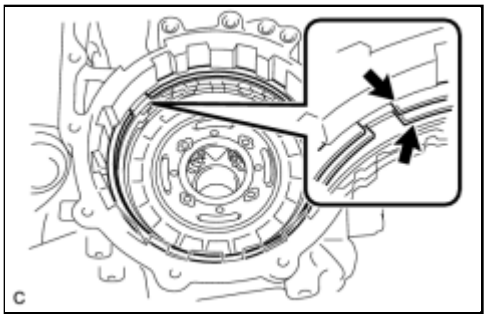
57. REMOVE REAR PLANETARY SUN GEAR THRUST NEEDLE ROLLER BEARING

(a) Remove the rear planetary sun gear thrust needle roller bearing and No. 1 planetary carrier thrust washer from the one-way clutch assembly.



58. INSPECT ONE-WAY CLUTCH ASSEMBLY

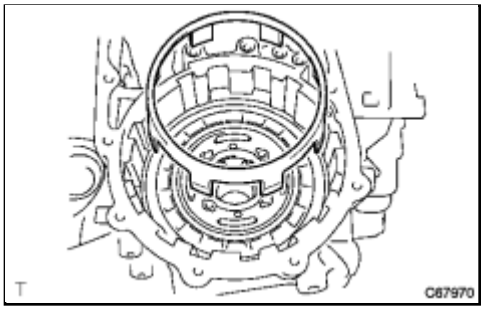
(a) Hold the rear planetary sun gear and turn the one-way clutch.



(b) Make sure that the one-way clutch turns freely counterclockwise and locks when turned clockwise.

59. REMOVE ONE-WAY CLUTCH ASSEMBLY

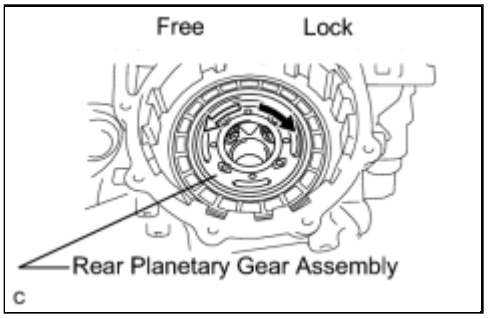
(a) Remove the one-way clutch assembly and No. 2 planetary carrier thrust washer from the rear planetary sun gear.



60. REMOVE 2ND BRAKE DISC

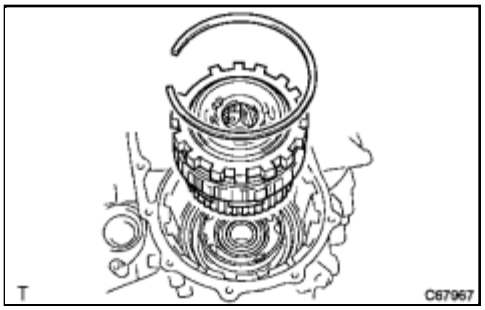
(a) Using a screwdriver, remove the 2 snap rings.

(b) Remove the 2 flanges, 4 discs and 3 flanges from the transaxle.



61. REMOVE 2ND BRAKE PISTON SLEEVE

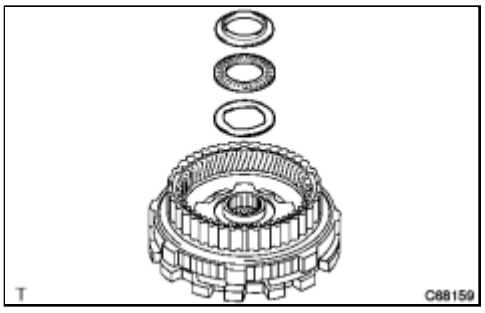
(a) Remove the 2nd brake piston sleeve from the transaxle case.



62. INSPECT NO. 2 ONE-WAY CLUTCH

(a) Turn the rear planetary gear assembly.

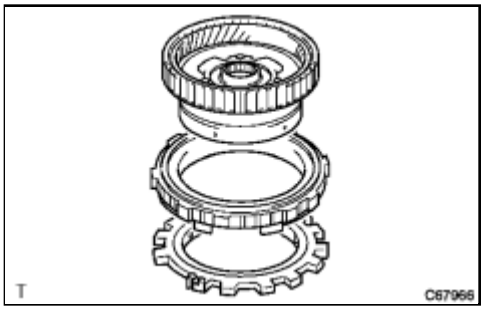
(b) Make sure that the rear planetary gear assembly turns freely counterclockwise and locks when turned clockwise.



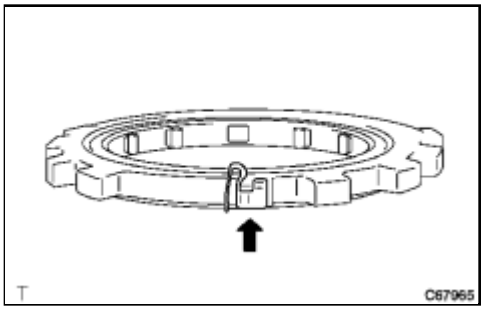
63. REMOVE REAR PLANETARY GEAR ASSEMBLY

(a) Using a screwdriver, remove the snap ring.

(b) Remove the rear planetary gear assembly from the transaxle case.



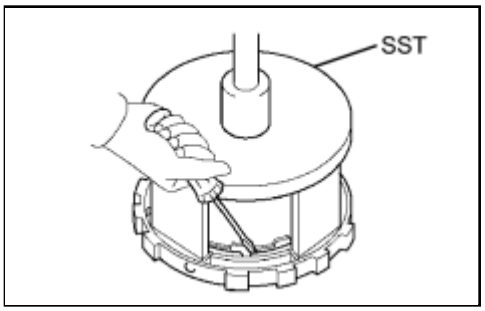
64. REMOVE REAR PLANETARY GEAR THRUST NEEDLE ROLLER BEARING



(a) Remove the thrust needle roller bearing and 2 bearing races from the rear planetary gear assembly.

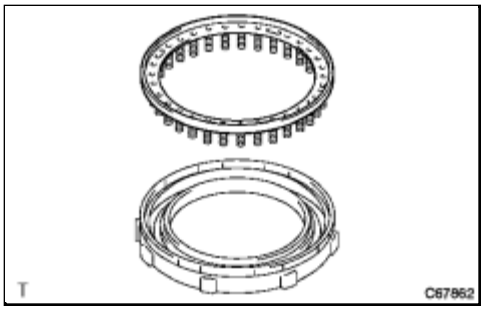
65. REMOVE NO. 2 ONE-WAY CLUTCH

(a) Separate the 2nd brake assembly, No. 2 one-way clutch and the rear planetary gear.



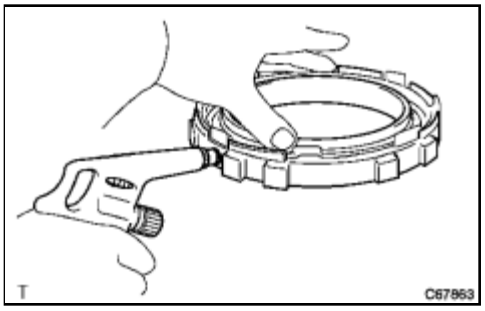
66. REMOVE OUTER RACE RETAINER

(a) Remove the retainer from the No. 2 one-way clutch.



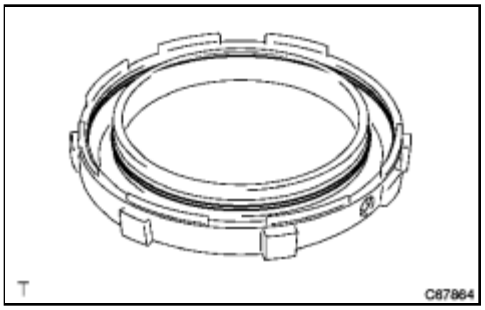
67. REMOVE 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

(a) Using SST and a press, remove the snap ring from the 2nd brake piston.



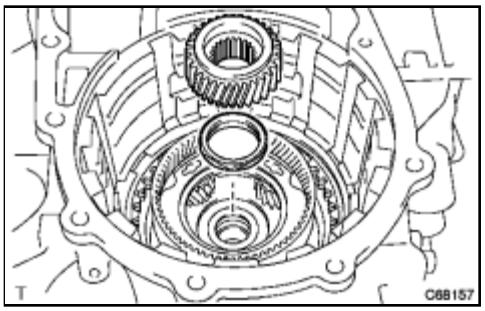
SST: 09387-00060

(b) Remove the 2nd brake return spring from the 2nd brake cylinder.



(c) Remove the 2nd brake piston return spring sub-assembly from the 2nd brake cylinder.

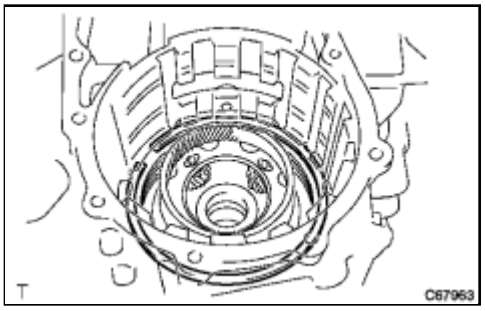
68. REMOVE 2ND BRAKE PISTON



(a) Hold the 2nd brake piston and apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the 2nd brake cylinder to remove the 2nd brake piston.

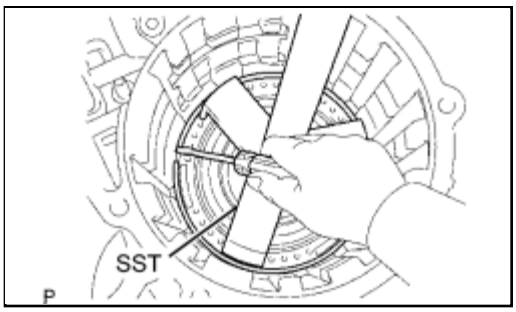
69. REMOVE 2ND BRAKE CYLINDER O-RING

(a) Using a screwdriver, remove the 2 O-rings from the 2nd brake cylinder.



70. REMOVE FRONT PLANETARY SUN GEAR

(a) Remove the front planetary sun gear and thrust needle roller bearing from the transaxle case.

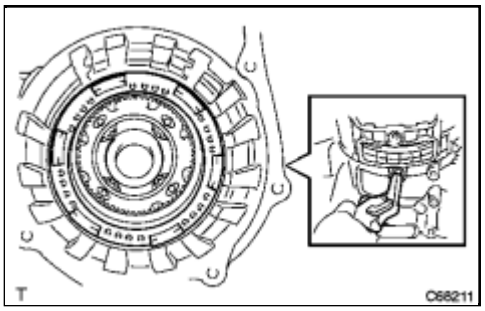


71. REMOVE 1ST AND REVERSE BRAKE DISC

(a) Using a screwdriver, remove the snap ring.

(b) Remove the flange, 4 discs and 4 plates from the transaxle case.

72. REMOVE 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

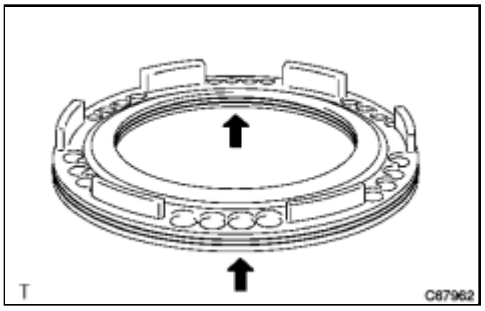


(a) Using SST, a press and a screwdriver, remove the snap ring.

SST: 09387-00070

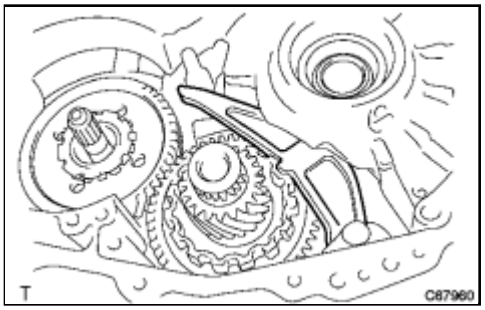
(b) Remove the 1st and reverse brake return spring sub-assembly.

73. REMOVE NO. 2 1ST AND REVERSE BRAKE PISTON



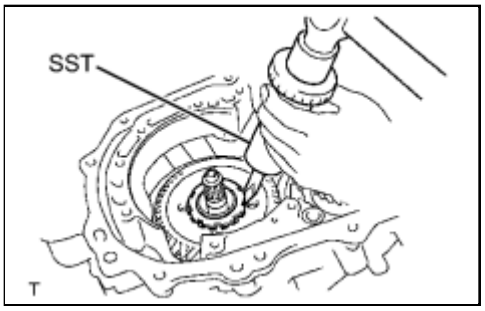
(a) Apply compressed air (392 kPa, 4.0 kgf/cm2, 57 psi) to the transaxle case to remove the No. 2 1st and reverse brake piston.

NOTICE:



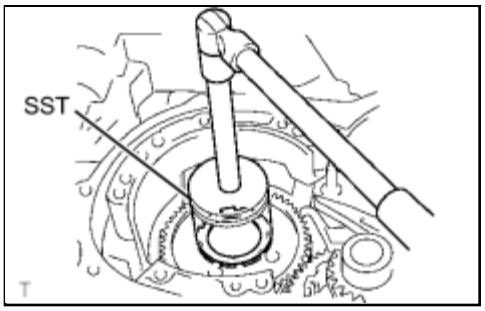
- Blowing air may cause the piston to jump out. When removing the piston, hold it by hand using a piece of cloth.
- Do not splash ATF with compressed air.

74. REMOVE NO. 2 1ST AND REVERSE BRAKE PISTON O-RING



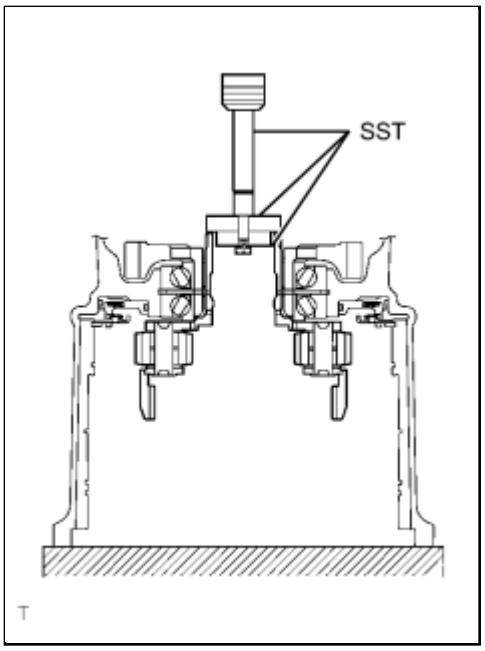
(a) Remove the 2 O-rings from the No. 2 1st and reverse brake piston.

75. REMOVE COUNTER DRIVE GEAR NUT



(a) Secure the counter driven gear with the parking lock pawl.

(b) Using SST and a hammer, release the lock nut washer.



SST: 09930-00010

(c) Using SST, remove the nut and lock nut washer.

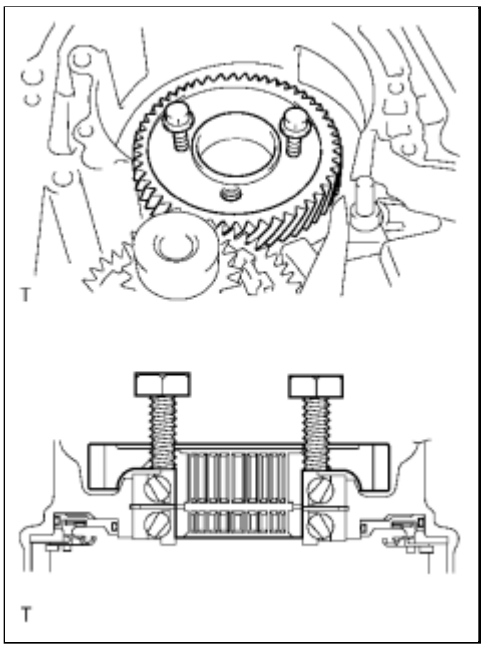
SST: 09387-00120

76. REMOVE PLANETARY GEAR ASSEMBLY

(a) Using SST and a press, remove the planetary gear assembly from the transaxle case.

SST: 09950-60010

09951-00400



09951-00320

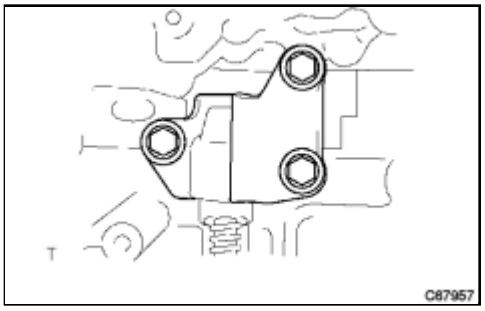
09952-06010

SST: 09950-70010

09951-07100

77. REMOVE COUNTER DRIVE GEAR

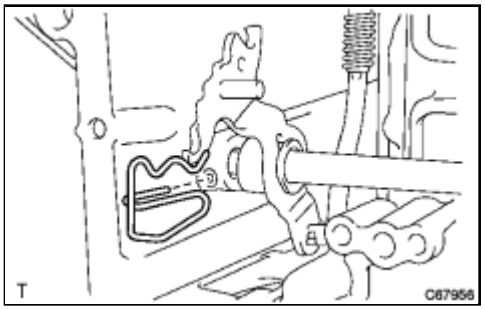
(a) Install the 2 bolts to the counter drive gear.



Bolt (M6):
Length = 40 to 80 mm (1.57 to 3.15 in.)
Pitch = 1.0 mm (0.0394 in.)

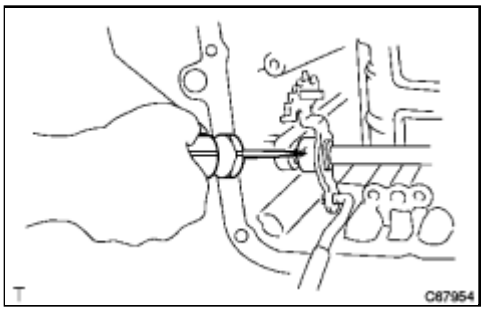
(b) Rotate the 2 bolts and remove the counter drive gear and front planetary sun gear.

(c) Remove the 2 radial ball bearings from the counter drive gear and front planetary sun gear.



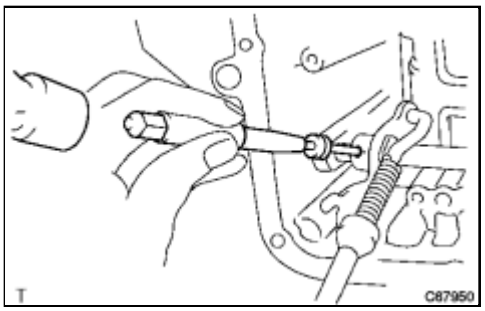
78. REMOVE PARKING LOCK PAWL BRACKET

(a) Remove the 3 bolts, cam guide and bracket from the



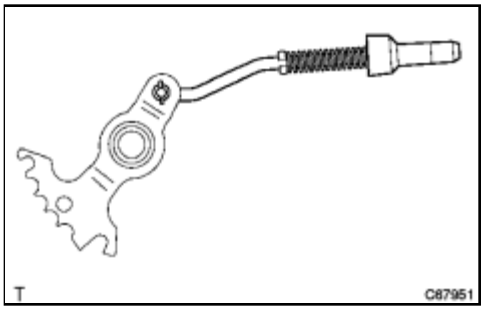
transaxle case.

79. REMOVE MANUAL VALVE LEVER SHAFT RETAINER SPRING



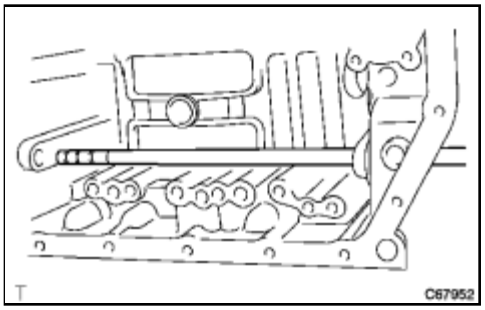
(a) Remove the manual valve lever shaft retainer spring from the manual valve lever shaft.

80. REMOVE MANUAL VALVE LEVER SUB-ASSEMBLY



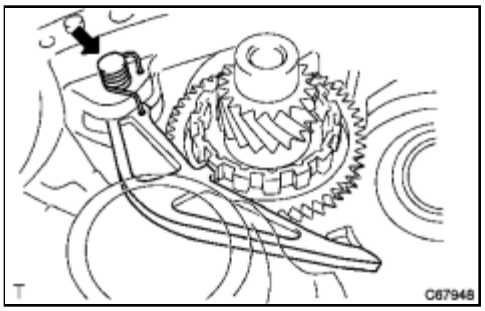
(a) Using a screwdriver, release and remove the spacer.

(b) Using a pin punch and hammer, drive out the manual valve lever shaft spring pin.



(c) Remove the manual valve lever shaft and manual valve lever.

81. REMOVE PARKING LOCK ROD SUB-ASSEMBLY

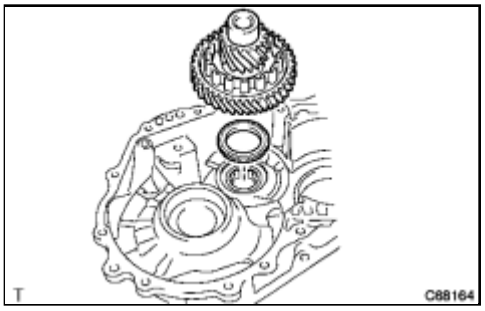


(a) Remove the parking lock rod from the manual valve lever.

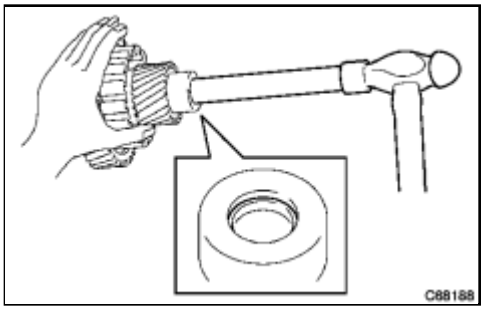
82. REMOVE MANUAL VALVE LEVER SHAFT

(a) Remove the manual valve lever shaft from the transaxle case.

83. REMOVE PARKING LOCK PAWL



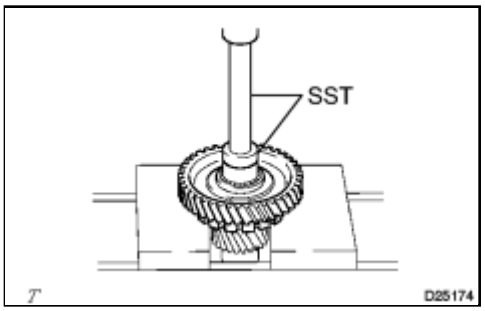
(a) Using a screwdriver, remove the parking lock pawl shaft from the transaxle case.



(b) Remove the parking lock pawl torsion spring and parking lock pawl from the transaxle case.

84. REMOVE COUNTER DRIVEN GEAR

(a) Remove the counter driven gear, drive pinion and drive pinion thrust bearing LH from the transaxle case.

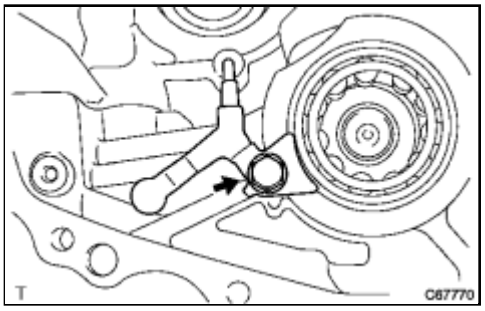


85. REMOVE DIFFERENTIAL DRIVE PINION PLUG

(a) Using a brass bar and a hammer, remove the differential drive pinion plug.

86. REMOVE DIFFERENTIAL DRIVE PINION

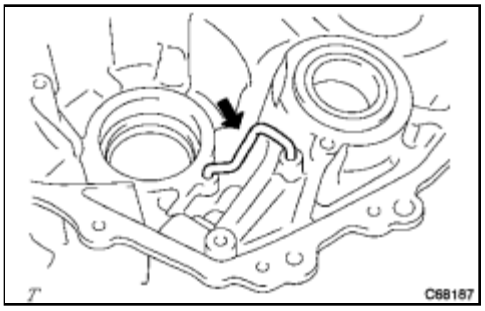
(a) Using SST and a press, remove the differential drive pinion from the counter driven gear.



SST: 09950-60010

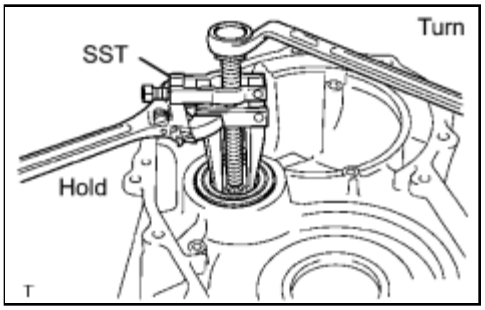
09951-00350

SST: 09950-70010



09951-07150

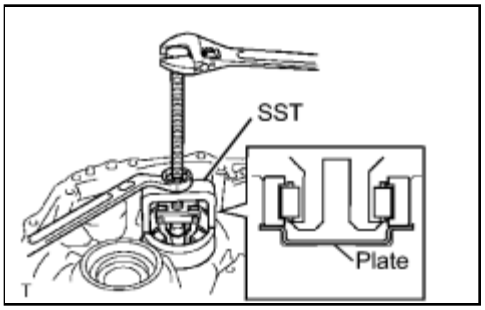
87. REMOVE BEARING LOCK PLATE



(a) Remove the bolt and the bearing lock plate.

88. REMOVE DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Remove the differential gear lube apply tube from the transaxle housing.



89. REMOVE FRONT DRIVE PINION FRONT TAPERED ROLLER BEARING

(a) Using SST, remove the front drive pinion front tapered roller bearing from the transaxle housing.

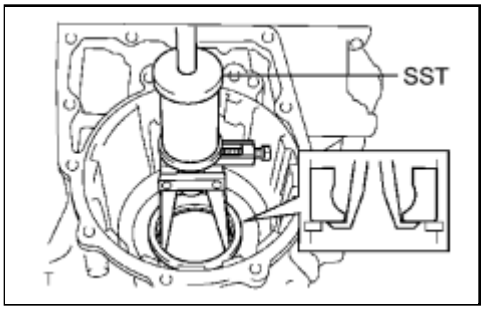
SST: 09308-10010

90. REMOVE FRONT DRIVE PINION REAR TAPERED ROLLER BEARING

(a) Using SST, remove the front drive pinion rear tapered roller bearing from the transaxle case.

SST: 09612-65014

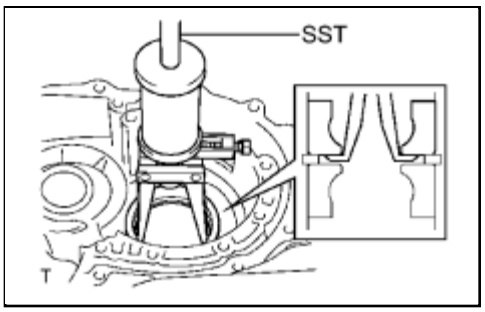
09612-01040



(b) Remove the No. 1 transaxle case plate from the transaxle case.

91. REMOVE COUNTER DRIVE GEAR BEARING LH

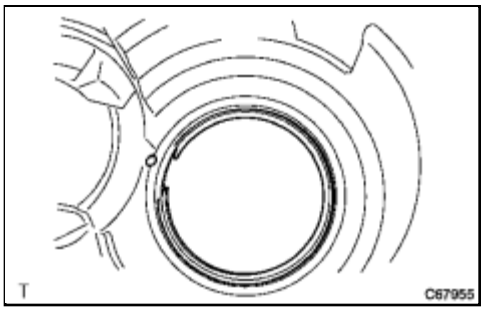
(a) Remove the counter drive gear bearing inner race LH and angular ball from the transaxle case.



(b) Using SST, remove the counter drive gear bearing outer race LH from the transaxle case.

SST: 09308-00010

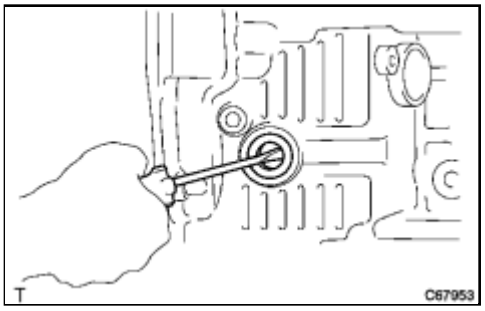
92. REMOVE COUNTER DRIVE GEAR BEARING RH



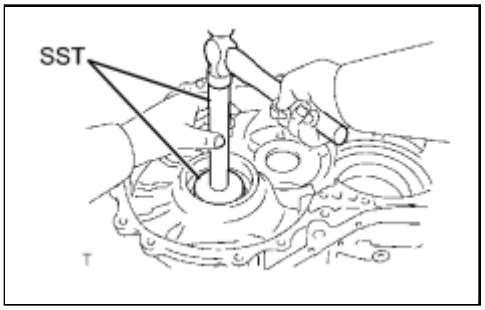
(a) Remove the counter drive gear bearing RH from the transaxle case.

(b) Using SST, remove the counter drive gear bearing outer race RH from the transaxle case.

SST: 09308-00010



93. REMOVE COUNTER DRIVE GEAR HOLE SNAP RING



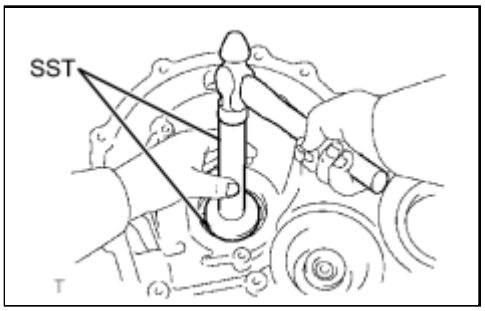
(a) Using a screwdriver, remove the counter drive gear hole snap ring from the transaxle case.

94. REMOVE MANUAL VALVE LEVER SHAFT OIL SEAL

(a) Using a screwdriver, remove the manual valve lever shaft oil seal from the transaxle case.

95. REMOVE NO. 2 TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the No. 2 transaxle case oil seal from the transaxle case.



SST: 09950-60010

09951-00550

SST: 09950-70010

09951-07100

96. REMOVE NO. 1 TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, remove the No. 1 transaxle case oil seal from the transaxle housing.

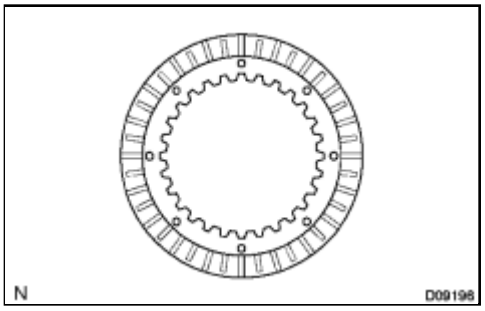
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE UNIT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT MULTIPLE DISC CLUTCH HUB

(a) Using a dial indicator, measure the inside diameter of the multiple disc clutch hub bushing.



Standard inside diameter:
23.025 to 23.046 mm (0.9065 to 0.9073 in.)
Maximum inside diameter:
23.09 mm (0.9091 in.)

If the diameter is greather than the maximum, replace the multiple disc clutch hub with a new one.

NOTICE:

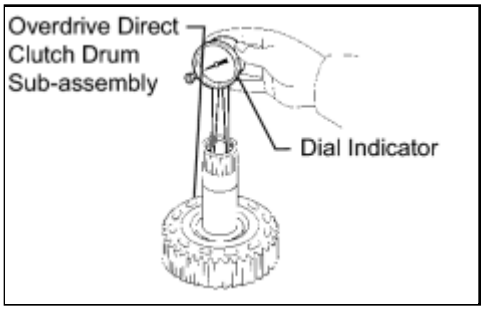
Check the contact surface of the bushing in the direct clutch shaft. If any scratches or discoloration is found, replace the direct clutch sub-assembly with a new one.

2. INSPECT NO. 2 UNDERDRIVE CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.

If necessary, replace them.

NOTICE:

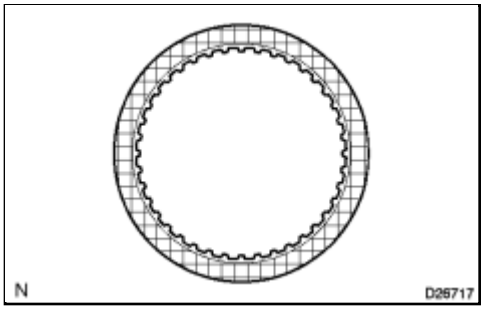


- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

3. INSPECT OVERDRIVE DIRECT CLUTCH DRUM SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the overdrive direct clutch drum sub-assembly bushing.

Standard inside diameter:
23.025 to 23.046 mm (0.9065 to 0.9073 in.)
Maximum inside diameter:
23.09 mm (0.9091 in.)

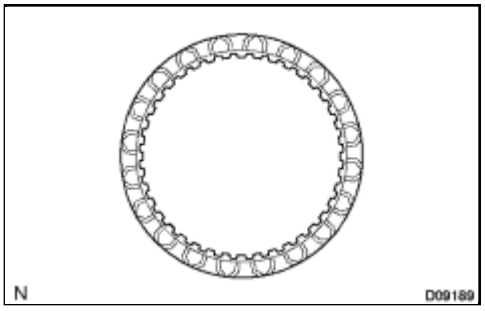


If the diameter is greather than the maximum, replace the overdrive direct clutch drum sub-assembly.

NOTICE:

Check the contact surface of the bushing in the direct clutch shaft. If any scratches or discoloration is found, replace the direct clutch sub-assembly with a new one.

4. INSPECT 2ND BRAKE DISC



(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.

If necessary, replace them.

NOTICE:

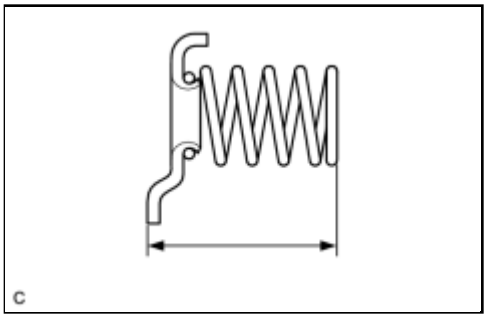
- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

5. INSPECT 1ST AND REVERSE BRAKE DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.

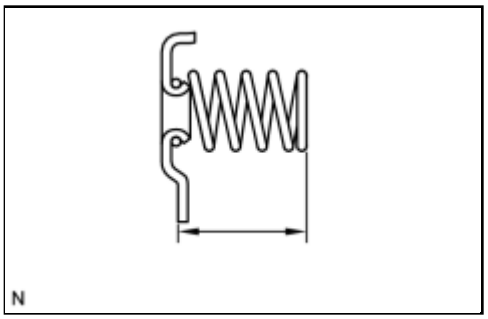
If necessary, replace them.

NOTICE:



- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

6. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

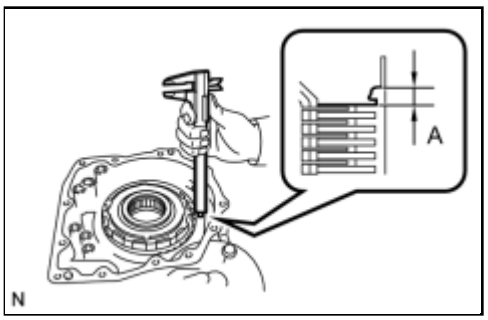


(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
17.63 mm (0.6941 in.)

If the free length is shorter than the standard free length, replace the 1st and reverse brake return spring sub-assembly.

7. INSPECT UNDERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY



(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
13.24 mm (0.5213 in.)

If the free length is shorter than the standard free length, replace the underdrive brake return spring sub-assembly.

8. INSPECT PACK CLEARANCE OF 1ST AND REVERSE BRAKE

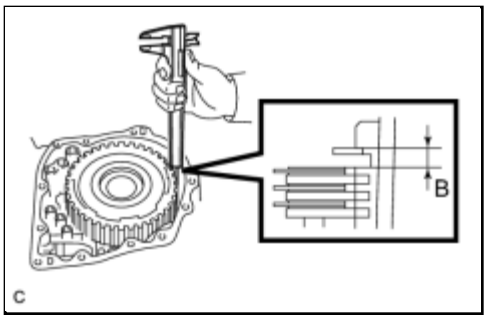
(a) Using a vernier caliper, measure the distance between the disc surface and the contact surface of the 2nd brake cylinder and transaxle case (Dimension A).

(b) Select an appropriate flange so that the pack clearance will be within the specified range.

Pack clearance:
0.745 to 1.21 mm (0.0293 to 0.0476 in.)

HINT:

Piston stroke = Dimension A - Flange thickness



Flange Thickness

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
1	1.8 (0.0708)	5	2.2 (0.0866)
2	1.9 (0.0748)	6	2.3 (0.0906)
3	2.0 (0.0787)	7	2.4 (0.0945)
4	2.1 (0.0827)	8	2.5 (0.0984)

(c) Install the flange.

9. INSPECT PACK CLEARANCE OF 2ND BRAKE

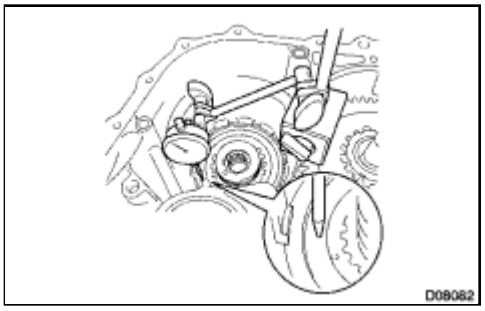
(a) Using a vernier caliper, measure the distance between the disc surface and snap ring surface (Dimension B).

(b) Select an appropriate flange so that the pack clearance will be within the specified range.

Pack clearance:
0.53 to 0.91 mm (0.0209 to 0.0358 in.)

HINT:

Piston stroke = Dimension B - Flange thickness - Snap ring thickness 1.6 mm (0.0630 in.)



Flange Thickness

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
0	2.9 (0.114)	5	3.4 (0.134)
1	3.0 (0.118)	6	3.5 (0.138)
2	3.1 (0.122)	7	3.6 (0.142)
3	3.2 (0.126)	8	3.7 (0.146)
4	3.3 (0.130)	-	-

(c) Install the flange.

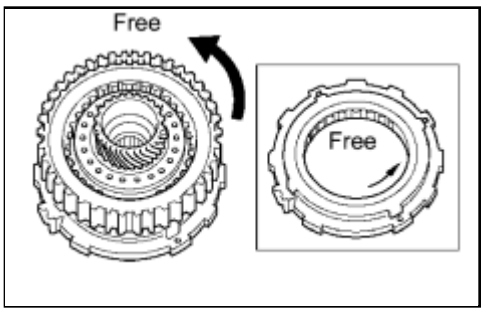
10. INSPECT PACK CLEARANCE OF UNDERDRIVE BRAKE

(a) Using a dial indicator, measure the underdrive clutch pack clearance while applying and releasing compressed air

(392 kPa, 4.0 kgf/cm2, 57 psi).

Pack clearance:
1.81 to 2.20 mm (0.0713 to 0.0866 in.)

(b) Select an appropriate flange from the table below so that the pack clearance will be within the specified range.



Flange Thickness

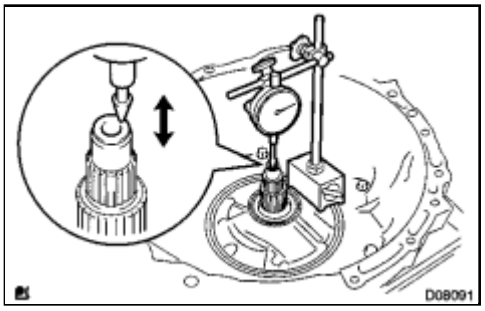
MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
Y	2.8 (0.110)	C	3.4 (0.134)
A	3.0 (0.118)	D	3.6 (0.142)
B	3.2 (0.126)	-	-

(c) Temporarily remove the snap ring and attach the flange to the transaxle case.

(d) Reinstall the snap ring to the transaxle case.

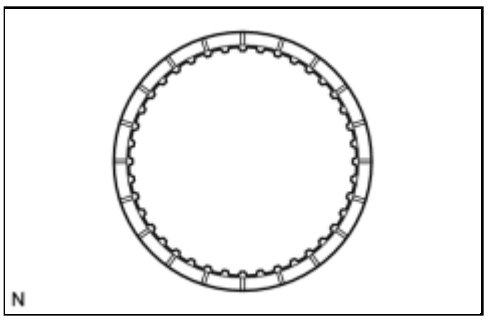
11. INSPECT UNDERDRIVE ONE-WAY CLUTCH ASSEMBLY

(a) Install the underdrive clutch assembly to the one-way clutch.



(b) Make sure that the underdrive one-way clutch turns freely counterclockwise and locks when turned clockwise.

(c) Remove the underdrive clutch assembly from the one-way clutch.

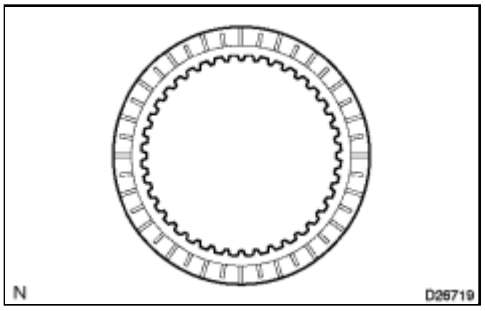


12. INSPECT INPUT SHAFT END PLAY

(a) Using a dial indicator, measure the input shaft end play.

End play:
0.262 to 1.249 mm (0.0103 to 0.0492 in.)

13. INSPECT DIRECT MULTIPLE DISC CLUTCH DISC



(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt.

If necessary, replace them.

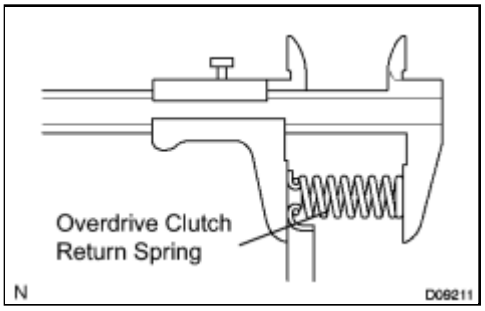
NOTICE:

- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

14. INSPECT OVERDRIVE DIRECT CLUTCH DISC

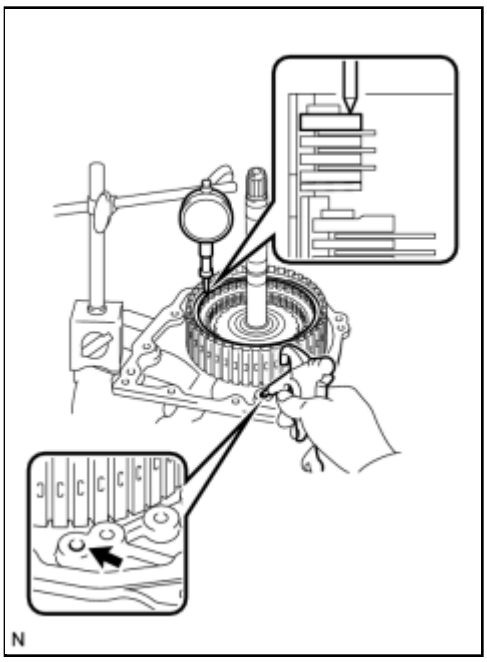
(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt. If necessary, replace them.

NOTICE:



- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

15. INSPECT OVERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY



(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
25.91 mm (1.0201 in.)

If the free length is shorter than the standard free length, replace the overdrive clutch return spring sub-assembly.

16. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

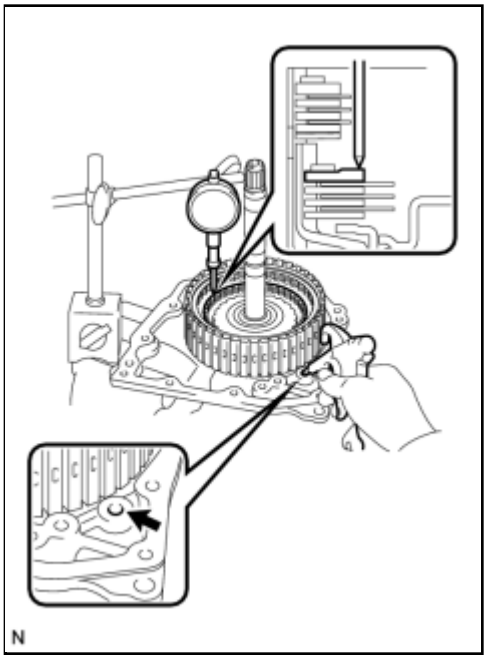
(a) Install the intermediate shaft and needle roller bearing on the transaxle rear cover.

NOTICE:

Be careful not to damage the oil seal ring outers.

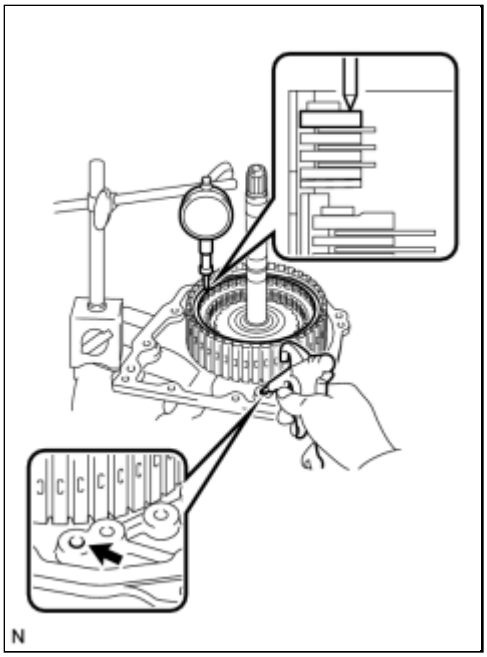
(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:
1.05 to 1.47 mm (0.04134 to 0.05787 in.)



If the pack clearance is not as specified, inspect the discs, plates and flange.

17. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH



(a) Using a dial indicator, measure the overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm2, 57 psi).

Pack clearance:
0.61 to 0.83 mm (0.02402 to 0.03268 in.)

If the pack clearance is not as specified, inspect the discs, plates and flange.

18. INSPECT PACK CLEARANCE OF DIRECT CLUTCH

(a) Install the intermediate shaft on the transaxle rear cover.

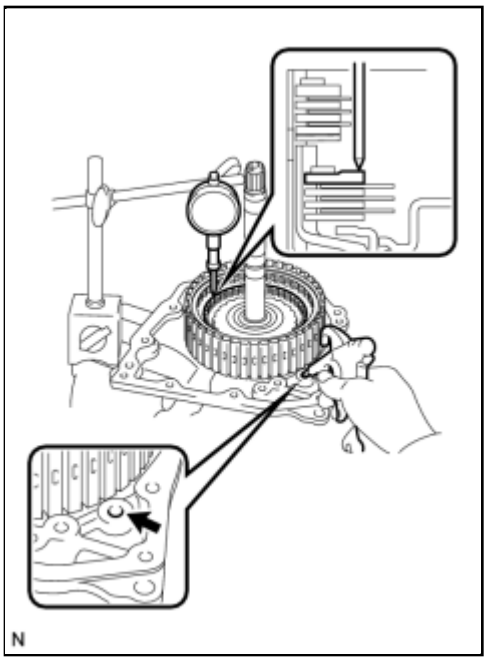
(b) Using a dial indicator, measure the direct clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

1.05 to 1.47 mm (0.04134 to 0.05787 in.)

If the pack clearance is less than the minimum, the parts may have been assembled incorrectly, so check and reassemble them.

If the clearance is not as specified, select another flange.



HINT:

There are 8 different thicknesses of flanges available.

Flange Thickness

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
0	2.9 (0.114)	4	3.3 (0.130)
1	3.0 (0.118)	5	3.4 (0.134)
2	3.1 (0.122)	6	3.5 (0.138)
3	3.2 (0.126)	7	3.6 (0.142)

19. INSPECT PACK CLEARANCE OF OVERDRIVE CLUTCH

(a) Using a dial indicator, measure the overdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm2, 57 psi).

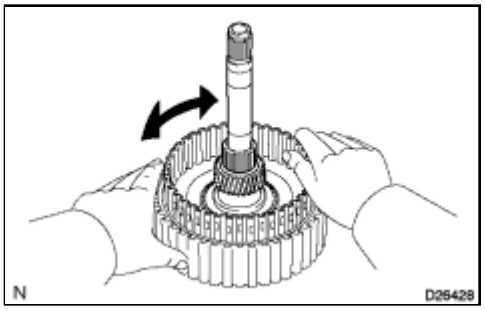
Pack clearance:
0.61 to 0.83 mm (0.02402 to 0.03268 in.)

If the pack clearance is less than the minimum, the parts may have been assembled incorrectly, so check and reassemble them.

If the clearance is not as specified, select another flange.

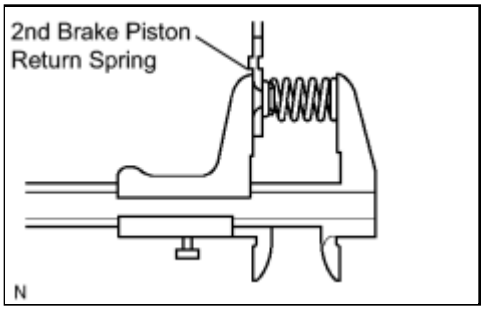
HINT:

There are 7 different thicknesses of flanges available.



Flange Thickness

MARK	THICKNESS (MM (IN.))	MARK	THICKNESS (MM (IN.))
0	2.5 (0.0984)	4	2.9 (0.114)
1	2.6 (0.102)	5	3.0 (0.118)
2	2.7 (0.106)	6	3.1 (0.122)
3	2.8 (0.110)	-	-

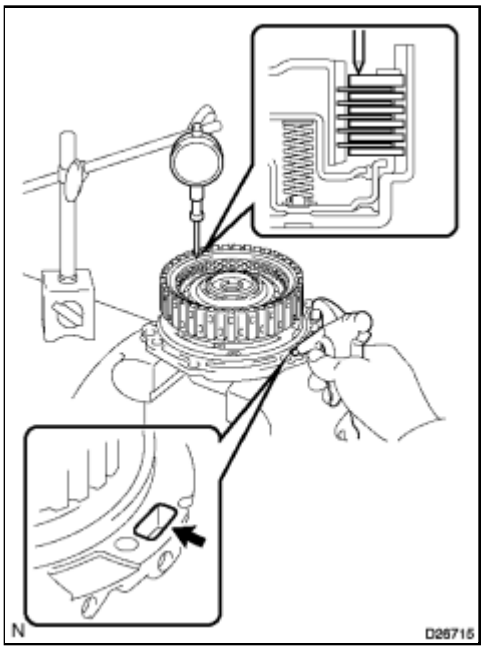


(b) Check that the disc rotates after inserting the rear planetary sun gear.

NOTICE:

Do not place the rear planetary sun gear in a vise.

20. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY



(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
16.61 mm (0.6539 in.)

If the free length is shorter than the standard free length, replace the 2nd brake piston return spring sub-assembly.

21. INSPECT PACK CLEARANCE OF FORWARD CLUTCH

(a) Install the forward clutch on the oil pump.

NOTICE:

Be careful not to damage the oil seal ring of the oil pump.

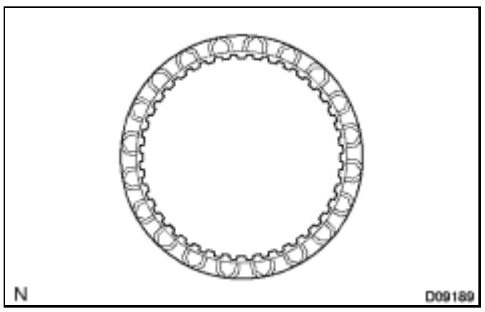
(b) Using a dial indicator, measure the forward clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

Pack clearance:

1.00 to 1.25 mm (0.0394 to 0.0492 in.)

If the clearance is not within the standard, inspect the discs, plates and flange.

If the piston stroke is less than the minimum, the parts may have been assembled incorrectly. Check and reassemble them again.



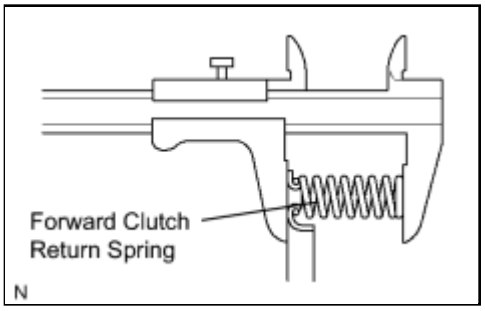
HINT:

- As the opening is large, cover it with a piece of cloth or shop rag to prevent the compressed air from being released.
- There are 7 different thicknesses of flanges available.

Flange Thickness:

NO.	THICKNESS (MM (IN.))	NO.	THICKNESS (MM (IN.))
0	2.85 (0.1122)	4	3.45 (0.1358)
1	3.00 (0.1181)	5	3.60 (0.1417)
2	3.15 (0.1240)	6	3.75 (0.1476)
3	3.30 (0.1299)	-	-

22. INSPECT FORWARD MULTIPLE DISC CLUTCH DISC



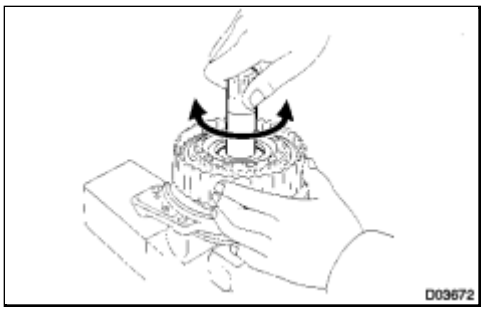
(a) Check if the sliding surfaces of the discs, plates, and flange are worn or burnt.

If necessary, replace them.

HINT:

- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

23. INSPECT FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

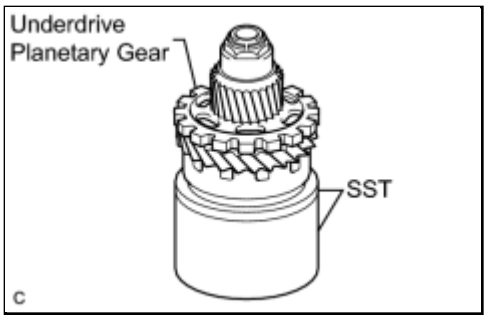


(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
26.74 mm (1.0528 in.)

If the free length is shorter than the standard free length, replace the forward clutch return spring sub-assembly.

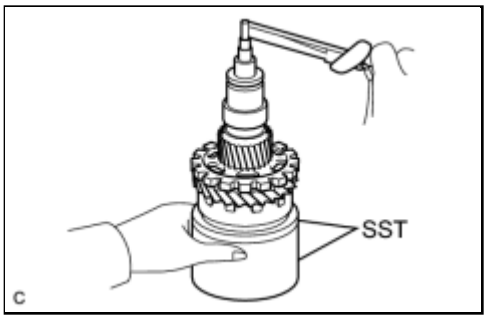
24. INSPECT FORWARD MULTIPLE DISC CLUTCH DISC



(a) Check if the disc rotates when lightly rotating the forward clutch assembly after inserting the multiple disc clutch.

NOTICE:

Do not place the forward clutch assembly in a vise.



25. INSPECT UNDERDRIVE PLANETARY GEAR PRELOAD

(a) Using SST, fix the underdrive planetary gear assembly.

SST: 09387-00050

SST: 09495-65040

(b) Using SST and a torque wrench, measure the turning torque of the underdrive planetary gear assembly while turning the torque wrench at 60 rpm.

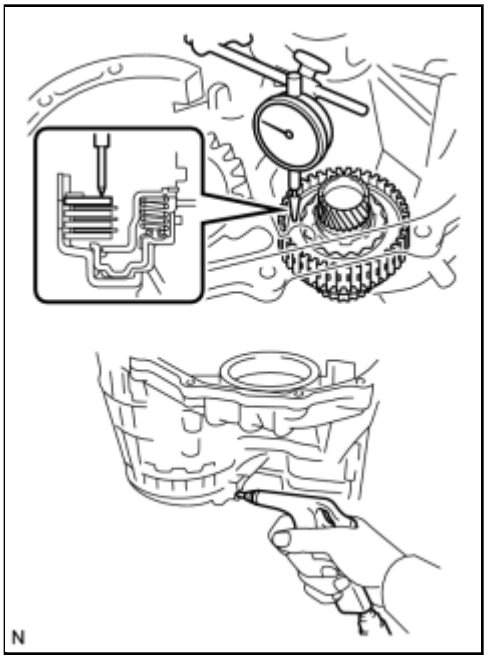
SST: 09387-00050

SST: 09495-65040

Turning torque at 60 rpm:

0.28 to 0.89 N*m (2.9 to 9.1 kgf*cm, 2.5 to 7.9 in.*lbf)

HINT:



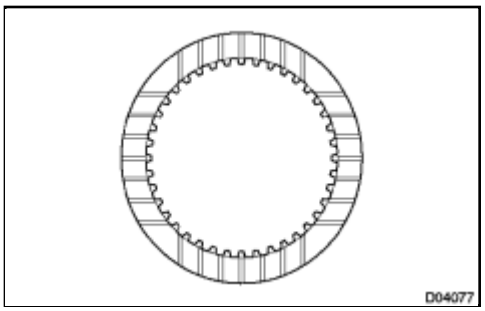
Use a torque wrench with a fulcrum length of 160 mm (6.30 in.).

26. INSPECT UNDERDRIVE PACK CLEARANCE

(a) Install the underdrive clutch to the transaxle case.

NOTICE:

Be careful not to damage the oil seal rings.



(b) Install a dial indicator as shown in the illustration.

(c) Measure the underdrive clutch pack clearance while applying and releasing compressed air (392 kPa, 4.0 kgf/cm^2, 57 psi).

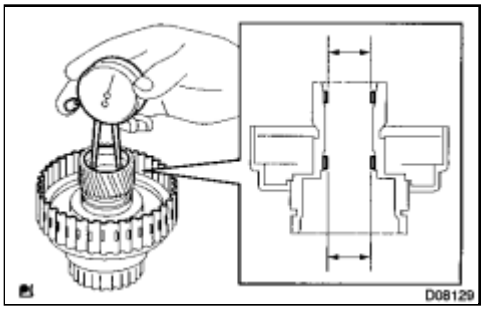
Pack clearance:
1.51 to 1.71 mm (0.0594 to 0.0673 in.)

If the pack clearance is not within the specified range, inspect the discs, plates, and flange.

27. INSPECT NO. 1 UNDERDRIVE CLUTCH DISC

(a) Check if the sliding surfaces of the discs, plates and flange are worn or burnt.

If necessary, replace them.

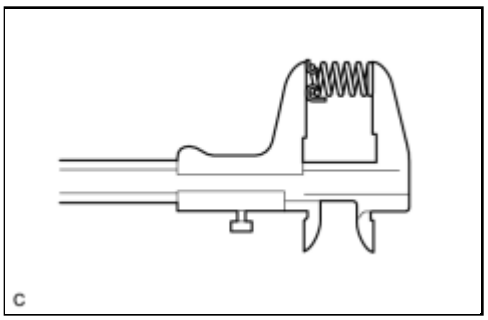


HINT:

- If the linings of a disc is peeled off or discolored, or even if a part of the groove is damaged, replace all discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

28. INSPECT UNDERDRIVE CLUTCH DRUM SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the underdrive clutch drum bushing.



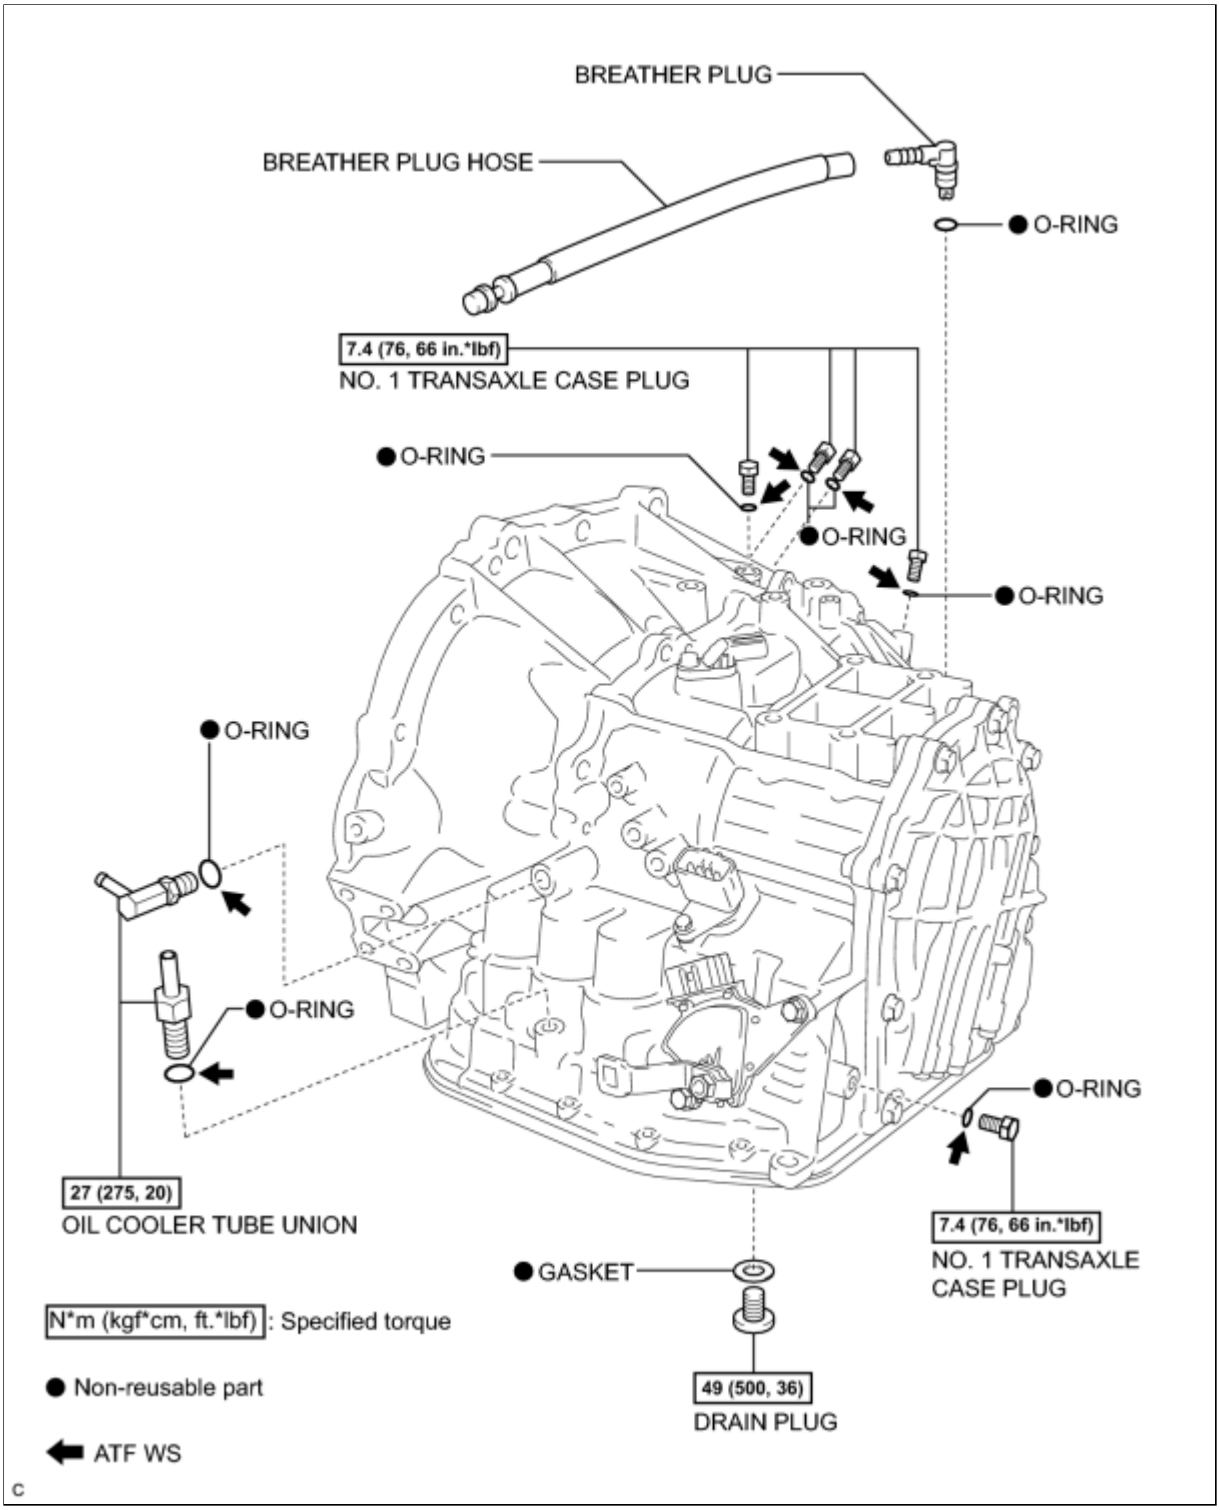
Standard inside diameter:
32.56 to 32.58 mm (1.2818 to 1.2826 in.)
Maximum inside diameter:

32.63 mm (1.2846 in.)

If the inside diameter is greater than the maximum, replace the underdrive clutch drum.

29. INSPECT UNDERDRIVE CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.



Standard free length:
17.14 mm (0.6748 in.)

If the free length is shorter than the standard free length, replace the underdrive clutch return spring sub-assembly.

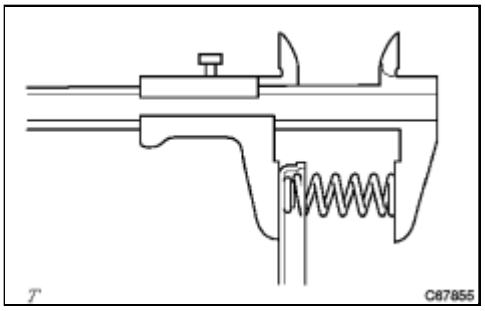
INSPECTION

1. INSPECT FRONT CLUTCH DISC

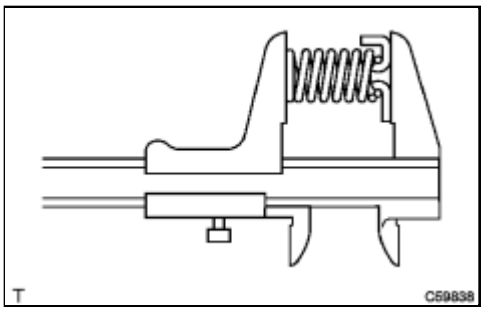


(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.

If necessary, replace them.

NOTICE:

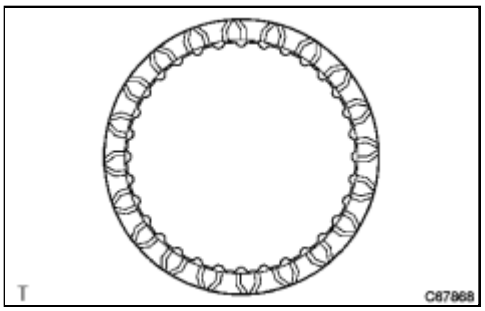
- If the lining of any disc is peeled off or discolored, or even if part of the printed number is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



2. INSPECT FORWARD CLUTCH RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
21.69 mm (0.853 in.)

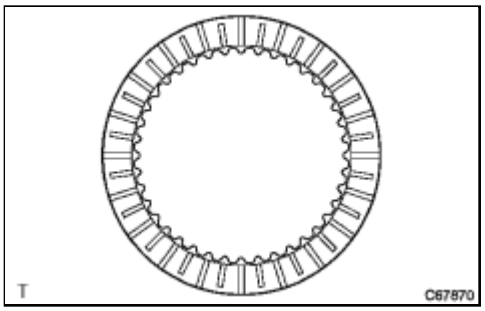


3. INSPECT OVERDRIVE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
17.88 mm (0.703 in.)

4. INSPECT REVERSE CLUTCH DISC



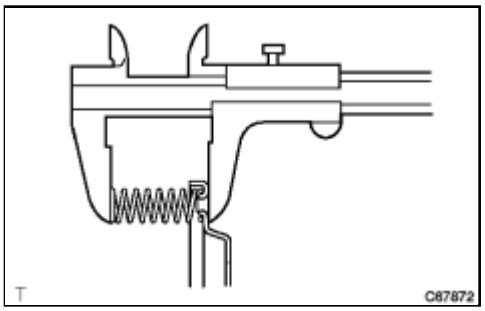
(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.

If necessary, replace them.

NOTICE:

- If the lining of any disc is peeled off or discolored, or even if part of the printed mark is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

5. INSPECT DIRECT CLUTCH DISC



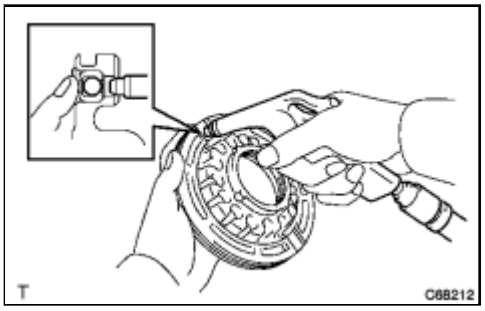
(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.

If necessary, replace them.

NOTICE:

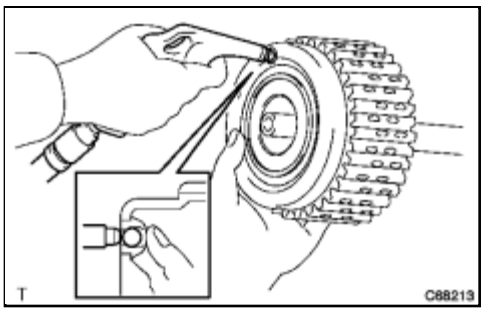
- If the lining of any disc is peeled off or discolored, or even if part of the printed mark is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

6. INSPECT DIRECT CLUTCH RETURN SPRING SUB-ASSEMBLY



(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

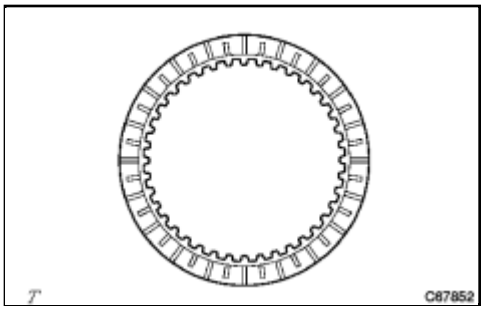
Standard free length:
31.7 mm (1.248 in.)



7. INSPECT DIRECT CLUTCH PISTON SUB-ASSEMBLY

(a) Shake the direct clutch pin and confirm that the check ball is not stuck.

(b) Apply low pressure compressed air to the check ball and confirm that there is no air leaks.



8. INSPECT INTERMEDIATE SHAFT SUB-ASSEMBLY

(a) Shake the direct clutch pin and confirm that the check ball is not stuck.

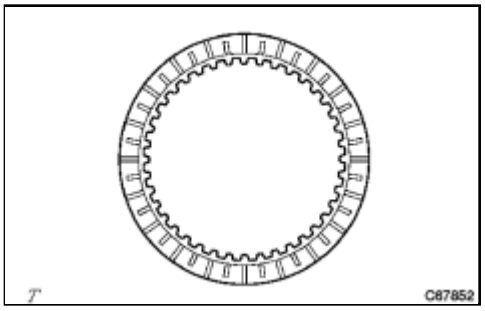
(b) Apply low pressure compressed air to the check ball and confirm that there is no air leaks.

9. INSPECT 2ND COAST AND OVERDRIVE BRAKE DISC

(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.

If necessary, replace them.

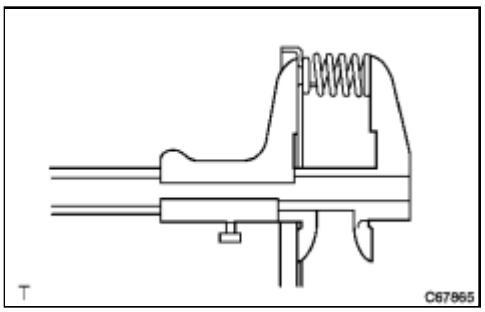
NOTICE:



- If the lining of any disc is peeled off or discolored, or even if part of the printed number is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

10. INSPECT 2ND BRAKE DISC

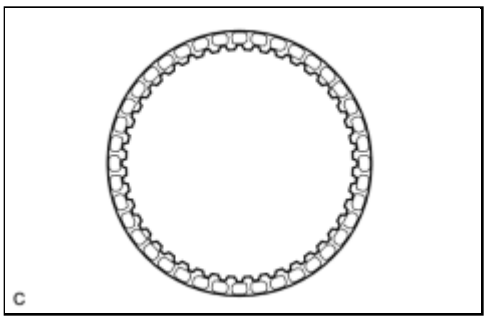
(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.



If necessary, replace them.

NOTICE:

- If the lining of any disc is peeled off or discolored or even if part of the printed mark is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.



11. INSPECT 2ND BRAKE PISTON RETURN SPRING SUB-ASSEMBLY

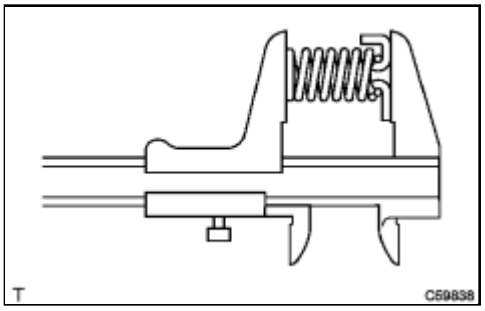
(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.

Standard free length:
14.65 mm (0.576 in.)

12. INSPECT 1ST AND REVERSE BRAKE DISC

(a) Check whether the sliding surfaces of the discs, plates and flanges are worn or burnt.

If necessary, replace them.

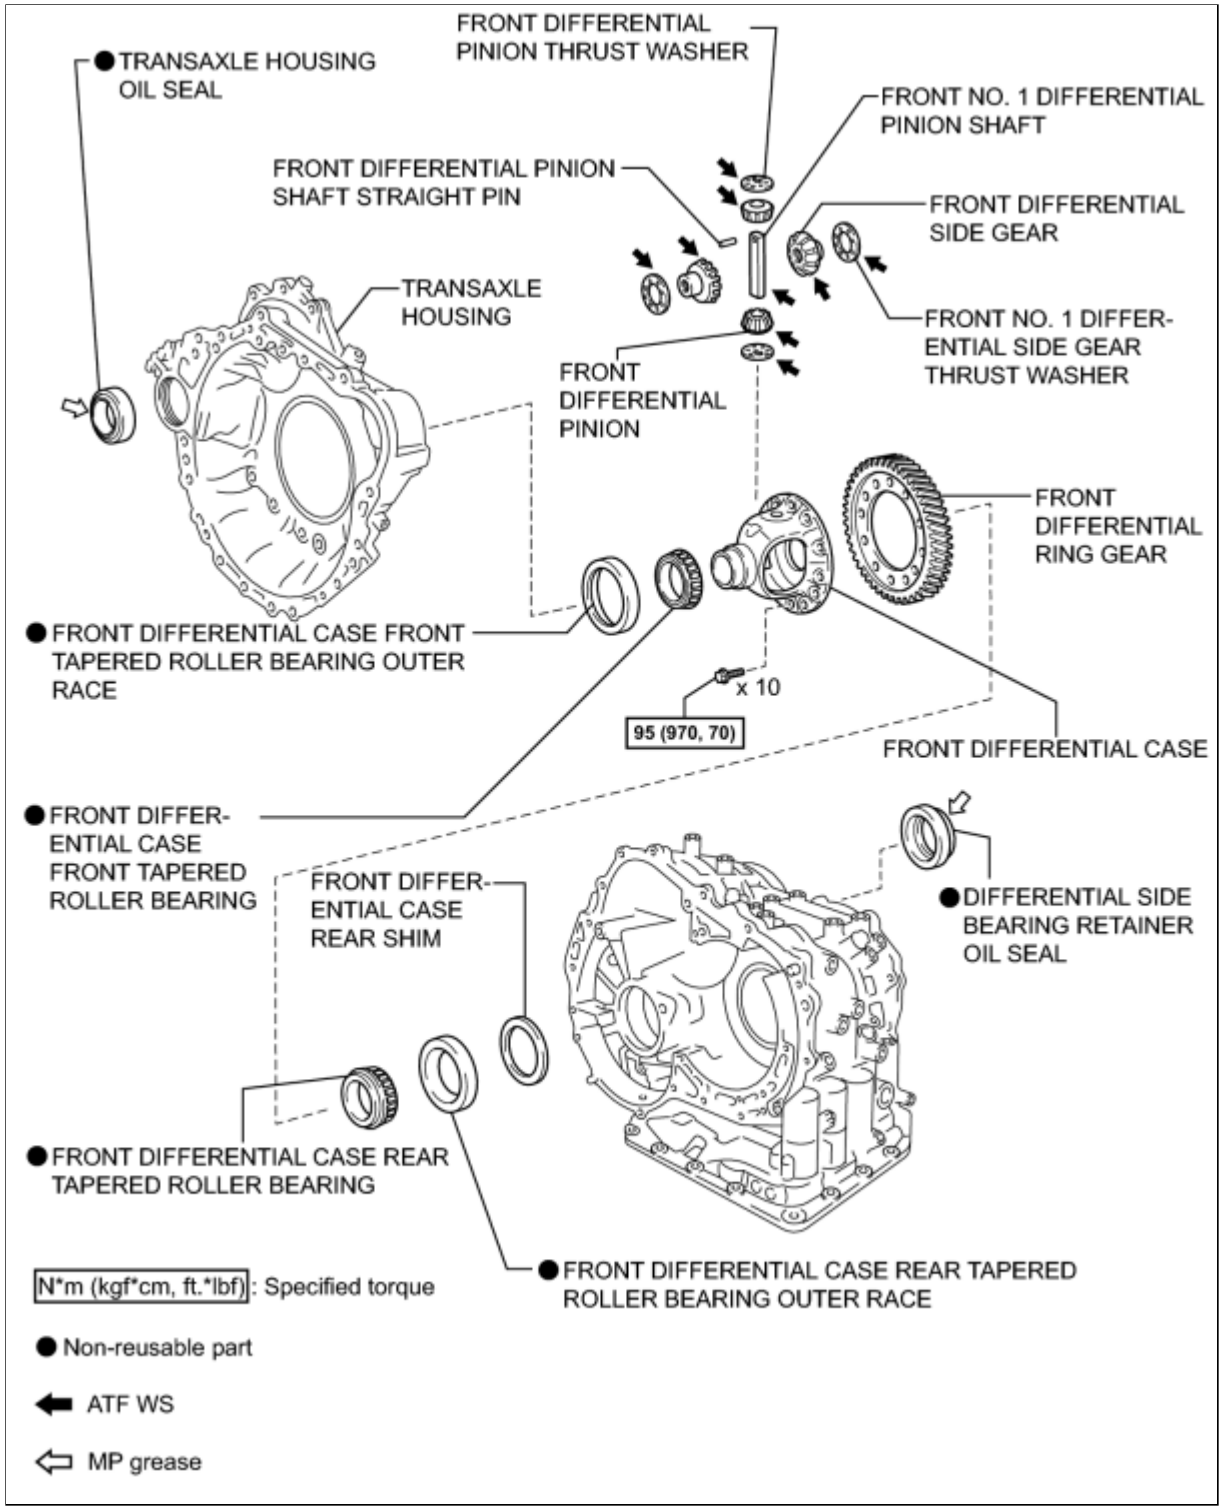


NOTICE:

- If the lining of any disc is peeled off or discolored, or even if part of the printed mark is damaged, replace all the discs.
- Before assembling new discs, soak them in ATF for at least 15 minutes.

13. INSPECT 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY

(a) Using a vernier caliper, measure the free length of the spring together with the spring seat.



Standard free length:
13.96 mm (0.549 in.)

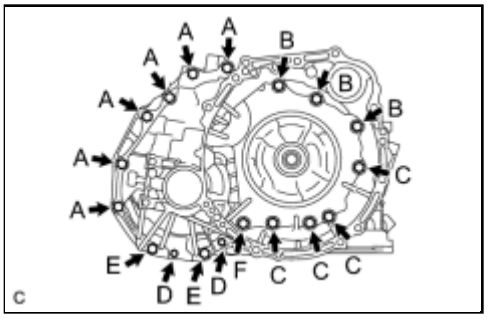
6. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

(a) Install the differential assembly to the transaxle case.

(b) Clean the contact surfaces of the transaxle case and transaxle housing.

(c) Install the transaxle housing to the transaxle case and tighten the 18 bolts.



Bolt A - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

Bolt B - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

Bolt A, E

42 mm (1.654 in.)

(d) Using SST, turn the differential assembly right and left 2 or 3 times to settle the bearing.

SST: 09564-32011

(e) Using SST and a torque wrench, measure the rotating torque of the differential.

SST: 09564-32011

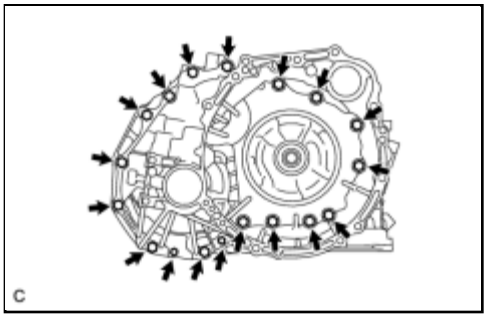
Rotating torque at 60 rpm:

New bearing

0.20 to 1.0 N*m (2.0 to 10.2 kgf*cm, 1.8 to 8.9 in.*lbf)

Used bearing

0.10 to 0.50 N*m (1.0 to 5.1 kgf*cm, 0.9 to 4.4 in.*lbf)



HINT:

If the rotating torque is not within the specified range, refer to the table below to select a thrust washer so that the rotating torque is within the specified range.

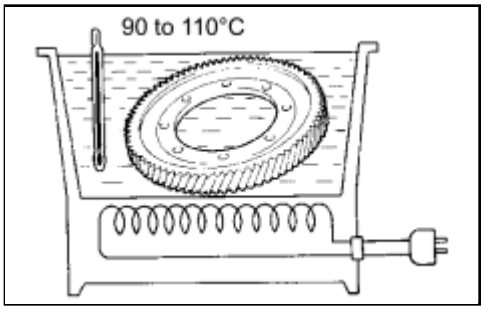
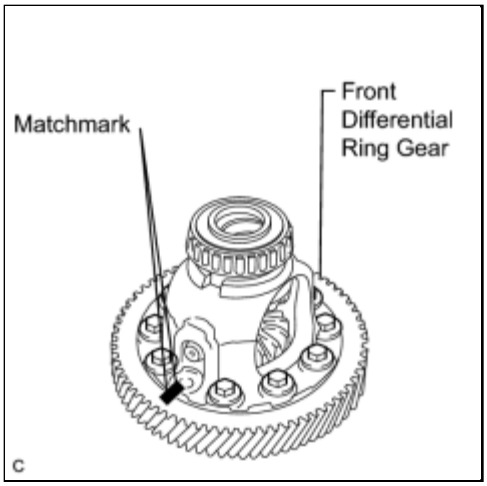
(f) Remove the 18 bolts and the transaxle housing.



(g) Remove the differential assembly.

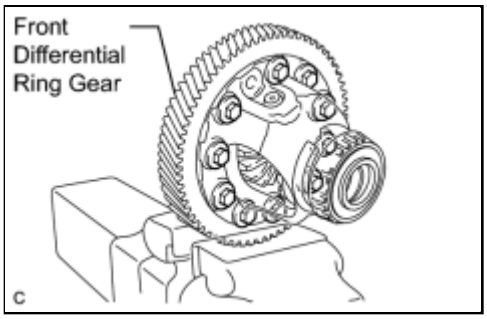
7. INSTALL FRONT DIFFERENTIAL RING GEAR



(a) Using ATF and a heater, heat the front differential ring gear to 90 to 110°C (194 to 230°F).

NOTICE:

Do not heat the ring gear to over 110°C (230°F).



(b) Clean the contact surface of the front differential case.

(c) Align the matchmarks, and install the front differential ring gear case quickly.

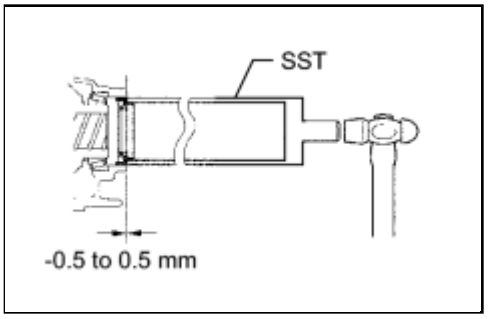
NOTICE:

Do not install the bolts while the ring gear is hot.

(d) Tighten the 10 bolts.

Torque: 95 N·m (970 kgf·cm, 70ft·lbf)

NOTICE:



Tighten the bolts one at a time in diagonal order.

8. INSTALL TRANSAXLE HOUSING OIL SEAL

(a) Using SST and a hammer, drive in a new oil seal.

SST: 09316-60011

INSPECTION

1. INSPECT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Measure the differential side gear backlash while holding 1 pinion gear toward the case.

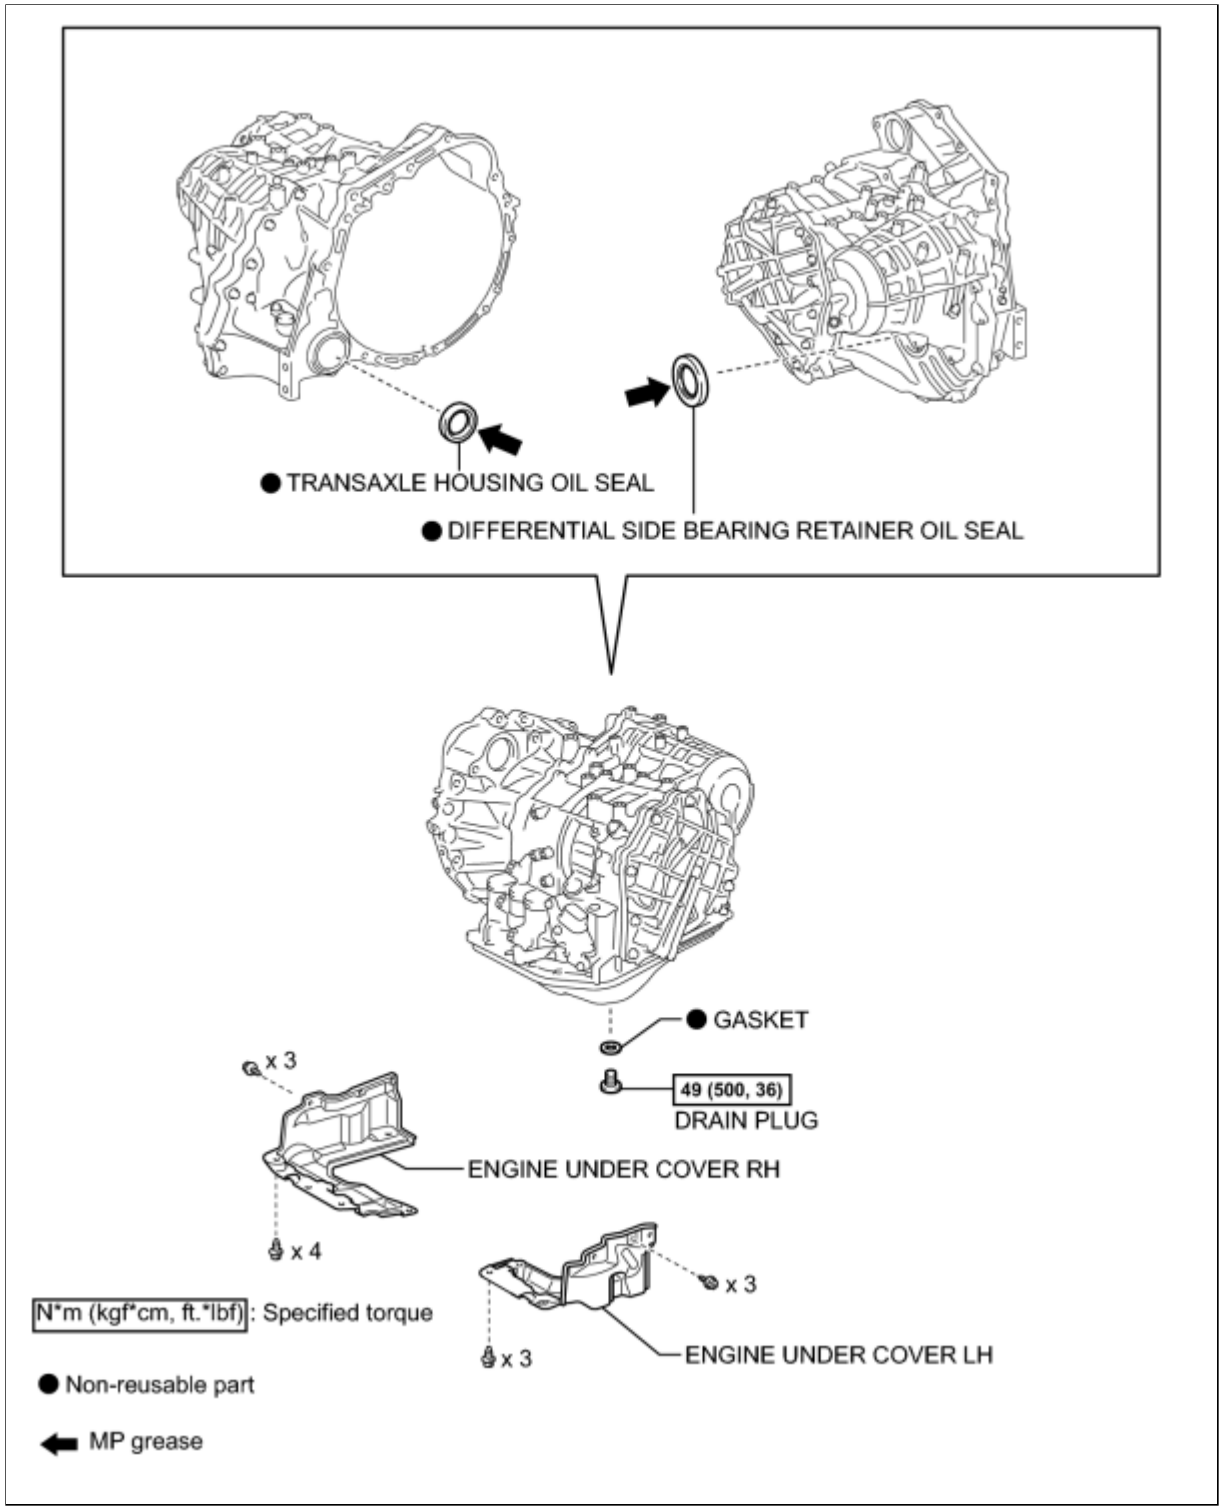
Standard backlash:

0.05 to 0.20 mm (0.00196 to 0.00787 in.)

If the backlash is not within the specified range, install the correct thrust washer to the side gear.

(b) Referring to the table below, select thrust washers which will ensure that the backlash is within the specified range for both sides.

Thrust Washer Thickness:



THICKNESS MM (IN.)	THICKNESS (MM (IN.))
0.95 (0.0374)	1.10 (0.0433)
1.00 (0.0394)	1.15 (0.0453)
1.05 (0.0413)	1.20 (0.0472)

If the backlash is not within the specified range, install a thrust washer of a different thickness.

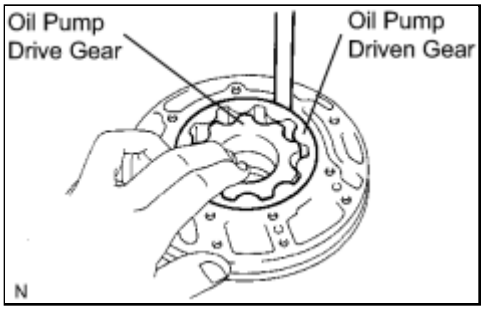
INSPECTION

1. INSPECT OIL PUMP ASSEMBLY



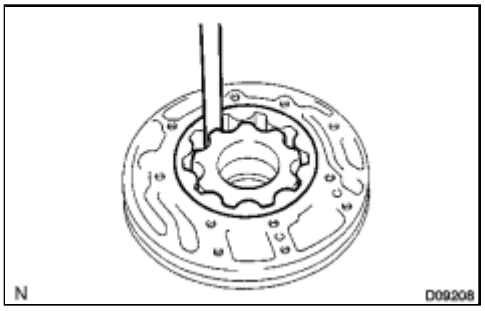
(a) Turn the drive gear with 2 screwdrivers and make sure that it rotates smoothly.

NOTICE:

Be careful not to damage the oil seal lip.

2. INSPECT CLEARANCE OF OIL PUMP ASSEMBLY

(a) Push the driven gear to one side of the body.



(b) Using a feeler gauge, measure the clearance.

Standard body clearance:
0.10 to 0.17 mm (0.00394 to 0.00669 in.)
Side clearance:
0.02 to 0.05 mm (0.000787 to 0.00197 in.)
Maximum body clearance:
0.17 mm (0.00669 in.)

If the body clearance is greater than the maximum, replace the oil pump body sub-assembly.

(c) Using a feeler gauge, measure the tip clearance between the driven gear teeth and drive gear teeth.

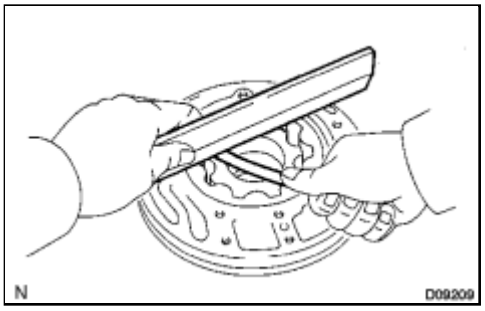
Standard tip clearance:
0.07 to 0.15 mm (0.00276 to 0.00591 in.)

Maximum tip clearance

0.15 mm (0.00591 in.)

If the tip clearance is greater than the maximum, replace the oil pump body sub-assembly.

(d) Using a straightedge and feeler gauge, measure the side clearance of both gears.



Standard side clearance:

0.02 to 0.05 mm (0.000787 to 0.00197 in.)

Maximum side clearance

0.05 mm (0.00197 in.)

Drive Gear Thickness

E	11.731 to 11.740 (0.4619 to 0.4622)

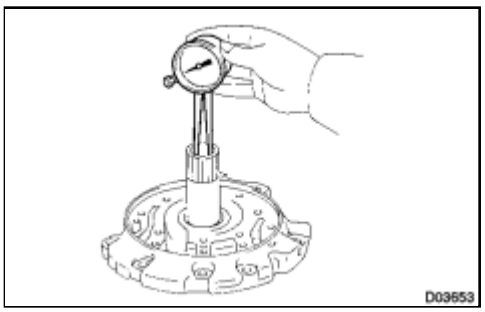
3. INSPECT FRONT OIL PUMP AND GEAR BODY SUB-ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the



oil pump body bushing.

Standard inside diameter:
38.113 to 38.138 mm (1.50051 to 1.50149 in.)

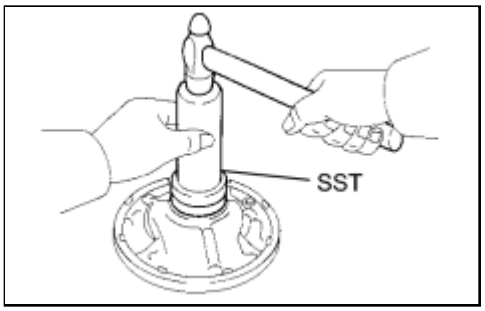
Maximum inside diameter
38.188 mm (1.50346 in.)

If the inside diameter is greater than the maximum, replace the oil pump and gear body sub-assembly.

4. INSPECT STATOR SHAFT ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the stator shaft.

Standard inside diameter:
21.500 to 21.526 mm (0.84646 to 0.84748 in.)



Maximum inside diameter
21.57 mm (0.8492 in.)

If the inside diameter is greater than the maximum, replace the stator shaft.

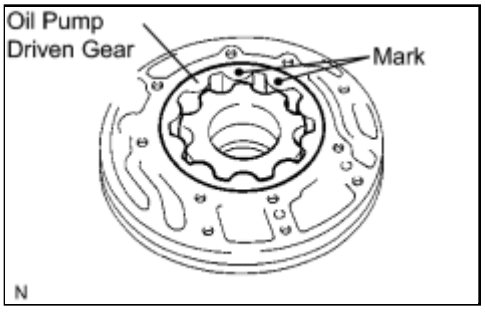
The seal end should be flush with the outer edge of the oil pump.

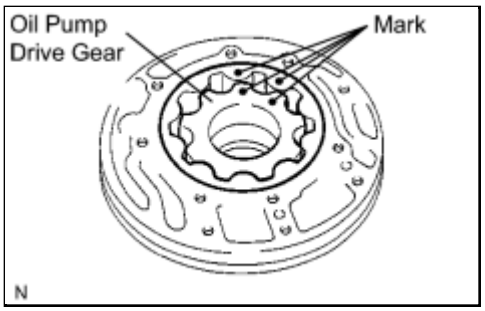
(b) Coat the lip of the oil seal with MP grease.

2. INSTALL FRONT OIL PUMP BODY O-RING



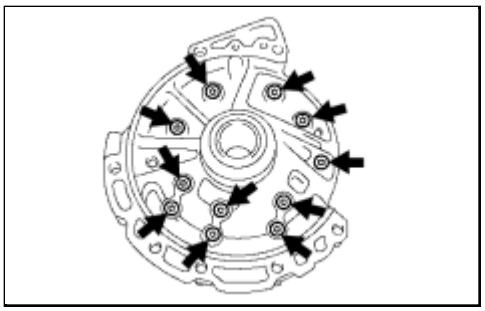
(a) Coat a new O-ring with ATF, and install it to the oil pump body.

NOTICE:



- Install the O-ring carefully to avoid twists or pinches.
- Apply sufficient ATF to the O-ring prior to installation.

3. INSTALL FRONT OIL PUMP DRIVEN GEAR

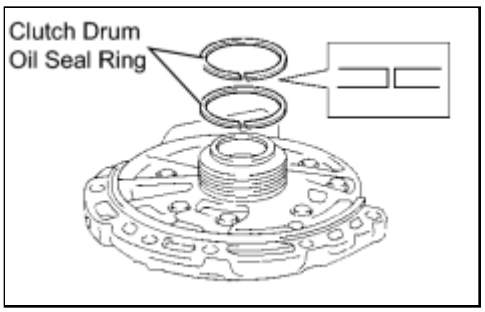


(a) Coat the front oil pump driven gear with ATF, and install it to the oil pump body with the marked side up.

4. INSTALL FRONT OIL PUMP DRIVE GEAR

(a) Coat the front oil pump drive gear with ATF, and install it to the oil pump body with the marked side up.

5. INSTALL STATOR SHAFT ASSEMBLY



(a) Align the bolt holes in the stator shaft assembly with those in the front oil pump and gear body sub-assembly.

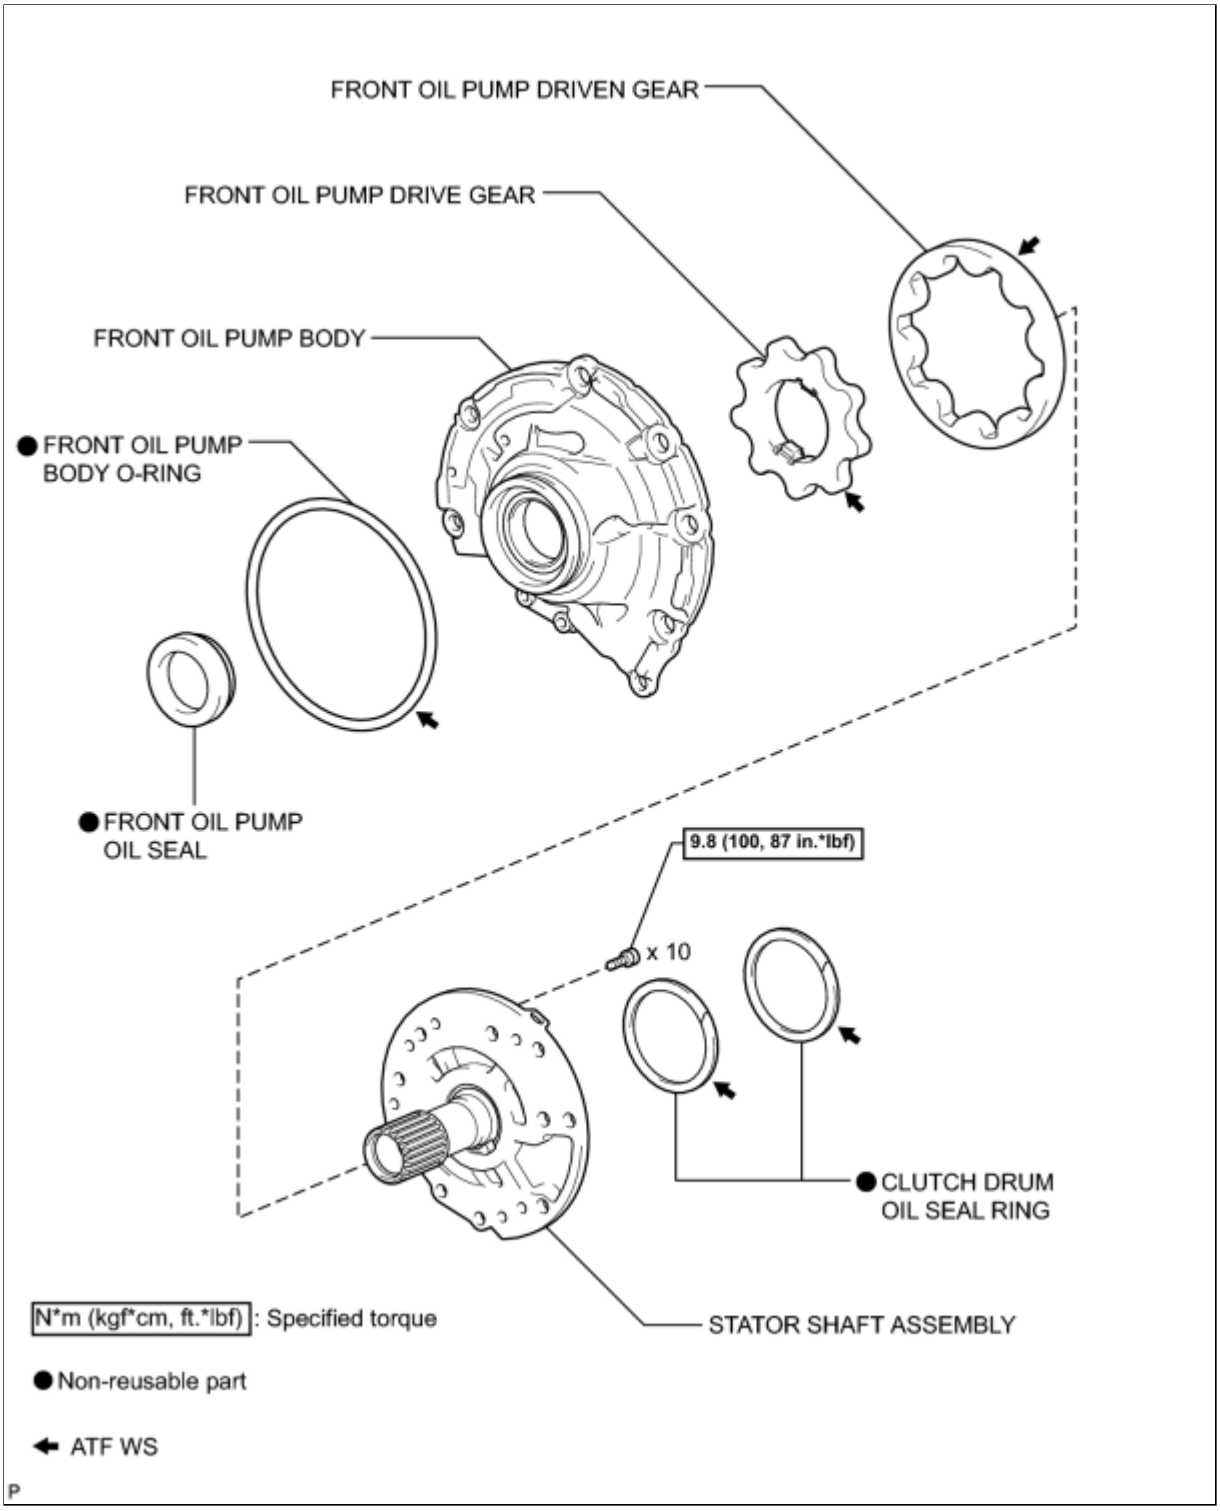
(b) Using a "TORX" socket (T30), install the 11 bolts.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

6. INSTALL CLUTCH DRUM OIL SEAL RING

(a) Coat 2 new clutch drum oil seal rings with ATF.

(b) Install the 2 clutch drum oil seal rings.



NOTICE:

Do not expand the ring ends excessively.

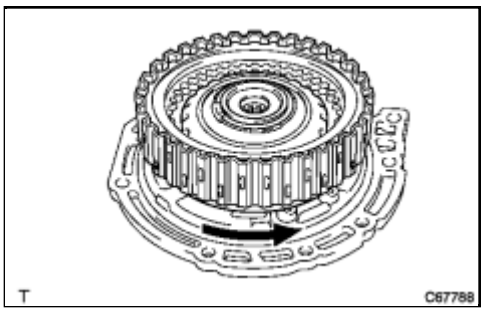
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: OIL PUMP: INSPECTION (2010 Corolla)		

INSPECTION

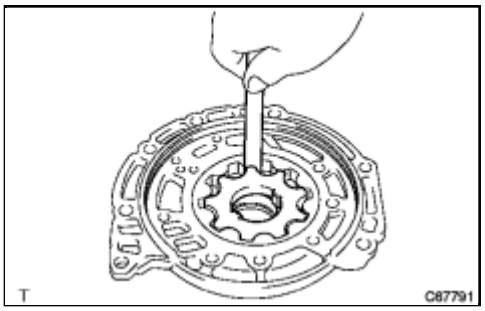


1. INSPECT STATOR SHAFT ASSEMBLY

(a) Using a dial indicator, measure the inside diameter of the stator shaft bushings.

Standard inside diameter:
21.50 to 21.52 mm (0.846 to 0.847 in.)
Maximum inside diameter:
21.52 mm (0.847 in.)

If the inside diameter is greater than the maximum, replace the stator shaft.



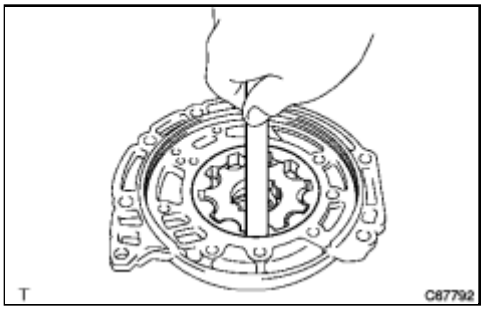
(b) Install the input shaft assembly onto the stator shaft assembly and check that the input shaft assembly turns smoothly.

NOTICE:

Replace the stator assembly with a new one if it moves roughly or makes unusual noise.

Inspect the input shaft's contact surface with the bearing when replacing, and replace the input shaft with a new one if any damage or discoloration is found.

2. INSPECT OIL PUMP GEAR CLEARANCE



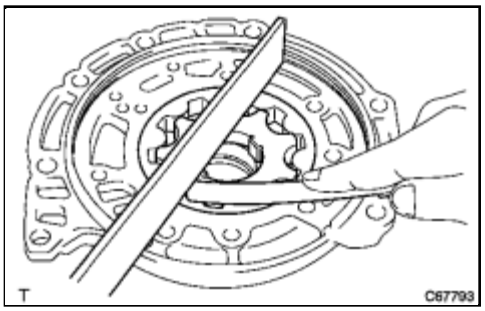
(a) Using a feeler gauge, measure the clearance between the tips of the driven gear teeth and the drive gear teeth.

Standard tip clearance:
0.07 to 0.15 mm (0.00275 to 0.00590 in.)
Maximum tip clearance:
0.15 mm (0.00590 in.)

If the tip clearance is greater than the maximum, replace the oil pump body sub-assembly.

(b) Push the driven gear to one side of the body. Using a feeler gauge, measure the clearance.

Standard body clearance:
0.10 to 0.15 mm (0.00393 to 0.00590 in.)
Maximum body clearance:
0.15 mm (0.00590 in.)



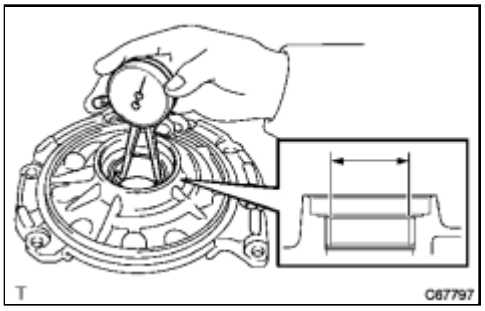
If the body clearance is greater than the maximum, replace the oil pump body sub-assembly.

(c) Using a steel straightedge and feeler gauge, measure the side clearance of both gears.

Standard side clearance:
0.02 to 0.05 mm (0.000787 to 0.00196 in.)
Maximum side clearance:
0.05 mm (0.00196 in.)

If the side clearance is greater than the maximum, replace the drive gear, driven gear or pump body.

Drive Gear Thickness:



NO.	THICKNESS (MM (IN.))
1	9.440 to 9.449 (0.3717 to 0.3720)

ADJUSTMENT

1. ADJUST PARK/NEUTRAL POSITION SWITCH ASSEMBLY

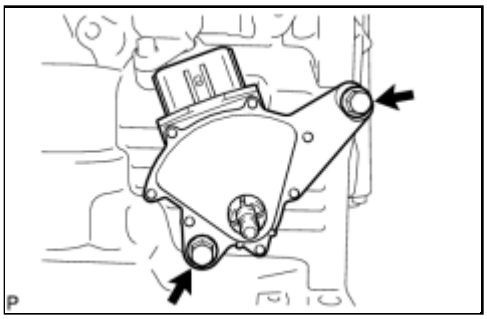
(a) Loosen the bolts of the park/neutral position switch and move the shift lever to N.

(b) Align the groove with the neutral basic line.

(c) Hold the switch in place and tighten the 2 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)



(d) After the adjustment, perform the switch operation check INFO .

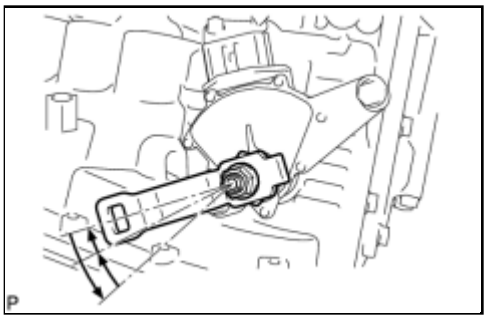
INSTALLATION

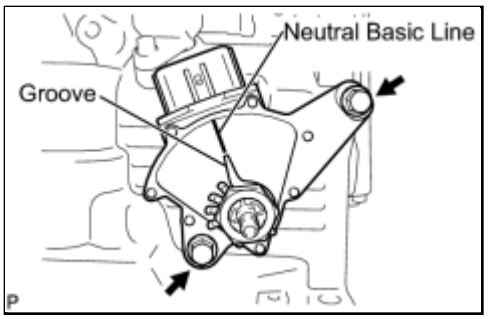
1. INSTALL PARK/NEUTRAL POSITION SWITCH ASSEMBLY

(a) Install the park/neutral position switch assembly to the automatic transaxle.



(b) Temporarily install the 2 bolts.

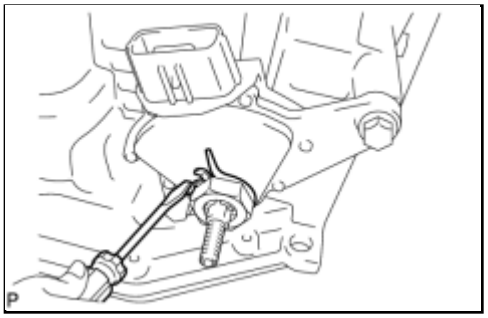
(c) Replace the lock plate with a new one and tighten the manual valve shaft nut.



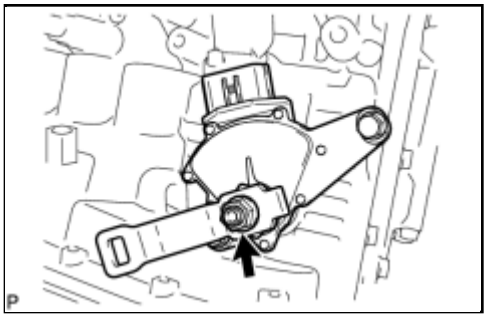
Torque: 6.9 N·m (70 kgf·cm, 61in·lbf)

(d) Temporarily install the control shaft lever.

(e) Turn the lever counterclockwise until it stops, then turn it clockwise 2 notches.



(f) Remove the control shaft lever.



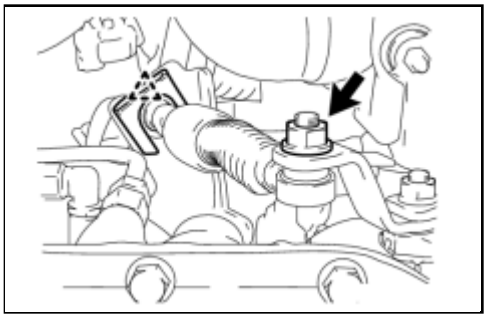
(g) Align the groove with the neutral basic line.

(h) Hold the switch in place and tighten the 2 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

(i) Using a screwdriver, stake the nut with the lock plate.

(j) Install the control shaft lever with the nut and washer.



Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

(k) Connect the connector to the park/neutral position switch assembly.

2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable assembly to the control shaft lever with the nut.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(b) Install the transmission control cable assembly to the bracket with a new clip.

ON-VEHICLE INSPECTION

1. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Inspect the shift lock operation.

(1) Move the shift lever to P.

(2) Turn the ignition switch off.

(3) Check that the shift lever cannot be moved from P to any other position.

(4) Turn the ignition switch to ON, depress the brake pedal, and check that the shift lever can be moved to another position.

If operation cannot be done as specified, inspect the shift lock control unit.

(b) Inspect the shift lock release button operation.

(1) When moving the shift lever with the shift lock release button pressed, check that the shift lever can be moved from P to any other position.

(c) Check the key interlock operation.

(1) Turn the ignition switch to ON.

(2) Depress the brake pedal and move the shift lever to any position other than P.

(3) Check that the ignition key cannot be turned to LOCK.

(4) Move the shift lever to P, turn the ignition key to LOCK and check that the ignition key can be removed.

If operation cannot be done as specified, inspect the shift lock control unit.

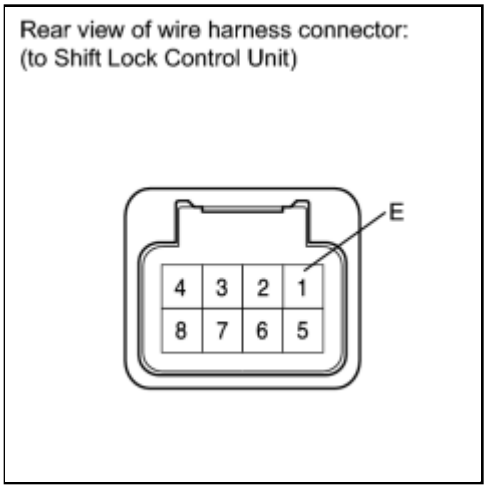
INSPECTION

1. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
6 (ACC) - 1 (E)	Ignition switch ON	11 to 14 V
6 (ACC) - 1 (E)	Ignition switch ACC	11 to 14 V
6 (ACC) - 1 (E)	Ignition switch off	Below 1 V
4 (STP) - 1 (E)	Brake pedal depressed	11 to 14 V
4 (STP) - 1 (E)	Brake pedal released	Below 1 V
5 (KLS+) - 1 (E)	Ignition switch ACC and shift lever P	Below 1 V
	Ignition switch ACC and shift lever except P (Within approx. 1 second)	7.5 to 11 V
	Ignition switch ACC and shift lever except P (After approx. 1 second)	6 to 9.5 V
8 (IG) - 1 (E)	Ignition switch ON	11 to 14 V
8 (IG) - 1 (E)	Ignition switch off	Below 1 V



NOTICE:

Do not disconnect the shift lock control unit assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

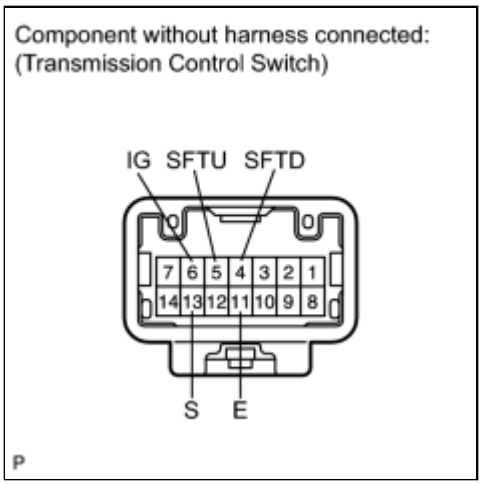
Standard Resistance:

TESTER	CONDITION	SPECIFIED

CONNECTION		CONDITION
1 (E) - Body ground	Always	Below 1 Ω

NOTICE:

Do not disconnect the shift lock control unit assembly connector.



If the result is not as specified, replace the shift lock control ECU sub-assembly.

2. INSPECT TRANSMISSION CONTROL SWITCH

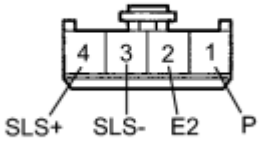
(a) Disconnect the transmission control switch connector of the shift lock control unit assembly.

(b) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard Resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
6 (IG) - 13 (S)	S, "+" and "-"	Below 1 Ω
5 (SFTU) - 11 (E)	Continuously shift to "+" (Up-shift)	Below 1 Ω
4 (SFTD) - 11 (E)	Continuously shift to "-" (Down-shift)	Below 1 Ω
6 (IG) - 13 (S)	Not on S "+" and "-"	10 kΩ or higher
5 (SFTU) - 11 (E)	S	10 kΩ or higher
4 (SFTD) - 11 (E)	S	10 kΩ or higher

If the result is not as specified, replace the shift lock control unit assembly.



3. INSPECT SHIFT LOCK SOLENOID

(a) Disconnect the shift lock solenoid connector.

(b) Measure the resistance according to the value(s) in the

table below when the shift lever is moved to each position.

Front view of wire harness connector:

INSPECTION

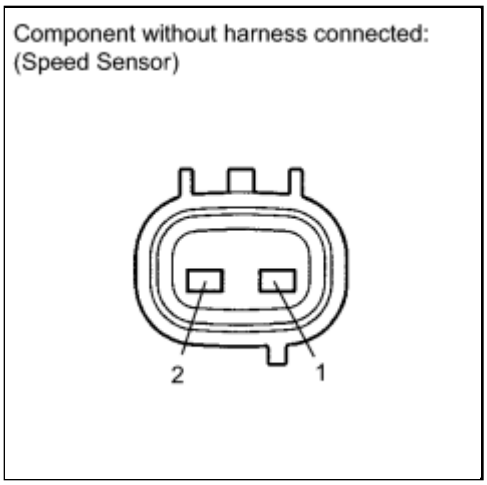
1. INSPECT SPEED SENSOR NT



(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	560 to 680 Ω

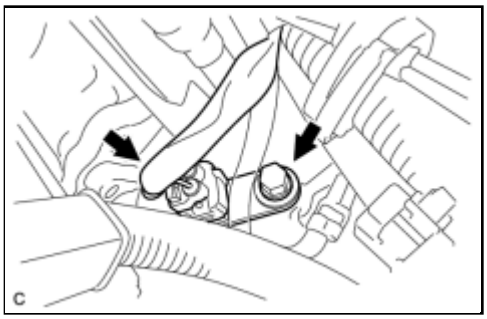
If the resistance value is not as specified, replace the speed sensor.

2. INSPECT SPEED SENSOR NC

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	560 to 680 Ω



If the resistance value is not as specified, replace the speed sensor.

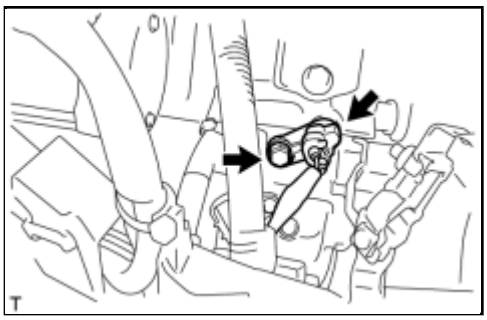
INSTALLATION

1. INSTALL SPEED SENSOR NC

(a) Coat a new O-ring with ATF WS and install it to the speed sensor.



(b) Install the speed sensor with the bolt.

Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

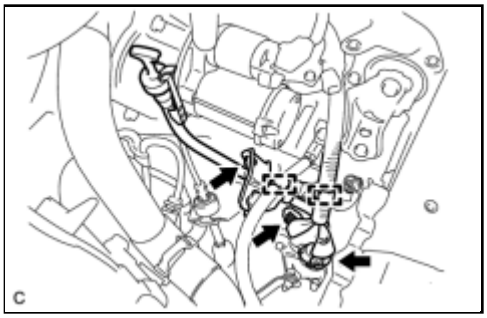
(c) Connect the speed sensor connector.

2. INSTALL SPEED SENSOR NT

(a) Coat a new O-ring with ATF WS and install it to the speed sensor.

(b) Install the speed sensor with the bolt.

Torque: 11 N·m (115 kgf·cm, 8ft·lbf)



(c) Connect the speed sensor connector.

3. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Apply ATF to a new O-ring, and install it to the transmission oil filler tube sub-assembly.

(b) Install the transmission oil filler tube sub-assembly to the automatic transaxle with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

(c) Connect the transmission wire connector, park/neutral position switch connector and 2 wire harness clamps.

(d) Install the transmission oil level gauge sub-assembly to the transmission oil filler tube sub-assembly.

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: TORQUE CONVERTER CLUTCH AND DRIVE PLATE: INSPECTION (2010 Corolla)		

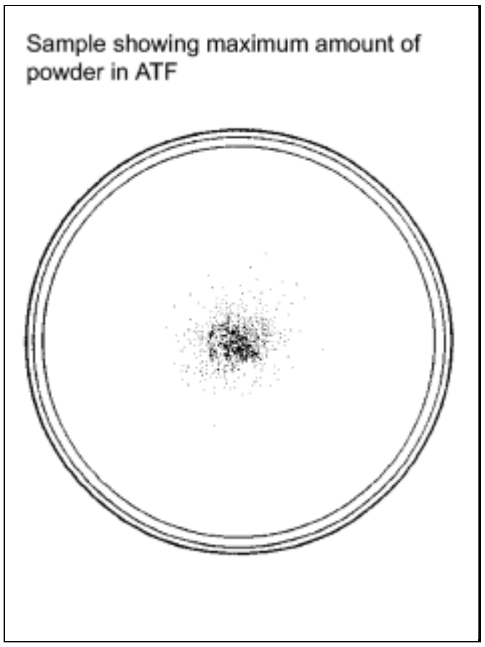
INSPECTION

1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the one-way clutch.

(1) Install SST onto the inner race of the one-way clutch.

SST: 09350-32014



09351-32010

(2) Set SST so that it fits in the notch of the converter hub and in the outer race of the one-way clutch.

SST: 09350-32014

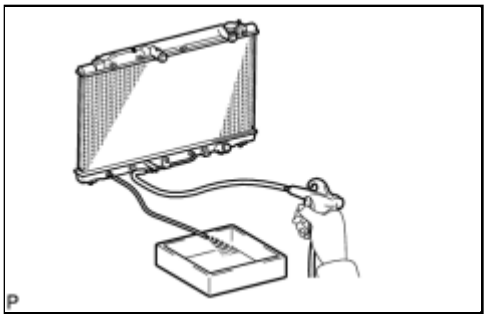
09351-32020

(3) With the torque converter standing on its side, check that the clutch locks when SST is turned counterclockwise and rotates freely and smoothly when turned clockwise. If the results are not as specified, clean the converter and recheck the one-way clutch. If the results still are not as specified, replace the converter.

(b) Determine the condition of the torque converter clutch.

(1) Check that the following conditions are met:

- During the stall test or when the shift lever is in N, metallic sounds are not emitted from the torque converter clutch.
- The one-way clutch turns clockwise and locks when turned counterclockwise.
- The amount of powder in the ATF is not greater than the sample shown in the illustration.



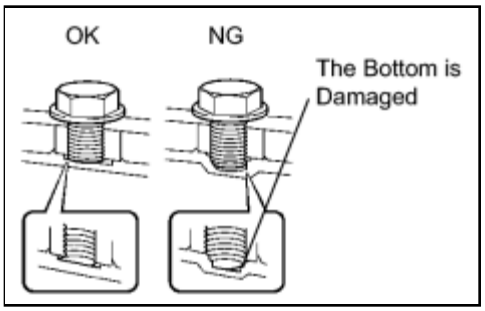
If the results are not as specified, replace the torque converter clutch assembly.

HINT:

The sample illustration shows approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) of the ATF taken from a removed torque converter clutch.

(c) Replace the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, completely stir the ATF in the torque converter clutch and drain it.



(d) Clean and check the oil cooler and oil pipe line.

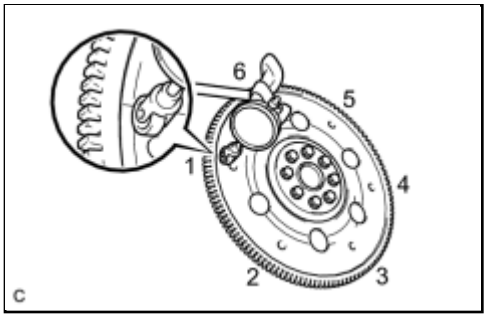
(1) If the torque converter clutch is inspected or the ATF is replaced, clean the oil cooler and oil lines.

HINT:

- Spray compressed air of 196 kPa (2 kgf/cm^2, 28 psi) into inlet hose.
- If there is a large amount of fine powder in the ATF, add new ATF using a bucket pump and clean it again.

(2) If the ATF is cloudy, inspect the oil cooler (radiator).

(e) Avoid damaging the torque converter clutch and the oil pump gear.



(1) If there is any damage to the end of the bolt for the torque converter clutch and to the bottom of the bolt hole, replace the bolt and the torque converter clutch.

(2) All of the bolts must be the same length.

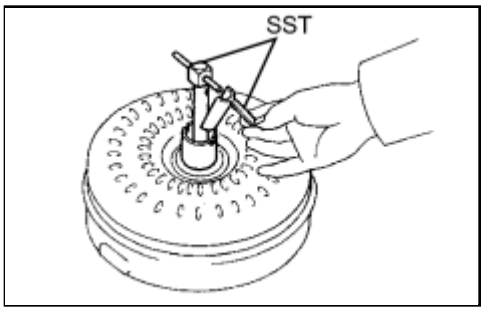
(3) Bolts with washers must be used.

2. INSPECT DRIVE PLATE & RING GEAR SUB-ASSEMBLY

(a) Check the drive plate for damage.

(b) Set up a dial indicator and measure the run out of the 6 portions around the torque converter fitting surface.

Maximum runout:
0.30 mm (0.0118 in.)



If the runout is not within the specification or the drive plate is damaged, replace the drive plate.

SST: 09350-32014

09351-32010

09351-32020

(2) Stand the torque converter up and turn the SST.

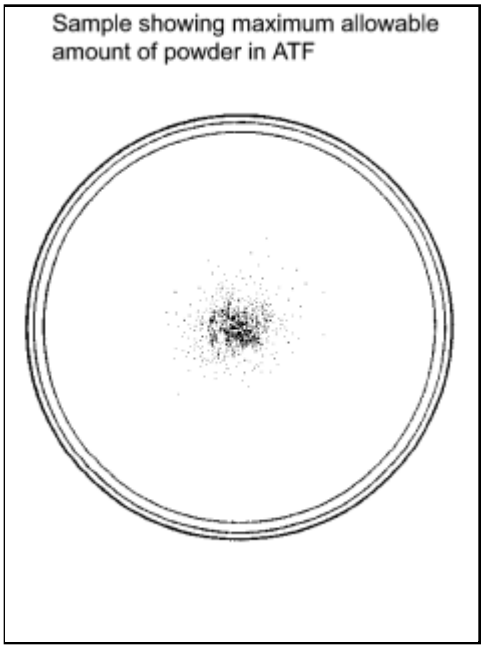
Check that it rotates smoothly when turned clockwise and locks up when turned counterclockwise.

SST: 09350-32014

09351-32010

09351-32020

If necessary, clean the converter and check the one-way clutch.



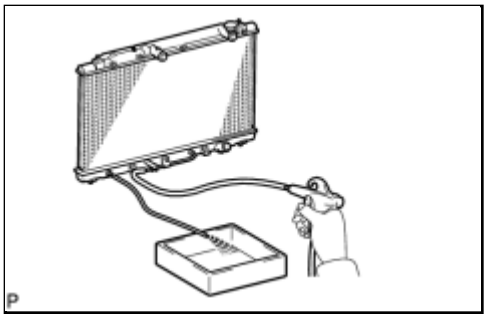
Replace the converter if the one-way clutch still does not operate as specified.

(b) Determine the condition of the torque converter clutch assembly.

(1) Check that the following conditions are met:

- During the stall test or when the shift lever is in N, metallic sounds are not emitted from the torque converter clutch.
- The one-way clutch turns in one direction and locks in the other direction.
- The amount of powder in the ATF is not greater than the sample shown in the illustration.

HINT:

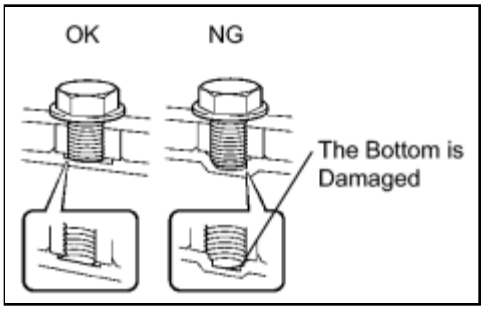


The sample illustration shows approximately 0.25 liters (0.26 US qts, 0.22 Imp. qts) of the ATF taken from a removed torque converter clutch.

(c) Replace the ATF in the torque converter clutch.

(1) If the ATF is discolored and/or has a foul odor, rock the torque converter to move the fluid around inside it. Drain the ATF with the mounting surface of the converter facing upward.

(d) Clean and check the oil cooler and oil pipe line.



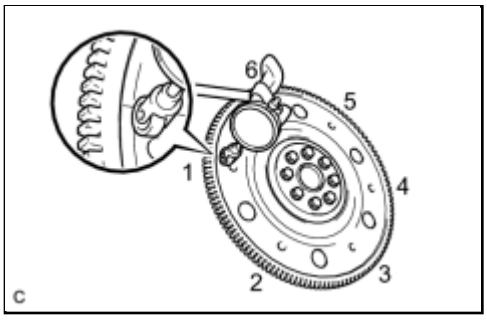
(1) If the torque converter clutch is inspected or the ATF is changed, clean the oil cooler and oil pipe line.

HINT:

- Spray compressed air of 196 kPa (2 kgf/cm^2, 28 psi) from the inlet hose.
- If excessive fine powder is found in the ATF, add new ATF using a bucket pump and clean it again.

(2) If the ATF is cloudy, inspect the oil cooler (radiator).

(e) Prevent deformation of the torque converter clutch and damage to the oil pump gear.



(1) When any marks due to interference are found on the end of the bolt for the torque converter clutch and on the bottom of the bolt hole, replace the bolt and the torque converter clutch.

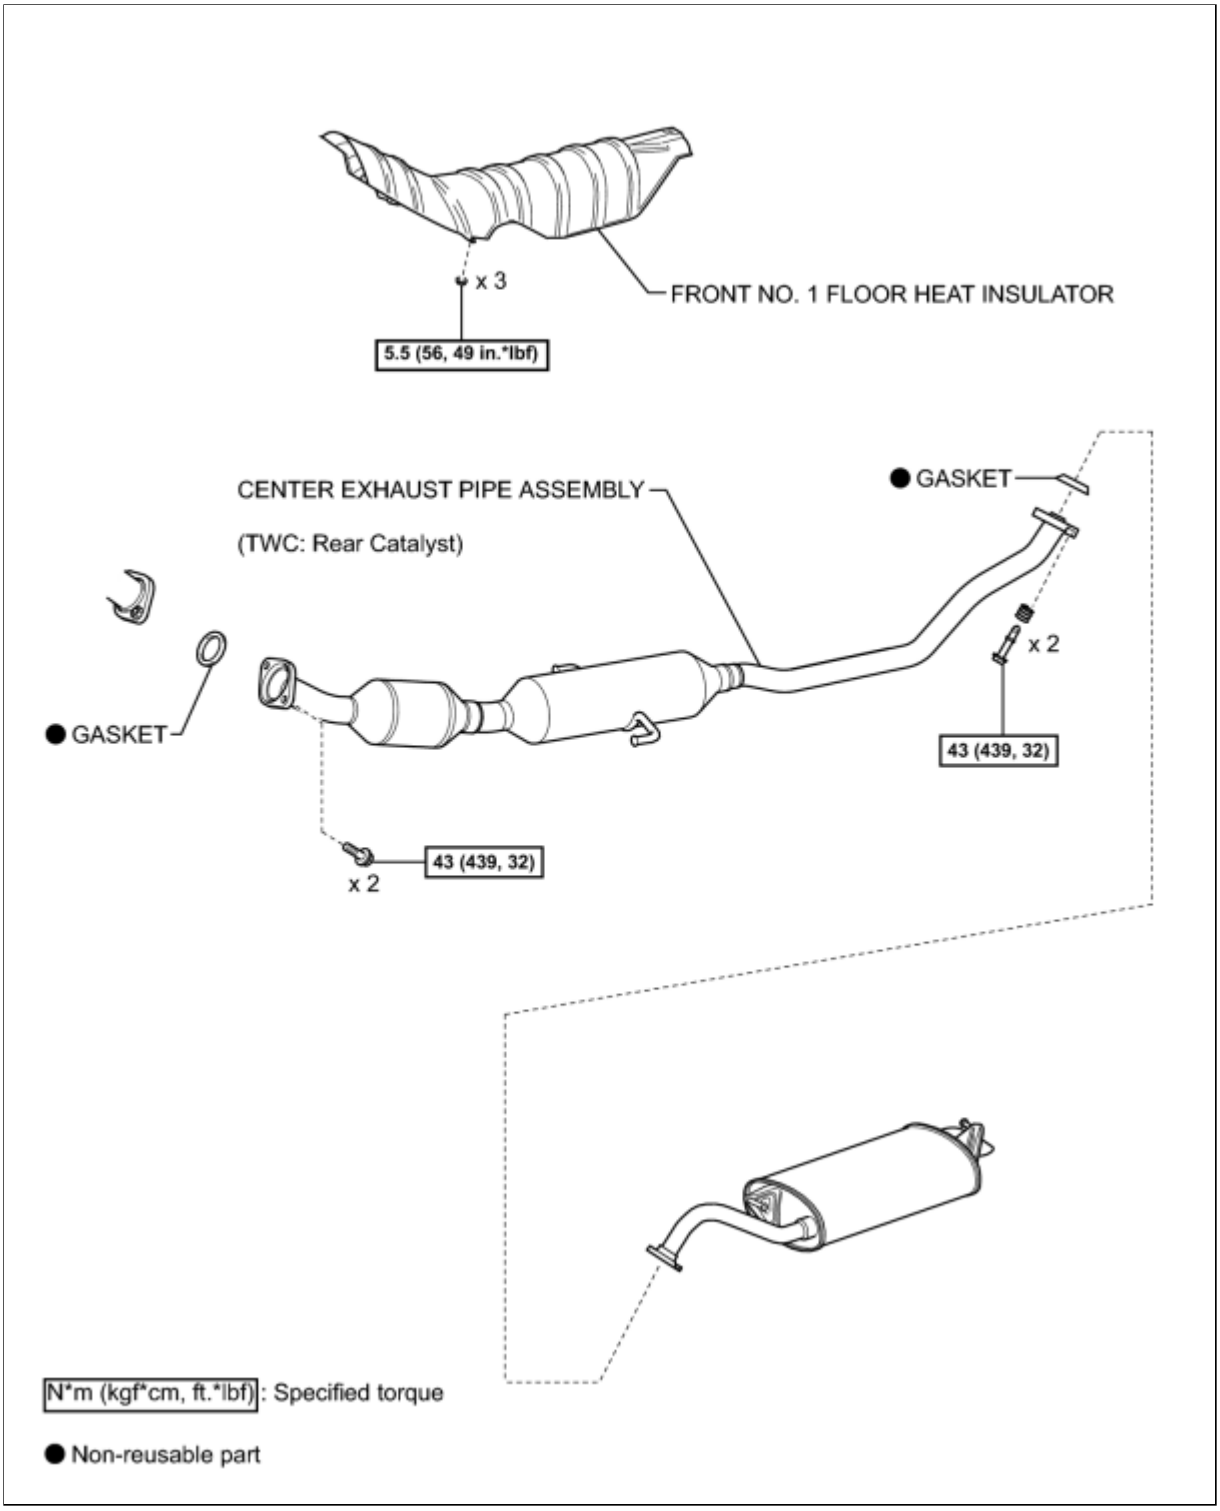
(2) All of the bolts must be the same length.

(3) Washers must be used with the bolts.

2. INSPECT DRIVE PLATE AND RING GEAR

(a) Check the drive plate for damage.

(b) Set up a dial indicator and measure the run out of the 6 portions around the torque converter fitting surfaces.



Maximum runout:
0.30 mm (0.0118 in.)

If the runout is not within the specification or drive plate is damaged, replace the drive plate.

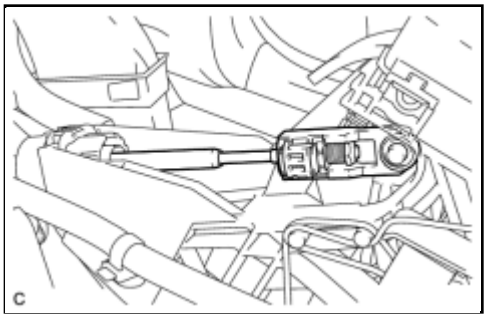
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: TRANSMISSION CONTROL CABLE: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION



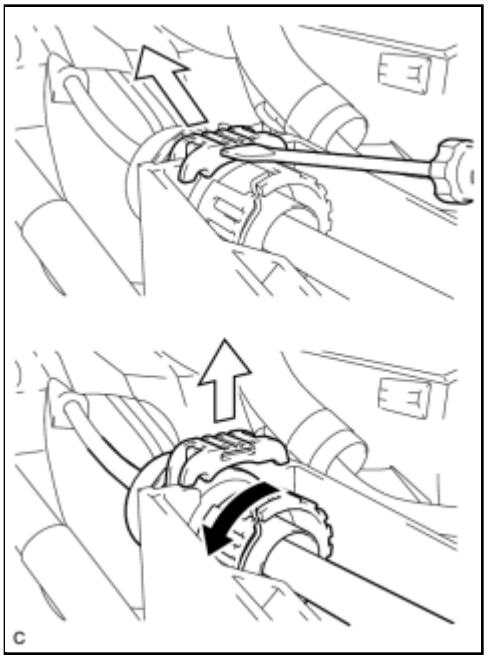
(a) When moving the shift lever from P to R with the ignition switch ON and the brake pedal depressed, make sure that the shift lever moves smoothly and correctly into position.

(b) Start the engine and make sure that the vehicle moves forward when moving the shift lever from N to D and moves rearward when moving the shift lever to R. If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

2. ADJUST SHIFT LEVER POSITION

(a) Apply the parking brake and move the shift lever to N.

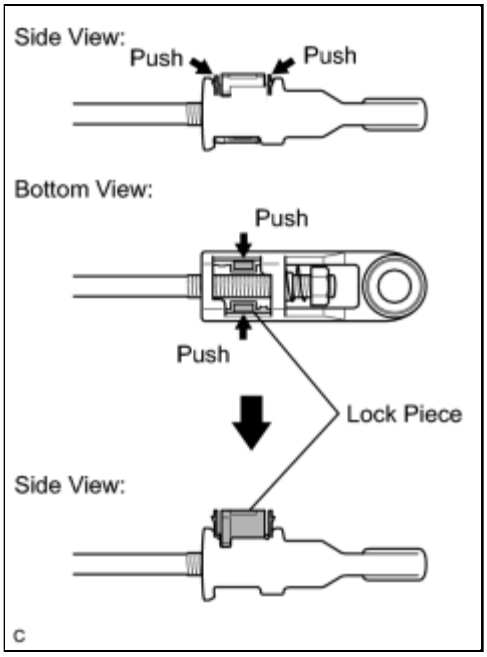
(b) Remove the console box assembly INFO .



(c) Disconnect the end of the transmission control cable assembly from the shift lever assembly.

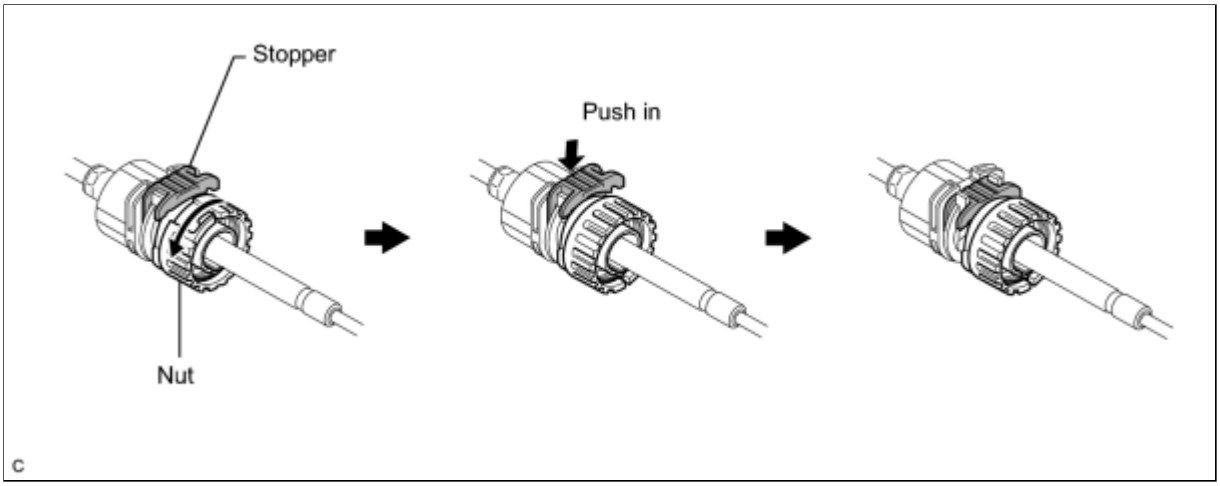
(d) Using a screwdriver, pull out the stopper of the transmission control cable.

NOTICE:



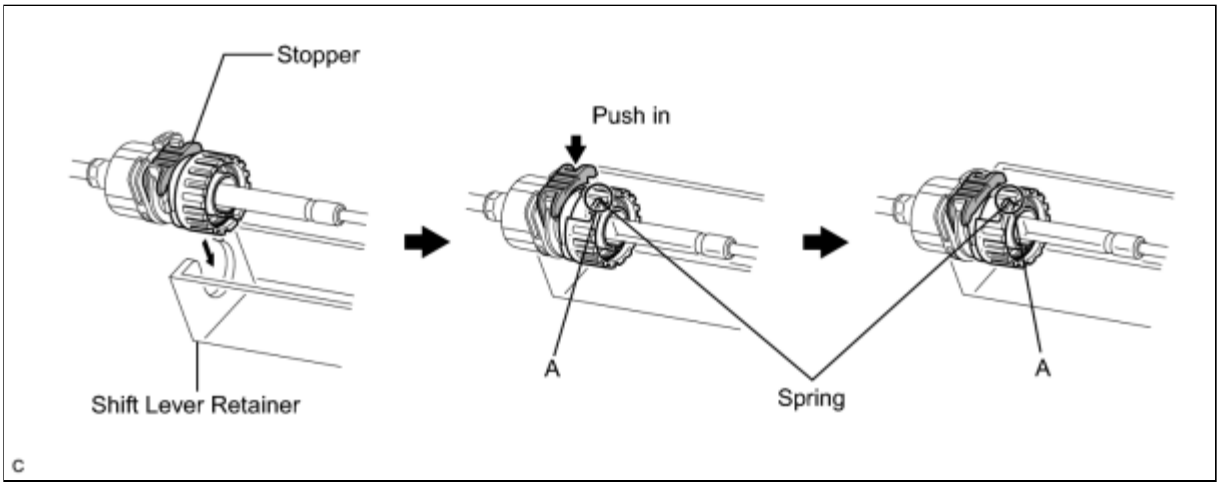
Do not remove the stopper. If the stopper is removed, reinstall it to its original position.

(e) Rotate the nut counterclockwise approximately 180°, and while holding the nut in place, disconnect the transmission control cable from the shift lever retainer.



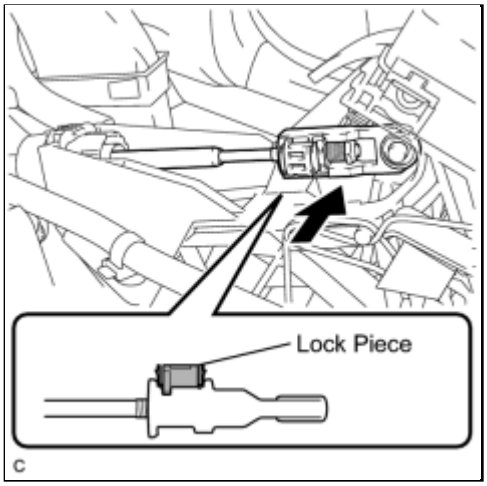
NOTICE:

Do not over-rotate the nut as it will come off the internal spring and the transmission control cable will not be reusable.



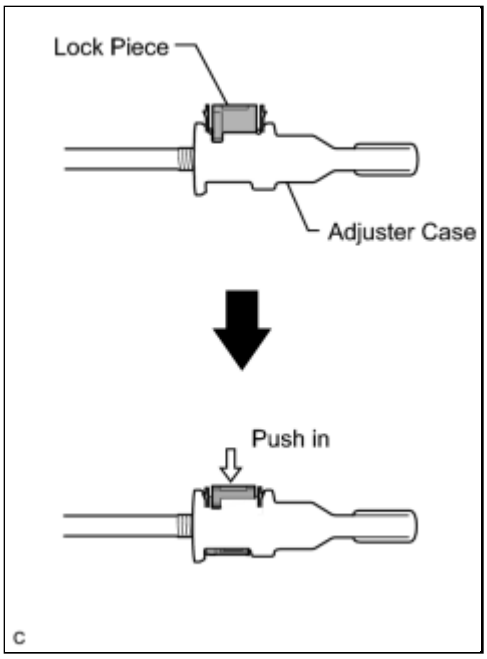
(f) Push the two claws together at the top of the transmission control cable lock piece. While holding the two claws together, push the two lugs on the bottom of the lock piece toward each other and upward to pull out the lock piece.

(g) Turn the nut of the transmission control cable 180° counterclockwise. While holding the nut in place, push in the stopper until the stopper clicks twice.



(h) Install the outer part of the transmission control cable to the shift lever retainer. Check that the spring is positioned at "A" and push in the stopper.

HINT:



If the stopper cannot be pushed in, slightly turn the nut clockwise and then push in the stopper again.

(i) Install the cable end to the shift lever assembly.

NOTICE:

- Check that the lock piece is pulled up.
- Install the cable end all the way to the base of the pin.

(j) Push the lock piece into the adjuster case.

NOTICE:

Securely push in the lock piece until it locks.

(k) After adjusting the shift lever position, check the operation and function of the shift lever. If there is a problem, adjust the position again.

(l) Install the console box assembly INFO .

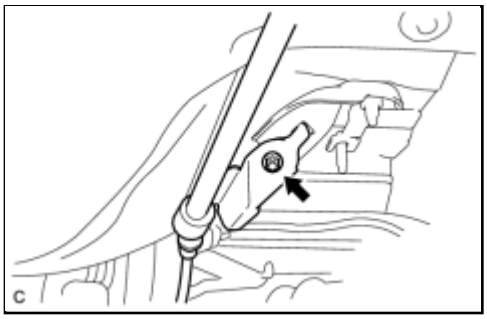
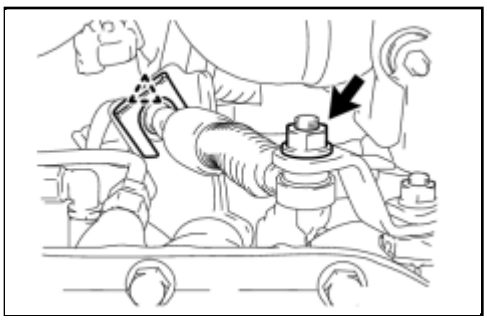
INSTALLATION

1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY



NOTICE:

Before installing the transmission control cable assembly, check that the park/neutral position switch and the shift lever are in N.

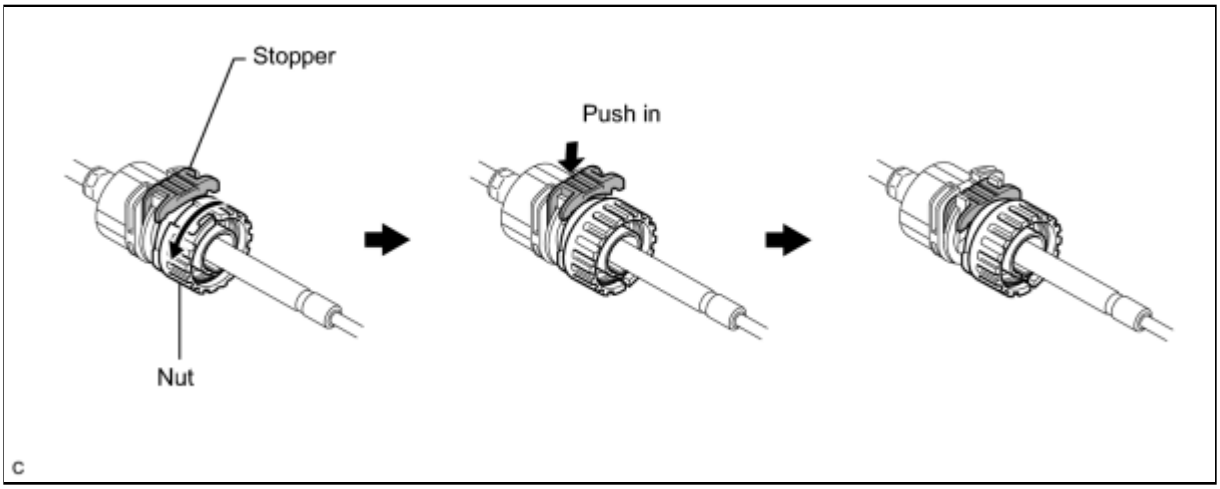


(a) Put the transmission control cable into the cabin and connect the transmission control cable with the 2 nuts.

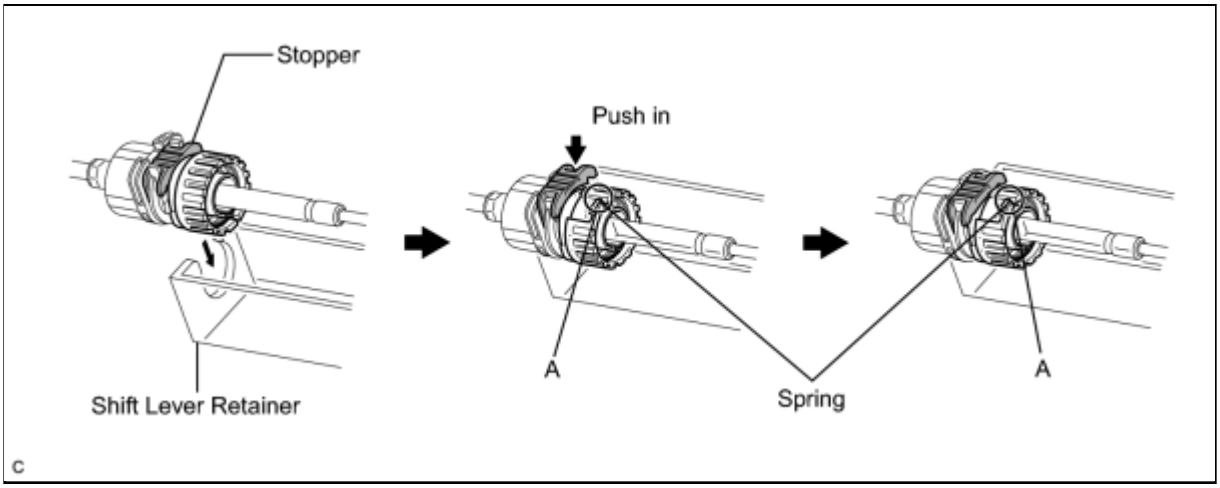
Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(b) Install the transmission control cable bracket to the rear engine mounting insulator with the nut.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)



(c) Connect the transmission control cable to the transmission control cable bracket with a new clip.

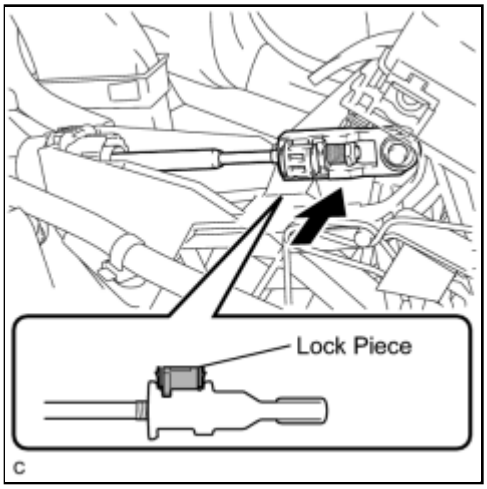


(d) Connect the transmission control cable to the control shaft lever with the nut.

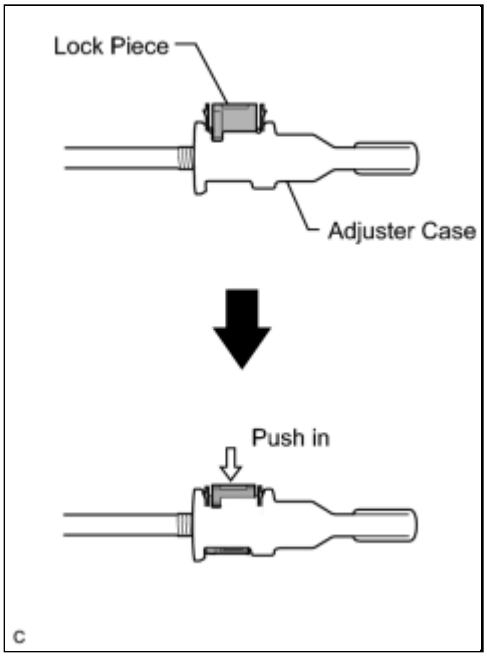
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(e) Turn the nut of the transmission control cable 180° counterclockwise. While holding the nut in place, push in the stopper until the stopper clicks twice.

(f) Install the outer part of the transmission control cable to the shift lever retainer. Check that the spring is positioned at "A" and push in the stopper.



HINT:



If the stopper cannot be pushed in, slightly turn the nut clockwise and then push in the stopper again.

(g) Install the cable end to the shift lever assembly.

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

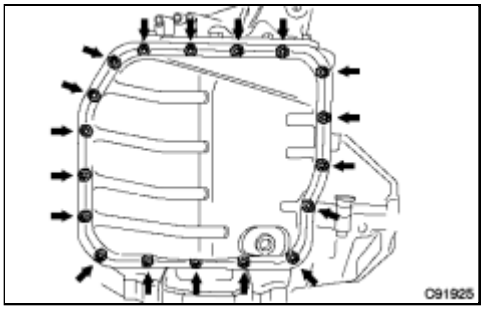
When disconnecting the cable, some systems need to be initialized after the cable is reconnected INFO **.**

2. DRAIN AUTOMATIC TRANSAXLE FLUID

(a) Remove the drain plug and gasket to drain the ATF.

(b) Install a new gasket and the drain plug.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

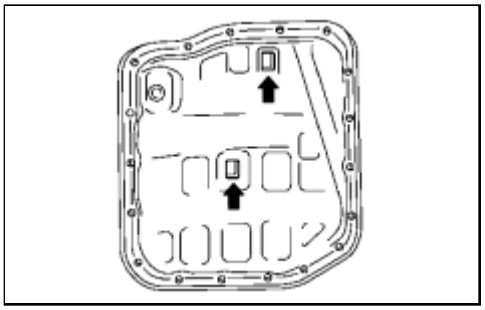


3. REMOVE BATTERY INFO

4. REMOVE BATTERY CARRIER INFO

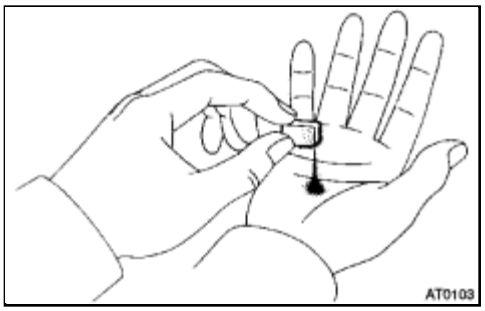
5. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY INFO

6. REMOVE ENGINE UNDER COVER LH



7. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Remove the 18 bolts, oil pan and gasket.



NOTICE:

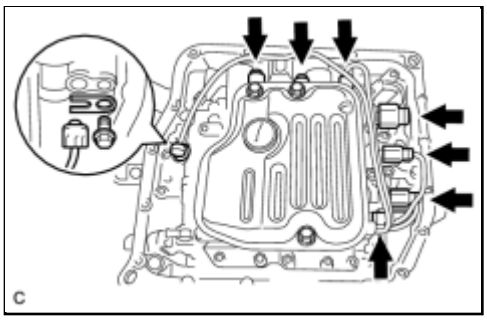
Some fluid will remain in the oil pan. Remove all the pan bolts, and carefully remove the oil pan assembly.

(b) Remove the 2 magnets from the oil pan.

(c) Examine particles in the pan.

(1) Collect any steel chips with the removed magnets. Look carefully at the chips and particles in the pan and on the magnets to see the type of wear which might be found in the transaxle.

Result:

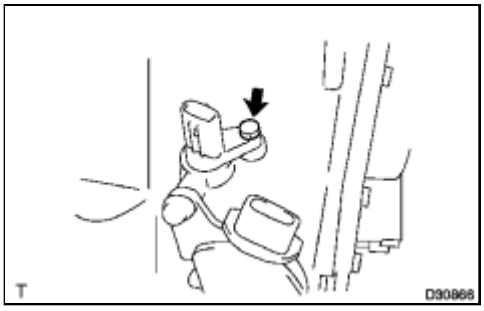


Steel (magnetic)

bearing, gear and plate wear

Brass (non-magnetic)

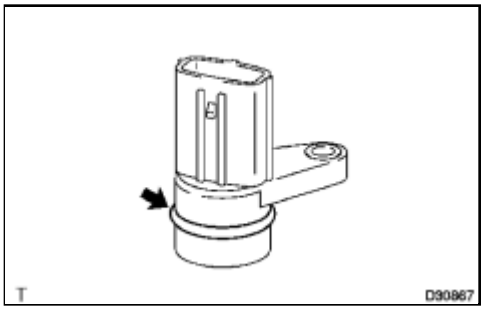
bushing wear



8. DISCONNECT TRANSMISSION WIRE

(a) Disconnect the 7 shift solenoid valve connectors.

(b) Remove the bolt and lock plate to disconnect the ATF temperature sensor.



9. REMOVE TRANSMISSION WIRE

(a) Disconnect the transmission wire connector.

(b) Remove the bolt and transmission wire.

(c) Remove the O-ring from the transmission wire.

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: TRANSMISSION WIRE: INSPECTION (2010 Corolla)		

INSPECTION

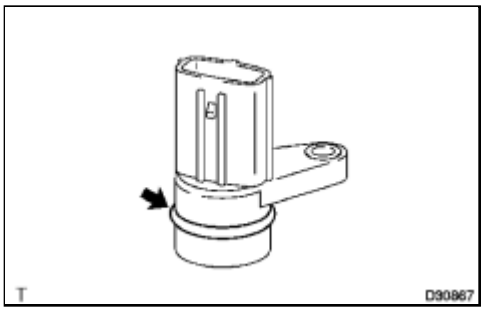
1. INSPECT TRANSMISSION WIRE

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	ATF TEMPERATURE	SPECIFIED CONDITION
1 (THO) - 7 (E2)	10°C (50°F)	5 to 8 kΩ
1 (THO) - 7 (E2)	25°C (77°F)	2.5 to 4.5 kΩ
1 (THO) - 7 (E2)	110°C (230°F)	0.22 to 0.28 kΩ

HINT:



If the resistance is out of the specified range with the ATF temperature shown in the table above, the driveability of the vehicle may decrease.

If the resistance value is not as specified, replace the transmission wire.

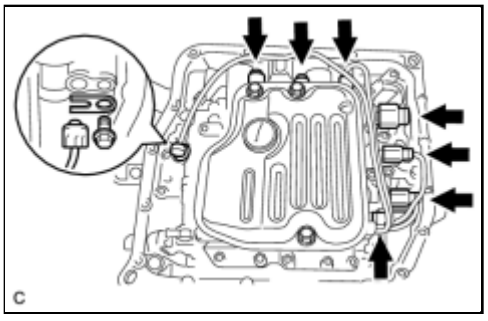
INSTALLATION

1. INSTALL TRANSMISSION WIRE

(a) Coat a new O-ring of the transmission wire connector with ATF WS and install it to the transmission wire.

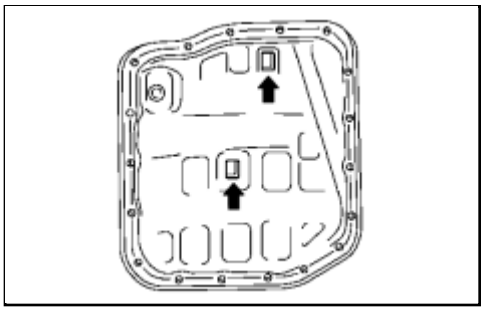


(b) Install the transmission wire with the bolt.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

(c) Connect the transmission wire connector.

2. CONNECT TRANSMISSION WIRE

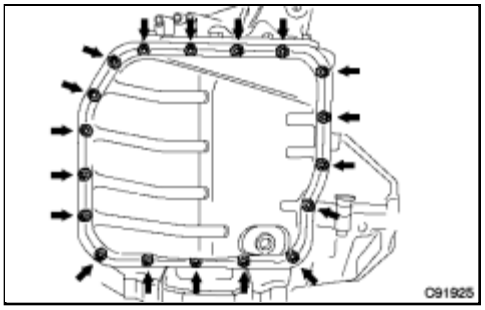


(a) Coat the O-ring of the ATF temperature sensor with ATF WS.

(b) Install the ATF temperature sensor with the lock plate and bolt.

Torque: 6.6 N·m (67 kgf·cm, 58in·lbf)

(c) Connect the 7 shift solenoid valve connectors.



3. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets in the oil pan.

(b) Apply adhesive or equivalent to the 18 bolts.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(c) Using a new gasket, install the oil pan to the transaxle case with the 18 bolts.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: VALVE BODY ASSEMBLY: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT SHIFT SOLENOID VALVE SL3

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

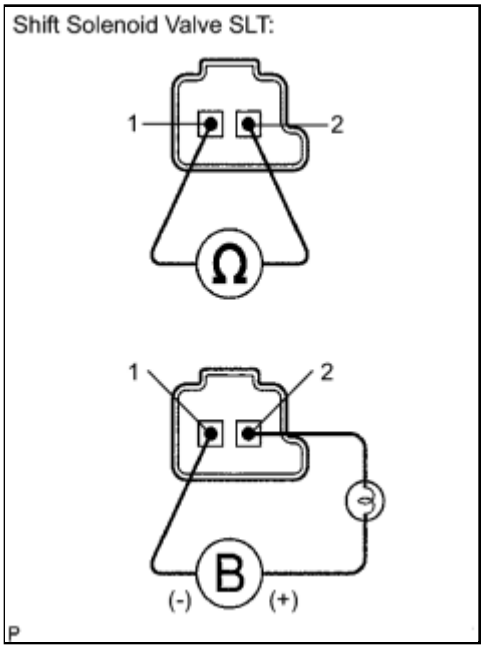
If the value is not as specified, replace the shift solenoid valve SL3.

(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead to terminal 1 of the solenoid valve connector, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SL3.



2. INSPECT SHIFT SOLENOID VALVE SLT

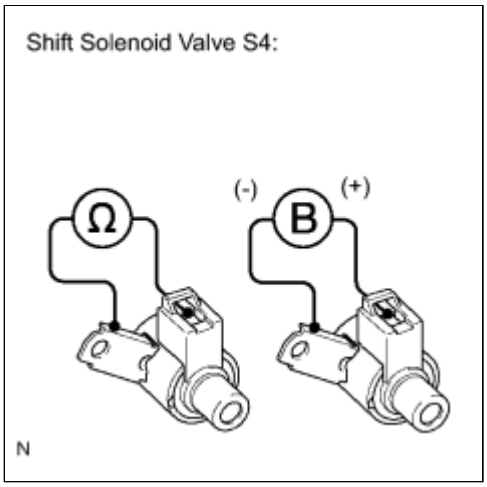
(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid

valve SLT.



(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead to terminal 1 of the solenoid valve connector, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SLT.

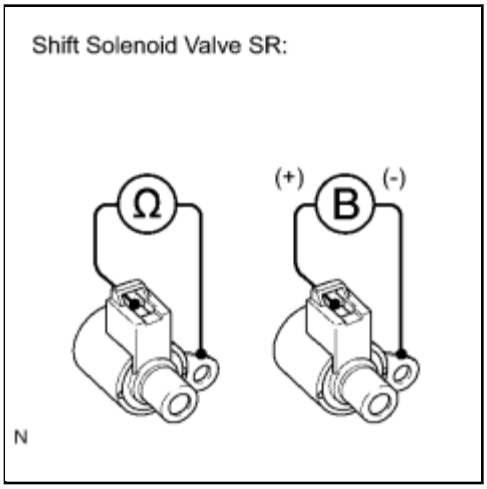
3. INSPECT SHIFT SOLENOID VALVE S4

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (S4) - Solenoid Body (S4)	20°C (68°F)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve S4.



(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve S4.

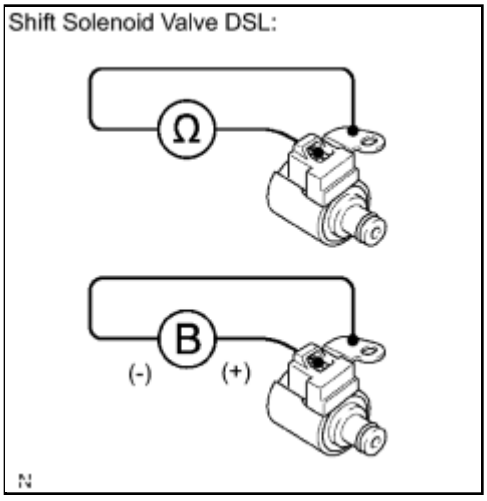
4. INSPECT SHIFT SOLENOID VALVE SR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (SR) - Solenoid Body (SR)	20°C (68°F)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve SR.



(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SR.

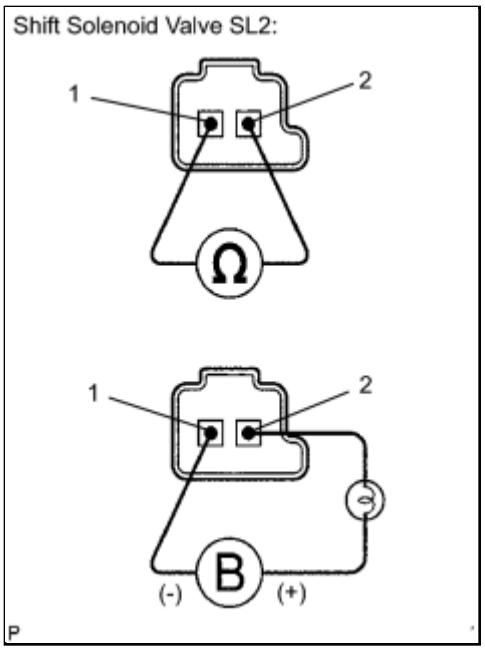
5. INSPECT SHIFT SOLENOID VALVE DSL

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (DSL) - Solenoid Body (DSL)	20°C (68°F)	11 to 13 Ω

If the value is not as specified, replace the shift solenoid valve.



(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body DSL, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve DSL.

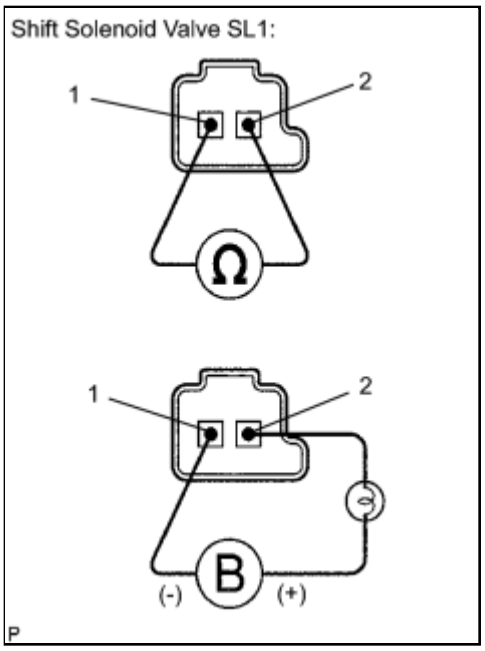
6. INSPECT SHIFT SOLENOID VALVE SL2

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve SL2.



(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead to terminal 1 of the solenoid valve connector, then check the operation of the valve.

OK:

The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SL2.

7. INSPECT SHIFT SOLENOID VALVE SL1

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

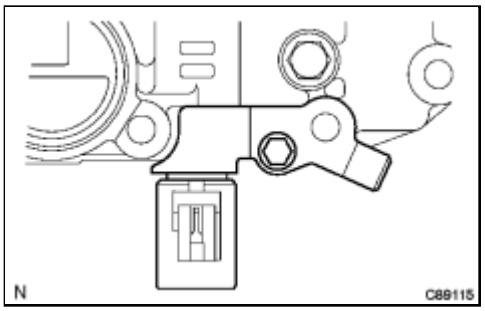
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve SL1.

(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead

to terminal 1 of the solenoid valve connector, then check the operation of the valve.

OK:



The solenoid valve makes an operating sound.

If the result is not as specified, replace the shift solenoid valve SL1.

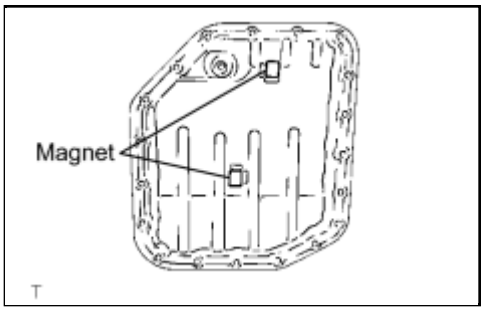
(a) Remove the drain plug and gasket, and drain ATF.

(b) Install a new gasket and the drain plug.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

3. REMOVE AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY



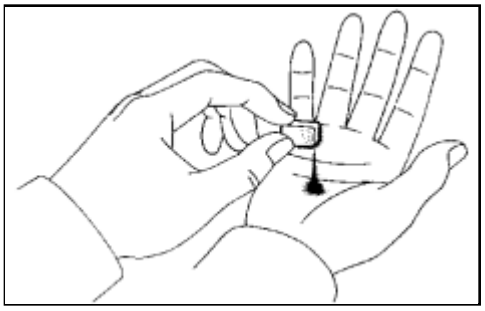
(a) Remove the 19 bolts, oil pan and oil pan gasket.

NOTICE:

Some fluid will remain in the oil pan.

Remove all the oil pan bolts, and carefully remove the oil pan sub-assembly.

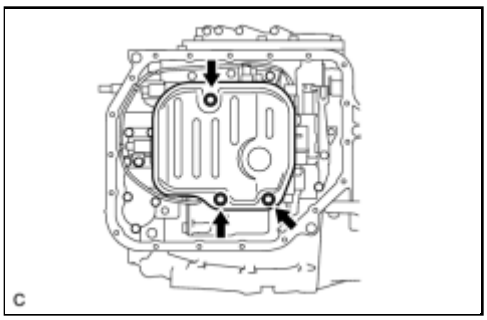
(b) Remove the 2 magnets from the oil pan.



(c) Examine the particles in the oil pan.

(1) Collect any steel chips with the removed magnets. Look carefully at the chips and particles in the pan and on the magnets to see the type of wear which might be found in the transaxle.

Result:



Steel (magnetic)

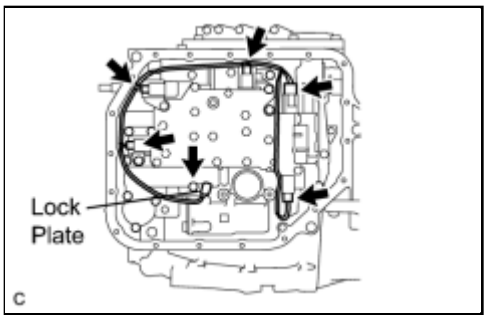
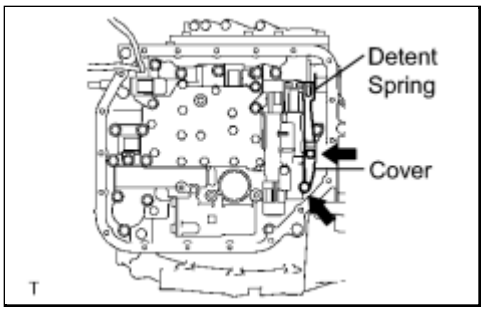
4. REMOVE VALVE BODY OIL STRAINER ASSEMBLY

(a) Remove the 3 bolts and oil strainer.



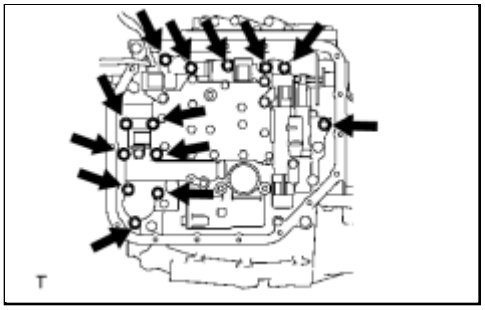
NOTICE:

Perform the operation carefully as some fluid will come out from the oil strainer.



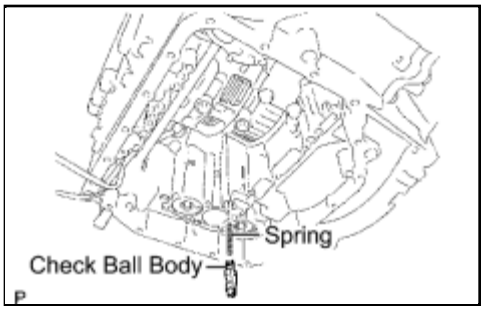
(b) Remove the oil strainer gasket from the oil strainer.

5. REMOVE TRANSMISSION VALVE BODY ASSEMBLY

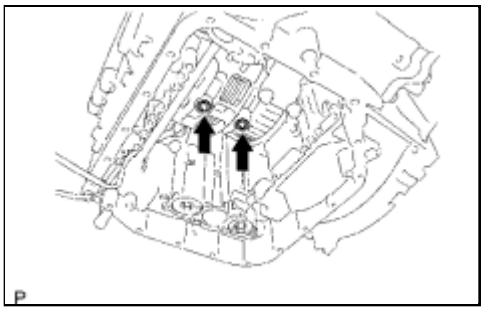


(a) Disconnect the 5 connectors.

(b) Remove the bolt, lock plate and ATF temperature sensor.



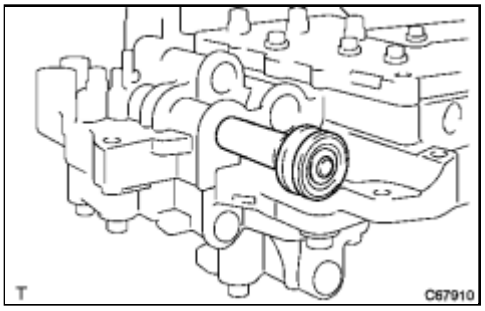
(c) Remove the 2 bolts, manual detent spring cover and manual detent spring.



(d) Remove the 13 bolts and valve body assembly.

NOTICE:

Do not drop the check ball body, check ball body spring or accumulator piston.



(e) Remove the check ball body and check ball body spring.

(f) Remove the 2 transaxle case 2nd brake gaskets.

6. REMOVE MANUAL VALVE

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: VALVE BODY ASSEMBLY: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT SHIFT SOLENOID VALVE S1

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (S1) - Solenoid Body (S1)	15 to 25°C (59 to 77°F)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve S1.

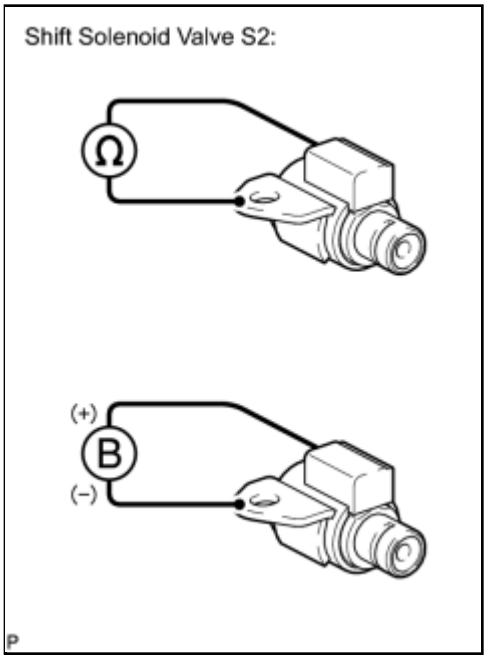
(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body, and check the operation of the valve.

NOTICE:

When using battery voltage during this inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.



If the operation cannot be done as specified, replace the shift solenoid valve S1.

2. INSPECT SHIFT SOLENOID VALVE S2

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

Solenoid Connector (S2) - Solenoid Body (S2)	15 to 25°C (59 to 77°F)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve S2.

(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body, and check the operation of the valve.

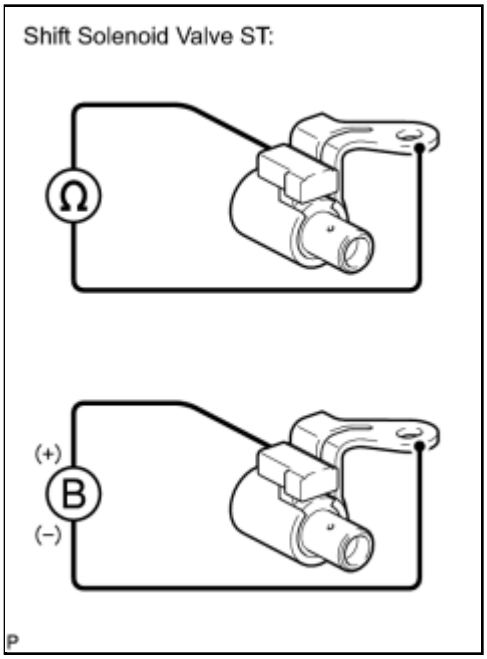
NOTICE:

When using battery voltage during this inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

If the operation cannot be done as specified, replace the shift solenoid valve S2.



3. INSPECT SHIFT SOLENOID VALVE ST

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (ST) - Solenoid Body (ST)	15 to 25°C (59 to 77°F)	11 to 15 Ω

If the value is not as specified, replace the shift solenoid valve ST.

(b) Connect a positive (+) battery lead to the terminal of the solenoid connector, and a negative (-) battery lead to the solenoid body, and check the operation of the valve.

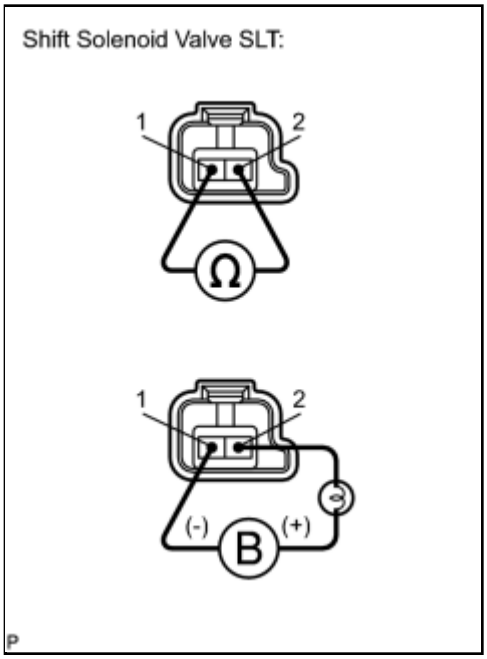
NOTICE:

When using battery voltage during this inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

If the operation cannot be done as specified, replace the shift solenoid valve ST.



4. INSPECT SHIFT SOLENOID VALVE SLT

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

If the value is not as specified, replace the shift solenoid valve SLT.

(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead to terminal 1 of the solenoid valve connector, and check the operation of the valve.

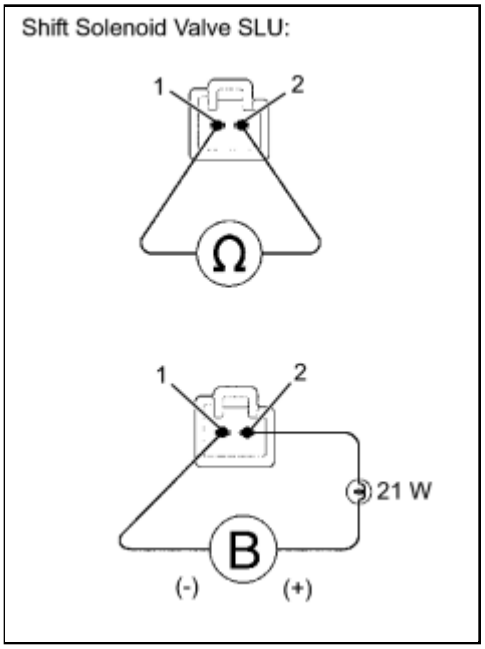
NOTICE:

When using battery voltage during this inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:

The solenoid makes an operating sound.

If the operation cannot be done as specified, replace the shift solenoid valve SLT.



5. INSPECT SHIFT SOLENOID VALVE SLU

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

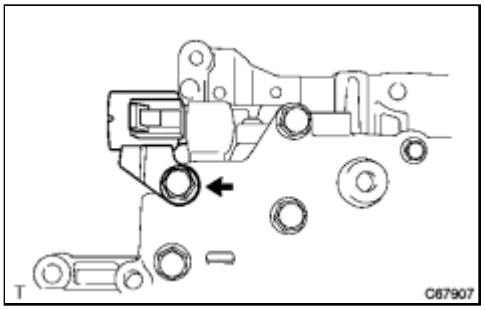
If the value is not as specified, replace the shift solenoid valve SLU.

(b) Connect a positive (+) battery lead with a 21 W bulb to terminal 2 and a negative (-) battery lead to terminal 1 of the solenoid valve connector, and check the operation of the valve.

NOTICE:

While using battery voltage during this inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

OK:



The solenoid makes an operating sound.

If the operation cannot be done as specified, replace the shift solenoid valve SLU.

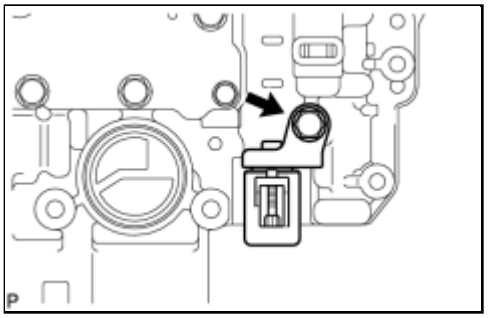
DISASSEMBLY

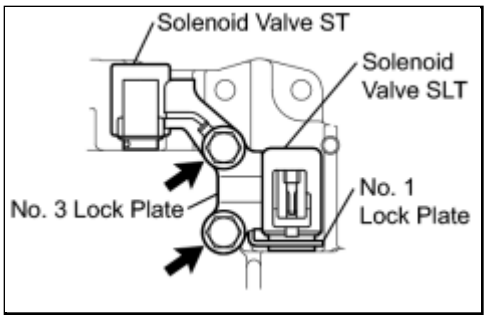
1. REMOVE SHIFT SOLENOID VALVE S1



(a) Remove the bolt and pull out the shift solenoid valve S1.

2. REMOVE SHIFT SOLENOID VALVE S2

(a) Remove the bolt and pull out the shift solenoid valve S2.



3. REMOVE SHIFT SOLENOID VALVE SLU

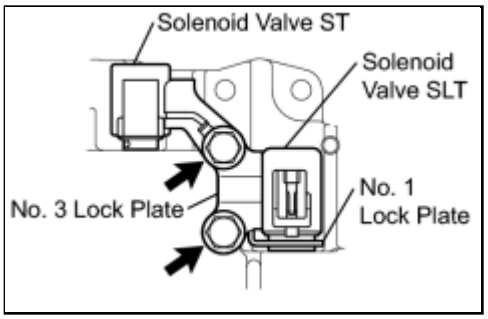
(a) Remove the bolt and solenoid lock plate.

(b) Pull out the shift solenoid valve SLU.

4. REMOVE NO. 3 SOLENOID LOCK PLATE

(a) Remove the 2 bolts and No. 3 solenoid lock plate from the valve body.

(b) Pull out the shift solenoid valve ST from the valve body.



(c) Remove the No. 1 solenoid lock plate from the shift solenoid valve SLT.

(d) Pull out the shift solenoid valve SLT from the valve body.

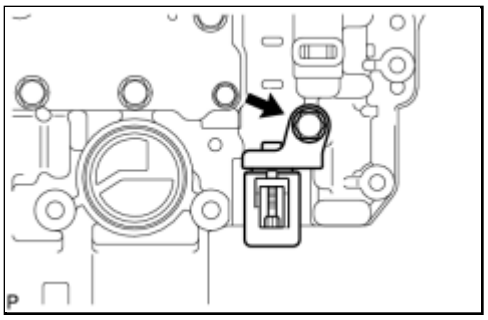
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: VALVE BODY ASSEMBLY: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL NO. 3 SOLENOID LOCK PLATE

(a) Install the shift solenoid valve SLT to the valve body.



(b) Install the No. 1 solenoid lock plate to the shift solenoid valve SLT.

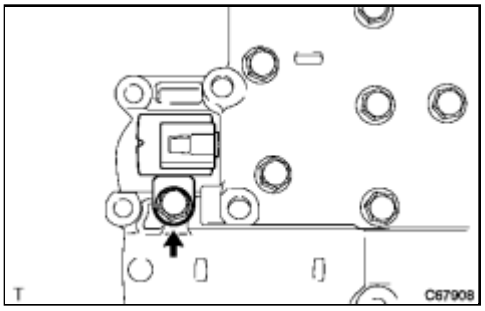
(c) Install the shift solenoid valve ST to the valve body.

(d) Install the No. 3 solenoid lock plate to the valve body with the 2 bolts.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

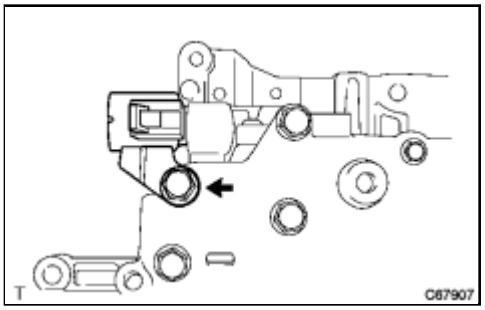
2. INSTALL SHIFT SOLENOID VALVE SLU

(a) Install the shift solenoid valve SLU onto the valve body.



(b) Install the solenoid lock plate with the bolt.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

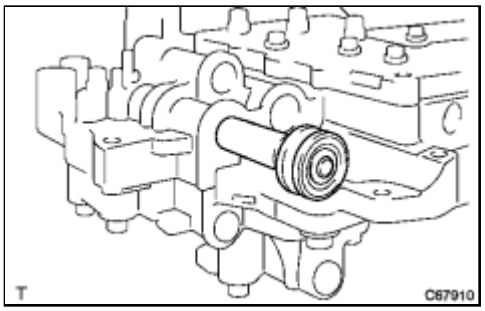


3. INSTALL SHIFT SOLENOID VALVE S2

(a) Install the shift solenoid valve S2 to the valve body with the bolt.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

4. INSTALL SHIFT SOLENOID VALVE S1



(a) Install the shift solenoid valve S1 to the valve body with the bolt.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

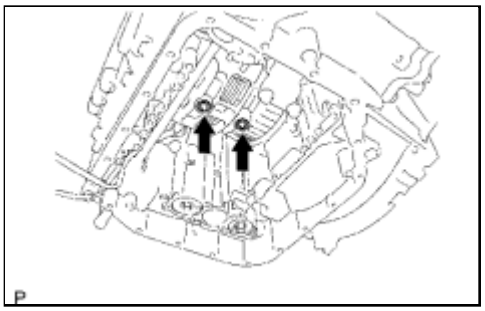
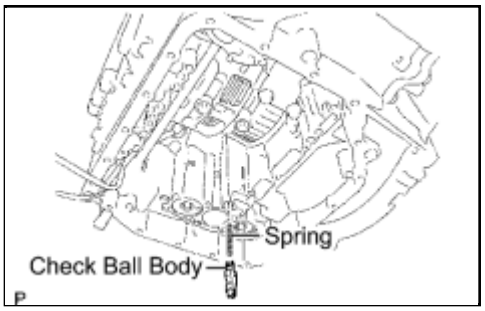
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: VALVE BODY ASSEMBLY: INSTALLATION (2010 Corolla)		



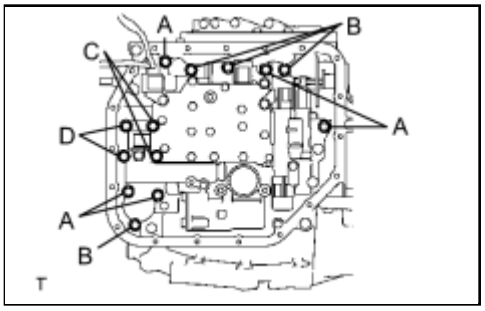
INSTALLATION

1. INSTALL MANUAL VALVE



(a) Coat the manual valve with ATF WS, and install it to the valve body.

2. INSTALL TRANSMISSION VALVE BODY ASSEMBLY



(a) Coat 2 new transaxle case 2nd brake gaskets with ATF WS, and install them to the transaxle case.

(b) Install the check ball body spring and check ball body.

(c) Align the groove of the manual valve with the pin of the manual valve lever.

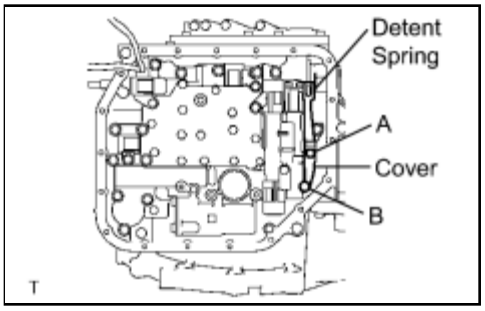
(d) Temporarily install the valve body with the 13 bolts.

Bolt length:

Bolt A

32 mm (1.26 in.)

Bolt B



22 mm (0.866 in.)

Bolt C

55 mm (2.17 in.)

Bolt D

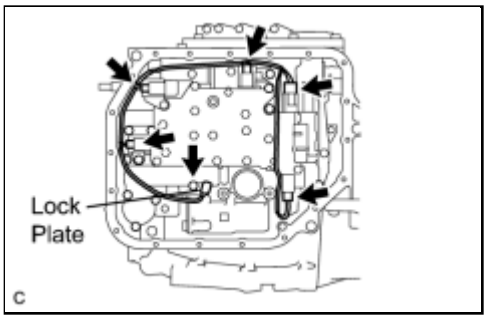
45 mm (1.77 in.)

(e) Temporarily install the manual detent spring and manual detent spring cover with the 2 bolts.

Bolt length:

Bolt A

14 mm (0.551 in.)



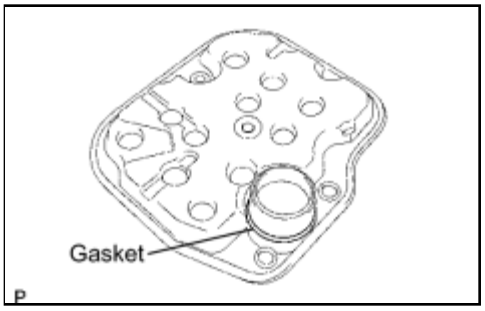
Bolt B

45 mm (1.77 in.)

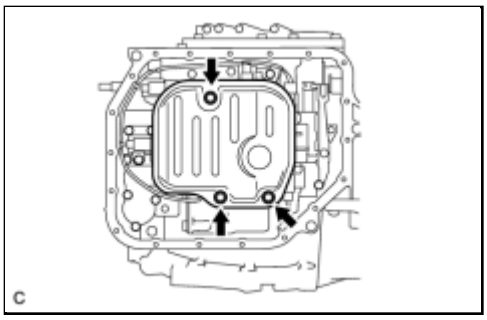
(f) Check that the manual valve lever comes into contact with the center of the roller at the tip of the manual detent spring.

(g) Tighten the 15 bolts.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)



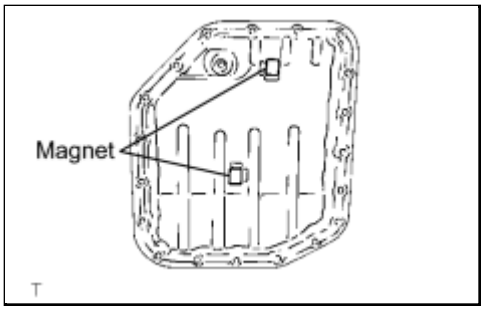
(h) Install the ATF temperature sensor with the lock plate and bolt.



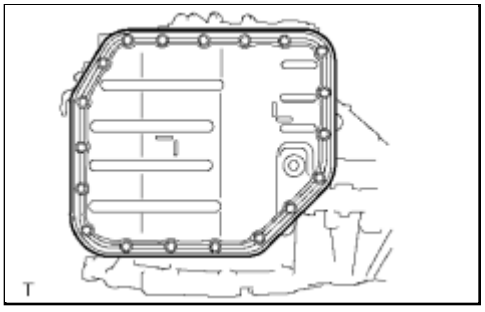
Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

(i) Connect the 5 shift solenoid valve connectors.

3. INSTALL VALVE BODY OIL STRAINER ASSEMBLY



(a) Coat a new oil strainer gasket with ATF WS and install it to the oil strainer.



(b) Install the oil strainer with the 3 bolts.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

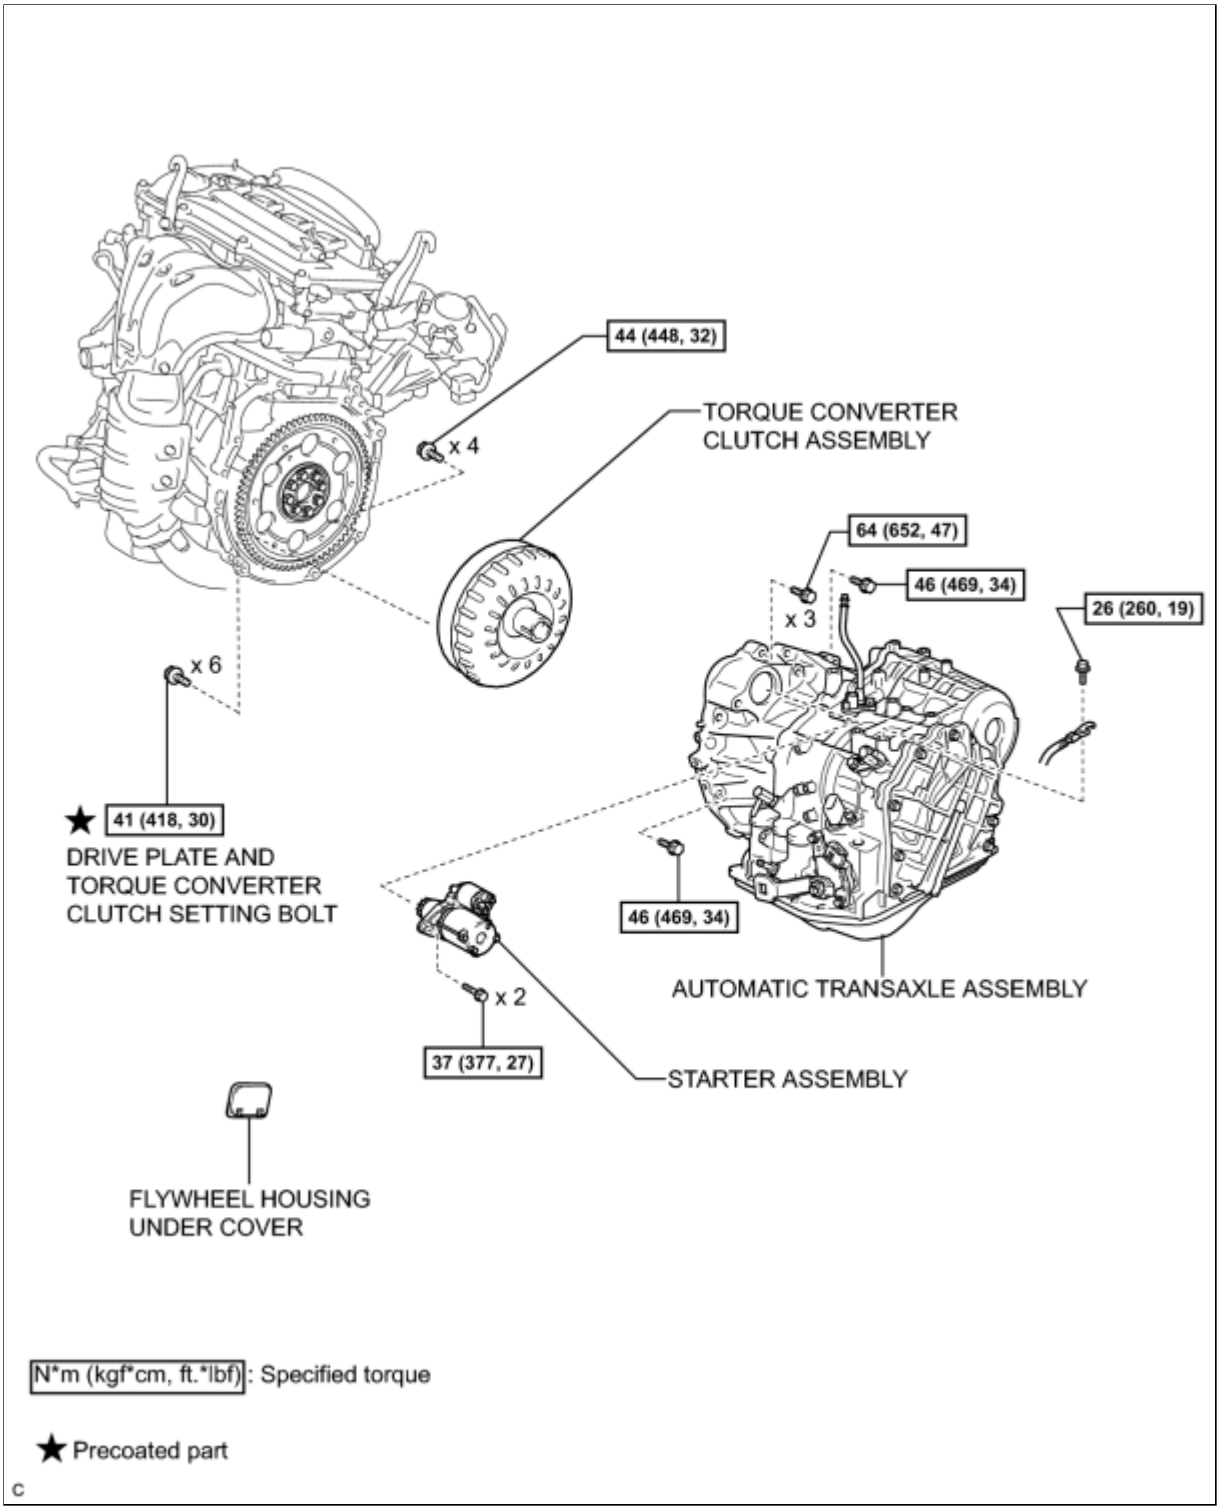
4. INSTALL AUTOMATIC TRANSAXLE OIL PAN SUB-ASSEMBLY

(a) Install the 2 magnets to the oil pan, as shown in the illustration.

(b) Install the oil pan and a new gasket with the 19 bolts.

Torque: 7.8 N·m (80 kgf·cm, 69in·lbf)

5. ADD AUTOMATIC TRANSAXLE FLUID



6. INSPECT TRANSAXLE FLUID LEVEL INFO

7. INSTALL ENGINE UNDER COVER LH

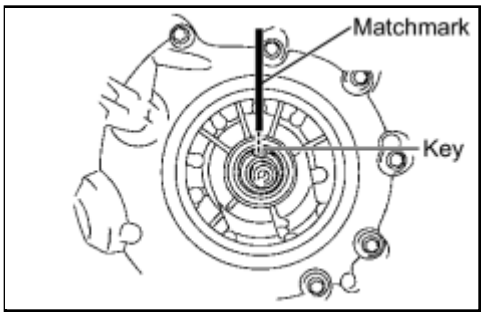
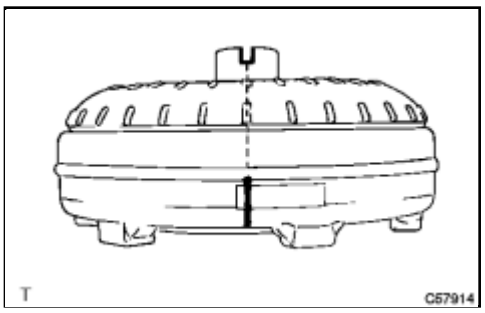
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE ASSEMBLY: INSTALLATION (2010 Corolla)		



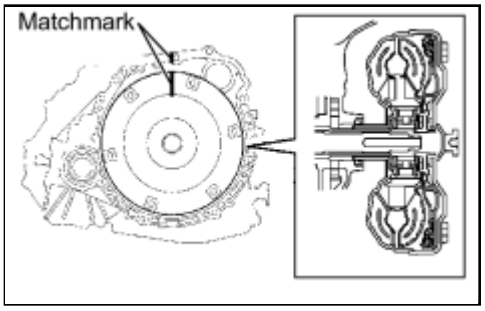
INSTALLATION

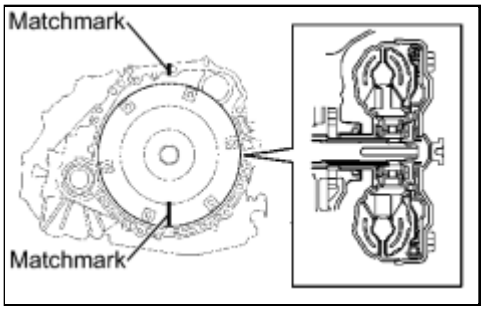
1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY INFO



2. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Using a vernier caliper and a straightedge, measure dimension "A" between the transaxle fitting surface of the engine and the converter fitting surface of the drive plate. (#1)

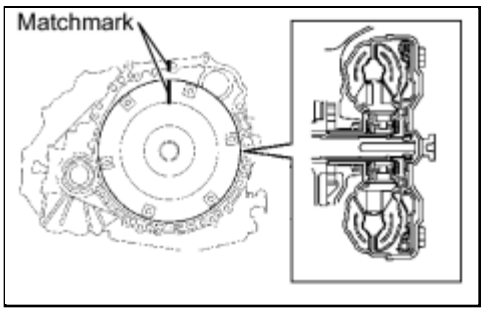




(b) Set the key of the front oil pump drive gear to the top and put a mark on the housing.

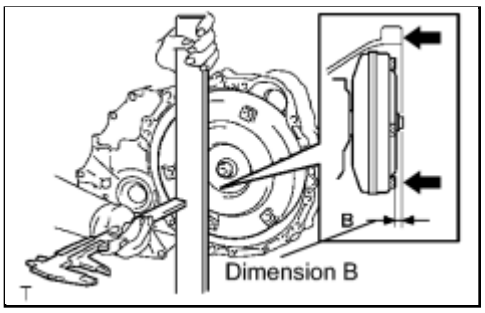
(c) Put a mark on the torque converter clutch so that its groove can be clearly indicated.

(d) Align the 2 marks on the transaxle case and torque converter clutch and fit the spline part of the input shaft to the spline part of the turbine runner.



(e) Rotating the torque converter clutch, fit the spline part of the stator shaft to the spline part of the stator.

HINT:



Rotate the torque converter clutch about 180°.

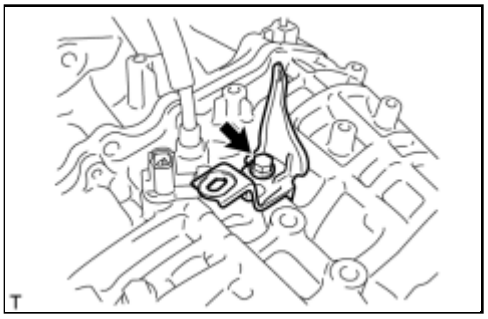
(f) Rotating the torque converter clutch, align the 2 marks on the case and the torque converter clutch again and fit the key of the oil pump drive gear into the key way of the torque converter clutch.

CAUTION:

When rotating the torque converter clutch, do not rotate it with excessive force.

(g) Using a vernier caliper and a straightedge, measure dimension "B" shown in the illustration and check that "B" is greater than "A" (measured in step (#1)).

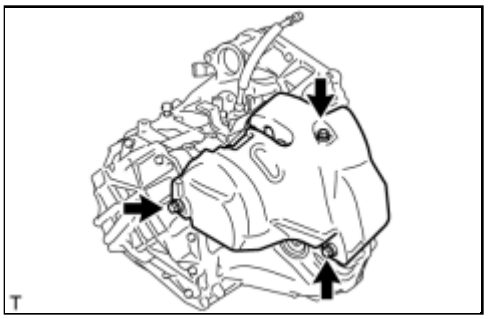
Standard:



A + 1 mm (0.0394 in.) or more

NOTICE:

Remember to subtract the thickness of the straightedge.

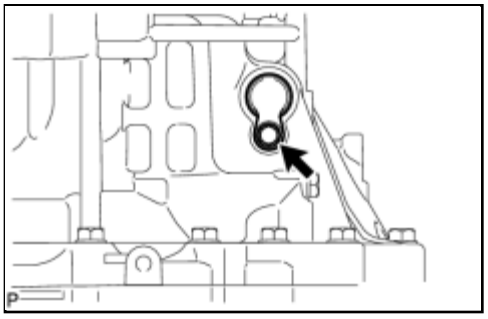


3. INSTALL WIRE HARNESS CLAMP BRACKET

(a) Install the bracket with the bolt.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

4. INSTALL UPPER TRANSAXLE CASE COVER

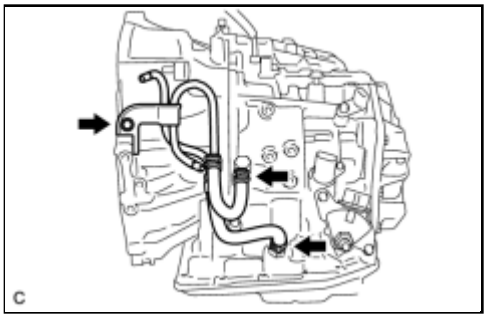


(a) Install the upper transmission case cover with the 3 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

5. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Coat a new O-ring with ATF WS, and install it to the hole cover.

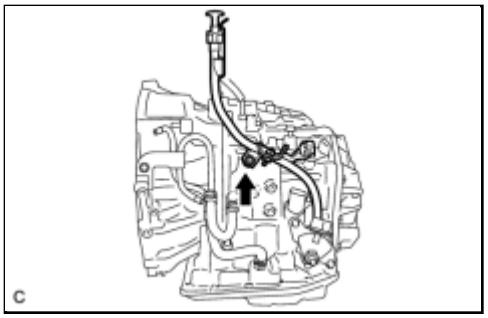


(b) Install the hole cover to the transaxle case with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

6. INSTALL OIL COOLER TUBE

(a) Connect the 2 oil cooler hoses to the 2 unions with the 2 hose clamps.

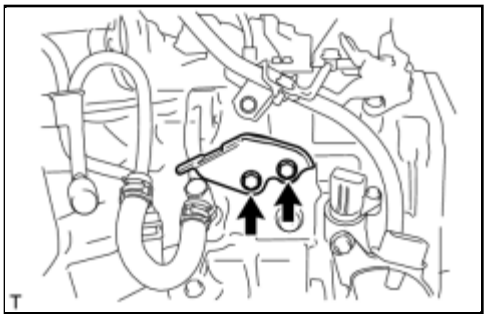


(b) Install the oil cooler tube sub-assembly to the automatic transaxle with the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

7. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Coat a new O-ring with ATF WS, and install it to the oil filler tube.

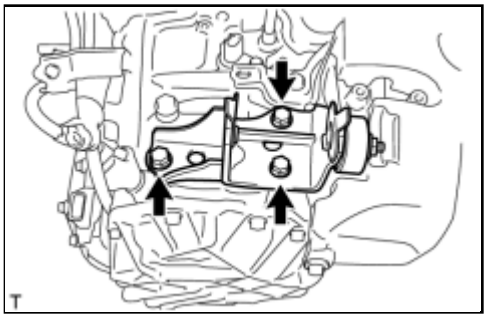


(b) Install the oil filler tube to the automatic transaxle with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

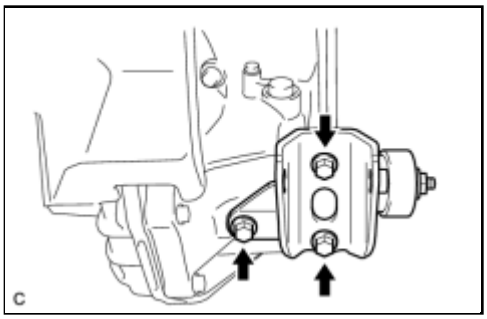
(c) Install the transmission oil level gauge sub-assembly.

8. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET



(a) Install the No. 1 transmission control cable bracket with the 2 bolts.

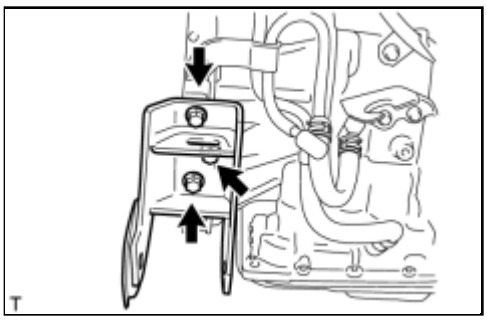
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)



9. INSTALL ENGINE MOUNTING BRACKET LH

(a) Install the engine mounting bracket LH to the automatic transaxle with the 3 bolts.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)



10. INSTALL REAR ENGINE MOUNTING BRACKET

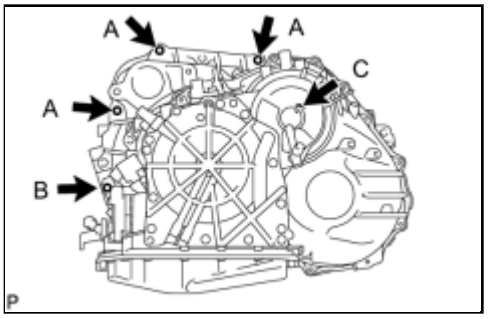
(a) Install the rear engine mounting bracket to the automatic transaxle with the 3 bolts.

Torque: 45 N·m (459 kgf·cm, 33ft·lbf)

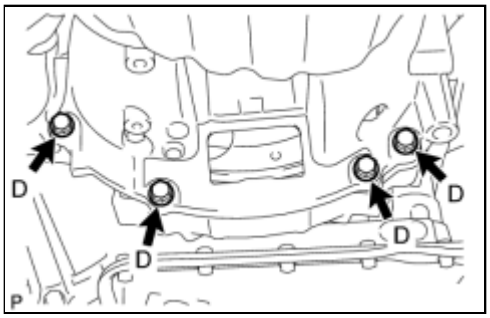
11. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket to the automatic transaxle with the 3 bolts.

Torque: 64 N·m (652 kgf·cm, 47ft·lbf)



12. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

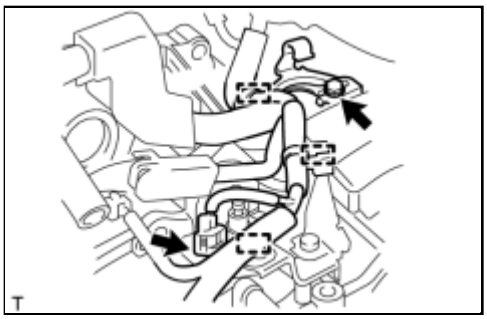


NOTICE:

Make sure the knock pins are fully engaged and the transaxle securely fitted to the engine before tightening the bolts.

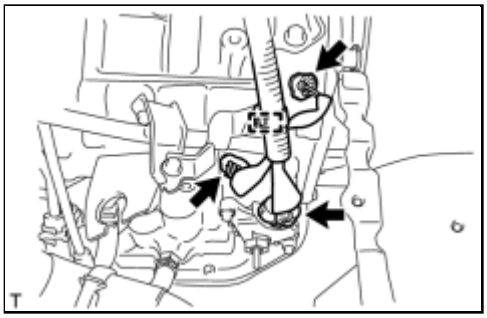
(a) Install the automatic transaxle to the engine with the 5 bolts.

Bolt A - Torque: 64 N·m (652 kgf·cm, 47ft·lbf)
Bolt B - Torque: 46 N·m (469 kgf·cm, 34ft·lbf)
Bolt C - Torque: 46 N·m (469 kgf·cm, 34ft·lbf)



(b) Install the 4 lower side mounting bolts.

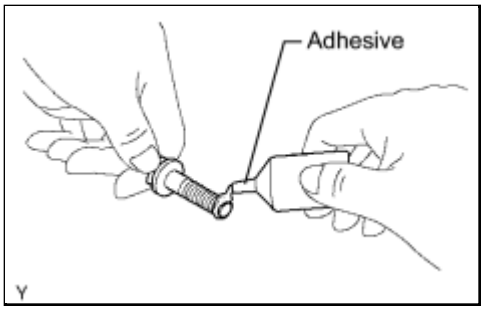
Bolt D - Torque: 44 N·m (448 kgf·cm, 32ft·lbf)



13. INSTALL WIRE HARNESS AND CONNECTOR

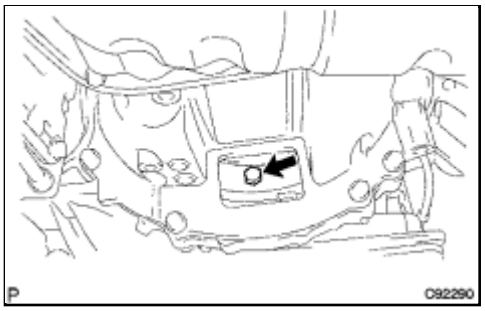
(a) Install the 3 engine wire clamps and speed sensor connector.

(b) Install the transmission control cable support with the bolt.



Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(c) Install the engine wire clamp, speed sensor connector, park/neutral position switch connector and transmission wire connector.

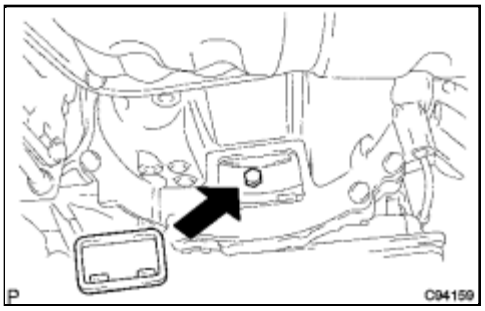


14. INSTALL STARTER ASSEMBLY INFO

15. INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT

(a) Apply a few drops of adhesive to 2 or 3 threads of the 6 torque converter clutch mounting bolts tip.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent.



(b) Install the 6 torque converter clutch mounting bolts.

Torque: 41 N·m (418 kgf·cm, 30ft·lbf)

NOTICE:

Install the black colored bolt first, and then the silver colored 5 bolts.

(c) Install the flywheel housing under cover.

16. TEMPORARILY TIGHTEN FRONT ENGINE MOUNTING INSULATOR INFO

17. TEMPORARILY TIGHTEN REAR ENGINE MOUNTING INSULATOR INFO

18. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT:

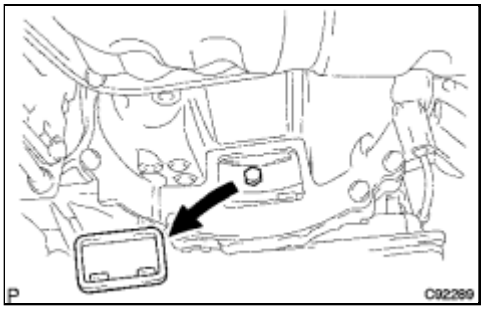
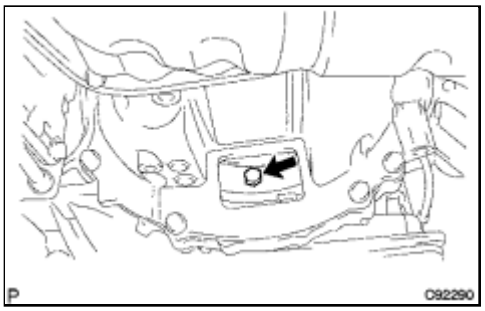
REMOVAL



1. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

HINT:



See the steps from "Discharge Fuel System Pressure" through "Remove Engine Assembly with Transaxle" INFO

.

2. REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT

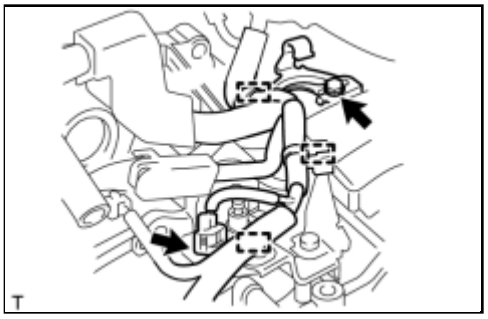
(a) Remove the flywheel housing under cover.

(b) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.

NOTICE:

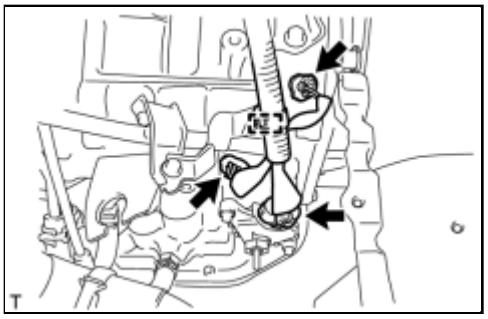
One of the 6 bolts has a different color than the other ones.

3. INSTALL ENGINE HANGERS INFO



4. REMOVE FRONT ENGINE MOUNTING INSULATOR INFO

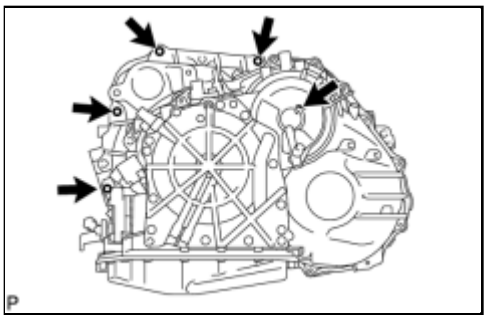
5. REMOVE REAR ENGINE MOUNTING INSULATOR INFO



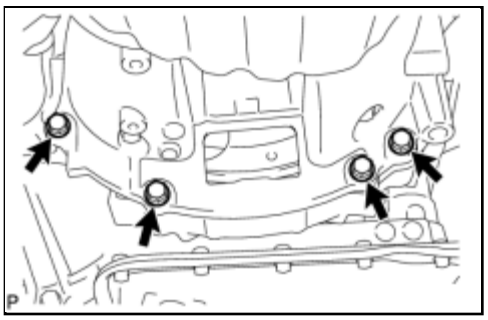
6. REMOVE STARTER ASSEMBLY INFO

7. DISCONNECT WIRE HARNESS AND CONNECTOR

(a) Remove the bolt, disconnect the 3 engine wire clamps and

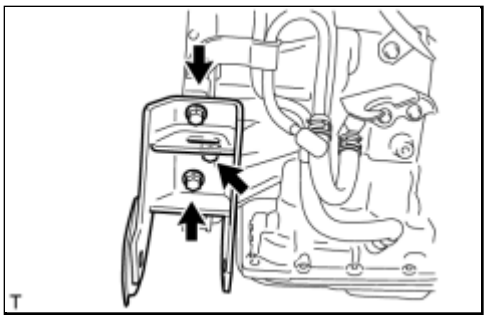


speed sensor connector.



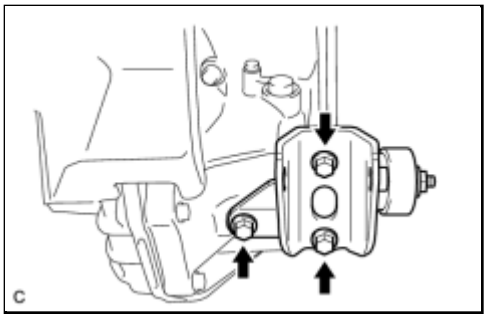
(b) Disconnect the engine wire clamp, speed sensor connector, park/neutral position switch connector and transmission wire connector.

8. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY



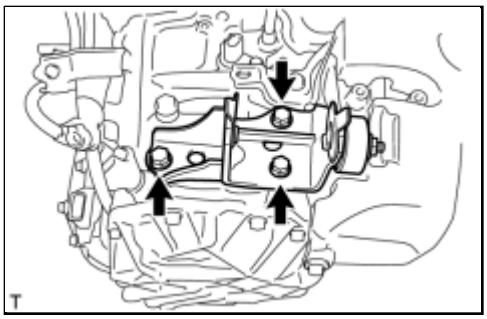
(a) Remove the 5 bolts.

(b) Remove the 4 lower side mounting bolts.



(c) Separate and remove the automatic transaxle.

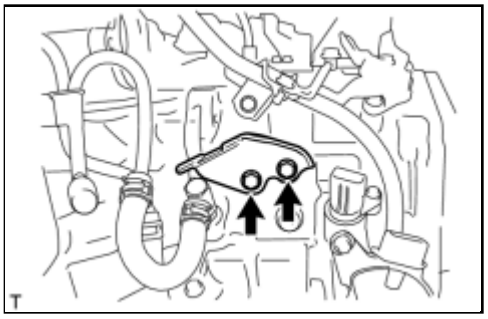
9. REMOVE FRONT ENGINE MOUNTING BRACKET



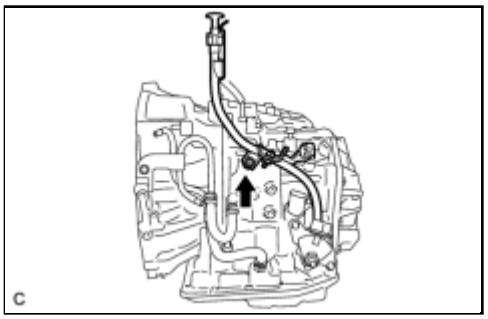
(a) Remove the 3 bolts and front engine mounting bracket.

10. REMOVE REAR ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and rear engine mounting bracket.



11. REMOVE ENGINE MOUNTING BRACKET LH

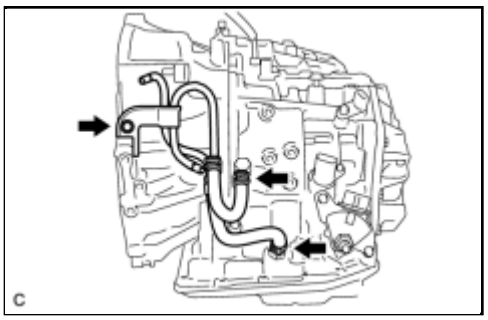


(a) Remove the 3 bolts and engine mounting bracket LH.

12. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and No. 1 transmission control cable bracket.

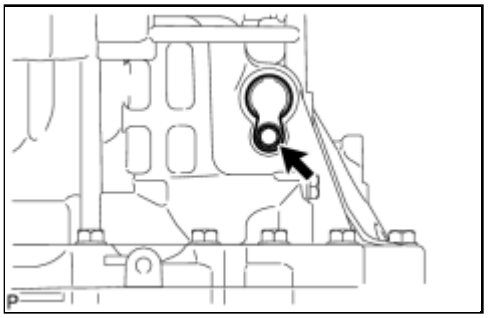
13. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY



(a) Remove the transmission oil level gauge sub-assembly.

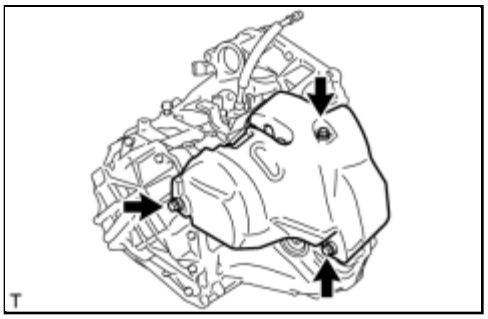
(b) Remove the bolt and remove the transmission oil filler tube sub-assembly.

(c) Remove the O-ring from the transmission oil filler tube sub-assembly.



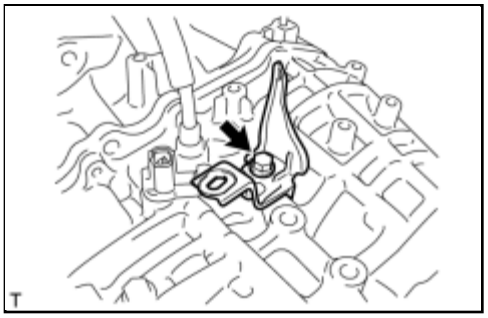
14. REMOVE OIL COOLER TUBE

(a) Remove the 2 hose clamps, bolt and oil cooler tube sub-assembly.



15. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Remove the bolt and hole cover from the transaxle case.



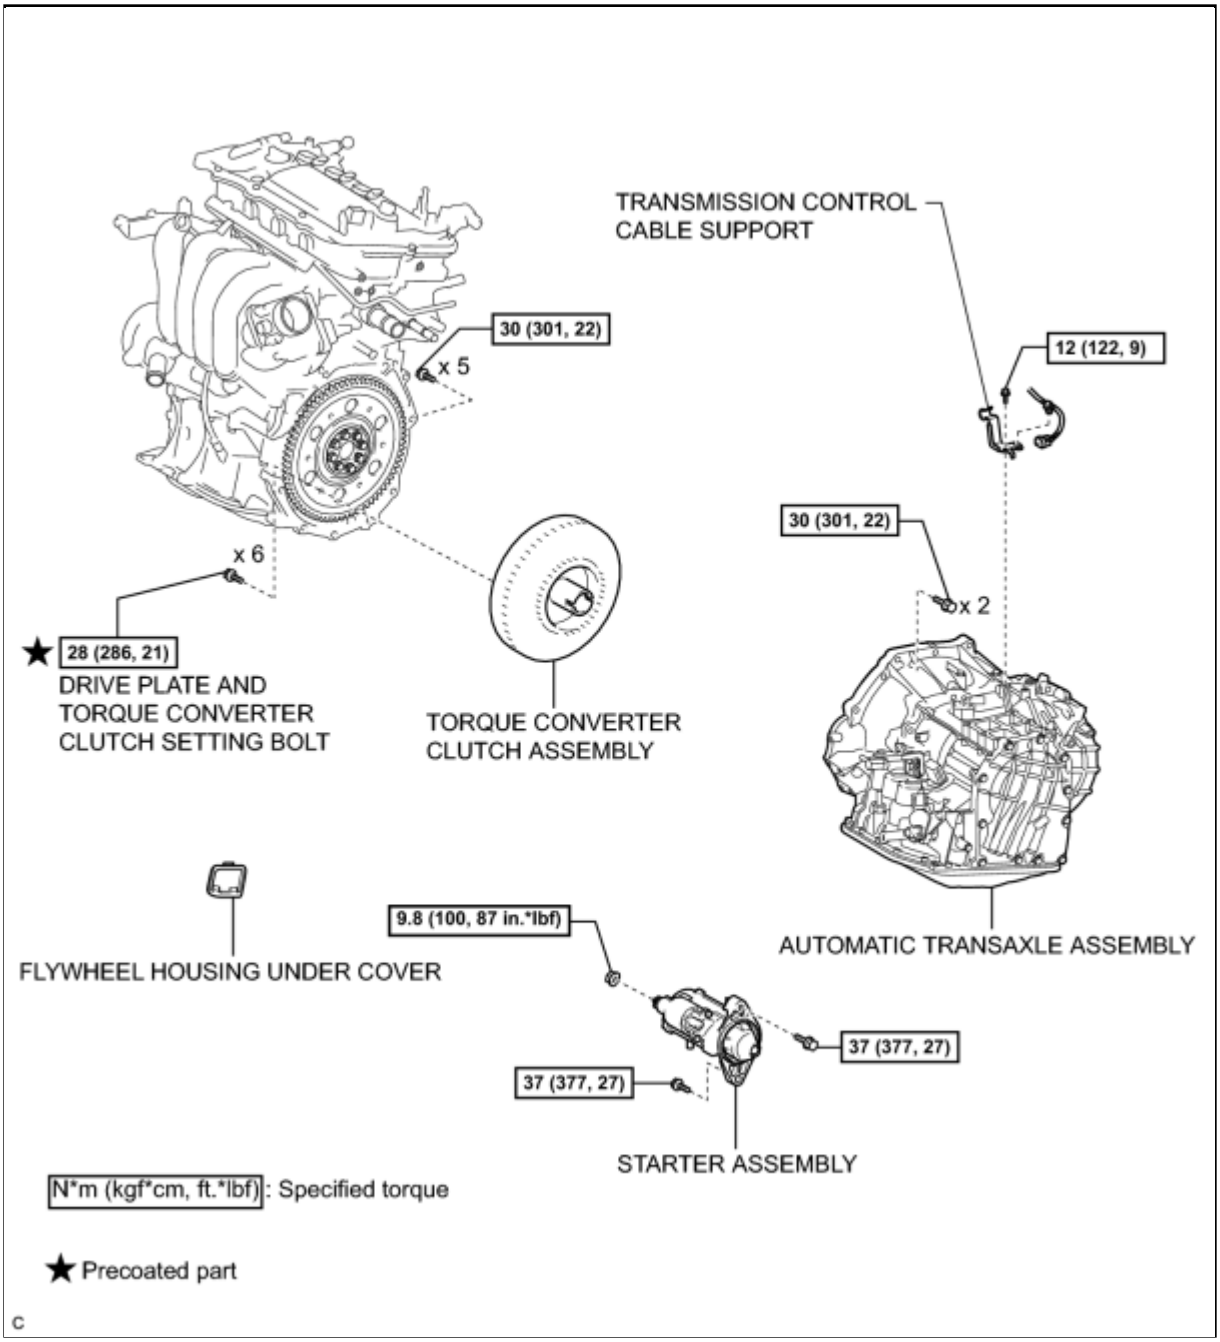
(b) Remove the O-ring from the hole cover.

16. REMOVE UPPER TRANSAXLE CASE COVER

(a) Remove the 3 bolts and upper transaxle case cover.

17. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the bolt and wire harness clamp bracket.



18. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Remove the torque converter clutch from the automatic transaxle.

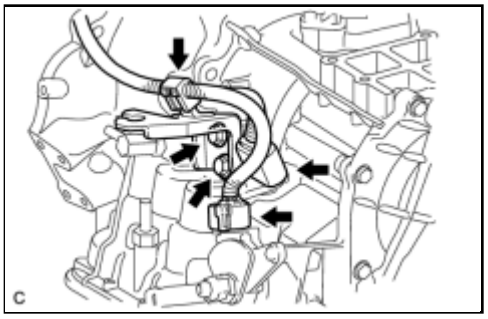
(b) Remove the bolt and transmission oil filler tube sub-assembly.

(c) Remove the O-ring from the transmission oil filler tube sub-assembly.

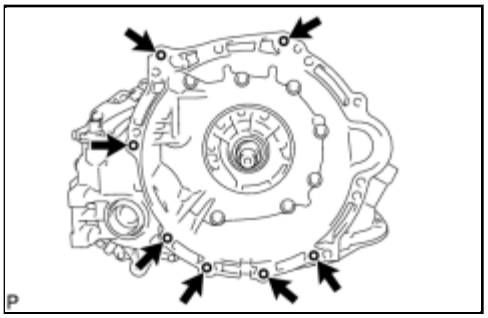
8. REMOVE STARTER ASSEMBLY INFO

9. SEPARATE TRANSMISSION CONTROL CABLE SUPPORT



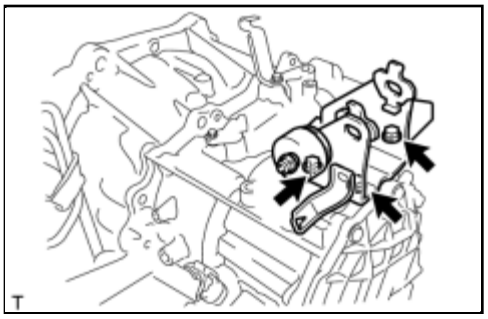
(a) Separate the speed sensor connector and wire harness clamp.

(b) Remove the bolt and transmission control cable bracket from the automatic transaxle.



10. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

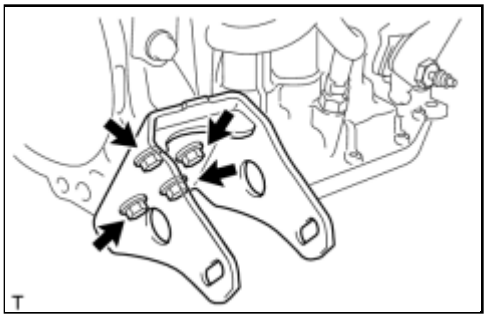
(a) Separate the 2 connectors and wire harness clamp.



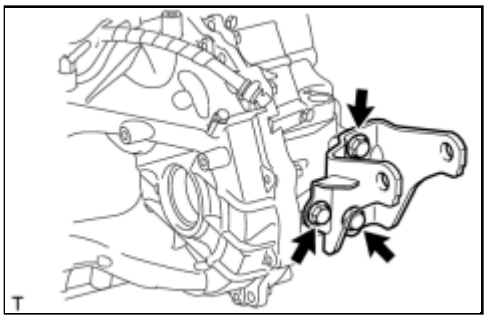
(b) Remove the 2 bolts and remove the No. 1 transmission control cable bracket from the automatic transaxle.

11. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

(a) Remove the 7 bolts and automatic transaxle from the engine.



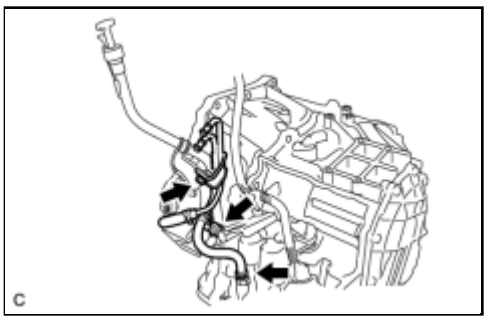
12. REMOVE ENGINE MOUNTING BRACKET LH



(a) Remove the 3 bolts and engine mounting bracket LH from the automatic transaxle.

13. REMOVE FRONT ENGINE MOUNTING BRACKET

(a) Remove the 4 bolts and front engine mounting bracket from the automatic transaxle.



14. REMOVE REAR ENGINE MOUNTING BRACKET
