Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: BASIC INSPECTION (2010 Corolla)		

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1.	**CHECK BATTERY VOLTAGE**

NOTICE:

Carry out this check with the engine stopped and the ignition switch off.

Result:

RESULT	PROCEED TO
11 V or more	OK
Below 11 V	NG

NG ▶ **CHARGE OR REPLACE BATTERY**

OK ▼

2.	**CHECK WHETHER ENGINE CRANKS**

NG ▶ INFO **PROCEED TO PROBLEM SYMPTOMS TABLE**

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: CHECK FOR INTERMITTENT PROBLEMS (2010 Corolla)		

CHECK FOR INTERMITTENT PROBLEMS

HINT:

Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with the Techstream when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear DTCs INFO .
2. Switch the ECM from normal mode to check mode using the Techstream INFO .
3. Perform a simulation test INFO .
4. Check and wiggle the harness(es), connector(s) and terminal(s) INFO .

Last Modified: 3-10-2010	6.4 M	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDT056X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: REGISTRATION (2010 Corolla)		

REGISTRATION

NOTICE:

The Vehicle Identification Number (VIN) must be input into a replacement ECM.

HINT:

The VIN is a 17-digit alphanumeric vehicle identification number. The Techstream is required to register the VIN.

1. DESCRIPTION

HINT:

This registration section consists of two parts: Read VIN and Write VIN.

(a) Read VIN: This process allows the VIN stored in the ECM to be read in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(b) Write VIN: This process allows the VIN to be input into the ECM. If the ECM is changed, or the ECM VIN and vehicle VIN do not match, the VIN can be registered, or overwritten in the ECM by following this procedure.

2. READ VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

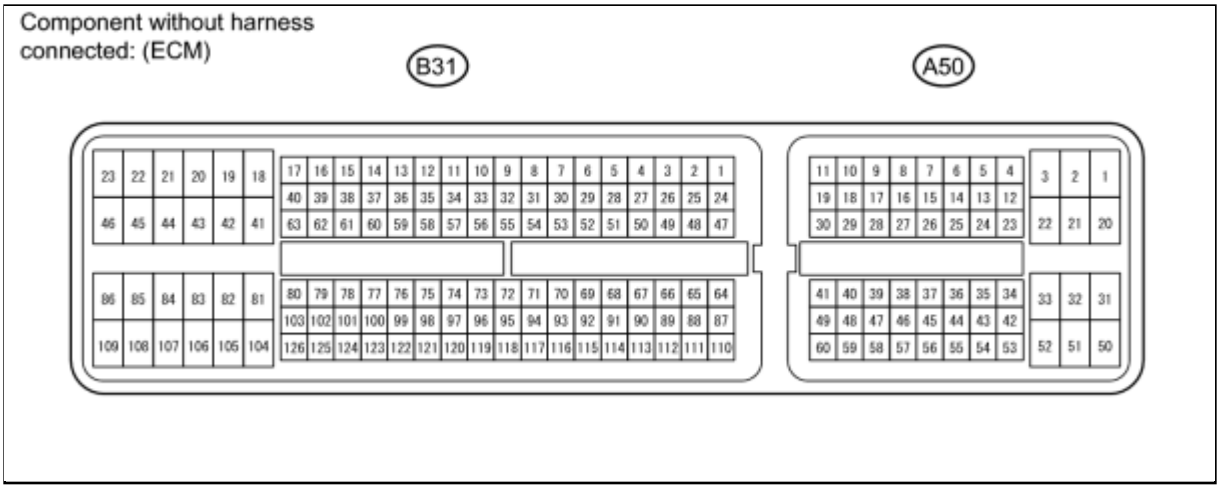
(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Read.

3. WRITE VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.



(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Write.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: TERMINALS OF ECM (2010 Corolla)		

TERMINALS OF ECM

HINT:

The standard normal voltage between each pair of the ECM terminals is shown in the table below. The appropriate conditions for checking each pair of the terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of the terminals, and displayed in the "Specified Conditions" column. The illustration above can be used as a reference to identify the ECM terminal locations.

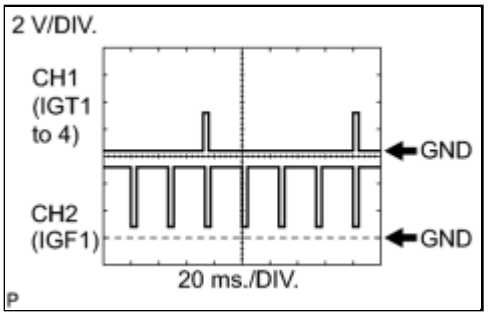
TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
A50-20 (BATT) - B31-104 (E1)	P - BR	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
A50-2 (+B) - B31-104 (E1)	B - BR	Power source of ECM	Ignition switch to ON	11 to 14 V
A50-1 (+B2) - B31-104 (E1)	B - BR	Power source of ECM	Ignition switch to ON	11 to 14 V
A50-3 (+BM) - B31-104 (E1)	B - BR	Power source of throttle actuator	Always	11 to 14 V
B31-85 (IGT1) - B31-104 (E1)	W-L - BR	Ignition coil (ignition signal)	Idling	Pulse generation (see waveform 1)
B31-84 (IGT2) - B31-104 (E1)	B - BR			
B31-83 (IGT3) - B31-104 (E1)	L-B - BR			

TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
B31-82 (IGT4) - B31-104 (E1)	B - BR			
B31-81 (IGF1) - B31-104 (E1)	Y - BR	Ignition coil (ignition confirmation signal)	Ignition switch to ON	4.5 to 5.5 V
			Idling	Pulse generation (see waveform 1)
B31-122 (NE+) - B31-121 (NE-)	R - G	Crankshaft position sensor	Idle after engine warmed-up	Pulse generation (see waveform 2)
B31-99 (G2+) - B31-98 (G2-)	R - W	Camshaft position sensor (for intake camshaft)	Idle after engine warmed-up	Pulse generation (see waveform 2)
B31-76 (EV1+) - B31-75 (EV1-)	R - W	Camshaft position sensor (for exhaust camshaft)	Idle after engine warmed-up	Pulse generation (see waveform 2)
B31-108 (#10) - B31-45 (E01)	V - W-B	Fuel injector	Ignition switch to ON	11 to 14 V
B31-107 (#20) - B31-45 (E01)	Y - W-B			
B31-106 (#30) - B31-45 (E01)	G - W-B		Idling	Pulse generation (see waveform 3)
B31-105 (#40) - B31-45 (E01)	LG - W-B			
B31-109 (HA1A) - B31-46 (E04)	R - W-B	Air fuel ratio sensor (sensor 1) heater	Ignition switch to ON	11 to 14 V
			Idling with warm engine	Pulse generation (see waveform 4)
B31-112 (A1A+) - B31-113 (A1A-)	Y - L	Air fuel ratio sensor (sensor 1)	Idling	Below 3.3 V*1
B31-47 (HT1B) - B31-86 (E03)	P - W-B	Heated oxygen sensor (sensor 2) heater	Ignition switch to ON	11 to 14 V
			Idling	Below 3.0 V
B31-64 (OX1B) - B31-87 (EX1B)	B - LG-B	Heated oxygen sensor (sensor 2)	Engine speed maintained at 2500 rpm for 2 minutes after warming up engine	Pulse generation (see waveform 5)
B31-110 (KNK1) -	B - W	Knock sensor	Engine speed maintained at 4000 rpm after	Pulse generation (see waveform

TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
B31-111 (EKNK)			warming up engine	6)
A50-8 (SPD) - B31-104 (E1)	V - BR	Speed signal from combination meter	Rotate driving wheel slowly	Pulse generation (see waveform 7)
B31-97 (THW) - B31-96 (ETHW)	B - BR	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
B31-65 (THA) - B31-88 (ETHA)	P - BR-W	Intake air temperature sensor (built into mass air flow meter	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
B31-118 (VG) - B31-116 (E2G)	V - B	Mass air flow meter	Idling, shift lever in P or N, A/C switch OFF	0.5 to 3.0 V
A50-24 (W) - B31-104 (E1)	R - BR	MIL	Ignition switch to ON (MIL goes ON)	Below 3.0 V
			Idling	11 to 14 V
A50-48 (STA) - B31-104 (E1)	LG - BR	Starter signal	Ignition switch to ON	Below 1.5 V
			Cranking	5.5 V or more
B31-52 (STAR) - B31-104 (E1)	W - BR	Starter relay control	Ignition switch to ON Shift position P or N	Below 1.5 V
			Cranking	5.5 V or more
A50-13 (ACCR) - B31-104 (E1)	L-Y - BR	ACC (cut) relay control signal	Ignition switch to ON	8 to 14 V
			Cranking	0.1 to 0.8 V
A50-14 (STSW) - B31-104 (E1)	W-G - BR	Starter relay operation signal	Ignition switch to ON	Below 1.5 V
			Ignition switch START Shift position P or N	5.5 V or more
B31-115 (VTA1) - B31-91 (ETA)	LG - BR	Throttle position sensor (for engine control)	Ignition switch to ON, Accelerator pedal released (Throttle valve fully closed)	0.5 to 1.1 V
			Ignition switch to ON, Accelerator pedal depressed (Throttle valve fully open)	3.2 to 4.8 V

TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
B31-114 (VTA2) - B31-91 (ETA)	R-G - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch to ON, Accelerator pedal released (Throttle valve fully closed)	2.1 to 3.1 V
			Ignition switch to ON, Accelerator pedal depressed (Throttle valve fully open)	4.6 to 5.0 V
B31-67 (VCTA) - B31-91 (ETA)	Y - BR	Power source of sensor (specific voltage)	Ignition switch to ON	4.5 to 5.5 V
A50-57 (VCPA) - A50-59 (EPA)	P - R	Power source of accelerator pedal position sensor (for VPA)	Ignition switch to ON	4.5 to 5.5 V
A50-55 (VPA) - A50-59 (EPA)	L - R	Accelerator pedal position sensor (for engine control)	Ignition switch to ON, Accelerator pedal released	0.5 to 1.1 V
			Ignition switch to ON, Accelerator pedal fully depressed	2.5 to 4.5 V
A50-56 (VPA2) - A50-60 (EPA2)	Y - O	Accelerator pedal position sensor (for sensor malfunctioning detection)	Ignition switch to ON, Accelerator pedal released	1.2 to 2.0 V
			Ignition switch to ON, Accelerator pedal fully depressed	3.4 to 5.5 V
A50-58 (VCP2) - A50-60 (EPA2)	B - O	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch to ON	4.5 to 5.5 V
B31-42 (M+) - B31-43 (ME01)	P - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 8)
B31-41 (M-) - B31-43 (ME01)	L - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 9)
A50-36 (STP) - B31-104 (E1)	L - BR	Stop light switch	Brake pedal depressed	11 to 14 V
			Brake pedal released	Below 1.5 V

TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
A50-35 (ST1-) - B31-104 (E1)	R - BR	Stop light switch	Ignition switch to ON, Brake pedal depressed	Below 1.5 V
			Ignition switch to ON, Brake pedal released	11 to 14 V
B31-49 (PRG) - B31-104 (E1)	L-B - BR	Purge VSV	Ignition switch to ON	11 to 14 V
			Idling, under purge control	Pulse generation (see waveform 10)
A50-7 (FC) - B31-104 (E1)	O - BR	Fuel pump control	Ignition switch to ON	11 to 14 V
			Idling	Below 1.5 V
A50-15 (TACH) - B31-104 (E1)	GR - BR	Engine speed	Idling	Pulse generation (see waveform 11)
A50-27 (TC) - B31-104 (E1)	P - BR	Terminal TC of DLC3	Ignition switch to ON	11 to 14 V
B31-100 (OC1+) - B31-123 (OC1-)	B - V-Y	Camshaft timing oil control valve (for intake camshaft)	Idling	Pulse generation (see waveform 12)
A50-41 (CANH) - B31-104 (E1)	Y - BR	CAN communication line	Engine stopped and ignition switch to ON	Pulse generation (see waveform 13)
A50-49 (CANL) - B31-104 (E1)	W - BR	CAN communication line	Engine stopped and ignition switch to ON	Pulse generation (see waveform 14)
A50-28 (IGSW) - B31-104 (E1)	B - BR	Ignition switch	Ignition switch to ON	11 to 14 V
A50-44 (MREL) - B31-104 (E1)	L - BR	EFI MAIN relay	Ignition switch to ON	11 to 14 V
B31-60 (OE1+) - B31-61 (OE1-)	BR-B - P	Camshaft timing oil control valve (for exhaust camshaft)	Idling	Pulse generation (see waveform 15)
B31-70 (VCV1) - B31-104 (E1)	BR-R - BR	Power source of camshaft position sensor (for intake camshaft)	Ignition switch to ON	4.5 to 5.5 V
B31-117 (VC) - B31-104 (E1)	BR-R - BR	Power source of camshaft position sensor (for exhaust camshaft)	Ignition switch to ON	4.5 to 5.5 V



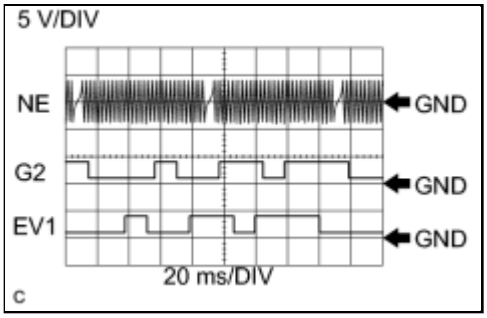
TERMINAL NO. (SYMBOL)	WIRING COLORS	TERMINAL DESCRIPTIONS	CONDITIONS	SPECIFIED CONDITIONS
A50-31 (ELS1) - B31-104 (E1)	G - BR	Electric load	Taillight switch ON	7.5 to 14 V
			Taillight switch OFF	Below 1.5 V
A50-33 (ELS2) - B31-104 (E1)	B - BR	Electric load	Defogger switch ON	7.5 to 14 V
			Defogger switch OFF	Below 1.5 V
A50-42 (VPMP) - B31-104 (E1)	W - BR	Vent valve (built into canister pump module)	Ignition switch to ON	11 to 14 V
A50-34 (MPMP) - B31-104 (E1)	R - BR	Leak detection pump (built into canister pump module)	Leak detection pump OFF	Below 3 V
			Leak detection pump ON	11 to 14 V
B31-69 (VCPP) - B31-92 (EPPM)	V - G	Power source for canister pressure sensor (specific voltage)	Ignition switch to ON	4.5 to 5.5 V
B31-68 (PPMP) - B31-92 (EPPM)	Y - G	Canister pressure sensor (built into canister pump module)	Ignition switch to ON	3 to 3.6 V
A50-43 (RFC) - B31-104 (E1)	R-G - BR	Cooling fan control	Ignition switch to ON	Below 1.5 V

HINT:

***1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.**

1. WAVEFORM 1

Igniter IGT Signal (from ECM to Igniter)



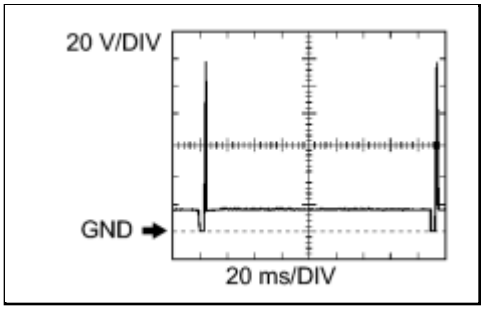
ECM Terminal Name	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Range	2 V/DIV, 20 ms/DIV
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

2. WAVEFORM 2

Crankshaft Position Sensor and Camshaft Position Sensors



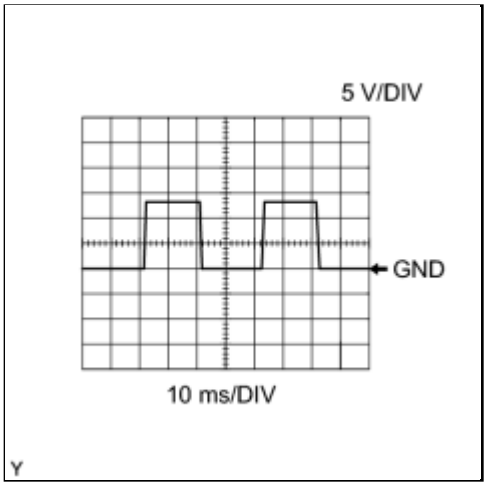
ECM Terminal Name	Between NE+ and NE- Between G2+ and G2- Between EV1+ and EV1-
Tester Range	5 V/DIV, 20 ms/DIV
Condition	Idle after engine warmed-up

HINT:

The wavelength becomes shorter as the engine rpm increases.

3. WAVEFORM 3

No. 1 (to No. 4) Injector Signal



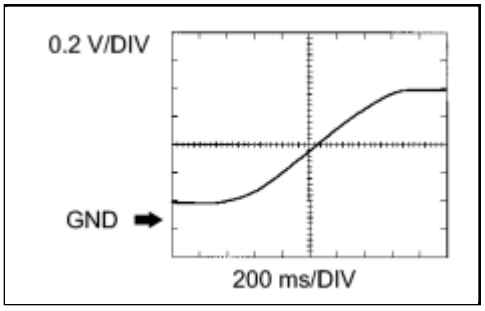
ECM Terminal Name	Between #10 (to #40) and E01
Tester Range	20 V/DIV, 20 ms/DIV
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

4. WAVEFORM 4

Air Fuel Ratio Sensor (Sensor 1) Heater



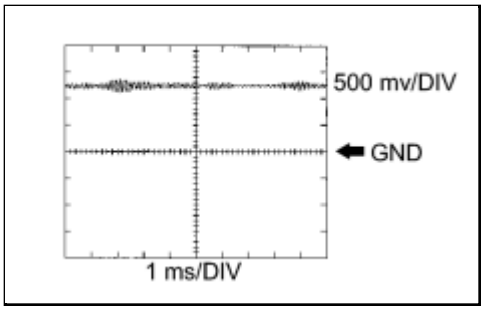
ECM Terminal Name	Between HA1A and E04
Tester Range	5 V/DIV, 10 ms/DIV
Condition	Idling with warm engine

HINT:

The wavelength varies in accordance with the engine operating condition.

5. WAVEFORM 5

Heated Oxygen Sensor (Sensor 2)



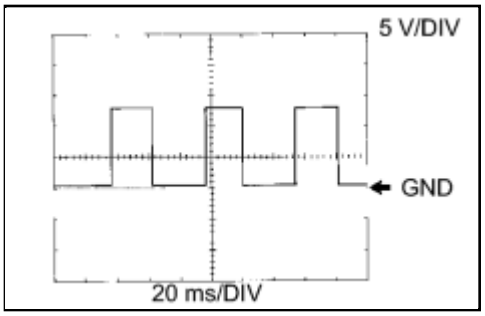
ECM Terminal Name	Between OX1B and EX1B
Tester Range	0.2 V/DIV. 200 ms/DIV
Condition	Engine speed maintained at 2500 rpm for 2 minutes after warming up engine

HINT:

In the Data List, the items O2S B1 S2 show the values input to the ECM from the heated oxygen sensor.

6. WAVEFORM 6

Knock Sensor



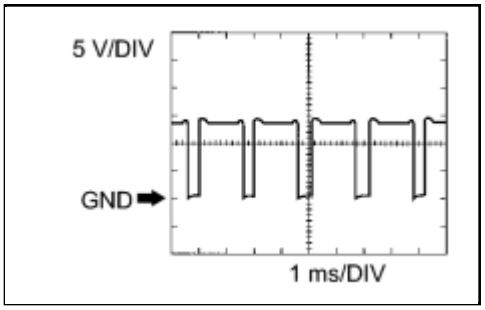
ECM Terminal Name	Between KNK1 and EKNK
Tester Range	500 mv/DIV, 1 ms/DIV
Condition	Engine speed maintained at 4000 rpm after engine warmed-up engine

HINT:

- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle condition.

7. WAVEFORM 7

Vehicle Speed Signal



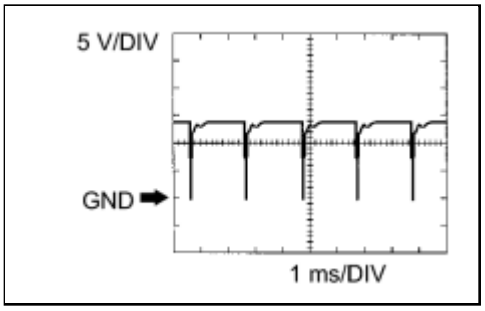
ECM Terminal Name	Between SPD and E1
Tester Range	5 V/DIV, 20 ms/DIV
Condition	Rotate driving wheel slowly

HINT:

The wavelength becomes shorter as the vehicle speed increases.

8. WAVEFORM 8

Throttle Actuator Positive Terminal



ECM Terminal Name	Between M+ and ME01
Tester Range	5 V/DIV, 1 ms/DIV
Condition	Idling with warm engine

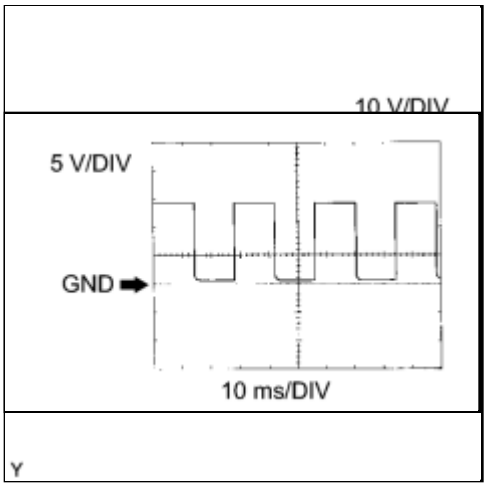
HINT:

The duty ratio varies depending on the throttle actuator operation.

9. WAVEFORM 9

Throttle Actuator Negative Terminal

ECM Terminal Name	Between M- and ME01
Tester Range	5 V/DIV, 1 ms/DIV
Condition	Idling with warm engine



HINT:

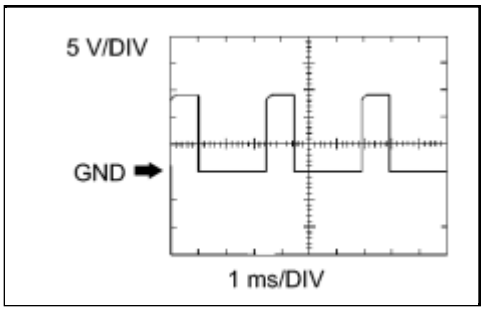
The duty ratio varies depending on the throttle actuator operation.

10. WAVEFORM 10

11. WAVEFORM 11

Purge VSV
Engine Speed Signal

ECM Terminal Name	Between PRG and E1
ECM Terminal Name	Between TACH and E1
Tester Range	10 V/DIV, 20 ms/DIV
Tester Range	5 V/DIV, 10 ms/DIV
Condition	Idling, under purge control
Condition	Idling



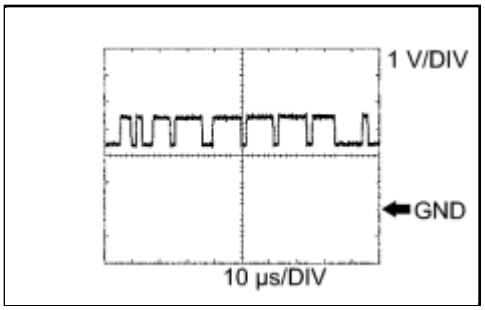
HINT:

HINT:

If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.

The wavelength becomes shorter as the engine rpm increases.

12. WAVEFORM 12

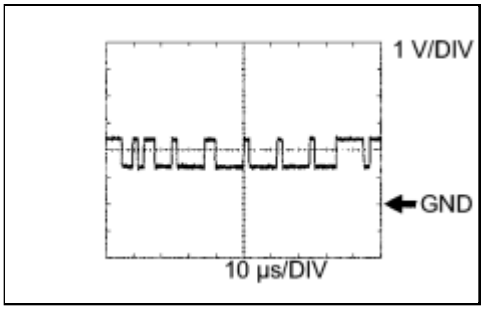


Camshaft Timing Oil Control Valve (for Intake Camshaft)

ECM Terminal Name	Between OC1+ and OC1-
Tester Range	5 V/DIV, 1 ms/DIV
Condition	Idling

13. WAVEFORM 13

CAN Communication Signal (Reference)



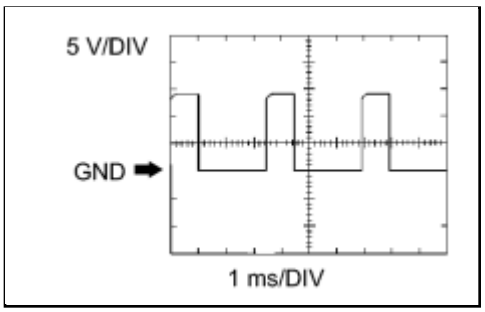
ECM Terminal Name	Between CANH and E1
Tester Range	1 V/DIV, 10 µs/DIV
Condition	Engine stopped and ignition switch to ON

HINT:

The waveform varies depending on the CAN communication signal.

14. WAVEFORM 14

CAN Communication Signal (Reference)



ECM Terminal Name	Between CANL and E1
Tester Range	1 V/DIV, 10 µs/DIV
Condition	Engine stopped and ignition switch to ON

HINT:

The waveform varies depending on the CAN communication signal.

15. WAVEFORM 15

Camshaft Timing Oil Control Valve (for

Exhaust Camshaft)

ECM Terminal Name	Between OE1+ and OE1-
Tester Range	5 V/DIV, 1 ms/DIV
Condition	Idling

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDR05VX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: CHECKING MONITOR STATUS (2010 Corolla)		

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are the catalyst, evaporative emission (EVAP) and thermostat monitors.

The monitor result allows an OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to cause it to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component may malfunction in the near future.

Perform the following instruction to view the monitor status. Although these instructions reference the Techstream, the monitors can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Operate the vehicle in accordance with the applicable drive pattern described in Readiness Monitor Drive Pattern INFO . Do not turn the ignition switch off.

NOTICE:

The test results will be lost if the ignition switch is turned off.

2. ACCESS MONITOR RESULT

(a) Enter the following menus: Powertrain / Engine and ECT / Monitor / Result. The monitor status appears after the component name.

- Pass: The component is functioning normally.
- Fail: The component is malfunctioning.

(b) Confirm that the component is either Pass or Fail.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either Pass or Fail.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit and maximum test limit.

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limit. If the test value is on the borderline of the test limit, the component may malfunction in the near future.

HINT:

The monitor result might show a Pass on rare occasions even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the value by the scaling value listed below.

Air Fuel Ratio Sensor (Sensor 1)

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$01	$8E	Multiply by 0.001	V	Air Fuel Ratio sensor deterioration level
$01	$91	Multiply by 0.004	mA	Air Fuel Ratio sensor current

Heated Oxygen Sensor (Sensor 2)

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8B	Multiply by 0.001	Seconds	0.35 - 0.2 V sensor switch time
$02	$8D	Multiply by 0.001	Seconds	Duration that sensor voltage drops to 0.2 V during fuel cut
$02	$8F	Multiply by 0.0003	g	Maximum oxygen storage capacity

Catalyst

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst

Advance Intake Side

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$35	$81	Multiply by 0.01	Second	Forced movement of oil control valve time

Advance Exhaust Side

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$35	$85	Multiply by 0.01	Second	Forced movement of oil control valve time

EVAP

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Misfire

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$A1	$0B	Multiply by 1	Time	Total EWMA misfire count of all cylinders in last ten driving cycles EWMA: Exponential Weighted Moving Average
$A1	$0C	Multiply by 1	Time	• When ignition switch is ON, total misfire count of all cylinders in last driving cycle is displayed. • While engine is running, total misfire count of all cylinders in current driving cycle is displayed.
$A2	$0B	Multiply by 1	Time	Total EWMA misfire count for cylinder 1 in last ten driving cycles
$A2	$0C	Multiply by 1	Time	• When ignition switch is ON, total misfire count of cylinder 1 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 1 in current driving cycle is displayed.
$A3	$0B	Multiply by 1	Time	Total EWMA misfire count for cylinder 2 in last ten driving cycles
$A3	$0C	Multiply by 1	Time	• When ignition switch is ON, total misfire count of cylinder 2 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 2 in current driving cycle is displayed.
$A4	$0B	Multiply by 1	Time	Total EWMA misfire count for cylinder 3 in last ten driving cycles
$A4	$0C	Multiply by 1	Time	• When ignition switch is ON, total misfire count of cylinder 3 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 3 in current driving cycle is displayed.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: READINESS MONITOR DRIVE PATTERN (2010 Corolla)		

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities using DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- To view the status, enter the following menus: Powertrain / Engine and ECT / Monitor / Status2.
- When the status of a Readiness Monitor reads Complete, the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:

Many state Inspection and Maintenance (I/M) programs require the status of vehicle Readiness Monitors to show Complete before beginning emission tests.

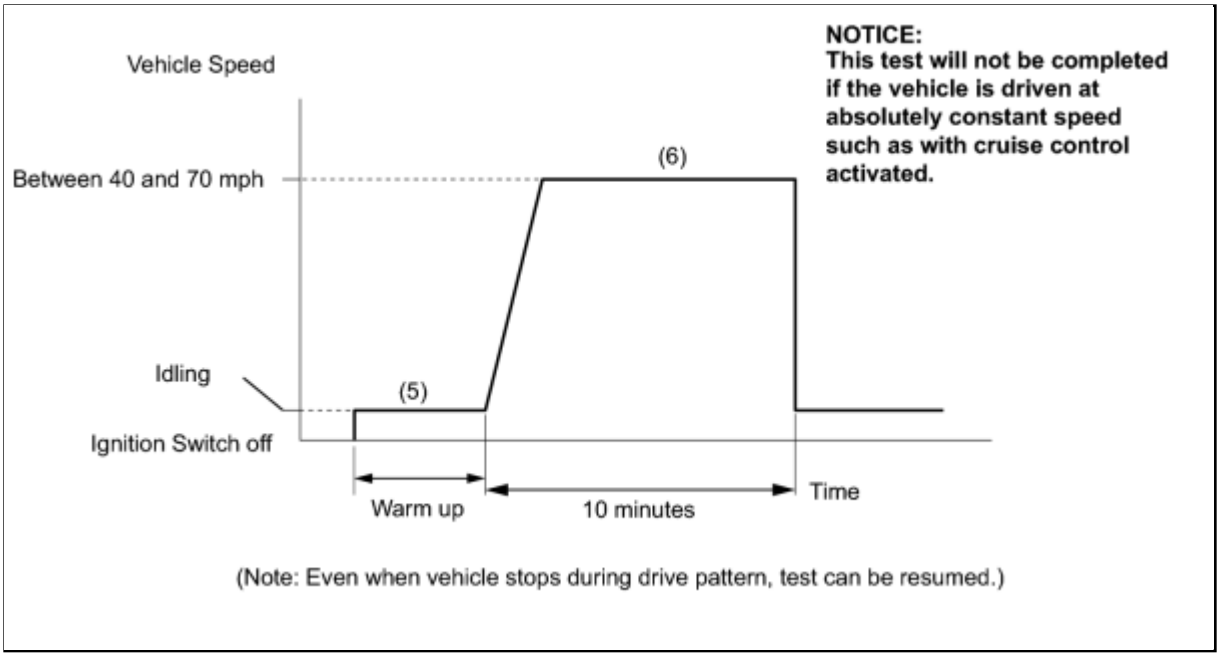
The Readiness Monitors will be reset to Incomplete if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If a Readiness Monitor status shows Incomplete, follow the appropriate Readiness Monitor Drive Pattern to change the status to Complete.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.



NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR FUEL RATIO CONTROL TYPE)

(a) Preconditions

- The monitor will not run unless:
    - The MIL is OFF.

(b) Drive Pattern

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear DTCs (if set) INFO .

(5) Start the engine and warm it up.

(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status

Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, extend the driving time.

3. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Preconditions

- The monitor will not run unless:
    - The fuel tank is less than 90% full.
    - The altitude is less than 8000 ft. (2438 m).
    - The vehicle is stationary.
    - The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F).
    - The intake air temperature is between 4.4°C and 35°C (40°F and 95°F).
    - The vehicle was driven in a city area (or on a free-way) for 10 minutes or more.

(b) Monitor Conditions

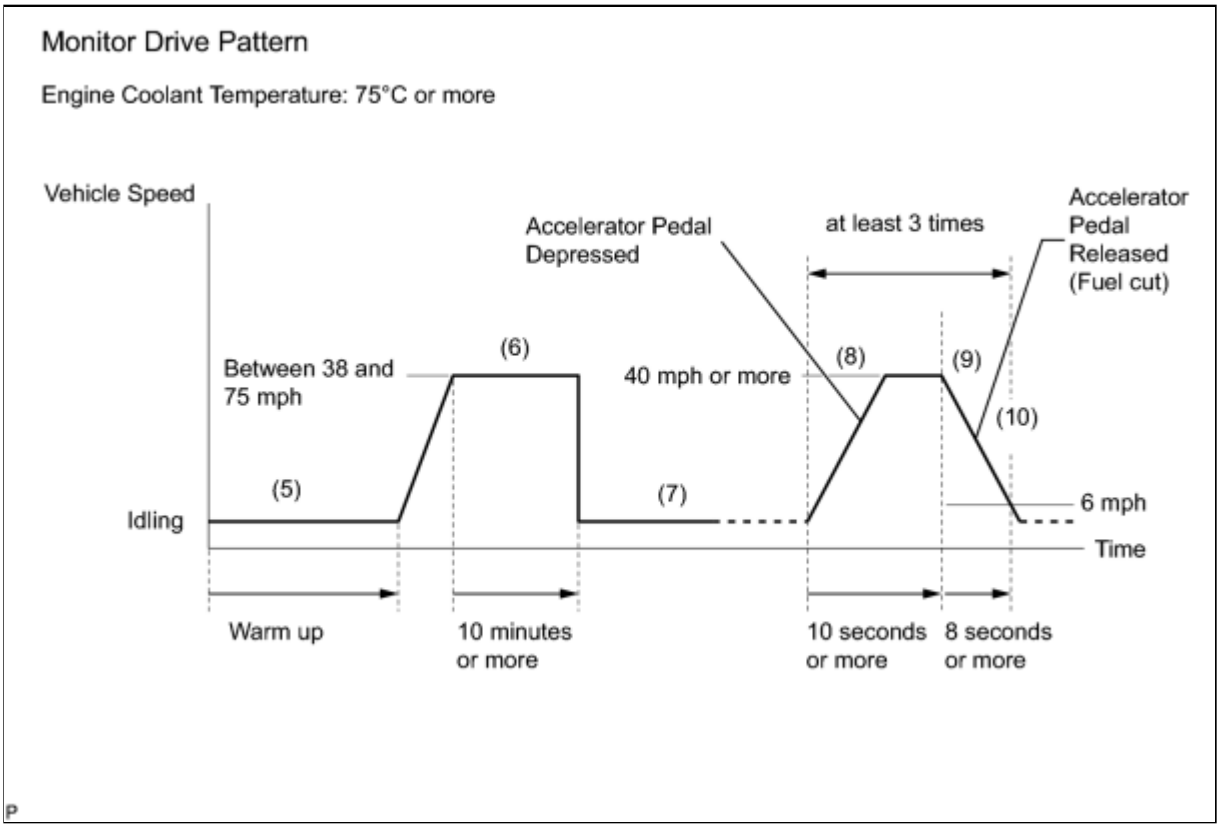
(1) Turn the ignition switch off and wait for 5 to 10 hours.

HINT:

Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status

(1) Connect the Techstream to the DLC3.



(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

4. AIR FUEL RATIO AND HEATED OXYGEN SENSOR MONITORS (ACTIVE AIR FUEL RATIO CONTROL TYPE)

(a) Preconditions

- The monitor will not run unless:
    - 2 minutes or more have elapsed since the engine was started.
    - The engine coolant temperature is 75°C (167°F) or more.
    - Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
    - Air fuel ratio feedback control is performed.

(b) Drive Pattern for front air fuel ratio sensor and heated oxygen sensor

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear DTCs INFO .

(5) Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F).

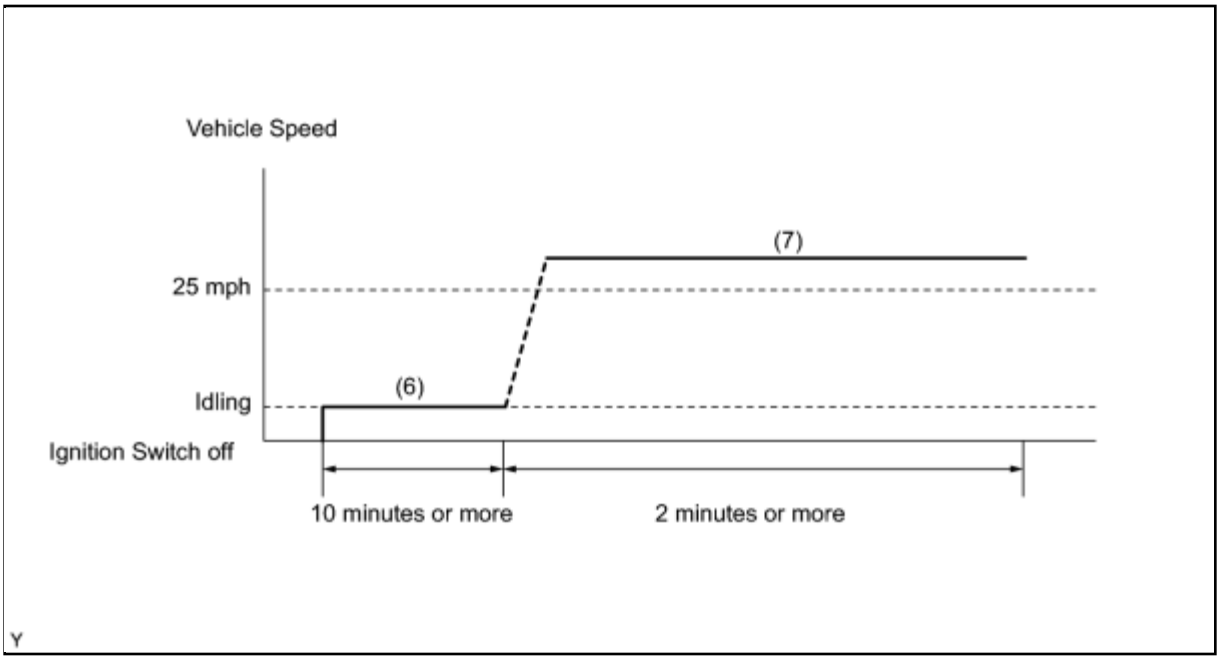
(6) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.

(7) Change the transmission to 2nd gear.

(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.

(9) Soon after performing step (8) above, release the accelerator pedal for at least 8 seconds without depressing the brake pedal, in order to execute fuel-cut control.

(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).



(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the Techstream.

(2) If the status does not switch to Complete, make sure that the preconditions have been met, and then perform steps from (5) through (11) in Drive Pattern above.

5. AIR FUEL RATIO AND HEATED OXYGEN SENSOR HEATER MONITORS (FRONT AIR FUEL RATIO AND REAR HEATED OXYGEN SENSOR TYPE)

(a) Preconditions

- The monitor will not run unless:
  - The MIL is OFF.

(b) Drive Pattern

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear DTCs (if set) 

.

(5) Start the engine.

(6) Allow the engine to idle for 10 minutes or more.

(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, make sure that the preconditions have been met, and repeat steps (5) to (7) described in the Drive Pattern above.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

SFI System

SYMPTOM	SUSPECTED AREA	SEE PAGE
Engine does not crank (Does not start)	Battery	INFO

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Data List.

(g) According to the display on the Techstream, read the Data List.

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed: Min.: 0 mph (0 km/h), Max.: 158.4 mph (255 km/h)	Actual vehicle speed	Speed indicated on speedometer
Engine Speed	Engine speed: Min.: 0 rpm, Max.: 16383.75 rpm	650 to 750 rpm: Idling (Automatic transaxle) 600 to 700 rpm: Idling (Manual transaxle)	-
Calculate Load	Calculated load by ECM: Min.: 0%, Max.: 100%	• 20 to 40%: Idling • 15 to 35%: Running without load (2500 rpm)	-
Vehicle Load	Vehicle load: Min.: 0%, Max.:	Actual vehicle load	Load percentage in terms of maximum intake air flow amount

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	25700%		
MAF	Air flow rate from Mass Air Flow meter: Min.: 0 g/sec, Max.: 655.35 g/sec	1 to 3 g/sec: Idling 4.5 to 8.5 g/sec: Running without load (2500 rpm)	If value approximately 0.0 g/sec: • Mass air flow meter power source circuit open • VG circuit open or short If value 271.0 g/sec or more: • E2G circuit open
Atmosphere Pressure	Atmospheric pressure: Min.: 0 kPa (0 mmHg) , Max.: 255 kPa (1912.5 mmHg)	Equivalent to atmospheric pressure	-
Coolant Temp	Engine coolant temperature: Min.: -40°C (-40°F), Max.: 140°C (284°F)	80 to 100°C (176 to 212°F): After warming up	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
Intake Air	Intake air temperature: Min.: -40°C (-40°F), Max.: 140°C (284°F)	Equivalent to ambient air temperature	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
Engine Run Time	Engine run time: Min.: 0 seconds, Max.: 65535 seconds	Time since engine started	-
Initial Engine Coolant Temp	Initial engine coolant temperature: Min.: -40°C (-40°F), Max.: 120°C (248°F)	Coolant temperature when engine started	Service data
Initial Intake Air Temp	Initial intake air temperature: Min.: -40°C (-40°F), Max.: 120°C (248°F)	Intake air temperature when engine started	Service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Battery Voltage	Battery voltage: Min.: 0 V, Max.: 65.535 V	11 to 14 V: Idling	-
Accel Sens. No. 1 Volt %	Accelerator pedal position No. 1: Min.: 0%, Max.: 100%	10 to 22%: Accelerator pedal released 52 to 90%: Accelerator pedal fully depressed	-
Accel Sens. No. 2 Volt %	Accelerator pedal position No. 2: Min.: 0%, Max.: 100%	24 to 40%: Accelerator pedal released 68 to 100%: Accelerator pedal fully depressed	-
Accel Sensor Out No. 1	Accelerator pedal position sensor No. 1 voltage: Min.: 0 V, Max.: 4.98 V	-	Electronic throttle control system service data
Accel Sensor Out No. 2	Accelerator pedal position sensor No. 2 voltage: Min.: 0 V, Max.: 4.98 V	-	Electronic throttle control system service data
Accel Sensor Out No. 1	Accelerator pedal position sensor No. 1 voltage: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Accelerator pedal released 2.5 to 4.5 V: Accelerator pedal fully depressed	-
Accel Sensor Out No. 2	Accelerator pedal position sensor No. 2 voltage: Min.: 0 V, Max.: 5 V	1.2 to 2.0 V: Accelerator pedal released 3.4 to 5.0 V: Accelerator pedal fully depressed	-
Accelerator Idle Position	Whether or not accelerator pedal position sensor detecting idle: ON or OFF	ON: Idling	-
Accel Fully Close #1 (AD)	Accelerator fully closed value No. 1 (AD): Min.: 0 V, Max.: 4.98 V	-	Electronic throttle control system service data
Accel Fully Close Learn #1	Accelerator fully closed learning value No. 1:	-	Electronic throttle control system service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	Min.: 0 deg, Max.: 124.512 deg		
Accel Fully Close Learn #2	Accelerator fully closed learning value No. 2: Min.: 0 deg., Max.: 124.512 deg.	-	Electronic throttle control system service data
Throttle Sensor Volt %	Throttle valve opening percentage according to throttle position sensor: Min.: 0%, Max.: 100%	• 10 to 22%: Accelerator pedal released • 64 to 96%: Accelerator pedal fully depressed	Value calculated based on the voltage at terminal VTA1
Throttl Sensor #2 Volt %	Throttle valve opening percentage according to throttle position sensor No. 2: Min.: 0%, Max.: 100%	• 42 to 62%: Accelerator pedal released • 92 to 100%: Accelerator pedal fully depressed	Value calculated based on the voltage at terminal VTA2
ST1	Brake pedal signal: ON or OFF	ON: Brake pedal released	-
System Guard	System guard: ON or OFF	-	Electronic throttle control system service data
Open Side Malfunction	Open side malfunction: ON or OFF	-	Electronic throttle control system service data
Throttle Idle Position	Whether or not throttle position sensor detecting idle: ON or OFF	• ON: Accelerator pedal released • OFF: Accelerator pedal fully depressed	-
Throttle Require Position	Required position: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Idling	-
Throttle Sensor Position*3	Throttle sensor positioning: Min.: 0%, Max.: 100%	• 0%: Accelerator pedal released • 50 to 80%: Accelerator pedal fully depressed	Recognition value for throttle opening angle on ECM

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Throttle Position No. 1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 4.98 V	-	Electronic throttle control system service data
Throttle Position No. 2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 4.98 V	-	Electronic throttle control system service data
Throttle Position No. 1	Throttle position No. 1: Min.: 0 V, Max.: 5 V	• 0.5 to 1.1 V: Accelerator pedal released • 3.2 to 4.8 V: Accelerator pedal fully depressed • 0.6 to 1.4 V: Fail-safe operating	-
Throttle Position No. 2	Throttle position No. 2: Min.: 0 V, Max.: 5 V	• 2.1 to 3.1 V: Accelerator pedal released • 4.6 to 5.0 V: Accelerator pedal fully depressed • 2.1 to 3.1 V: Fail-safe operating	-
Throttle Position Command	Throttle position command value: Min.: 0 V, Max.: 4.9804 V	0.5 to 4.8 V	-
Throttle Sens Open Pos #1	Throttle sensor opener position No. 1: Min.: 0 V, Max.: 4.9804 V	0.6 to 1.4 V	Electronic throttle control system service data
Throttle Sens Open Pos #2	Throttle sensor opener position No. 2: Min.: 0 V, Max.:	1.7 to 2.5 V	Electronic throttle control system service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	4.9804 V		
Throttle Sens Open #1 (AD)	Throttle sensor opener position No. 1 (AD): Min.: 0 V, Max.: 4.9804 V	0.5 to 4.8 V	-
Throttle Motor	Whether or not throttle actuator control permitted: ON or OFF	• ON: Ignition switch ON • OFF: ETCS has failed	-
Throttle Motor Current	Throttle actuator current: Min.: 0 A, Max.: 20 A	0 to 3.0 A: Idling	Electronic throttle control system service data
Throttle Motor DUTY	Throttle actuator: Min.: 0%, Max.: 100%	10 to 22%: Idling after engine warmed up	Electronic throttle control system service data
Throttle Motor Current	Throttle actuator current: Min.: 0 A, Max.: 19.92 A	0 to 3.0 A: Idling	-
Throttle Motor Open Duty	Throttle actuator open duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	When accelerator pedal depressed, duty ratio increased
Throttle Motor Close Duty	Throttle actuator close duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	When accelerator pedal released quickly, duty ratio increased
Throttle Motor Duty (Open)	Throttle actuator duty ratio (open): Min.: 0%, Max.: 100%	0 to 40%: Idling	Electronic throttle control system service data
Throttle Motor Duty (Close)	Throttle actuator duty ratio (close): Min.: 0%, Max.: 100%	0 to 40%: Idling	Electronic throttle control system service data
Throttle Fully Close Learn	Throttle valve fully closed (learned value): Min.: 0 V, Max.: 5 V	0.4 to 1.0 V: Accelerator pedal released	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
ETCS Actuator Power	ETCS power supply: ON or OFF	• ON: Ignition switch ON and system normal • OFF: ETCS has failed	-
+BM Voltage	+BM voltage: Min.: 0, Max.: 19.92 V	11 to 14 V: Ignition switch ON and system normal	Electronic throttle control system service data
Actuator Power Supply	Actuator power supply ON or OFF	ON: Idling	-
Clutch Current	Clutch current: Min.: 0 A, Max.: 2.49 A	-	-
Fail Safe Drive	Whether or not fail safe function executed: ON or OFF	• ON: Electronic throttle control system has failed • OFF: Electronic throttle control system normal	Electronic throttle control system service data
Fail Safe Drive (Main CPU)	Whether or not fail safe function executed: ON or OFF	• ON: Electronic throttle control system has failed • OFF: Electronic throttle control system normal	Electronic throttle control system service data
Injector (Port)	Injection duration for cylinder 1: Min.: 0 ms, Max.: 32.64 ms	1.0 to 3.0 ms: Idling	-
Injection Volum (Cylinder1)	Injection volume (Cylinder 1): Min.: 0 ml, Max.: 2.048 ml	0.05 to 0.15 ml: Idling	Quantity of fuel injection volume for 10 times
Fuel Pump/Speed Status	Fuel pump/status: ON or OFF	-	Active Test support data
Vacuum Pump	Key-off EVAP system leak detection pump	-	Active Test support data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	status: ON or OFF		
EVAP (Purge) VSV	EVAP (Purge) VSV control duty: Min.: 0%, Max.: 100%	10 to 50%: Idling, under purge control	Order signal from ECM
Evap Purge Flow	Ratio of evaporative purge flow to intake air volume: Min.: 0%, Max.: 102.4%	0 to 10%: Idling	Service data
Purge Density Learn Value	Learning value of purge density: Min.: -50, Max.: 350 %	-40 to 10 %/%: Idling	Service data
Vapor Pressure Pump	Vapor pressure: Min.: 33.8 kPa (254 mmHg), Max.: 125.596 kPa (942 mmHg)	Approximately 100 kPa (760 mmHg) (absolute): Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
Vapor pressure (calculated)	Vapor pressure (calculated): Min.: -5.632 kPa (-42.3 mmHg), Max.: 715.264 kPa (5366 mmHg)	Approximately 100 kPa (760 mmHg) (absolute): Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
EVAP System Vent Valve	Key-off EVAP system vent valve status: ON or OFF	-	Active Test support data
EVAP Purge VSV	VSV status for EVAP control: ON or OFF	-	Active Test support data
Target Air-Fuel Ratio	Ratio compared to stoichiometric level: Min.: 0, Max.: 1.999	0.8 to 1.2: Idling	-
AF Lambda B1 S1	Short-term fuel trim associated with bank 1 sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) = Rich • Stoichiometric air fuel ratio = 1	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
		• Value greater than 1 (1.001 to 1.999) = Lean	
AFS Voltage B1 S1	Air fuel ratio sensor output voltage for bank 1 sensor 1: Min.: 0 V, Max.: 7.999 V	2.6 to 3.8 V: Idling, engine warmed up	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensors
AFS Current B1 S1	Air fuel ratio sensor output current for bank 1 sensor 1: Min.: -128 mA, Max.: 127.99 mA	-0.5 to 0.5 mA: Idling, engine warmed up	Value becomes higher when fuel-cut executed under high engine speed
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2: Min.: 0 V, Max.: 1.275 V	0.0 to 0.9 V: Driving at 44 mph (70 km/h)	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensors
O2S Impedance B1S2	Sub heated oxygen sensor impedance (bank 1 sensor 2): Min.: 0 ohm, Max.: 21247.68 ohm	5 to 15000 ohm: After driving for 10 minutes or more in urban area	-
Short FT #1	Short-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Short-term fuel compensation used to maintain air fuel ratio at stoichiometric air fuel ratio
Long FT #1	Long-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Overall fuel compensation carried out long-term to compensate continual deviation of short-term fuel trim from central value
Total FT #1	Total fuel trim of bank 1 Average value for fuel trim system of bank 1: Min.: -0.5, Max.: 0.496	-0.28 to 0.2: Idling	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Fuel System Status #1	Fuel system status (bank 1): OL or CL or OLDrive or OLFault or CLFault	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using air fuel ratio sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but air fuel ratio sensor, which used for fuel control malfunctioning
Fuel System Status #2	Fuel system status (bank 2): OL or CL or OLDrive or OLFault or CLFault	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using air fuel ratio sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but air fuel ratio sensor, which used for fuel control malfunctioning
IGN Advance	Ignition timing advance for No. 1 cylinder: Min.: -64 deg., Max.:	BTDC 0 to 15 deg.: Idling	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	63.5 deg.		
Knock Feedback Value	Feedback value of knocking: Min.: -64°CA, Max.: 1984°CA	-20 to 0°CA: Driving at 44 mph (70 km/h)	Service data
Knock Correct Learn Value	Correction learning value of knocking: Min.: -64°CA, Max.: 1984°CA	0 to 20°CA: Driving at 44 mph (70 km/h)	Service data
VVT Control Status #1	VVT control (bank 1) status: ON or OFF	-	Active Test support data
VVT Aim Angle #1*2	VVT aim angle (bank 1): Min.: 0%, Max.: 100%	0 to 100%	VVT duty signal value during intrusive operation
VVT Change Angle #1*2	VVT change angle (bank 1): Min.: 0 DegFR, Max.: 60 DegFR	0 to 56 DegFR: Idling	Displacement angle during intrusive operation
VVT OCV Duty #1*2	VVT camshaft timing oil control valve operation duty: Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
VVT Ex Hold Lrn Val #1*2	VVT exhaust hold duty ratio learning value (bank 1): Min.: 0%, Max.: 100%	0 to 100%: Idling	-
VVT Ex Chg Angle #1*2	VVT exhaust change angle (bank 1): Min.: 0 DegFR, Max.: 60 DegFR	0 DegFR: Idling	Displacement angle during intrusive operation (Active Test)
VVT Ex OCV Duty #1*2	VVT exhaust camshaft timing oil control valve duty (bank 1): Min.: 0%, Max.: 100%	0 to 100%: Idling	Requested duty value for intrusive operation (Active Test)
Catalyst Temp B1 S1	Catalyst temperature	Close to catalyst inlet temperature	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	(associated with sensor 1): Min.: -40°C (-40°F), Max.: 6513.5°C (11756.3°F)

Engine Speed of Cyl #1	Engine RPM for cylinder 1: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Active Test not performed
Engine Speed of Cyl #2	Engine RPM for cylinder 2: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Active Test not performed
Engine Speed of Cyl #3	Engine RPM for cylinder 3: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Active Test not performed
Engine Speed of Cyl #4	Engine RPM for cylinder 4: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Active Test not performed
Av Engine Speed of All Cyl	Engine RPM for all cylinders: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Active Test not performed

HINT:

- *1: If no idling conditions are specified, the shift lever should be in N or P, and the A/C switch and all accessory switches should be off.
- *2: Values are only displayed when performing the Active Tests: Control the VVT Linear (Bank1). For other Active Tests, the value will be 0.
- *3: Automatic transaxle models only

2. ACTIVE TEST

HINT:

Using the Techstream to perform the Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Active Test.

(g) According to the display on the Techstream, perform the Active Test.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Injection Volume	Change injection volume	-12.5 to 24.8%	• All injectors tested at the same time • Perform test at less than 3000 rpm • Injection volume can be changed in 1% graduations within control range
Control the Injection Volume for A/F Sensor	Change injection volume	Lower by 12.5% or increase by 24.8%	• Perform test at less than 3000 rpm • Control the Injection Volume for A/F Sensor enables checking and graphing of air fuel ratio sensor and heated oxygen sensor voltage outputs • When conducting the test, select the following items: Active Test / Control the Injection Volume for A/F Sensor / Data List / AFS Voltage B1 S1 and O2S B1 S2
Activate the VSV for EVAP Control	Activate purge VSV control	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Fuel Pump / Speed	Activate fuel pump (C/OPN Relay)	ON/OFF	Test possible when following conditions met: • Ignition switch ON • Engine is stopped
Connect the TC and TE1	Turn on and off TC and CG (TE1) connection	ON/OFF	• ON: TC and TE1 connected • OFF: TC and TE1 disconnected
Control the Idle Fuel Cut Prohibit	Prohibit idling fuel cut control	ON/OFF	Idling fuel-cut turned ON when throttle valve fully closed and engine speed over 2800 rpm
Prohibit the Catalyst OT Misfire prevent F/C	Prohibit catalyst overheat malfunction prevention fuel cut operation during misfire	ON/OFF ON: Fuel cut prohibited	Confirm that vehicle is stopped and engine speed is 3000 rpm or less
Control the Electric Cooling Fan	Control electric cooling fan motor	ON/OFF	-
Activate the Starter Relay	Starter	ON/OFF	-
Activate the ACC Cut Relay	Activate ACC cut relay	ON/OFF	Test is possible when following conditions are met: • Ignition switch ON • Engine is stopped
Control the ETCS Open/Close Slow Speed	Throttle actuator	Close/Open	Test possible when following conditions met: • Ignition switch ON • Engine is stopped • Accelerator pedal fully depressed (Accelerator pedal position: 58 degrees or more)
Control the ETCS Open/Close Fast Speed	Throttle actuator	Close/Open	
Control the VVT Linear (Bank1)	Control VVT (bank 1)	Between -128 and 127% This value added to present camshaft	• Engine stall or rough idle when VVT actuator operated by 100%. • Test possible during idle.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
		timing oil control valve control duty 100%: Maximum advance -100%: Maximum retard	
Control the VVT System (Bank1)	Turn on and off intake camshaft timing oil control valve	ON/OFF	• Engine stalls or idles roughly when camshaft timing oil control valve turned ON • Normal engine running or idling when camshaft timing oil control valve OFF • Test possible during idle.
Control the VVT Exhaust Linear (Bank 1)	Control VVT (Bank 1)	Between -128 and 127% This value added to present camshaft timing oil control valve control duty (Exhaust camshaft) 100%: Maximum retard -100%: Maximum advance	-
Activate the Vacuum Pump	Leak detection pump	ON/OFF	-
Activate the VSV for Vent Valve	Vent valve	ON/OFF	-
Control the Cylinder #1 Fuel Cut	Cylinder #1 injector fuel cut	ON/OFF	Test possible while vehicle stopped and engine idling*1
Control the Cylinder #2 Fuel Cut	Cylinder #2 injector fuel cut	ON/OFF	
Control the Cylinder #3 Fuel Cut	Cylinder #3 injector fuel cut	ON/OFF	
Control the Cylinder #4 Fuel Cut	Cylinder #4 injector fuel cut	ON/OFF	

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the All Cylinder Fuel Cut	All cylinder fuel cut	ON/OFF	
Check the Cylinder Compression *2	Check the cylinder compression pressure (measuring engine speed for each cylinder)	ON/OFF	Fuel injection and ignition stop in all cylinders

NOTICE:

***1: If the display of the Data List Catalyst OT MF F/C item is Not Avl, perform this Active Test with the vehicle stopped and the engine idling. If the display of the Data List Catalyst OT MF F/C item is Avail, perform this Active Test as described below.**

1. Stop the engine and turn the ignition switch to ON to turn Control the Cylinder #1 Fuel Cut (to #4 Fuel Cut) ON.
2. Start the engine.

HINT:

***2: While the Active Test item Check the Cylinder Compression is being performed, the fuel and ignition of all cylinders is cut. At this time, the ECM measures the speed of each cylinder while the engine is being cranked.**

If one cylinder's speed is higher than the others, that cylinder's compression pressure can be concluded to be lower than the others.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the Techstream to the DLC3.
4. Turn the ignition switch to ON.
5. Turn the Techstream ON.
6. Enter the following menus: Powertrain / Engine and ECT / Active Test / Check the Cylinder Compression.
7. Enter the following menus: Compression / Engine Speed of Cyl #1 to #4, Av Engine Speed of All Cyl
8. Press the RIGHT or LEFT button to change the Check the Cylinder Compression to ON.

   HINT:

   Fuel injection and ignition for all cylinders are prohibited at this time, and each cylinder's engine speed measurement will enter standby mode.

9. Crank the engine until the monitor item values Engine speed of Cyl #1 to #4 and Av Engine Speed of All Cyl change.
10. Monitor the engine speed (Engine Speed of Cyl #1 to #4, Av Engine Speed of All Cyl) displayed on the Techstream.

    HINT:

    The Techstream displays extremely high values before cranking the engine. Each cylinder's engine speed is measured while cranking the engine and then the Techstream displays the actual engine

speed values.

NOTICE:

- The Active Test item Check the Cylinder Compression will automatically turn off 255 seconds after the Active Test is turned on.
- When the Check the Cylinder Compression is OFF and the engine is cranked, the engine will start.
- If the Check the Cylinder Compression test needs to be performed again after each cylinder's engine speed measurement has been performed once, press EXIT to return to the Active Test menu screen. Then perform the Check the Cylinder Compression test again.
- Use a fully-charged battery.

3. SYSTEM CHECK

HINT:

Performing a System Check in the Utility menu enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Utility.

(e) Perform the System Check by referring to the table below.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Evaporative System Check (Automatic Mode)	Perform 5 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs in Pending after performing this test, system functioning normally • Refer to EVAP System INFO
Evaporative System Check (Manual Mode)	Perform 5 steps in order to operate EVAP key-off monitor manually	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP System INFO

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDJ0D3X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, an OBD II scan tool (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle ECM (Engine Control Module) can be then read.

OBD II regulations require that the vehicle on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

a. The emission control system and components.
b. The powertrain control components (which affect vehicle emissions).
c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory. If the malfunction does not recur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check the DTCs, connect the Techstream to the DLC3. The Techstream displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be cleared with the Techstream. In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (the Techstream only).

3. 2 TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the subsequent drive cycle, the MIL is illuminated (2nd trip).

4. DLC3 (Data Link Connector 3)

(a) Check DLC3 INFO .

5. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

6. BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If voltage is below 11 V, replace or recharge the battery before proceeding.

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminate when the ignition switch is first turned to ON (the engine is not running).

(b) The MIL should turn off when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:

If the MIL does not illuminate when the ignition switch is first turned to ON, check the MIL circuit INFO .

8. ALL READINESS

HINT:

- With "ALL READINESS", you can check whether or not the DTC judgment has been completed by using the Techstream.
- You should check "ALL READINESS" after simulating malfunction symptoms or for validation after finishing repairs.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON and turn the Techstream on.

(g) Perform the DTC judgment driving pattern to run the DTC judgment.

(h) Enter the following menus: Powertrain / Engine and ECT / Utility / All Readiness.

(i) Input the DTCs to be confirmed.

(j) Check the DTC judgment result.

Techstream

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	• DTC judgment completed

TECHSTREAM DISPLAY	DESCRIPTION
	• System normal
ABNORMAL	• DTC judgment completed • System abnormal
INCOMPLETE	• DTC judgment not completed • Perform the driving pattern after confirming the DTC enabling conditions
UNKNOWN	• Unable to perform DTC judgment • Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

HINT:

Parameters listed in the chart may not be exactly the same as your readings due to the type of instrument or other factors. If a trouble code is displayed during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

*1: The MIL flashes when a catalyst damaging misfire is detected

*2: Automatic Transaxle models

*3: Manual Transaxle models

SFI System

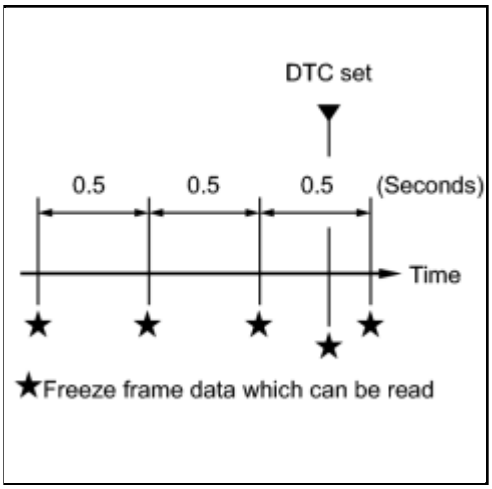
Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDS0AZX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA



1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

HINT:

If it is impossible to replicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the Techstream, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 data sets before the DTC was set.
- 1 data set when the DTC was set.
- 1 data set after the DTC was set.

2. LIST OF FREEZE FRAME DATA

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed	Speed indicated on speedometer
Engine Speed	Engine speed	-
Calculate Load	Calculated load by ECM	-
Vehicle Load	Vehicle load	Load percentage in terms of maximum intake air flow amount

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
MAF	Air flow rate from mass air flow meter	If value approximately 0.0 gm/sec: • Mass air flow meter power source circuit open • VG circuit open or short If value 271.0 gm/sec or more: • E2G circuit open
Atmosphere Pressure	Atmosphere pressure	-
Coolant Temp	Engine coolant temperature	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
Intake Air	Intake air temperature	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
Engine Run Time	Engine run time	-
Initial Engine Coolant Temp	Initial engine coolant temperature	Service data
Initial Intake Air Temp	Initial intake air temperature	Service data
Battery Voltage	Battery voltage	-
Accel Sens. No. 1 Volt %	Accelerator pedal position No. 1	-
Accel Sens. No. 2 Volt %	Accelerator pedal position No. 2	-
Throttle Sensor Volt %	Throttle sensor positioning	Recognition value for throttle opening angle on ECM Read value with ignition switch ON
Throttl Sensor #2 Volt %	Absolute throttle sensor positioning #2	Recognition value for throttle opening angle on ECM Read value with ignition switch ON
Throttle Sensor Position	Throttle sensor positioning	Recognition value for throttle opening angle on ECM Read value with ignition switch ON
Throttle Motor DUTY	Throttle actuator	-
Injector (Port)	Injection direction for cylinder 1	-

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Injection Volum (Cylinder1)	Injection volume (Cylinder 1)	Quantity of fuel injection volume for 10 times
Fuel Pump/Speed Status	Fuel pump/status	Active Test support data
Vacuum Pump	Key-off EVAP system leak detection pump status	Active Test support data
EVAP (Purge) VSV	EVAP (Purge) VSV control duty	Order signal from ECM
Evap Purge Flow	Ratio of evaporative purge flow to intake air volume	Service data
Purge Density Learn Value	Learning value of purge density	Service data
EVAP System Vent Valve	key-off EVAP system vent valve status	Active Test support data
EVAP Purge VSV	VSV status for EVAP control	Active Test support data
Target Air-Fuel Ratio	Ratio compared to stoichiometric level	-
AF Lambda B1 S1	Short-term fuel trim associated with bank 1 sensor 1	-
AFS Voltage B1 S1	Air fuel ratio sensor output voltage for bank 1 sensor 1	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensors
AFS Current B1 S1	Air fuel ratio sensor output current for bank 1 sensor 1	Value becomes higher when fuel-cut executed under high engine speed
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensors
O2S Impedance B1S2	Sub heated oxygen sensor impedance (bank 1 sensor 2)	-
Short FT #1	Short-term fuel trim of bank 1	Short-term fuel compensation used to maintain air fuel ratio at stoichiometric air fuel ratio
Long FT #1	Long-term fuel trim of bank 1	Overall fuel compensation carried out in long-term to compensate continual deviation of short-term fuel trim from central value

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Total FT #1	Total fuel trim	-
Fuel System Status #1	Fuel system status (bank 1)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but heated oxygen sensor, which is used for fuel control, malfunctioning
Fuel System Status #2	Fuel system status (bank 2)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using air fuel ratio sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but air fuel ratio sensor, witch is used for fuel control, malfunctioning
IGN Advance	Ignition timing advance for cylinder 1	-
Knock Feedback Value	Feedback value of knocking	Service data
Knock Correct Learn Value	Correction learning value of knocking	Service data
VVT Control Status #1	VVT control (bank 1) status	Active Test support data
Catalyst Temp B1 S1	Catalyst temperature (associated sensor 1)	-
Catalyst Temp B1 S2	Catalyst temperature (associated sensor 2)	-
Starter Signal	Starter signal	-
Starter Control	Starter control	-

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Starter Relay	Starter relay	-
ACC Relay	ACC relay	-
Neutral Position SW Signal*	Neutral position switch signal	-
Stop Light Switch	Stop light switch status	-
A/C Signal	A/C signal	-
Closed Throttle Position SW	Closed throttle position switch	-
Fuel Cut Condition	Fuel cut condition ON or OFF	-
Electrical Load Signal	Electrical load signal	-
Time after DTC Cleared	Time since DTCs cleared	-
Distance from DTC Cleared	Distance traveled since DTCs cleared	-
Warmup Cycle Cleard DTC	Warm-up cycles since DTCs cleared	Number of warm-up cycles since DTCs cleared
TC and TE1	TC and CG (TE1) terminals of DLC3	Active Test support data
Ignition Trig. Count	Ignition counter to calculated misfire count	-
Cylinder #1 Misfire Count	Misfire count for cylinder 1	-
Cylinder #2 Misfire Count	Misfire count for cylinder 2	-
Cylinder #3 Misfire Count	Misfire count for cylinder 3	-
Cylinder #4 Misfire Count	Misfire count for cylinder 4	-
All Cylinders Misfire Count	All cylinders misfire count	-
Misfire RPM	Average engine speed when misfire occurs	-
Misfire Load	Average engine load when misfire occurred	-

TESTER DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Misfire Margin	Margin to detect engine misfire	Misfire detection margin
Catalyst OT MF F/C	Catalyst over temperature misfire prevention F/C not available	-
Cat OT MF F/C History	Catalyst over temperature misfire prevention F/C history OFF	-
Cat OT MF F/C Cylinder#1	Catalyst over temperature misfire prevention F/C history OFF	-
Cat OT MF F/C Cylinder#2	Catalyst over temperature misfire prevention F/C history OFF	-
Cat OT MF F/C Cylinder#3	Catalyst over temperature misfire prevention F/C history OFF	-
Cat OT MF F/C Cylinder#4	Catalyst over temperature misfire prevention F/C history OFF	-
Electric Fan Motor	Electric cooling fan motor	Active Test support data
Idle Fuel Cut	Fuel cut idle	Idle Fuel Cut = "ON" when throttle valve fully closed and engine speed over 2800 rpm
FC TAU	FC TAU	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete

*: Automatic transaxle models only

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

NOTICE:

When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are cleared. Before changing modes, always check and record DTCs and freeze frame data.

HINT:

- DTCs which are stored in the ECM can be displayed on the Techstream. The Techstream can display the current and pending DTCs.
- Some DTCs are only set if the ECM detects the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check the DTC(s) and freeze frame data, and then save or write them down.

(f) Check the details of the DTC(s) INFO .

2. CLEAR DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Clear DTCs.

3. CLEAR DTC (Without using Techstream)

(a) Perform either of the following operations:

(1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.

(2) Remove the EFI MAIN and ETCS fuses from the engine room relay block located inside the engine compartment for more than 1 minute.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDL0ACX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: CHECK MODE PROCEDURE (2010 Corolla)		

CHECK MODE PROCEDURE

Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect malfunctions that cannot be detected in normal mode.

NOTICE:

All the stored DTCs and freeze frame data are cleared if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or OFF while in check mode. Before changing modes, always check and note any DTCs and freeze frame data.

1. CHECK MODE PROCEDURE

(a) Check and ensure the following conditions:

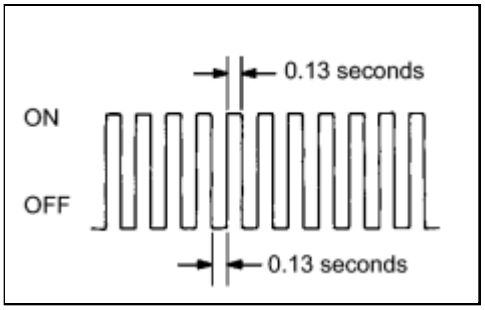
(1) Battery voltage 11 V or more.

(2) Throttle valve fully closed.

(3) Transmission in P or N.

(4) A/C switch OFF.

(b) Turn the ignition switch off.



(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Utility / Check Mode.

(g) Switch the ECM from normal mode to check mode.

(h) Make sure that the MIL flashes as shown in the illustration.

(i) Start the engine.

(j) Make sure that the MIL turns off.

(k) Simulate that the conditions of the malfunction described by the customer.

(l) Check DTCs and freeze frame data using the Techstream.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily or stops fuel injection.

DTC	COMPONENT	FAIL-SAFE OPERATION	FAIL-SAFE DEACTIVATION CONDITION
P0031 P0032	Air fuel ratio sensor heater	ECM turns off air fuel ratio sensor heater	Ignition switch off
P0037 P0038	Heated oxygen sensor heater	ECM turns off heated oxygen sensor heater	Ignition switch off
P0102 P0103	Mass air flow meter	ECM calculates ignition timing according to engine speed and throttle valve position	Pass condition detected
P0112 P0113	Intake air temperature sensor	ECM estimates intake air temperature to be 20°C (68°F)	Pass condition detected
P0115 P0117 P0118	Engine coolant temperature sensor	ECM estimates engine coolant temperature to be 80°C (176°F)	Pass condition detected
P0120 P0121 P0122 P0123 P0220 P0222 P0223 P0601 P0604 P0606 P0607 P060A P060D P060E P0657 P1607 P2102 P2103 P2111 P2112 P2118	Electronic throttle control system	ECM cuts off throttle actuator current and throttle valve returns to the 6° throttle position by return spring ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle, to allow vehicle to continue at minimal speed *1	Pass condition detected and then ignition switch turned off

DTC	COMPONENT	FAIL-SAFE OPERATION	FAIL-SAFE DEACTIVATION CONDITION
P2119 P2135			
P0300 P0301 P0302 P0303 P0304 *2	• Fuel injector • Electronic throttle control system	When a catalyst damaging misfire occurs (MIL blinking), following fail-safe operation performed for catalyst overheat malfunction prevention 1. Under low load and low engine speed ○ Fuel cut performed on malfunctioning cylinder 2. Under high load and high engine speed ○ Throttle valve opening angle control is performed ○ All cylinder fuel cut or malfunctioning cylinder fuel cut performed	Pass condition detected and then ignition switch turned off
P0325 P0327 P0328	Knock Sensor	ECM sets ignition timing to maximum retard	Ignition switch off
P0351 to P0354	Igniter	ECM cuts fuel	Pass condition detected
P2120 P2121 P2122 P2123 P2125 P2127 P2128 P2138	Accelerator pedal position sensor	Accelerator pedal position sensor has 2 sensor circuits: Main and Sub. If either circuit malfunctions, ECM controls engine using the other circuit. If both circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.	Pass condition detected and then ignition switch turned off

HINT:

- *1: The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.
- *2: Misfire related fail-safe operations occur when catalyst overheat malfunctions occur.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0010: Camshaft Position "A" Actuator Circuit (Bank 1) (2010 Corolla)		

DTC	**P0010**	**Camshaft Position "A" Actuator Circuit (Bank 1)**

DESCRIPTION

The VVT (variable valve timing) system adjusts the intake valve timing to improve driveability. The engine oil pressure turns the VVT controller to adjust the valve timing.

The camshaft timing oil control valve is a solenoid valve and switches the engine oil line. The valve moves when the ECM applies the 12 V to the solenoid. The ECM changes the energizing time to the solenoid (duty-cycle) in accordance with the camshaft position, crankshaft position, throttle position, etc.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0010	Open or short in camshaft timing oil control valve (for intake camshaft) circuit	• Open or short in camshaft timing oil control valve assembly (for intake camshaft) circuit

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	(1 trip detection logic)	• Camshaft timing oil control valve assembly (for intake camshaft) • ECM

MONITOR DESCRIPTION

This DTC is designed to detect open or short circuits in the camshaft timing oil control valve (for intake camshaft) circuit. If the camshaft timing oil control valve's duty-cycle is excessively high or low while the engine is running, the ECM will illuminate the MIL and set the DTC.

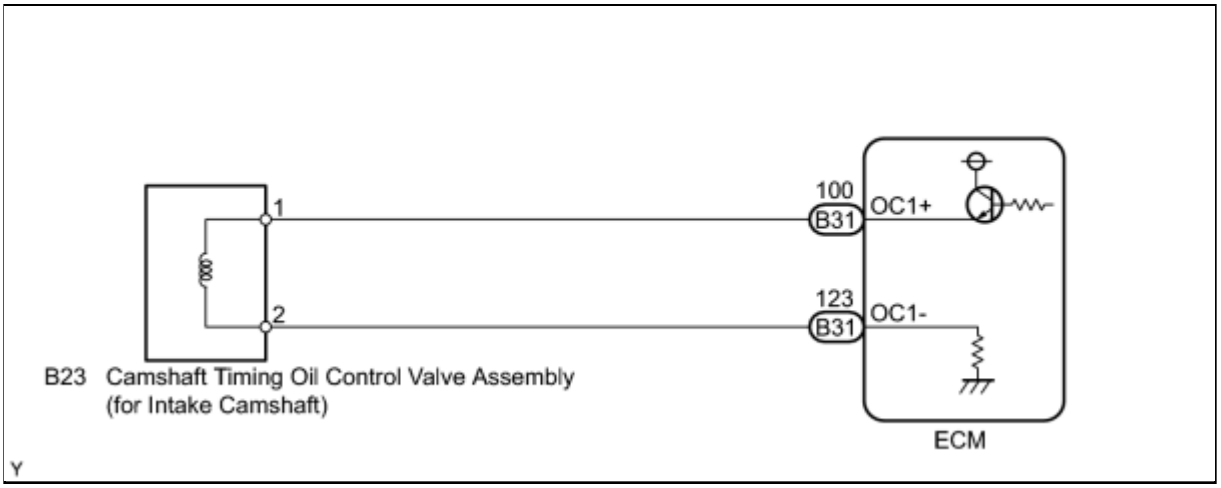
MONITOR STRATEGY

Related DTCs	P0010 Camshaft timing oil control valve range check (bank 1)
Required Sensors/Components (Main)	Camshaft timing oil control valve
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
All of following conditions met	-
Starter	OFF
Ignition switch	ON
Time after ignition switch off to ON	0.5 seconds or more

TYPICAL MALFUNCTION THRESHOLDS



One of following conditions met	-
A. All of following conditions met	-
Battery voltage	11 to 13 V

Target duty ratio	Less than 70 %
Output signal duty ratio	100 %
B. All of following conditions met	-
Battery voltage	13 V or more
Target duty ratio	Less than 80 %
Current cut status	Not cut
Output signal duty	3 % or less

COMPONENT OPERATING RANGE

Camshaft timing oil control valve duty ratio	3 to 100 %

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Turn the A/C switch to ON.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(f) Check the engine speed while operating the camshaft timing oil control valve assembly (for intake camshaft) using the Techstream.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve assembly OFF	Normal engine speed
Camshaft timing oil control valve assembly ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

HINT:

If the result is not acceptable, cool the engine and perform the Active Test again.

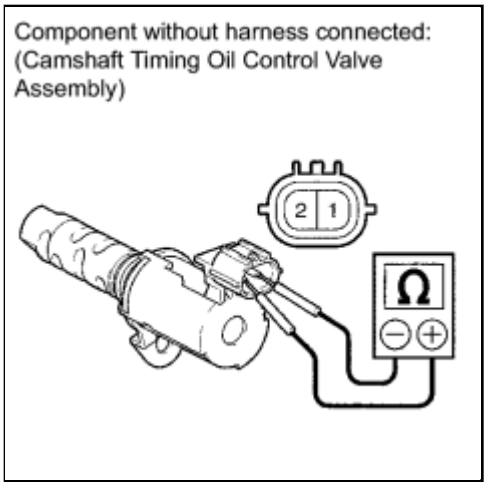
(g) Start the engine when the engine coolant temperature is 30°C (86°F) or less.

(h) Turn the Techstream on.

(i) Turn the A/C switch to ON.

(j) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(k) Check the engine speed while operating the camshaft timing oil control valve assembly (for intake camshaft) using the Techstream with the engine coolant temperature is 50°C (122°F) or less.



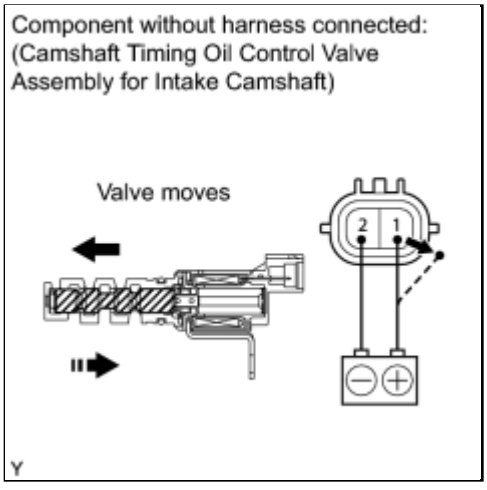
Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve assembly OFF	Normal engine speed
Camshaft timing oil control valve assembly ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

NG ▶ **INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR INTAKE CAMSHAFT)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR INTAKE CAMSHAFT)**



(a) Remove the camshaft timing oil control valve assembly (for intake camshaft).

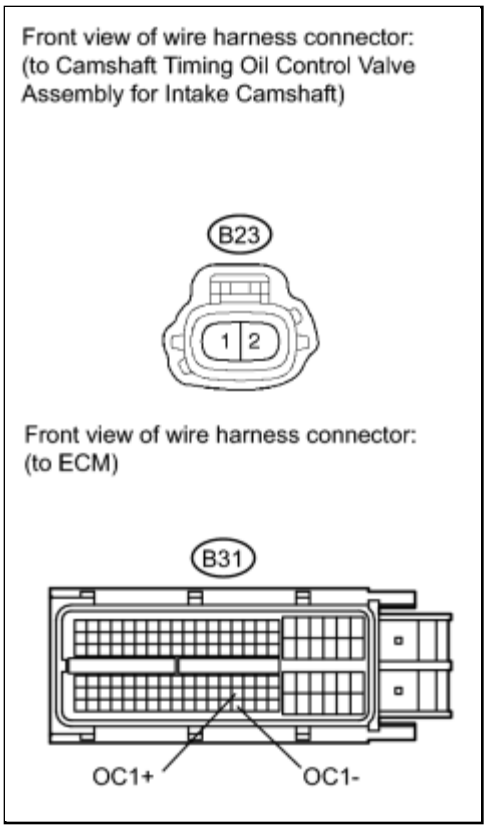
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Apply battery voltage to terminals of the camshaft timing oil control valve assembly (for intake camshaft). Check the valve operation.

OK:



Valve moves quickly.

(d) Reinstall the camshaft timing oil control valve assembly (for intake camshaft).

NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR INTAKE CAMSHAFT)**

OK

3.	**CHECK HARNESS AND CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**

(a) Disconnect the camshaft timing oil control valve assembly (for intake camshaft) connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B23-1 - B31-100 (OC1+)	Always	Below 1 Ω
B23-2 - B31-123 (OC1-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B23-1 or B31-100 (OC1+) - Body ground	Always	10 kΩ or higher
B23-2 or B31-123 (OC1-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the camshaft timing oil control valve assembly (for intake camshaft) connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0011,P0012: Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1) (2010 Corolla)		

DTC	**P0011**	**Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)**

DTC	**P0012**	**Camshaft Position "A" - Timing Over-Retarded (Bank 1)**

DESCRIPTION

Refer to DTC P0010 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0011	Valve timing is not adjusted in valve timing advance range (1 trip detection logic)	• Valve timing • Camshaft timing oil control valve assembly (for intake camshaft) • Oil control valve filter • Camshaft timing gear assembly (for intake camshaft) • ECM
P0012	Valve timing is not adjusted in valve timing retard range (2 trip detection logic)	

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the camshaft timing oil control valve and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve assembly. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.

If the difference between the target and actual intake valve timing is large, and changes in the actual intake valve timing are small, the ECM interprets this as a VVT controller stuck malfunction and sets a DTC.

Example:
A DTC is set when the following conditions "A" and "B" are met:

a. It takes 5 seconds or more to change the valve timing by 5°CA (Condition "A").
b. After the above condition is met, the camshaft timing oil control valve is forcibly activated 10 seconds (Condition "B").

The monitor will run if all of the following conditions are met:
DTC P0011 (Advanced Cam Timing) is subject to 1 trip detection logic.

DTC P0012 (Retarded Cam Timing) is subject to 2 trip detection logic.
These DTCs indicate that the VVT controller cannot operate properly due to camshaft timing oil control valve assembly malfunctions or the presence of foreign objects in the camshaft timing oil control valve assembly.

- The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
- The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
- The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing P0012: Retarded camshaft timing
Required Sensors/Components (Main)	Camshaft timing oil control valve and VVT controller
Required Sensors/Components (Related)	Crankshaft position sensor Camshaft position sensor Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds
MIL Operation	Advanced camshaft timing: Immediate Retarded camshaft timing: 2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0010 (VVT Oil Control Valve Bank 1) P0016 (VVT System Bank 1 - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor)
Battery voltage	11 V or more
Engine RPM	500 to 4000 rpm
Engine coolant temperature	75 to 100°C (167 to 212°F)

TYPICAL MALFUNCTION THRESHOLDS

Advanced Camshaft Timing

All of following conditions are met	-
Deviation of actual valve timing and target valve timing	More than 5°CA (crankshaft angle)
Valve timing	No change at advanced (retarded) valve timing

Retarded Camshaft Timing

All of following conditions are met	-
Deviation of actual valve timing and target valve timing	More than 5°CA (crankshaft angle)
Valve timing	No change at retarded valve timing

If the difference between the target and actual camshaft timing is greater than the specified value, the ECM operates the VVT actuator (camshaft timing oil control valve assembly).

Then, the ECM monitors the camshaft timing change for 10 seconds.

WIRING DIAGRAM

Refer to DTC P0010 INFO .

INSPECTION PROCEDURE

NOTICE:

DTC P0011 or P0012 may be set when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain set even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011 OR P0012)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0011 or P0012 is output	A
DTC P0011 or P0012 and other DTCs are output	B

HINT:

If any DTCs other than P0011 or P0012 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

Camshaft timing oil control valve duty ratio	3 to 100 %

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If DTC P0013 is displayed, check the VVT system (for exhaust camshaft) circuit.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**PERFORM ACTIVE TEST USING USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Turn the A/C switch to ON.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT Exhaust Linear (Bank 1).

(f) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust camshaft) using the Techstream.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0% (OFF)	Normal engine speed
127% (ON)	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

HINT:

If the result is not acceptable, cool the engine and perform the Active Test again.

(g) Start the engine when the engine coolant temperature is 30°C (86°F) or less.

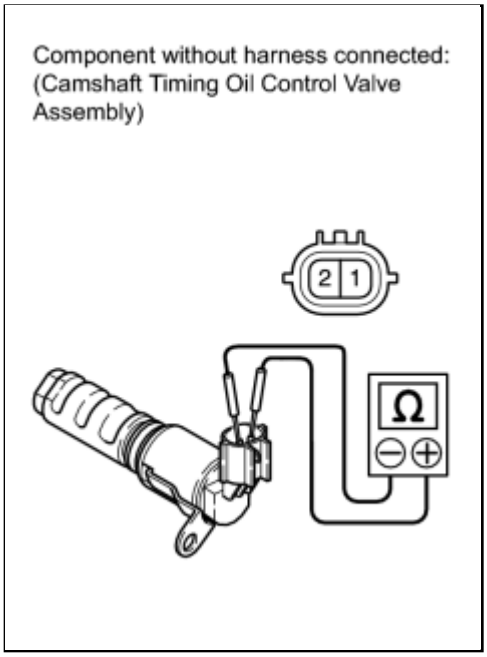
(h) Turn the Techstream on.

(i) Turn the A/C switch to ON.

(j) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT Exhaust Linear (Bank 1).

(k) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust camshaft) using the Techstream with the engine coolant temperature is 50°C (122°F) or less.

Result:



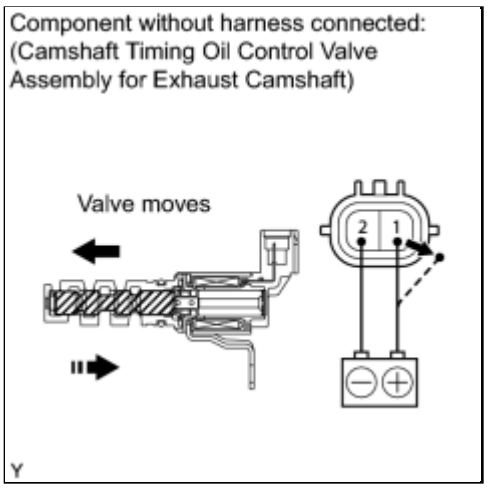
TECHSTREAM OPERATION	SPECIFIED CONDITION
0% (OFF)	Normal engine speed

TECHSTREAM OPERATION	SPECIFIED CONDITION
127% (ON)	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

NG ▶ **INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**



(a) Remove the camshaft timing oil control valve assembly (for exhaust camshaft).

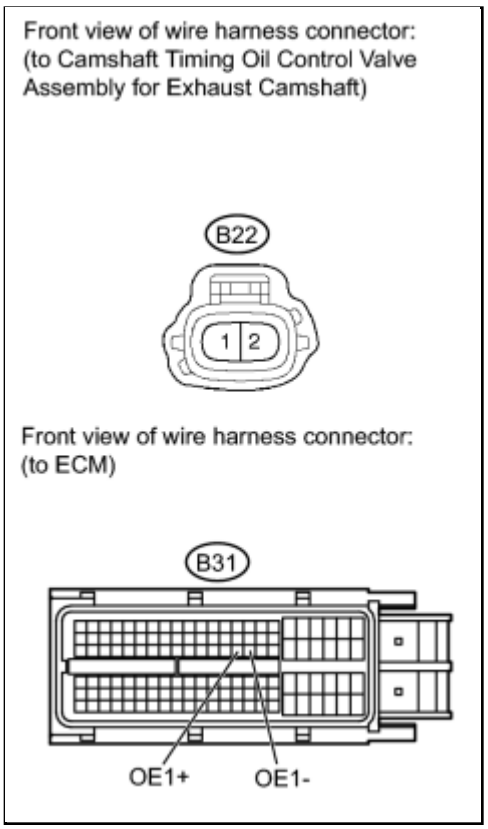
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Apply battery voltage to terminals of the camshaft timing oil control valve assembly (for exhaust camshaft). Check the valve operation.

OK:
Valve moves quickly.



(d) Reinstall the camshaft timing oil control valve assembly (for exhaust camshaft).

NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**

(a) Disconnect the camshaft timing oil control valve assembly (for exhaust camshaft) connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B22-1 - B31-60 (OE1+)	Always	Below 1 Ω
B22-2 - B31-61 (OE1-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B22-1 or B31-60 (OE1+) - Body ground	Always	10 kΩ or higher
B22-2 or B31-61 (OE1-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the camshaft timing oil control valve assembly (for exhaust camshaft) connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**

OK ▶ **REPLACE ECM**

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XH805EX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0014,P0015: Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 1) (2010 Corolla)		

DTC	**P0014**	**Camshaft Position "B" - Timing Over-Advanced or System Performance (Bank 1)**

DTC	**P0015**	**Camshaft Position "B" - Timing Over-Retarded (Bank 1)**

DESCRIPTION

Refer to DTC P0013 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0014	Valve timing is not adjusted in exhaust valve timing advance range (2 trip detection logic)	• Valve timing • Camshaft timing oil control valve assembly (for exhaust camshaft) • Oil control valve filter • Camshaft timing gear assembly (for exhaust camshaft) • ECM
P0015	Valve timing is not adjusted in exhaust valve timing retard range (1 trip detection logic)	

MONITOR DESCRIPTION

The ECM optimizes the exhaust valve timing using the VVT (Variable Valve Timing) system to control the exhaust camshaft. The VVT system includes the ECM, the camshaft timing oil control valve and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve assembly. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the exhaust camshaft.

If the difference between the target and actual exhaust valve timing is large, and changes in the actual exhaust valve timing are small, the ECM interprets this as the VVT controller stuck malfunction and sets a DTC.

Example:
A DTC is set when the following conditions 1, 2 and 3 are met:

a. The difference between the target and actual exhaust valve timing is more than 5°CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds.
b. It takes 5 seconds or more to change the valve timing by 5°CA.
c. After above conditions 1 and 2 are met, the camshaft timing oil control valve assembly is forcibly activated during 10 seconds.

DTC P0014 (Advanced Cam Timing) is subject to 2 trip detection logic.
DTC P0015 (Retarded Cam Timing) is subject to 1 trip detection logic.
These DTCs indicate that the VVT controller cannot operate properly due to camshaft timing oil control valve assembly malfunctions or the presence of foreign objects in the camshaft timing oil control valve assembly.
The monitor will run if all of the following conditions are met:

- The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
- The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
- The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0014: Advanced camshaft timing P0015: Retarded camshaft timing
Required Sensors/Components (Main)	Camshaft timing oil control valve and VVT controller
Required Sensors/Components (Related)	Crankshaft position sensor Camshaft position sensor Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds
MIL Operation	Advanced camshaft timing: 2 driving cycles Retarded camshaft timing: Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0013 (Exhaust Oil Control Valve) P0017 (Exhaust VVT System - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor)

Refer to DTC P0013 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0014 OR P0015)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0014 or P0015 is output	A
DTC P0014 or P0015 and other DTCs are output	B

HINT:

If any DTCs other than P0014 or P0015 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Turn the A/C switch to ON.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT Exhaust Linear (Bank 1).

(f) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust camshaft) using the Techstream.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0% (OFF)	Normal engine speed
127% (ON)	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

HINT:

If the result is not acceptable, cool the engine and perform the Active Test again.

(g) Start the engine when the engine coolant temperature is 30°C (86°F) or less.

(h) Turn the Techstream on.

(i) Turn the A/C switch to ON.

(j) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT Exhaust Linear (Bank 1).

(k) Check the engine speed while operating the camshaft timing oil control valve assembly (for exhaust camshaft) using the Techstream with the engine coolant temperature is 50°C

(122°F) or less.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
0% (OFF)	Normal engine speed
127% (ON)	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

NG ▶ **INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**

3.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P0014 OR P0015)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

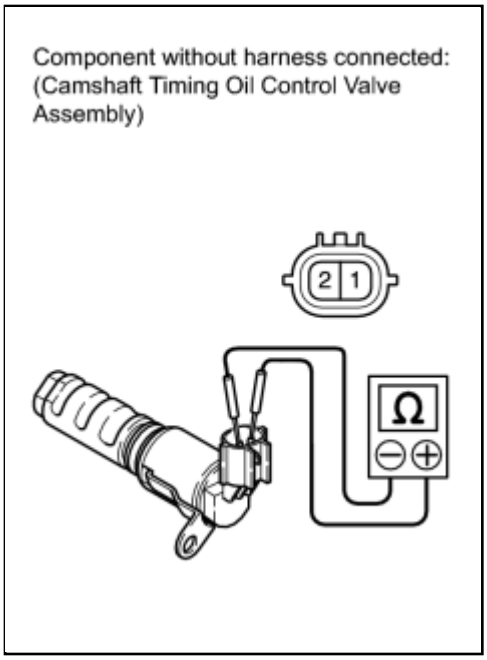
(e) Start the engine and warm it up.

(f) Allow the engine to idle for 3 minutes or more.

(g) Drive the vehicle for more than 10 minutes.

(h) Select the following menu items: Powertrain / Engine and ECT / Trouble Codes / Pending.

(i) Read DTCs.



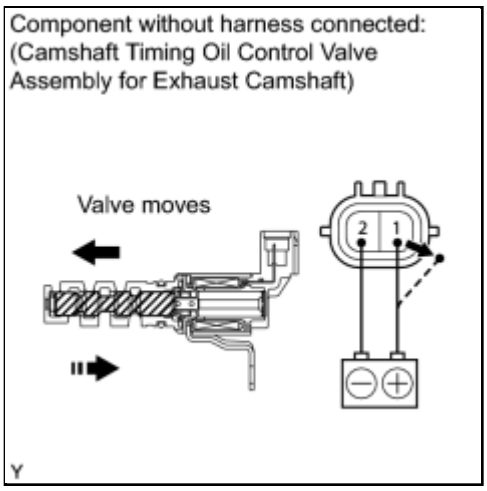
Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0014 or P0015 is output	B

B ▶ **ADJUST VALVE TIMING**

A ▶ CHECK FOR INTERMITTENT PROBLEMS

4.	**INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**



(a) Remove the camshaft timing oil control valve assembly (for exhaust camshaft) INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Apply the positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.

OK:

Valve moves quickly.

(d) Reinstall the camshaft timing oil control valve assembly (for exhaust camshaft) INFO .

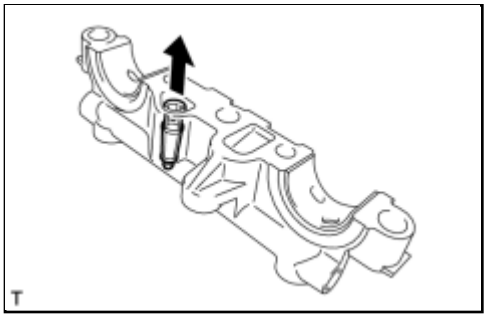
NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR EXHAUST CAMSHAFT)**

OK
▼

5.	**INSPECT CAMSHAFT TIMING GEAR ASSEMBLY (FOR EXHAUST CAMSHAFT)**

(a) Inspect the camshaft timing gear assembly (for exhaust camshaft) INFO .

NG ▶ **REPLACE CAMSHAFT TIMING GEAR ASSEMBLY (FOR EXHAUST CAMSHAFT)**



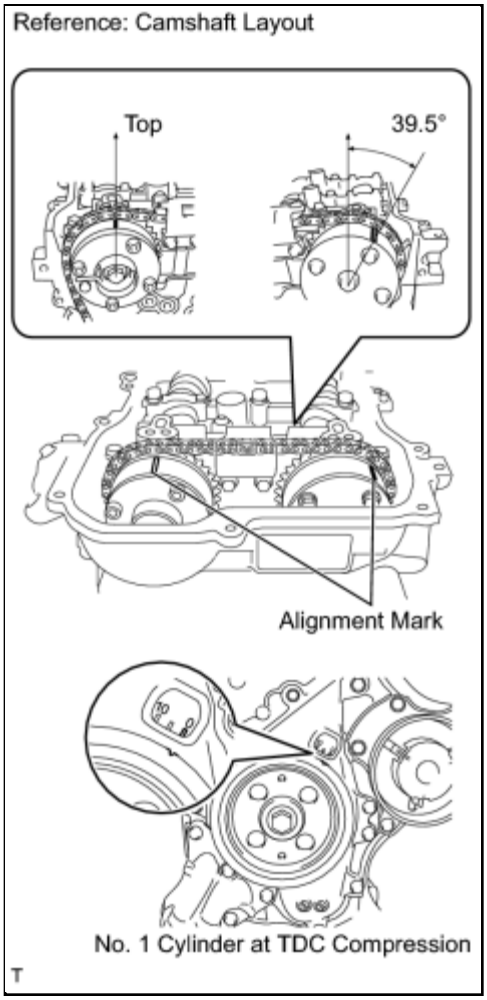
OK
▼

6.	**INSPECT OIL CONTROL VALVE FILTER**

(a) Remove the oil control valve filter INFO .

(b) Check that the filter is not clogged.

OK:
Filter is not clogged.



(c) Reinstall the oil control valve filter INFO .

NG ▶ **REPLACE OIL CONTROL VALVE FILTER**

OK

7.	ADJUST VALVE TIMING

HINT:

There are no marks on the cylinder head to match-up for the purpose of checking valve timing. Valve timing can only be inspected by lining up the colored plates on the timing chain with the marks on the pulleys. It may be necessary to remove and reinstall the chain to match-up the alignment marks INFO .

NEXT

8.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0014 OR P0015)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDV093X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0016,P0017: Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A) (2010 Corolla)		

DTC	**P0016**	**Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)**

DTC	**P0017**	**Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor B)**

DESCRIPTION

The ECM optimizes the valve timing by using the VVT (Variable Valve Timing) system to control the intake and exhaust camshaft. The VVT system includes the ECM, the camshaft timing oil control valve and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve assembly.

This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake and exhaust camshafts.

DTC NO.	DETECTION CONDITION	TROUBLE AREA
P0016	Deviation in crankshaft position sensor signal and camshaft position sensor (for intake camshaft) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped tooth or chain stretched) • Camshaft timing oil control valve assembly (for intake camshaft) • Camshaft timing gear assembly (for intake camshaft) • ECM
P0017	Deviation in crankshaft position sensor signal and camshaft position sensor (for exhaust camshaft) signal (2 trip detection logic)	• Mechanical system (Timing chain has jumped tooth or chain stretched) • Camshaft timing oil control valve assembly (for exhaust camshaft) • Camshaft timing gear assembly (for exhaust camshaft) • ECM

MONITOR DESCRIPTION

To monitor the correlation of the intake camshaft position and crankshaft position, the ECM checks the VVT learning value while the engine is idling. The VVT learning value is calibrated based on the

camshaft position and crankshaft position. The intake valve timing is set to the most retarded angle while the engine is idling. If the VVT learning value is out of specified range in consecutive driving cycles, the ECM illuminates the MIL and sets the DTC P0016.

To monitor the correlation of the exhaust camshaft position and crankshaft position, the ECM checks the VVT learning value while the engine is idling. The VVT learning value is calibrated based on the camshaft position and crankshaft position. The exhaust valve timing is set to the most advanced angle while the engine is idling. If the VVT learning value is out of specified range in consecutive driving cycles, the ECM illuminates the MIL and sets the DTC P0017.

This DTC indicates that the intake camshaft has been installed toward the crankshaft at an incorrect angle, caused by factors such as the timing chain having jumped a tooth.

This monitor begins to run after the engine has idled for 5 minutes.

MONITOR STRATEGY

Related DTCs	P0016: Camshaft Timing Misalignment at idling (for intake camshaft) P0017: Camshaft Timing Misalignment at idling (for exhaust camshaft)

Monitor runs whenever following DTCs not present	P0013 (Exhaust Oil Control Valve) P0017 (Exhaust VVT System - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor)
Engine RPM	500 to 1000 rpm

TYPICAL MALFUNCTION THRESHOLDS

P0016 (Intake Side)

One of following conditions is met	-
VVT learning value at maximum retarded valve timing	Less than 22°CA (crankshaft angle)
VVT learning value at maximum retarded valve timing	More than 47°CA (crankshaft angle)

P0017 (Exhaust Side)

One of following conditions is met	-
VVT learning value at maximum retarded valve timing	Less than 82.5°CA (crankshaft angle)
VVT learning value at maximum retarded valve timing	More than 104.4°CA (crankshaft angle)

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. Freeze frame data records the engine conditions when malfunctions are detected. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, and other data from the time the malfunction occurred.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0016 AND P0017)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0016 or P0017 is output	A
DTC P0016 or P0017 and other DTCs are output	B

HINT:

If any DTCs other than P0016 or P0017 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine.

(e) Check the camshaft timing oil control valve assembly for intake camshaft.

(1) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(2) Select the following Data List items: VVT Change Angle (Bank 1) and VVT OCV Duty (Bank 1).

(3) Check that the VVT Change Angle (Bank 1) varies when operating the camshaft timing oil control valve assembly (for intake camshaft) using the Techstream.

OK:

The VVT Change Angle (Bank 1) value and engine speed vary.

(f) Check the camshaft timing oil control valve assembly for exhaust camshaft.

(1) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT Exhaust Linear (Bank 1).

(2) Select the following monitor items: VVT Ex Chg Angle (Bank 1) and VVT Ex OCV Duty (Bank 1).

(3) Check that the VVT Ex Chg Angle (Bank 1) value varies when operating the camshaft timing oil control valve assembly (for exhaust camshaft) using the Techstream.

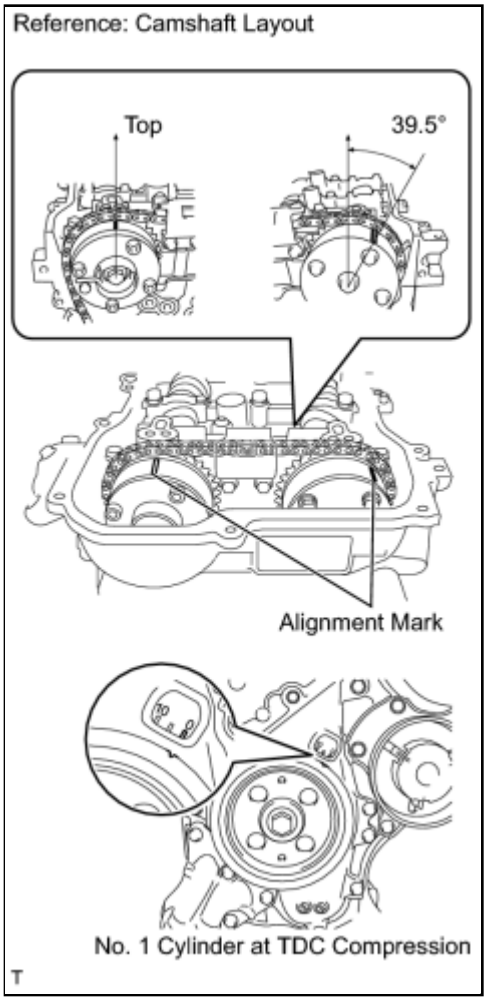
OK:

The VVT Ex Chg Angle (Bank1) value and engine speed vary.

HINT:

If the VVT system can be operated using the Active Test, it can be assumed that the VVT system is operating normally.

NG ▶ **INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (FOR INTAKE AND/OR EXHAUST CAMSHAFT)**



OK
▼

3.	**ADJUST VALVE TIMING**

HINT:

There are no marks on the cylinder head to match-up for the purpose of checking valve timing. Valve timing can only be inspected by lining up the colored plates on the timing chain with the marks on the pulleys. It may be necessary to remove and reinstall the chain to match-up the alignment marks INFO **.**

NEXT
▼

4.	CONFIRM WHETHER MALFUNCTION HAS BEEN SUCCESSFULLY REPAIRED

(a) In order to clear the ECM's learned values for valve timing, disconnect the cable from the negative (-) battery terminal for 1 minute.

(b) Reconnect the cable to the negative (-) battery terminal.

(c) Connect the Techstream to the DLC 3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Clear DTCs INFO .

(g) Start the engine and warm it up.

(h) Allow the engine to idle for 5 minutes or more.

(i) Drive the vehicle with a city drive pattern for more than 10 minutes.

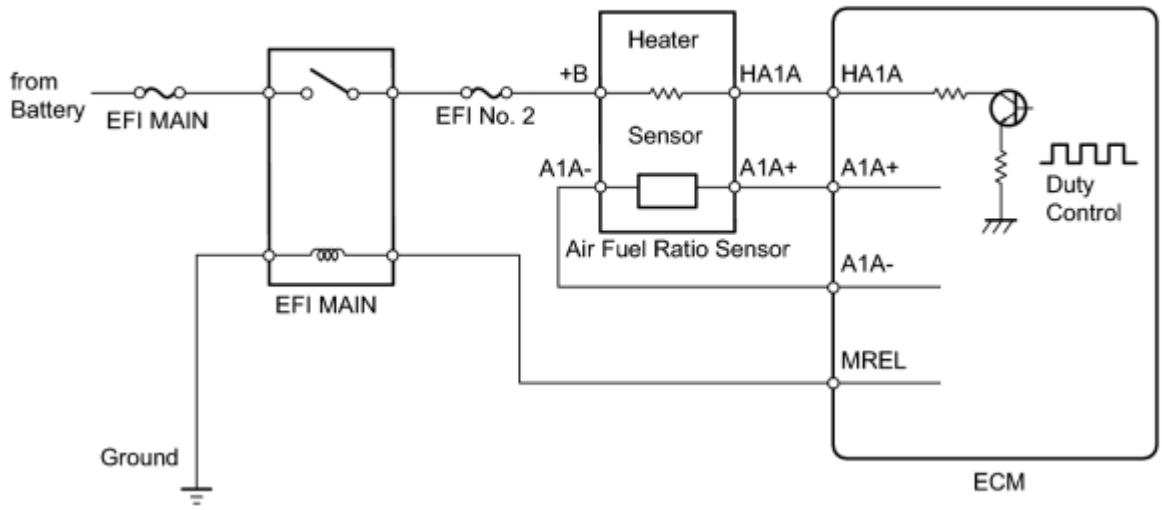
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0031,P0032: Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P0031**	**Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)**

DTC	**P0032**	**Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)**



DESCRIPTION

Refer to DTC P2195 INFO .

HINT:

- When either of these DTCs is set, the ECM enters fail-safe mode. The ECM turns off the air fuel ratio sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- Although the DTC titles say the oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-way catalytic converter and located near the engine assembly.
- The ECM uses pulse width modulation to adjust the current through the heater. The air fuel ratio sensor heater circuit uses a relay on the +B side of the circuit.

Reference (System Diagram of Sensor 1):

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0031	Air fuel ratio sensor heater current less than 0.8 A (1 trip detection logic)	• Open in air fuel ratio sensor heater circuit • Air fuel ratio sensor heater (sensor 1) • ECM
P0032	Air fuel ratio sensor heater current fail (1 trip detection logic)	• Short in air fuel ratio sensor heater circuit • Air fuel ratio sensor heater (sensor 1) • ECM

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The ECM uses information from the air fuel ratio sensor to regulate the air fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the three-way catalytic converter to purify the exhaust gases.

The air fuel ratio sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The air fuel ratio sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the air fuel ratio sensor becomes inaccurate, as a result, the ECM is unable to regulate air fuel ratio properly.

When the current in the air fuel ratio sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

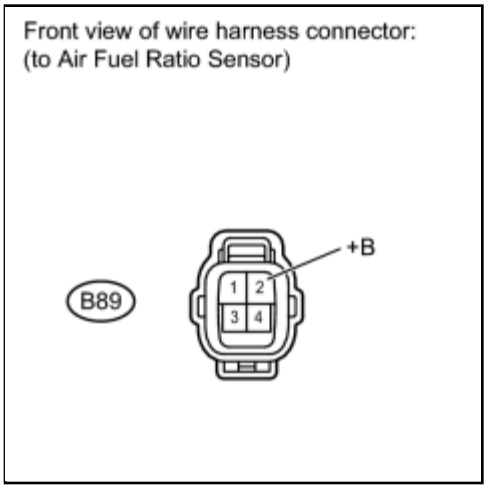
PROCEDURE

1.	**INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)**

(a) Disconnect the air fuel ratio sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (HA1A) - 2 (+B)	20°C (68°F)	1.8 to 3.4 Ω
1 (HA1A) - 4 (A1A-)	Always	10 kΩ or higher

(c) Reconnect the air fuel ratio sensor connector.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK

2.	CHECK TERMINAL VOLTAGE (POWER SOURCE)

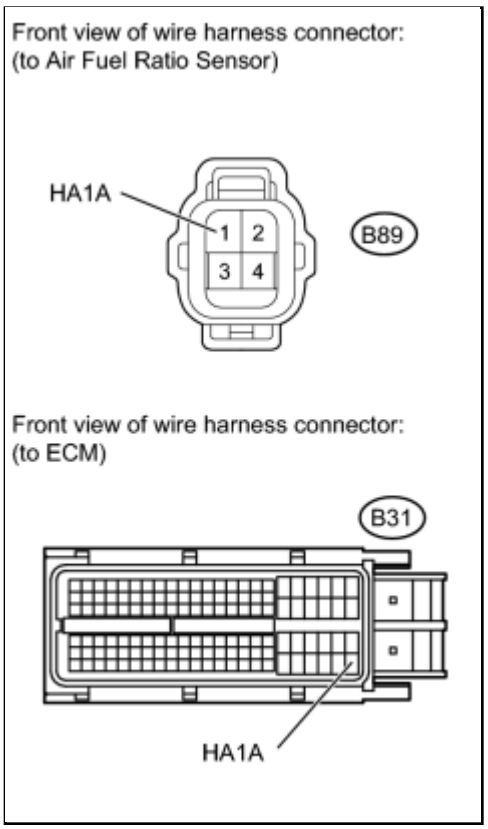
(a) Disconnect the air fuel ratio sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B89-2 (+B) - Body ground	Ignition switch ON	11 to 14 V



(d) Reconnect the air fuel ratio sensor connector.

NG ▶ **INSPECT FUSE (EFI NO. 2 FUSE)**

OK

3.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)

(a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B89-1 (HA1A) - B31-109 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B89-1 (HA1A) or B31-109 (HA1A) - Body ground	Always	10 kΩ or higher

(d) Reconnect the air fuel ratio sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**

OK ▼

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0031 OR P0032)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

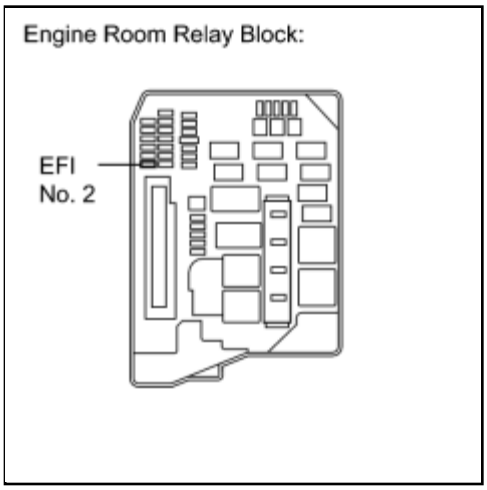
(d) Clear DTCs INFO .

(e) Start the engine.

(f) Allow the engine to idle for 1 minute or more.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.



Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0031 or P0032 is output	B

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

5.	INSPECT FUSE (EFI NO. 2 FUSE)

(a) Remove the EFI No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 2 fuse.

NG ▶ **REPLACE FUSE (EFI NO. 2)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - AIR FUEL RATIO SENSOR)**

DESCRIPTION

Refer to DTC P0136 INFO .

HINT:

- Sensor 2 refers to the sensor mounted behind the three-way catalytic converter and located far from the engine assembly.
- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the heated oxygen sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- The ECM uses pulse width modulation to adjust the current through the heater. The heated oxygen sensor heater circuit uses a relay on the +B side of the circuit.

Reference (System Diagram of Sensor 2):

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0037	Heated oxygen sensor (sensor 2) heater current less than 0.3 A (1 trip detection logic)	• Open in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM
P0038	Heated oxygen sensor (sensor 2) heater current more than 2 A (1 trip detection logic)	• Short in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM
P0141	Cumulative heater resistance correction value exceeds the acceptable threshold (2 trip detection logic)	• Open or short in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The sensing portion of the heated oxygen sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

Heated Oxygen Sensor Heater Range Check (P0037 and P0038):

The ECM monitors the current applied to the heated oxygen sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM will determine that there is an open circuit in the heater. If the current is above the threshold value, the ECM will determine that there is a short circuit in the heater.

Example:

The ECM sets DTC P0038 when the current in the heated oxygen sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 is set.

Heated Oxygen Sensor Heater Performance (P0141):

After the accumulated heater ON time exceeds 100 seconds, the ECM calculates the heater resistance using the battery voltage and the current applied to the heater. If the resistance is above the threshold

value, the ECM will determine that there is a malfunction in the heated oxygen sensor heater and set DTC P0141.

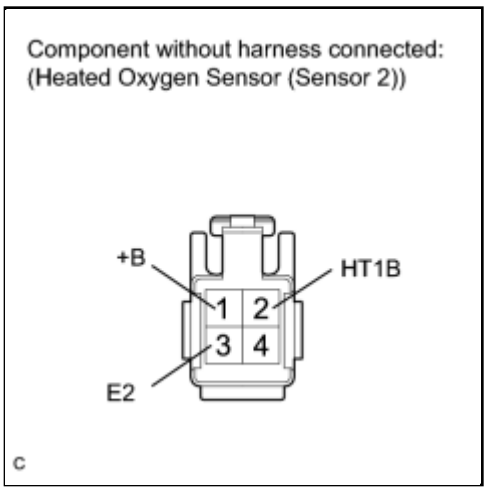
INSPECTION PROCEDURE



HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in

determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

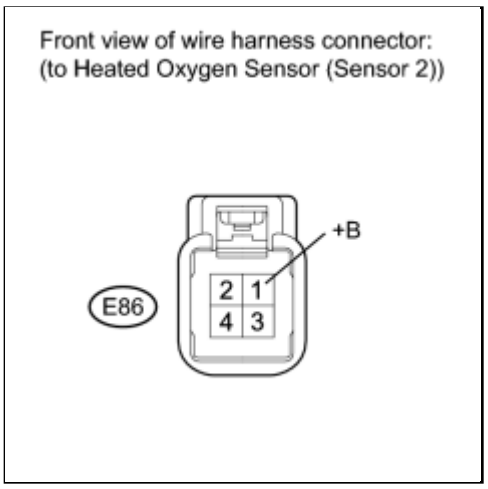
1.	**INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)**

(a) Disconnect the heated oxygen sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (HT1B) - 1 (+B)	20°C (68°F)	11 to 16 Ω
2 (HT1B) - 3 (E2)	Always	10 kΩ or higher



(c) Reconnect the heated oxygen sensor connector.

NG ▶ **REPLACE HEATED OXYGEN SENSOR**

OK ▼

2.	**CHECK TERMINAL VOLTAGE (POWER SOURCE)**

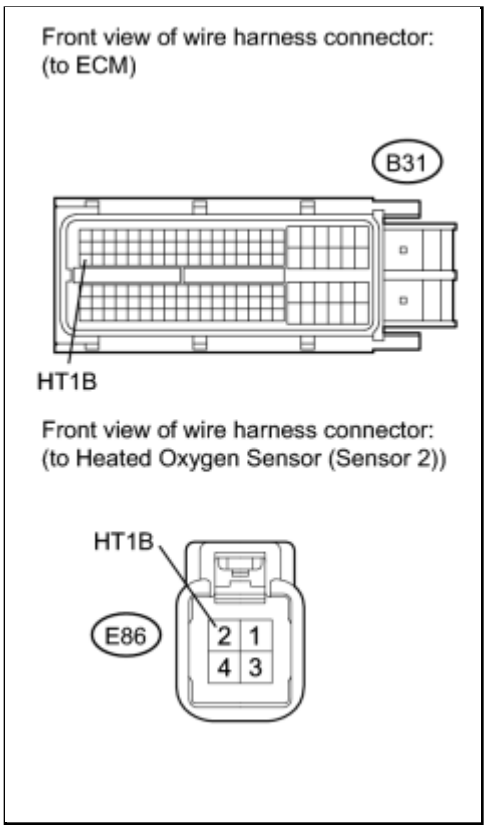
(a) Disconnect the heated oxygen sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E86-1 (+B) - Body ground	Ignition switch ON	11 to 14 V



(d) Reconnect the heated oxygen sensor connector.

NG ▶ **INSPECT FUSE (EFI NO. 1 FUSE)**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)**

(a) Disconnect the heated oxygen sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E86-2 (HT1B) - B31-47 (HT1B)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E86-2 (HT1B) or B31-47 (HT1B) - Body ground	Always	10 kΩ or higher

(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (HEATED OXYGEN SENSOR - ECM)**

OK ▼

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0037, P0038 OR P0141)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

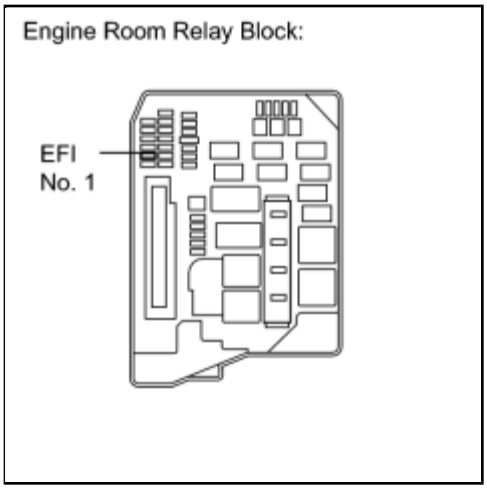
(e) Start the engine.

(f) Select the ECM from normal mode to check mode using the Techstream.

(g) Allow the engine to idle for 1 minute or more.

(h) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(i) Read the DTCs.



Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0037, P0038 or P0141 is output	B

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

5.	INSPECT FUSE (EFI NO. 1 FUSE)

(a) Remove the EFI No.1 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 1 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 1 fuse.

NG ▶ **REPLACE FUSE (EFI NO. 1)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - HEATED OXYGEN SENSOR)**

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0101: Mass Air Flow Circuit Range / Performance Problem (2010 Corolla)		

DTC	**P0101**	**Mass Air Flow Circuit Range / Performance Problem**

DESCRIPTION

Refer to DTC P0102 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0101	Conditions (a), (b), (c), (d) and (e) continue for more than 10 seconds (2 trip detection logic): (a) Engine running (b) Engine coolant temperature 70°C (158°F) or higher (c) Throttle position sensor voltage 0.24 to 2 V (d) Average engine load value ratio less than 0.85, or more than 1.28 (varies with estimated engine load) Average engine load value ratio = Average engine load based on mass air flow meter output / Average engine load estimated from driving conditions (e) Average air fuel ratio less than -20%, or more than 20%	• Mass air flow meter • Intake system • PCV hose connections

MONITOR DESCRIPTION

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air fuel ratio. Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to the mass air flow meter. The voltage level is proportional to the air flow through the sensor, and the ECM uses it to calculate the intake air volume.

The ECM monitors the average engine load value ratio to check the mass air flow meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the mass air flow meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.

If this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000U5B09BX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0102,P0103: Mass or Volume Air Flow Circuit Low Input (2010 Corolla)		

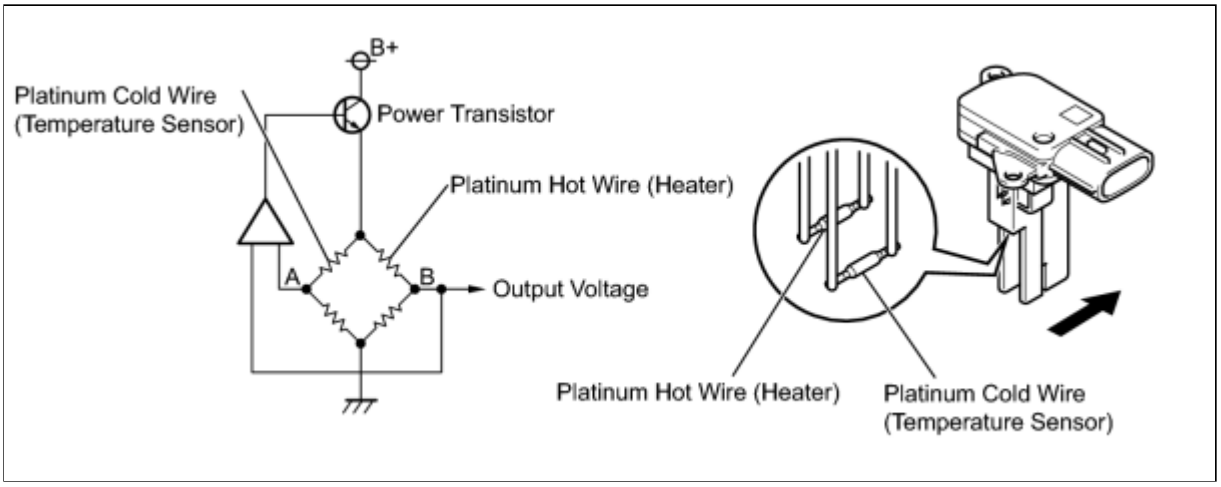
DTC	**P0102**	**Mass or Volume Air Flow Circuit Low Input**

DTC	**P0103**	**Mass or Volume Air Flow Circuit High Input**

DESCRIPTION

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve.

The ECM uses this information to determine the fuel injection time and to provide the appropriate air fuel ratio.



Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air by applying a specific electrical current to the wire.

The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant temperature value of the hot wire, current is applied to these components in the mass air flow meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0102	Mass air flow meter voltage less than 0.2 V for 3 seconds (1 trip detection logic)	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0103	Mass air flow meter voltage more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM

HINT:

When any of these DTCs are set, check the air-flow rate by entering the following menus: Powertrain / Engine and ECT / Data List / MAF.

MASS AIR FLOW RATE (GM/SEC)	CONDITION	MALFUNCTION
Approximately 0.0	• Engine not running • 30 seconds after ignition switch turned to ON	• Open in Mass air flow meter power source circuit • Open or short in VG circuit
0.26 or more		• Open in E2G circuit

HINT:

- Perform the inspection with the vehicle indoors and on a level surface.
- Perform the inspection of the mass air flow meter sub-assembly while it is installed to the air cleaner case (installed to the vehicle).
- During the test, do not use an exhaust air duct on the exhaust tail pipe assembly.

MONITOR DESCRIPTION

If there is a defect in the mass air flow meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the mass air flow meter circuit and sets a DTC.

Example:

When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

MONITOR STRATEGY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PF3093X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0112,P0113: Intake Air Temperature Circuit Low Input (2010 Corolla)		

DTC	**P0112**	**Intake Air Temperature Circuit Low Input**

DTC	**P0113**	**Intake Air Temperature Circuit High Input**

DESCRIPTION

The intake air temperature sensor, mounted in the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (see Fig. 1).
The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R which is located inside the ECM.
Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When any of DTCs P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the intake air temperature is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is

detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0112	Short in intake air temperature sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in intake air temperature sensor circuit • Intake air temperature sensor (built into mass air flow meter) • ECM
P0113	Open in intake air temperature sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in intake air temperature sensor circuit • Intake air temperature sensor (built into mass air flow meter) • ECM

HINT:

When any of these DTCs are set, check the intake air temperature by entering the following menus: Powertrain / Engine and ECT / Intake Air.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the intake air temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the intake air temperature sensor and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the intake air temperature sensor circuit, and sets DTC P0113. Conversely, if the output voltage is less than 0.18 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0111: Intake Air Temperature Sensor Gradient Too High (2010 Corolla)		

DTC	**P0111**	**Intake Air Temperature Sensor Gradient Too High**

DESCRIPTION

The intake air temperature sensor, mounted in the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (See Fig. 1).
The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R which is located inside the ECM.
Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0111	When either of following conditions are met (2 trip detection logic): • In duration between engine warmed up and next engine starts, change in intake air temperature sensor output below threshold	Mass air flow meter

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	• During engine warming up after cold engine starts, change in intake air temperature sensor output bellow threshold	

MONITOR DESCRIPTION

After warmed engine stop

The ECM monitors the intake air temperature variation in the period from when the engine was warmed up on the previous trip until the next engine start. If the change in the intake air temperature sensor output is less than the threshold, it is determined that a malfunction has occurred in the intake air temperature sensor. When this is detected, the MIL is illuminated and the DTC is set.

After a cold engine in started

The monitor runs when the engine is started cold after 5 hours or more have elapsed since the engine stopped. If the intake air temperature sensor output variation until the engine has warmed up completely is less than the threshold, it is determined that a malfunction has occurred in the intake air temperature sensor. When this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

MONITOR STRATEGY

DTC	**P0115**	**Engine Coolant Temperature Circuit Malfunction**

DTC	**P0117**	**Engine Coolant Temperature Circuit Low Input**

DTC	**P0118**	**Engine Coolant Temperature Circuit High Input**

DESCRIPTION

A thermistor, whose resistance value varies according to the engine coolant temperature, is built into the engine coolant temperature sensor.

The structure of the sensor and its connection to the ECM are the same as those of the intake air temperature sensor.

HINT:

When any of DTCs P0115, P0117 and P0118 are set, the ECM enters fail-safe mode. During fail-safe mode, the engine coolant temperature is estimated to be 80°C (176°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

HINT:

When any of these DTCs are set, check the engine coolant temperature by entering the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The engine coolant temperature sensor is used to monitor the engine coolant temperature. The engine coolant temperature sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature becomes low, the resistance in the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the engine coolant temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the engine coolant temperature sensor circuit and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the engine coolant temperature sensor circuit, and sets DTC P0118. Conversely, if the voltage output is less than 0.14 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0115: Engine coolant temperature sensor range check (Fluctuating) P0117: Engine coolant temperature sensor range check (Low voltage) P0118: Engine coolant temperature sensor range check (High voltage)

P0118

Engine coolant temperature sensor voltage [engine coolant temperature]	More than 4.91 V [Less than -40°C (-40°F)]

COMPONENT OPERATING RANGE

Engine coolant temperature sensor voltage [engine coolant temperature]	0.14 to 4.91 V [-40 to 140°C (-40 to 284°F)]

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (ENGINE COOLANT TEMPERATURE)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

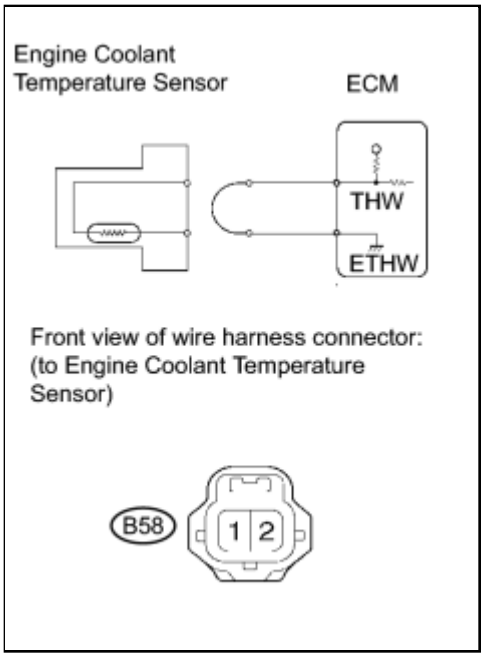
(e) Read the value displayed on the Techstream.

Standard value:
Between 80°C and 100°C (167°F and 212°F) with warm engine.
Result:

RESULT	PROCEED TO
-40°C (-40°F)	A

RESULT	PROCEED TO
140°C (284°F) or higher	B
Between 80°C and 100°C (176°F and 212°F)	C

HINT:



- If there is an open circuit, the Techstream indicates -40°C (-40°F).
- If there is a short circuit, the Techstream indicates 140°C (284°F) or higher.

C ▶ **CHECK FOR INTERMITTENT PROBLEMS**

B ▶ **READ VALUE USING TECHSTREAM (CHECK FOR SHORT IN WIRE HARNESS)**

A ▼

2.	**READ VALUE USING TECHSTREAM (CHECK FOR OPEN IN WIRE HARNESS)**

(a) Disconnect the engine coolant temperature sensor connector.

(b) Connect terminals 1 and 2 of the engine coolant temperature sensor connector on the wire harness side.

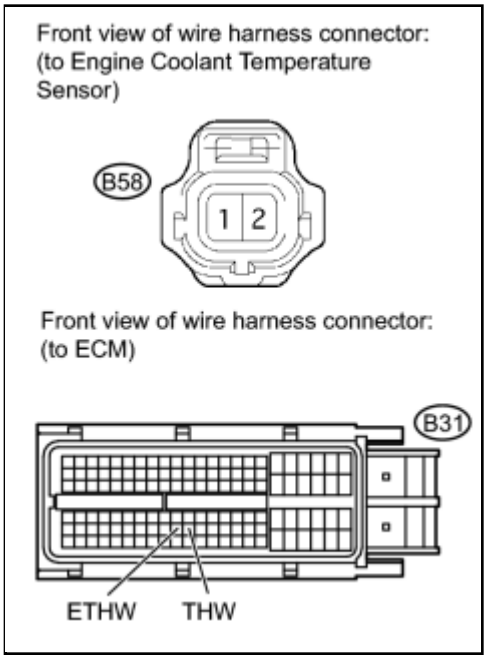
(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

(g) Read the value displayed on the Techstream.



Standard value:
140°C (284°F) or higher.

(h) Reconnect the engine coolant temperature sensor connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

OK ▶ **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

3.	**CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

(a) Disconnect the engine coolant temperature sensor connector.

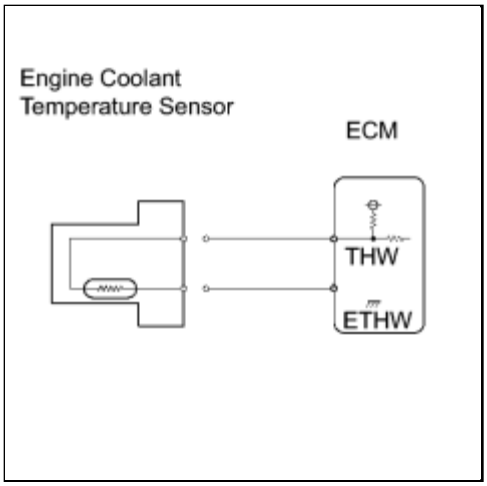
(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B58-2 - B31-97 (THW)	Always	Below 1 Ω
B58-1 - B31-96 (ETHW)	Always	Below 1 Ω



(d) Reconnect the engine coolant temperature sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

OK ▶ **REPLACE ECM**

4.	READ VALUE USING TECHSTREAM (CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the engine coolant temperature sensor connector.

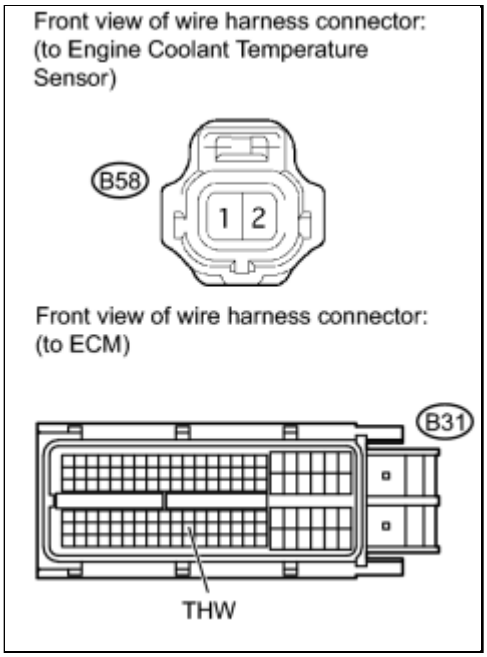
(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

(f) Read the value displayed on the Techstream.



Standard value:
-40°C (-40°F)

(g) Reconnect the engine coolant temperature sensor connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

OK ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

5.	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)

(a) Disconnect the engine coolant temperature sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B58-2 or B31-97 (THW) - Body ground	Always	10 kΩ or higher

(d) Reconnect the engine coolant temperature sensor connector.

(e) Reconnect the ECM connector.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)

OK ▶ REPLACE ECM

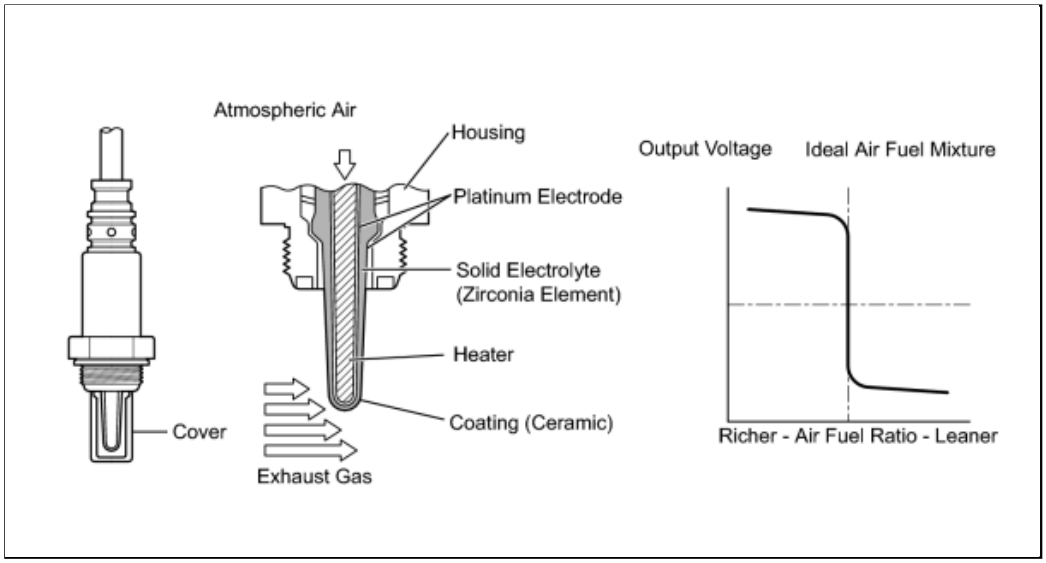
DESCRIPTION

HINT:

Sensor 2 refers to the sensor mounted behind the three-way catalytic converter and located far from the engine assembly.



In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a three-way catalytic converter is used. For the most efficient use of the three-way catalytic converter, the air fuel ratio must be precisely controlled so that it is always close to the stoichiometric air fuel level. For the purpose of helping the ECM to deliver accurate air fuel ratio control, a heated oxygen sensor is used.

The heated oxygen sensor is located behind the three-way catalytic converter, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).

When the air fuel ratio becomes lean, the oxygen concentration in the exhaust gas is rich. The heated oxygen sensor informs the ECM that the post-three-way catalytic converter air fuel ratio is lean (low voltage, i.e. less than 0.45 V).

Conversely, when the air fuel ratio is richer than the stoichiometric air fuel level, the oxygen concentration in the exhaust gas becomes lean. The heated oxygen sensor informs the ECM that the post-three-way catalytic converter air fuel ratio is rich (high voltage, i.e. more than 0.45 V). The heated oxygen sensor has the property of changing its output voltage drastically when the air fuel ratio is close to the stoichiometric level.

The ECM uses the supplementary information from the heated oxygen sensor to determine whether the air fuel ratio after the three-way catalytic converter is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the heated oxygen sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air fuel ratio control.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0136	• Abnormal voltage output: During active air fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic) (a) Heated oxygen sensor voltage does not decrease to less than 0.21 V (b) Heated oxygen sensor voltage does not increase to more than 0.59 V • Low impedance: Sensor impedance less than 5 Ω for more than 30 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open or short in heated oxygen sensor (sensor 2) • Heated oxygen sensor (sensor 2) • Heated oxygen sensor heater (sensor 2) • Air fuel ratio sensor (sensor 1) • Gas leak from exhaust system

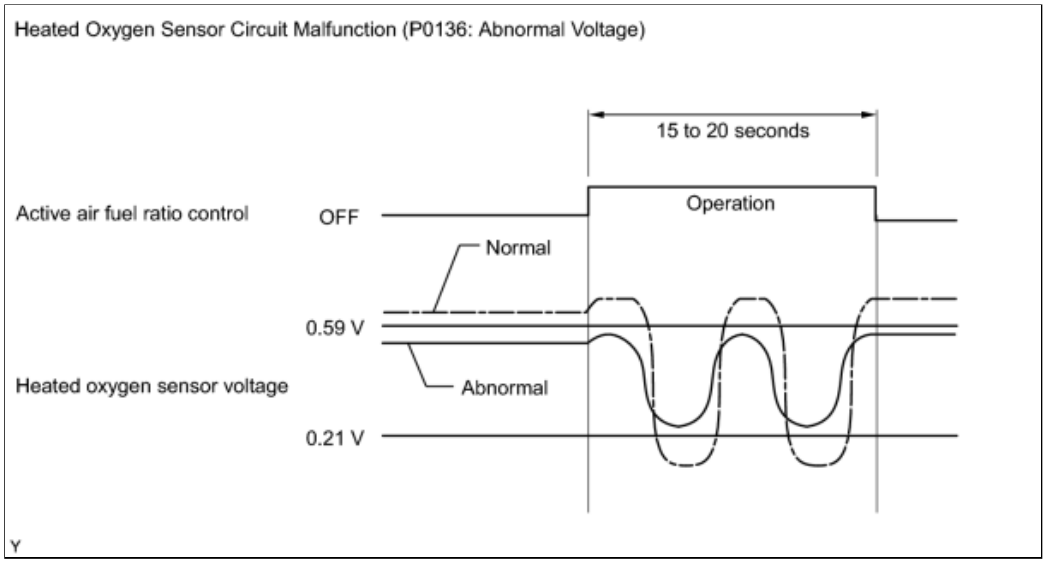
MONITOR DESCRIPTION



1. Active Air Fuel Ratio Control

The ECM usually performs air fuel ratio feedback control so that the air fuel ratio sensor output indicates a near stoichiometric air fuel level. This vehicle includes active air fuel ratio control in addition to regular air fuel ratio control. The ECM performs active air fuel ratio control to detect any deterioration in the three-way catalytic converter and heated oxygen sensor malfunctions (refer to the diagram below).

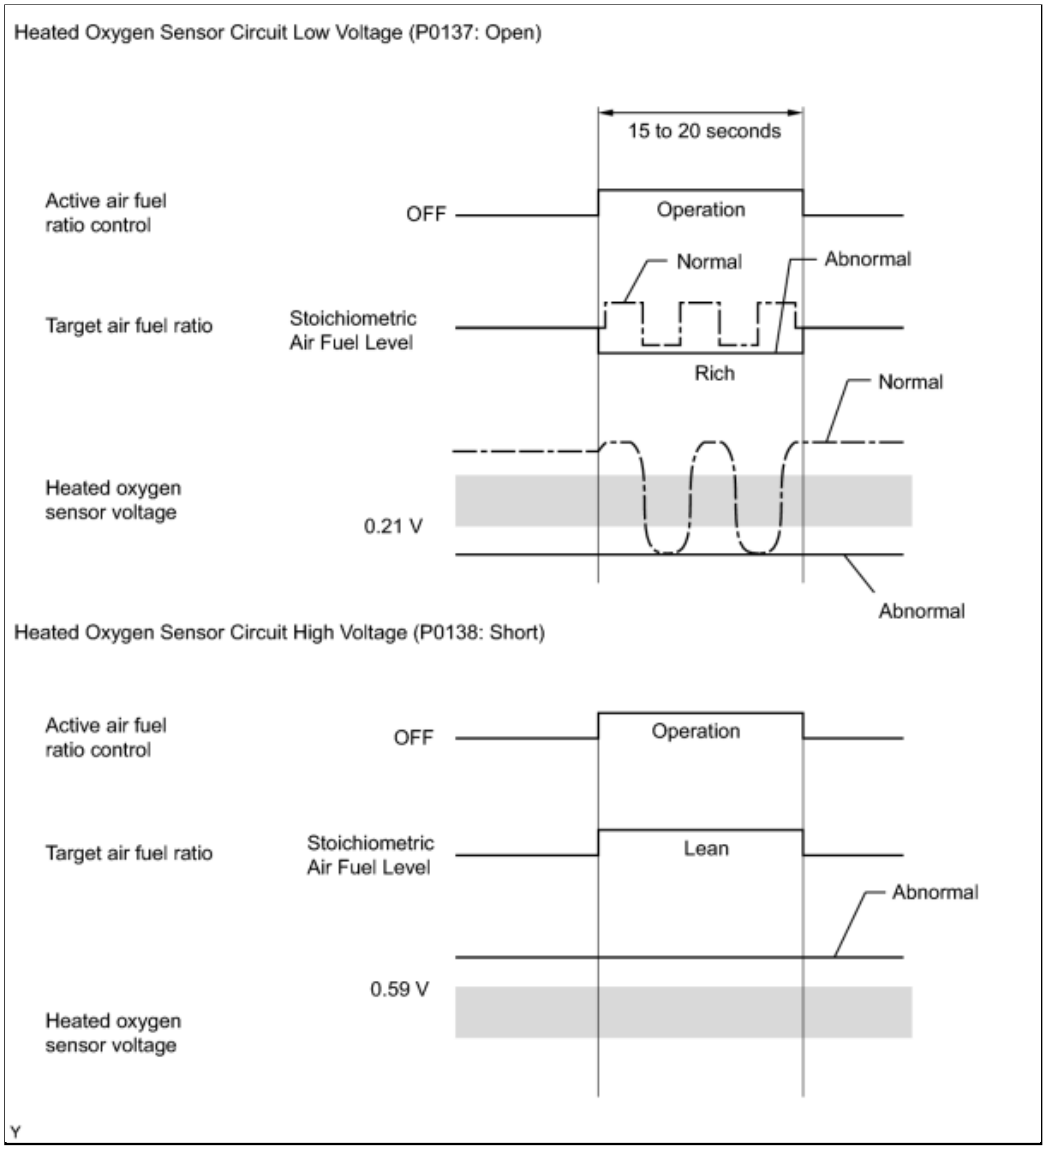
Active air fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air fuel ratio control, the air fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, a DTC is set.

2. Abnormal Voltage Output of Heated Oxygen Sensor (DTC P0136)

While the ECM is performing active air fuel ratio control, the air fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the heated oxygen sensor voltage does not decrease to less than 0.21 V or does not increase to more than 0.59 V during active air fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTCs P0136.

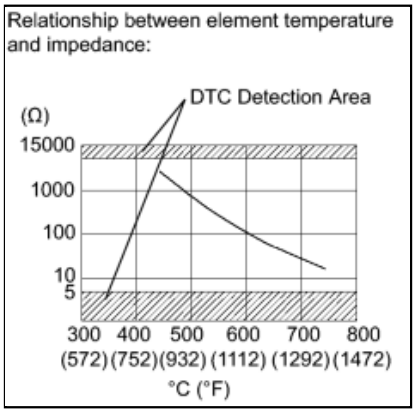
3. Open or Short in Heated Oxygen Sensor Circuit (DTCs P0137 or P0138)

During active air fuel ratio control, the ECM calculates the oxygen storage capacity * of the three-way catalytic converter by forcibly regulating the air fuel ratio to become rich or lean.



If the heated oxygen sensor has an open or short, or the voltage output of the sensor noticeably decreases, the oxygen storage capacity indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air fuel ratio to become rich or lean, the heated oxygen sensor output does not change.

While performing active air fuel ratio control, when the target air fuel ratio is rich and the heated oxygen sensor voltage output is less than 0.21 V (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137. When the target air fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138.



HINT:

DTC P0138 is also set if the heated oxygen sensor voltage output is more than 1.2 V for 10 seconds or more.

***: The three-way catalytic converter has the capability to store oxygen. The oxygen storage capacity and the emission purification capacity of the three-way catalytic converter are mutually related. The ECM determines whether the catalyst has deteriorated, based on the calculated oxygen storage capacity value** INFO **.**

4. High or Low Impedance of Heated Oxygen (HO2) Sensor (DTCs P0136 or P0137)

During normal air fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variation of the heated oxygen sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.

*: The effective resistance in an alternating current electrical circuit.

HINT:

- The impedance cannot be measured using an ohmmeter.
- DTC P0136 indicates the deterioration of the heated oxygen sensor. The ECM sets the DTCs by calculating the impedance of the sensor when the typical enabling conditions are satisfied (2 driving cycles).
- DTC P0137 indicates an open or short circuit in the heated oxygen sensor (2 driving cycles). The ECM sets the DTCs when the impedance of the sensor exceeds the threshold of 15 kΩ.

5. Abnormal Voltage Output of Heated Oxygen Sensor During Fuel-cut (DTC P0139)

The sensor output voltage drops to below 0.2 V (extremely Lean status) immediately when the vehicle decelerates and fuel

cut is operating. If the voltage does not drop to below 0.2 V for 7 seconds or more, or the voltage does not drop from 0.35 to 0.2 V for 1 second, the ECM determines that the sensor response has deteriorated, illuminates the MIL and sets a DTC.

CONFIRMATION DRIVING PATTERN

P0136, P0137 and P0138

1. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
2. Turn the ignition switch off.
3. Turn the ignition switch to ON and turn the Techstream on [A].
4. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
5. With the transmission in 4th gear or higher, drive the vehicle at 38 to 75 mph (60 to 120 km/h) for 10 minutes or more [C].
6. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
7. Input the DTC: P0136, P0137 or P0138.
8. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

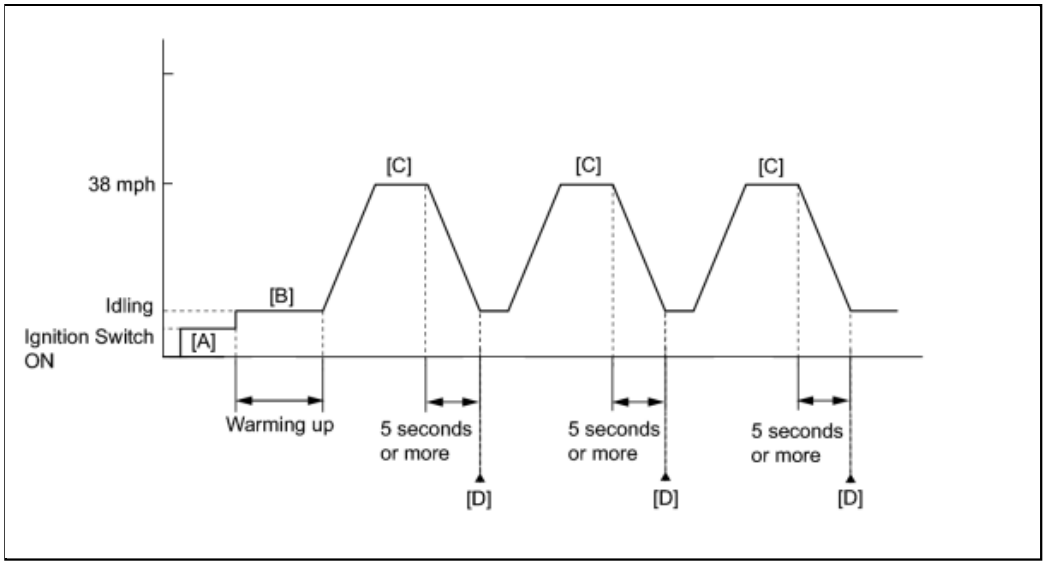
When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [C] and [D].

9. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
10. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

11. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

P0139

1. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
2. Turn the ignition switch off.
3. Turn the ignition switch to ON and turn the Techstream on [A].
4. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
5. Drive the vehicle at 38 mph (60 km/h), and then decelerate the vehicle by releasing the accelerator pedal for 5 seconds or more to perform the fuel-cut [C].
6. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
7. Input the DTC: P0139.
8. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

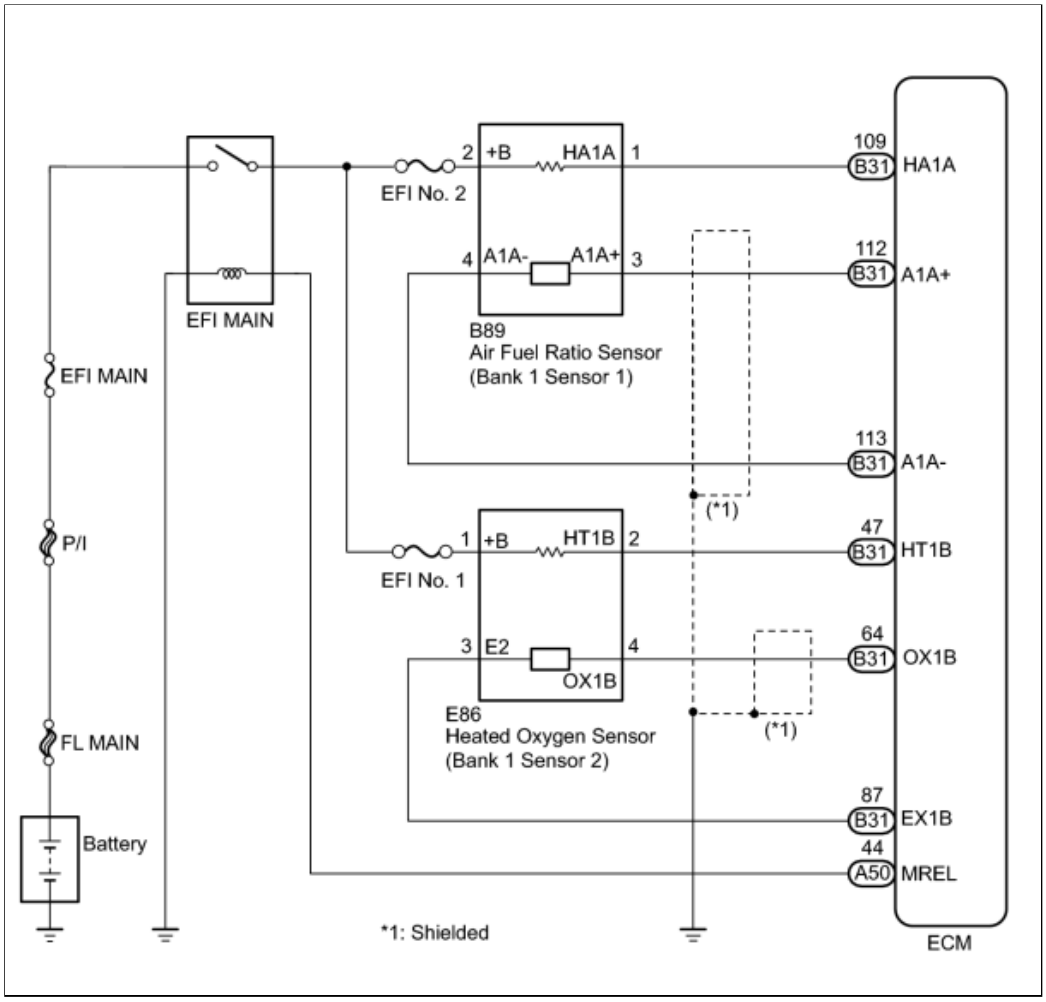
When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, move the shift lever to 2 and then perform steps [C] through [D] again.

9. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
10. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

11. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

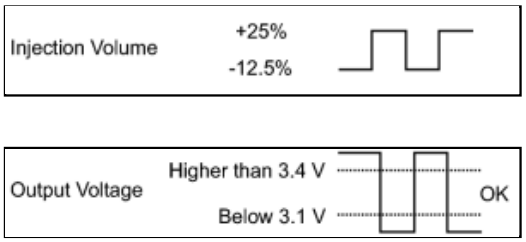
HINT:

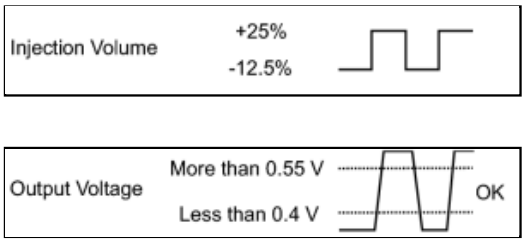
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

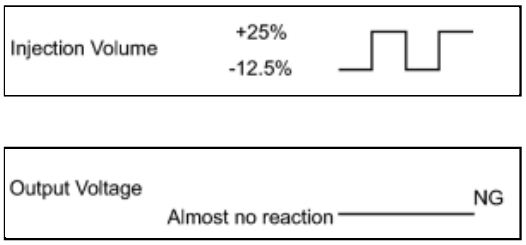
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

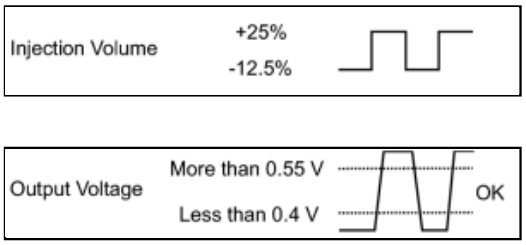
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

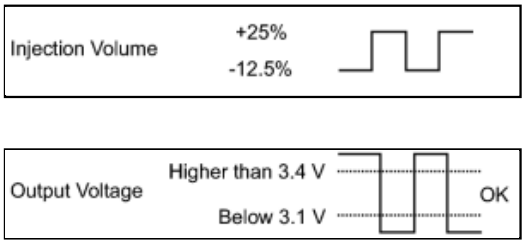
HINT:

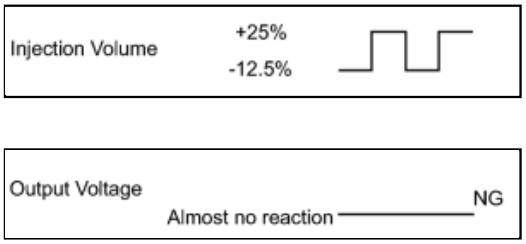


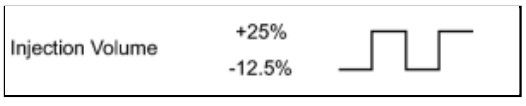


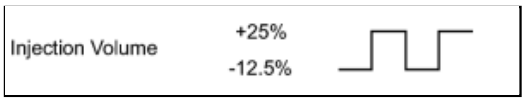




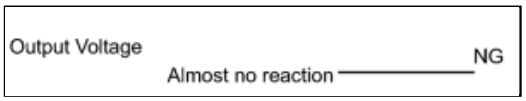


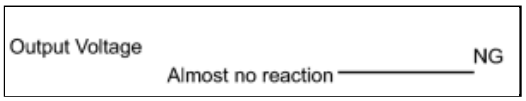






- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.





TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ DTC OUTPUT (DTC P0136, P0137, P0138 OR P0139)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0138	A
P0137	B
P0136	C
P0139	D

D ▶ **READ VALUE USING TECHSTREAM**

C ▶ **READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)**

B ▶ **CHECK EXHAUST GAS LEAK (HEATER RESISTANCE)**

A

2.	**READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)**

(a) Connect the Techstream to the DLC3.

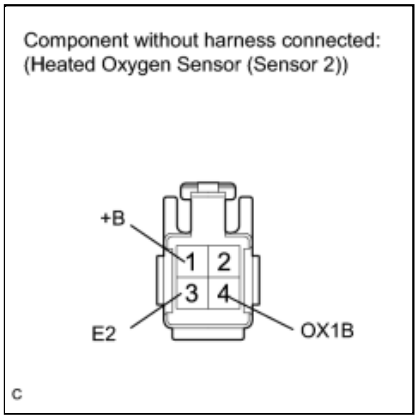
(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Data List / A/F Control System / O2S B1 S2.

(e) Allow the engine to idle.

(f) Read the heated oxygen sensor output voltage while idling.



Result:

RESULT	PROCEED TO
1.0 V or more	A
Less than 1.0 V	B

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (INJECTION VOLUME)**

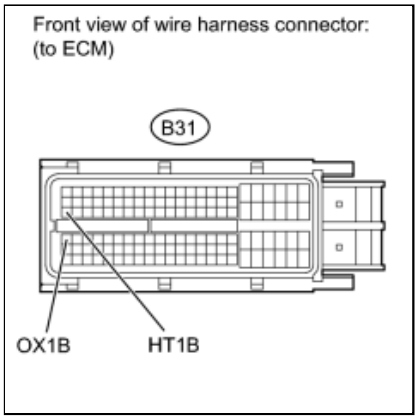
A

3.	**INSPECT HEATED OXYGEN SENSOR (CHECK FOR SHORT)**

(a) Disconnect the heated oxygen sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (+B) - 3 (E2)	Always	10 kΩ or higher
1 (+B) - 4 (OX1B)		

(c) Reconnect the heated oxygen sensor connector.

NG ▶ **REPLACE HEATED OXYGEN SENSOR**

OK

4.	CHECK HARNESS AND CONNECTOR

(a) Turn the ignition switch to off and wait for 5 minutes or more.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-47 (HT1B) - B31-64 (OX1B)	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

5.	PERFORM ACTIVE TEST USING TECHSTREAM (INJECTION VOLUME)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

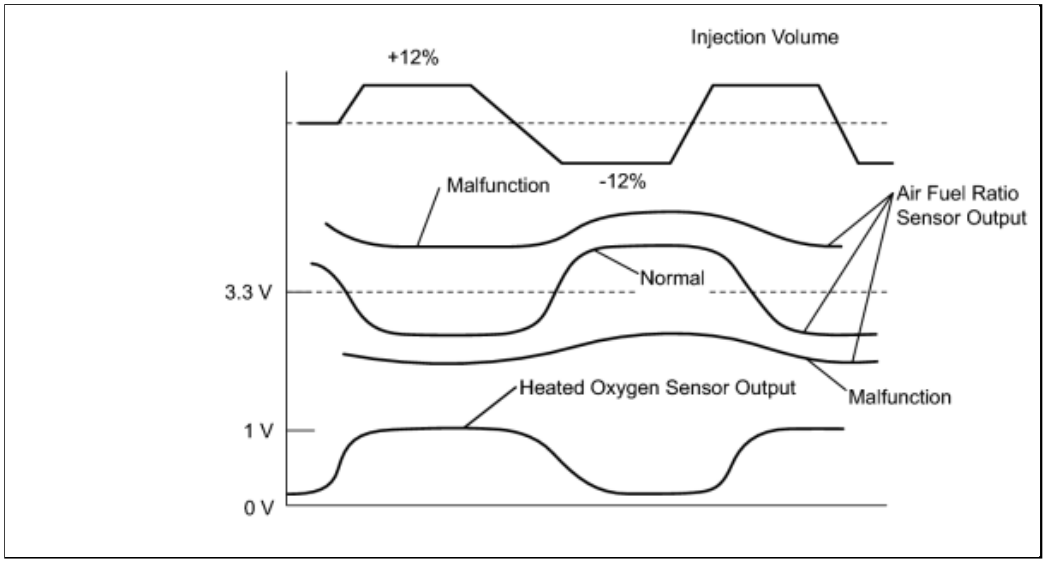
(d) Start the engine and warm it up.

(e) Select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume.

(f) Change the fuel injection volume using the Techstream, and monitor the voltage output of air fuel ratio and heated oxygen sensors displayed on the Techstream.

HINT:

- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in 1% graduations within the range.
- The A/F sensor is displayed as AFS Voltage B1 S1, and the HO2 sensor is displayed as O2S B1 S2 on the Techstream.



Result:

TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
AFS Voltage B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG

TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
	Remains at less than 3.3 V	NG

HINT:

A normal heated oxygen sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the air fuel ratio sensor voltage remains at either less or more than 3.3 V despite the heated oxygen sensor indicating a normal reaction, the air fuel ratio sensor is malfunctioning.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▼

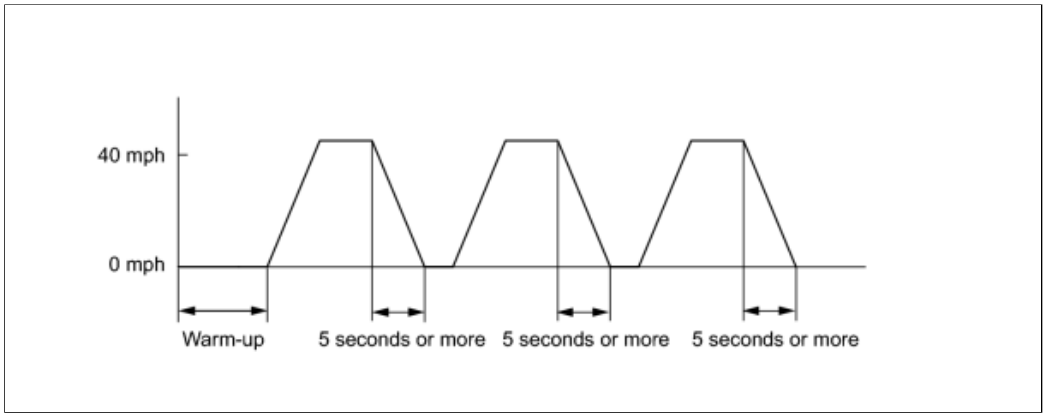
6.	INSPECT AIR FUEL RATIO SENSOR

HINT:

This air fuel ratio sensor test is to check the air fuel ratio sensor current during the fuel-cut. When the sensor is normal, the sensor current will indicate below 3.0 mA in this test.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.



(c) Turn the Techstream on.

(d) Drive the vehicle according to the drive pattern listed below:

(1) Warm up the engine until the engine coolant temperature reaches 75°C (167°F) or more.

(2) Drive the vehicle at 60 km/h (40 mph) or more and decelerate the vehicle for 5 seconds or more.

(3) Repeat the deceleration above at least 3 times.

(e) Select the following menu items: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details.

(f) Confirm that RANGE B1S1 is either Pass or Fail. If the Techstream shows Incomplete, re-check RANGE B1S1 after performing the drive pattern.

(g) Select the RANGE B1S1.

(h) Read the Test Value.

Standard current:
Less than 3.0 mA

HINT:

If the Techstream shows Incomplete again, increase the vehicle speed and use second gear to decelerate the vehicle.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▶ **REPLACE HEATED OXYGEN SENSOR**

7.	READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Start the engine.

(e) Select the following menu items: Powertrain / Engine and ECT / Data List / A/F Control System / O2S B1 S2.

(f) After warming up the engine, run the engine at an engine speed of 2500 rpm for 3 minutes.

(g) Read the output voltage of the heated oxygen sensor when the engine rpm is suddenly increased.

HINT:

Quickly accelerate the engine to 4000 rpm 3 times using the accelerator pedal.

Standard:
Fluctuates between 0.4 V or less and 0.5 V or more.

NG ▶ **CHECK EXHAUST GAS LEAK (HEATER RESISTANCE)**

OK

8.	PERFORM ACTIVE TEST USING TECHSTREAM (INJECTION VOLUME)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

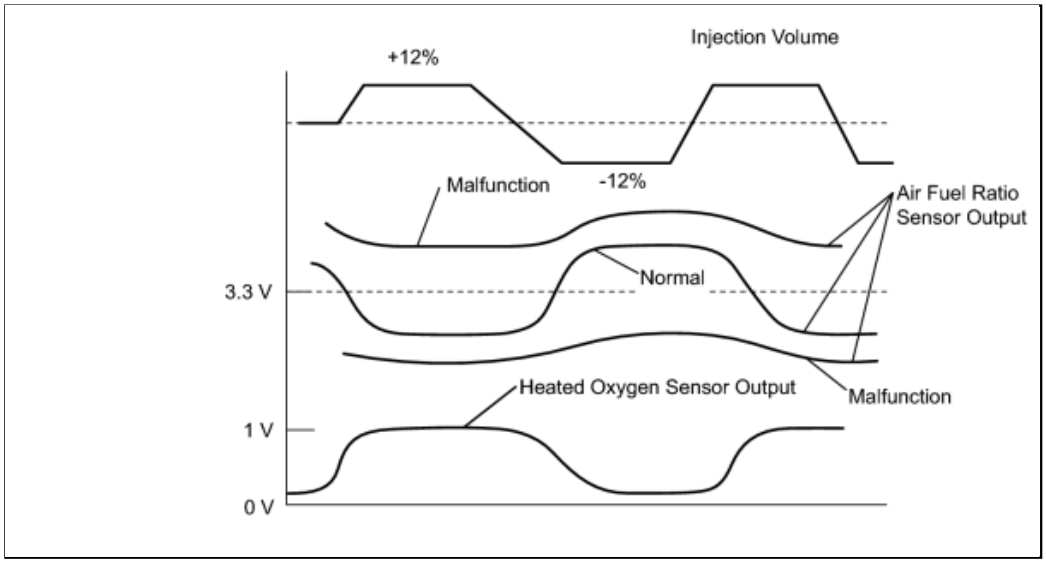
(c) Turn the Techstream on.

(d) Start the engine and warm it up.

(e) Select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume.

(f) Change the fuel injection volume using the Techstream, and monitor the voltage output of air fuel ratio and heated oxygen sensors displayed on the Techstream.

HINT:



- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in 1% graduations within the range.
- The A/F sensor is displayed as AFS Voltage B1 S1, and the HO2 sensor is displayed as O2S B1 S2 on the Techstream.

Result:

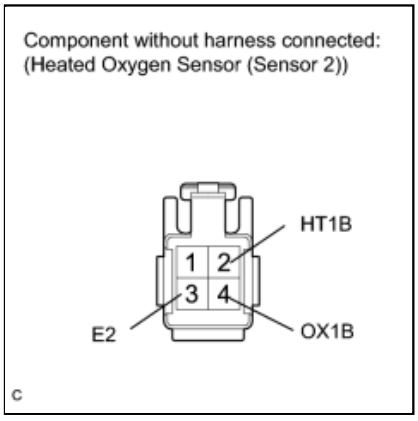
TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
AFS Voltage B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:

A normal heated oxygen sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the air fuel ratio sensor voltage remains at either less or more than 3.3 V despite the heated oxygen sensor indicating a normal reaction, the air fuel ratio sensor is malfunctioning.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▶ **CHECK AND REPLACE EXTREMELY RICH OR LEAN ACTUAL AIR FUEL RATIO (FUEL INJECTOR, FUEL PRESSURE, GAS LEAK FROM SYSTEM, ETC)**



9.	CHECK EXHAUST GAS LEAK (HEATER RESISTANCE)

OK:
No gas leaks.

NG ▶ **REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT**

OK ▼

10.	INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

(a) Disconnect the heated oxygen sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

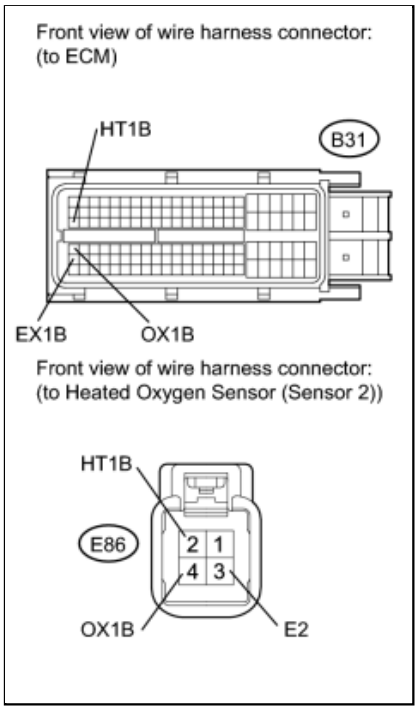
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (HT1B) - 2 (+B)	20°C (68°F)	11to 16 Ω or higher
2 (HT1B) - 4 (E2)	Always	10 kΩ or higher

(c) Reconnect the heated oxygen sensor connector.

NG ▶ **REPLACE HEATED OXYGEN**

SENSOR

OK



11.	CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)

(a) Disconnect the heated oxygen sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E86-2 (HT1B) - B31-47 (HT1B)	Always	Below 1 Ω
E86-4 (OX1B) - B31-64 (OX1B)		
E86-3 (E2) - B31-87 (EX1B)		

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E86-2 (HT1B) or B31-47 (HT1B) - Body ground	Always	10 kΩ or higher
E86-4 (OX1B) or B31-64 (OX1B) - Body ground		

(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

12.	REPLACE HEATED OXYGEN SENSOR

(a) Replace the heated oxygen sensor INFO.

NEXT

13.	PERFORM CONFIRMATION DRIVING PATTERN

HINT:

Refer to the Confirmation Driving Pattern for P0136, P0137 and P0138.

NEXT

14.	CHECK WHETHER DTC OUTPUT RECURS (P0136, P0137 OR P0138)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Utility / All Readiness.

(e) Input DTCs: P0136, P0137 and P0138. Check the DTC MONITOR is Normal. If DTC MONITOR is Incomplete, perform the drive pattern increasing the vehicle speed and using second gear to decelerate the vehicle.

Result:

RESULT	PROCEED TO
NORMAL (No DTC output)	A
ABNORMAL (P0136, P0137 or P0138 detected)	B

B **REPLACE AIR FUEL RATIO SENSOR**

A **END**

15.	REPLACE AIR FUEL RATIO SENSOR

(a) Replace the air fuel ratio sensor INFO .

NEXT

16.	PERFORM CONFIRMATION DRIVING PATTERN

HINT:

Refer to the Confirmation Driving Pattern for P0136, P0137 and P0138.

NEXT

17.	CHECK WHETHER DTC OUTPUT RECURS (P0136 OR P0138)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Utility / All Readiness.

(e) Input DTCs: P0136 or P0138. Check the DTC MONITOR is Normal. If DTC MONITOR is Incomplete, perform the drive pattern increasing the vehicle speed and using second gear to decelerate the vehicle.

Result:

RESULT	PROCEED TO
NORMAL (No DTC output)	A
ABNORMAL (P0136 or P0138 detected)	B

B **REPLACE HEATED OXYGEN SENSOR**

A **END**

18.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

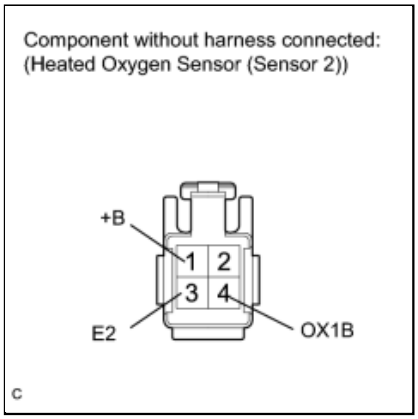
(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Data List / A/F Control System / O2S B1 S2.

(e) Allow the engine to idle.

(f) Read the heated oxygen sensor output voltage while idling.



Result:

RESULT	PROCEED TO
1.0 V or higher	A
Below 1.0 V	B

NG ▶ **READ DTC OUTPUT (DTC P0139 IS OUTPUT AGAIN)**

A
▼

19.	INSPECT HEATED OXYGEN SENSOR

(a) Disconnect the heated oxygen sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (+B) - 3 (E2)	Always	10 kΩ or higher
1 (+B) - 4 (OX1B)		

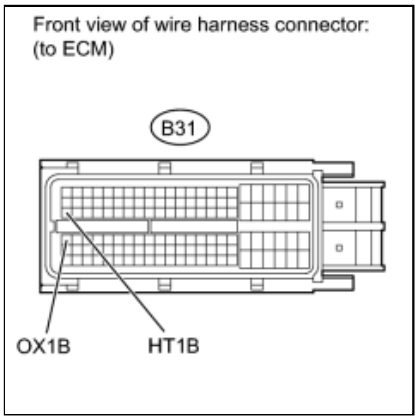
(c) Reconnect the heated oxygen sensor connector.

NG ▶ **REPLACE HEATED OXYGEN SENSOR**

OK
▼

20.	CHECK HARNESS OR CONNECTOR (CHECK FOR SHORT)

(a) Turn the ignition switch off and wait for 5 minutes or more.

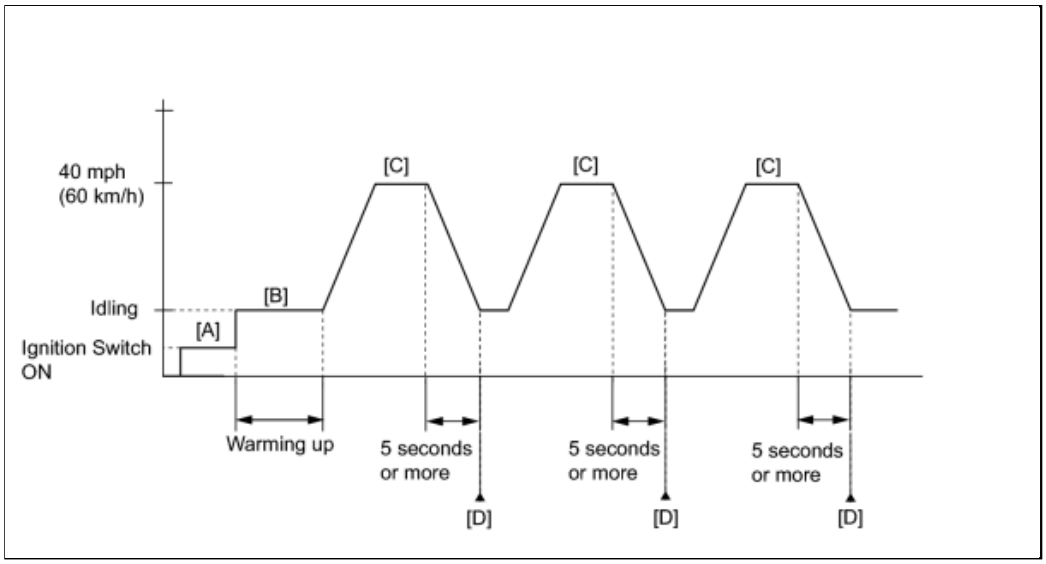


(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-47 (HT1B) - B31-64 (OX1B)	Always	10 kΩ or higher



(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

21.	READ DTC OUTPUT (DTC P0139 IS OUTPUT AGAIN)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and turn the Techstream on.

(c) Clear the DTC (even if no DTC are stored, perform the clear DTC Procedure) INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON and turn the Techstream on [A].

(f) Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or more [B].

(g) Drive the vehicle at 37 mph (60 km/h), and then decelerate the vehicle by releasing the accelerator pedal for 5 seconds or more to perform the fuel cut [C].

(h) Select the following menu items: Powertrain / Engine and ECT / Utility / All Readiness.

(i) Input DTC: P0139. Check the DTC MONITOR is NORMAL. If DTC MONITOR is INCOMPLETE, perform the drive pattern increasing the vehicle speed and using second gear to decelerate the vehicle.

Result:

RESULT	PROCEED TO
ABNORMAL (P0139 detected)	A
NORMAL (No DTC output)	B

B ▶ **CHECK FOR INTERMITTENT PROBLEMS**

A ▶ **REPLACE HEATED OXYGEN SENSOR**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PF609TX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0120-P0123,P0220,P0222,P0223,P2135: Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction (2010 Corolla)

DTC	**P0123**	**Throttle / Pedal Position Sensor / Switch "A" Circuit High Input**

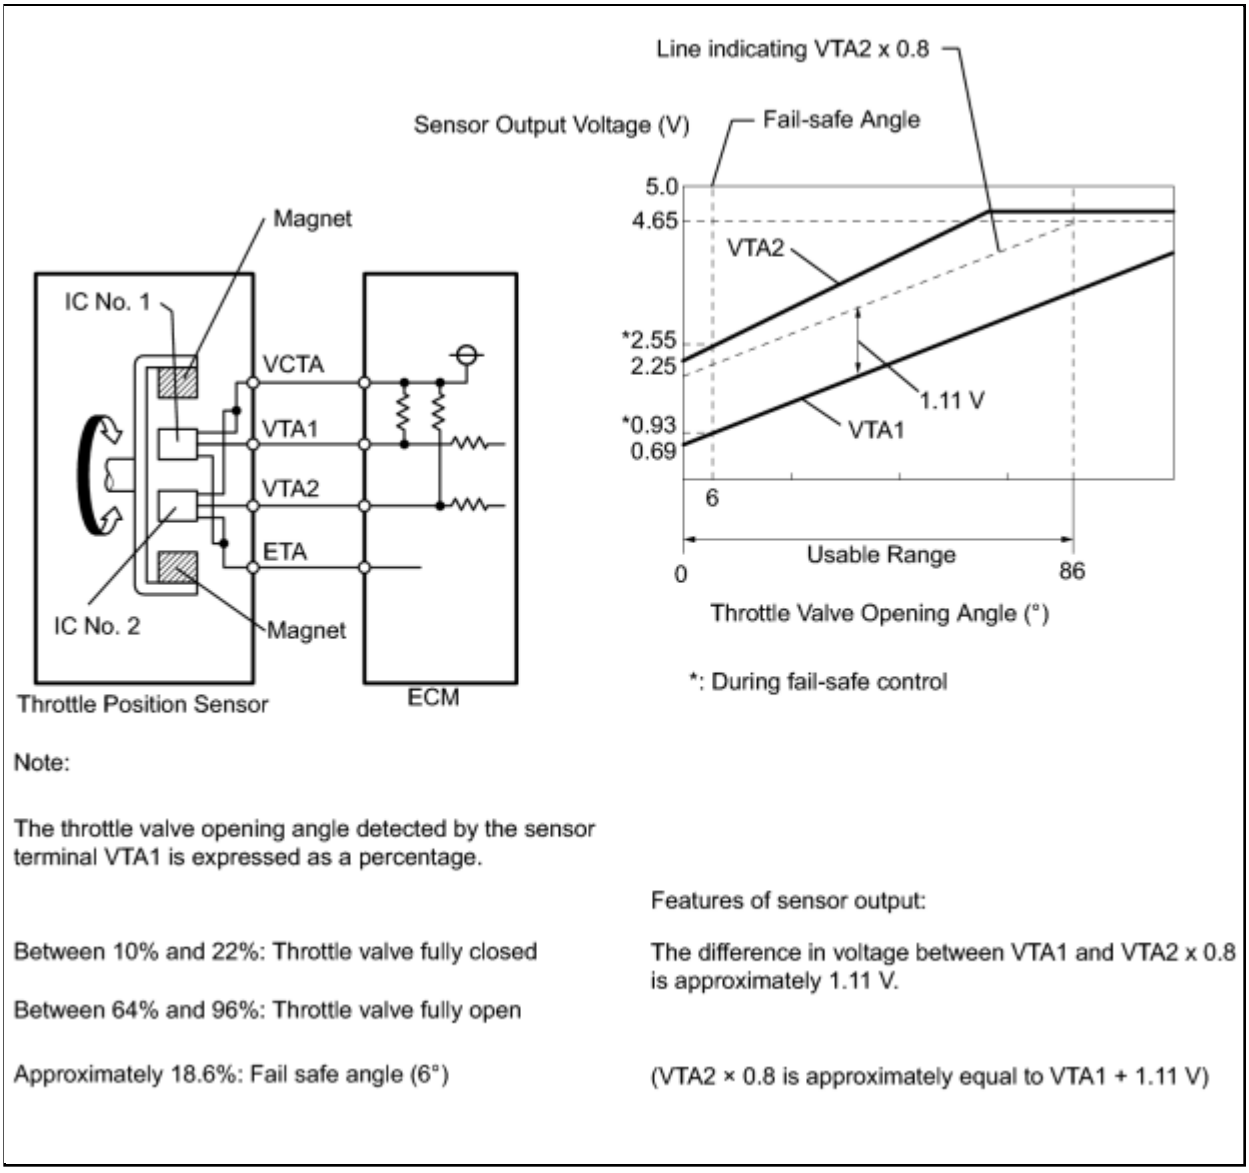
DTC	**P0220**	**Throttle / Pedal Position Sensor / Switch "B" Circuit**

DTC	**P0222**	**Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input**

DTC	**P0223**	**Throttle / Pedal Position Sensor / Switch "B" Circuit High Input**

DTC	**P2135**	**Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation**

DESCRIPTION



HINT:

- These DTCs relate to the throttle position sensor.

The throttle position sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type. It uses Hall-effect elements in order to yield accurate signals even in extreme conditions.

The throttle position sensor has 2 sensor circuits, each of which transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.

As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air fuel ratio correction, power enrichment correction and fuel-cut control.

Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as a percentage.

Between 10% and 22%: Throttle valve fully closed

Between 64% and 96%: Throttle valve fully open

Approximately 18.6%: Fail safe angle (6°)

Features of sensor output:

The difference in voltage between VTA1 and VTA2 x 0.8 is approximately 1.11 V.

(VTA2 × 0.8 is approximately equal to VTA1 + 1.11 V)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds or more (1 trip detection logic)	• Throttle position sensor (built into throttle body) • ECM

HINT:

- When any of these DTC s are set, check the throttle valve opening angle by entering the following menus: Powertrain / Engine and ECT / Data List / Throttle Position No. 1 and Throttle Position

No. 2.

- Throttle Position No. 1 denotes the VTA1 signal, and Throttle Position No. 2 denotes the VTA2 signal.

Reference (Normal Condition):

TECHSTREAM DISPLAY	ACCELERATOR PEDAL FULLY RELEASED	ACCELERATOR PEDAL FULLY DEPRESSED
Throttle Position No.1	0.5 to 1.1 V	3.2 to 4.8 V
Throttle Position No.2	2.1 to 3.1 V	4.6 to 5.0 V

MONITOR DESCRIPTION

P0120, P0122, P0123, P0220, P0222, P0223, P2135

The ECM uses the throttle position sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the throttle position sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor circuit, and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

P0121

This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM performs several checks to confirm the proper operation of the TP sensor and VTA1.

For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal operating range, the ECM interprets this as a malfunction in the TP sensor. The ECM illuminates the MIL and stores the DTC.

If the malfunction is not repaired successfully, the DTC is stored 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0120: Throttle position sensor 1 range check (Fluctuating)

	P0121: Throttle position sensor rationality P0122: Throttle position sensor 1 range check (Low voltage) P0123: Throttle position sensor 1 range check (High voltage) P0220: Throttle position sensor 2 range check (Fluctuating) P0222: Throttle position sensor 2 range check (Low voltage) P0223: Throttle position sensor 2 range check (High voltage) P2135: Throttle position sensor range check (Correlation)
Required Sensors/Components (Main)	Throttle position sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	2 seconds: P0120, P0122, P0123, P0220, P0222 and P0223 Within 2 seconds: P0121 0.5 seconds: P2135 Case 1 0.4 seconds: P2135 Case 2
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0120, P0122, P0123, P0220, P0222, P0223, P2135:

Monitor runs whenever following DTCs not present	None
Either of following conditions A or B is met	-
A. Ignition switch ON	0.012 seconds or more
B. Electronic throttle actuator power	ON

P0121:

Either of following conditions A or B set	-
A. Ignition switch	ON
B. Electric throttle motor power	ON
Throttle position sensor malfunction (P0120, P0121, P0122, P0123, P0220, P0222, P0223, P2135)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

P0120

VTA1 voltage	0.2 V or less, or 4.54 V or more

P0121

Either of following conditions set	-
Difference of throttle position sensor voltage between VTA1 and (VTA2 x 0.8)	Higher than 1.6 V
Difference of throttle position sensor voltage between VTA1 and (VTA2 x 0.8)	Lower than 0.8 V

P0122

VTA1 voltage	0.2 V or less

P0123

VTA1 voltage	4.54 V or more

P0220

VTA2 voltage	1.75 V or less, or 4.8 V or more

P0222

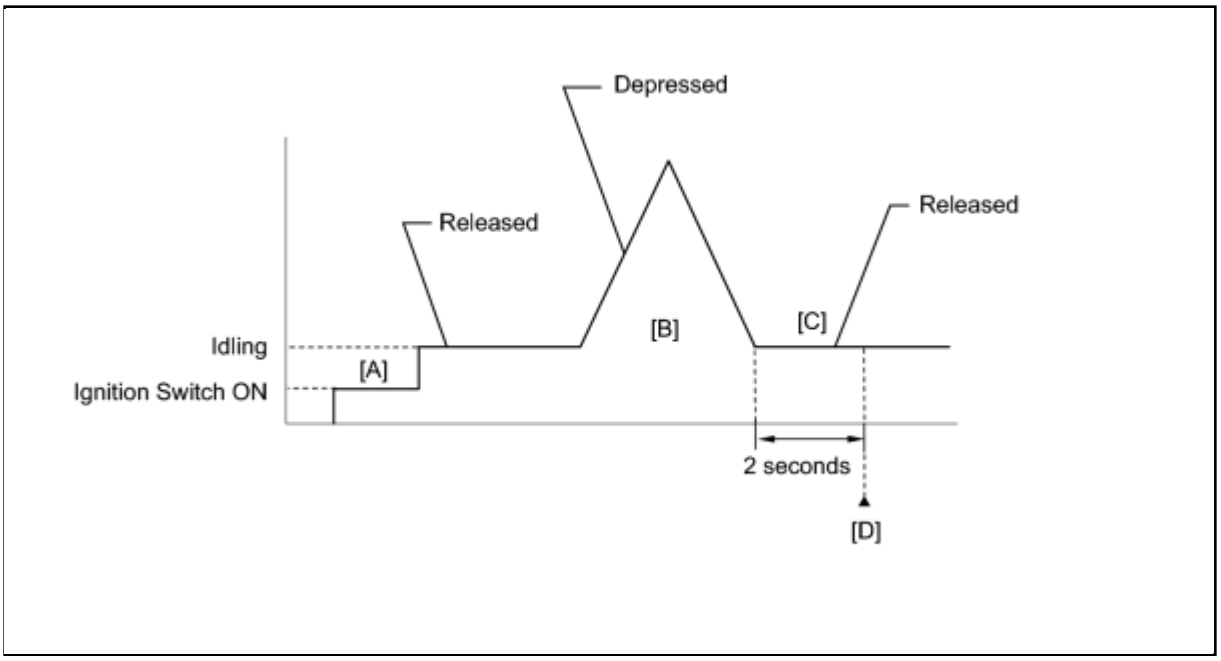
VTA2 voltage	1.75 V or less

P0223

VTA2 voltage when VTA1 0.2 V or more, and 2.02 V or less	4.8 V or more

P2135 Case 1

Difference between VTA1 and VTA2 voltages	0.02 V or less



P2135 Case 2

VTA1 voltage	0.2 V or less
VTA2 voltage	1.75 V or less

COMPONENT OPERATING RANGE

VTA1 voltage	0.2 to 4.54 V
VTA2 voltage	1.75 to 4.8 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. With the vehicle stationary, fully depress and release the accelerator pedal [B].
8. Idle the engine for 2 seconds or more [C].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0120, P0121, P0122, P0123, P0220, P0222, P0223 or P2135.
11. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

TECHSTREAM DISPLAY	DESCRIPTION
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [D] again.

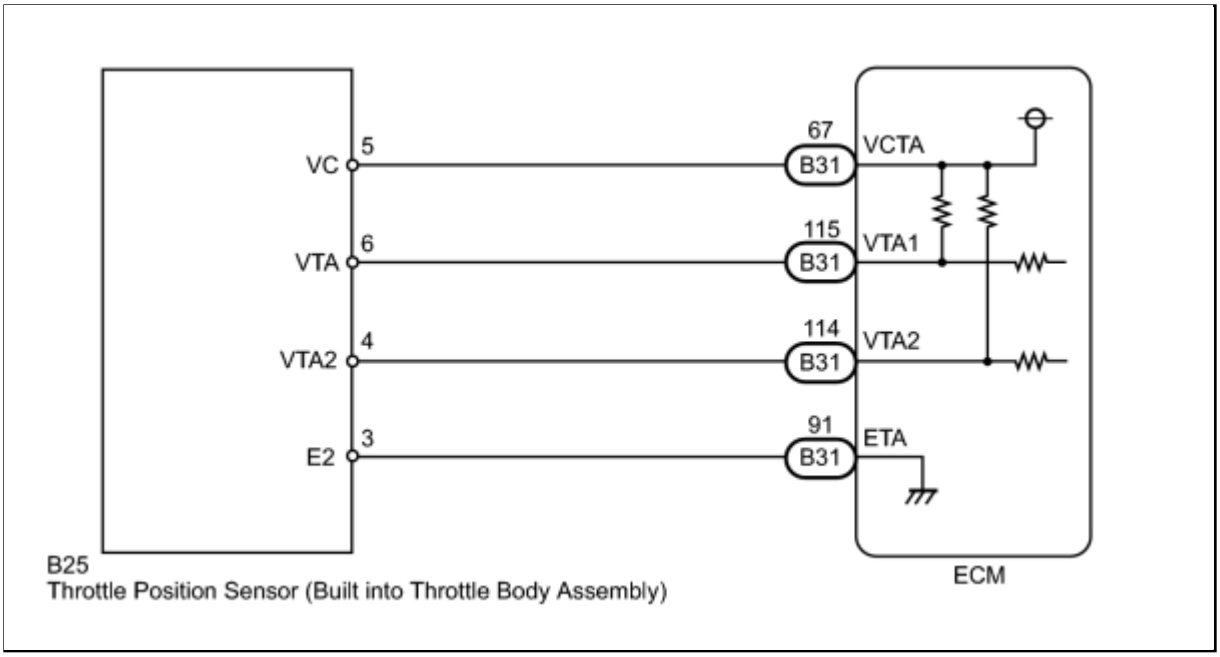
12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to electronic throttle control system malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (THROTTLE POSITION SENSOR)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Throttle Position No.1 and Throttle Position No.2.

(e) Read the values displayed on the Techstream.

Result:

WHEN ACCELERATOR PEDAL RELEASED		WHEN ACCELERATOR PEDAL DEPRESSED		TROUBLE AREA	PROCEED TO
THROTTLE POSITION	THROTTLE POSITION	THROTTLE POSITION	THROTTLE POSITION		

NO.1	NO.2	NO.1	NO.2		
0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	VC circuit open	A
4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	E2 circuit open	
0 to 0.2 V, or 4.5 to 5.0 V	2.1 V to 3.1 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	2.1 V to 3.1 V (Fail-safe)	VTA1 circuit open or ground short	
0.6 V to 1.4 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	0.6 V to 1.4 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	VTA2 circuit open or ground short	
0.5 to 1.1 V	2.1 to 3.1 V	3.2 to 4.8 V (Not fail-safe)	4.6 to 5.0 V (Not fail-safe)	Throttle position sensor circuit normal	B

HINT:

- DTC P0121 is stored when the voltages output from VTA1 and VTA2 are not consistent with the characteristics of the sensors. Therefore, check the Freeze Frame Data when this DTC is output. Use the following formula to confirm relative fluctuations in voltage.

  Features of sensor output:

  VTA2 x 0.8 is approximately equal to VTA1 + 1.11 V

  VTA1: Throttle Position No. 1

  VTA2: Throttle Position No. 2
- If DTC P0121 is output, proceed to the "CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)".

B ▶ **CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)**

A ▼

2.	CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)

(a) Disconnect the throttle body assembly connector.

(b) Disconnect the ECM connector.

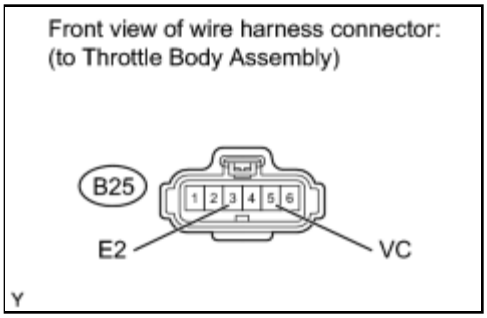
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) - B31-67 (VCTA)	Always	Below 1 Ω
B25-6 (VTA) - B31-115 (VTA1)	Always	Below 1 Ω
B25-4 (VTA2) - B31-114 (VTA2)	Always	Below 1 Ω
B25-3 (E2) - B31-91 (ETA)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) or B31-67 (VCTA) - Body ground	Always	10 kΩ or higher
B25-6 (VTA) or B31-115 (VTA1) - Body ground	Always	10 kΩ or higher
B25-4 (VTA2) or B31-114 (VTA2) - Body ground	Always	10 kΩ or higher



(d) Reconnect the throttle body assembly connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (THROTTLE POSITION SENSOR - ECM)**

OK

3.	**INSPECT ECM (VC VOLTAGE)**

(a) Disconnect the throttle body assembly connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) - B25-3 (E2)	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the throttle body assembly connector.

NG ▶ **REPLACE ECM**

OK

4.	**REPLACE THROTTLE BODY ASSEMBLY**

(a) Replace the throttle body assembly INFO .

NEXT

5.	CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Start the engine.

(f) Allow the engine to idle for 15 seconds or more.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0120, P0121, P0122, P0123, P0220, P0222, P0223 and/or P2135 is output	A
DTC is not output	B

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFB0A6X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0116: Engine Coolant Temperature Circuit Range / Performance Problem (2010 Corolla)		

DTC	**P0116**	**Engine Coolant Temperature Circuit Range / Performance Problem**

DESCRIPTION

Refer to DTC P0115 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0116	When either of the following conditions is met (2 trip detection logic): • During engine warm up after cold engine starts, change in Engine Coolant Temperature sensor output is below threshold • In duration between warmed engine stopped and next cold engine starts, change in engine coolant temperature sensor output below threshold	• Thermostat • Engine coolant temperature sensor
	For Mexico Models: Case 1: Engine Coolant Temperature (ECT) between 35°C and 60°C (95°F and 140°F) when engine started, and conditions (a) and (b) met (2 trip detection logic) • (a) Vehicle driven at varying speeds (accelerated and decelerated) • (b) ECT remains within 3°C (37.4°F) of initial ECT Case 2: ECT more than 60°C (140°F) when engine started, and conditions (a) and (b) met (6 trip detection logic) • (a) Vehicle driven at varying speeds (accelerated and decelerated) • (b) ECT measurements remain within 1°C (33.8°F) of initial ECT on 6 successive occasions	• Thermostat • ECT sensor

MONITOR DESCRIPTION

Engine Coolant Temperature Sensor Cold Start Monitor

The monitor runs when the engine is started cold. If the change in engine coolant temperature sensor output until the engine warmed up completely is less than the threshold, it is determined that a

malfunction has occurred in the engine coolant temperature sensor. When this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

Engine Coolant Temperature Sensor Soak Monitor

The ECM compares the engine coolant temperature when the warmed engine is stopped and when the engine is started on the next trip when more than 5 hours has elapsed since the engine was stopped. If the change in engine coolant temperature sensor output is less than the threshold, it is determined that a malfunction has occurred in the engine coolant temperature sensor. When this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

ECT sensor high side stuck monitor (only for Mexico models)

The ECM monitors the sensor voltage and uses this value to calculate the ECT. If the sensor voltage output deviates from the normal operating range, the ECM interprets this deviation as a malfunction in the ECT sensor and sets the DTC.

Examples:

- Upon starting the engine, the ECT is between 35°C and 60°C (95°F and 140°F). If after driving for 250 seconds, the ECT remains within 3°C (37.4°F) of the starting temperature, the DTC is set (2 trip detection logic).
- Upon starting the engine, the ECT is over 60°C (140°F). If after driving for 250 seconds, the ECM remains within 1°C (33.8°F) of the starting temperature, the DTC is set (6 trip detection logic).

MONITOR STRATEGY

Related DTCs	None
Required Sensors/Components (Main)	Engine coolant temperature sensor
Required Sensors/Components (Related)	None
Frequency of Operation	Once per driving cycle
Duration	5 hours or more
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Engine Coolant Temperature Sensor Cold Start Monitor

Monitor runs whenever following DTCs not present	None
Battery voltage	10.5 V or more
Time after engine start	1 second or more
Engine coolant temperature at engine start	Less than 60°C (140°F)

Intake air temperature sensor circuit	OK
Soak time	0 sec or more
Accumulated mass air flow	825 g or more (Manual transaxle), 1422 g or more (Automatic transaxle)
Fuel cut	OFF
Difference between engine coolant temperature at engine start and intake air temperature	Less than 40°C (72°F)

Engine Coolant Temperature Sensor Soak Monitor

Monitor runs whenever following DTCs not present	None
Battery voltage	10.5 V or more
Engine	Running
Soak time	5 hours or more
Either (a) or (b) condition met	-
(a) Engine coolant temperature	60°C (140°F) or more
(b) Accumulated mass air flow	1661 g or more (Manual transaxle), 3185 g or more (Automatic transaxle)

TYPICAL MALFUNCTION THRESHOLDS

Engine Coolant Temperature Sensor Cold Start Monitor

Engine coolant temperature sensor value change	Less than 5°C (41°F)

Engine Coolant Temperature Sensor Soak Monitor

Difference between current engine coolant temperature sensor value and previous engine coolant temperature sensor value when engine stopped	Less than 5°C (41°F)

COMPONENT OPERATING RANGE

Engine coolant temperature	Engine coolant temperature sensor value changes in accordance with actual engine coolant temperature

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the

engine coolant temperature sensor may have an open or a short circuit. Troubleshoot those DTCs first.

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0116 is output	A
DTC P0116 and other DTCs are output	B

HINT:

If any DTCs other than P0116 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT THERMOSTAT**

(a) Remove the thermostat INFO .

(b) Measure the valve opening temperature of the thermostat.

Standard value:

80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

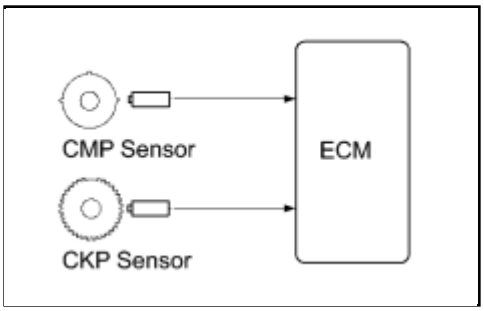
(c) Reinstall the thermostat INFO .

NG ▶ **REPLACE THERMOSTAT**

OK ▶ **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XH30AFX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0300-P0304: Random / Multiple Cylinder Misfire Detected (2010 Corolla)		

DTC	**P0300**	**Random / Multiple Cylinder Misfire Detected**



DTC	**P0301**	**Cylinder 1 Misfire Detected**

DTC	**P0302**	**Cylinder 2 Misfire Detected**

DTC	**P0303**	**Cylinder 3 Misfire Detected**

DTC	**P0304**	**Cylinder 4 Misfire Detected**

DESCRIPTION

When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. High HC concentration levels can cause an increase in exhaust emission levels. Extremely high concentrations of HC can also cause increases in the three-way catalytic converter temperature, which may cause damage to the three-way catalytic converter. To prevent this increase in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the three-way catalytic converter reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the Camshaft Position (CMP) sensor and the Crankshaft Position (CKP) sensor. The camshaft position sensor is used to identify any misfiring cylinders and the crankshaft position sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire count exceeds the threshold levels, and could cause emission control system performance

deterioration, the ECM illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0300	When one of following conditions below is detected (2 trip detection logic): • High temperature misfire occurs in three-way catalytic converter (MIL blinks) • Emission deterioration misfire occurs (MIL illuminates) • Simultaneous misfiring of several cylinders occurs	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Fuel injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve timing • PCV valve and hose • PCV hose connections • Intake system • ECM
P0301 P0302 P0303 P0304	When one of following conditions below is detected (2 trip detection logic): • High temperature misfire occurs in three-way catalytic converter (MIL blinks) • Emission deterioration misfire occurs (MIL illuminates) • Misfiring of specific cylinder occurs	

When DTCs for misfiring cylinders are randomly set, but DTC P0300 is not set, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and sets a DTC when either one of the following conditions, which could cause emission control system performance deterioration, is detected (2 trip detection logic).

- Within the first 1000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs once.
- An excessive misfiring rate (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs a total of 4 times.

The ECM flashes the MIL and sets a DTC when either one of the following conditions, which could cause the three-way catalytic converter damage, is detected (2 trip detection logic).

HINT:

If a catalyst damage misfire occurs, the monitor informs the driver by blinking the MIL (1 trip).

- In every 200 crankshaft revolutions at a high engine rpm, the threshold misfiring percentage is recorded once.
- In every 200 crankshaft revolutions at a normal engine rpm, the threshold misfiring percentage is recorded 3 times.

Misfire Monitor for Mexico Models

The ECM illuminates the MIL and sets a DTC when either one of the following conditions, which could

cause emission deterioration, is detected (2 trip detection logic).

- Within the first 1000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 1000 misfires per 1000 crankshaft revolutions) occurs once.
- An excessive misfiring rate (approximately 500 misfires per 1000 crankshaft revolutions) occurs a total of 4 times.

The ECM flashes the MIL and sets a DTC when the following condition, which could cause the Three-Way Catalytic Converter (TWC) damage, is detected (2 trip detection logic).

- A catalyst damage misfire, which is monitored every 200 crankshaft revolutions, occurs 3 times.

MONITOR STRATEGY

VVT system	Not operated by scan tool
Engine RPM	450 to 4500 rpm
Engine coolant temperature sensor	More than 65°C (149°F)
Fuel cut	OFF

Monitor period of emission-related-misfire: for Mexico models

First 1000 revolutions after engine start, or check mode	Crankshaft 1000 revolutions
Except above	Crankshaft 1000 revolutions x 4

Monitor period of catalyst-damaged-misfire (MIL blinks): for Mexico models

All of following conditions 1, 2 and 3 met	Crankshaft 200 revolutions
1. Driving cycles	1st
2. Check mode	OFF
Except above	Crankshaft 200 revolutions x 3

TYPICAL MALFUNCTION THRESHOLDS

Monitor Period of Emission Related Misfire

Misfire rate	1% or more

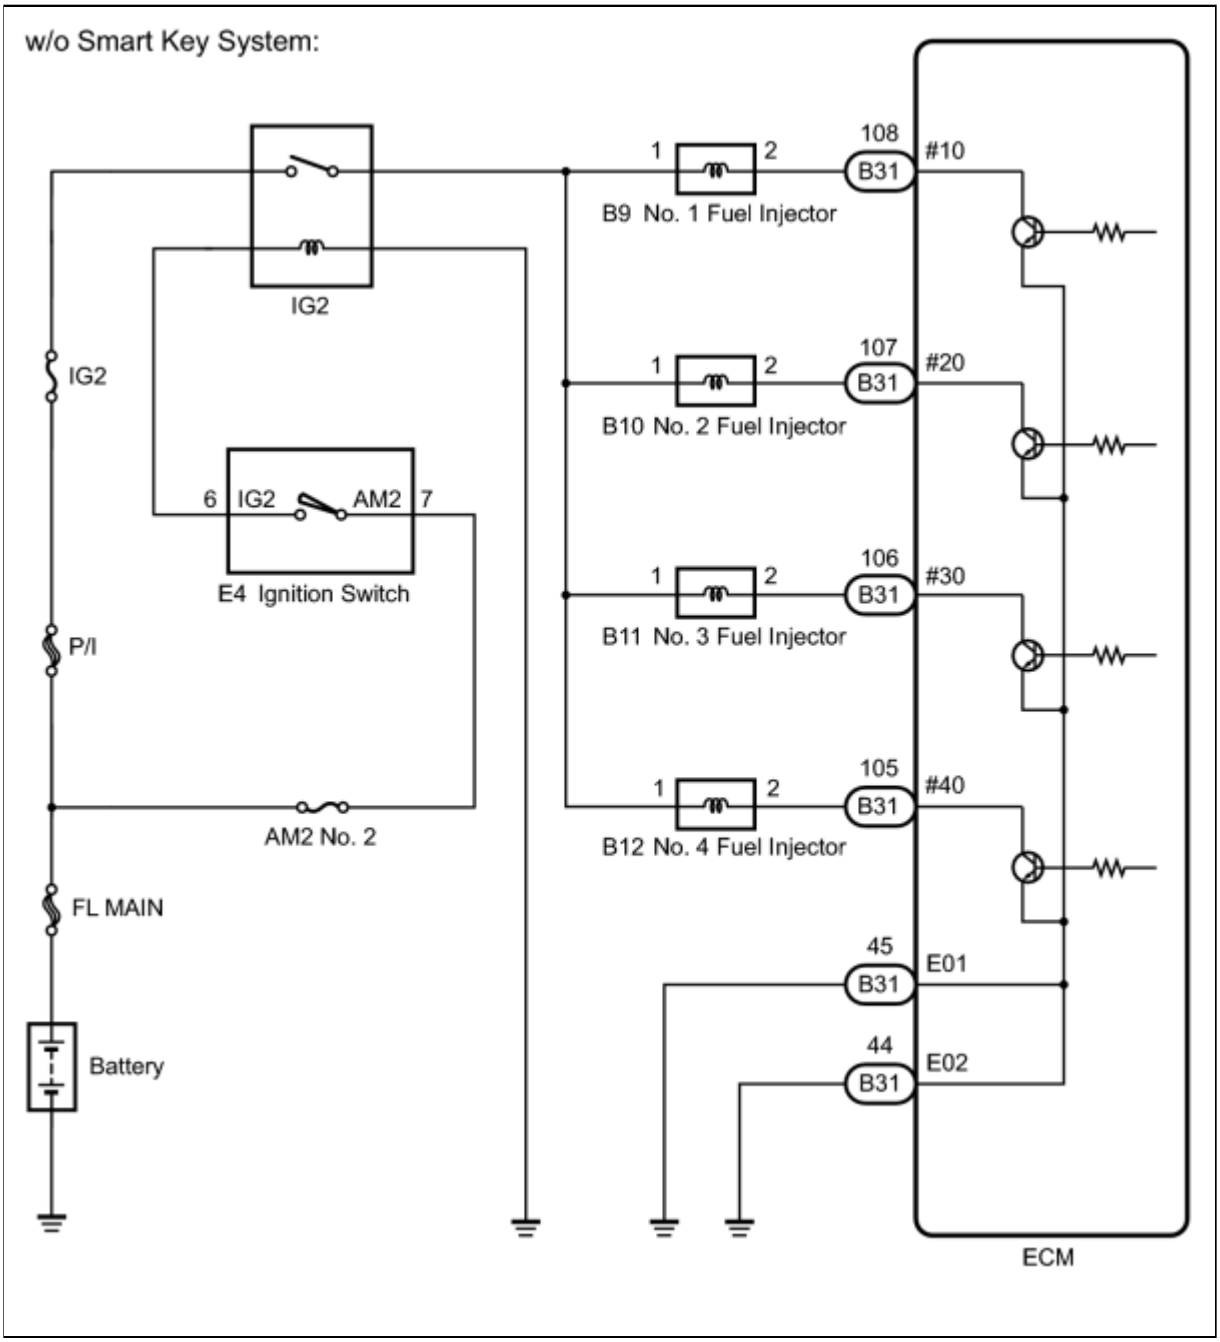
Monitor Period of Catalyst Damaging Misfire (MIL Blinks)

Number of misfire per 200 revolutions	124 or more (varies with intake air amount per RPM)

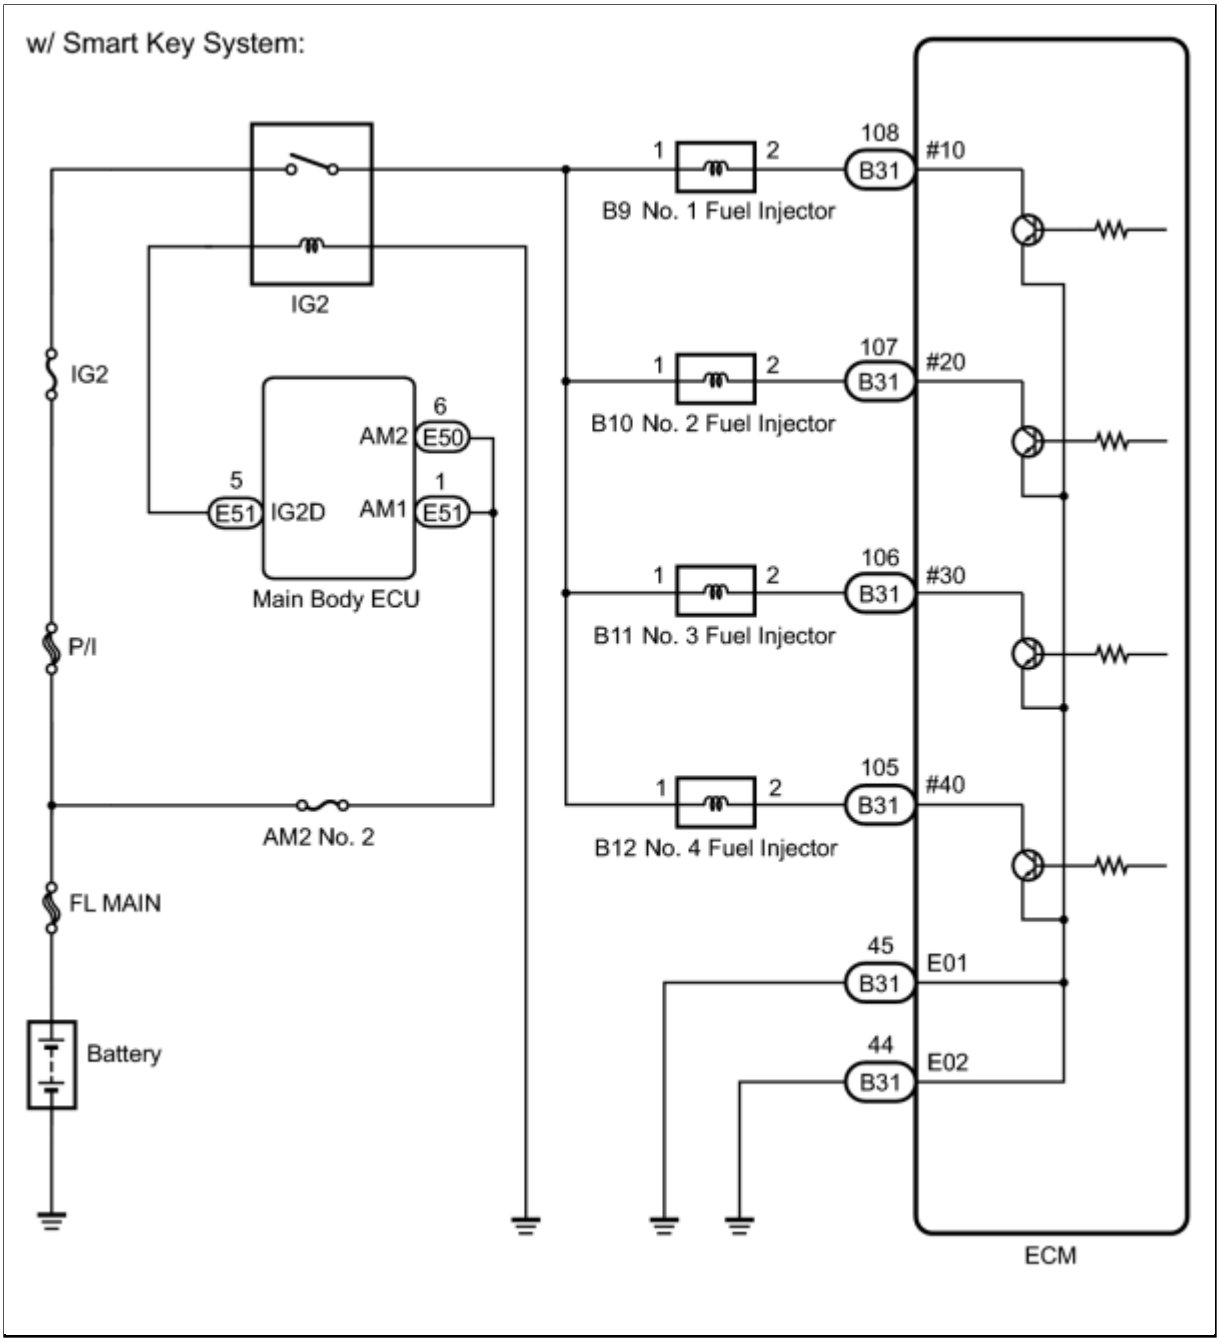
FOR MEXICO MODELS:

Monitor period of emission-related-misfire: for Mexico models

Misfire rate	50.0 % or more: for 1st 2000 revolutions 25.0 % or more: after 1st 2000 revolutions



Monitor period of catalyst-damaged-misfire (MIL blinks): for Mexico models



Number of misfire per 200 revolutions	94 or more (varies with intake air amount and RPM)
Paired cylinder misfire (MIL blinks immediately)	Detected

MONITOR RESULT

Refer to Checking Monitor Status INFO .

WIRING DIAGRAM

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Record the DTC(s) and freeze frame data.
5. Using the Techstream, switch the ECM from normal mode to check mode INFO .
6. Read the misfire counts of each cylinder, Cylinder #1 Misfire Count to Cylinder #4 Misfire Count, with the engine idling. If any misfire count is displayed, skip the following confirmation driving pattern.
7. Drive the vehicle several times with the conditions, such as engine rpm and engine load, shown in Misfire RPM and Misfire Load in the Data List.

HINT:

- In order to store misfire DTCs, it is necessary to operate the vehicle for the period of time shown in the table below, using the Misfire RPM and Misfire Load in the Data List.

ENGINE RPM	DURATION
Idling	8 minutes or more
1000	4.5 minutes or more
2000	2.5 minutes or more
3000	1.5 minute or more

8. Check whether misfires have occurred by checking DTCs and freeze frame data.

HINT:

Do not turn the ignition switch off until the stored DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data will be erased.

9. Record the DTC(s), freeze frame data and misfire counts.
10. Turn the ignition switch off and wait for at least 5 seconds.

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the ECM as freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the ECM as freeze frame data have been reproduced, one of the following factors is considered to be a possible cause of the problem:
    a. There was insufficient fuel in the tank.
    b. Improper fuel is used.
    c. The spark plugs have been contaminated.
    d. The problem requires further diagnosis.
- After finishing repairs, check the misfire counts of the cylinders Cylinder #1 Misfire Count to Cylinder #4 Misfire Count.
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern after finishing repairs.
- When one of Short FT #1, Long FT #1, Short FT #2 or Long FT #2 in the freeze frame data is outside the range of +/-20%, the air fuel ratio may be Rich (-20% or less) or Lean (+20% or more).
- When the Coolant Temp in the freeze frame data is less than 75°C (167°F), the misfire have occurred only while warming up the engine.
- An extremely imbalanced drive wheel which causes body vibration may cause misfire DTCs detected.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

HINT:

Write down indicated DTCs.

Result:

RESULT	PROCEED TO
DTC P0300, P0301, P0302, P0303 and/or P0304 is output	A
DTC P0300, P0301, P0302, P0303 and/or P0304 and other DTCs are output	B

HINT:

If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**READ VALUE USING TECHSTREAM (MISFIRE RPM AND MISFIRE LOAD)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Misfire RPM and Misfire Load.

(e) Read and note the Misfire RPM and Misfire Load values.

HINT:

The Misfire RPM and Misfire Load values indicate the vehicle conditions under which the misfire occurred.

NEXT

3.	**CHECK PCV HOSE CONNECTIONS**

(a) Check the PCV hose connected.

OK:

PCV hose is correctly connected and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

4.	**READ VALUE USING TECHSTREAM (CATALYST OT MF F/C)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Catalyst OT MF F/C.

(e) Read the value displayed on the Techstream.

Result:

DATA LIST	TECHSTREAM DISPLAY	PROCEED TO
Catalyst OT MF F/C	Avail	A
	Not Avl	B

B → **READ VALUE USING TECHSTREAM (CYLINDER #1 MISFIRE COUNT, #2, #3 AND #4)**

A

5.	**PERFORM ACTIVE TEST USING TECHSTREAM (PROHIBIT CATALYST OT MISFIRE PREVENT F/C)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Prohibit the Catalyst OT Misfire prevent F/C.

(e) Perform the Active Test.

NOTICE:

When performing the Active Test, make sure the vehicle is stopped and either idling or being revved within 3000 rpm.

NEXT

6.	**READ VALUE USING TECHSTREAM (CYLINDER #1 MISFIRE COUNT, #2, #3 AND #4)**

(a) Enter the following menus: Powertrain / Engine and ECT / Data List / Misfire / Cylinder #1 Misfire Count, #2, #3 and #4.

(b) Start the engine and allow the engine to idle.

(c) Read each value for Cylinder #1 Misfire Count to #4 displayed on the Techstream. If no misfire counts occur in any cylinders, perform steps (d) and (e), and then check the misfire counts again.

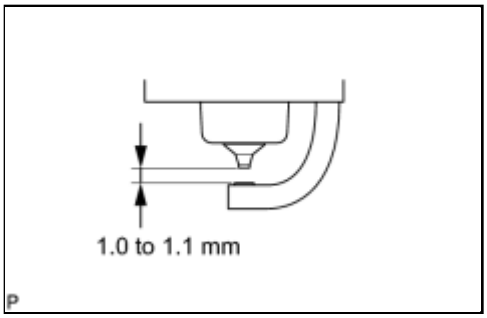
(d) Drive the vehicle with the Misfire RPM and Misfire Load noted in the "READ VALUE USING TECHSTREAM (MISFIRE RPM AND MISFIRE LOAD)" procedures above.

(e) Read the Cylinder #1 Misfire Count to #4 or DTCs displayed on the Techstream.

Result:

RESULT	PROCEED TO

(MISFIRE COUNT)	
Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	B



HINT:

- If it is difficult to reproduce misfires for each cylinder, check the Data List item called Misfire Margin. Try to find vehicle driving conditions that lower the Misfire Margin value. Values above 30% are considered normal.
- If the freeze frame data record of the engine coolant temperature is below 75°C (167°F), it may only be possible to detect the misfire when the engine is cold.
- If the freeze frame data record of the Engine Run Time is below 120 seconds, the misfire may be detected immediately after the engine is started.

B ▶ **CHECK INTAKE SYSTEM**

A ▼

7.	INSPECT SPARK PLUG

(a) Remove the ignition coil assembly and the spark plug from the misfiring cylinder.

(b) Measure the spark plug electrode gap.

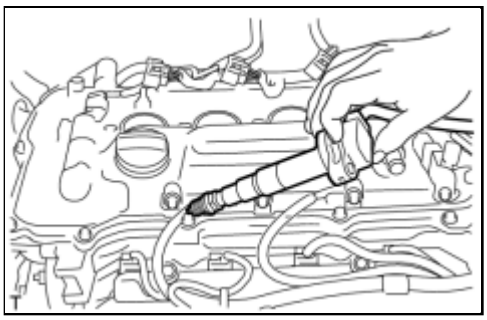
Standard gap:
1.0 to 1.1 mm (0.0394 to 0.0433 in.)

(c) Check the electrode for carbon deposits.

Recommended Spark Plug

MANUFACTURER	PRODUCT
DENSO	SC20HR11

NOTICE:



If the electrode gap is larger than standard, replace the spark plug. Do not adjust the electrode gap.

(d) Reinstall the ignition coil assembly.

NG ▶ **REPLACE SPARK PLUG**

OK ▼

8.	CHECK FOR SPARK AND IGNITION

(a) Disconnect the injector connectors to prevent the engine from starting.

CAUTION:

Always disconnect all injector connectors.

(b) Remove the ignition coil assembly from the cylinder head.

(c) Install the spark plug onto the ignition coil.

(d) Touch the spark plug tip to the cylinder head.

(e) Crank the engine for less than 2 seconds and check for sparks.

NOTICE:

Do not crank the engine for more than 2 seconds.

OK:

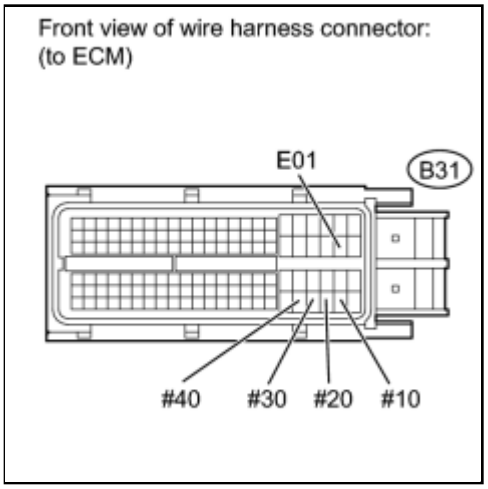
Sparks jump across electrode gap.

(f) Install the ignition coil assembly.

(g) Reconnect the injector connectors.

NG ▶ **CHANGE TO KNOWN GOOD SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER**

OK ▼



9.	**CHECK CYLINDER COMPRESSION PRESSURE**

(a) Measure the cylinder compression pressure of the misfiring cylinder INFO .

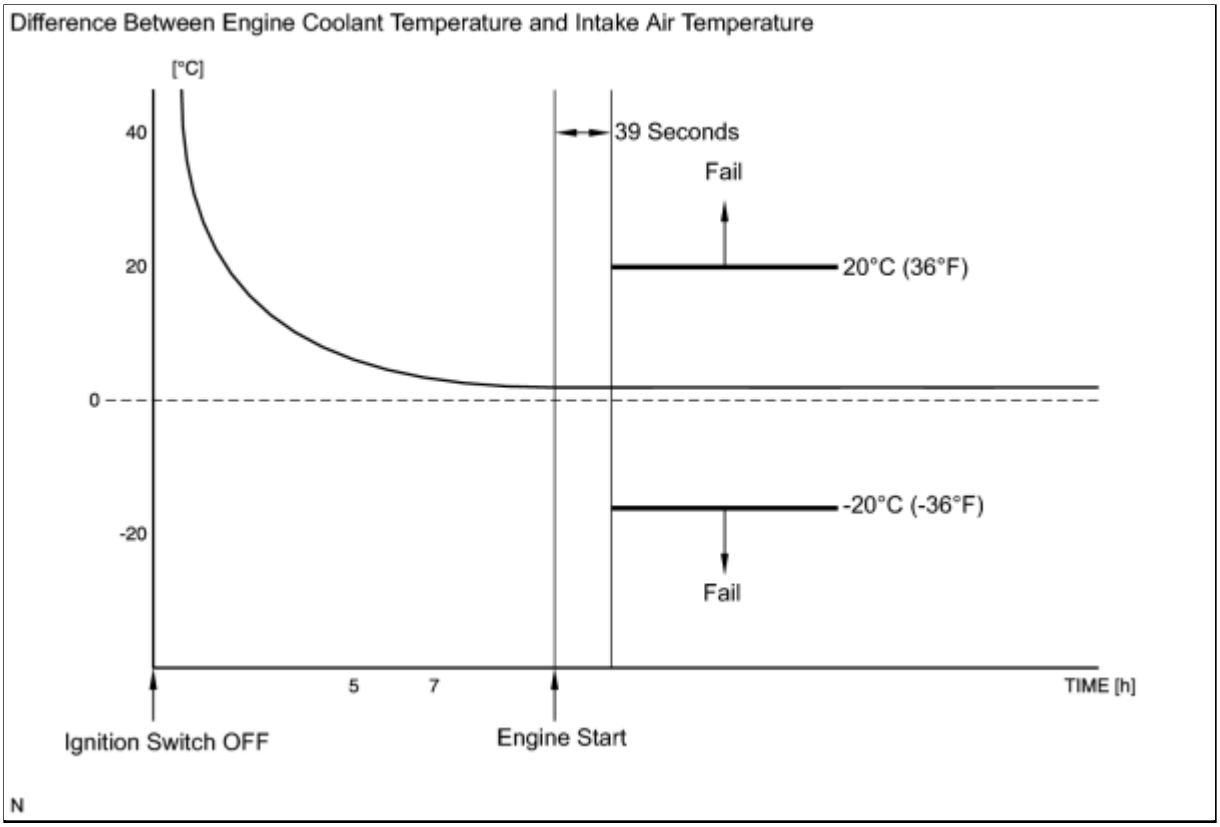
OK ▶ REPLACE IGNITION COIL ASSEMBLY



Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010BK05AX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P011B: Engine Coolant Temperature / Intake Air Temperature Correlation (2010 Corolla)		

DTC	**P011B**	**Engine Coolant Temperature / Intake Air Temperature Correlation**

DESCRIPTION

The engine has two temperature sensors, an engine coolant temperature sensor and an intake air temperature sensor, to detect the temperature while the engine is operating. A thermistor, whose resistance value varies according to the temperature, is built into each sensor. When the temperature is low, the resistance of the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes. Based on these temperature signals output from the sensors, the ECM determines the fuel injection duration and the ignition timing to control the engine.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P011B	• All of following conditions are met: (2 trip detection logic) a. Battery voltage 10.5 V or more b. 7 hours or more elapsed from engine stops on previous trip c. 39 seconds after cold engine starts d. Minimum intake air temperature after engine starts more than -10°C (14°F) e. Average engine coolant temperature before engine starts more than -10°C (14°F) f. Difference between readings of engine coolant temperature and intake air temperature greater than 20°C (68°F)	• Intake air temperature sensor • Engine coolant temperature sensor • ECM

HINT:

- Waiting is required to prevent the temperature of the engine from affecting the readings. If the engine has been operated recently, it will not be possible to accurately compare the readings.
- For diagnosis, in order to duplicate the detection conditions of the DTC, it is necessary to park the vehicle for 7 hours. Parking the vehicle for 7 hours ensures that the actual temperature of the engine coolant temperature and intake air temperature are very similar. When the vehicle has been parked for less than 7 hours, differences in the readings may exist, this does not necessarily indicate a fault.

MONITOR DESCRIPTION

The ECM monitors the difference between the engine coolant temperature and the intake air temperature when the engine is started cold to detect the engine temperature conditions accurately. The monitor runs when the engine started cold after 7 hours or more has elapsed since the engine was stopped (ignition switch turned off) on the previous trip. If the difference between the engine coolant temperature and the intake air temperature on a cold start exceeds 20°C (36°F), the ECM interprets this as a malfunction in the engine coolant temperature sensor circuit and intake air temperature sensor circuit, and sets the DTC.

MONITOR STRATEGY

Related DTCs	P011B: Engine coolant temperature / Intake air temperature sensor correlation
Required Sensors/Components (Main)	Engine coolant temperature Intake air temperature sensor

Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	7 hours or more
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	None
All of following conditions are met	Conditions 1 and 2
1. All of following conditions are met	Conditions (a), (b), (c) and (d)
(a) After ignition switch ON and engine not running time	Less than 20 seconds
(b) Soak Time	7 hours or more
(c) Battery voltage	10.5 V or more
(d) Time after engine start	39 seconds or more
2. Either of the following conditions is met	Condition (a) and (b)
(a) Minimum intake air temperature after engine start	-10°C (14°F) or more
(b) Engine coolant temperature before engine start	-10°C (14°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Deviated engine coolant temperature and intake air temperature	Less than -20°C (-36°F) or more than 20°C (36°F)

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P011B)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
DTC P011B is output	A
DTC P011B and other DTCs are output	B

HINT:

If any DTCs other than P011B are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**READ VALUE USING TECHSTREAM (INTAKE AIR TEMPERATURE)**

(a) Leave the vehicle for 7 hours or more.

HINT:

It is necessary leave the vehicle for 7 hours or more to allow conditions similar to the DTC detection conditions.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Intake Air.

(f) Read the value displayed on the Techstream.

OK:

The difference between the intake air temperature and the actual outside air temperature is within 10°C (18°F).

HINT:

Temperature readings on the vehicle's outside temperature gauge (if equipped) are not suitable for comparing to the intake air temperature reading. The outside temperature gauge has a significant delay built in to prevent temperature swings from being displayed on its display. Use an accurate thermometer to determine the outside air temperature.

NG ▶ REPLACE MASS AIR FLOW METER

OK ▼

3.	READ VALUE USING TECHSTREAM (COOLANT TEMPERATURE)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Coolant Temp.

(e) Read the value displayed on the Techstream.

OK:

The difference between the coolant temperature and the actual outside air temperature is within 10°C (18°F).

HINT:

If the result is not as specified, check if there are heat sources such as a block heater in the engine compartment.

NG ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK ▶ REPLACE ECM

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T9P05IX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0125: Insufficient Coolant Temperature for Closed Loop Fuel Control (2010 Corolla)		

DTC	**P0125**	**Insufficient Coolant Temperature for Closed Loop Fuel Control**

DESCRIPTION

Refer to DTC P0115 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0125	Engine coolant temperature does not reach closed-loop enabling temperature for 20 minutes (this period varies with engine start engine coolant temperature) (2 trip detection logic)	• Cooling system • Engine coolant temperature sensor • Thermostat

MONITOR DESCRIPTION

The resistance of the engine coolant temperature sensor varies in proportion to the actual engine coolant temperature. The ECM supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal output voltage varies according to the changing resistance of the sensor. After the engine is started, the engine coolant temperature is monitored through this signal. If the engine coolant temperature sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

Example:

The engine coolant temperature is 5°C (41°F) at engine start. After about 1 minute running time, the engine coolant temperature sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Engine coolant temperature sensor Thermostat Cooling system

Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	65 seconds: Engine coolant temperature at engine start -3.33°C (26°F) or more 129 seconds: Engine coolant temperature at engine start -3.33 to -14.44°C (26 to 6°F) 1200 seconds: Engine coolant temperature at engine start less than -14.44°C (6°F)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Thermostat fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	65 seconds: Engine coolant temperature at engine start -3.33°C (26°F) or more 129 seconds: Engine coolant temperature at engine start -3.33 to -14.44°C (26 to 6°F) 1200 seconds: Engine coolant temperature at engine start less than -14.44°C (6°F)

WIRING DIAGRAM

Refer to DTC P0115 INFO .

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the engine coolant temperature sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream ON.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0125 is output	A
DTC P0125 and other DTCs are output	B

HINT:

If any DTCs other than P0125 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT THERMOSTAT**

(a) Remove the thermostat INFO .

(b) Check the valve opening temperature of the thermostat.

Standard value:
80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat INFO .

NG ▶ REPLACE THERMOSTAT

OK ▼

3.	CHECK COOLING SYSTEM

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG ▶ REPAIR OR REPLACE COOLING SYSTEM

OK ▶ REPLACE ENGINE COOLANT TEMPERATURE SENSOR

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC3090X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0171,P0172: System Too Lean (Bank 1) (2010 Corolla)		

DTC	**P0171**	**System Too Lean (Bank 1)**

DTC	**P0172**	**System Too Rich (Bank 1)**

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection duration. The fuel trim consists of both the short-term and long-term fuel trim.

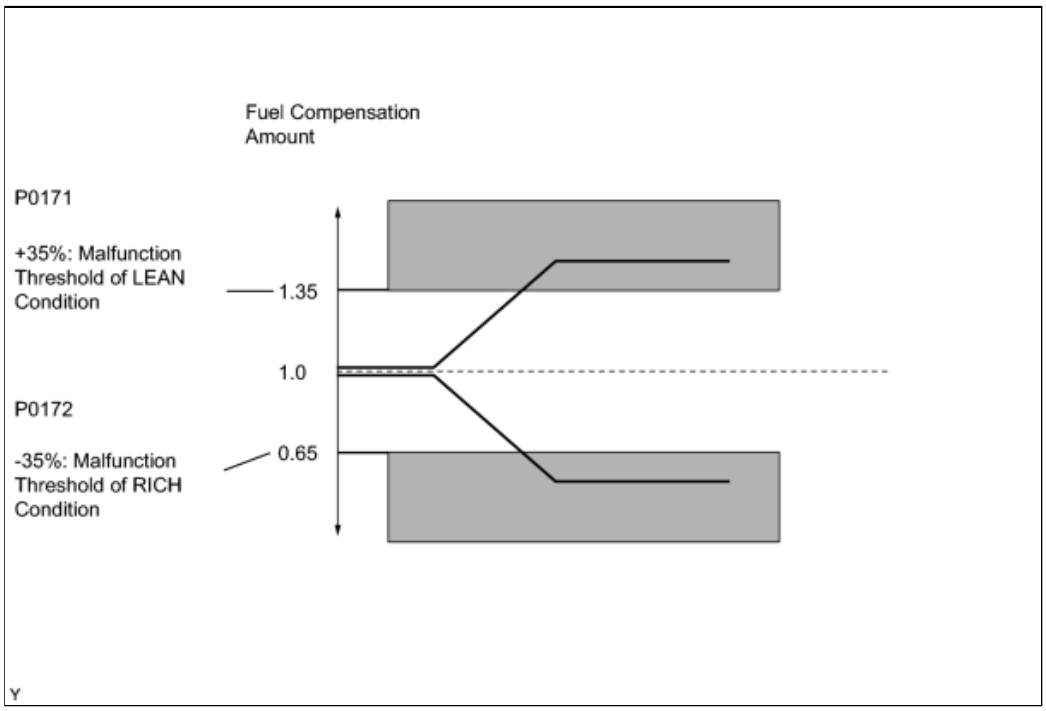
The short-term fuel trim is fuel compensation that is used to constantly maintain the air fuel ratio at stoichiometric levels. The signal from the air fuel ratio sensor indicates whether the air fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short- term fuel trim compensation.

If both the short-term and long-term fuel trim are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0171	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to lean side (2 trip detection logic)	• Intake system • Injector blockage • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Gas leaks from exhaust system • Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • PCV valve and hose • PCV hose connections • ECM
P0172	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to rich side (2 trip detection logic)	• Injector leak or blockage • Mass air flow meter • Engine coolant temperature sensor • Ignition system • Fuel pressure • Gas leaks from exhaust system • Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM

HINT:



- When DTC P0171 is set, the actual air fuel ratio is on the lean side. When DTC P0172 is set, the actual air fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When the total of the short-term and long-term fuel trim values is within the malfunction threshold (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, a fuel injection volume that deviates from that estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim value. Deviations from the ECM's estimated fuel injection volume also affects the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air fuel ratio). If the average fuel trim learning value exceeds a malfunction threshold, the ECM interprets this a fault in the fuel system and sets a DTC.

Example:

The average fuel trim learning value is more than +35% or less than -35%, the ECM interprets this as a fuel system malfunction.

MONITOR STRATEGY

Related DTCs	P0171: Fuel trim Lean (bank 1) P0172: Fuel trim Rich (bank 1)

WIRING DIAGRAM

Refer to DTC P2195 INFO .

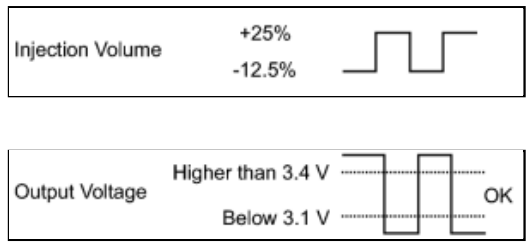
INSPECTION PROCEDURE

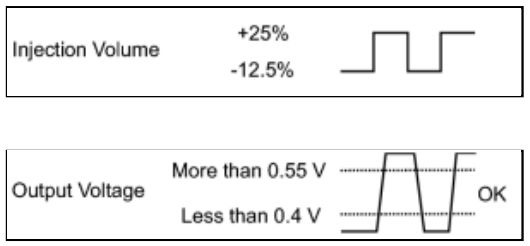
HINT:

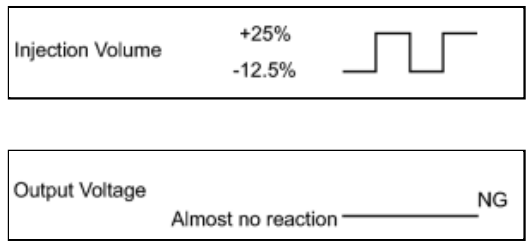
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

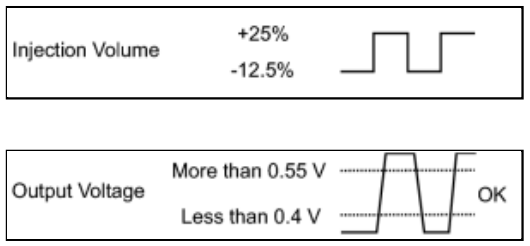
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

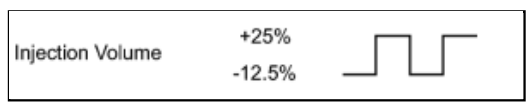
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

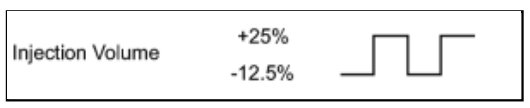




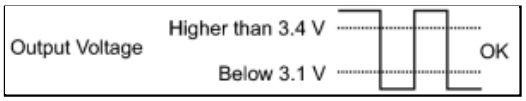


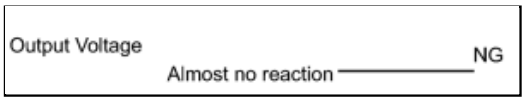


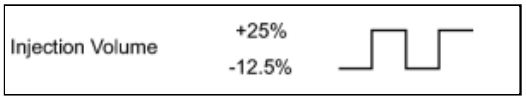


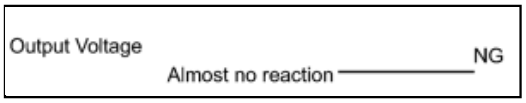


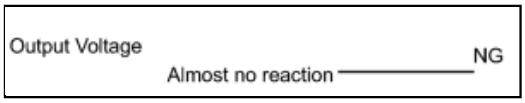
HINT:











- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			sensor heater • Heated oxygen sensor circuit
4	 	 	• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171 OR P0172)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO

RESULT	PROCEED TO
DTC P0171 or P0172 is output	A
DTC P0171 or P0172 and other DTCs are output	B

HINT:

If any DTCs other than P0171 or P0172 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	CHECK PCV HOSE CONNECTIONS

(a) Inspect the PCV hose connections INFO.

OK:

PCV hose is connected correctly and is not damaged.

NG ▶ **REPAIR OR REPLACE PCV HOSE**

OK ▼

3.	CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks INFO.

OK:

No leaks in intake system.

NG ▶ **REPAIR OR REPLACE INTAKE SYSTEM**

OK ▼

4.	PERFORM ACTIVE TEST USING TECHSTREAM (A/F CONTROL)

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor.

(f) Perform the Control the Injection Volume for A/F Sensor operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).

(g) Monitor the voltage outputs of the air fuel ratio sensor and the heated oxygen sensor (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- The Control the Injection Volume for A/F Sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard:

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

Result

STATUS AFS VOLTAGE B1S1	STATUS O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO SENSOR CONDITION	MISFIRE	SUSPECTED TROUBLE AREA	PROCEED TO
Lean/Rich	Lean/Rich	Normal	-	-	C

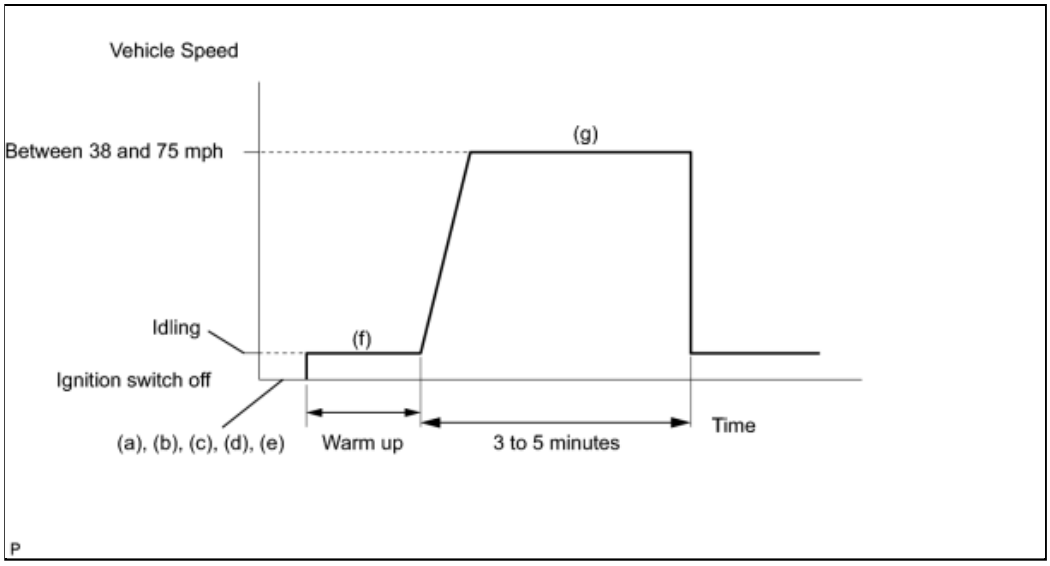
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**



OK ▼

14.	**REPLACE AIR FUEL RATIO SENSOR**

(a) Replace the air fuel ratio sensor INFO .

NEXT

15.	PERFORM CONFIRMATION DRIVING PATTERN

(a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Clear DTCs INFO .
(e) Switch the ECM from normal mode to check mode using the Techstream INFO .
(f) Start the engine and warm it up with all the accessories switched off.
(g) Drive the vehicle at between 38 mph and 75 mph (60 km/h and 120 km/h) and at an engine speed of between 1400 rpm and 3200 rpm for 3 to 5 minutes.

HINT:

If the system is still malfunctioning, the MIL will be illuminated during step (g).

NOTICE:

If the conditions in this test are not strictly followed, no malfunction will be detected.

NEXT

16.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0171 OR P0172)

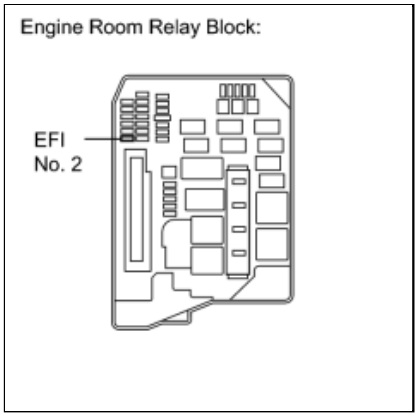
(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.



Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0171 or P0172 is output	B

B ▶ **REPLACE ECM**

A ▶ **END**

17.	**INSPECT FUSE (EFI NO. 2 FUSE)**

(a) Remove the EFI No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 2 fuse.

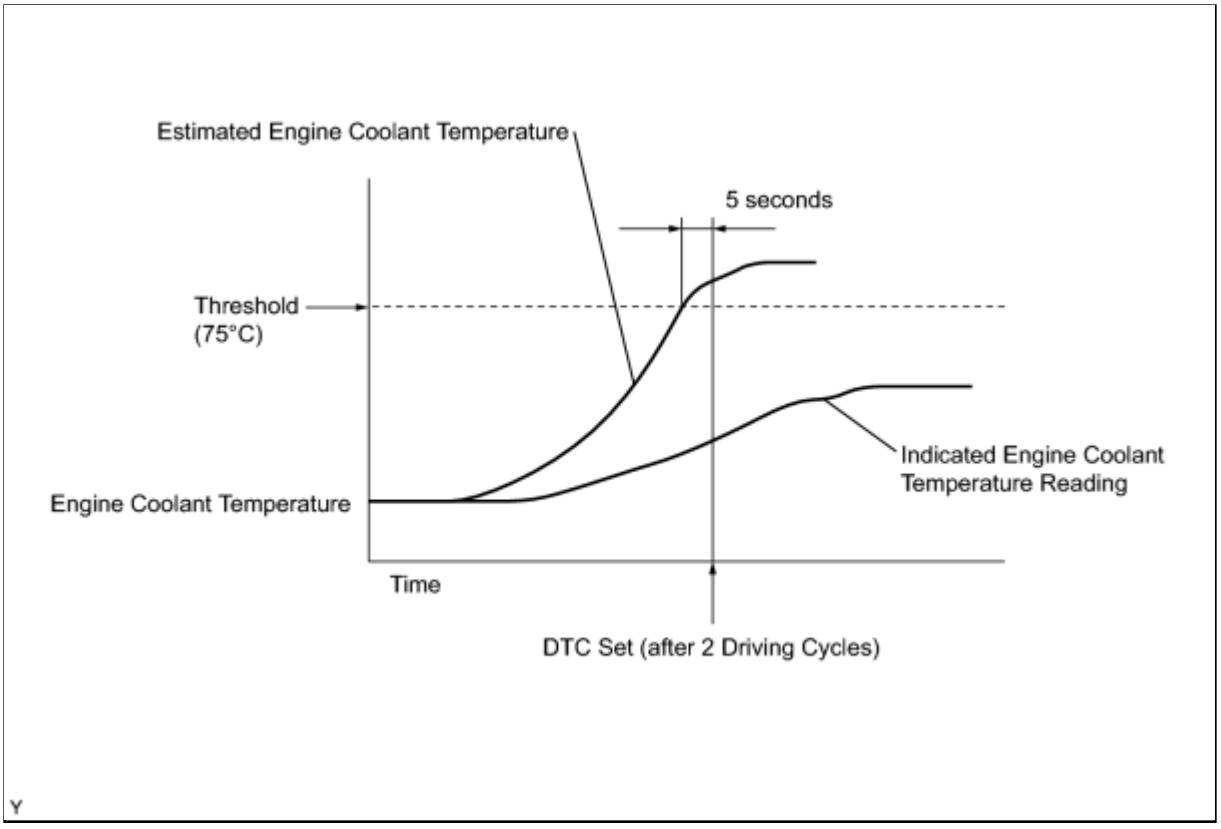
NG ▶ **REPLACE FUSE (EFI NO. 2 FUSE)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - AIR FUEL RATIO SENSOR)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TB3049X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0128: Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) (2010 Corolla)		

DTC	**P0128**	**Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)**

DESCRIPTION



HINT:

- This DTC relates to the thermostat.

This DTC is set when the engine coolant temperature does not reach 75°C (167°F) despite sufficient engine warm-up time having elapsed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0128	• Conditions (a), (b) and (c) are met for 5 seconds (2 trip detection logic): • (a) Cold start • (b) Engine warmed up • (c) Engine coolant temperature less than 75°C (167°F)	• Thermostat • Cooling system • Engine coolant temperature sensor • ECM

MONITOR DESCRIPTION

The ECM estimates the engine coolant temperature based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual engine coolant temperature. When the estimated engine coolant temperature reaches 75°C (167°F), the ECM checks the actual engine coolant temperature. If the actual engine coolant temperature is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat
Required Sensors/Components (Main)	Thermostat Engine coolant temperature sensor
Required Sensors/Components (Related)	Intake air temperature sensor Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	900 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

Battery voltage	11 V or more
Either of following conditions 1 or 2 is met:	-
1. All of following conditions are met:	-
• Engine coolant temperature at engine start - Intake air temperature at engine start	-15 to 7°C (-27 to 12.6°F)
• Engine coolant temperature at engine start	-10 to 56°C (14 to 133°F)
• Intake air temperature at engine start	-10 to 56°C (14 to 133°F)
2. All of following conditions are met:	-
• Engine coolant temperature at engine start - Intake air temperature at engine start	More than 7°C (12.6°F)

• Engine coolant temperature at engine start	56°C (133°F) or less
• Intake air temperature at engine start	-10°C (14°F) or more
Accumulated time at 128 km/h (80 mph) or more of vehicle speed	Less than 20 seconds

TYPICAL MALFUNCTION THRESHOLDS

Duration that both of following conditions (a) and (b) are met	5 seconds or more
(a) Estimated engine coolant temperature	75°C (167°F) or more
(b) Engine coolant temperature sensor output	Below 75°C (167°F)

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0128)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0128 is output	A
DTC P0128 and other DTCs are output	B

HINT:

If any DTCs other than P0128 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A
▼

2.	**CHECK COOLING SYSTEM**

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG ▶ **REPAIR OR REPLACE COOLING SYSTEM**

OK
▼

3.	**INSPECT THERMOSTAT**

(a) Remove the thermostat INFO .

(b) Measure the valve opening temperature of the thermostat.

Standard value:
80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat INFO .

NG ▶ **REPLACE THERMOSTAT**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000SVT097X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0325,P0327,P0328: Knock Sensor 1 Circuit (2010 Corolla)		

DTC	**P0325**	**Knock Sensor 1 Circuit**

DTC	**P0327**	**Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)**

DTC	**P0328**	**Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)**

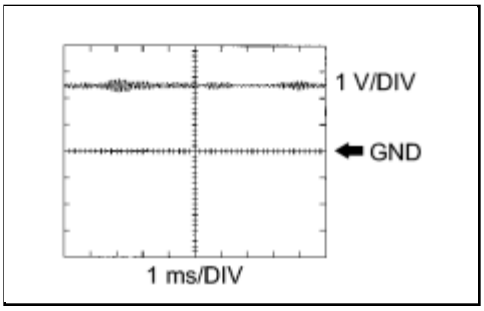
DESCRIPTION

A flat type knock sensor is used. Flat type knock sensors (non-resonant type) have a structure that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.

Knock sensors are fitted onto the engine block to detect engine knocking.

The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed.

The voltage is generated when the engine block vibrates due to knocking. Occurrence of engine knocking can be suppressed by delaying the ignition timing.



DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0325	Output voltage of knock sensor less than 0.5 V or more than 4.5 V for 1 second or more (1 trip detection logic)	• Open or short in knock sensor circuit • Knock sensor • ECM
P0327	Output voltage of knock sensor less than 0.5 V for 1 second or more (1 trip detection logic)	• Short in knock sensor circuit • Knock sensor • ECM
P0328	Output voltage of knock sensor more than 4.5 V for 1 second or more (1 trip detection logic)	• Open in knock sensor circuit

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
		• Knock sensor • ECM

HINT:

When any of DTCs P0325, P0327 and P0328 are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the ignition switch is turned off.

Reference: Inspection using an oscilloscope

The correct waveform is as shown.

ECM Terminal Name	Between KNK1 and EKNK
Tester Range	1 V/DIV, 1 ms/DIV
Condition	Engine speed maintained at 4000 rpm after warming up engine

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.

The monitor for DTCs P0325, P0327 and P0328 begins to run when 5 seconds have elapsed since the engine was started.

If the malfunction is not repaired successfully, DTC P0325, P0327 or P0328 is set 5 seconds after the engine is next started.

MONITOR STRATEGY

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (KNOCK FEEDBACK VALUE)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine.

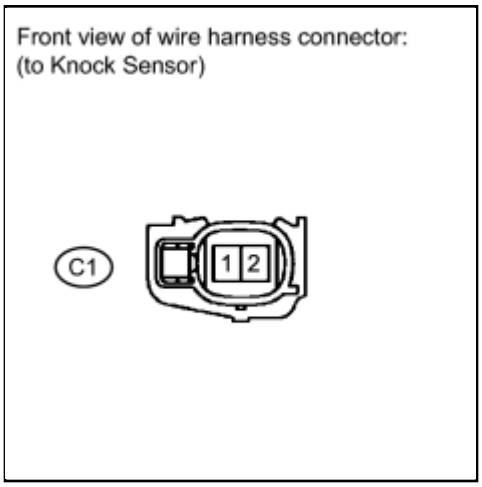
(e) Enter the following menus: Powertrain / Engine and ECT / Knock Feedback Value.

(f) Read the value while driving the vehicle.

OK:

The value changes.

Malfunction does not occur	Knock Feedback Value changes
Malfunctions occur	Knock Feedback Value does not change



HINT:

The knock feedback value change can be confirmed by running the engine with a high load, for example, by activating the air conditioning system and racing the engine.

NG ▶ **INSPECT ECM (KNK1 VOLTAGE)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

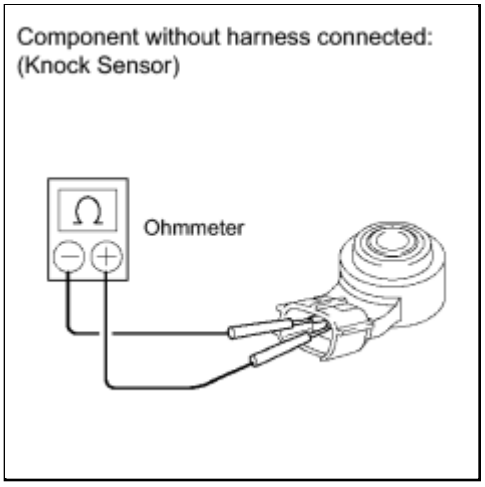
2.	**INSPECT ECM (KNK1 VOLTAGE)**

(a) Disconnect the knock sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
C1-2 - C1-1	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the knock sensor connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)**

OK ▼

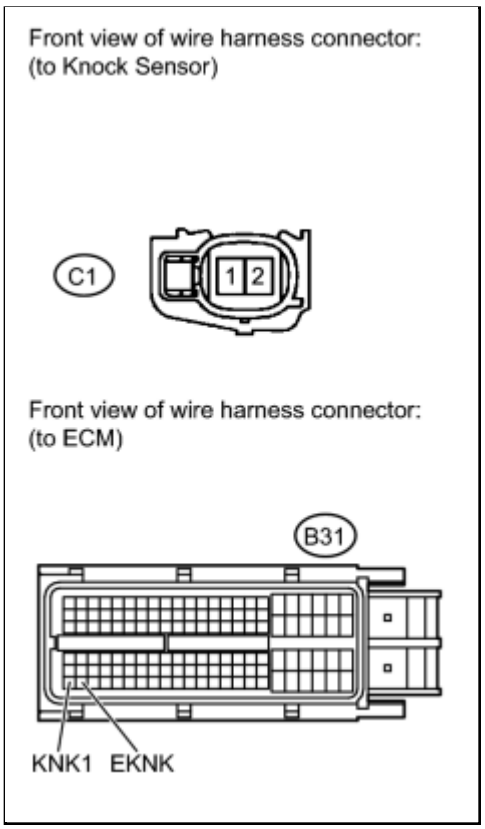
3.	INSPECT KNOCK SENSOR

(a) Remove the knock sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	120 to 280 kΩ



(c) Reinstall the knock sensor.

NG ▶ **REPLACE KNOCK SENSOR**

OK ▶ **REPLACE ECM**

4.	CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)

(a) Disconnect the knock sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C1-2 - B31-110 (KNK1)	Always	Below 1 Ω
C1-1 - B31-111 (EKNK)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
C1-2 or B31-110 (KNK1) - Body ground	Always	10 kΩ or higher
C1-1 or B31-111 (EKNK) - Body ground	Always	10 kΩ or higher

(d) Reconnect the knock sensor connector.

(e) Reconnect the ECM connector.

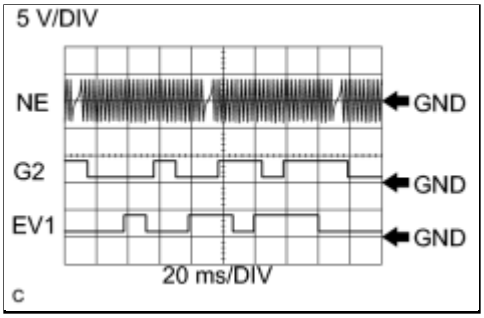
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - KNOCK SENSOR)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TCW0BEX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0335,P0339: Crankshaft Position Sensor "A" Circuit (2010 Corolla)		

DTC	**P0335**	**Crankshaft Position Sensor "A" Circuit**

DTC	**P0339**	**Crankshaft Position Sensor "A" Circuit Intermittent**



DESCRIPTION

The crankshaft position sensor system consists of a crankshaft position sensor plate and a pickup coil.

The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of wound copper wire, an iron core and magnet. The sensor plate rotates and, as each tooth passes by the pickup coil, a pulse signal is created. The pickup coil generates 34 signals per engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0335	When either of following conditions are met: (1 trip detection logic) • Missing crankshaft position sensor signal despite camshaft position sensor signal inputs normal after engine cranked • No crankshaft position sensor signal to ECM at engine speed of 600 rpm or more	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crankshaft position sensor plate • ECM
P0339	Following conditions (a), (b) and (c) are met: (1 trip detection logic) (a) Engine speed 1000 rpm or more (b) No crankshaft position sensor signal for 0.05 seconds or more (c) 3 seconds or more have elapsed since starter signal switched from ON to OFF	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crankshaft position sensor plate • ECM

Reference: Inspection using an oscilloscope.

HINT:

- The correct waveform is as shown.
- G2+ and EV1+ are camshaft position sensor signals, and NE+ is the crankshaft position sensor signal.
- A failure of the ground for the shielding of the wiring may result in noisy waveforms.

ECM Terminal Name	Between G2+ and G2- Between NE+ and NE- Between EV1+ and EV1-
Tester Range	5 V/DIV, 20 ms/DIV
Condition	Idling after engine warmed-up

MONITOR DESCRIPTION

If there is no signal from the crankshaft position sensor despite the engine rotating, the ECM interprets this as a malfunction of the sensor.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: Crankshaft position sensor range check or rationality

Frequency of Operation	Continuous
Duration	3 times
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All

Monitor runs whenever following DTCs not present	None

Case 1

Time after starter OFF to ON	3 seconds or more
Number of camshaft position sensor signal pulse	6 times
Battery voltage	7 V or more
Ignition switch	ON

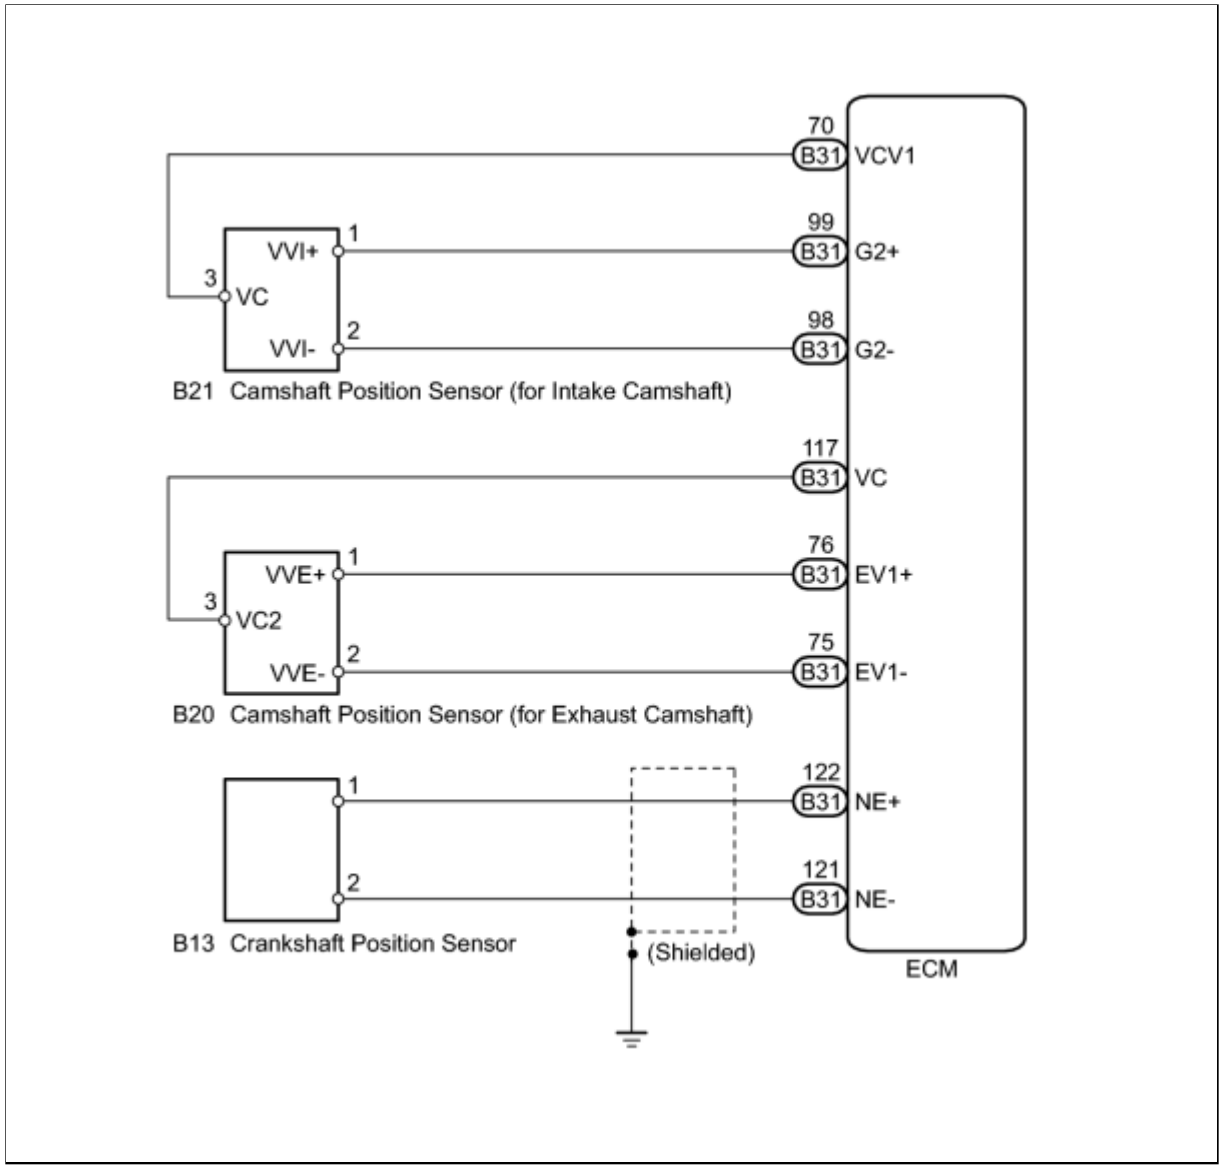
Case 2

Starter	OFF
Engine speed	600 rpm or more
Time after starter from ON to OFF	3 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Case 1

Number of crankshaft position sensor signal pulse	132 or less, and 174 or more



Case 2

Engine speed signal	No signal

COMPONENT OPERATING RANGE

Crankshaft position sensor	• Crankshaft position sensor output voltage fluctuates while crankshaft revolving • 34 crankshaft position sensor signals per crankshaft revolution

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If no problem is found through this diagnostic troubleshooting procedure, troubleshoot the engine mechanical systems.
- Check the engine speed. The engine speed can be checked using the Techstream. To check, follow the operation below:

    a. Connect the Techstream to the DLC3.
    b. Start the engine.
    c. Turn the Techstream on.
    d. Enter the following menus: Powertrain / Engine and ECT / Data List / Engine Speed.

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (ENGINE SPEED)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Engine Speed.

(e) Start the engine.

(f) Read the values displayed on the Techstream while the engine is running.

OK:
Correct values are displayed.

HINT:

- To check the engine speed change, display the graph on the Techstream.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the Techstream remains at zero (0), there may be an open or short in the crankshaft position sensor circuit.

NG ▶ **INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)

(a) Disconnect the crankshaft position sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	1850 to 2450 Ω

(c) Reconnect the crankshaft position sensor connector.

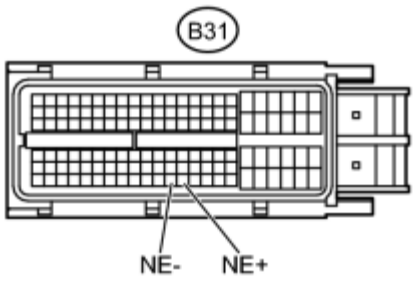
Component without harness connected:
(Crankshaft Position Sensor)

NG → REPLACE CRANKSHAFT POSITION SENSOR

OK ↓

3.	CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)

(a) Disconnect the crankshaft position sensor connector.



(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Crankshaft Position Sensor)

Front view of wire harness connector:
(to ECM)

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B13-1 - B31-122 (NE+)	Always	Below 1 Ω
B13-2 - B31-121 (NE-)	Always	Below 1 Ω

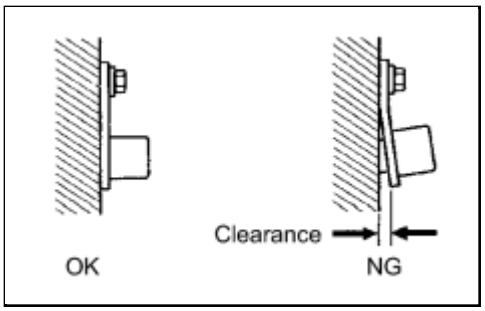
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B13-1 or B31-122 (NE+) - Body ground	Always	10 kΩ or higher
B13-2 or B31-121 (NE-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the crankshaft position sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)**



OK ▼

4.	CHECK SENSOR INSTALLATION (CRANKSHAFT POSITION SENSOR)

(a) Check the crankshaft position sensor installation.

OK:

Sensor is installed correctly.

NG ▶ **SECURELY REINSTALL SENSOR**

OK ▼

5.	INSPECT NO. 1 CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate INFO.

OK:

Sensor plate does not have any cracks or deformation.

NG ▶ **REPLACE NO. 1 CRANKSHAFT POSITION SENSOR PLATE**

OK

6.	REPLACE CRANKSHAFT POSITION SENSOR

(a) Replace the crankshaft position sensor INFO .

NEXT

7.	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Start the engine.

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0335 or P0339 is output	B

HINT:

If the engine does not start, replace the ECM.

B ▶ **REPLACE ECM**

A ▶ **END**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WBZ06GX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0340,P0342,P0343: Camshaft Position Sensor Circuit Malfunction (2010 Corolla)		

DTC	**P0340**	**Camshaft Position Sensor Circuit Malfunction**

DTC	**P0342**	**Camshaft Position Sensor "A" Circuit Low Input (Bank 1 or Single Sensor)**

DTC	**P0343**	**Camshaft Position Sensor "A" Circuit High Input (Bank 1 or Single Sensor)**

DESCRIPTION

The camshaft position sensor for intake camshaft (G signal sensor) consists of a magnet and MRE element.

The camshaft has a timing rotor for the camshaft position sensor. When the camshaft rotates, changes occur in the air gaps between the timing rotor and MRE element, which affects the magnet. As a result, the resistance of the MRE material fluctuates. The camshaft position sensor converts the camshaft rotation data to pulse signals, and uses the pulse signals to determine the camshaft angle, which it sends to the ECM. Then the ECM uses this data to control fuel injection time and injection timing.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0340	When one of following conditions is met: • No camshaft position sensor signal to ECM while cranking (2 trip detection logic) • Missing camshaft position sensor signal despite crankshaft position sensor inputs normal at engine speed of 600 rpm or more (1 trip detection logic) • Input voltage to ECM remains less than 0.3 V, or more than 4.7 V for 4 seconds when 2 or more seconds have elapsed after turning ignition switch ON (1 trip detection logic)	• Open or short in camshaft position sensor circuit for intake camshaft • Camshaft position sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM
P0342	Output voltage of camshaft position sensor less than 0.3 V for 4 seconds (1 trip detection logic)	• Open or short in camshaft position sensor circuit for

		intake camshaft • Camshaft position sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM
P0343	Output voltage of 4.7 V for 4 seconds (1 trip detection logic)	• Open or short in camshaft position sensor circuit for intake camshaft • Camshaft position sensor for intake camshaft • Camshaft timing gear for intake camshaft • Jumped tooth of timing chain for intake camshaft • ECM

HINT:

DTC P0340 indicates a malfunction relating to the camshaft position sensor circuit (the wire harness between the ECM and camshaft position sensor, and the camshaft position sensor itself).

Reference: Inspection using an oscilloscope INFO **.**

MONITOR DESCRIPTION

If no signal is transmitted by the camshaft position sensor despite the engine revolving, or the rotation of the camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.

If the malfunction is not repaired successfully, the DTC is set 10 seconds after the engine is nest started.

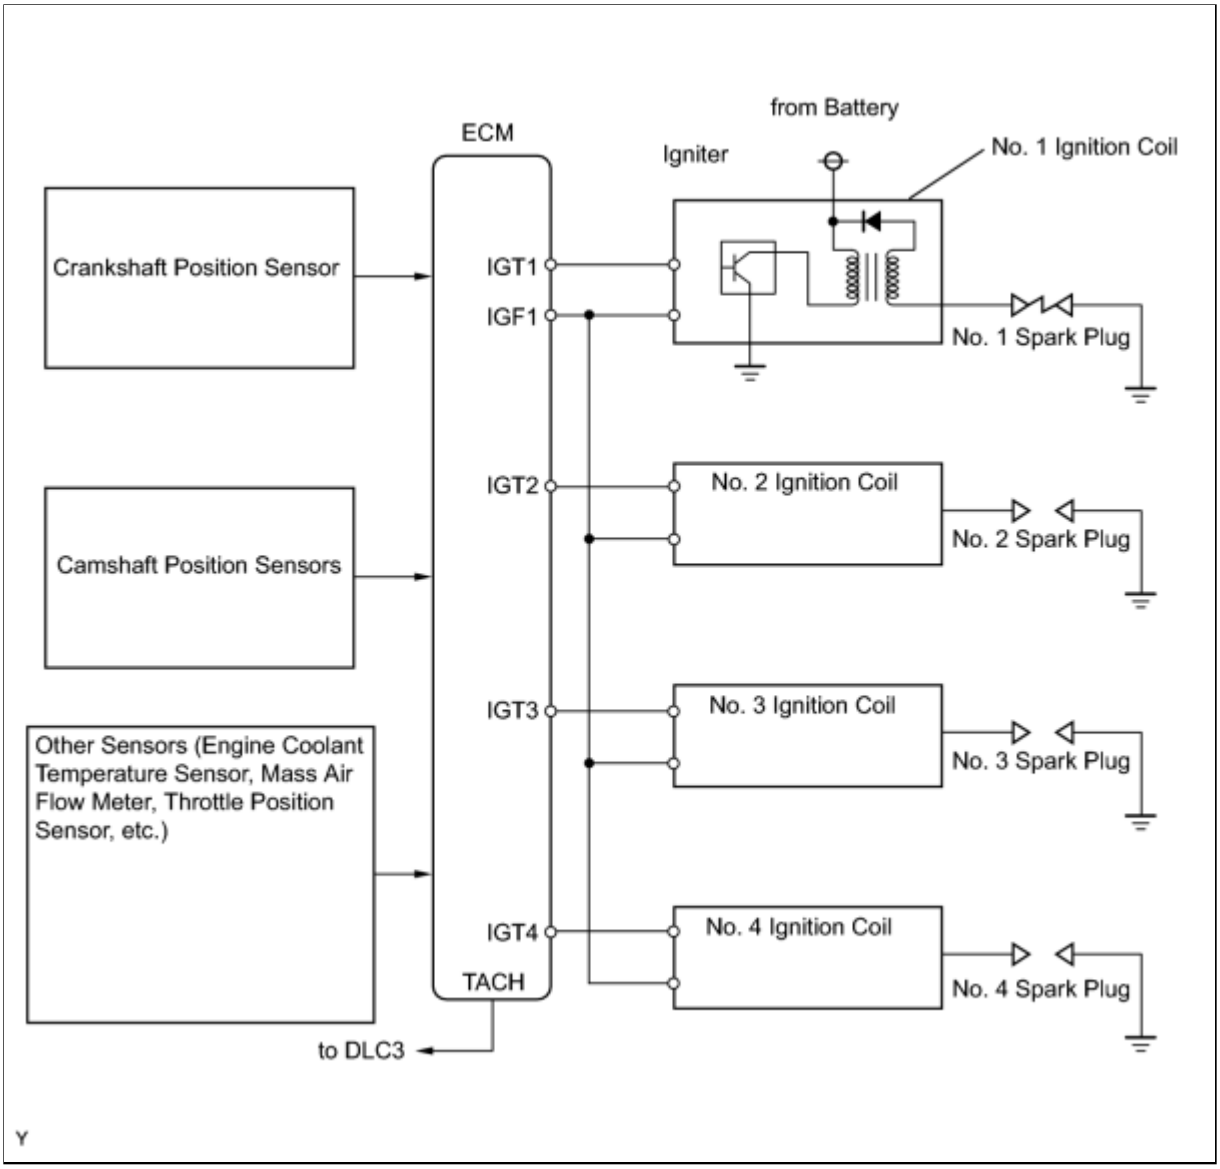
DTC	**P0351**	**Ignition Coil "A" Primary / Secondary Circuit**

DTC	**P0352**	**Ignition Coil "B" Primary / Secondary Circuit**

DTC	**P0353**	**Ignition Coil "C" Primary / Secondary Circuit**

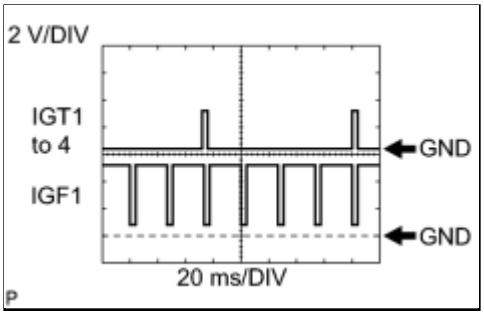
DTC	**P0354**	**Ignition Coil "D" Primary / Secondary Circuit**

DESCRIPTION



HINT:

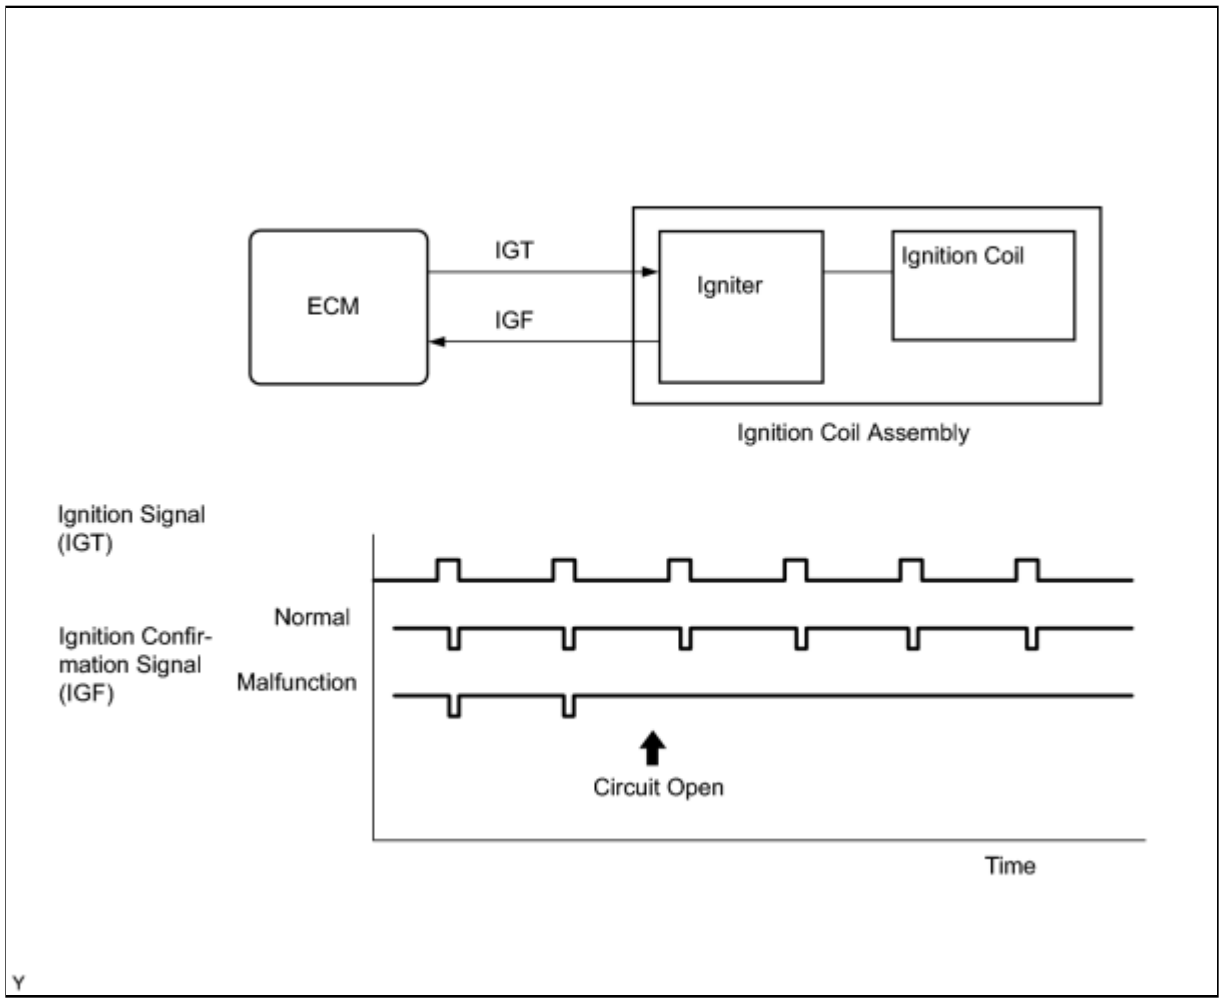
- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check the No. 1 ignition coil circuit.
- If DTC P0352 is set, check the No. 2 ignition coil circuit.
- If DTC P0353 is set, check the No. 3 ignition coil circuit.
- If DTC P0354 is set, check the No. 4 ignition coil circuit.



A Direct Ignition System (DIS) is used on this vehicle.

The DIS is an ignition system in which each cylinder is ignited by it's own ignition coil and spark plug. The secondary wiring of each ignition coil generates a powerful voltage which is applied directly to each spark plug. The spark passes from the center electrode of the spark plug to the ground electrode.

The ECM determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil, the igniter sends back an ignition confirmation (IGF) signal to the ECM, for each cylinder ignition.



DTC NO.	DTC DETECTION CONDITIONS	TROUBLE AREAS
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine running (1 trip detection logic)	• Ignition system • Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil and ECM • No. 1 to No. 4 ignition coils • ECM

Reference: Inspection using an oscilloscope.
While cranking or idling the engine, check the waveform between terminals IGT (1 to 4) and E1, and IGF1 and E1 of the ECM connector.

ECM Terminal Name	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Range	2 V/DIV, 20 ms/DIV
Condition	Idling

MONITOR DESCRIPTION

If the ECM does not receive any IGF signals despite transmitting the IGT signal, it interprets this as a fault in the igniter and sets a DTC.

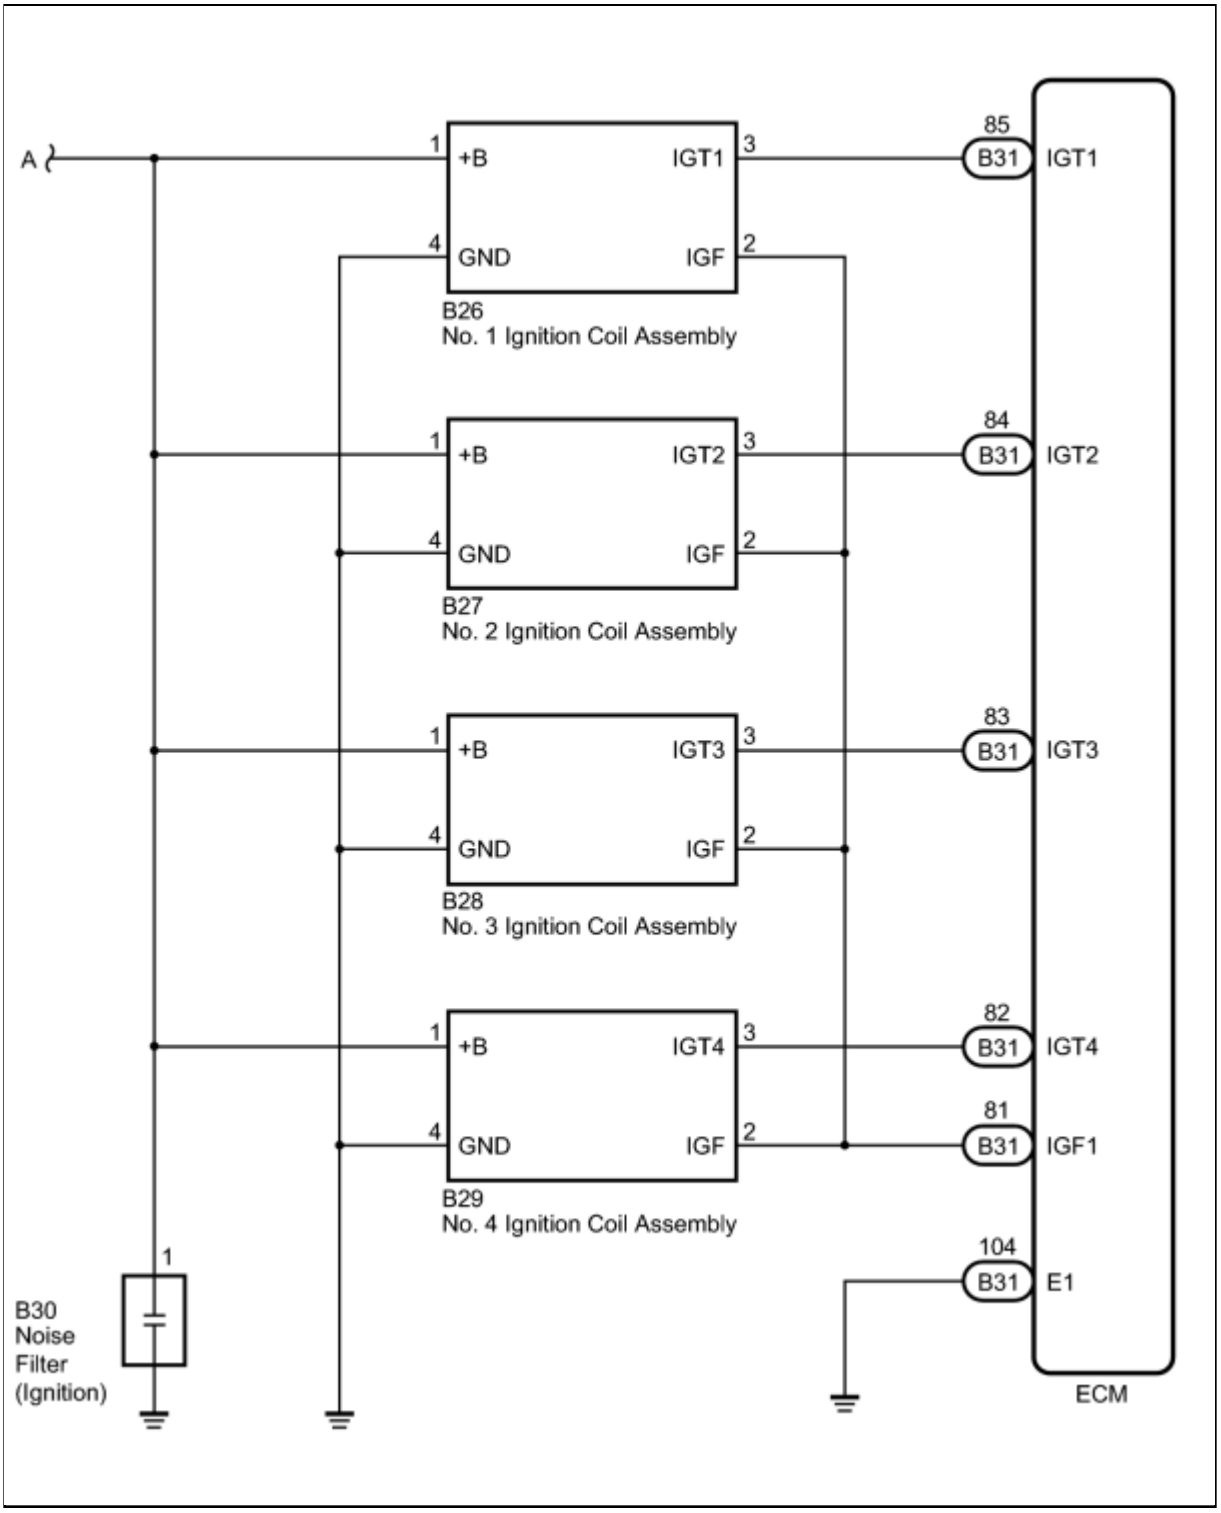
If the malfunction is not repaired successfully, a DTC is set 1 second after the engine is next started.

MONITOR STRATEGY

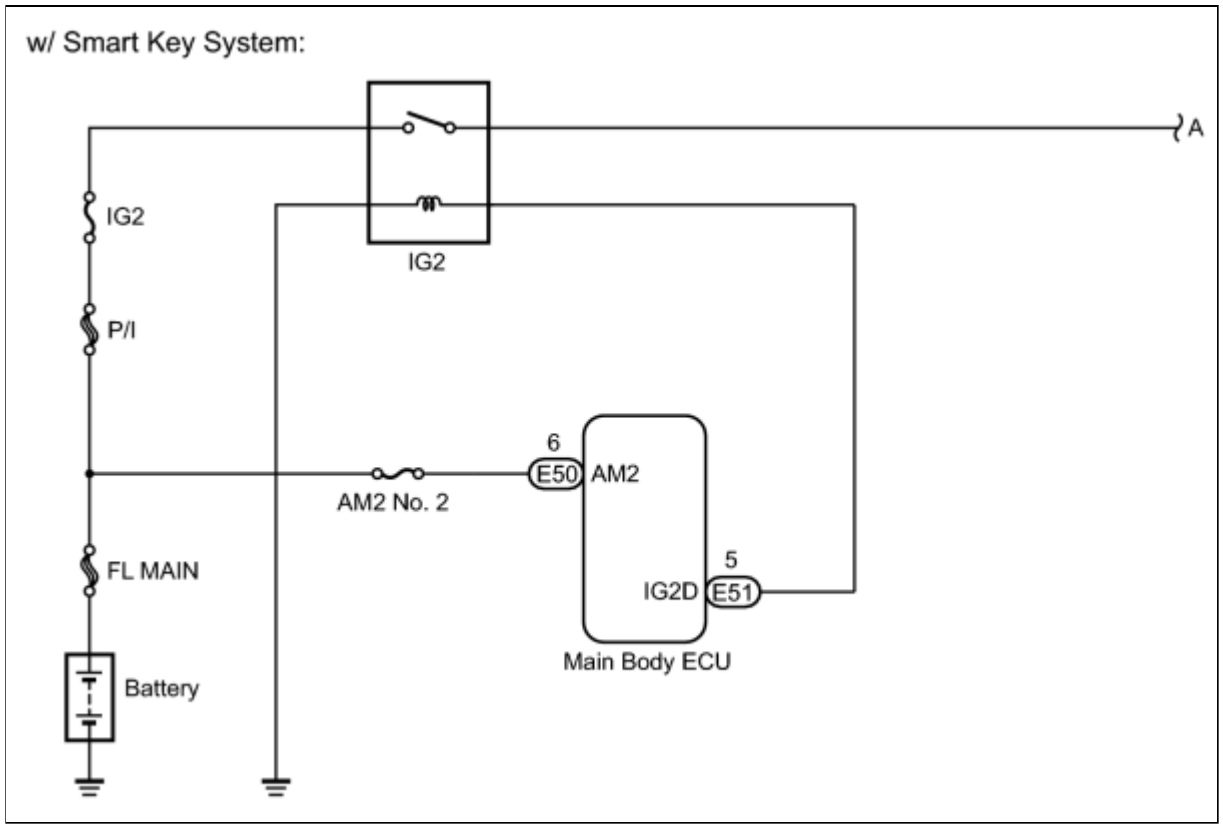
Related DTCs	P0351: Igniter (cylinder 1) malfunction P0352: Igniter (cylinder 2) malfunction P0353: Igniter (cylinder 3) malfunction P0354: Igniter (cylinder 4) malfunction
Required Sensors/Components (Main)	Igniter
Required Sensors/Components (Related)	Crankshaft position sensor
Frequency of Operation	Continuous
Duration	0.256 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

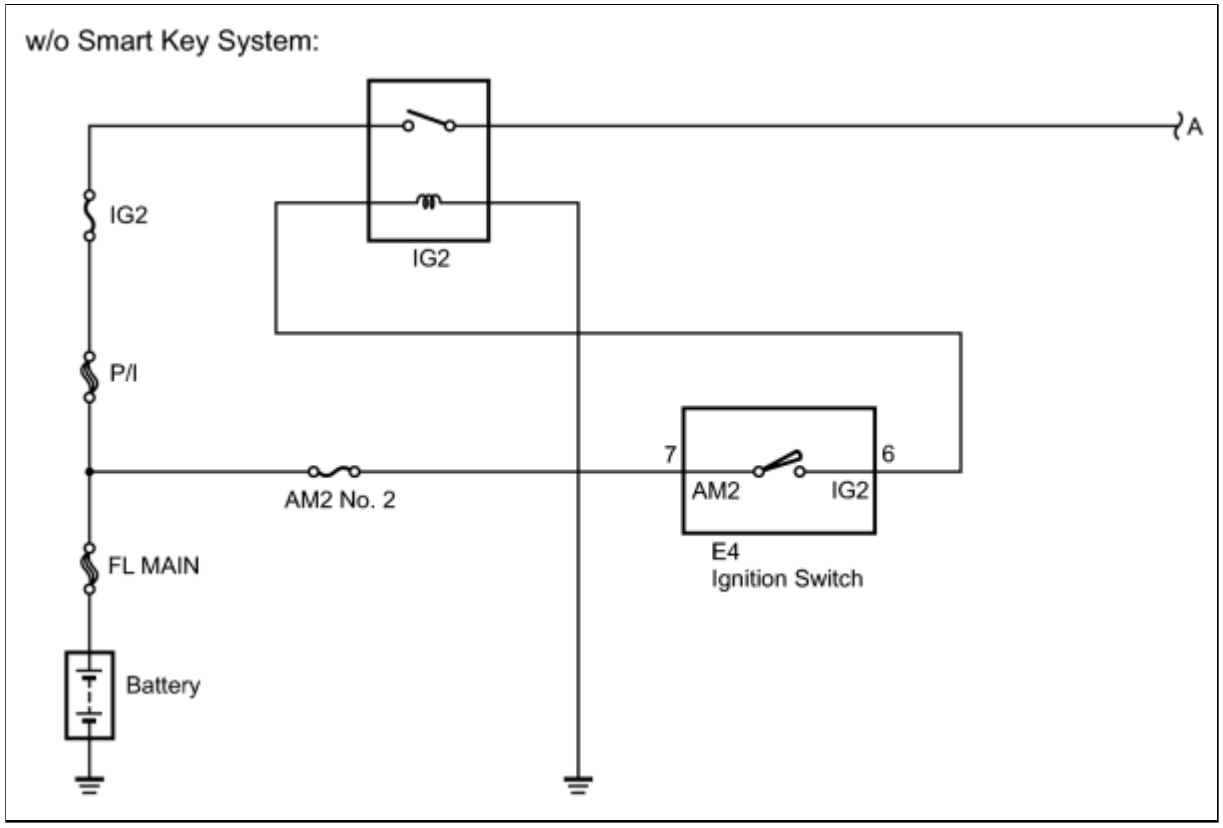
Monitor runs whenever following DTCs not present	None
Either of following conditions A or B is met	-
A. Engine RPM	1500 rpm or less
B. Starter	OFF
Either of following conditions C or D met	-
C. Both of following conditions (a) and (b) are met	-
(a) Engine speed	500 rpm or less
(b) Battery voltage	6 V or more
D. All of following conditions (a), (b) and (c) are met	-
(a) Engine speed	More than 500 rpm
(b) Battery voltage	10 V or more
(c) Number of sparks after CPU reset	5 sparks or more



TYPICAL MALFUNCTION THRESHOLDS



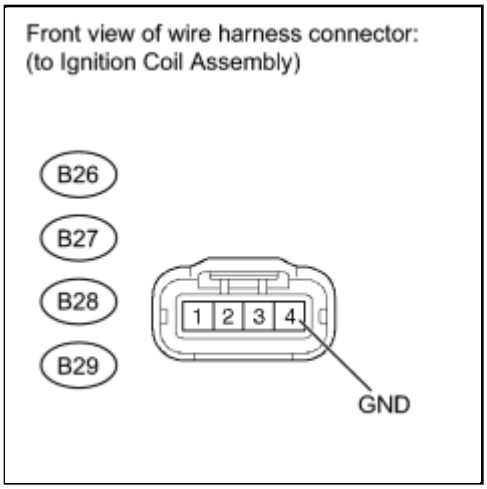
IGF signal	ECM does not receive any IGF signal despite ECM sending IGT signal to igniter



COMPONENT OPERATING RANGE

IGF signal	Igniter transmits IGF signal when it receives IGT signal from ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

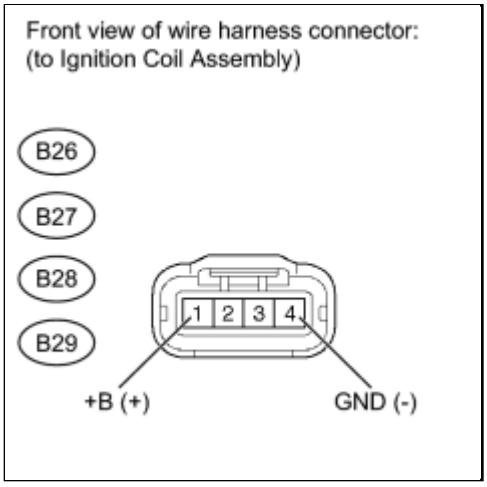
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - BODY GROUND)**

(a) Disconnect the ignition coil assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-4 (GND) - Body ground	Always	Below 1 Ω
B27-4 (GND) - Body ground	Always	Below 1 Ω
B28-4 (GND) - Body ground	Always	Below 1 Ω
B29-4 (GND) - Body ground	Always	Below 1 Ω

(c) Reconnect the ignition coil assembly connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION COIL ASSEMBLY - BODY GROUND)**

OK ▼

2.	**INSPECT IGNITION COIL ASSEMBLY (POWER SOURCE)**

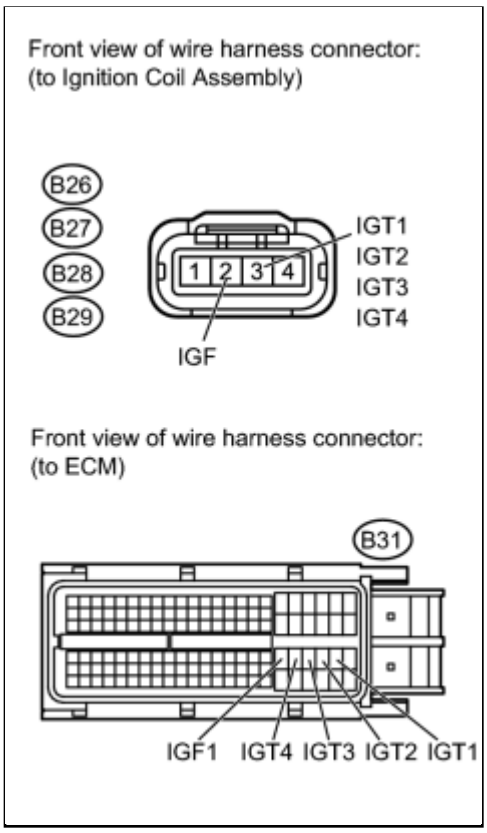
(a) Disconnect the ignition coil assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) - B26-4 (GND)	Ignition switch ON	11 to 14 V
B27-1 (+B) - B27-4 (GND)	Ignition switch ON	11 to 14 V
B28-1 (+B) - B28-4 (GND)	Ignition switch ON	11 to 14 V
B29-1 (+B) - B29-4 (GND)	Ignition switch ON	11 to 14 V



(d) Reconnect the ignition coil assembly connectors.

NG ▶ **CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM)**

(a) Disconnect the ignition coil assembly connectors.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B27-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B28-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B29-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-3 (IGT1) - B31-85 (IGT1)	Always	Below 1 Ω
B27-3 (IGT2) - B31-84 (IGT2)	Always	Below 1 Ω
B28-3 (IGT3) - B31-83 (IGT3)	Always	Below 1 Ω
B29-3 (IGT4) - B31-82 (IGT4)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B27-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B28-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B29-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-3 (IGT1) or B31-85 (IGT1) - Body ground	Always	10 kΩ or higher
B27-3 (IGT2) or B31-84 (IGT2) - Body ground	Always	10 kΩ or higher
B28-3 (IGT3) or B31-83 (IGT3) - Body ground	Always	10 kΩ or higher
B29-3 (IGT4) or B31-82 (IGT4) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

(e) Reconnect the ignition coil assembly connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION COIL ASSEMBLY - ECM)**

OK ▼

4.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P0351, P0352, P0353 OR P0354)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Shuffle arrangement of the ignition coils with igniters (among No. 1 to No. 4 cylinders).

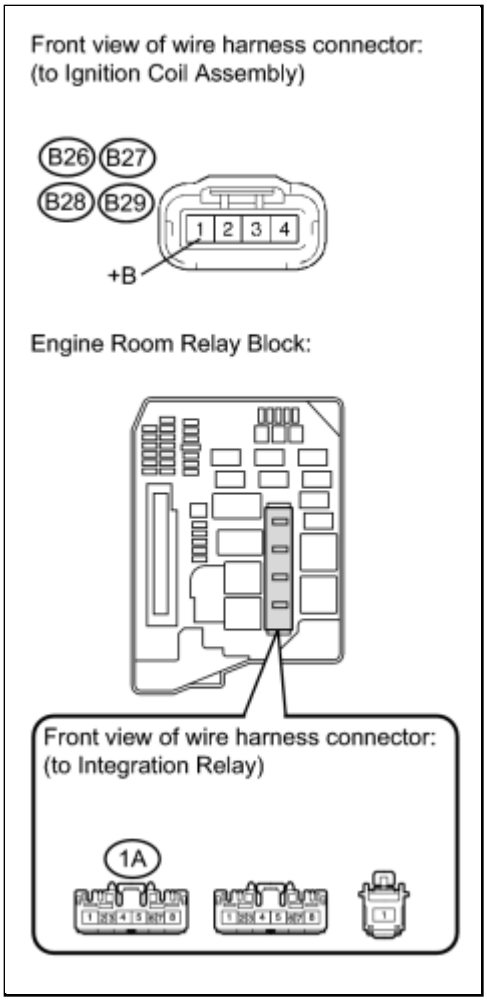
NOTICE:

Do not shuffle the connectors.

(f) Perform a simulation test.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.



Result:

RESULT	PROCEED TO
Same DTC output	A
Different ignition coil DTC output	B

B ▶ **REPLACE IGNITION COIL ASSEMBLY**

A ▶ **REPLACE ECM**

5.	**CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

(a) Disconnect the ignition coil assembly connectors.

(b) Remove the integration relay from the engine room relay block.

(c) Disconnect the integration relay connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) - 1A-4	Always	Below 1 Ω
B27-1 (+B) - 1A-4	Always	Below 1 Ω
B28-1 (+B) - 1A-4	Always	Below 1 Ω
B29-1 (+B) - 1A-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B27-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B28-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B29-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher

(e) Reconnect the integration relay connector.

(f) Reinstall the integration relay.

(g) Reconnect the ignition coil assembly connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

OK ▶ **CHECK ECM POWER SOURCE CIRCUIT**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YTB058X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0365,P0367,P0368: Camshaft Position Sensor "B" Circuit (Bank 1) (2010 Corolla)		

DTC	**P0365**	**Camshaft Position Sensor "B" Circuit (Bank 1)**

DTC	**P0367**	**Camshaft Position Sensor "B" Circuit Low Input (Bank 1)**

DTC	**P0368**	**Camshaft Position Sensor "B" Circuit High Input (Bank 1)**

DESCRIPTION

The camshaft position sensor for exhaust camshaft (EV signal sensor) consists of a magnet and MRE element.

The exhaust camshaft has a timing rotor for camshaft position sensor. When the camshaft rotates, changes occur in the air gaps between the timing rotor and MRE element, which affects the magnet. As a result, the resistance of the MRE material fluctuates. The camshaft position sensor converts the camshaft rotation data to pulse signals, and uses the pulse signals to determine the camshaft angle, which it sends to the ECM. Then the ECM uses this data to control fuel injection duration, injection timing and the Variable Valve Timing (VVT) system.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0365	When one of following conditions is met: • Missing exhaust camshaft position sensor signal signal for 5 seconds at engine speed of 600 rpm or more (1 trip detection logic) • Input voltage to ECM remains less than 0.3 V, or more than 4.7 V for 4 seconds when 2 or more seconds have elapsed after turning ignition switch ON (1 trip detection logic)	• Open or short in exhaust camshaft position sensor circuit • Exhaust camshaft position sensor • Camshaft timing gear for exhaust camshaft • Jumped tooth of timing chain for exhaust camshaft • ECM
P0367	Output voltage of exhaust camshaft position sensor less than 0.3 V for 4 seconds (1 trip detection logic)	• Open or short in exhaust camshaft position sensor

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
		circuit • Exhaust camshaft position sensor • Camshaft timing gear for exhaust camshaft • Jumped tooth of timing chain for exhaust camshaft • ECM
P0368	Output voltage of exhaust camshaft position sensor 4.7 V for 4 seconds (1 trip detection logic)	• Open or short in exhaust camshaft position sensor circuit • Exhaust camshaft position sensor • Camshaft timing gear for exhaust camshaft • Jumped tooth of timing chain for exhaust camshaft • ECM

HINT:

DTC P0365, P0367 and P0368 indicate a malfunction relating to the exhaust camshaft position sensor circuit (the wire harness between the ECM and exhaust camshaft position sensor, and the exhaust camshaft position sensor itself).

Reference: Inspection using an oscilloscope INFO

MONITOR DESCRIPTION

If no signal is transmitted by the exhaust camshaft position sensor despite the engine revolving, or the rotation of the exhaust camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.

If the malfunction is not repaired successfully, the DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC0057X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0420: Catalyst System Efficiency Below Threshold (Bank 1) (2010 Corolla)		

DTC	**P0420**	**Catalyst System Efficiency Below Threshold (Bank 1)**

MONITOR DESCRIPTION

The ECM uses sensors mounted in front of and behind the three-way catalytic converter to monitor its efficiency.

The first sensor, the air fuel ratio sensor, sends pre-catalyst information to the ECM. The second sensor, the heated oxygen sensor, sends post-catalyst information to the ECM.

In order to detect any deterioration in the three-way catalytic converter, the ECM calculates the oxygen storage capacity of the three-way catalytic converter. This calculation is based on the voltage output of the heated oxygen sensor while performing active air fuel ratio control.

The oxygen storage capacity value is an indication of the oxygen storage capacity of the three-way catalytic converter. When the vehicle is being driven with a warm engine, active air fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air fuel ratio to lean or rich levels. If the cycle of the waveform for the heated oxygen sensor is long, the oxygen storage capacity is great. There is a direct correlation between the heated oxygen sensor and the oxygen storage capacity of the three-way catalytic converter.

The ECM uses the oxygen storage capacity value to determine the state of the three-way catalytic converter. If any deterioration has occurred, it illuminates the MIL and sets the DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0420	Oxygen storage capacity value smaller than standard value under active air fuel ratio control (2 trip detection logic)	• Gas leak from exhaust system • Air fuel ratio sensor (sensor 1) • Heated oxygen sensor (sensor 2) • Front exhaust pipe assembly (TWC: Three-way catalytic converter)

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR STRATEGY

Related DTCs	P0420: Catalyst Deterioration
Required Sensors/Components (Main)	Air fuel ratio sensor Heated oxygen sensor
Required Sensors/Components (Related)	Intake air temperature sensor Mass air flow meter Crankshaft position sensor Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	About 30 seconds

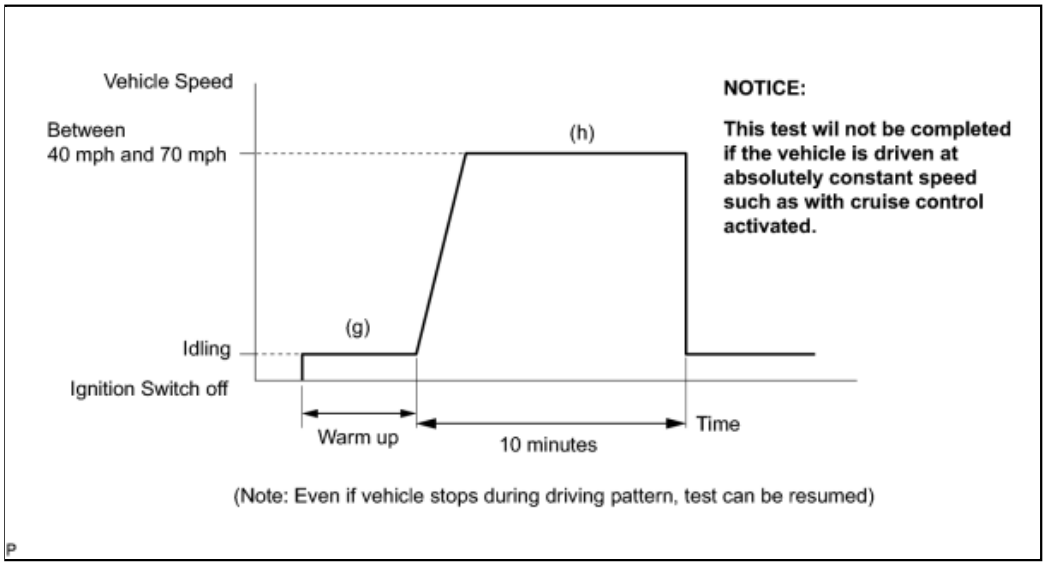
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System Bank 1 - Advance) P0012 (VVT System Bank 1 - Retard) P0013 (Exhaust Oil Control Valve) P0014 (Exhaust System - Advance) P0016 (VVT System Bank 1 - Misalignment) P0017 (Exhaust VVT System - Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1) P0037, P0038 (Heated Oxygen Sensor Heater - Sensor 2) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0136, P0137, P0138, P0139 (Rear Oxygen sensor - Sensor 2) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0365, P0367, P0368 (Exhaust Camshaft Position Sensor) P0500 (Vehicle Speed Sensor) P0606, P0607 (Heated Oxygen Sensor - Sensor 2) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Battery voltage	11 V or more
Intake air temperature	-10°C (14°F) or more
Engine coolant temperature	75°C (167°F) or more
Atmospheric pressure coefficient	0.75 or more
Idling	OFF
Engine RPM	Less than 4000 rpm
Air fuel ratio sensor status	Activated
Fuel system status	Closed loop
Engine load	10 to 80%
All of the following conditions are met	Condition 1, 2 and 3
1. Mass air flow rate	2.5 to 40 gm/sec
2. Front catalyst temperature (estimated)	Automatic transaxle models: 660 to 840°C (1220 to 1544°F) Manual transaxle models: 635 to 840°C (1175 to 1544°F)
3. Rear catalyst temperature (estimated)	400 to 760°C (752 to 1400°F)
Rear Heated oxygen sensor monitor	Completed
Shift position	4th or more

TYPICAL MALFUNCTION THRESHOLDS

Oxygen storage capacity of three-way catalytic converter	Less than 0.045 g



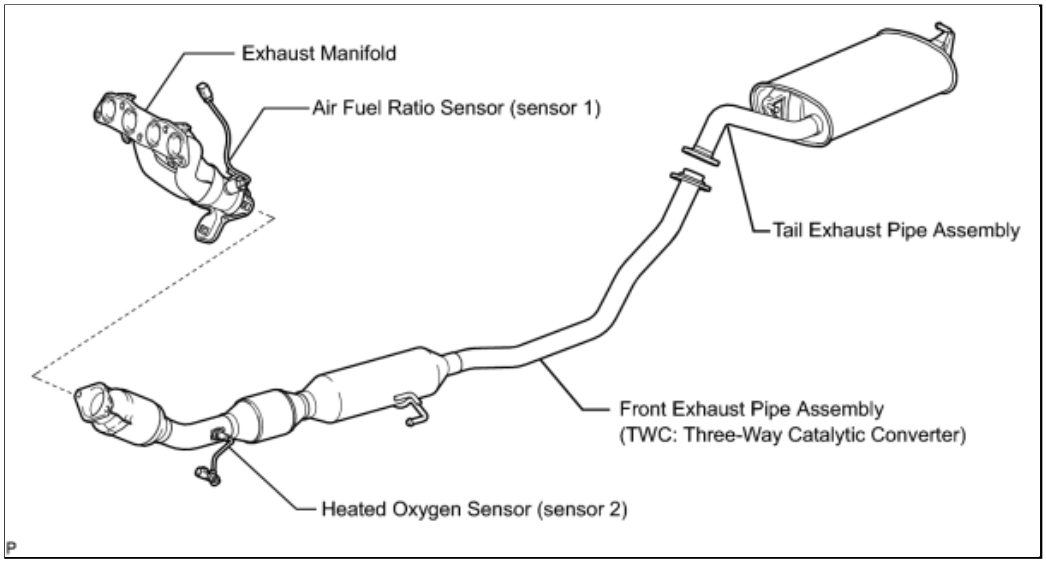
MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the catalyst monitor. This is very useful for verifying the completion of a repair.

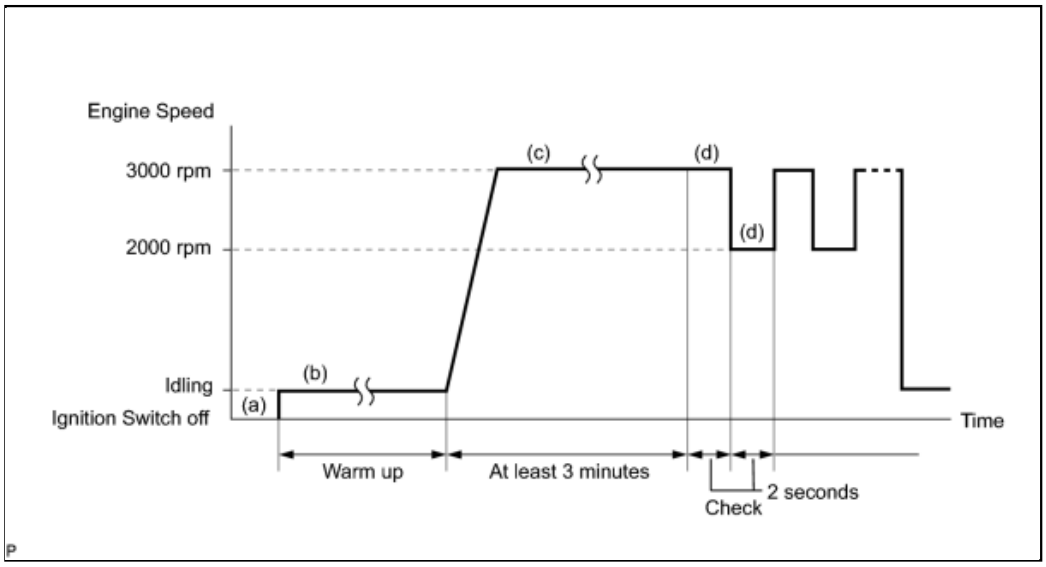


HINT:

(a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Clear DTCs (if set) INFO .
(e) Enter the following menus: Powertrain / Engine and ECT / Monitor.
(f) Check that Catalyst / Status2 is Incomplete.
(g) Start the engine and warm it up.
(h) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.
(i) Those items will change to Complete as Catalyst monitor operates.
(j) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.
(k) Check if any DTCs (any pending DTCs) are set.

HINT:

If Catalyst does not change to Complete, and any pending DTCs fail to set, extend the driving time.

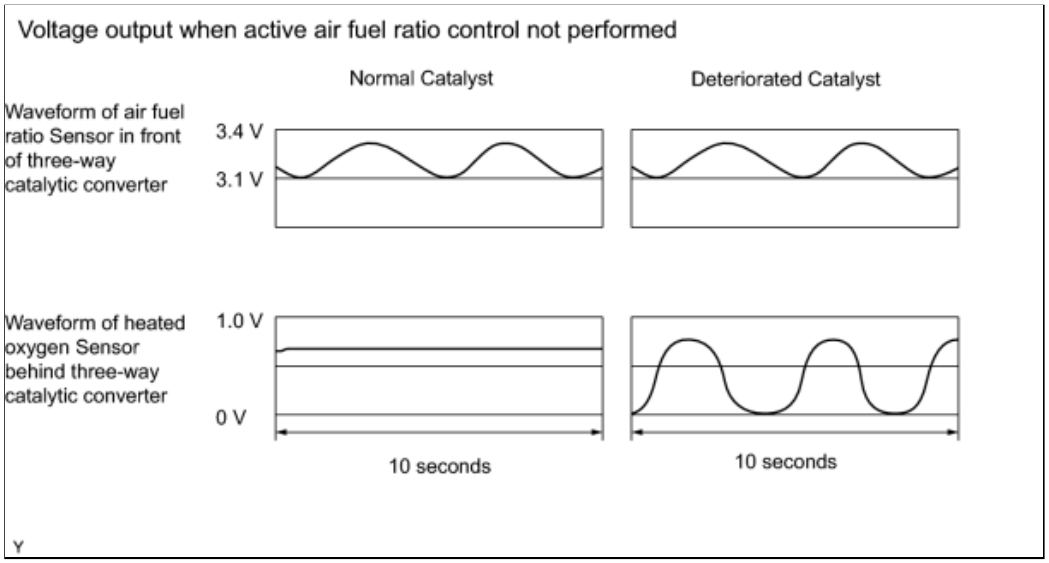


CATALYST LOCATION

CONDITIONING FOR SENSOR TESTING

HINT:

Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the air fuel ratio sensor and heated oxygen sensor. This is in order to activate the sensors sufficiently to obtain the appropriate inspection results.



(a) Connect the Techstream to the DLC3.
(b) Start the engine and warm it up with all the accessories switched off until the engine coolant temperature stabilizes.
(c) Run the engine at an engine speed of between 2500 rpm and 3000 rpm for at least 3 minutes.
(d) While running the engine at 3000 rpm for 2 seconds and 2000 rpm for 2 seconds, check the waveforms of the air fuel ratio and heated oxygen sensors using the Techstream.

HINT:

- If either of the voltage outputs of the air fuel ratio or heated oxygen sensor does not fluctuate, or there is noise in the waveform of either sensor, the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air fuel ratio may be extremely lean or rich. In such cases, perform the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
- If the three-way catalytic converter has deteriorated, the heated oxygen sensor (located behind the three-way catalytic converter) voltage output fluctuates up and down frequently, even under normal driving conditions (active air

fuel ratio control is not performed).

INSPECTION PROCEDURE

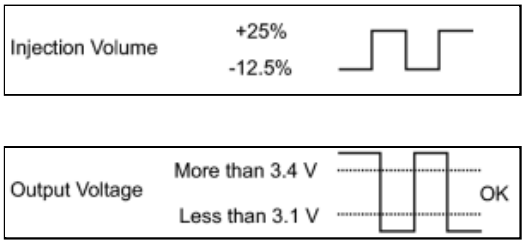
HINT:

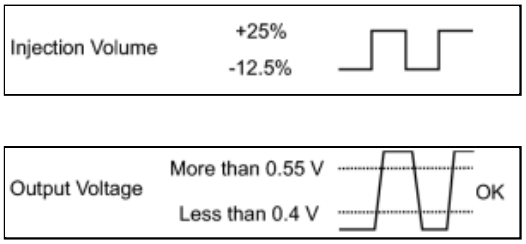
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

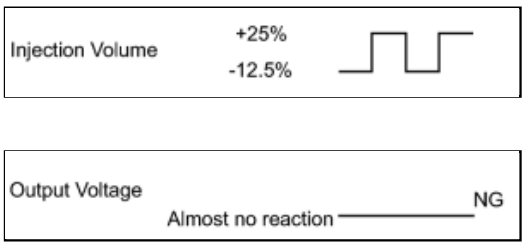
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

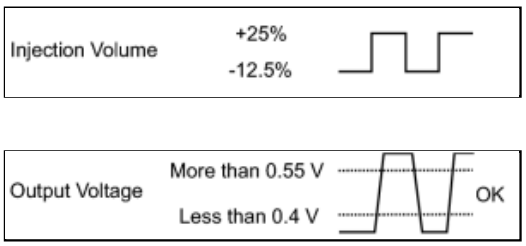
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

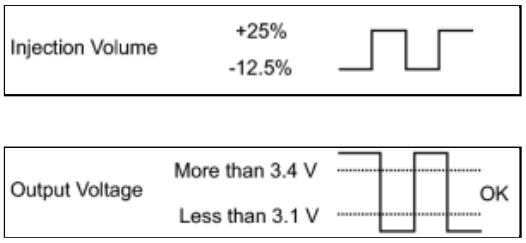
HINT:

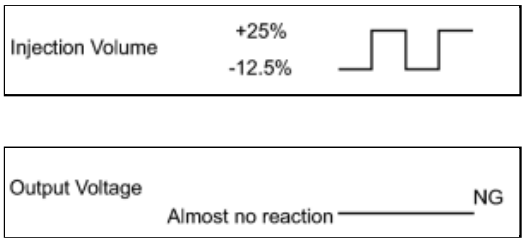


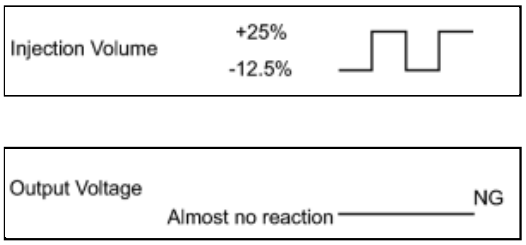


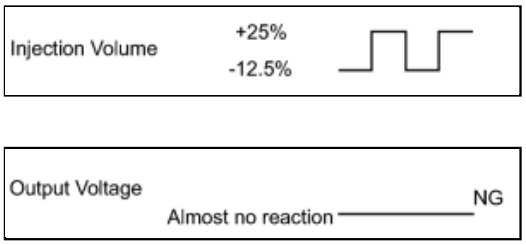












- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1)	HEATED OXYGEN SENSOR (SENSOR 2)	MAIN

	OUTPUT VOLTAGE	OUTPUT VOLTAGE	SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or

stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0420 is output	A
DTC P0420 and other DTCs are output	B

HINT:

If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL THE INJECTION VOLUME FOR A/F SENSOR)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine and warm it up.

(c) Turn the Techstream on.

(d) Run the engine at an engine speed of 2500 rpm for approximately 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.

(f) Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).

(g) Monitor the voltage outputs of the air fuel ratio sensor and heated oxygen sensor (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.

- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard:

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

Result:

STATUS AFS VOLTAGE B1S1	STATUS O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO AND HEATED OXYGEN SENSORS CONDITION	MISFIRE	MAIN SUSPECTED TROUBLE AREA	PROCEED TO
Lean/Rich	Lean/Rich	Normal	-	○ Three-way catalytic converter ○ Gas leakage from exhaust system	A
Lean	Lean/Rich	Air fuel ratio sensor malfunction	-	○ Air fuel ratio sensor	B
Rich	Lean/Rich	Air fuel ratio sensor malfunction	-	○ Air fuel ratio sensor	
Lean/Rich	Lean	Heated oxygen sensor malfunction	-	○ Heated oxygen sensor ○ Gas leakage from exhaust system	C
Lean/Rich	Rich	Heated oxygen sensor malfunction	-	○ Heated oxygen sensor ○ Gas leakage from exhaust system	
Lean	Lean	Actual air fuel ratio lean	May occur	○ Extremely rich or lean actual air fuel ratio ○ Gas leakage from exhaust system	D
Rich	Rich	Actual air fuel ratio rich	-	○ Extremely rich or lean actual air fuel ratio ○ Gas leakage from exhaust system	

Lean: During Control the Injection Volume for A/F sensor, the air fuel ratio sensor output voltage (AFS Voltage) is consistently more than 3.4 V, and the heated oxygen sensor output voltage (O2S) is consistently less than 0.4 V.

Rich: During the AFS Voltage is consistently less than 3.1 V, and the O2S is consistently more than 0.55 V.

Lean/Rich: During Control the Injection Volume for A/F sensor of the Active Test, the output voltage of the heated oxygen sensor alternates correctly.

D ▶ CHECK ENGINE TO DETERMINE CAUSE OF EXTREMELY RICH OR LEAN ACTUAL AIR FUEL RATIO, AND GO TO STEP 3

C ▶ INSPECT FOR EXHAUST GAS LEAK

B ▶ REPLACE AIR FUEL RATIO SENSOR (SENSOR 1)

A ▼

3.	INSPECT FOR EXHAUST GAS LEAK

(a) Check for exhaust gas leakage.

OK:

No gas leaks.

NG ▶ REPAIR OR REPLACE EXHAUST GAS LEAK POINT

OK ▶ REPLACE FRONT EXHAUST PIPE ASSEMBLY (TWC: THREE-WAY CATALYTIC CONVERTER)

4.	INSPECT FOR EXHAUST GAS LEAK

(a) Check for exhaust gas leakage.

OK:

No gas leaks.

NG ▶ REPAIR OR REPLACE EXHAUST GAS LEAK POINT

OK ▶ REPLACE HEATED OXYGEN SENSOR (SENSOR 2)

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P043E	Reference orifice clogged	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • Reference orifice clogged • Reference orifice high-flow • Leak	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe	While ignition switch off	2 trip
P043F	Reference orifice high-flow				
P2401	Leak detection pump stuck OFF				

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
		detection pump OFF malfunction • Leak detection pump ON malfunction • Vent valve ON (close) malfunction	from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM		
P2402	Leak detection pump stuck ON				
P2419	Vent valve stuck closed				

HINT:

The reference orifice is located inside the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

HINT:

Unit expressions

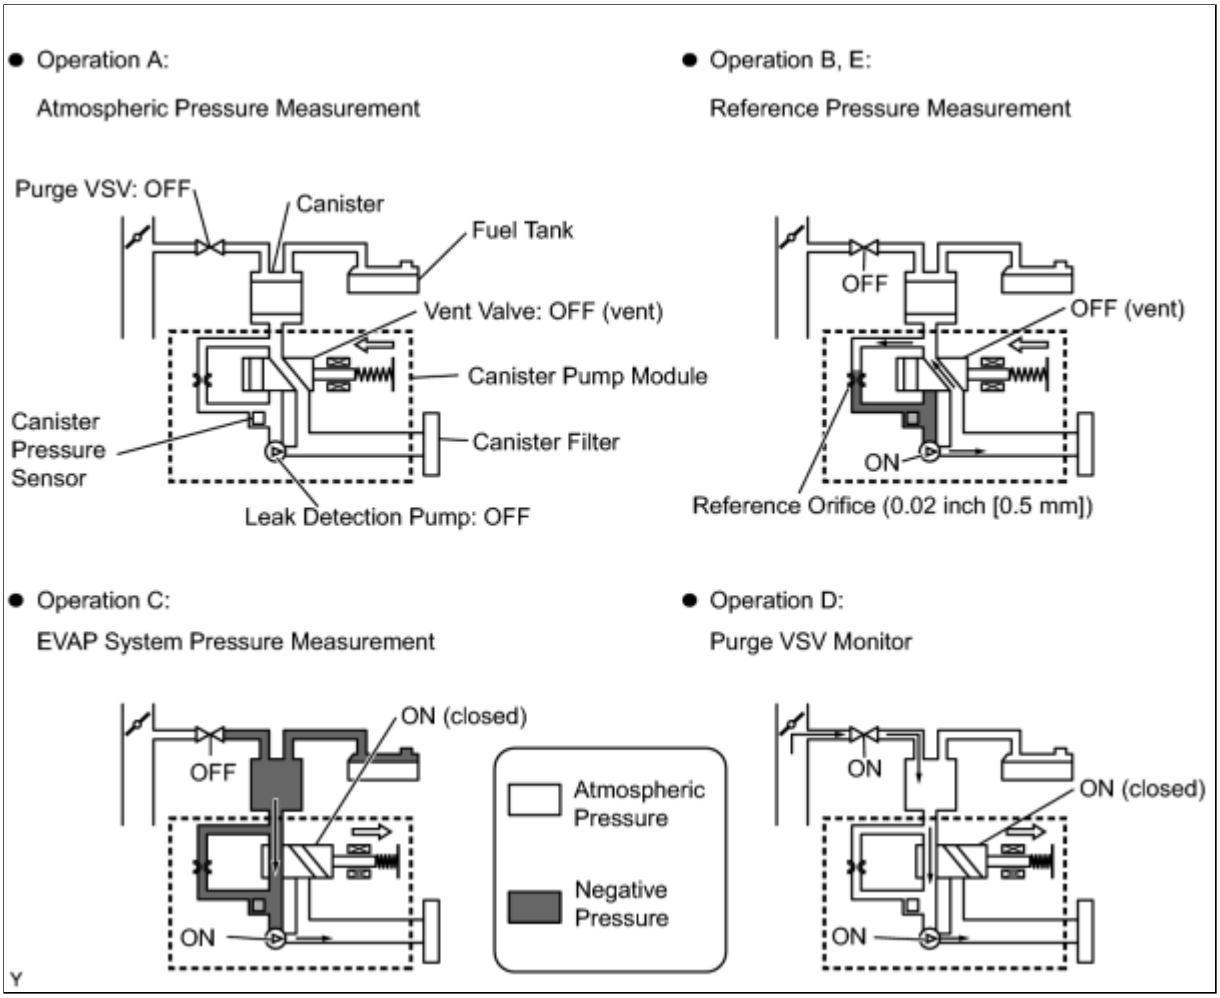
- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

MONITOR DESCRIPTION

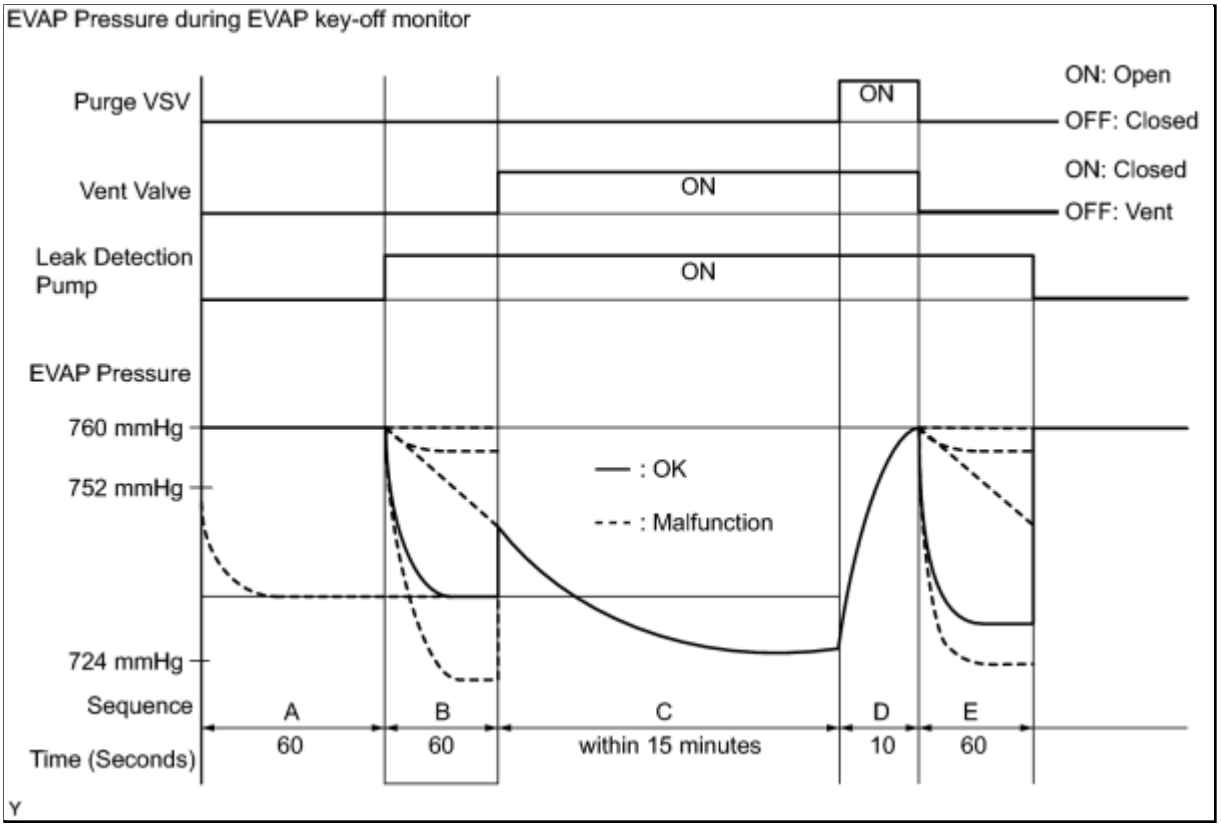
5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.



HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-



SEQUENCE	OPERATION	DESCRIPTION	DURATION
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine reference pressure, the leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than second the reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

The leak detection pump creates negative pressure through the reference orifice (in operation B and E). When the system is normal, the EVAP pressure is between 724 to 752 mmHg* and saturated within a minute. If not, the ECM interprets this as a malfunction. The ECM will illuminate the MIL and set DTC if this malfunction is detected in consecutive drive cycles.

*: Typical value.

MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 4 km/h (2.5 mph)
Ignition switch	OFF
Time after key off	5, 7 or 9.5 hours

Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

One of following conditions met	-
EVAP pressure just after reference pressure measurement started	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds
Reference pressure difference between first and second	0.7 kPa-g (5.25 mmHg-g) or more

MONITOR RESULT

Refer to Checking Monitor Status INFO .

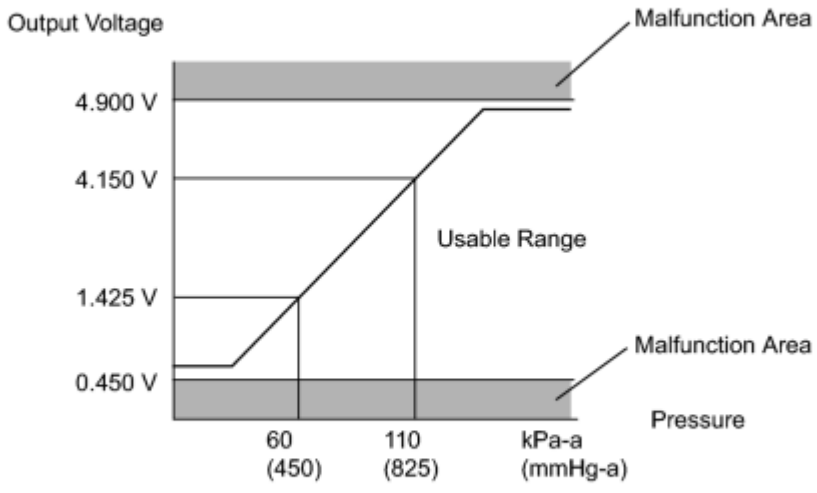
			• ECM		

HINT:

The canister pressure sensor is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .



HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

Canister Pressure Sensor Specification:

HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

1. DTC P0451: Canister pressure sensor noise or fixed/flat

   If the canister pressure sensor voltage output fluctuates rapidly for 10 seconds, the ECM stops the EVAP system monitor. The ECM interprets this as noise from the canister

pressure sensor, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.

Alternatively, if the sensor voltage output does not change for 10 seconds, the ECM interprets this as the sensor being fixed/flat, and stops the monitor. The ECM then illuminates the MIL and sets the DTC.

(Both malfunctions are detected by 2 trip detection logic.)

2. DTC P0452: Canister pressure sensor voltage low

If the canister pressure sensor voltage output [pressure] is below 0.45 V [42.1 kPa-a (315.7 mmHg-a)], the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

3. DTC P0453: Canister pressure sensor voltage high

If the canister pressure sensor voltage output [pressure] is 4.9 V [123.8 kPa-a (928.5 mmHg-a)] or more, the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle: P0451 sensor fixed/flat Continuous: P0451 sensor noise, P0452 and P0453
Duration	0.5 seconds: P0452 and P0453 15 seconds: P0451 (Noise monitor) 2 minutes: P0451 (Fixed/flat monitor)
MIL Operation	Immediate: P0452 and P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0451 (Noise Monitor)

Monitor runs whenever following DTCs not present	None
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
Canister pressure sensor malfunction (P0452, 0453)	Not detected
Either of following conditions met	A or B
A. Engine condition	Running

B. Time after key off	5 or 7 or 9.5 hours

P0451 (Fixed/flat Monitor)

Monitor runs whenever following DTCs not present	None
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
Canister pressure sensor malfunction (P0452, 0453)	Not detected
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Time after key off	5 or 7 or 9.5 hours

P0452 and P0453

Monitor runs whenever following DTCs not present	None
Either of following conditions met	(a) or (b)
(a) Ignition switch	ON
(b) Soak timer	ON

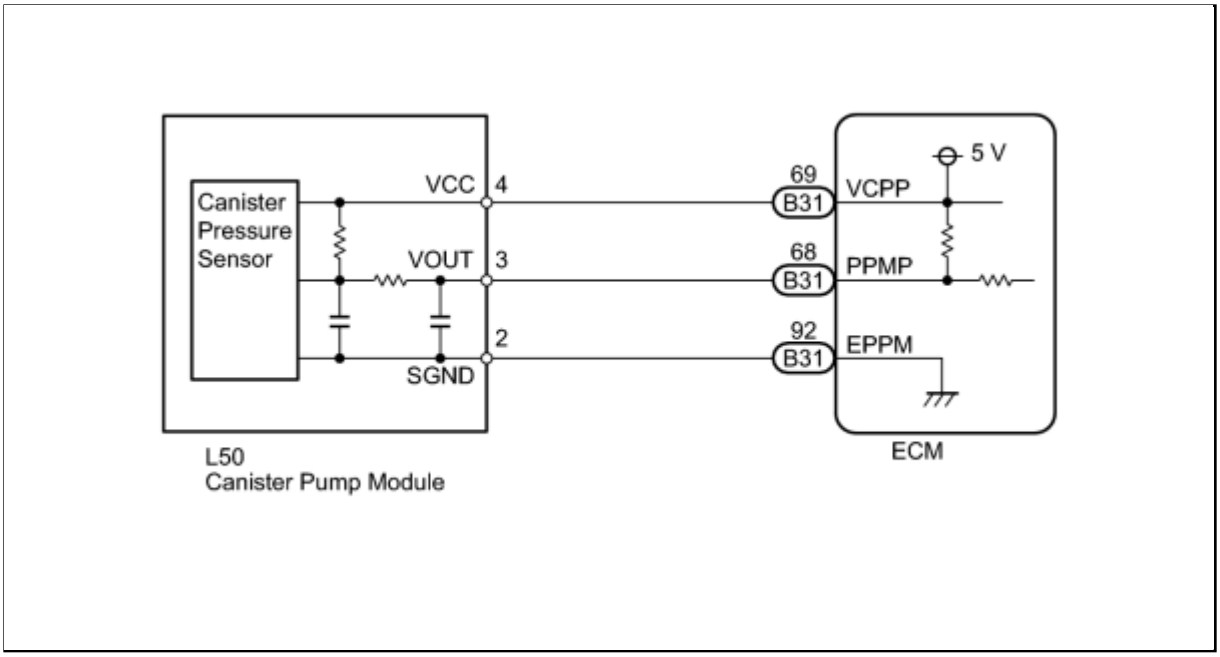
TYPICAL MALFUNCTION THRESHOLDS

P0451: Canister Pressure Sensor Noise

Frequency that EVAP pressure change 0.3 kPa-g (2.25 mmHg-g) or more	10 times or more in 10 seconds

P0451: Canister Pressure Sensor Fixed/flat

EVAP pressure change during reference pressure	Less than 0.65 kPa-g (4.87 mmHg-g)



P0452: Canister Pressure Sensor Low Voltage

EVAP pressure	Less than 42.1 kPa-a (315.8 mmHg-a)

P0453: Canister Pressure Sensor High Voltage

EVAP pressure	More than 123.8 kPa-a (928.3 mmHg-a)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel cap.
- Do not disassemble the canister pump module.
- The Techstream is required to conduct the following diagnostic troubleshooting procedure.

PROCEDURE

1.	**CONFIRM DTC AND EVAP PRESSURE**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON (do not start the engine).

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

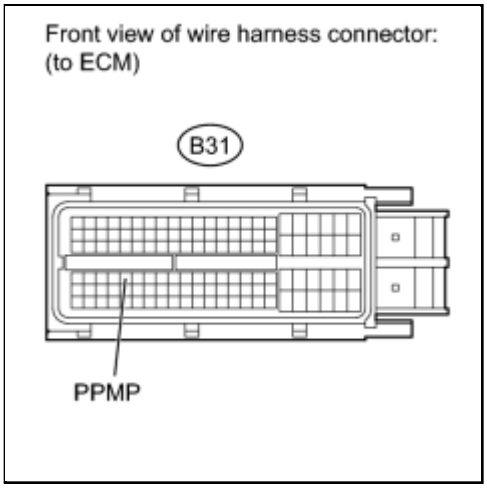
(e) Read the DTCs.

(f) Enter the following menus: Powertrain / Engine and ECT / Data List / EVAP / Vapor Pressure Pump.

(g) Read the EVAP (Evaporative Emission) pressure displayed on the Techstream.

Result:

DISPLAY (DTC OUTPUT)	TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P0451	-	Canister pressure sensor	C



DISPLAY (DTC OUTPUT)	TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P0452	Less than 45 kPa-a (430 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor • ECM	A
P0453	More than 120 kPa-a (900 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor • ECM	B

C ▶ **GO TO EVAP SYSTEM**

B ▶ **CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)**

A ▼

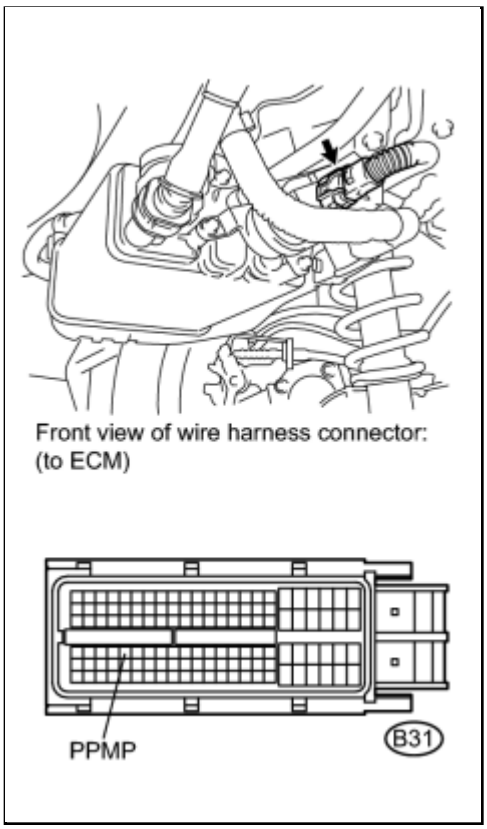
2.	**CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)**

(a) Disconnect the ECM connector.

(b) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B31-68 (PPMP) - Body ground	Always	Below 10 Ω	• Wire harness/connector (ECM - Canister pressure sensor) • Short in canister pressure sensor circuit	A
		10 kΩ or higher	• Wire harness/connector (ECM - Canister pressure sensor) • Short in ECM circuit	B



(c) Reconnect the ECM connector.

B ▶ **REPLACE ECM**

A ▼

3.	**CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)**

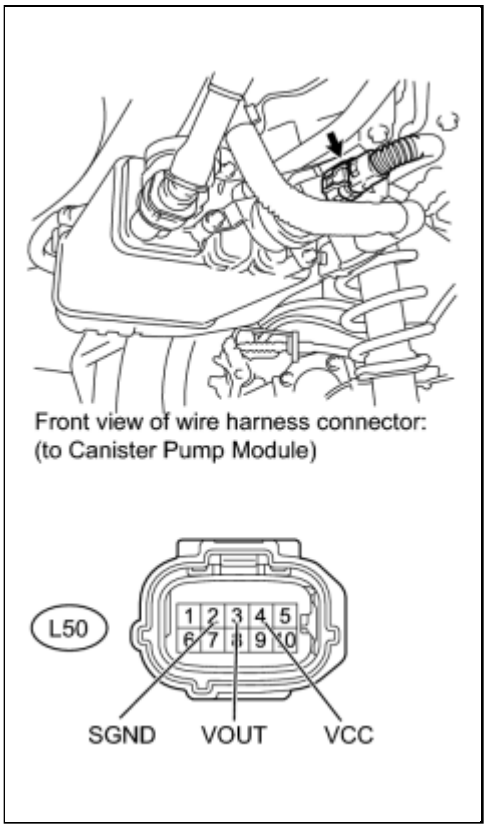
(a) Disconnect the canister pump module connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B31-68 (PPMP) - Body ground	Always	10 kΩ or higher	Short in canister pressure sensor circuit	A
		Below 10 Ω	Short in wire harness/connector (ECM - Canister pressure sensor)	B



(d) Reconnect the canister pump module connector.

(e) Reconnect the ECM connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER PUMP MODULE - ECM)**

A ▶ **REPLACE CHARCOAL CANISTER ASSEMBLY**

4.	**CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)**

(a) Disconnect the canister pump module connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L50-4 (VCC) - Body ground	Ignition switch ON	4.5 to 5.5 V
L50-3 (VOUT) - Body ground	Ignition switch ON	4.5 to 5.5 V

Standard Resistance:

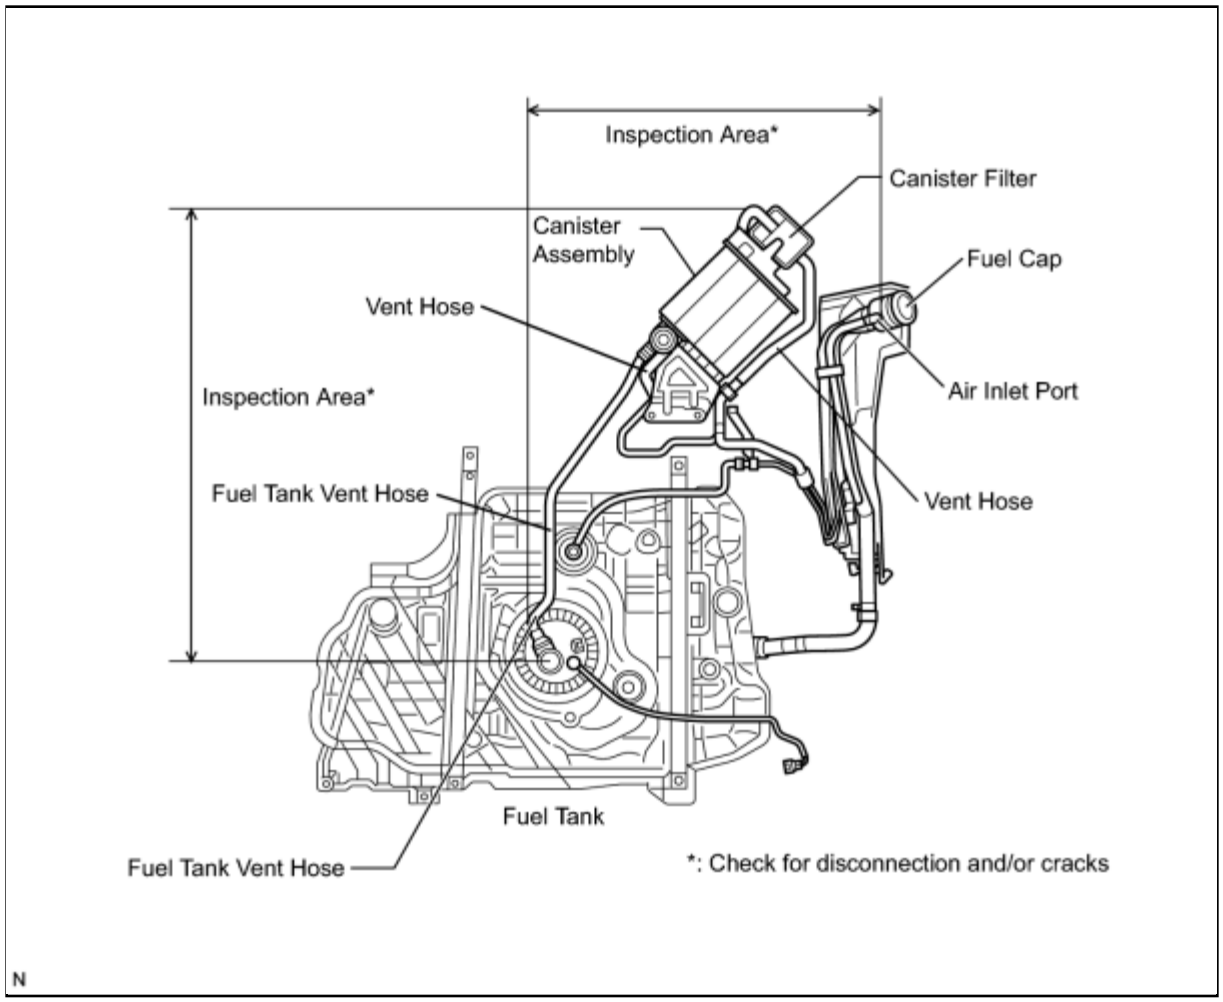
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L50-2 (SGND) - Body ground	Always	Below 100 Ω

Result:

TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Voltage and resistance within standard ranges	Open in canister pressure sensor circuit	A
Voltage and resistance outside standard ranges	Open in wire harness/connector (ECM - Canister pressure sensor)	B

(c) Reconnect the canister pump module connector.

B REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER PUMP MODULE - ECM)



A

5.	REPLACE CHARCOAL CANISTER ASSEMBLY

(a) Replace the charcoal canister assembly INFO .

NOTICE:

When replacing the charcoal canister assembly, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

NEXT CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

6.	REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER PUMP MODULE - ECM)

HINT:

If the exhaust tailpipe has been removed, go to the next step before reinstalling it.

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)**

7.	REPLACE ECM

(a) Replace the ECM INFO .

NEXT ▼

8.	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Wait for at least 60 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

HINT:

If no pending DTCs are displayed on the Techstream, the repair has been successfully completed.

NEXT ▶ **END**

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0441: Evaporative Emission Control System Incorrect Purge Flow (2010 Corolla)		

DTC	**P0441**	**Evaporative Emission Control System Incorrect Purge Flow**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0441	Purge VSV (Vacuum Switching Valve) stuck open	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.4], ECM determines that purge VSV stuck open.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leak from EVAP system	While ignition switch off	2 trip
	Purge VSV stuck closed	After EVAP leak check performed, purge VSV turned ON (open), and atmospheric air introduced into EVAP system. Reference pressure measured at start and at end of check. If pressure does not return to near atmospheric pressure, ECM determines that purge VSV stuck closed.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leak from EVAP system	While ignition switch off	2 trip
	Purge flow	While engine running, following conditions successively met: • Negative pressure not created in EVAP system when purge VSV turned ON (open)	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • Leak from EVAP line (Purge VSV - Intake manifold)	While engine running	2 trip

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
		• EVAP system pressure change less than 0.4 kPa-g (3.0 mmHg-g) when vent valve turned ON (closed) • Atmospheric pressure change before and after purge flow monitor less than 0.1 kPa-g (0.75 mmHg-g)	• ECM		

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

HINT:

Unit expressions

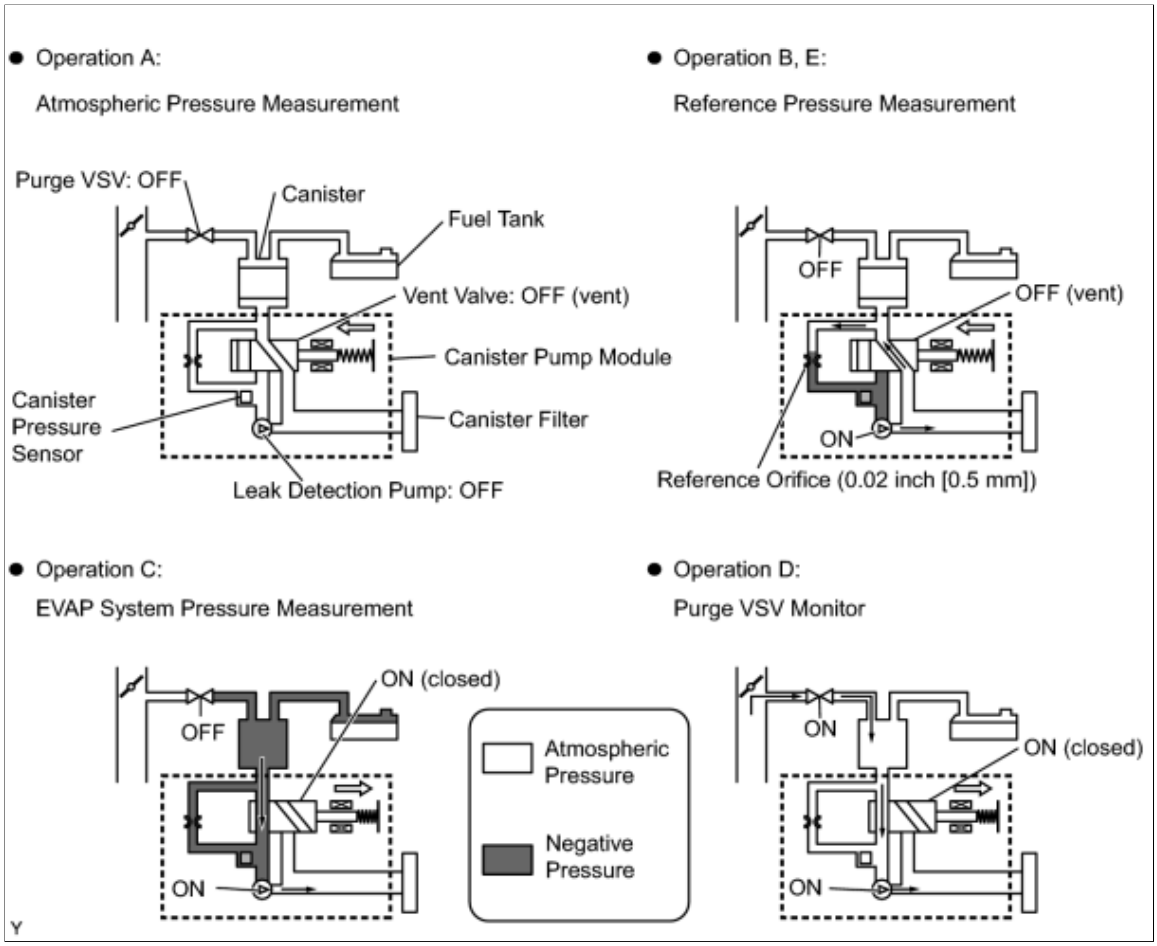
- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, chose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

The two monitors, Key-Off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The Key-Off monitor is initiated by the ECM internal timer, known as the soak timer, 5 hours* after the ignition off. The purge flow monitor runs while the engine is running.

1. KEY-OFF MONITOR

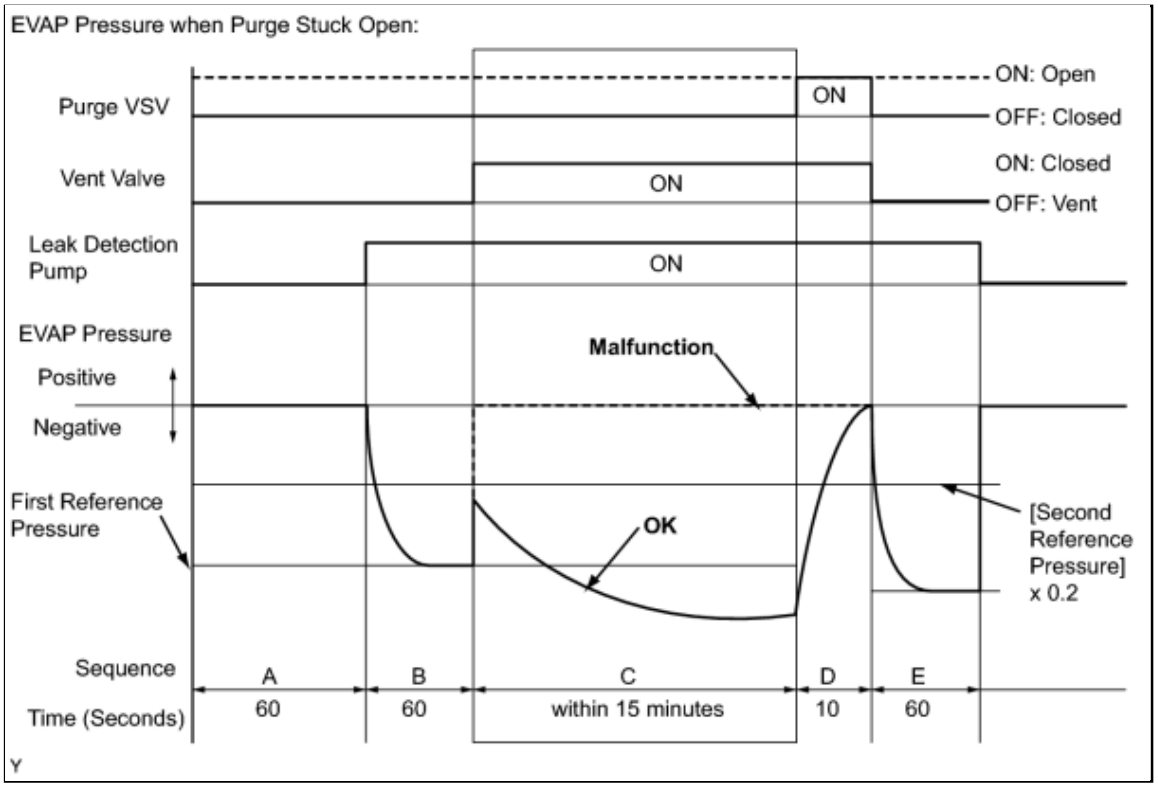
   5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.



HINT:

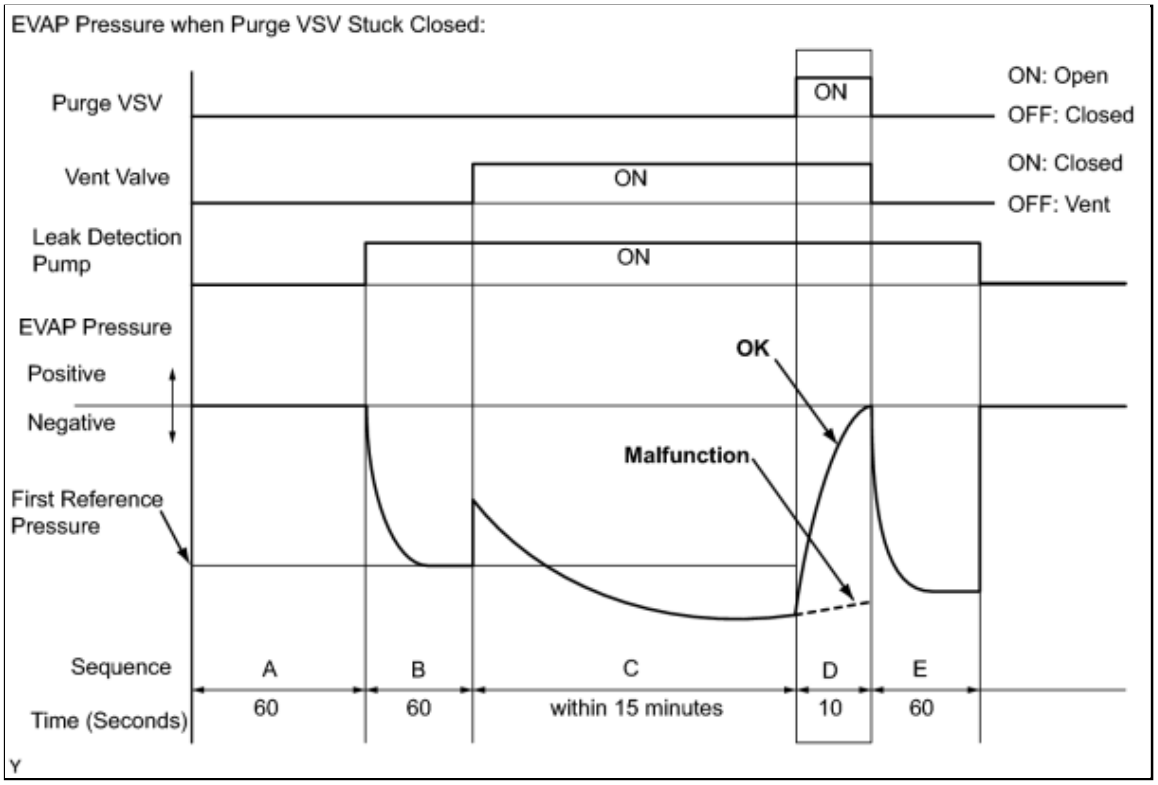
***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

SEQUENCE	OPERATION	DESCRIPTION	DURATION



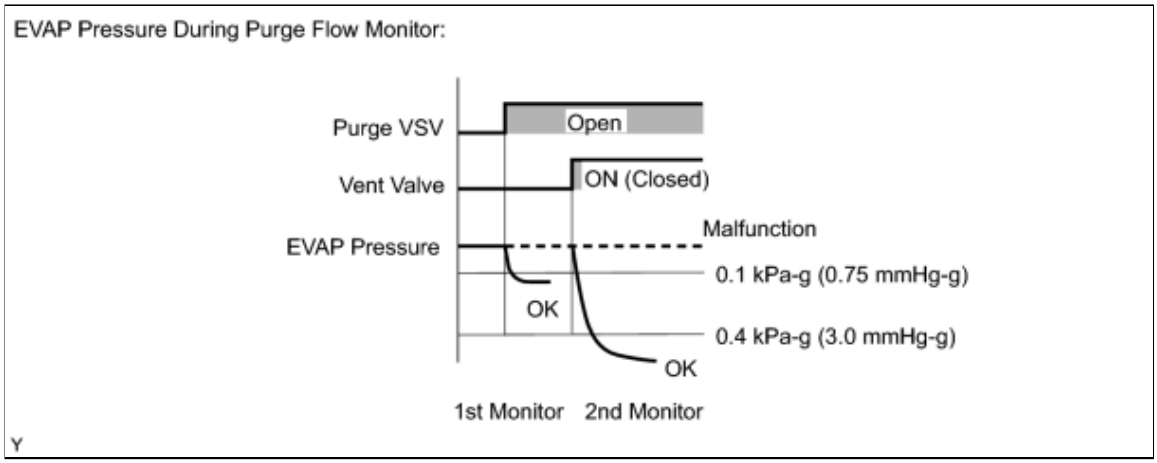
SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine reference pressure, the leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than second the reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



a. Purge VSV stuck open

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The EVAP system pressure is then measured by the ECM using the canister pressure sensor. If the stabilized system pressure is higher than [second reference pressure x 0.2], the ECM interprets this as the purge VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).



b. Purge VSV stuck closed

In operation D, the canister pressure sensor measures the EVAP system pressure. The pressure measurement for the purge VSV monitor is begun when the purge VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa-g (2.25 mmHg-g) or more, the purge VSV is functioning normally. If the pressure does not increase, the ECM interprets this as the purge VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

2. PURGE FLOW MONITOR

The purge flow monitor consists of two monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor

  While the engine is running and the purge VSV is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.

- The 2nd monitor

  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.4 kPa-g (3.0 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after the purge flow monitor is performed, is measured by the ECM.

OBD II MONITOR SPECIFICATIONS

1. Key-off Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 4 km/h (2.5 mph)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

Typical Malfunction Thresholds

Purge VSV stuck open:	-
EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.2

Purge VSV stuck closed:	-
EVAP pressure change after purge VSV ON (open)	Less than 0.3 kPa-g (2.25 mmHg-g)

OBD II MONITOR SPECIFICATIONS

1. Purge Flow Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

Monitor runs whenever following DTCs not present	None
Engine	Running
Engine coolant temperature	4.4°C (40°F) or more
Intake air temperature	4.4°C (40°F) or more
Canister pressure sensor malfunction	Not detected
Purge VSV	Not operated by scan tool
EVAP system check	Not operated by scan tool
Battery voltage	10 V or more
Purge duty cycle	8% or more

Typical Malfunction Thresholds

Both of following conditions met	Conditions 1 and 2
1. EVAP pressure change when purge operation started	Less than 0.1 kPa-g (0.75 mmHg-g)
2. EVAP pressure change during purge operation when vent valve closed	Less than 0.4 kPa-g (3.0 mmHg-g)

MONITOR RESULT

Refer to Checking Monitor Status INFO .

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

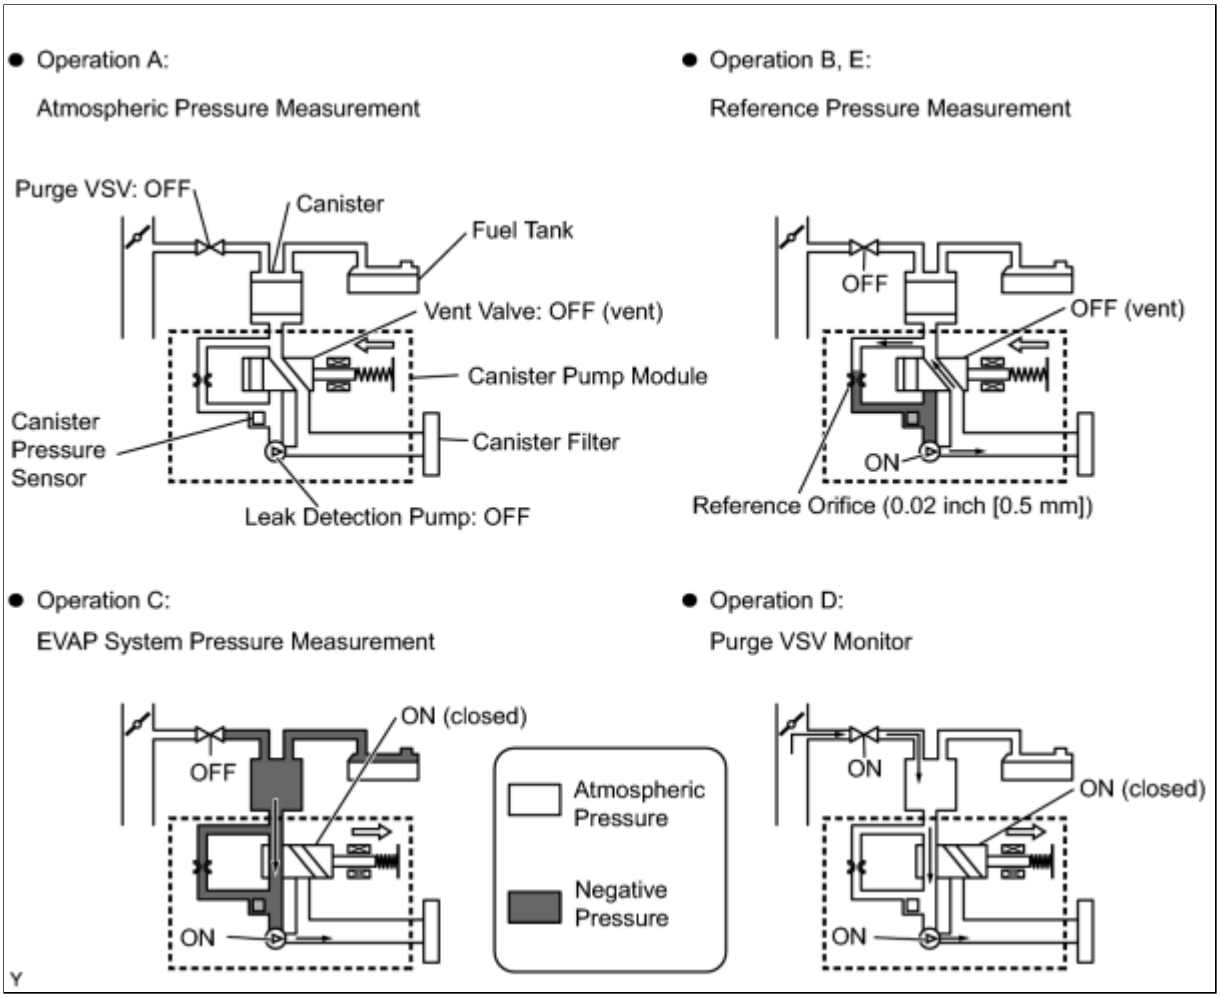
HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.



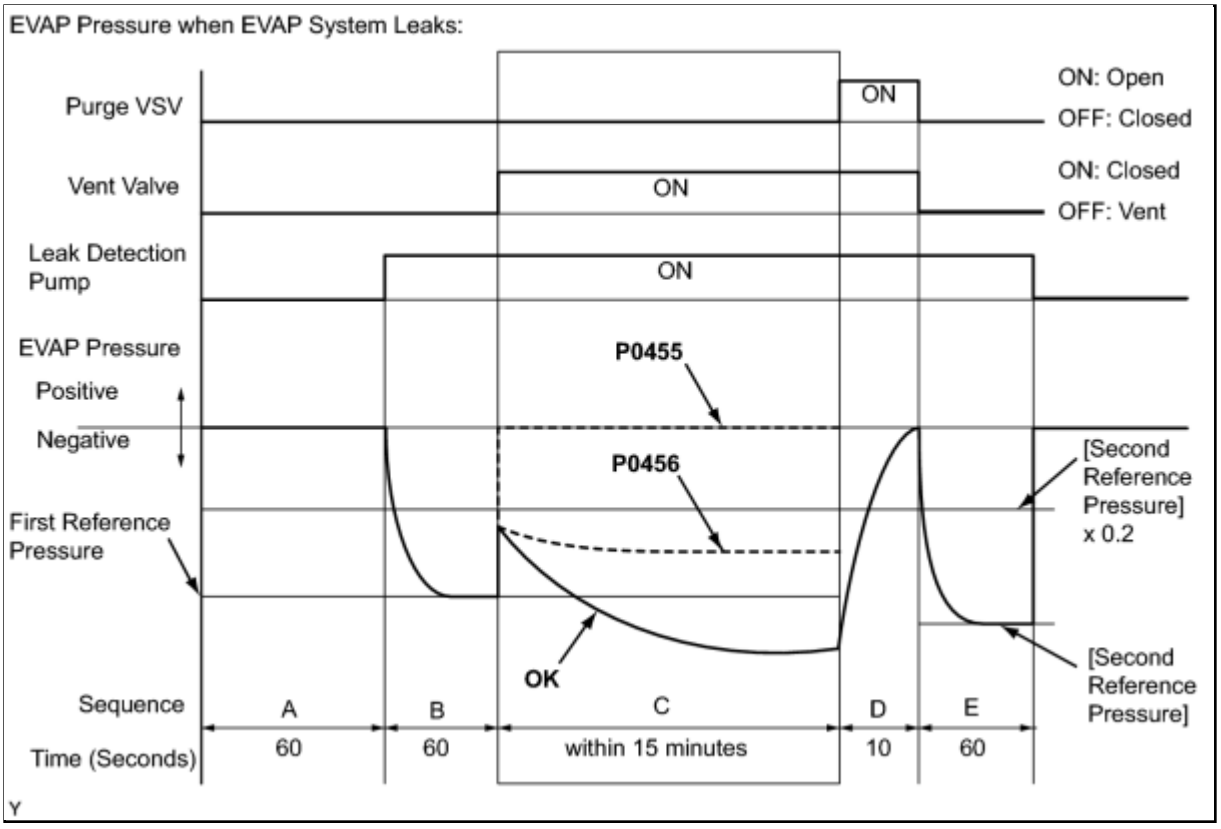
HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is**

turned off, the monitor check starts 2.5 hours later.

SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine reference pressure, the leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than second the reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



(a) P0455: EVAP gross leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second reference pressure x 0.2] (near atmospheric pressure), the ECM determines that the EVAP system has a large leak, illuminates the MIL and sets the DTC (2 trip detection logic).

(b) P0456: EVAP very small leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system has a small leak, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0455, P0456

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 4 km/h (2.5 mph)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours

Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle is driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

TYPICAL MALFUNCTION THRESHOLDS

P0455 EVAP Gross Leak

EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.2

P0456 EVAP Small Leak

EVAP pressure when vacuum introduction complete	Between reference pressure and reference pressure x 0.2

MONITOR RESULT

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y4K02BX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0500: Vehicle Speed Sensor "A" (2010 Corolla)		

DTC	**P0500**	**Vehicle Speed Sensor "A"**

DESCRIPTION

The speed sensors detect the wheel speed and send the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0500	While vehicle being driven, no vehicle speed sensor signal transmitted to ECM (2 trip detection logic: manual transaxle models) (1 trip detection logic: automatic transaxle models)	• Open or short in speed signal circuit • Speed meter circuit (wheel speed sensor, skid control ECU) • Combination meter • ECM

MONITOR DESCRIPTION

Automatic Transaxle Models:

The ECM assumes that the vehicle is being driven when the vehicle speed sensor signal is being transmitted by the combination meter. If there is no signal from the combination meter, despite the ECM detecting the speed signal from the speed sensor NC, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

Manual Transaxle Models:

The ECM assumes that the vehicle is being driven when the indicated engine speed is more than 2000 rpm and the engine load calculated by the ECM is more than a certain level or the idle fuel-cut operation* is being executed. If there is no signal from the vehicle speed sensor, despite these conditions being met, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

*: Idle fuel-cut is executed when the throttle valve is fully closed and engine speed is over 2800 rpm.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle speed sensor "A" pulse input error
Required Sensors/Components (Main)	Vehicle speed sensor Combination meter Skid control ECU
Required Sensors/Components (Related)	Park/neutral position switch Engine coolant temperature sensor Crankshaft position sensor Throttle position sensor Mass air flow meter
Frequency of Operation	Continuous
Duration	2 seconds: automatic transaxle models (IAT is -10°C (14 °F) or more) 8 seconds: manual transaxle models, Case 1 8 seconds: automatic transaxle (IAT is less than -10°C (14 °F)) 4.64 seconds: manual transaxle models, Case 2
MIL Operation	Immediate: automatic transaxle models 2 driving cycles: manual transaxle models
Sequence of Operation	None

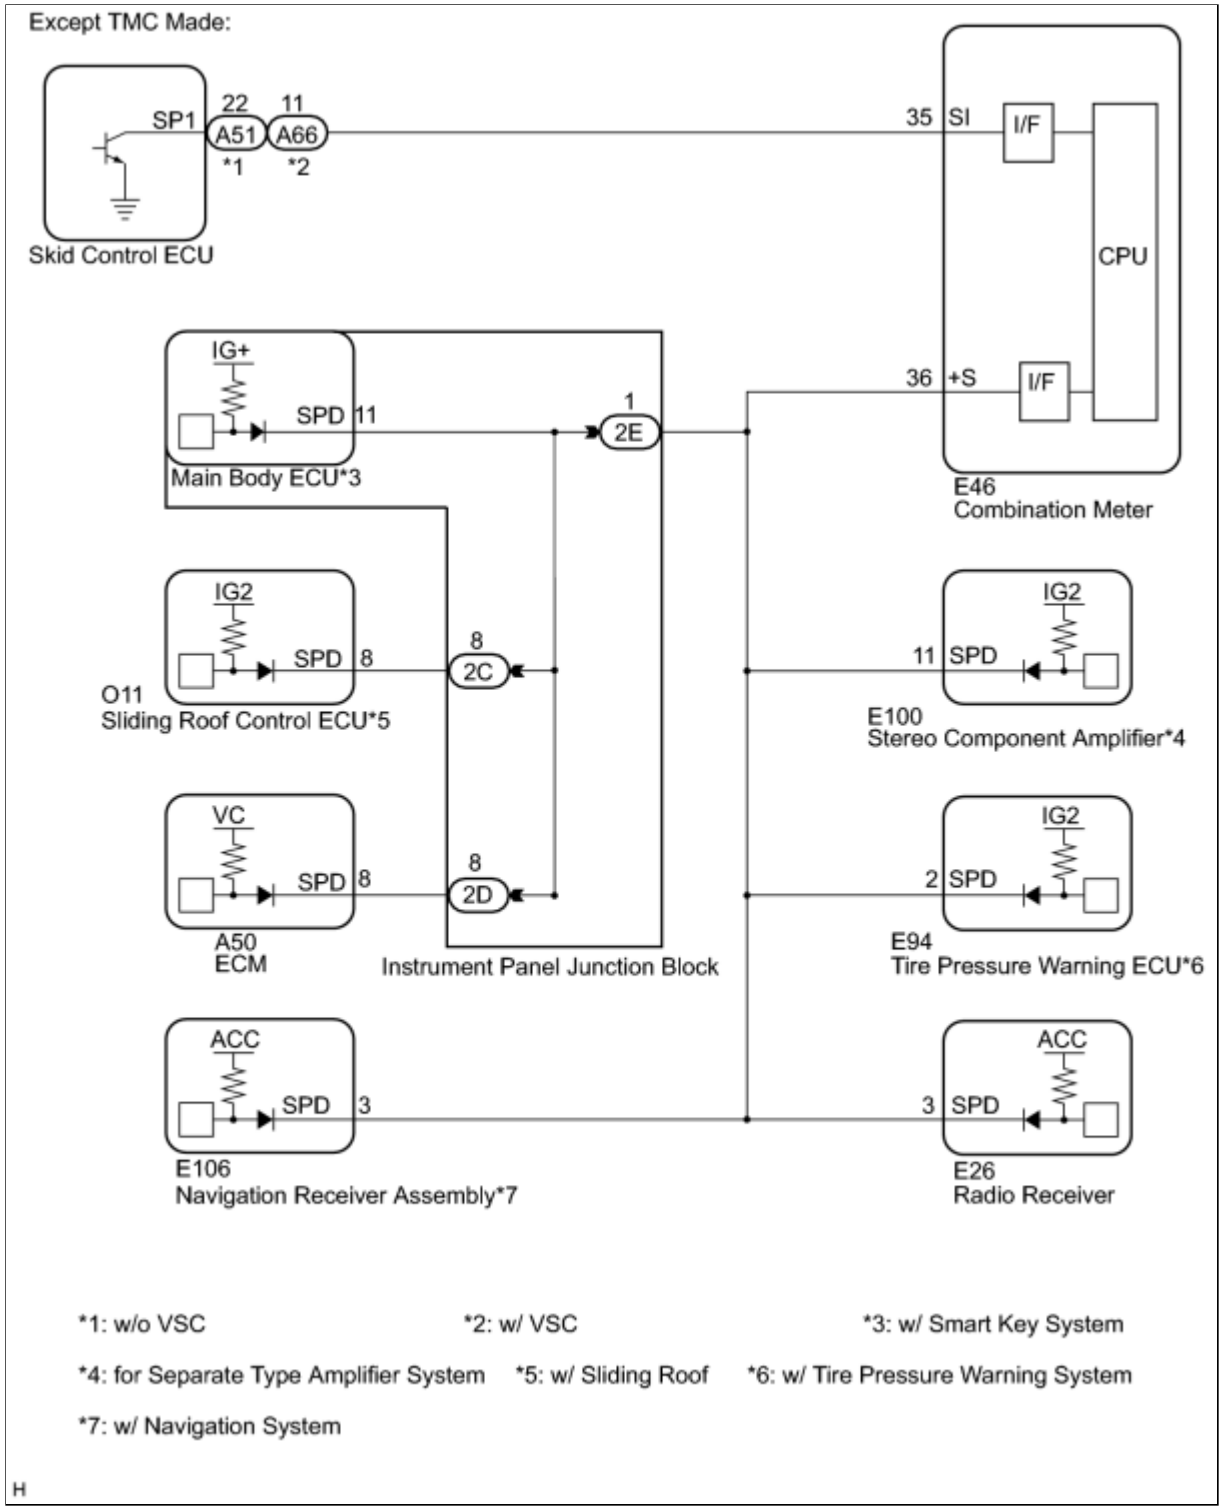
TYPICAL ENABLING CONDITIONS

Manual Transaxle Models (Case 1)

Monitor runs whenever following DTCs not present	None
Engine coolant temperature	70°C (158°F) or more
Engine speed	2000 to 5000 rpm
Engine load	31.7 % or more
Fuel-cut at high engine speed	Not operating

Manual Transaxle Models (Case 2)

Monitor runs whenever following DTCs not present	None
Idle	ON
Fuel-cut	ON



Automatic Transaxle Models

Monitor runs whenever following DTCs not present	None
Time after ignition switch OFF to ON	3 seconds or more
Throttle position sensor angle is less than 13°	2070 rpm or more
Throttle position sensor angle is less than 21°	2470 rpm or more
Throttle position sensor angle is less than 30°	2600 rpm or more
Throttle position sensor angle is 30°or more	2910 rpm or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (VEHICLE SPEED)**

(a) Connect the Techstream to the DLC3.

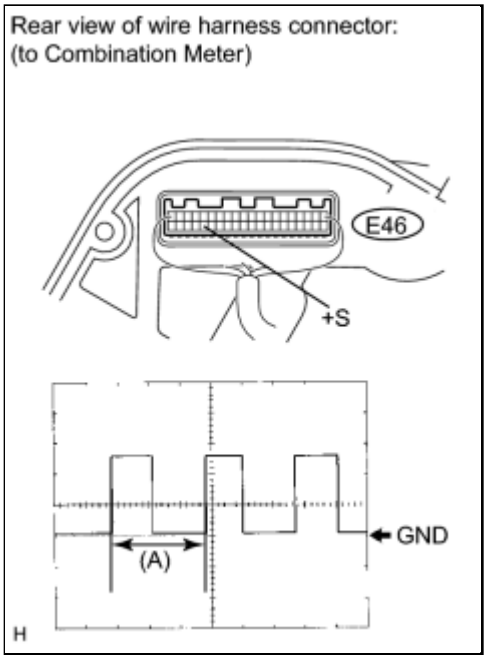
(b) Turn the ignition switch to the ON position.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Vehicle Speed.

(e) Drive the vehicle.

(f) Read the value displayed on the Techstream.



OK:

Vehicle speeds displayed on the Techstream and speedometer display are equal.

NG ▶ **INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

(a) Check the output waveform.

(1) Remove the combination meter assembly with the connector(s) still connected.

(2) Connect an oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the ignition switch to ON.

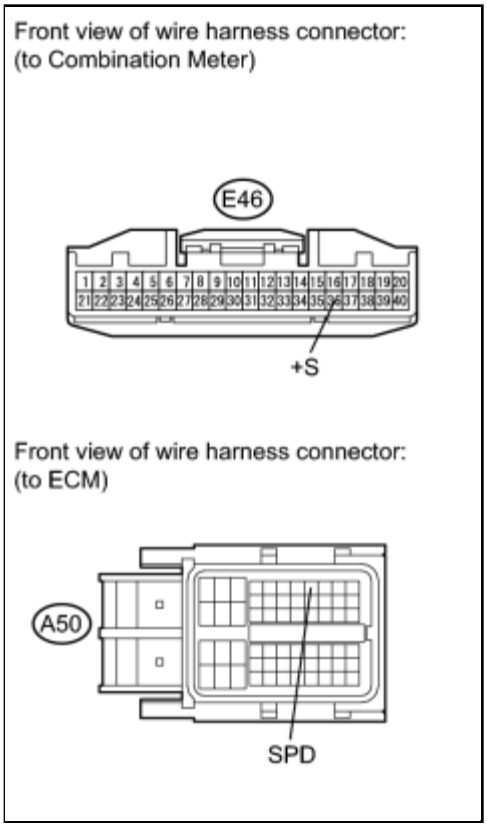
(4) Turn a wheel slowly.

(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms/DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.



HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG ▶ **GO TO METER / GAUGE SYSTEM**

OK

3.	CHECK HARNESS AND CONNECTOR (ECM - COMBINATION METER)

(a) Disconnect the ECM connector.

(b) Disconnect the combination meter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - A50-8 (SPD)	Always	Below 1 Ω

(d) Reconnect the ECM connector.

(e) Reconnect the combination meter connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - COMBINATION METER)**

OK ▶ REPLACE ECM

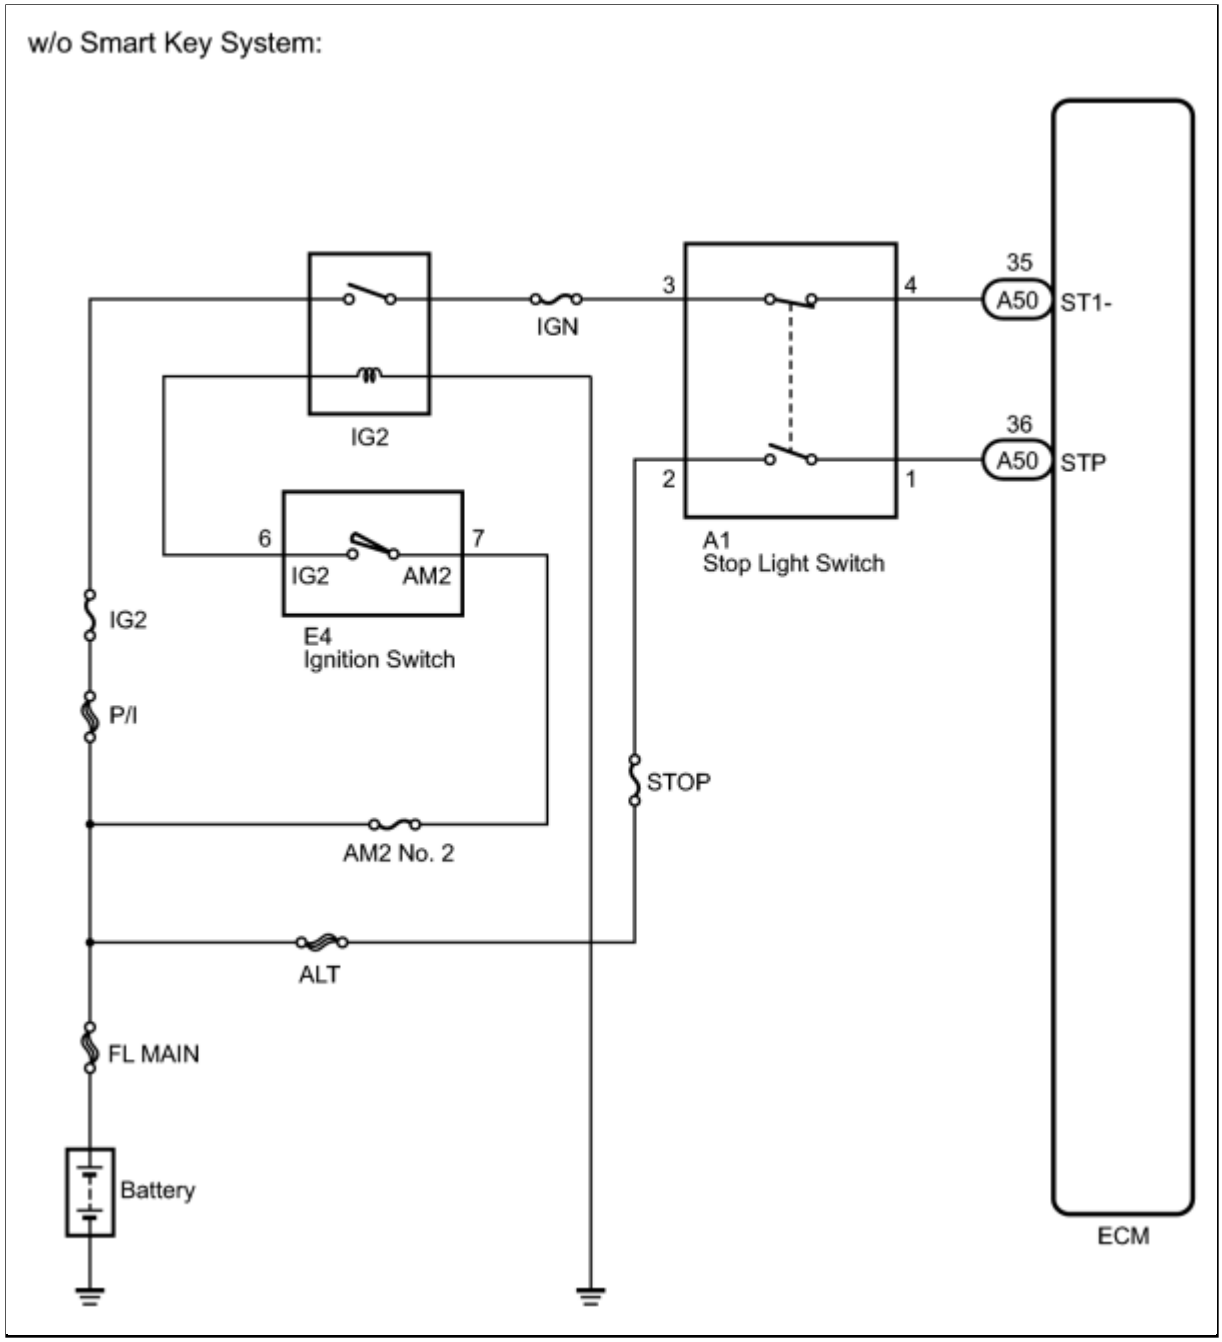
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XCT08NX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0504: Brake Switch "A" / "B" Correlation (2010 Corolla)		

DTC	**P0504**	**Brake Switch "A" / "B" Correlation**

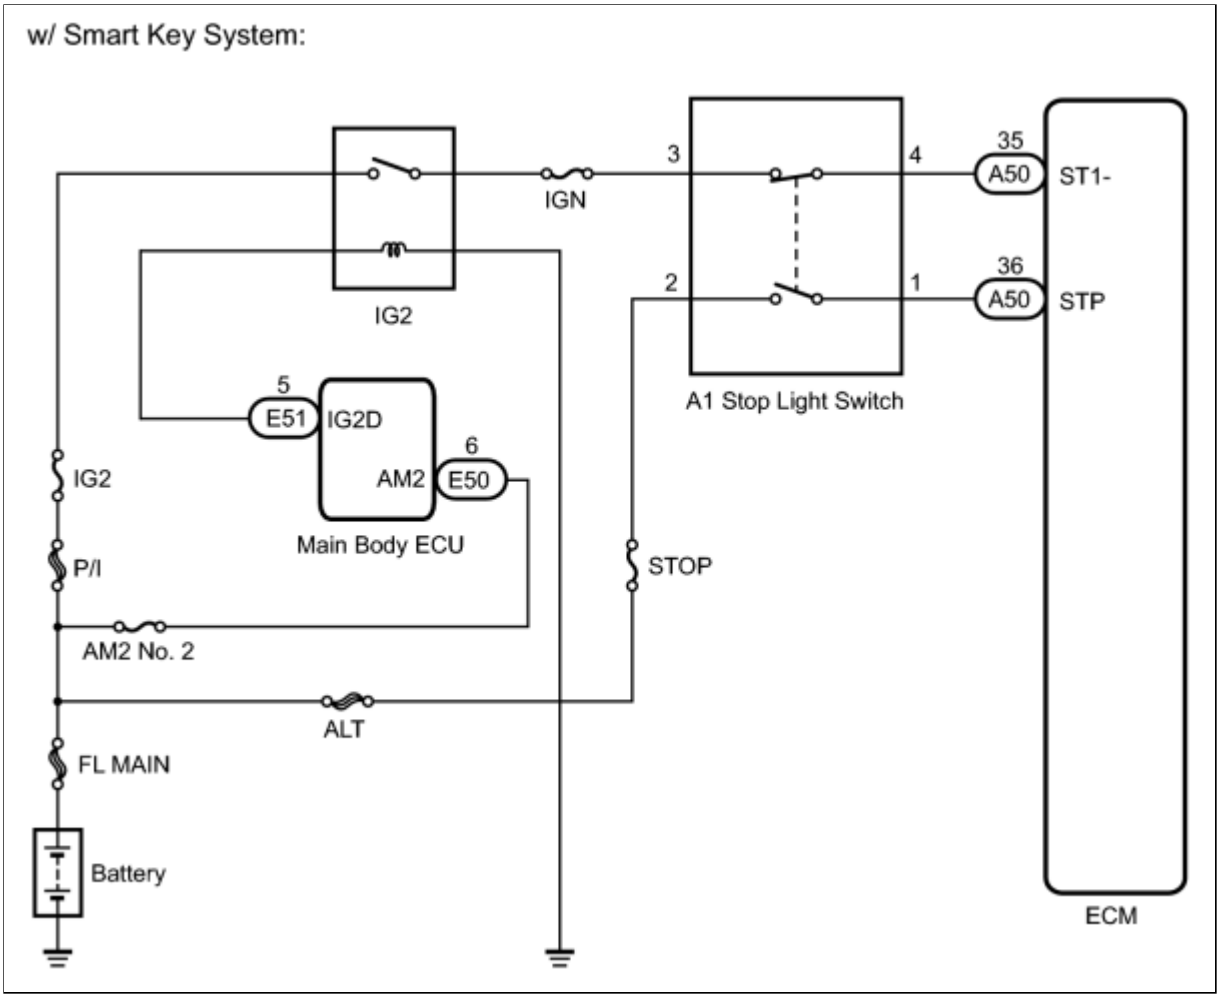
DESCRIPTION

The stop light switch is a duplex system that transmits two signals: STP and ST1-. These two signals are used by the ECM to monitor whether or not the brake system is working properly. If the signals, which indicate the brake pedal is being depressed and released, are detected simultaneously, the ECM interprets this as a malfunction in the stop light switch and sets the DTC.

HINT:



The normal conditions are as shown in the table below. The signals can be read using the Techstream.



SIGNAL	BRAKE PEDAL RELEASED	IN TRANSITION	BRAKE PEDAL DEPRESSED
STP	OFF	ON	ON
ST1-	ON	ON	OFF

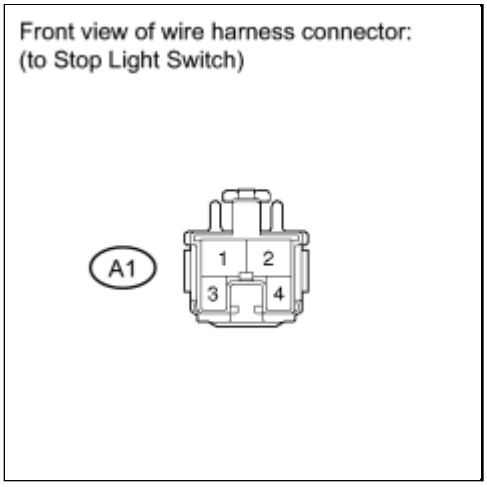
DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0504	Conditions (a), (b) and (c) continue for 0.5 seconds or more (1 trip detection logic): (a) Ignition switch ON (b) Brake pedal released (c) STP signal OFF when ST1- signal OFF	• Short in stop light switch signal circuit • STOP fuse • IGN fuse • Stop light switch • ECM

WIRING DIAGRAM

w/o Smart Key System:

INSPECTION PROCEDURE

HINT:



- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- STP signal conditions can be checked using the Techstream.

  a. Connect the Techstream to the DLC3.
  b. Turn the ignition switch to ON.
  c. Turn the Techstream on.
  d. Enter the following menus: Powertrain / Engine and ECT / Stop Light Switch.
  e. Check the STP signal when the brake pedal is depressed and released.

BRAKE PEDAL OPERATION	SPECIFIED CONDITION
Depressed	STP signal ON
Released	STP signal OFF

PROCEDURE

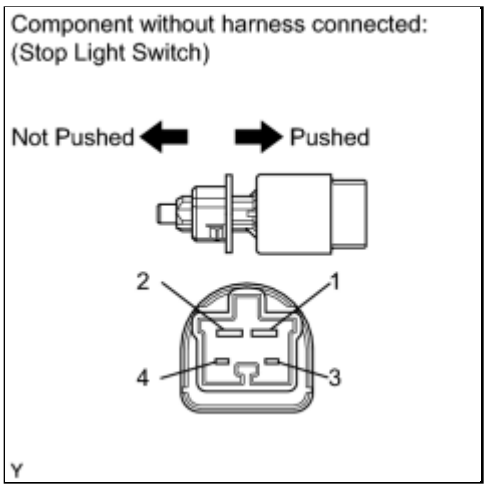
1.	**INSPECT STOP LIGHT SWITCH (TERMINAL VOLTAGE)**

(a) Disconnect the stop light switch connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A1-2 - Body ground	Always	11 to 14 V
A1-3 - Body ground	Ignition switch ON	11 to 14 V



(c) Reconnect the stop light switch connector.

NG ▶ **INSPECT FUSES (STOP AND IGN FUSES)**

OK ▼

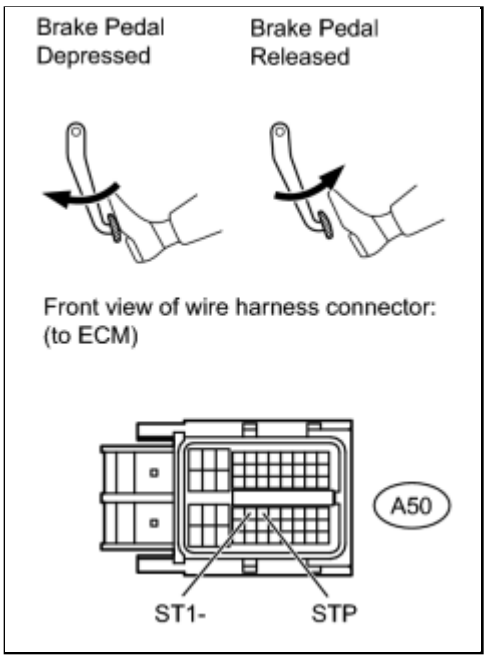
2.	**INSPECT STOP LIGHT SWITCH**

(a) Remove the stop light switch.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Switch pin not pushed	Below 1 Ω
	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin not pushed	10 kΩ or higher
	Switch pin pushed	Below 1 Ω



(c) Reinstall the stop light switch.

NG ▶ **REPLACE STOP LIGHT SWITCH**

OK ▼

3.	**INSPECT ECM (STP AND ST1- VOLTAGE)**

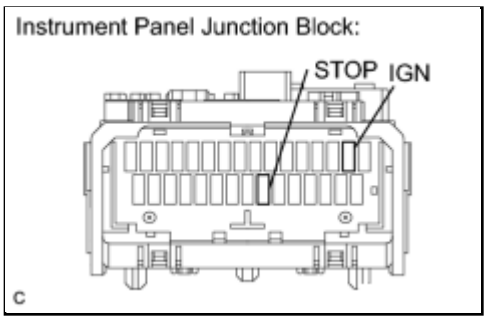
(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-35 (ST1-) - Body ground	Brake pedal released	11 to 14 V
	Brake pedal depressed	0 to 3 V
A50-36 (STP) - Body ground	Brake pedal released	0 to 3 V
	Brake pedal depressed	11 to 14 V



(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - ECM)**

OK ▶ **REPLACE ECM**

4.	**INSPECT FUSES (STOP AND IGN FUSES)**

(a) Remove the STOP and IGN fuses from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
STOP fuse	Always	Below 1 Ω
IGN fuse		

(c) Reinstall the STOP and IGN fuses.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - STOP LIGHT SWITCH - INTEGRATION RELAY)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001BFY041X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P050A: Cold Start Idle Air Control System Performance (2010 Corolla)		

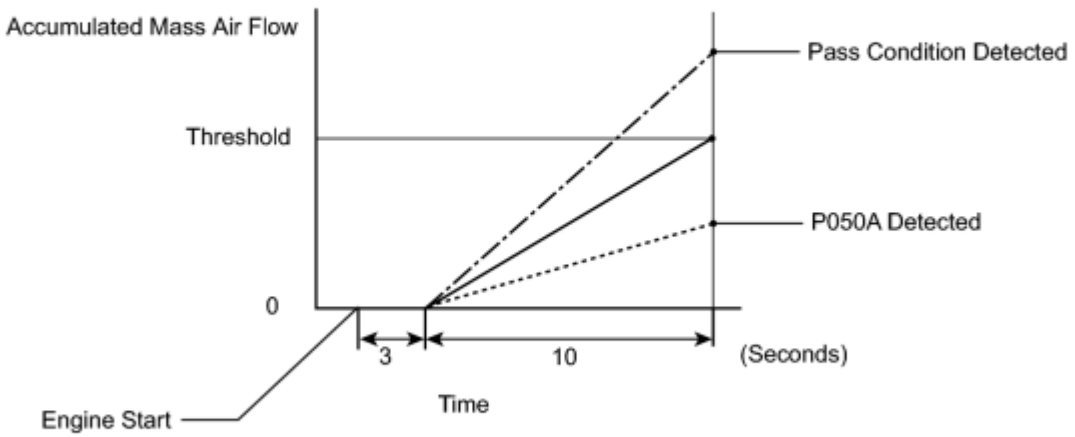
DTC	**P050A**	**Cold Start Idle Air Control System Performance**

MONITOR DESCRIPTION

This monitor will run when the engine is started at an engine coolant temperature of -10 to 50°C (14 to 122°F). The DTC can be set after the engine idles for 13 seconds (2 trip detection logic).

The DTC is designed to monitor the idle air control at cold start. When the engine is started at an engine coolant temperature of lower than 50°C (122°F), the ECM measures the accumulated mass air flow at idle. If it does not reach the specified level within 10 seconds, the ECM interprets this as a malfunction. The MIL is illuminated and a DTC is set when the malfunction is detected in consecutive driving cycles (2 trip detection logic).

The electronic throttle control system controls the idle speed. The electronic throttle control system operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idle speed.



NOTICE:

When the negative battery terminal is disconnected during inspection or repairs, the idle speed control (ISC) learned values are cleared. Idle speed control learning needs to be performed before this DTC can be stored. To perform idle speed control learning, the engine must be warmed up by allowing it to idle for 5 minutes. For idle speed control learning to be successful, when the engine is started to warm it up, there must be at least 10 seconds of idling with the coolant temperature below 30°C before allowing it to continue running for the 5 minute learning period.

HINT:

The idle speed control learning is performed when the engine is warmed up and has been idling for 5 minutes.

P050A Detection Logic:

Engine Coolant Temperature: -10 to 50°C

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P050A	Insufficient mass air flow at cold start (2 trip detection logic)	• Throttle body • Mass air flow meter • PCV system • Air cleaner filter element • Intake system • VVT system • ECM

Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System Bank 1- Advance) P0012 (VVT System Bank 1- Retard) P0013 (Exhaust Oil Control Valve) P0014 (Exhaust System - Advance) P0016 (VVT System Bank 1 - Misalignment) P0017 (Exhaust VVT System - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340, P0342, P0343 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0365, P0367, P0368 (Exhaust Camshaft Position Sensor) P0500 (Vehicle Speed Sensor) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
Engine coolant temperature at engine start	-10°C (14°F) or more
Engine coolant temperature	-10 to 50°C (14 to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 3 km/h (1.875 mph)
Atmospheric pressure	76 kPa (570 mmHg) or more

TYPICAL MALFUNCTION THRESHOLDS

Accumulated mass air flow	Varies with engine coolant temperature (Example: Less than 18.75 g (manual transaxle models) or less than 20 g (automatic transaxle models, N position))

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P050A is output	A
DTC P050A and other DTCs are output	B

HINT:

If any DTCs other than P050A are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**READ VALUE USING TECHSTREAM (FUEL TRIM)**

HINT:

Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Short FT #1 and Long FT #1.

(e) Read the values displayed on the Techstream.

(f) Add together the Short FT #1 and Long FT #1 values to obtain the total Fuel Trim.

OK:

Total of Short FT #1 and Long FT #1 values is between -20% and 20%.

NG ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY)**

OK ▼

3.	**INSPECT THROTTLE BODY ASSEMBLY**

(a) Check that there are no deposits around the throttle valve.

OK:

No deposits around the throttle valve.

NG ▶ **REPLACE THROTTLE BODY ASSEMBLY**

OK ▼

4.	**REPLACE ECM**

(a) Replace ECM INFO .

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

5.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY)**

(a) Check the camshaft timing oil control valve assembly for intake camshaft.

(1) Connect the Techstream to the DLC3.

(2) Start the engine.

(3) Turn the Techstream on.

(4) Turn the A/C switch to ON.

(5) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(6) Check the engine speed while operating the camshaft timing oil control valve assembly (for intake camshaft) using the Techstream.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve assembly OFF	Normal engine speed
Camshaft timing oil control valve assembly ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

HINT:

If the result is not acceptable, cool the engine and perform the Active Test again.

(7) Start the engine when the engine coolant temperature is 30°C (86°F) or less.

(8) Turn the Techstream on.

(9) Turn the A/C switch to ON.

(10) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(11) Check the engine speed while operating the camshaft timing oil control valve assembly using the Techstream with the engine coolant temperature is 50°C (122°F) or less.

Result:

TECHSTREAM OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve assembly OFF	Normal engine speed

TECHSTREAM OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve assembly ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

NG ▶ **CHECK AND REPAIR VVT SYSTEM**

OK ▼

6.	CHECK PCV SYSTEM

(a) Start the engine.

(b) Pinch the positive crankcase ventilation (PCV) hose.

(c) Check the engine rpm.

OK:

The engine rpm rises when the PCV hose is pinched.

NG ▶ **REPAIR OR REPLACE PCV SYSTEM**

OK ▼

7.	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.

OK:

The air cleaner filter element is not excessively contaminated with dirt or oil.

NG ▶ **REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**

OK

8.	CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks INFO .

OK:

No leaks from the intake system.

NG ▶ **REPAIR OR REPLACE INTAKE SYSTEM**

OK

9.	REPLACE MASS AIR FLOW METER

(a) Replace the mass air flow meter INFO .

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

10.	REPLACE THROTTLE BODY ASSEMBLY

(a) Replace the throttle body assembly INFO .

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

11.	CHECK AND REPAIR VVT SYSTEM

HINT:

Check the VVT system for intake camshaft INFO **.**

NEXT ▶ CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

12.	REPAIR OR REPLACE PCV SYSTEM

NEXT ▶ CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

13.	REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

NEXT ▶ CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

14.	REPAIR OR REPLACE INTAKE SYSTEM

NEXT ▼

15.	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

NOTICE:

For this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Switch the ECM from normal mode to check mode using the Techstream INFO .

(f) Start the engine and idle it for one minute.

OK:

Stable fast idle

(g) Read the DTCs.

OK:

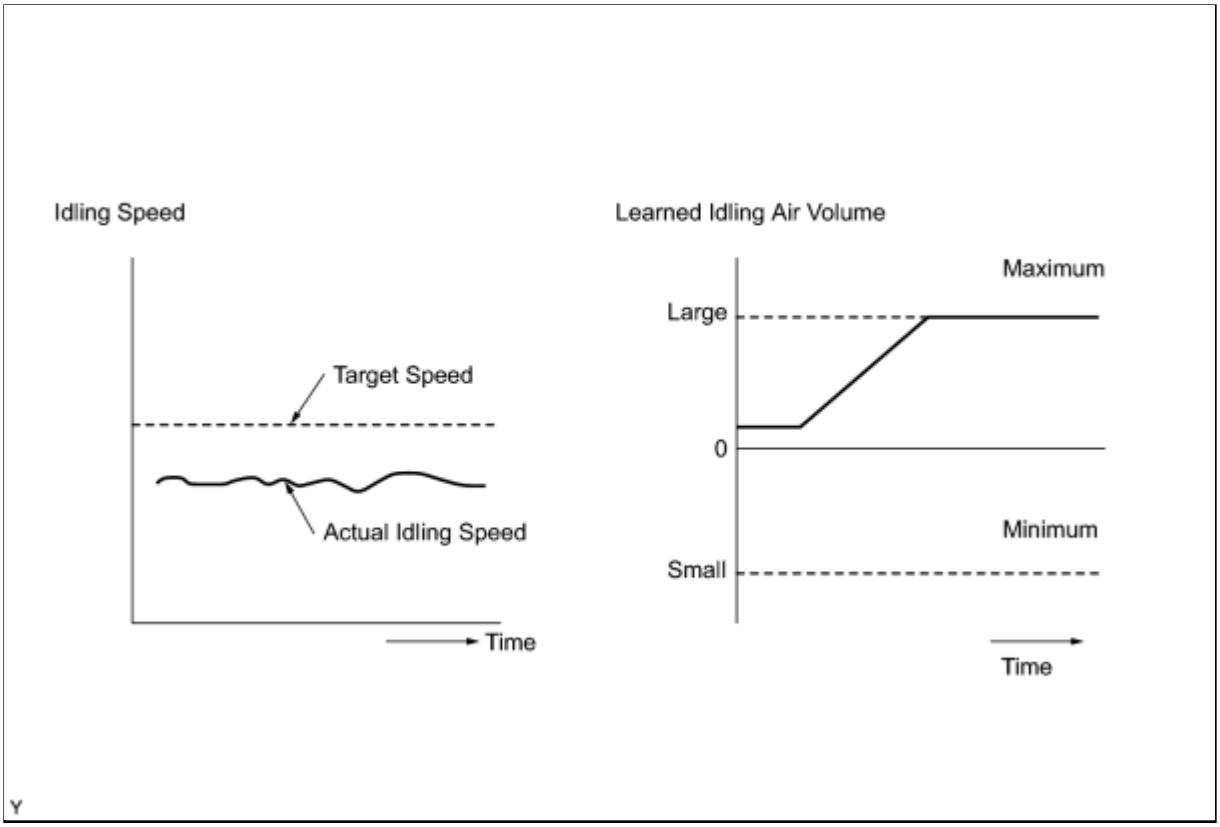
No DTC is output.

NEXT END

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T8M09OX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0505: Idle Control System Malfunction (2010 Corolla)		

DTC	**P0505**	**Idle Control System Malfunction**

DESCRIPTION



The idle speed is controlled by the electronic throttle control system. The electronic throttle control system is comprised of: 1) the one valve type throttle body; 2) a throttle actuator, which operates the throttle valve; 3) a throttle position sensor, which detects the opening angle of the throttle valve; 4) an accelerator pedal position sensor, which detects the accelerator pedal position; and 5) the ECM, which controls the electronic throttle control system. Based on the target idle speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0505	Idling speed continues to vary greatly from target idling speed (2 trip detection logic)	• Electronic throttle control system • Intake system • PCV hose connections • ECM

MONITOR DESCRIPTION

The ECM monitors the idle speed and idle air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the idle speed control system is malfunctioning if the following conditions apply:

- The learned idle air flow volume remains at the maximum or minimum volume for 5 seconds or more during a drive cycle.
- After driving at a vehicle speed of 6.25 mph (10 km/h) or more, the actual engine idle speed varies from the target idle speed by less than -100 rpm or 150 rpm or more when the A/C and NSW are off, or less than -100 rpm or 200 rpm or more when the A/C or NSW are on, 5 times or more during a driving cycle, the ECM illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0505: ISC function
Required Sensors/Components (Main)	Electronic throttle control system
Required Sensors/Components (Related)	Crankshaft position sensor Engine coolant temperature sensor Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 minutes (Idling after warming up)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System Bank 1 - Advance) P0012 (VVT System Bank 1 - Retard) P0013 (Exhaust Oil Control Valve) P0014 (Exhaust System - Advance) P0016 (VVT System Bank 1 - Misalignment)

	P0017 (Exhaust VVT System - Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0365, P0367, P0368 (Exhaust Camshaft Position Sensor) P0451, P0452 (EVAP System) P0500 (Vehicle Speed Sensor) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Engine	Running

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions is met	Condition 1 or 2
1. Frequency that both of following conditions (a) and (b) met	5 times or more
(a) Either of the following conditions (a) and (b) is met	Condition A or B
A. Engine rpm - Target engine rpm	Less than -100 rpm, or 150 rpm or more (A/C off and NSW off)
B. Engine rpm - Target engine rpm	Less than -100 rpm, or 200 rpm or more (A/C on and NSW on)
(b) Vehicle condition	Stop after vehicle was driven at 6.25 mph (10 km/h) or more
2. Frequency that both of following conditions (a) and (b) met	Once
Either of the following condition is met:	Condition A or B
A. Engine rpm - Target engine rpm	Less than -100 rpm, or 150 rpm or more (A/C off and NSW off)
B. Engine rpm - Target engine rpm	Less than -100 rpm, or 200 rpm or more (A/C on and NSW on)
(b) Idle air control flow rate learning valve	0.5 L/sec or less, or 6.1 L/sec or more

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
    a. The floor carpet overlapping slightly onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
    b. The accelerator pedal being not fully released.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0505 is output	A
DTC P0505 and other DTCs are output	B

HINT:

If any DTCs other than P0505 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	CHECK PCV HOSE CONNECTIONS

(a) Check the PCV hose connections INFO .

OK:

PCV hose is connected correctly and is not damaged.

NG ▶ REPAIR OR REPLACE PCV HOSE

OK ▼

3.	CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks INFO .

OK:

No leaks from intake system.

NG ▶ REPAIR OR REPLACE INTAKE SYSTEM

OK ▼

4.	INSPECT THROTTLE BODY ASSEMBLY (THROTTLE VALVE)

(a) Check the throttle valve condition.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ REPAIR OR REPLACE THROTTLE BODY ASSEMBLY

OK ▶ REPLACE ECM

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T8P0D3X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0560: System Voltage (2010 Corolla)		

DTC	**P0560**	**System Voltage**

MONITOR DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, the memory is cleared and the ECM determines that there is a malfunction in the power supply circuit. The next time the engine is started, the ECM illuminates the MIL and sets the DTC.

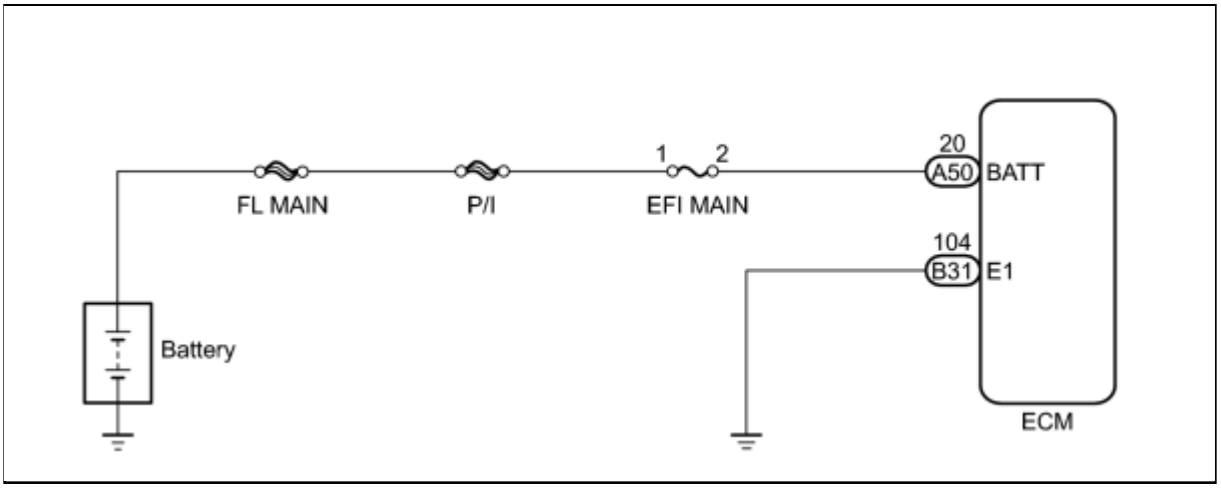
DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0560	Open in ECM back up power source circuit (1 trip detection logic)	• Open in back up power source circuit • Battery • Battery terminals • EFI MAIN fuse • ECM

HINT:

If DTC P0560 is set, the ECM does not store other DTCs or the data stored in the ECM may be partly erased.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

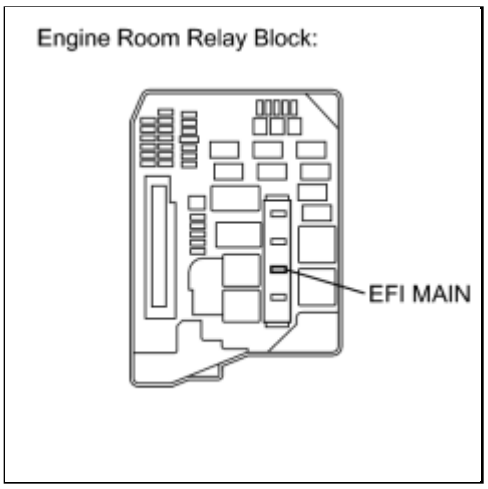
Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

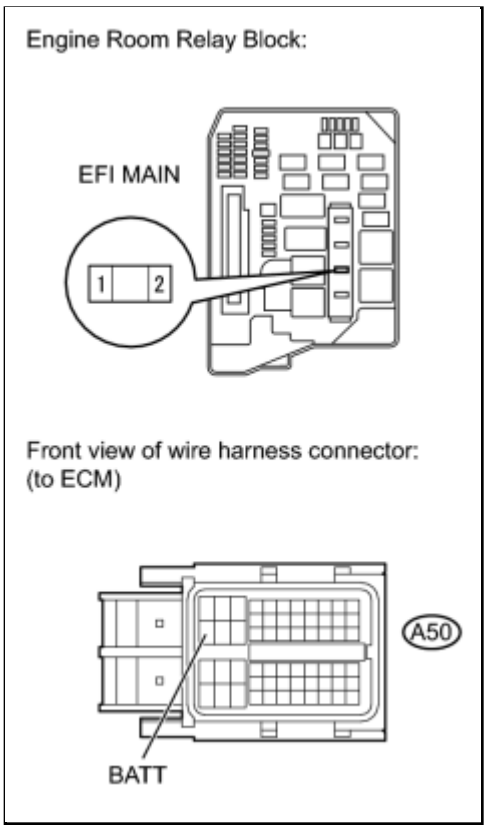
1.	**INSPECT FUSE (EFI MAIN FUSE)**

(a) Remove the EFI MAIN fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse	Always	Below 1 Ω



(c) Reinstall the EFI MAIN fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (ECM - EFI MAIN FUSE)**

(a) Disconnect the negative battery terminal.

(b) Disconnect the positive battery terminal.

(c) Remove the EFI MAIN fuse from the engine room relay block.

(d) Disconnect the ECM connector.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

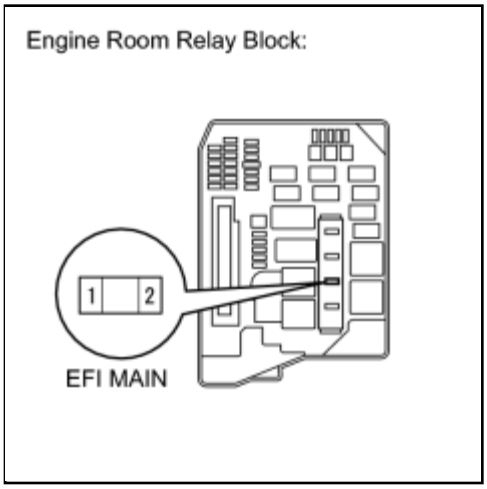
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse (2) - A50-20 (BATT)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse (2) or A50-20 (BATT) - Body ground	Always	10 kΩ or higher

(f) Reinstall the EFI MAIN fuse.

(g) Reconnect the ECM connector.



(h) Reconnect the positive battery terminal.

(i) Reconnect the negative battery terminal.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - EFI MAIN FUSE)**

OK

3.	**CHECK HARNESS AND CONNECTOR (BATTERY - EFI MAIN FUSE)**

(a) Disconnect the negative battery terminal.

(b) Disconnect the positive battery terminal.

(c) Remove the EFI MAIN fuse from the engine room relay block.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal - EFI MAIN fuse (1)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal or EFI MAIN fuse (1) - Body ground	Always	10 kΩ or higher

(e) Reinstall the EFI MAIN fuse.

(f) Reconnect the positive battery terminal.

(g) Reconnect the negative battery terminal.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

(BATTERY - EFI MAIN FUSE)

OK

4.	**INSPECT BATTERY**

(a) Check that the battery is not discharged or weak.

OK:

Battery is not discharged or weak

NG → **CHARGE OR REPLACE BATTERY**

OK

5.	**CHECK BATTERY TERMINAL**

(a) Check that the battery terminals are not loose or corroded.

OK:

Battery terminals are not loose or corroded

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

6.	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to on.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Start the engine and turn the Techstream on.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0560 is output	A
DTC is not output	B

B ▶ **CHECK FOR INTERMITTENT PROBLEMS**

A ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000292G00CX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0601: Internal Control Module Memory Check Sum Error (2010 Corolla)		

DTC	**P0601**	**Internal Control Module Memory Check Sum Error**

MONITOR DESCRIPTION

The ECM continuously monitors its own internal memory status, internal circuits, and output signals transmitted to the throttle actuator. This self-check insures that the ECM is functioning properly. If any malfunction is detected, the ECM sets the appropriate DTC and illuminates the MIL.

The ECM memory status is diagnosed by internal mirroring of the main CPU and the sub CPU to detect Random Access Memory (RAM) errors. The two CPUs also perform continuous mutual monitoring. The ECM illuminates the MIL and sets a DTC if: 1) outputs from the two CPUs are different or deviate from the standards, 2) the signals sent to the throttle actuator deviate from the standards, 3) a malfunction is found in the throttle actuator supply voltage, and 4) any other ECM malfunction is found.

DTC NO.	DTC DETECTION CONDITIONS	TROUBLE AREAS
P0601	ECM internal error (1 trip detection logic)	ECM

MONITOR STRATEGY

Related DTCs	P0601: ECM Check Sum error
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	135 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM Check Sum Error

Check sum	Error

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**REPLACE ECM**

(a) Replace the ECM INFO .

TOYOTA

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002KQO02YX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0604: Random Access Memory (RAM) (2010 Corolla)		

DTC	**P0604**	**Random Access Memory (RAM)**

MONITOR DESCRIPTION

The ECM continuously monitors its internal memory status. This self-check ensures that the ECM is functioning properly. It is diagnosed by internal "mirroring" of the main CPU and sub CPU to detect Random Access Memory (RAM) errors. If outputs from these CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set the DTC immediately.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0604	ECM RAM errors	ECM

MONITOR STRATEGY

Related DTCs	P0604: ECM RAM error
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	None
Frequency of operation	Continuous
Duration	6 times
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

Main CPU and sub CPU mirroring	Fail

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ OUTPUT DTC (DTC P0604)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTC INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Disconnect the Techstream.

(g) Disconnect the cable from the battery negative (-) terminal and wait for 1 minute.

(h) Connect the cable to the battery negative (-) terminal.

(i) Connect the Techstream to the DLC3.

(j) Turn the ignition switch to ON.

(k) Turn the Techstream on.

(l) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(m) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0604 is output	B

B ▶ **REPLACE ECM**

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0607: Control Module Performance (2010 Corolla)		

DTC	**P0607**	**Control Module Performance**

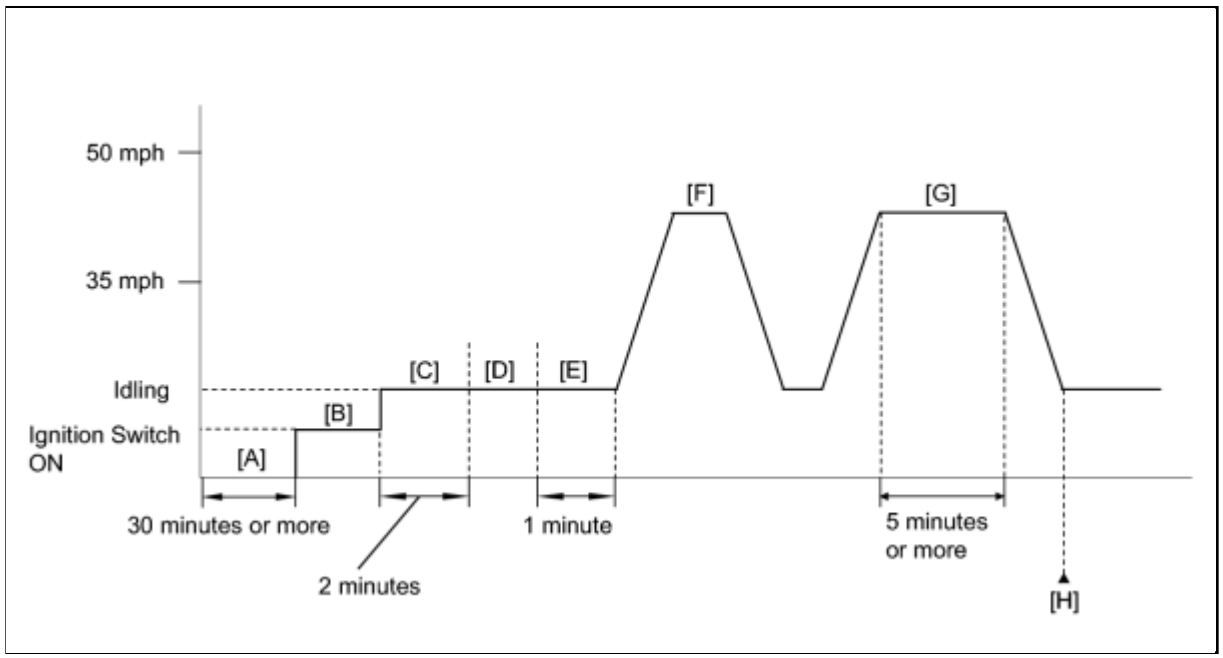
MONITOR DESCRIPTION

The ECM continuously monitors its internal processors (CPUs) and heated oxygen sensor transistors. This self-check ensures that the ECM is functioning properly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0607	• The ECM CPUs malfunction • The heated oxygen sensor transistor (built into the ECM) malfunctions	• ECM • Heated oxygen sensor (bank 1 sensor 2) • Exhaust gas leak
	For Mexico models: ECM CPU error	• ECM

MONITOR STRATEGY

Related DTCs	P0607: Control Module Performance
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	Heated oxygen sensor
Frequency of Operation	Continuous
Duration	60 seconds
MIL Operation	Immediate
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever the following DTCs are not stored	None
Engine	Running
Estimated heated oxygen sensor temperature	450 to 800°C (842 to 1472°F)

TYPICAL MALFUNCTION THRESHOLDS

Heated oxygen sensor transistors	Fail

CONFIRMATION DRIVING PATTERN

1. Stop the engine for 30 minutes or more [A].
2. Connect the Techstream to the DLC3.
3. Turn the ignition switch to ON and turn the Techstream on.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on [B].
7. Start the engine, and wait 2 minutes [C].
8. Warm up the engine until the engine coolant temperature is 75°C (167°F) or higher [D].
9. Idle the engine for 1 minute [E].
10. Accelerate the vehicle to 50 mph (80 km/h) and stop the vehicle [F].
11. Drive the vehicle at 35 to 50 mph (56 to 80 km/h) for 5 minutes or more [G].
12. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
13. Input the DTC: P0607, P0136, P0137 or P0138.
14. Check the DTC judgment result [H].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal

TECHSTREAM DISPLAY	DESCRIPTION
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [D] through [H].

15. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
16. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

17. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine / Trouble Codes.

(e) Read the DTCs INFO.

Result:

RESULT	PROCEED TO
P0607 and P0136, P0137 or P0138 are output	A
P0607 is output	B

B ▶ **CHECK FOR EXHAUST GAS LEAK**

A ▼

2.	**INSPECT DTC (P0136, P0137 OR P0138)**

(a) Refer to the P0136, P0137 or P0138 flowchart.

HINT:

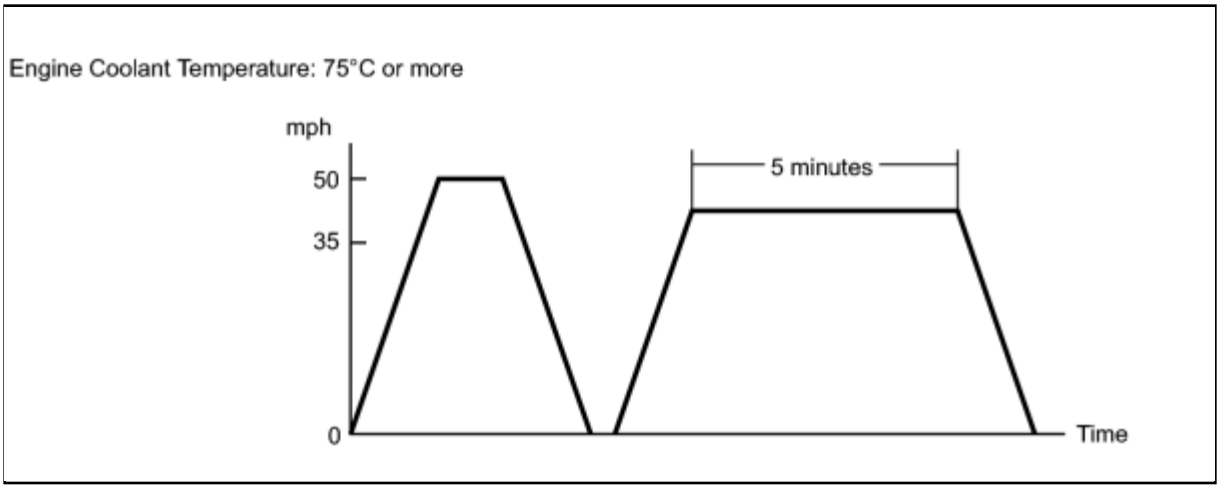
- If P0136 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0137 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0138 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If DTC P0607 and P0136, P0137 or P0138 are output, the output voltage of the heated oxygen sensor may remain close to 0 V or become high (around 1 V or higher).

NEXT ▶ **INSPECT ECM**

3.	**CHECK FOR EXHAUST GAS LEAK**

(a) Allow the engine to idle and rev the engine.

(b) Check for exhaust gas leaks around the heated oxygen sensor.



If any exhaust gas leaks are present, repair them and proceed to "PERFORM CONFIRMATION DRIVING PATTERN". If no exhaust gas leaks are present, proceed to "PERFORM CONFIRMATION DRIVING PATTERN".

HINT:

- If no exhaust gas leaks are present, a malfunction in the heated oxygen sensor circuit is suspected.
- If any exhaust gas leaks are present around the heated oxygen sensor, noise appears in the output voltage of the heated oxygen sensor.

NEXT

4.	**PERFORM CONFIRMATION DRIVING PATTERN**

(a) Clear the DTC INFO .

(b) Connect the Techstream to the DLC3.

(c) Start the engine.

(d) Switch the ECM from normal mode to check mode.

(e) Warm up the engine until the engine coolant temperature is 75°C (167°F) or higher.

(f) Perform the driving pattern.

(1) Accelerate the vehicle to 50 mph (80 km/h) and stop the vehicle.

(2) Drive the vehicle between 38 and 50 mph (60 and 80 km/h) for 5 minutes.

(g) Enter the following menus: Powertrain / Engine / Trouble Codes.

(h) Read the DTCs.

Result:

RESULT	PROCEED TO

RESULT	PROCEED TO

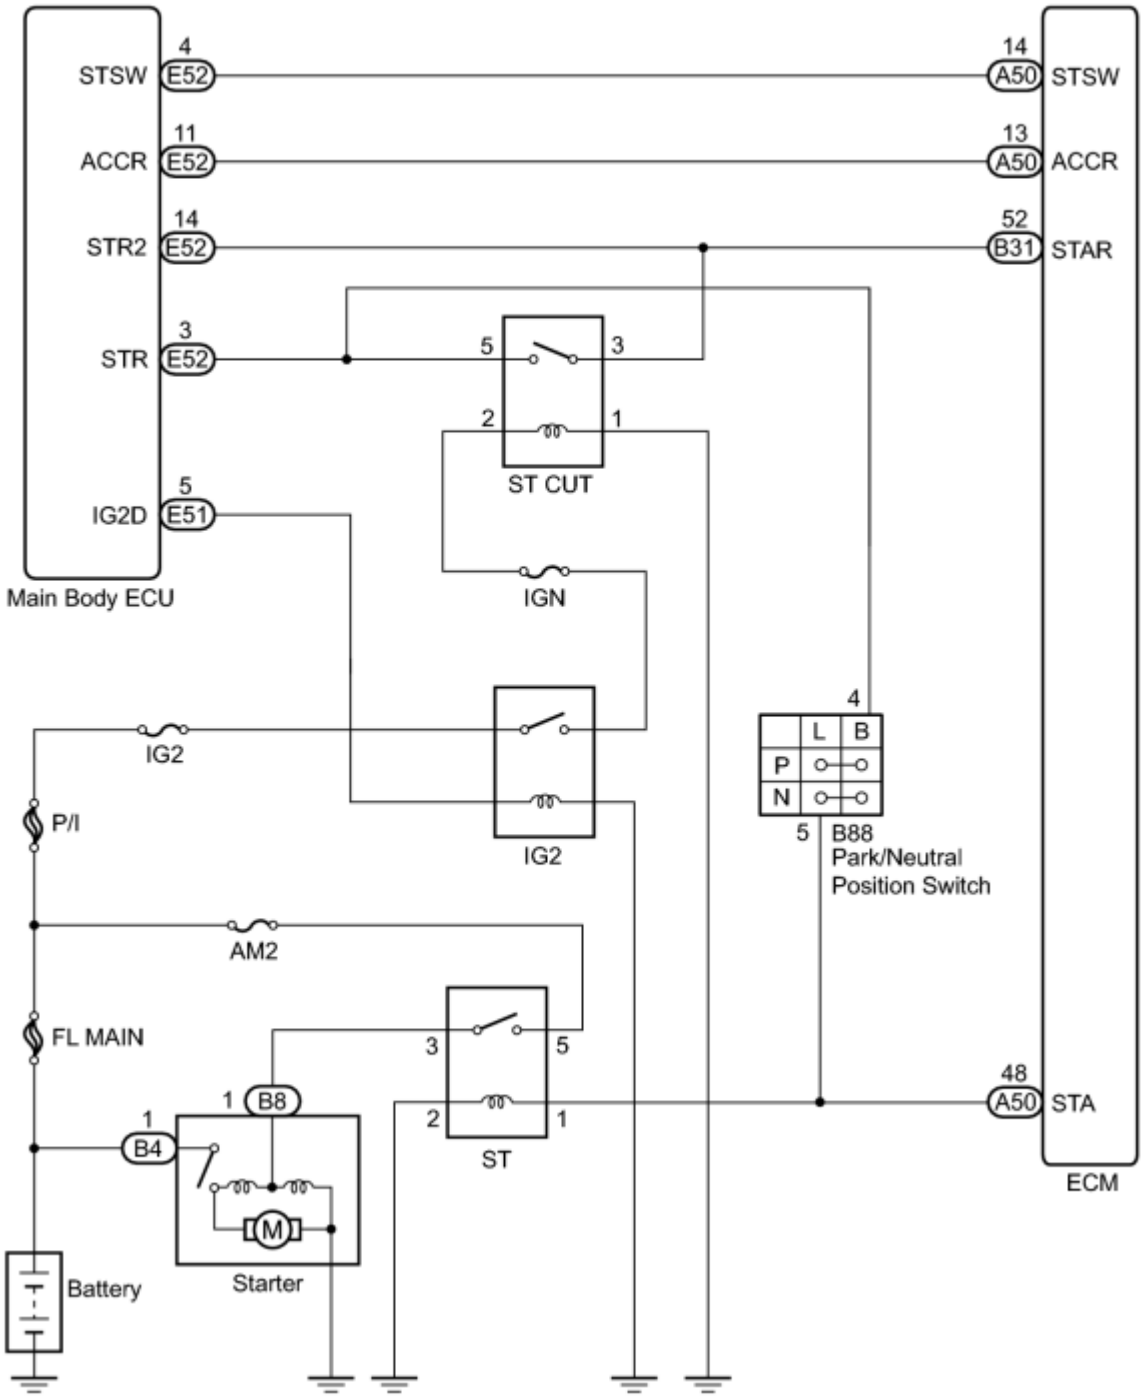
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0617: Starter Relay Circuit High (2010 Corolla)		

DTC	**P0617**	**Starter Relay Circuit High**

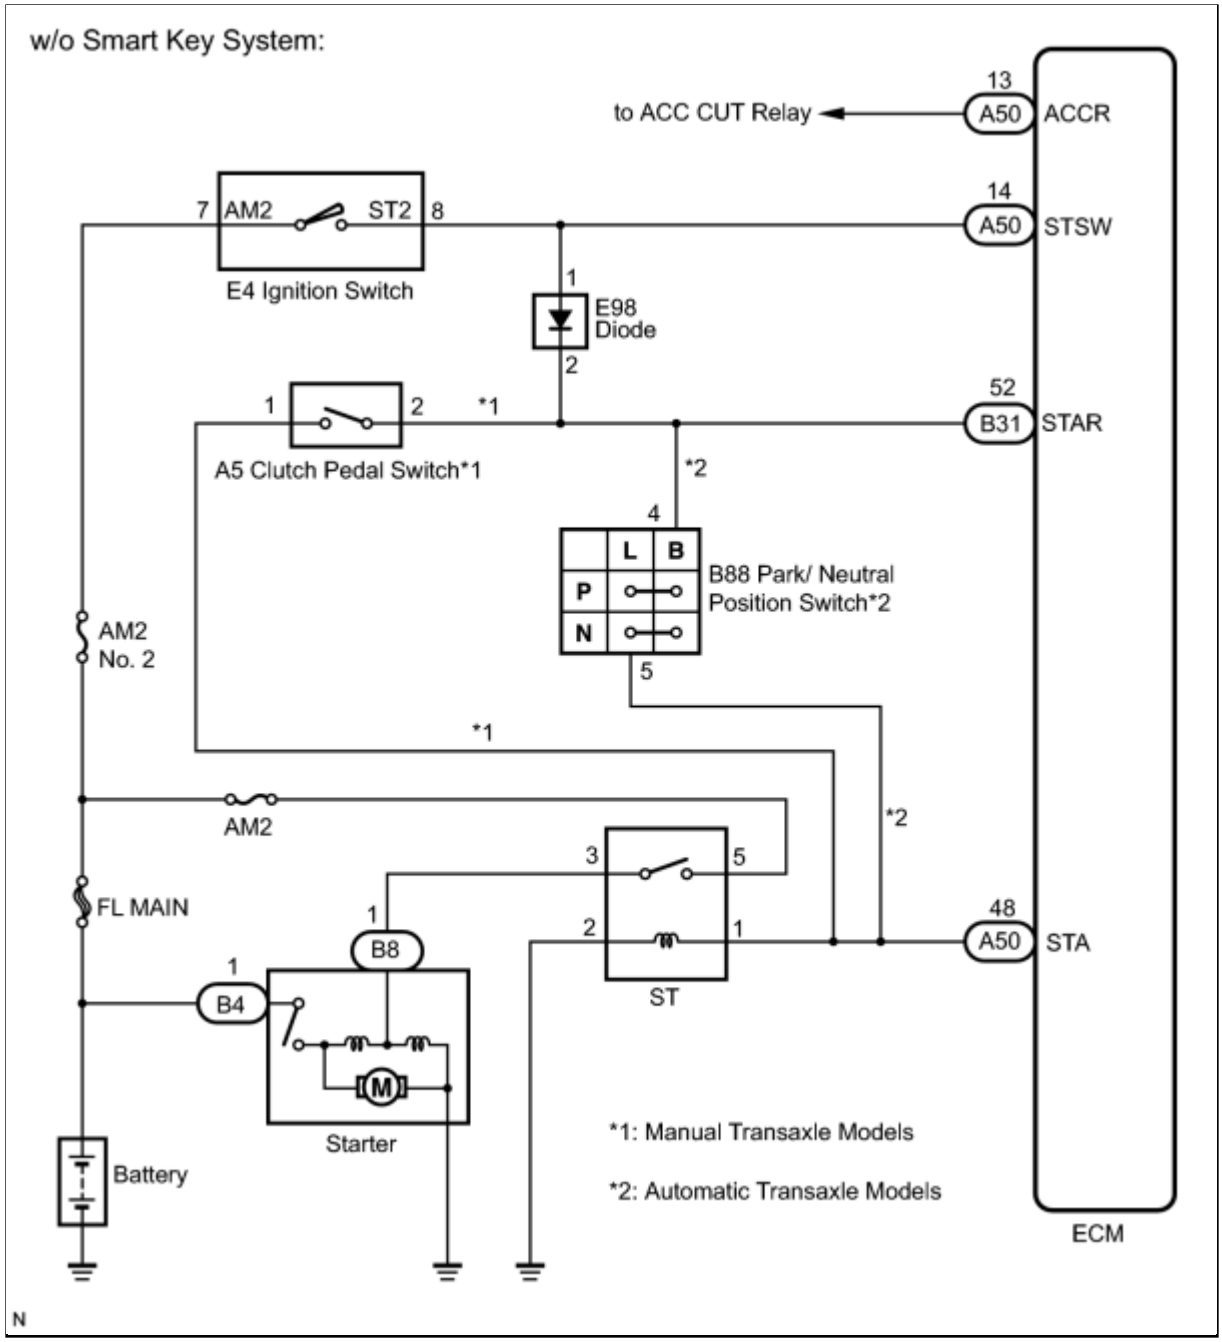
DESCRIPTION

While the engine is being cranked, battery voltage is applied to terminal STA of the ECM.

If the ECM detects the starter signal (STA signal) while the vehicle is being driven, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and sets the DTC.



This monitor runs when the vehicle is driven at 12.4 mph (20 km/h) for over 20 seconds.



DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0617	When conditions (a), (b) and (c) are met, positive (+B) battery voltage 10.5 V or more applied to ECM for 20 seconds (1 trip detection logic): • (a) Vehicle speed more than 12.4 mph (20 km/h) • (b) Engine speed more than 1000 rpm • (c) STA signal ON	• Cranking holding function circuit • Park/neutral position switch*1 • Ignition switch*2 • ECM

- *1: Automatic transaxle models.
- *2: Manual transaxle models.

B ▶ REPLACE ECM

A CHECK FOR INTERMITTENT PROBLEMS

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001DN902VX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P0724: Brake Switch "B" Circuit High (2010 Corolla)		

DTC	**P0724**	**Brake Switch "B" Circuit High**

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling when brakes are suddenly applied while driving with the lock-up torque converter clutch on.

When the brake pedal is depressed, this switch sends a signal to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0724	Stop light switch remains ON even when vehicle repeats 5 cycles of STOP (less than 1.86 mph [3 km/h]) and GO (18.65 mph [30 km/h] or more) (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 1.86 mph [3 km/h]) and go (18.65 mph [30 km/h] or more) 5 times during 2 driving cycles, in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components (Main)	Stop light switch
Required sensors/Components (Related)	Speed sensor
Frequency of Operation	Continuous
Duration	5 times
MIL Operation	2 driving cycles

3.	**CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - ECM)**

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-35 (ST1-) - Body ground	Brake pedal released	11 to 14 V
	Brake pedal depressed	0 to 3 V
A50-36 (STP) - Body ground	Brake pedal released	0 to 3 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
	Brake pedal depressed	11 to 14 V

(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - ECM)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFU0ACX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2102,P2103: Throttle Actuator Control Motor Circuit Low (2010 Corolla)		

DTC	**P2102**	**Throttle Actuator Control Motor Circuit Low**

DTC	**P2103**	**Throttle Actuator Control Motor Circuit High**

DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using an electric motor and gears.

The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This electronic throttle control system does not use a throttle cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2102	Conditions (a) and (b) continue for 2 seconds (1 trip detection logic): (a) Throttle actuator duty ratio 80% or more (b) Throttle actuator current less than 0.5 A	• Open in throttle actuator circuit • Throttle actuator • ECM
P2103	Either of following conditions is met (1 trip detection logic): • Hybrid IC diagnosis signal fail • Hybrid IC current limiter port fail	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and

open circuits in the throttle actuator based on the current value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.

Example:

When the electrical current is less than 0.5 A and the throttle actuator duty ratio exceeds 80%, the ECM interprets this as the current being outside the standard range, illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the engine is quickly revved to a high rpm several times after the engine has idled for 5 seconds after starting the engine.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None

Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

P2102:

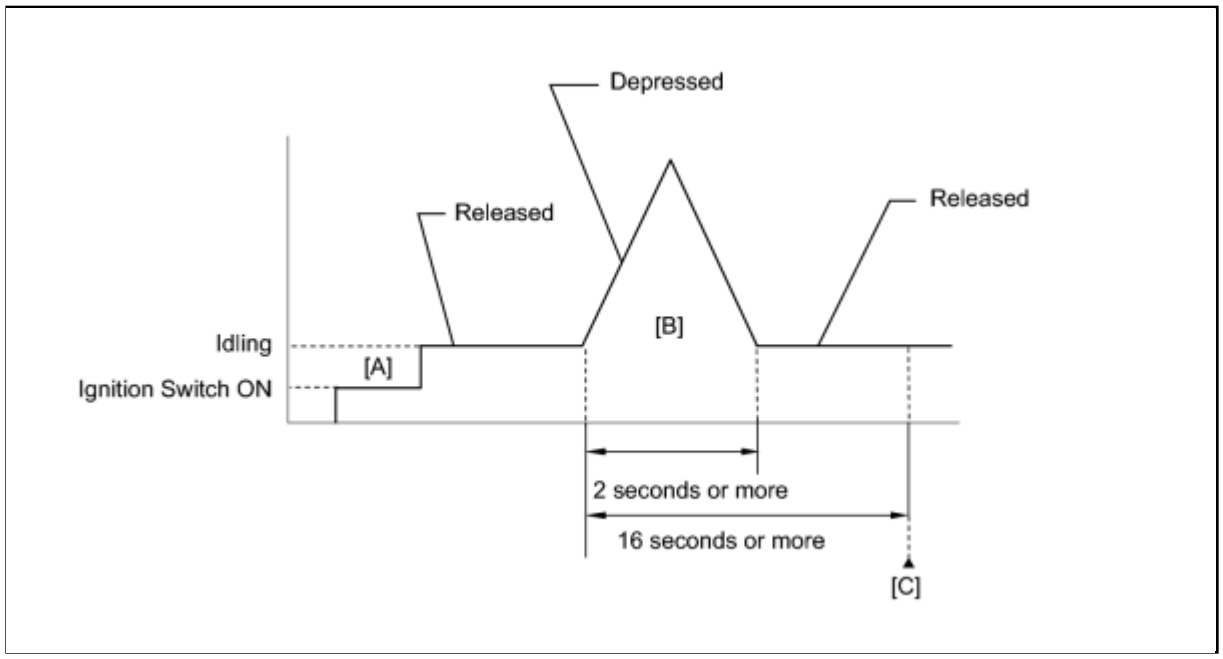
Throttle actuator	ON
Duty-cycle ratio to open throttle actuator	80% or more
Throttle actuator power supply	8 V or more
Motor current change during latest 0.016 seconds	Less than 0.2 A

P2103:

Throttle actuator	ON
Either of the following conditions 1 or 2 is met:	-
1. Throttle actuator power supply	8 V or more

2. Throttle actuator power	ON
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS



P2102:

Throttle actuator current	Less than 0.5 A

P2103:

Either of following conditions is met:	A or B
A. Hybrid IC diagnosis signal	Fail
B. Hybrid IC current limiter port	Fail

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. With the vehicle stationary, fully depress the accelerator pedal and quickly release it [B].
8. Check that 16 seconds or more have elapsed from the instant when the accelerator pedal is

first depressed.

9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P2102 or P2103.
11. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] through [C] again.

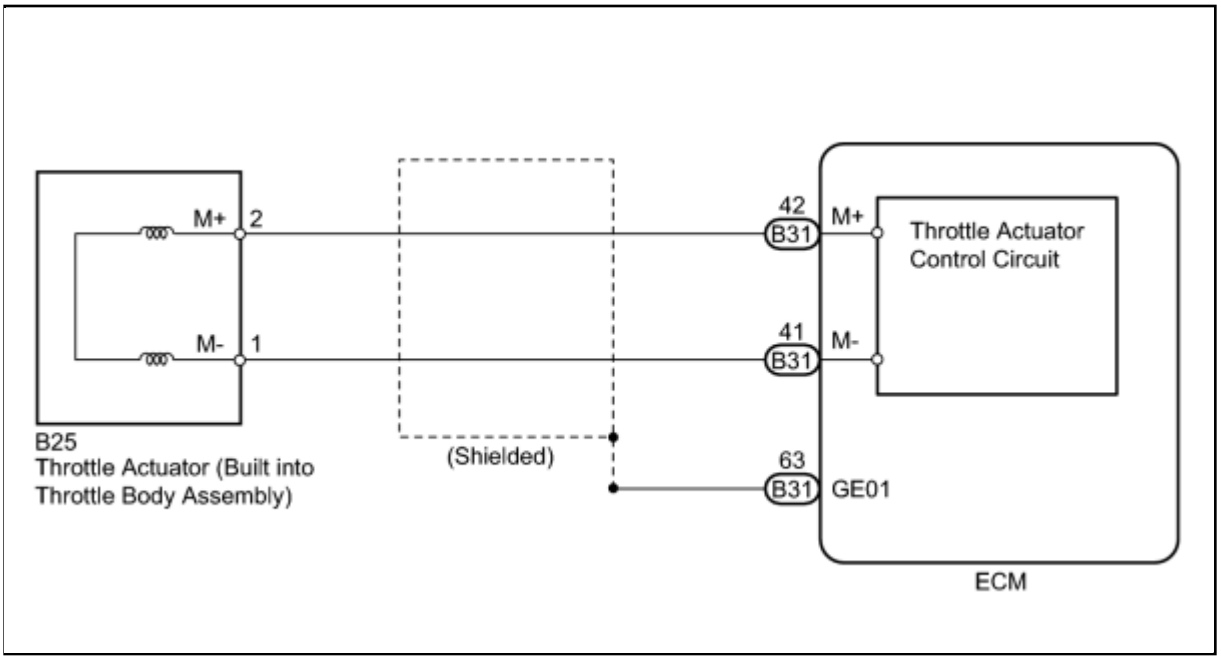
12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

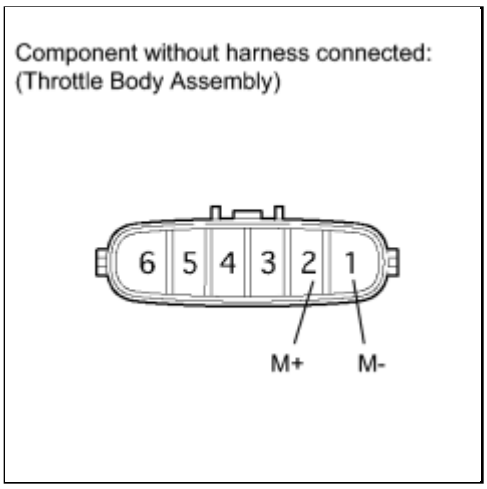
FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- The throttle actuator current [Throttle Motor Current] and the throttle actuator duty ratio Throttle Motor Open Duty / Throttle Motor Close Duty can be read using the Techstream. However, the ECM shuts off the throttle actuator current when the electronic throttle control system malfunctions.

PROCEDURE

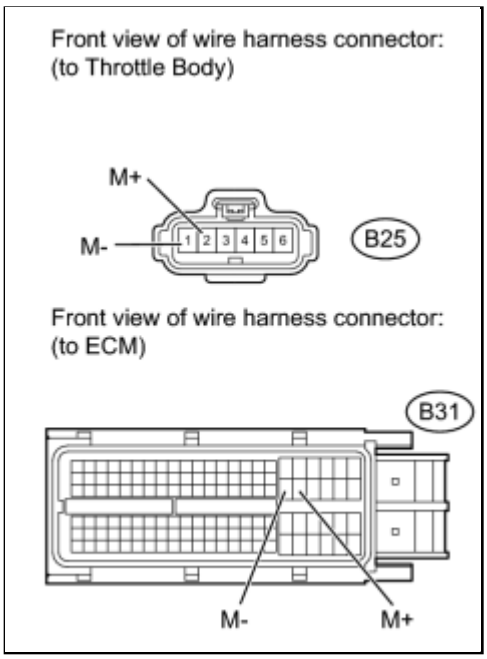
1.	**INSPECT THROTTLE BODY ASSEMBLY (RESISTANCE OF THROTTLE ACTUATOR)**

(a) Disconnect the throttle body assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (M+) - 1 (M-)	20°C (68°F)	0.3 to 100 Ω



(c) Reconnect the throttle body assembly connector.

NG ▶ **REPLACE THROTTLE BODY ASSEMBLY**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (THROTTLE BODY - ECM)**

(a) Disconnect the throttle body connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-2 (M+) - B31-42 (M+)	Always	Below 1 Ω
B25-1 (M-) - B31-41 (M-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-2 (M+) or B31-42 (M+) - Body ground	Always	10 kΩ or higher
B25-1 (M-) or B31-41 (M-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

(e) Reconnect the throttle body connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (THROTTLE BODY - ECM)**

OK ▼

3.	INSPECT THROTTLE BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for foreign objects between the throttle valve and the housing.

OK:

No foreign objects between throttle valve and housing.

NG ▶ **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY ASSEMBLY**

OK ▼

4.	INSPECT THROTTLE BODY ASSEMBLY (THROTTLE VALVE)

(a) Check if the throttle valve opens and closes smoothly.

OK:

Throttle valve opens and closes smoothly.

NG ▶ **REPLACE THROTTLE BODY ASSEMBLY**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000324401QX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P1607: Cruise Control Input Processor (2010 Corolla)		

DTC	**P1607**	**Cruise Control Input Processor**

MONITOR DESCRIPTION

The ECM continuously monitors its main and sub CPUs for the cruise control. This self-check ensures that the ECM is functioning properly. If outputs from the CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set the DTC immediately.

Cruise control	Forbiddance
When either condition below is met:	-

• Cruise control	Operating
• Low speed control	Operating

INSPECTION PROCEDURE

PROCEDURE

1.	**READ OUTPUT DTC (DTC P1607)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Disconnect the Techstream.

(g) Disconnect the cable from the battery negative (-) terminal and wait for 1 minute.

(h) Connect the cable to the battery negative (-) terminal.

(i) Connect the Techstream to the DLC3.

(j) Turn the ignition switch to ON.

(k) Turn the Techstream on.

(l) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(m) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P1607 is output	B

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFV0B6X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2111,P2112: Throttle Actuator Control System - Stuck Open (2010 Corolla)		

DTC	**P2111**	**Throttle Actuator Control System - Stuck Open**

DTC	**P2112**	**Throttle Actuator Control System - Stuck Closed**

DESCRIPTION

The throttle actuator is operated by the ECM, and opens and closes the throttle valve using an electric motor and gears. The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This electronic throttle control system does not use a throttle cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2111	ECM signals throttle actuator to close, but stuck open (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve • ECM
P2112	ECM signals throttle actuator to open, but stuck closed (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve • ECM

MONITOR DESCRIPTION

The ECM determines that there is a malfunction in the electronic throttle control system when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, the DTC can be set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the subsequent engine is next start.

MONITOR STRATEGY

Related DTCs	P2111: Throttle actuator stuck open P2112: Throttle actuator stuck closed
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All

Monitor runs whenever following DTCs are not present	None

P2111 (Throttle Actuator Stuck Open)

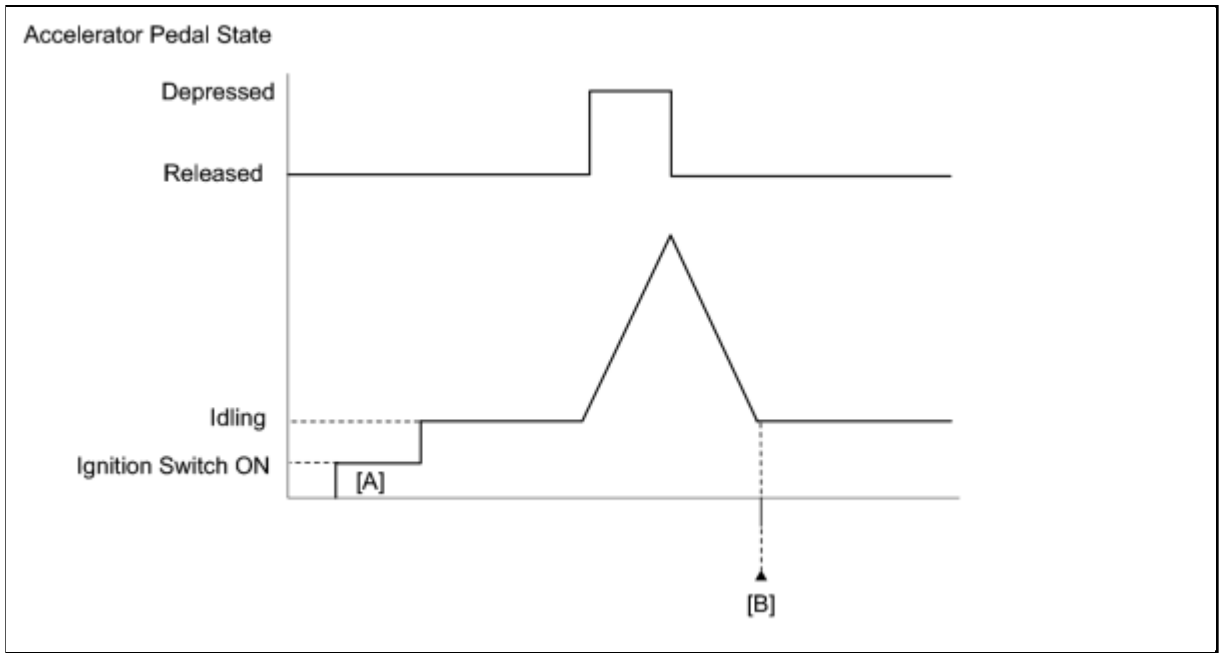
All of following conditions are met:	-
System guard* judge condition	ON
Throttle actuator current	2 A or more
Duty cycle to close throttle	80% or more

P2112 (Throttle Actuator Stuck Closed)

All of following conditions are met:	-
System guard* judge condition	ON
Throttle actuator current	2 A or more
Duty cycle to open throttle	80% or more

*System guard set when following conditions are met:	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
Throttle position sensor fail	Not detected
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	5.5 V or more
Throttle actuator fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS



P2111 (Throttle Actuator Stuck Open)

Throttle position sensor voltage change for 0.016 seconds	Less than 0.1 V for 0.5 seconds or more

P2112 (Throttle Actuator Stuck Closed)

Throttle position sensor voltage change for 0.016 seconds	Less than 0.1 V for 0.5 seconds or more

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P2111 or P2112.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal

TECHSTREAM DISPLAY	DESCRIPTION
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**INSPECT THROTTLE BODY ASSEMBLY (VISUALLY CHECK THROTTLE VALVE)**

(a) Check for contamination such as carbon between the throttle valve and the housing. If necessary, clean the throttle body. After cleaning check that the throttle valve moves smoothly.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ **REPLACE THROTTLE BODY ASSEMBLY**

OK ▼

2.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P2111 OR P2112)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Start the engine, and fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P2111 or P2112 is output	B

B ▶ REPLACE ECM

A ▶ CHECK FOR INTERMITTENT PROBLEMS

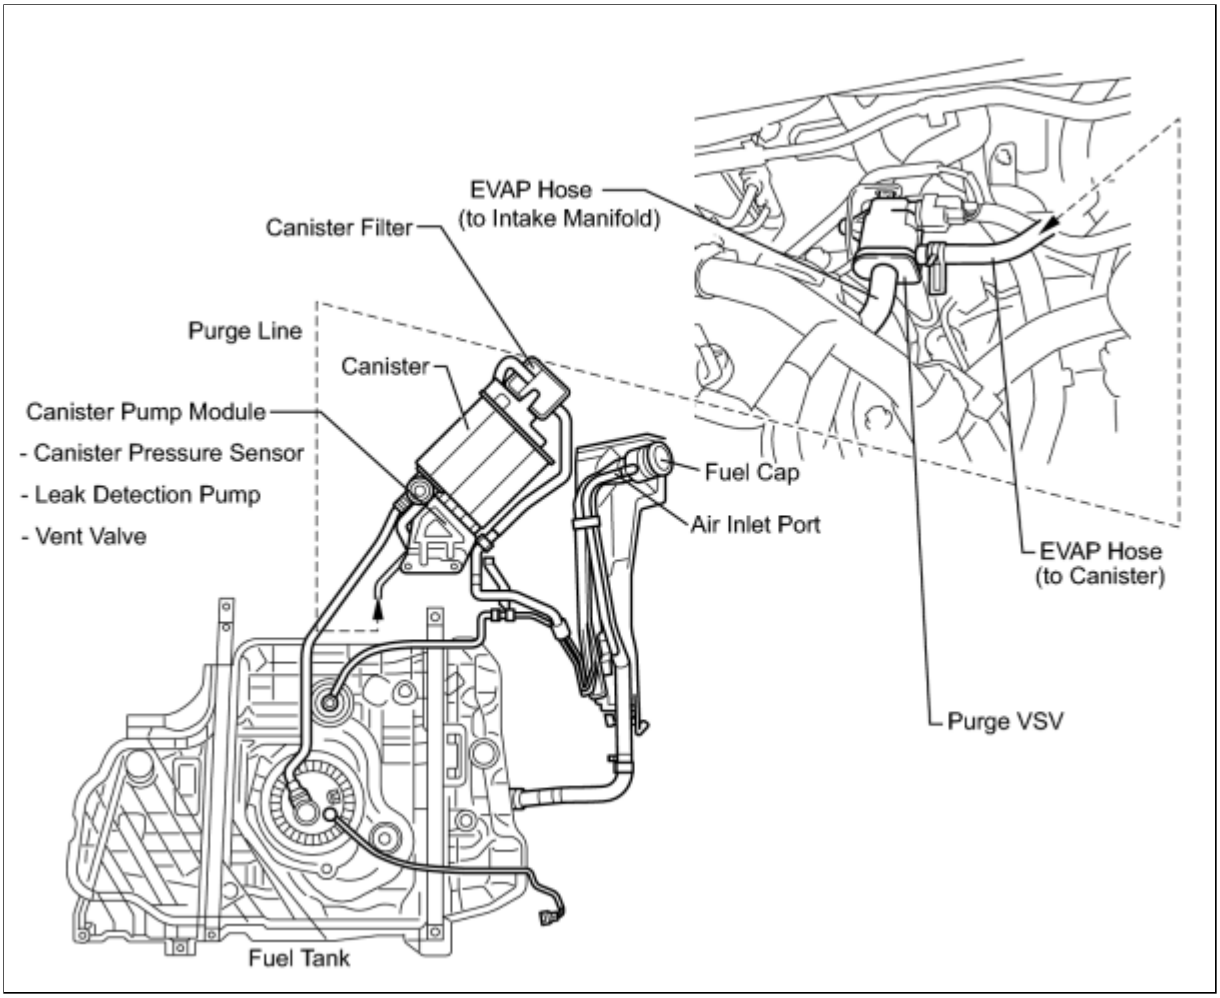
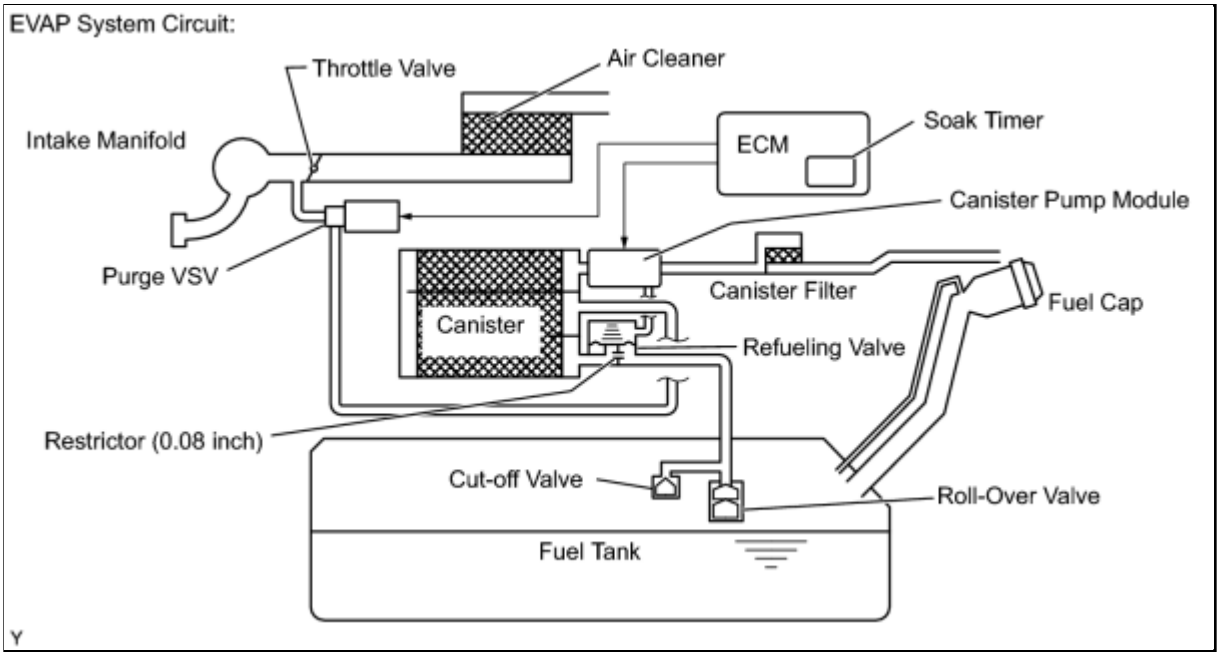
Y

NOTICE:



If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.



DESCRIPTION

HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

NOTICE:

In this vehicle's EVAP system, turning on the vent valve does not seal off the EVAP system. To check for leaks in the EVAP system, disconnect the air inlet vent hose and apply pressure from the atmospheric side of the canister.

While the engine is running, if a predetermined condition (closed-loop, etc.) is met, the purge VSV is opened by the ECM and stored fuel vapors in the canister are purged into the intake manifold. The ECM changes the duty cycle ratio of the purge VSV to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that the purge flow is maintained when the negative pressure (vacuum) is applied to the canister.

The following two monitors run to confirm the appropriate EVAP system operation.

1. Key-off monitor

This monitor checks for EVAP (Evaporative Emission) system leaks and canister pump module malfunctions. The monitor starts 5 hours* after the ignition switch is turned off. At least 5 hours are required for the fuel to cool down to stabilize the EVAP pressure, thus making the EVAP system monitor more accurate.

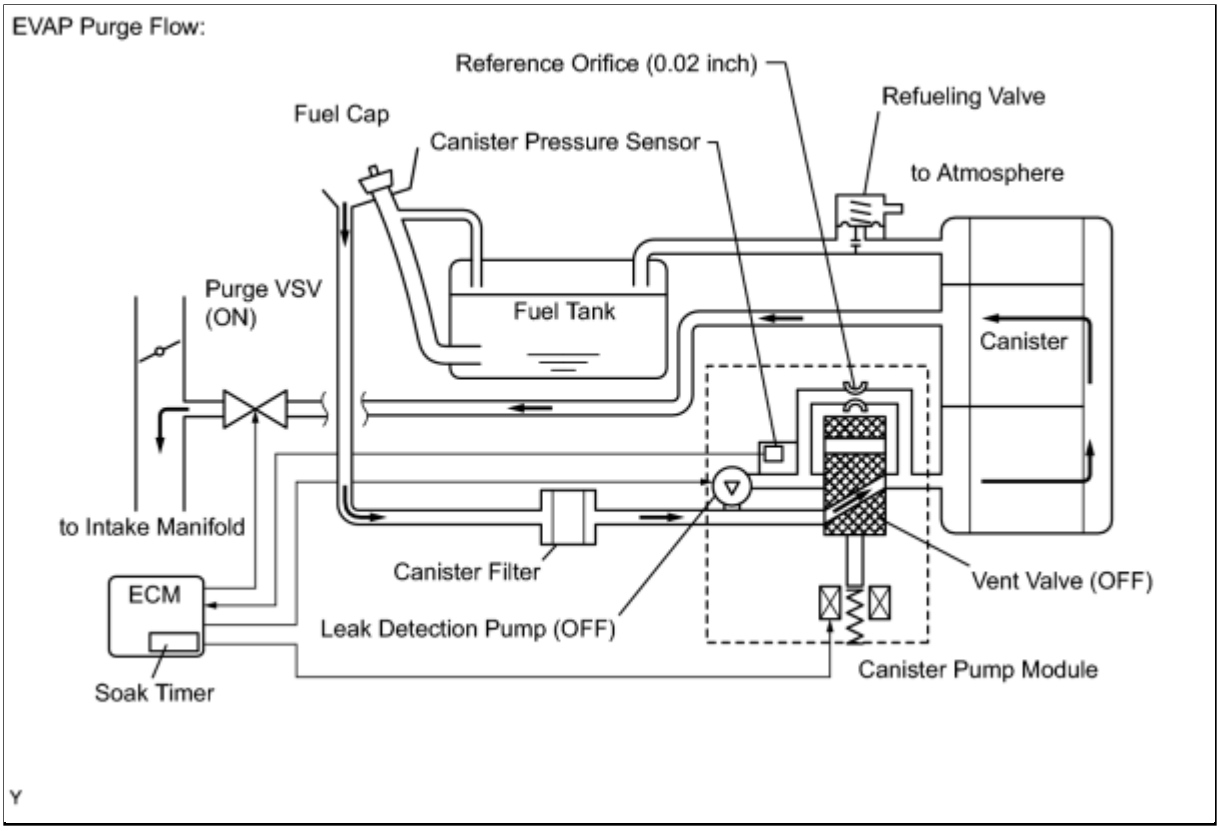
The leak detection pump creates negative pressure (vacuum) in the EVAP system and the pressure is measured. Finally, the ECM monitors for leaks from the EVAP system, and malfunctions in both the canister pump module and purge VSV, based on the EVAP pressure.

HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

2. Purge flow monitor

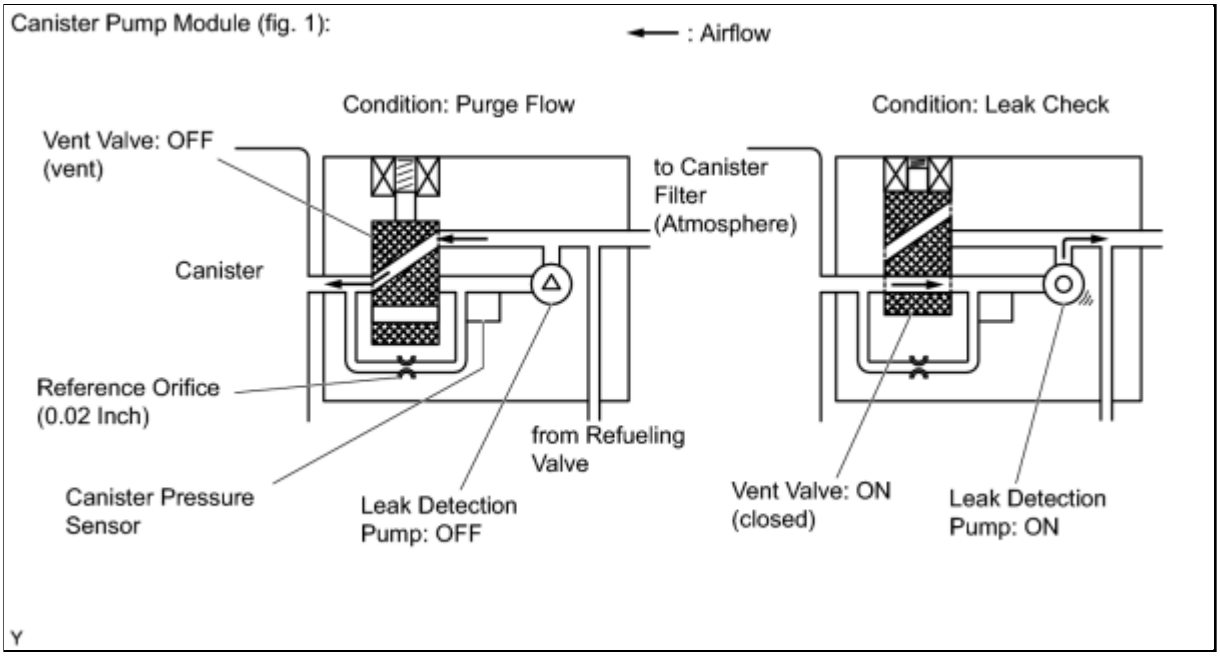
The purge flow monitor consists of 2 monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.



- The 1st monitor

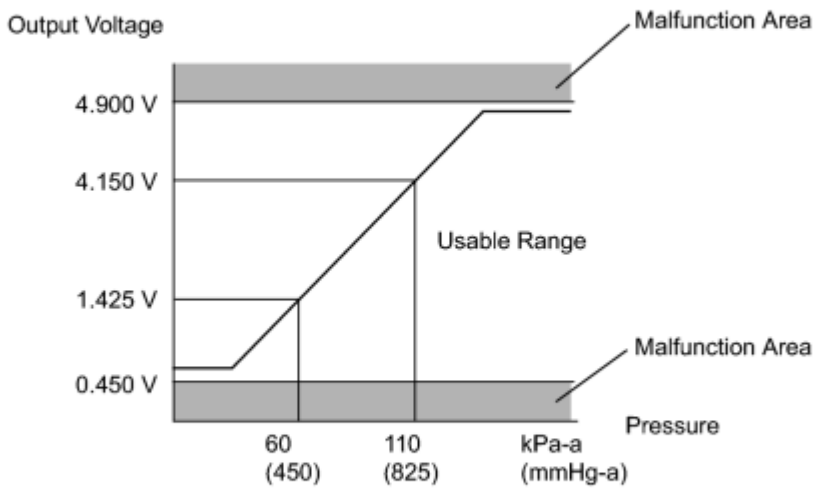
  While the engine is running and the purge VSV (Vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor

  The vent valve is turned ON (closed) and the EVAP pressure is measured. If the variation in the pressure is less than 0.4 kPa-g (3.0 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, illuminates the MIL and sets DTC P0441 (2 trip detection logic).



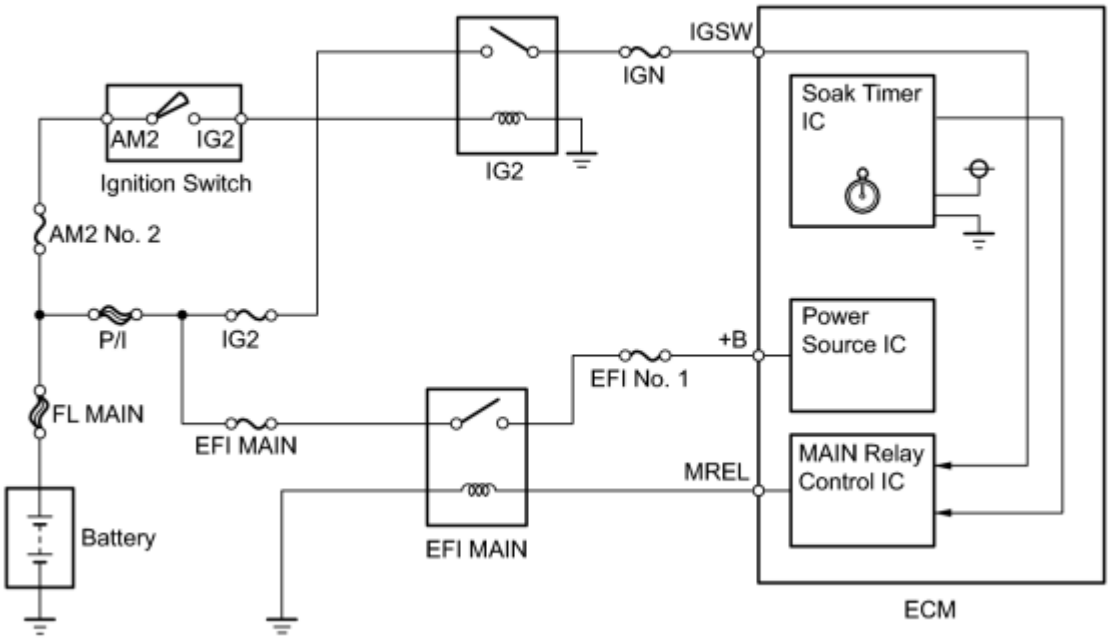
Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after the purge flow monitor is performed, is measured by the ECM.

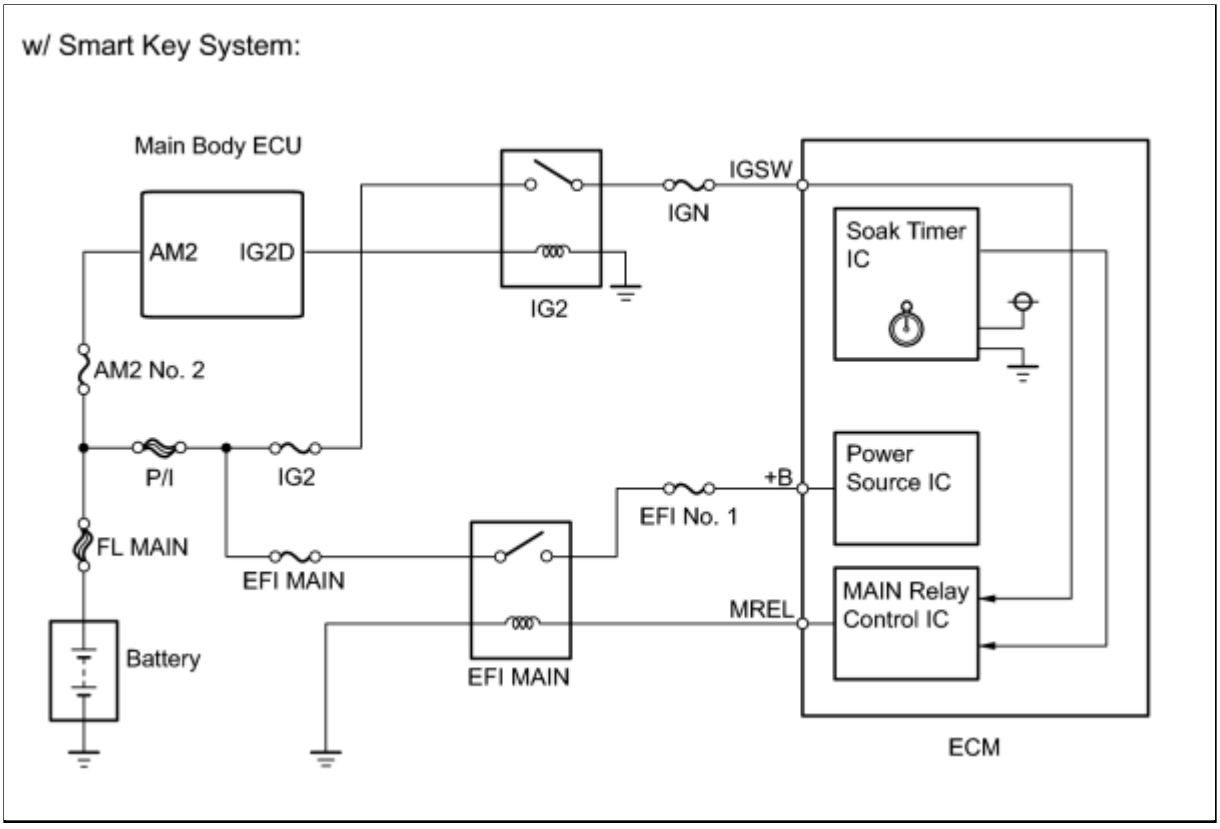


COMPONENT	OPERATION
Canister	Contains activated charcoal to absorb EVAP (Evaporative Emissions) generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve floats and closes when fuel tank 100% full.
Purge VSV (Vacuum Switching Valve)	Opens or closes line between canister and intake manifold. ECM uses purge VSV to control EVAP purge flow. In order to discharge EVAP absorbed by canister to intake manifold, ECM opens purge VSV. EVAP discharge volume to intake manifold controlled by purge VSV duty cycle ratio (current-carrying time) (Open: ON; Closed: OFF).
Refueling valve	Controls EVAP pressure from fuel tank to canister. Valve consists of diaphragm, spring and restrictor (diameter: 0.08 inch). When fuel vapor and pressure inside fuel tank increase, valve opens. While EVAP purged, valve closes and restrictor prevents large amount of vacuum from affecting pressure in fuel tank. Valve opened while refueling.
Roll-over valve	Located in fuel tank. Valve closed by its own weight when vehicle overturns to prevent fuel from spilling out.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+/-15 min.) after ignition switch turned off. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM activates (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.

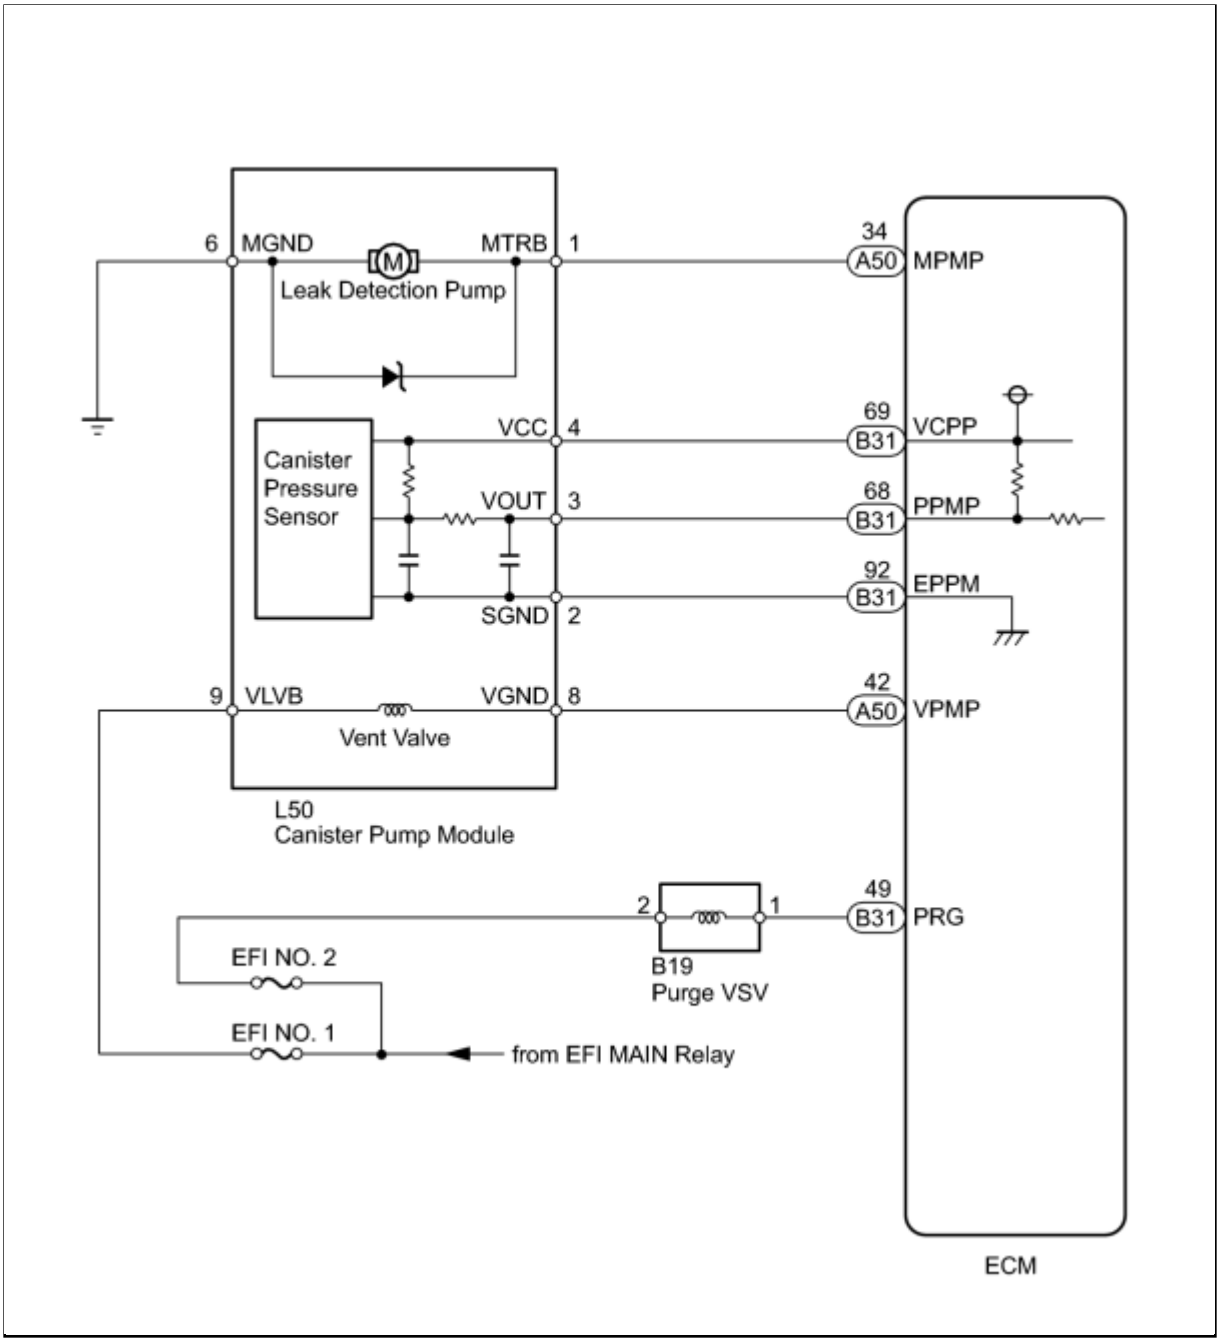
COMPONENT	OPERATION
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system closed. When ECM turns valve OFF, EVAP system vented. Negative pressure (vacuum) created in EVAP system to check for EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating leak detection pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to canister pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum produced through orifice by closing purge VSV, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates small leak of EVAP.



Canister Pressure Sensor Specification (fig. 2):



HINT:



Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

w/o Smart Key System:

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The Techstream is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using the Techstream to monitor results enables the EVAP (Evaporative Emission) system to be confirmed.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CONFIRM DTC**

(a) Turn the ignition switch off and wait for 10 seconds.

(b) Turn the ignition switch to ON.

(c) Turn the ignition switch off and wait for 10 seconds.

(d) Connect the Techstream to the DLC3.

(e) Turn the ignition switch to ON.

(f) Turn the Techstream on.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Confirm DTCs and freeze frame data.

If any EVAP system DTCs are set, the malfunctioning area can be determined using the table below.

DTC / Malfunctioning Area	P043E P043F	P0441	P0451	P0452	P0453	P0455	P0456	P2401 P2402	P2419	P2420

2.	**PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

NOTICE:

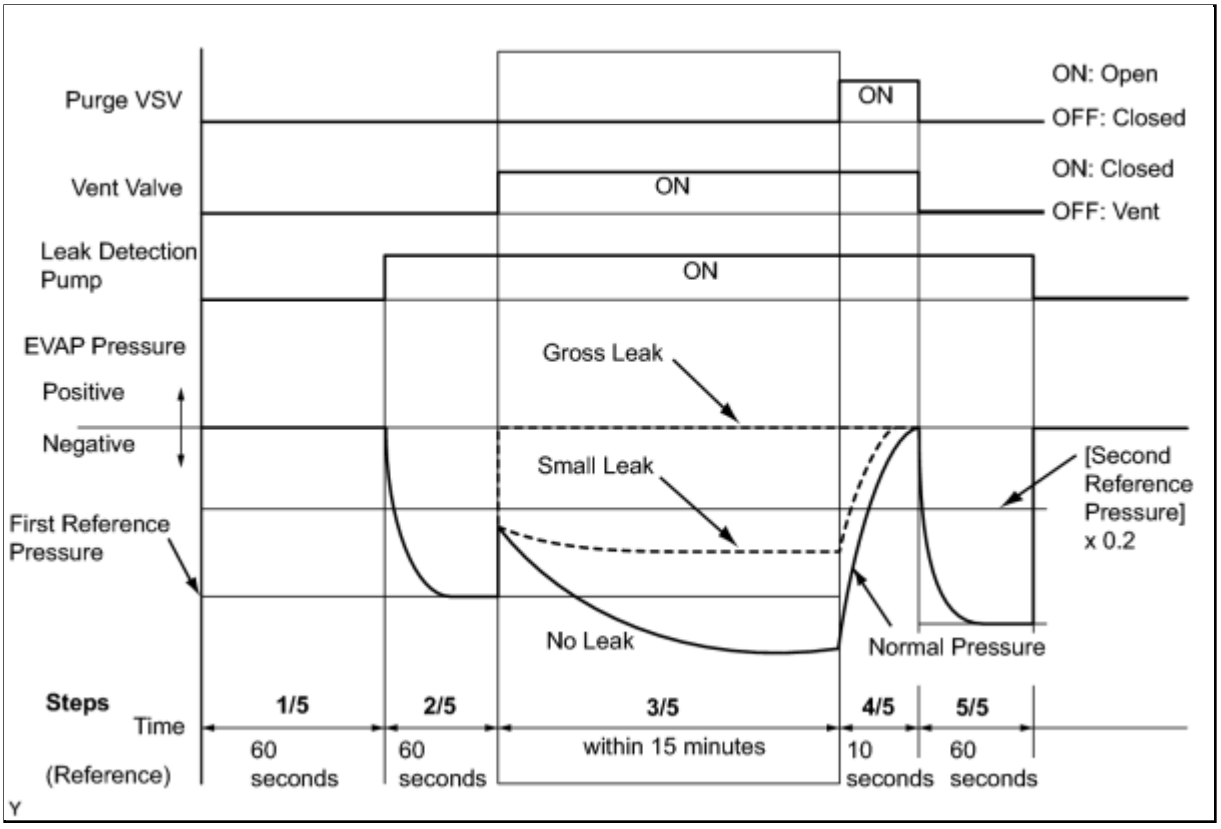
- The Evaporative System Check (Automatic Mode) consists of five steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and Techstream on.

(c) Clear DTCs INFO .

(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Automatic Mode.



(e) After the Evaporative System Check is completed, check for pending DTCs by selecting the following menu items: Powertrain / Engine and ECT / Trouble Codes.

HINT:

If no pending DTCs are displayed, perform the CONFIRMATION DRIVING PATTERN. After this confirmation, check for pending DTCs. If no DTCs are displayed, the EVAP system is normal.

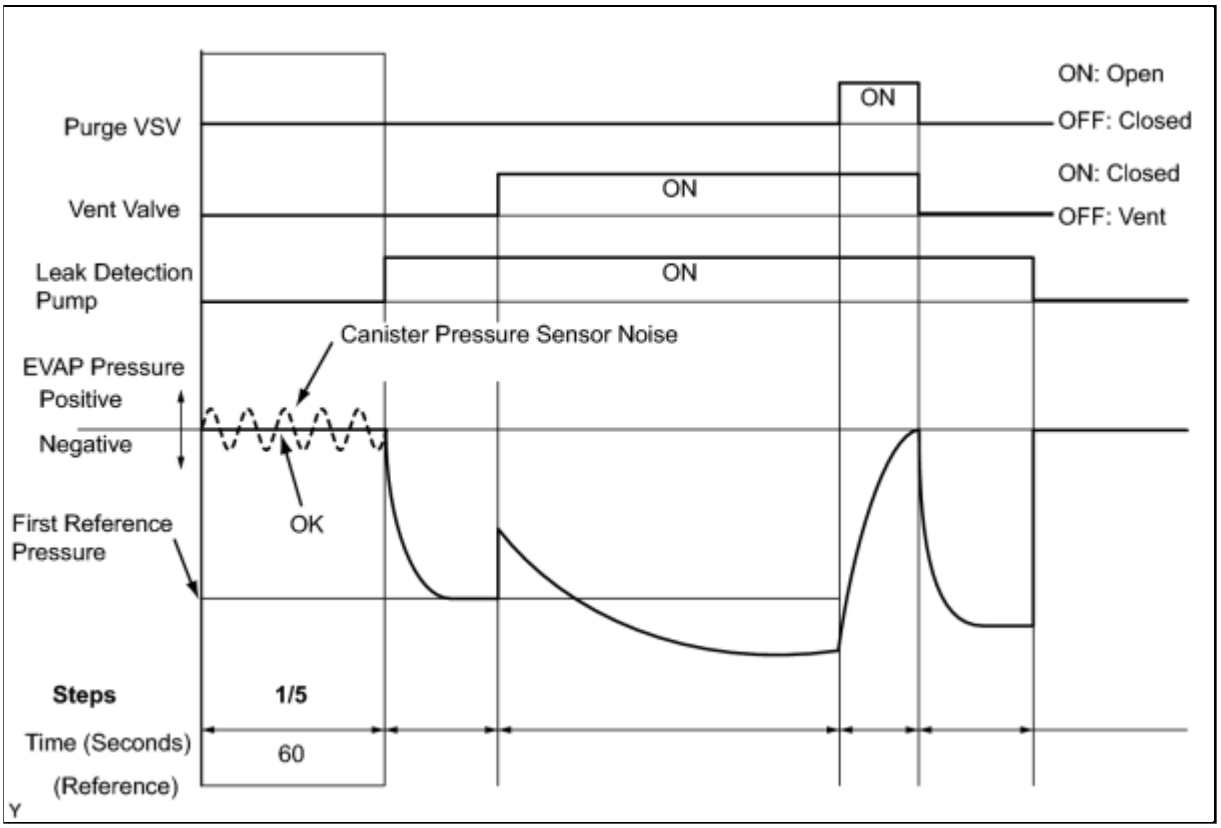
NEXT

3.	**PERFORM EVAPORATIVE SYSTEM CHECK (MANUAL MODE)**

NOTICE:

- In the Evaporative System Check (Manual Mode), perform the series of 5 Evaporative System Check steps manually using the Techstream.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Connect the Techstream to the DLC3.



(b) Turn the ignition switch to ON and Techstream on.

(c) Clear DTCs INFO .

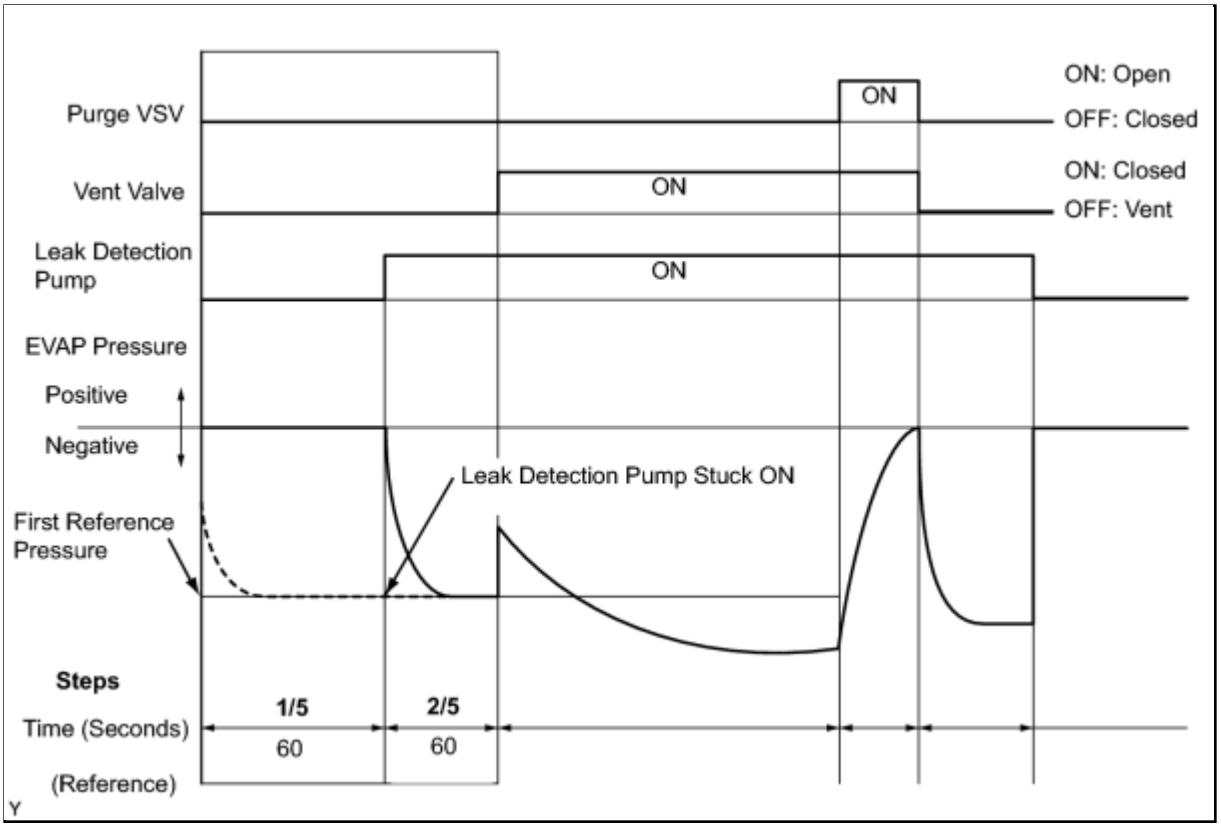
(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Manual Mode.

NEXT

4.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 1/5)**

(a) Check the EVAP pressure in step 1/5.

Result:



DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure	Not yet determined	A
P0451	EVAP pressure fluctuates by +/-0.3 kPa-g (+/-2.25 mmHg-g) or more	Canister pressure sensor noise	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.

B ▶ **REPLACE CANISTER ASSEMBLY**

A ▼

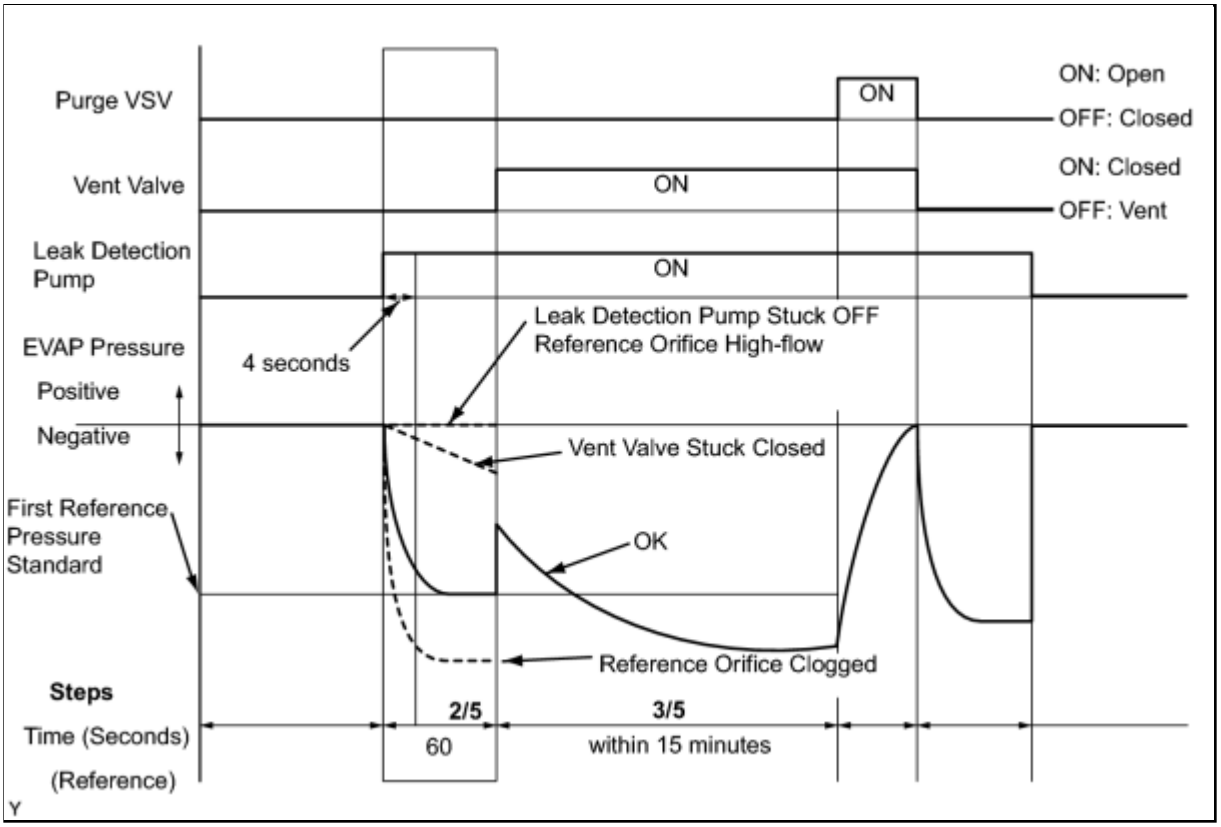
5.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 1/5 TO 2/5)**

(a) Check the EVAP pressure in steps 1/5 and 2/5.

Result:

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure during step 1/5. Then decreases to reference pressure	Not yet determined	A
P2402	Small difference between EVAP pressures during steps 1/5 and 2/5	Leak detection pump stuck ON	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.



HINT:

The first reference pressure is the value determined in step 2/5.

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)**

A ▼

6.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 2/5)

HINT:

Make a note of the pressures checked in steps (a) and (b) below.

(a) Check the EVAP pressure 4 seconds after the leak detection pump is activated*.

*: The leak detection pump begins to operate as step 1/5 finishes and step 2/5 starts.

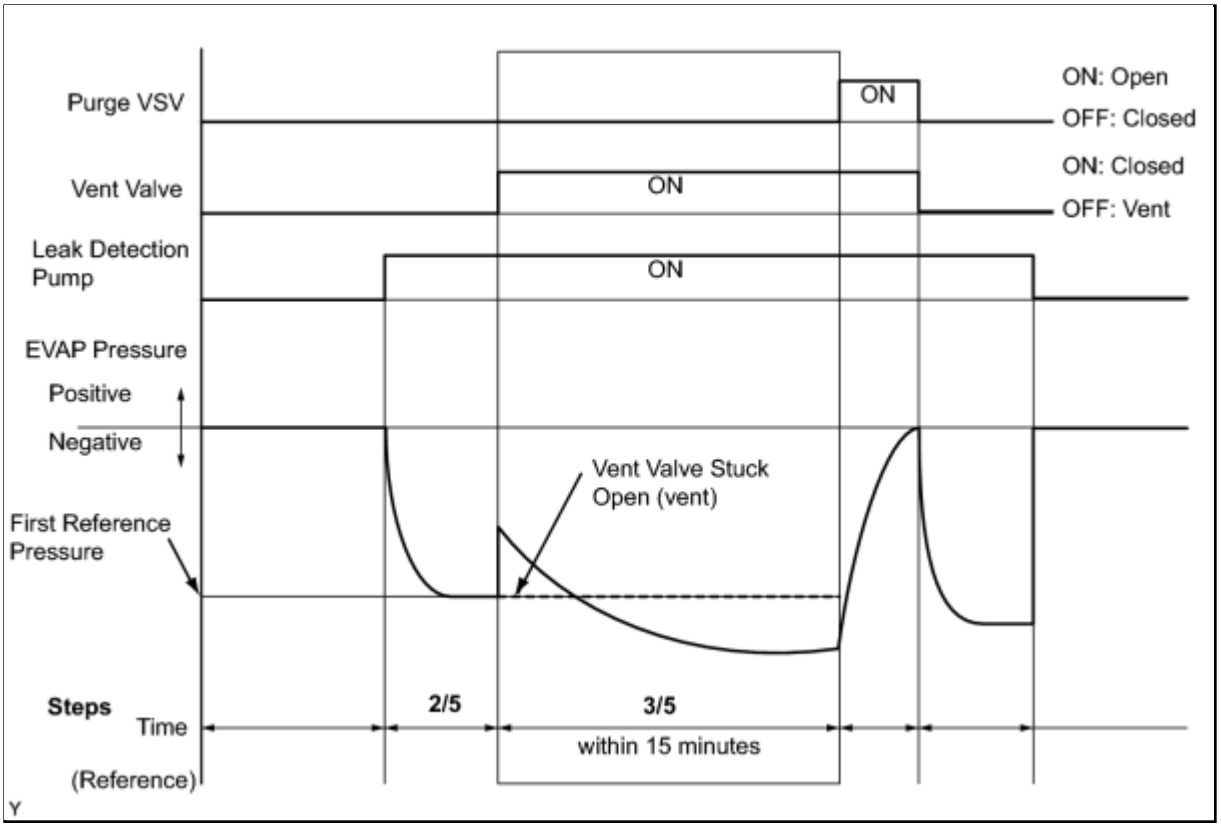
(b) Check the EVAP pressure again when it has stabilized. This pressure is the reference pressure.

Result:

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure in step (b) between -4.85 kPa-g and -1.057 kPa-g (-36.4 mmHg-g and -7.93 mmHg-g)	Not yet determined	A
P043F and P2401	EVAP pressure in step (b) -1.057 kPa-g (-7.93 mmHg-g) or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P043E	EVAP pressure in step (b) below -4.85 kPa-g (-36.4 mmHg-g)	Reference orifice clogged	C
P2419	EVAP pressure in step (a) more than -1.057 kPa-g (-7.93 mmHg-g)	Vent valve stuck closed	D

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.



D ▶ **INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)**

C ▶ **REPLACE CANISTER ASSEMBLY**

B ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)**

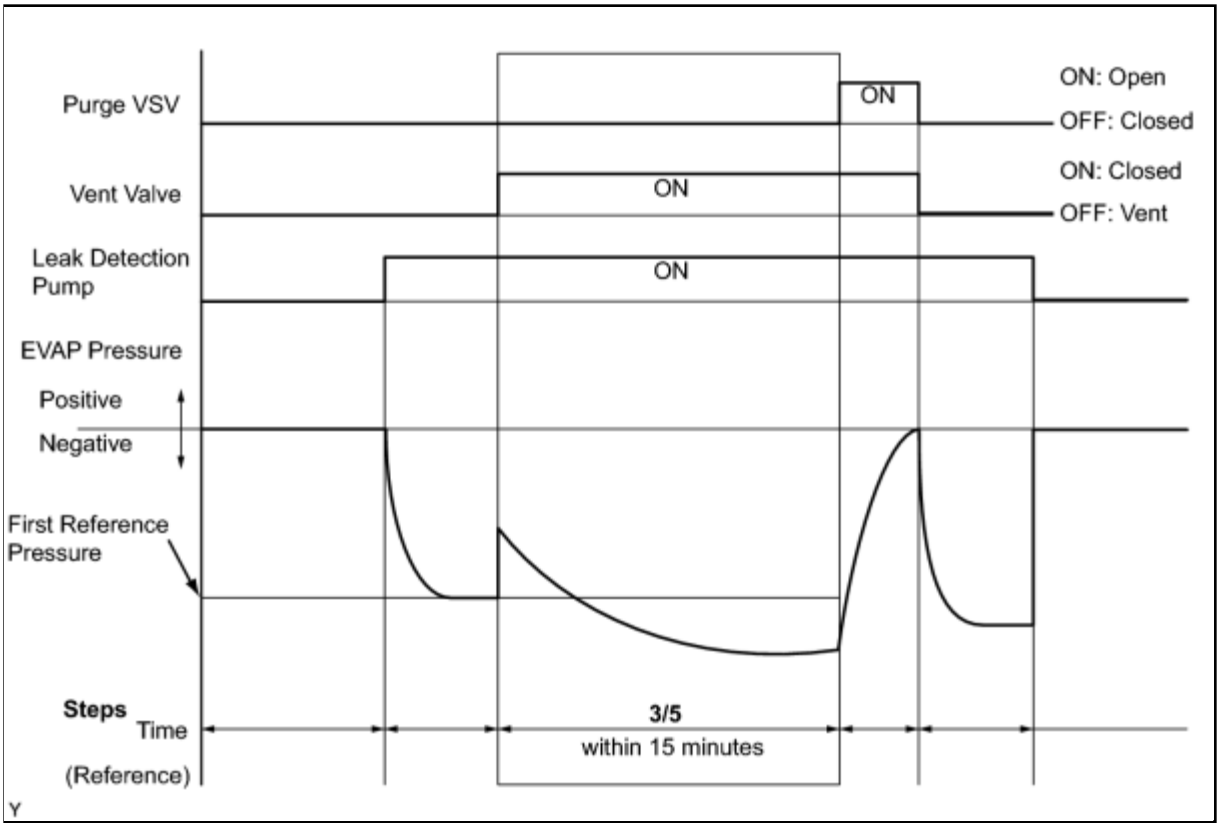
A ▼

7.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 2/5 TO 3/5)**

(a) Check the EVAP pressure increase in step 3/5.

Result:

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 2/5 to step 3/5	Not yet determined	A
P2420	No variation in EVAP pressure despite proceeding from step 2/5 to step 3/5	Vent valve stuck open (vent)	B
P0451	No variation in EVAP pressure during steps 1/5 through 3/5	Canister pressure sensor output value stuck	C



*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.

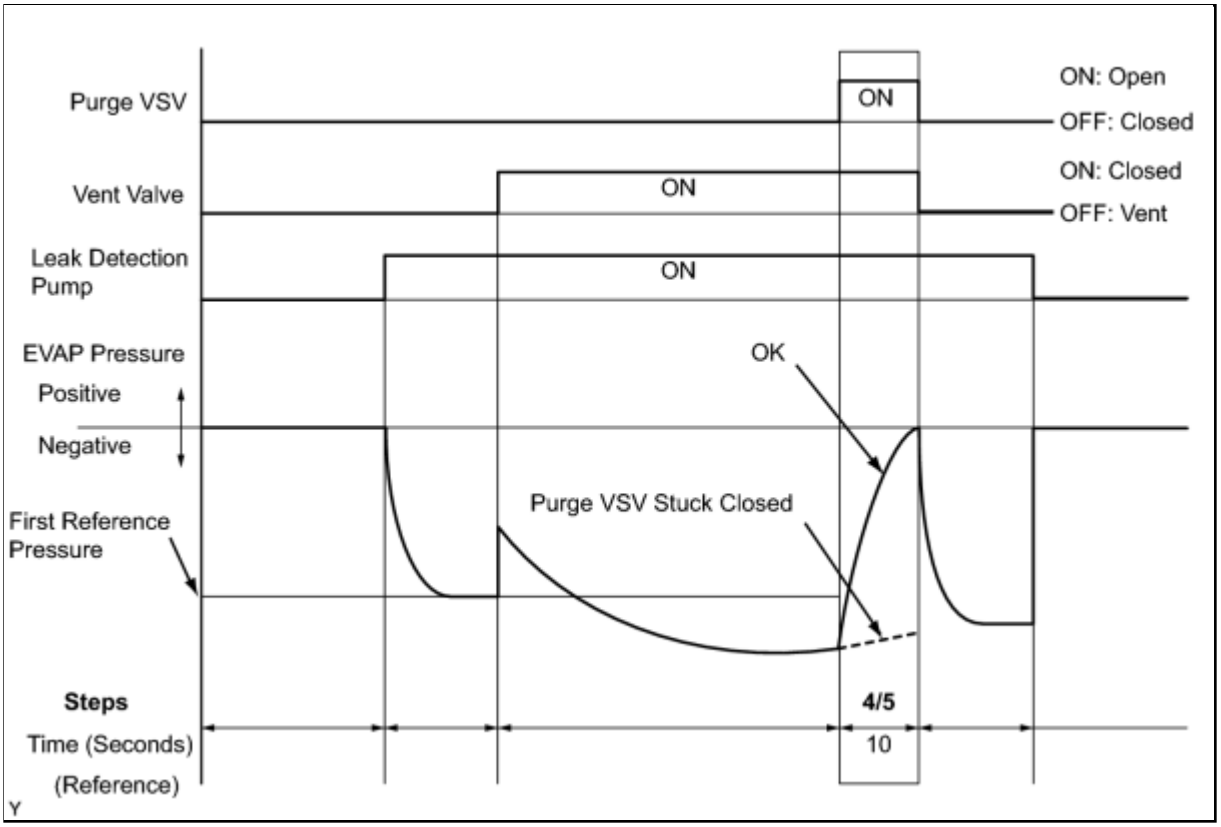
C ▶ **REPLACE CANISTER ASSEMBLY**

B ▶ **INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)**

A

8.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)

(a) Wait until the EVAP pressure change is less than 0.1 kPa-g (0.75 mmHg-g) for 30 seconds.



(b) Measure the EVAP pressure and record it.

HINT:

A few minutes are required for the EVAP pressure to become saturated. When there is little fuel in the fuel tank, it takes up to 15 minutes.

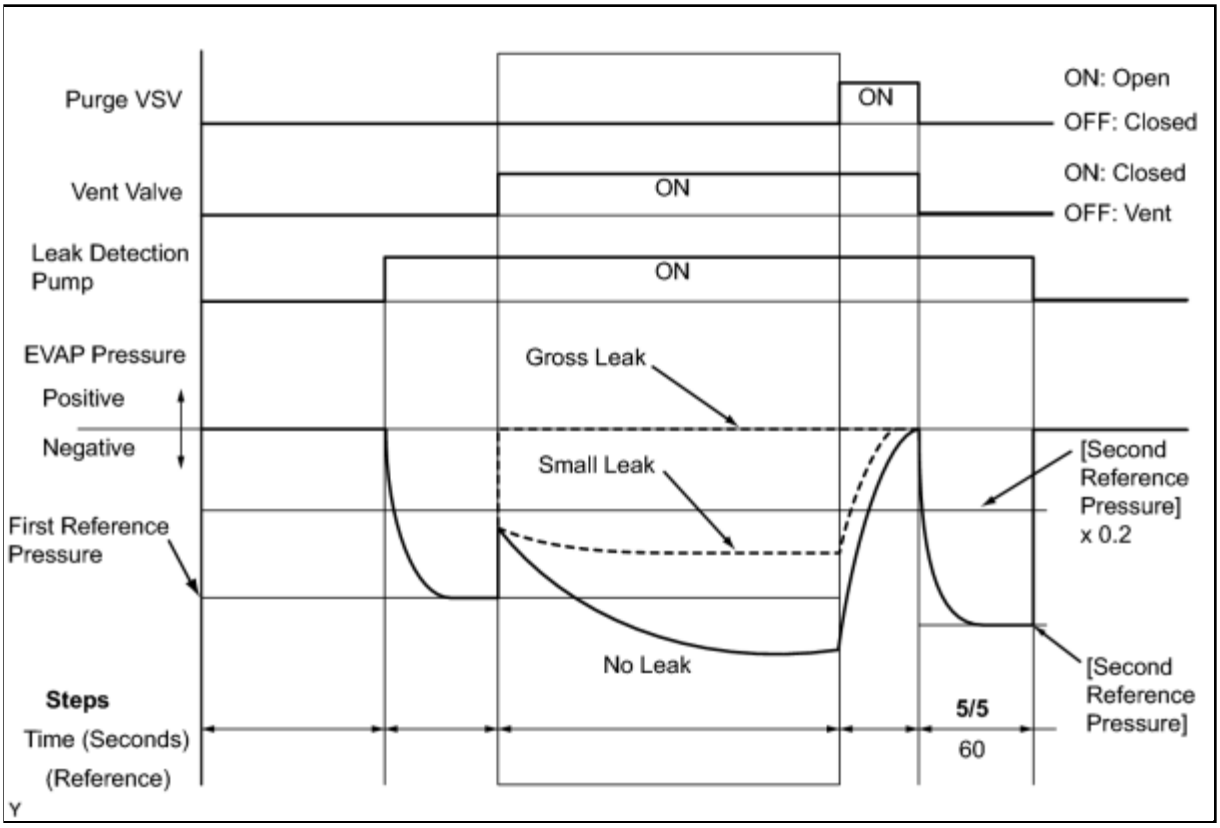
NEXT

9.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 4/5)

(a) Check the EVAP pressure in step 4/5.

Result:

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Not yet determined	A
P0441	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Problems in EVAP hose between purge VSV and intake manifold	B
P0441	Variation in EVAP pressure less than 0.3 kPa-g (2.25 mmHg-g) for 10 seconds, after proceeding from step 3/5 to step 4/5	Purge VSV stuck closed	C



*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.

B ▶ PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)

CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)

A

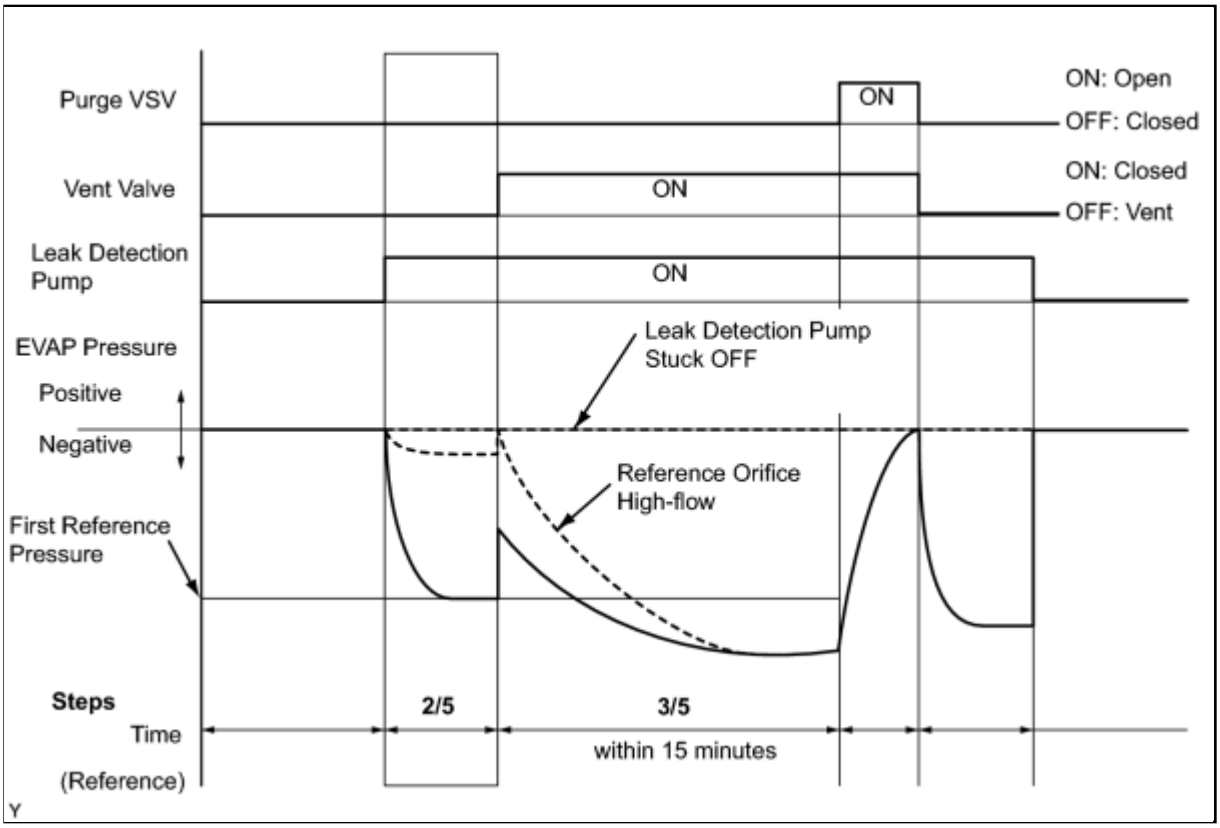
10.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 5/5)

(a) Check the EVAP pressure in step 5/5.

(b) Compare the EVAP pressure in step 3/5 and the second reference pressure (step 5/5).

Result:

DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure (step 3/5) lower than second reference pressure (step 5/5)	Not yet determined (no leak from EVAP system)	A
P0441 and P0455	EVAP pressure (step 3/5) higher than [second reference pressure (step 5/5) x 0.2]	• EVAP gross leak • Purge VSV stuck open	B



DTC*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P0456	EVAP pressure (step 3/5) higher than second reference pressure (step 5/5)	EVAP small leak	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)**

A ▶ **REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS**

11.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)

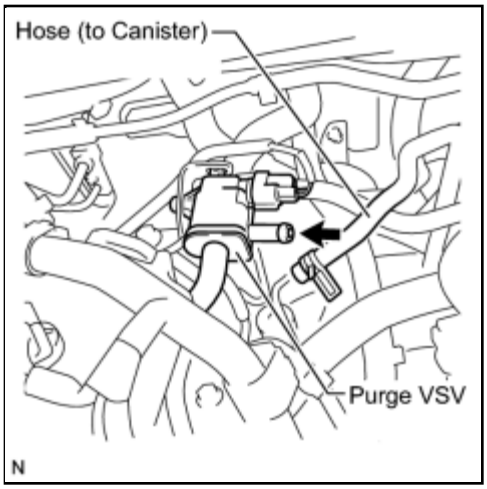
(a) Check the EVAP pressure in step 3/5.

Result:

DTC*	RESULT	SUSPECTED TROUBLE	PROCEED

		AREA	TO
P043F	EVAP pressure less than [reference pressure] measured at 2/5	Reference orifice high-flow	A
P2401	EVAP pressure almost same as [reference pressure] measured at 2/5	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "Confirm DTC" procedures above.



HINT:

The first reference pressure is the value determined in step 2/5.

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)**

A ▶ **REPLACE CANISTER ASSEMBLY**

12.	PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)

(a) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for EVAP Control.

(b) Disconnect the hose (connected to the canister) from the purge VSV.

(c) Start the engine.

(d) Using the Techstream, turn off the purge VSV (Activate the VSV for EVAP Control: OFF).

(e) Use your finger to confirm that the purge VSV has no suction.

(f) Using the Techstream, turn on the purge VSV (Activate the VSV for EVAP Control: ON).

(g) Use your finger to confirm that the purge VSV has suction.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
No suction when purge VSV turned OFF, and suction applied when turned ON	Purge VSV is normal	A
Suction applied when purge VSV turned OFF	Purge VSV stuck open	B
No suction when purge VSV turned ON	• Purge VSV stuck closed • Problems with EVAP hose between purge VSV and intake manifold	C

(h) Reconnect the hose.

C ▶ **CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)**

B ▶ **INSPECT PURGE VSV**

A ▼

13.	CHECK FUEL CAP ASSEMBLY

(a) Check that the fuel cap is correctly installed and confirm that the fuel cap meets OEM specifications.

(b) Tighten the fuel cap until a few click sounds are heard.

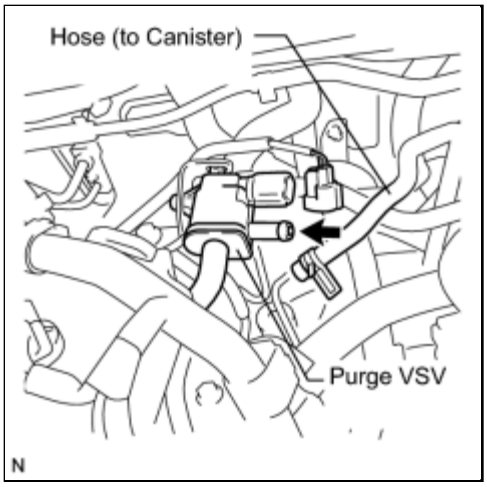
HINT:

If an EVAP tester is available, check the fuel cap using the tester.

1. Remove the fuel cap and install it onto a fuel cap adapter.
2. Connect an EVAP tester pump hose to the adapter, and pressurize the cap to 3.2 to 3.7 kPa (24 to 28 mmHg) using an EVAP tester pump.
3. Seal the adapter and wait for 2 minutes.
4. Check the pressure. If the pressure is 2 kPa (15 mmHg) or more, the fuel cap is normal.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Fuel cap correctly installed	-	A



RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Fuel cap loose	• Fuel cap improperly installed • Defective fuel cap • Fuel cap does not meet OEM specifications	B
Defective fuel cap	-	B
No fuel cap	-	C

C ▶ **REPLACE FUEL TANK CAP**

B ▶ **CORRECTLY REINSTALL OR REPLACE FUEL TANK CAP**

A ▶ **LOCATE EVAP LEAK PART**

14.	INSPECT PURGE VSV

(a) Turn the ignition switch off.

(b) Disconnect the purge VSV connector.

(c) Disconnect the hose (connected to the canister) from the purge VSV.

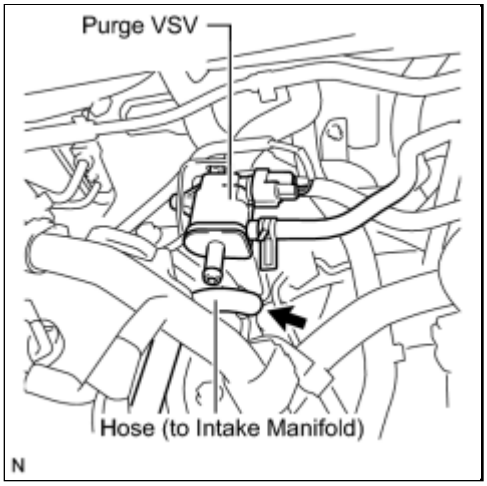
(d) Start the engine.

(e) Use your finger to confirm that the purge VSV has no suction.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
No suction	ECM	A

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Suction applied	Purge VSV	B



(f) Reconnect the purge VSV connector.

(g) Reconnect the hose.

B ▶ **REPLACE PURGE VSV**

A ▶ **REPLACE ECM**

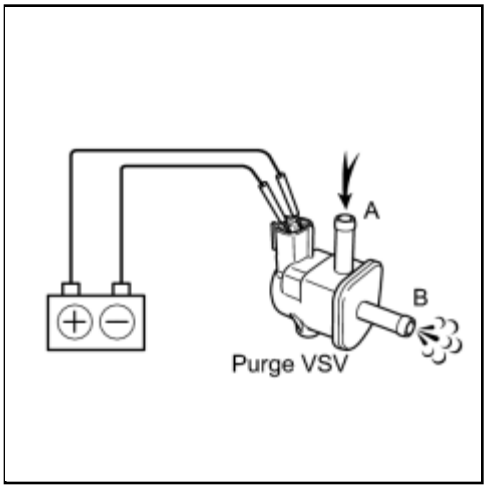
15.	CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)

(a) Disconnect the hose (connected to the intake manifold) from the purge VSV.

(b) Start the engine.

(c) Use your finger to confirm that the hose has suction.

Result:



RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Suction applied	EVAP hose between purge VSV and intake manifold normal	A
No suction	• Intake manifold port • EVAP hose between purge VSV and intake manifold	B

(d) Reconnect the hose.

B ▶ **INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)**

A

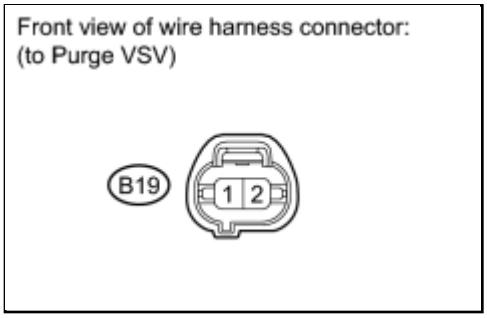
16.	INSPECT PURGE VSV

(a) Remove the purge VSV.

(b) Apply battery voltage across the terminals of the purge VSV.

(c) Confirm that air flows from port A to port B.

Result:



RESULT	CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
Air flows	Apply battery voltage to purge VSV terminals	-	A
No air flow	Apply battery voltage to purge VSV terminals	Purge VSV	B

(d) Reinstall the purge VSV.

B REPLACE PURGE VSV

A

17.	CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PURGE VSV)

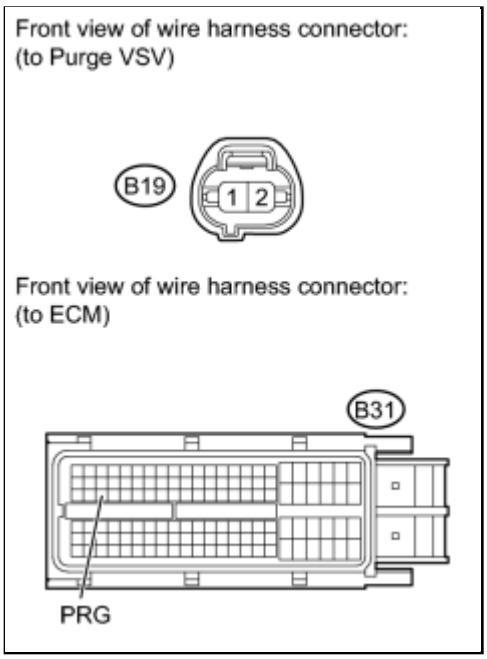
(a) Disconnect the purge VSV connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Result:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B19-2 - Body ground	Ignition switch ON	11 to 14 V	Normal	A
		Other than result above	Wire harness or connectors between purge VSV and battery	B



(d) Reconnect the purge VSV connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A ▼

18.	CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the purge VSV connector.

(c) Measure the resistance according to the value(s) in the table below.

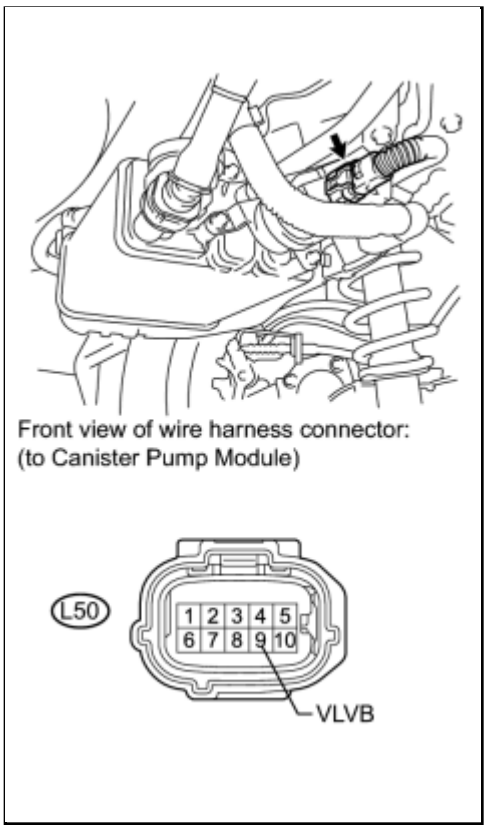
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-49 (PRG) - B19-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-49 (PRG) or B19-1 - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.



(e) Reconnect the purge VSV connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

19.	**INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)**

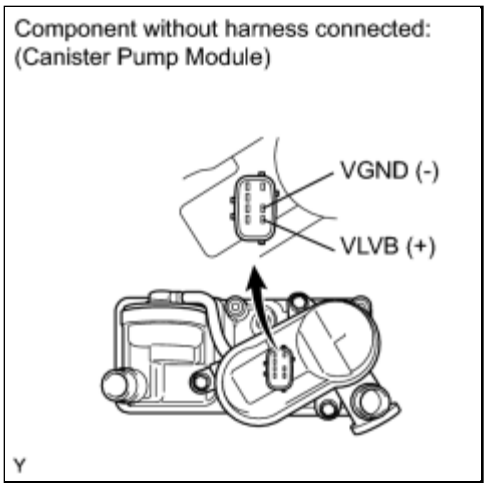
(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Result:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-9 (VLVB) - Body ground	Ignition switch ON	11 to 14 V	1. Wire harness between vent valve and ECM 2. Vent valve 3. ECM	A
		Below 3 V	Power source wire harness of vent valve	B

(e) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A

20.	INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)

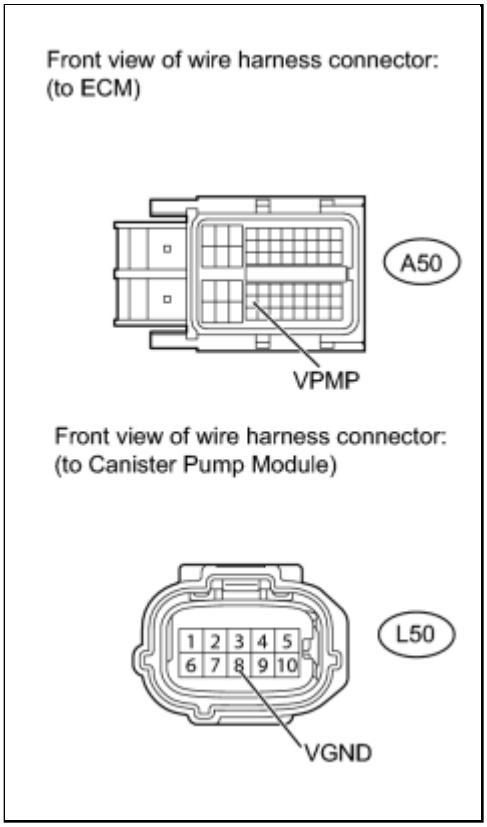
(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

(c) Apply the battery voltage across VLVB and VGND of the canister pump module.

(d) Touch the canister pump module to confirm the vent valve operation.

Result:



CONDITION	TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Apply battery voltage to terminals VLVB and VGND	Operating	1. Wire harness between vent valve and ECM 2. ECM	A
Apply battery voltage to terminals VLVB and VGND	Not operating	Vent valve	B

(e) Reconnect the canister pump module connector.

B ▶ **REPLACE CANISTER ASSEMBLY**

A

21.	CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

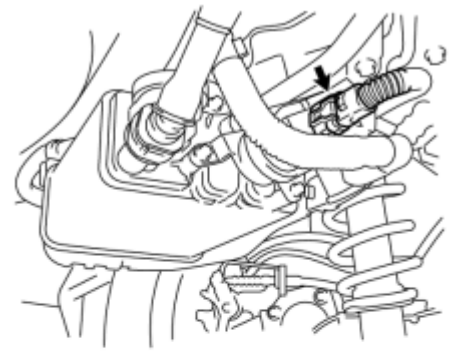
(a) Disconnect the ECM connector.

(b) Disconnect the canister pump module connector.

(c) Measure the resistance according to the value(s) in the table below.

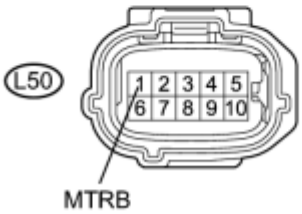
Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
A50-42 (VPMP) - L50-8 (VGND)	Always	Below 1 Ω	ECM	A
		10 kΩ or higher	Wire harness between ECM and canister pump module	B



(d) Reconnect the ECM connector.

(e) Reconnect the canister pump module connector.



B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A ▶ **REPLACE ECM**

22.	PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)

Front view of wire harness connector:
(to Canister Pump Module)

(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

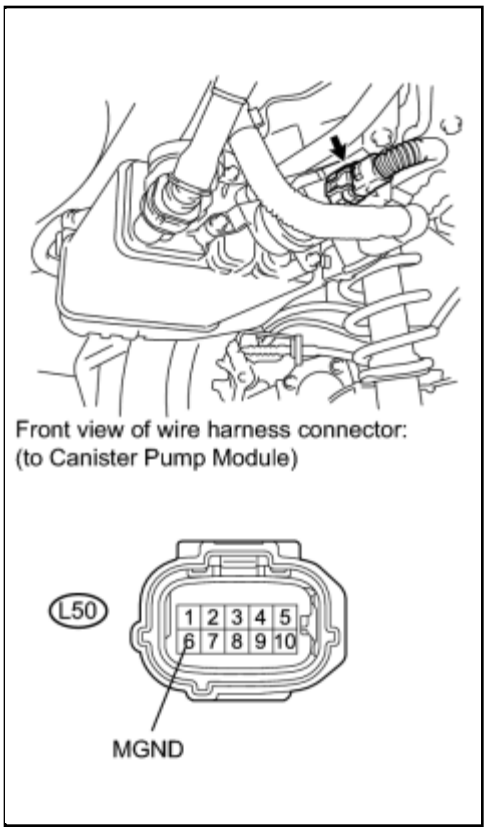
(c) Turn the ignition switch to ON.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Vacuum Pump.

(e) Measure the voltage according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-1 (MTRB) - Body ground	Leak detection pump ON and OFF (Active Test ON and OFF)	Below 3 V when OFF 11 to 14 V when ON	1. Wire harness between leak detection pump and body ground 2. Leak detection pump	A
		Below 3 V when OFF and ON or	1. Wire harness between leak detection pump and	B



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
		11 to 14 V when OFF and ON	ECM 2. ECM	

(f) Reconnect the canister pump module connector.

B CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

A

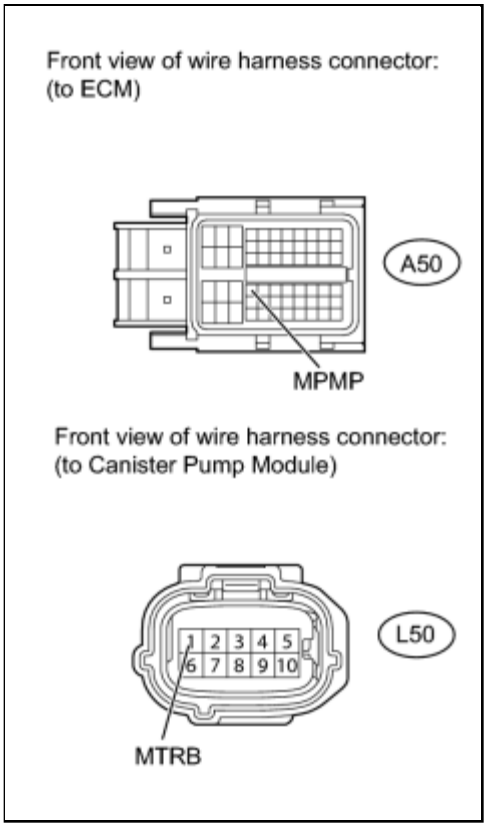
23.	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)

(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

(c) Measure the resistance according to the value(s) in the table below.

Result:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-6 (MGND) - Body ground	Always	Below 1 Ω	Leak detection pump	A
		10 kΩ or higher	Wire harness between canister pump module and body ground	B

(d) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A ▶ **REPLACE CANISTER ASSEMBLY**

24.	CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

(a) Turn the ignition switch off.

(b) Disconnect the ECM connector.

(c) Disconnect the canister pump module connector.

(d) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
A50-34 (MPMP) - L50-1 (MTRB)	Always	Below 1 Ω	ECM	A
		10 kΩ or higher	Wire harness between ECM and canister pump module	B

(e) Reconnect the ECM connector.

(f) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A ▶ **REPLACE ECM**

25.	INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Stop the engine.

(b) Disconnect the EVAP hose from the intake manifold.

(c) Start the engine.

(d) Use your finger to confirm that the port of the intake manifold has suction.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Suction applied	EVAP hose between intake manifold and purge VSV	A
No suction	Intake manifold	B

(e) Reconnect the EVAP hose.

B ▶ **INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)**

A ▶ **REPLACE PURGE LINE HOSE (INTAKE MANIFOLD - PURGE VSV)**

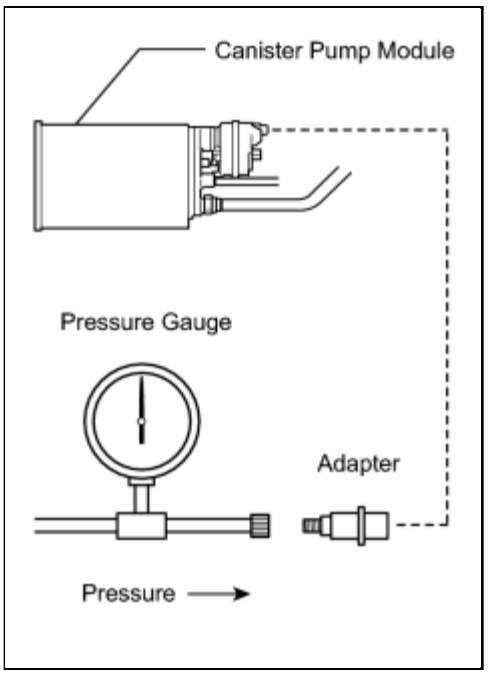
26.	CORRECTLY REINSTALL OR REPLACE FUEL TANK CAP

HINT:

- When reinstalling the fuel tank cap, tighten it until a few click sounds are heard.

- When replacing the fuel tank cap, use a fuel tank cap that meets OEM specifications, and install it until a few click sounds are heard.

NEXT PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)



27.	**REPLACE FUEL TANK CAP**

HINT:

When replacing the fuel cap, use a fuel cap that meets OEM specifications, and install it until a few click sounds are heard.

NEXT PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

28.	**LOCATE EVAP LEAK PART**

(a) Disconnect the vent hose.

(b) Connect an EVAP tester to the canister pump module with the adapter.

(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).

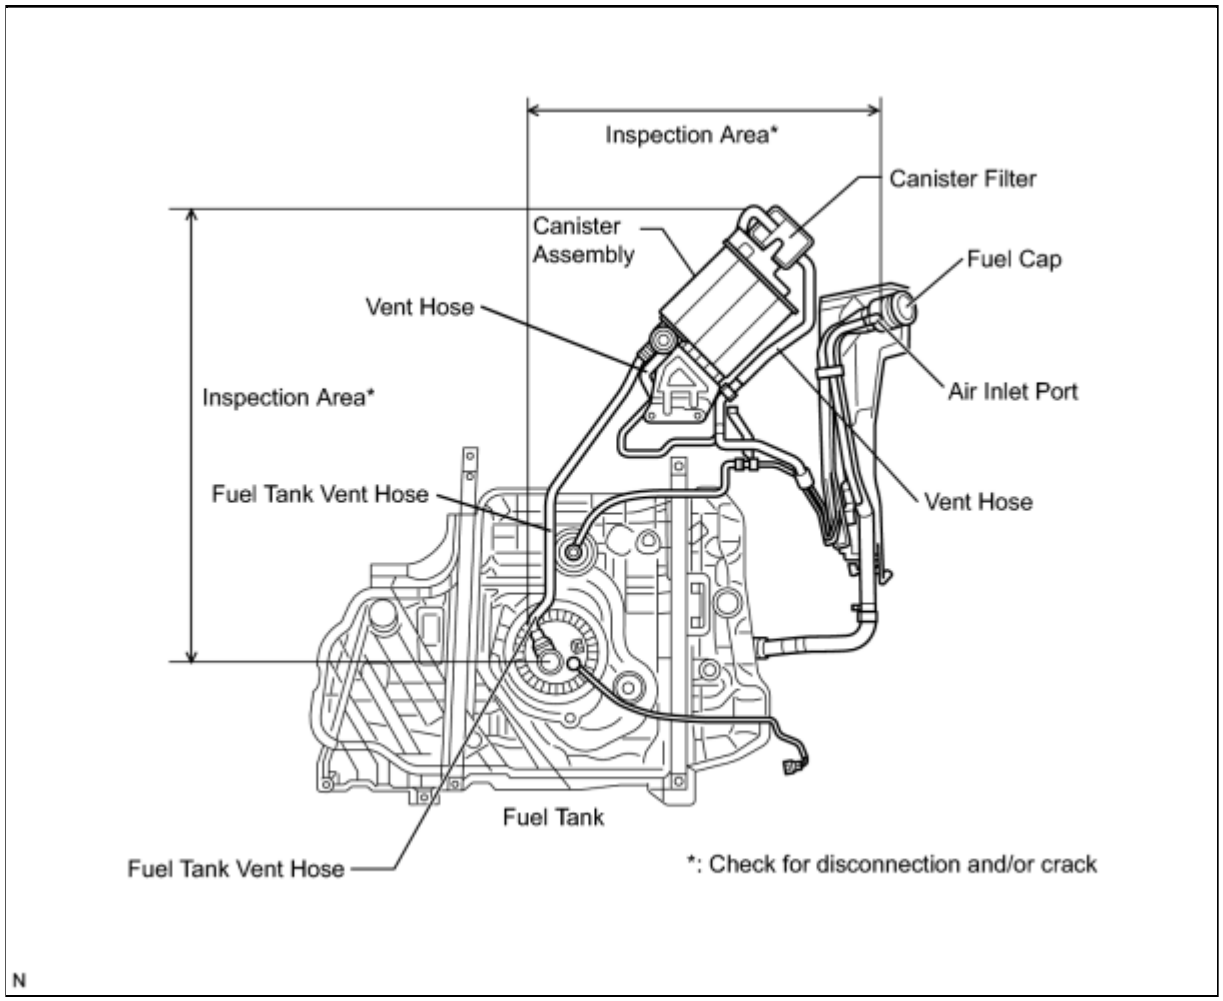
(d) Apply soapy water to the piping and connecting parts of the EVAP system.

(e) Look for areas where bubbles appear. This indicates a leak point.

(f) Repair or replace the leak point.

HINT:

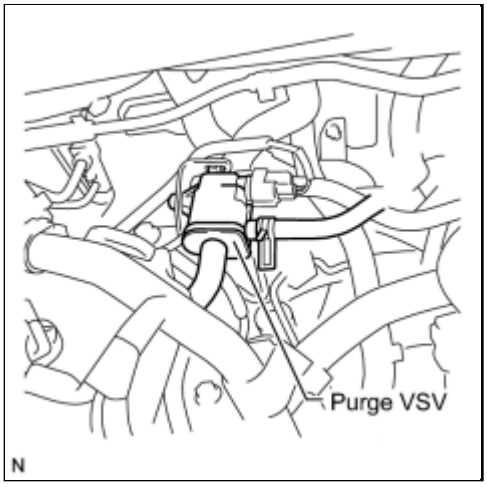
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.



NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

29.	REPLACE CANISTER ASSEMBLY

(a) Replace the canister assembly INFO .



NOTICE:

When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

30.	**REPLACE PURGE VSV**

(a) Disconnect the connector and the hoses from the purge VSV.

(b) Remove the purge VSV INFO .

(c) Install a new purge VSV.

(d) Reconnect the connector and hoses.

NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

31.	**REPAIR OR REPLACE HARNESS OR CONNECTOR**

NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

32.	**REPLACE PURGE LINE HOSE (INTAKE MANIFOLD - PURGE VSV)**

NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

33.	**INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)**

(a) Check that the EVAP purge port of the intake manifold is not clogged. If necessary, replace the intake manifold.

NEXT PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

34.	REPLACE ECM

(a) Replace the ECM INFO .

NEXT PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

35.	REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS

(a) Repair the malfunctioning areas indicated by the DTCs that had been confirmed when the vehicle was brought in.

NEXT

36.	PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of five steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and Techstream on.

(c) Clear DTCs INFO .

(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Automatic Mode.

(e) After the Evaporative System Check is completed, check for pending DTCs by selecting

the following menu items: Powertrain / Engine and ECT / Trouble Codes.

HINT:

If no pending DTCs are found, the repair has been successfully completed.

NEXT ▶ END

CONFIRMATION DRIVING PATTERN

HINT:

After a repair, check Monitor Status by performing the Key-off Monitor Confirmation and Purge Flow Monitor Confirmation described below.

1. Key-off monitor confirmation

(a) Preconditions

The monitor will not run unless:

- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The fuel tank is less than 90% full
- The altitude is less than 8000 ft. (2432 m)
- The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F)
- The intake air temperature is between 4.4°C and 35°C (40°F and 95°F)
- The vehicle remains stationary (the vehicle speed is 0 mph [0 km/h])

(b) Monitor Conditions

1. Allow the engine to idle for at least 5 minutes.
2. Turn the ignition switch off and wait for 5 hours (7 or 9.5 hours).

HINT:

Do not start the engine until checking Monitor Status. If the engine is started, the steps described above must be repeated.

(c) Monitor Status

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Enter the following menus: Powertrain / Engine and ECT / Monitor / Evaporative System.
5. Check the Monitor Status displayed on the Techstream.

HINT:

If Incomplete is displayed, the monitor is not completed. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

2. Purge flow monitor confirmation (P0441)

HINT:

Perform this monitor confirmation after the Key-Off Monitor Confirmation shows Complete.

(a) Preconditions

The monitor will not run unless:

- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F)
- The intake air temperature is between 4.4°C and 35°C (40°F and 95°F)

(b) Monitor Conditions

1. Release the pressure from the fuel tank by removing and reinstalling the fuel cap.
2. Warm the engine up until the engine coolant temperature reaches more than 75°C (167°F).
3. Increase the engine speed to 3000 rpm once.
4. Allow the engine to idle and turn the air conditioning on for 1 minute.

(c) Monitor Status

1. Turn the ignition switch off (if ON or the engine is running).
2. Connect the Techstream to the DLC3.
3. Turn the ignition switch to ON.
4. Turn the Techstream on.
5. Enter the following menus: Powertrain / Engine and ECT / Monitor.
6. Check the Monitor Status displayed on the Techstream.

HINT:

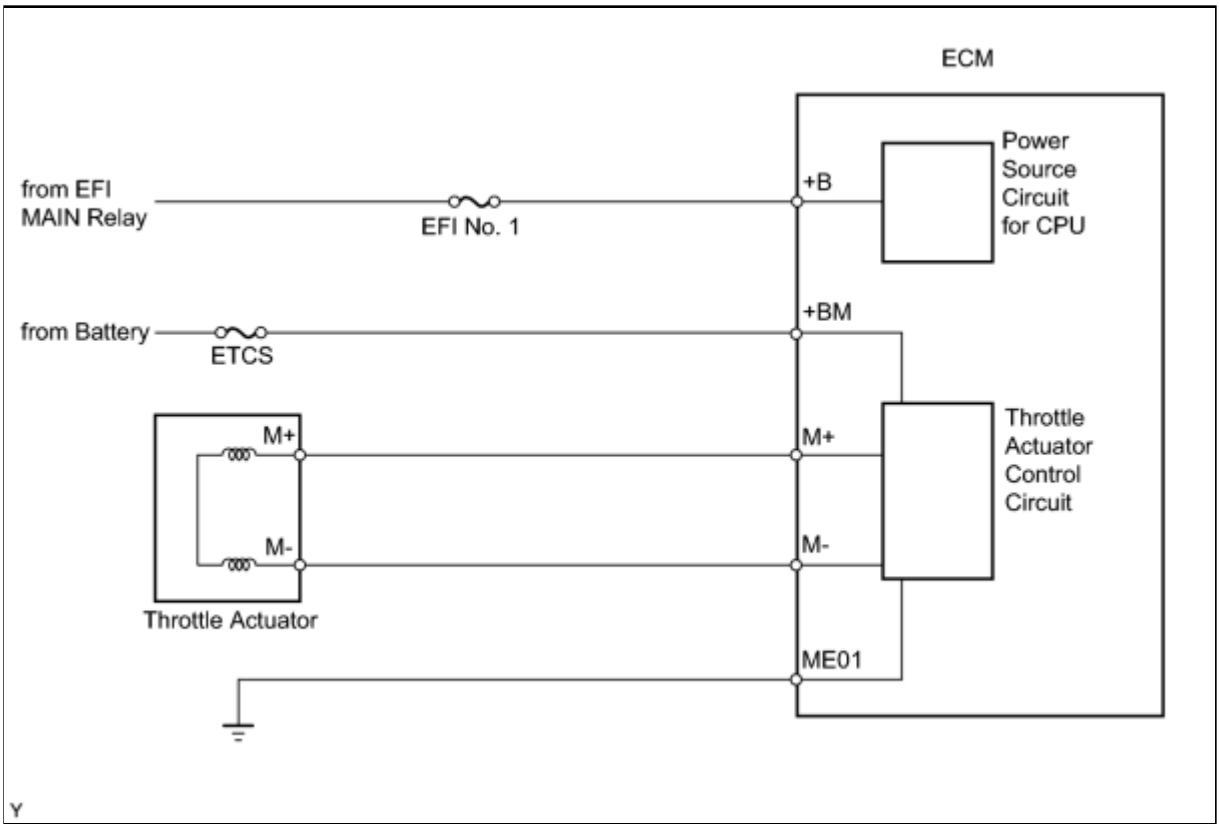
If Incomplete is displayed, the monitor did not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

MONITOR RESULT

Refer to Checking Monitor Status INFO .

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFW0AEX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2118: Throttle Actuator Control Motor Current Range / Performance (2010 Corolla)		

DTC	**P2118**	**Throttle Actuator Control Motor Current Range / Performance**



DESCRIPTION

The electronic throttle control system has a dedicated power supply circuit. The voltage (+BM) is monitored and when it is low (less than 4 V), the ECM determines that there is a malfunction in the electronic throttle control system and cuts off the current to the throttle actuator.

When the voltage becomes unstable, the electronic throttle control system itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the ignition switch off. On the next restart, the ECM will allow the current to flow to the throttle actuator.

HINT:

The electronic throttle control system does not use a throttle cable.

DTC	DTC DETECTION CONDITION	TROUBLE AREA

NO.		
P2118	Open in electronic throttle control system power source (+BM) circuit (1 trip detection logic)	• Open in ETCS power source circuit • Battery • Battery terminals • ETCS fuse • ECM

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.

When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.

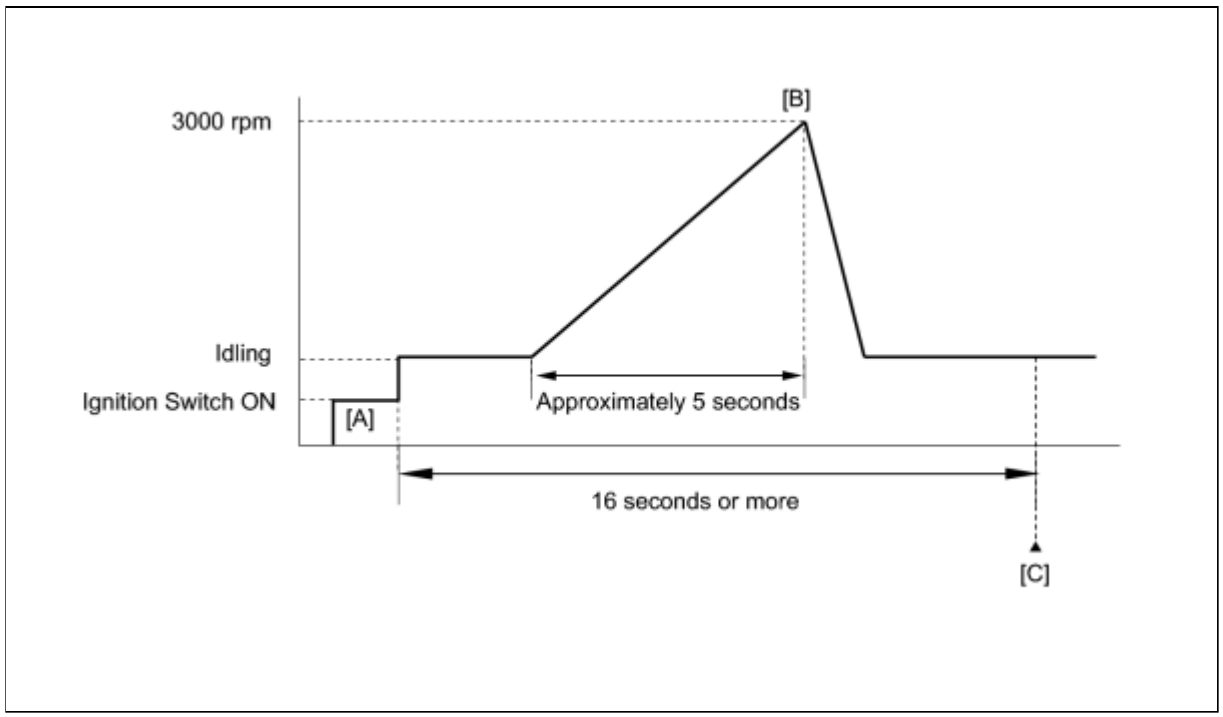
If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve (throttle body) ETCS fuse
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	0.8 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Battery voltage	8 V or more
Electronic throttle actuator power	ON



TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

COMPONENT OPERATING RANGE

Throttle actuator power supply voltage (+BM)	11 to 14 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Slowly depress the accelerator pedal, raise the engine speed to approximately 3000 rpm for approximately 5 seconds, and then idle the engine [B].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P2118.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

HINT:

○ If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

    HINT:

    If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

    HINT:

    - If a permanent DTC is output, the system is malfunctioning.
    - If no permanent DTC is output, the system is normal.

FAIL-SAFE

When this DTC, or other DTCs relating to electronic throttle control system malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (+BM VOLTAGE)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

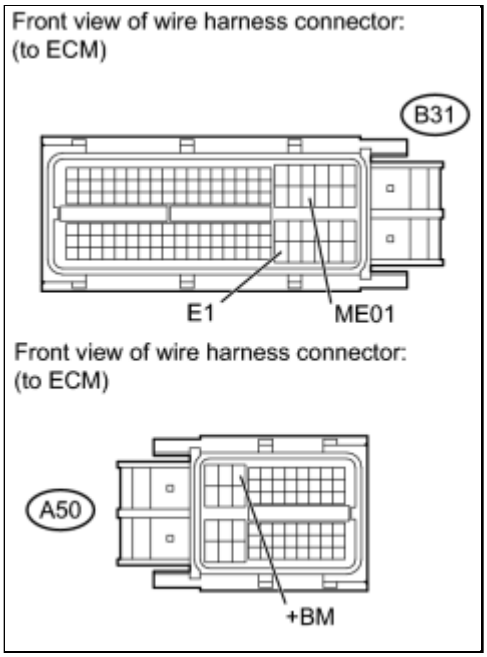
(d) Enter the following menus: Powertrain / Engine and ECT / Data List / +BM Voltage.

(e) Read the value displayed on the Techstream.

Standard voltage:
11 to 14 V

NG ▶ CHECK HARNESS AND CONNECTOR (ECM - BATTERY, BODY GROUND)

OK ▶ CHECK FOR INTERMITTENT PROBLEMS



2.	CHECK HARNESS AND CONNECTOR (ECM - BATTERY, BODY GROUND)

(a) Disconnect the ECM connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-3 (+BM) - Body ground	Always	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-43 (ME01) - Body ground	Always	11 to 14 V
B31-104 (E1) - Body ground		

(d) Reconnect the ECM connectors.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFY0ADX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2120,P2122,P2123,P2125,P2127,P2128,P2138: Throttle / Pedal Position Sensor / Switch "D" Circuit (2010 Corolla)		

DTC	**P2120**	**Throttle / Pedal Position Sensor / Switch "D" Circuit**

DTC	**P2122**	**Throttle / Pedal Position Sensor / Switch "D" Circuit Low Input**

DTC	**P2123**	**Throttle / Pedal Position Sensor / Switch "D" Circuit High Input**

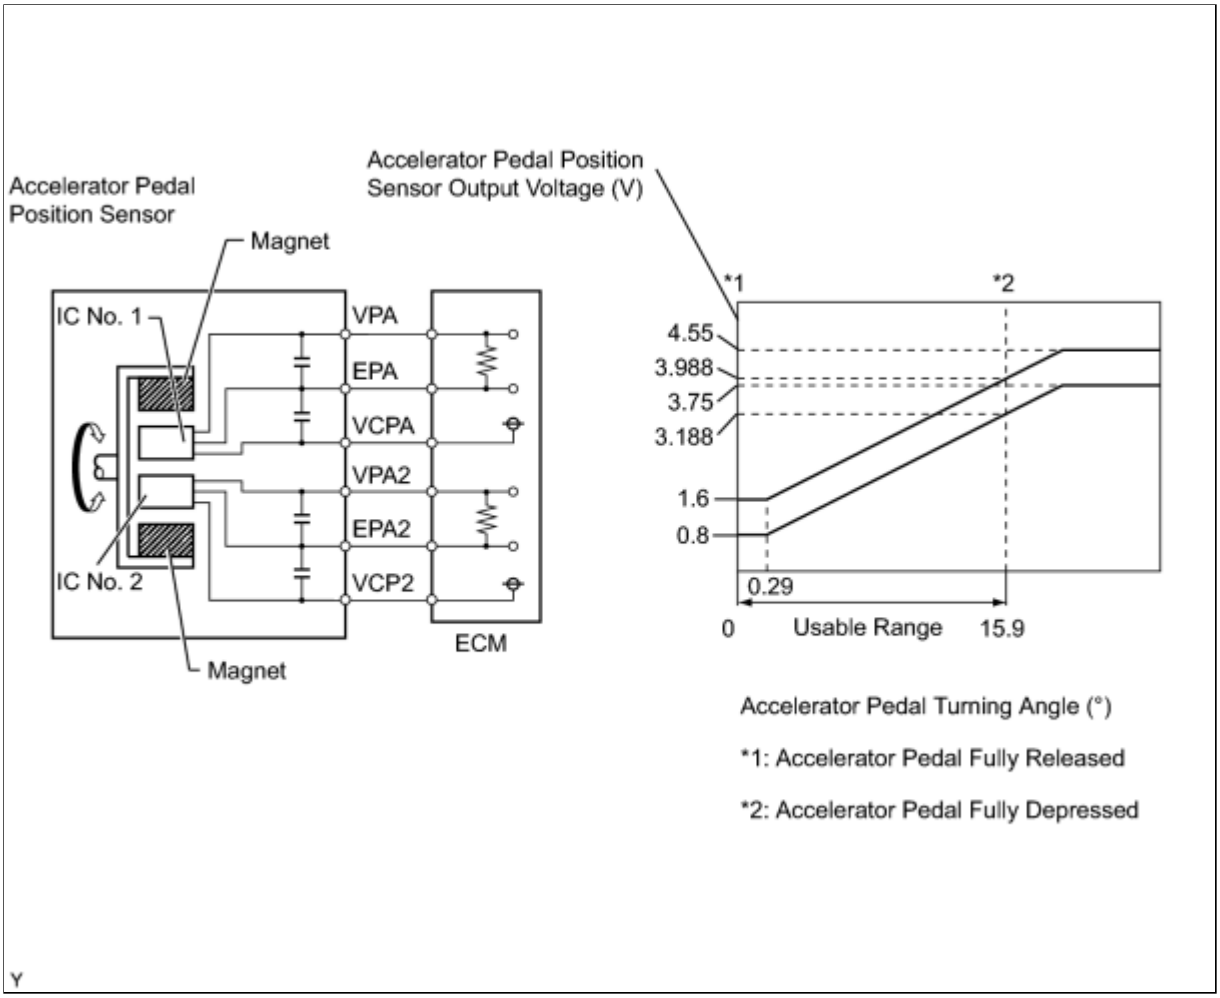
DTC	**P2125**	**Throttle / Pedal Position Sensor / Switch "E" Circuit**

DTC	**P2127**	**Throttle / Pedal Position Sensor / Switch "E" Circuit Low Input**

DTC	**P2128**	**Throttle / Pedal Position Sensor / Switch "E" Circuit High Input**

DTC	**P2138**	**Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation**

DESCRIPTION



HINT:

- This electronic throttle control system does not use a throttle cable.
- These DTCs relate to the accelerator pedal position sensor.

The accelerator pedal position sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type and uses Hall-effect elements in order to yield accurate signals even in extreme conditions. The voltage from this sensor, which is applied to terminals VPA and VPA2 of the ECM, varies between 0.5 V and 4.5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the accelerator pedal position

sensor itself.

The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the signals from VPA and VPA2, and controls the throttle actuator according to these signals.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2120	VPA fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor • ECM
P2122	VPA is 0.4 V or less for 0.5 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Accelerator pedal position sensor • Open in VCP1 circuit • Open or ground short in VPA circuit • ECM

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2123	VPA is 4.8 V or more for 2.0 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor • Open in EPA circuit • ECM
P2125	VPA2 fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor • ECM
P2127	VPA2 is 1.2 V or less for 0.5 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Accelerator pedal position sensor • Open in VCP2 circuit • Open or ground short in VPA2 circuit • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more (1 trip detection logic): (a) VPA2 is 4.8 V or more (b) VPA is between 0.4 V and 3.45 V	• Accelerator pedal position sensor • Open in EPA2 circuit • ECM
P2138	Condition (a) or (b) continues for 2.0 seconds or more (1 trip detection logic): (a) Difference between VPA and VPA2 is 0.02 V or less (b) VPA is 0.4 V or less and VPA2 is 1.2 V or less	• Short between VPA and VPA2 circuits • Accelerator pedal position sensor • ECM

HINT:

When any of these DTCs are set, check the accelerator pedal position sensor voltage by entering the following menus using the Techstream: Powertrain / Engine and ECT / Data List / Accel Sensor Out No. 1 and Accel Sensor Out No. 2.

TROUBLE AREA	ACCEL SENSOR OUT NO.1 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO.2 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO.1 WHEN ACCELERATOR PEDAL	ACCEL SENSOR OUT NO.2 WHEN ACCELERATOR PEDAL

			DEPRESSED	DEPRESSED
VCP circuit open	0 to 0.4 V	0 to 0.4 V	0 to 0.4 V	0 to 0.4 V
Open or ground short in VPA circuit	0 to 0.4 V	1.2 to 2.0 V	0 to 0.4 V	3.4 to 5.0 V
Open or ground short in VPA2 circuit	0.5 to 1.1 V	0 to 0.4 V	2.5 to 4.5 V	0 to 0.4 V
EPA circuit open	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.5 to 4.5 V	3.4 to 5.0 V

HINT:

Accelerator pedal positions are expressed as voltages.

MONITOR DESCRIPTION

When either the output voltage of VPA or VPA2 deviates from the standard range, or the difference between the output voltages of the 2 sensor circuits is less than the threshold, the ECM determines that there is a malfunction in the accelerator pedal position sensor. The ECM then illuminates the MIL and sets a DTC.

Example:

When the output voltage of VPA drops below 0.4 V for more than 0.5 seconds when the accelerator pedal is fully depressed, DTC P2122 is set.

If the malfunction is not repaired successfully, a DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2120: Accelerator pedal position sensor 1 range check (fluctuating) P2122: Accelerator pedal position sensor 1 range check (low voltage) P2123: Accelerator pedal position sensor 1 range check (high voltage) P2125: Accelerator pedal position sensor 2 range check (fluctuating) P2127: Accelerator pedal position sensor 2 range check (low voltage) P2128: Accelerator pedal position sensor 2 range check (high voltage)

	P2138: Accelerator pedal position sensor range check (correlation)
Required Sensors/Components (Main)	Accelerator pedal position sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds: P2120, P2122, P2125 and P2127 2.0 seconds: P2123, P2128 and P2138
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of following conditions 1 or 2 is met:	-
1. Ignition switch	ON
2. Throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

P2120:

Either of following conditions 1 or 2 is met:	-
1. VPA voltage when VPA2 voltage 0.04 V or more	0.4 V or less
2. VPA voltage	4.8 V or more

P2122:

VPA voltage when VPA2 voltage 0.04 V or more	0.4 V or less

P2123:

VPA voltage	4.8 V or more

P2125:

Either of following conditions 1 or 2 is met:	-
1. VPA2 voltage when VPA voltage 0.04 V or more	1.2 V or less

2. VPA2 voltage when VPA voltage 0.4 to 3.45 V	4.8 V or more

P2127:

VPA2 voltage when VPA voltage 0.04 V or more	1.2 V or less

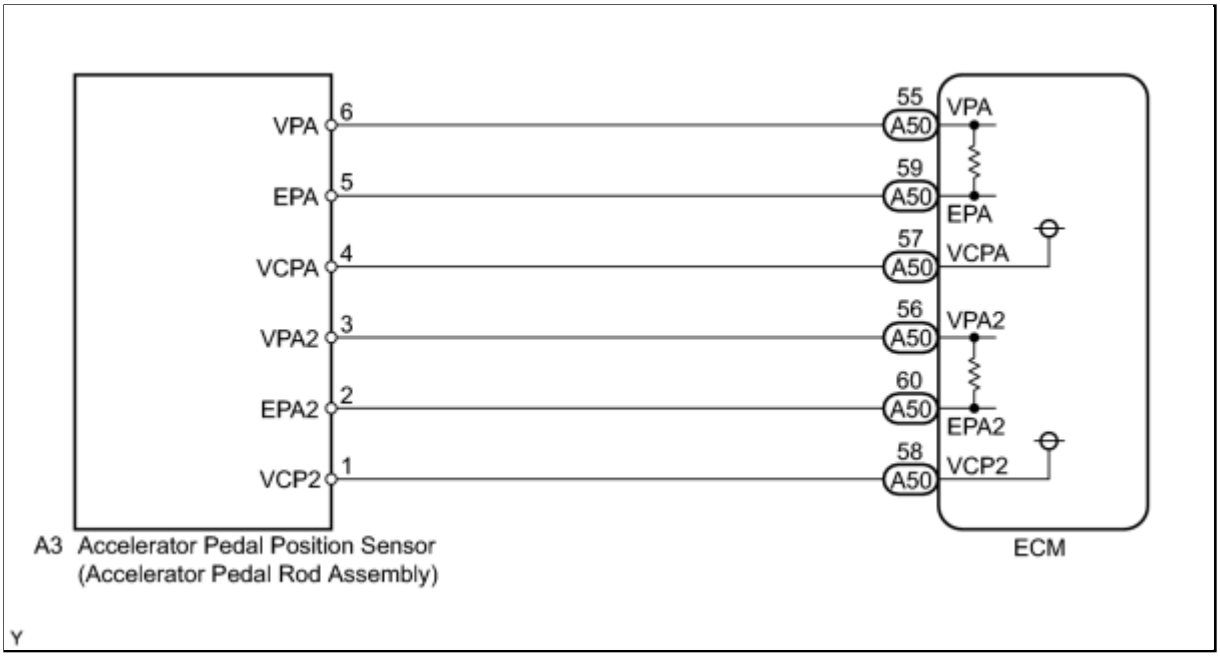
P2128:

VPA2 voltage when VPA voltage 0.4 to 3.45 V	4.8 V or more

P2138:

Either of following conditions A or B is met:	-
Condition A	-
Difference between VPA and VPA 2 voltages	0.02 V or less
Condition B	-
VPA voltage	0.4 V or less
VPA2 voltage	1.2 V or less

COMPONENT OPERATING RANGE



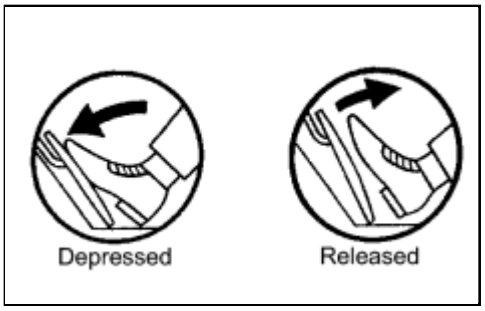
VPA voltage	0.4 to 4.8 V
VPA2 voltage	1.2 to 4.8 V
Difference between VPA and VPA2 voltages	More than 0.02 V

FAIL-SAFE

When any of DTCs P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138 are set, the ECM enters fail-safe mode. If either of the 2 sensor circuits malfunctions, the ECM uses the remaining circuit to calculate the accelerator pedal position to allow the vehicle to continue driving. If both of the circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is turned off.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (ACCELERATOR POSITION SENSOR)**

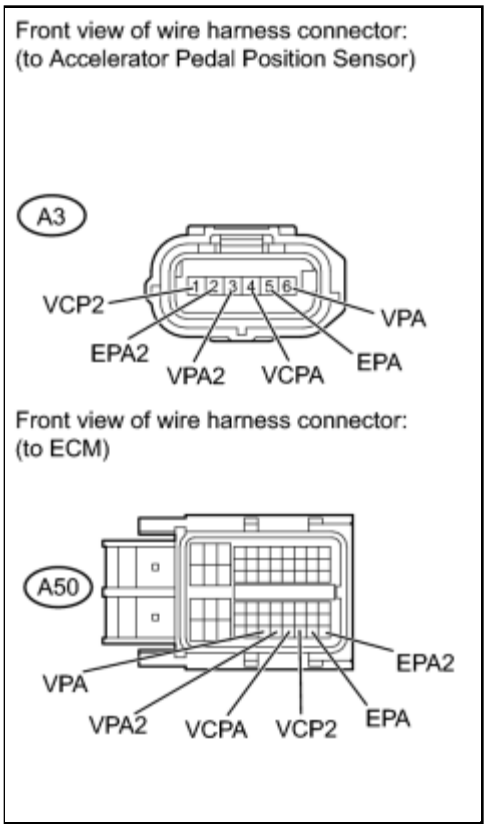
(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Accel Sensor Out No.1 and Accel Sensor Out No.2.

(e) Read the value displayed on the Techstream.



Standard Voltage:

ACCELERATOR PEDAL OPERATION	ACCEL SENSOR OUT NO.1	ACCEL SENSOR OUT NO.2
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.5 to 4.5 V	3.4 to 5.0 V

NG ▶ **CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**

(a) Disconnect the accelerator pedal position sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

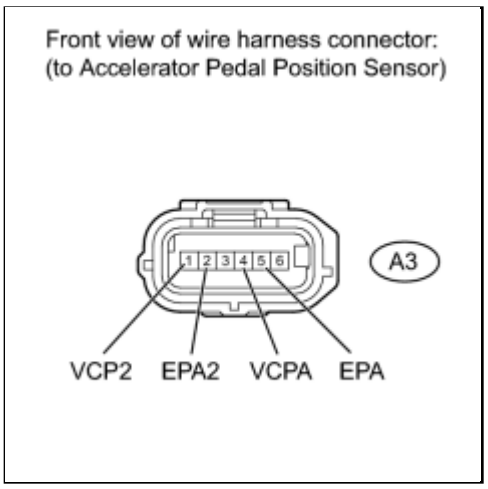
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A3-6 (VPA) - A50-55 (VPA)	Always	Below 1 Ω
A3-5 (EPA) - A50-59 (EPA)	Always	Below 1 Ω
A3-4 (VCPA) - A50-57 (VCPA)	Always	Below 1 Ω
A3-3 (VPA2) - A50-56 (VPA2)	Always	Below 1 Ω
A3-2 (EPA2) - A50-60 (EPA2)	Always	Below 1 Ω
A3-1 (VCP2) - A50-58 (VCP2)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A3-6 (VPA) or A50-55 (VPA) - Body ground	Always	10 kΩ or higher
A3-5 (EPA) or A50-59 (EPA) - Body ground	Always	10 kΩ or higher
A3-4 (VCPA) or A50-57 (VCPA) - Body ground	Always	10 kΩ or higher
A3-3 (VPA2) or A50-56 (VPA2) - Body ground	Always	10 kΩ or higher
A3-2 (EPA2) or A50-60 (EPA2) - Body ground	Always	10 kΩ or higher
A3-1 (VCP2) or A50-58 (VCP2) - Body ground	Always	10 kΩ or higher

(d) Reconnect the accelerator pedal position sensor connector.



(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**

OK ▼

3.	**INSPECT ECM (VCPA AND VCP2 VOLTAGE)**

(a) Disconnect the accelerator pedal position sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A3-4 (VCPA) - A3-5 (EPA)	Ignition switch ON	4.5 to 5.5 V
A3-1 (VCP2) - A3-2 (EPA2)	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the accelerator pedal position sensor connector.

NG ▶ **REPLACE ECM**

OK
▼

4.	**REPLACE ACCELERATOR PEDAL ROD ASSEMBLY**

(a) Replace the accelerator pedal rod assembly INFO .

NEXT
▼

5.	**CHECK WHETHER DTC OUTPUT RECURS (ACCELERATOR PEDAL POSITION SENSOR**

	DTCS)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Start the engine.

(f) Allow the engine to idle for 15 seconds or more.

(g) Fully depress and release the accelerator pedal several times quickly.

(h) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(i) Read the DTCs.

Result:

RESULT	PROCEED TO

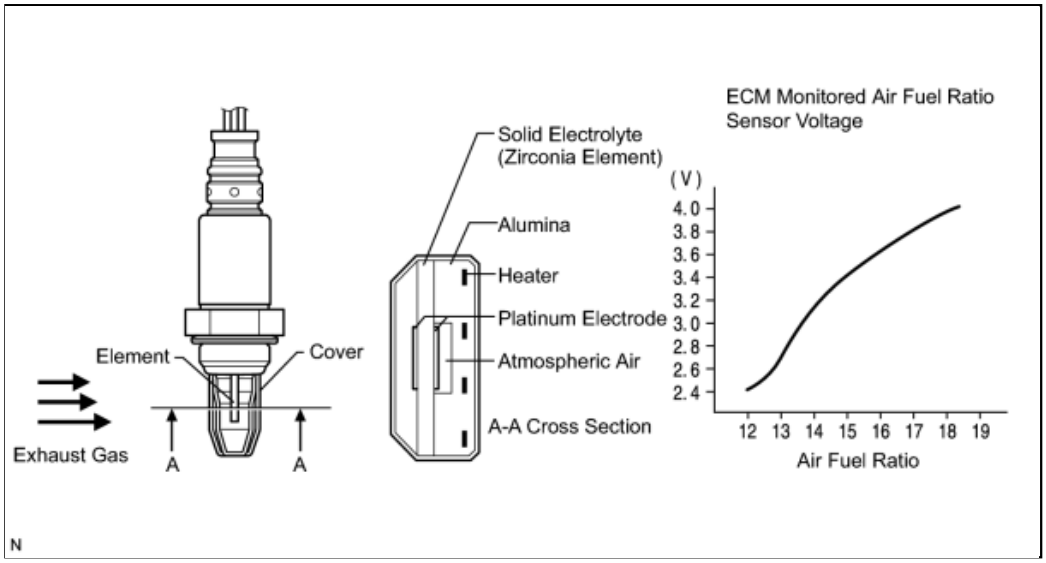
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC409DX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2195,P2196: Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P2195**	**Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)**

DTC	**P2196**	**Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)**

DESCRIPTION

HINT:



- Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

The air fuel ratio sensor generates a voltage* that corresponds to the actual air fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air fuel ratio. The ECM determines the deviation from the stoichiometric air fuel ratio level, and regulates the fuel injection time. If the air fuel ratio sensor malfunctions, the ECM is unable to control the air fuel ratio accurately.

The air fuel ratio sensor is the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are the narrow type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a three-way catalytic converter is used. For the most efficient use of the three-way catalytic converter, the air fuel ratio must be precisely controlled so that it is always close to the stoichiometric level.

*: Value changes inside the ECM. Since the air fuel ratio sensor is a current output element, the current is converted into a voltage inside the ECM. Any measurements taken at the air fuel ratio sensor or ECM connectors will show a constant voltage.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2195	Conditions (a) and (b) continue for 5 seconds or more (2 trip detection logic) • (a) Air fuel ratio sensor voltage more than 3.8 V • (b) Heated oxygen sensor voltage is rises from less than 0.21 V to 0.59 V or more	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • Air fuel ratio sensor (sensor 1) heater • Air fuel ratio sensor heater circuit • Intake system • Fuel pressure • Fuel injector • ECM
	While fuel-cut operation performed (during vehicle deceleration), air fuel ratio sensor current is 3.6 mA or more for 3 seconds (2 trip detection logic)	• Air fuel ratio sensor (sensor 1) • ECM
P2196	Conditions (a) and (b) continue for 5 seconds or more (2 trip detection logic) • (a) Air fuel ratio sensor voltage less than 2.8 V • (b) Heated oxygen sensor voltage falls from 0.59 V or more to less than 0.21 V	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • Air fuel ratio sensor (sensor 1) heater • Air fuel ratio sensor heater circuit • Intake system • Fuel pressure • Fuel injector • ECM
	While fuel-cut operation performed (during vehicle deceleration), air fuel ratio sensor current is less than 1.0 mA for 3 seconds (2 trip detection logic)	• Air fuel ratio sensor (sensor 1) • ECM

HINT:

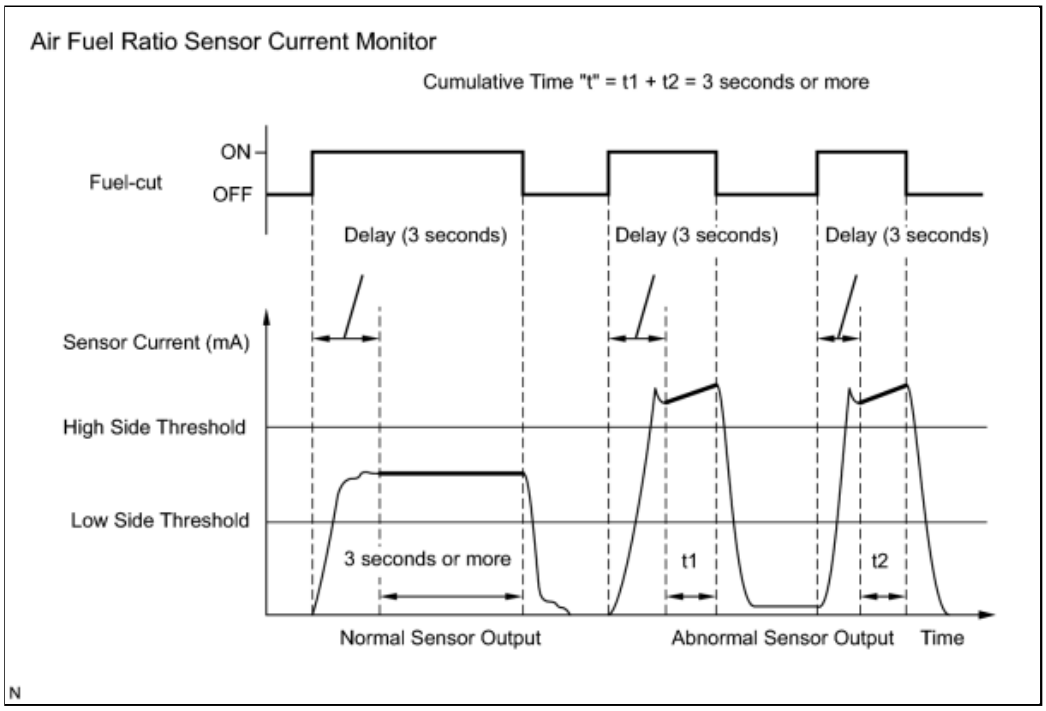
- When any of these DTCs are set, check the air fuel ratio sensor voltage output by entering the following menus on the Techstream: Powertrain / Engine / Data List / All Data / AFS Voltage B1 S1.
- Short-term fuel trim values can also be read using the Techstream.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the air fuel ratio sensor voltage output cannot be confirmed without using the Techstream.
- If an air fuel ratio sensor malfunction is detected, the ECM sets a DTC.

MONITOR DESCRIPTION

Sensor Voltage Detection Monitor

Under the air fuel ratio feedback control, if the air fuel ratio sensor voltage output indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the air fuel ratio sensor. The ECM illuminates the MIL and stores a DTC.

Example:



If the air fuel ratio sensor voltage output is below 2.8 V (very rich condition) and heated oxygen sensor output voltage falls from 0.59 V or more to less than 0.21 V for 5 seconds, the ECM stores DTC P2196. Alternatively, if the air fuel ratio sensor voltage output is higher than 3.8 V (very lean condition) and heated oxygen sensor output voltage rises from less

than 0.21 V to 0.59 V or more for 5 seconds, DTC P2195 is stored.

Sensor Current Detection Monitor

A rich air fuel mixture causes a low air fuel ratio sensor current, and a lean air fuel mixture causes a high air fuel ratio sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the air fuel ratio sensor current during fuel-cut and detects any abnormal current values.

If the air fuel ratio sensor output is 3.6 mA or higher for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the air fuel ratio sensor and stores DTC P2195 (stuck on high side). If the air fuel ratio sensor output is below 1.0 mA for more than 3 seconds of cumulative time, the ECM stores DTC P2196 (stuck on low side).

MONITOR STRATEGY

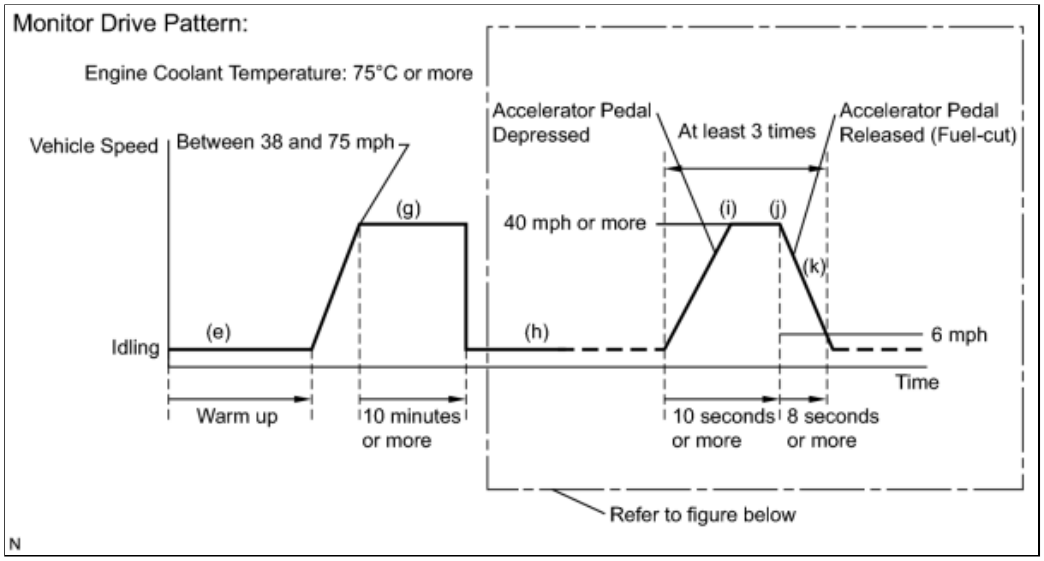
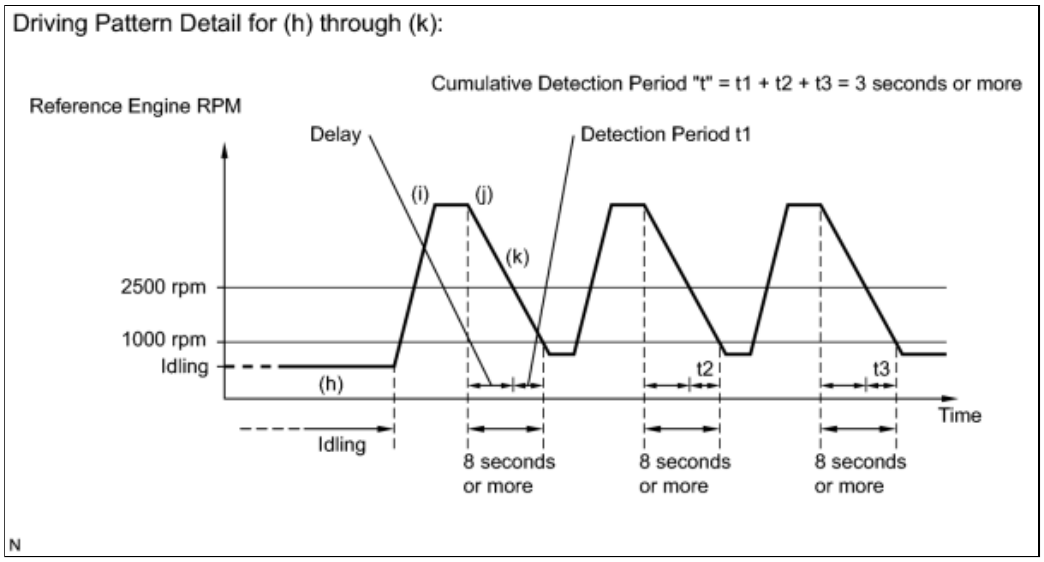
WIRING DIAGRAM



CONFIRMATION DRIVING PATTERN



CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

HINT:

This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.

(a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Clear DTCs INFO .
(e) Start the engine, and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher.
(f) Enter the following menus to check the fuel-cut status: Powertrain / Engine and ECT / Data List / Idle Fuel Cut.
(g) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(h) Change the transmission to 2nd gear.
(i) Drive the vehicle at the proper vehicle speed to perform fuel-cut operation (refer to the following HINT).

HINT:

Fuel-cut is performed when the following conditions are met:

- Accelerator pedal fully released.
- Engine speed is 2500 rpm or more (fuel injection returns at 1000 rpm).

(j) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
(k) Soon after performing step (j) above, release the accelerator pedal for at least 8 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(l) Allow the vehicle to decelerate until the vehicle decelerates to less than 6 mph (10 km/h).
(m) Repeat steps from (h) through (k) above at least 3 times in one driving cycle.

HINT:

Completion of all O2S (A/F) Monitor is required to change the value in Monitor.

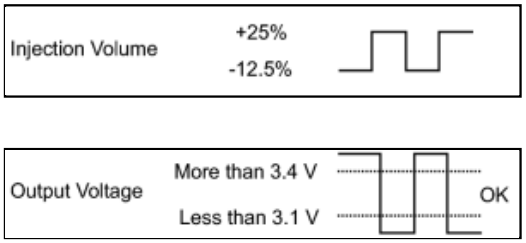
INSPECTION PROCEDURE

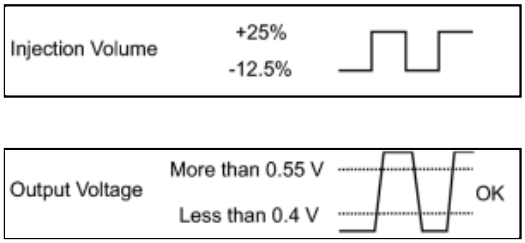
HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

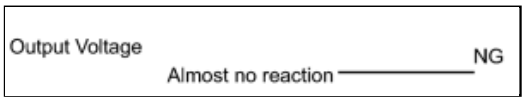
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

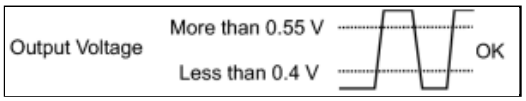
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

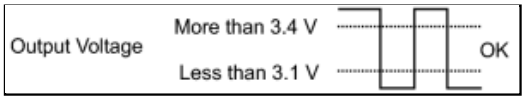


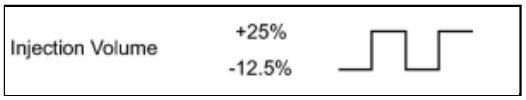


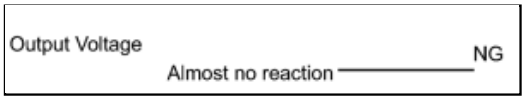
HINT:

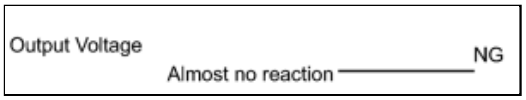


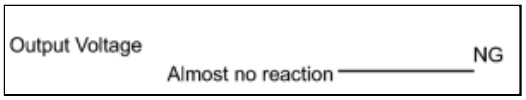












- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			• Air fuel ratio sensor circuit
3	 	 	• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4	 	 	• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P2195 or P2196 is output	A
DTC P2195 or P2196 and other DTCs are output	B

HINT:

If any DTCs other than P2195 and P2196 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**CONFIRM IF VEHICLE HAS RUN OUT OF FUEL IN PAST**

(a) Has the vehicle run out of fuel in the past?

NO ▶ **READ VALUE USING TECHSTREAM (TEST VALUE OF AIR FUEL RATIO SENSOR)**

YES ▶ **DTC CAUSED BY RUNNING OUT OF FUEL**

3.	**READ VALUE USING TECHSTREAM (TEST VALUE OF AIR FUEL RATIO SENSOR)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Allow the vehicle to drive in accordance with the drive pattern described in the CONFIRMATION DRIVING PATTERN.

(f) Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor / Status 2.

(g) Check that the Status 2 of O2 Sensor is Complete.

If the status is still Incomplete, perform the drive pattern increasing the vehicle speed and using the second gear to decelerate the vehicle.

(h) Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details / RANGE B1 S1.

(i) Check the test value of the air fuel ratio sensor output current during fuel-cut.

Result:

RESULT	PROCEED TO
Within normal range (1.0 mA or higher, and below 3.6 mA)	A
Outside normal range (Below 1.0 mA, or 3.6 mA or higher)	B

B ▶ REPLACE AIR FUEL RATIO SENSOR

A ▼

4.	**READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF AIR FUEL RATIO SENSOR)**

(a) Connect the Techstream to the DLC3.

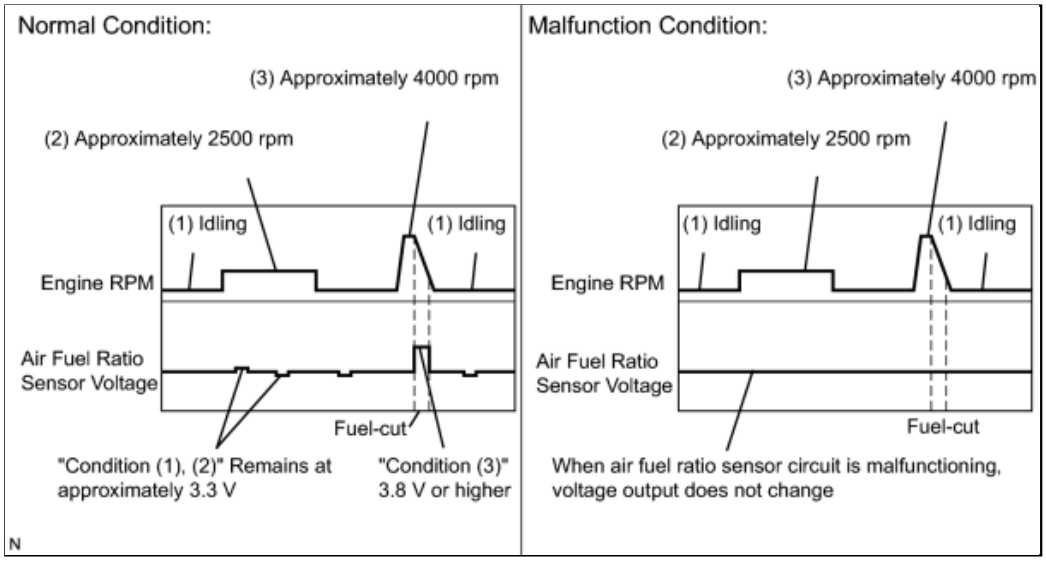
(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the air fuel ratio sensor at an engine speed of 2500 rpm for 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / AFS Voltage B1 S1 and Engine Speed, then press the Record button.

(f) Check the air fuel ratio sensor voltage three times, when the engine is in each of the following conditions:



(1) While idling (check for at least 30 seconds)
(2) At an engine speed of approximately 2500 rpm (without any sudden changes in engine speed)
(3) Raise the engine speed to 4000 rpm and then quickly release the accelerator pedal so that the throttle valve is fully closed.

Standard Voltage:

CONDITION	AIR FUEL RATIO SENSOR VOLTAGE VARIATION	REFERENCE
(1) and (2)	Changes at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or higher	This occurs during engine deceleration (when fuel-cut performed)

HINT:

For more information, see the diagrams below.

HINT:

- If the output voltage of the air fuel ratio sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the air fuel ratio sensor may have an open circuit. (This will also happen if the air fuel ratio sensor heater has an open circuit.)
- If the output voltage of the air fuel ratio sensor remains at either approximately 3.8 V or higher, or below 2.8 V (see Malfunction Condition diagram) under any conditions, including those above, the air fuel ratio sensor may have a short circuit.
- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and results in a momentary increase in the air fuel ratio sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:

  The output voltage of the air fuel ratio sensor may be below 2.8 V during fuel enrichment. For the vehicle, this translates to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The air fuel ratio sensor is functioning normally.
- The air fuel ratio sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the air fuel ratio sensor or ECM will show a constant voltage result.

NG ▶ **INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)**

OK ▼

5.	**PERFORM CONFIRMATION DRIVING PATTERN**

(a) Connect the Techstream to the DLC3.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFX0B8X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2119: Throttle Actuator Control Throttle Body Range / Performance (2010 Corolla)		

DTC	**P2119**	**Throttle Actuator Control Throttle Body Range / Performance**

DESCRIPTION

The electronic throttle control system is composed of the throttle actuator, throttle position sensor, accelerator pedal position sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The throttle position sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1 trip detection logic)	• Electronic throttle control system • ECM

MONITOR DESCRIPTION

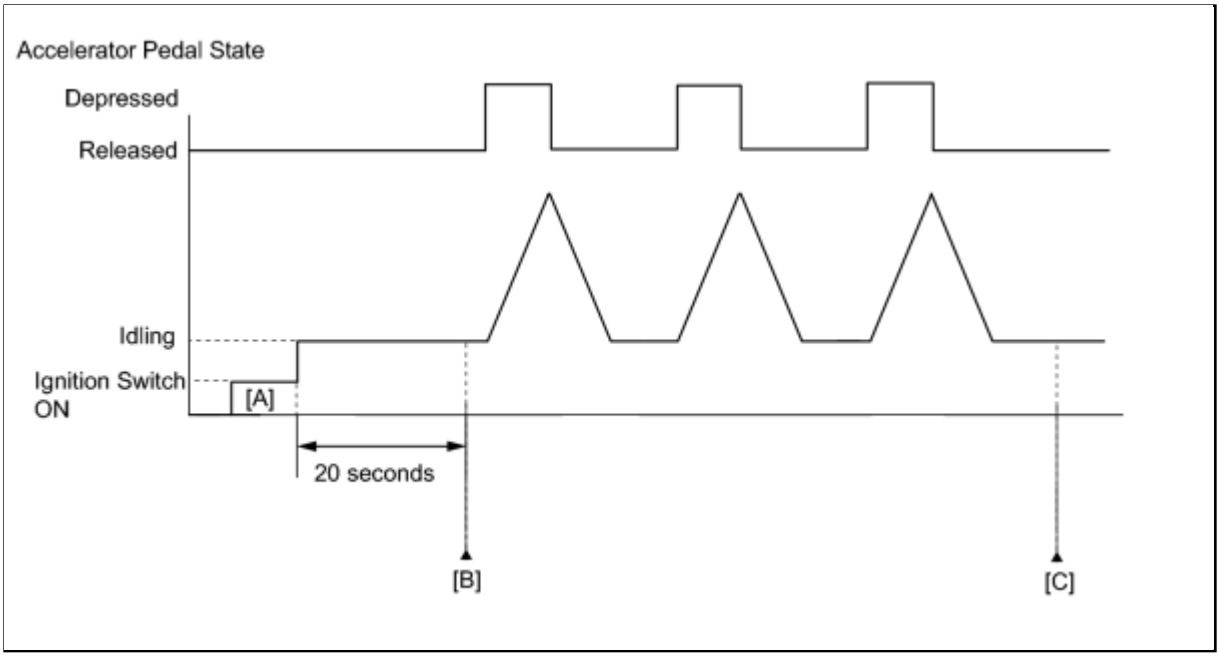
The ECM determines the actual opening angle of the throttle valve from the throttle position sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the electronic throttle control system. The ECM then illuminates the MIL and sets the DTC.

If the malfunction is not repaired successfully, the DTC can be set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5000 rpm by fully depressing the accelerator pedal (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: Electronic throttle control system malfunction
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate

Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
System guard* judge condition	ON
*System guard set when following conditions are met:	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
Throttle position sensor fail	Not detected
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	5.5 V or more
Throttle actuator fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions A or B is met	-
A. Commanded closed throttle position - current closed throttle position	0.3 V or more for 1 second
B. Commanded open throttle position - current open throttle position	0.3 V or more for 0.6 seconds

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Idle the engine for 20 seconds.
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P2119.
10. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, fully depress and release the accelerator pedal 3 times, and then check the DTC judgment result at step [C].

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When this DTC, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P2119 is output	A
DTC P2119 and other DTCs are output	B

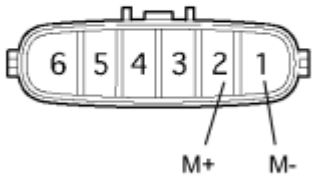
HINT:

If any DTCs other than P2119 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)**



(a) Disconnect the throttle body connector.

(b) Measure the resistance according to the value(s) in the table below.

:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (M+) - 1 (M-)	20°C (68°F)	0.3 to 100 Ω

Component without harness connected:
(Throttle Body)

(c) Reconnect the throttle body connector.

NG ▶ **REPLACE THROTTLE BODY**

OK ▼

3.	REPLACE ECM

NEXT

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P2119)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Allow the engine to idle for 15 seconds or more.

(f) Fully depress and release the accelerator pedal several times quickly.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.

HINT:

The output voltage of the throttle position sensor can be checked using the Techstream. Variations in the output voltage indicate that the throttle actuator is operating. To check the output voltage using the Techstream, enter the following menus: Powertrain / Engine and ECT / Data List / Throttle Position No. 1.

NG ▶ **REPLACE THROTTLE BODY**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFZ0AKX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2121: Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance (2010 Corolla)		

DTC	**P2121**	**Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance**

DESCRIPTION

HINT:

- This DTC relates to the accelerator pedal position sensor.

Refer to DTC P2120 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2121	Difference between VPA and VPA2 less than 0.4 V, or more than 1.2 V for 0.5 seconds (1 trip detection logic)	• Accelerator pedal position sensor • ECM

MONITOR DESCRIPTION

The accelerator pedal position sensor is mounted on the accelerator pedal bracket. The accelerator pedal position sensor has 2 sensor elements and 2 signal outputs: VPA and VPA2. VPA is used to detect the actual accelerator pedal angle (used for engine control) and VPA2 is used to detect malfunctions in VPA. When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the accelerator pedal position sensor is malfunctioning. The ECM turns on the MIL and the DTC is set.

MONITOR STRATEGY

Related DTCs	P2121: Accelerator pedal position sensor rationality
Required Sensors/Components (Main)	Accelerator pedal position sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of following conditions 1 or 2 is met:	-
1. Ignition switch	ON
2. Electronic throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference between VPA voltage (learned value) and VPA2 voltage (learned value)	Less than 0.4 V, or more than 1.2 V

FAIL-SAFE

The accelerator pedal position sensor has two (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the two sensor circuits and switches to limp mode. In limp mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.

If a pass condition is detected and then the ignition switch is turned off, the fail-safe operation stops and the system returns to a normal condition.

WIRING DIAGRAM

Refer to DTC P2120 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2237-P2239,P2252,P2253: Oxygen (A/F) Sensor Pumping Current Circuit / Open (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P2237**	**Oxygen (A/F) Sensor Pumping Current Circuit / Open (Bank 1 Sensor 1)**

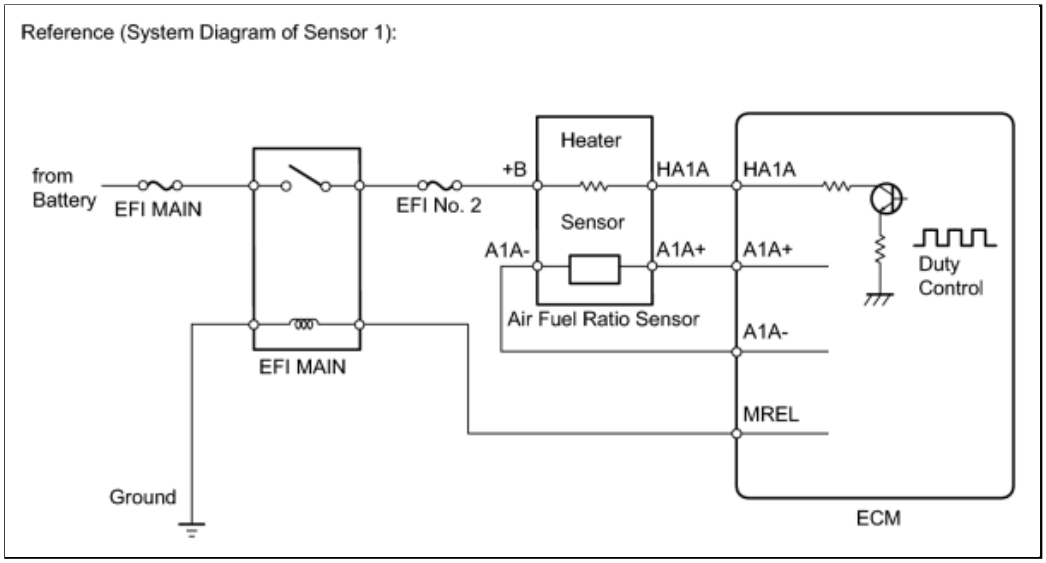
DTC	**P2238**	**Oxygen (A/F) Sensor Pumping Current Circuit Low (Bank 1 Sensor 1)**

DTC	**P2239**	**Oxygen (A/F) Sensor Pumping Current Circuit High (Bank 1 Sensor 1)**

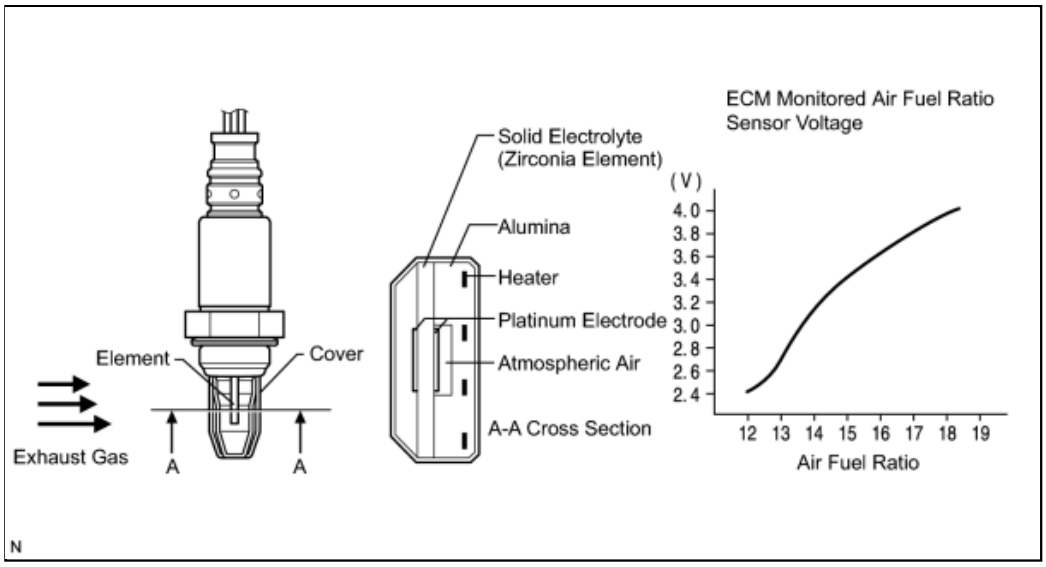
DTC	**P2252**	**Oxygen (A/F) Sensor Reference Ground Circuit Low (Bank 1 Sensor 1)**

DTC	**P2253**	**Oxygen (A/F) Sensor Reference Ground Circuit High (Bank 1 Sensor 1)**

DESCRIPTION



HINT:



- Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

The air fuel ratio sensor, which is located between the exhaust manifold and catalyst, consists of alloyed metal elements and a heater.

Depending on the engine operating conditions, the heater heats the sensor elements to activate them. Battery voltage is applied to the heater, the sensor ground is controlled by the ECM using a duty ratio.

The sensor elements convert the oxygen concentration in the exhaust gas into voltage values to output. Based on the voltage, the ECM determines the air fuel ratio and regulates the fuel injection volume depending on the air fuel ratio and engine operating conditions. The voltage changes between 0.6 V and 4.5 V while the engine is running. If the air fuel ratio is lean, which means the oxygen concentration in the exhaust gas is high, the voltage is high. If the air fuel ratio is rich, which means the oxygen concentration in the exhaust gas is low, the voltage is low.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2237	Open in the circuit between terminals A1A+ and A1A- of the air fuel ratio sensor while engine is running (2 trip detection logic)	• Open in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM
P2238	Any of the following conditions are met (2 trip detection logic) • Air fuel ratio sensor output drops while engine is running. • Voltage at terminal A1A+ voltage is 0.5 V or less. • Voltage difference between terminals A1A+ and A1A- voltage is 0.1 V or less.	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM
P2251	A1A- voltage is more than 4.5 V (2 trip detection logic)	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM

MONITOR DESCRIPTION

These DTCs are output when there is an open or short in the air fuel ratio sensor circuit, or the air fuel ratio sensor output drops. To detect these problems, the voltage of the air fuel ratio sensor is monitored when turning the ignition switch to the

ON, and the admittance (admittance is an electrical term that indicates the ease of flow of current) is checked while driving. If the voltage of the air fuel ratio sensor is between 0.5 V and 4.5 V, it is considered normal. If the voltage is out of the specified range, or the admittance is less than the standard value, the ECM will determine that there is a malfunction in the air fuel ratio sensor. If the same malfunction is detected in next driving cycle, the MIL will be illuminated and a DTC will be stored.

MONITOR STRATEGY

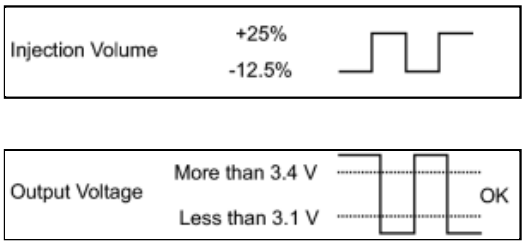
INSPECTION PROCEDURE

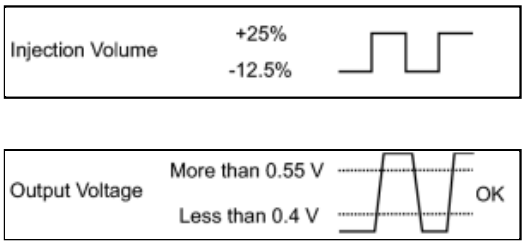
HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

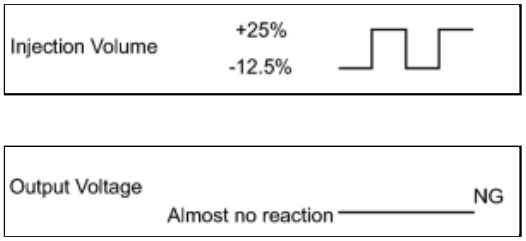
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

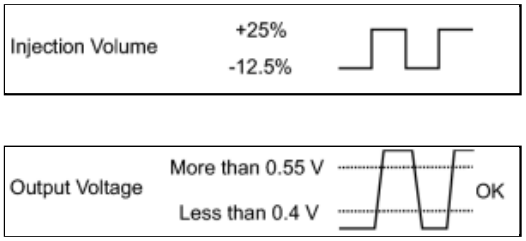
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

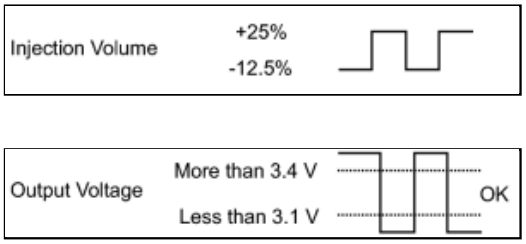


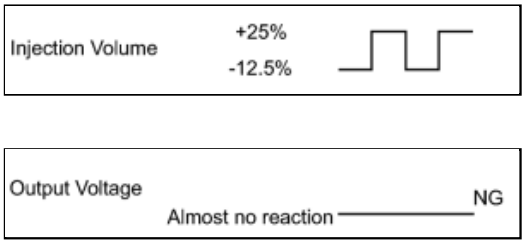


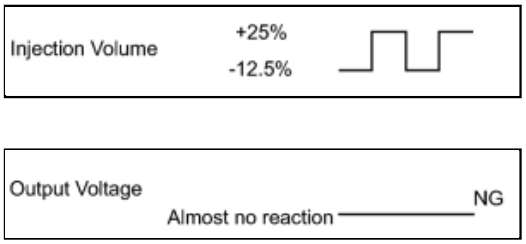
HINT:

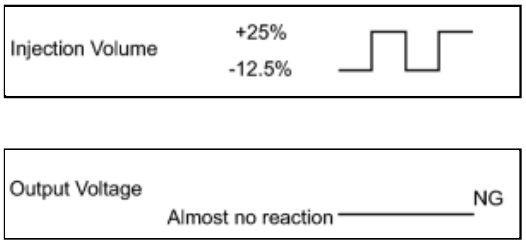












- The Control the Injection Volume for A/F sensor active test lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

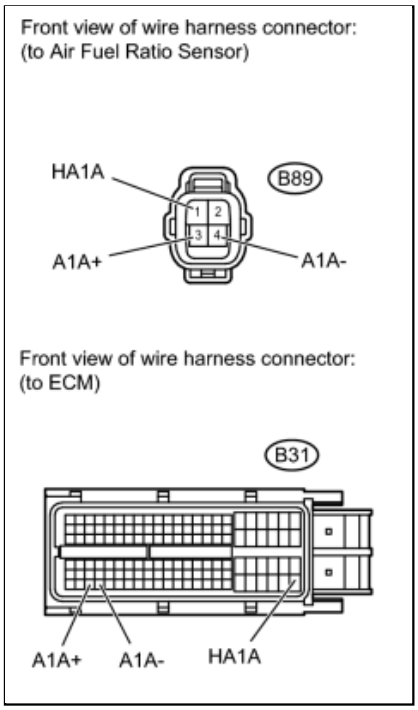
TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)



- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)** (a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B89-1 (HA1A) - B31-109 (HA1A)	Always	Below 1 Ω
B89-3 (A1A+) - B31-112 (A1A+)		
B89-4 (A1A-) - B31-113 (A1A-)		

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B89-1 (HA1A) or B31-109 (HA1A) - Body ground	Always	10 kΩ or higher
B89-3 (A1A+) or B31-112 (A1A+) - Body ground		
B89-4 (A1A-) or B31-113 (A1A-) - Body ground		

(d) Reconnect the air fuel ratio sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**

OK ▼

2.	**REPLACE AIR FUEL RATIO SENSOR**

(a) Replace the air fuel ratio sensor INFO .

NEXT

3.	PERFORM CONFIRMATION DRIVING PATTERN

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and turn the Techstream on.

(c) Clear DTCs.

(d) Switch the ECM from normal mode to check mode.

(e) Drive the vehicle referring to the Confirmation Driving Pattern on DTC P2195 INFO .

NEXT

4.	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

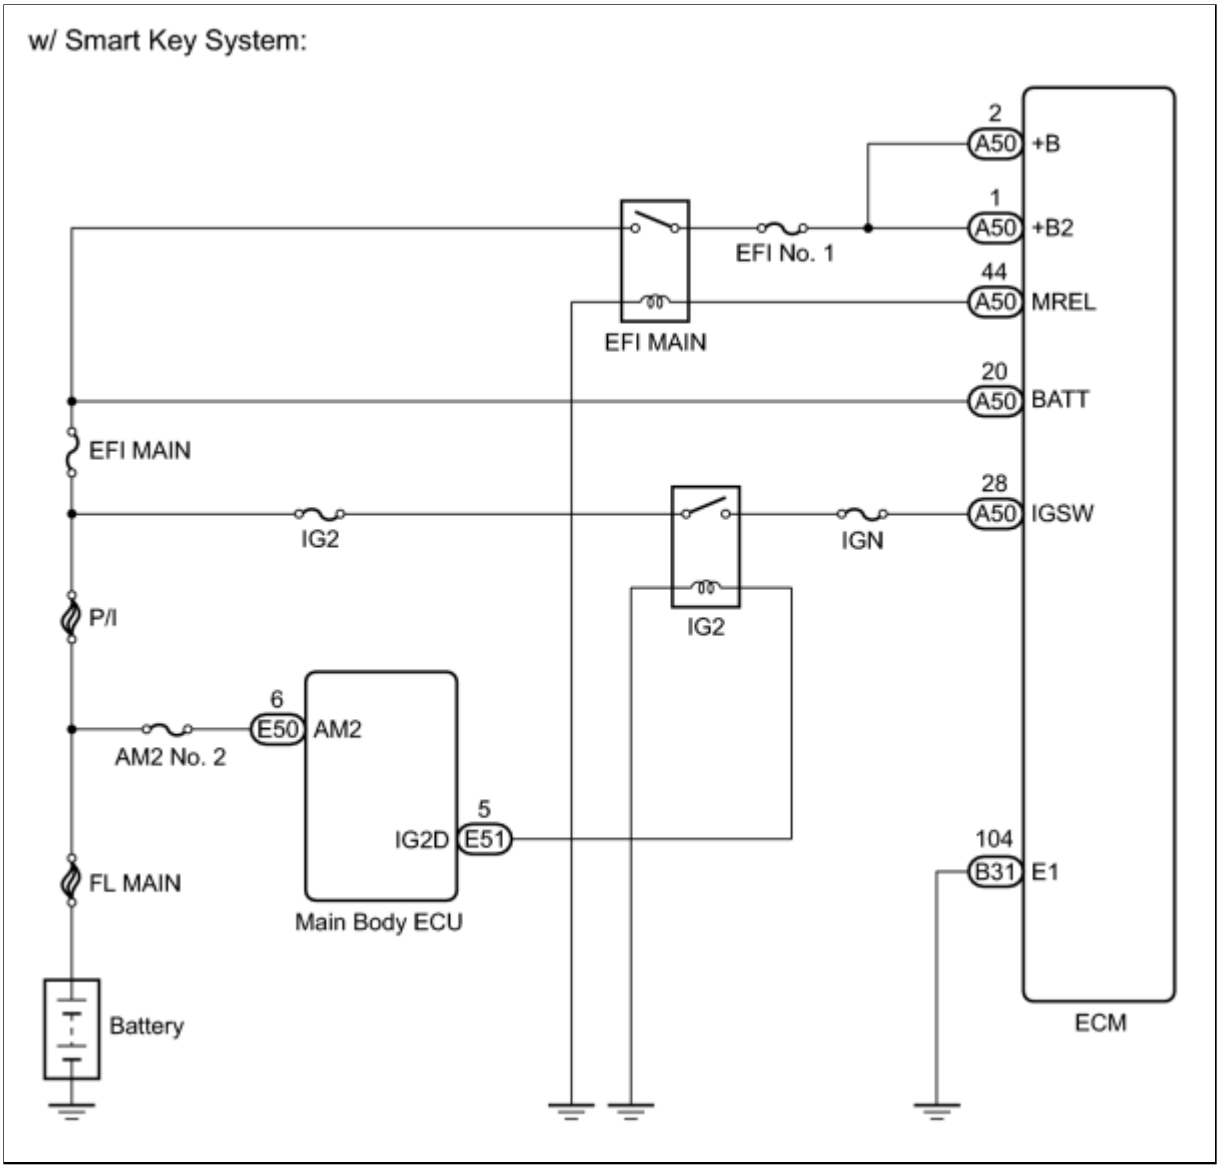
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: ECM Power Source Circuit (2010 Corolla)		

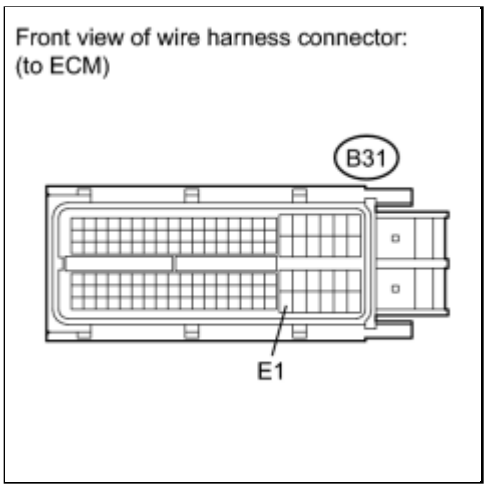


ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned to the ON, battery voltage is applied to IGSW of the ECM. The output signal from the MREL terminal of the ECM causes a current to flow to the coil, closing the contacts of the integration relay (EFI MAIN relay) and supplying power to either terminal +B and +B2 of the ECM.

WIRING DIAGRAM



INSPECTION PROCEDURE

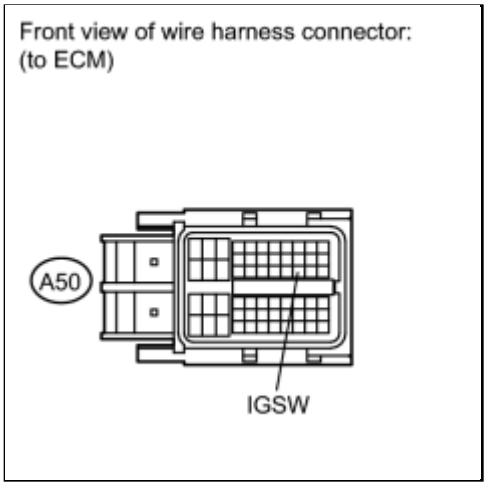
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)**

(a) Disconnect the ECM connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-104 (E1) - Body ground	Always	Below 1 Ω

(c) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BODY GROUND)**

OK ▼

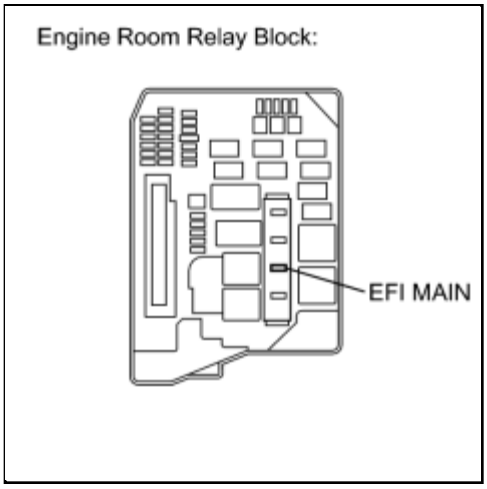
2.	**INSPECT ECM (IGSW VOLTAGE)**

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A50-28 (IGSW) - Body ground	Ignition switch ON	11 to 14 V

(d) Reconnect the ECM connector.

NG ▶ **INSPECT FUSE (IGN FUSE)**

OK ▼

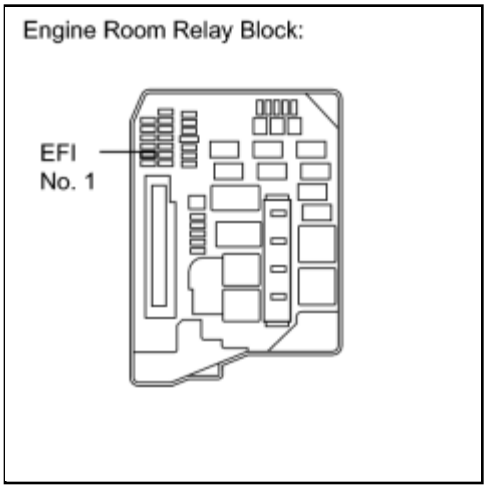
3.	**INSPECT FUSE (EFI MAIN FUSE)**

(a) Remove the EFI MAIN fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse	Always	Below 1 Ω



(c) Reinstall the EFI MAIN fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE**

FUSE

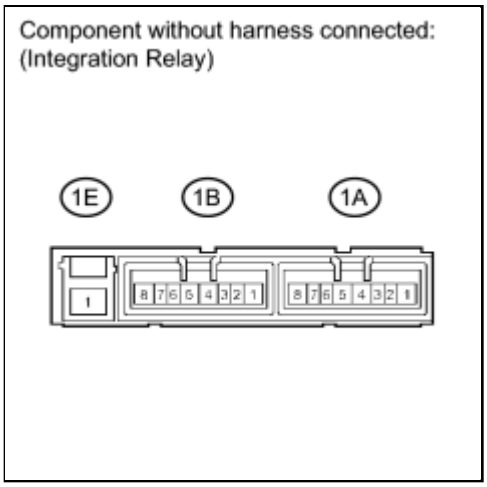
OK

4.	**INSPECT FUSE (EFI NO. 1 FUSE)**

(a) Remove the EFI No. 1 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 1 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 1 fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

5.	**INSPECT INTEGRATION NO.1 RELAY (EFI MAIN RELAY)**

(a) Remove the integration relay from the engine room relay block.

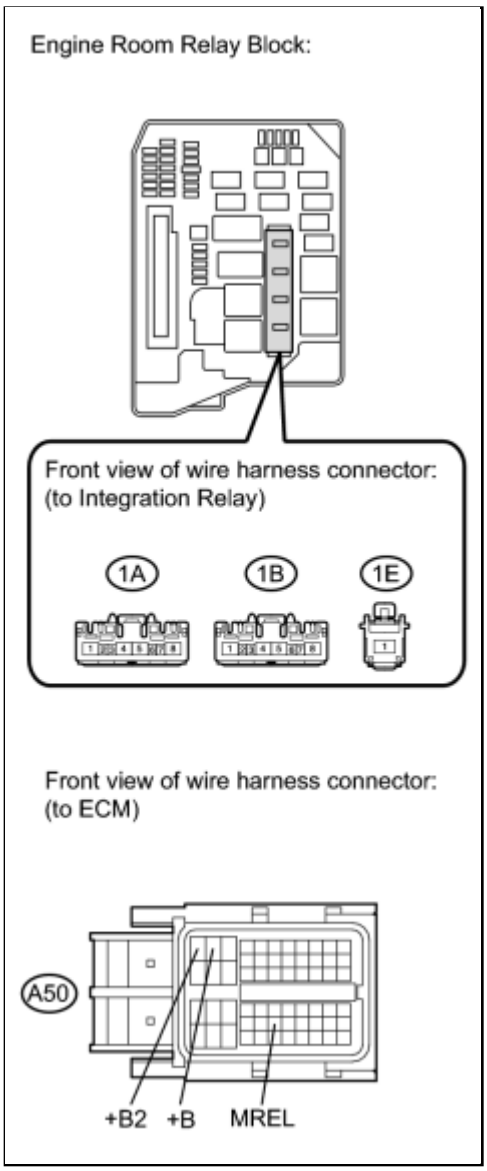
(b) Disconnect the integration relay connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - 1B-4	Always	10 kΩ or higher
	Always	Below 1 Ω (Apply battery voltage terminals 1B-2 and 1B-3)

(d) Reconnect the integration relay connector.



(e) Reinstall the integration relay.

NG ▶ **REPLACE INTEGRATION NO.1 RELAY**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - ECM)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

(c) Disconnect the ECM connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

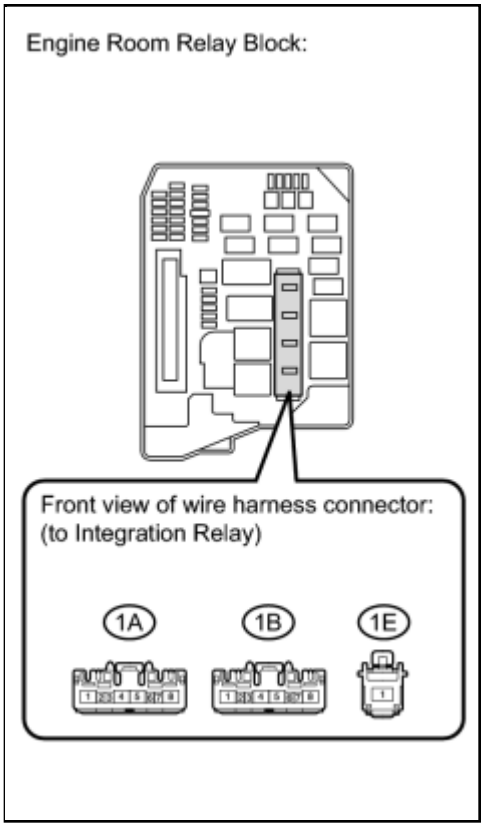
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1B-4 - A50-1 (+B2)	Always	Below 1 Ω
1B-4 - A50-2 (+B)	Always	Below 1 Ω
1B-2 - A50-44 (MREL)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1B-4 or A50-2 (+B2) - Body ground	Always	10 kΩ or higher
1B-4 or A50-1 (+B) - Body ground	Always	10 kΩ or higher
1B-2 or A50-44 (MREL) - Body ground	Always	10 kΩ or higher

(e) Reconnect the ECM connector.



(f) Reconnect the integration relay connector.

(g) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - ECM)**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - BATTERY)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

(c) Disconnect the negative battery terminal.

(d) Disconnect the positive battery terminal.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - Battery positive terminal	Always	Below 1 Ω

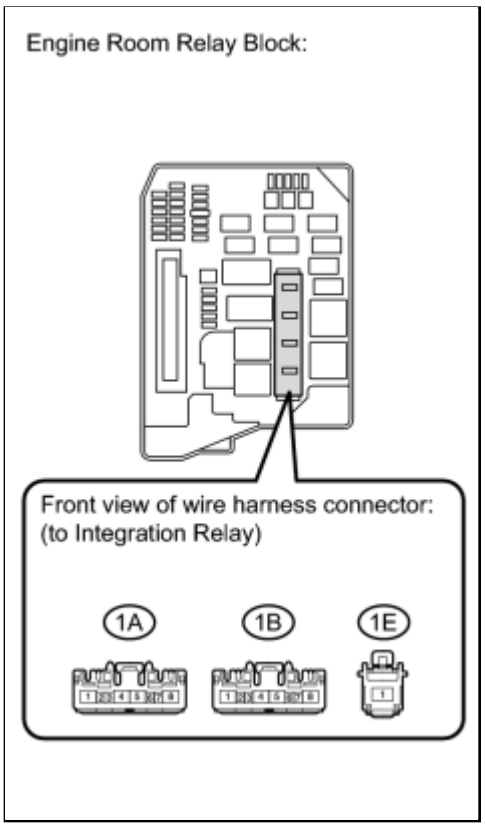
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 or Battery positive terminal - Body ground	Always	10 kΩ or higher

(f) Reconnect the integration relay connector.

(g) Reinstall the integration relay.

(h) Reconnect the positive battery terminal.



(i) Reconnect the negative battery terminal.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - BATTERY)**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - BODY GROUND)**

(a) Remove the integration relay from the engine room relay block.

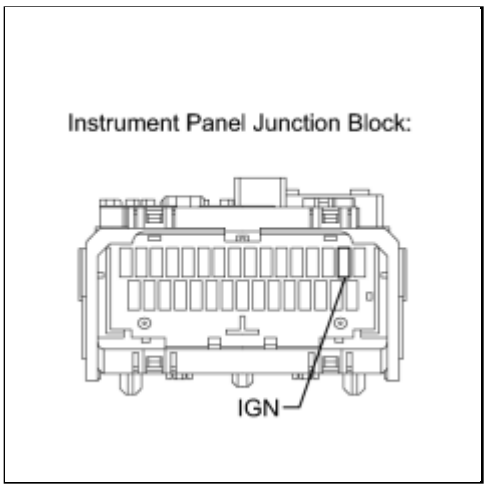
(b) Disconnect the integration relay connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1B-3 - Body ground	Always	Below 1 Ω

(d) Reconnect the integration relay connector.



(e) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY) - BODY GROUND)**

OK ▶ **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

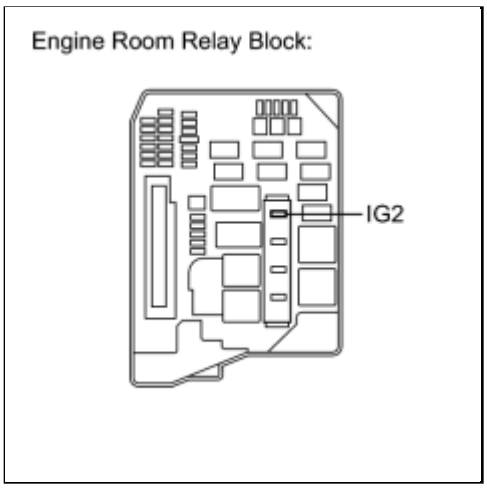
9.	**INSPECT FUSE (IGN FUSE)**

(a) Remove the IGN fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IGN fuse	Always	Below 1 Ω



(c) Reinstall the IGN fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK ▼

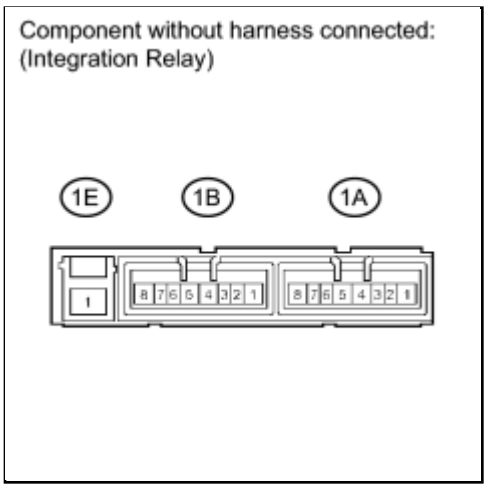
10.	**INSPECT FUSE (IG2 FUSE)**

(a) Remove the IG2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 fuse	Always	Below 1 Ω



(c) Reinstall the IG2 fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK ▼

11.	**INSPECT INTEGRATION NO.1 RELAY (IG2 RELAY)**

(a) Remove the integration relay from the engine room relay block.

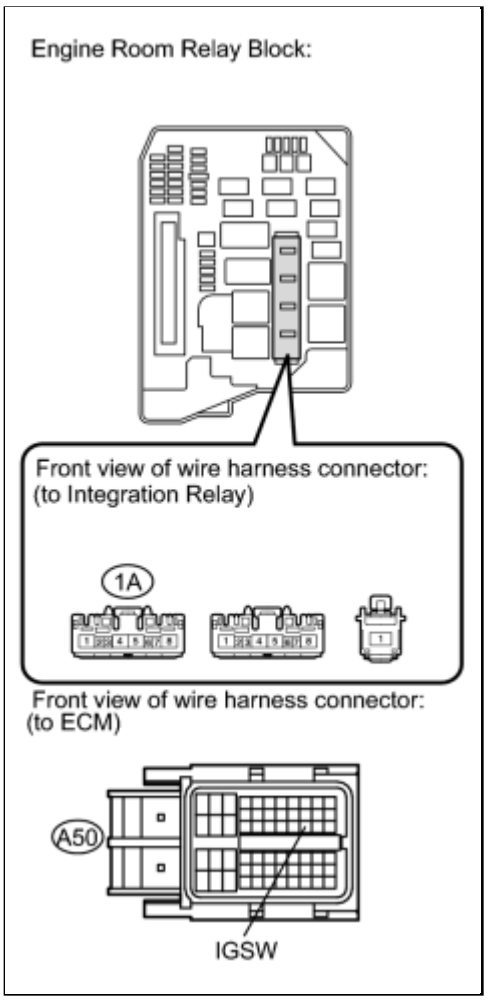
(b) Disconnect the integration relay connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - 1A-4	Always	10 kΩ or higher
	Always	Below 1 Ω (Apply battery voltage terminals 1A-2 and 1A-3)

(d) Reconnect the integration relay connector.



(e) Reinstall the integration relay.

NG ▶ **REPLACE INTEGRATION NO.1 RELAY (IG2 RELAY)**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - ECM)**

(a) Disconnect the ECM connector.

(b) Remove the integration relay from the engine room relay block.

(c) Disconnect the integration relay connector.

(d) Measure the resistance according to the value(s) in the table below.

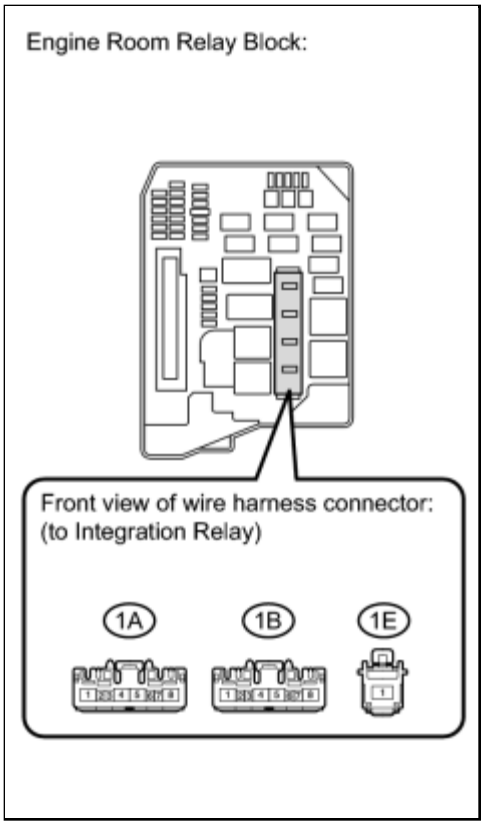
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-4 - A50-28 (IGSW)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-4 or A50-28 (IGSW) - Body ground	Always	10 kΩ or higher

(e) Reconnect the ECM connector.



(f) Reconnect the integration relay connector.

(g) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - ECM)**

OK ▼

13.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - BATTERY)

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

(c) Disconnect the negative battery terminal.

(d) Disconnect the positive battery terminal.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

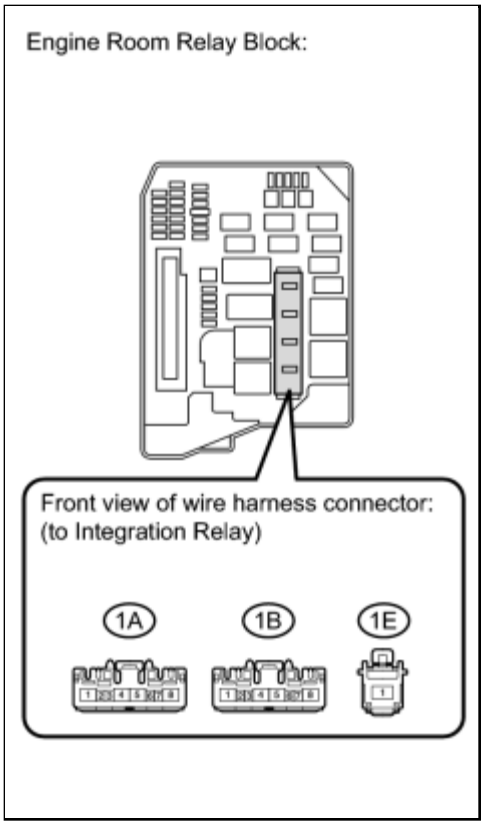
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - Battery positive terminal	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 or Battery positive terminal - Body ground	Always	10 kΩ or higher

(f) Reconnect the integration relay connector.

(g) Reinstall the integration relay.



(h) Reconnect the positive battery terminal.

(i) Reconnect the negative battery terminal.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - BATTERY)**

OK ▼

14.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - BODY GROUND)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

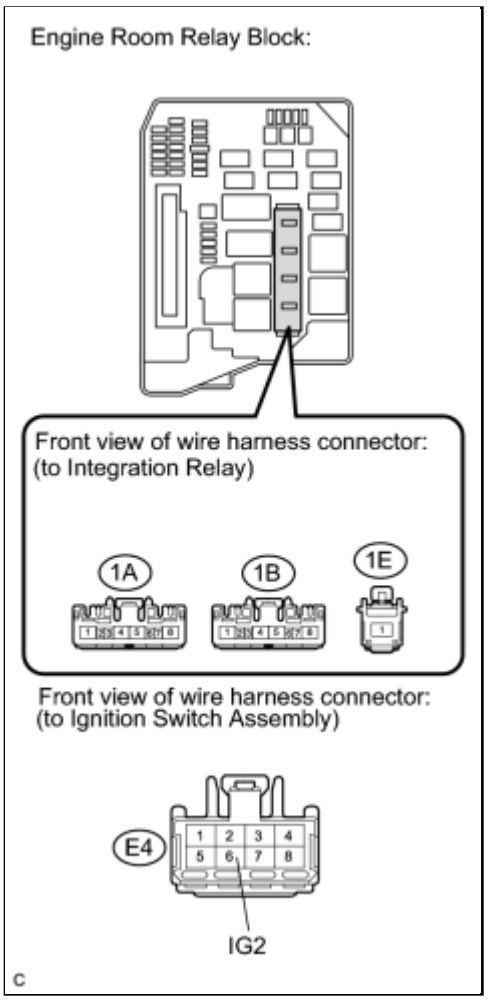
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-3 - Body ground	Always	Below 1 Ω

Result:

RESULT	PROCEED TO
OK (w/o SMART KEY SYSTEM)	A
OK (w/ SMART KEY SYSTEM)	B
NG	C

(d) Reconnect the integration relay connector.

(e) Reinstall the integration relay.



C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - BODY GROUND)**

A ▼

15.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - IGNITION SWITCH ASSEMBLY)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

(c) Disconnect the ignition switch assembly connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-2 - E4-6 (IG2)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-2 or E4-6 (IG2) - Body ground	Always	10 kΩ or higher

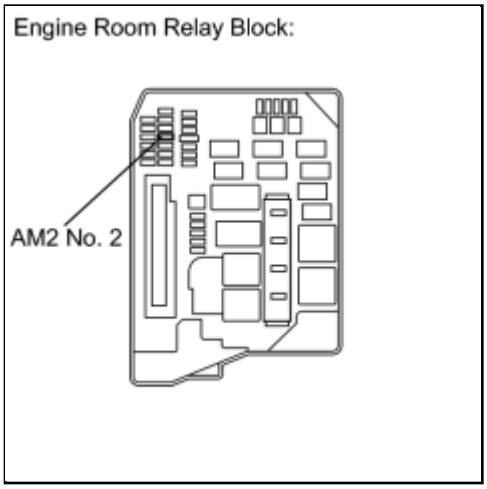
(e) Reconnect the integration relay connector.

(f) Reinstall the integration relay.

(g) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - IGNITION SWITCH ASSEMBLY)**

OK ▼



16.	**INSPECT IGNITION SWITCH ASSEMBLY**

(a) Inspect the ignition switch assembly INFO .

NG ▶ **REPLACE IGNITION SWITCH ASSEMBLY**

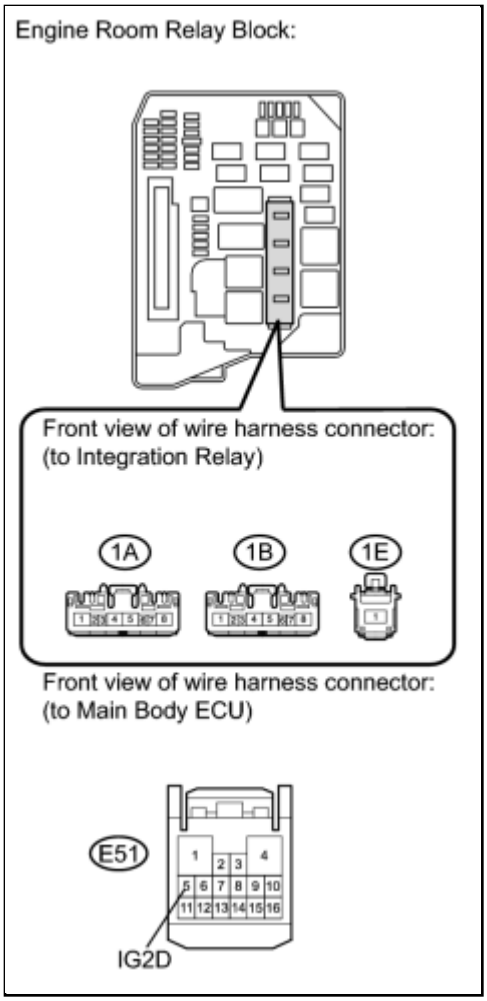
OK ▼

17.	**INSPECT FUSE (AM2 NO. 2 FUSE)**

(a) Remove the AM2 No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AM2 No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the AM2 No. 2 fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - IGNITION SWITCH ASSEMBLY)**

18.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY (IG2 RELAY))**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the integration relay connector.

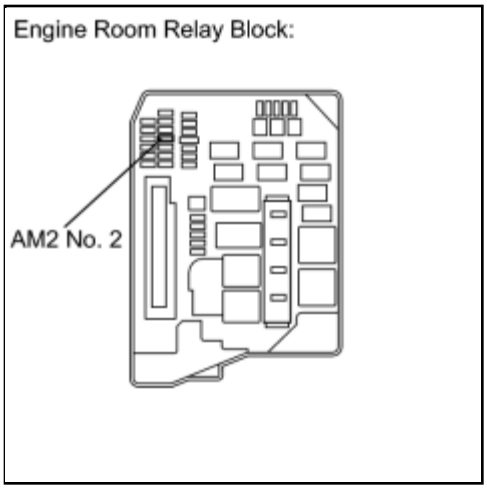
(c) Disconnect the main body ECU connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-5 (IG2D) - 1A-2	Always	Below 1 Ω

(e) Reconnect the integration relay connector.



(f) Reinstall the integration relay.

(g) Reconnect the main body ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY (IG2 RELAY))**

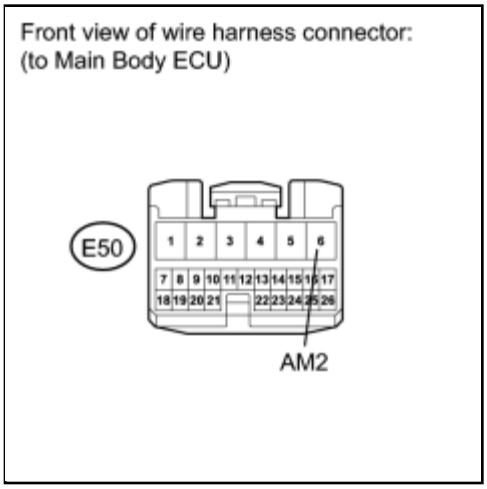
OK ▼

19.	INSPECT FUSE (AM2 NO. 2 FUSE)

(a) Remove the AM2 No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AM2 No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the AM2 No. 2 fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE**

OK

20.	**CHECK HARNESS AND CONNECTOR (AM2 VOLTAGE)**

(a) Disconnect the main body ECU connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-6 (AM2) - Body ground	Always	11 to 14 V

(c) Reconnect the main body ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - BATTERY)**

OK → **CHECK SMART KEY SYSTEM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002BHC01ZX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2420: Evaporative Emission System Switching Valve Control Circuit High (2010 Corolla)		

DTC	**P2420**	**Evaporative Emission System Switching Valve Control Circuit High**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P2420	Vent valve stuck open (vent)	Following condition met during key-off EVAP monitor: • EVAP pressure change when vent valve closed (ON) less than 0.3 kPa-g (2.25 mmHg-g)	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • ECM	While ignition switch off	2 trip

HINT:

The vent valve is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

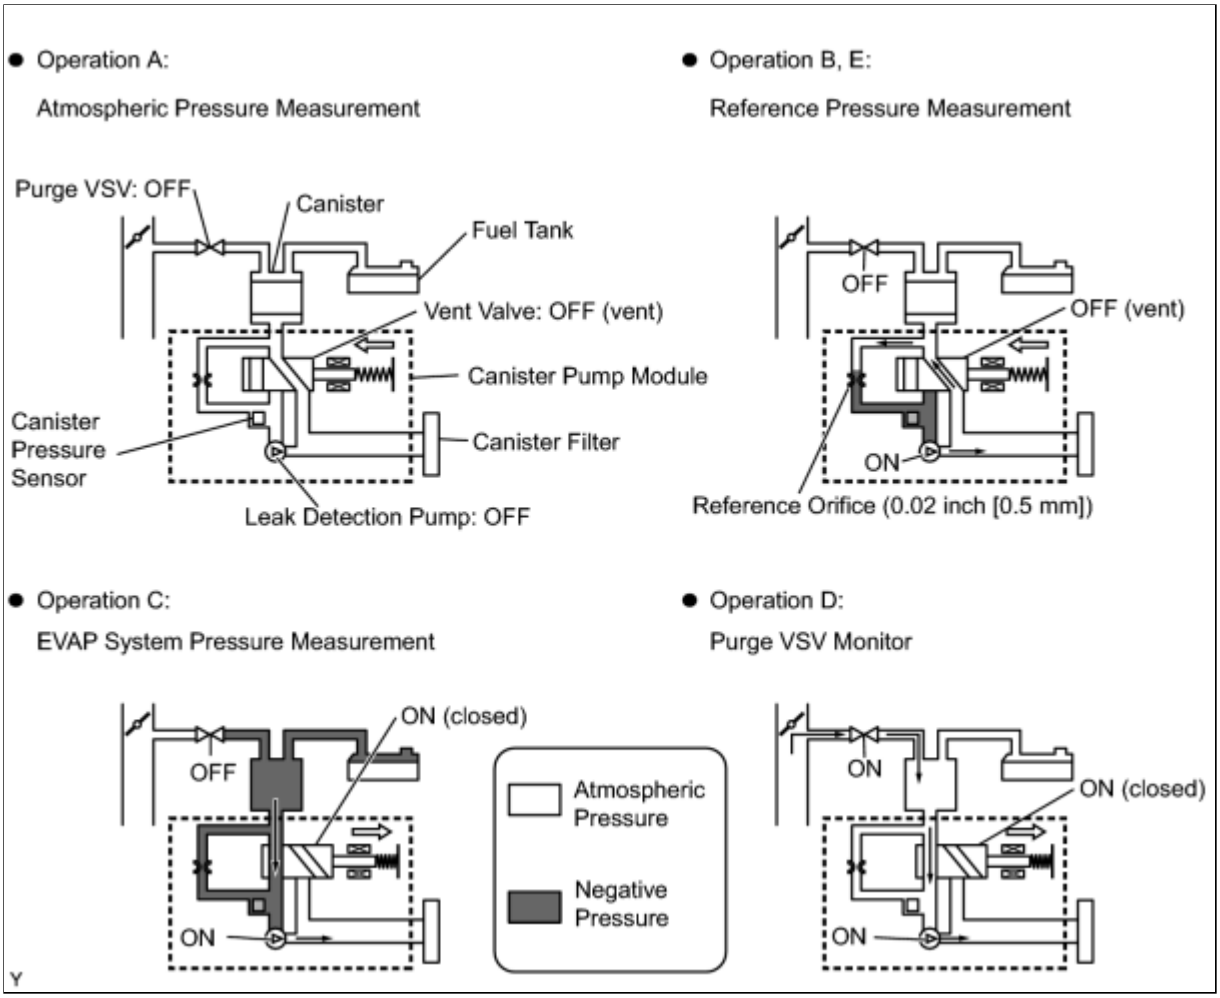
Refer to the EVAP System INFO .

HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, convert the unit of measurement according to the inspection procedure.

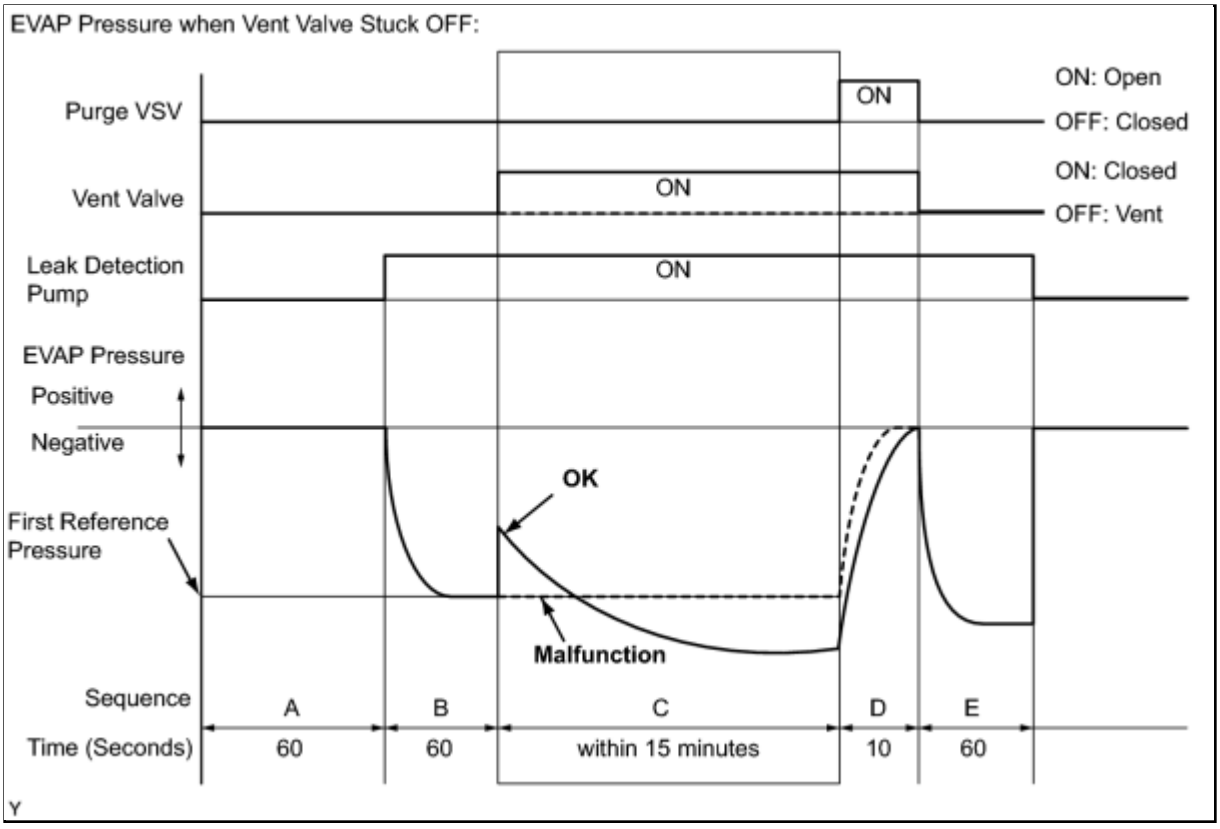
MONITOR DESCRIPTION



5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**



SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	Activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure measured by ECM in order to register atmospheric pressure. If pressure in EVAP system not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine reference pressure, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut EVAP system. Negative pressure (vacuum) created in EVAP system, and EVAP system pressure then measured. Write down measured value as it will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV opened and then EVAP system pressure measured by ECM. Large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check performed by comparing first and second reference pressure. If stabilized system pressure higher than second reference pressure, ECM determines that EVAP system leaking.	60 seconds
-	Final check	Atmospheric pressure measured and then monitoring result recorded by ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

P2420: Vent valve stuck open (vent)

In operation C, the vent valve turns ON (closes) and the EVAP system pressure is then measured by the ECM using the canister pressure sensor to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
EVAP key-off monitor runs when all of following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 4 km/h (2.5 mph)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours

Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

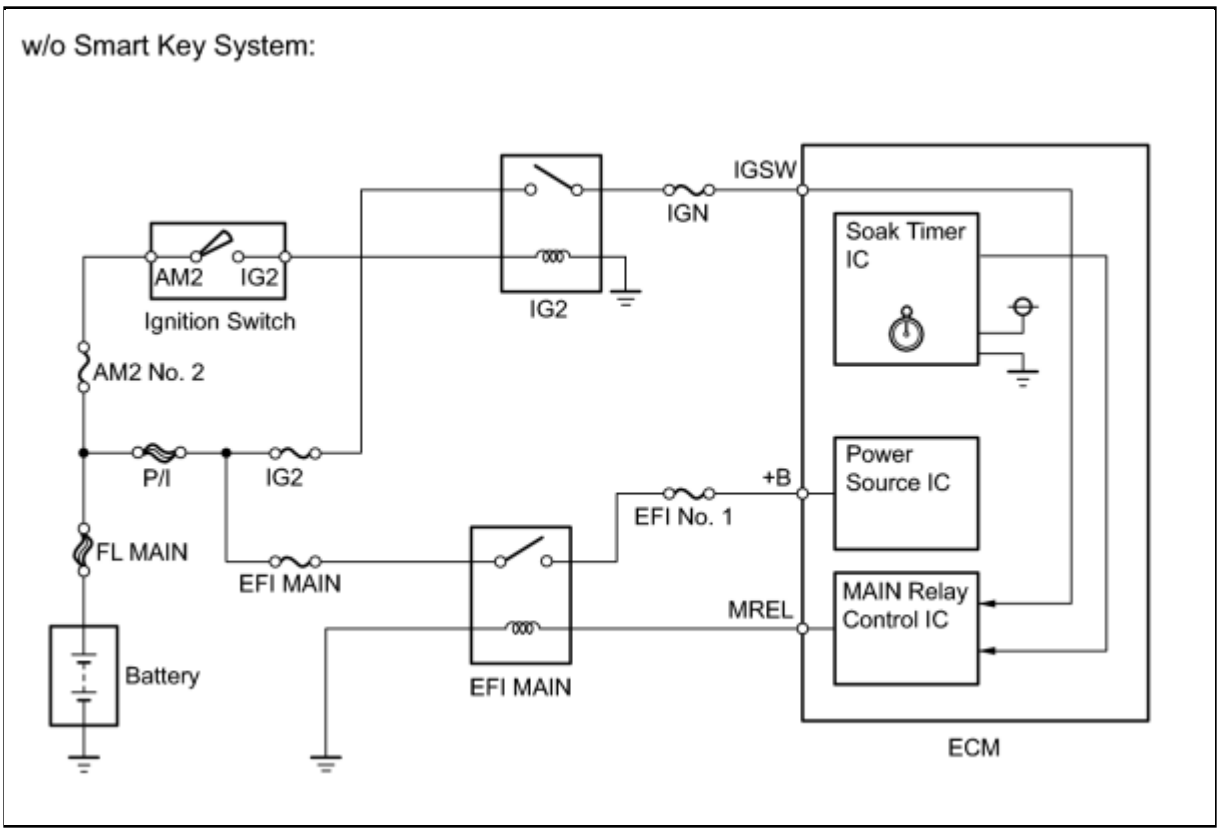
TYPICAL MALFUNCTION THRESHOLDS

EVAP pressure change after EVAP canister vent valve ON	Less than 0.3 kPa-g (2.25 mmHg-g)

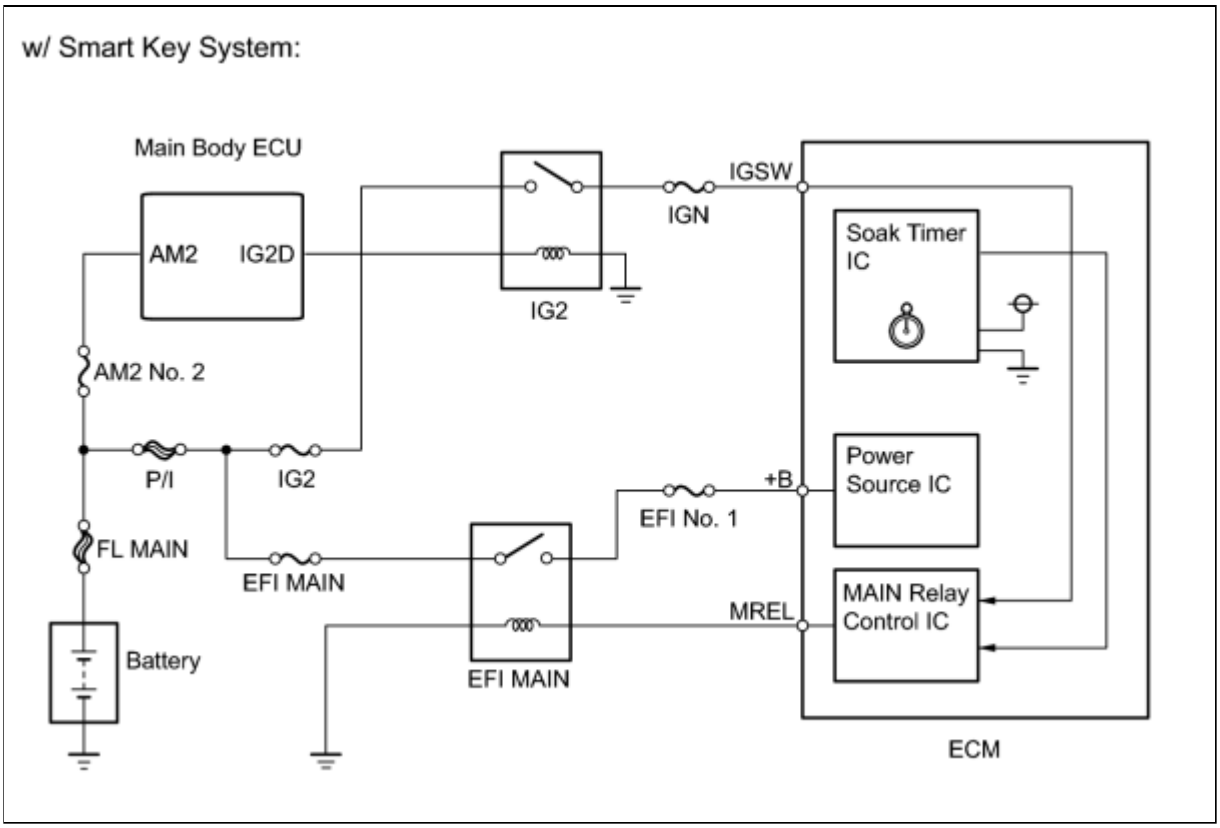
MONITOR RESULT

Refer to Checking Monitor Status INFO .

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T6X053X
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2610: ECM / PCM Internal Engine Off Timer Performance (2010 Corolla)		



DTC	**P2610**	**ECM / PCM Internal Engine Off Timer Performance**



DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P2610	Soak timer (built into ECM)	ECM internal malfunction	ECM	Engine running	2 trip

DESCRIPTION

To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM, measures 5 hours (+/-15 minutes) from when the ignition switch is turned off, before the monitor is run. This allows the fuel to cool down, which stabilizes the EVAP pressure. When 5 hours have elapsed, the ECM turns on the EVAP System monitor.

MONITOR DESCRIPTION

5 hours after the ignition switch is turned off, the soak timer activates the ECM to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	ECM
Frequency of Operation	Once per driving cycle
Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTC not present	None
Ignition switch	ON
Engine	Running

Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Soak timer measurement when ECM CPU clock counts 10 minutes	Less than 7 minutes, or more than 13 minutes

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM problem is detected. Diagnostic procedures are not required. ECM replacement is necessary.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**REPLACE ECM**

(a) Replace the ECM INFO .

NEXT

2.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P2610)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Switch the ECM from normal mode to check mode.

(f) Start the engine and wait for 10 minutes or more.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) If no pending DTC is displayed, the repair has been successfully completed.

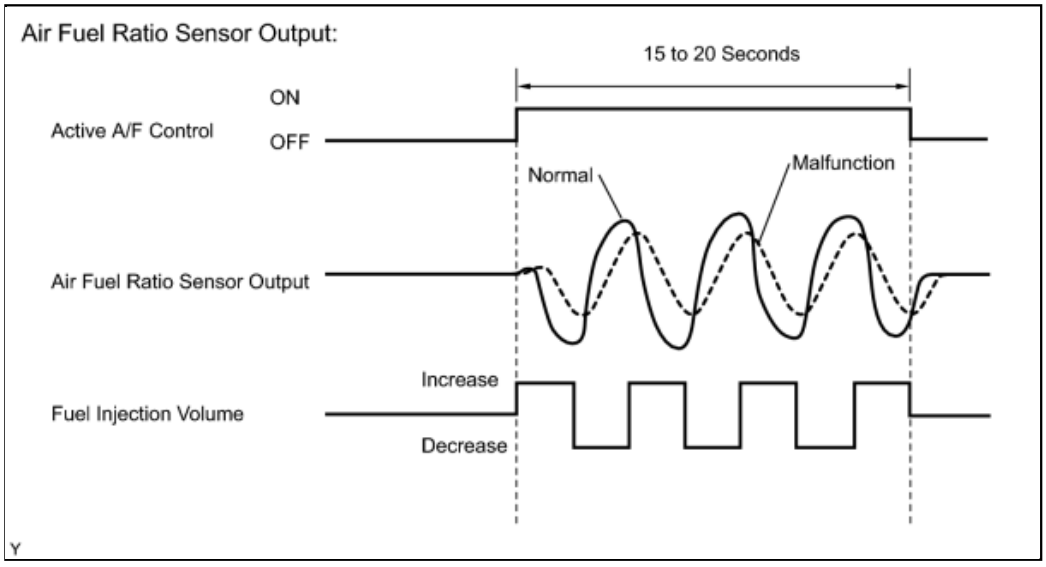
NEXT END

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC205RX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: P2A00: A/F Sensor Circuit Slow Response (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P2A00**	**A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)**

DESCRIPTION

HINT:



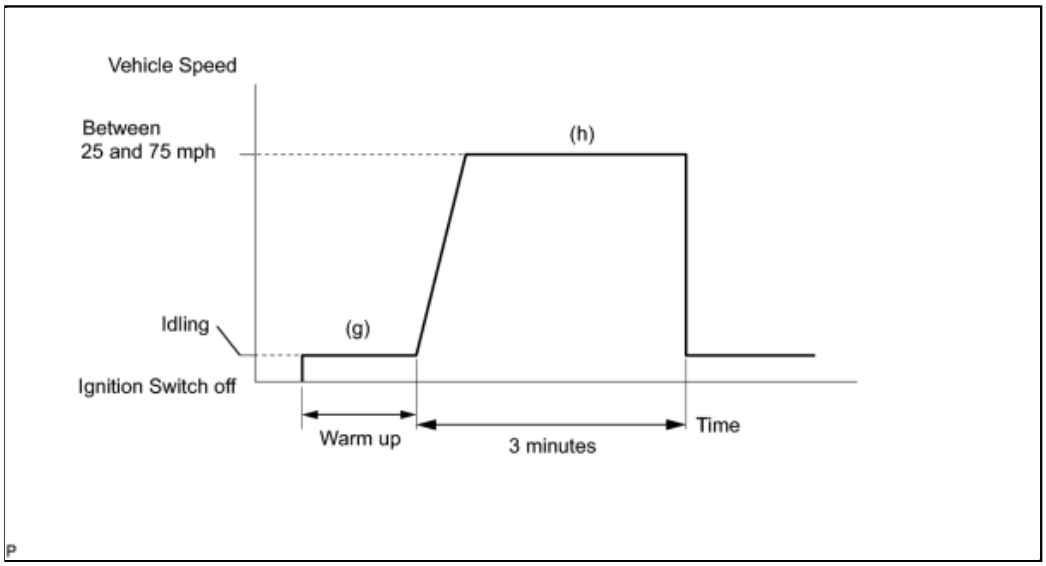
- Refer to DTC P2195 INFO .
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2A00	Calculated value for air fuel ratio sensor response rate deterioration level is less than threshold (2 trip detection logic)	• Air fuel ratio sensor • Air fuel ratio sensor heater • ECM

MONITOR DESCRIPTION

After engine is warmed up, the ECM performs air fuel ratio feedback control to maintain the air fuel ratio at the stoichiometric level. In addition, active A/F control is performed for approximately 15 to 20 seconds after preconditions are met in order to measure the air fuel ratio sensor response rate. During active A/F control, the ECM forcibly increases and decreases the injection volume a certain amount, based on the stoichiometric air fuel ratio learned during normal air fuel ratio control, and measures the air fuel ratio sensor response rate. The ECM receives a signal from the air fuel ratio sensor while performing active A/F control and uses it to calculate the air fuel ratio sensor response rate deterioration level.

If the value for air fuel ratio sensor response rate deterioration level is beyond the threshold, the ECM interprets this as a malfunction and sets the DTC.



CONFIRMATION DRIVING PATTERN

HINT:

This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.

Performing this confirmation pattern will activate the air fuel ratio sensor response monitor.

(a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Clear DTCs INFO .
(e) Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details.
(f) Check that RES RATE B1S1 is Fail.
(g) Start the engine and warm it up.
(h) Drive the vehicle at between 25 mph and 75 mph (40 km/h and 120 km/h) for 3 minutes. However, the vehicle should be driven at a constant speed.
(i) Check that RES RATE B1S1 is Pass.
(j) Check the monitor result values on the Techstream by selecting the following menu items: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details / RES RATE B1S1 / Details.
(k) If the values indicated on the Techstream do not change, perform READINESS MONITOR DRIVE PATTERN for the air fuel ratio sensor and the heated oxygen sensor INFO .

HINT:

Completion of all air fuel ratio sensor monitors is required to change the value in RES RATE B1S1.

(l) Note the value of the RES RATE B1S1.
(m) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.
(n) Check the DTCs.

MONITOR STRATEGY

Related DTCs	P2A00: Air fuel ratio sensor (bank 1) slow response
Required Sensors/Components (Main)	Air fuel ratio sensor
Required Sensors/Components (Related)	Vehicle speed sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle

Duration	10 to 15 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0016 (VVT System Bank 1 - Misalignment) P0017 (Exhaust VVT System - Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1) P0102, P0103 (Mass Air Flow Meter) P0112, P0113 (Intake Air Temperature Sensor) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0128 (Thermostat) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0451, P0452 (EVAP System) P0500 (Vehicle Speed Sensor) P0505 (Vehicle Speed Sensor IAC Valve)
Active air fuel ratio control	Performing
Active air fuel ratio control performed when following conditions met	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	OFF
Engine RPM	Less than 4000 rpm
Air fuel ratio sensor status	Activated
Fuel-cut	OFF
Engine load	10 to 70%
Shift position	2 or more
Catalyst monitor	Not yet
Intake air amount	4 to 16 gm/sec

TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.12 V

MONITOR RESULT

Refer to Checking Monitor Status 

.

WIRING DIAGRAM

Refer to DTC P2195 INFO .

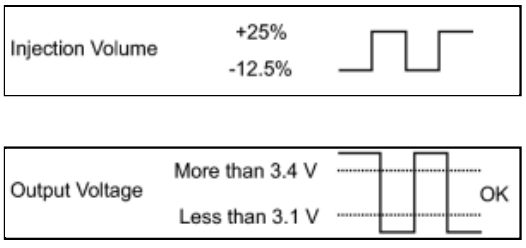
INSPECTION PROCEDURE

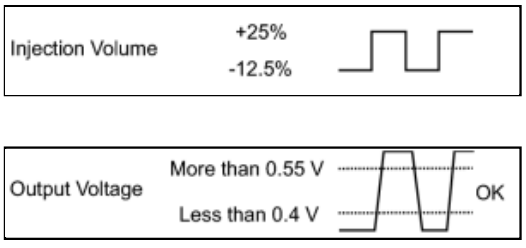
HINT:

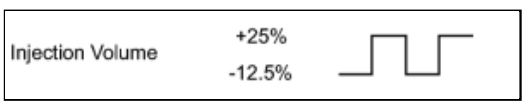
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

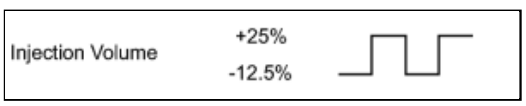
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

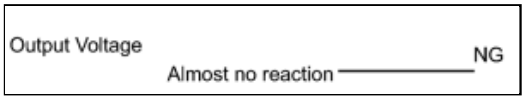


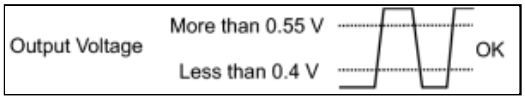


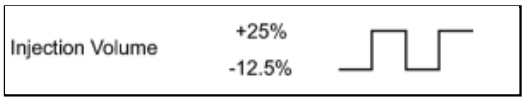


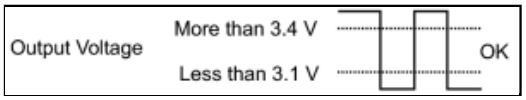


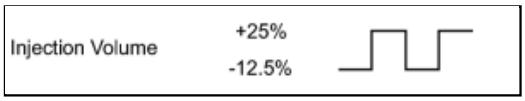
HINT:

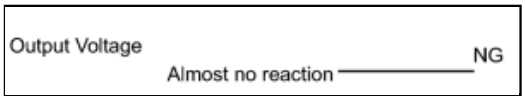


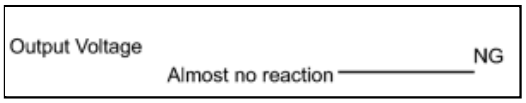


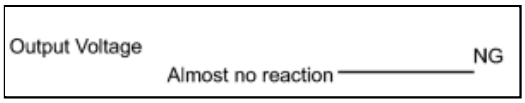












- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			ratio sensor heater • Air fuel ratio sensor circuit
3	 	 	• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4	 	 	• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- DTC P2A00 may be also set, when the air fuel ratio is stuck rich or lean.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P2A00 is output	A
DTC P2A00 and other DTCs are output	B

HINT:

If any DTCs other than P2A00 are output, troubleshoot those DTCs first.

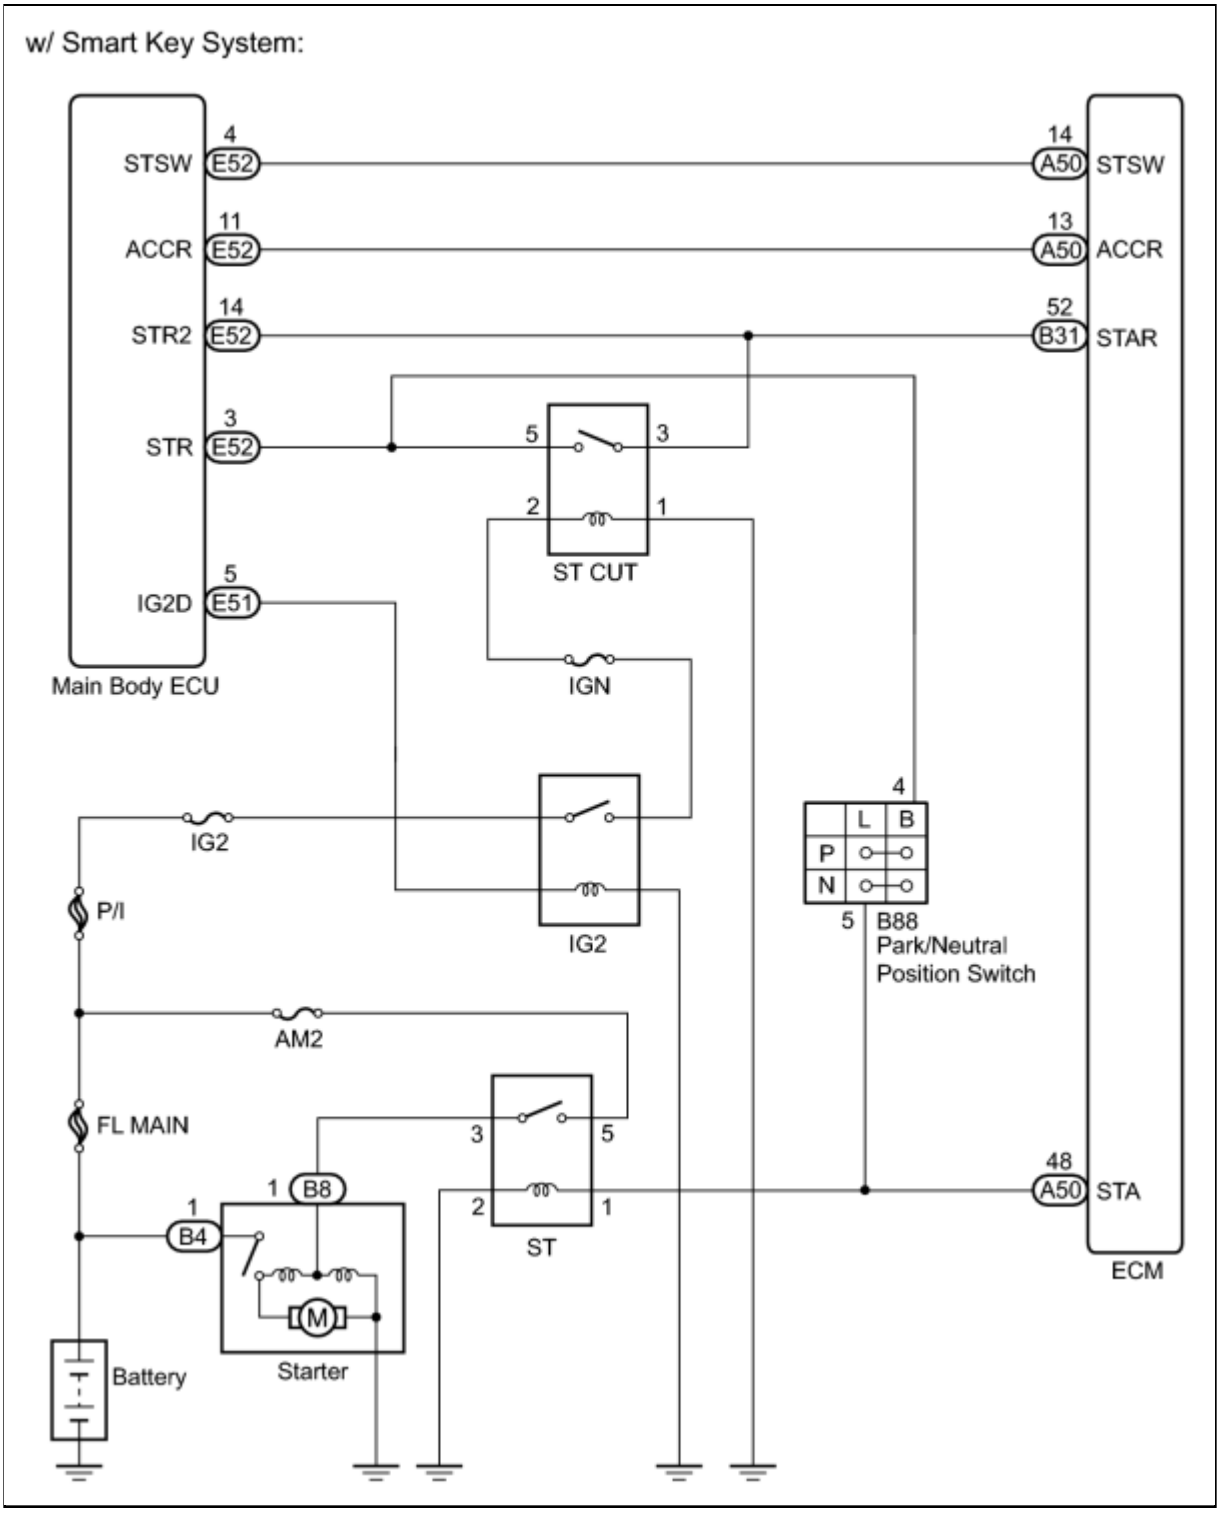
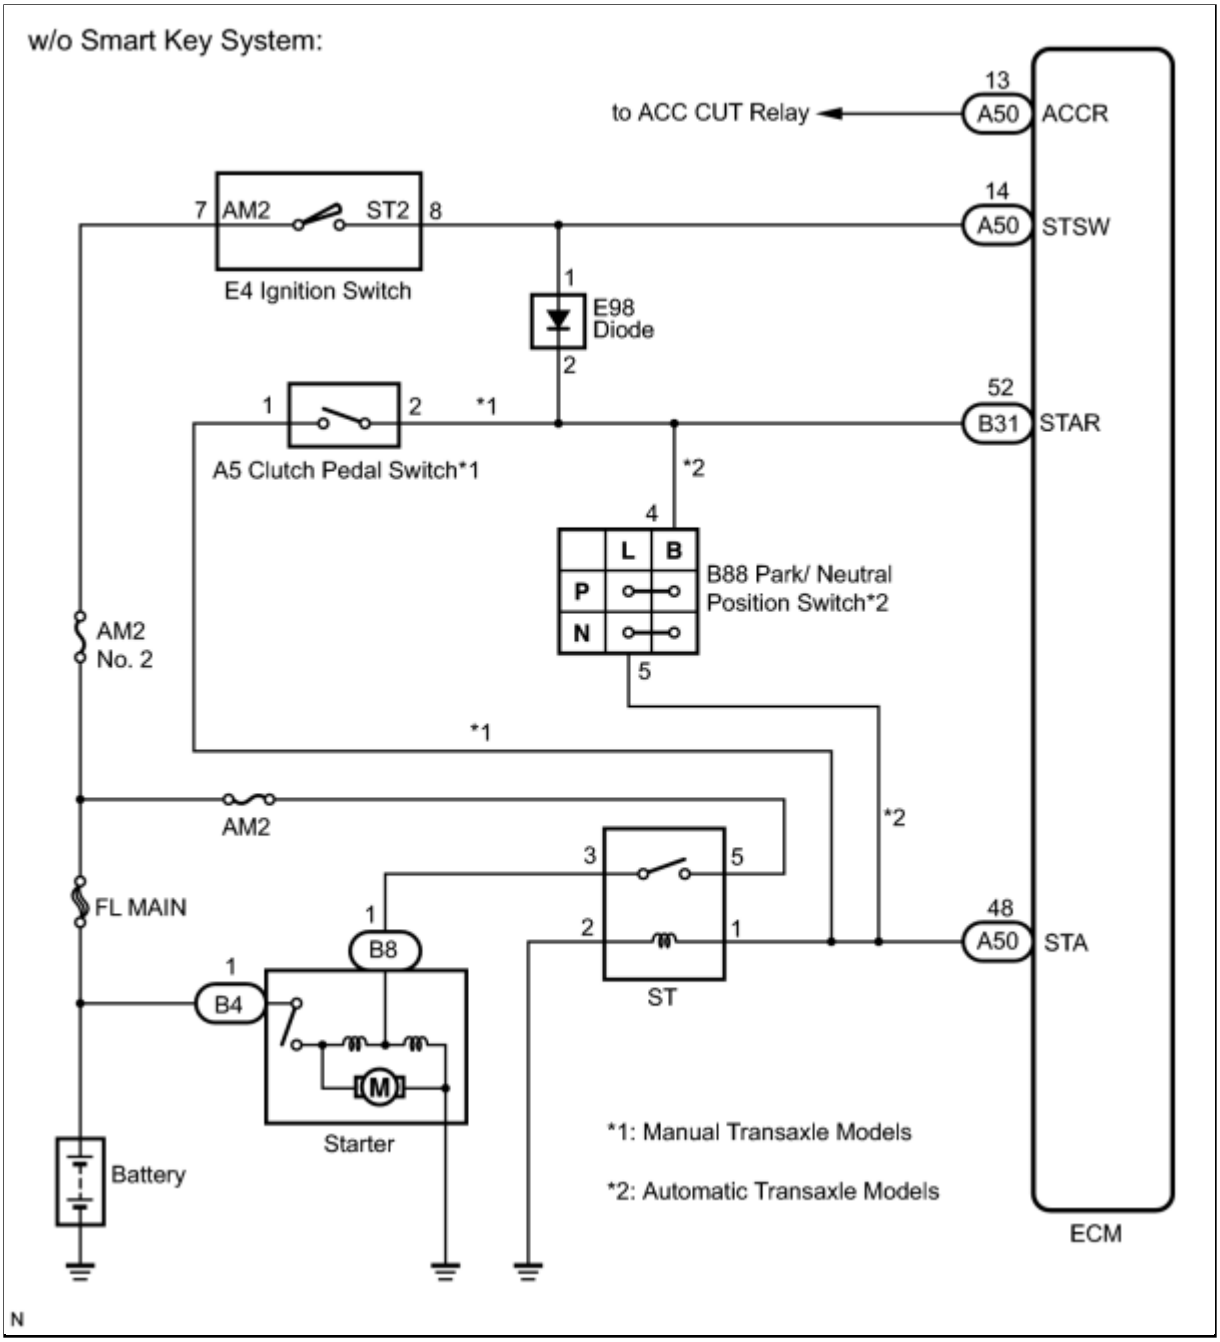
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: Cranking Holding Function Circuit (2010 Corolla)		

Cranking Holding Function Circuit



DESCRIPTION



The cranking holding control system keeps energizing the ST relay after the ECM detects the starter signal (STSW signal) from the main body ECU until the ECM performs a judgment of "Engine started". Furthermore, the ECM outputs an accessory cut signal (ACCR signal) to the ACC relay during cranking to prevent flickering of the combination meter, clock, audio system, and other areas.

When the ECM detects the STSW signal, the ECM outputs the starter relay drive signal (STAR signal) to the starter relay through the clutch pedal switch assembly or park/neutral position switch, and then the engine is cranked. When the ECM receives a stable engine speed signal (NE signal) (more specifically, when the NE signal reaches a predetermined value), the ECM stops outputting the STAR signal. Also, the ECM monitors the ST relay operating conditions based on the STA terminal voltage status.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (STARTER SIGNAL)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream ON.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Starter Signal.

(e) Move the shift lever to P or N (for automatic transaxle models).

(f) Fully depress the clutch pedal (for manual transaxle models).

(g) Depress the brake pedal (w/ Smart Key System).

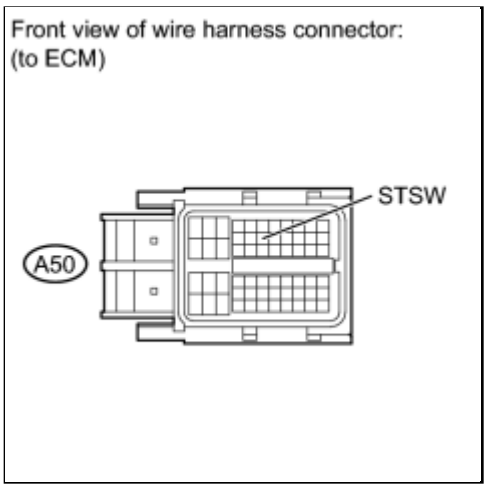
(h) Check the result when the ignition switch is turned ON and START positions.

OK:

IGNITION SWITCH CONDITION	TECHSTREAM DISPLAY (STARTER SIGNAL)
Ignition switch ON	OFF
START	ON

Result:

RESULT	PROCEED TO
NG (w/o Smart key system)	A
NG (w/ Smart key system)	B
OK	C



C ▶ **INSPECT ST RELAY (VOLTAGE)**

B ▶ **INSPECT ECM (STSW TERMINAL VOLTAGE)**

A ▼

2.	**INSPECT ECM (STSW TERMINAL VOLTAGE)**

(a) Disconnect the ECM connector.

(b) Crank the engine.

(c) Measure the voltage according to the value(s) in the table below.

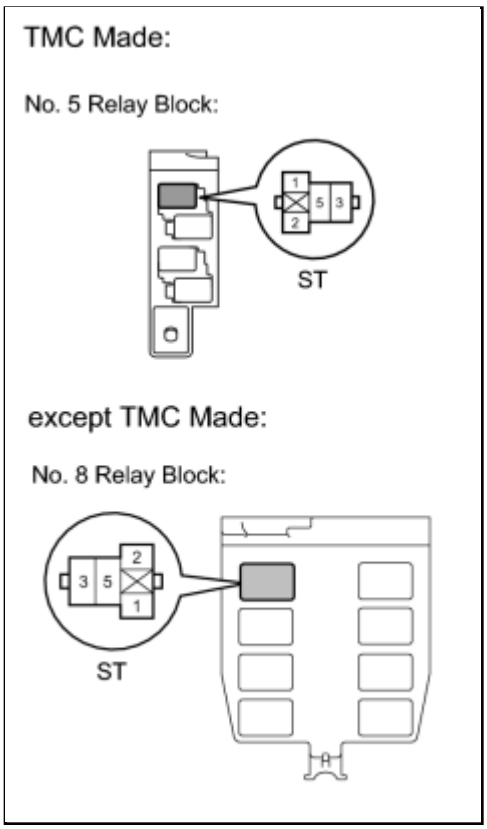
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A50-14 (STSW) - Body ground	Ignition switch ON	Below 1 V
A50-14 (STSW) - Body ground	START	8 to 14 V

(d) Reconnect the ECM connector.

HINT:

DTCs related to the communication with other computers may be set due to this inspection. Clear those DTCs after inspection.



NG ▶ **INSPECT FUSE (AM2 NO. 2 FUSE)**

OK
▼

3.	**INSPECT RELAY (ST RELAY VOLTAGE)**

(a) Remove the ST relay from the No. 5 relay block (TMC made).

(b) Remove the ST relay from the No. 8 relay block (except TMC made).

(c) Move the shift lever the P or N position (for automatic transaxle models).

(d) Fully depress the clutch pedal (for manual transaxle models).

(e) Crank the engine.

(f) Measure the voltage according to the value(s) in the table below.

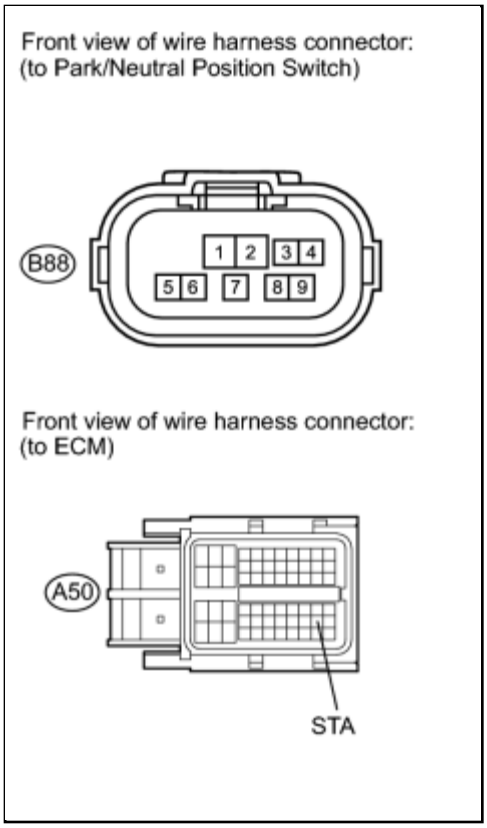
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
ST relay terminal 1 - Body ground	ON	Below 1 V
ST relay terminal 1 - Body ground	START	9 to 13 V

(g) Reinstall the ST relay.

Result:

RESULT	PROCEED TO
OK (for automatic transaxle models)	A
OK (for manual transaxle models)	B
NG (for automatic transaxle models)	C
NG (for manual transaxle models)	D



D INSPECT CLUTCH PEDAL SWITCH

INSPECT PARK/NEUTRAL POSITION SWITCH

B CHECK HARNESS AND CONNECTOR (CLUTCH PEDAL SWITCH - ECM)

A

4.	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the park/neutral position switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

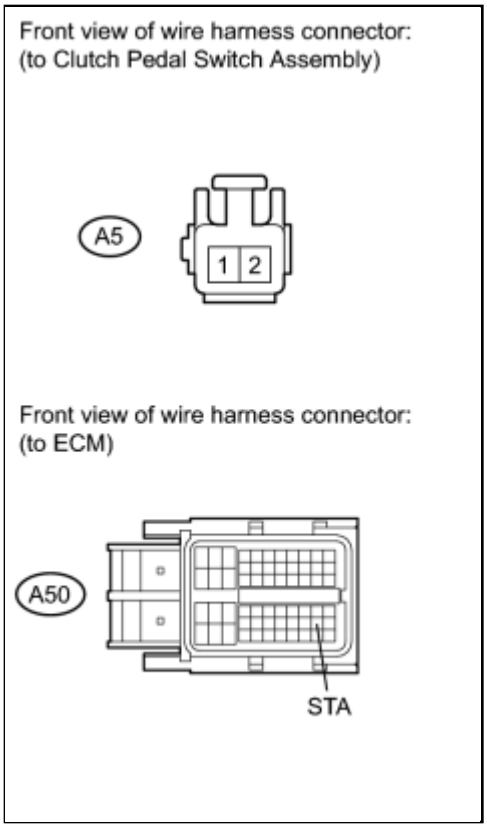
Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-5 - A50-48(STA)	Always	Below 1 Ω

Standard Resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-5 or A50-48(STA) - Body ground	Always	10 kΩ or higher



(d) Reconnect the ECM connector.

(e) Reconnect the park/neutral position switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

OK ▶ **REPLACE ECM**

5.	CHECK HARNESS AND CONNECTOR (CLUTCH PEDAL SWITCH - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the clutch pedal switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-1 - A50-48 (STA)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-1 or A50-48 (STA) - Body ground	Always	10 kΩ or higher

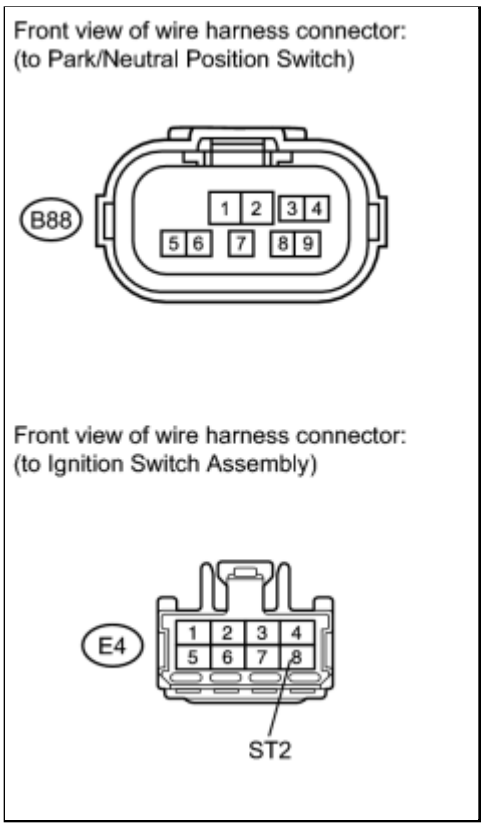
(d) Reconnect the ECM connector.

(e) Reconnect the clutch pedal switch connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CLUTCH PEDAL SWITCH - ECM)**

OK ▶ **REPLACE ECM**

6.	**INSPECT PARK/NEUTRAL POSITION SWITCH**



(a) Inspect the park/neutral position switch INFO.

NG ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (IGNITION SWITCH ASSEMBLY - PARK/NEUTRAL POSITION SWITCH)**

(a) Disconnect the park/neutral position switch connector.

(b) Disconnect the ignition switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

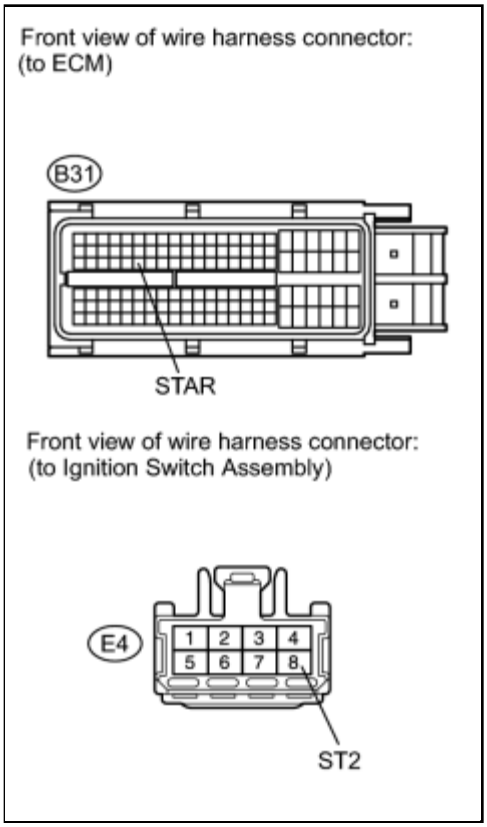
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) (+) - B88-4 (-)	Always	Below 1 Ω
E4-8 (ST2) (-) - B88-4 (+)	Always	10 kΩ or higher

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) or B88-4 - Body ground	Always	10 kΩ or higher

HINT:

When measuring the resistance, it is necessary to reverse the positive (+) and negative (-) tester probes because there is a diode in the wire harness.



(d) Reconnect the park/neutral position switch connector.

(e) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH ASSEMBLY - PARK/NEUTRAL POSITION SWITCH)**

OK

8.	CHECK HARNESS AND CONNECTOR (IGNITION SWITCH ASSEMBLY - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the ignition switch assembly connector.

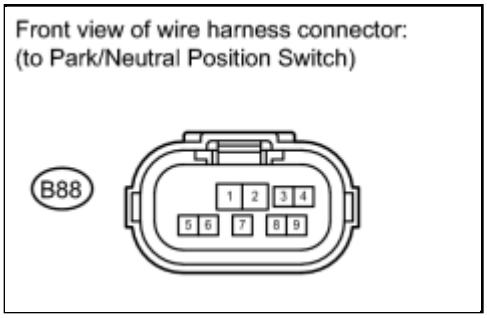
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) - E31-52 (STAR)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) or B31-52 (STAR) - Body ground	Always	10 kΩ or higher

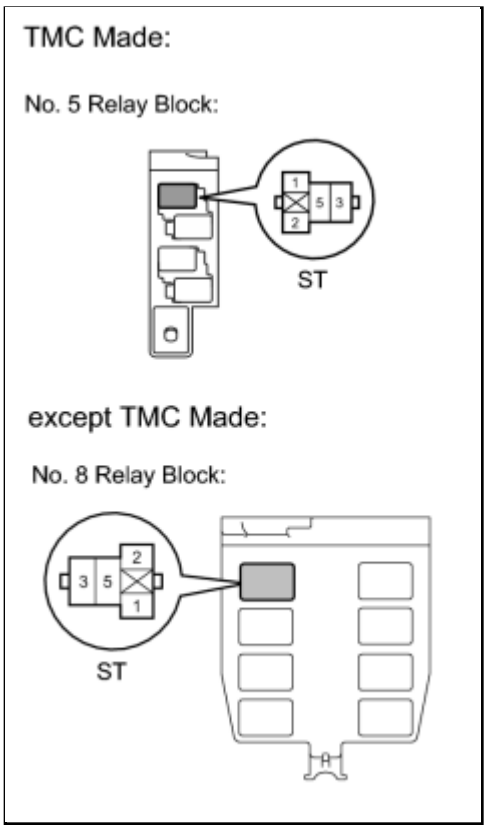


(d) Reconnect the ECM connector.

(e) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH ASSEMBLY - ECM)**

OK ▼



9.	**CHECK HARNESS AND CONNECTOR (ST RELAY - PARK/NEUTRAL POSITION SWITCH)**

(a) Disconnect the park/neutral position switch connector.

(b) Remove the ST relay from the No. 5 relay block (TMC made).

(c) Remove the ST relay from the No. 8 relay block (except TMC made).

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST relay terminal 1 - B88-5	Always	Below 1 Ω

Standard Resistance (Check for Short):

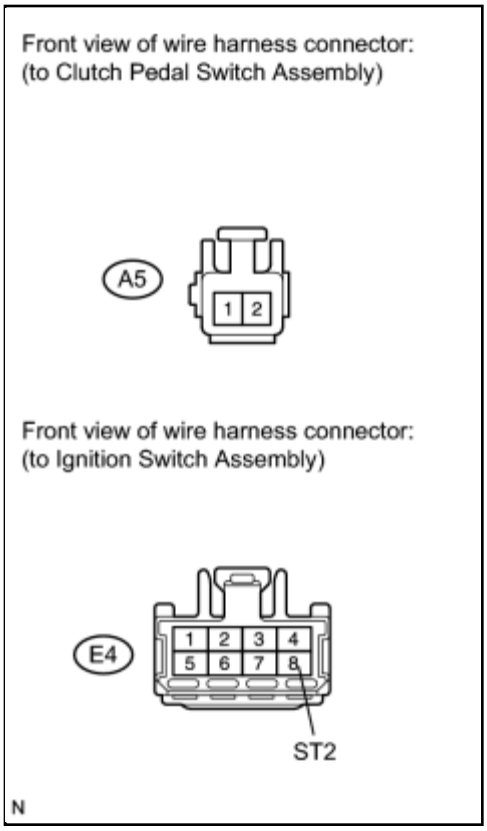
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST relay terminal 1 or B88-5 - Body ground	Always	10 kΩ or higher

(e) Reconnect the park/neutral position switch connector.

(f) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST RELAY - PARK/NEUTRAL POSITION SWITCH)**

OK ▶ **REPLACE ECM**



10.	**INSPECT CLUTCH PEDAL SWITCH**

(a) Inspect the clutch pedal switch INFO .

NG ▶ **REPLACE CLUTCH PEDAL SWITCH**

OK ▼

11.	**CHECK HARNESS AND CONNECTOR (IGNITION SWITCH ASSEMBLY - CLUTCH PEDAL SWITCH)**

(a) Disconnect the clutch pedal switch connector.

(b) Disconnect the ignition switch assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) (+) - A5-2 (-)	Always	Below 1 Ω
E4-8 (ST2) (-) - A5-2 (+)	Always	10 kΩ or higher

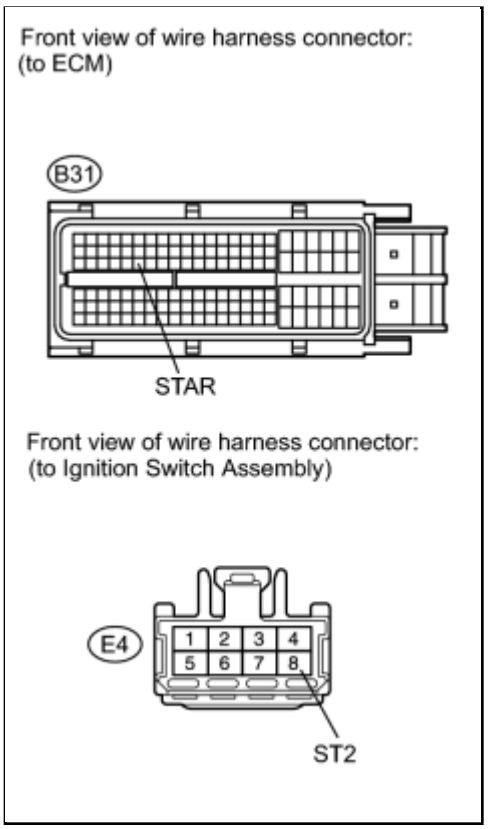
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) or A5-2 - Body ground	Always	10 kΩ or higher

HINT:

When measuring the resistance, it is necessary to reverse the positive (+) and negative (-) tester probes because there is a diode in the wire harness.

(d) Reconnect the clutch pedal switch connector.



(e) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH ASSEMBLY - CLUTCH PEDAL SWITCH)**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (IGNITION SWITCH ASSEMBLY - ECM)**

(a) Disconnect the ECM connector.

(b) Disconnect the ignition switch assembly connector.

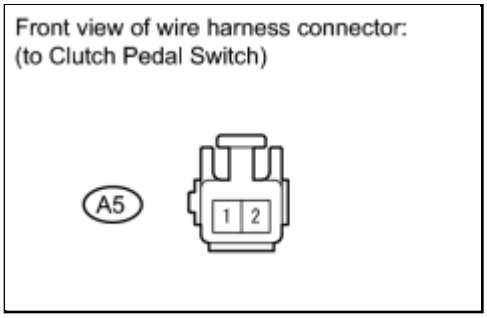
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) - B31-52 (STAR)	Always	Below 1 Ω

Standard Resistance (Check for Short):

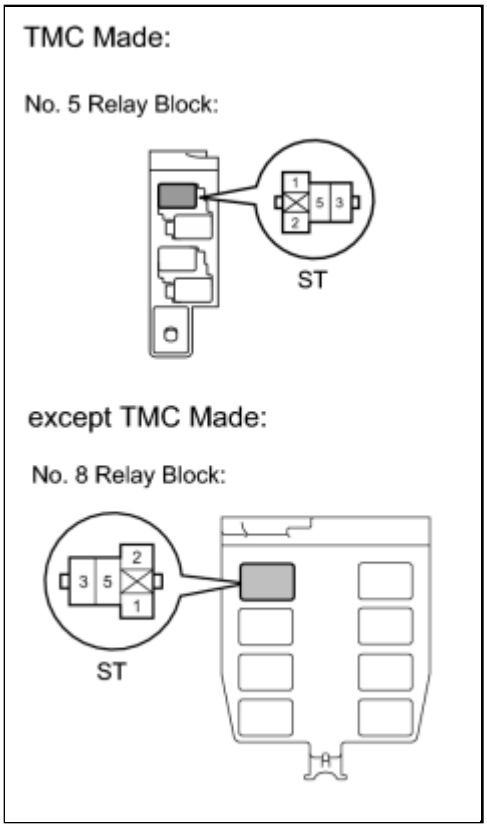
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-8 (ST2) or B31-52 (STAR) - Body ground	Always	10 kΩ or higher



(d) Reconnect the ECM connector.

(e) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH ASSEMBLY - ECM)**



OK ▼

13.	CHECK HARNESS AND CONNECTOR (ST RELAY - CLUTCH PEDAL SWITCH)

(a) Disconnect the clutch pedal switch connector.

(b) Remove the ST relay from the No. 5 relay block (TMC made).

(c) Remove the ST relay from the No. 8 relay block (except TMC made).

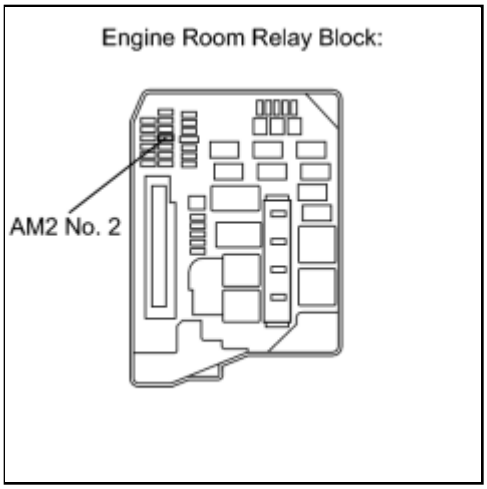
(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST relay terminal 1 - A5-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST relay terminal 1 or A5-1 - Body ground	Always	10 kΩ or higher



(e) Reconnect the clutch pedal switch connector.

(f) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST RELAY - CLUTCH PEDAL SWITCH)**

OK ▶ **REPLACE ECM**

14.	**INSPECT FUSE (AM2 NO. 2 FUSE)**

(a) Remove the AM2 No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

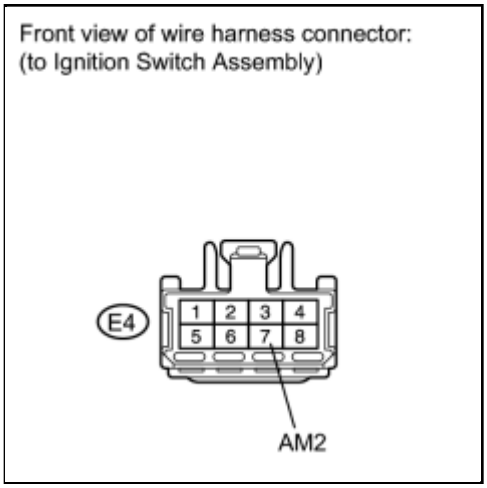
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AM2 No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the AM2 No. 2 fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK



15.	INSPECT IGNITION SWITCH ASSEMBLY

(a) Inspect the ignition switch assembly INFO .

NG ▶ REPLACE IGNITION SWITCH ASSEMBLY

OK ▼

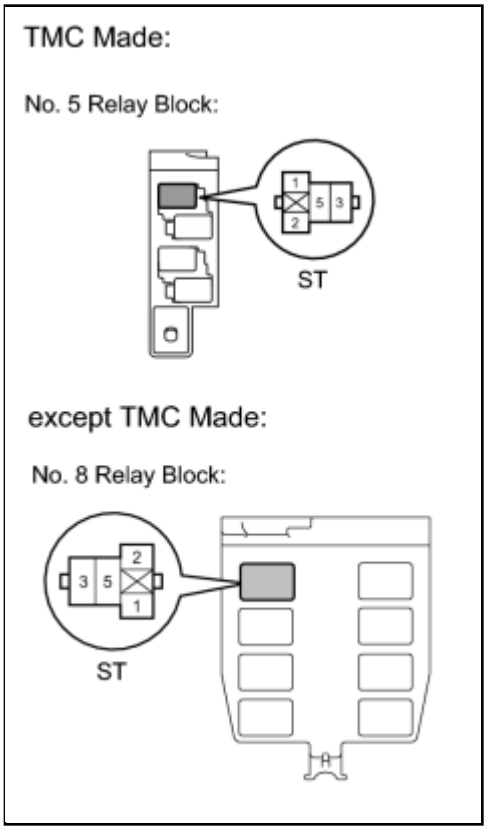
16.	CHECK HARNESS AND CONNECTOR (AM2 TERMINAL VOLTAGE)

(a) Disconnect the ignition switch assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-7 (AM2) - Body ground	Always	11 to 14 V



(c) Reconnect the ignition switch assembly connector.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - IGNITION SWITCH ASSEMBLY)

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH ASSEMBLY - ECM)**

17.	INSPECT ST RELAY (VOLTAGE)

(a) Remove the ST relay from the No. 5 relay block (TMC made).

(b) Remove the ST relay from the No. 8 relay block (except TMC made).

(c) Move the shift lever to the P or N position (for automatic transaxle models).

(d) Fully depress the clutch pedal (for manual transaxle models).

(e) Crank the engine.

(f) Measure the voltage according to the value(s) in the table below.

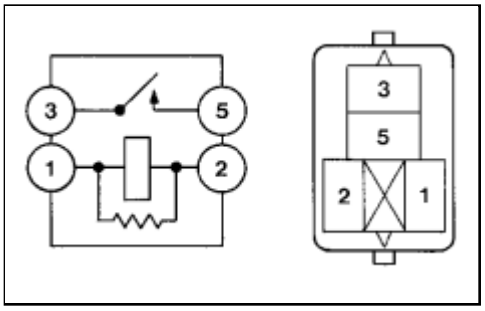
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
ST relay terminal 1 - Body ground	ON	Below 1 V
ST relay terminals 1 - Body ground	START	9 to 13 V

(g) Reinstall the ST relay.

Result:

RESULT	PROCEED TO
OK	A
NG (for automatic transaxle models)	B
NG (for manual transaxle models)	C



C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST RELAY - CLUTCH PEDAL SWITCH)**

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST RELAY - PARK/NEUTRAL POSITION SWITCH)**

A ▼

18.	**INSPECT RELAY (ST RELAY)**

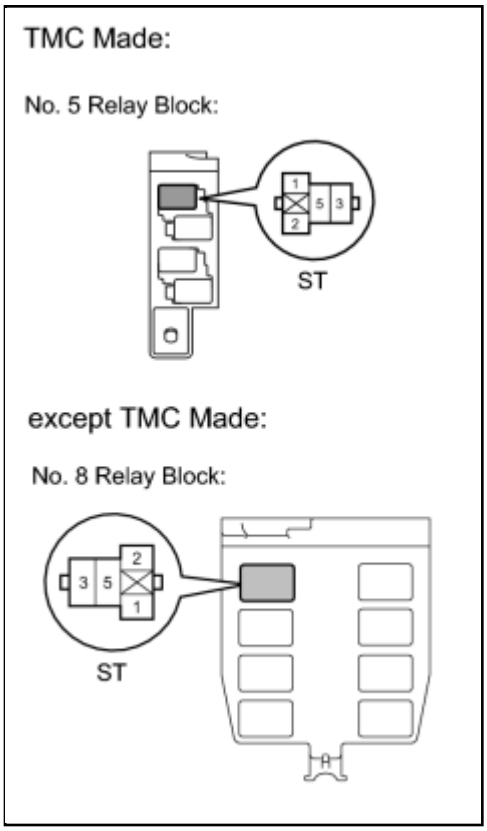
(a) Remove the ST relay from the No. 5 relay block (TMC made).

(b) Remove the ST relay from the No. 8 relay block (except TMC made).

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3-5	Always	10kΩ or higher
3-5	Apply battery voltage between terminal 1 and 2	Below 1 Ω



(d) Reinstall the ST relay.

NG ▶ **REPLACE RELAY (ST RELAY)**

OK

19.	INSPECT ST RELAY (VOLTAGE)

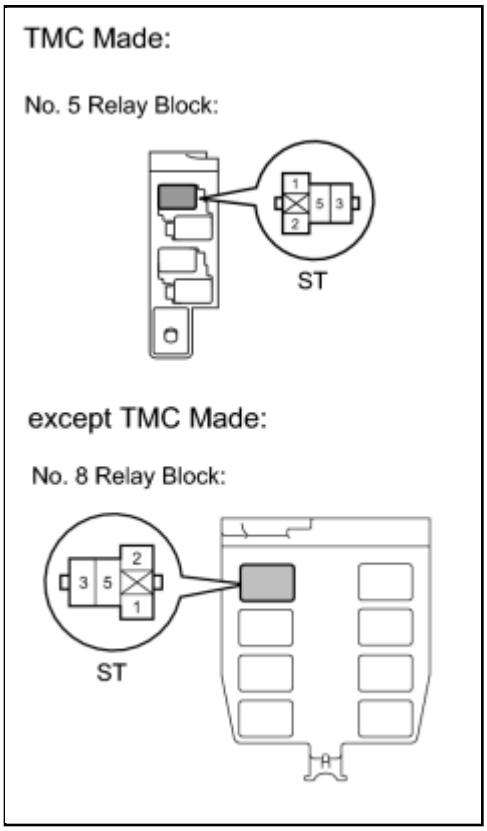
(a) Remove the ST relay from the No. 5 relay block (TMC made).

(b) Remove the ST relay from the No. 8 relay block (except TMC made).

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
ST relay terminal 5 - Body ground	Ignition switch ON	11 to 14 V



(d) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - ST RELAY)**

OK

20.	CHECK HARNESS AND CONNECTOR (ST RELAY - BODY GROUND)

(a) Remove the ST relay from the No. 5 relay block (TMC made).

(b) Remove the ST relay from the No. 8 relay block (except TMC made).

(c) Measure the resistance according to the value(s) in the table below.

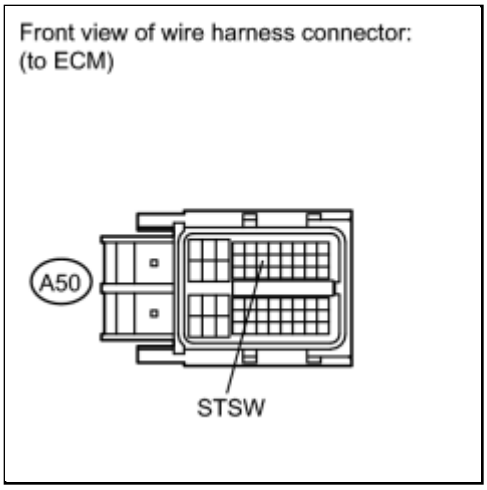
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST relay terminal 2 - Body ground	Always	Below 1 Ω

(d) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST RELAY - BODY GROUND)**

OK



21.	INSPECT STARTER ASSEMBLY

(a) Inspect the starter assembly INFO .

NG ▶ **REPLACE STARTER ASSEMBLY**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - STARTER - ST RELAY)**

22.	INSPECT ECM (STSW TERMINAL VOLTAGE)

(a) Disconnect the ECM connector.

(b) Move the shift lever to the P or N position.

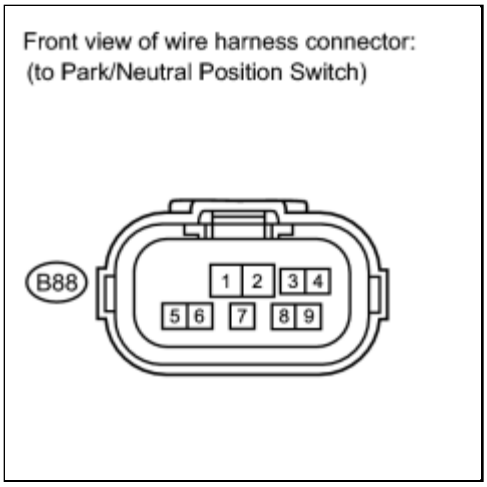
(c) Crank the engine.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A50-14 (STSW) - Body ground	ON	Below 1 V
A50-14 (STSW) - Body ground	START	9 to 13 V

(e) Reconnect the ECM connector.



HINT:

DTCs related to the communication with other computers may be set due to this inspection. Clear those DTCs after inspection.

NG ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ECM)**

OK ▼

23.	INSPECT PARK/NEUTRAL POSITION SWITCH (VOLTAGE)

(a) Disconnect the park/neutral position switch connector.

(b) Move the shift lever to the P or N position.

(c) Crank the engine.

(d) Measure the voltage according to the value(s) in the table below.

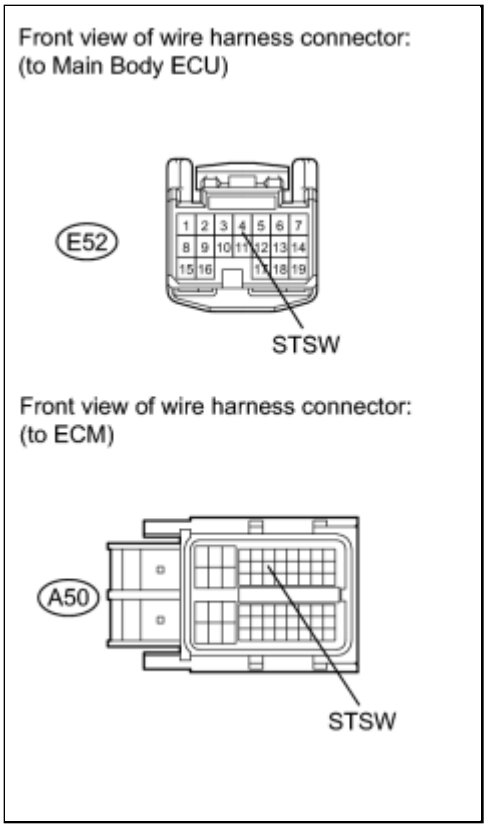
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B88-4 - Body ground	ON	Below 1 V
B88-4 - Body ground	START	9 to 13 V

(e) Reconnect the park/neutral position switch connector.

NG ▶ **INSPECT RELAY (ST CUT RELAY)**

OK



24.	INSPECT PARK/NEUTRAL POSITION SWITCH

(a) Inspect the park/neutral position switch INFO .

NG ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

25.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the main body ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

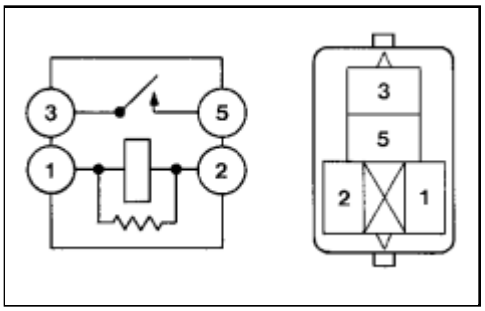
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-14 (STSW) - E52-4 (STSW)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-14 (STSW) or E52-4 (STSW) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.



(e) Reconnect the main body ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - ECM)**

OK ▶ **GO TO SMART KEY SYSTEM**

26.	INSPECT RELAY (ST CUT RELAY)

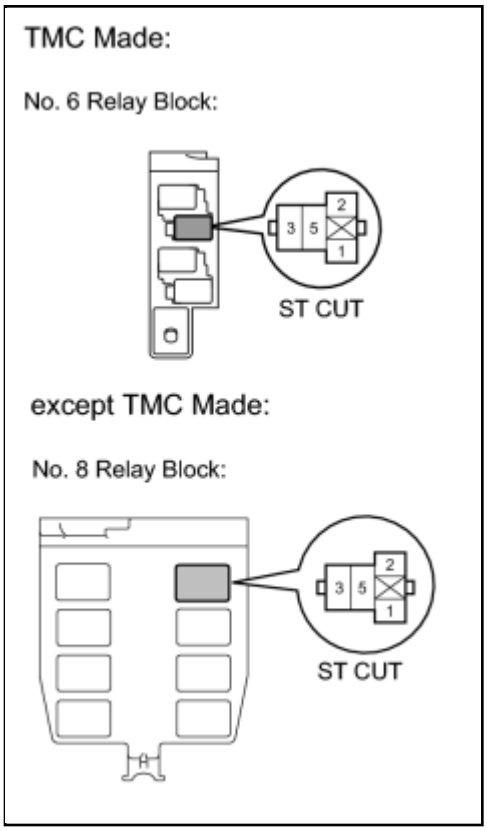
(a) Remove the ST CUT relay from the No. 6 relay block (TMC made).

(b) Remove the ST CUT relay from the No. 8 relay block (except TMC made).

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3-5	Always	10 kΩ or higher
3-5	Apply battery voltage between terminal 1 and 2	Below 1 Ω



(d) Reinstall the ST CUT relay.

NG ▶ **REPLACE RELAY (ST CUT RELAY)**

OK

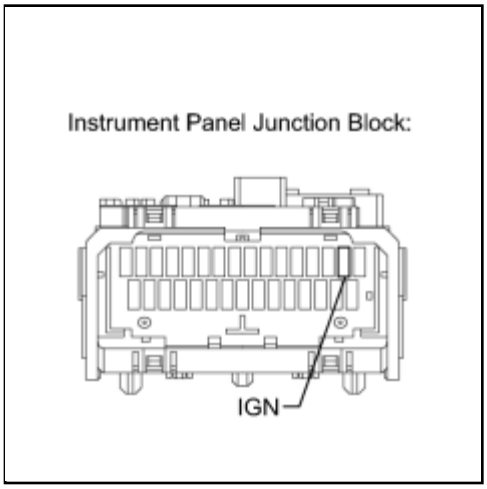
27.	CHECK HARNESS AND CONNECTOR (ST CUT RELAY - BODY GROUND)

(a) Remove the ST CUT relay from the No. 6 relay block (TMC made).

(b) Remove the ST CUT relay from the No. 8 relay block (except TMC made).

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 1 - Body ground	Always	Below 1 Ω

(d) Reinstall the ST CUT relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST CUT RELAY - BODY GROUND)**

OK

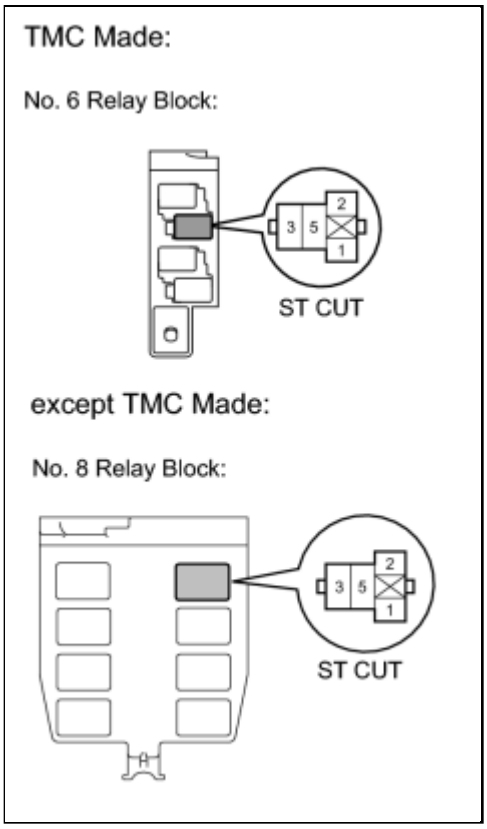
28.	**INSPECT FUSE (IGN FUSE)**

(a) Remove the IGN fuse from the instrument junction block.

(b) Measure the resistance according to the value(s) in the table below.

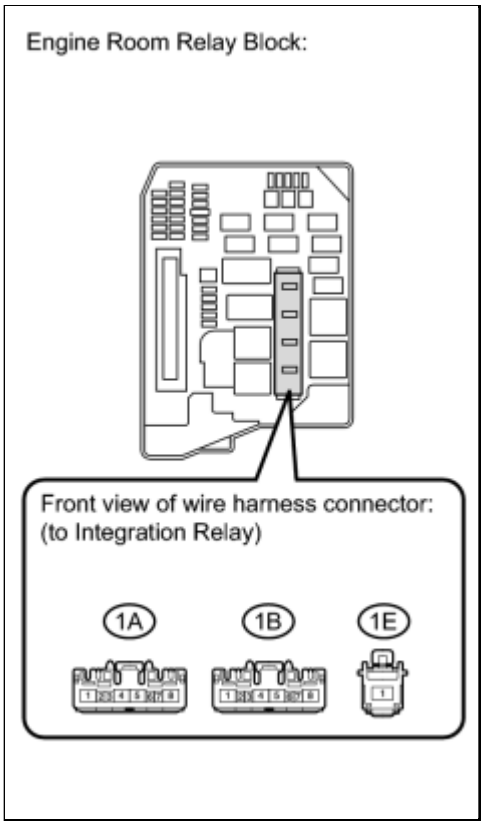
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IGN fuse	Always	Below 1 Ω



(c) Reinstall the IGN fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**



OK

29.	**CHECK HARNESS AND CONNECTOR (ST CUT RELAY - INTEGRATION RELAY (IG2 RELAY))**

(a) Remove the ST CUT relay from the No. 6 relay block (TMC made).

(b) Remove the ST CUT relay from the No. 8 relay block (except TMC made).

(c) Remove the integration relay from the engine room relay block.

(d) Disconnect the integration relay connector.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 2 - 1A-4	Always	Below 1 Ω

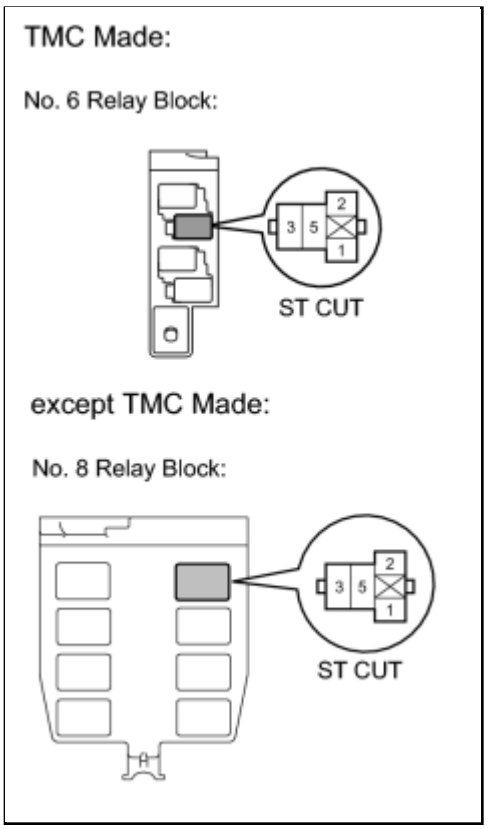
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 2 or 1A-4 - Body ground	Always	10 kΩ or higher

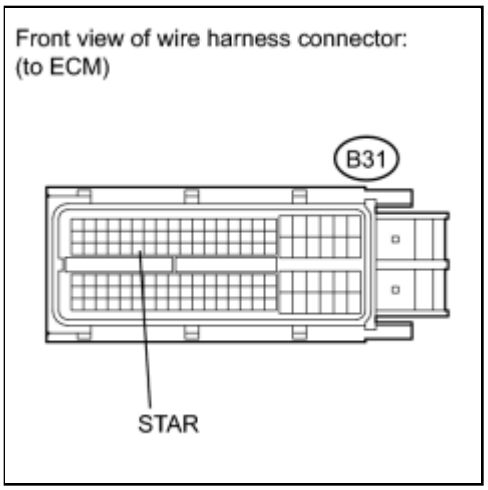
(f) Reinstall the ST CUT relay.

(g) Reconnect the integration relay connector.

(h) Reinstall the integration relay.



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST CUT RELAY - INTEGRATION RELAY (IG2 RELAY))**



OK ▼

30.	**CHECK HARNESS AND CONNECTOR (ST CUT RELAY - ECM)**

(a) Remove the ST CUT relay from the No. 6 relay block (TMC made).

(b) Remove the ST CUT relay from the No. 8 relay block (except TMC made).

(c) Disconnect the ECM connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

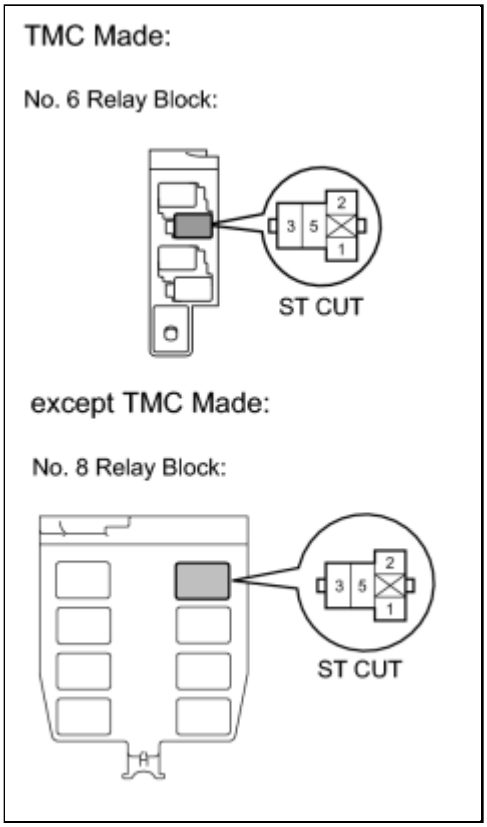
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 3 - B31-52 (STAR)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 3 or B31-52 (STAR) - Body ground	Always	10 kΩ or higher

(e) Reinstall the ST CUT relay.



(f) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST CUT RELAY - ECM)**

OK ▼

31.	CHECK HARNESS AND CONNECTOR (ST CUT RELAY - MAIN BODY ECU)

(a) Remove the ST CUT relay from the No. 6 relay block (TMC made).

(b) Remove the ST CUT relay from the No. 8 relay block (except TMC made).

(c) Disconnect the main body ECU connector.

(d) Measure the resistance according to the value(s) in the table below.

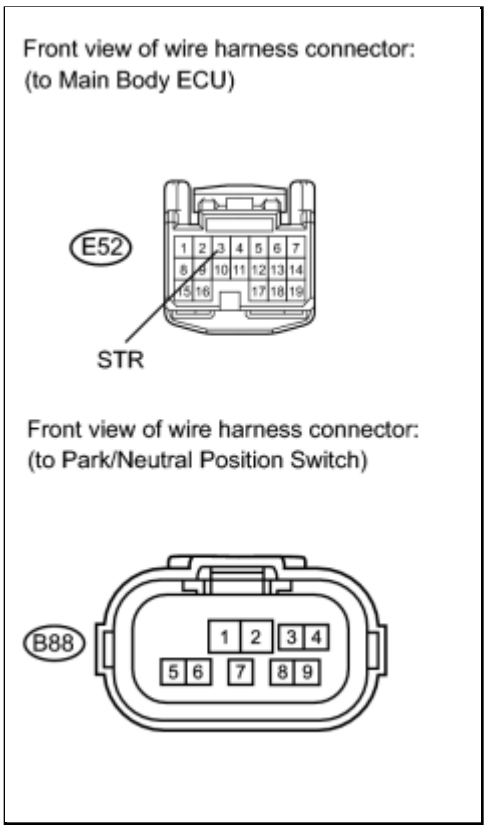
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 3 - E52-14 (STR2)	Always	Below 1 Ω
ST CUT relay terminal 5 - E52-3 (STR)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST CUT relay terminal 3 or E52-14 (STR2) - Body ground	Always	10 kΩ or higher
ST CUT relay terminal 5 or E52-3 (STR) - Body ground	Always	10 kΩ or higher

(e) Reinstall the ST CUT relay.



(f) Reconnect the main body ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ST CUT RELAY - MAIN BODY ECU)**

OK ▼

32.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)**

(a) Disconnect the park/neutral position switch connector.

(b) Disconnect the main body ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E52-3(STR) - B88-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E52-3(STR) or B88-4 - Body ground	Always	10 kΩ or higher

(d) Reconnect the park/neutral position switch connector.

(e) Reconnect the main body ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 J	**From:** 200901

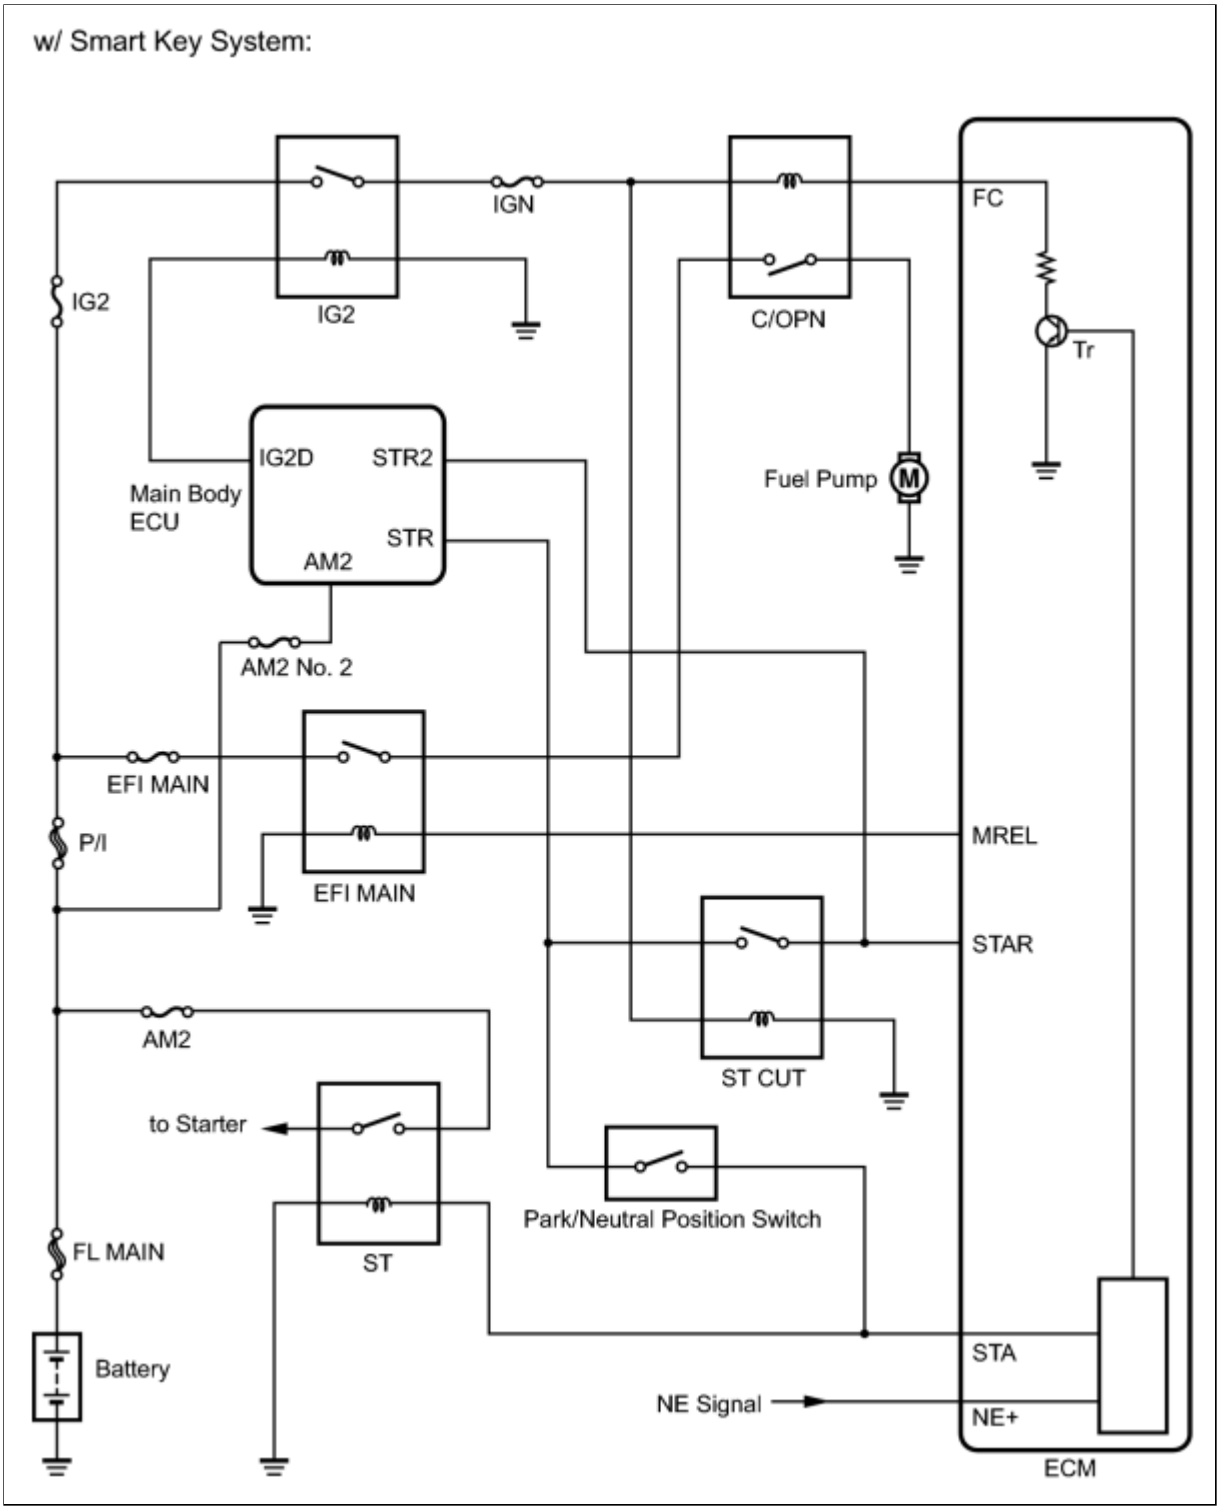
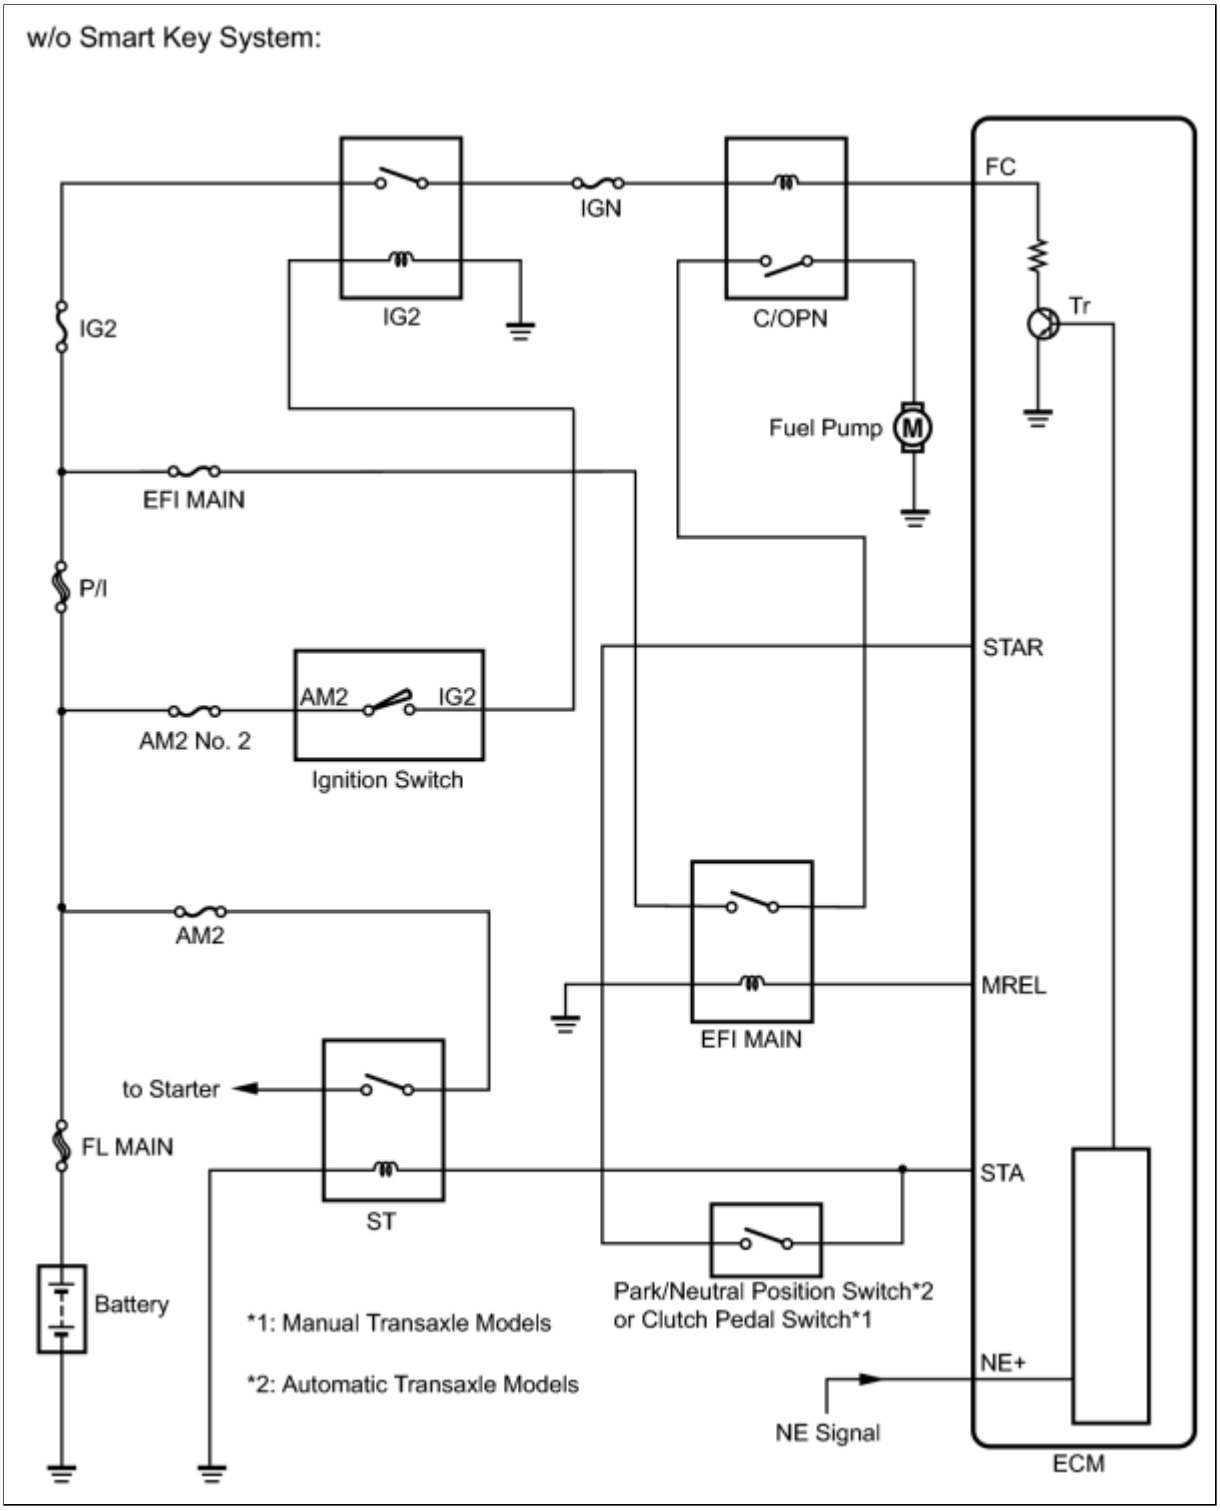
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: Fuel Pump Control Circuit (2010 Corolla)		

Fuel Pump Control Circuit



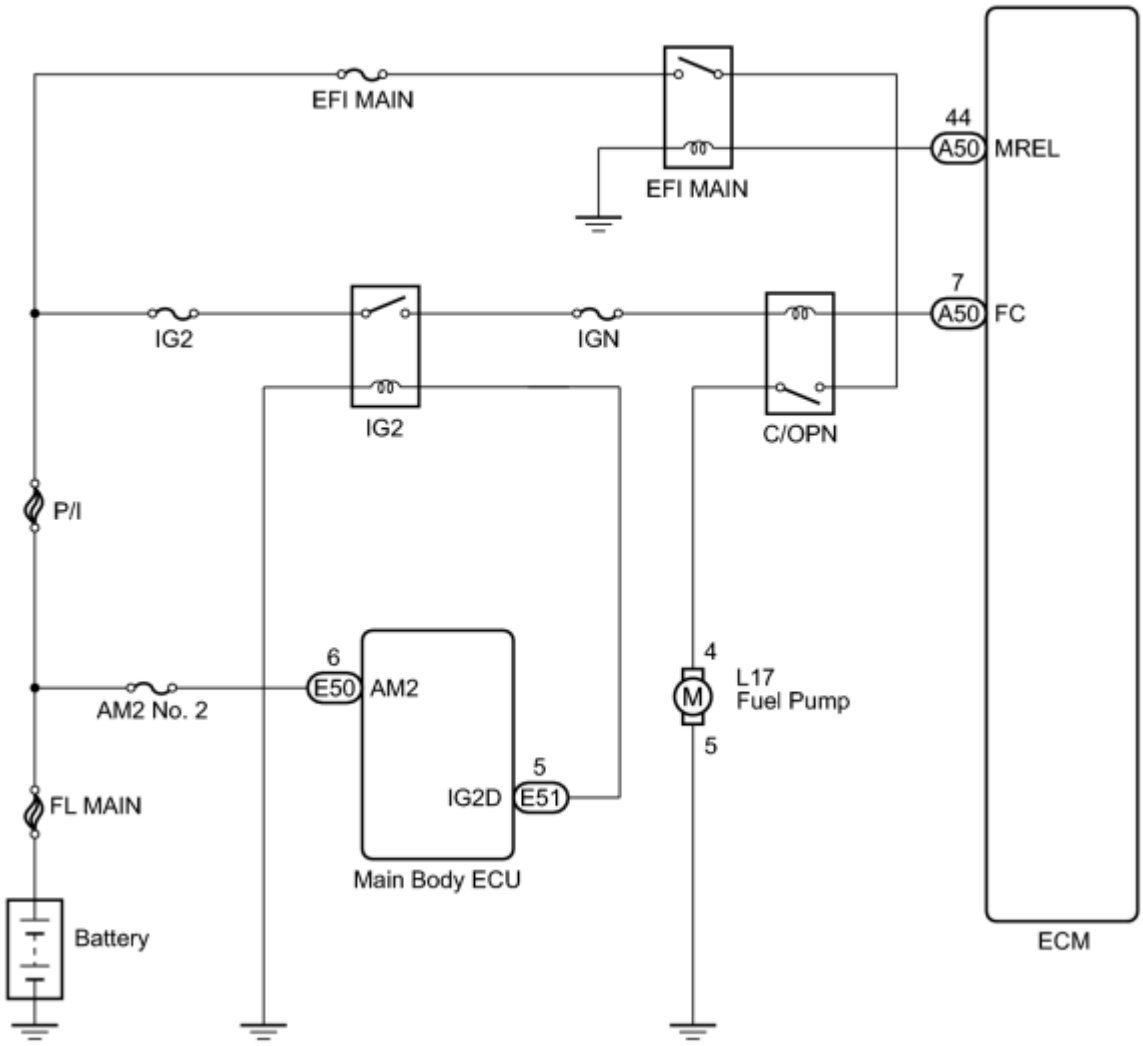
DESCRIPTION



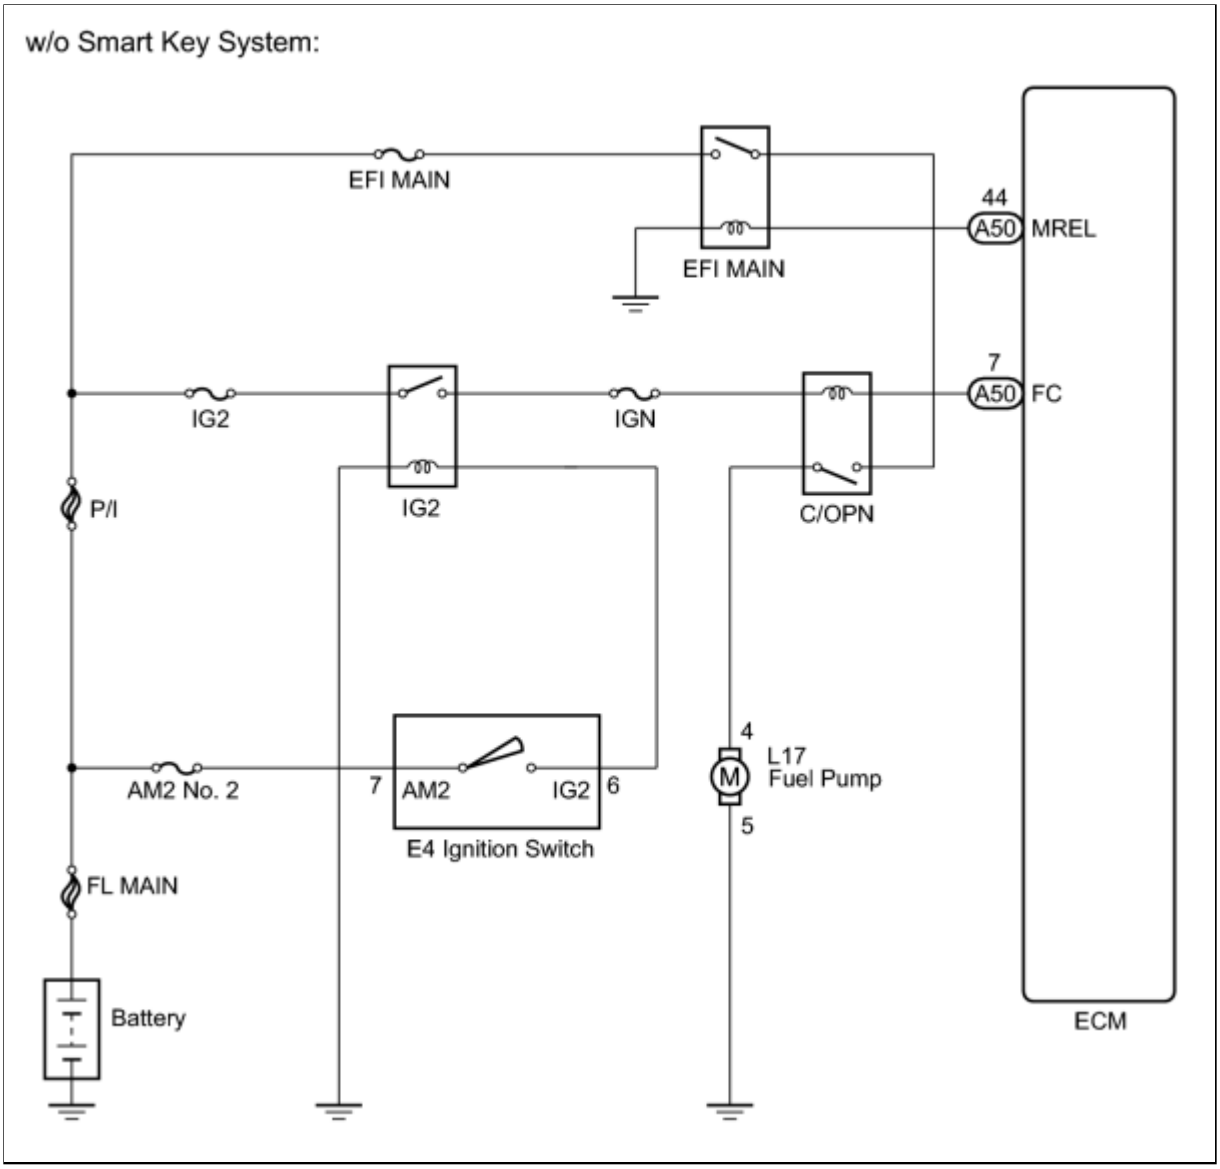
In the diagram below, when the engine is cranked, current flows from terminal ST1 (STR) of the ignition switch (power source control ECU) to the starter relay coil and current also flows to terminal STA of the ECM (STA signal).

When the STA signal and NE signal are input to the ECM, Tr is turned on, current flows to the coil of the circuit opening relay, the relay switches on, power is supplied to the fuel pump and the fuel pump operates.

While the NE signal is generated (engine running), the ECM keeps Tr on (circuit opening relay on) and the fuel pump also keeps operating.



w/ Smart Key System:



WIRING DIAGRAM

w/ Smart Key System:

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE C/OPN RELAY)**

(a) Connect the Techstream to the DLC3.

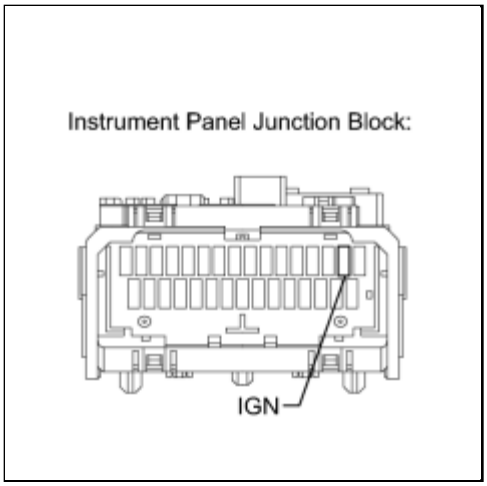
(b) Turn the ignition to switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

(e) Check whether the fuel pump operation sound occurs when performing the Active Test on

the tester.



OK:

Fuel pump operating sound occurs.

NG ▶ **INSPECT FUSE (IGN FUSE)**

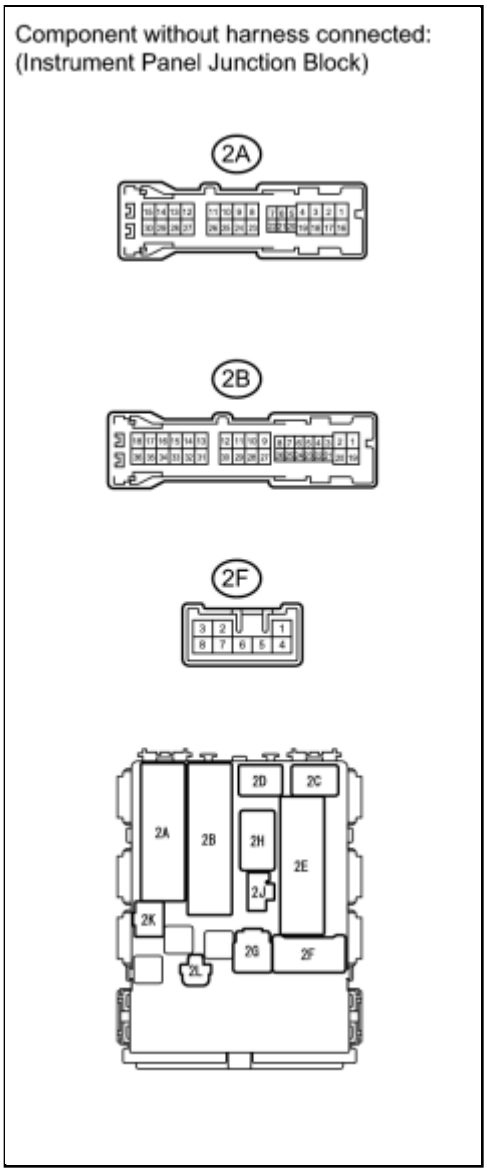
OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT FUSE (IGN FUSE)**

(a) Remove the IGN fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IGN fuse	Always	Below 1 Ω

(c) Reinstall the IGN fuse.

NG ▶ **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

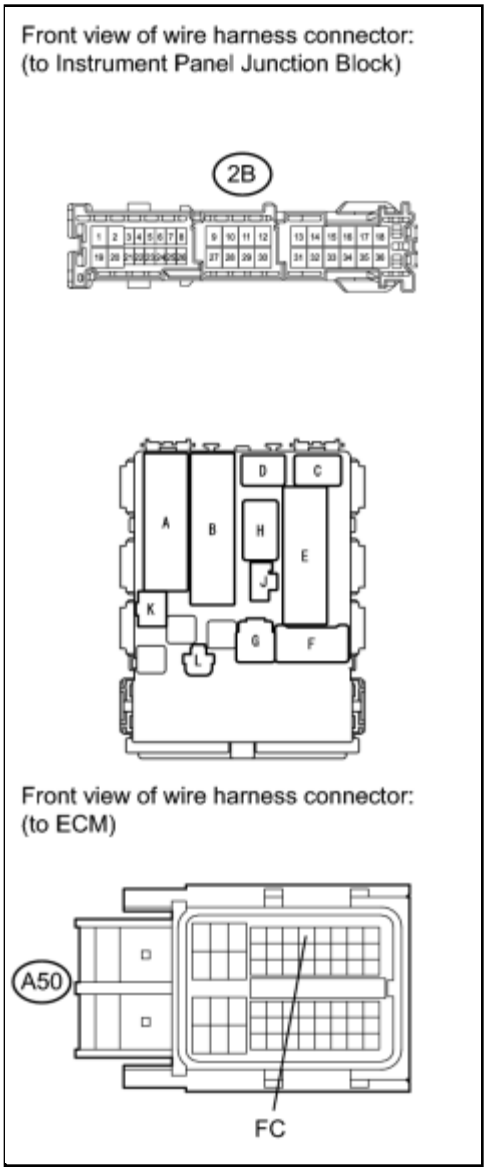
OK ▼

3.	**INSPECT INSTRUMENT PANEL JUNCTION BLOCK (C/OPN RELAY)**

(a) Disconnect the instrument panel junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2A-8 - 2B-11	Always	10 kΩ or higher
	Apply battery voltage to terminals 2B-10 and 2F-4	Below 1 Ω

(c) Reconnect the instrument panel junction block connector.

NG ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (C/OPN RELAY)**

OK

4.	CHECK HARNESS AND CONNECTOR (C/OPN RELAY - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the instrument panel junction block connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

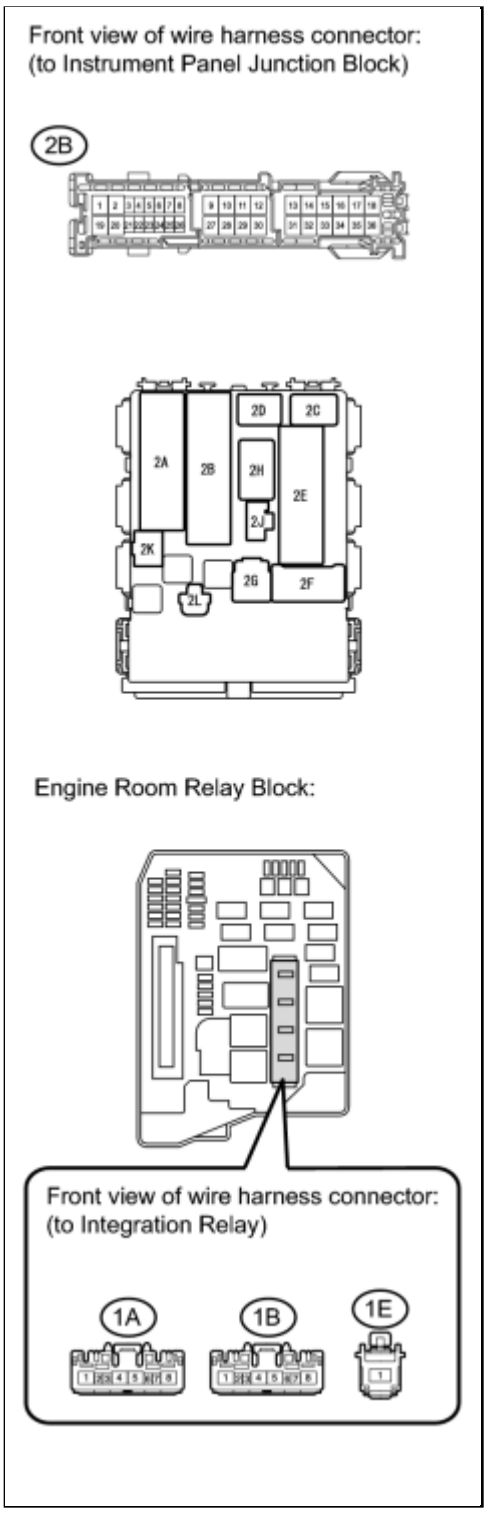
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-10 - A50-7 (FC)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-10 or A50-7 (FC) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.



(e) Reconnect the instrument panel junction block connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (C/OPN RELAY - ECM)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (C/OPN RELAY - INTEGRATION RELAY (EFI MAIN RELAY))**

(a) Remove the integration relay from engine room junction block.

(b) Disconnect the integration relay connector.

(c) Disconnect the instrument panel junction block connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

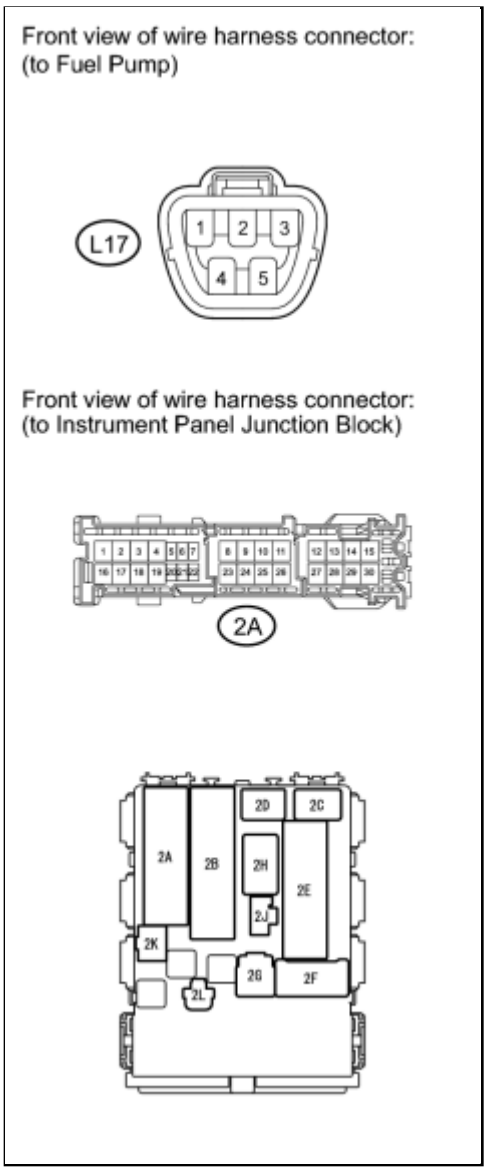
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-11 - 1B-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-11 or 1B-4 - Body ground	Always	10 kΩ or higher

(e) Reconnect the instrument panel junction block connector.

(f) Reconnect the integration relay connector.



(g) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (C/OPN RELAY - INTEGRATION RELAY (EFI MAIN RELAY))**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (C/OPN RELAY - FUEL PUMP)**

(a) Disconnect the fuel pump connector.

(b) Disconnect the instrument panel junction block connector.

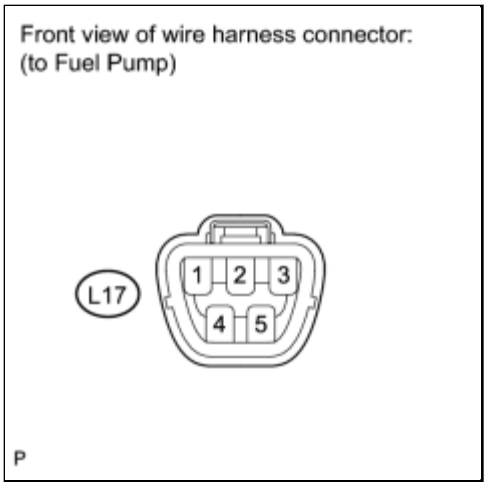
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2A-8 - L17-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2A-8 or L17-4 - Body ground	Always	10 kΩ or higher



(d) Reconnect the fuel pump connector.

(e) Reconnect the instrument panel junction block connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (C/OPN RELAY - FUEL PUMP)**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (FUEL PUMP - BODY GROUND)**

(a) Disconnect the fuel pump connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L17-5 - Body ground	Always	Below 1 Ω

(c) Reconnect the fuel pump connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUEL PUMP - BODY GROUND)**

OK ▼

8.	**INSPECT FUEL PUMP ASSEMBLY**

(a) Inspect the fuel pump assembly INFO .

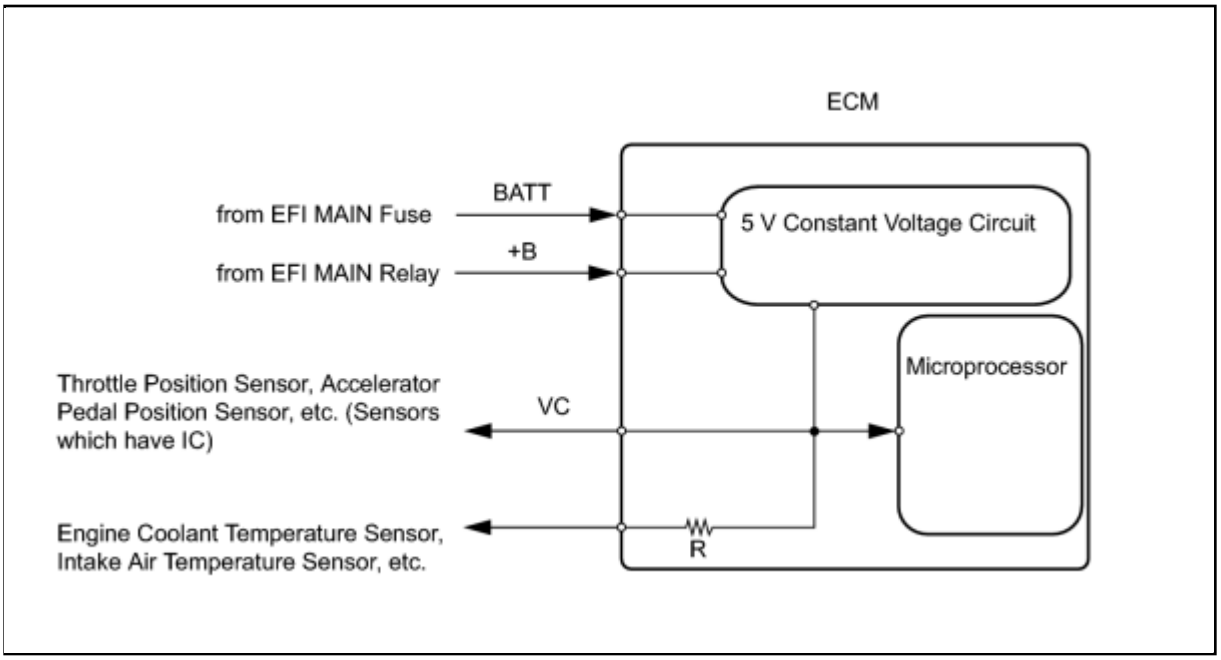
NG ▶ **REPLACE FUEL PUMP ASSEMBLY**

OK ▼

9.	**CHECK ECM POWER SOURCE CIRCUIT**

(a) Check the ECM power source circuit INFO .

NG ▶ **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**



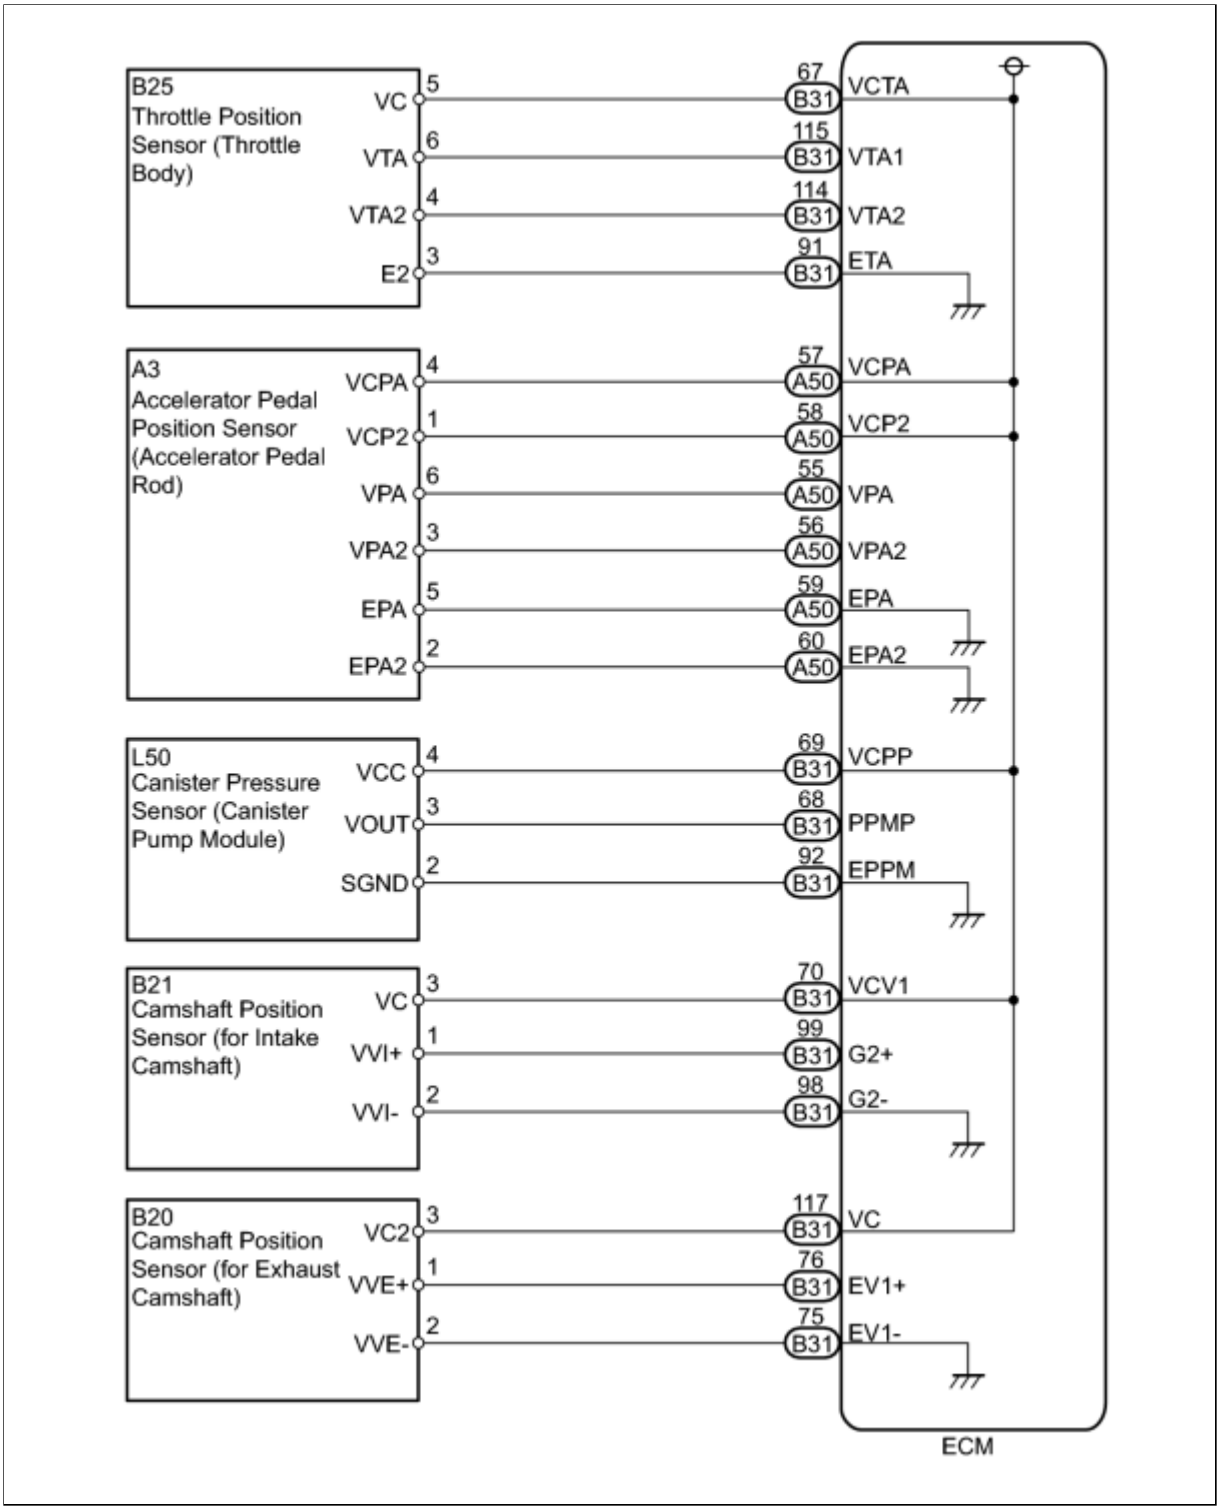
OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001D6V08GX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: VC Output Circuit (2010 Corolla)		

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltage supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.



When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned ON. The MIL goes off when the engine is started.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK MIL**

(a) Check that the Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch to ON.

OK:

MIL lights up

NG ▶ **CHECK COMMUNICATION BETWEEN TECHSTREAM AND ECM**

OK ▶ **SYSTEM OK**

2.	CHECK COMMUNICATION BETWEEN TECHSTREAM AND ECM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Check the communication between the Techstream and ECM.

Result:

RESULT	PROCEED TO

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK FUEL INJECTOR ASSEMBLY (POWER SOURCE)**

(a) Disconnect the fuel injector assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

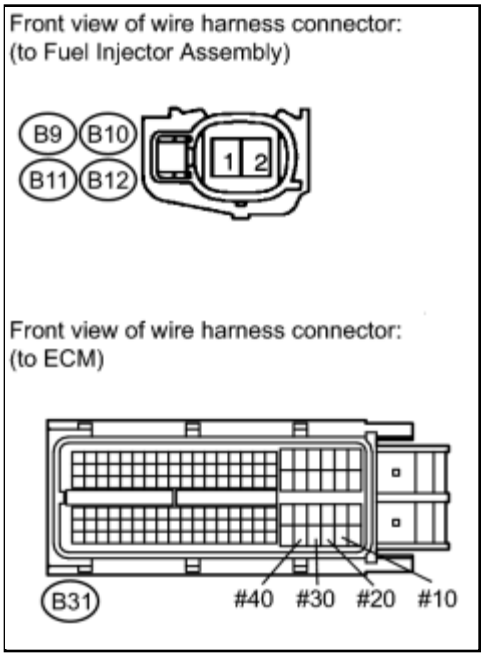
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B9-1 - Body ground	Ignition switch ON	11 to 14 V
B10-1 - Body ground	Ignition switch ON	11 to 14 V
B11-1 - Body ground	Ignition switch ON	11 to 14 V
B12-1 - Body ground	Ignition switch ON	11 to 14 V

(d) Turn the ignition switch off.

(e) Reconnect the fuel injector assembly connectors.

NG ▶ **CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - FUEL INJECTOR ASSEMBLY)**

OK ▼



2.	**INSPECT FUEL INJECTOR ASSEMBLY**

(a) Inspect the fuel injector assembly INFO.

NG ▶ **REPLACE FUEL INJECTOR ASSEMBLY**

OK

3.	CHECK HARNESS AND CONNECTOR (FUEL INJECTOR ASSEMBLY - ECM)

(a) Disconnect the fuel injector assembly connectors.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

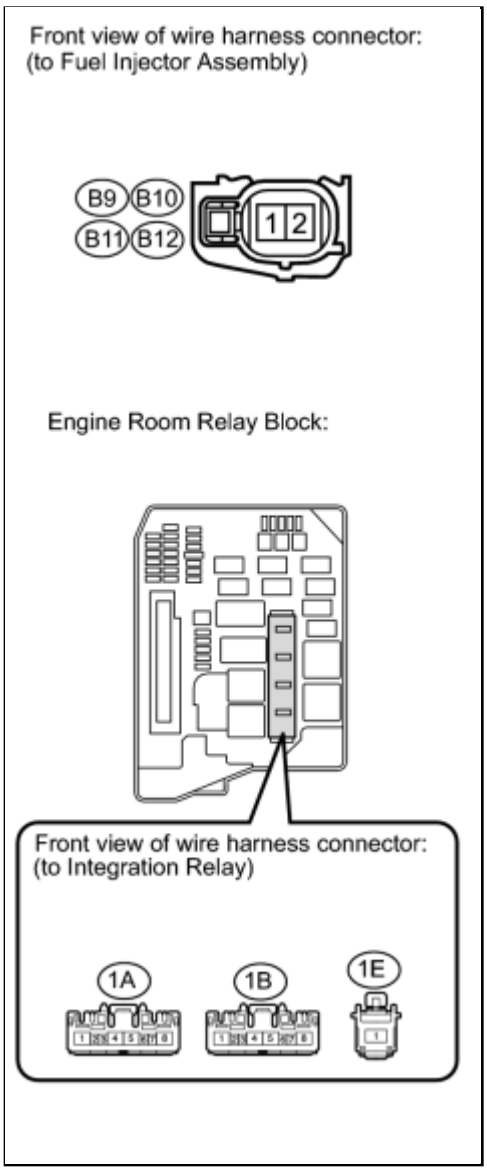
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-2 - B31-108 (#10)	Always	Below 1 Ω
B10-2 - B31-107 (#20)	Always	Below 1 Ω
B11-2 - B31-106 (#30)	Always	Below 1 Ω
B12-2 - B31-105 (#40)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-2 or B31-108 (#10) - Body ground	Always	10 kΩ or higher
B10-2 or B31-107 (#20) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B11-2 or B31-106 (#30) - Body ground	Always	10 kΩ or higher
B12-2 or B31-105 (#40) - Body ground	Always	10 kΩ or higher

(d) Reconnect the fuel injector assembly connectors.



(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUEL INJECTOR ASSEMBLY - ECM)**

OK ▶ **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

4.	**CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - FUEL INJECTOR ASSEMBLY)**

(a) Disconnect the fuel injector assembly connectors.

(b) Remove the integration relay from the engine room relay block.

(c) Disconnect the integration relay connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-1 - 1A-4	Always	Below 1 Ω
B10-1 - 1A-4	Always	Below 1 Ω
B11-1 - 1A-4	Always	Below 1 Ω
B12-1 - 1A-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B10-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B11-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B12-1 or 1A-4) - Body ground	Always	10 kΩ or higher

(e) Reconnect the fuel injector assembly connectors.

(f) Reconnect the integration relay connector.

(g) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (IG2 RELAY) - FUEL INJECTOR ASSEMBLY)**

OK ▶ **CHECK ECM POWER SOURCE CIRCUIT**

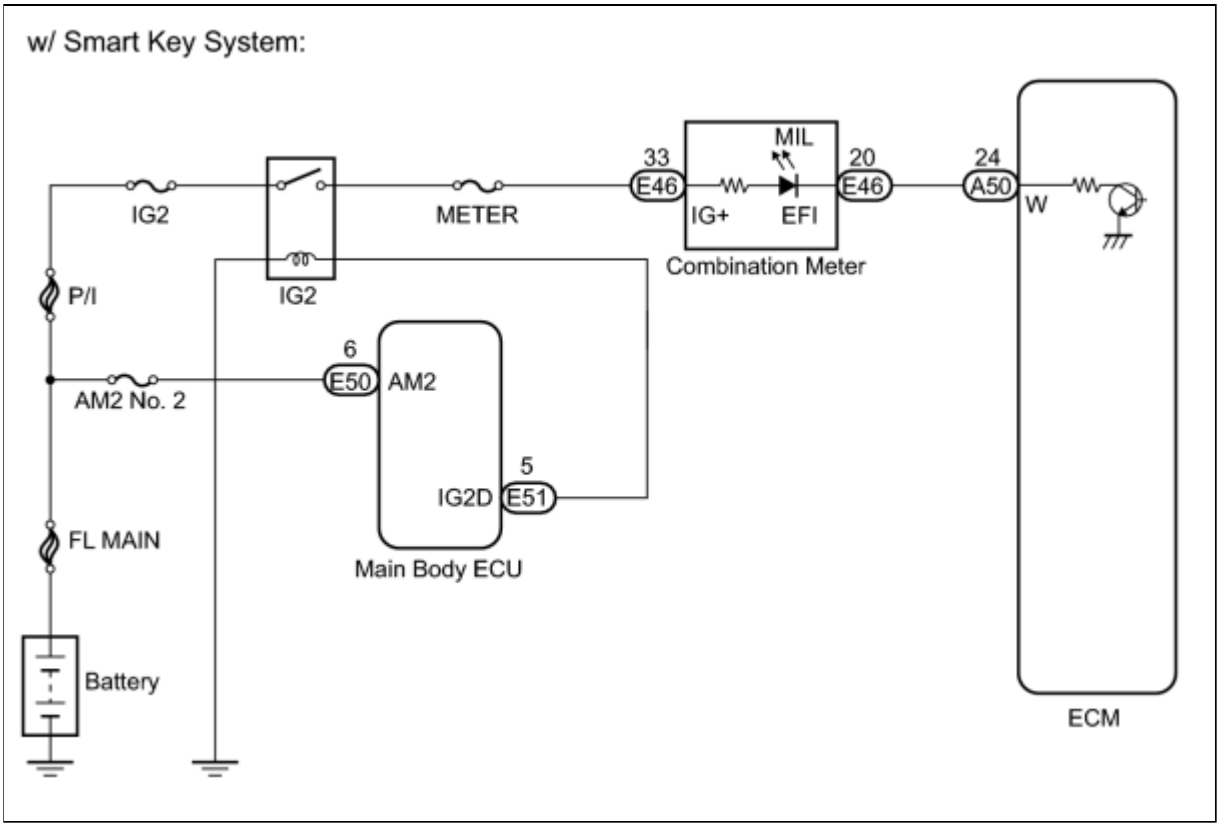
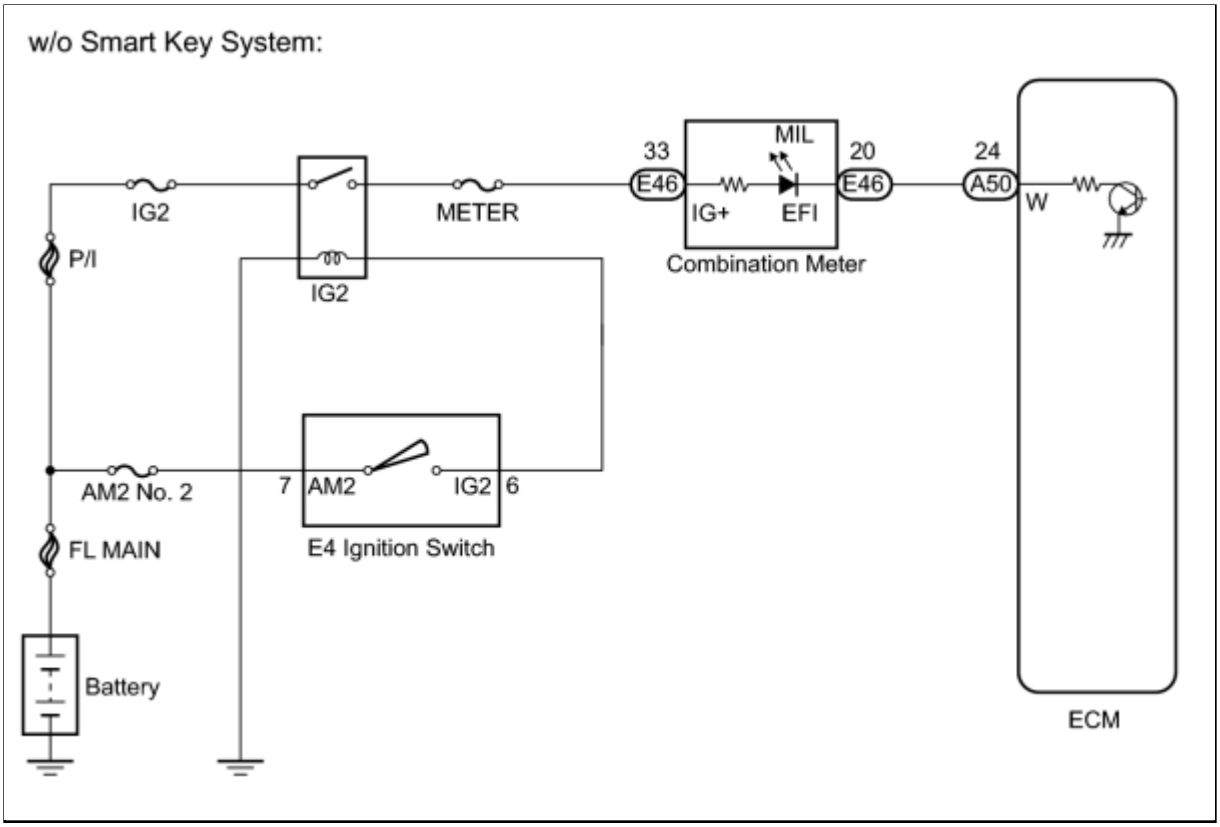
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: MIL Circuit (2010 Corolla)		



MIL Circuit



DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunction detected by the ECM. When the ignition switch is turned to ON, power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.

The MIL operation can be checked visually: When the ignition switch is first turned to ON, the MIL should be illuminated and should then turn off. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the Techstream.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK THAT MIL IS ILLUMINATED**

(a) Turn the ignition switch to ON.

(b) Check the illumination of the MIL.

Result:

CONDITION	PROCEED TO
MIL remains illuminated (Even after ignition switch to ON and several seconds have passed, MIL still remains illuminated)	A
MIL remains off (Does not illuminate at all)	B
MIL illuminates for several seconds, but turns off after engine is started	C

C ▶ **SYSTEM OK**

B ▶ **CHECK THAT ENGINE STARTS**

A

2.	CHECK WHETHER MIL TURNS OFF

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

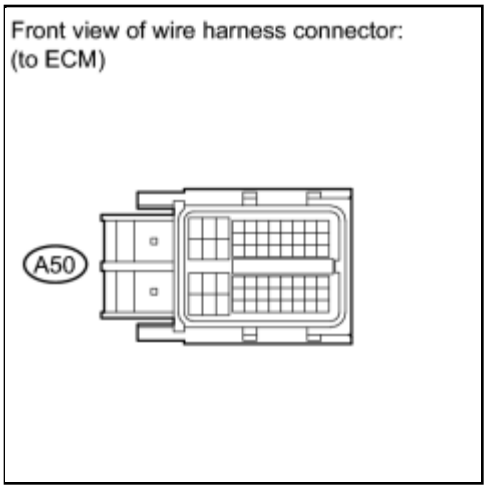
(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check if any DTCs have been stored. Note down any DTCs.

(f) Clear DTCs INFO .

(g) Check if the MIL goes off.



OK:

MIL goes off.

NG ▶ CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

OK ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

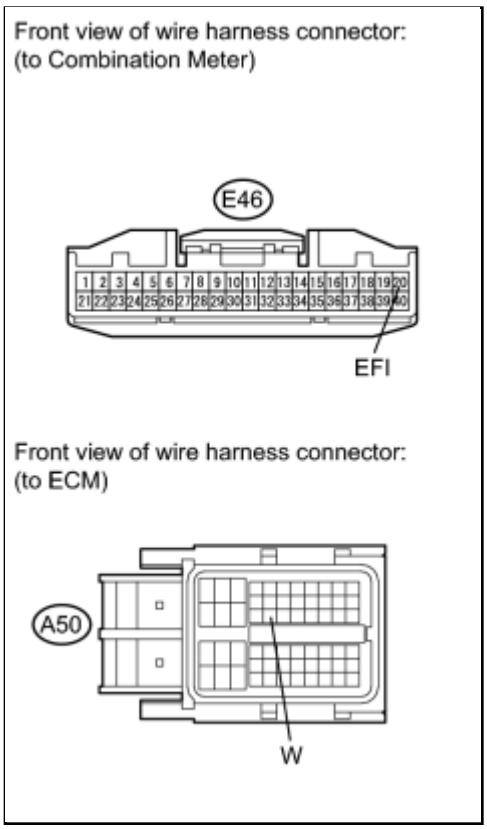
3.	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Check that the MIL is not illuminated.

OK:



MIL is not illuminated.

(d) Reconnect the ECM connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE ECM**

4.	CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)

(a) Disconnect the combination meter connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-20 (EFI) or A50-24 (W) - Body ground	Always	10 kΩ or higher

(d) Reconnect the combination meter connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE COMBINATION METER**

5.	**CHECK THAT ENGINE STARTS**

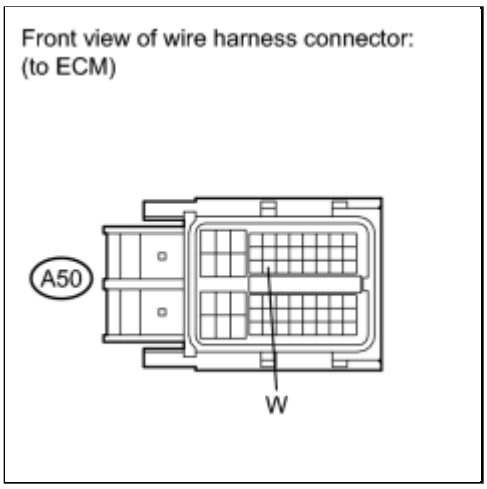
(a) Turn the ignition switch to ON.

(b) Start the engine.

Result:

RESULT	PROCEED TO
Engine starts	A
Engine does not start*	B

HINT:



***: The Techstream cannot communicate with the ECM.**

B ▶ **GO TO VC OUTPUT CIRCUIT**

A ▼

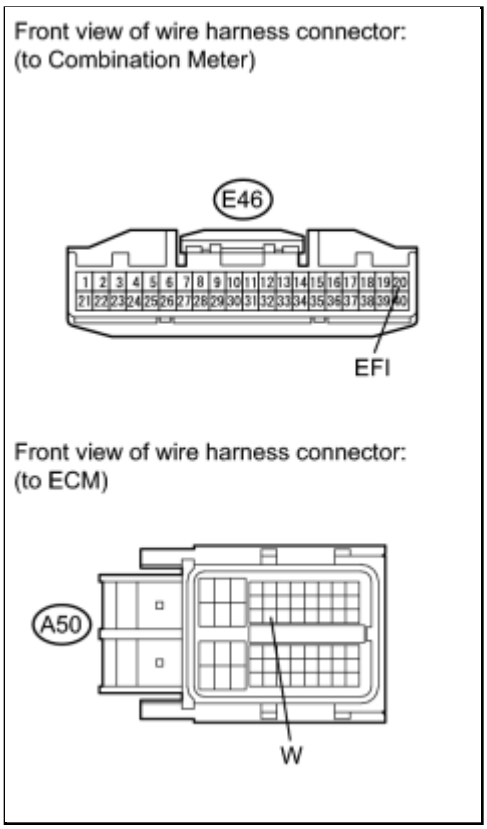
6.	**CHECK COMBINATION METER ASSEMBLY (COMBINATION METER - BODY GROUND)**

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A50-24 (W) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE ECM**

7.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)**

(a) Disconnect the combination meter connector.

(b) Disconnect the ECM connector.

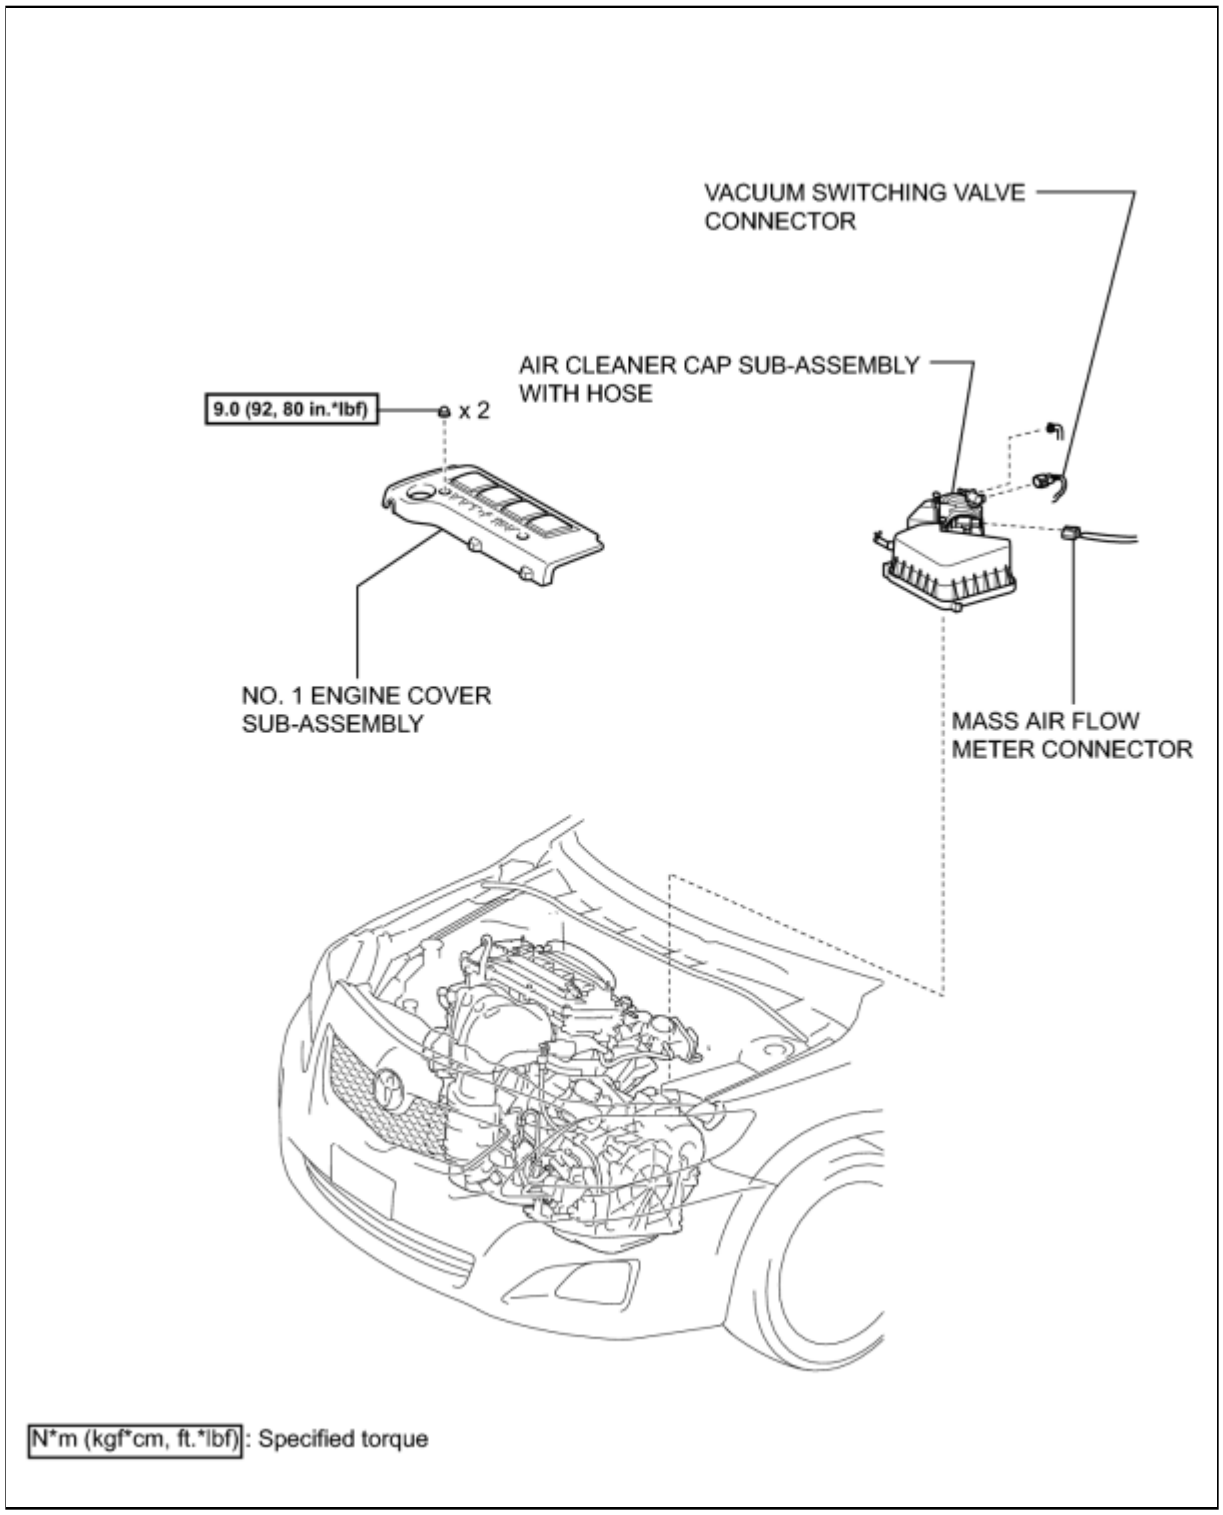
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-20 (EFI) - A50-24 (W)	Always	Below 1 Ω

(d) Reconnect the ECM connector.

(e) Reconnect the combination meter connector.



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE COMBINATION METER**

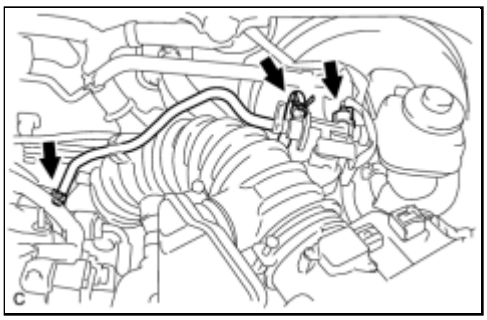
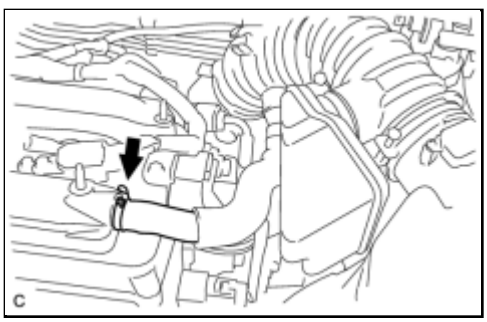
REMOVAL

1. DRAIN ENGINE COOLANT INFO

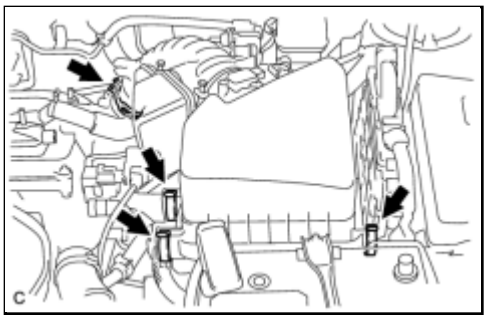


2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

3. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE

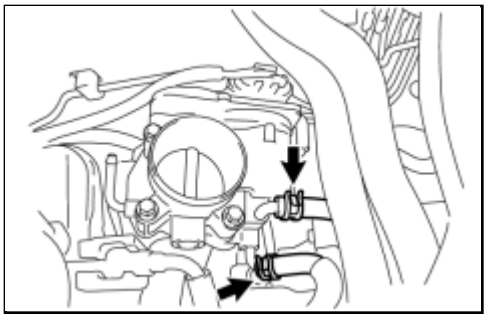


(a) Disconnect the mass air flow meter connector.

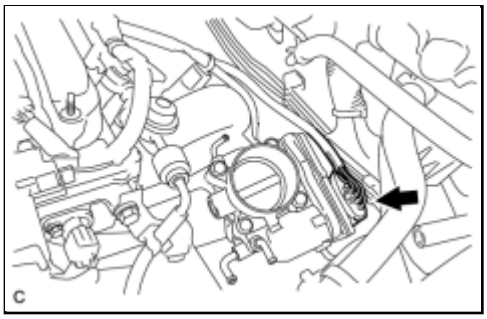


(b) Separate the 2 wire harness clamps.

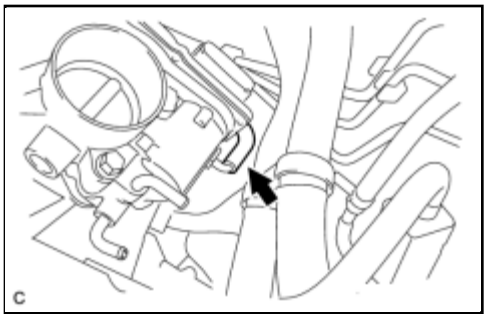
(c) Disconnect the No. 1 vacuum switching valve connector and the 2 vacuum hoses.



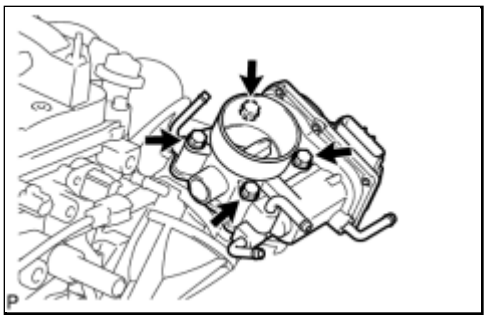
(d) Disconnect the ventilation hose.



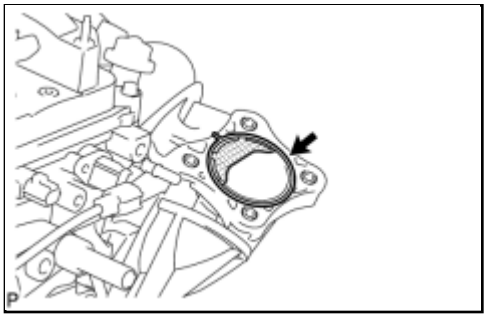
(e) Loosen the No. 1 air cleaner hose clamp, release the 3 air cleaner assembly clamps and remove the air cleaner cap sub-assembly with No. 1 hose.



4. REMOVE THROTTLE BODY ASSEMBLY



(a) Disconnect the 2 water by-pass hoses.



(b) Disconnect the throttle body assembly connector.

(c) Disconnect the throttle body hose.

(d) Remove the 4 bolts and throttle body assembly.

(e) Remove the gasket from the intake manifold.

Title: 2AZ-FE ENGINE CONTROL: THROTTLE BODY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT THROTTLE BODY ASSEMBLY

(a) Check the throttle control motor operating sound.

(1) Turn the ignition switch to ON.

(2) When depressing the accelerator pedal, check the operating sound of the motor. Make sure that no friction noises are emitted from the motor.

If any friction noise exists, replace the throttle body assembly.

(b) Check the throttle position sensor.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Enter the following menus: Powertrain / Engine and ECT / Data List / Throttle Pos. Sensor Output.

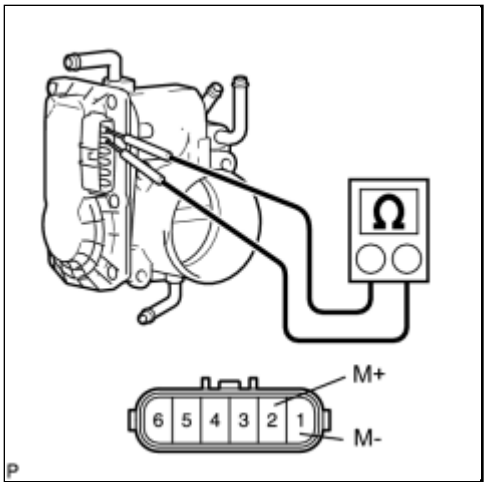
(5) When the throttle valve is fully opened, check that the value of "Throttle Position" is within the specification.

Standard Throttle Valve Opening Percentage:

TESTER DISPLAY	STANDARD VALUE
Throttle Pos. Sensor Output	60% or more

If the percentage is less than 60%, replace the throttle body assembly.

NOTICE:



- When checking the standard throttle valve opening percentage, the shift lever should be in N.
- Fully depress the accelerator pedal.

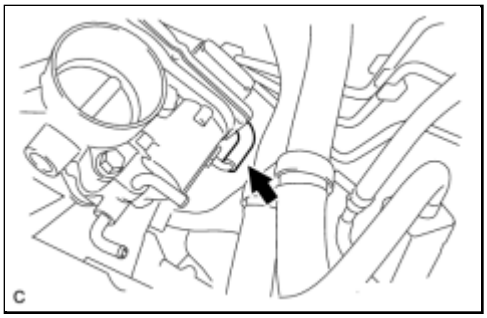
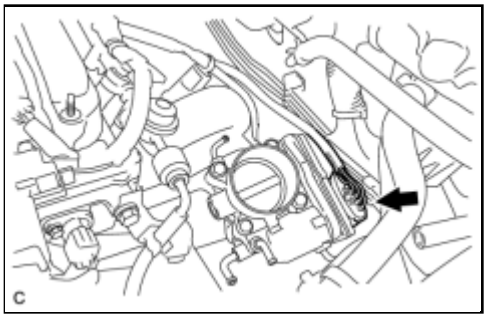
Title: 2AZ-FE ENGINE CONTROL: THROTTLE BODY: INSTALLATION (2010 Corolla)		

INSTALLATION

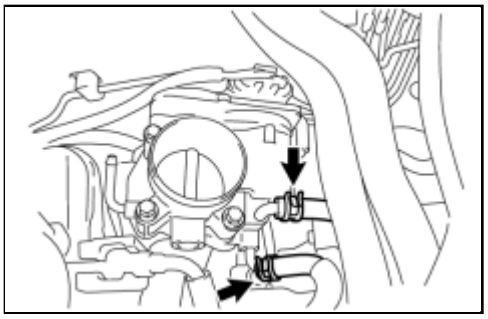
1. INSTALL THROTTLE BODY ASSEMBLY



(a) Install a new gasket onto the intake manifold.

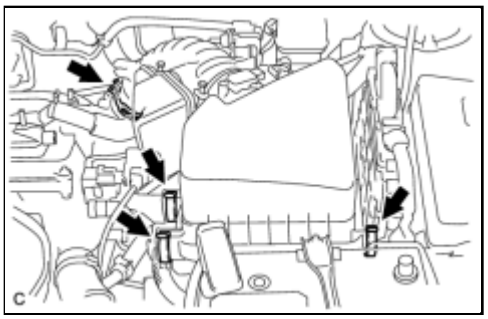


(b) Install the throttle body assembly with the 4 bolts.

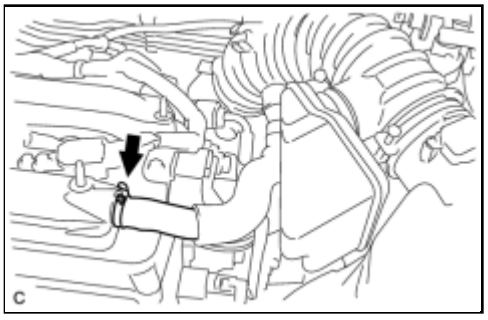


Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

(c) Connect the throttle body hose.

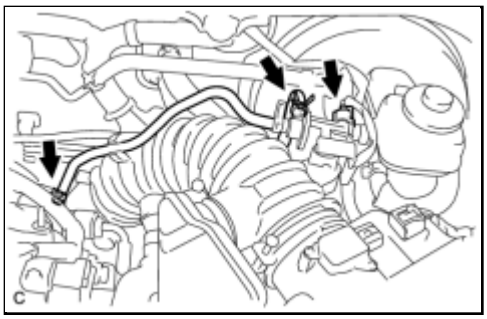


(d) Connect the throttle body connector.

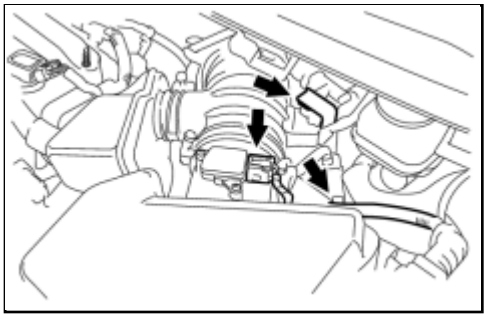


(e) Connect the 2 water by-pass hoses.

2. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE



(a) Install the air cleaner cap sub-assembly with hose and lock the 3 clamps.



(b) Tighten the air cleaner hose clamp.

(c) Connect the ventilation hose.

(d) Connect the 2 vacuum hoses and No. 1 vacuum switching valve connector.

(e) Connect the 2 wire harness clamps and the mass air flow meter connector.

3. ADD ENGINE COOLANT INFO

4. INSPECT FOR COOLANT LEAK INFO

5. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

6. PERFORM INITIALIZATION

NOTICE:

Be sure to perform this procedure after reassembling the throttle body assembly, removing and reinstalling any throttle body component or replacing the ECM.

(a) Disconnect the cable from the negative (-) battery terminal. Wait at least 60 seconds and reconnect the cable.

(b) Turn the ignition switch to ON without operating the accelerator pedal.

NOTICE:

If the accelerator pedal is operated, perform the above steps again.

(c) Connect the Techstream to the DLC3 and clear the DTCs INFO .

(d) Start the engine and check that the MIL is not illuminated and that the idle speed is within the specified range when the air conditioning is switched off after the engine is warmed up.

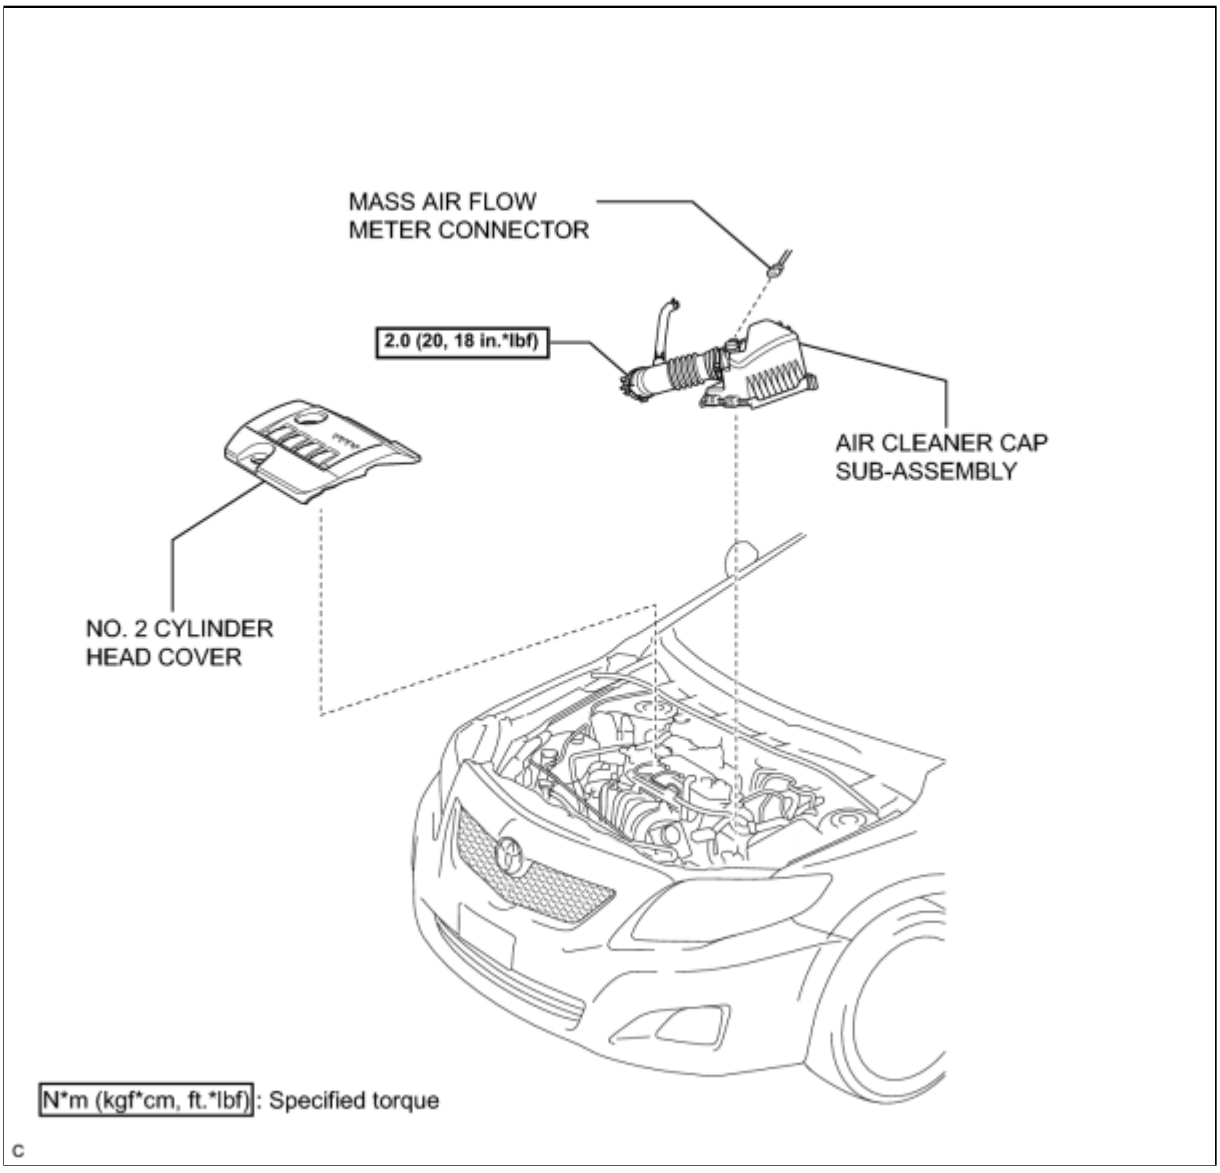
Standard:

CONDITION	ENGINE IDLE SPEED
A/C switched off	600 to 700 rpm

NOTICE:

- Be sure to perform this step with all accessories off.
- Make sure that the shift lever is in N or P.

(e) Enter the following menus: Powertrain/ Engine and ECT/ Data List/ Throttle Pos. Sensor Output. Fully depress the accelerator pedal and check that the value is 60% or more.



(f) Perform a road test and confirm that there are no abnormalities.

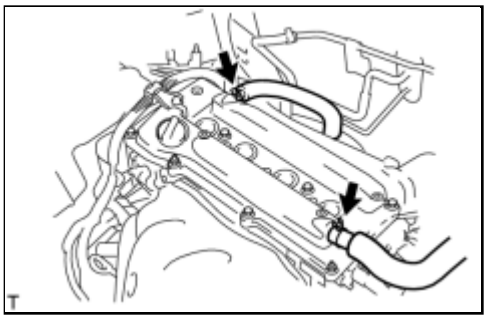
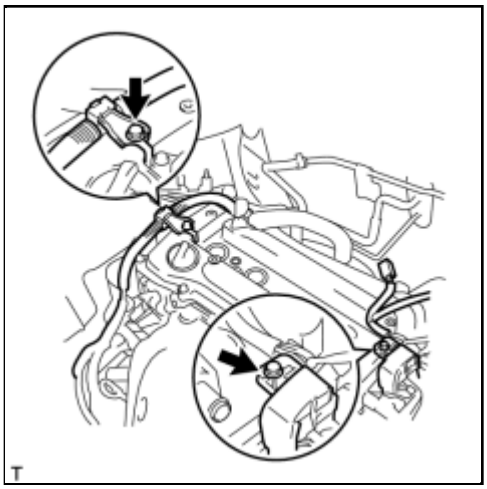
Title: 2AZ-FE ENGINE MECHANICAL: CAMSHAFT: REMOVAL (2010 Corolla)		

REMOVAL



1. REMOVE ENGINE UNDER COVER RH

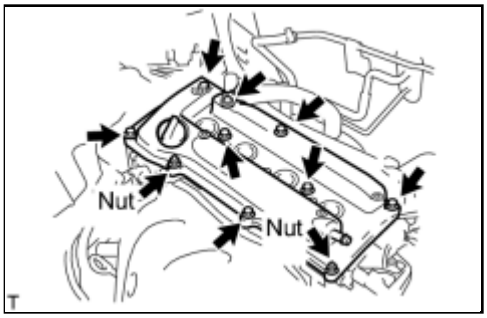
2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO



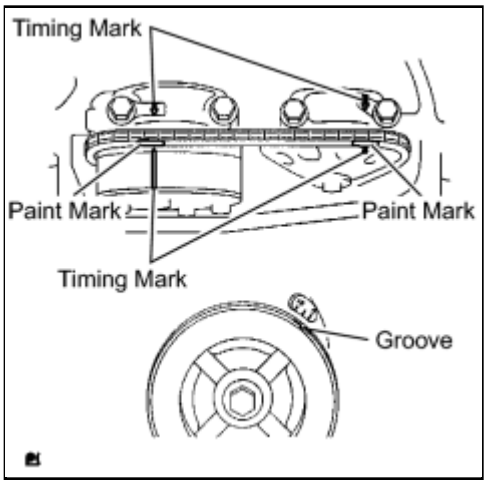
3. REMOVE IGNITION COIL ASSEMBLY INFO

4. REMOVE SPARK PLUG INFO

5. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY



(a) Remove the 2 ventilation hoses from the cylinder head cover sub-assembly.

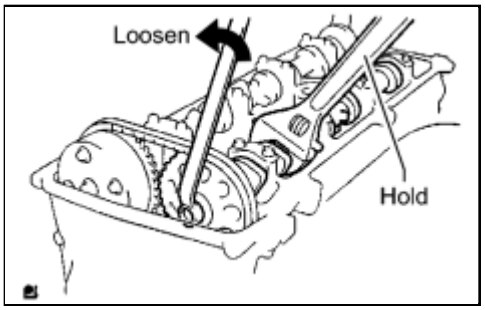


(b) Remove the 2 bolts and separate the 2 wire harness brackets.

(c) Remove the 8 bolts and 2 nuts, then remove the cylinder head cover sub-assembly and gasket.

6. SET NO. 1 CYLINDER TO TDC/COMPRESSION

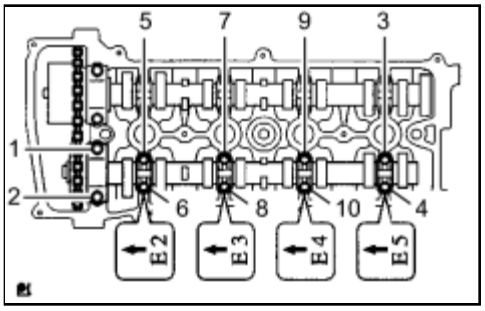
(a) Turn the crankshaft pulley until the groove and the timing mark "0" on the timing chain cover are aligned.



(b) Check that each timing mark on the camshaft timing gear and sprocket is aligned with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

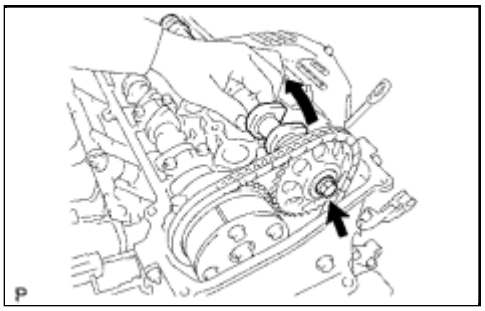
If not, turn the crankshaft pulley 1 revolution (360°) to align the timing marks as illustrated.

(c) Place paint marks on the chain in alignment with the timing marks on the camshaft timing gear and camshaft timing sprocket.



7. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

8. LOOSEN CAMSHAFT TIMING GEAR OR SPROCKET

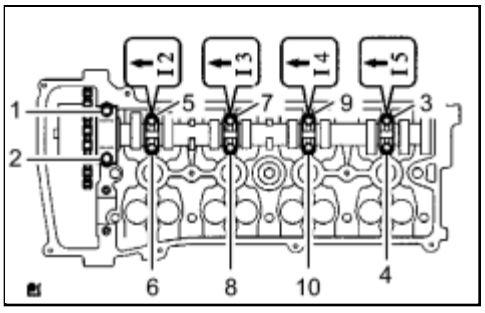


(a) While holding the No. 2 camshaft with a wrench, loosen the No. 2 camshaft timing set bolt.

9. REMOVE NO. 2 CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Remove the 5 bearing caps.



(c) While holding the No. 2 camshaft by hand, remove the camshaft timing sprocket set bolt.

(d) Remove the camshaft timing sprocket from the No. 2 camshaft with the timing chain wrapped on the sprocket.

(e) Remove the camshaft timing sprocket from the timing chain.

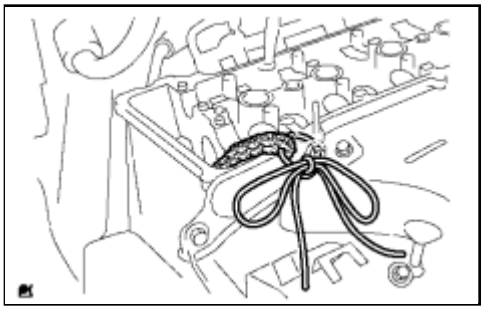
10. REMOVE CAMSHAFT

(a) In several steps, uniformly loosen and remove the 10 bearing caps bolts in the sequence shown in the illustration.

(b) Remove the 5 bearing caps.

(c) Remove the camshaft and camshaft timing gear assembly while holding the timing chain by hand.

(d) Support the timing chain with a string to prevent it from slipping off the crankshaft sprocket as shown in the



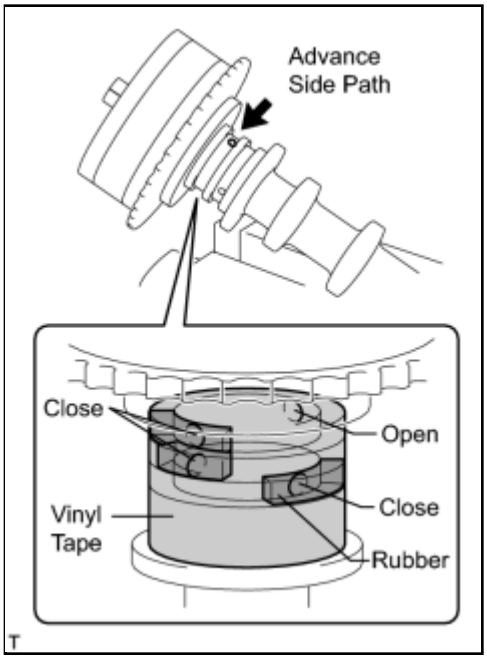


illustration.

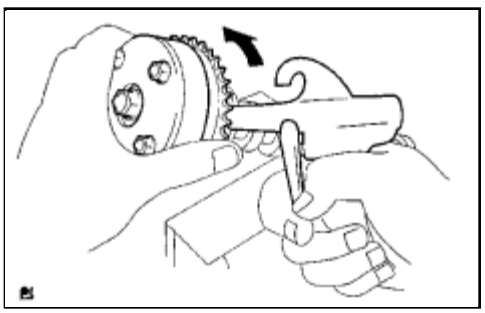
NOTICE:

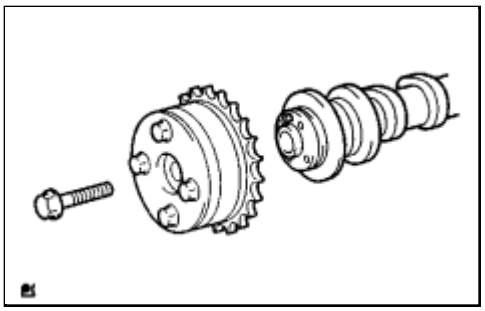


Be careful not to drop anything inside the timing chain cover.

11. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise, and make sure that the camshaft timing gear assembly does not rotate.

(b) Cover all the oil path with vinyl tape except the advance side path shown in the illustration.



(c) Apply air pressure of 150 kPa (1.5 kgf/cm2, 22 psi) to the oil path, then turn the camshaft timing gear assembly to the advance direction (counterclockwise) by hand.

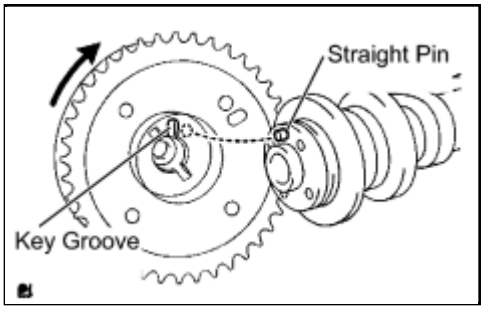
CAUTION:

Cover the paths with a piece of cloth to avoid oil splashes.

HINT:

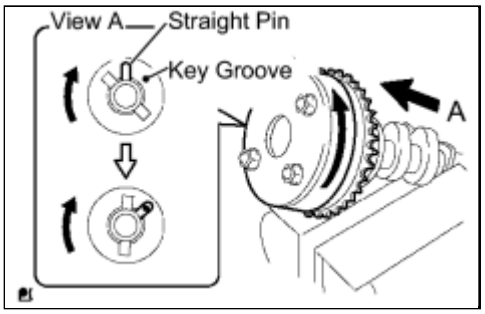
Depending on the air pressure, the camshaft timing gear assembly may turn to the advance side without applying force by hand. Also, if the pressure is difficult to apply because of air leakage from a path, the lock pin may be difficult to release.

(d) Remove the flange bolt of the camshaft timing gear.



NOTICE:

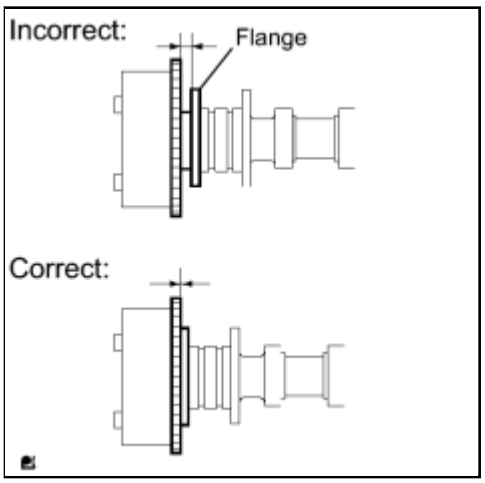
- Be sure not to remove the other 4 bolts.
- When reusing the camshaft timing gear, release the straight pin lock first, then install the gear.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000032Z4008X
Title: 2AZ-FE ENGINE MECHANICAL: CAMSHAFT: INSTALLATION (2010 Corolla)		

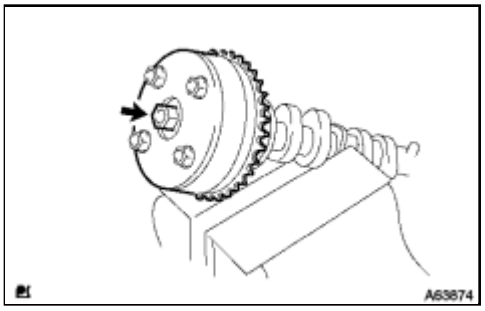
INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY



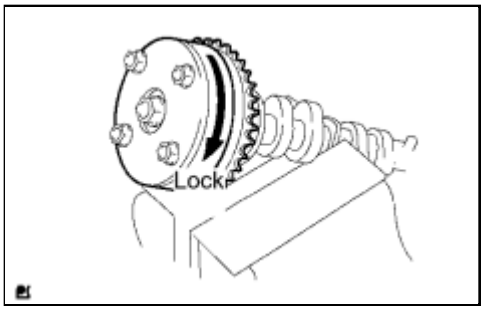
(a) Put the camshaft timing gear and camshaft together with the straight pin and key groove misaligned, as shown in the illustration.

(b) Turn the camshaft timing gear as shown in the illustration while pushing it gently against the camshaft. Push further at the position where the pin fits into the groove.



NOTICE:

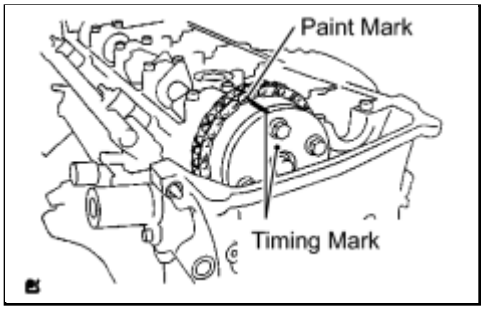
Be sure not to turn the camshaft timing gear to the retard direction (clockwise).



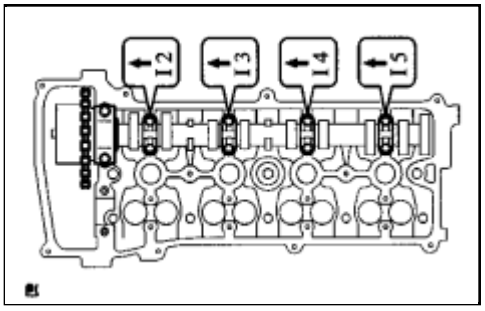
(c) Check that there is no clearance between the timing gear and camshaft flange.

(d) Tighten the flange bolt with the camshaft timing gear

assembly fixed in place.



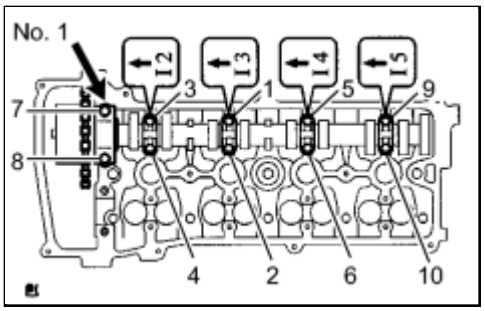
Torque: 54 N·m (551 kgf·cm, 40ft·lbf)



(e) Check that the camshaft timing gear assembly can move to the retard direction (clockwise) and is locked in the most retarded position.

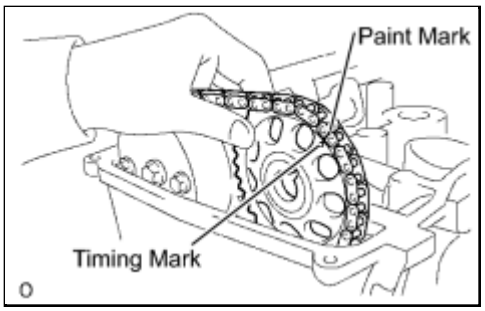
2. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the journal portion of the camshaft.



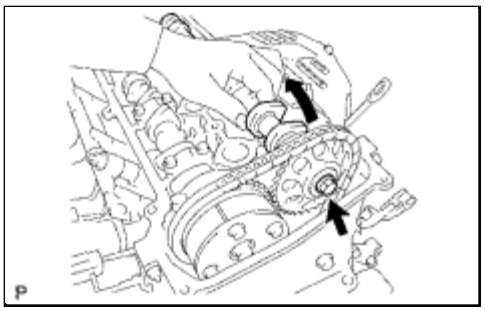
(b) Install the timing chain onto the camshaft timing gear with the paint mark aligned with the timing mark on the camshaft timing gear as shown in the illustration.

(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.



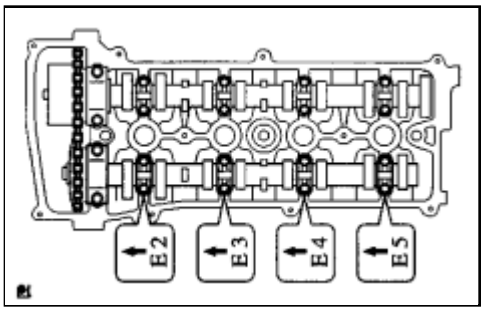
(d) Apply a light coat of engine oil on the threads and under the heads of the bearing cap bolts.

(e) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.



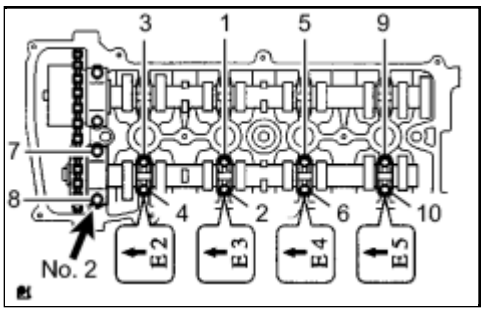
No. 1 bearing - Torque: 30 N·m (301 kgf·cm, 22ft·lbf)
No. 3 bearing - Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

3. INSTALL NO. 2 CAMSHAFT



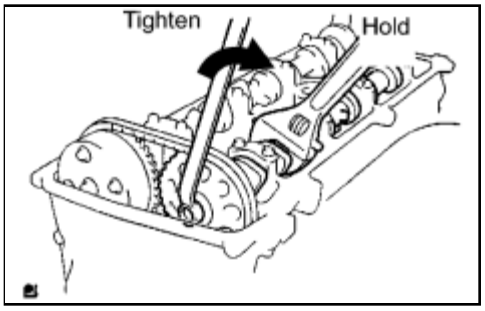
(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.

(b) Put the No. 2 camshaft on the cylinder head with the paint mark on the chain aligned with the timing mark on the camshaft timing sprocket.



(c) While holding the No. 2 camshaft by hand, temporarily tighten the camshaft timing sprocket set bolt.

(d) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

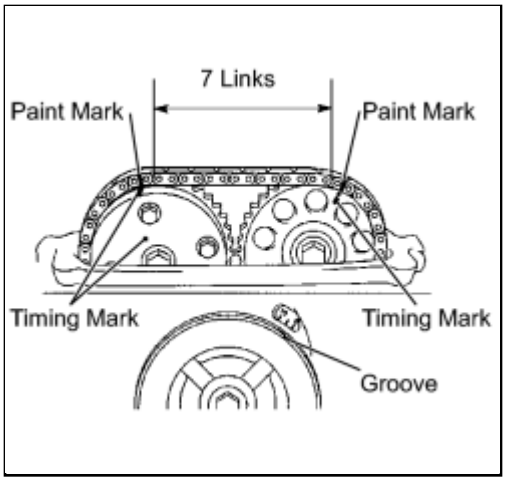


(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

(f) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

No. 2 bearing - Torque: 30 N·m (301 kgf·cm, 22ft·lbf)

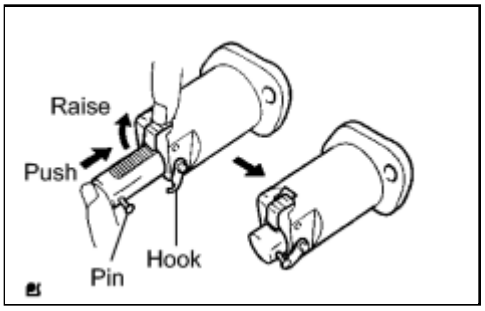
No. 3 bearing - Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)



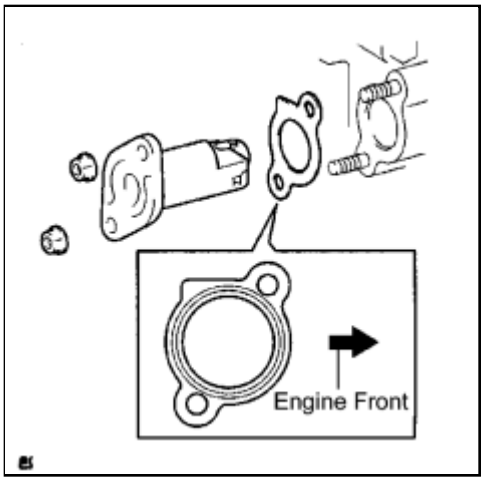
(g) While holding the camshaft with a wrench, tighten the camshaft timing sprocket set bolt.

Torque: 54 N·m (551 kgf·cm, 40ft·lbf)

NOTICE:



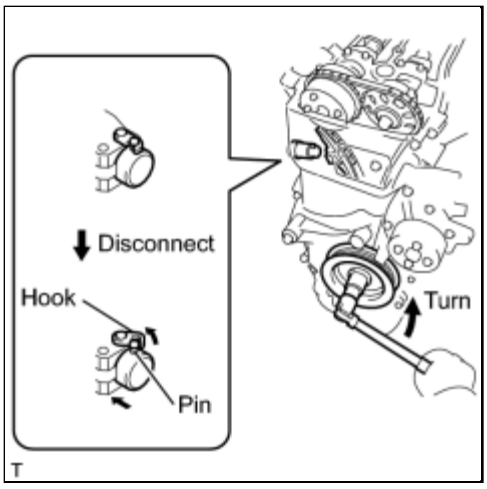
Be careful not to damage the valve lifter.



(h) Check that the paint marks on the chain are aligned with the timing marks on the camshaft timing gear and camshaft timing sprocket. Also, check that the crankshaft pulley groove is aligned with the timing mark "0" on the timing mark chain cover.

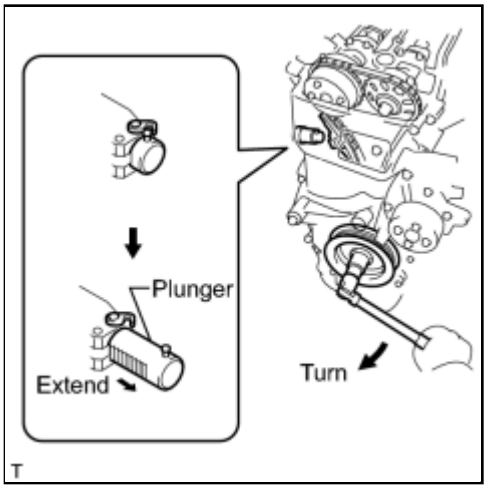
4. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Release the ratchet pawl, then fully push in the plunger and set the hook to the pin so that the plunger is in the position shown in the illustration.



(b) Install a new gasket and the chain tensioner with the 2 nuts.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

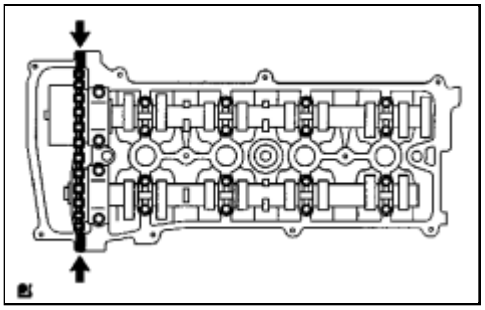


NOTICE:

When installing the chain tensioner, set the hook again if the hook releases the plunger.

(c) Turn the crankshaft counterclockwise, then disconnect the hook from the pin.

(d) Turn the crankshaft clockwise, then check that the plunger is extended.



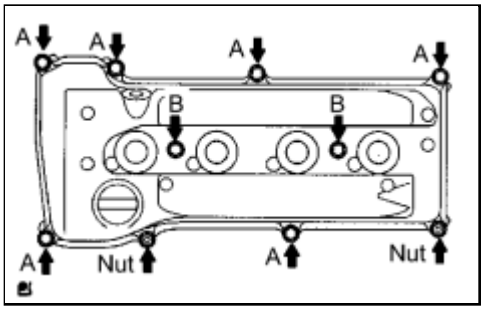
5. SET NO. 1 CYLINDER TO TDC/COMPRESSION INFO

6. CHECK VALVE CLEARANCE INFO

7. ADJUST VALVE CLEARANCE INFO

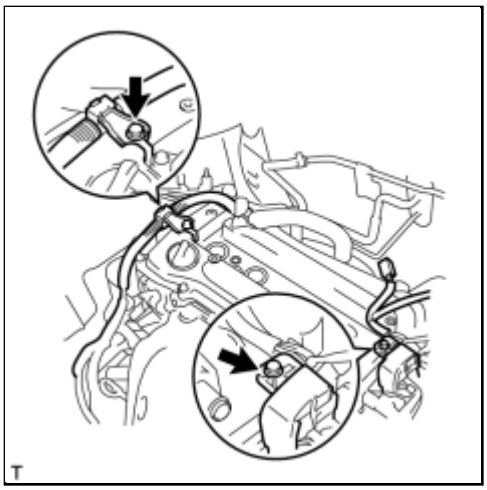
8. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove any old packing material from the contact surface.



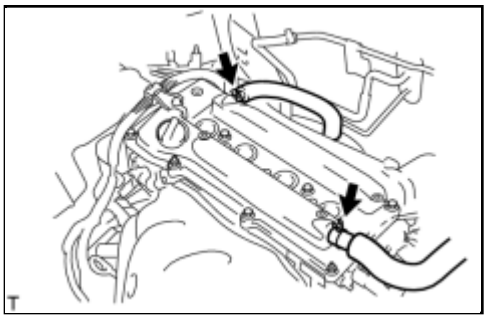
(b) Apply seal packing to the 2 locations shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- Remove any oil from the contact surface.
- Install the oil pan within 3 minutes of applying seal packing.
- Do not add engine oil for at least 2 hours after installing the oil pan.



(c) Install the cylinder head cover gasket and sub-assembly with the 8 bolts and 2 nuts.

Bolt A - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)
Bolt B - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)
Nut - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

(d) Install the 2 engine wire harness brackets with the 2 bolts.

Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(e) Connect the 2 ventilation hoses to the cylinder head cover.

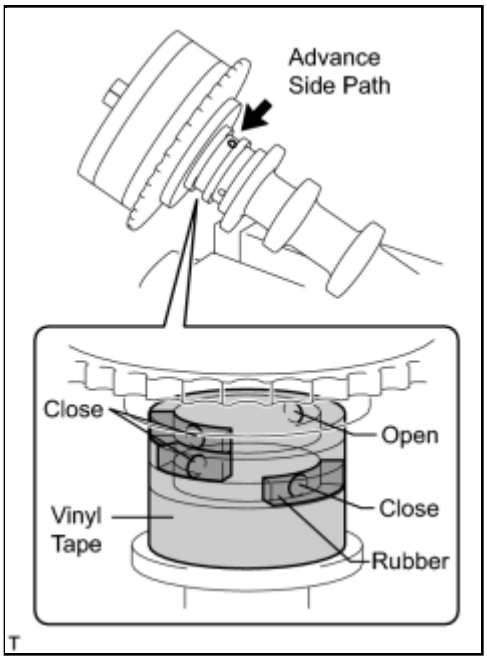
9. INSTALL SPARK PLUG INFO

10. INSTALL IGNITION COIL ASSEMBLY INFO

11. INSPECT FOR OIL LEAK

12. INSPECT IGNITION TIMING INFO

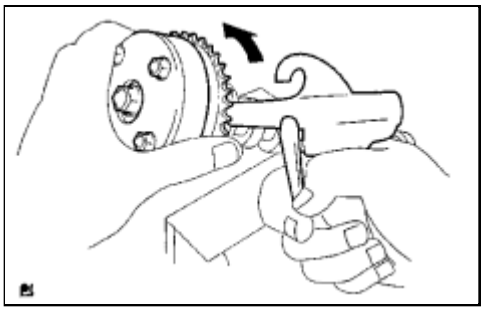
13. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO



14. INSTALL ENGINE UNDER COVER RH

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000033RO008X
Title: 2AZ-FE ENGINE MECHANICAL: CAMSHAFT: INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Install the camshaft timing gear assembly INFO .

(b) Clamp the camshaft in a vise, and make sure that the camshaft timing gear assembly does not rotate.

(c) Cover all the oil paths with vinyl tape except the advance side path shown in the illustration.

(d) Apply air pressure of 150 kPa (1.5 kgf/cm2, 22 psi) to the oil path

CAUTION:

Cover the paths with a piece of cloth to avoid oil splashes.

(e) Check that the camshaft timing gear revolves in the advance direction (counterclockwise) by hand.

HINT:

Depending on the air pressure, the camshaft timing gear may turn to the advance side without applying force by hand. Also, if enough air pressure cannot be applied because of air leakage from the path, releasing the lock

pin may be difficult.

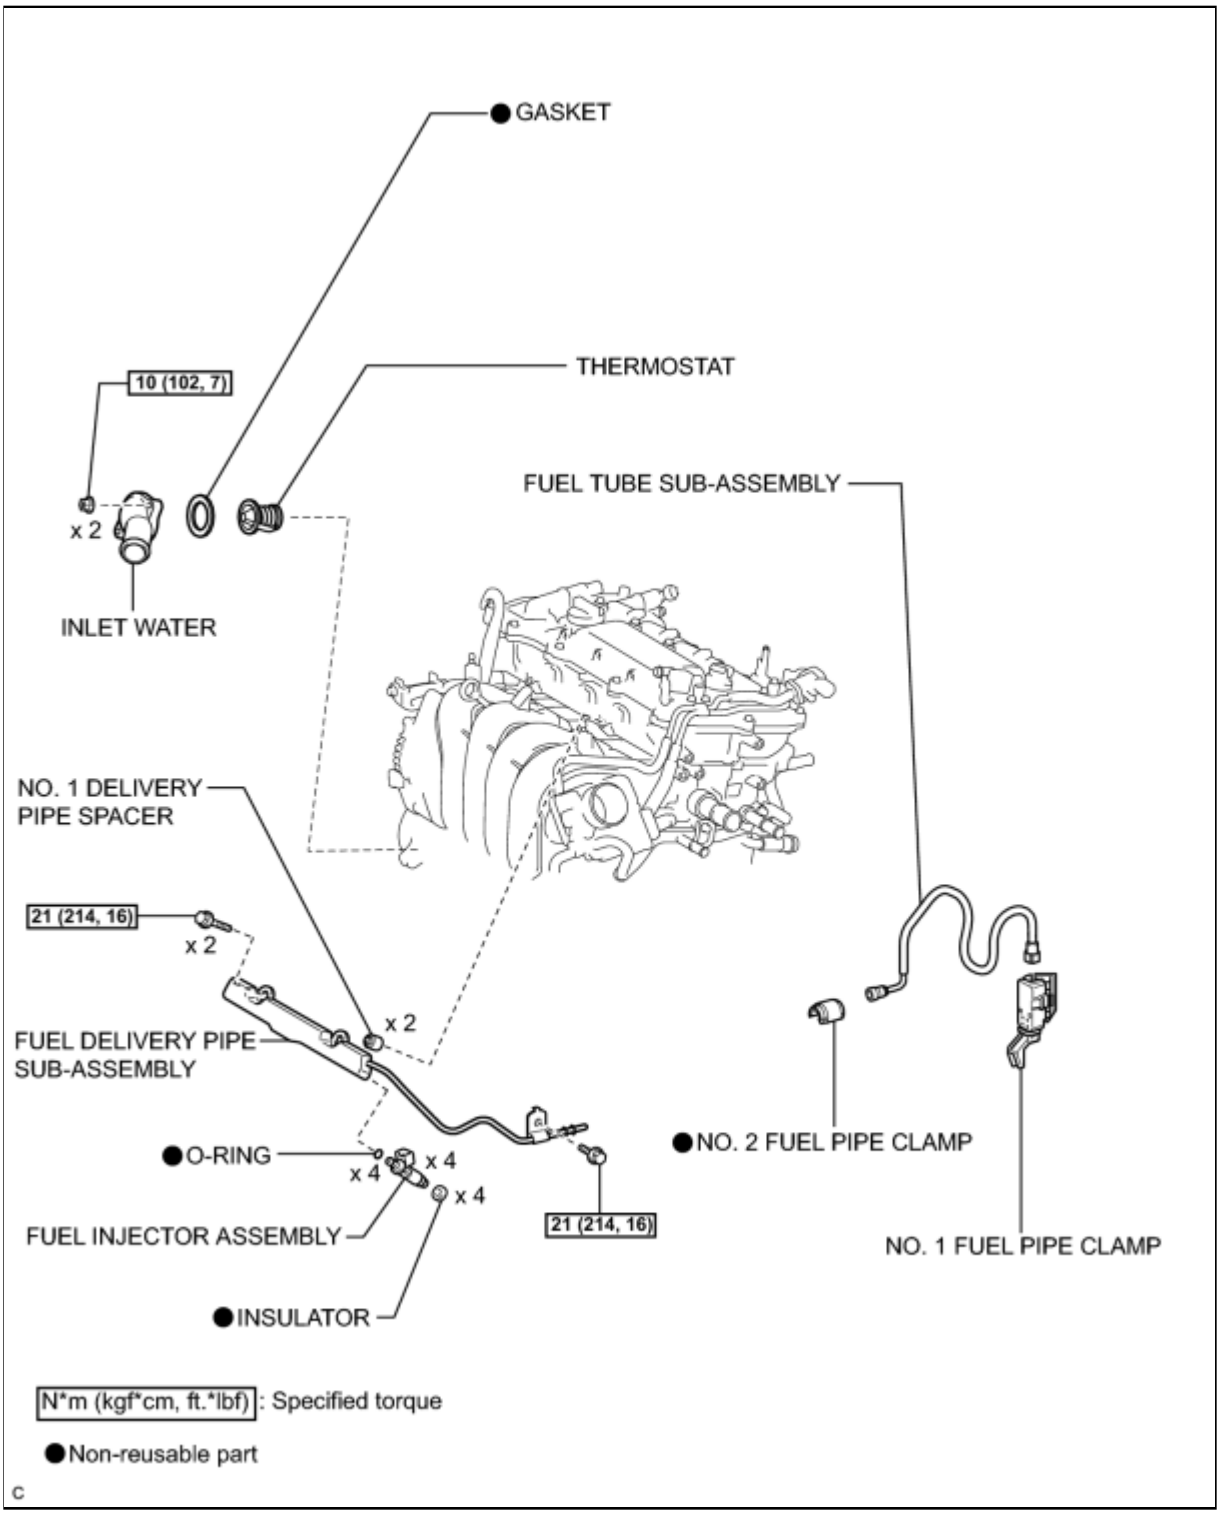
(f) Check for smooth rotation.

(1) Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.

NOTICE:

Do not use air pressure to perform the smooth rotation check.

(g) Check the lock in the most retarded position.



(1) Confirm that the camshaft timing gear is locked at the most retarded position.

(h) Remove the camshaft timing gear assembly INFO .

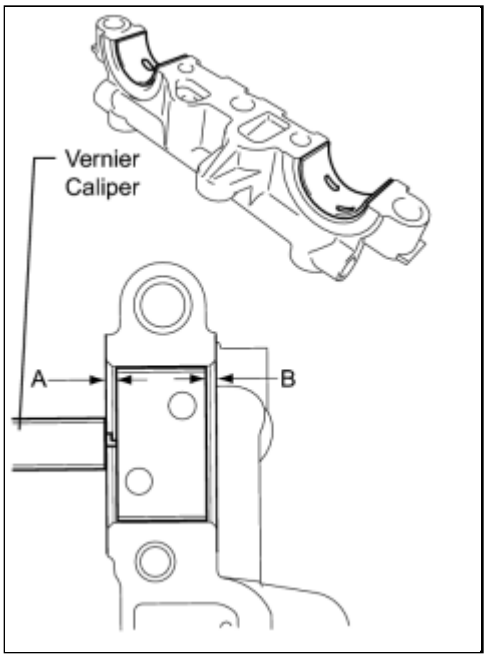
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027I901HX
Title: 2ZR-FE ENGINE MECHANICAL: CAMSHAFT: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL VALVE LASH ADJUSTER ASSEMBLY INFO

2. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO

3. INSTALL NO. 1 CAMSHAFT BEARING

(a) Clean both surfaces of the bearings.

(b) Install the 2 No. 1 camshaft bearings.

(c) Using a vernier caliper, measure the distance between the bearing cap edge and the camshaft bearing edge.

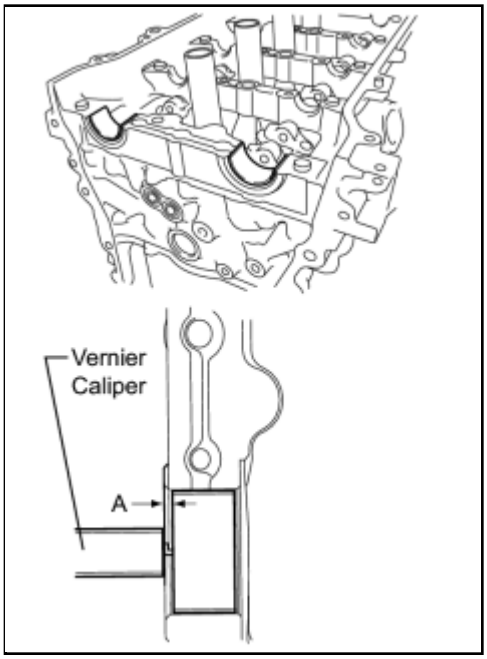
Dimension (A - B):
0.7 mm (0.0276 in.) or less

NOTICE:

Position the bearings to the center of the bearing cap by measuring dimensions A and B.

4. INSTALL NO. 2 CAMSHAFT BEARING

(a) Clean both surfaces of the bearings.

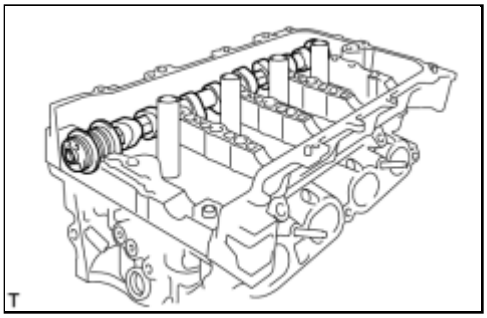


(b) Install the 2 No. 2 camshaft bearings.

(c) Using a vernier caliper, measure the distance between the bearing cap edge and the camshaft bearing edge.

Dimension (A):
1.05 to 1.75 mm (0.0413 to 0.0689 in.)

NOTICE:

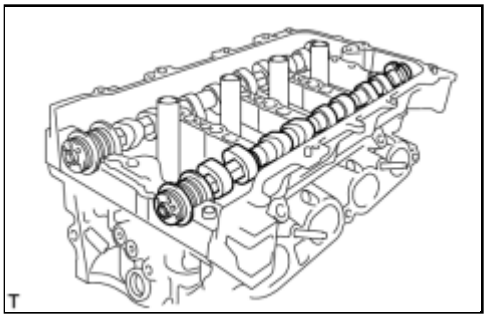


Position the bearings to the center of the bearing cap by measuring dimension A.

5. INSTALL NO. 2 CAMSHAFT

(a) Clean the camshaft journals.

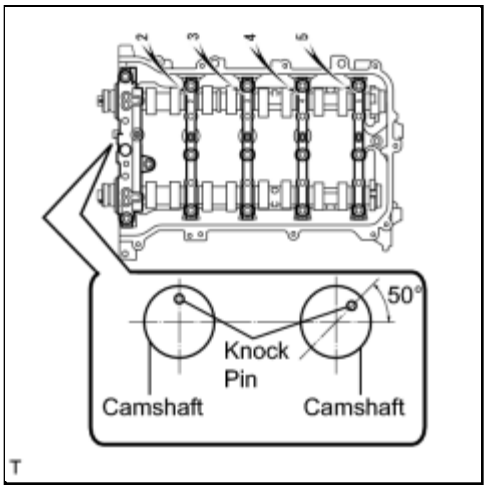
(b) Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.



(c) Install the No. 2 camshaft to the camshaft housing.

6. INSTALL CAMSHAFT

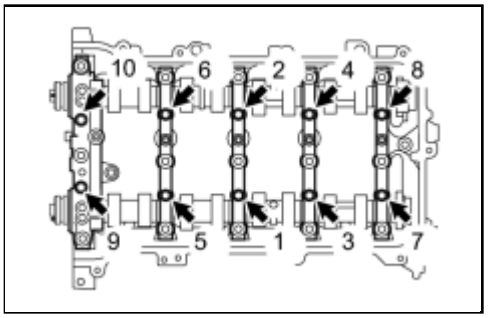
(a) Clean the camshaft journals.



(b) Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

(c) Install the camshaft to the camshaft housing.

7. INSTALL CAMSHAFT BEARING CAP

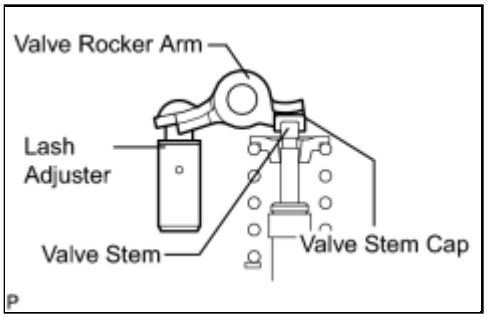


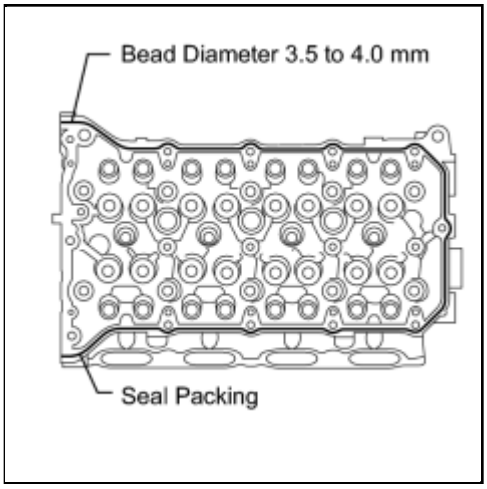
(a) Apply engine oil to the camshaft journals, camshaft housings and bearing caps.

(b) Make sure of the marks and numbers on the camshaft bearing caps and place them in each proper position and direction.

HINT:

Make sure that the knock pin of the camshaft is positioned as shown in the illustration.





(c) Tighten the 10 bolts in the order shown in the illustration.

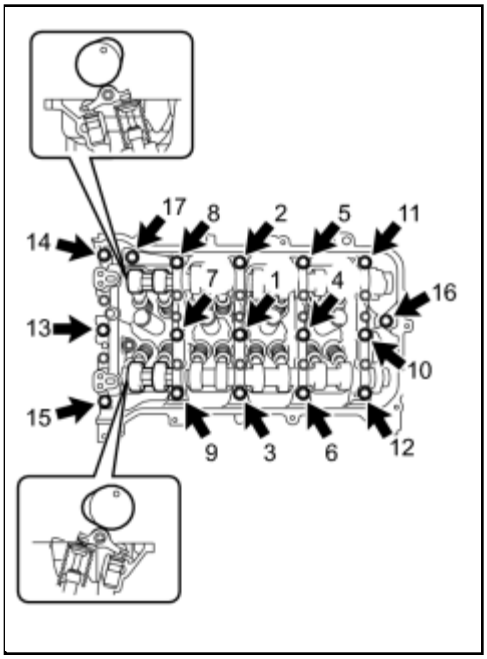
Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

8. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY

(a) Make sure that the valve rocker arm is installed as shown in the illustration.

(b) Apply seal packing in a continuous bead as shown in the illustration.

Seal packing:



Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Bead diameter:

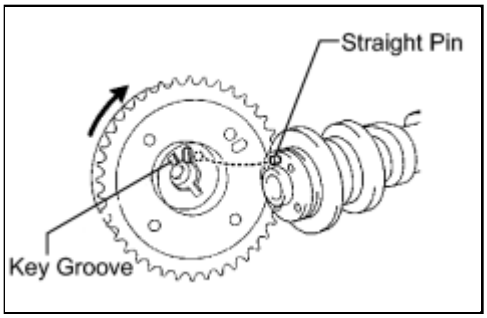
3.5 to 4.0 mm (0.138 to 0.158 in.)

NOTICE:

- Remove any oil from the contact surface.
- Install the camshaft housing sub-assembly within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing.

(c) Set the camshaft and No. 2 camshaft as shown in the illustration.

(d) Install the camshaft housing and tighten the 17 bolts in the order shown in the illustration.

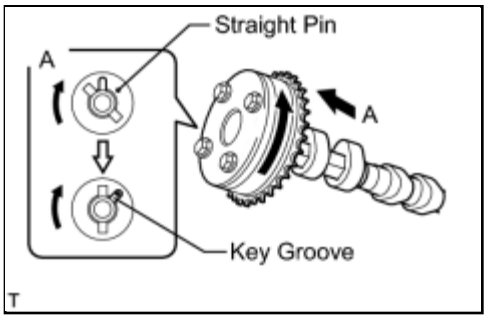


Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

NOTICE:

- After installing the camshaft housing, make sure that the cam lobes are positioned as shown in the illustration.
- If any of the bolts are loosened during installation, remove the camshaft housing, clean the installation surfaces, and reapply seal packing.
- If the camshaft housing is removed because any of the bolts are loosened during installation, make sure that the previously applied seal packing does not enter any oil passages.
- After installing the camshaft housing, wipe off any seal packing that seeped out from between the housing and the cylinder head.

9. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

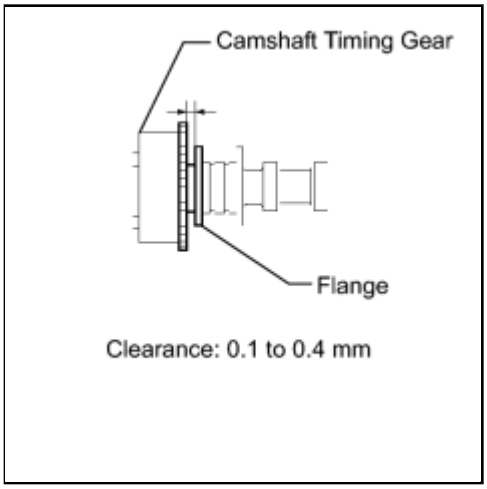


(a) Check that the knock pin is installed on the camshaft.

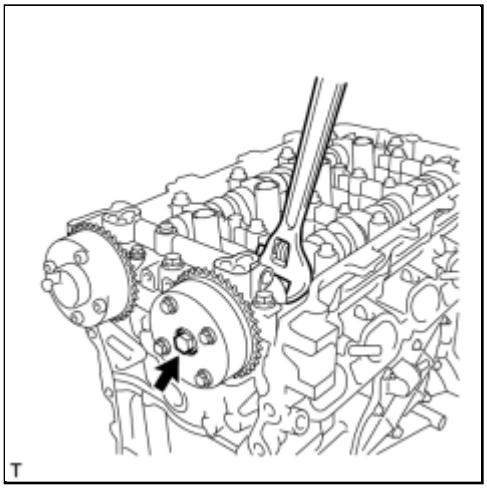
(b) Put the camshaft timing gear and camshaft together with the straight pin and key groove misaligned, as shown in the illustration.

NOTICE:

Do not forcefully push in the camshaft timing gear assembly. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing gear assembly.



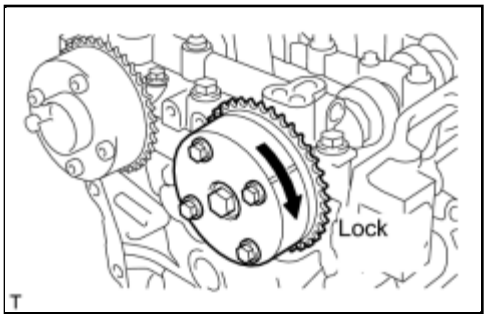
(c) Turn the camshaft timing gear as shown in the illustration while pushing it gently against the camshaft. Push further at the position where the pin fits into the groove.



NOTICE:

Do not turn the camshaft timing gear in the retard direction (clockwise).

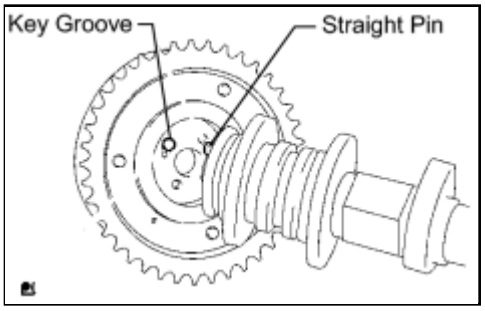
(d) Measure the clearance between the gear and the camshaft flange.



Clearance:
0.1 to 0.4 mm (0.004 to 0.016 in.)

(e) Tighten the flange bolt with the camshaft timing gear secured in place.

Torque: 54 N·m (551 kgf·cm, 40ft·lbf)

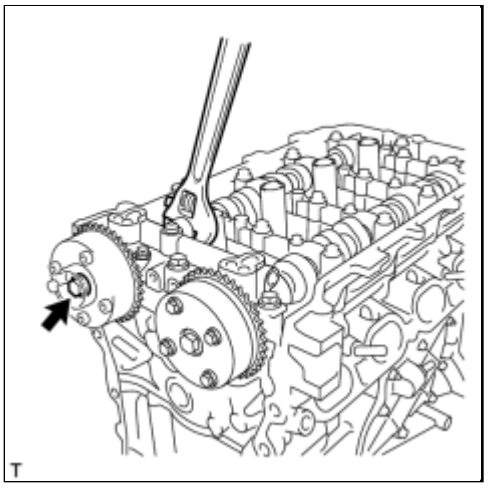


(f) Check that the camshaft timing gear can move in the retard direction (clockwise) and is locked in the most retarded position.

10. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Check that the knock pin is installed on the camshaft.

(b) Put the camshaft timing exhaust gear and camshaft together by aligning the key groove and straight pin.



(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.

NOTICE:

Be sure not to turn the camshaft timing exhaust gear in the retard direction (clockwise).

(d) Check that there is no clearance between the gear and the camshaft flange.

(e) Tighten the flange bolt with the camshaft timing exhaust gear secured.

Torque: 54 N·m (551 kgf·cm, 40ft·lbf)

(f) Check the camshaft timing exhaust gear lock.

(1) Make sure that the camshaft timing exhaust gear is locked.

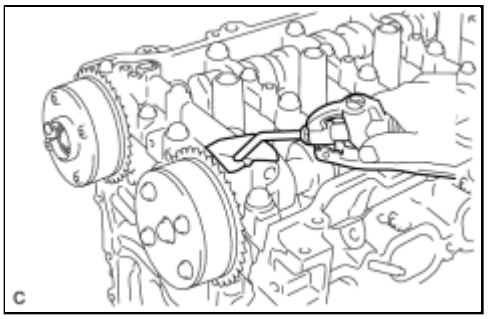
27. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO

28. REMOVE CHAIN SUB-ASSEMBLY INFO

29. REMOVE NO. 2 CHAIN VIBRATION DAMPER INFO

30. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Inspect the lock of the camshaft timing gear.



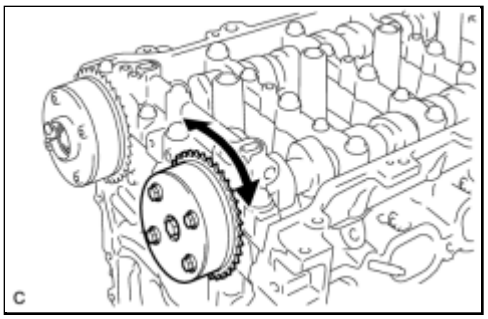
(b) After cleaning and degreasing the VVT oil hole on the intake side of the No. 1 camshaft bearing cap, completely seal the oil hole with adhesive tape or equivalent as shown in the illustration to prevent air from leaking.

NOTICE:

Be sure to cover the oil hole completely because air leaks due to insufficient sealing will prevent the lock pin from being released.

(c) Prick a hole in the tape covering the oil hole as shown in the illustration. (Procedure A)

(d) Apply approximately 150 kPa (1.5 kgf/cm2, 22 psi) of air pressure to the hole pricked in procedure A to release the lock pin.



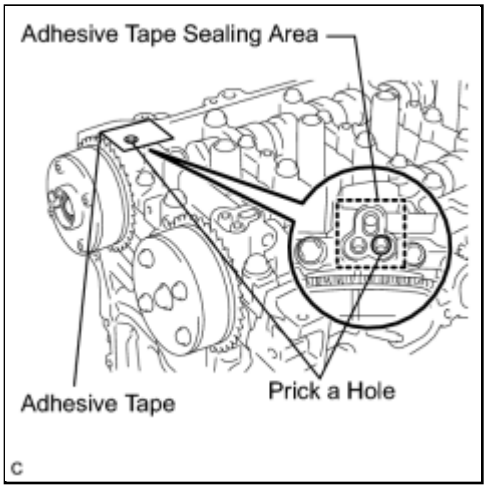
NOTICE:

- If air leaks out, reattach the adhesive tape.
- Cover the oil hole with a piece of cloth when applying air pressure to prevent oil from spraying.

(e) Forcibly turn the camshaft timing gear assembly in the advance direction (counterclockwise).

HINT:

Depending on the air pressure applied, the camshaft timing gear assembly may turn in the advance direction without assistance by hand.

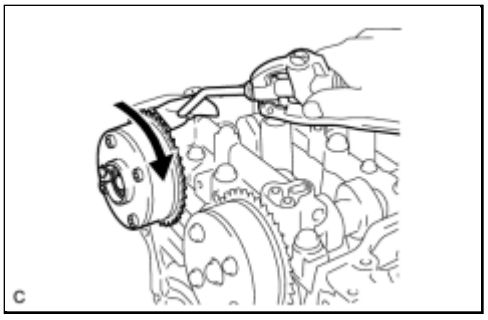


(f) Turn the camshaft timing gear assembly within its movable range (26.5 to 28.5°) 2 or 3 times without turning it to the most retarded position. Make sure that the camshaft timing gear assembly turns smoothly.

(g) Remove the adhesive tape from the No. 1 camshaft bearing cap.

31. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Check the lock of the camshaft timing exhaust gear.



(b) After cleaning and degreasing the VVT oil hole on the exhaust side of the No. 1 camshaft bearing cap, completely seal the oil hole with adhesive tape or equivalent as shown in the illustration to prevent air from leaking.

NOTICE:

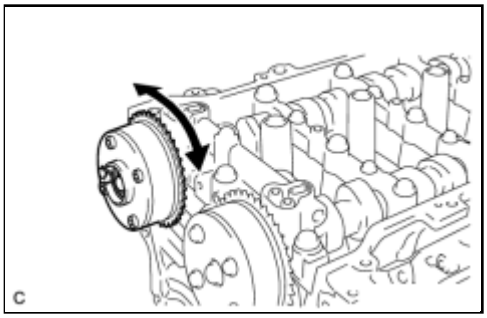
Be sure to cover the oil hole completely because air leaks due to insufficient sealing will prevent the lock pin from being released.

(c) Prick a hole in the tape covering the oil hole as shown in the illustration. (Procedure B)

(d) Apply approximately 200 kPa (2.0 kgf/cm2, 28 psi) of air pressure to the hole pricked in procedure B to release the lock pin.

NOTICE:

- If air leaks out, reattach the adhesive tape.
- Cover the oil hole with a shop rag or a piece of cloth when applying air pressure to prevent oil from spraying.

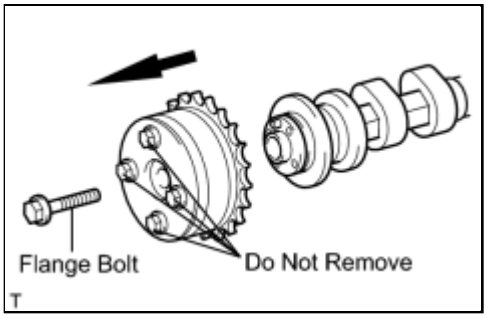


(e) Using a screwdriver with its tip wrapped with tape, forcibly turn the camshaft timing exhaust gear in the retard direction (clockwise).

NOTICE:

- Be sure to keep the camshaft timing exhaust gear in the retard direction using a screwdriver. If

the gear is released, it will return to the most advanced position automatically due to force from the spring.

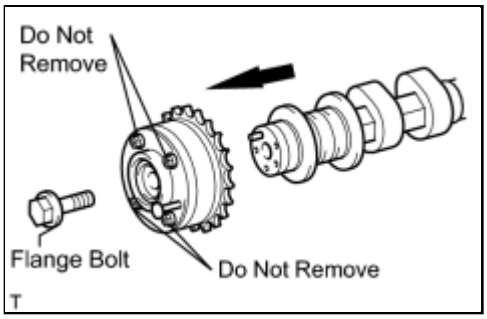


- Do not damage the camshaft timing exhaust gear.

(f) Using a screwdriver with its tip wrapped with tape, turn the camshaft timing exhaust gear within its movable range (19 to 21°) 2 or 3 times without turning it to the most advanced position. Make sure that the camshaft timing exhaust gear turns smoothly.

(g) Remove the adhesive tape from the No. 1 camshaft bearing cap.

32. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

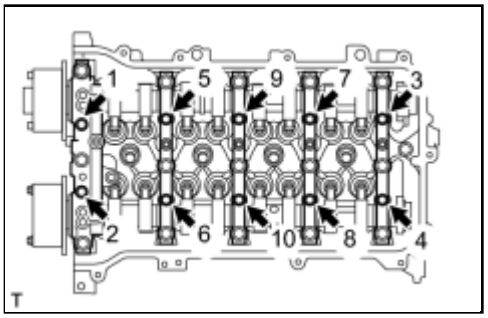


(a) Remove the flange bolt while holding the hexagonal portion of the camshaft, then remove the camshaft timing gear assembly.

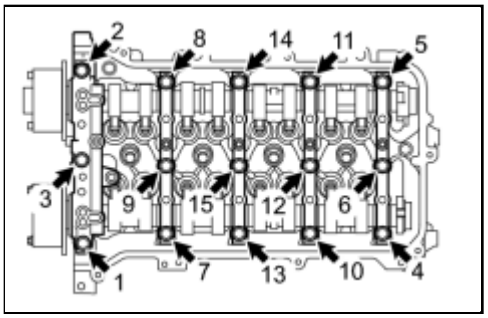
NOTICE:

- Before removing the camshaft timing gear, make sure that the lock pin has been released.
- Be sure not to remove the other 4 bolts.
- Keep the camshaft timing gear assembly horizontal while removing it from the camshaft.

33. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY



(a) Remove the flange bolt while holding the hexagonal portion of the camshaft, then remove the camshaft timing exhaust gear assembly.



NOTICE:

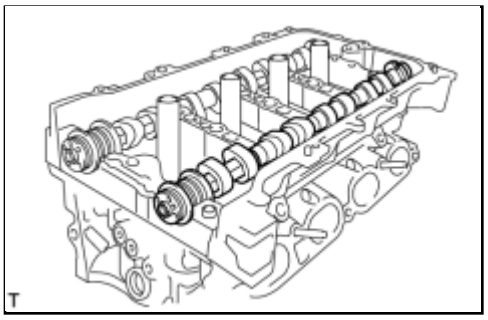
- Be sure not to remove the other 4 bolts.
- Keep the camshaft timing exhaust gear assembly horizontal while removing it from the camshaft.

34. REMOVE CAMSHAFT BEARING CAP

(a) Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Uniformly loosen and remove the 15 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

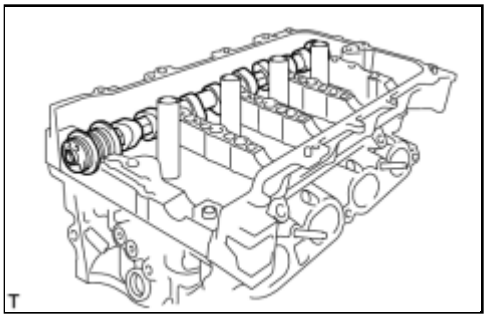


Uniformly loosen the bolts while keeping the camshaft level.

(c) Remove the 5 bearing caps.

HINT:

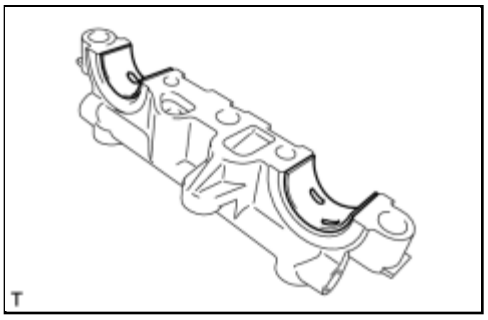
Arrange the removed parts in the correct order.



35. REMOVE CAMSHAFT

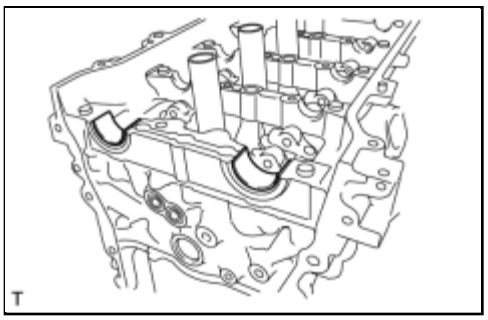
(a) Remove the camshaft.

36. REMOVE NO. 2 CAMSHAFT



(a) Remove the No. 2 camshaft.

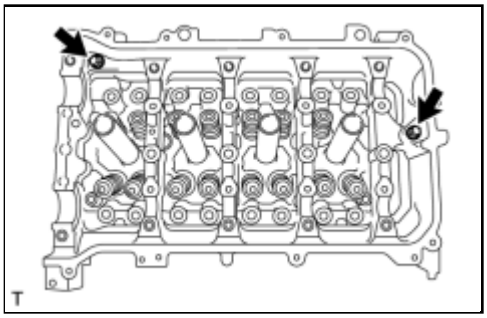
37. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO



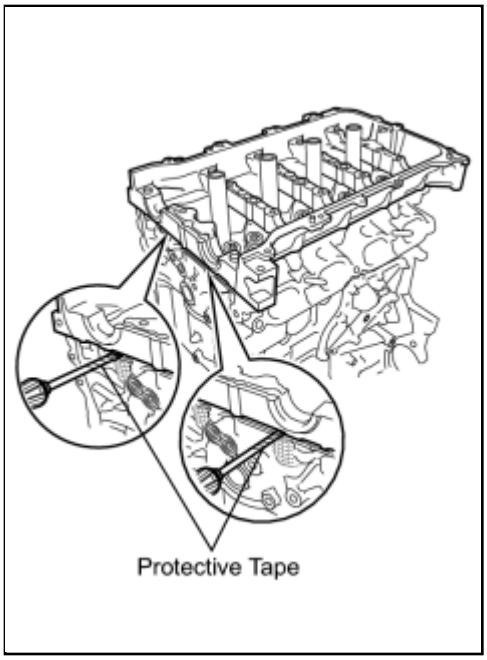
38. REMOVE VALVE LASH ADJUSTER ASSEMBLY INFO

39. REMOVE NO. 1 CAMSHAFT BEARING

(a) Remove the 2 No. 1 camshaft bearings.



40. REMOVE NO. 2 CAMSHAFT BEARING



(a) Remove the 2 No. 2 camshaft bearings.

41. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY

(a) Remove the 2 bolts.

(b) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

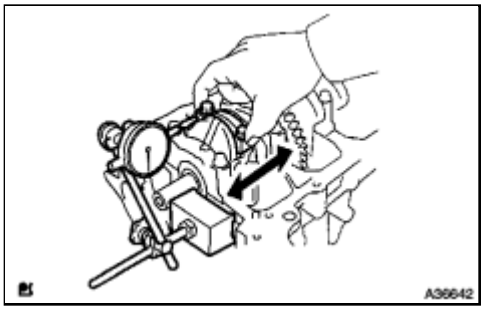
NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

HINT:

Tape the screwdriver tip before use.

42. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO



43. INSPECT VALVE LASH ADJUSTER ASSEMBLY INFO

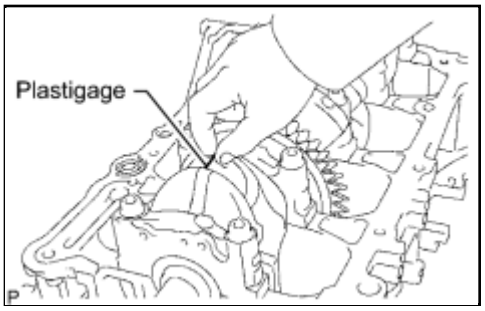
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026TQ019X
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER BLOCK: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CONNECTING ROD THRUST CLEARANCE

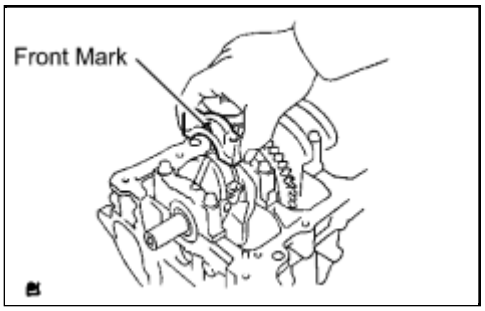
(a) Install the connecting rod cap INFO .

(b) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.



Standard thrust clearance:
0.160 to 0.362 mm (0.00630 to 0.0143 in.)
Maximum thrust clearance:
0.362 mm (0.0143 in.)

If the thrust clearance is greater than the maximum, replace the connecting rod assemblies as necessary. If necessary, replace the crankshaft.



2. INSPECT CONNECTING ROD OIL CLEARANCE

(a) Clean the crank pin and bearing.

(b) Check the crank pin and bearing for pitting and scratches.

(c) Lay a strip of Plastigage on the crank pin.

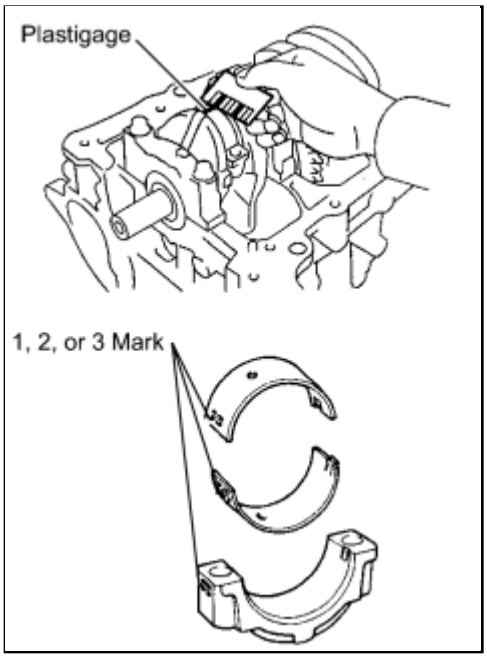
(d) Check that the front mark of the connecting rod cap is facing forward.

(e) Install the connecting rod cap INFO .

NOTICE:

Do not turn the crankshaft.

(f) Remove the 2 bolts and connecting rod cap INFO .



(g) Measure the Plastigage at its widest point.

Standard oil clearance:
0.024 to 0.048 mm (0.000945 to 0.00189 in.)
Maximum oil clearance:
0.063 mm (0.00248 in.)

NOTICE:

Completely remove the Plastigage after the measurement.

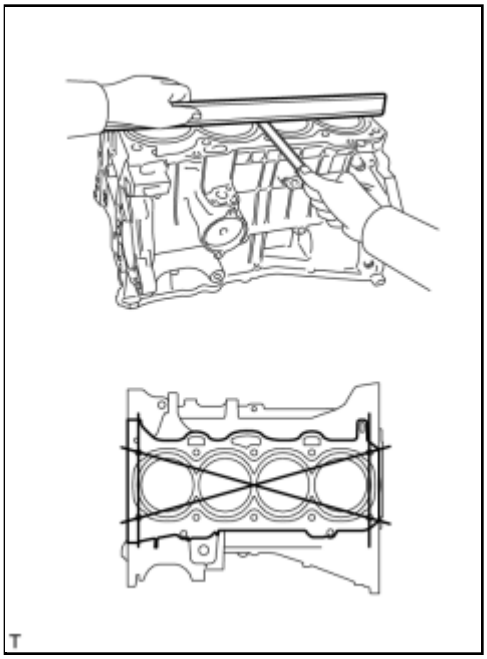
If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, inspect the crankshaft.

HINT:

If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, or 3 mark on its surface.

Standard Connecting Rod Large End Bore Diameter:

MARK	SPECIFIED CONDITION
Mark 1	51.000 to 51.007 mm (2.0079 to 2.0082 in.)
Mark 2	51.008 to 51.013 mm (2.0082 to 2.0084 in.)
Mark 3	51.014 to 51.020 mm (2.0084 to 2.0087 in.)



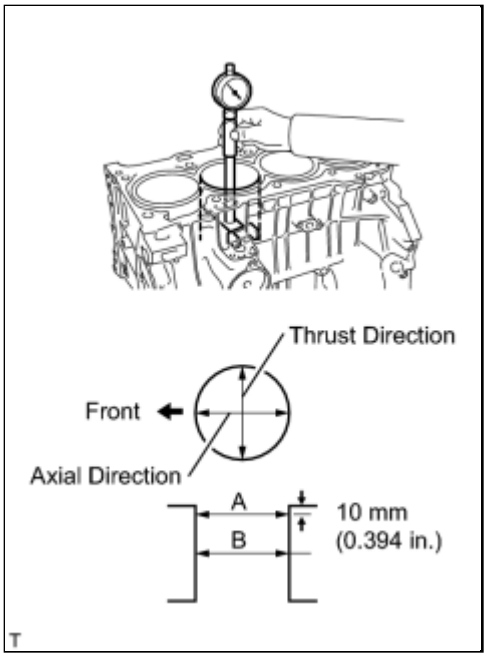
Standard Connecting Rod Bearing Thickness:

MARK	SPECIFIED CONDITION
Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)

Standard crankshaft pin diameter:
47.990 to 48.000 (1.8894 to 1.8898 in.)

3. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that contacts the cylinder head



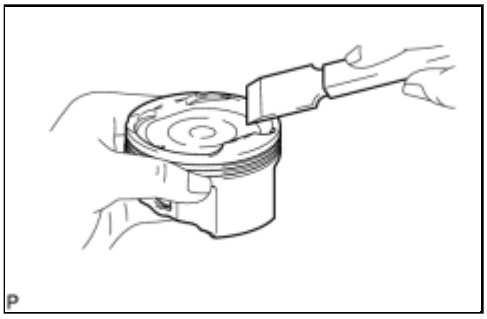
gasket.

Maximum warpage:
0.05 mm (0.00197 in.)

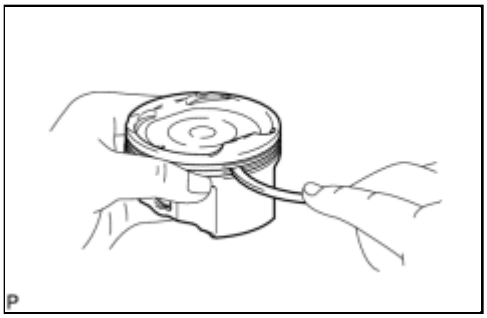
If the warpage is greater than the maximum, replace the cylinder block.

4. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

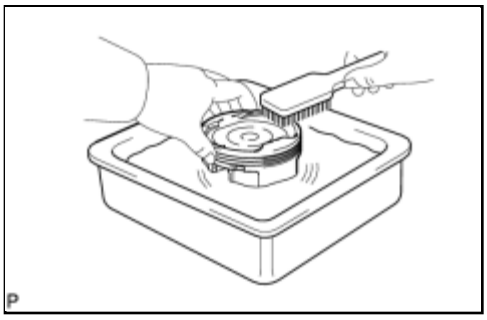


Standard diameter:
88.500 to 88.513 mm (3.4843 to 3.4847 in.)
Maximum diameter:
88.613 mm (3.4887 in.)



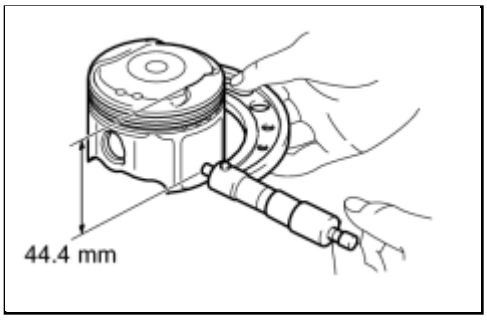
If the average diameter of the 4 positions is greater than the maximum, replace the cylinder block.

5. INSPECT PISTON



(a) Using a gasket scraper, remove the carbon from the top of the piston.

NOTICE:
Do not damage the piston.



(b) Using a groove cleaning tool or a broken ring, clean the piston ring grooves.

(c) Using a brush and solvent, thoroughly clean the piston.

NOTICE:

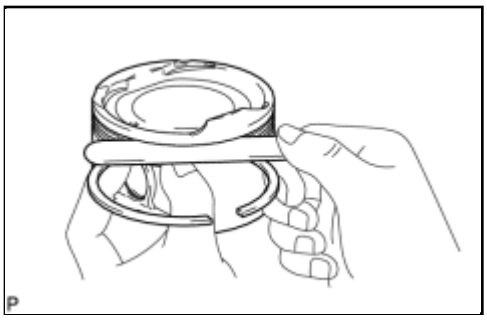
Do not use a wire brush.

(d) Using a micrometer, measure the piston diameter at right angles to the piston pin hole, and at the piston 44.4 mm (1.748 in.) from the piston head.

Standard piston diameter:
88.469 to 88.479 mm (3.4830 to 3.4834 in.)

If the diameter is not as specified, replace the piston.

6. INSPECT PISTON OIL CLEARANCE



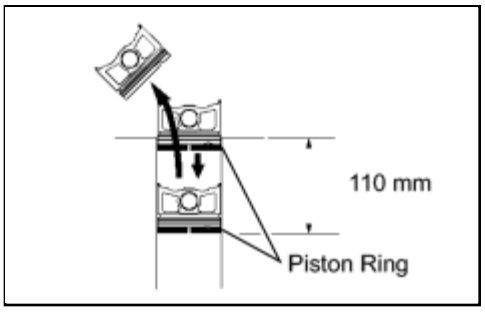
(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.021 to 0.044 mm (0.000827 to 0.00173 in.)

Maximum oil clearance:
0.10 mm (0.00394 in.)

If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

7. INSPECT RING GROOVE CLEARANCE

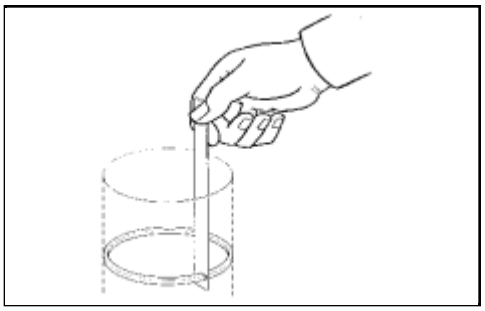


(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

ITEM	SPECIFIED CONDITION
No. 1 Ring	0.020 to 0.070 mm (0.000787 to 0.00276 in.)
No. 2 Ring	0.020 to 0.060 mm (0.000787 to 0.00236 in.)
Oil Ring	0.020 to 0.070 mm (0.000787 to 0.00276 in.)

If the groove clearance is not as specified, replace the piston.



8. INSPECT PISTON RING END GAP

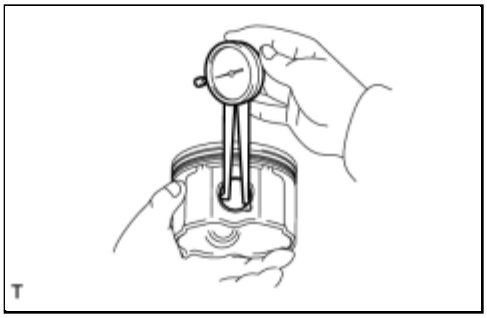
(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.

(b) Using a feeler gauge, measure the end gap.

Standard End Gap:

ITEM	SPECIFIED CONDITION
No. 1 Ring	0.24 to 0.31 mm (0.00945 to 0.0122 in.)
No. 2 Ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)
Oil Ring	0.10 to 0.30 mm (0.00394 to 0.0118 in.)

Maximum End Gap:



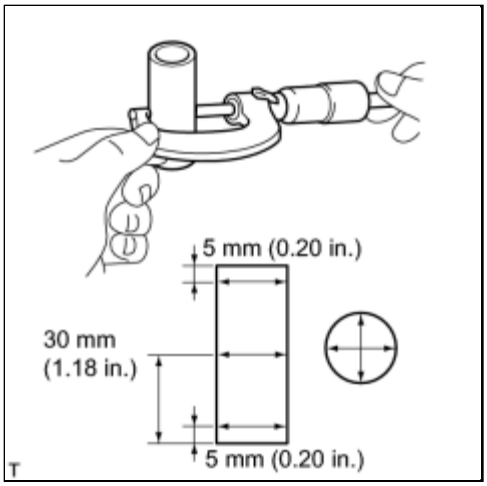
ITEM	SPECIFIED CONDITION
No. 1 Ring	0.31 mm (0.0122 in.)
No. 2 Ring	0.43 mm (0.0169 in.)
Oil Ring	0.30 mm (0.0118 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum with a new piston ring, replace the cylinder block.

9. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the piston pin bore diameter.

Standard piston pin bore diameter:
22.001 to 22.010 mm (0.8662 to 0.8665 in.)
:

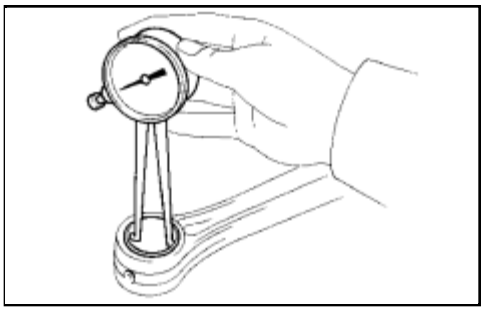


ITEM	SPECIFIED CONDITION
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)

If the diameter is not as specified, replace the piston.

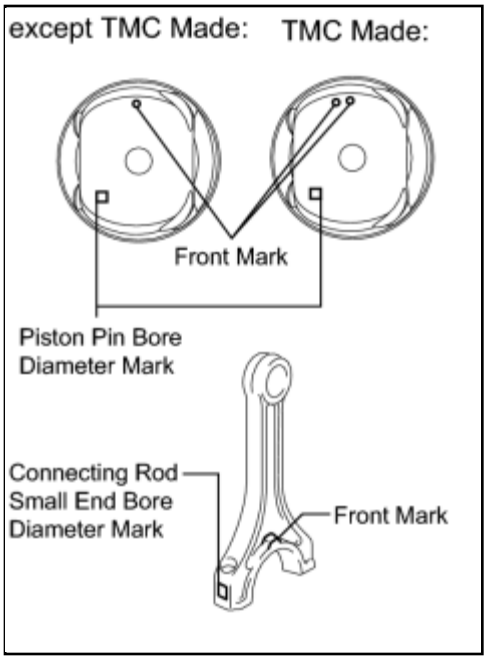
(b) Using a micrometer, measure the piston pin diameter.

Standard piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)
:



ITEM	SPECIFIED CONDITION
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)

If the diameter is not as specified, replace the piston pin.



(c) Using a caliper gauge, measure the connecting rod small end bore diameter.

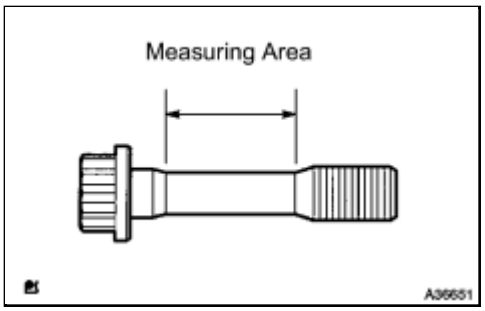
Standard connecting rod small end bore diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)
:

ITEM	SPECIFIED CONDITION
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)

If the diameter is not as specified, replace the connecting rod.

(d) Subtract the piston pin diameter measurement from the piston pin bore diameter measurement.

Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.0003 in.)
Maximum oil clearance:
0.010 mm (0.0004 in.)



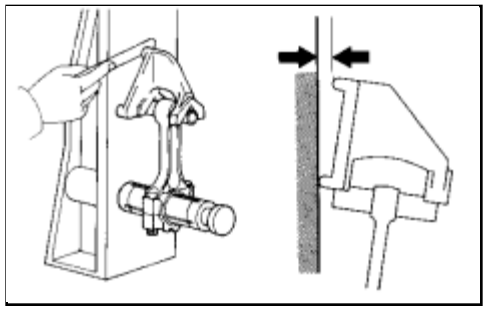
If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

(e) Subtract the piston pin diameter measurement from the connecting rod small end bore diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.011 mm (0.0004 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.

10. INSPECT CONNECTING ROD BOLT

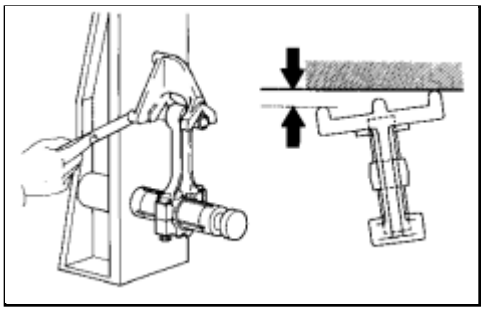


(a) Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

11. INSPECT CONNECTING ROD SUB-ASSEMBLY



(a) Using a connecting rod aligner and feeler gauge, check the connecting rod alignment.

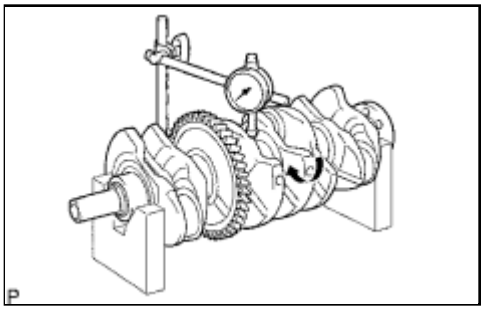
(1) Check for misalignment.

Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If the misalignment is greater than the maximum, replace the connecting rod.

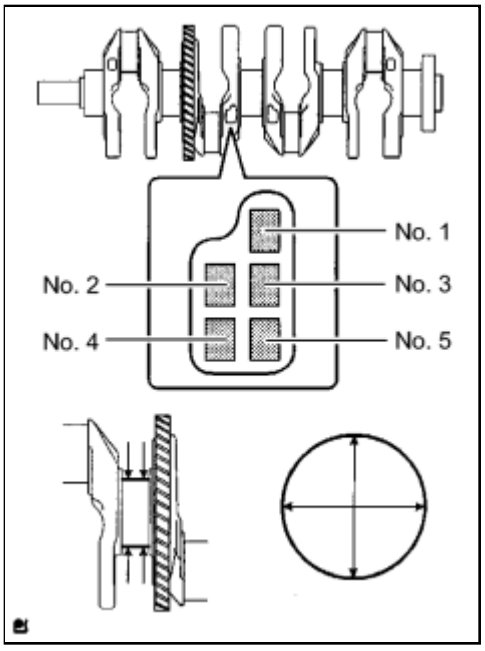
(2) Check for twist.

Maximum twist:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)



If the twist is greater than the maximum, replace the connecting rod.

12. INSPECT CRANKSHAFT



(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.

Maximum circle runout:
0.03 mm (0.0012 in.)

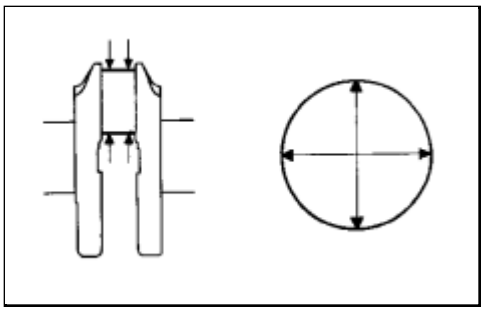
If the circle runout is greater than the maximum, replace

the crankshaft.

(b) Using a micrometer, measure the diameter of each main journal.

Standard diameter:
54.988 to 55.000 mm (2.1649 to 2.1654 in.)

If the diameter is not as specified, check the crankshaft oil clearance.



(c) Check each main journal for taper and distortion as shown in the illustration.

Maximum taper and distortion:
0.003 mm (0.0001 in.)

If the taper and distortion are greater than the maximum, replace the crankshaft.

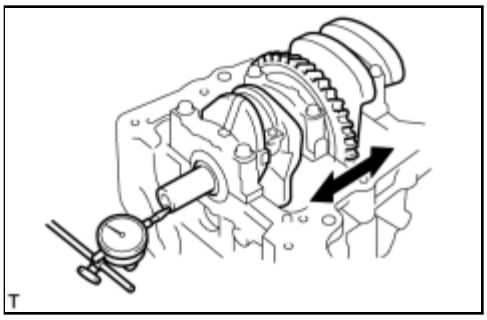
Standard Diameter (Reference):

MARK	SPECIFIED CONDITION
0	54.999 to 55.000 mm (2.16531 to 2.16535 in.)
1	54.997 to 54.998 mm (2.16523 to 2.16527 in.)
2	54.995 to 54.996 mm (2.16515 to 2.16519 in.)
3	54.993 to 54.994 mm (2.16507 to 2.16511 in.)
4	54.991 to 54.992 mm (2.16500 to 2.16503 in.)
5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

(d) Using a micrometer, measure the diameter of each crank pin.

Standard diameter:
47.990 to 48.000 mm (1.8894 to 1.8898 in.)

If the diameter is not as specified, check the connecting rod oil clearance.



(e) Inspect each crank pin for taper and distortion as shown in the illustration.

Maximum taper and distortion:
0.003 mm (0.000118 in.)

If the taper and distortion are greater than the maximum, replace the crankshaft.

13. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Install the main bearing cap INFO .

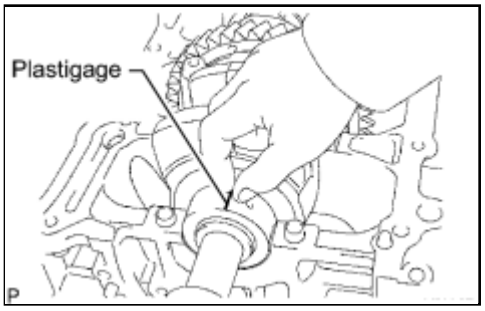
(b) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.24 mm (0.00157 to 0.00945 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)

If the thrust clearance is greater than the maximum, replace the thrust washers as a set.

HINT:

The thrust washer thickness is 1.93 to 1.98 mm (0.0760 to 0.0780 in.).



14. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Check the crank journal and bearing for pitting and scratches.

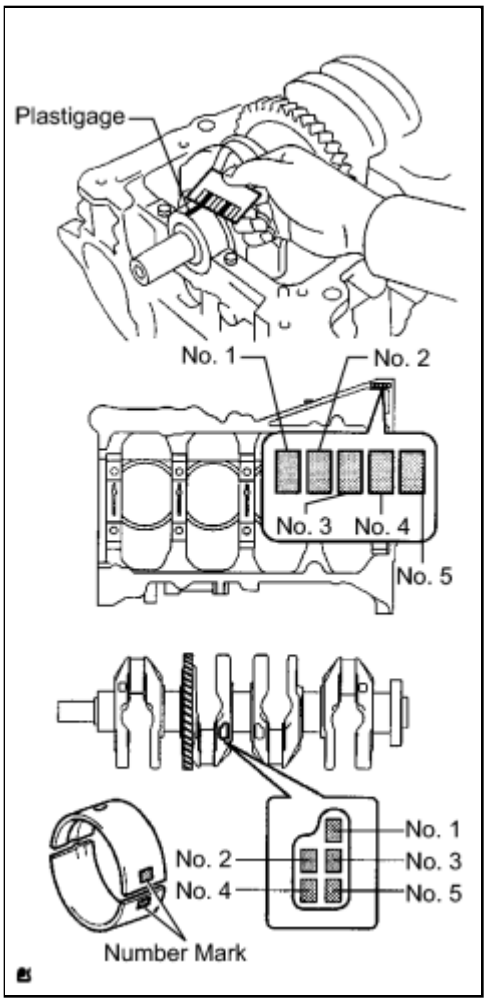
(b) Install the crankshaft bearing INFO .

(c) Place the crankshaft on the cylinder block.

(d) Lay a strip of Plastigage across each journal.

(e) Examine the front marks and numbers and install the bearing caps on the cylinder block.

HINT:



A number is marked on each main bearing cap to indicate the installation position.

(f) Install the main bearing caps INFO .

NOTICE:

Do not turn the crankshaft.

(g) Remove the main bearing caps INFO .

(h) Measure the Plastigage at its widest point.

Standard oil clearance:
0.017 to 0.040 mm (0.000669 to 0.00157 in.)
Maximum oil clearance:
0.060 mm (0.00236 in.)

NOTICE:

Remove the Plastigage completely after the measurement.

If the oil clearance is greater than the maximum, replace the crankshaft bearing. If necessary, replace the crankshaft.

HINT:

- If replacing a bearing, select a new one with the same number. If the number of the bearing cannot be determined, calculate the correct bearing number by adding together the numbers imprinted on the cylinder block and crankshaft. Then select a new bearing with the calculated number. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.
- EXAMPLE: Cylinder block "3" + Crankshaft "5" = Total number 8 (Use bearing "3")

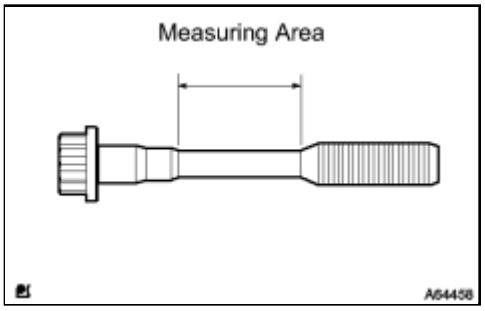
Cylinder block + Crankshaft	0 to 2	3 to 5	6 to 8	9 to 11
Bearing to be used	"1"	"2"	"3"	"4"

Standard Cylinder Block Journal Bore Diameter:

MARK	SPECIFIED CONDITION
0	59.000 to 59.002 mm (2.32283 to 2.32291 in.)
1	59.003 to 59.004 mm (2.32295 to 2.32299 in.)
2	59.005 to 59.006 mm (2.32303 to 2.32307 in.)
3	59.007 to 59.009 mm (2.32311 to 2.32318 in.)
4	59.010 to 59.011 mm (2.32322 to 2.32326 in.)
5	59.012 to 59.013 mm (2.32330 to 2.32334 in.)
6	59.014 to 59.016 mm (2.32338 to 2.32346 in.)

Standard Crankshaft Journal Diameter:

MARK	SPECIFIED CONDITION
0	54.999 to 55.000 mm (2.16531 to 2.16535 in.)
1	54.997 to 54.998 mm (2.16523 to 2.16527 in.)
2	54.995 to 54.996 mm (2.16515 to 2.16519 in.)
3	54.993 to 54.994 mm (2.16507 to 2.16511 in.)
4	54.991 to 54.992 mm (2.16500 to 2.16504 in.)
5	54.988 to 54.990 mm (2.16488 to 2.16496 in.)



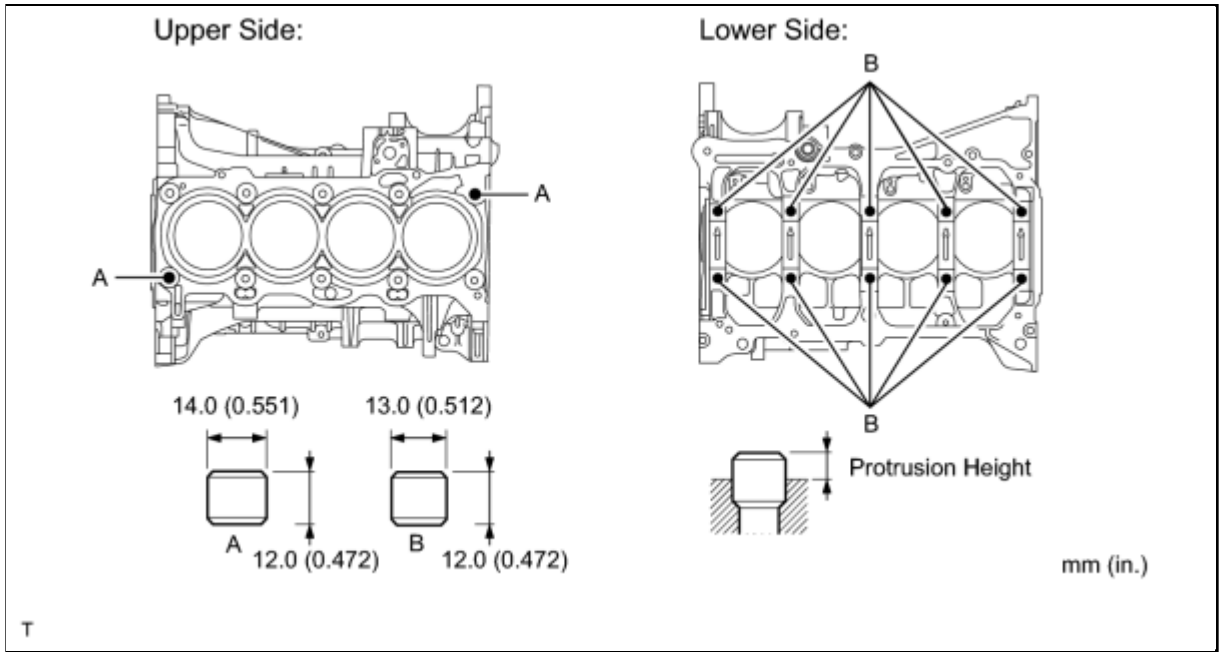
Standard Bearing Center Wall Thickness:

MARK	SPECIFIED CONDITION
1	1.993 to 1.996 mm (0.078464 to 0.078583 in.)
2	1.997 to 1.999 mm (0.078622 to 0.078701 in.)
3	2.000 to 2.002 mm (0.078740 to 0.078819 in.)
4	2.003 to 2.005 mm (0.078858 to 0.078937 in.)

15. INSPECT CRANKSHAFT BEARING CAP SET RING PIN

(a) Using a vernier caliper, measure the tension portion diameter of the bolts.

Standard diameter:
7.5 to 7.6 mm (0.295 to 0.299 in.)
Minimum diameter:
7.5 mm (0.295 in.)



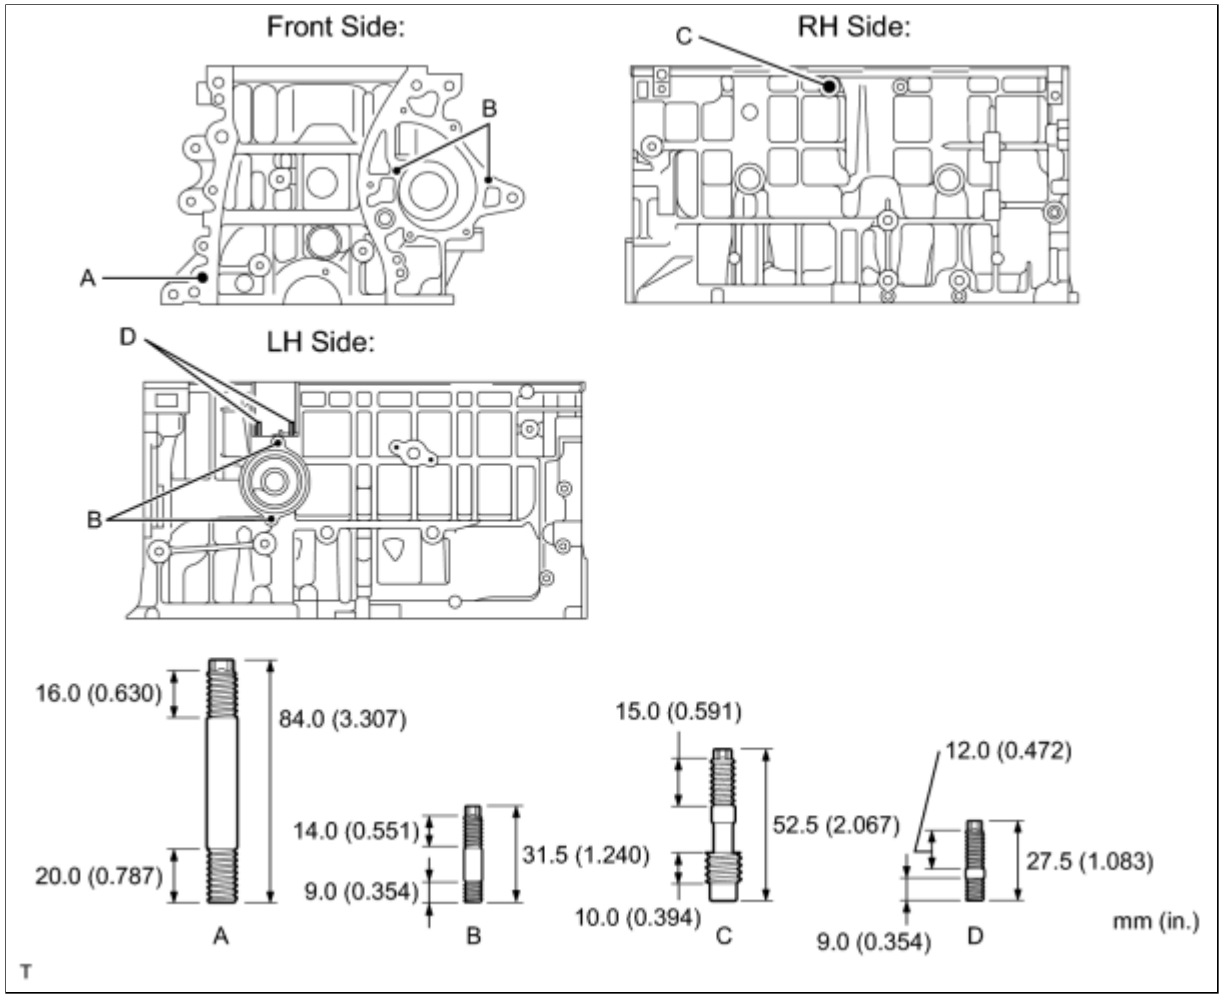
If the diameter is less than the minimum, replace the bolt.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000224E00CX
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER BLOCK: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL RING PIN

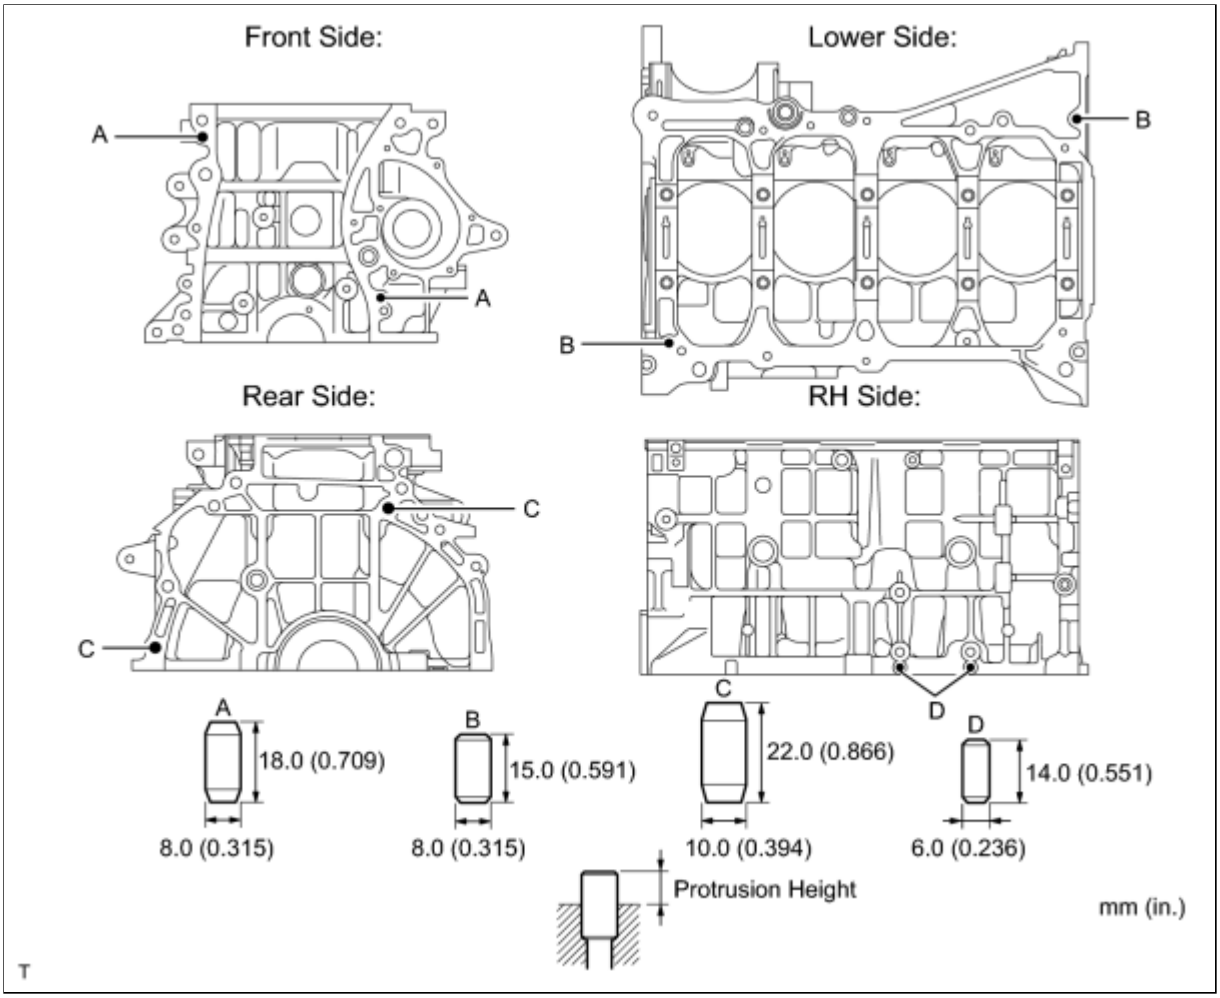
(a) Using a plastic hammer, tap in the ring pins.



Standard Protrusion:

ITEM	PROTRUSION
A	6 mm (0.236 in.)
B	5 mm (0.197 in.)

2. INSTALL STUD BOLT



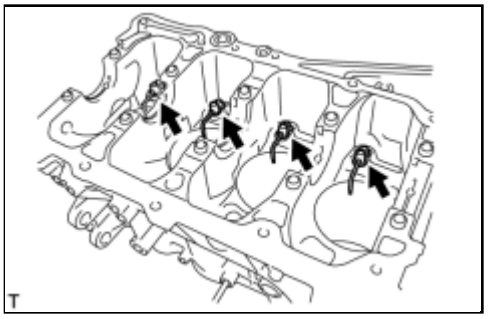
(a) Install the stud bolts as shown in the illustration.

Stud Bolt A - Torque: 22 N·m (220 kgf·cm, 16ft·lbf)
Stud Bolt B - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)
Stud Bolt C - Torque: 9.5 N·m (97 kgf·cm, 84in·lbf)
Stud Bolt D - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

3. INSTALL STRAIGHT PIN

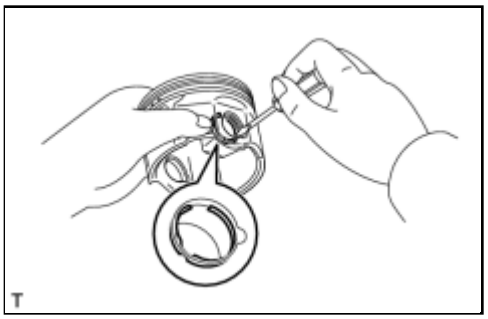
(a) Using a plastic hammer, tap in the straight pins.

Standard Protrusion:



ITEM	PROTRUSION
A	8 mm (0.315 in.)
B	7.5 mm (0.295 in.)
C	12 mm (0.472 in.)
D	5 mm (0.197 in.)

4. INSPECT CRANKSHAFT OIL CLEARANCE INFO

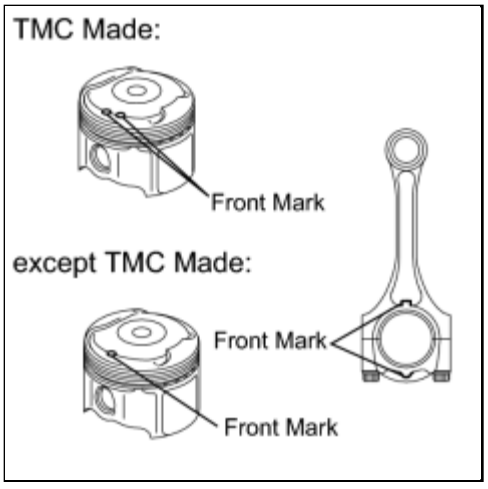


5. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the oil nozzles with the bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

6. INSTALL PISTON

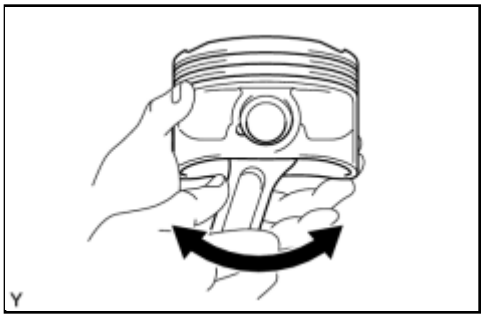


(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.

HINT:

Make sure that the end gap on the snap ring is not aligned with the pin hole cutout portion of the piston.

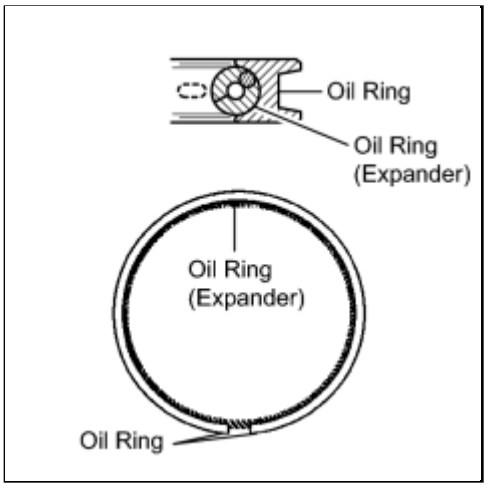
(b) Gradually heat the piston to approximately 80 to 90 °C (176 to 194°F).



(c) Align the front marks on the piston and connecting rod, and push in the piston with a thumb.

(d) Using a screwdriver, install a new snap ring on the other end of the piston pin hole.

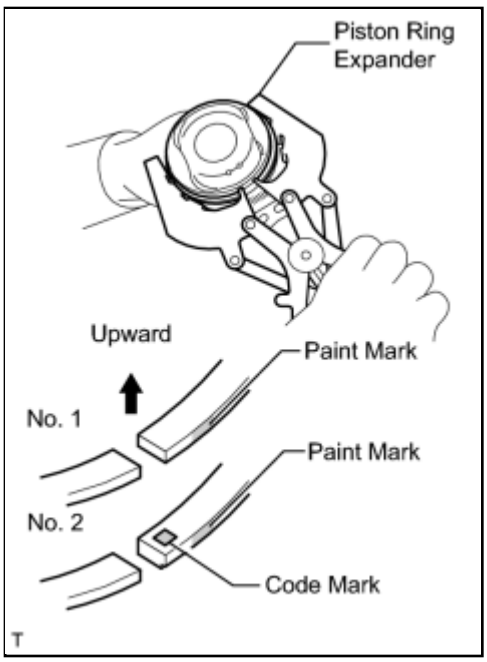
HINT:



Make sure that the end gap on the snap ring is not aligned with the pin hole cutout portion of the piston.

(e) Check the fitting condition between the piston and piston

pin by trying to move the piston back and forth on the piston pin.

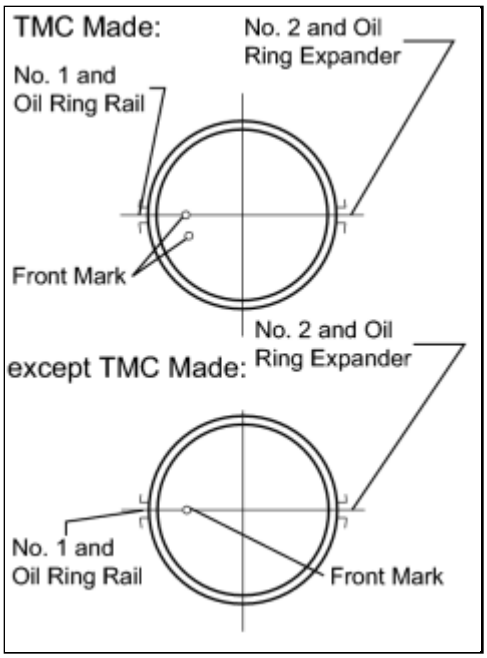


7. INSTALL PISTON RING SET

(a) Install the oil ring expander and oil ring rail by hand.

NOTICE:

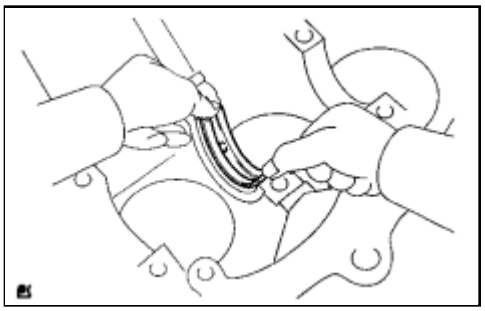
- Install the expander and oil ring so that their ring ends are at opposite sides.
- Securely install the expander into the inner groove of the oil ring.



(b) Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.

NOTICE:

Install compression ring No. 2 with the code mark (2N or 2A) facing upward.

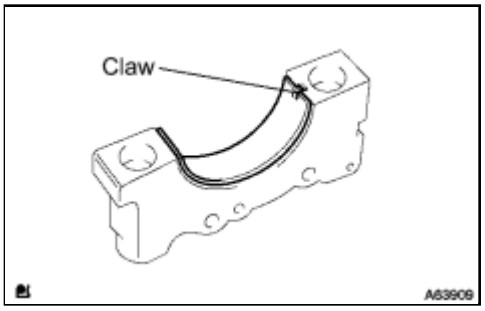


HINT:

Supply part compression springs (No. 1 and No. 2) do not have paint marks.

(c) Position the piston rings so that the ring ends are as shown in the illustration.

8. INSTALL CRANKSHAFT BEARING

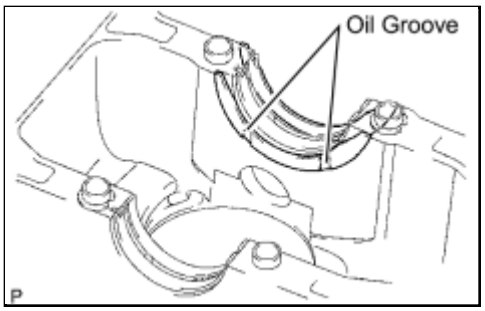


(a) Install the upper bearing with an oil groove on the cylinder block.

NOTICE:

Do not apply engine oil to the bearing inner surface or bearing cap contact surfaces.

9. INSTALL NO. 2 CRANKSHAFT BEARING



(a) Install the No. 2 crankshaft bearing on the bearing cap.

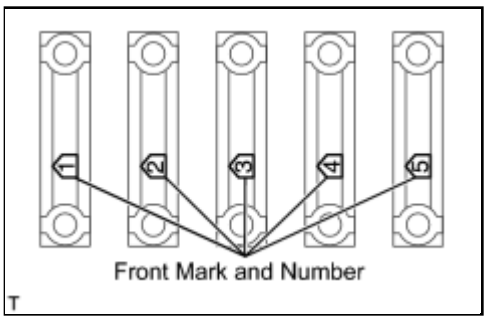
NOTICE:

Clean the backside of the bearing and the bearing surface of the connecting rod. The surface should be free of dust and oils.

10. INSTALL UPPER CRANKSHAFT THRUST WASHER

(a) Install the 2 thrust washers under the No. 3 journal of the cylinder block with the oil grooves facing outward.

NOTICE:



Make sure to install the proper thrust washers.

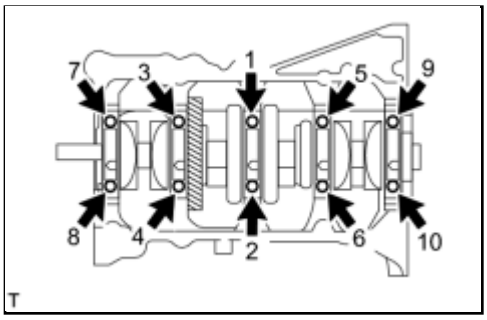
(b) Apply engine oil to the crankshaft thrust washers.

11. INSTALL CRANKSHAFT

(a) Apply engine oil to the upper bearings and place the crankshaft on the cylinder block.

(b) Apply engine oil to the lower bearings.

(c) Examine the front marks and install the bearing caps on the cylinder block.

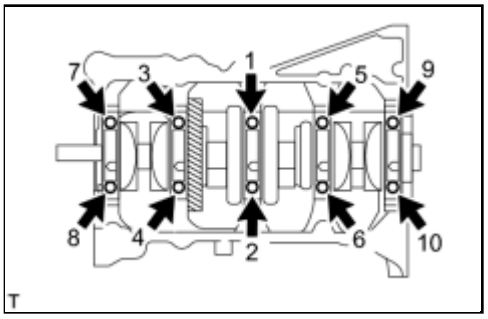


(d) Apply a light coat of engine oil to the threads and under the bearing cap bolts.

(e) Install the crankshaft bearing cap bolts.

NOTICE:

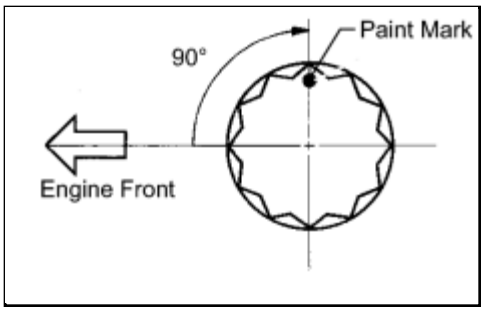
The main bearing cap bolts are tightened in 2 progressive steps.



(f) Step 1

(1) Install and uniformly tighten the 10 main bearing cap bolts in the sequence shown in the illustration.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)



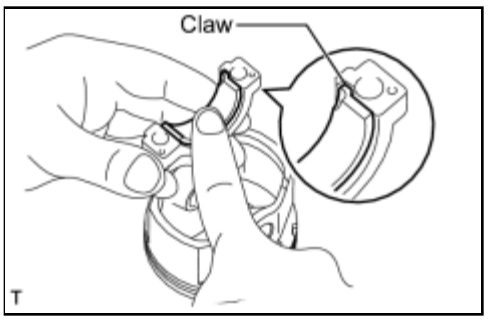
(2) Retighten the 10 main bearing cap bolts in the

sequence shown in the illustration.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

(g) Step 2

(1) Mark the front of the bearing cap bolts with paint.



(2) Retighten the bearing cap bolts 90° in the numerical order shown in the illustration.

(h) Check that the paint mark is now at a 90° angle to the front.

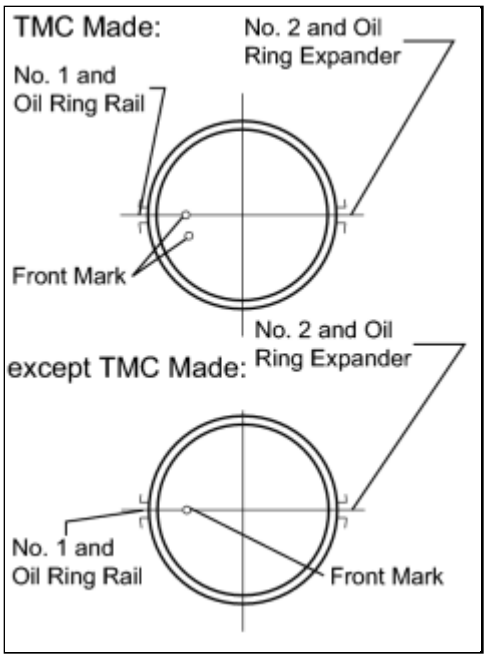
(i) Check that the crankshaft turns smoothly.

(j) Check the crankshaft thrust clearance INFO .

12. INSTALL CONNECTING ROD BEARING

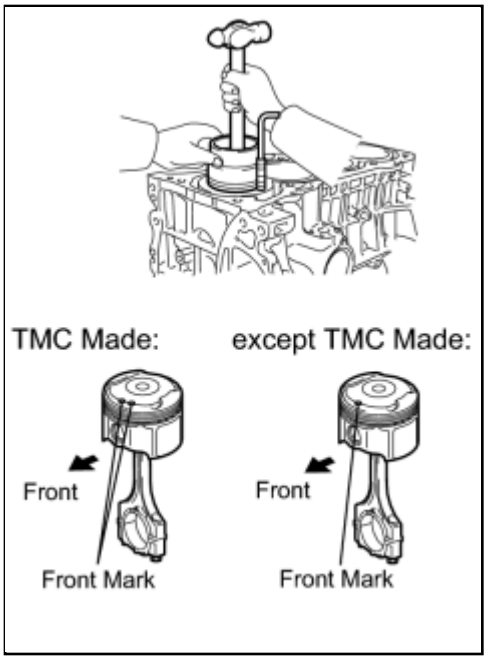
(a) Align the bearing claw with the groove on the connecting rod or connecting cap.

NOTICE:



Do not apply engine oil to the bearing inner surface or connecting rod contact surface.

13. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

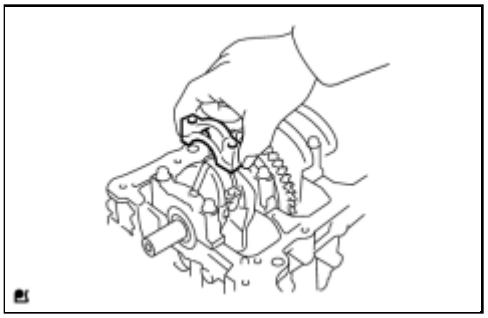


NOTICE:

The connecting rod cap bolts are tightened in 2 progressive steps.

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.

(b) Check the position of the piston ring ends.

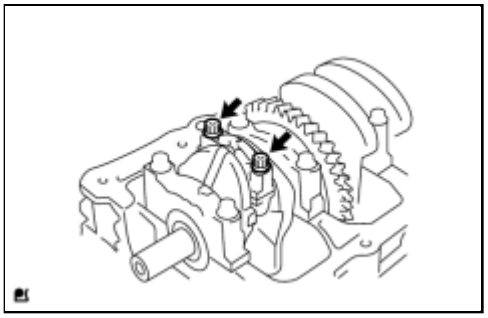


(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.

NOTICE:

Match the numbered connecting rod cap with the connecting rod.

(d) Check that the protrusion on the connecting rod cap is facing in the correct direction.

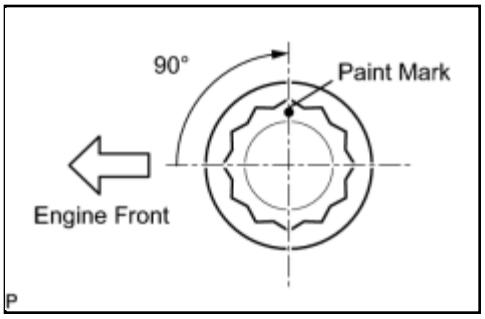


(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.

(f) Install the connecting cap bolts.

NOTICE:

The connecting cap bolts should be tightened in 2 progressive steps.



(g) Step 1

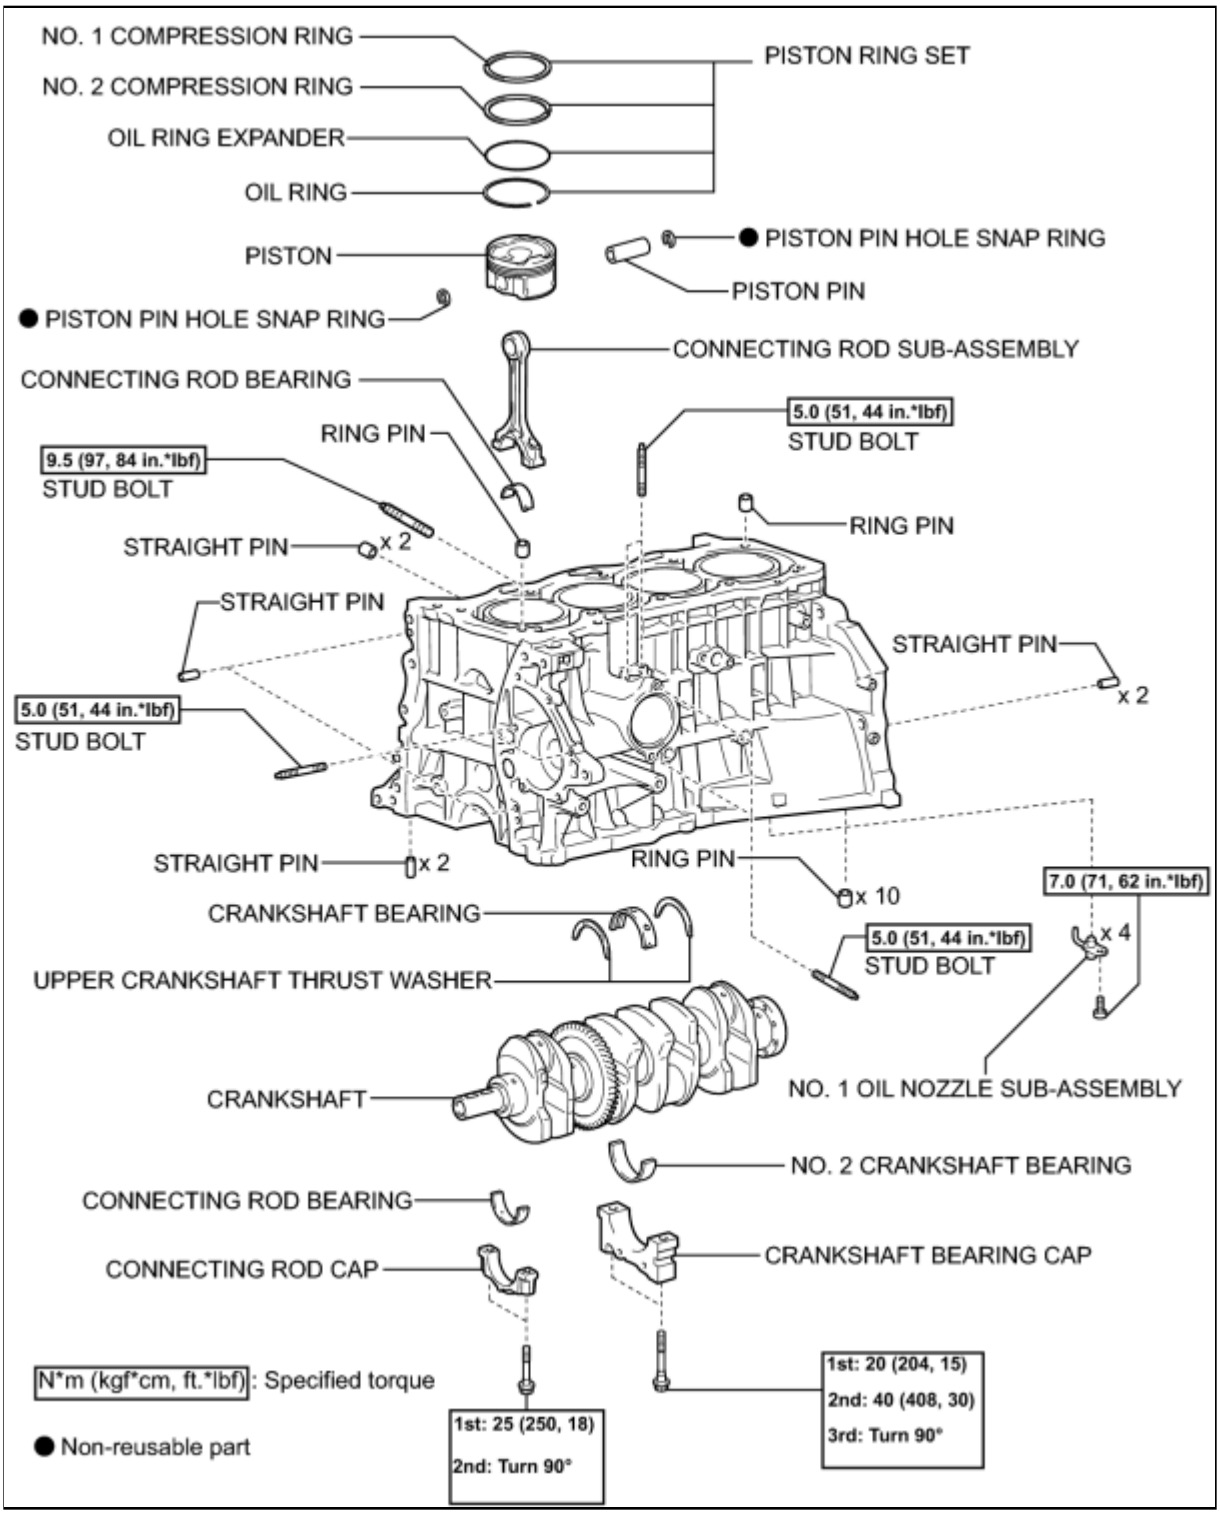
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

(h) Step 2

(1) Mark the front of the connecting rod cap bolts with paint.

(2) Retighten the cap bolts 90° as shown in the illustration.



(i) Check that the crankshaft turns smoothly.

(j) Check the connecting rod thrust clearance INFO .

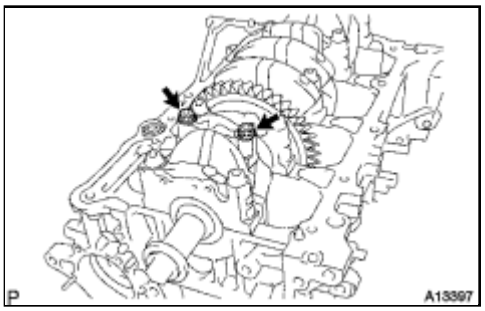
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER BLOCK: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. INSPECT CONNECTING ROD THRUST CLEARANCE INFO

2. INSPECT CONNECTING ROD OIL CLEARANCE INFO



3. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Check that the matchmarks on the connecting rod and cap are aligned to ensure the correct reassembly.

HINT:

The matchmarks on the connecting rods and caps are provided for ensuring the correct reassembly.

(b) Using a 12 mm socket wrench, uniformly loosen and remove the 2 bolts.

(c) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

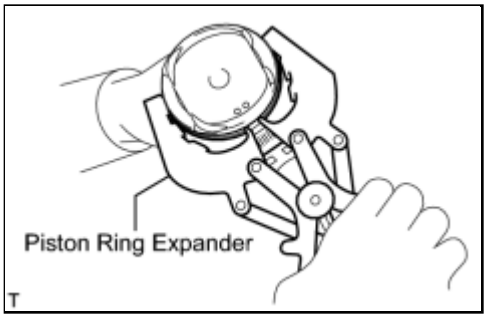
HINT:

Keep the lower bearing inserted in the connecting rod cap.

(d) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

HINT:

- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.



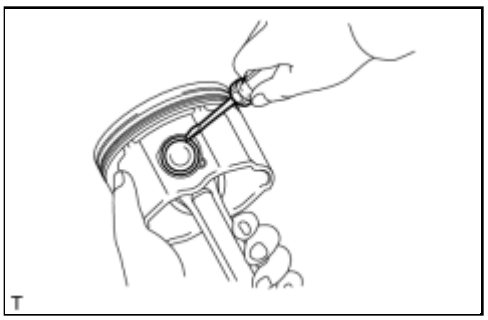
4. REMOVE CONNECTING ROD BEARING

(a) Remove the connecting rod bearings.

HINT:

Arrange the removed parts in the correct order.

5. REMOVE PISTON RING SET

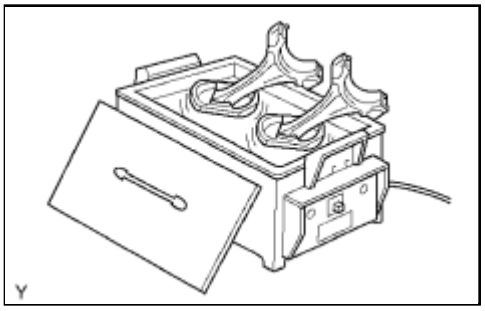


(a) Using a piston ring expander, remove the 2 compression rings.

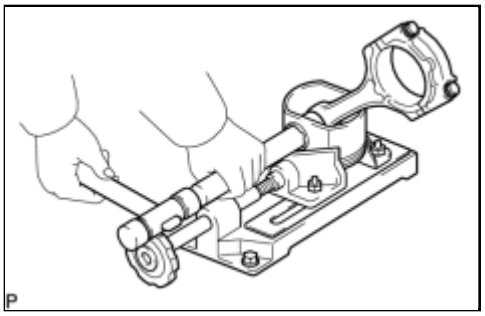
(b) Remove the oil ring rail and oil ring expander by hand.

HINT:

Arrange the removed parts in the correct order.



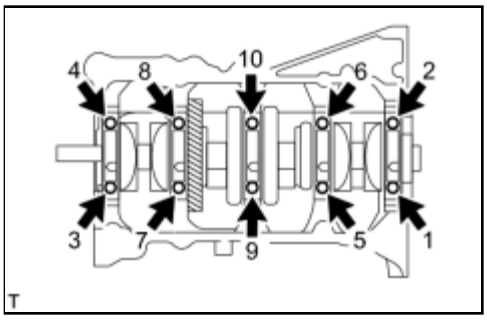
6. REMOVE PISTON PIN HOLE SNAP RING



(a) Using a screwdriver, pry out the 2 snap rings.

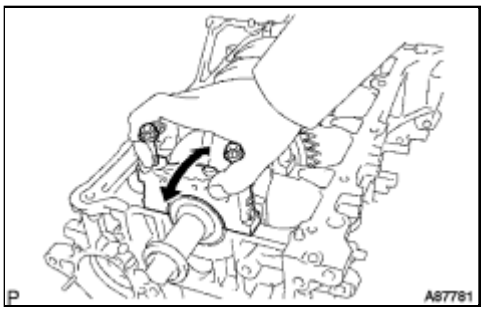
7. REMOVE PISTON

(a) Gradually heat the piston to between 80 and 90°C (176 and 194°F).



(b) Using a plastic hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:



- The piston and pin are a matched set.
- Arrange the pistons, pin, rings, connecting rods and bearings in the correct order.

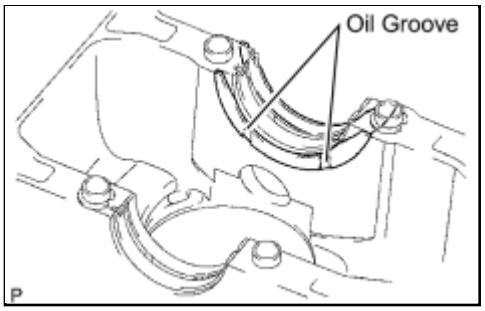
8. INSPECT CRANKSHAFT THRUST CLEARANCE INFO

9. REMOVE CRANKSHAFT

(a) Uniformly loosen and remove the 10 main bearing cap bolts in the sequence shown in the illustration.

(b) Use 2 removed main bearing cap bolts to remove the 5 main bearing caps and 5 lower bearings.

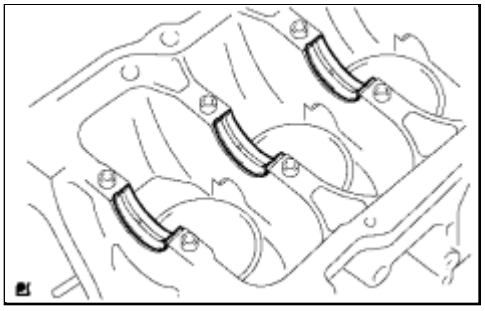
NOTICE:



Insert the bolts into one of the caps. Ease the cap out by gently pulling up and applying force toward the front and back side of the cylinder block, as shown in the illustration. Take care not to damage the contact surfaces of the cap and cylinder block.

HINT:

- Keep the lower bearing and main bearing cap.
- Arrange the main bearing caps in the correct order.

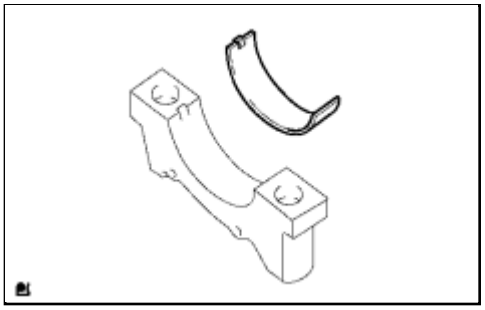


(c) Lift out the crankshaft.

10. REMOVE UPPER CRANKSHAFT THRUST WASHER

(a) Remove the upper thrust washers from the cylinder block.

11. REMOVE CRANKSHAFT BEARING

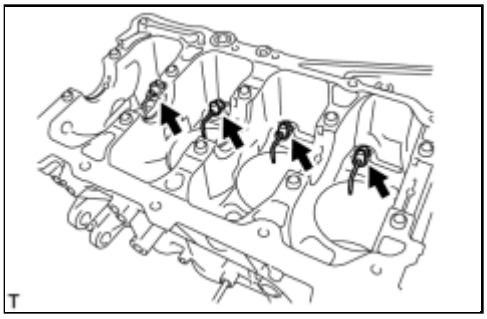


(a) Remove the 5 crankshaft bearings from the cylinder block.

HINT:

Arrange the removed parts in the correct order.

12. REMOVE NO. 2 CRANKSHAFT BEARING



(a) Remove the 5 No. 2 crankshaft bearings from the 5 main bearing caps.

HINT:

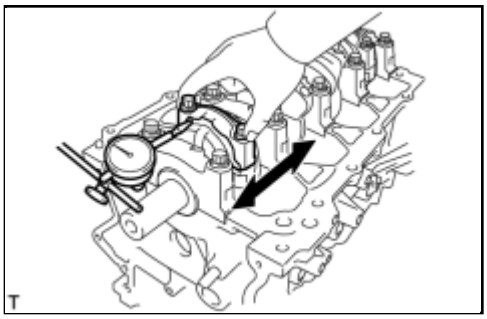
Arrange the removed parts in the correct order.

13. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, remove the bolts and oil nozzles.

14. REMOVE STUD BOLT

15. REMOVE RING PIN



16. REMOVE STRAIGHT PIN

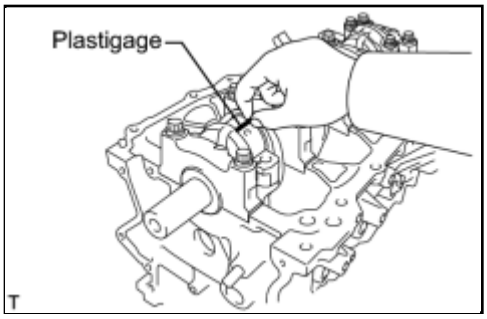
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA201UX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER BLOCK: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CONNECTING ROD THRUST CLEARANCE

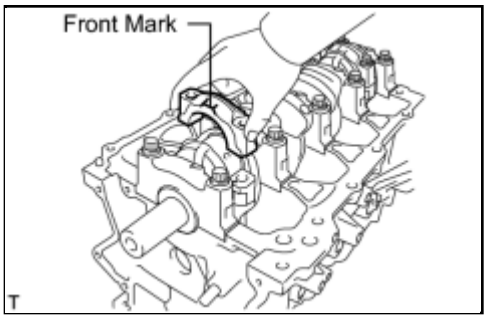
(a) Install the connecting rod cap INFO .

(b) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.



Standard thrust clearance:
0.160 to 0.342 mm (0.0063 to 0.0135 in.)
Maximum thrust clearance:
0.342 mm (0.0135 in.)

If the thrust clearance is greater than the maximum, replace the connecting rod assemblies as necessary. If necessary, replace the crankshaft.



2. INSPECT CONNECTING ROD OIL CLEARANCE

(a) Clean the crank pin and bearing.

(b) Check the crank pin and bearing for pitting and scratches.

(c) Lay a strip of Plastigage on the crank pin.

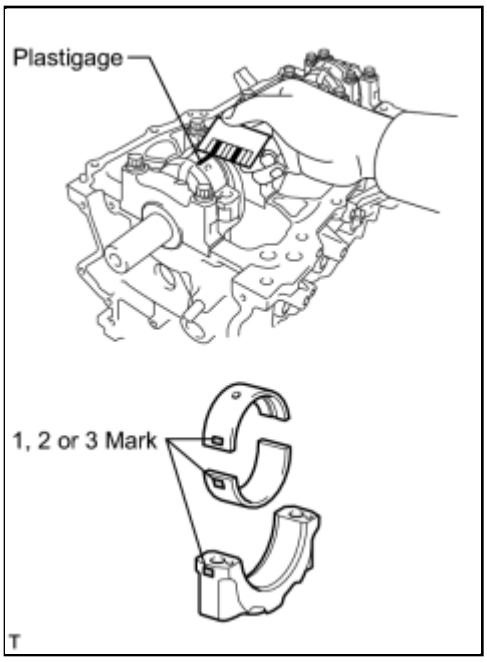
(d) Check that the front mark of the connecting rod cap is facing forward.

(e) Install the connecting rod cap INFO .

NOTICE:

Do not turn the crankshaft.

(f) Remove the 2 bolts and connecting rod cap INFO .



(g) Measure the Plastigage at its widest point.

Standard oil clearance:
0.030 to 0.062 mm (0.0012 to 0.0024 in.)
Maximum oil clearance:
0.07 mm (0.0028 in.)

If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, inspect the crankshaft.

NOTICE:

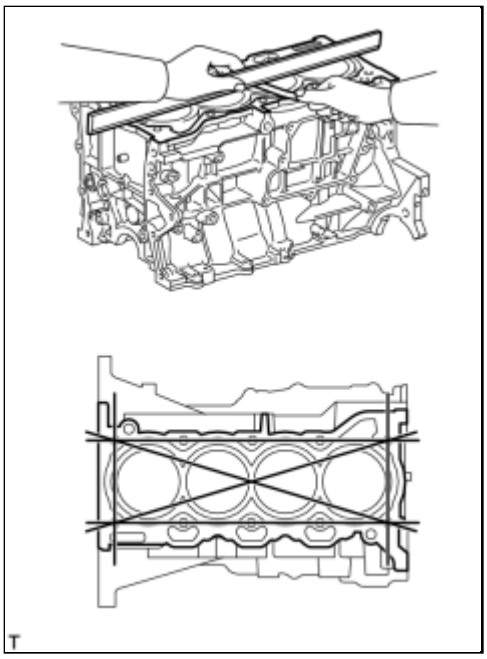
Completely remove the Plastigage after the measurement.

HINT:

If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each standard bearing thickness is indicated by a 1, 2, or 3 mark on its surface.

Standard Connecting Rod Large End Bore Diameter:

MARK	SPECIFIED CONDITION
Mark 1	47.000 to 47.008 mm (1.8504 to 1.8507 in.)
Mark 2	47.009 to 47.016 mm (1.8507 to 1.8510 in.)
Mark 3	47.017 to 47.024 mm (1.8511 to 1.8513 in.)



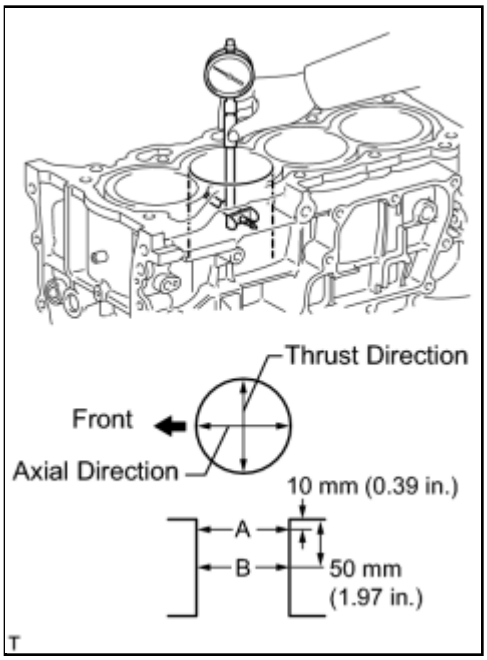
Standard Connecting Rod Bearing Thickness:

MARK	SPECIFIED CONDITION
Mark 1	1.489 to 1.493 mm (0.0586 to 0.0588 in.)
Mark 2	1.494 to 1.497 mm (0.0588 to 0.0589 in.)
Mark 3	1.498 to 1.501 mm (0.0590 to 0.0591 in.)

Standard Crankshaft Pin Diameter:

MARK	SPECIFIED CONDITION
Mark 1,2,3	43.992 to 44.000 mm (1.7320 to 1.7323 in.)

3. INSPECT CYLINDER BLOCK FOR WARPAGE

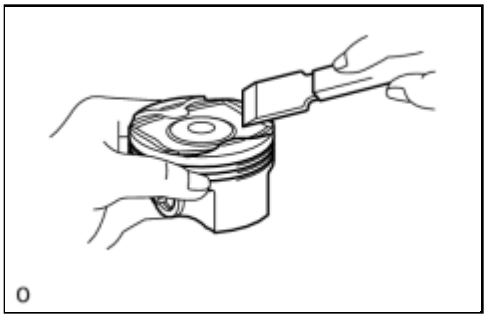


(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder head gasket.

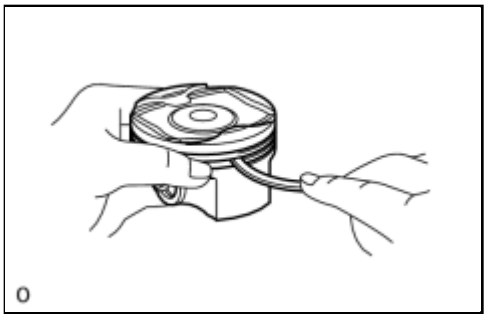
Maximum warpage:
0.05 mm (0.0020 in.)

If the warpage is greater than the maximum, replace the cylinder block.

4. INSPECT CYLINDER BORE

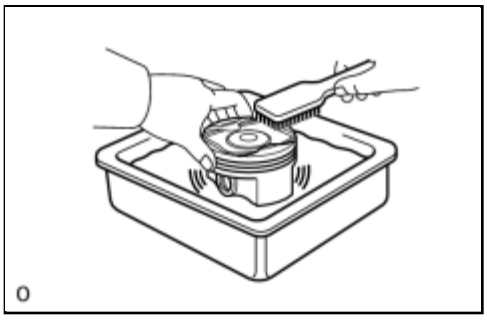


(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in both thrust and axial directions.



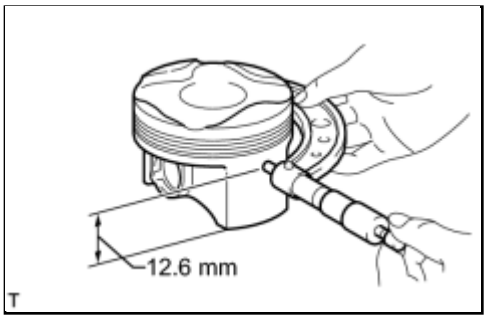
Standard diameter:
80.500 to 80.513 mm (3.1693 to 3.1698 in.)
Maximum diameter:
80.633 mm (3.1745 in.)

If the average diameter of the 4 positions is greater than the maximum, replace the cylinder block.



5. INSPECT PISTON

(a) Using a gasket scraper, remove the carbon from the top of the piston.



(b) Using a groove cleaning tool or broken ring, clean the piston ring grooves.

(c) Using a brush and solvent, thoroughly clean the piston.

NOTICE:

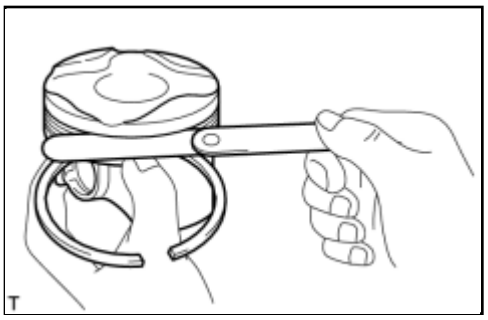
Do not use a wire brush.

(d) Using a micrometer, measure the piston diameter at right angles to the piston pin hole, and at a point 12.6 mm (0.4961 in.) from the piston head.

Standard piston diameter:
80.461 to 80.471 mm (3.1677 to 3.1681 in.)

If the diameter is not as specified, replace the piston.

6. INSPECT PISTON OIL CLEARANCE



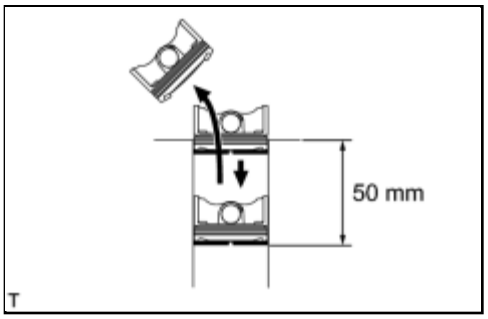
(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.029 to 0.052 mm (0.0011 to 0.0020 in.)

Maximum oil clearance:
0.09 mm (0.0035 in.)

If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

7. INSPECT RING GROOVE CLEARANCE

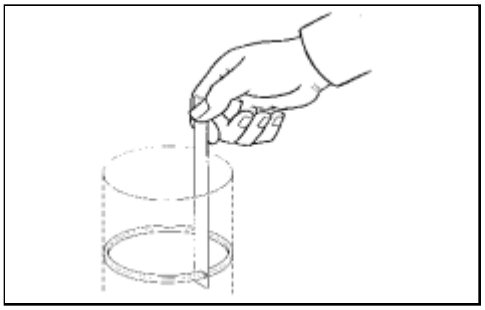


(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

ITEM	SPECIFIED CONDITION
No. 1 Ring	0.02 to 0.07 mm (0.0008 to 0.0028 in.)
No. 2 Ring	0.02 to 0.06 mm (0.0008 to 0.0024 in.)
Oil Ring	0.02 to 0.065 mm (0.0008 to 0.0026 in.)

If the groove clearance is not as specified, replace the piston.

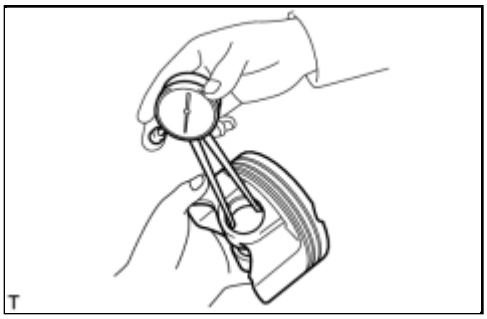


8. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 50 mm (1.97 in.) from the top of the cylinder block.

(b) Using a feeler gauge, measure the end gap.

Standard End Gap:



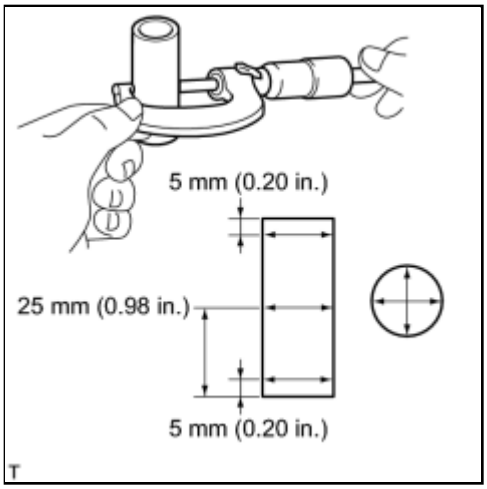
ITEM	SPECIFIED CONDITION
No. 1 Ring	0.2 to 0.3 mm (0.0079 to 0.0118 in.)
No. 2 Ring	0.3 to 0.5 mm (0.0118 to 0.0197 in.)
Oil Ring	0.1 to 0.4 mm (0.0039 to 0.0157 in.)

Maximum End Gap:

ITEM	SPECIFIED CONDITION
No. 1 Ring	0.5 mm (0.0197 in.)
No. 2 Ring	0.7 mm (0.0276 in.)
Oil Ring	0.7 mm (0.0276 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum, even with a new piston ring, replace the cylinder block.

9. INSPECT PISTON PIN OIL CLEARANCE



(a) Using a caliper gauge, measure the piston pin bore diameter.

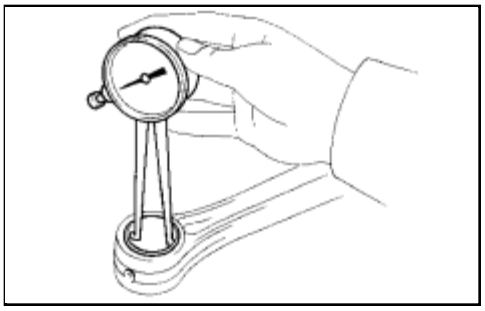
Standard piston pin bore diameter:
20.006 to 20.015 mm (0.7876 to 0.7880 in.)

ITEM	SPECIFIED CONDITION
A	20.006 to 20.009 mm (0.7876 to 0.7878 in.)
B	20.010 to 20.012 mm (0.7878 to 0.7879 in.)
C	20.013 to 20.015 mm (0.7879 to 0.7880 in.)

If the diameter is not as specified, replace the piston.

(b) Using a micrometer, measure the piston pin diameter.

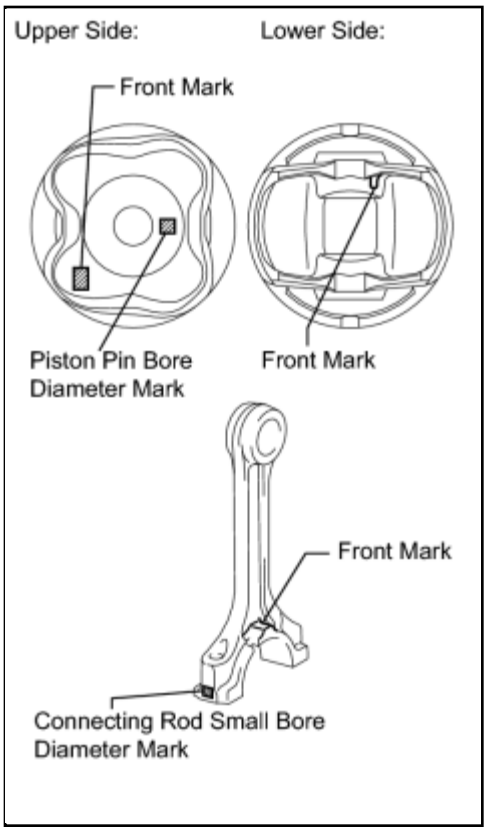
Standard piston pin diameter:
20.004 to 20.013 mm (0.7876 to 0.7879 in.)



ITEM	SPECIFIED CONDITION
A	20.004 to 20.007 mm (0.7876 to 0.7877 in.)
B	20.008 to 20.010 mm (0.7877 to 0.7878 in.)
C	20.011 to 20.013 mm (0.7878 to 0.7879 in.)

If the diameter is not as specified, replace the piston pin.

(c) Using a caliper gauge, measure the connecting rod small



end bore diameter.

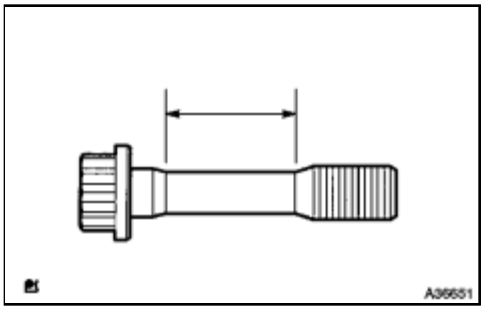
Standard connecting rod small end bore diameter:
20.012 to 20.021 mm (0.7879 to 0.7882 in.)

ITEM	SPECIFIED CONDITION
A	20.012 to 20.015 mm (0.7879 to 0.7880 in.)
B	20.016 to 20.018 mm (0.7880 to 0.7881 in.)
C	20.019 to 20.021 mm (0.7881 to 0.7882 in.)

If the diameter is not as specified, replace the connecting rod.

(d) Subtract the piston pin diameter measurement from the piston pin bore diameter measurement.

Standard oil clearance:
-0.001 to 0.005 mm (-0.00004 to 0.0002 in.)
Maximum oil clearance:
0.010 mm (0.0004 in.)



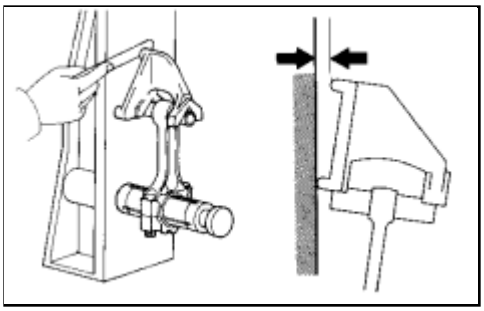
If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

(e) Subtract the piston pin diameter measurement from the connecting rod small end bore diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.014 mm (0.0006 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.

10. INSPECT CONNECTING ROD BOLT

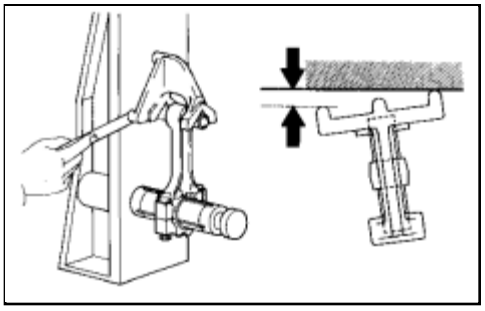


(a) Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
6.6 to 6.7 mm (0.2598 to 0.2638 in.)
Minimum diameter:
6.4 mm (0.2520 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.

11. INSPECT CONNECTING ROD SUB-ASSEMBLY



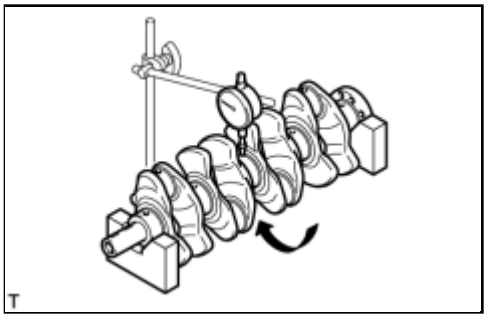
(a) Using a connecting rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.

Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

If the misalignment is greater than the maximum, replace the connecting rod.

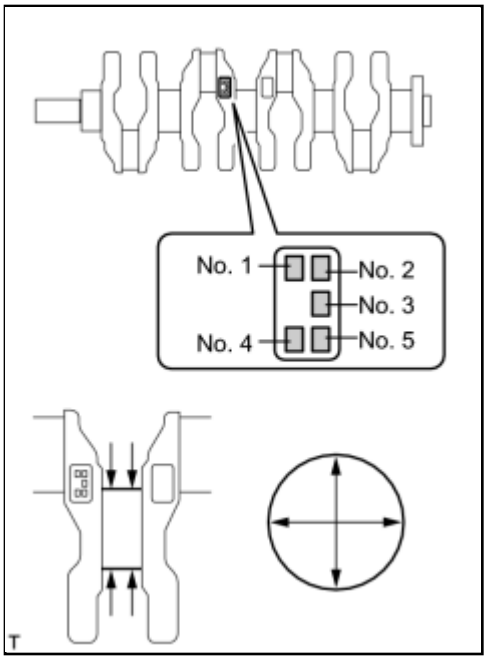
(2) Check for twist.



Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If the twist is greater than the maximum, replace the connecting rod.

12. INSPECT CRANKSHAFT



(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.

Maximum circle runout:

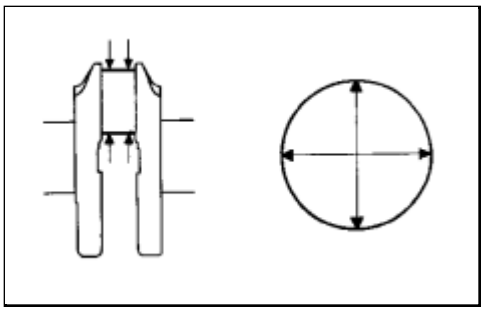
0.03 mm (0.0012 in.)

If the taper and distortion are greater than the maximum, replace the crankshaft.

(b) Using a micrometer, measure the diameter of each main journal.

Standard diameter:
47.988 to 48.000 mm (1.8893 to 1.8898 in.)

If the diameter is not as specified, check the crankshaft oil clearance.



(c) Check each main journal for taper and distortion as shown in the illustration.

Maximum taper and distortion:
0.004 mm (0.0002 in.)

If the taper and distortion are greater than the maximum, replace the crankshaft.

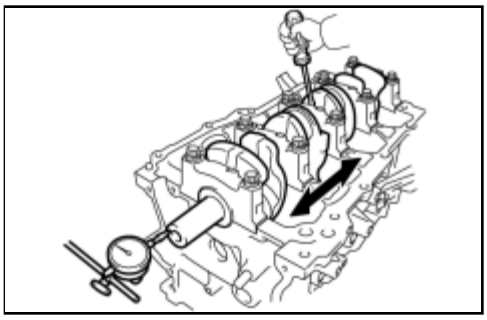
Standard Diameter (Reference):

MARK	SPECIFIED CONDITION
0	47.999 to 48.000 mm (1.8897 to 1.8898 in.)
1	47.997 to 47.998 mm (1.8896 to 1.8897 in.)
2	47.995 to 47.996 mm (1.8896 to 1.8896 in.)
3	47.993 to 47.994 mm (1.8895 to 1.8895 in.)
4	47.991 to 47.992 mm (1.8894 to 1.8894 in.)
5	47.988 to 47.990 mm (1.8893 to 1.8894 in.)

(d) Using a micrometer, measure the diameter of each crank pin.

Standard diameter:
43.992 to 44.000 mm (1.7320 to 1.7323 in.)

If the diameter is not as specified, check the connecting rod oil clearance.



(e) Inspect each crank pin for taper and distortion as shown in the illustration.

Maximum taper and distortion:
0.004 mm (0.0002 in.)

If the taper and distortion are greater than the maximum, replace the crankshaft.

13. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Install the main bearing cap INFO .

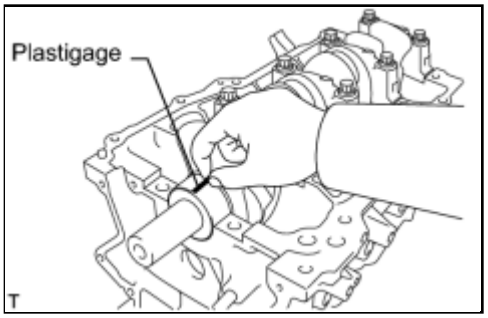
(b) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

Standard thrust clearance:
0.04 to 0.14 mm (0.0016 to 0.0055 in.)
Maximum thrust clearance:
0.18 mm (0.0071 in.)

If the thrust clearance is greater than the maximum, replace the thrust washers as a set.

HINT:

The thrust washer thickness is 2.43 to 2.48 mm (0.0957 to 0.0976 in.).



14. INSPECT CRANKSHAFT OIL CLEARANCE

(a) Check the crank journal and bearing for pitting and scratches.

(b) Install the crankshaft bearing INFO .

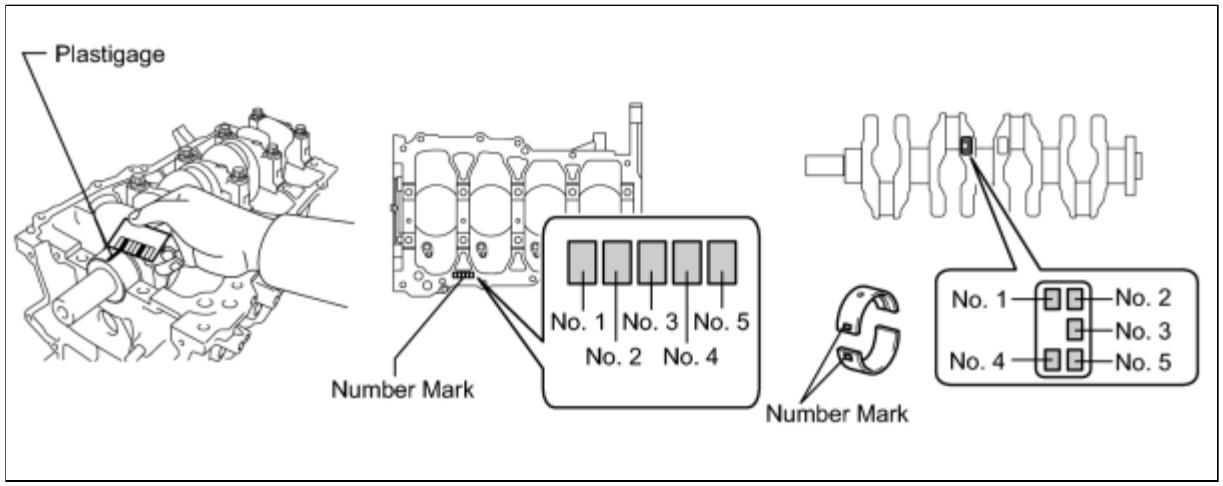
(c) Place the crankshaft on the cylinder block.

(d) Lay a strip of Plastigage across each journal.

(e) Examine the front marks and numbers and install the bearing caps on the cylinder block.

HINT:

A number is marked on each main bearing cap to indicate the installation position.



(f) Install the main bearing cap INFO .

NOTICE:

Do not turn the crankshaft.

(g) Remove the main bearing caps INFO .

(h) Measure the Plastigage at its widest point.

Standard oil clearance:
0.016 to 0.039 mm (0.0006 to 0.0015 in.)
Maximum oil clearance:
0.050 mm (0.0020 in.)

If the oil clearance is greater than the maximum, replace the crankshaft bearing. If necessary, replace the crankshaft.

NOTICE:

Remove the Plastigage completely after the measurement.

HINT:

- If replacing a bearing, select a new one with the same number. If the number of the bearing cannot be determined, calculate the correct bearing number by adding together the numbers imprinted on the cylinder block and crankshaft. Then select a new bearing with the calculated number

according to the chart below. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.

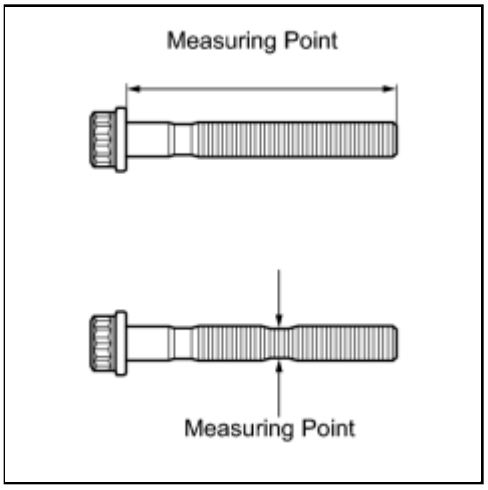
- EXAMPLE: Cylinder block "3" + Crankshaft "5" = Total number 8 (Use bearing "3")

Cylinder block + Crankshaft	0 to 2	3 to 5	6 to 8	9 to 11
Bearing to be used	"1"	"2"	"3"	"4"

Standard Cylinder Block Journal Bore Diameter:

MARK	SPECIFIED CONDITION
0	52.000 to 52.003 mm (2.0472 to 2.0474 in.)
1	52.003 to 52.005 mm (2.04736 to 2.04744 in.)
2	52.005 to 52.007 mm (2.0474 to 2.0475 in.)
3	52.007 to 52.010 mm (2.0475 to 2.0476 in.)
4	52.010 to 52.012 mm (2.0476 to 2.0477 in.)
5	52.012 to 52.014 mm (2.0477 to 2.0478 in.)
6	52.014 to 52.016 mm (2.0478 to 2.0479 in.)

Standard Crankshaft Journal Diameter:



MARK	SPECIFIED CONDITION
0	47.999 to 48.000 mm (1.8897 to 1.8898 in.)
1	47.997 to 47.998 mm (1.8896 to 1.8897 in.)
2	47.995 to 47.996 mm (1.88956 to 1.88960 in.)
3	47.993 to 47.994 mm (1.8895 to 1.8895 in.)
4	47.991 to 47.992 mm (1.8894 to 1.8894 in.)
5	47.988 to 47.990 mm (1.8893 to 1.8894 in.)

Standard Bearing Center Wall Thickness:

MARK	SPECIFIED CONDITION
1	1.994 to 1.997 mm (0.0785 to 0.0786 in.)
2	1.998 to 2.000 mm (0.07866 to 0.07874 in.)
3	2.001 to 2.003 mm (0.0788 to 0.0789 in.)
4	2.004 to 2.006 mm (0.0789 to 0.0790 in.)

15. INSPECT CYLINDER HEAD SET BOLT

(a) Using a vernier caliper, measure the tension portion

diameter of the bolts.

Standard bolt length:
84.3 to 85.7 mm (3.3189 to 3.3740 in.)
Maximum bolt length:
86.7 mm (3.4134 in.)

If the bolt length is greater than the maximum, replace the bolt.

(b) Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.

Standard outside diameter:
9.77 to 9.96 mm (0.3846 to 0.3921 in.)
Minimum outside diameter:
9.1 mm (0.3583 in.)

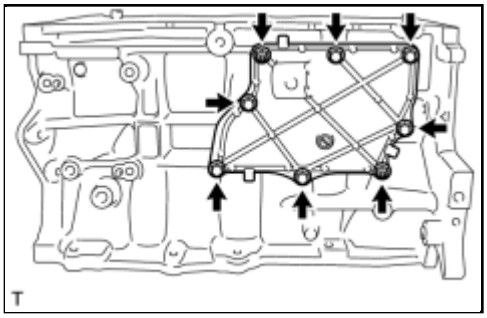
HINT:

Using a straightedge, visually check thinner areas of the threaded part of the crankshaft bearing cap bolt.

If the diameter is less than the minimum, replace the bolt.

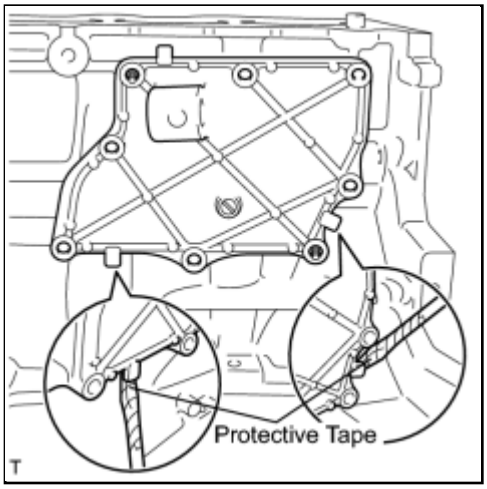
16. INSPECT NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Check the oil nozzles for damage or clogging.



HINT:

If there is damage or clogging, replace the oil nozzle.



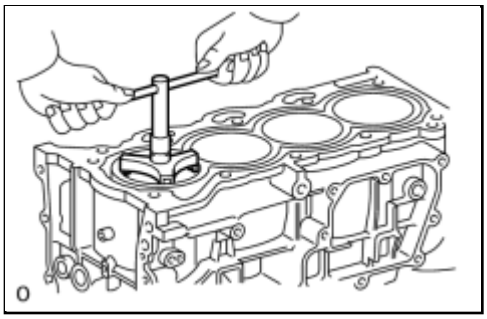
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA302PX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER BLOCK: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE NO. 1 VENTILATION CASE

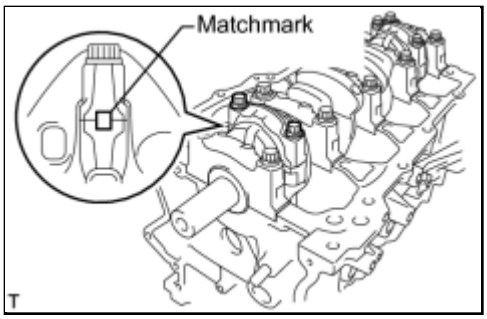
(a) Remove the 6 bolts and 2 nuts.

(b) Remove the No. 1 ventilation case by prying between the No. 1 ventilation case and cylinder block with a screwdriver as shown in the illustration.



NOTICE:

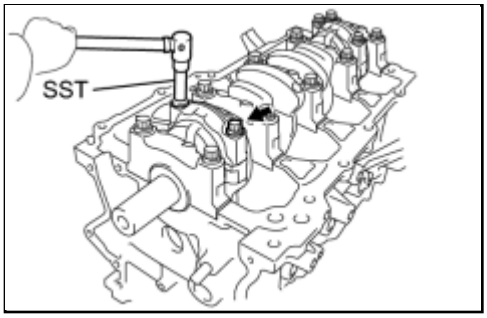
Be careful not to damage the contact surfaces of the cylinder block and No. 1 ventilation case.



HINT:

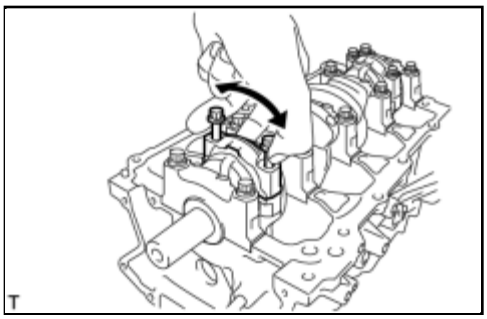
Tape the screwdriver tip before use.

2. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD



(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.

(b) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.



HINT:

The matchmarks on the connecting rods and caps are provided to ensure correct reassembly.

(c) Using SST, uniformly loosen the 2 bolts.

SST: 09205-16010

(d) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

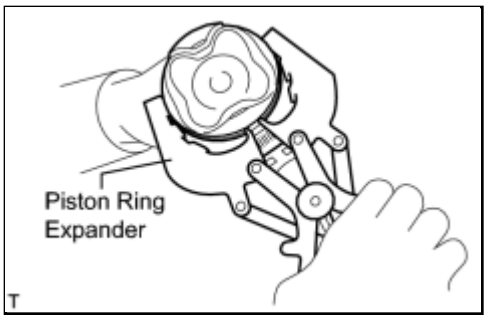
HINT:

Keep the lower bearing inserted in the connecting rod cap.

(e) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.

HINT:

- Keep the bearing, connecting rod and cap as a set.
- Arrange the piston and connecting rod assemblies in the correct order.



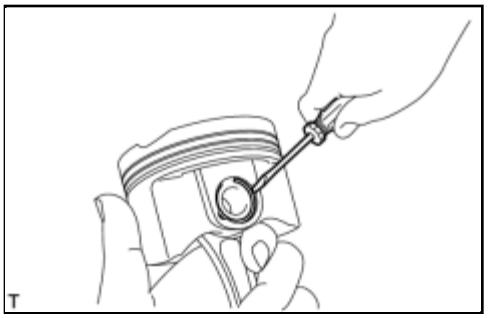
3. REMOVE CONNECTING ROD BEARING

(a) Remove the connecting rod bearings.

HINT:

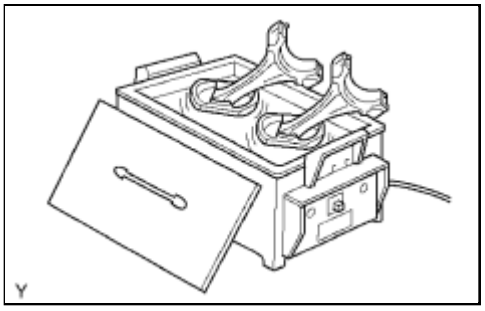
Arrange the removed parts in the correct order.

4. REMOVE PISTON RING SET



(a) Using a piston ring expander, remove the 2 compression rings.

(b) Remove the oil ring rail and oil ring expander by hand.

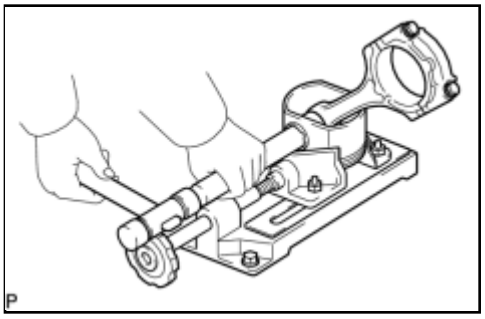


HINT:

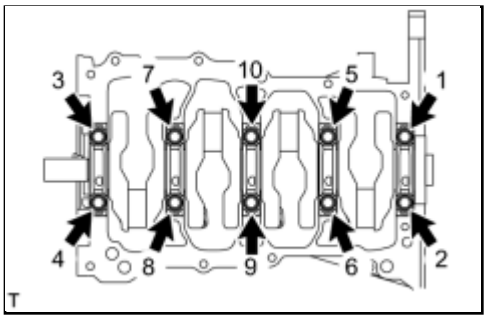
Arrange the removed parts in the correct order.

5. REMOVE PISTON

(a) Using a screwdriver, pry out the 2 snap rings.

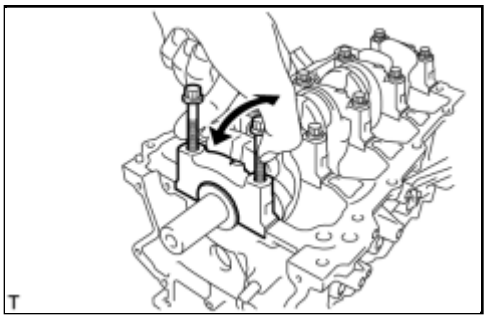


(b) Gradually heat each piston to approximately 80 to 90°C (176 to 194°F).



(c) Using a plastic hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.

HINT:



- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.

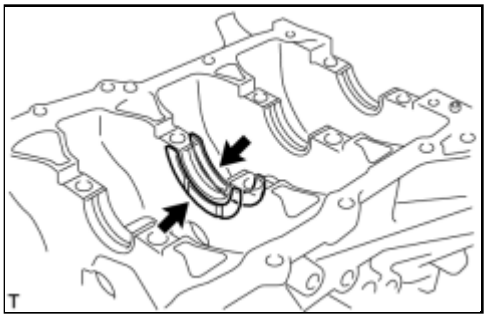
6. REMOVE CRANKSHAFT

(a) Uniformly loosen and remove the 10 main bearing cap bolts in the sequence shown in the illustration.

(b) Use 2 removed main bearing cap bolts to remove the 5 main bearing caps and 5 lower bearings.

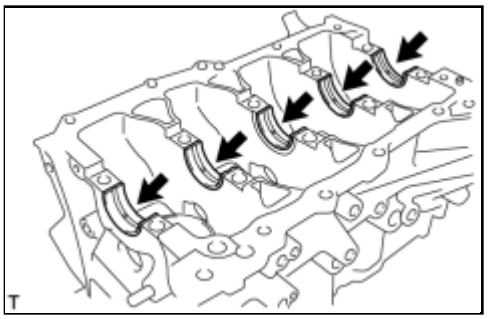
NOTICE:

Insert the bolts into the caps in turn. Ease the cap out by gently pulling up and applying force toward the front and back sides of the cylinder block, as shown in the illustration. Take care not to damage the contact surfaces of the cap and cylinder block.



HINT:

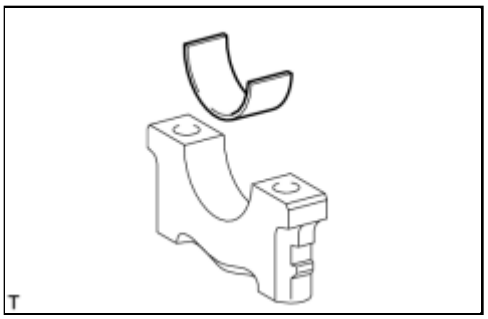
- Keep the lower bearing and main bearing cap as a set.
- Arrange the main bearing caps in the correct order.



(c) Lift out the crankshaft.

7. REMOVE UPPER CRANKSHAFT THRUST WASHER

(a) Remove the upper crankshaft thrust washers from the cylinder block.

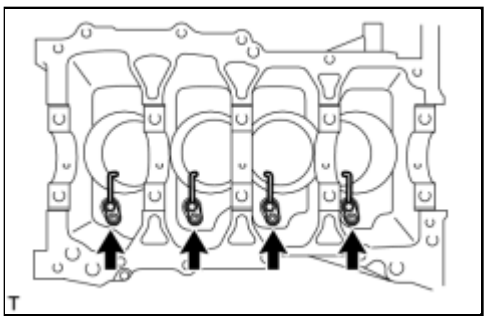


8. REMOVE CRANKSHAFT BEARING

(a) Remove the 5 upper main bearings from the cylinder block.

HINT:

Arrange the bearings in the correct order.



(b) Remove the 5 lower main bearings from the 5 main bearing caps.

HINT:

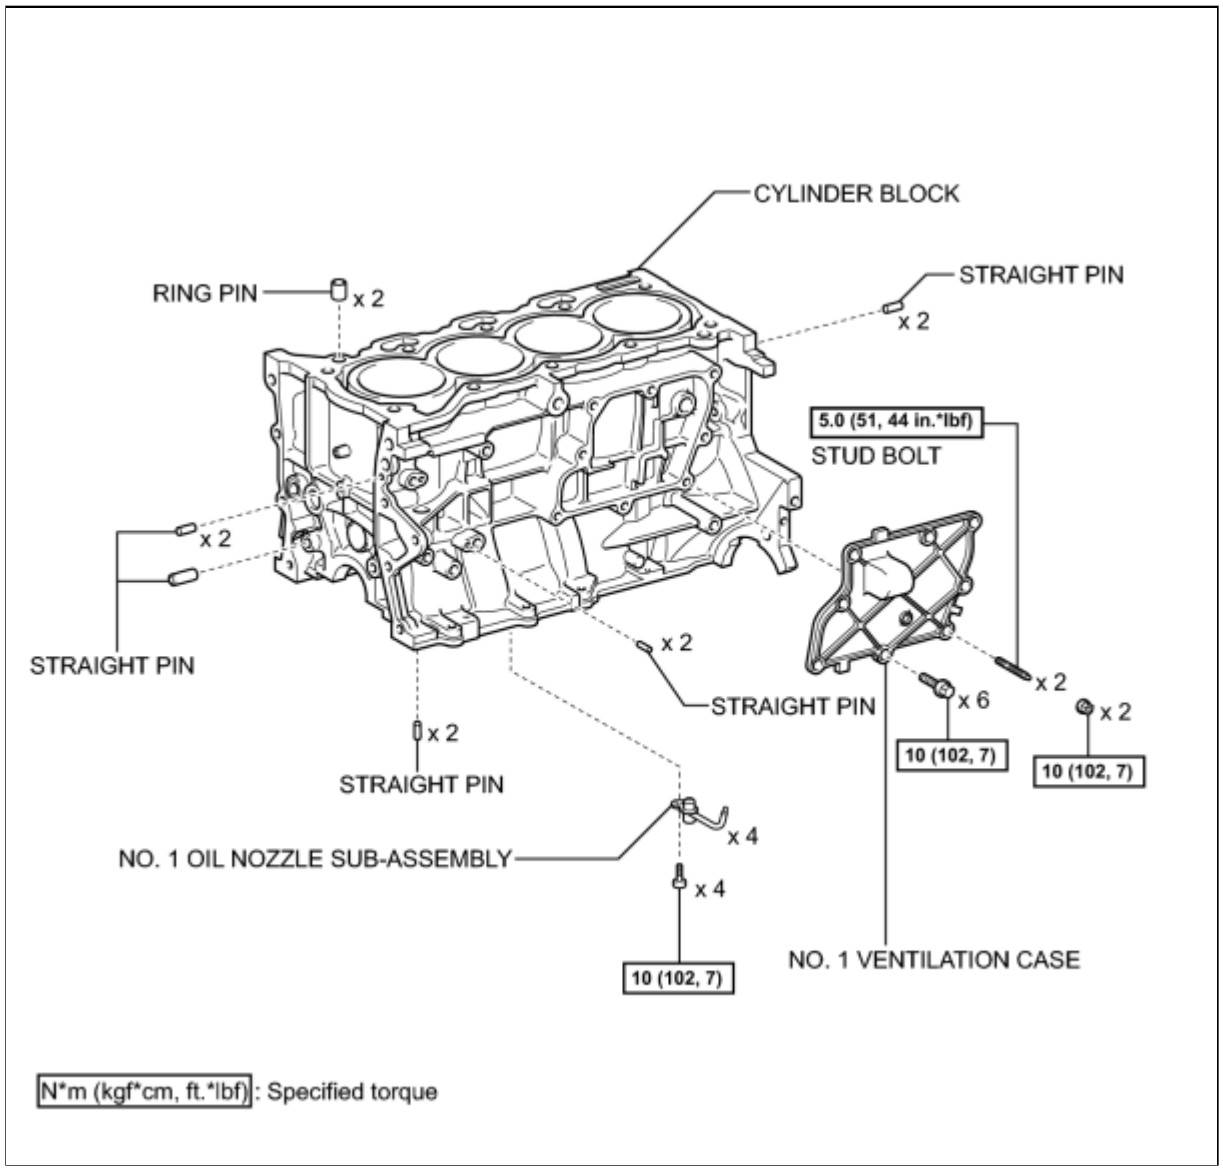
Arrange the bearings in the correct order.

9. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm socket hexagon wrench, remove the bolts and oil nozzles.

10. CLEAN CYLINDER BLOCK

NOTICE:



If the cylinder is washed at high temperature, the cylinder liner will stick out beyond the cylinder block. Always wash the cylinder block at a temperature of 45°C (113°F) or less.

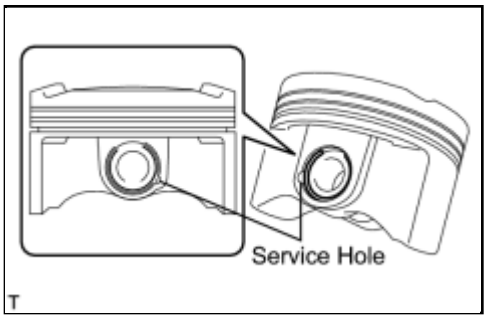
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA402QX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER BLOCK: REASSEMBLY (2010 Corolla)		

REASSEMBLY



1. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

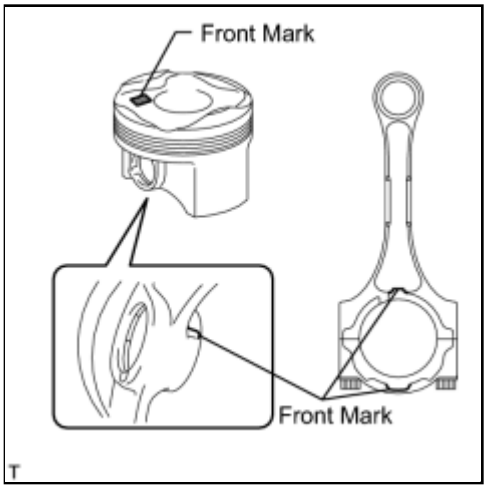
(a) Using a 5 mm socket hexagon wrench, install the oil nozzles with the bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

2. INSTALL PISTON

(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.

HINT:

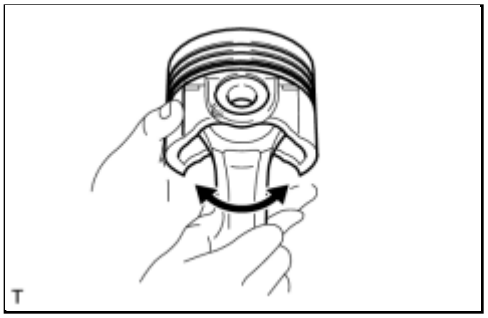


Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

(b) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

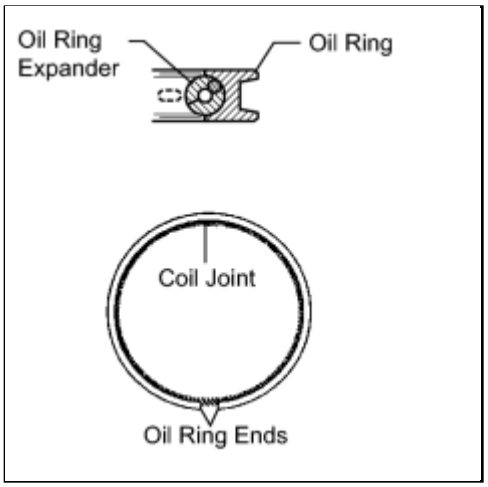
(c) Align the front marks of the piston and connecting rod, and push in the piston with your thumb.

HINT:



The piston and pin are a matched set.

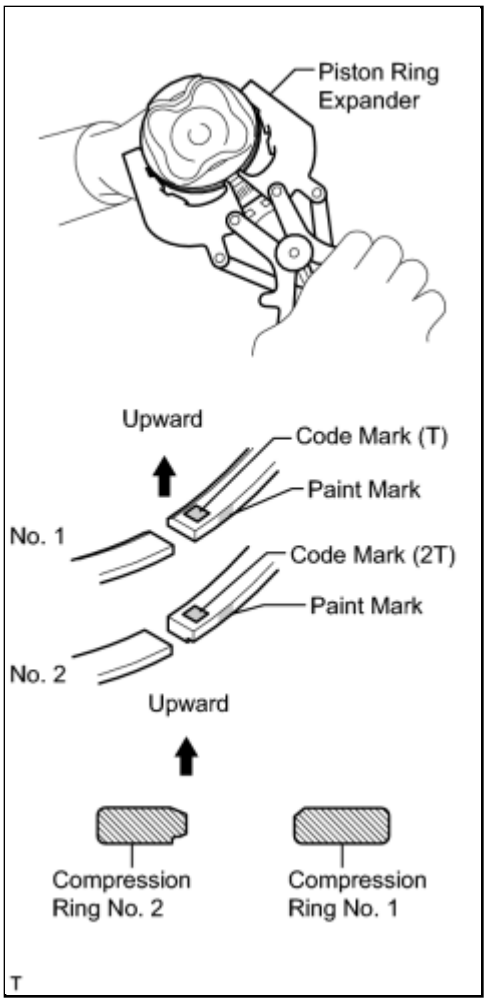
(d) Using a screwdriver, install a new snap ring on the other end of the piston pin hole.



HINT:

Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

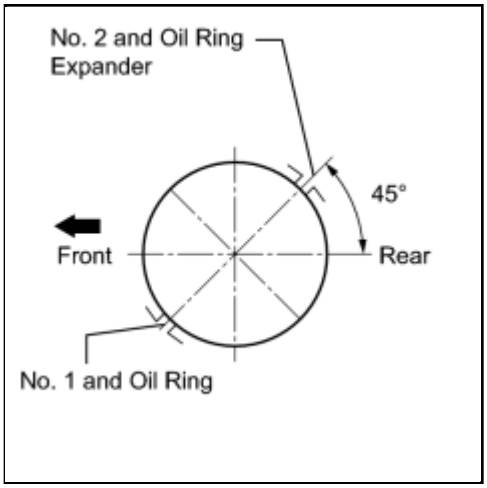
(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



3. INSTALL PISTON RING SET

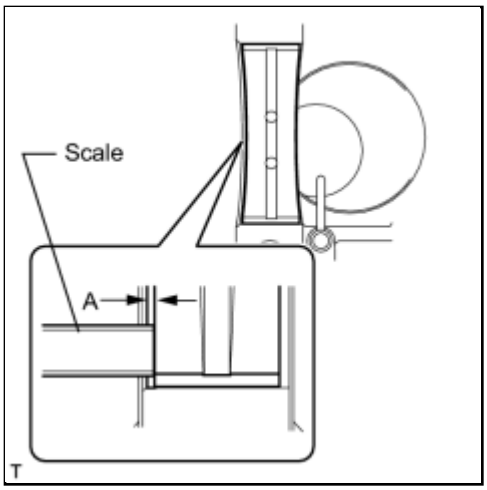
(a) Install the oil ring expander and oil ring rail by hand.

NOTICE:



- Install the expander and oil ring so that their ring ends are at opposite sides.
- Securely install the expander to the inner groove of the oil ring.

(b) Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.



NOTICE:

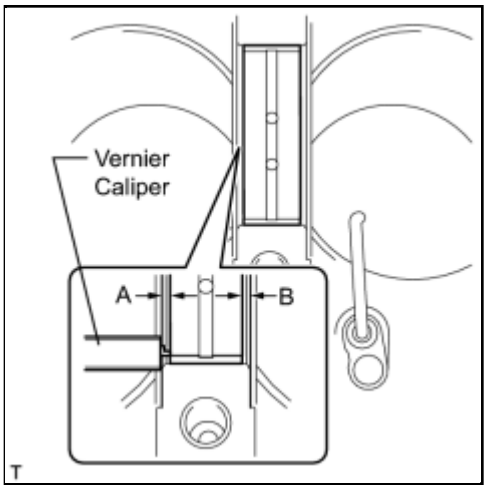
- Install the compression ring No. 1 with the code mark (T) facing upward.
- Install the compression ring No. 2 with the code mark (2T) facing upward.
- Paint marks can only be checked on new piston rings. When reusing piston rings, check each piston ring profile in order to install them into the correct positions.

(c) Position the piston rings so that the ring ends are as shown in the illustration.

4. INSTALL CRANKSHAFT BEARING

(a) Install the upper bearing (for except No. 3 journal).

(1) Install the upper bearing with an oil groove on the cylinder block.



(2) Using a scale, measure the distance between the cylinder block edge and the upper bearing edge.

NOTICE:

Do not apply engine oil to the bearing inner surface or journal contact surfaces.

Dimension (A):

0.5 to 1.0 mm (0.020 to 0.039 in.)

(b) Install the upper bearing (for No. 3 journal).

(1) Install the upper bearing with an oil groove on the cylinder block.

(2) Using a vernier caliper, measure the distance between the cylinder block edge and the upper bearing edge.

NOTICE:

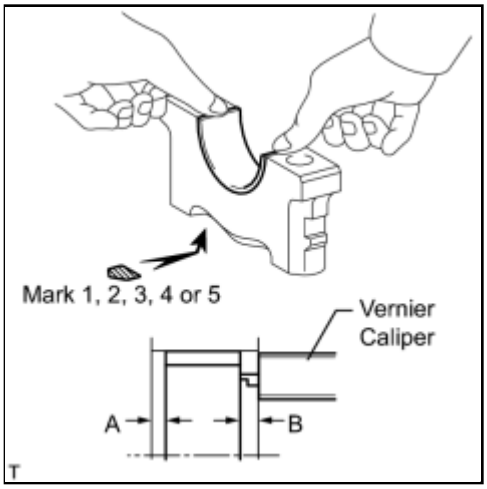
Do not apply engine oil to the bearing inner surface or journal contact surfaces.

Dimension (A - B):

0.5 mm (0.0197 in.) or less

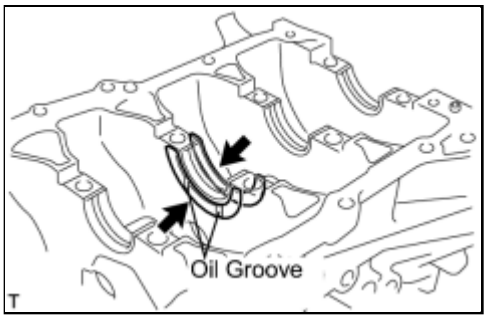
(c) Install the lower bearing.

(1) Install the lower bearing onto the bearing cap.



(2) Using a vernier caliper, measure the distance between the bearing cap edge and the lower bearing edge.

Dimension (A - B):



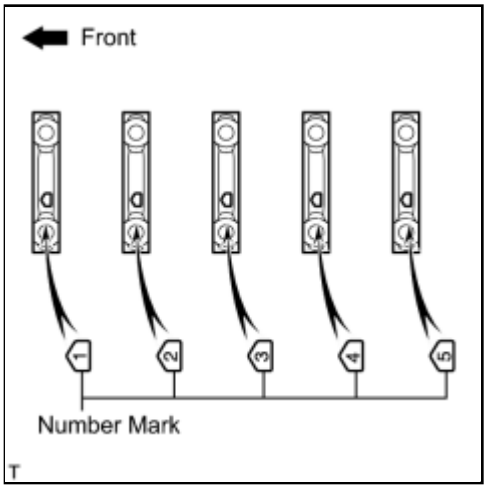
0.5 mm (0.0197 in.) or less

NOTICE:

Do not apply engine oil to the bearing inner surface or bearing cap contact surfaces.

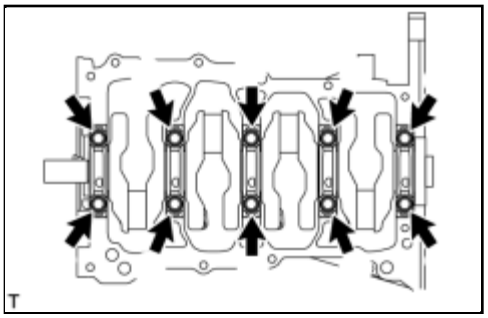
5. INSTALL UPPER CRANKSHAFT THRUST WASHER

(a) Install the 2 thrust washers under the No. 3 journal of the cylinder block with the oil grooves facing outward.



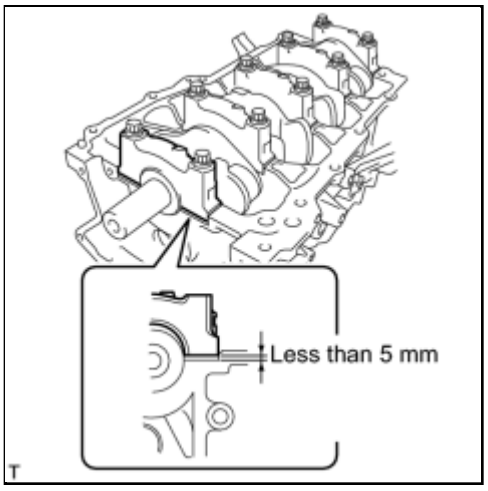
(b) Apply engine oil to the crankshaft thrust washer.

6. INSTALL CRANKSHAFT



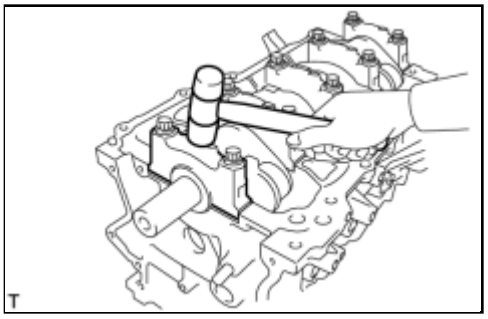
(a) Apply engine oil to the upper bearing and install the crankshaft on the cylinder block.

(b) Apply engine oil to the lower bearing.



(c) Examine the number marks and install the bearing caps on the cylinder block.

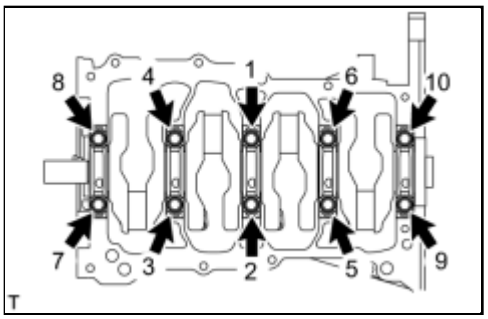
(d) Apply a light coat of engine oil to the threads and under the bearing cap bolts.



(e) Temporarily install the 10 main bearing cap bolts.

(f) Insert the main bearing cap by hand until the clearance between the main bearing cap and the cylinder block is less than 5 mm (0.20 in.) using the 2 internal bearing cap bolts as guides.

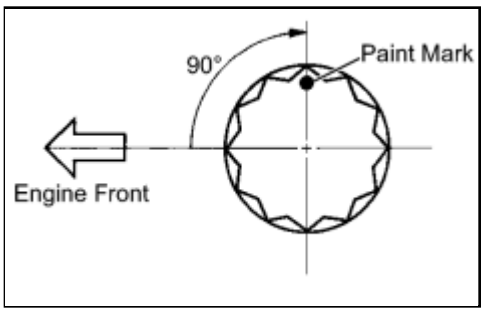
(g) Using a plastic hammer, lightly tap the bearing cap to ensure a proper fit.



(h) Install the crankshaft bearing cap bolts.

NOTICE:

Tighten the main bearing cap bolts in 2 progressive steps.



(i) Step 1

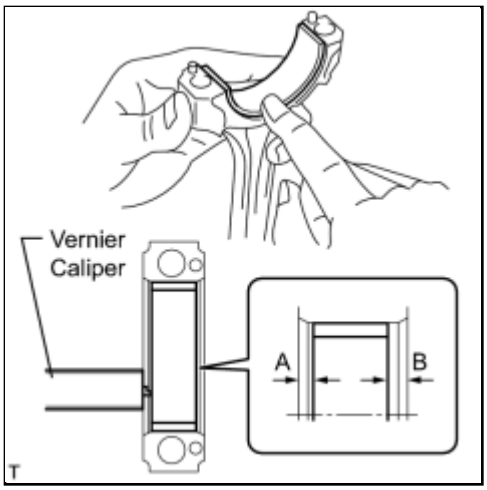
(1) Install and uniformly tighten the 10 main bearing cap bolts in the sequence shown in the illustration.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

(j) Step 2

(1) Mark the front of the bearing cap bolts with paint.

(2) Further tighten the bearing cap bolts an additional 90° in the numerical order shown in the previous illustration.



(k) Check that the paint mark is now at a 90° angle to the front.

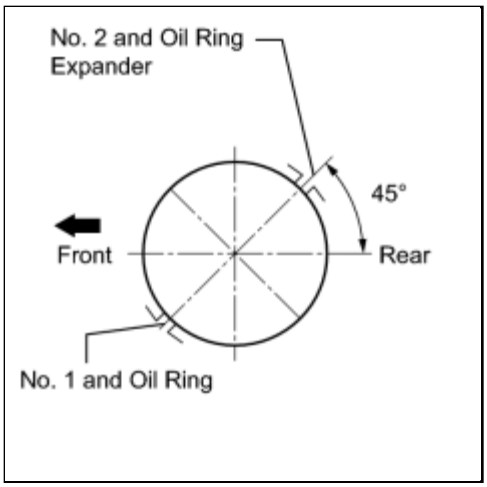
(l) Check that the crankshaft turns smoothly.

(m) Check the crankshaft thrust clearance INFO .

7. INSTALL CONNECTING ROD BEARING

(a) Install the connecting rod bearing to the connecting rod and bearing cap.

(b) Using a vernier caliper, measure the distance between the connecting rod and bearing cap edges and the connecting rod bearing edge.



Dimension (A - B):
0.7 mm (0.0276 in.) or less

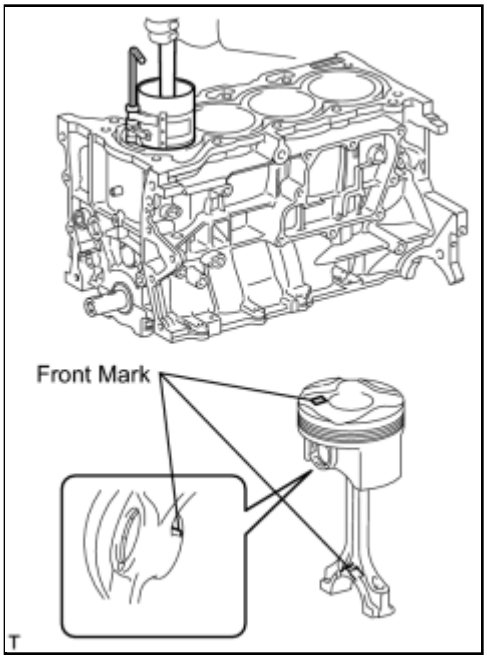
NOTICE:

Do not apply engine oil to the bearing inner surface or connecting rod contact surfaces.

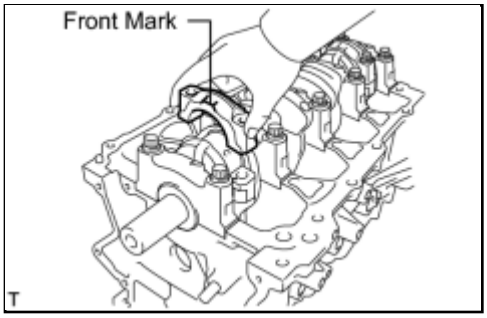
8. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.

(b) Position the piston rings so that the ring ends are as shown in the illustration.



NOTICE:



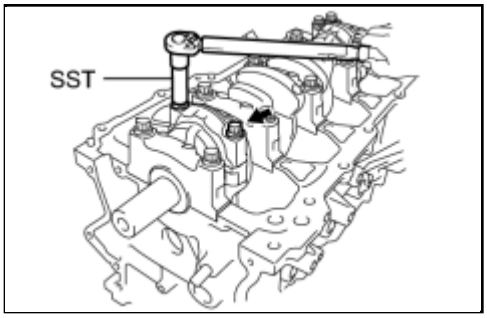
Do not align the ring ends.

(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assembly into the cylinder with the front mark of the piston facing forward.

NOTICE:

- When inserting the piston with connecting rod, do not allow it to make contact with the oil nozzle.
- Match the numbered connecting rod cap with the connecting rod.

(d) Check that the protrusion of the connecting rod cap is facing in the correct direction.



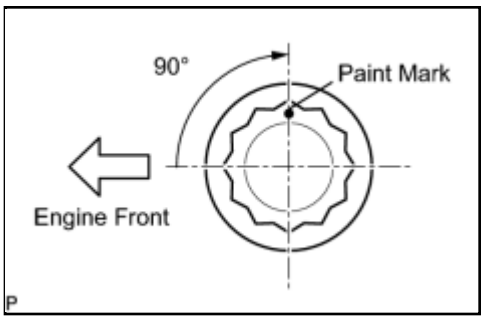
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.

(f) Install the connecting rod cap bolts.

NOTICE:

Tighten the connecting rod cap bolts in 2 progressive steps.

(g) Step 1

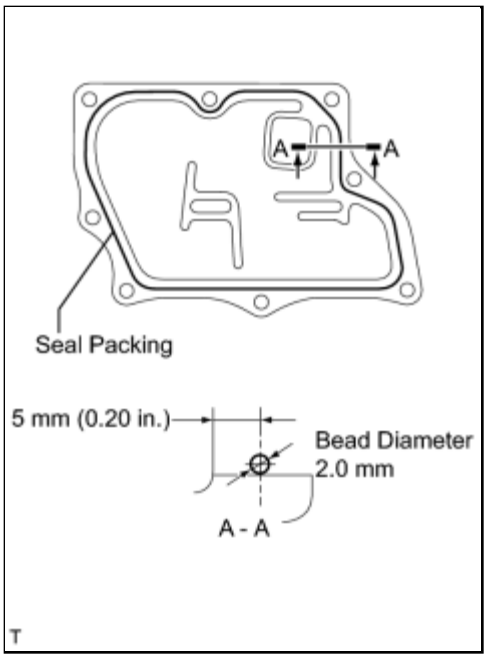


(1) Using SST, install and alternately tighten the bolts of the connecting rod cap in several steps.

SST: 09205-16010

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

(h) Step 2



(1) Mark the front of the connecting rod cap bolts with paint.

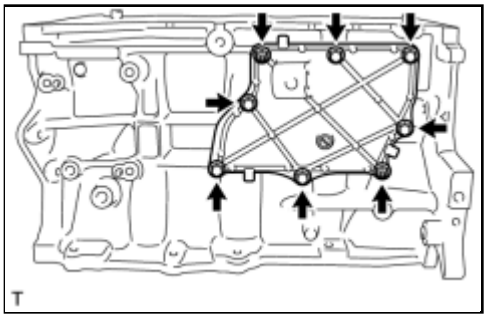
(2) Further tighten the cap bolts an additional 90° as shown in the illustration.

(i) Check that the crankshaft turns smoothly.

(j) Check the connecting rod thrust clearance INFO .

9. INSTALL NO. 1 VENTILATION CASE

(a) Apply seal packing in a continuous bead as shown in the illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Bead diameter:
2.0 mm (0.0787 in.)

NOTICE:

- Remove any oil from the contact surface.
- Install the No. 1 ventilation case within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing.

(b) Install the No. 1 ventilation case with the 6 bolts and 2 nuts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

T

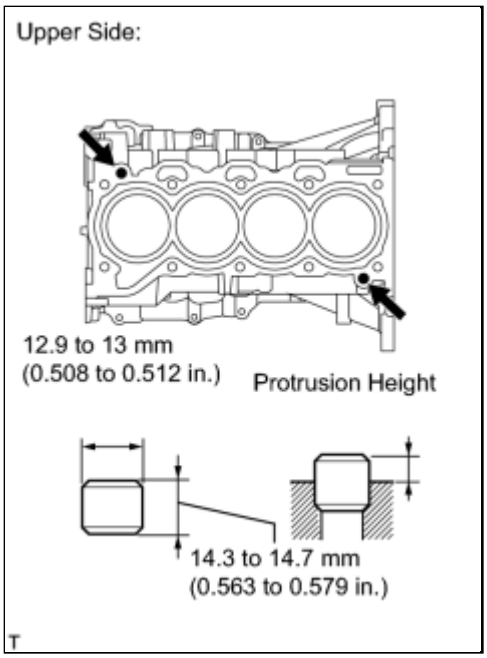
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA101QX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER BLOCK: REPLACEMENT (2010 Corolla)		



REPLACEMENT

1. REPLACE RING PIN

NOTICE:

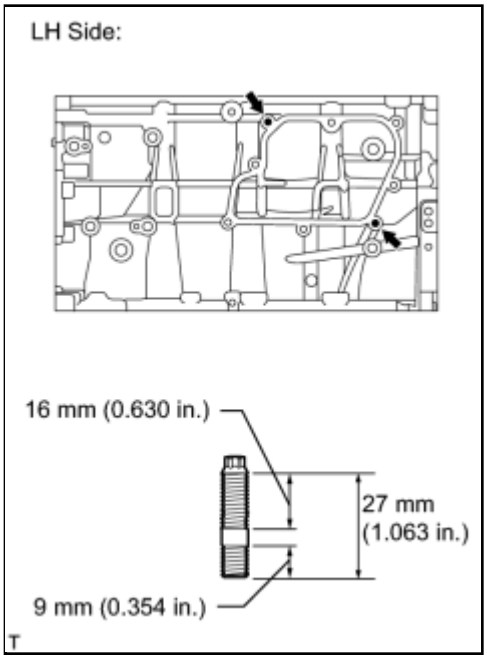
It is not necessary to remove the ring pins unless they are being replaced.

(a) Remove the ring pins.

(b) Using a plastic hammer, tap in the ring pins.

Standard protrusion:
7.5 to 8.5 mm (0.295 to 0.335 in.)

2. REPLACE STUD BOLT



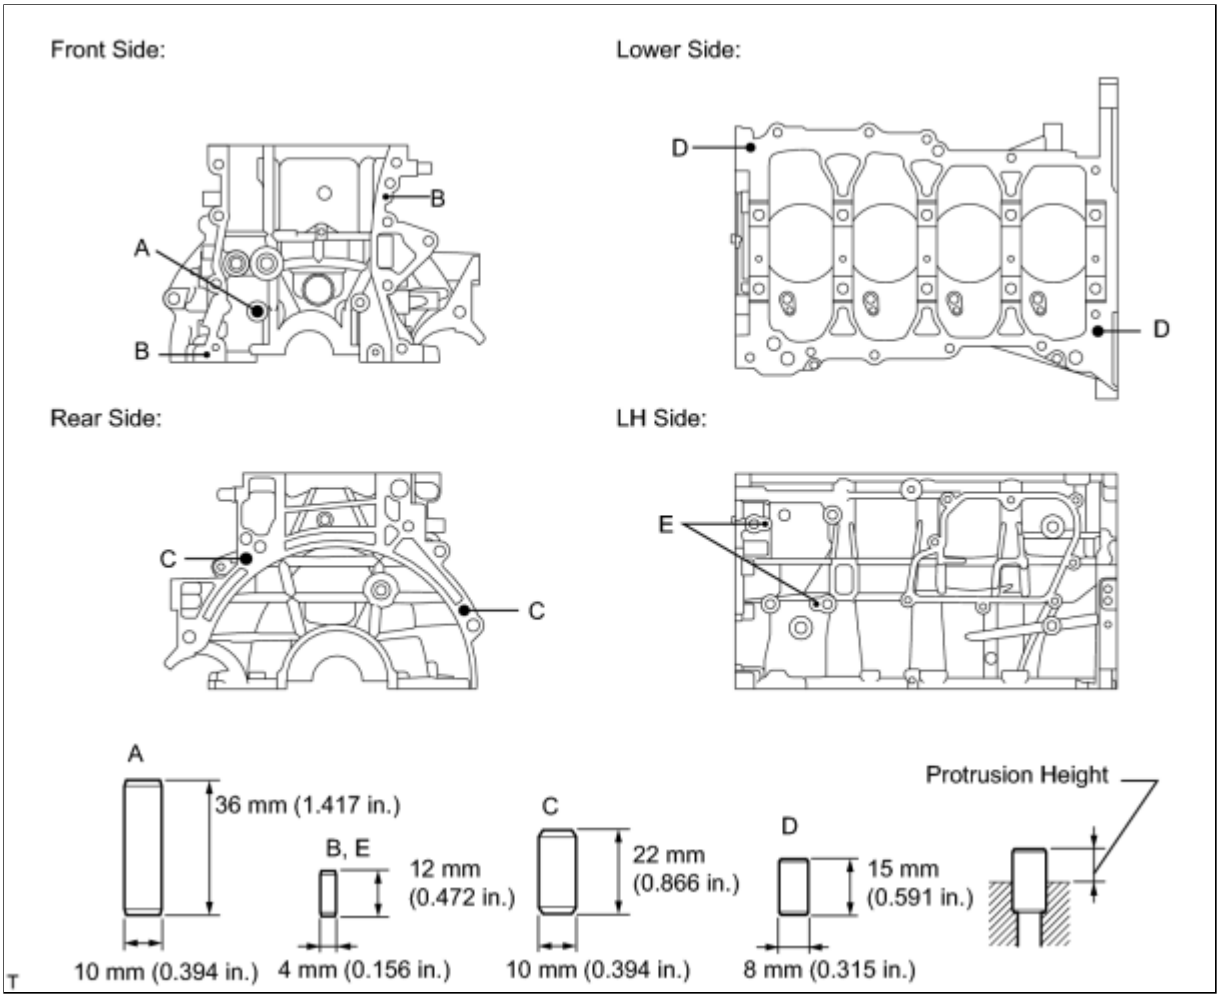
NOTICE:

If any of the stud bolts is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using a "TORX" socket E6, install the stud bolts as shown in the illustration.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)



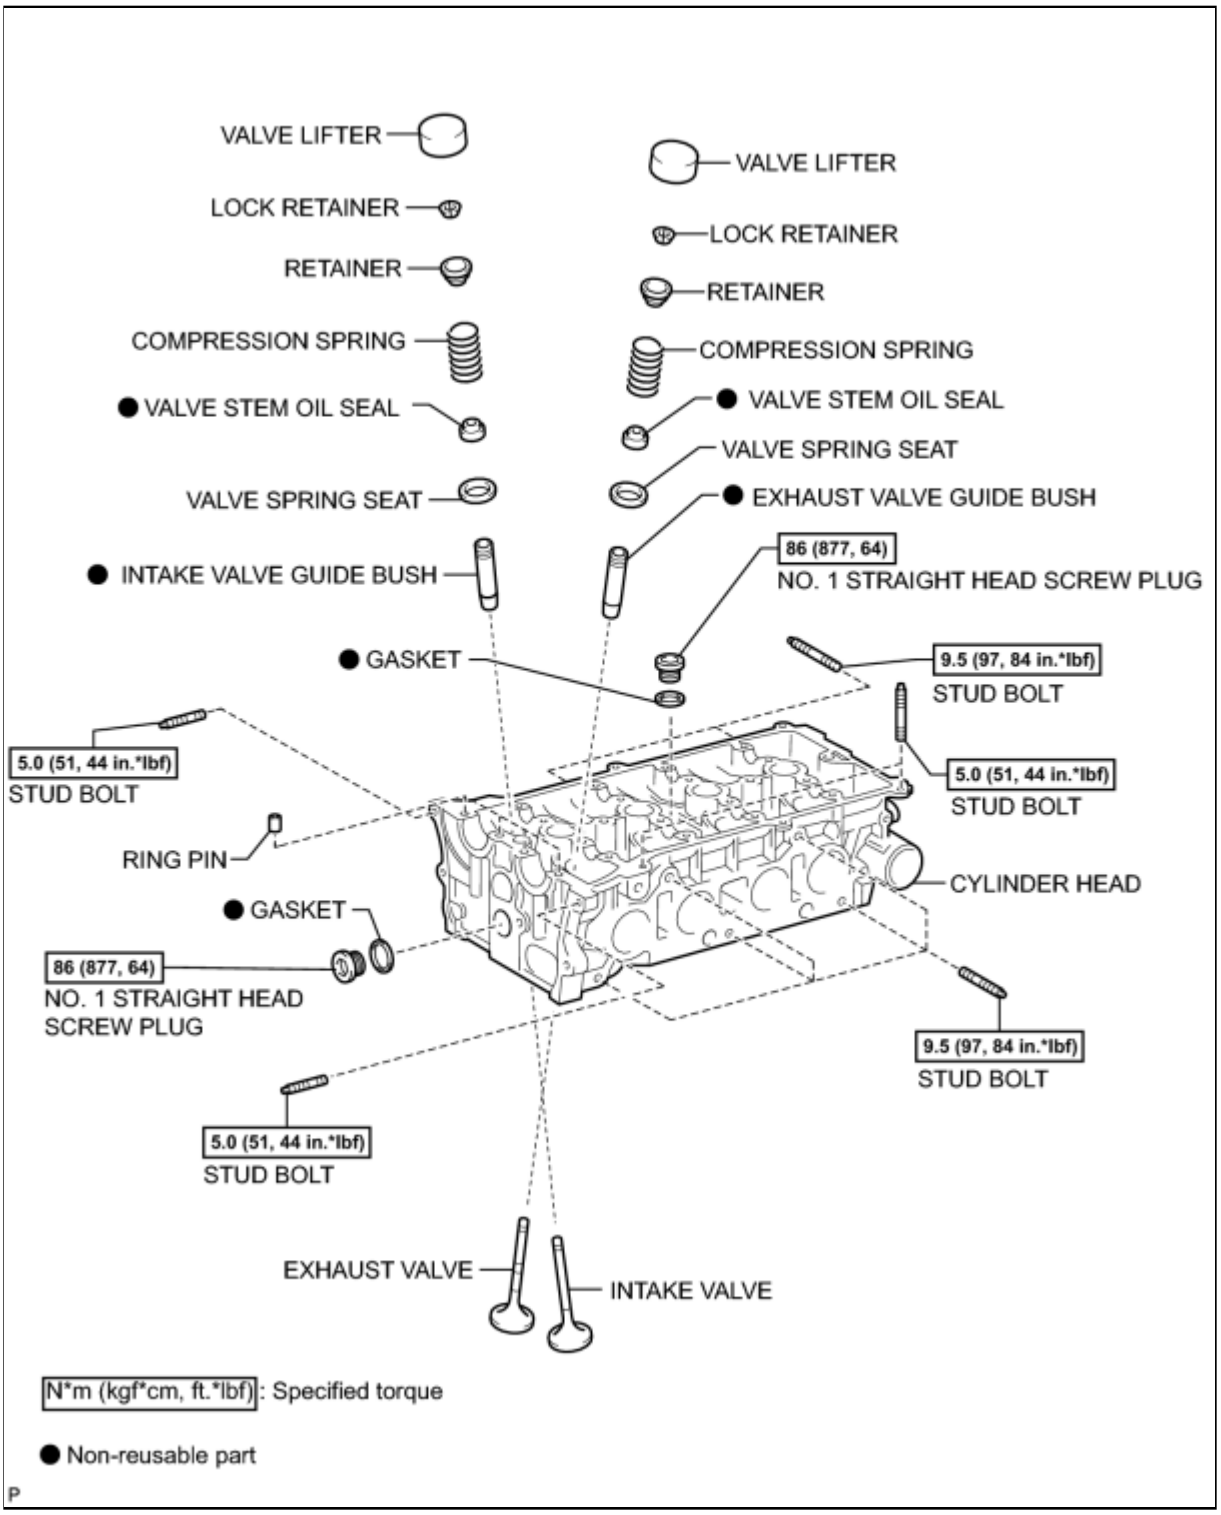
3. REPLACE STRAIGHT PIN

NOTICE:

It is not necessary to remove the straight pins unless they are being replaced.

(a) Remove the straight pins.

(b) Using a plastic hammer, tap in the straight pins.



Standard Protrusion:

ITEM	PROTRUSION
Pin A	18.5 to 19.5 mm (0.729 to 0.768 in.)
Pin B	5.0 to 7.0 mm (0.197 to 0.276 in.)
Pin C	11 to 13 mm (0.433 to 0.512 in.)
Pin D	5.0 to 7.0 mm (0.197 to 0.276 in.)
Pin E	5.0 to 6.0 mm (0.197 to 0.236 in.)

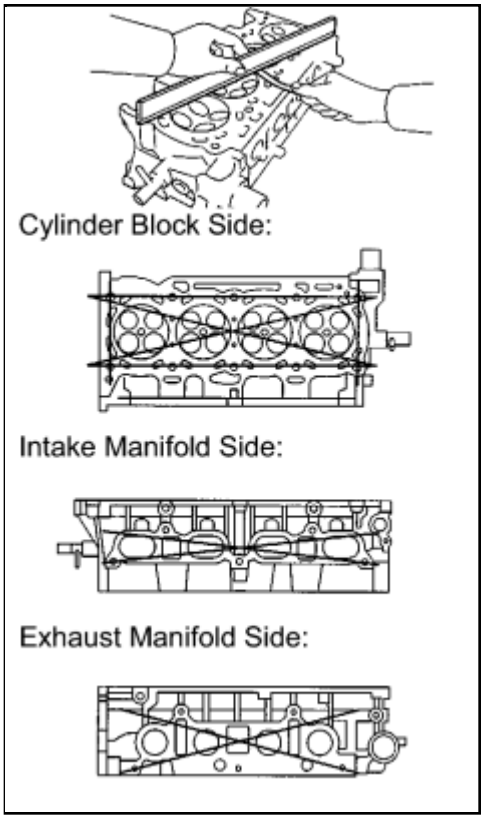
COMPONENTS

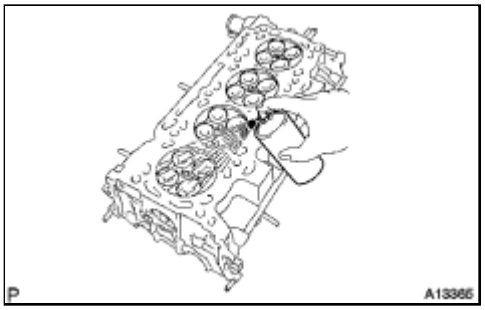


ILLUSTRATION

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YIC012X
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CYLINDER HEAD FOR WARPAGE



(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.

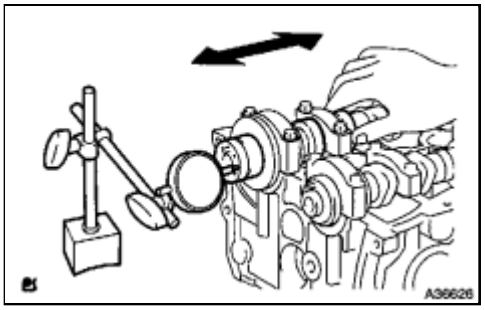
Maximum Warpage:

ITEM	SPECIFIED CONDITION
Cylinder block side	0.08 mm (0.00315 in.)
Intake manifold side	0.08 mm (0.00315 in.)
Exhaust manifold side	0.08 mm (0.00315 in.)

If the warpage is greater than the maximum, replace the cylinder head.

2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.



If cracked, replace the cylinder head.

3. INSPECT CAMSHAFT THRUST CLEARANCE

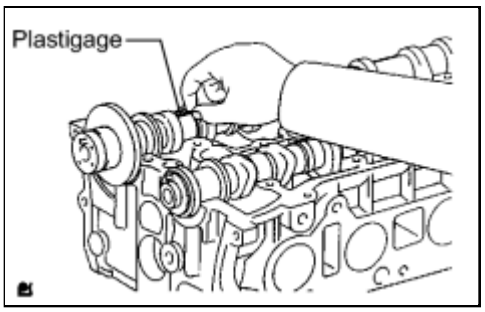
(a) Install the camshafts INFO .

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard Thrust Clearance:

ITEM	SPECIFIED CONDITION
Intake	0.040 to 0.095 mm (0.00157 to 0.00374 in.)
Exhaust	0.090 to 0.145 mm (0.00354 to 0.00570 in.)

Maximum Thrust Clearance:



ITEM	SPECIFIED CONDITION
Intake	0.110 mm (0.00433 in.)
Exhaust	0.150 mm (0.00591 in.)

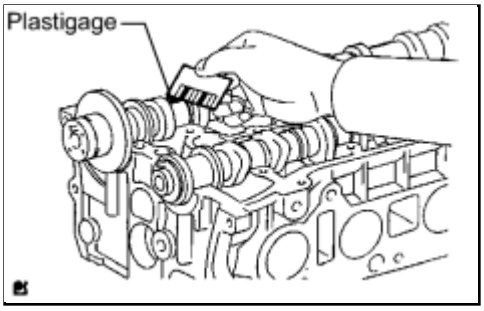
If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.

4. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the cylinder head.

(c) Lay a strip of Plastigage across each of the camshaft journals.



(d) Install the bearing caps INFO .

NOTICE:

Do not turn the camshaft.

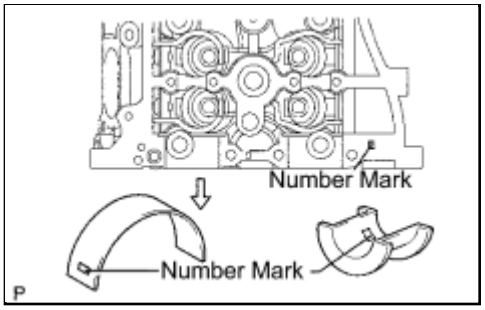
(e) Remove the bearing caps INFO .

(f) Measure the Plastigage at its widest point.

Standard Oil Clearance:

ITEM	SPECIFIED CONDITION
Camshaft No. 1 journal bearing mark 1	0.007 to 0.038 mm (0.000276 to 0.00150 in.)
Camshaft No. 1 journal bearing mark 2	0.008 to 0.038 mm (0.000315 to 0.00150 in.)
Camshaft No. 1 journal bearing mark 3	0.008 to 0.038 mm (0.000315 to 0.00150 in.)
Camshaft other journals	0.025 to 0.062 mm (0.000984 to 0.00244 in.)
No. 2 camshaft No. 1 journal	0.040 to 0.072 mm (0.00157 to 0.00283 in.)
No. 2 camshaft other journals	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

Maximum Oil Clearance:



ITEM	SPECIFIED CONDITION
Intake	0.070 mm (0.00276 in.)
Exhaust	0.100 mm (0.00394 in.)

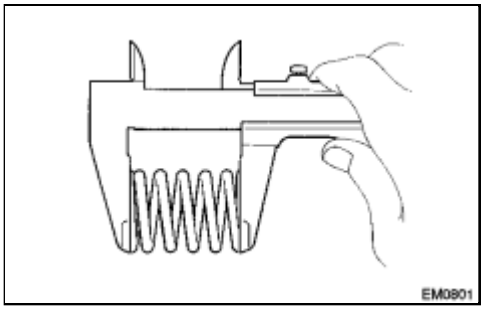
NOTICE:

Completely remove the Plastigage after the inspection.

- If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the cylinder head.
- If the oil clearance on the camshaft No. 1 journal is greater than the maximum, choose a new bearing and install it.

(1) Check the number mark shown in the illustration.

Cylinder Head Journal Bore Diameter:

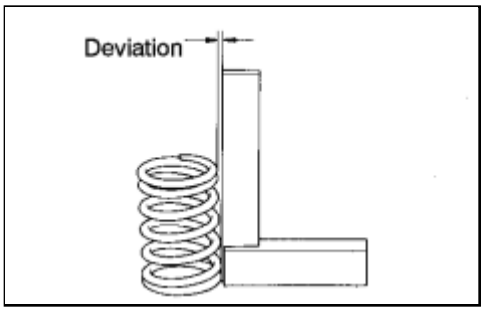


MARK 1	MARK 2	MARK 3
40.000 to 40.009 mm (1.5748 to 1.5752 in.)	40.010 to 40.017 mm (1.5752 to 1.5755 in.)	40.018 to 40.025 mm (1.5755 to 1.5758 in.)

Standard Bearing Center Wall Thickness:

MARK 1	MARK 2	MARK 3
2.000 to 2.004 mm (0.0787 to 0.0789 in.)	2.005 to 2.008 mm (0.0789 to 0.0791 in.)	2.009 to 2.012 mm (0.0791 to 0.0792 in.)

Camshaft journal diameter:
35.971 to 35.985 mm (1.4162 to 1.4167 in.)

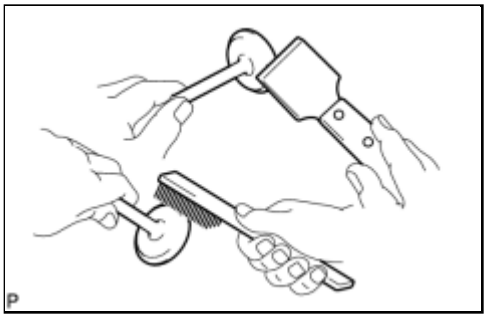


5. INSPECT INNER COMPRESSION SPRING

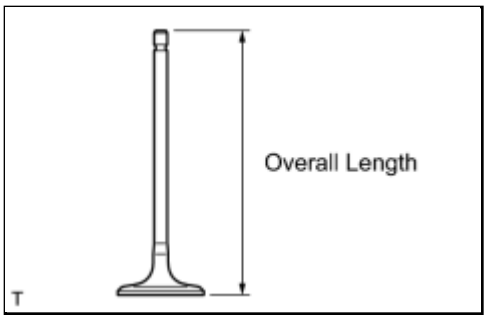
(a) Using a vernier caliper, measure the free length of the valve spring.

Free length:
47.43 mm (1.867 in.)

If the free length is not as specified, replace the valve spring.



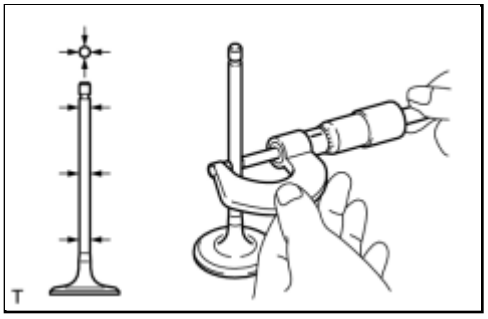
(b) Using a steel set square, measure the deviation of the valve spring.



Maximum deviation:
1.6 mm (0.063 in.)

If the deviation is greater than the maximum, replace the valve spring.

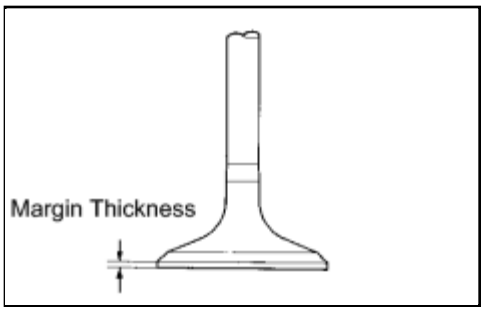
6. INSPECT INTAKE VALVE



(a) Using a gasket scraper, scrape off any carbon on the valve head.

(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:
101.71 mm (4.0043 in.)
Minimum overall length:
101.21 mm (3.9846 in.)

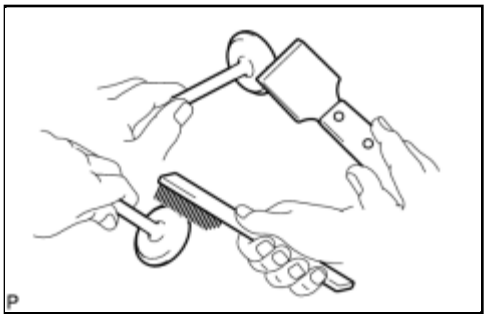


If the overall length is less than the minimum, replace the valve.

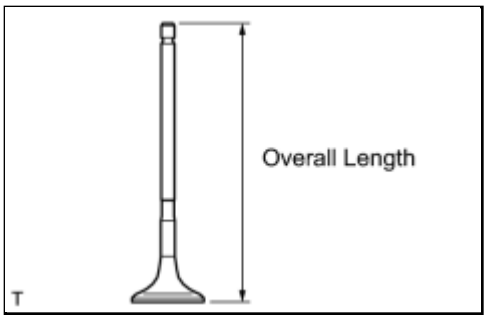
(c) Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)

If the valve stem is not as specified, check the oil clearance.



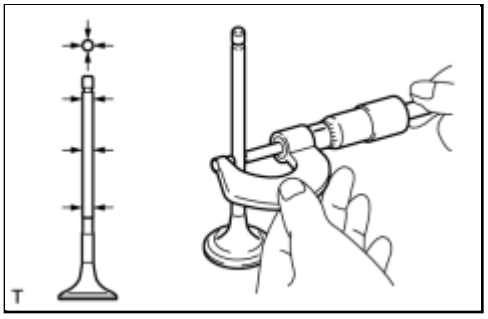
(d) Using a vernier caliper, measure the valve head margin thickness.



Standard margin thickness:
1.05 to 1.45 mm (0.0413 to 0.0571 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

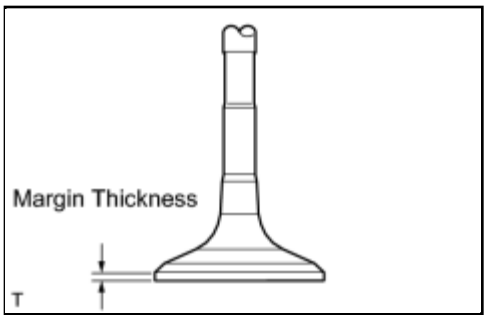
7. INSPECT EXHAUST VALVE



(a) Using a gasket scraper, scrape off any carbon on the valve head.

(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:
101.15 mm (3.9823 in.)
Minimum overall length:
100.70 mm (3.9646 in.)

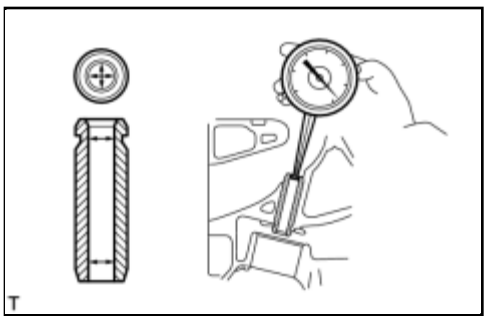


If the overall length is less than the minimum, replace the valve.

(c) Using a micrometer, measure the diameter of the valve stem.

Valve stem diameter:
5.465 to 5.480 mm (0.2152 to 0.2157 in.)

If the valve stem is not as specified, check the oil clearance.



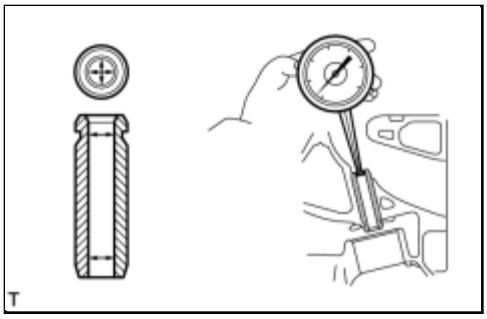
(d) Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.20 to 1.60 mm (0.0472 to 0.0630 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

8. INSPECT INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the inside diameter of the guide bush.



Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

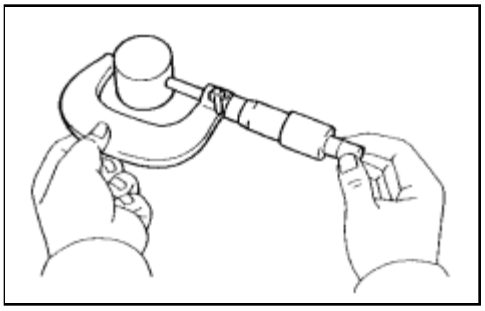
(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Maximum oil clearance:
0.090 mm (0.0035 in.)

If the clearance is greater than the maximum, replace the valve and guide bush.

9. INSPECT EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the inside diameter of the guide bush.



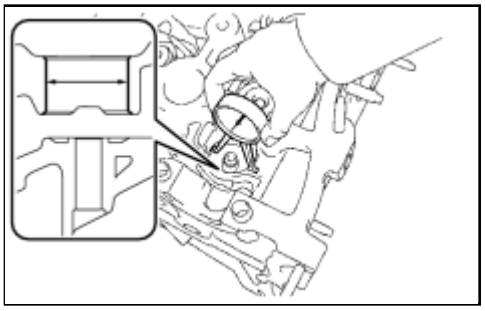
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.

Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Maximum oil clearance:
0.095 mm (0.0037 in.)

If the clearance is greater than the maximum, replace the valve and guide bush.

10. INSPECT VALVE LIFTER

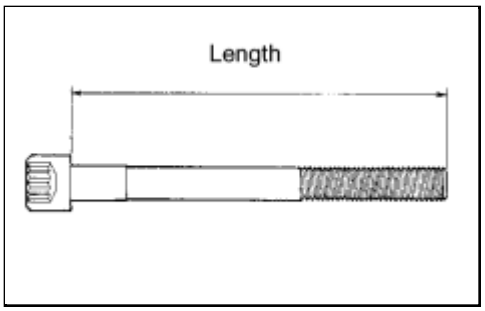


(a) Using a micrometer, measure the lifter diameter.

Lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)

(b) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.

Standard lifter bore diameter:
31.009 to 31.025 mm (1.2208 to 1.2215 in.)



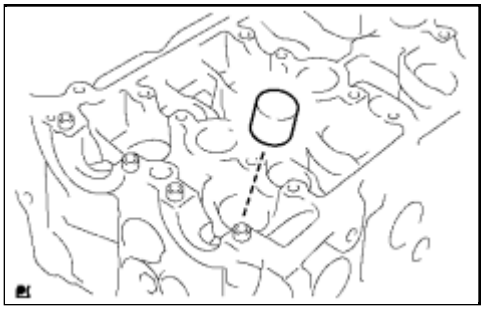
(c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.

Standard oil clearance:
0.033 to 0.059 mm (0.00130 to 0.00232 in.)
Maximum oil clearance:
0.079 mm (0.00311 in.)

If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.

11. INSPECT CYLINDER HEAD SET BOLT

(a) Using a vernier caliper, measure the length of the head bolts from the seat to the end.



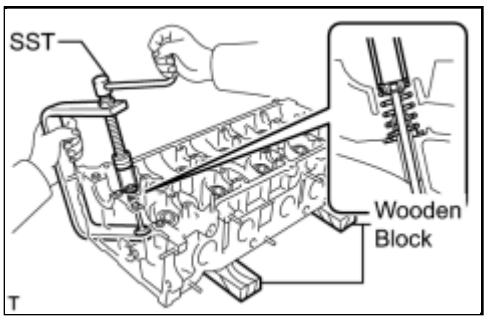
Standard bolt length:
141.3 to 142.7 mm (5.563 to 5.618 in.)
Maximum bolt length:
144.2 mm (5.677 in.)

If the bolt length is greater than the maximum, replace the cylinder head set bolt.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000224A00BX
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE VALVE LIFTER



(a) Remove the 16 valve lifters from the cylinder head.

HINT:

Arrange the valve lifters in the correct order.

2. REMOVE INTAKE VALVE

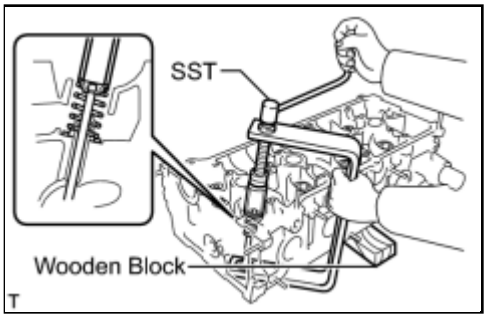
(a) Using SST and wooden blocks, remove the 16 retainer locks.

SST: 09202-70020

09202-00010

(b) Remove the 8 retainers, compression springs and intake valves.

HINT:



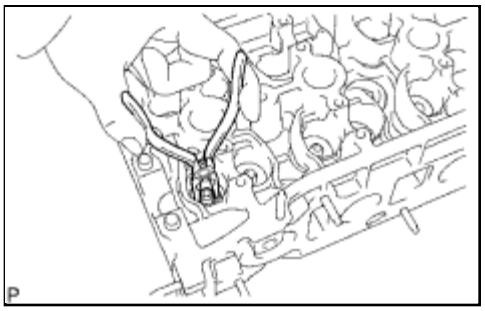
Arrange the removed parts in the correct order.

3. REMOVE EXHAUST VALVE

(a) Using SST and wooden blocks, remove the 16 retainer locks.

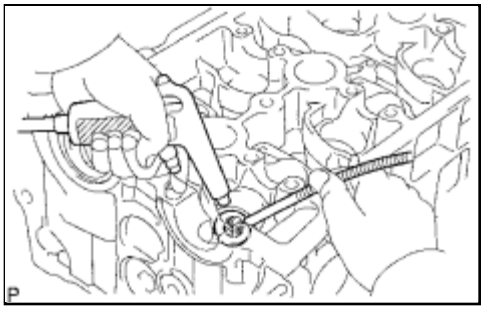
SST: 09202-70020

09202-00010



(b) Remove the 8 retainers, compression springs and exhaust valves.

HINT:

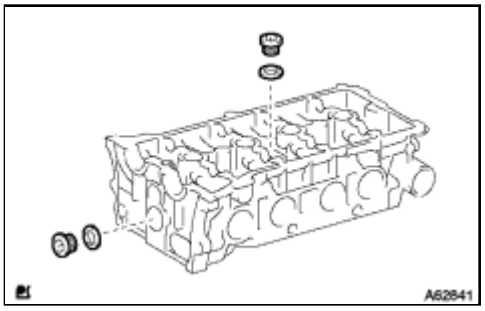


Arrange the removed parts in the correct order.

4. REMOVE VALVE STEM OIL SEAL

(a) Using needle nose pliers, remove the oil seals.

5. REMOVE VALVE SPRING SEAT



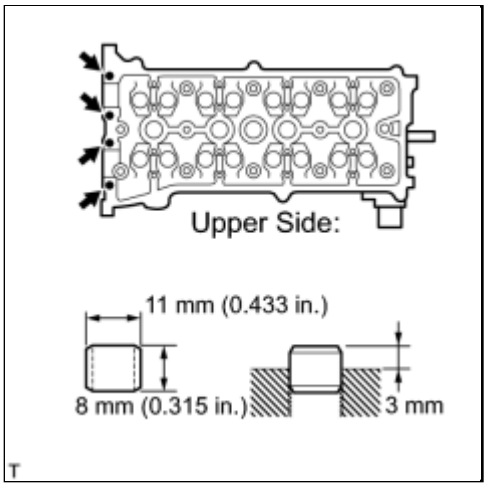
(a) Using compressed air and a magnetic pick-up tool, remove the valve spring seats by blowing air onto them.

6. REMOVE NO. 1 STRAIGHT HEAD SCREW PLUG

(a) Using a 14 mm straight hexagon wrench, remove the 2 screw plugs and 2 gaskets.

NOTICE:

If water leaks from the straight screw plug or the plug is



corroded, replace it.

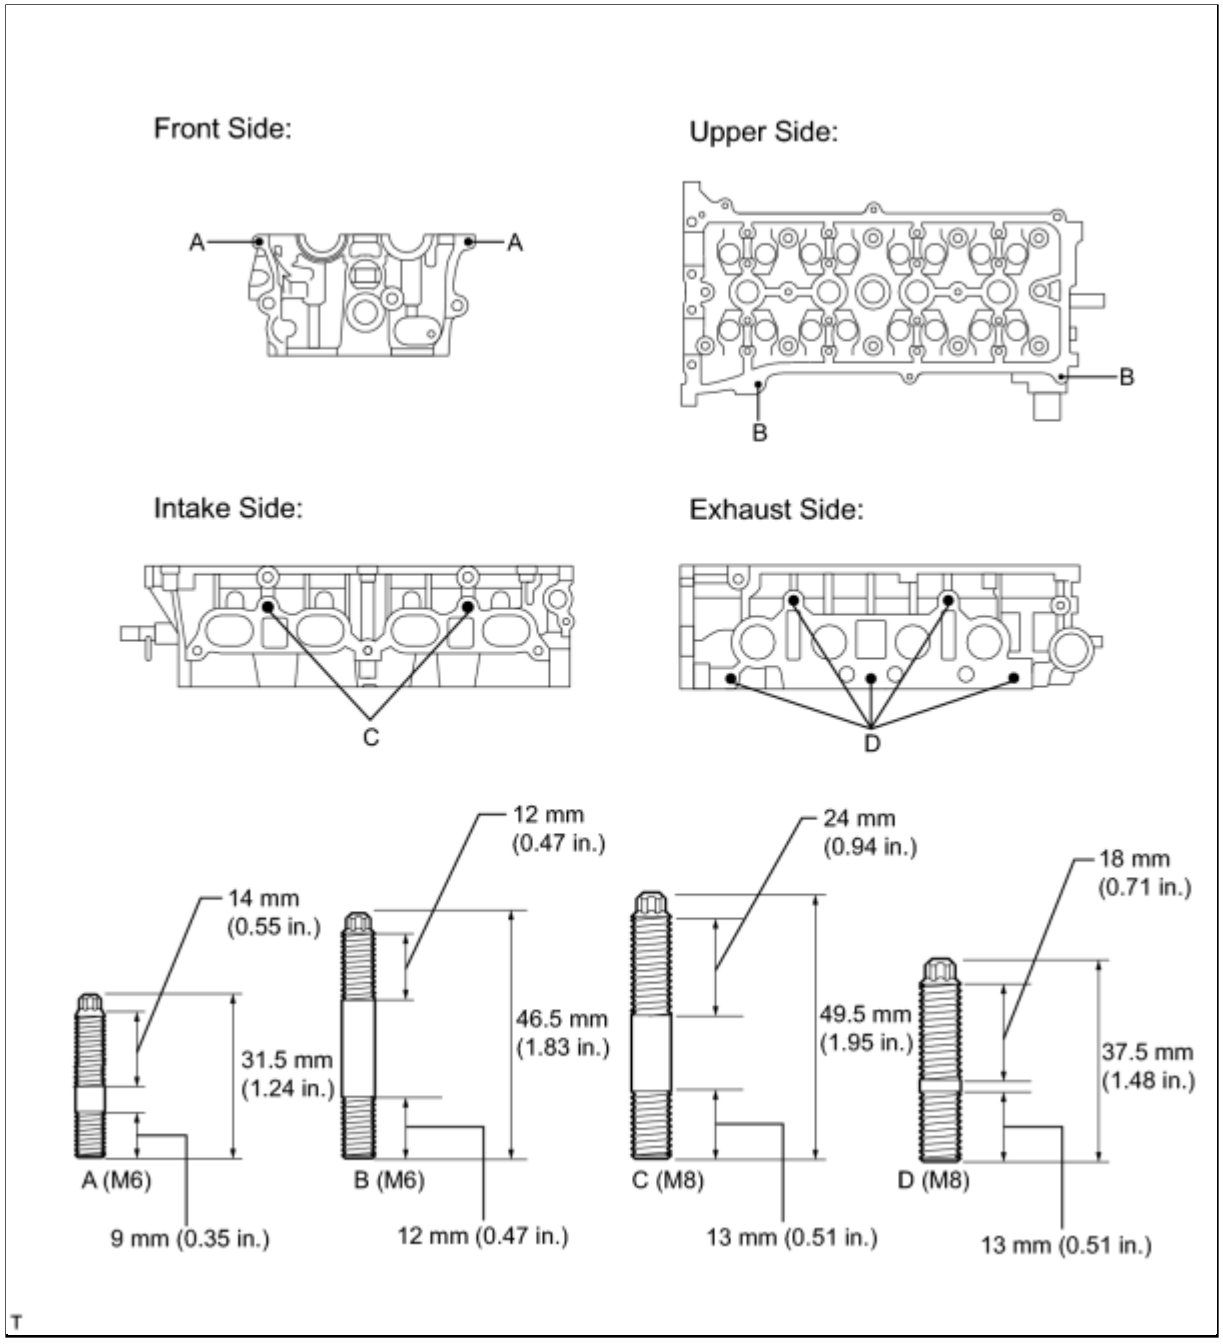
7. REMOVE STUD BOLT

8. REMOVE RING PIN

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000224B00BX
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL RING PIN



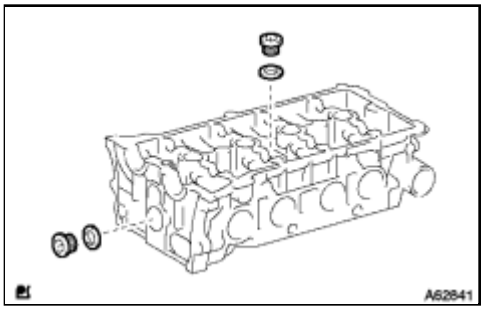
(a) Using a plastic-faced hammer, tap in a new ring pin to the specified protrusion height.

Protrusion height:
3 mm (0.118 in.)

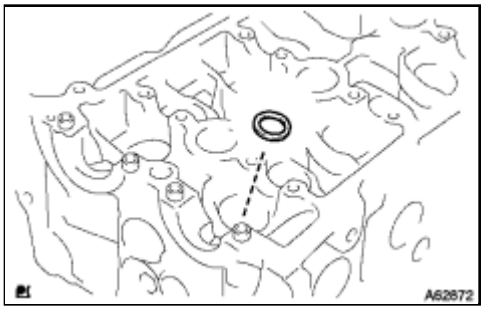
2. INSTALL STUD BOLT

NOTICE:
If any stud bolt is deformed or the threads are damaged, replace it.

(a) Using E5 and E7 "TORX" sockets, install the stud bolts.



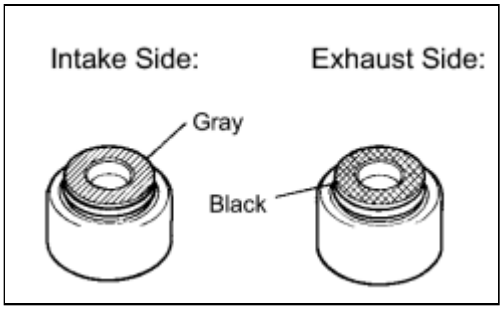
Bolt A - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)
Bolt B - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)
Bolt C - Torque: 9.5 N·m (97 kgf·cm, 84in·lbf)
Bolt D - Torque: 9.5 N·m (97 kgf·cm, 84in·lbf)



3. INSTALL NO. 1 STRAIGHT HEAD SCREW PLUG

(a) Using a 14 mm straight hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.

Torque: 86 N·m (877 kgf·cm, 64ft·lbf)



4. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats into the cylinder head.

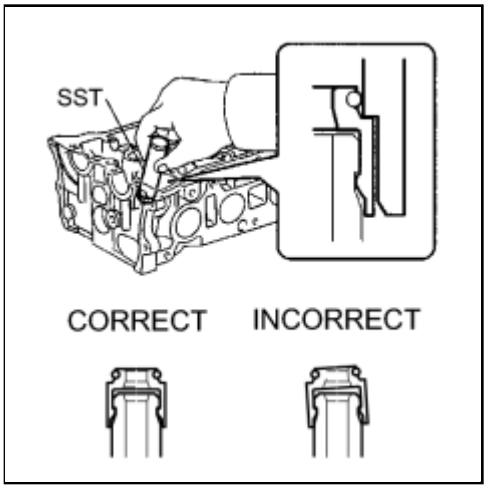
5. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to a new oil seal.

NOTICE:

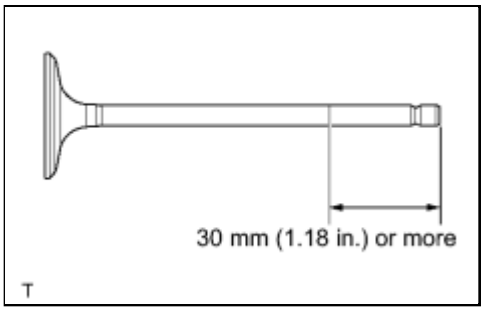
Pay close attention when installing the intake and exhaust oil seals. Installing the intake oil seal into the exhaust side or installing the exhaust oil seal into the intake side may cause installation problems later.

HINT:



The intake valve oil seal is gray and the exhaust valve oil seal is black.

(b) Using SST, push in the oil seal.

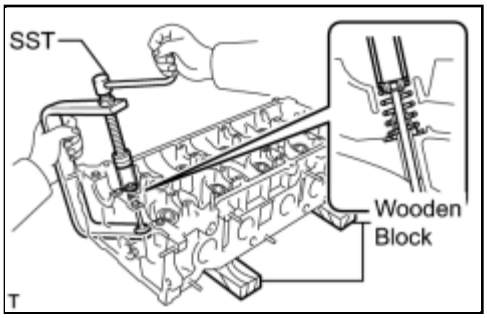


SST: 09201-41020

NOTICE:

Failure to use SST will cause the seal to be damaged or improperly seated.

6. INSTALL INTAKE VALVE



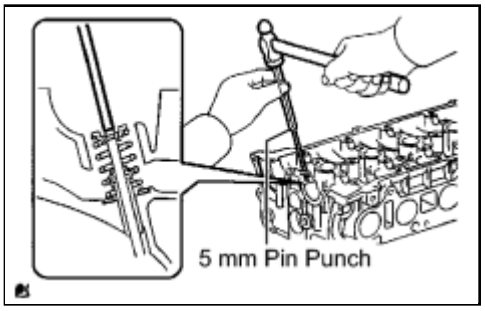
(a) Apply a sufficient coat of engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

NOTICE:

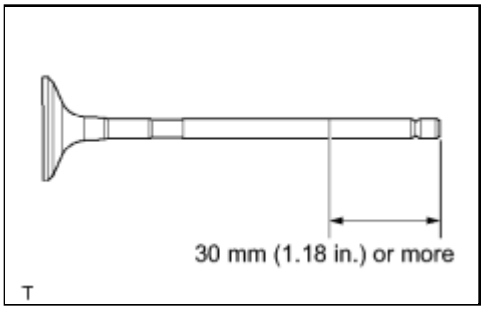
Install the same parts in the same combination to the original locations.

(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.



SST: 09202-70020

09202-00010

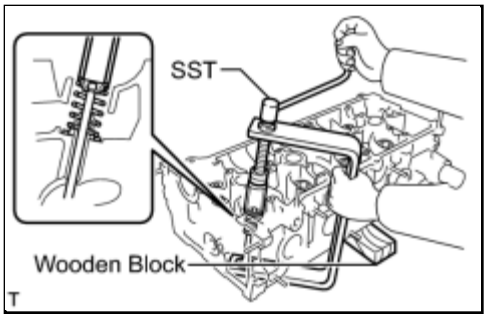


(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the valve stem tip.

7. INSTALL EXHAUST VALVE



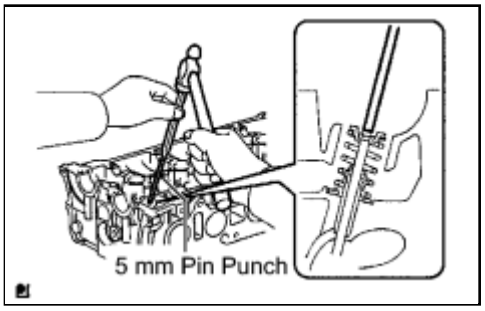
(a) Apply a sufficient coat of engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

NOTICE:

Install the same parts in the same combination to the original locations.

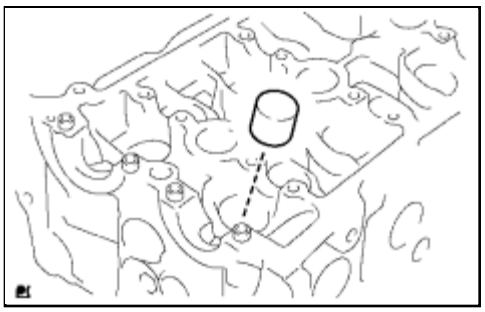
(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.



SST: 09202-70020

09202-00010

(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.

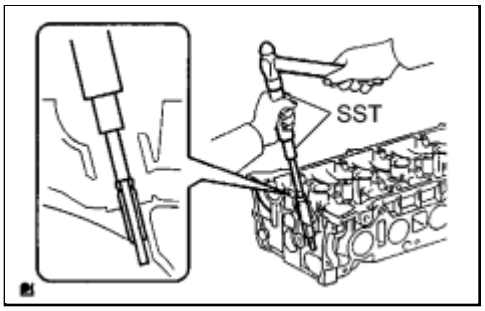


NOTICE:

Be careful not to damage the valve stem tip.

8. INSTALL VALVE LIFTER

(a) Apply a light coat of engine oil.



(b) Assemble the valve lifter and the tip of the valve stem.

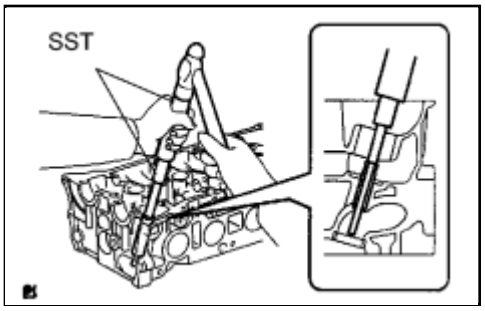
NOTICE:

Install the same parts in the same combination to the original locations.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000033OR006X
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REMOVE INTAKE VALVE GUIDE BUSH



(a) Heat the cylinder head to 80 to 100°C (176 to 212 °F).

(b) Place the cylinder head on wooden blocks.

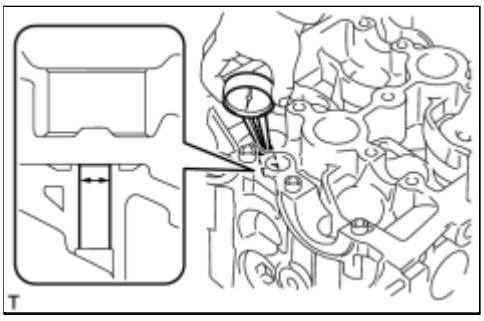
(c) Using SST and a hammer, tap out the guide bush.

SST: 09202-70020

09202-00010

2. REMOVE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212 °F).



(b) Place the cylinder head on wooden blocks.

(c) Using SST and a hammer, tap out the guide bush.

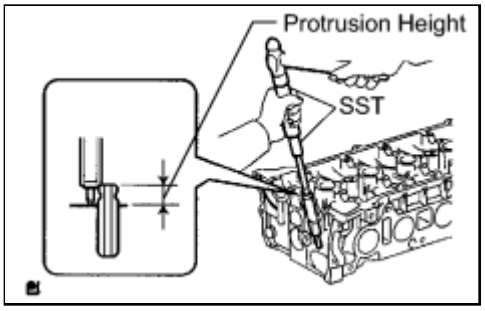
SST: 09202-70020

09202-00010

3. INSTALL INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a New Guide Bush (STD or O/S 0.05):



BUSH SIZE	BUSH BORE DIAMETER

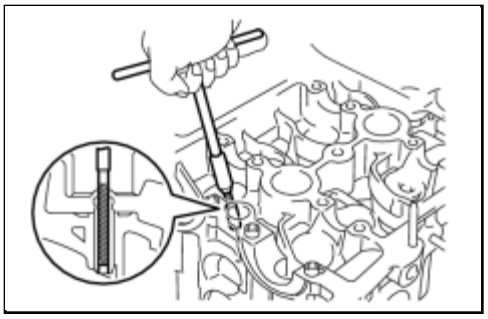
BUSH SIZE	BUSH BORE DIAMETER
Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

If the cylinder head bush bore diameter is greater than 10.306 mm (0.4057 in.), machine the bush bore to a dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) and install an O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212 °F).

(c) Place the cylinder head on wooden blocks.

(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.

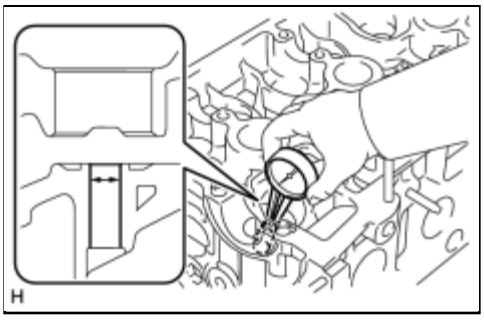


SST: 09201-10000

09201-01050

SST: 09950-70010

09951-07100



Protrusion height:
9.6 to 10.0 mm (0.3779 to 0.3937 in.)

(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

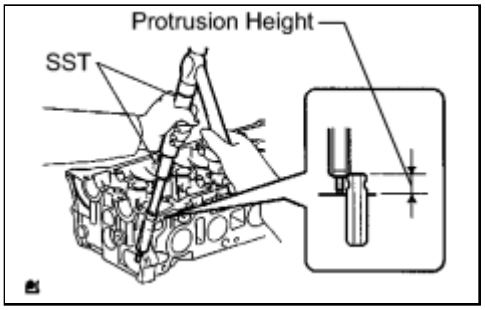
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)

4. INSTALL EXHAUST VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Cylinder bore diameter:

10.285 to 10.306 mm (0.4049 to 0.4057 in.)



Select a New Guide Bush (STD or O/S 0.05):

BUSH SIZE	BUSH BORE DIAMETER
Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

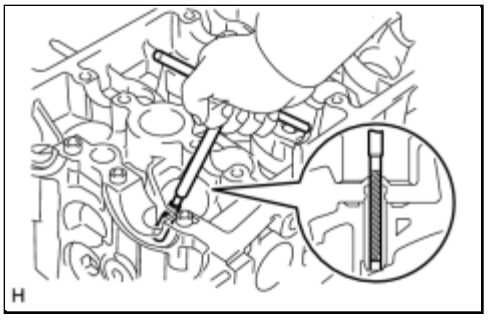
If the cylinder head bush bore diameter is greater than 10.306 mm (0.4057 in.), machine the bush bore to a dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) and install an O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212 °F).

(c) Place the cylinder head on wooden blocks.

(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.

SST: 09201-10000



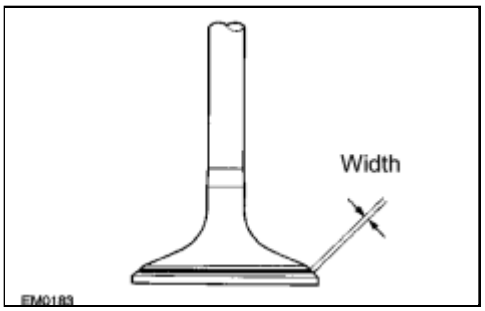
09201-01050

SST: 09950-70010

09951-07100

Protrusion height:

9.6 to 10.0 mm (0.3779 to 0.3937 in.)



(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.

Standard oil clearance:

0.030 to 0.065 mm (0.00118 to 0.00256 in.)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000033OS006X
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD: REPAIR (2010 Corolla)		

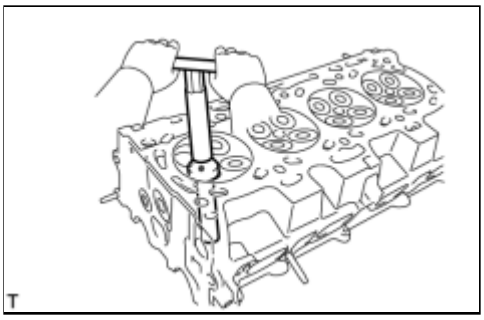
REPAIR

1. INSPECT VALVE SEATS

(a) Apply a light coat of prussian blue to the valve face.

(b) Lightly press the valve face against the valve seat.

(c) Check the valve face and valve seat according to the following procedure:



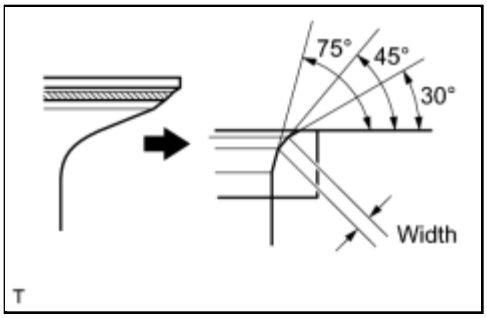
(1) If prussian blue appears 360° around the valve face, the valve face is concentric. If not, replace the valve.

(2) If prussian blue appears 360° around the valve seat, the guide and valve face are concentric. If not, resurface the valve seat.

(3) Check that the valve seat contact is in the middle of the valve face with the width between 1.0 to 1.4 mm (intake side (0.039 to 0.055 in.)).

(4) Check that the valve face width is between 1.2 to 1.6 mm (Exhaust side (0.047 to 0.063 in.)).

2. REPAIR VALVE SEATS



NOTICE:

- Repair the seat while checking the seating position.
- Keep the lip free from foreign matter.

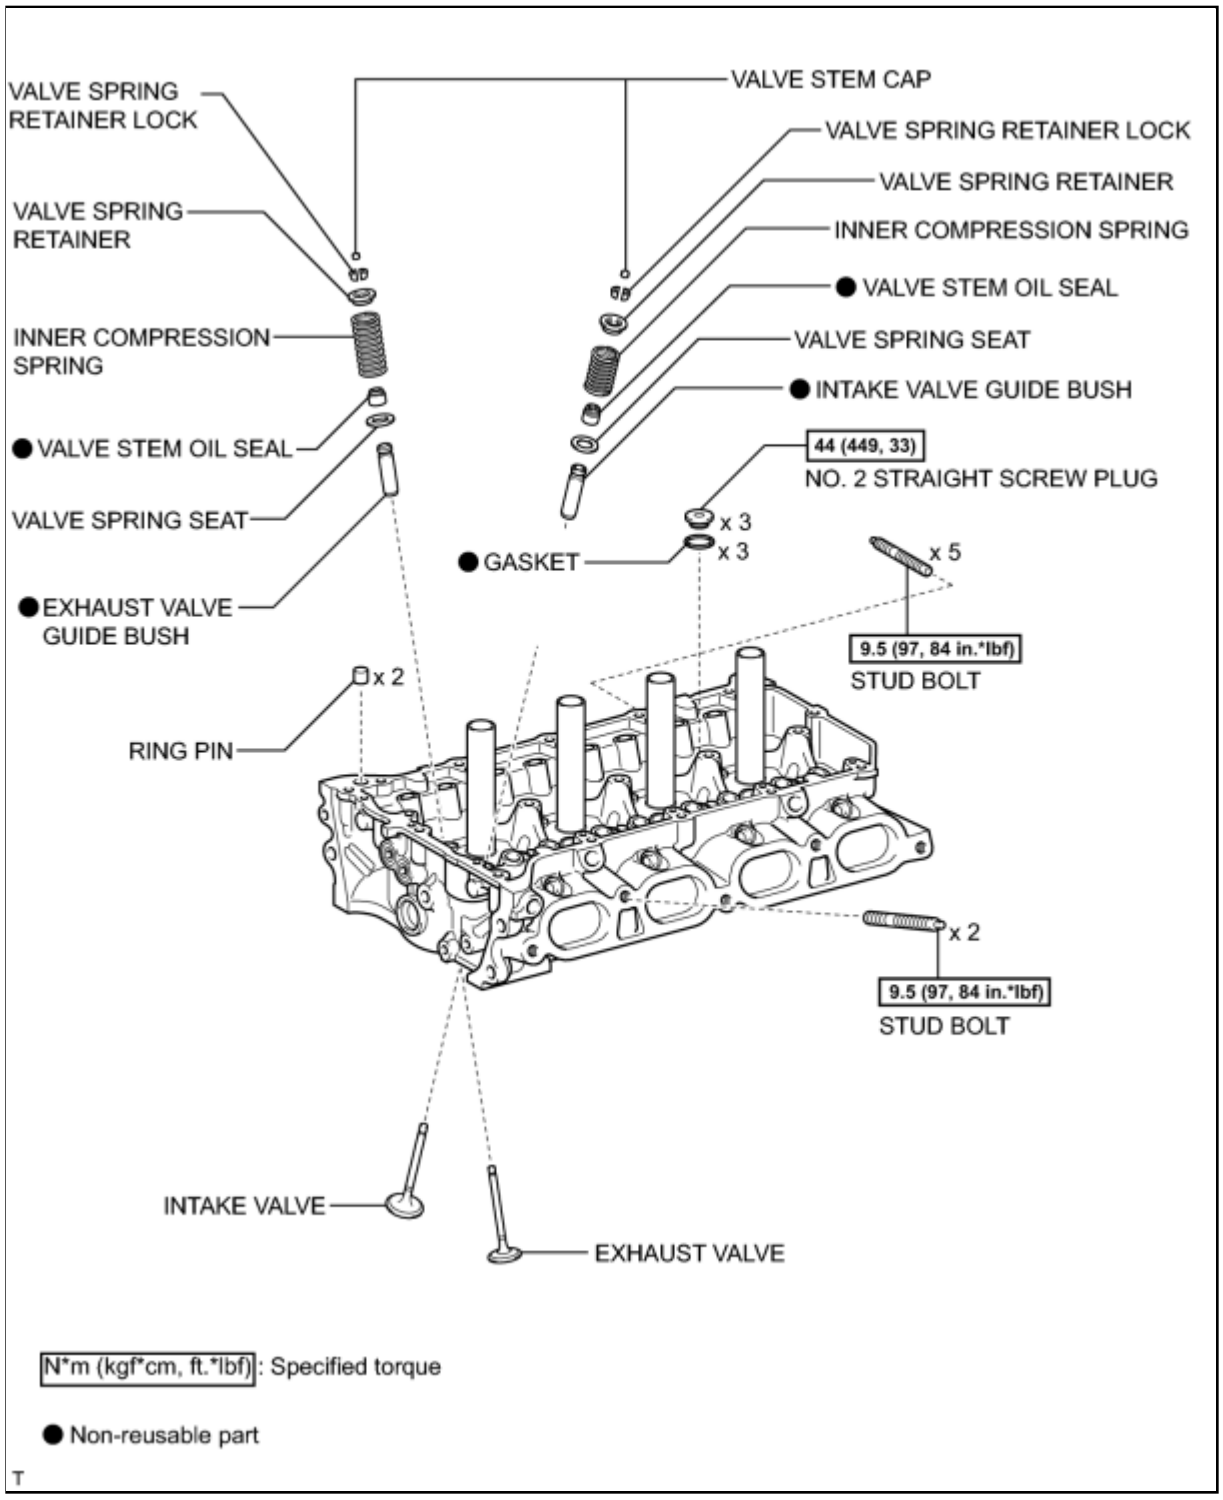
(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

(b) Using 30° to 75° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and

the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Valve Seat Width:

ITEM	SPECIFIED CONDITION
Intake Side	1.0 to 1.4 mm (0.039 to 0.055 in.)
Exhaust Side	1.2 to 1.6 mm (0.047 to 0.063 in.)



(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

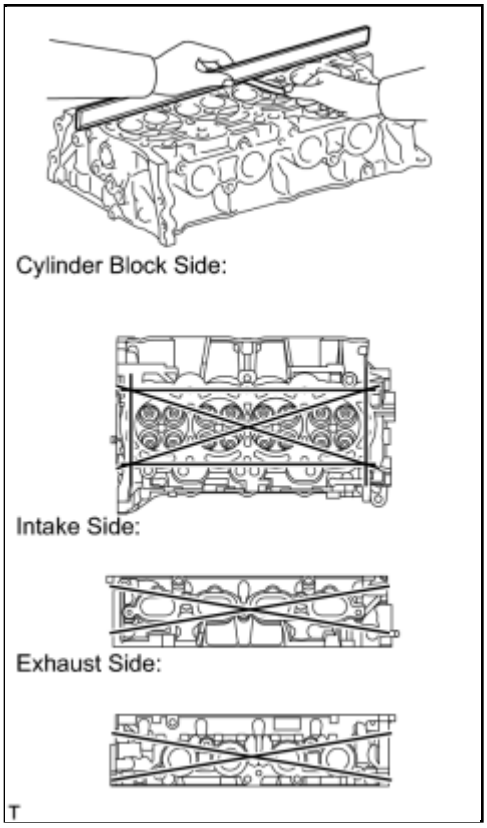
COMPONENTS

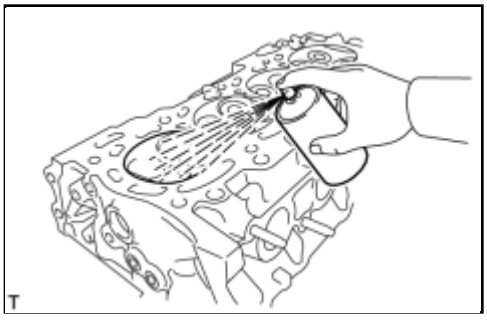


ILLUSTRATION

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA201TX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CYLINDER HEAD FOR FLATNESS

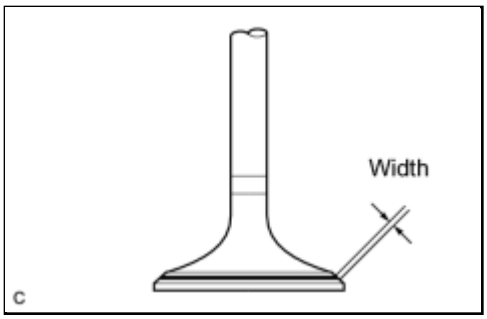


(a) Using a precision straight edge and a feeler gauge, measure the surfaces contacting the cylinder block and the manifolds for warpage.

Maximum Warpage:

ITEM	SPECIFIED CONDITION
Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.10 mm (0.0039 in.)
Exhaust manifold side	0.10 mm (0.0039 in.)

If the warpage is greater than the maximum, replace the cylinder head.



2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.

If cracked, replace the cylinder head.

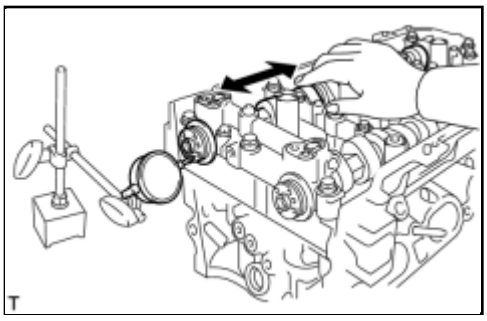
3. INSPECT VALVE SEATS

(a) Apply a light coat of Prussian blue to the valve face.

(b) Lightly press the valve face against the valve seat.

(c) Check the valve face and valve seat according to the following procedure:

(1) If Prussian blue appears 360° around the valve face, the valve face is concentric. If not, replace the valve.



(2) If Prussian blue appears 360° around the valve seat, the guide and valve face are concentric. If not, resurface the valve seat.

(3) Check that the valve seat contact is in the middle of the valve face with the valve seat width between 1.0 and 1.4 mm (Intake side (0.039 to 0.055 in.)).

(4) Check that the valve seat contact is in the middle of the valve face with the valve seat width between 1.0 and 1.4 mm (Exhaust side (0.039 to 0.055 in.)).

4. INSPECT CAMSHAFT THRUST CLEARANCE

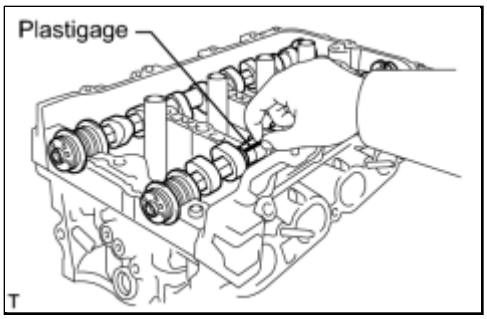
(a) Install the camshafts INFO .

(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard Thrust Clearance:

ITEM	SPECIFIED CONDITION
Intake	0.06 to 0.155 mm (0.0024 to 0.0061 in.)
Exhaust	0.06 to 0.155 mm (0.0024 to 0.0061 in.)

Maximum Thrust Clearance:



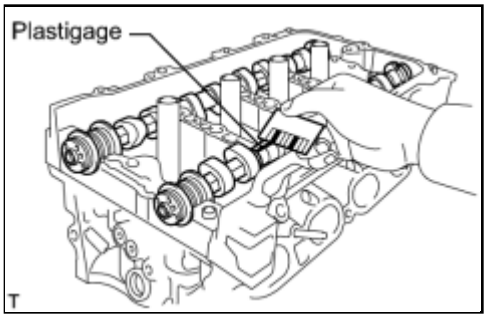
ITEM	SPECIFIED CONDITION
Intake	0.17 mm (0.0067 in.)
Exhaust	0.17 mm (0.0067 in.)

If the thrust clearance is greater than the maximum, replace the camshaft housing. If the thrust surface is damaged, replace the camshaft.

5. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the camshaft housing.



(c) Lay a strip of Plastigage across each of the camshaft journals.

(d) Install the bearing caps INFO .

NOTICE:

Do not turn the camshaft.

(e) Remove the bearing caps INFO .

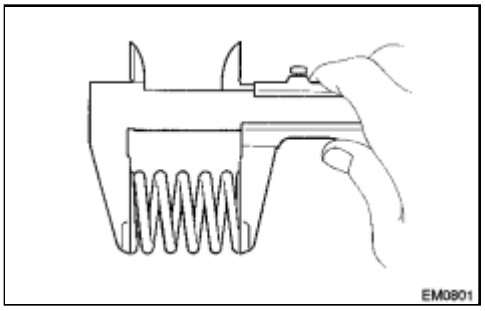
(f) Measure the Plastigage at its widest point.

Standard Oil Clearance:

ITEM	SPECIFIED CONDITION
Camshaft No. 1 journal	0.030 to 0.063 mm (0.0012 to 0.0025 in.)
Camshaft other journals	0.035 to 0.072 mm (0.0014 to 0.0028 in.)

Maximum Oil Clearance:

ITEM	SPECIFIED CONDITION
Camshaft No. 1 journal	0.085 mm (0.0033 in.)
Camshaft other journals	0.09 mm (0.0035 in.)

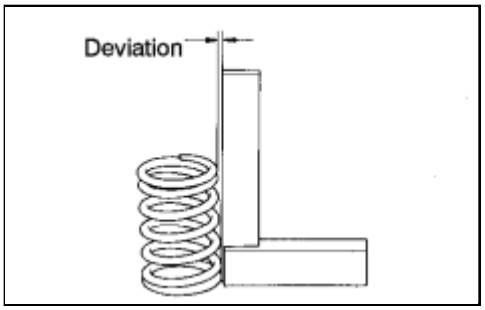


NOTICE:

Completely remove the Plastigage after the inspection.

If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the cylinder head.

6. INSPECT COMPRESSION SPRING

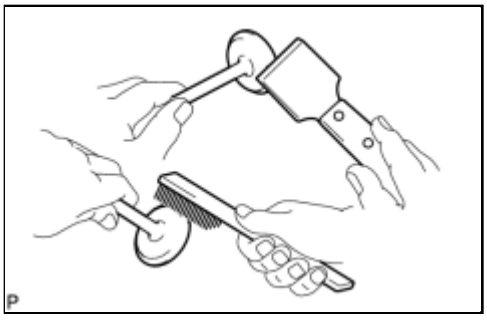


(a) Using a vernier caliper, measure the free length of the

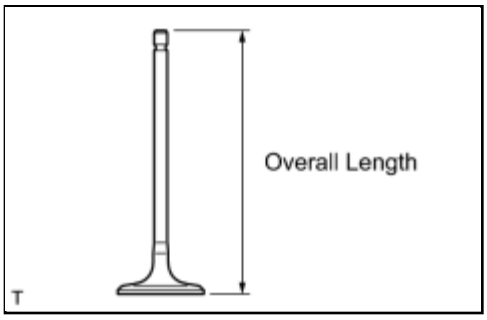
valve spring.

Free length:
53.36 mm (2.1008 in.)

If the free length is not as specified, replace the valve spring.



(b) Using a steel square, measure the deviation of the valve spring.

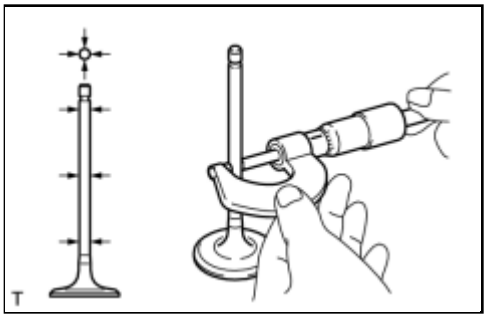


Maximum deviation:
1.0 mm (0.0394 in.)

If the deviation is greater than the maximum, replace the valve spring.

7. INSPECT INTAKE VALVE

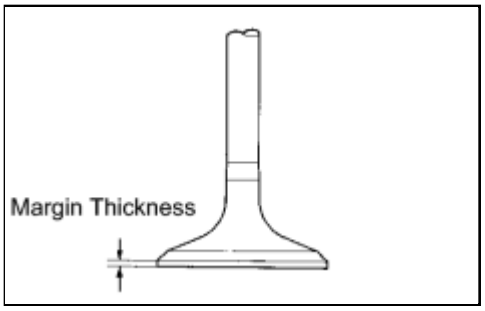
(a) Using a gasket scraper and wire brush, scrape off any carbon on the valve head.



(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:
109.34 mm (4.3047 in.)
Minimum overall length:
108.84 mm (4.2850 in.)

If the overall length is less than the minimum, replace the valve.

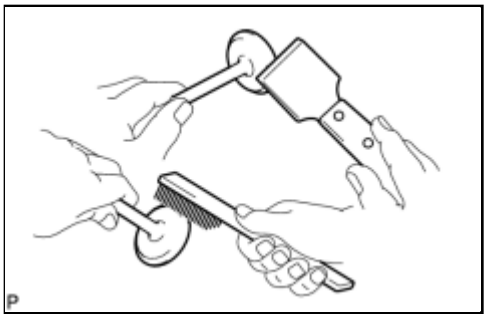


(c) Using a micrometer, measure the diameter of the valve

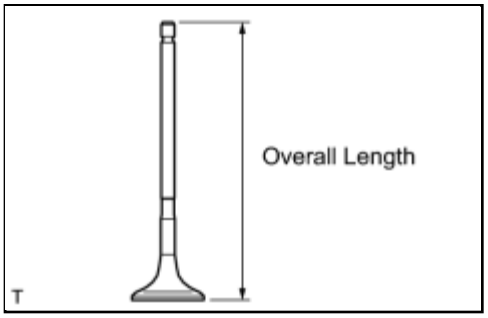
stem.

Valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)

If the valve stem diameter is not as specified, check the oil clearance.



(d) Using a vernier caliper, measure the valve head margin thickness.

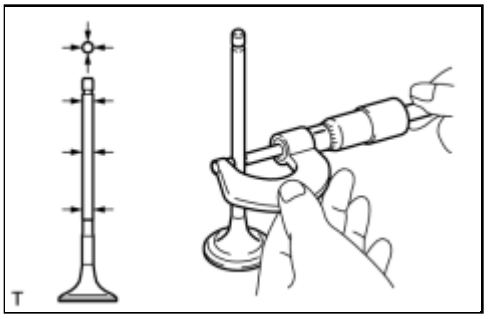


Standard margin thickness:
1.0 mm (0.0394 in.)
Minimum margin thickness:
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

8. INSPECT EXHAUST VALVE

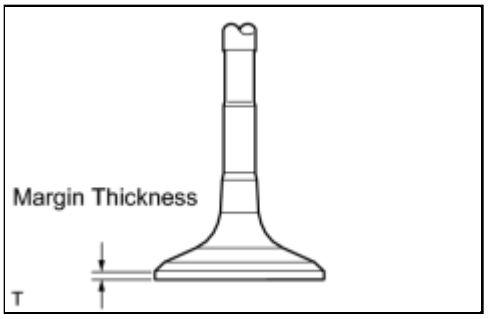
(a) Using a gasket scraper and wire brush, scrape off any carbon on the valve head.



(b) Using a vernier caliper, measure the overall length of the valve.

Standard overall length:
108.25 mm (4.2618 in.)
Minimum overall length:
107.75 mm (4.2421 in.)

If the overall length is less than the minimum, replace the valve.

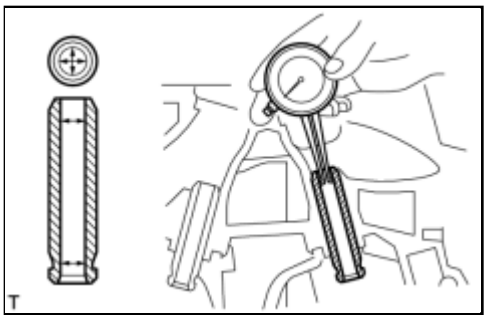


(c) Using a micrometer, measure the diameter of the valve

stem.

Valve stem diameter:
5.465 to 5.480 mm (0.2152 to 0.2157 in.)

If the valve stem diameter is not as specified, check the oil clearance.



(d) Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.01 mm (0.0398 in.)
Minimum margin thickness:
0.5 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the valve.

9. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

(a) Using a caliper gauge, measure the inside diameter of the guide bush.

Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.

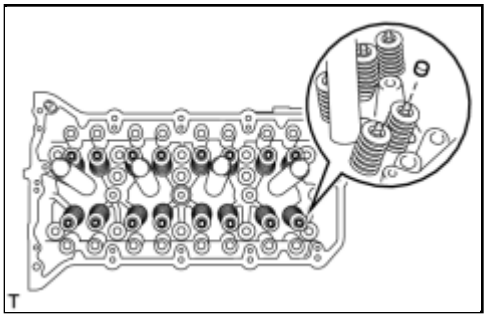
Standard Oil Clearance:

ITEM	SPECIFIED CONDITION
Intake	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust	0.030 to 0.065 mm (0.0012 to 0.0026 in.)

Maximum Oil Clearance:

ITEM	SPECIFIED CONDITION

ITEM	SPECIFIED CONDITION
Intake	0.080 mm (0.0031 in.)
Exhaust	0.085 mm (0.0033 in.)



If the clearance is greater than the maximum, replace the valve and guide bush.

TOYOTA

Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REPLACE INTAKE VALVE GUIDE BUSH

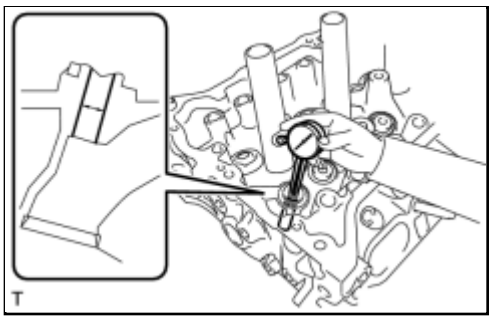
(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.

(c) Using SST and a hammer, tap out the guide bush.

SST: 09201-10000

09201-01050



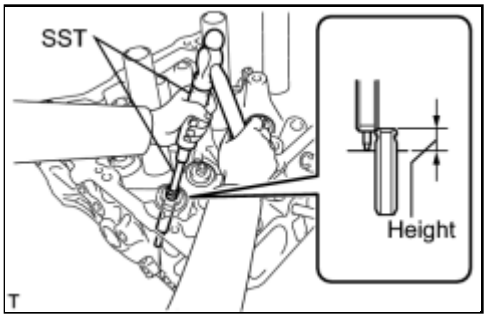
SST: 09950-70010

09951-07100

(d) Using a caliper gauge, measure the bush bore diameter of the cylinder head.

Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)

Select a New Guide Bush (STD or O/S 0.05):



BUSH SIZE	BUSH BORE DIAMETER
STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

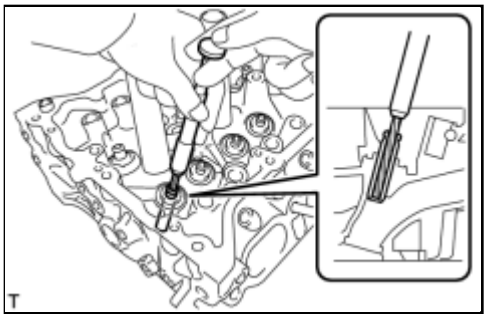
If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install an O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(e) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(f) Place the cylinder head on wooden blocks.

(g) Using SST and a hammer, tap a new guide bush into the specified protrusion height.

SST: 09201-10000



09201-01050

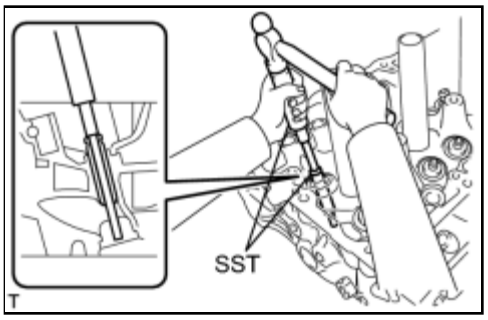
SST: 09950-70010

09951-07100

Protrusion height:

9.9 to 10.3 mm (0.3898 to 0.4055 in.)

(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard clearance between the guide bush and valve stem.



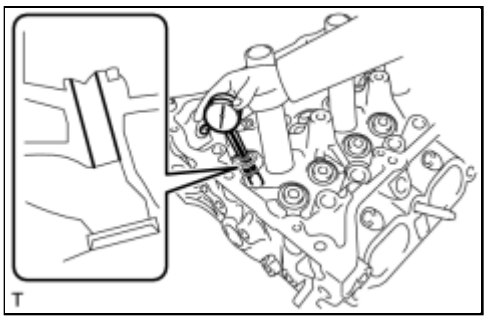
Standard oil clearance:

0.025 to 0.060 mm (0.0010 to 0.0024 in.)

2. REPLACE EXHAUST VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



(c) Using SST and a hammer, tap out the guide bush.

SST: 09201-10000

09201-01050

09951-07100

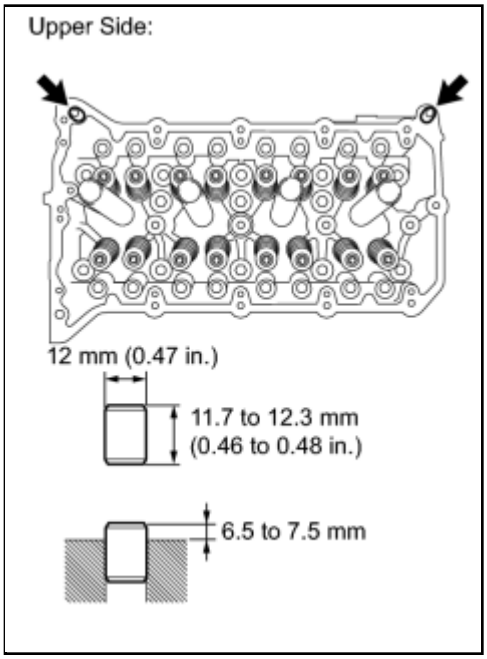
Protrusion height:
11.15 to 11.55 mm (0.4390 to 0.4547 in.)

(h) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard clearance between the guide bush and valve stem.

Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)

3. REPLACE RING PIN



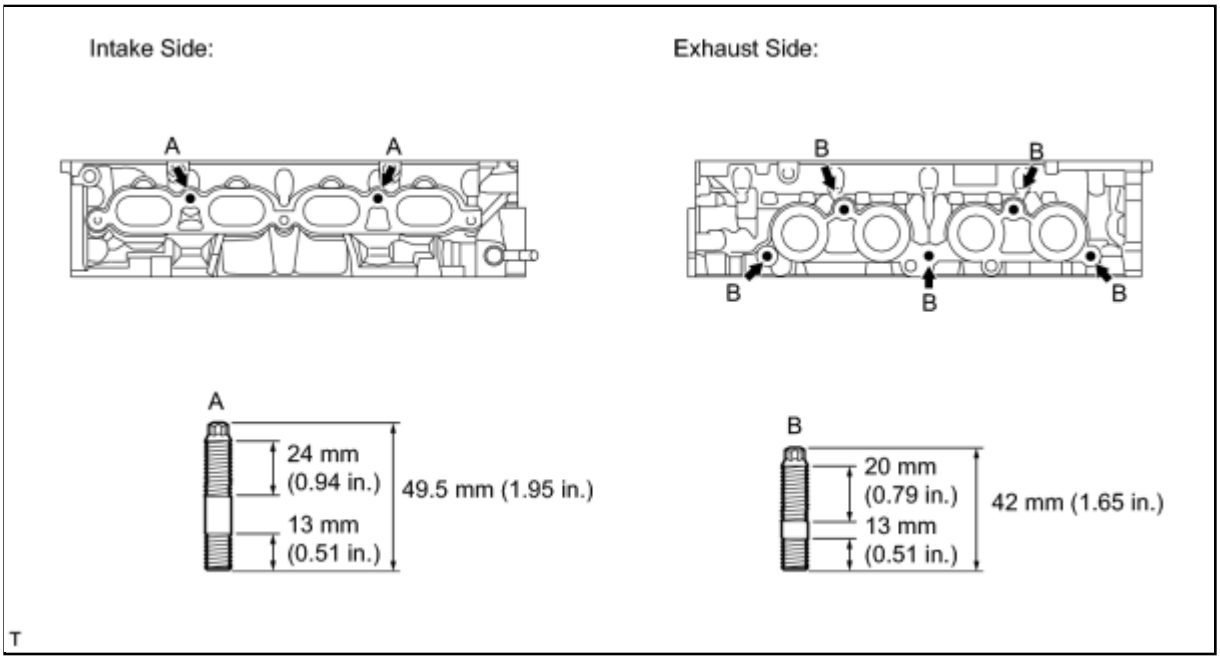
NOTICE:

It is not necessary to remove the ring pins unless they are being replaced.

(a) Remove the ring pins.

(b) Using a plastic-faced hammer, tap in new ring pins to the specified protrusion height.

Protrusion height:
6.5 to 7.5 mm (0.26 to 0.30 in.)



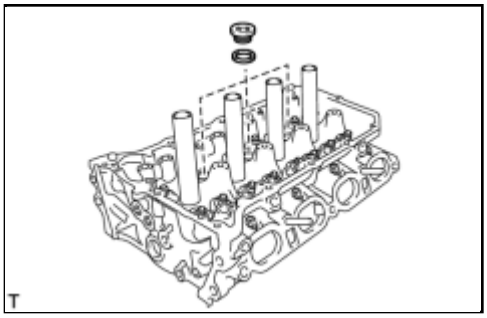
4. REPLACE STUD BOLT

NOTICE:

If any of the stud bolts is deformed or the threads are damaged, replace it.

(a) Remove the stud bolts.

(b) Using an E8 "TORX" socket, install the stud bolts.

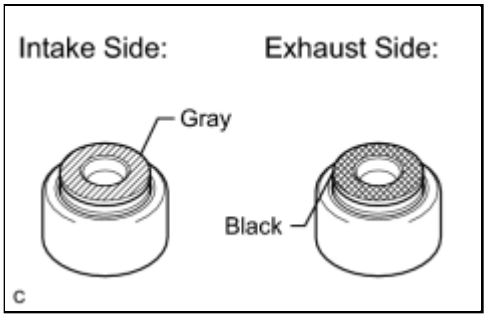


Torque: 9.5 N·m (97 kgf·cm, 84in·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA402PX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL NO. 2 STRAIGHT SCREW PLUG



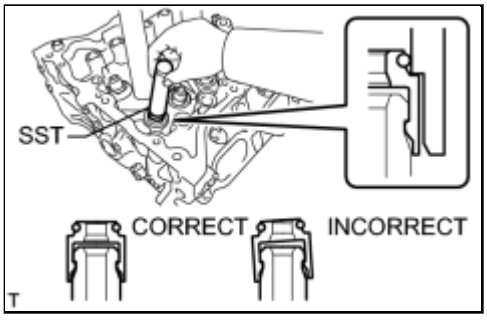
(a) Using a 10 mm straight hexagon wrench, install 3 new gaskets and the 3 straight screw plugs.

Torque: 44 N·m (449 kgf·cm, 33ft·lbf)

2. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats to the cylinder head.

3. INSTALL VALVE STEM OIL SEAL



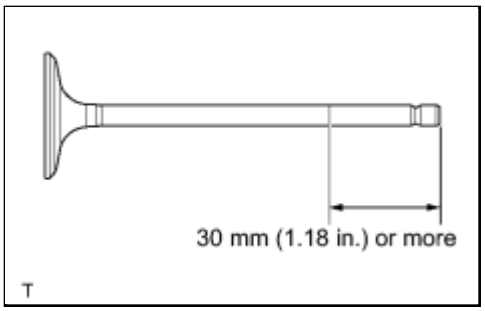
(a) Apply a light coat of engine oil to new oil seals.

NOTICE:

Pay close attention when installing the intake and exhaust oil seals. Installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side may cause installation problems later.

HINT:

The intake valve oil seal is gray and the exhaust valve oil seal is black.



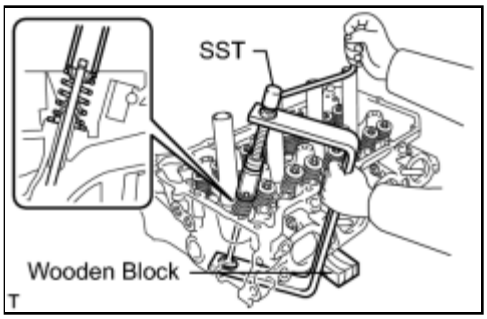
(b) Using SST, push in the oil seals.

SST: 09201-41020

NOTICE:

Failure to use SST may cause the oil seal to be damaged or improperly seated.

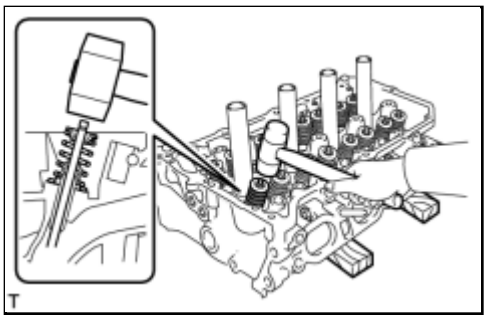
4. INSTALL INTAKE VALVE



(a) Sufficiently apply engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

NOTICE:

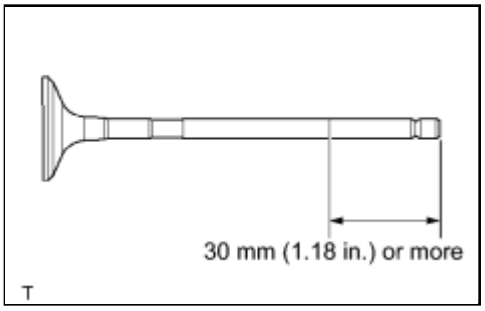


Install the same parts in the same combination to the original locations.

(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.

SST: 09202-70020

09202-00010

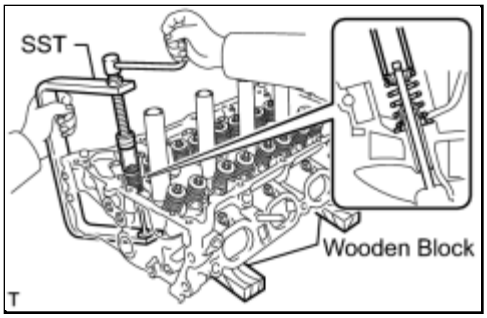


(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

- Be careful not to damage the valve stem tip.
- Be careful not to damage the retainer.

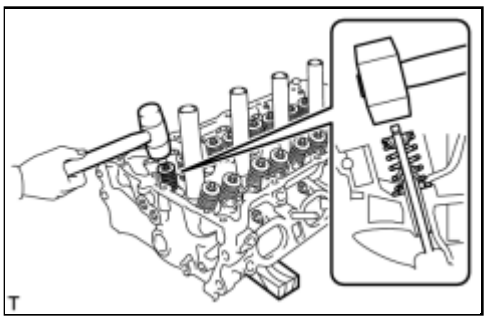
5. INSTALL EXHAUST VALVE



(a) Sufficiently apply engine oil to the tip area of the exhaust valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

NOTICE:



Install the same parts in the same combination to the original locations.

(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.

SST: 09202-70020

09202-00010

(d) Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

- Be careful not to damage the valve stem tip.
- Be careful not to damage the retainer.

6. INSTALL VALVE STEM CAP

(a) Apply a light coat of engine oil to the valve stem caps.

(b) Install the valve stem caps to the cylinder head.

27. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

28. REMOVE ENGINE OIL LEVEL DIPSTICK

29. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

(a) Remove the bolt and engine oil level dipstick guide.

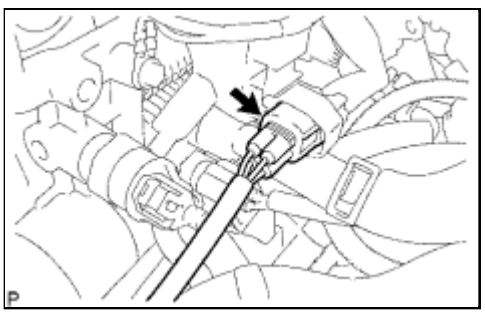
(b) Remove the O-ring from the engine oil level dipstick guide.

30. DISCONNECT FUEL MAIN TUBE INFO

31. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

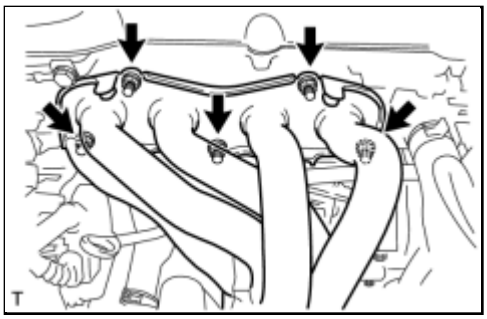
32. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY INFO

33. REMOVE INTAKE MANIFOLD INFO



34. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR INFO

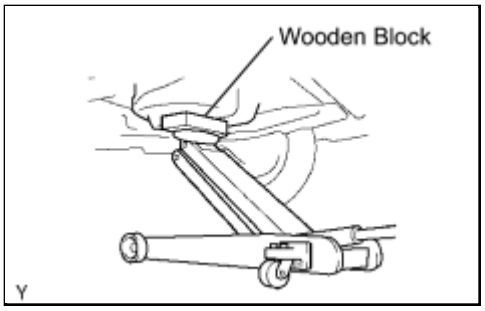
35. REMOVE MANIFOLD STAY INFO



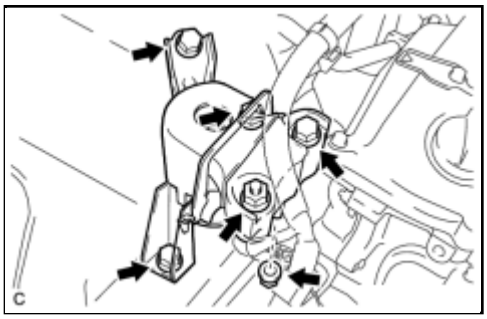
36. REMOVE NO. 2 MANIFOLD STAY INFO

37. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

38. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY



(a) Disconnect the air-fuel ratio sensor connector.

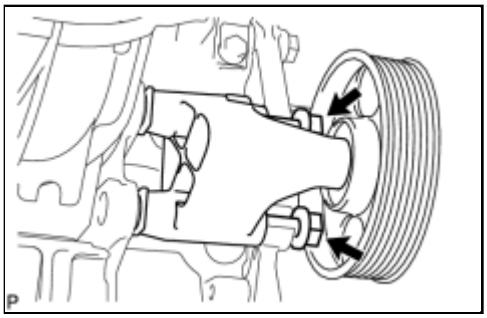


(b) Remove the 5 nuts, exhaust manifold converter sub-assembly and gasket.

39. REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH

(a) Place a wooden block between a floor jack and the engine, then support the engine using the floor jack.

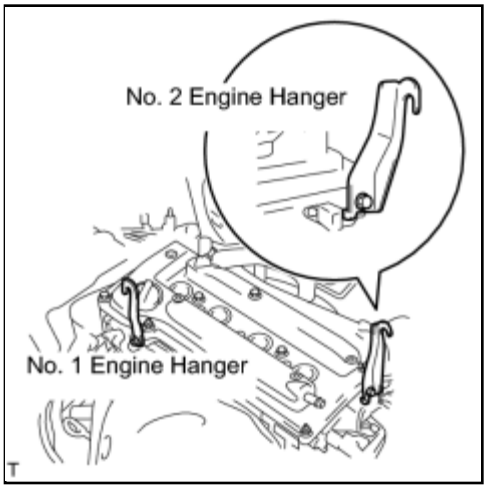
(b) Remove the 4 bolts and 2 nuts, then remove the engine mounting insulator sub-assembly RH.



NOTICE:

Do not apply excessive force to the return tube when removing the engine mounting insulator sub-assembly RH.

HINT:

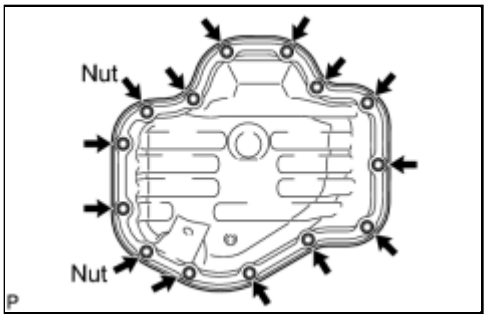


Keep clearance by lowering the engine using the floor jack when removing the front engine mounting insulator.

40. REMOVE IDLER PULLEY SUB-ASSEMBLY

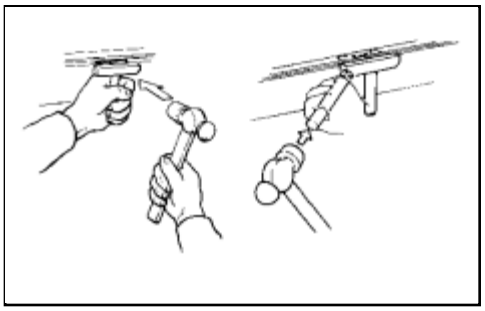
(a) Loosen the 2 bolts and remove the idler pulley sub-assembly with the 2 bolts.

41. REMOVE OIL PAN SUB-ASSEMBLY



(a) Install the No. 1 and No. 2 engine hangers with new bolts.

Torque: 38 N·m (387 kgf·cm, 28ft·lbf)

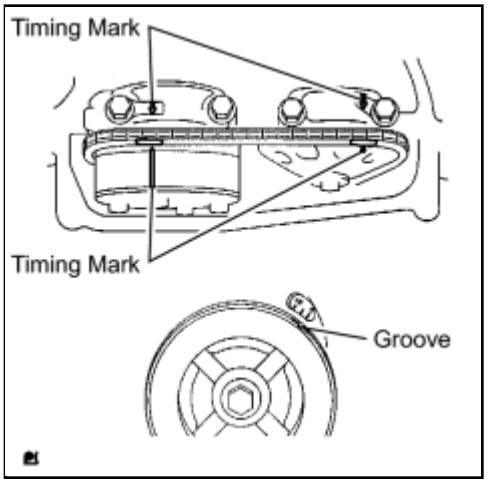


Part No.

ITEM	PART NO.
No. 1 engine hanger	12281-28010
No. 2 engine hanger	12282-28010 or 12282-AB010
Bolt	90080-10177

(b) Attach the sling device to the engine hangers and chain block.

(c) Remove the 12 bolts and 2 nuts.



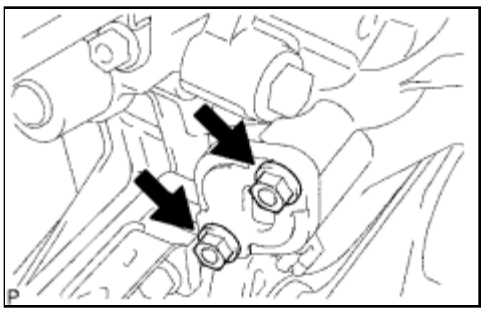
(d) Insert the blade of oil pan seal cutter between the crankcase, chain cover and oil pan, then cut through the applied sealer and remove the oil pan.

NOTICE:

Be careful not to damage the contact surface of the crankcase, chain cover or oil pan.

42. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley until the groove and the timing mark "0" on the timing chain cover are aligned.



(b) Check that each timing mark on the camshaft timing gear and sprocket is aligned with the timing marks located on the No. 1 and No. 2 bearing caps as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°) to align the timing marks as above.

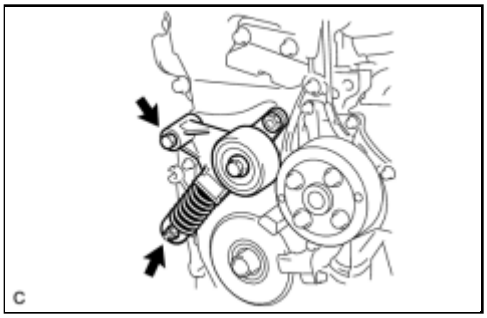
43. REMOVE CRANKSHAFT PULLEY INFO

44. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Remove the 2 nuts, No. 1 chain tensioner assembly and gasket.

NOTICE:

Do not turn the crankshaft without the No. 1 chain tensioner assembly.

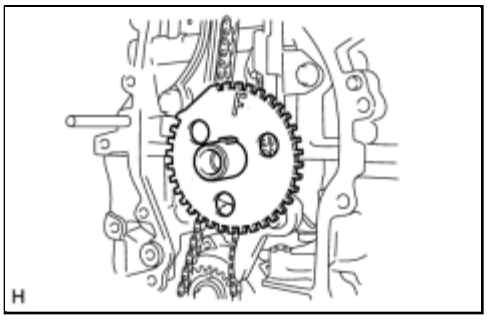


45. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

(a) Lift the engine upward.

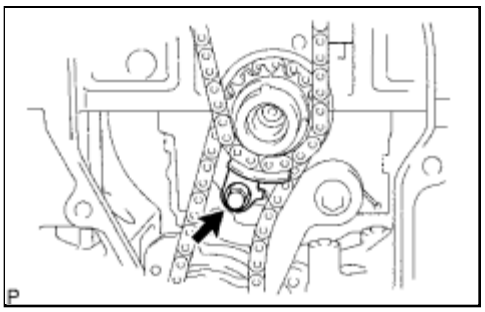
NOTICE:

Do not lift the engine more than necessary.



(b) Remove the bolt, nut and V-ribbed belt tensioner assembly.

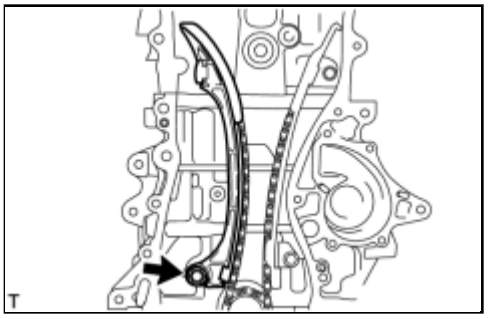
46. REMOVE CRANKSHAFT POSITION SENSOR INFO



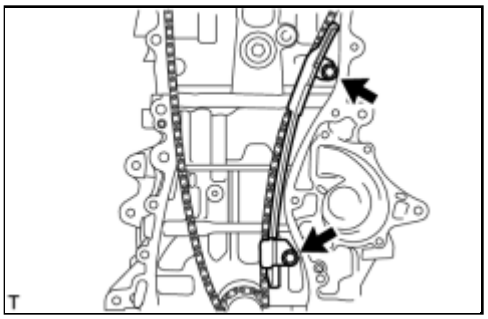
47. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY INFO

48. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

(a) Remove the No. 1 crankshaft position sensor plate.



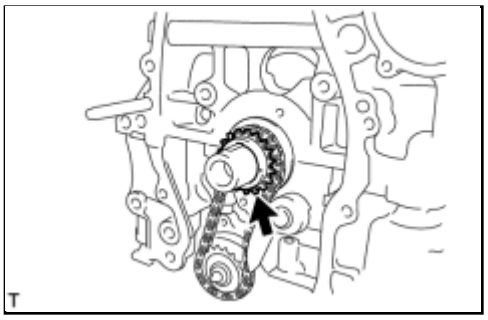
49. REMOVE TIMING CHAIN GUIDE



(a) Remove the bolt and timing chain guide.

50. REMOVE CHAIN TENSIONER SLIPPER

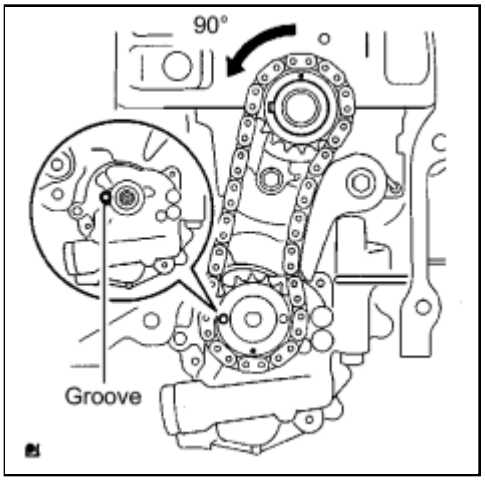
(a) Remove the bolt and chain tensioner slipper.



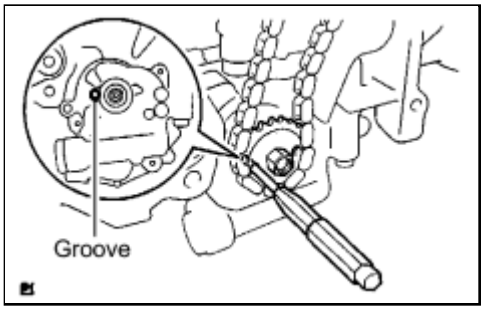
51. REMOVE NO. 1 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and No. 1 chain vibration damper.

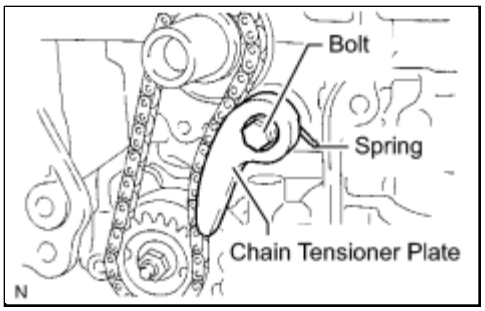
52. REMOVE CHAIN SUB-ASSEMBLY



53. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET



(a) Remove the crankshaft timing gear or sprocket from the crankshaft.



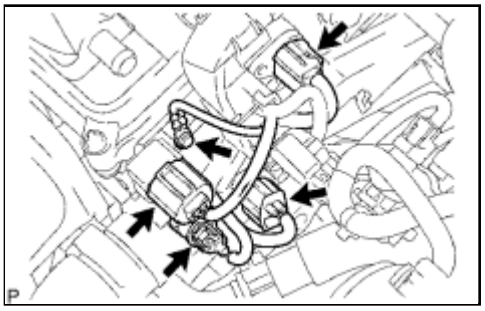
54. REMOVE NO. 2 CHAIN SUB-ASSEMBLY

(a) Turn the crankshaft 90° counterclockwise to align the adjusting hole on the oil pump drive shaft sprocket with the groove on the oil pump.

(b) Insert a 4 mm diameter bar into the adjusting hole of the oil pump drive shaft sprocket to lock the gear in position, and then remove the nut.

(c) Remove the bolt, chain tensioner plate and spring.

(d) Remove the oil pump drive sprocket, oil pump drive shaft sprocket and No. 2 chain.



55. DISCONNECT NO. 1 RADIATOR HOSE INFO

56. DISCONNECT OUTLET HEATER WATER HOSE INFO

57. DISCONNECT INLET HEATER WATER HOSE INFO

58. DISCONNECT ENGINE WIRE

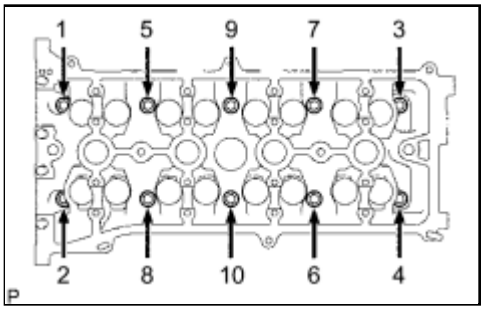
(a) Disconnect the radio setting condenser connector.

(b) Disconnect the engine oil pressure switch connector.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Disconnect the camshaft position sensor connector.

(e) Remove the bolt and ground cable.

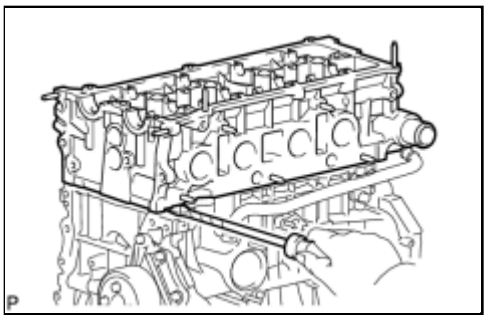


59. REMOVE NO. 2 CAMSHAFT INFO

60. REMOVE CAMSHAFT INFO

61. REMOVE NO. 1 CAMSHAFT BEARING INFO

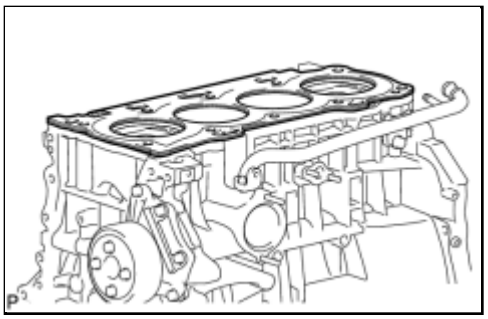
62. REMOVE NO. 2 CAMSHAFT BEARING INFO



63. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) In several steps, uniformly loosen and remove the 10 cylinder head bolts and 10 plate washers with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.

NOTICE:

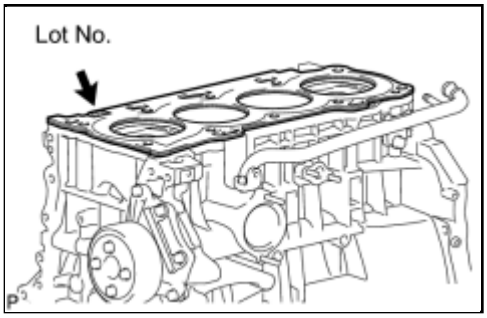


Head warpage or cracking could result from removing the bolts in the wrong order.

(b) Using a screwdriver with its tip wrapped with tape, pry between the cylinder head and cylinder block, and remove the cylinder head.

NOTICE:

Be careful not to damage the contact surfaces between the cylinder head and cylinder block.



64. REMOVE CYLINDER HEAD GASKET

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001AN500XX
Title: 2AZ-FE ENGINE MECHANICAL: CYLINDER HEAD GASKET: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

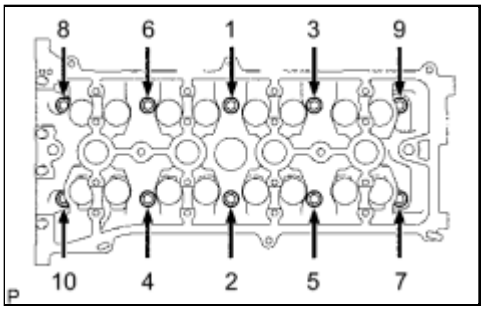
(a) Place a new cylinder head gasket on the cylinder block surface with the Lot No. stamp facing upward.

NOTICE:

- Remove any oil from the contact surface.
- Be careful of the installation direction.

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

(a) Place the cylinder head on the cylinder head gasket.



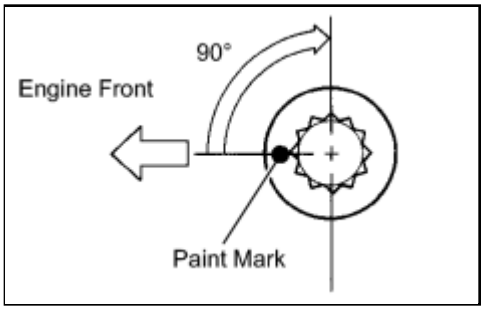
NOTICE:

Place the cylinder head gently in order to avoid damaging the cylinder head gasket.

(b) Install the cylinder head bolts.

NOTICE:

The cylinder head bolts are tightened in 2 successive steps.



(1) Apply a light coat of engine oil to the threads and under the heads of the cylinder head set bolts.

(2) Using several steps, uniformly install and tighten the 10 cylinder head set bolts and plate washers with a 10 mm bi-hexagon wrench in the order shown in the illustration.

Torque: 70 N·m (714 kgf·cm, 52ft·lbf)

(c) Mark the front of the cylinder head bolts with paint.

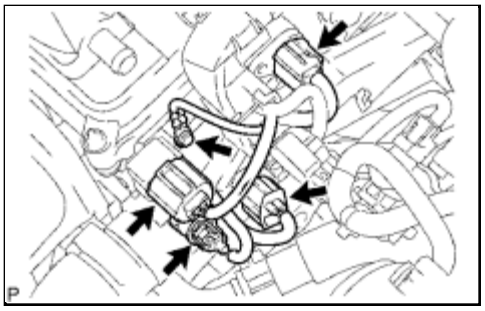
(d) Further tighten the cylinder head bolts 90° as shown in the illustration.

(e) Check that the paint mark is now at a 90° angle to the front.

3. INSTALL NO. 1 CAMSHAFT BEARING INFO

4. INSTALL NO. 2 CAMSHAFT BEARING INFO

5. INSTALL CAMSHAFT INFO



6. INSTALL NO. 2 CAMSHAFT INFO

7. CONNECT INLET HEATER WATER HOSE INFO

8. CONNECT OUTLET HEATER WATER HOSE INFO

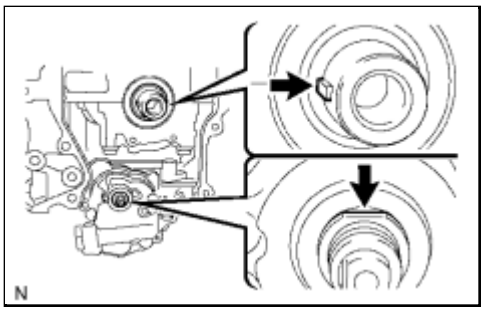
9. CONNECT NO. 1 RADIATOR HOSE INFO

10. CONNECT ENGINE WIRE

(a) Connect the ground cable with the bolt.

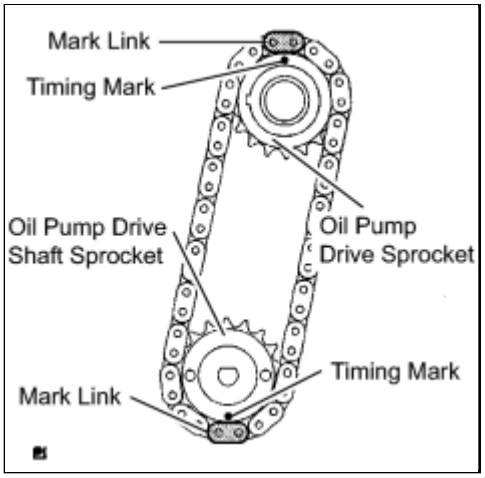
Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(b) Connect the camshaft position sensor connector.



(c) Connect the engine coolant temperature sensor connector.

(d) Connect the engine oil pressure switch connector.

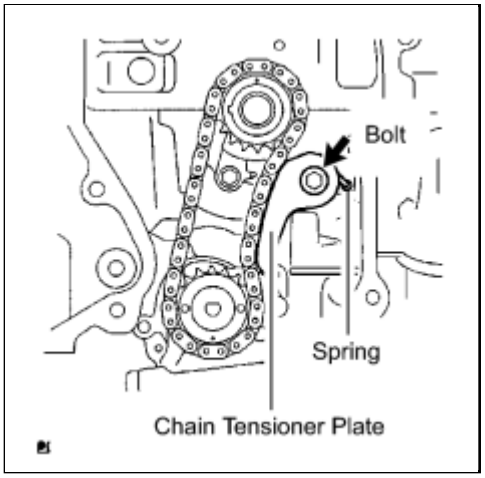


(e) Connect the radio setting condenser connector.

(f) Connect the heater water inlet hose.

11. INSTALL NO. 2 CHAIN SUB-ASSEMBLY

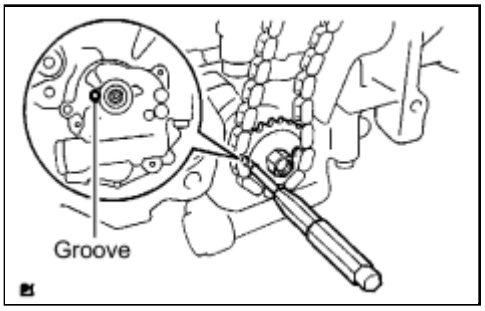
(a) Set the crankshaft key in the left horizontal position.



(b) Turn the cutout of the drive shaft so that it faces upward.

(c) Align the yellow mark links with the timing marks of each gear as shown in the illustration.

(d) Install the sprockets onto the crankshaft and oil pump shaft with the chain placed on the gears.

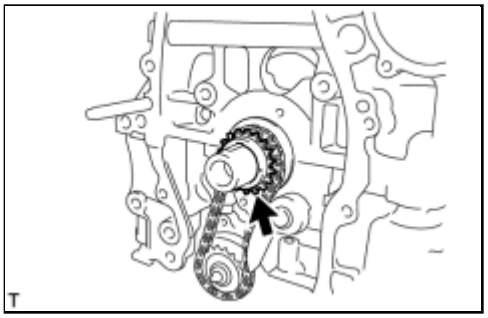


(e) Temporarily tighten the oil pump drive shaft sprocket with the nut.

(f) Insert the damper spring into the adjusting hole, and then install the chain tensioner plate with the bolt.

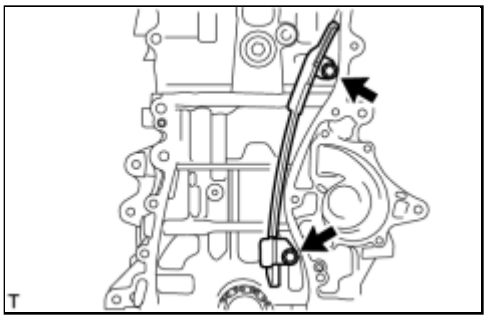
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(g) Align the adjusting hole on the oil pump drive shaft



sprocket with the groove on the oil pump.

(h) Insert a 4 mm diameter bar into the adjusting hole on the oil pump drive shaft gear to lock the gear in position, and then tighten the nut.

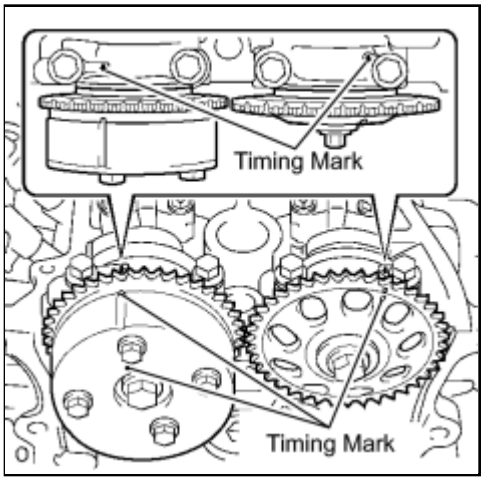


Torque: 30 N·m (301 kgf·cm, 22ft·lbf)

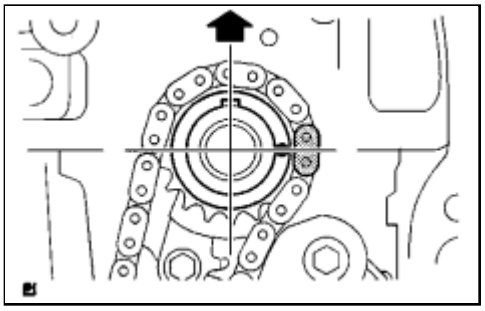
12. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Install the crankshaft timing gear or sprocket to the crankshaft.

13. INSTALL NO. 1 CHAIN VIBRATION DAMPER

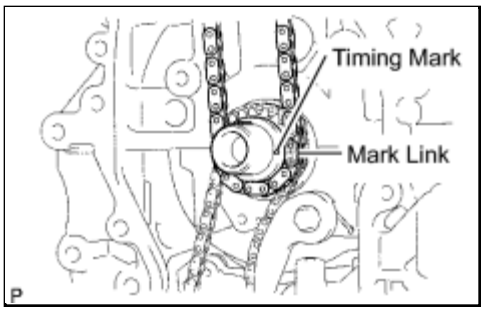


(a) Install the No. 1 chain vibration damper with the 2 bolts.



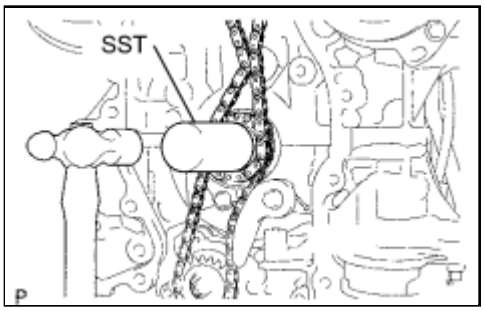
Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

14. INSTALL CHAIN SUB-ASSEMBLY

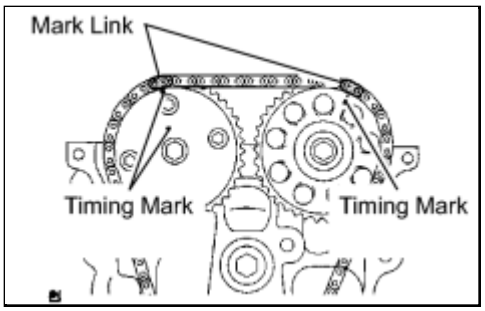


(a) Set the No. 1 cylinder to TDC/compression.

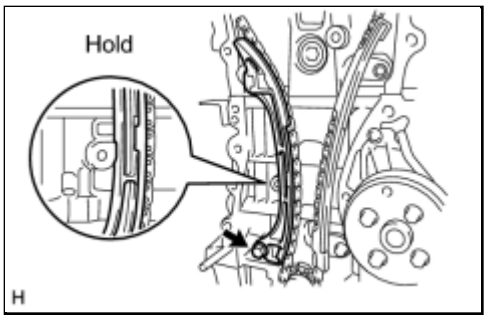
(1) Turn the camshafts with a wrench (using the hexagonal lobe) to align the timing marks on the camshaft timing gear with the timing marks located on the No. 1 and No. 2 bearing caps as shown in the illustration.



(2) Using the crankshaft pulley bolt, turn the crankshaft to position the key on the crankshaft upward.



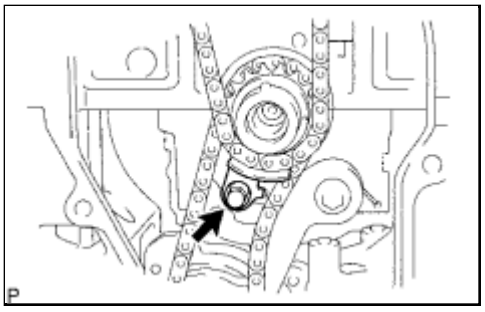
(b) Install the chain onto the crankshaft timing sprocket with the gold or orange mark link aligned with the timing mark on the crankshaft.



(c) Using SST and a hammer, tap in the crankshaft timing sprocket.

SST: 09309-37010

(d) Align the gold or yellow links with the timing marks located on the camshaft timing gear and sprocket, then install the chain.

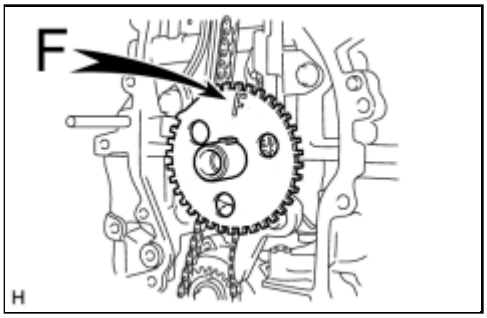


15. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the chain tensioner slipper with the bolt.

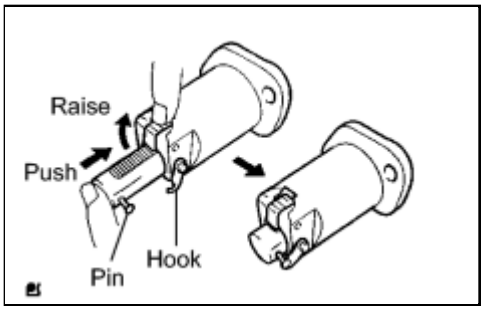
Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

16. INSTALL TIMING CHAIN GUIDE



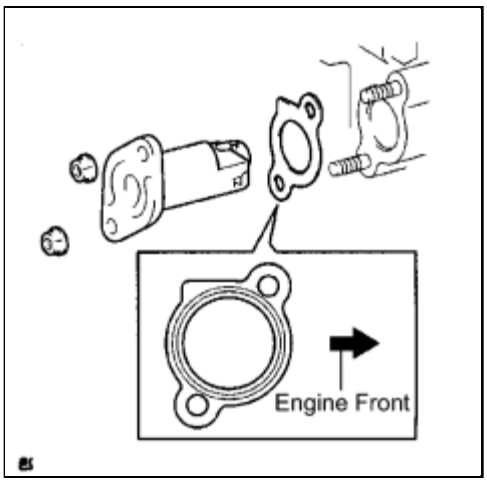
(a) Install the timing chain guide with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)



17. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

(a) Install the sensor plate with the "F" mark facing forward.

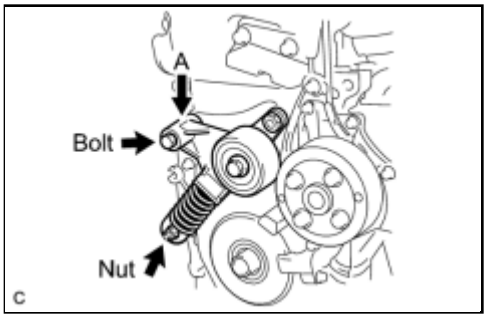


18. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY INFO

19. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

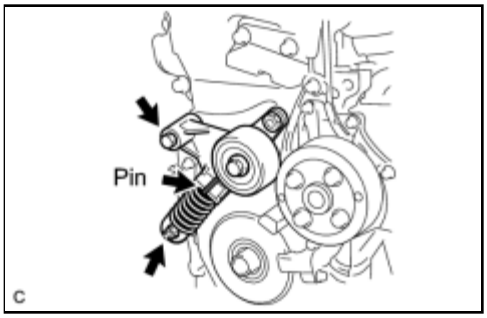
(a) Release the ratchet pawl, then fully push in the plunger and set the hook to the pin so that the plunger is in the position shown in the illustration.

(b) Install a new gasket and the chain tensioner with the 2 nuts.



Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

NOTICE:

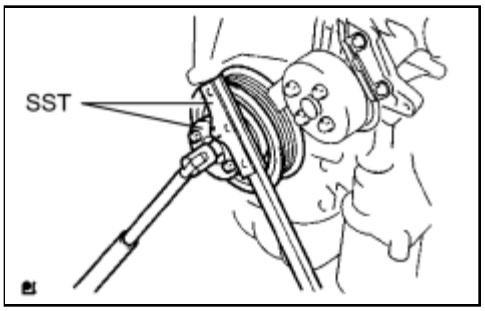


When installing the chain tensioner, set the hook again if the hook releases the plunger.

20. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Temporarily install the V-ribbed belt tensioner assembly with the nut.

(b) Slightly push down on the V-ribbed belt tensioner assembly at part (A) to align the holes of the engine and tensioner as shown in the illustration, and temporarily install the bolt .



(c) Tighten the bolt and nut to install the V-ribbed belt tensioner.

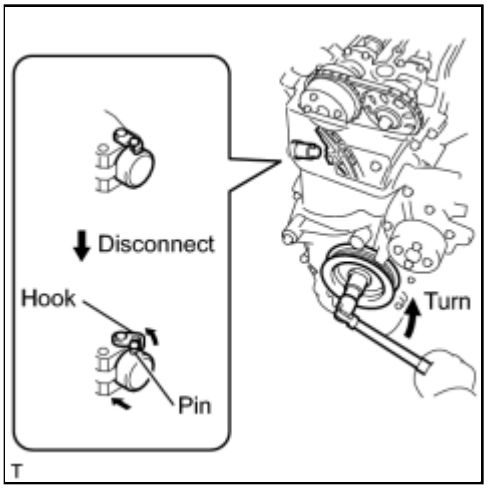
Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

NOTICE:

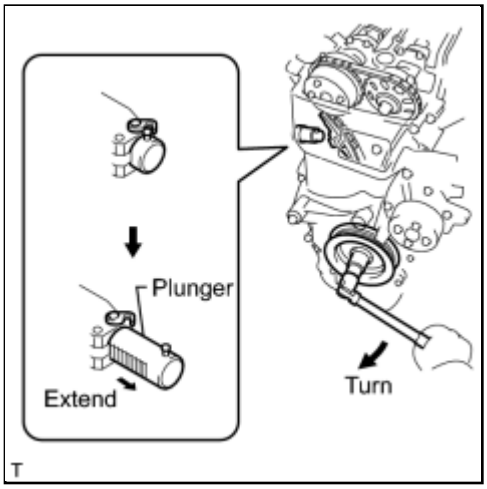
- When replacing the V-ribbed belt tensioner with a new one, do not pull out the pin.
- The pin will be removed in a later step.

21. INSTALL CRANKSHAFT PULLEY

(a) Using SST, secure the pulley in place and tighten the bolt.



SST: 09213-54015



91651-60855

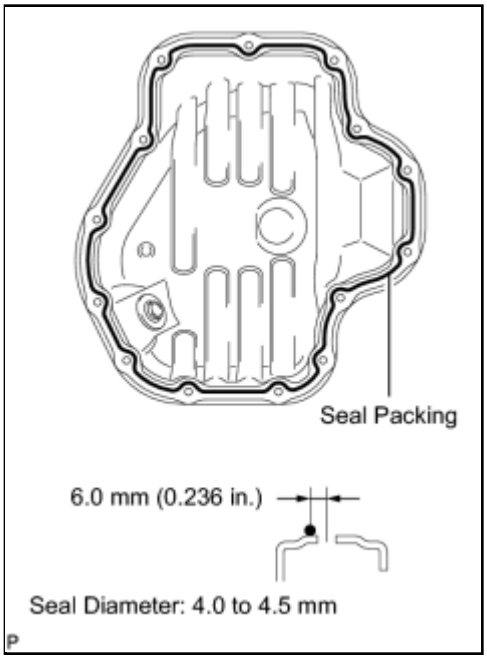
SST: 09330-00021

Torque: 180 N·m (1835 kgf·cm, 133ft·lbf)

(b) Turn the crankshaft counterclockwise, then disconnect the hook from the pin.

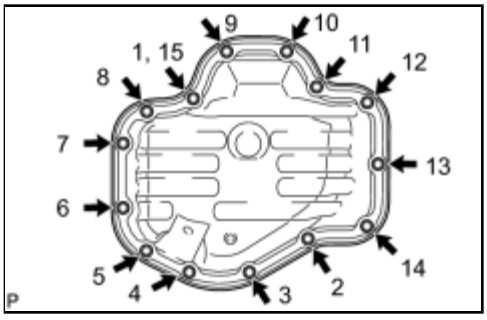
(c) Turn the crankshaft clockwise, then check that the plunger is extended.

22. INSTALL OIL PAN SUB-ASSEMBLY



(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.

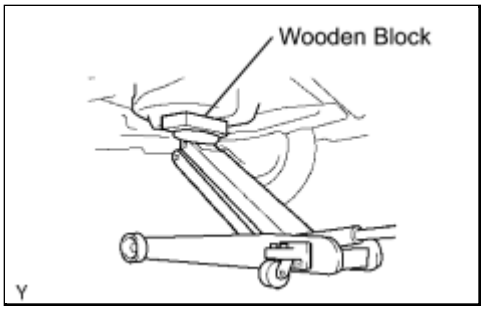
(b) Apply a continuous bead of seal packing (diameter 4.0 to 4.5 mm (0.158 to 0.177 in.)) as shown in the illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

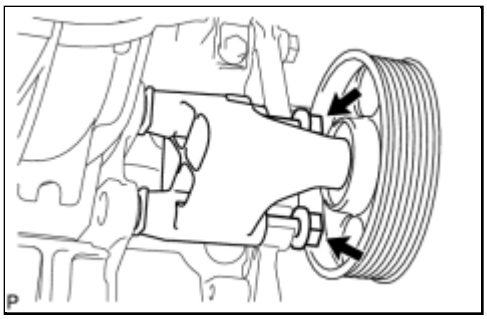
- Remove any oil from the contact surfaces.
- Install the oil pan within 3 minutes of applying seal packing.
- Do not add engine oil for at least 2 hours after installing the oil pan.



(c) Install the oil pan onto the cylinder block.

(d) Uniformly tighten the 12 bolts and 2 nuts in the sequence shown in the illustration.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

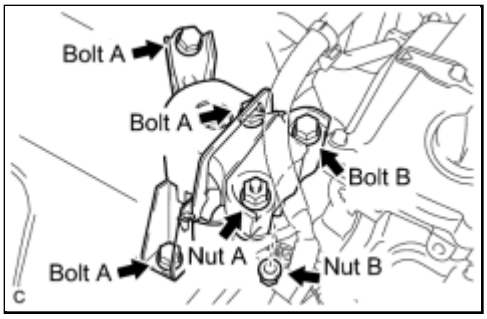


(e) Place a wooden block between a floor jack and the engine, then support the engine using the floor jack.

(f) Remove the chain block and sling device.

(g) Remove the 2 bolts and engine hangers.

23. INSTALL CRANKSHAFT POSITION SENSOR INFO

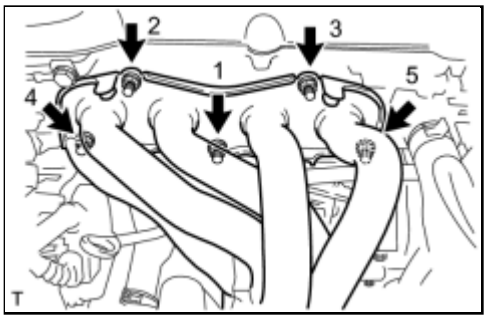


24. INSTALL IDLER PULLEY SUB-ASSEMBLY

(a) Install the idler pulley sub-assembly with the 2 bolts.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

25. INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH

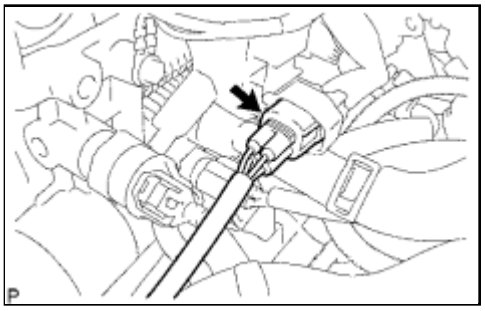


(a) Install the engine mounting insulator sub-assembly RH with the 4 bolts and 2 nuts.

Bolt A - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)
Bolt B - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)
Nut A - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)
Nut B - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

26. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

(a) Install a new gasket onto the cylinder head sub-assembly.



(b) Temporarily tighten the exhaust manifold converter sub-assembly with the 5 nuts.

(c) Tighten the 5 nuts in the sequence shown in the illustration.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

(d) Connect the air fuel ratio sensor connector.

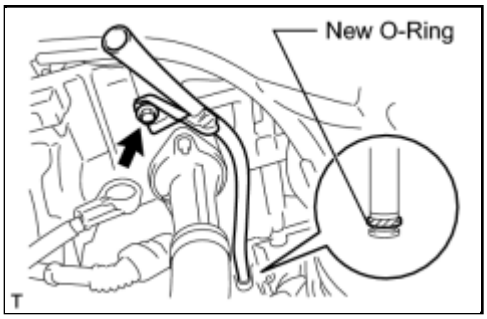
27. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

28. INSTALL NO. 2 MANIFOLD STAY INFO

29. INSTALL MANIFOLD STAY INFO

30. INSTALL NO. 1 INTAKE MANIFOLD INSULATOR INFO

31. INSTALL INTAKE MANIFOLD INFO



32. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY INFO

33. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

34. CONNECT FUEL MAIN TUBE INFO

35. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

(a) Apply a light coat of engine oil to a new O-ring and install it onto the engine oil level dipstick guide.

(b) Install the engine oil level dipstick guide with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

36. INSTALL ENGINE OIL LEVEL DIPSTICK

37. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY INFO

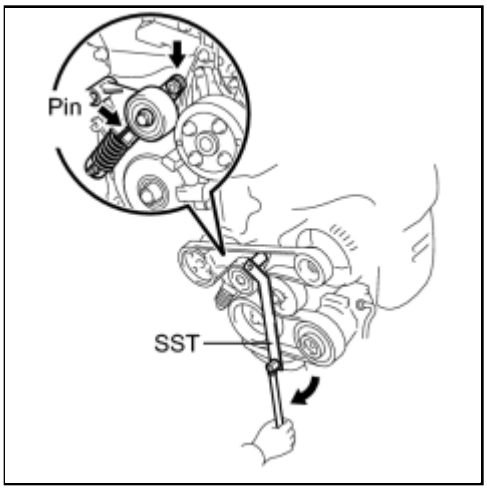
38. INSTALL SPARK PLUG INFO

39. INSTALL IGNITION COIL ASSEMBLY INFO

40. INSTALL THROTTLE BODY ASSEMBLY INFO

41. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

42. INSTALL RADIATOR RESERVE TANK ASSEMBLY INFO



43. INSTALL GENERATOR ASSEMBLY INFO

44. INSTALL V-RIBBED BELT

(a) When reusing the V-ribbed belt tensioner:

(1) Install the V-ribbed belt INFO .

(b) When replacing the V-ribbed belt tensioner with a new one:

(1) Using SST, slowly turn the V-ribbed belt tensioner clockwise.

SST: 09216-42010

09216-04010

(2) Pull out the pin from the V-ribbed belt tensioner being compressed in a clockwise direction.

(3) Slowly return the V-ribbed belt tensioner.

NOTICE:

- Make sure that SST and other tools are set to the tensioner securely.
- When compressing the V-ribbed belt tensioner, slowly turn the tensioner.

(4) Install the V-ribbed belt INFO .

45. INSTALL FRONT EXHAUST PIPE ASSEMBLY INFO

46. INSTALL CENTER EXHAUST PIPE ASSEMBLY INFO

47. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

48. ADD ENGINE OIL INFO

49. ADD ENGINE COOLANT INFO

50. INSPECT FOR FUEL LEAK INFO

51. INSPECT FOR COOLANT LEAK INFO

52. INSPECT FOR OIL LEAK

53. INSPECT FOR EXHAUST GAS LEAK

54. INSPECT IGNITION TIMING INFO

55. INSPECT ENGINE IDLING SPEED INFO

56. INSPECT COMPRESSION INFO

57. INSPECT CO/HC INFO

58. INSTALL SUSPENSION TOWER DAMPER ASSEMBLY (w/ Front Strut Bar) INFO

59. INSTALL OUTER COWL TOP PANEL INFO

60. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

61. INSTALL COWL TOP VENTILATOR LOUVER LH INFO

62. INSTALL CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

63. INSTALL HOOD TO COWL TOP SEAL INFO

64. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

65. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

66. INSTALL FRONT WIPER ARM HEAD CAP INFO

67. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

68. INSTALL ENGINE UNDER COVER LH

69. INSTALL ENGINE UNDER COVER RH

70. INSTALL FRONT WHEEL RH

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

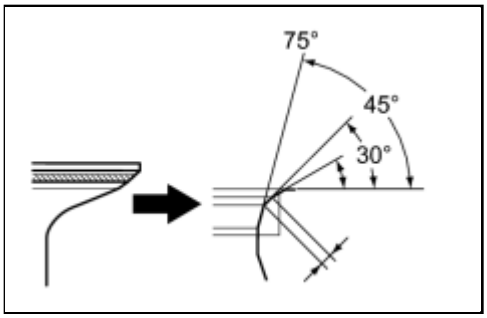
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA000XX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD: REPAIR (2010 Corolla)		

REPAIR



1. REPAIR VALVE SEATS

NOTICE:

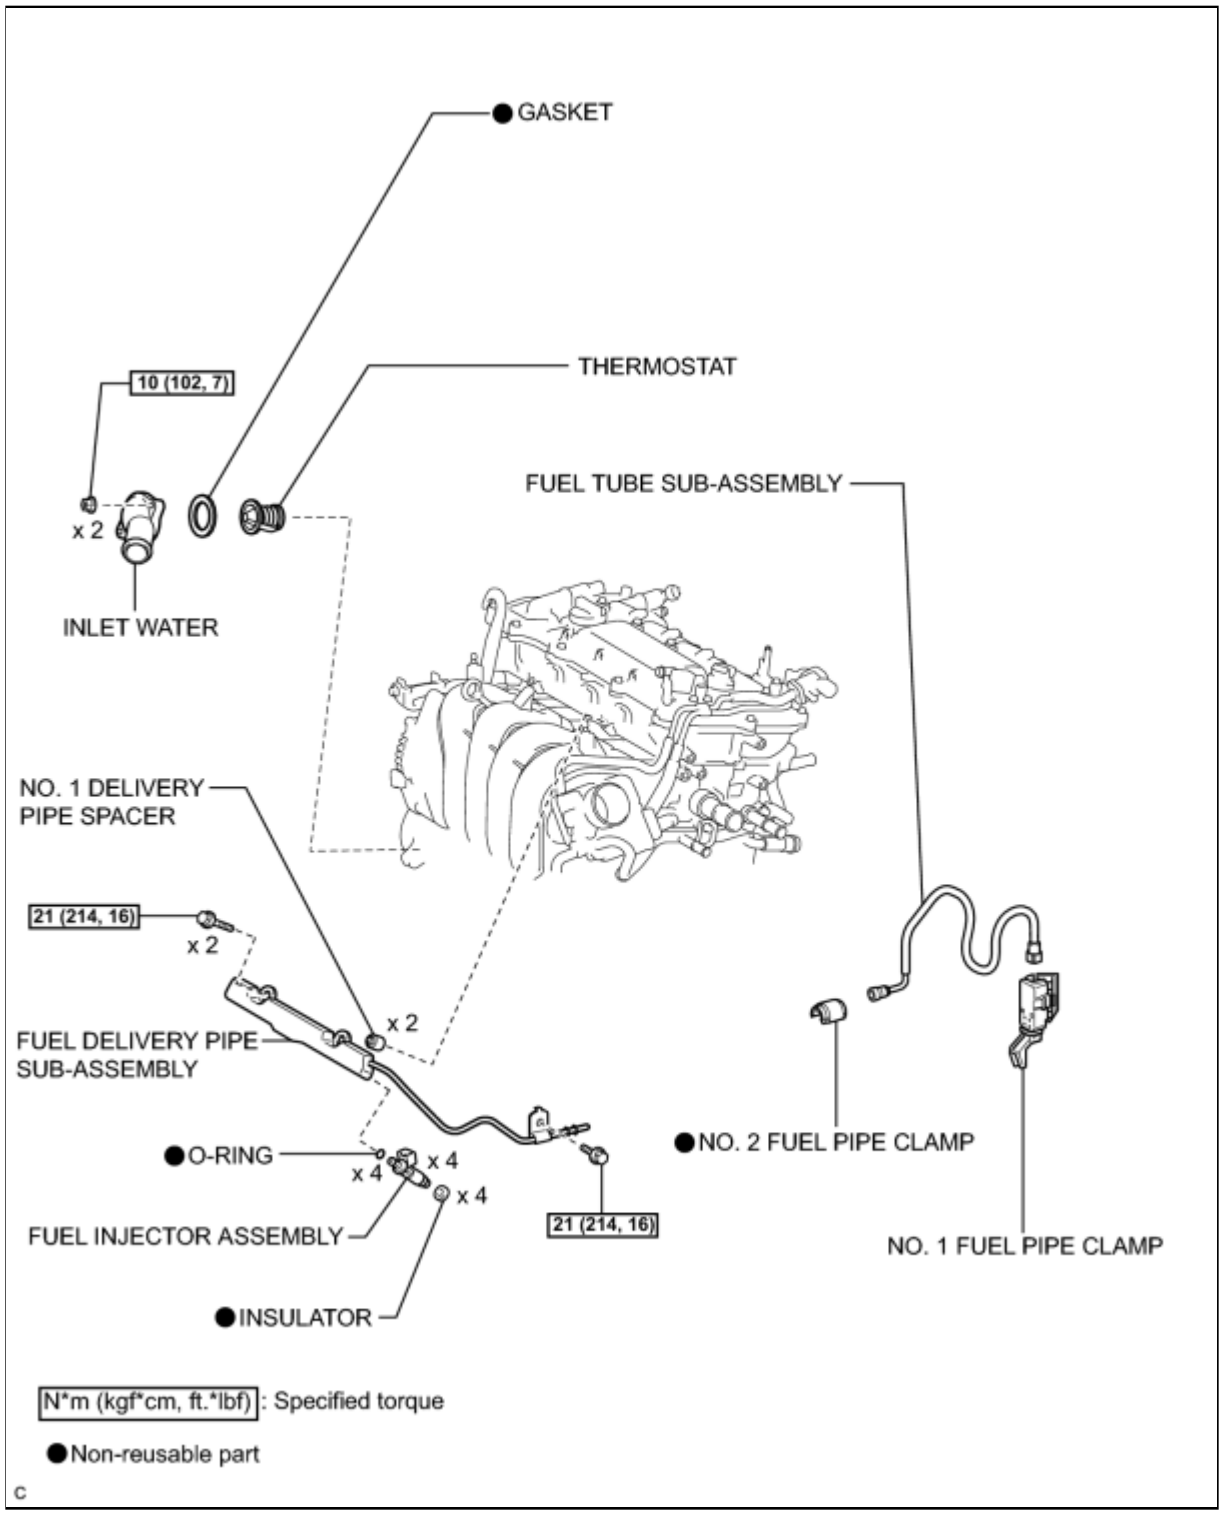
- Repair the seat while checking the seating position.
- Keep the lip free of foreign matter.

(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

(b) Using 30° and 75° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Valve Seat Width:

ITEM	SPECIFIED CONDITION
Intake Side	1.0 to 1.4 mm (0.039 to 0.055 in.)
Exhaust Side	1.0 to 1.4 mm (0.039 to 0.055 in.)



(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD GASKET: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

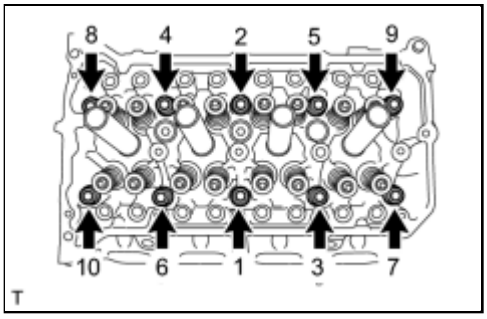
(a) Place a new gasket on the cylinder block surface with the Lot No. stamp facing upward.

NOTICE:

- Remove any oil from the contact surface.
- Make sure that the gasket is installed in the correct direction.

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

HINT:

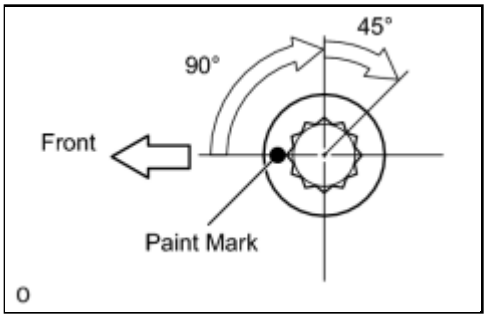


The cylinder head bolts are tightened in 2 progressive steps.

(a) Apply a light coat of engine oil to the bolt threads and the area beneath the bolt heads that come in contact with the washers.

(b) Install the bolts and plate washers to the cylinder head.

NOTICE:



Do not drop the washers into the cylinder head.

(c) Using several passes, uniformly install and tighten the 10 cylinder head set bolts and plate washers with a 10 mm bi-hexagon wrench in the order shown in the illustration.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

(d) Mark the front side of the cylinder head bolts with paint.

(e) Retighten the cylinder head bolts an additional 90°, then once more 45° as shown in the illustration.

(f) Check that the paint mark is now at a 135° angle to the front.

3. INSTALL VALVE LASH ADJUSTER ASSEMBLY INFO

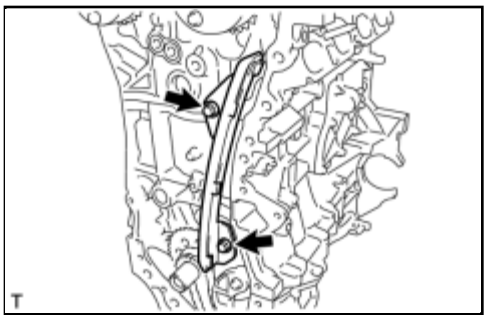
4. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO

5. INSTALL NO. 1 CAMSHAFT BEARING INFO

6. INSTALL NO. 2 CAMSHAFT BEARING INFO

7. INSTALL NO. 2 CAMSHAFT INFO

8. INSTALL CAMSHAFT INFO



9. INSTALL CAMSHAFT BEARING CAP INFO

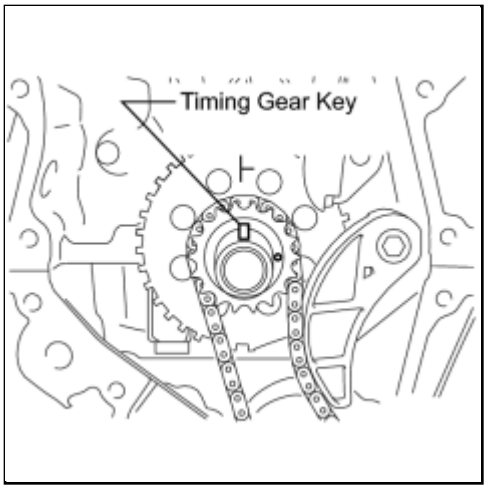
10. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY INFO

11. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY INFO

12. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY INFO

13. INSTALL NO. 1 CHAIN VIBRATION DAMPER

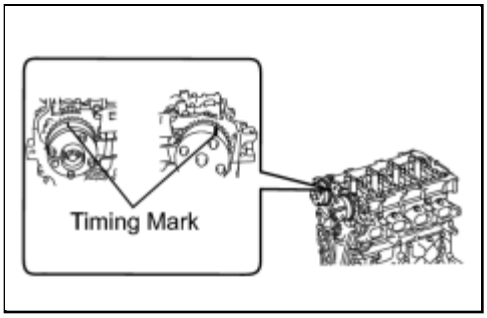
(a) Install the No. 1 chain vibration damper with the 2 bolts.



Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

14. INSTALL NO. 2 CHAIN VIBRATION DAMPER INFO

15. INSTALL CHAIN SUB-ASSEMBLY

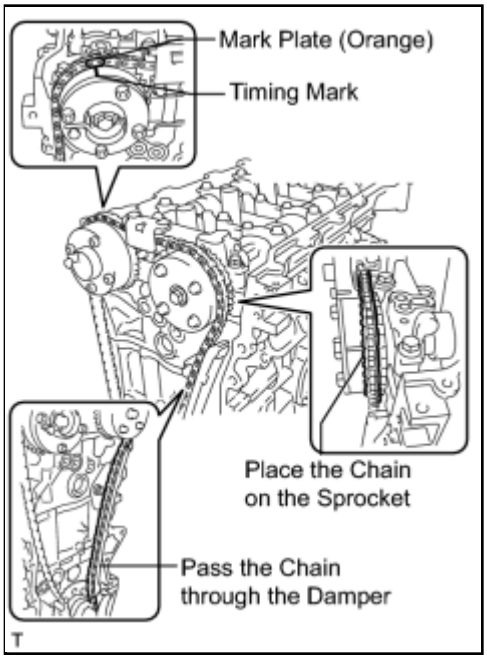


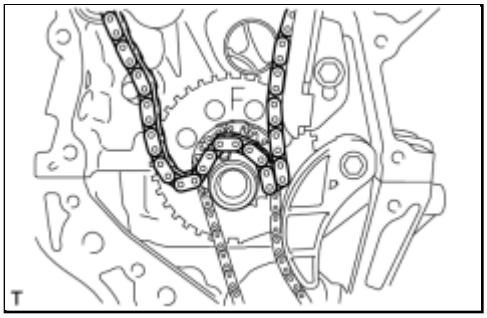
(a) Check the No. 1 cylinder TDC/compression.

(1) Temporarily tighten the crankshaft pulley bolt.

(2) Turn the crankshaft counterclockwise to position the timing gear key to the top.

(3) Remove the crankshaft pulley bolt.



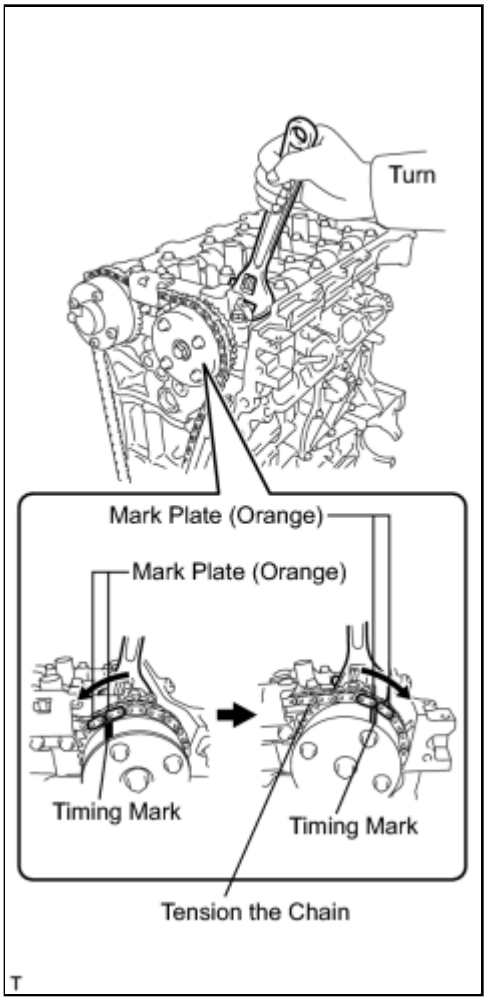


(4) Check the timing marks on each camshaft timing gear.

(b) Align the mark plate (orange) with the timing mark of the No. 2 camshaft as shown in the illustration and install the chain.

HINT:

- Be sure to position the mark plate at the front of the engine.
- The mark plate on the camshaft side is colored orange.
- Do not pass the chain around the sprocket of the camshaft timing gear assembly. Only place it on the sprocket.
- Pass the chain through the No. 1 vibration damper.



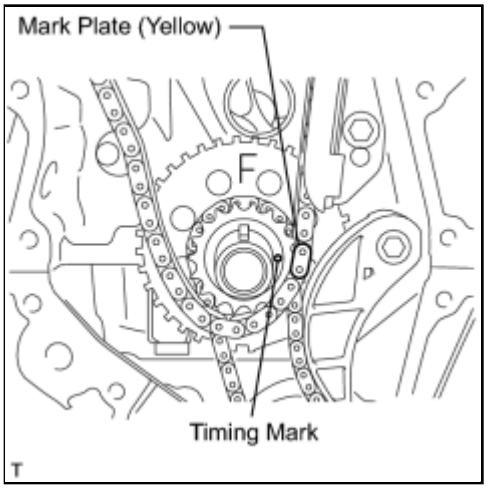
(c) Place the chain on the crankshaft without passing it around the shaft.

(d) Hold the hexagonal portion of the camshaft with a wrench and turn the camshaft timing gear assembly counterclockwise to align the mark plate (orange) and timing mark.

HINT:

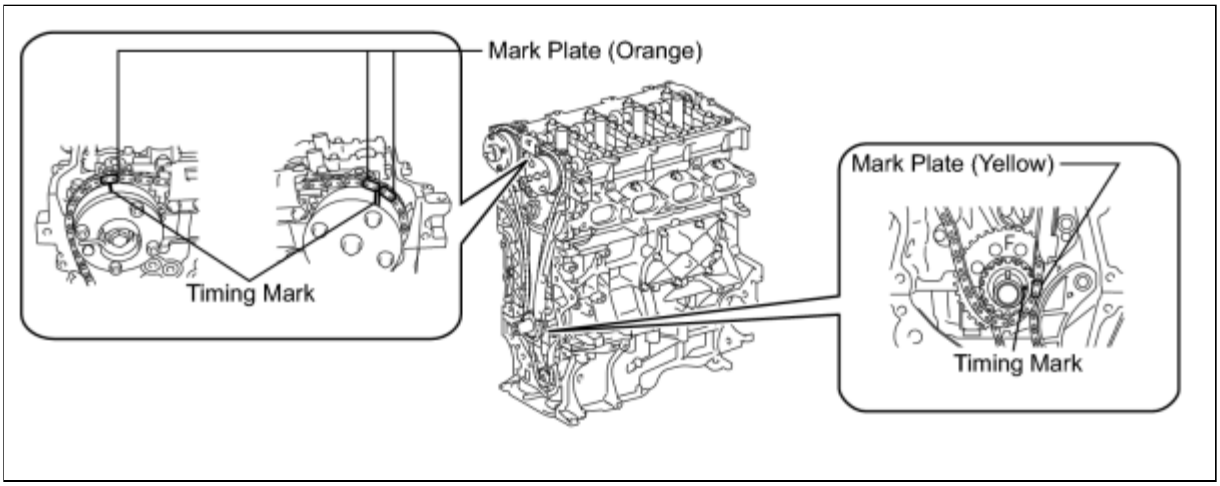
- Be sure to position the mark plate at the front of the engine.
- The mark plate on the camshaft side is colored orange.

(e) Hold the hexagonal portion of the camshaft with a wrench and turn the camshaft timing gear assembly clockwise.



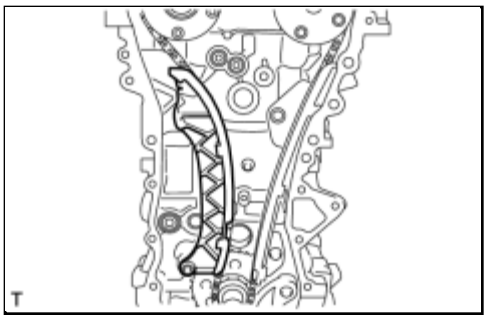
HINT:

To tension the chain, slowly turn the camshaft timing gear assembly clockwise to prevent the chain from being misaligned.



(f) Align the mark plate (yellow) and timing mark and install the chain to the crankshaft timing gear.

HINT:



The mark plate on the crankshaft side is colored yellow.

(g) Recheck each timing mark at TDC/compression.

16. INSTALL CHAIN TENSIONER SLIPPER

(a) Install the chain tensioner slipper.

17. INSTALL TIMING CHAIN COVER OIL SEAL INFO

18. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY INFO

19. INSTALL CRANKSHAFT PULLEY INFO

20. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY INFO

21. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY INFO

22. INSTALL RADIO SETTING CONDENSER INFO

23. INSTALL THERMOSTAT INFO

24. INSTALL INLET WATER INFO

25. INSTALL INLET WATER HOSE INFO

26. INSTALL WATER BY-PASS HOSE INFO

27. INSTALL NO. 1 WATER BY-PASS PIPE INFO

28. CONNECT NO. 3 WATER BY-PASS HOSE

29. INSTALL VENTILATION HOSE INFO

30. INSPECT EXHAUST MANIFOLD INFO

31. INSTALL EXHAUST MANIFOLD INFO

32. INSTALL MANIFOLD STAY INFO

33. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

34. INSTALL OIL LEVEL DIPSTICK SUB-ASSEMBLY INFO

35. INSTALL IGNITION COIL ASSEMBLY INFO

36. INSTALL FUEL INJECTOR ASSEMBLY INFO

37. INSTALL NO. 1 DELIVERY PIPE SPACER INFO

38. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

39. INSTALL FUEL TUBE SUB-ASSEMBLY INFO

40. INSTALL INTAKE MANIFOLD INFO

41. REMOVE ENGINE STAND INFO

42. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT: INFO .

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027IB01IX
Title: 2ZR-FE ENGINE MECHANICAL: CYLINDER HEAD GASKET: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

HINT: INFO .

2. INSTALL ENGINE STAND INFO

3. REMOVE INTAKE MANIFOLD INFO

4. DISCONNECT FUEL TUBE SUB-ASSEMBLY INFO

5. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

6. REMOVE FUEL INJECTOR ASSEMBLY INFO

7. REMOVE IGNITION COIL ASSEMBLY INFO

8. REMOVE OIL LEVEL DIPSTICK SUB-ASSEMBLY INFO

9. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

10. REMOVE MANIFOLD STAY INFO

11. REMOVE EXHAUST MANIFOLD INFO

12. REMOVE VENTILATION HOSE INFO

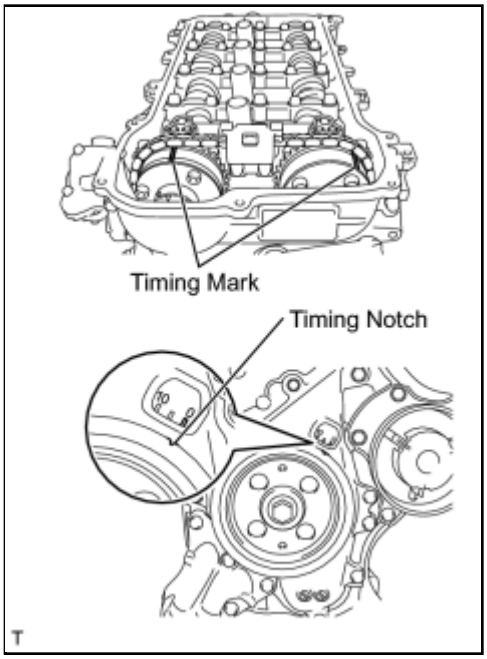
13. DISCONNECT NO. 3 WATER BY-PASS HOSE INFO

14. REMOVE NO. 1 WATER BY-PASS PIPE INFO

15. REMOVE WATER BY-PASS HOSE INFO

16. REMOVE INLET WATER HOSE INFO

17. REMOVE INLET WATER INFO



18. REMOVE THERMOSTAT INFO

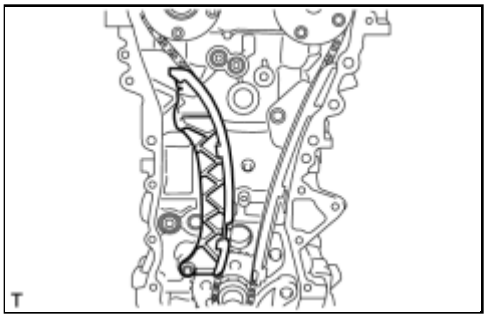
19. REMOVE RADIO SETTING CONDENSER INFO

20. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

21. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.

(b) Check that each timing mark of the camshaft timing gear and sprocket are aligned with each timing mark located as shown in the illustration. If not, turn the crankshaft 1 revolution (360°) to align the timing marks as shown in the illustration.

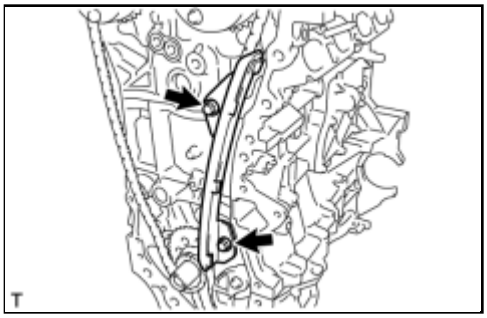


22. REMOVE CRANKSHAFT PULLEY INFO

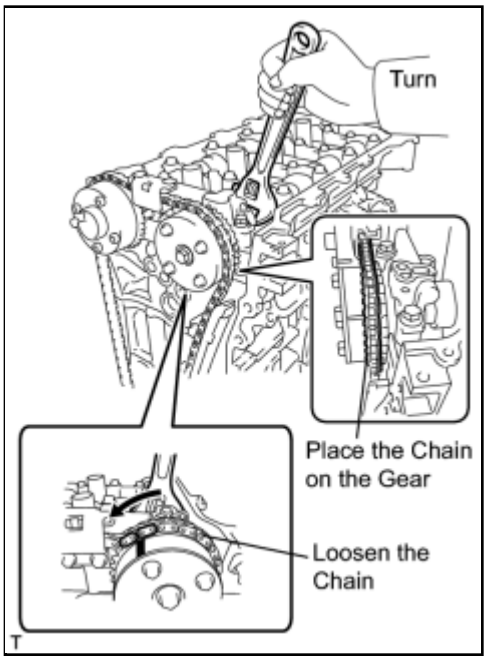
23. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

24. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY INFO

25. REMOVE TIMING CHAIN COVER OIL SEAL INFO



26. REMOVE CHAIN TENSIONER SLIPPER



(a) Remove the chain tensioner slipper.

27. REMOVE NO. 1 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and No. 1 chain vibration damper.

28. REMOVE CHAIN SUB-ASSEMBLY

(a) Hold the hexagonal portion of the camshaft with a wrench and turn the camshaft timing gear assembly counterclockwise to loosen the chain between the camshaft timing gears.

(b) With the chain loosened, release the chain from the camshaft timing gear assembly and place it on the camshaft timing gear assembly.

HINT:

Be sure to release the chain from the sprocket completely.

(c) Turn the camshaft clockwise to return it to the original position and remove the chain.

29. REMOVE NO. 2 CHAIN VIBRATION DAMPER INFO

30. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY INFO

31. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY INFO

32. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY INFO

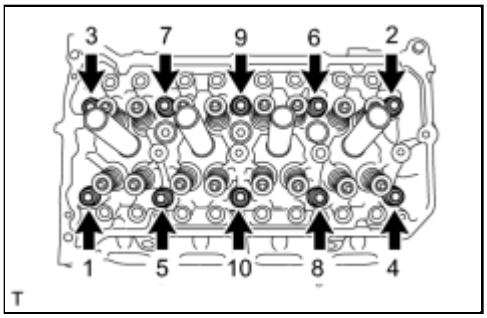
33. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY INFO

34. REMOVE CAMSHAFT BEARING CAP INFO

35. REMOVE CAMSHAFT INFO

36. REMOVE NO. 2 CAMSHAFT INFO

37. REMOVE NO. 1 CAMSHAFT BEARING INFO



38. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO

39. REMOVE VALVE LASH ADJUSTER ASSEMBLY INFO

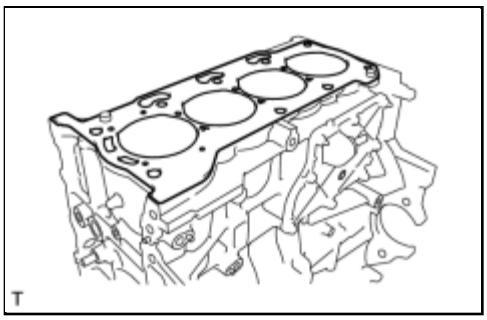
40. REMOVE NO. 2 CAMSHAFT BEARING INFO

41. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY INFO

42. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts and 10 plate washers with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.

NOTICE:



Head warpage or cracking could result from removing the bolts in the wrong order.

(b) Using a screwdriver with its tip wrapped with tape, pry between the cylinder head and cylinder block, and remove the cylinder head.

NOTICE:

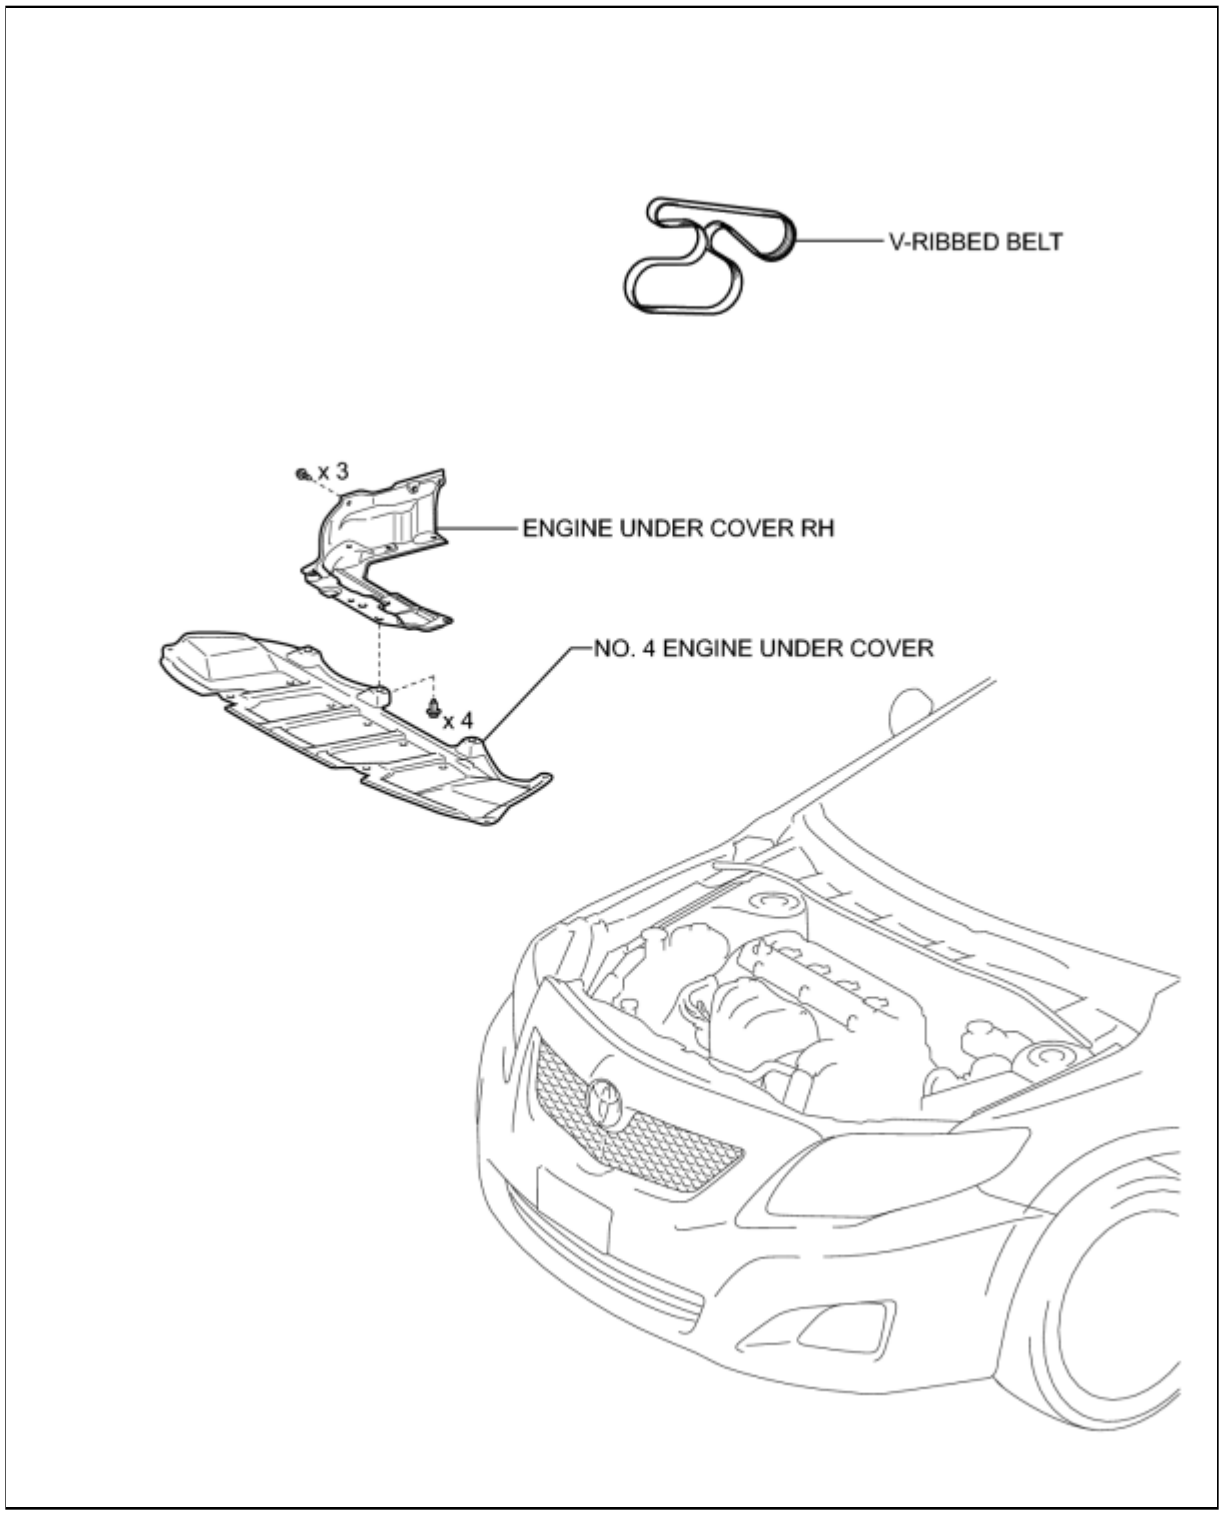
Be careful not to damage the contact surfaces of the cylinder head and cylinder block.

43. REMOVE CYLINDER HEAD GASKET

(a) Remove the cylinder head gasket.

44. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY INFO

45. INSPECT VALVE LASH ADJUSTER ASSEMBLY INFO



46. INSPECT CYLINDER HEAD SET BOLT INFO

Last Modified: 3-10-2010	6.4 K	**From:** 200901

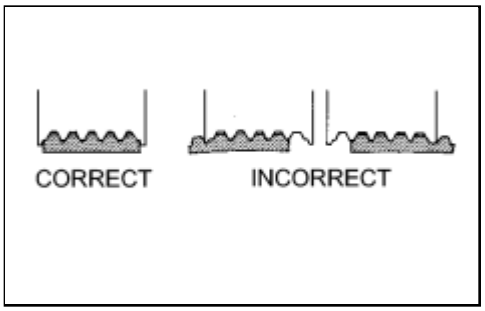
Title: 2AZ-FE ENGINE MECHANICAL: DRIVE BELT: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION



1. CHECK V-RIBBED BELT

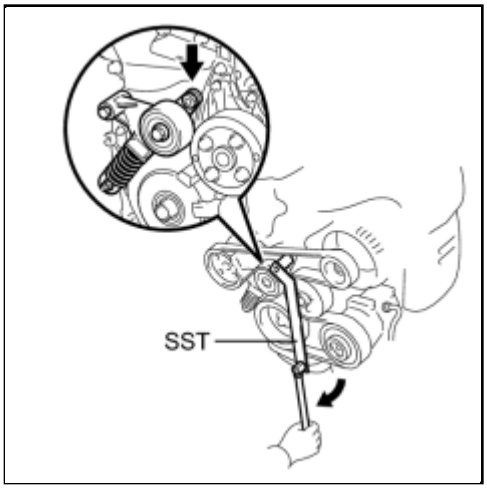
(a) Check the belt for wear, cracks or other signs of damage.

If any of the following defects is found, replace the V-ribbed belt.

- The belt is cracked.
- The belt is worn out to the extent that cords are exposed.
- The belt has chunks missing from the ribs.

(b) Check that the belt fits properly in the ribbed grooves.

HINT:



Check by hand to confirm that the belt has not slipped out of the groove on the bottom to the pulley. If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R3F00IX
Title: 2AZ-FE ENGINE MECHANICAL: DRIVE BELT: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE ENGINE UNDER COVER RH

2. REMOVE V-RIBBED BELT

(a) Using SST, slowly turn the V-ribbed belt tensioner clockwise.

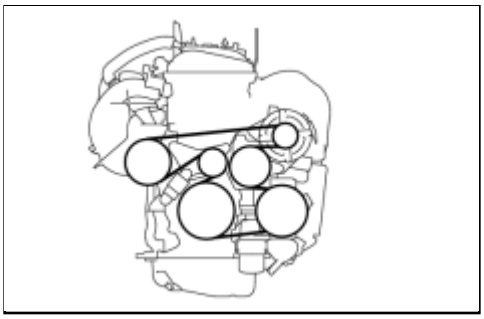
SST: 09216-42010

09216-04010

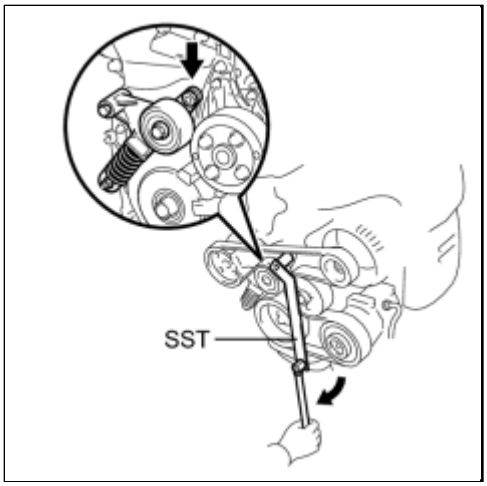
(b) Remove the V-ribbed belt from each pulley and slowly return the tensioner.

NOTICE:

- Make sure that SST and other tools are set to the tensioner securely.
- When compressing the V-ribbed belt tensioner, slowly turn the tensioner.
- Be careful not to pinch your fingers between the parts.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R3D00KX
Title: 2AZ-FE ENGINE MECHANICAL: DRIVE BELT: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL V-RIBBED BELT

HINT:

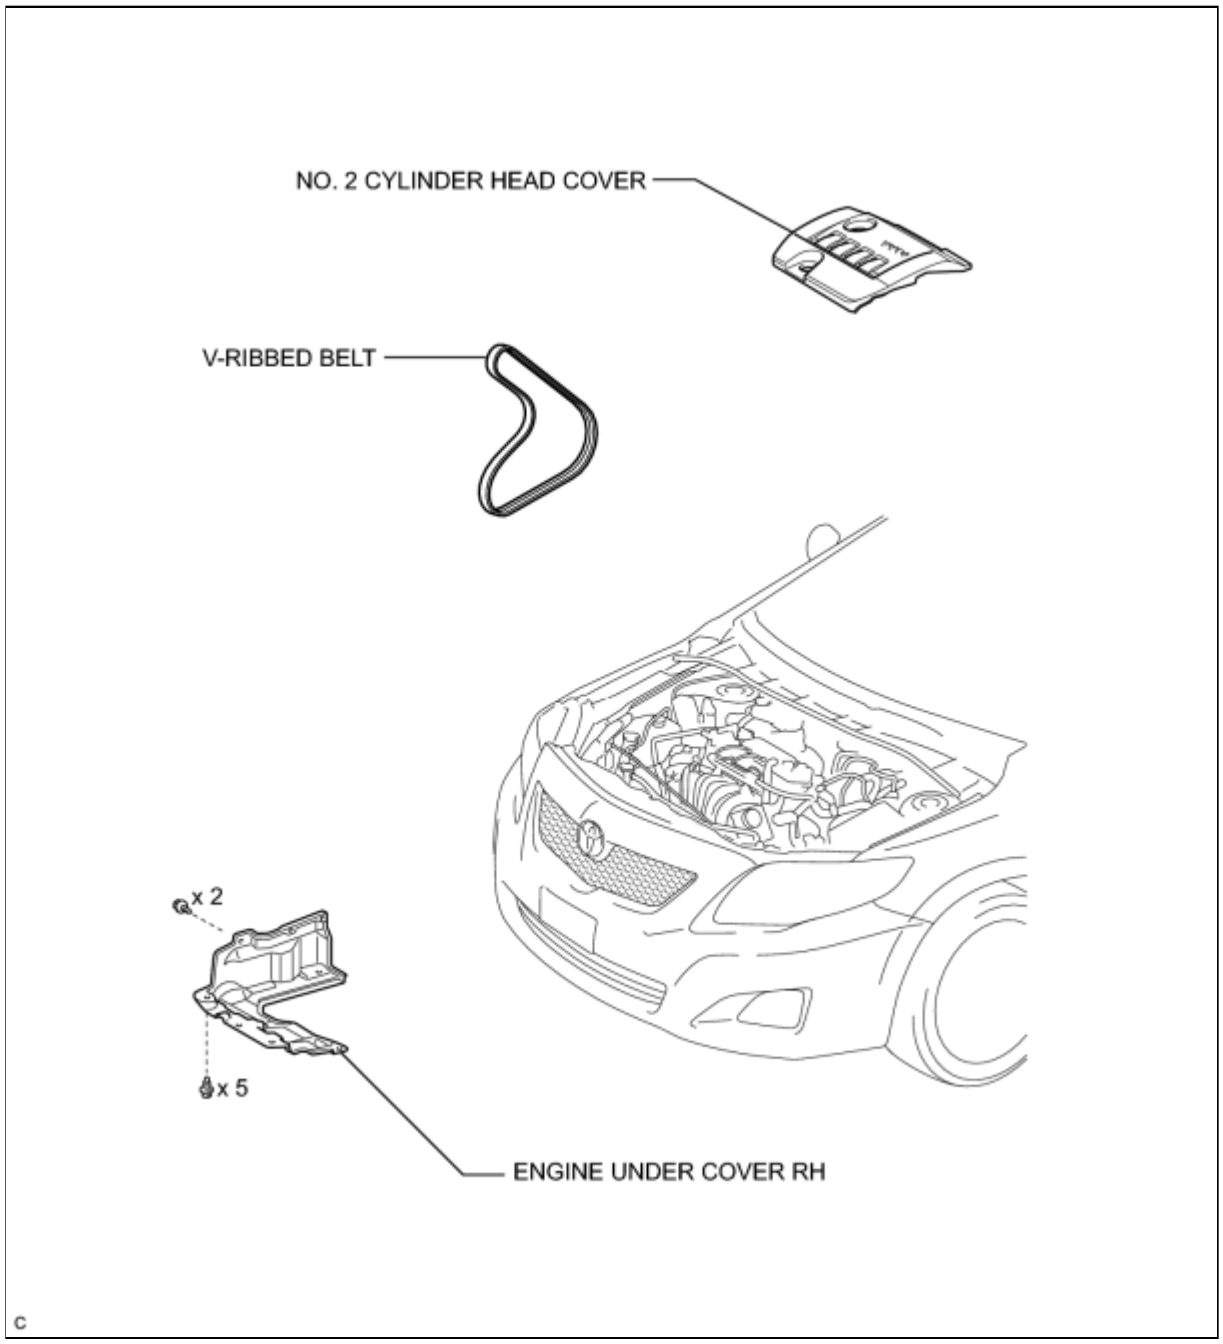
The illustration shows the V-ribbed belt layout.

(a) Using SST, slowly turn the V-ribbed belt tensioner clockwise and install the V-ribbed belt.

SST: 09216-42010

09216-04010

NOTICE:

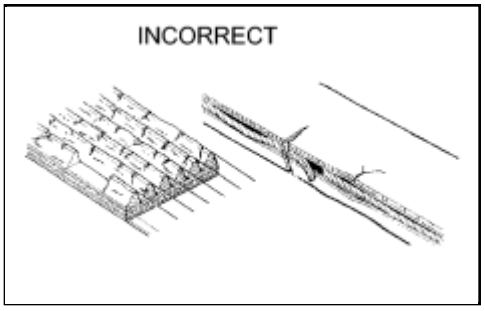


- Make sure that SST and other tools are set to the tensioner securely.
- When compressing the V-ribbed belt tensioner, slowly turn the tensioner.

2. INSTALL ENGINE UNDER COVER RH

Last Modified: 3-10-2010	6.4 K	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027IN00XX
Title: 2ZR-FE ENGINE MECHANICAL: DRIVE BELT: COMPONENTS (2010 Corolla)		

COMPONENTS



ILLUSTRATION

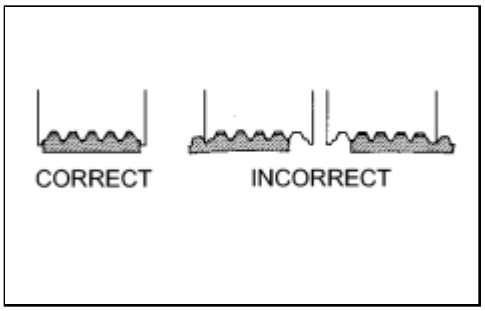
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000034Q9007X
Title: 2ZR-FE ENGINE MECHANICAL: DRIVE BELT: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION



1. INSPECT V-RIBBED BELT

(a) Check the belt for wear, cracks or other signs of damage.

If any of the following defects is found, replace the V-ribbed belt.

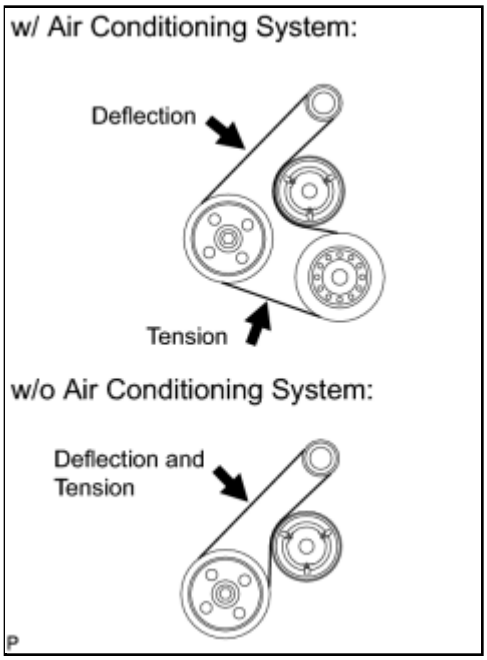
- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

(b) Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley. If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

(c) Check the V belt deflection and tension.



Deflection:

ITEM	SPECIFIED CONDITION
New belt	7.0 to 8.2 mm (0.276 to 0.323 in.)
Used belt	7.6 to 10.0 mm (0.299 to 0.394 in.)

Tension:

ITEM	SPECIFIED CONDITION
New belt	700 to 800 N (71 to 82 kg, 157 to 180 lb)
Used belt	550 to 750 N (56 to 77 kg, 124 to 169 lb)

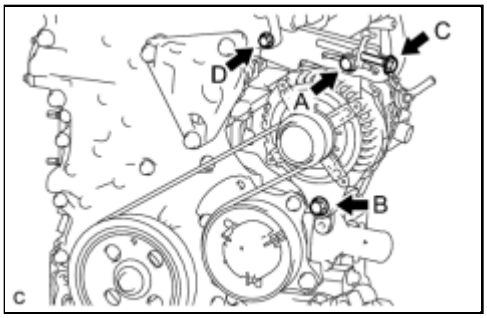
If the belt deflection is not as specified, adjust it.

HINT:

- When inspecting the V belt deflection, apply 98 N (10 kgf) tensile force to it.
- After installing a new belt, run the engine for approximately 5 minutes and then readjust the tension to (new belt) specifications.
- Check the V-ribbed belt deflection and tension at the specified point.
- V-ribbed belt tension and deflection should be checked after 2 revolutions of the engine.
- V-ribbed belt tension and deflection should be checked at TDC crank angle and cold condition.
- When adjusting a belt, adjust its deflection and tension to the intermediate values of the specification.
- When reinstalling a belt which has been used for over 5 minutes, adjust its deflection and tension to the used belt specification.
- When using a belt tension gauge, confirm its accuracy by using a master gauge first.
- If using a sonic tension meter:

  Input data for sonic tension meter

  Weight:
  15 g/rib*m
  Width:
  6 ribs
  Span:
  188 mm (7.40 in.) (w/ air Conditioning)
  282 mm (11.1 in.) (w/o air Conditioning)



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027IO00ZX
Title: 2ZR-FE ENGINE MECHANICAL: DRIVE BELT: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE NO. 2 CYLINDER HEAD COVER INFO

2. REMOVE ENGINE UNDER COVER RH

3. REMOVE V-RIBBED BELT

(a) Loosen bolts A and B.

(b) Loosen bolt C, then remove the V-ribbed belt.

NOTICE:

Do not loosen bolt D.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R3C00NX
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT ENGINE COOLANT

(a) Inspect the engine coolant INFO .

2. INSPECT ENGINE OIL

(a) Inspect the engine oil INFO .

3. INSPECT BATTERY

(a) Inspect the battery INFO .

4. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Remove the air cleaner cap sub-assembly INFO .

(b) Remove the air filter element.

(c) Visually check that the air filter is not excessively damaged or oily.

If necessary, replace the air filter.

5. INSPECT SPARK PLUG INFO

6. INSPECT V-RIBBED BELT INFO

7. INSPECT IGNITION TIMING

NOTICE:

- Turn all the electrical systems and the A/C off.
- When checking the ignition timing, move the shift lever to neutral.

(a) Warm up and stop the engine.

(b) When using the Techstream:

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

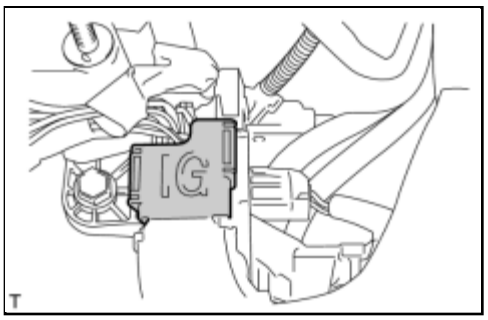
(3) Turn the Techstream on.

(4) Enter the following menus: Power Train / Engine and ECT / Data List / IGN Advance

(5) Start the engine.

(6) According to the display on the Techstream, read the Data List.

Standard ignition timing:
5 to 15° BTDC at idle



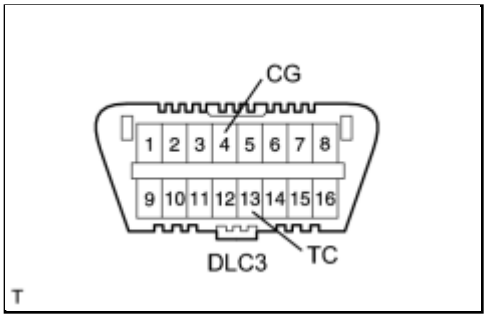
(7) Check that the ignition timing advances immediately when the engine speed is increased.

(8) Turn the ignition switch off.

(9) Disconnect the Techstream from the DLC3.

(c) When not using the Techstream:

(1) Remove the No. 1 engine cover sub-assembly INFO .



(2) Open the ignition cover located to the right of the No. 4 ignition coil.

(3) Pull the wire harness out from the IG cover.

(4) Connect the timing light to the wire harness.

NOTICE:

Use a timing light that detects the primary signal.

(5) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

(6) Allow the engine to idle and check the ignition timing.

Standard ignition timing:
8 to 12° BTDC at idle

HINT:

Run the engine at 1000 to 1300 rpm for 5 seconds, then check that the engine speed returns to idle speed.

(7) Disconnect SST from terminals 13 (TC) and 4 (CG) of the DLC3.

(8) Allow the engine to idle and check the ignition timing.

Standard ignition timing:
5 to 15° BTDC at idle

(9) Check that the ignition timing advances immediately when the engine speed is increased.

(10) Turn the ignition switch off.

(11) Remove the timing light.

(12) Close the IG cover.

(13) Install the No. 1 engine cover sub-assembly INFO .

8. INSPECT ENGINE IDLE SPEED

NOTICE:

- Turn all the electrical systems and the A/C off.
- When checking the idle speed, move the shift lever to P or neutral.

(a) Warm up and stop the engine.

(b) When using the Techstream:

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

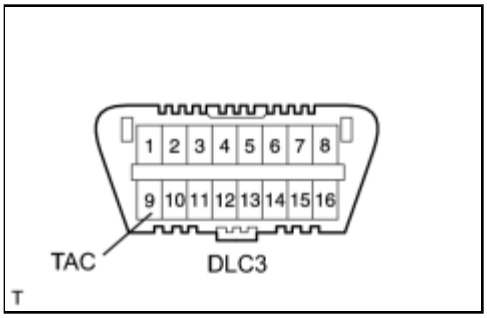
(3) Turn the Techstream on.

(4) Enter the following menus: Power Train / Engine and ECT / Data List / Engine Speed

(5) Start the engine.

(6) According to the display on the Techstream, read the Data List.

Standard idle speed:
600 to 700 rpm



(7) Turn the ignition switch off.

(8) Disconnect the Techstream from the DLC3.

(c) When not using the Techstream:

(1) Turn off all the accessories and air conditioning.

(2) Move the shift lever to P or neutral.

(3) Connect SST to 9 (TAC) of the DLC3 terminal, and then connect a tachometer to SST.

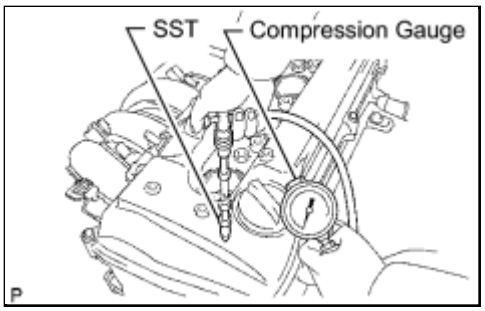
SST: 09843-18030

(4) Start the engine.

(5) Check the idle speed with the cooling fan off.

Standard idle speed:
600 to 700 rpm

(6) Turn the ignition switch off.



(7) Remove the tachometer and disconnect SST from the DLC3.

9. INSPECT COMPRESSION

(a) Warm up and stop the engine.

(b) Remove the 4 ignition coils and spark plugs INFO .

(c) Disconnect the 4 fuel injector connectors.

(d) Set SST and a compression gauge.

SST: 09992-00500

(e) Insert the compression gauge into the spark plug hole.

(f) Fully open the throttle.

(g) While cranking the engine, measure the compression pressure.

Standard compression pressure:
1300 kPa (13.3 kgf/cm^2, 189 psi)
Minimum compression pressure:
1000 kPa (10.0 kgf/cm^2, 145 psi)
Standard difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi) or less

NOTICE:

- Always use a fully-charged battery to obtain an engine speed of 250 rpm or more.
- Check the other cylinders in the same way.
- This measurement must be done as quickly as possible.

If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole and inspect again.

HINT:

- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.

(h) Connect the 4 fuel injector connectors.

(i) Install the 4 spark plugs and ignition coils INFO .

10. INSPECT CO/HC

HINT:

This check determines whether or not the idle CO/HC complies with local regulations.

(a) Start and warm up the engine.

(b) Run the engine at 2500 rpm for approximately 180 seconds.

(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft.) into the tailpipe while idling.

(d) Inspect the CO/HC concentration during idle at 2500 rpm.

If the CO/HC concentration does not comply with local regulations, troubleshoot in the order given below.

(1) Check the A/F sensor and heated oxygen sensor operation.

(2) See the table below for possible causes, then inspect the applicable parts and repair them if necessary.

:

CO	HC	PROBLEM	POSSIBLE CAUSE
Normal	High	Rough idle	1. Faulty ignition: - Incorrect timing - Plugs are contaminated, shorted, or gaps are defective 2. Incorrect valve clearance 3. Leaks in intake and exhaust valve 4. Leaks in cylinders
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leakage: - Ventilation hoses - Intake manifold - Throttle body - Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Plugged PCV valve 3. Faulty EFI system: - Faulty pressure regulator - Faulty engine coolant temperature sensor - Faulty mass air flow meter - Faulty ECM - Faulty injectors - Faulty throttle body

Title: 2ZR-FE ENGINE MECHANICAL: DRIVE BELT: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL V-RIBBED BELT

(a) Install the belt.

2. ADJUST V-RIBBED BELT

(a) Turn bolt C to adjust the tension of the V-ribbed belt.

(b) Tighten bolts A and B.

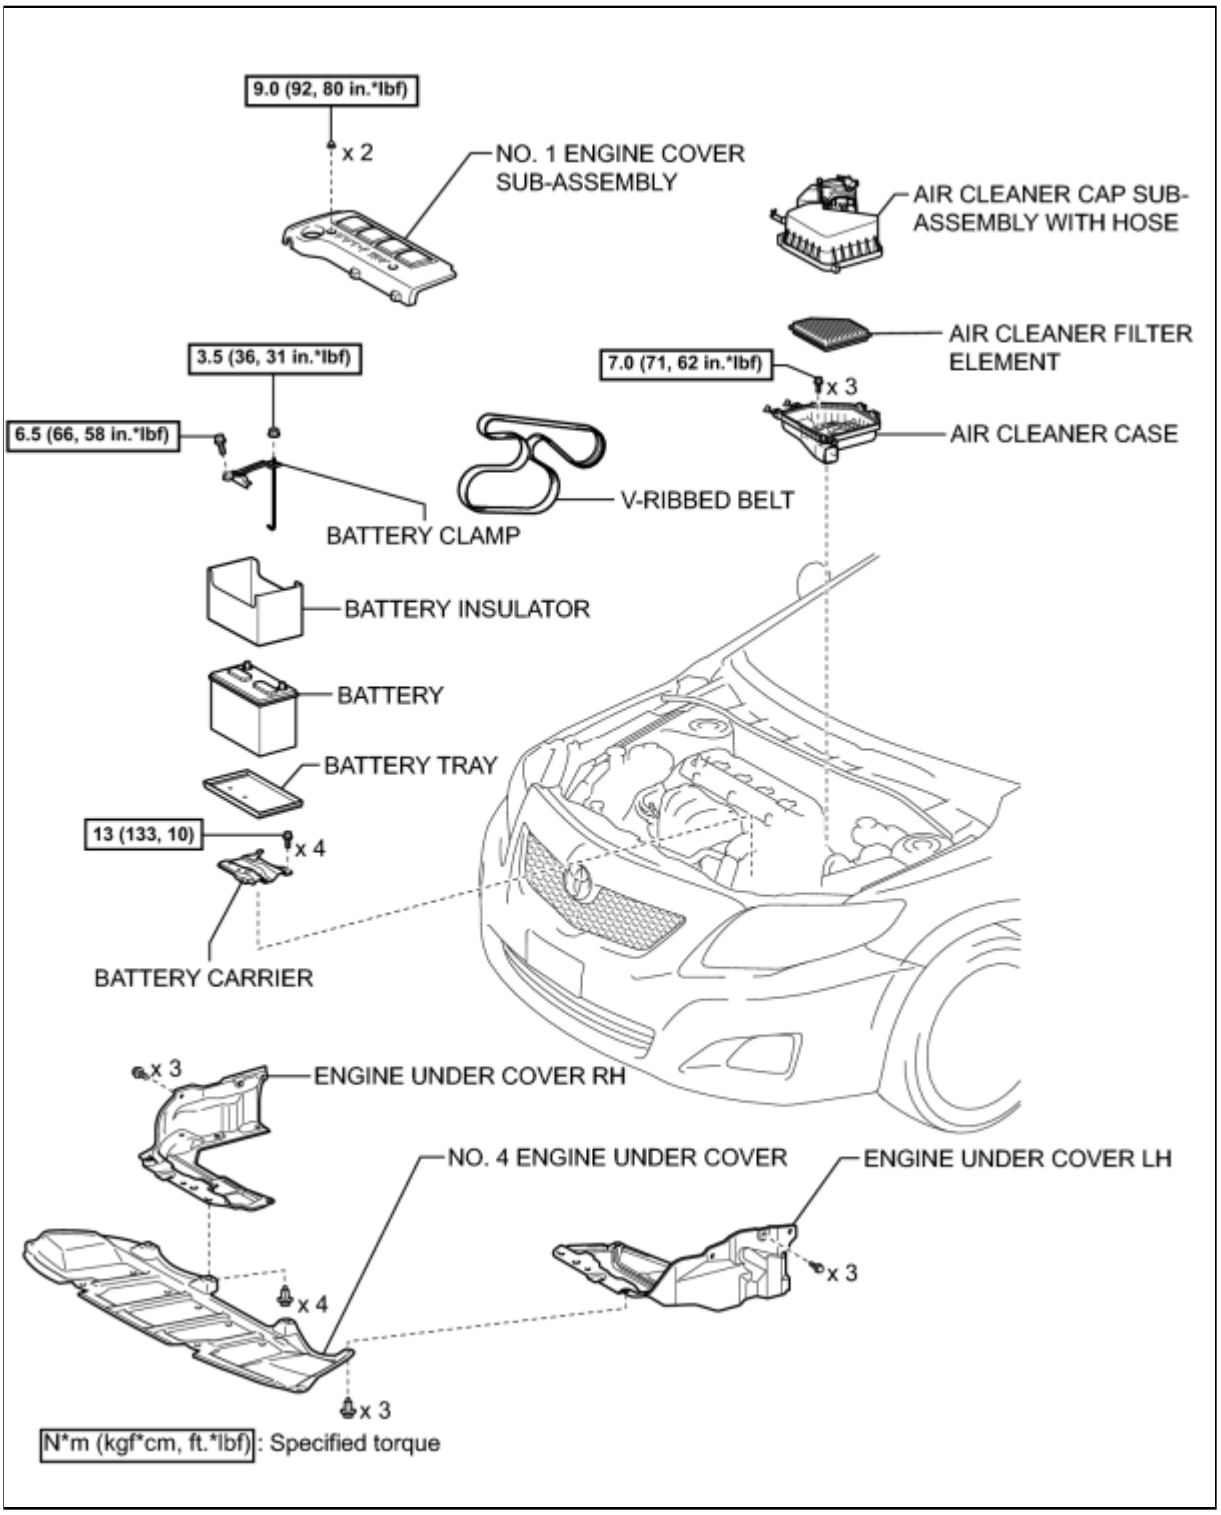
Bolt A - Torque: 19 N·m (190 kgf·cm, 14ft·lbf)

Bolt B - Torque: 43 N·m (438 kgf·cm, 32ft·lbf)

NOTICE:

Confirm that bolt D is not loosened.

3. INSPECT V-RIBBED BELT INFO



4. INSTALL ENGINE UNDER COVER RH

5. INSTALL NO. 2 CYLINDER HEAD COVER INFO

Title: 2AZ-FE ENGINE MECHANICAL: ENGINE ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE INFO

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

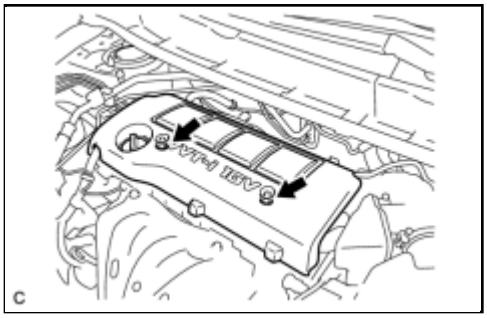
3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

4. REMOVE FRONT WHEELS

5. REMOVE ENGINE UNDER COVER LH

6. REMOVE ENGINE UNDER COVER RH

7. DRAIN ENGINE COOLANT INFO

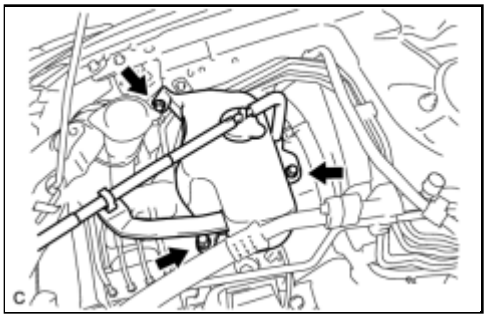


8. DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

HINT: INFO **for U250E.**

9. DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle)

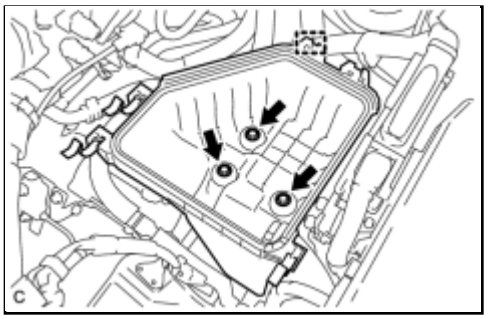
HINT: INFO **for E351.**



10. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

(a) Remove the 2 nuts and No. 1 engine cover sub-assembly.

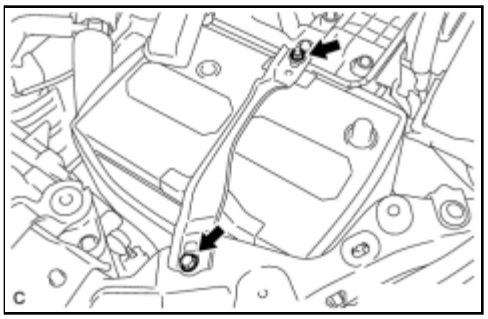
11. SEPARATE RADIATOR RESERVE TANK ASSEMBLY



(a) Remove the 3 bolts and separate the radiator reserve tank assembly.

12. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

13. REMOVE AIR CLEANER CASE

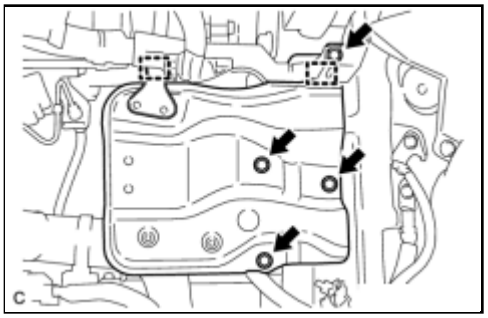


(a) Remove the air cleaner filter element.

(b) Disconnect the clamp of the engine wire.

(c) Remove the 3 bolts and air cleaner case.

14. REMOVE BATTERY

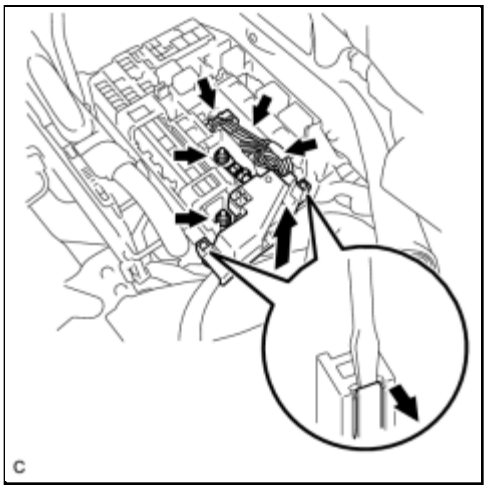


(a) Remove the bolt, nut and battery clamp.

(b) Remove the battery and battery insulator.

15. REMOVE BATTERY CARRIER

(a) Remove the battery tray.

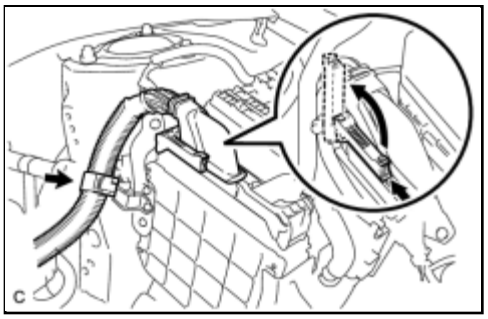


(b) Separate the 2 wire harness clamps from the battery

carrier.

(c) Remove the 4 bolts and battery carrier.

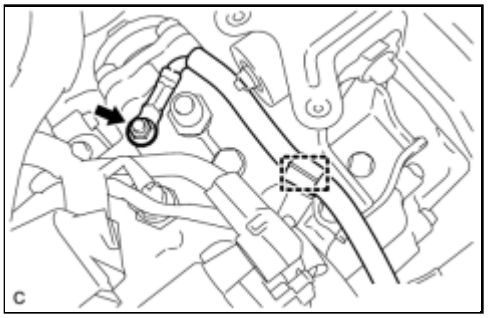
16. SEPARATE WIRE HARNESS



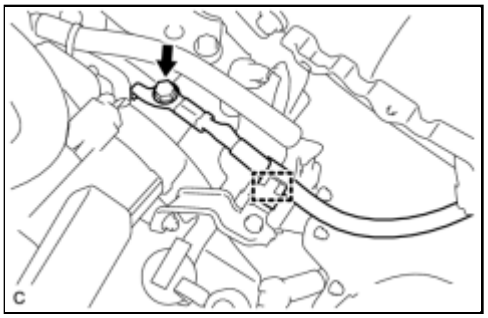
(a) Disconnect the 3 connectors from the engine room relay block.

(b) Remove the 2 nuts and disconnect the wire harnesses from the engine room relay block.

(c) Using a screwdriver, unlock the 2 claws.



(d) Pull the engine room relay block upward.



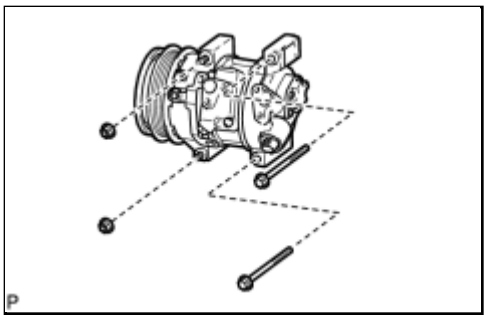
(e) Pull up the lever and disconnect the ECM connector.

(f) Disconnect the clamp.

(g) Remove the bolt and disconnect the ground cable and

clamp (for Manual Transaxle).

(h) Remove the bolt and disconnect the ground cable and clamp (for Automatic Transaxle).



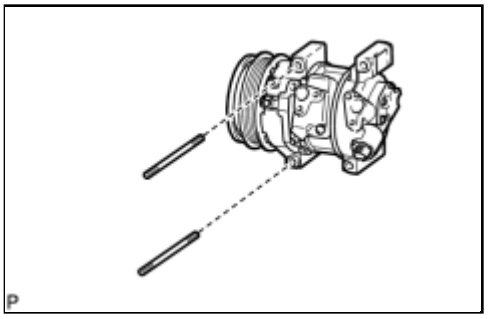
17. REMOVE THROTTLE BODY ASSEMBLY INFO

18. REMOVE V-RIBBED BELT INFO

19. REMOVE GENERATOR ASSEMBLY INFO

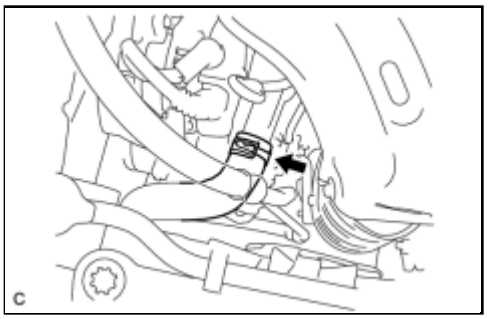
20. SEPARATE COMPRESSOR ASSEMBLY WITH PULLEY

(a) Disconnect the connector.



(b) Remove the 2 bolts and 2 nuts.

(c) Using a "TORX" socket wrench (E8), remove the 2 stud bolts and compressor with pulley assembly.



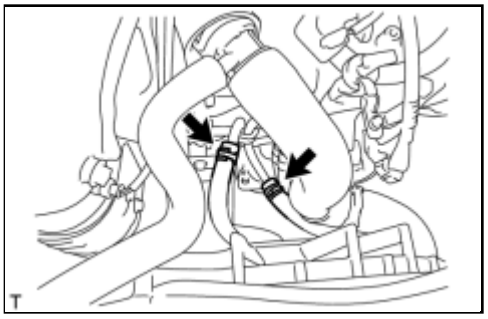
HINT:

Secure the compressor and hoses off to the side instead of

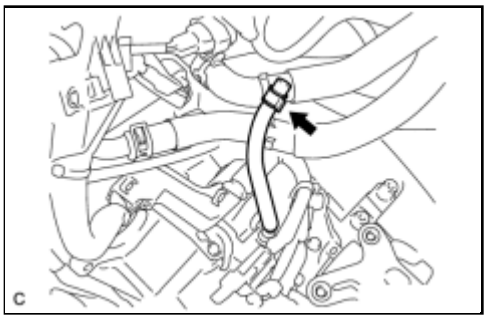
discharging the A/C system.

21. DISCONNECT NO. 2 RADIATOR HOSE

(a) Disconnect the No. 2 radiator hose from the inlet water.



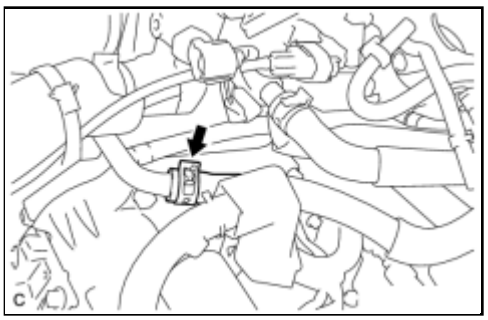
22. DISCONNECT NO. 1 RADIATOR HOSE



(a) Disconnect the No. 1 radiator hose from the cylinder head.

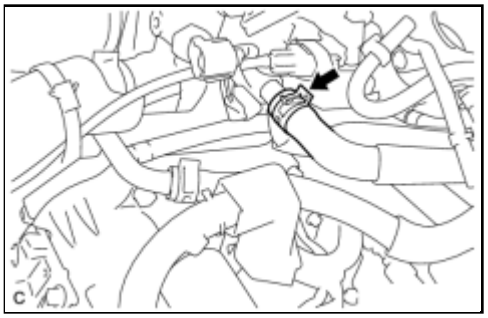
23. DISCONNECT OIL COOLER HOSE (for Automatic Transaxle)

(a) Disconnect the 2 oil cooler hoses.



24. DISCONNECT BREATHER HOSE (for Automatic Transaxle)

(a) Disconnect the breather hose.

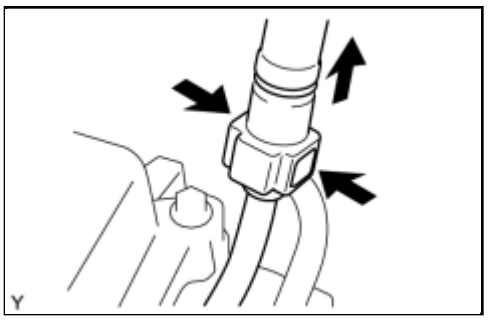


25. DISCONNECT OUTLET HEATER WATER HOSE

(a) Disconnect the outlet heater water hose.

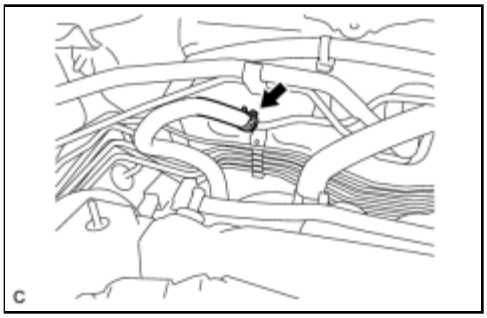
26. DISCONNECT INLET HEATER WATER HOSE

(a) Disconnect the inlet heater water hose.



27. REMOVE FUEL TUBE SUB-ASSEMBLY

(a) Release the claw and remove the No. 1 fuel pipe clamp.

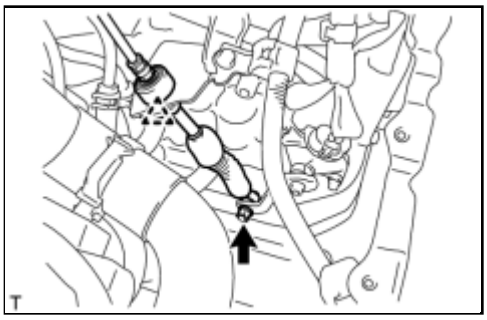


(b) Pinch the retainer as illustrated, then pull the fuel tube connector out of the pipe.

NOTICE:

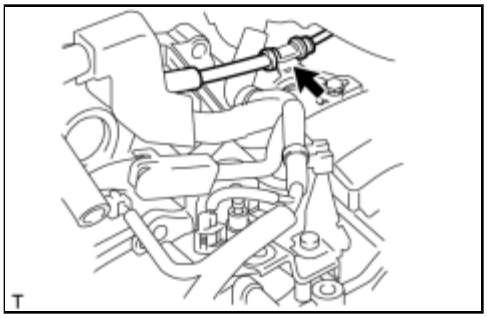
- Remove any dirt or foreign matter from the fuel tube connector before performing this work.
- Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has O-rings that seal the pipe.
- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, kink or twist the nylon tube.
- Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.
- If the fuel tube connector and pipe are stuck, push and pull to release them.

28. DISCONNECT UNION TO CONNECTOR TUBE HOSE



(a) Disconnect the union to connector tube hose.

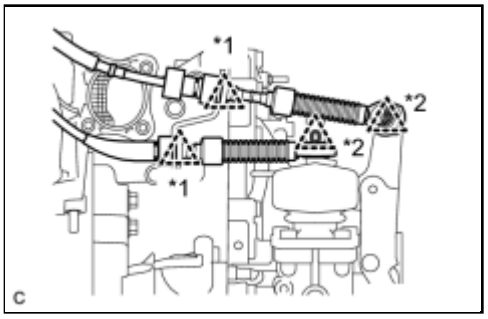
29. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)



HINT: INFO **for E351.**

30. SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

(a) Remove the nut and disconnect the control cable assembly from the control shaft lever.



(b) Remove the clip and disconnect the transmission control cable assembly from the control cable bracket.

(c) Disconnect the control cable assembly from the control cable bracket.

31. SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

(a) Remove the 2 clips and disconnect the 2 transmission control cables from the control cable bracket*1.

(b) Remove the 2 clips and disconnect the 2 transmission control cables from the transaxle*2.

32. SECURE STEERING WHEEL INFO

33. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO

34. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

35. SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

36. REMOVE CENTER EXHAUST PIPE ASSEMBLY INFO

37. REMOVE FRONT EXHAUST PIPE ASSEMBLY INFO

38. REMOVE FRONT AXLE SHAFT LH NUT INFO

39. REMOVE FRONT AXLE SHAFT RH NUT

HINT:

Perform the same procedure for the LH side.

40. SEPARATE FRONT SPEED SENSOR LH INFO

41. SEPARATE FRONT SPEED SENSOR RH

HINT:

Perform the same procedure for the LH side.

42. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

43. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

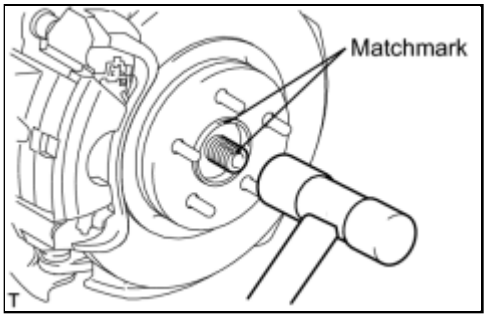
Perform the same procedure for the LH side.

44. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

45. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.



46. SEPARATE FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY LH INFO

47. SEPARATE FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

48. SEPARATE STEERING KNUCKLE WITH AXLE HUB LH

(a) Put matchmarks on the drive shaft and axle hub.

NOTICE:

Do not punch the marks.

(b) Using a plastic-faced hammer, disconnect the front axle assembly LH.

NOTICE:

- Be careful not to damage the boot or speed sensor rotor.
- Do not excessively push out the drive shaft from the axle assembly.

49. SEPARATE STEERING KNUCKLE WITH AXLE HUB RH

HINT:

Perform the same procedure for the LH side.

50. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH INFO

51. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH INFO

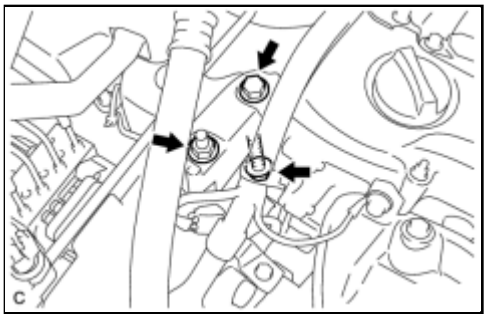
52. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH INFO

53. SEPARATE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)

HINT: INFO **for U250E.**

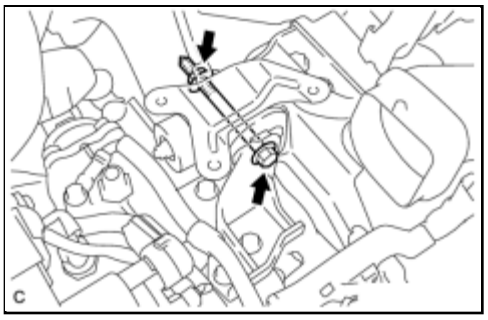
54. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

55. REMOVE CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO



56. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine assembly with transaxle on the engine lifter.

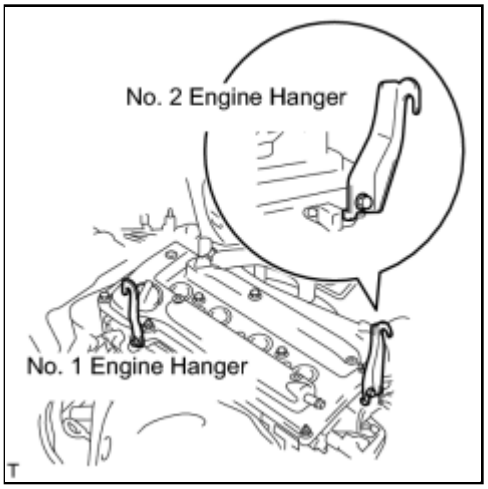


NOTICE:

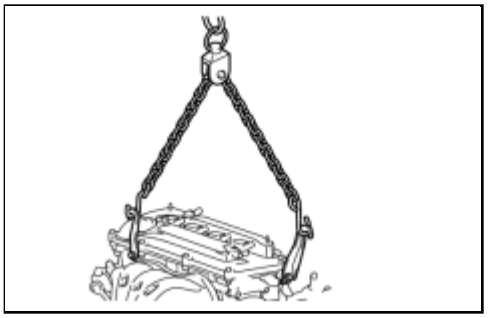
Place the engine on wooden blocks or equivalent so that the engine is level.

(b) Remove the bolt and 2 nuts, and separate the engine mounting insulator RH.

(c) Remove the through bolt and nut, and separate the engine mounting insulator LH.



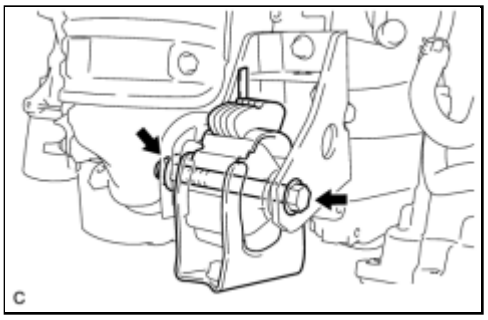
(d) Carefully remove the engine with transaxle from the vehicle.



57. INSTALL ENGINE HANGERS

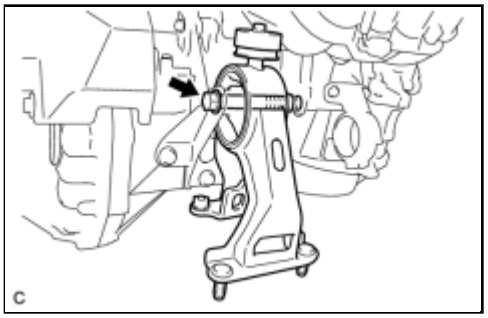
(a) Install the No. 1 and No. 2 engine hangers with new bolts as shown in the illustration.

Torque: 38 N·m (387 kgf·cm, 28ft·lbf)

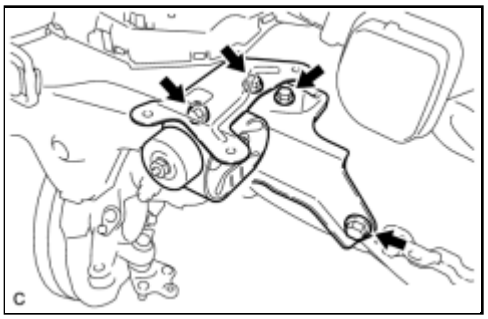


ITEM	PART NO.
No. 1 engine hanger	12281-28010
No. 2 engine hanger	12282-28010 or 12282-AB010
Bolt	90080-10177

(b) Using an engine sling device and a chain block, suspend the engine assembly with transaxle.



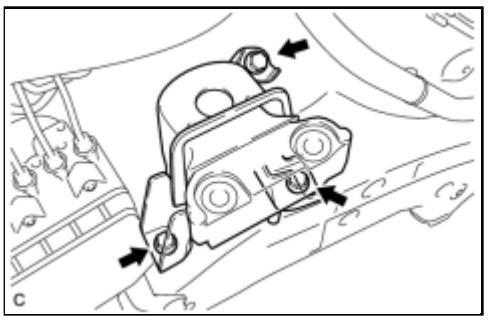
58. REMOVE FRONT ENGINE MOUNTING INSULATOR



(a) Remove the through bolt and nut, and separate the front engine mounting insulator.

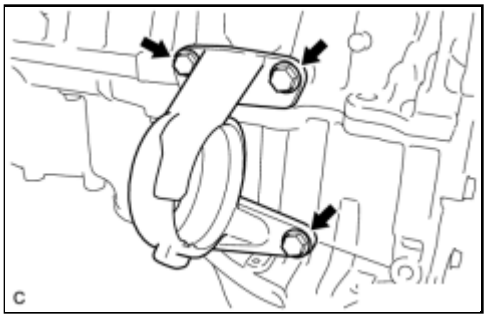
59. REMOVE REAR ENGINE MOUNTING INSULATOR

(a) Remove the through bolt and separate the rear engine mounting insulator.



60. REMOVE ENGINE MOUNTING INSULATOR LH

(a) Remove the 4 bolts and engine mounting insulator LH.



61. REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH

(a) Remove the 3 bolts and engine mounting insulator sub-assembly RH.

62. REMOVE DRIVE SHAFT BEARING BRACKET

(a) Remove the 3 bolts and bracket.

63. REMOVE STARTER ASSEMBLY (for Automatic Transaxle) INFO

64. REMOVE STARTER ASSEMBLY (for Manual Transaxle) INFO

65. REMOVE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

66. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT: INFO **for U250E.**

67. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

68. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

69. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) INFO

70. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) INFO

71. REMOVE ENGINE WIRE

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001BC100RX
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL ENGINE WIRE

2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) INFO

3. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) INFO

4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle)

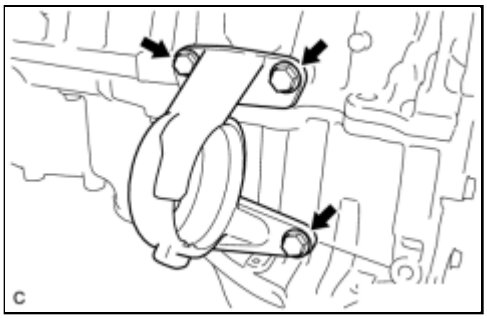
HINT: INFO **for E351.**

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

6. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT: INFO **for U250E.**



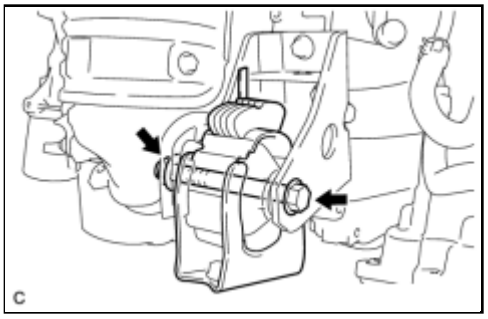
7. INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

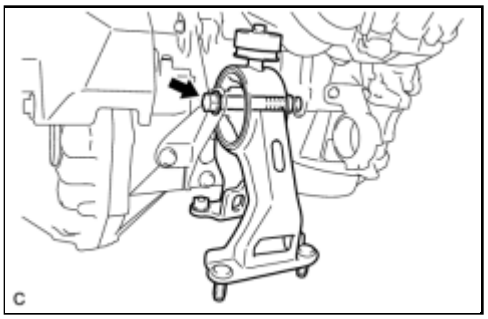
8. INSTALL STARTER ASSEMBLY (for Manual Transaxle) INFO

9. INSTALL STARTER ASSEMBLY (for Automatic Transaxle) INFO

10. INSTALL DRIVE SHAFT BEARING BRACKET



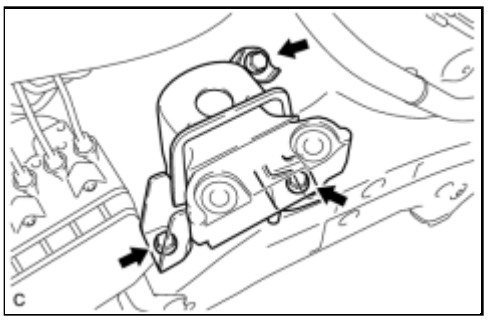
(a) Install the drive shaft bearing bracket with the 3 bolts.



Torque: 64 N·m (653 kgf·cm, 47ft·lbf)

11. TEMPORARILY TIGHTEN FRONT ENGINE MOUNTING INSULATOR

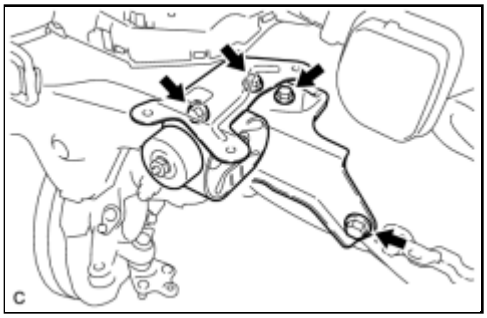
(a) Temporarily install the front engine mounting insulator with the nut and through bolt.



12. TEMPORARILY TIGHTEN REAR ENGINE MOUNTING INSULATOR

(a) Temporarily install the rear engine mounting insulator to the engine mounting bracket with the through bolt.

13. INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH



(a) Install the engine mounting insulator RH with the 3 bolts.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

14. INSTALL ENGINE MOUNTING INSULATOR LH

(a) Temporarily install the engine mounting insulator LH with the 4 bolts.

(b) Tighten the 4 bolts.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

HINT:

Perform this procedure only when replacement of the engine mounting insulator is necessary.

15. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine assembly with transaxle on the engine lifter.

NOTICE:

Place the engine on wooden blocks or equivalent so that the engine is level.

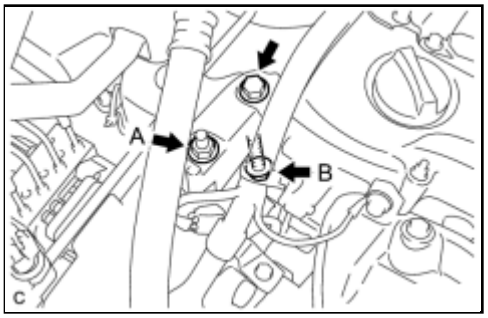
(b) Remove the 2 bolts and 2 engine hangers.

(c) Operate the engine lifter and lift the engine assembly with transaxle to the position where the engine mounting insulators RH and LH can be installed.

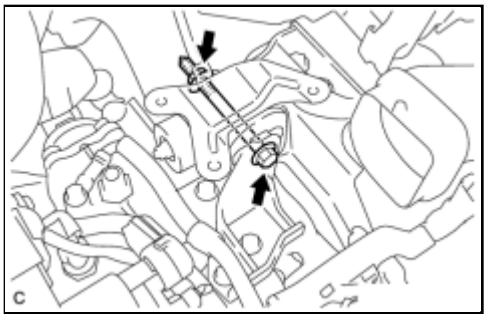
CAUTION:

Do not raise the engine more than necessary. If the engine is raised excessively, the vehicle may also be lifted up.

NOTICE:



- Make sure that the engine is clear of all wiring and hoses.
- While raising the engine into the vehicle, do not allow it to contact the vehicle.



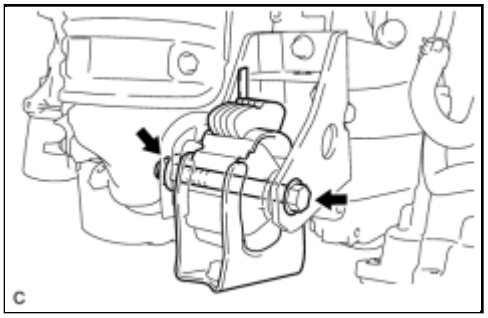
(d) Install the engine mounting insulator RH with the bolt and 2 nuts.

Nut A - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)

Nut B - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

Bolt - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)

(e) Install the engine mounting insulator LH with the through bolt and nut.



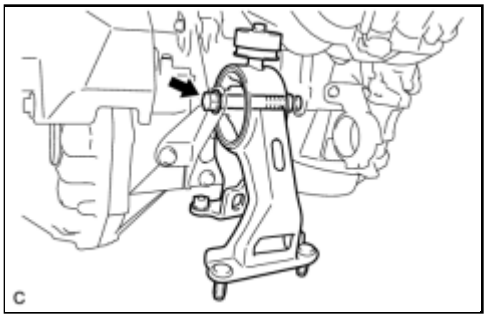
Torque: 56 N·m (571 kgf·cm, 41ft·lbf)

16. TEMPORARILY TIGHTEN CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO

17. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

18. FULLY TIGHTEN CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO

19. FULLY TIGHTEN FRONT ENGINE MOUNTING INSULATOR



(a) Fully tighten the front engine mounting insulator with the nut and through bolt.

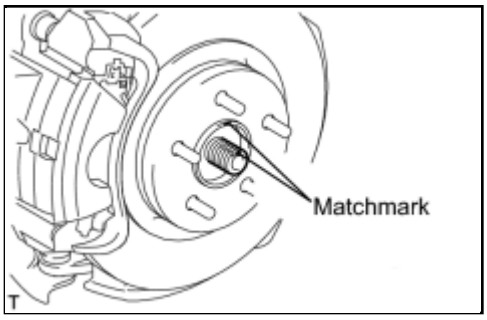
Torque: 73 N·m (744 kgf·cm, 54ft·lbf)

20. FULLY TIGHTEN REAR ENGINE MOUNTING INSULATOR

(a) Fully tighten the rear engine mounting insulator to the engine mounting bracket with the through bolt.

Torque: 65 N·m (663 kgf·cm, 48ft·lbf)

21. INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle)



HINT: INFO **for U250E.**

22. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH INFO

23. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH INFO

24. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH INFO

25. INSTALL STEERING KNUCKLE WITH AXLE HUB LH

(a) Align the matchmarks and connect the front drive shaft assembly to the front axle assembly LH.

26. INSTALL STEERING KNUCKLE WITH AXLE HUB RH

HINT:

Perform the same procedure for the LH side.

27. INSTALL FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY LH INFO

28. INSTALL FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

29. INSTALL FRONT STABILIZER LINK ASSEMBLY LH INFO

30. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

31. INSTALL TIE ROD END SUB-ASSEMBLY LH INFO

32. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

33. INSTALL FRONT SPEED SENSOR LH INFO

34. INSTALL FRONT SPEED SENSOR RH

HINT:

Perform the same procedure for the LH side.

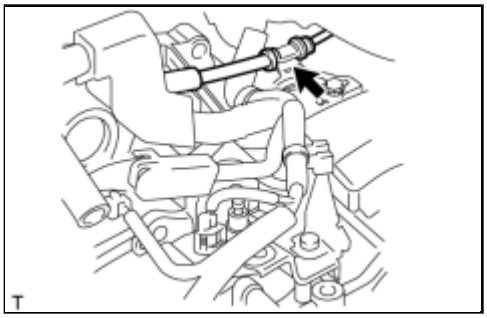
35. INSTALL FRONT AXLE SHAFT LH NUT INFO

36. INSTALL FRONT AXLE SHAFT RH NUT

HINT:

Perform the same procedure for the LH side.

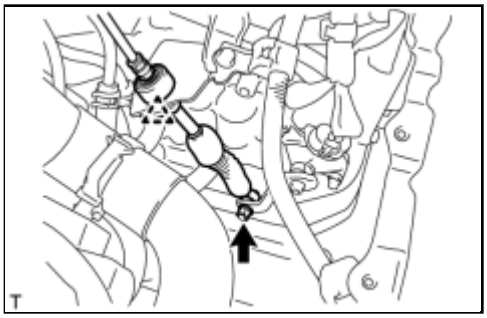
37. INSTALL FRONT EXHAUST PIPE ASSEMBLY INFO



38. INSTALL CENTER EXHAUST PIPE ASSEMBLY INFO

39. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

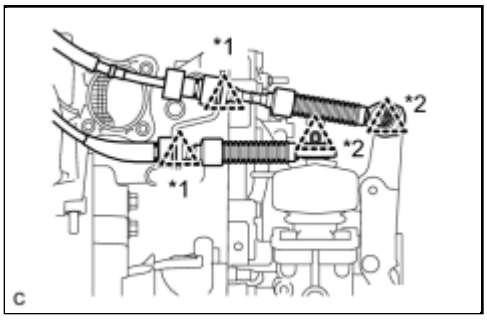
40. INSTALL NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO



41. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

42. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

(a) Connect the transmission control cable to the control cable bracket.

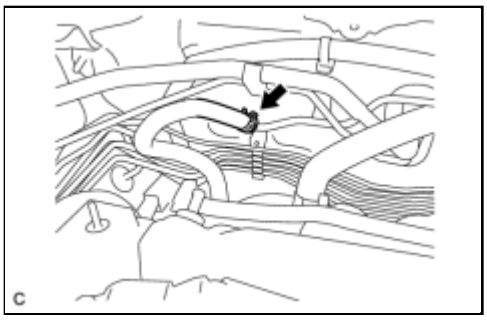


(b) Connect the transmission control cable to the bracket with a new clip.

(c) Connect the transmission control cable assembly to the control shaft lever with the nut.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

43. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)



(a) Install the 2 transmission control cables to the control cable bracket with 2 new clips*1.

(b) Install the 2 transmission control cables to the transaxle with 2 new clips*2.

44. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)

HINT: INFO **for E351.**

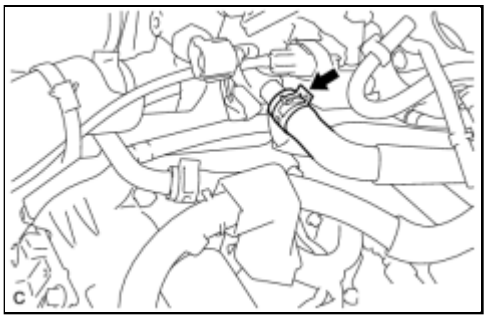
45. CONNECT UNION TO CONNECTOR TUBE HOSE

(a) Connect the union to connector tube hose.

46. INSTALL FUEL TUBE SUB-ASSEMBLY

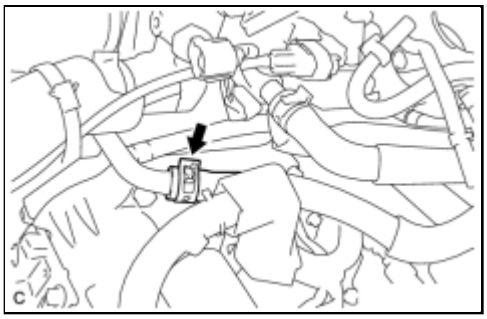
(a) Connect the fuel tube connector and fuel pipe.

CAUTION:



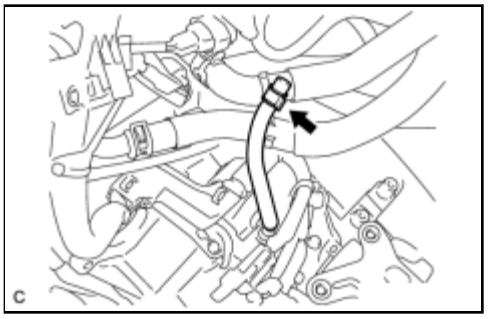
Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer

makes a "click" sound. If the connection is tight, apply a small amount of engine oil to the tip of the pipe. After connecting, pull the pipe and connector to make sure that they are securely connected.



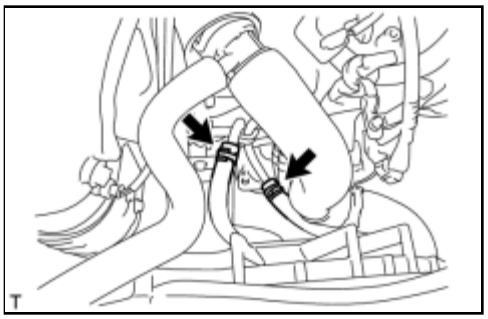
(b) Engage the claw and install the No. 1 fuel pipe clamp.

47. CONNECT INLET HEATER WATER HOSE



(a) Connect the inlet heater water hose with the clamp.

48. CONNECT OUTLET HEATER WATER HOSE



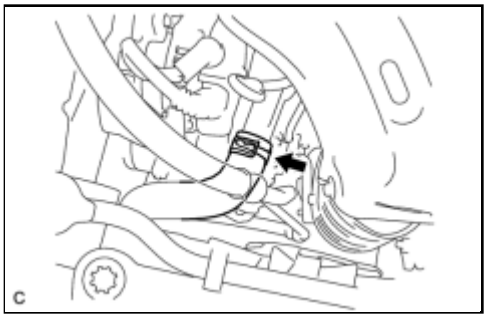
(a) Connect the outlet heater water hose with the clamp.

49. INSTALL BREATHER HOSE (for Automatic Transaxle)

(a) Install the breather hose.

50. CONNECT OIL COOLER HOSE (for Automatic Transaxle)

(a) Connect the 2 oil cooler hoses with the clamps.

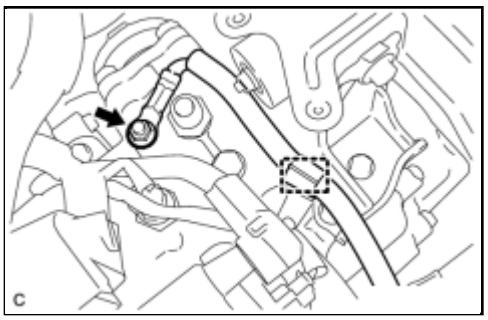


51. INSTALL NO. 1 RADIATOR HOSE

(a) Connect the No. 1 radiator hose with the clamp.

52. INSTALL NO. 2 RADIATOR HOSE

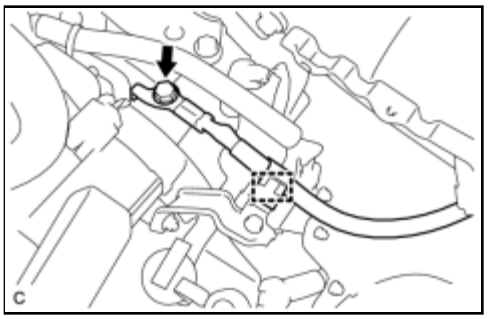
(a) Connect the No. 2 radiator hose with the clamp.



53. INSTALL COMPRESSOR ASSEMBLY WITH PULLEY INFO

54. INSTALL GENERATOR ASSEMBLY INFO

55. INSTALL V-RIBBED BELT INFO

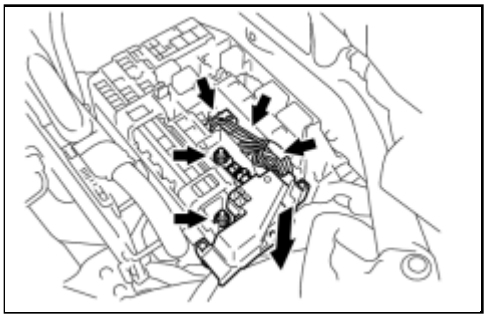


56. INSTALL THROTTLE BODY ASSEMBLY INFO

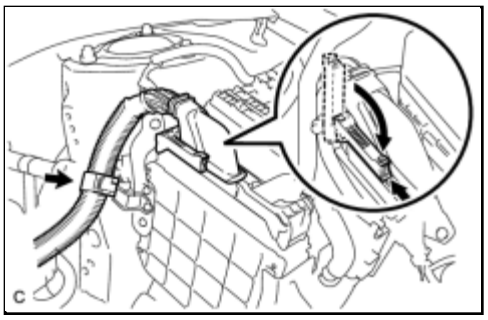
57. INSTALL WIRE HARNESS

(a) Install the ground cable to the transmission with the bolt and clamp (for Manual Transaxle).

Torque: 13 N·m (130 kgf·cm, 10ft·lbf)



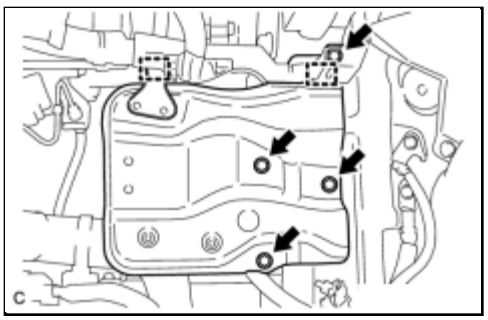
(b) Install the earth wire to the transmission with the bolt and clamp (for Automatic Transaxle).



Torque: 26 N·m (260 kgf·cm, 19ft·lbf)

(c) Install the wire harness with the 2 nuts.

Torque: 8.4 N·m (85 kgf·cm, 74in·lbf)



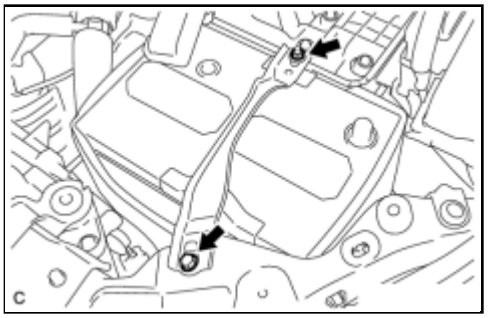
(d) Connect the 3 connectors

(e) Connect the connector to the ECM with the clamp and lock lever.

58. INSTALL BATTERY CARRIER

(a) Install the battery carrier with the 4 bolts.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

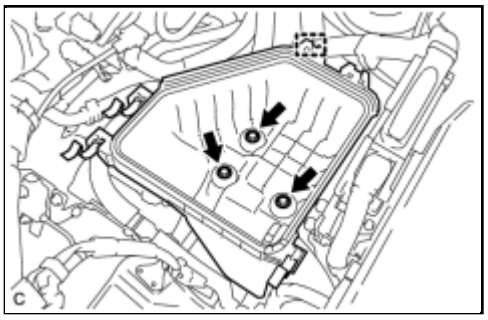


(b) Connect the 2 wire harness clamps.

59. INSTALL BATTERY

(a) Install the battery tray, battery and battery insulator.

(b) Install the battery clamp with the bolt and nut.



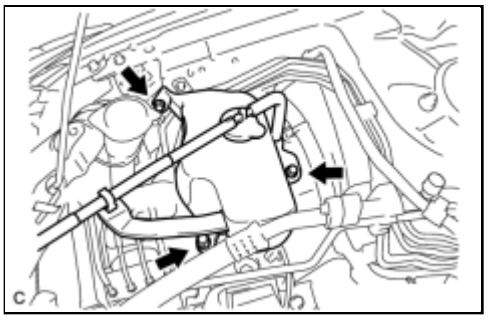
Bolt - Torque: 6.5 N·m (66 kgf·cm, 58in·lbf)
Nut - Torque: 3.5 N·m (36 kgf·cm, 31in·lbf)

(c) Connect the battery cables.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

60. INSTALL AIR CLEANER CASE

(a) Install the air cleaner case with the 3 bolts.



Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

(b) Install the engine wire clamp to the air cleaner case.

(c) Install the air cleaner filter element.

61. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

62. INSTALL RADIATOR RESERVE TANK ASSEMBLY

(a) Install the radiator reserve tank assembly with the 3 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

63. ADD MANUAL TRANSAXLE OIL (for Manual Transaxle)

HINT: INFO **for E351.**

64. INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle)

HINT: INFO for E351.

65. ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

HINT: INFO for U250E.

66. INSPECT AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

HINT: INFO for U250E.

67. INSPECT SHIFT LEVER POSITION (for Automatic Transaxle)

HINT: INFO for U250E.

68. ADJUST SHIFT LEVER POSITION (for Automatic Transaxle)

HINT: INFO for U250E.

69. ADD ENGINE COOLANT INFO

70. WARM UP ENGINE

71. FILL BRAKE FLUID RESERVOIR (for Manual Transaxle)

HINT: INFO for E351.

72. BLEED CLUTCH LINE (for Manual Transaxle)

HINT: INFO for E351.

73. INSPECT FLUID LEVEL (for Manual Transaxle)

HINT: INFO for E351.

74. INSPECT FOR FUEL LEAK INFO

75. INSPECT FOR COOLANT LEAK INFO

76. INSPECT FOR OIL LEAK

77. INSPECT FOR EXHAUST GAS LEAK

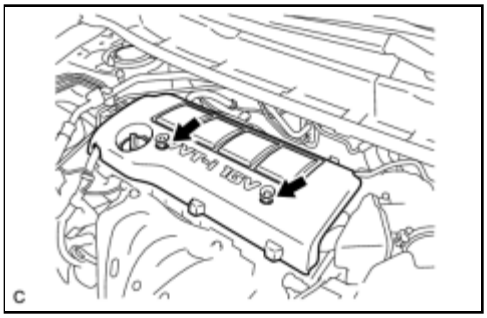
78. INSTALL ENGINE UNDER COVER LH

79. INSTALL ENGINE UNDER COVER RH

80. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

81. INSPECT IGNITION TIMING INFO



82. INSPECT ENGINE IDLING SPEED INFO

83. INSPECT CO/HC INFO

84. ADJUST FRONT WHEEL ALIGNMENT

HINT: INFO .

85. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

(a) Install the No. 1 engine cover sub-assembly with the 2 nuts.

86. CHECK ABS SPEED SENSOR SIGNAL

HINT:

- INFO for ABS.
- INFO for VSC.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002ZLZ00PX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT ENGINE COOLANT

HINT: INFO .

2. INSPECT ENGINE OIL

HINT: INFO .

3. INSPECT BATTERY

HINT: INFO .

4. INSPECT AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Remove the air cleaner cap.

(b) Remove the air filter element.

(c) Visually check that the air filter is not excessively damaged or oily. If necessary, replace the air filter.

5. INSPECT SPARK PLUG INFO

6. INSPECT V-RIBBED BELT INFO

7. INSPECT VALVE AND ADJUSTER NOISE

(a) Rev up the engine several times. Check that the engine does not emit unusual noises. If unusual noises occur, warm up the engine and idle it for over 30 minutes. Then perform the inspection above again. If any defects or problems are found during the inspection above, perform a lash adjuster inspection INFO .

8. INSPECT IGNITION TIMING

(a) When using the Techstream:

(1) Warm up and stop the engine.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch to ON.

(4) Enter Data List Mode on the Techstream.

HINT:

Refer to the Techstream operator's manual for further details.

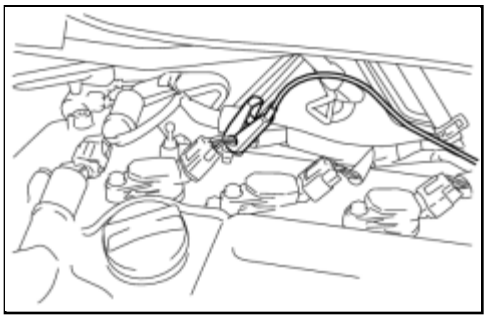
(5) Inspect the ignition timing at idle.

Ignition timing:
8 to 12 degrees BTDC

NOTICE:

- Turn all the electrical systems and the A/C off.

- Inspect the ignition timing with the cooling fans off.
- When checking the ignition timing, shift the transmission to the neutral position.



(6) Enter the following menus : TC (TE1) / OFF.

(7) Turn the ignition switch off.

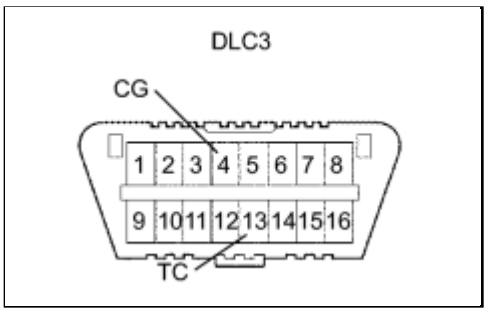
(8) Disconnect the Techstream from the DLC3.

(b) When not using the Techstream:

(1) Remove the No. 2 cylinder head cover INFO .

(2) Connect the tester probe of a timing light to the wire of the ignition connector for No. 1 cylinder.

NOTICE:



Use a timing light that detects the first signal.

(3) Warm up and stop the engine.

(4) Connect the clip of the timing light to the wire harness.

NOTICE:

Use a timing light that detects the primary signal.

(5) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

NOTICE:

Examine the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.

(6) Inspect the ignition timing at idle.

Ignition timing:
8 to 12 degrees BTDC

NOTICE:

- Turn all the electrical systems and the A/C off.
- Inspect the ignition timing with the cooling fans off.
- When checking the ignition timing, shift the transmission to either neutral or park.

(7) Disconnect SST from terminals 13 (TC) and 4 (CG) of the DLC3.

(8) Turn the ignition switch off.

(9) Remove the timing light.

(10) Install the No. 2 cylinder head cover INFO .

9. INSPECT ENGINE IDLE SPEED

(a) Warm up and stop the engine.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Enter Data List Mode on the Techstream.

HINT:

Refer to the Techstream operator's manual for further details.

(e) Inspect the engine idle speed.

Idle speed:
600 to 700 rpm

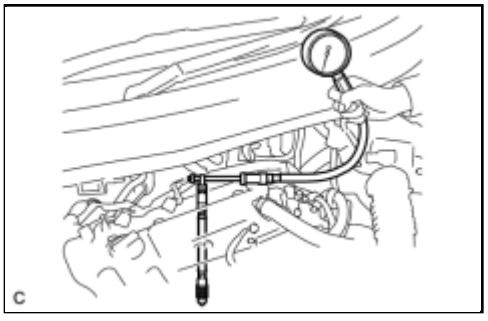
NOTICE:

- Turn all the electrical systems and the A/C off.
- Inspect the idle speed with the cooling fans off.
- When checking the idle speed, shift the transmission to either neutral or park.

(f) Turn the ignition switch off.

(g) Disconnect the Techstream from the DLC3.

10. INSPECT COMPRESSION



(a) Warm up and stop the engine.

(b) Remove the No. 2 cylinder head cover INFO .

(c) Remove the 4 ignition coils.

(d) Remove the 4 spark plugs INFO .

(e) Disconnect the 4 fuel injector connectors.

(f) Inspect the cylinder compression pressure.

(1) Insert a compression gauge into the spark plug hole.

(2) Fully open the throttle.

(3) While cranking the engine, measure the compression pressure.

Compression:
1373 kPa (14.0 kgf/cm^2, 199 psi)
Minimum pressure:
1079 kPa (11.0 kgf/cm^2, 157 psi)
Difference between each cylinder:
98 kPa (1.0 kgf/cm^2, 14.2 psi) or less

NOTICE:

- Use a fully-charged battery so the engine speed can be increased to 250 rpm or more.

- Inspect the other cylinders in the same way.
- Measure the compression in as short time as possible.

(4) If the cylinder compression is low, pour a small amount of engine oil into the cylinder through the spark plug hole, then inspect it again.

HINT:

- If adding oil increases the compression, the piston rings and/or cylinder bore may be worn or damaged.
- If the pressure stays low, the valve may be stuck or seated improperly, or there may be leakage from the gasket.

(g) Connect the 4 fuel injector connectors.

(h) Install the 4 spark plugs INFO .

(i) Install the 4 ignition coils.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(j) Install the No. 2 cylinder head cover INFO .

11. INSPECT CO/HC

HINT:

This check determines whether or not the idle CO/HC complies with local regulations.

(a) Start the engine.

(b) Run the engine at 2500 rpm for approximately 180 seconds.

(c) Insert the CO/HC meter testing probe at least 40 cm (1.3 ft.) into the tailpipe while idling.

(d) Check the CO/HC concentration during idle and when the engine is running at 2500 rpm.

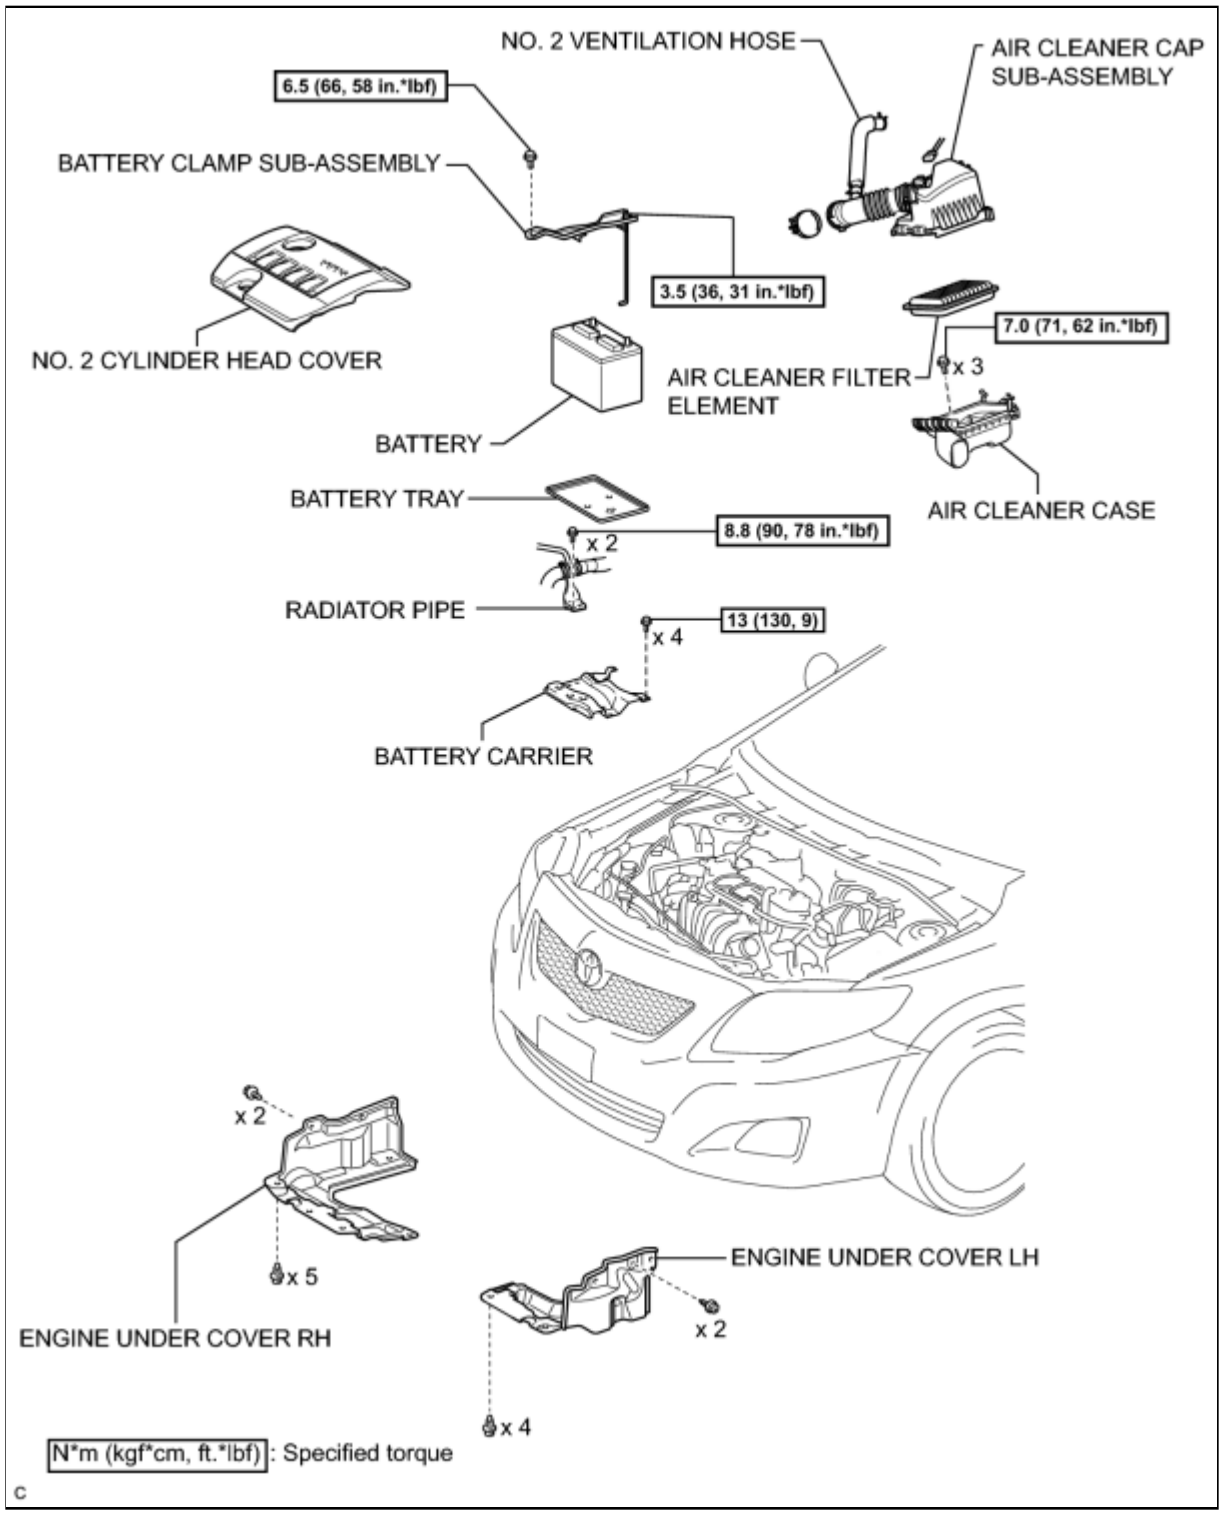
HINT:

When doing the 2 mode (with the engine idling/ running at 2500 rpm) test, the measuring procedures are determined by applicable local regulations.

If the CO/HC concentration does not comply with local regulations, troubleshoot in the order given below.

(1) Check the A/F sensor and heated oxygen sensor operation.

(2) See the table below for possible causes, then inspect the applicable parts and repair them if necessary.



CO	HC	PROBLEM	POSSIBLE CAUSE
Normal	High	Rough idle	1. Faulty ignition: ○ Incorrect timing ○ Fouled, shorted or improperly gapped plugs

CO	HC	PROBLEM	POSSIBLE CAUSE
			2. Incorrect valve clearance 3. Leakage from intake and exhaust valves 4. Leakage from cylinders
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hoses • Intake manifold • Throttle body • Brake booster line 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air cleaner filter element 2. Plugged PCV valve 3. Faulty EFI system: • Faulty pressure regulator • Faulty engine coolant temperature sensor • Faulty mass air flow meter • Faulty ECM • Faulty injectors • Throttle body

Title: 2ZR-FE ENGINE MECHANICAL: ENGINE ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE

HINT: INFO .

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

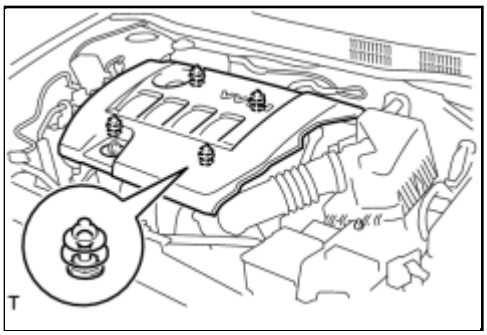
3. REMOVE FRONT WHEEL

4. REMOVE ENGINE UNDER COVER LH

5. REMOVE ENGINE UNDER COVER RH

6. DRAIN ENGINE COOLANT INFO

7. DRAIN ENGINE OIL INFO



8. DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle)

HINT: INFO **for C59.**

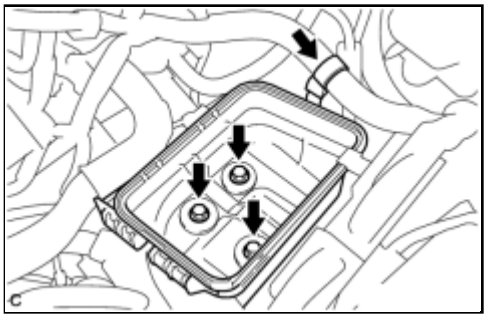
9. DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

HINT: INFO **for U341E.**

10. REMOVE NO. 2 CYLINDER HEAD COVER

(a) Hold the rear of the cover and raise it to disengage the 2 clips on the rear of the cover. Continue to raise the cover to disengage the 2 clips on the front of the cover to remove the cover.

NOTICE:



Attempting to disengage both front and rear clips at the same time may cause the cover to break.

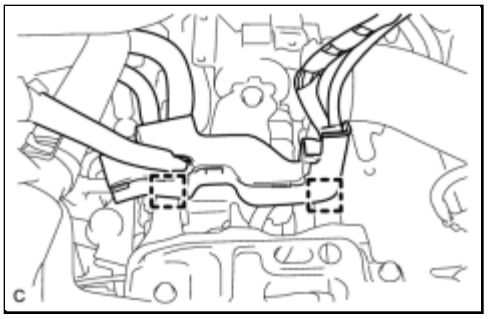
11. REMOVE AIR CLEANER CAP SUB-ASSEMBLY INFO

12. REMOVE AIR CLEANER CASE

(a) Separate the air cleaner filter element from the air cleaner.

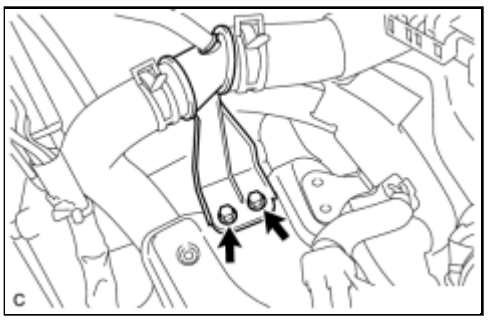
(b) Disconnect the engine wire harness clamp from air cleaner case.

(c) Remove the 3 bolts and the air cleaner case.



13. REMOVE BATTERY

(a) Disconnect the battery cables.

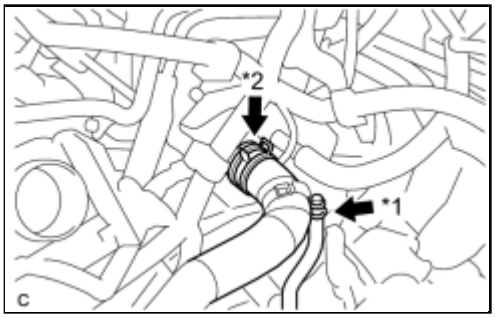


(b) Remove the bolt and loosen the nut.

(c) Remove the battery.

14. REMOVE BATTERY CARRIER

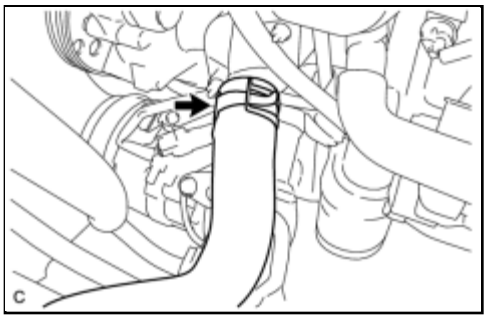
(a) Separate the 2 wire harness clamps from the battery carrier.



(b) Remove the 2 bolts.

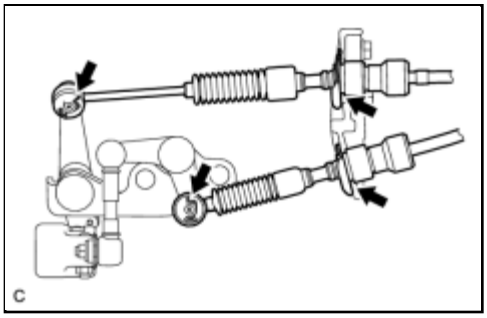
(c) Separate the radiator pipe from the battery carrier.

(d) Remove the 4 bolts and battery carrier.



15. DISCONNECT NO. 1 RADIATOR HOSE

(a) Disengage the clamp*1.

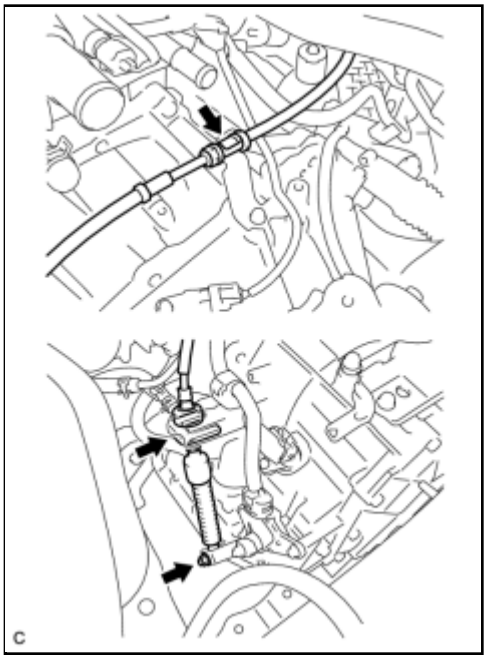


(b) Disconnect the No. 1 radiator hose from the cylinder head with the clamp*2.

16. DISCONNECT NO. 2 RADIATOR HOSE

(a) Disconnect the No. 2 radiator hose from the water inlet hose.

17. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

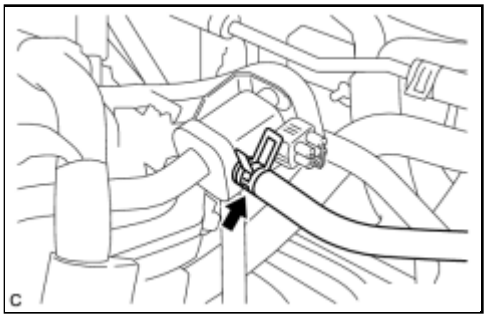


(a) Remove the 2 clips and disconnect the 2 cables from the transaxle.

(b) Remove the 2 clips and disconnect the 2 cables from the control cable bracket.

18. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

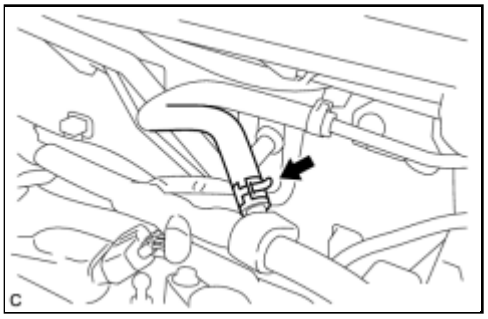
(a) Disconnect the control cable from the control cable support.



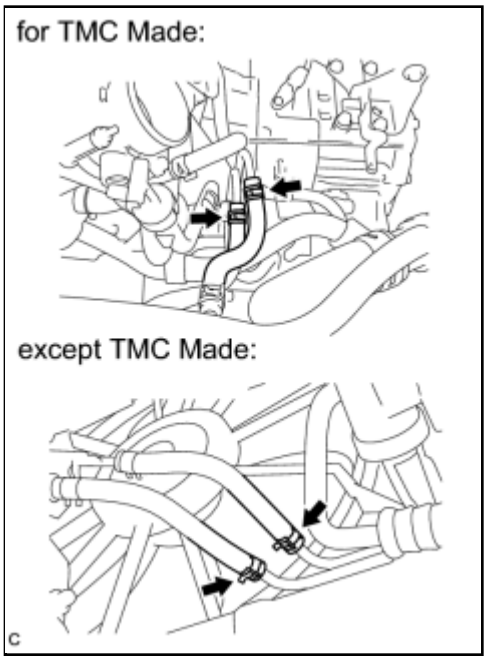
(b) Remove the nut and disconnect the control cable from the control shaft lever.

(c) Remove the clip and disconnect the control cable from the control cable bracket.

(d) Remove the bolt and disconnect the clamp of the control cable.



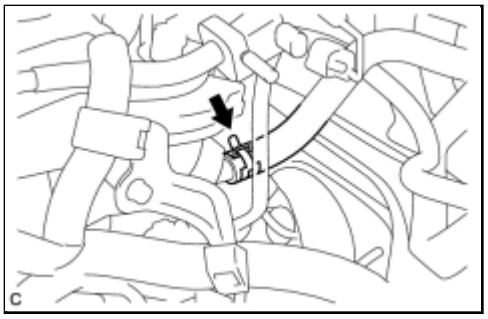
19. DISCONNECT FUEL VAPOR FEED HOSE ASSEMBLY



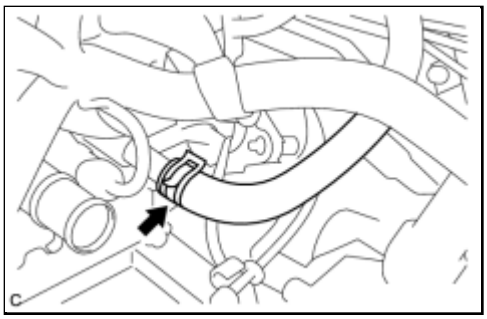
(a) Disconnect the fuel vapor feed hose.

20. DISCONNECT UNION TO CONNECTOR TUBE HOSE

(a) Disconnect the union to connector tube hose.

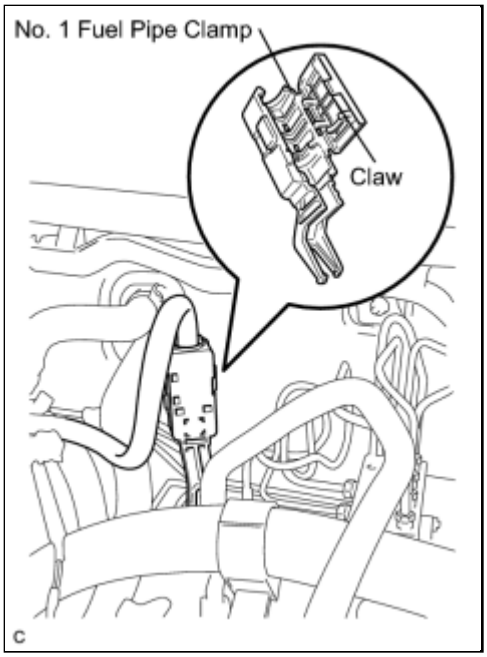


21. DISCONNECT OIL COOLER HOSE (for Automatic Transaxle)



(a) Disconnect the 2 oil cooler hoses from the oil cooler tube.

22. DISCONNECT OUTLET HEATER WATER HOSE

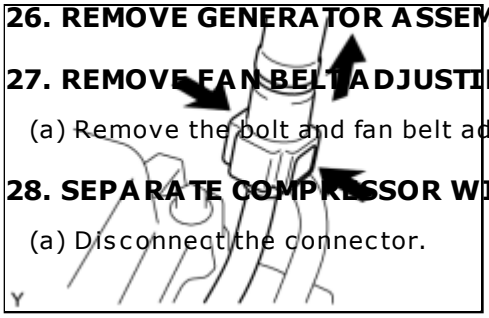


(a) Disconnect the outlet heater water hose from the engine.

23. DISCONNECT INLET HEATER WATER HOSE

(a) Disconnect the inlet heater water hose from the engine.

24. DISCONNECT FUEL TUBE SUB-ASSEMBLY



(a) Release the claw and remove the No. 1 fuel pipe clamp.

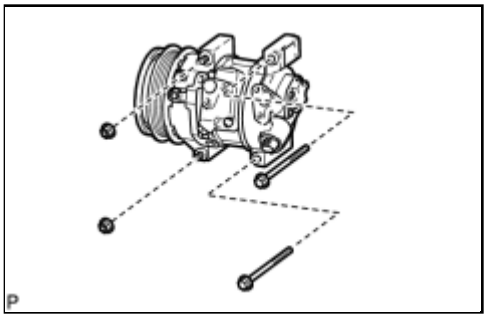
(b) Pinch the retainer as illustrated, then pull the fuel tube connector out of the pipe.

25. REMOVE V-RIBBED BELT INFO

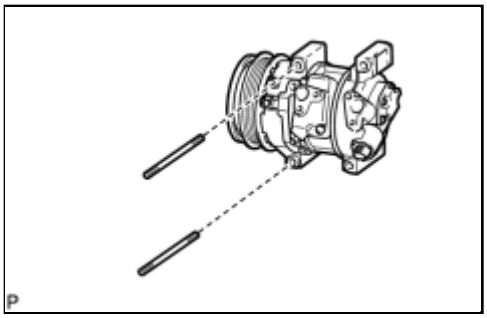
26. REMOVE GENERATOR ASSEMBLY

27. REMOVE FAN BELT ADJUSTING BAR

(a) Remove the bolt and fan belt adjusting bar.



28. SEPARATE COMPRESSOR WITH PULLEY ASSEMBLY (w/ Air Conditioning System)

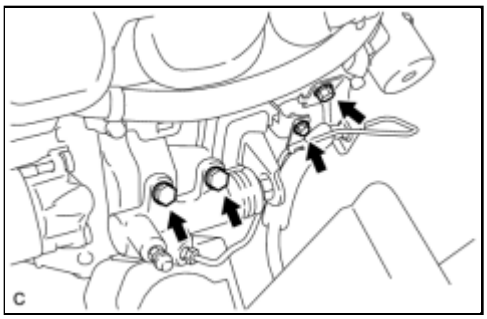


(a) Disconnect the connector.

(b) Remove the 2 bolts and 2 nuts.

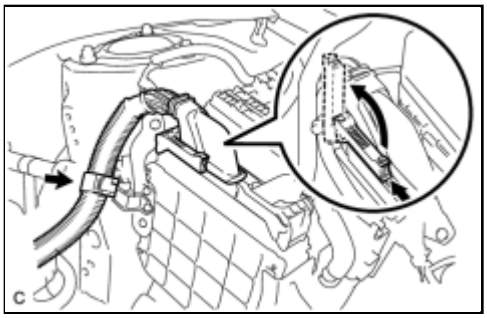
NOTICE INFO

- Remove any dirt and foreign matter from the fuel tube connector before performing this work.
- Do not allow any scratches or foreign matter on the parts when disconnecting, as the fuel tube connector has the O-rings that seal the pipe.
- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, kink or twist the nylon tube.
- Protect the disconnected parts by covering them with vinyl bags after disconnecting the fuel tube.
- If the fuel tube connector and pipe are stuck, push and pull to release them.



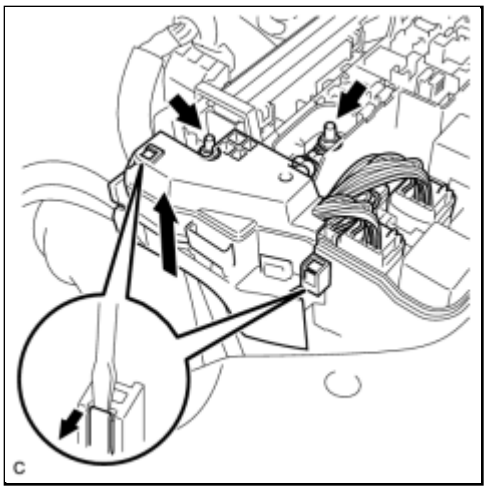
(c) Using a "TORX" socket wrench (E8), remove the 2 stud bolts and compressor with pulley assembly.

HINT:



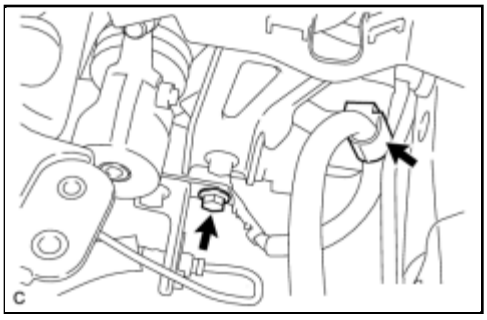
Secure the compressor and hoses off to the side instead of discharging the A/C system.

29. SEPARATE CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)

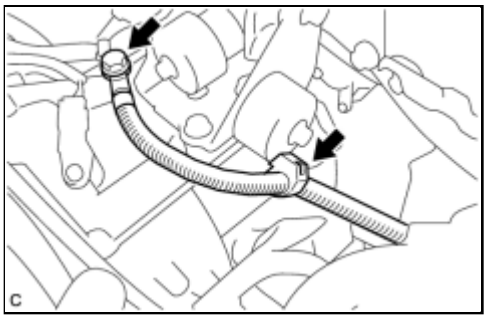


(a) Remove the 4 bolts and clutch tube bracket, and separate the clutch release cylinder assembly.

30. DISCONNECT WIRE HARNESS



(a) Pull up the lever to disconnect the ECM connector and release the clamp.



(b) Remove the 2 nuts.

(c) Remove the 3 connectors and 2 clamps from the engine room junction block and disconnect the wire harness.

(d) Remove the bolt and clamp (for Manual Transaxle).

(e) Remove the bolt and clamp (for Automatic Transaxle).

(f) Disconnect all the wire harnesses and connectors.

Make sure that no wire harness is connected between the body and engine.

31. SECURE STEERING WHEEL INFO

32. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO

33. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

34. DISCONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

35. REMOVE FRONT EXHAUST PIPE ASSEMBLY INFO

36. REMOVE FRONT AXLE SHAFT LH NUT INFO

37. REMOVE FRONT AXLE SHAFT RH NUT

HINT:

Perform the same procedure for the LH side.

38. DISCONNECT FRONT SPEED SENSOR LH INFO

39. DISCONNECT FRONT SPEED SENSOR RH

HINT:

Perform the same procedure for the LH side.

40. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

41. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

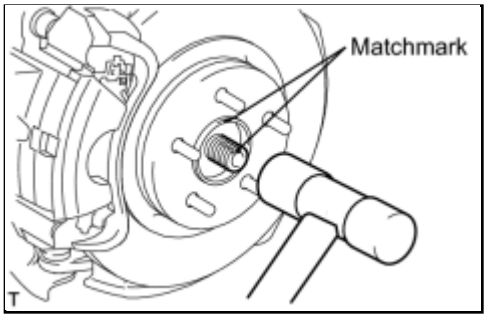
Perform the same procedure for the LH side.

42. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

43. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.



44. SEPARATE FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY LH INFO

45. SEPARATE FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

46. SEPARATE STEERING KNUCKLE WITH AXLE HUB LH

(a) Put matchmarks on the drive shaft and axle hub.

NOTICE:

Do not punch the marks.

(b) Using a plastic-faced hammer, disconnect the front axle assembly LH.

NOTICE:

- Be careful not to damage the boot and speed sensor rotor.
- Do not excessively push out the drive shaft from the axle assembly.

47. SEPARATE STEERING KNUCKLE WITH AXLE HUB RH

HINT:

Perform the same procedure for the LH side.

48. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH INFO

49. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH INFO

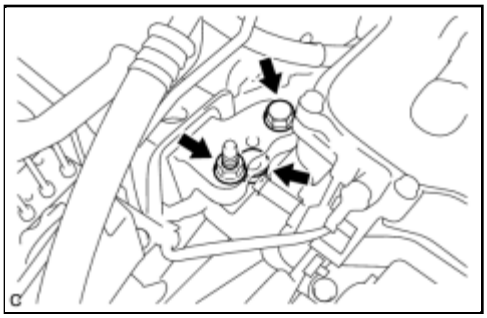
50. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH INFO

51. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING RH INFO

52. REMOVE FLYWHEEL HOUSING UNDER COVER (for Automatic Transaxle) INFO

53. REMOVE DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle) INFO

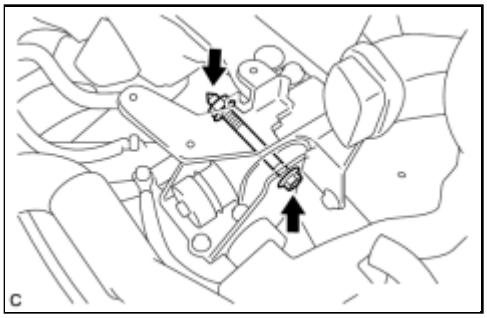
54. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO



55. REMOVE CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO

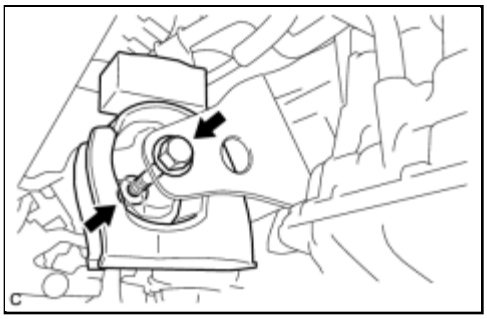
56. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine lifter.



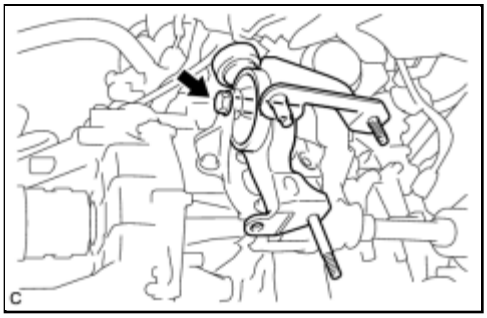
NOTICE:

Place the engine on wooden blocks or equivalent so that the engine is level.



(b) Remove the bolt and 2 nuts, and separate the engine mounting insulator RH.

(c) Remove the through bolt and nut, and separate the engine mounting insulator LH.

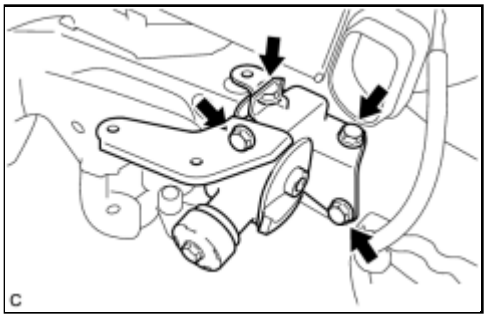


(d) Carefully remove the engine with transaxle from the vehicle.

57. REMOVE FRONT ENGINE MOUNTING INSULATOR

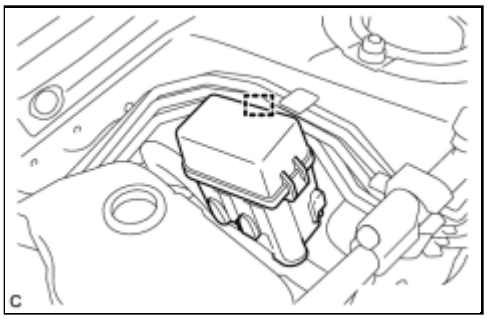
(a) Remove the bolt, nut and front engine mounting insulator.

58. REMOVE REAR ENGINE MOUNTING INSULATOR



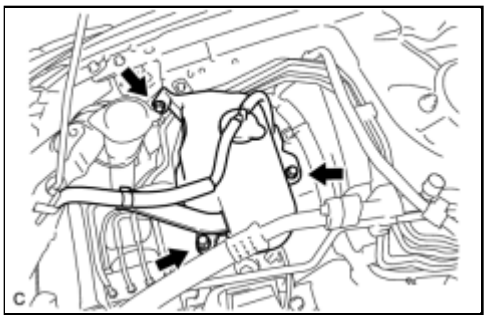
(a) Remove the through bolt and rear engine mounting insulator.

59. REMOVE ENGINE MOUNTING INSULATOR LH

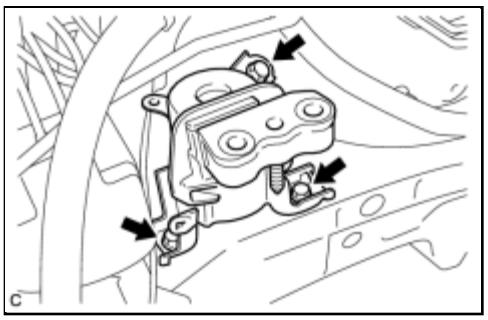


(a) Remove the 4 bolts and engine mounting insulator LH.

HINT:



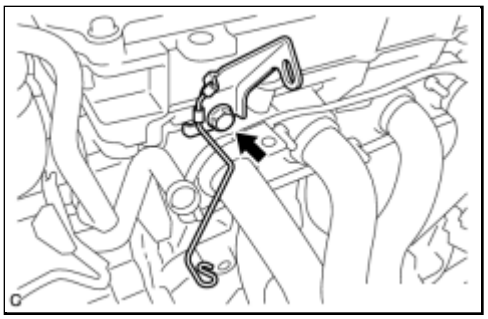
Perform this procedure only when replacement of the engine mounting insulator is necessary.



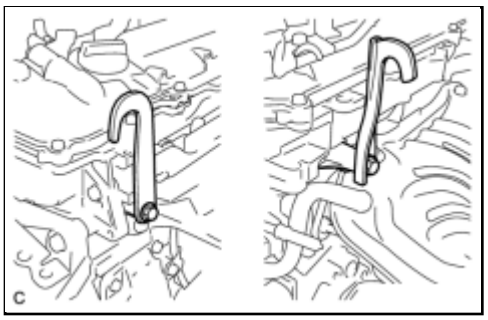
60. REMOVE ENGINE MOUNTING INSULATOR RH

(a) Disconnect the clamp, and release the relay block assembly.

(b) Remove the 3 bolts and radiator reserve tank.



(c) Remove the 3 bolts and engine mounting insulator RH.



HINT:

Perform this procedure only when replacement of the engine mounting insulator is necessary.

61. INSTALL ENGINE HANGER

(a) Remove the bolt and wire harness bracket.

(b) Install the 2 engine hangers with the 2 bolts.

Torque: 43 N·m (439 kgf·cm, 32ft·lbf)

PART NAME	PART NO.
No. 1 engine hanger	12281-37021
No. 2 engine hanger	12282-37011
Bolt	91552-81050

62. REMOVE FLYWHEEL HOUSING SIDE COVER

63. REMOVE STARTER ASSEMBLY INFO

64. REMOVE MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT: INFO **for C59.**

65. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT: INFO **for U341E.**

66. REMOVE CLUTCH COVER ASSEMBLY (for Manual Transaxle) INFO

67. REMOVE CLUTCH DISC ASSEMBLY (for Manual Transaxle) INFO

68. REMOVE FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) INFO

69. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) INFO

70. REMOVE ENGINE WIRE

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WH4019X
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL ENGINE WIRE

2. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle) INFO

3. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle) INFO

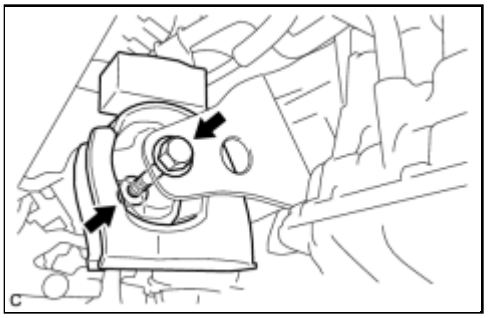
4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) INFO

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) INFO

6. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY (for Manual Transaxle) INFO

7. INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT: INFO **for C59.**



8. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT: INFO **for U341E.**

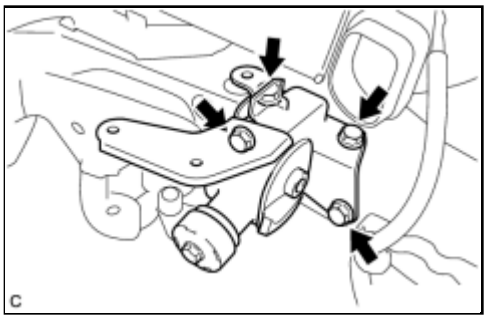
9. INSTALL STARTER ASSEMBLY INFO

10. INSTALL FLYWHEEL HOUSING SIDE COVER

11. INSTALL FRONT ENGINE MOUNTING INSULATOR

(a) Install the front engine mounting insulator with the nut and bolt.

Torque: 73 N·m (744 kgf·cm, 54ft·lbf)



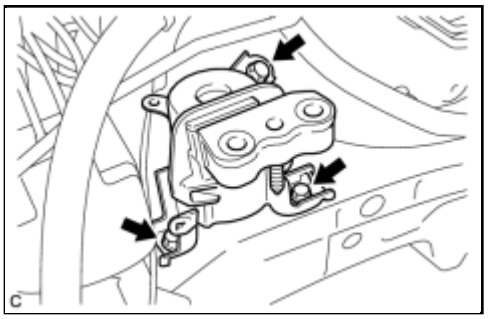
12. INSTALL REAR ENGINE MOUNTING INSULATOR

(a) Install the rear engine mounting insulator to the engine mounting bracket with the through bolt.

except TMC made - Torque: 65 N·m (663 kgf·cm, 48ft·lbf)
for TMC made - Torque: 87 N·m (887 kgf·cm, 64ft·lbf)

13. INSTALL ENGINE MOUNTING INSULATOR LH

(a) Temporarily install the engine mounting insulator LH with the 4 bolts.



(b) Tighten the 4 bolts.

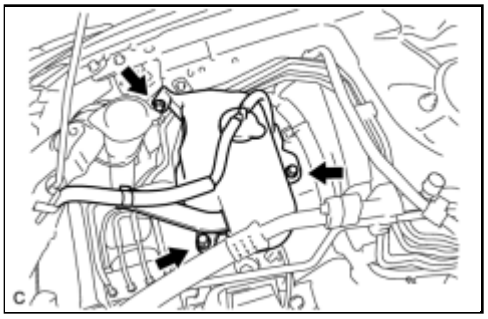
Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

HINT:

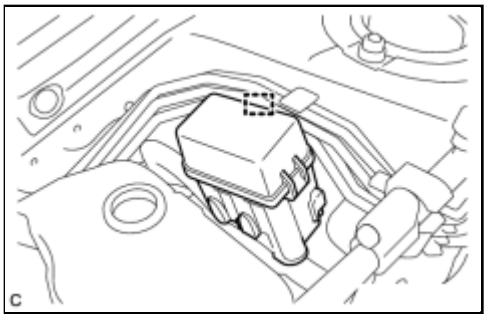
Perform this procedure only when replacement of the engine mounting insulator is necessary.

14. INSTALL ENGINE MOUNTING INSULATOR RH

(a) Install the engine mounting insulator RH with the 3 bolts.



HINT:



Perform this procedure only when replacement of the engine mounting insulator is necessary.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

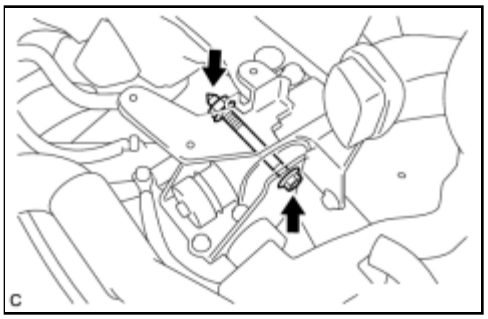
(b) Install the radiator reserve tank with the 3 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

(c) Install the relay block assembly.

15. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

(a) Set the engine assembly with transaxle and front suspension crossmember on the engine lifter.

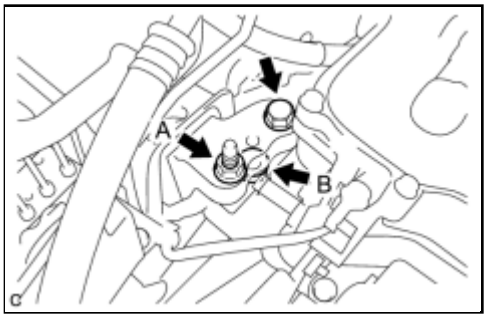


(b) Operate the engine lifter and lift the engine assembly with transaxle and front suspension crossmember to the position where the engine mounting insulators RH and LH can be installed.

CAUTION:

Do not raise the engine more than necessary. If the engine is raised excessively, the vehicle may also be lifted up.

NOTICE:



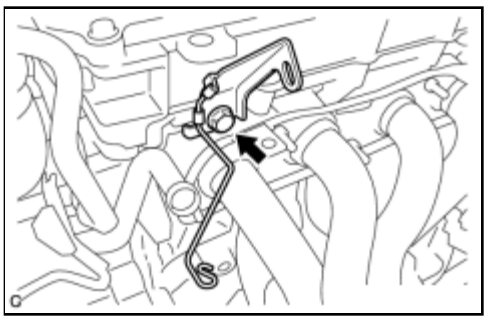
- Make sure that the engine is clear of all wiring and hoses.
- While raising the engine into the vehicle, do not allow it to contact the vehicle.

(c) Install the engine mounting insulator LH with the through bolt and nut.

Torque: 56 N·m (571 kgf·cm, 41ft·lbf)

(d) Install the engine mounting insulator RH with the bolt and 2 nuts.

Nut A - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)
Nut B - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)
Bolt - Torque: 95 N·m (969 kgf·cm, 70ft·lbf)



16. TEMPORARILY INSTALL CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO

17. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

18. FULLY TIGHTEN CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY INFO

19. REMOVE ENGINE HANGER

(a) Remove the 2 bolts and 2 engine hangers.

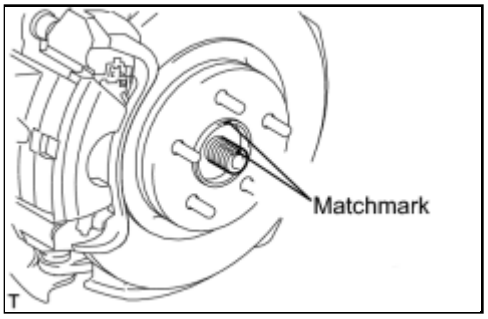
(b) Install the wire harness bracket with the bolt.

Torque: 60 N·m (612 kgf·cm, 44ft·lbf)

20. INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT (for Automatic Transaxle) INFO

21. INSTALL FLYWHEEL HOUSING UNDER COVER (for Automatic Transaxle) INFO

22. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH INFO



23. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING RH INFO

24. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH INFO

25. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH INFO

26. INSTALL STEERING KNUCKLE WITH AXLE HUB LH

(a) Align the matchmarks and connect the front drive shaft assembly to the front axle assembly LH.

27. INSTALL STEERING KNUCKLE WITH AXLE HUB RH

HINT:

Perform the same procedure for the LH side.

28. INSTALL FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY LH INFO

29. INSTALL FRONT LOWER NO. 1 SUSPENSION ARM SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

30. INSTALL FRONT STABILIZER LINK ASSEMBLY LH INFO

31. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

32. CONNECT TIE ROD END SUB-ASSEMBLY LH INFO

33. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure for the LH side.

34. INSTALL FRONT SPEED SENSOR LH INFO

35. INSTALL FRONT SPEED SENSOR RH

HINT:

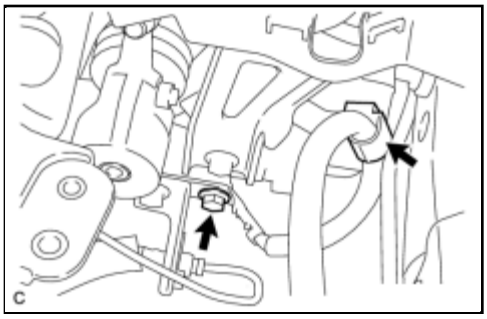
Perform the same procedure for the LH side.

36. INSTALL FRONT AXLE SHAFT LH NUT INFO

37. INSTALL FRONT AXLE SHAFT RH NUT

HINT:

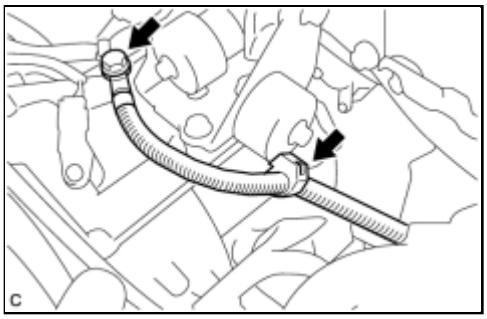
Perform the same procedure for the LH side.



38. INSTALL FRONT EXHAUST PIPE ASSEMBLY INFO

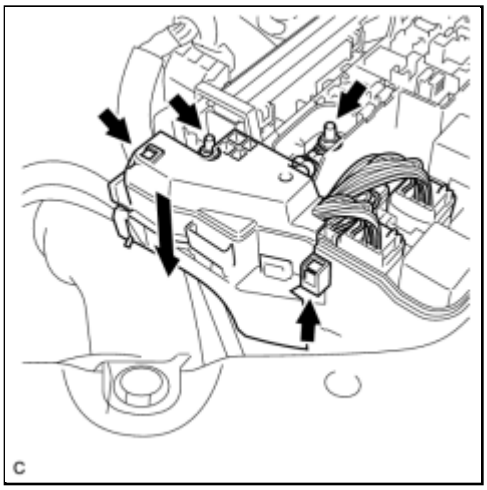
39. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

40. INSTALL NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO



41. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

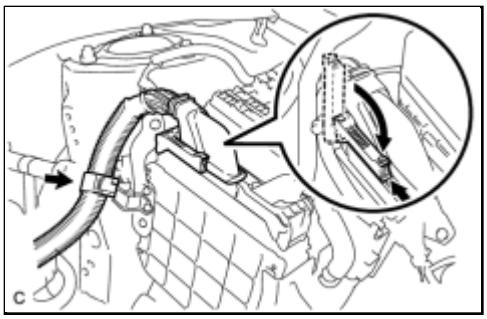
42. INSTALL WIRE HARNESS



(a) Install the earth wire to the engine compartment with the bolt and clamp (for Manual Transaxle).

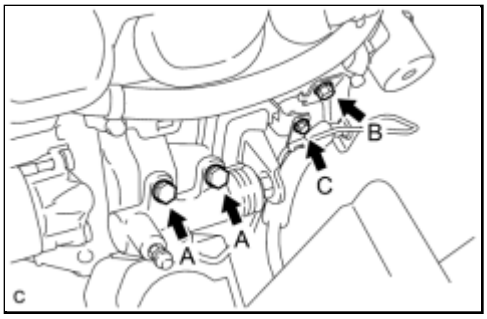
Torque: 13 N·m (130 kgf·cm, 10ft·lbf)

(b) Install the earth wire to the engine compartment with the bolt and clamp (for Automatic Transaxle).



Torque: 26 N·m (260 kgf·cm, 19ft·lbf)

(c) Install the wire harness with the 2 nuts.



Torque: 8.4 N·m (85 kgf·cm, 74in·lbf)

(d) Connect the 3 connectors and 2 wire harness clamps to the engine room junction block.

(e) Connect the connector to the ECU with the lock lever and connect the clamp.

43. INSTALL CLUTCH RELEASE CYLINDER ASSEMBLY (for Manual Transaxle)

(a) Install the clutch release cylinder assembly with the 4 bolts and clutch tube bracket.

Bolt A - Torque: 12 N·m (120 kgf·cm, 9ft·lbf)
Bolt B - Torque: 12 N·m (122 kgf·cm, 9ft·lbf)
Bolt C - Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

44. INSTALL COMPRESSOR WITH PULLEY ASSEMBLY (w/ Air Conditioning System) INFO

45. INSTALL FAN BELT ADJUSTING BAR

(a) Install the bolt and fan belt adjusting bar.

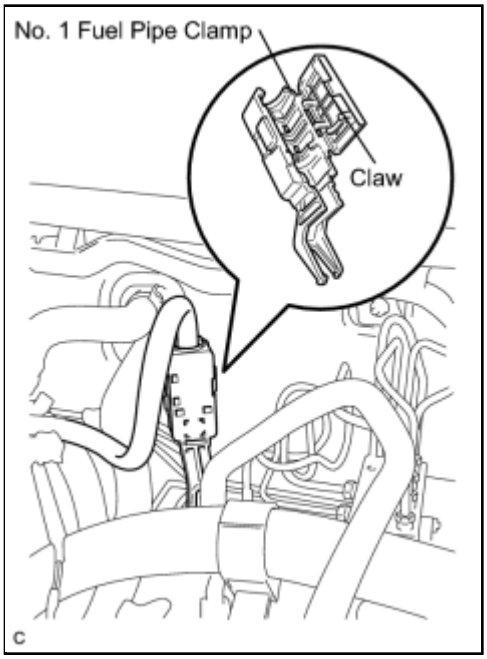
Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

46. INSTALL GENERATOR ASSEMBLY INFO

47. INSTALL V-RIBBED BELT INFO

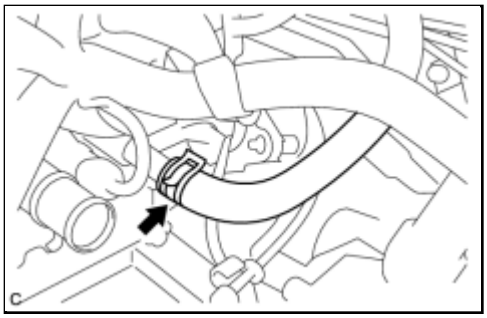
48. ADJUST V-RIBBED BELT INFO

49. INSPECT V-RIBBED BELT INFO



50. CONNECT FUEL TUBE SUB-ASSEMBLY

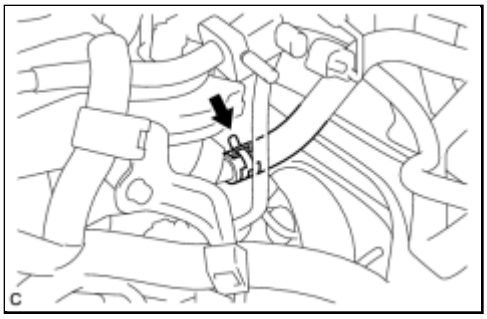
(a) Connect the fuel tube connector and fuel pipe.



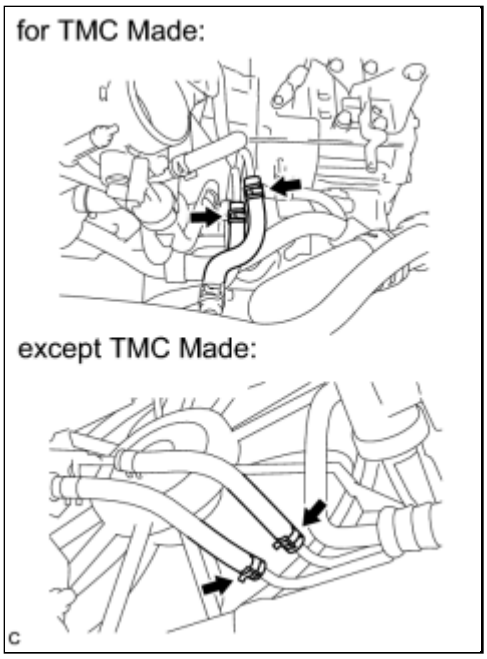
CAUTION:

Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound. If the connection is tight, apply a small amount of engine oil to the tip of the pipe. After connecting, pull on the pipe and connector to make sure that they are securely connected.

(b) Engage the claw and install the No. 1 fuel pipe clamp.

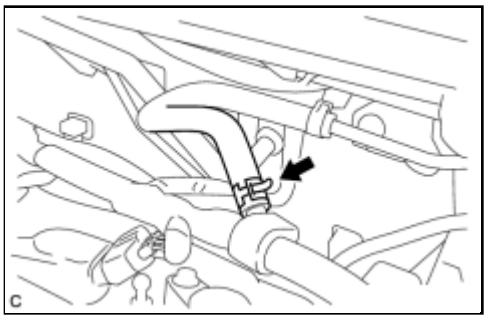


51. CONNECT INLET HEATER WATER HOSE



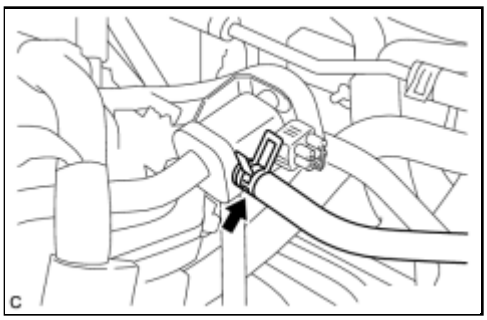
(a) Connect the inlet heater water hose with the clamp.

52. CONNECT OUTLET HEATER WATER HOSE



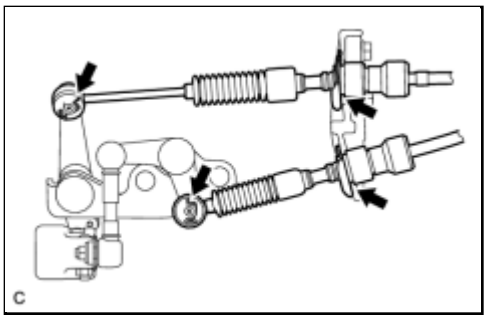
(a) Connect the outlet heater water hose with the clamp.

53. CONNECT OIL COOLER HOSE (for Automatic Transaxle)



(a) Connect the 2 oil cooler hoses with the clamps.

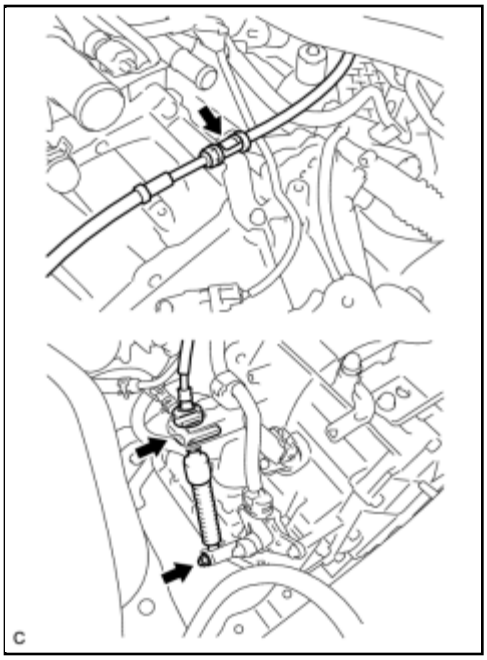
54. CONNECT UNION TO CONNECTOR TUBE HOSE



(a) Connect the union to connector tube hose.

55. CONNECT FUEL VAPOR FEED HOSE ASSEMBLY

(a) Connect the fuel vapor feed hose assembly.



56. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

(a) Install the transmission control cable to the control cable bracket with 2 new clips.

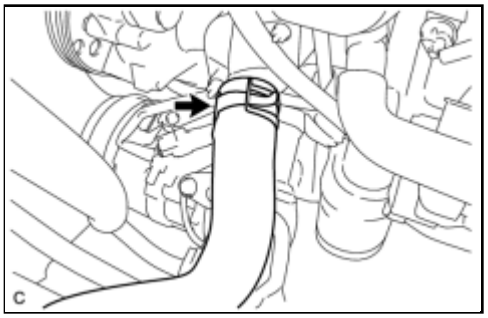
(b) Install the transmission control cable to the transaxle with the 2 clips.

57. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

(a) Secure the control cable onto the control cable bracket with a new clip.

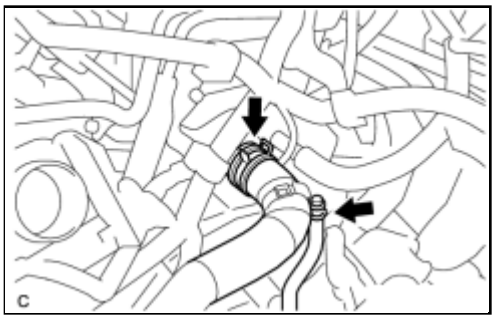
(b) Connect the control cable onto the control shaft lever with the nut.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)



(c) Connect the control cable to the cable support.

(d) Connect the clamp of the control cable with the bolt.

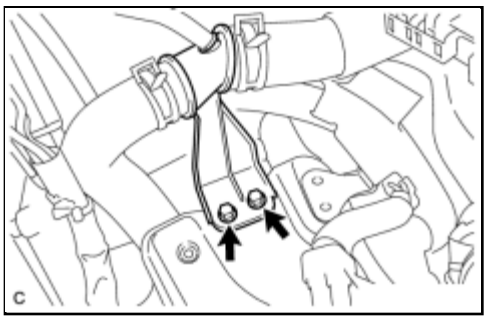


Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

58. CONNECT NO. 2 RADIATOR HOSE

(a) Connect the No. 2 radiator hose with the clamp.

59. CONNECT NO. 1 RADIATOR HOSE

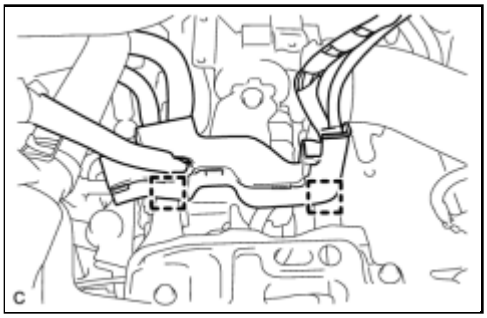


(a) Connect the No. 1 radiator hose with the clamp.

(b) Connect the clamp.

60. INSTALL BATTERY CARRIER

(a) Install the battery carrier with the 4 bolts.



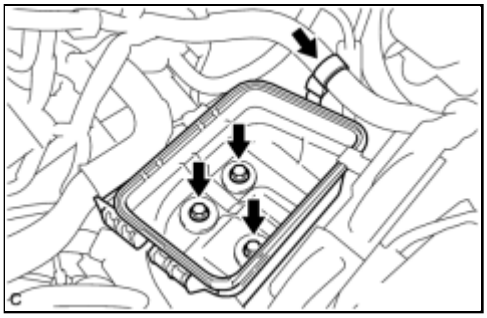
Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

(b) Connect the radiator pipe with the 2 bolts.

Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

(c) Connect the 2 wire harness clamps.

61. INSTALL BATTERY



(a) Install the battery clamp with the bolt and nut.

for bolt - Torque: 6.5 N·m (66 kgf·cm, 58in·lbf)
for nut - Torque: 3.5 N·m (36 kgf·cm, 31in·lbf)

(b) Connect the battery cables.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

62. INSTALL AIR CLEANER CASE

(a) Install the air cleaner case with the 3 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

(b) Install the wire harness clamp to the air cleaner case.

(c) Install the air cleaner filter element.

63. INSTALL AIR CLEANER CAP SUB-ASSEMBLY INFO

64. ADD TRANSAXLE OIL (for Manual Transaxle)

HINT: INFO **for C59.**

65. INSPECT AND ADJUST TRANSAXLE OIL (for Manual Transaxle)

HINT: INFO **for C59.**

66. ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

HINT: INFO **for U341E.**

67. INSPECT TRANSAXLE FLUID LEVEL (for Automatic Transaxle)

HINT: INFO **for U341E.**

68. INSPECT FOR AUTOMATIC TRANSAXLE FLUID LEAK (for Automatic Transaxle)

69. INSPECT SHIFT LEVER POSITION (for Automatic Transaxle)

HINT: INFO **for U341E.**

70. ADJUST SHIFT LEVER POSITION (for Automatic Transaxle)

HINT: INFO **for U341E.**

71. ADD ENGINE COOLANT INFO

72. ADD ENGINE OIL INFO

73. INSPECT ENGINE OIL LEVEL INFO

74. INSPECT FOR FUEL LEAK INFO

75. INSPECT FOR ENGINE COOLANT LEAK INFO

76. INSPECT FOR OIL LEAK

77. INSPECT FOR EXHAUST GAS LEAK

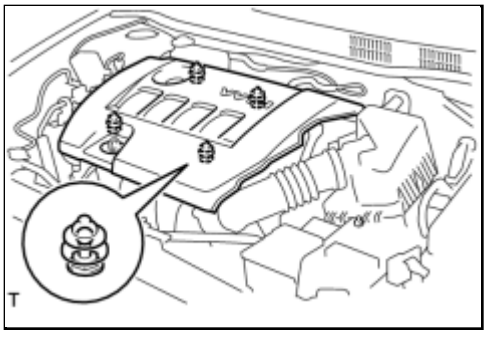
78. INSTALL ENGINE UNDER COVER LH

79. INSTALL ENGINE UNDER COVER RH

80. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

81. INSPECT IGNITION TIMING INFO



82. INSPECT ENGINE IDLE SPEED INFO

83. INSPECT CO/HC INFO

84. ADJUST FRONT WHEEL ALIGNMENT

HINT: INFO .

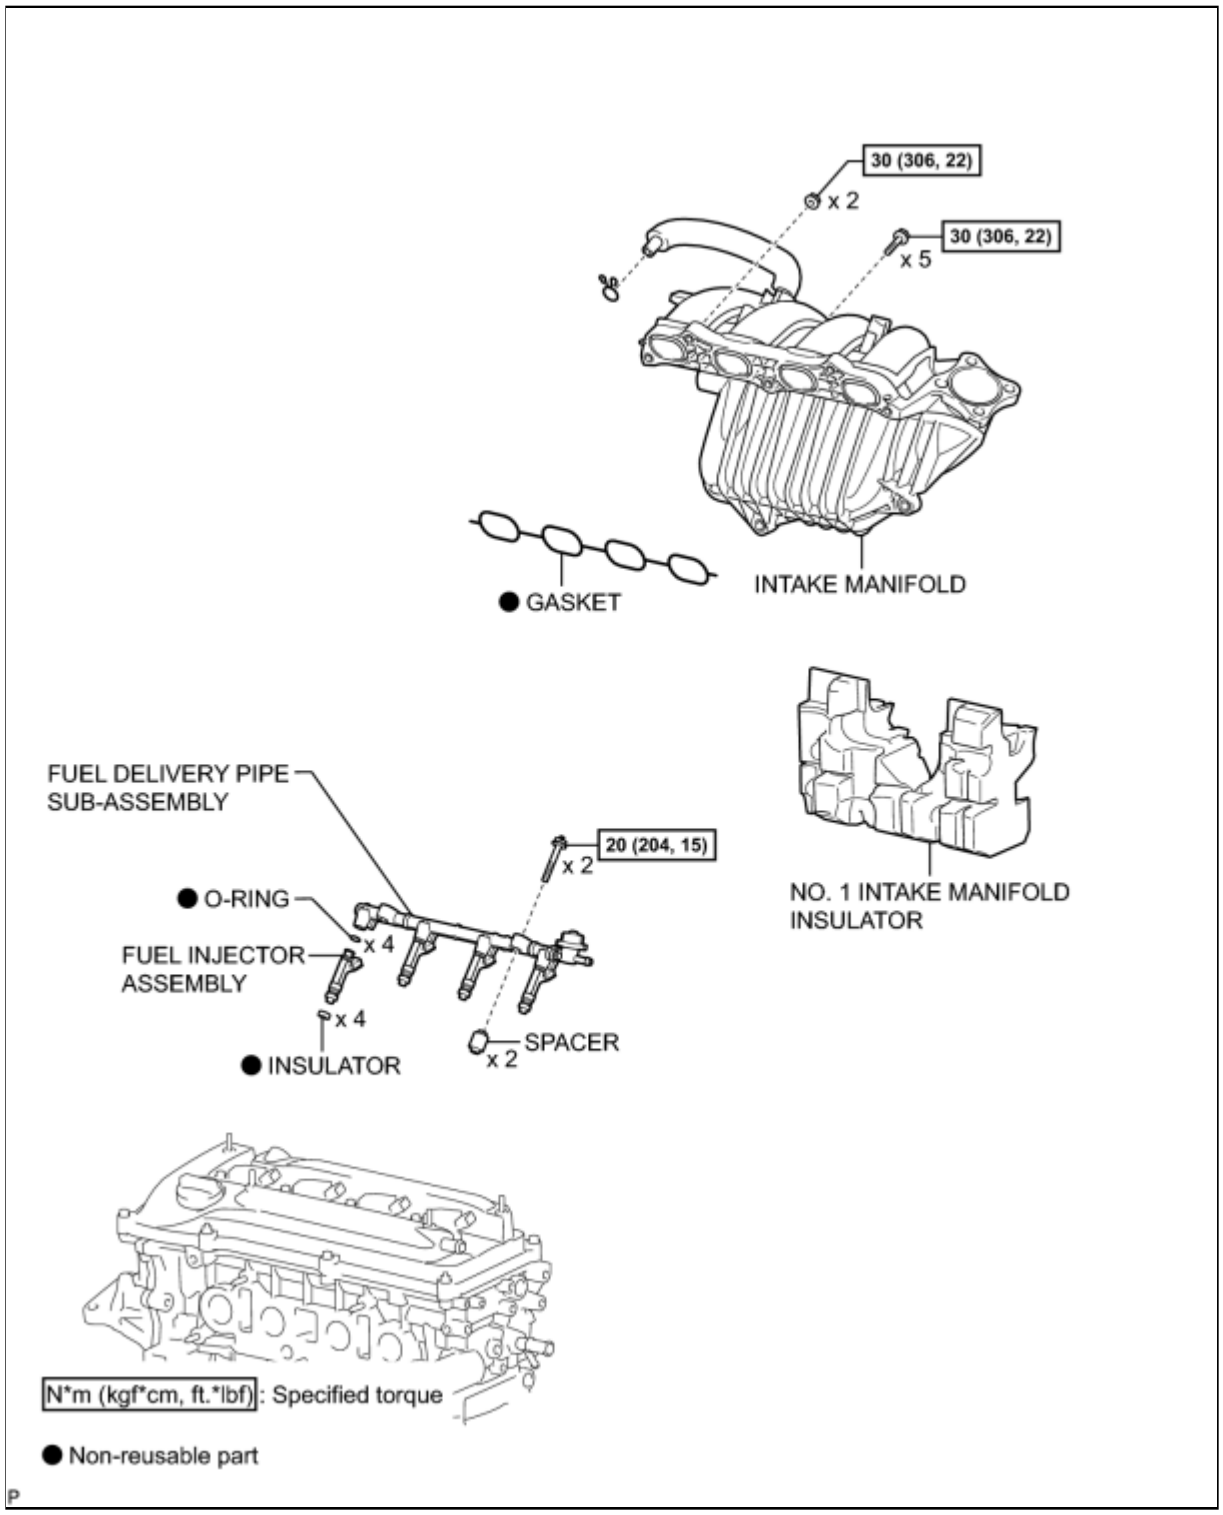
85. INSTALL NO. 2 CYLINDER HEAD COVER

(a) Engage the 4 clips to install the No. 2 cylinder head cover.

NOTICE:

- Be sure to engage the clips securely.
- Do not apply excessive force or do not hit the cover to engage the clips. This may cause the cover to break.

86. CHECK ABS SPEED SENSOR SIGNAL



HINT: INFO **for ABS.**

INFO **for VSC.**

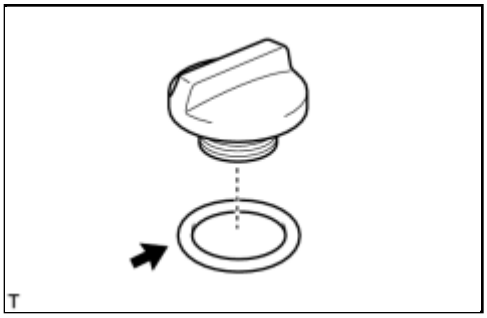
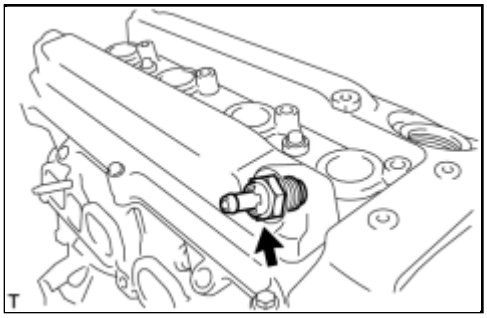
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE UNIT: DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

1. REMOVE OIL FILLER CAP SUB-ASSEMBLY

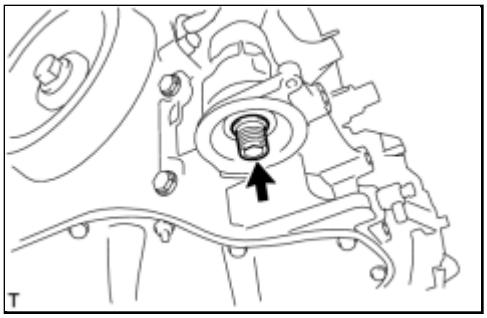


(a) Remove the oil filler cap from the cylinder head cover.

2. REMOVE OIL FILLER CAP GASKET

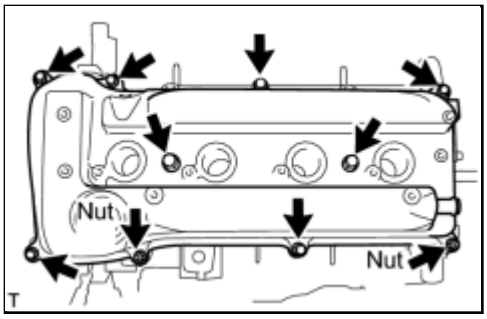
(a) Remove the oil filler cap gasket from the oil filler cap.

3. REMOVE VENTILATION VALVE SUB-ASSEMBLY



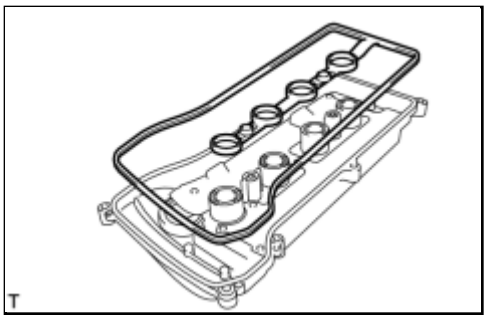
(a) Using a 22 mm deep socket wrench, remove the ventilation valve from the cylinder head cover.

4. REMOVE SPARK PLUG INFO



5. REMOVE OIL FILTER SUB-ASSEMBLY INFO

6. REMOVE OIL FILTER UNION

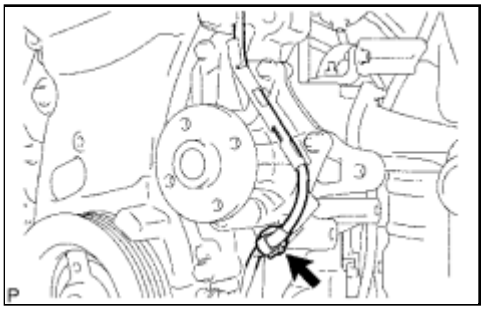


(a) Using a 12 mm socket hexagon wrench, remove the oil filter union.

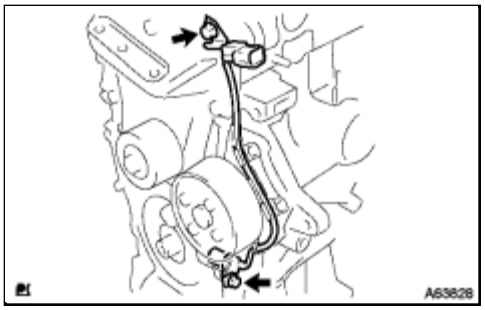
7. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 8 bolts and 2 nuts, and remove the cylinder head cover.

8. REMOVE CYLINDER HEAD COVER GASKET



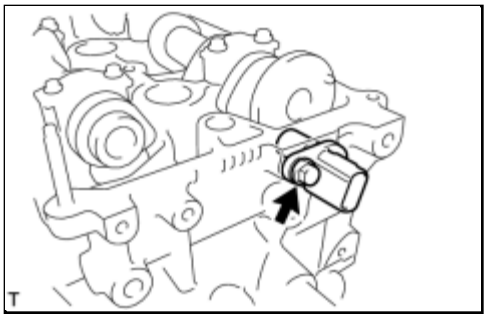
(a) Remove cylinder head cover gasket from the cylinder head cover.



9. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY INFO

10. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the wire harness clamp.



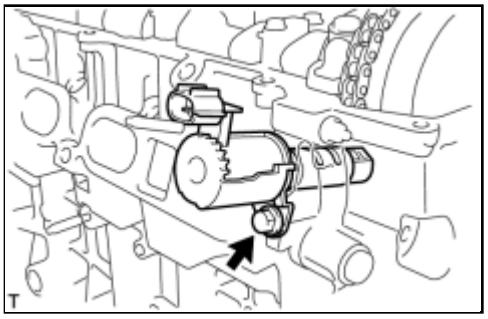
(b) Separate the wire harness from the wire harness clamp bracket.

(c) Remove the 2 bolts and sensor.

11. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the bolt and camshaft position sensor.

12. SET NO. 1 CYLINDER TO TDC/COMPRESSION INFO



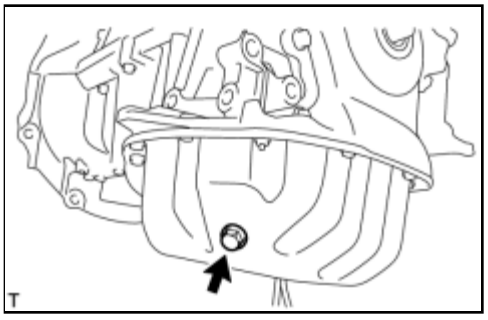
13. REMOVE CRANKSHAFT PULLEY INFO

14. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Remove the bolt and camshaft timing oil control valve from the cylinder head.

NOTICE:

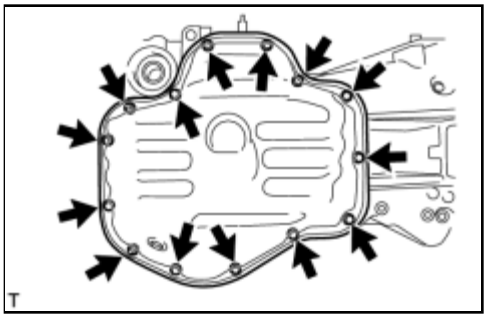
The camshaft timing oil control valve may be damaged when loosening the cylinder head bolts if the it is not removed.



(b) Remove the O-ring from the camshaft timing oil control valve.

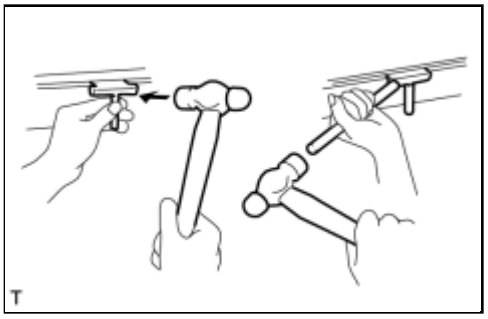
15. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

16. REMOVE WATER PUMP PULLEY INFO



17. REMOVE WATER PUMP ASSEMBLY INFO

18. REMOVE OIL PAN DRAIN PLUG



(a) Remove the oil pan drain plug from the oil pan.

19. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 12 bolts and 2 nuts.

(b) Insert the blade of oil pan seal cutter between the crankcase, chain cover and oil pan, then cut through the applied sealer and remove the oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the crankcase, chain cover and oil pan.

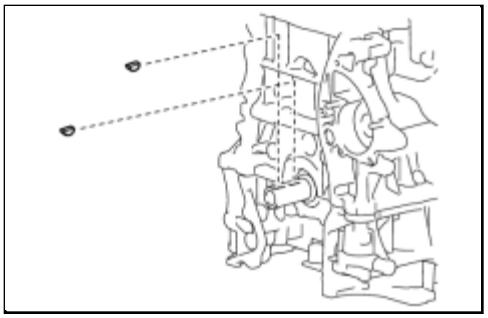
20. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY INFO

21. REMOVE FRONT CRANKSHAFT OIL SEAL INFO

22. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

23. REMOVE TIMING CHAIN GUIDE INFO

24. REMOVE CHAIN TENSIONER SLIPPER INFO



25. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO

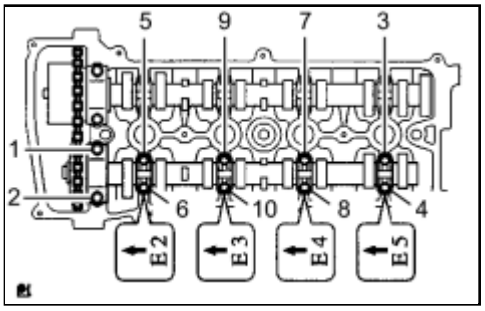
26. REMOVE CHAIN SUB-ASSEMBLY

27. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET INFO

28. REMOVE NO. 2 CHAIN SUB-ASSEMBLY INFO

29. REMOVE KEYS

(a) Remove the 2 pulley set keys from the crankshaft.



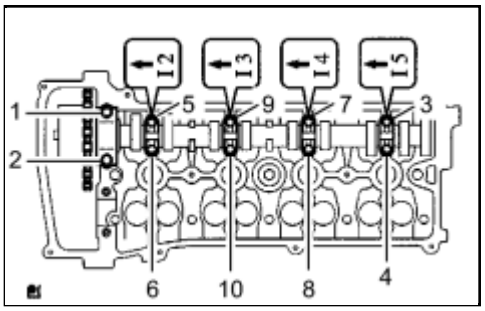
30. REMOVE NO. 2 CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

Uniformly loosen the bolts while keeping the camshaft level.

HINT:



Arrange the removed parts in the correct order.

(b) Remove the 5 bearing caps.

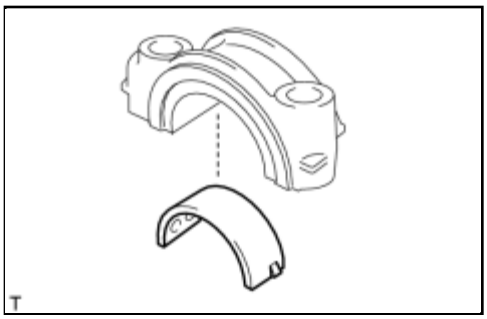
(c) Remove the No. 2 camshaft.

31. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

Uniformly loosen the bolts while keeping the camshaft level.

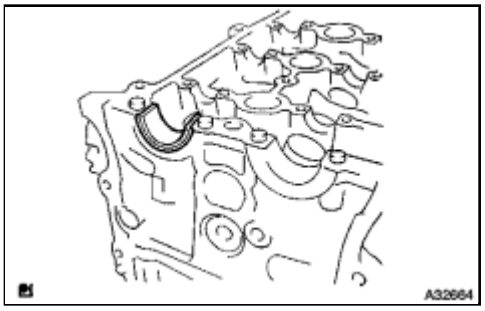


HINT:

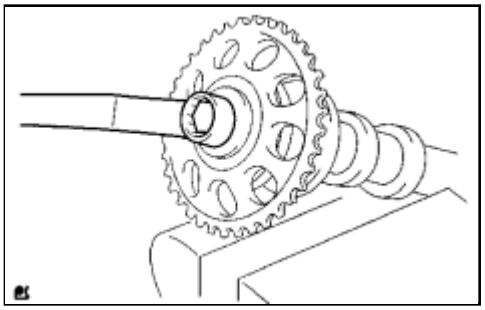
Arrange the removed parts in the correct order.

(b) Remove the 5 bearing caps.

(c) Remove the camshaft.



32. REMOVE NO. 1 CAMSHAFT BEARING



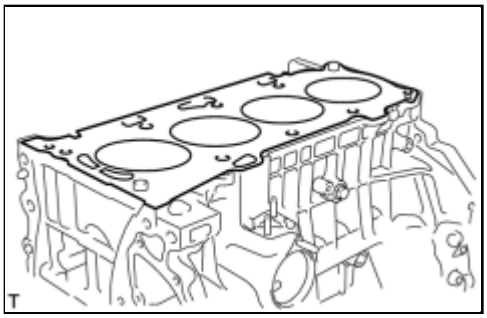
(a) Remove the camshaft bearing from the No. 1 camshaft bearing cap.

33. REMOVE NO. 2 CAMSHAFT BEARING

(a) Remove the No. 2 camshaft bearing from the cylinder head.

34. REMOVE CAMSHAFT TIMING GEAR OR SPROCKET

(a) Clamp the camshaft in a vise.



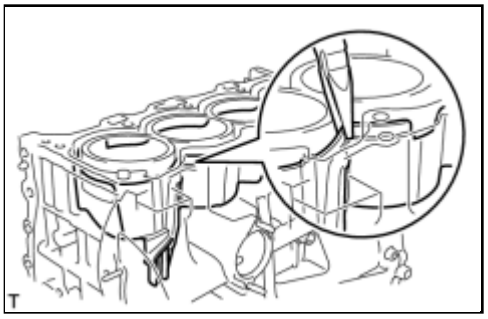
NOTICE:

- Do not overtighten the vise.
- Do not damage the camshaft.

(b) Remove the bolt and camshaft timing gear or sprocket.

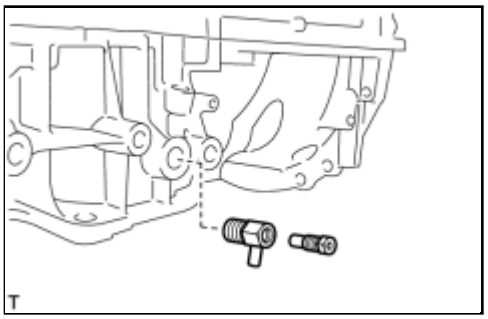
35. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY INFO

36. REMOVE CYLINDER HEAD SUB-ASSEMBLY INFO



37. REMOVE CYLINDER HEAD GASKET

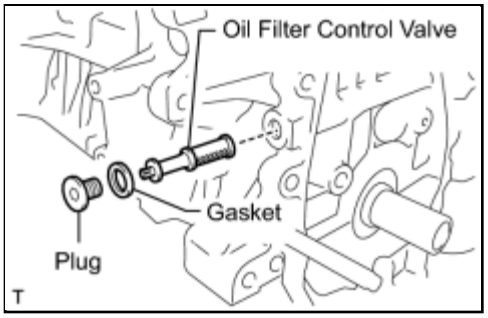
38. REMOVE CYLINDER BLOCK WATER JACKET SPACER



(a) Using needle nose pliers, remove the cylinder block water jacket spacer from the water jacket.

NOTICE:

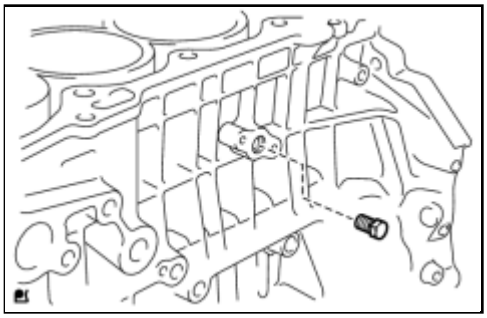
Before turning the cylinder block upside down, make sure that the water jacket spacer is removed, as it will fall out.



39. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the water drain cock from the stiffening crankcase.

(b) Remove the water drain cock plug from the water drain cock.

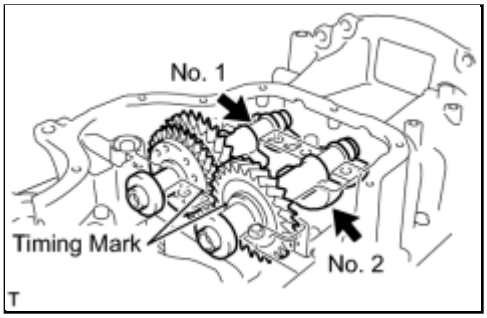


40. REMOVE OIL CONTROL VALVE FILTER

(a) Using a 8mm socket hexagon wrench, remove the plug, gasket and oil control valve filter.

41. REMOVE NO. 1 TAPER HEAD SCREW PLUG

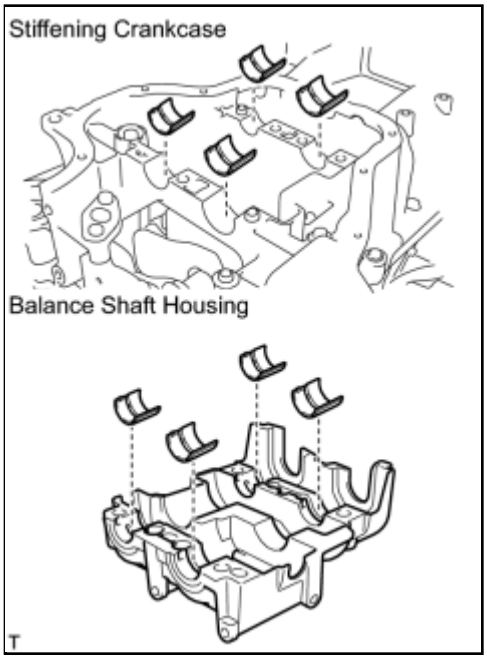
(a) Remove the No. 1 taper head screw plug.



42. REMOVE OIL PUMP ASSEMBLY INFO

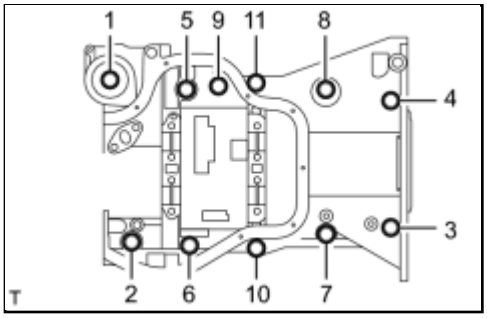
43. INSPECT BALANCESHAFT THRUST CLEARANCE INFO

44. INSPECT BALANCESHAFT OIL CLEARANCE INFO



45. REMOVE NO. 1 AND NO. 2 BALANCESHAFTS

(a) Remove the No. 1 and No. 2 balanceshafts.

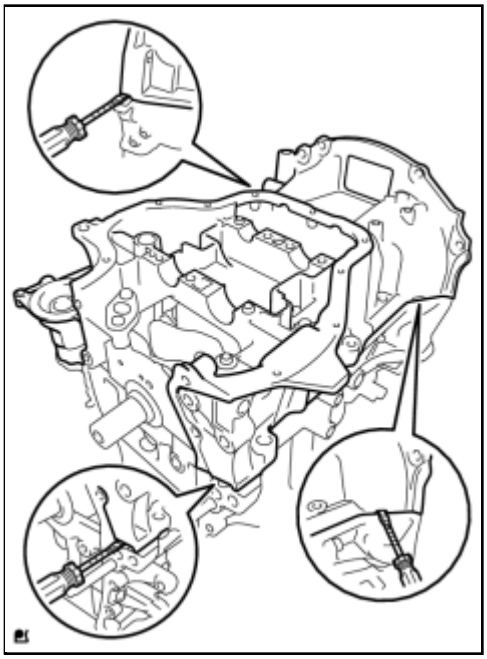


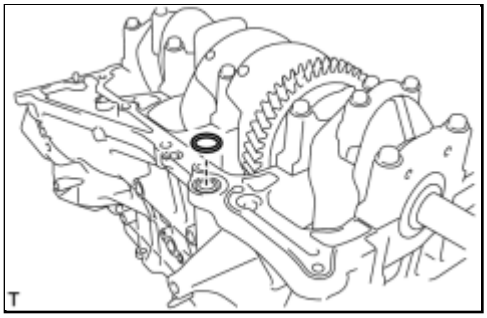
46. REMOVE NO. 1 BALANCESHAFT BEARING

(a) Remove the 8 No. 1 balanceshaft bearings shown in the illustration.

47. REMOVE REAR CRANKSHAFT OIL SEAL INFO

48. REMOVE STIFFENING CRANKCASE ASSEMBLY



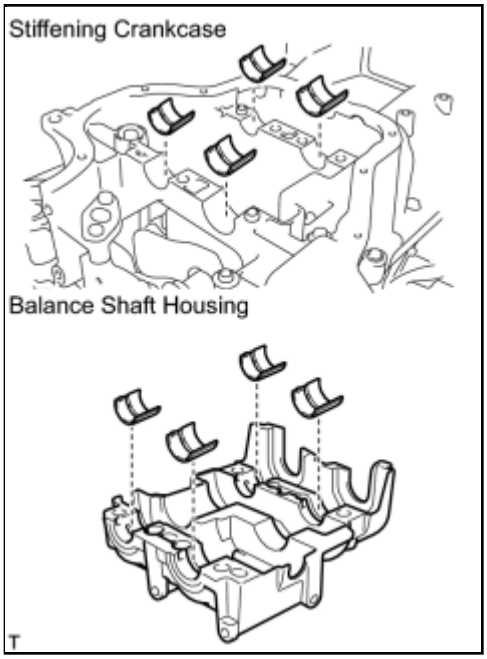


(a) Uniformly loosen and remove the 11 bolts in the sequence shown in the illustration.

(b) Using a screwdriver with its tip wrapped with protective tape, remove the crankcase by prying between the crankcase and cylinder block.

NOTICE:

Be careful not to damage the contact surfaces between the crankcase and cylinder block.

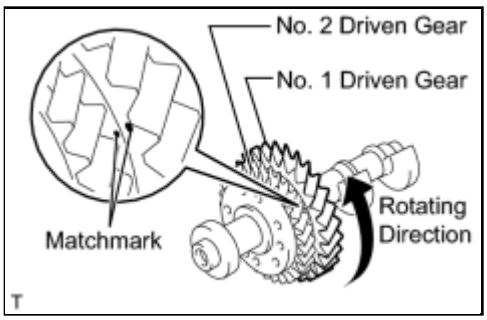


(c) Remove the O-ring from the cylinder block.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000224800CX
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE UNIT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL NO. 1 BALANCESHAFT BEARING



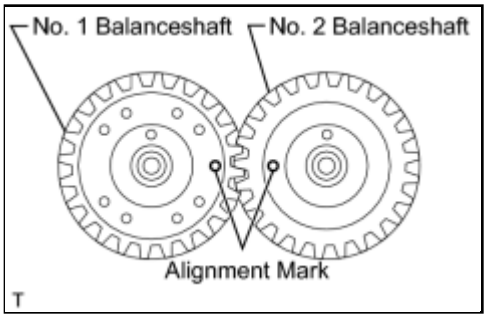
(a) Align the bearing claw with the claw groove, and push in the 8 bearings.

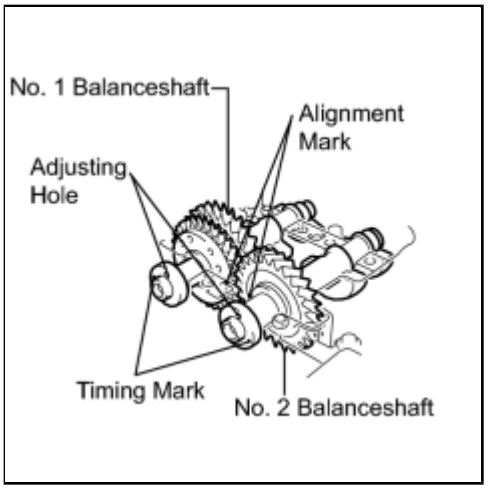
NOTICE:

Do not apply engine oil to the contact surfaces of the balanceshaft bearing and balanceshaft housing.

(b) Apply a light coat of the engine oil to the bearings.

2. INSTALL NO. 1 AND NO. 2 BALANCESHAFTS



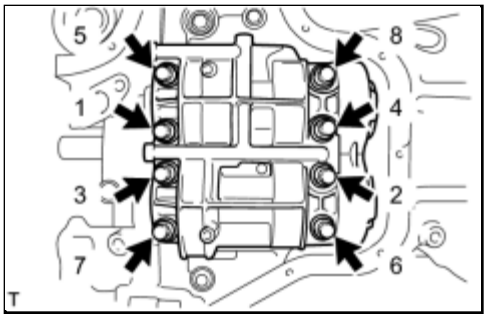


(a) Rotate the No. 1 driven gear of the No. 1 balanceshaft in the rotating direction until it hits the stopper.

NOTICE:

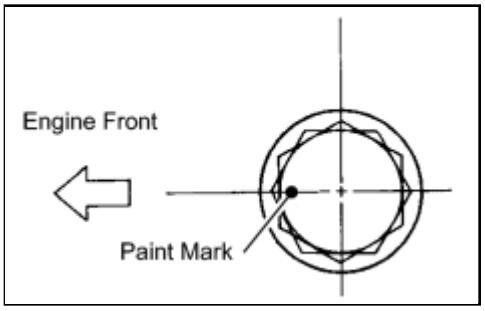
Confirm that the matchmarks on the No. 1 and No. 2 driven gears are matched.

(b) Confirm that the alignment marks on the No. 1 and No. 2 balanceshafts are aligned.

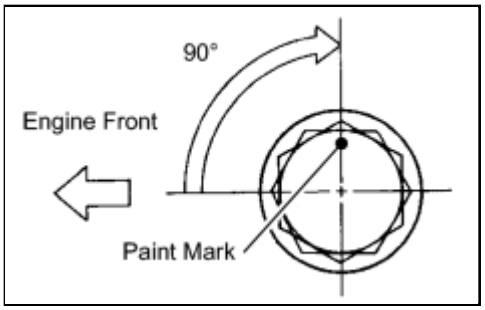


(c) Align the alignment marks on the No. 1 and No. 2 balanceshafts as shown in the illustration.

(d) Place the No. 1 and No. 2 balancshafts onto the crankcase.



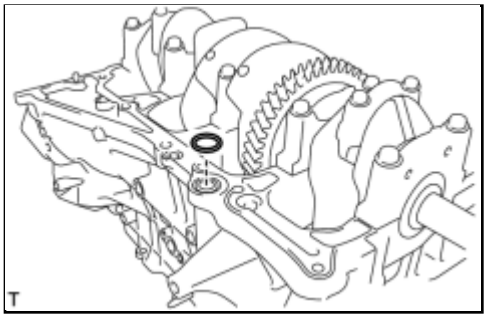
(e) Apply a light coat of engine oil to the threads and under the heads of the bolts.

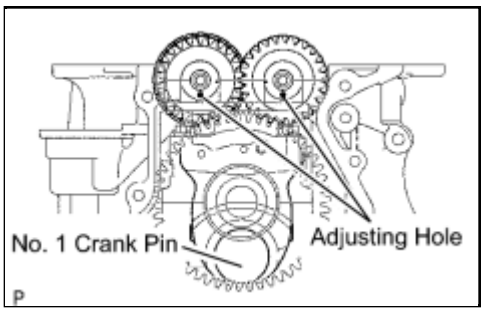


(f) Using several steps, uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

Torque: 22 N·m (220 kgf·cm, 16ft·lbf)

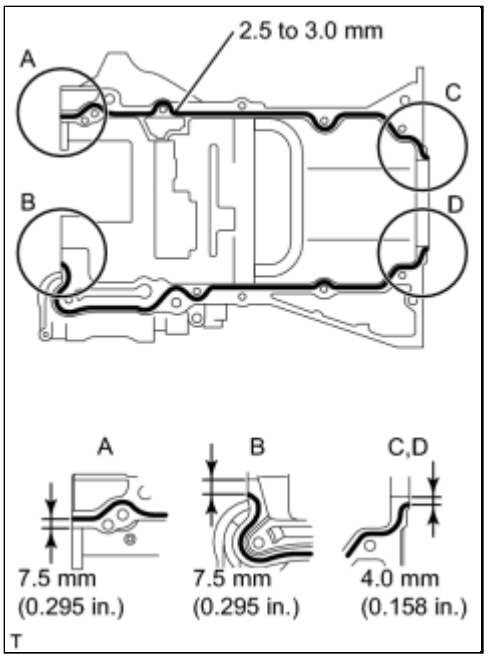
(g) Mark the front of the bolts with paint.





(h) Further tighten the bolts 90° as shown in the illustration.

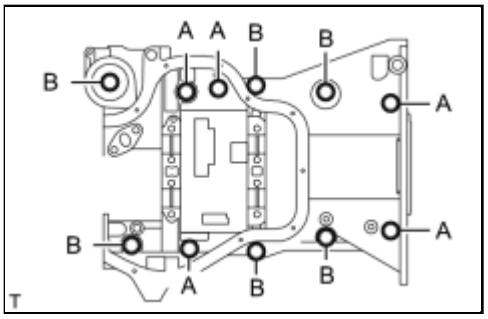
(i) Check that the paint mark is now at a 90° angle to the front.



3. INSTALL STIFFENING CRANKCASE ASSEMBLY

(a) Place a new O-ring on the cylinder block as shown in the illustration.

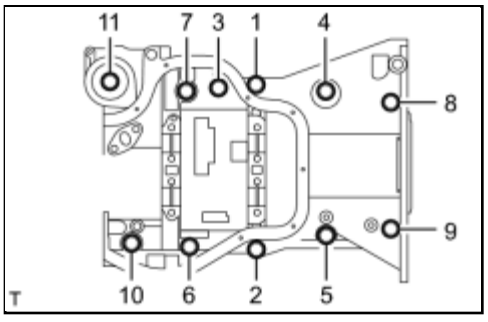
(b) With the No. 1 crank pin of the crankshaft placed at the TDC position, install the No. 1 and No. 2 balanceshafts and align the adjusting holes as shown in the illustration.



(c) Apply a continuous bead of seal packing (Diameter 2.5 to 3.0 mm (0.098 to 0.118 in.)) as shown in the illustration.

Seal Packing:

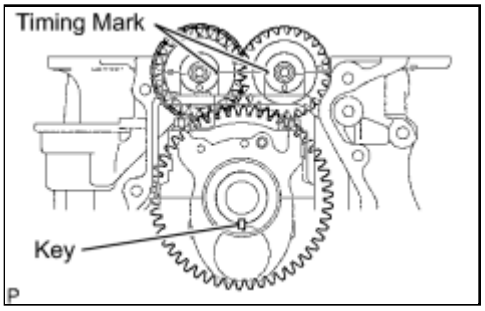
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- Remove any oil from the contact surfaces.
- Install the crankcase within 3 minutes of applying seal packing.
- Do not add engine oil for at least 2 hours after installing the crankcase.

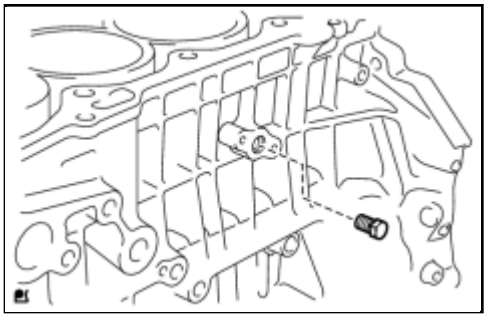
(d) Temporarily install the crankcase with the 11 bolts.



ITEM	BOLT LENGTH
A	125 mm (4.92 in.)
B	45 mm (1.77 in.)

(e) Uniformly tighten the bolts.

Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



(f) Confirm that the timing marks on the balanceshafts are aligned when the key groove is placed at the TDC position, as shown in the illustration.

4. INSTALL OIL PUMP ASSEMBLY INFO

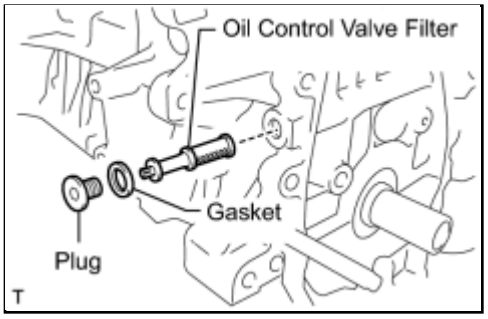
5. INSTALL REAR CRANKSHAFT OIL SEAL INFO

6. INSTALL NO. 1 TAPER HEAD SCREW PLUG

(a) Apply adhesive to 2 or 3 threads of the plug, and install it.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

Adhesive:



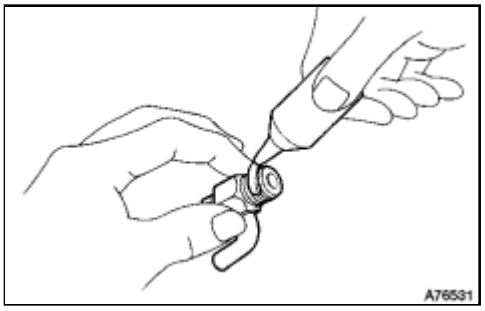
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

NOTICE:

- Install the plug within 3 minutes of applying adhesive.
- Do not add coolant for at least an hour after installing the plug.

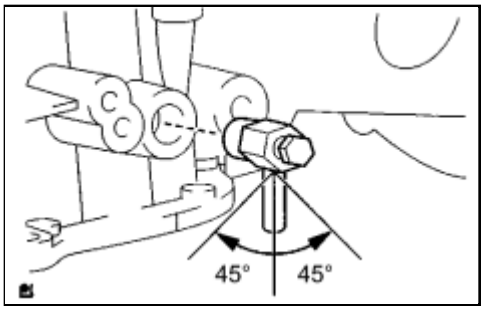
7. INSTALL OIL CONTROL VALVE FILTER

(a) Check that there are no foreign objects on the mesh part of the oil control valve filter.



(b) Using a 8 mm socket hexagon wrench, install a new gasket and the oil control valve filter with the plug.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)



8. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

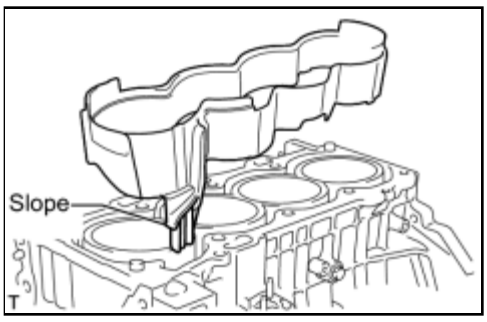
(a) Apply adhesive to 2 or 3 threads of the drain cock.

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Install the water drain cock within the range shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)



NOTICE:

Do not rotate the drain cocks more than 1 revolution (360°) after tightening the drain cock to the specified torque.

(c) Install the water drain cock plug to the water drain cock.

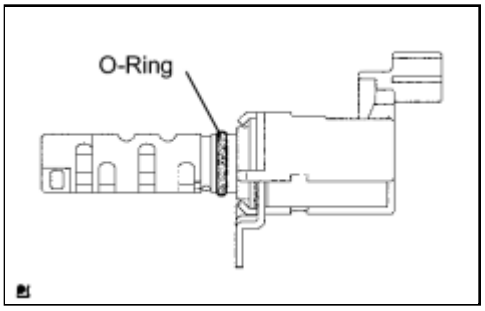
Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

9. INSTALL CYLINDER BLOCK WATER JACKET SPACER

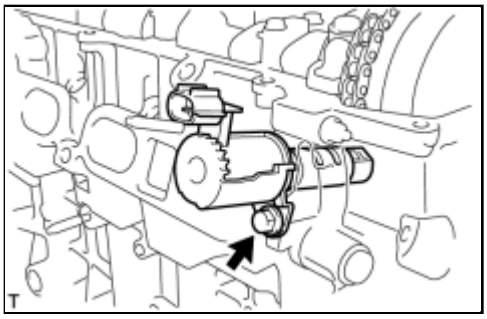
(a) Install the water jacket spacer as shown in the illustration.

HINT:

Be sure to face the slope to the front of the engine.



10. INSTALL CYLINDER HEAD GASKET INFO

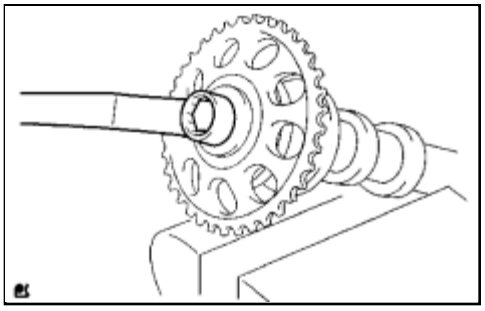


11. INSTALL CYLINDER HEAD SUB-ASSEMBLY INFO

12. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Apply a light coat of engine oil onto a new O-ring.

(b) Install the O-ring to the camshaft timing oil control valve.



(c) Install the camshaft timing oil control valve with the bolt.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

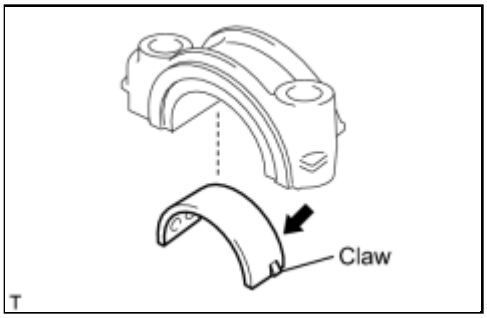
13. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

INFO

14. INSTALL CAMSHAFT TIMING GEAR OR SPROCKET

(a) Clamp the camshaft in a vise, then install the camshaft timing sprocket with the bolt.

Torque: 54 N·m (551 kgf·cm, 40ft·lbf)



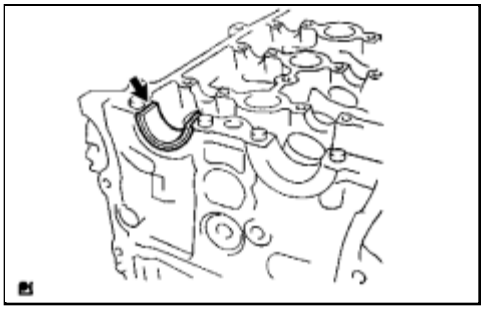
15. INSTALL NO. 1 CAMSHAFT BEARING

(a) Clean the installation surfaces and the inner and outer surfaces of the bearing.

NOTICE:

Keep the installation surfaces and the back surfaces of the bearing free of engine oil.

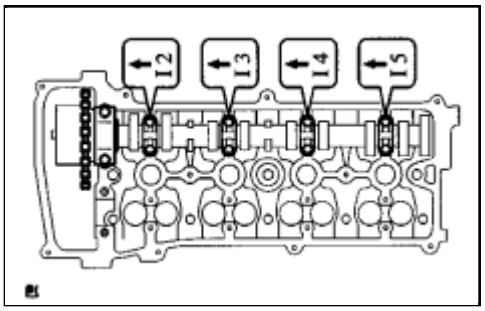
(b) Align the claws and install No. 1 camshaft bearing onto No. 1 camshaft bearing cap.



16. INSTALL NO. 2 CAMSHAFT BEARING

(a) Clean the installation surfaces and the inner and outer surfaces of the bearing.

NOTICE:

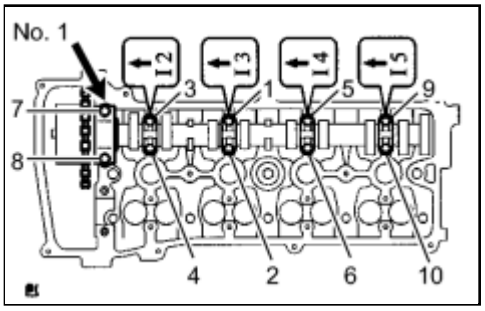


Keep the installation surfaces and the back surfaces of the bearing free of engine oil.

(b) Install the No. 2 camshaft bearing onto the cylinder head.

17. INSTALL CAMSHAFT

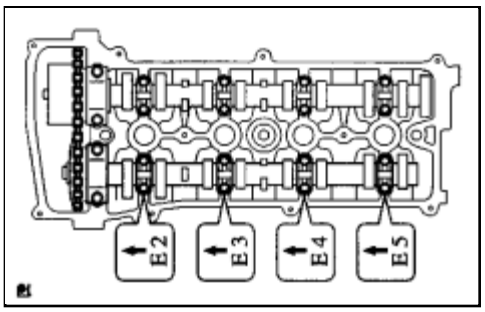
(a) Apply a light coat of engine oil to the journal portion.



(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.

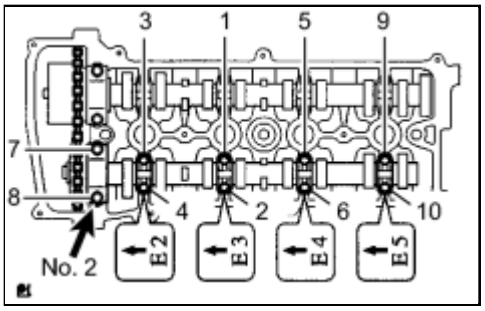
(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.



No. 1 Bearing cap - Torque: 30 N·m (301 kgf·cm, 22ft·lbf)

No. 3 Bearing cap - Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

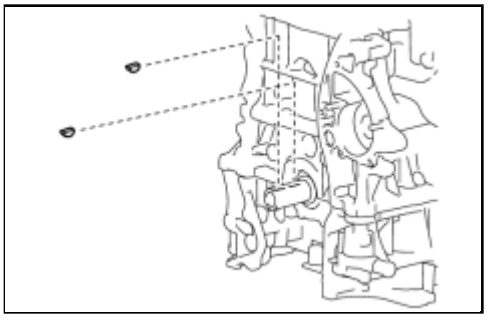


18. INSTALL NO. 2 CAMSHAFT

(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.

(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

No. 2 Bearing cap - Torque: 30 N·m (301 kgf·cm, 22ft·lbf)
No. 3 Bearing cap - Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

19. INSTALL KEYS

(a) Install the 2 keys.

20. INSTALL NO. 2 CHAIN SUB-ASSEMBLY INFO

21. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET INFO

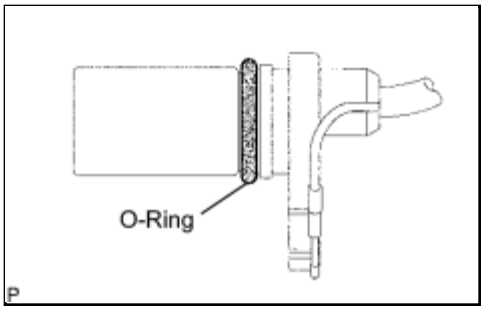
22. INSTALL NO. 1 CHAIN VIBRATION DAMPER INFO

23. INSTALL CHAIN SUB-ASSEMBLY INFO

24. INSTALL CHAIN TENSIONER SLIPPER INFO

25. INSTALL TIMING CHAIN GUIDE INFO

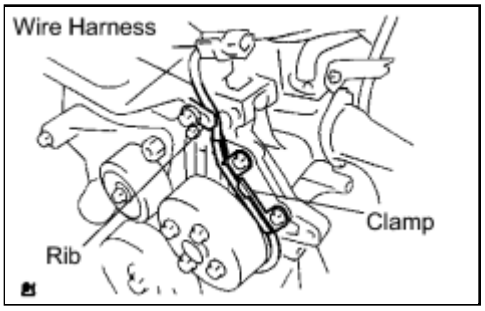
26. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO



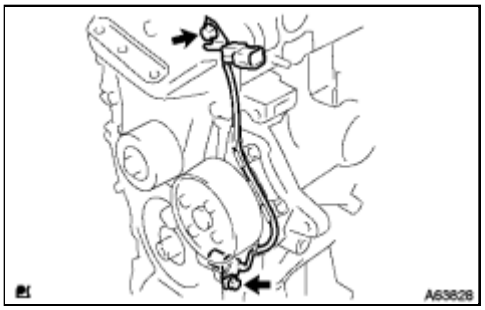
27. INSTALL FRONT CRANKSHAFT OIL SEAL INFO

28. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY INFO

29. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY INFO



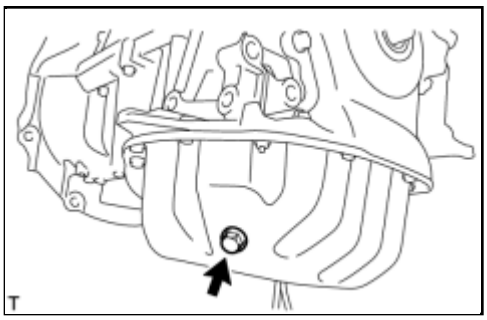
30. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY INFO



31. INSTALL CRANKSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the sensor.

(b) Confirm that the wire harness of the sensor is placed as shown in the illustration.



(c) Install the sensor with the 2 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

(d) Install the clamp of the crankshaft position sensor onto the water pump.

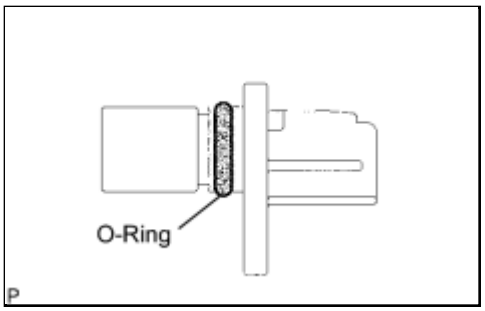
32. INSTALL OIL PAN SUB-ASSEMBLY INFO

33. INSTALL OIL PAN DRAIN PLUG

(a) Install the oil drain plug with a new gasket.

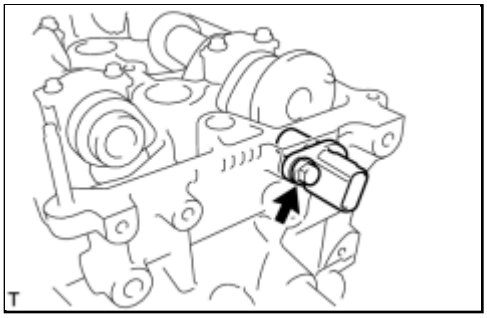
Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

34. INSTALL WATER PUMP ASSEMBLY INFO



35. INSTALL WATER PUMP PULLEY INFO

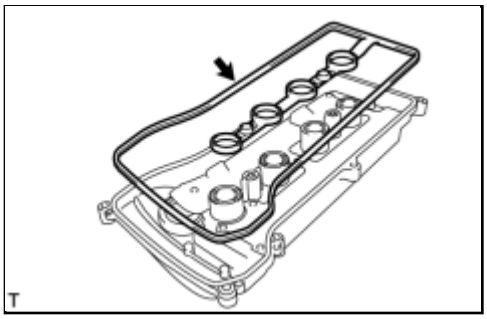
36. INSTALL CRANKSHAFT PULLEY INFO



37. INSPECT VALVE CLEARANCE INFO

38. ADJUST VALVE CLEARANCE INFO

39. INSTALL CAMSHAFT POSITION SENSOR



(a) Apply a light coat of engine oil onto the O-ring of the sensor.

(b) Install the camshaft position sensor with the bolt.

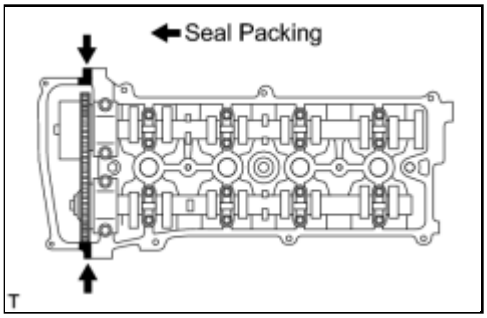
Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

40. INSTALL CYLINDER HEAD COVER GASKET

(a) Install the cylinder head cover gasket onto the cylinder head cover.

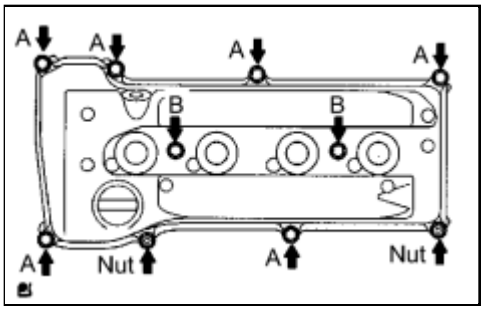
41. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove any old packing material from the contact surface.



(b) Apply seal packing to the 2 locations shown in the illustration.

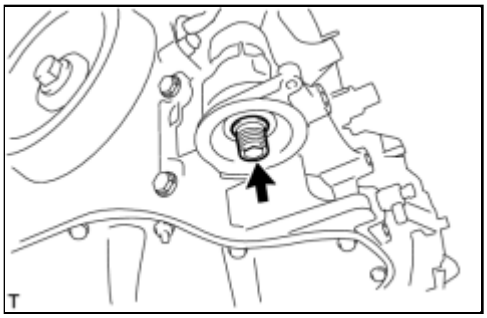
Seal Packing:



Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- Remove any oil from the contact surfaces.



- Install the cylinder head cover within 3 minutes of applying seal packing.
- Do not start the engine for at least 2 hours after installing the cylinder head cover.

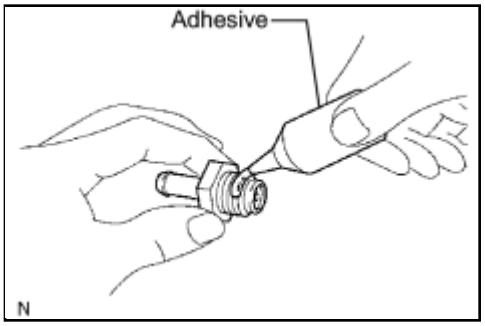
(c) Install the cylinder head cover with the 8 bolts and 2 nuts.

Bolt A - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)
Bolt B - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)
Nut - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

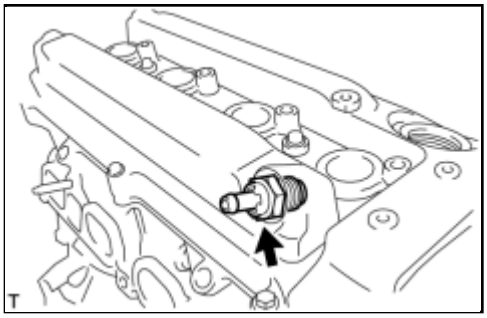
42. INSTALL OIL FILTER UNION

(a) Using a 12 mm socket hexagon wrench, install the oil filter union.

Torque: 30 N·m (306 kgf·cm, 22ft·lbf)



43. INSTALL OIL FILTER SUB-ASSEMBLY INFO

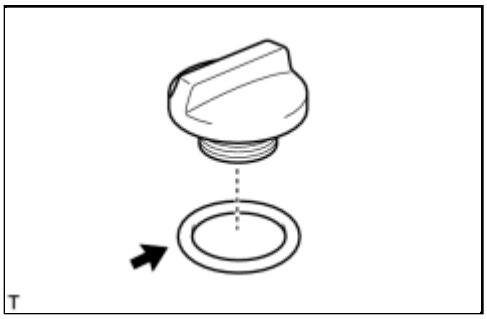


44. INSTALL SPARK PLUG INFO

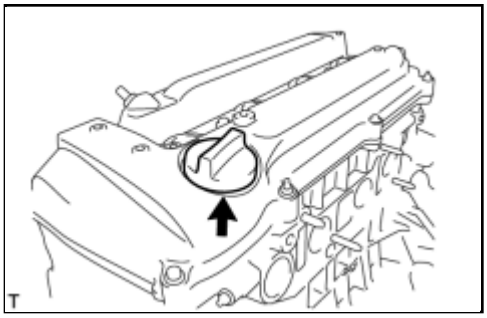
45. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive to the threads of the ventilation valve.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



(b) Using a 22 mm deep socket wrench, install the ventilation valve onto the cylinder head cover.

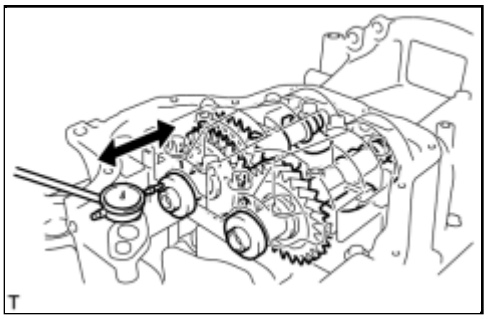


Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

46. INSTALL OIL FILLER CAP GASKET

(a) Install the oil filler cap gasket onto the oil filler cap.

47. INSTALL OIL FILLER CAP SUB-ASSEMBLY



(a) Install the oil filler cap onto the cylinder head cover.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026TQ018X
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE UNIT: INSPECTION (2010 Corolla)		

INSPECTION

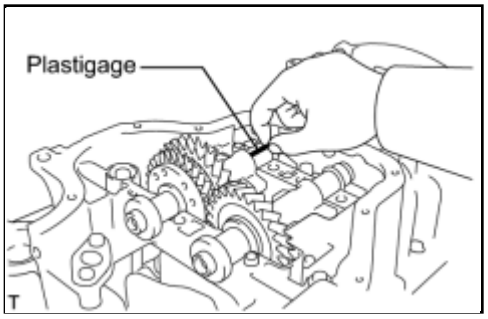
1. INSPECT BALANCESHAFT THRUST CLEARANCE

(a) Install the balanceshafts INFO .

(b) Using a dial indicator, measure the thrust clearance while moving the balanceshaft back and forth.

Standard thrust clearance:
0.05 to 0.09 mm (0.0020 to 0.0035 in.)
Maximum thrust clearance:
0.09 mm (0.0035 in.)

If the thrust clearance is greater than the maximum, replace the balanceshaft housing and bearings. If necessary, replace the balanceshaft.



2. INSPECT BALANCESHAFT OIL CLEARANCE

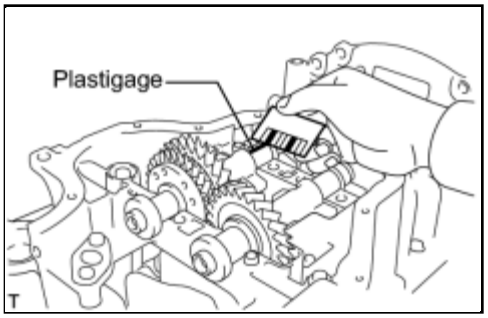
(a) Clean each bearing and journal.

(b) Check each bearing and journal for pitting and scratches.

If a bearing or journal is damaged, replace the bearings. If necessary, replace the balanceshaft.

(c) Place the No. 1 and No. 2 balanceshafts onto the crankcase.

(d) Lay a strip of Plastigage across each journal.



(e) Install the balanceshaft housing INFO .

NOTICE:

Do not turn the balanceshafts.

(f) Remove the balanceshafts INFO .

(g) Measure the Plastigage at its widest point.

Standard oil clearance:
0.022 to 0.049 mm (0.0009 to 0.0019 in.)
Maximum oil clearance:
0.049 mm (0.0019 in.)

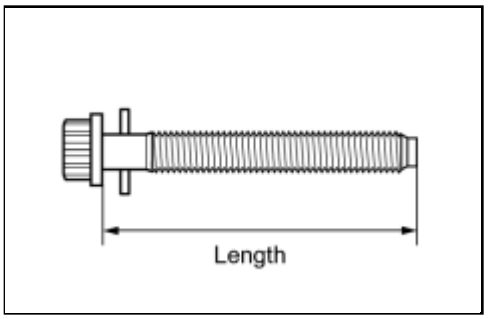
NOTICE:

Remove the Plastigage completely after the measurement.

If the oil clearance is greater than the maximum, replace the bearing. If necessary, replace the balanceshaft.

(h) If replacing a bearing, select a new one with the same number.

Standard Balanceshaft Housing Journal Bore Diameter:



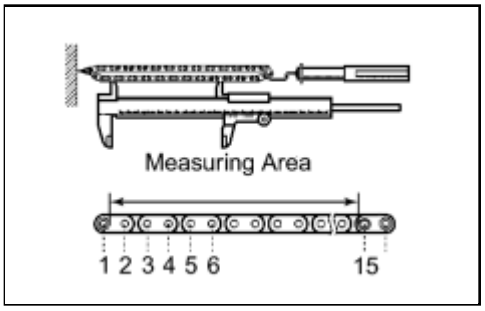
ITEM	SPECIFIED CONDITION
Mark 1	26.000 to 26.006 mm (1.0236 to 1.0239 in.)
Mark 2	26.007 to 26.012 mm (1.0239 to 1.0241 in.)
Mark 3	26.013 to 26.018 mm (1.0241 to 1.0243 in.)

Standard Bearing Center Wall Thickness:

ITEM	SPECIFIED CONDITION
Mark 1	1.486 to 1.489 mm (0.05850 to 0.05862 in.)
Mark 2	1.490 to 1.492 mm (0.05866 to 0.05874 in.)
Mark 3	1.493 to 1.495 mm (0.0588 to 0.0589 in.)

Standard balanceshaft journal diameter:
22.985 to 23.000 mm (0.9049 to 0.9055 in.)

(i) Inspect the balanceshaft housing bolts.



(1) Using a vernier caliper, measure the length of the bolts from the seat to the end.

Standard bolt length:
58.3 to 59.7 mm (2.295 to 2.350 in.)
Maximum bolt length:
60.3 mm (2.374 in.)

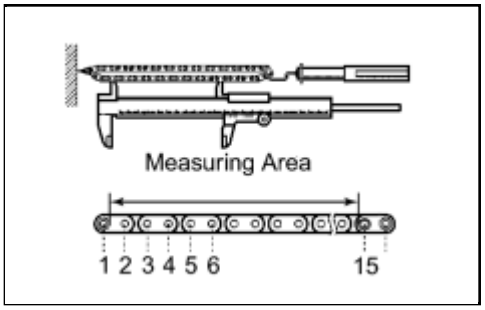
If the bolt length is greater than the maximum, replace the balanceshaft housing bolt.

3. INSPECT CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as

shown in the illustration.

(b) Using a vernier caliper, measure the length of 15 links.



Maximum chain elongation:
114.5 mm (4.508 in.)

NOTICE:

Perform the measurement at 3 random places. Use the average of the measurements.

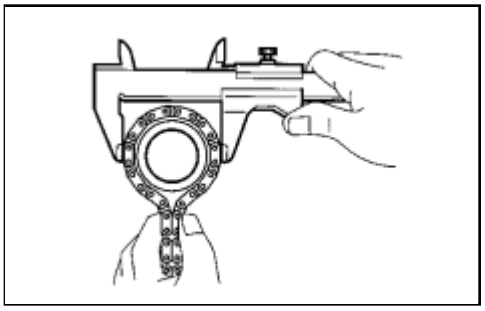
If the elongation is greater than the maximum, replace the chain.

4. INSPECT NO. 2 CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 15 links.

Maximum chain elongation:
102.2 mm (4.024 in.)



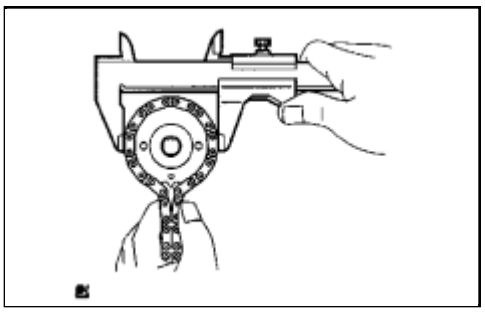
NOTICE:

Perform the measurement at 3 random places. Use the average of the measurements.

If the elongation is greater than the maximum, replace the No. 2 chain.

5. INSPECT OIL PUMP DRIVE GEAR

(a) Wrap the chain around the sprocket.



(b) Using a vernier caliper, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

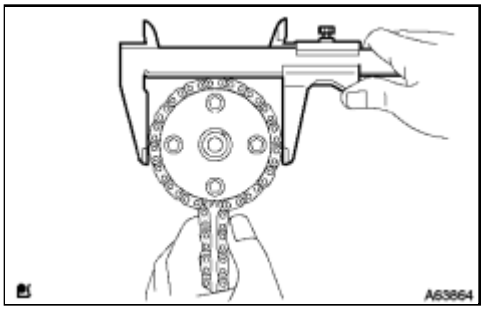
NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

6. INSPECT OIL PUMP DRIVE SHAFT GEAR

(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain wrapped around.



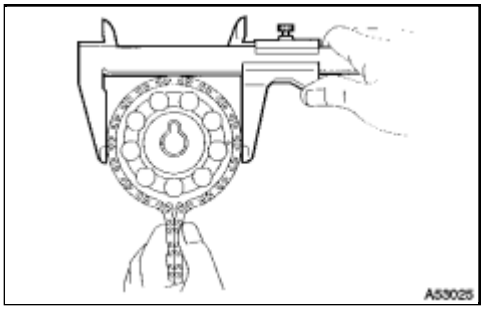
Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

7. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Wrap the chain around the sprocket.



(b) Using a vernier caliper, measure the sprocket diameter with the chain wrapped around.

Minimum gear diameter (with chain):
97.3 mm (3.831 in.)

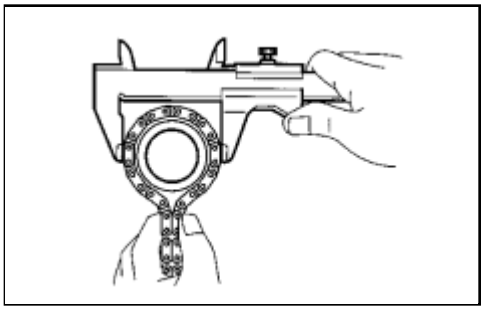
NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

8. INSPECT CAMSHAFT TIMING GEAR OR SPROCKET

(a) Wrap the chain around the sprocket.

(b) Using a vernier caliper, measure the sprocket diameter with the chain wrapped around.



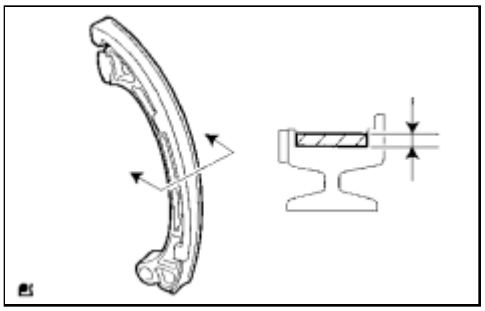
Minimum gear diameter (with chain):
97.3 mm (3.831 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

9. INSPECT CRANKSHAFT TIMING GEAR OR SPROCKET

(a) Wrap the chain around the timing sprocket.



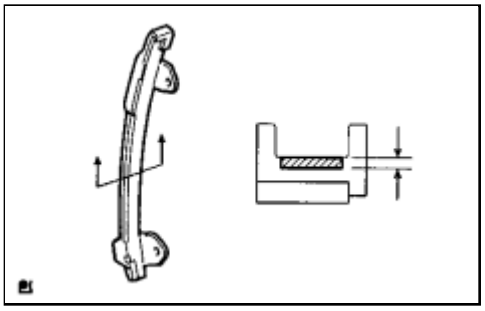
(b) Using a vernier caliper, measure the timing gear diameter with the chain wrapped around.

Minimum gear diameter (with chain):
51.6 mm (2.031 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the gear diameter is less than the minimum, replace the chain sub-assembly and crankshaft timing sprocket.

10. INSPECT CHAIN TENSIONER SLIPPER

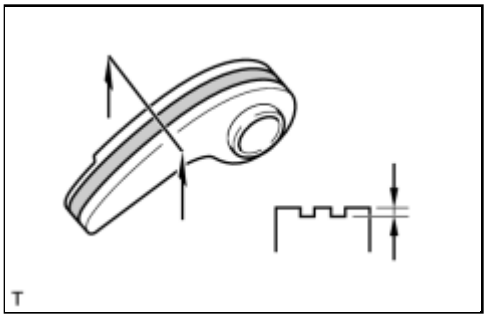


(a) Using a vernier caliper, measure the tensioner slipper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner slipper.

11. INSPECT NO. 1 CHAIN VIBRATION DAMPER



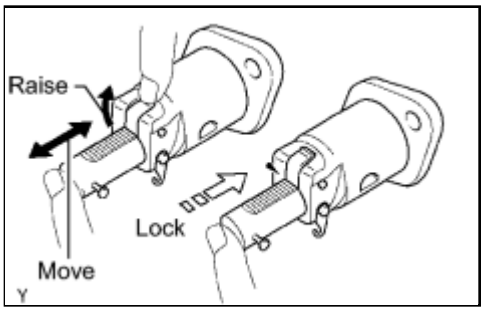
(a) Using a vernier caliper, measure the vibration damper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the No. 1 chain vibration damper.

12. INSPECT CHAIN TENSIONER PLATE

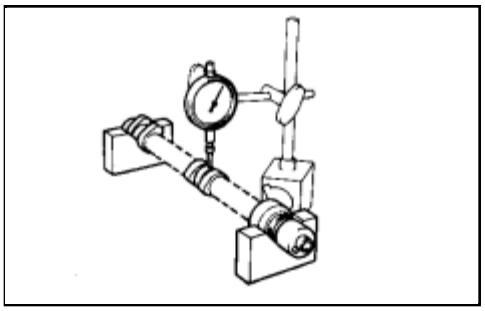
(a) Using a vernier caliper, measure the vibration damper



wear.

Maximum wear:
0.5 mm (0.020 in.)

If the wear is greater than the maximum, replace the chain tensioner plate.



13. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.

(b) Release the ratchet pawl, then check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.

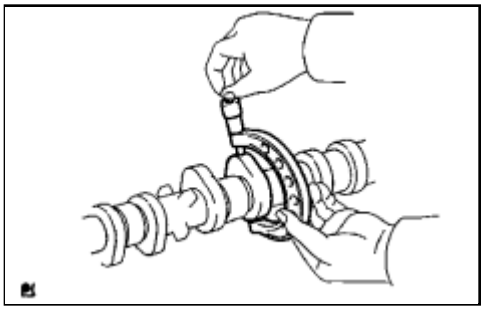
14. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.

(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
0.03 mm (0.0012 in.)



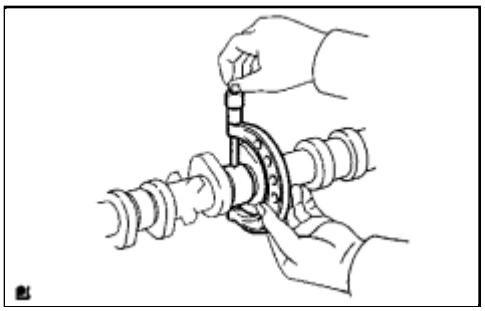
If the circle runout is greater than the maximum, replace the camshaft.

(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe heights.

Standard cam lobe height:
47.306 to 47.406 mm (1.8624 to 1.8664 in.)
Minimum cam lobe height:
47.196 mm (1.8581 in.)

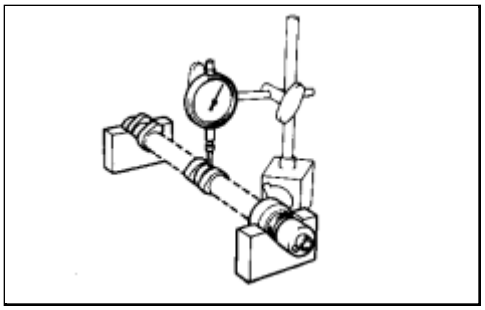
If any of the cam lobe heights are less than the



minimum, replace the camshaft.

(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.



Standard Journal Diameter:

JOURNAL POSITION	SPECIFIED CONDITION
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Others	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

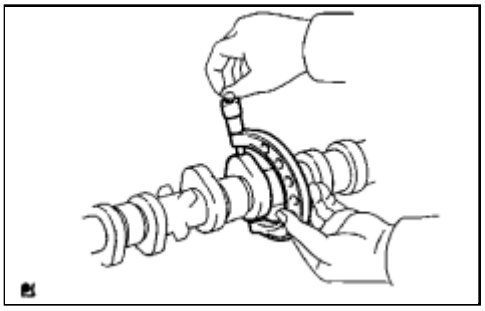
If the journal diameter is not as specified, check the oil clearance.

15. INSPECT NO. 2 CAMSHAFT

(a) Inspect the camshaft for runout.

(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.



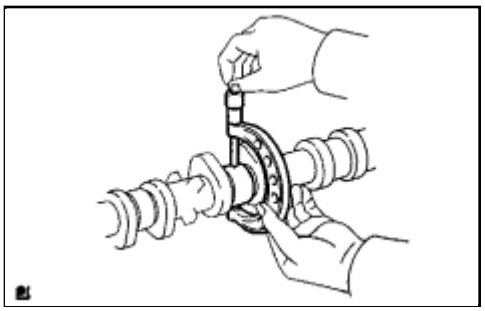
Maximum circle runout:
0.03 mm (0.0012 in.)

If the circle runout is greater than the maximum, replace the No. 2 camshaft.

(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe heights.

Standard cam lobe height:
46.063 to 46.163 mm (1.8135 to 1.8174 in.)
Minimum cam lobe height:
45.953 mm (1.8092 in.)



If any of the cam lobe heights are less than the minimum, replace the No. 2 camshaft.

(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.

Standard Journal Diameter:

JOURNAL POSITION	SPECIFIED CONDITION
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Others	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.

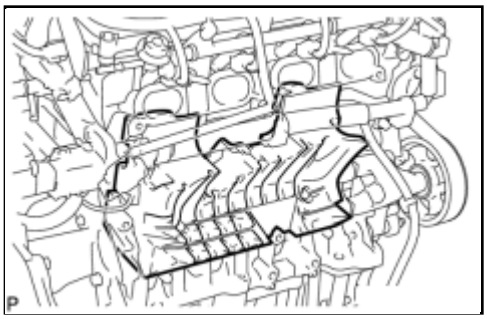
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE UNIT: REMOVAL (2010 Corolla)		



REMOVAL

1. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

2. REMOVE FUEL INJECTOR ASSEMBLY INFO

3. REMOVE INTAKE MANIFOLD INFO

4. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR

(a) Remove the No. 1 intake manifold insulator.

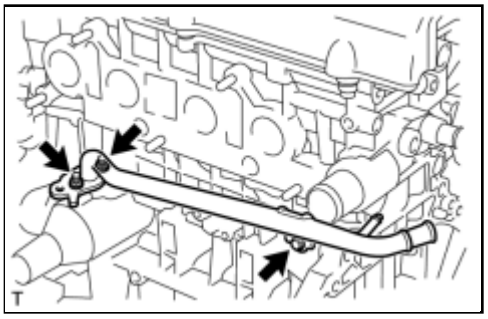
5. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

6. REMOVE MANIFOLD STAY INFO

7. REMOVE NO. 2 MANIFOLD STAY INFO

8. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY INFO

9. REMOVE INLET WATER INFO



10. REMOVE THERMOSTAT INFO

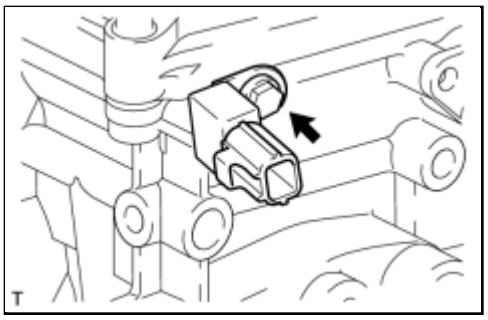
11. REMOVE ENGINE OIL LEVEL DIPSTICK

12. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE INFO

13. REMOVE NO. 1 WATER BY-PASS PIPE

(a) Remove the bolt and 2 nuts, then remove the No. 1 water by-pass pipe.

(b) Remove the gasket.



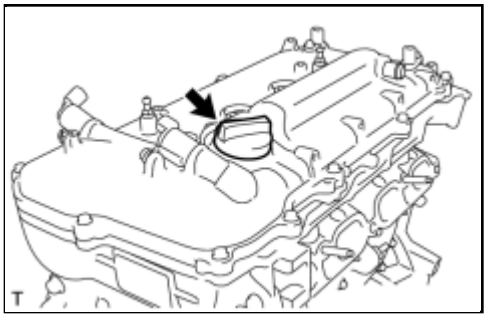
14. REMOVE IGNITION COIL ASSEMBLY INFO

15. REMOVE KNOCK SENSOR INFO

16. REMOVE OIL PRESSURE SWITCH INFO

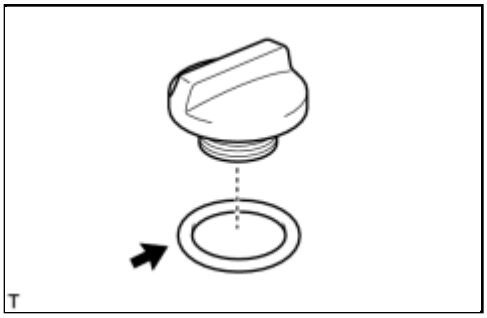
17. REMOVE ENGINE COOLANT TEMPERATURE SENSOR INFO

18. REMOVE RADIO SETTING CONDENSER



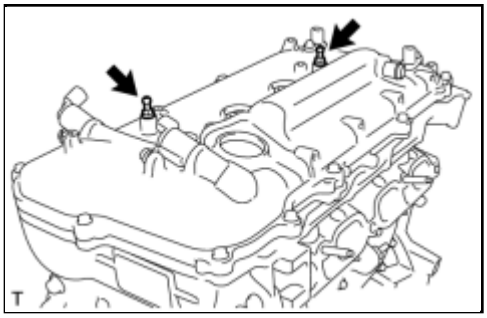
(a) Remove the bolt and radio setting condenser.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA302NX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: DISASSEMBLY (2010 Corolla)		



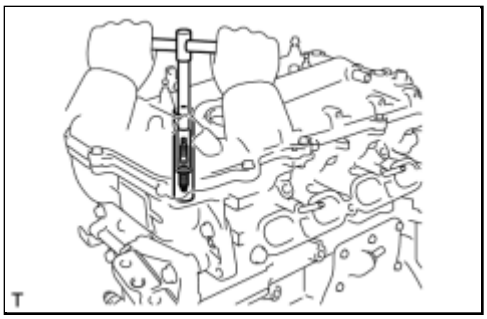
DISASSEMBLY

1. REMOVE OIL FILLER CAP SUB-ASSEMBLY



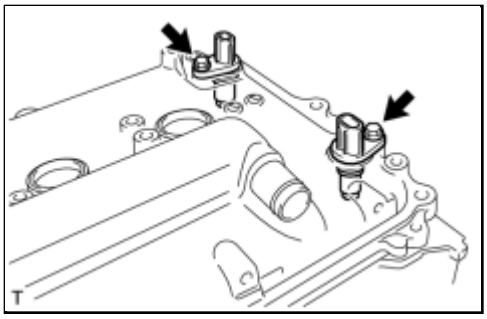
(a) Remove the oil filler cap.

2. REMOVE OIL FILLER CAP GASKET



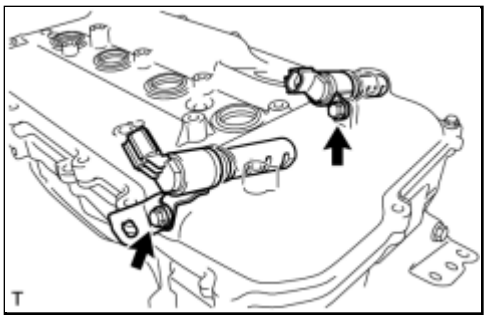
(a) Remove the gasket from the oil filler cap.

3. REMOVE ENGINE COVER JOINT



(a) Remove the 2 engine cover joints.

4. REMOVE SPARK PLUG

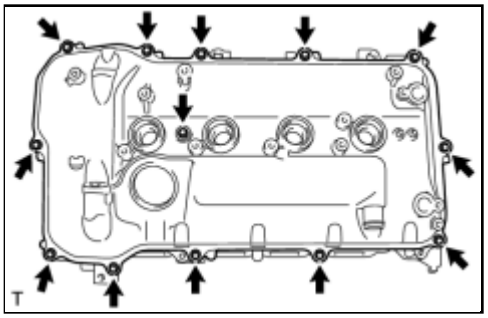


(a) Using a 14 mm spark plug wrench, remove the 4 spark plugs.

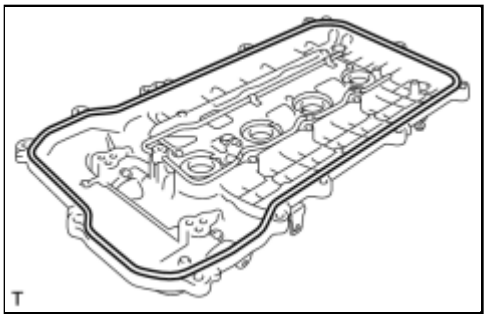
5. REMOVE CAMSHAFT POSITION SENSOR

(a) Remove the 2 bolts and 2 sensors.

6. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

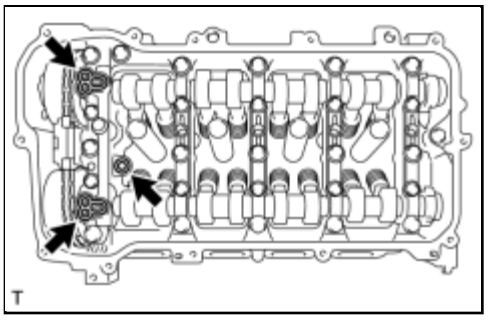


(a) Remove the 2 bolts, O-rings, bracket and 2 oil control valves.



7. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 13 bolts, seal washer and cylinder head cover.



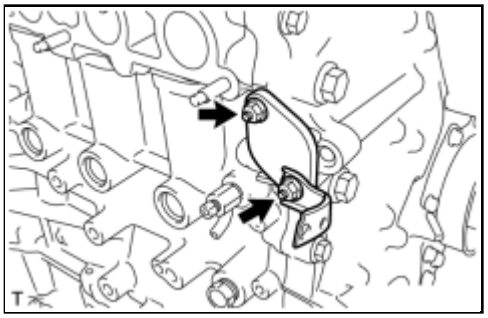
NOTICE:

Be careful not to drop any of the gaskets into the engine when removing the cylinder head cover because the gaskets may stick to the cylinder head cover.

(b) Remove the cylinder head cover gasket.

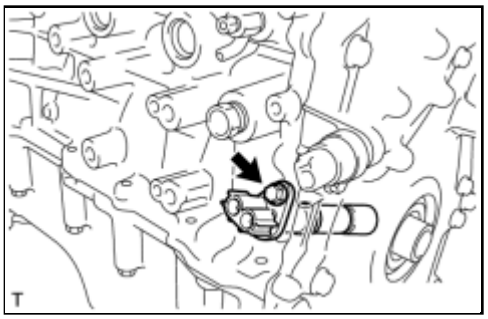
(c) Remove the 3 gaskets from the camshaft bearing cap.

8. SET NO. 1 CYLINDER TO TDC/COMPRESSION INFO



9. REMOVE CRANKSHAFT PULLEY INFO

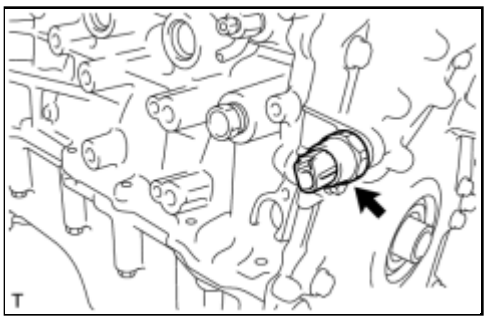
10. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY



(a) Remove the 2 nuts, bracket, tensioner and gasket.

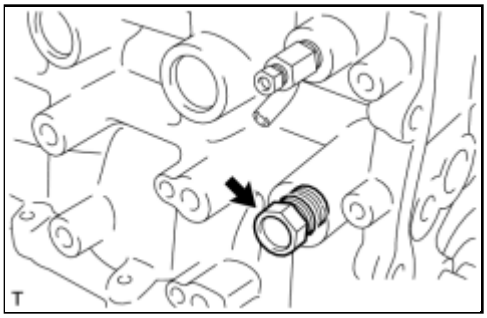
NOTICE:

Do not turn the crankshaft without the chain tensioner installed.

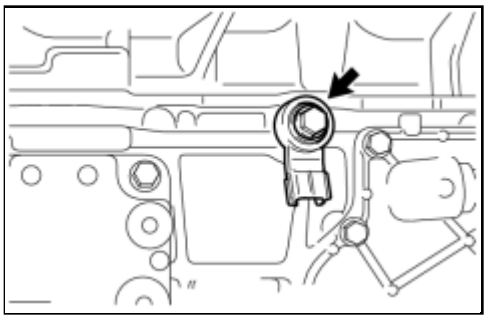


11. REMOVE CRANKSHAFT POSITION SENSOR

(a) Remove the bolt and sensor.



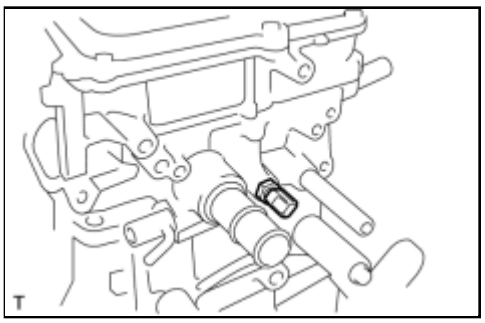
12. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY



(a) Using a 24 mm deep socket wrench, remove the engine oil pressure switch assembly.

13. REMOVE NO. 1 TAPER SCREW PLUG

(a) Remove the taper screw plug.



14. REMOVE KNOCK CONTROL SENSOR

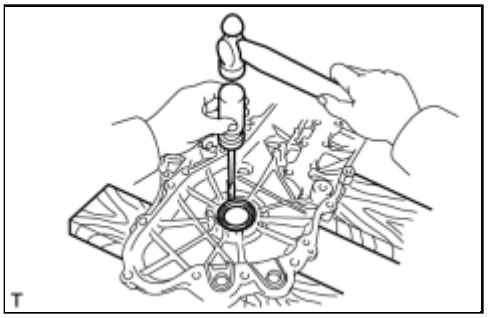
(a) Remove the bolt and sensor.

15. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using a 19 mm deep socket wrench, remove the sensor.

(b) Remove the gasket from the engine coolant temperature sensor.

16. REMOVE OIL FILTER CAP ASSEMBLY INFO

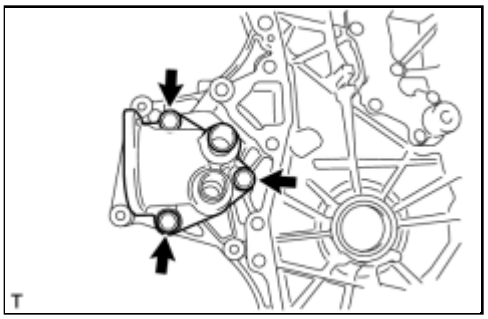


17. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY INFO

18. REMOVE TIMING CHAIN COVER OIL SEAL

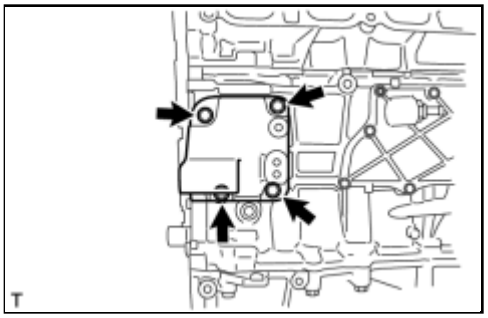
(a) Using a screwdriver and hammer, remove the oil seal.

NOTICE:



Be careful not to damage the timing chain cover.

HINT:



Tape the screwdriver tip before use.

19. REMOVE INLET WATER HOUSING

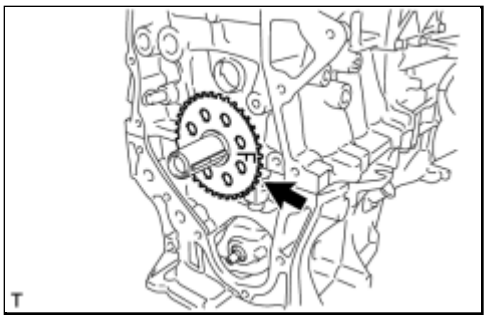
(a) Remove the 3 bolts, gasket and inlet water housing.

20. REMOVE NO. 1 GENERATOR BRACKET

(a) Remove the 4 bolts and No. 1 generator bracket.

21. REMOVE CHAIN TENSIONER SLIPPER INFO

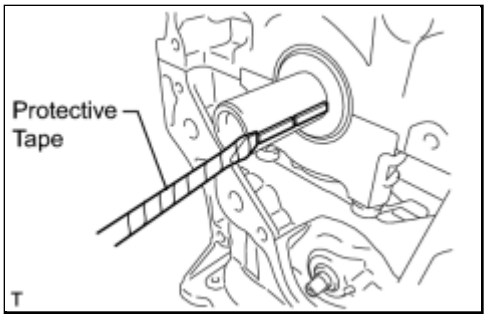
22. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO



23. REMOVE CHAIN SUB-ASSEMBLY INFO

24. REMOVE NO. 2 CHAIN VIBRATION DAMPER INFO

25. REMOVE CRANKSHAFT TIMING SPROCKET INFO



26. REMOVE NO. 2 CHAIN SUB-ASSEMBLY INFO

27. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

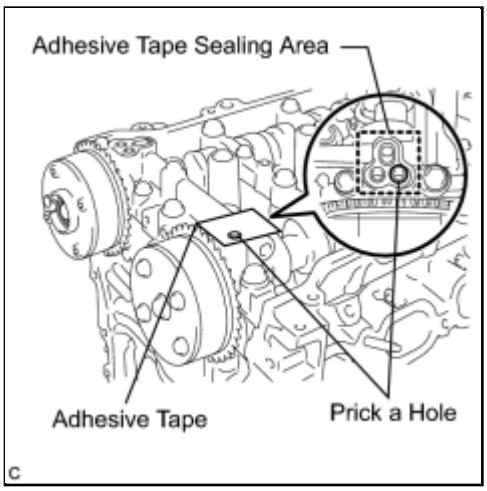
(a) Remove the No. 1 crankshaft position sensor plate.

28. REMOVE CRANKSHAFT TIMING GEAR KEY

(a) Using a screwdriver, remove the 2 crankshaft timing gear keys.

HINT:

Tape the screwdriver tip before use.



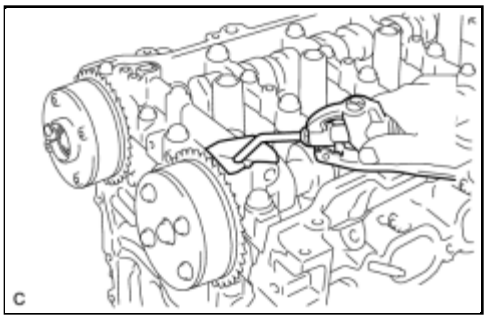
29. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Check the lock of the camshaft timing gear.

(b) Release the lock pin.

NOTICE:

Before removing the camshaft timing gear assembly, make sure that the lock pin has been released.



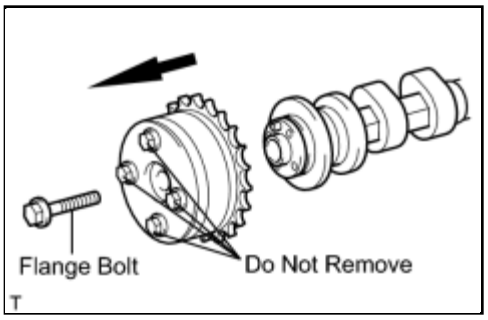
(1) After cleaning and degreasing the VVT oil hole on the intake side of the No. 1 camshaft bearing cap, completely seal the oil hole with adhesive tape or equivalent as shown in the illustration to prevent air from leaking.

NOTICE:

Be sure to cover the oil hole completely because air leaks due to insufficient sealing will prevent the lock pin from being released.

(2) Prick a hole in the tape covering the oil hole as shown in the illustration. (Procedure A)

(3) Apply approximately 150 kPa (1.5 kgf/cm2, 22 psi) of air pressure to the hole pricked in procedure A to release the lock pin.



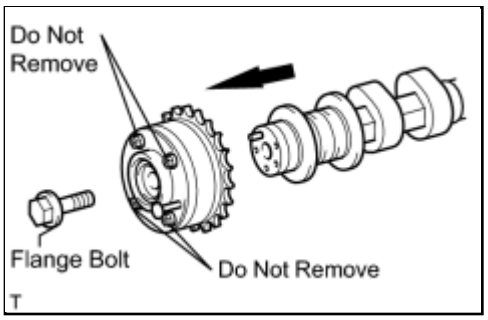
NOTICE:

- If air leaks out, reattach the adhesive tape.
- Cover the oil hole with a piece of cloth when applying air pressure to prevent oil from spraying.
- Do not lock the camshaft timing gear assembly. If it is locked, release the lock pin again.

HINT:

- The camshaft timing gear assembly may be turned in the advance direction without applying any force.
- If enough air pressure cannot be applied because of air leakage from the port, releasing the lock pin may be difficult.

(4) Remove the adhesive tape from the No. 1 camshaft bearing cap.

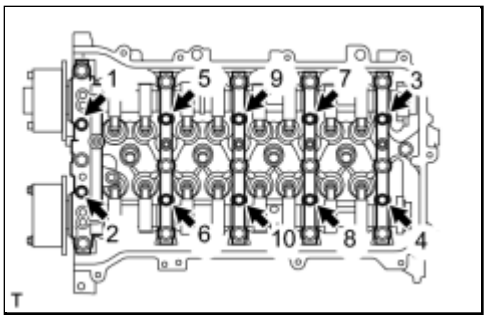


(c) Remove the flange bolt while holding the hexagonal portion of the camshaft, then remove the camshaft timing gear assembly.

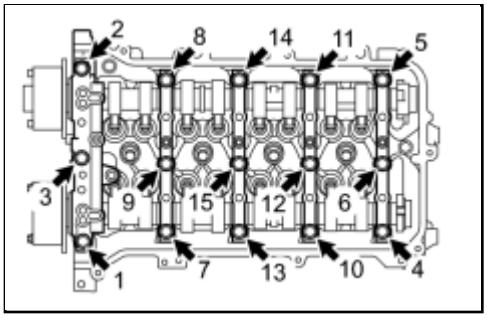
NOTICE:

- Before removing the camshaft timing gear, make sure that the lock pin has been released.
- Be sure not to remove the other 4 bolts.
- Keep the camshaft timing gear assembly horizontal while removing it from the camshaft.

30. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY



(a) Remove the flange bolt while holding the hexagonal portion of the camshaft, then remove the camshaft timing exhaust gear assembly.



NOTICE:

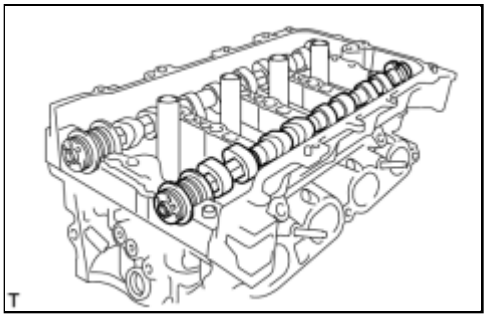
- Be sure not to remove the other 4 bolts.
- Keep the camshaft timing exhaust gear assembly horizontal while removing it from the camshaft.

31. REMOVE CAMSHAFT BEARING CAP

(a) Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Uniformly loosen and remove the 15 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

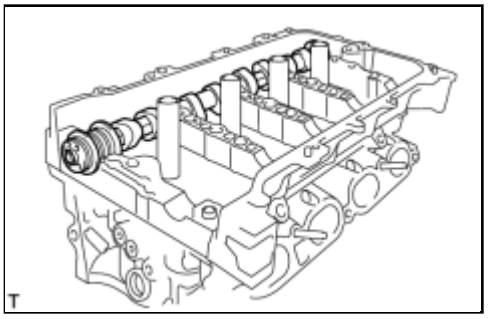


Uniformly loosen the bolts while keeping the camshaft level.

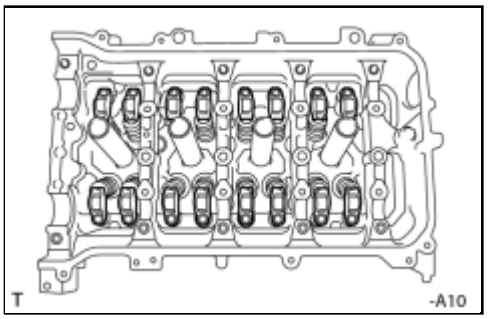
(c) Remove the 5 bearing caps.

HINT:

Arrange the removed parts in the correct order.



32. REMOVE CAMSHAFT

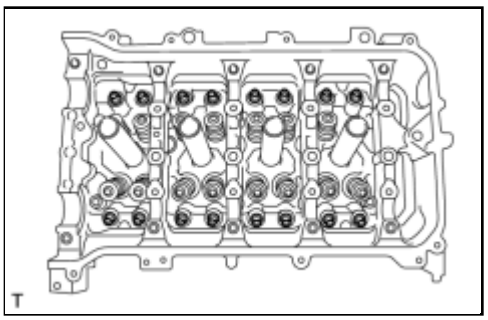


(a) Remove the camshaft.

33. REMOVE NO. 2 CAMSHAFT

(a) Remove the No. 2 camshaft.

34. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

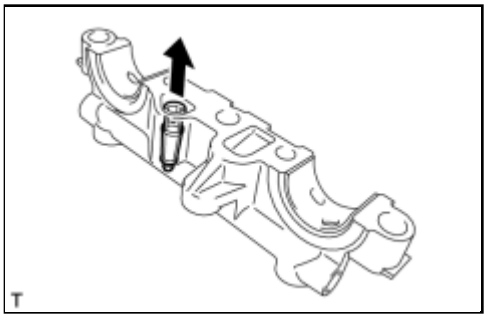


(a) Remove the 16 valve rocker arms.

HINT:

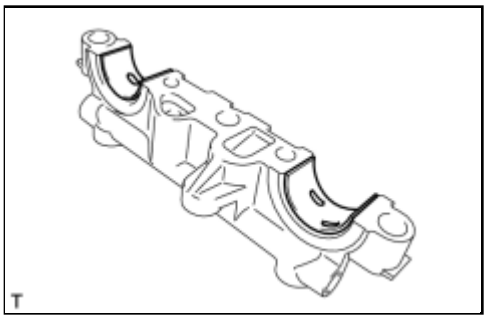
Arrange the removed parts in the correct order.

35. REMOVE VALVE LASH ADJUSTER ASSEMBLY



(a) Remove the 16 valve lash adjusters from the cylinder head.

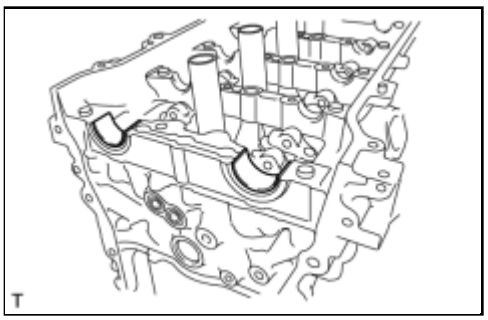
HINT:



Arrange the removed parts in the correct order.

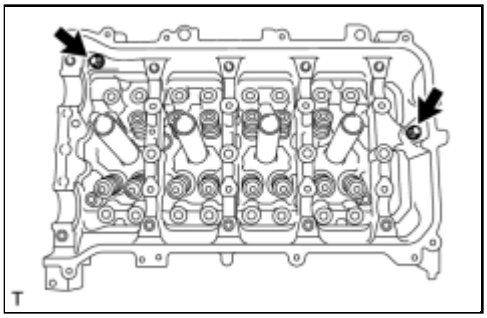
36. REMOVE OIL CONTROL VALVE FILTER

(a) Remove the oil control valve filter.

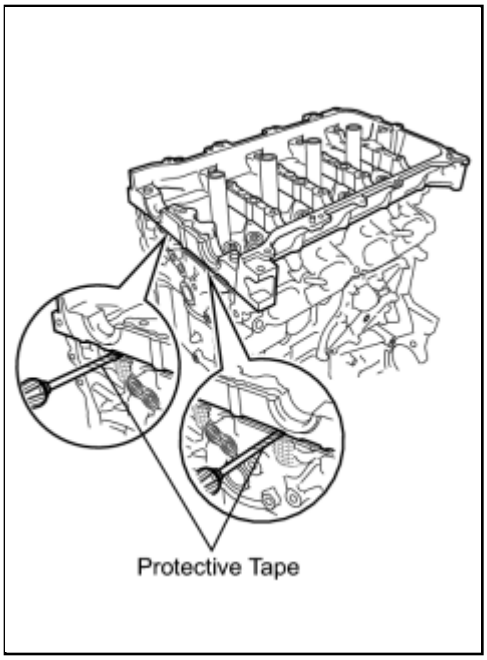


37. REMOVE NO. 1 CAMSHAFT BEARING

(a) Remove the 2 No. 1 camshaft bearings.



38. REMOVE NO. 2 CAMSHAFT BEARING



(a) Remove the 2 No. 2 camshaft bearings.

39. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY

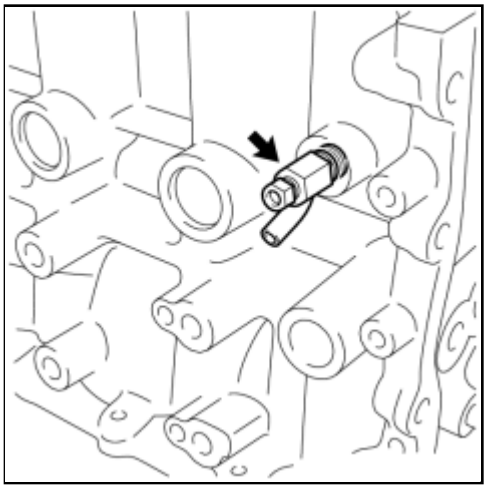
(a) Remove the 2 bolts.

(b) Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

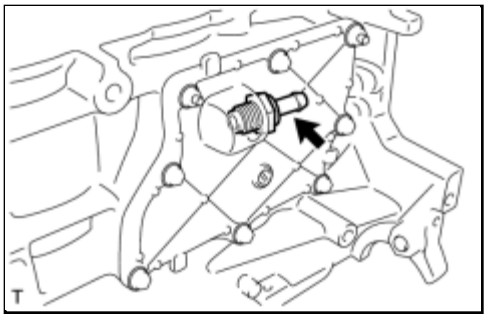
HINT:



Tape the screwdriver tip before use.

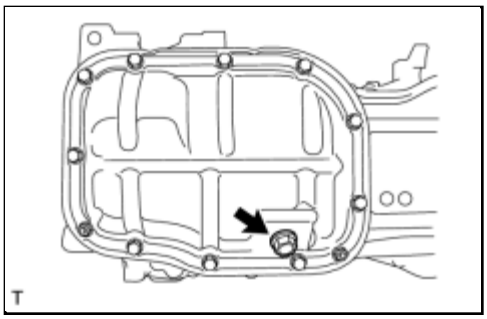
40. REMOVE CYLINDER HEAD SUB-ASSEMBLY INFO

41. REMOVE CYLINDER HEAD GASKET INFO



42. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Remove the water drain cock plug from the water drain cock sub-assembly.

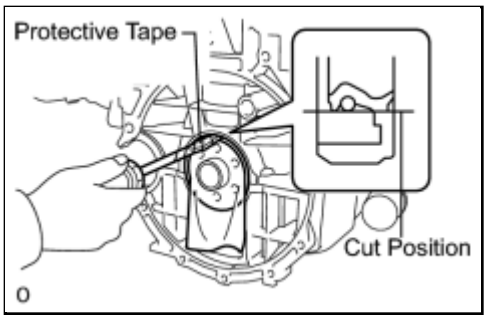


(b) Remove the cylinder block water drain cock sub-assembly from the cylinder block.

43. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve.

44. REMOVE OIL PAN DRAIN PLUG

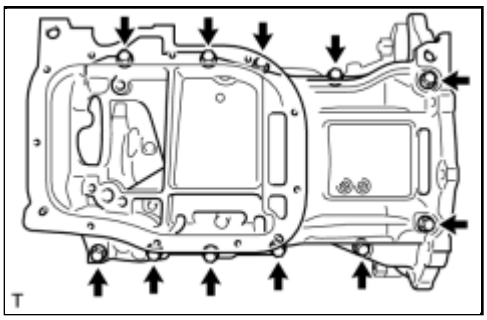


(a) Remove the oil pan drain plug and gasket.

45. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY INFO

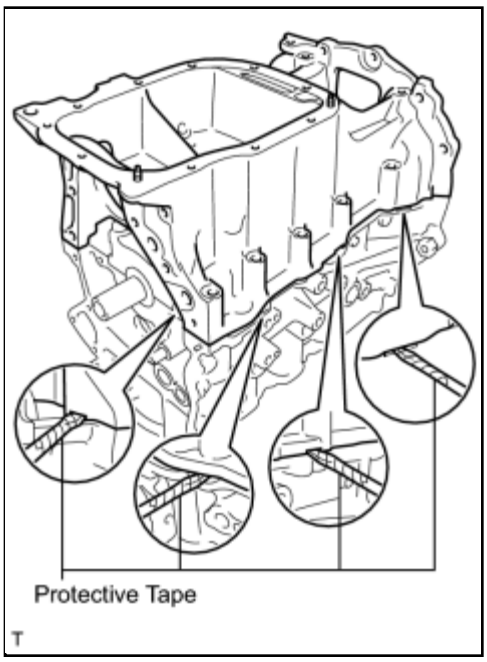
46. REMOVE OIL PUMP ASSEMBLY INFO

47. REMOVE REAR ENGINE OIL SEAL



(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip taped, pry out the oil seal.



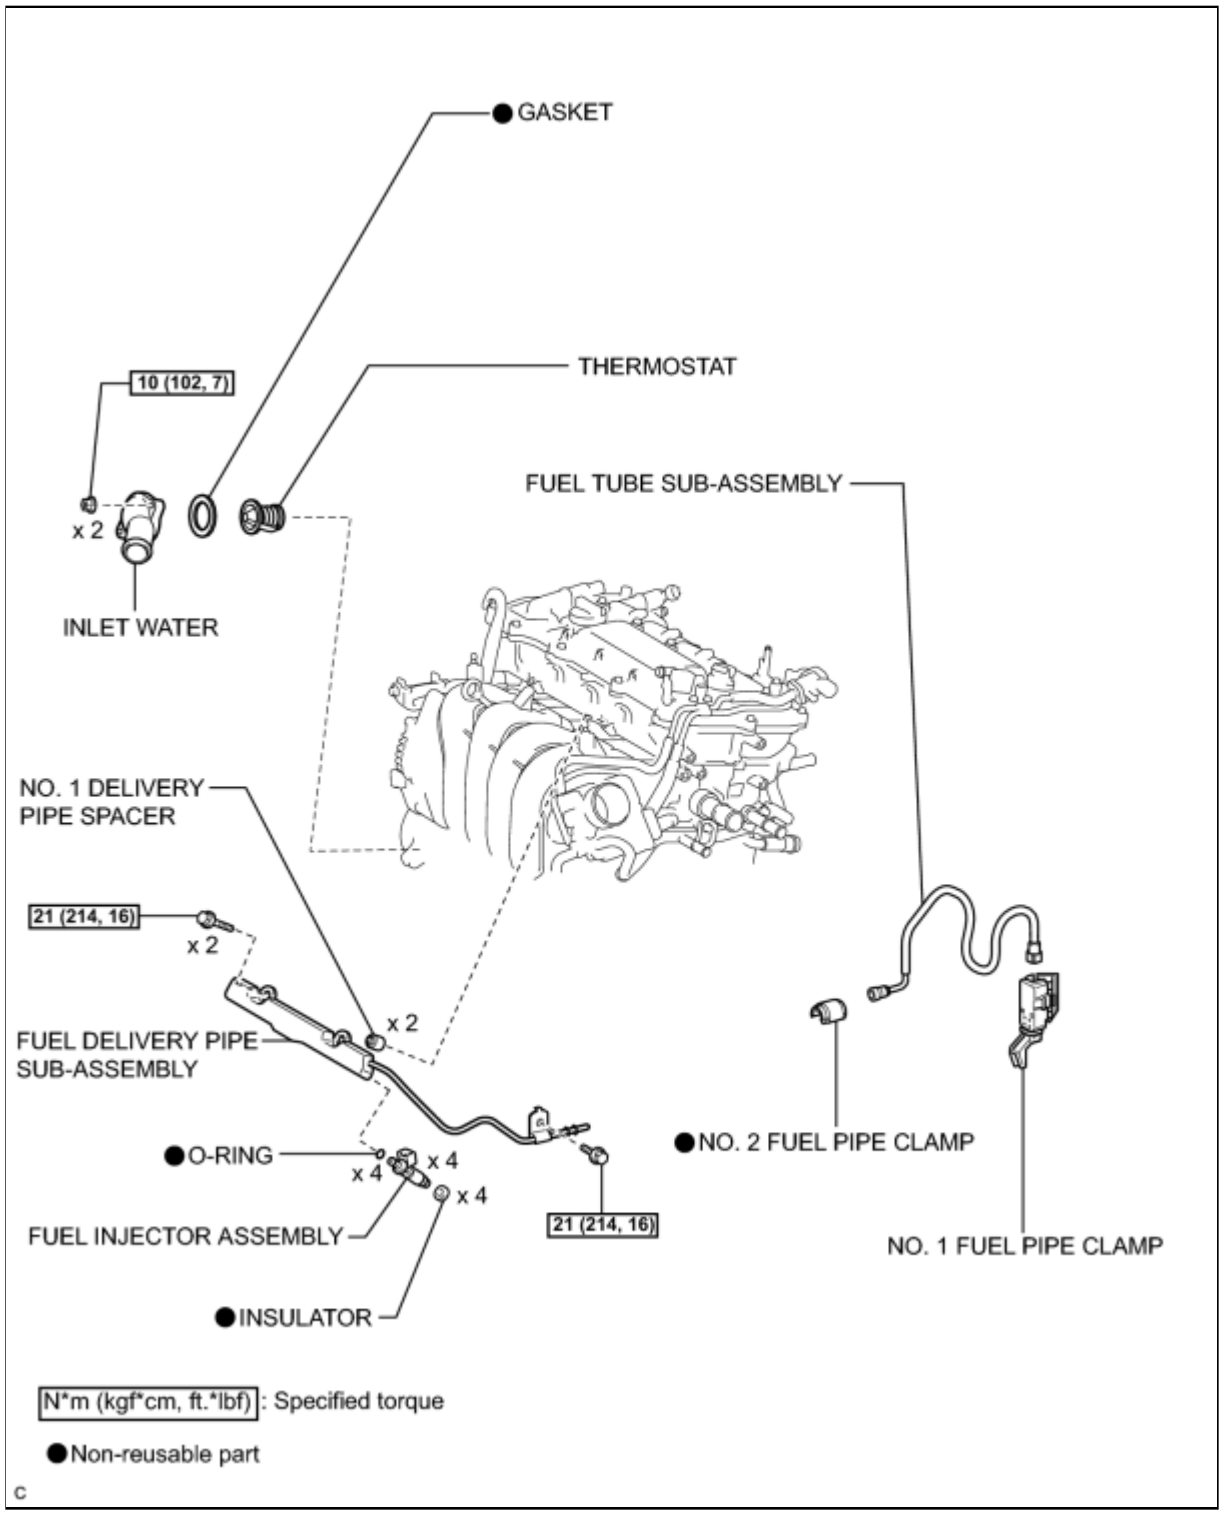
NOTICE:

After removing the oil seal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

48. REMOVE STIFFENING CRANKCASE ASSEMBLY

(a) Uniformly loosen and remove the 11 bolts.

(b) Using a screwdriver, remove the crankcase by prying between the crankcase and cylinder block.



NOTICE:

Be careful not to damage the contact surfaces of the crankcase and cylinder block.

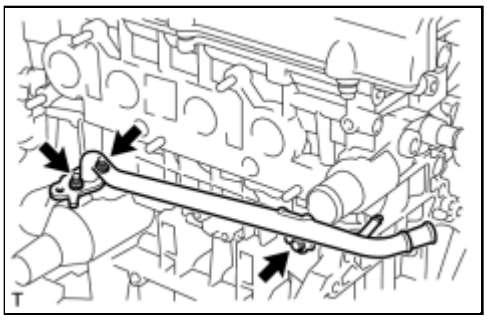
Title: 2AZ-FE ENGINE MECHANICAL: ENGINE UNIT: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL RADIO SETTING CONDENSER

(a) Install the condenser with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)



2. INSTALL ENGINE COOLANT TEMPERATURE SENSOR INFO

3. INSTALL OIL PRESSURE SWITCH INFO

4. INSTALL KNOCK SENSOR INFO

5. INSTALL IGNITION COIL ASSEMBLY INFO

6. INSTALL NO. 1 WATER BY-PASS PIPE

(a) Install a new gasket and the pipe with the bolt and 2 nuts.

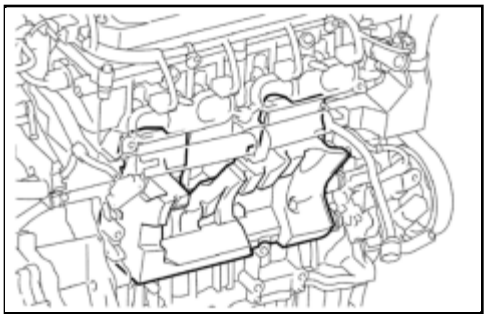
Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

7. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE INFO

8. INSTALL ENGINE OIL LEVEL DIPSTICK

9. INSTALL THERMOSTAT INFO

10. INSTALL INLET WATER INFO



11. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY INFO

12. INSTALL NO. 2 MANIFOLD STAY INFO

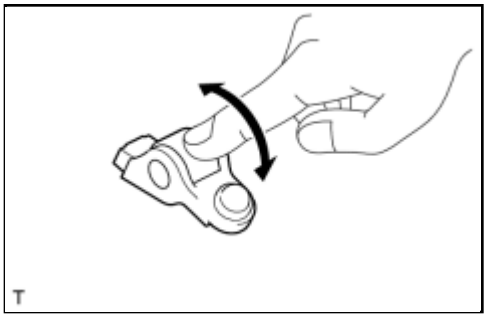
13. INSTALL MANIFOLD STAY INFO

14. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

15. INSTALL NO. 1 INTAKE MANIFOLD INSULATOR

(a) Install the No. 1 intake manifold insulator onto the cylinder block.

16. INSTALL INTAKE MANIFOLD INFO



17. INSTALL FUEL INJECTOR ASSEMBLY INFO

18. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XR2016X
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: INSPECTION (2010 Corolla)		

INSPECTION

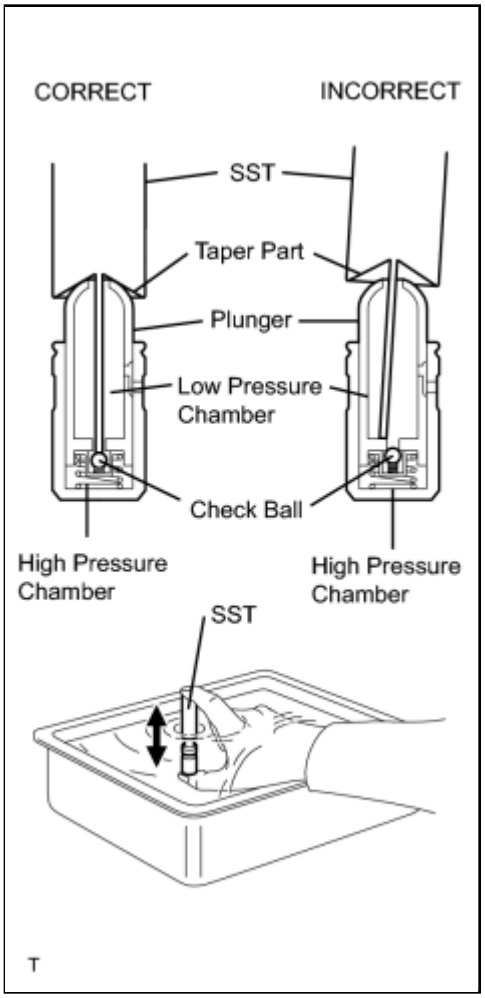
1. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Turn the roller by hand to check that it turns smoothly.

HINT:

If the roller does not turn smoothly, replace the valve rocker arm sub-assembly.

2. INSPECT VALVE LASH ADJUSTER ASSEMBLY



NOTICE:

- Keep the lash adjuster free of dirt and foreign matter.
- Only use clean engine oil.

(a) Place the lash adjuster into a container filled with engine oil.

(b) Insert the tip of SST into the lash adjuster plunger and use the tip to press down on the check ball inside the plunger.

SST: 09276-75010

(c) Squeeze SST and the lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed it.

OK:

Plunger moves up and down.

NOTICE:

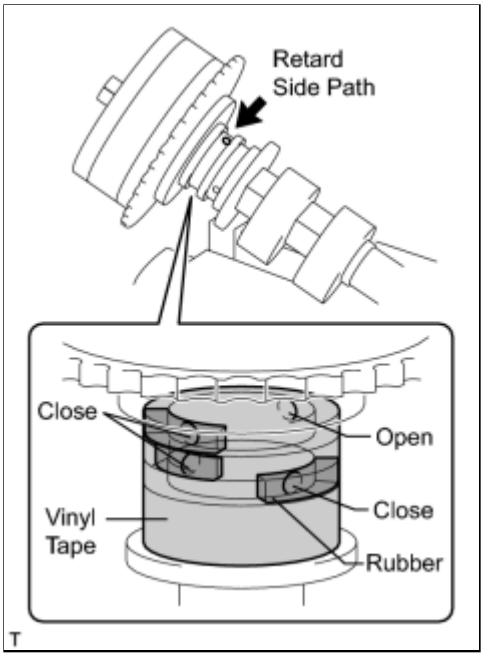
When bleeding the high-pressure chamber, make sure that the tip of SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, the high-pressure chamber will not be bled.

(e) After bleeding, remove SST. Then try to quickly and firmly press the plunger by hand.

OK:

Plunger is very difficult to move.

If the result is not as specified, replace the lash adjuster.



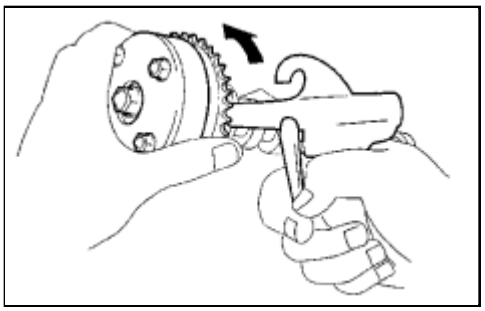
3. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Install the camshaft timing gear INFO .

(b) Check the lock of the camshaft timing gear.

(1) Confirm that the camshaft timing gear is locked.

(c) Release the lock pin.



(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

There are 4 oil paths in the groove of the camshaft. Plug three of the paths with pieces of rubber.

(2) Prick a hole in the tape placed on the retard side path, on the opposite side to that of the advance side path, as shown in the illustration.

(3) While applying approximately 150 kPa (1.5 kgf/cm2, 22 psi) of air pressure to the oil paths, forcibly turn the camshaft timing gear assembly in the advance direction (counterclockwise).

CAUTION:

Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

NOTICE:

Do not lock the camshaft timing gear assembly. If it is locked, release the lock pin again.

HINT:

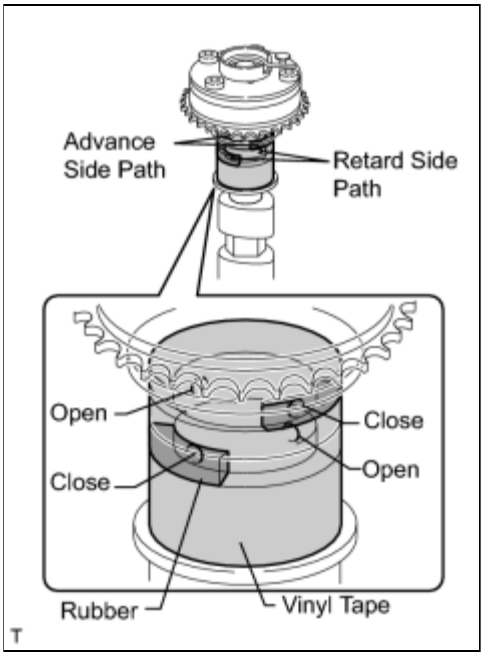
- The camshaft timing gear assembly may be turned in the advance direction without applying any force.
- If enough air pressure cannot be applied because of air leakage from the port, releasing the lock pin may be difficult.

(d) Check for smooth rotation.

(1) Turn the camshaft timing gear within its movable range (26.5 to 28.5°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.

NOTICE:

Do not lock the camshaft timing gear assembly. If it is locked, release the lock pin again.



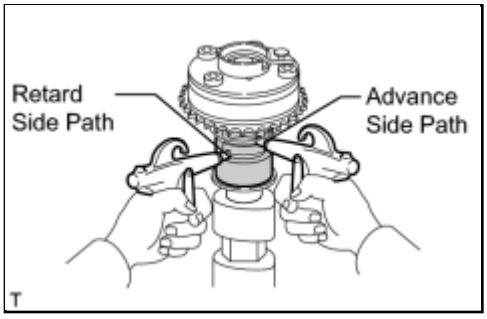
4. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Install the camshaft timing exhaust gear INFO .

(b) Check the camshaft timing exhaust gear lock.

(1) Make sure that the camshaft timing exhaust gear is locked.

(c) Release the lock pin.

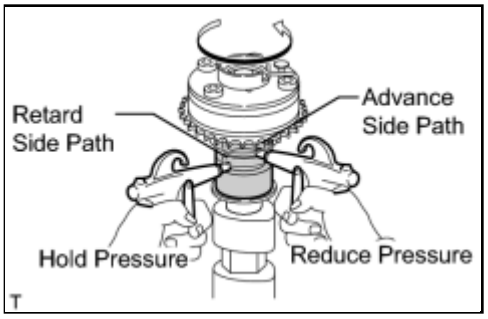


(1) Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

HINT:

The 4 oil paths are provided in the grooves. Plug 2 paths with rubber pieces.

(2) Prick a hole in the tape placed on the advance side path. Prick a hole in the tape placed on the retard side path, on the opposite side to that of the advance side path, as shown in the illustration.



(3) Apply approximately 200 kPa (2.0 kgf/cm2, 28 psi) of air pressure to the 2 paths (the advance side path and the retard side path).

CAUTION:

Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

(4) Make sure that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure

applied to the advance side path.

HINT:

The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.

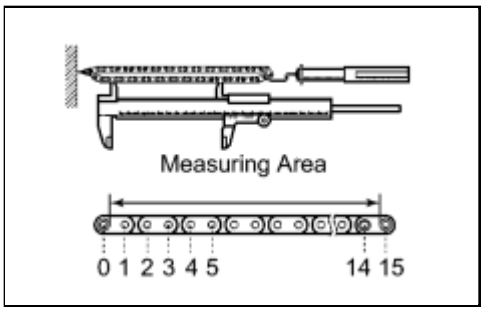
(5) When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, then release the air pressure from the retard side path.

NOTICE:

Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

(d) Check for smooth rotation.

(1) Turn the camshaft timing exhaust gear within its movable range (19 to 21°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.



NOTICE:

When the air pressure is released from the advance side path, then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

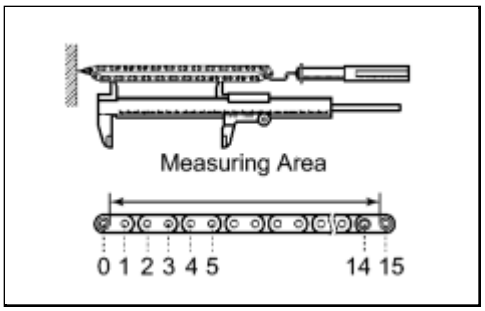
(e) Check the lock at the most advanced position.

(1) Make sure that the camshaft timing exhaust gear is locked at the most advanced position.

5. INSPECT CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 15 links.



Maximum chain elongation:
115.2 mm (4.535 in.)

NOTICE:

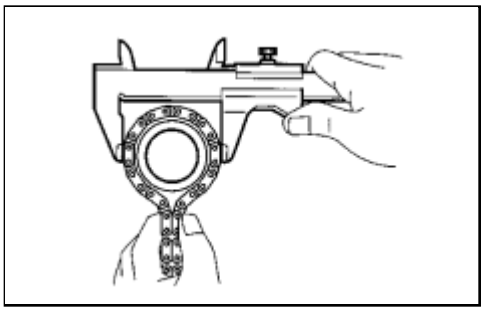
Perform the measurement at 3 random places. Use the average of the measurements.

If the average elongation is greater than the maximum, replace the chain.

6. INSPECT NO. 2 CHAIN SUB-ASSEMBLY

(a) Pull the chain with a force of 147 N (15 kgf, 33 lbf) as shown in the illustration.

(b) Using a vernier caliper, measure the length of 15 links.



Maximum chain elongation:
102.1 mm (4.019 in.)

NOTICE:

Perform the measurement at 3 random places. Use the average of the measurements.

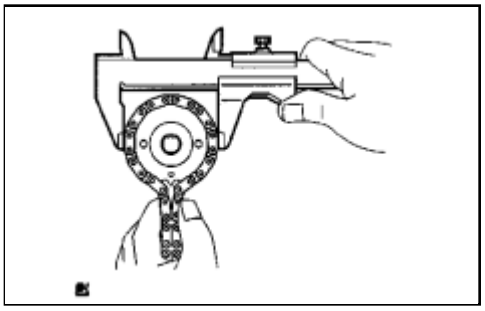
If the average elongation is greater than the maximum, replace the No. 2 chain.

7. INSPECT OIL PUMP DRIVE GEAR

(a) Place the chain around the gear.

(b) Using a vernier caliper, measure the diameter of the gear and chain.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)



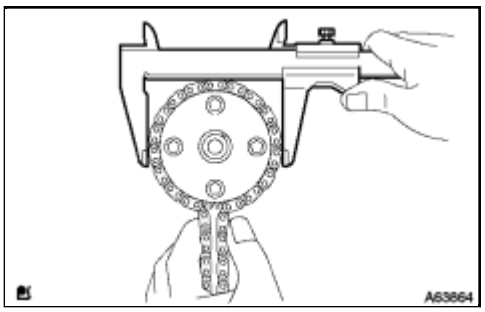
NOTICE:

The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.

8. INSPECT OIL PUMP DRIVE SHAFT GEAR

(a) Place the chain around the gear.



(b) Using a vernier caliper, measure the diameter of the gear and chain.

Minimum gear diameter (with chain):
48.8 mm (1.921 in.)

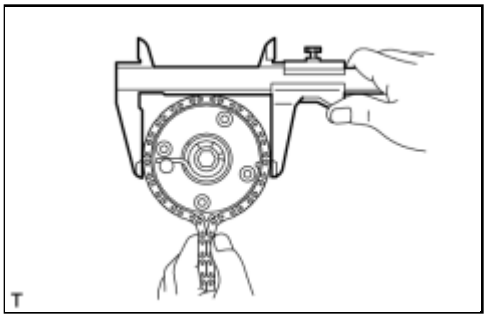
NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.

9. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Place the chain around the gear.

(b) Using a vernier caliper, measure the diameter of the gear and chain.



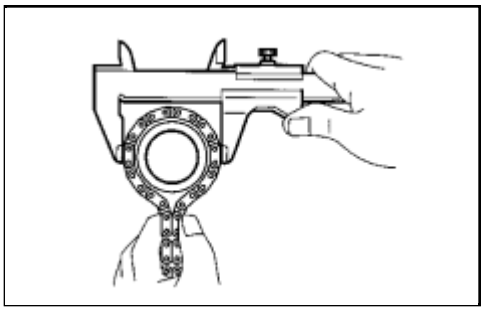
Minimum gear diameter (with chain):
96.8 mm (3.811 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.

10. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Place the chain around the sprocket.



(b) Using a vernier caliper, measure the diameter of the sprocket and chain.

Minimum sprocket diameter (with chain):
96.8 mm (3.811 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.

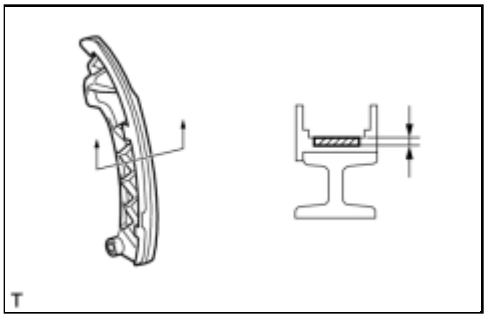
11. INSPECT CRANKSHAFT TIMING GEAR

(a) Place the chain around the gear.

(b) Using a vernier caliper, measure the diameter of the gear and chain.

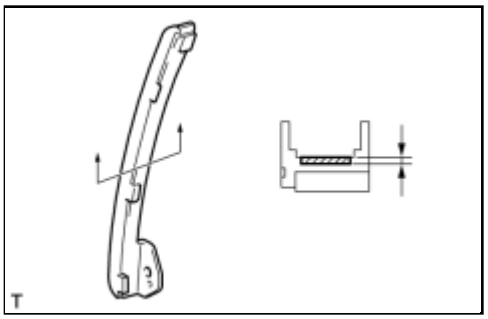
Minimum gear diameter (with chain):
51.1 mm (2.012 in.)

NOTICE:
The vernier caliper must be in contact with the chain rollers when measuring.



If the diameter is less than the minimum, replace the chain and gear.

12. INSPECT CHAIN TENSIONER SLIPPER

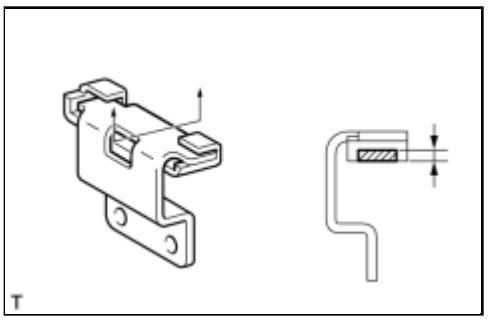


(a) Using a vernier caliper, measure the tensioner slipper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner slipper.

13. INSPECT NO. 1 CHAIN VIBRATION DAMPER



(a) Using a vernier caliper, measure the vibration damper wear.

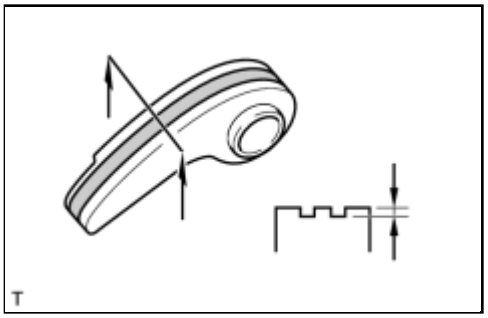
Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the No. 1 chain vibration damper.

14. INSPECT NO. 2 CHAIN VIBRATION DAMPER

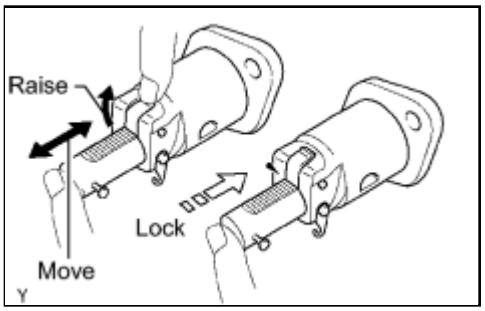
(a) Using a vernier caliper, measure the vibration damper wear.

Maximum wear:
1.0 mm (0.039 in.)



If the wear is greater than the maximum, replace the No. 2 chain vibration damper.

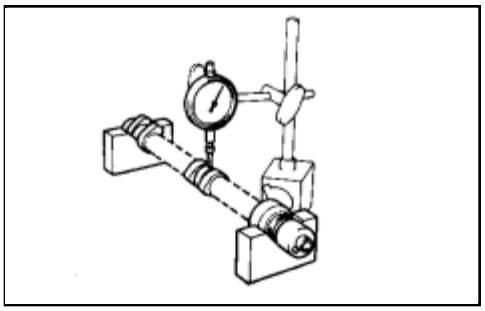
15. INSPECT CHAIN TENSIONER PLATE



(a) Using a vernier caliper, measure the chain tensioner plate wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner plate.



16. INSPECT NO. 1 CHAIN TENSIONER

(a) Check that the plunger moves smoothly when the ratchet pawl is raised by hand.

(b) Release the ratchet pawl, then check that the plunger is locked in place by the ratchet pawl and does not move when pushed by hand.

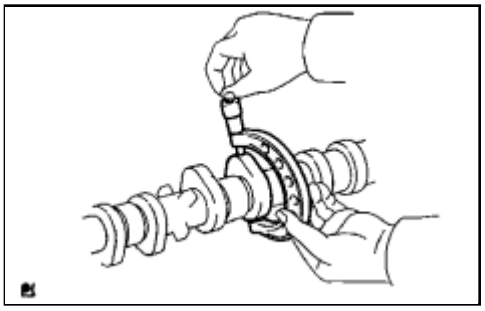
17. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.

(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
0.04 mm (0.0016 in.)



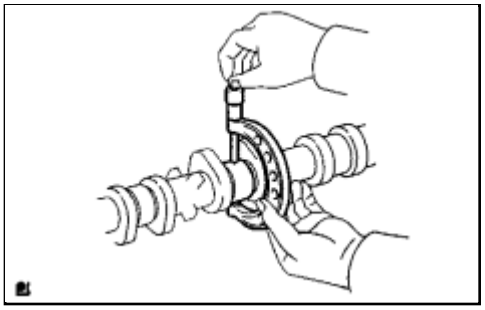
If the circle runout is greater than the maximum, replace the camshaft.

(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe height.

Standard cam lobe height:
42.816 to 42.916 mm (1.6857 to 1.6896 in.)
Minimum cam lobe height:
42.666 mm (1.6798 in.)

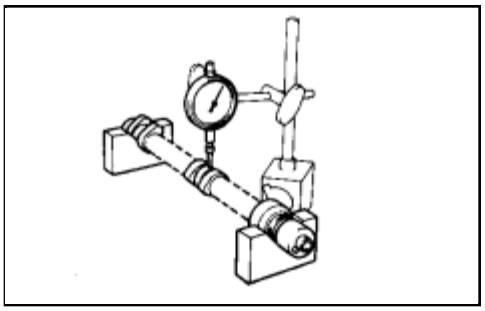
If the cam lobe height is less than the minimum,



replace the camshaft.

(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.



Standard Journal Diameter:

JOURNAL POSITION	SPECIFIED CONDITION
No. 1	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

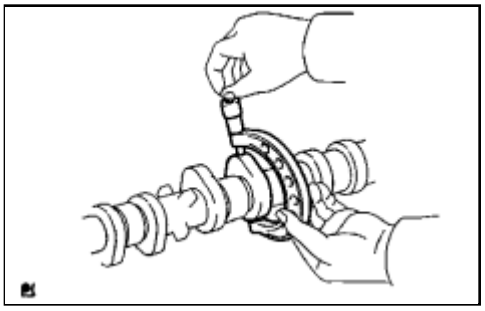
If the journal diameter is not as specified, check the oil clearance INFO .

18. INSPECT NO. 2 CAMSHAFT

(a) Inspect the No. 2 camshaft for runout.

(1) Place the No. 2 camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.



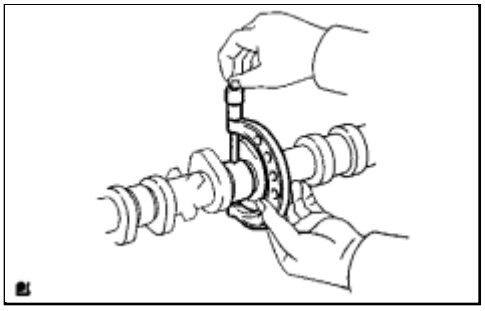
Maximum circle runout:
0.04 mm (0.0016 in.)

If the circle runout is greater than the maximum, replace the No. 2 camshaft.

(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe height.

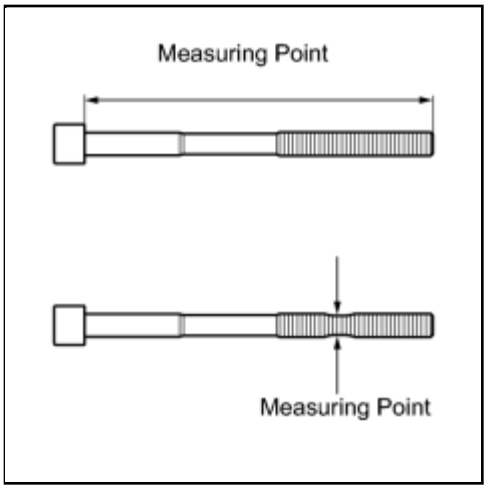
Standard cam lobe height:
44.336 to 44.436 mm (1.7455 to 1.7494 in.)
Minimum cam lobe height:
44.186 mm (1.7396 in.)



If the cam lobe height is less than the minimum, replace the No. 2 camshaft.

(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.



Standard Journal Diameter:

JOURNAL POSITION	SPECIFIED CONDITION
No. 1	34.449 to 34.465 mm (1.3563 to 1.3569 in.)
Other	22.949 to 22.965 mm (0.9035 to 0.9041 in.)

If the journal diameter is not as specified, check the oil clearance INFO .

19. INSPECT CYLINDER HEAD SET BOLT

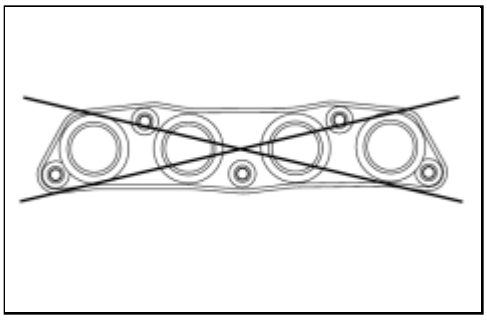
(a) Using a vernier caliper, measure the length of the cylinder head set bolt from the seat to the end.

Standard bolt length:
146.8 to 148.2 mm (5.7795 to 5.8346 in.)
Maximum bolt length:
149.2 mm (5.874 in.)

If the bolt length is greater than the maximum, replace the cylinder head set bolt.

(b) Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.

Standard outside diameter:
9.77 to 9.96 mm (0.3846 to 0.3921 in.)



Minimum outside diameter:
9.4 mm (0.3701 in.)

HINT:

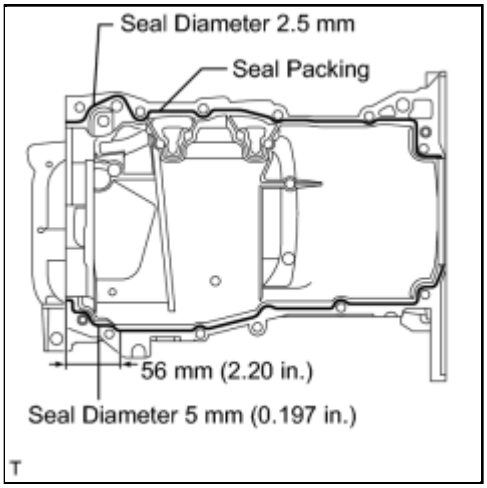
Using a straightedge, visually check thinner areas of the threaded part of the cylinder head set bolt.

If the diameter is less than the minimum, replace the cylinder head set bolt.

20. INSPECT EXHAUST MANIFOLD

(a) Using a precision straightedge and feeler gauge, measure the warpage on the contact surface of the cylinder head.

Maximum warpage:
0.7 mm (0.028 in.)



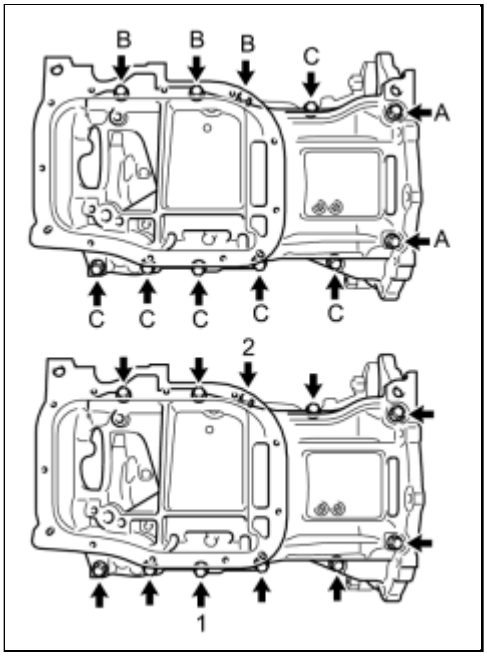
HINT:

If the warpage is greater than the maximum, replace the manifold.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA402OX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL STIFFENING CRANKCASE ASSEMBLY



(a) Apply seal packing in a continuous bead (diameter: 2.5 mm (0.0984 in.)) to the places shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

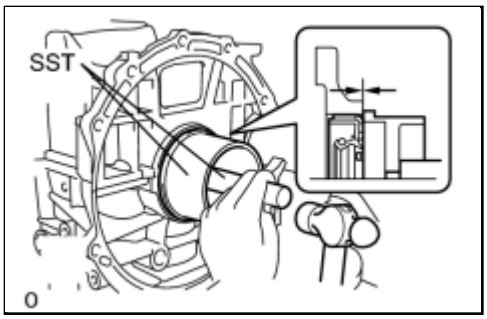
NOTICE:

- Remove any oil from the contact surface.
- Install the crankcase within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the stiffening crankcase.

(b) Install the stiffening crankcase with the 11 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

Bolt Length:



ITEM	LENGTH
Bolt A	138 mm (5.43 in.)
Bolt B	35 mm (1.38 in.)
Bolt C	70 mm (2.76 in.)

(c) Recheck the torque for bolts 1 and 2.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

(d) Wipe off any excess seal packing with a clean piece of cloth.

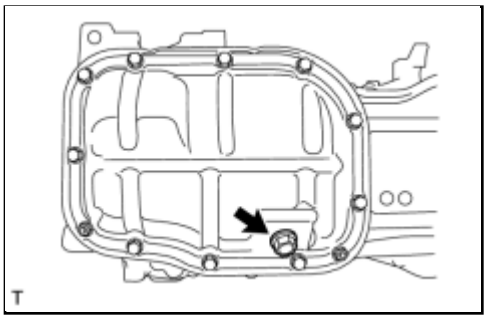
2. INSTALL REAR ENGINE OIL SEAL

(a) Using SST and a hammer, evenly tap the oil seal until its surface is flush with the rear oil seal retainer edge.

SST: 09223-15030
SST: 09950-70010
09951-07100

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.

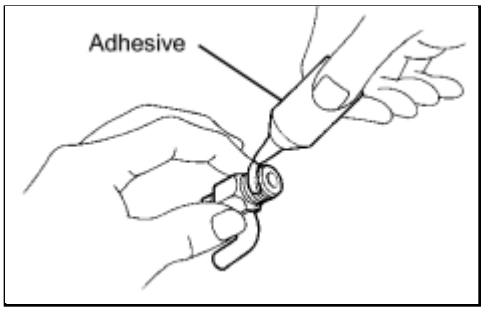


(b) Apply MP grease to a new oil seal lip.

NOTICE:
Wipe off extra grease on the crankshaft.

3. INSTALL OIL PUMP ASSEMBLY INFO

4. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY INFO

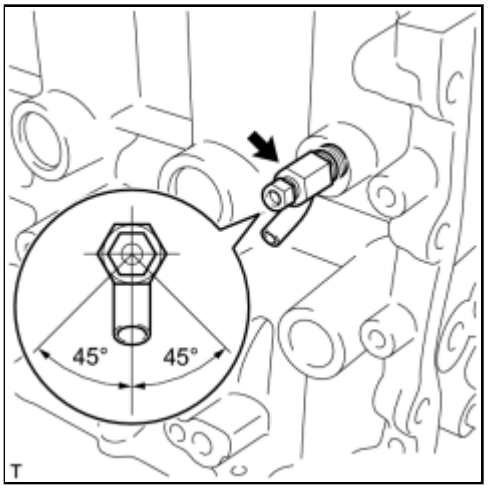


5. INSTALL OIL PAN DRAIN PLUG

(a) Install a new gasket and the oil pan drain plug.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

6. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

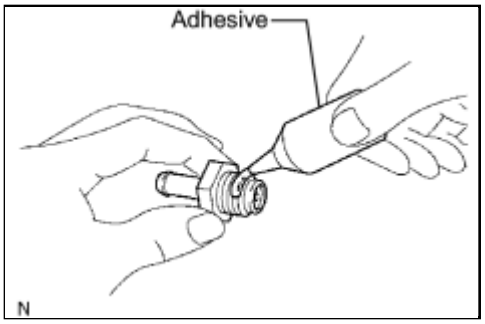


(a) Apply adhesive to the threads of the drain cock.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Install the water drain cock as shown in the illustration.

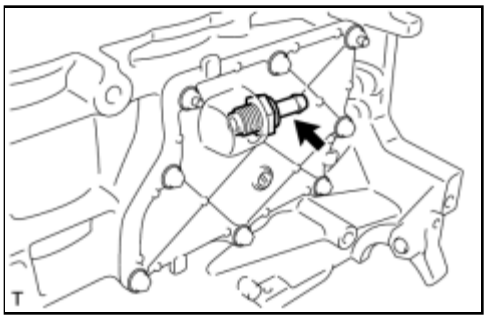
Torque: 20 N·m (204 kgf·cm, 15ft·lbf)



NOTICE:

- Do not rotate the drain cock more than 1 revolution (360°) after tightening it to the specified torque.
- Install the water drain cock within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the water drain cock.

(c) Install the water drain cock plug to the water drain cock.



Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

7. INSTALL VENTILATION VALVE SUB-ASSEMBLY

(a) Apply adhesive to the threads of the ventilation valve.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

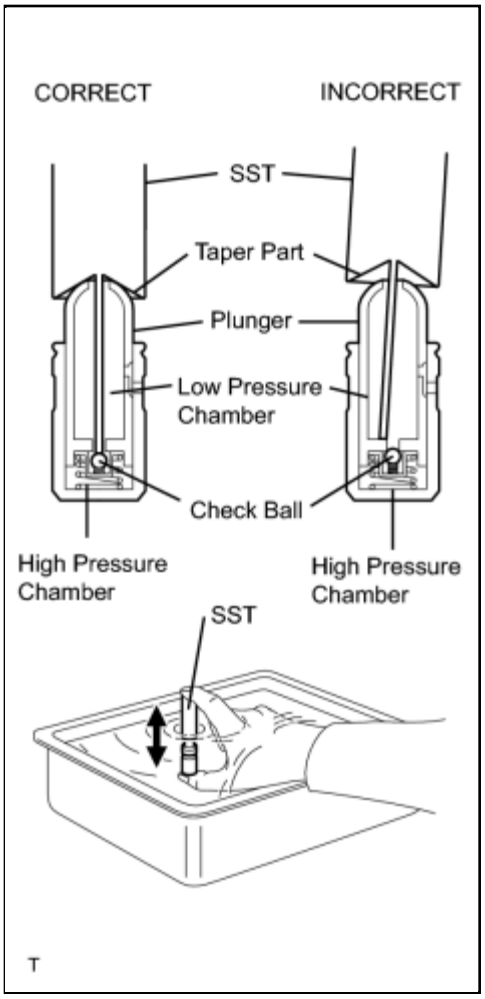
(b) Install the ventilation valve.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

NOTICE:

- Install the crankcase within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the ventilation valve.

8. INSTALL CYLINDER HEAD GASKET INFO



9. INSTALL CYLINDER HEAD SUB-ASSEMBLY INFO

10. INSTALL VALVE LASH ADJUSTER ASSEMBLY

NOTICE:

- Keep the lash adjuster free of dirt and foreign matter.
- Only use clean engine oil.

(a) Place the lash adjuster into a container filled with engine oil.

(b) Insert the tip of SST into the lash adjuster plunger and use the tip to press down on the check ball inside the plunger.

SST: 09276-75010

(c) Squeeze SST and the lash adjuster together to move the plunger up and down 5 to 6 times.

(d) Check the movement of the plunger and bleed it.

OK:

Plunger moves up and down.

NOTICE:

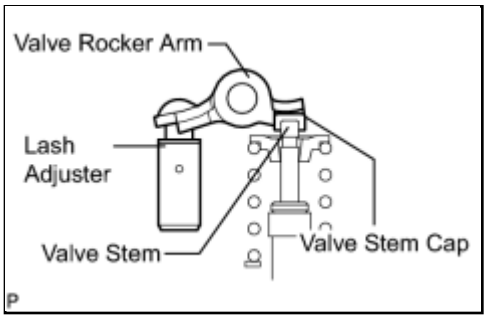
When bleeding air from the high-pressure chamber, make sure that the tip of SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, the high-pressure chamber will not be bled.

(e) After bleeding, remove SST. Then, try to press the plunger quickly and firmly by hand.

OK:

Plunger is very difficult to move.

If the result is not as specified, replace the lash adjuster.



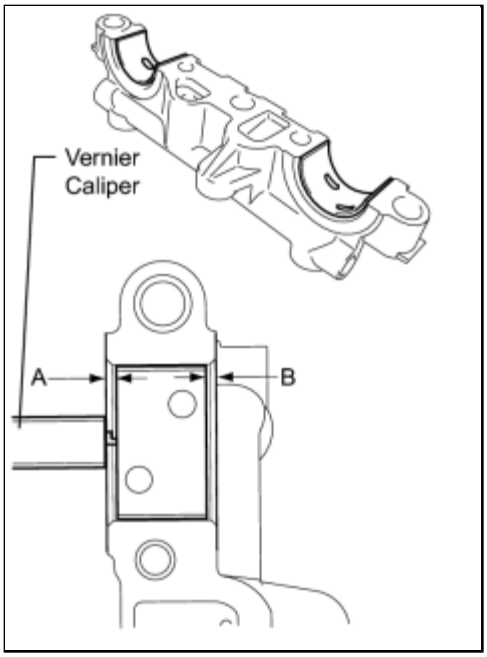
(f) Install the lash adjusters.

NOTICE:

Install the lash adjuster to the same place it was removed from.

11. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

(a) Apply engine oil to the lash adjuster tip and valve stem cap end.



(b) Make sure that the valve rocker arms are installed as shown in the illustration.

12. INSTALL NO. 1 CAMSHAFT BEARING

(a) Clean the both surfaces of the bearings.

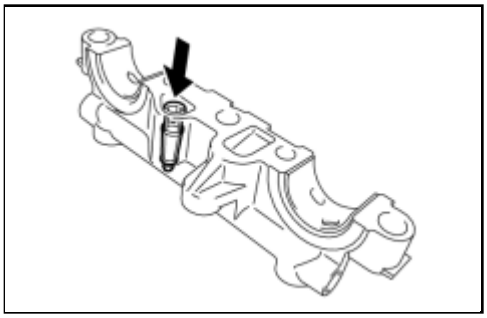
(b) Install the 2 No. 1 camshaft bearings.

(c) Using a vernier caliper, measure the distance between the bearing cap edge and the camshaft bearing edge.

Dimension (A - B):
0.7 mm (0.0276 in.) or less

NOTICE:

Position the bearings to the center of the bearing cap by measuring dimensions A and B.

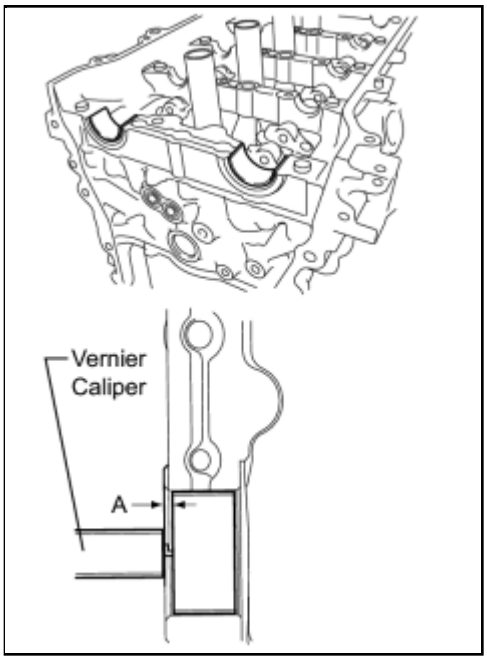


13. INSTALL OIL CONTROL VALVE FILTER

(a) Check that no foreign matter is on the mesh part of the filter.

(b) Install the oil control valve filter.

NOTICE:



Do not touch the mesh when installing the oil control valve filter.

14. INSTALL NO. 2 CAMSHAFT BEARING

(a) Clean both surfaces of the bearings.

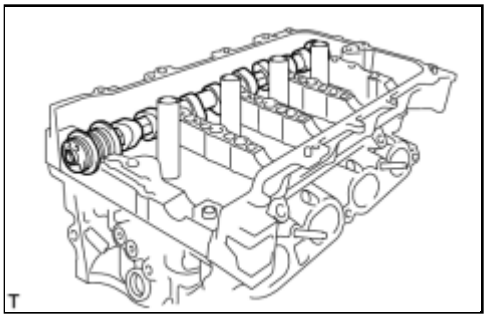
(b) Install the 2 No. 2 camshaft bearings.

(c) Using a vernier caliper, measure the distance between the bearing cap edge and the camshaft bearing edge.

Dimension (A):

1.05 to 1.75 mm (0.041 to 0.069 in.)

NOTICE:

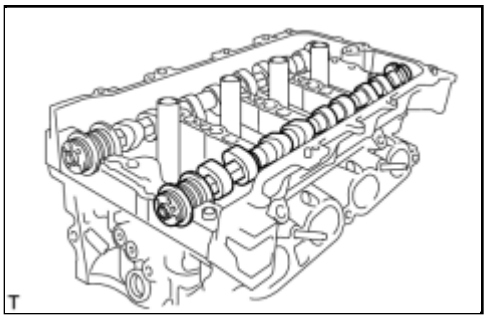


Position the bearings to the center of the bearing cap by measuring dimension A.

15. INSTALL NO. 2 CAMSHAFT

(a) Clean the camshaft journals.

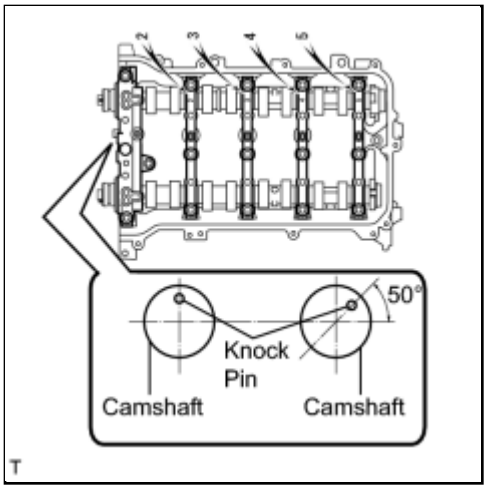
(b) Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.



(c) Install the No. 2 camshaft to the camshaft housing.

16. INSTALL CAMSHAFT

(a) Clean the camshaft journals.

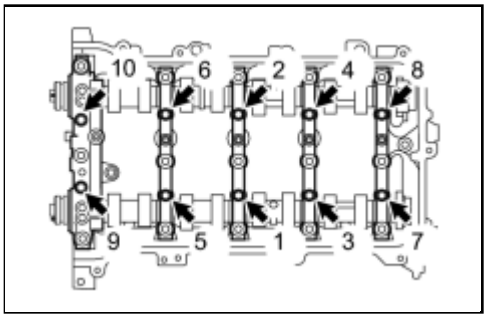


(b) Apply a light coat of engine oil to the camshaft journals, camshaft housing.

(c) Install the camshaft to the camshaft housing.

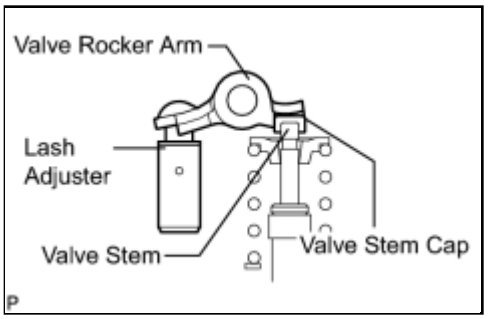
17. INSTALL CAMSHAFT BEARING CAP

(a) Apply engine oil to the bearing caps.



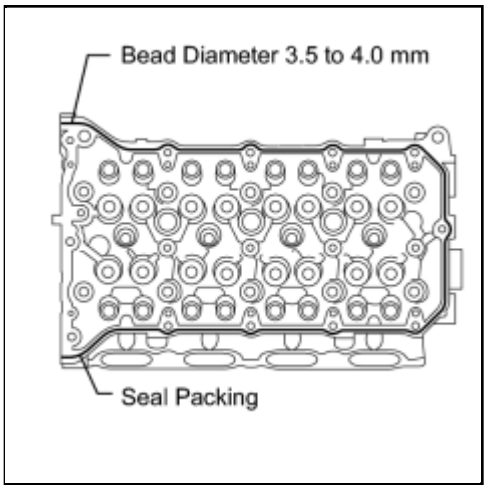
(b) Make sure of the marks and numbers on the camshaft bearing caps and place them in each proper position and direction.

HINT:



Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

(c) Tighten the 10 bolts in the order shown in the illustration.



Torque: 16 N·m (163 kgf·cm, 12ft·lbf)

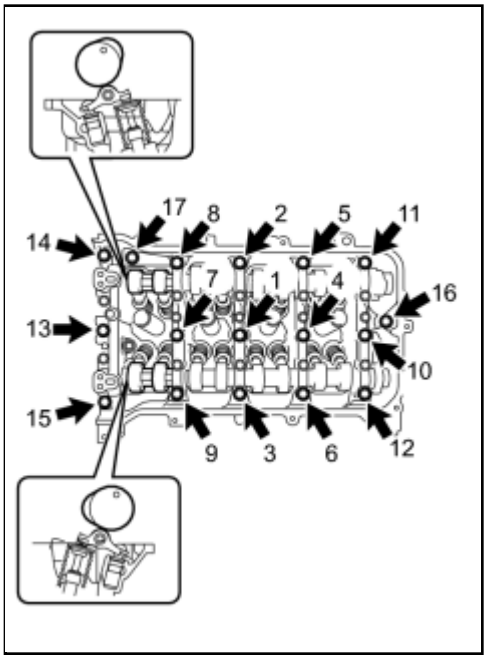
18. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY

(a) Make sure that the valve rocker arms are installed as shown in the illustration.

(b) Apply seal packing in a continuous bead as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



Bead diameter:

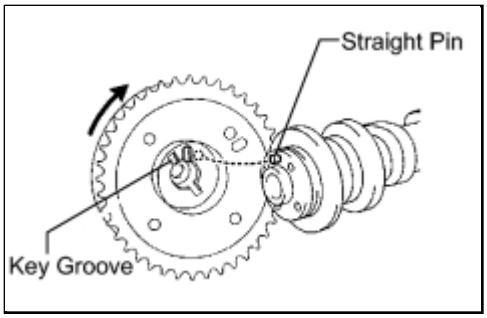
3.5 to 4.0 mm (0.138 to 0.158 in.)

NOTICE:

- Remove any oil from the contact surface.
- Install the camshaft housing sub-assembly within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing.

(c) Set the camshaft and No. 2 camshaft as shown in the illustration.

(d) Install the camshaft housing and tighten the 17 bolts in the order shown in the illustration.



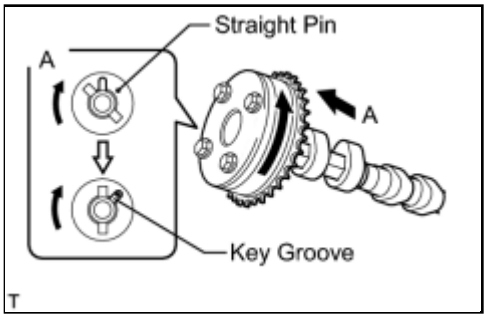
Torque: 27 N·m (275 kgf·cm, 20ft·lbf)

NOTICE:

- After installing the camshaft housing, make sure that the cam lobes are positioned as shown in the illustration.
- If any of the bolts are loosened during installation, remove the camshaft housing, clean the installation surfaces, and reapply seal packing.
- If the camshaft housing is removed because any of the bolts are loosened during installation, make sure that the previously applied seal packing does not enter any oil passages.
- After installing the camshaft housing, wipe off any seal packing that seeped out from between the housing and the cylinder head.

19. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

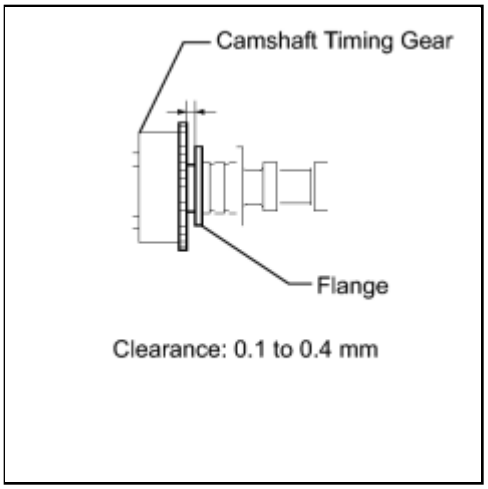
(a) Check that the knock pin is installed on the camshaft.



(b) Put the camshaft timing gear and camshaft together with the straight pin and key groove misaligned, as shown in the illustration.

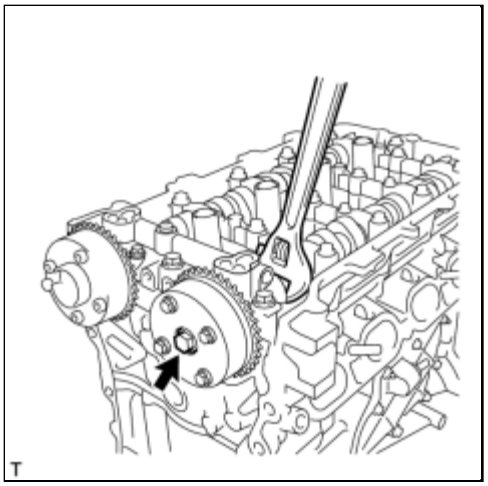
NOTICE:

Do not forcefully push in the camshaft timing gear assembly. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing gear assembly.



(c) Turn the camshaft timing gear as shown in the illustration while pushing it gently against the camshaft. Push further

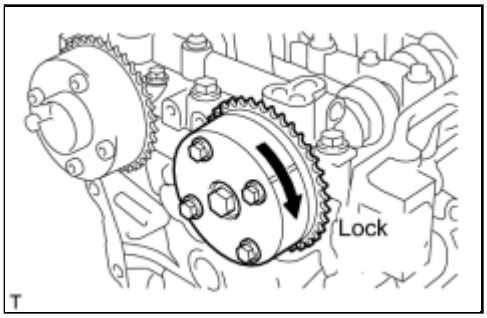
at the position where the pin fits into the groove.



NOTICE:

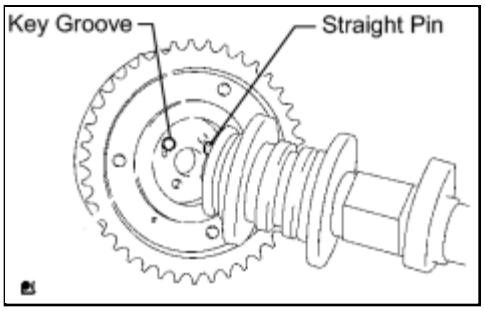
Do not turn the camshaft timing gear in the retard direction (clockwise).

(d) Measure the clearance between the gear and the camshaft flange.



Clearance:
0.1 to 0.4 mm (0.004 to 0.016 in.)

(e) Tighten the flange bolt with the camshaft timing gear secured in place.

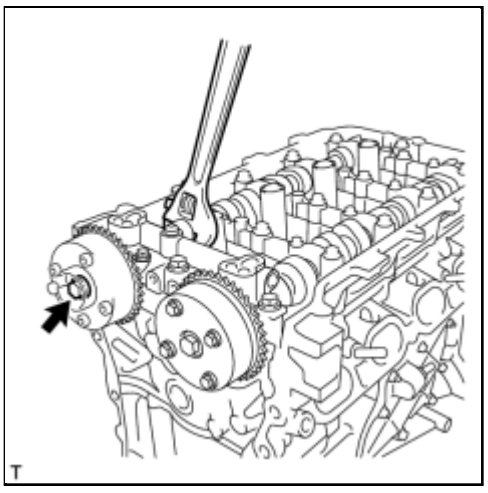


Torque: 54 N·m (551 kgf·cm, 40ft·lbf)

(f) Check that the camshaft timing gear can move in the retard direction (clockwise) and locks in the most retarded position.

20. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Check that the knock pin is installed on the camshaft.



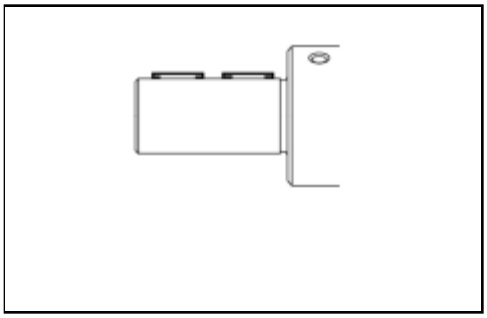
(b) Put the camshaft timing exhaust gear and camshaft together by aligning the key groove and straight pin.

(c) Lightly press the gear against the camshaft, and turn the gear. Push further at the position where the pin enters the groove.

NOTICE:

Be sure not to turn the camshaft timing exhaust gear in the retard direction (clockwise).

(d) Check that there is no clearance between the gear and the camshaft flange.



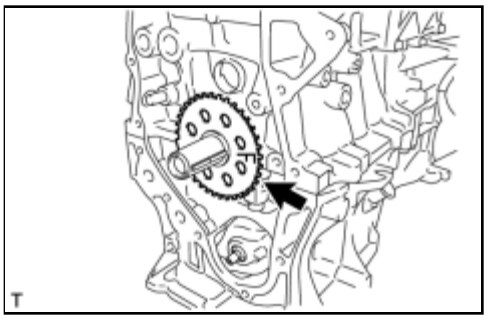
(e) Tighten the flange bolt with the camshaft timing exhaust gear fixed.

Torque: 54 N·m (551 kgf·cm, 40ft·lbf)

(f) Check the camshaft timing exhaust gear lock.

(1) Make sure that the camshaft timing exhaust gear is locked.

21. INSTALL CRANKSHAFT TIMING GEAR KEY



(a) Using a plastic-faced hammer, tap in the 2 crankshaft timing gear keys.

HINT:

Tap in the crankshaft timing gear keys until they contact the crankshaft as shown in the illustration.

22. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE

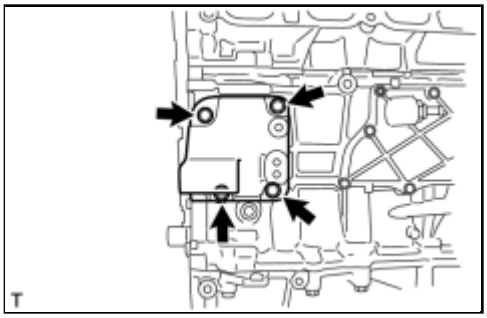
(a) Install the sensor plate with the "F" mark facing forward.

23. INSTALL NO. 2 CHAIN SUB-ASSEMBLY INFO

24. INSTALL CRANKSHAFT TIMING SPROCKET INFO

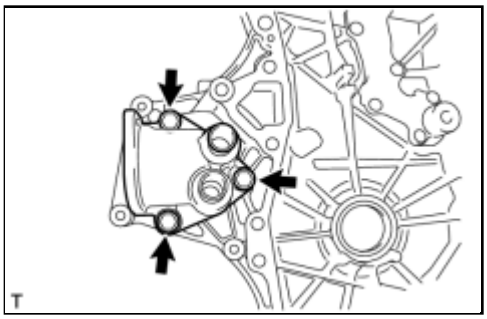
25. INSTALL NO. 1 CHAIN VIBRATION DAMPER INFO

26. INSTALL NO. 2 CHAIN VIBRATION DAMPER INFO



27. INSTALL CHAIN SUB-ASSEMBLY INFO

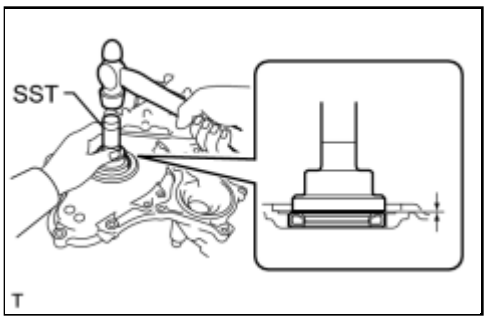
28. INSTALL CHAIN TENSIONER SLIPPER INFO



29. INSTALL NO. 1 GENERATOR BRACKET

(a) Install the No. 1 generator bracket with the 4 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)



30. INSTALL INLET WATER HOUSING

(a) Install the inlet water housing with the 3 bolts.

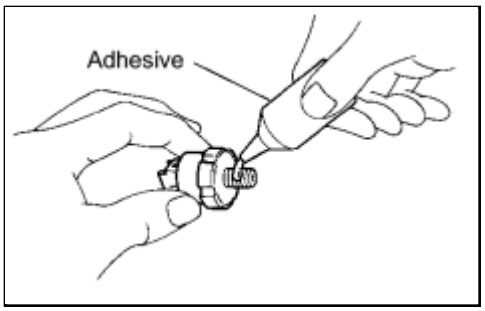
Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

31. INSTALL TIMING CHAIN COVER OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing gear case edge.

SST: 09223-22010

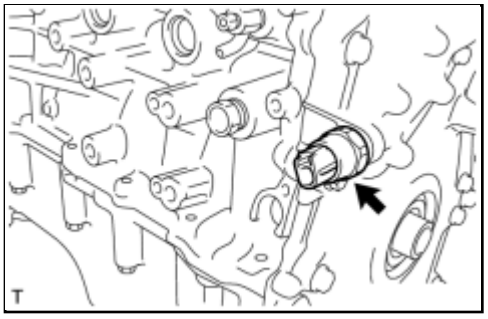
(b) Apply a light coat of MP grease to the lip of the oil seal.



NOTICE:

- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.
- Make sure that the oil seal edge does not stick out of the timing chain cover.

32. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY INFO

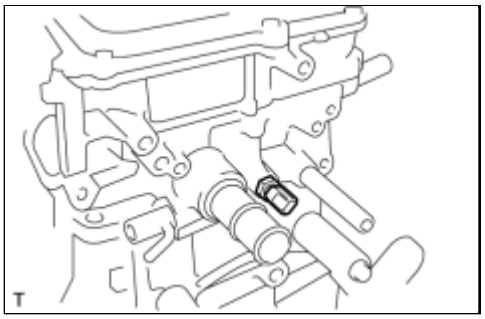


33. INSTALL CRANKSHAFT PULLEY INFO

34. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to 2 or 3 threads of the oil pressure switch.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



(b) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: 15 N·m (153 kgf·cm, 11ft·lbf)

NOTICE:

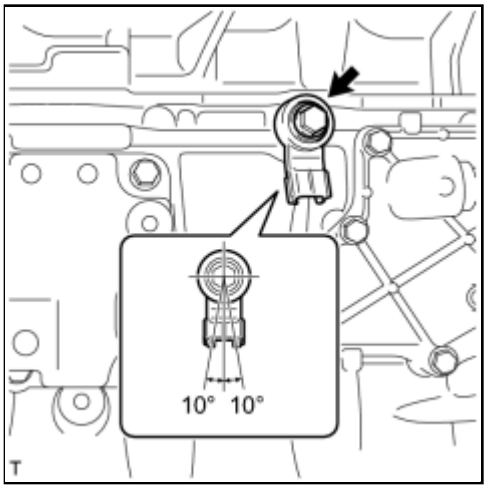
- Install the oil pressure switch within 3 minutes after applying adhesive.
- Do not start the engine within 1 hour after installation.

35. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Install a new gasket to the engine coolant temperature sensor.

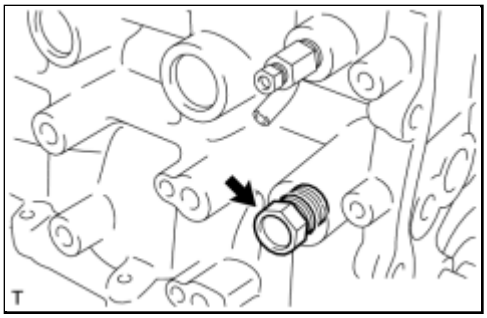
(b) Using a 19 mm deep socket wrench, install the temperature sensor.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)



36. INSTALL KNOCK CONTROL SENSOR

(a) Install the knock control sensor with the bolt.



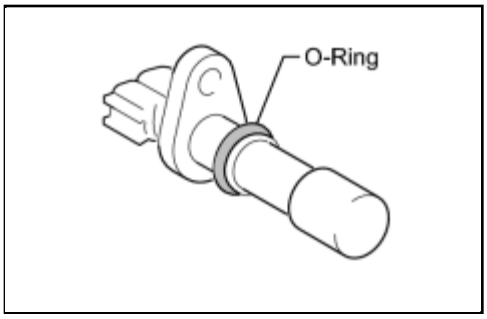
Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

NOTICE:

Make sure that the knock control sensor is in the correct position.

37. INSTALL NO. 1 TAPER SCREW PLUG

(a) Apply adhesive to 2 or 3 threads of the plug, and install the plug.

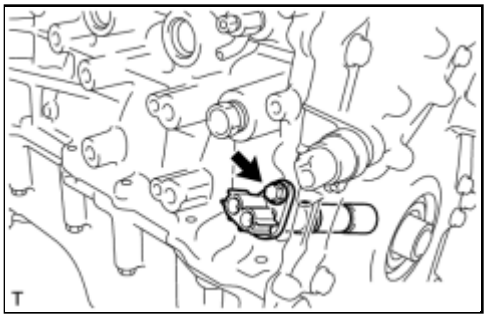


Torque: 43 N·m (439 kgf·cm, 32ft·lbf)

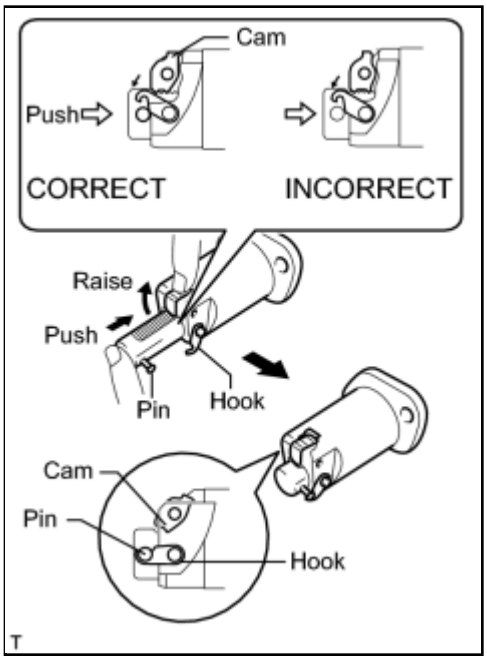
NOTICE:

- Install the plug within 3 minutes after applying adhesive.
- Do not start the engine within 1 hour after installation.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



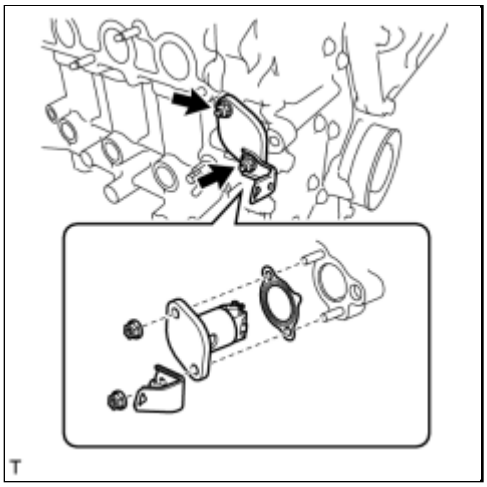
38. INSTALL CRANKSHAFT POSITION SENSOR



(a) Apply a light coat of engine oil to the O-ring of the sensor.

(b) Install the crankshaft position sensor with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

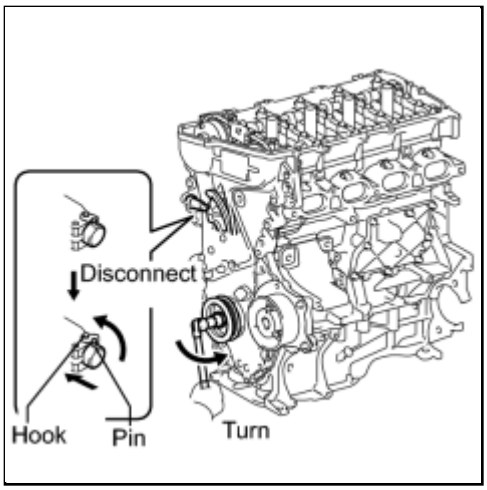


39. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY

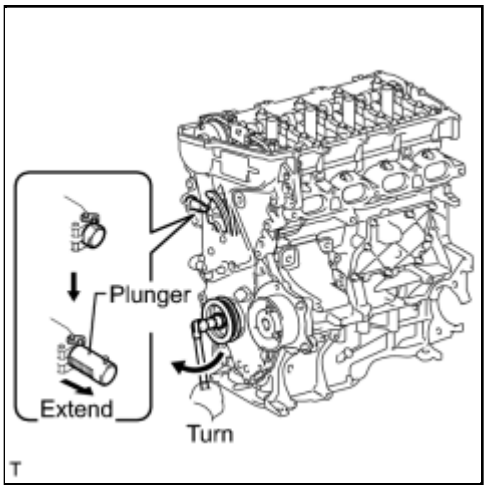
(a) Release the ratchet pawl, then fully push in the plunger and engage the hook to the pin so that the plunger is in the position shown in the illustration.

NOTICE:

Make sure that the cam engages the first tooth of the plunger to allow the hook to pass over the pin.



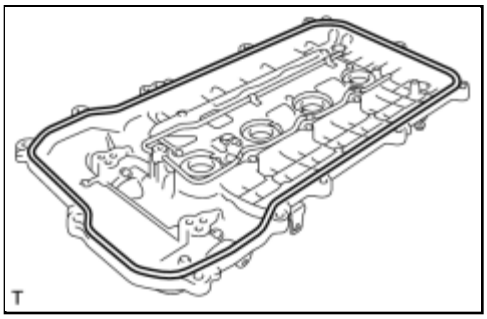
(b) Install a new gasket, bracket and No. 1 chain tensioner with the 2 nuts.



Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

NOTICE:

If the hook releases the plunger while the chain tensioner is being installed, engage the hook again.

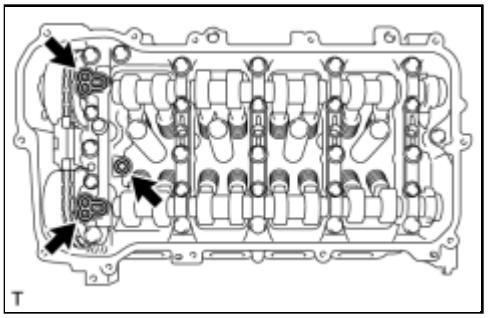


(c) Turn the crankshaft counterclockwise, then disconnect the hook from plunger knock pin.

(d) Turn the crankshaft clockwise, then check that the plunger is extended.

40. INSTALL OIL FILTER CAP ASSEMBLY INFO

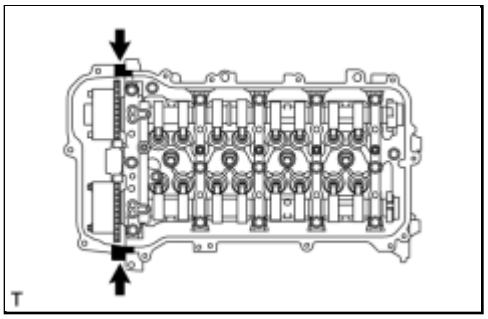
41. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY



(a) Install a new gasket to the cylinder head cover.

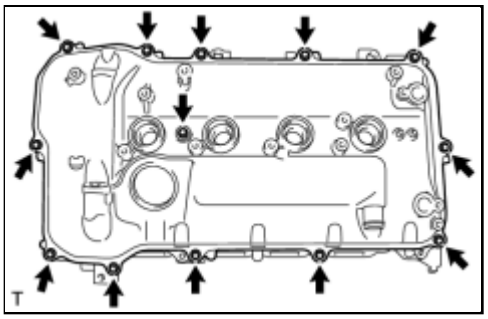
NOTICE:

Remove any oil from the contact surfaces.



(b) Install 3 new gaskets to the No. 1 camshaft bearing cap.

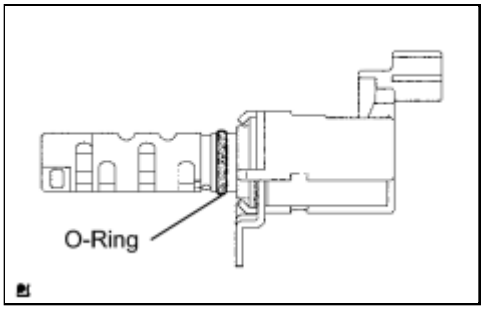
(c) Apply seal packing as shown the illustration.



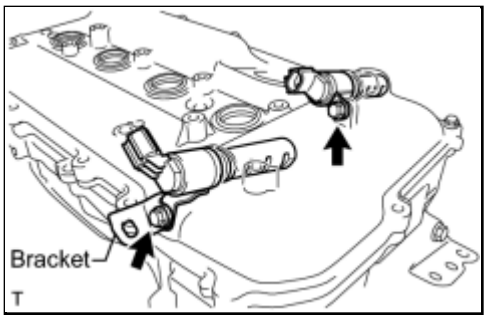
Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:



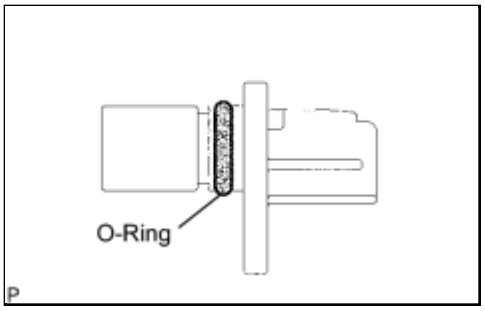
- Remove any oil from the contact surfaces.
- Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after the installation.



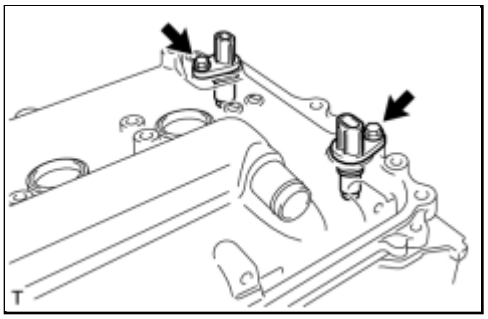
(d) Install the cylinder head cover with a new seal washer and the 13 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

42. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



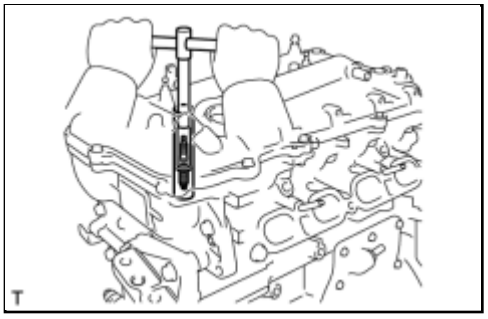
(a) Apply a light coat of engine oil to 2 new O-rings, then install them onto the camshaft timing oil control valves.



(b) Install the 2 camshaft timing oil control valves and bracket with the 2 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

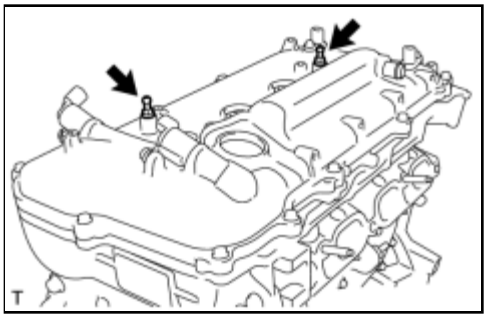
43. INSTALL CAMSHAFT POSITION SENSOR



(a) Apply a light coat of engine oil to the O-rings of the sensors.

(b) Install the 2 sensors with the 2 bolts.

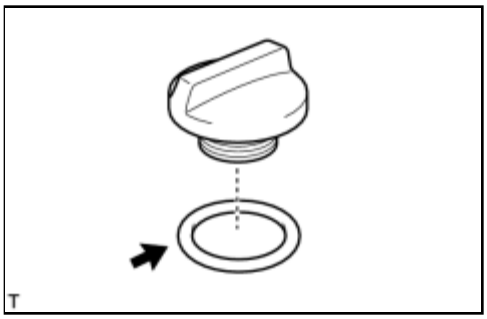
Torque: 10 N·m (102 kgf·cm, 7ft·lbf)



44. INSTALL SPARK PLUG

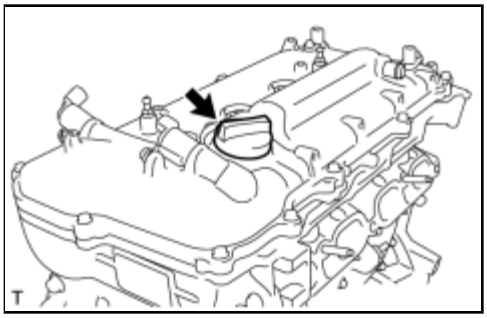
(a) Using a 14 mm spark plug wrench, install the 4 spark plugs.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)



45. INSTALL ENGINE COVER JOINT

(a) Install the 2 engine cover joints.

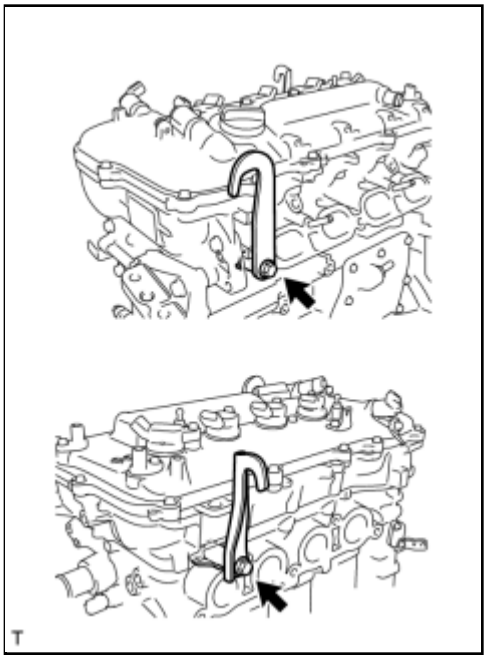


Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

46. INSTALL OIL FILLER CAP GASKET

(a) Install the gasket to the cap.

47. INSTALL OIL FILLER CAP SUB-ASSEMBLY



(a) Install the oil filler cap.

48. INSTALL ENGINE HANGER

(a) Install the 2 engine hangers with the 2 bolts.

Torque: 43 N·m (439 kgf·cm, 32ft·lbf)

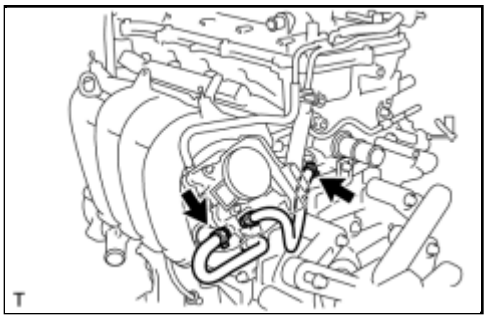
T

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WH601AX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: REMOVAL (2010 Corolla)		

REMOVAL

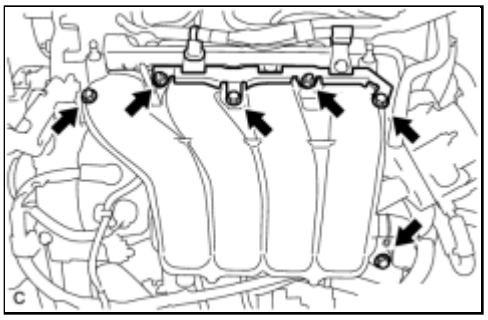
1. INSTALL ENGINE STAND

(a) Set the engine on an engine stand.



2. REMOVE ENGINE HANGER INFO

3. REMOVE INTAKE MANIFOLD



(a) Remove the wire harness clamp bracket.

(b) Remove the 2 bolts and disconnect the air tube.

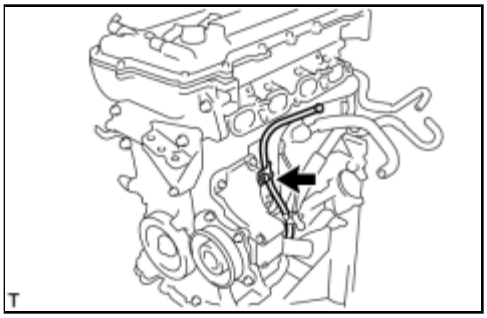
(c) Disconnect the ventilation hose from the intake manifold.

(d) Disconnect the 2 water by-pass hoses.

(e) Remove the 4 bolts, 2 nuts and intake manifold and intake manifold stay.

(f) Remove the gasket from the intake manifold.

4. DISCONNECT FUEL TUBE SUB-ASSEMBLY INFO

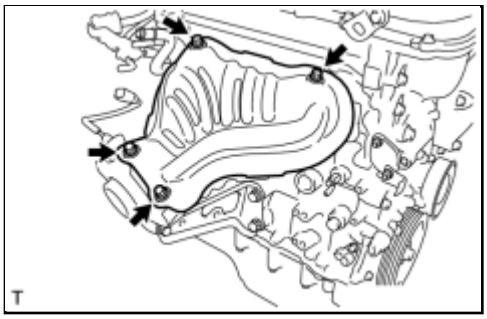


5. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

6. REMOVE FUEL INJECTOR ASSEMBLY INFO

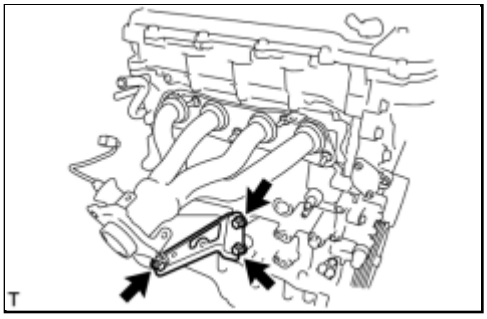
7. REMOVE IGNITION COIL ASSEMBLY

(a) Remove the 4 bolts and 4 ignition coils.



8. REMOVE OIL LEVEL DIPSTICK SUB-ASSEMBLY

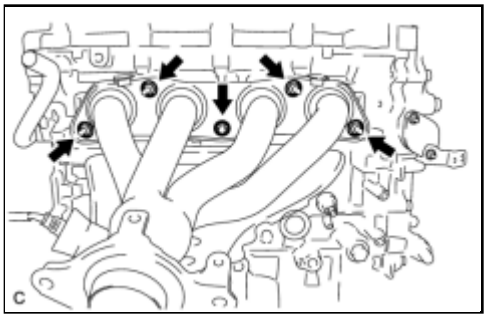
(a) Remove the bolt and oil level dipstick.



(b) Remove the O-ring from the oil level dipstick.

9. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

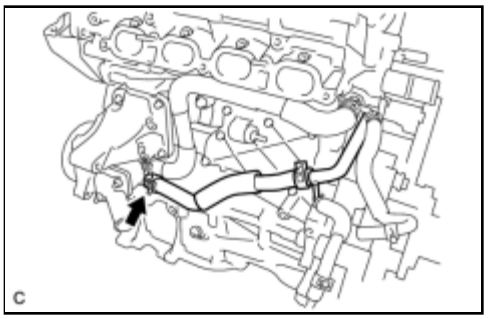
(a) Remove the 4 bolts and exhaust manifold heat insulator.



10. REMOVE MANIFOLD STAY

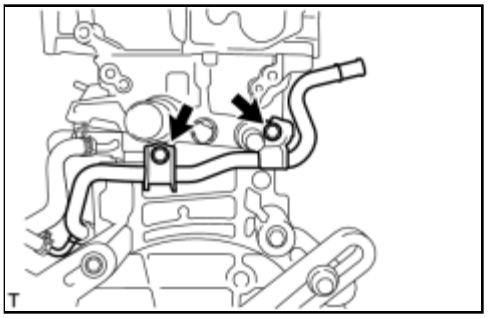
(a) Remove the 3 bolts and manifold stay.

11. REMOVE EXHAUST MANIFOLD



(a) Remove the 5 nuts and exhaust manifold.

12. REMOVE VENTILATION HOSE

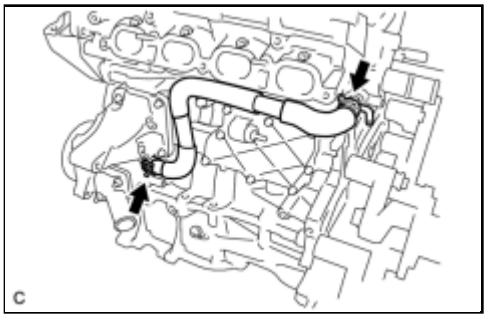


(a) Remove the ventilation hose.

13. DISCONNECT NO. 3 WATER BY-PASS HOSE

(a) Disconnect the No. 3 water by-pass hose from the water inlet housing.

14. REMOVE NO. 1 WATER BY-PASS PIPE

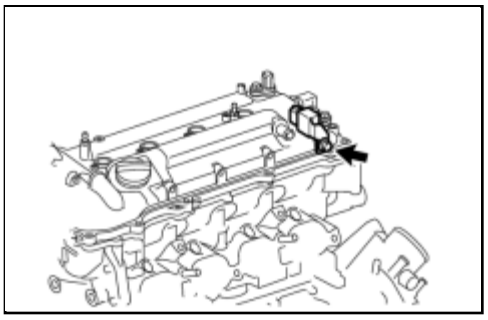


(a) Remove the 2 bolts and No. 1 water by-pass pipe.

15. REMOVE WATER BY-PASS HOSE

(a) Remove the clamp and water by-pass hose.

16. REMOVE INLET WATER HOSE

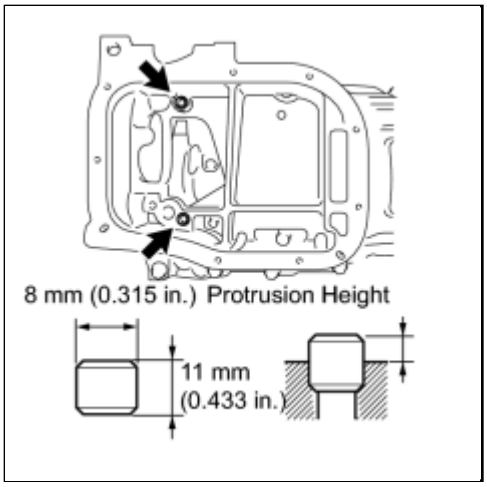


(a) Remove the 2 clamps and inlet water hose.

17. REMOVE INLET WATER INFO

18. REMOVE THERMOSTAT INFO

19. REMOVE RADIO SETTING CONDENSER



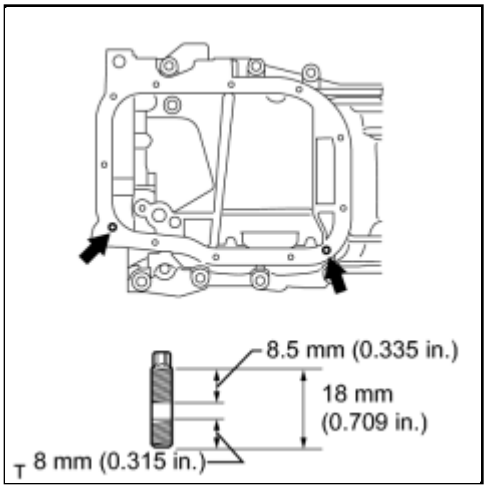
(a) Remove the bolt and radio setting condenser.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XA101PX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REPLACE RING PIN

(a) Remove the 2 ring pins.



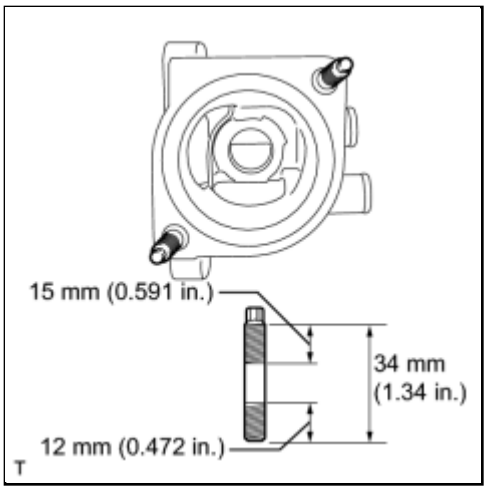
(b) Install 2 new ring pins to the crankcase.

Standard protrusion:
3 mm (0.118 in.)

2. REPLACE STUD BOLT

(a) For crankcase:

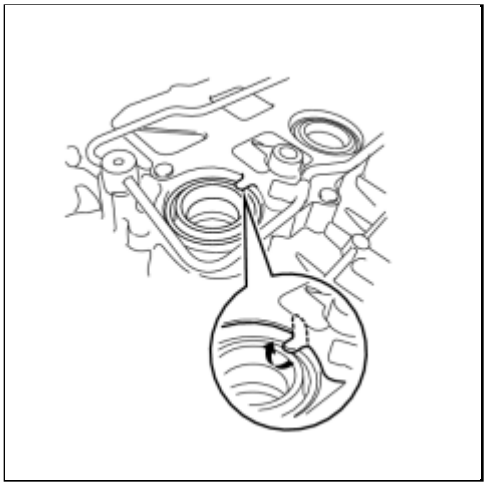
(1) Remove the 2 stud bolts.



(2) Using a "TORX" socket E5, install the 2 stud bolts as shown in the illustration.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(b) For water inlet housing:



(1) Remove the 2 stud bolts.

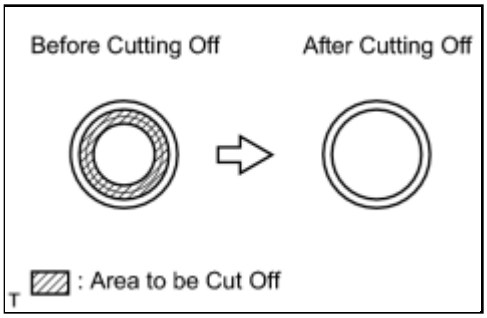
(2) Using a "TORX" socket E5, install the 2 stud bolts as shown in the illustration.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

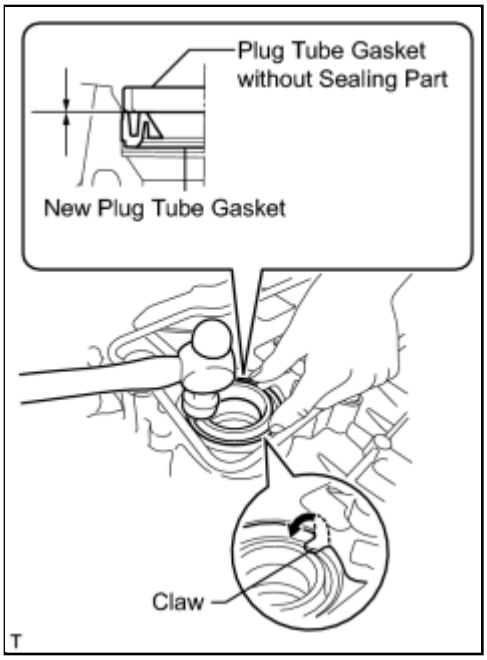
3. REPLACE SPARK PLUG TUBE GASKET

(a) Pry up the claws of the ventilation baffle plate.

NOTICE:



Do not deform the claws of the baffle plate more than necessary.



(b) Remove the 4 gaskets from the cylinder head covers.

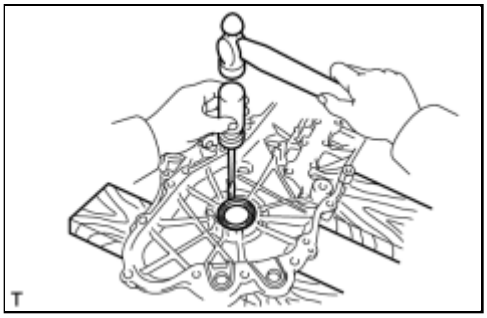
NOTICE:

- Prevent the plug tube gaskets from being deformed as much as possible. The removed gaskets will be used when reinstalling the gaskets.
- Do not damage the connection of the cylinder head cover.

(1) Using a cutter, cut off the sealing part of the removed plug tube gasket.

(2) Using the plug tube gasket which has had the sealing part cut off, uniformly press in a new plug tube gasket all the way.

NOTICE:



- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.

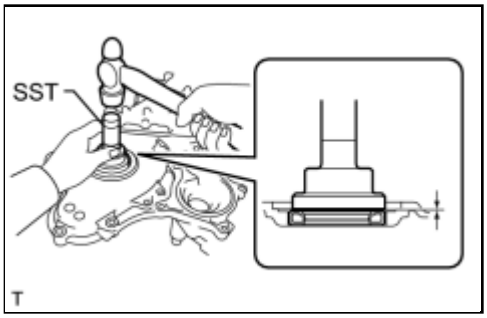
HINT:

If a plug tube gasket that will be used to install a new gasket is deformed, and cannot be positioned on a new gasket, correct the deformation using pliers.

(c) Return the claws of the ventilation baffle plate to their original positions.

4. REPLACE TIMING CHAIN COVER OIL SEAL

(a) Using a screwdriver and hammer, remove the oil seal.



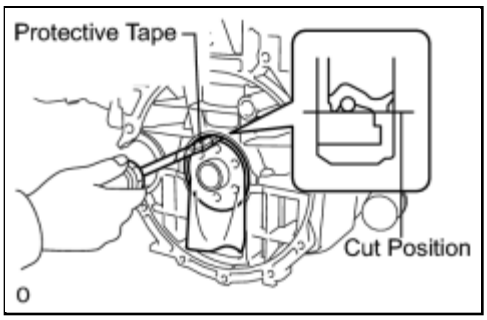
NOTICE:

Be careful not to damage the timing chain cover oil seal.

HINT:

Tape the screwdriver tip before use.

(b) Using SST, tap in a new oil seal until its surface is flush with the timing gear case edge.



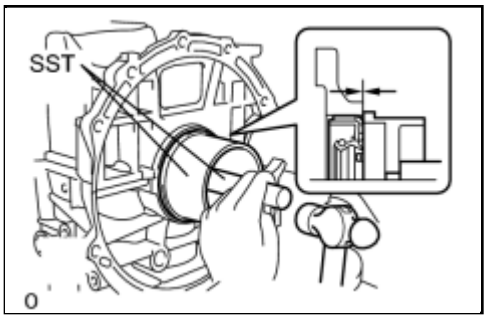
SST: 09223-22010

(c) Apply a light coat of MP grease to the lip of the oil seal.

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.
- Make sure that the oil seal edge does not stick out of the timing chain cover.

5. REPLACE REAR ENGINE OIL SEAL



(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip taped, pry out the oil seal.

NOTICE:

After removing the oil seal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

(c) Using SST and a hammer, evenly tap the oil seal until its surface is flush with the rear oil seal retainer edge.

SST: 09223-15030

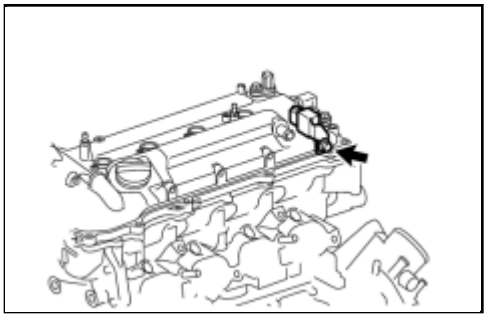
SST: 09950-70010

09951-07100

NOTICE:

- Keep the lip free of foreign matter.
- Do not tap on the oil seal at an angle.

(d) Apply MP grease to a new oil seal lip.



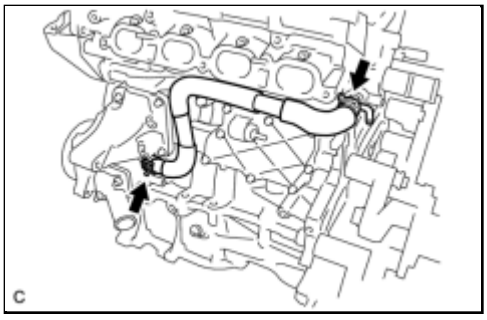
NOTICE:

Wipe off extra grease on the crankshaft.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WH401AX
Title: 2ZR-FE ENGINE MECHANICAL: ENGINE UNIT: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL RADIO SETTING CONDENSER



(a) Install the radio setting condenser with the bolt.

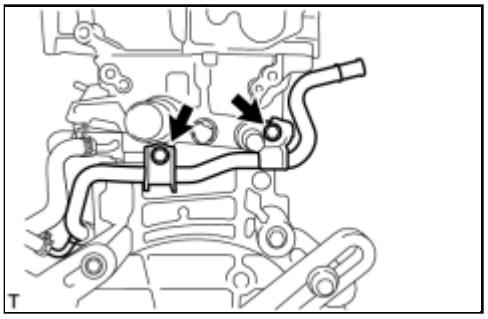
Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

2. INSTALL THERMOSTAT INFO

3. INSTALL INLET WATER INFO

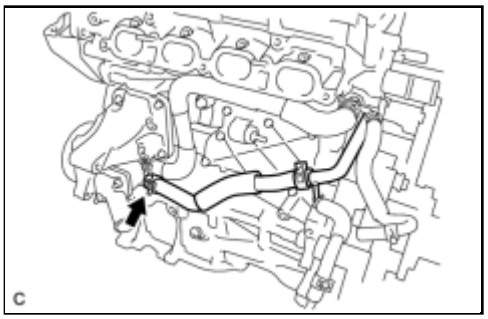
4. INSTALL INLET WATER HOSE

(a) Install the inlet water hose with the 2 clamps.



5. INSTALL WATER BY-PASS HOSE

(a) Install the water by-pass hose with the clamp.

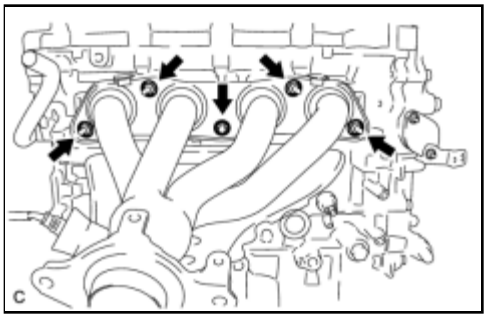


6. INSTALL NO. 1 WATER BY-PASS PIPE

(a) Install the No. 1 water by-pass pipe with the 2 bolts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

7. CONNECT NO. 3 WATER BY-PASS HOSE



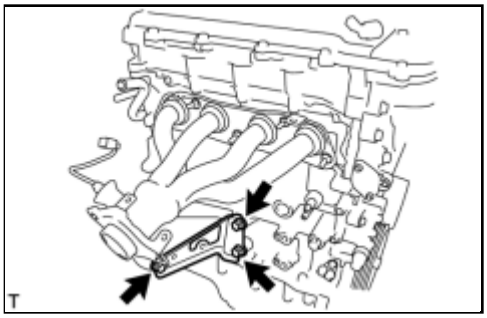
(a) Connect the No. 3 water by-pass hose to the inlet water housing.

8. INSTALL VENTILATION HOSE

(a) Install the ventilation hose.

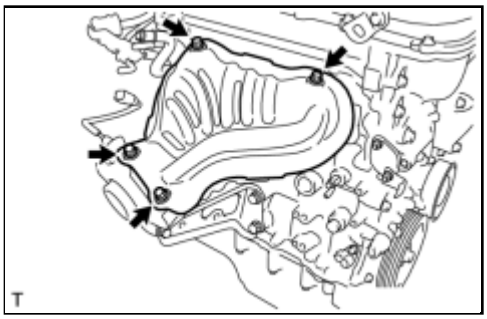
9. INSTALL EXHAUST MANIFOLD

(a) Install a new gasket onto the exhaust manifold.



(b) Install the exhaust manifold with the 5 nuts.

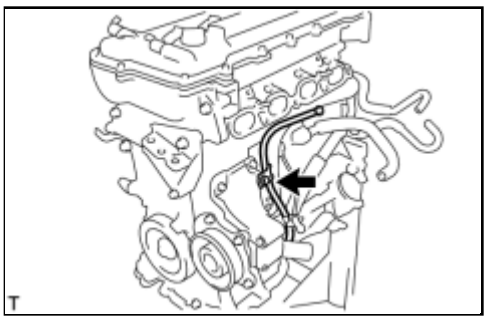
Torque: 21 N·m (214 kgf·cm, 16ft·lbf)



10. INSTALL MANIFOLD STAY

(a) Install the manifold stay with the 3 bolts.

Torque: 43 N·m (439 kgf·cm, 32ft·lbf)



11. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the exhaust manifold heat insulator with the 4 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

12. INSTALL OIL LEVEL DIPSTICK SUB-ASSEMBLY

(a) Apply engine oil to a new O-ring.

(b) Install the oil level dipstick with the bolt through the new O-ring.

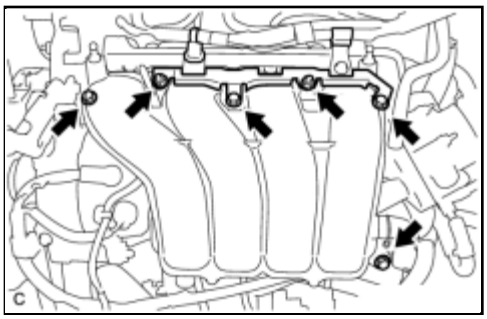
Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

13. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 4 ignition coils with the 4 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

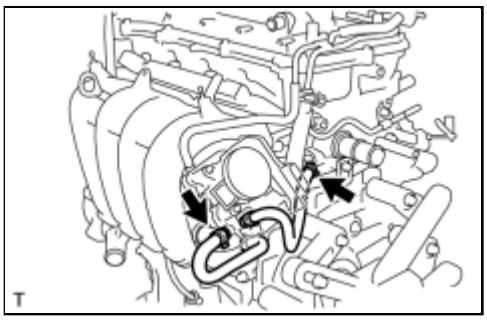
14. INSTALL FUEL INJECTOR ASSEMBLY INFO



15. INSTALL NO. 1 DELIVERY PIPE SPACER INFO

16. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

17. CONNECT FUEL TUBE SUB-ASSEMBLY INFO



18. INSTALL INTAKE MANIFOLD

(a) Install a new gasket to the intake manifold.

(b) Install the intake manifold and intake manifold stay with the 4 bolts and 2 nuts.

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)

(c) Connect the 2 water by-pass hoses.

(d) Connect the ventilation hose to the intake manifold.

(e) Install the air tube with the 2 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(f) Install the wire harness bracket.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

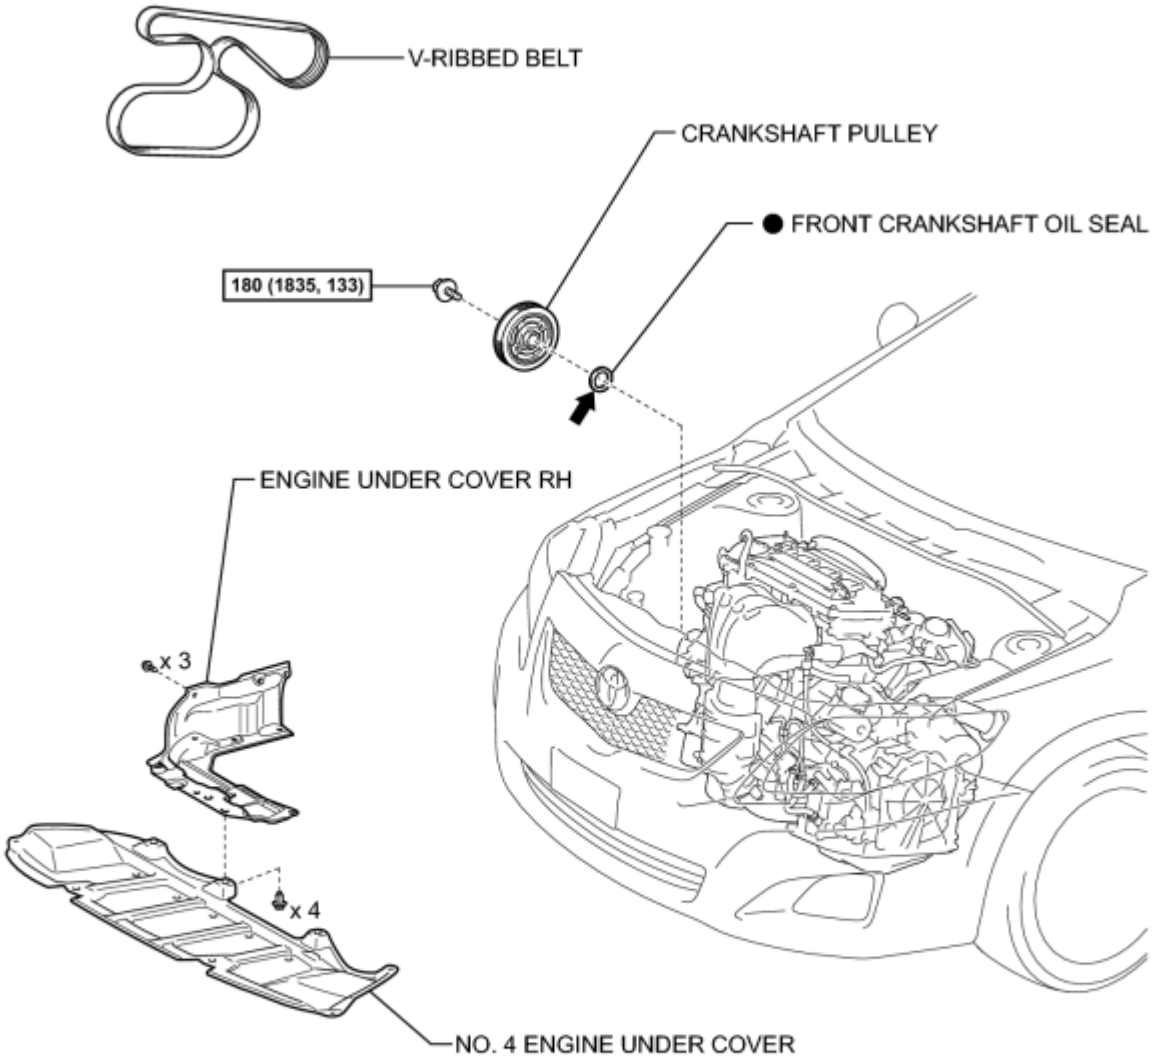
19. INSTALL FAN BELT ADJUSTING BAR

(a) Install the bolt and fan belt adjusting bar.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

20. INSTALL ENGINE HANGER INFO

21. REMOVE ENGINE STAND



(a) Attach the engine to the sling device with the chain block.

(b) Remove the engine from the engine stand.

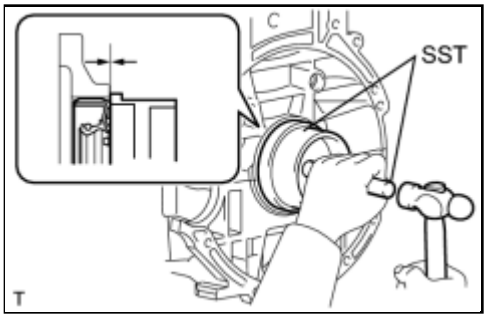
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027IF016X
Title: 2ZR-FE ENGINE MECHANICAL: REAR CRANKSHAFT OIL SEAL: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL REAR ENGINE OIL SEAL

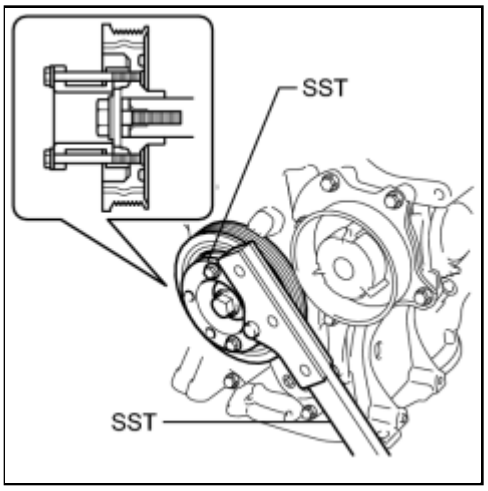
(a) Apply MP grease to the lip of a new oil seal.

NOTICE:

Keep the lip free from foreign matter.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST: 09223-15030



SST: 09950-70010

09951-07100

NOTICE:

- Wipe any extra grease off the crankshaft.
- Do not tap the oil seal at an angle.

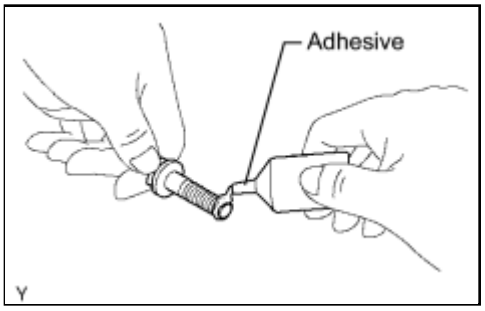
2. INSTALL FLYWHEEL SUB-ASSEMBLY (for Manual Transaxle)

(a) Using SST, hold the crankshaft.

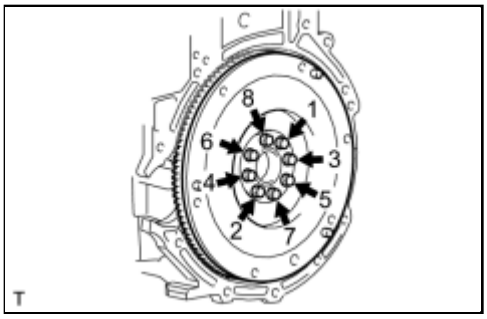
SST: 09213-58014

91551-80840

SST: 09330-00021



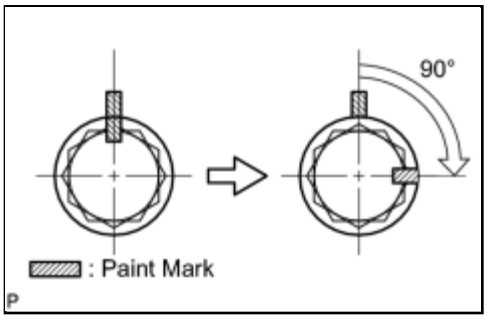
NOTICE:



Check the SST installation positions when installing them to prevent the SST fixing bolts from coming into contact with the timing chain cover sub-assembly.

(b) Apply adhesive to 2 or 3 threads of the bolt ends.

Adhesive:



Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(c) Using several steps, uniformly install and tighten the 8 bolts in the sequence shown in the illustration.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

(d) Mark the top of the bolts with paint.

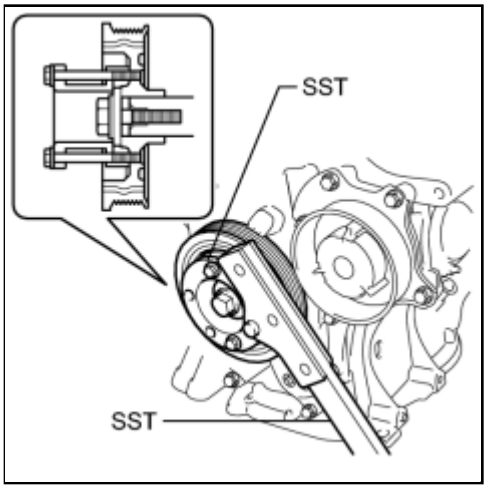
(e) Retighten the 8 bolts an additional 90° in the same sequence.

(f) Check that the paint marks are now at a 90° angle to the top.

(g) Check that the crankshaft turns smoothly.

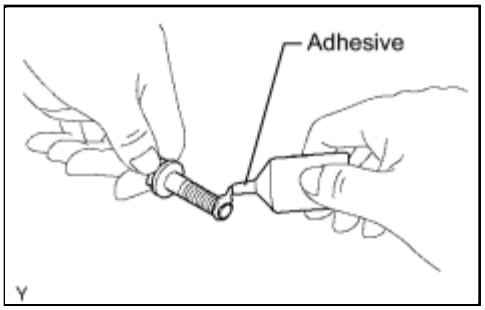
3. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY (for Automatic Transaxle)

(a) Using SST, hold the crankshaft.



SST: 09213-58014

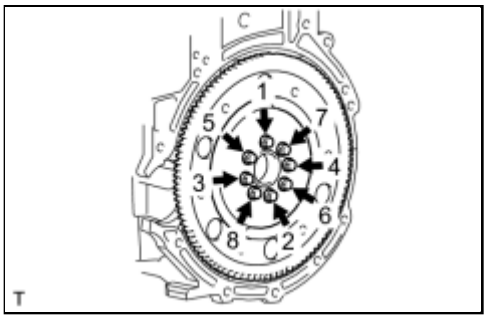
91551-80840



SST: 09330-00021

NOTICE:

Check the SST installation positions when installing them to prevent the SST fixing bolts from coming into contact with the timing chain cover sub-assembly.



(b) Clean the bolts and the bolt holes.

(c) Apply a few drops of adhesive to 2 or 3 threads of the 8 bolts tip.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(d) Install the front spacer, drive plate and rear spacer with the 8 bolts. uniformly tighten the 8 bolts in the sequence shown in the illustration.

Torque: 88 N·m (897 kgf·cm, 65ft·lbf)

4. INSTALL CLUTCH DISC ASSEMBLY (for Manual Transaxle) INFO

5. INSTALL CLUTCH COVER ASSEMBLY (for Manual Transaxle) INFO

6. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY (for Manual Transaxle) INFO

7. INSTALL MANUAL TRANSAXLE ASSEMBLY (for Manual Transaxle)

HINT: INFO **for C59.**

8. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY (for Automatic Transaxle)

HINT: INFO **for U341E.**

9. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT: INFO .

Last Modified: 3-10-2010	6.4 A	**From:** 200901

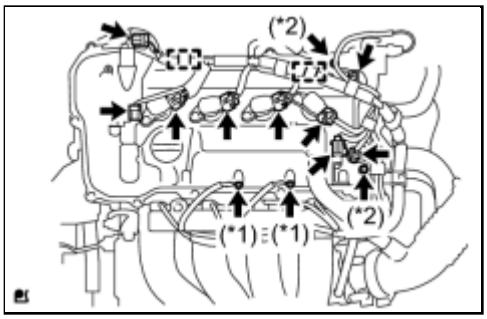
COMPONENTS

ILLUSTRATION

ILLUSTRATION

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000381F00AX
Title: 2ZR-FE ENGINE MECHANICAL: TIMING GEAR: REMOVAL (2010 Corolla)		

REMOVAL



1. REMOVE NO. 2 CYLINDER HEAD COVER INFO

2. DISCONNECT FUEL VAPOR FEED HOSE ASSEMBLY INFO

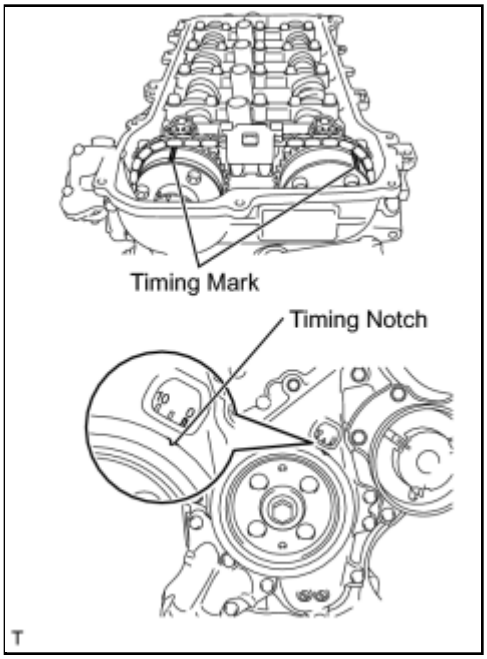
3. DISCONNECT UNION TO CONNECTOR TUBE HOSE INFO

4. DISCONNECT NO. 2 VENTILATION HOSE

5. SEPARATE WIRE HARNESS

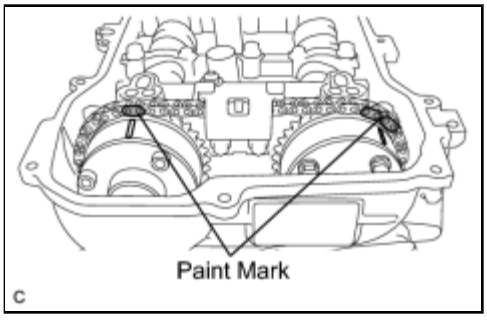
(a) Remove the 2 bolts (*1) and disconnect the 9 connectors and 2 clamps. Then disconnect the wire harness.

(b) Remove the 2 bolts (*2) and disconnect the air tube.



6. REMOVE RADIO SETTING CONDENSER INFO

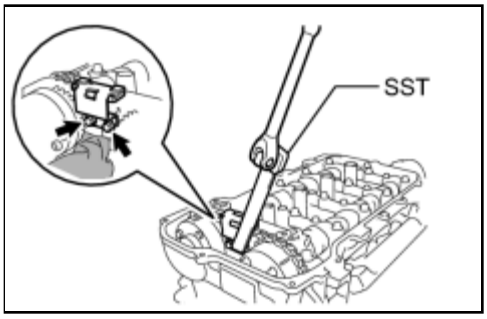
7. REMOVE IGNITION COIL ASSEMBLY INFO



8. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

9. SET NO. 1 CYLINDER TO TDC/COMPRESSION

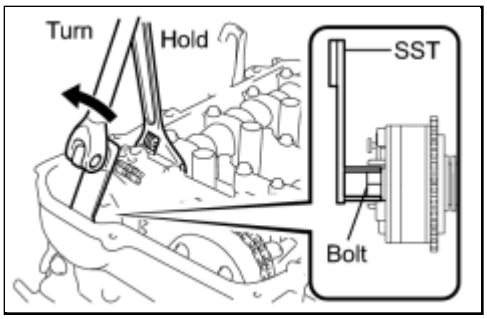
(a) Turn the crankshaft pulley until its groove and the timing mark "0" of the timing chain cover are aligned.



(b) Check that each timing mark of the camshaft timing gear and sprocket are aligned with each timing mark located as shown in the illustration. If not, turn the crankshaft 1 revolution (360°) to align the timing marks as shown in the illustration.

(c) Place paint marks on the chain in alignment with the timing marks on the camshaft timing gear and camshaft timing exhaust gear.

10. REMOVE NO. 2 CHAIN VIBRATION DAMPER



(a) Using SST, remove the 2 bolts and No. 2 chain vibration damper from the cam cap.

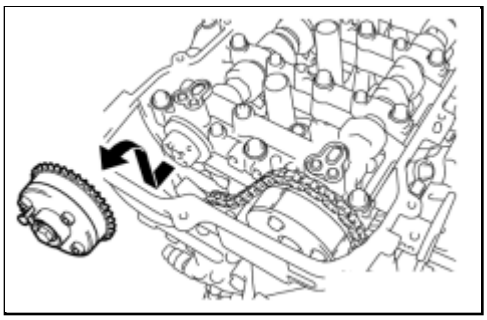
SST: 09961-00950

11. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

12. REMOVE CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) While holding the hexagonal portion of the No. 2 camshaft with a wrench, loosen the camshaft timing exhaust gear bolt with SST.

SST: 09249-37010



NOTICE:

Do not remove the other 4 bolts ("TORX" bolt). If any of them is removed, replace the camshaft timing exhaust gear assembly.

HINT:

The bolt cannot be removed separately from the camshaft timing exhaust gear assembly due to lack of space.

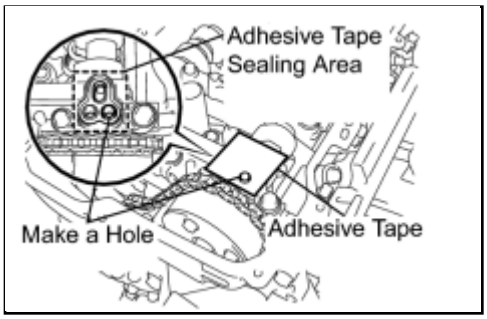
(b) Hold the hexagonal portion of the intake camshaft with a wrench and turn it slightly counterclockwise to release the chain.

(c) While removing the chain, pull out the camshaft timing exhaust gear assembly horizontally and then upward with the bolts installed.

NOTICE:

Do not turn the intake camshaft more than necessary.

HINT:



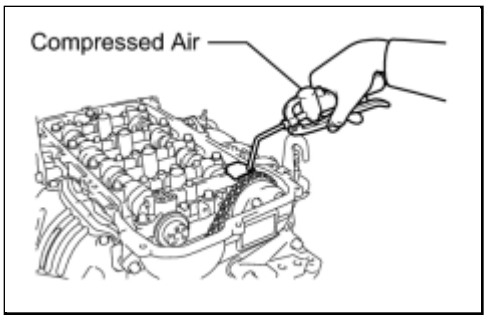
Be sure to loosen the chain because the camshaft timing exhaust gear assembly cannot be removed with the chain tensioned.

13. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Inspect the camshaft timing gear lock.

(1) Check that the camshaft timing gear is locked.

(b) Inspect camshaft timing gear operation.



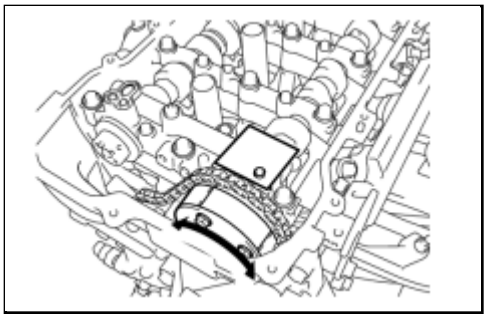
(1) After cleaning and degreasing the intake side VVT oil hole on the No. 1 camshaft bearing cap, completely seal the oil hole with adhesive tape or equivalent as shown in the illustration to prevent air from leaking.

NOTICE:

Be sure to seal the oil hole completely because air leaks due to insufficient sealing will prevent the lock pin from being released.

(2) Make a hole in the adhesive tape covering the oil hole as shown in the illustration. (Procedure A)

(3) Apply approximately 100 kPa (1.0 kgf/cm2, 14.5 psi.) of air pressure to the hole made in procedure A to release the lock pin.



NOTICE:

- If air leaks out, reattach the adhesive tape.
- Cover the oil hole with a piece of cloth when applying air pressure to prevent oil from spraying.

(4) Forcibly turn the camshaft timing gear in the advance direction (counterclockwise).

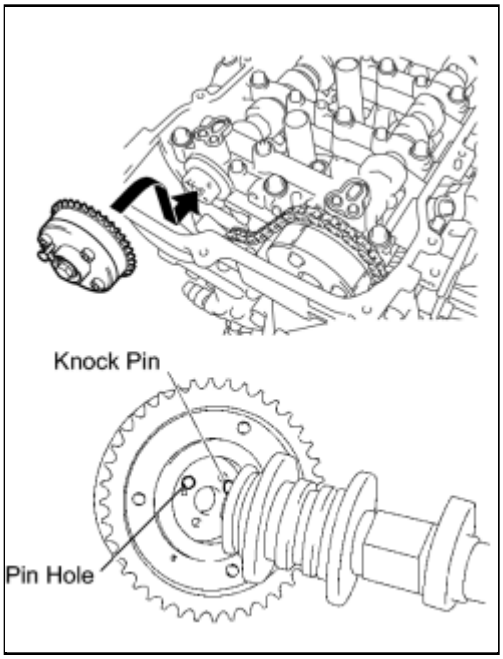
HINT:

Depending on the air pressure applied, the camshaft timing gear may turn in the advance direction without assistance by hand.

(5) Turn the camshaft timing gear within its movable range (27.5°) 2 or 3 times without turning it to the most retarded position. Check that the camshaft timing gear turns smoothly.

(6) Lock the camshaft timing gear.

NOTICE:



Be sure to turn the camshaft timing gear to the locked position and then confirm that it is securely locked again to prevent the valve timing from being affected.

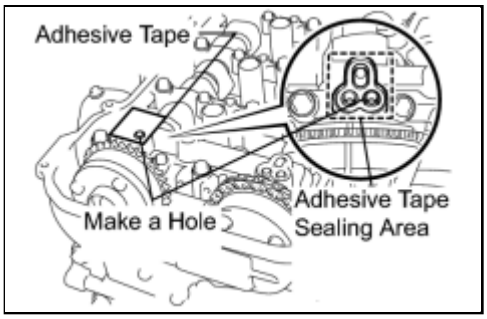
(7) Remove the adhesive tape from the No. 1 camshaft bearing cap.

14. INSPECT CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY

(a) Temporarily install the camshaft timing exhaust gear assembly.

(1) Install the bolt to the camshaft timing exhaust gear assembly.

(2) Align the knock pin on the No. 2 camshaft with the pin hole in the camshaft timing exhaust gear assembly and temporarily install the camshaft timing exhaust gear assembly to the No. 2 camshaft with the bolt.



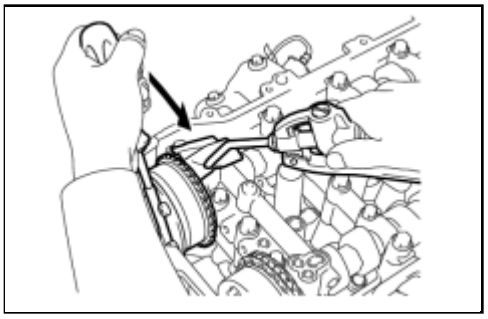
NOTICE:

- Do not install the chain onto the gear at this step.
- Do not allow the chain to interfere with the gear when installing the gear assembly.

(b) Inspect the camshaft timing exhaust gear lock.

(1) Check that the camshaft timing exhaust gear is locked.

(c) Inspect camshaft timing exhaust gear operation.



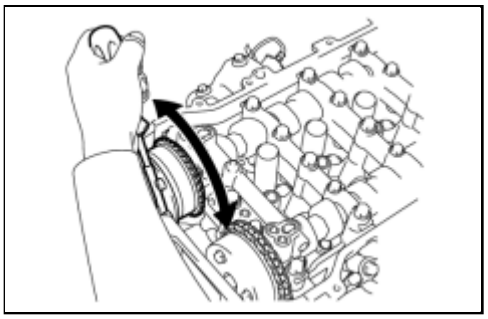
(1) After cleaning and degreasing the exhaust side VVT oil hole on the No. 1 camshaft bearing cap, completely seal the oil hole with adhesive tape or equivalent as shown in the illustration to prevent air from leaking.

NOTICE:

Be sure to seal the oil hole completely because air leaks due to insufficient sealing will prevent the lock pin from being released.

(2) Make a hole in the adhesive tape covering the oil hole as shown in the illustration. (Procedure B)

(3) Apply approximately 100 kPa (1.0 kgf/cm2, 14.5 psi.) of air pressure to the hole made in procedure B to release the lock pin.



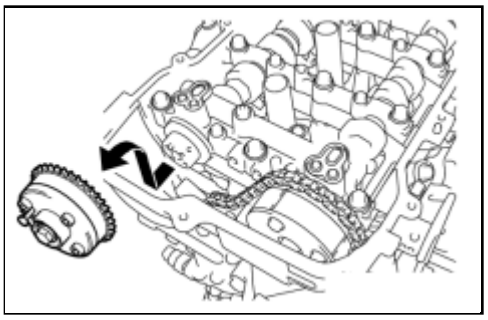
NOTICE:

- If air leaks out, reattach the adhesive tape.
- Cover the oil hole with a piece of cloth when applying air pressure to prevent oil from spraying.

(4) Using a screwdriver with its tip taped, forcibly turn the camshaft timing exhaust gear in the retard direction (clockwise).

NOTICE:

- Be sure to keep the camshaft timing exhaust gear in the retard direction. If the gear is released, it will return to the advanced position automatically due to the force from the spring.
- Do not damage the camshaft timing exhaust gear.

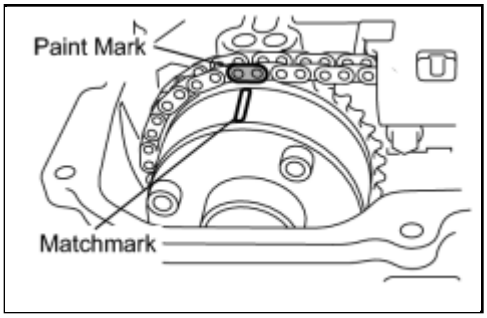


(5) Using a screwdriver with its tip taped, turn the camshaft timing exhaust gear within its movable range (20°) 2 or 3 times without turning it to the most advanced position. Check that the camshaft timing gear turns smoothly.

(6) Lock the camshaft timing exhaust gear.

(7) Remove the adhesive tape from the No. 1 camshaft bearing cap.

(d) Remove the camshaft timing exhaust gear assembly.

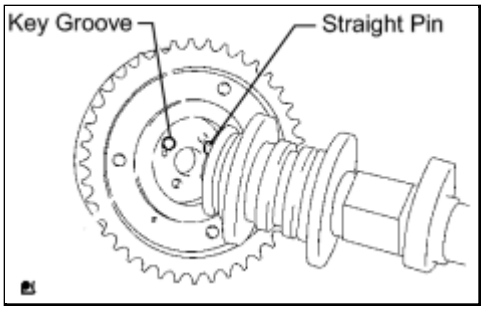


(1) Remove the temporarily installed camshaft timing exhaust gear assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000381G009X
Title: 2ZR-FE ENGINE MECHANICAL: TIMING GEAR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CAMSHAFT TIMING EXHAUST GEAR ASSEMBLY



(a) Raise the chain.

(b) Hold the hexagonal portion of the intake camshaft with a wrench and turn it slightly counterclockwise to release the chain.

(c) Align the paint mark with the matchmark to install the chain.

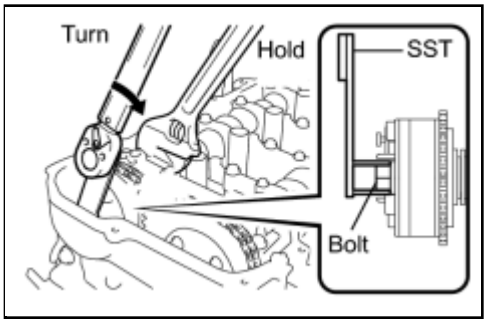
NOTICE:

Do not turn the intake camshaft more than necessary.

(d) Align the straight pin on the No. 2 camshaft with the pin hole in the camshaft timing exhaust gear assembly and install the camshaft timing exhaust gear assembly to the No. 2 camshaft.

NOTICE:

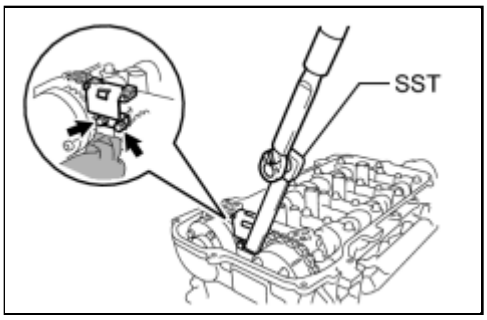
- If the straight pin cannot be aligned with the pin hole, hold the hexagonal portion of the No. 2 camshaft with a wrench and turn it slightly to install the gear.
- Do not turn the No. 2 camshaft more than necessary.
- Do not forcibly push on the tip of the straight pin with the camshaft timing exhaust gear assembly.



(e) Using SST and a wrench, hold the hexagonal portion of the No. 2 camshaft and install the camshaft timing exhaust gear assembly to the No. 2 camshaft.

SST: 09249-37010

without SST - Torque: 54 N·m (551 kgf·cm, 40ft·lbf)



with SST - Torque: 39 N·m (397 kgf·cm, 29ft·lbf)

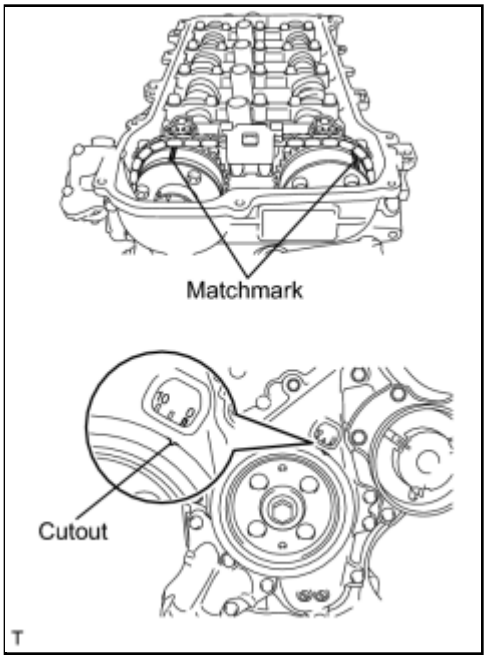
NOTICE:

- This torque value can be obtained by using a torque wrench with a fulcrum length of 260 mm (10.24 in.) and SST of 100 mm (3.94 in.) INFO .
- This torque value is effective when SST is parallel to the torque wrench.

2. INSTALL NO. 2 CHAIN VIBRATION DAMPER

(a) Using SST, install the No. 2 chain vibration damper with the 2 bolts.

SST: 09961-00950
without SST - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)
with SST - Torque: 5.5 N·m (56 kgf·cm, 48in·lbf)



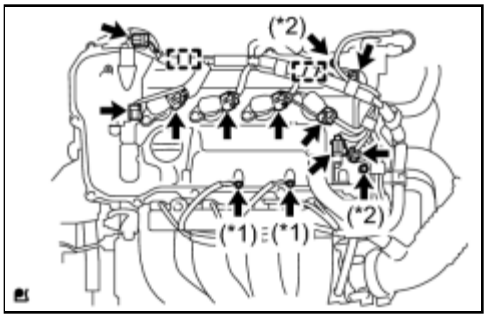
NOTICE:

- This torque value can be obtained by using a torque wrench with a fulcrum length of 180 mm (7.09 in.) and SST of 150 mm (5.91 in.) INFO .
- This torque value is effective when SST is parallel to the torque wrench.

3. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY INFO

4. SET NO. 1 CYLINDER TO TDC/COMPRESSION

(a) Turn the crankshaft clockwise 360° to set the No. 1 cylinder to TDC/compression and align the matchmark (cutout) with the "0" mark on the timing chain (belt) cover.



(b) Check that the matchmark on each camshaft timing gear is positioned as shown in the illustration.

5. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY INFO

6. INSTALL IGNITION COIL ASSEMBLY INFO

7. INSTALL RADIO SETTING CONDENSER INFO

8. INSTALL WIRE HARNESS

(a) Install the air tube with the 2 bolts (*2).

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(b) Connect the 9 connectors and install the wire harness with the 2 bolts (*1) and 2 clamps.

Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

9. INSTALL NO. 2 VENTILATION HOSE

10. CONNECT FUEL VAPOR FEED HOSE ASSEMBLY INFO

11. CONNECT UNION TO CONNECTOR TUBE HOSE INFO

12. INSTALL NO. 2 CYLINDER HEAD COVER INFO

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A8Z01OX
Title: 2AZ-FE ENGINE MECHANICAL: VALVE CLEARANCE: ADJUSTMENT (2010 Corolla)		

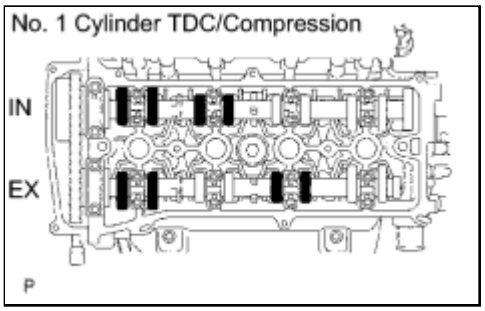
ADJUSTMENT

1. REMOVE ENGINE UNDER COVER RH

2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

3. REMOVE IGNITION COIL ASSEMBLY INFO

4. REMOVE SPARK PLUG INFO



5. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

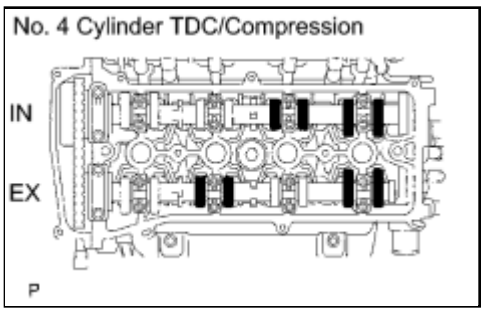
6. SET NO. 1 CYLINDER TO TDC/COMPRESSION INFO

7. CHECK VALVE CLEARANCE

(a) Check only the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

Standard Valve Clearance (Cold):



ITEM	SPECIFIED CONDITION
Intake	0.19 to 0.29 mm (0.00748 to 0.0114 in.)
Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve clearance lifters.

(b) Turn the crankshaft 1 revolution (360°) and set the No. 4 cylinder to TDC/compression.

(c) Check only the valves indicated in the illustration.

(1) Using a feeler gauge, measure the clearance between the valve lifter and camshaft.

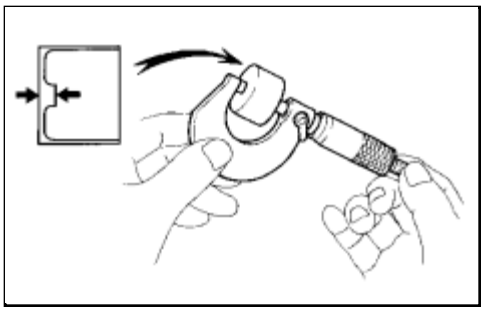
Standard Valve Clearance (Cold):

ITEM	SPECIFIED CONDITION
Intake	0.19 to 0.29 mm (0.00748 to 0.0114 in.)
Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)

(2) Record any out-of-specification valve clearance measurements. They will be used later to determine the required replacement valve lifters.

8. ADJUST VALVE CLEARANCE

(a) Set No. 1 cylinder to TDC/compression INFO .



(b) Remove the No. 1 chain tensioner INFO .

(c) Loosen the camshaft timing sprocket INFO .

(d) Remove the No. 2 camshaft INFO .

(e) Remove the camshaft INFO .

(f) Remove the valve lifters.

(g) Using a micrometer, measure the thickness of the removed valve lifters.

(h) Calculate the thickness of a new lifter so that the valve clearance comes within the specified values.

New Lifter Thickness:

ITEM	SPECIFICATION
Intake	A = B + (C - 0.24 mm (0.00945 in.))
Exhaust	A = B + (C - 0.43 mm (0.0169 in.))

A	New lifter thickness
B	Used lifter thickness
C	Measured valve clearance

CALCULATION EXAMPLE (Intake):

1. Measured intake valve clearance = 0.40 mm (0.0157 in.)

(Measured - Specification = Excess clearance)

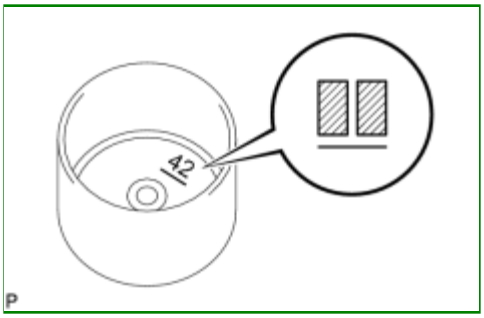
a. 0.40 mm (0.0157 in.) - 0.24 mm (0.00945 in.) = 0.16 mm (0.00630 in.)

2. Measured used lifter thickness = 5.250 mm (0.2067 in.)

3. New lifter thickness = 5.410 mm (0.2130 in.)

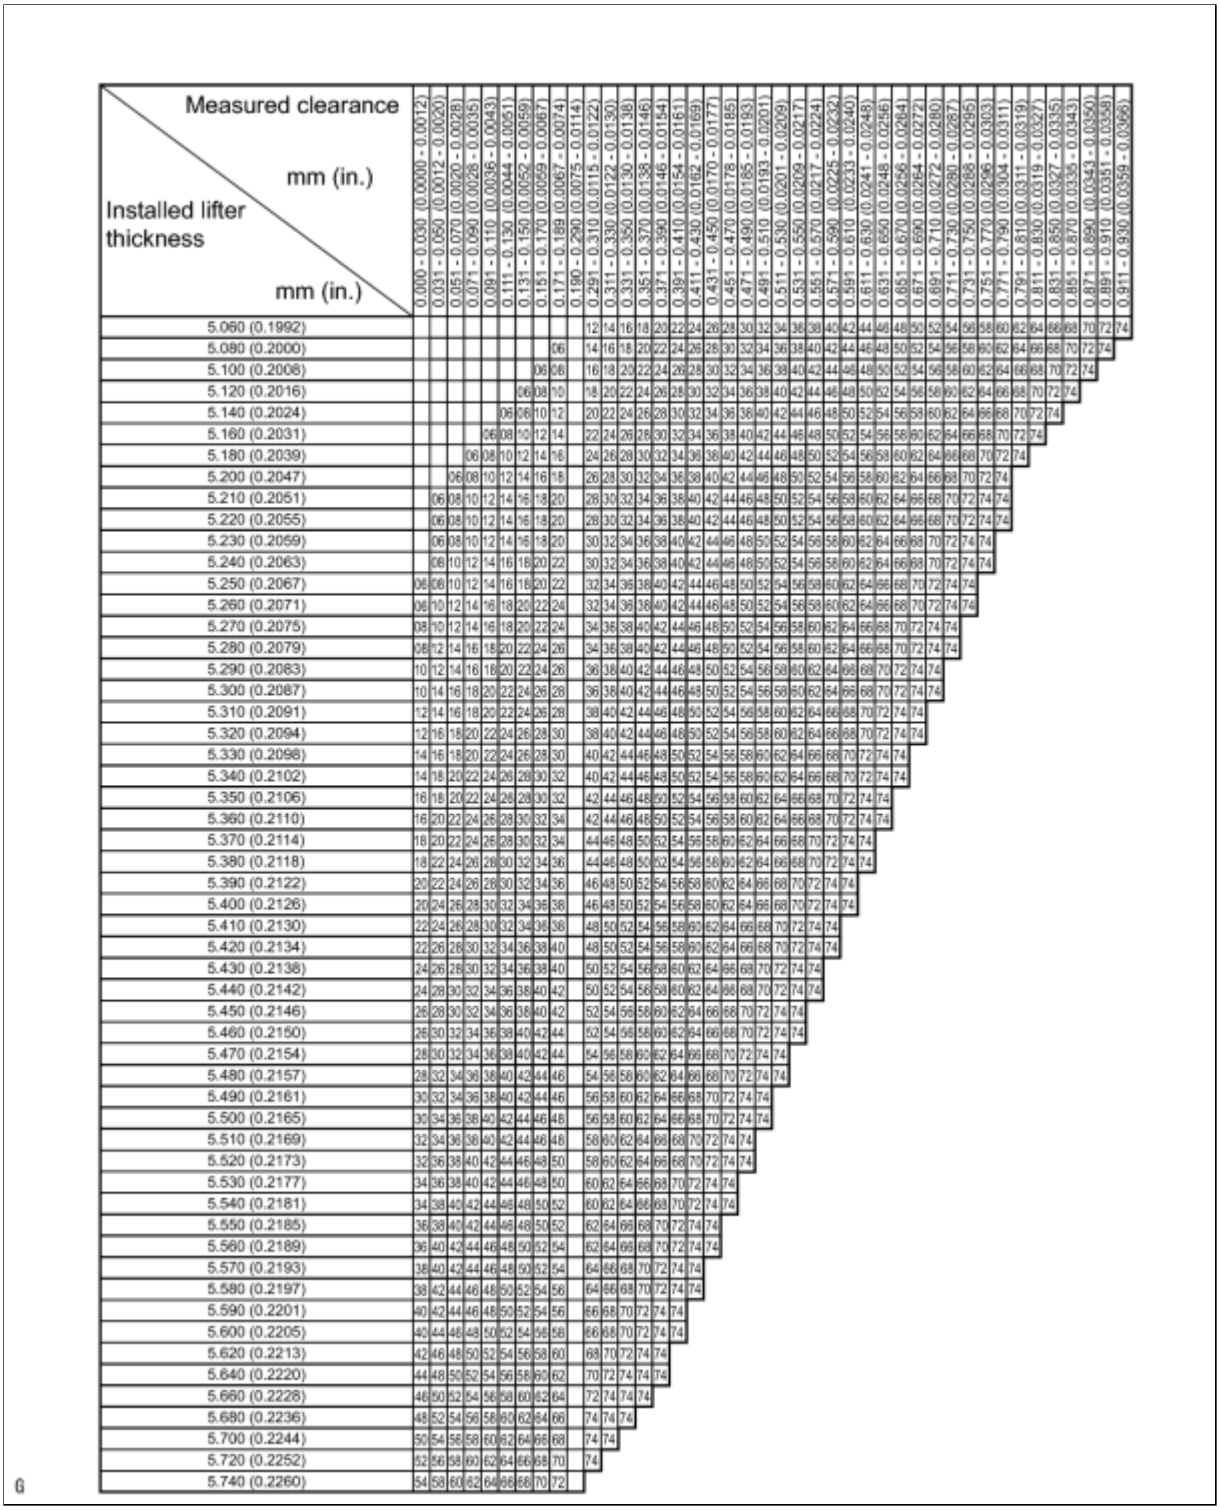
(Excess clearance + Used lifter thickness = Ideal new lifter)

a. 0.16 mm (0.00630 in.) + 5.250 mm (0.2067 in.) = 5.410 mm (0.2130 in.)



4. Closest new lifter = 5.420 mm (0.2134 in.)

- Select No. 42 lifter



(i) Select a new lifter with a thickness as close as possible to the calculated values.

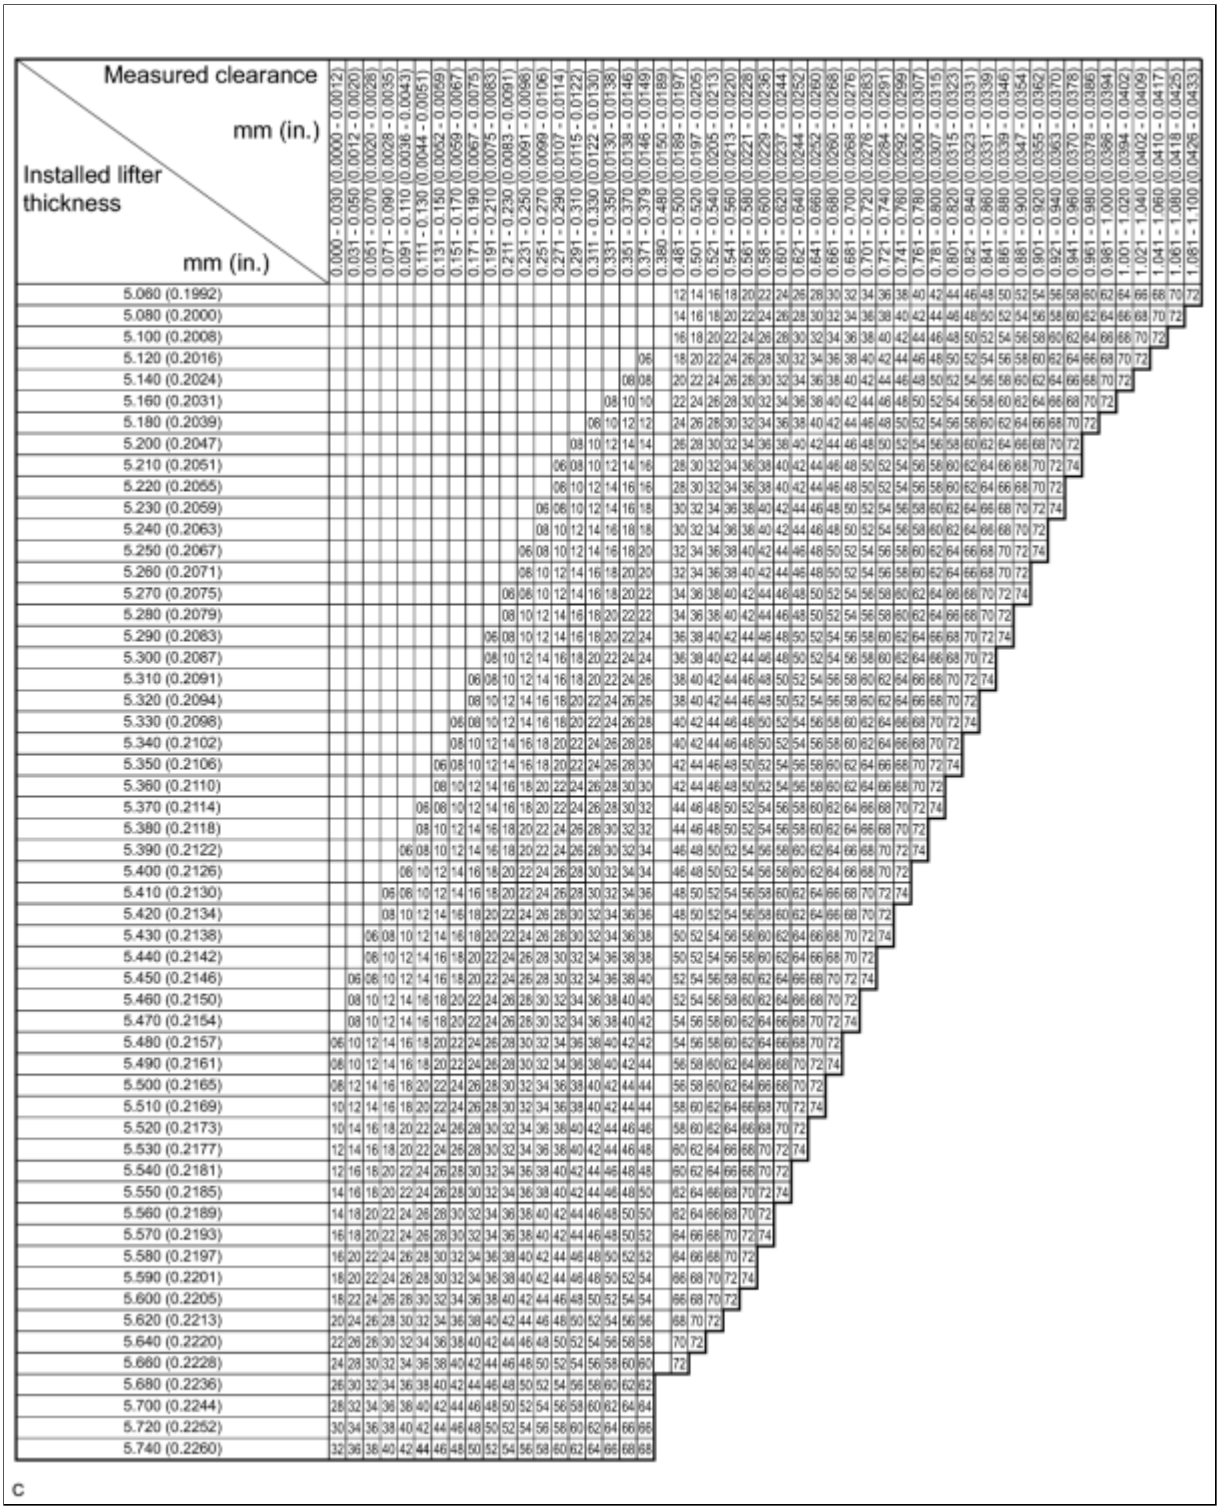
HINT:

- Lifters are available in 35 sizes in increments of 0.020 mm (0.000787 in.), from 5.060 to 5.740 mm (0.1992 to 0.2260 in.).
- The identification number inside the valve lifters shows the value to 2 decimal places. (The illustration shows 5.420 mm (0.2134 in.)

(j) Valve lifter selection chart (intake).

New Lifter Thickness

LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)



LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)
20	5.200 (0.2047)	44	5.440 (0.2142)	68	5.680 (0.2236)
22	5.220 (0.2055)	46	5.460 (0.2150)	70	5.700 (0.2244)
24	5.240 (0.2063)	48	5.480 (0.2157)	72	5.720 (0.2252)
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)	-	-

Standard intake valve clearance (cold):
0.19 to 0.29 mm (0.00748 to 0.0114 in.)

EXAMPLE:

The 5.250 mm (0.2067 in.) lifter is installed, and the measured clearance is 0.400 mm (0.0157 in.). Replace the 5.250 mm (0.2067 in.) lifter with a new No. 42 lifter.

(k) Valve lifter selection chart (exhaust).

New Lifter Thickness

LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)
06	5.060 (0.1992)	30	5.300 (0.2087)	54	5.540 (0.2181)
08	5.080 (0.2000)	32	5.320 (0.2094)	56	5.560 (0.2189)
10	5.100 (0.2008)	34	5.340 (0.2102)	58	5.580 (0.2197)

LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)	LIFTER NO.	THICKNESS MM (IN.)
12	5.120 (0.2016)	36	5.360 (0.2110)	60	5.600 (0.2205)
14	5.140 (0.2024)	38	5.380 (0.2118)	62	5.620 (0.2213)
16	5.160 (0.2031)	40	5.400 (0.2126)	64	5.640 (0.2220)
18	5.180 (0.2039)	42	5.420 (0.2134)	66	5.660 (0.2228)
20	5.200 (0.2047)	44	5.440 (0.2142)	68	5.680 (0.2236)
22	5.220 (0.2055)	46	5.460 (0.2150)	70	5.700 (0.2244)
24	5.240 (0.2063)	48	5.480 (0.2157)	72	5.720 (0.2252)
26	5.260 (0.2071)	50	5.500 (0.2165)	74	5.740 (0.2260)
28	5.280 (0.2079)	52	5.520 (0.2173)	-	-

Standard exhaust valve clearance (cold):
0.38 to 0.48 mm (0.0150 to 0.0189 in.)

EXAMPLE:

The 5.340 mm (0.2102 in.) lifter is installed, and the measured clearance is 0.510 mm (0.0201 in.). Replace the 5.340 mm (0.2102 in.) lifter with a new No. 42 lifter.

(l) Install the selected valve lifter.

(m) Install the camshaft INFO .

(n) Install the No. 2 camshaft INFO .

(o) Install the No. 1 chain tensioner INFO .

9. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY INFO

10. INSTALL SPARK PLUG INFO

11. INSTALL IGNITION COIL ASSEMBLY INFO

12. INSPECT FOR OIL LEAK

13. INSPECT IGNITION TIMING INFO

14. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

15. INSTALL ENGINE UNDER COVER RH

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000004094000X
Title: 2AZ-FE ENGINE MECHANICAL: VALVE CLEARANCE: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT VALVE CLEARANCE

(a) Check for noise and vibration

(1) Check for valve noise or a rough idle.

(2) Judge whether the valve clearance needs to be adjusted.

HINT:

If the valve noise is too loud or the idle is rough, inspect the valve clearance INFO **.**

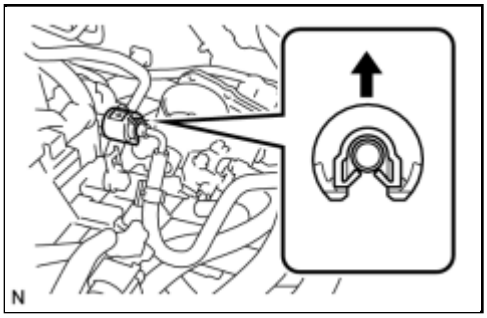
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000017R800UX
Title: 2AZ-FE FUEL: FUEL INJECTOR: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE

HINT: INFO

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



3. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

4. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

5. DISCONNECT FUEL MAIN TUBE

NOTICE:

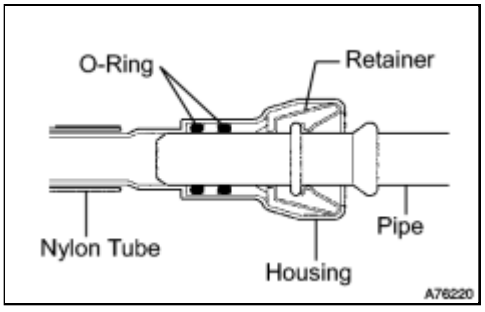
Do not forcibly bend, kink or twist the fuel main tube.

(a) Remove the fuel tube from the fuel hose clamp.

(b) Remove the fuel pipe clamp.

(c) Wipe off any dirt on the fuel tube connector.

(d) Hold the fuel tube connector, and then install SST.

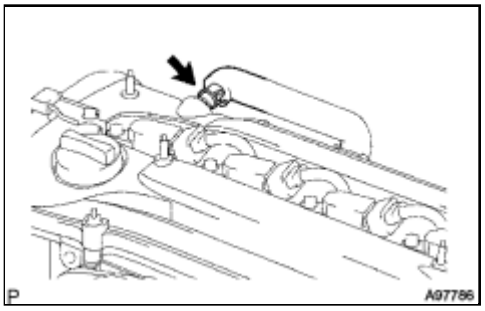


SST: 09268-21010

(e) Turn SST to align the retainer inside the fuel tube connector with the chamfered part of SST.

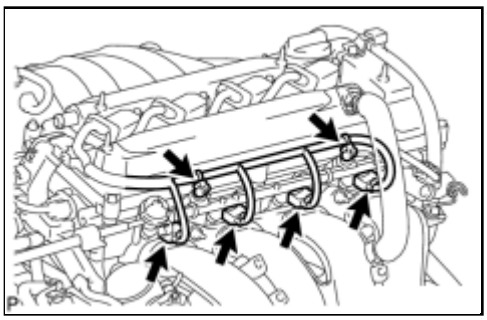
(f) Insert SST into the fuel tube and hold it. Then push the fuel tube connector toward SST.

(g) Mount the retainer of the fuel tube connector onto the chamfered part of SST.



(h) Slide SST and fuel tube connector together towards the fuel tube until they make a "click" sound, and then disconnect the fuel tube.

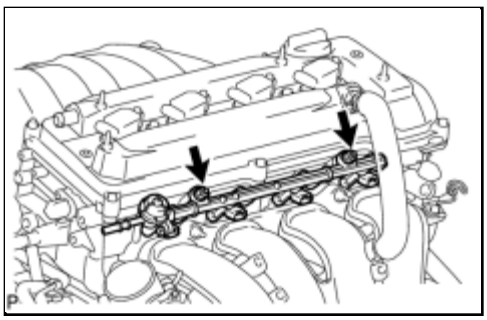
(i) Drain the fuel remaining inside the fuel tube.



(j) Cover the fuel tube and fuel pipe with a plastic bag to protect the disconnected part.

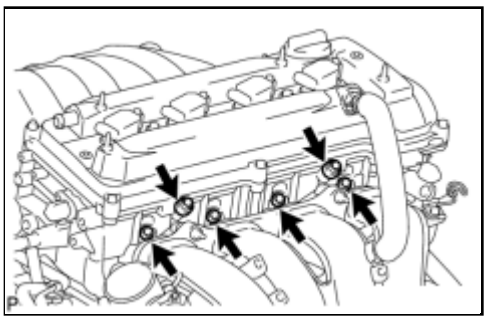
6. DISCONNECT NO. 2 VENTILATION HOSE

(a) Disconnect the No. 2 ventilation hose from the ventilation valve.



7. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY

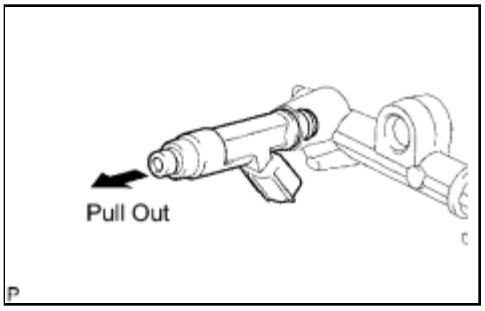
(a) Remove the 2 wire harness clamps.



(b) Disconnect the 4 fuel injector connectors.

(c) Remove the 2 bolts, then remove the fuel delivery pipe together with the 4 fuel injectors.

NOTICE:

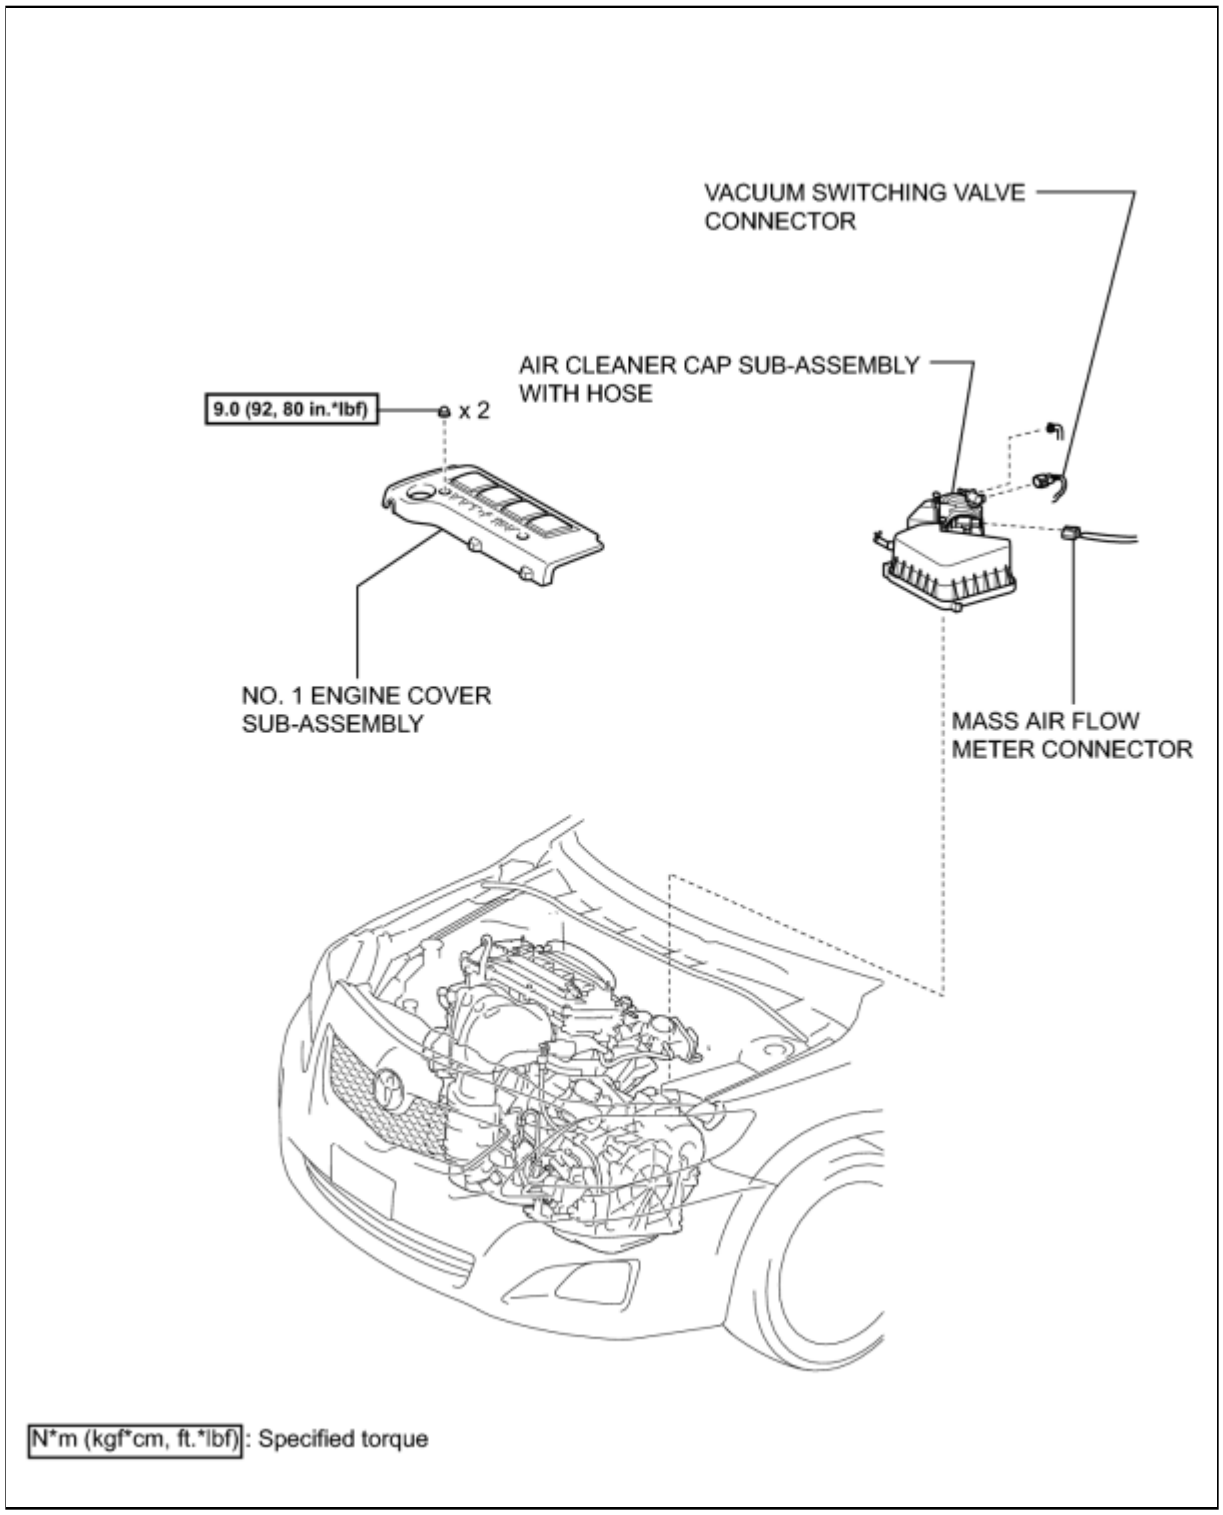


Be careful not to drop the fuel injectors when removing the fuel delivery pipe.

(d) Remove the 2 delivery pipe spacers from the cylinder head.

(e) Remove the 4 insulators from the cylinder head.

8. REMOVE FUEL INJECTOR ASSEMBLY



(a) Pull the 4 fuel injectors out of the fuel delivery pipe.

(b) Remove the 4 O-rings from the 4 fuel injectors.

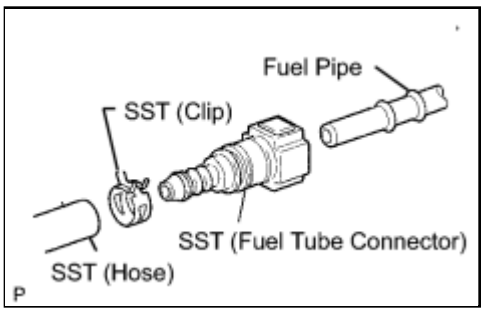
Title: 2AZ-FE FUEL: FUEL INJECTOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Using an ohmmeter, measure the resistance between the injector terminals.

Standard Resistance:



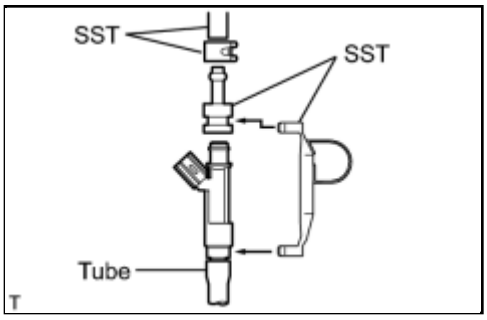
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	11.6 to 12.4 Ω

If the result is not as specified, replace the injector.

(b) Inspect the injector injection.

CAUTION:

Keep the injector away from sparks during the test.



(1) Connect SST (fuel tube connector) to SST (hose), then connect them to the fuel pipe (vehicle side).

SST: 09268-31012

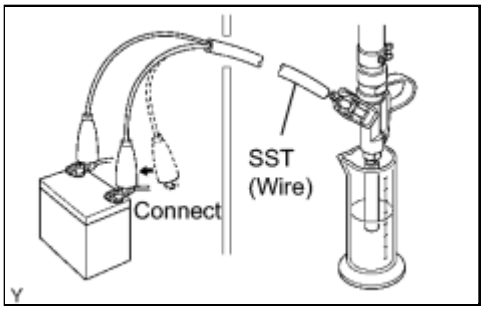
09268-41500
90467-13001
95336-08070

(2) Install the O-ring to the fuel injector.

(3) Connect SST (adapter and hose) to the injector, and hold the injector and union with SST (clamp).

SST: 09268-31012

95336-08070
09268-41110
09268-41130
09268-41400



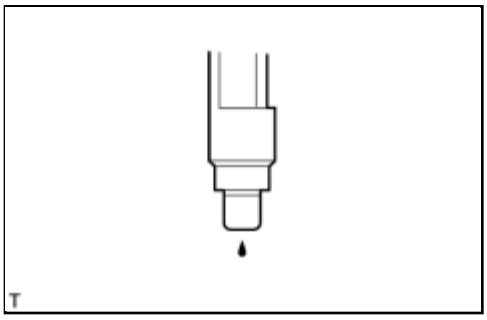
(4) Put the injector into the graduated cylinder.

CAUTION:

Install a suitable vinyl tube onto the injector that will contain gasoline spray.

(5) Operate the fuel pump.

(6) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.



SST: 09842-30080

Injection Volume:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Positive terminal - Ground terminal	per 15 seconds	76 to 92 cc (4.6 to 5.6 cu in.)

Standard difference between each injector:
16 cc (1.0 cu in.) or less

(c) Inspect the fuel leakage.

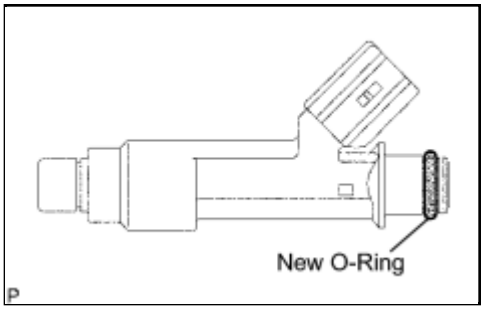
(1) Disconnect the SST (wire) tester probes from the battery and check the fuel leakage from the injector.

Standard fuel drop:
1 drop or less per 12 minutes

(2) Turn the ignition switch off.

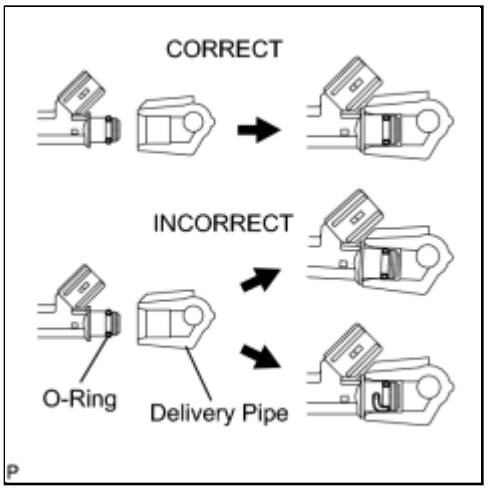
(3) Disconnect the cable from the negative (-) battery terminal.

(4) Remove SST.



(5) Disconnect the Techstream from the DLC3.

(6) Reconnect the fuel inlet hose (rear fuel pipe) to the fuel main tube.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000017R500RX
Title: 2AZ-FE FUEL: FUEL INJECTOR: INSTALLATION (2010 Corolla)		

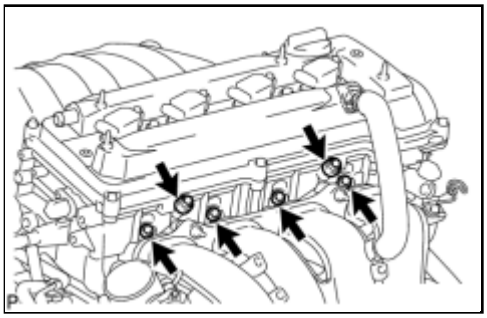
INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install them to the fuel injectors.

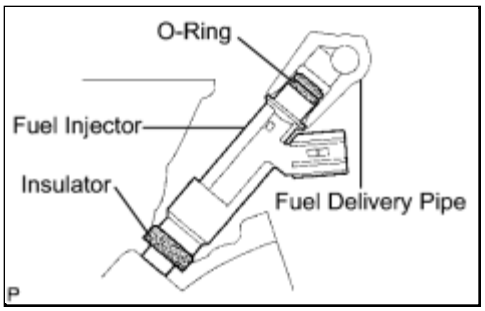
(b) Apply a light coat of gasoline or spindle oil to the part of the fuel delivery pipe which comes into contact with the O-ring of the fuel injector.

(c) Apply a light coat of gasoline or spindle oil to the O-ring again, then install the right and left fuel injectors onto the fuel delivery pipe.



NOTICE:

Make sure that the O-rings are not cracked or does not jump out of position during installation.

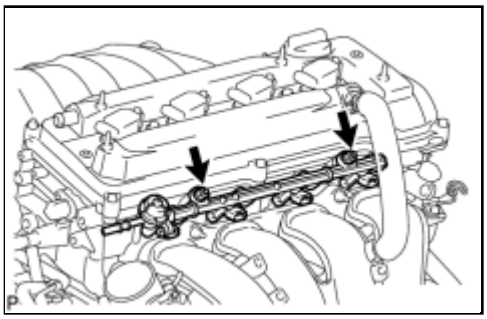


(d) Check that the fuel injectors rotate smoothly. If the fuel injector does not rotate, replace the O-ring.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Install 4 new insulators to the cylinder head.

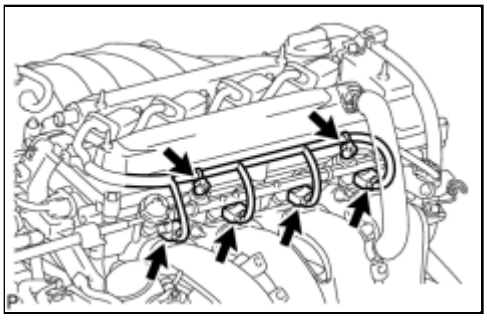
(b) Install the 2 delivery pipe spacers onto the cylinder head.



(c) Install the fuel delivery pipe together with the 4 fuel injectors, then temporarily tighten the 2 bolts.

NOTICE:

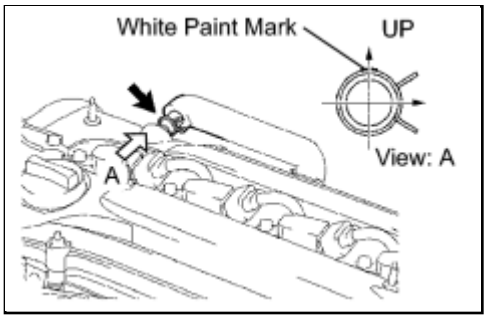
Be careful not to drop the fuel injectors when installing the fuel delivery pipe.



(d) Check that the fuel injector rotates smoothly.

If the fuel injector does not rotate smoothly, replace the O-ring.

(e) Tighten the 2 bolts to the specified torque.



Torque: 20 N·m (205 kgf·cm, 15ft·lbf)

(f) Connect the 4 fuel injector connectors.

(g) Install the 2 wire harness clamps.

3. CONNECT NO. 2 VENTILATION HOSE

(a) Connect the ventilation hose to the ventilation valve.

NOTICE:

Make sure that the paint mark and hose clamp are at the correct angle when installing the hose.

4. CONNECT FUEL MAIN TUBE

(a) Connect the fuel main tube.

(b) Push the fuel tube connector until it makes a "click" sound.

(c) Install the fuel pipe clamp.

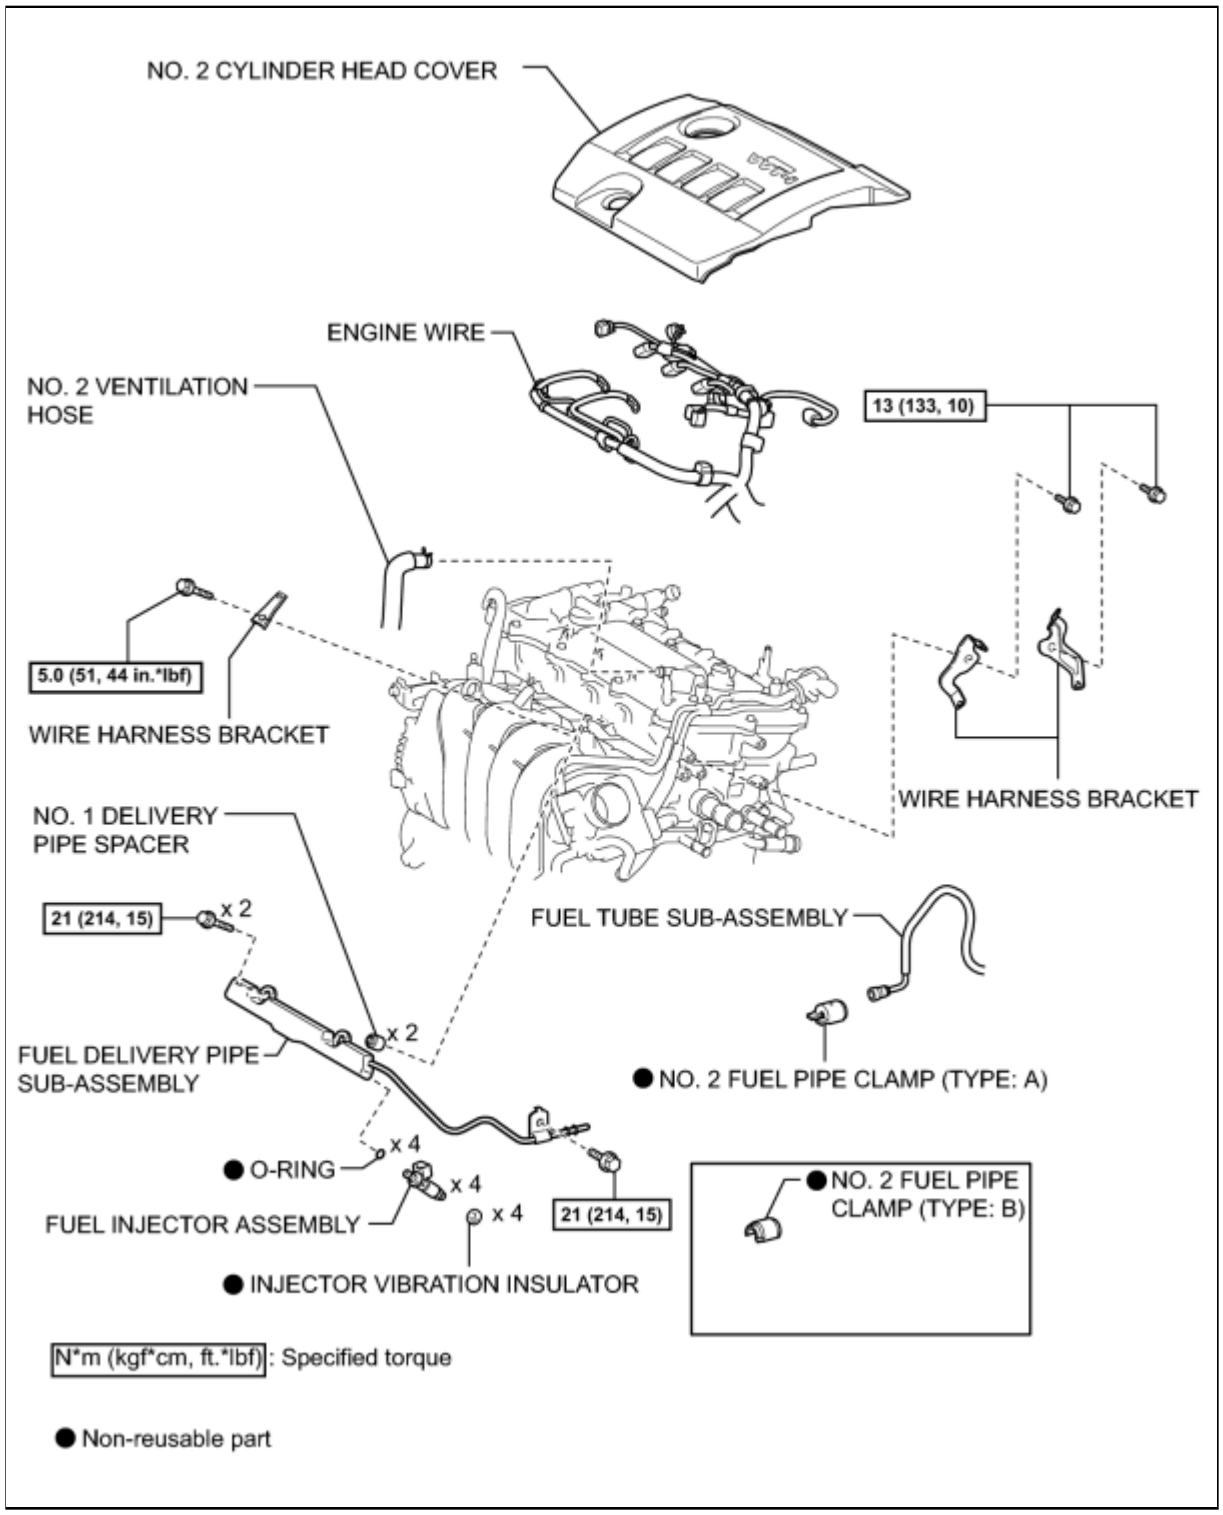
(d) Install the fuel tube to the fuel hose clamp.

5. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

6. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

(a) Connect the cable to the negative battery terminal.



Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

8. INSPECT FOR FUEL LEAK INFO

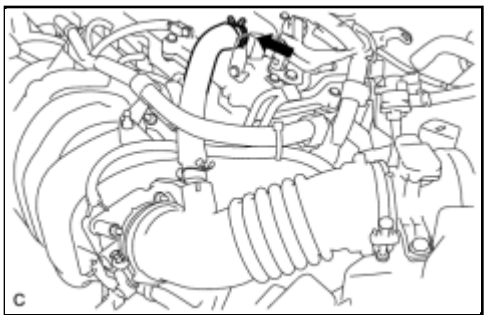
Title: 2ZR-FE FUEL: FUEL INJECTOR: REMOVAL (2010 Corolla)		

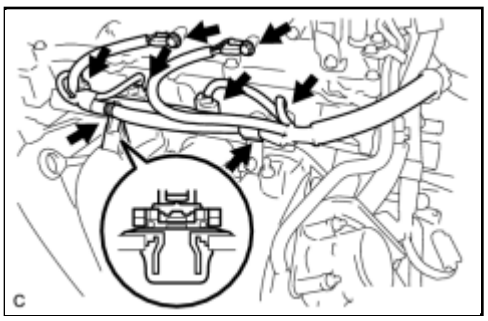
REMOVAL



1. DISCHARGE FUEL SYSTEM PRESSURE

HINT: INFO .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

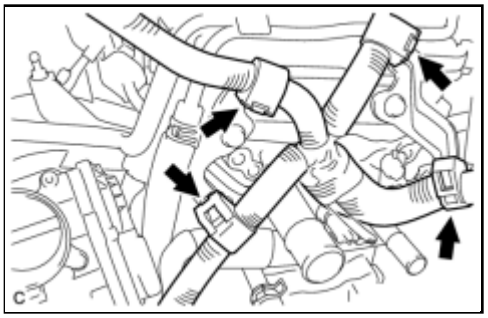


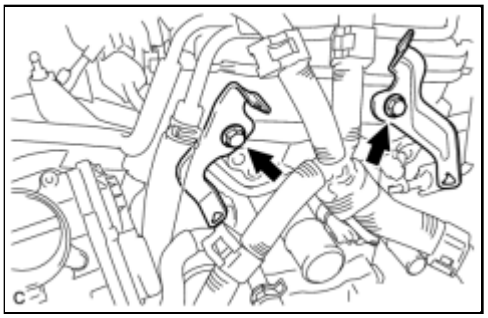
3. REMOVE NO. 2 CYLINDER HEAD COVER INFO

4. DISCONNECT NO. 2 VENTILATION HOSE

(a) Disconnect the No. 2 ventilation hose.

5. REMOVE ENGINE WIRE

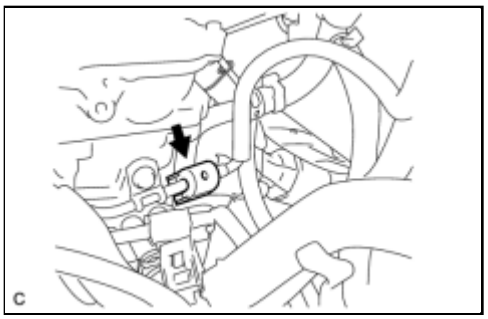




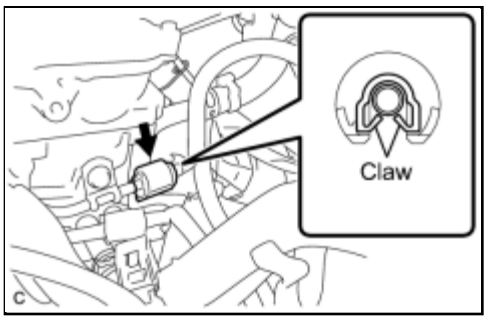
(a) Remove the 2 bolts and disconnect the ground wires.

(b) Disconnect the 4 fuel injector assembly connectors.

(c) Disconnect the 2 wire harness clamps.

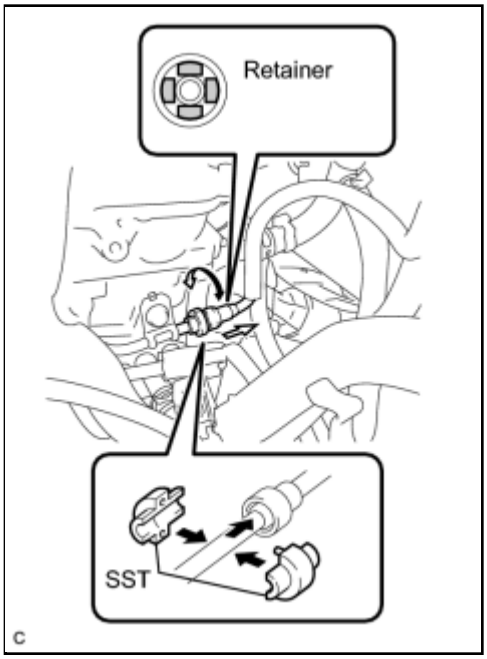


(d) Disconnect the 4 wire harness clamps.

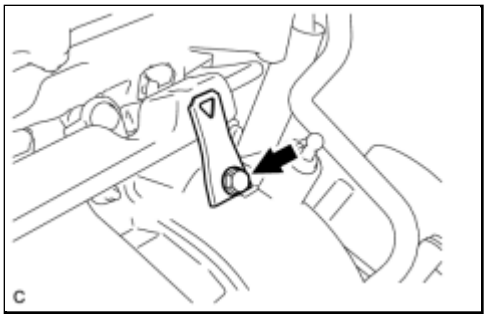


(e) Remove the 2 bolts and 2 wire harness brackets.

6. DISCONNECT FUEL TUBE SUB-ASSEMBLY

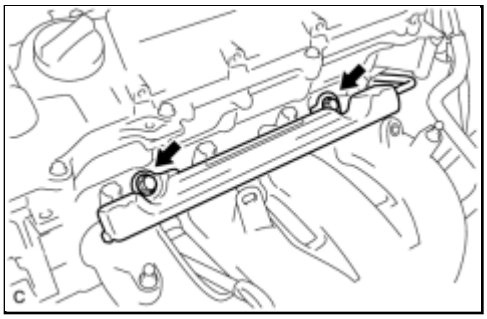


(a) Remove the No. 2 fuel pipe clamp (Type A).



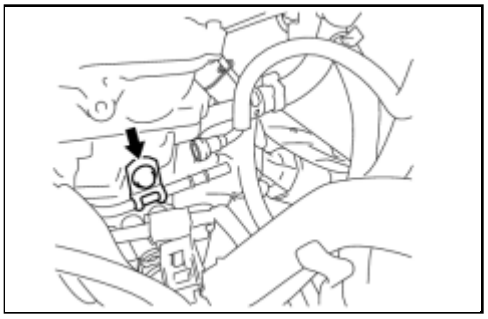
(b) Remove the No. 2 fuel pipe clamp (Type B).

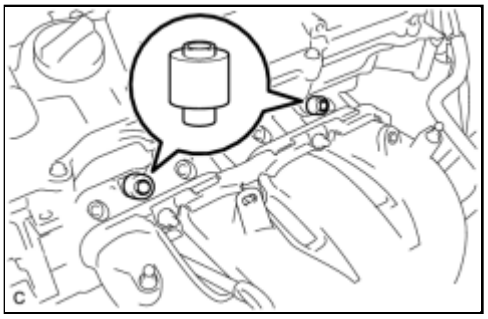
(c) Using SST, disconnect the fuel tube sub-assembly.



SST: 09268-21010

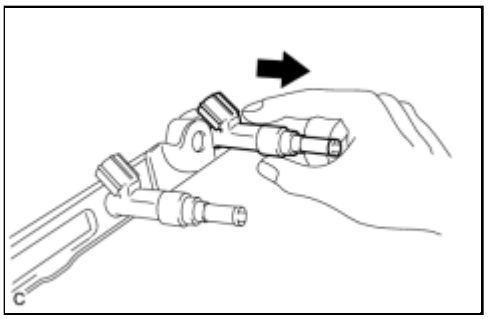
7. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY



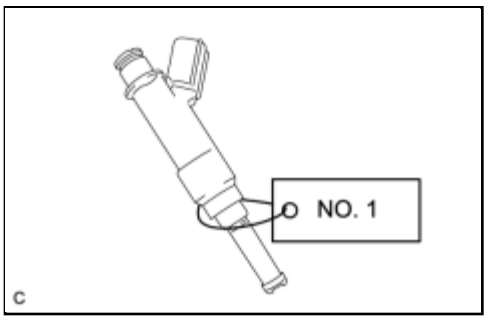


(a) Remove the bolt and wire harness bracket.

(b) Remove the 2 bolts.



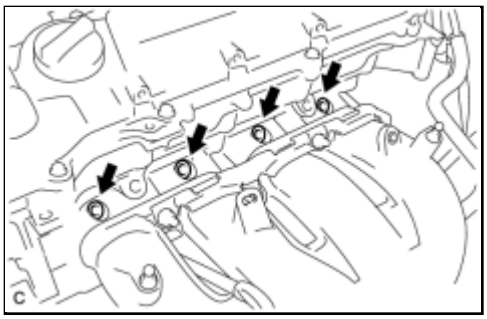
(c) Remove the bolt and the fuel delivery pipe sub-assembly.



(d) Remove the 2 No. 1 delivery pipe spacers.

8. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull the 4 fuel injector assemblies out of the fuel delivery pipe sub-assembly.

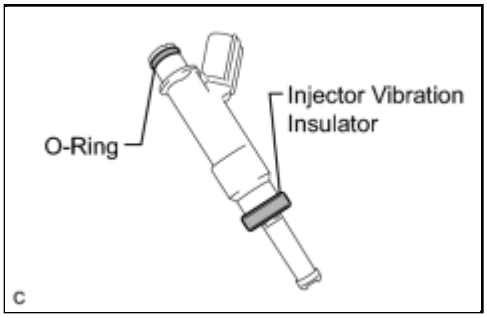


(b) For reinstallation, attach a tag or label to the injector shaft.

NOTICE:

Prevent entry of foreign objects by covering the fuel injector with a plastic bag.

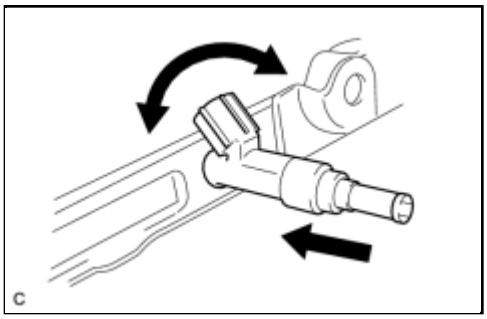
(c) Remove the O-rings from the fuel injector assemblies.



(d) Remove the 4 injector vibration insulators.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001EDP01FX
Title: 2ZR-FE FUEL: FUEL INJECTOR: INSTALLATION (2010 Corolla)		

INSTALLATION

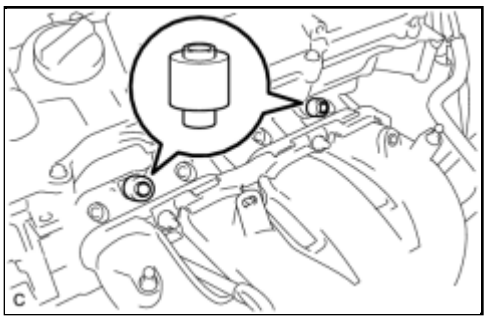


1. INSTALL FUEL INJECTOR ASSEMBLY

(a) Install 4 new injector vibration insulators to the 4 fuel injector assemblies.

(b) Install 4 new injector vibration insulators to the 4 fuel injector assemblies.

(c) Apply a light coat of gasoline or spindle oil to the contact surfaces of the the O-rings of the fuel injector assemblies.

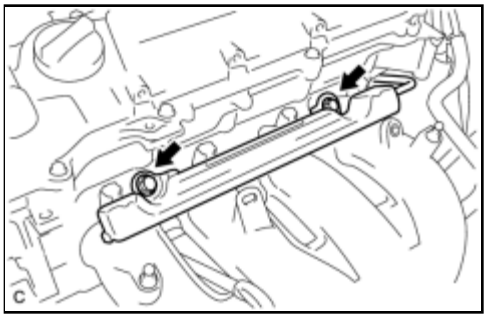


(d) While turning the fuel injector assembly left and right, install it onto the fuel delivery pipe sub-assembly.

NOTICE:

- Do not twist the O-ring.
- After installing the fuel injectors, check that they turn smoothly.

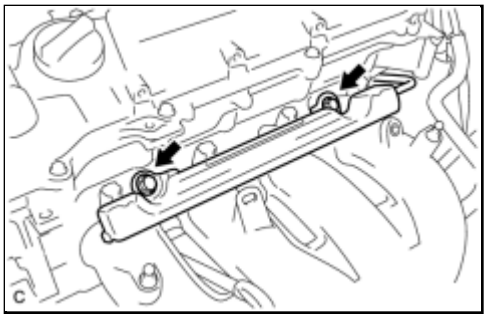
2. INSTALL NO. 1 DELIVERY PIPE SPACER



(a) Install the 2 No. 1 delivery pipe spacers onto the cylinder head.

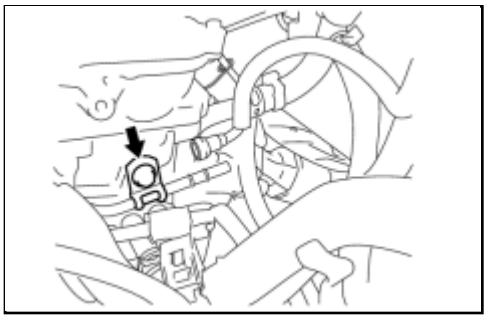
NOTICE:

Install the No. 1 delivery pipe spacers in the correct direction.



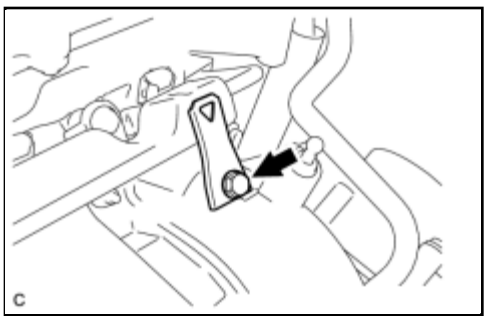
3. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY

(a) Install the fuel delivery pipe sub-assembly with the 4 fuel injector assemblies, then temporarily install the 2 bolts.



NOTICE:

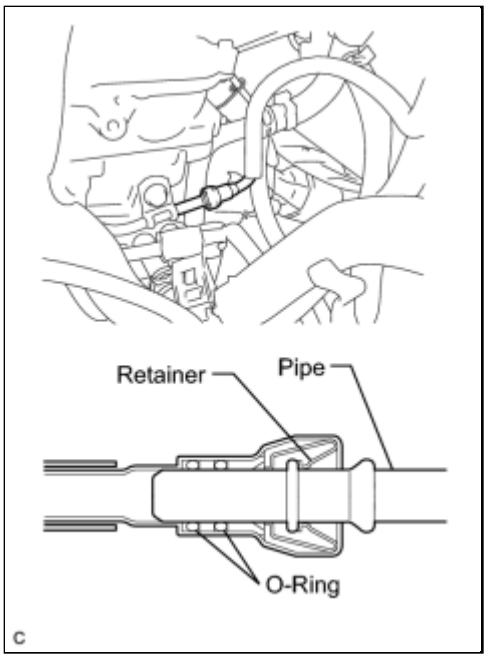
- Do not drop the fuel injectors when installing the fuel delivery pipe sub-assembly.
- Check that the fuel injector assemblies rotate smoothly after installing the fuel delivery pipe sub-assembly.



(b) Tighten the 2 bolts to the specified torque.

Torque: 21 N·m (214 kgf·cm, 15ft·lbf)

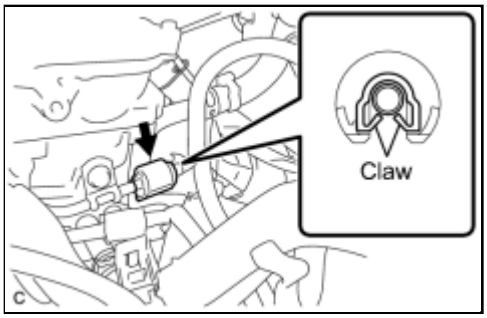
(c) Install the bolt to secure the fuel delivery pipe sub-assembly.



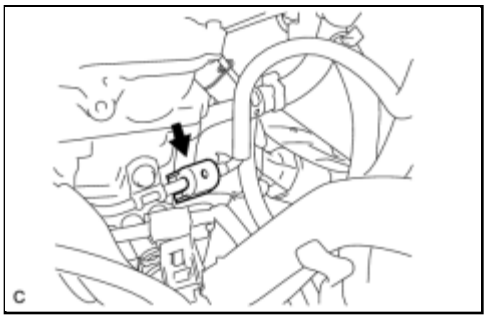
Torque: 21 N·m (214 kgf·cm, 15ft·lbf)

(d) Install the wire harness bracket with the bolt.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)



4. CONNECT FUEL TUBE SUB-ASSEMBLY

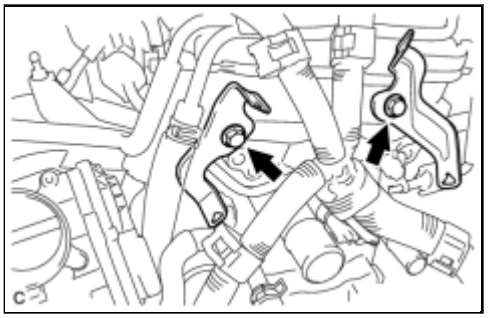


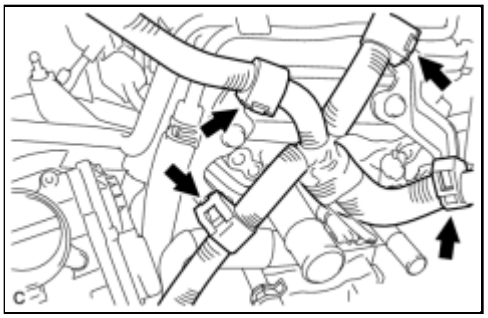
(a) Insert the fuel tube sub-assembly connector into the fuel delivery pipe until a "click" sound can be heard.

NOTICE:

- Check that there are no scratches or foreign matter around the contact surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tube, check that the fuel tube connector and pipe are securely connected by pulling on them.

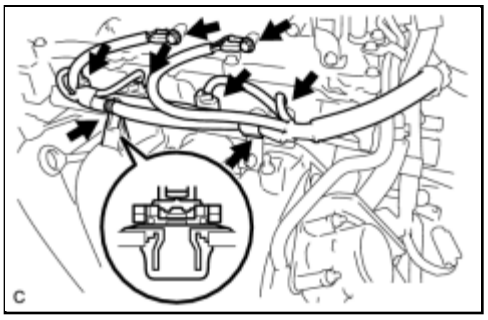
(b) Install a new No. 2 fuel pipe clamp (Type B).





(c) Install a new No. 2 fuel pump clamp (Type A).

5. CONNECT ENGINE WIRE

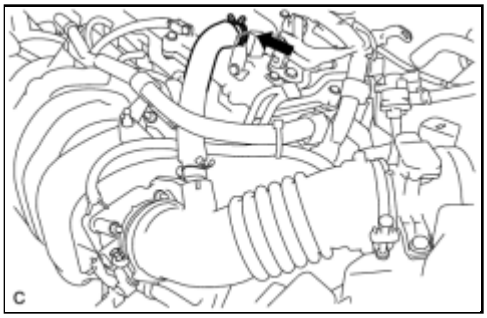


(a) Install the 2 wire harness brackets with the 2 bolts.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

(b) Connect the 4 wire harness clamps.

(c) Connect the 4 fuel injector assembly connectors.



(d) Connect the 2 wire harness clamps.

(e) Connect the ground wires with the 2 bolts.

6. INSTALL AIR CLEANER CAP SUB-ASSEMBLY INFO

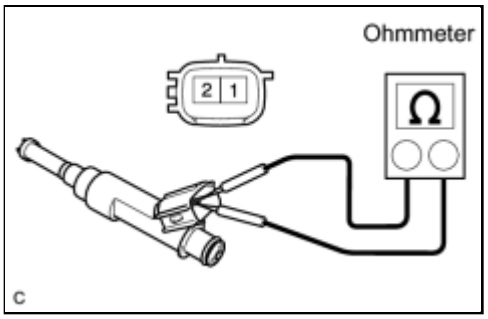
7. CONNECT NO. 2 VENTILATION HOSE

(a) Connect the No. 2 ventilation hose.

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

(a) Connect the cable to the negative battery terminal.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)



9. INSPECT FOR FUEL LEAK INFO

10. INSTALL NO. 2 CYLINDER HEAD COVER INFO

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001EDQ01OX
Title: 2ZR-FE FUEL: FUEL INJECTOR: INSPECTION (2010 Corolla)		

INSPECTION

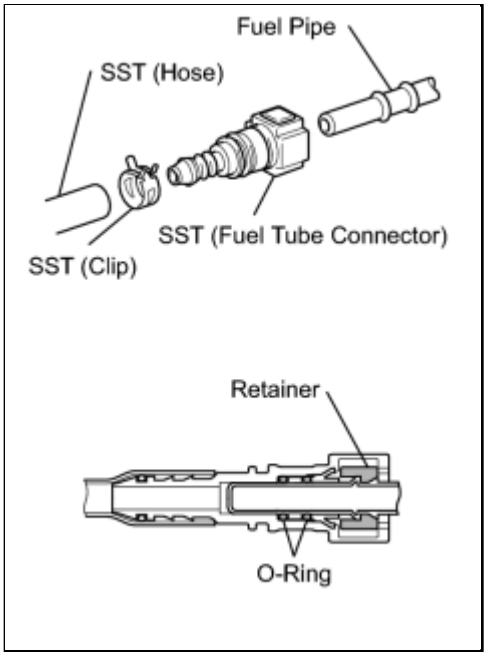
1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	11.6 to 12.4 Ω



If the result is not as specified, replace the injector assembly.

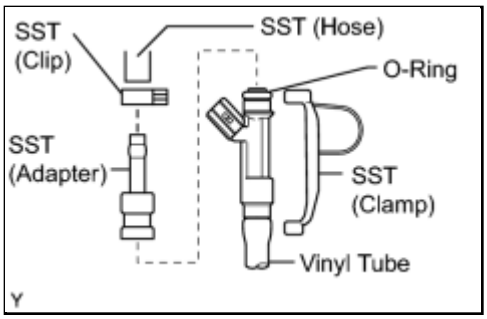
(b) Check the operation.

CAUTION:

Perform the inspection in a well-ventilated area.

Do not perform the inspection near a naked flame.

(1) Connect SST (fuel tube connector) to SST (hose), then connect them to the fuel pipe (vehicle side).



SST: 09268-31012

90467-13001

95336-08070

09268-41500

(2) Install the O-ring onto the fuel injector assembly.

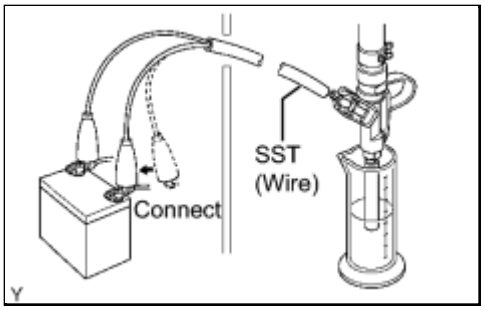
(3) Connect SST (adapter and hose) to the injector assembly, and hold the injector assembly and union with SST (clamp).

SST: 09268-31012

90467-13001
95336-08070
09268-41400
09268-41110

(4) Set the injector assembly in a graduated cylinder.

CAUTION:



Install a suitable vinyl tube onto the injector assembly to prevent gasoline from spraying.

(5) Operate the fuel pump.

(6) Connect SST (wire) to the injector assembly and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

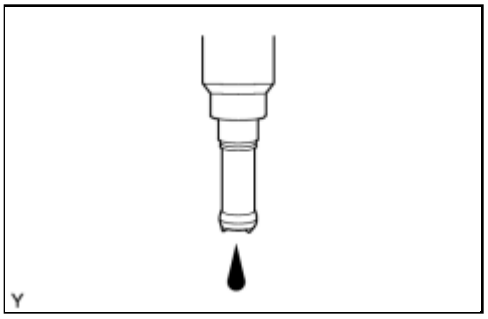
SST: 09842-30080

Injection Volume:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Positive terminal - Ground terminal	Per 15 seconds	60 to 73 cc (3.7 to 4.5 cu in.)

Difference between each injector:
13 cc (0.8 cu in.) or less

NOTICE:

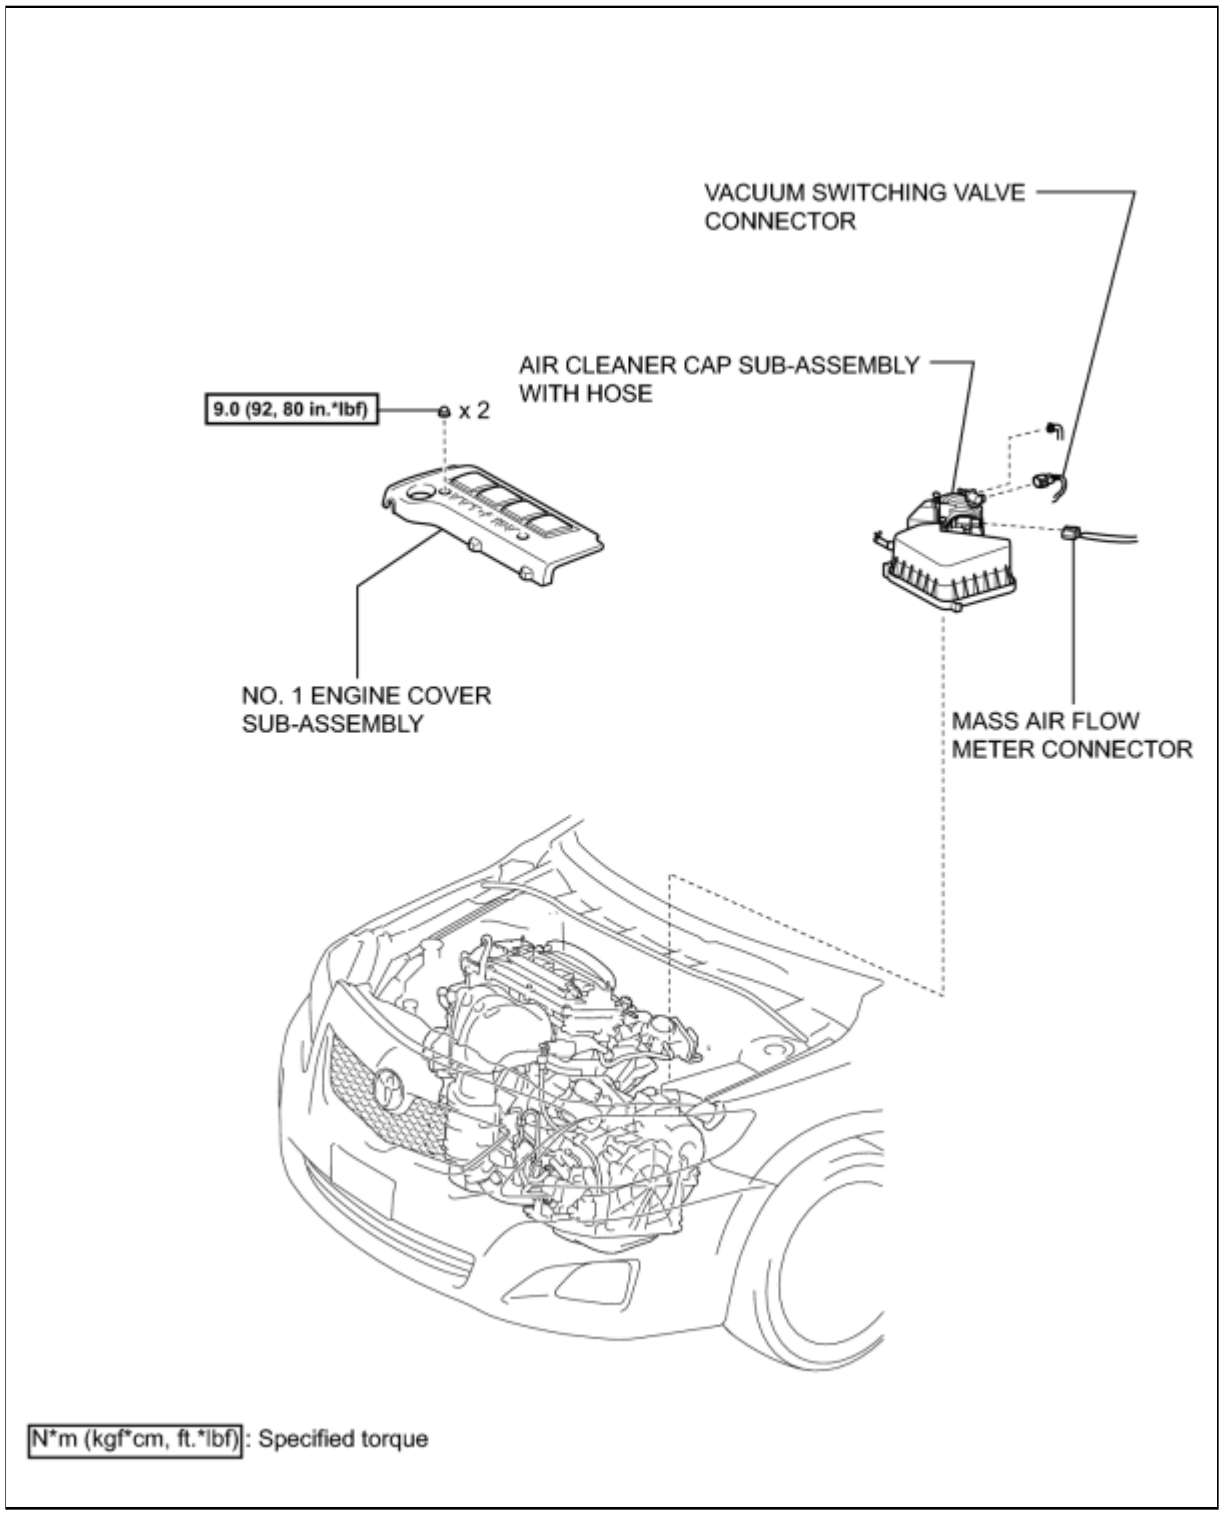


Always do the switching at the battery side.

If the injection volume is not as specified, replace the injector assembly.

(c) Check for leaks.

(1) Disconnect the test probes of SST (wire) from the battery and check the fuel leaks from the injector.



Fuel drop:
1 drop or less every 12 minutes

Y

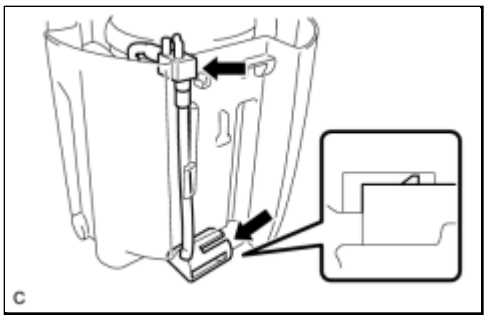
Title: 2AZ-FE FUEL: FUEL PRESSURE REGULATOR: REMOVAL (2010 Corolla)		

REMOVAL

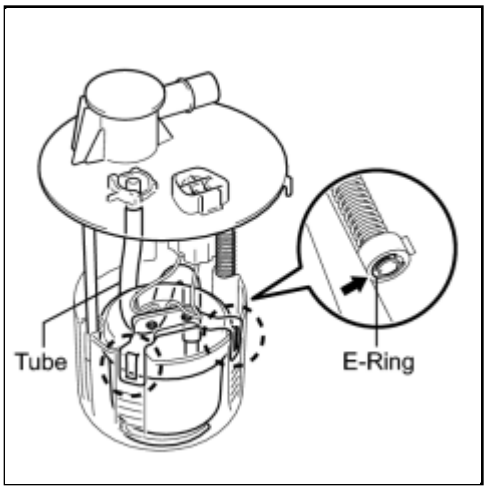
1. DISCHARGE FUEL SYSTEM PRESSURE

HINT: INFO .



2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

3. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

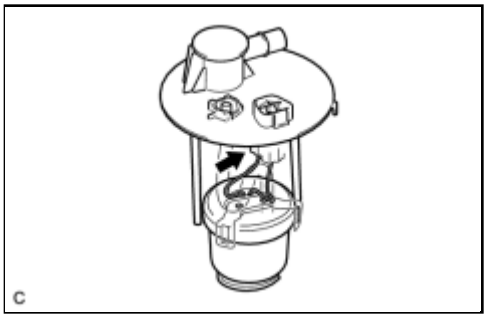


(a) Remove the fuel suction tube assembly with pump and gauge INFO .

4. REMOVE FUEL SENDER GAUGE ASSEMBLY INFO

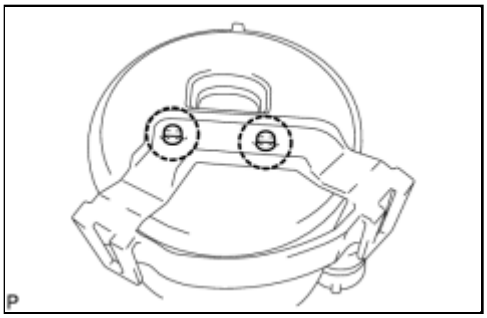
5. REMOVE FUEL PUMP

(a) Release the claw and disconnect the fuel pump filter hose.



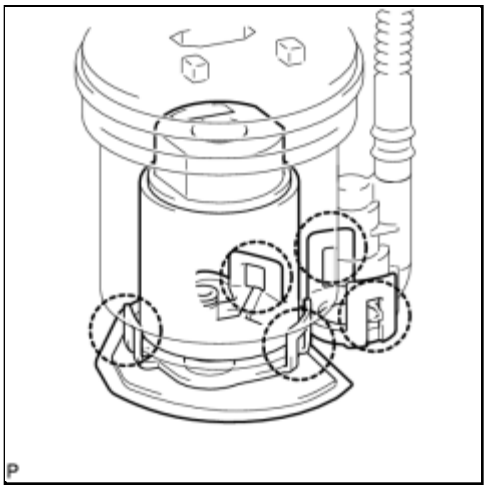
(b) Remove the E-ring and separate the 2 claws, then remove the fuel pump sub-tank.

NOTICE:



Do not separate the tube indicated in the illustration INFO .

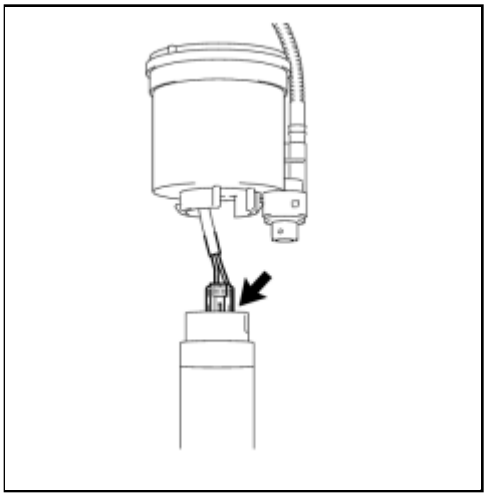
(c) Disconnect the fuel pump harness connector.

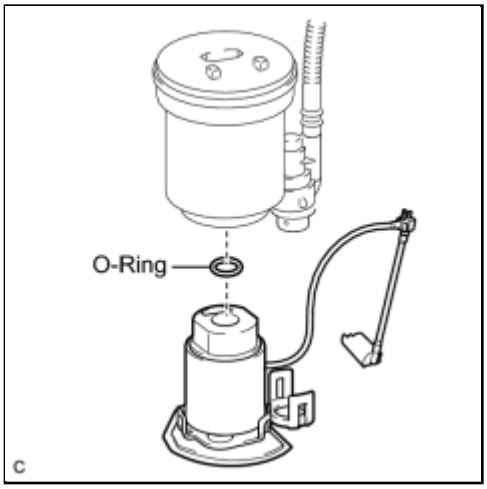


NOTICE:

Do not damage the wire harness.

(d) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the No. 1 fuel suction support.

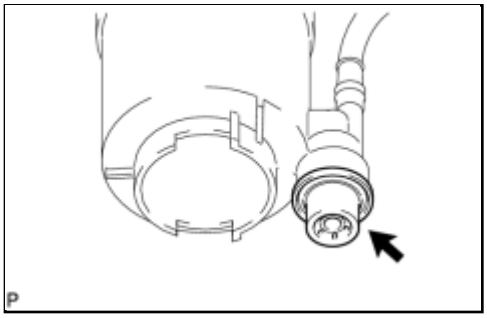




(e) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws, and remove the suction filter and fuel pump from the fuel filter.

NOTICE:

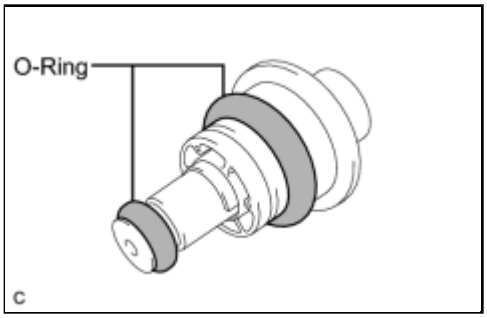
- Do not damage the fuel pump filter or fuel filter.
- Do not remove the suction filter.
- Do not use either the fuel pump or the suction filter if the suction filter is removed from the fuel pump.



(f) Disconnect the fuel pump connector.

(g) Remove the O-ring from the fuel pump.

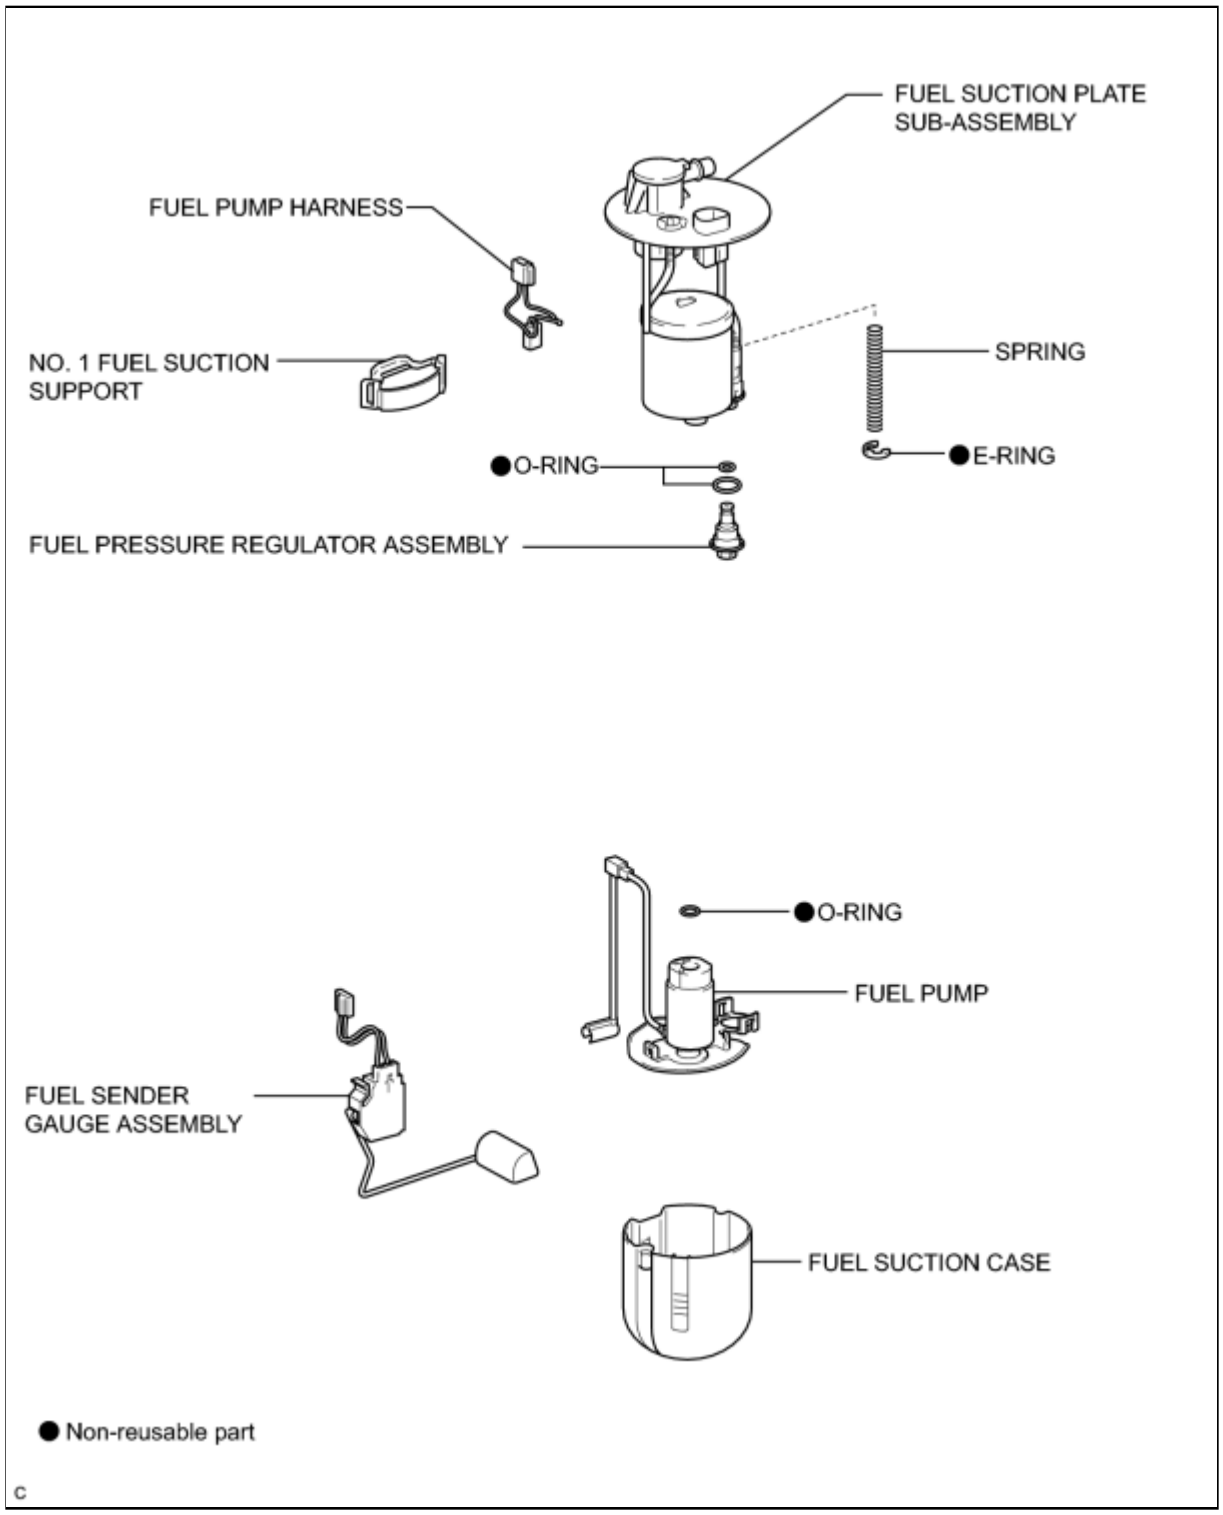
6. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY



(a) Using a screwdriver with its tip wrapped in protective tape, remove the fuel pressure regulator assembly.

NOTICE:

Slowly pull out the fuel pressure regulator assembly because the O-ring is firmly installed between the regulator and the fuel filter.



(b) Remove the 2 O-rings from the fuel pressure regulator assembly.

Title: 2AZ-FE FUEL: FUEL PUMP: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY INFO

2. REMOVE REAR FLOOR SERVICE HOLE COVER

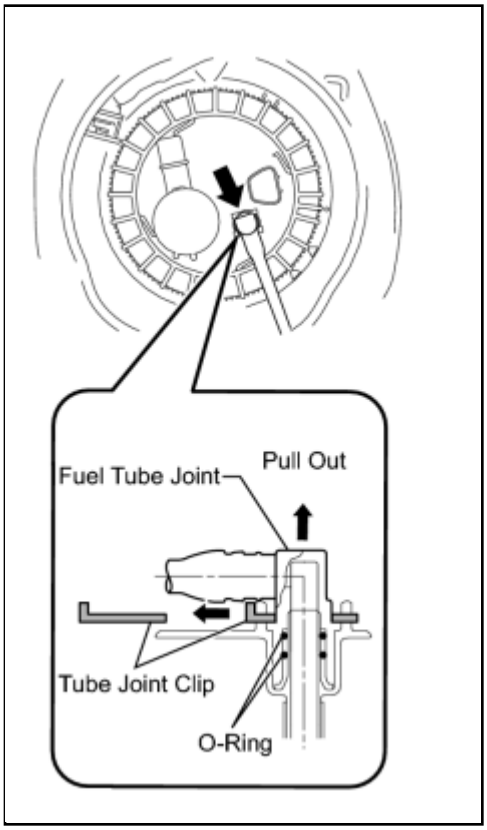
(a) Remove the rear floor service hole cover.

(b) Disconnect the connector from the fuel suction tube assembly.

3. DISCHARGE FUEL SYSTEM PRESSURE

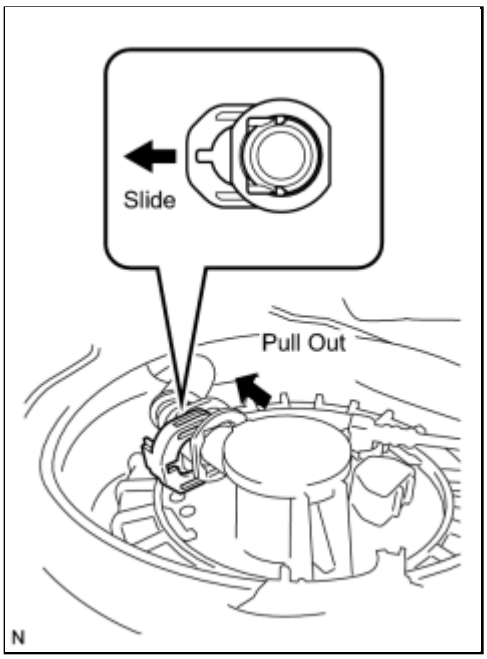
HINT: INFO .

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



5. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Disconnect the fuel tank main tube.

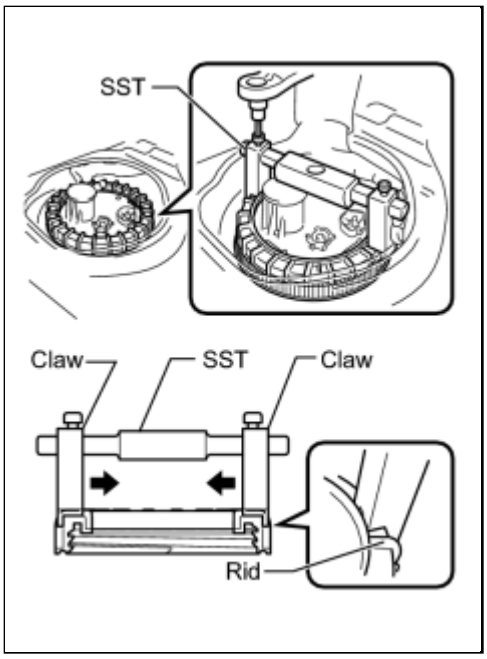


(1) Remove the tube joint clip, and pull the fuel tube joint out of the plug of the fuel suction plate.

NOTICE:

- Check that there is no dirt or other foreign objects around the fuel tube joint before disconnecting it. Clean the joint if necessary.
- It is necessary to prevent mud or dirt from entering the joint. If mud or dirt gets in the joint, the O-rings may not seal properly.
- Only disconnect the joint by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the joint by covering it with a plastic bag.

6. DISCONNECT FUEL TANK VENT HOSE



(a) Disconnect the fuel tank vent hose.

(1) Pinch the retainer and pull the fuel tank vent connector out of the fuel tank to disconnect the fuel tank vent hose from the fuel suction plate.

NOTICE:

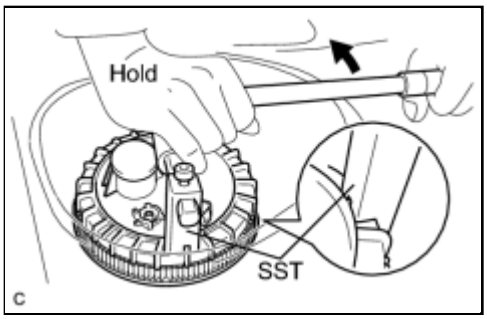
- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

7. REMOVE FUEL PUMP GAUGE RETAINER

(a) Using a 6 mm socket hexagon wrench, set SST to the fuel pump gauge retainer.

SST: 09808-14020

09808-01410
09808-01420
09808-01430



HINT:

- Engage the SST claws securely with the fuel pump gauge retainer ribs to secure SST.
- Install SST while pressing the SST claws toward the fuel pump gauge retainer (towards the center of SST).

(b) Using SST, loosen the fuel pump gauge retainer.

SST: 09808-14020

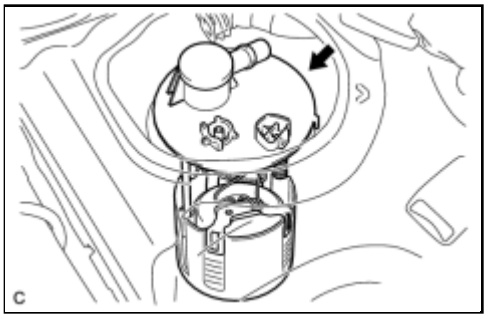
09808-01410
09808-01420
09808-01430

NOTICE:

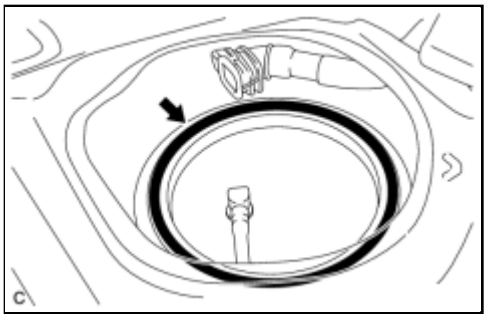
- Do not use any tools other than specified in this operation. Damage to the fuel pump gauge retainer or the fuel tank.
- Loosen the retainer by turning it counterclockwise while holding SST down. Do not allow the claw of the tank suction tube support to slip out of its groove on the fuel tank.

HINT:

The ribs on the fuel pump gauge retainer can be fitted into the tips of SST.



(c) Remove the fuel pump gauge retainer while holding the fuel suction tube assembly by hand.

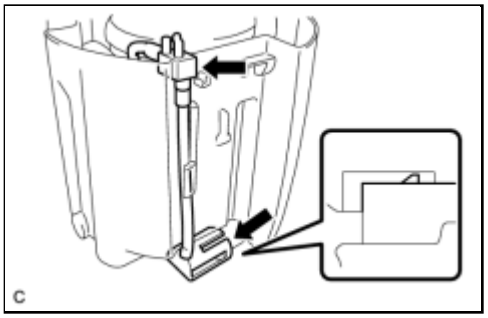


8. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Remove the fuel suction tube assembly from the fuel tank.

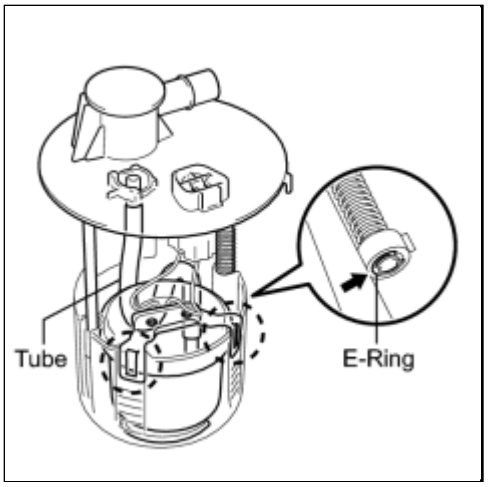
NOTICE:

Make sure that the fuel sender gauge arm does not bend.



(b) Remove the gasket from the fuel tank.

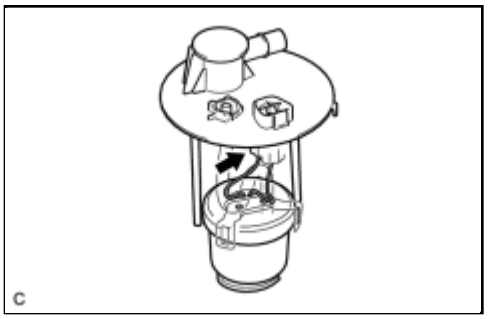
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003D8C004X
Title: 2AZ-FE FUEL: FUEL PUMP: DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

1. REMOVE FUEL SENDER GAUGE ASSEMBLY INFO

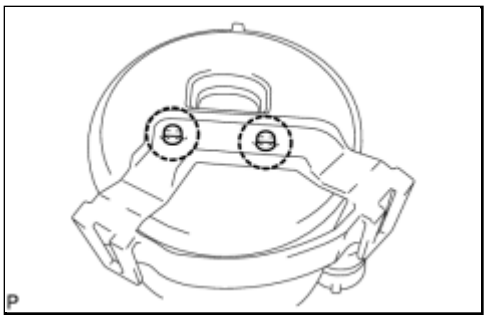
2. REMOVE FUEL PUMP



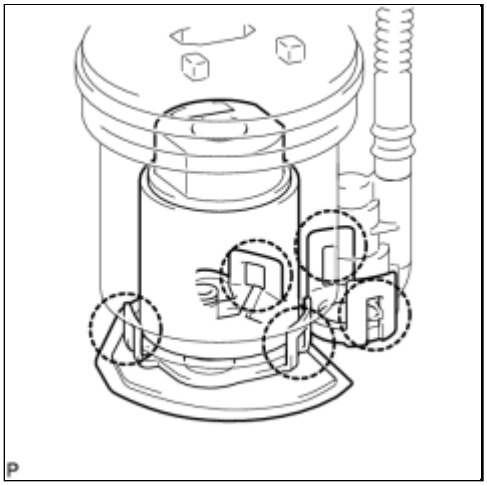
(a) Release the claw and disconnect the fuel pump filter hose.

(b) Remove the E-ring and separate the 2 claws, then remove the fuel pump sub-tank.

NOTICE:



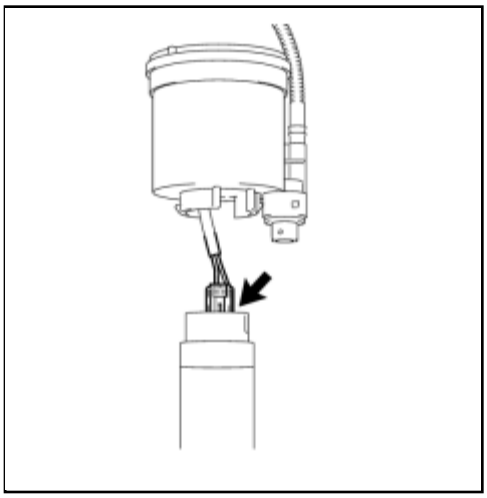
Do not separate the tube indicated in the illustration INFO **.**



(c) Disconnect the fuel pump harness connector.

NOTICE:

Do not damage the wire harness.

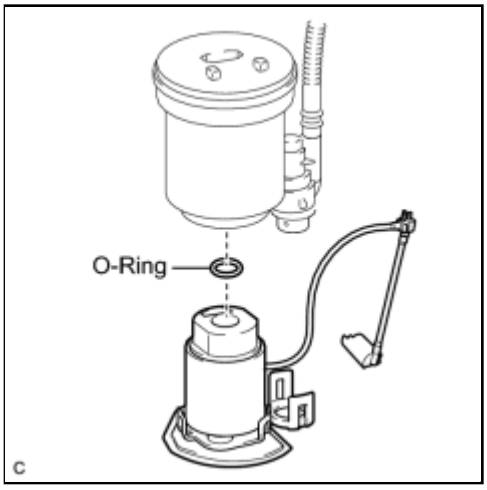


(d) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the No. 1 fuel suction support.

(e) Using a screwdriver with its tip wrapped in protective tape, disengage the 5 claws, and remove the suction filter and fuel pump from the fuel filter.

NOTICE:

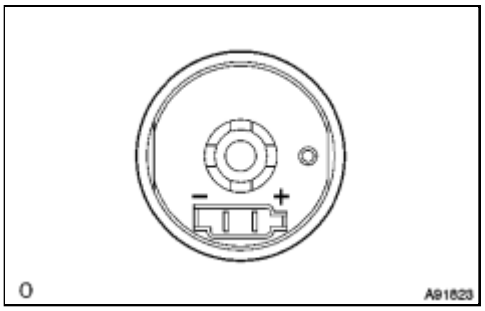
- Do not damage the fuel pump filter or fuel filter.
- Do not remove the suction filter.
- Do not use either the fuel pump or the suction filter if the suction filter is removed from the fuel pump.



(f) Disconnect the fuel pump connector.

(g) Remove the O-ring from the fuel pump.

NOTICE:



Do not disassemble the fuel pump and the suction filter because they are non-reusable parts.

Title: 2AZ-FE FUEL: FUEL PUMP: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FUEL PUMP

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:

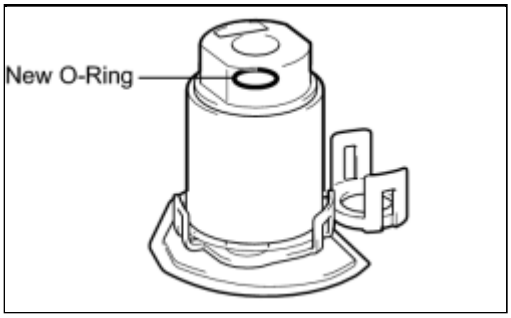
TESTER CONNECTION	SPECIFIED CONDITION
1 - 2	0.2 to 3.0 Ω at 20°C (68°F)

If the result is not as specified, replace the fuel pump.

(b) Check the operation.

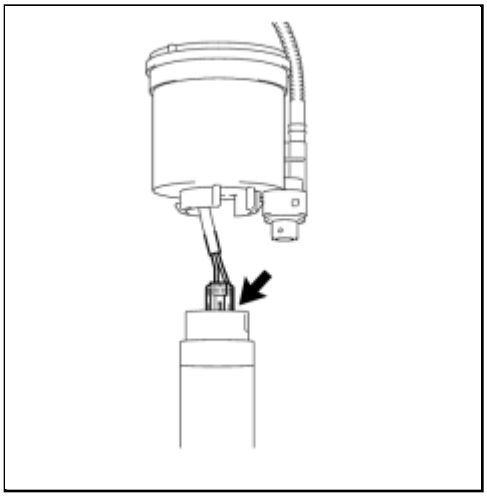
(1) Apply battery voltage to both terminals. Check that the pump operates.

NOTICE:



- These tests must be done quickly (for less than 10 seconds) to prevent the coil from burning out.
- Keep the fuel pump as far away from the battery as possible.
- Always do the switching at the battery side.

If the motor does not operate, replace the fuel pump.



Last Modified: 3-10-2010	6.4 A	**From:** 200901

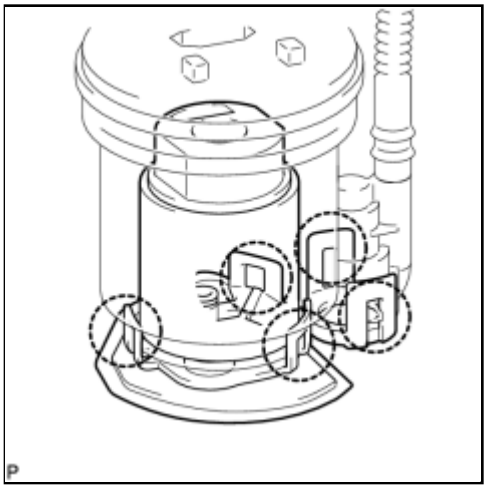
Title: 2AZ-FE FUEL: FUEL PUMP: REASSEMBLY (2010 Corolla)		

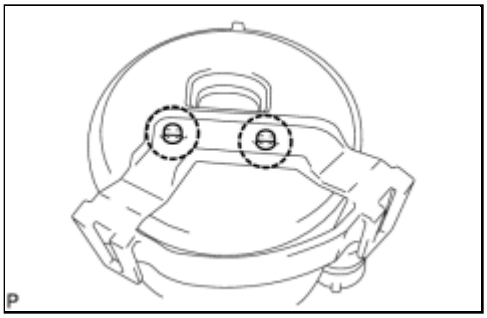
REASSEMBLY

1. INSTALL FUEL PUMP

(a) Apply a light coat of gasoline or spindle oil to a new O-ring, then install it into the fuel pump.

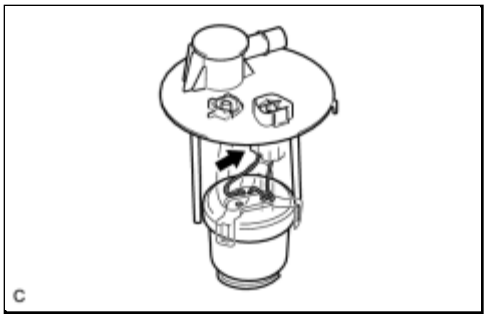


(b) Connect the fuel pump harness connector.



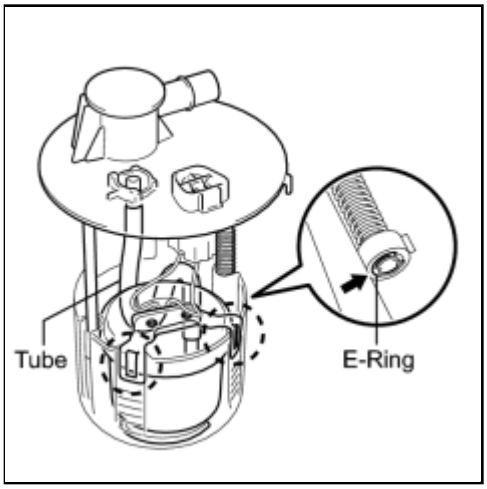
(c) Apply a light coat of gasoline or spindle oil to the O-ring of the fuel pump again.

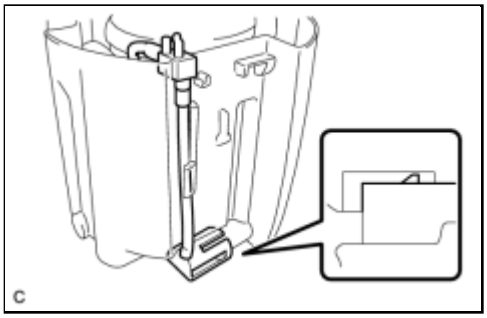
(d) Engage the 5 claws, and install the fuel pump filter onto the fuel pump with fuel filter.



NOTICE:

Make sure that the O-ring is not cracked or does not jump out of position during installation.

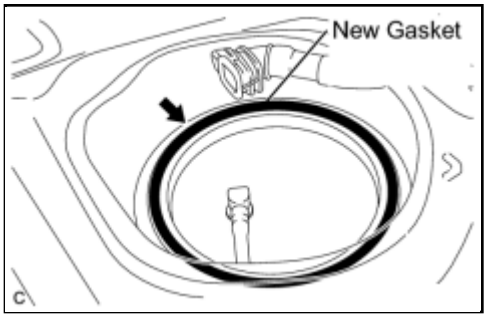




(e) Engage the 2 claws of the No. 1 fuel suction support.

(f) Connect the fuel pump harness connector.

(g) Engage the 2 claws and install a new E-ring and fuel pump sub-tank.



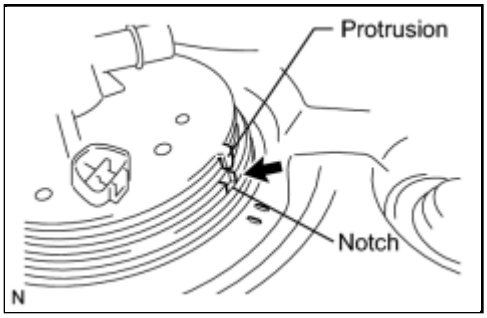
(h) Align the groove of the fuel pump filter hose with the cutout of the fuel sub-tank and install the hose.

2. INSTALL FUEL SENDER GAUGE ASSEMBLY INFO

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000022XU01UX
Title: 2AZ-FE FUEL: FUEL PUMP: INSTALLATION (2010 Corolla)		

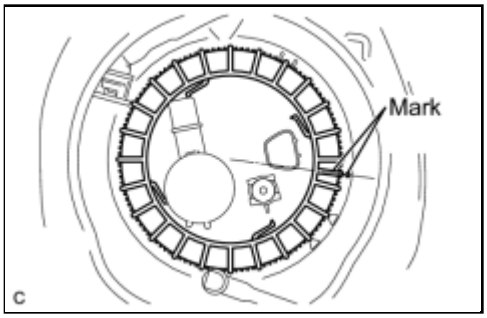
INSTALLATION

1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE



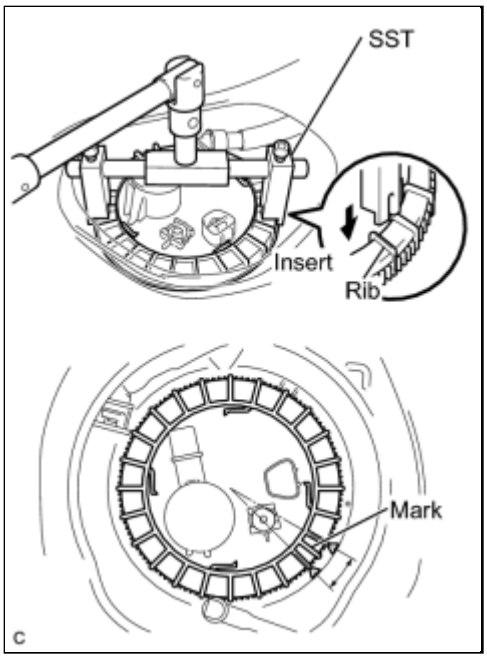
(a) Install a new gasket onto the fuel tank.

(b) Set the fuel suction tube assembly to the fuel tank.



NOTICE:

Make sure that the fuel sender gauge arm does not bend.



2. INSTALL FUEL PUMP GAUGE RETAINER

(a) Align the protrusion of the fuel suction tube assembly with the notch of the fuel tank.

(b) While holding the fuel suction tube assembly by hand, align the marks of a new fuel pump gauge retainer and fuel tank as shown in the illustration, then install the fuel pump gauge retainer.

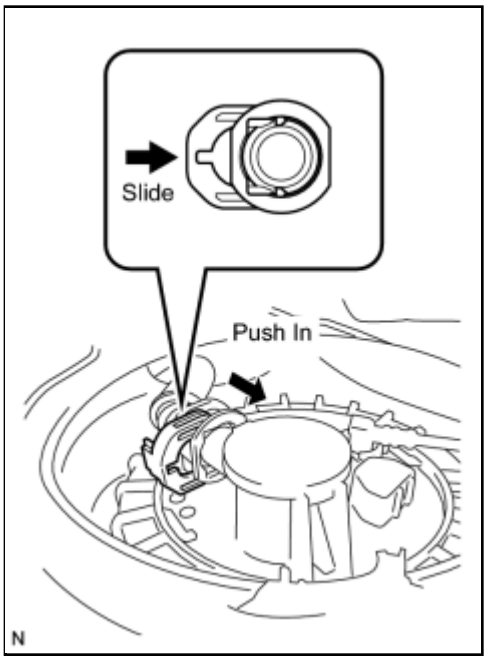
(c) Using SST and your hand, tighten the fuel pump gauge retainer 2 revolutions so that the mark of the retainer comes within the range shown in the illustration.

SST: 09808-14020

09808-01410

09808-01420

09808-01430



NOTICE:

Use SST. Do not use any other tools such as a screwdriver.

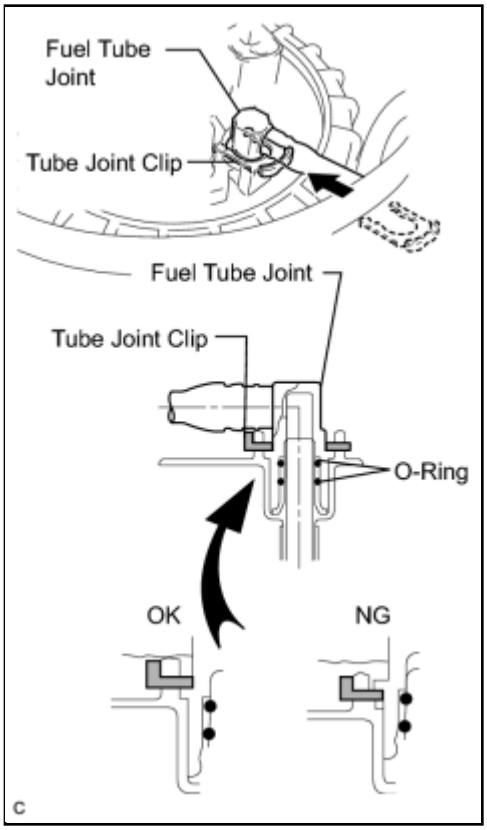
HINT:

Insert the notch of SST into the rib of the fuel pump gauge retainer.

3. INSTALL FUEL TANK VENT HOSE

(a) Connect the fuel tank vent hose.

(1) Align the fuel tank vent connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the fuel suction plate.



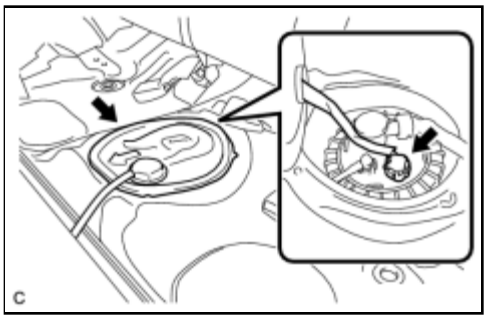
NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tank vent connector and pipe before performing this work.
- After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling on the quick connector.

4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Connect the fuel tank main tube.

(1) Push the fuel tube joint in the plug of the fuel suction plate, then install the tube joint clip.



NOTICE:

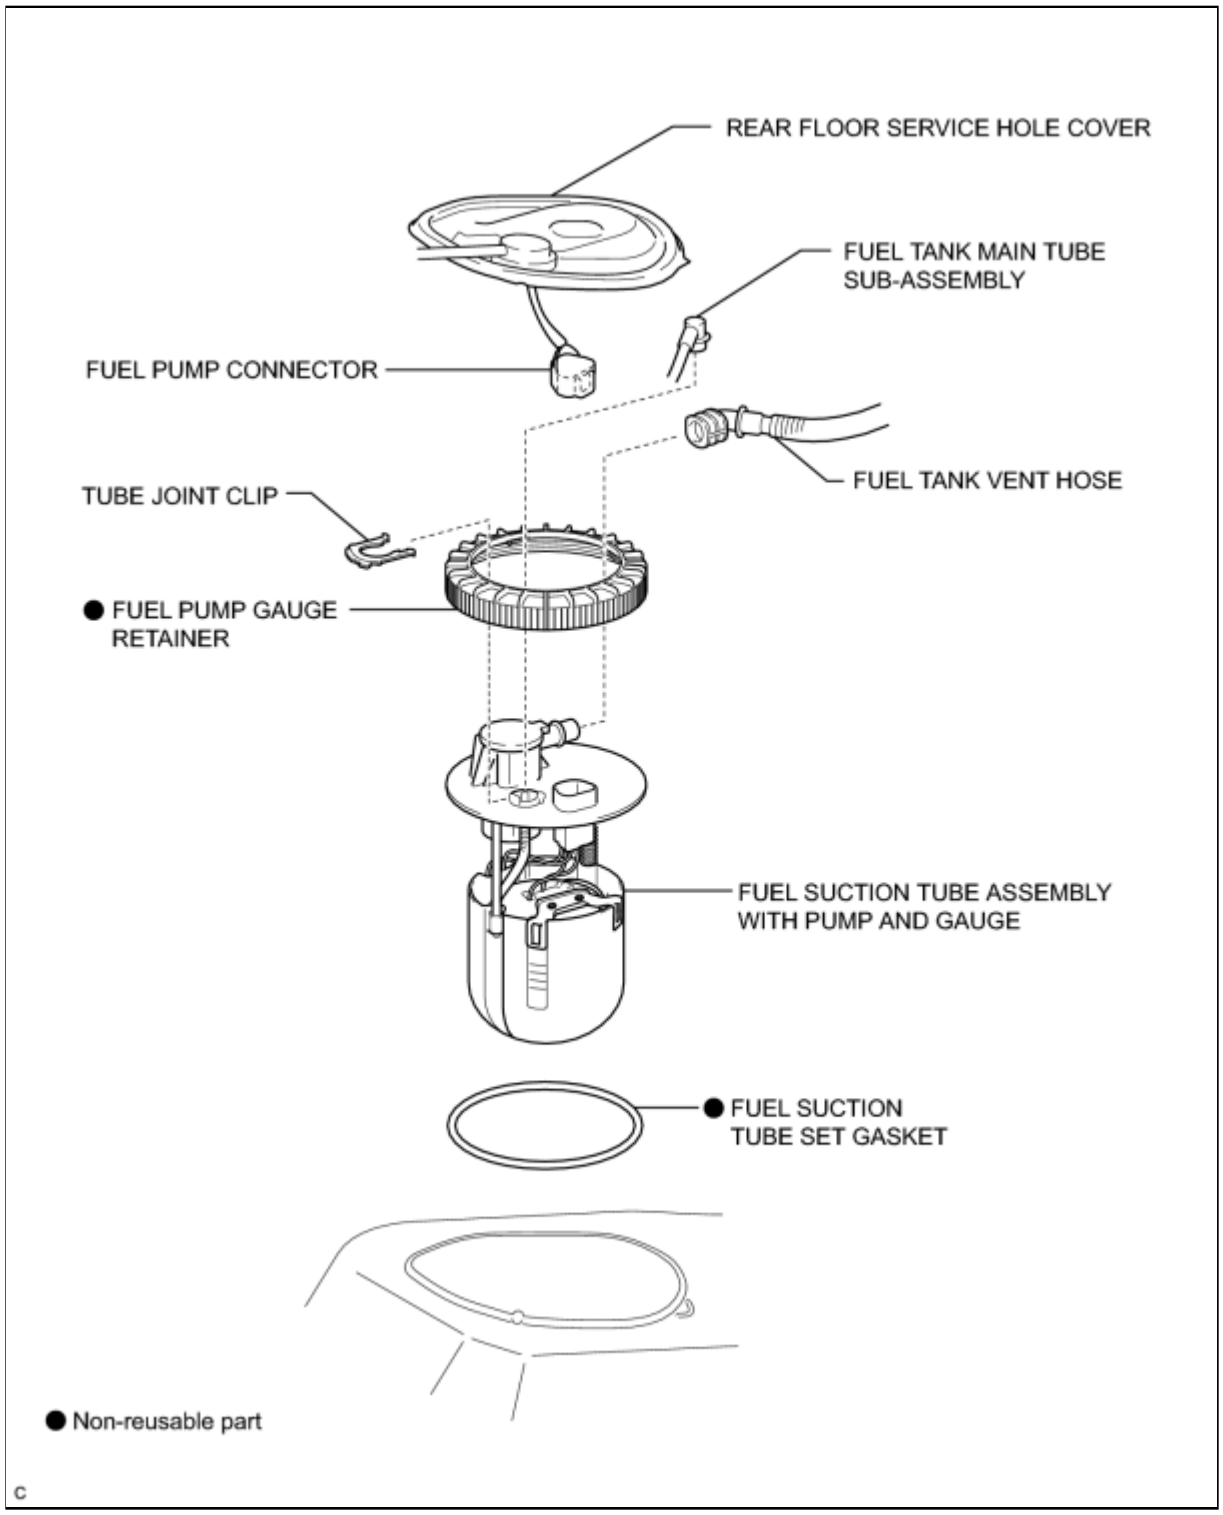
- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube joint and plug before performing this work.
- Check that the fuel tube joint is securely inserted to the end.
- Check that the tube joint clip is on the collar of the fuel tube joint.
- After installing the tube joint clip, check that the fuel tank main tube cannot be pulled out.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

6. INSPECT FOR FUEL LEAK INFO

7. INSTALL REAR FLOOR SERVICE HOLE COVER

(a) Connect the fuel pump connector.



(b) Install the rear floor service hole cover.

8. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

Title: 2ZR-FE FUEL: FUEL PUMP: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY INFO

2. REMOVE REAR FLOOR SERVICE HOLE COVER

(a) Remove the rear floor service hole cover.

(b) Disconnect the connector from the fuel suction tube assembly.

3. DISCHARGE FUEL SYSTEM PRESSURE

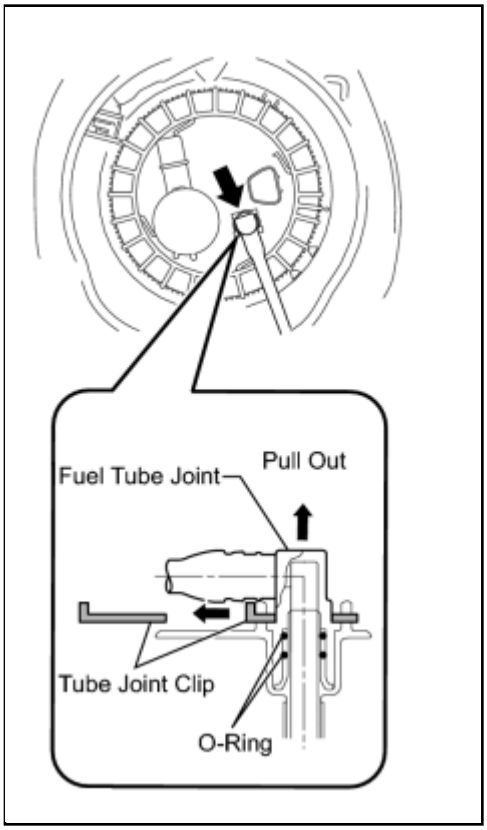
(a) Start the engine. After the engine stops naturally, turn the ignition switch off.

HINT:

DTC P0171/25 (system too lean) may be set.

(b) Crank the engine again and make sure that the engine does not start.

(c) Remove the fuel tank cap and discharge the pressure from the fuel tank.



4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

5. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Remove the tube joint clip, then pull the fuel tube joint out of the plug of the fuel suction tube assembly.

NOTICE:

- Check that there is no dirt or other foreign objects around the fuel tube joint before disconnecting it. Clean the joint if necessary.
- It is necessary to prevent mud or dirt from entering the joint. If mud or dirt gets in the joint, the O-rings may not seal properly.
- Only disconnect the joint by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the contact surfaces by covering it with a plastic

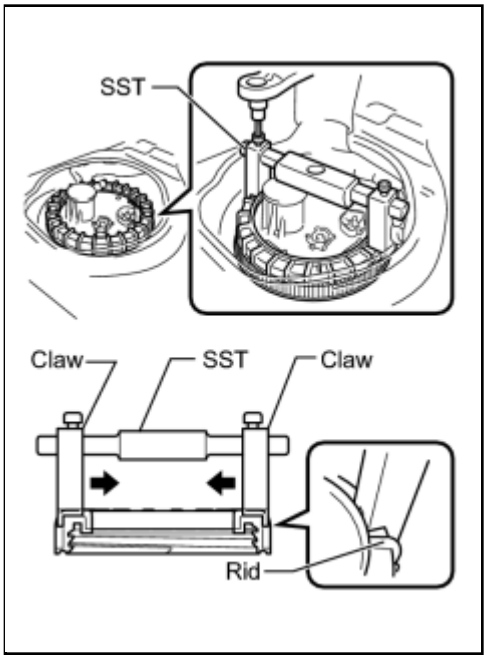
bag.

6. DISCONNECT FUEL TANK VENT HOSE

(a) Disconnect the fuel tank vent hose.

(1) Pinch the retainer and pull the fuel tank vent connector out of the fuel tank to disconnect the fuel tank vent hose from the fuel suction plate.

NOTICE:



- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

7. REMOVE FUEL PUMP GAUGE RETAINER

(a) Using a 6 mm socket hexagon wrench, set SST to the fuel pump gauge retainer.

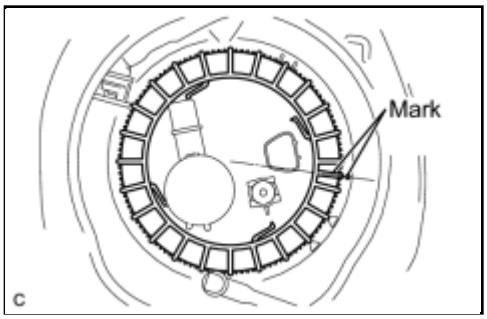
Title: 2ZR-FE FUEL: FUEL PUMP: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

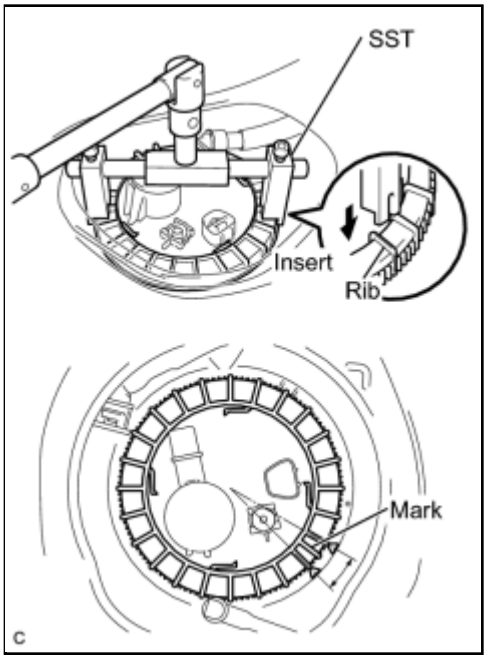
(a) Install a new gasket onto the fuel tank.



(b) Set the fuel suction tube assembly with pump and gauge to the fuel tank.

NOTICE:

Make sure that the fuel sender gauge arm does not bend.



2. INSTALL FUEL PUMP GAUGE RETAINER

(a) Align the protrusion of the fuel suction tube with the notch of the fuel tank.

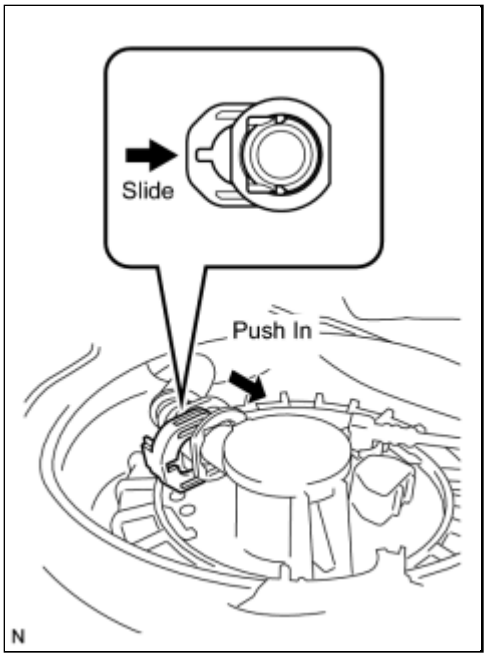
(b) While holding the fuel suction tube assembly by hand to prevent it from tilting, align the starting marks on the fuel pump gauge retainer and fuel tank and tighten the fuel pump gauge retainer.

(c) Using SST and your hand, tighten the fuel pump gauge retainer 2 revolutions so that the mark of the retainer

comes within the range shown in the illustration.

SST: 09808-14020

09808-01410
09808-01420
09808-01430



NOTICE:

Use SST. Do not use any other tools such as a screwdriver.

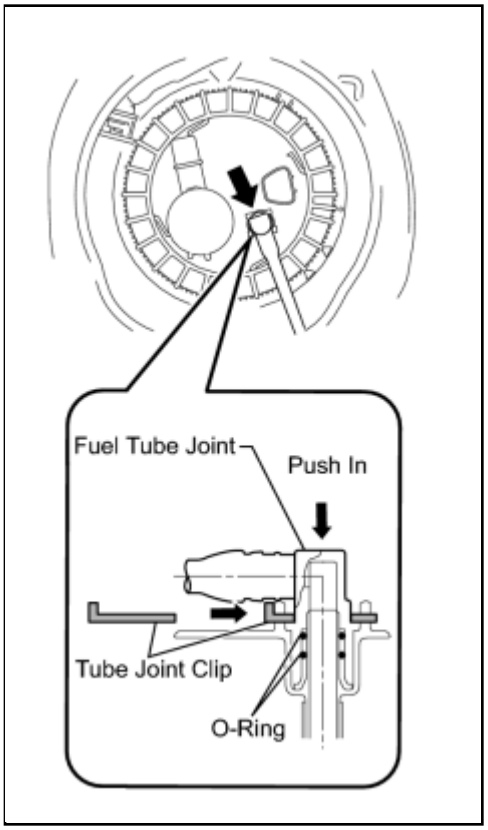
HINT:

Insert the notch of SST into the rib of the fuel pump gauge retainer.

3. CONNECT FUEL TANK VENT HOSE

(a) Connect the fuel tank vent hose.

(1) Align the fuel tank vent connector with the pipe, then push in the fuel tank vent connector until the retainer makes a "click" sound to connect the fuel tank vent hose to the fuel suction plate.



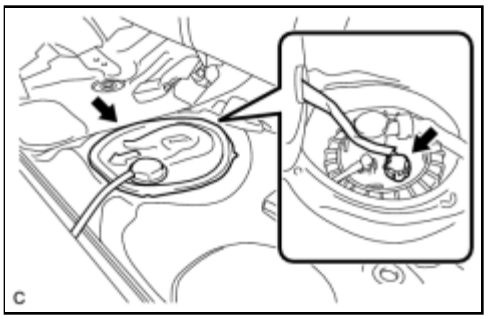
NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tank vent connector and pipe before performing this work.
- After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling on the quick connector.

4. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Connect the fuel tank main tube.

(1) Push the fuel tube joint in the plug of the fuel suction plate, then install the tube joint clip.



NOTICE:

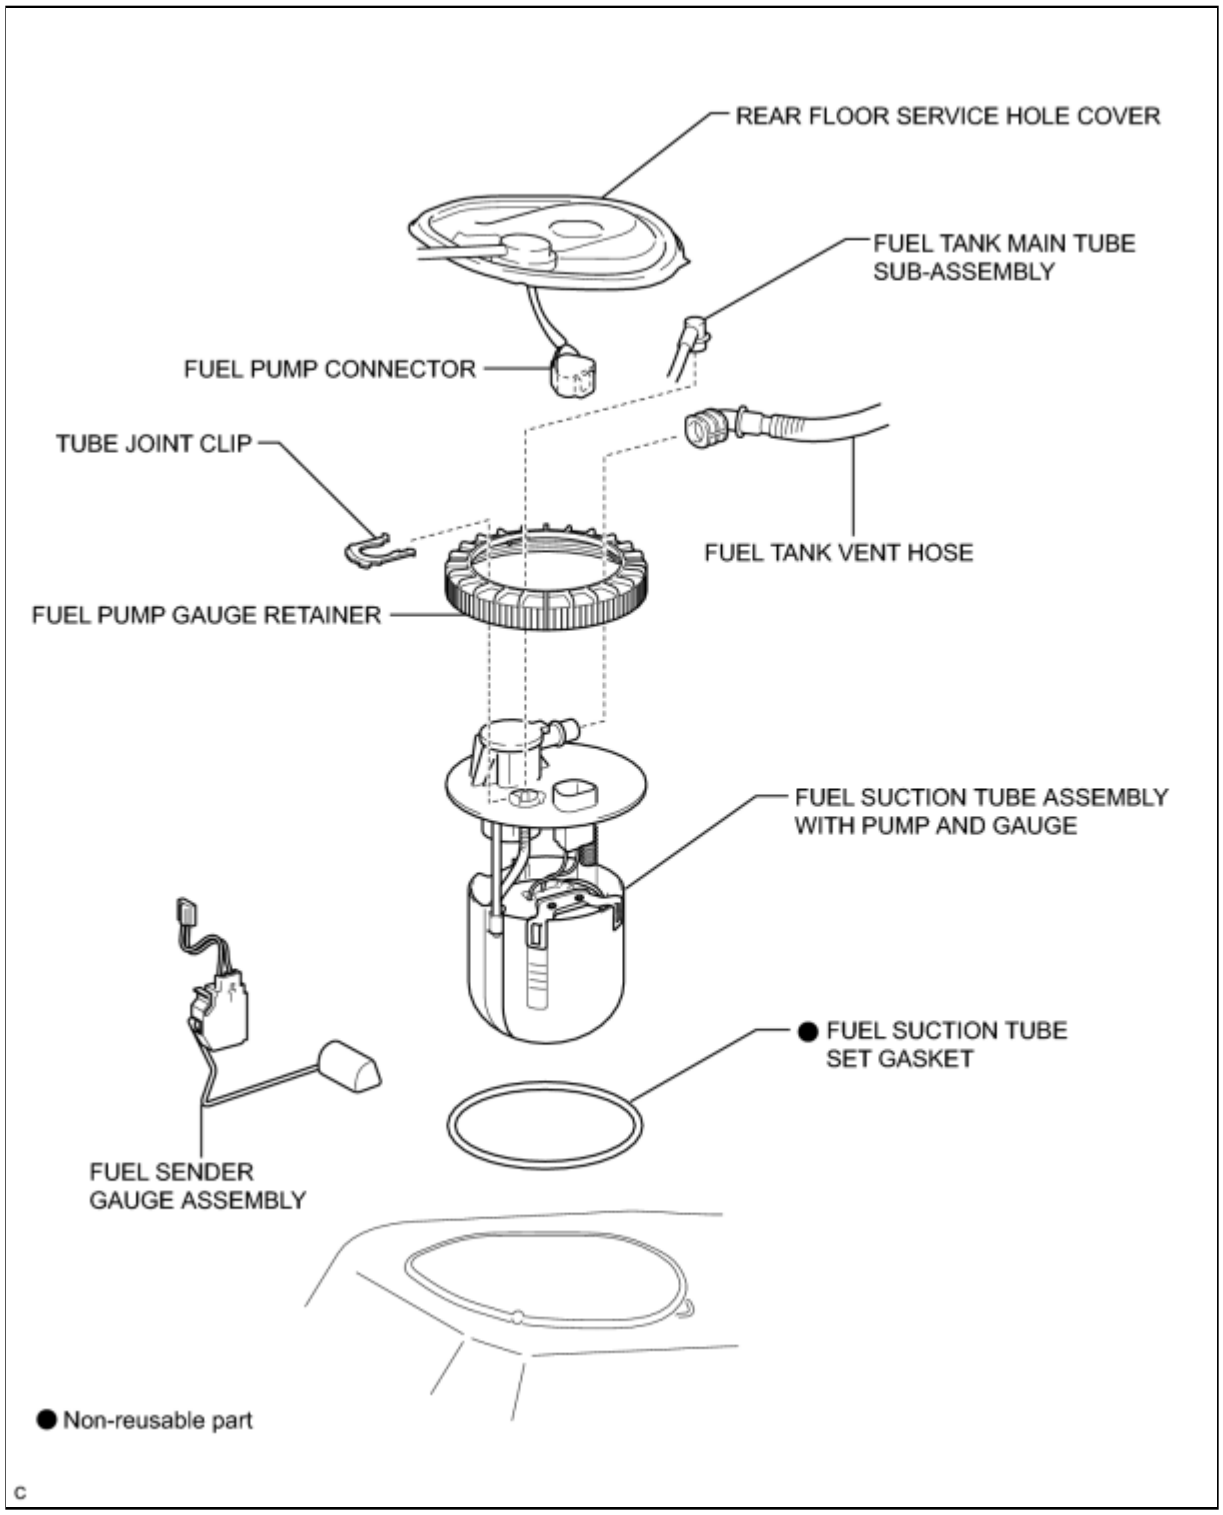
- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube joint and plug before performing this work.
- Check that the fuel tube joint is securely inserted to the end.
- Check that the tube joint clip is on the collar of the fuel tube joint.
- After installing the tube joint clip, check that the fuel tank main tube cannot be pulled out.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

6. INSPECT FOR FUEL LEAK INFO

7. INSTALL REAR FLOOR SERVICE HOLE COVER

(a) Connect the fuel pump connector.



(b) Install the rear floor service hole cover.

8. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

Last Modified: 3-10-2010	6.4 K	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000030P400VX

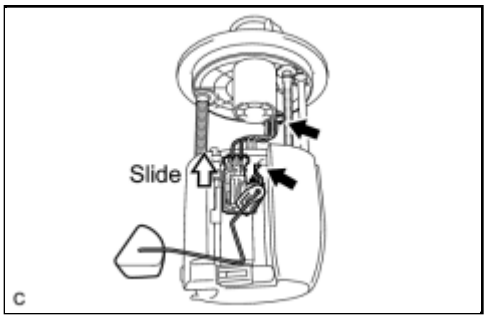
REMOVAL



1. DISCHARGE FUEL SYSTEM PRESSURE INFO

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

3. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Remove the fuel suction tube assembly with pump and gauge from the fuel tank INFO .

4. REMOVE FUEL SENDER GAUGE ASSEMBLY

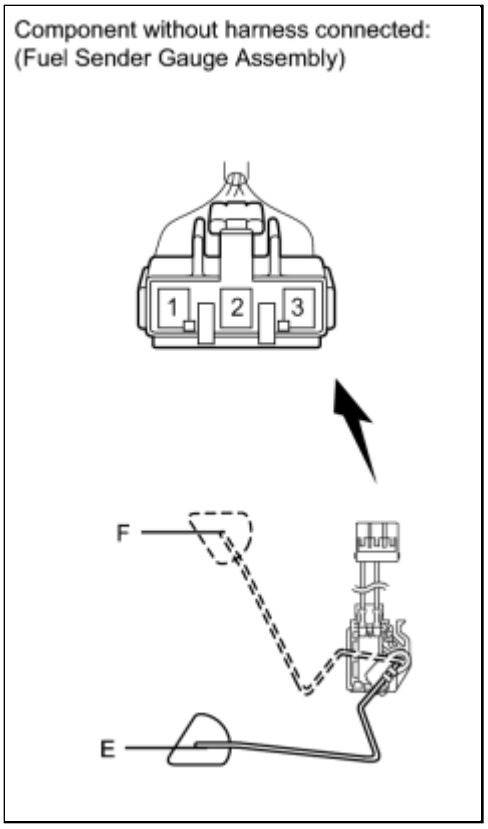
(a) Disconnect the fuel sender gauge connector.

NOTICE:

Do not damage the wire harness.

(b) Release the lock and slide the fuel sender gauge assembly to remove it.

NOTICE:



Make sure that the fuel sender gauge arm does not bend.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000030P300YX
Title: 2AZ-FE FUEL: FUEL SENDER GAUGE ASSEMBLY: INSPECTION (2010 Corolla)		

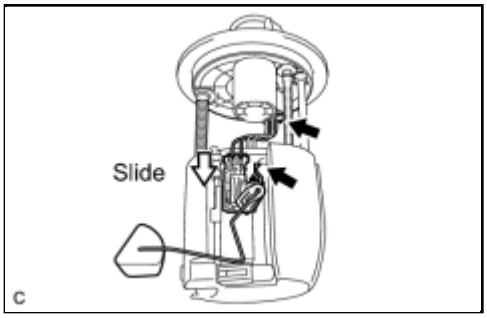
INSPECTION

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

(a) Check that the float moves smoothly between F and E.

(b) Measure the resistance between terminals 1 and 2 of the connector according to the value(s) in the table below.

Standard Resistance:



FLOAT LEVEL	RESISTANCE (Ω)
F	13.5 to 16.5
Between E and F	13.5 to 414.5 (Gradually changes)
E	405.5 to 414.5

If the value is not as specified, replace the fuel sender gauge assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000030P200YX
Title: 2AZ-FE FUEL: FUEL SENDER GAUGE ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

(a) Install the fuel sender gauge assembly by sliding it downward.

NOTICE:

Make sure that the fuel sender gauge arm does not bend.

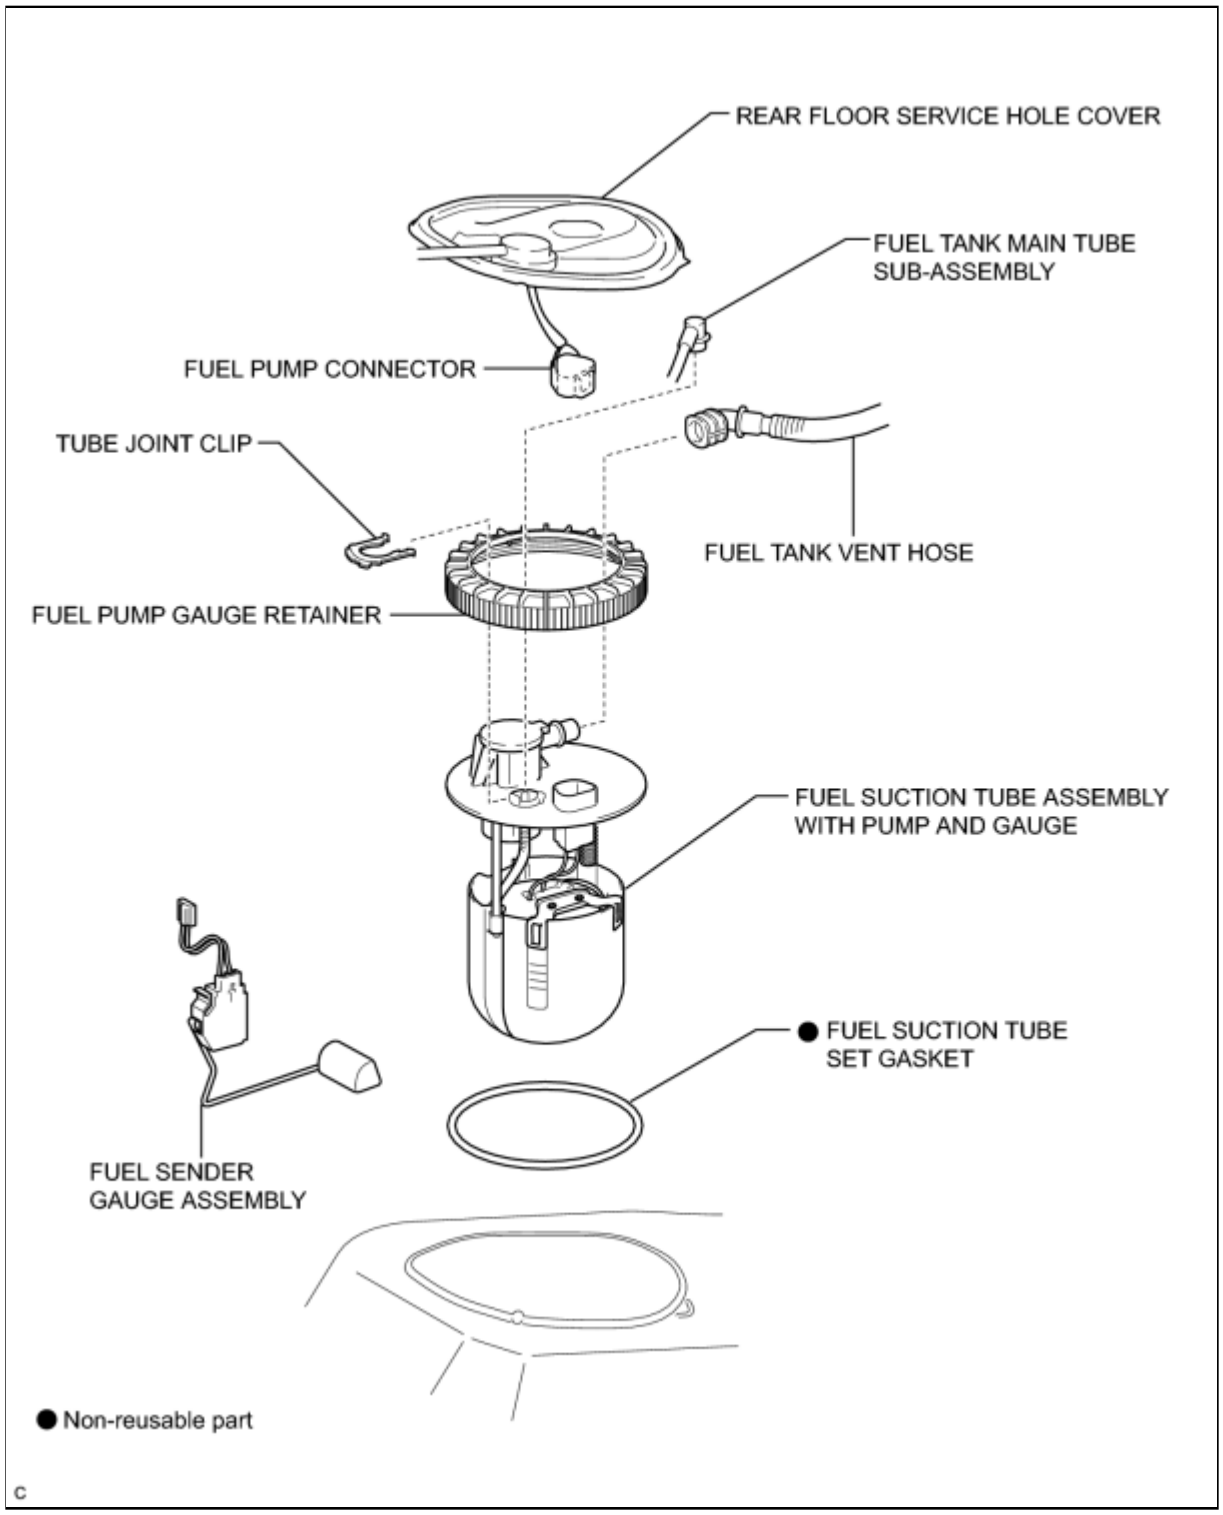
(b) Connect the connector of the fuel sender gauge assembly.

NOTICE:

Do not damage the wire harness.

2. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Install the fuel suction tube assembly with pump and gauge to the fuel tank INFO .



3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

4. INSPECT FOR FUEL LEAK INFO

Last Modified: 3-10-2010	6.4 K	**From:** 200901

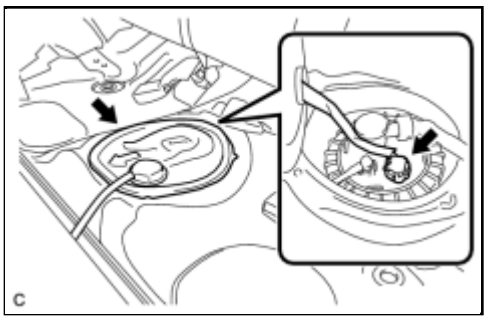
Title: 2AZ-FE FUEL: FUEL SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS

(a) Before inspecting and repairing the fuel system, disconnect the cable from the negative (-) battery terminal.

(b) Do not smoke or work near open flame when handling the fuel system.



(c) Keep gasoline away from rubber or leather parts.

2. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- Perform the following procedure to prevent fuel from spilling out before removing any fuel system parts.
- Pressure will still remain in the fuel lines even after performing the following procedure. When disconnecting a fuel line, cover it with a piece of cloth to prevent fuel from spraying or coming out.

(a) Remove the rear seat cushion assembly INFO .

(b) Remove the rear floor service hole cover.

(c) Disconnect the connector from the fuel pump assembly.

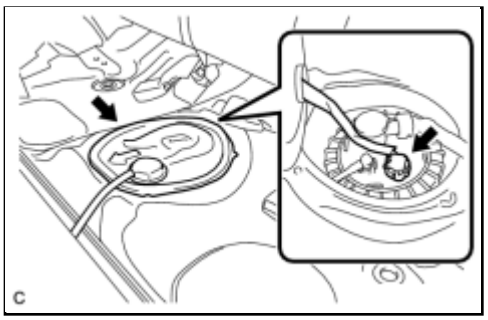
(d) Start the engine. After the engine stops naturally, turn the ignition switch off.

NOTICE:

Do not increase engine speed or drive the vehicle while waiting for the engine to stop naturally.

HINT:

DTC P0171/25 (system too lean) may be set.



(e) Crank the engine again and make sure that the engine does not start.

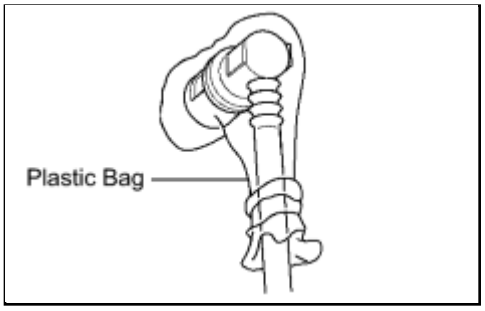
(f) Remove the fuel tank cap and discharge the pressure from the fuel tank.

(g) Disconnect the cable from the negative (-) battery terminal.

(h) Connect the connector of the fuel pump assembly.

(i) Install the rear floor service hole cover.

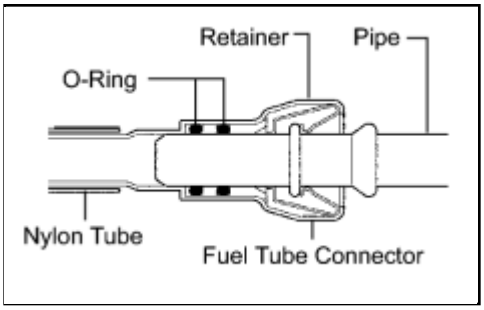
(j) Install the rear seat cushion assembly INFO .



3. FUEL LINE

(a) When disconnecting a high-pressure fuel line, a large amount of gasoline will spray out. Perform the following procedure:

(1) Discharge fuel system pressure.



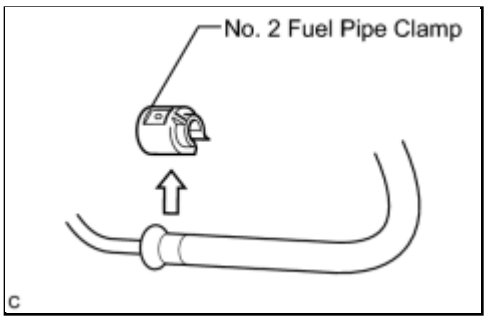
(2) Disconnect the fuel tube.

(3) Drain the fuel remaining inside the fuel pump tube into a container.

(4) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.

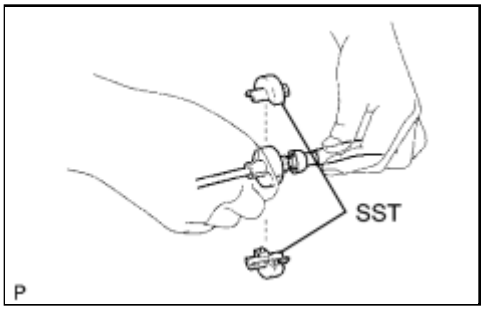
(b) Perform the following procedure when disconnecting a fuel delivery pipe (metallic type):

HINT:



The structure of a fuel tube connector is as shown in the illustration.

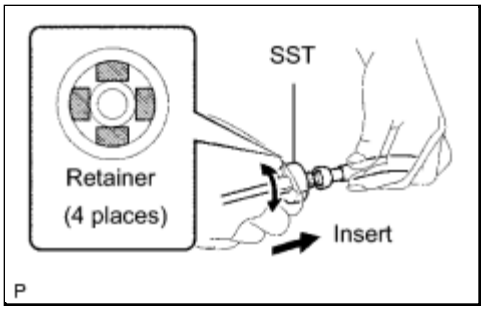
(1) Check if there is any damage or foreign objects on the pipe connections.



(2) Remove the No. 2 fuel pipe clamp.

NOTICE:

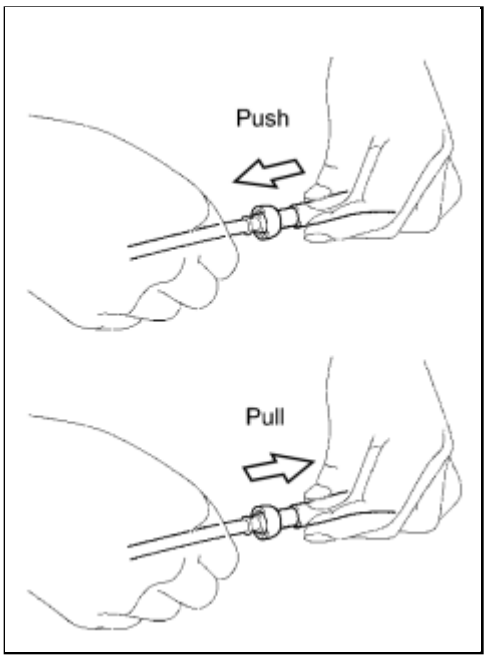
Do not reuse the fuel pipe clamp.



(3) Find the metallic connector of the fuel tube assembly.

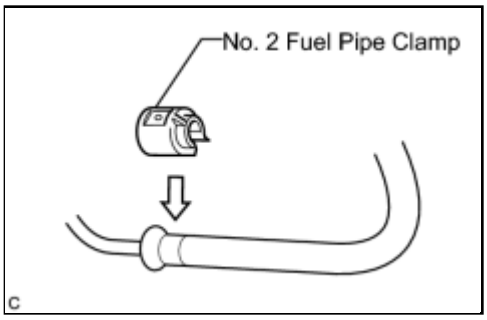
(4) Assemble SST to the connector as shown in the illustration.

SST: 09268-21010



(5) Turn SST, align the retainers inside the connector with the SST chamfers and insert SST into the connector.

(6) Slide SST and the connector together towards the fuel tube assembly.

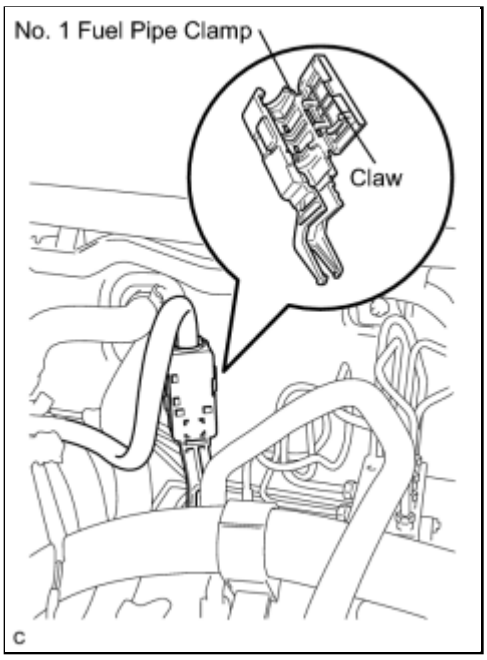


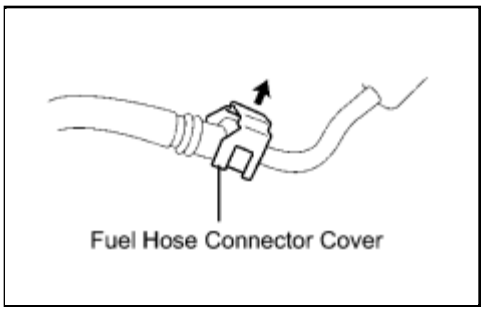
(c) Perform the following procedure when connecting a fuel tube connector (metallic type):

(1) Check if there is any damage or foreign objects on the pipe connections.

(2) Match the axis of the connector with the axis of the pipe, and push the pipe into the connector until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe.

(3) After connecting, check if the pipe and the connector are securely connected by pulling on them.



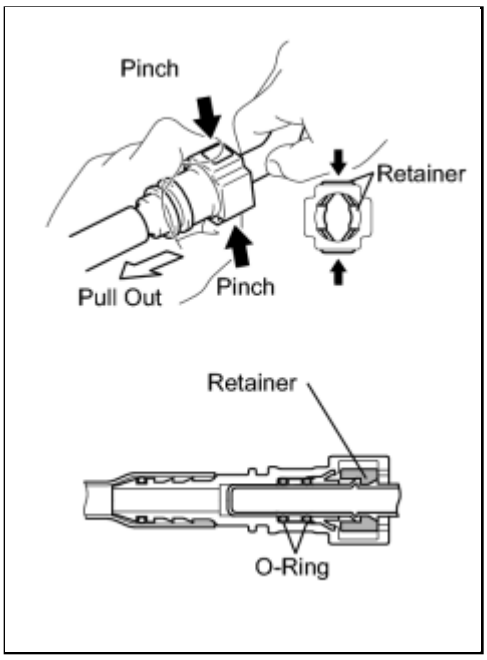


(4) Install a new No. 2 fuel pipe clamp.

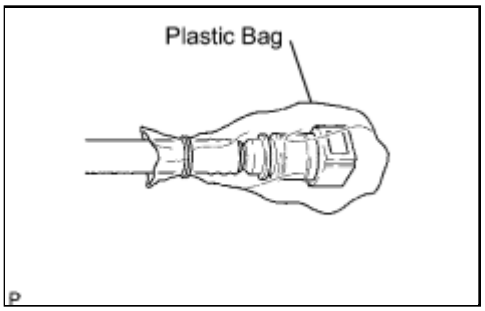
(5) Check for fuel leaks.

(d) Perfrm the following procedure when disconnecting a fuel tube connector (quick type A):

(1) Release the claw and remove the No. 1 fuel pipe clamp.



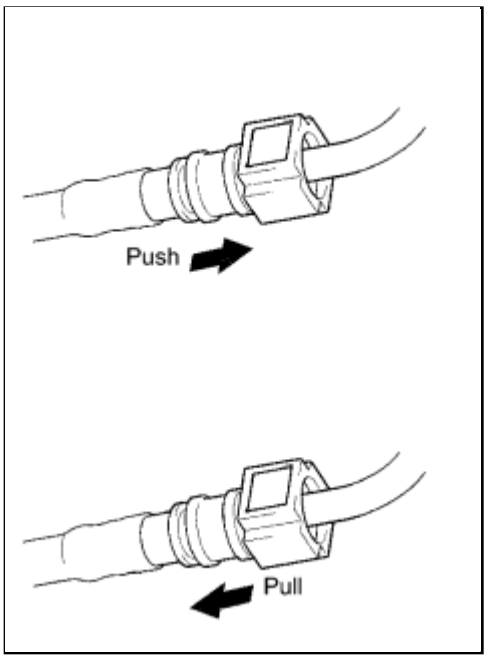
(2) Disengage the lock claws by raising the fuel hose connector cover as shown in the illustration.



(3) Check that there is no dirt or other foreign objects on the pipe and contact surface before disconnecting them. Clean them if necessary.

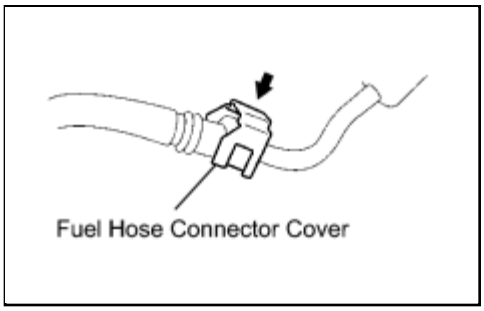
(4) Disconnect the connector from the pipe by hand.

(5) If the connector and the pipe are stuck, push in and pull on the connector to release them. Pull the connector out of the pipe carefully.



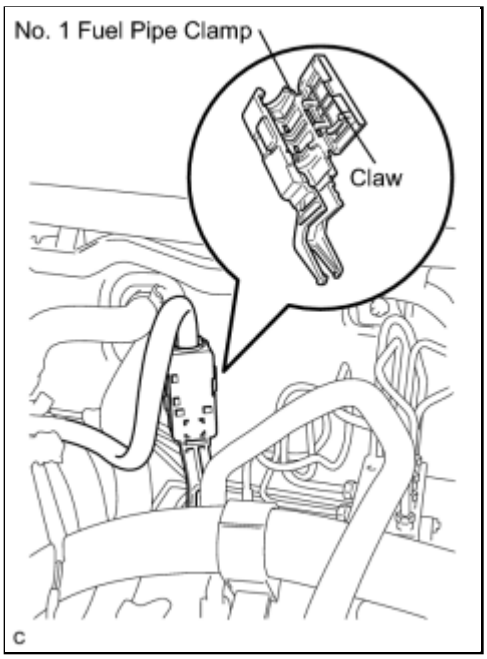
(6) Check that there is no dirt or other foreign objects on the contact surfaces of the disconnected pipe. Clean them away if necessary.

(7) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.



(e) Perform the following procedure when connecting a fuel tube connector (quick type A):

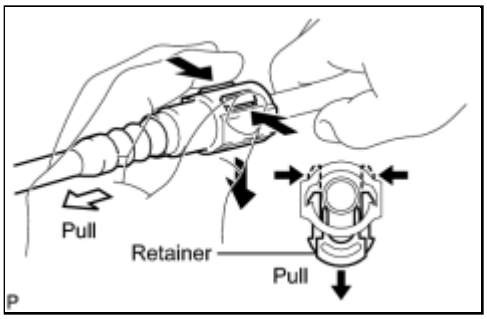
(1) Check if there is any damage or foreign objects on the pipe connections.



(2) Line up the two parts of the pipes to be connected, and push them together until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.

(3) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.

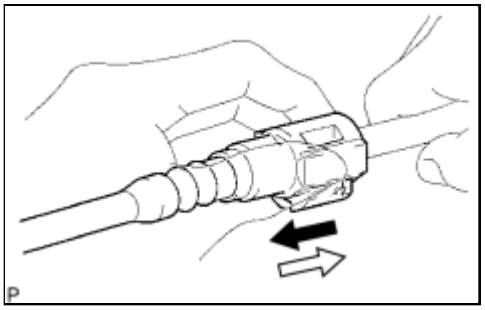
(4) Engage the lock claws to the connector by pushing down on the fuel hose connector cover.



(5) Engage the lock claw and install the No. 1 fuel pipe clamp.

(6) Check for fuel leaks.

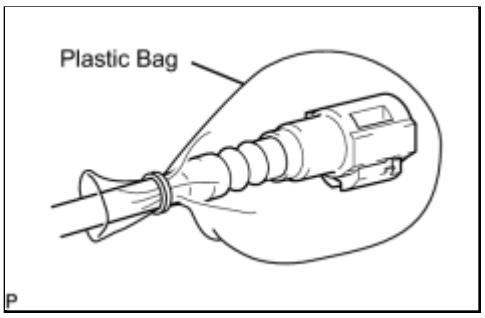
(f) Perform the following procedure when disconnecting a fuel tube connector (quick type B):



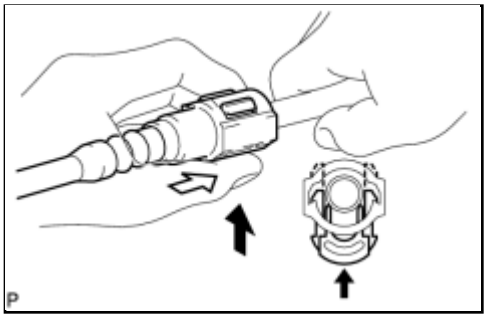
(1) Before disconnecting the connector, clean off any dirt that may be present.

(2) Pull the tabs of the fuel tube retainer to disengage the 2 claws. Push the retainer down as shown in the illustration.

HINT:



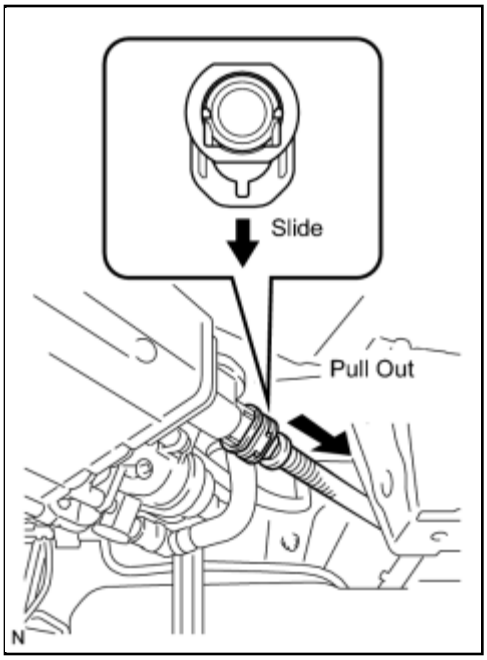
Be sure to disconnect the connector by hand.



(3) If the connector and pipe are stuck, hold the fuel pipe by hand and push and pull on the connector. Pull the two pipes apart to separate the connector.

(4) If there are any dirt or any other foreign objects on the sealing surfaces of the disconnected pipes, clean them if necessary.

(5) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.



(g) Perform the following procedure when connecting a fuel tube connector (quick type B):

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until it comes into contact with the seat, then push the retainer in until the claws lock.

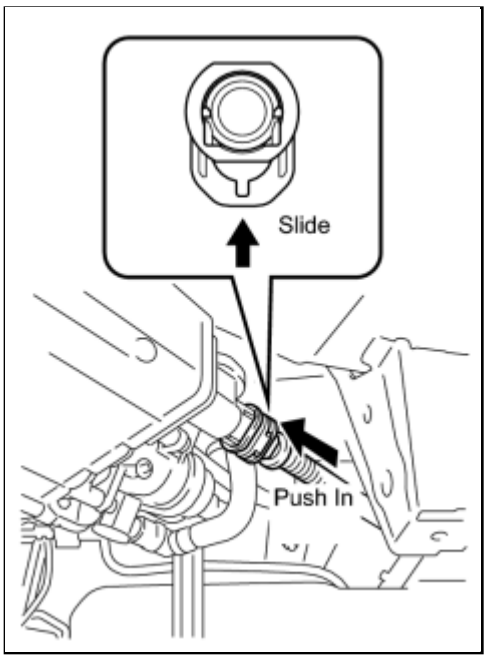
(2) After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling on them.

(3) Check for fuel leaks.

(h) Perform the following procedure when disconnecting a fuel tube connector (quick type C):

(1) Check the pipe and around the connector for dirt and mud before disconnecting them. Clean them if necessary.

(2) Remove the checker of the fuel tube connector from the pipe.



(3) Pinch the tab of the retainer of the fuel tube connector to disengage the lock claws and slide it as shown in the illustration.

(4) Check the sealing surface of the disconnected pipe for dirt and mud. Clean them away if necessary.

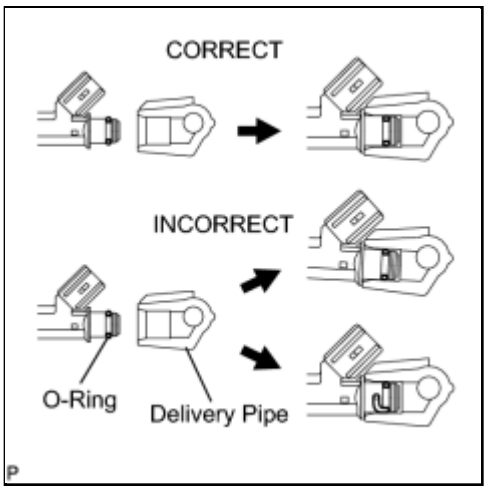
(5) Cover the disconnected fuel tube connector and pipe with a plastic bag to prevent damage and contamination.

(i) Observe the following procedure when connecting a fuel tube connector (quick type C):

(1) Check the connected part of the pipe for any damage

and foreign objects.

(2) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound. If the connection is tight, apply a small amount of clean engine oil to the tip of the pipe.



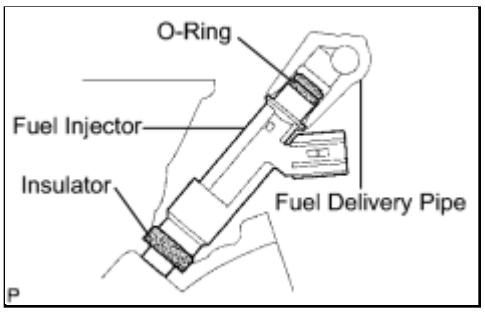
(3) Install the checker onto the pipe.

(4) Check for fuel leaks.

(j) Observe the following precautions when handling a nylon tube:

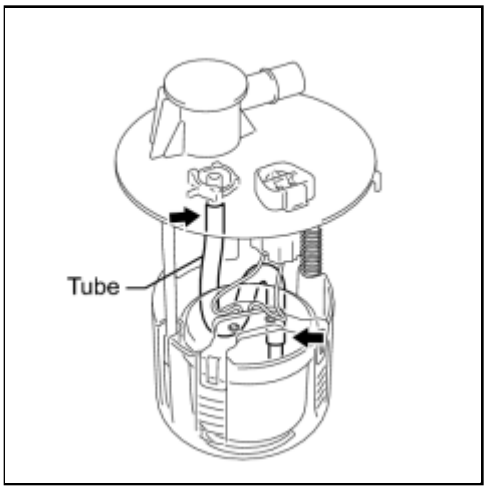
- Do not twist the connection part of the nylon tube and the quick connector when connecting them.
- Do not bend, kink, or twist the nylon tube.
- Do not remove the EPDM protector on the outside of the nylon tube.
- Do not close the piping by kinking the nylon tube.

4. INJECTOR



(a) Observe the following precautions when removing and installing a fuel injector:

(1) Do not reuse a O-ring and insulator.



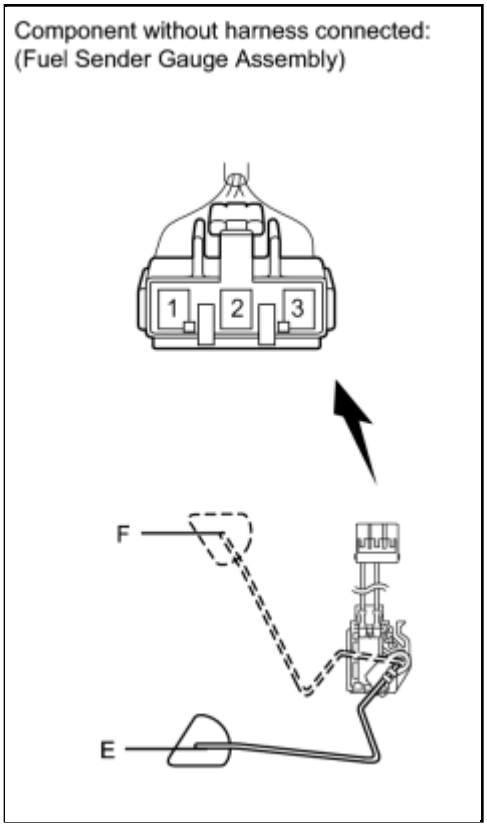
(2) When placing a new O-ring onto the injector, do not damage the O-ring.

(3) Coat a new O-ring with grease or gasoline before installing it. Do not use engine oil, gear oil or brake fluid.

(b) Install the injector into the delivery pipe and cylinder head as shown in the illustration. Apply grease or gasoline to the contact surfaces of the injector before installing the injector.

5. FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Do not disconnect the tube shown in the illustration when disassembling the fuel suction tube assembly with pump and gauge. Doing so will cause reassembly of the fuel suction tube assembly with pump and gauge to be impossible as the tube is welded to the plate.



6. INSPECT FOR FUEL LEAK

(a) Check that there is no fuel leakage after performing maintenance anywhere on the fuel system INFO .

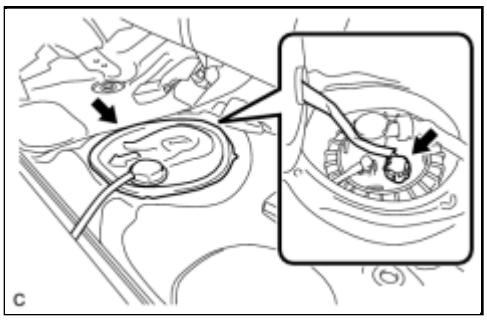
Title: 2ZR-FE FUEL: FUEL SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS

(a) Before inspecting and repairing the fuel system, disconnect the cable from the negative (-) battery terminal.

(b) Do not smoke or work near an open flame when handling the fuel system.



(c) Keep gasoline away from rubber or leather parts.

2. DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- Perform the following procedure to prevent fuel from spilling out before removing any fuel system parts.
- Pressure will still remain in the fuel lines even after performing the following procedure. When disconnecting a fuel line, cover it with a piece of cloth to prevent fuel from spraying or coming out.

(a) Remove the rear seat cushion assembly INFO .

(b) Remove the rear floor service hole cover.

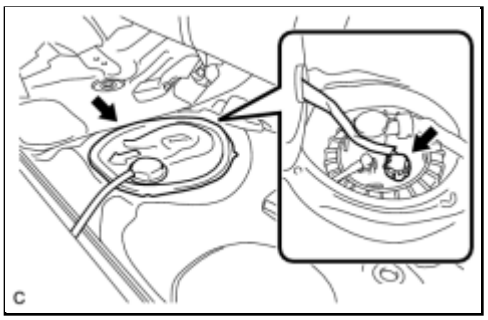
(c) Disconnect the connector from the fuel pump assembly.

(d) Start the engine. After the engine stops naturally, turn the ignition switch off.

NOTICE:

Do not increase engine speed or drive the vehicle while waiting for the engine to stop naturally.

HINT:



DTC P0171/25 (system too lean) may be set.

(e) Crank the engine again and make sure that the engine does not start.

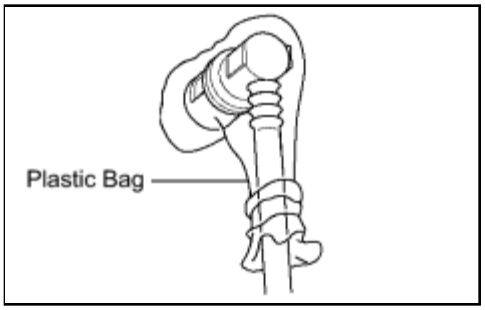
(f) Remove the fuel tank cap and discharge the pressure from the fuel tank.

(g) Disconnect the cable from the negative (-) battery terminal.

(h) Connect the connector of the fuel pump assembly.

(i) Install the rear floor service hole cover.

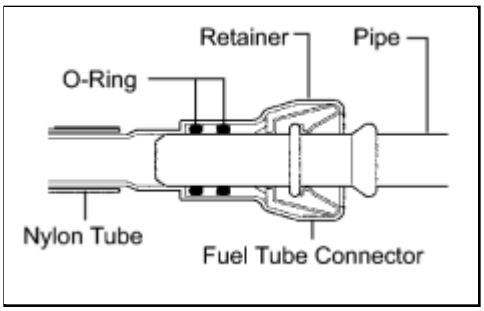
(j) Install the rear seat cushion assembly (INFO).



3. FUEL LINE

(a) When disconnecting a high-pressure fuel line, a large amount of gasoline will spray out. Perform the following procedure:

(1) Discharge fuel system pressure.

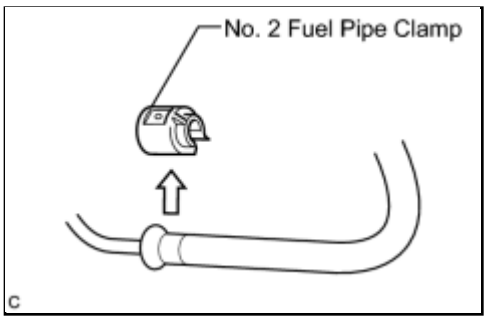


(2) Disconnect the fuel tube.

(3) Drain the fuel remaining inside the fuel pump tube into a container.

(4) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.

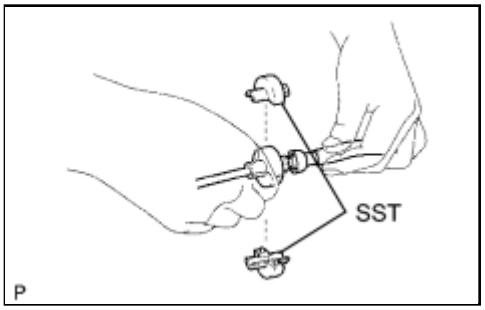
(b) Perform the following procedure when disconnecting a fuel delivery pipe (metallic type):



HINT:

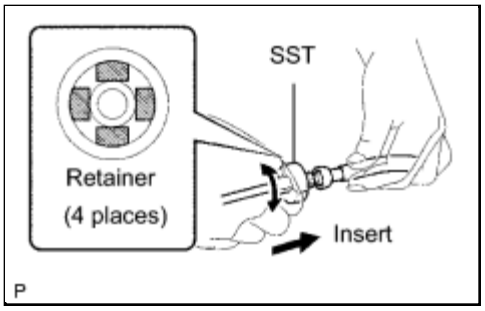
The structure of a fuel tube connector is as shown in the illustration.

(1) Check if there is any damage or foreign objects on the pipe connections.



(2) Remove the No. 2 fuel pipe clamp.

NOTICE:

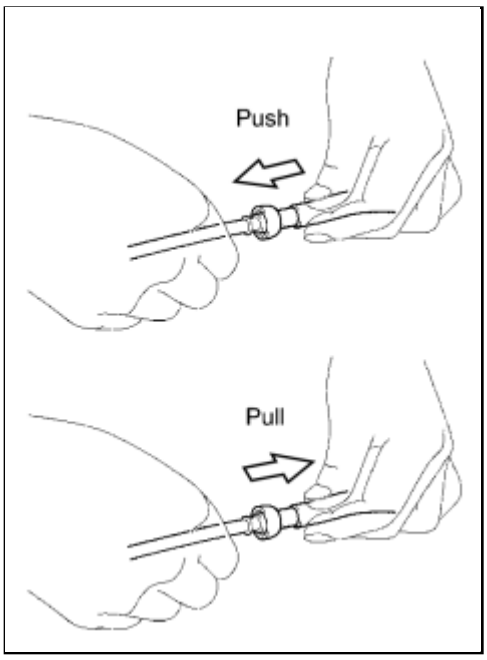


Do not reuse the fuel pipe clamp.

(3) Find the metallic connector of the fuel tube assembly.

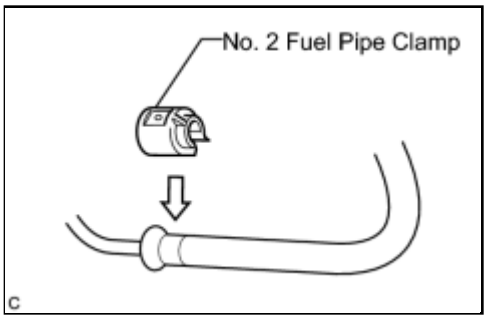
(4) Assemble SST to the connector as shown in the illustration.

SST: 09268-21010



(5) Turn SST, align the retainers inside the connector with the SST chamfers and insert SST into the connector.

(6) Slide SST and the connector together towards the fuel tube assembly.

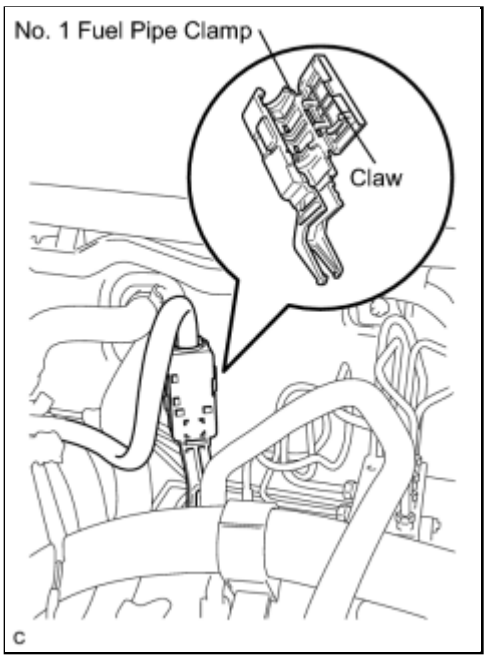


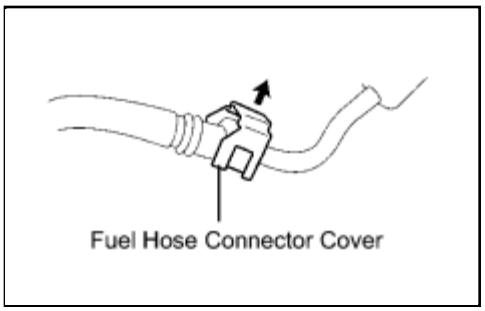
(c) Perform the following procedure when connecting a fuel tube connector (metallic type):

(1) Check if there is any damage or foreign objects on the pipe connections.

(2) Match the axis of the connector with the axis of the pipe, and push the pipe into the connector until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe.

(3) After connecting, check if the pipe and the connector are securely connected by pulling on them.



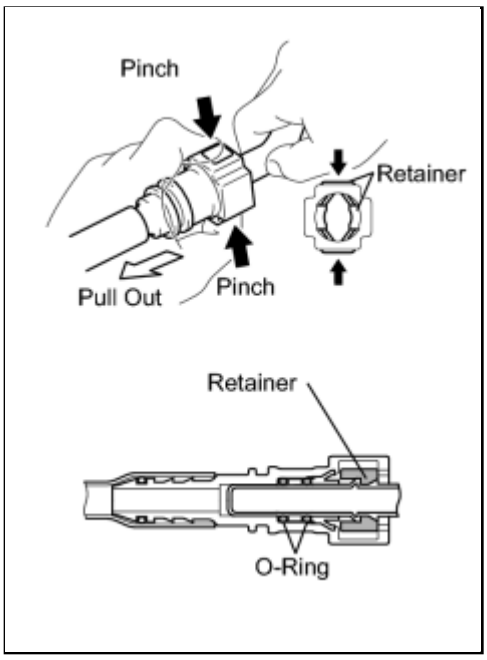


(4) Install a new No. 2 fuel pipe clamp.

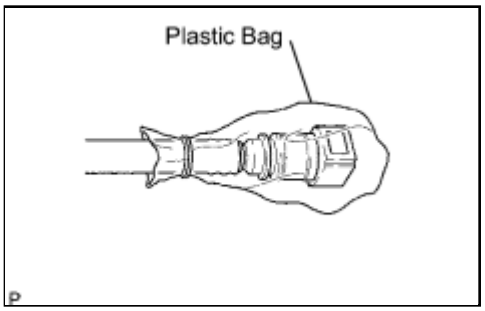
(5) Check for fuel leaks.

(d) Perform the following procedure when disconnecting a fuel tube connector (quick type A):

(1) Release the claw and remove the No. 1 fuel pipe clamp.



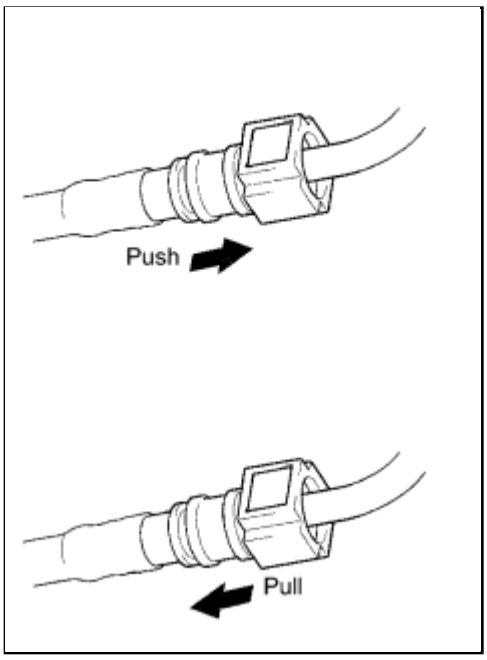
(2) Disengage the lock claws by raising the fuel hose connector cover as shown in the illustration.



(3) Check that there is no dirt or other foreign objects on the pipe and contact surface before disconnecting them. Clean them if necessary.

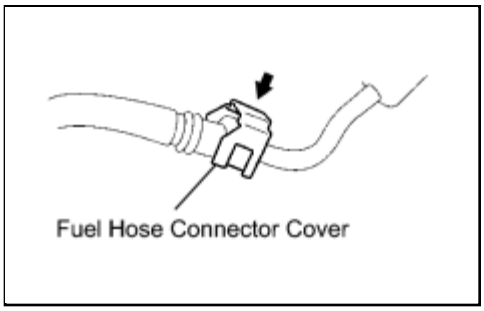
(4) Disconnect the connector from the pipe by hand.

(5) If the connector and the pipe are stuck, push in and pull on the connector to release them. Pull the connector out of the pipe carefully.



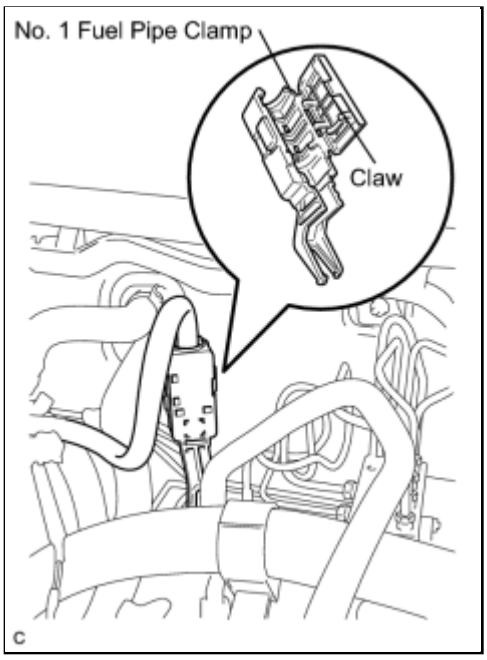
(6) Check that there is no dirt or other foreign objects on the contact surface of the disconnected pipe. Clean them away if necessary.

(7) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.



(e) Perform the following procedure when connecting a fuel tube connectors (quick type A):

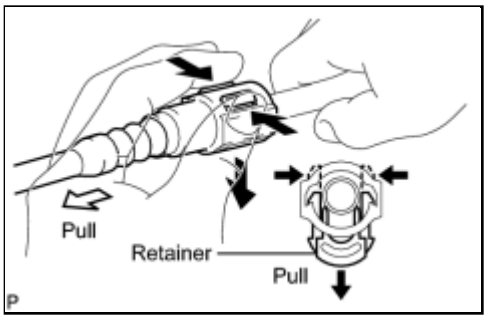
(1) Check if there is any damage or foreign objects on the pipe connections.



(2) Line up the two parts of the pipes to be connected, and push them together until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe and reinsert it.

(3) After connecting the pipes, check that the pipe and connector are securely connected by pulling on them.

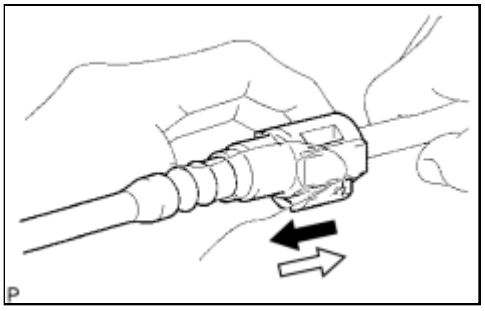
(4) Engage the lock claws to the connector by pushing down on the fuel hose connector cover.



(5) Engage the lock claws and install the No. 1 fuel pipe clamp.

(6) Check for fuel leaks.

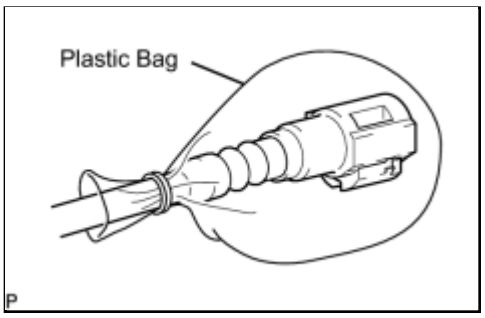
(f) Perform the following procedure when disconnecting a fuel tube connector (Quick Type B):



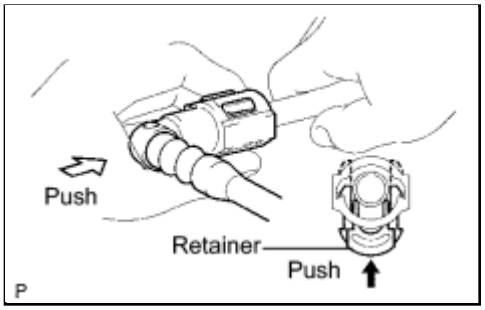
(1) Before disconnecting the connector, clean off any dirt that may be present.

(2) Pinch the tabs of the fuel tube retainer to disengage the 2 claws. Push the retainer down as shown in the illustration

HINT:

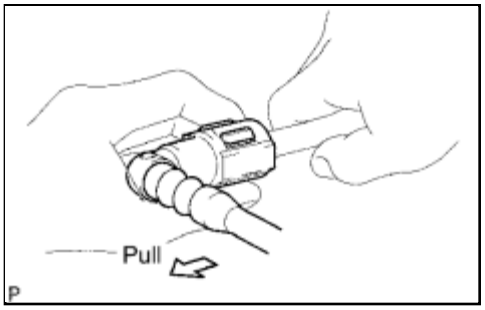


Be sure to disconnect the connector by hand.



(3) If the connector and pipe are stuck, hold the fuel pipe by hand and push and pull on the connector. Pull the two pipes apart to separate the connector.

(4) If there are any dirt or any other foreign objects on the sealing surfaces of the disconnected pipes, clean them if necessary.



(5) Cover the disconnected pipe and connector with a plastic bag to prevent to damage and contamination.

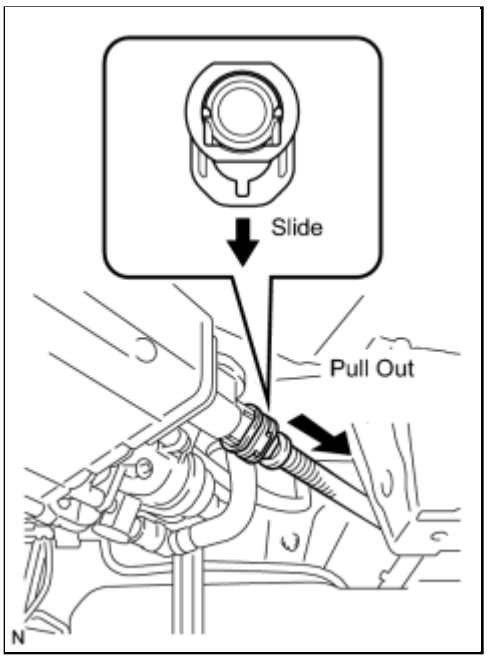
(g) Perform the following procedure when connecting a fuel tube connector (quick type B):

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until it comes into contact with the seat, then push the retainer in until the claws lock.

(2) After connecting the fuel tube connector, check that the fuel tube connector and pipe are securely connected by pulling on them.

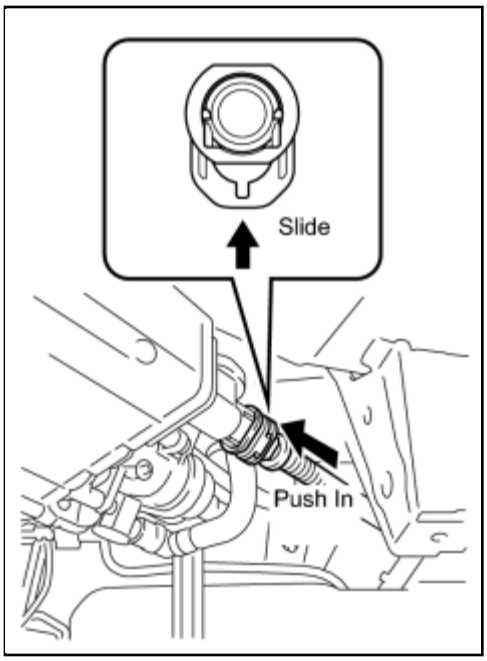
(3) Check for fuel leaks.

(h) Perform the following procedure when disconnecting a fuel tube connector (quick type C):



(1) Check the pipe and around the connector for dirt and mud before disconnecting them. Clean them if necessary.

(2) Remove the checker of the fuel tube connector from the pipe.



(3) Pinch the tabs of the retainer of the fuel tube connector to disengage the lock claws and slide it as shown in the illustration.

(4) Check the sealing surface of the disconnected pipe for dirt and mud. Clean them away if necessary.

(5) Cover the disconnected fuel tube connector and pipe with a plastic bag to prevent damage and

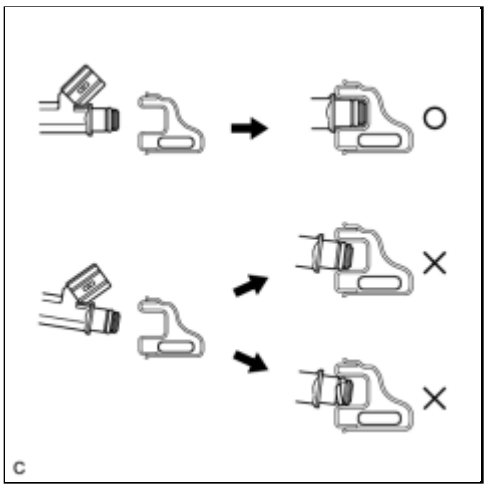
contamination.

(i) Perform the following procedure when connecting a fuel tube connector (quick type C):

(1) Check the connected part of the pipe for any damage and foreign objects.

(2) Align the fuel tube connector with the pipe, then push the fuel tube connector in until the retainer makes a "click" sound. If the connection is tight, apply a small amount of clean engine oil to the tip of the pipe.

(3) Install a checker onto the pipe.

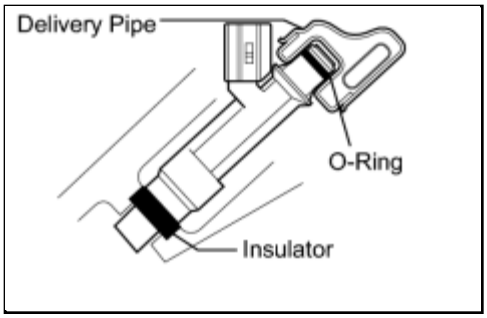


(4) Check for fuel leaks.

(j) Observe the following precautions when handling a nylon tube:

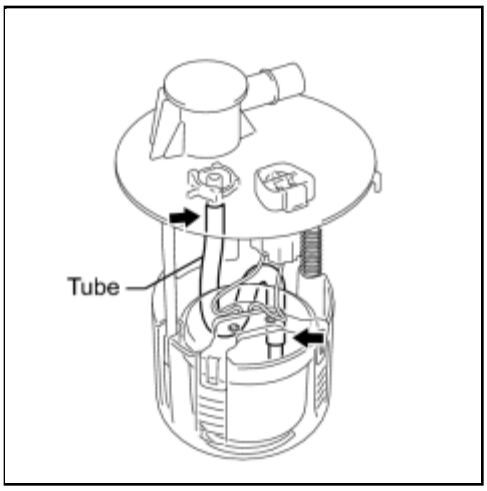
- Do not twist the connection part of the nylon tube and the quick connector when connecting them.
- Do not bend, kink, or twist the nylon tube.
- Do not remove the EPDM protector on the outside of the nylon tube.
- Do not close the piping by kinking the nylon tube.

4. INJECTOR



(a) Observe the following precautions when removing and installing a fuel injector:

(1) Do not reuse a O-ring and insulator.



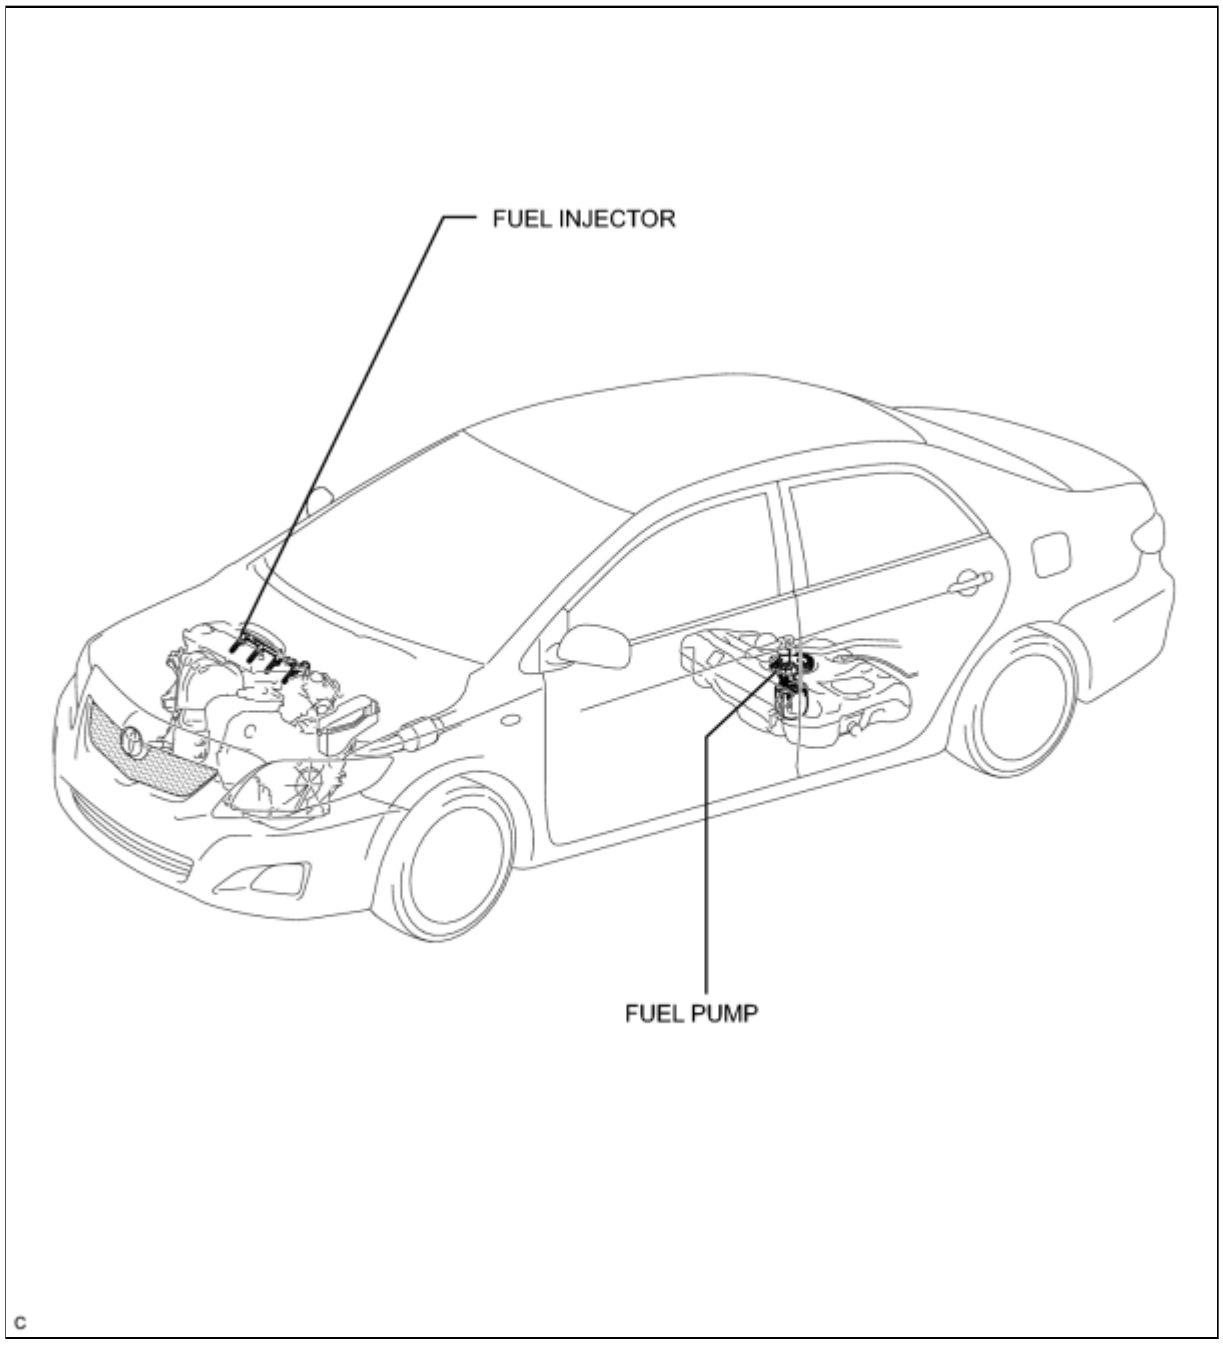
(2) When placing a new O-ring onto the injector, do not damage the O-ring.

(3) Coat a new O-ring with grease or gasoline before installing it. Do not use engine oil, gear oil or brake fluid.

(b) Install the injector into the delivery pipe and cylinder head as shown in the illustration. Apply grease or gasoline to the contact surfaces of the injector before installing the injector.

5. FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Do not disconnect the tube shown in the illustration when disassembling the fuel suction tube assembly with pump and gauge. Doing so will cause reassembly of the fuel suction tube assembly with pump and gauge to be impossible as the tube is welded to the plate.



6. INSPECT FOR FUEL LEAK

(a) Check that there are no fuel leakage after performing maintenance anywhere on the fuel system INFO .

Title: 2AZ-FE FUEL: FUEL SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK FOR FUEL PUMP OPERATION AND INSPECT FOR FUEL LEAK

(a) Check fuel pump operation.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON and turn the Techstream on.

NOTICE:

Do not start the engine.

(3) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump /Speed.

(4) Check for pressure in the fuel inlet tube from the fuel line. Check that sounds of fuel flowing from the fuel tank can be heard. If no sounds can be heard, check the integration relay, fuel pump, ECM and wiring connectors.

(b) Check for fuel leaks.

(1) There is no fuel leakage after performing maintenance anywhere on the fuel system. If there is a fuel leak, repair or replace parts as necessary.

(c) Turn the ignition switch off.

(d) Disconnect the Techstream from the DLC3.

2. CHECK FUEL PRESSURE

(a) Discharge fuel system pressure INFO .

(b) Using a voltmeter, measure the battery voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Positive terminal - Negative terminal	Ignition switch off	11 to 14 V

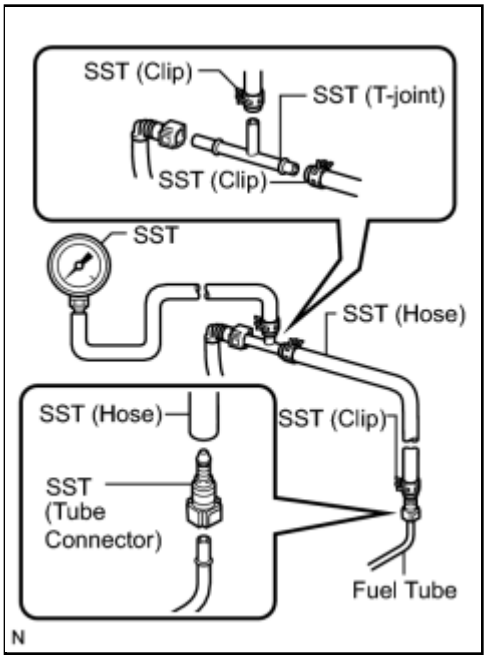
(c) Disconnect the cable from the negative (-) battery terminal.

(d) Disconnect the fuel hose from the fuel main tube INFO .

(e) Install SST (pressure gauge) using other SST as shown in the illustration.

SST: 09268-31012

09268-41500



90467-13001

95336-08070

SST: 09268-45014

09268-41200

09268-41220

09268-41250

(f) Clean up any spilled gasoline.

(g) Connect the cable to the negative (-) battery terminal.

(h) Connect the Techstream to the DLC3.

(i) Enter the following menus: Powertrain / Engine / Active Test / Control the Fuel Pump / Speed.

(j) Measure the fuel pressure.

Fuel pressure:
304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)

- If the fuel pressure is greater than the standard value, replace the fuel pressure regulator.
- If the fuel pressure is less than the standard value, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

(k) Disconnect the Techstream from the DLC3.

(l) Start the engine.

(m) Measure the fuel pressure at idle.

Fuel pressure:
304 to 343 kPa (3.1 to 3.5 kgf*cm^2, 44.1 to 49.7 psi)

(n) Stop the engine.

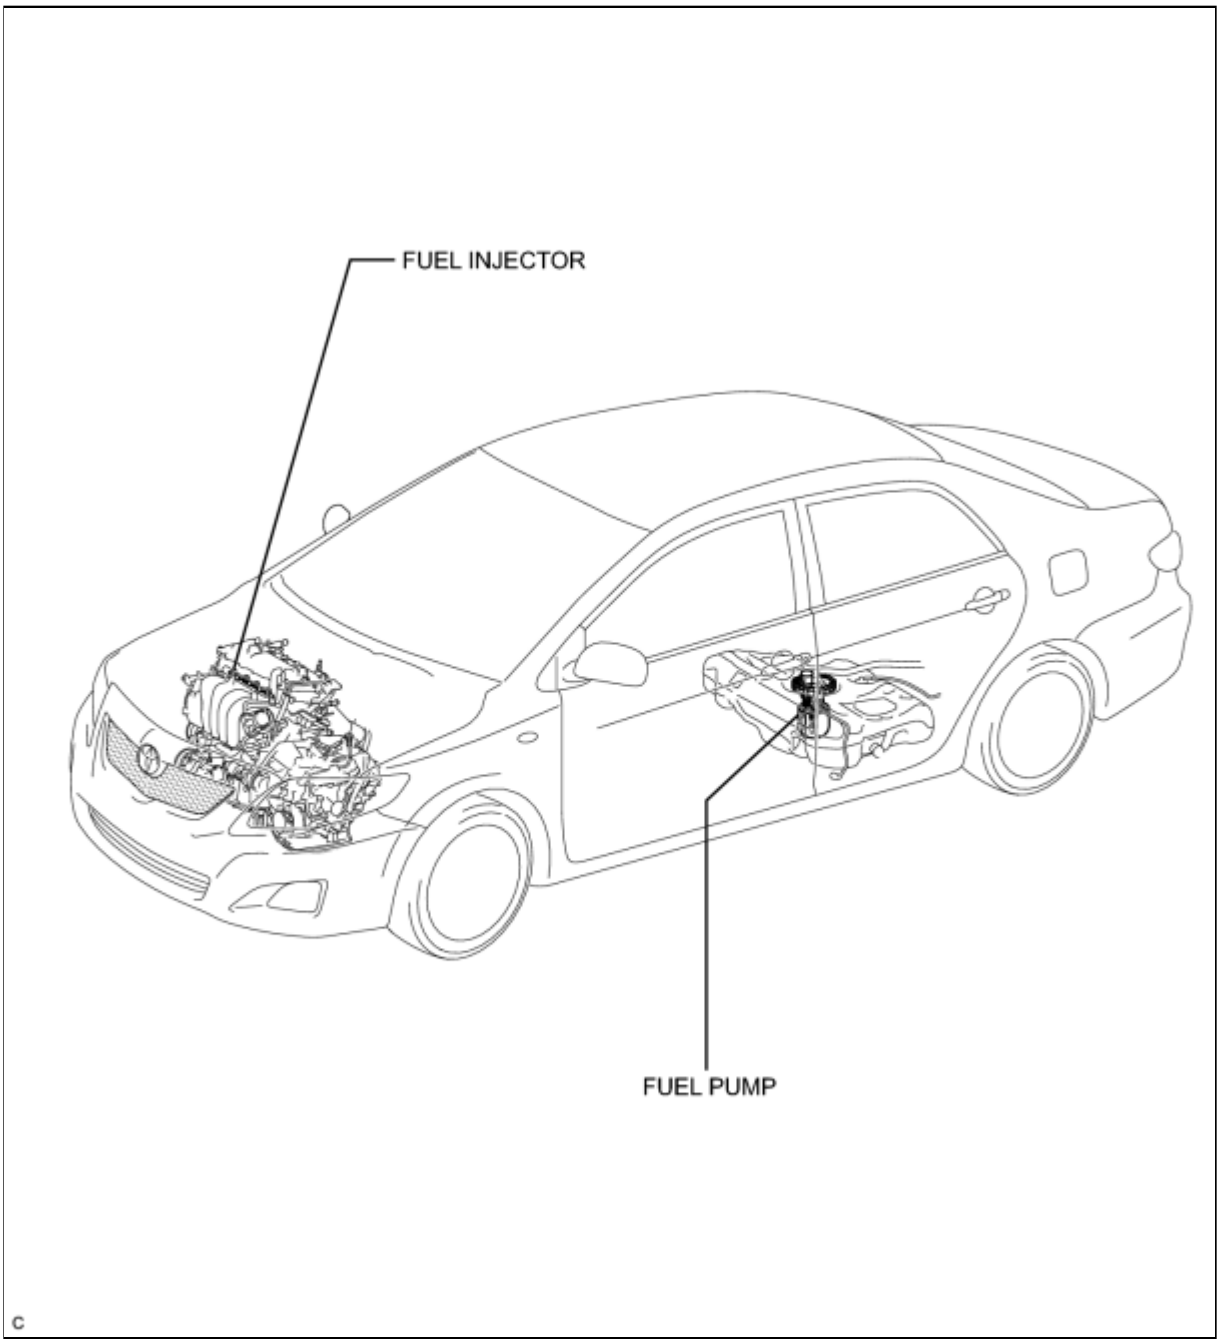
(o) Check that the fuel pressure remains as specified for 5 minutes after the engine stops.

Fuel pressure:
147 kPa (1.5 kgf*cm^2, 21 psi) or more

If the fuel pressure is not as specified, check the fuel pump or fuel injector.

(p) After checking the fuel pressure, disconnect the cable from the negative (-) battery terminal and carefully remove SST to prevent gasoline from spraying.

(q) Reconnect the fuel tube to the main fuel tube (fuel tube connector).



(r) Install the No. 1 fuel pipe clamp to the fuel tube connector.

(s) Check for fuel leaks (Step 1).

Title: 2AZ-FE FUEL: FUEL TANK: REMOVAL (2010 Corolla)		

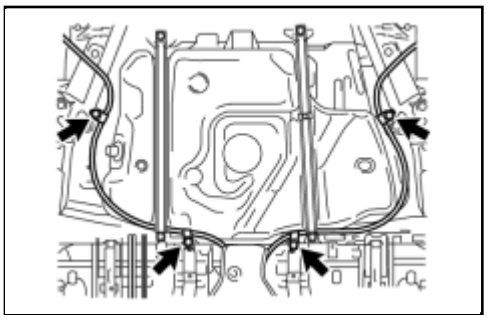
REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE

HINT: INFO .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

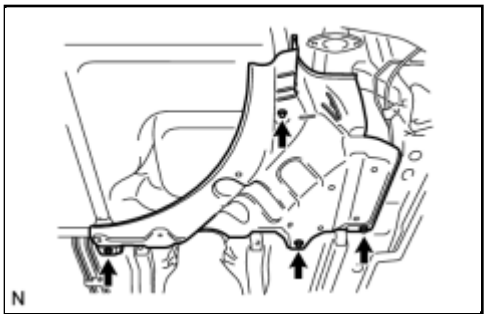
3. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE



(a) Remove the fuel suction tube assembly with pump and gauge from the fuel tank INFO .

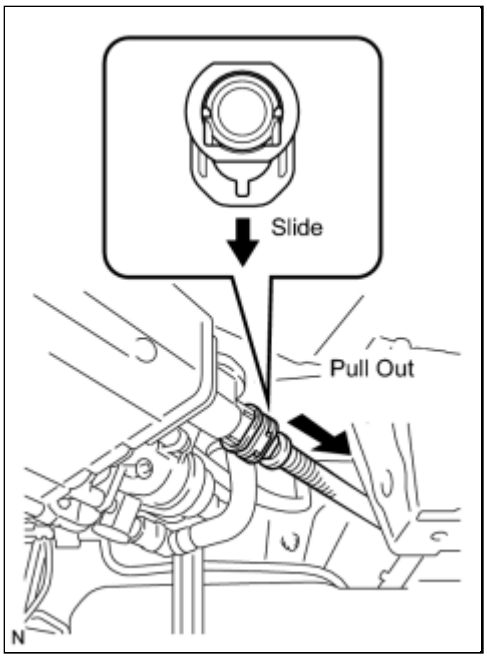
4. DRAIN FUEL

5. REMOVE CENTER EXHAUST PIPE ASSEMBLY



HINT: INFO .

6. SEPARATE PARKING BRAKE CABLE



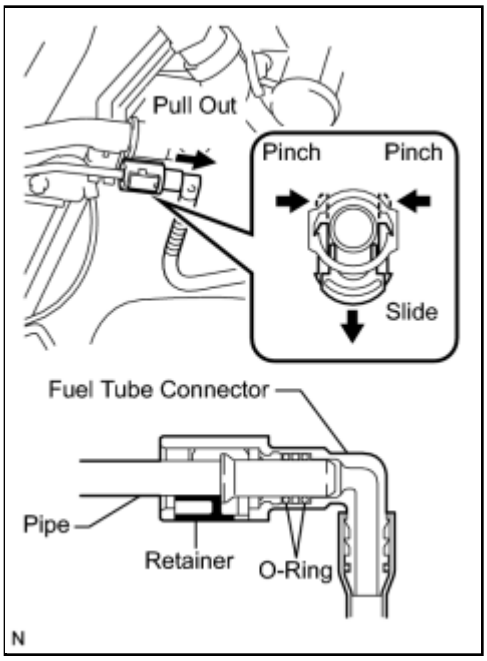
(a) Remove the 4 bolts, and separate the parking brake cables.

7. REMOVE NO. 1 FUEL TANK PROTECTOR

(a) Remove the 4 bolts and the No. 1 fuel tank protector.

8. DISCONNECT FUEL TANK VENT HOSE

(a) Disconnect the fuel tank vent hose.



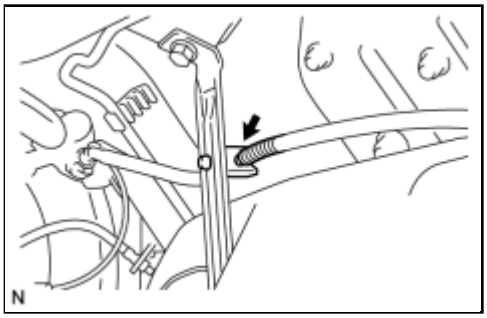
(1) Pinch the tabs of the retainer of the fuel tube connector to disengage the lock claws and slide it as shown in the illustration.

(2) Pull the fuel tank vent hose out of the pipe.

NOTICE:

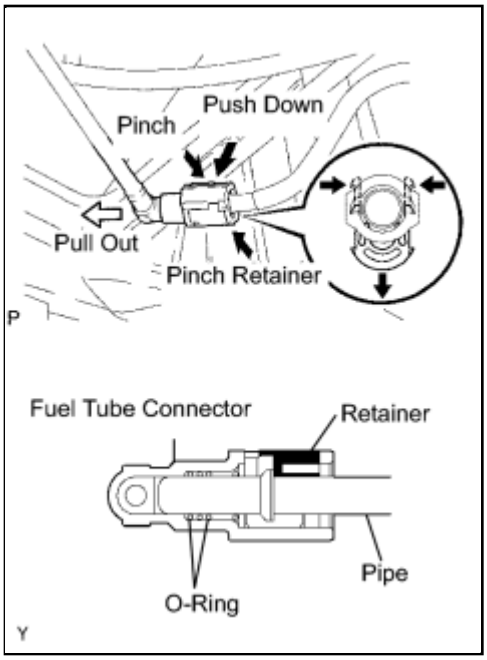
- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.

9. DISCONNECT BREATHER TUBE FUEL HOSE



(a) Disconnect the breather tube fuel hose.

(1) Pinch the retainer of the fuel tube connector, then pull the fuel tube connector out of the pipe.



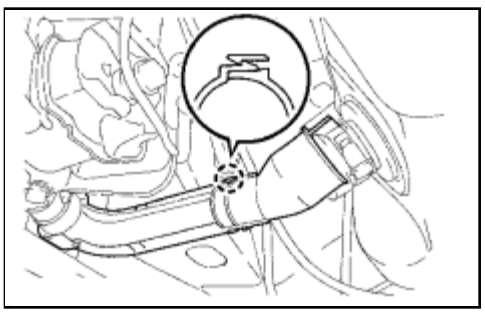
NOTICE:

- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

(b) Separate the breather tube fuel hose.

10. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

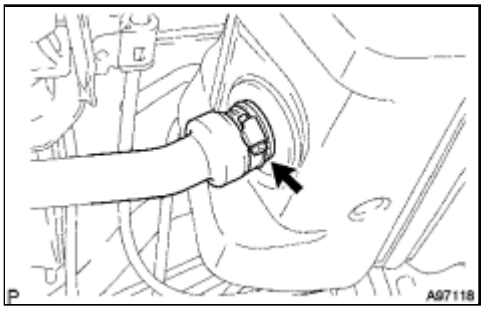
(a) Disconnect the fuel tank main tube.



(1) Pinch the tabs of the retainer of the fuel tube connector to disengage the lock claws and push it down as shown in the illustration.

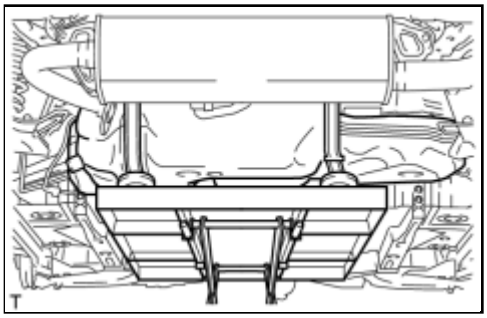
(2) Pull the fuel tank main tube out of the pipe.

NOTICE:



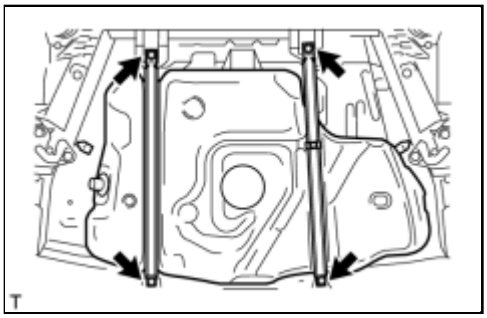
- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

11. DISCONNECT FUEL TANK FILLER PIPE SUB-ASSEMBLY



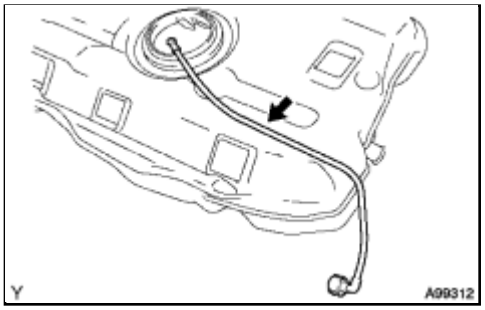
(a) Using a screwdriver, unfasten the claw. Then remove the fuel tank filler pipe cover from the fuel tank filler pipe.

(b) Loosen the hose clamp bolt, then disconnect the fuel tank



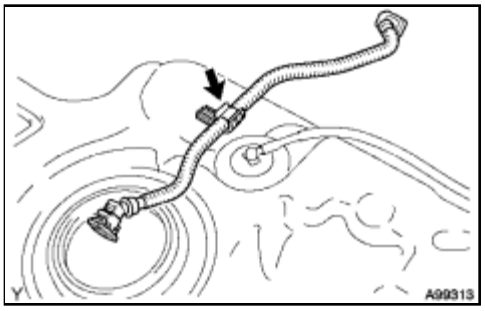
filler pipe hose from the fuel tank.

12. REMOVE FUEL TANK ASSEMBLY



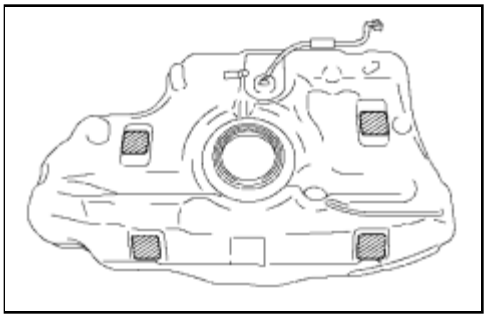
(a) Hold the fuel tank using a transmission jack.

(b) Remove the 4 bolts, then remove the 2 No. 1 fuel tank bands.



(c) Operate the transmission jack, then remove the fuel tank.

13. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY

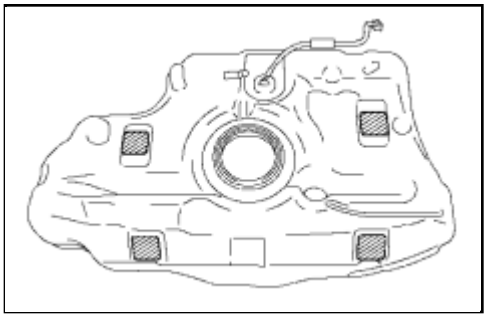


(a) Remove the fuel tank main tube from the fuel tank.

14. REMOVE FUEL TANK VENT HOSE

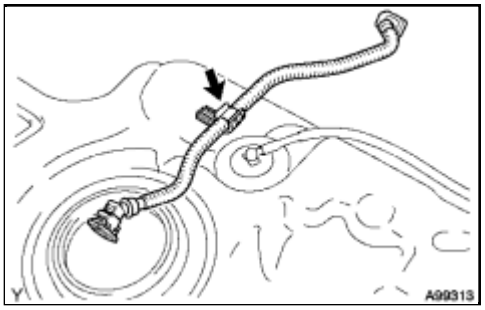
(a) Remove the fuel tank vent hose from the fuel tank clamp.

15. REMOVE FUEL TANK CUSHION



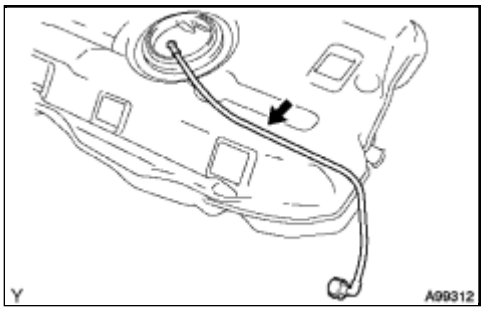
(a) Remove the fuel tank cushions from the fuel tank.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000022Y200AX
Title: 2AZ-FE FUEL: FUEL TANK: INSTALLATION (2010 Corolla)		



INSTALLATION

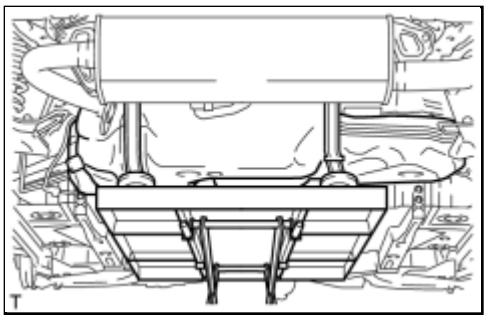
1. INSTALL FUEL TANK CUSHION



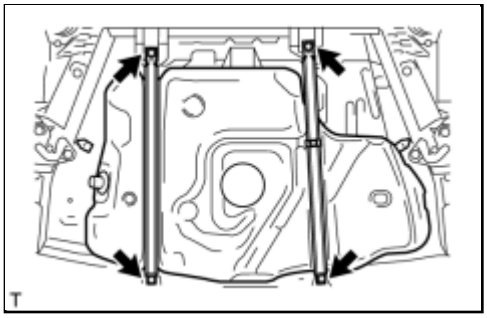
(a) Install new fuel tank cushions onto the fuel tank.

2. INSTALL FUEL TANK VENT HOSE

(a) Install the fuel tank vent hose onto the fuel hose clamp.



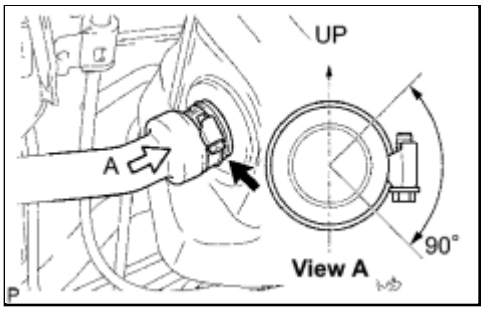
3. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY



(a) Install the fuel tank main tube onto the fuel tank.

4. INSTALL FUEL TANK ASSEMBLY

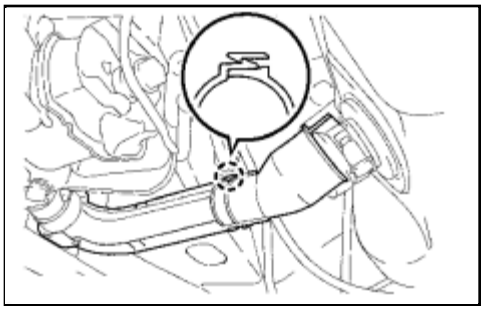
(a) Set the fuel tank on a transmission jack.



(b) Operate the transmission jack, then install the fuel tank into the vehicle.

(c) Install the 2 No. 1 fuel tank bands with the 4 bolts.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

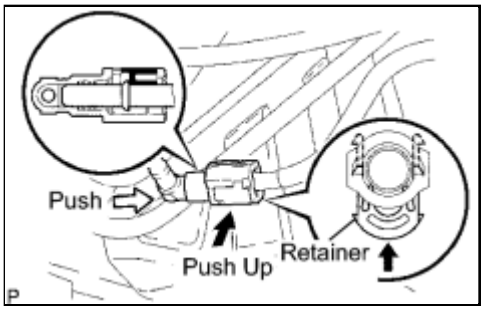


5. INSTALL FUEL TANK FILLER PIPE SUB-ASSEMBLY

(a) Connect the fuel tank filler pipe hose to the fuel tank.

NOTICE:

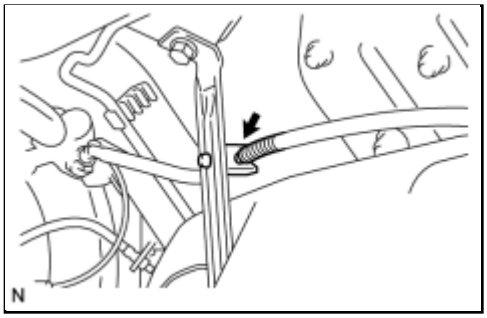
Make sure that the hose clamp is facing in the correct direction when installing.



(b) Engage the claw, then install the fuel tank filler pipe cover onto the fuel tank filler pipe.

6. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

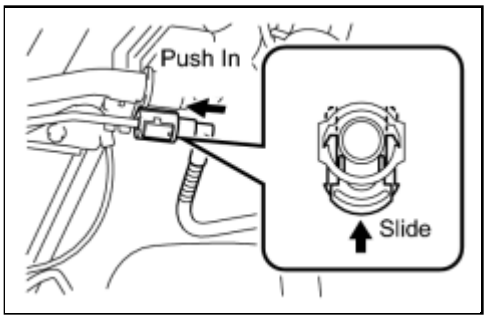
(a) Connect the fuel tank main tube.



(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until it comes into contact with the seat to connect the fuel tank main tube to the pipe, then push the retainer up until the claws lock.

NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tank main tube, check that the fuel tank main tube is securely connected by pulling on the fuel tube connector and pipe.

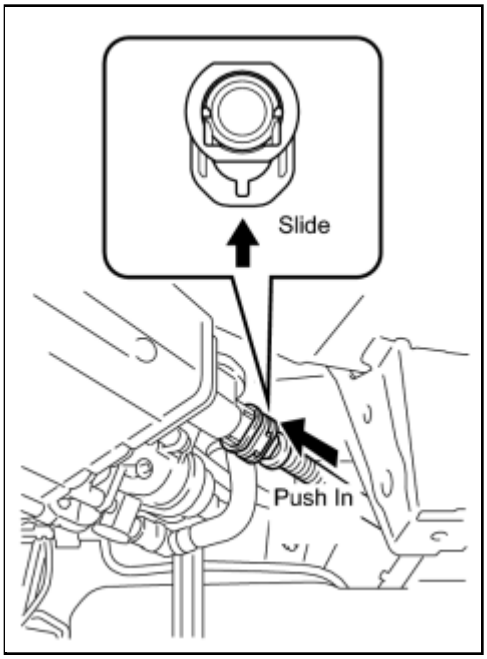


7. CONNECT BREATHER TUBE FUEL HOSE

(a) Connect the breather tube fuel hose to the hose clamp.

(b) Connect the breather tube fuel hose.

(1) Align the fuel hose connector with the pipe, then push the fuel hose connector in until the retainer makes a "click" sound to connect the breather tube fuel hose to the pipe.



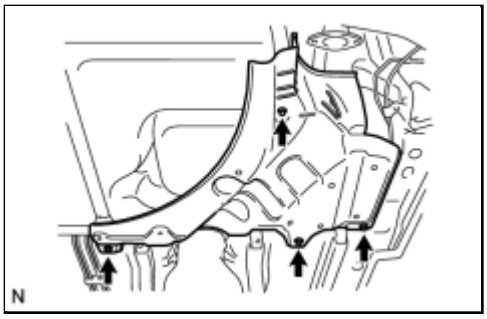
NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the breather tube fuel hose, check that the fuel pump tube is securely connected by pulling on the fuel tube connector and pipe.

8. CONNECT FUEL TANK VENT HOSE

(a) Connect the fuel tank vent hose.

(1) Align the fuel tube connector with the pipe, then push

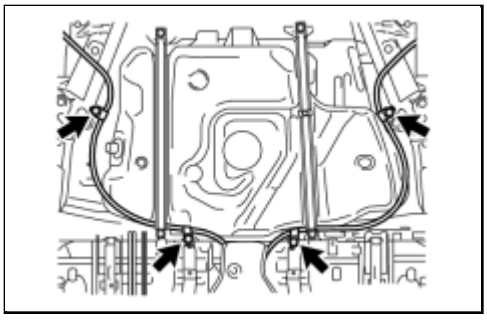


the fuel tube connector in until it comes into contact with the seat to connect the fuel tank vent hose to the pipe.

(2) Slide the retainer of the fuel tube connector to lock the claws as shown in the illustration.

NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling on the fuel tube connector.



9. INSTALL NO. 1 FUEL TANK PROTECTOR

(a) Install the No.1 fuel tank protector with the 4 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

10. CONNECT PARKING BRAKE CABLE

(a) Install the parking cables with the 4 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

11. INSTALL CENTER EXHAUST PIPE ASSEMBLY

HINT: INFO .

12. ADD FUEL

13. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Install the fuel suction with pump and gauge tube assembly to the fuel tank INFO .

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL INFO

15. INSPECT FOR FUEL LEAK INFO

16. INSPECT FOR EXHAUST GAS LEAK

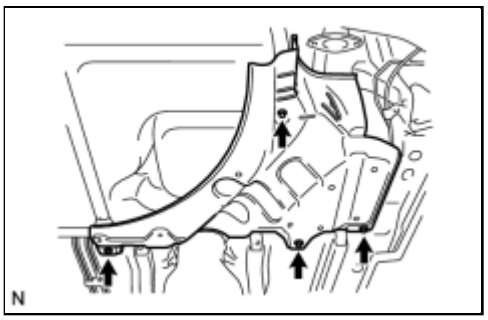
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002PZU00TX
Title: 2ZR-FE FUEL: FUEL TANK: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE INFO

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

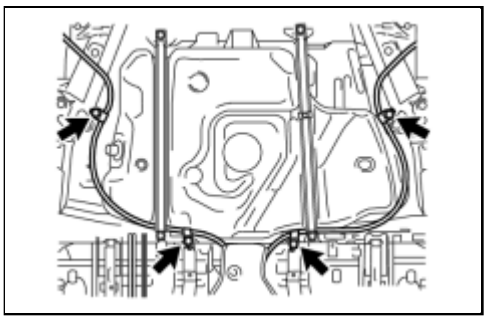
3. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE



(a) Remove the fuel suction tube assembly with pump and gauge from the fuel tank INFO .

4. DRAIN FUEL

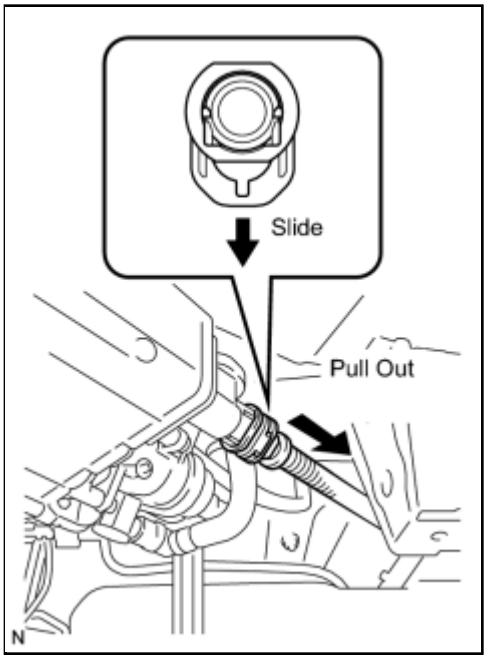
5. REMOVE FRONT EXHAUST PIPE ASSEMBLY



HINT: INFO .

6. REMOVE NO. 1 FUEL TANK PROTECTOR

(a) Remove the 4 bolts and the No. 1 fuel tank protector.



7. SEPARATE PARKING BRAKE CABLE

(a) Remove the 4 bolts, and separate the parking brake cables.

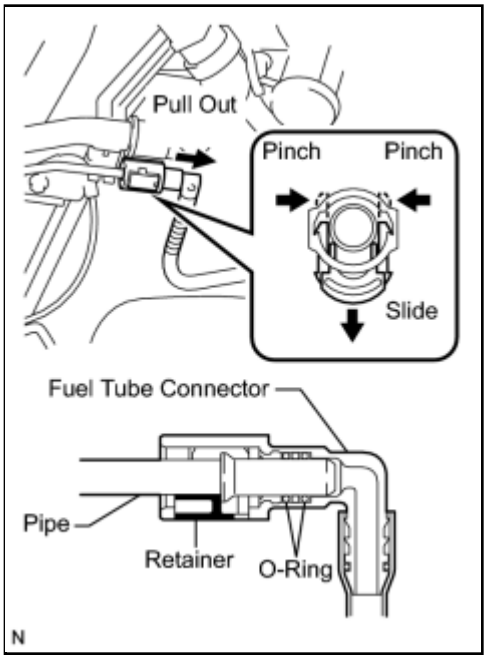
8. DISCONNECT FUEL TANK VENT HOSE

(a) Disconnect the fuel tank vent hose.

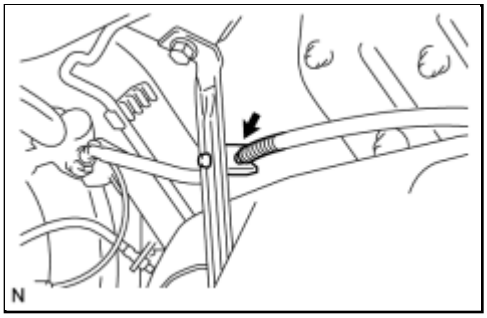
(b) Pull the fuel tank vent hose out of the pipe.

NOTICE:

- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.



9. DISCONNECT BREATHER TUBE FUEL HOSE



(a) Disconnect the breather tube fuel hose.

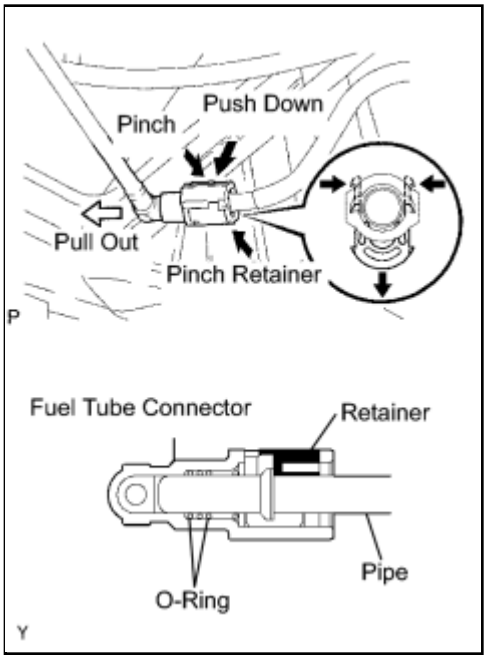
(1) Pinch the retainer of the fuel tube connector, then pull the fuel tube connector out of the pipe.

NOTICE:

- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.
- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

(b) Separate the fuel breather tube fuel hose.

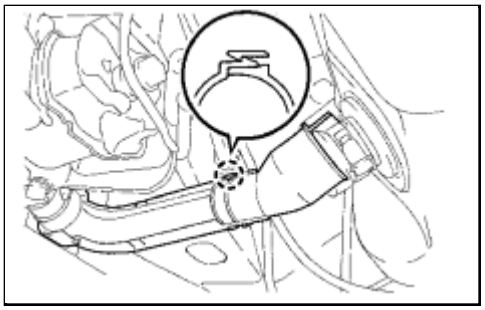
10. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY



(a) Disconnect the fuel tank main tube.

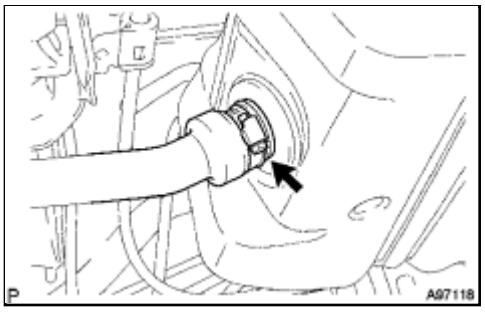
(1) Pinch the tabs of the retainer of the fuel tube connector to disengage the lock claws and push it down as shown in the illustration.

(2) Pull the fuel tank main tube out of the pipe.



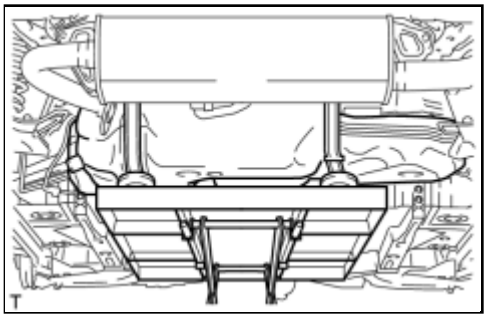
NOTICE:

- Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.
- It is necessary to prevent mud or dirt from entering the connector. If mud or dirt gets in the connector, the O-rings may not seal properly.
- Only disconnect the quick connector by hand.
- Do not bend, kink or twist the nylon tubes.

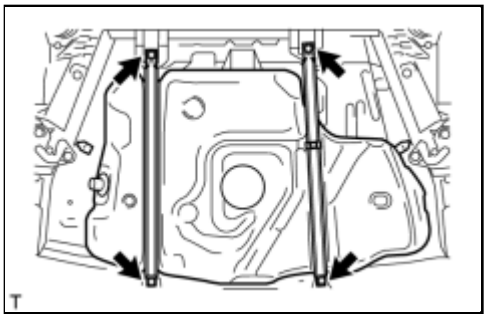


- Protect the connector by covering it with a plastic bag.
- If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.

11. DISCONNECT FUEL TANK FILLER PIPE SUB-ASSEMBLY



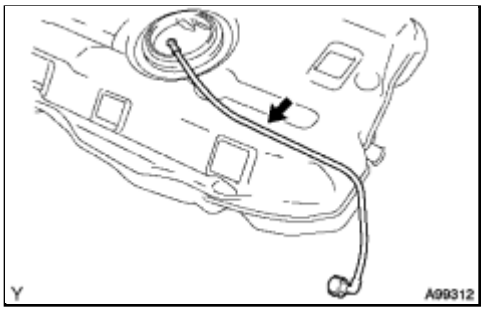
(a) Using a screwdriver, unfasten the claw. Then remove the fuel tank filler pipe cover from the fuel tank filler pipe.



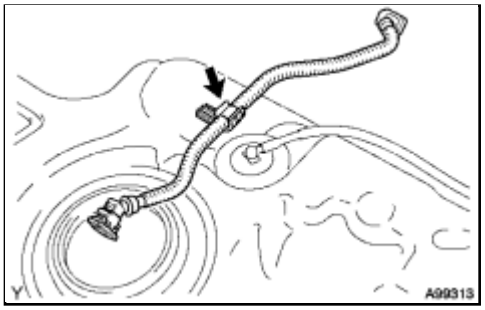
(b) Loosen the hose clamp bolt, then disconnect the fuel tank filler pipe hose from the fuel tank.

12. REMOVE FUEL TANK ASSEMBLY

(a) Hold the fuel tank using a transmission jack.

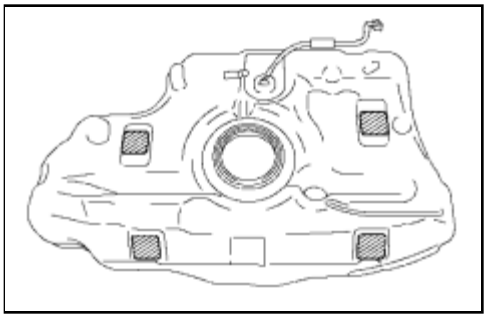


(b) Remove the 4 bolts, then remove the 2 No. 1 fuel tank bands.



(c) Operate the transmission jack, then remove the fuel tank.

13. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY

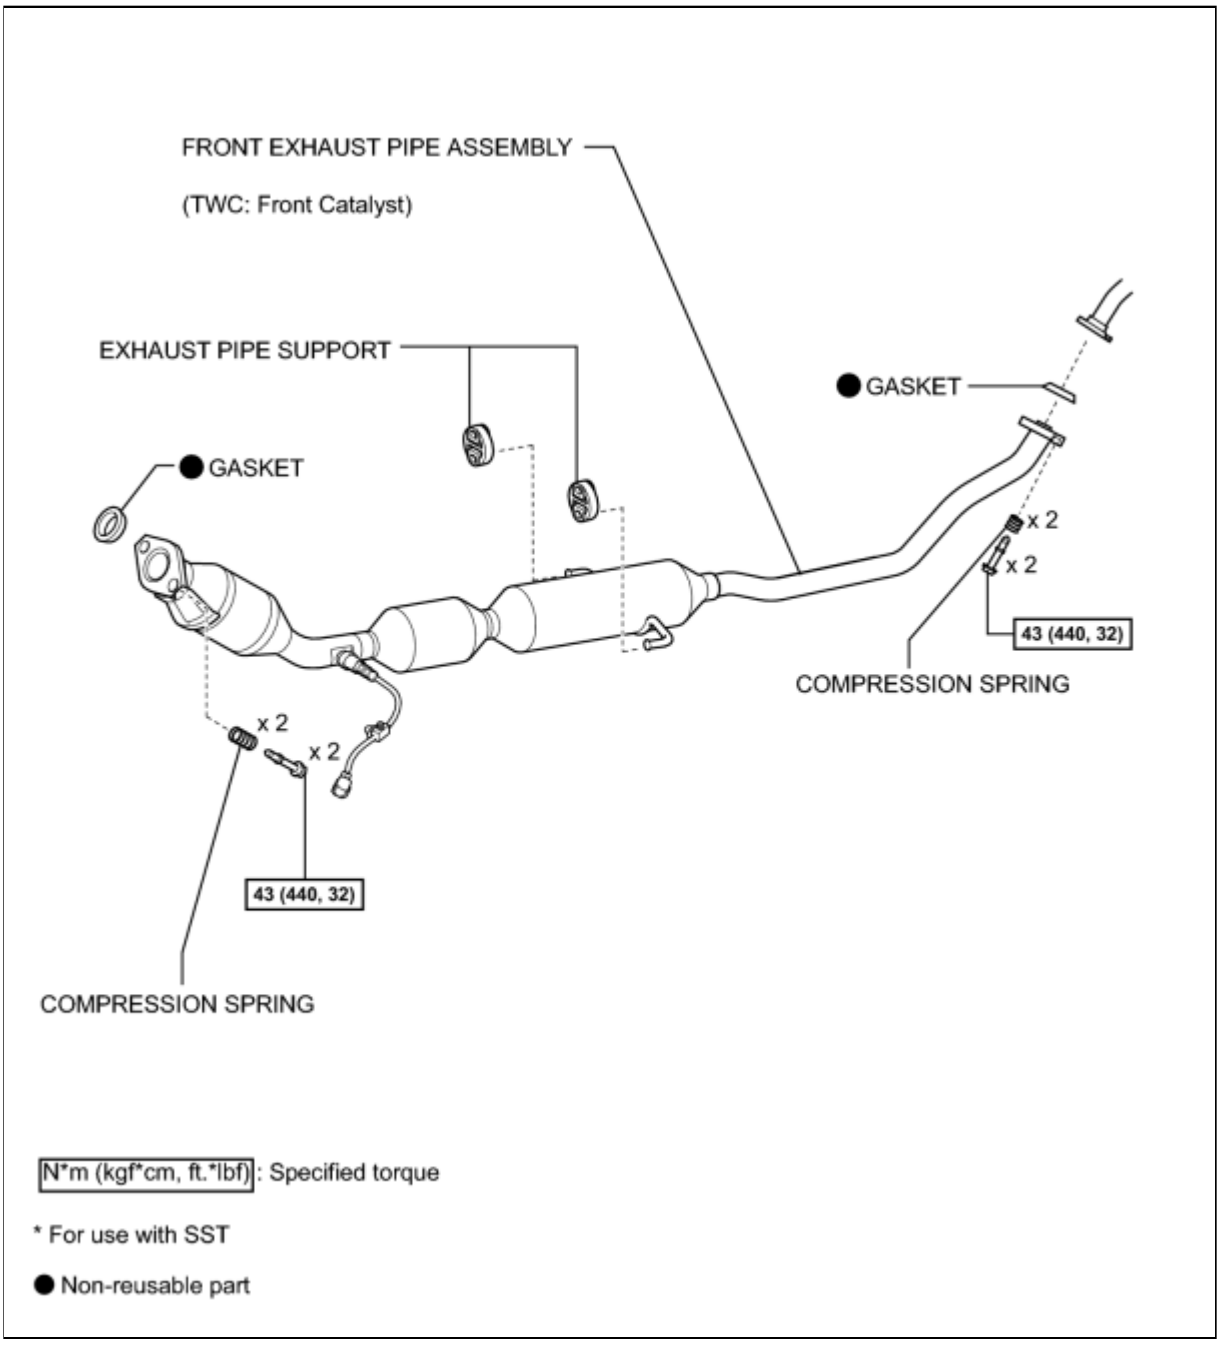


(a) Remove the fuel tank main tube from the fuel tank.

14. REMOVE FUEL TANK VENT HOSE

(a) Remove the fuel tank vent hose from the fuel tank clamp.

15. REMOVE FUEL TANK CUSHION



(a) Remove the fuel tank cushions from the fuel tank.

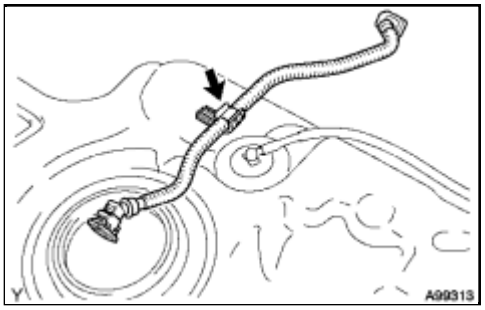
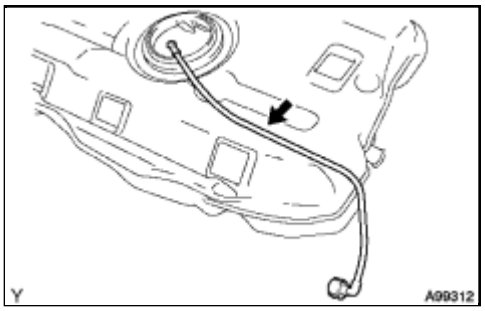
Title: 2ZR-FE FUEL: FUEL TANK: INSTALLATION (2010 Corolla)		



INSTALLATION

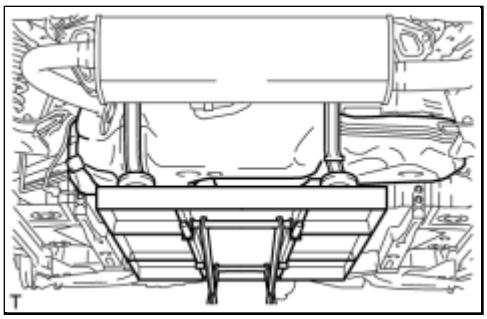
1. INSTALL FUEL TANK CUSHION



(a) Install new fuel tank cushions onto the fuel tank.

2. INSTALL FUEL TANK VENT HOSE

(a) Install the fuel tank vent hose onto the fuel tank clamp.

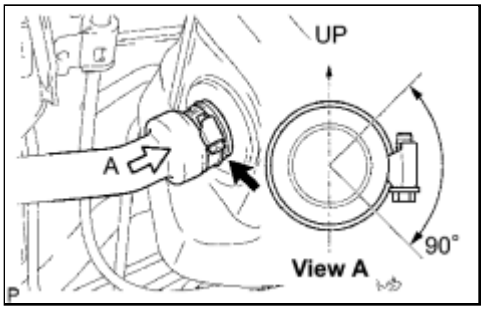


3. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Install the fuel tank main tube onto the fuel tank.

4. INSTALL FUEL TANK ASSEMBLY

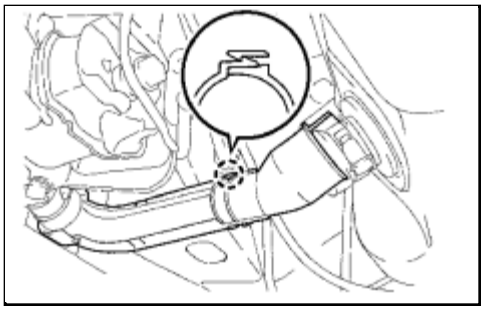
(a) Set the fuel tank on a transmission jack.



(b) Operate the transmission jack, then install the fuel tank into the vehicle.

(c) Install the 2 No. 1 fuel tank bands with the 4 bolts.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

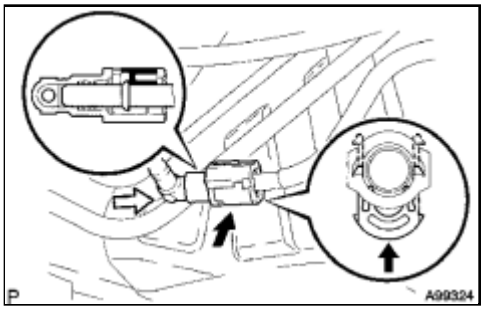


5. INSTALL FUEL TANK FILLER PIPE SUB-ASSEMBLY

(a) Connect the fuel tank filler pipe to the fuel tank.

NOTICE:

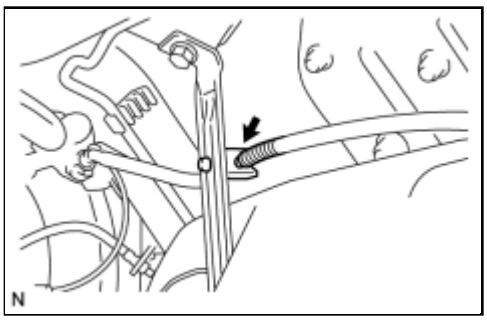
Make sure that the hose clamp is facing in the correct direction when installing.



(b) Engage the claw, then install the fuel tank filler pipe cover onto the fuel tank filler pipe.

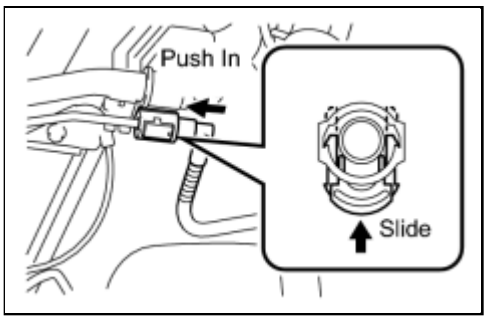
6. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY

(a) Connect the fuel tank main tube.



(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until it comes into contact with the seat to connect the fuel tank main tube to the pipe, then push the retainer up until the claws lock.

NOTICE:



- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tank main tube, check that the fuel tank main tube is securely connected by pulling on the fuel tube connector and pipe.

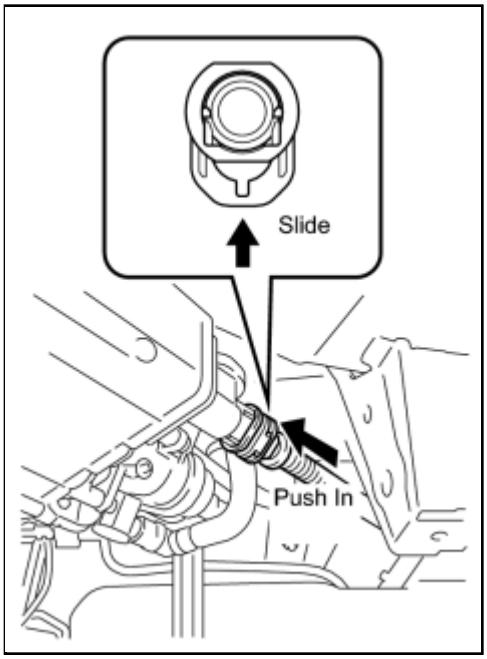
7. CONNECT BREATHER TUBE FUEL HOSE

(a) Connect the breather tube fuel hose to the clamp.

(b) Connect the breather tube fuel hose to the pipe.

(1) Align the fuel hose connector with the pipe, then push the fuel hose connector in until the retainer makes a "click" sound to connect the fuel tank breather tube fuel hose to the pipe.

NOTICE:



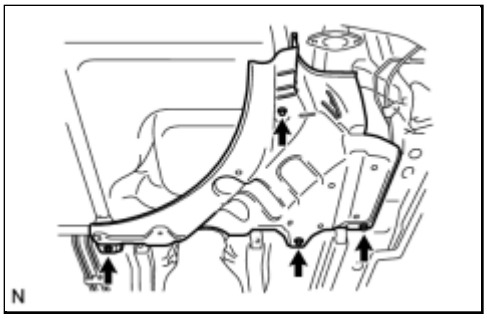
- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tank breather tube, check that the fuel pump tube is securely connected by pulling on the fuel tube connector and pipe.

8. CONNECT FUEL TANK VENT HOSE

(a) Connect the fuel tank vent hose.

(1) Align the fuel tube connector with the pipe, then push the fuel tube connector in until it comes into contact with the seat to connect the fuel tank vent hose to the pipe.

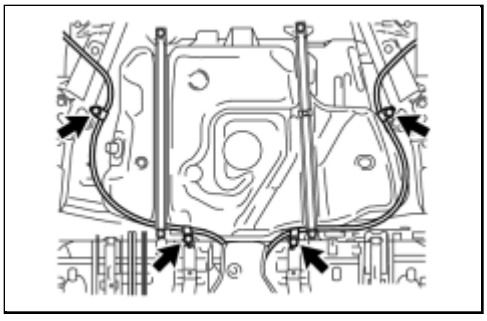
(2) Slide the retainer of the fuel tube connector to lock the



claws as shown in the illustration.

NOTICE:

- Check that there are no scratches or foreign objects around the connecting surfaces of the fuel tube connector and pipe before performing this work.
- After connecting the fuel tank vent hose, check that the fuel tank vent hose is securely connected by pulling on the fuel tube connector.



9. INSTALL NO. 1 FUEL TANK PROTECTOR

(a) Install the fuel tank protector sub-assembly with the 4 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

10. CONNECT PARKING BRAKE CABLE

(a) Install the parking cables with the 4 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

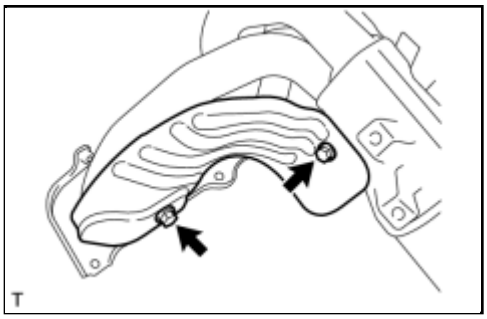
Title: 2AZ-FE INTAKE / EXHAUST: EXHAUST MANIFOLD: INSTALLATION (2010 Corolla)		

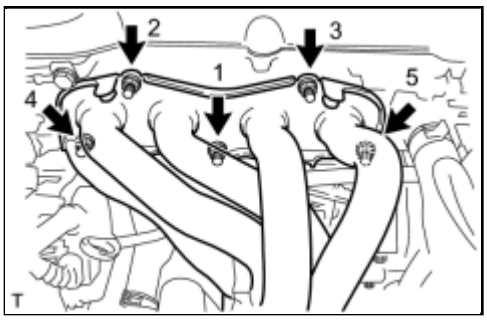
INSTALLATION



1. INSTALL NO. 1 MANIFOLD CONVERTER INSULATOR

(a) Install the No. 1 manifold converter insulator with the 4 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

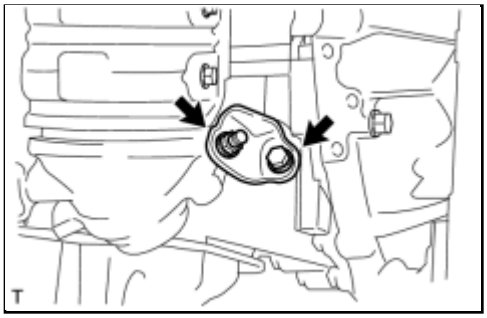


2. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 2 exhaust manifold heat insulator with the 2 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

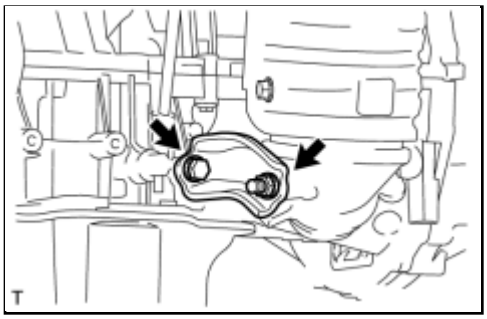
3. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY



(a) Install a new gasket.

(b) Install the exhaust manifold converter sub-assembly with the 5 nuts in the order shown in the illustration.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

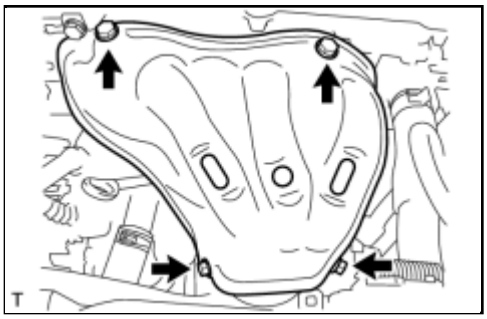


4. INSTALL NO. 2 MANIFOLD STAY

(a) Install the No. 2 manifold stay with the bolt and nut.

Torque: 44 N·m (449 kgf·cm, 33ft·lbf)

5. INSTALL MANIFOLD STAY

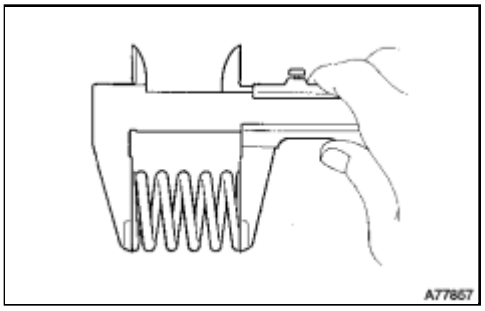


(a) Install the manifold stay with the bolt and nut.

Torque: 44 N·m (449 kgf·cm, 33ft·lbf)

6. INSTALL AIR FUEL RATIO SENSOR INFO

7. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

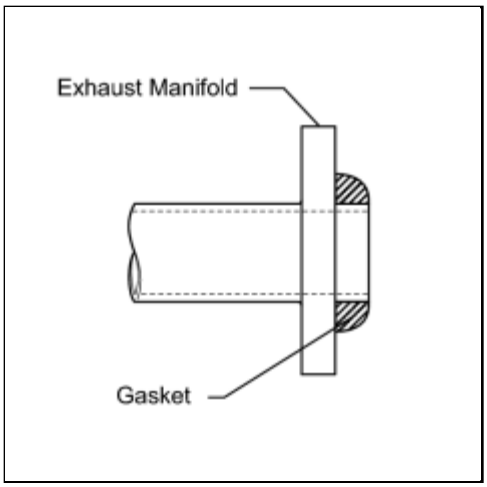


(a) Install the No. 1 exhaust manifold heat insulator with the 4 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

8. INSTALL FRONT EXHAUST PIPE ASSEMBLY

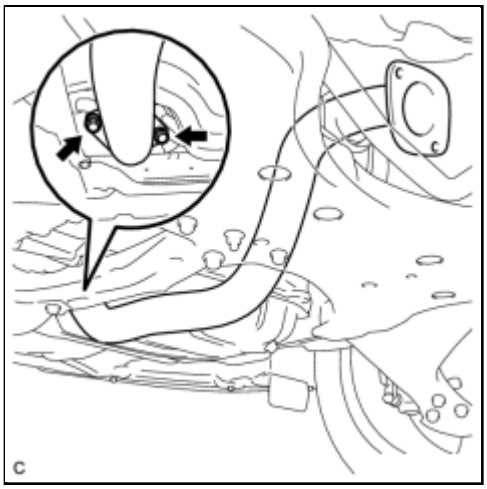
(a) Using a vernier caliper, measure the free length of the compression springs.



Minimum	41.5 mm (1.63 in.)

HINT:

If the free length is less than the minimum, replace the compression spring.

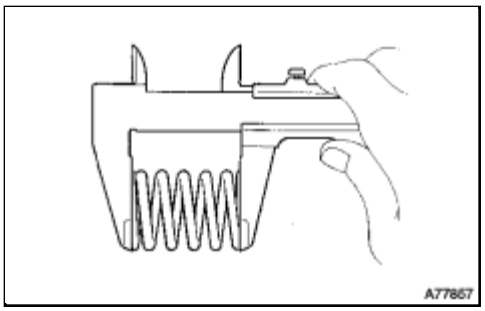


(b) Remove the remains of exhaust manifold converter with wire brash.

(c) Fully insert a new gasket to the exhaust manifold.

NOTICE:

- Be sure to install the gasket in the correct direction.
- Do not reuse the gasket.
- Do not damage the gasket.



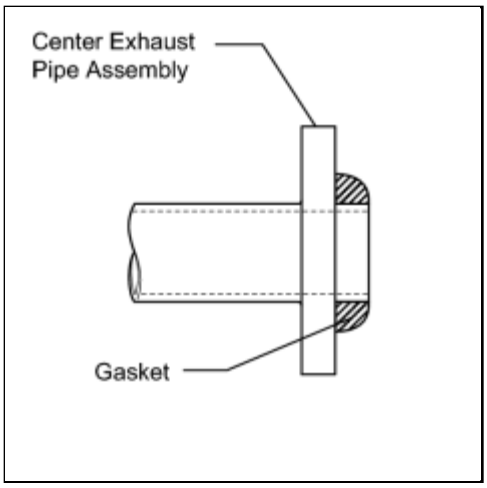
(d) Install the front exhaust pipe assembly with the 2 bolts and 2 compression springs.

Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

(e) Connect the heated oxygen sensor connector.

9. INSTALL CENTER EXHAUST PIPE ASSEMBLY

(a) Using a vernier caliper, measure the free length of the

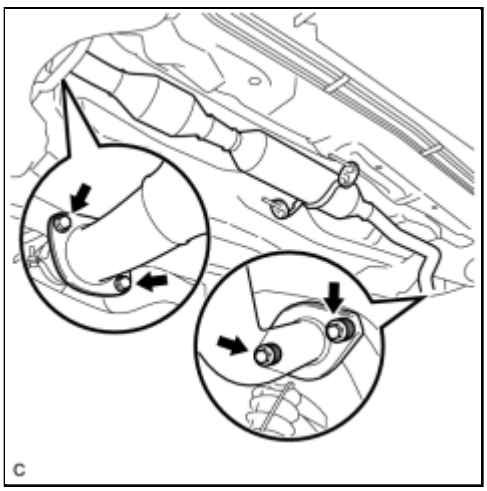


compression springs.

Minimum	38.5 mm (1.52 in.)

HINT:

If the free length is less than the minimum, replace the compression spring.



(b) Fully insert a new gasket to the center exhaust pipe assembly.

NOTICE:

- Be sure to install the gasket in the correct direction.
- Do not reuse the gasket.
- Do not damage the gasket.

(c) Install a new gasket to the front exhaust pipe assembly.

(d) Connect the center exhaust pipe assembly to the 2 exhaust pipe supports.

(e) Install the center exhaust pipe assembly with the 4 bolts and 2 compression springs.

Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

10. INSTALL GENERATOR ASSEMBLY

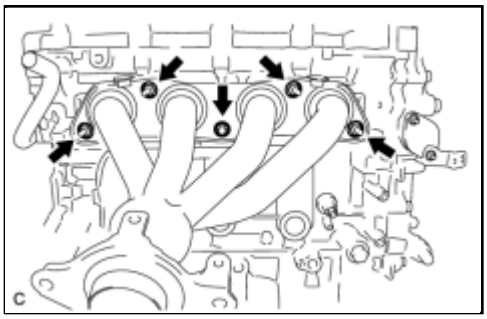
Title: 2ZR-FE INTAKE / EXHAUST: EXHAUST MANIFOLD: INSTALLATION (2010 Corolla)		

INSTALLATION

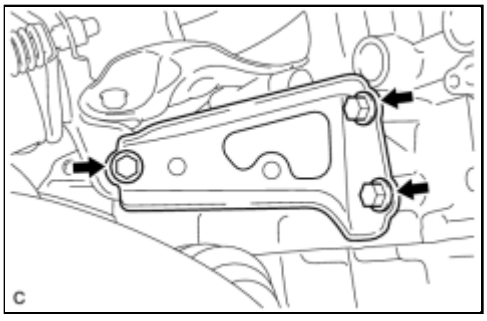


1. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 2 exhaust manifold heat insulator with the 3 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

2. INSTALL EXHAUST MANIFOLD

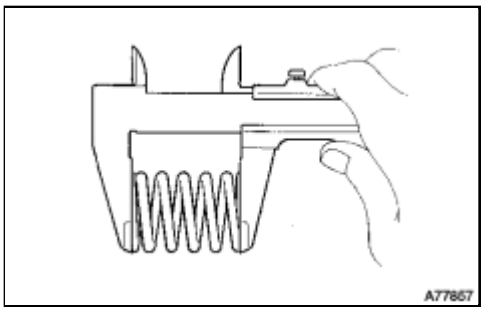


(a) Install a new exhaust manifold gasket.

(b) Install the exhaust manifold with the 5 nuts.

Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

3. INSTALL MANIFOLD STAY

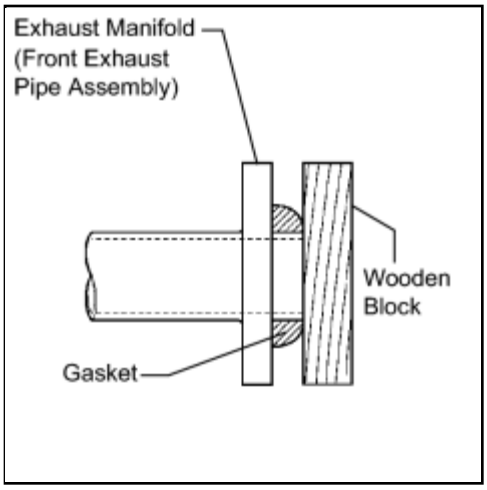


(a) Install the manifold stay with the 3 bolts.

Torque: 43 N·m (439 kgf·cm, 32ft·lbf)

4. INSTALL FRONT EXHAUST PIPE ASSEMBLY

(a) Using a vernier caliper, measure the free length of the compression springs.



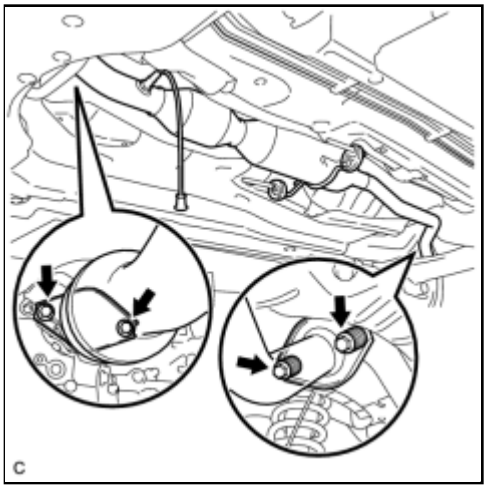
Minimum (front)	41.5 mm (1.63 in.)
Minimum (rear)	38.5 mm (1.52 in.)

HINT:

If the free length is less than the minimum, replace the compression spring.

(b) Fully insert new gaskets to the exhaust manifold and front exhaust pipe assembly.

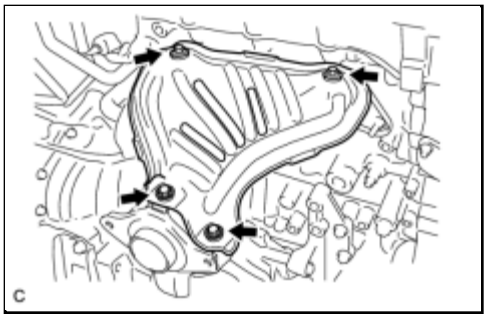
(c) Using a plastic hammer and wooden block, tap in the 2 new gaskets until their surface are flush with the exhaust manifold and front exhaust pipe assembly.



NOTICE:

- Be sure to install the gaskets in the correct direction.
- Do not reuse the gaskets.
- Do not damage the gaskets.
- Do not push in the gaskets by using the exhaust pipe when connecting it.

(d) Connect the front exhaust pipe assembly to the 2 exhaust pipe supports.



(e) Install the front exhaust pipe assembly with the 4 bolts and 4 compression springs.

Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

(f) Connect the heated oxygen sensor connector.

5. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

(a) Install the No. 1 exhaust manifold heat insulator with the 4 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

6. INSTALL AIR FUEL RATIO SENSOR INFO

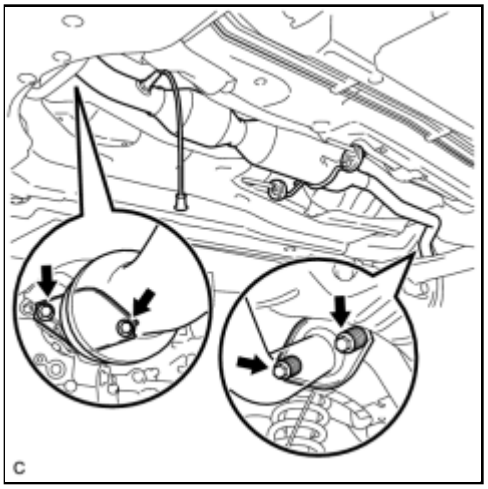
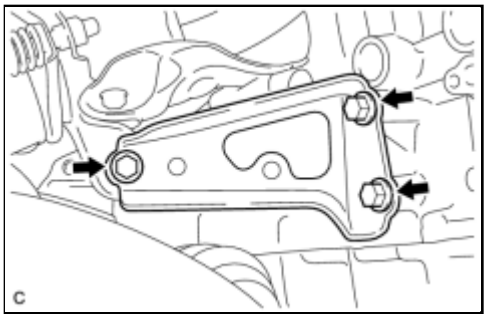
11. REMOVE AIR FUEL RATIO SENSOR INFO



12. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

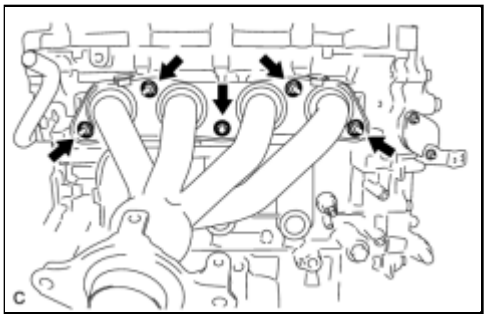
(a) Remove the 4 bolts and No. 1 exhaust manifold heat insulator.

13. REMOVE FRONT EXHAUST PIPE ASSEMBLY



(a) Disconnect the heated oxygen sensor connector.

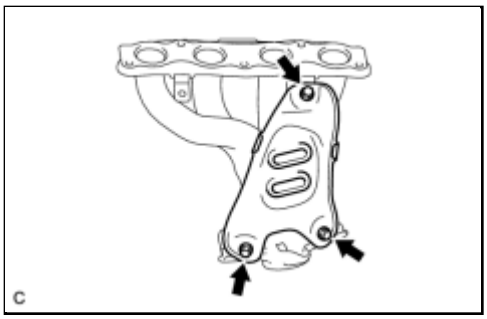
(b) Remove the 4 bolts and 4 compression springs.



(c) Remove the front exhaust pipe assembly from the 2 exhaust pipe supports.

14. REMOVE MANIFOLD STAY

(a) Remove the 3 bolts and manifold stay.

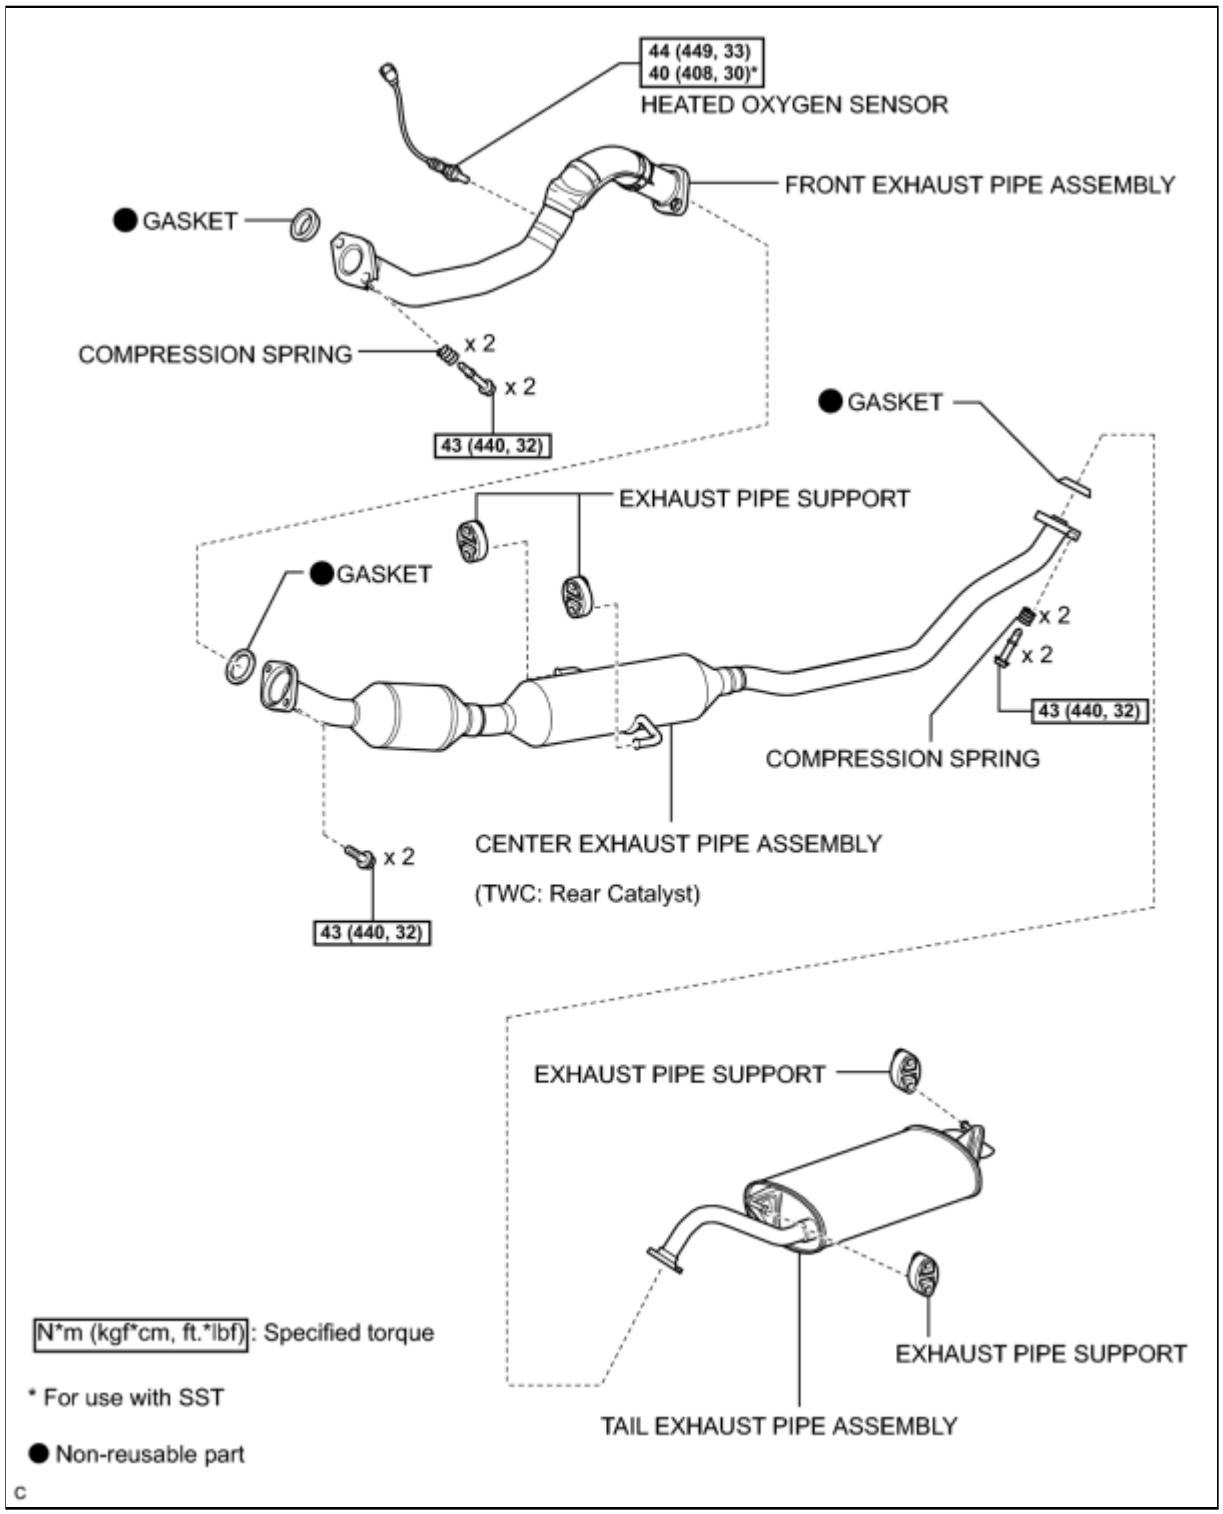


15. REMOVE EXHAUST MANIFOLD

(a) Remove the 5 nuts and exhaust manifold.

(b) Remove the exhaust manifold gasket.

16. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR



(a) Remove the 3 bolts and No. 2 exhaust manifold heat insulator.

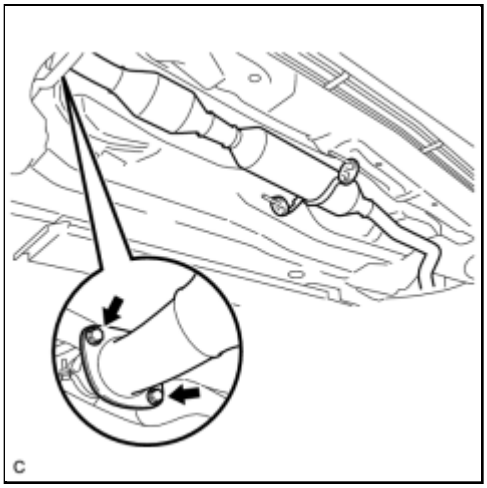
Title: 2AZ-FE INTAKE / EXHAUST: EXHAUST PIPE: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE TAIL EXHAUST PIPE ASSEMBLY



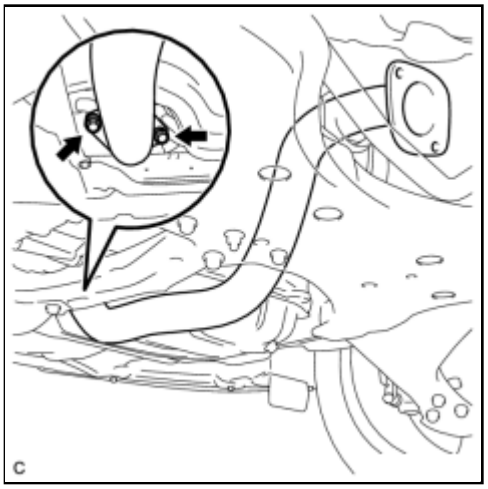
(a) Remove the 2 bolts and 2 compression springs.

(b) Remove the tail exhaust pipe assembly from the 2 exhaust pipe supports.

(c) Remove the gasket from the center exhaust pipe assembly.

2. REMOVE HEATED OXYGEN SENSOR INFO

3. REMOVE CENTER EXHAUST PIPE ASSEMBLY



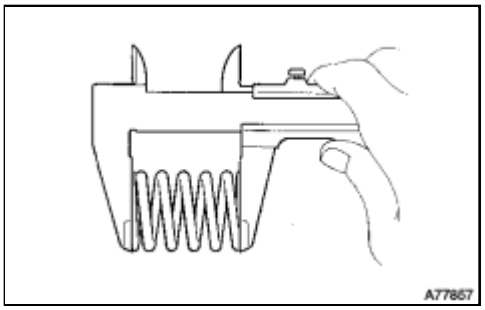
(a) Remove the 2 bolts.

(b) Remove the center exhaust pipe assembly from the 2 exhaust pipe supports.

(c) Remove the gasket from the front exhaust pipe assembly.

4. REMOVE FRONT EXHAUST PIPE ASSEMBLY

(a) Remove the 2 bolts, 2 compression springs and front



exhaust pipe assembly.

(b) Remove the gasket from the exhaust manifold.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

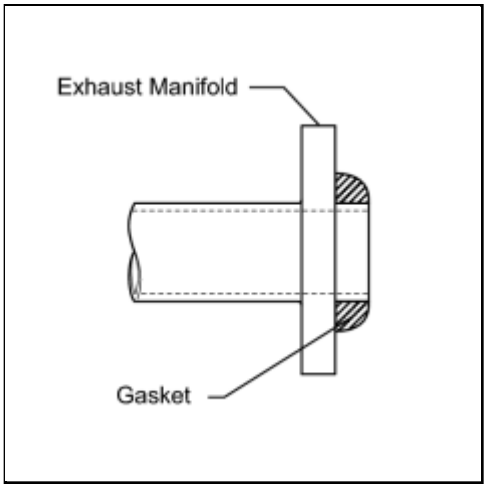
Title: 2AZ-FE INTAKE / EXHAUST: EXHAUST PIPE: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FRONT EXHAUST PIPE ASSEMBLY



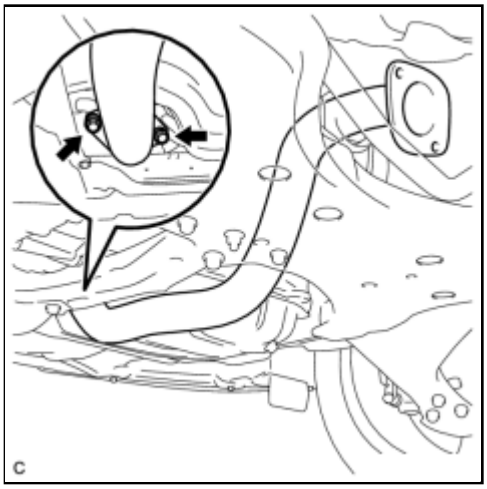
(a) Using a vernier caliper, measure the free length of the compression springs.

Minimum	41.5 mm (1.63 in.)

HINT:

If the free length is less than the minimum, replace the compression spring.

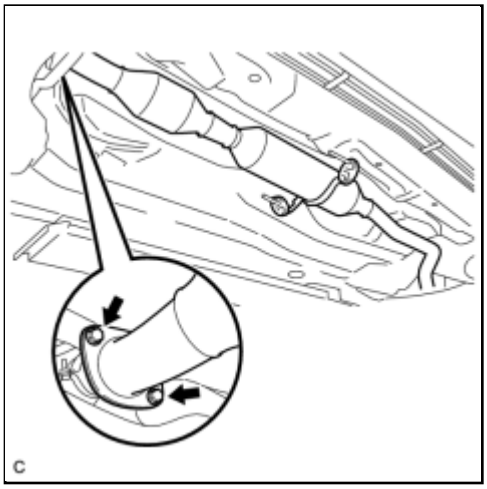
(b) Remove the remains of exhaust manifold converter with wire brash.



(c) Fully insert a new gasket to the exhaust manifold.

NOTICE:

- Be sure to install the gasket in the correct direction.
- Do not reuse the gasket.
- Do not damage the gasket.



(d) Install the front exhaust pipe assembly with the 2 bolts and 2 compression springs.

Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

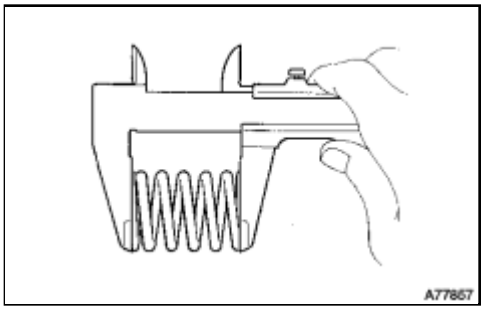
2. INSTALL HEATED OXYGEN SENSOR INFO

3. INSTALL CENTER EXHAUST PIPE ASSEMBLY

(a) Install a new gasket to the front exhaust pipe assembly

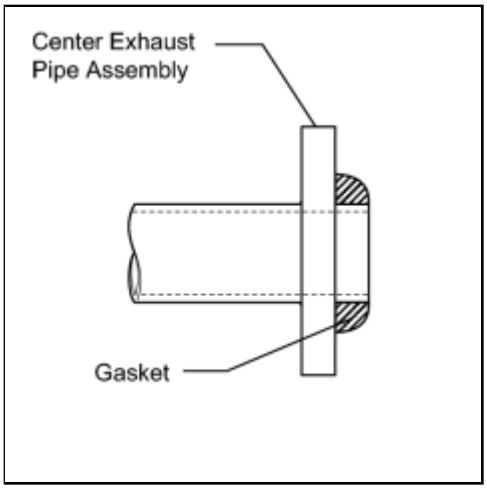
(b) Connect the center exhaust pipe assembly to the 2 exhaust pipe supports.

(c) Install the center exhaust pipe assembly with the 2 bolts.



Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

4. INSTALL TAIL EXHAUST PIPE ASSEMBLY

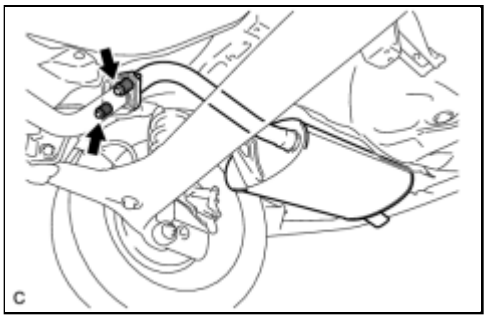


(a) Using a vernier caliper, measure the free length of the compression springs.

Minimum	38.5 mm (1.52 in.)

HINT:

If the free length is less than the minimum, replace the compression spring.



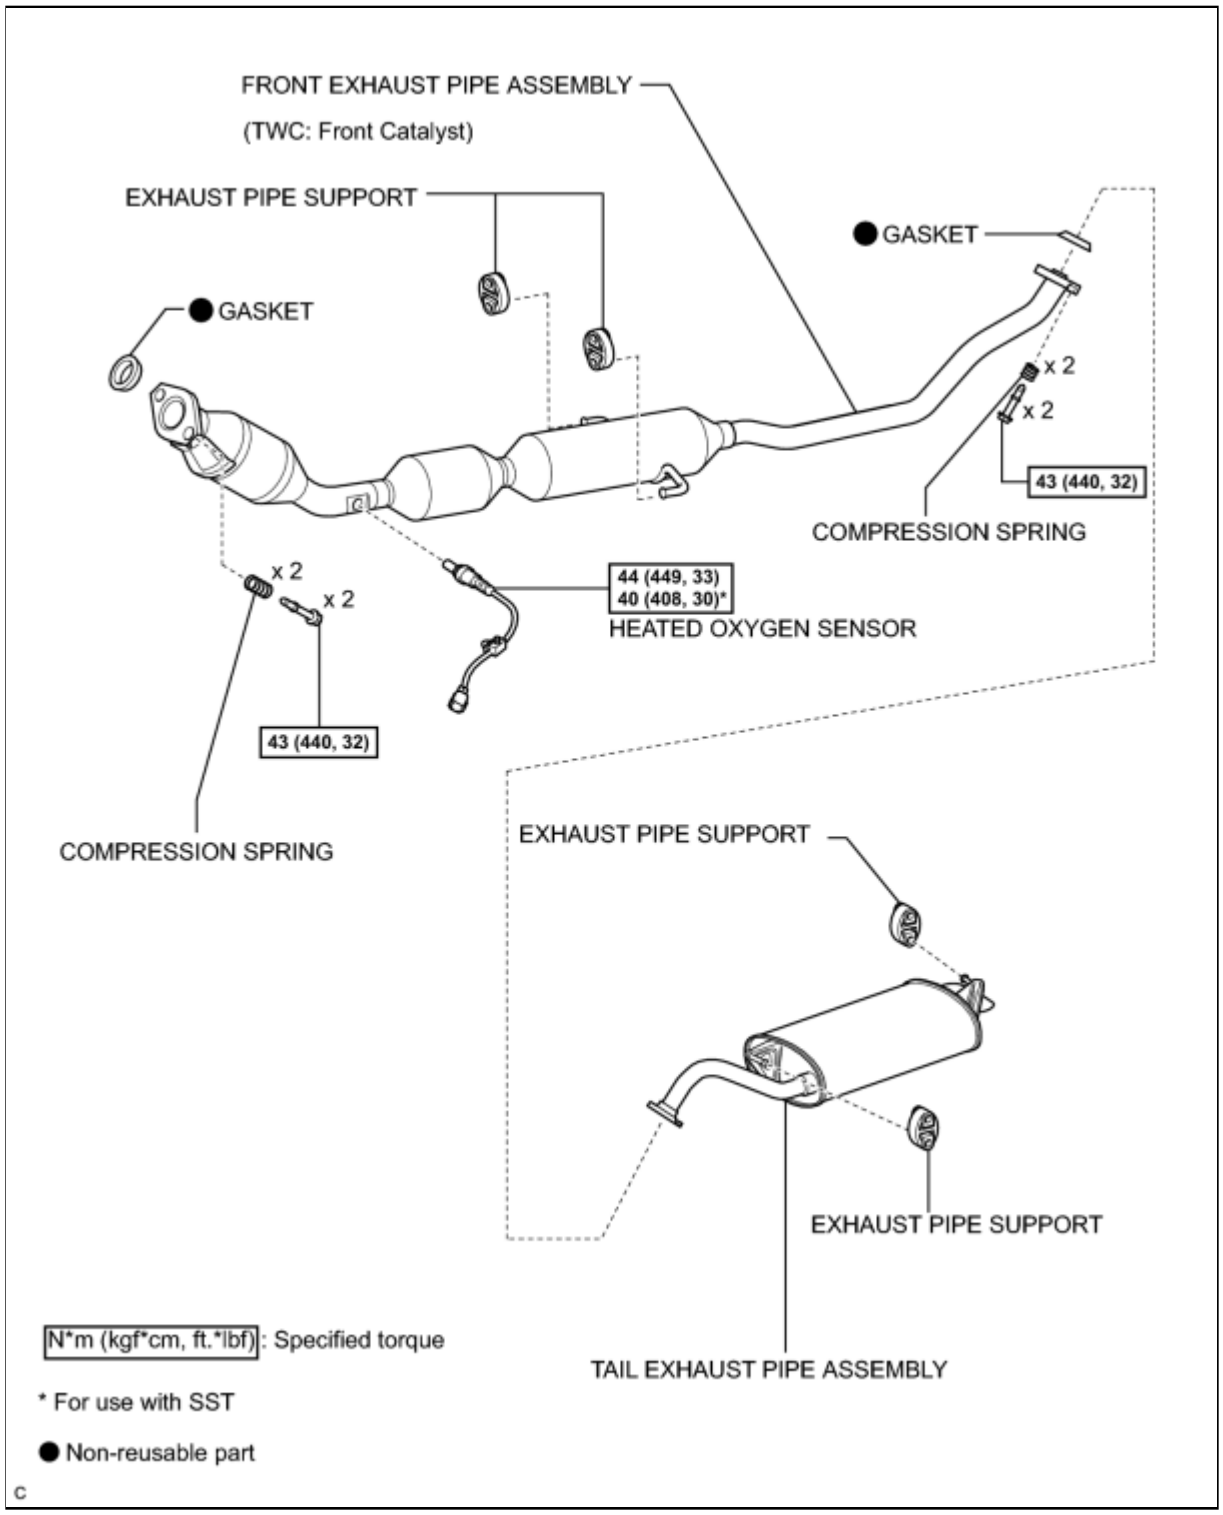
(b) Fully insert a new gasket to the center exhaust pipe assembly.

NOTICE:

- Be sure to install the gasket in the correct direction.
- Do not reuse the gasket.
- Do not damage the gasket.

(c) Connect the tail exhaust pipe assembly to the 2 exhaust pipe supports.

(d) Install the tail exhaust pipe assembly with the 2 bolts and 2 compression springs.



Torque: 43 N·m (440 kgf·cm, 32ft·lbf)

5. INSPECT FOR EXHAUST GAS LEAK

Title: 2AZ-FE LUBRICATION: LUBRICATION SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

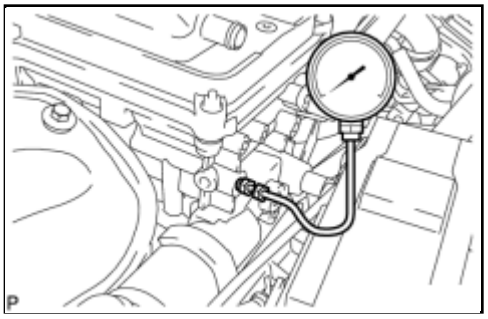
(a) Warm up and stop the engine, then wait for 5 minutes.

(b) Check that the engine oil level is between the low level and full level marks on the level gauge.

If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill with engine oil to above the full level mark.



2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water, discoloring or thinning.

If the quality is visibly poor, replace the oil.

3. INSPECT OIL PRESSURE

(a) Remove the oil pressure switch INFO .

(b) Install the oil pressure gauge.

(c) Warm up the engine.

(d) Check the oil pressure.

Oil Pressure:

AT IDLE	AT 3000 RPM
29 kPa (0.3 kgf/cm^2, 4.3 psi) or more	170 to 300 kPa (1.7 to 3.1 kgf/cm^2, 24 to 44 psi)

(e) If the oil pressure is not as specified, check the oil pump INFO .

(f) Remove the oil pressure gauge.

(g) Install the oil pressure switch INFO .

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000259G01IX
Title: 2ZR-FE LUBRICATION: LUBRICATION SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK ENGINE OIL LEVEL

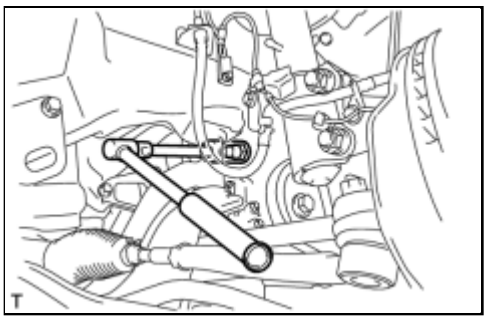
(a) Warm up and stop the engine, then wait for 5 minutes.

(b) Check that the engine oil level is between the low level and full level marks on the level gauge.

If low, check for engine oil leaks and add oil up to the full level mark.

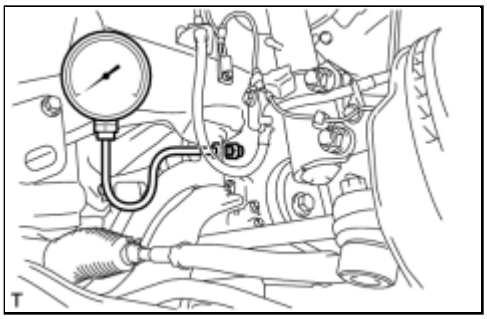
NOTICE:

Do not fill with engine oil to above the full level mark.



2. CHECK ENGINE OIL QUALITY

(a) Check the oil for deterioration, water, discoloring or thinning.



If the quality is visibly poor, replace the oil.

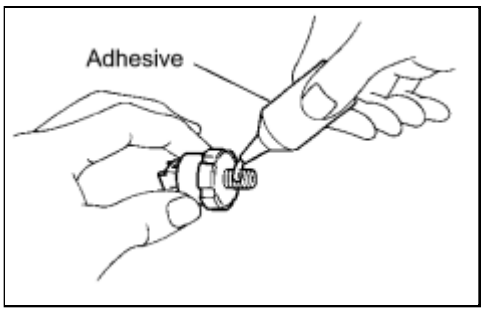
3. INSPECT OIL PRESSURE

(a) Disconnect the oil pressure switch connector.

(b) Using a 24 mm deep socket wrench, remove the oil pressure switch.

(c) Install the oil pressure gauge.

(d) Warm up the engine.



(e) Check the oil pressure.

Oil Pressure:

AT IDLE	AT 3000 RPM
25 kPa (0.3 kgf/cm^2, 3.6 psi) or more	150 to 400 kPa (1.5 to 4.1 kgf/cm^2, 22 to 58 psi)

(f) If the oil pressure is not as specified, check the oil pump INFO .

(g) Remove the oil pressure gauge.

(h) Apply adhesive to the end 2 or 3 threads on the oil pressure switch.

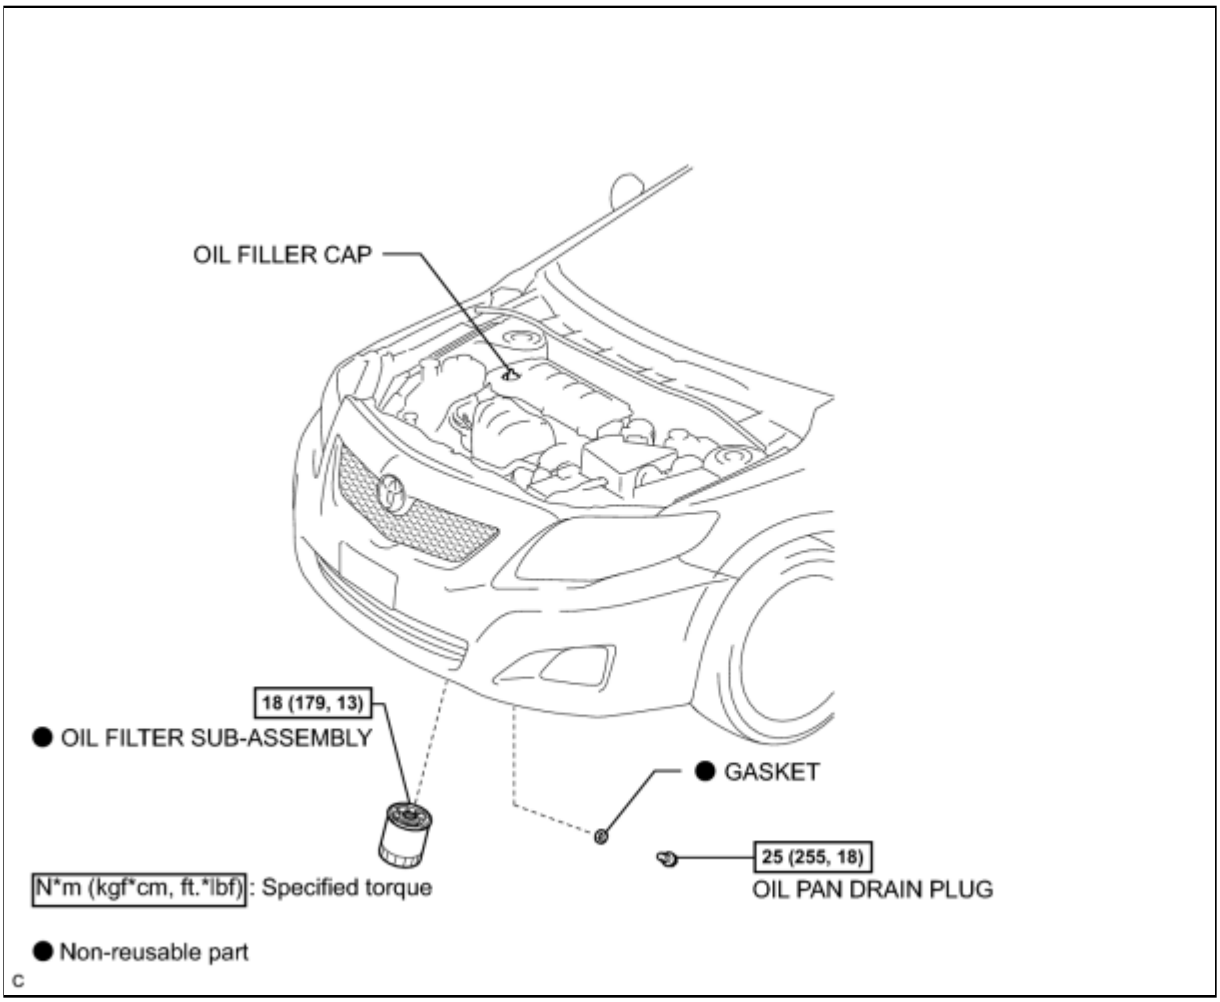
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(i) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: 15 N·m (153 kgf·cm, 11ft·lbf)

NOTICE:

Do not start the engine for at least 1 hour after installation.



(j) Connect the oil pressure switch connector.

(k) Check for engine oil leaks.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R0H014X
Title: 2AZ-FE LUBRICATION: OIL AND OIL FILTER: REPLACEMENT (2010 Corolla)		

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with engine oil will cause remove of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use a waterless hand cleaner to remove any used engine oil. Do not use gasoline, thinners or solvents.
- For environmental protection, used oil and used oil filters must be disposed of at designated disposal sites.

1. DRAIN ENGINE OIL

(a) Remove the oil filler cap.

(b) Remove the oil drain plug and drain the oil into a container.

(c) Clean and install the oil drain plug with a new gasket.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

2. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.

SST: 09228-06501

3. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Clean the oil filter installation surface.

(b) Apply engine oil to a new oil filter gasket.

(c) Lightly screw the oil filter into the engine until the oil filter does not turn.

(d) Using SST, tighten the oil filter.

SST: 09228-06501

(1) Depending on the work space available, choose from the following:

1. If enough space is available, use a torque wrench to tighten the oil filter.

Torque: 18 N·m (179 kgf·cm, 13ft·lbf)

2. If enough space is not available to use a torque wrench, tighten the oil filter a 3/4 turn by hand or use a common wrench.

4. ADD ENGINE OIL

(a) Add fresh engine oil and install the oil filler cap.

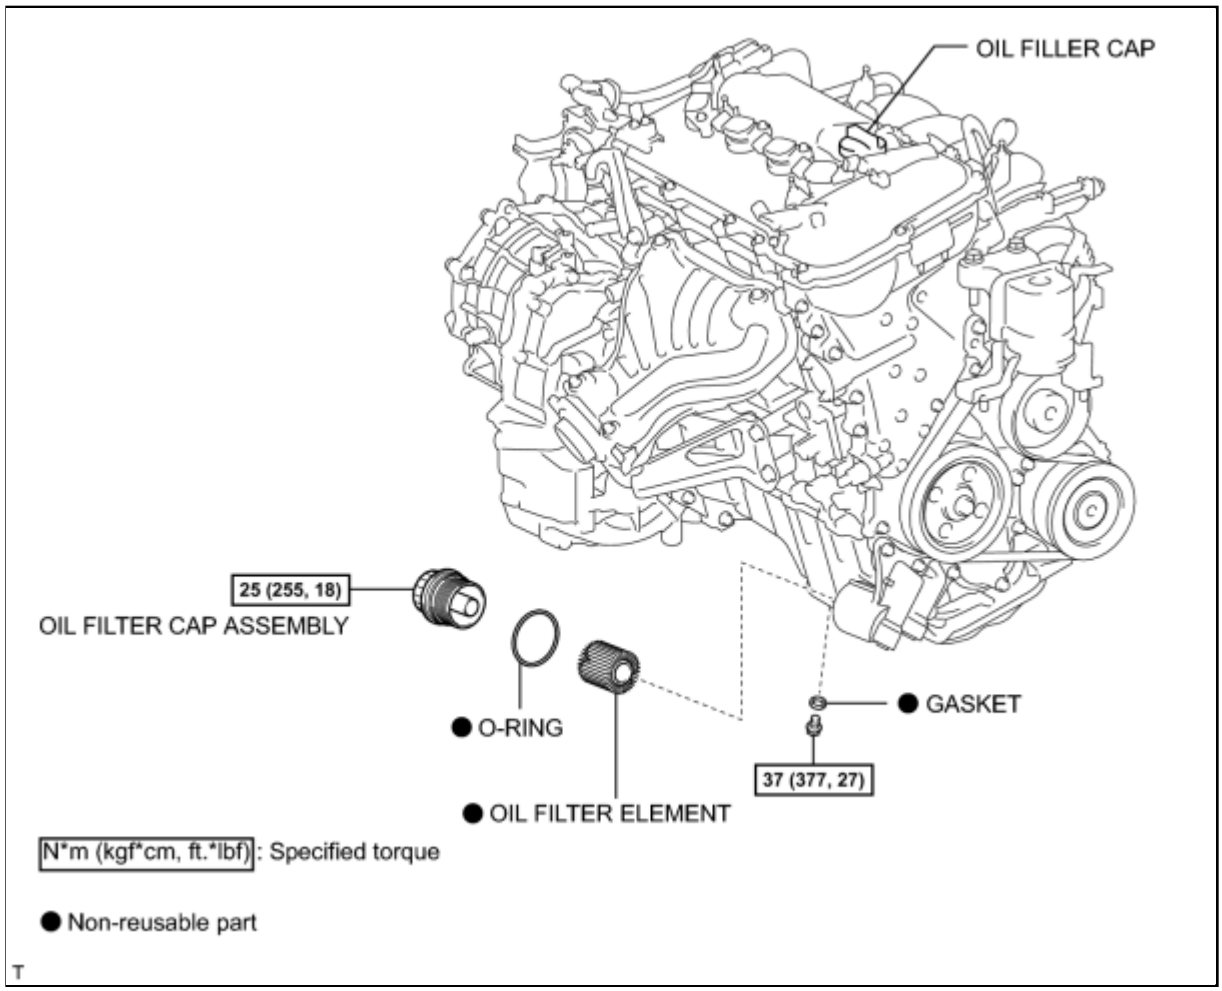
Engine Oil

OIL GRADE	OIL VISCOSITY (SAE)

OIL GRADE	OIL VISCOSITY (SAE)
• ILSAC multigrade engine oil	• 0W-20 • 5W-20

Capacity

ITEM	STANDARD CONDITION
Drain and refill with oil filter change	3.8 liters (4.0 US qts, 3.3 Imp. qts)
Drain and refill without oil filter change	3.6 liters (3.8 US qts, 3.2 Imp. qts)
Dry fill	4.5 liters (4.8 US qts, 4.0 Imp. qts)



5. INSPECT FOR OIL LEAK

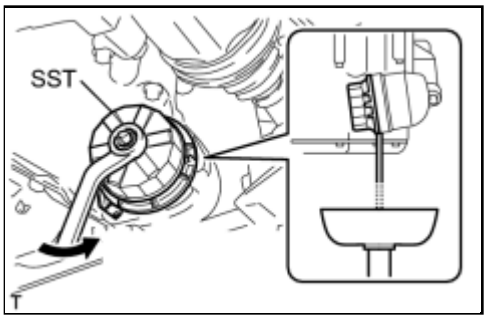
Title: 2ZR-FE LUBRICATION: OIL AND OIL FILTER: REPLACEMENT (2010 Corolla)		

REPLACEMENT

CAUTION:

- Prolonged and repeated contact with engine oil will cause removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.
- Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Wear protective clothing and gloves. Wash your skin thoroughly with soap and water, or use a waterless hand cleaner to remove any used engine oil. Do not use gasoline, thinners or solvents.
- For environmental protection, used oil and used oil filters must be disposed of at designated disposal sites.

1. DRAIN ENGINE OIL



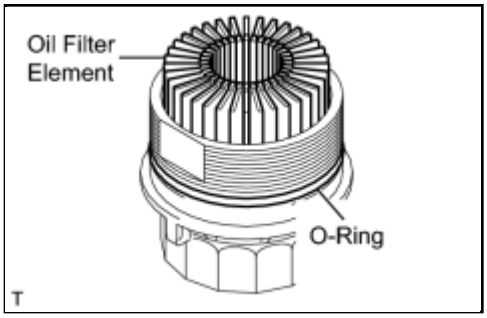
(a) Remove the oil filler cap.

(b) Remove the oil drain plug and drain the oil into a container.

(c) Clean and install the oil drain plug with a new gasket.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

2. REMOVE OIL FILTER CAP ASSEMBLY



(a) Using SST, loosen the oil filter cap 4 revolutions, align the cap ribs vertically, and drain the remaining engine oil in the oil filter cap.

SST: 09228-06501

HINT:

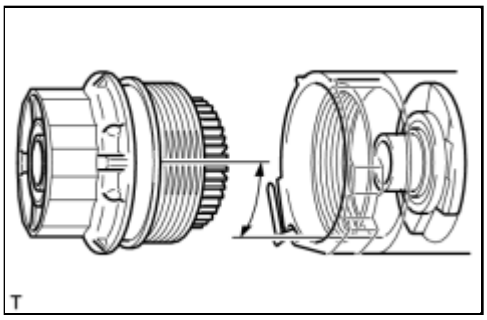
Set a container below the oil filter cap assembly before loosening the oil filter cap.

(b) Remove the oil filter cap assembly.

(c) Remove oil filter element and O-ring from the oil filter cap.

NOTICE:

Be sure to remove the O-ring (for the cap) by hand, without using any tools, to prevent damage to the groove for the O-ring on the cap.



3. INSTALL OIL FILTER CAP ASSEMBLY

(a) Clean the oil filter cap threads and O-ring groove.

(b) Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.

(c) Set a new oil filter element in the oil filter cap.

(d) Remove any dirt or foreign matter from the installation surface and inside of the engine.

(e) Reapply a small amount of engine oil to the O-ring of the oil filter cap assembly. Align the cutout in the oil filter cap threads 90° to the grooves in the oil filter bracket and temporarily tighten the cap.

NOTICE:

Make sure that the O-ring does not get caught between the parts.

(f) Using SST, tighten the oil filter cap assembly.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)
SST: 09228-06501

NOTICE:

- After tightening the oil filter cap assembly, check for gaps between the installation surfaces.
- Do not remove the oil filter bracket clip when installing the oil filter cap assembly.
- Do not cross thread the oil filter cap assembly.

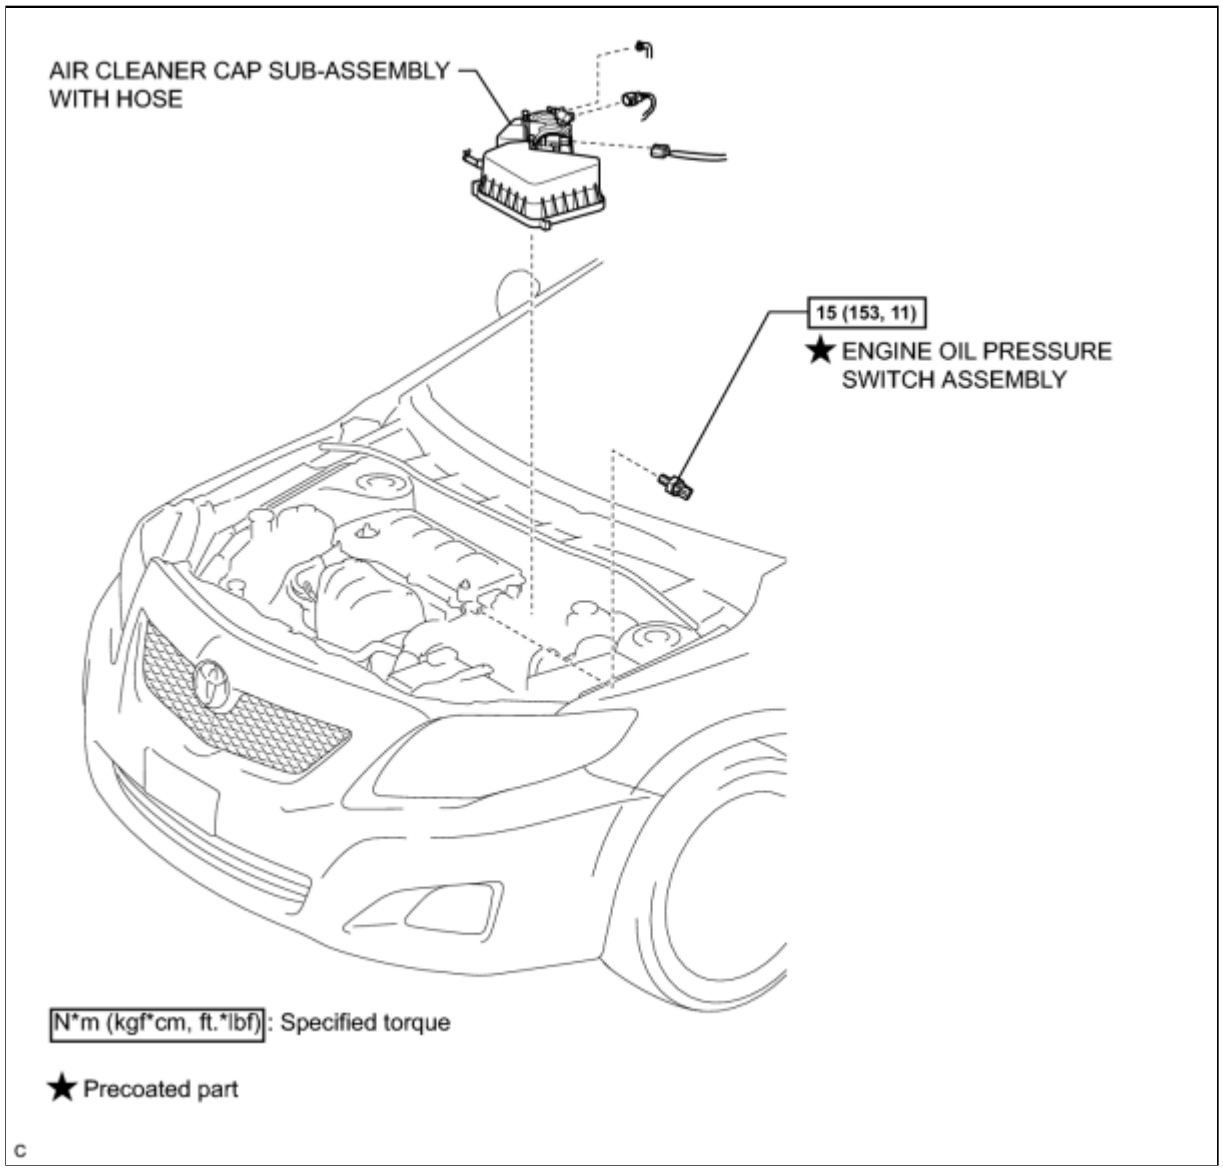
4. ADD ENGINE OIL

(a) Add fresh engine oil and install the oil filler cap.

Engine Oil

OIL GRADE	OIL VISCOSITY (SAE)
• ILSAC multigrade engine oil	• 0W-20 • 5W-20

Capacity



ITEM	STANDARD CONDITION
Drain and refill with oil filter change	4.2 liters (4.4 US qts, 3.7 lmp. qts)
Drain and refill without oil filter change	3.9 liters (4.1 US qts, 3.4 lmp. qts)
Dry fill	4.7 liters (5.0 US qts, 4.1 lmp. qts)

Title: 2ZR-FE LUBRICATION: OIL PRESSURE SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Disconnect the oil pressure switch connector.

(b) Start the engine.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B6-1 - Switch body	Idling	10 kΩ or higher
B6-1 - Switch body	Engine stopped	Below 1 Ω

(d) Reconnect the oil pressure switch connector.

If the result is not as specified, replace the oil pressure switch assembly.

Title: 2AZ-FE LUBRICATION: OIL PUMP: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE INFO

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

3. REMOVE FRONT WIPER ARM HEAD CAP INFO

4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

5. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

6. REMOVE HOOD TO COWL TOP SEAL INFO

7. REMOVE CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

8. REMOVE COWL TOP VENTILATOR LOUVER LH INFO

9. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

10. REMOVE OUTER COWL TOP PANEL INFO

11. REMOVE SUSPENSION TOWER DAMPER ASSEMBLY (w/ Front Strut Bar) INFO

12. REMOVE FRONT WHEEL RH

13. REMOVE ENGINE UNDER COVER LH

14. REMOVE ENGINE UNDER COVER RH

15. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

16. DRAIN ENGINE COOLANT INFO

17. DRAIN ENGINE OIL INFO

18. REMOVE CENTER EXHAUST PIPE ASSEMBLY INFO

19. REMOVE FRONT EXHAUST PIPE ASSEMBLY INFO

20. REMOVE V-RIBBED BELT INFO

21. REMOVE GENERATOR ASSEMBLY INFO

22. DISCONNECT NO. 1 RADIATOR HOSE INFO

23. DISCONNECT OUTLET HEATER WATER HOSE INFO

24. DISCONNECT INLET HEATER WATER HOSE INFO

25. SEPARATE RADIATOR RESERVE TANK ASSEMBLY INFO

26. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

27. REMOVE THROTTLE BODY ASSEMBLY INFO

28. REMOVE IGNITION COIL ASSEMBLY INFO

29. REMOVE SPARK PLUG INFO

30. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

31. REMOVE ENGINE OIL LEVEL DIPSTICK

32. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE INFO

33. REMOVE FUEL MAIN TUBE INFO

34. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

35. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY INFO

36. REMOVE INTAKE MANIFOLD INFO

37. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR INFO

38. REMOVE MANIFOLD STAY INFO

39. REMOVE NO. 2 MANIFOLD STAY INFO

40. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

41. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY INFO

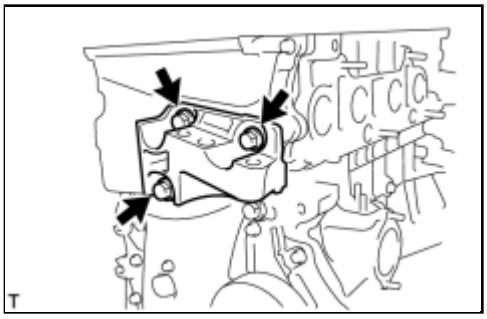
42. REMOVE ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH INFO

43. REMOVE IDLER PULLEY SUB-ASSEMBLY INFO

44. REMOVE OIL PAN SUB-ASSEMBLY INFO

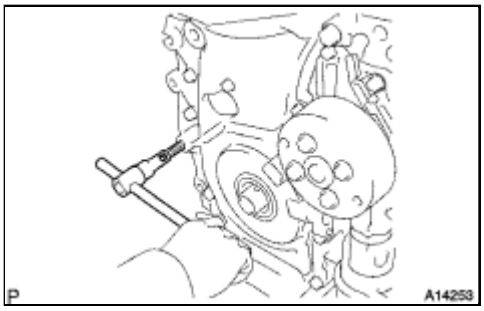
45. SET NO. 1 CYLINDER TO TDC / COMPRESSION INFO

46. REMOVE CRANKSHAFT PULLEY INFO



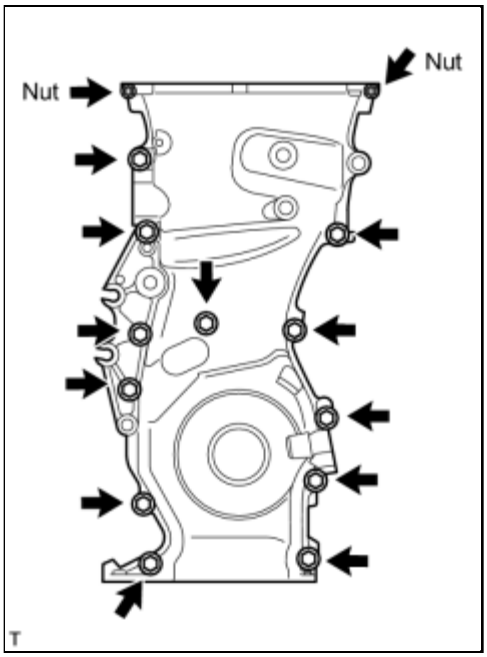
47. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO

48. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY INFO



49. REMOVE CRANKSHAFT POSITION SENSOR INFO

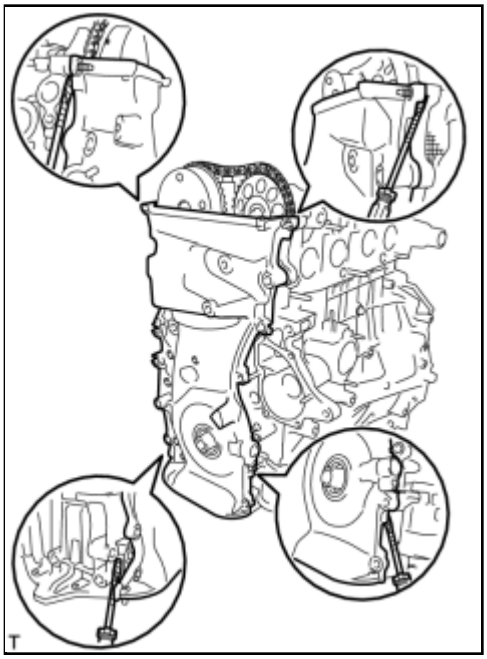
50. REMOVE TIMING CHAIN OR BELT COVER SUB-ASSEMBLY



(a) Remove the 3 bolts and transverse engine engine

mounting bracket.

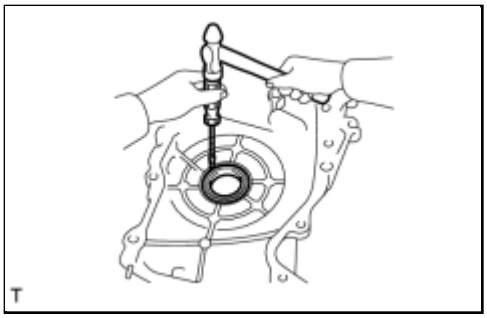
(b) Using an E10 "TORX" socket, remove the stud bolt for the V-ribbed belt tensioner.



(c) Remove the 12 bolts and 2 nuts.

(d) Remove the timing chain cover by prying the portions between the timing chain cover, cylinder head and cylinder block with a screwdriver.

NOTICE:



Be careful not to damage the contact surfaces of the timing chain cover, cylinder head and cylinder block.

HINT:

Tape the screwdriver tip before use.

51. REMOVE TIMING CHAIN COVER OIL SEAL

(a) Place the timing chain cover on wooden blocks.

(b) Using a screwdriver, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole.

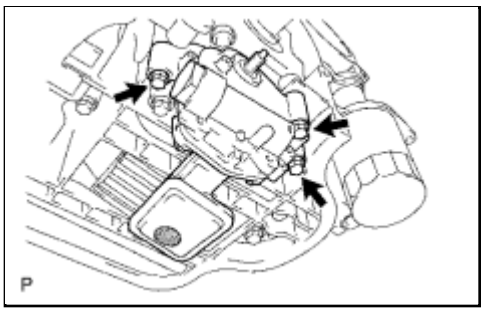
HINT:

Tape the screwdriver tip before use.

52. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

53. REMOVE TIMING CHAIN GUIDE INFO

54. REMOVE CHAIN TENSIONER SLIPPER INFO



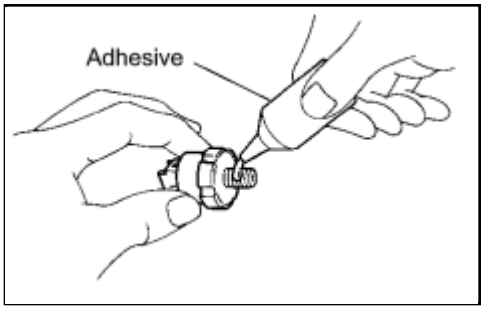
55. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO

56. REMOVE CHAIN SUB-ASSEMBLY

57. REMOVE CRANKSHAFT TIMING GEAR OR SPROCKET INFO

58. REMOVE NO. 2 CHAIN SUB-ASSEMBLY INFO

59. REMOVE OIL PUMP ASSEMBLY



(a) Remove the 3 bolts, oil pump and gasket.

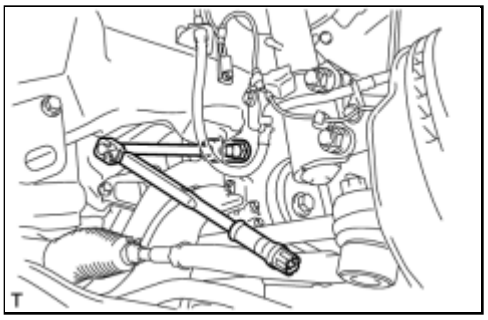
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002ZA501YX
Title: 2ZR-FE LUBRICATION: OIL PRESSURE SWITCH: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Apply adhesive to the end 2 or 3 threads on the oil pressure switch.

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

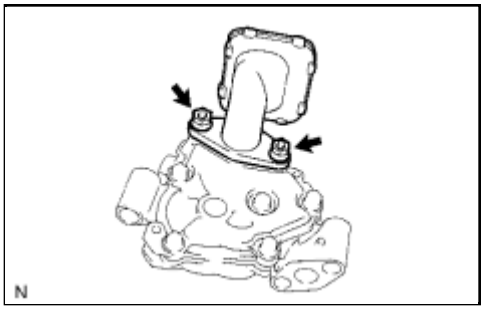
(b) Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque: 15 N·m (153 kgf·cm, 11ft·lbf)

NOTICE:

Do not start the engine for at least 1 hour after installation.

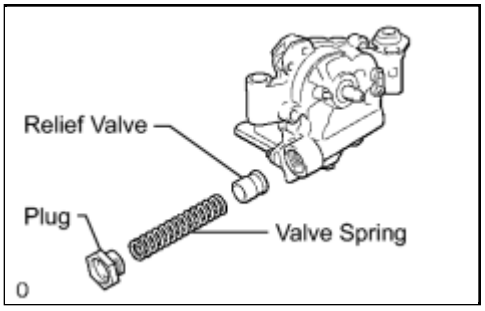
(c) Connect the oil pressure switch connector.



2. INSPECT FOR OIL LEAK

3. INSTALL FRONT WHEEL RH INFO

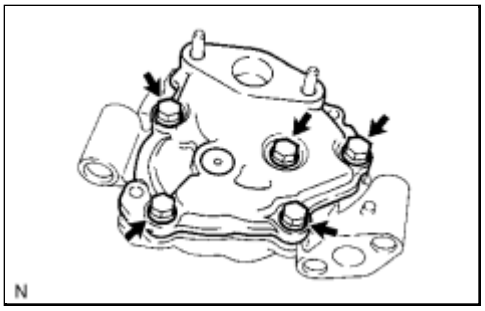
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R0N014X
Title: 2AZ-FE LUBRICATION: OIL PUMP: DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

1. REMOVE OIL PUMP STRAINER

(a) Remove the 2 nuts, oil pump strainer and gasket.

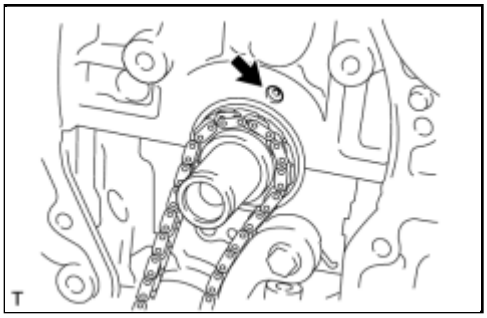


2. REMOVE OIL PUMP RELIEF VALVE

(a) Using a 27 mm socket wrench, remove the plug.

(b) Remove the valve spring and relief valve.

3. REMOVE OIL PUMP COVER

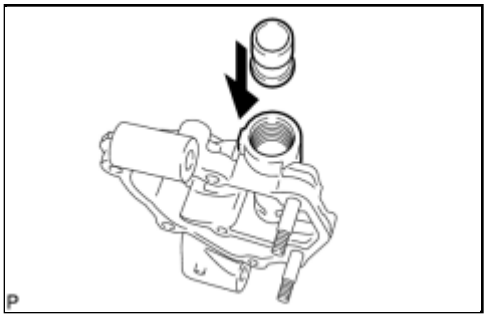


(a) Remove the 5 bolts and oil pump cover.

(b) Remove the oil pump drive and driven rotors from the oil pump.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R0K01EX
Title: 2AZ-FE LUBRICATION: OIL PUMP: INSPECTION (2010 Corolla)		

INSPECTION



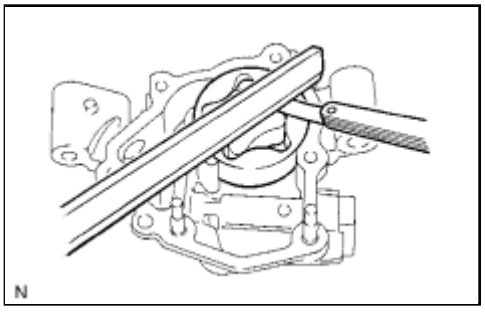
1. INSPECT OIL JET

(a) Check the oil jet for damage or clogging.

If necessary, repair the cylinder block.

2. INSPECT OIL PUMP RELIEF VALVE

(a) Check the relief valve.

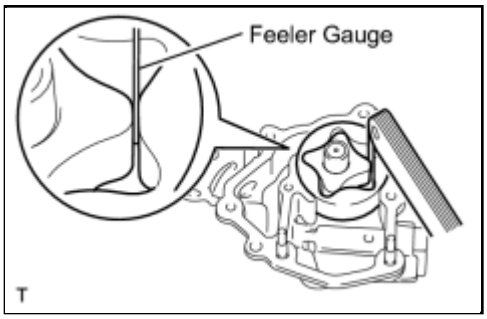


(1) Coat the valve with engine oil, and then check that the valve falls smoothly into the valve hole by its own weight.

If it does not, replace the relief valve.

If necessary, replace the oil pump assembly.

3. INSPECT OIL PUMP ROTOR

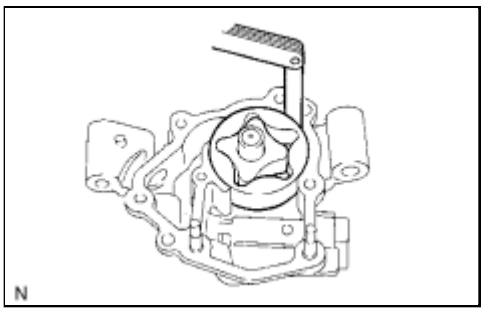


(a) Check the side clearance.

(1) Using a feeler gauge and precision straightedge, measure the clearance between the rotors and precision straightedge.

Standard clearance:
0.030 to 0.085 mm (0.00118 to 0.00335 in.)
Maximum clearance:
0.160 mm (0.00630 in.)

If the side clearance is greater than the maximum, replace the oil pump assembly.



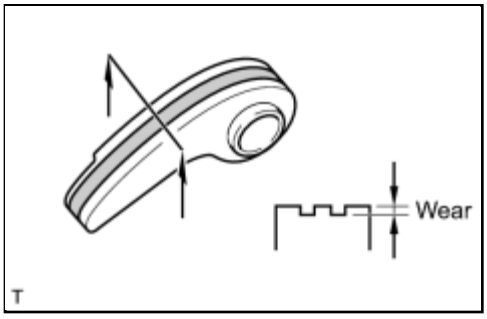
(b) Check the tip clearance.

(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard clearance:
0.080 to 0.160 mm (0.00315 to 0.00630 in.)
Maximum clearance:
0.35 mm (0.0138 in.)

If the tip clearance is greater than the maximum, replace the oil pump assembly.

(c) Check the body clearance.



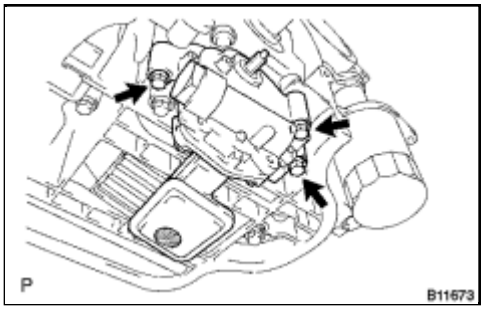
(1) Using a feeler gauge, measure the clearance between the driven rotor and pump body.

Standard clearance:
0.100 to 0.170 mm (0.00394 to 0.00669 in.)
Maximum clearance:
0.325 mm (0.0128 in.)

If the body clearance is greater than the maximum, replace the oil pump assembly.

4. INSPECT NO. 2 CHAIN SUB-ASSEMBLY INFO

5. INSPECT CHAIN TENSIONER PLATE



(a) Measure the chain tensioner plate wear.

Maximum wear:
0.5 mm (0.0197 in.)
If the wear is greater than the maximum, replace the chain tensioner plate.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R0J01IX
Title: 2AZ-FE LUBRICATION: OIL PUMP: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL OIL PUMP ASSEMBLY

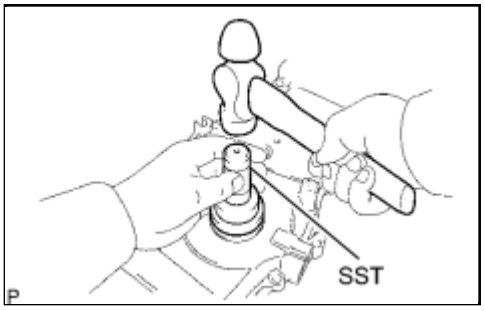
(a) Install a new gasket and the oil pump with the 3 bolts.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

2. INSTALL NO. 2 CHAIN SUB-ASSEMBLY INFO

3. INSTALL CRANKSHAFT TIMING GEAR OR SPROCKET INFO

4. INSTALL NO. 1 CHAIN VIBRATION DAMPER INFO



5. INSTALL CHAIN SUB-ASSEMBLY INFO

6. INSTALL CHAIN TENSIONER SLIPPER INFO

7. INSTALL TIMING CHAIN GUIDE INFO

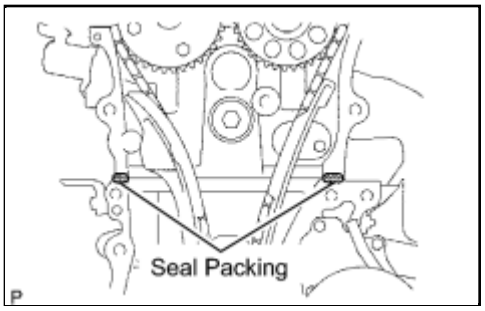
8. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

9. INSTALL TIMING CHAIN COVER OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.

SST: 09223-22010

NOTICE:



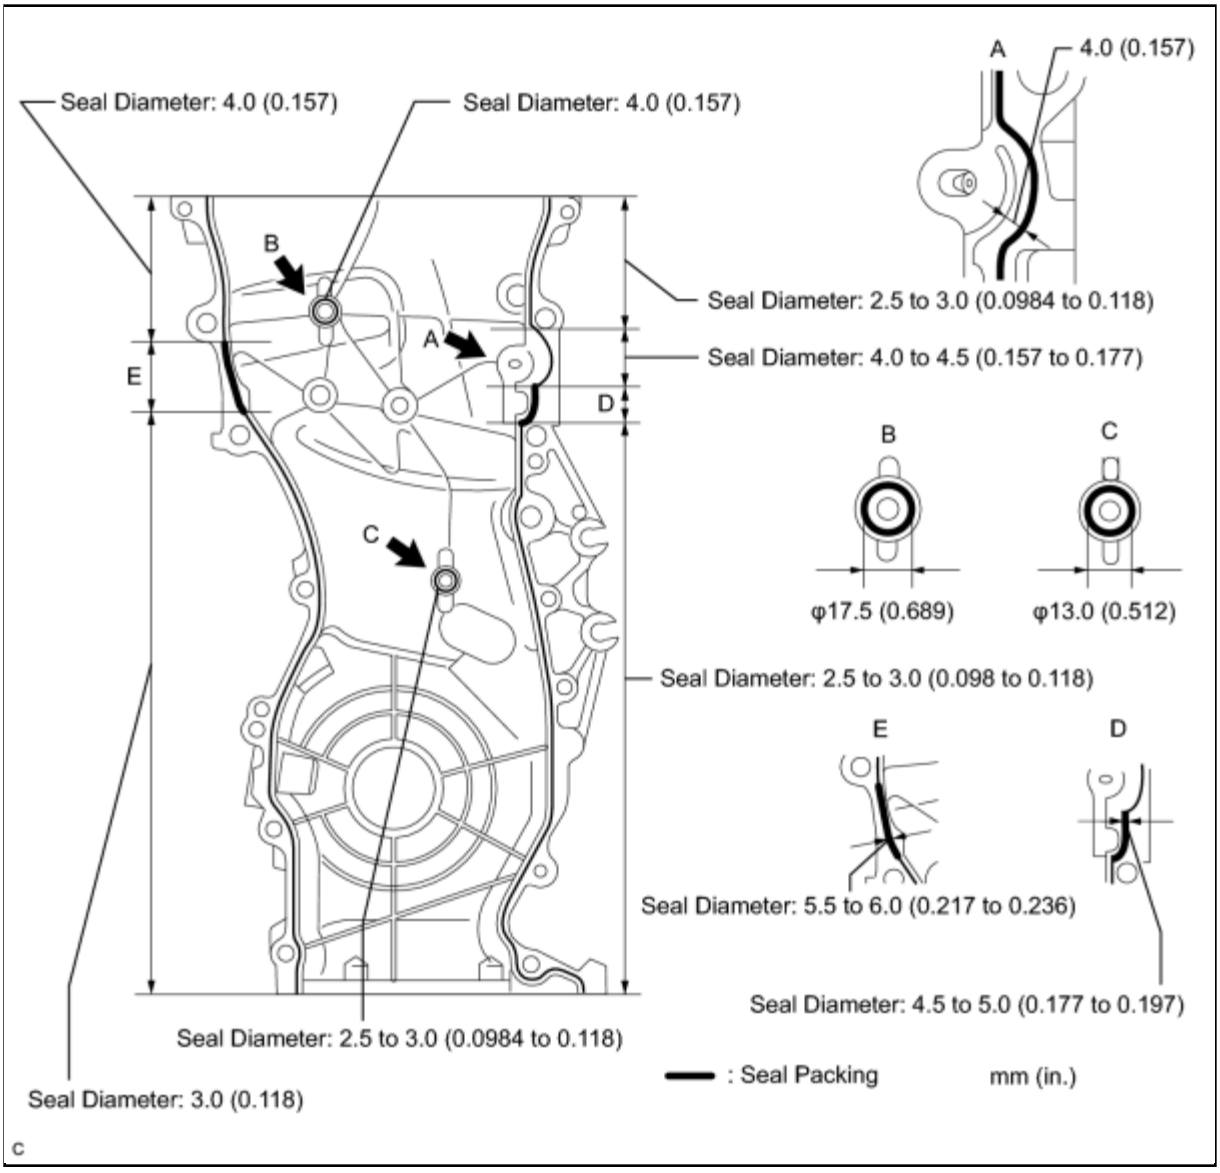
- Keep the lip free from foreign matter.
- Do not tap the oil seal at an angle.

(b) Apply MP grease to the lip of the oil seal.

10. INSTALL TIMING CHAIN OR BELT COVER SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the

timing chain cover, cylinder head and cylinder block.



(b) Apply seal packing (Diameter 4.0 to 4.5 mm (0.157 to 0.177 in.)) as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

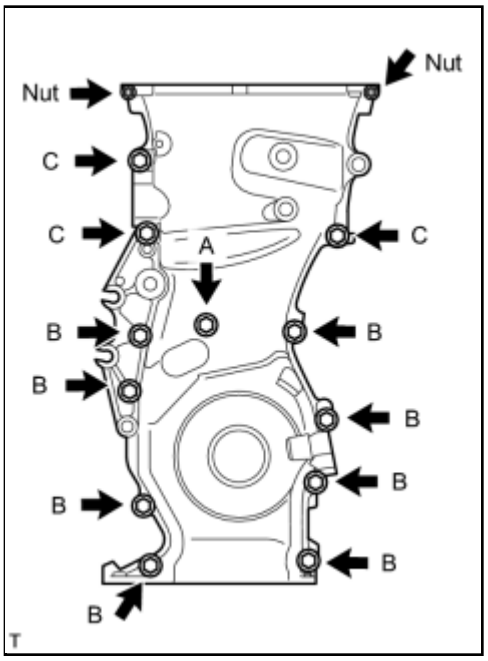
NOTICE:

- Remove any oil from the contact surfaces.
- Install the chain cover within 3 minutes of applying seal packing.
- Do not add engine oil for at least 2 hours after installing the chain cover.

(c) Apply a continuous bead of seal packing as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

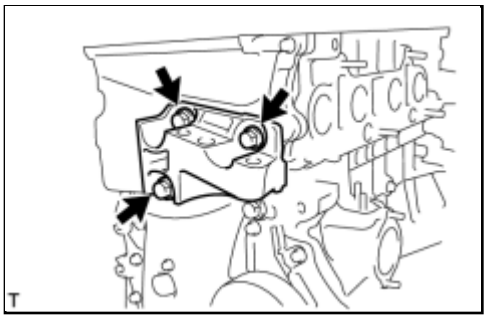


NOTICE:

- Remove any oil from the contact surface.
- Install the chain cover within 3 minutes of applying seal packing.
- Do not add engine oil for at least 2 hours after installing the chain cover.

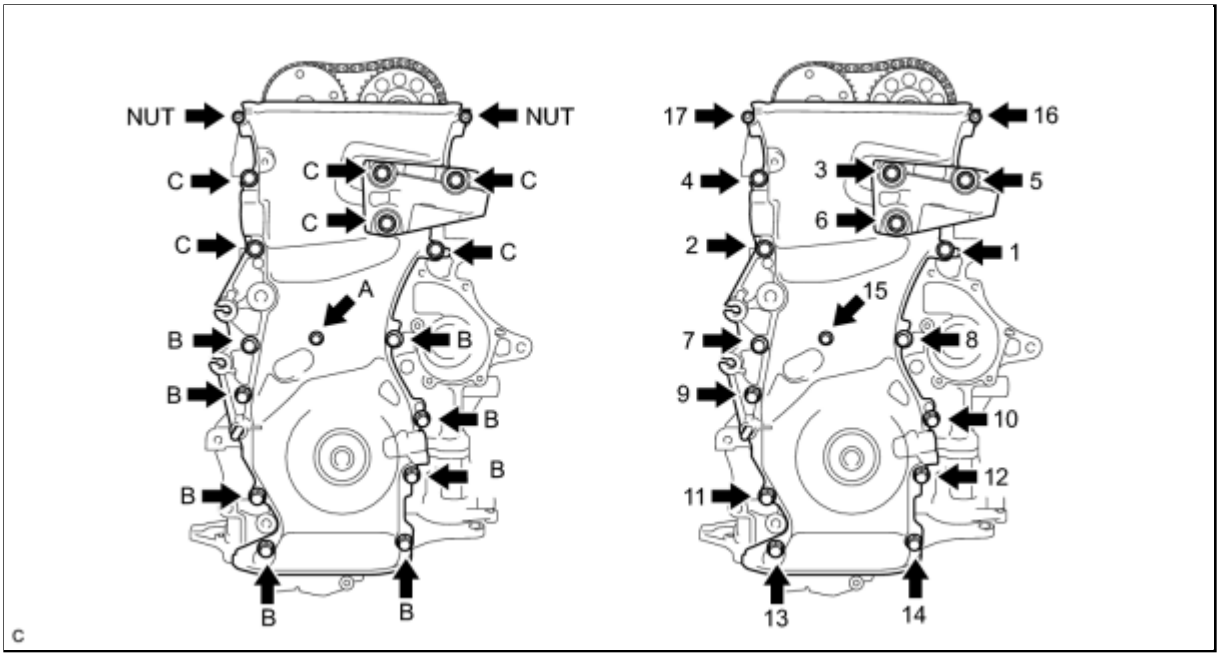
(d) Apply adhesive to the threads of the bolt A.

Seal packing:



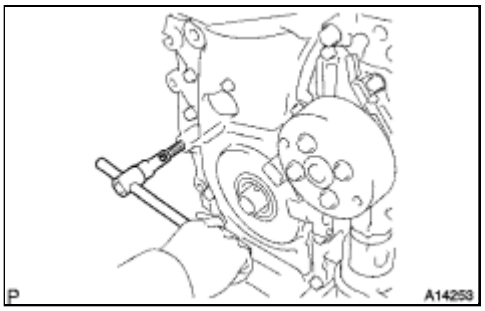
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(e) Temporarily install the timing chain cover with the 12 bolts and 2 nuts.



Bolt length:

ITEM	LENGTH
Bolt A	30 mm (1.18 in.) length for 10 mm head
Bolt B	30 mm (1.18 in.) length for 12 mm head
Bolt C	40 mm (1.57 in.) length for 14 mm head



(f) Temporarily install the engine transverse engine engine mounting bracket with the 3 bolts.

(g) Fully tighten the timing chain cover with the 15 bolts and 2 nuts as shown in the illustration.

Bolt A - Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)
Bolt B - Torque: 25 N·m (255 kgf·cm, 18ft·lbf)
Bolt C - Torque: 55 N·m (561 kgf·cm, 41ft·lbf)
Nut - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

(h) Using an E10 "TORX" socket, install the stud bolt for the V-ribbed belt tensioner.

Torque: 22 N·m (220 kgf·cm, 16ft·lbf)

11. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY INFO

12. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY INFO

13. INSTALL CRANKSHAFT PULLEY INFO

14. INSTALL OIL PAN SUB-ASSEMBLY INFO

15. INSTALL CRANKSHAFT POSITION SENSOR INFO

16. INSTALL IDLER PULLEY SUB-ASSEMBLY INFO

17. INSTALL ENGINE MOUNTING INSULATOR SUB-ASSEMBLY RH INFO

18. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY INFO

19. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

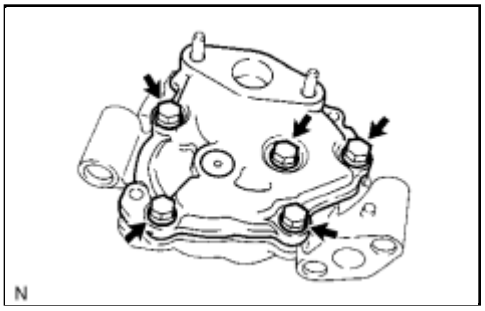
Title: 2AZ-FE LUBRICATION: OIL PUMP: REASSEMBLY (2010 Corolla)		

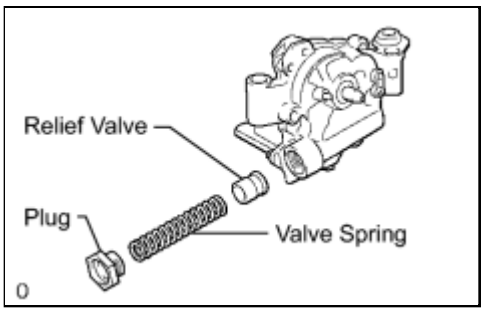


REASSEMBLY

1. INSTALL OIL PUMP COVER

(a) Coat the drive rotor and driven rotor with engine oil.

(b) Place the drive and driven rotors into the oil pump with the marks facing the pump cover side.

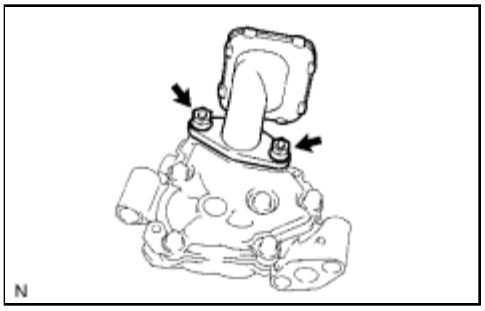


(c) Install the oil pump cover with the 5 bolts.

Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil.

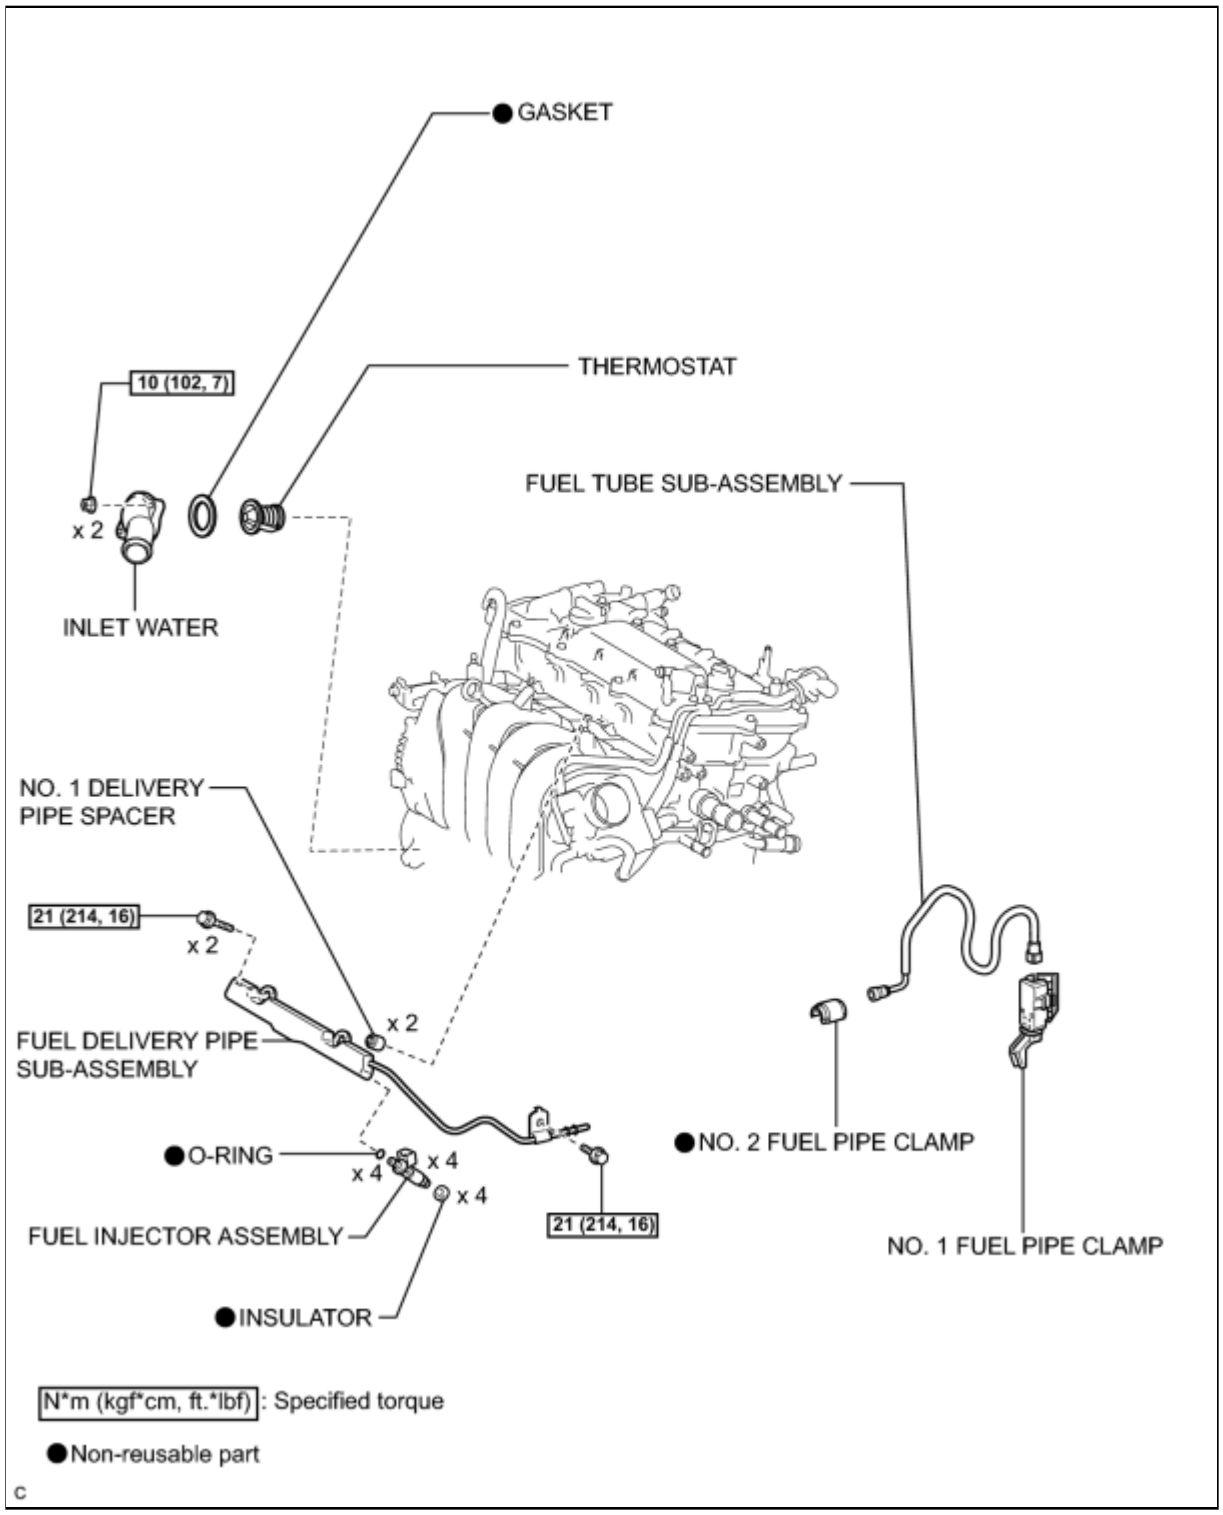


(b) Insert the relief valve and spring into the pump body hole.

(c) Using a 27 mm socket wrench, install the plug.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

3. INSTALL OIL PUMP STRAINER



(a) Install a new gasket and the oil strainer with the 2 nuts.

Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

5. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY INFO

6. REMOVE FUEL INJECTOR ASSEMBLY INFO

7. REMOVE IGNITION COIL ASSEMBLY INFO

8. REMOVE OIL LEVEL DIPSTICK SUB-ASSEMBLY INFO

9. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR INFO

10. REMOVE MANIFOLD STAY INFO

11. REMOVE EXHAUST MANIFOLD INFO

12. REMOVE VENTILATION HOSE INFO

13. DISCONNECT NO. 3 WATER BY-PASS HOSE INFO

14. REMOVE NO. 1 WATER BY-PASS PIPE INFO

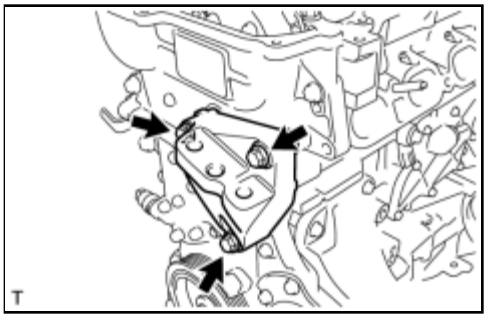
15. REMOVE WATER BY-PASS HOSE INFO

16. REMOVE INLET WATER HOSE INFO

17. REMOVE INLET WATER INFO

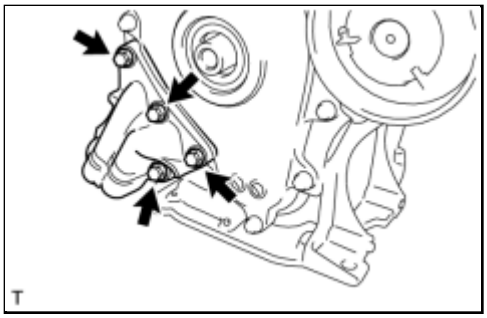
18. REMOVE THERMOSTAT INFO

19. REMOVE RADIO SETTING CONDENSER INFO



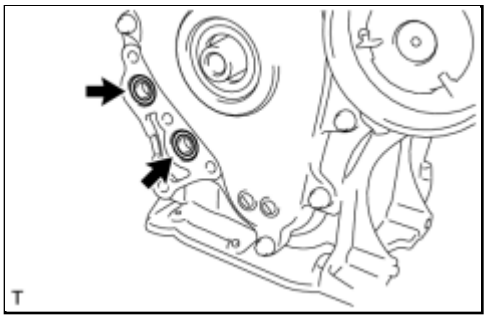
20. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY INFO

21. REMOVE NO. 1 CYLINDER TO TDC/COMPRESSION INFO



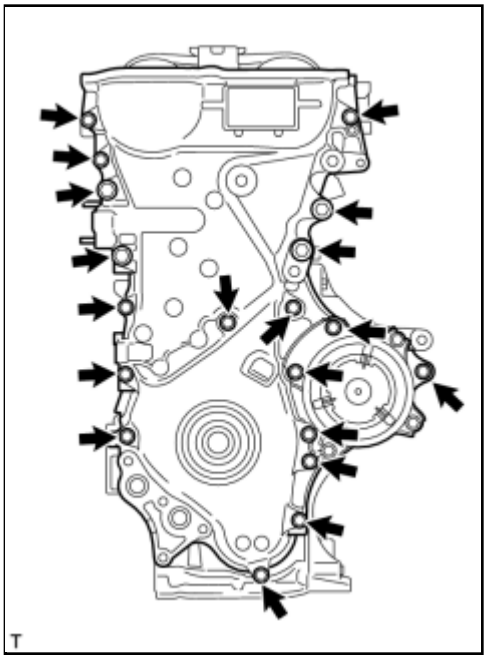
22. REMOVE CRANKSHAFT PULLEY INFO

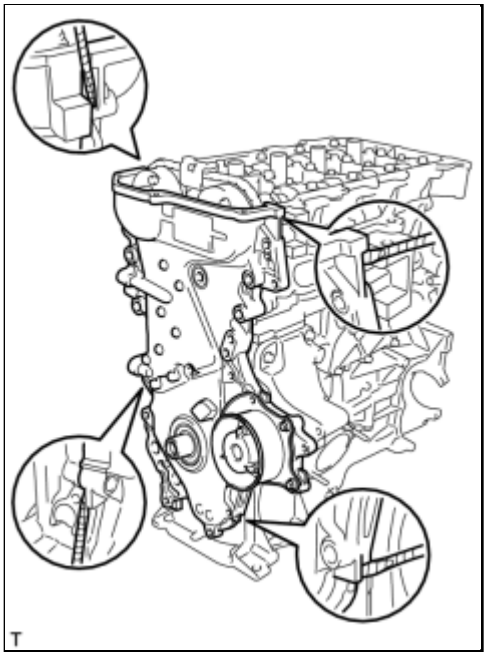
23. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY INFO



24. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

(a) Remove the 3 bolts and engine mounting bracket.



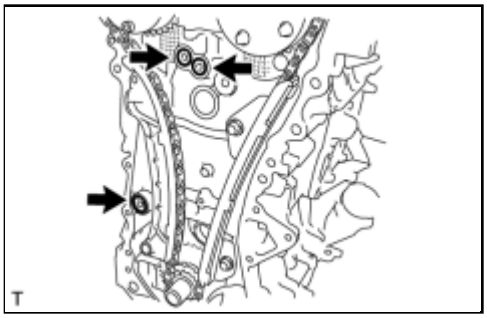


(b) Remove the 4 bolts and oil filter bracket.

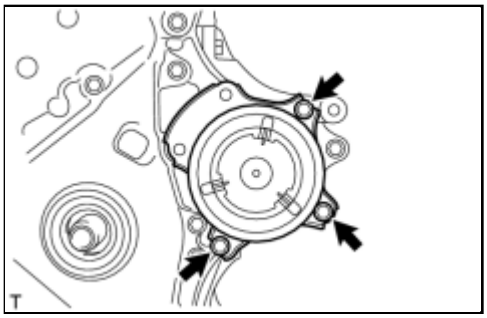
(c) Remove the 2 O-rings.

(d) Remove the 19 bolts.

(e) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.

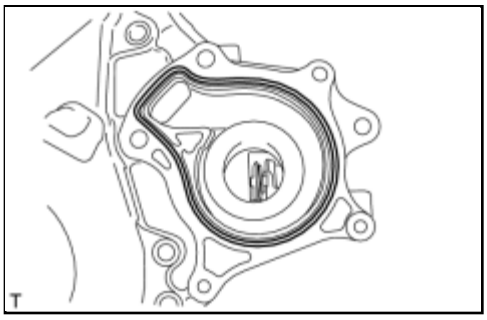


NOTICE:



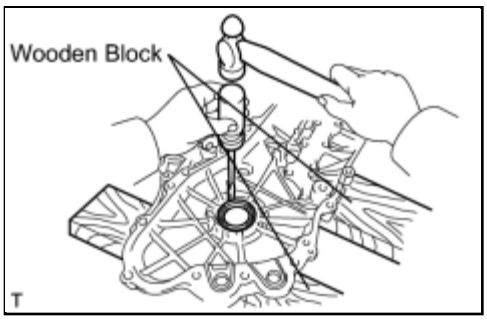
Be careful not to damage the contact surfaces of the timing chain cover, cylinder block, and cylinder head.

HINT:



Tape the screwdriver tip before use.

(f) Remove the 3 O-rings.



(g) Remove the 3 bolts and water pump.

(h) Remove the gasket.

25. REMOVE TIMING CHAIN COVER OIL SEAL

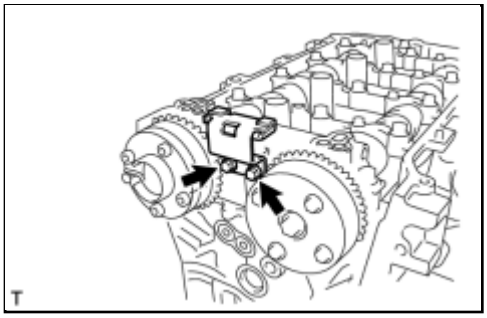
(a) Place the timing chain cover on wooden blocks.

(b) Using a screwdriver and a hammer, pry out the oil seal.

NOTICE:

Do not damage the surface of the oil seal press fit hole.

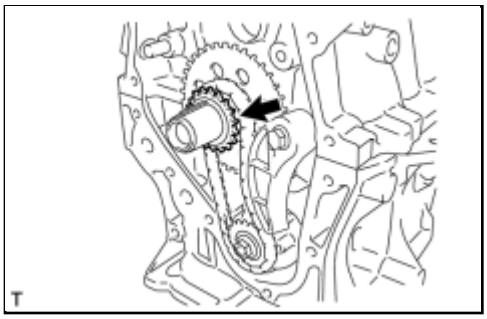
HINT:



Tape the screwdriver tip before use.

26. REMOVE CHAIN TENSIONER SLIPPER INFO

27. REMOVE NO. 1 CHAIN VIBRATION DAMPER INFO



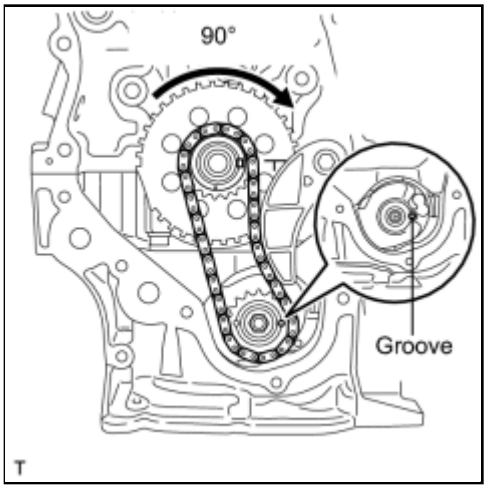
28. REMOVE CHAIN SUB-ASSEMBLY INFO

29. REMOVE NO. 2 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and No. 2 chain vibration damper.

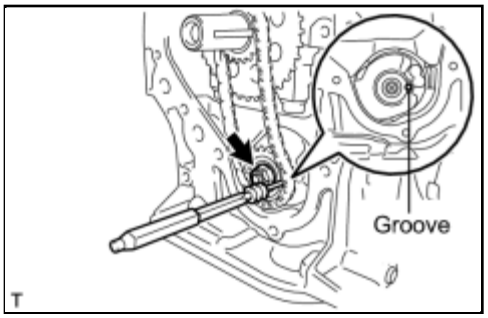
30. REMOVE CRANKSHAFT TIMING SPROCKET

(a) Remove the crankshaft timing sprocket.



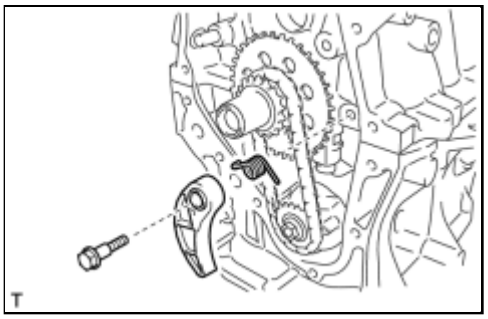
31. REMOVE NO. 2 CHAIN SUB-ASSEMBLY

(a) Temporarily tighten the crank pulley bolt.



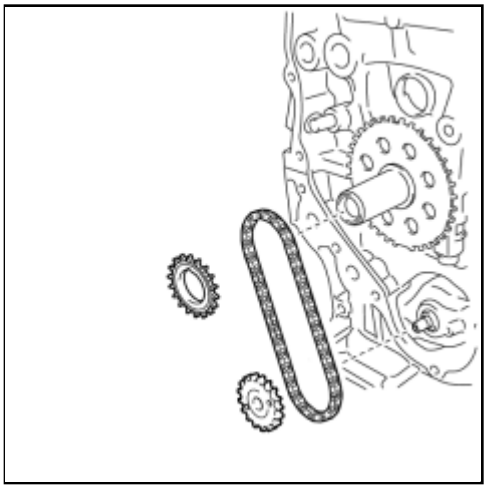
(b) Turn the crankshaft 90° clockwise to align the adjusting hole of the oil pump drive shaft sprocket with the groove of the oil pump.

NOTICE:

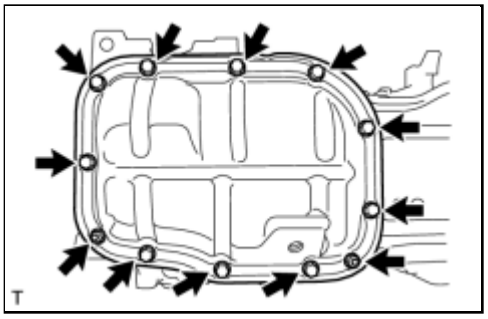


Do not rotate the crankshaft more than 90°. If the crankshaft is rotated too much without the timing chain installed, the valves may hit the pistons and cause damage.

(c) Remove the crank pulley bolt.

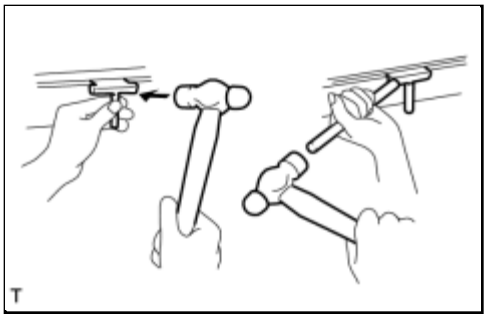


(d) Insert a 3 mm diameter bar into the adjusting hole of the oil pump drive shaft sprocket to lock the gear in position, and then remove the nut.



(e) Remove the bolt, chain tensioner plate, and spring.

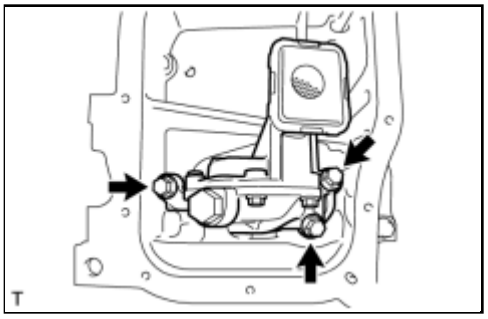
(f) Remove the crankshaft timing sprocket, oil pump drive shaft gear, and No. 2 chain sub-assembly.



32. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

33. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove the 10 bolts and 2 nuts.

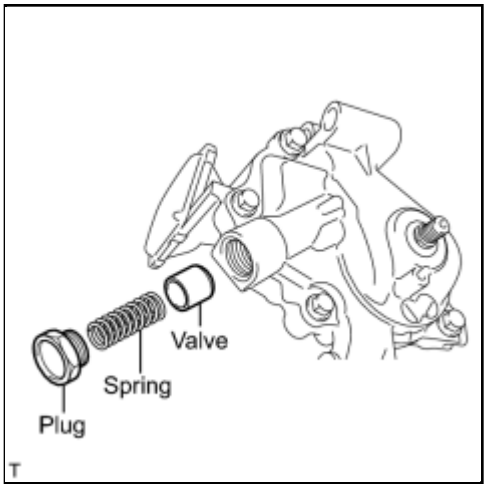


(b) Insert the blade of oil pan seal cutter between the crankcase and oil pan. Cut through the sealer and remove the oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the crankcase and oil pan.

34. REMOVE OIL PUMP ASSEMBLY



(a) Remove the 3 bolts and oil pump.

T

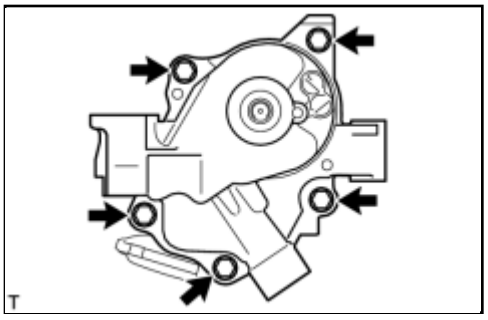
Title: 2ZR-FE LUBRICATION: OIL PUMP: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

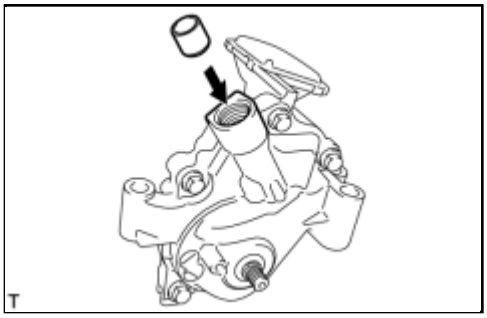


1. REMOVE OIL PUMP RELIEF VALVE

(a) Using a 27 mm socket wrench, remove the plug.

(b) Remove the valve spring and relief valve.

2. REMOVE OIL PUMP COVER SUB-ASSEMBLY

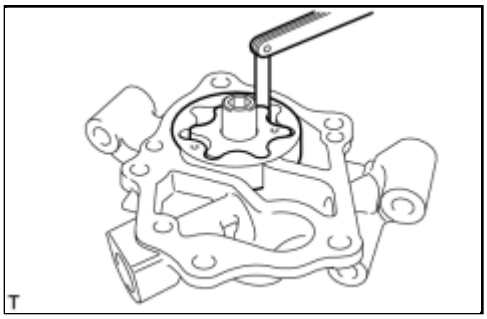


(a) Remove the 5 bolts and oil pump cover.

(b) Remove the oil pump drive and driven rotors from the oil pump.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000025 9I01KX
Title: 2ZR-FE LUBRICATION: OIL PUMP: INSPECTION (2010 Corolla)		

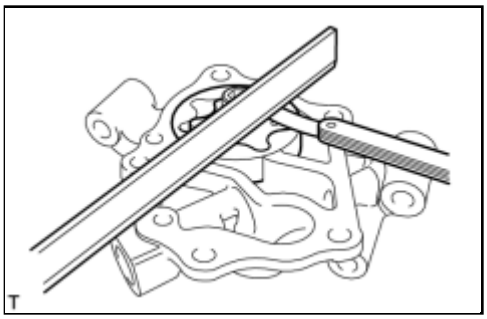
INSPECTION



1. INSPECT OIL PUMP RELIEF VALVE

(a) Coat the oil pump relief valve with engine oil, then check that it falls smoothly into the valve hole by its own weight.

If this does not occur, replace the oil pump.

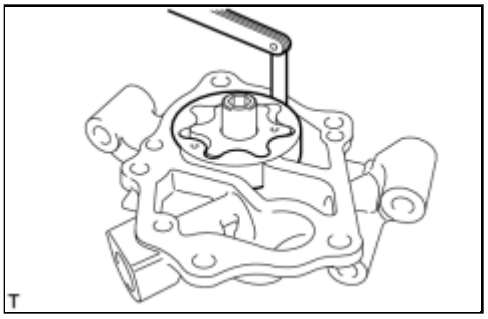


2. INSPECT OIL PUMP ROTOR

(a) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.

Standard tip clearance:
0.08 to 0.160 mm (0.00315 to 0.00630 in.)
Maximum tip clearance:
0.35 mm (0.0138 in.)

If the tip clearance is greater than the maximum, replace the oil pump.

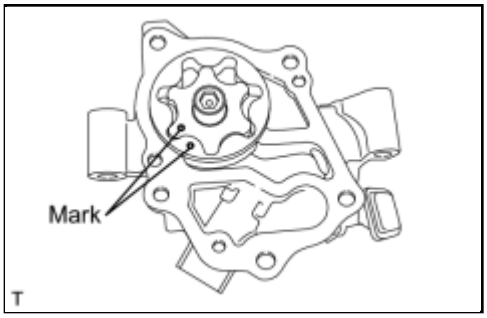


(b) Using a feeler gauge and precision straightedge, measure the clearance between the 2 rotors and precision straightedge.

Standard side clearance:
0.03 to 0.08 mm (0.00118 to 0.00315 in.)
Maximum side clearance:
0.16 mm (0.00630 in.)

If the side clearance is greater than the maximum, replace the oil pump.

(c) Using a feeler gauge, measure the clearance between the driven rotor and oil pump body.



Standard body clearance:
0.12 to 0.19 mm (0.0047 to 0.0075 in.)
Maximum body clearance:
0.325 mm (0.0128 in.)

If the body clearance is greater than the maximum, replace the oil pump.

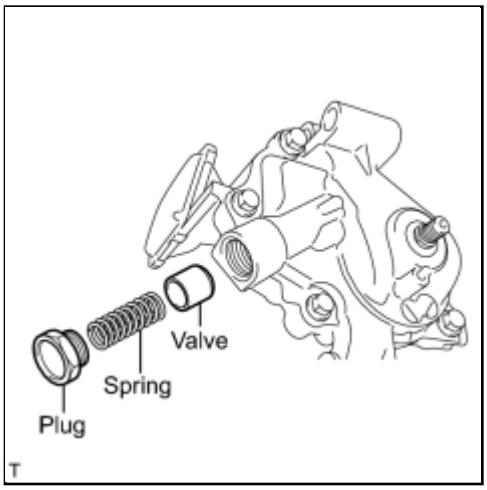
Title: 2ZR-FE LUBRICATION: OIL PUMP: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL OIL PUMP COVER SUB-ASSEMBLY



(a) Coat the oil pump drive and driven rotors with engine oil, and place them into the oil pump with the marks facing the oil pump cover side.

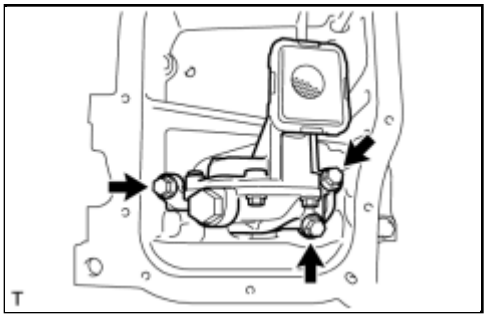
(b) Install the oil pump cover with the 5 bolts.

Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

2. INSTALL OIL PUMP RELIEF VALVE

(a) Coat the relief valve with engine oil.

(b) Insert the relief valve and spring into the pump body hole.



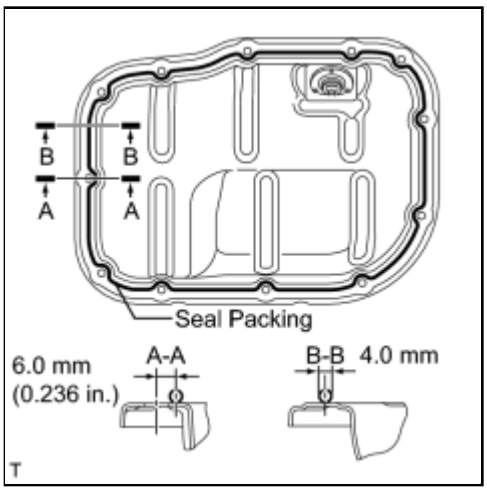
(c) Using a 27 mm socket wrench, install the plug.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002TNU010X
Title: 2ZR-FE LUBRICATION: OIL PUMP: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL OIL PUMP ASSEMBLY



(a) Install the oil pump with the 3 bolts.

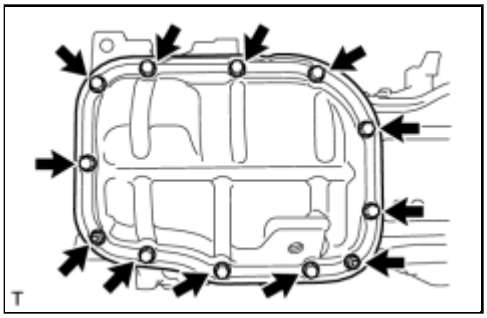
Torque: 21 N·m (214 kgf·cm, 16ft·lbf)

2. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.

(b) Apply a continuous bead of seal packing (Diameter 4.0 mm (0.157 in.)) as shown in the illustration.

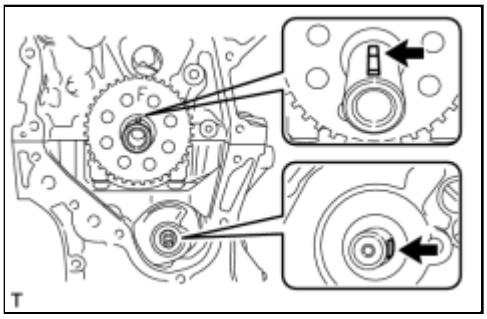
Seal packing:



Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

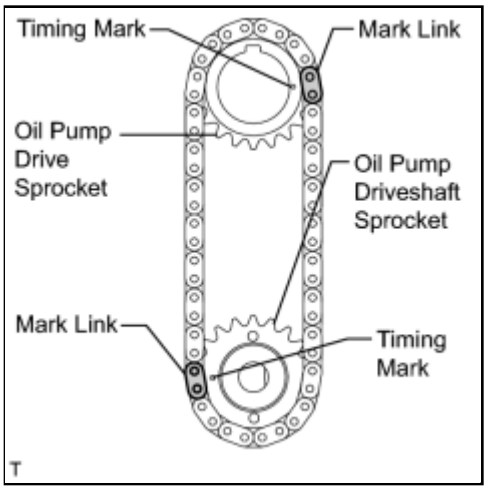
NOTICE:

- Remove any oil from the contact surfaces.
- Install the oil pan within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the oil pan.



(c) Install the No. 2 oil pan with the 10 bolts and 2 nuts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

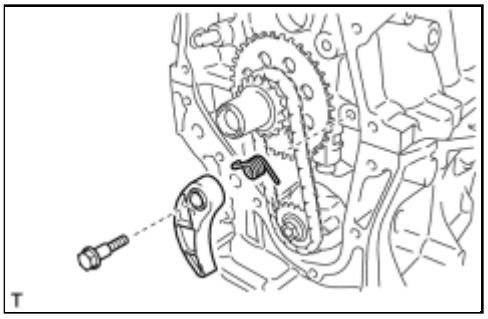


3. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE INFO

4. INSTALL NO. 2 CHAIN SUB-ASSEMBLY

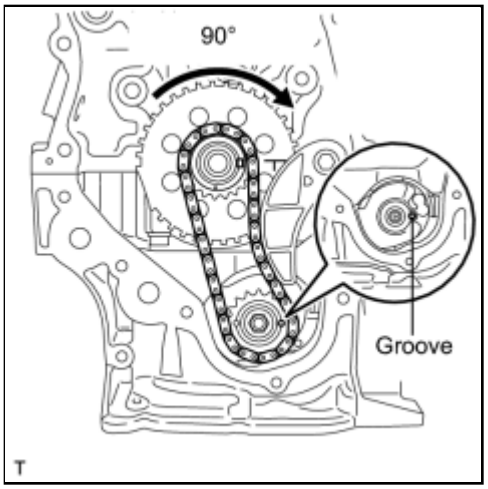
(a) Set the crankshaft key as shown in the illustration.

(b) Turn the drive shaft so that the cutout faces the right horizontal position.



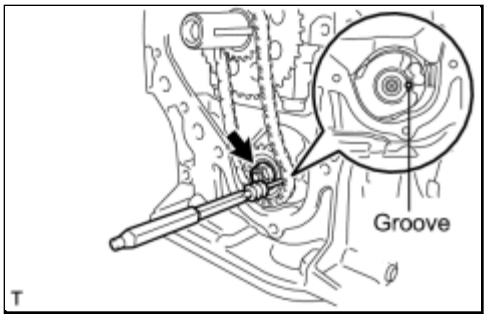
(c) Align the yellow mark links with the timing marks of each gear as shown in the illustration.

(d) Install the sprockets onto the crankshaft and oil pump shaft with the chain on the gears.



(e) Temporarily tighten the oil pump drive shaft sprocket with the nut.

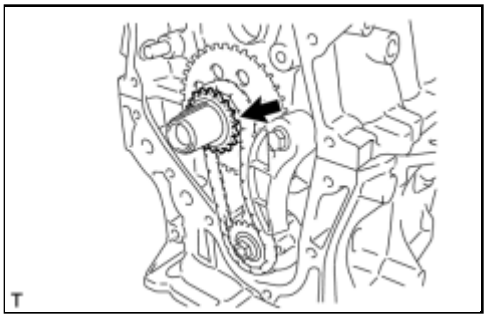
(f) Insert the damper spring into the adjusting hole, and then



install the chain tensioner plate with the bolt.

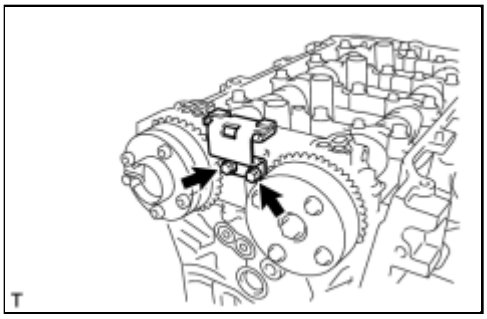
Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(g) Align the adjusting hole of the oil pump drive shaft sprocket with the groove of the oil pump.



(h) Insert a 3 mm diameter bar into the adjusting hole of the oil pump drive shaft gear to lock the gear in position, and then tighten the nut.

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)

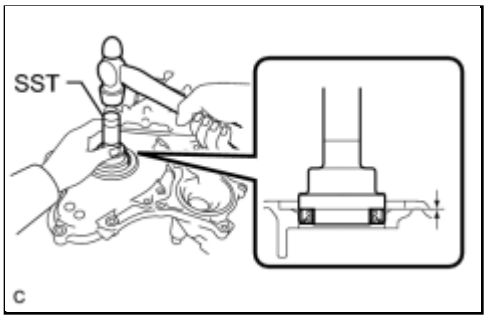


5. INSTALL CRANKSHAFT TIMING SPROCKET

(a) Install the crankshaft timing sprocket.

6. INSTALL NO. 1 CHAIN VIBRATION DAMPER INFO

7. INSTALL NO. 2 CHAIN VIBRATION DAMPER



(a) Install the No. 2 chain vibration damper with the 2 bolts.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

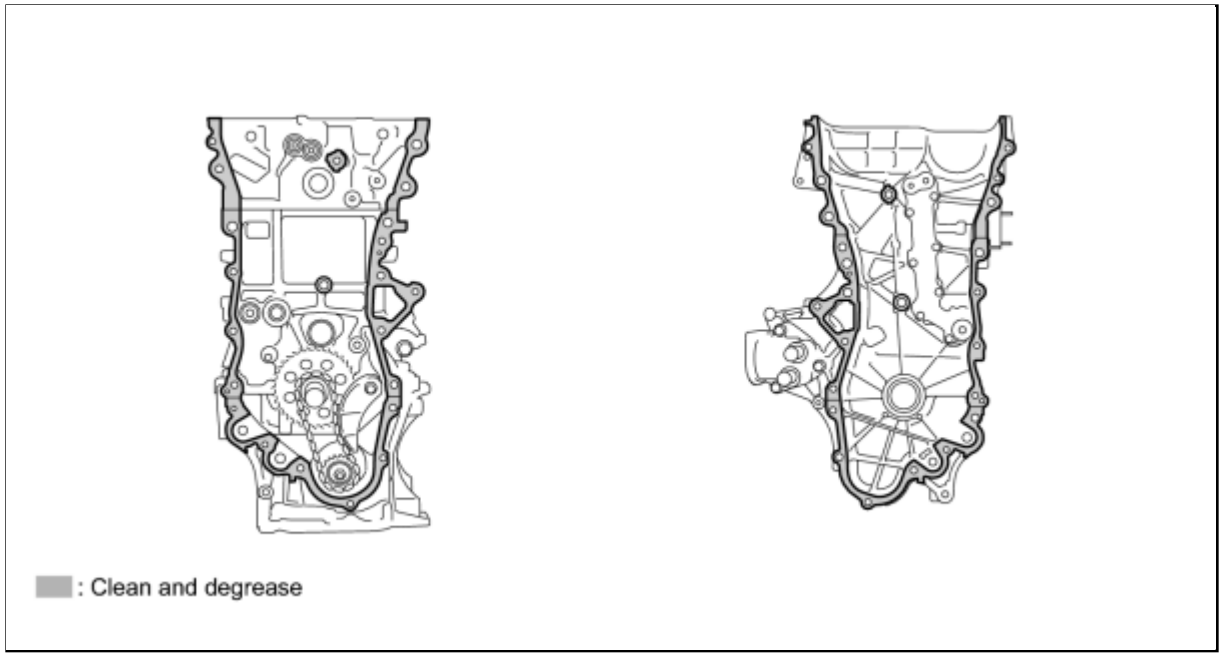
8. INSTALL CHAIN SUB-ASSEMBLY INFO

9. INSTALL CHAIN TENSIONER SLIPPER INFO

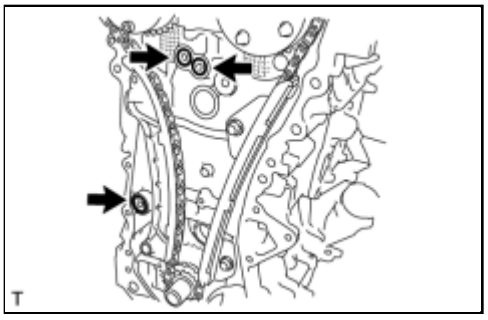
10. INSTALL TIMING CHAIN COVER OIL SEAL

(a) Using SST and a hammer, tap in a new oil seal until its surface is flush with the timing chain cover sub-assembly edge.

SST: 09223-22010



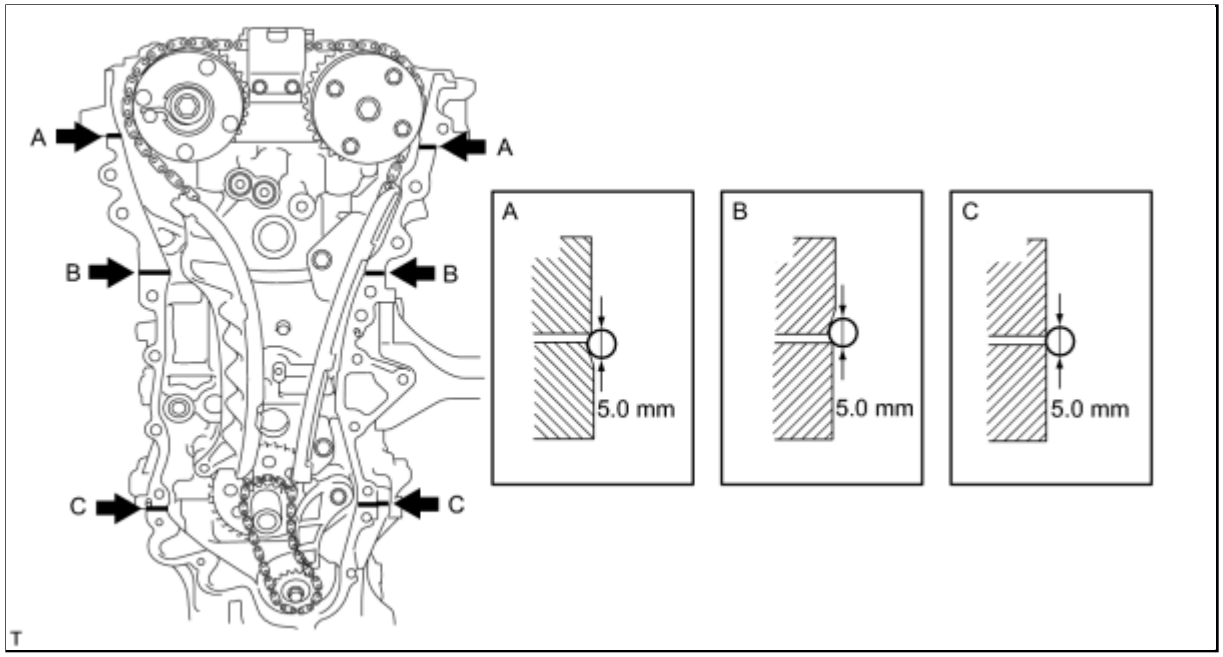
NOTICE:



- Keep the lip free from foreign matter.
- Do not tap the oil seal at an angle.

(b) Apply MP grease to the lip of the oil seal.

11. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



(a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover sub-assembly, cylinder head, and cylinder block.

(b) Install 3 new O-rings.

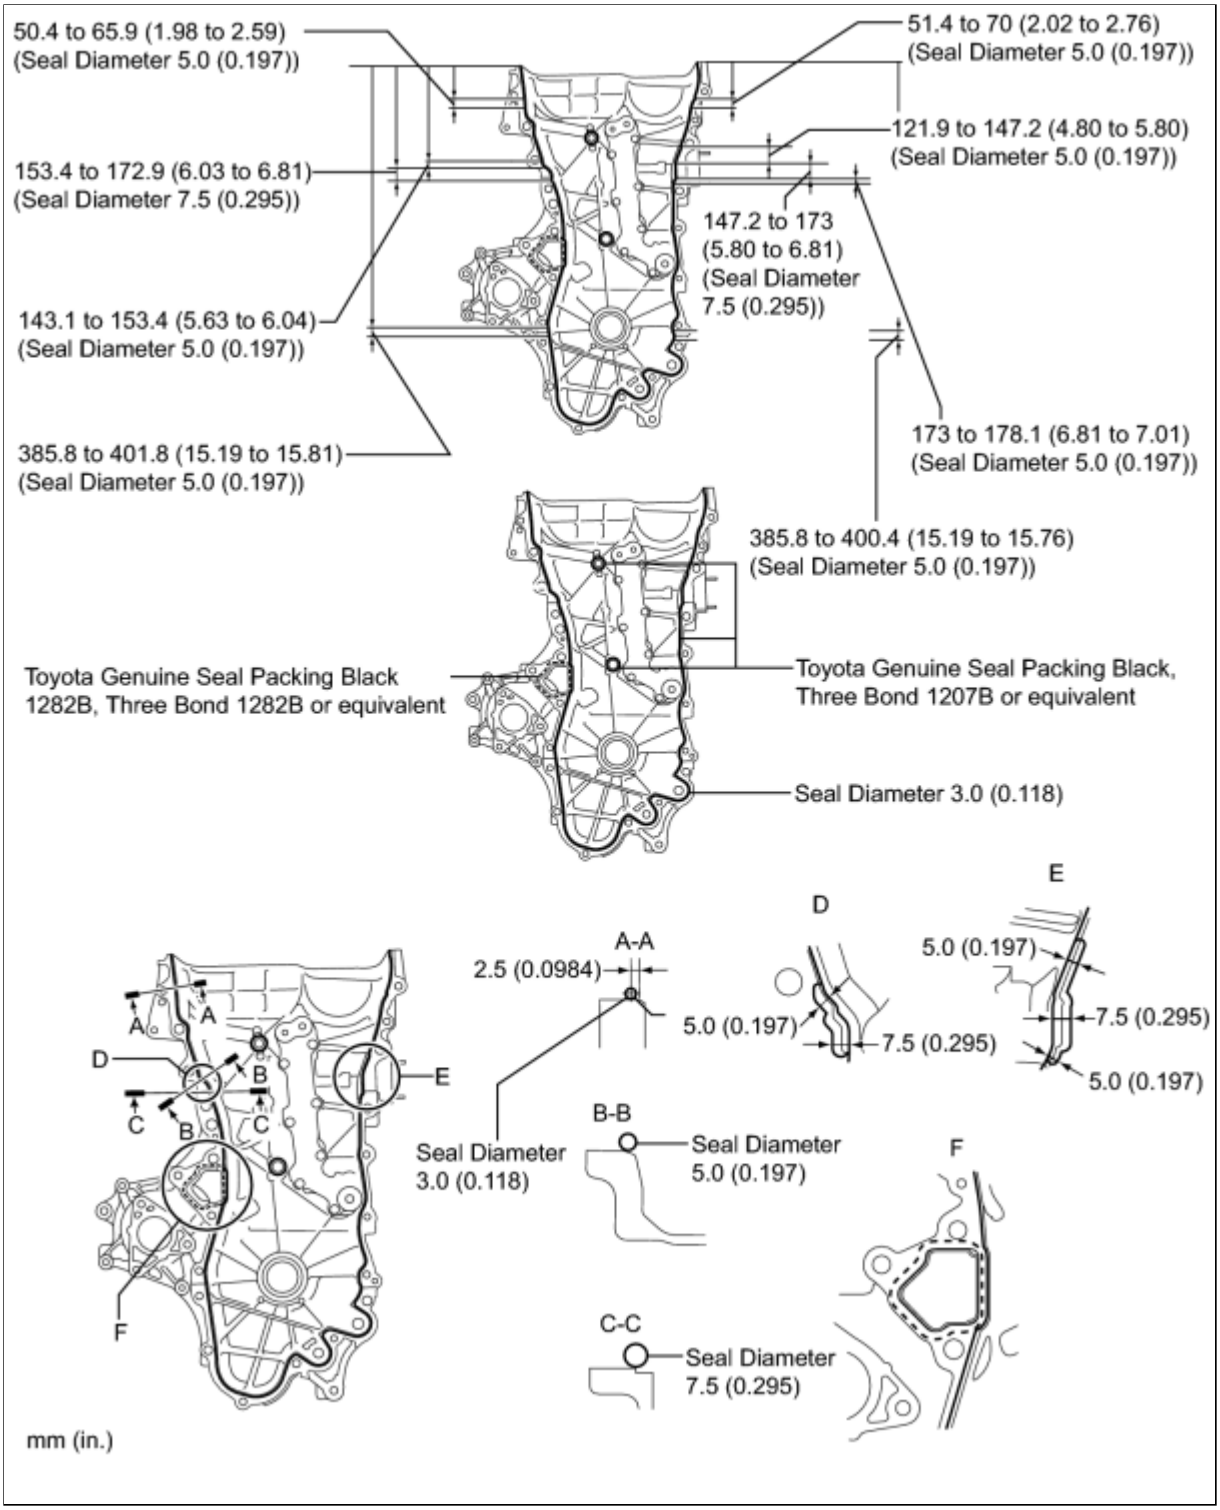
(c) Apply seal packing as shown in the illustration.

Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Seal diameter:

5.0 mm (0.196 in.)



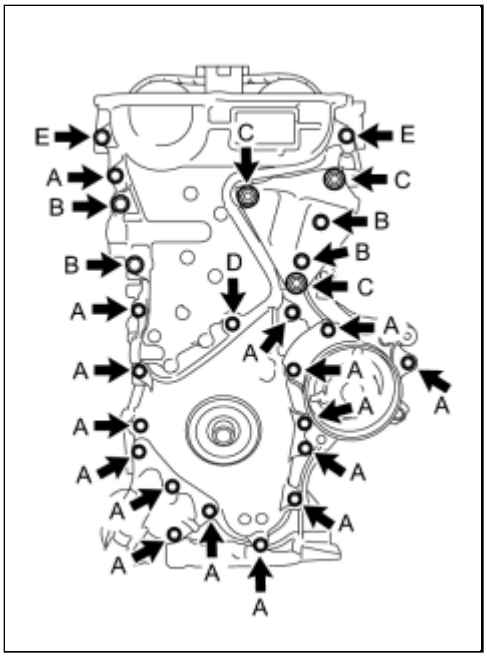
NOTICE:

- Remove any oil from the contact surfaces.
- Install the chain cover within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the timing chain cover sub-assembly.

(d) Apply seal packing to the timing chain cover sub-assembly in a continuous line as shown in the following illustration.

NOTICE:

- When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.
- Install the timing chain cover sub-assembly within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing.



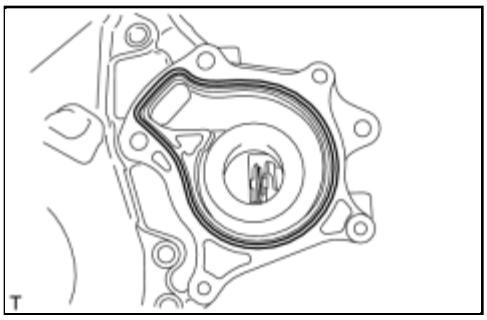
Apply Seal Packing as Follows:

AREA	SEAL PACKING DIAMETER	APPLICATION POSITION FROM INSIDE SEAL LINE	SEAL PACKING
Continuous Line Area	3.0 mm (0.118 in.)	2.5 mm (0.098 in.)	Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

AREA	SEAL PACKING DIAMETER	APPLICATION POSITION FROM INSIDE SEAL LINE	SEAL PACKING
Dashed Line Area	4.0 mm (0.156 in.)	3.0 mm (0.118 in.)	Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

(e) Apply adhesive to the threads of the bolt E.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



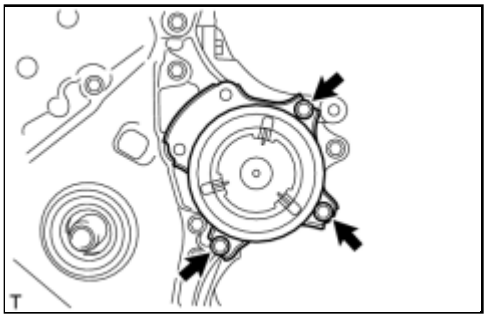
(f) Temporarily install the timing chain cover sub-assembly with 19 bolts.

NOTICE:

- Remove any oil from the contact surfaces.
- Install the chain cover within 3 minutes after applying seal packing.
- Do not start the engine for at least 2 hours after installing the timing chain cover subassembly.

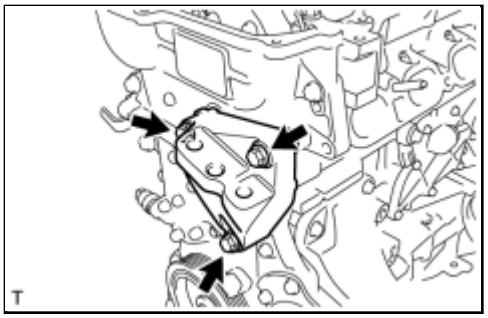
Bolt Length:

ITEM	LENGTH
Bolt A, E	35 mm (1.38 in.)
Bolt B	55 mm (2.16 in.)
Bolt C	80 mm (3.15 in.)
Bolt D	40 mm (1.57 in.)



(g) Install a new gasket.

NOTICE:

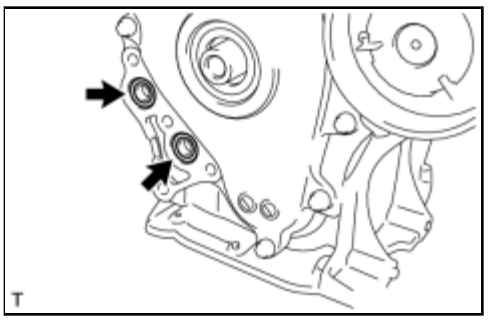


Remove any oil from the contact surfaces.

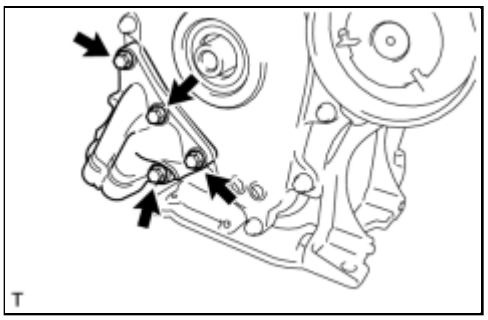
(h) Install the water pump with the 3 bolts.

Torque: 24 N·m (245 kgf·cm, 18ft·lbf)

(i) Temporarily install the engine mounting bracket with the 3 bolts.



NOTICE:



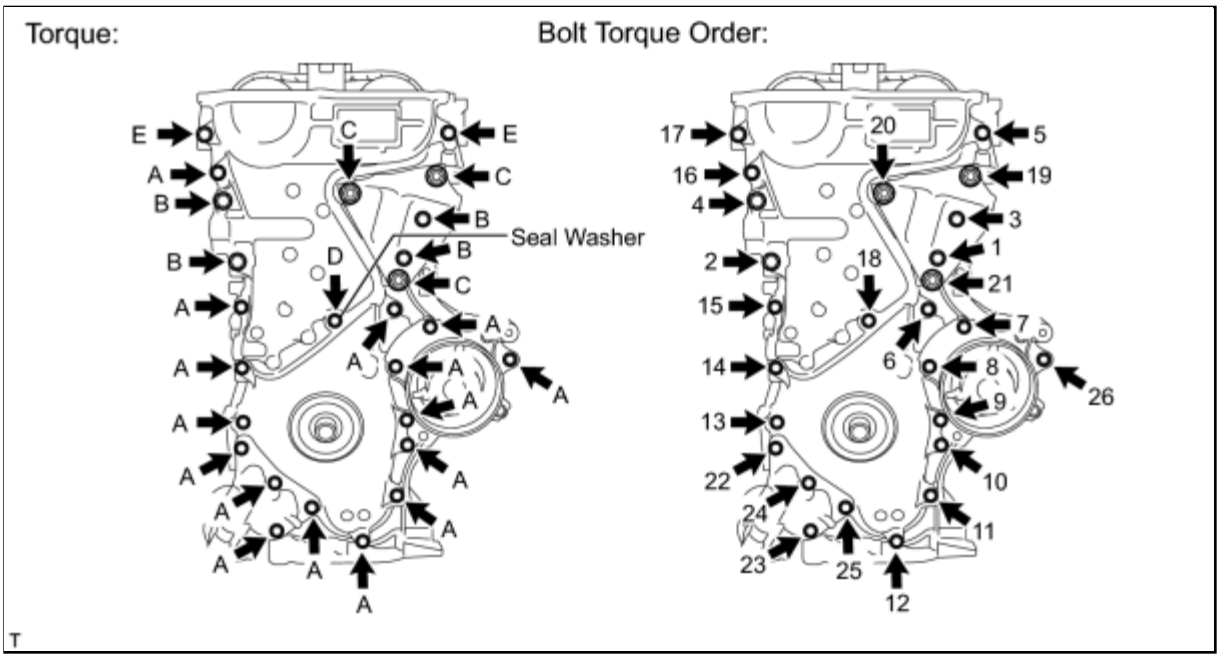
- Install the mounting bracket within 10 minutes after installing the timing chain cover sub-assembly.
- Do not start the engine for at least 2 hours after installation.

Bolt Length:

ITEM	LENGTH
Bolt	80 mm (3.15 in.)

(j) Install 2 new O-rings.

(k) Temporarily install the oil filter bracket with the 4 bolts.



NOTICE:

- Install the oil filter bracket within 10 minutes after installing the chain cover.
- Do not start the engine for at least 2 hours after installation.

Bolt Length:

ITEM	LENGTH
Bolt	35 mm (1.38 in.)

(l) Fully tighten the timing chain cover sub-assembly with the 26 bolts as shown in the illustration.

Bolt A, E - Torque: 26 N·m (260 kgf·cm, 19ft·lbf)
Bolt B, C - Torque: 51 N·m (520 kgf·cm, 37ft·lbf)
Bolt D - Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

NOTICE:

- When the contact surfaces are wet, wipe them with oil-free cloth before applying seal packing.
- Install the chain cover within 3 minutes and tighten the bolts within 15 minutes after applying the seal packing.
- Do not start the engine for at least 2 hours after installing.

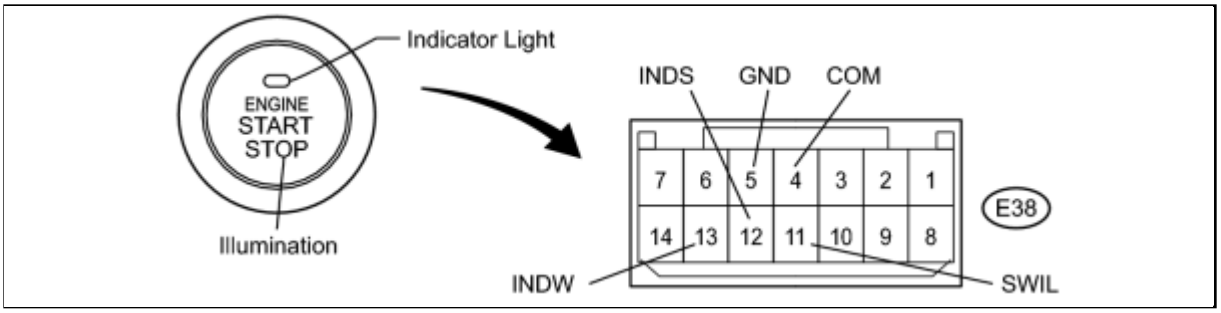
Title: 2ZR-FE STARTING: ENGINE SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT ENGINE SWITCH

(a) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
SS1 (E38-7) - GND (E38-5)	Pushed	Below 1 Ω
SS2 (E38-2) - GND (E38-5)	Pushed	Below 1 Ω
SS1 (E38-7) - GND (E38-5)	Not pushed	10 kΩ or higher
SS2 (E38-2) - GND (E38-5)	Not pushed	10 kΩ or higher

If the result is not as specified, replace the engine switch.

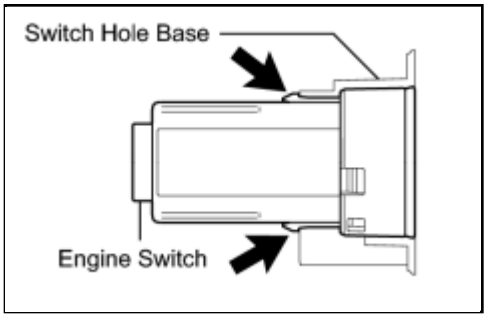
(b) Apply battery voltage between the terminals of the switch and check the illumination condition of the switch.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → SWIL (E38-11) Battery negative (-) → COM (E38-4) or GND (E38-5)	Illuminates

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → INDS (E38-12) Battery negative (-) → COM (E38-4) or GND (E38-5)	Illuminates
Battery positive (+) → INDW (E38-13) Battery negative (-) → COM (E38-4) or GND (E38-5)	Illuminates

NOTICE:



- If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator light will not illuminate.
- If the voltage is too low, the indicator light will not illuminate.

If the result is not as specified, replace the engine switch.

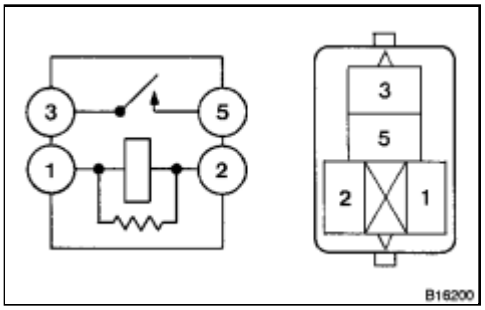
Title: 2AZ-FE STARTING: RELAY: ON-VEHICLE INSPECTION (2010 Corolla)		



ON-VEHICLE INSPECTION

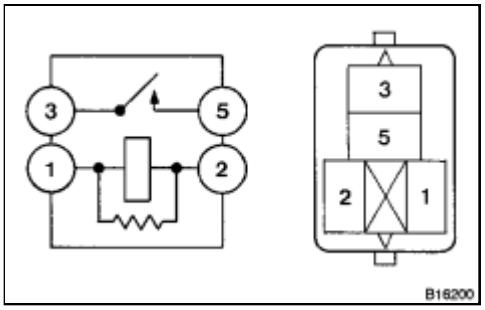
1. INSPECT STARTER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω



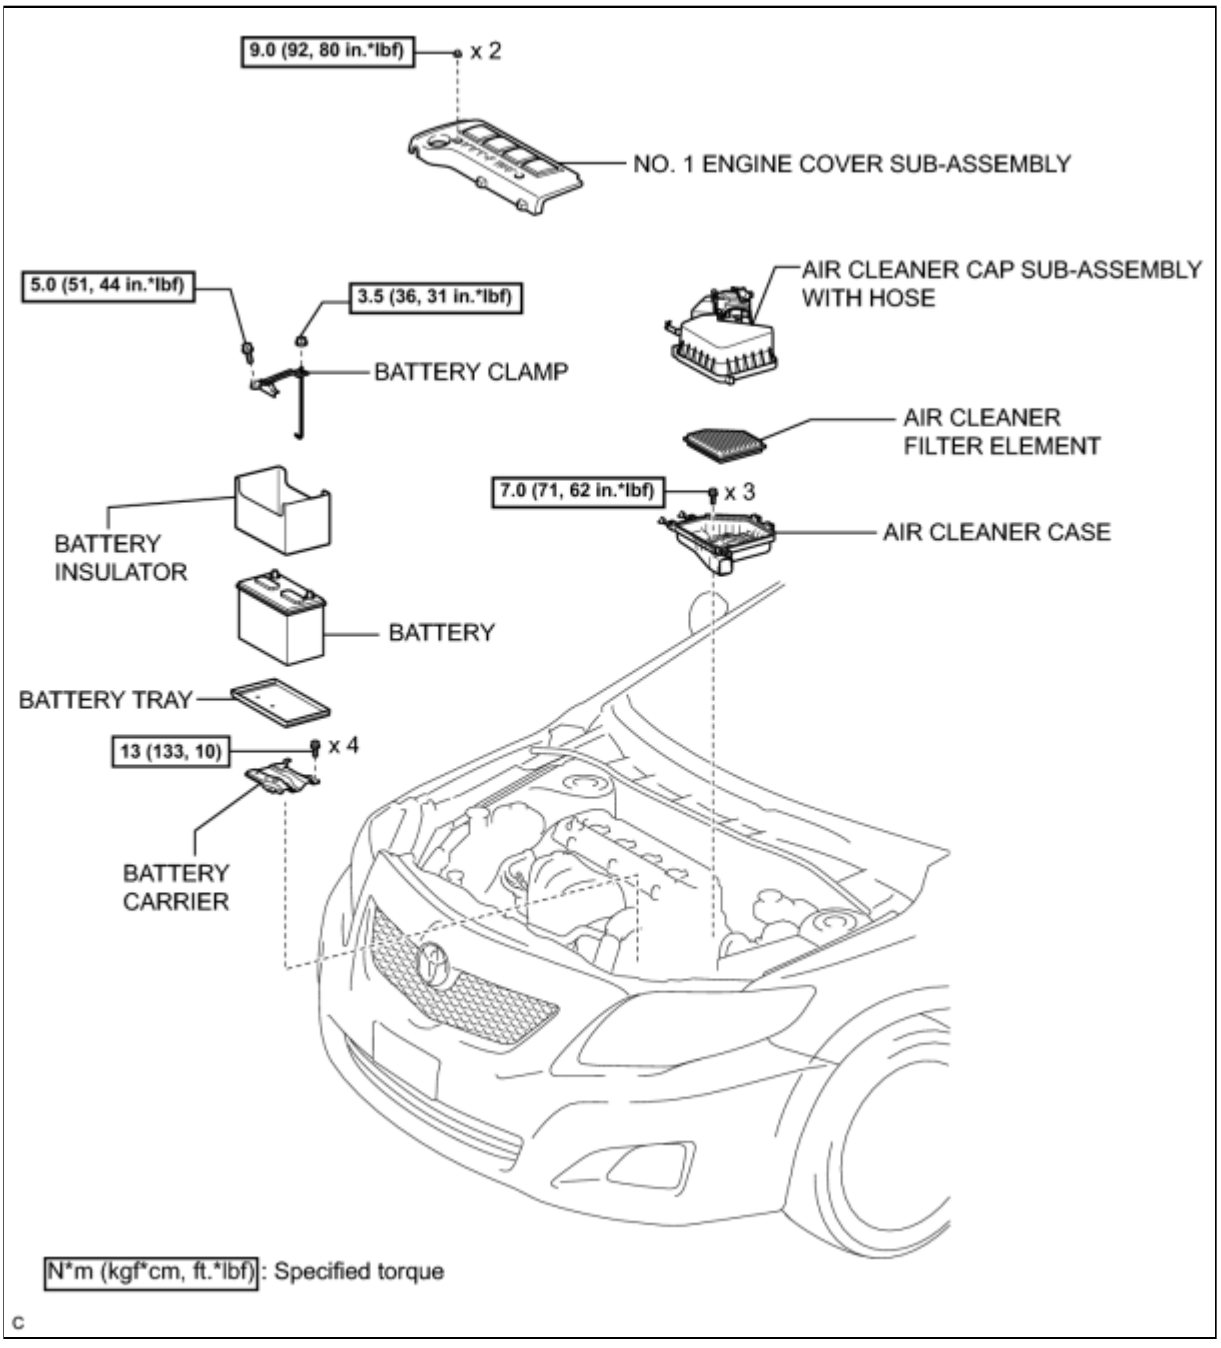
If the result is not as specified, replace the relay.

2. INSPECT ACC RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

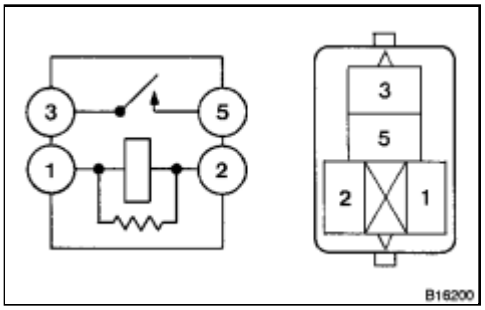
Title: 2ZR-FE STARTING: RELAY: ON-VEHICLE INSPECTION (2010 Corolla)		



ON-VEHICLE INSPECTION

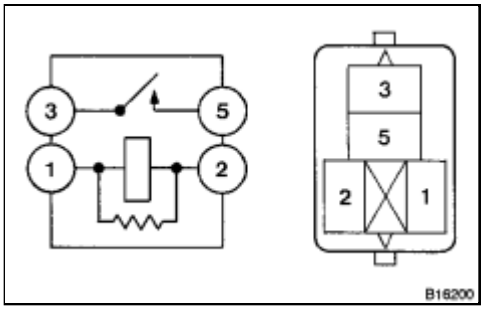
1. INSPECT STARTER RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω



If the result is not as specified, replace the relay.

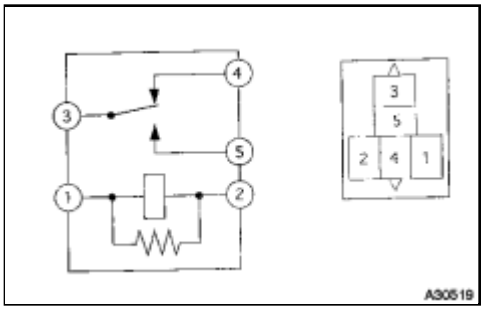
2. INSPECT ACC RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω



If the result is not as specified, replace the relay.

3. INSPECT ACC CUT RELAY

(a) Check the resistance.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 4	Battery voltage is not applied to terminals 1 and 2	Below 1 Ω
3 - 4	Battery voltage is applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

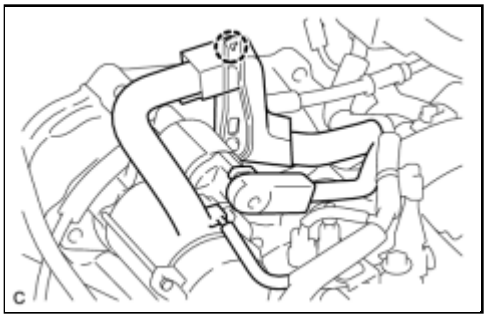
Title: 2AZ-FE STARTING: STARTER: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

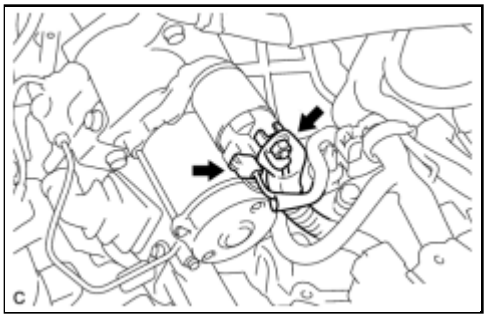
2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO



3. REMOVE AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

4. REMOVE AIR CLEANER CASE INFO

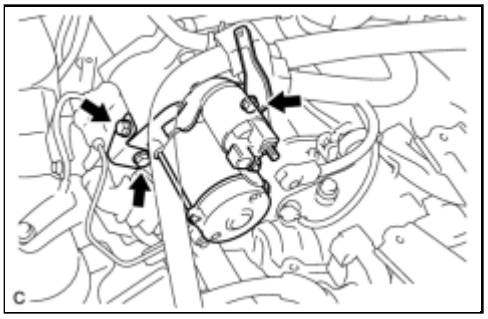
5. REMOVE BATTERY INFO



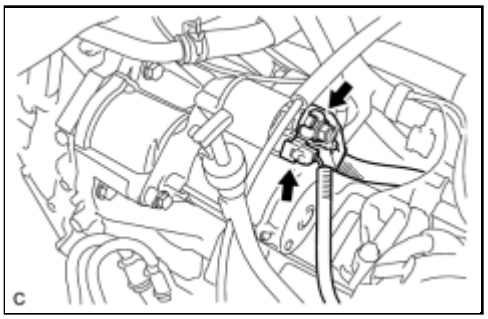
6. REMOVE BATTERY CARRIER INFO

7. DISCONNECT WIRE HARNESS

(a) Release the claw, and disconnect the wire harness.



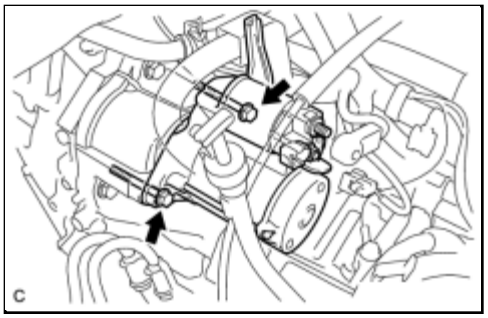
8. REMOVE STARTER ASSEMBLY (for Manual Transaxle)



(a) Disconnect the terminal 50 connector from the starter assembly.

(b) Remove the nut and disconnect the wire harness from terminal 30.

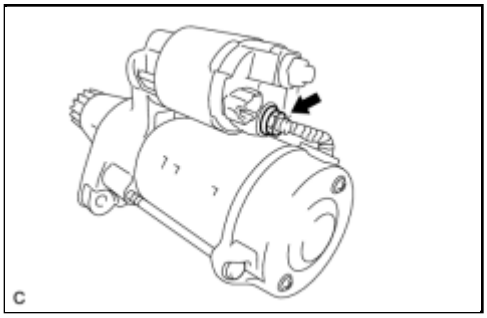
(c) Remove the 3 bolts, clutch accumulator bracket, wire harness clamp bracket and starter assembly.



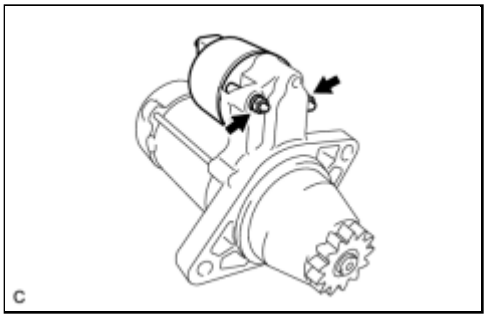
9. REMOVE STARTER ASSEMBLY (for Automatic Transaxle)

(a) Disconnect the terminal 50 connector from the starter assembly.

(b) Remove the nut and disconnect the wire harness from terminal 30.

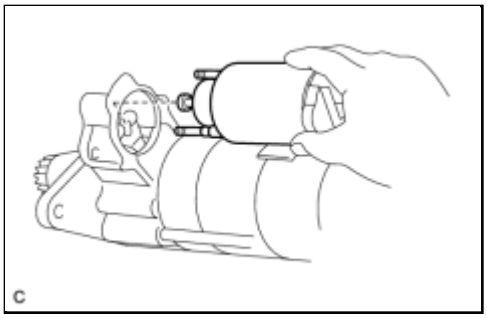


(c) Remove the 2 bolts, wire harness clamp bracket and starter assembly.



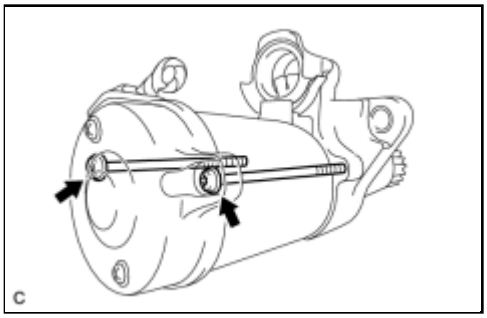
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001ETK019X
Title: 2AZ-FE STARTING: STARTER: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

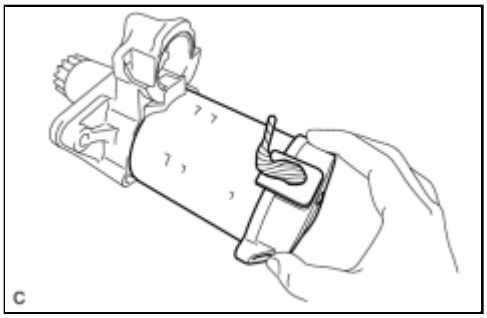


1. REMOVE MAGNET STARTER SWITCH ASSEMBLY

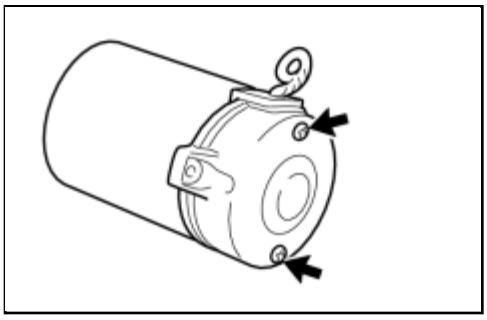
(a) Remove the nut, then disconnect the lead wire from the magnet starter switch assembly.



(b) Remove the 2 nuts from the starter drive housing assembly while holding the magnet starter switch assembly.

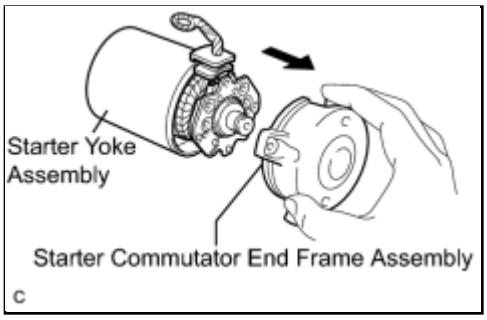


(c) Pull the magnet starter switch assembly, and while lifting the front part of the magnet starter switch assembly, release the plunger hook from the drive lever and magnet starter switch assembly.



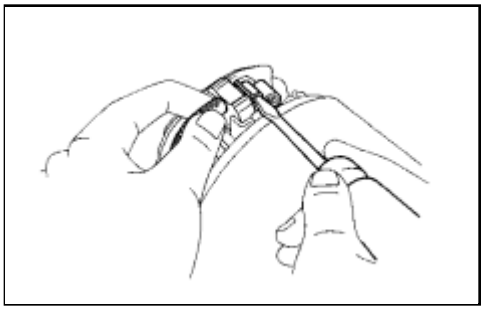
2. REMOVE STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Using a T25 "TORX" socket wrench, remove the 2 bolts.



(b) Pull out the starter yoke together with the starter commutator end frame assembly.

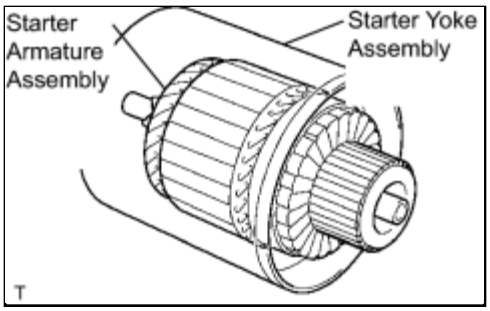
(c) Remove the 2 screws from the starter commutator end frame assembly.



(d) Pull the starter yoke assembly out of the starter commutator end frame assembly.

NOTICE:

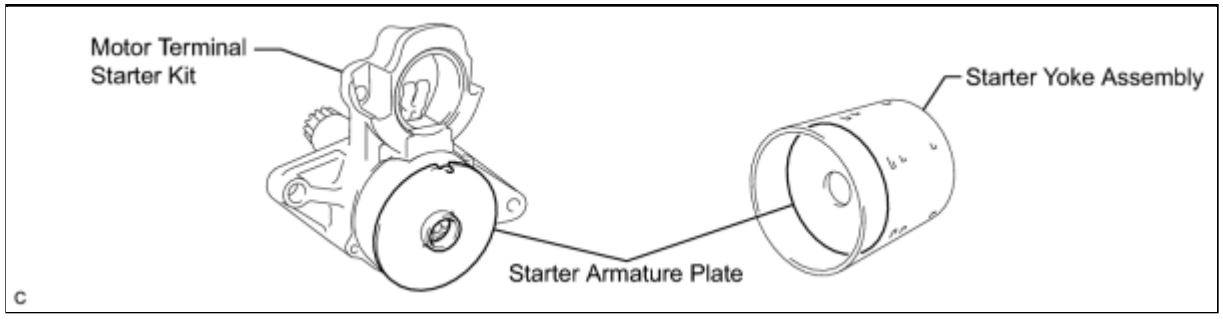
While holding down the lead wire, remove the starter commutator end frame.



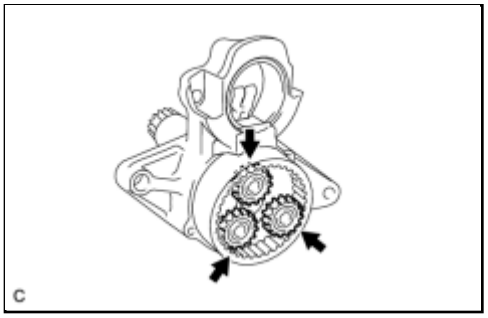
3. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using a screwdriver, hold the spring back and disconnect

the brush from the brush holder.



(b) Disconnect the 4 brushes, and remove the brush holder.



(c) Remove the starter armature assembly from the starter yoke assembly.

4. REMOVE STARTER ARMATURE PLATE

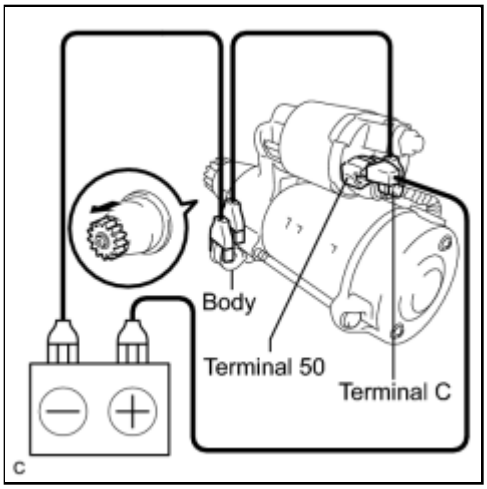
(a) Remove the armature plate from the motor terminal starter kit or the starter yoke assembly.

5. REMOVE PLANETARY GEAR

(a) Remove the 3 planetary gears from the starter center bearing clutch sub-assembly.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001ETI01GX
Title: 2AZ-FE STARTING: STARTER: INSPECTION (2010 Corolla)		

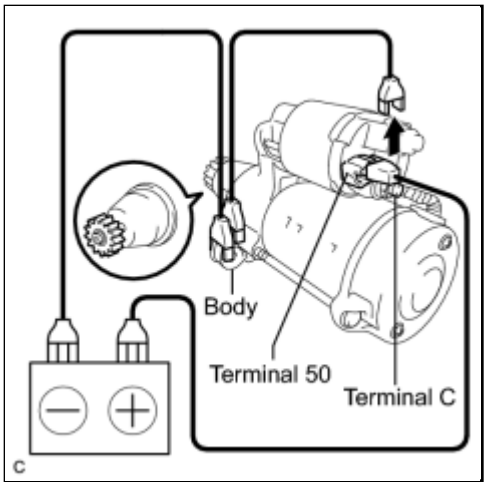
INSPECTION



1. INSPECT STARTER ASSEMBLY

NOTICE:

Perform each of the following tests within 3 to 5 seconds.

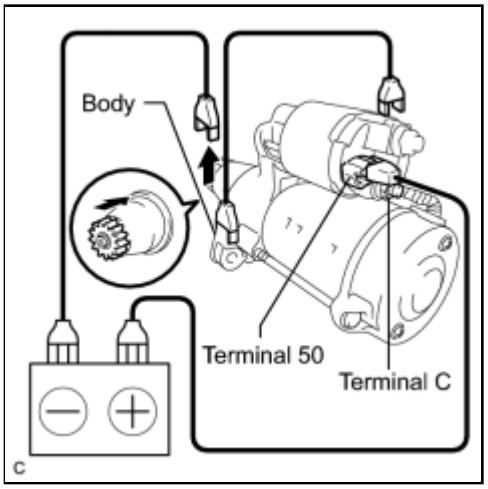


(a) Perform a pull-in test.

(1) Disconnect the field coil lead wire from terminal C.

(2) Connect the battery to the magnet starter switch as shown in the illustration and check that the pinion gear moves outward.

If the clutch pinion gear does not move, replace the magnet starter switch assembly.



(b) Perform a hold-in test.

(1) Check that the pinion gear does not return inward after the cable is disconnected from terminal C.

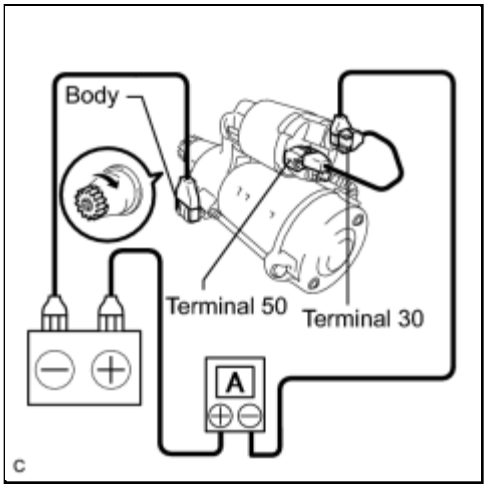
If the clutch pinion gear returns inward, replace the magnet starter switch assembly.

(c) Inspect the clutch pinion gear return.

(1) Disconnect the negative (-) lead from the switch body.

Check that the pinion gear moves inward.

If the clutch pinion gear does not return inward, replace the magnet starter switch assembly.



(d) Perform an operation test without load.

(1) Connect the field coil lead wire to terminal C.

Torque: 10 N·m (102 kgf·cm, 7.4ft·lbf)

(2) Clamp the starter in a vise.

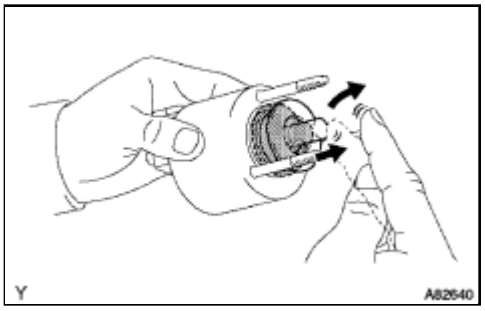
(3) Connect the battery and ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended.

Check that the ammeter indicates the specified current.

Standard Current:

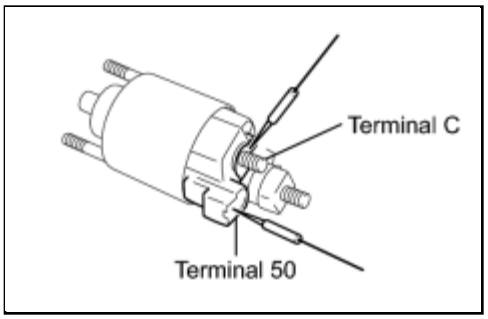
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal - Terminal 30 - Terminal 50	11.5 V	Below 90 A



If the result is not as specified, replace the starter assembly.

2. INSPECT MAGNET STARTER SWITCH ASSEMBLY

(a) Check the plunger.

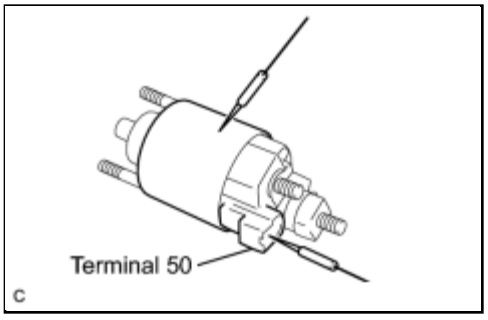


(1) Push in the plunger, then check that it returns quickly to its original position.

If necessary, replace the magnet starter switch assembly.

(b) Inspect the resistance of the pull-in coil.

(1) Using an ohmmeter, measure the resistance between terminals 50 and C.



Standard Resistance:

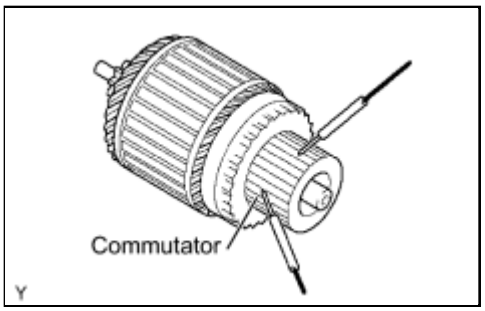
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal 50 - Terminal C	-	Below 1 Ω

If the result is not as specified, replace the magnet starter switch assembly.

(c) Inspect the resistance of the hold-in coil.

(1) Using an ohmmeter, measure the resistance between terminal 50 and switch body.

Standard Resistance:



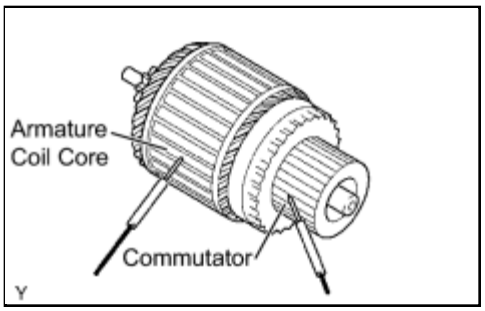
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal 50 - Body ground	-	Below 2 Ω

If the result is not as specified, replace the magnet starter switch assembly.

3. INSPECT STARTER ARMATURE ASSEMBLY

(a) Inspect the resistance of the commutator.

(1) Using an ohmmeter, measure the resistance between any 2 segments of the commutator.



Standard Resistance:

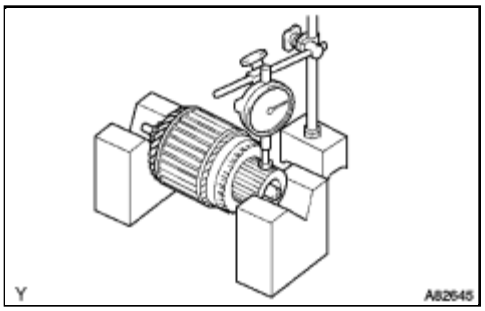
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Segment - Segment	-	Below 1 Ω

If the result is not as specified, replace the starter armature assembly.

(b) Check the commutator for a short to ground.

(1) Using an ohmmeter, measure the resistance between the commutator and the armature coil core.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Commutator - Armature	-	10 kΩ or higher

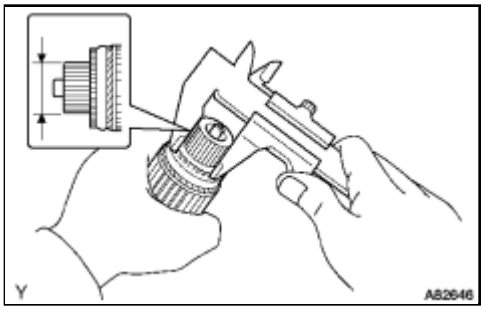
If the result is not as specified, replace the starter armature assembly.

(c) Check the appearance.

If the surface is dirty or burnt, restore the surface with sandpaper (No. 400) or on a lathe.

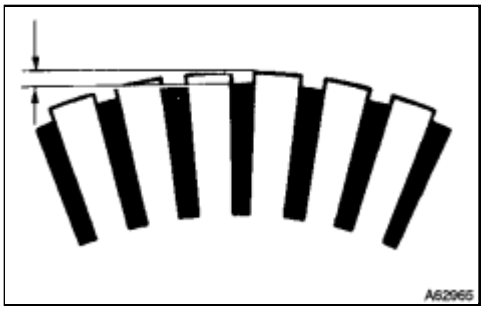
(d) Check the commutator circle for runout.

(1) Place the commutator on V-blocks.



(2) Using a dial indicator, measure the circle runout.

Standard runout:
0.02 mm (0.000787 in.)
Maximum runout:
0.05 mm (0.00197 in.)



If the runout is greater than the maximum, replace the armature assembly.

(e) Using vernier calipers, measure the commutator diameter.

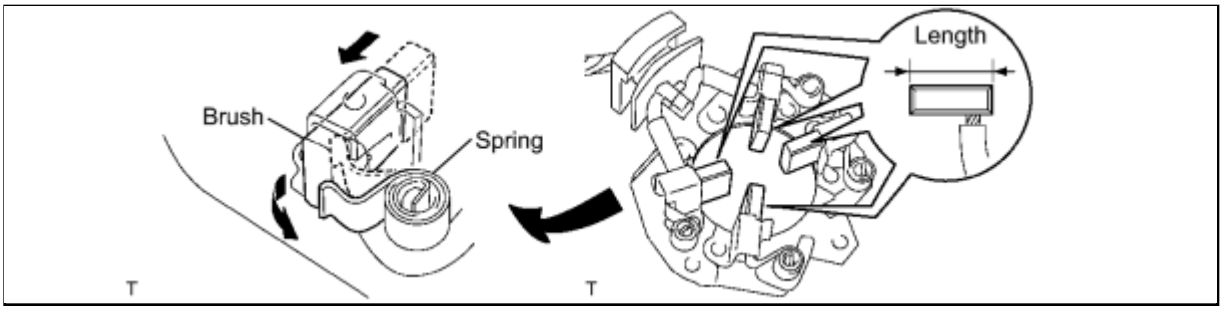
Standard diameter:
29.0 mm (1.14 in.)
Minimum diameter:
28.0 mm (1.10 in.)

If the diameter is less than the minimum, replace the armature assembly.

(f) Check that the undercut portion is clean and free of foreign matter. Smooth out the edge.

Standard undercut depth:
0.7 mm (0.0276 in.)
Minimum undercut depth:
0.2 mm (0.00787 in.)

If the undercut depth is less than the minimum, increase the depth using a hacksaw blade.

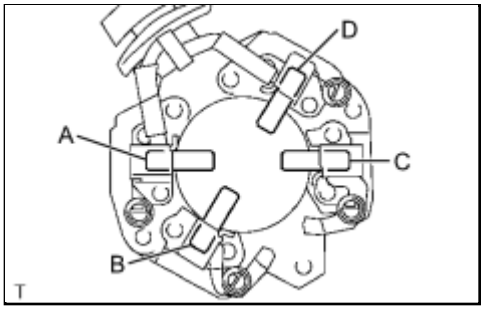


4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

(a) Remove the claws of the springs, then remove the 4 brushes.

(b) Using a vernier caliper, measure the brush length.

Standard length:
14.4 mm (0.567 in.)
Minimum length:
9.0 mm (0.354 in.)

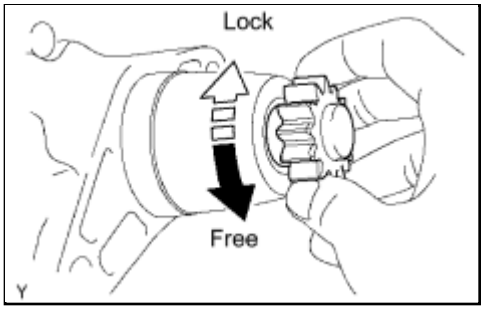


If the length is less than the minimum, replace the starter brush holder assembly.

(c) Check the brush holder.

(1) Using an ohmmeter, measure the resistance between the brushes.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A - B	-	10 kΩ or higher
A - C	-	10 kΩ or higher
A - D	-	Below 1 Ω
B - C	-	Below 1 Ω
B - D	-	10 kΩ or higher
C - D	-	10 kΩ or higher

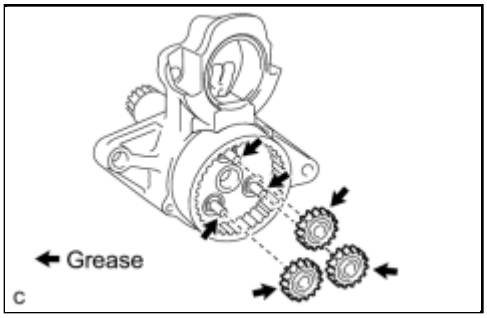
If the result is not as specified, replace the starter brush holder assembly.

5. INSPECT STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

(a) Inspect the gear teeth on the planetary gear, internal gear and starter clutch for wear or damage.

If damaged, replace the gear or clutch assembly. Also check the planetary gears for wear or damage.

(b) Inspect the starter clutch.



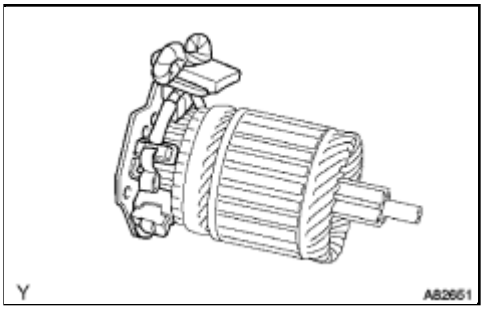
(1) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.

If necessary, replace the starter center bearing clutch sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001ETL019X
Title: 2AZ-FE STARTING: STARTER: REASSEMBLY (2010 Corolla)		

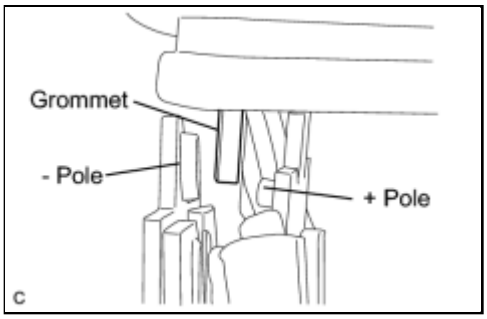
REASSEMBLY

1. INSTALL PLANETARY GEAR



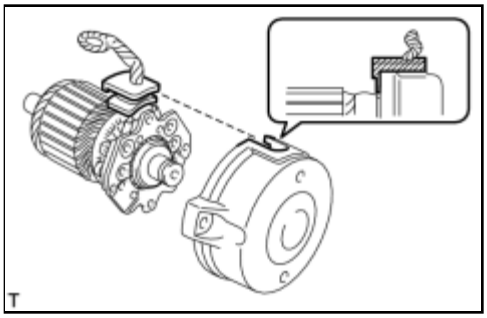
(a) Apply high-temperature grease to the planetary gears and pin parts of the planetary shaft.

(b) Install the 3 planetary gears.



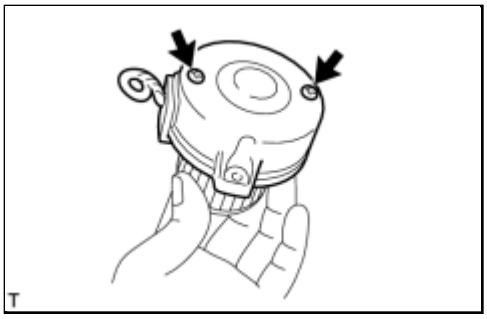
2. INSTALL STARTER BRUSH HOLDER ASSEMBLY

(a) Install the brush holder.



(1) Using a screwdriver, hold the brush springs back, and install the 4 brushes into the brush holder.

(2) Install the brush holder to the starter armature.



(3) Insert the grommet between the positive (+) pole and negative (-) pole.

3. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

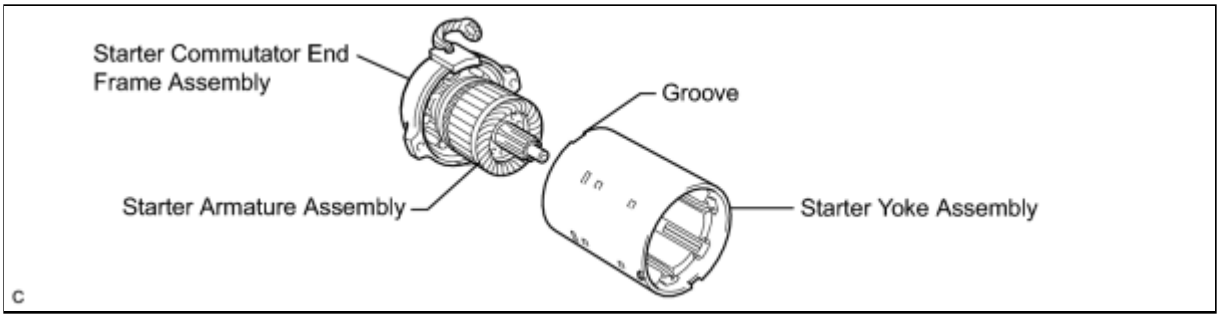
(a) Fit the clamp of the brush holder into the starter commutator end frame assembly.

(b) Install the commutator end frame with the 2 screws.

Torque: 1.5 N·m (15 kgf·cm, 13in·lbf)

4. INSTALL STARTER ARMATURE ASSEMBLY

(a) Align the rubber with the groove of the starter yoke assembly.

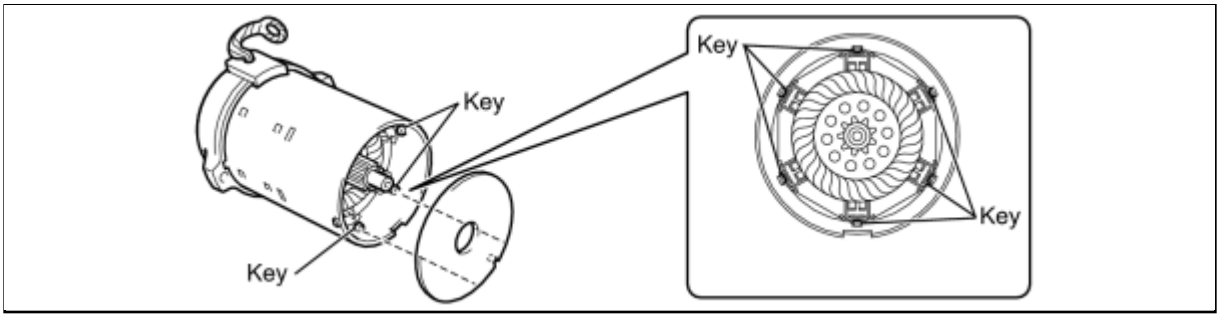


(b) Install the starter armature with the brush holder onto the starter yoke assembly.

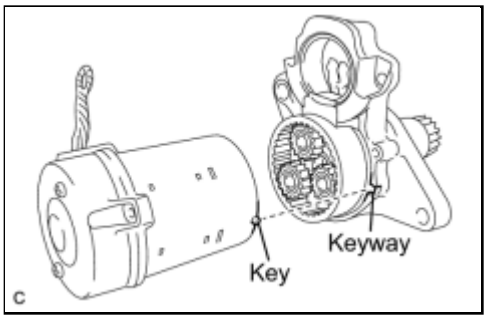
NOTICE:

The magnet of the starter yoke assembly may attract the starter armature assembly when the starter commutator end frame assembly is installed, causing the magnet to break.

HINT:

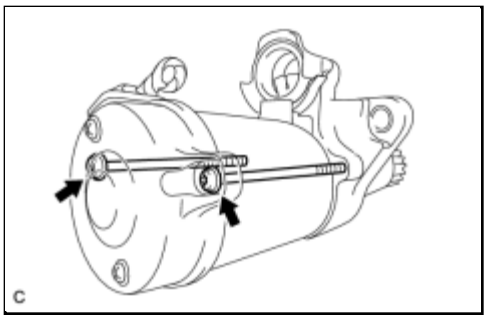


Support the starter armature so that it may not be pulled out from the starter brush holder by magnetic force of the starter yoke assembly.



5. INSTALL STARTER ARMATURE PLATE

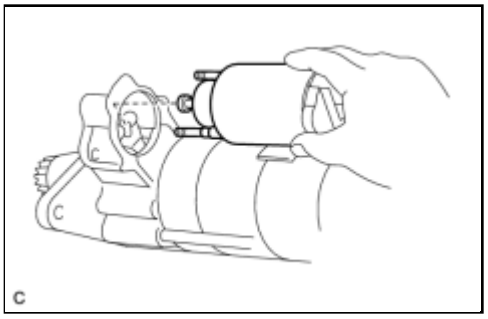
(a) Install the starter armature plate onto the starter yoke assembly.



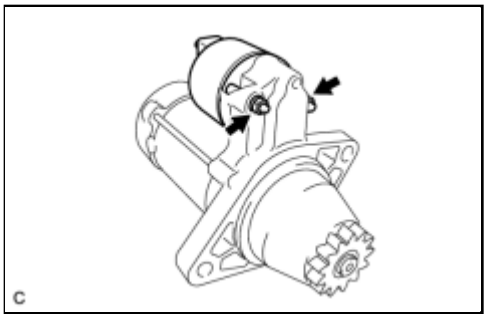
(b) Install the starter plate so that the keyway is positioned between the keys.

6. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Align the key of the starter yoke with the keyway located on the starter drive housing assembly.



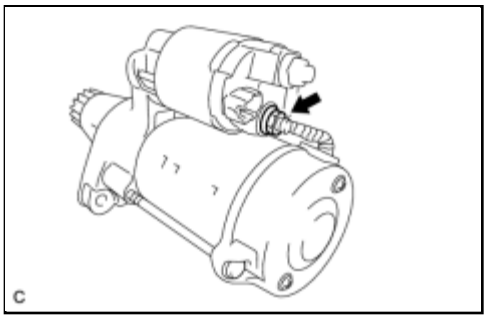
(b) Using a T25 "TORX" socket wrench, install the drive housing with the 2 bolts.



Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

7. INSTALL MAGNET STARTER SWITCH ASSEMBLY

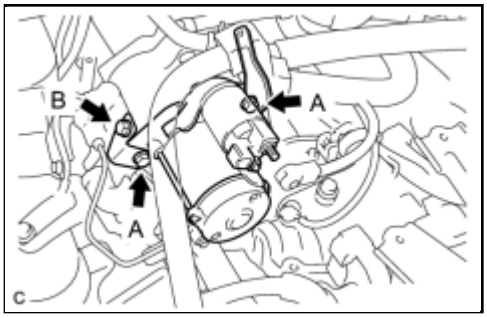
(a) Apply high-temperature grease to the plunger hook.



(b) Hang the plunger of the magnet starter switch assembly into the drive lever from the upper side.

(c) Install the magnet starter switch assembly with the 2 nuts.

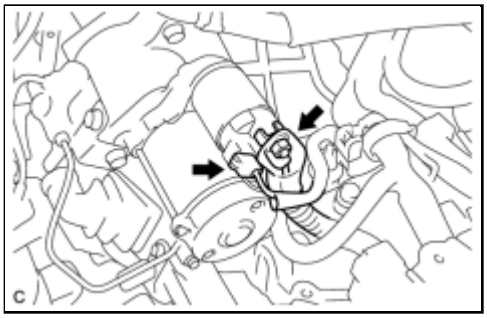
Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)



(d) Connect the lead wire to the magnet starter switch, then fasten it with the nut.

Torque: 10 N·m (102 kgf·cm, 7.4ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000025TY00TX
Title: 2AZ-FE STARTING: STARTER: INSTALLATION (2010 Corolla)		

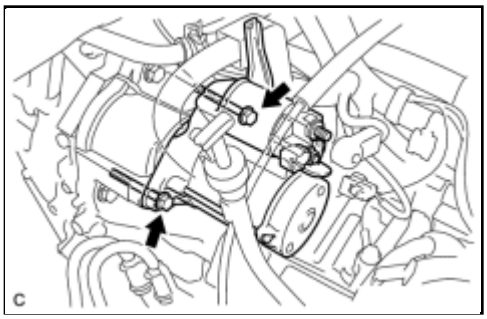


INSTALLATION

1. INSTALL STARTER ASSEMBLY (for Manual Transaxle)

(a) Install the starter assembly, clutch accumulator bracket and wire harness clamp bracket with the 3 bolts.

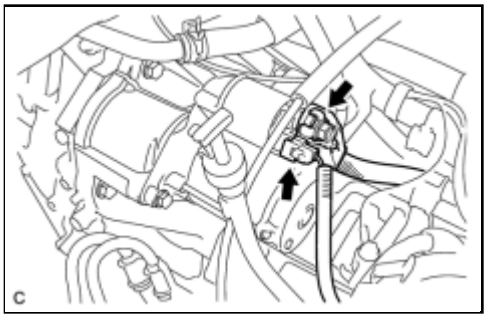
Bolt A - Torque: 37 N·m (377 kgf·cm, 27ft·lbf)
Bolt B - Torque: 12 N·m (120 kgf·cm, 9ft·lbf)



(b) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(c) Connect the terminal 50 connector to the starter assembly.



2. INSTALL STARTER ASSEMBLY (for Automatic Transaxle)

(a) Install the starter assembly and wire harness clamp bracket with the 2 bolts.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

(b) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(c) Connect the terminal 50 connector to the starter assembly.

3. INSTALL BATTERY CARRIER INFO

4. INSTALL BATTERY INFO

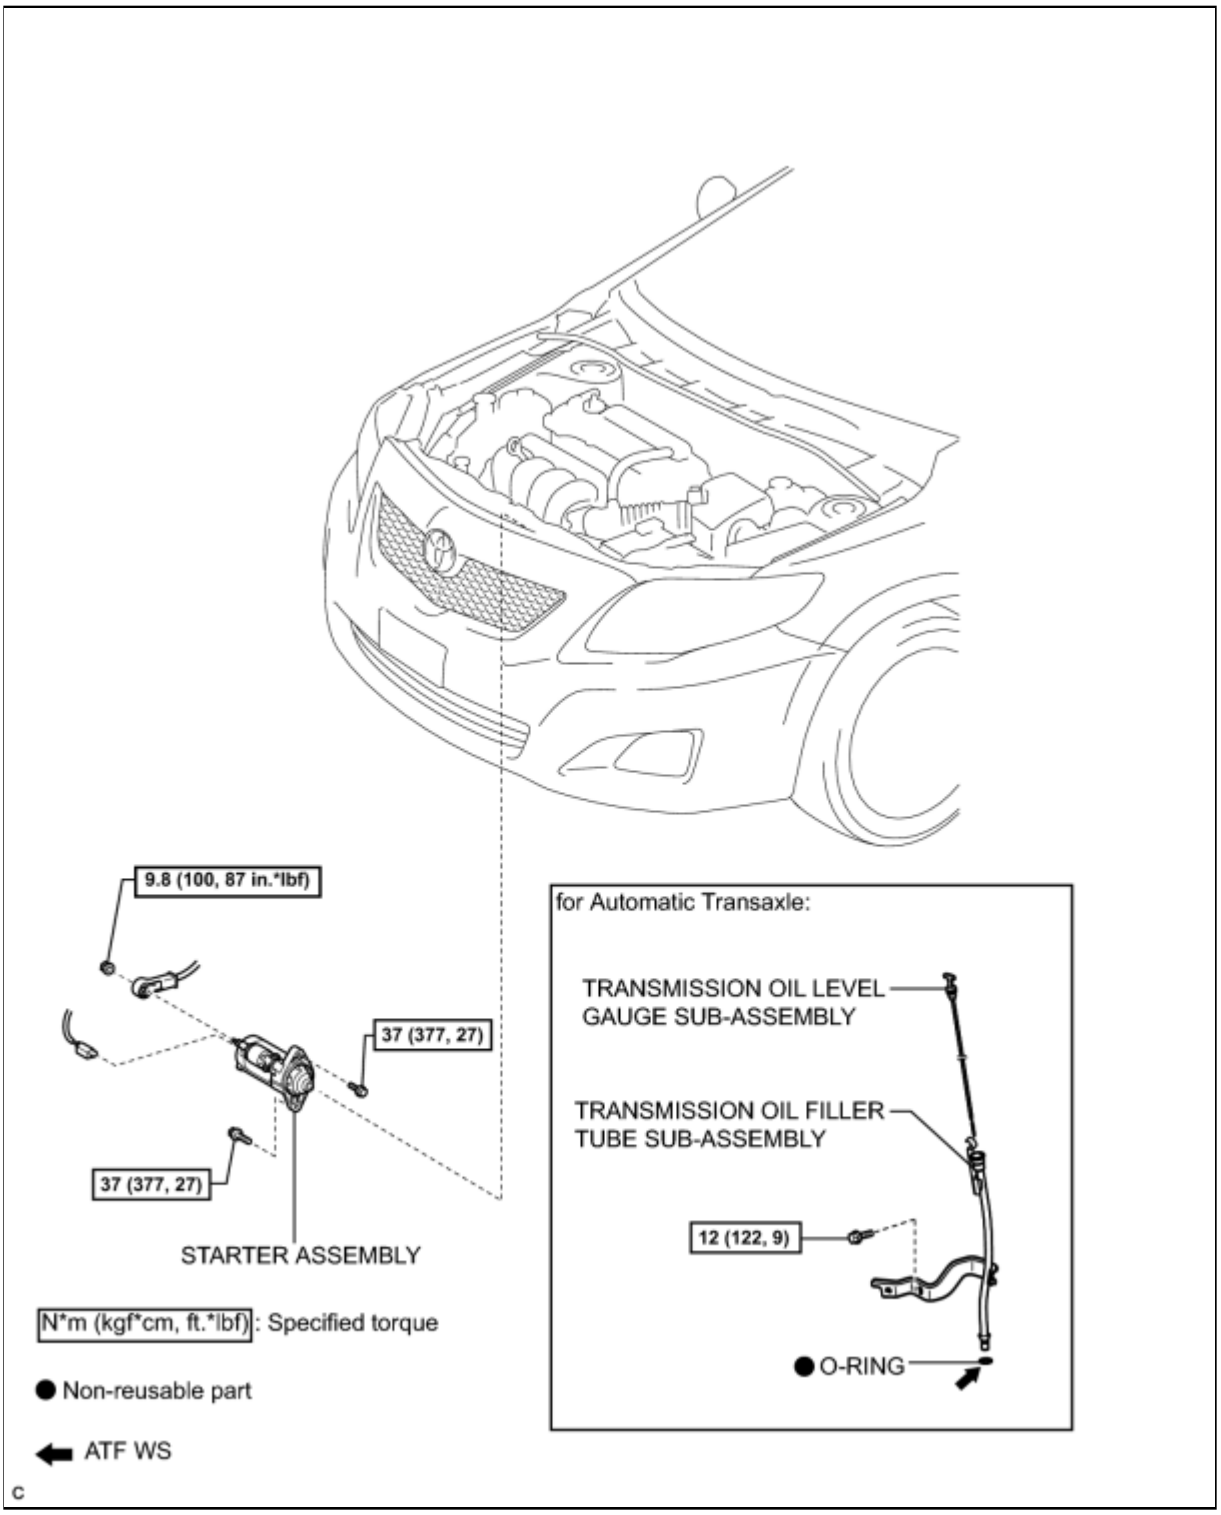
5. INSTALL WIRE HARNESS

(a) Install the claw and wire harness.

6. INSTALL AIR CLEANER CASE INFO

7. INSTALL AIR CLEANER CAP SUB-ASSEMBLY WITH HOSE INFO

8. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO



9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

HINT: INFO .

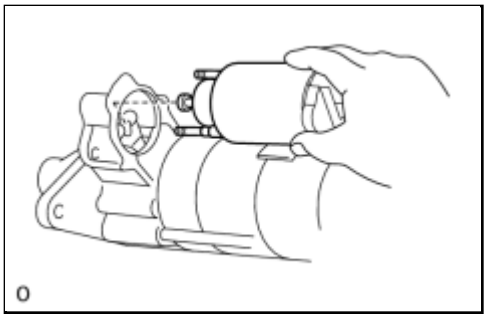
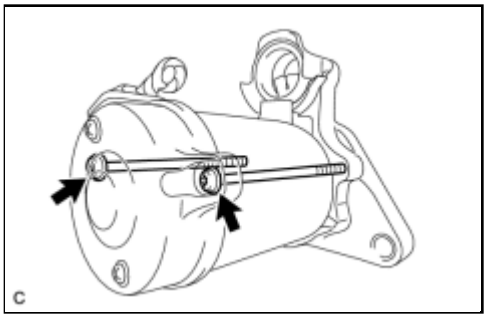
Title: 2ZR-FE STARTING: STARTER: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

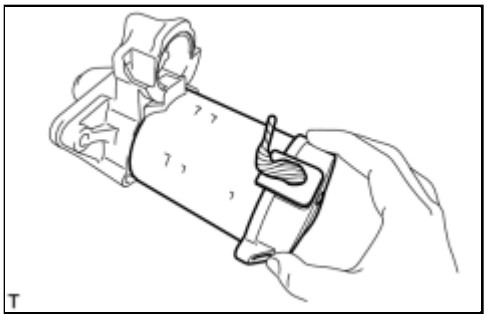


1. REMOVE MAGNET STARTER SWITCH ASSEMBLY

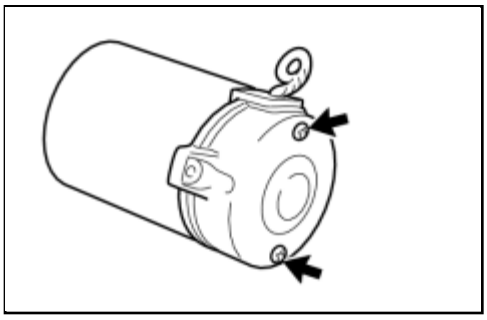
(a) Remove the nut, then disconnect the lead wire from the magnet starter switch assembly.



(b) Remove the 2 nuts from the starter drive housing assembly while holding the magnet starter switch assembly.

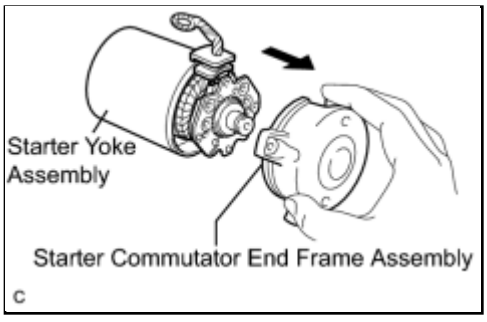


(c) Pull the magnet starter switch assembly, and while lifting the front part of the magnet starter switch assembly, release the plunger hook from the drive lever and magnet starter switch assembly.



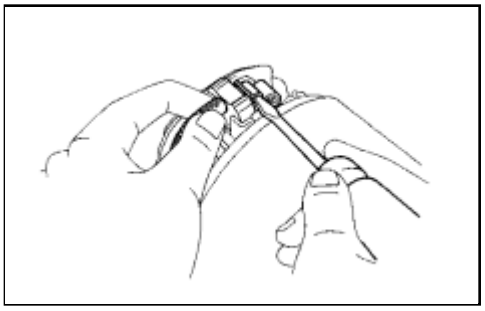
2. REMOVE STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Using a T25 "TORX" socket wrench, remove the 2 bolts.



(b) Pull out the starter yoke together with the starter commutator end frame assembly.

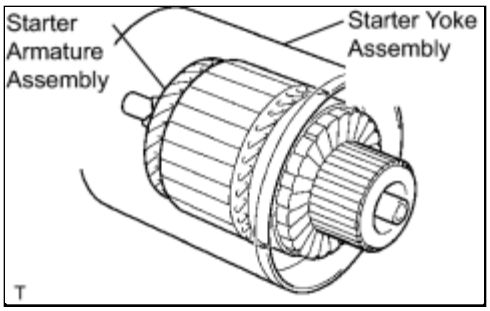
(c) Remove the 2 screws from the starter commutator end frame assembly.



(d) Pull the starter yoke assembly out of the starter commutator end frame assembly.

NOTICE:

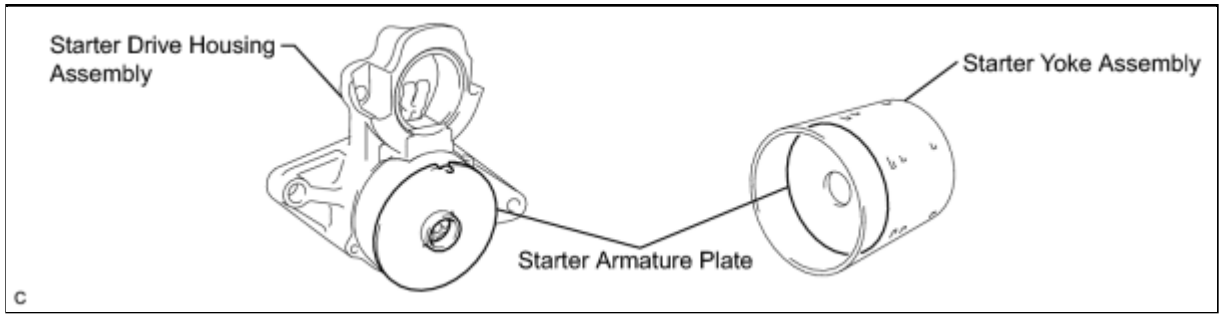
While holding down the lead wire, remove the starter commutator end frame.



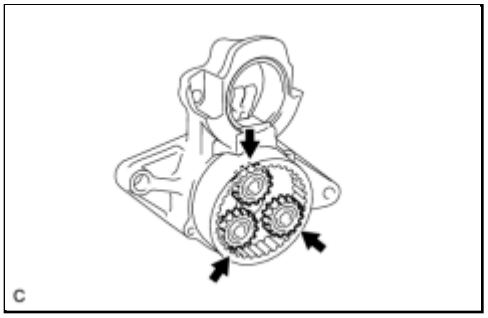
3. REMOVE STARTER ARMATURE ASSEMBLY

(a) Using a screwdriver, hold the spring back and disconnect

the brush from the brush holder.



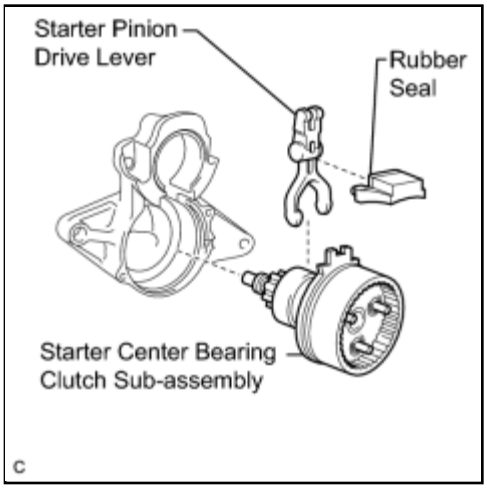
(b) Disconnect the 4 brushes, and remove the brush holder.



(c) Remove the starter armature assembly from the starter yoke assembly.

4. REMOVE STARTER ARMATURE PLATE

(a) Remove the armature plate from the starter drive housing assembly or the starter yoke assembly.



5. REMOVE PLANETARY GEAR

(a) Remove the 3 planetary gears from the starter center bearing clutch sub-assembly.

6. REMOVE STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

(a) Remove the starter center bearing clutch sub-assembly with starter pinion drive lever from the starter drive housing assembly.

(b) Remove the starter center bearing clutch sub-assembly, rubber seal, and the starter pinion drive lever.

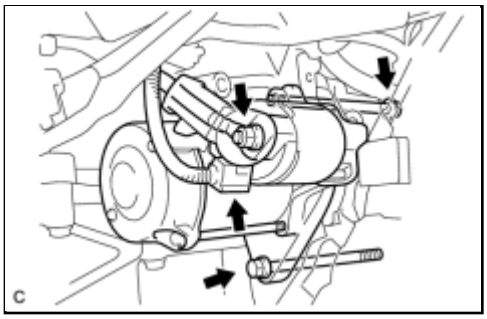
Title: 2ZR-FE STARTING: STARTER: REMOVAL (2010 Corolla)		



REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (for Automatic Transaxle)

HINT: INFO .

3. REMOVE STARTER ASSEMBLY

(a) Remove the terminal cap.

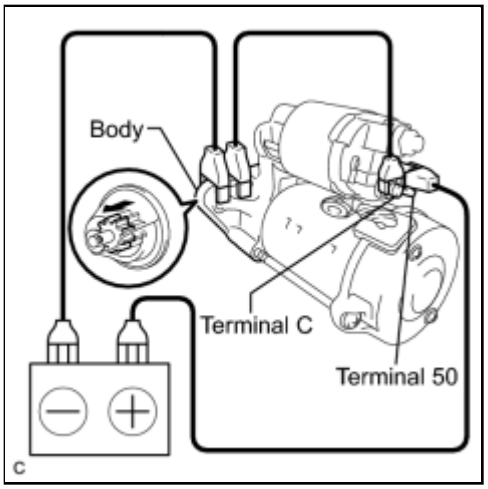
(b) Remove the nut and disconnect terminal 30.

(c) Disconnect the connector.

(d) Remove the 2 bolts and starter assembly.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000034TA007X
Title: 2ZR-FE STARTING: STARTER: INSPECTION (2010 Corolla)		

INSPECTION

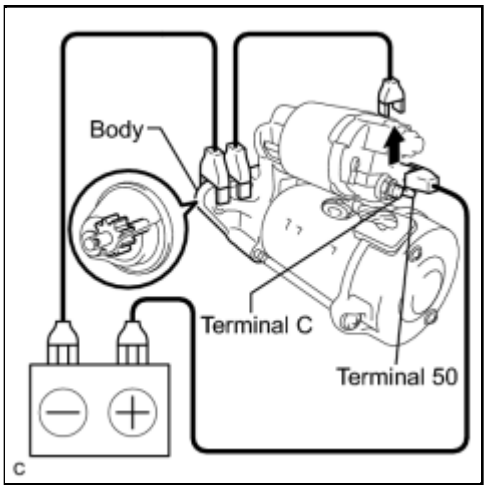


1. INSPECT STARTER ASSEMBLY

NOTICE:

Perform each of the following tests within 3 to 5 seconds.

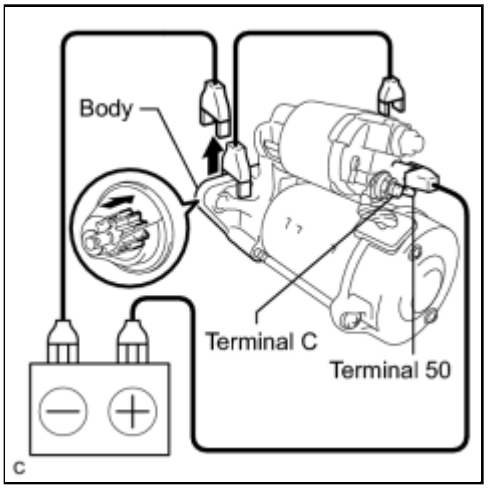
(a) Perform a pull-in test.



(1) Disconnect the field coil lead wire from terminal C.

(2) Connect the battery to the magnet starter switch as shown in the illustration and check that the pinion gear moves outward.

If the clutch pinion gear does not move, replace the magnet switch assembly.



(b) Perform a hold-in test.

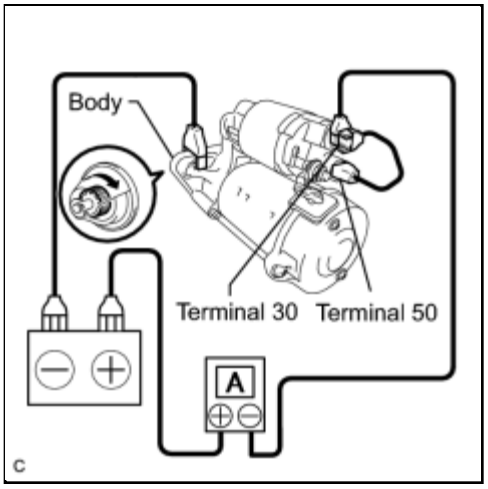
(1) Check that the pinion gear does not return inward after the cable is disconnected from terminal C.

If the clutch pinion gear returns inward, replace the magnet starter switch assembly.

(c) Inspect the clutch pinion gear return.

(1) Disconnect the negative (-) lead from the switch body.

Check that the pinion gear moves inward.



If the clutch pinion gear does not return inward, replace the magnet starter switch assembly.

(d) Perform an operation test without load.

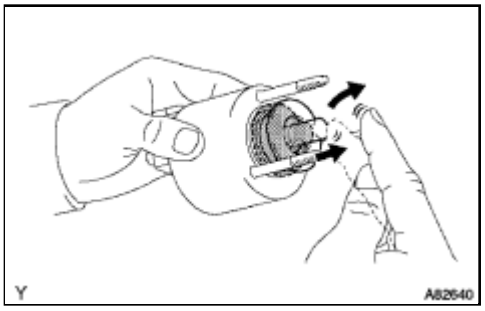
(1) Connect the lead wire to terminal C.

Torque: 10 N·m (102 kgf·cm, 7.4ft·lbf)

(2) Clamp the starter in a vise.

(3) Connect the battery and ammeter to the starter as shown in the illustration.

(4) Check that the starter rotates smoothly and steadily with the clutch pinion gear extended.



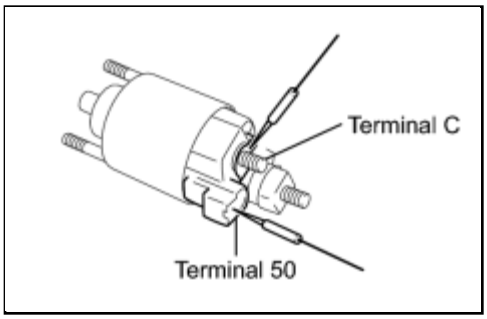
Check that the ammeter indicates the specified current.

Standard Current:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal - Terminal 30 - Terminal 50	11.5 V	Below 90 A

2. INSPECT MAGNET STARTER SWITCH ASSEMBLY

(a) Check the plunger.

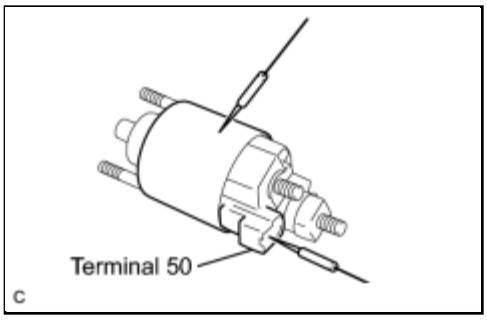


(1) Push in the plunger, then check that it returns quickly to its original position.

If necessary, replace the magnet starter switch assembly.

(b) Inspect the resistance of the pull-in coil.

(1) Using an ohmmeter, measure the resistance between terminals 50 and C.



Standard Resistance:

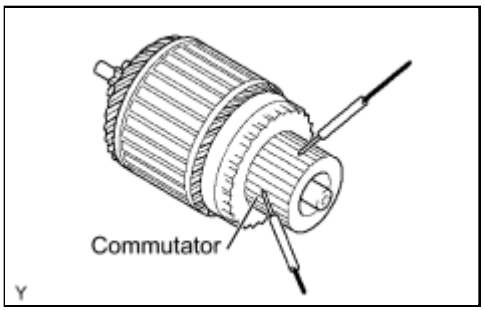
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal 50 - Terminal C	-	Below 1 Ω

If the result is not as specified, replace the magnet starter switch assembly.

(c) Inspect the resistance of the hold-in coil.

(1) Using an ohmmeter, measure the resistance between terminal 50 and switch body.

Standard Resistance:



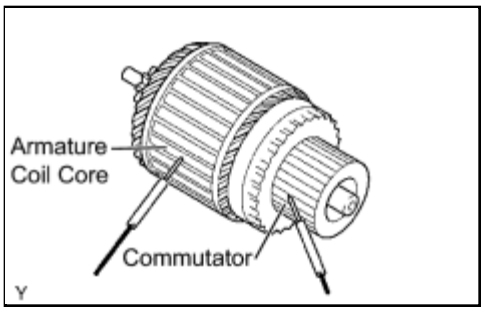
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal 50 - Body ground	-	Below 2 Ω

If the result is not as specified, replace the magnet starter switch assembly.

3. INSPECT STARTER ARMATURE ASSEMBLY

(a) Inspect the resistance of the commutator.

(1) Using an ohmmeter, measure the resistance between any 2 segments of the commutator.



Standard Resistance:

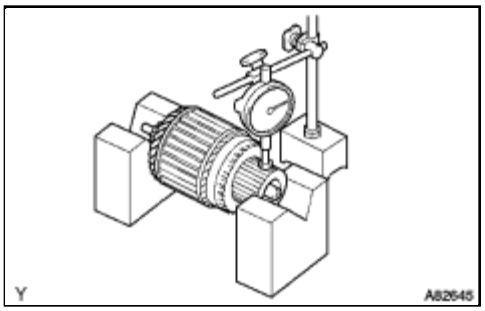
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Segment - Segment	-	Below 1 Ω

If the result is not as specified, replace the starter armature assembly.

(b) Check the commutator for a short to ground.

(1) Using an ohmmeter, measure the resistance between the commutator and the armature coil core.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Commutator - Armature	-	10 kΩ or higher

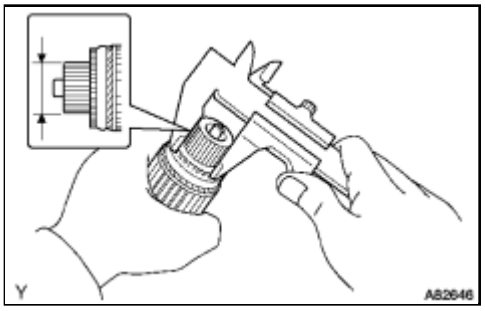
If the result is not as specified, replace the starter armature assembly.

(c) Check the appearance.

(1) If the surface is dirty or burnt, restore the surface with sandpaper (No. 400) or on a lathe.

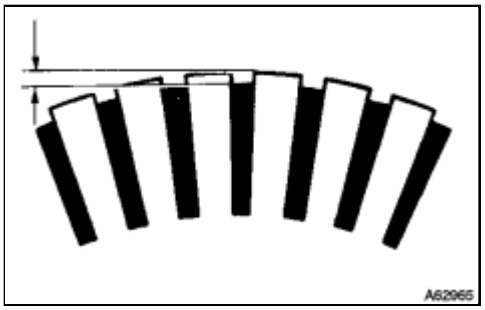
(d) Check the commutator circuit for runout.

(1) Place the commutator on V-blocks.



(2) Using a dial indicator, measure the circle runout.

Standard runout:
0.02 mm (0.000787 in.)
Maximum runout:
0.05 mm (0.00197 in.)



If the runout is greater than the maximum, replace the armature assembly.

(e) Using a vernier caliper, measure the commutator diameter.

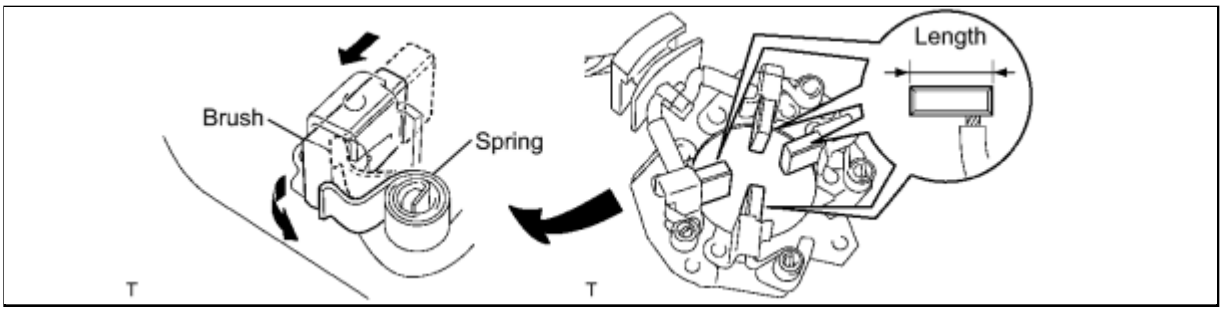
Standard diameter:
29 mm (1.14 in.)
Minimum diameter:
28 mm (1.10 in.)

If the diameter is less than the minimum, replace the armature.

(f) Check that the undercut portion is clean and free of foreign matter. Smooth out the edges.

Standard undercut depth:
0.7 mm (0.0276 in.)
Minimum undercut depth:
0.2 mm (0.00787 in.)

If the undercut depth is less than the minimum, increase the depth using a hacksaw blade.

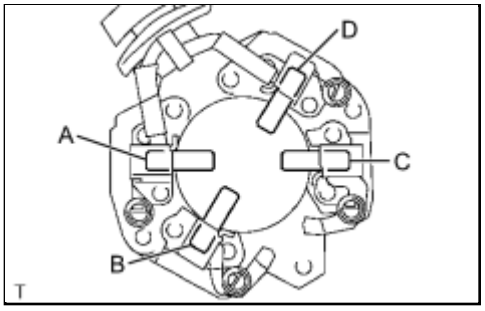


4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

(a) Remove the claw of the spring, then remove the 4 brushes.

(b) Using a vernier caliper, measure the brush length.

Standard length:
14.4 mm (0.567 in.)
Minimum length:
9.0 mm (0.354 in.)

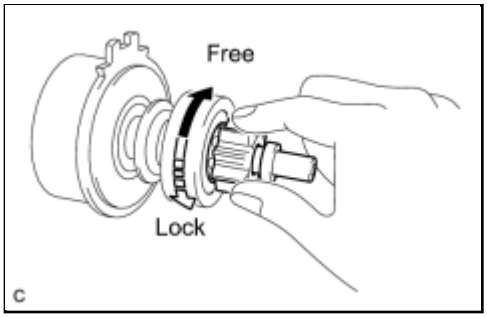


If the length is less than the minimum, replace the starter brush holder assembly.

(c) Check the brush holder.

(1) Using an ohmmeter, measure the resistance between the brushes.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A - B	-	10 kΩ or higher
A - C	-	10 kΩ or higher
A - D	-	Below 1 Ω
B - C	-	Below 1 Ω
B - D	-	10 kΩ or higher
C - D	-	10 kΩ or higher

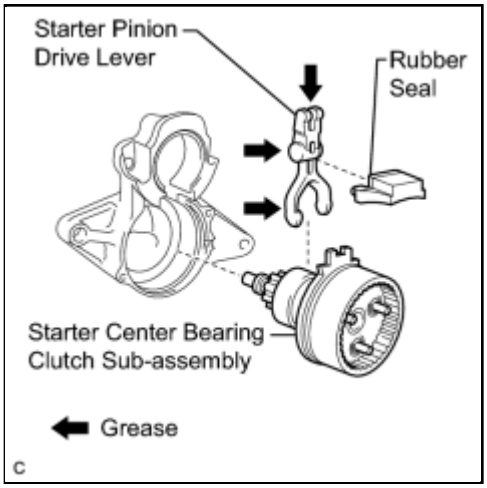
If the result is not as specified, replace the starter brush holder assembly.

5. INSPECT STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

(a) Inspect the gear teeth on the planetary gear, internal gear and starter clutch for wear or damage.

If damaged, replace the gear or clutch assembly. Also check the planetary gears for wear or damage.

(b) Inspect the starter clutch.



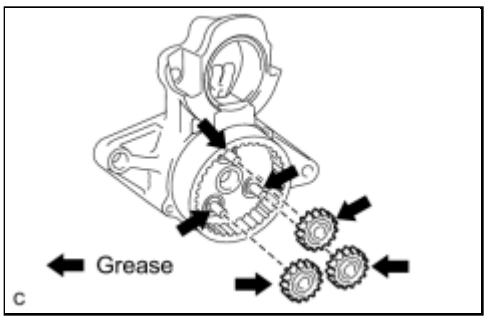
(1) Rotate the clutch pinion gear clockwise and check that it turns freely. Try to rotate the clutch pinion gear counterclockwise and check that it locks.

If necessary, replace the starter center bearing clutch sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000034TE00BX
Title: 2ZR-FE STARTING: STARTER: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

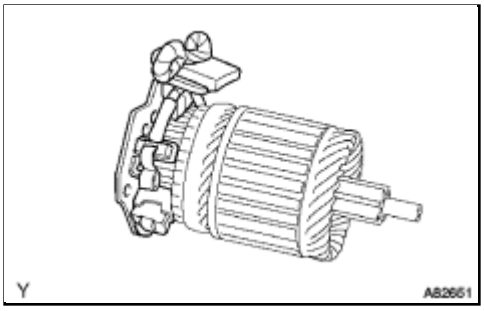


(a) Apply high-temperature grease to the parts of the starter pinion drive lever that contact the starter pivot part of the starter pinion drive lever.

(b) Install the starter pinion drive lever and rubber seal into the starter center bearing clutch sub-assembly.

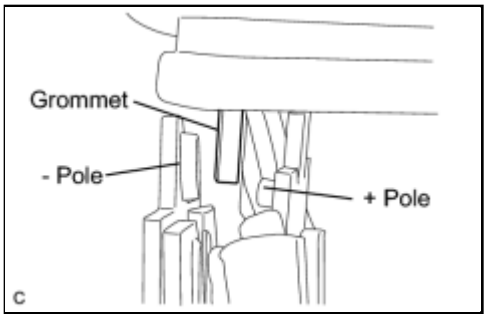
(c) Install the starter center bearing clutch together with the starter pinion drive lever into the starter drive housing assembly.

2. INSTALL PLANETARY GEAR



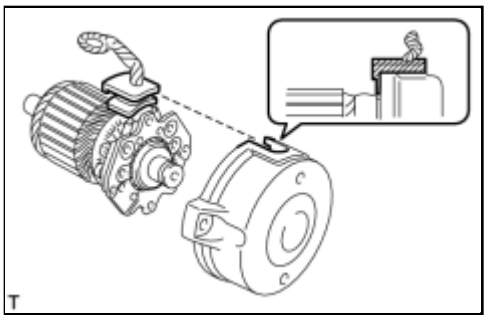
(a) Apply high-temperature grease to the planetary gears and pin parts of the planetary shaft.

(b) Install the 3 planetary gears.



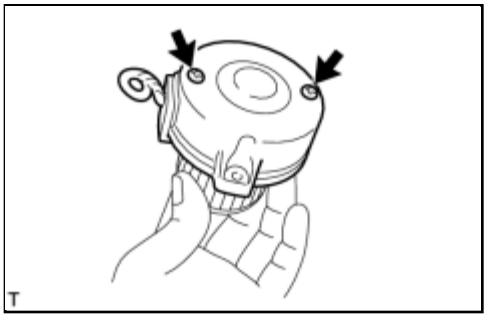
3. INSTALL STARTER BRUSH HOLDER ASSEMBLY

(a) Install the brush holder.



(1) Using a screwdriver, hold the brush springs back, and install the 4 brushes into the brush holder.

(2) Install the brush holder to the starter armature.



(3) Insert the grommet between the positive (+) pole and negative (-) pole.

4. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

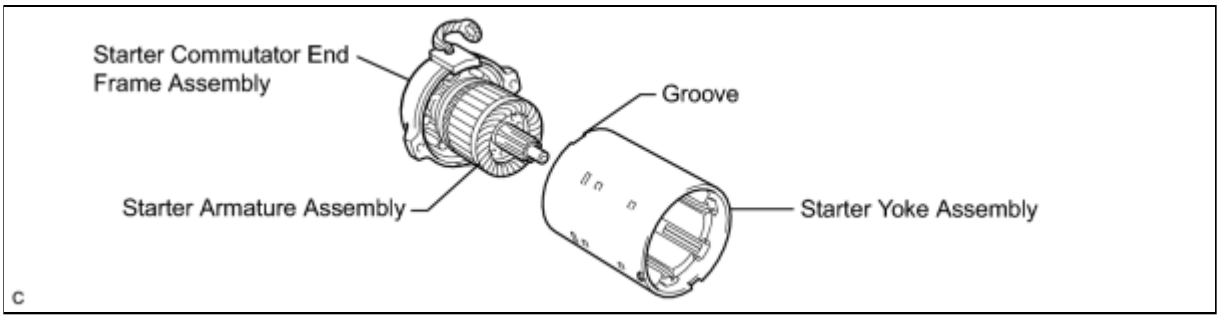
(a) Fit the clamp of the brush holder into the starter commutator end frame assembly.

(b) Install the commutator end frame with the 2 screws.

Torque: 1.5 N·m (15 kgf·cm, 13in·lbf)

5. INSTALL STARTER ARMATURE ASSEMBLY

(a) Align the rubber with the groove of the starter yoke assembly.

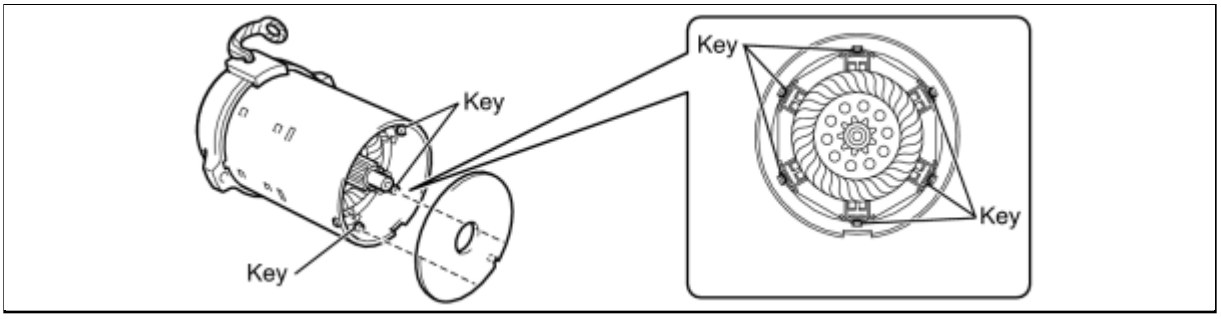


(b) Install the starter armature with the brush holder onto the starter yoke assembly.

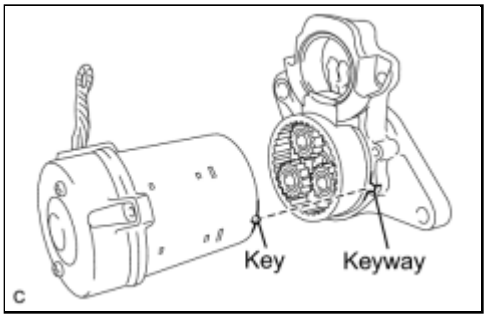
NOTICE:

The magnet of the starter yoke assembly may attract the starter armature assembly when the starter commutator end frame assembly is installed, causing the magnet to break.

HINT:

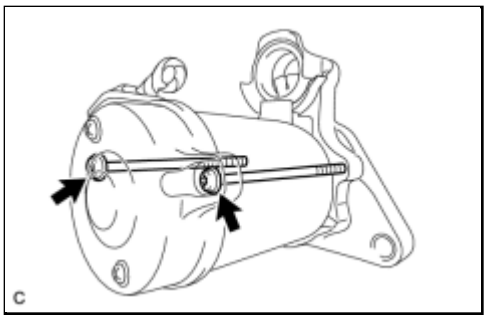


Support the starter armature so that it may not be pulled out from the starter brush holder by magnetic force of the starter yoke assembly.



6. INSTALL STARTER ARMATURE PLATE

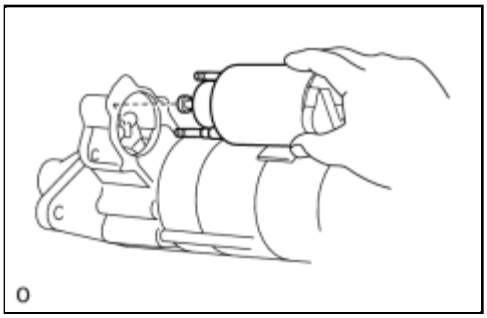
(a) Install the starter armature plate onto the starter yoke assembly.



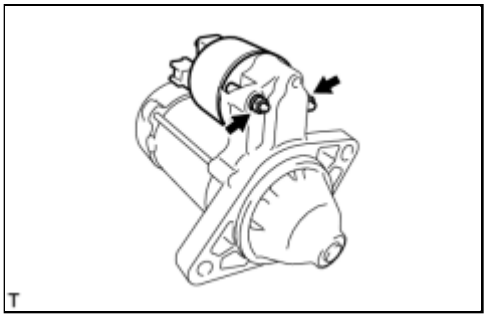
(b) Install the starter plate so that the keyway is positioned between the keys.

7. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY

(a) Align the key of the starter yoke with the keyway located on the starter drive housing assembly.



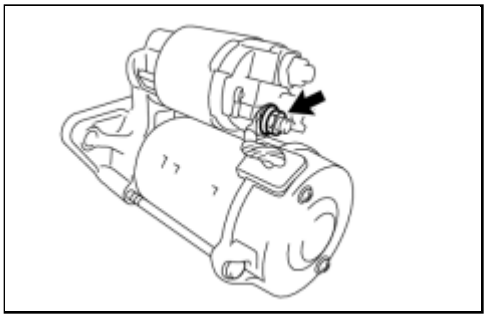
(b) Using a T25 "TORX" socket wrench, install the drive housing with the 2 bolts.



Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

8. INSTALL MAGNET STARTER SWITCH ASSEMBLY

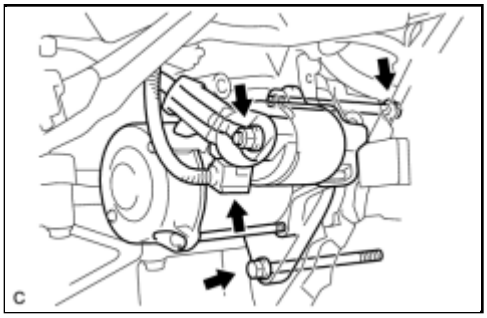
(a) Apply high-temperature grease to the plunger hook.



(b) Hang the plunger of the magnet starter switch assembly into the drive lever from the upper side.

(c) Install the magnet starter switch assembly with the 2 nuts.

Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)



(d) Connect the lead wire to the magnet starter switch, then fasten it with the nut.

Torque: 10 N·m (102 kgf·cm, 7.4ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000034T9007X
Title: 2ZR-FE STARTING: STARTER: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL STARTER ASSEMBLY

(a) Install the starter assembly with the 2 bolts.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

(b) Connect the connector.

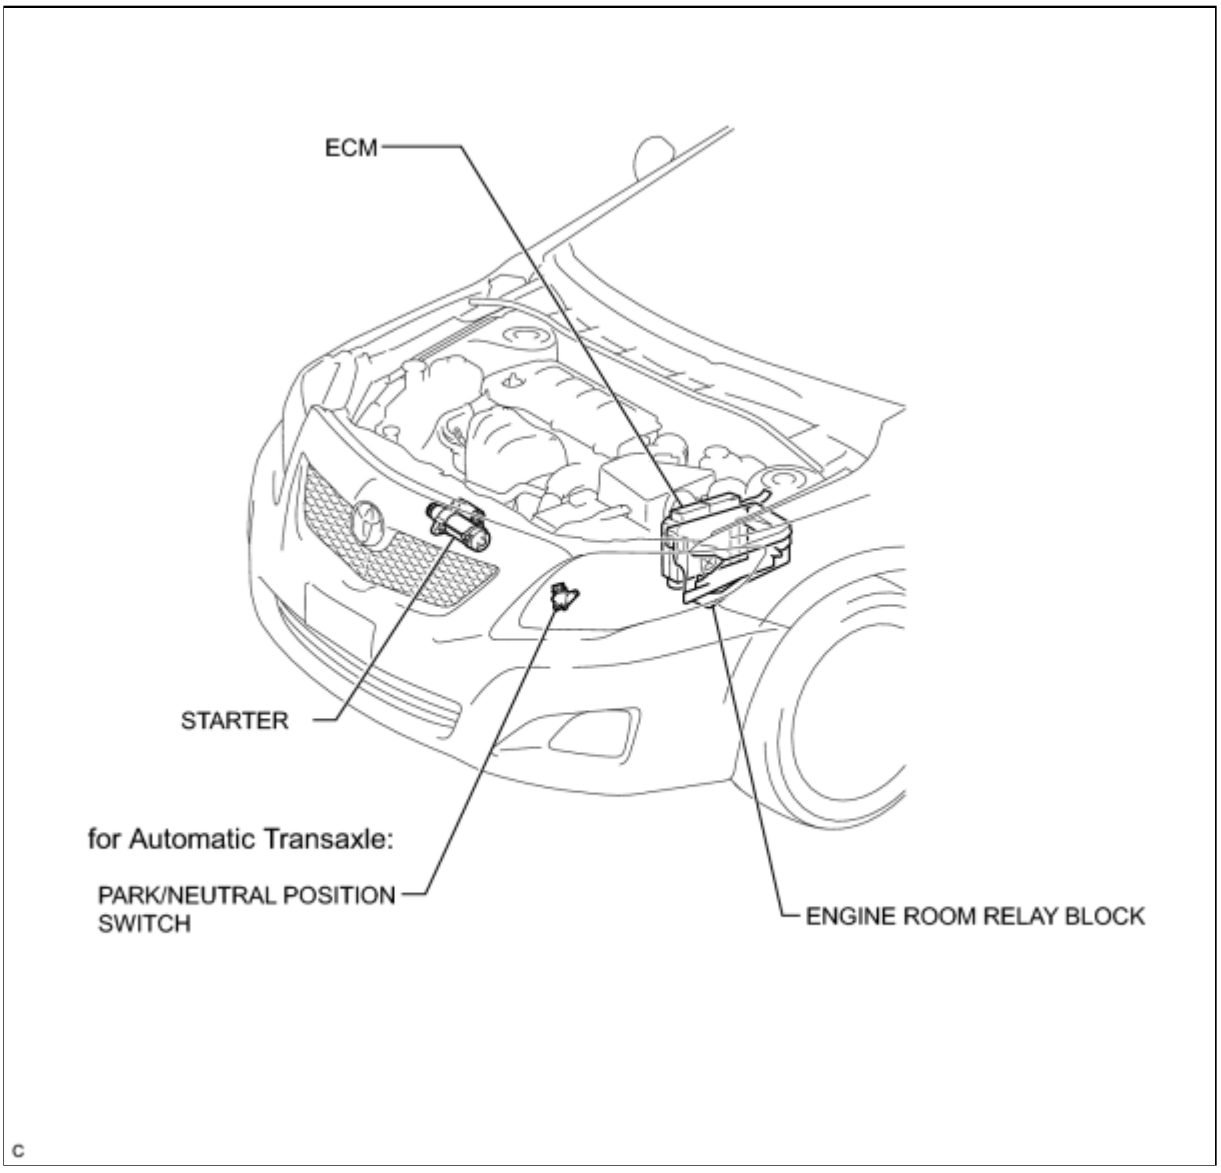
(c) Connect terminal 30 with the nut.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(d) Close the terminal cap.

2. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (for Automatic Transaxle)

HINT: INFO .



3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

HINT: INFO .

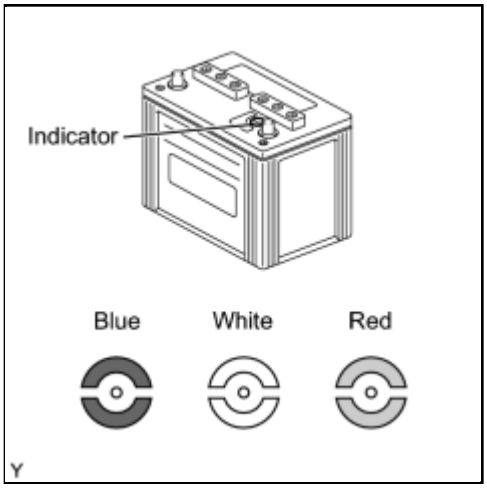
Title: 2AZ-FE BATTERY / CHARGING: CHARGING SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		



ON-VEHICLE INSPECTION

1. CHECK BATTERY ELECTROLYTE LEVEL

(a) Check the electrolyte level.

(1) If the electrolyte level is low, replace the battery (or add distilled water) and check the charging system.

2. CHECK BATTERY SPECIFIC GRAVITY

(a) Check the color of the indicator.

Result:

INDICATOR COLOR	CONDITION
Blue	Good
White	Charging necessary
Red	Replacement necessary

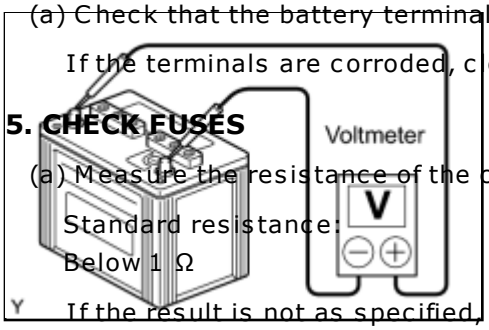
3. CHECK BATTERY VOLTAGE

(a) Turn the ignition switch off and turn on the headlights for 20 to 30 seconds. This will remove the surface charge from the battery.

(b) Measure the battery voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive terminal - Battery negative terminal	20°C (68°F)	12.5 to 12.9 V



HINT:

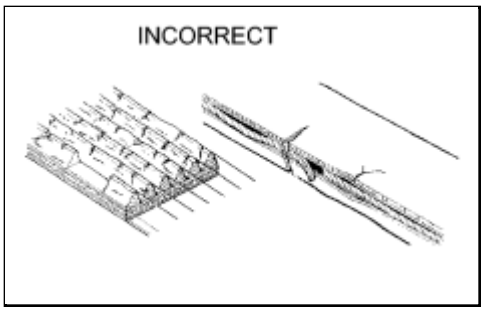
If the voltage is below the specification, charge the battery.

4. CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.

If the terminals are corroded, clean them.

5. CHECK FUSES

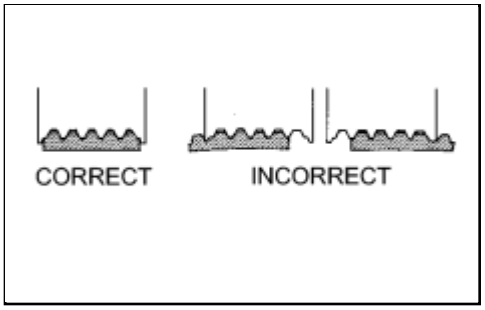


(a) Measure the resistance of the charging system fuses.

Standard resistance:

Below 1 Ω

If the result is not as specified, replace the fuses as necessary.



6. CHECK V-RIBBED BELT

(a) Check the belt for wear, cracks and other signs of damage.

If any of the following defects is found, replace the V-ribbed belt.

- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

(b) Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom to the pulley. If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

7. VISUALLY CHECK GENERATOR WIRING

(a) Check that the generator wiring is in good condition.

If the condition is not good, repair or replace the generator wire.

8. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.

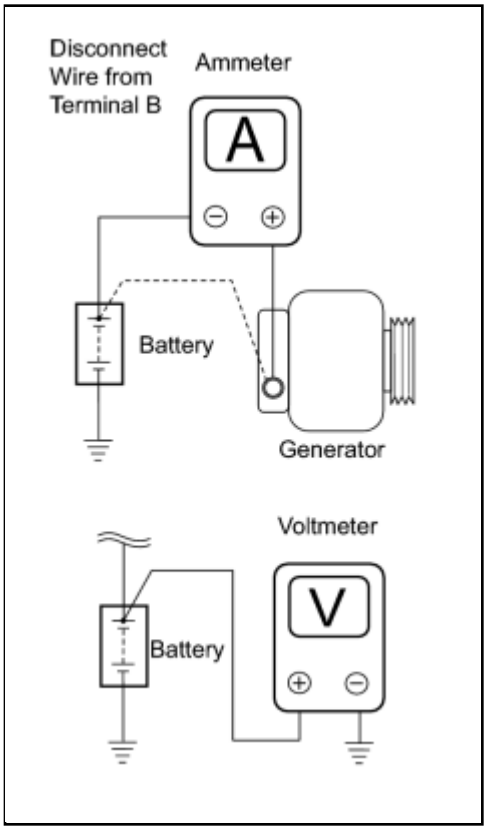
If there is abnormal noise, replace the pulley or generator.

9. CHECK CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

If the light does not operate as specified, troubleshoot the charge warning light circuit.



10. CHECK CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.

(3) Connect the positive (+) lead of the voltmeter to the positive (+) terminal of the battery.

(4) Ground the negative (-) lead of the voltmeter.

(b) Check the charging circuit.

(1) While keeping the engine speed at 2000 rpm, check the readings on the ammeter and voltmeter.

Standard current:
10 A or less
Standard voltage:
13.2 to 14.8 V

If the results are not as specified, replace the generator assembly.

HINT:

If the battery is not fully charged, the ammeter reading may be more than the standard current.

11. CHECK CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2000 rpm, turn on the high beam headlights, and turn the heater blower switch to the "HI" position.

(b) Check the reading on the ammeter.

Standard current:
30 A or more

If the ammeter reading is less than the standard current, replace the generator assembly.

HINT:

If the battery is fully charged, the ammeter reading may be less than the standard current. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

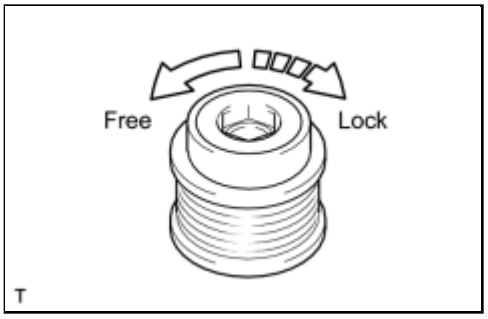
Title: 2AZ-FE BATTERY / CHARGING: CHARGING SYSTEM: Charge Warning Light Comes ON while Driving (2010 Corolla)		

Charge Warning Light Comes ON while Driving

INSPECTION PROCEDURE

PROCEDURE



1.	**CHECK LOCK FUNCTION OF CLUTCH PULLEY**

(a) Check the lock function with the pulley installed in the vehicle.

(1) Visually check that the rotor in the generator operates with the engine running.

(b) Check the lock function with the pulley removed from the vehicle.

(1) Remove the generator pulley cap. Using SST, hold the generator rotor.

SST: 09820-63021

(2) Turn the clutch pulley clockwise and check that the outer ring locks.

OK:

The outer ring locks.

NG ▶ **REPLACE GENERATOR CLUTCH PULLEY**

OK ▼

2.	**CHECK LOCK OF CLUTCH PULLEY**

(a) Start the engine and visually check for looseness of the clutch pulley.

OK:

The clutch pulley is not loose.

NG ▶ **TIGHTEN CLUTCH PULLEY TO THE SPECIFIED TORQUE**

OK ▶ **REPLACE GENERATOR ASSEMBLY**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001J2K037X
Title: 2AZ-FE BATTERY / CHARGING: CHARGING SYSTEM: Noise Occurs from Generator while Engine is Running (2010 Corolla)		

Noise Occurs from Generator while Engine is Running

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK LOOSENESS OF V-RIBBED BELT**

(a) Check the tension of the belt by pushing it down with a finger.

OK:

The tension of the belt is enough.

NG ▶ **REPLACE V-RIBBED BELT TENSIONER ASSEMBLY**

OK ▼

2.	**CHECK V-RIBBED BELT FOR WEAR**

(a) Check the V-ribbed belt for wear.

OK:

The V-ribbed belt is not worn.

NG ▶ **REPLACE V-RIBBED BELT**

OK ▼

3.	CHECK CLUTCH PULLEY FOR WEAR

(a) Check the clutch pulley groove for wear or other defects.

OK:

The clutch pulley groove is not damaged.

NG ▶ **REPLACE CLUTCH PULLEY**

OK ▼

4.	CHECK FOR NOISE WHILE CLUTCH PULLEY IS OPERATING

(a) Perform a driving test and check if noise occurs when decelerating.

OK:

Noise does not occur.

NG ▶ **REPLACE CLUTCH PULLEY**

OK ▶ **REPLACE GENERATOR ASSEMBLY**

(b) Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom to the pulley. If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt correctly.

7. VISUALLY CHECK GENERATOR WIRING

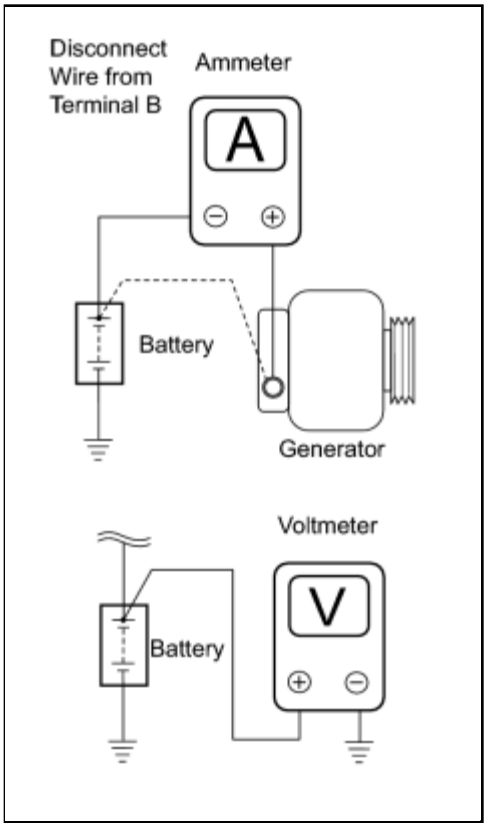
(a) Check that the generator wiring is in good condition.

If the condition is not good, repair or replace the generator wire.

8. LISTEN FOR ABNORMAL NOISES FROM GENERATOR

(a) Check that there is no abnormal noise from the generator while the engine is running.

If there is abnormal noise, replace the pulley or generator.



9. CHECK CHARGE WARNING LIGHT CIRCUIT

(a) Turn the ignition switch to ON. Check that the charge warning light comes on.

(b) Start the engine and check that the light goes off.

If the light does not operate as specified, troubleshoot the charge warning light circuit.

10. CHECK CHARGING CIRCUIT WITHOUT LOAD

(a) According to the following procedure, connect an ammeter and voltmeter as shown in the illustration.

(1) Disconnect the wire from terminal B of the generator and connect it to the negative (-) lead of the ammeter.

(2) Connect the positive (+) lead of the ammeter to terminal B of the generator.

(3) Connect the positive (+) lead of the voltmeter to the positive (+) terminal of the battery.

(4) Ground the negative (-) lead of the voltmeter.

(b) Check the charging circuit.

(1) While keeping the engine speed at 2000 rpm, check the readings on the ammeter and voltmeter.

Standard current:
10 A or less
Standard voltage:
13.2 to 14.8 V

If the results are not as specified, replace the generator assembly.

HINT:

If the battery is not fully charged, the ammeter reading may be more than the standard current.

11. CHECK CHARGING CIRCUIT WITH LOAD

(a) Keep the engine speed at 2000 rpm, turn on the high beam headlights, and turn the heater blower switch to the "HI" position.

(b) Check the reading on the ammeter.

Standard current:
30 A or more

If the ammeter reading is less than the standard current, replace the generator assembly.

HINT:

If the battery is fully charged, the ammeter reading may be less than the standard current. In this case, increase electrical load by operating devices such as the wiper motor and rear window defogger. Then, recheck the reading on the ammeter.

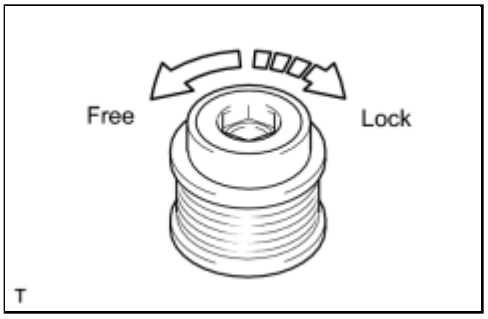
Title: 2ZR-FE BATTERY / CHARGING: CHARGING SYSTEM: Charge Warning Light Comes ON while Driving (2010 Corolla)		

Charge Warning Light Comes ON while Driving

INSPECTION PROCEDURE

PROCEDURE



1.	**CHECK LOCK FUNCTION OF GENERATOR CLUTCH PULLEY**

(a) Check the lock function with the pulley installed in the vehicle.

(1) Visually check that the rotor in the generator operates with the engine running.

(b) Check the lock function with the pulley removed from the vehicle.

(1) Remove the generator pulley cap. Using SST, hold the generator rotor.

SST: 09820-63021

(2) Turn the clutch pulley clockwise and check that the outer ring locks.

OK:

The outer ring locks.

NG ▶ **REPLACE GENERATOR CLUTCH PULLEY**

OK ▼

2.	**CHECK LOCK OF GENERATOR CLUTCH PULLEY**

(a) Start the engine and visually check the clutch pulley for looseness.

OK:

The clutch pulley is not loose.

NG ▶ **TIGHTEN GENERATOR CLUTCH PULLEY TO THE SPECIFIED TORQUE**

OK ▶ **REPLACE GENERATOR ASSEMBLY**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001J2K036X
Title: 2ZR-FE BATTERY / CHARGING: CHARGING SYSTEM: Noise Occurs from Generator while Engine is Running (2010 Corolla)		

Noise Occurs from Generator while Engine is Running

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK LOOSENESS OF V-RIBBED BELT**

(a) Check the tension of the belt by pushing it down with a finger.

OK:

The tension of the belt is enough.

NG ▶ **ADJUST V-RIBBED BELT**

OK ▼

2.	**CHECK V-RIBBED BELT FOR WEAR**

(a) Check the V-ribbed belt for wear.

OK:

The V-ribbed belt is not worn.

NG ▶ **REPLACE V-RIBBED BELT**

OK ▼

3.	CHECK GENERATOR CLUTCH PULLEY FOR WEAR

(a) Check the clutch pulley grooves for wear or other defects.

OK:

The clutch pulley grooves are not damaged.

NG ▶ REPLACE GENERATOR CLUTCH PULLEY

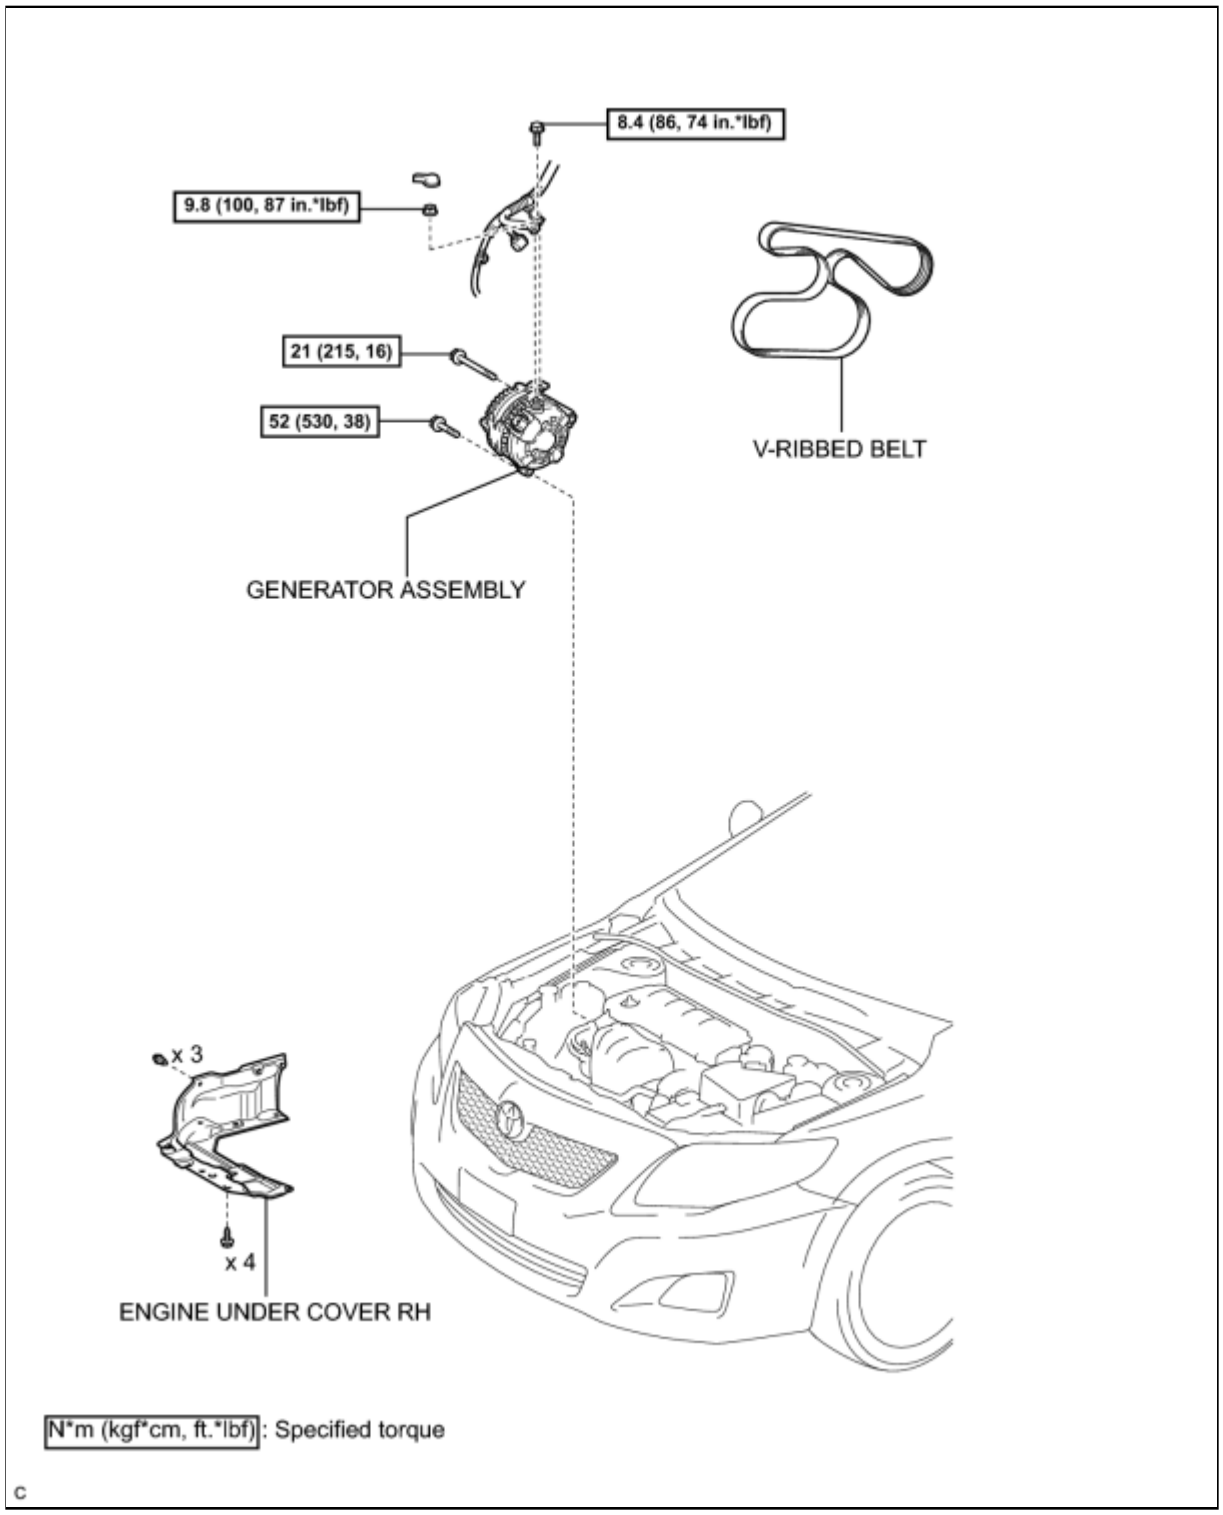
OK ▼

4.	CHECK FOR NOISE WHILE GENERATOR CLUTCH PULLEY IS OPERATING

(a) Perform a driving test and check if noise occurs when decelerating.

OK:

Noise does not occur.



NG ▶ REPLACE GENERATOR CLUTCH PULLEY

OK ▶ REPLACE GENERATOR ASSEMBLY

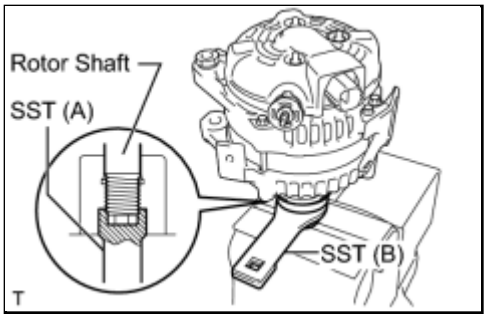
Title: 2AZ-FE BATTERY / CHARGING: GENERATOR: DISASSEMBLY (2010 Corolla)		

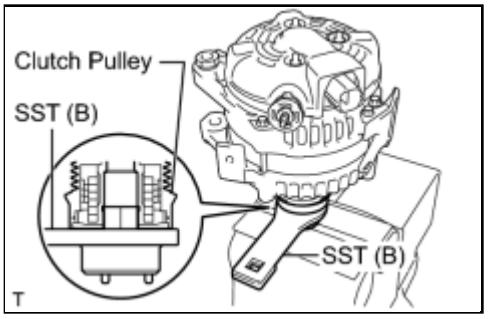
DISASSEMBLY

1. REMOVE GENERATOR CLUTCH PULLEY

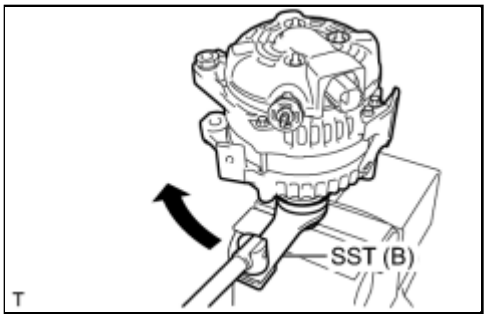


(a) Using a screwdriver, puncture the center of the generator pulley cap and pry it off.

(b) Set SST (A) and (B).



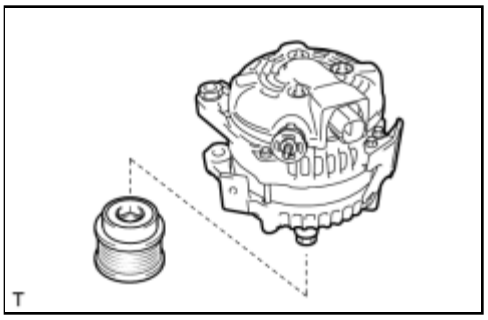
SST: 09820-63021



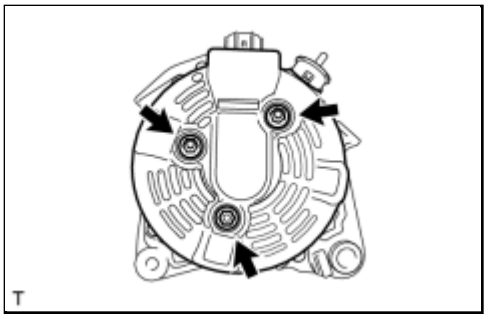
(c) Clamp SST (A) in a vise.

(d) Place the rotor shaft end into SST (A).

(e) Fit SST (B) to the clutch pulley.



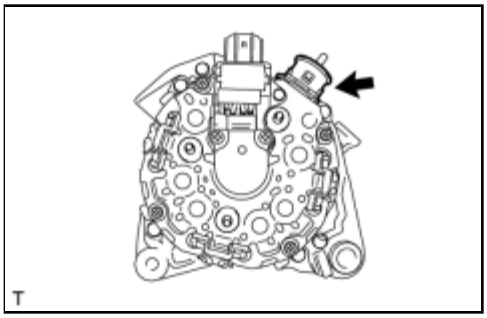
(f) Loosen the pulley by turning SST (B) in the direction shown in the illustration.



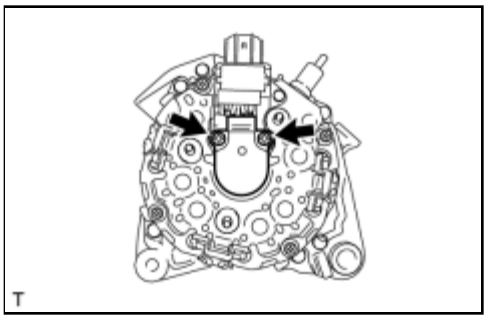
(g) Remove the generator assembly from SST.

(h) Remove the clutch pulley from the rotor shaft.

2. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY

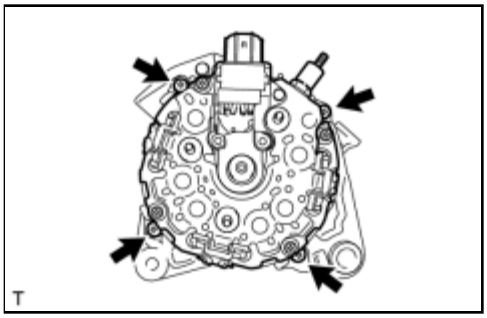


(a) Place the generator assembly on the clutch pulley.



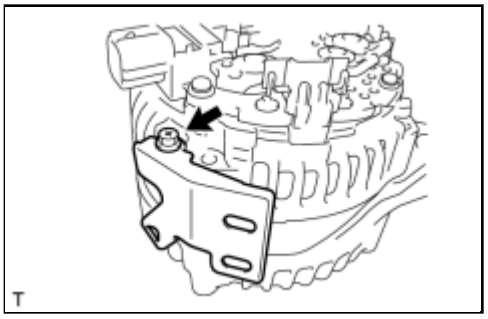
(b) Remove the 3 nuts and generator rear end cover.

3. REMOVE GENERATOR TERMINAL INSULATOR

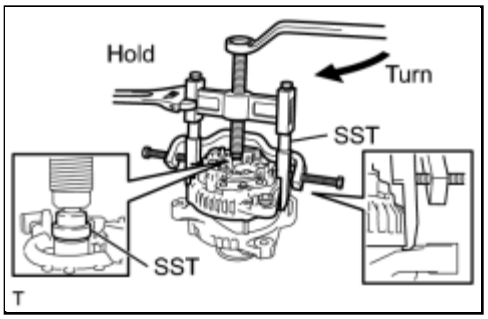


(a) Remove the terminal insulator.

4. REMOVE GENERATOR BRUSH HOLDER ASSEMBLY



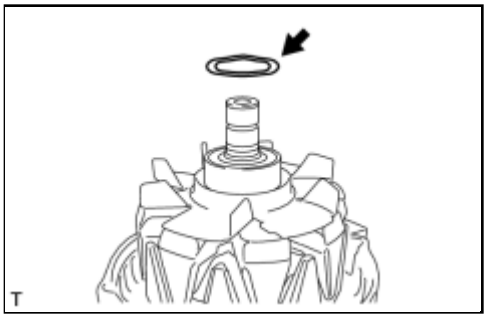
(a) Remove the 2 screws and generator brush holder.



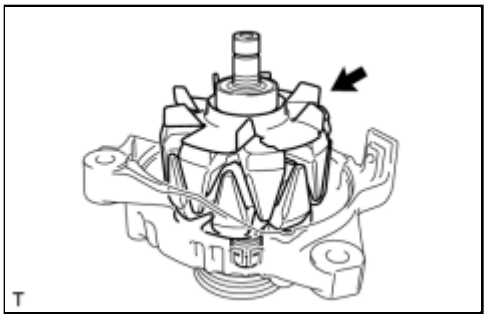
5. REMOVE GENERATOR ROTOR ASSEMBLY

(a) Remove the 4 bolts.

(b) Remove the bolt and cord clip.



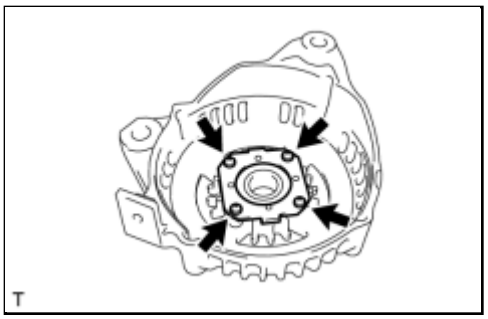
(c) Using SST, remove the coil.



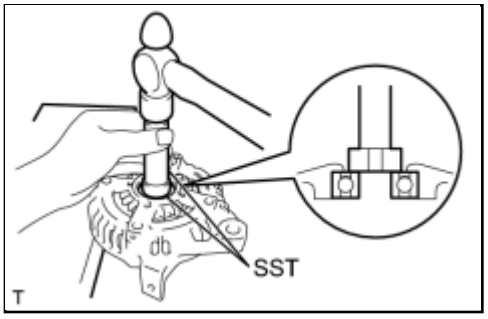
SST: 09950-40011

09951-04020
09952-04010
09953-04020
09954-04010
09955-04071
09957-04010
09958-04011

6. REMOVE GENERATOR ROTOR ASSEMBLY



(a) Remove the washer.



(b) Remove the generator rotor.

7. REMOVE GENERATOR DRIVE END FRAME BEARING

(a) Remove the 4 screws and bearing retainer.

(b) Using SST and a hammer, tap out the bearing.

SST: 09950-60010

09951-00250

SST: 09950-70010

09951-07100

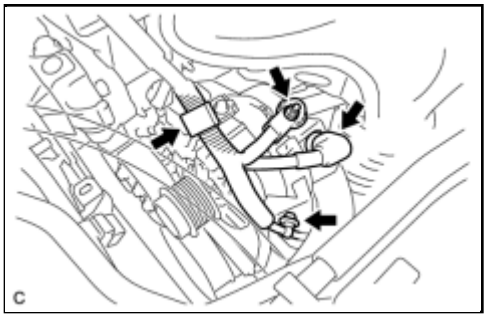
Title: 2AZ-FE BATTERY / CHARGING: GENERATOR: REMOVAL (2010 Corolla)		

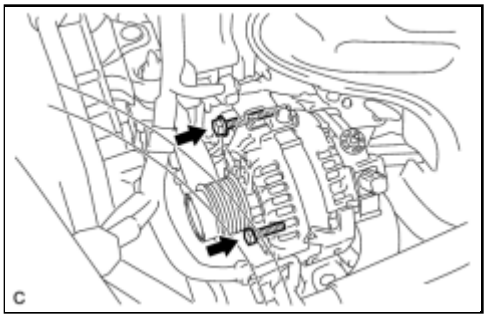


REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

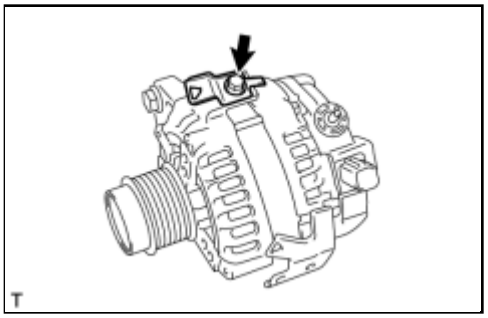
2. REMOVE ENGINE UNDER COVER RH

3. REMOVE V-RIBBED BELT INFO



4. REMOVE GENERATOR ASSEMBLY

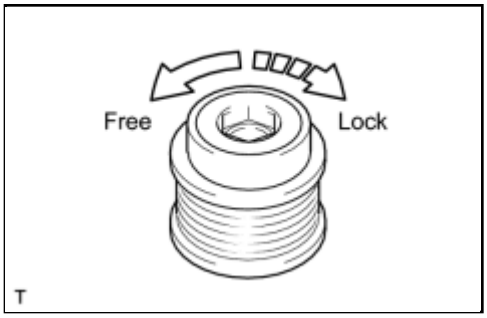
(a) Disconnect the generator connector.



(b) Remove the nut and disconnect the wire harness from terminal B.

(c) Separate the 2 wire harness clamps.

(d) Remove the 2 bolts and generator assembly.

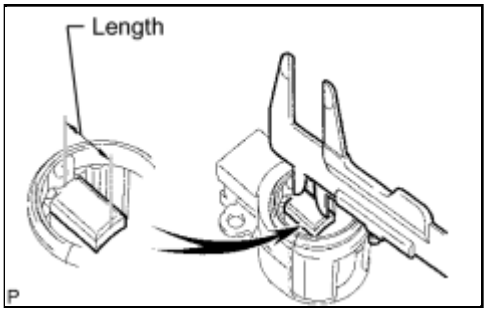


(e) Remove the bolt and wire harness clamp bracket.

T

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000017VH019X
Title: 2AZ-FE BATTERY / CHARGING: GENERATOR: INSPECTION (2010 Corolla)		

INSPECTION

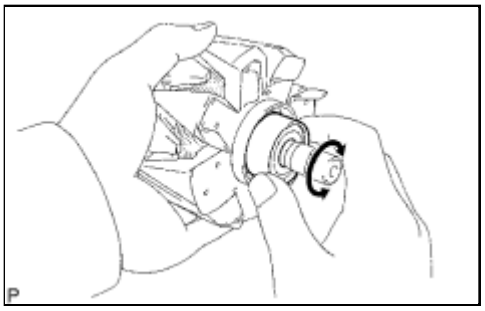


1. INSPECT GENERATOR CLUTCH PULLEY

(a) Hold the center of the pulley, and confirm that the outer ring turns counterclockwise and does not turn clockwise.

If the result is not as specified, replace the generator clutch pulley.

2. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY

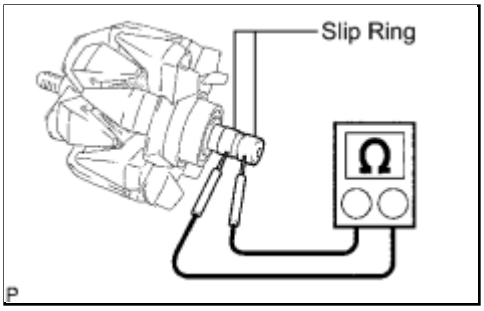


(a) Using a vernier caliper, measure the brush length.

Standard length:
9.5 to 11.5 mm (0.374 to 0.453 in.)
Minimum length:
4.5 mm (0.177 in.)

If the brush length is less than the minimum, replace the generator brush holder assembly.

3. INSPECT GENERATOR ROTOR ASSEMBLY



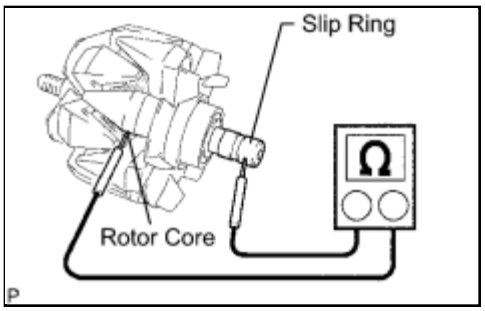
(a) Check the appearance.

(1) Check that the bearing is not rough or worn.

OK:
The bearing rotates smoothly.

If the result is not as specified, replace the generator rotor assembly.

(b) Check the resistance.

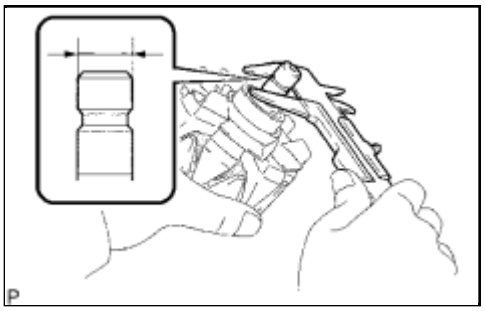


(1) Measure the resistance between the slip rings.

Standard Resistance:

CONDITION	SPECIFIED CONDITION
Approx. 20°C (68°F)	2.3 to 2.7 Ω

If the result is not as specified, replace the generator rotor assembly.



(2) Measure the resistance between the slip ring and rotor core.

Standard Resistance:

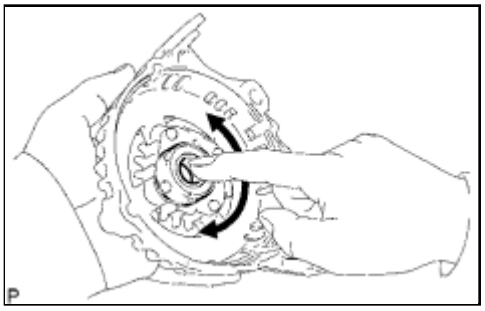
TESTER CONNECTION	SPECIFIED CONDITION
Slip ring - Rotor core	1 MΩ or higher

If the result is not as specified, replace the generator rotor assembly.

(c) Check the slip ring diameter.

(1) Using a vernier caliper, measure the slip ring diameter.

Standard diameter:
14.2 to 14.4 mm (0.559 to 0.567 in.)
Minimum diameter:
14 mm (0.551 in.)



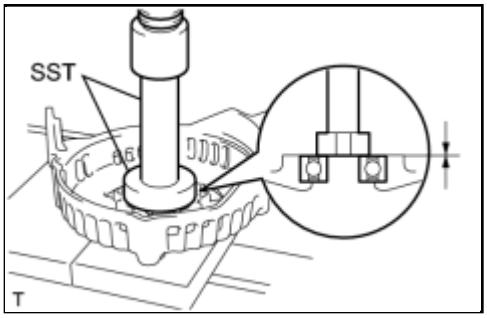
If the diameter is less than the minimum, replace the generator rotor assembly.

4. INSPECT GENERATOR DRIVE END FRAME BEARING

(a) Check that the bearing is not rough or worn.

OK:
The bearing rotates smoothly.

If the bearing does not rotate smoothly, replace the



bearing.

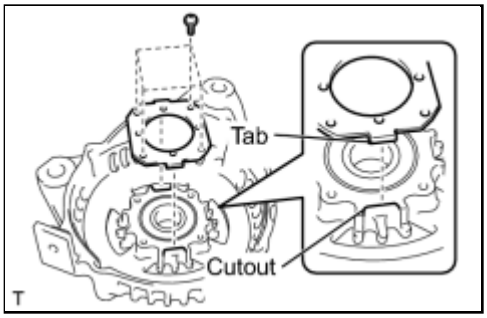
Title: 2AZ-FE BATTERY / CHARGING: GENERATOR: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL GENERATOR DRIVE END FRAME BEARING



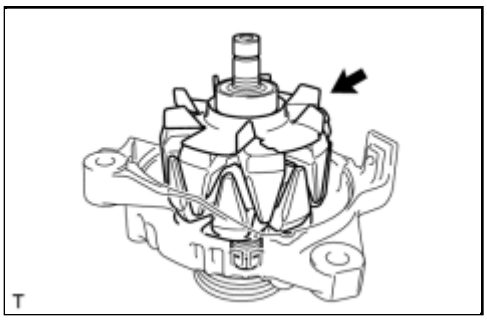
(a) Using SST and a press, press in a new generator drive end frame bearing.

SST: 09950-60010

09951-00250

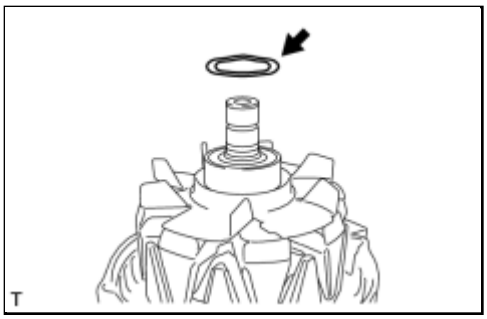
SST: 09950-70010

09951-07100



(b) Fit the tabs on the retainer plate into the cutouts on the drive end frame to install the retainer plate.

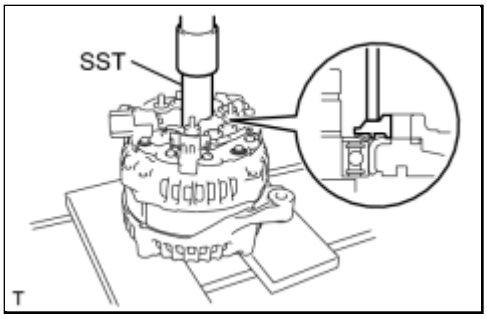
(c) Install the 4 screws.



Torque: 2.3 N·m (23 kgf·cm, 20in·lbf)

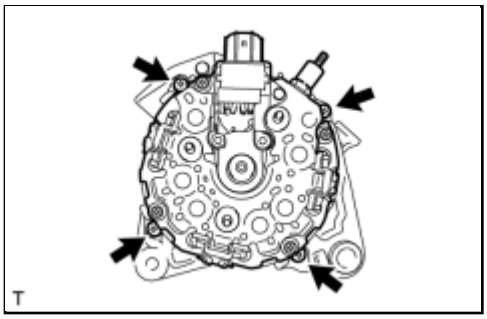
2. INSTALL GENERATOR ROTOR ASSEMBLY

(a) Place the drive end frame on the clutch pulley.



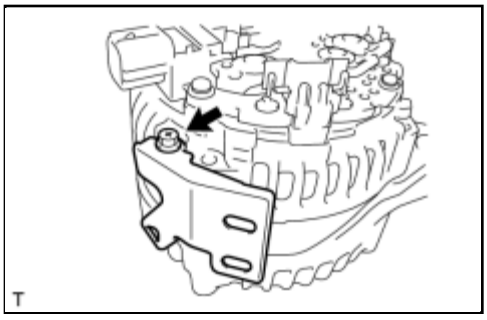
(b) Install the generator rotor onto the generator rectifier end frame.

(c) Place a new generator washer on the generator rotor.



3. INSTALL GENERATOR COIL ASSEMBLY

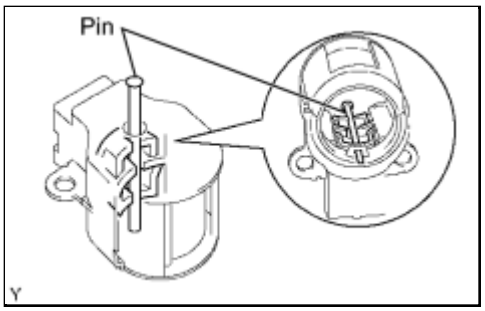
(a) Using SST and a press, press in the generator coil assembly to the drive end frame.



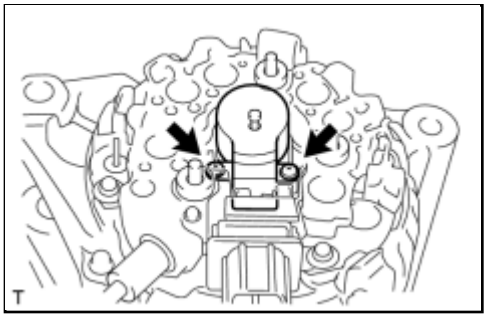
SST: 09612-70100

09612-07240

(b) Tighten the 4 bolts.



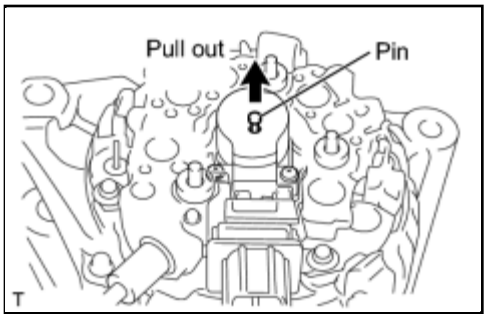
Torque: 5.8 N·m (59 kgf·cm, 51in·lbf)



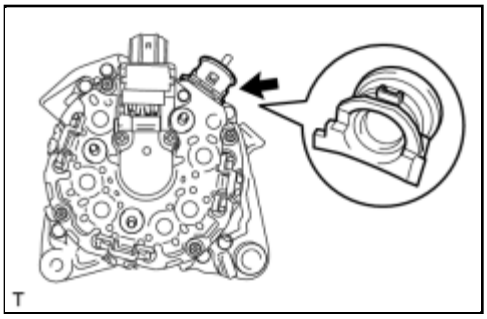
(c) Install the cord clip with the bolt.

Torque: 4.6 N·m (47 kgf·cm, 41in·lbf)

4. INSTALL GENERATOR BRUSH HOLDER ASSEMBLY

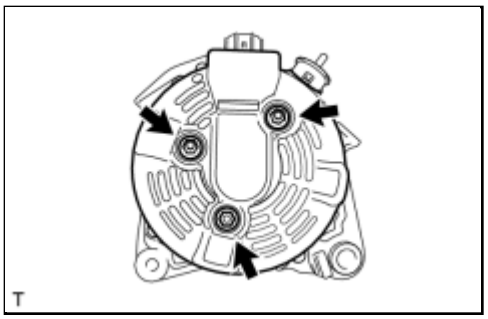


(a) While pushing the 2 brushes into the generator brush holder, insert a φ1.0 mm (0.0394 in.) pin into the generator brush holder.



(b) Install the generator brush holder with the 2 screws.

Torque: 1.8 N·m (18 kgf·cm, 16in·lbf)

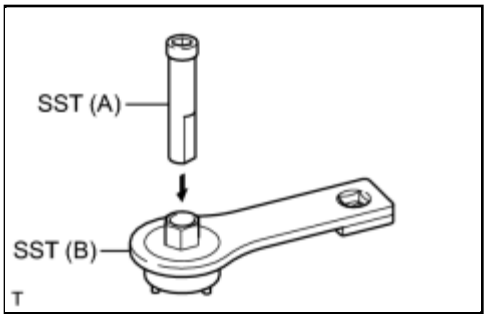


(c) Pull the pin out of the generator brush holder.

5. INSTALL GENERATOR TERMINAL INSULATOR

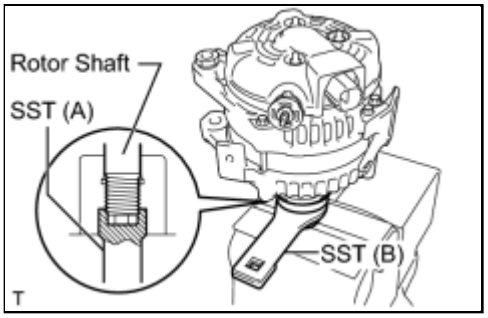
(a) Install the terminal insulator onto the generator rectifier end frame.

6. INSTALL GENERATOR REAR END COVER



(a) Install the generator rear end cover with the 3 nuts.

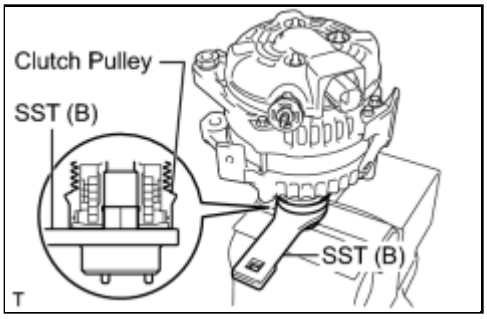
Torque: 4.6 N·m (47 kgf·cm, 41in·lbf)



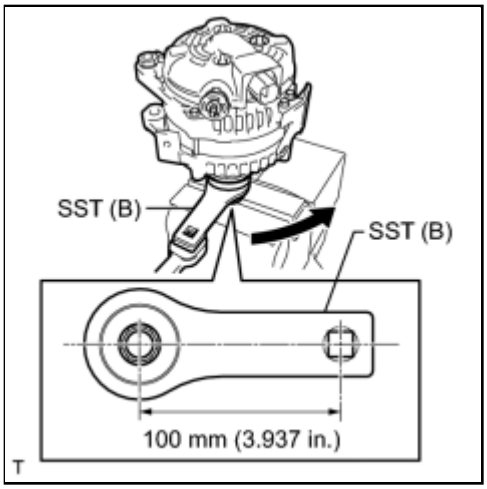
7. INSTALL GENERATOR CLUTCH PULLEY

(a) Temporarily install the clutch pulley onto the rotor shaft.

(b) Set SST (A) and (B).



SST: 09820-63021



(c) Clamp SST (A) in a vise.

(d) Place the rotor shaft end into SST (A).

(e) Fit SST (B) to the clutch pulley.

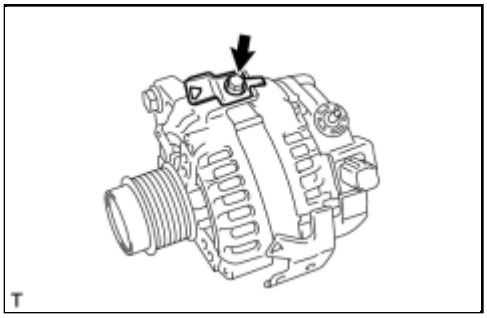
(f) Tighten the pulley by turning SST (B) in the direction indicated by the arrow shown in the illustration.

Without SST - Torque: 111 N·m (1127 kgf·cm, 82ft·lbf)
With SST - Torque: 84 N·m (857 kgf·cm, 62ft·lbf)

NOTICE:

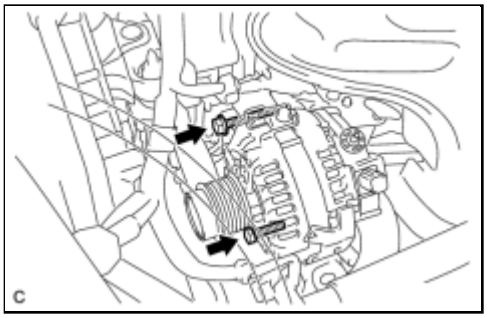
- Use a torque wrench with a fulcrum length of 318 mm (12.52 in.).
- This torque value is effective when SST is parallel to the torque wrench.

(g) Remove the generator assembly from SST.



(h) Check that the clutch pulley rotates smoothly.

(i) Install a new clutch pulley cap to the clutch pulley.



Last Modified: 3-10-2010	6.4 A	**From:** 200901

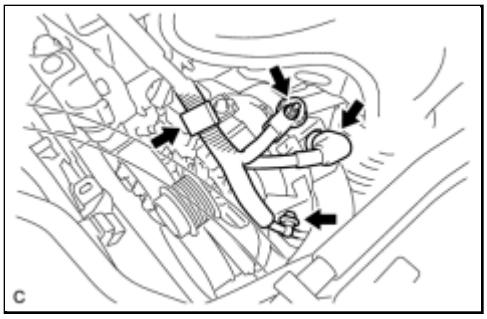
Title: 2AZ-FE BATTERY / CHARGING: GENERATOR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL GENERATOR ASSEMBLY



(a) Install the wire harness clamp bracket with the bolt.

(b) Install the generator assembly with the 2 bolts.

Bolt A - Torque: 21 N·m (215 kgf·cm, 16ft·lbf)
Bolt B - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

(c) Install the generator wire to terminal B with the nut.

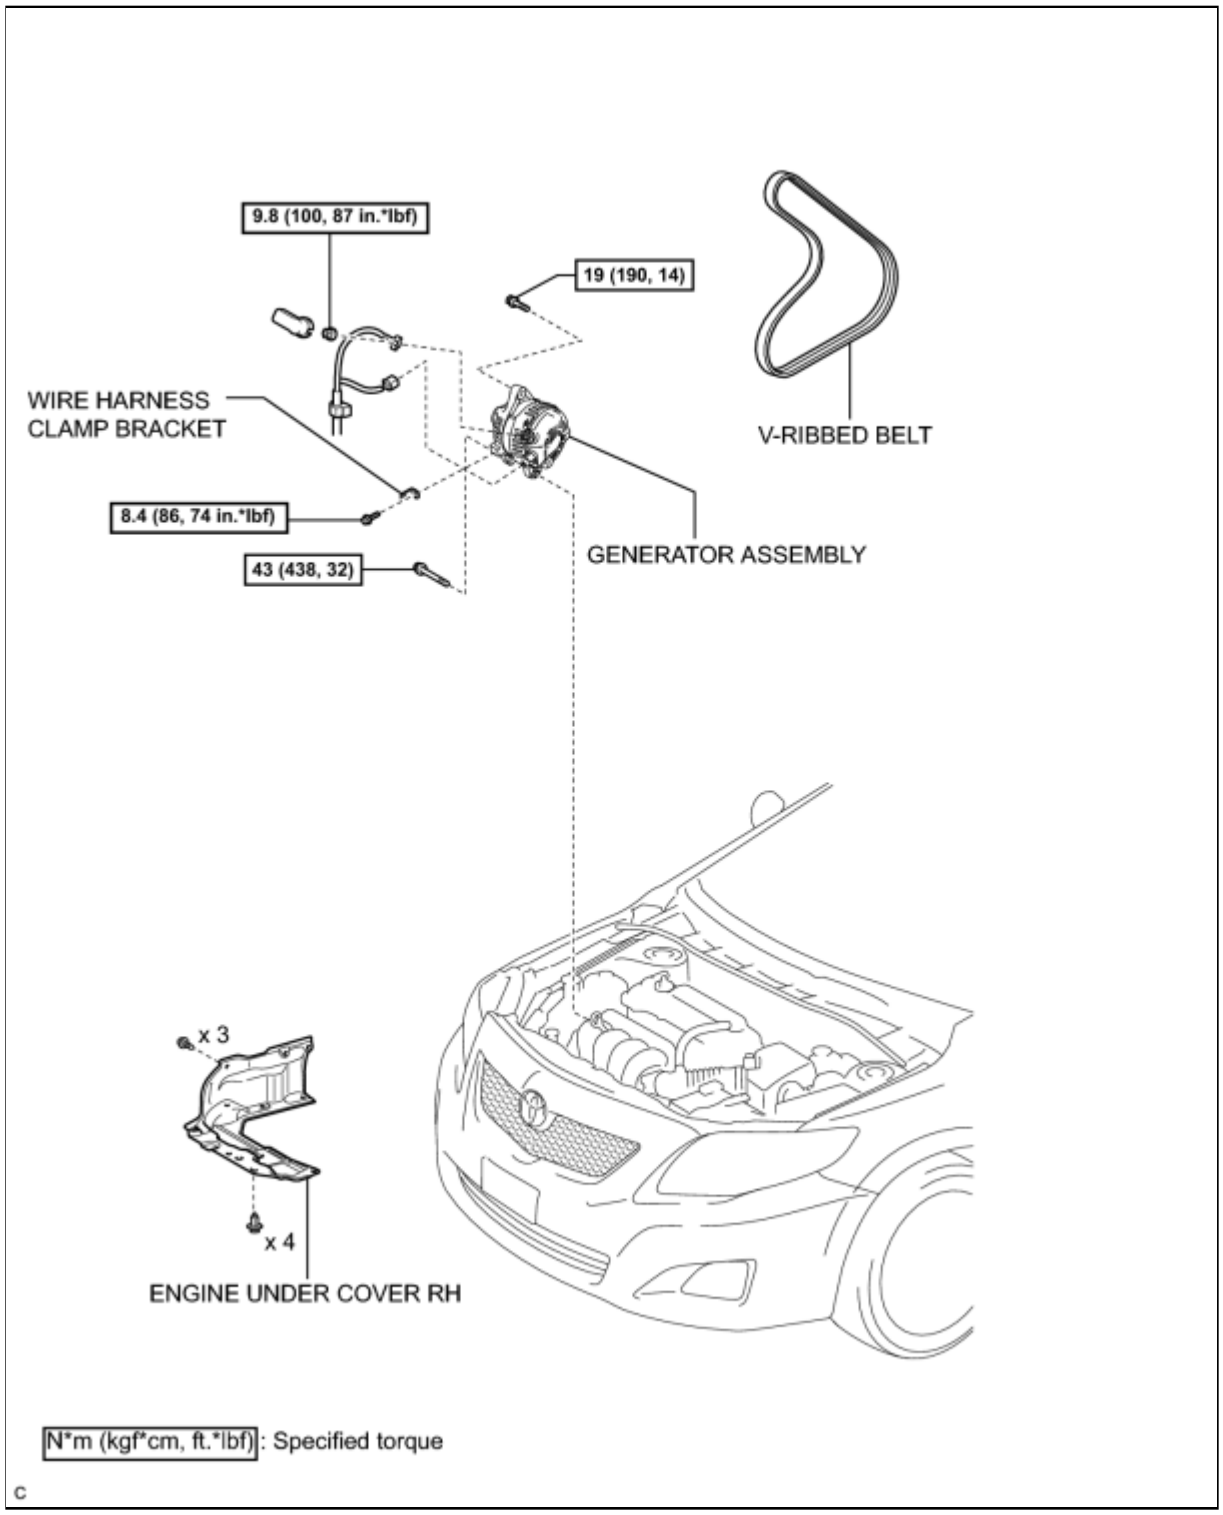
Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(d) Attach the clamp and connect the generator connector to the generator.

(e) Install the 2 wire harness clamps.

2. INSTALL V-RIBBED BELT INFO

3. INSTALL ENGINE UNDER COVER RH



4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

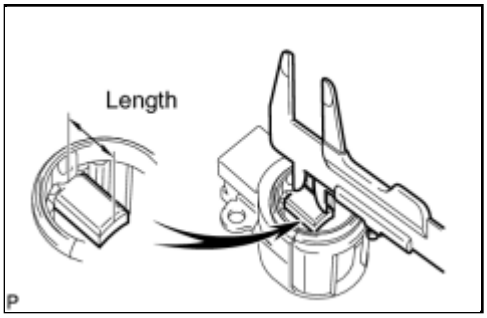
Title: 2ZR-FE BATTERY / CHARGING: GENERATOR: INSPECTION (2010 Corolla)		

INSPECTION

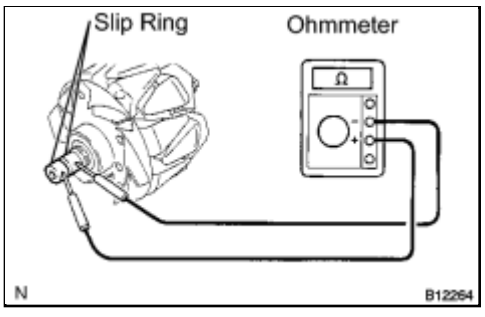


1. INSPECT GENERATOR CLUTCH PULLEY

(a) Hold the center of the pulley, and confirm that the outer ring turns counterclockwise and does not turn clockwise.

If the result is not as specified, replace the clutch pulley.

2. INSPECT GENERATOR BRUSH HOLDER ASSEMBLY



(a) Using a vernier caliper, measure the length of the exposed brushes.

Standard exposed length:
9.5 to 11.5 mm (0.374 to 0.453 in.)
Minimum exposed length:
4.5 mm (0.177 in.)

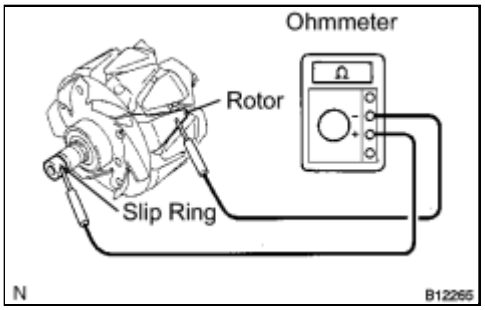
If the exposed length is less than the minimum, replace the brush holder assembly.

3. INSPECT GENERATOR ROTOR ASSEMBLY

(a) Check the generator rotor for an open circuit.

(1) Using an ohmmeter, measure the resistance between the slip rings.

Standard Resistance:

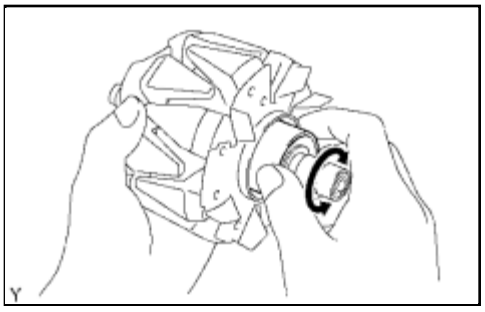


TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Slip ring - Slip ring	Approx. 20°C (68°F)	2.3 to 2.7 Ω

If the result is not as specified, replace the generator

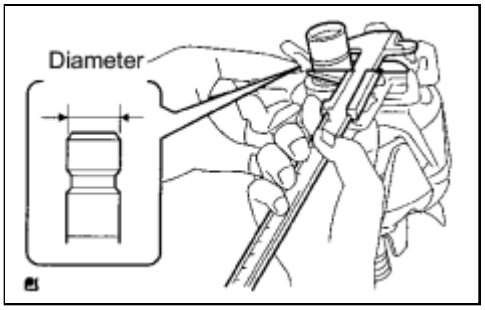
rotor assembly.

(b) Check the rotor for a short to ground.



(1) Using an ohmmeter, measure the resistance between one of the slip rings and the rotor.

Standard Resistance:



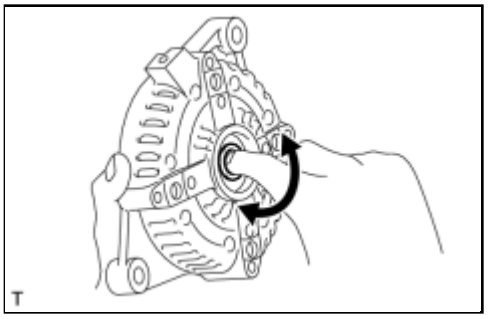
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Slip ring - Rotor	-	1 MΩ or higher

If the result is not as specified, replace the generator rotor assembly.

(c) Check that the generator rotor bearing is not rough or worn.

If necessary, replace the generator rotor assembly.

(d) Using a vernier caliper, measure the slip ring diameter.

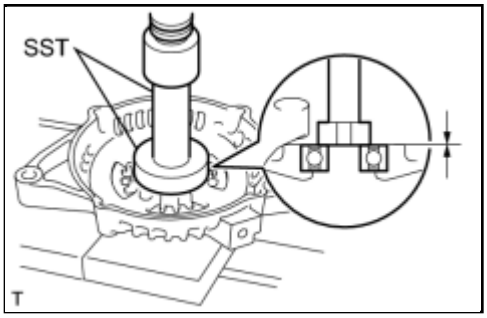


Standard diameter:
14.2 to 14.4 mm (0.559 to 0.567 in.)
Minimum diameter:
14.0 mm (0.551 in.)

If the diameter is less than the minimum, replace the generator rotor assembly.

4. INSPECT GENERATOR DRIVE END FRAME BEARING

(a) Check that the bearing is not rough or worn.



If necessary, replace the generator drive end frame bearing.

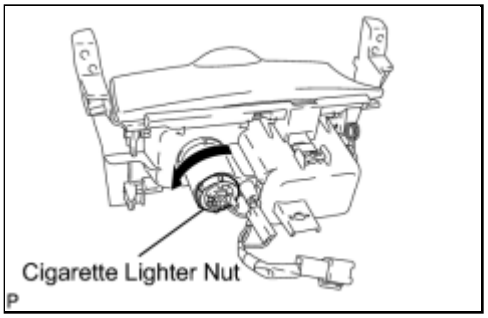
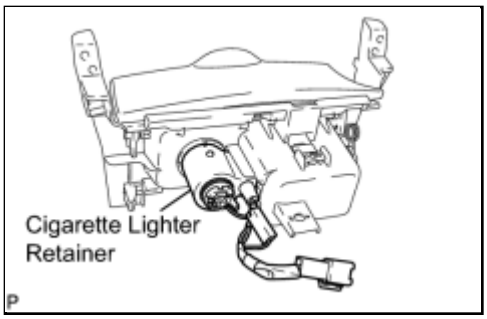
Title: POWER OUTLETS (INT): CIGARETTE LIGHTER: REMOVAL (2010 Corolla)		

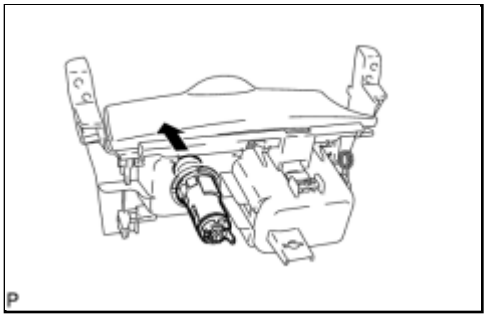


REMOVAL

1. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH** INFO
2. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH** INFO
3. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)** INFO
4. **REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle)** INFO
5. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)** INFO
6. **REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle)** INFO
7. **REMOVE INSTRUMENT PANEL BOX ASSEMBLY** INFO
8. **REMOVE CIGARETTE LIGHTER ASSEMBLY**



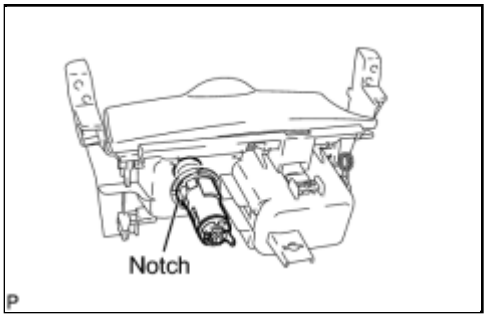
(a) Disconnect the connector.



(b) Disengage the clamp and disconnect the connector.

(c) Turn the cigarette lighter nut to remove it.

(d) Remove the cigarette lighter retainer.



(e) Remove the cigarette lighter socket.

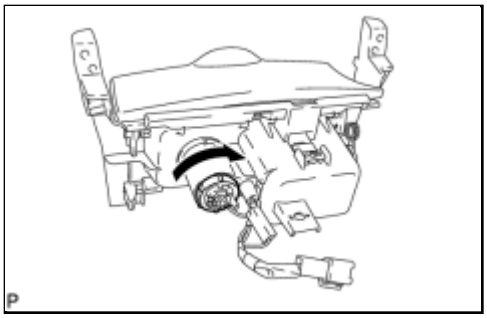
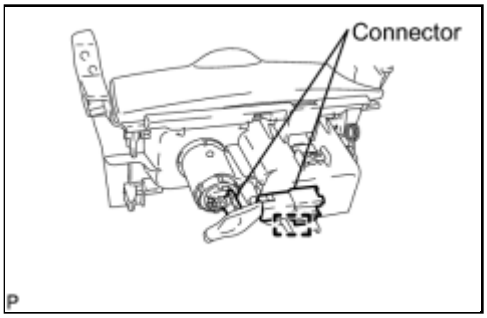
Title: POWER OUTLETS (INT): CIGARETTE LIGHTER: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL CIGARETTE LIGHTER ASSEMBLY

(a) Align the cigarette lighter socket with the notch on the instrument panel box assembly, then install it.



(b) Install the cigarette lighter retainer.

(c) Turn the cigarette lighter nut to install it.

(d) Engage the clamp and connect the connector.

(e) Connect the connector.

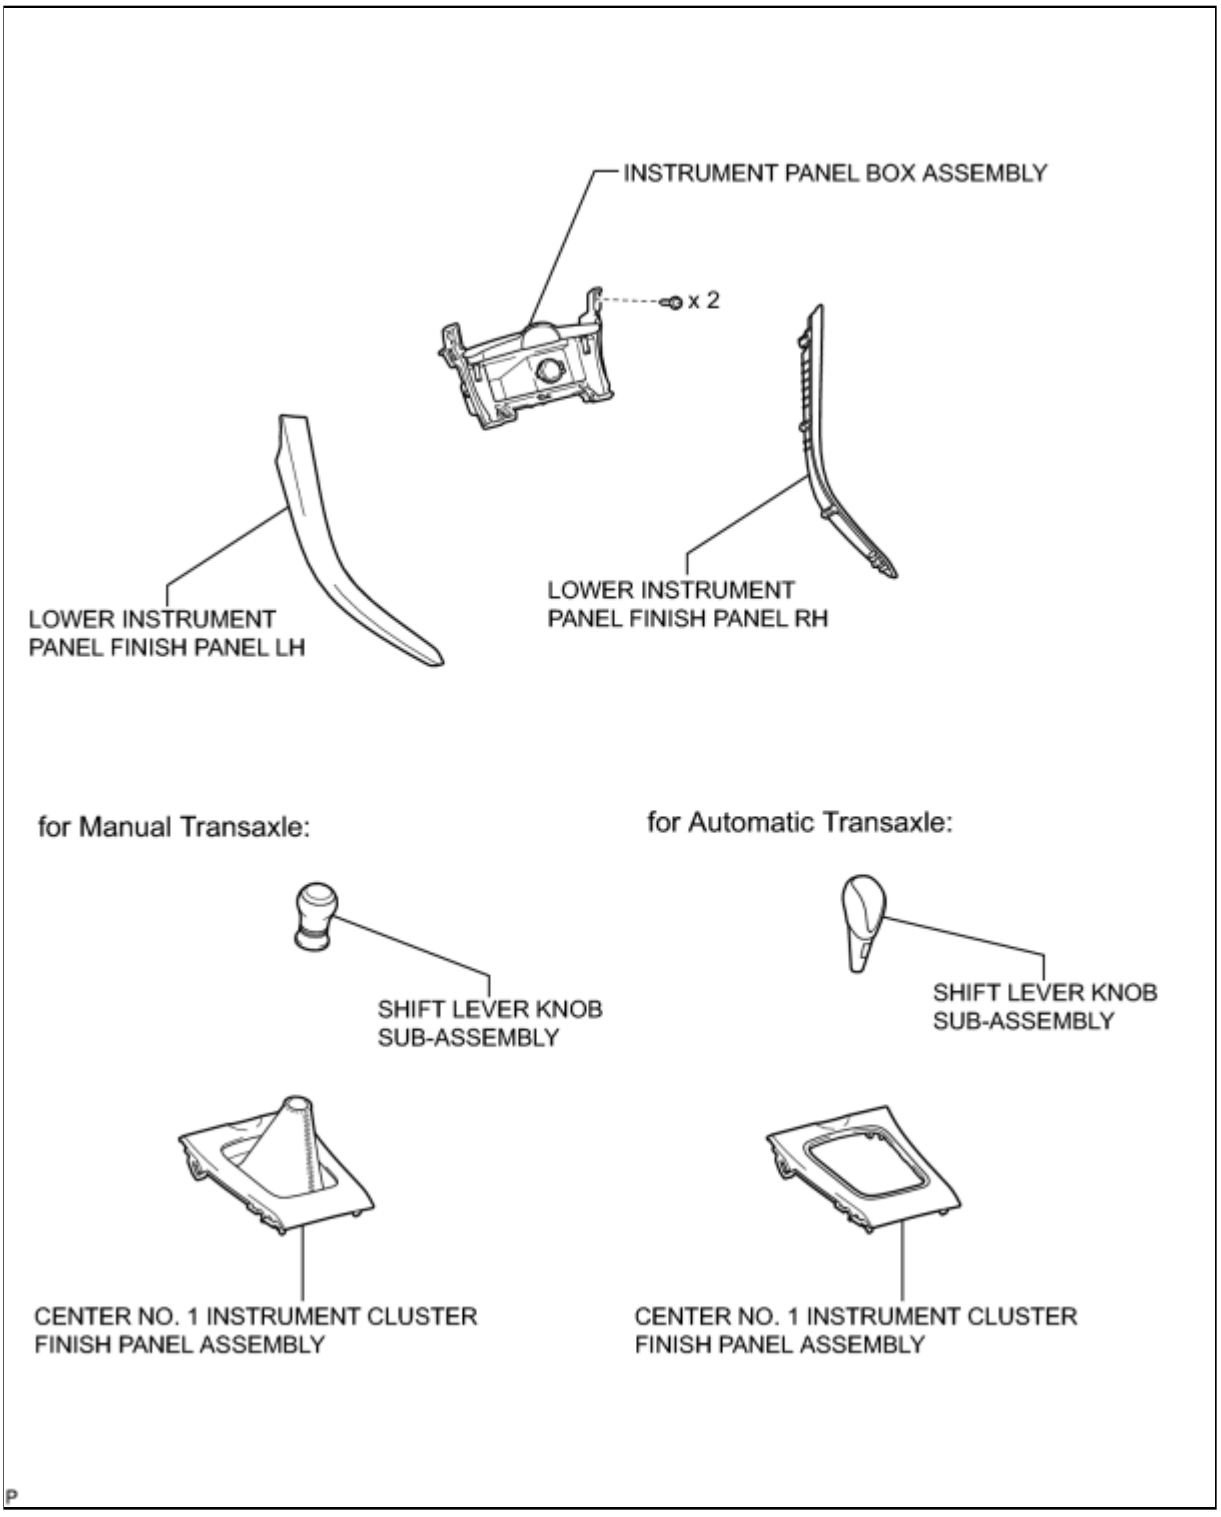
2. **INSTALL INSTRUMENT PANEL BOX ASSEMBLY** INFO

3. **INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle)** INFO

4. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)** INFO

5. **INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle)** INFO

6. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)** INFO



7. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH** INFO

8. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH** INFO

Title: NETWORKING: CAN COMMUNICATION SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. IGNITION SWITCH EXPRESSIONS

HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ON	ON	On (IG)
Ignition Switch ACC	ACC	On (ACC)
Engine Start	START	Start

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

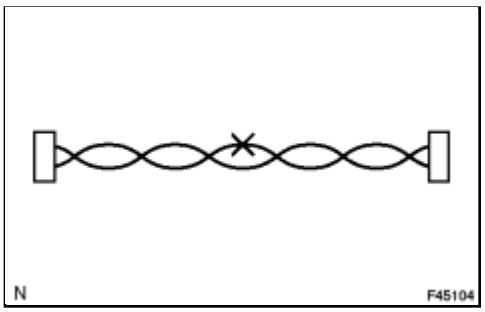
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable after the SRS system.

(a) Be careful when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

3. STEERING SYSTEM HANDLING PRECAUTIONS

(a) Be careful when replacing parts. Incorrect replacement could affect the performance of the steering system and result in hazardous driving.

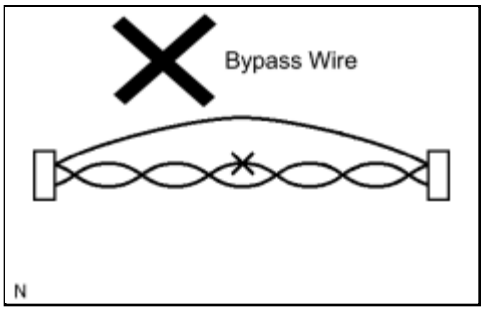
4. SRS AIRBAG SYSTEM HANDLING PRECAUTIONS



(a) This vehicle is equipped with an SRS (Supplemental Restraint System) which includes parts such as the driver airbag and front passenger airbag. Failure to carry out service operations in the correct sequence could cause unexpected SRS deployment during servicing and may lead to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notice for the SRS INFO .

5. BUS WIRE REPAIR

(a) After repairing a bus wire with solder, wrap the repaired part with electrical tape.

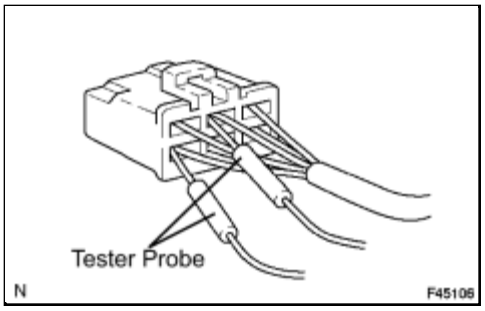


NOTICE:

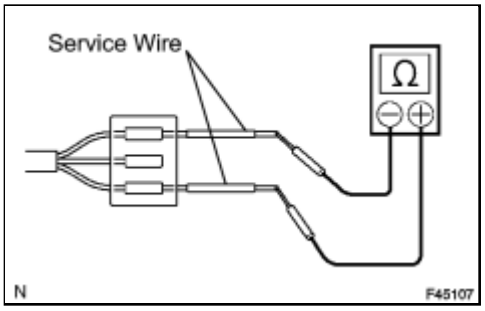
- The CANL bus wire and CANH bus wire must be installed together at all times.
- When installing, make sure that the wires are twisted.
- CAN bus wires are likely to be influenced by electrical

noise if the bus wires are not twisted.

- The difference in length between the CANL bus wire and CANH bus wire should be 100 mm (3.937 in.) or less.
- Leave approximately 80 mm (3.150 in.) loose in the twisted wires around the connector.



(b) Do not use bypass wiring between the connectors.



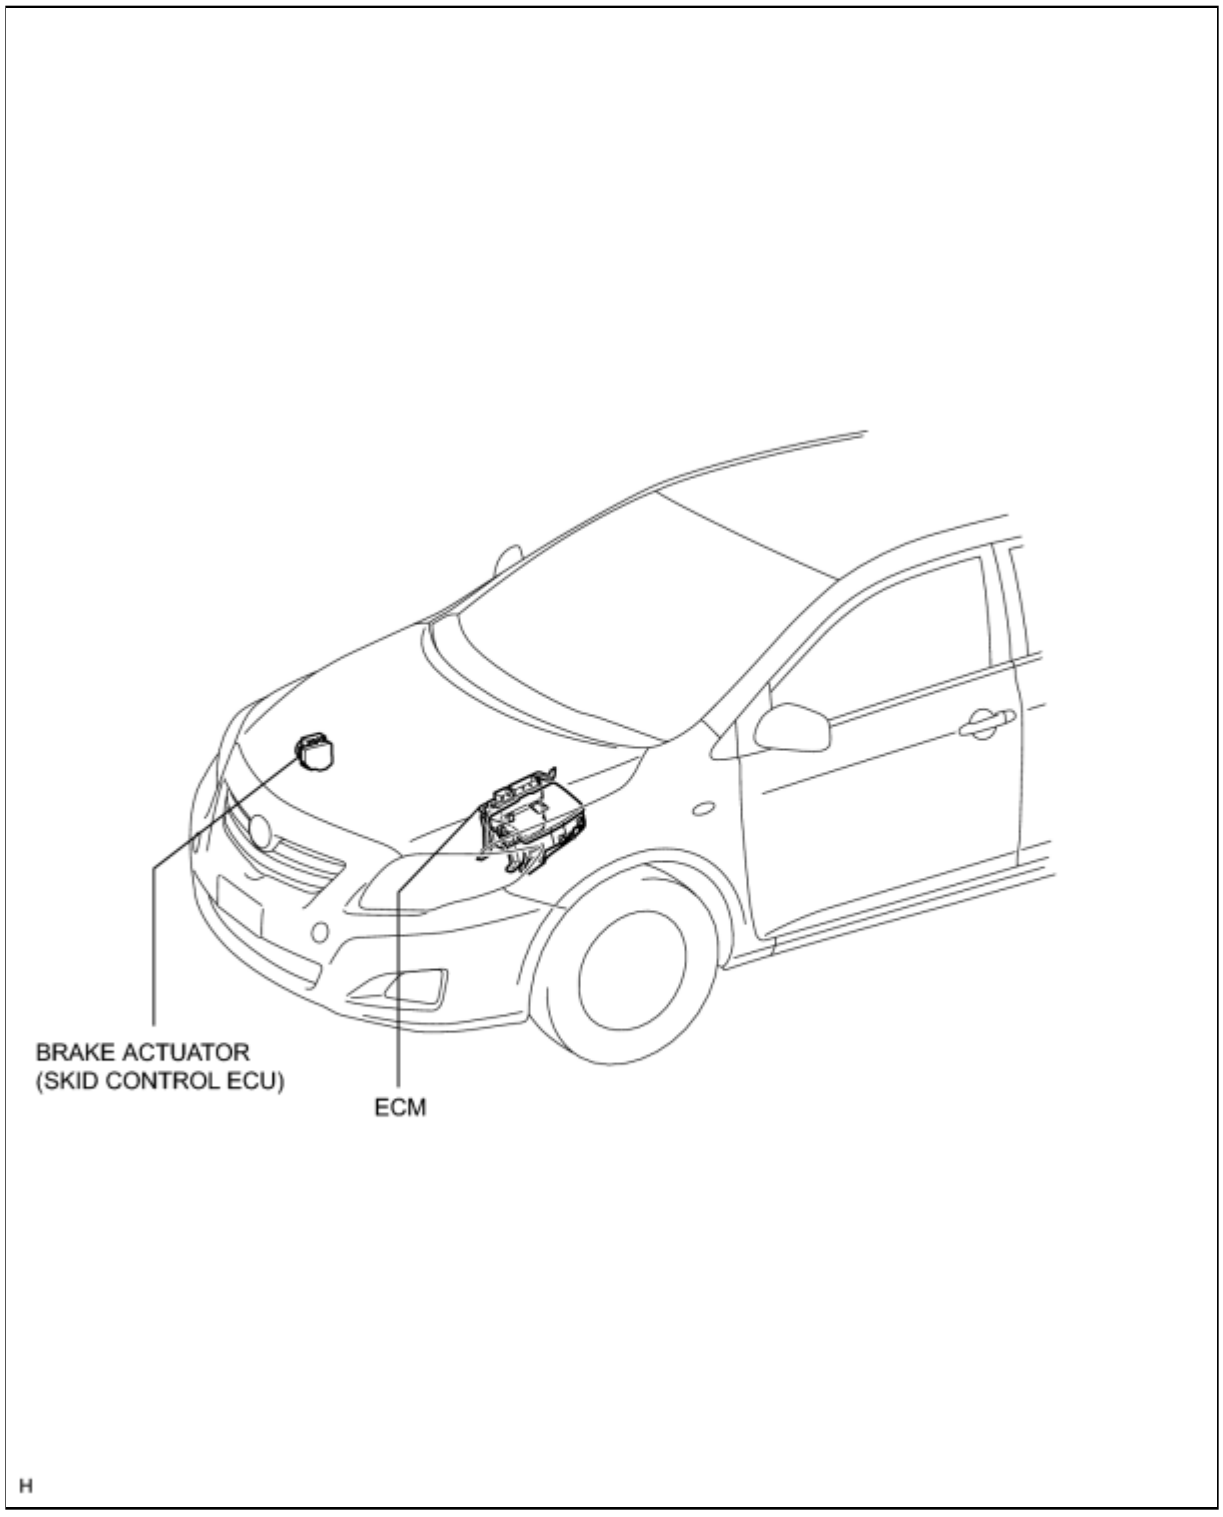
NOTICE:

The ability of the twisted bus wires to resist interference will be lost if bypass wire is used.

6. CONNECTOR HANDLING

(a) When checking resistance with a tester, insert the tester probes from the backside (harness side) of the connector.

(b) Use service wires to check the connector if it is impossible to check continuity from the rear of the connector.



7. PRECAUTIONS FOR INSPECTING OR REPLACING CAN JUNCTION CONNECTOR

(a) If the CAN junction connector is removed from the vehicle for inspection or replacement, make sure to install the CAN junction connector and all wire harnesses to their original locations with tape and the clamps.

Title: NETWORKING: CAN COMMUNICATION SYSTEM: TERMINALS OF ECU (2010 Corolla)		

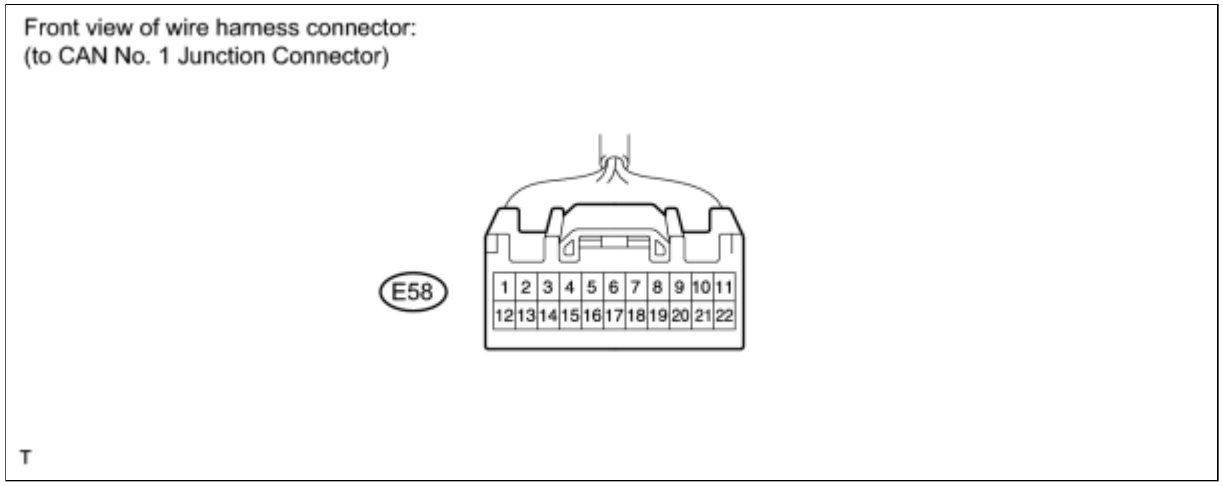
TERMINALS OF ECU

NOTICE:

- Turn the ignition switch off before measuring the resistance of the CAN bus main wires and CAN bus branch wires.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN.

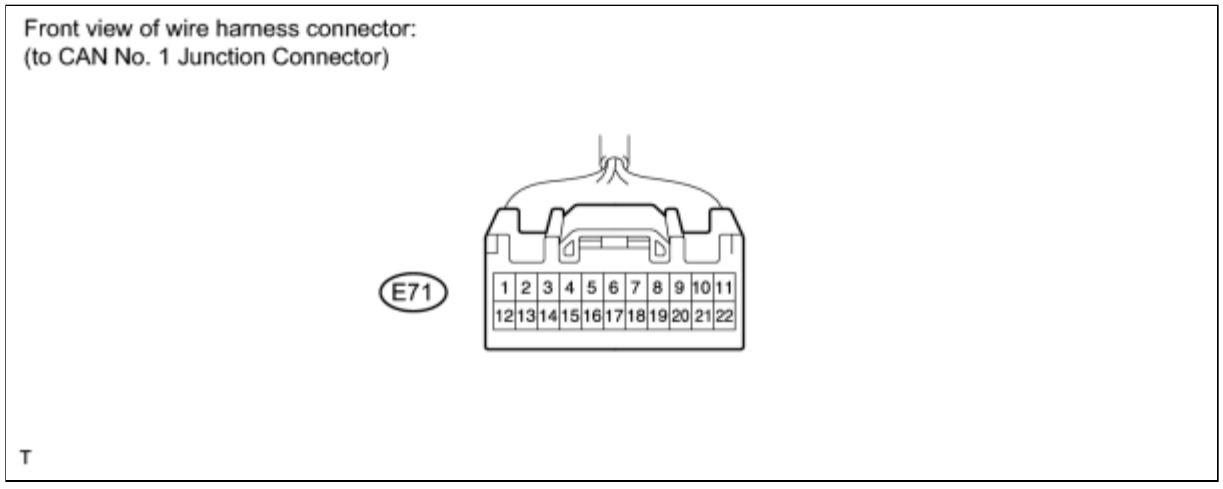


This communication will cause the resistance value to change.

NOTICE:

This section describes the standard CAN values for all CAN related components.

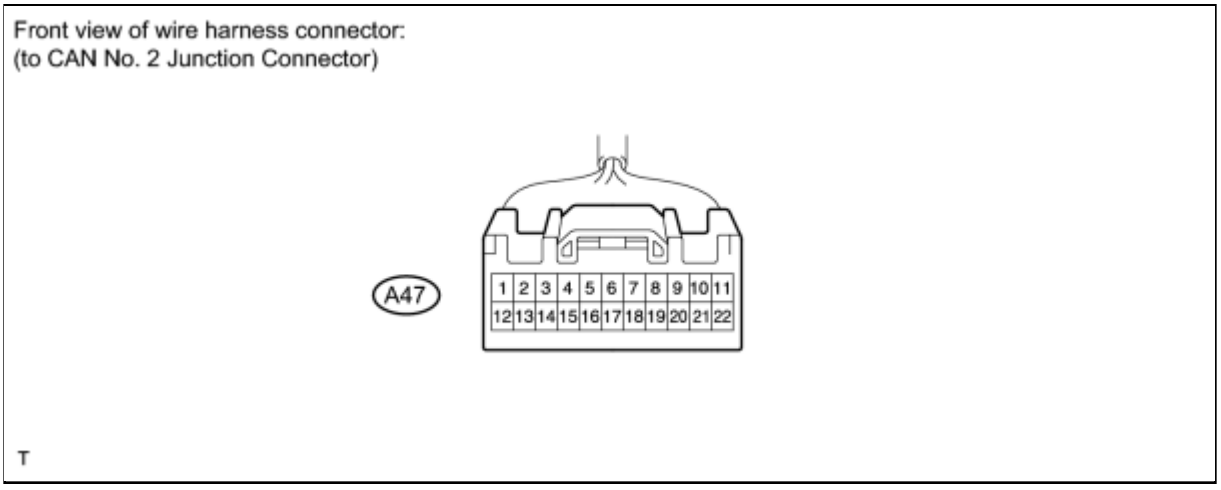
1. JUNCTION CONNECTOR FOR CAN NO. 1 BUS



(a) CAN No. 1 junction connector (TMC made)

NO. 1 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
E58-2 (CANH)	G	Combination meter
E58-13 (CANL)	W	Combination meter
E58-3 (CANH)	SB	Power steering ECU
E58-14 (CANL)	W	Power steering ECU

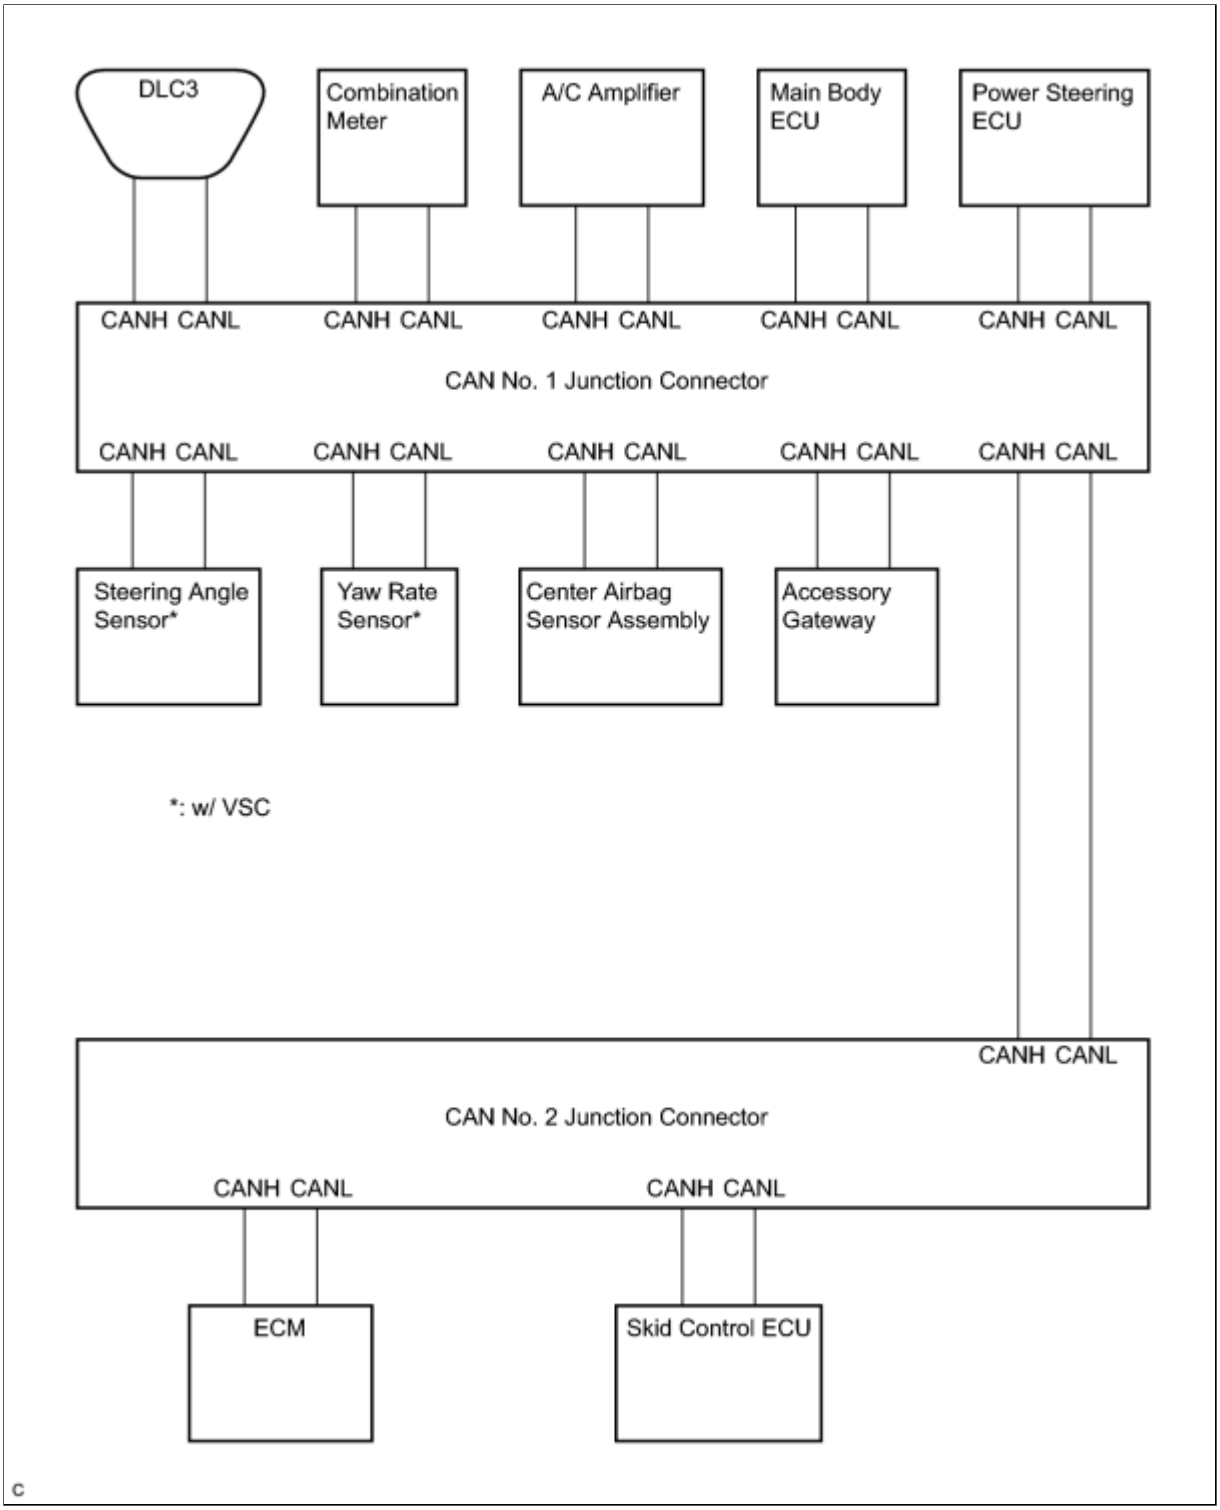
NO. 1 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
E58-4 (CANH)	V	Air conditioning amplifier
E58-15 (CANL)	W	Air conditioning amplifier
E58-5 (CANH)	BR	Steering angle sensor
E58-16 (CANL)	W	Steering angle sensor
E58-6 (CANH)	L	Yaw rate sensor
E58-17 (CANL)	W	Yaw rate sensor
E58-7 (CANH)	LG	DLC3
E58-18 (CANL)	W	DLC3
E58-8 (CANH)	R	Main body ECU
E58-19 (CANL)	W	Main body ECU
E58-9 (CANH)	Y	Center airbag sensor assembly
E58-20 (CANL)	W	Center airbag sensor assembly
E58-10 (CANH)	B	CAN No. 2 junction connector
E58-21 (CANL)	W	CAN No. 2 junction connector
E58-11 (CANH)	GR	Accessory gateway
E58-22 (CANL)	W	Accessory gateway



(b) CAN No. 1 junction connector (Except TMC made)

NO. 1 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
E7-1 (CANH)	R	Main body ECU
E71-12 (CANL)	W	Main body ECU
E71-2 (CANH)	LG	DLC3

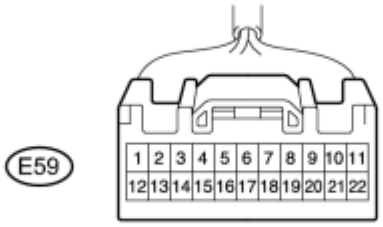
NO. 1 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
E71-13 (CANL)	W	DLC3
E71-3 (CANH)	SB	Power steering ECU
E71-14 (CANL)	W	Power steering ECU
E71-4 (CANH)	G	Combination meter
E71-15 (CANL)	W	Combination meter
E71-5 (CANH)	Y	Center airbag sensor assembly
E71-16 (CANL)	W	Center airbag sensor assembly
E71-6 (CANH)	B	CAN No. 2 junction connector
E71-17 (CANL)	W	CAN No. 2 junction connector
E71-7 (CANH)	V	Air conditioning amplifier
E71-18 (CANL)	W	Air conditioning amplifier
E71-8 (CANH)	BR	Steering angle sensor
E71-19 (CANL)	W	Steering angle sensor
E71-9 (CANH)	L	Yaw rate sensor
E71-20 (CANL)	W	Yaw rate sensor
E71-11 (CANH)	GR	Accessory gateway
E71-22 (CANL)	W	Accessory gateway



(c) CAN No. 2 junction connector

NO. 2 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
A47-8 (CANH)	R	Skid control ECU
A47-19 (CANL)	W	Skid control ECU

NO. 2 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
A47-9 (CANH)	B	CAN No. 1 junction connector
A47-20 (CANL)	W	CAN No. 1 junction connector
A47-10 (CANH)	Y	ECM
A47-21 (CANL)	W	ECM

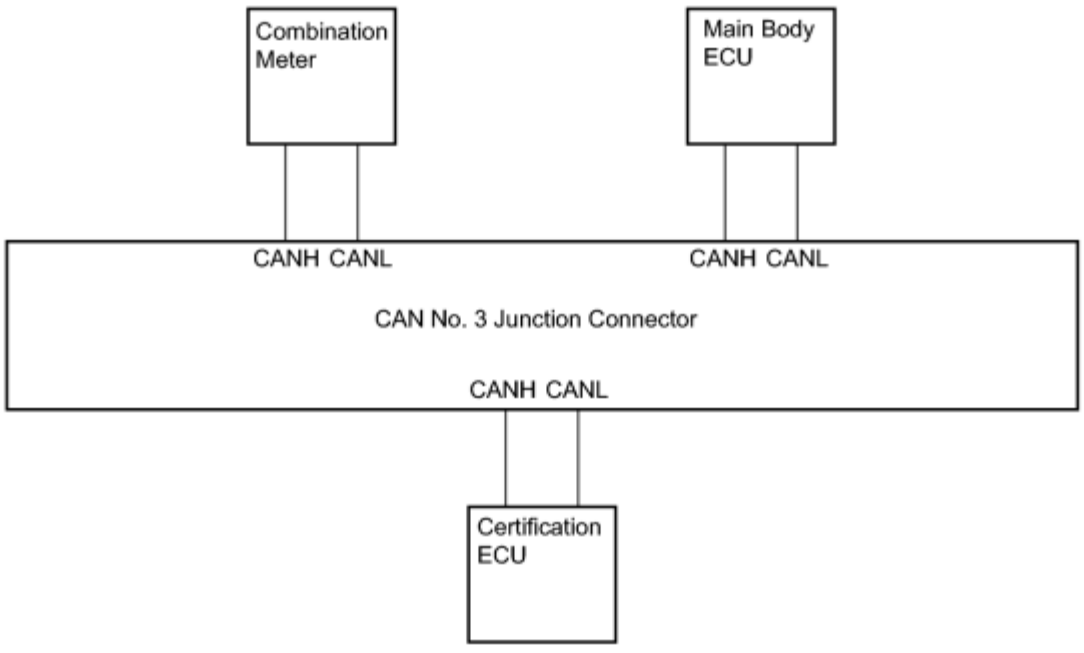


(d) The connection diagram of the components which are connected to the CAN junction connector

2. JUNCTION CONNECTOR FOR CAN MS BUS

(a) CAN No. 3 junction connector

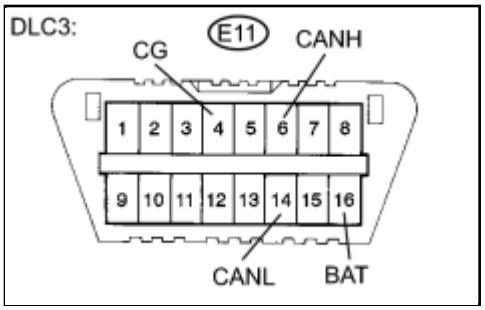
Front view of wire harness connector:
(to CAN No.3 Junction Connector)



T

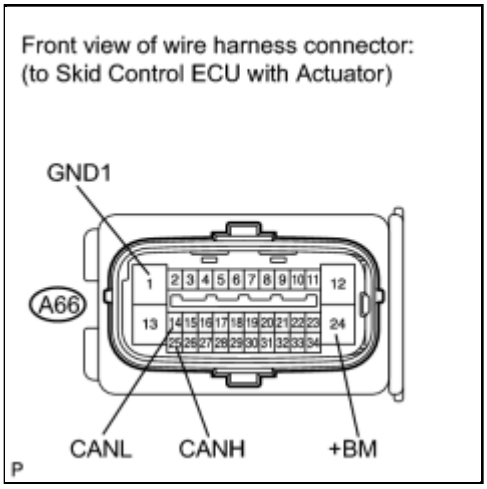
NO. 3 JUNCTION CONNECTOR	WIRING COLOR	CONNECT TO
E59-7 (CANH)	SB	Certification ECU
E59-18 (CANL)	W	Certification ECU
E59-8 (CANH)	G	Combination meter
E59-19 (CANL)	W	Combination meter
E59-9 (CANH)	R	Main body ECU
E59-20 (CANL)	W	Main body ECU

(b) The connection diagram of the components which are connected to the CAN junction connector.



w/ Smart Key System:

3. DLC3

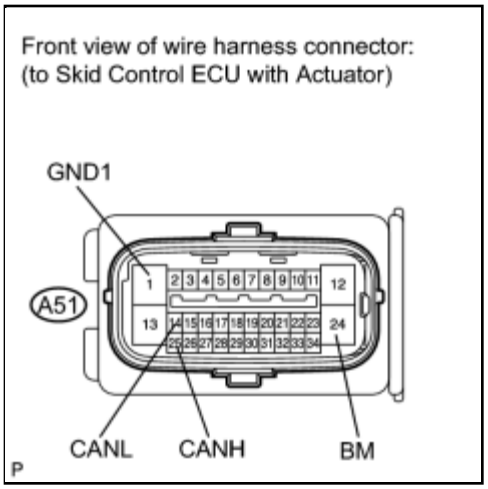


(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	LG - W	Ignition switch off	54 to 69 Ω
E11-6 (CANH) - E11-4 (CG)	LG - W-B	Ignition switch off	200 Ω or higher
E11-14 (CANL) - E11-4 (CG)	W - W-B	Ignition switch off	200 Ω or higher
E11-6 (CANH) - E11-16 (BAT)	LG - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E11-14 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

4. SKID CONTROL ECU WITH ACTUATOR (w/o VSC)



(a) Disconnect the connector from the skid control ECU.

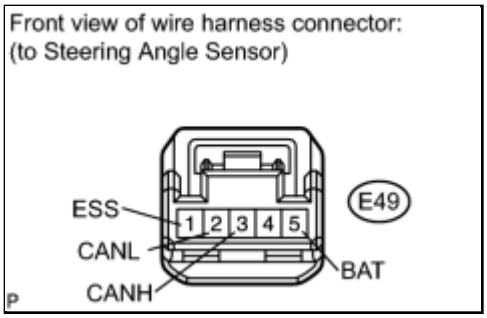
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
A66-25 (CANH) - A66-14 (CANL)	R - W	Ignition switch off	54 to 69 Ω
A66-25 (CANH) - A66-1 (GND1)	R - W-B	Ignition switch off	200 Ω or higher
A66-14 (CANL) - A66-1 (GND1)	W - W-B	Ignition switch off	200 Ω or higher
A66-25 (CANH) - A66-24 (+BM)	R - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A66-14 (CANL) - A66-24 (+BM)	W - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

5. SKID CONTROL ECU WITH ACTUATOR (w/ VSC)

(a) Disconnect the connector from the skid control ECU.



(b) Measure the resistance according to the value(s) in the table below.

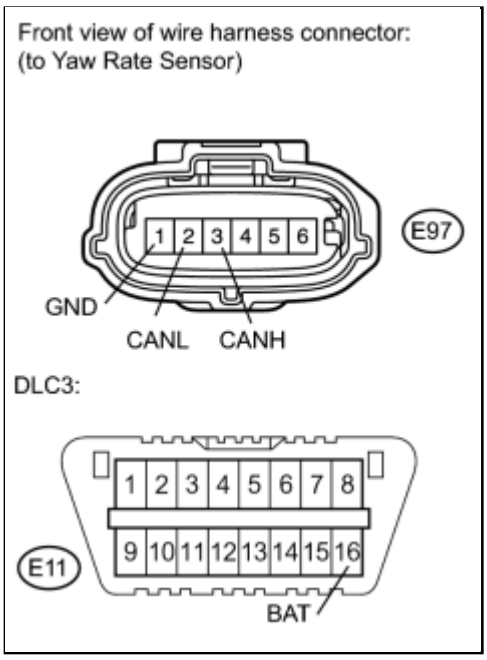
Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
A51-25 (CANH) - A51-14 (CANL)	R - W	Ignition switch off	54 to 69 Ω
A51-25 (CANH) - A51-1 (GND1)	R - W-B	Ignition switch off	200 Ω or higher
A51-14 (CANL) - A51-1 (GND1)	W - W-B	Ignition switch off	200 Ω or higher

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
A51-25 (CANH) - A51-24 (BM)	R - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A51-14 (CANL) - A51-24 (BM)	W - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

6. STEERING ANGLE SENSOR

(a) Disconnect the connector from the steering angle sensor.



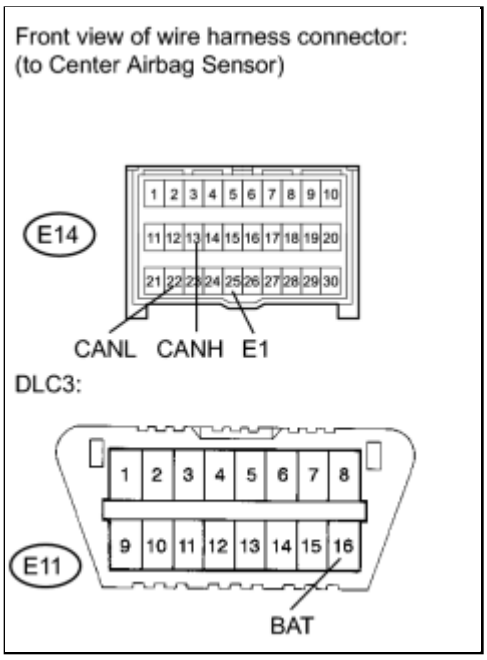
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E49-3 (CANH) - E49-2 (CANL)	BR - W	Ignition switch off	54 to 69 Ω
E49-3 (CANH) - E49-1 (ESS)	BR - BR	Ignition switch off	200 Ω or higher
E49-2 (CANL) - E49-1 (ESS)	W - BR	Ignition switch off	200 Ω or higher
E49-3 (CANH) - E49-5 (BAT)	BR - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E49-2 (CANL) - E49-5 (BAT)	W - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

7. YAW RATE SENSOR

(a) Disconnect the connector from the yaw rate sensor.



(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E97-3 (CANH) - E97-2 (CANL)	L - W	Ignition switch off	54 to 69 Ω
E97-3 (CANH) - E97-1 (GND)	L - BR	Ignition switch off	200 Ω or higher
E97-2 (CANL) - E97-1 (GND)	W - BR	Ignition switch off	200 Ω or higher
E97-3 (CANH) - E11-16 (BAT)	L - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E97-2 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

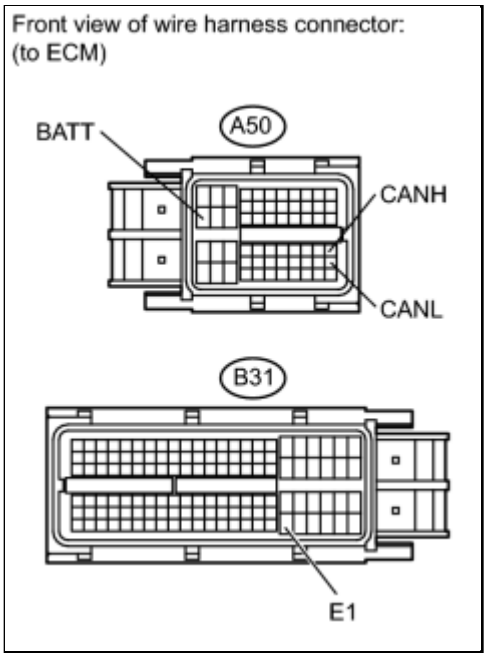
8. CENTER AIRBAG SENSOR

(a) Disconnect the connector from the center airbag sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E14-13 (CANH) - E14-22 (CANL)	Y - W	Ignition switch off	54 to 69 Ω
E14-13 (CANH) - E14-25 (E1)	Y - W-B	Ignition switch off	200 Ω or higher
E14-22 (CANL) - E14-25 (E1)	W - W-B	Ignition switch off	200 Ω or higher
E14-13 (CANH) - E11-16 (BAT)	Y - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E14-22 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher



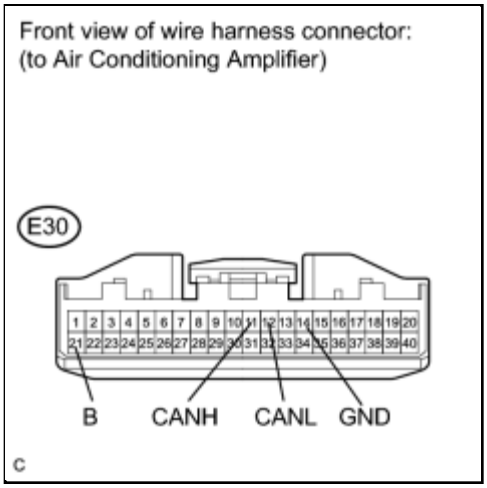
9. ECM

(a) Disconnect the connector from the ECM.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION



A50-41 (CANH) - A50-49 (CANL)	Y - W	Ignition switch off	108 to 132 Ω
A50-41 (CANH) - B31-104 (E1)	Y - BR	Ignition switch off	200 Ω or higher
A50-49 (CANL) - B31-104 (E1)	W - BR	Ignition switch off	200 Ω or higher
A50-41 (CANH) - A50-20 (BATT)	Y - P	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A50-49 (CANL) - A50-20 (BATT)	W - P	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

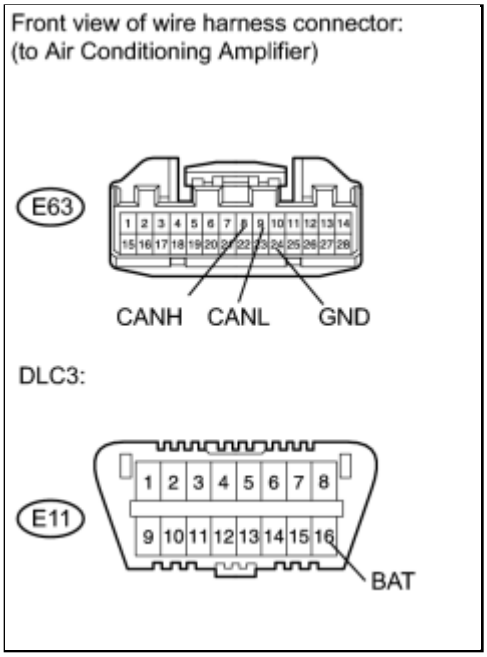
10. AIR CONDITIONING AMPLIFIER (for Automatic Air Conditioning System)

(a) Disconnect the amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E30-11 (CANH) - E30-12 (CANL)	V - W	Ignition switch off	54 to 69 Ω
E30-11 (CANH) - E30-14 (GND)	V - BR	Ignition switch off	200 Ω or higher
E30-12 (CANL) - E30-14 (GND)	W - BR	Ignition switch off	200 Ω or higher

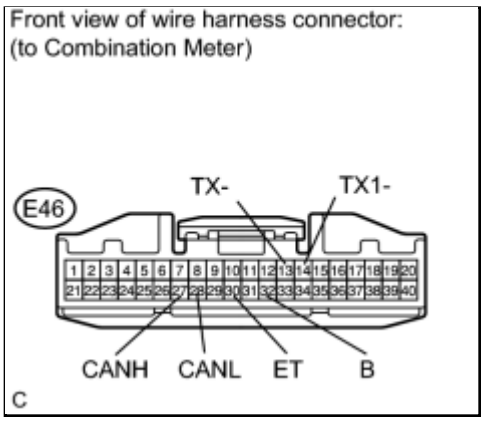


E30-11 (CANH) - E30-21 (B)	V - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E30-12 (CANL) - E30-21 (B)	W - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

11. AIR CONDITIONING AMPLIFIER (for Manual Air Conditioning System)

(a) Disconnect the amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

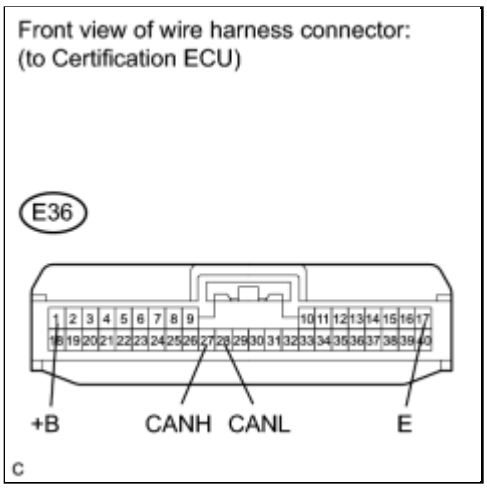


Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E63-8 (CANH) - E63-9 (CANL)	V - W	Ignition switch off	54 to 69 Ω
E63-8 (CANH) - E63-24 (GND)	V - BR	Ignition switch off	200 Ω or higher
E63-9 (CANL) - E63-24 (GND)	W - BR	Ignition switch off	200 Ω or higher
E63-8 (CANH) - E11-16 (BAT)	V - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E63-9 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

12. COMBINATION METER

(a) Disconnect the connector from the combination meter.



(b) Measure the resistance according to the value(s) in the table below.

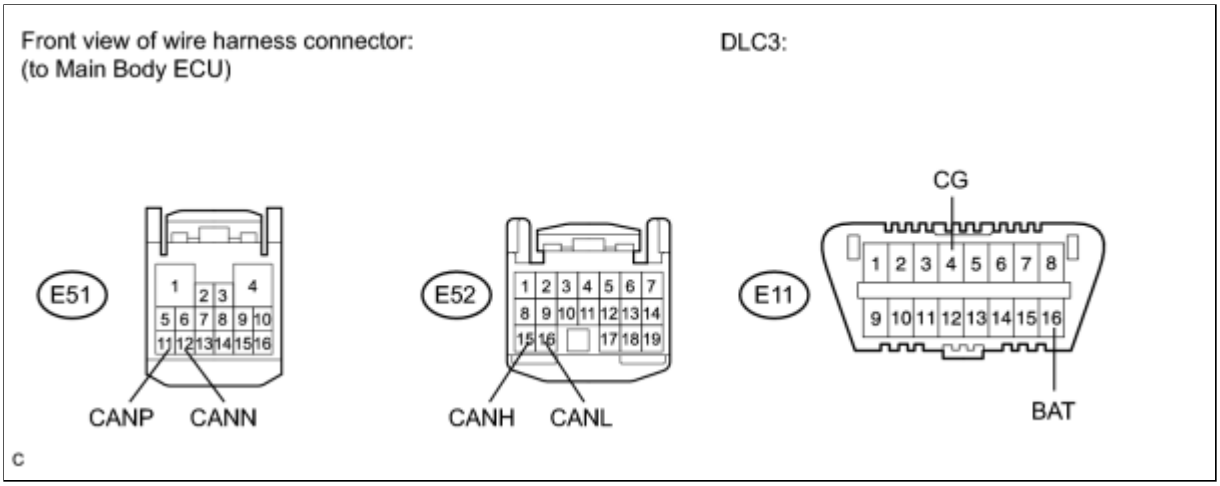
Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E46-27 (CANH) - E46-28 (CANL)	G - W	Ignition switch off	108 to 132 Ω
E46-27 (CANH) - E46-30 (ET)	G - BR	Ignition switch off	200 Ω or higher
E46-28 (CANL) - E46-30 (ET)	W - BR	Ignition switch off	200 Ω or higher
E46-27 (CANH) - E46-32 (B)	G - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E46-28 (CANL) - E46-32 (B)	W - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E46-13 (TX-) - E46-14 (TX1-)	W - G	Ignition switch off	108 to 132 Ω
E46-13 (TX-) - E46-30 (ET)	G - BR	Ignition switch off	200 Ω or higher
E46-14 (TX1-) - E46-30 (ET)	W - BR	Ignition switch off	200 Ω or higher
E46-13 (TX-) - E46-32 (B)	G - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E46-14 (TX1-) - E46-32 (B)	W - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

13. CERTIFICATION ECU

(a) Disconnect the connector from the certification ECU.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

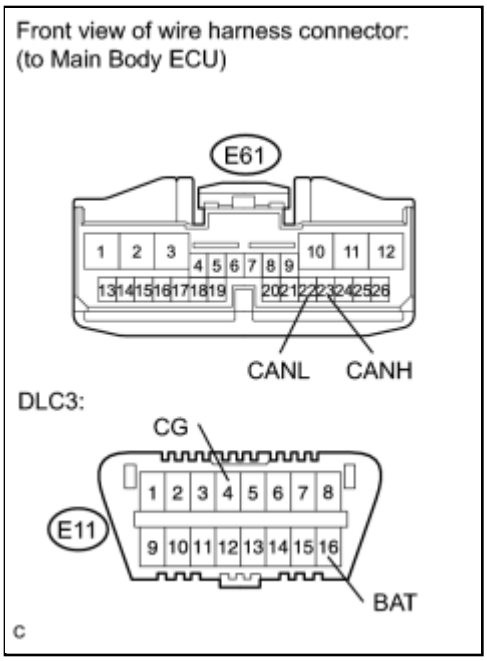
TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E36-27 (CANH) - E36-28 (CANL)	SB - W	Ignition switch off	54 to 69 Ω
E36-27 (CANH) - E36-17 (E)	SB - W-B	Ignition switch off	200 Ω or higher
E36-28 (CANL) - E36-17 (E)	W - W-B	Ignition switch off	200 Ω or higher
E36-27 (CANH) - E36-1 (+B)	SB - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E36-28 (CANL) - E36-1 (+B)	W - W	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

14. MAIN BODY ECU (w/ Smart Key System or Automatic Light Control System)

(a) Disconnect the connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

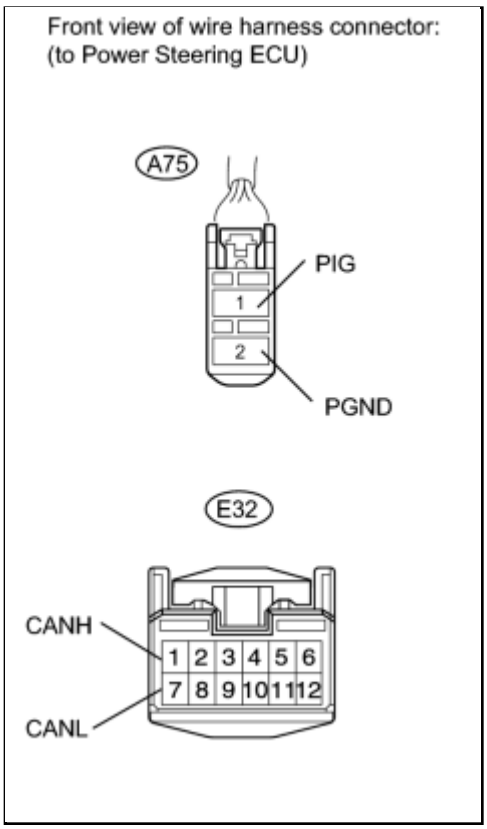


TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E52-15 (CANH) - E52-16 (CANL)	R - W	Ignition switch off	54 to 69 Ω
E52-15 (CANH) - E11-4 (CG)	R - W-B	Ignition switch off	200 Ω or higher
E52-16 (CANL) - E11-4 (CG)	W - W-B	Ignition switch off	200 Ω or higher
E52-15 (CANH) - E11-16 (BAT)	R - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E52-16 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E51-11 (CANP) - E51-12 (CANN)	R - W	Ignition switch off	108 to 132 Ω
E51-11 (CANP) - E11-4 (CG)	R - W-B	Ignition switch off	200 Ω or higher
E51-12 (CANN) - E11-4 (CG)	W - W-B	Ignition switch off	200 Ω or higher
E51-11 (CANP) - E11-16 (BAT)	R - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E51-12 (CANN) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

15. MAIN BODY ECU (w/o Smart Key System, Automatic Light Control System)

(a) Disconnect the connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

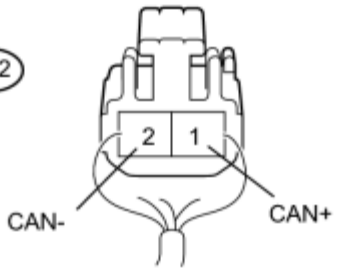
TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E61-23 (CANH) - E61-22 (CANL)	R - W	Ignition switch off	54 to 69 Ω
E61-23 (CANH) - E11-4 (CG)	R - W-B	Ignition switch off	200 Ω or higher
E61-22 (CANL) - E11-4 (CG)	W - W-B	Ignition switch off	200 Ω or higher
E61-23 (CANH) - E11-16 (BAT)	R - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E61-22 (CANL) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

16. POWER STEERING ECU

(a) Disconnect the power steering ECU connectors.

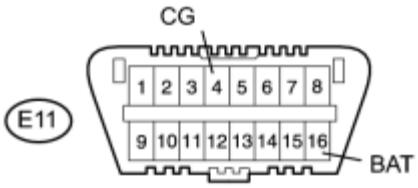
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E32-1 (CANH) - E32-7 (CANL)	SB - W	Ignition switch off	54 to 69 Ω
E32-1 (CANH) - A75-2 (PGND)	SB - W-B	Ignition switch off	200 Ω or higher
E32-7 (CANL) - A75-2 (PGND)	W - W-B	Ignition switch off	200 Ω or higher
E32-1 (CANH) - A75-1 (PIG)	SB - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E32-7 (CANL) - A75-1 (PIG)	W - L	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

17. ACCESSORY GATEWAY

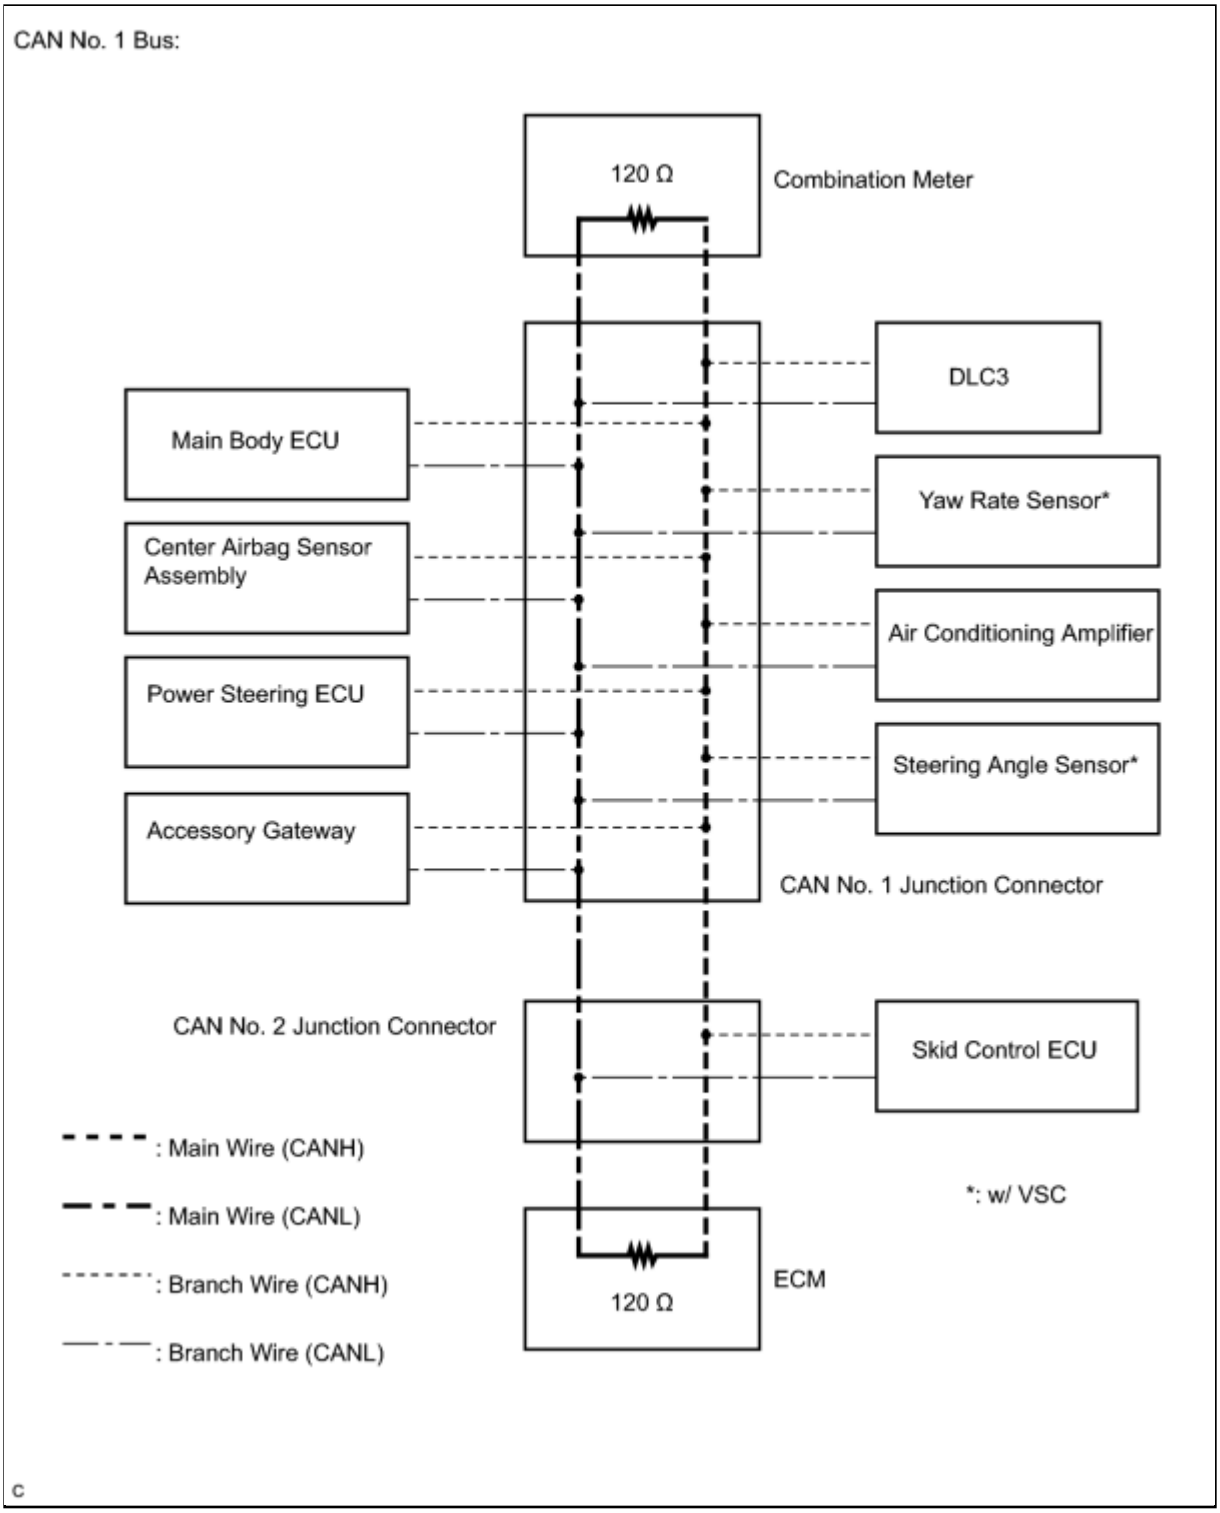


(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Rear view of wire harness connector:
(Accessory Gateway)

DLC3:



c

TERMINAL NO. (SYMBOL)	WIRING COLOR	CONDITION	SPECIFIED CONDITION
E92-1 (CAN+) - E92-2 (CAN-)	GR - W	Ignition switch off	54 to 69 Ω
E92-1 (CAN+) - E11-4 (CG)	R - W-B	Ignition switch off	200 Ω or higher
E92-2 (CAN-) - E11-4 (CG)	W - W-B	Ignition switch off	200 Ω or higher
E92-1 (CAN+) - E11-16 (BAT)	R - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E92-2 (CAN-) - E11-16 (BAT)	W - G	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

Title: NETWORKING: CAN COMMUNICATION SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- DTCs for the CAN communication system are as follows: U0073, U0100*1, U0123*1, U0124*1, U0126*1, U0129, U0327*2, U1002*2 and B1499.

  *1: w/ VSC

  *2: w/ Smart key system
- Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.

1.	**CHECK AND CLEAR DTCS**

HINT:

- CAN communication DTCs are output when there is an open or short in any of the communication wires. Any problems with the power source of a corresponding ECU or sensor, or problem in the ECU or the sensor itself also cause these DTCs to be output.
- If a CAN communication wire connector is disconnected with the ignition switch ON, the ECUs of the corresponding system and related systems record a DTC.

NEXT

2.	**CHECK CAN NO. 1 BUS WIRE**

(a) Check the CAN bus wire INFO.

HINT:

If the area where an open or short is occurring in a CAN bus wire can be determined, refer to Problem Symptoms Table INFO.

NEXT

3.	CHECK TECHSTREAM

(a) Using the Techstream, display the "CAN Bus Check" screen INFO .

(b) Observe the screen for approximately 1 minute to check the ECUs and sensors displayed on the screen.

Result:

RESULT	PROCEED TO
All ECUs and sensors connected to the CAN communication system are displayed on the screen. (CAN bus circuit is currently normal.)	A
One of the ECUs and sensors connected to the CAN communication system is not displayed on the screen. (Open in ECU or sensor branch wires, or communication interrupted)	B*1
Some ECUs and sensors repeatedly appear and disappear from the screen, during this check. (Open in one side of ECU or sensor branch wires)	C
• All ECUs and sensors except the main body ECU connected to the CAN MS bus are not displayed on the screen. • The main body ECU outputs DTC U1002. (Open in CAN MS bus main wire or short in CAN MS bus wire)	D
All ECUs and sensors connected to the CAN MS bus are not displayed on the screen. (Open in main body ECU branch wire or main body ECU malfunction)	E

NOTICE:

- The systems (ECUs, sensors) that adopt CAN communication vary depending on the vehicle and optional equipment. Check which systems (ECUs, sensors) are installed on the vehicle INFO .
- Non-installed ECUs or sensors will not be displayed. Do not mistake them for being in the communication stop mode.
- The ECUs and sensors that repeatedly appear and disappear from the screen during this check are considered normal. (The response to the Techstream and the tester display are affected by signals output from other ECUs which have an open circuit in either of their CAN branch wires.)

HINT:

- *1: See DTC Chart instead of Communication Stop Mode Table when some of the ECUs connected to the CAN MS bus are not displayed on the screen INFO .

- The ECUs connected to the CAN MS bus are displayed on the screen by the main body ECU.

B ▶ **GO TO COMMUNICATION STOP MODE TABLE**

C ▶ **GO TO OPEN IN ONE SIDE OF CAN BRANCH WIRE**

D ▶ **GO TO U1002 (CAN MS BUS)**

E ▶ **GO TO MAIN BODY ECU COMMUNICATION STOP MODE**

A ▼

4.	**RECHECK DTC**

HINT:

- Sometimes CAN communication system DTCs are output, but all the ECUs and sensors connected to the CAN communication system are displayed on the Techstream. In this case, previous or history DTCs may indicate the cause of the problem.
- ECUs related to a problem in the CAN No. 1 bus will store DTCs to indicate communication malfunctions. The communication stop mode in the CAN No. 1 bus can be determined by comparing the combination of DTCs that has been set. Refer to the DTC combination table for the CAN No. 1 bus.
- The main body ECU will store communication error DTCs when the ECUs connected to the CAN MS bus cannot communicate, or if a network malfunction occurs.

Result:

RESULT	PROCEED TO
Communication error DTCs other than the codes output from the main body ECU are output. (A malfunction occurred in the CAN No. 1 bus.)	A
The main body ECU outputs CAN MS bus DTC U1002. (A malfunction occurred in the CAN MS bus.)	B
The main body ECU outputs CAN MS bus DTC U0327. (A malfunction occurred in an ECU branch wire connected to the CAN MS bus.)	C

B ▶ **GO TO "U1002 (CAN MS BUS)"**

C ▶ **GO TO "U0327"**

A

5.	DTC COMBINATION TABLE

(a) Confirm a trouble according to the combination of output DTCs regarding the CAN communication system INFO .

HINT:

Previous CAN communication system DTCs may be caused if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on the Techstream's "CAN Bus Check" screen.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YDW05BX
Title: NETWORKING: CAN COMMUNICATION SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

(a) The CAN (Control Area Network) is a serial data communication system for real time application. It is a vehicle multiplex communication system which has a high communication speed and the ability to detect malfunctions.

(b) By pairing the CANH and CANL bus wires, the CAN performs communication based on differential voltage.

(c) Many ECUs (sensors) installed on the vehicle operate by sharing information and communicating with each other.

(d) The CAN has two resistors of 120 Ω which are necessary to communicate with the main bus wire.

2. DEFINITION OF TERMS

(a) Main bus wire

(1) The main bus wire is a wire harness between the two terminating resistors on the bus (communication wire). This is the main bus in the CAN communication system.

(b) Branch wire

(1) The branch wire is a wire harness which diverges from the main bus wire to an ECU or sensor.

(c) Terminating resistors

(1) Two resistors of 120 Ω are installed in parallel across the ends of the CAN main bus wire. They are called terminating resistors. These resistors allow the changes of the voltage differential between the CAN bus wires to be accurately judged. To allow proper function of CAN communication, it is necessary to have both terminating resistors installed. Since the two resistors are installed in parallel, a measurement of resistance between the two CAN bus wires should produce a reading of approximately 60 Ω.

3. CIRCUIT DESCRIPTION

(a) For vehicles with the smart key system: The CAN communication system consists of the CAN No. 1 bus and MS bus, which are connected to each system through the main body ECU.

(b) The CAN No. 1 bus and MS bus each have terminus circuits with 120 Ω x 2 of resistance. High speed communication at 500 kbps and 250 kbps is possible.

4. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) Skid control ECU

(b) Yaw rate sensor (w/ VSC)

(c) Steering angle sensor (w/ VSC)

(d) Main body ECU

(e) Center airbag sensor assembly

(f) ECM

(g) Certification ECU (w/ Smart key system)

(h) Air conditioning amplifier

(i) Combination meter

(j) Power steering ECU

5. DIAGNOSTIC CODE FOR CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0073, U0100*1, U0123*1, U0124*1, U0126*1, U0129, U0327*2, U1002*2 and B1499.

*1: w/ VSC

*2: w/ Smart key system

6. TROUBLESHOOTING REMARKS

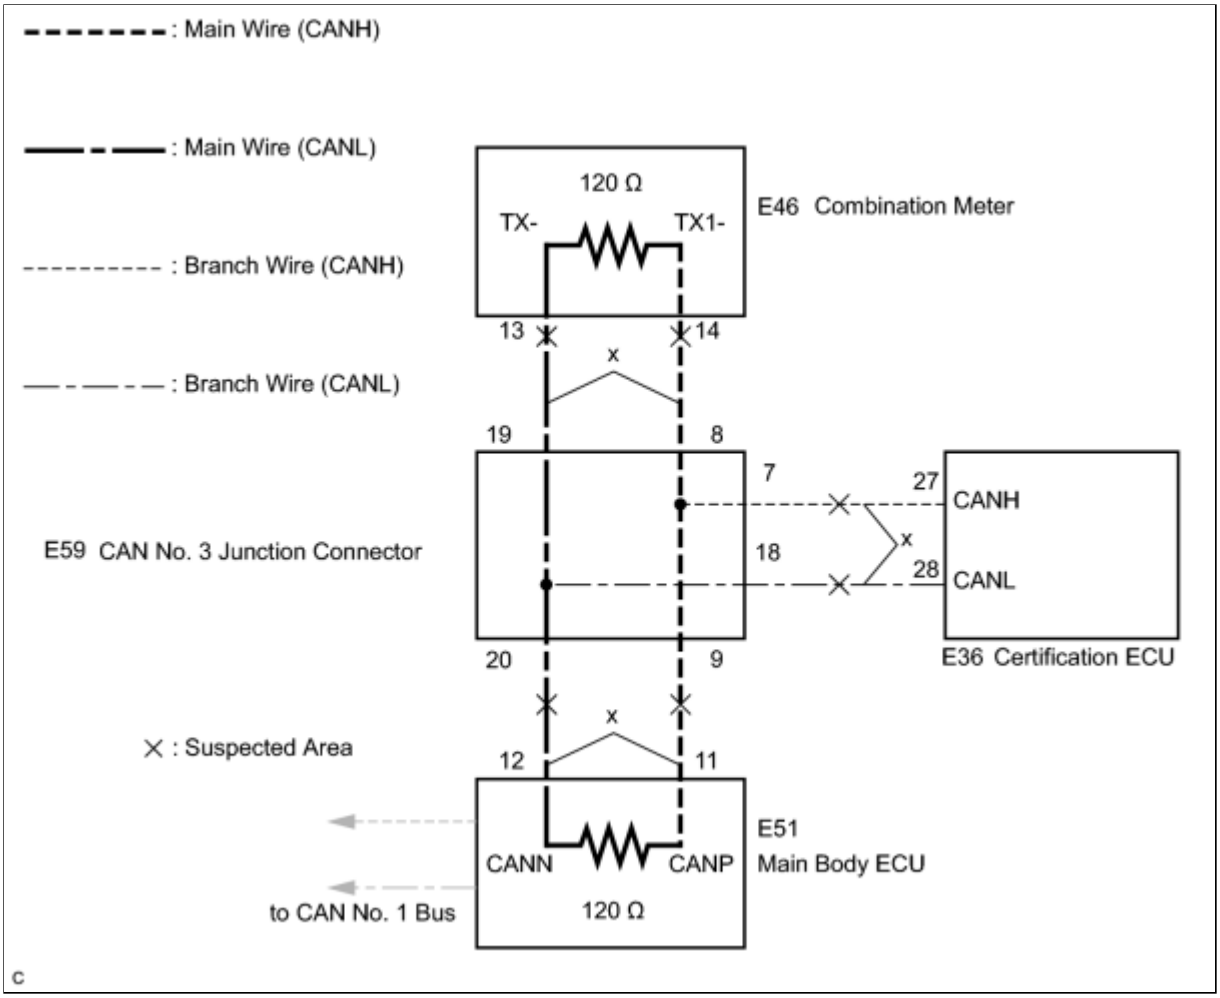
(a) DTCs for the CAN communication system can be checked using the Techstream. The DLC3 is connected to the CAN communication system, but no DTCs exist regarding problems in the DLC3 or the DLC3 branch wires. If there is a trouble in the DLC3 or the DLC3 branch wires, ECUs on the CAN network cannot output codes to the Techstream.

(b) Trouble in the CAN buses (communication wires) can be checked by measuring the resistance between terminals of the DLC3. However, an open circuit in a branch wire other than the DLC3 branch wires cannot be checked from the DLC3.

NOTICE:

Do not insert the tester probes directly into the DLC3. Be sure to use service wires.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002DX801IX
Title: NETWORKING: CAN COMMUNICATION SYSTEM: U1002 (CAN MS BUS): Lost Communication with Gateway Module (Main body ECU) (2010 Corolla)		



DTC	**U1002 (CAN MS BUS)**	**Lost Communication with Gateway Module (Main body ECU)**

DESCRIPTION

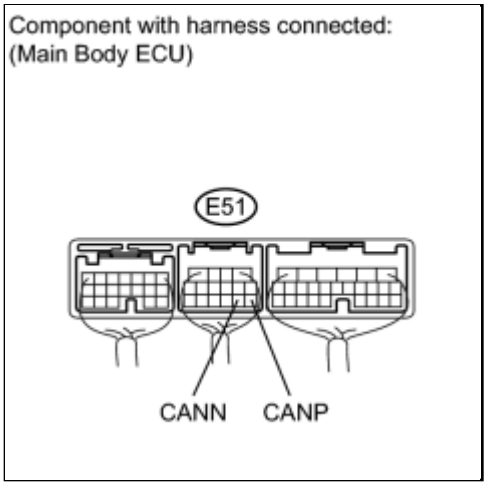
- The main body ECU will store this DTC when no signals can be received from the ECUs that have been memorized as those that are connected to the CAN MS bus.
- When the main body ECU receives a response signal from the ECUs connected to the CAN MS bus, the main body ECU recognizes and memorizes that the ECU is connected to the CAN MS bus. Based on this memorized data, the main body ECU monitors for malfunctions in the ECUs connected to the CAN MS bus when communicating with those ECUs. If the main body ECU cannot receive response signals from the ECUs that have been memorized as those connected to the CAN MS bus, the main body ECU determines that a malfunction exists.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
U1002	Main body ECU cannot receive signals from all ECUs that have been memorized as those connected to the CAN MS bus.	• Open or short in CAN MS bus main wire or connector • Open or short in CAN MS bus branch wire or connector • Certification ECU • Combination meter • Main body ECU • CAN No. 3 junction connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:



- Turn the ignition switch off before measuring the resistance of the CAN bus main wires and the CAN bus branch wires.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK CAN MS BUS WIRE**

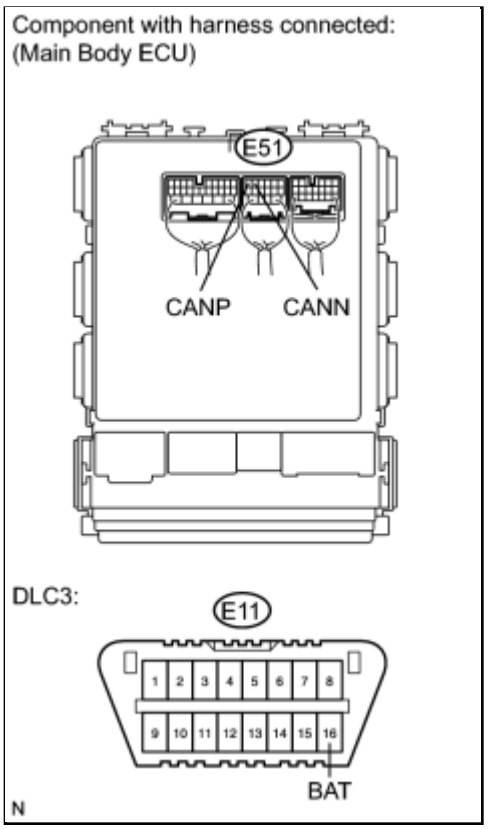
(a) Turn the ignition switch off.

(b) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	SWITCH CONDITION	RESULT	PROCEED TO
E51-11 (CANP) - E51-12 (CANN)	Ignition switch off	54 to 69 Ω	A
E51-11 (CANP) - E51-12 (CANN)	Ignition switch off	70 Ω or higher	B
E51-11 (CANP) - E51-12 (CANN)	Ignition switch off	Less than 54 Ω	C

C ▶ **CHECK FOR SHORT IN CAN MS BUS WIRES (MAIN BODY ECU MAIN WIRE)**



B ▶ **CHECK FOR OPEN IN CAN MS BUS MAIN WIRE (COMBINATION METER MAIN WIRE)**

A ▼

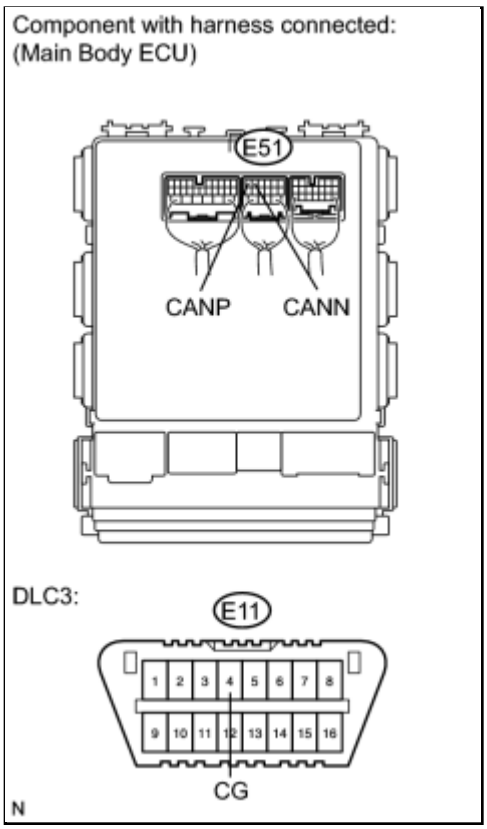
2.	**CHECK FOR SHORT TO +B IN CAN MS BUS WIRE**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-11 (CANP) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E51-12 (CANN) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (MAIN BODY ECU MAIN WIRE)**



OK ▼

3.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE**

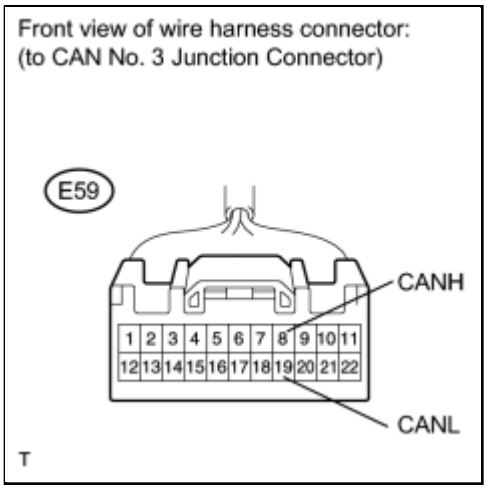
(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E51-11 (CANP) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E51-12 (CANN) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (MAIN BODY ECU MAIN WIRE)**

OK ▼



4.	**CHECK FOR OPEN IN CAN MS BUS WIRE (CAN MS BUS BRANCH WIRE)**

(a) Check for the certification ECU MS bus branch wire INFO .

NG ▶ **REPAIR OR REPLACE CAN MS BUS BRANCH WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

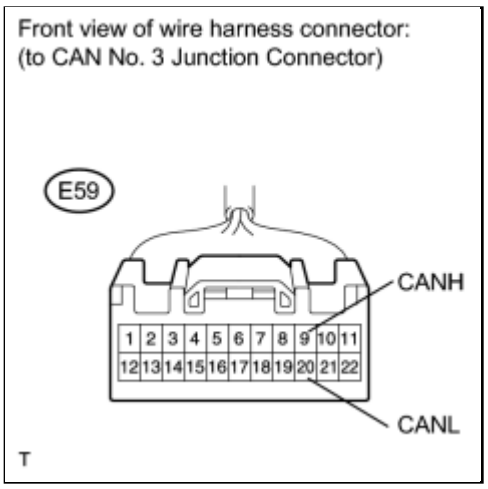
OK ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

5.	**CHECK FOR OPEN IN CAN MS BUS MAIN WIRE (COMBINATION METER MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E59-19 (CANL)	Ignition switch off	108 to 132 Ω

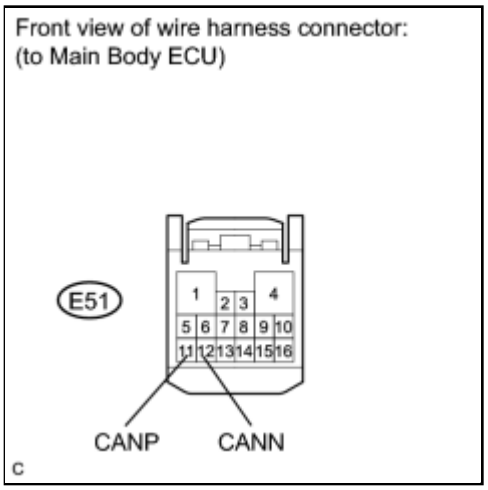
NG ▶ **CHECK FOR OPEN IN CAN MS BUS MAIN WIRE (COMBINATION METER - CAN NO. 3 JUNCTION CONNECTOR)**

OK ▼

6.	**CHECK FOR OPEN IN CAN MS BUS MAIN WIRE (MAIN BODY ECU MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-9 (CANH) - E59-20 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **CHECK FOR OPEN IN CAN BUS MAIN WIRE (MAIN BODY ECU - CAN NO. 3 JUNCTION CONNECTOR)**

OK ▶ **REPLACE CAN NO. 3 JUNCTION CONNECTOR**

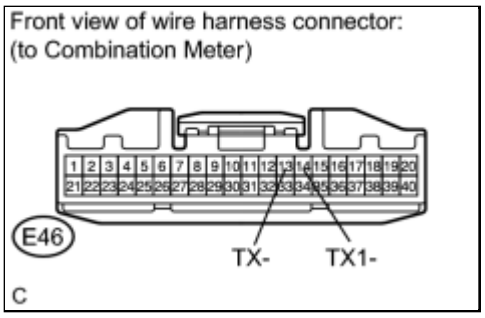
7.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (MAIN BODY ECU - CAN NO. 3 JUNCTION CONNECTOR)**

(a) Reconnect the CAN No. 3 junction connector.

(b) Disconnect the main body ECU connector from the main body ECU.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E51-11 (CANP) - E51-12 (CANN)	Ignition switch off	108 to 132 Ω

NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**

OK ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

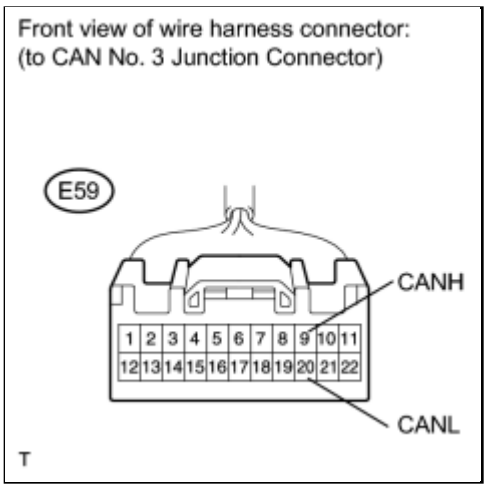
8.	**CHECK FOR OPEN IN CAN MS BUS MAIN WIRE (COMBINATION METER - CAN NO. 3 JUNCTION CONNECTOR)**

(a) Reconnect the CAN No. 3 junction connector.

(b) Disconnect the combination meter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E46-13 (TX-) - E46-14 (TX1-)	Ignition switch off	108 to 132 Ω

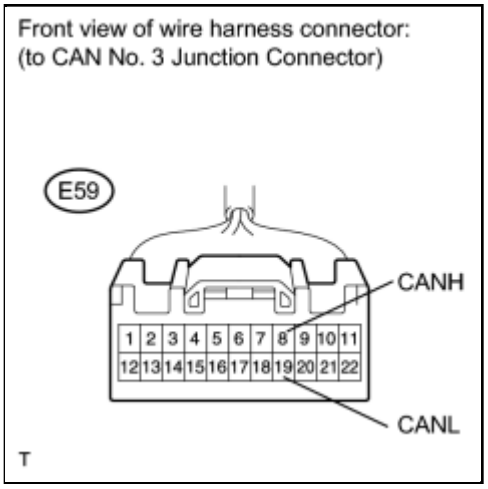
NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**

OK ▶ **REPLACE COMBINATION METER ASSEMBLY**

9.	**CHECK FOR SHORT IN CAN MS BUS WIRES (MAIN BODY ECU MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-9 (CANH) - E59-20 (CANL)	Ignition switch off	108 to 132 Ω

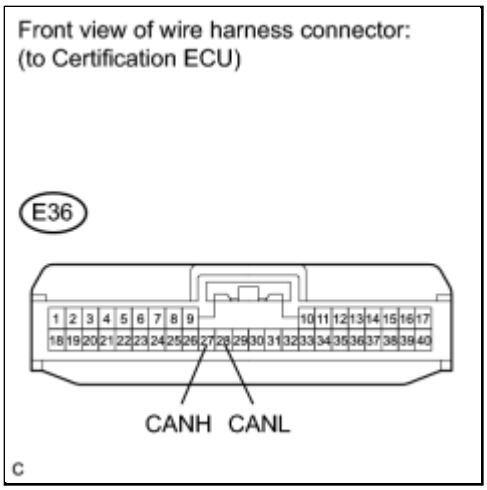
NG ▶ **CHECK FOR SHORT IN CAN BUS MAIN WIRE (MAIN BODY ECU - CAN NO. 3 JUNCTION CONNECTOR)**

OK ▼

10.	CHECK FOR SHORT IN CAN MS BUS WIRES (COMBINATION METER MAIN WIRE)

(a) Disconnect the CAN No. 3 junction connector.

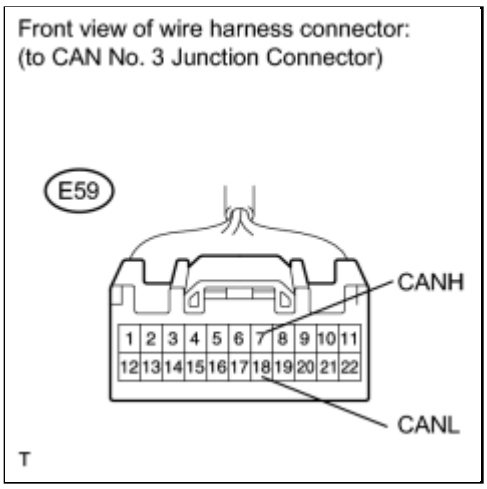
(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E59-19 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **CHECK FOR SHORT IN CAN MS BUS WIRES (COMBINATION METER - CAN NO. 3 JUNCTION CONNECTOR)**



OK ▼

11.	**CHECK FOR SHORT IN CAN MS BUS WIRES (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

(a) Disconnect the certification ECU connector.

(b) Disconnect the CAN No. 3 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

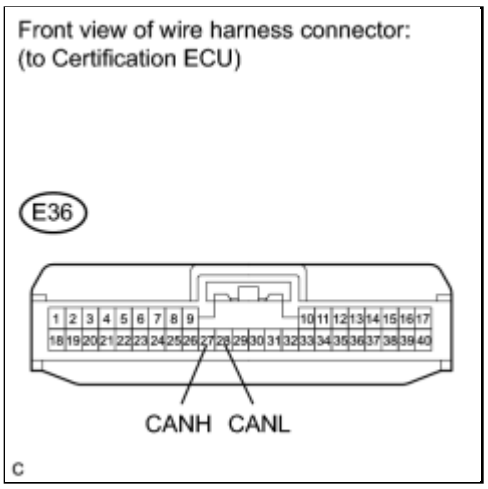
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-7 (CANH) - E59-18 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

OK ▼

12.	**CHECK FOR SHORT IN CAN MS BUS WIRES (CAN No. 3 JUNCTION CONNECTOR)**

(a) Reconnect the CAN No. 3 junction connector.



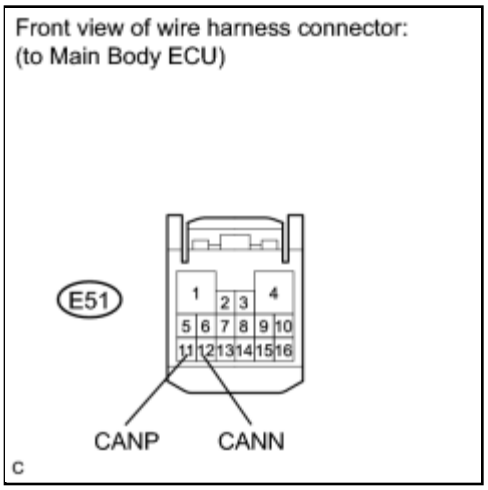
(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the main body ECU, combination meter and No. 3 junction connectors are reconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E36-27 (CANH) -	Ignition switch	54 Ω or higher



E36-28 (CANL)	off	

NG ▶ **REPLACE CAN NO. 3 JUNCTION CONNECTOR**

OK ▶ **REPLACE CERTIFICATION ECU**

13.	**CHECK FOR SHORT IN CAN BUS MAIN WIRE (MAIN BODY ECU - CAN NO. 3 JUNCTION CONNECTOR)**

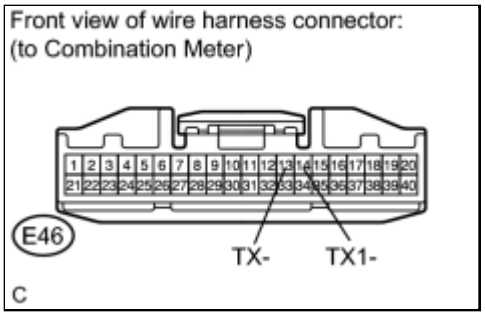
(a) Disconnect the main body ECU connector from the main body ECU.

(b) Reconnect the CAN No. 3 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E51-11 (CANP) - E51-12 (CANN)	Ignition switch off	108 to 132 Ω



NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR -**

MAIN BODY ECU)

OK ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

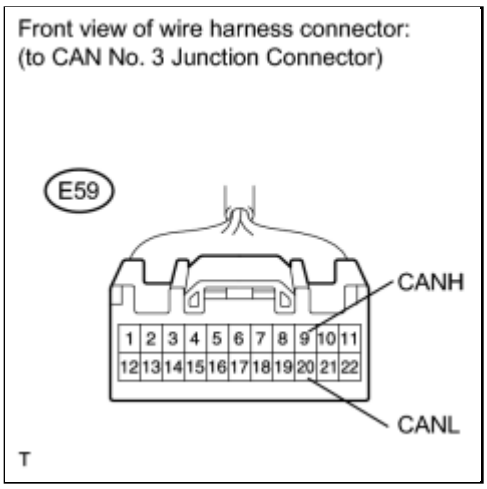
14.	CHECK FOR SHORT IN CAN MS BUS WIRES (COMBINATION METER - CAN NO. 3 JUNCTION CONNECTOR)

(a) Disconnect the combination meter connector.

(b) Reconnect the CAN No. 3 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

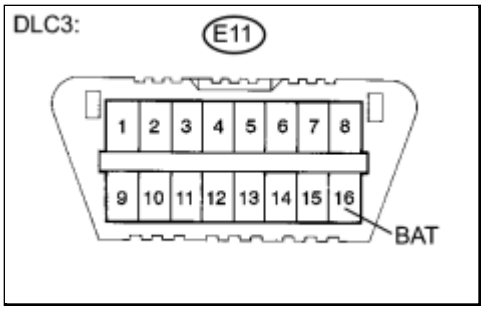
Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E46-13 (TX-) - E46-14 (TX1-)	Ignition switch off	108 to 132 Ω

NG ▶ REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)

OK ▶ REPLACE COMBINATION METER ASSEMBLY

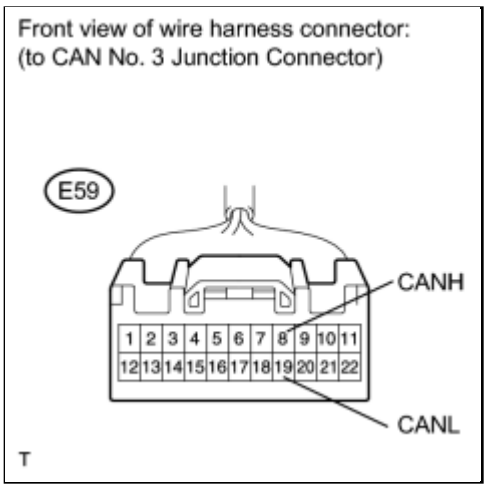


15.	CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (MAIN BODY ECU MAIN WIRE)

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

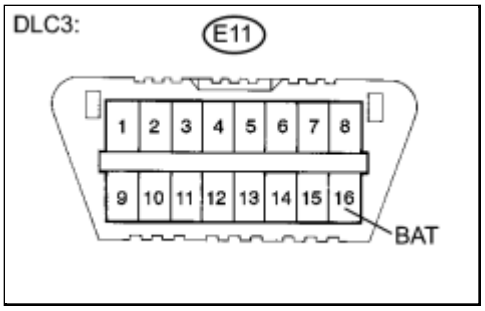
Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E59-9 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E59-20 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**

OK ▼



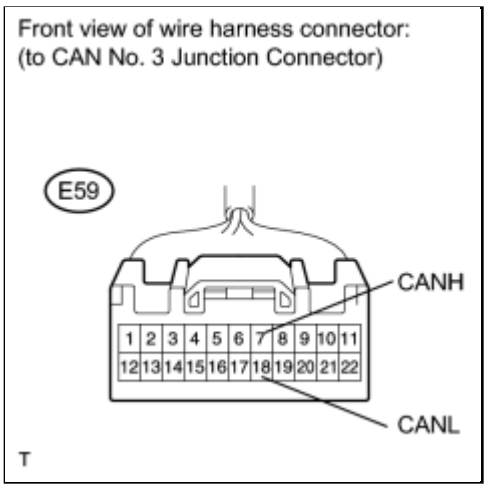
16.	**CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (COMBINATION METER MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

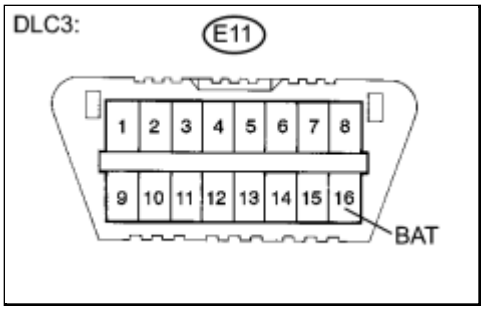
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E59-19 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher



NG ▶ **CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**

OK ▼

17.	**CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

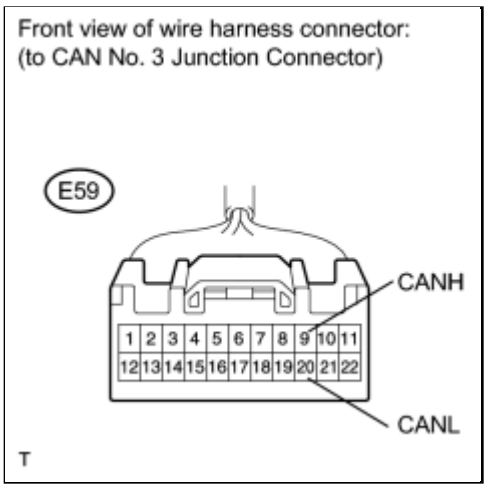


(a) Disconnect the certification ECU connector.

(b) Disconnect the CAN No. 3 junction connector.

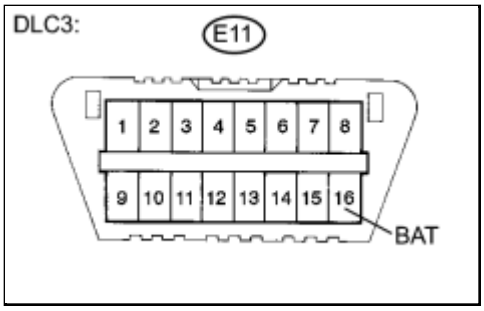
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E59-7 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E59-18 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS BRANCH WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**



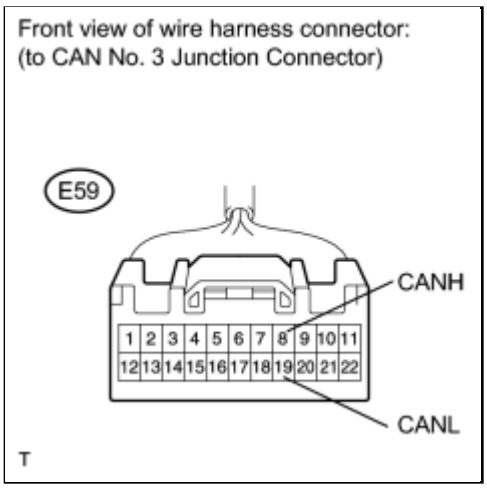
OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

18.	**CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**

(a) Disconnect the main body ECU connector from the main body ECU.

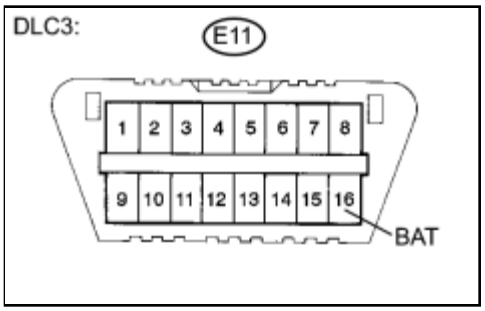
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E59-9 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E59-20 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**



OK ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

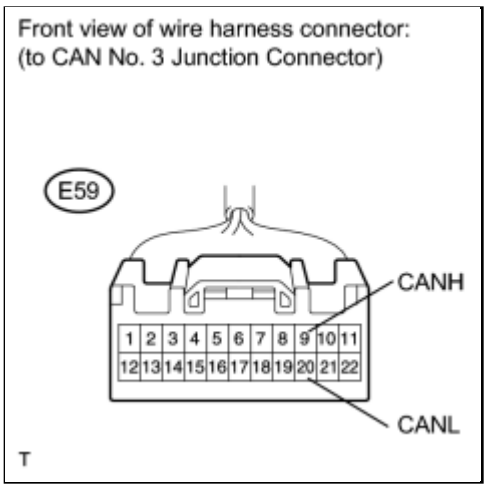
19.	**CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Disconnect the combination meter connector.

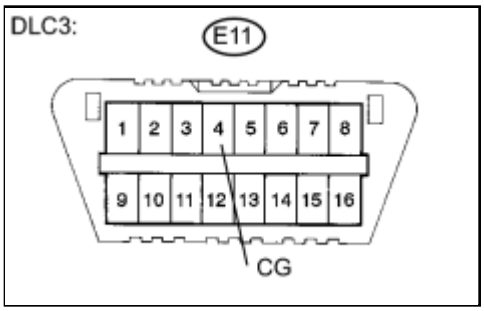
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E59-19 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**



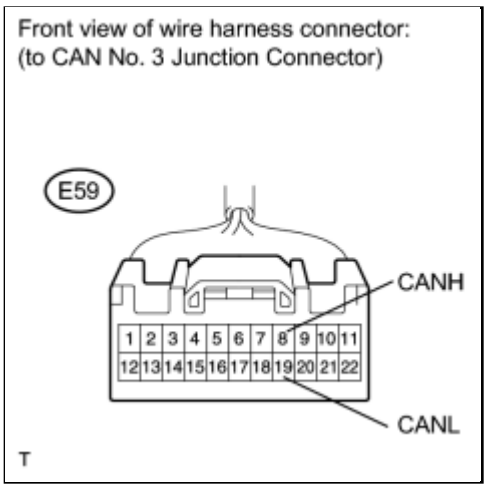
OK ▶ **REPLACE COMBINATION METER ASSEMBLY**

20.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (MAIN BODY ECU MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

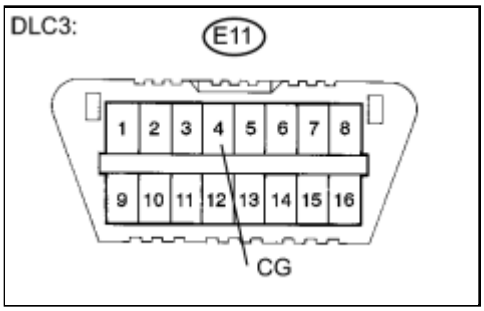
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-9 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E59-20 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**



OK ▼

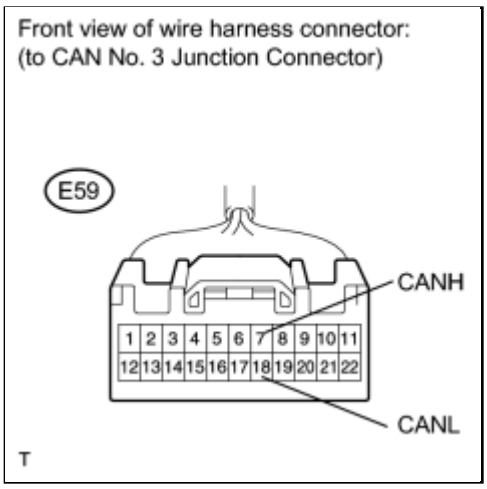
21.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (COMBINATION METER MAIN WIRE)**

(a) Disconnect the CAN No. 3 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

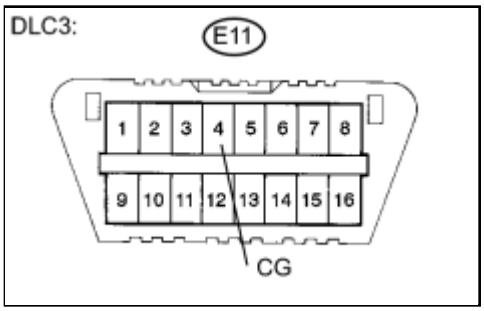
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E59-19 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher



NG ▶ **CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**

OK ▼



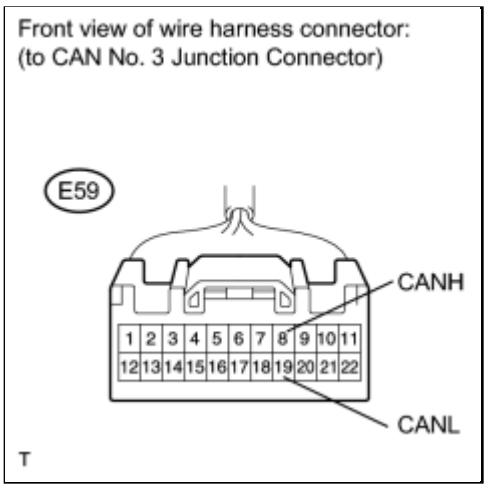
22.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**

(a) Disconnect the certification ECU connector.

(b) Disconnect the CAN No. 3 junction connector.

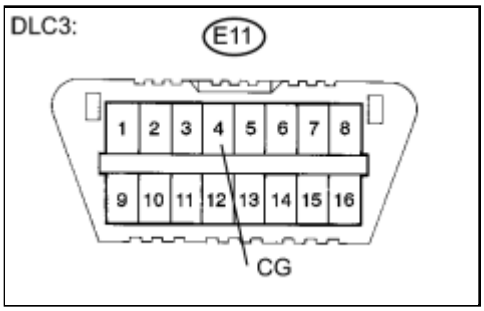
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-7 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E59-18 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS BRANCH WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - CERTIFICATION ECU)**



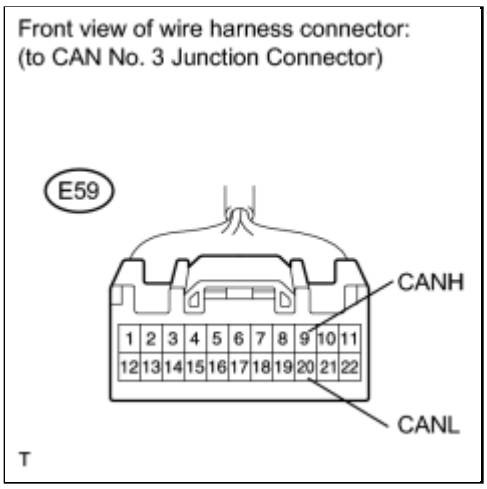
OK ▶ **REPLACE CERTIFICATION ECU**

23.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**

(a) Disconnect the combination meter connector.

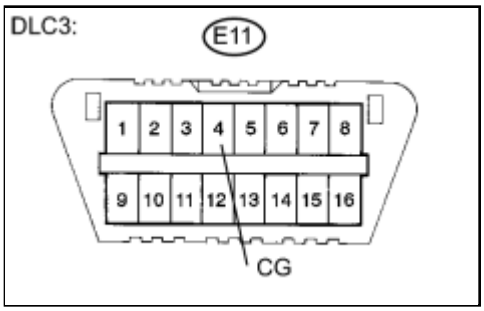
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-8 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E59-19 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - COMBINATION METER)**



OK ▶ **REPLACE COMBINATION METER ASSEMBLY**

24.	**CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**

(a) Disconnect the main body ECU connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E59-9 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E59-20 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **REPAIR OR REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR (CAN NO. 3 JUNCTION CONNECTOR - MAIN BODY ECU)**

OK ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

Title: NETWORKING: CAN COMMUNICATION SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Result List of CAN Bus Wire Check

SYMPTOM	SUSPECTED AREA	SEE PAGE

Title: NETWORKING: CAN COMMUNICATION SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CAN BUS CHECK

(a) Using the Techstream, select "CAN Bus Check" from the "System Select".

2. CHECK FOR INSTALLED SYSTEMS (ECUS AND SENSORS) THAT ADOPT CAN COMMUNICATION

(a) Systems (ECUs, sensors) that adopt CAN communication vary depending on the vehicle's optional settings. Check which systems (ECUs, sensors) are installed on the vehicle.

HINT:

ECUs and sensors that are connected to the LIN communication system and the local CAN system are also displayed.

ECU/SENSOR NAME	CHECK METHOD
ECM	Installed on all vehicles
Combination meter	Installed on all vehicles
Air conditioning amplifier	Installed on all vehicles
Center airbag sensor	Installed on all vehicles
Power steering ECU	Installed on all vehicles
Main body ECU	Installed on all vehicles
Skid control ECU	Installed on all vehicles
Steering angle sensor	w/ VSC
Yaw rate sensor	w/ VSC
Certification ECU	w/ Smart key system

3. DTC TABLE BY ECU

HINT:

- In the CAN communication system, CAN communication system DTCs can be displayed by the ECU using the Techstream.
- If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to How to Proceed with Troubleshooting INFO .

(a) SKID CONTROL ECU (w/o VSC)

HINT:

DTC communication uses the CAN communication system.

DTC NO.	DETECTION ITEM
U0073	Control Module Communication Bus Off

(b) SKID CONTROL ECU (w/ VSC)

HINT:

DTC communication uses the CAN communication system.

DTC NO.	DETECTION ITEM
U0073	Control Module Communication Bus Off
U0100	Lost Communication with ECM/PCM "A"
U0123	Lost Communication with Yaw Rate Sensor Module
U0124	Lost Communication with Lateral Acceleration Sensor Module
U0126	Lost Communication with Steering Angle Sensor Module

(c) AIR CONDITIONING AMPLIFIER

HINT:

- DTC communication uses the CAN communication system.
- The following DTC is output only for current malfunctions.

DTC NO.	DETECTION ITEM
B1499	Multiplex Communication Circuit

(d) COMBINATION METER

HINT:

DTC communication uses the CAN communication system.

DTC NO.	DETECTION ITEM
U0100	Lost Communication with ECM/PCM "A"
U0129	Lost Communication with Brake System Control Module

(e) POWER STEERING ECU

HINT:

DTC communication uses the CAN system.

DTC NO.	DETECTION ITEM
U0100	Lost Communication with ECM
U0129	Lost Communication with Anti-lock Brake System (ABS) Control Module

(f) MAIN BODY ECU

HINT:

DTC communication uses the CAN system.

DTC NO.	DETECTION ITEM
U0327	Software Incompatibility with Vehicle Security Control Module
U1002	Lost Communication with Gateway Module

(g) ECM

HINT:

The ECM is connected to the CAN communication system, but CAN communication DTCs are not output.

(h) CENTER AIRBAG SENSOR

HINT:

The center airbag sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(i) STEERING ANGLE SENSOR (w/ VSC)

HINT:

The steering angle sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(j) YAW RATE SENSOR (w/ VSC)

HINT:

The yaw rate sensor is connected to the CAN communication system, but CAN communication DTCs are not output.

(k) CERTIFICATION ECU

HINT:

The certification ECU is connected to the CAN communication system, but CAN communication DTCs are not output.

4. DTC COMBINATION TABLE

(a) CAN No. 1 Bus (w/o VSC)

DTC		TROUBLE MODE						
OUTPUT FROM	OUTPUT DTC	ECM COMMUNICATION STOP MODE	SKID CONTROL ECU COMMUNICATION STOP MODE	POWER STEERING ECU COMMUNICATION STOP MODE	CENTER AIRBAG SENSOR COMMUNICATION STOP MODE	AIR CONDITIONING AMPLIFIER COMMUNICATION STOP MODE	COMBINATION METER ECU COMMUNICATION STOP MODE	MAIN BODY ECU COMMUNICATION STOP MODE

Title: NETWORKING: CAN COMMUNICATION SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the CAN bus wires (communication wires) due to a short circuit or other causes, the fail-safe function which is specified for each system, operates to prevent the system from malfunctioning.

(b) The following chart shows the relationships between components, system functions, and effects of communication failure on these functions. (For further details, see the pages for each system.)

FUNCTION (FUNCTION DESCRIPTION)	CONTROL MASTER	SYSTEM RELATED	FAIL-SAFE OPERATION	DTC (DRIVER DETECTABLE)
Air conditioning control	Air Conditioning Amplifier	• ECM • Combination Meter • Main Body ECU • Accessory Gateway	Air conditioning function and PTC heater function stop	B1499 (Air Conditioning inoperative)
VSC control*1 (Controls driving force while VSC in operation)	Skid Control ECU	• ECM • Steering Angle Sensor • Yaw Rate Sensor	VSC control is inoperative (VSC control gradually stops)	U0073, U0100, U0123, U0124, U0126 (Warning light comes on)
VSC control*1 (Engine power control by VSC/TRC)	Skid Control ECU	• ECM • Steering Angle Sensor • Yaw Rate Sensor	VSC control is inoperative (VSC control gradually stops)	U0073, U0100, U0123, U0124, U0126 (Warning light comes on)
ABS control (Controls driving force while ABS in operation)	Skid Control ECU	Yaw Rate Sensor*1	Control inoperative (gradually stops controlling during ABS control)	U0073, U0123*1, U0124*1 (Warning light comes on)
Electric power steering (Speed of vehicle induction type torque control)	Power Steering ECU	• ECM • Skid Control ECU • Steering	VSC Malfunction: Depression of EPS assist (Deterioration of steering)	U0100, U0129 (VSC failure: Warning light comes on, and decrease of assistance power at

FUNCTION (FUNCTION DESCRIPTION)	CONTROL MASTER	SYSTEM RELATED	FAIL-SAFE OPERATION	DTC (DRIVER DETECTABLE)
		Angle Sensor • Combination Meter	ECM Malfunction (before assist beginning): stop the assist operation ECM Malfunction (after assist beginning): continue the assist operation	vehicle speed 70 km/h) (ECM failure: Warning light comes on [only before assist beginning])
Entry function/Power door lock control*2	Main Body ECU	• ECM • Center Airbag Sensor Assembly • Combination Meter • Certification ECU	Unlock permitted	U0327, U1002 (Wireless door lock cannot operate)
Meter display (Displays operation condition and DTCs)	Combination Meter	• ECM • Skid Control ECU • Power Steering ECU • Center Airbag Sensor Assembly • Air Conditioner Amplifier • Certification ECU • Main Body ECU	Light does not come on, illuminates abnormally, or blinks abnormally	U0100, U0129 (Abnormal light illumination)

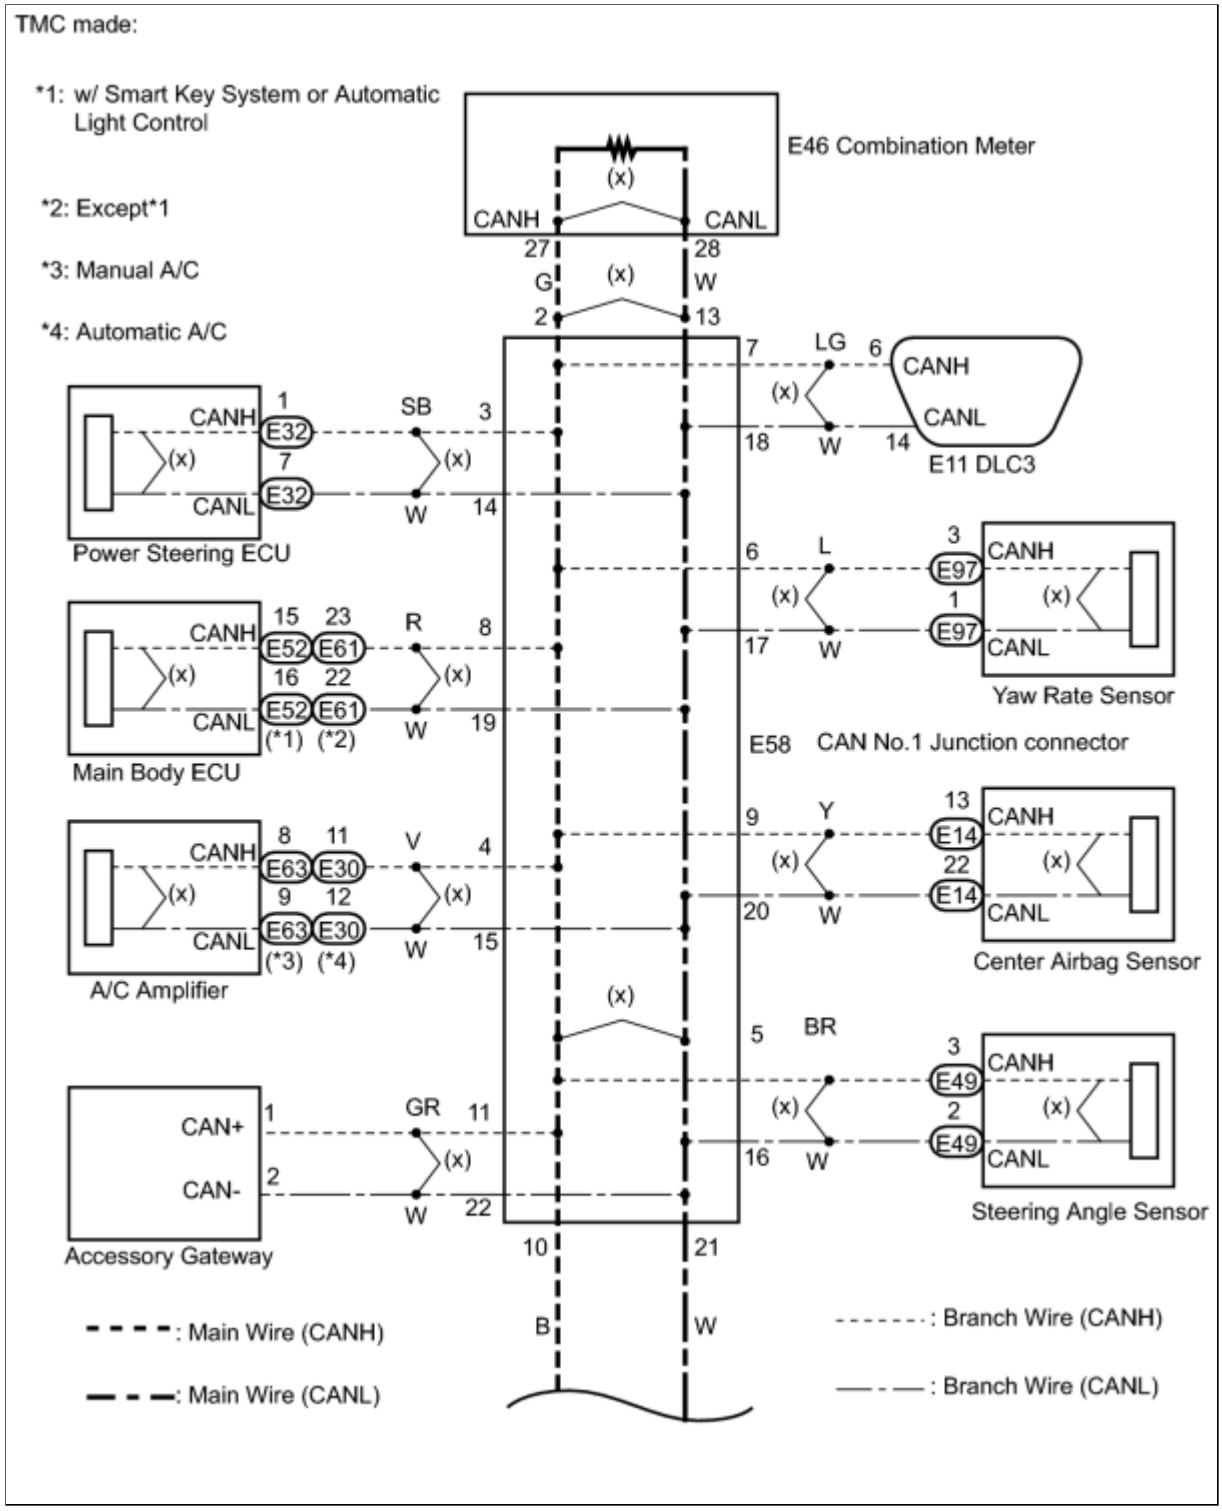
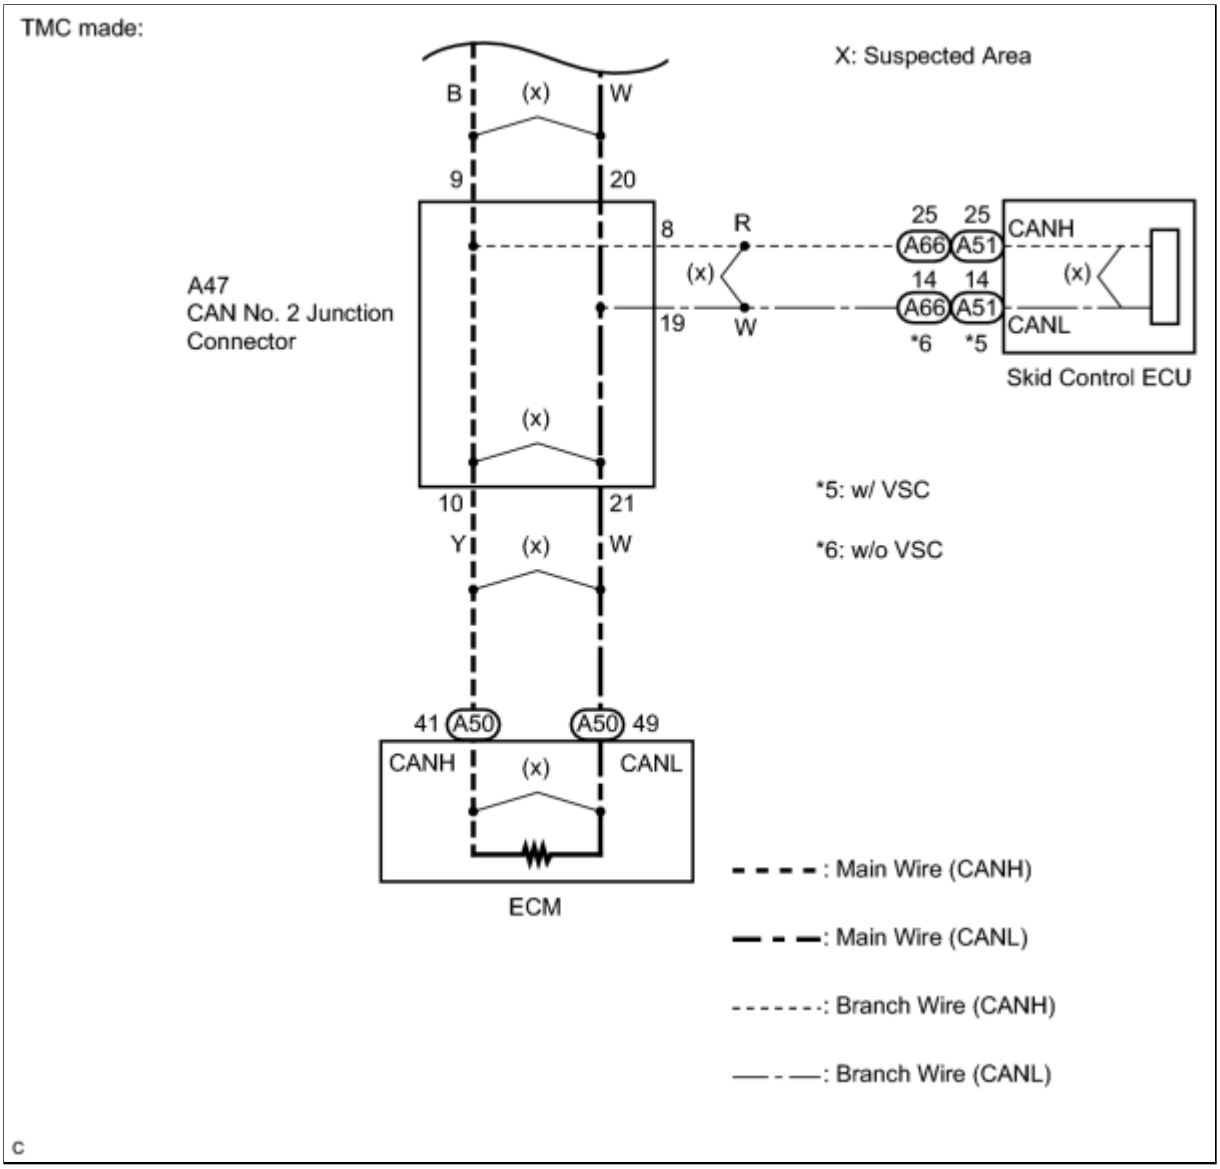
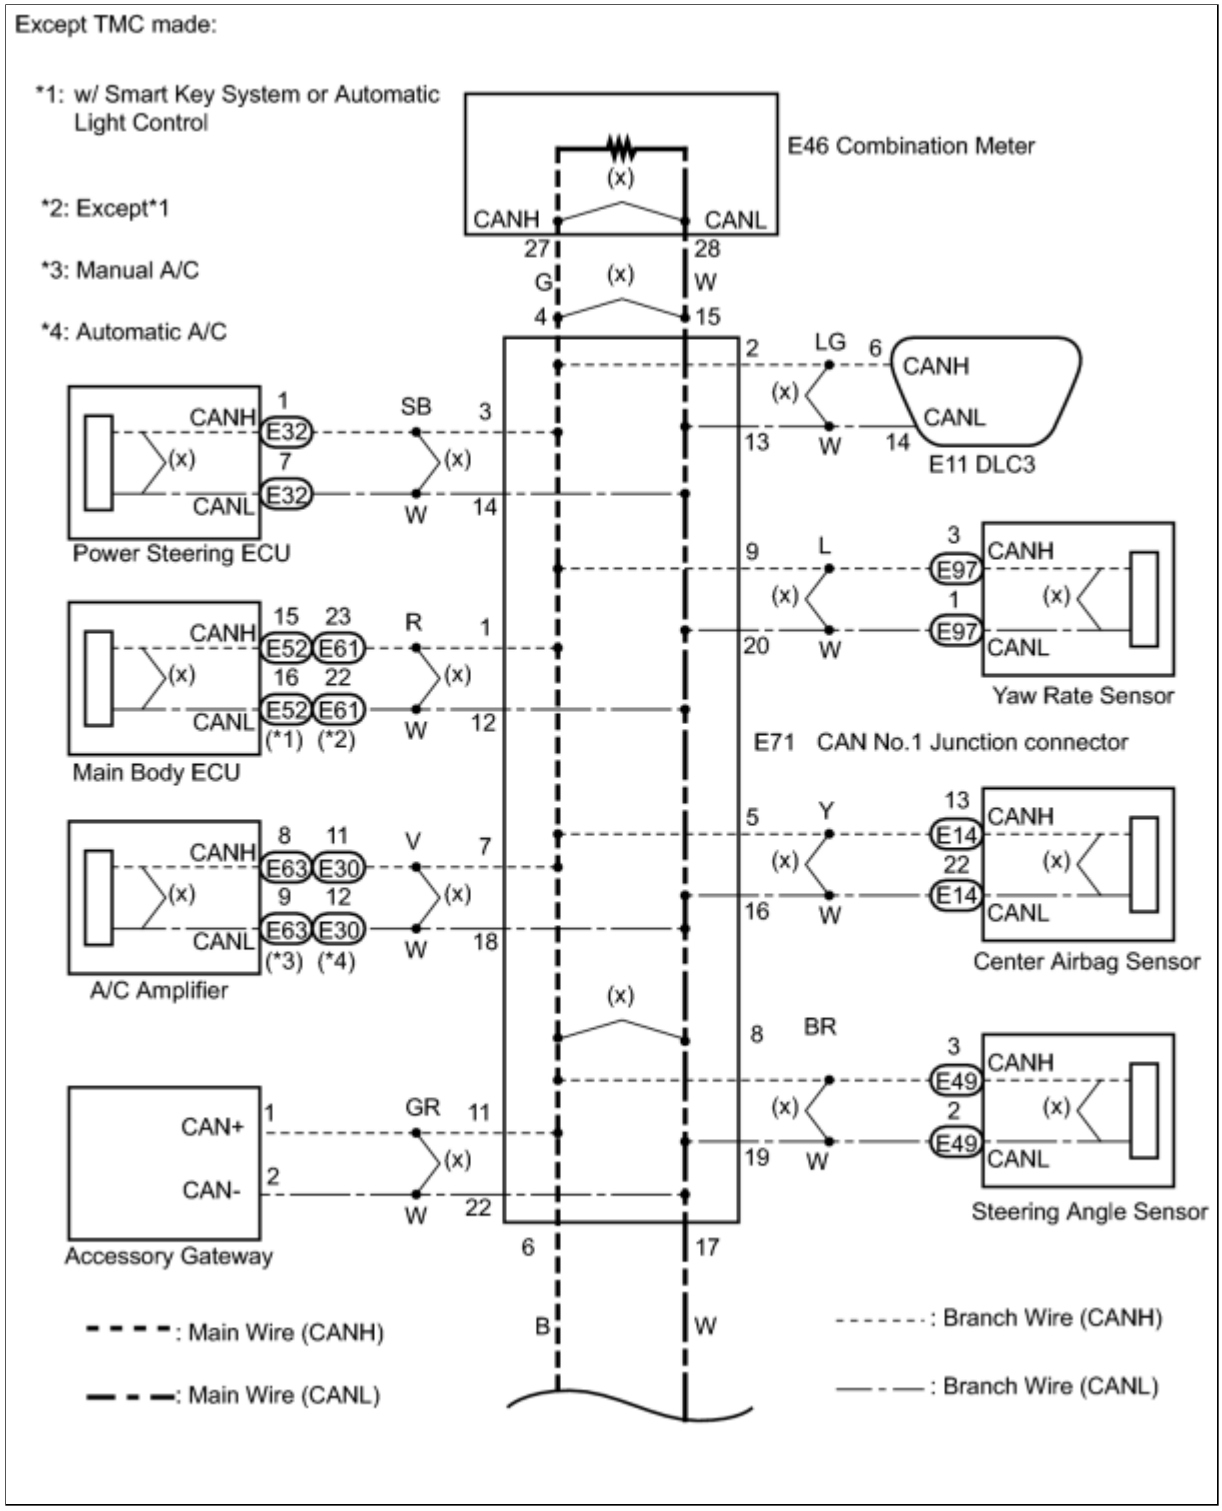
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Line for Short to +B (2010 Corolla)		



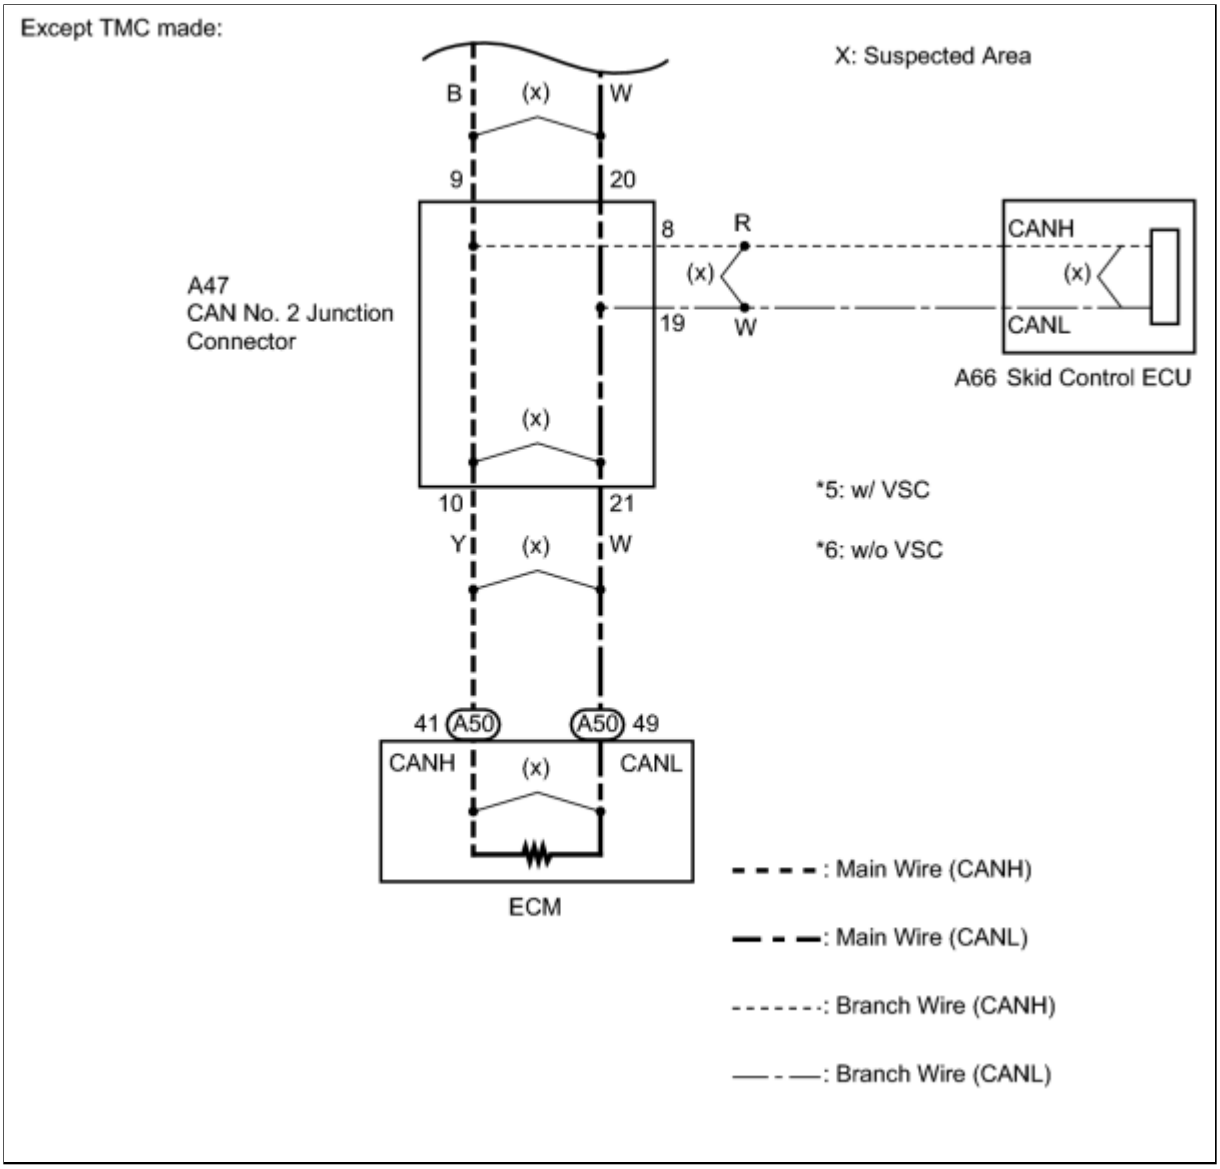
Check CAN Bus Line for Short to +B



DESCRIPTION



There may be a short circuit between the CAN bus line and +B when no resistance exists between terminals 6 (CANH) and 16 (BAT) or terminals 14 (CANL) and 16 (BAT) of the DLC3.



SYMPTOM	TROUBLE AREA
No resistance exists between terminals 6 (CANH) and 16 (BAT) or terminals 14 (CANL) and 16 (BAT) of the DLC3.	Short to +B in CAN bus wire • Skid control ECU • Power steering ECU • Steering angle sensor (w/ VSC) • Yaw rate sensor (w/ VSC) • ECM • Center airbag sensor assembly • Air conditioning amplifier • Combination meter ECU • Main body ECU • Accessory gateway

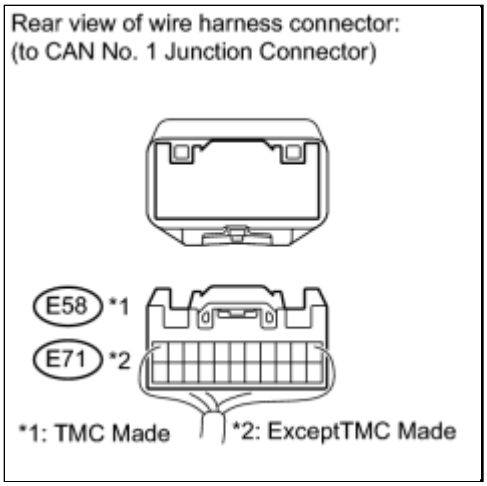
INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

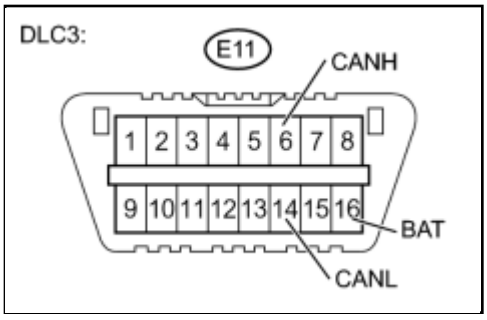


HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (DLC3 BRANCH WIRE)**

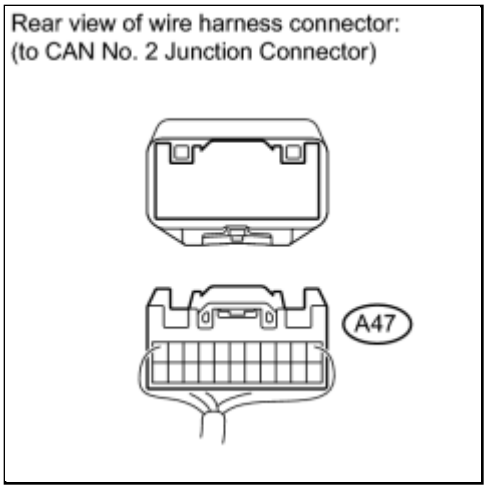


(a) Turn the ignition switch off, and disconnect negative battery terminal.

(b) Disconnect the CAN No. 1 junction connector.

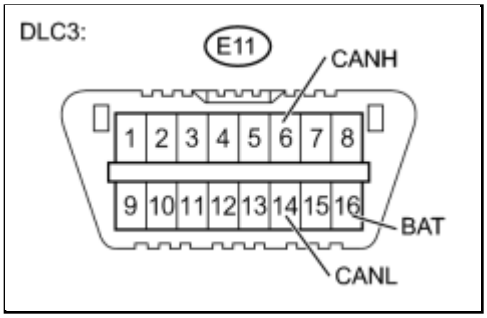
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E11-14 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3**



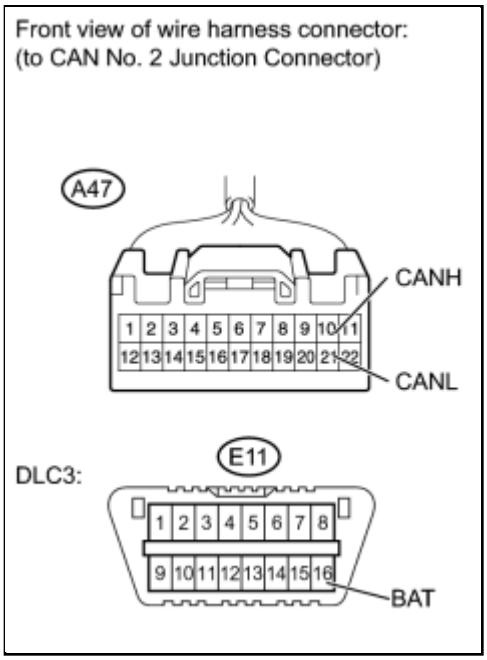
OK ▼

2.	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR)

(a) Reconnect the CAN No. 1 junction connector.

(b) Disconnect the CAN No. 2 junction connector.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E11-14 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (POWER STEERING ECU BRANCH WIRE)**

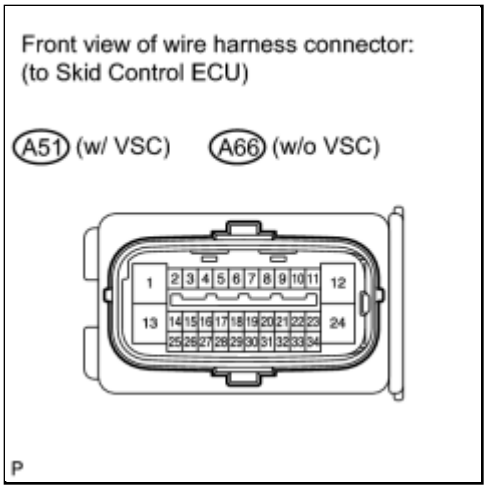
OK ▼

3.	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (ECM MAIN WIRE)

(a) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 2 junction connector is disconnected.



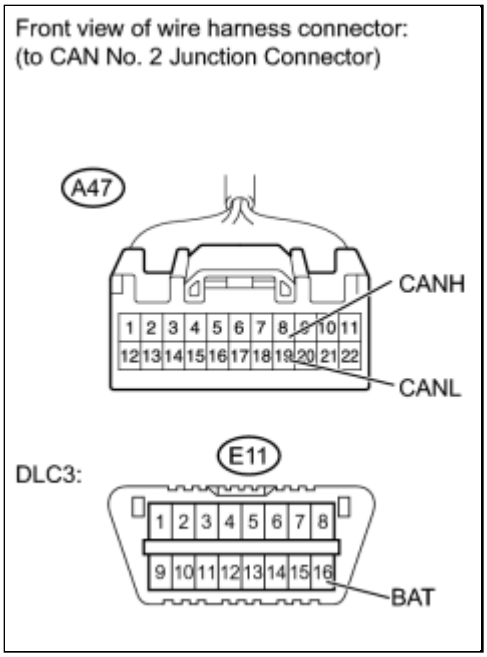
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A47-10 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A47-21 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

OK ▼

4.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**



(a) Disconnect the skid control ECU connector.

(b) Measure the resistance according to the value(s) in

the table below.

NOTICE:

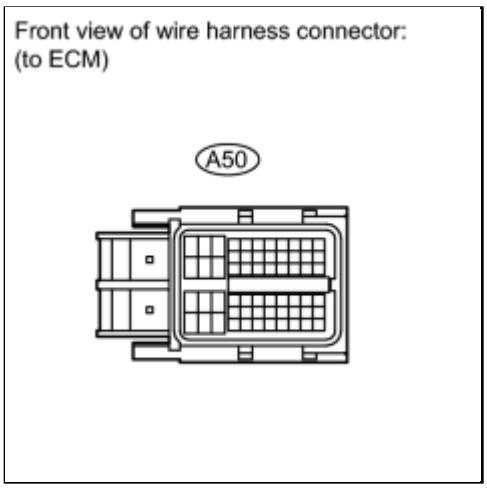
The resistance must be measured after the skid control ECU connector and CAN No. 2 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A47-8 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A47-19 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

Result:

RESULT	PROCEED TO
OK (w/o VSC)	A
OK (w/ VSC)	B
NG	C

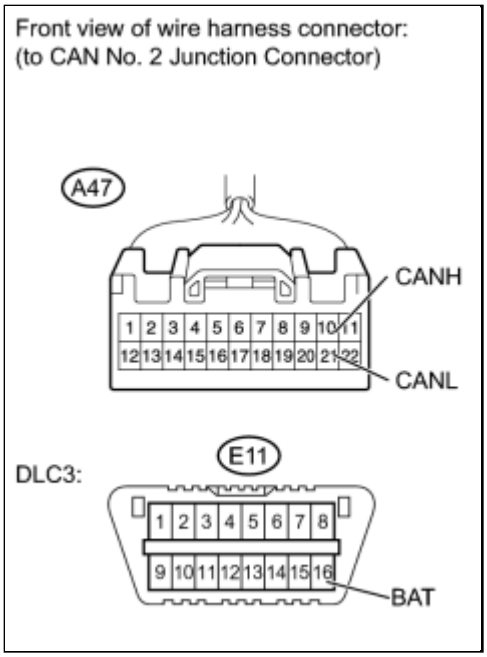


C ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**

B ▶ **REPLACE BRAKE ACTUATOR ASSEMBLY**

A ▶ **REPLACE BRAKE ACTUATOR ASSEMBLY**

5.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**



(a) Disconnect the ECM connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the ECM connector and CAN No. 2 junction connector are disconnected.

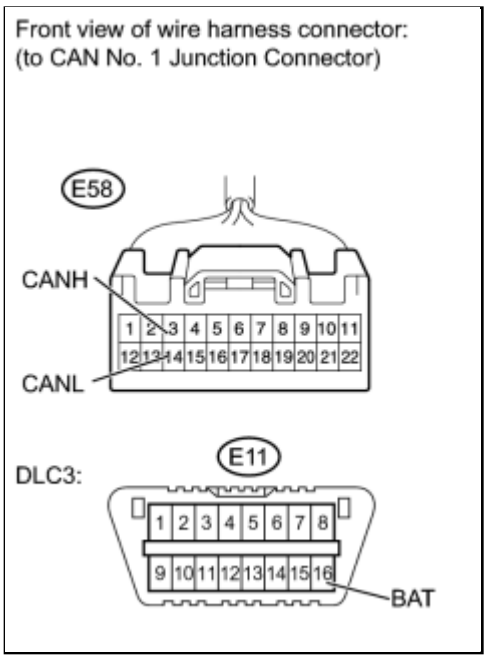
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A47-10 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
A47-21 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

Result:

RESULT	PROCEED TO
OK (for 2ZR-FE)	A
OK (for 2AZ-FE)	B
NG	C

C ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - ECM)**



B ▶ **REPLACE ECM**

A ▶ **REPLACE ECM**

6.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (POWER STEERING ECU BRANCH WIRE)**

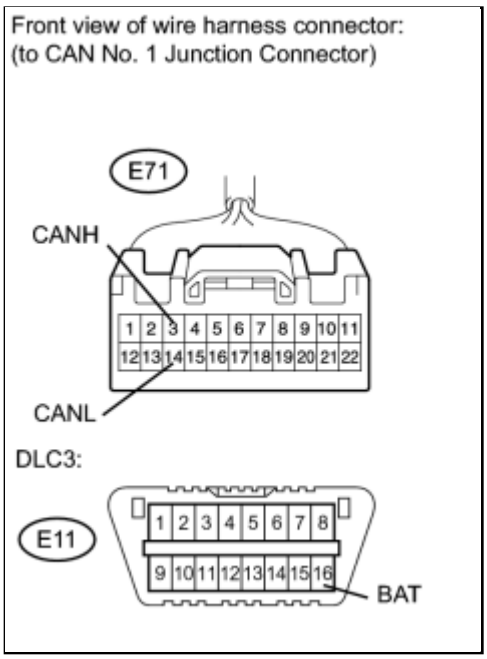
(a) Reconnect the CAN No. 2 junction connector.

(b) TMC made:

(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:



- The resistance must be measured after the CAN No. 2 junction connector is reconnected.
- The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-3 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-14 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(c) Except TMC made:

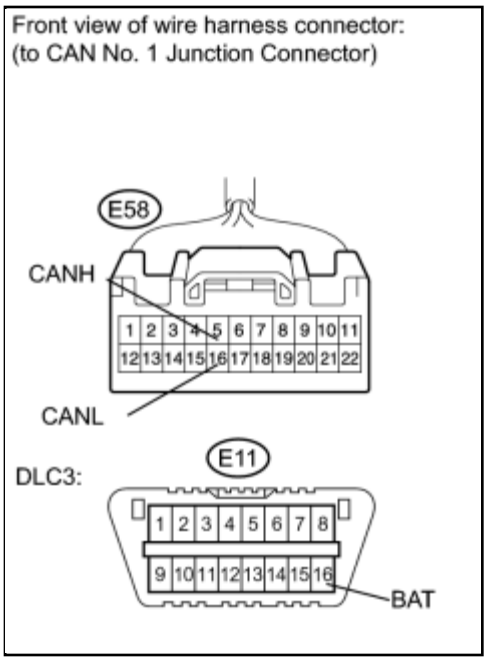
(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

- The resistance must be measured after the CAN No. 2 junction connector is reconnected.
- The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E71-3 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E71-14 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

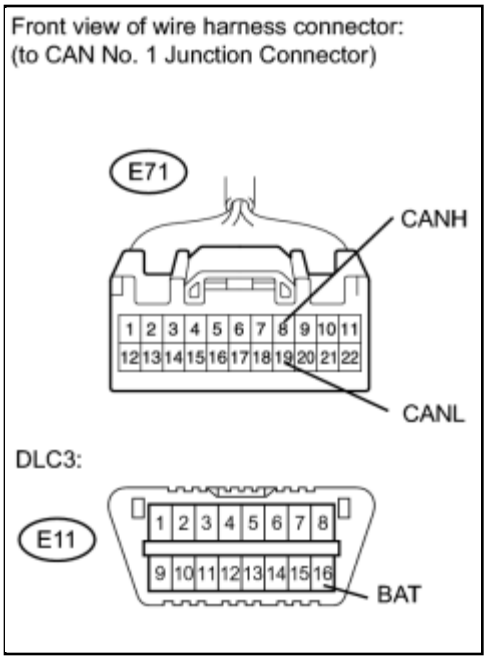
NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - POWER STEERING ECU)**

OK ▼

7.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (STEERING ANGLE SENSOR BRANCH WIRE)**

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-5 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-16 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(b) Except TMC made:

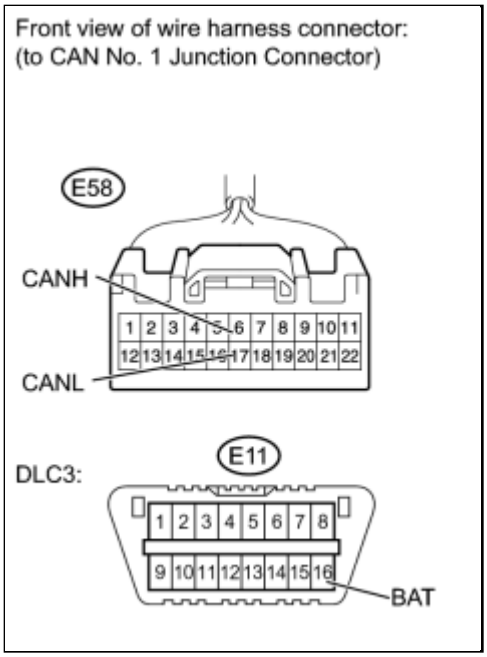
(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E71-8 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E71-19 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)**

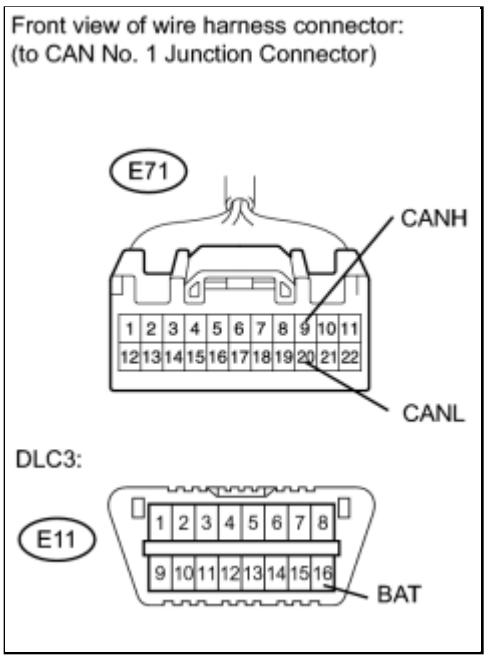
OK ▼

8.	CHECK FOR SHORT TO B+ IN CAN BUS WIRE (YAW RATE SENSOR BRANCH WIRE)

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:



The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-6 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-17 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(b) Except TMC made:

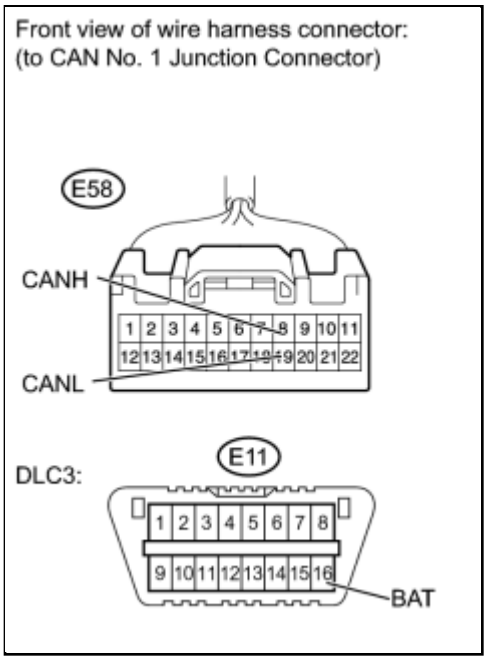
(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E71-9 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E71-20 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

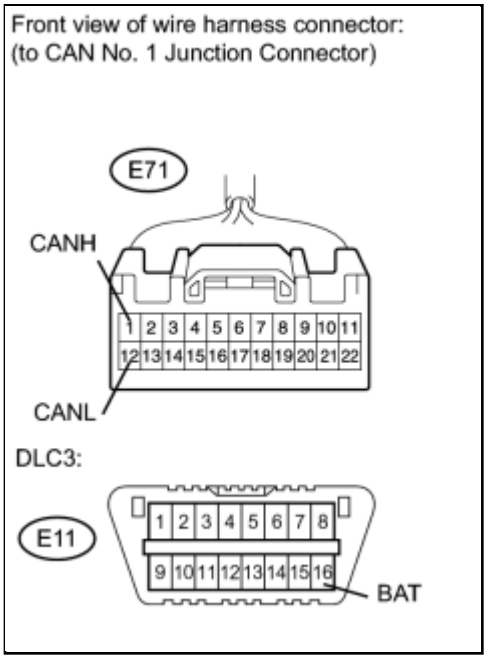
NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - YAW RATE SENSOR)**

OK ▼

9.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (MAIN BODY ECU BRANCH WIRE)**

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-8 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-19 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(b) Except TMC made:

(1) Disconnect the CAN No. 1 junction connector.

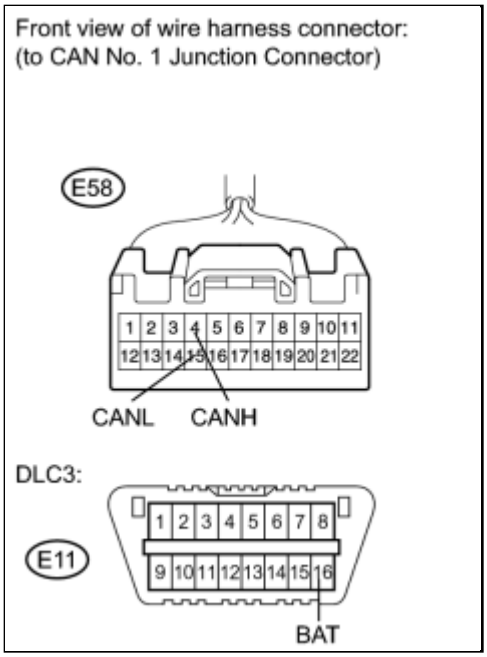
(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E71-1 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E71-12 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - MAIN BODY ECU)**

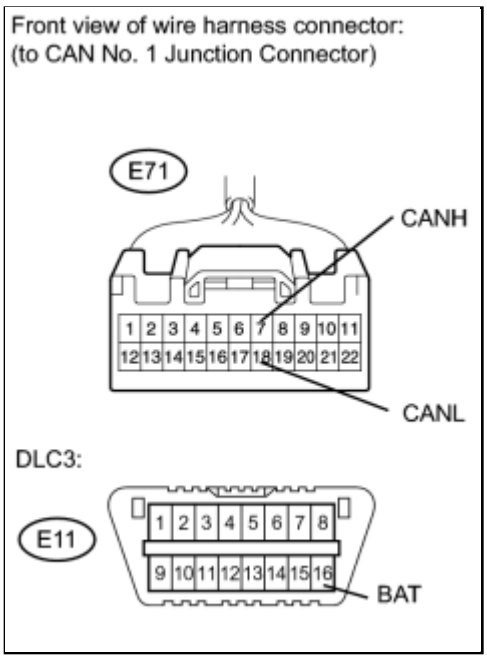
OK ▼

10.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (AIR CONDITIONING AMPLIFIER BRANCH WIRE)**

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:



The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-4 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-15 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(b) Except TMC made:

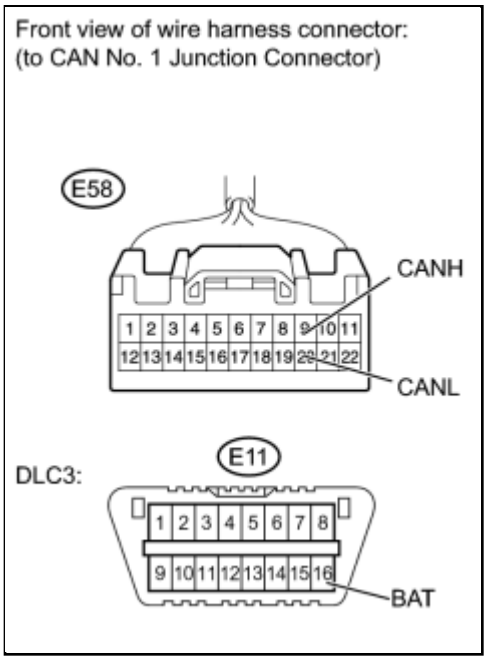
(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E71-7 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E71-18 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

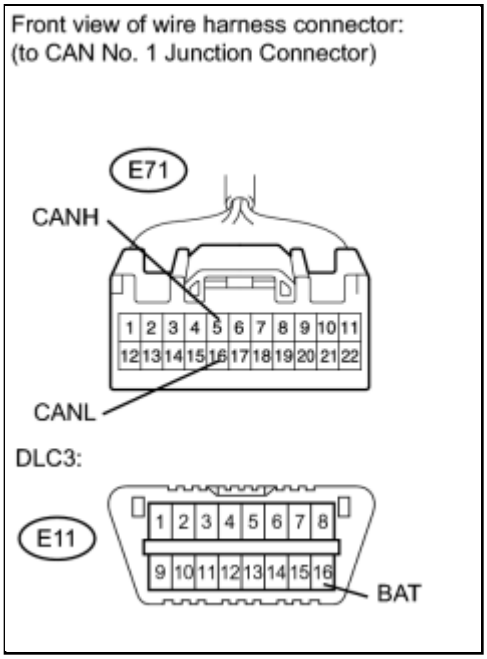
NG ▶ **CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)**

OK ▼

11.	**CHECK FOR SHORT TO B+ IN CAN BUS WIRE (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)**

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E58-9 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E58-20 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

(b) Except TMC made:

(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

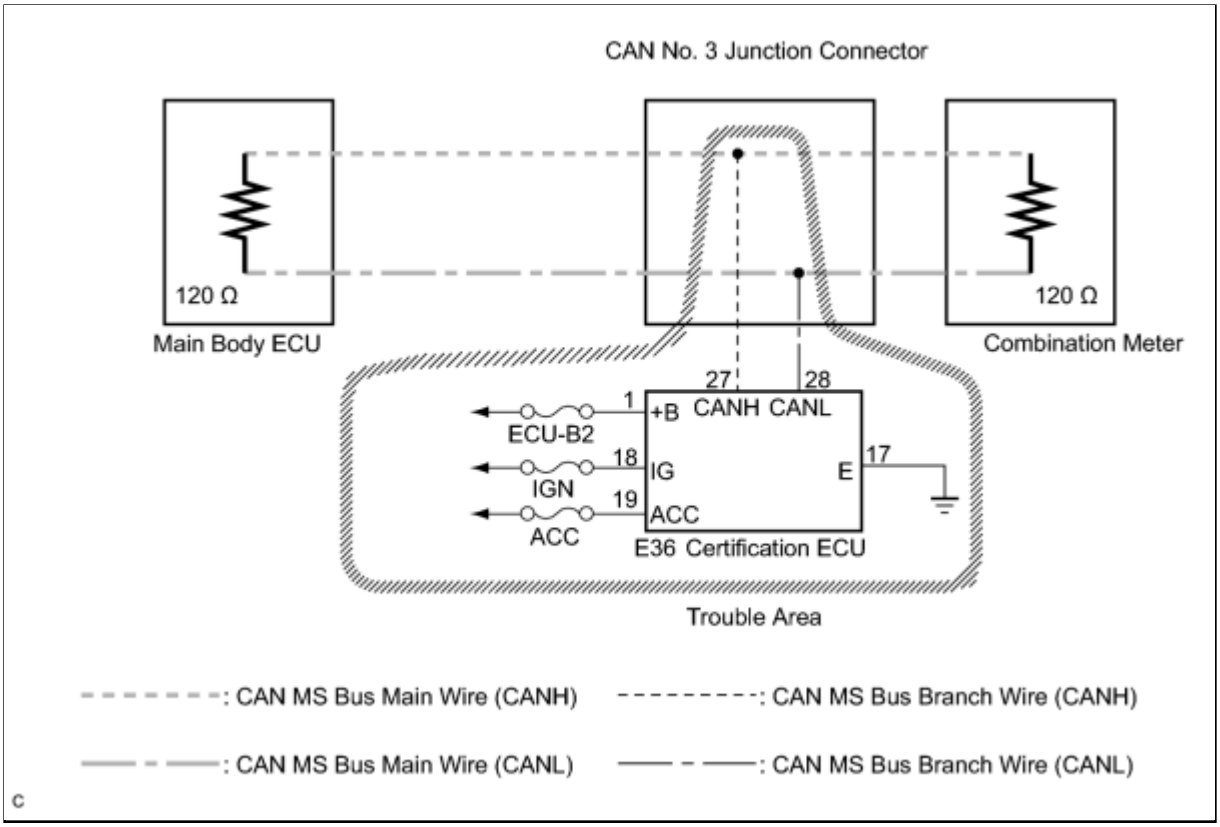
NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - ACCESSORY GATEWAY)**

OK ▶ **REPLACE THE ACCESSORY**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002E79019X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: U0327: Software Incompatibility with Vehicle Security Control Module (2010 Corolla)		



DTC	**U0327**	**Software Incompatibility with Vehicle Security Control Module**

DESCRIPTION

The main body ECU will store this DTC when no signals can be received from the certification ECU while the CAN MS main bus is normal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
U0327	No communication from certification ECU continues	• Certification ECU power source circuit • Certification ECU • Certification ECU branch wire or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the CAN bus main wires and the CAN bus branch wires.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

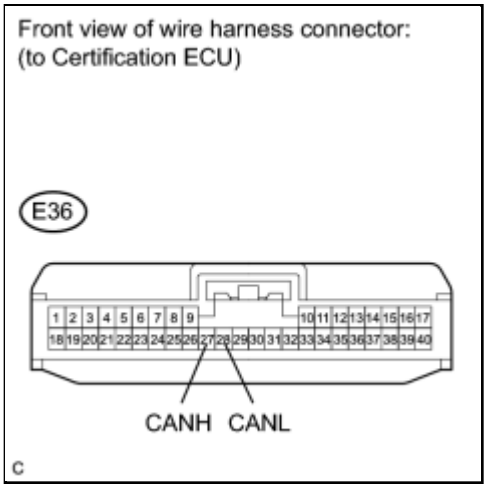
1.	**CHECK DTC**

(a) Check the DTC.

HINT:

If the CAN MS bus communication error DTC U1002 is output, troubleshoot for U1002 and check for malfunctions in the CAN MS main bus circuit INFO .

Result:



RESULT	PROCEED TO
U1002 is not output	A
U1002 is output	B

B GO TO DTC CHART

A

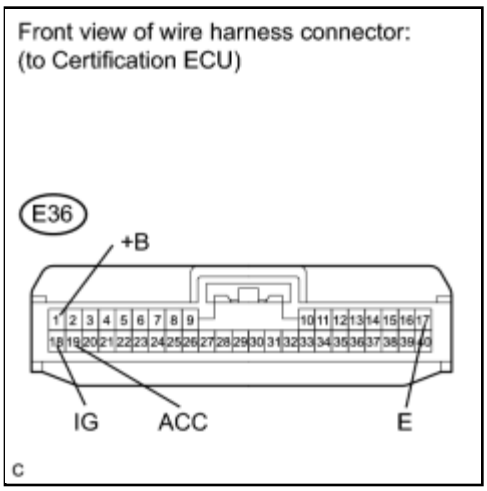
2.	CHECK CAN MS BUS WIRE (CERTIFICATION ECU)

(a) Turn the ignition switch off.

(b) Disconnect the certification ECU connector from the certification ECU.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E36-27 (CANH) - E36-28 (CANL)	Ignition switch off	54 to 69 Ω

NG REPAIR OR REPLACE CAN MS BUS BRANCH WIRE

OR CONNECTOR (CERTIFICATION ECU)

OK

3.	**CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-17 (E) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-18 (IG) - Body ground	Ignition switch ON	10 to 14 V
E36-1 (+B) - Body ground	Always	10 to 14 V
E36-19 (ACC) - Body ground	Ignition switch ACC	10 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE CERTIFICATION ECU**

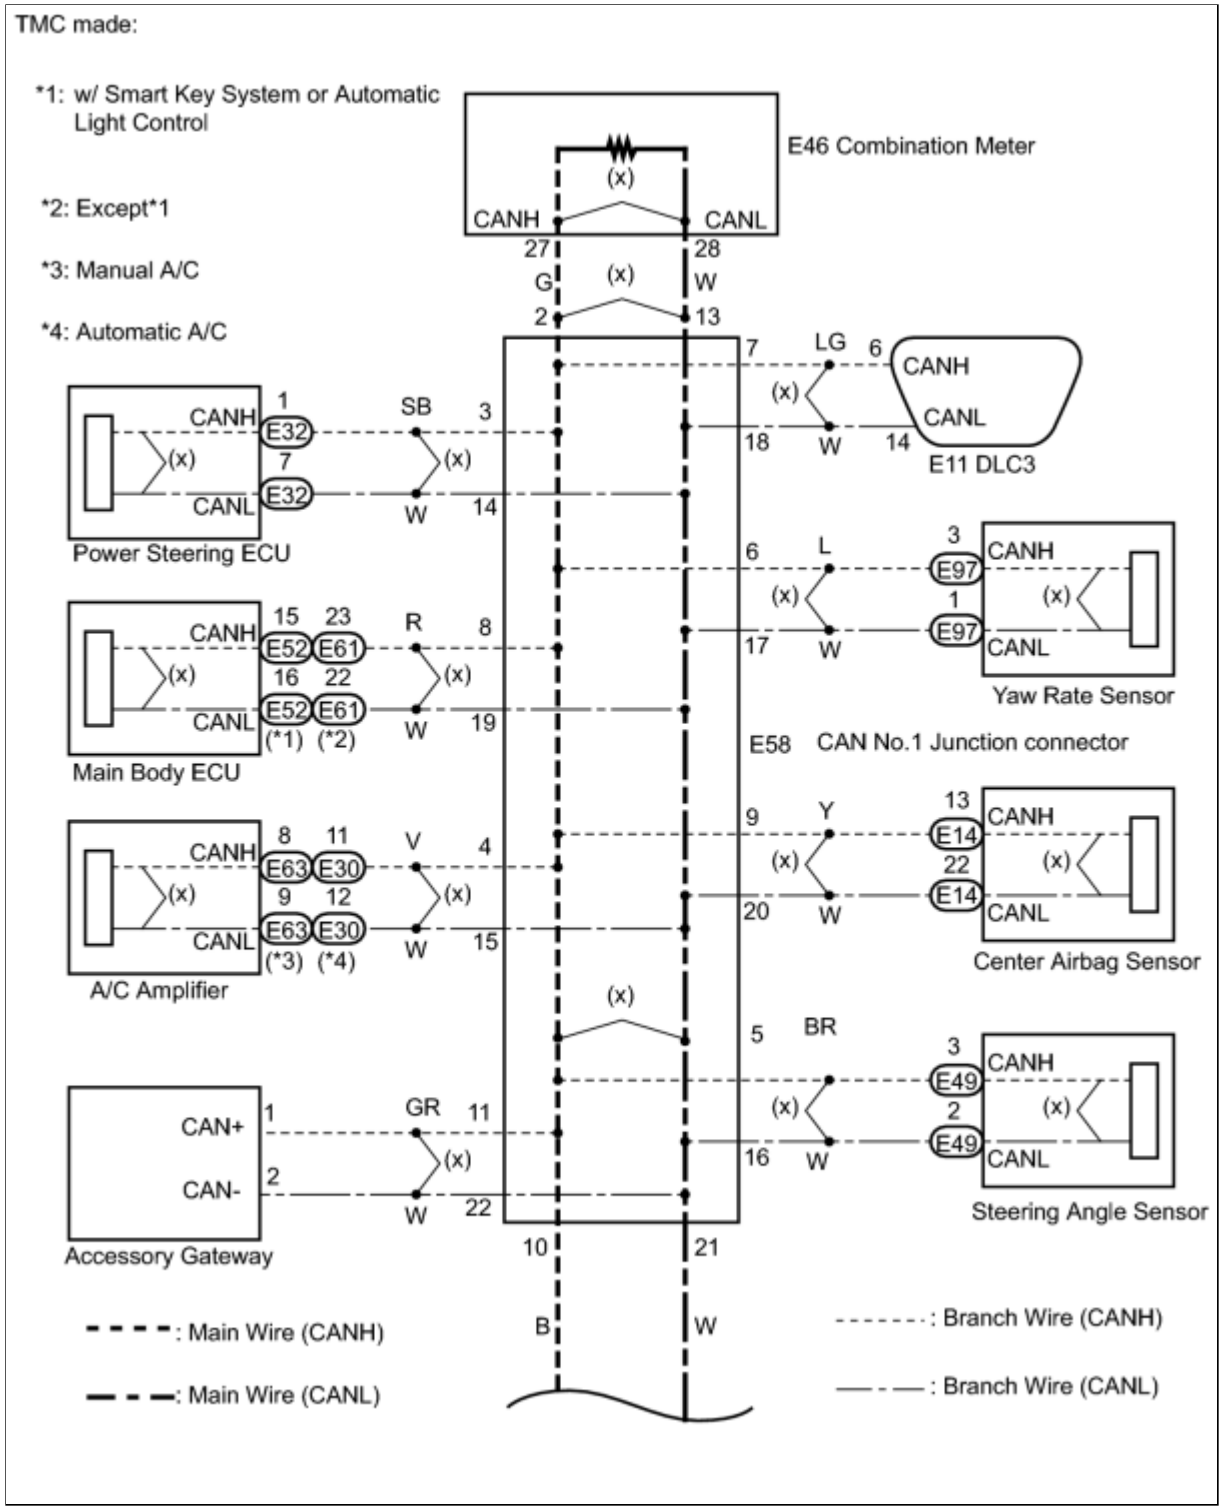
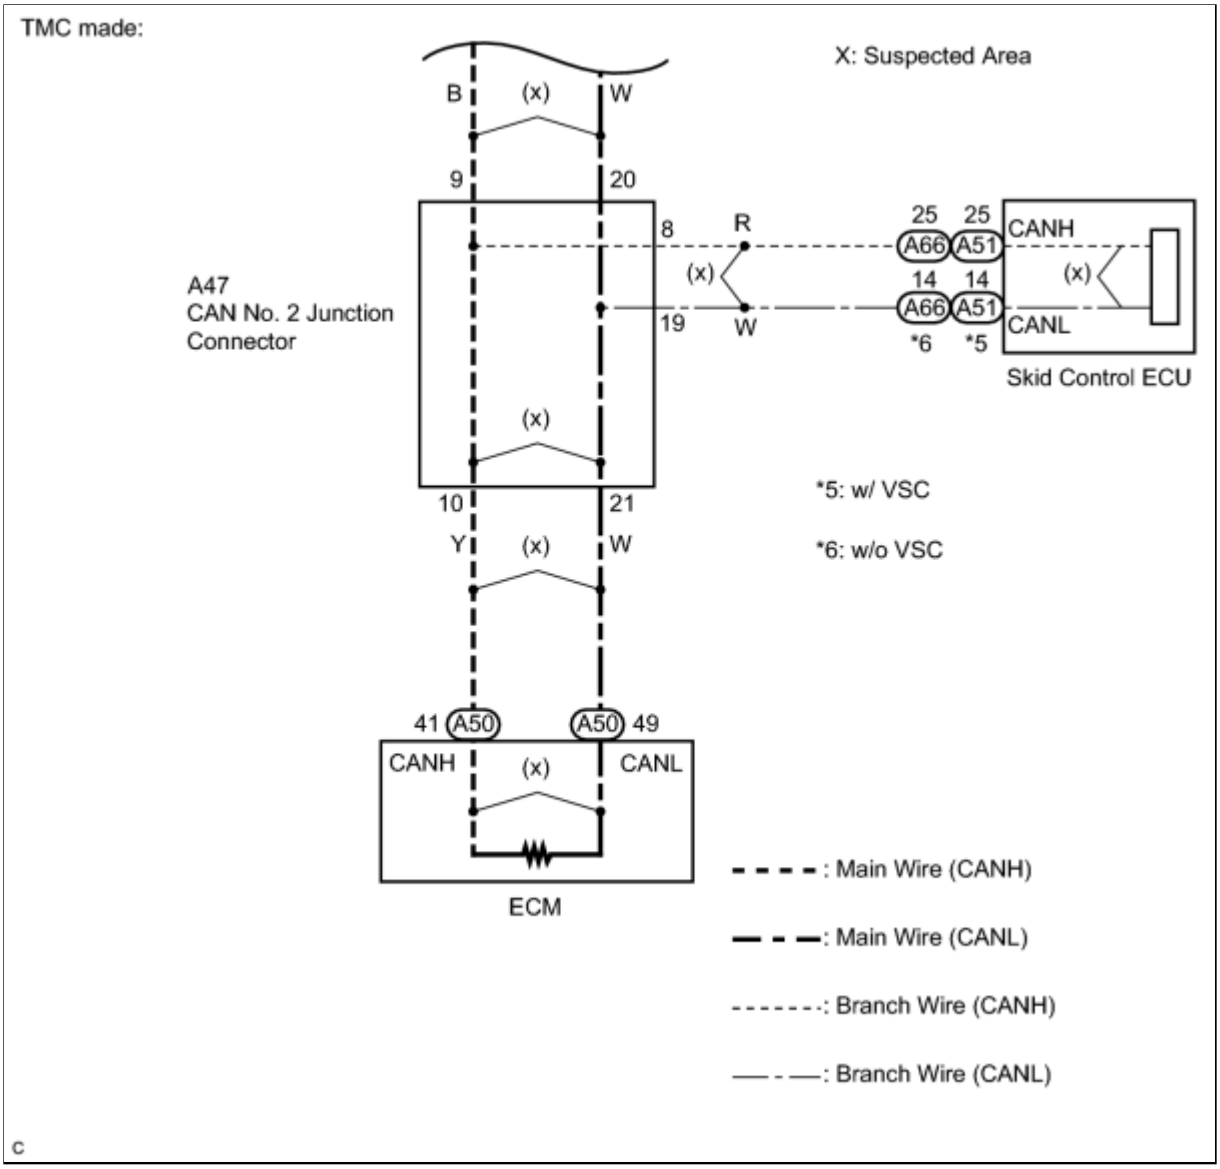
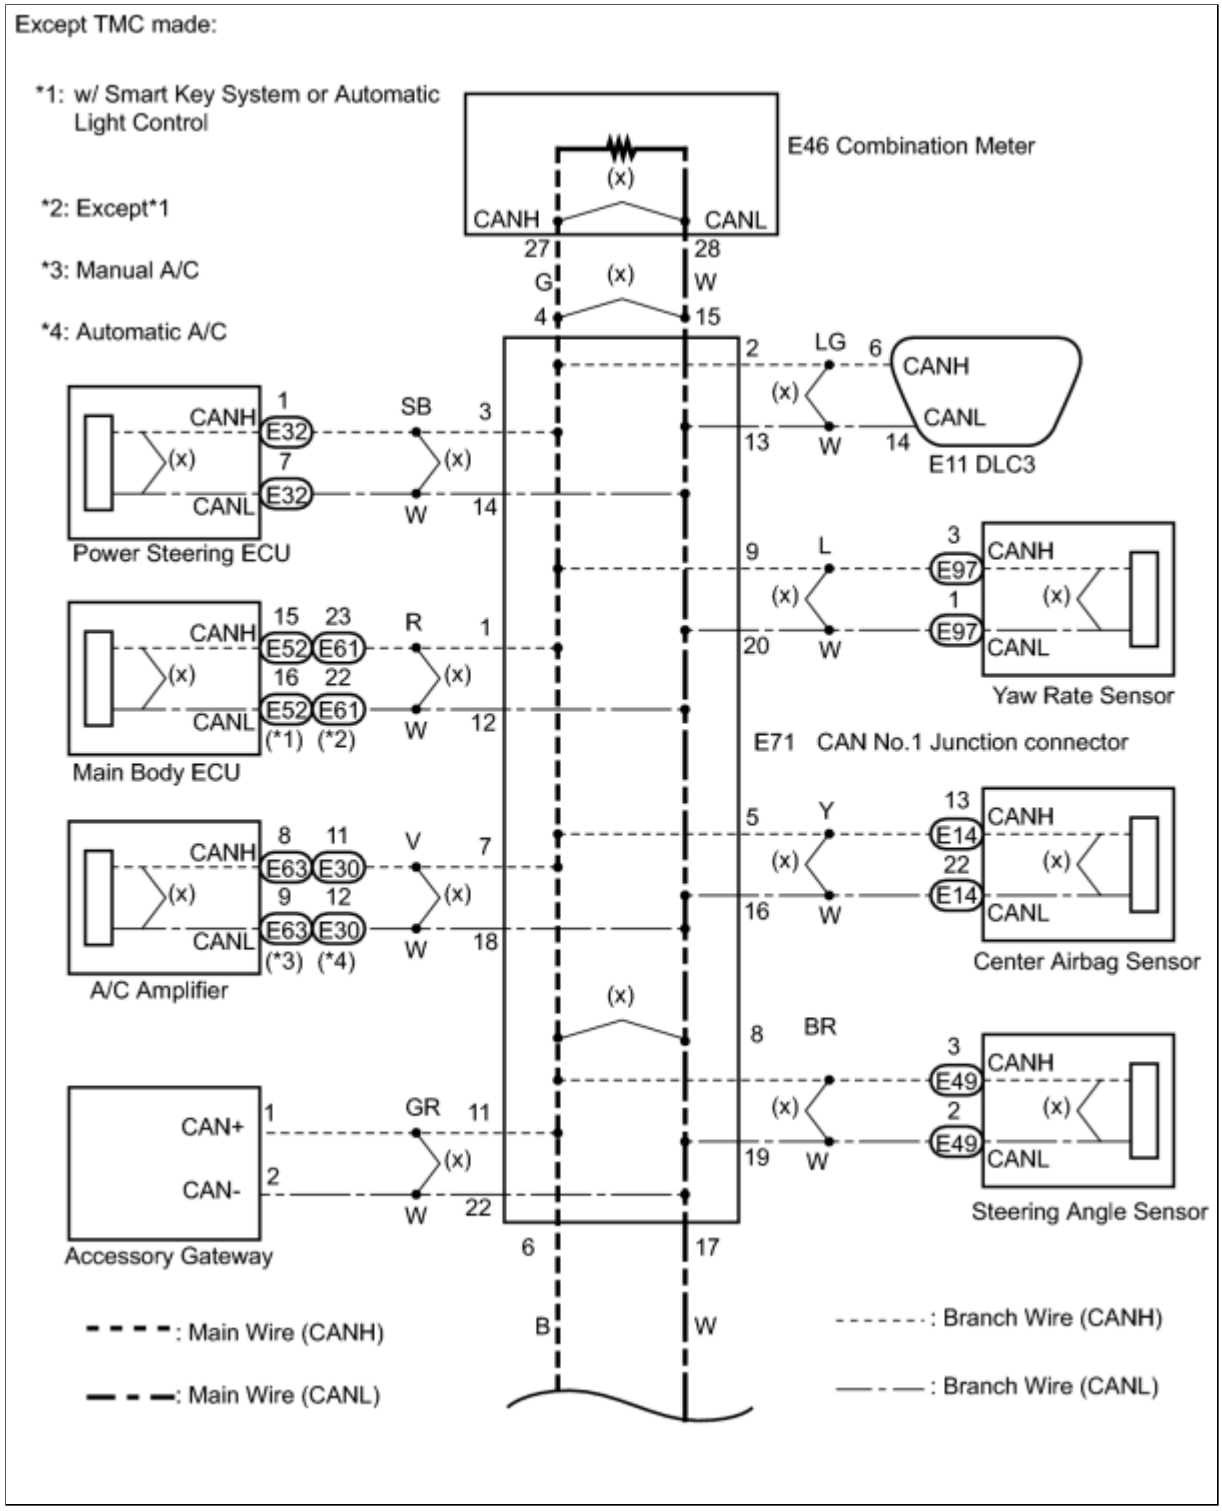
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Line for Short to GND (2010 Corolla)		



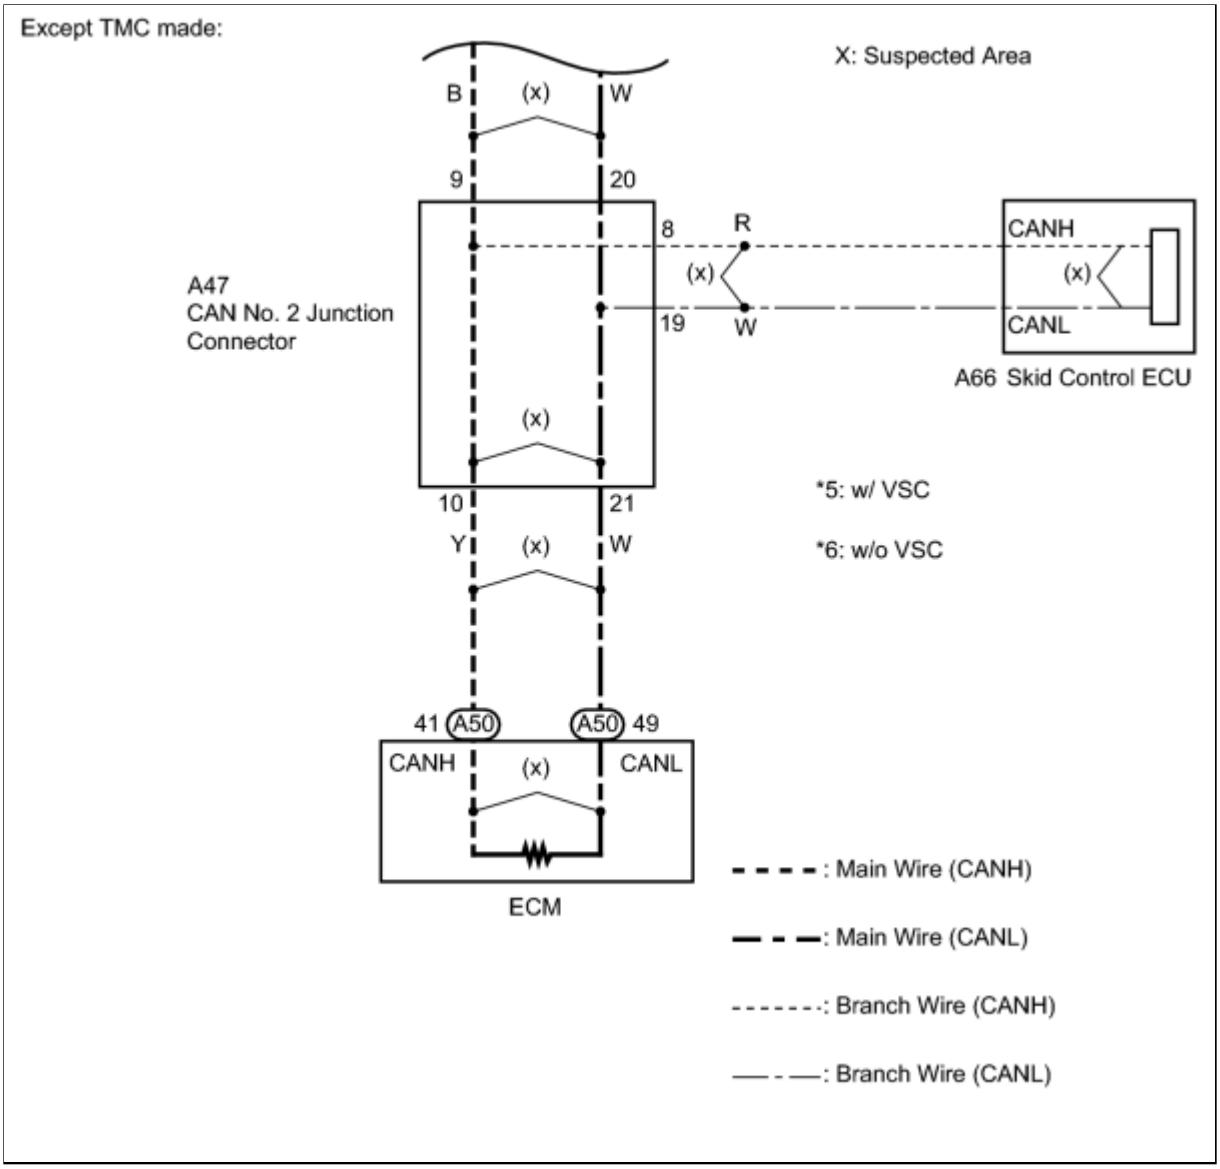
Check CAN Bus Line for Short to GND



DESCRIPTION



There may be a short circuit between the CAN bus line and GND when there is no resistance between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of the DLC3.



SYMPTOM	TROUBLE AREA
No resistance exists between terminals 6 (CANH) and 4 (CG) or terminals 14 (CANL) and 4 (CG) of DLC3.	Short to GND in CAN bus wire • Short to GND in CAN bus wire • Skid control ECU • Power steering ECU • Steering angle sensor (w/ VSC) • Yaw rate sensor (w/ VSC) • ECM • Center airbag sensor assembly • Air conditioning amplifier • Combination meter ECU • Main body ECU • Accessory Gateway

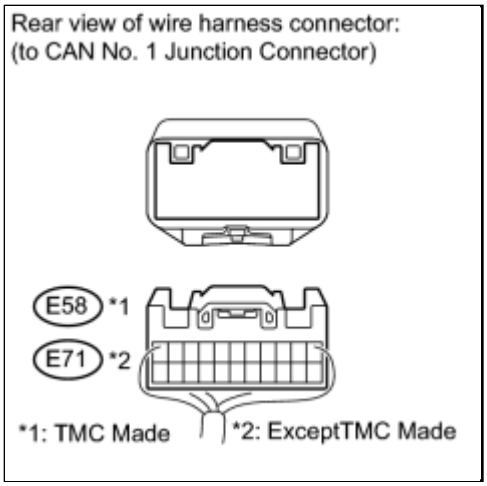
INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.



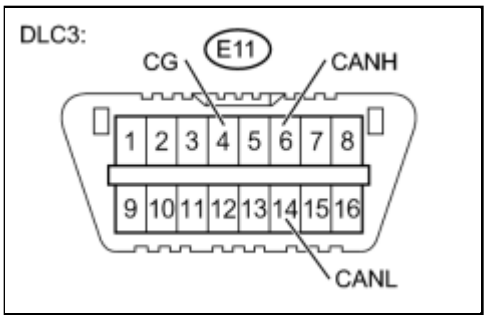
HINT:

- Operating the ignition switch, any switches or any doors triggers related ECU and sensor communication with the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (DLC3 BRANCH WIRE)**

(a) Turn the ignition switch off.



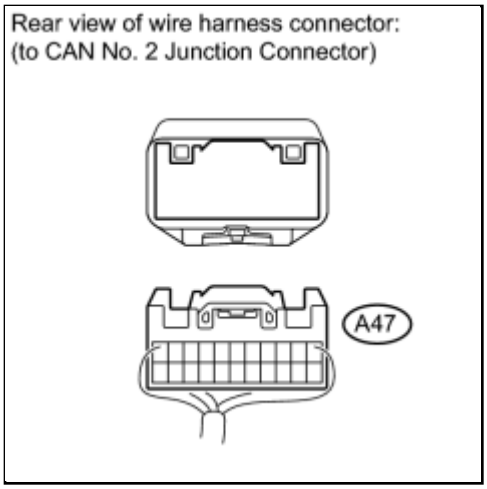
(b) Disconnect the CAN No. 1 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



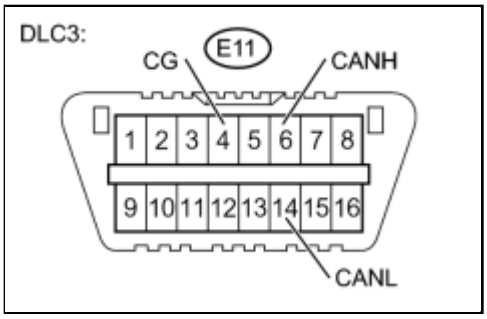
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E11-14 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3**

OK ▼

2.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR)

(a) Reconnect the CAN No. 1 junction connector.



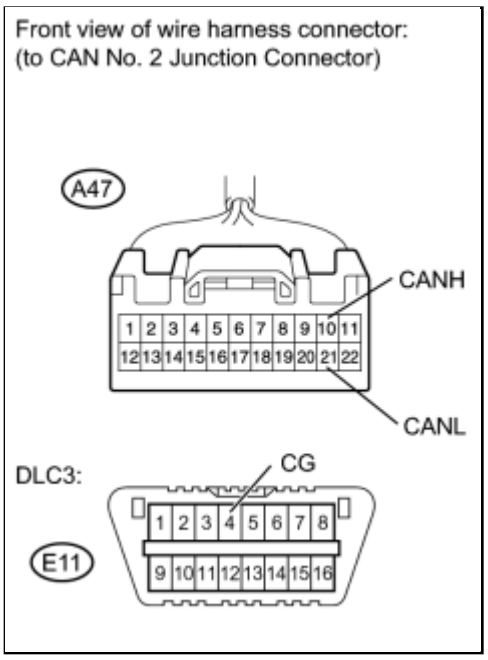
(b) Disconnect the CAN No. 2 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 2 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E11-14 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (POWER STEERING ECU BRANCH WIRE)**

OK ▼

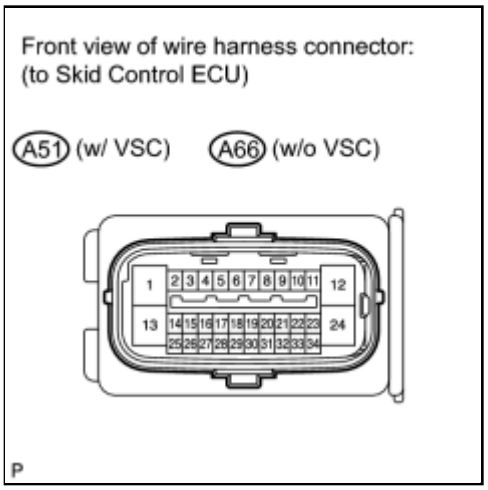
3.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (ECM MAIN WIRE)

(a) Measure the resistance according to the value(s) in

the table below.

NOTICE:

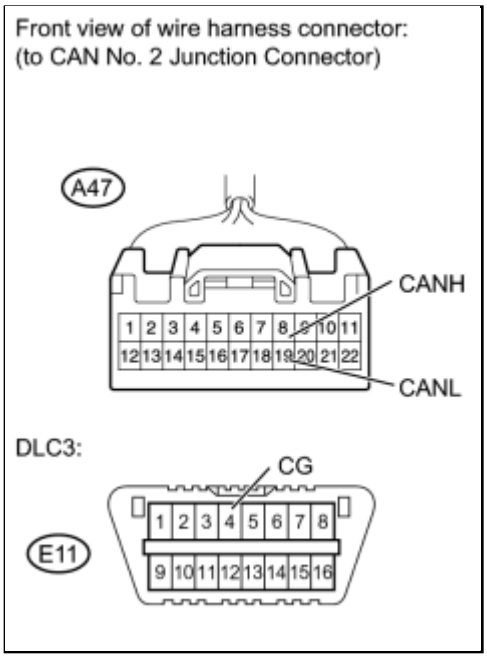
The resistance must be measured after the CAN No. 2 junction connector is disconnected.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-10 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
A47-21 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**



OK ▼

4.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**

(a) Disconnect the skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

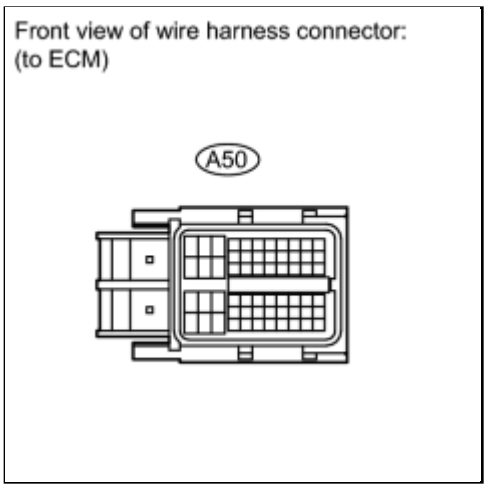
The resistance must be measured after the skid control ECU connector and CAN No. 2 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-8 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
A47-19 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

Result:

RESULT	PROCEED TO
OK (w/o VSC)	A
OK (w/ VSC)	B
NG	C



C ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**

B ▶ **REPLACE BRAKE ACTUATOR ASSEMBLY**

A ▶ **REPLACE BRAKE ACTUATOR ASSEMBLY**

5.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

(a) Disconnect the ECM connector.

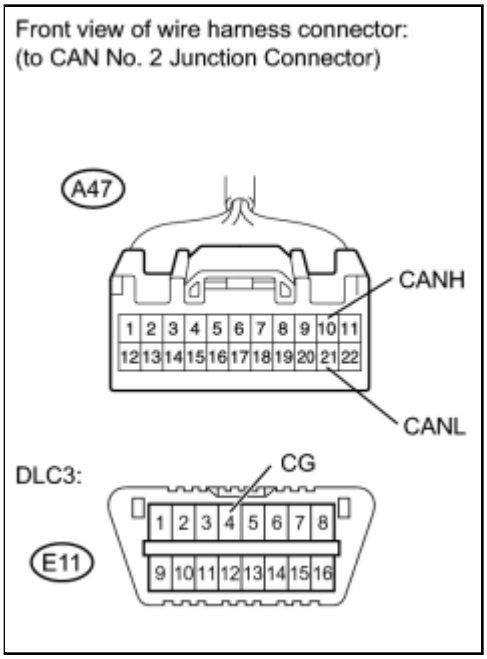
(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the ECM connector and CAN No.2 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-10 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
A47-21 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher



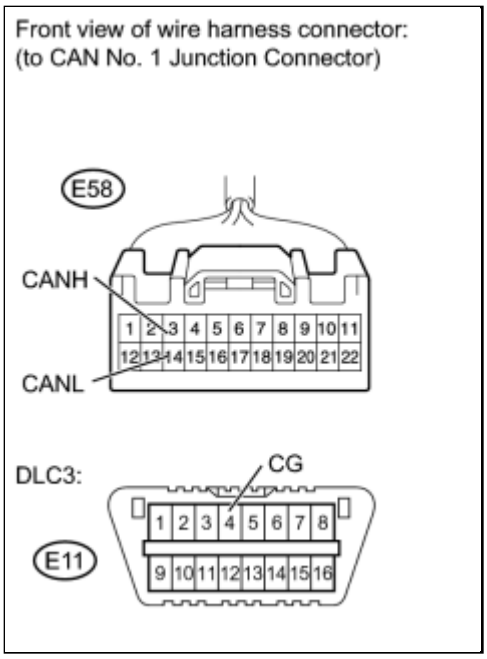
Result:

RESULT	PROCEED TO
OK (for 2ZR-FE)	A
OK (for 2AZ-FE)	B
NG	C

C ▶ **REPAIR OR REPLACE CAN BUS MAIN WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

B ▶ **REPLACE ECM**

A ▶ **REPLACE ECM**



6.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (POWER STEERING ECU BRANCH WIRE)

(a) Reconnect the CAN No. 2 junction connector.

(b) Disconnect the CAN No. 1 junction connector.

(c) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

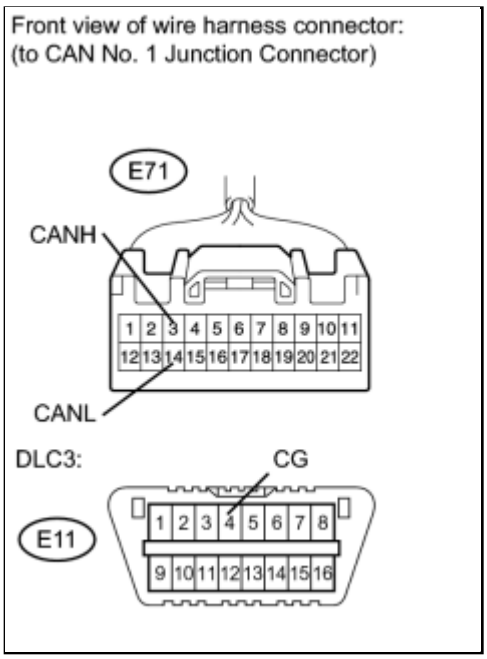
NOTICE:

- The resistance must be measured after the CAN No. 2 junction connector is reconnected.
- The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-3 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E58-14 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

(d) Except TMC made:



(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

- The resistance must be measured after the CAN No. 2 junction connector is reconnected.
- The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-3 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher

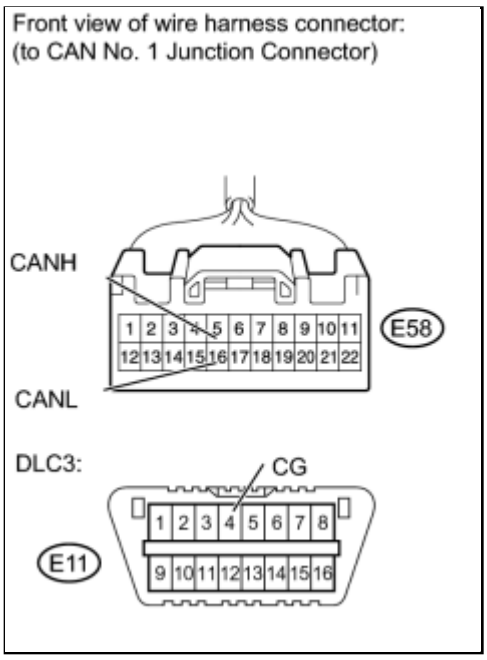
E71-14 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - POWER STEERING ECU)**

OK ▼

7.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (STEERING ANGLE SENSOR BRANCH WIRE)**

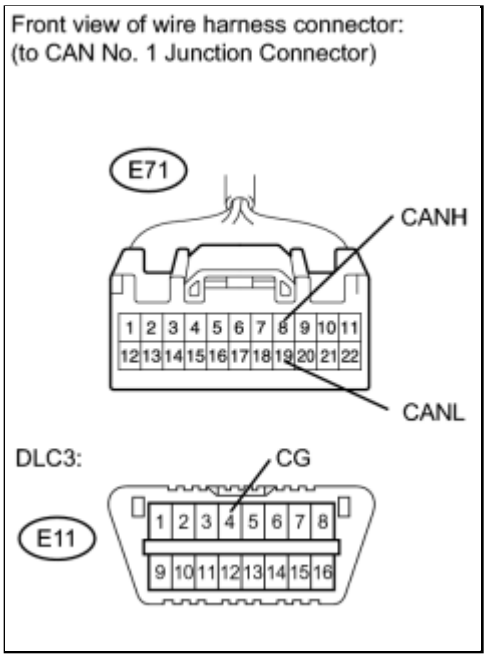
(a) TMC made:



(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-5 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher

E58-16 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

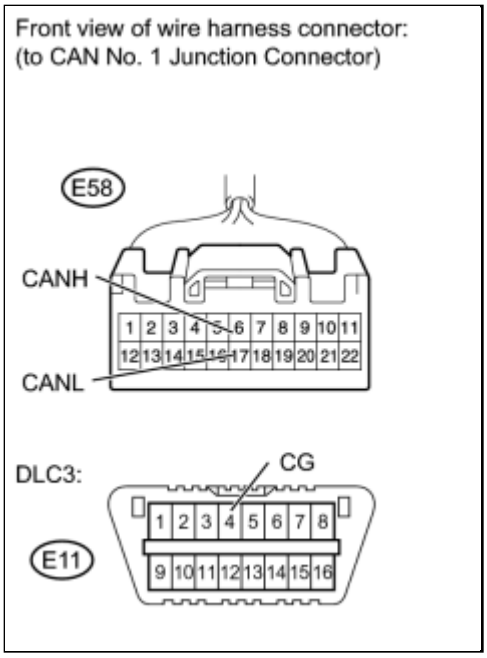
(b) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-8 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E71-19 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

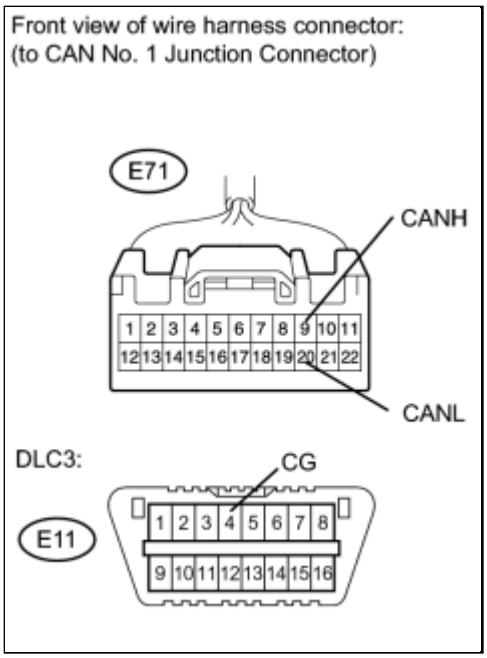
NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)**

OK ▼

8.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (YAW RATE SENSOR BRANCH WIRE)

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-6 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E58-17 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

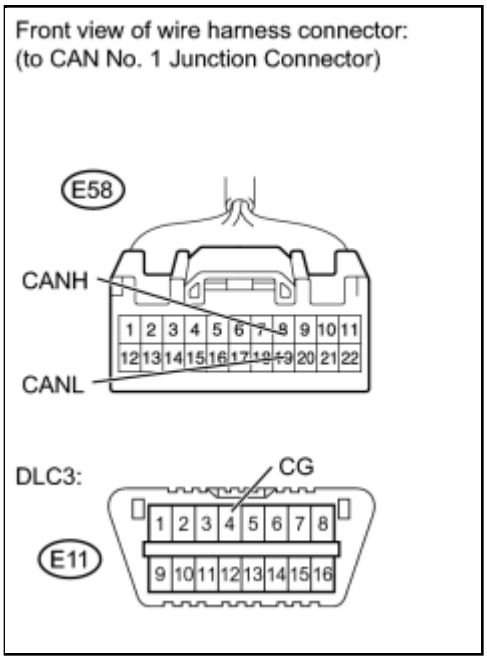
(b) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-9 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E71-20 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - YAW RATE SENSOR)**

OK

9.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (MAIN BODY ECU BRANCH WIRE)

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

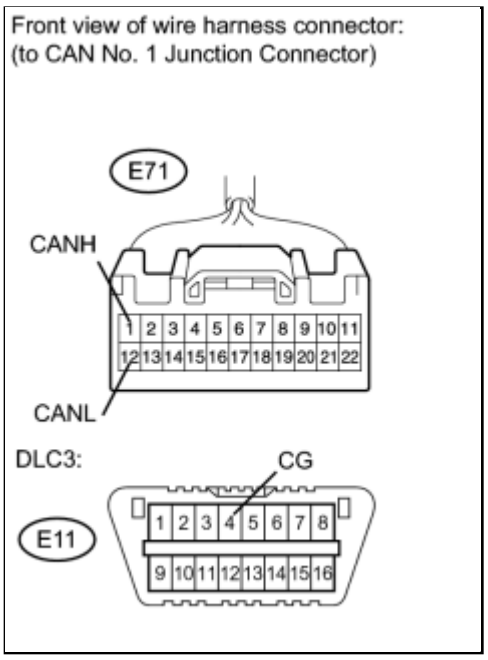
NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-8 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E58-19 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

(b) Except TMC made:



(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

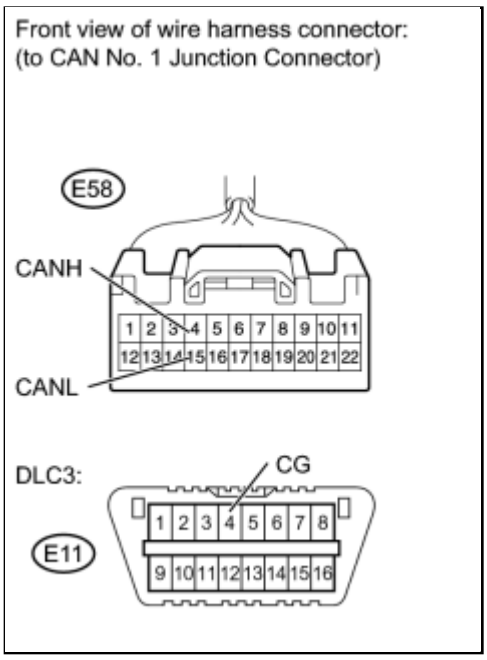
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-1 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E71-12 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - MAIN BODY ECU)**

OK ▼

10.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (AIR CONDITIONING AMPLIFIER BRANCH WIRE)**

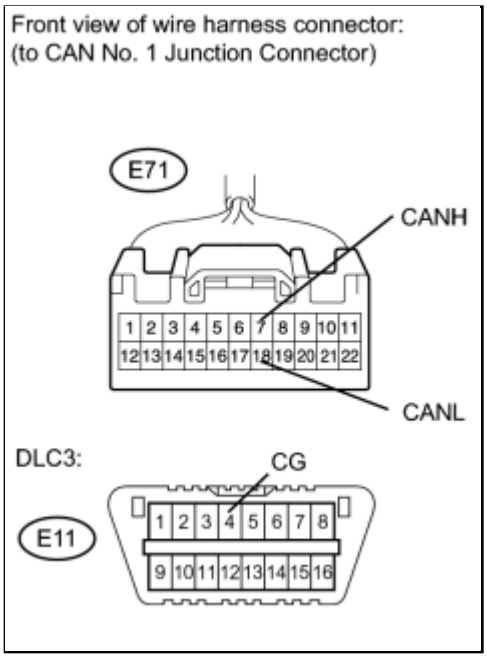
(a) TMC made:



(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-4 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher

E58-15 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

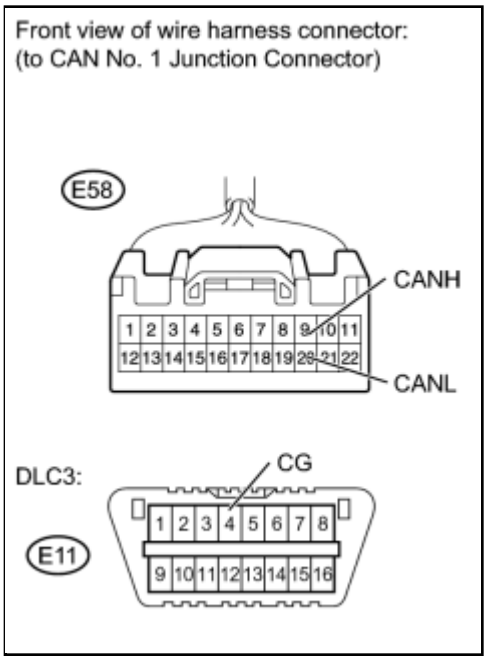
(b) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-7 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E71-18 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

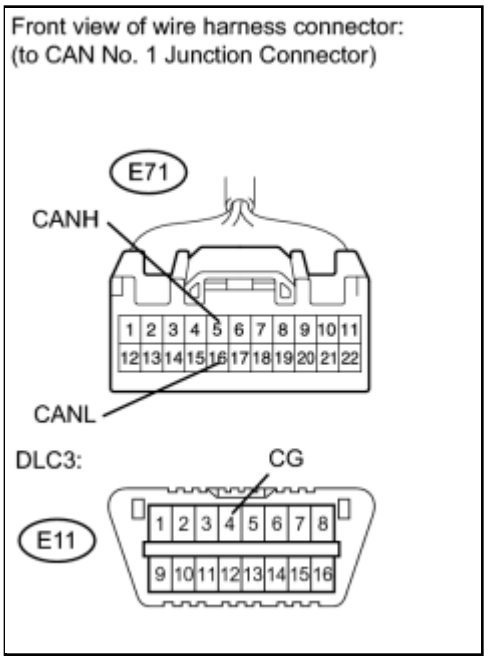
NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)**

OK ▼

11.	**CHECK FOR SHORT TO GND IN CAN BUS WIRE (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)**

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-9 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E58-20 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

(b) Except TMC made:

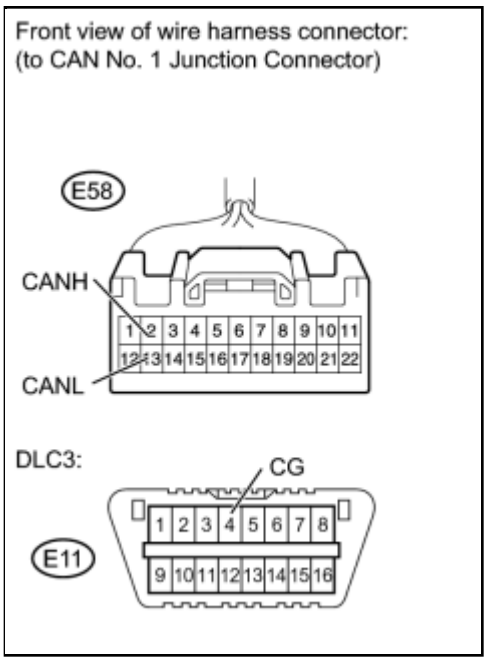
(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-5 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E71-16 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher



NG ▶ **CHECK FOR SHORT TO GND IN CAN BUS WIRE (CAN NO. 1 JUNCTION CONNECTOR - CENTER AIRBAG**

SENSOR ASSEMBLY)

OK

12.	CHECK FOR SHORT TO GND IN CAN BUS WIRE (COMBINATION METER MAIN WIRE)

(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-2 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E58-13 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

Skid Control ECU Communication Stop Mode

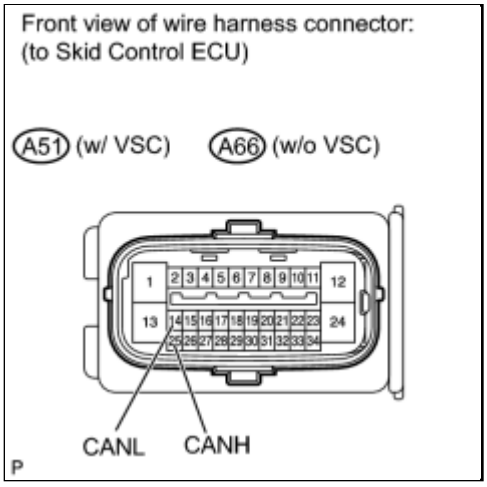
DESCRIPTION

DETECTION ITEM	SYMPTOM	TROUBLE AREA
Skid Control ECU Communication Stop Mode	• "ABS/VSC/TRAC" is not displayed on "CAN Bus Check" screen of the Techstream • Applies to "Skid Control ECU Communication Stop Mode" in "DTC Combination Table"	• Power source circuit of skid control ECU • Skid control ECU branch wire or connector • Skid control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:



- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK CAN BUS WIRE FOR DISCONNECTION (SKID CONTROL ECU BRANCH WIRE)**

(a) Turn the ignition switch off.

(b) Disconnect the skid control ECU connector.

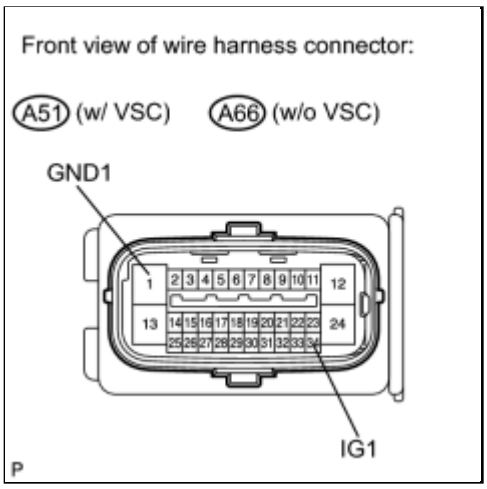
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ VSC

w/o VSC

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A51-25 (CANH) - A51-14 (CANL)	Ignition switch off	54 to 69 Ω



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A66-25 (CANH) - A66-14 (CANL)	Ignition switch off	54 to 69 Ω

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (SKID CONTROL ECU BRANCH WIRE)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (IG1, GND1)**

(a) Disconnect the skid control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ VSC

w/o VSC

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-1 (GND1) - Body ground	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A66-1 (GND1) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

w/ VSC

w/o VSC

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A51-34 (IG1) - Body ground	Ignition switch ON	10 to 14 V

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A66-34 (IG1) - Body ground	Ignition switch ON	10 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	CHECK DTC OUTPUT

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRC / DTC.

(e) Read the DTC.

OK:
C1241 is not stored.
Result:

RESULT	PROCEED TO
OK (w/o VSC)	A
OK (w/ VSC)	B

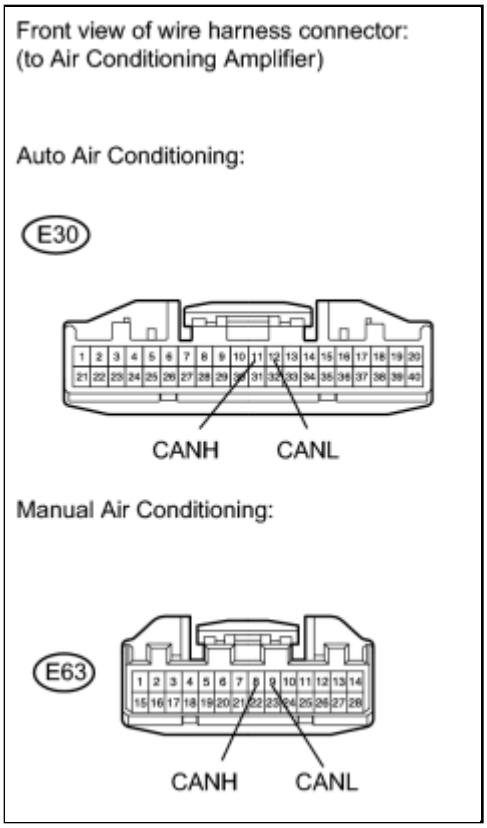
INSPECTION PROCEDURE

NOTICE:



- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK CAN BUS LINE FOR DISCONNECTION (AIR CONDITIONING AMPLIFIER BRANCH WIRE)**

(a) Turn the ignition switch off.

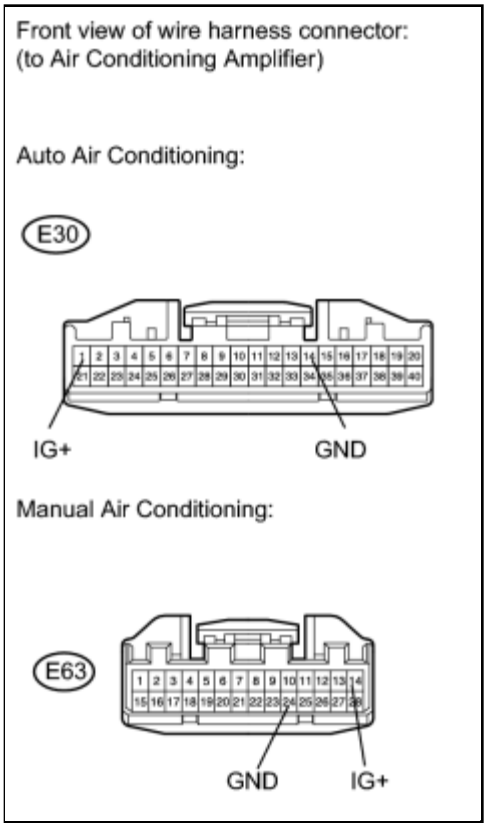
(b) Disconnect the air conditioning amplifier connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Automatic Air Conditioning

Manual Air Conditioning



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E30-11 (CANH) - E30-12 (CANL)	Ignition switch off	54 to 69 Ω

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E63-8 (CANH) - E63-9 (CANL)	Ignition switch off	54 to 69 Ω

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (AIR CONDITIONING AMPLIFIER BRANCH WIRE)**

OK

2.	CHECK HARNESS AND CONNECTOR (IG+, GND)

(a) Disconnect the air conditioning amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Automatic Air Conditioning

Manual Air Conditioning

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-14 (GND) - Body ground	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-24 (GND) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Automatic Air Conditioning

Manual Air Conditioning

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E30-1 (IG+) - Body ground	Ignition switch ON	10 to 14 V

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E63-14 (IG+) - Body ground	Ignition switch ON	10 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

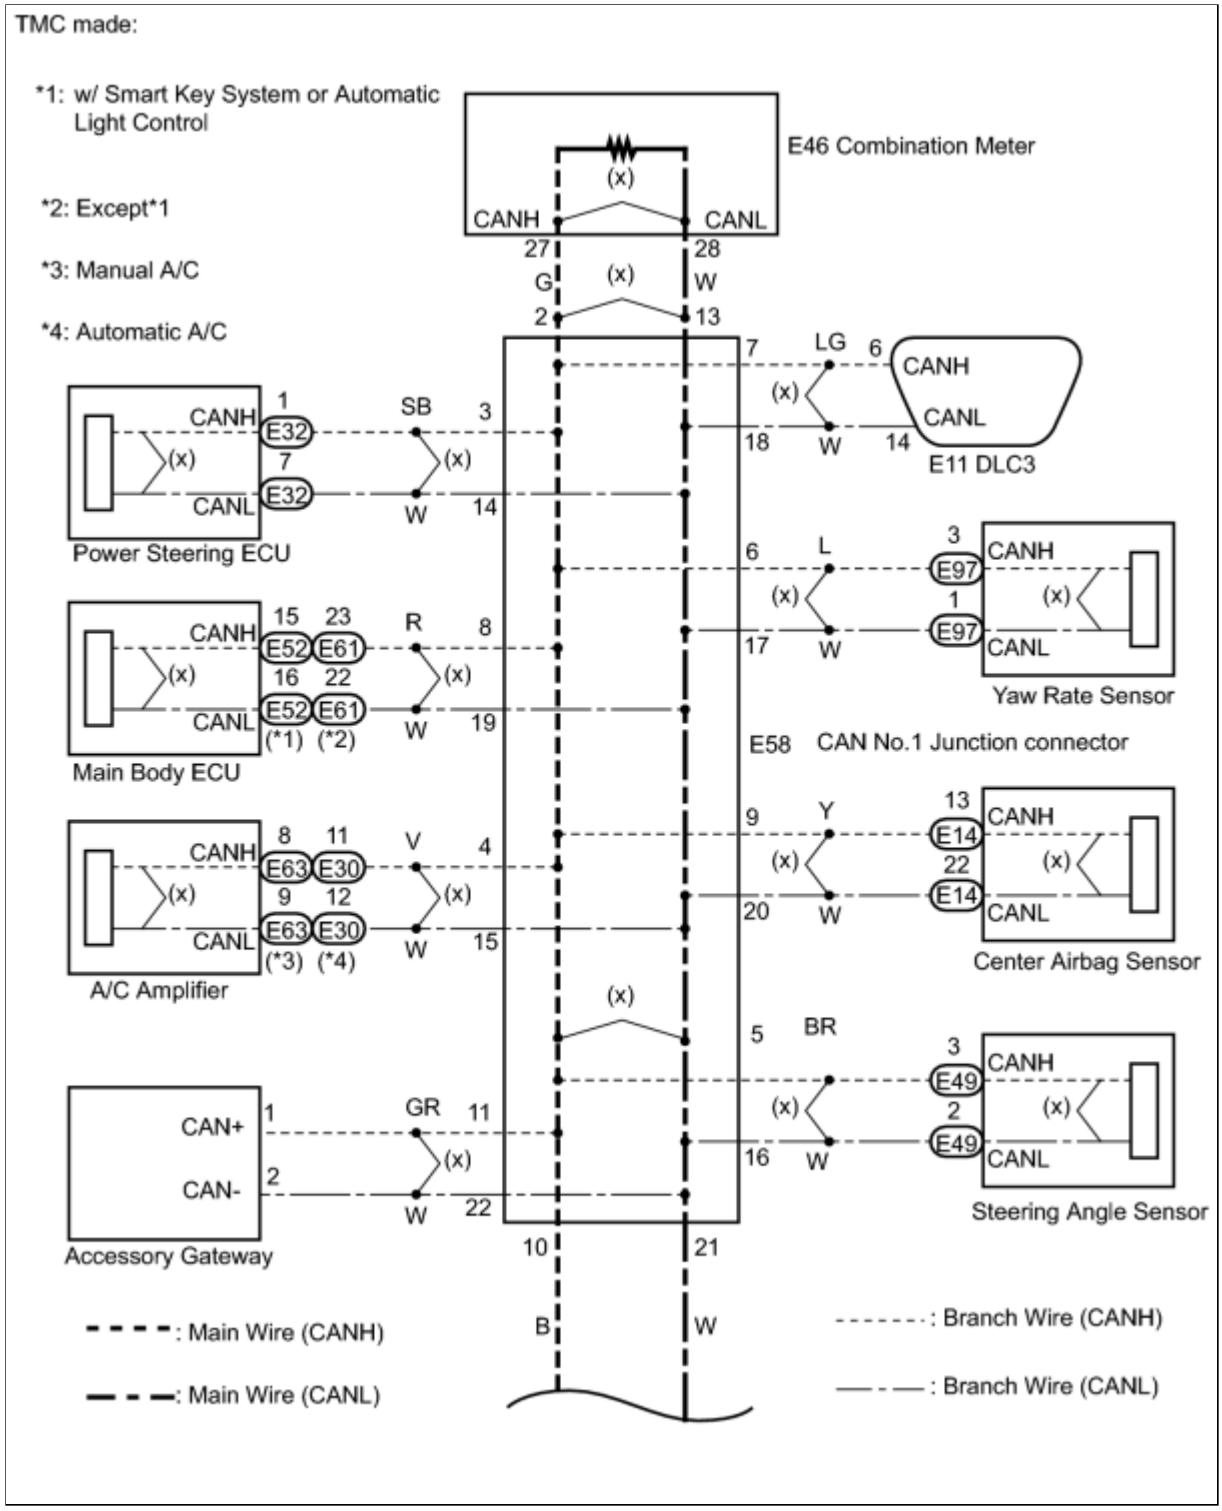
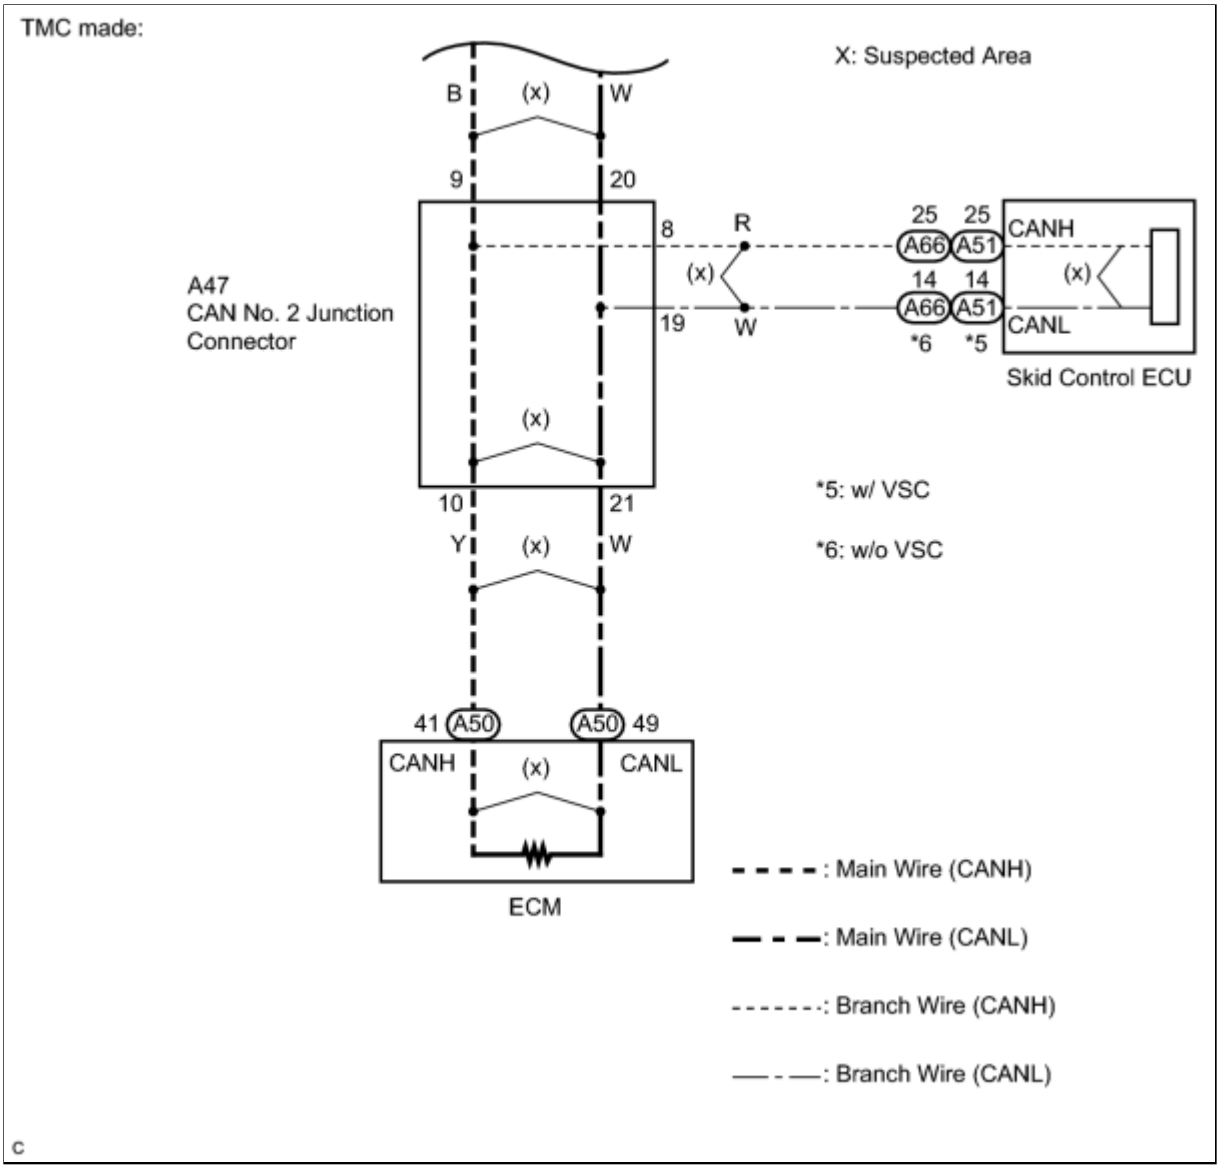
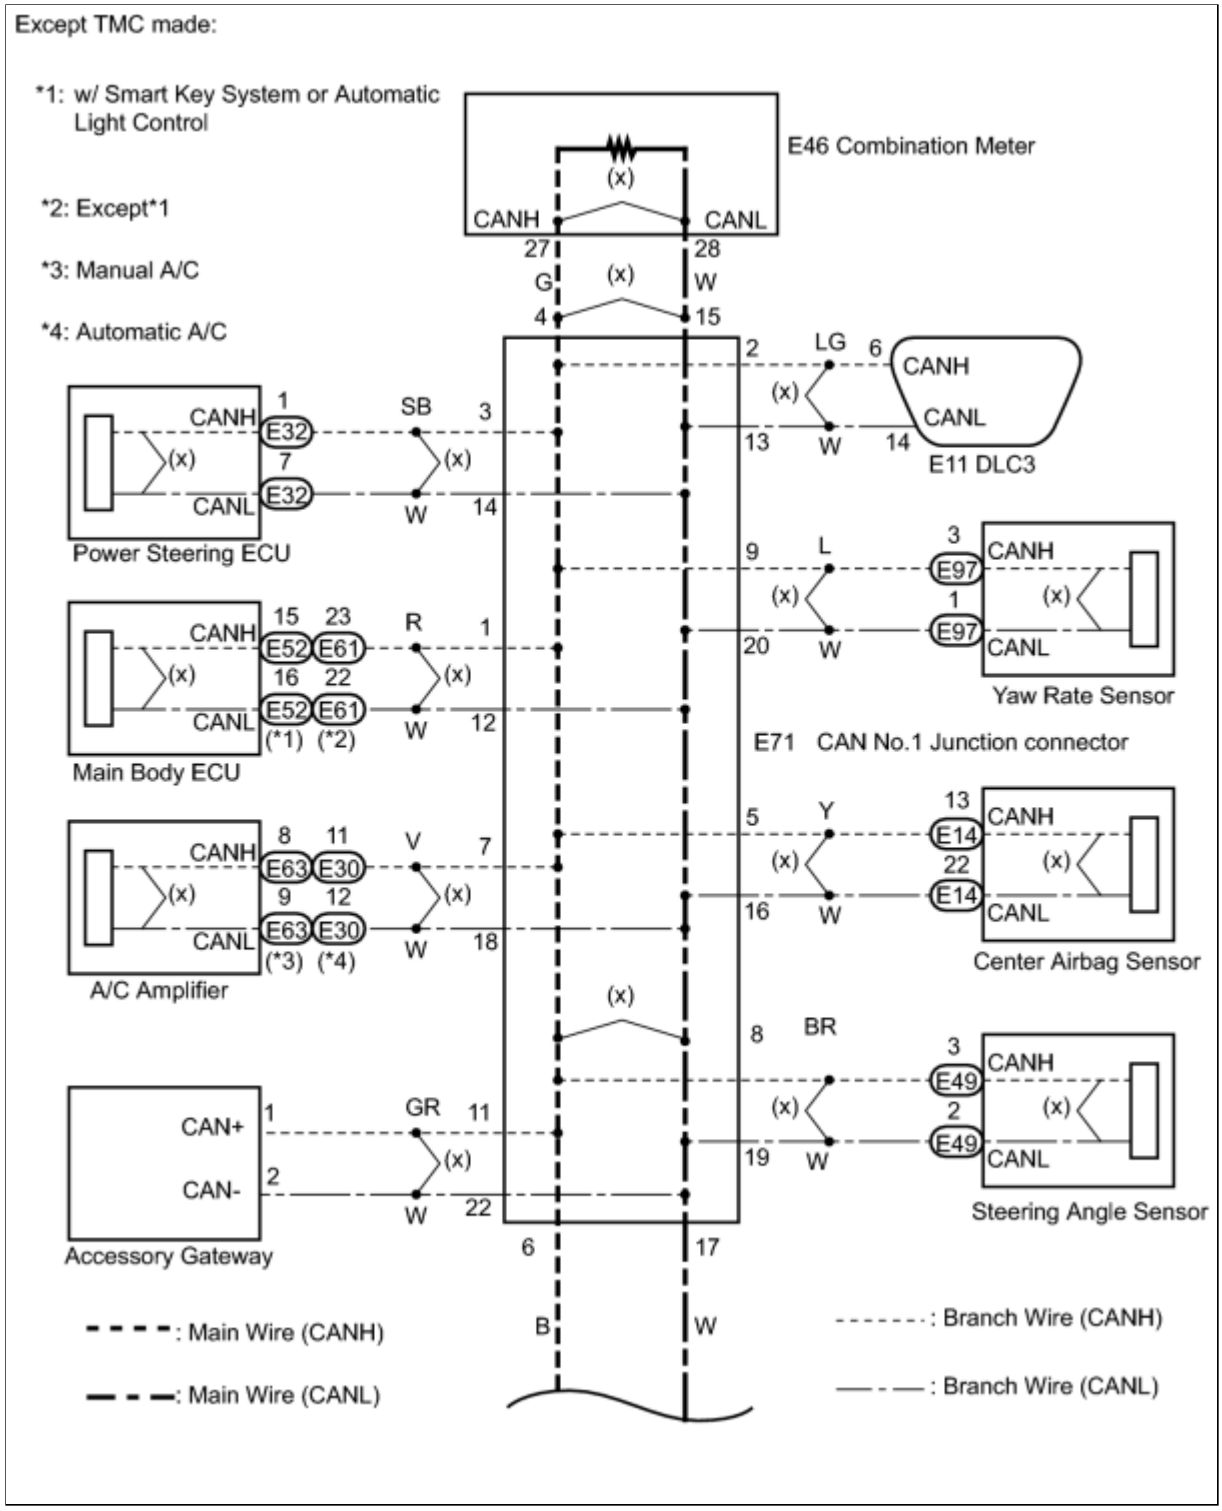
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Lines for Short Circuit (2010 Corolla)		



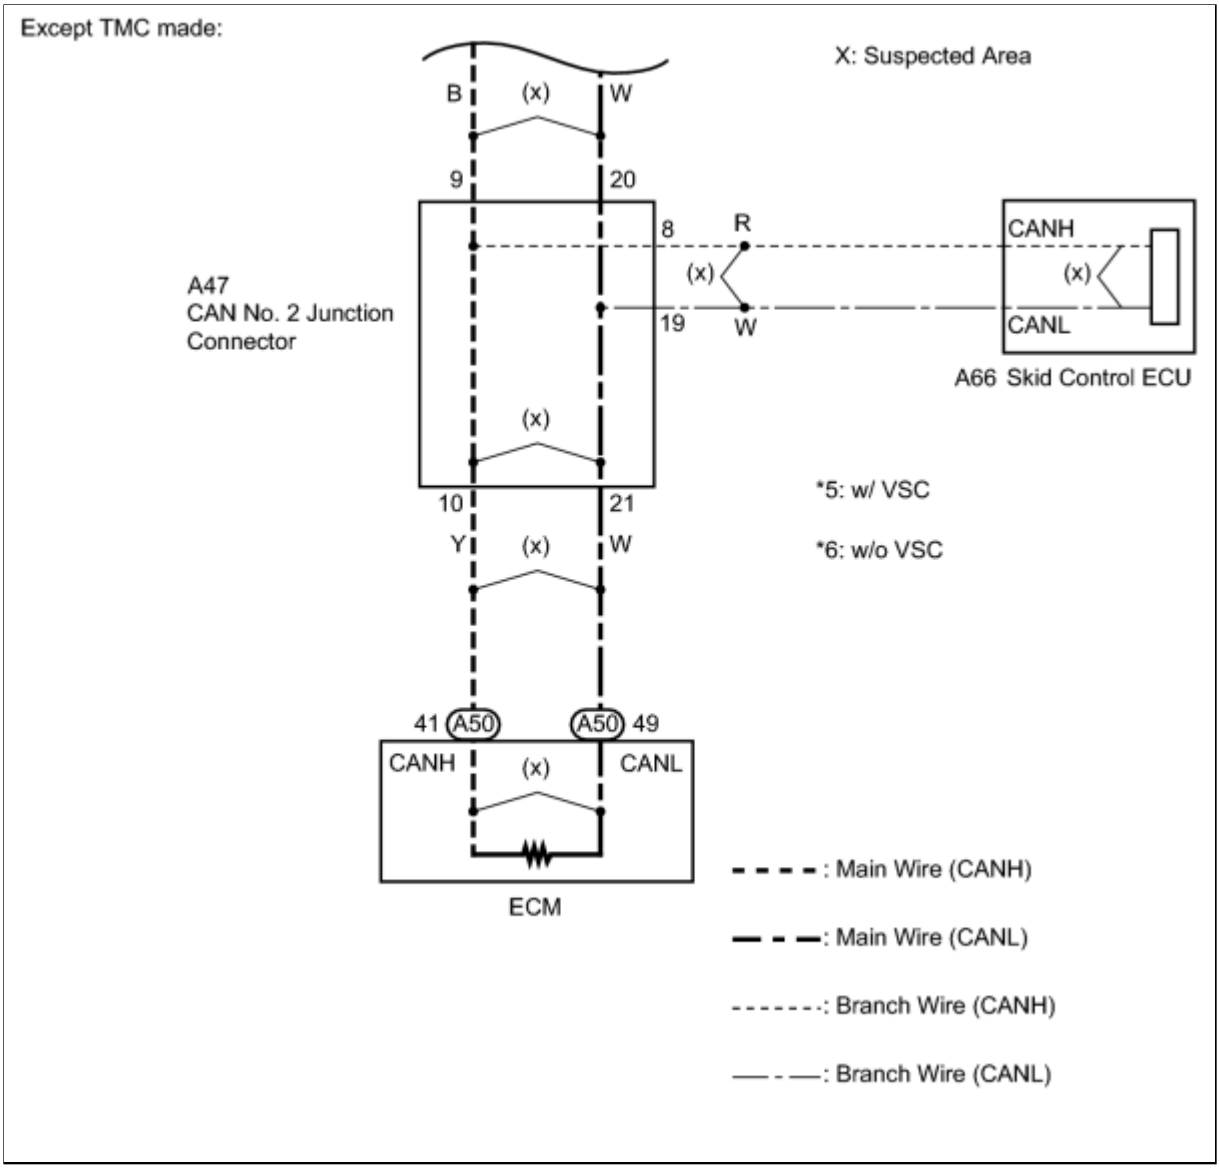
Check CAN Bus Lines for Short Circuit



DESCRIPTION



There may be a short circuit in the CAN main wire and/or CAN branch wire when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is below 54 Ω.



SYMPTOM	TROUBLE AREA
Resistance between terminals 6 (CANH) and 14 (CANL) of DLC3 is below 54 Ω.	Short in CAN bus wire • Skid control ECU • Power steering ECU • Steering angle sensor • Yaw rate sensor • ECM • Center airbag sensor assembly • Air conditioning amplifier • Combination meter • Main body ECU • Accessory gateway • CAN No. 1 junction connector • CAN No. 2 junction connector

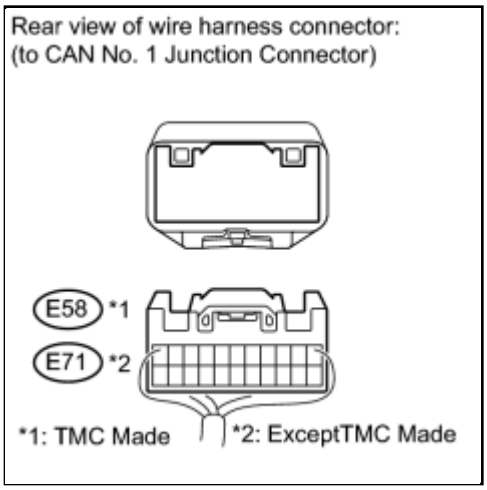
INSPECTION PROCEDURE

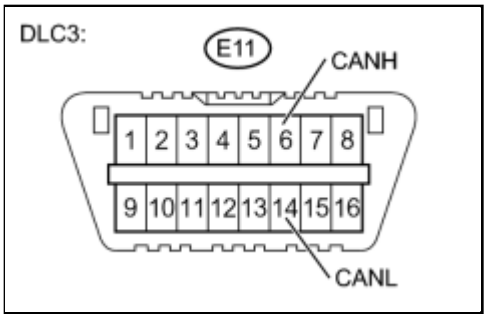
NOTICE:



- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.



PROCEDURE

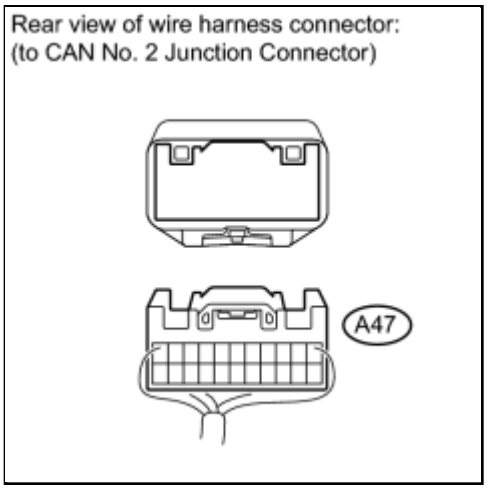
1.	**CHECK FOR SHORT IN CAN BUS WIRES (DLC3 BRANCH WIRE)**

(a) Turn the ignition switch off.

(b) Disconnect the CAN No. 1 junction connector.

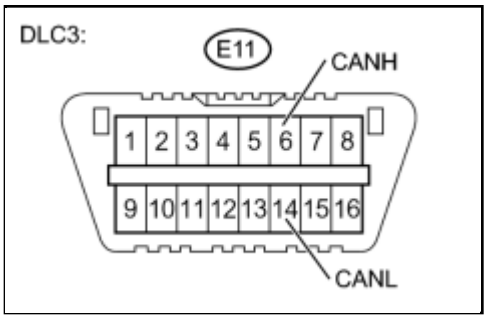
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3**



OK ▼

2.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 2 JUNCTION CONNECTOR)**

(a) Reconnect the CAN No. 1 junction connector.

(b) Disconnect the CAN No. 2 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

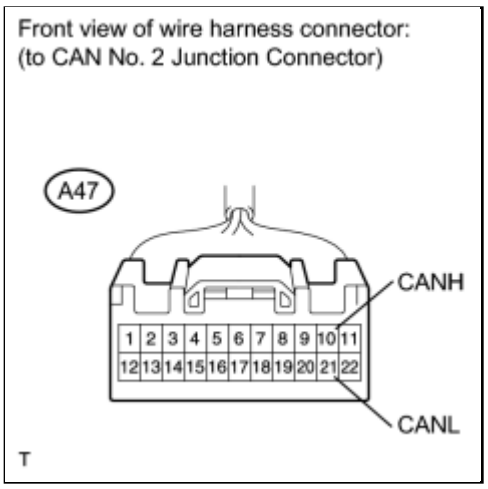
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - CAN NO. 2 JUNCTION CONNECTOR)**

OK ▼

3.	**CHECK FOR SHORT IN CAN BUS WIRES (ECM MAIN WIRE)**



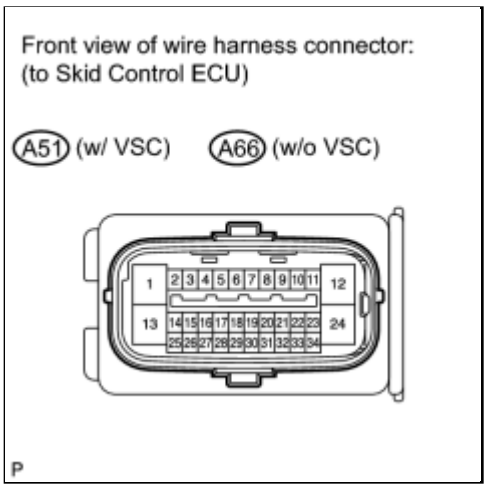
(a) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 2 junction connector is disconnected.

Standard Resistance:

TESTER	SWITCH	SPECIFIED

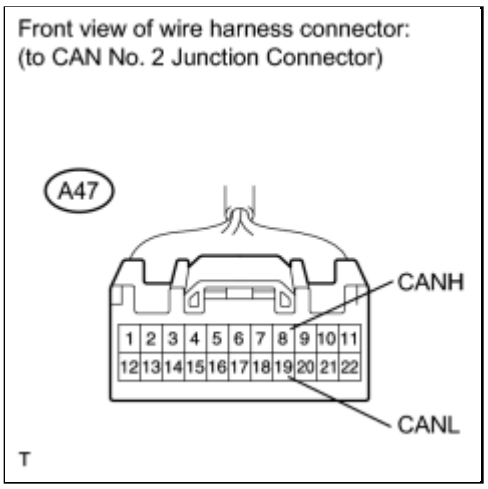


CONNECTION	CONDITION	CONDITION
A47-10 (CANH) - A47-21 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 2 JUNCTION CONNECTOR - ECM MAIN WIRE)**

OK ▼

4.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**



(a) Disconnect the skid control ECU connector.

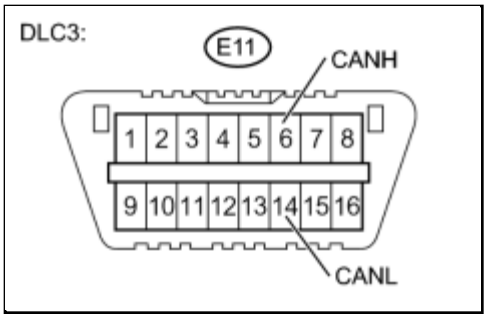
(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the skid control ECU connector and CAN No. 2 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-8 (CANH) - A47-19 (CANL)	Ignition switch off	1 MΩ or higher



NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - SKID CONTROL ECU)**

OK ▼

5.	**CHECK FOR SHORT IN CAN BUS WIRES (SKID CONTROL ECU)**

(a) Reconnect the CAN No. 2 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the skid control ECU connector is disconnected.

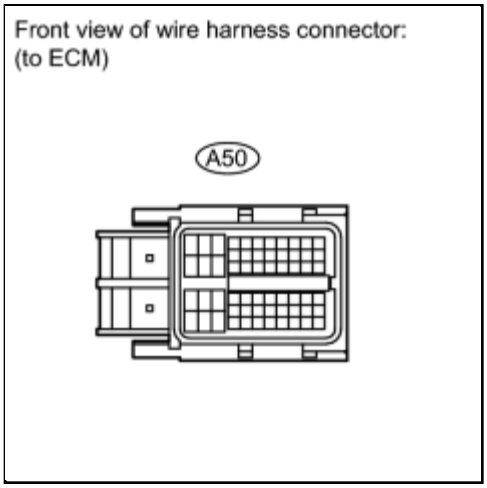
The resistance must be measured after the CAN No. 1and CAN No. 2 junction connector are reconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

Result:

RESULT	PROCEED TO



RESULT	PROCEED TO
OK (w/o VSC)	A
OK (w/ VSC)	B

C ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

B ▶ **REPLACE ECM**

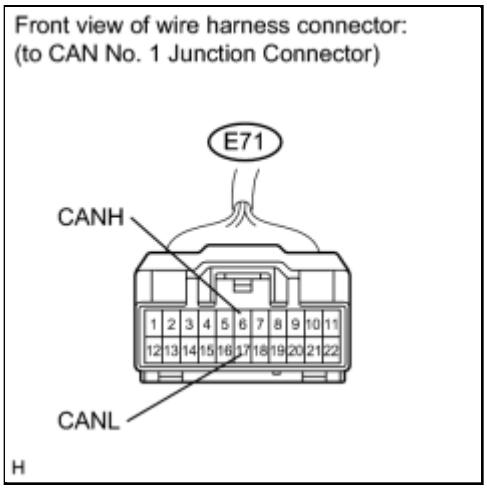
A ▶ **REPLACE ECM**

7.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - CAN NO. 2 JUNCTION CONNECTOR)**

(a) TMC made:

(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the CAN No. 2 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-10 (CANH) - E58-21 (CANL)	Ignition switch off	1 MΩ or higher

(b) Except TMC made:

(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 2 junction connector is disconnected.

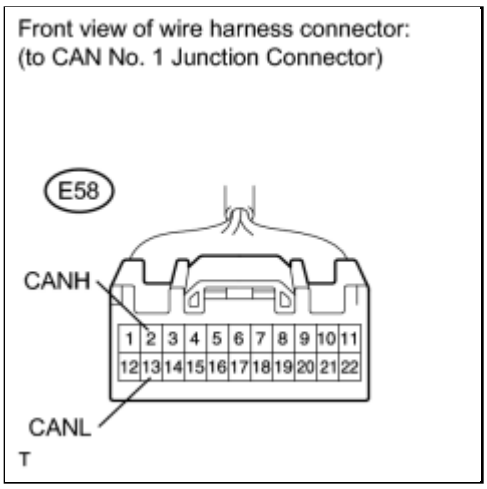
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-6 (CANH) - E71-17 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - CAN NO. 2 JUNCTION CONNECTOR)**

OK ▼

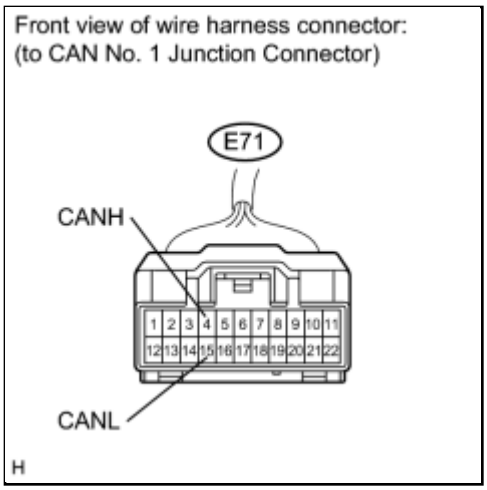
8.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - COMBINATION METER)**



(a) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:



The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-2 (CANH) - E58-13 (CANL)	Ignition switch off	108 to 132 Ω

(b) Except TMC made:

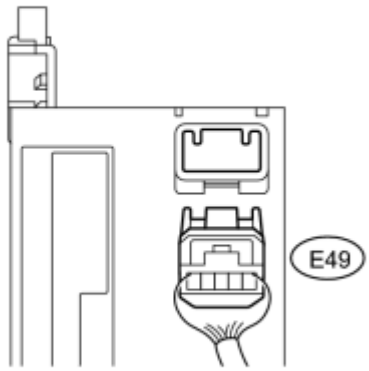
(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

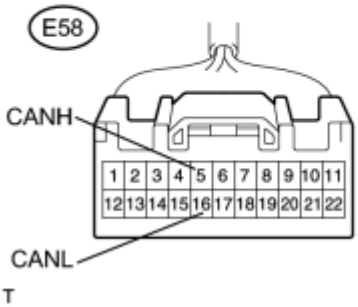
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-4 (CANH) - E71-15 (CANL)	Ignition switch off	1 MΩ or higher



NG ▶ **CHECK FOR SHORT IN CAN BUS WIRES (COMBINATION METER ECU)**

OK ▼

9.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)**



(a) Disconnect the steering angle sensor connector.

Rear view of wire harness connector:
(to Steering Angle Sensor)

(b) TMC made:

Front view of wire harness connector:
(to CAN No. 1 Junction Connector)

T

(1) Measure the resistance according to the value(s) in the table below.

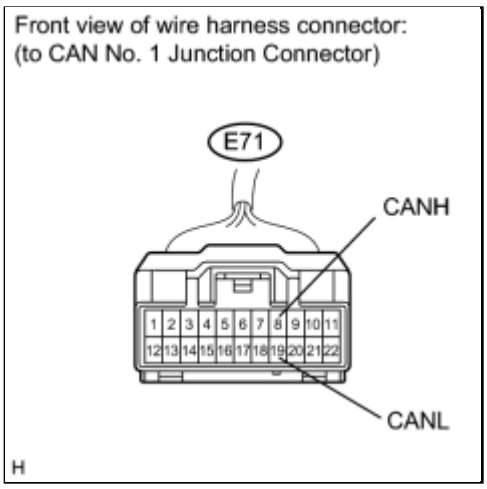
NOTICE:

The resistance must be measured after the steering angle sensor connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-5 (CANH) - E58-16 (CANL)	Ignition switch off	1 MΩ or higher

(c) Except TMC made:



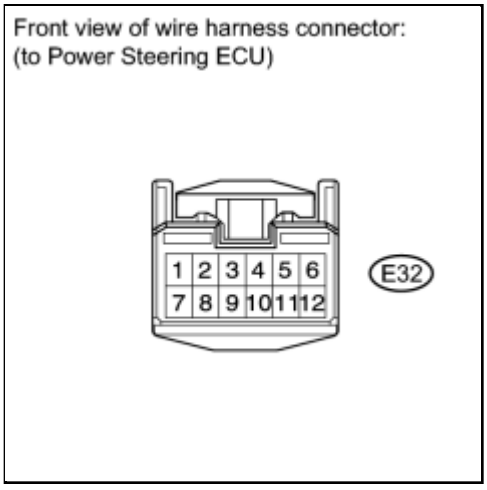
(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-8 (CANH) -	Ignition switch	1 MΩ or higher

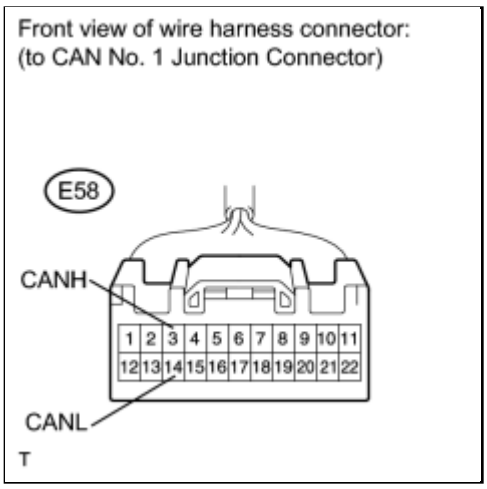


E71-19 (CANL)	off	

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - STEERING ANGLE SENSOR)**

OK ▼

10.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - POWER STEERING ECU)**



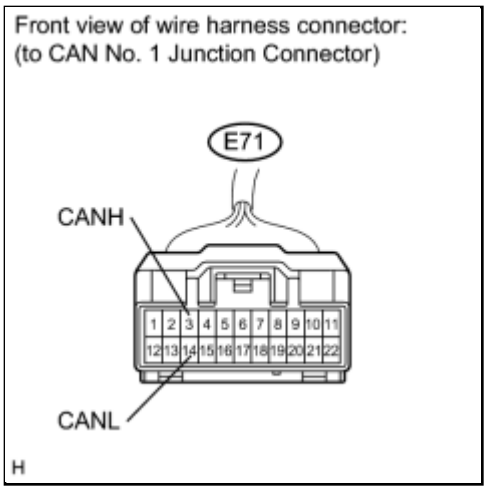
(a) Disconnect the power steering ECU connector.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the power steering ECU



connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-3 (CANH) - E58-14 (CANL)	Ignition switch off	1 MΩ or higher

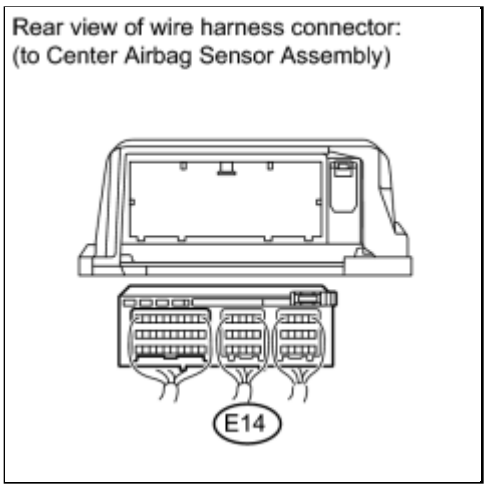
(c) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

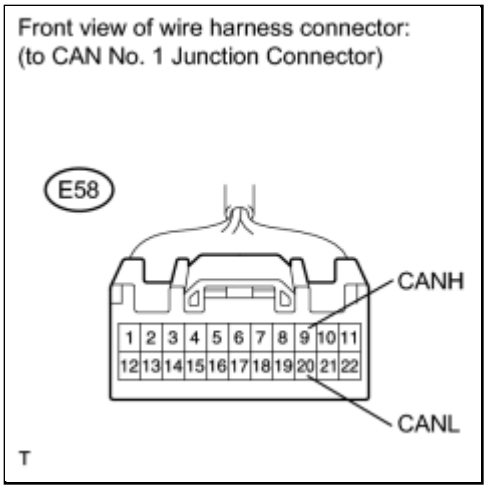
The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-3 (CANH) - E71-14 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - POWER STEERING ECU)**



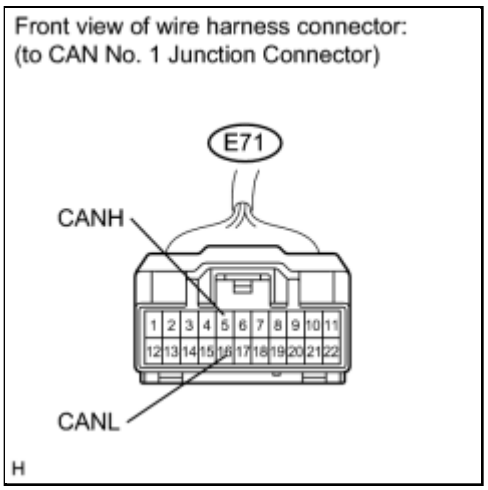
OK ▼

11.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - CENTER AIRBAG SENSOR ASSEMBLY)**

(a) Disconnect the center airbag sensor assembly connector.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the center airbag sensor assembly connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

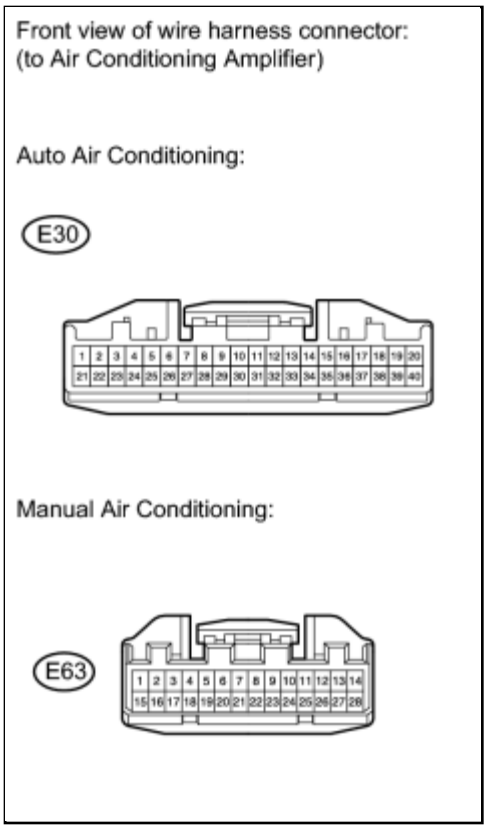
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-9 (CANH) - E58-20 (CANL)	Ignition switch off	1 MΩ or higher

(c) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-5 (CANH) - E71-16 (CANL)	Ignition switch off	1 MΩ or higher

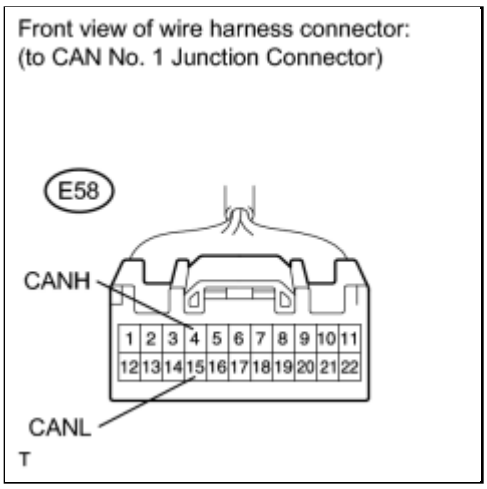
NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR -**

OK

12.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)**

(a) Disconnect the air conditioning amplifier connector.

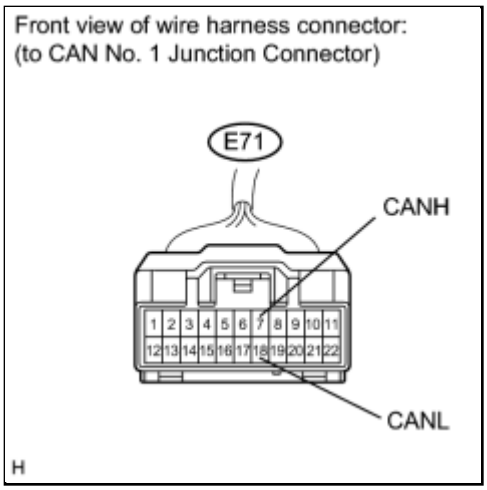
(b) TMC made:



(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the air conditioning amplifier connector and CAN No. 1 junction connector are disconnected.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

E58-4 (CANH) - E58-15 (CANL)	Ignition switch off	1 MΩ or higher

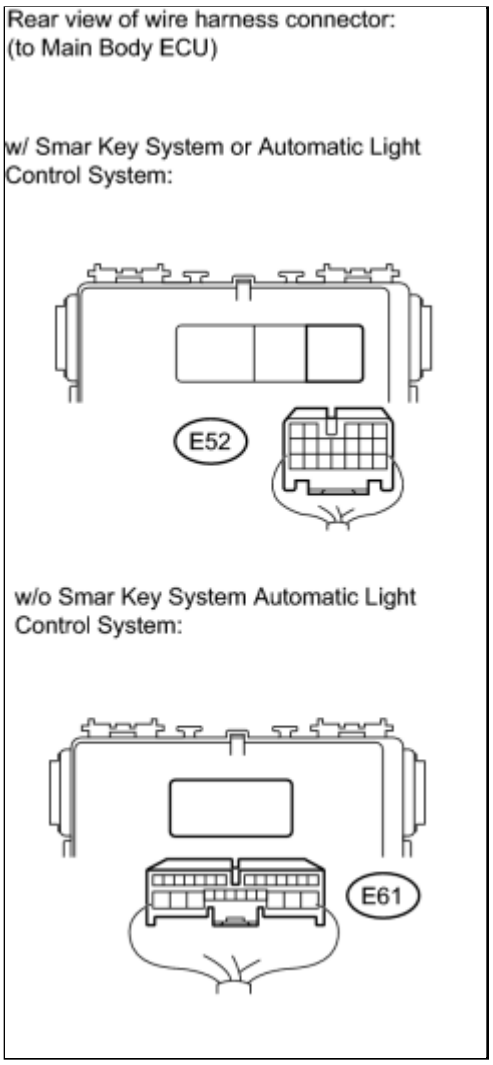
(c) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

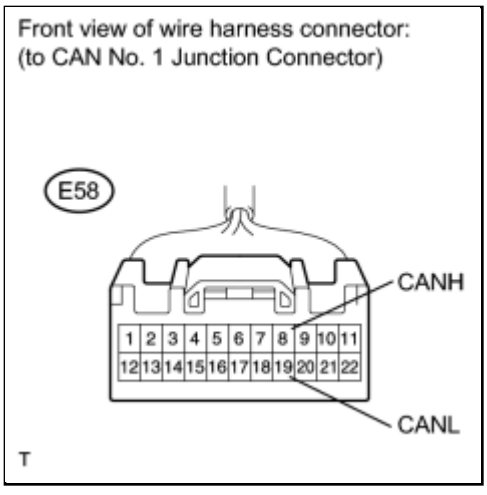
The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-7 (CANH) - E71-18 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - AIR CONDITIONING AMPLIFIER)**



OK ▼

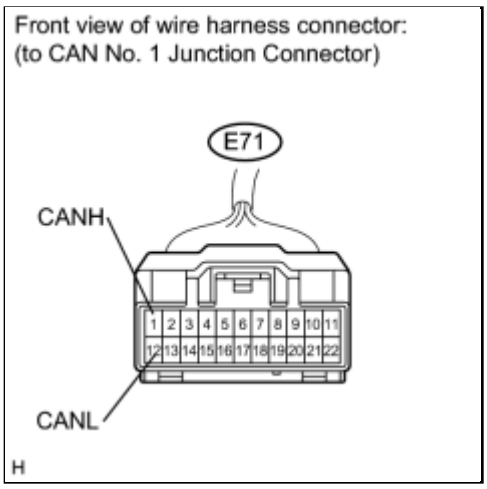
13.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - MAIN BODY ECU)**

(a) Disconnect the main body ECU connector.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:



The resistance must be measured after the main body ECU connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-8 (CANH) - E58-19 (CANL)	Ignition switch off	1 MΩ or higher

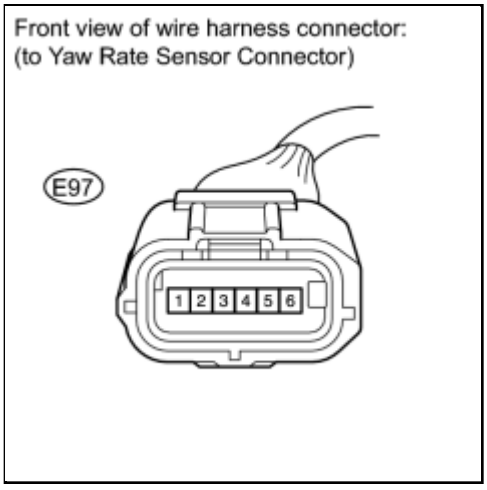
(c) Except TMC made:

(1) Measure the resistance according to the value(s) in

the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.



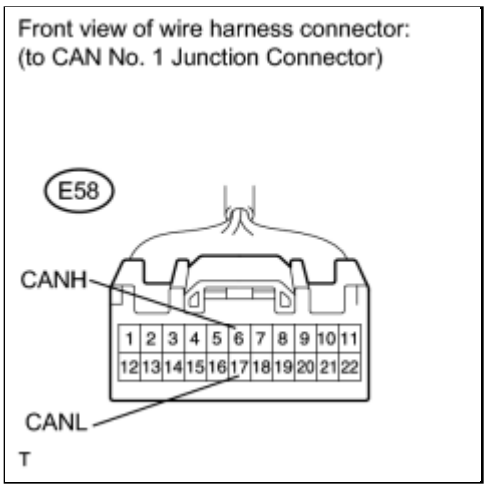
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-1 (CANH) - E71-12 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - MAIN BODY ECU)**

OK ▼

14.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - YAW RATE SENSOR)**



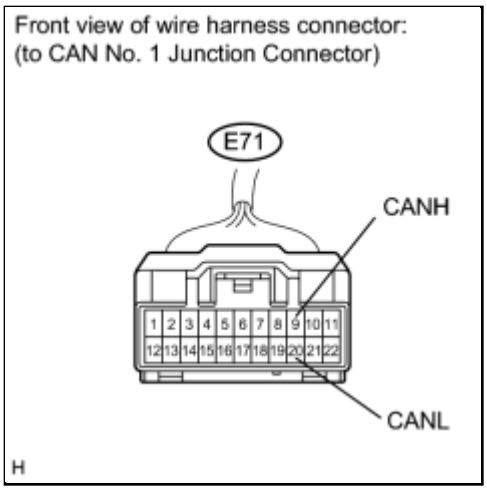
(a) Disconnect the yaw rate sensor connector.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the yaw rate sensor



connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-6 (CANH) - E58-17 (CANL)	Ignition switch off	1 MΩ or higher

(c) Except TMC made:

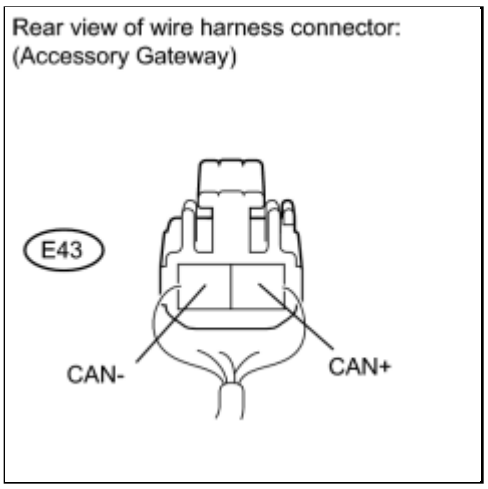
(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

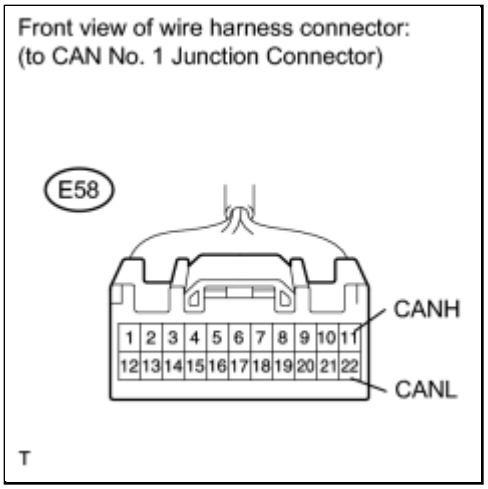
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-9 (CANH) - E71-20 (CANL)	Ignition switch off	1 MΩ or higher



NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - YAW RATE SENSOR)**

OK ▼



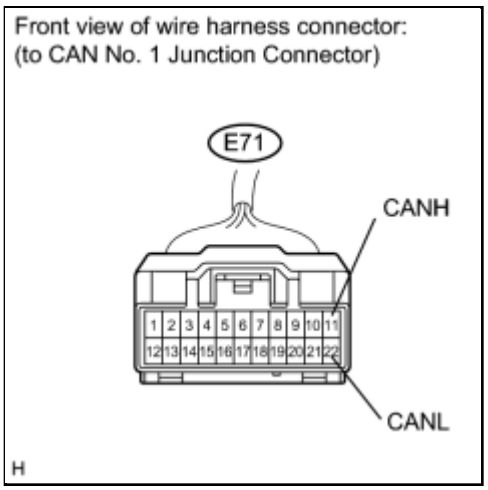
15.	**CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR - ACCESSORY GATEWAY)**

(a) w/ remote engine starter:

(1) Disconnect the accessory gateway connector from the accessory.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the yaw rate sensor connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-11 (CAN+) - E58-22 (CAN-)	Ignition switch off	1 MΩ or higher

(c) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the CAN No. 1 junction connector is disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-11 (CANH) - E71-22 (CANL)	Ignition switch off	1 MΩ or higher

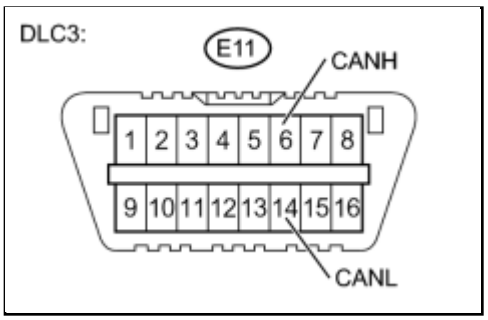
Result:

RESULT	PROCEED TO
OK	A
NG (w/o remote engine starter)	B
NG (w/ remote engine starter)	C

C ▶ **CHECK FOR SHORT IN CAN BUS WIRES (ACCESSORY GATEWAY)**

B ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - ACCESSORY GATEWAY)**

A ▼



16.	CHECK FOR SHORT IN CAN BUS WIRES (CAN NO. 1 JUNCTION CONNECTOR)

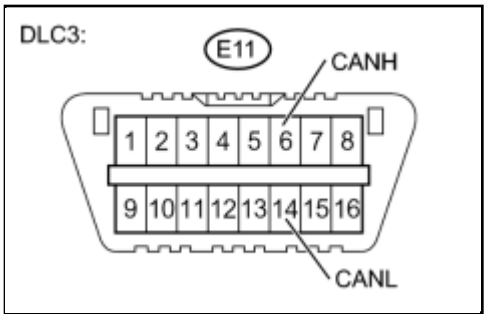
(a) Reconnect the CAN No. 1 junction connector and CAN No. 2 junction connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

- The resistance must be measured after the main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.
- The resistance must be measured after the all branch wire connected ECUs and sensor connectors are disconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

NG ▶ **REPLACE JUNCTION CONNECTOR (CAN No. 1)**

OK

17.	CHECK FOR SHORT IN CAN BUS WIRES (STEERING ANGLE SENSOR)

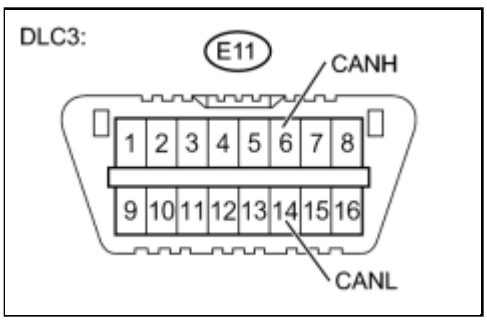
(a) Reconnect the steering angle sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the steering angle sensor, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

NG ▶ **REPLACE STEERING ANGLE SENSOR**

OK

18.	CHECK FOR SHORT IN CAN BUS WIRES (POWER STEERING ECU)

(a) Reconnect the power steering ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the power steering ECU, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

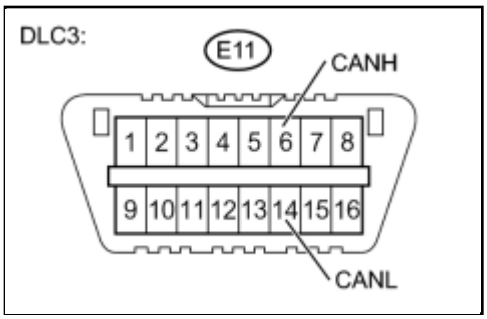
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ **REPLACE POWER STEERING ECU**



B ▶ **REPLACE POWER STEERING ECU**

A ▼

19.	CHECK FOR SHORT IN CAN BUS WIRES (CENTER AIRBAG SENSOR ASSEMBLY)

(a) Reconnect the center airbag sensor assembly connector.

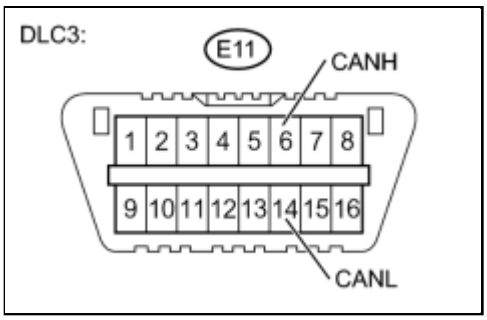
(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the center airbag sensor assembly, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher



NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

20.	**CHECK FOR SHORT IN CAN BUS WIRES (AIR CONDITIONING AMPLIFIER)**

(a) Reconnect the air conditioning amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the air conditioning amplifier, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

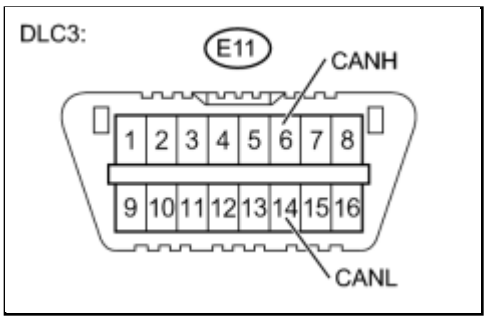
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

NG ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

OK

21.	**CHECK FOR SHORT IN CAN BUS WIRES (MAIN BODY ECU)**



(a) Reconnect the main body ECU connector.

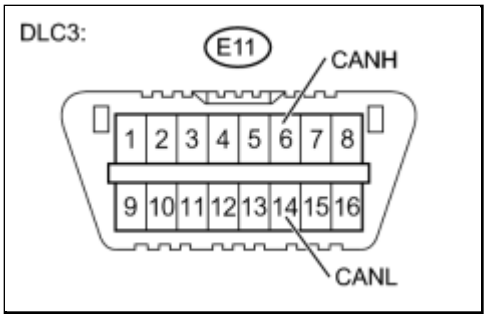
(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the main body ECU, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher



NG ▶ **REPLACE MAIN BODY ECU**

OK ▼

22.	CHECK FOR SHORT IN CAN BUS WIRES (ACCESSORY GATEWAY)

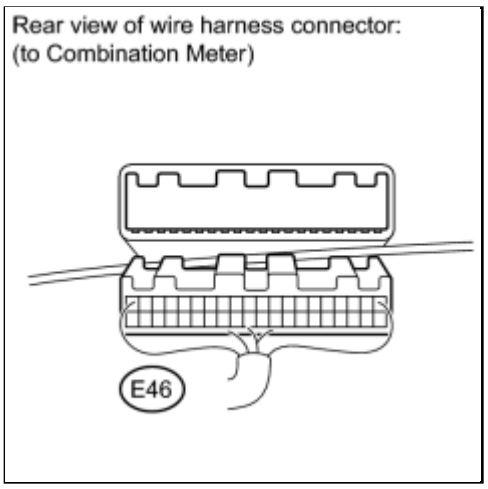
(a) Reconnect the accessory gateway connector.

(b) Measure the resistance according to the value(s) in the table below.

NOTICE:

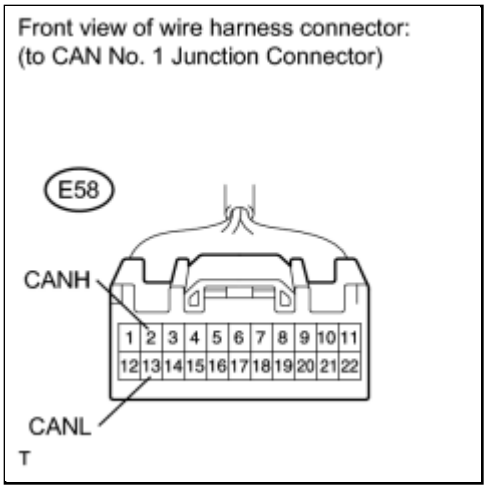
The resistance must be measured after the main body ECU, main wire connected ECUs (ECM and combination meter), and CAN No. 1 and No. 2 junction connectors are reconnected.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 Ω or higher

NG ▶ **REPLACE THE ACCESSORY**



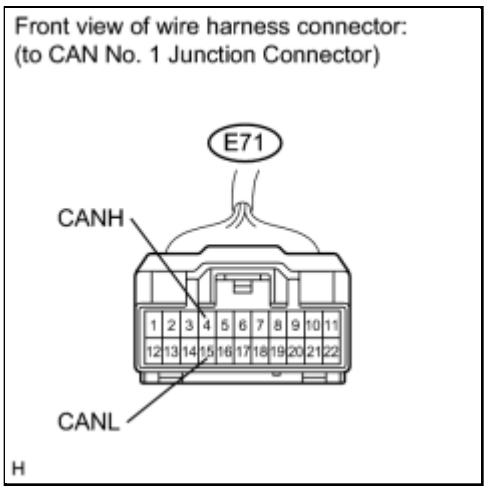
OK ▶ **REPLACE YAW RATE SENSOR**

23.	CHECK FOR SHORT IN CAN BUS WIRES (COMBINATION METER ECU)

(a) Disconnect the combination meter ECU connector.

(b) TMC made:

(1) Measure the resistance according to the value(s) in the table below.



NOTICE:

The resistance must be measured after the combination meter ECU connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-2 (CANH) - E58-13 (CANL)	Ignition switch off	108 to 132 Ω

(c) Except TMC made:

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

The resistance must be measured after the combination meter ECU connector and CAN No. 1 junction connector are disconnected.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-4 (CANH) - E71-15 (CANL)	Ignition switch off	1 MΩ or higher

NG ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR -**

COMBINATION METER)

OK ▶ REPLACE COMBINATION METER

Power Steering ECU Communication Stop Mode

DESCRIPTION

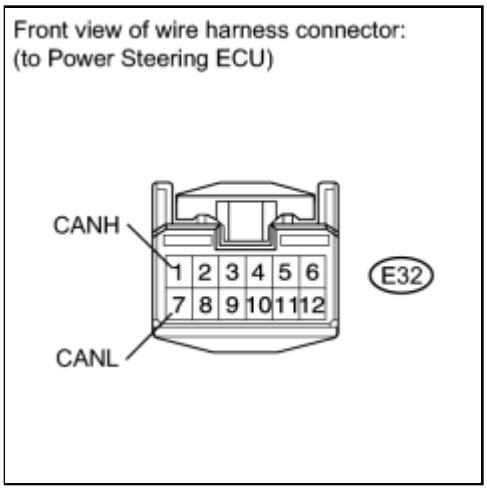
DETECTION ITEM	SYMPTOM	TROUBLE AREA
Power Steering ECU Communication Stop Mode	• EPS is not displayed on "CAN Bus Check" screen of the Techstream • Applies to "POWER STEERING ECU COMMUNICATION STOP MODE" in "DTC Combination Table"	• Power source circuit of the power steering ECU • Power steering ECU branch wire or connector • Power steering ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.



HINT:

- Operating the ignition switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

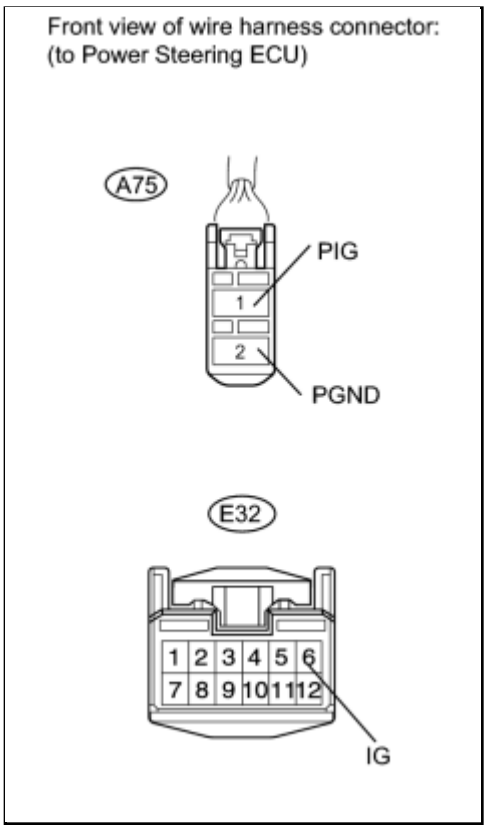
1.	**CHECK CAN BUS WIRE FOR DISCONNECTION (POWER STEERING ECU BRANCH WIRE)**

(a) Turn the ignition switch off.

(b) Disconnect the power steering ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E32-1 (CANH) - E32-7 (CANL)	Ignition switch off	54 to 69 Ω

NG ▶ **REPAIR OR REPLACE CAN BRANCH WIRE OR CONNECTOR (POWER STEERING ECU BRANCH WIRE)**

OK ▼

2.	**CHECK WIRE HARNESS (POWER STEERING ECU - BATTERY AND BODY GROUND)**

(a) Disconnect the power steering ECU connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A75-2 (PGND) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A75-1 (PIG) - Body ground	Always	10 to 14 V
E32-6 (IG) - Body ground	Ignition switch ON	10 to 14 V

Result:

RESULT	PROCEED TO
OK (for 2AZ-FE)	A
OK (for 2ZR-FE)	B
NG	C

C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

B ▶ REPLACE POWER STEERING ECU (for 2ZR-FE)

A ▶ REPLACE POWER STEERING ECU (for 2AZ-FE)

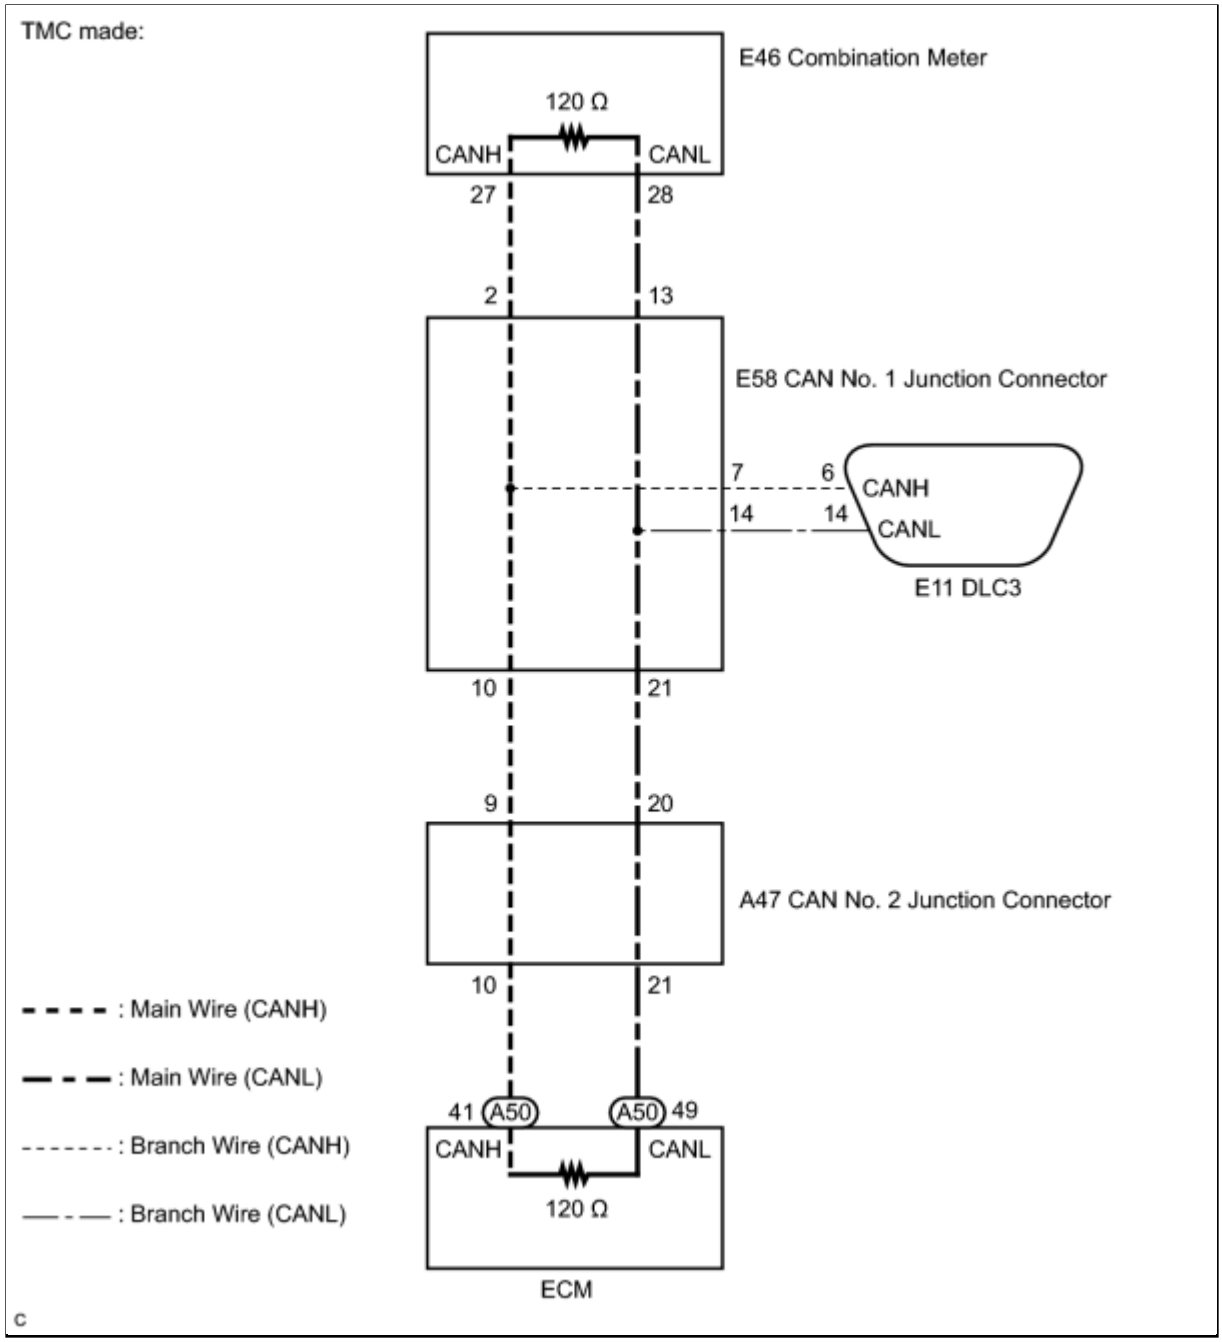
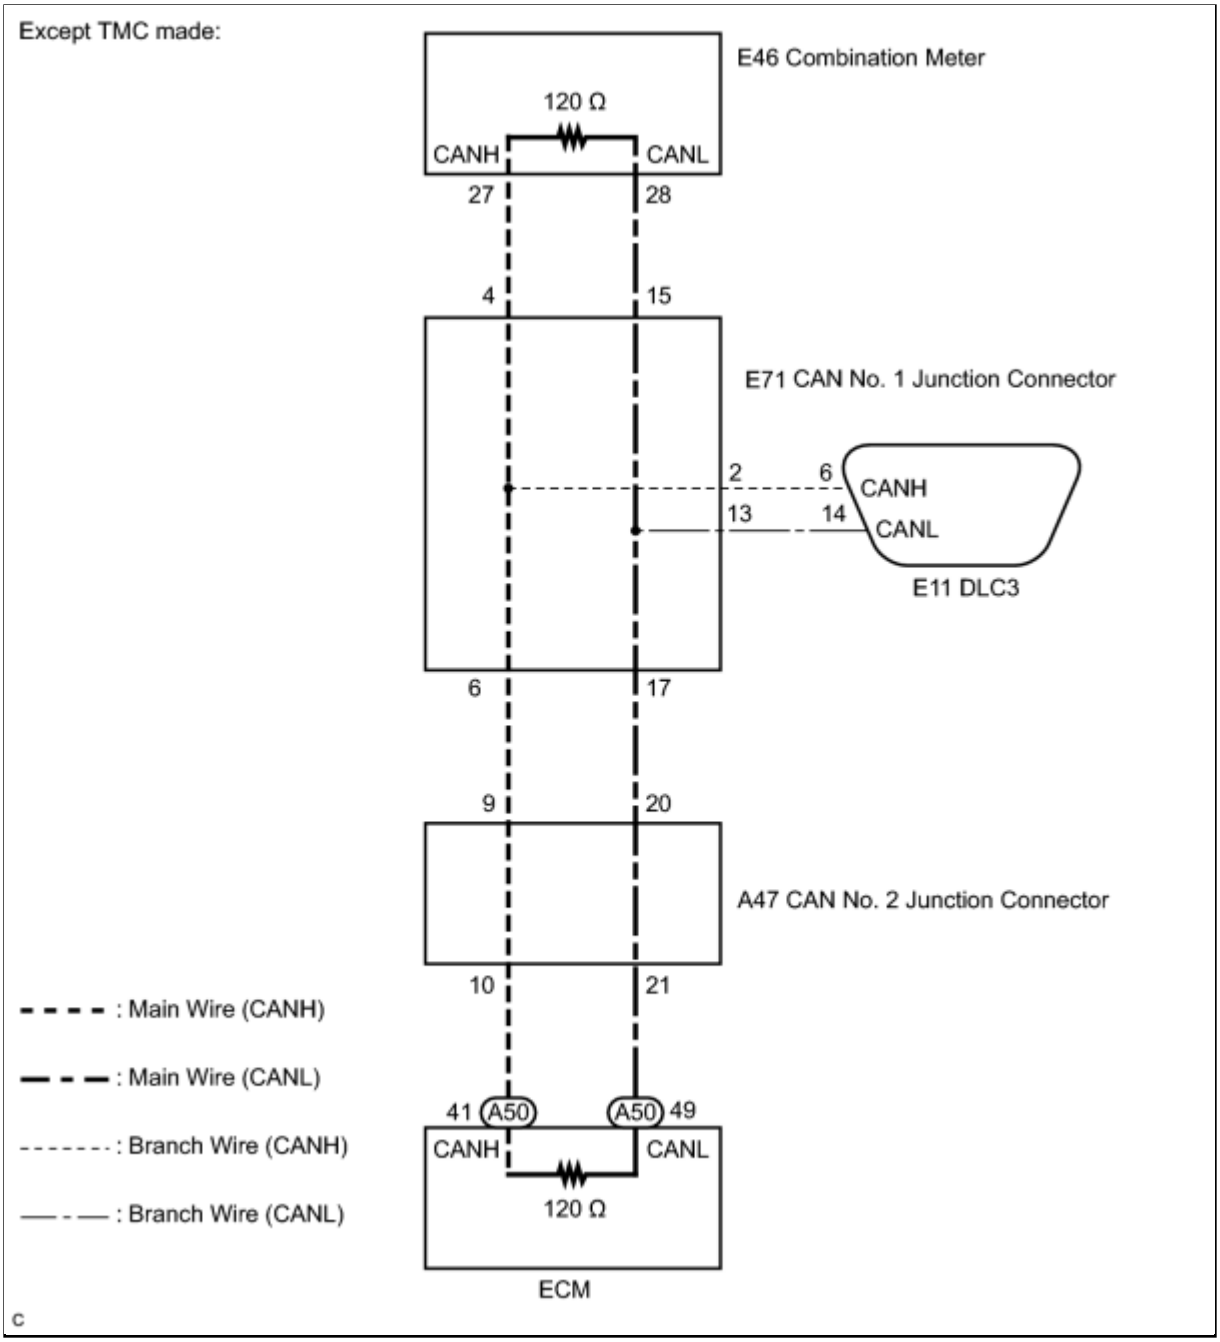
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Open in CAN Main Bus Line (2010 Corolla)		



Open in CAN Main Bus Line



DESCRIPTION

There may be an open circuit in the CAN main wire and/or the DLC3 branch wire when the resistance between terminals 6 (CANH) and 14 (CANL) of the DLC3 is 70 Ω or higher.

SYMPTOM	TROUBLE AREA
Resistance between terminals 6 (CANH) and 14 (CANL) of DLC3 is 70 Ω or higher.	• CAN bus main wire or connector • CAN No. 1 junction connector • CAN No. 2 junction connector • ECM • Combination meter

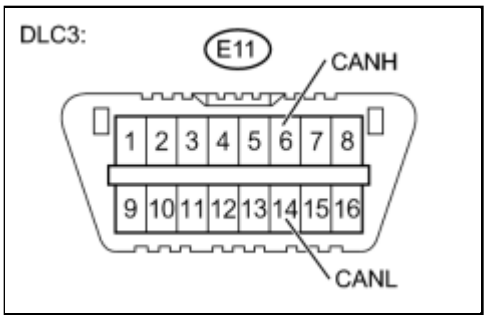
INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.

HINT:



- Operating the ignition switch, any other switches or a door triggers related ECU and sensor

communication on the CAN. This communication will cause the resistance value to change.

- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK DLC3**

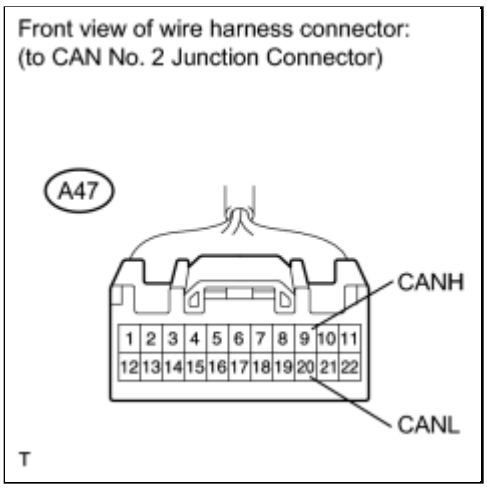
(a) Turn the ignition switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	108 to 132 Ω

NOTICE:



When the measured value is 132 Ω or higher and a CAN communication system diagnostic trouble code is output, there may be a fault besides disconnection of the DLC3 branch wire. For that reason, troubleshooting should be performed again from How to Proceed with Troubleshooting INFO after repairing the trouble area.

NG ▶ **REPAIR OR REPLACE CAN BRANCH WIRE CONNECTED TO DLC3**

OK ▼

2.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 2 JUNCTION CONNECTOR)**

(a) Turn the ignition switch off.

(b) Disconnect the CAN No. 2 junction connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-9 (CANH) - A47-20 (CANL)	Ignition switch off	108 to 132 Ω

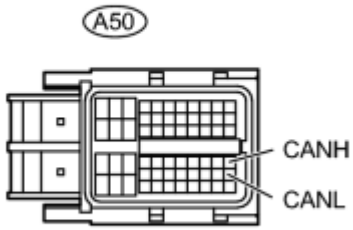
NG ▶ **CHECK FOR OPEN IN CAN BUS MAIN WIRE (COMBINATION METER)**

OK ▼

3.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (ECM)**

(a) Turn the ignition switch off.

(b) Reconnect the CAN No. 2 junction connector.



(c) Disconnect the ECM connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

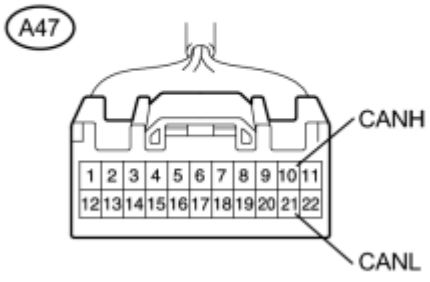
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

Front view of wire harness connector:
(to ECM)

A50-41 (CANH) - A50-49 (CANL)	Ignition switch off	108 to 132 Ω

Result:

RESULT	PROCEED TO
OK (for 2ZR-FE)	A
OK (for 2AZ-FE)	B
NG	C



C ▶ **CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

B ▶ **REPLACE ECM**

A ▶ **REPLACE ECM**

4.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

Front view of wire harness connector:
(to CAN No. 2 Junction Connector)

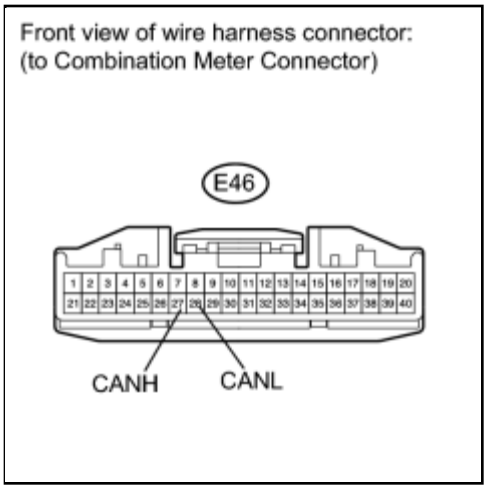
T

(a) Reconnect the ECM connector.

(b) Turn the ignition switch off.

(c) Disconnect the CAN No. 2 junction connector.

(d) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A47-10 (CANH) - A47-21 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 2 JUNCTION CONNECTOR - ECM)**

OK ▶ **REPLACE CAN NO. 2 JUNCTION CONNECTOR**

5.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (COMBINATION METER)**

(a) Reconnect the CAN No. 2 junction connector.

(b) Turn the ignition switch off.

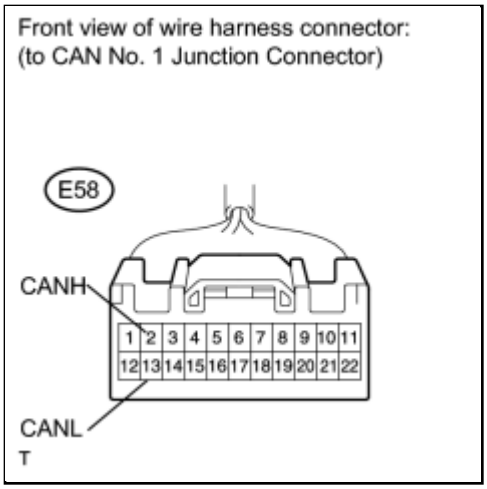
(c) Disconnect the combination meter connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E46-27 (CANH) - E46-28 (CANL)	Ignition switch off	108 to 132 Ω

OK ▶ **CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 1 JUNCTION CONNECTOR - COMBINATION METER)**



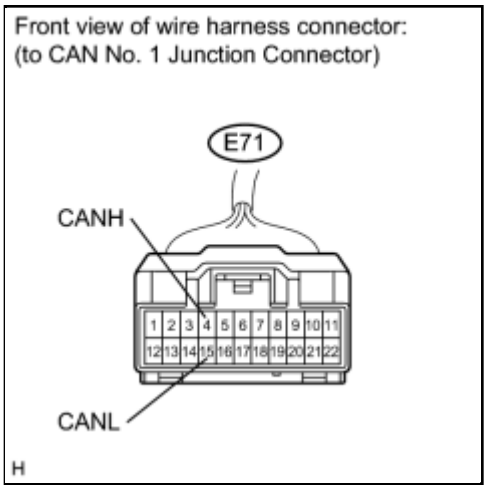
NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

6.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 1 JUNCTION CONNECTOR - COMBINATION METER)**

(a) Reconnect the combination meter connector.

(b) Turn the ignition switch off.

(c) TMC made:



(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

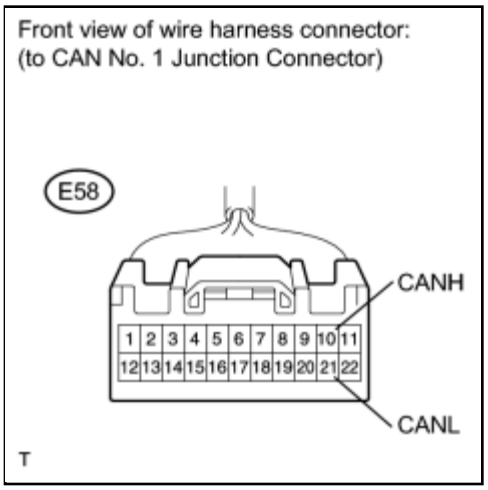
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-2 (CANH) - E58-13 (CANL)	Ignition switch off	108 to 132 Ω

(d) Except TMC made:

(1) Disconnect the CAN No. 1 junction connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-4 (CANH) - E71-15 (CANL)	Ignition switch off	108 to 132 Ω

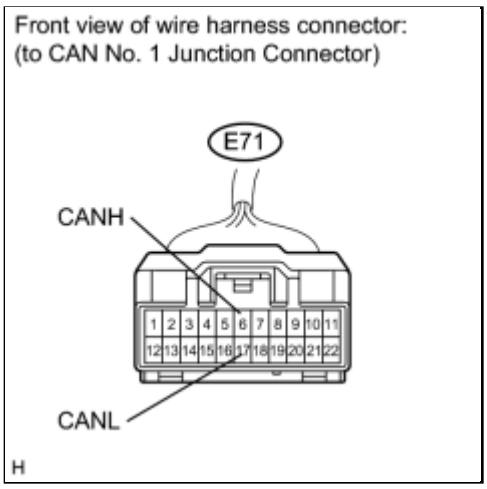
NG ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - COMBINATION METER)**

OK ▼

7.	**CHECK FOR OPEN IN CAN BUS MAIN WIRE (CAN NO. 1 JUNCTION CONNECTOR - CAN NO. 2 JUNCTION CONNECTOR)**

(a) TMC made:

(1) Disconnect the CAN No. 1 junction connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E58-10 (CANH) - E58-21 (CANL)	Ignition switch off	108 to 132 Ω

(b) Except TMC made:

(1) Disconnect the CAN No. 1 junction connector.

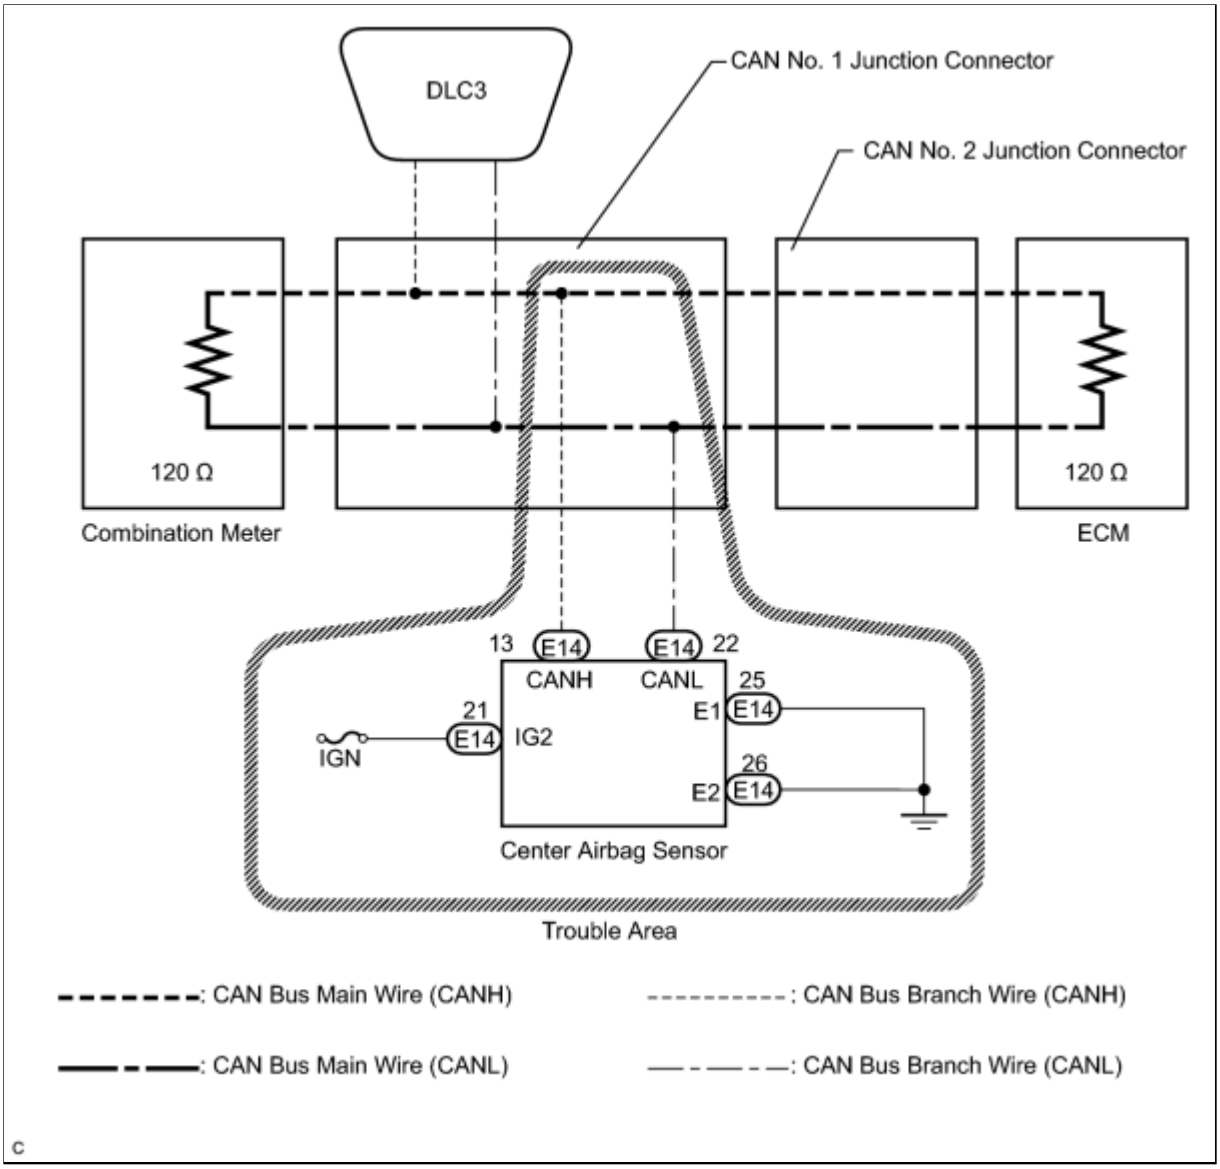
(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E71-6 (CANH) - E71-17 (CANL)	Ignition switch off	108 to 132 Ω

NG ▶ **REPAIR OR REPLACE CAN MAIN WIRE OR CONNECTOR (CAN NO. 1 JUNCTION CONNECTOR - CAN NO. 2 JUNCTION CONNECTOR)**

OK ▶ **REPLACE CAN NO. 1 JUNCTION CONNECTOR**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: NETWORKING: CAN COMMUNICATION SYSTEM: Center Airbag Sensor Communication Stop Mode (2010 Corolla)		

Center Airbag Sensor Communication Stop Mode

DESCRIPTION

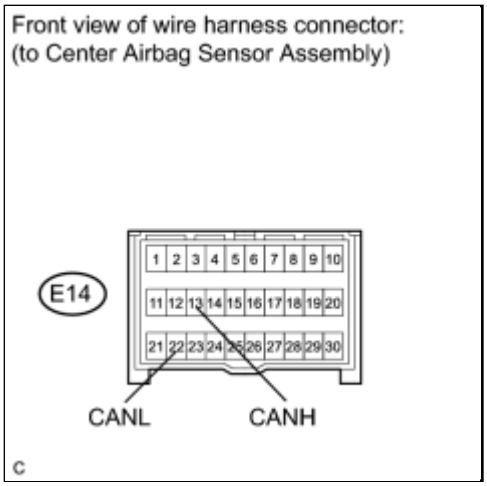
DETECTION ITEM	SYMPTOM	TROUBLE AREA
Center Airbag Sensor Communication Stop Mode	• "SRS Airbag" is not displayed on the "CAN Bus Check" screen of the Techstream • Applies to "Center Airbag Sensor Communication Stop Mode" in the "DTC Combination Table"	• Power source circuit of the center airbag sensor • Center airbag sensor branch wire or connector • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to check the connectors, open the doors and leave them open.



HINT:

- Operating the ignition switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

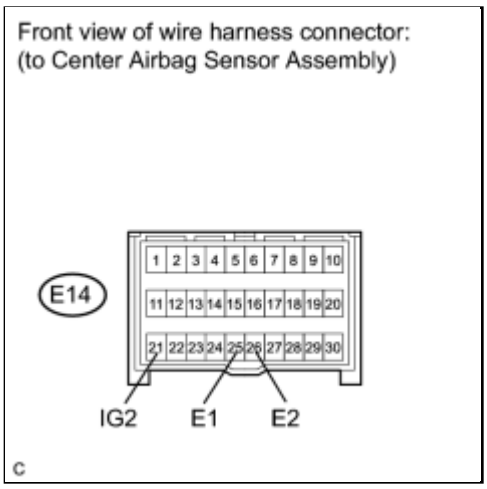
1.	**CHECK FOR OPEN IN CAN BUS WIRE (CENTER AIRBAG SENSOR BRANCH WIRE)**

(a) Turn the ignition switch off.

(b) Disconnect the center airbag sensor assembly connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E14-13 (CANH) - E14-22 (CANL)	Ignition switch off	54 to 69 Ω

NG ▶ **REPAIR OR REPLACE CAN BUS BRANCH WIRE OR CONNECTOR (CENTER AIRBAG SENSOR ASSEMBLY BRANCH WIRE)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (IG2, E1, E2)**

(a) Disconnect the center airbag sensor assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E14-25 (E1) - Body ground	Always	Below 1 Ω
E14-26 (E2) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E14-21 (IG2) - Body ground	Ignition switch ON	10 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

Title: NETWORKING: CAN COMMUNICATION SYSTEM: Check CAN Bus Line (2010 Corolla)		

Check CAN Bus Line

DESCRIPTION

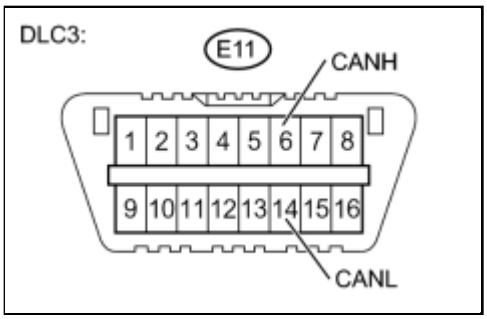
If any DTCs from the CAN communication system are not output, first measure the resistance between the terminals of the DLC3 to specify the trouble area, and check that there is no short in the CAN wire, and +B or GND.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Turn the ignition switch off before measuring the resistance of the main CAN bus wires and the CAN Bus branch wire.
- After the ignition switch is turned off, check that the key reminder warning system and light reminder warning system are not in operation.
- Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or the doors. If any doors need to be opened in order to



check the connectors, open the doors and leave them open.

HINT:

- Operating the ignition switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.
- Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

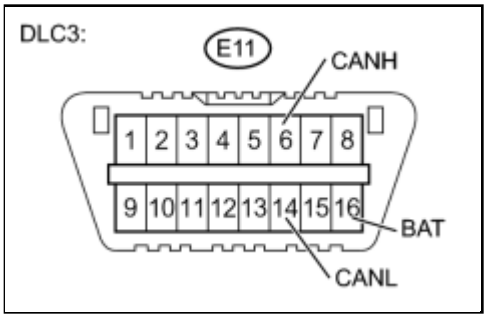
PROCEDURE

1.	**CHECK CAN BUS WIRE (MAIN WIRE FOR DISCONNECTION, CAN BUS LINES FOR SHORT CIRCUIT)**

(a) Turn the ignition switch off.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	RESULT	PROCEED TO
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	54 to 69 Ω	A
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	70 Ω or higher	B
E11-6 (CANH) - E11-14 (CANL)	Ignition switch off	Below 54 Ω	C

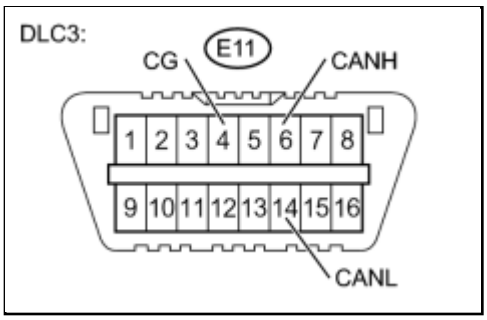
C ▶ **CHECK CAN BUS LINES FOR SHORT CIRCUIT**

B ▶ **CHECK FOR OPEN IN CAN MAIN BUS LINE**

A ▼

2.	CHECK FOR SHORT TO B+ IN CAN BUS WIRE

(a) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher
E11-14 (CANL) - E11-16 (BAT)	Cable is disconnected from negative (-) battery terminal	6 kΩ or higher

NG ▶ **CHECK CAN BUS LINE FOR SHORT TO +B**

OK ▼

3.	CHECK FOR SHORT TO GND IN CAN BUS WIRE

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E11-6 (CANH) - E11-4 (CG)	Ignition switch off	200 Ω or higher
E11-14 (CANL) - E11-4 (CG)	Ignition switch off	200 Ω or higher

NG ▶ **CHECK CAN BUS LINE FOR SHORT TO GND**

OK ▶ **GO TO HOW TO PROCEED WITH TROUBLESHOOTING**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001ZUR022X
Title: NETWORKING: CAN COMMUNICATION SYSTEM: Open in One Side of CAN Branch Line (2010 Corolla)		

Open in One Side of CAN Branch Line

DESCRIPTION

If some ECUs and sensors are not displayed the "CAN Bus Check" on screen of the Techstream and some ECUs and sensors repeatedly appear and disappear from the screen when the CAN main bus wires are normal (there is no open, short, short to B+, or short to GND in the main bus wires), there may be an open circuit in either of the CAN branch wires.

HINT:

If some ECUs and sensors repeatedly appear and disappear the "CAN Bus Check" from screen, communication between the normal ECUs (sensors) and the Techstream may be affected by the incomplete signals that are output from the ECU that has an open circuit in either of its CAN branch wires. In this case, the CAN branch wires for the ECUs and sensors that repeatedly appear and disappear from the screen are normal and the ECU that is not displayed on the screen may be the main cause of the problem (this ECU may have an open circuit in either of its CAN branch wires).

SYMPTOM	TROUBLE AREA
2 or more ECUs and/or sensors do not appear on the Techstream "CAN Bus Check" screen.	One side of the CAN branch wire is open, or output signals are incomplete. • Skid control ECU • Steering angle sensor • Yaw rate sensor • Power steering ECU • Air conditioning amplifier • Main body ECU • Center airbag sensor assembly • ECM • Combination meter • Accessory gateway

INSPECTION PROCEDURE

HINT:

Even after DTCs are cleared, if a DTC is stored again after driving the vehicle for a while, the malfunction may be occurring due to vibration of the vehicle. In such a case, wiggling the ECUs or wire harness while performing the inspection below will help determine the cause of the malfunction.

PROCEDURE

1.	**CHECK FOR OPEN IN ONE SIDE OF CAN NO. 1 BUS BRANCH WIRE**

(a) Confirm the systems (ECUs and sensors), which use CAN communication, equipped on the vehicle INFO .

(b) Using the Techstream, select and perform "CAN Bus Check" INFO .

(c) Observe the screen for approximately 1 minute to check the ECUs and sensors that are not displayed on the screen and also those that repeatedly appear and disappear from the screen.

(d) Check that the ECUs and sensors, which are connected to the ECUs or sensors that are not displayed on the screen.

(e) Check that the ECUs and sensors, which repeatedly appear and disappear the "Bus Check" screen, are constantly displayed.

NEXT ▶ **GO TO CORRESPONDING COMMUNICATION STOP MODE**

Title: NETWORKING: LIN COMMUNICATION SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

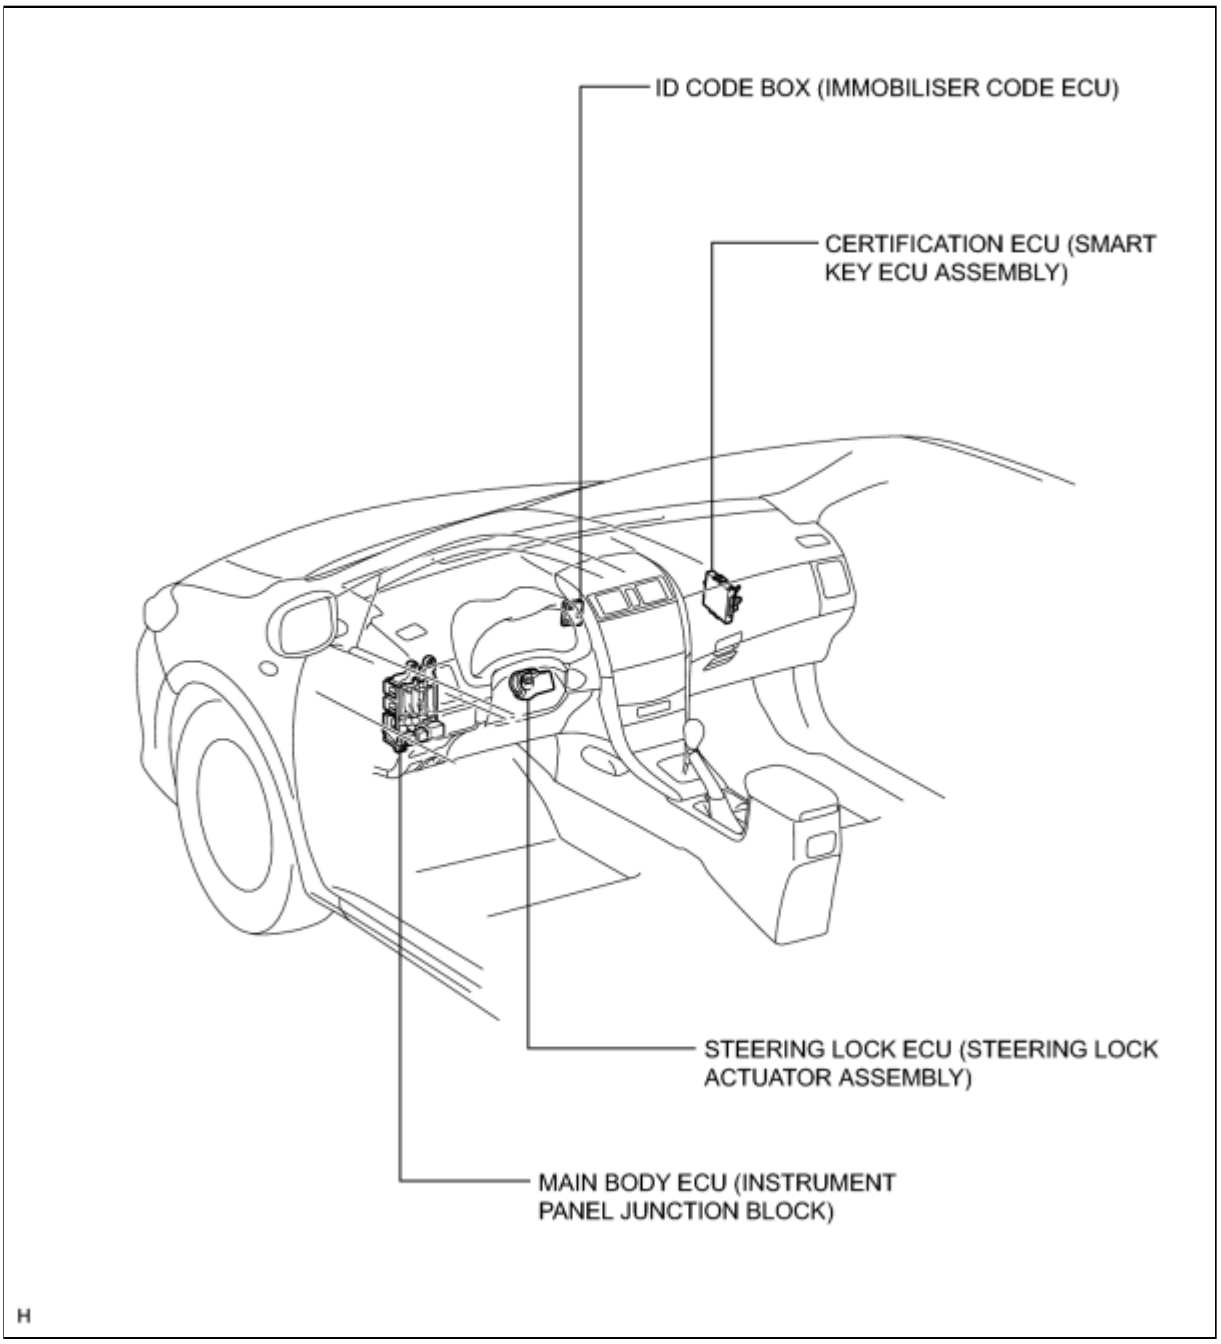
1. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream with the engine switch off to troubleshoot: Connect the Techstream to the vehicle, and turn the courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and the vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).

2. PRECAUTIONS WHEN WORKING ON ELECTRIC STEERING LOCK

(a) If the steering lock ECU (steering lock actuator assembly) is replaced, open and close the driver door. The engine may not start until this is performed.



HINT:

Opening and closing the driver door causes the steering lock ECU (steering lock actuator assembly) to memorize the correct steering lock bar position.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the LIN communication system.
- *: Use the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

HINT:

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM*

(a) Using the Techstream, inspect the LIN communication function to ensure there are no malfunctions in the communication system INFO .

Title: NETWORKING: LIN COMMUNICATION SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

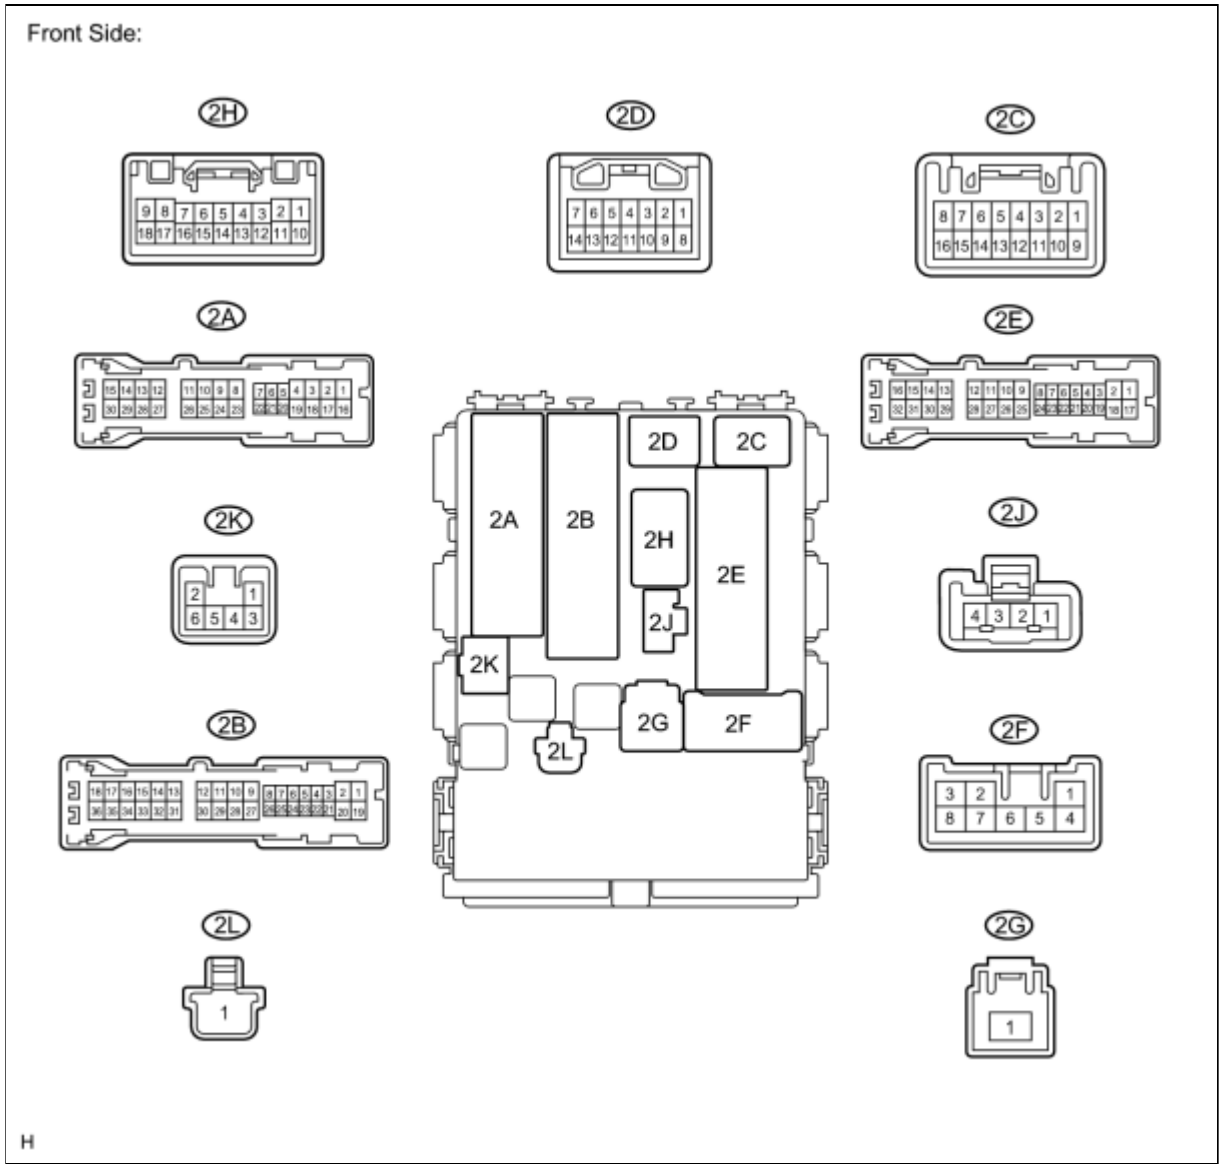
1. LIN COMMUNICATION SYSTEM DESCRIPTION

The multiplex communication system (LIN) is used to control communication between the ECUs of the body system. If communication cannot be performed through the LIN because of an open in the communication lines or other reason, the master control ECU of the relevant system will output a DTC. For the communication system and the connected ECUs, refer to the table below.

HINT:

Each ECU has a fail safe function which activates to maintain the minimum performance of the system and protect the system.

(a) LIN Communication Certification System



ECU	MASTER CONTROL (LIN COMMUNICATION DTC OUTPUT FUNCTION)
Certification ECU (Smart Key ECU Assembly)	○ (with output function)
Main Body ECU (Instrument Panel Junction Block)	○ (with output function)
Steering Lock ECU (Steering Lock Actuator Assembly)	x (no output function)
ID Code Box (Immobiliser Code ECU)	x (no output function)

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XHL017X
Title: NETWORKING: LIN COMMUNICATION SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2B, 2E, 2F and 2G junction block and E51 ECU connectors.

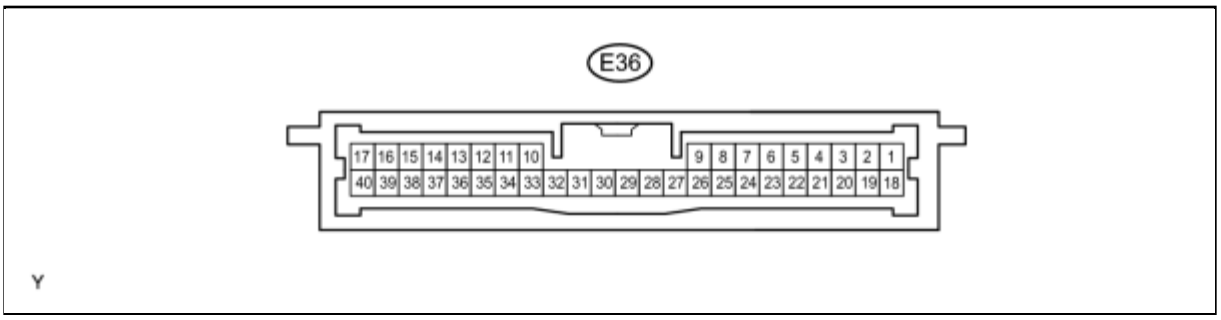
(b) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2B-30 (BECU) - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V
2F-5 (ACC) - Body ground	W - Body ground*1 L - Body ground*2	ACC power supply	Engine switch on (ACC)	11 to 14 V
2G-1 (IG) - Body ground	W - Body ground	Battery power supply	Engine switch on (IG)	11 to 14 V
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E51-4 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction on the wire harness side.



(c) Reconnect the 2B, 2E, 2F and 2G junction block and E51 ECU connectors.

(d) Measure the pulse according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2C-12 (LIN1) - E51-4 (GND2)	V - W-B	LIN Communication line	Engine switch on (IG)	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the E36 ECU connector.

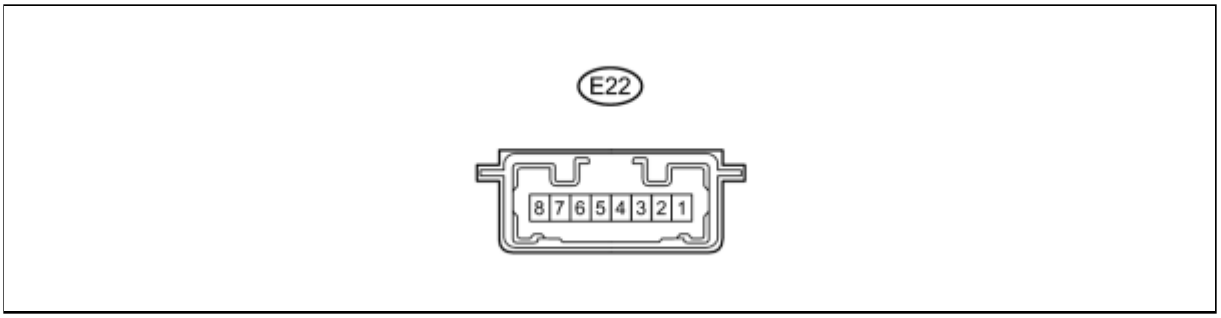
(b) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - E36-17 (E)	W - W-B*1 BR - W-B*2	Battery power supply	Always	11 to 14 V
E36-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E36 ECU connector.



(d) Measure the voltage and pulse according to value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-18 (IG) - E36-17 (E)	L - W-B*1 B - W-B*2	Engine switch power supply	Engine switch on (IG)	11 to 14 V
E36-18 (IG) - E36-17 (E)	L - W-B*1 B - W-B*2	Engine switch power supply	Engine switch off	Below 1 V
E36-10 (LIN) - E36-17 (E)	V - W-B	LIN Communication line	Engine switch on (IG)	Pulse generation

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, the ECU may have a malfunction.

3. CHECK ID CODE BOX (IMMOBILISER CODE ECU)

(a) Disconnect the E22 ECU connector.

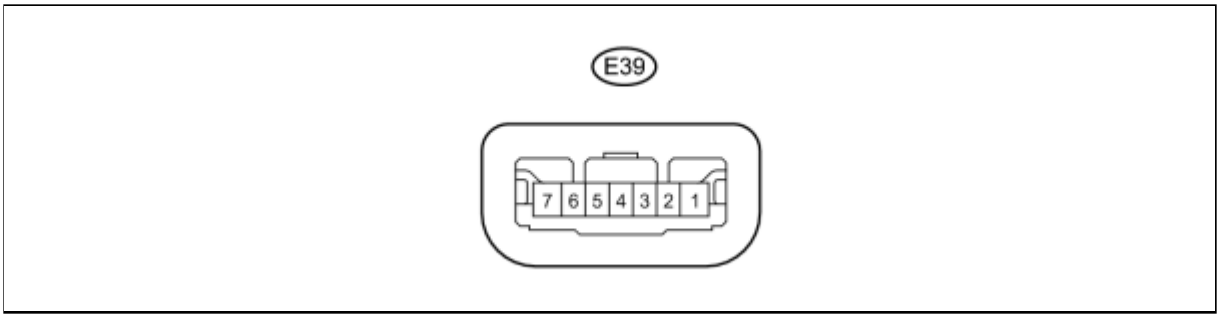
(b) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E22-1 (+B) - E22-8 (GND)	W - BR*1 BR - BR*2	Battery power supply	Always	11 to 14 V
E22-8 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E22 ECU connector.



(d) Measure the pulse according to value(s) in the table below.

TESTER	WIRING	TERMINAL	CONDITION	SPECIFIED

CONNECTION	COLOR	DESCRIPTION		CONDITION
E22-3 (LIN1) - E22-8 (GND)	V - BR	LIN Communication line	Engine switch on (IG)	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

4. CHECK STEERING LOCK ECU (STEERING LOCK ACTUATOR ASSEMBLY)

(a) Disconnect the E39 ECU connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E39-7 (B) - E39-1 (GND)	L - W-B	Battery power supply	Always	11 to 14 V
E39-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E39-6 (IG2) - E39-1 (GND)	B - W-B	Engine switch power supply	Engine switch on (IG)	11 to 14 V
E39-6 (IG2) - E39-1 (GND)	B - W-B	Engine switch power supply	Engine switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E39 ECU connector.

(d) Measure the pulse according to value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E39-5 (LIN) - E39-1 (GND)	V - W-B	LIN Communication line	Engine switch on (IG)	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

Title: NETWORKING: LIN COMMUNICATION SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The certification ECU (smart key ECU assembly) controls the LIN communication system. LIN communication system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

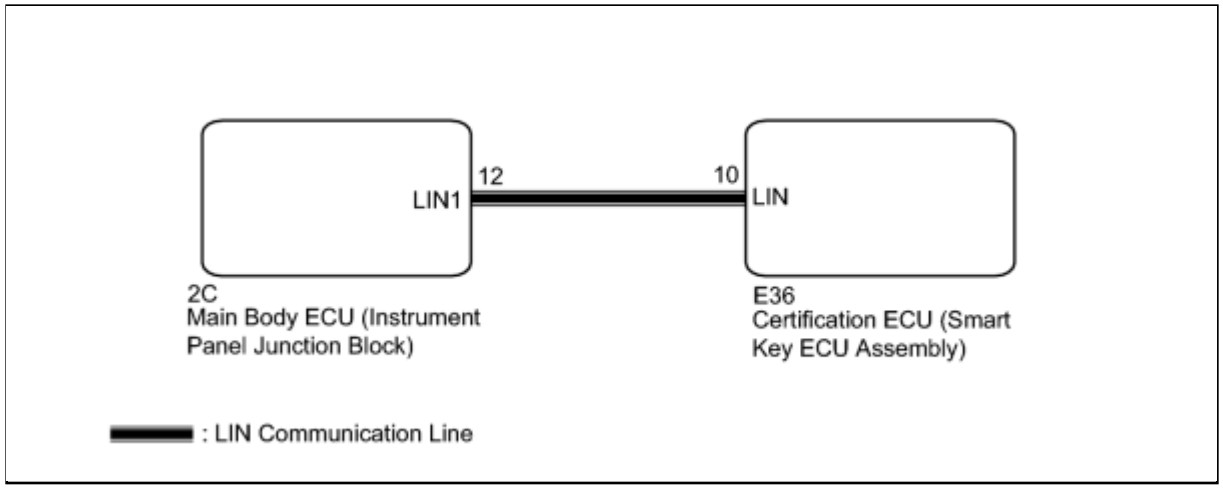
Title: NETWORKING: LIN COMMUNICATION SYSTEM: B2287: LIN Communication Master Malfunction (2010 Corolla)		



DTC	**B2287**	**LIN Communication Master Malfunction**

DESCRIPTION

This DTC is output when there is an open, short or ECU communication malfunction between the main body ECU (instrument panel junction block) and certification ECU (smart key ECU assembly).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2287	There is an open, short or ECU communication malfunction between the main body ECU (instrument panel junction block) and certification ECU (smart key ECU assembly).	• Certification ECU (smart key ECU assembly) • Main body ECU (instrument panel junction block) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

When DTC B2785 and B2287 are output simultaneously, perform the troubleshooting for DTC B2785 first.

NOTICE:

If the certification ECU (smart key ECU assembly) is replaced, register the keys and ECU communication ID INFO .

PROCEDURE

1.	**CLEAR DTC**

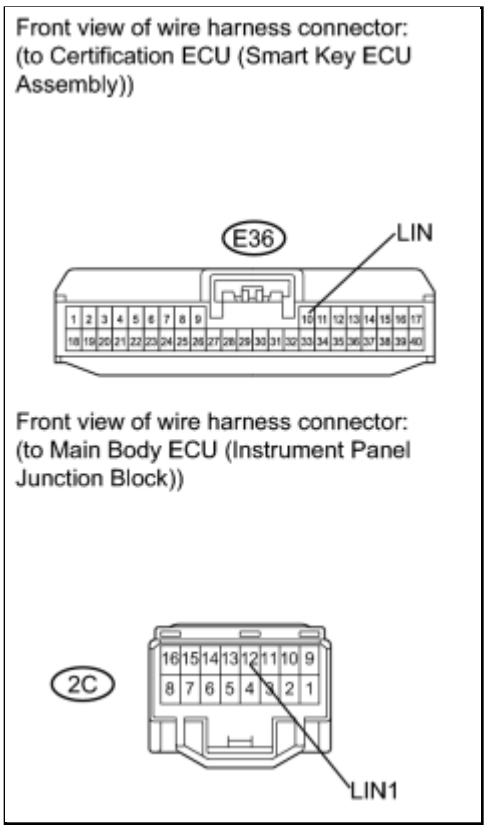
(a) Clear the DTC INFO .

NEXT

2.	**CHECK FOR DTC**

(a) Recheck for the DTC INFO .

OK:



B2287 is not output.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - MAIN BODY ECU)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

3.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - MAIN BODY ECU)**

(a) Disconnect the E36 and 2C connectors.

(b) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - 2C-12 (LIN1)	Always	Below 1 Ω
E36-10 (LIN) - Body ground	Always	10 kΩ or higher

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - Body ground	Always	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Replace the main body ECU (instrument panel junction block).

NEXT

5.	**CHECK FOR DTC**

(a) Clear the DTC INFO .

(b) Recheck for the DTC.

OK:
B2287 is not output.

NG → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK → **END (MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) IS DEFECTIVE)**

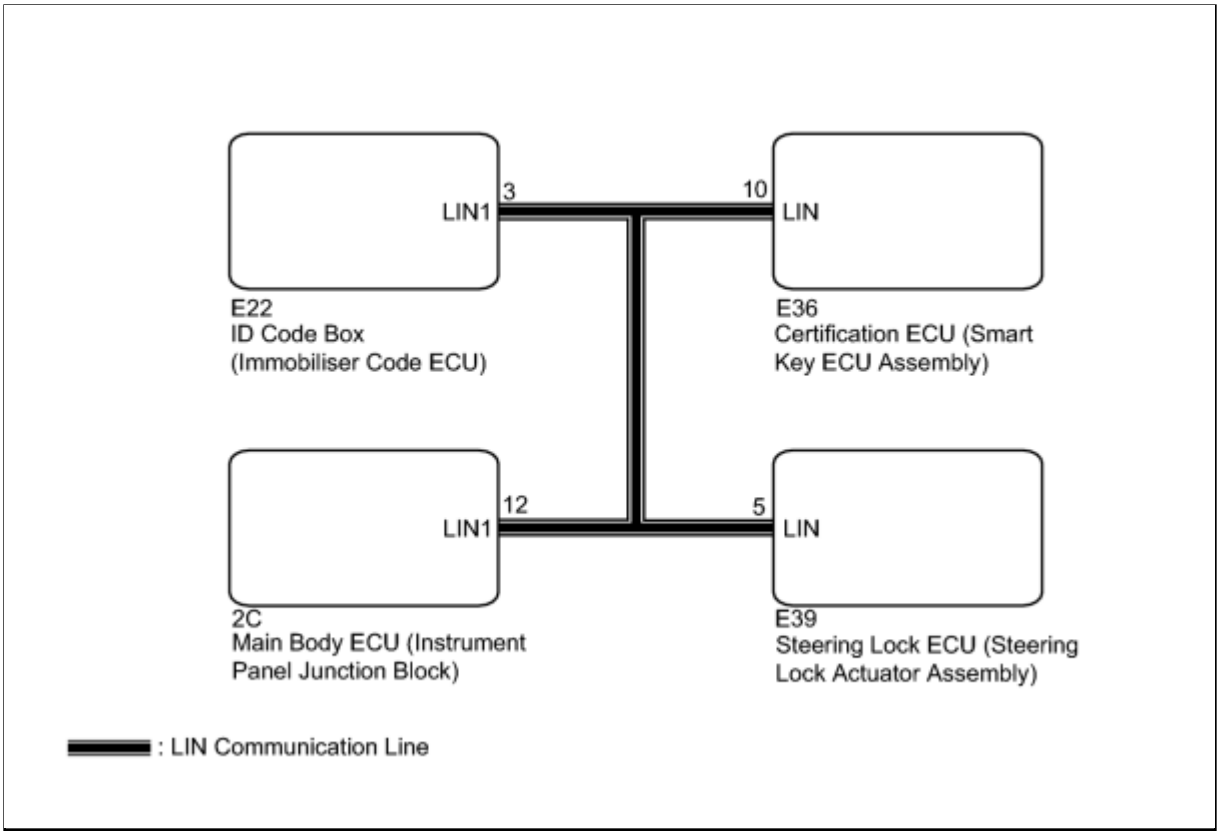
Title: NETWORKING: LIN COMMUNICATION SYSTEM: B2785: Communication Malfunction between ECUs Connected by LIN (2010 Corolla)		



DTC	**B2785**	**Communication Malfunction between ECUs Connected by LIN**

DESCRIPTION

The certification ECU (smart key ECU assembly) monitors communication between all the ECUs connected to the certification ECU system LIN bus lines. When the certification ECU (smart key ECU assembly) detects an error in communication with all the ECUs connected to the certification ECU system LIN bus lines at a set interval and 3 times in a row, DTC B2785 will be output.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2785	• Error in LIN communication between ECUs and an open or short in communication lines • LIN communication from the certification ECU (smart key ECU assembly) stops for a set amount of time or more	• Certification ECU (smart key ECU assembly) • Main body ECU (instrument panel junction block) • Steering lock ECU (steering lock actuator assembly) • ID code box (immobiliser code ECU) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

When DTC B2785 and B2287 are output simultaneously, perform the troubleshooting for DTC B2785 first.

NOTICE:

- If the certification ECU (smart key ECU assembly) is replaced, register the keys and ECU communication ID INFO .
- If the steering lock ECU (steering lock actuator assembly) is replaced, register the ECU code INFO .
- If the ID code box (immobiliser code ECU) is replaced, register the ECU code and ECU communication ID INFO .

PROCEDURE

1.	**CLEAR DTC**

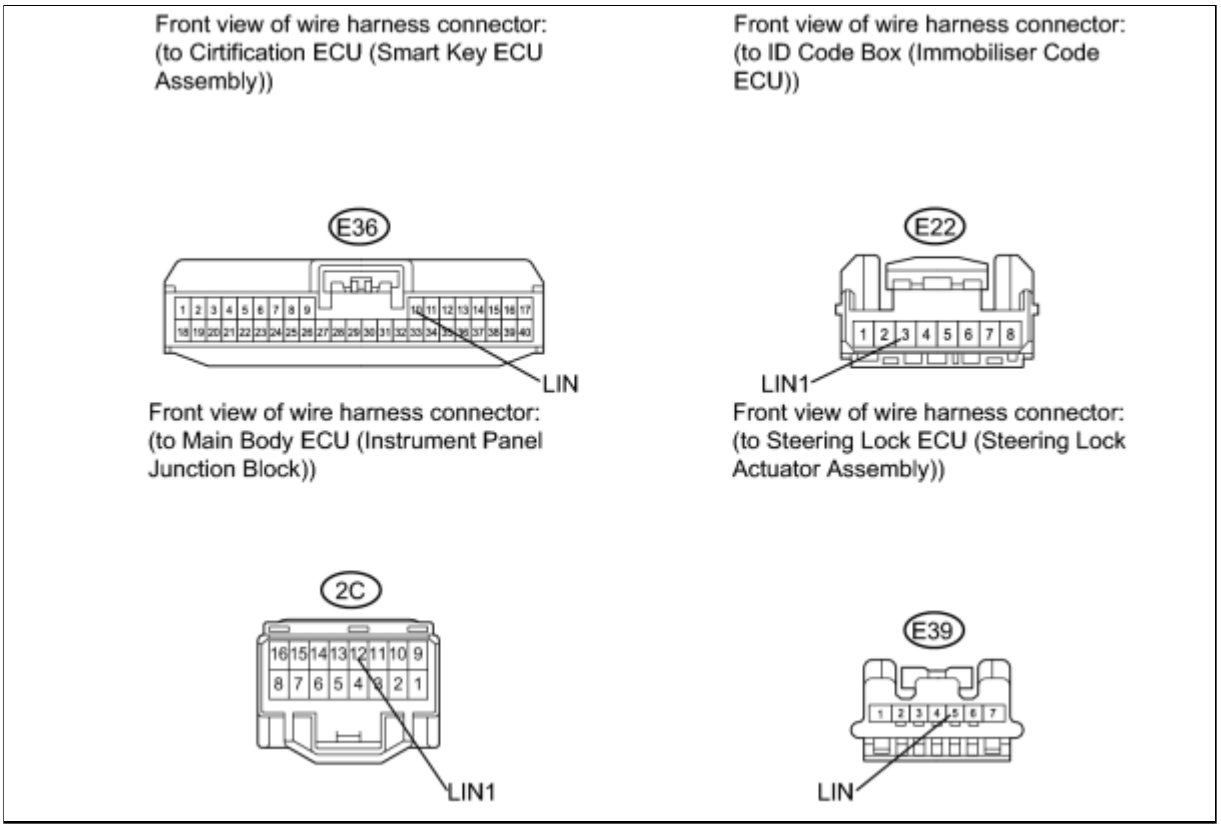
(a) Clear the DTC INFO .

NEXT

2.	**CHECK FOR DTC**

(a) Recheck for the DTC INFO .

OK:



B2785 is not output.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - EACH ECU)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

3.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - EACH ECU)**

(a) Disconnect the E22, E36, E39 and 2C connectors.

(b) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - E39-5 (LIN)	Always	Below 1 Ω
E36-10 (LIN) - E22-3 (LIN1)	Always	Below 1 Ω
E36-10 (LIN) - 2C-12 (LIN1)	Always	Below 1 Ω
E36-10 (LIN) - Body ground	Always	10 kΩ or higher

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - Body ground	Always	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK FOR DTC (STEERING LOCK ECU)**

(a) Reconnect the E36, E22 and 2C connectors.

(b) Clear the DTC INFO.

(c) Recheck for the DTC.

Result:

RESULT	PROCEED TO
B2785 is output	A
B2785 is not output	B

B ▶ **REPLACE STEERING LOCK ECU (STEERING LOCK ACTUATOR ASSEMBLY)**

A ▼

5.	CHECK FOR DTC (ID CODE BOX)

(a) Reconnect the E39 connector.

(b) Disconnect the E22 connector.

(c) Clear the DTC INFO .

(d) Recheck for the DTC.

Result:

RESULT	PROCEED TO
B2785 is output	A
B2785 is not output	B

B ▶ **REPLACE ID CODE BOX (IMMOBILISER CODE ECU)**

A ▼

6.	CHECK FOR DTC (MAIN BODY ECU)

(a) Reconnect the E22 connector.

(b) Disconnect the 2C connector.

(c) Clear the DTC INFO .

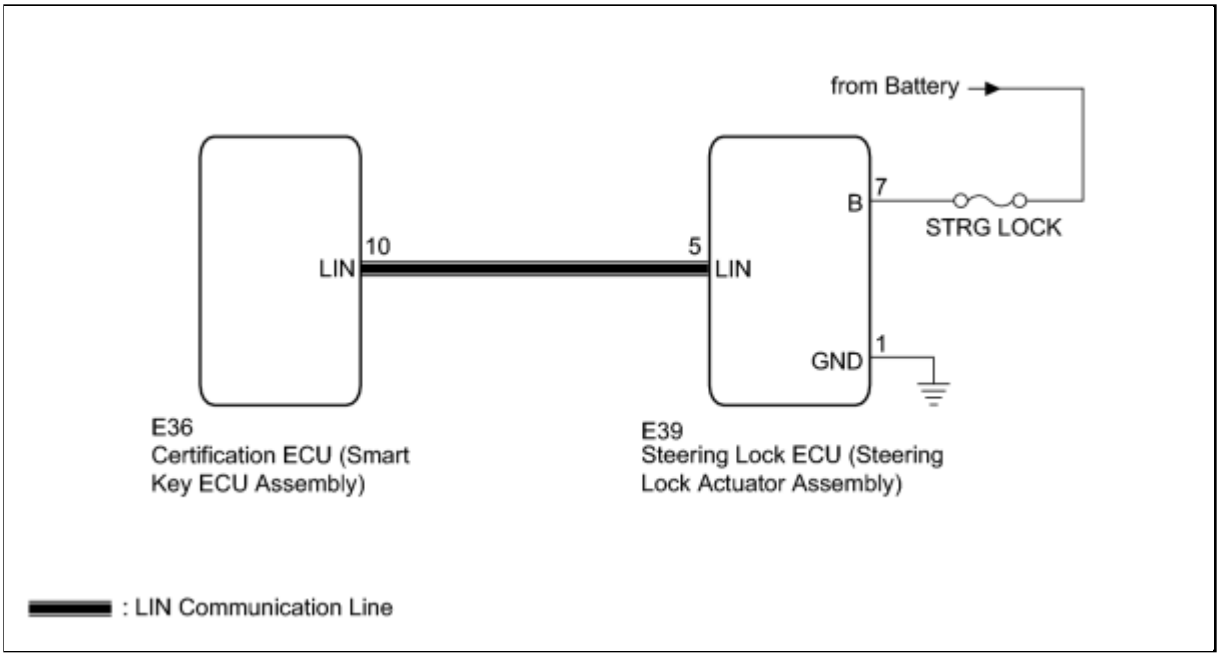
(d) Recheck for the DTC.

OK:
B2785 is not output.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XHX00VX
Title: NETWORKING: LIN COMMUNICATION SYSTEM: B2786: No Response from Steering Lock ECU (2010 Corolla)		



DTC	**B2786**	**No Response from Steering Lock ECU**

DESCRIPTION

This DTC is output when LIN communication between the certification ECU (smart key ECU assembly) and the steering lock ECU (steering lock actuator assembly) stops for more than 10 seconds.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2786	No communication between the steering lock ECU (steering lock actuator assembly) and the certification ECU (smart key ECU assembly) for more than 10 seconds	• Steering lock ECU (steering lock actuator assembly) • Certification ECU (smart key ECU assembly) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- If the certification ECU (smart key ECU assembly) is replaced, register the keys and ECU communication ID INFO .
- If the steering lock ECU (steering lock actuator assembly) is replaced, register the ECU code INFO .

PROCEDURE

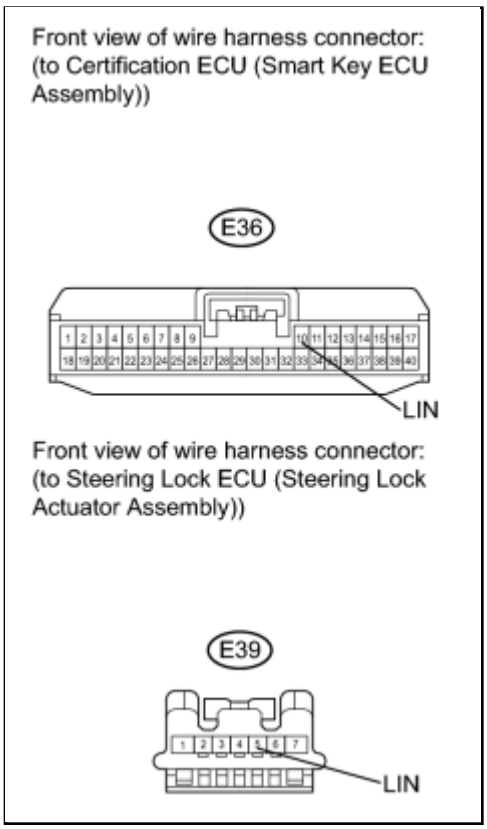
1.	**CLEAR DTC**

(a) Clear the DTC INFO .

NEXT

2.	**CHECK FOR DTC**

(a) Recheck for the DTC INFO .



OK:
B2786 is not output.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - STEERING LOCK ECU)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

3.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - STEERING LOCK ECU)**

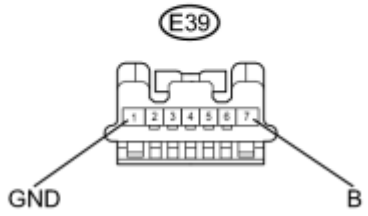
(a) Disconnect the E36 and E39 ECU connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - E39-5 (LIN)	Always	Below 1 Ω
E36-10 (LIN) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

4.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ECU BATTERY VOLTAGE AND GROUND)**

(a) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Front view of wire harness connector:
(to Steering Lock ECU (Steering Lock Actuator Assembly))

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-1 (GND) - Body ground	Always	Below 1 Ω

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-7 (B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	REPLACE STEERING LOCK ECU

(a) Replace the steering lock ECU (steering lock actuator assembly).

NEXT ▼

6.	CHECK FOR DTC

(a) Clear the DTC [INFO].

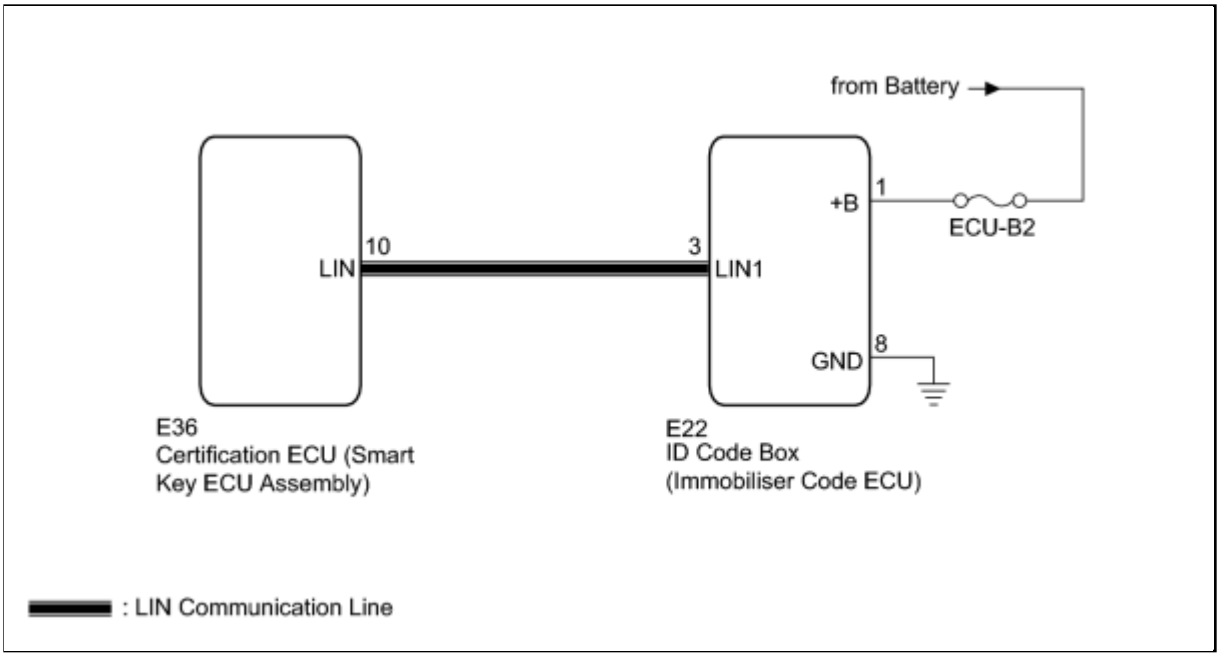
(b) Recheck for the DTC.

OK:
B2786 is not output.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (STEERING LOCK ECU IS DEFECTIVE)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XI700XX
Title: NETWORKING: LIN COMMUNICATION SYSTEM: B2789: No Response from ID BOX (2010 Corolla)		



DTC	**B2789**	**No Response from ID BOX**

DESCRIPTION

This DTC is output when LIN communication between the certification ECU (smart key ECU assembly) and the ID code box (immobiliser code ECU) stops for more than 10 seconds.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2789	No communication between the certification ECU (smart key ECU assembly) and the ID code box (immobiliser code ECU) for more than 10 seconds	• ID code box (immobiliser code ECU) • Certification ECU (smart key ECU assembly) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- If the certification ECU (smart key ECU assembly) is replaced, register the keys and ECU communication ID INFO .
- If the ID code box (immobiliser code ECU) is replaced, register the ECU code and ECU communication ID INFO .

PROCEDURE

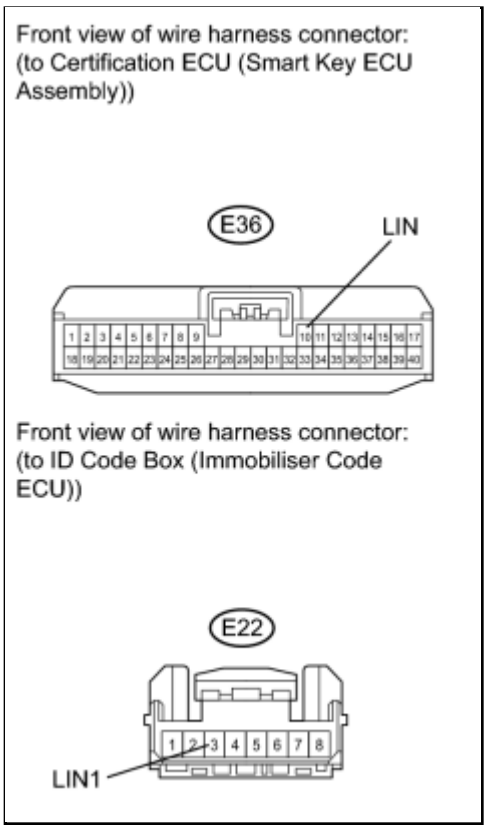
1.	**CLEAR DTC**

(a) Clear the DTC INFO .

NEXT

2.	**CHECK FOR DTC**

(a) Recheck for the DTC INFO .



OK:
B2789 is not output.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ID CODE BOX)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

3.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ID CODE BOX)**

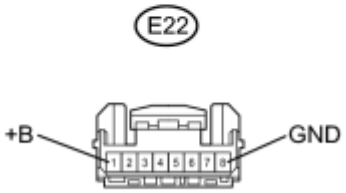
(a) Disconnect the E36 and E22 connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - E22-3 (LIN1)	Always	Below 1 Ω
E36-10 (LIN) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

4.	**CHECK HARNESS AND CONNECTOR (ID CODE BOX BATTERY VOLTAGE AND GROUND)**

(a) Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Front view of wire harness connector:
(to ID Code Box (Immobiliser Code ECU))

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E22-8 (GND) - Body ground	Always	Below 1 Ω

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E22-1 (+B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	REPLACE ID CODE BOX (IMMOBILISER CODE ECU)

(a) Replace the ID code box (immobiliser code ECU) INFO .

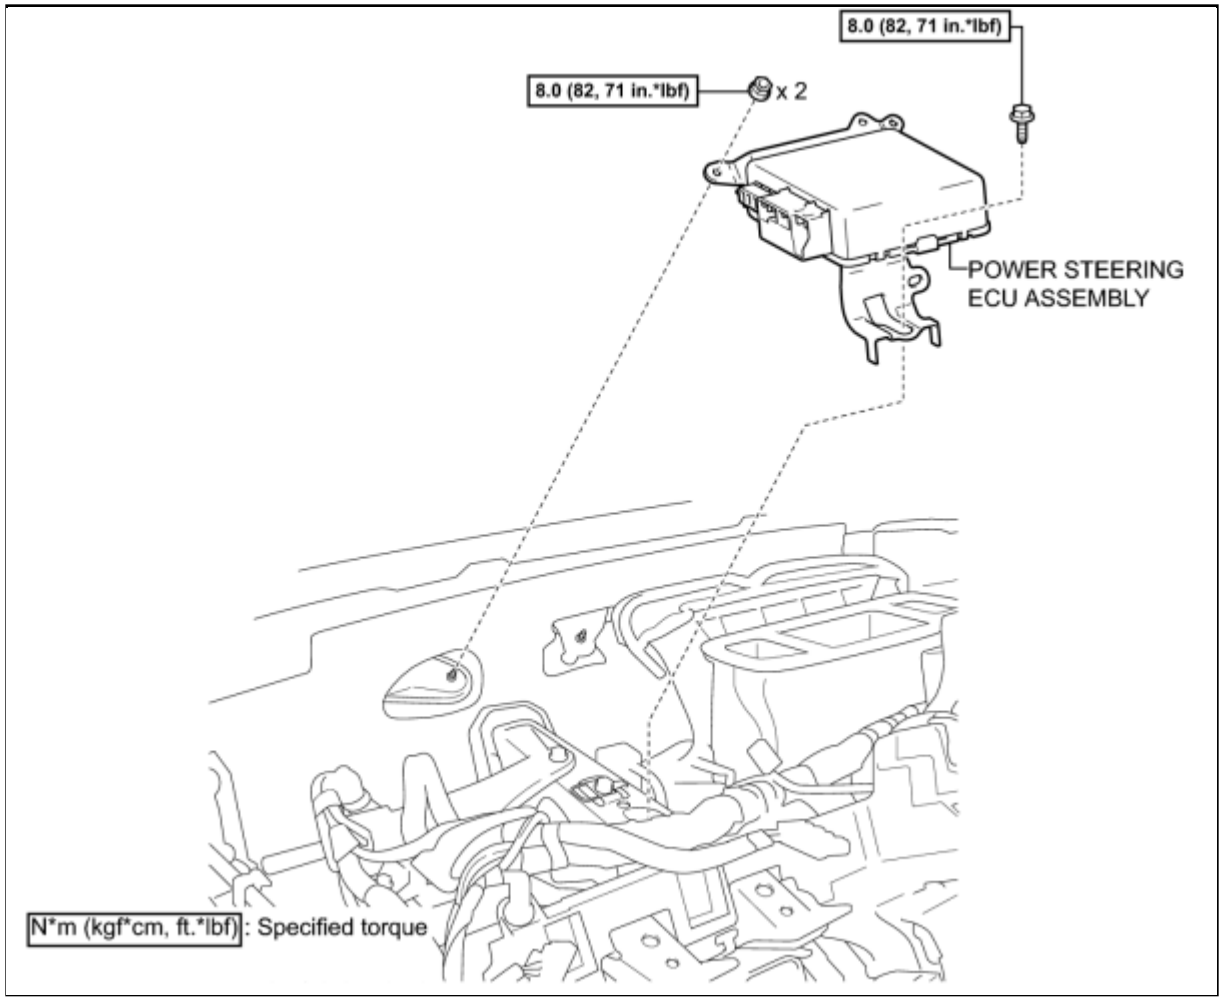
NEXT ▼

6.	CHECK FOR DTC

(a) Clear the DTC INFO .

(b) Recheck for the DTC.

OK:
B2789 is not output.



NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (ID CODE BOX (IMMOBILISER CODE ECU) IS DEFECTIVE)**

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): PRECAUTION (2010 Corolla)		

PRECAUTION

1. IGNITION SWITCH EXPRESSIONS

HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with an SRS (Supplemental Restraint System). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident.

Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System INFO .

3. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC MOTOR POWER STEERING COMPONENTS

(a) Be sure to align the front wheels straight ahead when removing and installing the power steering gear assembly.

(b) If disconnecting the steering sliding yoke sub-assembly and the pinion shaft of the power steering gear assembly, be sure to place matchmarks before starting the operation.

(c) After replacing the power steering gear assembly or power steering ECU, clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point INFO .

4. HANDLING PRECAUTION

(a) When handling the electronic parts:

- Avoid any impact to electronic parts such as ECUs and relays. Replace them with new ones if dropped or subjected to a severe blow.
- Do not expose any electronic parts to high temperatures or humidity.
- Do not touch the connector terminals in order to prevent deformation or malfunctions due

to static electricity.

(b) When handling the steering column assembly:

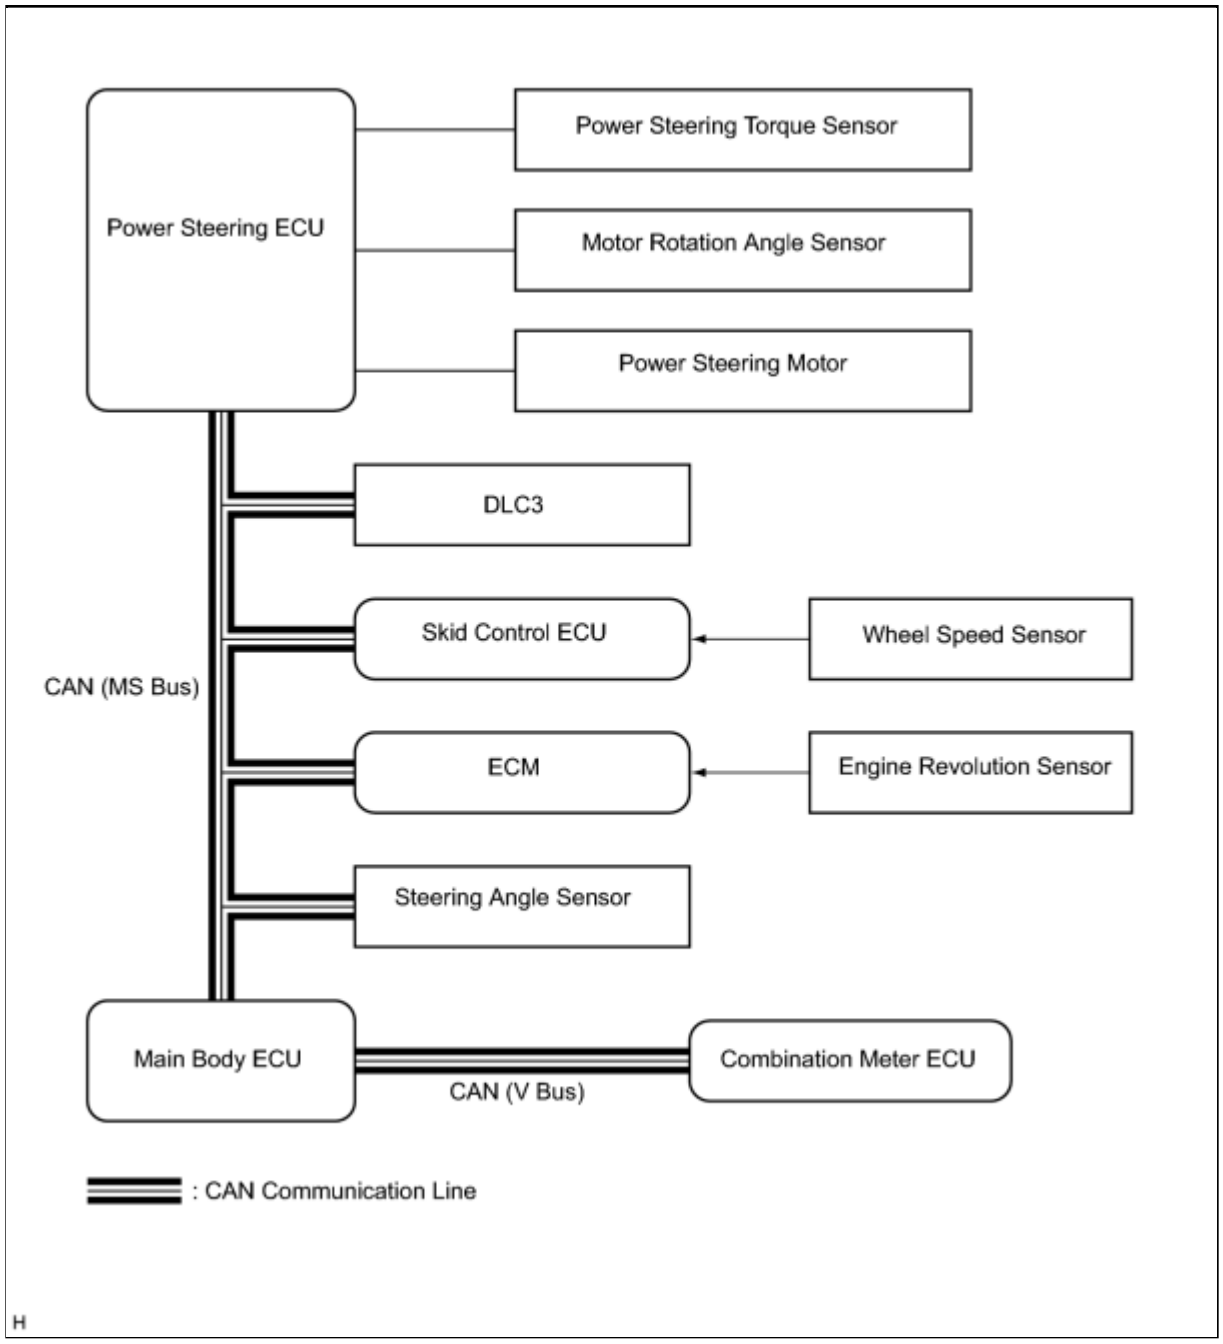
- Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace them with new ones if dropped or subjected to a severe blow.
- Do not pull the wire harness when moving the steering column assembly.

(c) When disconnecting and reconnecting the connectors:

When disconnecting the connectors related to the power steering system, turn the ignition switch on (IG), center the steering wheel, turn the ignition switch off, and then disconnect the connectors.

5. PRECAUTIONS FOR CAN COMMUNICATION

(a) CAN communication lines are used to receive information from the skid control ECU and the ECM, and to transmit warnings to the combination meter.



When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting for the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the power steering system after confirming that the CAN communication system is normal.

(c) Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. DESCRIPTION

- The power steering system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort.
- The power steering ECU determines directions and the amount of assisting power in accordance with vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, the power steering ECU adjusts the steering effort so that it is lighter during low speed driving and heavier during high speed driving.

(a) Power steering ECU:

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:

The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) Power steering motor:

The power steering motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

(d) Motor rotation angle sensor:

The motor rotation angle sensor consists of the resolver sensor, which excels in reliability and durability. The rotation angle sensor detects the rotation angle of the motor and outputs it to the power steering ECU. As a result, it ensures efficient EPS control.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): CALIBRATION (2010 Corolla)		

CALIBRATION

1. ROTATION ANGLE SENSOR INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION

NOTICE:

Clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point if any of the following has occurred:

- The power steering ECU has been replaced.
- The steering column assembly has been replaced.
- Steering effort differs between left and right.

(a) Inspection before calibration.

(1) Turn the ignition switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch on (IG).

(4) Turn the Techstream on.

(5) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Data List.

(6) Check the values by referring to the table below.

Power Steering ECU

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	11 to 14 V	Ignition switch on (IG)

Standard voltage:
11 to 14 V

NOTICE:

If the IG power supply voltage is 9 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.

(b) Rotation angle sensor calibration value clear, rotation angle sensor initialization, and torque sensor zero point calibration.

NOTICE:

- If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.
- If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor cannot be initialized. Clear the DTC before starting initialization.

(1) Turn the ignition switch off.

(2) Connect the Techstream to the DLC3.

(3) Turn the ignition switch on (IG).

(4) Turn the Techstream on.

(5) Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Set the steering wheel to the center point and align the front tires straight ahead.
- Do not turn the steering wheel sharply.
- Do not touch the steering wheel during the torque sensor zero point calibration (for 3 seconds).

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK POWER STEERING ECU

HINT:

As connector a2 uses a lock lever, each terminal cannot be checked while the connector is still connected to the power steering ECU.

TERMINAL NO. (SYMBOLS)	WIRING COLOR	TERMINAL DESCRIPTION
a2-1 (V)	W	V phase motor output
a2-2 (U)	B	U phase motor output
a2-3 (W)	R	W phase motor output

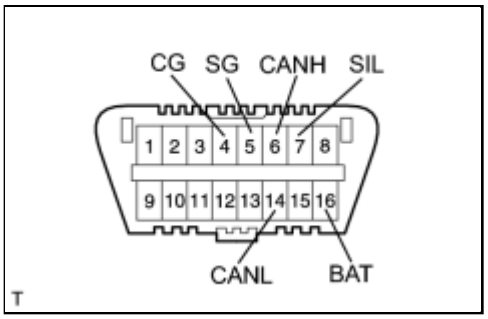
(a) Measure the voltage and resistance according to the value(s) in the table below.

NOTICE:

When the P/S warning light is illuminated during a malfunction, the fail-safe function may cause the voltage of the power steering ECU's terminals to become 0 V.

TERMINAL NO. (SYMBOLS)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A75-1 (PIG) - A75-2 (PGND)	L - W-B	Power source	Always	11 to 14 V
A75-2 (PGND) - Body ground	W-B - Body ground	Power ground	Always	Below 1 Ω

TERMINAL NO. (SYMBOLS)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E32-1 (CANH) - E32-7 (CANL)	SB - W	CAN communication line	Ignition switch off	54 to 69 Ω
E32-6 (IG) - A75-2 (PGND)	L - W-B	IG power source	Ignition switch on (IG)	11 to 14 V
a1-1 (RZV) - A75-2 (PGND)	- W-B	Rotation angle sensor excitation output signal	Ignition switch on (IG) Steering wheel is turned	0.68 to 4.42 V
a1-3 (RZG) - A75-2 (PGND)	- W-B	Rotation angle sensor excitation circuit GND	Always	Below 1 Ω
a1-5 (RZCS) - A75-2 (PGND)	- W-B	Rotation angle sensor COS aspect output signal	Ignition switch on (IG) Steering wheel is turned	0.68 to 4.42 V
a1-6 (RZSN) - A75-2 (PGND)	- W-B	Rotation angle sensor SIN aspect output signal	Ignition switch on (IG) Steering wheel is turned	0.68 to 4.42 V
a3-5 (TRQ1) - a3-8 (TRQG)	-	Torque sensor signal	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
			Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	2.5 to 3.8 V
			Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	1.2 to 2.5 V
a3-6 (TRQV) - a3-8 (TRQG)	-	Torque sensor voltage source	Ignition switch on (IG)	4.5 to 5.5 V
a3-7 (TRQ2) - a3-8 (TRQG)	-	Torque sensor signal	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
			Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V
			Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	2.5 to 3.8 V
a3-8 (TRQG) - Body ground	- Body ground	Torque sensor ground	Always	Below 1 Ω



If the result is not as specified, the ECU may have a malfunction.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000274Z00WX
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

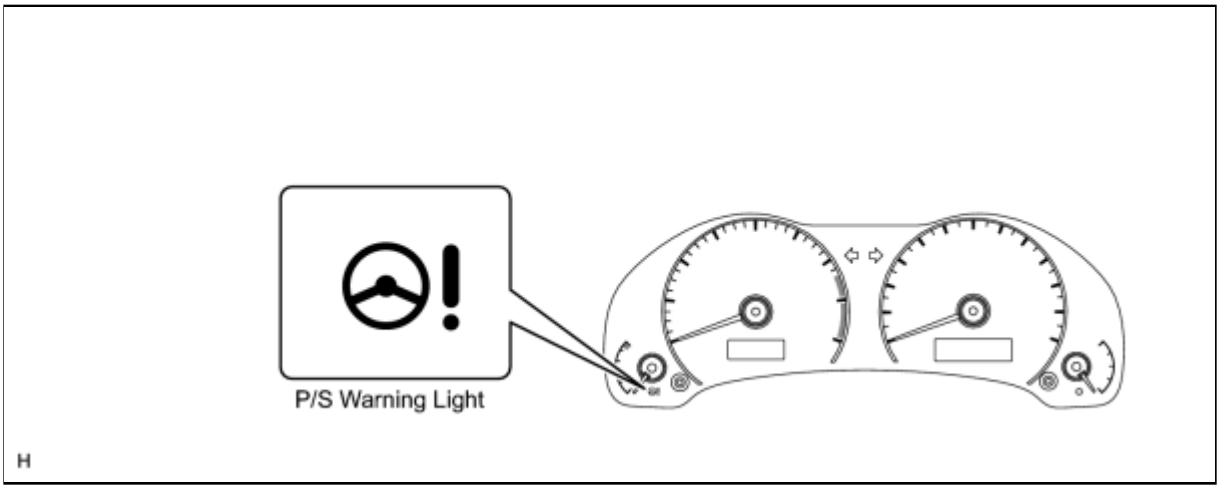
SYMBOL (TERMINAL NO.)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off*	6 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch or any other switches or the doors.**

(b) If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:



Connect the Techstream cable to the DLC3, turn the ignition switch on (IG) and attempt to use the Techstream.

If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the Techstream.

- If communication is normal when the Techstream is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the Techstream is connected to another vehicle, the problem may be in the Techstream itself. Consult the Service Department listed in the Techstream instruction manual.

2. CHECK WARNING LIGHT

(a) When a problem occurs in the power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

TOYOTA

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Read the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.

(f) Refer to the Diagnostic Trouble Code Chart for DTC information INFO .

2. CLEAR DTC

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Clear the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.

(f) According to the display on the Techstream, select the trouble code data display with the clear button.

(g) Turn the ignition switch off.

(h) Disconnect the Techstream from the DLC3.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002755012X
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA

1. FREEZE FRAME DATA

NOTICE:

- It is difficult to show the specified values (judgment values) clearly because freeze frame data values change significantly due to differences in measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even when the values are within specifications.
- Turn the ignition switch on (IG) and park the vehicle on level ground. Check the freeze frame data by using the Techstream.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Check the freeze frame data on the Techstream.

EMPS

TESTER DISPLAY	ITEM DESCRIPTION/RANGE (DISPLAY)	INSPECTION CONDITION	REFERENCE VALUE
Meter Vehicle Velocity	Vehicle speed from meter/ Min.: 0 km/h (0 mph) Max.: 300 km/h (186.4 mph)	Vehicle stopped	0 km/h (0 mph)
		Vehicle driven at a constant speed	No significant fluctuation
Engine Revolution	Engine revolution/ Min.: 0 rpm Max.: 12800 rpm	Engine is running at a constant speed	No significant fluctuation
Motor Actual Current	Amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Power steering is in operation	Value changes in proportion to steering effort
Command Value Current	Demanded amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Power steering is in operation	Value changes in proportion to steering effort
Steering Angle Velocity	Steering angle speed/ Min.: -32768 deg/s Max.: 32767 deg/s	Steering wheel is turned	Value changes in proportion to steering effort

TESTER DISPLAY	ITEM DESCRIPTION/RANGE (DISPLAY)	INSPECTION CONDITION	REFERENCE VALUE
Thermistor Temperature	ECU substrate temperature/ Min.: -40°C (-40°F) Max.: 150°C (302°F)	Ignition switch on (IG)	-
PIG Power Supply	Power source voltage to activate motor/ Min.: 0 V Max.: 20.1531 V	Power steering is in operation	11 to 14 V
IG Power Supply	ECU power source voltage/ Min.: 0 V Max.: 20.1531 V	Ignition switch on (IG)	11 to 14 V
Motor Rotation Angle	Motor rotation angle/ Min.: 0 deg Max.: 1441.77 deg	Power steering is in operation	During steering operation, motor rotation angle value changes from 0 to 360°
Command Val Current 2	Demanded amount of current to motor/ Min.: -327.68 A Max.: 327.67 A	Power steering is in operation	Value changes in proportion to steering effort
PIG2 Voltage	Coil rear pressurization voltage/ Min.: 0 V Max.: 45.955 V	Ignition switch on (IG) Steering wheel is not turned	Approximately 27 V
		Ignition switch on (IG) Steering wheel is turned	Value changes within 4 to 35 V range
Motor Voltage	Motor power supply voltage/ Min.: 0 V Max.: 45.955 V	Ignition switch on (IG) Steering wheel is not turned	Approximately 27 V
		Ignition switch on (IG) Steering wheel is turned	Value changes within 4 to 35 V range
Motor Terminal Volt(U)	Motor terminal voltage (U phase)/ Min.: 0 V Max.: 46.667 V	Steering wheel is turned	Value changes within 4 to 35 V range
Motor Terminal Volt(V)	Motor terminal voltage (V phase)/ Min.: 0 V Max.: 46.667 V	Steering wheel is turned	Value changes within 4 to 35 V range
Motor Terminal Volt(W)	Motor terminal voltage (W phase)/ Min.: 0 V	Steering wheel is turned	Value changes within 4 to 35 V range

TESTER DISPLAY	ITEM DESCRIPTION/RANGE (DISPLAY)	INSPECTION CONDITION	REFERENCE VALUE
	Max.: 46.667 V		
Torque Sensor 1 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
		Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	2.5 to 3.8 V
		Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	1.2 to 2.5 V
Torque Sensor 2 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
		Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V
		Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	2.5 to 3.8 V
TRQ1 Zero Point Value	Torque sensor voltage/ Min.: 0 V Max.: 5 V	Steering wheel is not turned	Values differ depending on vehicle
TRQ2 Zero Point Value	Torque sensor voltage/ Min.: 0 V Max.: 5 V	Steering wheel is not turned	Values differ depending on vehicle
PS Assist Signal	Power steering assist signal/ ON or OFF	No steering load (in neutral position)	OFF
		Ignition switch on (IG) Steering wheel is turned	ON

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

(f) According to the display on the Techstream, read the "Data List".

EMPS

<tr><td>C1541</td><td rowspan="4">Power assist stops</td></tr>
<tr><td>C1551</td><td>IG power source voltage error</td></tr>
<tr><td>C1552</td><td>PIG power source voltage error</td></tr>
<tr><td>C1554</td><td>Power source relay malfunction</td></tr>
</table>

DTC NO.	DETECTION CONDITION	FAIL-SAFE
C1555	Motor relay malfunction	
C1581	ECU malfunction	
U0100	ECM communication	
U0129	Skid control ECU communication error	Amount of power assist is locked at 100 km/h (62 mph) level of power assist

HINT:

The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO **.**

PROCEDURE

1.	**CHECK CONNECTOR CONNECTION CONDITION (TORQUE SENSOR - ECU)**

(a) Check the installation condition of the torque sensor connector.

OK:

Torque sensor connector is securely connected to the power steering ECU.

NG ▶ **CONNECT CONNECTOR**

OK ▼

2.	**READ VALUE USING TECHSTREAM (TORQUE SENSOR1, TORQUE SENSOR2)**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

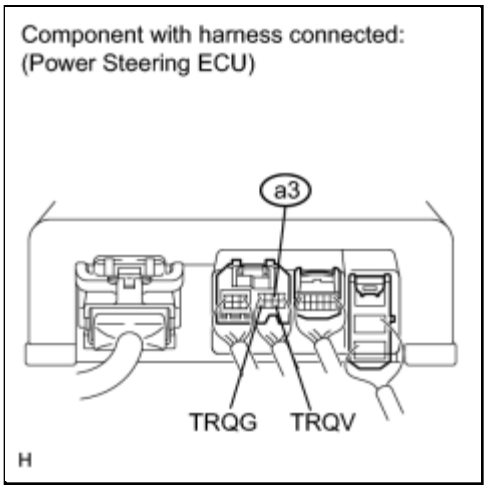
(f) Select the items "Torque sensor 1 output" and "Torque sensor 2 output" in the Data List and read the value displayed on the Techstream.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Torque Sensor 1 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Steering wheel not turned (without load)
		2.5 to 3.8 V	Steering wheel turned to right with vehicle stopped
		1.2 to 2.5 V	Steering wheel turned to left with vehicle stopped
Torque Sensor 2 Output	Torque sensor voltage/ Min.: 0 V Max.: 5 V	2.3 to 2.7 V	Steering wheel not turned (without load)
		1.2 to 2.5 V	Steering wheel turned to right with vehicle stopped
		2.5 to 3.8 V	Steering wheel turned to left with vehicle stopped

OK:
Normal condition value is displayed on the Techstream during each steering operation.

NG ▶ **CHECK POWER STEERING ECU (TRQV VOLTAGE)**



OK ▶ **REPLACE POWER STEERING ECU**

3.	**CHECK POWER STEERING ECU (TRQV VOLTAGE)**

(a) Turn the ignition switch on (IG).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:
