

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
a3-6 (TRQV) - a3-8 (TRQG)	Ignition switch on (IG)	4.5 to 5.5 V

NG ▶ **REPLACE POWER STEERING ECU**

OK ▼

4.	**CHECK POWER STEERING ECU (TRQ1, TRQ2 VOLTAGE)**

(a) Turn the ignition switch on (IG).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION (STEERING POSITION)	SPECIFIED CONDITION
a3-5 (TRQ1) - a3-8 (TRQG)	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
	Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	2.5 to 3.8 V

TESTER CONNECTION	SWITCH CONDITION (STEERING POSITION)	SPECIFIED CONDITION
	Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	1.2 to 2.5 V
a3-7 (TRQ2) - a3-8 (TRQG)	Ignition switch on (IG) Steering wheel not turned (without load)	2.3 to 2.7 V
	Ignition switch on (IG) Steering wheel turned to right with vehicle stopped	1.2 to 2.5 V
	Ignition switch on (IG) Steering wheel turned to left with vehicle stopped	2.5 to 3.8 V

NG ▶ **REPLACE STEERING COLUMN ASSEMBLY**

OK ▶ **REPLACE POWER STEERING ECU**

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

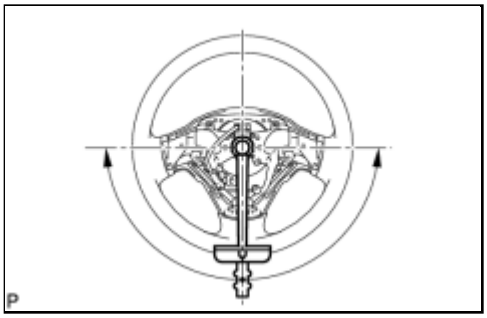
Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbag system before servicing.

(a) Stop the vehicle on a level, paved surface and align the wheels straight ahead.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



(c) Remove the steering pad INFO .

(d) Connect the cable to the negative (-) battery terminal.

(e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

(f) Turn the ignition switch to ON (the engine is stopped) so that the power steering is ready to operate.

(g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while continuing to turn it further in the same direction.

Standard steering effort (Reference):
5.5 N*m (56 kgf*cm, 49 in.*lbf) or less

(h) Align the front wheels facing straight ahead.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Install the steering pad INFO .

(k) Connect the cable to the negative (-) battery terminal.

(l) Clear the DTCs INFO .

(m) Inspect the airbag warning light INFO .

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): C1515,C1525: Torque Sensor Zero Point Adjustment Undone (2010 Corolla)		

DTC	**C1515**	**Torque Sensor Zero Point Adjustment Undone**

DTC	**C1525**	**Rotation Angle Sensor Initialization Undone**

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU outputs these DTCs when it determines that the rotation angle sensor value initialization and torque sensor zero point calibration have not been performed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1515	This DTC is detected when torque sensor zero point calibration has not been performed.	There is no malfunction if this DTC is not output again after performing zero point calibration.
C1525	This DTC is detected when rotation angle sensor value initialization has not been performed.	There is no malfunction if this DTC is not output again after performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO **.**

PROCEDURE

1.	**INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT**

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point INFO .

NEXT

2.	CHECK FOR DTC

(a) Check for DTCs INFO .

Result:

CONDITION	PROCEED TO
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times*1.	A
DTCs are still output even after performing rotation angle sensor value initialization and steering zero point calibration once or twice*2.	B
Normal system code is output.	C

HINT:

- *1: The power steering ECU must be replaced if DTC C1515 or C1525 is still output even after the torque sensor zero point calibration is performed 3 times.
- *2: Perform the torque sensor zero point calibration again if DTC C1515 or C1525 is still output even after the calibration is performed once or twice.

C **END**

B **PERFORM ZERO POINT CALIBRATION AGAIN (TORQUE SENSOR)**

A

3.	REPLACE POWER STEERING ECU

(a) Replace the power steering ECU INFO .

NEXT

4.	**INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT**

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point INFO .

NEXT

5.	**CHECK FOR DTC**

(a) Check for DTCs INFO .

Result:

CONDITION	PROCEED TO
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times*1.	A
DTCs are still output even after performing rotation angle sensor value initialization and steering zero point calibration twice*2.	B
Normal system code is output.	C

HINT:

- *1: The steering column assembly must be replaced if DTC C1515 or C1525 is still output even after the torque sensor zero point calibration is performed 3 times.
- *2: Perform the torque sensor zero point calibration again if DTC C1515 or C1525 is still output even after the calibration is performed twice.

NOTICE:

If replacing the steering column assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point INFO .

C END

B ▶ PERFORM ZERO POINT CALIBRATION AGAIN (TORQUE SENSOR)

A ▶ REPLACE STEERING COLUMN ASSEMBLY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027BY00JX
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): C1516,C1526: Torque Sensor Zero Point Adjustment Incomplete (2010 Corolla)		

DTC	**C1516**	**Torque Sensor Zero Point Adjustment Incomplete**

DTC	**C1526**	**Rotation Angle Sensor Initialization Incomplete**

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU outputs these DTCs when it determines that the rotation angle sensor value initialization and torque sensor zero point calibration are incomplete.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1516	Torque sensor zero point calibration is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing zero point calibration.
C1526	Rotation angle sensor value initialization is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO **.**

PROCEDURE

1.	**CLEAR DTC**

(a) Clear the DTCs INFO .

NEXT

2.	**INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT**

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point INFO .

NEXT

3.	**CHECK FOR DTC**

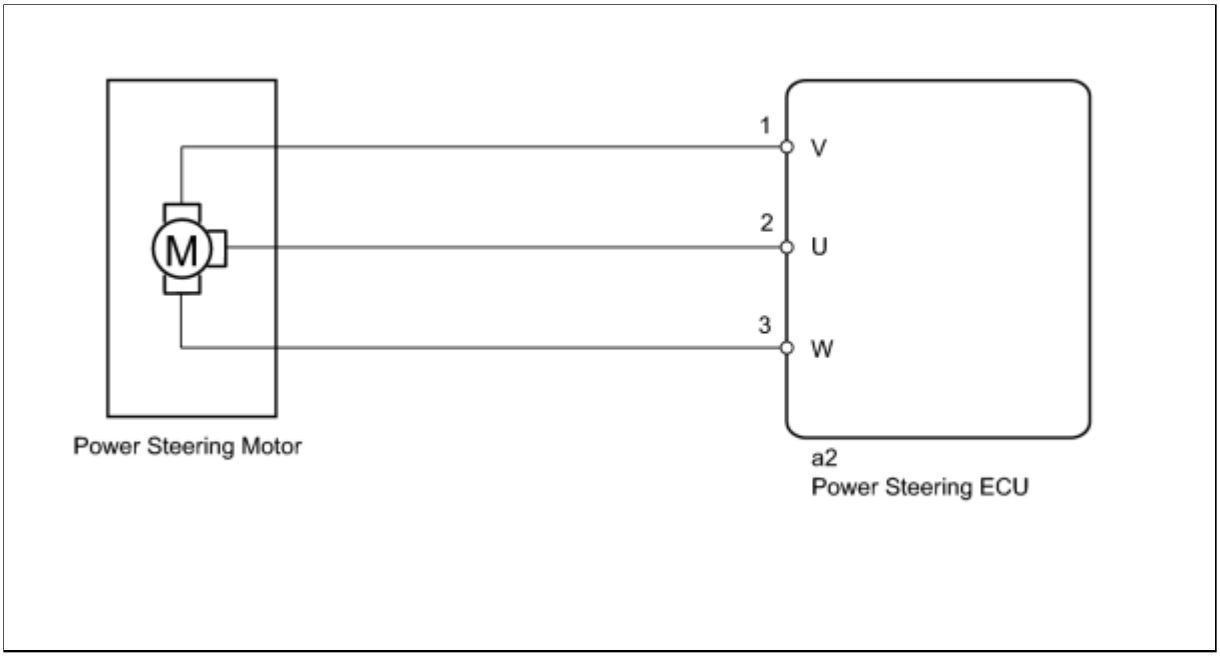
DTC	**C1523**	**Motor Circuit Malfunction**

DTC	**C1524**	**Motor Circuit Malfunction**



DTC	**C1555**	**Motor Relay Welding Failure**

DESCRIPTION

The power steering ECU supplies the current to the power steering motor through the motor circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1522	Motor current sensor malfunction	• Steering column assembly • Power steering ECU
C1523	Excessively large current deviation	
C1524	Short (or open) in motor circuit or abnormal voltage or current in motor circuit	
C1555	Motor relay circuit malfunction	

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO **.**

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (MOTOR VOLTAGE)**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

(f) Select the items "Motor Terminal Volt(U)", "Motor Terminal Volt(V)" and "Motor Terminal Volt(W)" in the Data List and read the value displayed on the Techstream.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Motor Terminal Volt(U)	Motor terminal voltage (U phase)/ Min.: 0 V	During steering operation, value changes within 4 to 35 V range	Steering wheel is turned

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	Max.: 46.667 V		
Motor Terminal Volt(V)	Motor terminal voltage (V phase)/ Min.: 0 V Max.: 46.667 V	During steering operation, value changes within 4 to 35 V range	Steering wheel is turned
Motor Terminal Volt(W)	Motor terminal voltage (W phase)/ Min.: 0 V Max.: 46.667 V	During steering operation, value changes within 4 to 35 V range	Steering wheel is turned

Result:

RESULT	PROCEED TO
During steering operation, value changes within 4 to 35 V range	A
During steering operation, voltage is not generated	B

B ▶ **REPLACE STEERING COLUMN ASSEMBLY**

A ▶ **REPLACE POWER STEERING ECU**

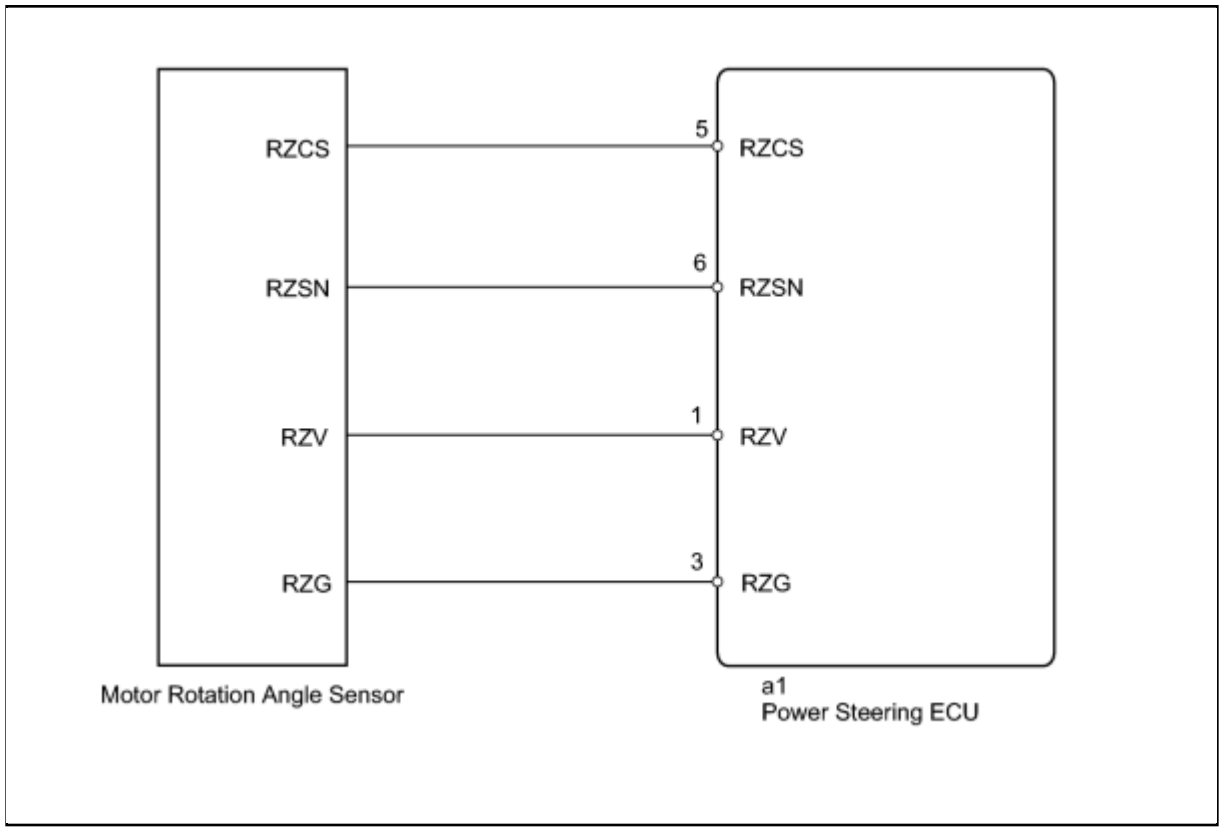
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): C1528: Motor Rotation Angle Sensor Malfunction (2010 Corolla)		



DTC	**C1528**	**Motor Rotation Angle Sensor Malfunction**

DESCRIPTION

The motor rotation angle sensor detects the motor rotation angle and sends this information to the power steering ECU.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1528	Motor rotation angle sensor malfunction	• Motor rotation angle sensor (built into steering column assembly) • Power steering ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO .

PROCEDURE

1.	**CHECK CONNECTOR CONNECTION CONDITION**

(a) Check the installation condition of the motor rotation angle sensor connector.

OK:

Motor rotation angle sensor connector is securely connected to the power steering ECU.

NG ▶ **CONNECT CONNECTOR**

OK ▼

2.	**READ VALUE USING TECHSTREAM (MOTOR ROTATION ANGLE SENSOR)**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

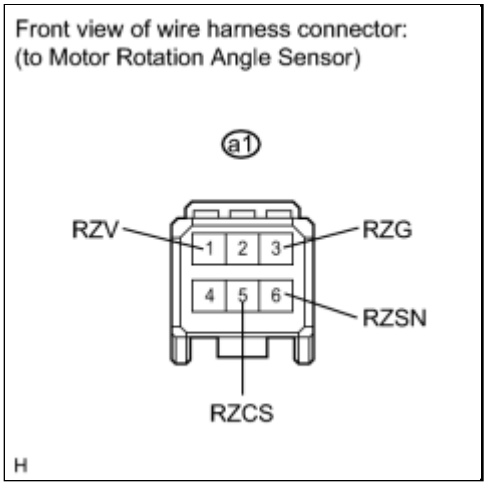
(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Data List.

(f) Select the item "Motor Rotation Angle" in the Data List and read the value displayed on the Techstream.

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Motor Rotation Angle	Motor rotation angle/ Min.: 0 deg Max.: 1441.77 deg	During steering operation, motor rotation angle value changes from 0 to 360°	Power steering in operation



OK:

During steering operation, motor rotation angle value changes from 0 to 360°.

NG ▶ CHECK STEERING COLUMN ASSEMBLY

OK ▶ REPLACE POWER STEERING ECU

3.	CHECK STEERING COLUMN ASSEMBLY

(a) Disconnect the connector from the motor rotation angle sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
a1-6 (RZSN) - a1-3 (RZG)	Always	75.2 to 112.8 Ω
a1-1 (RZV) - a1-3 (RZG)	Always	27.6 to 41.4 Ω
a1-5 (RZCS) - a1-3 (RZG)	Always	73.2 to 110.8 Ω

NG ▶ REPLACE STEERING COLUMN ASSEMBLY

OK ▶ END

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2AZ-FE): C1541: Vehicle Speed Signal Malfunction (2010 Corolla)		

DTC	**C1541**	**Vehicle Speed Signal Malfunction**

DESCRIPTION

The power steering ECU receives vehicle speed signals from the skid control ECU via CAN communication. The ECU provides appropriate assisting force in accordance with the vehicle speed, based on the signals.

If the ECU detects this DTC, it adjusts the amount of power assistance for a speed of 100 km/h (62 mph) and continues the system control.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1541	This DTC is detected when vehicle speed signals via CAN communication are cut off for 3 seconds or more.	• Speed sensor circuit • Skid control ECU • CAN communication system • Power steering ECU

INSPECTION PROCEDURE

NOTICE:

If the steering column assembly or power steering ECU has been replaced, perform the rotation angle sensor initialization and torque sensor zero point calibration INFO **.**

PROCEDURE

1.	**CHECK OTHER DTC OUTPUT (CAN COMMUNICATION SYSTEM)**

(a) Check if DTC U0129 is output.

Result:

RESULT	PROCEED TO
No output	A
U0129 is output	B

HINT:

DTC U0129 indicates a ABS ECU communication malfunction in the power steering system.

B ▶ **GO TO CAN COMMUNICATION SYSTEM**

A

2.	**CHECK OTHER DTC OUTPUT (BRAKE CONTROL SYSTEM)**

(a) Check for DTCs of the brake control system.

HINT:

- Anti-lock brake system: INFO .
- Vehicle stability control system: INFO .

Result:

RESULT	PROCEED TO
No output	A
C0200 or C0210 is output (for Anti-lock Brake System)	B
C0200 or C0210 is output (for Vehicle Stability Control System)	C

HINT:

These DTCs indicate a speed sensor signal malfunction in the Anti-lock Brake System or Vehicle Stability Control System.

NOTICE:

If replacing the power steering ECU, initialize the rotation angle sensor and calibrate the torque sensor zero point INFO .

C ▶ **REPAIR CIRCUIT INDICATED BY OUTPUT CODE (for Vehicle Stability Control System)**

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): PRECAUTION (2010 Corolla)		

PRECAUTION

1. IGNITION SWITCH EXPRESSIONS

HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch on (IG)	ON	On (IG)
	Ignition switch on (ACC)	ACC	On (ACC)
	Engine start	START	Start

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with an SRS (Supplemental Restraint System). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident.

Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System INFO .

3. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC MOTOR POWER STEERING COMPONENTS

(a) Be sure to align the front wheels straight ahead when removing and installing the power steering gear assembly.

(b) If disconnecting the steering sliding yoke sub-assembly and the pinion shaft of the power steering gear assembly, be sure to place matchmarks before starting the operation.

(c) After replacing the steering column assembly or power steering ECU, calibrate the torque sensor zero point INFO .

4. HANDLING PRECAUTION

(a) When handling electronic parts:

(1) Avoid any impact to parts such as ECUs and relays. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not expose to high temperatures or humidity.

(3) In order to prevent deformation or malfunctions due to static electricity, do not touch the connector terminals.

(b) When handling power steering ECU:

(1) When the power steering ECU has been replaced with a new one, perform the assist map writing and the torque sensor zero point calibration INFO .

(c) When handling the steering column assembly:

(1) Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace them with new ones if dropped or subjected to a severe blow.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly has been replaced, perform the torque sensor zero point calibration after initializing the torque sensor zero point INFO .

(d) When disconnecting and reconnecting the connectors:

(1) Before disconnecting the connectors related to the power steering system, turn the ignition switch on (IG), center the steering wheel, turn the ignition switch off, and then disconnect the connectors.

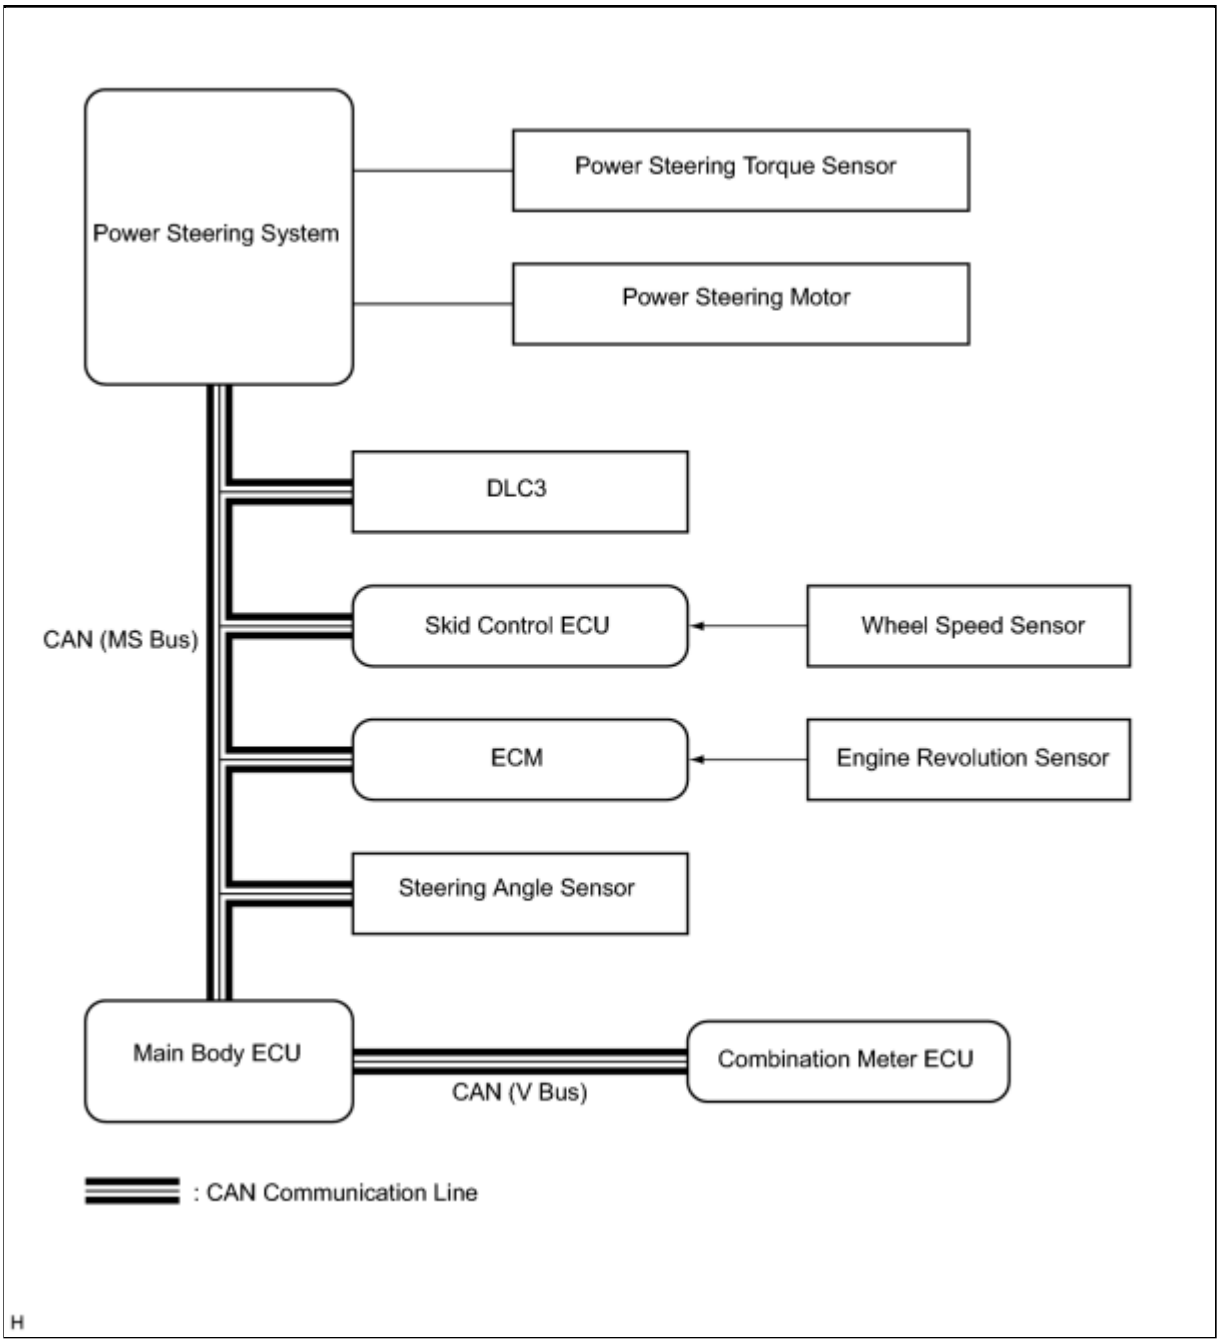
(2) Before reconnecting the connectors related to the power steering system, ensure that the ignition switch is off. Then center the steering wheel and turn the ignition switch on (IG).

NOTICE:

Do not turn the ignition switch on (IG) when the steering wheel is not centered.

(3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between turning right and left. If there is a difference in steering effort between turning right and left, perform the torque sensor zero point calibration after initializing the torque sensor zero point INFO .

5. PRECAUTIONS FOR CAN COMMUNICATION



(a) CAN communication lines are used to receive information from the skid control ECU and the ECM, and to transmit warnings to the combination meter. When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting of the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the electronic power steering system after confirming that the CAN communication system is normal.

(c) Since the CAN communication line has its own length and route, it cannot be temporarily repaired with a bypass wire, etc.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. DESCRIPTION

The power steering system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort.

The power steering ECU determines the direction and the amount of assisting power in accordance with the vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, steering effort is controlled to be light during low speed driving and moderately high during high speed driving.

(a) Power steering ECU:

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:

The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) Power steering motor:

The power steering motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002753013X
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): CALIBRATION (2010 Corolla)		

CALIBRATION

1. TORQUE SENSOR ZERO POINT CALIBRATION (USING TECHSTREAM)

NOTICE:

Perform the torque sensor zero point calibration if any of the following conditions occur:

- The steering column assembly (containing the torque sensor) has been replaced.
- The power steering ECU has been replaced.
- There is a difference in steering effort between turning right and left.

HINT:

When torque sensor zero point calibration is performed, the assist map is written automatically at the same time.

(a) Perform the torque sensor zero point calibration.

NOTICE:

If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.

(1) Set the steering wheel to the center point and align the front wheels straight ahead.

(2) Turn the ignition switch off.

(3) Connect the Techstream to the DLC3.

(4) Start the engine.

(5) Turn the Techstream on.

(6) Calibrate the power steering ECU. Enter the following menus: Chassis / EMPS / Utility / Torque Sensor Adjustment.

NOTICE:

- Do not touch the steering wheel during the torque sensor zero point calibration.
- Perform the calibration only when the vehicle is stopped.

(7) Check for DTCs INFO.

NOTICE:

- After zero point calibration is completed normally, confirm that DTC is not output.
- If DTC C1515, C1516, C1534 or C1581 is output, perform troubleshooting for the corresponding DTC.

Result:

RESULT	SEE PROCEDURE
DTC C1515 is output.	INFO
DTC C1516 is output.	INFO

RESULT	SEE PROCEDURE
DTC C1534 is output.	INFO
DTC C1581 is output.	INFO

2. ASSIST MAP WRITING (USING TECHSTREAM)

HINT:

If DTC C1581 is output after torque sensor zero point calibration, perform assist map writing.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Start the engine.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / EMPS / Utility / Signal Check.

HINT:

- Follow the instructions on the Techstream to perform Signal Check.
- With DTC C1581 output, performing Signal Check will cause the power steering ECU to enter Test Mode and the assist map will be written automatically.

(f) Check for DTCs INFO .

HINT:

After writing the assist map, if DTC C1581 is output, perform the troubleshooting procedure for DTC C1581 INFO .

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Power Steering System

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK POWER STEERING ECU

Power Steering ECU:

N

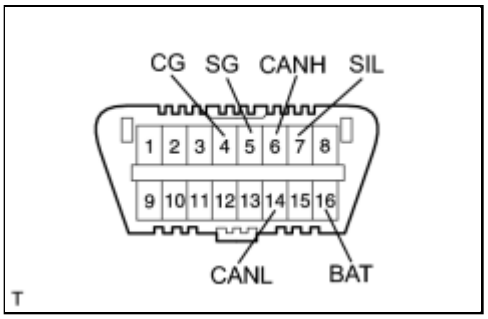
(a) Measure the voltage and resistance according to the value(s) in the table below.

NOTICE:

- Check if the power steering ECU connectors are securely connected by pulling on them from the backside.
- If the P/S warning light is illuminated due to a malfunction, the fail-safe function may cause the voltage of the power steering ECU's terminals to become 0 V.

TERMINALS NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A75-1 (PIG) - Body ground	L - Body ground	Power steering motor power supply input signal	Always	11 to 14 V
A75-2 (PGND) - Body ground	W-B - Body ground	Power ground	Always	Below 1 Ω
a2-1 (M1) - Body ground	R - Body ground	Power steering motor output signal 1	Ignition switch on (IG), steering wheel turned to left	11 to 14 V
			Ignition switch on (IG), steering wheel turned to right	Below 1 V

TERMINALS NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
a2-2 (M2) - Body ground	B - Body ground	Power steering motor output signal 2	Ignition switch on (IG), steering wheel turned to left	Below 1 V
			Ignition switch on (IG), steering wheel turned to right	11 to 14 V
E32-1 (CANH) - E32-7 (CANL)	SB - W	CAN communication line (CAN HI signal)	Ignition switch off	54 to 69 Ω
E32-6 (IG) - Body ground	L - Body ground	IG power source	Ignition switch on (IG)	11 to 14 V
E32-7 (CANL) - E32-1 (CANH)	W - SB	CAN communication line (CAN LO signal)	Ignition switch off	54 to 69 Ω
a3-5 (TRQ1) - Body ground	W - Body ground	Torque sensor 1 input signal	Ignition switch on (IG), steering wheel is not turned (without load)	2.3 to 2.7 V
			Ignition switch on (IG), steering wheel is turned to right	2.5 to 4.7 V
			Ignition switch on (IG), steering wheel is turned to left	0.3 to 2.5 V
a3-6 (TRQV) - Body ground	R - Body ground	Torque sensor power source	Ignition switch on (IG)	7.5 to 8.5 V
a3-7 (TRQ2) - Body ground	Y - Body ground	Torque sensor 2 input signal	Ignition switch on (IG), steering wheel is not turned (without load)	2.3 to 2.7 V
			Ignition switch on (IG), steering wheel is turned to right	2.5 to 4.7 V
			Ignition switch on (IG), steering wheel is turned to left	0.3 to 2.5 V
a3-8 (TRQG) - Body ground	B - Body ground	Torque sensor ground	Always	Below 1 Ω



If the result is not as specified, the ECU may have a malfunction.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000274Z00XX
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

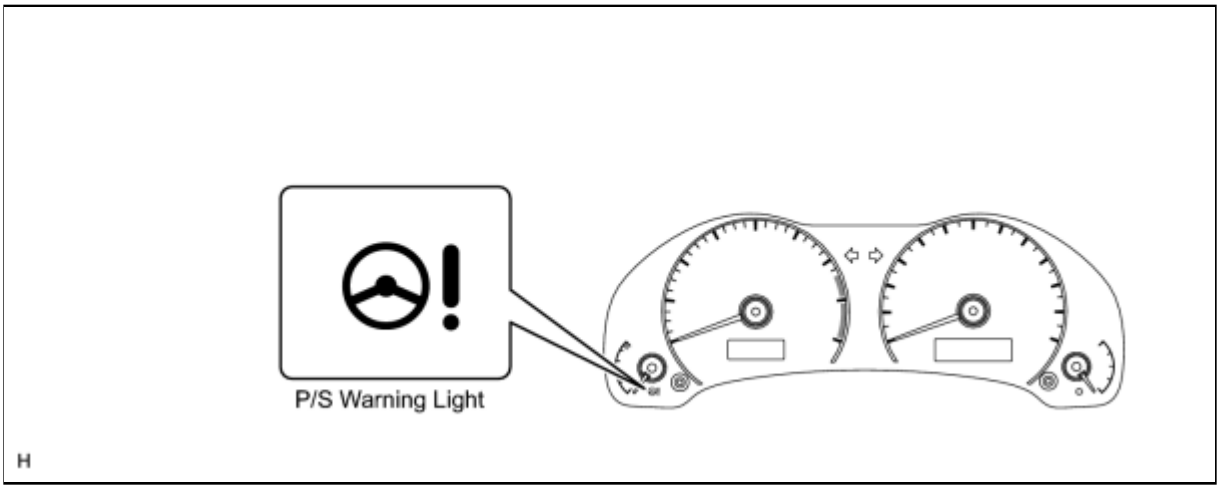
SYMBOL (TERMINAL NO.)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Ignition switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Ignition switch off*	6 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Ignition switch off*	6 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch or any other switches or the doors.**

(b) If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:



Connect the Techstream cable to the DLC3, turn the ignition switch on (IG) and attempt to use the Techstream.

If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the Techstream.

- If communication is normal when the Techstream is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the Techstream is connected to another vehicle, the problem may be in the Techstream itself. Consult the Service Department listed in the Techstream instruction manual.

2. CHECK WARNING LIGHT

(a) If a problem occurs in the power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002750011X
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTCs

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Read the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.

(f) Refer to the Diagnostic Trouble Code Chart for DTC information INFO .

2. CLEAR DTCs

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Start the engine.

(d) Turn the Techstream on.

(e) Clear the DTCs following the display on the Techstream. Enter the following menus: Chassis / EMPS / Trouble Codes.

(f) According to the display on the Techstream, select the trouble code data display with the clear button.

(g) Turn the ignition switch off.

(h) Disconnect the Techstream from the DLC3.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002755013X
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA

1. FREEZE FRAME DATA

NOTICE:

- Freeze frame data values will vary depending on the measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even if the values are within specifications.
- Turn the ignition switch on (IG) and park the vehicle on level ground. Check the freeze frame data by using the Techstream.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch on (IG).

(d) Turn the Techstream on.

(e) Check the freeze frame data on the Techstream.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

If a problem occurs in the power steering system, the P/S warning light on the combination meter comes on, and the ECU stops the steering power assist, maintains a constant amount of power assist, or reduces the amount of power assist to protect the system.

DTC CODE	MALFUNCTION	FAIL-SAFE
C1511 C1512 C1513 C1514 C1515 C1516	Torque sensor malfunction	Power assist stopped
C1517	Torque sensor malfunction	Power assist stopped
C1524	Motor malfunction	Power assist stopped
C1531 C1532	Power steering ECU malfunction	Power assist stopped
C1533	Temperature sensor malfunction in power steering ECU	Assist force restricted
C1534	EEPROM abnormal	Power assist stopped
C1535	Steering wheel location data error	Power assist stopped
C1551	IG power source voltage error	Power assist stopped
C1552	PIG power source voltage error	Power assist stopped
C1553	Overvoltage at IG and PIG terminals	Power assist stopped
C1554	Power source relay malfunction	Power assist stopped
C1555	Motor relay malfunction	Power assist stopped
C1581	ECU malfunction (Assist map number un-writing)	Permission of control assist map
U0100	ECM communication error	Power assist stopped
U0129	Skid control ECU communication error	Amount of power assist remains constant at speed of 70 km/h (43 mph)

HINT:

The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering

wheel is kept in either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch on (IG).

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / EMPS / Data List.

(g) According to the display on the Techstream, read the "Data List".

EMPS

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Meter Vehicle Velocity	Vehicle speed from meter/ Min.: 0 km/h (mph) Max.: 300 km/h (186.4 mph)	0 km/h (0 mph)	Vehicle stopped
		No significant fluctuation	Vehicle driven at constant speed
Engine Revolution	Engine revolution/ Min.: 0 rpm Max.: 12800 rpm	No significant fluctuation	Engine is running at a constant speed
Motor Actual Current	Current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Engine running, power steering is in operation
Command Value Current	Requested current to motor/ Min.: -327.68 A Max.: 327.67 A	Value changes in proportion to steering effort	Engine running, power steering is in operation
hermistor Temperature	ECU substrate temperature/ Min.: -40°C (-40°F) Max.: 150°C (302°F)	-40 to 150°C (-40 to 302°F)	-

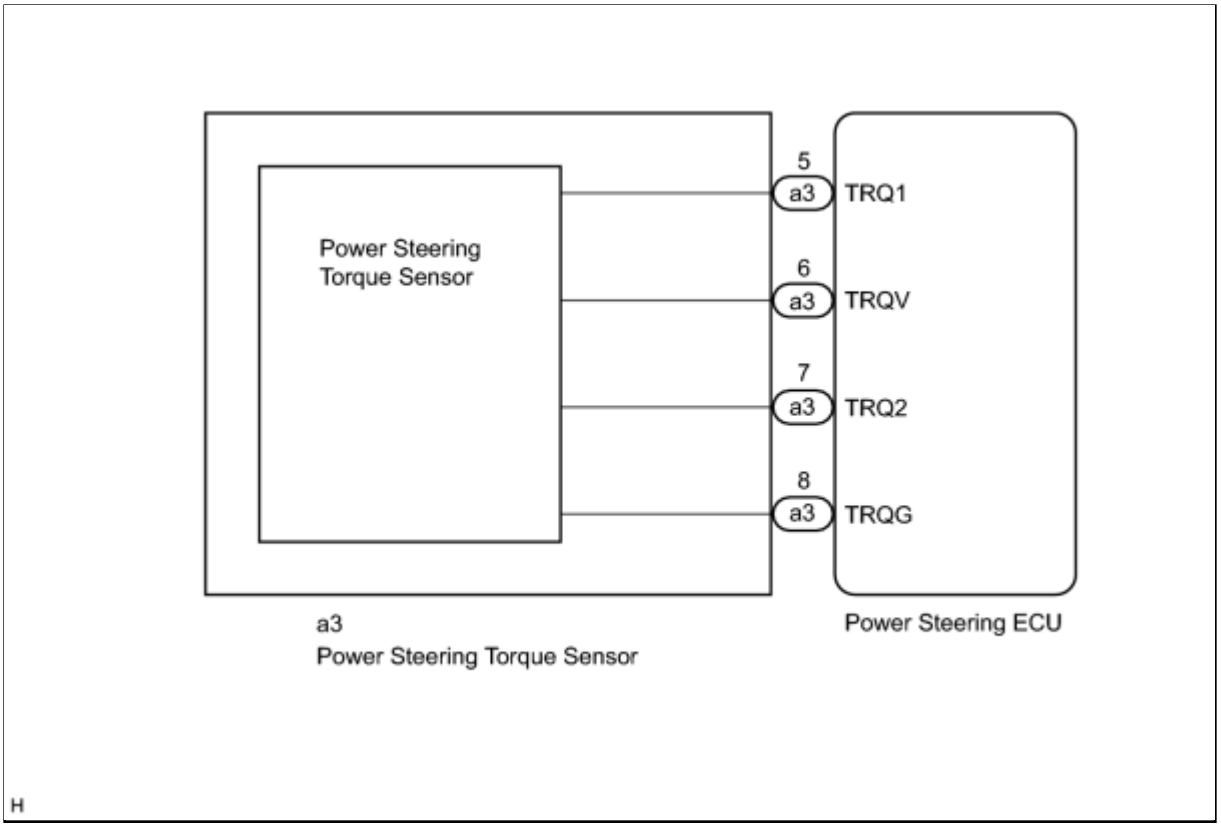
Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): C1511-C1514,C1517: Torque Sensor Circuit Malfunction (2010 Corolla)		

DTC	**C1511**	**Torque Sensor Circuit Malfunction**

DTC	**C1512**	**Torque Sensor Circuit Malfunction**

DTC	**C1513**	**Torque Sensor Circuit Malfunction**

DTC	**C1514**	**Torque Sensor Power Supply Abnormal**



DTC	**C1517**	**Torque Hold Abnormal**

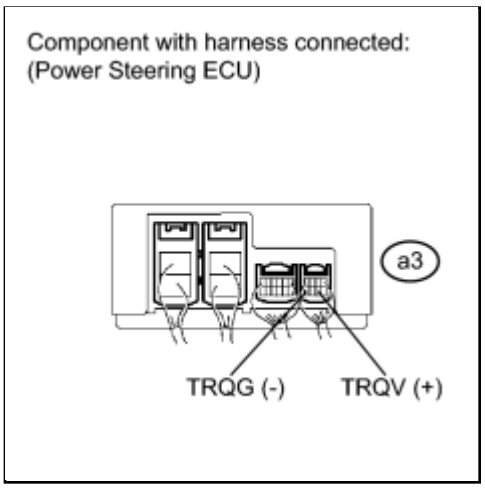
DESCRIPTION

The power steering ECU calculates assisting power based on steering torque signals from the torque sensor. If these DTCs are stored in the power steering ECU, the ECU stops steering power assist as a fail-safe function.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C1511	Torque sensor (TRQ1) signal error or stop	• Steering column assembly (torque sensor) • Power steering ECU
C1512	Torque sensor (TRQ2) signal error or stop	
C1513	Deviation between torque sensor TRQ1 and TRQ2 exceeds specified value	
C1514	Torque sensor power source voltage error	
C1517	Temporary control due to malfunction related to torque sensor continues for long time	

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

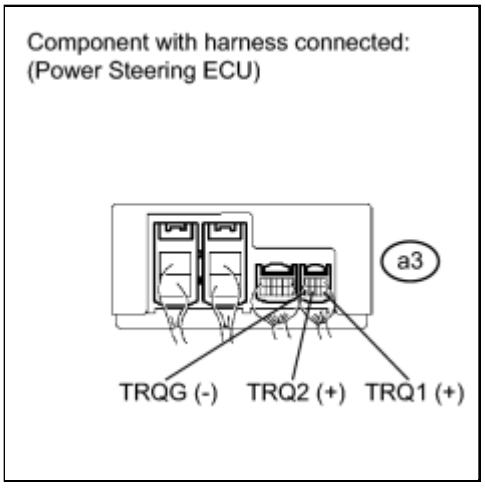
- If the power steering ECU has been replaced with a new one, perform the assist map writing and the torque sensor zero point calibration INFO .
- If the steering column assembly has been replaced with a new one, perform the torque sensor zero point calibration after performing the initialization of the torque sensor zero point value INFO .

PROCEDURE

1.	**CHECK POWER STEERING ECU (TOQUE SENSOR OUTPUT)**

(a) Turn the ignition switch on (IG).

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
a3-6 (TRQV) - a3-8 (TRQG)	Ignition switch on (IG)	7.5 to 8.5 V

NG ▶ **REPLACE POWER STEERING ECU**

OK ▼

2.	**CHECK STEERING COLUMN ASSEMBLY (TORQUE SENSOR)**

(a) Turn the ignition switch on (IG).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION (STEERING POSITION)	SPECIFIED CONDITION
a3-5 (TRQ1) - a3-8 (TRQG)	Ignition switch on (IG) Center position	2.3 to 2.7 V
a3-7 (TRQ2) - a3-8 (TRQG)	Ignition switch on (IG) Center position	2.3 to 2.7 V
a3-5 (TRQ1) - a3-8 (TRQG)	Ignition switch on (IG) Turned to right	2.5 to 4.7 V
a3-7 (TRQ2) - a3-8 (TRQG)	Ignition switch on (IG) Turned to right	2.5 to 4.7 V
a3-5 (TRQ1) - a3-8 (TRQG)	Ignition switch on (IG) Turned to left	0.3 to 2.5 V
a3-7 (TRQ2) - a3-8 (TRQG)	Ignition switch on (IG) Turned to left	0.3 to 2.5 V

NG ▶ **REPLACE STEERING COLUMN ASSEMBLY**

OK ▶ **REPLACE POWER STEERING ECU**

Title: POWER ASSIST SYSTEMS: POWER STEERING SYSTEM (for 2ZR-FE): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

NOTICE:

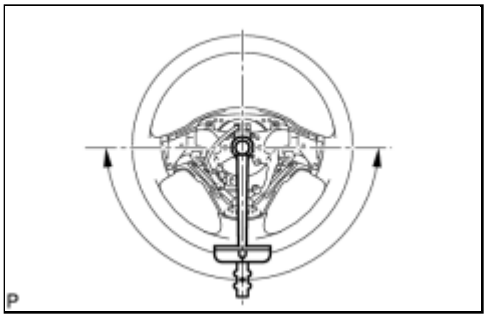
Some of these service operations may affect the SRS airbags. Read the precautionary notices concerning the SRS airbag system before servicing.

(a) Stop the vehicle on a level, paved road and align the wheels facing straight ahead.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



(c) Remove the steering pad INFO .

(d) Connect the cable to the negative (-) battery terminal.

(e) Using a torque wrench, check that the steering wheel set nut is properly tightened.

Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

(f) Turn the ignition switch to the ON position (the engine is stopped) so that the power steering is ready to operate.

(g) Turn the steering wheel 90 degrees to the right and check the steering effort (torque) while continuing to turn it further in the same direction.

Steering effort (Reference):
5.5 N*m (56 kgf*cm, 49 in.*lbf) or less

(h) Align the front wheels facing straight ahead.

(i) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(j) Install the steering pad INFO .

(k) Connect the cable to the negative (-) battery terminal.

(l) Clear the DTCs INFO .

(m) Inspect the airbag warning light INFO .

Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

CAUTION:

Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing INFO .

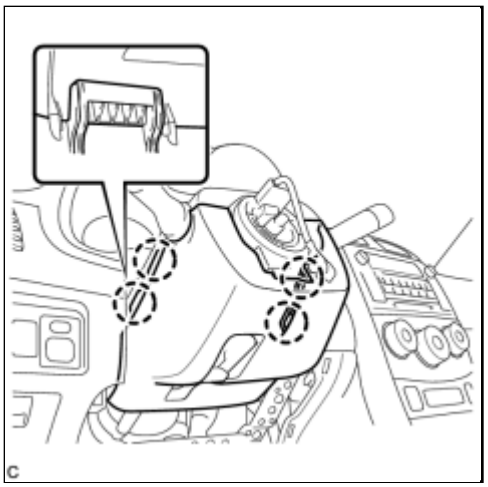
1. REMOVE STEERING WHEEL ASSEMBLY (w/ Steering Pad Switch)

HINT:

Refer to the procedures up to "Remove steering wheel assembly" INFO .

2. REMOVE STEERING WHEEL ASSEMBLY (w/o Steering Pad Switch)

HINT:



Refer to the procedures up to "Remove steering wheel assembly" INFO .

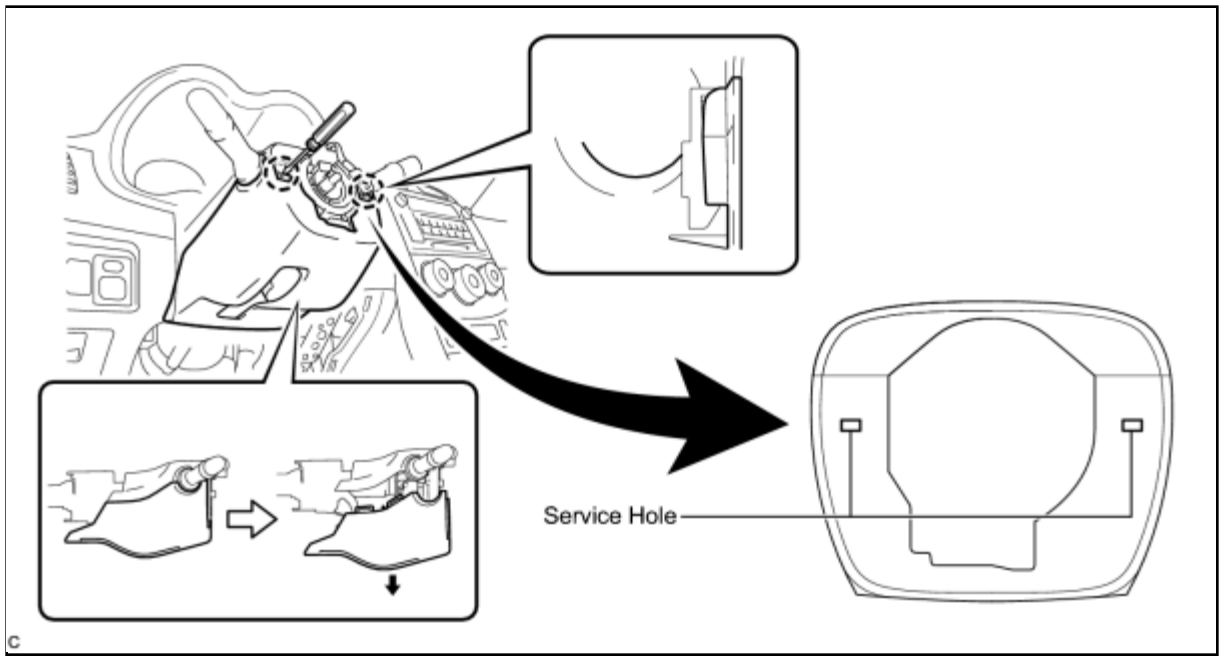
3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

4. REMOVE LOWER STEERING COLUMN COVER

NOTICE:

Removing the lower steering column cover in the incorrect order will cause the lower steering column cover to break.

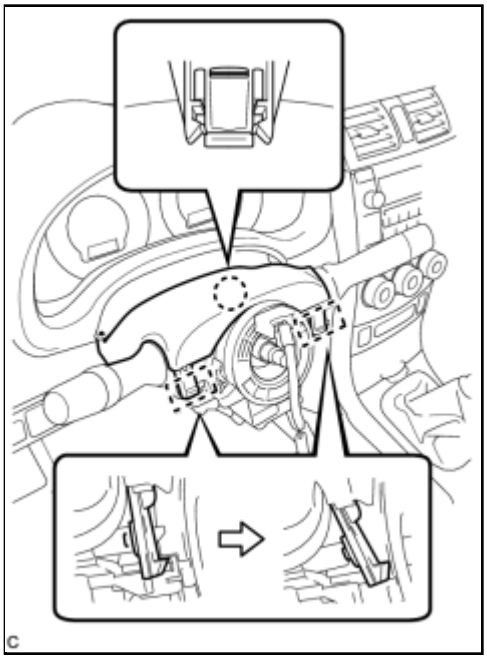
(a) Push the right and left sides of the lower steering column cover, and disengage the 4 claws.



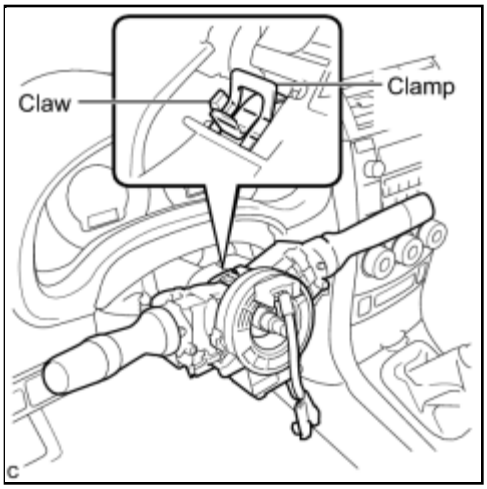
(b) Insert your fingers into the opening of the tilt lever of the lower steering column cover to disengage the claw.

HINT:

Spread the claw to disengage it.



(c) Using a screwdriver, insert the tip into each service hole to disengage the 2 claws and remove the lower steering column cover as shown in the illustration.



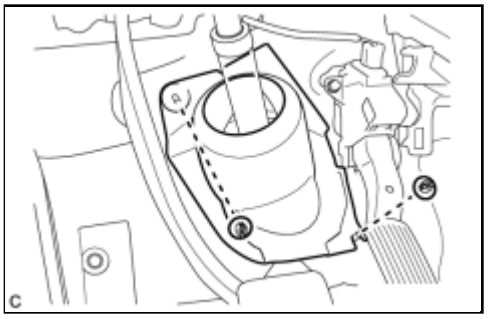
5. REMOVE UPPER STEERING COLUMN COVER

(a) Disengage the claw and the 2 pins, and remove the upper steering column cover.

6. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

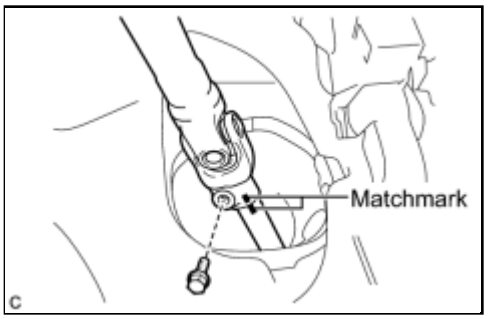
(a) Disconnect the connectors from the turn signal switch assembly with spiral cable sub-assembly.

(b) Use pliers to hold the clamp and raise the claw with a screwdriver. Remove the turn signal switch assembly with spiral cable sub-assembly from the steering column assembly.



7. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

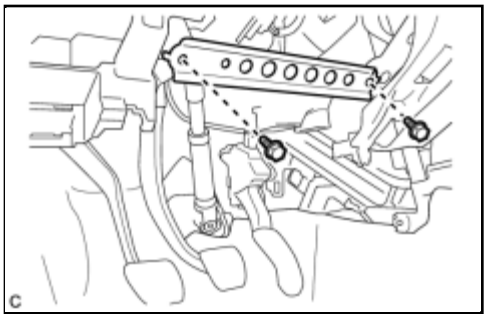
HINT:



Refer to the instructions for Removal of the upper instrument panel INFO .

8. REMOVE COLUMN HOLE COVER SILENCER SHEET

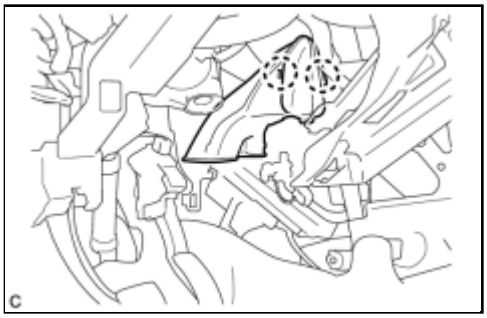
(a) Turn back the floor carpet, and remove the 2 clips and column hole cover silencer sheet.



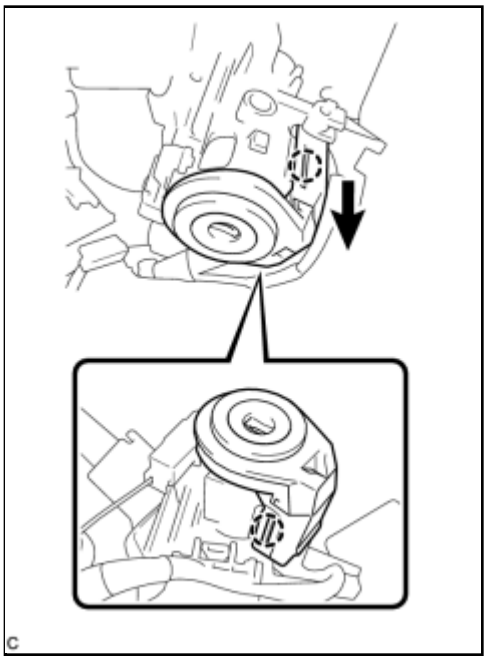
9. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Put matchmarks on the No. 2 steering intermediate shaft assembly and the steering intermediate shaft.

(b) Remove the bolt and separate the No. 2 steering intermediate shaft assembly from the steering intermediate shaft.

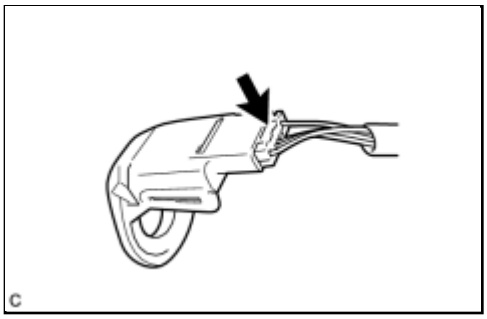


10. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT



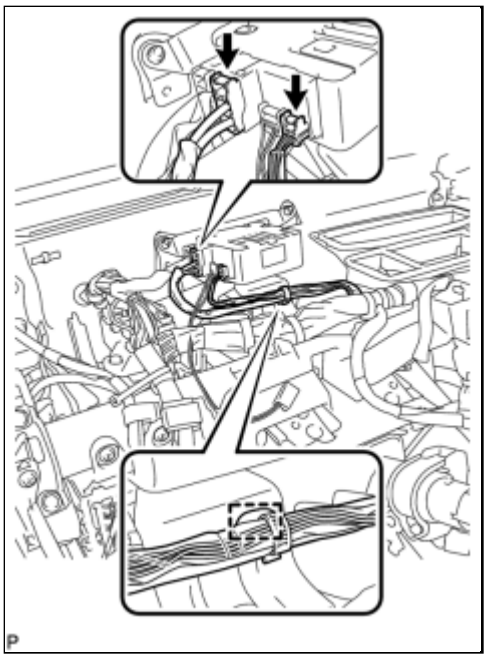
(a) Remove the 2 bolts and instrument panel sub reinforcement.

11. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY



(a) Disengage the 2 claws and remove the No. 3 air duct sub-assembly.

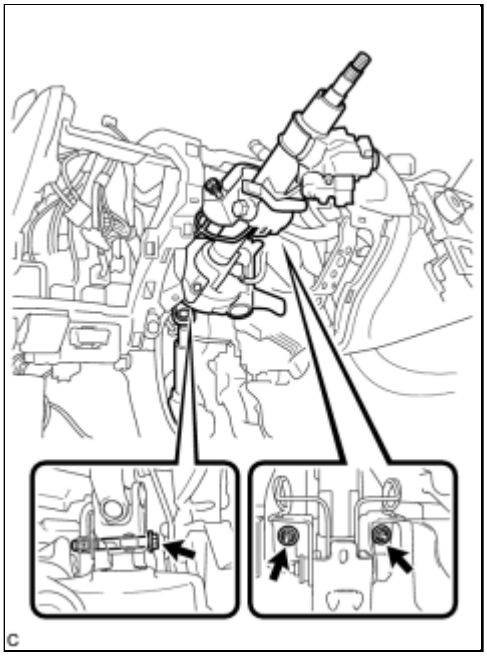
12. REMOVE TRANSPONDER KEY AMPLIFIER (w/o Smart Key System)



(a) Slide the transponder key amplifier to disengage the 2 claws as shown in the illustration.

(b) Disconnect the connector and remove the transponder key amplifier.

13. REMOVE STOP LIGHT SWITCH ASSEMBLY INFO

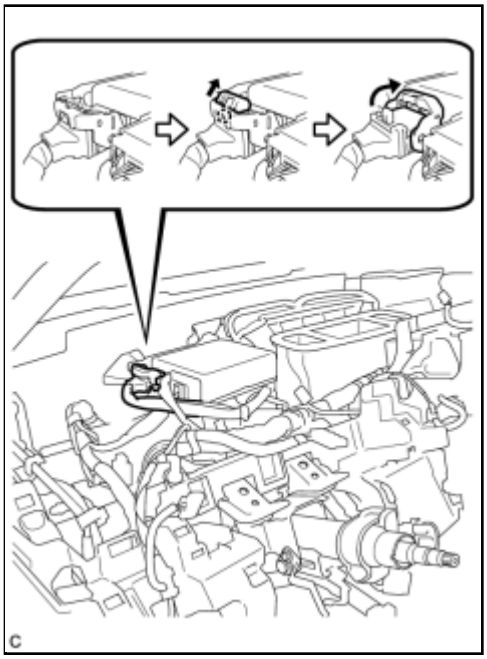


14. REMOVE STEERING POST ASSEMBLY (for 2ZR-FE)

(a) Separate the wire harness clamp from the power steering ECU assembly.

(b) Disconnect the 2 connectors from the power steering ECU assembly.

(c) Disconnect the connectors and disengage the wire harness clamps from the steering column assembly.

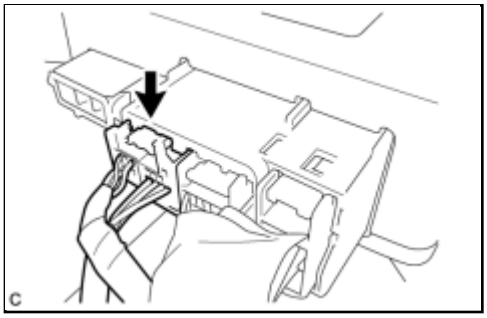


(d) Remove the bolt, 2 nuts and steering post assembly.

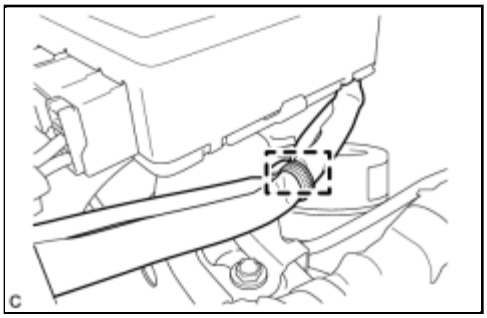
NOTICE:

- Do not release the tilt lever when the steering column assembly is not installed on the vehicle.
- Do not drop or strike the steering column assembly. If dropped or struck, replace it with a new one.

15. REMOVE STEERING POST ASSEMBLY (for 2AZ-FE)



(a) Disconnect the connector from the power steering ECU

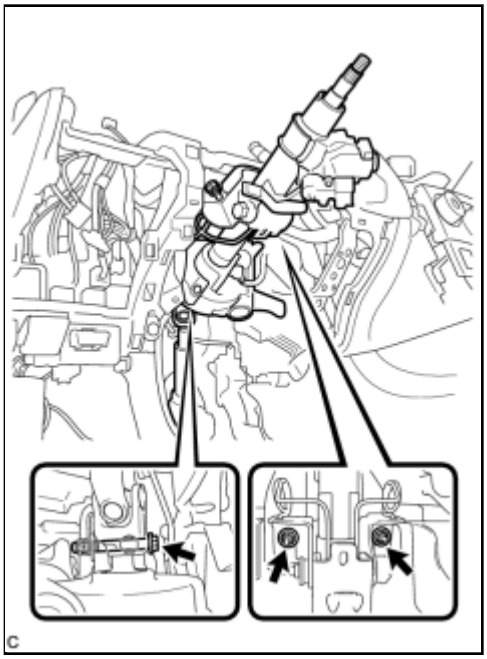


assembly.

HINT:

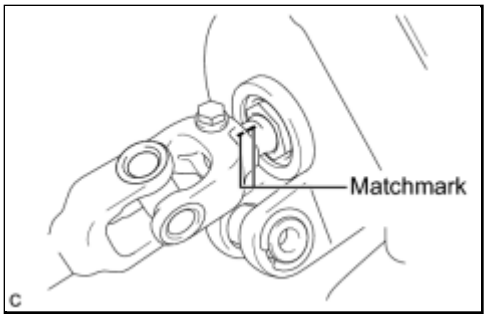
Pull out the lock of the lock lever, disengage the claw, and turn the lock lever to disconnect the connector, as shown in the illustration.

(b) Disconnect the connector from the power steering ECU assembly.



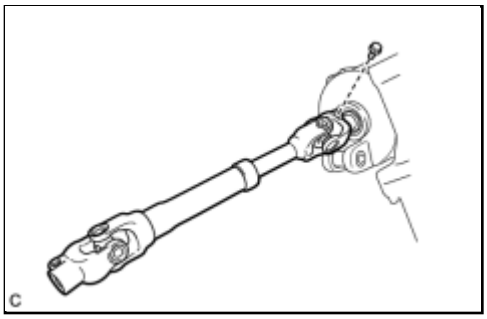
(c) Separate the wire harness clamp from the power steering ECU assembly.

(d) Remove the bolt, 2 nuts, and steering post assembly.



NOTICE:

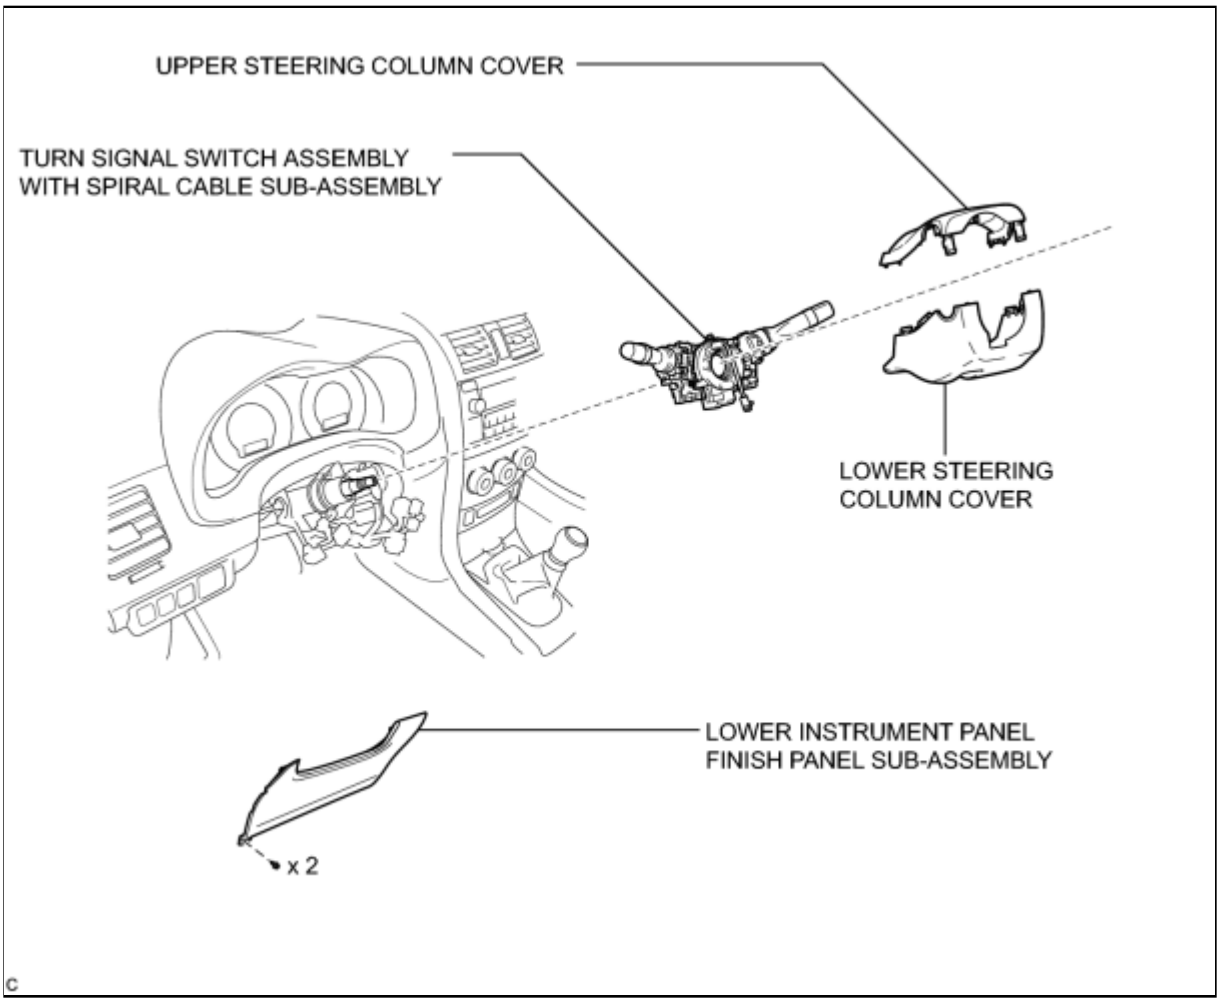
- Do not release the tilt lever when the steering column assembly is not installed on the vehicle.
- Do not drop or strike the steering column assembly. If



dropped or struck, replace it with a new one.

16. REMOVE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Put matchmarks on the No. 2 steering intermediate shaft assembly and the steering column assembly.



(b) Remove the bolt and the No. 2 steering intermediate shaft assembly from the steering column assembly.

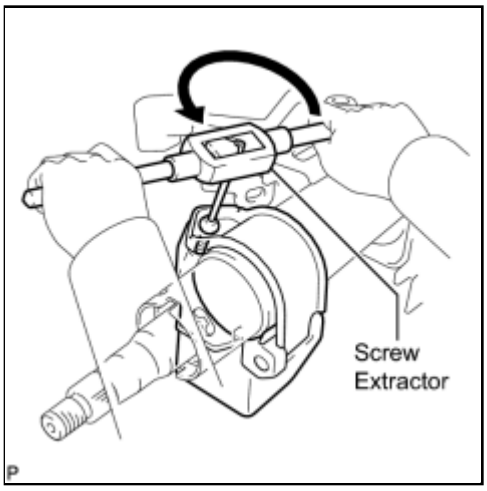
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

NOTICE:



When using a vise, do not overtighten it.

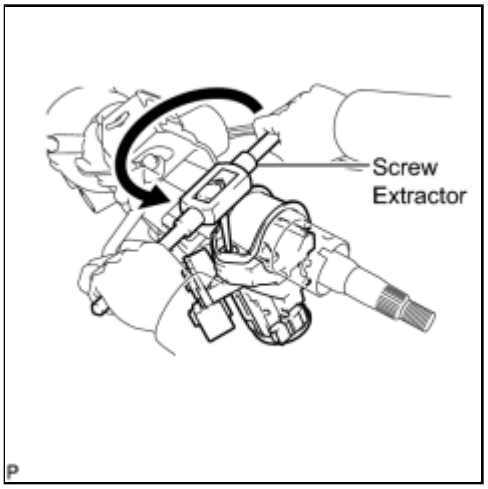
1. REMOVE STEERING LOCK ACTUATOR ASSEMBLY (w/ Smart Key System)

(a) Secure the steering column assembly in a vise.

(b) Using a center punch, mark the center of the tapered-head bolt.

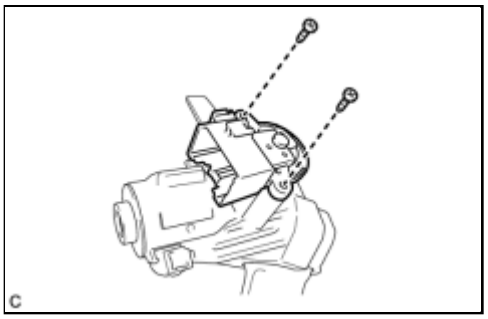
(c) Using a 3 to 4 mm (0.118 to 0.157 in.) diameter drill bit, drill a hole in the tapered-head bolt.

(d) Using a screw extractor, remove the tapered-head bolt, and then remove the steering lock actuator assembly from the steering column assembly.



2. REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (w/o Smart Key System)

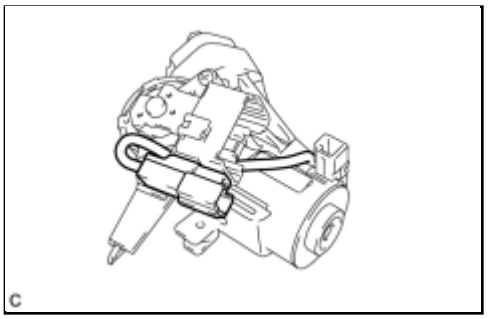
(a) Secure the steering column assembly in a vise.



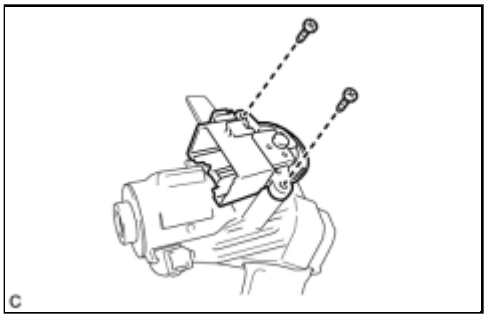
(b) Using a center punch, mark the center of the tapered-head bolt.

(c) Using a 3 to 4 mm (0.118 to 0.157 in.) diameter drill bit, drill a hole in the tapered-head bolt.

(d) Using a screw extractor, remove the tapered-head bolt, and then remove the steering column upper with switch bracket assembly from the steering column assembly.

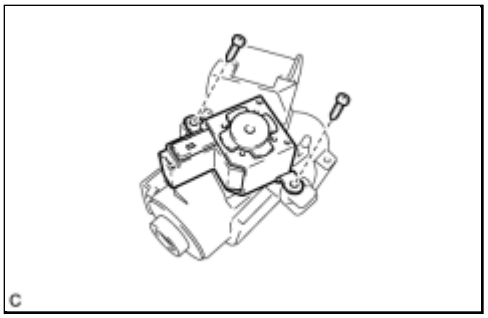


3. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY (for Manual Transaxle)

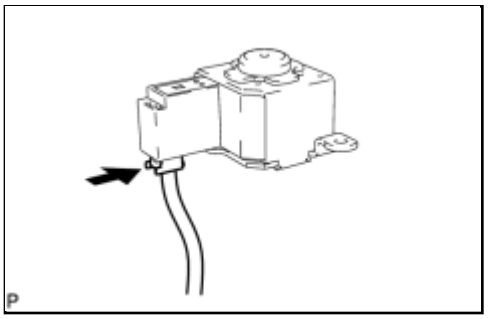


(a) Remove the 2 screws and the ignition or starter switch assembly from the steering column upper bracket.

4. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY (for Automatic Transaxle without Smart Key System)

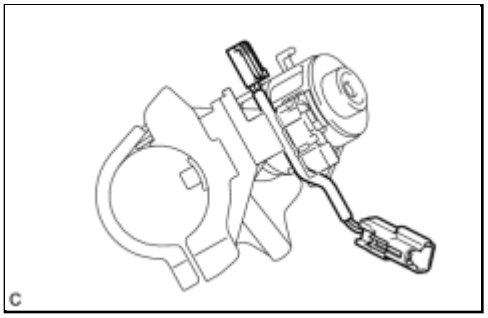


(a) Remove the solenoid wire connector from the ignition or starter switch assembly.

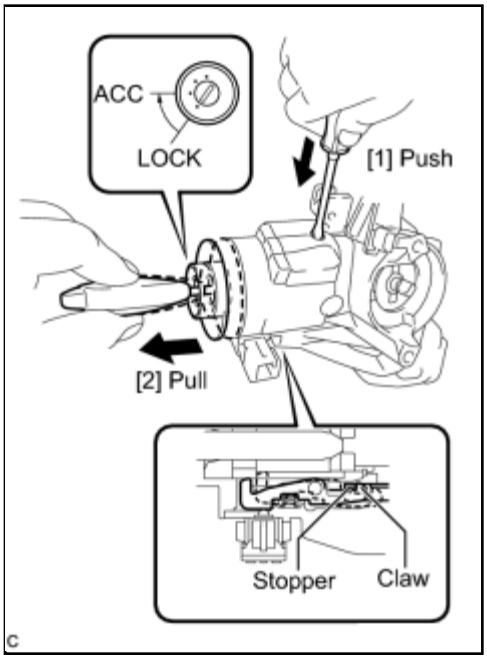


(b) Remove the 2 screws and the ignition or starter switch assembly from the steering column upper bracket.

5. REMOVE KEY INTERLOCK SOLENOID (for Automatic Transaxle without Smart Key System)



(a) Remove the 2 screws and the key interlock solenoid from the steering column upper bracket.

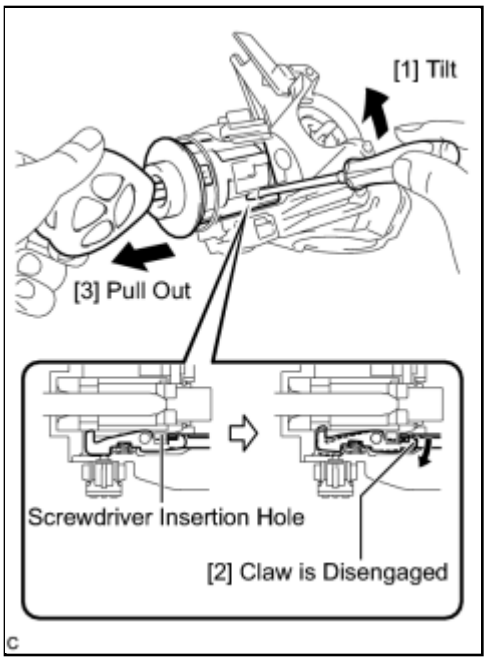


(b) Disconnect the solenoid wire connector from the key interlock solenoid.

6. REMOVE SOLENOID WIRE (for Automatic Transaxle without Smart Key System)

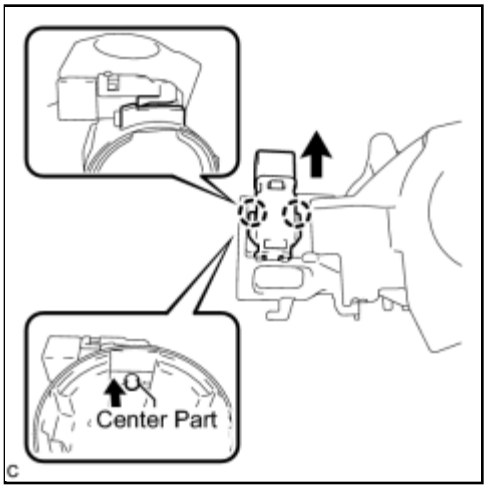
(a) Remove the solenoid wire from the steering column upper bracket.

7. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY (w/o Smart Key System)



(a) Turn the ignition switch lock cylinder assembly to the ACC position.

(b) Insert a screwdriver into the hole of the steering column upper with switch bracket assembly as shown in the illustration. Pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column upper with switch bracket assembly.



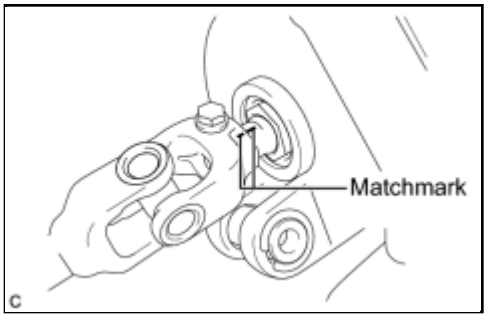
NOTICE:

Make sure to pull the ignition switch lock cylinder assembly until its claw contacts the stopper of the steering column upper with switch bracket assembly. Failure to do so will affect later work operations.

(c) Insert a screwdriver into the hole of the steering column upper with switch bracket assembly. Tilt the screwdriver as shown in the illustration to disengage the claw of the ignition switch lock cylinder assembly, and pull out the ignition switch lock cylinder assembly.

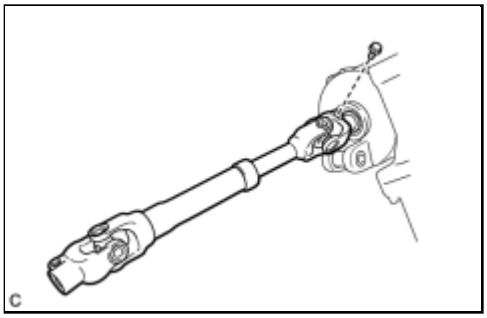
8. REMOVE UNLOCK WARNING SWITCH ASSEMBLY (w/o Smart Key System)

(a) Remove the unlock warning switch assembly by pushing up the center part and releasing the 2 claws.



HINT:

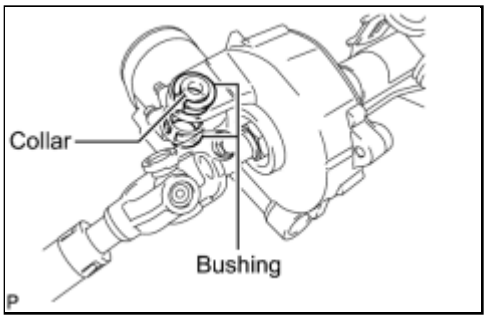
Slide the unlock warning switch in the direction shown by the arrow in the illustration to remove it.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029SX00ZX
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

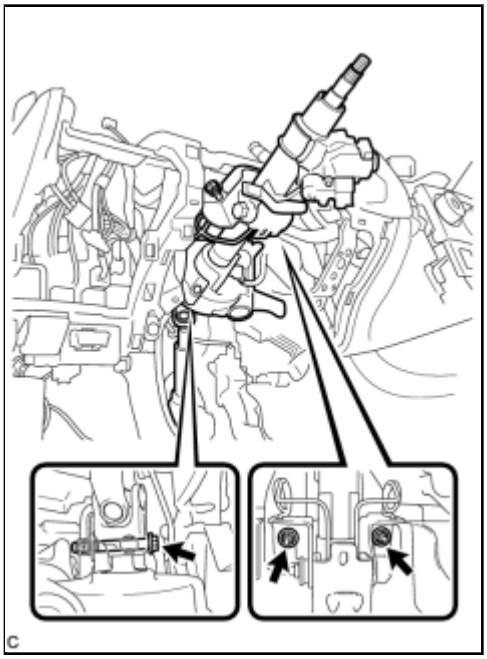


(a) Align the matchmarks on the No. 2 steering intermediate shaft assembly and the steering column assembly.

(b) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26ft·lbf)

2. INSTALL STEERING POST ASSEMBLY (for 2ZR-FE)

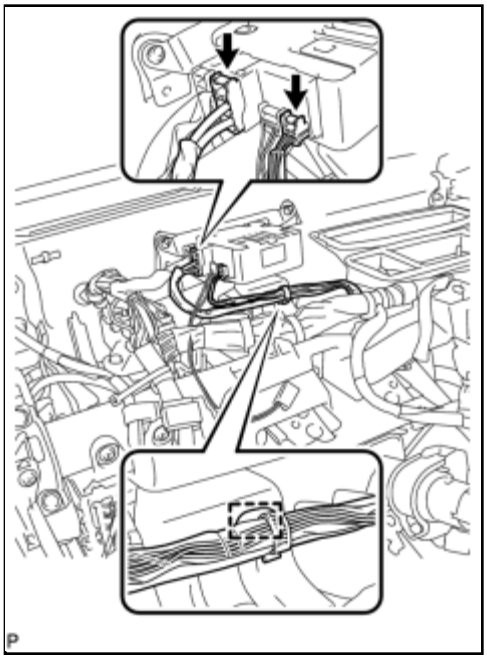


(a) Check that the 2 bushings are securely installed to the steering column assembly.

HINT:

If the bushings are missing or damaged, replace the steering column assembly with a new one.

(b) Install the steering post assembly with the bolt and 2 nuts.

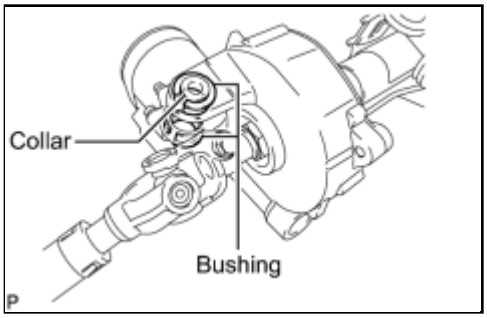


Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

NOTICE:

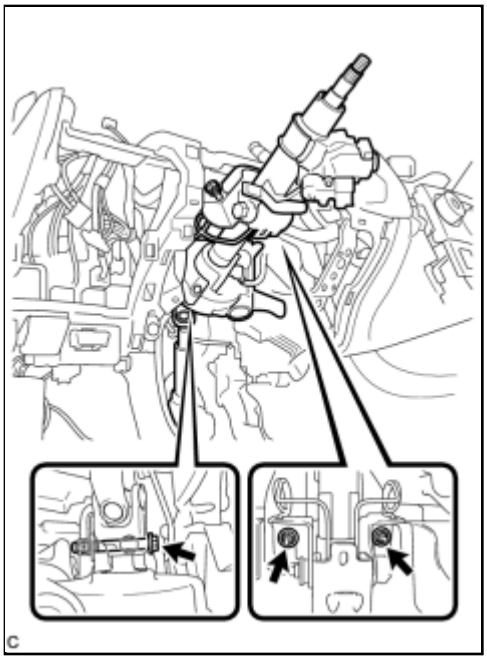
- Do not damage the 2 bushings.
- Do not line up the bolt hole by prying on the collar or bushings. Only install the bolt in straight, without applying any force to the bushings.

(c) Connect the connectors and engage the wire harness clamps to the steering column assembly.



(d) Connect the 2 connectors to the power steering ECU assembly.

(e) Install the wire harness clamp to the power steering ECU assembly.

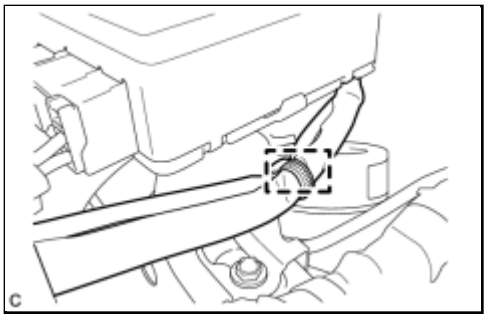


3. INSTALL STEERING POST ASSEMBLY (for 2AZ-FE)

(a) Check that the 2 bushings are securely installed to the steering column assembly.

HINT:

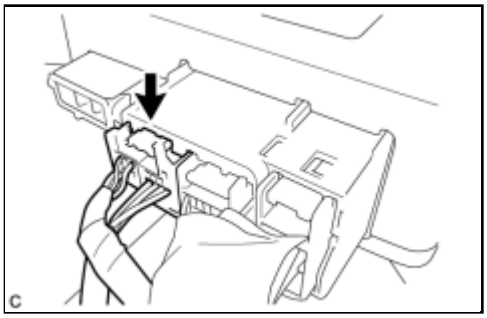
If the bushings are missing or damaged, replace the steering column assembly with a new one.



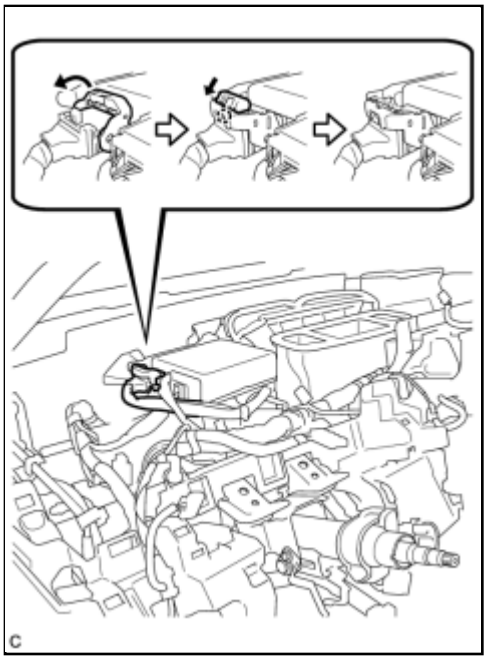
(b) Install the steering post assembly with the bolt and 2 nuts.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

NOTICE:



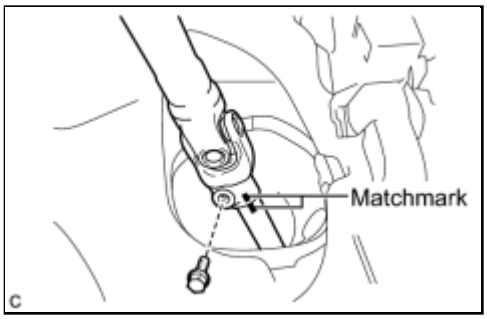
- Do not damage the 2 bushings.
- Do not line up the bolt hole by prying on the collar or bushings. Only install the bolt in straight, without applying any force to the bushings.



(c) Connect the connectors and engage the wire harness clamps to the steering column assembly.

(d) Engage the wire harness clamp to the power steering ECU assembly.

(e) Connect the connector to the power steering ECU assembly.



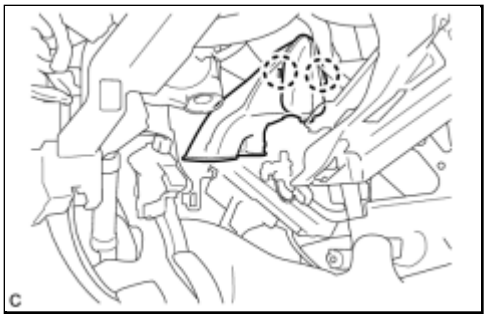
(f) Connect the connector to the power steering ECU assembly.

HINT:

Return the lock lever to the original position, engage the claw, and push in the lock of the lock lever, as shown in the illustration.

4. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

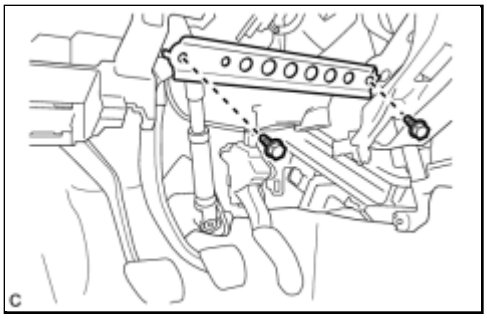
5. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY



(a) Align the matchmarks on the No. 2 steering intermediate shaft assembly and the steering intermediate shaft assembly.

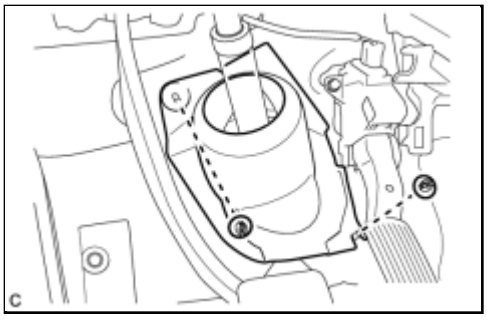
(b) Install the bolt.

Torque: 35 N·m (360 kgf·cm, 26ft·lbf)



6. INSTALL STOP LIGHT SWITCH ASSEMBLY INFO

7. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY

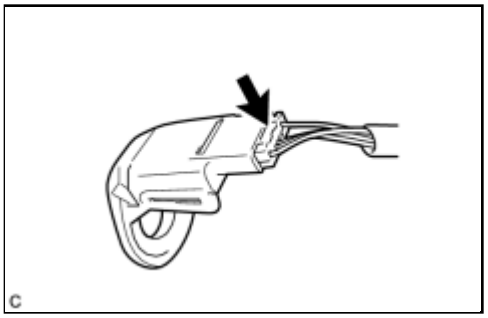


(a) Engage the 2 claws and install the No. 3 air duct sub-assembly.

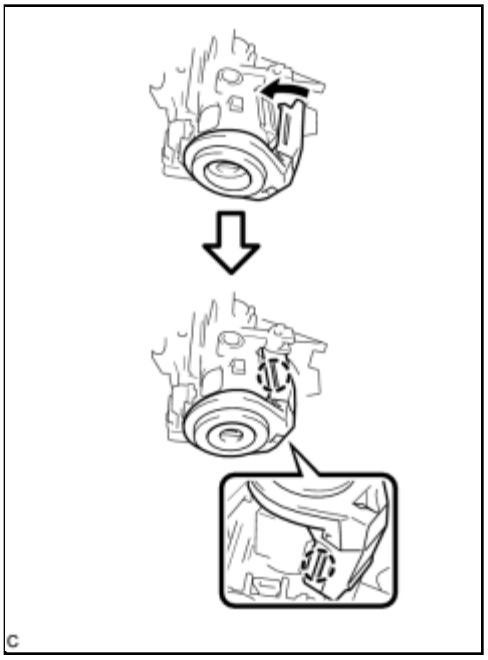
8. INSTALL INSTRUMENT PANEL SUB REINFORCEMENT

(a) Install the instrument panel sub reinforcement with the 2 bolts.

9. INSTALL COLUMN HOLE COVER SILENCER SHEET



(a) Install the column hole cover silencer sheet with the 2 clips.



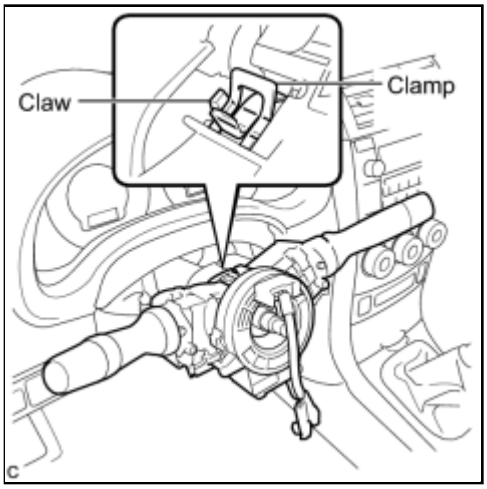
(b) Install the floor carpet.

10. INSTALL TRANSPONDER KEY AMPLIFIER (w/o Smart Key System)

(a) Connect the connector to the transponder key amplifier.

(b) Align the transponder key amplifier with the steering column upper bracket. Tilt the amplifier slightly and slide it into position.

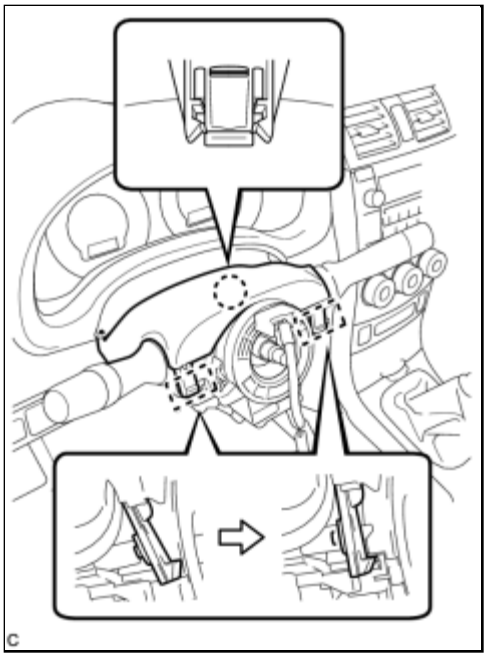
(c) Push the transponder key amplifier, and engage the 2 claws to install the transponder key amplifier to the steering column upper bracket.



11. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

HINT:

Refer to the instructions for Installation of the upper instrument panel INFO **.**

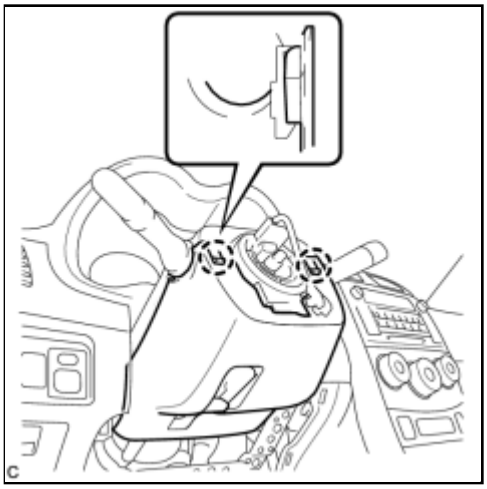


12. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

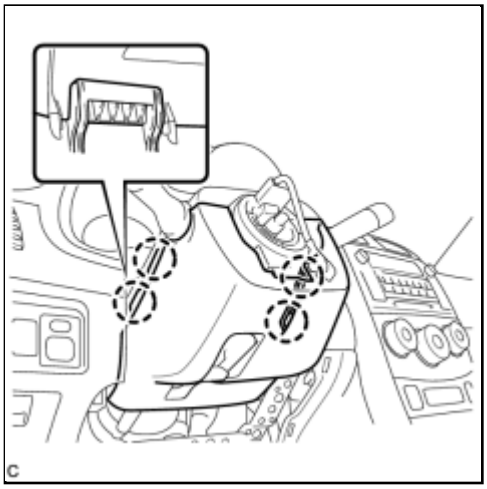
(a) Using pliers, engage the claw. Install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly.

(b) Install the connectors to the turn signal switch assembly with spiral cable sub-assembly.

13. INSTALL UPPER STEERING COLUMN COVER



(a) Engage the claw and the 2 pins, and install the upper steering column cover.



14. INSTALL LOWER STEERING COLUMN COVER

NOTICE:

If the lower steering column cover is installed in the incorrect order, it will not be possible to assemble the lower steering column cover.

(a) Engage the 2 claws to install the lower steering column cover.

(b) Engage the 4 claws.

(c) Engage the claw.

HINT:

Press the area around the claw to engage it.

15. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

16. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

17. ADJUST SPIRAL CABLE INFO

18. INSTALL STEERING WHEEL ASSEMBLY (w/ Steering Pad Switch)

HINT:

Refer to the procedures from "Install steering wheel assembly" INFO .

19. INSTALL STEERING WHEEL ASSEMBLY (w/o Steering Pad Switch)

HINT:

Refer to the procedures from "Install steering wheel assembly" INFO .

20. REGISTER ECU CODE

NOTICE:

When replacing the steering lock actuator assembly, perform initialization INFO .

21. CALIBRATE TORQUE SENSOR ZERO POINT (for 2AZ-FE)

HINT: INFO .

22. CALIBRATE TORQUE SENSOR ZERO POINT (for 2ZR-FE)

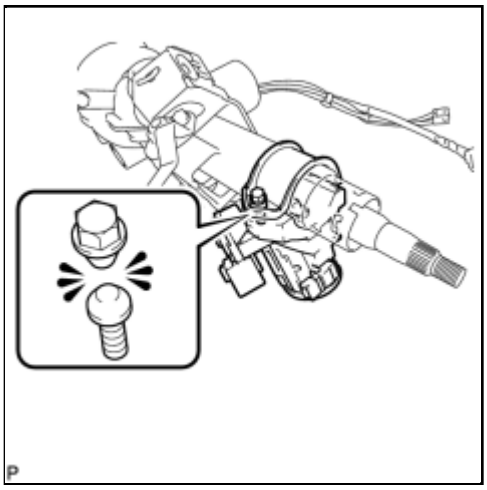
HINT: INFO .

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UD1033X
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: REASSEMBLY (2010 Corolla)		

REASSEMBLY

NOTICE:

When using a vise, do not overtighten it.



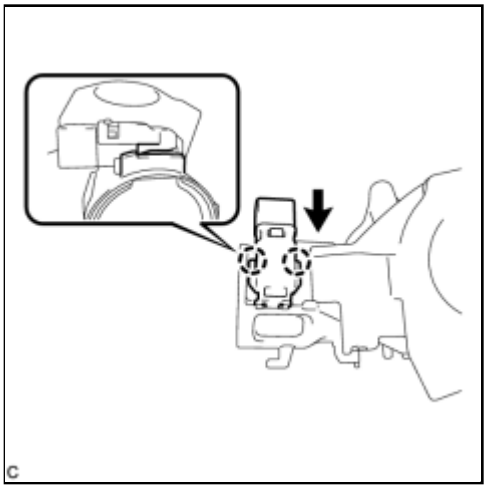
1. INSTALL STEERING LOCK ACTUATOR ASSEMBLY (w/ Smart Key System)

(a) Secure the steering column assembly in a vise.

(b) Temporarily install the steering lock actuator assembly to the steering column assembly with a new tapered-head bolt.

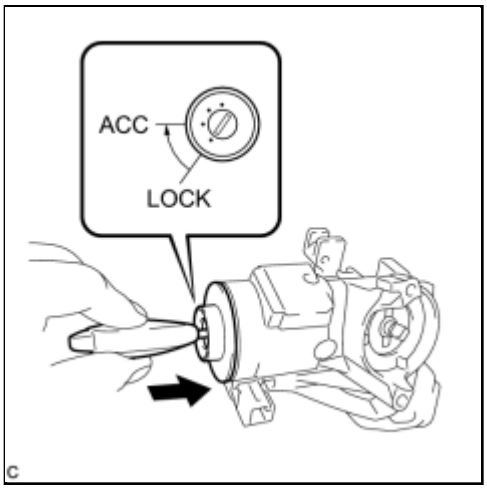
NOTICE:

Be sure to use a new tapered-head bolt.



(c) Tighten the tapered-head bolt until the bolt heads break off.

2. INSTALL UNLOCK WARNING SWITCH ASSEMBLY (w/o Smart Key System)

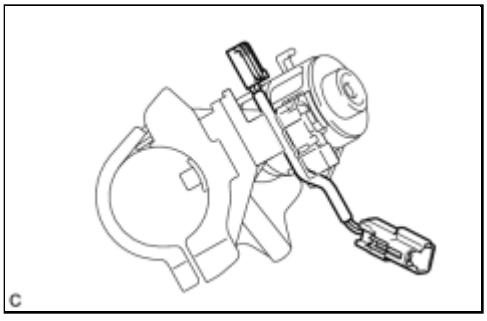


(a) Attach the 2 claws to install the unlock warning switch onto the steering column upper bracket.

HINT:

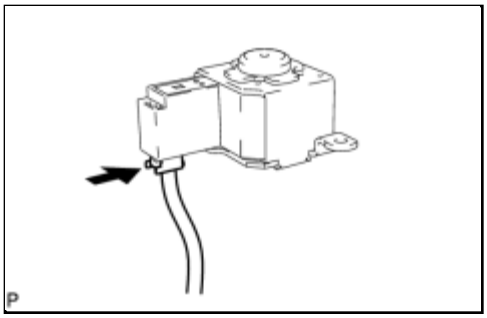
Slide the unlock warning switch in the direction shown by the arrow in the illustration to install it.

3. INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY (w/o Smart Key System)



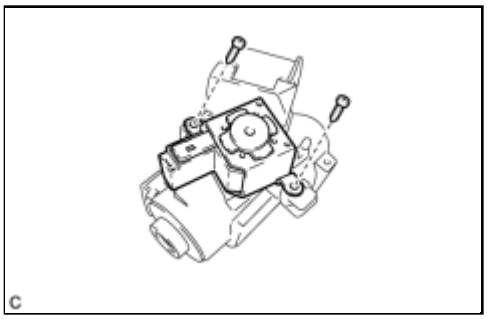
(a) Make sure that the ignition switch lock cylinder assembly is in the ACC position.

(b) Install the ignition switch lock cylinder assembly to the steering lock sub-assembly.



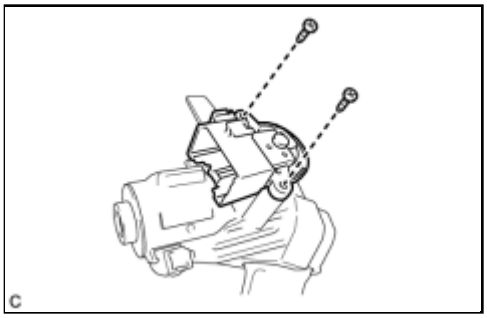
(c) Make sure that the ignition switch lock cylinder assembly is securely installed.

4. INSTALL SOLENOID WIRE (for Automatic Transaxle without Smart Key System)



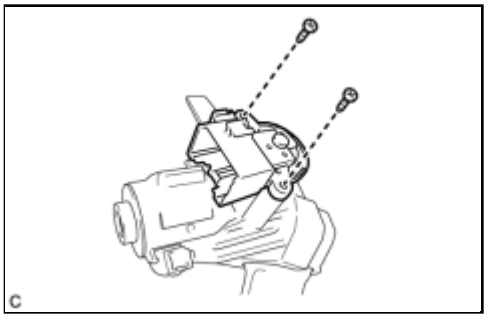
(a) Install the solenoid wire to the steering column upper bracket.

5. INSTALL KEY INTERLOCK SOLENOID (for Automatic Transaxle without Smart Key System)

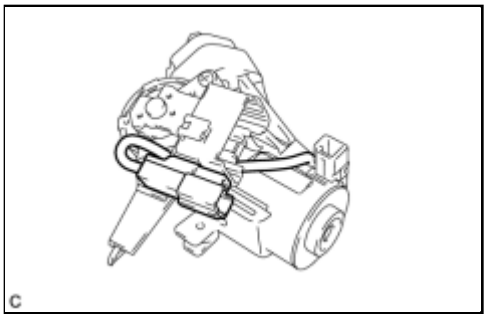


(a) Connect the solenoid wire connector to the key interlock solenoid.

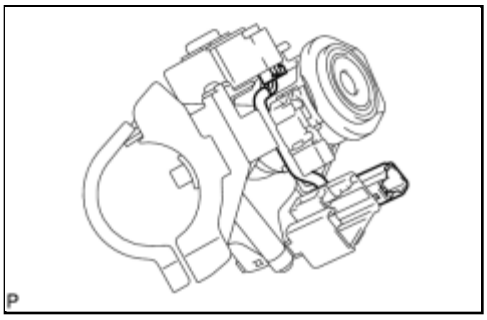
(b) Install the key interlock solenoid to the steering column upper bracket with the 2 screws.



6. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY (for Manual Transaxle)



(a) Install the ignition or starter switch assembly to the steering column upper bracket with the 2 screws.



7. INSTALL IGNITION OR STARTER SWITCH ASSEMBLY (for Automatic Transaxle without Smart Key System)

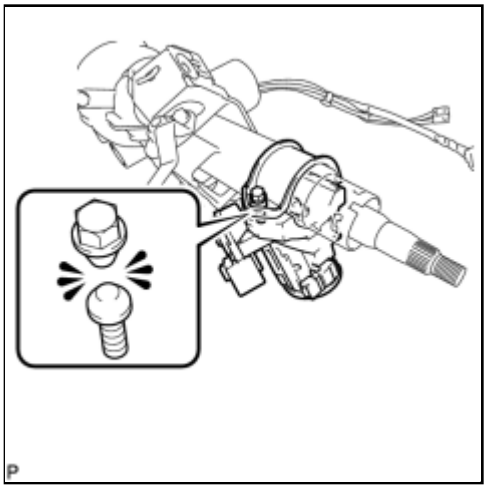
(a) Install the ignition or starter switch assembly to the steering column upper bracket with the 2 screws.

(b) Install the solenoid wire connector to the ignition or starter switch assembly.

(c) Make sure that the solenoid wire runs securely through the gap of the steering column upper bracket as shown in the illustration.

8. INSPECT STEERING LOCK OPERATION (w/o Smart Key System) INFO

9. INSTALL STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY (w/o Smart Key System)



(a) Secure the steering column assembly in a vise.

(b) Temporarily install the steering column upper with switch bracket assembly to the steering column assembly with a new tapered-head bolt.

NOTICE:

Be sure to use a new tapered-head bolt.

(c) Tighten the tapered-head bolt until the bolt heads break off.

P

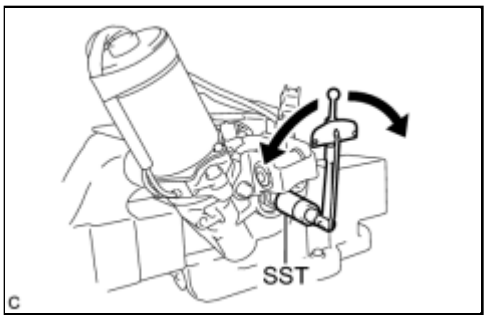
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002W8B00SX
Title: STEERING COLUMN: STEERING COLUMN ASSEMBLY: INSPECTION (2010 Corolla)		



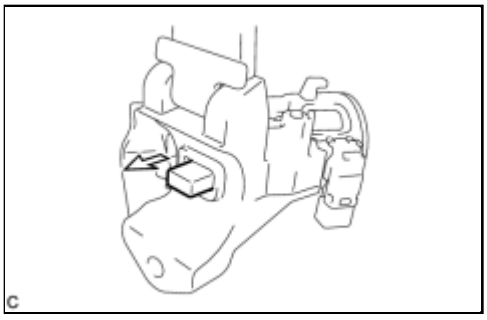
INSPECTION

NOTICE:

When using a vise, do not overtighten it.

1. INSPECT PRELOAD

(a) Secure the steering column assembly in a vise.



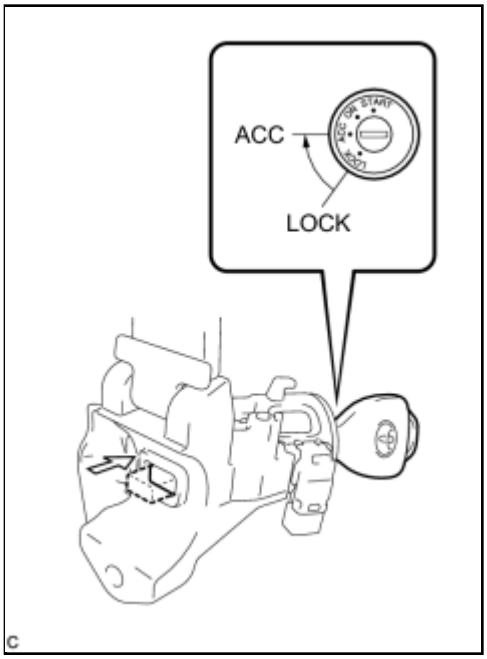
(b) Using SST, turn the main shaft and measure the preload.

SST: 09616-00011

Preload - Torque: 0.8 to 1.2 N·m (8 to 12 kgf·cm, 7 to 10in·lbf)

If the preload is not as specified, replace the steering column assembly.

2. INSPECT STEERING LOCK OPERATION (w/o Smart Key System)



(a) Check that the steering lock mechanism is activated when the key is removed.

(b) Check that the steering lock mechanism is deactivated when the key is inserted and turned to the ACC position.

HINT:

If there is any abnormality, replace the ignition switch lock cylinder assembly or steering column upper with switch bracket assembly.

Title: STEERING COLUMN: STEERING LOCK SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS WHEN WORKING ON STEERING LOCK SYSTEM

(a) After replacing the steering lock actuator assembly (steering lock ECU), perform the key ID code registration.

(b) If the steering lock actuator assembly is replaced, open and close the driver's door. The engine may not start until the driver's door is opened or closed.

HINT:

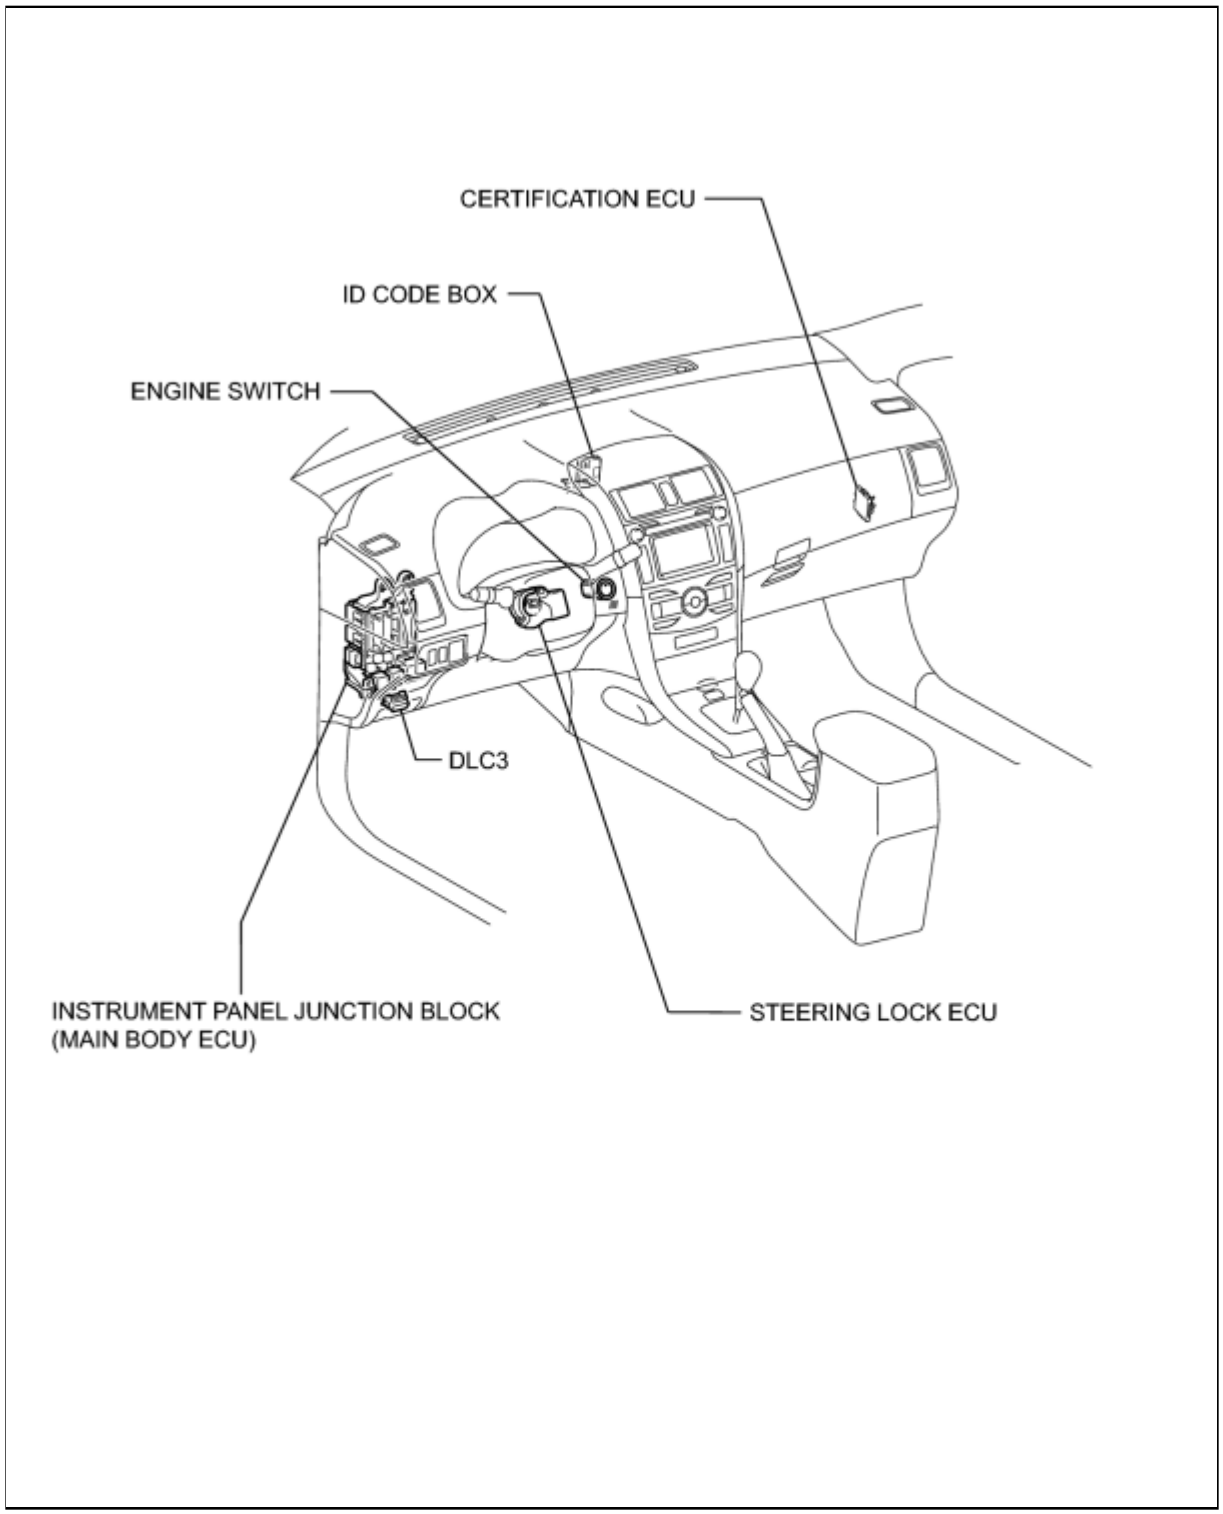
Opening and closing the driver's door causes the steering lock actuator assembly (steering lock ECU) to memorize the correct steering lock bar position.

(c) If checking for DTCs of the smart key system function or if checking the Data List with the engine switch off, make sure that the driver's door is open.

HINT:

When the engine switch is off, the main body ECU may be in a sleep mode. If the main body ECU is in this sleep mode, it will not be possible for the Techstream to communicate with it. Opening and closing the driver's door will cause the ECU to exit the sleep mode.

2. PRECAUTIONS FOR STEERING LOCK ACTUATOR



NOTICE:

If the steering lock actuator (steering lock ECU) is replaced, open and close the driver side door with the engine switch off and the shift lever in neutral to record the current steering lock position into the steering lock ECU. If this is not performed, the engine may not start.

Title: STEERING COLUMN: STEERING LOCK SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

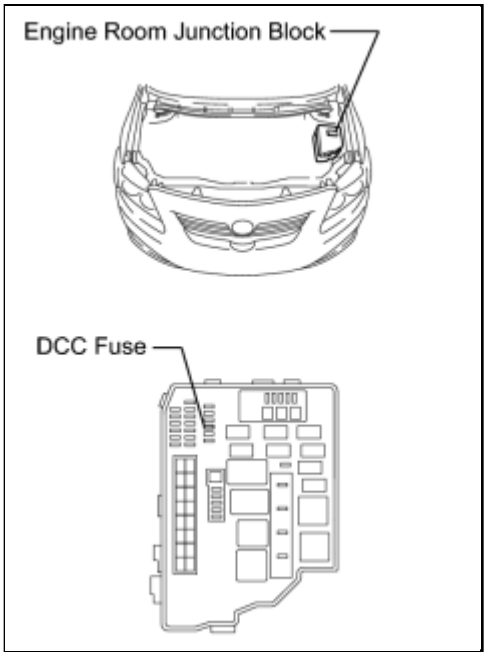
1. DESCRIPTION

(a) The steering lock system locks or unlocks the steering by activating the steering lock actuator assembly. The steering lock ECU activates the motor that is built into the actuator assembly based on signals from the certification ECU and main body ECU.

(b) A LIN (Local Interconnect Network) is used for communication between different ECUs in this system.

2. FUNCTION OF COMPONENTS

(a) The steering lock ECU controls the system based on information from the following components.



ITEM	FUNCTION
Steering lock actuator assembly	Consists of a motor, lock bar, lock and unlock position sensors, etc. Activated by the steering lock ECU.
Steering lock ECU	Included in the steering lock actuator assembly. This ECU activates the steering lock motor based on permission signals from the main body ECU and certification ECU. Detects steering lock or unlock state and transmits this status to other ECUs.
Main body ECU	Permits the steering lock ECU to supply power to activate the motor. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
Certification ECU	Orders the steering lock ECU to lock/unlock the steering. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
IG2 relay	Controlled by the main body ECU. This ECU sends IG signals to the steering lock ECU.
ID code box	Transmits command to set or cancel immobiliser to ECM based on permission signals from certification ECU.

Title: STEERING COLUMN: STEERING LOCK SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

HINT:

In vehicles equipped with the smart key system, the starting function may not operate after recharging or while jump-starting a discharged battery. This condition is most common if the battery voltage drops below 9 V. The following procedure has been developed to address this condition.

1. INITIALIZATION PROCEDURE

(a) Confirm that the DCC fuse is installed.

HINT:

If the DCC fuse is not installed, install it at this time.

(b) Move the shift lever to neutral.

(c) Turn the engine switch off.

(d) Open the driver's door.

HINT:

Opening the driver's door will start an initialization process between the steering lock ECU and the engine room junction block.

(e) Depress the brake pedal.

(f) Press the engine switch.

Title: STEERING COLUMN: STEERING LOCK SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed in order of probability in the causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related the this system before inspecting the suspected areas below.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XWS02HX
Title: STEERING COLUMN: STEERING LOCK SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

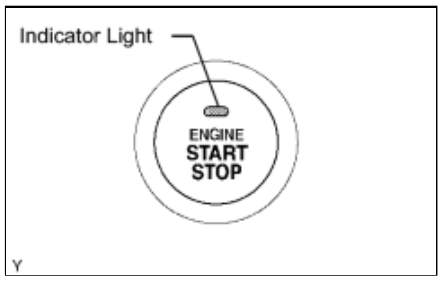
1. DESCRIPTION

(a) DIAGNOSTIC SYSTEM

When troubleshooting a vehicle with a diagnostic system, the only difference from the usual troubleshooting procedure is connecting the Techstream to the vehicle and reading various data output from the vehicle's steering lock ECU.

The steering lock ECU records DTCs when the computer detects a malfunction in the computer itself or in system circuits.

To check the DTCs, connect the Techstream to the DLC3 on the vehicle. The Techstream enables the DTCs to be cleared, the indicators to be activated, and the Data List to be checked.



(b) The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the Techstream. The diagnosis information from the steering lock ECU is transmitted to the Techstream via the certification ECU to the Techstream using the Controller Area Network (CAN).

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. WARNING FUNCTION OF ENGINE SWITCH INDICATOR

(a) The steering lock ECU blinks the LED indicator of the engine switch when any of the following problems occurs in the system:

DETECTION ITEM	INDICATOR LIGHT BLINK PATTERN	INDICATION STATUS	COUNTERMEASURE
Steering lock is still not released	• Blinks green at 1-second intervals • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the engine switch while turning the steering wheel left or right.
Malfunction in smart key system	• Blinks amber at 2-second intervals • Goes off 15 seconds after the engine switch is turned off	• There is a short in the devices activating the motor. • There is a problem in the steering	Troubleshoot by following How To Proceed With Troubleshooting INFO .

	while blinking	lock ECU or main body ECU.	

4. WARNING FUNCTION OF COMBINATION METER

(a) The steering lock ECU displays a warning on the combination meter when any of the following problems occurs in the system.

DETECTION ITEM	DISPLAY	INDICATION STATUS	COUNTERMEASURE
Steering lock is still not released	"S/T is not Unlocked" • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the engine switch while turning the steering wheel left or right.
Malfunction in smart key system	"Check S/T Lock" • Goes off 15 seconds after the engine switch is turned off while blinking	• There is a short in the devices activating the motor. • There is a problem in the steering lock ECU or main body ECU.	Troubleshoot by following How To Proceed With Troubleshooting INFO .

Title: STEERING COLUMN: STEERING LOCK SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Turn the engine switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the engine switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Smart Key / Data List.

(f) According to the display on the Techstream, read the Data List.

Smart Key

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Slck Sleep Cond	Steering lock ECU sleep condition / YES or NO	YES: Steering lock ECU sleep mode can be entered NO: Steering lock ECU sleep mode cannot be entered	-
Slck Start Cond	Steering lock ECU start signal / YES or NO	YES: Steering lock ECU sent a start signal NO: Steering lock ECU did not send a start signal	-
Eng Start Cond	Engine start condition / OK or NG	OK: Engine is allowed to start NG: Engine is not allowed to start	-
Sensor Value	Sensor malfunction / NG (PAST) or OK	NG (PAST): Sensor malfunction OK: No malfunction	-
Pwr Supply Shrt	Short in ECU / NG (PAST) or OK	NG (PAST): Short in ECU OK: No malfunction	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Pwr Supply Open	Open in ECU / NG (PAST) or OK	NG (PAST): Open in ECU OK: No malfunction	-

Lck/Unlck Rec	Steering lock command reception record / YES or NO	YES: Steering lock/unlock signal received NO: Steering lock/unlock signal no received	-
Lck Bar Stuck	Lock bar stuck malfunction / NG (PAST) or OK	NG (PAST): Lock bar stuck malfunction OK: No malfunction	-
Push Start Err	Smart key system function malfunction / NG (PAST) or OK	NG (PAST): Malfunction in smart key system OK: No malfunction	-
IG2	IG2 voltage / ON or OFF	ON: 10 to 14 V OFF: Below 1 V	-
IG (Lin)	LIN bus IG status / ON or OFF	ON: LIN bus IG ON status OFF: LIN bus IG OFF status	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Turn the engine switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the engine switch on (IG).

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Main Body / Active Test.

(f) According to the display on the Techstream, perform the Active Test.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
S Lock Pwr	Power supply for steering lock system	ON or OFF	-

Last Modified: 3-10-2010	6.4 D	**From:** 200901

Title: STEERING COLUMN: STEERING LOCK SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Prepare the Techstream.

(b) Connect the Techstream to the DLC3 at the lower part of the instrument panel.

(c) Turn the engine switch on (IG) and turn the Techstream on.

(d) Use the Techstream to check for DTCs, and note or print the result (see Operator's Manual for operating instructions).

(e) Confirm the details of the DTCs INFO .

2. CLEAR DTC

(a) Operate the Techstream to clear the DTCs (see Operator's Manual for operation instructions).

Last Modified: 3-10-2010	6.4 S	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XWM02PX
Title: STEERING COLUMN: STEERING LOCK SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the parts listed for that code in the table below and proceed to the appropriate page.

HINT:

The steering lock ECU does not store DTCs regarding the past problems.

Title: STEERING COLUMN: STEERING LOCK SYSTEM: B2781: Open / Short in Steering Lock ECU (2010 Corolla)		

DTC	**B2781**	**Open / Short in Steering Lock ECU**

DESCRIPTION

If the steering lock ECU determines that there is a malfunction inside the ECU, it outputs this DTC. The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the Techstream. The diagnosis information from the steering lock ECU is transmitted to the Techstream via the certification ECU to the Techstream using the Controller Area Network (CAN).

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B2781	• Steering lock motor drive circuit is defective. • Both lock and unlock position sensors detect "ON".	Steering lock actuator assembly (Steering lock ECU)

INSPECTION PROCEDURE

HINT:

When the engine switch is off, the main body ECU may occasionally go into a non-active state called sleep mode. Therefore, before proceeding with the inspection, it is necessary to perform the following step to wake up the ECU:

Before starting the inspection, open the driver door with the engine switch off. Then (with the engine switch still off) open and close any door several times at 1.5-second intervals.

NOTICE:

If the steering lock actuator (steering lock ECU) is replaced, open and close the driver side door with the engine switch off and the shift lever in neutral to record the current lock position into the steering lock ECU. If this is not performed, the engine may not start.

PROCEDURE

1.	**REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

HINT:

The steering lock ECU and steering lock actuator assembly are supplied as a unit.

(a) Replace the steering lock actuator assembly INFO .

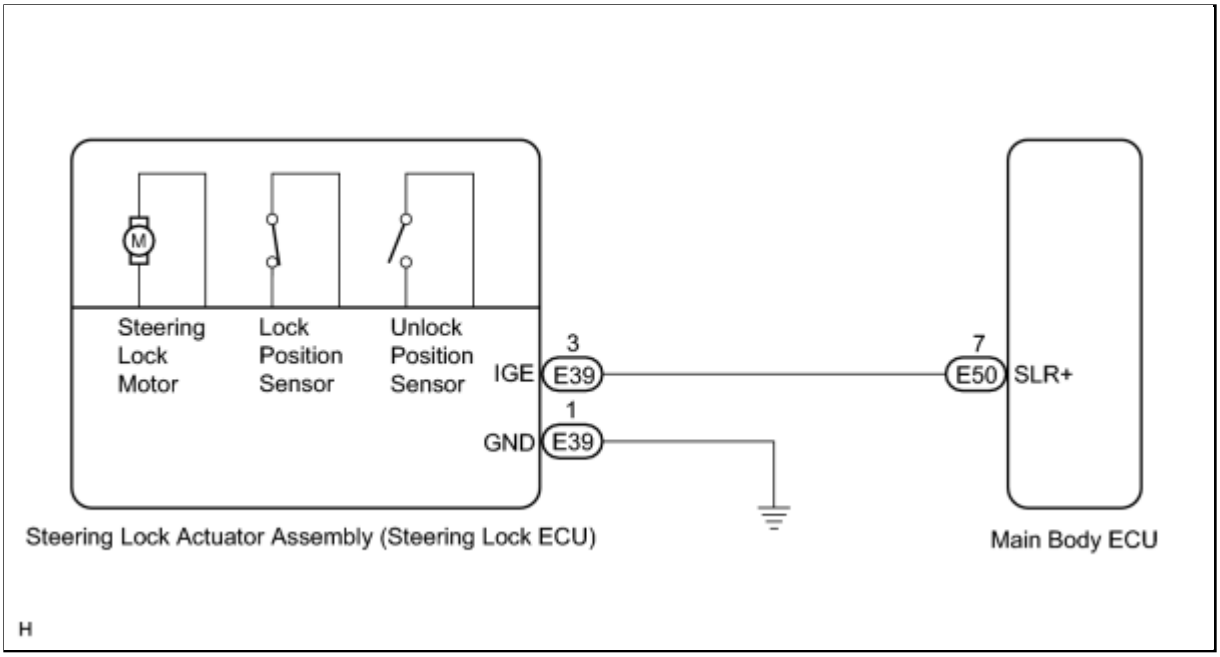
Title: STEERING COLUMN: STEERING LOCK SYSTEM: B2782: Power Source Control ECU Malfunction (2010 Corolla)		

DTC	**B2782**	**Power Source Control ECU Malfunction**

DESCRIPTION

The steering lock ECU activates the steering lock motor by the power from the main body ECU* through the IGE circuit. This prevents the steering from being locked while the vehicle is moving.



The diagnosis information of the steering lock ECU is transmitted to the Techstream via the certification ECU as the steering lock ECU is not connected to the CAN communication system.

HINT:

***: The power source control ECU is not a physical part. This code refers to the power source control function performed by the main body ECU.**

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B2782	Steering lock motor drive control circuit is defective.	• Wire harness • Steering lock actuator assembly (Steering lock ECU) • Main body ECU

WIRING DIAGRAM

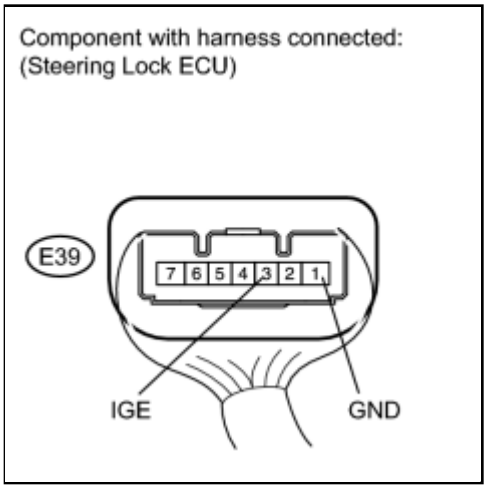
INSPECTION PROCEDURE

When the engine switch is off, the main body ECU may occasionally go into a non-active state called sleep mode. Therefore, before proceeding with the inspection, it is necessary to perform the following step to wake up the ECU:

Before starting the inspection, open the driver side door with the engine switch off. Then (with the engine switch still off) open and close any door several times at 1.5-second intervals.

NOTICE:

If the steering lock actuator (steering lock ECU) is replaced, open and close the driver side door with the engine switch off and the shift lever in neutral to record the current lock position into the steering lock ECU. If this is not performed, the engine may not start.



PROCEDURE

1.	**INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

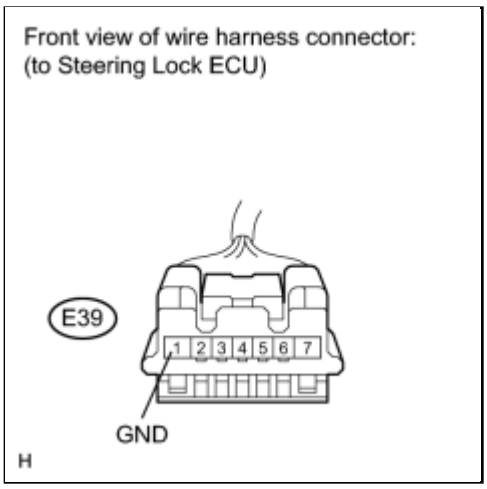
(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-3 (IGE) - E39-1 (GND)	The specified condition should be checked after performing the following:	• Motor activated: Below 1 V • Motor not

	1. Turn the engine switch off 2. Turn the engine switch on (ACC or IG)	activated: 11 to 14 V
E39-3 (IGE) - E39-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to P 2. Turn the engine switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 11 to 14 V

HINT:



The steering lock ECU and steering lock actuator assembly are supplied as a unit.

NG ▶ **CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

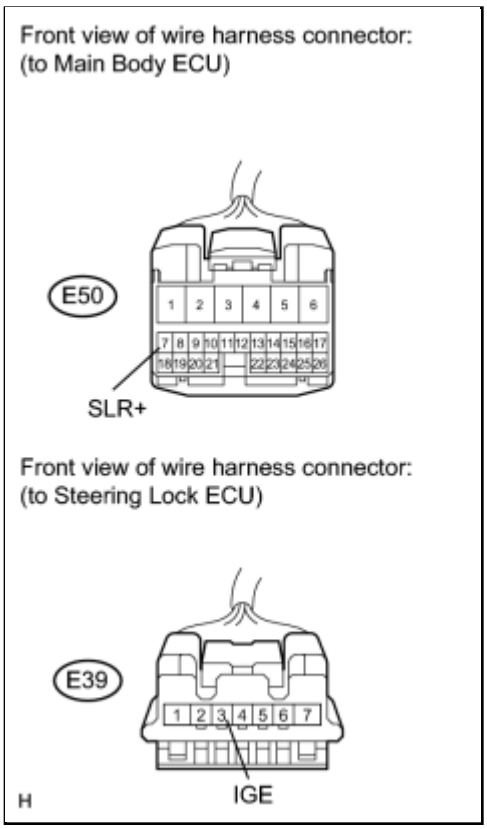
OK ▶ **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

2.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

(a) Disconnect the E39 connector from the steering lock actuator assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-1 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)**

(a) Disconnect the E50 connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-3 (IGE) - E50-7 (SLR+)	Always	Below 1 Ω
E39-3 (IGE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU**

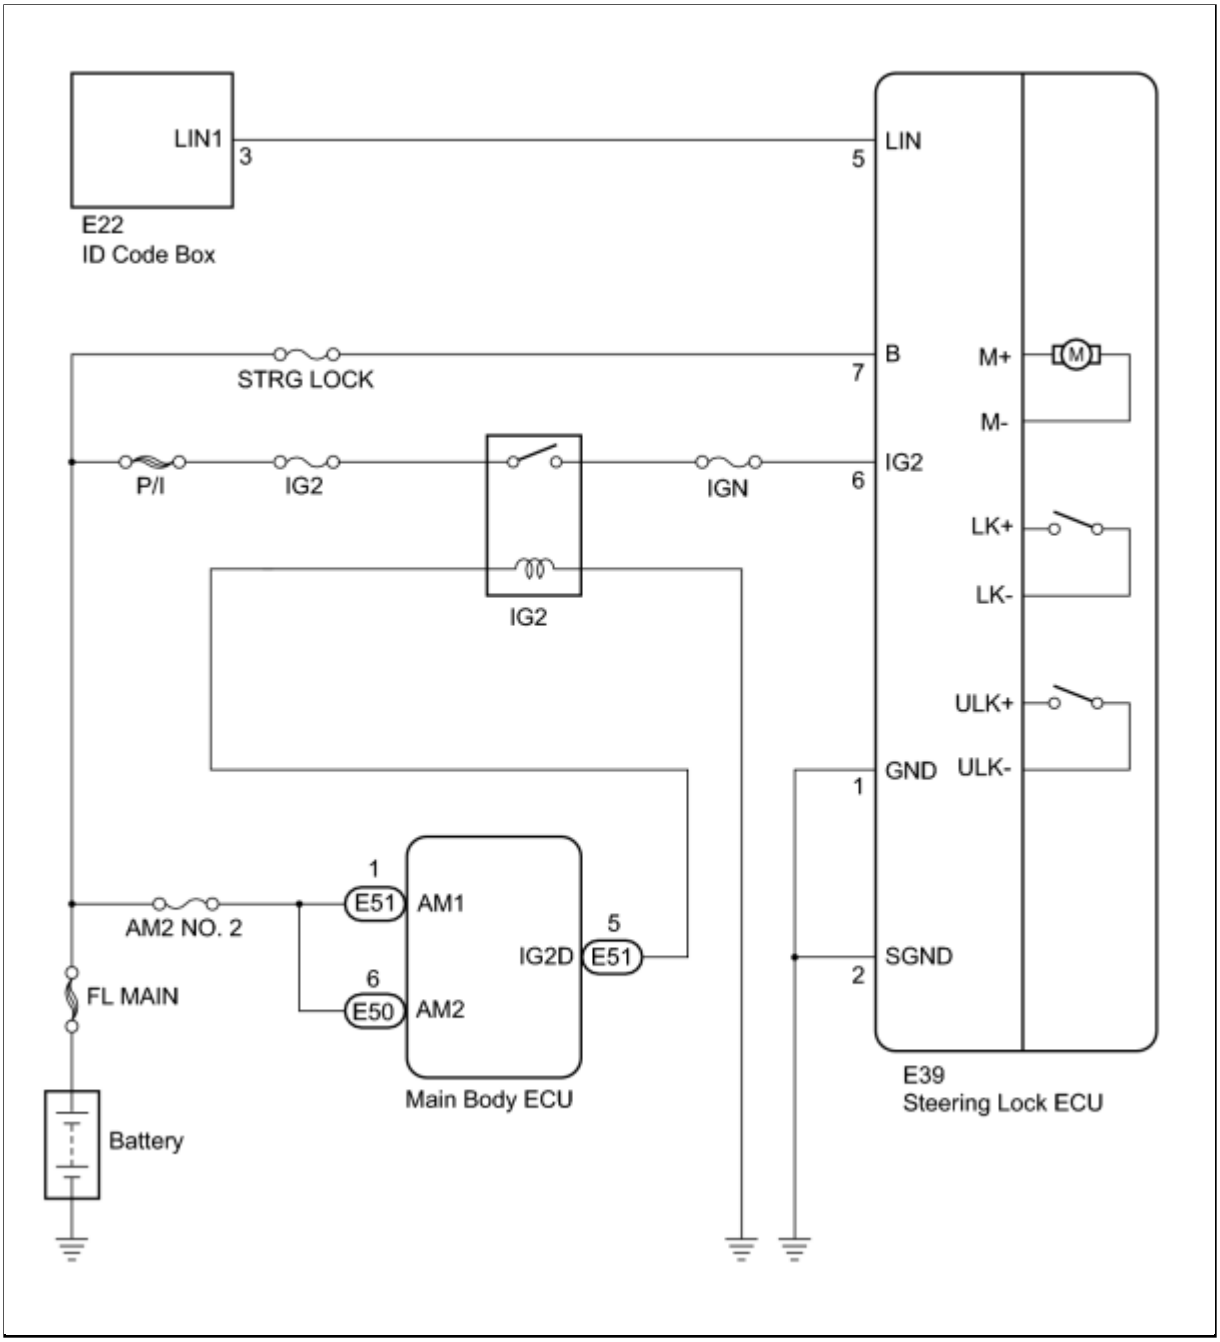
Title: STEERING COLUMN: STEERING LOCK SYSTEM: B2788: IG2 Signal Malfunction (2010 Corolla)		

DTC	**B2788**	**IG2 Signal Malfunction**

DESCRIPTION



The steering lock ECU determines the on/off status of the engine switch through the IG2 signal circuit.

After receiving an IG2 relay ON signal, the steering lock ECU determines that the vehicle is moving. The steering lock ECU does not lock the steering when it receives the IG2 relay ON signal. This prevents the steering from being locked while the vehicle is moving.

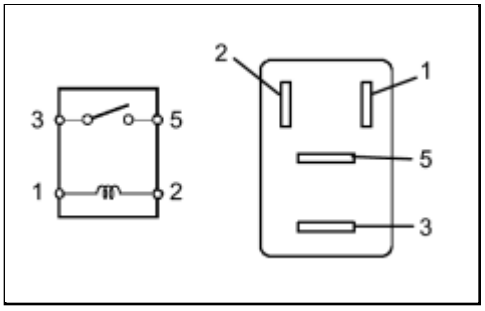
The diagnosis information of the steering lock ECU is transmitted to the Techstream via the certification ECU as the steering lock ECU is not connected to the CAN communication system.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B2788	Different information is obtained from IG2 signal received directly from the IG2 circuit, and from IG2 signal sent via LIN communication for a period of 1 second.	• IG2 relay • Wire harness • Main body ECU • Steering lock actuator assembly (Steering lock ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

When the engine switch is off, the main body ECU may occasionally go into a non-active state called sleep mode. Therefore, before proceeding with the inspection, it is necessary to perform the following step to wake up the ECU:



Before starting the inspection, open the driver door with the engine switch off. Then (with the engine switch still off) open and close any door several times at 1.5-second intervals.

NOTICE:

If the steering lock actuator (steering lock ECU) is replaced, open and close the driver side door with the engine switch off and the shift lever in neutral to record the current lock position into the steering lock ECU. If this is not performed, the engine may not start.

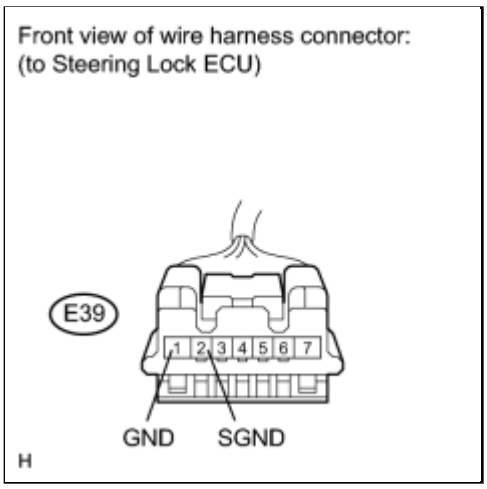
PROCEDURE

1.	**INSPECT NO. 2 IGNITION RELAY (IG2)**

(a) Remove the IG2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Always	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

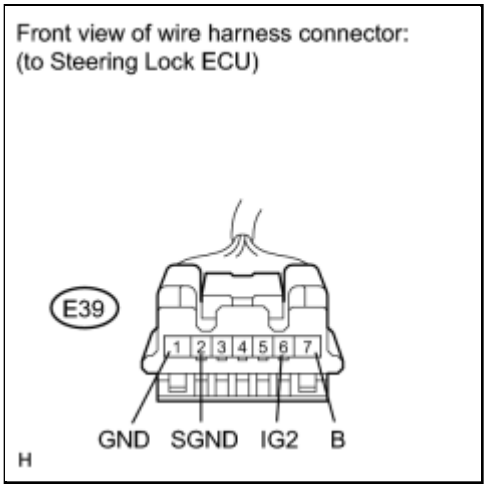
NG ▶ **REPLACE NO. 2 IGNITION RELAY (IG2)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

(a) Disconnect the E39 connector from the steering lock actuator assembly.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-1 (GND) - Body ground	Always	Below 1 Ω
E39-2 (SGND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E39-6 (IG2) - E39-1 (GND)	Engine switch on (IG)	11 to 14 V
E39-6 (IG2) - E39-2 (SGND)	Engine switch on (IG)	11 to 14 V

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
*E39-6 (IG2) - E39-7 (B)	Engine switch off	10 kΩ or higher

*: This measurement is performed with the engine switch off to check for a short between IG2 and battery.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)**

OK ▶ **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK VEHICLE CONDITION**

(a) Check the problem symptom of the steering lock system.

Result:

CONDITION	PROCEED TO
Steering lock cannot be released	A
Steering cannot be locked	B

B ▶ INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

A ▼

2.	READ VALUE USING TECHSTREAM

(a) Turn the engine switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the engine switch on (IG).

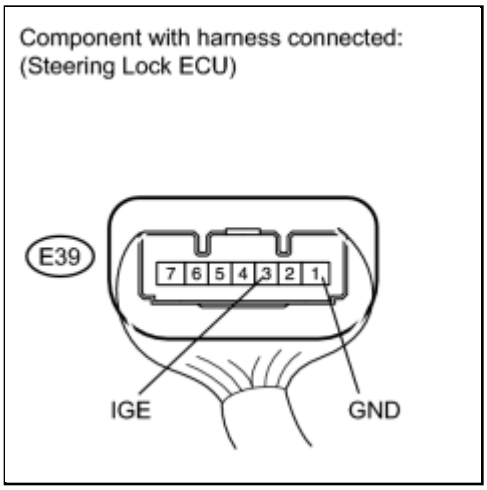
(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Smart Key / Data List.

(f) Select the item below in the Data List, and read its value displayed on the Techstream.

Smart Key

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Lck/Unlck Rec	Steering lock command reception record / YES or NO	YES: Steering lock/unlock signal received NO: Steering lock/unlock signal not received	-



(g) Check if a steering unlock command signal has been received.

OK:
"YES" is displayed on the Techstream display.

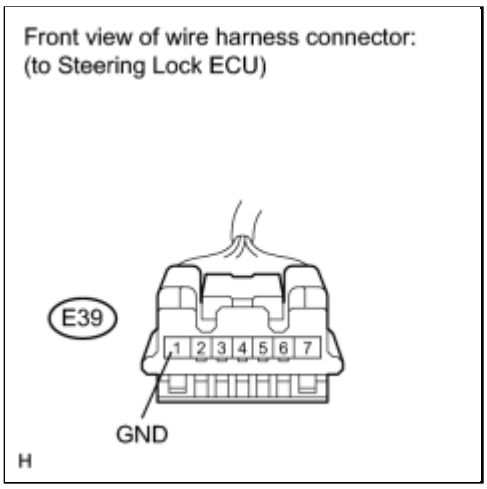
NG ▶ CHECK SMART KEY SYSTEM (for Start Function)

OK

3.	**INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-3 (IGE) - E39-1 (GND)	1. Engine switch off 2. Engine switch on (ACC or IG)	• Motor activated: Below 1 V • Motor not activated: 11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

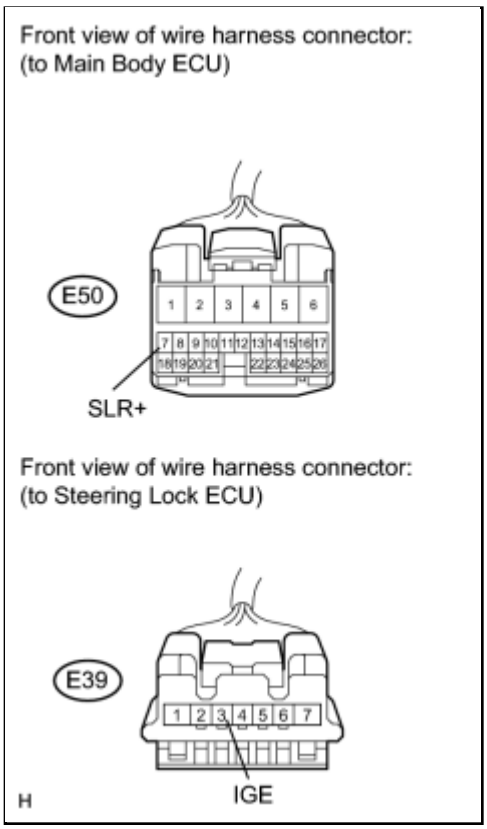
OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

4.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)**

(a) Disconnect the E39 connector from the steering lock actuator assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-1 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)**

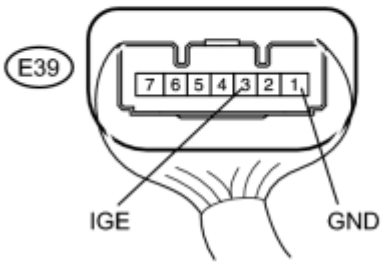
(a) Disconnect the E50 connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-3 (IGE) - E50-7 (SLR+)	Always	Below 1 Ω
E39-3 (IGE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



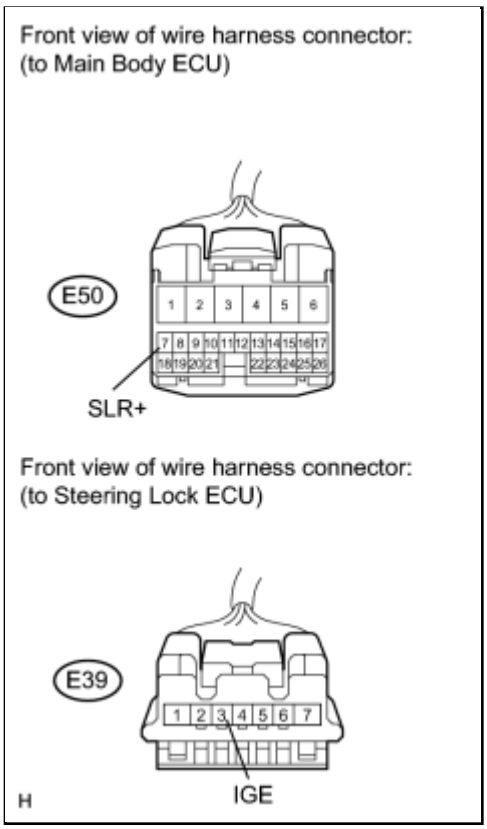
OK ▶ **REPLACE MAIN BODY ECU**

6.	**INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION



Component with harness connected: (Steering Lock ECU)  	E39-3 (IGE) - E39-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to neutral 2. Turn the engine switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)**

(a) Disconnect the E39 connector from the steering lock actuator assembly.

(b) Disconnect the E50 connector from the main body ECU.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E39-3 (IGE) - E50-7 (SLR+)	Always	Below 1 Ω
E39-3 (IGE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU**

Title: STEERING COLUMN: STEERING LOCK SYSTEM: Unlock Position Sensor Signal Circuit (2010 Corolla)		

Unlock Position Sensor Signal Circuit

DESCRIPTION

The unlock position sensor is one of the components in the steering lock actuator. The sensor switch contact closes when the steering lock is released. The steering lock release signal is then sent to the main body ECU. Receiving the signal, the ECU permits engine start. (This prevents the engine from being started with the steering locked.)

Title: STEERING COLUMN: STEERING SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. IGNITION SWITCH EXPRESSIONS

HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ACC	ACC	On (ACC)
Ignition Switch ON	ON	On (IG)
Engine Start	START	Start

2. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) The vehicle is equipped with an SRS (Supplemental Restraint System). Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing. This may cause a serious accident. Before servicing (including inspection, replacement, removal and installation of parts), be sure to read the precautionary notices for the Supplemental Restraint System INFO .

3. HANDLING PRECAUTIONS FOR STEERING COLUMN

(a) When handling the steering column assembly:

(1) Avoid any impacts to the steering column assembly, especially to the motor or the torque sensor. Replace the steering column assembly with a new one if it is dropped or subjected to any severe impacts.

(2) Do not pull on any wire harness when moving the steering column assembly.

(3) After replacing the steering column assembly or power steering ECU assembly, calibrate torque sensor zero point INFO for 2AZ-FE, INFO for 2ZR-FE).

(4) Do not release the tilt lever when the steering column assembly is not installed on the vehicle.

(b) When disconnecting or reconnecting the connectors:

(1) When disconnecting the connectors related to the electric motor power steering system, turn the ignition switch to ON (the engine is stopped), center the steering wheel, turn the ignition switch off, and then disconnect the connectors.

(2) When reconnecting the connectors related to the electric motor power steering system, make sure that the ignition switch is turned off, center the steering wheel and then turn the ignition switch to ON (the engine is stopped).

NOTICE:

Do not turn the ignition switch to ON without the steering wheel centered.

(3) If the above operations are not carried out correctly, the steering center point (zero point) will deviate, causing a difference in steering effort between right and left turns. If there is a difference in the steering effort between right and left turns, perform the torque sensor zero point calibration INFO for 2AZ-FE, INFO for 2ZR-FE).

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IA101MX
Title: STEERING COLUMN: STEERING SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK STEERING WHEEL FREE PLAY

(a) Stop the vehicle and align the tires facing straight ahead.

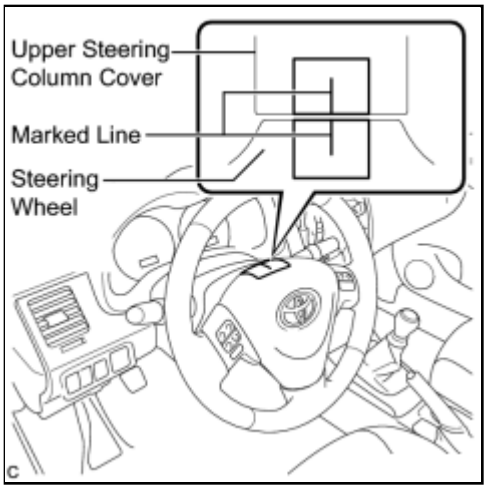
(b) Turn the steering wheel gently right and left, and check the steering wheel free play.

Maximum free play:
30 mm (1.18 in.)

If the free play exceeds the maximum, check the steering system INFO .

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R4401OX
Title: STEERING COLUMN: STEERING SYSTEM: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

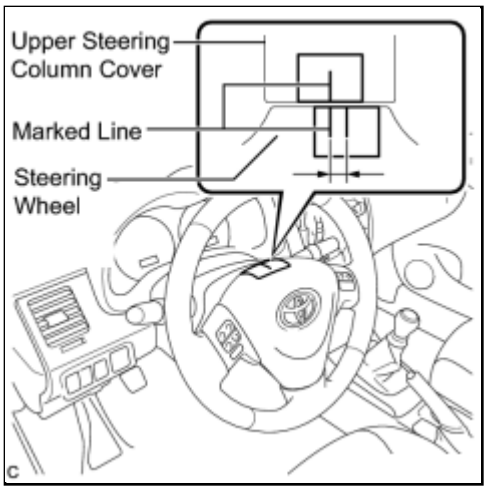


1. ADJUST STEERING WHEEL OFF CENTER

(a) Inspect steering wheel off center.

(1) Apply masking tape on the top center of the steering wheel and upper steering column cover.

(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 56 km/h (35 mph), while holding the steering wheel straight.



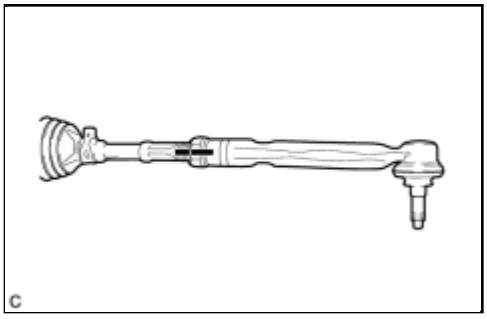
(3) Draw a line on the masking tape as shown in the illustration.

(4) Turn the steering wheel to the center position.

HINT:

Look at the upper surface of the steering wheel, steering spoke, and SRS airbag line to find the center position.

(5) Draw a new line on the masking tape on the steering wheel as shown in the illustration.



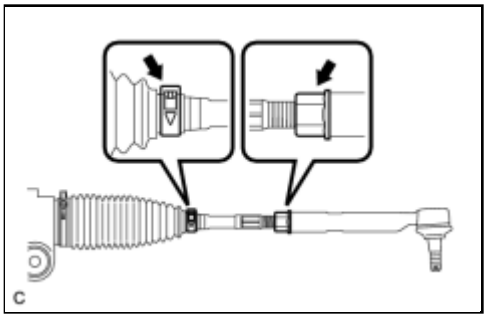
(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.

(7) Convert the measured distance to steering angle.

HINT:

- Measured distance 1 mm (0.0394 in.) = Steering angle of approximately 1 degree.
- Make a note of the steering angle.

(b) Adjust steering angle.



(1) Draw a line on the RH and LH tie rod ends and rack ends respectively where it can be easily seen.

(2) Using a paper gauge, measure the distance from the RH and LH tie rod ends to the rack end screws.

HINT:

- Perform measurement on both RH and LH sides.
- Make a note of the measured values.

(3) Remove the RH and LH boot clips from the rack boots.

(4) Loosen the RH and LH lock nuts.

(5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.

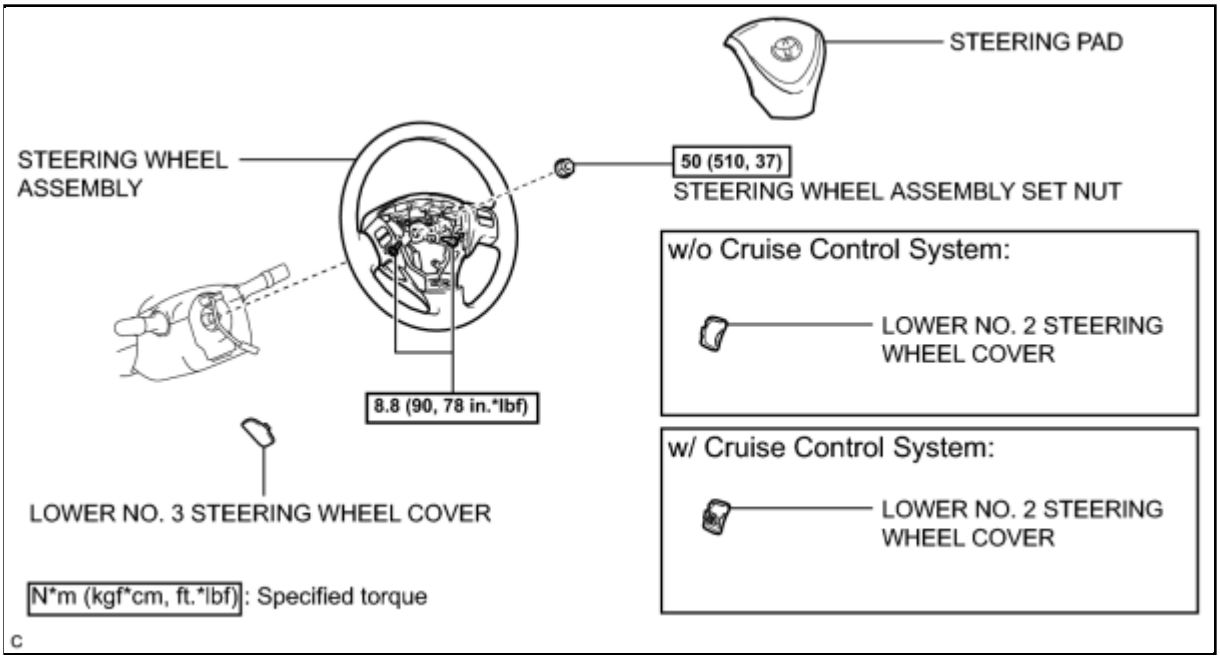
HINT:

One 360 degree turn of the rack end (1.5 mm (0.0591 in.) horizontal movement) equals to 12 degrees of steering angle.

(6) Tighten the RH and LH lock nuts to the specified torque.

Torque: 74 N·m (755 kgf·cm, 55ft·lbf)

NOTICE:



Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is within 1.5 mm (0.0591 in.).

(7) Install the RH and LH boot clips.

REMOVAL

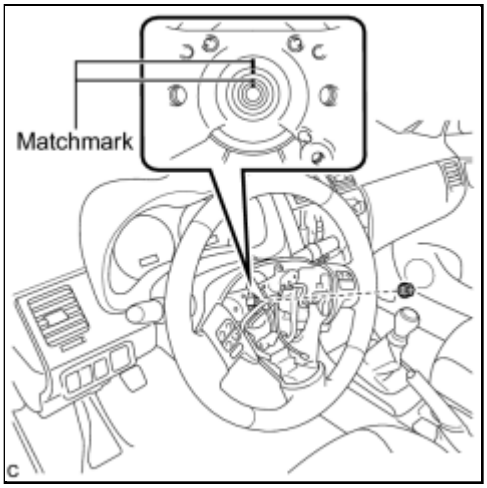
CAUTION:

Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing INFO **.**

1. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

3. REMOVE LOWER NO. 3 STEERING WHEEL COVER INFO

4. REMOVE LOWER NO. 2 STEERING WHEEL COVER INFO

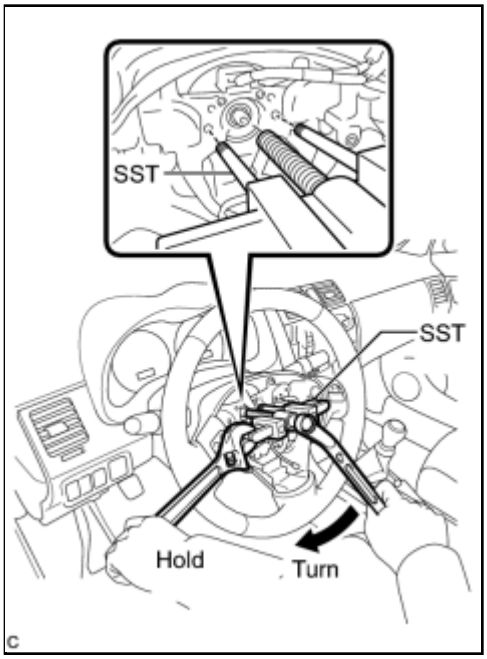
5. REMOVE STEERING PAD INFO

6. REMOVE STEERING WHEEL ASSEMBLY

(a) Remove the steering wheel assembly set nut.

(b) Put matchmarks on the steering wheel assembly and the steering main shaft.

(c) Disconnect the connectors from the spiral cable.



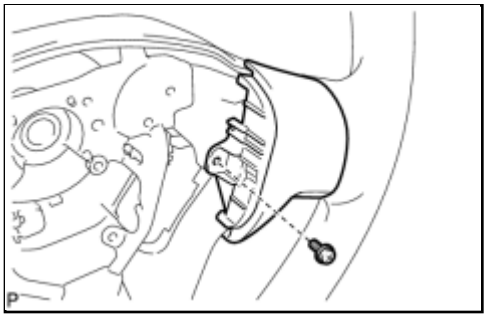
(d) Using SST, remove the steering wheel assembly.

SST: 09950-50013

09951-05010

09952-05010

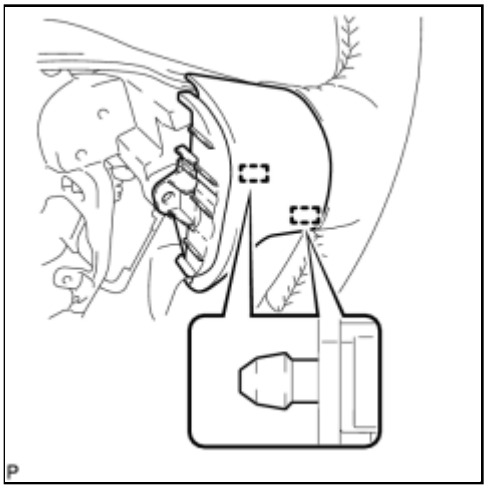
09953-05020



09954-05021

NOTICE:

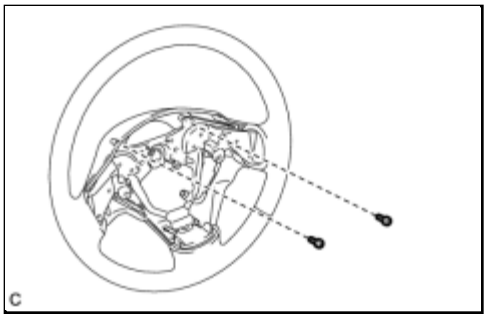
Apply a small amount of grease to the threads and tip of SST (09953-05020) before use.



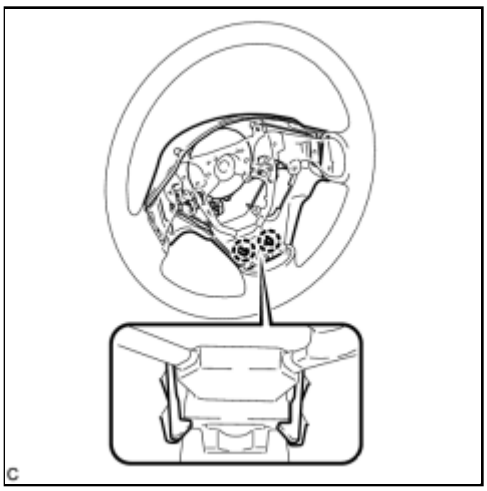
7. REMOVE STEERING PAD SWITCH LH (w/o Microphone) INFO

8. REMOVE NO. 1 STEERING WHEEL ORNAMENT (w/o Microphone)

(a) Remove the screw.



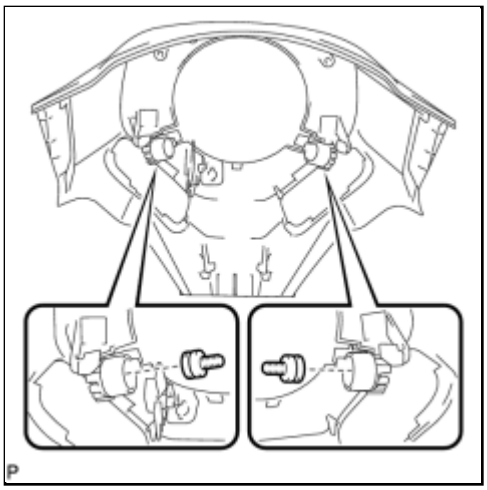
(b) Disengage the 2 pins to remove the No. 1 steering wheel ornament from the steering wheel sub-assembly.



9. REMOVE STEERING PAD SWITCH ASSEMBLY (w/ Microphone) INFO

10. REMOVE CRUISE CONTROL MAIN SWITCH (w/ Cruise Control System) INFO

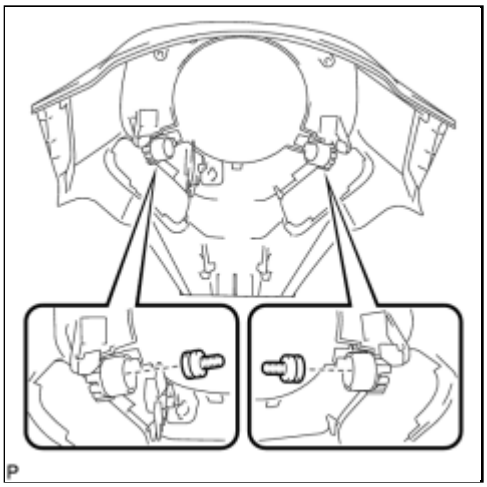
11. REMOVE LOWER STEERING WHEEL BOSS COVER



(a) Remove the 2 screws.

(b) Disengage the 2 claws to remove the lower steering wheel boss cover from the steering wheel sub-assembly.

12. REMOVE STEERING WHEEL PAD ATTACHING SCREW



(a) Remove the 2 steering wheel pad attaching screws from the lower steering wheel boss cover.

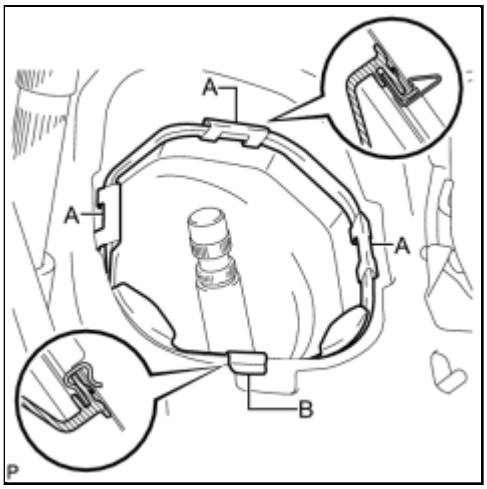
Title: STEERING GEAR / LINKAGE: STEERING GEAR: REMOVAL (2010 Corolla)		

REMOVAL

1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. SECURE STEERING WHEEL

(a) Secure the steering wheel with the seat belt in order to prevent rotation.



HINT:

This operation is useful to prevent damage to the spiral cable.

3. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO

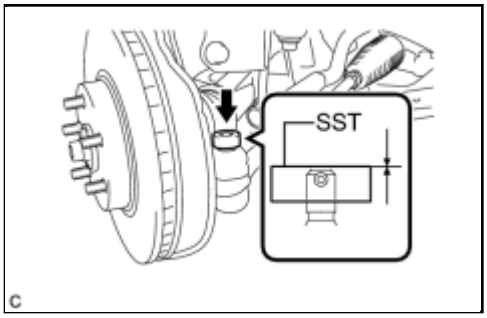
4. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

5. SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove clips A and the No. 1 steering column hole cover sub-assembly and disengage clip B from the body.

NOTICE:

Do not damage clips A and B.



6. REMOVE FRONT WHEELS

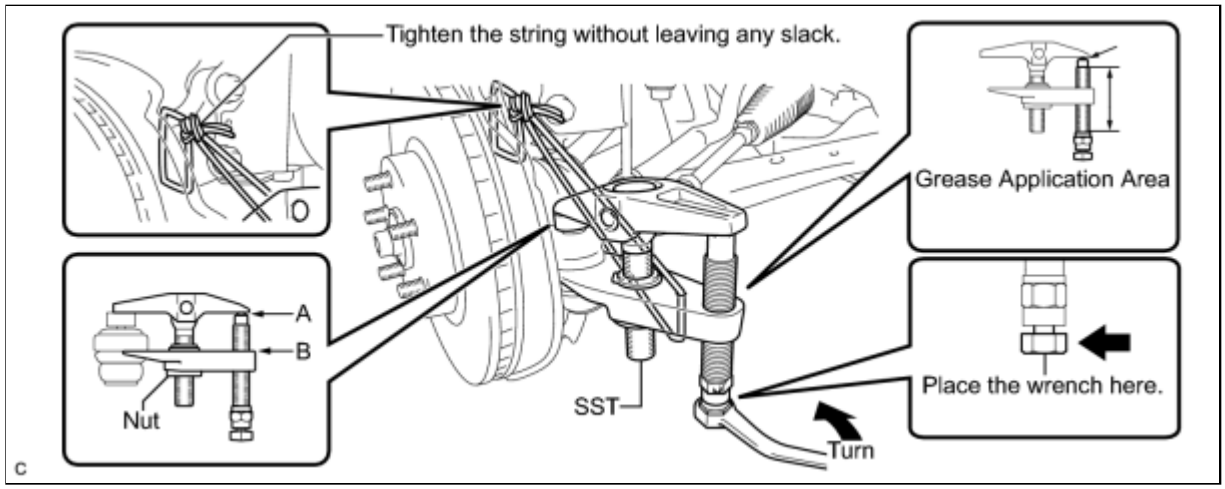
7. REMOVE ENGINE UNDER COVER LH

8. REMOVE ENGINE UNDER COVER RH

9. SEPARATE TIE ROD END SUB-ASSEMBLY LH

(a) Remove the cotter pin and the nut.

(b) Install SST to the tie rod end.



SST: 09960-20010

09961-02060

NOTICE:

Make sure that the upper ends of the tie rod end and SST are aligned.

(c) Using SST, separate the tie rod end from the steering knuckle.

SST: 09960-20010

09961-02010

CAUTION:

Apply grease to the threads of the bolt and the tip of SST.

NOTICE:

- Be sure to tighten the string firmly to secure SST to the steering knuckle to prevent SST from falling off.
- Install SST with the center nut so that A and B are parallel. Otherwise, the dust cover may be damaged.
- Be sure to place the wrench on the part indicated in the illustration.
- Do not damage the front disc brake dust cover.
- Do not damage the ball joint dust cover.
- Do not damage the steering knuckle.

10. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

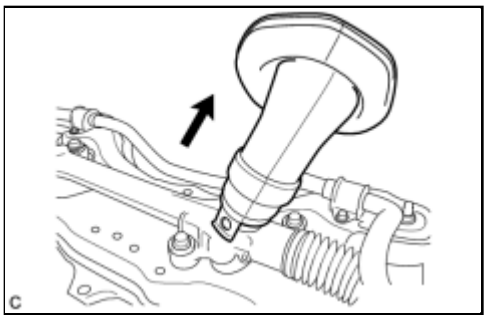
11. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

12. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

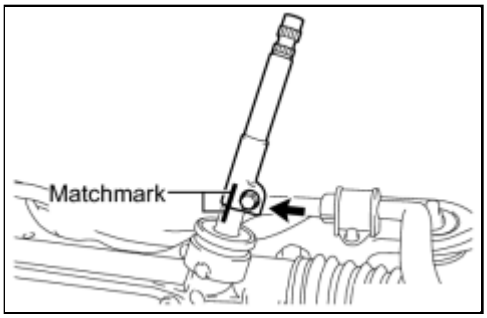
13. SEPARATE FRONT LOWER SUSPENSION ARM LH INFO



14. SEPARATE FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

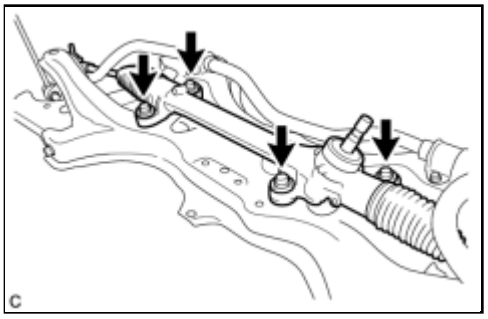


15. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

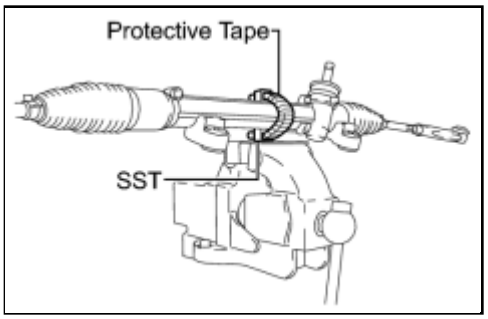
16. REMOVE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove the No. 1 steering column hole cover sub-assembly from the steering link assembly.

17. REMOVE STEERING INTERMEDIATE SHAFT



(a) Put matchmarks on the steering intermediate shaft and the steering link assembly.

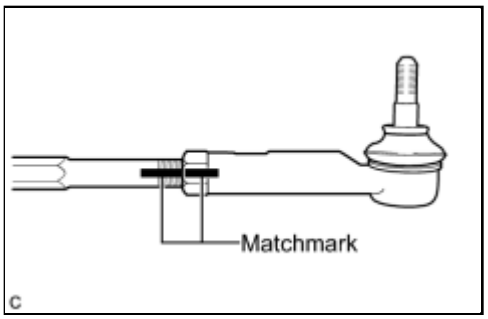


(b) Remove the bolt and the steering intermediate shaft from the steering link assembly.

18. REMOVE STEERING LINK ASSEMBLY

(a) Remove the 4 bolts and steering link assembly from the front suspension crossmember sub-assembly.

19. SECURE STEERING LINK ASSEMBLY



(a) Using SST, secure the steering link assembly in a vise.

SST: 09612-00012

HINT:

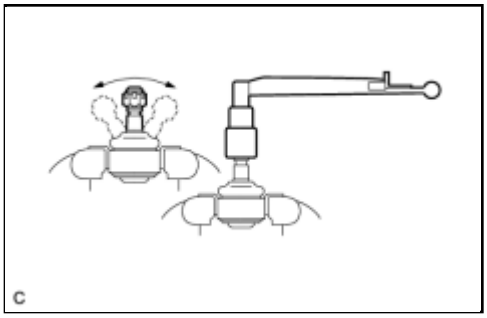
Tape SST before use.

20. REMOVE TIE ROD END SUB-ASSEMBLY LH

(a) Put matchmarks on the tie rod end sub-assembly LH and steering gear assembly.

(b) Remove the tie rod end sub-assembly LH and lock nut.

21. REMOVE TIE ROD END SUB-ASSEMBLY RH



HINT:

Perform the same procedure as for the LH side.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029T5012X
Title: STEERING GEAR / LINKAGE: STEERING GEAR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT TIE ROD END SUB-ASSEMBLY LH

(a) Secure the tie rod end sub-assembly LH in a vise.

NOTICE:

Do not overtighten the vise.

(b) Install the nut to the stud bolt.

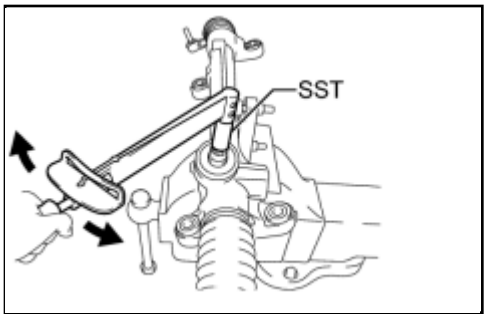
(c) Flip the ball joint back and forth 5 times.

(d) Set a torque wrench to the nut, turn the ball joint continuously at a rate of 2 to 4 seconds per turn, and check the turning torque on the 5th turn.

Standard turning torque:

0.3 to 2.0 N*m (3 to 20 kgf*cm, 3 to 17 in.*lbf)

HINT:



If the turning torque is not within the specified range, replace the tie rod end sub-assembly LH with a new one.

2. INSPECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

3. INSPECT TOTAL PRELOAD

(a) Using SST and a torque wrench, inspect the total preload.

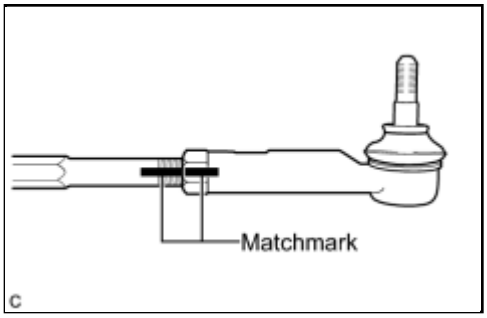
SST: 09616-00011

Standard Preload

for 2AZ-FE	0.7 to 1.1 N*m (8 to 11 kgf*cm, 7 to 9 in.*lbf)
for 2ZR-FE	0.5 to 0.9 N*m (6 to 9 kgf*cm, 5 to 7 in.*lbf)

NOTICE:

Inspect the total preload around the steering rack center position.



HINT:

If the total preload is not within the specified range, replace the steering gear assembly with a new one.

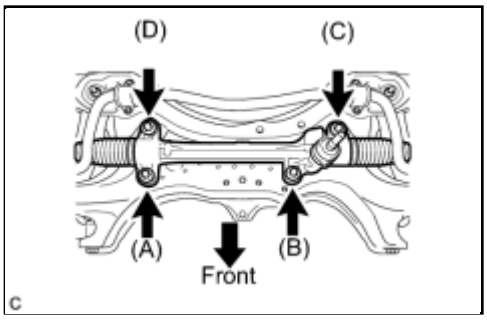
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029T401VX
Title: STEERING GEAR / LINKAGE: STEERING GEAR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL TIE ROD END SUB-ASSEMBLY LH

(a) Install the lock nut and the tie rod end sub-assembly LH to the steering gear assembly until the matchmarks are aligned.

HINT:



After adjusting the toe-in, tighten the lock nut.

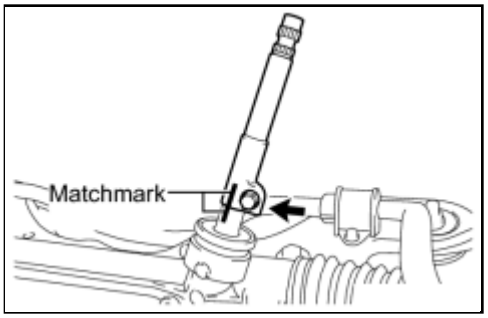
2. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

3. INSTALL STEERING LINK ASSEMBLY

(a) Install the steering link assembly to the front suspension crossmember sub-assembly with the 4 bolts.

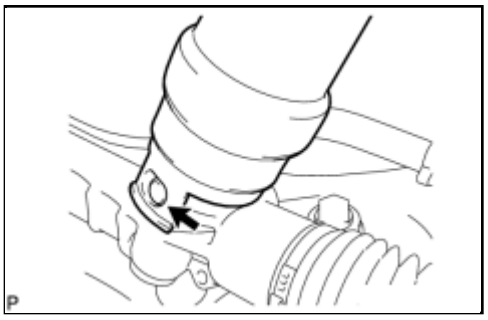


(1) Temporarily tighten the bolts in order of (A), (B), (C), and then (D).

(2) Tighten the bolts in order of (A), (B), (C), and then (D).

Torque: 58 N·m (591 kgf·cm, 43ft·lbf)

4. INSTALL STEERING INTERMEDIATE SHAFT



(a) Align the matchmarks and install the steering intermediate shaft to the steering link assembly.

(b) Install the bolt.

Torque: 35 N·m (357 kgf·cm, 26ft·lbf)

5. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Align the round hole in the No. 1 steering column hole cover sub-assembly with the protrusion of the steering link assembly to install the cover.

6. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (for TMC Made) INFO

7. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (except TMC Made) INFO

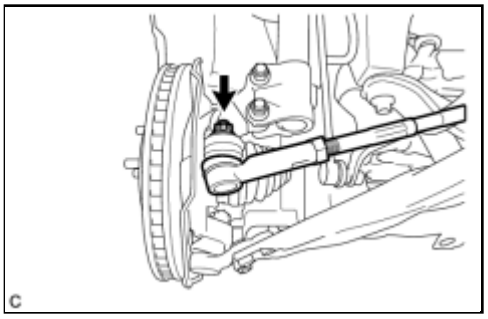
8. CONNECT FRONT LOWER SUSPENSION ARM LH INFO

9. CONNECT FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

10. CONNECT FRONT STABILIZER LINK ASSEMBLY LH INFO



11. CONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

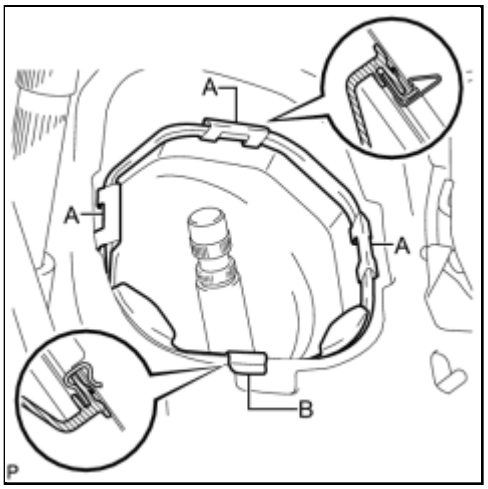
Perform the same procedure as for the LH side.

12. CONNECT TIE ROD END SUB-ASSEMBLY LH

(a) Connect the tie rod end sub-assembly LH to the steering knuckle with the nut.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

NOTICE:



Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.

(b) Install a new cotter pin.

13. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

14. CONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Engage clip B onto the body and install the No. 1 steering column hole cover sub-assembly onto the body with clips A.

NOTICE:

Make sure that the lip of the No. 1 steering column hole cover sub-assembly is not damaged.

15. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

16. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

17. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

18. INSTALL ENGINE UNDER COVER LH

19. INSTALL ENGINE UNDER COVER RH

20. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 75ft·lbf)

21. STABILIZE SUSPENSION INFO

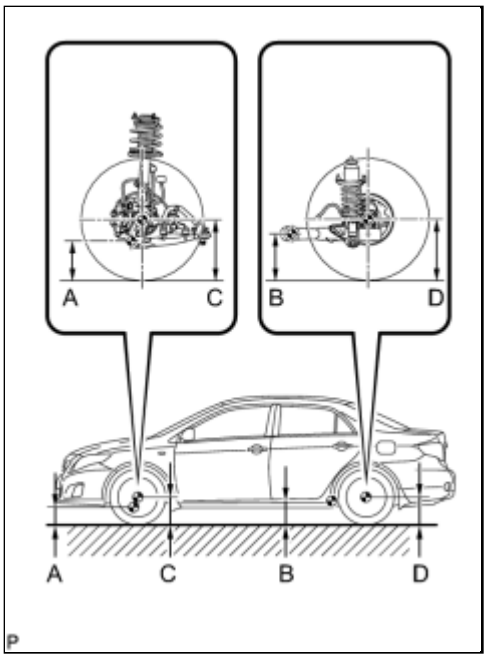
22. ADJUST FRONT WHEEL ALIGNMENT

HINT: INFO .

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001Y3B010X
Title: ALIGNMENT / HANDLING DIAGNOSIS: FRONT WHEEL ALIGNMENT: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

NOTICE:



For vehicles equipped with VSC, if the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

1. Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.
2. Reconnect the cable to the negative (-) battery terminal.
3. Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection.

1. INSPECT TIRES

INFO

2. MEASURE VEHICLE HEIGHT

NOTICE:

- Before inspecting the wheel alignment, adjust the vehicle height to the specified value.
- Be sure to perform measurement on a level surface.
- If it is necessary to go under the vehicle for measurement, confirm that the parking brake is applied and the vehicle is secured with chocks.

(a) Bounce the vehicle up and down at the corners several times to stabilize the suspension.

(b) Measure the vehicle height.

Measuring points:

A

No. 1 lower suspension arm bushing set bolt ground clearance

B

Rear axle beam set bolt ground clearance

C

Front wheel center ground clearance

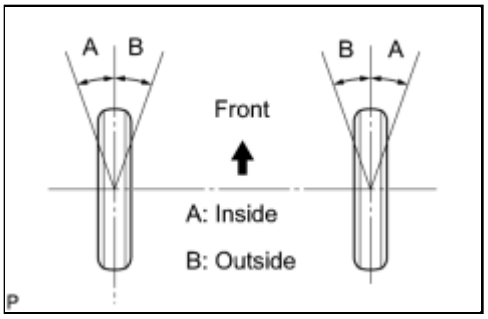
D

Rear wheel center ground clearance

Vehicle Height (Unloaded Vehicle):

-	ENGINE	FRONT C - A	REAR D - B
for TMC Made	2ZR-FE	92 mm (3.62 in.)	45 mm (1.77 in.)

except TMC Made	2ZR-FE	92 mm (3.62 in.) 80 mm (3.15 in.)*	45 mm (1.77 in.) 32 mm (1.26 in.)*
	2AZ-FE	96 mm (3.78 in.) 81 mm (3.19 in.)*	51 mm (2.01 in.) 36 mm (1.42 in.)*



* For vehicle height for Mexico, add 15 mm (0.591 in.).

3. INSPECT WHEEL ANGLE

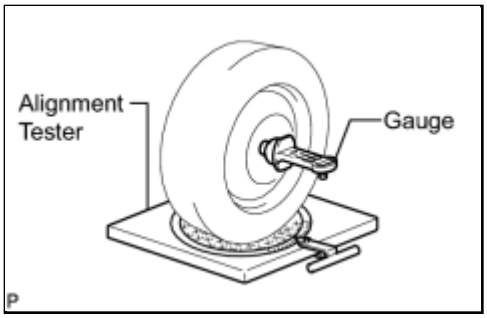
(a) Put tread center marks on the rearmost points of the turning radius gauge.

(b) Turn the steering wheel to the left and right full lock positions, and measure the turning angle.

Wheel Angle (Unloaded Vehicle):

-	ENGINE	TIRE SIZE	INSIDE WHEEL	OUTSIDE WHEEL REFERENCE
for TMC Made	2ZR-FE	195/65R15	38°13' +/- 2° (38.22° +/- 2°)	32°50' (32.83°)
		205/55R16		
except TMC Made	2ZR-FE	195/65R15	38°13' +/- 2° (38.22° +/- 2°)	32°50' (32.83°)
		205/55R16	38°13' +/- 2° (38.22° +/- 2°) 38°31' +/- 2° (38.52° +/- 2°)*	32°50' (32.83°) 33°04' (33.07°)*
	2AZ-FE	205/55R16*	37°19' +/- 2° (37.32° +/- 2°)*	32°18' (32.30°)*
		215/45R17	36°59' +/- 2° (36.98° +/- 2°)	32°01' (32.02°)

* For vehicle height for Mexico, add 15 mm (0.591 in.).



If the angles are not as specified, check and adjust the right and left rack end lengths.

4. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Install a camber-caster-kingpin gauge or place the front wheels on the center of a wheel alignment tester.

(b) Inspect the camber, caster and steering axis inclination.

Camber (Unloaded Vehicle):

-	ENGINE	TIRE SIZE	CAMBER INCLINATION	RIGHT-LEFT DIFFERENCE
for TMC Made	2ZR-FE	195/65R15	-0°35' +/- 45' (-0.58° +/- 0.75°)	45' (0.75°) or less
		205/55R16		
except TMC Made	2ZR-FE	195/65R15	- 0°34' +/- 45' (- 0.57° +/- 0.75°)	
		205/55R16	- 0°35' +/- 45' (- 0.58° +/- 0.75°) - 0°26' +/- 45' (- 0.43° +/- 0.75°)*	
	2AZ-FE	205/55R16*	- 0°27' +/- 45' (- 0.45° +/- 0.75°)*	
		215/45R17	- 0°37' +/- 45' (- 0.62° +/- 0.75°)	

* For vehicle height for Mexico, add 15 mm (0.591 in.).

Caster (Unloaded Vehicle):

-	ENGINE	TIRE SIZE	CASTER INCLINATION	RIGHT-LEFT DIFFERENCE
for TMC Made	2ZR-FE	195/65R15	2°50' +/- 45' (2.83° +/- 0.75°)	45' (0.75°) or less

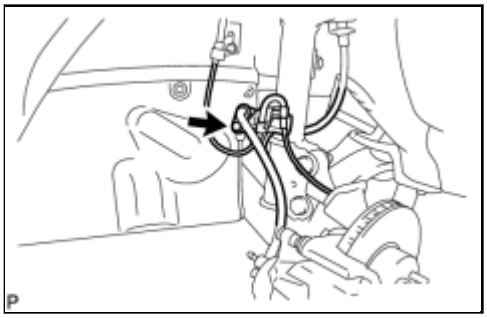
		205/55R16	2°51' +/- 45' (2.85° +/- 0.75°)
except TMC Made	2ZR-FE	195/65R15	2°50' +/- 45' (2.83° +/- 0.75°)
		205/55R16	2°50' +/- 45' (2.83° +/- 0.75°) 2°41' +/- 45' (2.68° +/- 0.75°)*
	2AZ-FE	205/55R16*	2°45' +/- 45' (2.75° +/- 0.75°)*
		215/45R17	2°55' +/- 45' (2.92° +/- 0.75°)

* For vehicle height for Mexico, add 15 mm (0.591 in.).

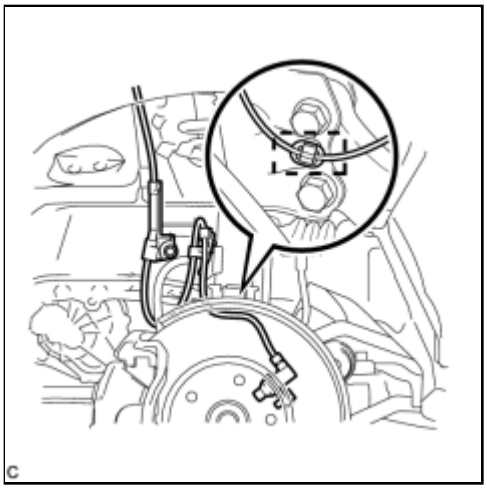
Steering Axis Inclination (Unloaded Vehicle):

-	ENGINE	TIRE SIZE	STEERING AXIS INCLINATION
for TMC Made	2ZR-FE	195/65R15	12°32' (12.53°)
		205/55R16	
except TMC Made	2ZR-FE	195/65R15	12°32' (12.53°) 12°13' (12.22°)*
		205/55R16	
	2AZ-FE	205/55R16*	12°16' (12.27°)*
		215/45R17	12°37' (12.62°)

* For vehicle height for Mexico, add 15 mm (0.591 in.).

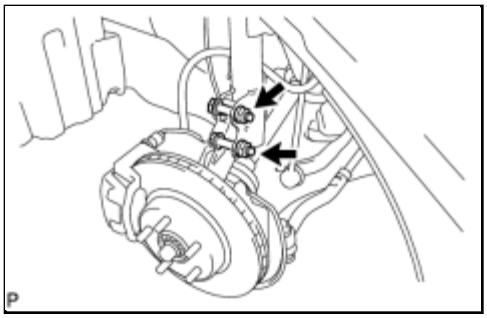


5. ADJUST CAMBER



NOTICE:

Inspect toe-in after the camber has been adjusted.

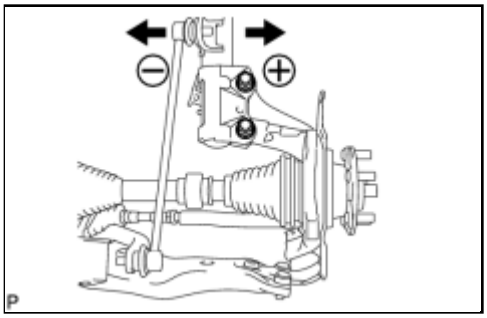


(a) Remove the front wheel.

(b) Remove the bolt and separate the front flexible hose from the front shock absorber.

(c) Remove the clamp and separate the front speed sensor from the front shock absorber (except TMC Made).

(d) Remove the 2 nuts on the lower side of the front shock absorber.



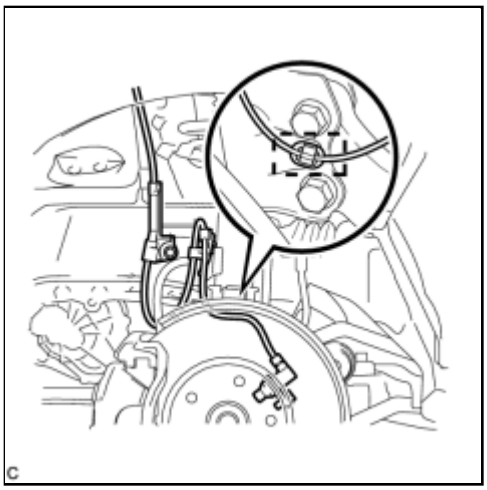
NOTICE:

Keep the bolts inserted.

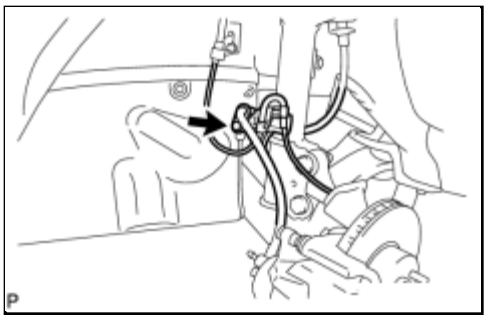
(e) Clean the installation surfaces of the front shock absorber and the steering knuckle.

(f) Temporarily install the 2 nuts (Step A).

(g) Fully push or pull the front axle hub in the direction of the required adjustment (Step B).



(h) Tighten the nuts.

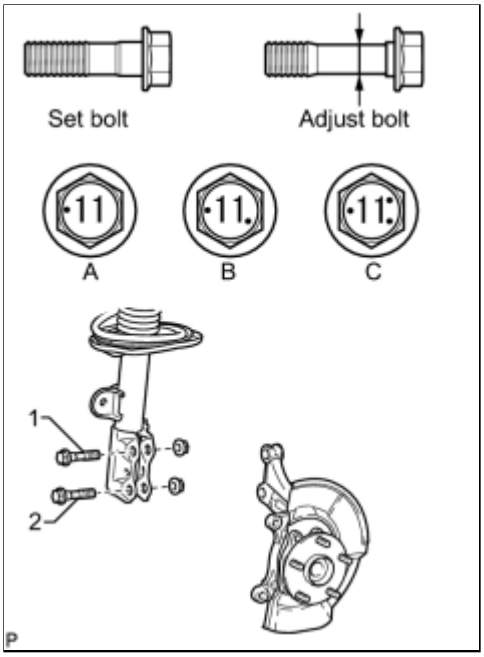


Torque: 240 N·m (2448 kgf·cm, 176ft·lbf)

NOTICE:

Keep the bolts from rotating when tightening the nuts.

(i) Install the front speed sensor with the clamp to the front shock absorber (except TMC Made).



(j) Install the front speed sensor and the front flexible hose to the front shock absorber with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(k) Install the front wheel.

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

(l) Check the camber.

If the measured value is not within the specification, calculate the required adjustment amount using the formula below.

Camber adjustment amount = center value of the specified range - measured value

Check the combination of installed bolts. Select appropriate bolts from the table below to adjust the camber to the specified values.

HINT:

Try to adjust the camber to the center of the specified values.

MOVE THE AXLE TOWARD (+) IN STEP (B)	MOVE THE AXLE TOWARD (-) IN STEP (B)

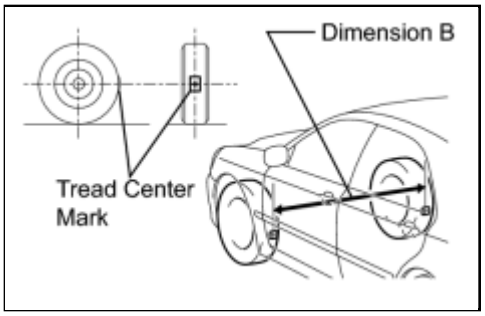
The body and suspension may be damaged if the camber is not correctly adjusted according to the table above.

NOTICE:

Replace the nut with a new one when replacing the bolt.

(m) Repeat the steps mentioned above. In step (A), replace 1 or 2 selected bolts.

HINT:



Replace 1 bolt at a time when replacing the 2 bolts.

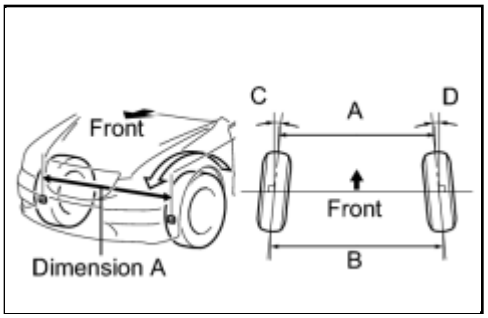
6. INSPECT TOE-IN

(a) Bounce the vehicle up and down at the corners several times to stabilize the suspension.

(b) Release the parking brake and move the shift lever to N.

(c) Push the vehicle straight ahead approximately 5 m (16.4 ft.). (*1)

(d) Put tread center marks on the rearmost points of the front wheels and measure the distance between the marks (dimension B).



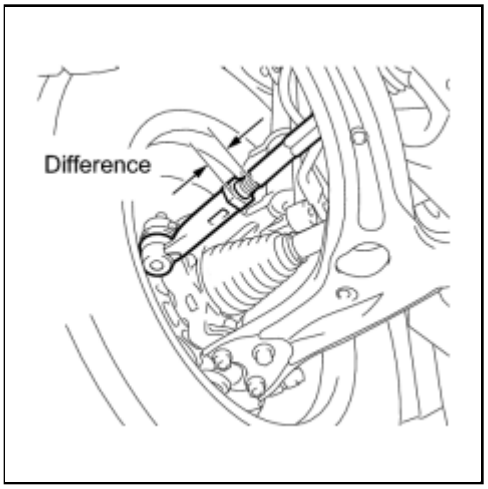
(e) Slowly push the vehicle straight ahead to rotate the front wheels 180° using the front tire valve as a reference point.

HINT:

Do not allow the wheels to rotate more than 180°. If the wheels rotate more than 180°, perform the procedure from (*1) again.

(f) Measure the distance between the tread center marks on the front side of the wheels (dimension A).

Toe-in:

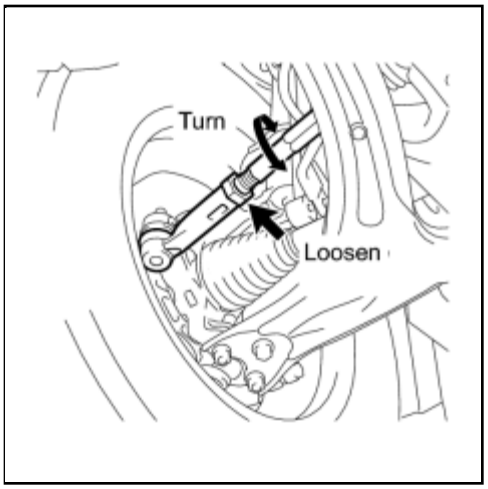


SPECIFIED CONDITION
C + D: 0°00' +/- 0°12' (0° +/- 0.2°) B - A: 0 +/- 2.0 mm (0 +/- 0.0787 in.)

HINT:

- Measure "B - A" only when "C + D" cannot be measured.
- If the toe-in is not within the specified range, adjust it at the rack ends.

7. ADJUST TOE-IN



(a) Make sure that the lengths of the right and left rack ends

are almost the same.

Difference between right and left rack ends:
1.5 mm (0.0591 in.) or less

(b) Remove the boot clips.

(c) Loosen the tie rod end lock nuts.

(d) Turn the right and left rack ends by an equal amount to adjust the toe-in to the center value.

(1) Extend the shorter rack end if the measured toe-in deviates toward the outer side.

(2) Shorten the longer rack end if the measured toe-in deviates toward the inner side.

(e) Tighten the tie rod end lock nuts.

Torque: 74 N·m (755 kgf·cm, 55ft·lbf)

(f) Place the boots on the seats and install the clips.

HINT:

Make sure that the boots are not twisted.

8. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

9. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ VSC)

NOTICE:

Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ VSC)

11. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION (w/ VSC)

INFO .

12. CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION (w/ VSC)

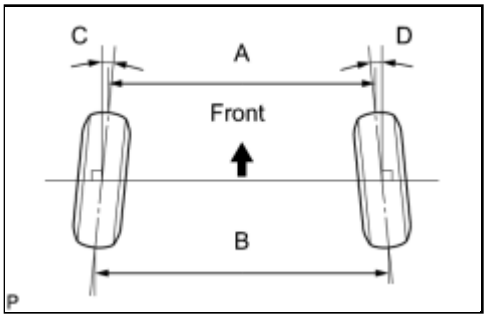
INFO .

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y7V00SX
Title: ALIGNMENT / HANDLING DIAGNOSIS: REAR WHEEL ALIGNMENT: INSPECTION (2010 Corolla)		

INSPECTION

NOTICE:

For vehicles equipped with VSC, if the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:



1. Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.
2. Reconnect the cable to the negative (-) battery terminal.
3. Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection.

1. INSPECT TIRES INFO

2. MEASURE VEHICLE HEIGHT INFO

3. INSPECT TOE-IN

Toe-in (Unloaded Vehicle):

-	GRADE	SPECIFIED CONDITION	RIGHT-LEFT DIFFERENCE
for TMC Made	except XRS	C + D: 0°16' +/- 15' (0.27° +/- 0.25°)	45' (0.75°) or less
		B - A: 2.8 +/- 2.7 mm (0.110 +/- 0.106 in.)	-
except TMC Made	except XRS	C + D: 0°16' +/- 15' (0.27° +/- 0.25°) C + D: 0°16' +/- 15' (0.27° +/- 0.25°)*	45' (0.75°) or less
		B - A: 2.8 +/- 2.7 mm (0.110 +/- 0.106 in.) B - A: 2.0 +/- 2.8 mm (0.0787 +/- 0.110 in.)*	-
	for XRS	C + D: 0°16' +/- 15' (0.27° +/- 0.25°) C + D: 0°16' +/- 15' (0.27° +/- 0.25°)*	45' (0.75°) or less
		B - A: 3.1 +/- 2.6 mm (0.122 +/- 0.102 in.) B - A: 2.2 +/- 2.8 mm (0.0866 +/- 0.110	-

	in.)*	

* For vehicle height for Mexico, add 15 mm (0.591 in.).

If the toe-in is not within the specified range, inspect the suspension parts and replace them if necessary.

HINT:

- Measure "B - A" only when "C + D" cannot be measured.

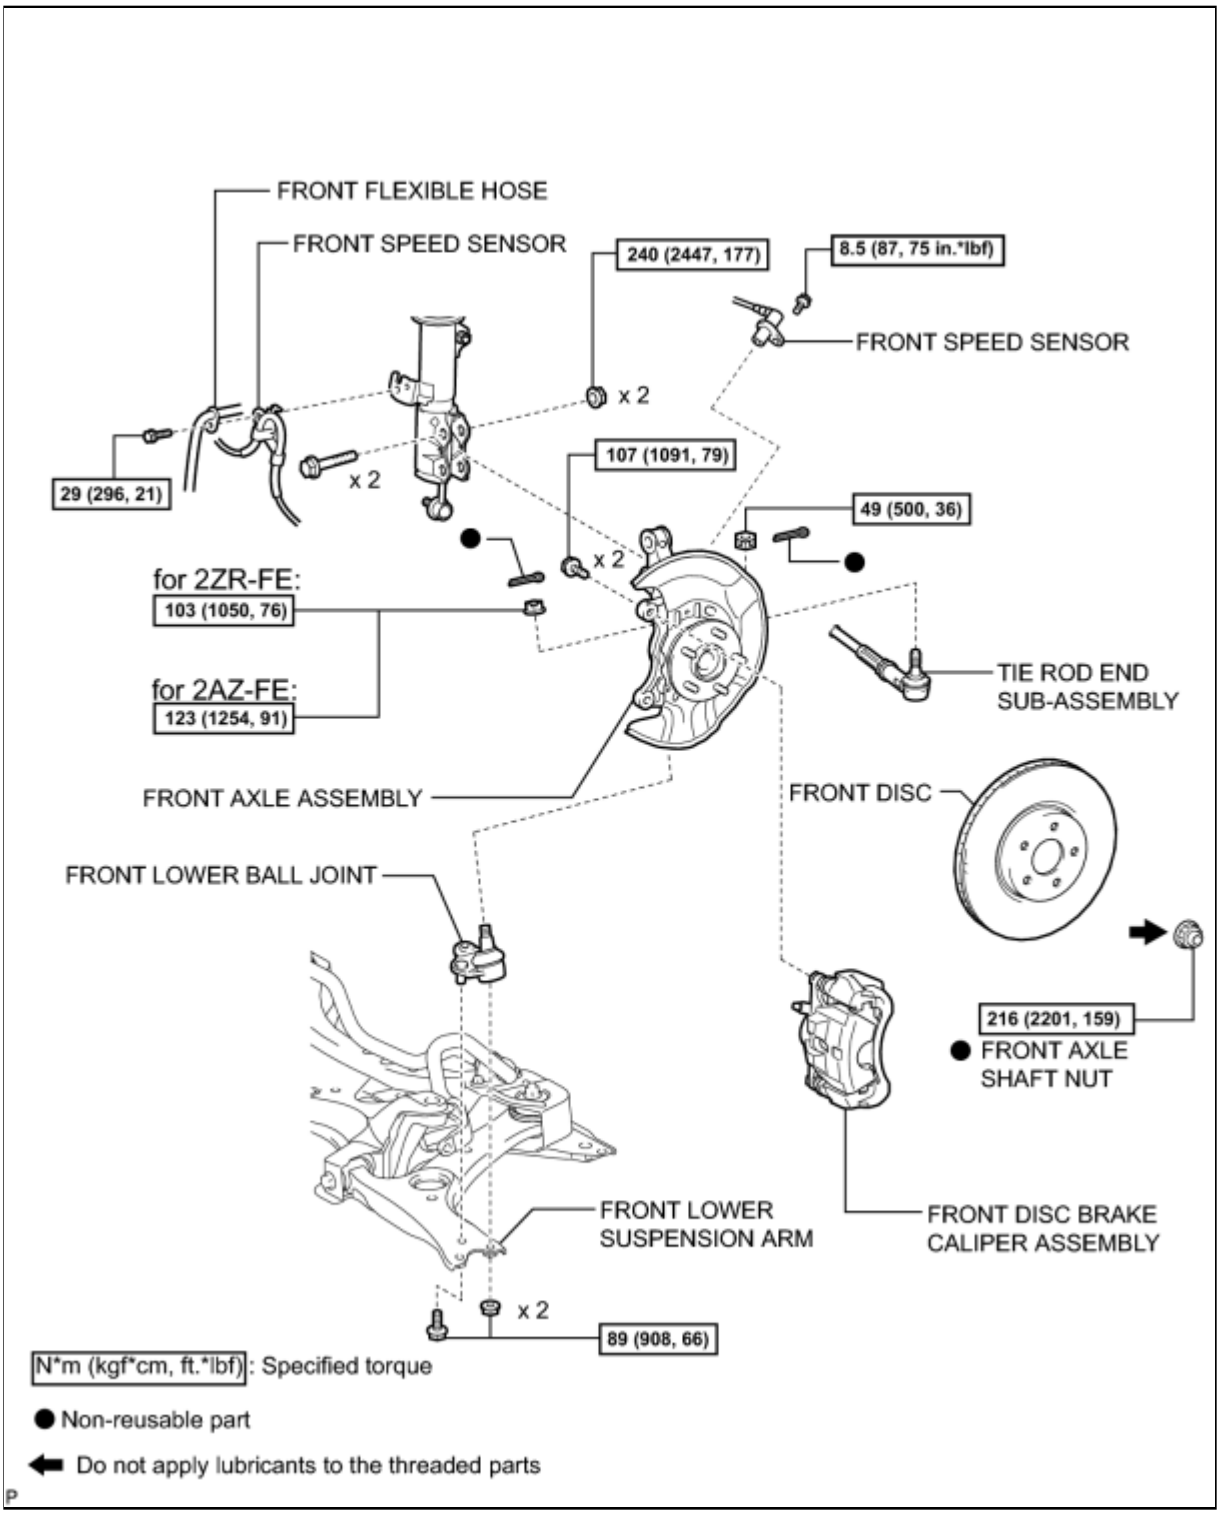
4. INSPECT CAMBER

(a) Install the camber-caster-kingpin gauge or set the vehicle on the wheel alignment tester.

(b) Inspect the camber.

Camber (Unloaded Vehicle):

-	GRADE	CAMBER INCLINATION	RIGHT-LEFT DIFFERENCE
for TMC Made	except XRS	-1°28' +/- 30' (-1.47° +/- 0.50°)	30' (0.50°) or less
except TMC Made	except XRS	-1°27' +/- 30' (-1.45° +/- 0.50°)	
	for XRS	-1°28' +/- 30' (-1.47° +/- 0.50°)	



HINT:

Camber is not adjustable. If the measurement is not within the specified range, inspect the suspension parts for damage and/or wear, and replace them if necessary.

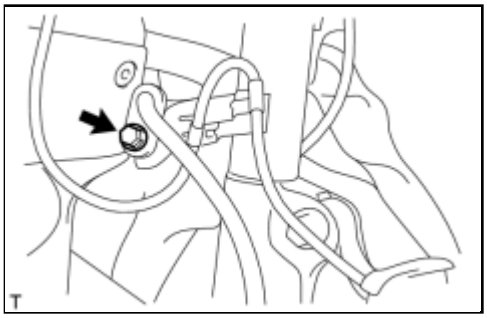
Title: FRONT SUSPENSION: FRONT LOWER BALL JOINT: REMOVAL (2010 Corolla)		

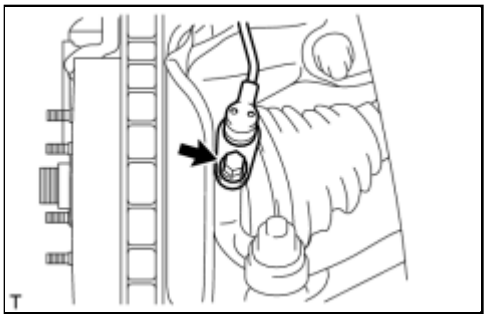
REMOVAL

HINT:



- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.

1. REMOVE FRONT WHEEL



2. REMOVE FRONT AXLE SHAFT NUT (for 2AZ-FE) INFO

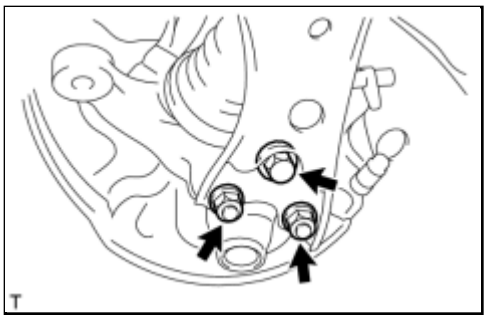
3. REMOVE FRONT AXLE SHAFT NUT (for 2ZR-FE) INFO

4. SEPARATE FRONT SPEED SENSOR

(a) Remove the bolt and separate the front speed sensor and flexible hose from the front shock absorber bracket.

(b) Remove the bolt and separate the front speed sensor from the steering knuckle.

NOTICE:



- Keep the front speed sensor tip and installation surfaces free of foreign matter.
- Remove the front speed sensor without turning it from its original installation angle.

5. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

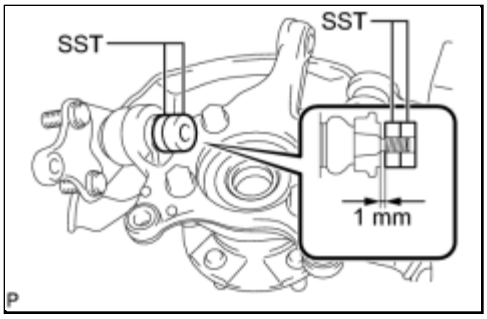
6. REMOVE FRONT DISC INFO

7. SEPARATE TIE ROD END SUB-ASSEMBLY INFO

8. SEPARATE FRONT LOWER SUSPENSION ARM

(a) Remove the bolt and 2 nuts, and separate the front lower suspension arm from the lower ball joint.

9. REMOVE FRONT AXLE ASSEMBLY INFO



10. REMOVE FRONT LOWER BALL JOINT

(a) Secure the front axle assembly in a vise.

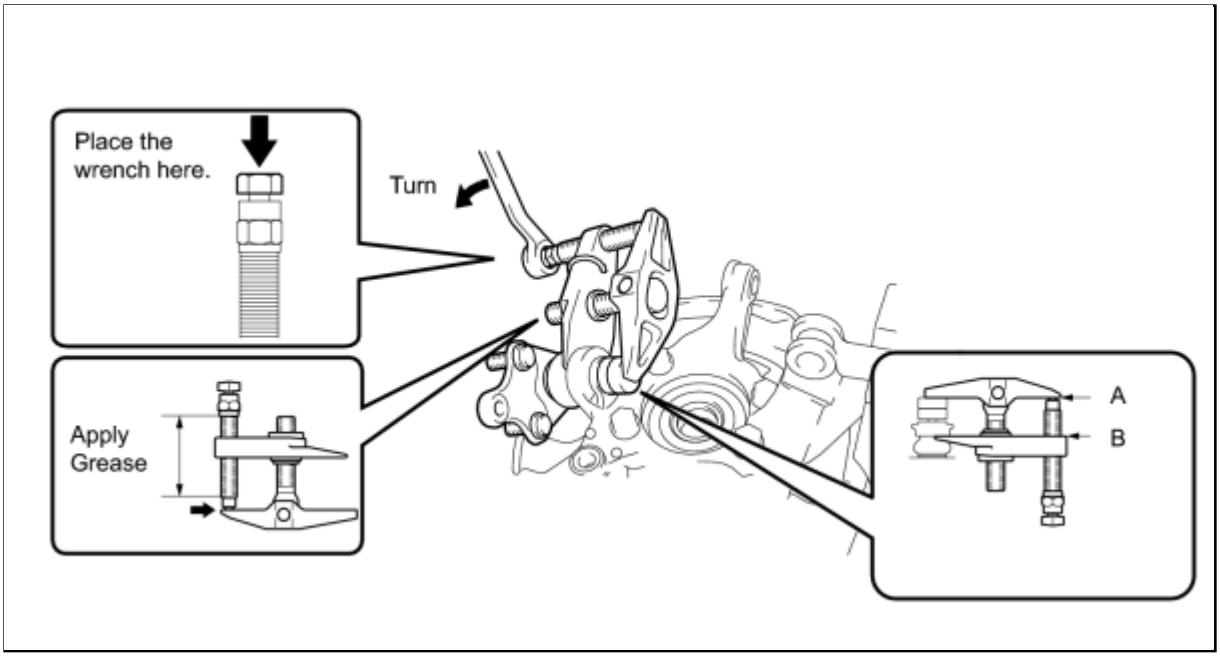
NOTICE:

When using a vise, do not overtighten it.

(b) Remove the cotter pin and nut.

(c) Install SST to the front lower ball joint as shown in the illustration.

SST: 09960-20010



09961-02050

09961-02050

NOTICE:

Check that the clearance measurement between SST and the front axle assembly is 1 mm (0.04 in.).

(d) Using SST, remove the front lower ball joint from the front axle assembly as shown in the illustration.

SST: 09960-20010

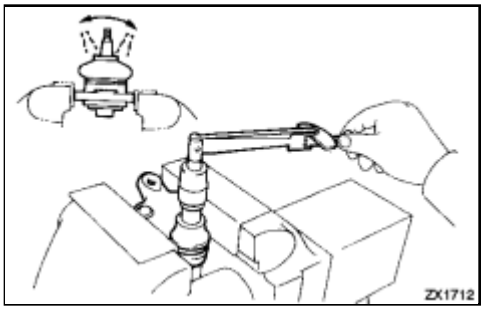
09961-02010

09961-02050

09961-02050

CAUTION:

Apply grease to the threads and end of the SST bolt.



NOTICE:

- Install SST so that A and B are parallel.
- Be sure to place a wrench on the part indicated in the illustration.
- Do not damage the front lower ball joint dust cover.

Title: FRONT SUSPENSION: FRONT LOWER BALL JOINT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT LOWER BALL JOINT

(a) Inspect the turning torque of the ball joint.

(1) Secure the front lower ball joint in a vise using aluminum plates.

(2) Install the nut to the front lower ball joint stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Turning Torque (for 2AZ-FE) - Torque: 1.0 to 3.4 N·m (10 to 35 kgf·cm, 9 to 30in·lbf)

Turning Torque (for 2ZR-FE) - Torque: 1.0 to 4.9 N·m (10 to 50 kgf·cm, 9 to 43in·lbf)

If the turning torque is not within the specified range, replace the front lower ball joint with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

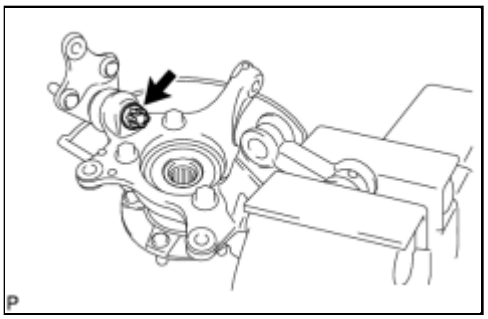
Title: FRONT SUSPENSION: FRONT LOWER BALL JOINT: INSTALLATION (2010 Corolla)		

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.



1. INSTALL FRONT LOWER BALL JOINT

(a) Secure the front axle assembly in a vise using aluminum plates.

NOTICE:

When using a vise, do not overtighten it.

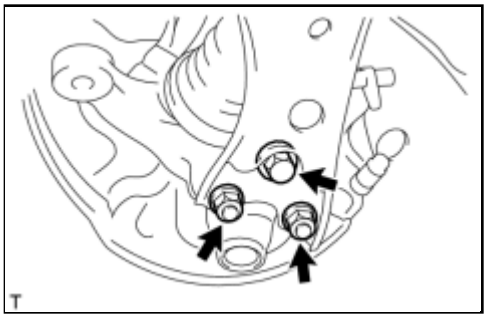
(b) Install the front lower ball joint to the front axle assembly with the nut.

2ZR-FE - Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

2AZ-FE - Torque: 123 N·m (1254 kgf·cm, 91ft·lbf)

(c) Install a new cotter pin.

NOTICE:



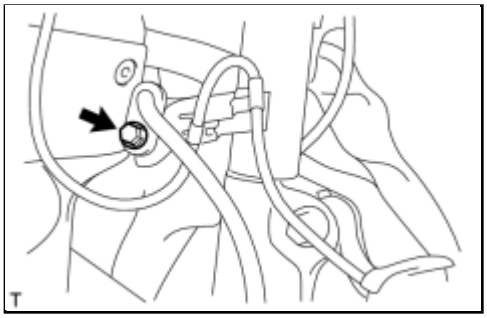
Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.

2. INSTALL FRONT AXLE ASSEMBLY INFO

3. CONNECT FRONT LOWER SUSPENSION ARM

(a) Install the front lower suspension arm to the lower ball joint with the bolt and 2 nuts.

Torque: 89 N·m (908 kgf·cm, 66ft·lbf)

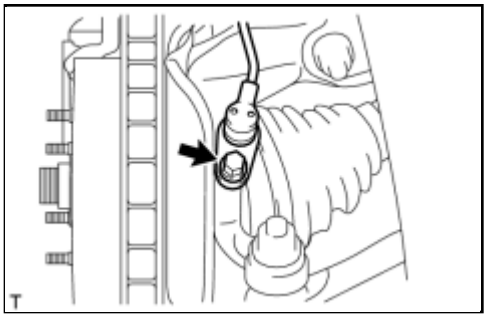


4. CONNECT TIE ROD END SUB-ASSEMBLY INFO

5. INSTALL FRONT DISC INFO

6. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

7. INSTALL FRONT SPEED SENSOR



(a) Install the front flexible hose and front speed sensor with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

NOTICE:

Install the flexible hose and speed sensor without twisting them.

(b) Install the front speed sensor onto the steering knuckle with the bolt.

Torque: 8.5 N·m (87 kgf·cm, 75in·lbf)

8. INSTALL FRONT AXLE SHAFT NUT (for 2AZ-FE) INFO

9. INSTALL FRONT AXLE SHAFT NUT (for 2ZR-FE) INFO

10. INSTALL FRONT WHEEL

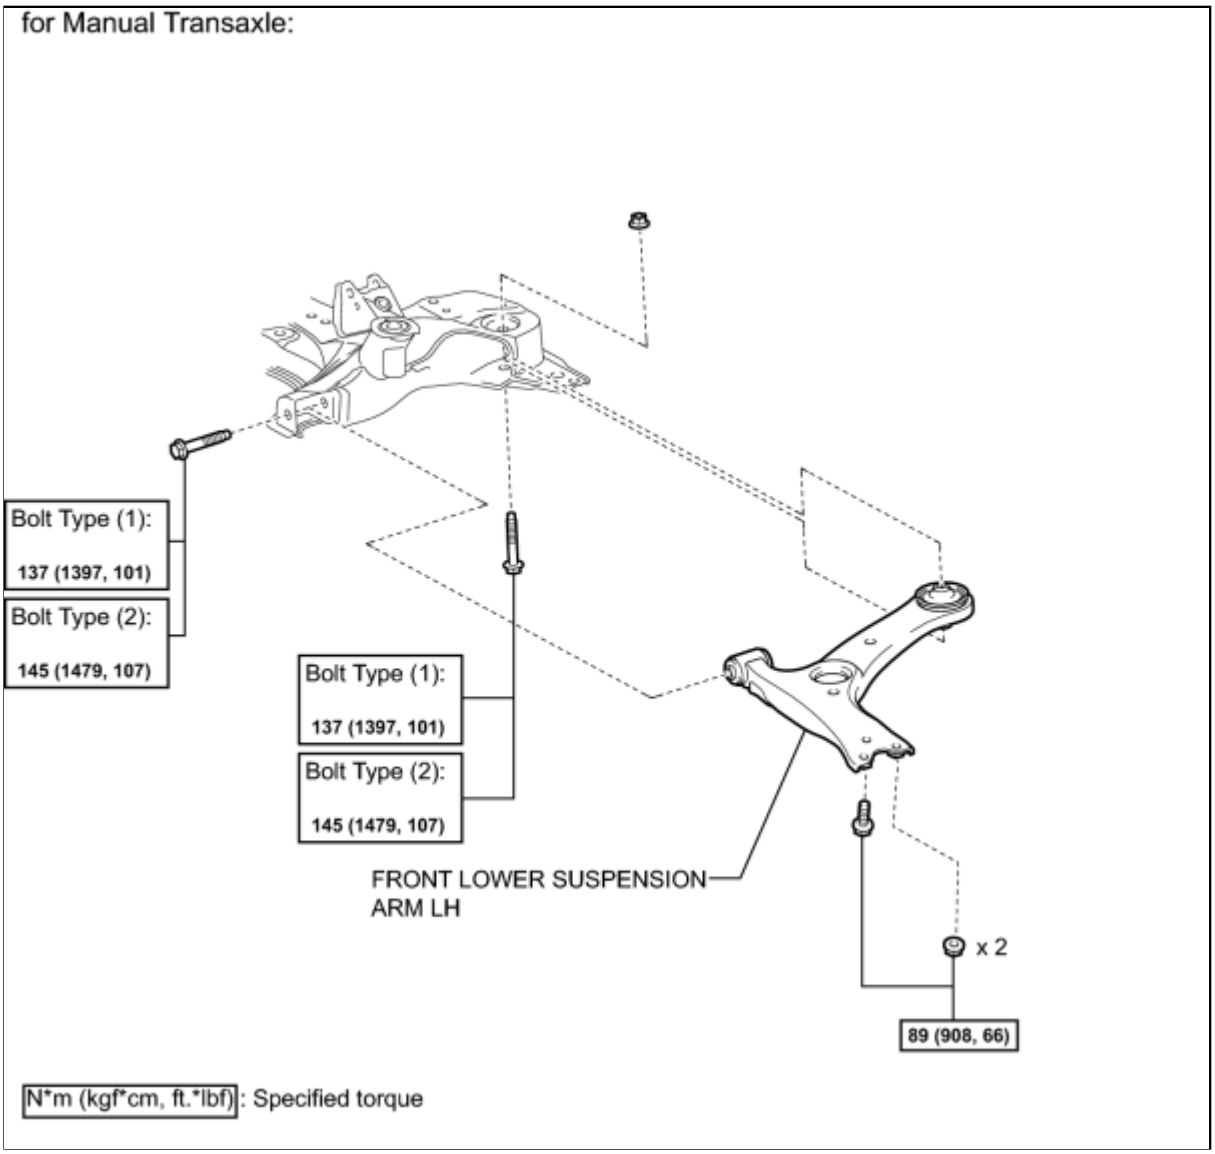
Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

11. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

Inspect and adjust front wheel alignment INFO **.**

12. CHECK FOR SPEED SENSOR SIGNAL



HINT:

Check for speed sensor signal INFO **.**

Title: FRONT SUSPENSION: FRONT LOWER SUSPENSION ARM: INSTALLATION (2010 Corolla)		

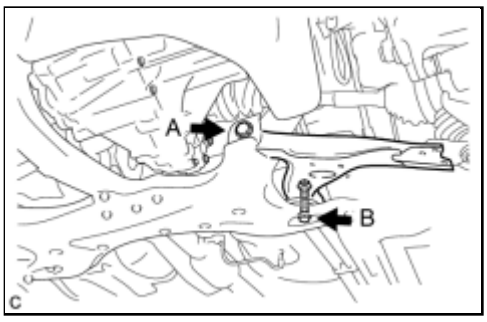
INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.

1. TEMPORARILY INSTALL FRONT LOWER SUSPENSION ARM LH

(a) Temporarily install the front lower suspension arm LH to the front suspension crossmember with the 2 bolts and nut.



NOTICE:

Because the nut has its own stopper, do not turn the nut. While securing the nut, tighten the bolt.

HINT:

Fully tighten the 2 bolts after stabilizing the suspension.

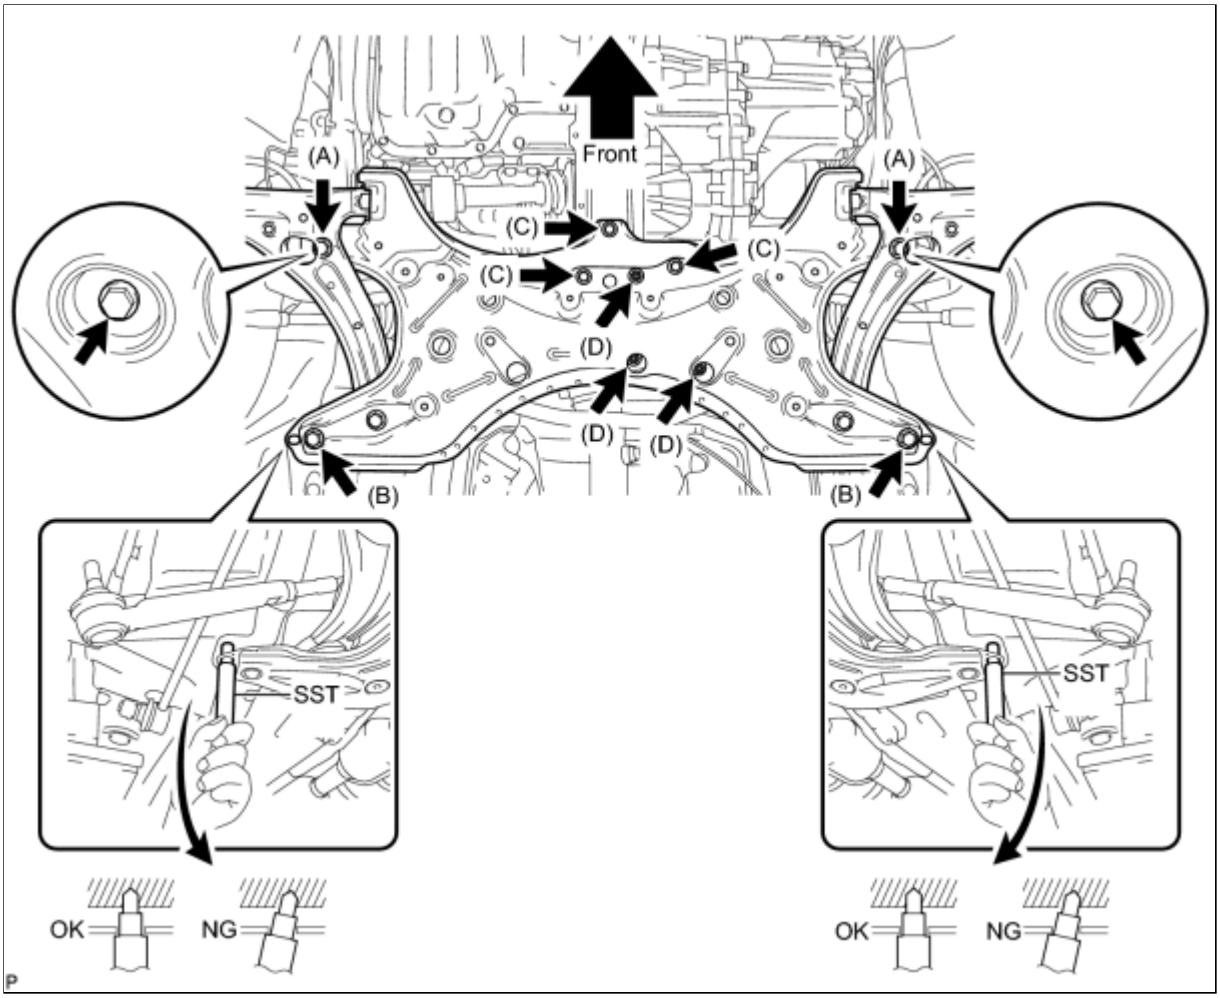
2. TEMPORARILY INSTALL FRONT LOWER SUSPENSION ARM LH (for Manual Transaxle)

(a) Temporarily install the front lower suspension arm LH to the front suspension crossmember sub-assembly with the 2 bolts and nut.

NOTICE:

Because the nut has its own stopper, do not turn the nut. While securing the nut, tighten the bolt B.

HINT:



Fully tighten the 2 bolts after stabilizing the suspension.

3. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY

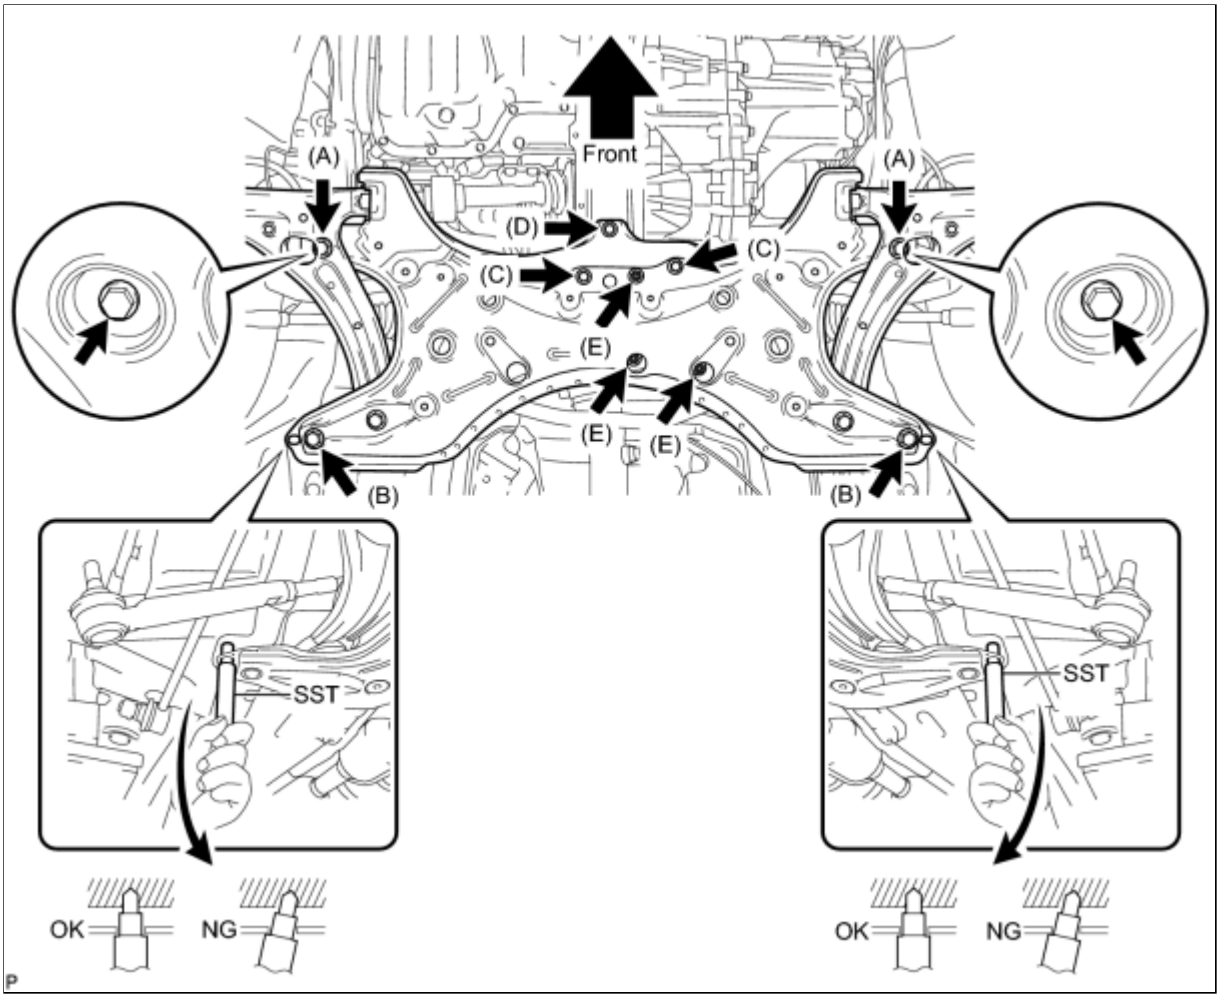
(a) for TMC Made:

(1) While alternately inserting SST into the guide holes on both sides of the front suspension crossmember RH and LH, tighten 2 bolts (A), 2 bolts (B), 3 bolts (C), and 3 nuts (D) on the RH and LH sides to the respective specified torque in several steps.

SST: 09670-00010

Bolt (A) - Torque: 113 N·m (1152 kgf·cm, 83ft·lbf)

Bolt (B) - Torque: 157 N·m (1600 kgf·cm, 116ft·lbf)



Bolt (C) - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

Nut (D) - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

(b) except TMC Made:

(1) While alternately inserting SST into the guide holes on both sides of the front suspension crossmember RH and LH, tighten 2 bolts (A), 2 bolts (B), 2 bolts (C), bolt (D) and 3 nuts (E) on the RH and LH sides to the respective specified torque in several steps.

SST: 09670-00010

Bolt (A) - Torque: 113 N·m (1152 kgf·cm, 83ft·lbf)
Bolt (B) - Torque: 157 N·m (1600 kgf·cm, 116ft·lbf)
Bolt (C) - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)
Bolt (D) - Torque: 87 N·m (887 kgf·cm, 64ft·lbf)
Nut (E) - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

4. CONNECT FRONT LOWER SUSPENSION ARM LH INFO

5. CONNECT FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as the LH side.

6. CONNECT FRONT STABILIZER LINK ASSEMBLY LH INFO

7. CONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

8. CONNECT TIE ROD END SUB-ASSEMBLY LH INFO

9. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

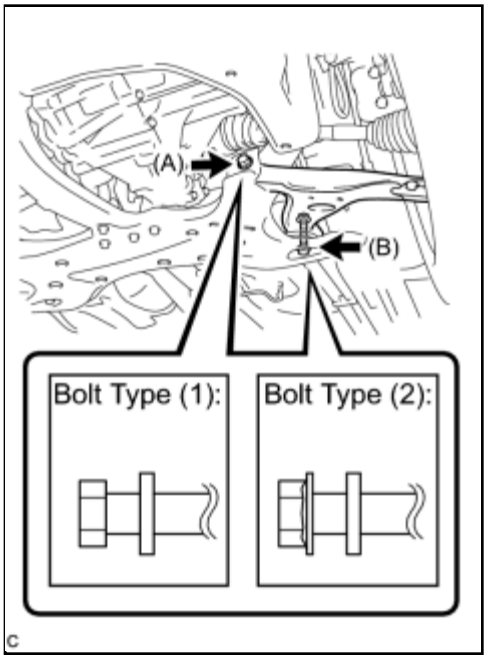
Perform the same procedure as the LH side.

10. CONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

11. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

12. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

13. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO



14. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

15. STABILIZE SUSPENSION

(a) Lower the vehicle and bounce it up and down several times to stabilize the front suspension. Raise the vehicle.

16. FULLY TIGHTEN FRONT LOWER SUSPENSION ARM LH

(a) Fully tighten the bolt (A).

Bolt type (1) - Torque: 137 N·m (1397 kgf·cm, 101ft·lbf)
Bolt type (2) - Torque: 145 N·m (1479 kgf·cm, 107ft·lbf)

NOTICE:

The final torque must be applied under standard vehicle height conditions.

(b) Fully tighten the bolt (B).

Bolt type (1) - Torque: 137 N·m (1397 kgf·cm, 101ft·lbf)
Bolt type (2) - Torque: 145 N·m (1479 kgf·cm, 107ft·lbf)

NOTICE:

- The final torque must be applied under standard vehicle height conditions.
- Because the nut has its own stopper, do not turn the nut. While securing the nut, tighten the bolt B.

17. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

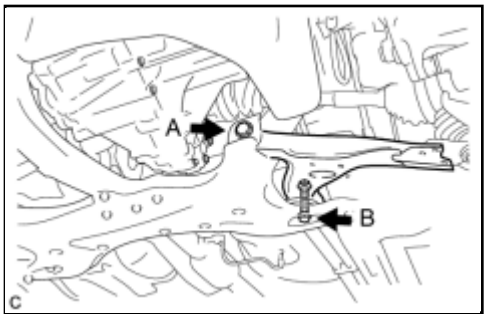
Inspect and adjust front wheel alignment INFO .

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029T701UX
Title: FRONT SUSPENSION: FRONT LOWER SUSPENSION ARM: REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.



1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. SECURE STEERING WHEEL INFO

3. REMOVE FRONT WHEELS

4. SEPARATE FRONT LOWER SUSPENSION ARM LH (for Manual Transaxle) INFO

5. REMOVE FRONT LOWER SUSPENSION ARM LH (for Manual Transaxle)

(a) Remove the 2 bolts, nut, and front lower suspension arm LH from the front suspension crossmember sub-assembly.

NOTICE:

Because the nut has its own stopper, do not turn the nut. While securing the nut, loosen bolt B.

6. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO

7. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

8. SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

9. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

10. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

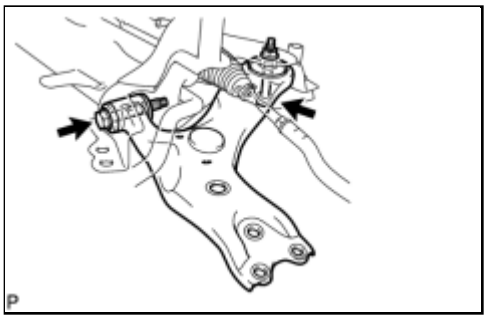
11. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

12. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

13. SEPARATE FRONT LOWER SUSPENSION ARM LH INFO



14. SEPARATE FRONT LOWER SUSPENSION ARM RH

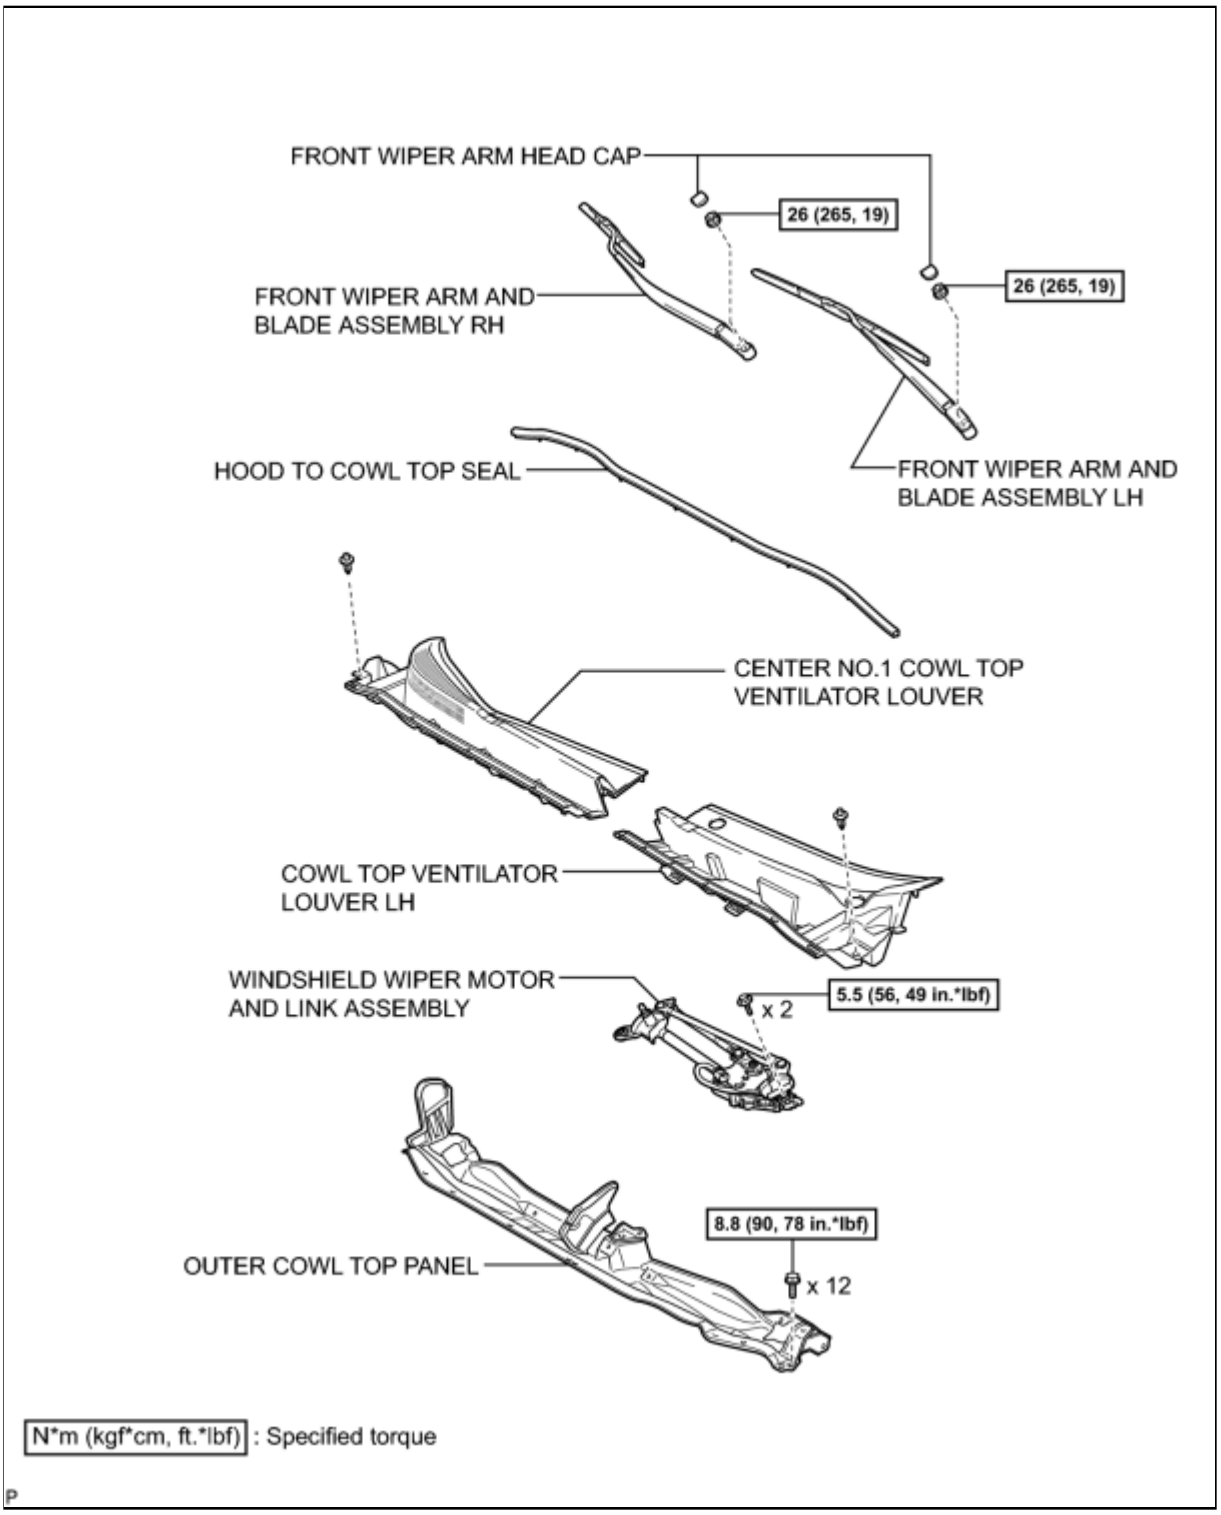
HINT:

Perform the same procedure as the LH side.

15. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

16. REMOVE FRONT LOWER SUSPENSION ARM LH

(a) Remove the 2 bolts, nut, and front lower suspension arm LH from the front suspension crossmember.



CAUTION:

Because the nut has its own stopper, do not turn the nut. While securing the nut, loosen bolt.

Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.

1. REMOVE FRONT WHEEL

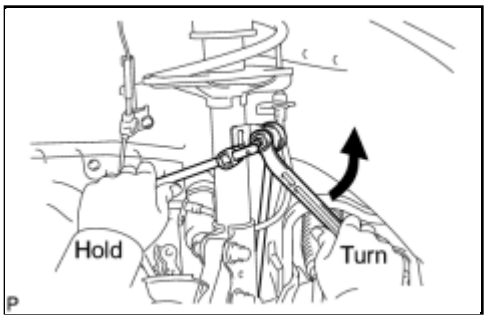
2. REMOVE FRONT WIPER ARM HEAD CAP INFO

3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

5. REMOVE HOOD TO COWL TOP SEAL INFO

6. REMOVE CENTER NO.1 COWL TOP VENTILATOR LOUVER INFO



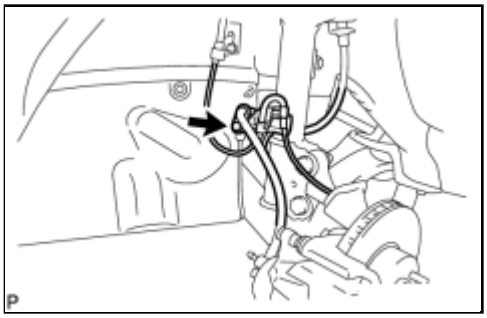
7. REMOVE COWL TOP VENTILATOR LOUVER LH INFO

8. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

9. REMOVE OUTER COWL TOP PANEL (for TMC Made) INFO

10. REMOVE OUTER COWL TOP PANEL (except TMC Made) INFO

11. SEPARATE FRONT STABILIZER LINK ASSEMBLY

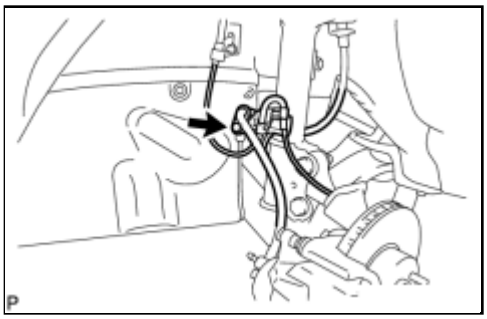


(a) Remove the nut and separate the stabilizer link assembly from the front shock absorber with coil spring.

NOTICE:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

12. SEPARATE FRONT SPEED SENSOR (for TMC Made)



(a) Remove the bolt and separate the front flexible hose and the front speed sensor from the front shock absorber with coil spring.

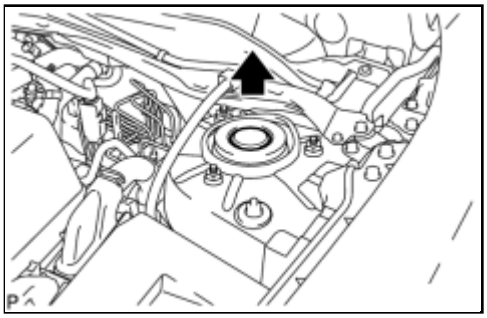
NOTICE:

Be sure to separate the front speed sensor from the front shock absorber with coil spring completely.

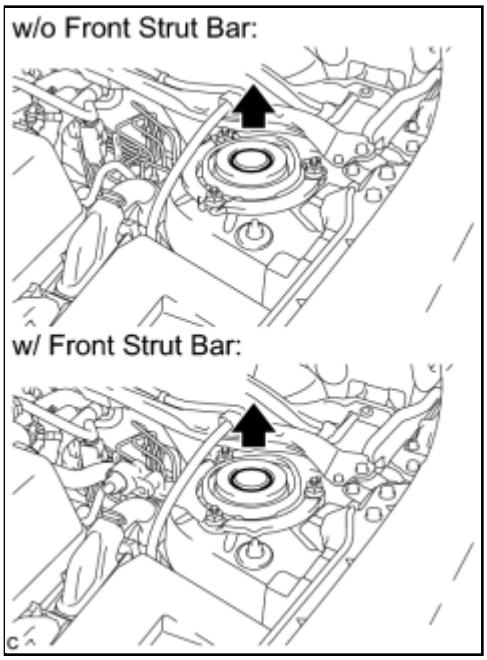
13. SEPARATE FRONT SPEED SENSOR (except TMC Made)

(a) Remove the bolt and separate the front flexible hose and the front speed sensor from the front shock absorber with coil spring.

NOTICE:



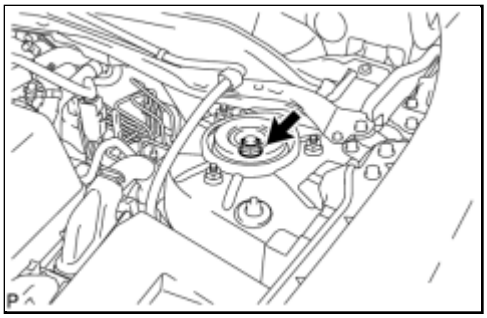
Be sure to separate the front speed sensor from the front shock absorber with coil spring completely.



(b) Remove the clamp and separate the front speed sensor from the front shock absorber.

14. REMOVE FRONT SUSPENSION SUPPORT DUST COVER (for TMC Made)

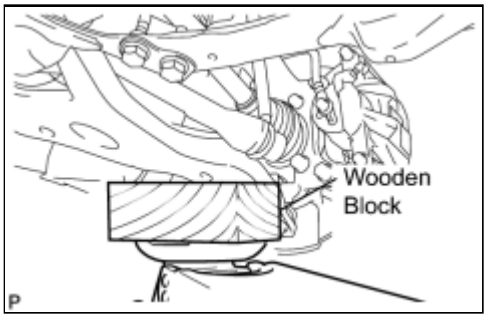
(a) Remove the front suspension support dust cover.

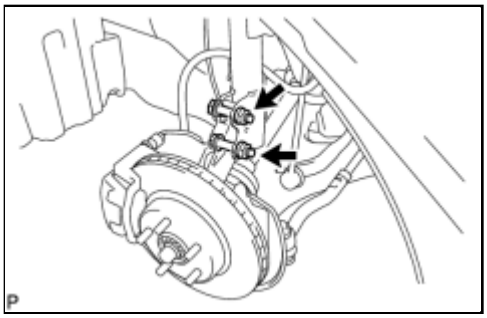


15. REMOVE FRONT SUSPENSION SUPPORT DUST COVER (except TMC Made)

(a) Remove the front suspension support dust cover.

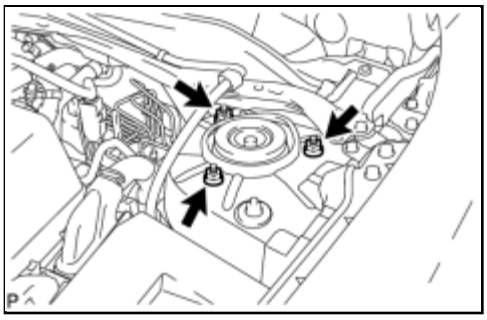
16. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING (for TMC Made)





(a) Loosen the front support to front shock absorber nut of the front shock absorber.

NOTICE:



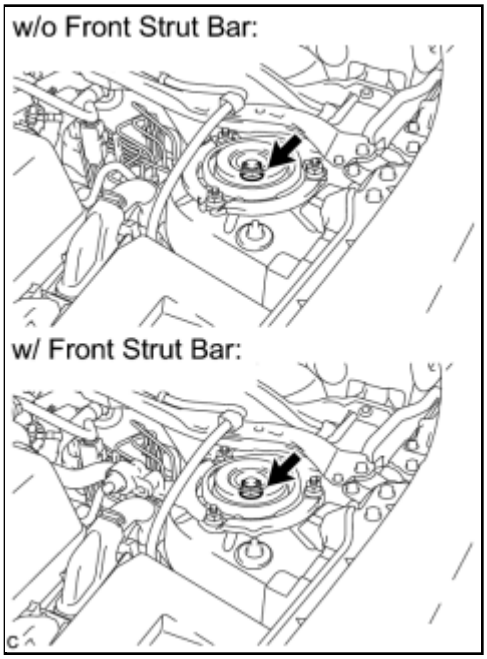
- Do not remove the front support to front shock absorber nut.
- Loosen the nut only when the front shock absorber with coil spring needs to be disassembled.

(b) Support the front axle using a jack and wooden block.

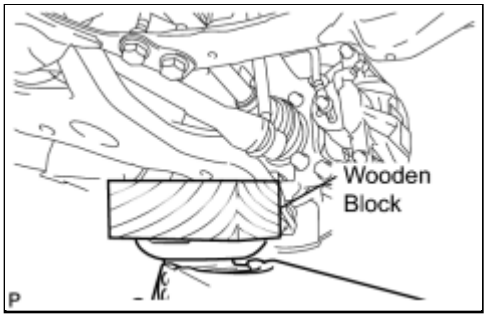
(c) Remove the 2 bolts and 2 nuts, and separate the front shock absorber with coil spring (lower side) from the steering knuckle.

(d) Remove the 3 nuts and front shock absorber with coil spring.

NOTICE:

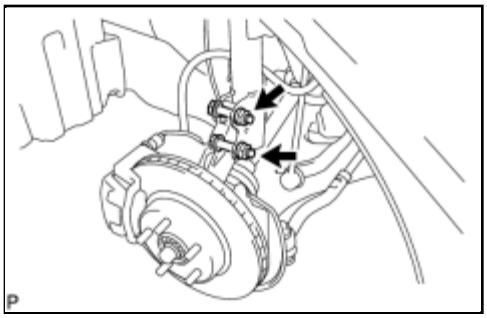


Make sure that the front speed sensor is completely separated from the front shock absorber with coil spring.



17. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING (except TMC Made)

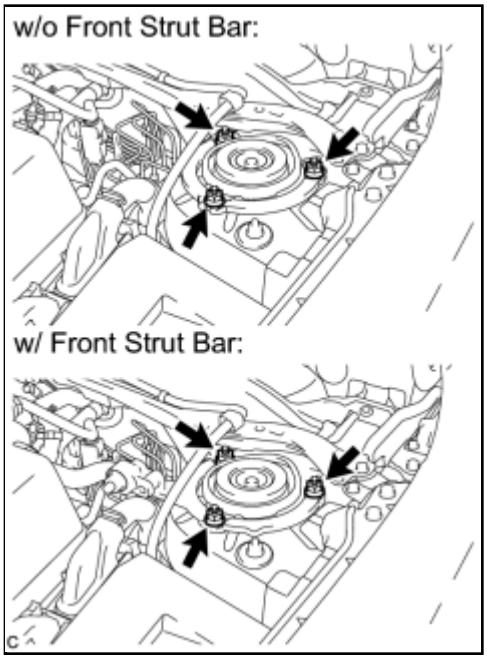
(a) Loosen the front support to front shock absorber nut of the front shock absorber.



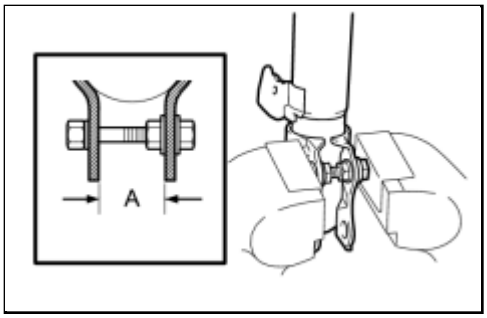
NOTICE:

- Do not remove the front support to front shock absorber nut.
- Loosen the nut only when the front shock absorber with coil spring needs to be disassembled.

(b) Support the front axle using a jack and wooden block.



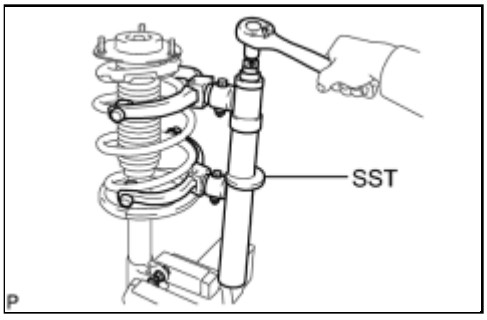
(c) Remove the 2 bolts and 2 nuts, and separate the front shock absorber with coil spring (lower side) from the steering knuckle.



(d) Remove the 3 nuts and front shock absorber with coil spring.

NOTICE:

Make sure that the front speed sensor is completely separated from the front shock absorber with coil spring.



18. SECURE FRONT SHOCK ABSORBER WITH COIL SPRING

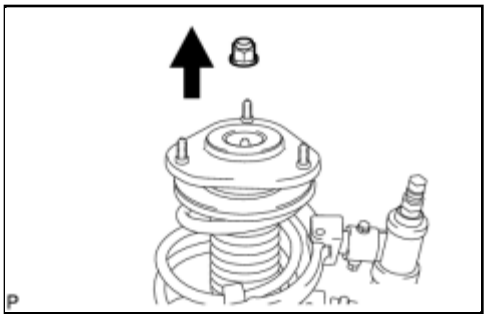
(a) Install the bolt and nut to the front shock absorber as shown in the illustration and secure the front shock absorber in a vise.

A:
28 mm (1.102 in.)

19. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT

(a) Using SST, compress the front coil spring.

SST: 09727-30021
09727-00010
09727-00021
09727-00031



HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

(b) Check that the front coil spring is sufficiently compressed.

NOTICE:

Do not use an impact wrench. It will damage SST.

(c) Remove the front support to front shock absorber nut.

20. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

21. REMOVE FRONT SUSPENSION SUPPORT DUST SEAL

22. REMOVE FRONT COIL SPRING UPPER SEAT

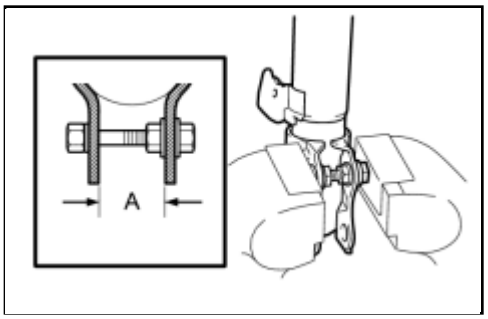
23. REMOVE FRONT COIL SPRING UPPER INSULATOR

24. REMOVE FRONT COIL SPRING

25. REMOVE FRONT SPRING BUMPER

26. REMOVE FRONT COIL SPRING LOWER INSULATOR

27. REMOVE FRONT SHOCK ABSORBER

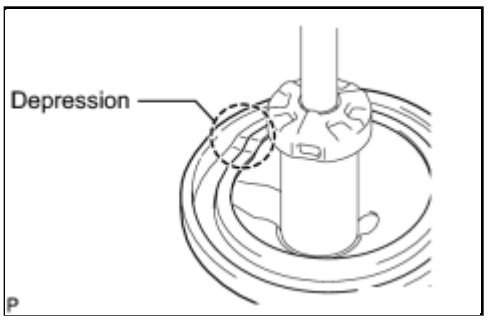


Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000003GX010X
Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: INSTALLATION (2010 Corolla)		

INSTALLATION

HINT:

- Use the same procedure for the LH side and RH side.
- The following procedure listed is for the LH side.



1. SECURE FRONT SHOCK ABSORBER

(a) Install the bolt and nut to the front shock absorber as shown in the illustration and secure the front shock absorber in a vise.

A:
28 mm (1.102 in.)

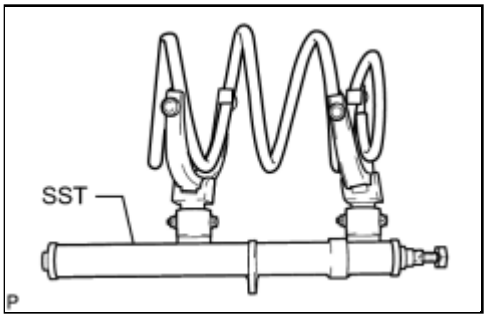
2. INSTALL FRONT COIL SPRING LOWER INSULATOR

(a) Install the front coil spring lower insulator to the front shock absorber.

NOTICE:

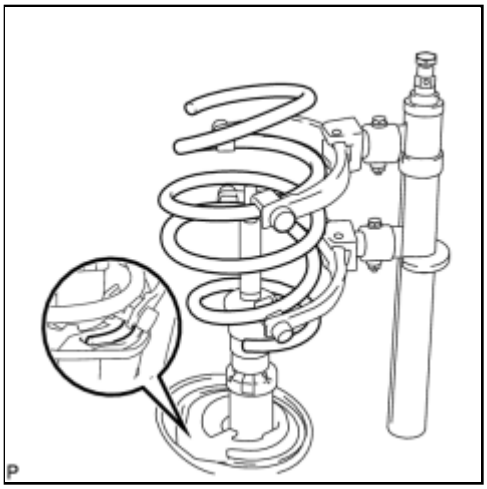
Make sure that the front coil spring lower insulator is positioned in the depression of the lower spring seat.

3. INSTALL FRONT SPRING BUMPER



4. INSTALL FRONT COIL SPRING

(a) Using SST, compress the front coil spring.

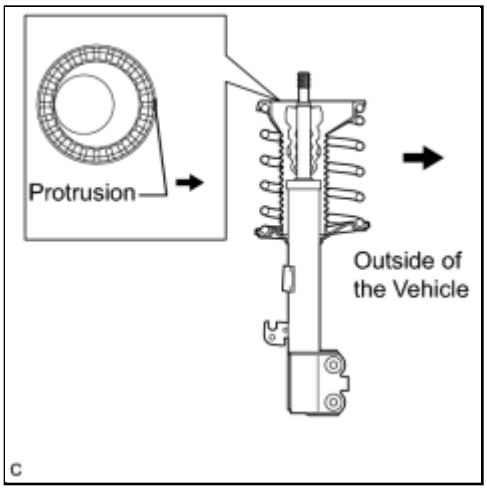


SST: 09727-30021

09727-00010
09727-00021
09727-00031

NOTICE:

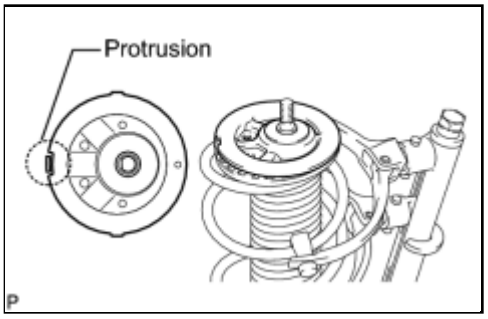
- Do not use an impact wrench. It will damage SST.
- Do not make a damage on the spring surface. The spring has soft coating.



(b) Install the front coil spring.

NOTICE:

Fit the lower end of the front coil spring into the gap of the spring lower seat.



5. INSTALL FRONT COIL SPRING UPPER INSULATOR

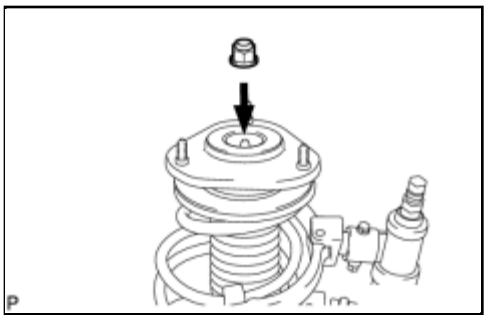
(a) Install the front coil spring upper insulator to the front shock absorber with the protrusion on the insulator facing the outside of the vehicle.

6. INSTALL FRONT COIL SPRING UPPER SEAT

(a) Install the front coil spring upper seat to the front shock

absorber assembly with the mark facing the outside of the vehicle.

NOTICE:



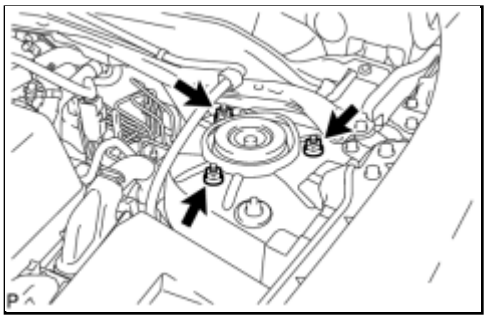
- Align the cutout of the front coil spring upper seat with the protrusion on the front coil spring upper insulator.
- Check that the slot on the piston rod and the slot on the front coil spring upper seat are aligned.

7. INSTALL FRONT SUSPENSION SUPPORT DUST SEAL

(a) Install a new front suspension support dust seal.

8. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY

9. TEMPORARILY TIGHTEN FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT



(a) Temporarily tighten a new front support to front shock absorber nut.

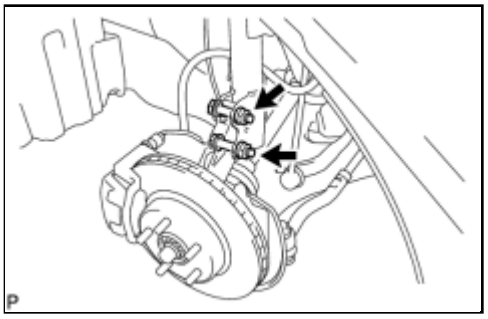
(b) Remove SST from the front coil spring.

NOTICE:

Do not use an impact wrench. It will damage SST.

10. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING (for TMC Made)

(a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.

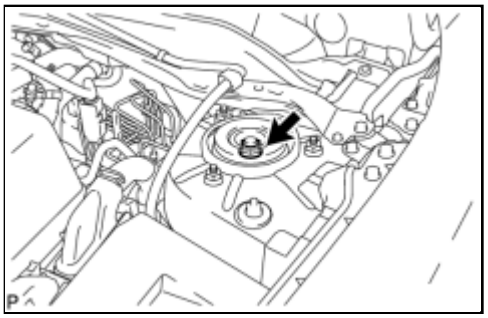


Torque: 39 N·m (398 kgf·cm, 29ft·lbf)

NOTICE:

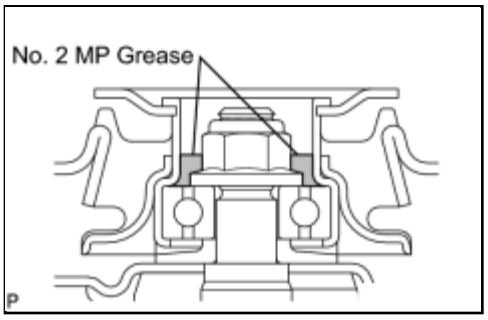
Check the nut size before installing.

for TMC Made	M8



(b) Install the front shock absorber with coil spring (lower side) to the steering knuckle with the 2 bolts and 2 nuts.

Torque: 240 N·m (2447 kgf·cm, 177ft·lbf)



NOTICE:

Keep the bolts from rotating while tightening the nuts.

(c) Fully tighten the front support to front shock absorber nut.

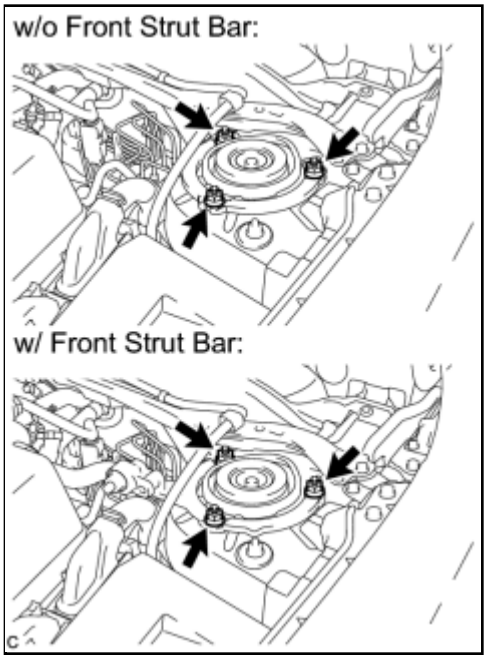
Torque: 47 N·m (479 kgf·cm, 35ft·lbf)

(d) Apply No. 2 MP grease into the suspension support sub-assembly.

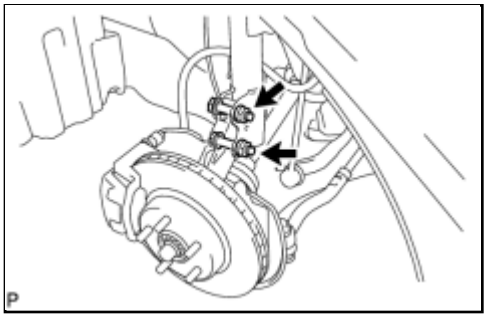
NOTICE:

Do not apply any grease to the rubber surface of the front suspension support sub-assembly.

11. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING (except TMC Made)



(a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.



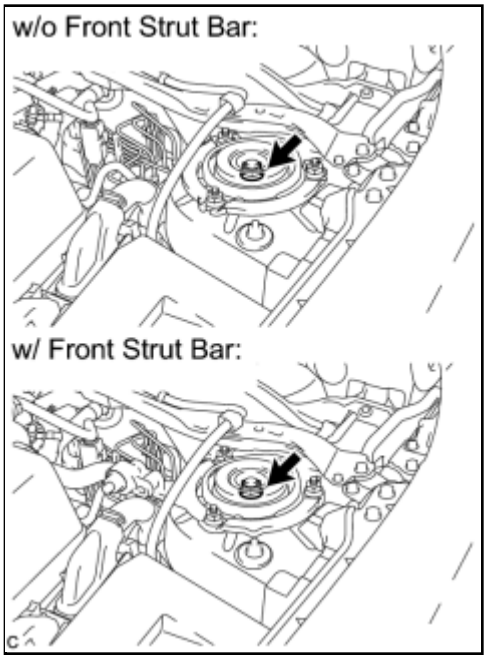
Torque: 50 N·m (510 kgf·cm, 37ft·lbf)

NOTICE:

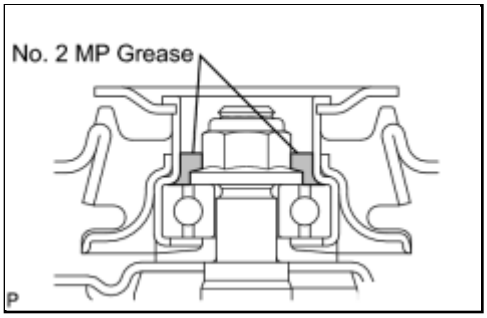
Check the nut size before installing.

except TMC Made	M10

(b) Install the front shock absorber with coil spring (lower side) to the steering knuckle with the 2 bolts and 2 nuts.



Torque: 240 N·m (2447 kgf·cm, 177ft·lbf)

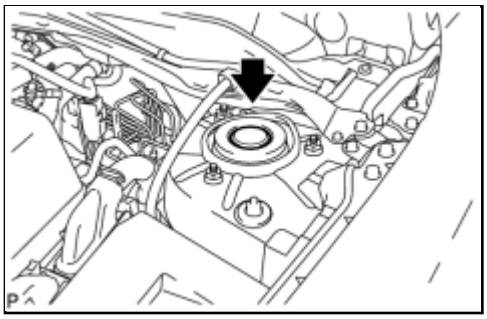


NOTICE:

Keep the bolts from rotating while tightening the nuts.

(c) Fully tighten the front support to front shock absorber nut.

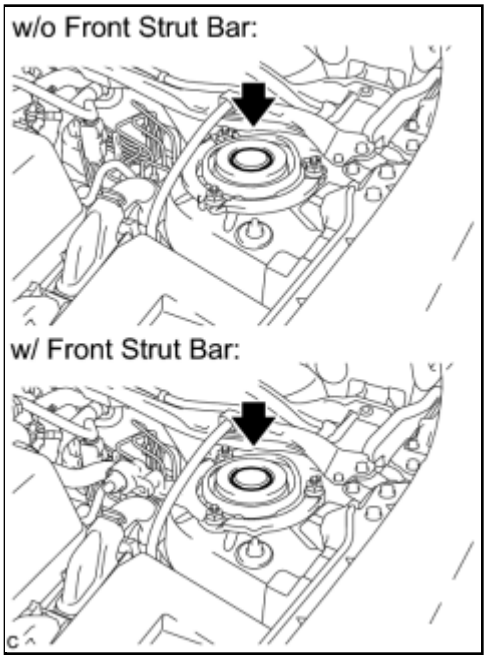
Torque: 47 N·m (479 kgf·cm, 35ft·lbf)



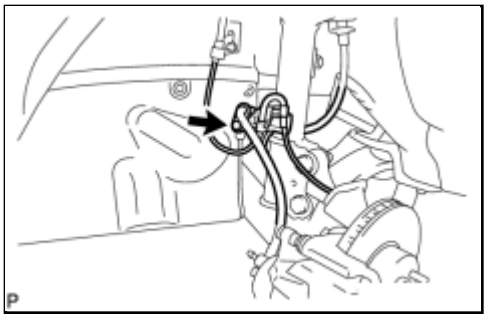
(d) Apply No. 2 MP grease into the suspension support sub-assembly.

NOTICE:

Do not apply any grease to the rubber surface of the front suspension support sub-assembly.



12. INSTALL FRONT SUSPENSION SUPPORT DUST COVER (for TMC Made)



(a) Install the front suspension support dust cover.

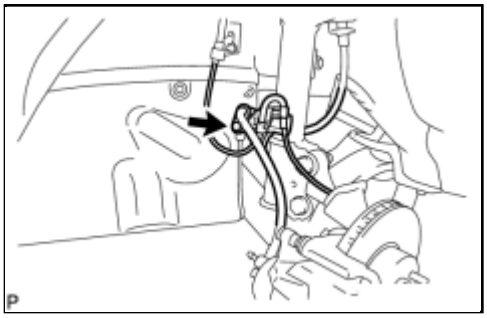
13. INSTALL FRONT SUSPENSION SUPPORT DUST COVER (except TMC Made)

(a) Install the front suspension support dust cover.

14. INSTALL FRONT SPEED SENSOR (for TMC Made)

(a) Install the front speed sensor and front flexible hose to the front shock absorber with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



NOTICE:

Do not twist the front speed sensor when installing it.

HINT:

Install the speed sensor harness bracket first, and then the front flexible hose.

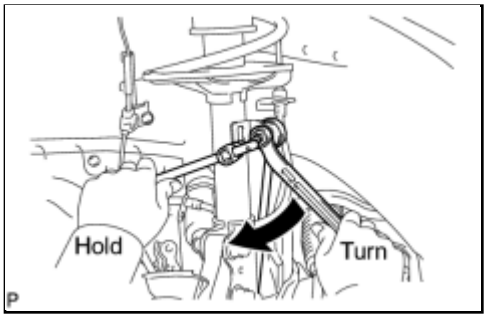
15. INSTALL FRONT SPEED SENSOR (except TMC Made)

(a) Install the front speed sensor and front flexible hose to the front shock absorber with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

NOTICE:

Do not twist the front speed sensor when installing it.



HINT:

Install the speed sensor harness bracket first, and then the front flexible hose.

(b) Install the front speed sensor with the clamp to the front shock absorber.

16. INSTALL FRONT STABILIZER LINK ASSEMBLY

(a) Install the front stabilizer link assembly to the front shock absorber with coil spring with the nut.

Torque: 74 N·m (755 kgf·cm, 55ft·lbf)

NOTICE:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

17. INSTALL OUTER COWL TOP PANEL (for TMC Made) INFO

18. INSTALL OUTER COWL TOP PANEL (except TMC Made) INFO

19. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

20. INSTALL COWL TOP VENTILATOR LOUVER LH INFO

21. INSTALL CENTER NO.1 COWL TOP VENTILATOR LOUVER INFO

22. INSTALL HOOD TO COWL TOP SEAL INFO

23. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

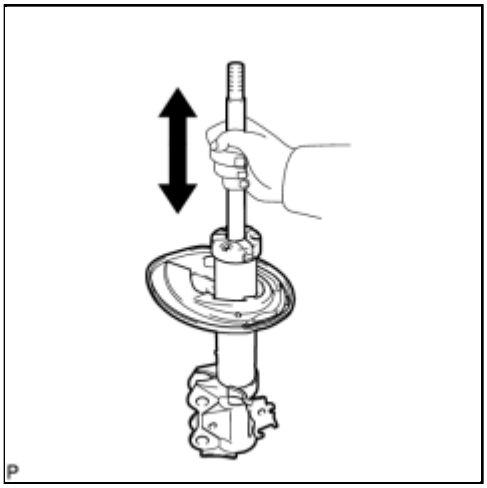
24. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

25. INSTALL FRONT WIPER ARM HEAD CAP INFO

26. INSTALL FRONT WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

27. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT



HINT:

Inspect and adjust front wheel alignment INFO **.**

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002YJ500PX
Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: INSPECTION (2010 Corolla)		

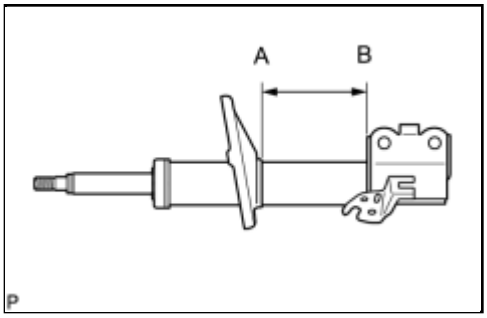
INSPECTION

1. INSPECT FRONT SHOCK ABSORBER

(a) Compress and extend the shock absorber rod 4 times or more .

Standard:

The operational sound and resistance are normal.



HINT:

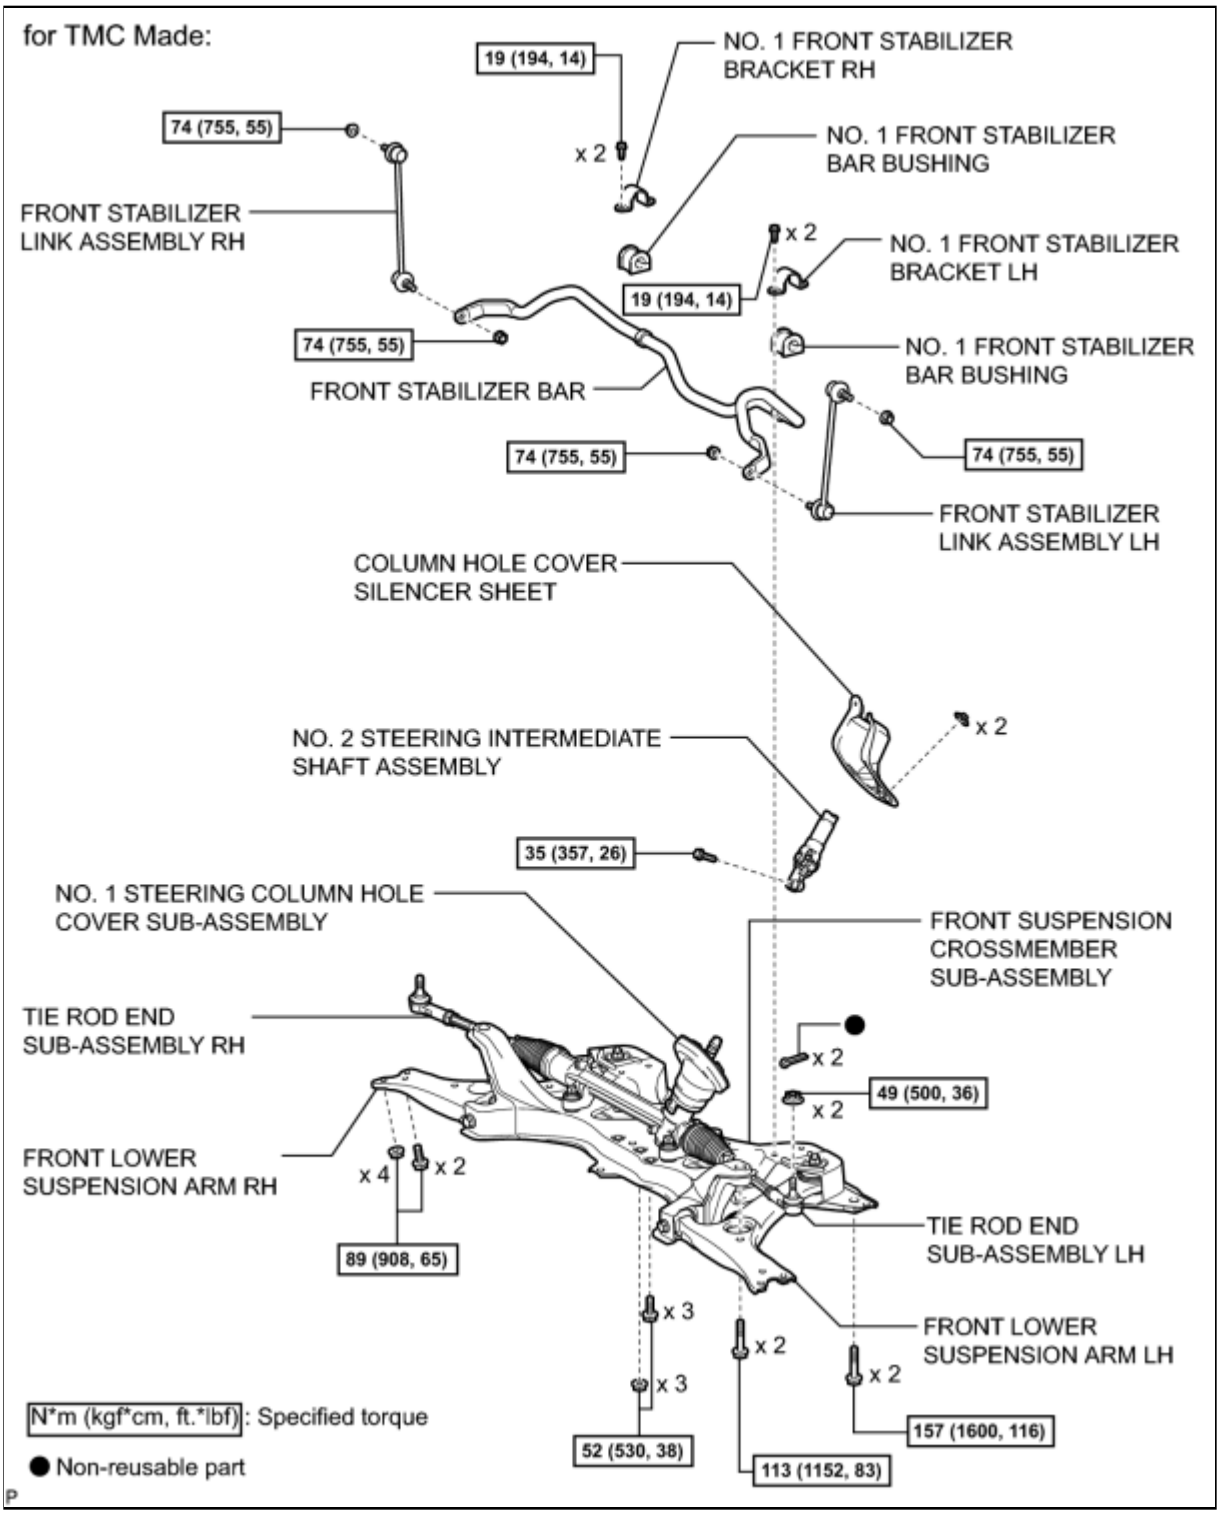
If there is any abnormality, replace the front shock absorber with a new one.

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000003GW00XX
Title: FRONT SUSPENSION: FRONT SHOCK ABSORBER: DISPOSAL (2010 Corolla)		

DISPOSAL

1. DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY

(a) Position the front shock absorber assembly level with the piston rod fully extended. Using a drill, make a hole in the cylinder between A and B shown in the illustration to discharge the gas inside.



NOTICE:

- The gas is colorless, odorless, and non-poisonous.
- Always use proper safety equipment and be careful when drilling because sharde of metal fly about.

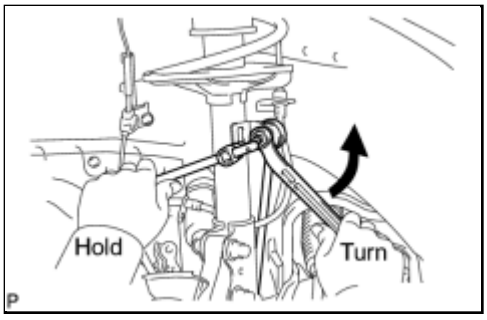
4. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

5. SEPARATE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

6. REMOVE FRONT WHEELS

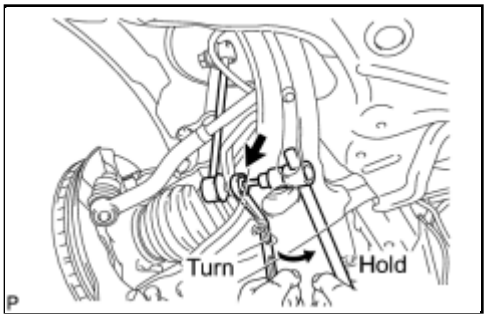


7. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

8. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.



9. REMOVE FRONT STABILIZER LINK ASSEMBLY LH

(a) Remove the nut and separate the stabilizer link assembly LH from the front shock absorber with coil spring.

HINT:

If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

(b) Remove the nut and the stabilizer link assembly LH from the front stabilizer bar.

HINT:

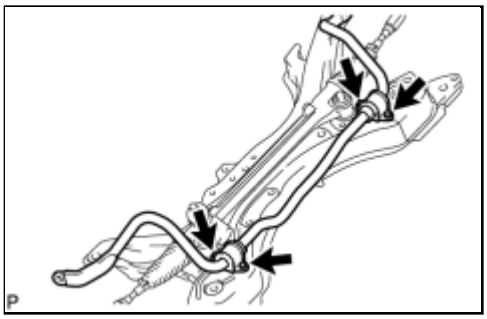
If the ball joint turns together with the nut, use a hexagon wrench (6 mm) to hold the stud bolt.

10. REMOVE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

11. SEPARATE FRONT LOWER SUSPENSION ARM LH INFO



12. SEPARATE FRONT LOWER SUSPENSION ARM RH

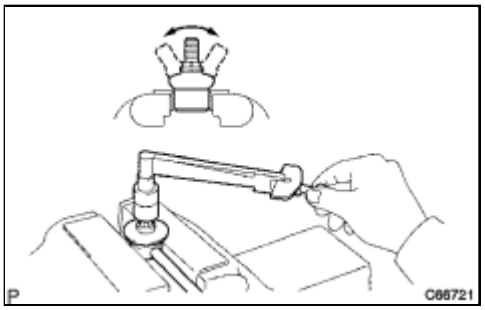
HINT:

Perform the same procedure as the LH side.

13. REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY INFO

14. REMOVE FRONT STABILIZER BAR

(a) Remove the 4 bolts, 2 No. 1 front stabilizer brackets and front stabilizer bar from the front suspension crossmember.



15. REMOVE NO. 1 FRONT STABILIZER BAR BUSHING

(a) Remove the 2 No. 1 front stabilizer bar bushings from the front stabilizer bar.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011DO01UX
Title: FRONT SUSPENSION: FRONT STABILIZER BAR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Inspect the turning torque of the ball joint.

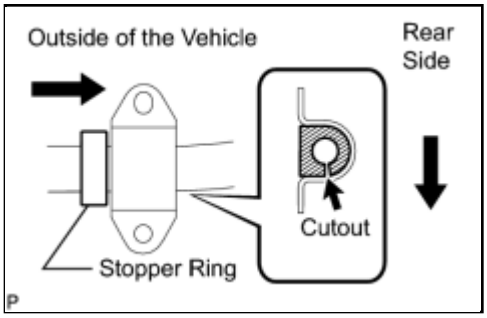
(1) Secure the front stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the front stabilizer link assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the 5th turn.

Turning Torque - Torque: 0.1 to 2.0 N·m (1 to 20 kgf·cm, 1 to 17in·lbf)

If the turning torque is not within the specified range, replace the front stabilizer link assembly with a new one.



(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

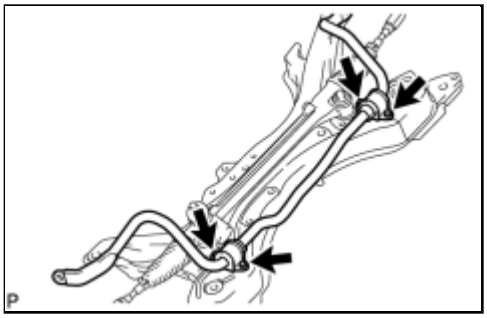
Title: FRONT SUSPENSION: FRONT STABILIZER BAR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL NO. 1 FRONT STABILIZER BAR BUSHING (for LH Side)

(a) Install the No. 1 front stabilizer bar bushing to the front stabilizer bar as shown in the illustration.

NOTICE:



- Install the No. 1 front stabilizer bar bushing so that the cutout faces the rear of the vehicle.
- Make sure that the amount of deviation of the front stabilizer bar in the horizontal direction is within +/- 5 mm (0.20 in.).

2. INSTALL NO. 1 FRONT STABILIZER BAR BUSHING (for RH Side)

HINT:

Perform the same procedure as the LH side.

3. INSTALL FRONT STABILIZER BAR

(a) Install the front stabilizer bar and 2 No. 1 front stabilizer brackets to the front suspension crossmember with the 4 bolts.

TMC Made - Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

except TMC Made - Torque: 24 N·m (245 kgf·cm, 18ft·lbf)

NOTICE:

Check the type of bolt before installing, Look at strength division number of the bolt head.

- 11T: TMC Made
- 10T: except TMC Made

DISPOSAL

1. DISPOSE OF FRONT STRUT BAR

(a) Fully extend the front strut bar.

(b) Using a drill, make a hole in the cylinder between A and B as shown in the illustration to discharge the gas inside.

A to B:

10 mm (0.394 in.)

NOTICE:

- Always use proper safety equipment and be careful when drilling because shards of metal fly about.
- The gas is colorless, odorless and non-poisonous.

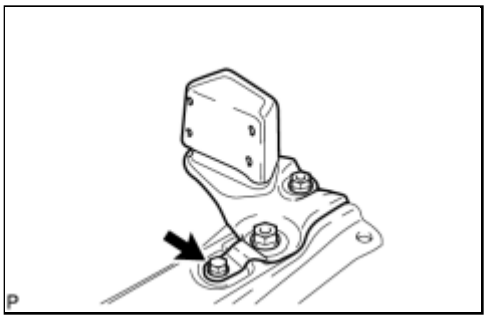
Title: FRONT SUSPENSION: FRONT SUSPENSION MEMBER: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FRONT STABILIZER BAR INFO

2. INSTALL STEERING LINK ASSEMBLY INFO

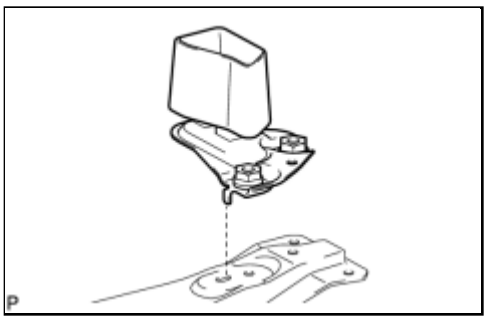


3. TEMPORARILY INSTALL FRONT LOWER SUSPENSION ARM LH INFO

4. TEMPORARILY INSTALL FRONT LOWER SUSPENSION ARM RH

HINT:

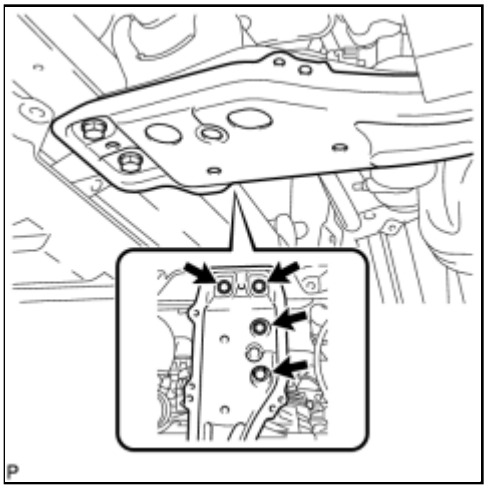
Perform the same procedure as the LH side.



5. INSTALL FRONT SUSPENSION MEMBER DYNAMIC DAMPER (for TMC Made)

(a) Install the front suspension member dynamic damper with the bolt.

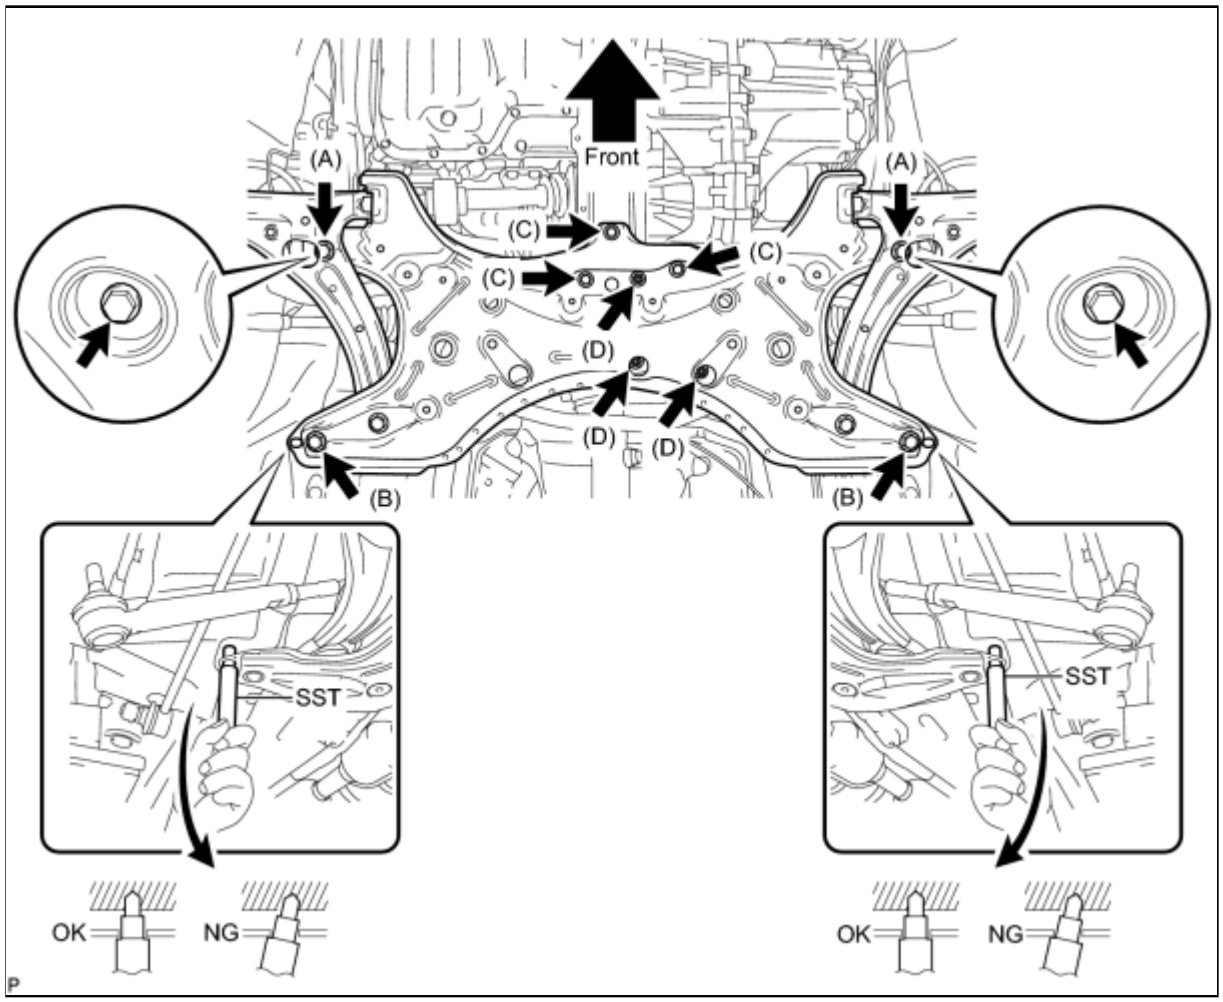
Torque: 52 N·m (530 kgf·cm, 38ft·lbf)



6. INSTALL FRONT SUSPENSION MEMBER DYNAMIC DAMPER (except TMC Made)

(a) Install the front suspension member dynamic damper.

7. TEMPORARILY INSTALL CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY

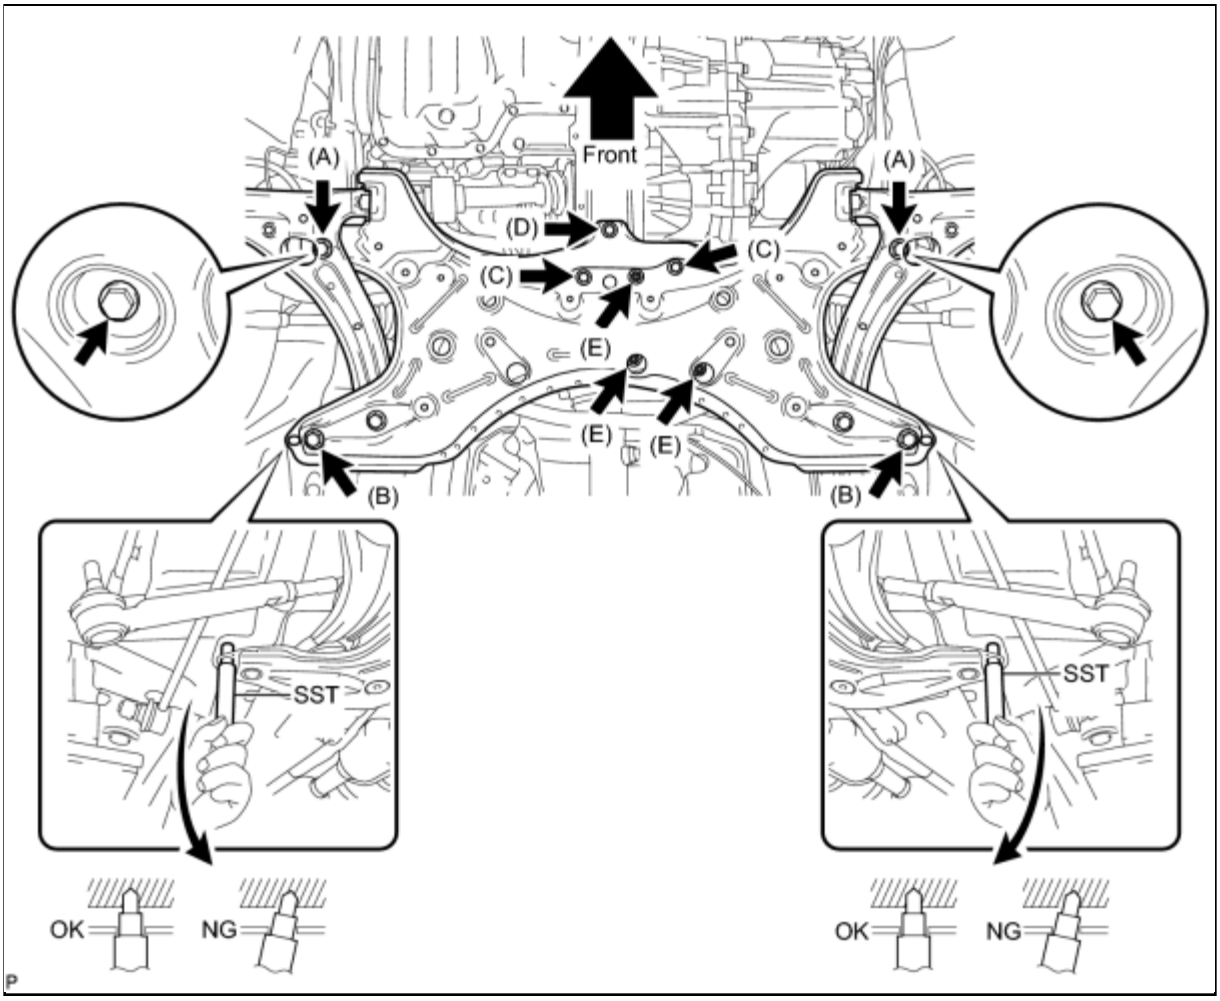


(a) Temporarily install the center engine mounting member sub-assembly with the 4 bolts.

8. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (for TMC Made)

(a) While alternately inserting SST into the guide holes on both sides of the front suspension crossmember RH and LH, tighten 2 bolts (A), 2 bolts (B), 3 bolts (C), and 3 nuts (D) on the RH and LH sides to the respective specified torque in several steps.

SST: 09670-00010



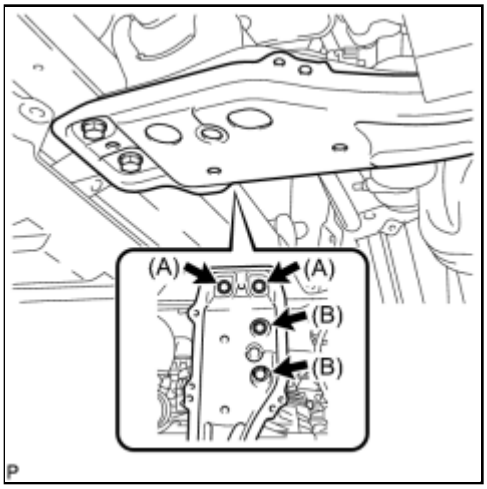
Bolt A - Torque: 113 N·m (1152 kgf·cm, 83ft·lbf)

Bolt B - Torque: 157 N·m (1600 kgf·cm, 116ft·lbf)
Bolt C - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)
Nut D - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

9. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (except TMC Made)

(a) While alternately inserting SST into the guide holes on both sides of the front suspension crossmember RH and LH, tighten 2 bolts (A), 2 bolts (B), 2 bolts (C), bolt (D) and 3 nuts (E) on the RH and LH sides to the respective specified torque in several steps.

SST: 09670-00010

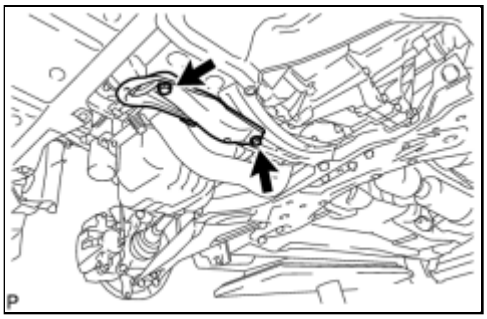


Bolt A - Torque: 113 N·m (1152 kgf·cm, 83ft·lbf)
Bolt B - Torque: 157 N·m (1600 kgf·cm, 116ft·lbf)
Bolt C - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)
Bolt D - Torque: 87 N·m (887 kgf·cm, 64ft·lbf)
Nut E - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

10. FULLY TIGHTEN CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY

(a) Fully tighten the center engine mounting member sub-assembly with the 4 bolts.

Bolt A (TMC Made) - Torque: 39 N·m (398 kgf·cm, 29ft·lbf)
Bolt A (except TMC Made) - Torque: 60 N·m (612 kgf·cm,



44ft·lbf)

Bolt B (TMC Made) - Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

Bolt B (except TMC Made) - Torque: 81 N·m (827 kgf·cm, 160in·lbf)

11. INSTALL FRONT HOOK ASSEMBLY

(a) Install the front hook assembly with the 2 bolts.

Torque: 39 N·m (398 kgf·cm, 29ft·lbf)

12. CONNECT FRONT LOWER SUSPENSION ARM LH INFO

13. CONNECT FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as the LH side.

14. CONNECT FRONT STABILIZER LINK ASSEMBLY LH INFO

15. CONNECT FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

16. CONNECT TIE ROD END SUB-ASSEMBLY LH INFO

17. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as the LH side.

18. INSTALL ENGINE UNDER COVER LH

19. INSTALL ENGINE UNDER COVER RH

20. CONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY INFO

21. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

22. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

23. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

24. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

25. STABILIZE SUSPENSION INFO

26. FULLY TIGHTEN FRONT LOWER SUSPENSION ARM LH INFO

27. FULLY TIGHTEN FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as the LH side.

28. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT:

Inspect and adjust front wheel alignment INFO .

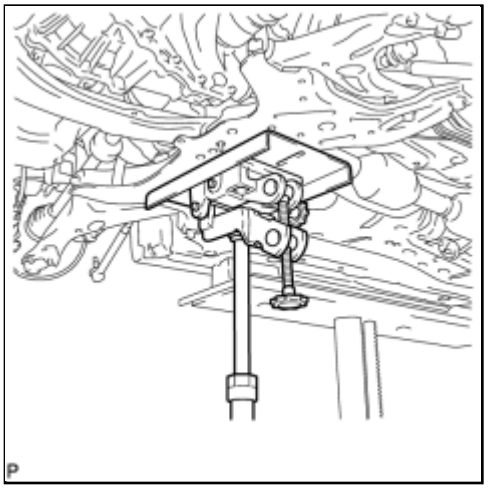
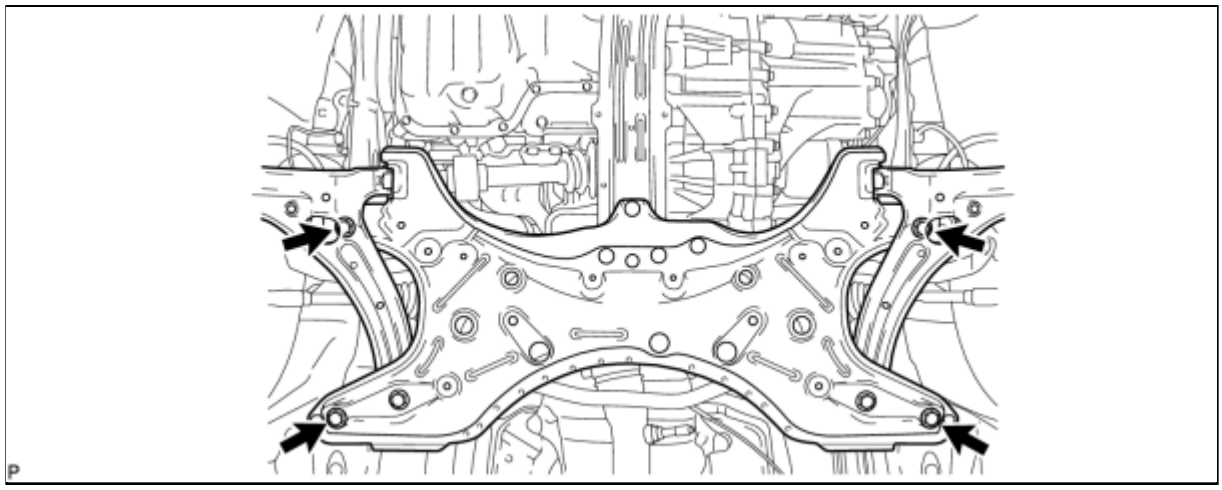
14. **SEPARATE FRONT LOWER SUSPENSION ARM RH**



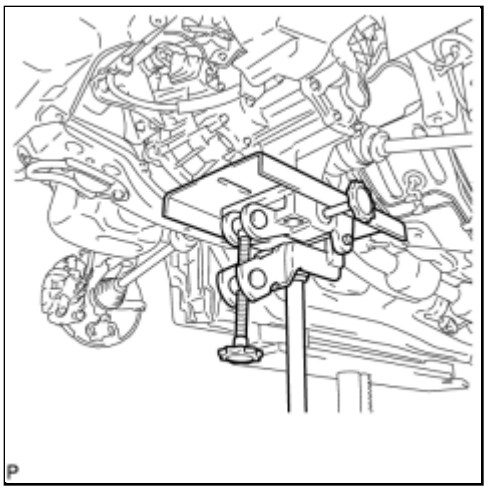
HINT:

Perform the same procedure as the LH side.

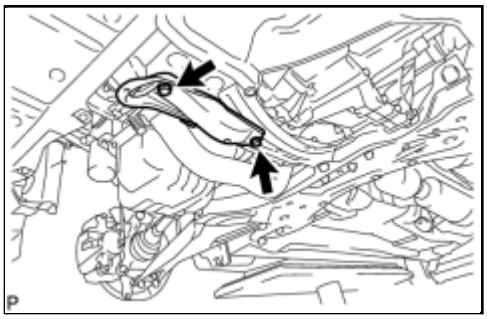
15. **REMOVE FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY**



(a) Remove the 3 bolts and 3 nuts.

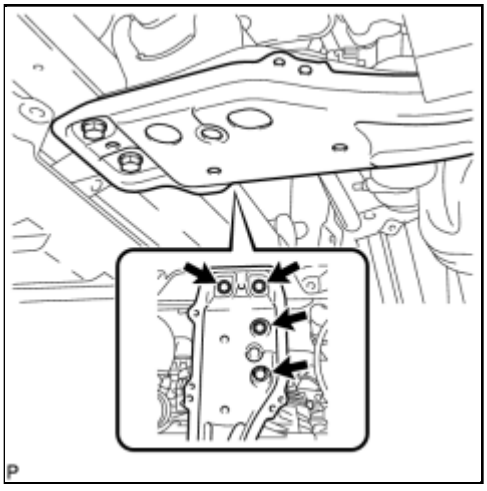


(b) Using a transmission jack or equivalent, support the front suspension crossmember sub-assembly.

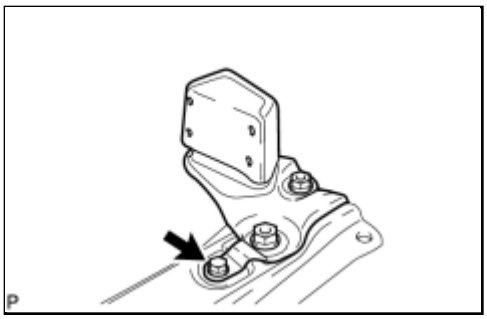


(c) Remove the 4 bolts and front suspension crossmember sub-assembly.

16. REMOVE FRONT HOOK ASSEMBLY

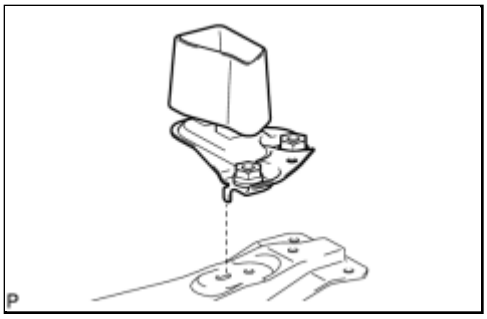


(a) Using a transmission jack or equivalent, support the transmission.



(b) Remove the 2 bolts and front hook assembly.

17. REMOVE CENTER ENGINE MOUNTING MEMBER SUB-ASSEMBLY



(a) Remove the 4 bolts and center engine mounting member sub-assembly.

18. REMOVE FRONT SUSPENSION MEMBER DYNAMIC DAMPER (for TMC Made)

(a) Remove the bolt and front suspension member dynamic damper.

19. REMOVE FRONT SUSPENSION MEMBER DYNAMIC DAMPER (except TMC Made)

(a) Remove the front suspension member dynamic damper.

20. REMOVE FRONT STABILIZER BAR INFO

21. REMOVE STEERING LINK ASSEMBLY INFO

22. REMOVE FRONT LOWER SUSPENSION ARM LH INFO

23. REMOVE FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as the LH side.

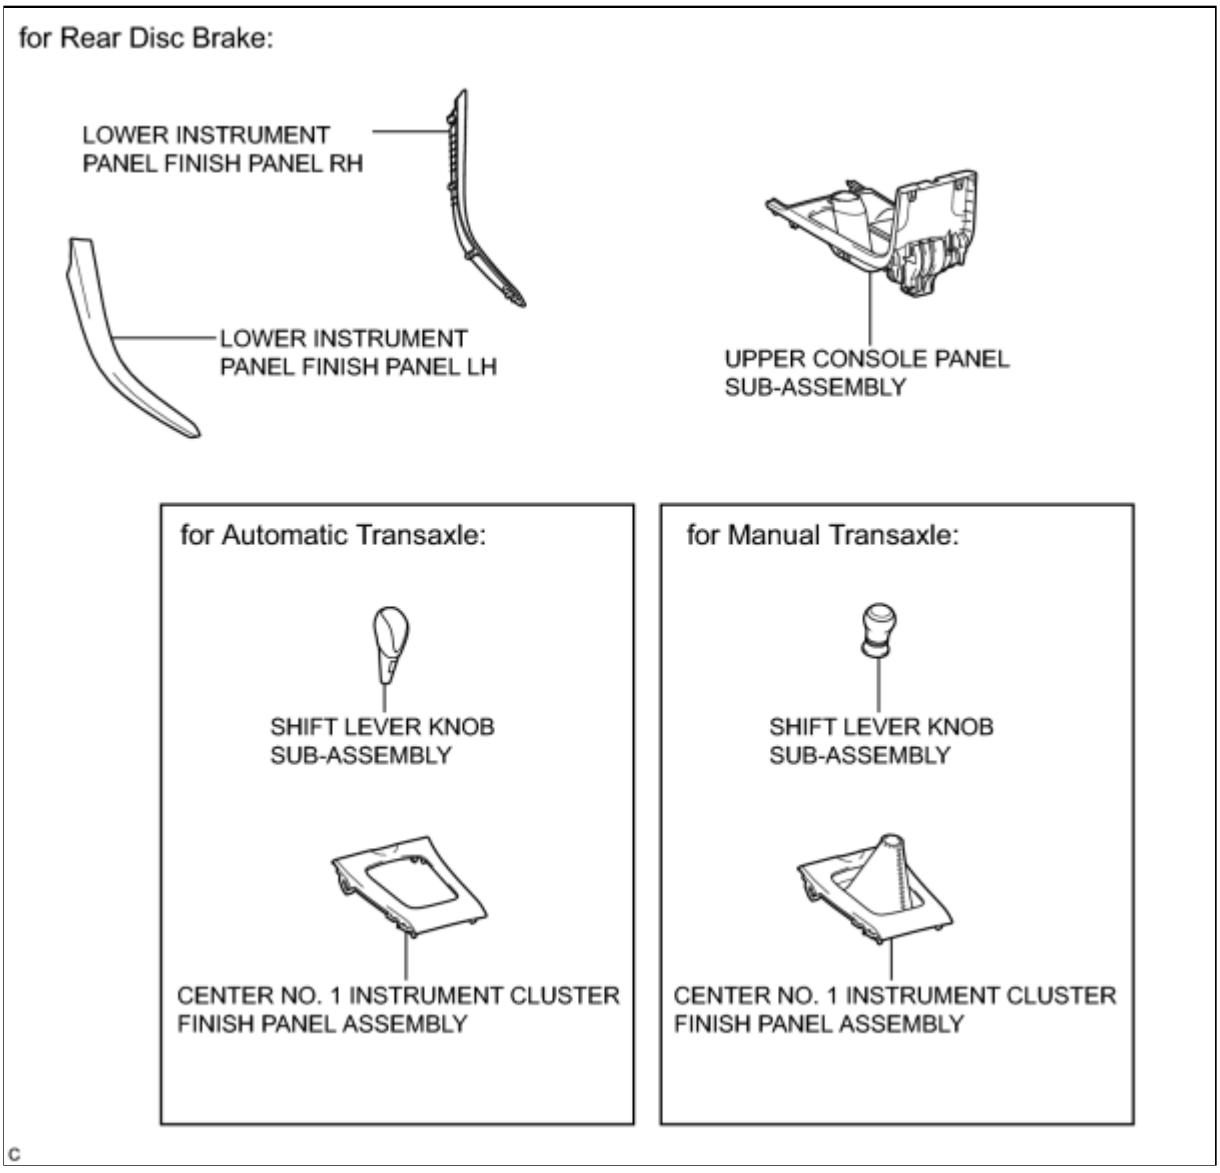
Title: FRONT SUSPENSION: FRONT SUSPENSION SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Suspension System



SYMPTOM	SUSPECTED AREA	SEE PAGE
Vehicle pulls to one side while driving	Tire (worn or improperly inflated)	INFO
	Front wheel alignment (incorrect)	INFO
	Front shock absorber (worn)	INFO
	Steering linkage (loose or worn)	INFO
	Front hub bearing (worn)	INFO
	Steering gear (broken)	INFO
	Suspension parts (worn)	-
Bottoming	Vehicle (overloaded)	-
	Front coil spring (weak)	INFO
	Front shock absorber (worn)	INFO
Sway/pitches	Tire (worn or improperly inflated)	INFO
	Front coil spring (weak)	INFO
	Front shock absorber (worn)	INFO
	Front stabilizer bar (bent or broken)	INFO
Wheel shimmy	Tire (worn or improperly inflated)	INFO
	Wheel (out of balance)	INFO
	Front wheel alignment (incorrect)	INFO
	Front shock absorber (worn)	INFO
	Front lower ball joint (worn)	INFO
	Front hub bearing (worn)	INFO
	Steering linkage (loose or worn)	INFO

Title: REAR SUSPENSION: REAR AXLE BEAM: REMOVAL (2010 Corolla)		

REMOVAL

NOTICE:

For vehicles equipped with VSC, if the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

1. Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.
2. Reconnect the cable to the negative (-) battery terminal.
3. Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for Rear Disc Brake) INFO

3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH (for Rear Disc Brake) INFO

4. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO .
- for Automatic Transaxle INFO .

5. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO .
- for Automatic Transaxle INFO .

6. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Rear Disc Brake) INFO

7. LOOSEN PARKING BRAKE CABLE (for Rear Disc Brake) INFO

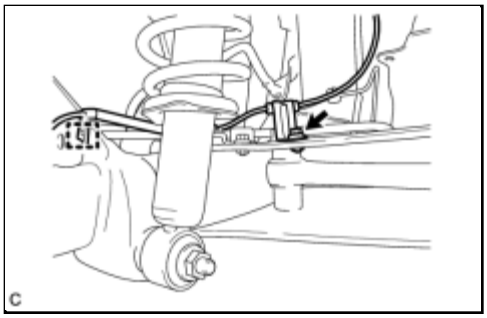
8. REMOVE REAR WHEELS

9. DRAIN BRAKE FLUID (for Rear Drum Brake)

10. DISCONNECT REAR SPEED SENSOR WIRE LH (for Rear Drum Brake) INFO

11. DISCONNECT REAR SPEED SENSOR WIRE RH (for Rear Drum Brake)

HINT:



Perform the same procedure as the LH side.

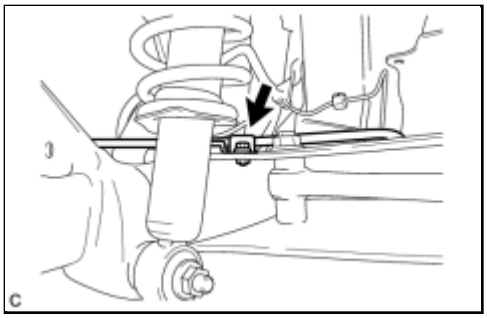
12. DISCONNECT REAR SPEED SENSOR WIRE LH (for Rear Disc Brake) INFO

13. DISCONNECT REAR SPEED SENSOR WIRE RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.

14. SEPARATE REAR SPEED SENSOR WIRE LH



(a) Remove the bolt.

(b) Disengage the clamp and separate the rear speed sensor wire from the rear axle beam.

15. SEPARATE REAR SPEED SENSOR WIRE RH

HINT:

Perform the same procedure as the LH side.

16. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Remove the bolt and separate the No. 3 parking brake cable assembly.

17. SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

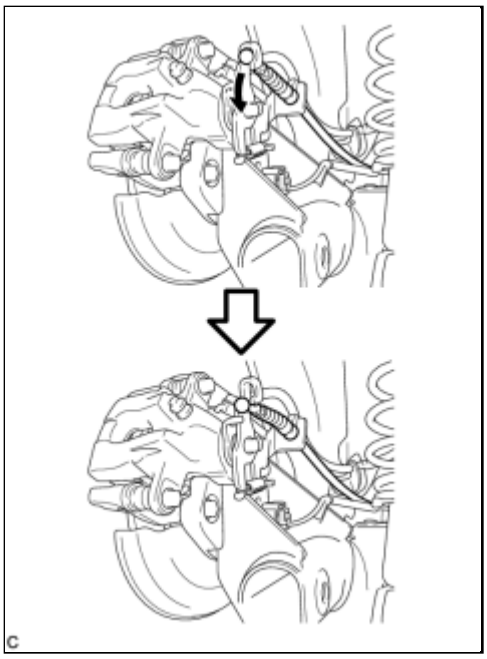
Perform the same procedure as the No. 3 parking brake cable assembly.

18. REMOVE REAR BRAKE DRUM LH (for Rear Drum Brake) INFO

19. REMOVE REAR BRAKE DRUM RH (for Rear Drum Brake)

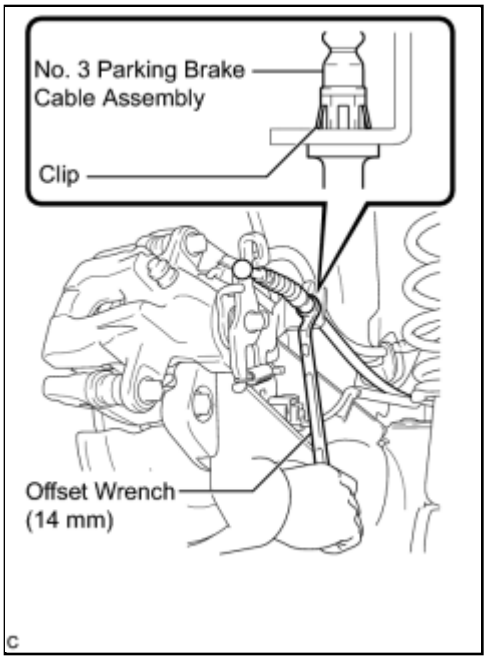
HINT:

Perform the same procedure as the LH side.



20. REMOVE PARKING BRAKE LEVER PROTECTOR LH (for Rear Disc Brake) INFO

21. REMOVE PARKING BRAKE LEVER PROTECTOR RH (for Rear Disc Brake)



HINT:

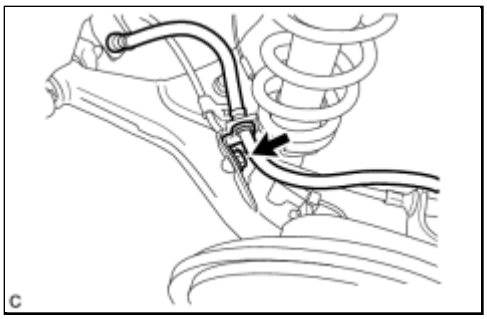
Perform the same procedure as the LH side.

22. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake)

(a) Separate the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

(b) Remove the No. 3 parking brake cable assembly.

HINT:



Insert an offset wrench (14 mm) at the base of the No. 3 parking brake cable assembly as shown in the illustration to disengage the clip. Pull out the No. 3 parking brake cable assembly from the rear disc brake cylinder assembly.

23. DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake)

HINT:

Perform the same procedure as the No. 3 parking brake cable assembly.

24. SEPARATE REAR FLEXIBLE HOSE LH (for Rear Disc Brake)

(a) Remove the bolt and separate the rear flexible hose LH from the rear axle beam.

25. SEPARATE REAR FLEXIBLE HOSE RH (for Rear Disc Brake)

HINT:

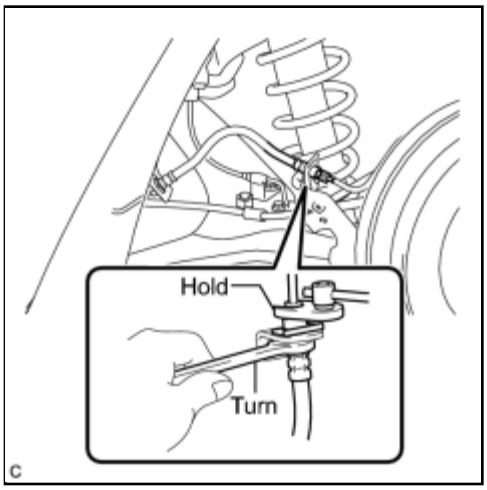
Perform the same procedure as the LH side.

26. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY LH (for Rear Disc Brake) INFO

27. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.



28. REMOVE REAR DISC LH (for Rear Disc Brake) INFO

29. REMOVE REAR DISC RH (for Rear Disc Brake)

HINT:

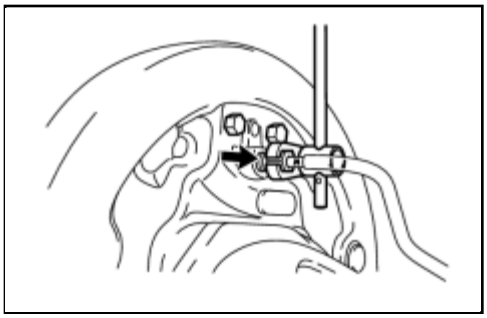
Perform the same procedure as the LH side.

30. SEPARATE REAR FLEXIBLE HOSE LH (for Rear Drum Brake)

(a) Using a union nut wrench (10 mm), separate the No. 4 rear brake tube while holding the rear flexible hose with a wrench.

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line from the clip or bracket.



(b) Remove the clip and disconnect the rear flexible hose LH.

31. SEPARATE REAR FLEXIBLE HOSE RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

32. REMOVE NO. 4 REAR BRAKE TUBE (for Rear Drum Brake)

(a) Using a union nut wrench (10 mm), remove the No. 4 rear brake tube.

33. REMOVE NO. 3 REAR BRAKE TUBE (for Rear Drum Brake)

HINT:

Perform the same procedure as the No. 4 rear brake tube.

34. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH (for Rear Drum Brake) INFO

35. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

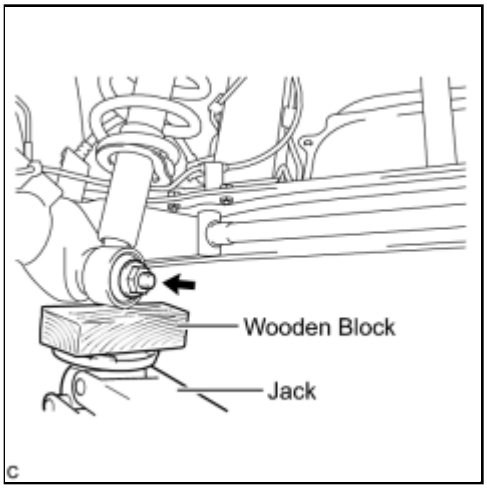
36. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY LH (for Rear Disc Brake) INFO

37. REMOVE REAR AXLE HUB AND BEARING ASSEMBLY RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.

38. REMOVE REAR AXLE BEAM DAMPER INFO



39. REMOVE REAR STABILIZER BAR INFO

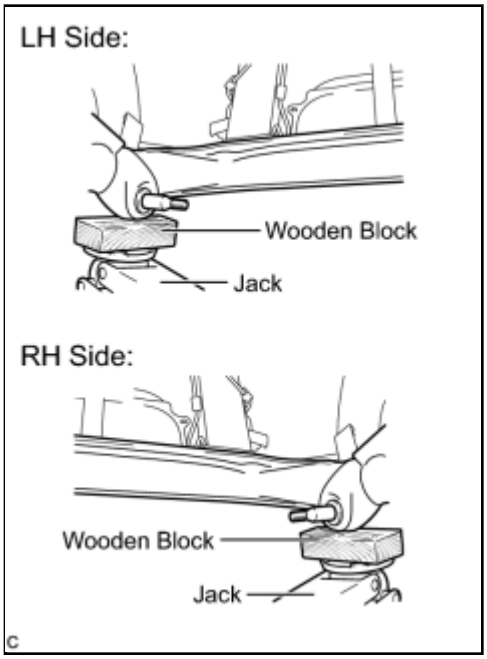
40. SEPARATE REAR SHOCK ABSORBER WITH COIL SPRING LH

(a) Support the rear axle beam assembly using a jack and wooden block.

NOTICE:

Do not excessively jack up the rear axle beam assembly.

(b) Remove the nut and rear No. 1 shock absorber retainer.



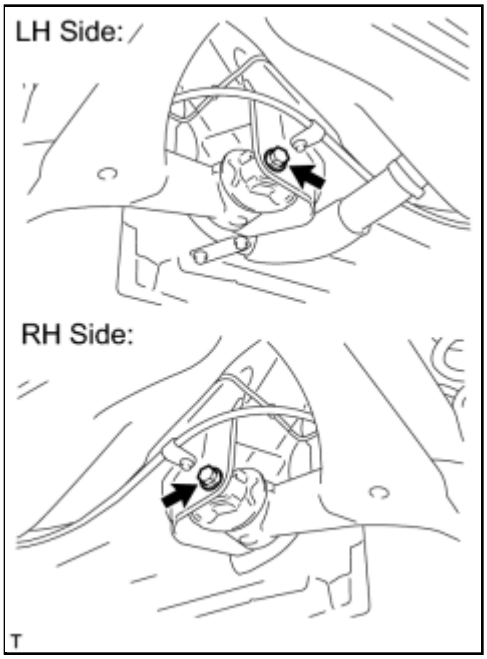
(c) Separate the rear shock absorber with coil spring LH (lower side).

41. SEPARATE REAR SHOCK ABSORBER WITH COIL SPRING RH

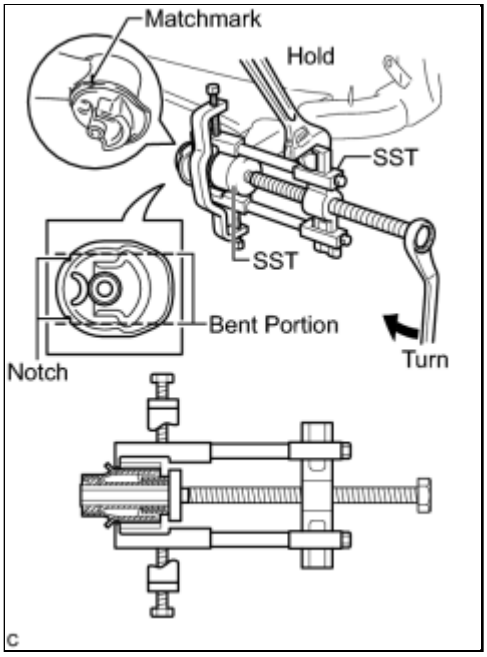
HINT:

Perform the same procedure as the LH side.

42. REMOVE REAR AXLE BEAM ASSEMBLY



(a) Support the rear axle beam assembly using 2 jacks and 2 wooden blocks.



(b) Remove the 2 bolts, 2 nuts, and rear axle beam assembly.

NOTICE:

Since stopper nuts are used, loosen the bolts.

43. REMOVE REAR AXLE CARRIER BUSHING LH

(a) Place matchmarks on the 2 notches of the rear axle carrier bushing and rear axle beam assembly.

(b) Using a chisel and hammer, bend the 2 portions of the rear axle carrier bushing rib.

NOTICE:

- When removing the rear axle carrier bushing, do not erase the matchmarks on the rear axle beam assembly.
- If the axle beam has been scratched, apply the paint to the axle beam assembly.

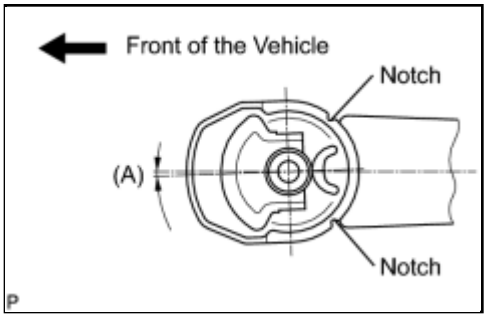
(c) Using SST, remove the rear axle carrier bushing from the rear axle beam assembly.

SST: 09950-40011

SST: 09950-60010

09951-04020
09952-04010
09953-04030
09954-04020
09955-04051
09957-04010
09958-04011
09951-00630

44. REMOVE REAR AXLE CARRIER BUSHING RH



HINT:

Perform the same procedure as the LH side.

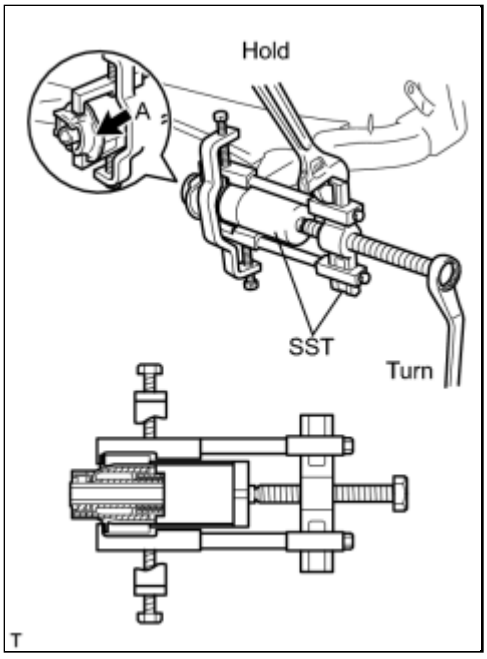
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WRD014X
Title: REAR SUSPENSION: REAR AXLE BEAM: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL REAR AXLE CARRIER BUSHING LH

(a) Align the arrow mark on a new rear axle carrier bushing LH with the matchmark on the rear axle beam assembly and temporarily install the rear axle carrier bushing LH to the rear axle beam assembly. (Perform this procedure when reusing the rear axle beam assembly.)

NOTICE:



Install the rear axle carrier bushing LH in the same direction as the removed bushing.

(b) Temporarily install a new rear axle carrier bushing LH to the position shown in the illustration. (Perform this procedure when replacing with a new rear axle beam assembly.)

(A):
0°53' +/- 3° (0.88° +/- 3°)

NOTICE:

Install the rear axle carrier bushing LH in the same direction as the removed bushing.

(c) Using SST, install the rear axle carrier bushing LH to the rear axle beam assembly.

SST: 09710-04101

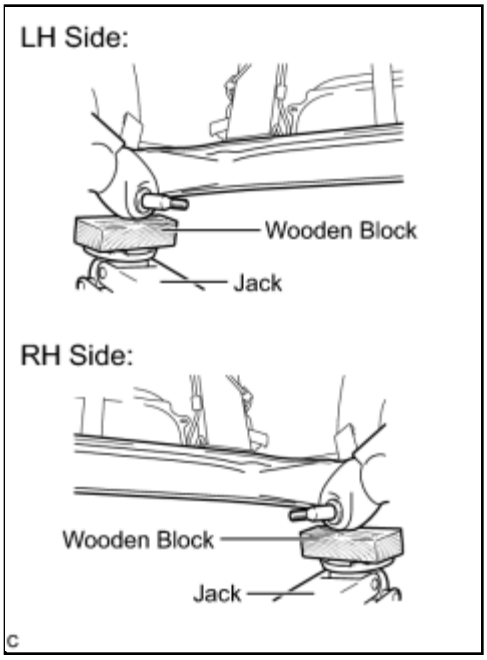
SST: 09950-40011

09951-04020
09952-04010
09953-04030
09954-04020
09955-04051
09957-04010
09958-04011

SST: 09950-60010

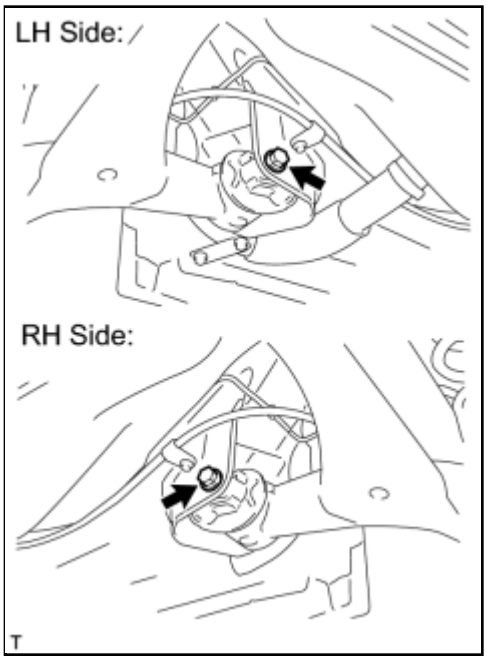
09951-00620

NOTICE:



- Hang the claws of SST to the bushing deeply and firmly.
- Do not scratch the rubber portion (A) of the bushing.
- Do not deform the bushing rib.

2. INSTALL REAR AXLE CARRIER BUSHING RH

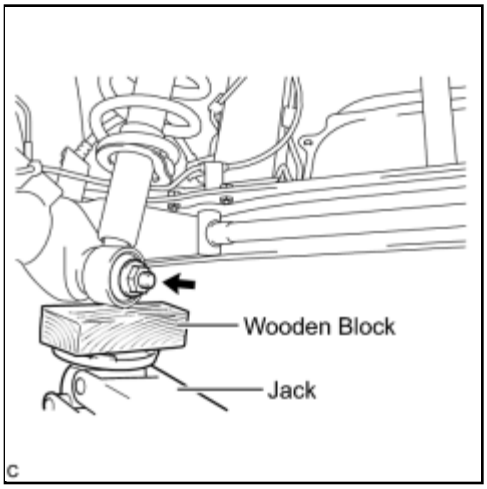


HINT:

Perform the same procedure as the LH side.

3. TEMPORARILY TIGHTEN REAR AXLE BEAM ASSEMBLY

(a) Support the rear axle beam assembly using 2 jacks and 2 wooden blocks.



(b) Temporarily install the rear axle beam assembly with the 2 bolts and 2 nuts.

(c) Temporarily tighten the 2 bolts.

NOTICE:

Since stopper nuts are used, temporarily tighten the bolts.

4. TEMPORARILY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING LH

(a) Temporarily install the rear shock absorber with coil spring LH and the rear No. 1 shock absorber cushion retainer with the nut.

5. TEMPORARILY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING RH

HINT:

Perform the same procedure as the LH side.

6. INSTALL REAR STABILIZER BAR (for TMC Made) INFO

7. INSTALL REAR STABILIZER BAR (except TMC Made) INFO

8. INSTALL REAR AXLE BEAM DAMPER INFO

9. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH (for Rear Drum Brake) INFO

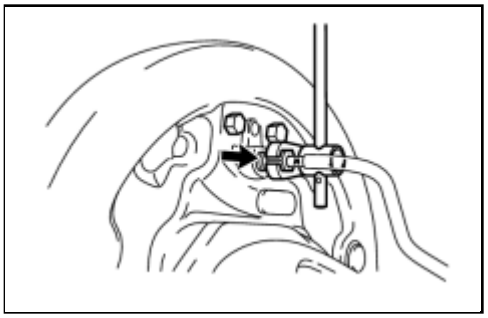
10. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

11. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY LH (for Rear Disc Brake) INFO

12. INSTALL REAR AXLE HUB AND BEARING ASSEMBLY RH (for Rear Disc Brake)



HINT:

Perform the same procedure as the LH side.

13. TEMPORARILY TIGHTEN NO. 4 REAR BRAKE TUBE (for Rear Drum Brake)

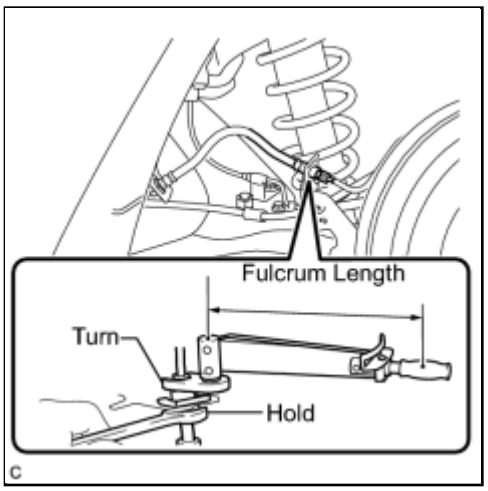
(a) Using a union nut wrench (10 mm), temporarily install the No. 4 rear brake tube to the rear brake wheel cylinder assembly LH.

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.

14. TEMPORARILY TIGHTEN NO. 3 REAR BRAKE TUBE (for Rear Drum Brake)

HINT:



Perform the same procedure as the No. 4 rear brake tube.

15. INSTALL REAR FLEXIBLE HOSE LH (for Rear Drum Brake)

(a) Install the rear flexible hose LH with a new clip.

NOTICE:

Install the new clip as far as it will go.

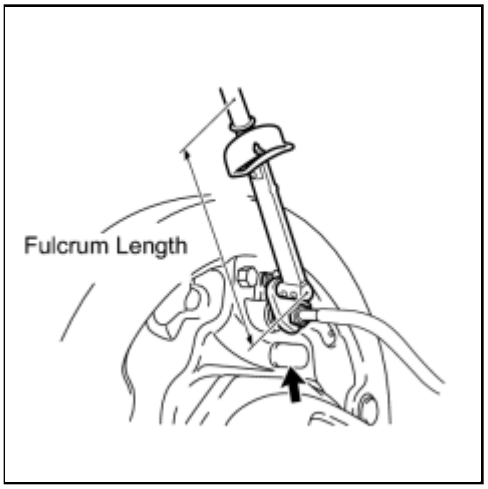
(b) Using a union nut wrench (10 mm), connect the No. 4 rear brake tube to the rear flexible hose while holding the rear flexible hose LH with a wrench.

without union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Do not bend or damage the brake line.
- Do not allow any foreign matter such as dirt and dust to enter the brake line.
- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.



16. INSTALL REAR FLEXIBLE HOSE RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

17. FULLY TIGHTEN NO. 4 REAR BRAKE TUBE (for Rear Drum Brake)

(a) Using a union nut wrench (10 mm), fully tighten the No. 4 rear brake tube.

without union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

18. FULLY TIGHTEN NO. 3 REAR BRAKE TUBE (for Rear Drum Brake)

HINT:

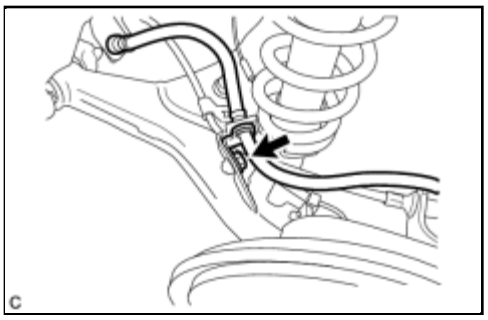
Perform the same procedure as the No. 4 rear brake tube.

19. INSTALL REAR DISC LH (for Rear Disc Brake) INFO

20. INSTALL REAR DISC RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.



21. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY LH (for Rear Disc Brake) INFO

22. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY RH (for Rear Disc Brake)

HINT:

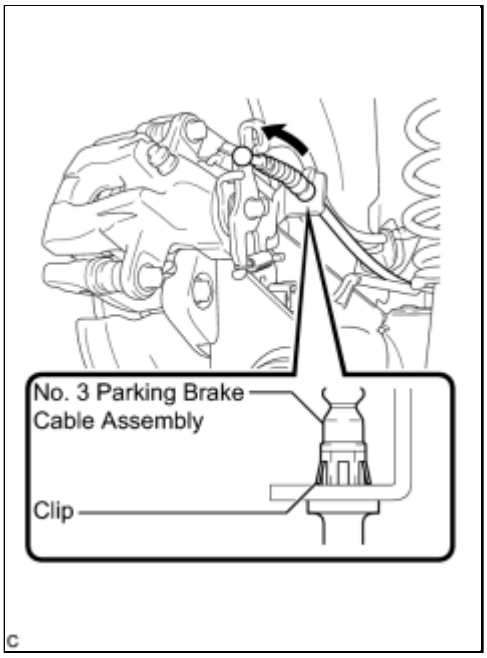
Perform the same procedure as the LH side.

23. INSTALL REAR FLEXIBLE HOSE LH (for Rear Disc Brake)

(a) Install the rear flexible hose LH to the rear axle beam with the bolt.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

NOTICE:

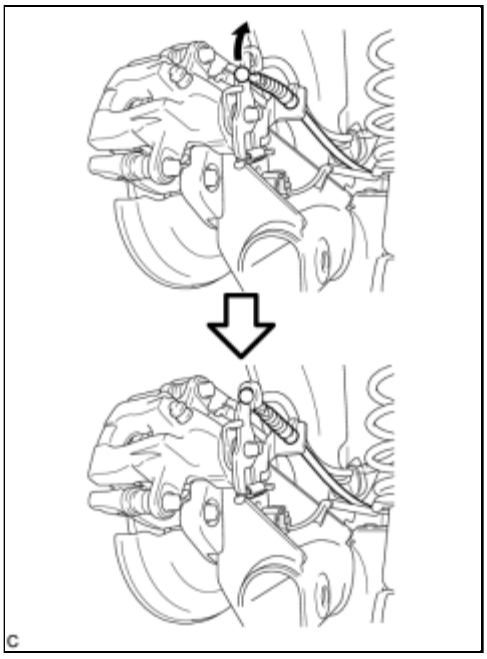


Do not twist the rear flexible hose LH.

24. INSTALL REAR FLEXIBLE HOSE RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.



25. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake)

(a) Install the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly LH.

HINT:

Be sure to engage the No. 3 parking cable assembly clip onto the rear disc brake cylinder assembly LH as shown in the illustration.

(b) Connect the No. 3 parking brake cable assembly to the rear disc brake cylinder assembly LH.

26. CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake)

HINT:

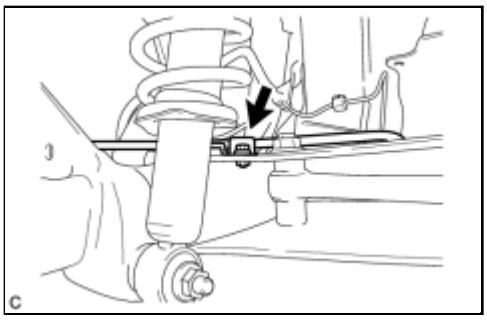
Perform the same procedure as the No. 3 parking brake cable assembly side.

27. INSTALL PARKING BRAKE LEVER PROTECTOR LH (for Rear Disc Brake) INFO

28. INSTALL PARKING BRAKE LEVER PROTECTOR RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.



29. INSTALL REAR BRAKE DRUM LH (for Rear Drum Brake) INFO

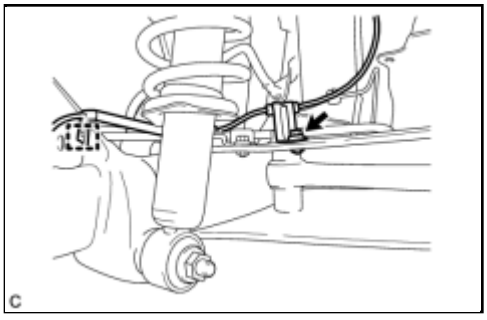
30. INSTALL REAR BRAKE DRUM RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

31. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 3 parking brake cable assembly with the bolt.



Torque: 6.0 N·m (61 kgf·cm, 53in·lbf)

32. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

HINT:

Perform the same procedure as the No. 3 parking brake cable assembly.

33. INSTALL REAR SPEED SENSOR WIRE LH

(a) Install the rear speed sensor wire LH with the bolt.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

NOTICE:

Do not twist the rear speed sensor wire LH.

(b) Engage the clamp.

NOTICE:

Do not twist the rear speed sensor wire LH.

34. INSTALL REAR SPEED SENSOR WIRE RH

HINT:

Perform the same procedure as the LH side.

35. CONNECT REAR SPEED SENSOR WIRE LH (for Rear Drum Brake) INFO

36. CONNECT REAR SPEED SENSOR WIRE RH (for Rear Drum Brake)

HINT:

Perform the same procedure as the LH side.

37. CONNECT REAR SPEED SENSOR WIRE LH (for Rear Disc Brake) INFO

38. CONNECT REAR SPEED SENSOR WIRE RH (for Rear Disc Brake)

HINT:

Perform the same procedure as the LH side.

39. ADJUST PARKING BRAKE LEVER TRAVEL (for Rear Disc Brake) INFO

40. INSPECT REAR DISC BRAKE CYLINDER OPERATION LEVER AND STOPPER CLEARANCE (for Rear Disc Brake) INFO

41. ADJUST REAR DRUM BRAKE SHOE CLEARANCE (for Rear Drum Brake) INFO

42. FILL BRAKE FLUID RESERVOIR (for Rear Drum Brake) INFO

43. BLEED BRAKE LINE (for Rear Drum Brake) INFO

44. INSPECT FOR BRAKE FLUID LEAK (for Rear Drum Brake)

45. INSPECT BRAKE FLUID LEVEL (for Rear Drum Brake) INFO

46. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

47. INSTALL REAR WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

48. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Rear Disc Brake) INFO

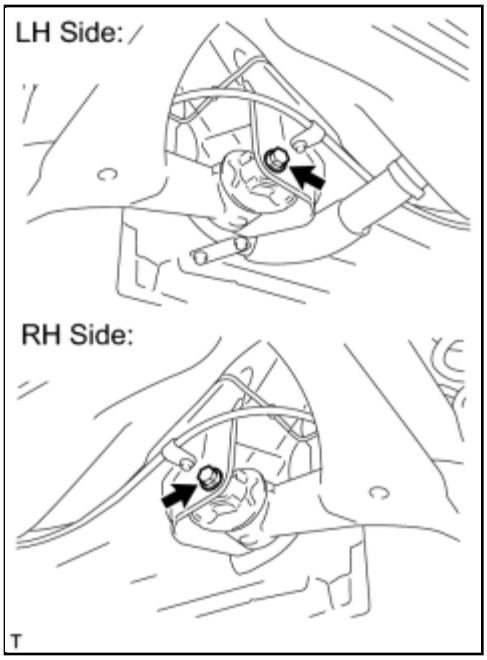
49. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO
- for Automatic Transaxle INFO

50. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Rear Disc Brake)

HINT:



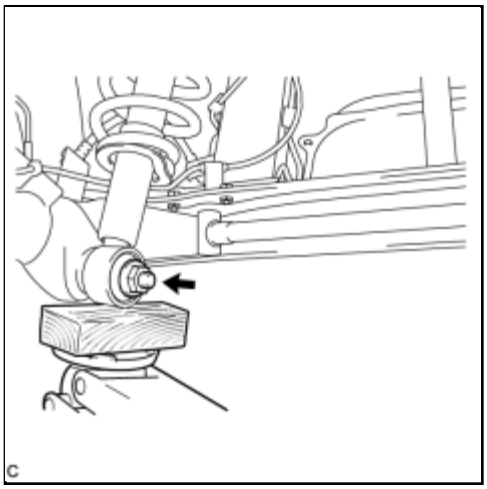
- for Manual Transaxle INFO
- for Automatic Transaxle INFO

51. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for Rear Disc Brake) INFO

52. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH (for Rear Disc Brake) INFO

53. STABILIZE SUSPENSION INFO

54. FULLY TIGHTEN REAR AXLE BEAM ASSEMBLY



(a) Fully tighten the 2 bolts on the rear axle beam assembly.

Torque: 85 N·m (867 kgf·cm, 63ft·lbf)

NOTICE:

- Since stopper nuts are used, tighten the bolts.
- The final torque must be applied under standard vehicle height conditions.

55. FULLY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING LH

(a) Fully tighten the nut on the rear shock absorber with coil spring LH (lower side).

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

CAUTION:

The final torque must be applied under standard vehicle height conditions.

56. FULLY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING RH

HINT:

Perform the same procedure as the LH side.

57. INSPECT REAR WHEEL ALIGNMENT

INFO .

58. PLACE FRONT WHEELS FACING STRAIGHT AHEAD (w/ VSC)

59. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ VSC)

NOTICE:

Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.

60. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ VSC)

61. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION (w/ VSC)

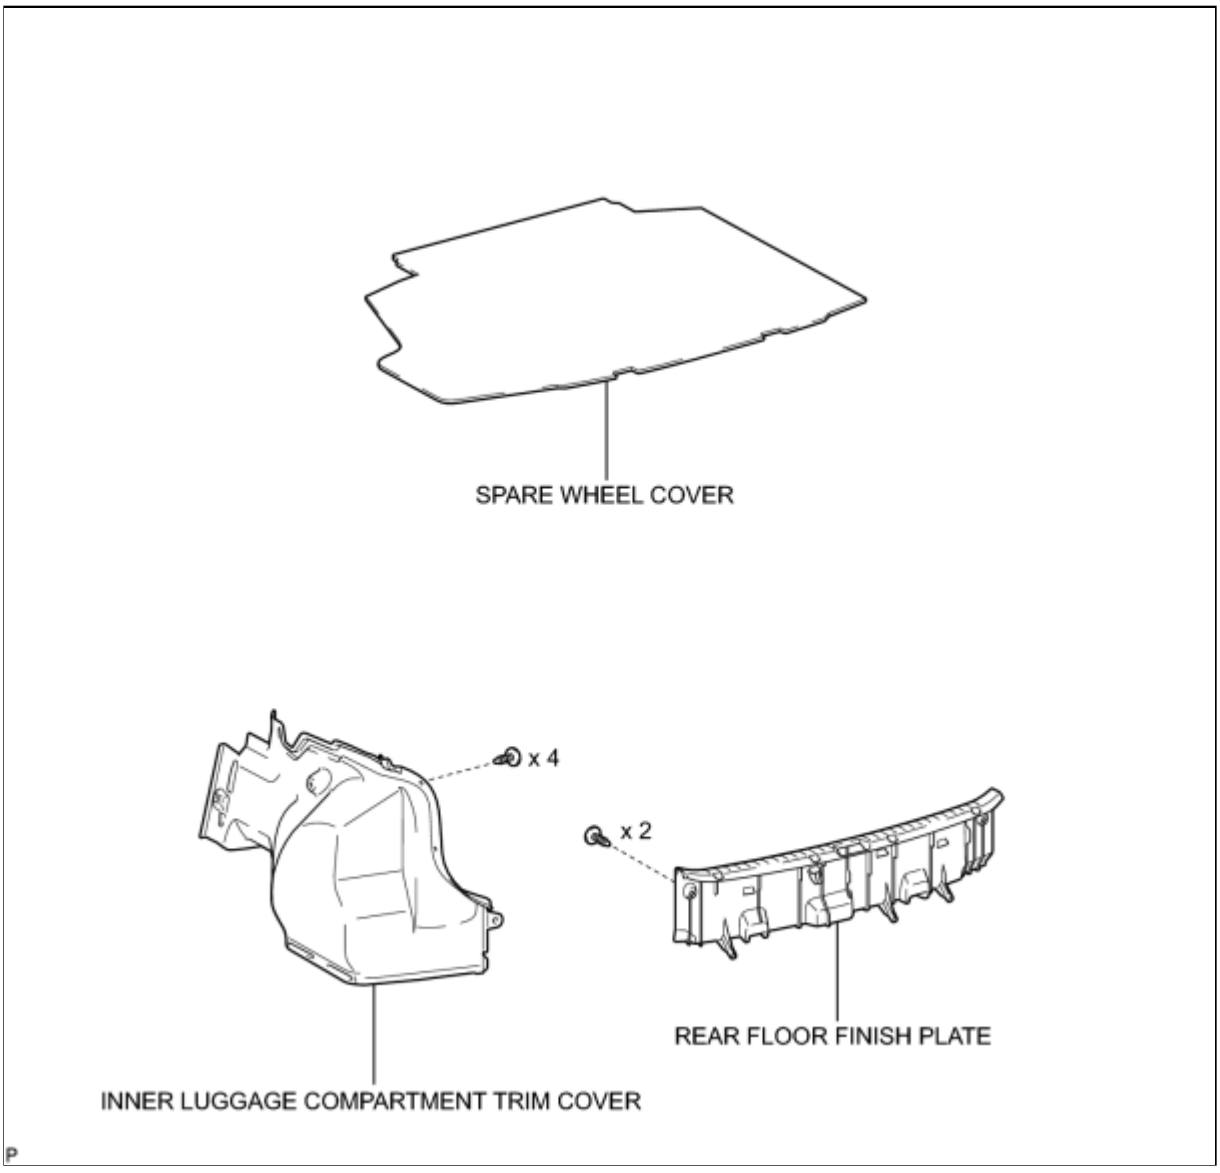
INFO .

62. CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION (w/ VSC)

INFO .

63. CHECK FOR SPEED SENSOR SIGNAL (w/ ABS)

INFO .



64. CHECK FOR SPEED SENSOR SIGNAL (w/ VSC)

INFO .

Title: REAR SUSPENSION: REAR SHOCK ABSORBER: REMOVAL (2010 Corolla)		

REMOVAL

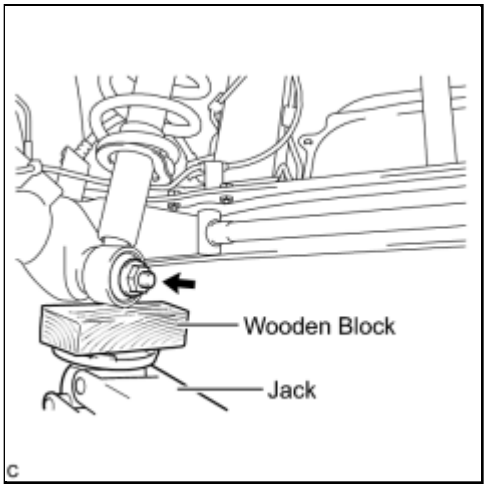
NOTICE:

For vehicles equipped with VSC, if the wheel alignment has been adjusted, and if suspension or underbody components have been removed/installed or replaced, be sure to perform the following initialization procedure in order for the system to function normally:

1. Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.
2. Reconnect the cable to the negative (-) battery terminal.
3. Perform zero point calibration of the yaw rate and acceleration sensor and test mode inspection.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

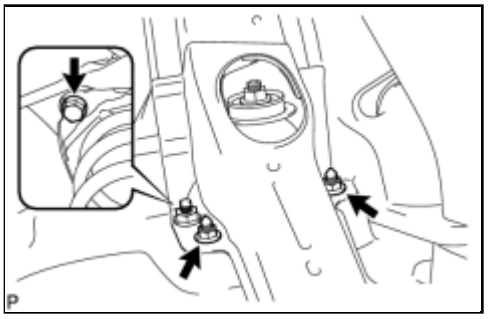


1. REMOVE SPARE WHEEL COVER INFO

2. REMOVE REAR FLOOR FINISH PLATE INFO

3. REMOVE INNER LUGGAGE COMPARTMENT TRIM COVER INFO

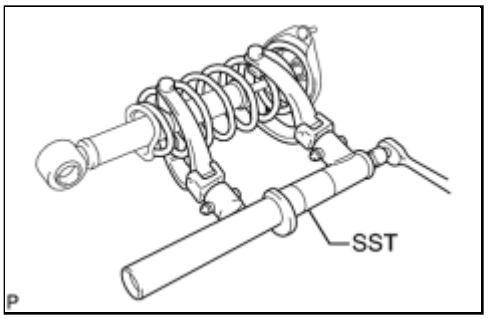
4. REMOVE REAR WHEEL



5. REMOVE REAR SHOCK ABSORBER WITH COIL SPRING

(a) Support the rear axle beam assembly using a jack and wooden block.

(b) Remove the nut and rear shock absorber cushion retainer.



(c) Remove the 2 nuts from the rear shock absorber with coil spring (upper side).

(d) Remove the bolt (lower side) from the rear shock absorber with coil spring.

(e) Slowly lower the jack and remove the rear shock absorber with coil spring.

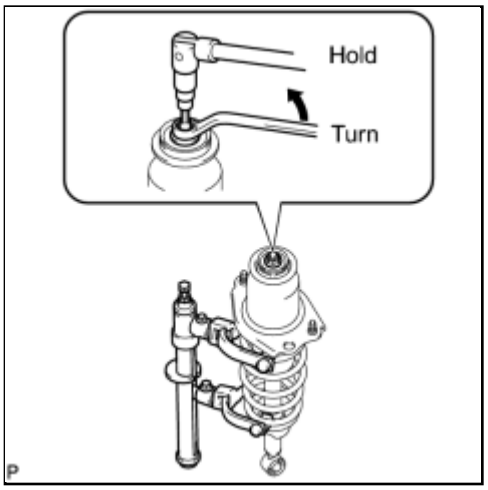
6. REMOVE REAR NO. 1 SHOCK ABSORBER CUSHION WASHER

(a) Using SST, compress the rear coil spring.

SST: 09727-30021

09727-00010

09727-00021



09727-00031

If the rear coil spring is compressed at an angle, using 2 SST will make the work easier.

NOTICE:

Do not use an impact wrench. It will damage SST.

(b) Check that the rear coil spring is fully compressed.

(c) Use a hexagon wrench (6 mm) to hold the rear shock absorber piston rod and remove the nut.

(d) Remove the No. 1 rear shock absorber cushion washer.

7. REMOVE REAR SUSPENSION SUPPORT

8. REMOVE REAR SPRING BRACKET SUB-ASSEMBLY

9. REMOVE REAR SUSPENSION SUPPORT ASSEMBLY

10. REMOVE REAR COIL SPRING UPPER INSULATOR

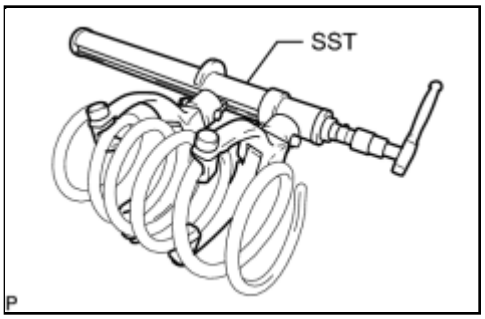
11. REMOVE REAR BUMPER SPRING

12. REMOVE REAR COIL SPRING

(a) Remove SST and remove the rear coil spring.

NOTICE:

Do not use an impact wrench. It will damage SST.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WTW010X
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: INSTALLATION (2010 Corolla)		

INSTALLATION

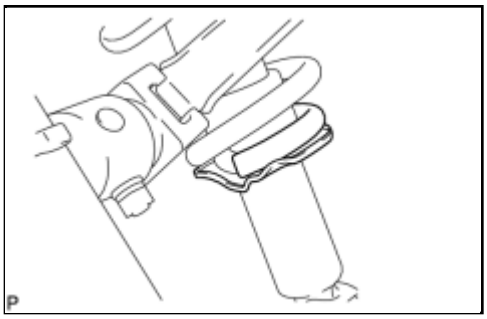
HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. INSTALL REAR COIL SPRING

(a) Using SST, compress the rear coil spring.

SST: 09727-30021



09727-00010

09727-00021

09727-00031

NOTICE:

Do not use an impact wrench. It will damage SST.

(b) Install the coil spring into the shock absorber assembly.

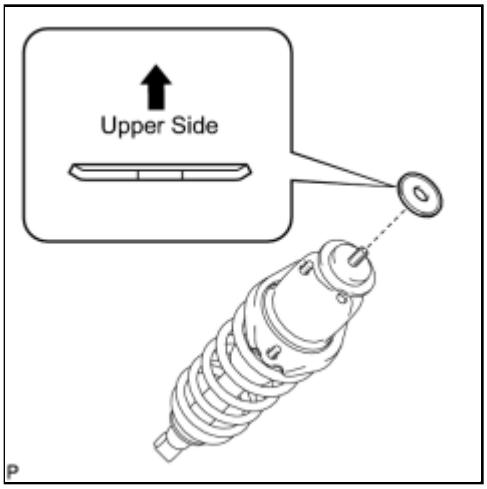
NOTICE:

Make sure that the end of the rear coil spring is positioned in the depression of the lower spring seat.

2. INSTALL REAR BUMPER SPRING

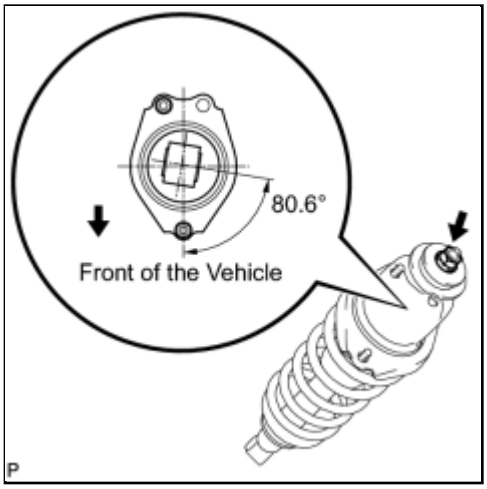
3. INSTALL REAR COIL SPRING UPPER INSULATOR

4. INSTALL REAR SUSPENSION SUPPORT ASSEMBLY



5. INSTALL REAR SPRING BRACKET SUB-ASSEMBLY

6. INSTALL REAR SUSPENSION SUPPORT

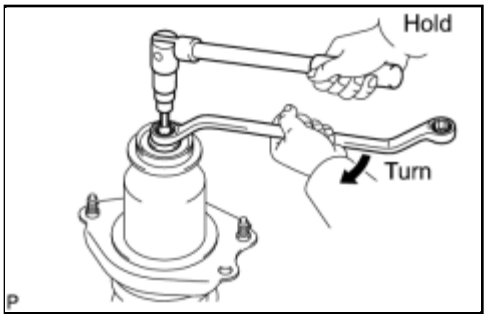


7. INSTALL REAR NO. 1 SHOCK ABSORBER CUSHION WASHER

(a) Install the rear No. 1 shock absorber cushion washer.

HINT:

Be sure to install the rear No. 1 shock absorber cushion washer in the correct direction.



(b) Temporarily install a new nut.

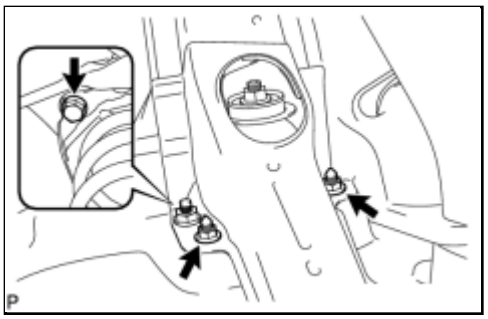
NOTICE:

Position the rear spring bracket sub-assembly with rear shock absorber lower bushing as shown in the illustration.

HINT:

Position the RH side on the symmetrical to the illustration.

(c) Using a socket hexagon wrench (6 mm), secure the rear shock absorber piston rod and tighten the nut.



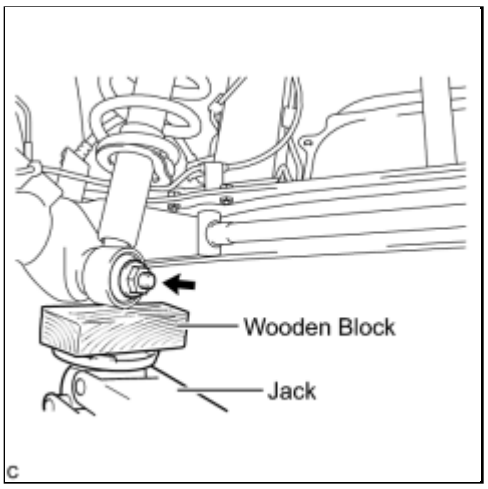
Torque: 39 N·m (398 kgf·cm, 29ft·lbf)

(d) Remove SST from the rear coil spring.

NOTICE:

Do not use an impact wrench. It will damage SST.

8. INSTALL REAR SHOCK ABSORBER WITH COIL SPRING



(a) Install the rear shock absorber with coil spring with the bolt (lower side).

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

(b) Install the rear shock absorber with coil spring with the 2 nuts (upper side).

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

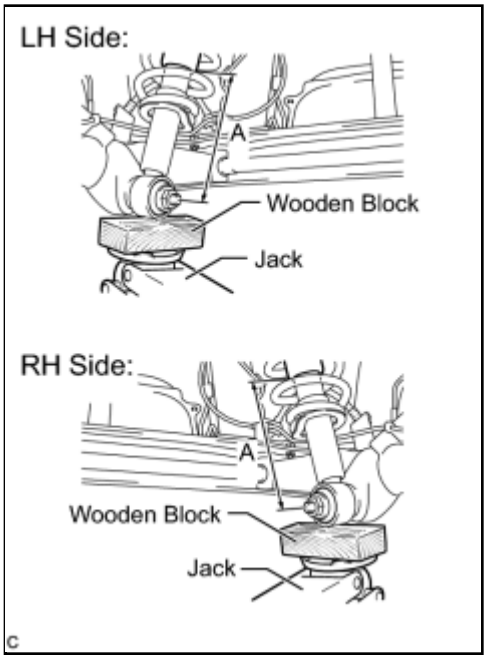
(c) Support the rear axle beam using a jack and wooden block.

(d) Temporarily install the rear shock absorber with coil spring (lower side) and rear shock absorber cushion retainer with the nut.

9. INSTALL REAR WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

10. STABILIZE SUSPENSION



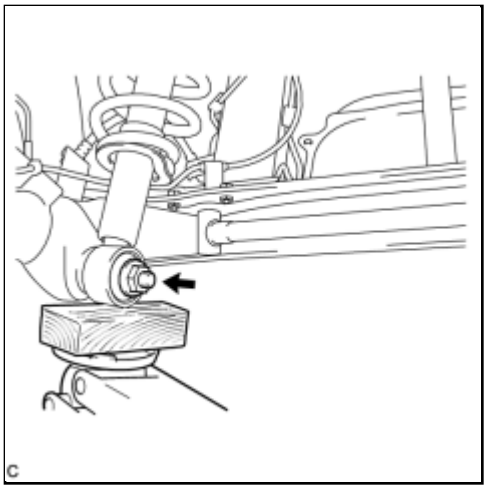
(a) Lower the vehicle.

(b) Bounce the vehicle up and down several times to stabilize the suspension.

(c) Jack up the rear axle beam, placing a wooden block underneath to avoid damage. Apply load to the suspension so that the rear shock absorber with coil spring is positioned as shown in the illustration.

Length A :
206 mm (8.11 in.)

If the rear shock absorber with coil spring cannot be



positioned as shown in the illustration even when the rear axle beam is jacked up, apply additional load to the vehicle such as by having a person sit in the rear seat.

CAUTION:

Do not jack up the rear axle beam too high as the vehicle may fall.

11. FULLY TIGHTEN REAR SHOCK ABSORBER WITH COIL SPRING

(a) Fully tighten the nut on the rear shock absorber with coil spring (lower side).

Torque: 80 N·m (816 kgf·cm, 59ft·lbf)

NOTICE:

The final torque must be applied under standard vehicle height conditions.

12. INSTALL INNER LUGGAGE COMPARTMENT TRIM COVER INFO

13. INSTALL REAR FLOOR FINISH PLATE INFO

14. INSTALL SPARE WHEEL COVER INFO

15. INSPECT REAR WHEEL ALIGNMENT

INFO .

16. PLACE FRONT WHEELS FACING STRAIGHT AHEAD (w/ VSC)

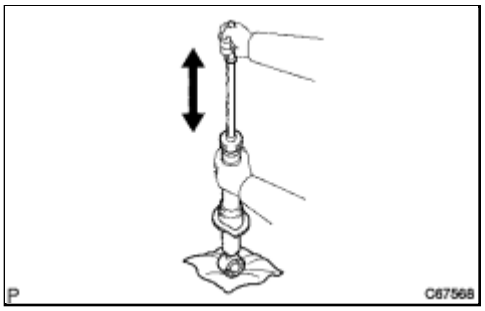
17. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ VSC)

NOTICE:

Disconnect the cable from the negative (-) battery terminal for more than 2 seconds.

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ VSC)

19. PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION (w/ VSC)



INFO .

20. CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION (w/ VSC)

INFO .

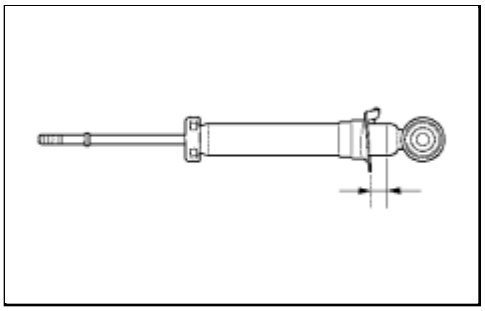
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT REAR SHOCK ABSORBER ASSEMBLY

(a) Compress and extend the shock absorber rod, and check that there is no abnormal resistance or unusual sound during operation.

If there is any abnormality, replace the shock absorber with a new one.

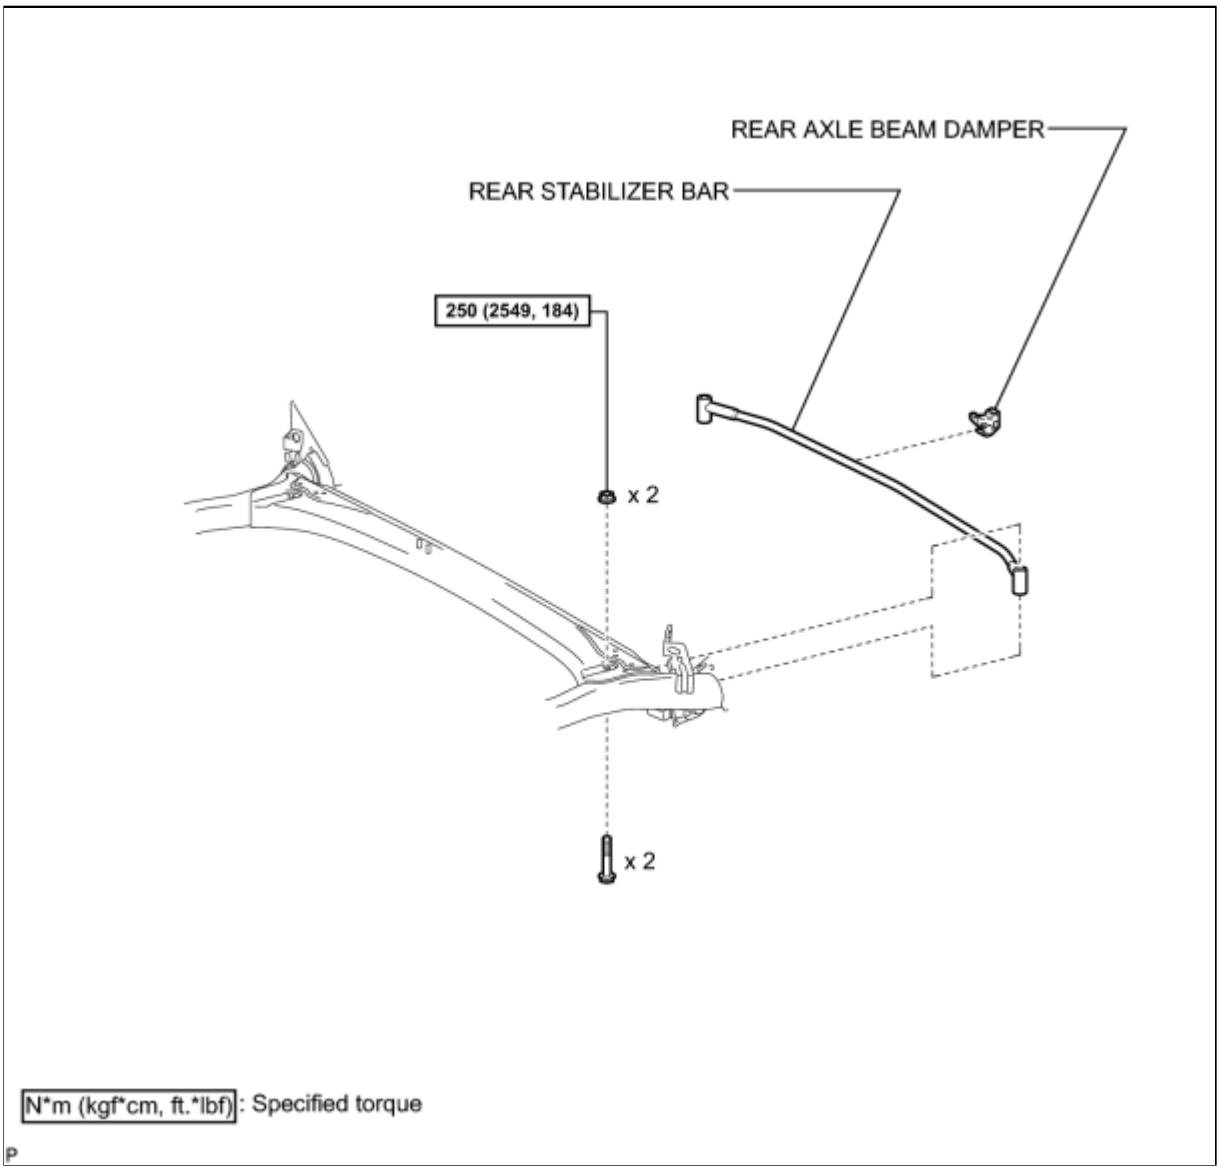
Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UA3011X
Title: REAR SUSPENSION: REAR SHOCK ABSORBER: DISPOSAL (2010 Corolla)		

DISPOSAL

1. DISPOSE OF REAR SHOCK ABSORBER ASSEMBLY

(a) Fully extend the piston rod and secure the rear shock absorber assembly at an angle in a vise.

(b) Using a drill, make a hole in the cylinder as shown in the illustration to discharge the gas inside the cylinder.



NOTICE:

- The gas is colorless, odorless, and non-poisonous.
- Be careful when drilling because shards of metal may fly about, so always use proper safety equipment.

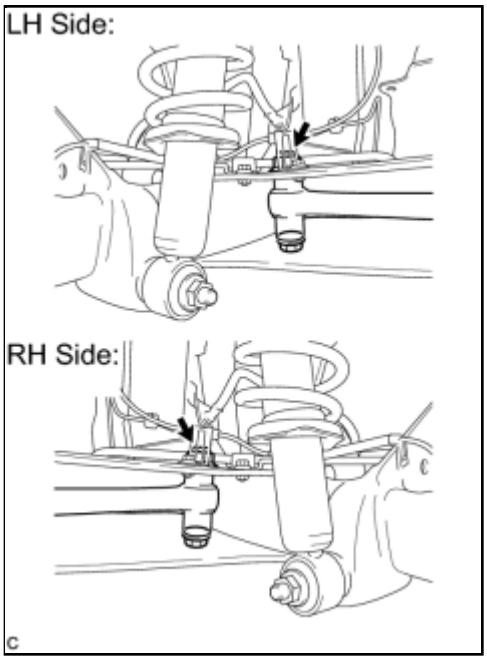
Title: REAR SUSPENSION: REAR STABILIZER BAR: REMOVAL (2010 Corolla)		



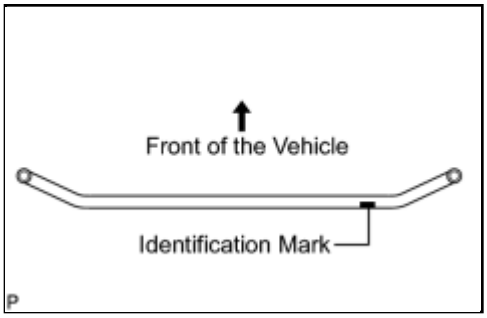
REMOVAL

1. REMOVE REAR AXLE BEAM DAMPER

(a) Remove the rear axle beam damper.

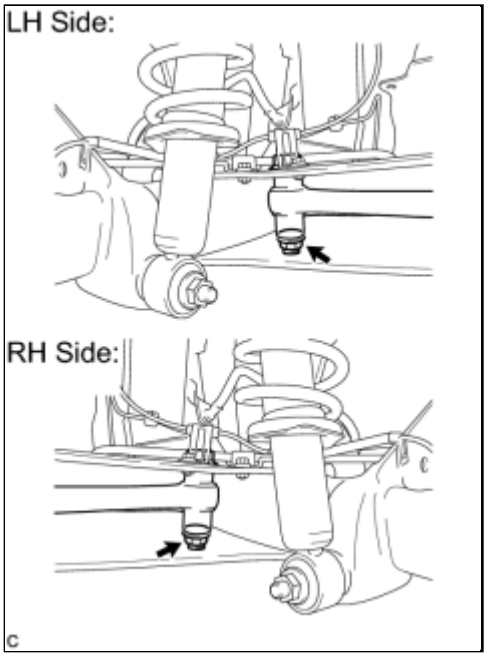
2. REMOVE REAR STABILIZER BAR

(a) Remove the 2 bolts, 2 nuts and rear stabilizer bar.



NOTICE:

Be sure to loosen the nuts.



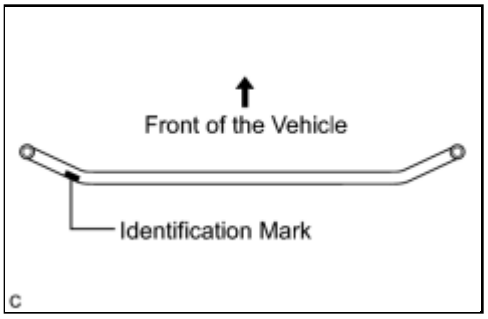
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000228U00NX
Title: REAR SUSPENSION: REAR STABILIZER BAR: INSTALLATION (2010 Corolla)		

INSTALLATION

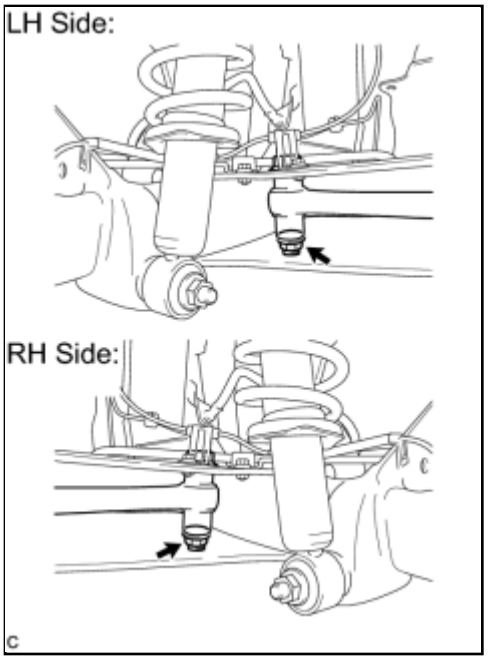
1. INSTALL REAR STABILIZER BAR (for TMC Made)

(a) Check that the identification mark of the rear stabilizer bar is positioned on the right side of the vehicle.

(b) Install the rear stabilizer bar with the 2 bolts and 2 nuts.



Torque: 250 N·m (2549 kgf·cm, 184ft·lbf)

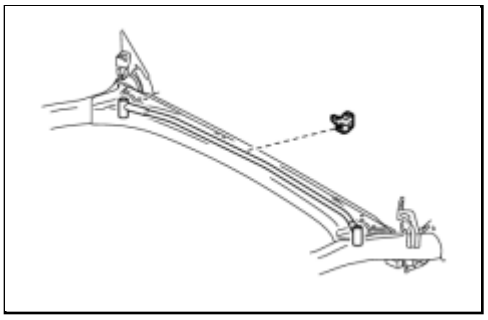


NOTICE:

- Be sure to tighten the nuts.
- If reusing the bolts, insert them from the upper side of the vehicle.

2. INSTALL REAR STABILIZER BAR (except TMC Made)

(a) Check that the identification mark of the rear stabilizer bar is positioned on the left side of the vehicle.



(b) Install the rear stabilizer bar with the 2 bolts and 2 nuts.

Torque: 250 N·m (2549 kgf·cm, 184ft·lbf)

NOTICE:

- Be sure to tighten the nuts.
- If reusing the bolts, insert them from the upper side of the vehicle.

3. INSTALL REAR AXLE BEAM DAMPER

(a) Install the rear axle beam damper to the center of the rear stabilizer bar.

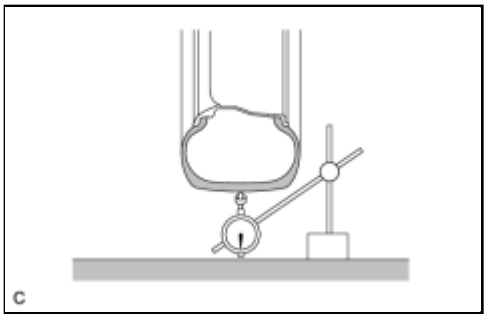
Title: TIRE / WHEEL: TIRE AND WHEEL SYSTEM: INSPECTION (2010 Corolla)		

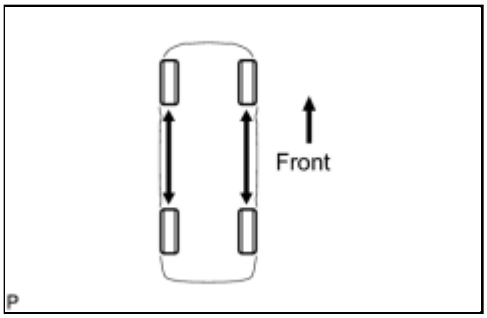


INSPECTION

1. INSPECT TIRES

(a) Check the tires for wear and proper inflation pressure.

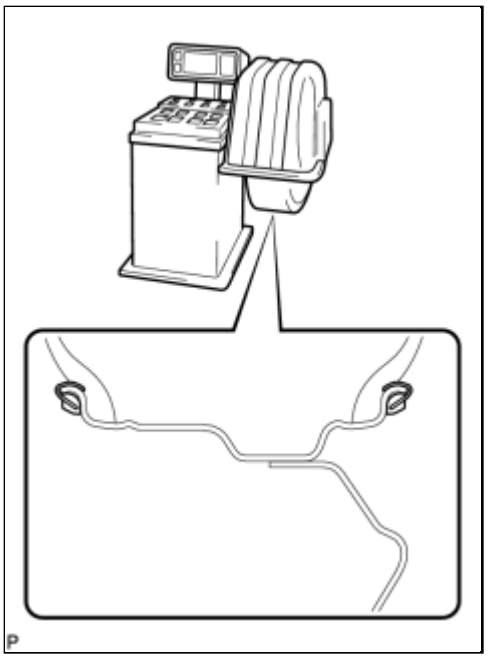
Cold Tire Inflation Pressure



TIRE SIZE	FRONT KPA (KGF/CM^2, PSI)	REAR KPA (KGF/CM^2, PSI)
P195/65R15 89S	210 (2.1, 30)	210 (2.1, 30)
P205/55R16 89H P215/45R17 87W 205/55R16 91V	220 (2.2, 32)	220 (2.2, 32)

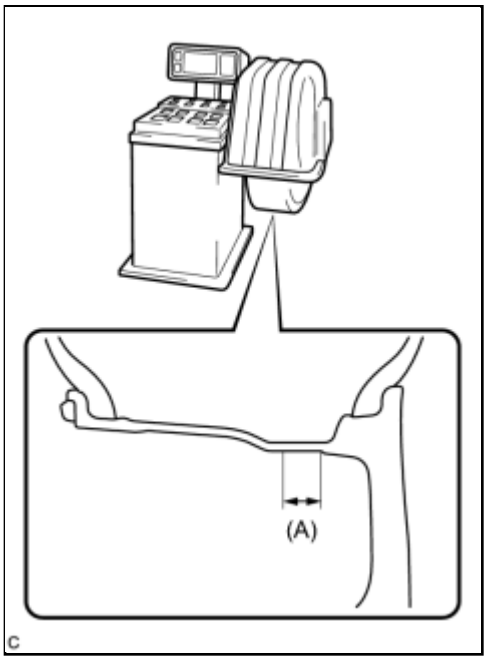
(b) Using a dial indicator, check the runout of the tires.

Maximum tire runout:
1.4 mm (0.0551 in.)



2. ROTATE TIRES

(a) Rotate the tires as shown in the illustration.



3. INSPECT WHEEL BALANCE

(a) Check and adjust the off-the-car balance.

(1) Steel wheel:

Maximum imbalance after adjustment:
8.0 g (0.0176 lb)

(2) Others (Non-steel wheel):

Maximum imbalance after adjustment:
8.0 g (0.0176 lb)

NOTICE:

- Use a cleaning detergent to remove dirt, oil and water from the surface where the balance weight is to be adhered.
- Do not touch the adhesive surface of the tape.
- Adhere the sticking type balance weight to the flat position (A) shown in the illustration.
  Width (A):
  25 mm (0.984 in.)
- Push the balance weight securely with a finger to adhere it to the position.
- Do not reuse the balance weight.

HINT:

The inner side balance weight should be installed by clipping it to the rim.

4. INSPECT FRONT AXLE HUB BEARING LOOSENESS

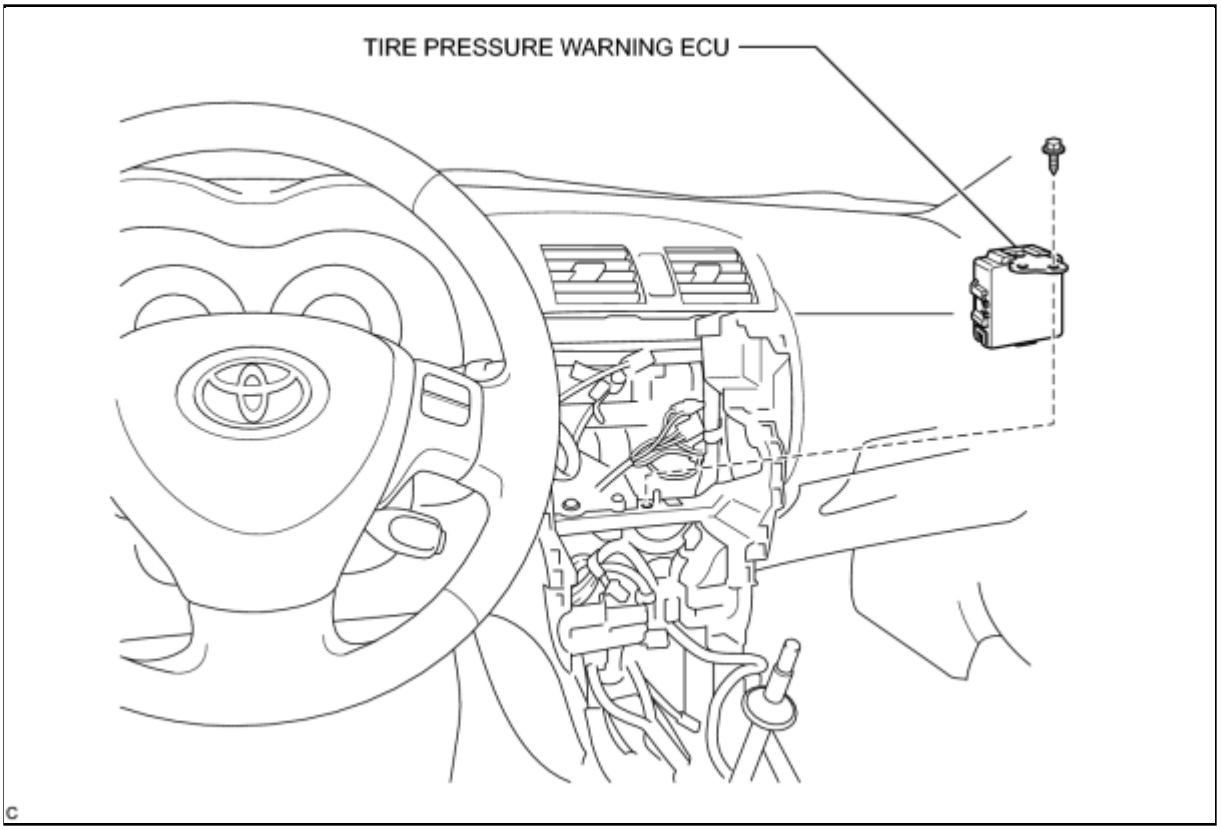
HINT: INFO .

5. INSPECT REAR AXLE HUB BEARING LOOSENESS

HINT: INFO .

6. INSPECT FRONT AXLE HUB RUNOUT

HINT: INFO .



7. INSPECT REAR AXLE HUB RUNOUT

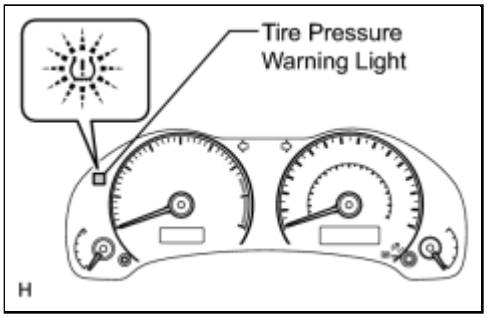
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. NOTICE FOR INITIALIZATION



NOTICE:

When disconnecting the cable from the negative (-) battery terminal, initialize the following system(s) after the cable is reconnected.

SYSTEM	SEE PROCEDURE
2ZR-FE SFI System	INFO
2AZ-FE SFI System	

2. TIRE PRESSURE WARNING SYSTEM PRECAUTION

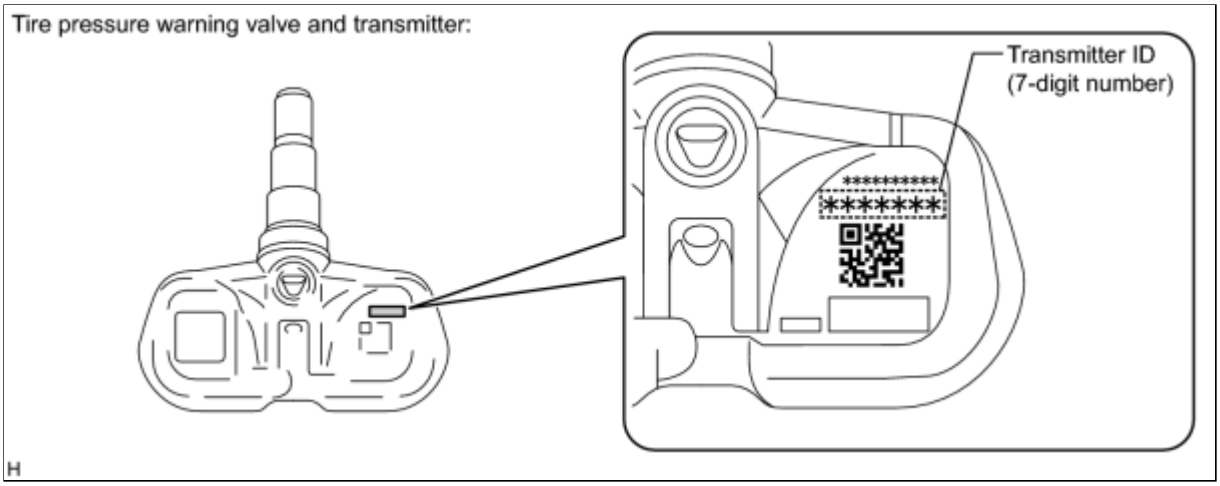
(a) When the tire pressure warning light comes on, immediately check the tire pressure of the tire and adjust it to the specified value (The tire pressure warning light will come on after blinking for 1 minute, the system may be malfunction. In this case, refer to following troubleshooting to repair the malfunction).

Cold Tire Inflation Pressure

TIRE SIZE	FRONT KPA (KGF/CM^2, PSI)	REAR KPA (KGF/CM^2, PSI)
P195/65R15 89S 195/65R15 91H	210 (2.1, 30)	210 (2.1, 30)
P205/55R16 89H P215/45R17 87W 205/55R16 91V	220 (2.2, 32)	220 (2.2, 32)

(b) When the tire pressure warning light comes on after blinking for 1 minute, there is a malfunction in the system. Check for DTCs.

(c) It is necessary to register the transmitter ID in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU INFO .



(d) When replacing the tire pressure warning ECU:

(1) Using the Data List, read the transmitter IDs registered in the ECU and make a note of them before removing the tire pressure warning ECU.

(2) Register the transmitter IDs after installing a new tire pressure warning ECU.

(e) When replacing the tire pressure warning valve and transmitter:

(1) Take a note of the 7-digit number (transmitter ID) written on the new tire pressure warning valve and transmitter when replacing the old one. Register the transmitter IDs in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and installing the tires and wheels on the vehicle.

NOTICE:

The transmitter ID is written on the tire pressure warning valve and transmitter. It will be unable to be read after installing the tire pressure warning valve and transmitter on the tire and wheel. Therefore, take a note of the transmitter ID before installing the tire pressure warning valve and transmitter.

(f) Tire and wheel replacement or tire rotation:

- After the tires or wheels are replaced with a new tire pressure warning valve and transmitter, it is necessary to register the transmitter IDs.
- After the set of the tires and wheels are replaced, be sure to select the tire pressure warning select switch.
- It is not necessary to register the transmitter IDs after tire rotation is performed.
- After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead from the wheel.

NOTICE:

Be careful not to damage the tire pressure warning valve and transmitter because of interference between the sensor and tire bead.

- The initialization is necessary to reset the warning threshold in accordance with the variant tire pressure settings due to the tire types.

(g) When replacing the tire pressure warning ECU and the tire pressure warning valve and transmitters, it is necessary to perform the initialization INFO after the registration INFO .

(h) Precautions about the tire pressure:

- The tire pressures decrease naturally.
- In winter, tire pressure may decrease due to low depending on the ambient temperatures (the tire pressure decreases by approximately 10 kPa (0.1 kgf/cm^2, 1.5 psi) for every 10°C (50°F) drop in the ambient temperature).

Therefore, the tire pressure warning system is more likely to operate if the tire pressures are not adjusted appropriately. If the daily temperature variation is large, pressurize the tires high so that the tire pressures are suitable under cold conditions. As a result, incorrect tire pressure warning operation should decrease.

3. IN CASE OF TIRE AND WHEEL REPLACEMENT

(a) When tires and wheels are replaced, always ensure that each transmitter ID is correctly registered.

(b) Before removing the tires from the disc wheels or reinstalling the tires to the disc wheels, be sure to follow the correct procedures for removal and reinstallation of the tire pressure warning valve and transmitter. Failure to do so may cause the tire pressure warning valve and transmitters to break INFO .

4. INITIALIZATION PRECAUTION

(a) Initialize the tire pressure warning system after any of the following is performed:

- Replacing the tire pressure warning ECU and/or the tire pressure warning valve and transmitter
- When rotating tires on vehicles with differing front and rear tire inflation pressures

HINT:

The tire pressure warning system will not operate properly if it is not initialized INFO .

5. FAIL-SAFE FUNCTION

(a) When a system malfunction occurs in the tire pressure warning system, the tire pressure warning light and master warning light comes on after blinking for 1 minute to informs the driver of the system failure.

(b) The result of this diagnosis is stored in the tire pressure warning ECU.

6. CHECK TIRE PRESSURE AFTER REPAIRS

(a) After repairs confirm that the actual tire pressures are displayed in the Data List INFO .

7. REMOVAL AND INSTALLATION TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) When installing a tire, make sure that the tire pressure warning valve and transmitter does not interfere with the tire bead in order to prevent damage to the tire pressure warning valve and transmitter.

(b) After completing the operation, remove the valve core to rapidly release the air in the tire and check that the warning light comes on. If the warning light does not come on, the system may be defective.

(c) If there is air leakage, tighten the nut to a torque of 4.0 N*m (41 kgf*cm, 35 in.*lbf) and push the valve core 2 or 3 times to remove any dirt attached to the valve core. If air continues to leak, replace the grommet, washer, and nut.

(d) When installing the tire pressure warning valve and transmitter, make sure the rim, grommet, washer, and nut are clean. Use a manufacturer-specified the valve cap.

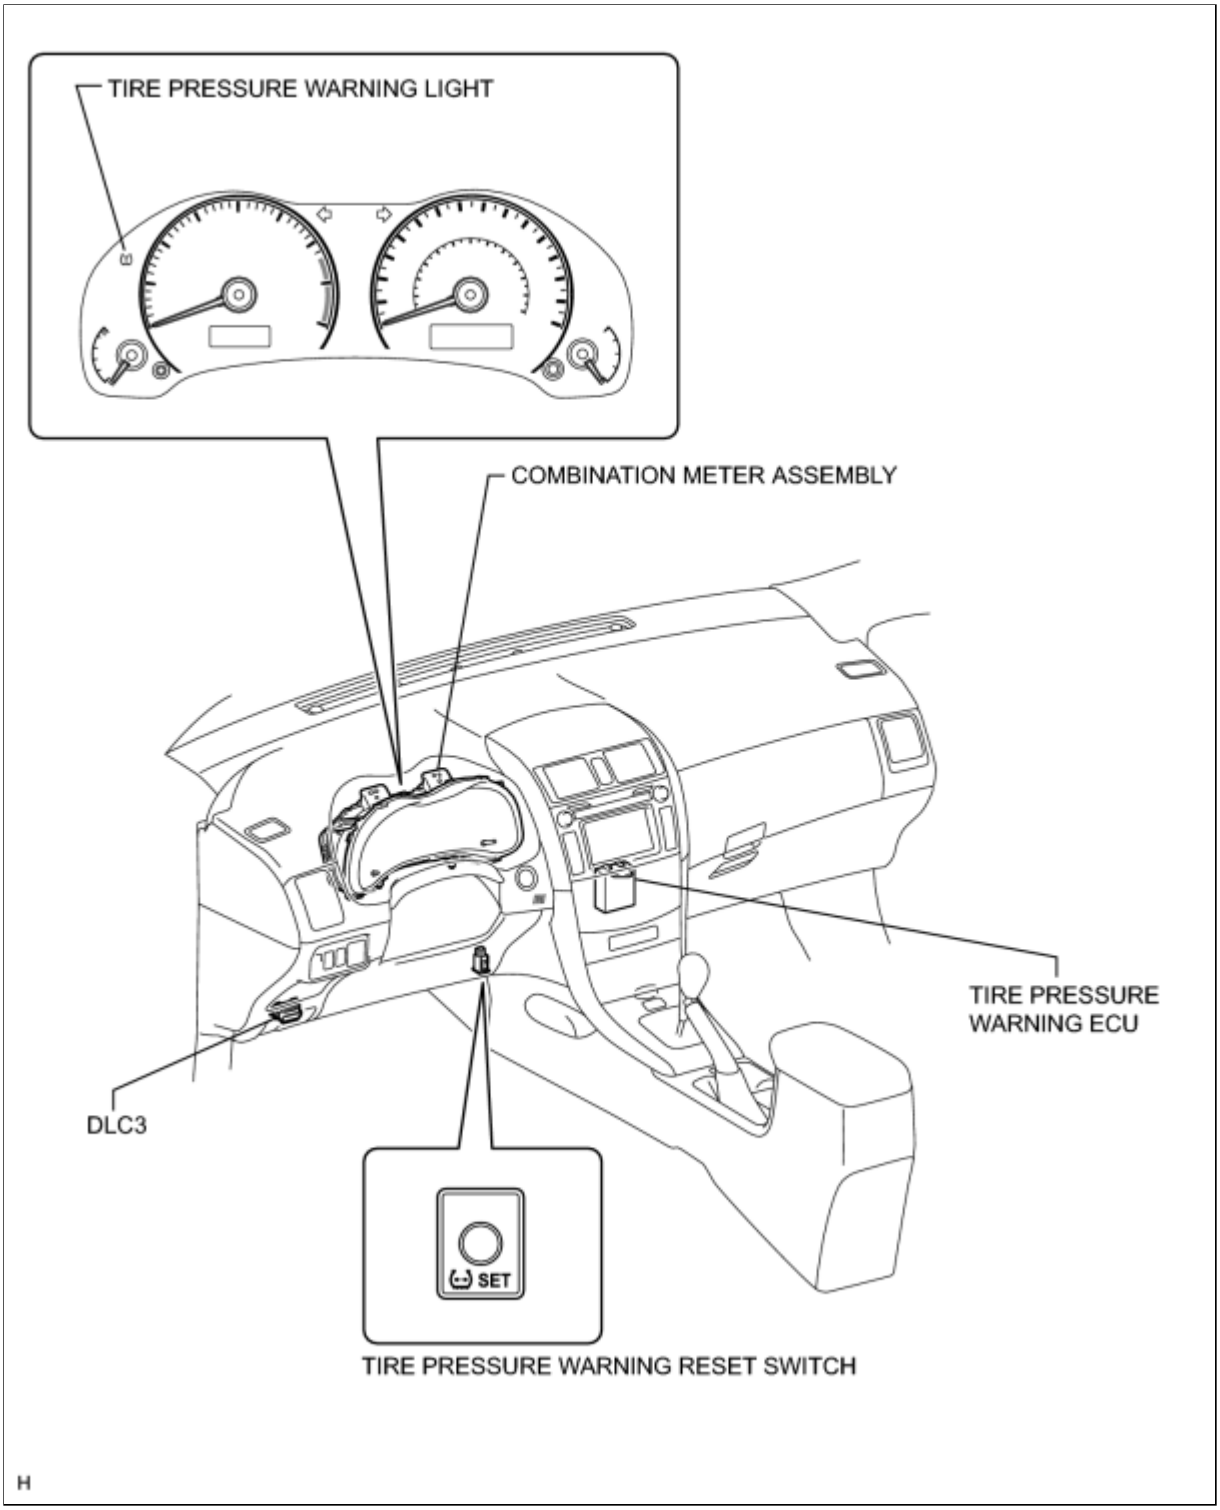
(e) When putting air into the tire, first install the tire pressure valve straight onto the stem of the tire pressure warning valve and transmitter.

8. TIRE AND WHEEL REPLACEMENT

(a) To prevent damage to the tire pressure warning valve and transmitter, drop the tire pressure warning valve and transmitter into the tire whenever removing the tire from the wheel.

NOTICE:

Always use a new grommet, washer and nut when installing the tire pressure warning valve and transmitter.



(b) If tires and wheels are replaced, register the transmitter IDs 

.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the tire pressure warning system.
- *: Use the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

(a) Interview the customer to confirm the trouble.

HINT:

It is important to collect as much specific information as possible from the customer to allow for a quick repair.

NEXT

3.	**ADJUST TIRE PRESSURE***

(a) Turn the ignition switch off.

(b) Set the all tire pressure to the specified value INFO .

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Read the "ID Tire Inflation Pressure" values.

(g) Check the Data List INFO .

HINT:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- If the problem is that the tire pressure decreases, wait until all of the tire pressure data is received by the ECU. If the data is received, the tire pressure warning light will goes off.

Result:

CONDITION	PROCEED TO
Tire pressure warning light goes off	A
Tire pressure warning light remains on	B

A ▶ GO TO STEP 9

B ▼

4.	**CHECK FOR DTC***

(a) Check for DTCs INFO .

Result:

RESULT	PROCEED TO
DTC is output	A
DTC is not output	B

B ▶ GO TO STEP 6

A ▼

5.	**DTC CHART**

(a) Refer to Diagnostic Trouble Code Chart INFO .

NEXT ▶ **GO TO STEP 7**

6.	**PROBLEM SYMPTOMS TABLE**

(a) Refer to Problem Symptoms Table INFO .

NEXT
▼

7.	**CIRCUIT INSPECTION***

(a) Refer to Electronic Circuit Inspection Procedure INFO .

NEXT
▼

8.	**REPAIR OR REPLACE**

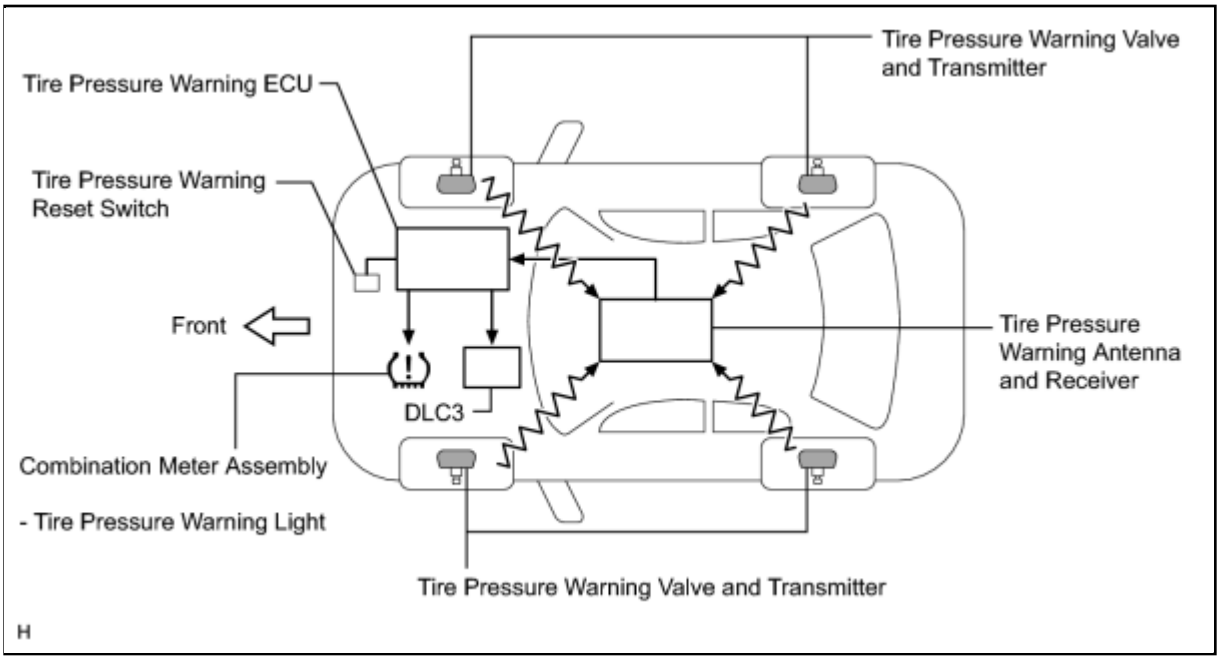
(a) Repair or replace parts based on the diagnosis result.

NEXT
▼

9.	**CONFIRMATION TEST***

(a) Check the Data List to confirm that the tire inflation pressure has been received INFO .

(b) Perform initialization INFO .



(c) Confirm that the initialization has been completed.

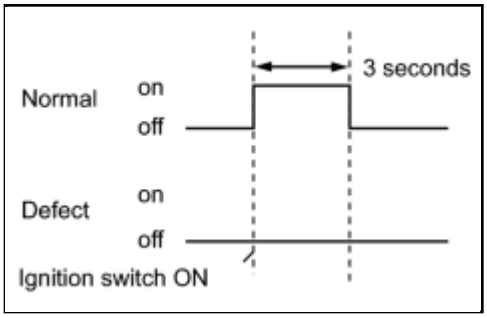
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XMM042X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		



SYSTEM DESCRIPTION

1. DESCRIPTION OF SYSTEM

(a) A tire pressure warning valve and transmitter is equipped with a tire pressure sensor and a transmitter and is installed in each tire and wheel assembly. The sensor measures the tire pressure. The measured value and transmitter ID are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU from the tire pressure warning antenna and receiver. If the transmitter ID has already been registered, the ECU compares the measured air pressure value with the standard value. When the value is less than the standard value registered in the tire pressure warning ECU, the warning light on the combination meter comes on. The tire pressure warning reset switch addresses the differences in the air pressure settings by the type of tires.

2. INITIAL CHECK

(a) After the ignition switch is turned to ON, the tire pressure warning light comes on for 3 seconds and then go off.

HINT:

If the warning light does not come on for 3 seconds, troubleshoot the tire pressure warning light circuit INFO **.**

3. WHEN TIRE PRESSURE WARNING LIGHT IS LIT

(a) When the tire pressure warning light does not go off, or when it comes on during driving, check the tire pressure. If the tire pressure warning light comes on within several hours of adjusting the tire pressure, the tire may have a slow air leak.

(b) Under the following conditions, the system may not function properly:

(1) The system will be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

- If tires not equipped with the tire pressure warning valve and transmitters are used.
- If the ID code on the tire pressure warning valve and transmitters is not registered in the tire pressure warning ECU.
- If the tire inflation pressure is absolute pressure: 600 kPa (6.0 kgf/cm^2, 87 psi) or more; relative pressure: 500 kPa (5.0 kgf/cm^2, 73 psi) or more.
- If the tire pressure warning valve and transmitter battery voltage drops. (battery life: 10 years)

(2) The system may be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

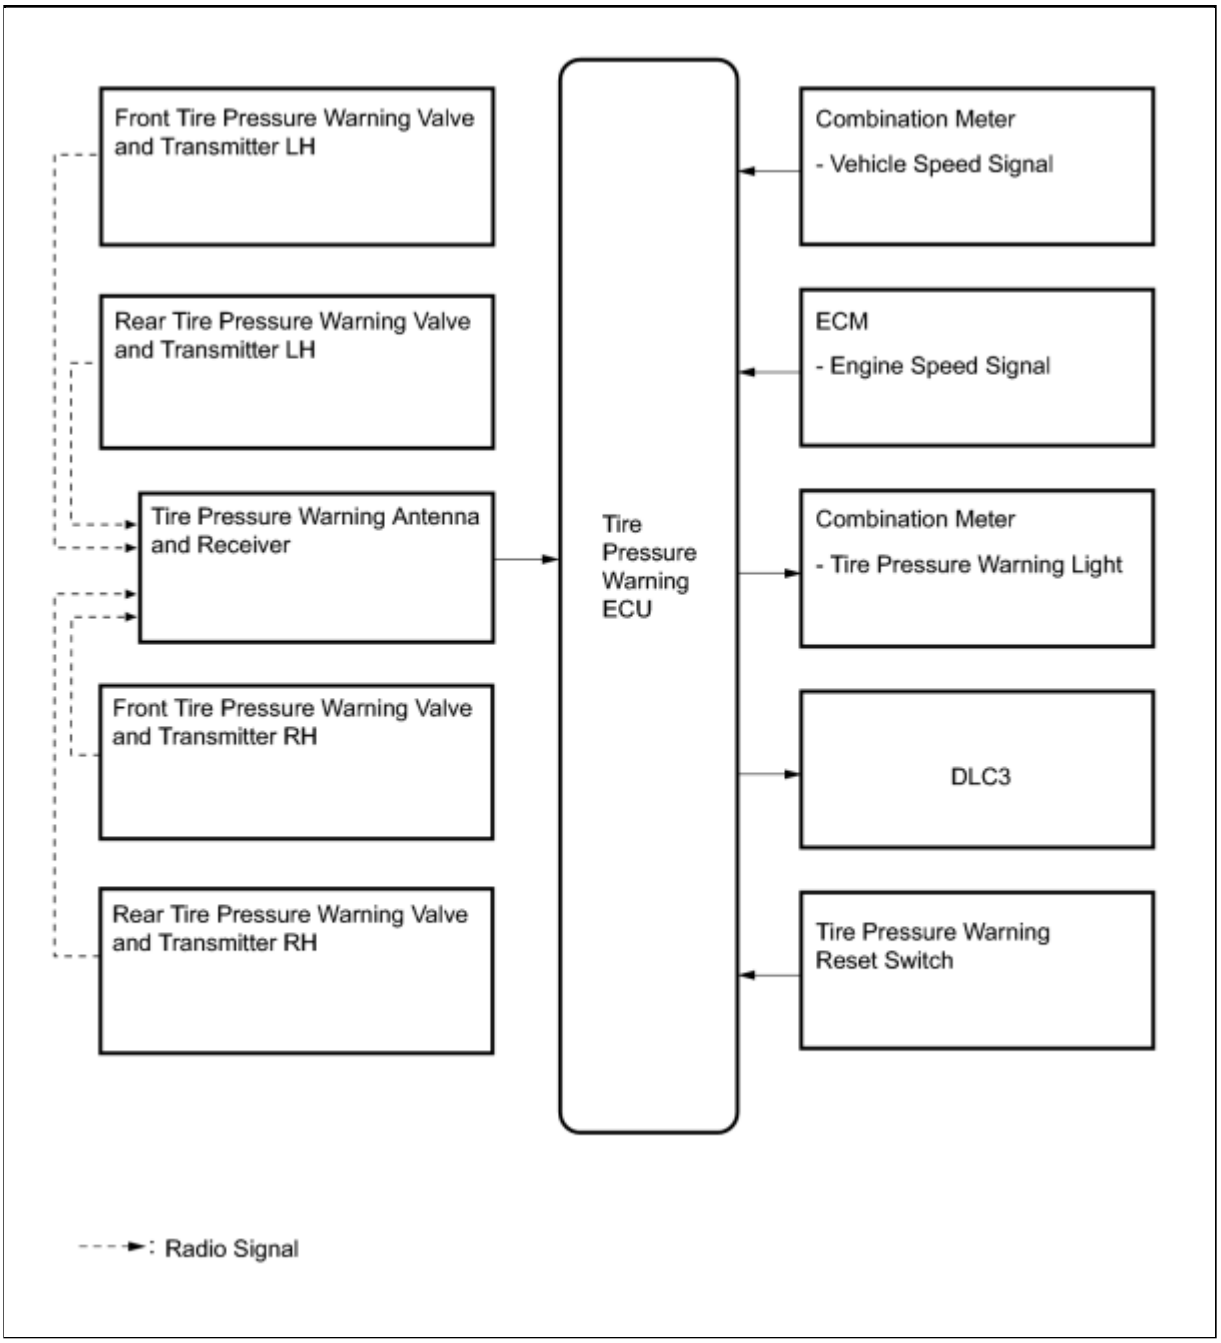
- If electronic devices or facilities using similar radio wave frequencies are nearby.
- If a radio set at similar frequencies is in used in the vehicle.
- If a window tint that affects the radio wave signal is installed.
- If there is a lot of snow or ice on the vehicle, in particular around the wheels or wheel housings.
- If non-genuine wheel are used.
- If tire chains are used.

(c) After removing and installing the ECU or a sensor, check for a diagnostic trouble code and verify that it is a normal system code.

4. FUNCTION OF COMPONENTS

COMPONENTS	FUNCTION
Tire pressure warning valve and transmitter	Combined as a single unit with a disc wheel air valve, it measures tire pressure and temperature and transmits an ID number for measurement value and identification. Built-in the battery.
Tire pressure warning antenna and receiver	Receives and transmits a necessary signal from the transmitters to the tire pressure warning ECU.
Tire pressure warning ECU	Receives a signal from the receiver and identifies it as vehicle's own signal. If the measured value is equal to or lower than the specified value, it transmits a signal to illuminate the tire pressure warning light on the combination meter.
Tire pressure warning light	Located in the combination meter, it informs the driver of lowered tire pressure and system failure.
Tire pressure warning reset switch	Allows entering initialization mode for when the standard pressure is changed

5. TIRE PRESSURE WARNING RESET SWITCH



- By operating the tire pressure warning reset switch, the tire pressure warning ECU can be set to issue a warning at an inflation pressure that corresponds to the standard pressure of tires.

  Therefore, the dealer must set the warning threshold to the proper value in order to comply with the local regulations.
- Operate the tire pressure warning reset switch only after the inflation pressures of all tires have been adjusted on the vehicle.
- To initialize the system, press and hold the tire pressure warning reset switch for 3 seconds or longer with the ignition switch in the ON position. When the system receives the initialization signal, the warning light blinks 3 times (1 second on, 1 second off).
- During initialization, the tire pressure warning valve and transmitter measures the inflation pressure of the tire, and registers the signals that are transmitted into the tire pressure warning ECU at a frequency of once per minute. The initialization process is completed when signals from all the tires have been received. It takes a few minutes.

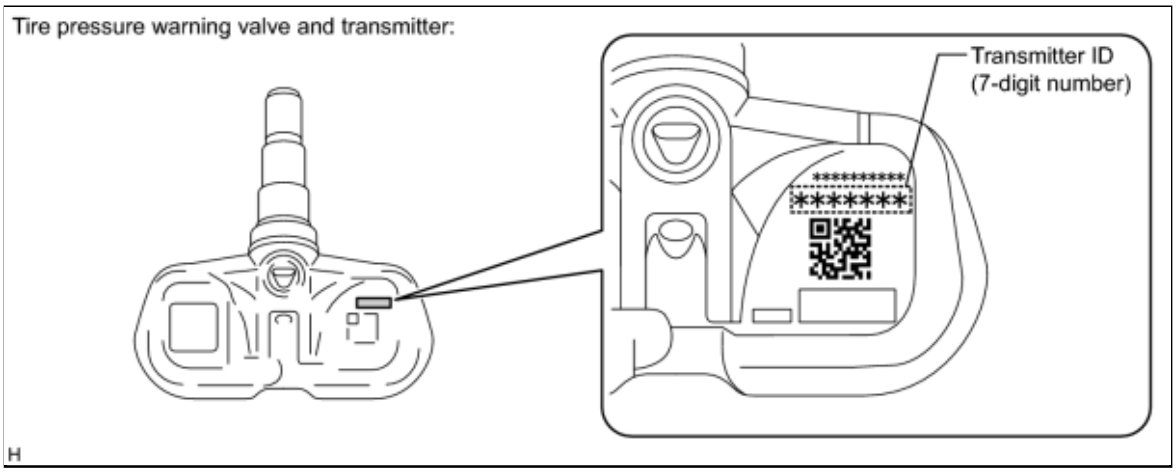
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: REGISTRATION (2010 Corolla)		

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

It is necessary to register the transmitter ID in the tire pressure warning ECU when replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU.

Prepare all transmitter ID data before starting registration.



(a) Before registration

(1) When replacing the tire pressure warning ECU:

- Read the registered transmitter IDs that are stored in the old ECU using the Techstream and note them down.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valve and transmitters INFO .

(2) When replacing a tire pressure warning valve and transmitter:

- Take note of the 7-digit number (transmitter ID) written on the tire pressure warning valve and transmitter.

NOTICE:

- The transmitter ID is written on the tire pressure warning valve and transmitter. It will be unable to be read after installing the tire pressure warning valve and transmitter on the tire and wheel. Therefore, take a note of the transmitter ID before installing the tire pressure warning valve and transmitter.
- The ID registration must be performed for all tire pressure warning valve and transmitters. Check the Data List, replace the exchanged ID with a new ID, and make a new DATA LIST of all 4 tires for the vehicle.

2. REGISTER TRANSMITTER ID (Using Techstream)

(a) Set the all tire pressure to the specified value INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / ID Registration.

(g) Perform the following procedures displayed on the screen.

(h) Confirmation of transmitter ID registration.

(1) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(2) Read the "ID Tire Inflation Pressure" values.

(3) Confirm that the data of tire pressure of all tires are displayed on the Techstream.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 INFO .
- If the IDs have not been registered, DTC C2171/71 is set in the tire pressure warning ECU after 3 minutes or more.
- If normal pressure values are displayed, the IDs have been registration correctly.
- If the tire pressure values are not displayed after a few minutes, the IDs may be incorrect or the system may have a malfunction.
- After all IDs are registered, DTC C2126/26 (Transmitter ID not Received) is set in the tire pressure warning ECU and the tire pressure warning light blinks for 1 minute and then comes on. When the tire pressure warning ECU successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126/26 is deleted and the tire pressure warning light goes off.

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. DESCRIPTION OF INITIALIZATION

(a) Perform initialization in the following cases:

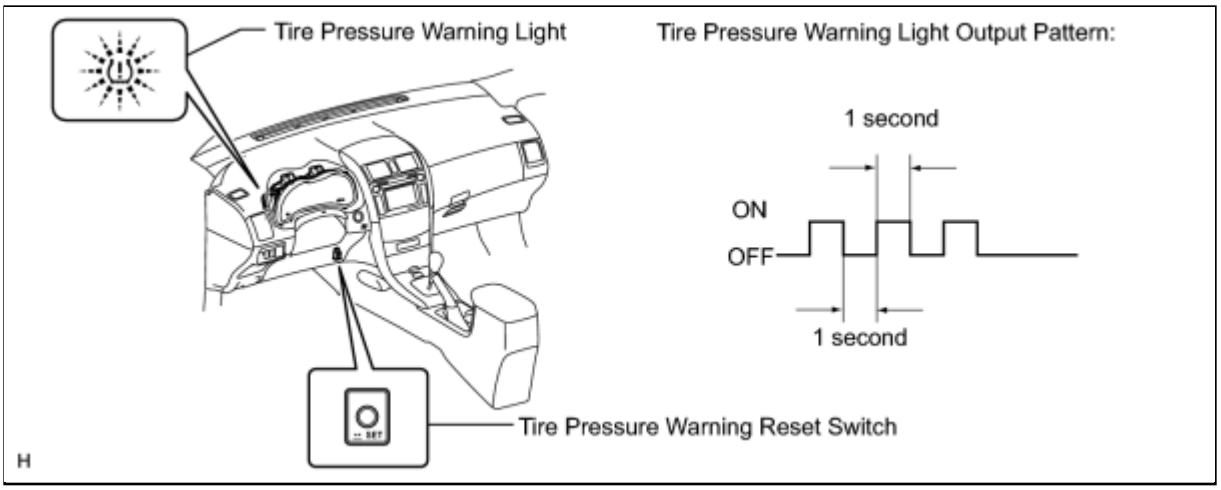
- Before delivery of a new vehicle.
- After replacement of the tire pressure warning ECU*.
- After replacement of any of the tire pressure warning valve and transmitters*.

*: Perform initialization after the transmitter ID registration is completed INFO .

(b) Before initialization

(1) Set the all tire pressure to the specified value INFO .

NOTICE:



Make sure the tires are cooled down.

2. INITIALIZATION PROCEDURE

(a) Adjust all tire (except spare tire) to the standard tire inflation pressure, as indicated on the tire and loading information label on the vehicle.

(b) Turn the ignition switch to ON.

(c) Push and hold the tire pressure warning reset switch for 3 seconds or more so that the tire pressure warning light blinks 3 times.

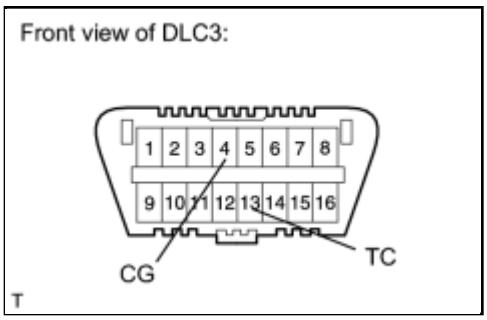
(d) Turn the ignition switch off.

(e) Connect the Techstream to the DLC3.

(f) Turn the ignition switch to ON.

(g) Turn the Techstream on.

(h) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.



(i) Check that the initialization has been completed.

(j) Confirm that the tire pressure data of all wheels are displayed on the Techstream.

NOTICE:

- The initialization is normally completed within 2 or 3 minutes.
- If the initialization has not been completed successfully, DTC C2177/77 is set after a vehicle speed 8 km/h (5 mph) or more continues for 20 minutes or more.
- The initialization can be terminated by connecting terminals TC and CG of the DLC3.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

- The initialization is completed when the "ID Tire Information Pressure" display shows the correct pressures.
- *: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24 INFO .

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XN0049X
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: TEST MODE PROCEDURE (2010 Corolla)		

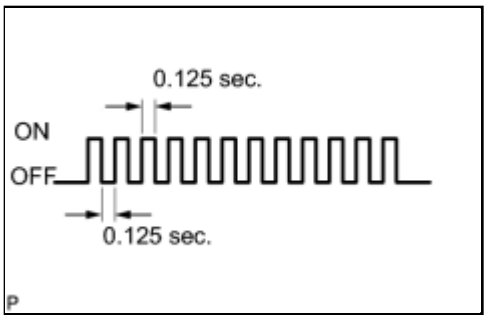
TEST MODE PROCEDURE

1. ENTER TEST MODE

HINT:

- Operation of the tire pressure warning reset switch can be checked in TEST MODE.
- During TEST MODE, the system is not initialized by pushing the tire pressure warning reset switch. The circuit of the tire pressure warning reset switch can be inspected during this mode.

(a) Turn the ignition switch off.



(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Check that the tire pressure warning light comes on for 3 seconds and then goes off.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / Signal Check.

(g) Confirm that the tire pressure warning light in the combination meter blinks at 0.125 second intervals.

2. PERFORM SIGNAL CHECK

HINT:

- When entering signal check mode, the tire pressure warning ECU sets all the signal check DTCs first.

  After completing signal check for each inspection item, the DTCs for systems that are determined to be normal by the tire pressure warning ECU will be erased.

  The DTCs for other inspection items may not be erased when only a certain signal is inspected.
- When signal check returns to normal mode, all the signal check DTCs will be erased.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Utility / Signal Check.

HINT:

Every time the test mode DTC erasure conditions are satisfied, the tire pressure warning light comes on for 1 second. Then, the tire pressure warning light blinks at 0.125 second intervals.

(f) Start the engine and allow it to run at 1000 rpm for 3 seconds or more to check the engine speed signal (C2194/94).

(g) Drive the vehicle at 20 km/h (12 mph) or more for 3 seconds or more to check the vehicle speed signal (C2191/91).

(h) Loosen the valve core and rapidly reduce the pressure (at least 40 kPa (0.4 kg/cm^2, 5.8 psi) within 30 seconds or more) to check the transmitter data (C2181/81 to C2184/84).

HINT:

The transmitter ID can be transmitted by rapidly reducing the tire pressure.

(i) Check that the tire pressure warning system test mode DTCs are erased.

TEST MODE DTC	TEST SIGNAL	TEST MODE DTC CLEAR CONDITION
C2181/81 to C2184/84	Transmitter Data	Data is received from the transmitter which has a registered ID in the tire pressure warning ECU
C2191/91	Vehicle Speed Signal	Vehicle speed of 20 km/h (12 mph) or more is detected for 3 seconds or more
C2194/94	Engine Speed Signal	Engine speed of 1000 rpm or more is detected for 3 seconds or more

(j) Check the tire pressure warning reset switch.

(1) Press the tire pressure warning reset switch.

(2) Check the tire pressure warning light.

TEST SIGNAL	NORMAL CONDITION
Tire Pressure Warning Reset Switch	• Switch ON: Tire pressure warning light comes on • Switch OFF: Tire pressure warning light blinks at 0.125 sec. intervals

(k) Result

HINT:

After the signal check is completed, check for a signal check DTC to confirm the system status.

CONDITION	PROCEDURE
Test mode DTC is output	Repair the faulty part and enter SIGNAL CHECK again

CONDITION	PROCEDURE
Test mode DTCs are cleared	No problem

(l) End of SIGNAL CHECK

(1) After completing the test mode (SIGNAL CHECK), turn the ignition switch off and disconnect the Techstream.

(m) DTC of SIGNAL CHECK (TEST DIAGNOSIS):

(1) If a trouble code is displayed during the test mode DTC check, check the circuit listed for that code. For details of each code, refer to the "See Procedure" below.

DTC	**C2123/23**	**No Signal from Transmitter ID3**

DTC	**C2124/24**	**No Signal from Transmitter ID4**

DTC	**C2181/81**	**Transmitter ID1 not Received (Test Mode DTC)**

DTC	**C2182/82**	**Transmitter ID2 not Received (Test Mode DTC)**

DTC	**C2183/83**	**Transmitter ID3 not Received (Test Mode DTC)**

DTC	**C2184/84**	**Transmitter ID4 not Received (Test Mode DTC)**

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.

The tire pressure warning valve and transmitters constantly send radio waves to the tire pressure warning antenna and receiver.

Under the conditions below, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valve and transmitters, and a DTC is stored.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.
- The ID of the tire pressure warning valve and transmitter is mistyped during registration.
- A tire/wheel/transmitter from a different vehicle is installed.

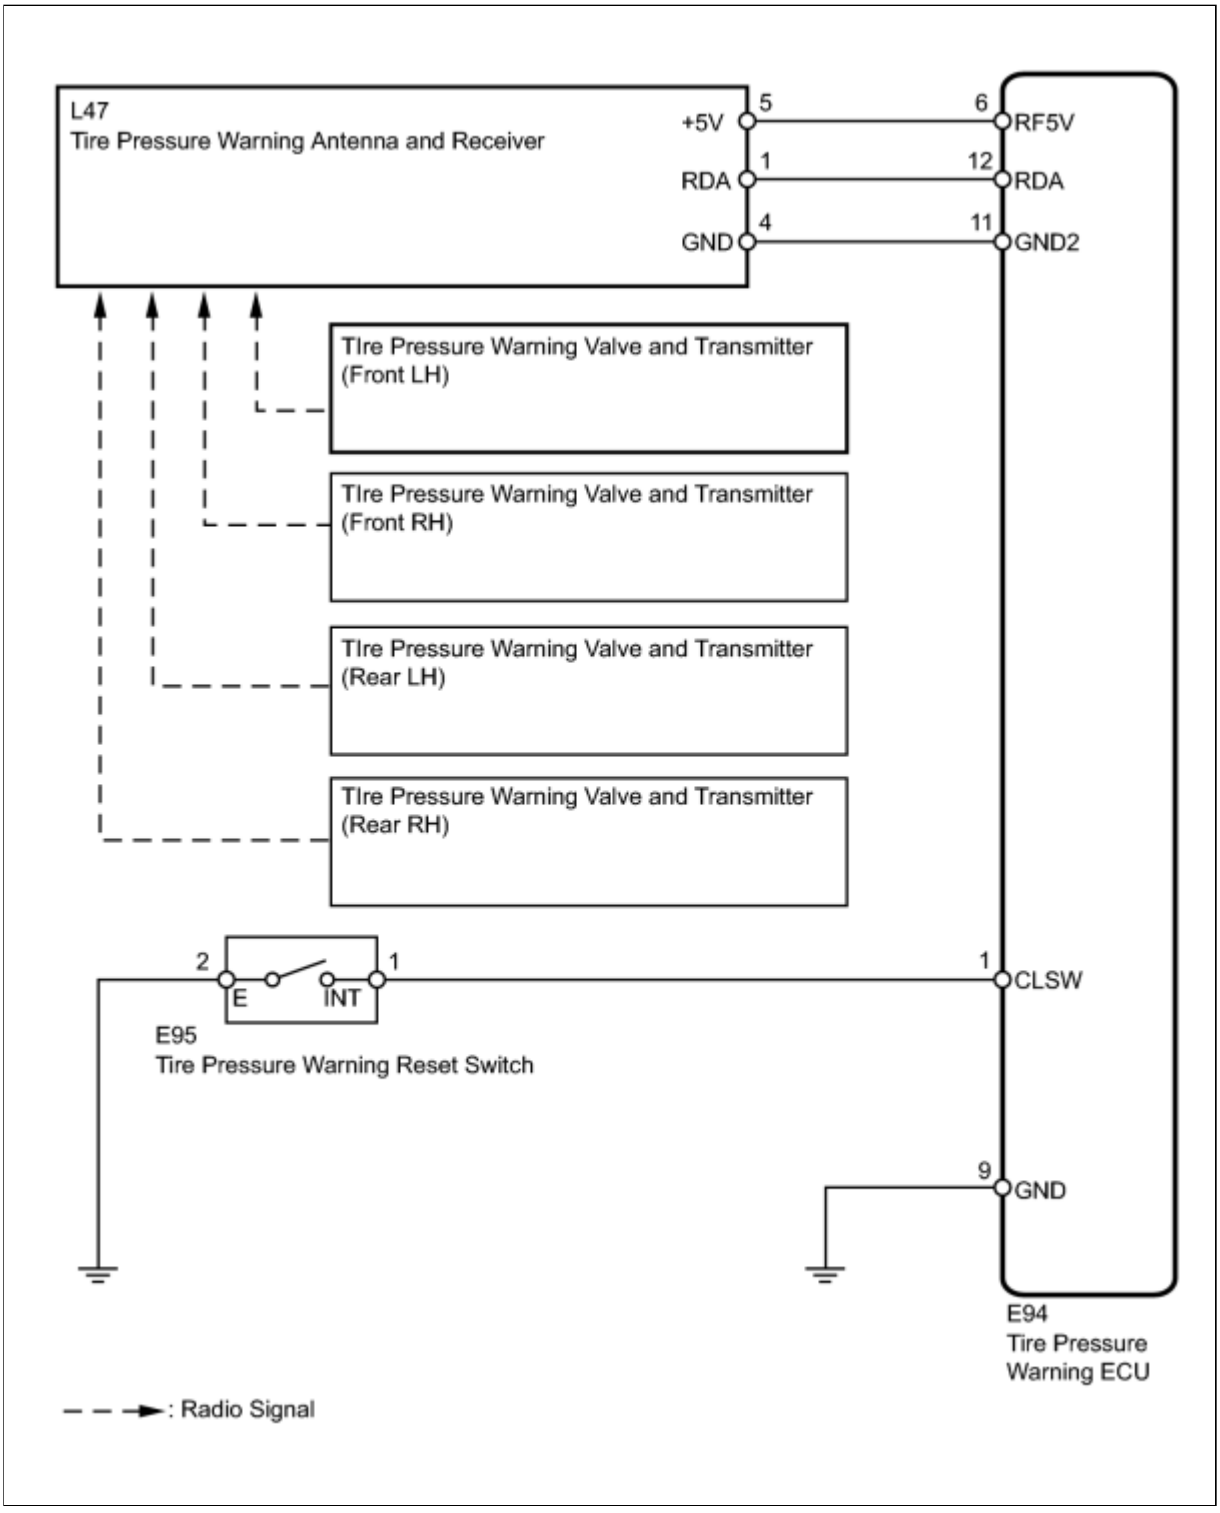
HINT:

When no transmitter ID is received from a tire pressure warning valve and transmitter for a total of 20 minutes while the vehicle speed is more than 8 km/h (5 mph) or no transmitter ID is received from all the tire pressure warning valve and transmitters for a total of 20 minutes, DTCs are set.

DTCs from C2121/21 to C2124/24 can only be cleared by using the Techstream. DTCs from C2181/81 to C2184/84 can be cleared when the transmitter in the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs from C2181/81 to C2184/84 are output only in test mode.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2121/21 C2122/22 C2123/23 C2124/24	Following condition (a) or (b) is met: (a) When all conditions below are met: • Tire pressure warning valve and transmitter is not in stop mode. • Any transmitter ID is not received from tire pressure warning valve and transmitters. • For 20 minutes or more, vehicle speed is more than 8 km/h (5 mph) or no vehicle speed signal or engine speed signal is received. (b) When all conditions below are met: • Tire Pressure warning valve and transmitter is not in stop mode. • No transmitter ID is received from tire pressure warning valve and transmitters for 20 minutes or more.	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2181/81 C2182/82 C2183/83 C2184/84	Test mode procedure is performed.	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

NOTICE:



When DTCs C2121/21 to C2124/24 are set, DTC C2173/73 may be set simultaneously. In such cases,

troubleshoot C2173/73 first, then troubleshoot DTCs C2121/21 to C2124/24.

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	**READ OUTPUT DTC (DTC C2173/73)**

(a) Turn the ignition switch to off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.

(f) Read DTCs.

Result:

RESULT	PROCEED TO
DTC C2173/73 is not output	A
DTC C2173/73 is output	B

NOTICE:

When DTC C2173/73 is output, troubleshoot that DTC first. Then troubleshoot DTCs C2121/21 to C2124/24.

B ▶ **GO TO DTC C2173/73**

A ▼

2.	**CHECK FREQUENCY RECEIVING CONDITION**

(a) Check that the vehicle is not located in an area such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in area described above, the tire pressure warning light may come on only in a particular area.

(2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings or devices installed by the user.

NG ▶ **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK ▼

3.	**IDENTIFY TRANSMITTER CORRESPONDING TO DTC**

(a) Set the tire pressure to the specified values INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)		has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

***: It may take about 2 or 3 minutes until the values are displayed.**

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm^2, 5.8 psi) within 30 seconds.

(i) Check the Data List.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.

- Record the transmitter ID of which "ID Tire Inflation Pressure" data corresponds to each tire.

(j) After confirming that the "ID Tire Inflation Pressure" data for one tire (ID1 to ID4) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to the DTC.

4.	**CHECK HARNESS AND CONNECTOR (ECU - RECEIVER)**

(a) Disconnect the E94 ECU connector.

(b) Disconnect the L47 receiver connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-12 (RDA) - L47-1 (RDA)	Always	Below 1 Ω
E94-11 (GND2) - L47-4 (GND)		
E94-6 (RF5V) - L47-5 (+5V)		
E94-12 (RDA) - Body ground		10 kΩ or higher
E94-11 (GND2) - Body ground		
E94-6 (RF5V) - Body ground		

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**CHECK TRANSMITTER ID**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

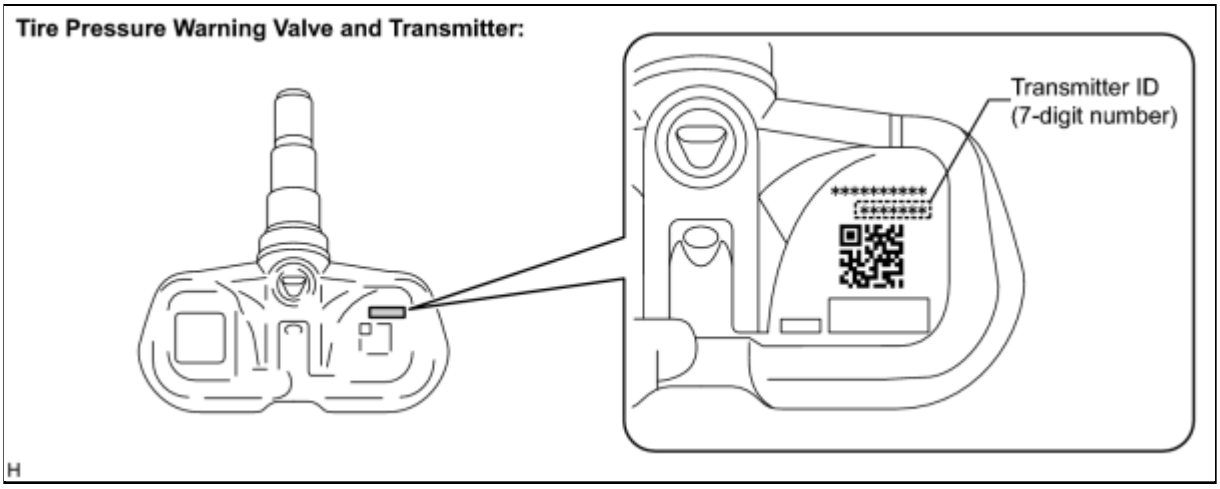
(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check the values by referring to the table below.

Tire Pressure Monitor



TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK TIRE PRESSURE WARNING ECU

HINT:

Inspect the connectors from the back side while the connectors are connected.

(a) Disconnect the L47 tire pressure warning antenna and receiver connector.

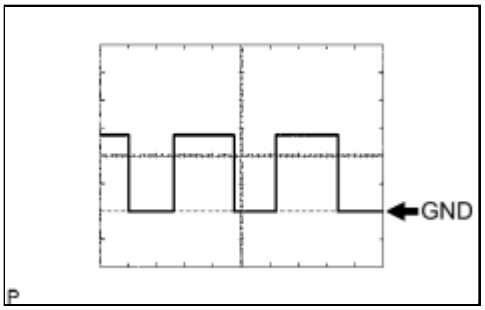
(b) Measure the voltage according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E94-12 (RDA) - E94-9 (GND)	R - W-B*1, BR*2	Tire pressure warning antenna and receiver signal	Ignition switch ON	11 to 14 V

(c) Connect the L47 tire pressure warning antenna and receiver connector.

(d) Measure the voltage and resistance according to the value(s) in the table below. If the result is not as specified, the ECU may have a malfunction.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E94-1 (CLSW) - E94-9 (GND)	SB - W-B*1, BR*2	Tire pressure warning reset switch	• Ignition switch ON • Tire pressure warning reset switch ON	8.5 to 15 V
			• Ignition switch ON • Tire pressure warning reset	Below 1.5 V



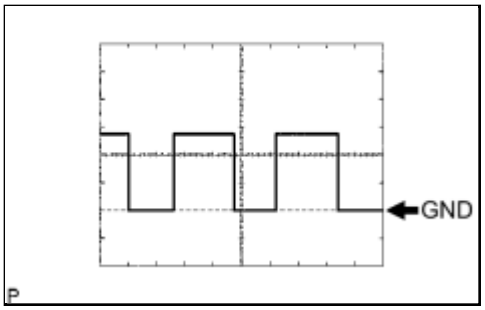
TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			switch OFF	
E94-2 (SPD) - E94-9 (GND)	V - W-B*1, BR*2	Vehicle speed signal	Vehicle is running	Pulse generation (see waveform 1)
E94-3 (TC) - E94-9 (GND)	G - W-B*1, BR*2	TC terminal	Terminal TC is not connected	11 to 14 V
E94-4 (TACH) - E94-9 (GND)	GR - W-B*1, BR*2	Engine speed signal	Engine is running	Pulse generation (see waveform 2)
E94-5 (IND) - E94-9 (GND)	P - W-B*1, BR*2	Tire pressure warning light output signal	• Ignition switch ON • Tire pressure warning light OFF	Below 0.5 V
		Tire pressure warning reset switch	After ignition switch is turned ON, tire pressure warning light illuminates for 3 seconds.	0.9 to 3.2 V
E94-6 (RF5V) - E94-9 (GND)	B - W-B*1, BR*2	Tire pressure warning antenna and receiver power source	Ignition switch ON	11 to 14 V
E94-7 (IG) - E94-9 (GND)	L - W-B*1, BR*2	IG power source	Ignition switch ON	11 to 14 V
E94-9 (GND) - Body ground	W-B*1, BR*2 - Body ground	Ground	Always	Below 1 Ω
E94-10 (SIL) - E94-9 (GND)	W - W-B*1, BR*2	Diagnostic communication	Ignition switch ON	8 to 14 V
E94-11 (GND2) - E94-9 (GND)	LG - W-B*1, BR*2	Tire pressure warning antenna and receiver ground	Always	Below 1 Ω
E94-12 (RDA) - E94-9 (GND)	R - W-B*1, BR*2	Tire pressure warning antenna and receiver signal	Ignition switch ON	11 to 14 V

*1: TMC Made

*2: NUMMI, TMMC Made

(e) Using an oscilloscope, check the waveform 1.

Waveform 1:



ITEM	CONTENTS
Terminal	E94-2 (SPD) - E94-9 (GND)
Tool setting	5 V/DIV, 20 ms./DIV.
Vehicle condition	Driving at approximately 20 km/h (12 mph)

HINT:

The wavelength becomes shorter as the vehicle speed increases.

(f) Using an oscilloscope, check the waveform 2.

Waveform 2:

ITEM	CONTENTS
Terminal	E94-4 (TACH) - E94-9 (GND)
Tool setting	5 V/DIV., 10 ms./DIV.
Vehicle condition	Idling

HINT:

The wavelength becomes shorter as the engine speed increases.

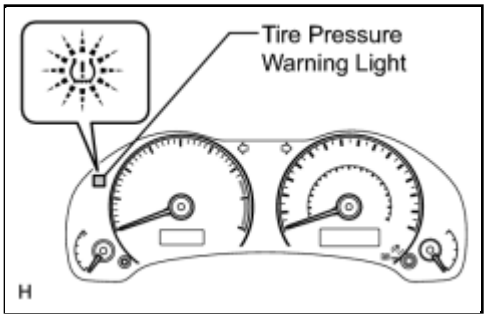
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XMW03WX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM



1. CHECK BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding to the next step.

2. CHECK DLC3 INFO

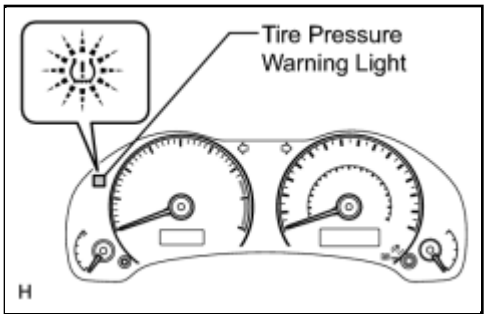
3. DIAGNOSIS SYSTEM

(a) Warning light

(1) When there is a problem with the tire pressure warning system, the tire pressure warning light blinks at 0.5 second intervals, and comes on after 1 minute.

NOTICE:

When the malfunction has been corrected, the tire pressure warning light does not come on.



(b) DTCs (Normal mode)

(1) DTCs are memorized in the tire pressure warning ECU and read by the blinks of the tire pressure warning light or by using the Techstream INFO .

(c) Test mode

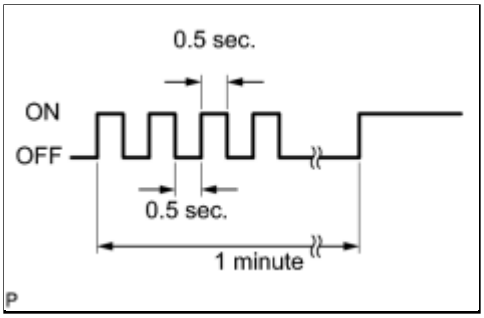
(1) By switching from normal mode into test mode (input signal check), you can inspect the tire pressure warning antenna and receiver, each tire pressure warning valve and transmitter, engine speed signal and vehicle speed sensor INFO .

4. CHECK TIRE PRESSURE WARNING LIGHT

(a) Turn the ignition switch to ON.

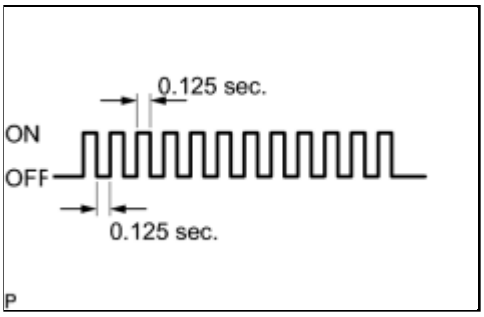
(b) Check that the tire pressure warning light comes on for 3 seconds.

If the warning check result is not normal, proceed to the troubleshooting for the tire pressure warning light circuit INFO .



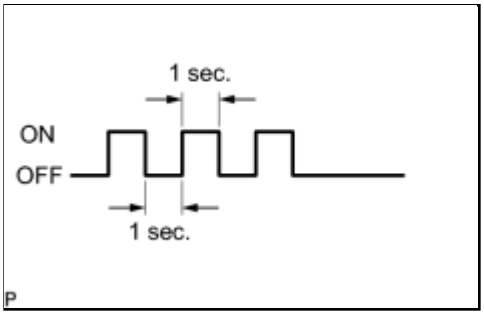
5. TIRE PRESSURE WARNING LIGHT CHART

HINT:

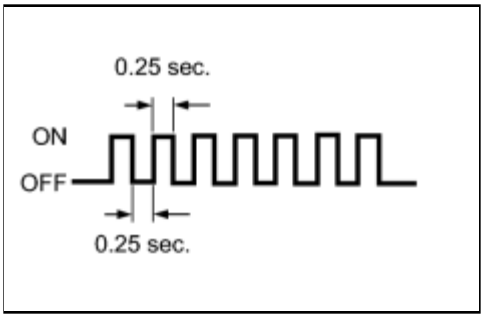


The table below indicates the state of the tire pressure warning light after the ignition switch is turned to ON.

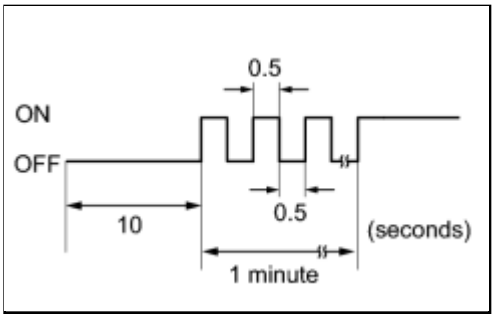
	IMMEDIATELY AFTER TURNING THE IGNITION SWITCH ON	ALWAYS						
		WARNING LIGHT OUTPUT PATTERN						
	COMES ON FOR 3 SEC.	GOES OFF	COMES ON	BLINKS FOR 1 MINUTE AND THEN ILLUMINATES (*1)	BLINKS (*2)	BLINKS (*3)	BLINKS (*4)	OUTPUTS DTC
Normal	○	○	-	-	-	-	-	-
Low tire pressure	○	-	○	-	-	-	-	-
System fail	○	-	-	○	-	-	-	-
Test mode	○	-	-	-	○	-	-	-
Initialization	○	-	-	-	-	○	-	-
ECU connector poorly connected	-	-	-	○ (*5)	-	-	-	-
TC ground (DTC is output)	○	-	-	-	-	-	-	○
TC ground (DTC is not output)	○	-	-	-	-	-	○	-



*1: Comes on and goes off repeatedly at 0.5 second intervals, and stays on after 1 minute.



*2: Comes on and goes off repeatedly at 0.125 second intervals.



*3: Blinks 3 times (1 second on, 1 second off).

*4: Comes on and goes off repeatedly at 0.25 second intervals.

*5: When determining if there is a short circuit (10 seconds), the light is off. Then it blinks at 0.5 second intervals, and stays on after 1 minute.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XMY03GX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) According to the display on the Techstream, read the "Data List".

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Mode Status	Tire pressure warning system mode/ NORMAL or TEST	NORMAL: Normal mode TEST: Test mode	-
Main Tire	Number of main tire ID to be registered/ 0 or 1 or 2 or 3 or 4	0 to 4 is displayed	-

HINT:

***1: Displayed only when the ID No. is not registered.**

***2: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24**

INFO .

2. Active Test

Using the Techstream to perform Active Tests allows the relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(f) Check the operation by referring to the table below.

Combination Meter

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XMX03XX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Turn the ignition switch off.

(b) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST: 09843-18040

(c) Turn the ignition switch to ON.

(d) Read and record any DTCs from the tire pressure warning light on the combination meter. Refer to the illustration as examples of the normal system code and codes 13 and 23.

HINT:

- If the tire pressure warning light does not indicate any DTCs or the normal system code, inspect the tire pressure warning light circuit or TC and CG terminal circuit.

TROUBLE AREA	SEE PROCEDURE
Tire pressure warning light circuit	INFO
TC and CG terminal circuit	INFO

- If 2 or more malfunctions are indicated at the same time, the lowest numbered DTC is displayed first.

(e) Refer to the Diagnostic Trouble Code Chart INFO for DTC information.

(f) After completing the check, turn the ignition switch off and remove SST from the DLC3.

SST: 09843-18040

2. DTC CHECK (USING TECHSTREAM)

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.

(f) Read the DTCs following the prompts on the Techstream.

HINT:

Refer to the Techstream's operator's manual for further details.

3. CLEAR DTC

HINT:

After repairing the malfunctions, clear the DTCs.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Trouble Codes.

(f) Clear the DTCs following the prompts on the Techstream.

HINT:

Refer to the Techstream operator's manual for further details.

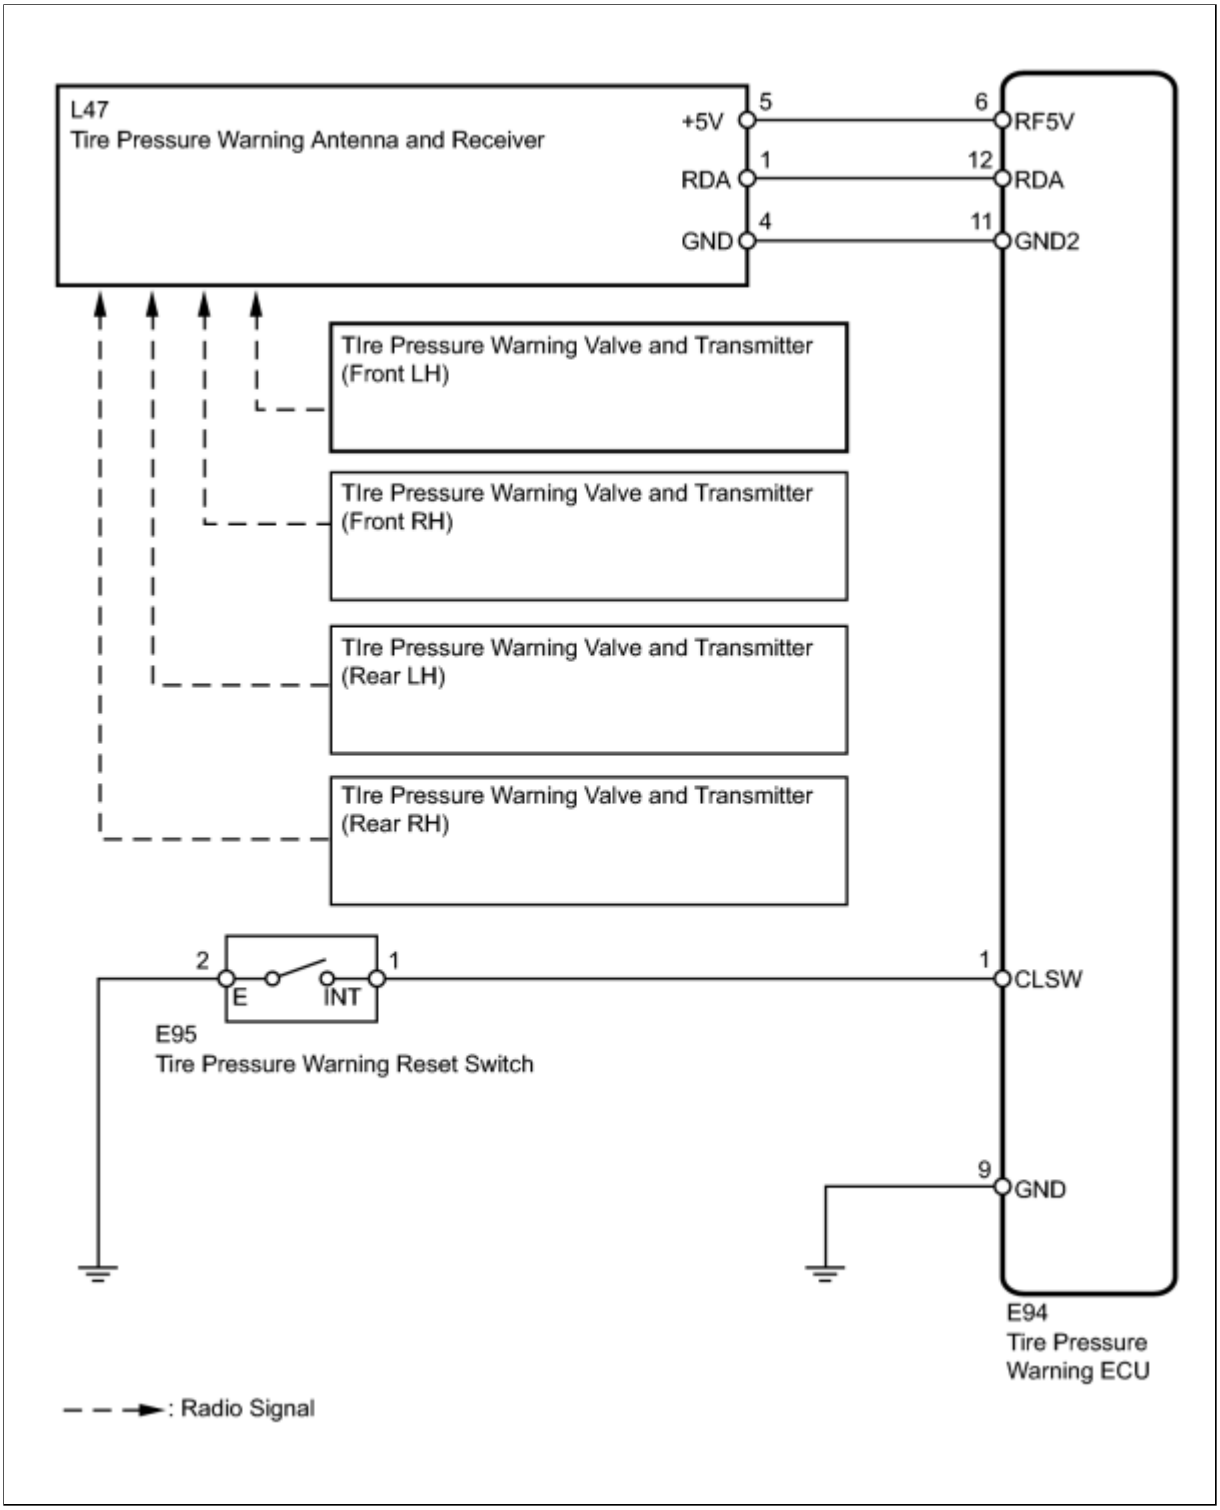
DTC	**C2114/14**	**Transmitter ID4 Operation Stop**

DESCRIPTION



The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on. The tire pressure warning ECU stores a DTC when the tire pressure warning valve and transmitter stops transmitting signals. At this time, forcibly transmit the signals by releasing the tire pressure rapidly. The stored DTC is cleared when the signal transmission is resumed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2111/11 C2112/12 C2113/13 C2114/14	Tire pressure warning valve and transmitters stop transmitting signals	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM FORCED TRANSMISSION OF TRANSMITTER ID OF ALL WHEELS**

(a) Set the tire pressure to the specified value INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)		

HINT:

***: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24** INFO .

(h) Rapidly release the tire pressure for each wheel at least 40 kPa (0.4 kgf/cm^2, 5.8 psi) within 30 seconds.

(1) Check that each tire pressure data displayed on the Techstream has changed.

OK:

Each tire pressure data displayed on the Techstream will change to the value of the tire pressure.

NOTICE:

- It takes about 2 or 3 minutes to display the updated tire pressure data.
- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.

(2) After confirming that all of the tire pressure data displayed on the Techstream have changed, set the tire pressure to the appropriate specified values.

HINT:

If the tire pressure data displayed on the Techstream has not changed after rechecking, inspect for another problem INFO .

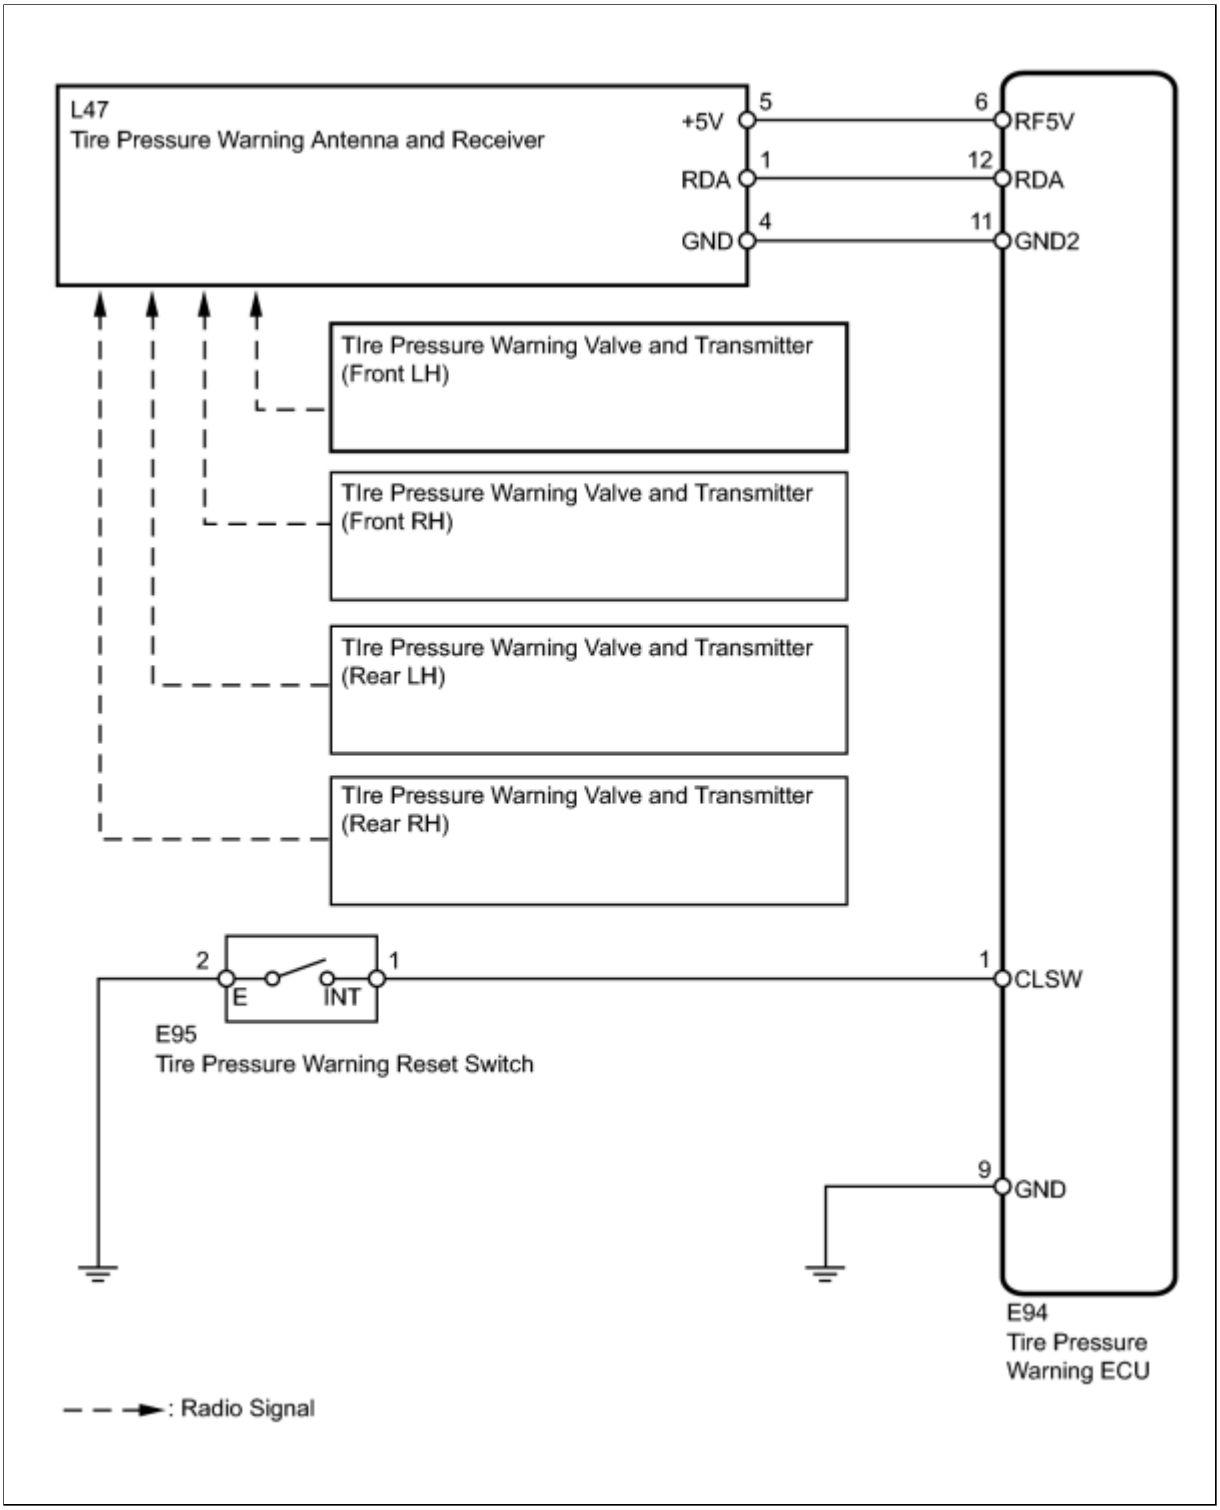
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000340702WX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2126/26: Transmitter ID not Received in Main Mode (2010 Corolla)		

DTC	**C2126/26**	**Transmitter ID not Received in Main Mode**

DESCRIPTION

After all IDs are registered, DTC C2126/26 is set in the tire pressure warning ECU and the tire pressure warning light blinks for 1 minute and then comes on.



When the tire pressure waning ECU successfully receives radio waves from all the transmitters whose IDs are stored in the ECU, DTC C2126/26 is deleted and the tire pressure warning light goes off.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2126/26	After ID registration is completed, ECU does not receive radio waves from transmitters whose IDs are stored in ECU.	• ID registration failure • Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

HINT:

If the IDs stored in the tire pressure warning ECU differ from the transmitter IDs, DTC C2126/26 is set. Check that the IDs in the ECU are the same as the transmitter IDs.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.

PROCEDURE

1.	IDENTIFY TRANSMITTER NOT RECEIVED

(a) Set the tire pressure to the specified values INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XN404DX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2141/41-C2144/44: Transmitter ID1 Error (2010 Corolla)		

DTC	**C2141/41**	**Transmitter ID1 Error**

DTC	**C2142/42**	**Transmitter ID2 Error**

DTC	**C2143/43**	**Transmitter ID3 Error**

DTC	**C2144/44**	**Transmitter ID4 Error**

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the tire pressures. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.

When the internal circuit of the tire pressure warning valve and transmitter is malfunctioning, one of these DTC is output.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2141/41 C2142/42 C2143/43 C2144/44	If an "ERROR" signal is received 3 times consecutively, the tire pressure warning valve and transmitter will be judged as defective and a DTC will be output. This will happen in situations where the inflation pressure is outside the range -100 to 538 kPa (-1.0 to 5.4 kgf/cm^2, -14 to 78 psi), the temperature inside the tire is outside the specified range -40 to 215°C (-40 to 419°F), or an error occurs in the tire pressure warning valve and transmitter or the surrounding area.	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	**IDENTIFY TRANSMITTER CORRESPONDING TO DTC**

(a) Set the tire pressure to the specified value INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Display the "ID Tire Inflation Pressure" data for each wheel using the Techstream.

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm^2, 5.8 psi) within 30 seconds. If "ID Tire Inflation Pressure" displayed on the Techstream (ID1 to ID4) does not change, the tire pressure warning valve and transmitter corresponding to the unchanged "ID Tire Inflation Pressure" data was the cause of the output DTC.

HINT:

- Identify the malfunctioning tire pressure warning valve and transmitter by repeatedly decreasing the tire pressure for each tire.
- Record which "ID Tire Inflation Pressure" data (ID1 to ID4) corresponds to each tire.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi),	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)		
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

***: It may take about 2 or 3 minutes until the values are displayed. If the values are not displayed after a few minutes, perform troubleshooting according to the inspection procedure for DTCs C2121/21 to C2124/24** INFO .

(i) Check the Data List.

Result:

RESULT	DETECTION CONDITION
One of "ID Tire Inflation Pressure" data (ID1 to ID4) changed.	Normal
"ID Tire Inflation Pressure" data did not change.	Transmitter corresponding to DTC

NOTICE:

- When the "ID Tire Inflation Pressure" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.
- Record the transmitter IDs and positions of transmitters that are normal.

(j) When the "ID Tire inflation Pressure" data (ID1 to ID4) has changed, repeat this procedure to identify the tire pressure warning valve and transmitter that corresponds to the DTC.

(k) When all of the "ID Tire Inflation Pressure" data (ID1 to ID4) have changed, identify the malfunctioning tire pressure warning valve and transmitter using the recorded ID numbers and output DTCs.

NEXT

2.	REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Replace the identified tire pressure warning valve and transmitter with a new one INFO .

HINT:

- Before installing a new tire pressure warning valve and transmitter, read and write down its transmitter ID.
- The IDs for the tire pressure warning valve and transmitters which are not replaced should be checked using the tester and recorded.

NEXT

3.	REGISTRATION OF TRANSMITTER ID

(a) Register the transmitter ID for all wheels INFO .

NEXT

4.	PERFORM INITIALIZATION

(a) Perform initialization INFO .

NEXT

5.	READ VALUE USING TECHSTREAM

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON .

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check the values by referring to the table below.

Tire Pressure Monitor

B ▶ **END**

A ▶ **REPLACE TIRE PRESSURE WARNING ECU**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XN704DX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2165/65-C2168/68: Abnormal Temperature Inside ID1 Tire (2010 Corolla)		

DTC	**C2165/65**	**Abnormal Temperature Inside ID1 Tire**

DTC	**C2166/66**	**Abnormal Temperature Inside ID2 Tire**

DTC	**C2167/67**	**Abnormal Temperature Inside ID3 Tire**

DTC	**C2168/68**	**Abnormal Temperature Inside ID4 Tire**

DESCRIPTION

Each tire pressure warning valve and transmitter measures the internal temperature of its tire as well as tire pressure, and transmits the information to the tire pressure warning ECU along with the transmitter ID. If the measured temperature is out of the specified range, the tire pressure warning ECU recognizes it as a malfunction, outputs DTCs, and the tire pressure warning light blinks for 1 minute and then remains on.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2165/65 C2166/66 C2167/67 C2168/68	Temperature inside the tire exceeds 119°C (246.2°F).	• Tires • Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into

the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	**CHECK TIRES**

(a) Check that the tires are not flat, and there is no indication of air pressure drop.

OK:
Tires are normal.

HINT:

If a tire is damaged, the tire pressure warning valve and transmitter may also have been damaged at the same time.

NG ▶ **REPLACE TIRE AND TIRE PRESSURE WARNING VALVE AND TRANSMITTER**

OK ▼

2.	**IDENTIFY TRANSMITTER CORRESPONDING TO DTC**

(a) Set the tire pressure to the specified value INFO .

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(g) Display the "ID Tire Inflation Pressure" data for each wheel using the Techstream.

(h) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.4 kg/cm^2, 5.8 psi) within 30 seconds.

(i) Check the Data List.

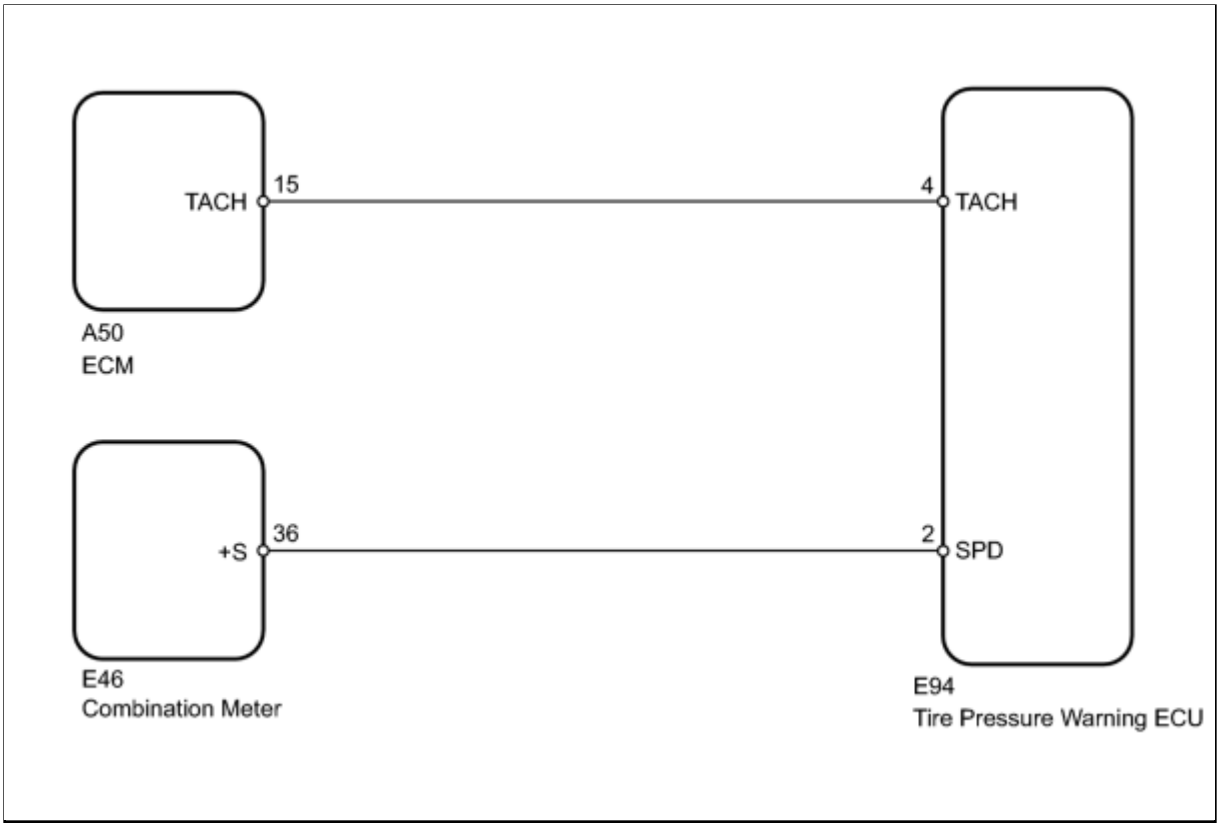
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2173/73: Vehicle Speed or Engine Speed Signal Malfunction (2010 Corolla)		

DTC	**C2173/73**	**Vehicle Speed or Engine Speed Signal Malfunction**

DESCRIPTION



The tire pressure warning ECU receives a vehicle speed signal from the combination meter and an engine speed signal from the ECM. The tire pressure warning ECU uses these signals to detect DTCs C2121/21 to C2124/24 (No Signal from Transmitter) and DTC C2177/77 (Initialization not Completed).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2173/73	Following condition (a) or (b) is met for a total of 15 minutes: (a) No engine speed signal while vehicle speed is 8 km/h (5 mph) or more (b) No vehicle speed signal while engine speed is a specified value	• Combination meter • ECM • Wire harness or connector • Tire pressure warning ECU

HINT:

This DTC is set at the same time as DTCs C2121/21 to C2124/24 are being set.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1.	**PERFORM SIGNAL CHECK (VEHICLE SPEED SIGNAL AND ENGINE SPEED SIGNAL)**

(a) Enter the signal check mode in Test Mode Procedure INFO .

(b) Drive the vehicle at 20 km/h (12 mph) or more for 10 seconds to erase DTC C2191/91.

(c) Start the engine and allow it to run at 1000 rpm for 3 seconds or more to DTC C2194/94.

(d) Check for test mode DTCs.

Result:

RESULT	PROCEED TO
DTCs C2191/91 and C2194/94 are erased	A

RESULT	PROCEED TO
DTC C2191/91 is output	B
DTC C2194/94 is output	C

HINT:

DTCs C2181/81 to C2184/84 (Transmitter ID not Received) are output at this time, but they are not related to this check.

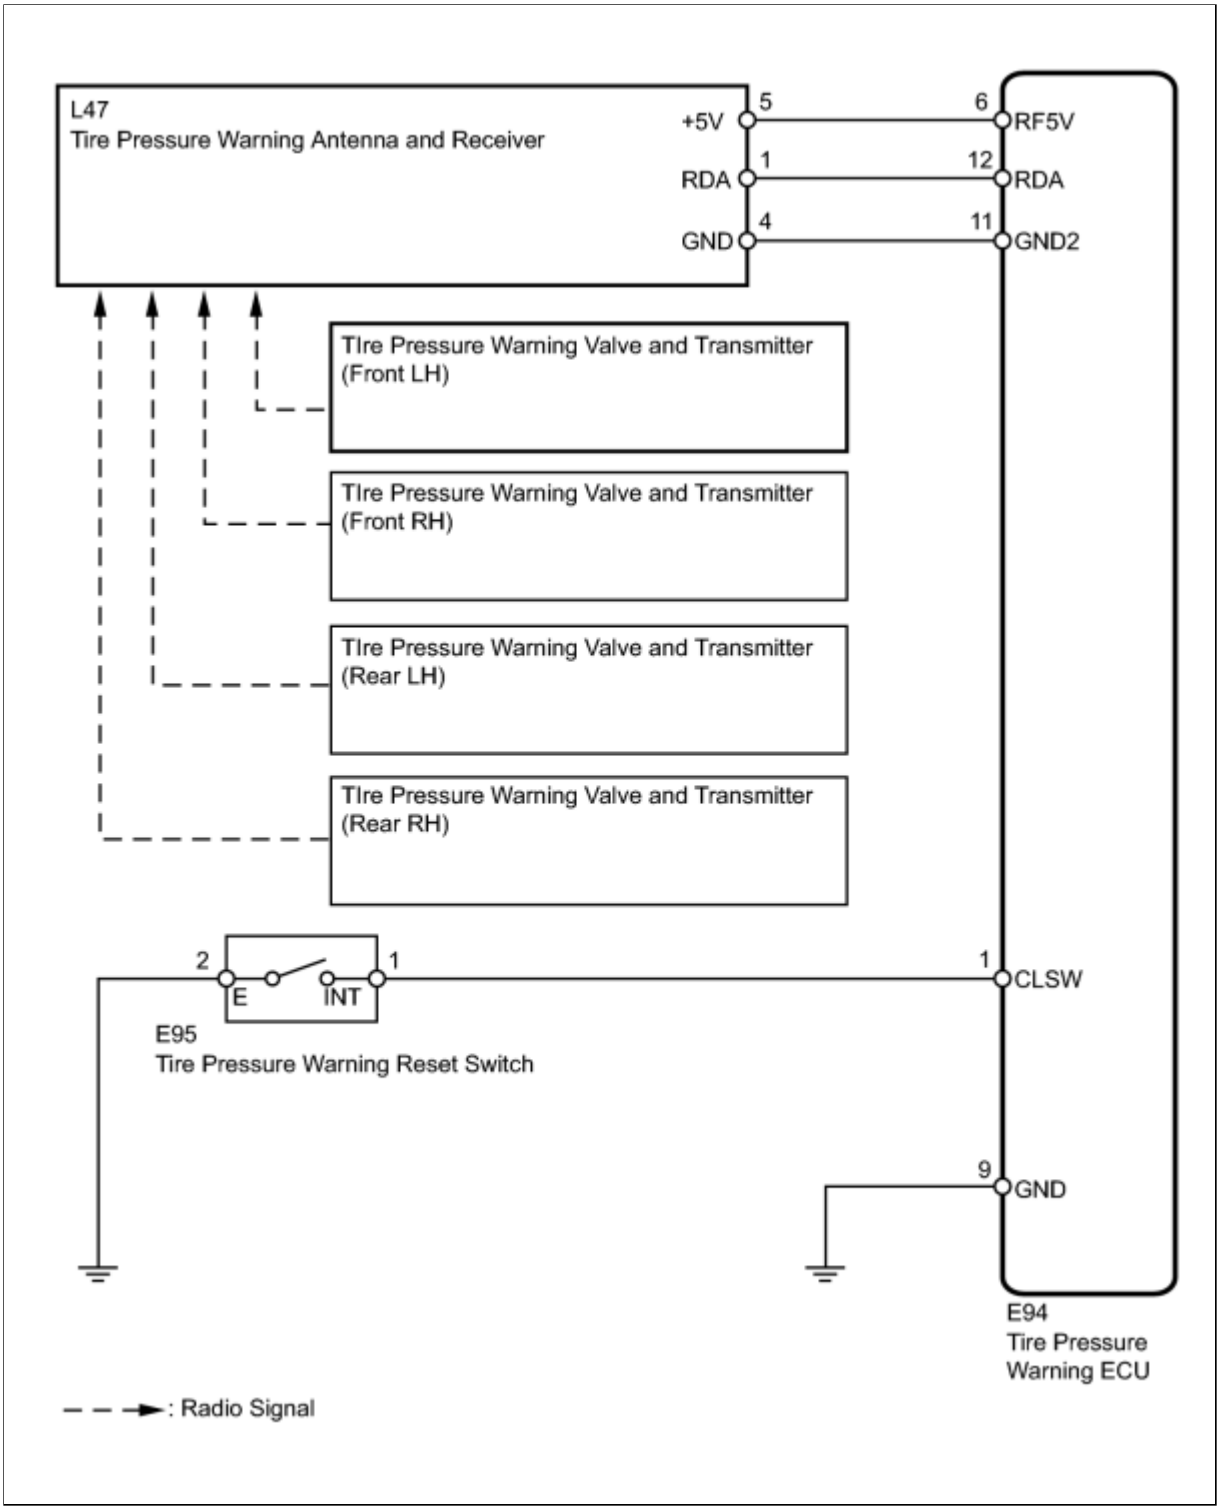
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2177/77: Initialization not Completed (2010 Corolla)		

DTC	**C2177/77**	**Initialization not Completed**

DESCRIPTION



Initialization is necessary if one of the following occurs:

- Tire pressure warning ECU is replaced
- Tire pressure warning valve and transmitter is replaced
- Tires with a different tire standard pressure are installed
- Tires are rotated
- A new vehicle is delivered

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

C2177/77	• All conditions below are met:
	  • During initialization
	  • Tire pressure warning valve and transmitter is not in stop mode
	  • Signal is not received from tire pressure warning valve and transmitter for 20 minutes or more
	  • Vehicle speed is more than 8 km/h (5 mph) for a total of 20 minutes
		• Tire pressure warning valve and transmitter
		• Tire pressure warning ECU
		• Tire pressure warning antenna and receiver
		• Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU and/or any of the valve and transmitters have been replaced.

PROCEDURE

1.	CHECK FREQUENCY RECEIVING CONDITION

(a) Check that the vehicle is not located in an area such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in an area described above, the tire pressure warning light may come on after blinking 1 minute only in a particular area due to interfering radio frequencies.

(2) Devices using similar radio frequencies are used in the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio transmissions may be interrupted due to the surroundings, or devices installed by the user.

NG ▶ **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK ▼

2.	CONFIRM TIRE INFLATION PRESSURE (DATA LIST)

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check the values by referring to the table below.

Tire Pressure Monitor

TESTER	MEASUREMENT	NORMAL	DIAGNOSTIC NOTE

DISPLAY	ITEM/RANGE	CONDITION	
ID1 Tire Inflation Pressure	ID1 tire inflation pressure/ min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID2 Tire Inflation Pressure	ID2 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID3 Tire Inflation Pressure	ID3 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*
ID4 Tire Inflation Pressure	ID4 tire inflation pressure / min.: Absolute pressure / 0 kPa (0 kgf/cm^2, 0 psi), Relative pressure / -100 kPa (-1.0 kgf/cm^2, -14 psi) max.: Absolute pressure / 638 kPa (6.4 kgf/cm^2, 93 psi), Relative pressure / 538 kPa (5.4 kgf/cm^2, 78 psi)	Actual tire inflation pressure	If 0 kPa (0 kgf/cm^2, 0 psi) is displayed for absolute pressure or -100 kPa (-1.0 kgf/cm^2, -14 psi) is displayed for relative pressure, data has not been received.*

HINT:

- *: It may take about 2 or 3 minutes until the values are displayed.
- When no "ID Tire Inflation Pressure" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.

Result:

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: C2191/91: Vehicle Speed Signal Error (Test Mode DTC) (2010 Corolla)		

DTC	**C2191/91**	**Vehicle Speed Signal Error (Test Mode DTC)**

DESCRIPTION

The tire pressure warning ECU receives a vehicle speed signal from the combination meter. This DTC is stored upon entering test mode, and cleared when a vehicle speed signal of 20 km/h (12 mph) is detected for 3 seconds or more. This DTC is output only in test mode.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
C2191/91	Test mode procedure is performed	• Combination meter • Vehicle speed sensor • Wire harness or connector • Tire pressure warning ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU

using Techstream and write them down before removal.

- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (VEHICLE SPEED)**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

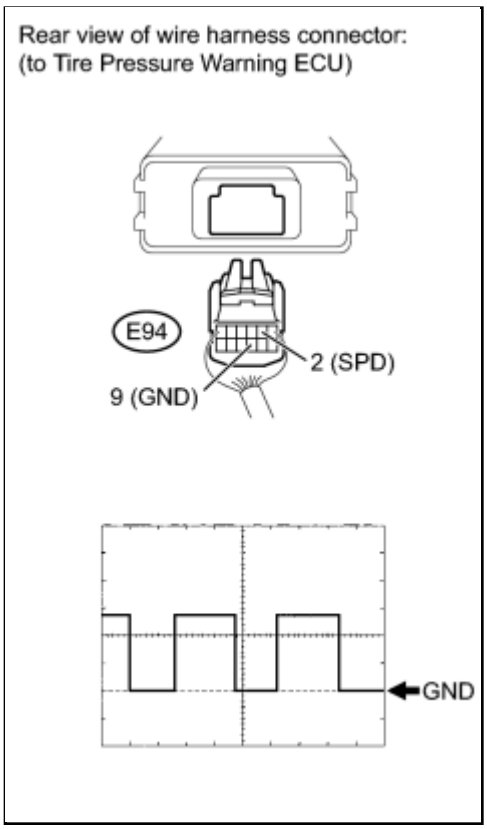
(d) Turn the Techstream on.

(e) Enter the following menus: Chassis / Tire Pressure Monitor / Data List.

(f) Check that the values indicated on the Techstream and on the combination meter are the same.

Tire Pressure Monitor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed/ min.: 0 km/h (0 mph) max.: 255 km/h (158 mph)	Almost same as actual vehicle speed	Speed indicated on combination meter



OK:
Vehicle speed indicated on the Techstream and on the combination meter are the same.

NG ▶ **INSPECT TIRE PRESSURE WARNING ECU (SPD SIGNAL)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

2.	**INSPECT TIRE PRESSURE WARNING ECU (SPD SIGNAL)**

(a) Disconnect the E94 ECU connector.

(b) Jack up the vehicle.

(c) Shift the lever to the neutral position.

(d) Turn the ignition switch to ON.

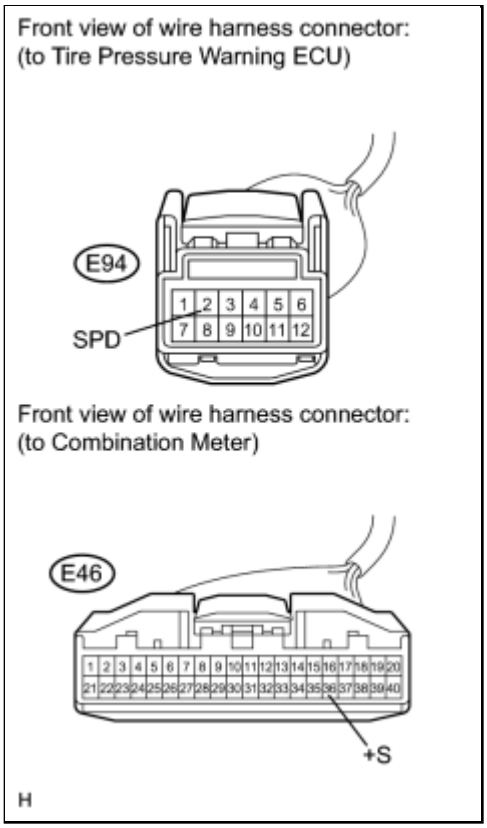
(e) Check the waveform of the ECU connector using an oscilloscope while turning the wheel slowly.

OK:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E94-2 (SPD) - E94-9 (GND)	Ignition switch ON	Correct waveform appears as shown

Tool Setting

ITEM	CONTENTS
Tool Setting	5 V/DIV., 20 ms/DIV.
Vehicle Condition	Driving wheels rotating slowly



HINT:

The wavelength becomes shorter as the vehicle speed increases.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECU - COMBINATION METER)**

OK ▶ REPLACE TIRE PRESSURE WARNING ECU

3.	CHECK HARNESS AND CONNECTOR (ECU - COMBINATION METER)

(a) Disconnect the E94 ECU connector.

(b) Disconnect the E46 meter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-2 (SPD) - E46-36 (+S)	Always	Below 1 Ω
E94-2 (SPD) - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE COMBINATION METER

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: Tire Pressure Warning Reset Switch Circuit (2010 Corolla)		

Tire Pressure Warning Reset Switch Circuit

DESCRIPTION

Initialization can be started by pressing the tire pressure warning reset switch and holding it for 3 seconds or more. If the ECU receives the signal from the switch, the tire pressure warning light blinks 3 times (1 second on, 1 second off).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU, after the ECU has been replaced.

PROCEDURE

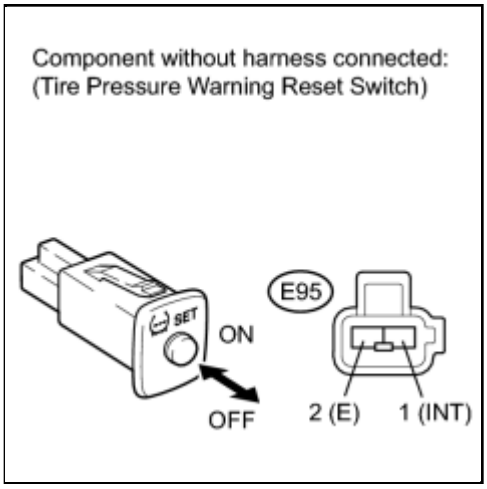
1.	CHECK TIRE PRESSURE WARNING RESET SWITCH FUNCTION

(a) Perform the tire pressure warning reset switch test in Test Mode Procedure INFO.

OK:

Reset switch ON

Tire pressure warning light comes on.



Reset switch OFF

Tire pressure warning light blinks.

NG ▶ **INSPECT TIRE PRESSURE WARNING RESET SWITCH**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	INSPECT TIRE PRESSURE WARNING RESET SWITCH

(a) Disconnect the tire pressure warning reset switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E95-1 (INT) - E95-2 (E)	ON	Below 1 Ω
	OFF	10 kΩ or higher

NG ▶ **REPLACE TIRE PRESSURE WARNING RESET SWITCH**

OK

3.	**CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING RESET SW - TIRE PRESSURE WARNING ECU)**

(a) Disconnect the tire pressure warning reset switch E95 connector and tire pressure warning ECU E94 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E94-1 (CLSW) - E95-1 (INT)	Always	Below 1 Ω
E94-1 (CLSW) - Body ground		10 kΩ or higher
E95-2 (E) - Body ground		Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TIRE PRESSURE WARNING ECU**

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XN302OX
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: Tire Pressure Warning Light Circuit (2010 Corolla)		

Tire Pressure Warning Light Circuit

DESCRIPTION

If the tire pressure warning ECU detects any trouble, the tire pressure warning light blinks (stays on after blinking for 1 minute) and tire pressure monitor is cancelled at the same time. At this time, the ECU records a DTC in the memory.

Connecting terminals TC and CG of the DLC3 makes the tire pressure warning light blink to output DTCs.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU if the ECU has been replaced.

PROCEDURE

1.	**CHECK OPERATION OF TIRE PRESSURE WARNING LIGHT (ACTIVE TEST)**

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

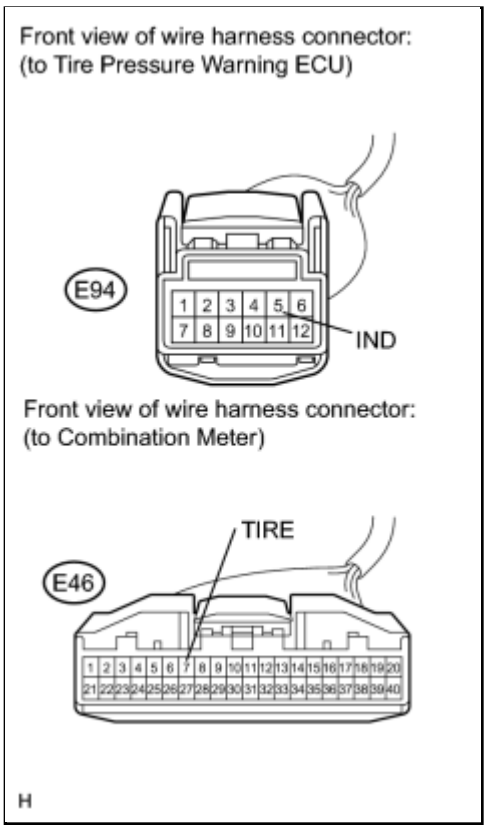
(d) Turn the Techstream on.

(e) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(f) Check the condition of the tire pressure warning light by operating the Techstream.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Tire Pressure Warning System	Tire pressure warning light	Tire pressure warning light is OFF or ON	Confirm that the vehicle is stopped, engine idling



OK:
The warning light turns on when operating the Techstream.

NG ▶ **GO TO METER / GAUGE SYSTEM**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - TIRE PRESSURE WARNING ECU)**

(a) Disconnect the E46 combination meter connector.

(b) Disconnect the E94 tire pressure warning ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-7 (TIRE) - E94-5 (IND)	Always	Below 1 Ω
E46-7 (TIRE) - Body ground		10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TIRE PRESSURE WARNING ECU**

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: ECU Power Source Circuit (2010 Corolla)		

ECU Power Source Circuit

DESCRIPTION

This is the power source for the tire pressure warning ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

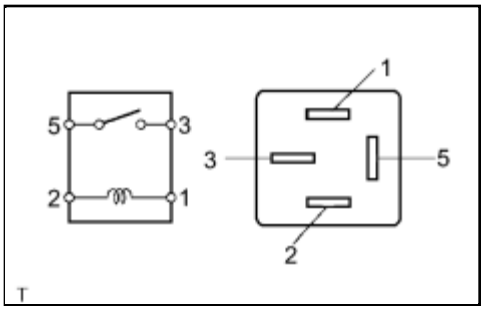
- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.
- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.

PROCEDURE

1.	**INSPECT FUSE (ECU-IG)**

(a) Remove the ECU-IG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EUC-IG	Always	Below 1 Ω

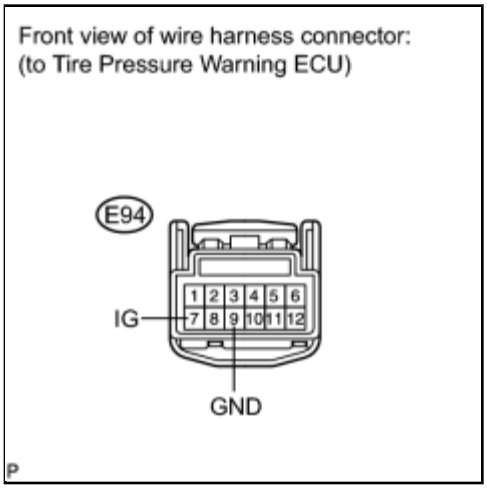
NG ▶ **REPLACE FUSE**

OK ▼

2.	**INSPECT IGNITION RELAY NO. 1**

(a) Remove the IG1 relay from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG ▶ **REPLACE IGNITION RELAY NO. 1**

OK

3.	CHECK HARNESS AND CONNECTOR (ECU - BATTERY AND BODY GROUND)

(a) Disconnect the E94 ECU connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E94-7 (IG) - Body ground	Ignition switch ON	11 to 14 V
	Ignition switch off	Below 1 V

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-9 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING SYSTEM: TC and CG Terminal Circuit (2010 Corolla)		

TC and CG Terminal Circuit

DESCRIPTION

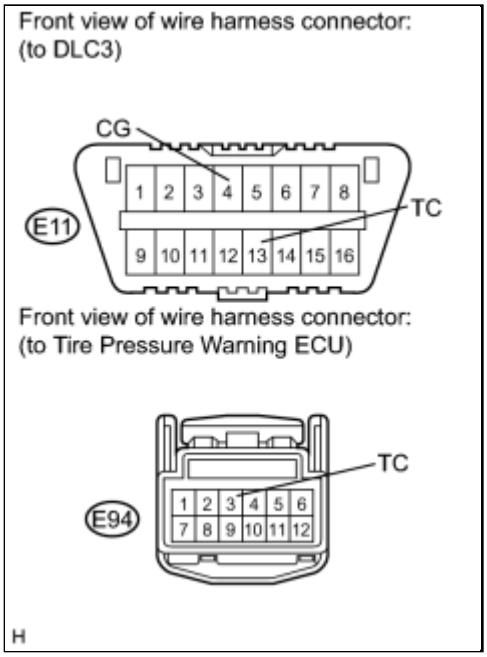
DTC output mode is set by Connecting terminals 13 (TC) and 4 (CG) of the DLC3. The DTCs are indicated by the blinking of the tire pressure warning light.

WIRING DIAGRAM

HINT:

When various warning lights blinks continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in an ECU connected to this circuit may have occurred.

INSPECTION PROCEDURE



NOTICE:

- When replacing the tire pressure warning ECU, read the transmitter IDs stored in the old ECU using the Techstream and write them down before removal.

- It is necessary to perform initialization INFO after registration INFO of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (DLC3 - TIRE PRESSURE WARNING ECU)**

(a) Disconnect the E94 ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-3 (TC) - E11-13 (TC)	Always	Below 1 Ω
E11-4 (CG) - Body ground

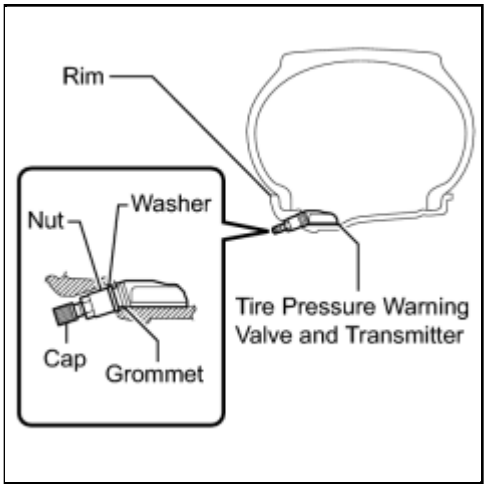
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: INSTALLATION (2010 Corolla)		

INSTALLATION

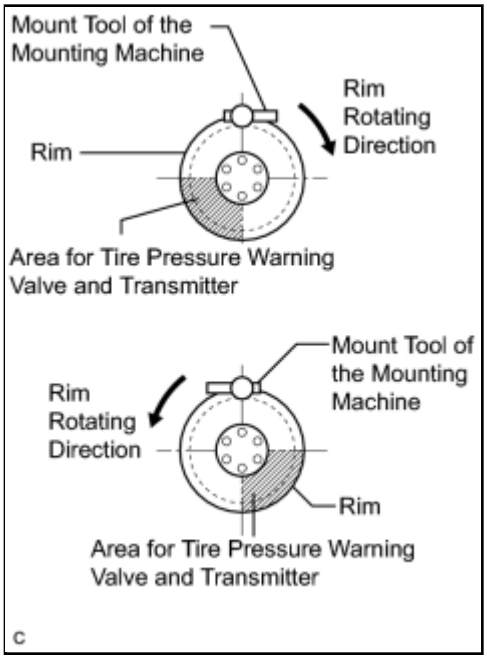


1. INSTALL TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Insert the tire pressure warning valve and transmitter into the valve installation hole. Insert it from the inside of the rim so that the printed surface can be seen.

NOTICE:

- Check that there is no visible deformation, damage, or other abnormalities on the tire pressure warning valve and transmitter.
- Check that there is no foreign matter on the inner grommet and around the rim hole.
- If the tire pressure warning valve and transmitter is installed upside down, it may be damaged or fail to transmit signals when running at high speeds.
- If installing a new tire pressure warning valve and transmitter, write down the ID number before installation.
- It is necessary to register the ID in the ECU after installation INFO .



(b) Install a new washer on the tire pressure warning valve and transmitter from the rim side and tighten a new nut.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

NOTICE:

- No further tightening is required once the nut is tightened to the specified torque.
- Check that there is no foreign matter on the washer and nut.
- Always use a new grommet, washer, and nut when installing the tire pressure warning valve and transmitter.
- Check that there is no oil, water, or lubricant around the rim hole, tire pressure warning valve and transmitter, washer, and nut. Failing to do so may result in improper installation.

(c) Set the wheel onto the mounting machine and install the

lower bead. Position the main body of the tire pressure warning valve and transmitter in the shaded area shown in the illustration.

NOTICE:

- If the tire pressure warning valve and transmitter is positioned outside this area, it will interfere with the tire bead, and may be damaged.
- If the use of lubricant is required when installing the bead, do not apply the lubricant directly to the tire pressure warning valve and transmitter.

(d) Install the upper bead.

NOTICE:

Make sure that the tire bead and tool do not interfere with the main body of the tire pressure warning valve and transmitter and that it is not clamped by the bead.

(e) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque and then check for air leaks with soapy water.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

NOTICE:

No further tightening is required once the nut is tightened to the specified torque.

2. INSTALL FRONT WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

3. INSTALL REAR WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

4. INSPECT TIRES

HINT: INFO .

5. REGISTER TRANSMITTER ID

HINT:

It is necessary to register all transmitter IDs INFO .

6. INSPECT TIRE PRESSURE WARNING SYSTEM

HINT: INFO .

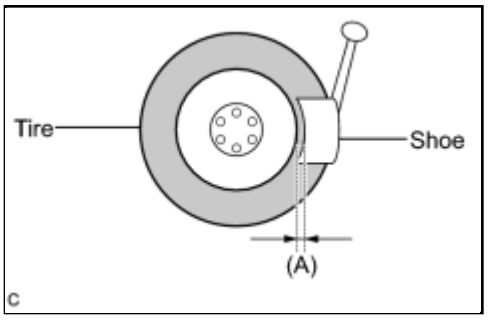
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE FRONT WHEEL

2. REMOVE REAR WHEEL



3. REMOVE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Remove the valve core and cap to release the air from the tire.

(b) After ensuring that a sufficient amount of air has been released, remove the nut and washer used to secure the tire pressure warning valve and transmitter. Drop the tire pressure warning valve and transmitter into the tire.

HINT:

Keep the removed cap and valve core.

(c) After dropping the tire pressure warning valve and transmitter into the tire, disengage the bead using the shoe of the tire remover.

NOTICE:

- Be careful not to damage the tire pressure warning valve and transmitter due to interference between the valve and the tire bead.
- Set the tire remover shoe as shown in the illustration.

  Width (A):
  10 to 20 mm (0.394 to 0.787 in.)

(d) Separate the upper bead.

(e) Take out the tire pressure warning valve and transmitter from the tire and separate the lower bead.

NOTICE:

Always use a new grommet, washer and nut when installing the tire pressure warning valve and transmitter.

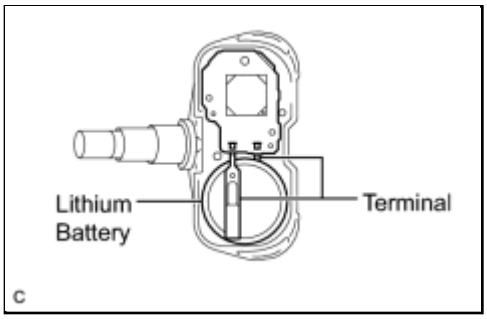
Title: TIRE PRESSURE MONITORING: TIRE PRESSURE WARNING VALVE: DISPOSAL (2010 Corolla)		

DISPOSAL



HINT:

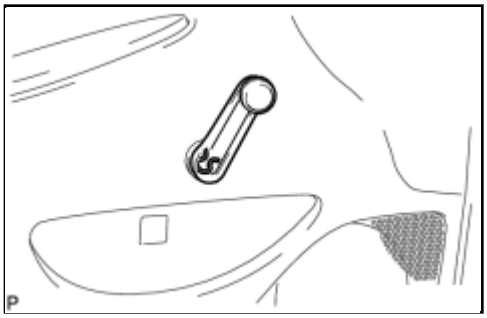
The tire pressure warning valve and transmitter is powered by a lithium battery. When disposing of the tire pressure warning valve and transmitter, remove the battery and dispose of it correctly.

1. DISPOSE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Using a screwdriver, pry off the back cover.

(b) Cut the 2 terminals that connect the battery to the base board to remove the battery.

HINT:



The battery and base board are covered with silicone.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

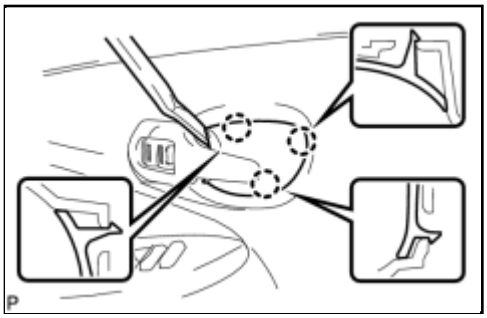
Title: DOOR / HATCH: FRONT DOOR: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

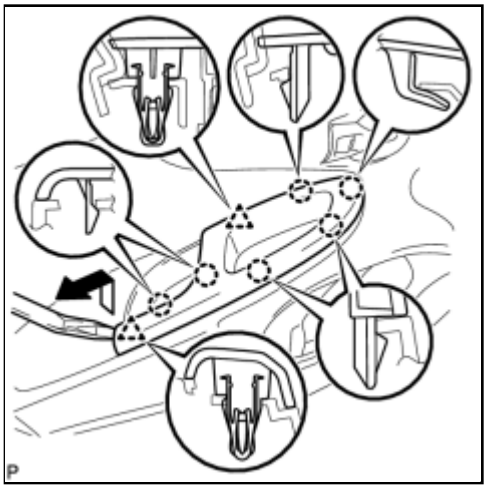
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



2. REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Using a clip remover, remove the snap ring.

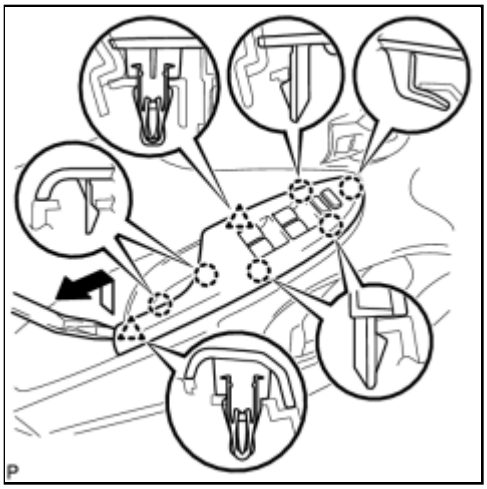
(b) Remove the front door window regulator handle assembly and front door regulator inside handle plate.



3. REMOVE FRONT DOOR INSIDE HANDLE BEZEL

(a) Using a moulding remover, disengage the 3 claws and remove the front door inside handle bezel.

4. REMOVE FRONT ARMREST UPPER BASE PANEL (w/o Power Window)

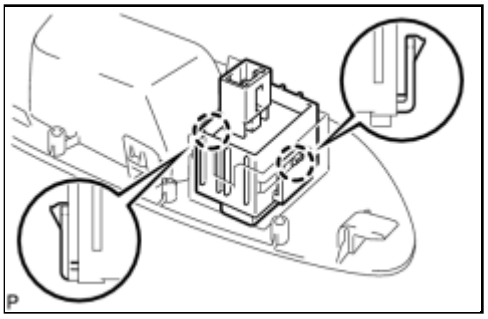


(a) Using a moulding remover, disengage the 2 clips and 6 claws, and remove the front armrest upper base panel.

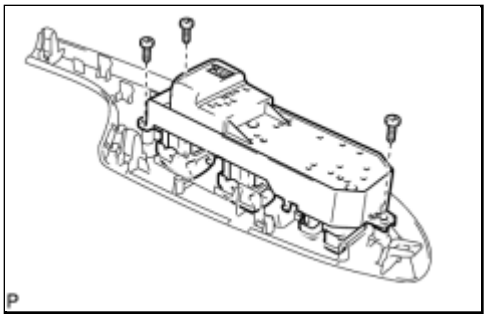
(b) w/ Power Door Lock:

(1) Disconnect the connector.

5. REMOVE FRONT ARMREST UPPER BASE PANEL (w/ Power Window)



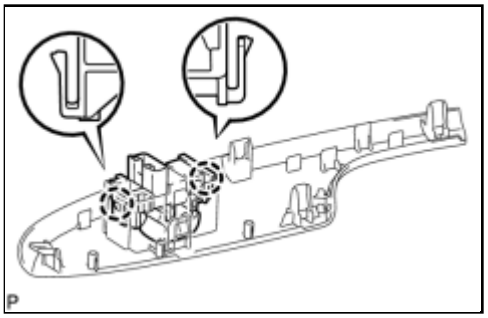
(a) Using a moulding remover, disengage the 2 clips and 6 claws.



(b) Disconnect the connector and remove the front armrest upper base panel.

6. REMOVE DOOR CONTROL SWITCH ASSEMBLY (w/ Power Door Lock)

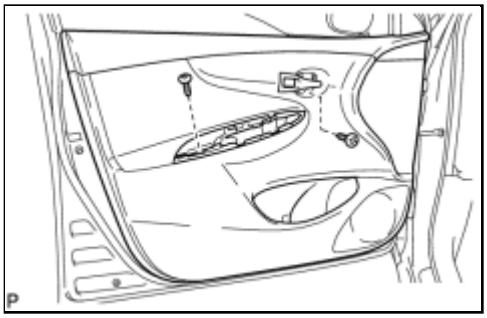
(a) Using a screwdriver with its tip wrapped with protective tape, disengage the 2 claws and remove the door control switch assembly.



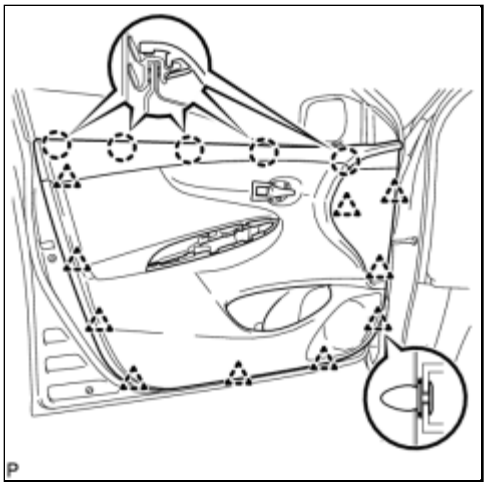
7. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side with Power Window)

(a) Remove the 3 screws and the power window regulator master switch assembly.

8. REMOVE POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side with Power Window)

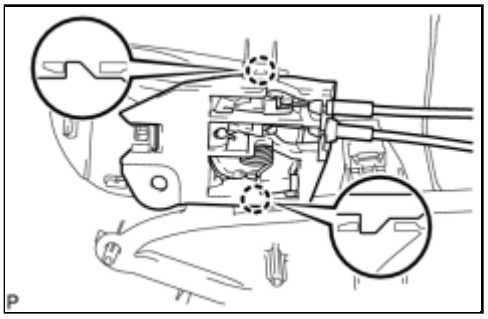


(a) Using a screwdriver with its tip wrapped with protective tape, disengage the 2 claws and remove the power window regulator switch assembly.

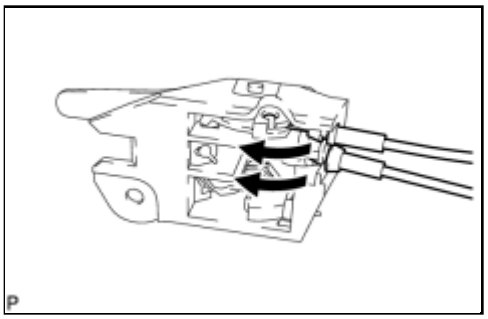


9. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped with protective tape, disengage the claw and disconnect the door armrest cap.



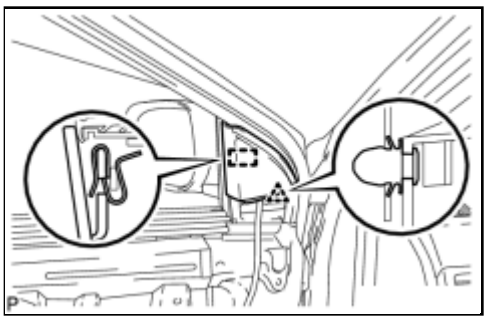
(b) Remove the 2 screws.



(c) Using a clip remover, disengage the 10 clips.

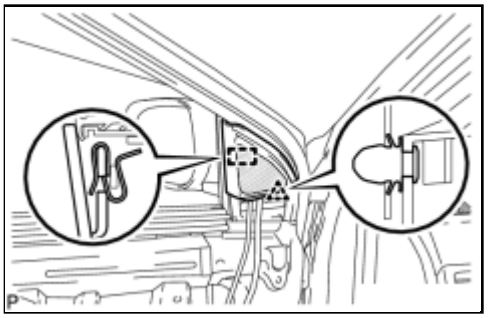
(d) Disengage the 5 claws and separate the front door trim board sub-assembly from the front door inner glass weatherstrip.

(e) Disengage the 2 claws and disconnect the front door inside handle sub-assembly.



10. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disconnect the front door lock remote control cable and front door inside locking cable, and remove the front door inside handle sub-assembly.

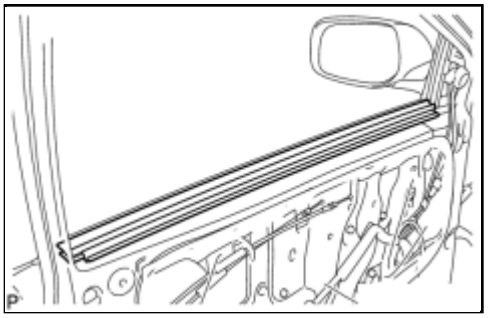


11. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/o Front No. 2 Speaker)

(a) Disengage the clip and clamp, and remove the front door lower frame bracket garnish.

12. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Front No. 2 Speaker)

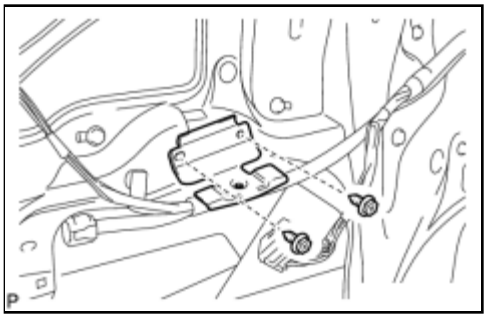
(a) Disengage the clip and clamp.



(b) Disconnect the connector and remove the front door lower frame bracket garnish.

13. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (w/ Front No. 2 Speaker) INFO

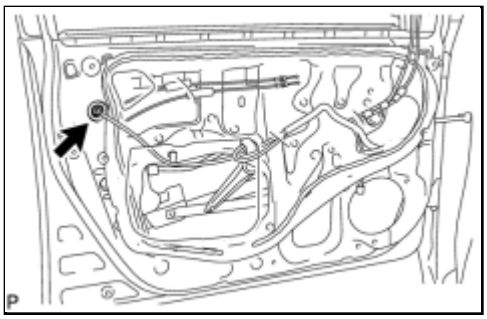
14. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY (w/ Front No. 3 Speaker) INFO



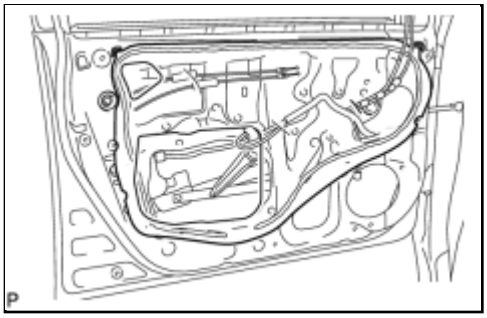
15. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP

(a) Remove the front door inner glass weatherstrip from the front door panel.

16. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY INFO



17. REMOVE FRONT DOOR TRIM BRACKET



(a) Remove the 2 screws and the front door trim bracket.

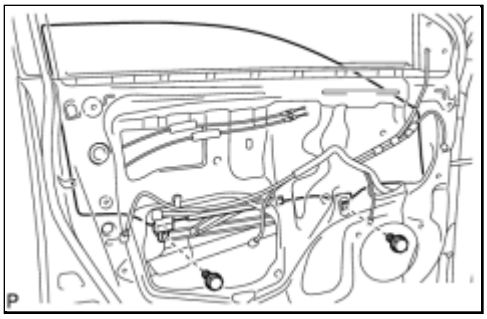
18. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) w/ Power door lock:

(1) Disconnect the connector.

(b) Remove the front door service hole cover.

HINT:



Remove any remaining butyl tape from the door.

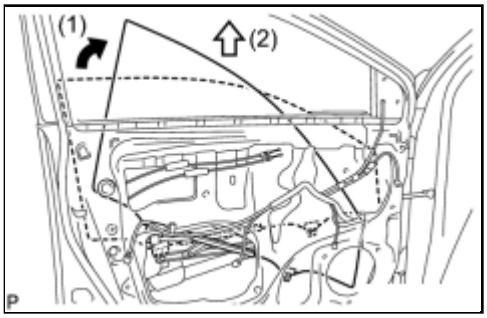
19. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY WITH COVER INFO

20. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (w/o Power Window)

(a) Install the front door window regulator handle assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

(b) Remove the front door window regulator handle assembly.

(c) Remove the 2 bolts.



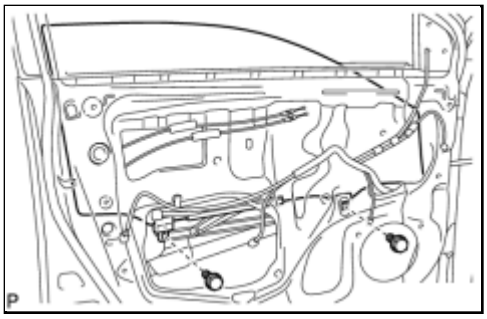
NOTICE:

After the bolts are removed, do not allow the door glass to fall.

(d) Remove the front door glass sub-assembly as shown in the illustration.

NOTICE:

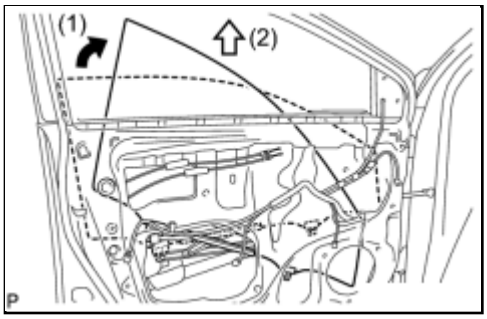
Do not damage the door glass.



21. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (w/ Power Window)

(a) Connect the cable to the negative (-) battery terminal.

(b) Connect the power window regulator master switch assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

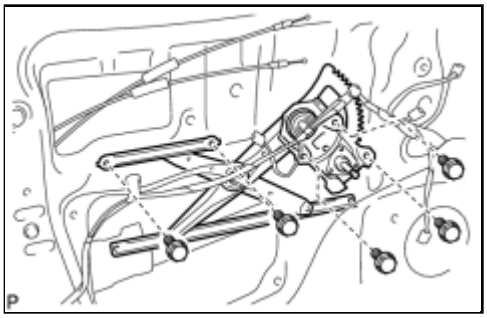


(c) Disconnect the cable from the negative (-) battery terminal and power window regulator master switch assembly.

(d) Remove the 2 bolts.

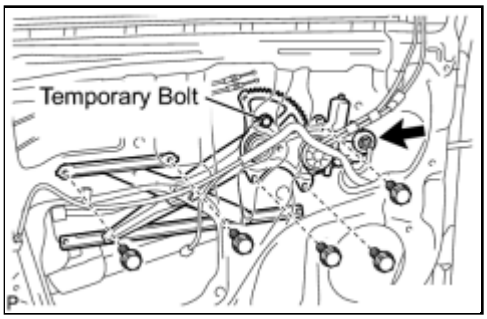
NOTICE:

After the bolts are removed, do not allow the door glass to fall.



(e) Remove the front door glass sub-assembly as shown in the illustration.

NOTICE:



Do not damage the door glass.

22. REMOVE FRONT DOOR WINDOW REGULATOR ASSEMBLY (w/o Power Window)

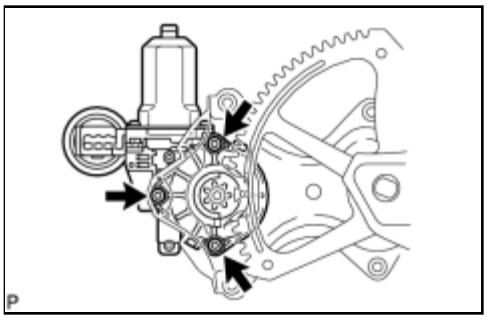
(a) Remove the 5 bolts and the front door window regulator assembly.

23. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window)

(a) Disconnect the connector.

(b) Loosen the temporary bolt.

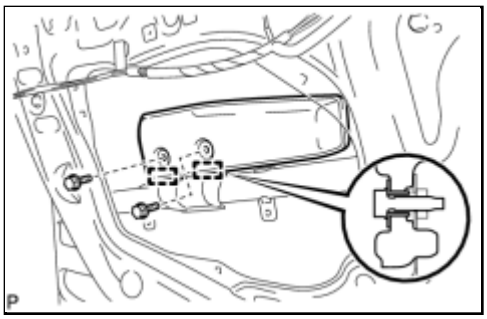
NOTICE:



Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator may fall and cause damage.

(c) Remove the 5 bolts.

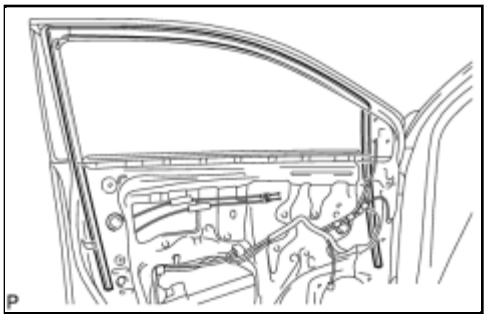
(d) Remove the front door window regulator sub-assembly and the front power window regulator motor assembly as a unit.



(e) Remove the temporary bolt from the front door window regulator sub-assembly.

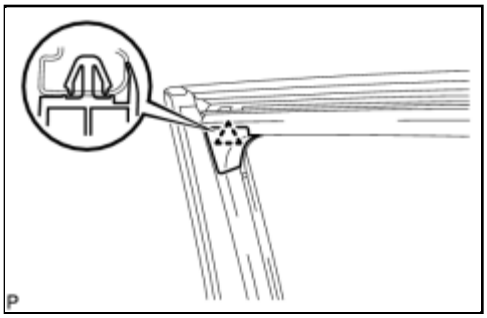
24. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY (w/ Power Window)

(a) Using a "TORX" socket wrench (T25), remove the 3 screws and the front power window regulator motor assembly.



25. REMOVE FRONT DOOR NO. 2 STIFFENER CUSHION

(a) Remove the 2 bolts.

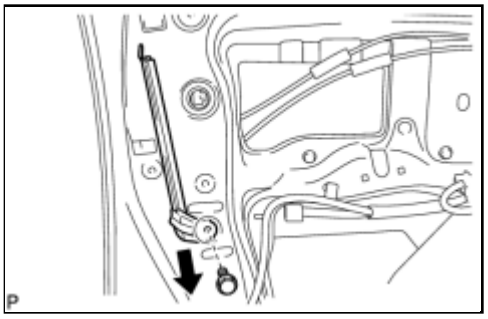


(b) Disengage the 2 guides and remove the front door No. 2 stiffener cushion.

26. REMOVE FRONT DOOR GLASS RUN

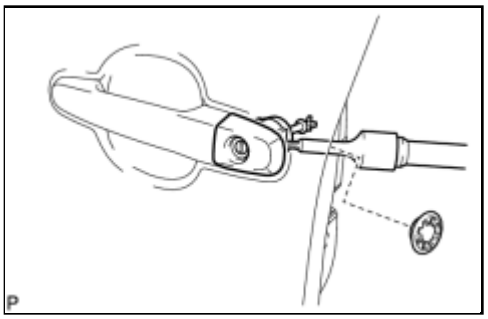
(a) Remove the front door glass run.

27. REMOVE DOOR FRAME GARNISH



(a) Disengage the clip and remove the door frame garnish.

HINT:

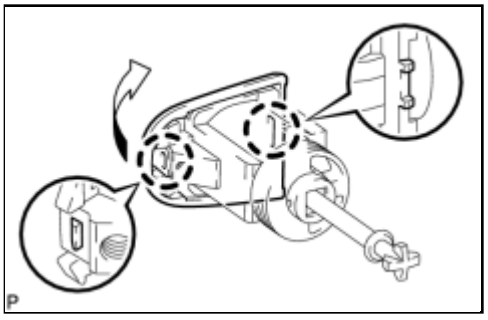


This garnish needs to be replaced with a new one because the clip will break when removing the door frame garnish.

28. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the bolt and the front door rear lower frame sub-assembly as shown in the illustration.

29. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)



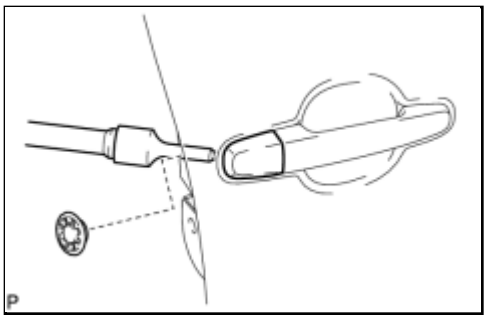
(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover and the door lock key cylinder as a unit.

HINT:

The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

(c) Using a screwdriver, disengage the 2 claws and remove the front door outside handle cover.



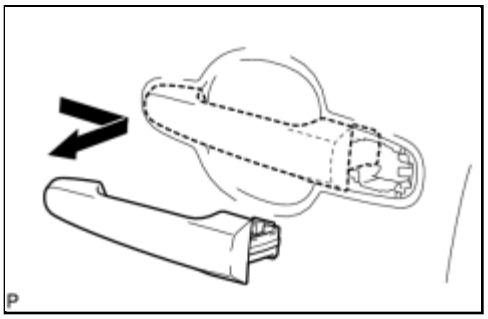
30. REMOVE FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

(a) w/o Wireless door lock system:

HINT:

Use the same procedure for the front passenger side and the driver side.

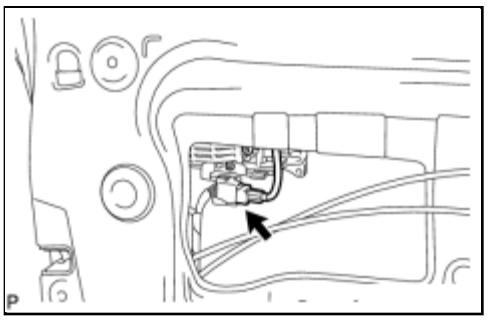
(b) w/ Wireless door lock system:



(1) Remove the hole plug.

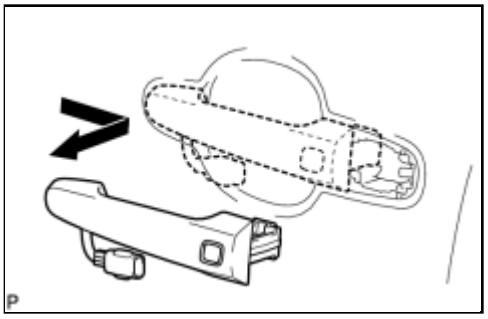
(2) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover.

HINT:



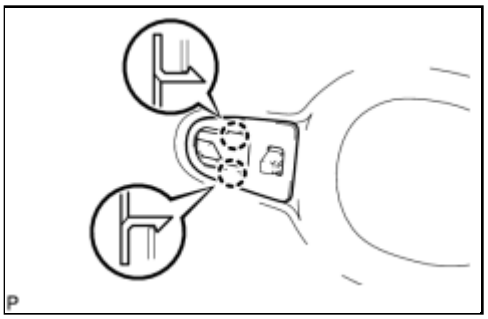
The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

31. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/o Smart Key System)



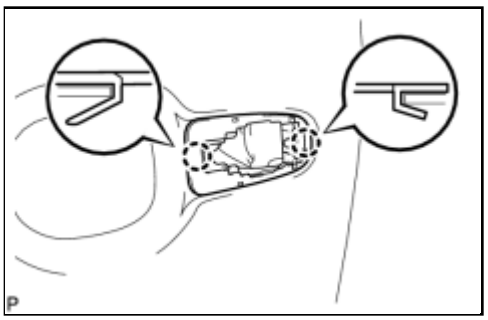
(a) Remove the front door outside handle assembly as shown in the illustration.

32. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/ Smart Key System)



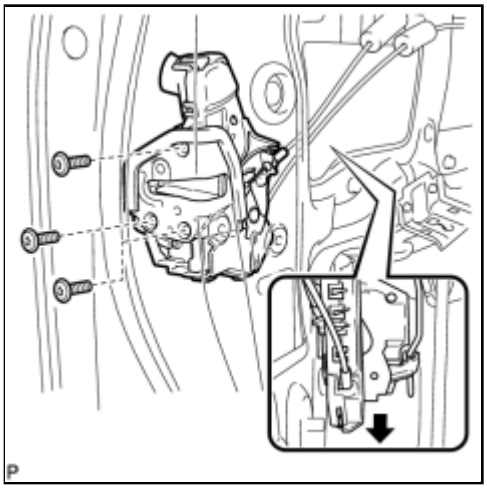
(a) Disconnect the connector.

(b) Remove the front door outside handle assembly as shown in the illustration.



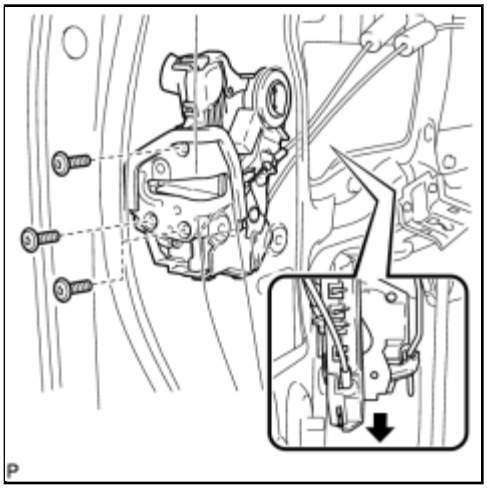
33. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door front outside handle pad.



34. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the front door rear outside handle pad.

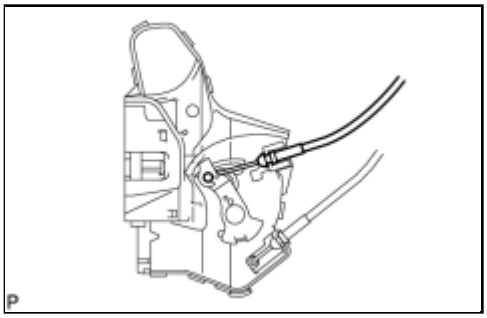


35. REMOVE FRONT DOOR LOCK ASSEMBLY (w/o Power Door Lock)

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

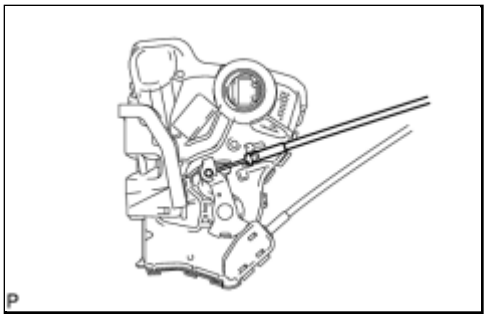
(b) Slide the front door lock assembly downward, and remove the front door lock assembly and cables as a unit.

36. REMOVE FRONT DOOR LOCK ASSEMBLY (w/ Power Door Lock)



(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

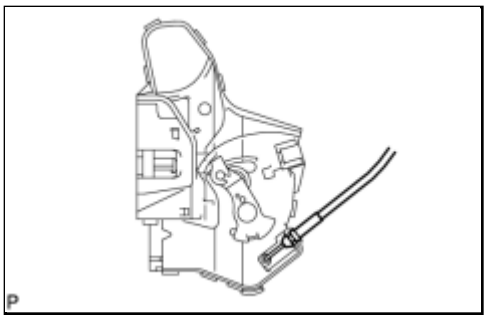
(b) Slide the front door lock assembly downward, and remove the front door lock assembly and cables as a unit.



(c) Remove the door lock wiring harness seal from the front door lock assembly.

37. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)

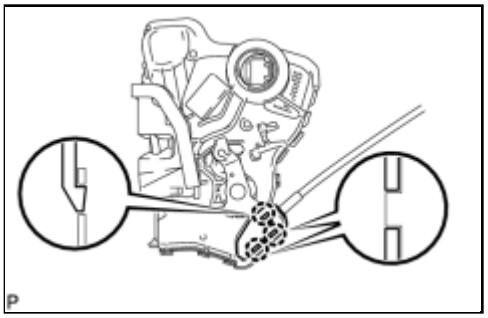
(a) Remove the front door lock remote control cable assembly.



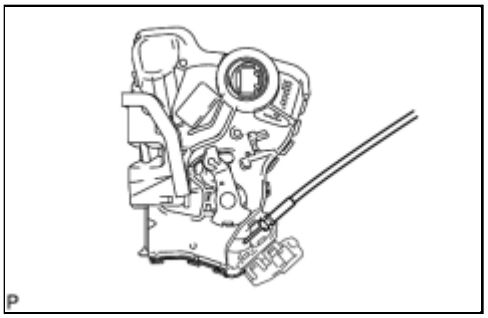
38. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Remove the front door lock remote control cable assembly.

39. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)



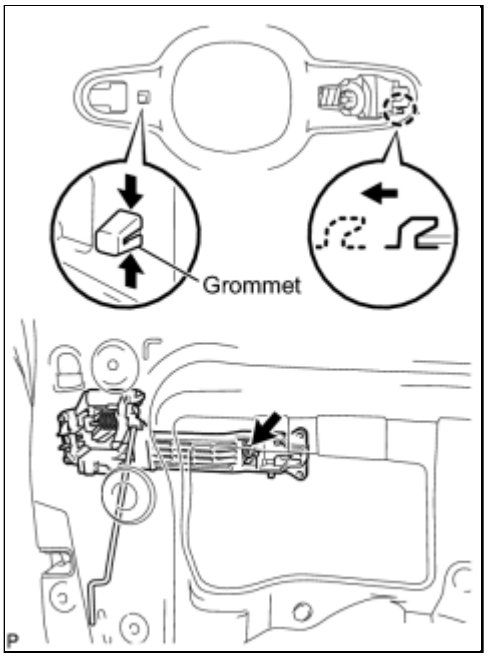
(a) Remove the front door inside locking cable assembly.



40. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)

(a) Using a screwdriver, disengage the 3 claws.

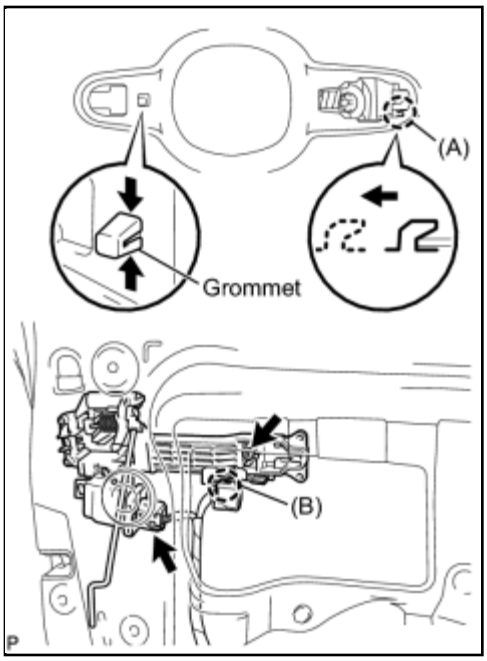
HINT:



Tape the screwdriver tip before use.

(b) Remove the front door inside locking cable assembly.

41. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/o Smart Key System)



(a) Using a "TORX" socket wrench (T30), remove the screw.

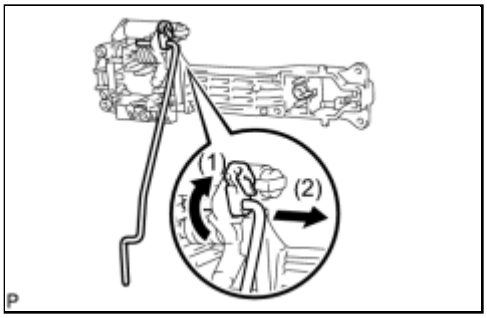
(b) Using pliers, disengage the grommet as shown in the illustration.

(c) Disengage the claw and remove the front door outside handle frame sub-assembly.

42. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/ Smart Key

System)

(a) Using a "TORX" socket wrench (T30), remove the screw.



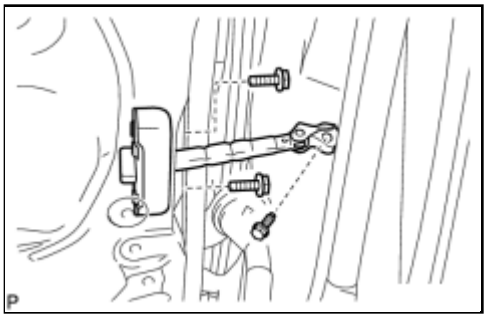
(b) Disconnect the connector.

(c) Disengage the claw (B).

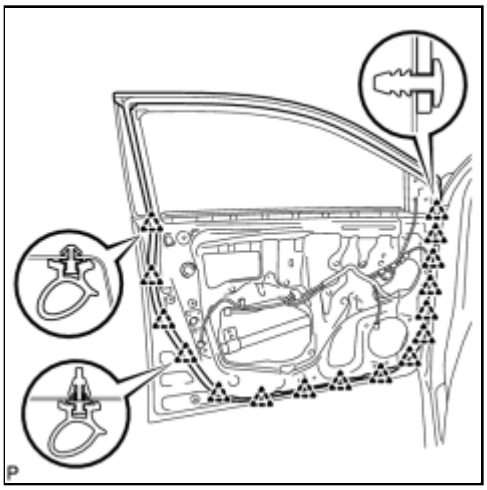
(d) Using pliers, disengage the grommet as shown in the illustration.

(e) Disengage the claw (A) and remove the front door outside handle frame sub-assembly.

43. REMOVE FRONT DOOR LOCK OPEN ROD



(a) Remove the front door lock open rod as shown in the illustration.



44. REMOVE DOOR ELECTRICAL KEY OSCILLATOR (w/ Smart Key System) INFO

45. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts and the front door check assembly.

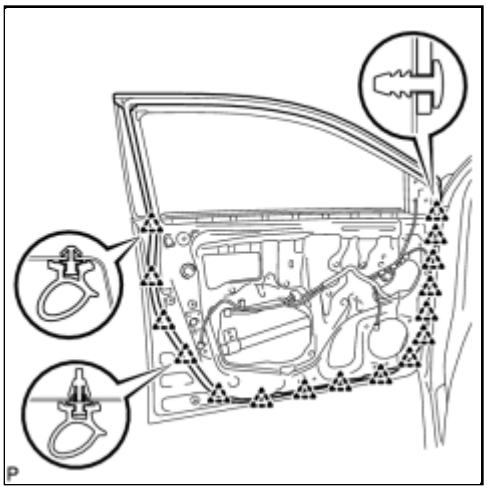
46. REMOVE FRONT DOOR WEATHERSTRIP

(a) Using a clip remover, disengage the 16 clips and remove the front door weatherstrip.

47. REMOVE FRONT DOOR BELT MOULDING ASSEMBLY INFO

48. REMOVE NO. 1 BLACK OUT TAPE (w/ Black Out Tape) INFO

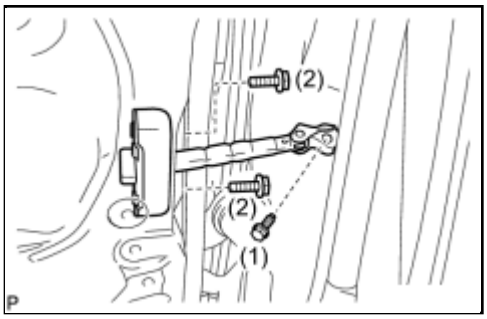
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011QG02WX
Title: DOOR / HATCH: FRONT DOOR: REASSEMBLY (2010 Corolla)		



REASSEMBLY

1. REPAIR INSTRUCTION (w/ Black Out Tape) INFO

2. INSTALL NO. 1 BLACK OUT TAPE (w/ Black Out Tape) INFO



3. INSTALL FRONT DOOR BELT MOULDING ASSEMBLY INFO

4. INSTALL FRONT DOOR WEATHERSTRIP

(a) Engage the 16 clips and install the front door weatherstrip.

5. INSTALL FRONT DOOR CHECK ASSEMBLY

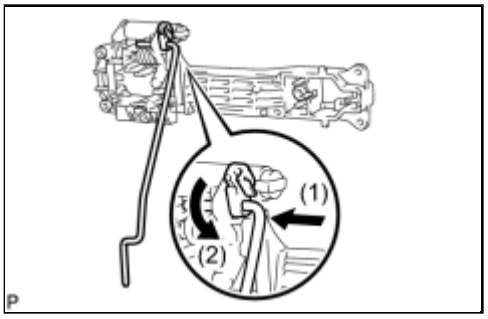
(a) Install the front door check assembly with the 3 bolts.

Bolt (1) - Torque: 30 N·m (306 kgf·cm, 22ft·lbf)
Bolt (2) - Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

6. INSTALL DOOR ELECTRICAL KEY OSCILLATOR (w/ Smart Key System) INFO

7. INSTALL FRONT DOOR LOCK OPEN ROD

(a) Install the front door lock open rod as shown in the



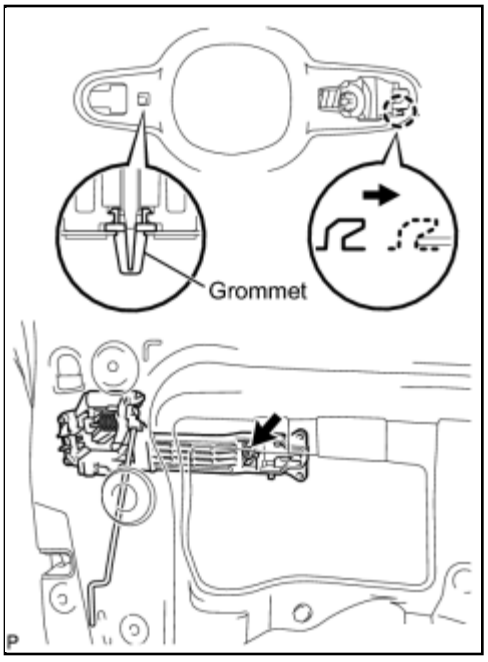


illustration.

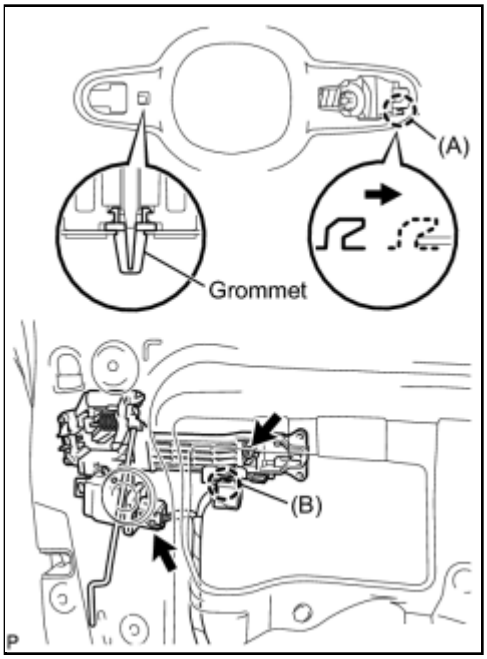
8. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/o Smart Key System)

(a) Apply MP grease to the sliding parts of the front door outside handle frame sub-assembly.

(b) Engage the claw and grommet.



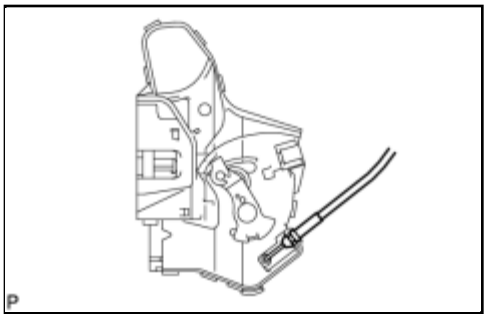
(c) Using a "TORX" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

9. INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY (w/ Smart Key System)

(a) Apply MP grease to the sliding parts on the front door outside handle frame sub-assembly.

(b) Engage the claw (A) and grommet.

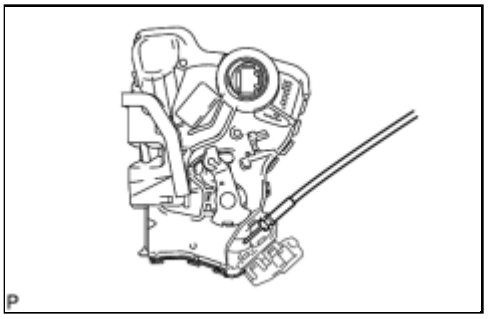


(c) Using a "TORX" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.

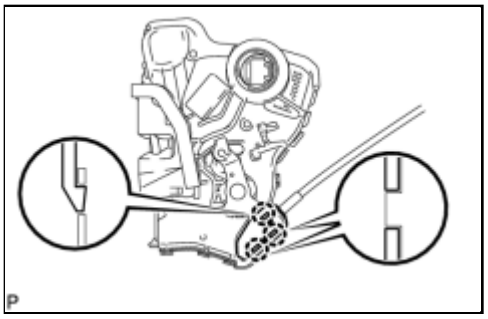
Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

(d) Engage the claw (B).

(e) Connect the connector.

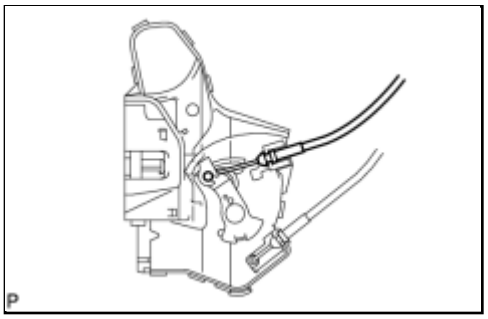


10. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)



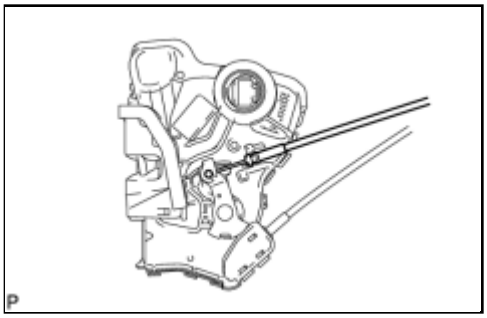
(a) Install the front door inside locking cable assembly.

11. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)



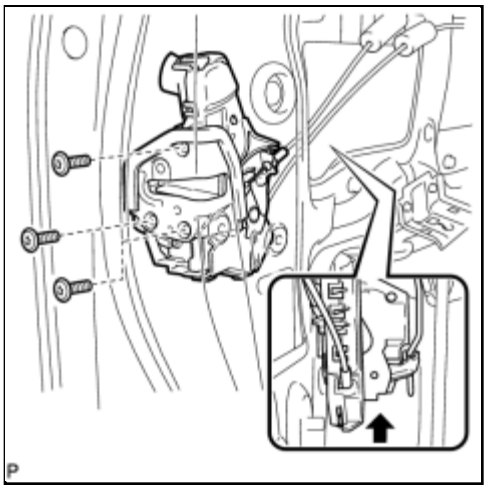
(a) Install the front door inside locking cable assembly.

(b) Engage the 3 claws.



12. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)

(a) Install the front door lock remote control cable assembly.



13. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Install the front door lock remote control cable assembly.

14. INSTALL FRONT DOOR LOCK ASSEMBLY (w/o Power Door Lock)

(a) Apply MP grease to the sliding parts of the front door lock assembly.

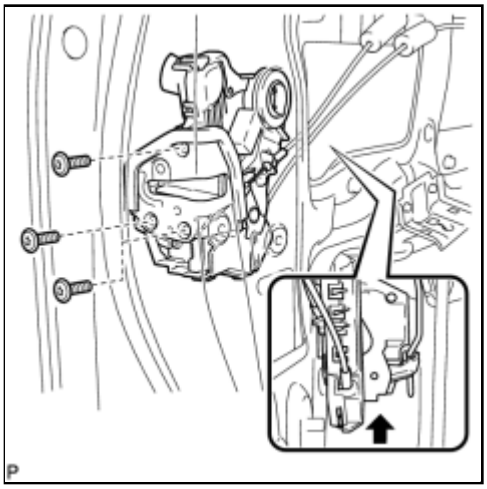
(b) Insert the front door lock open rod to the front door lock assembly.

(c) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(d) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

15. INSTALL FRONT DOOR LOCK ASSEMBLY (w/ Power Door Lock)



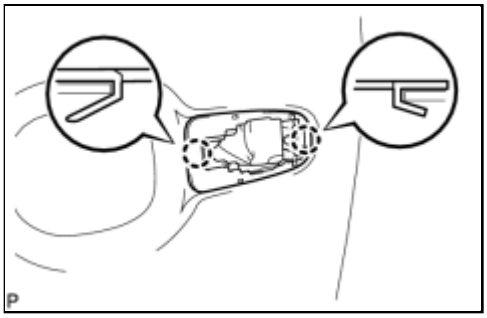
NOTICE:

- When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the front door lock assembly.

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

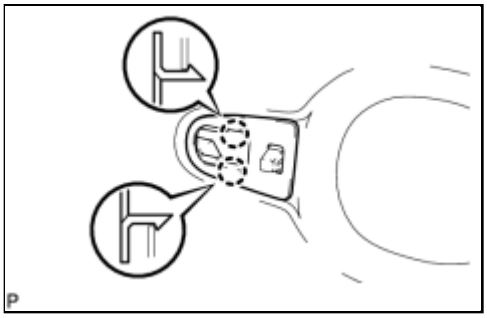
(c) Insert the front door lock open rod to the front door lock



assembly.

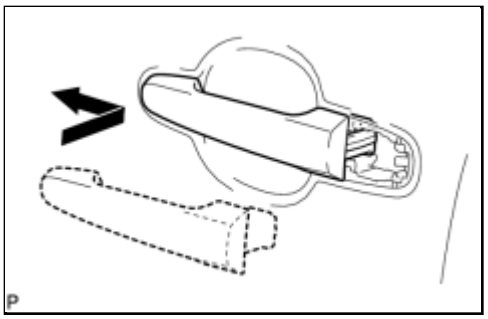
(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(e) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.



Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

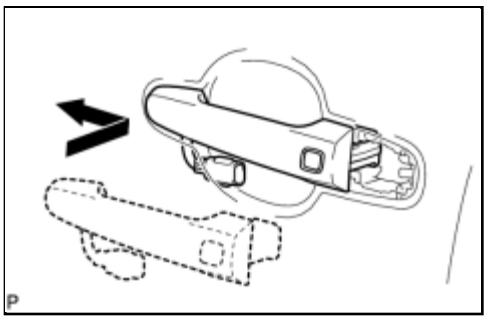
16. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD



(a) Engage the 2 claws and install the front door rear outside handle pad.

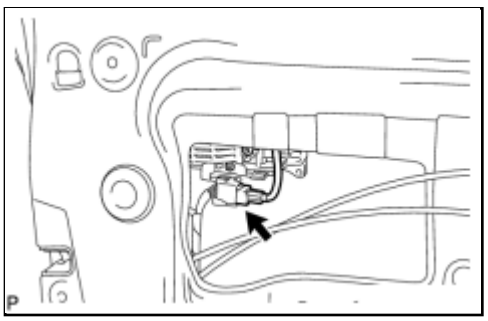
17. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 2 claws and install the front door front outside handle pad.



18. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/o Smart Key System)

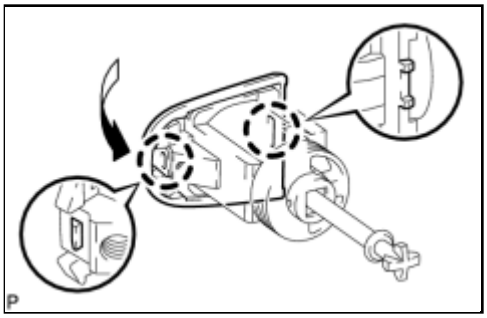
(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.



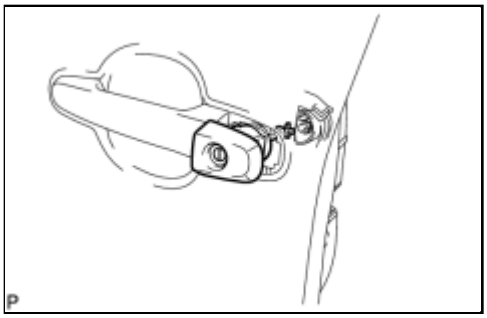
(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame then slide the front door outside handle assembly toward the front of the vehicle to install it.

19. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY (w/ Smart Key System)

(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.



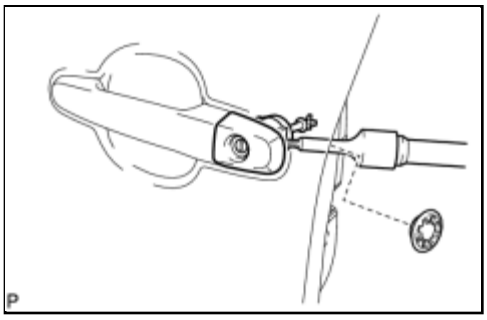
(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame then slide the front door outside handle assembly toward the front of the vehicle to install it.



(c) Connect the connector.

20. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Driver Side)

(a) Engage the 2 claws and install the front door outside handle cover to the front door lock cylinder.



(b) Install the front door lock cylinder.

HINT:

Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.

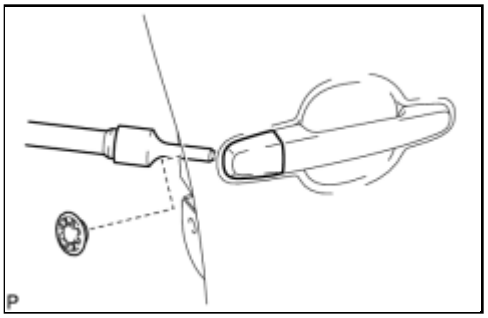
(c) Using a "TORX" socket wrench (T30), install the front door lock cylinder with the screw.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

(d) Install the hole plug.

21. INSTALL FRONT DOOR OUTSIDE HANDLE COVER (for Front Passenger Side)

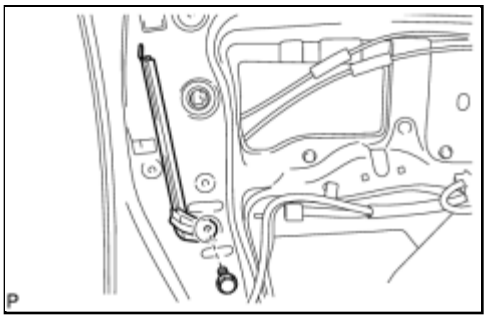
(a) w/o Wireless door lock system:



HINT:

Use the same procedure for the front passenger side and the driver side.

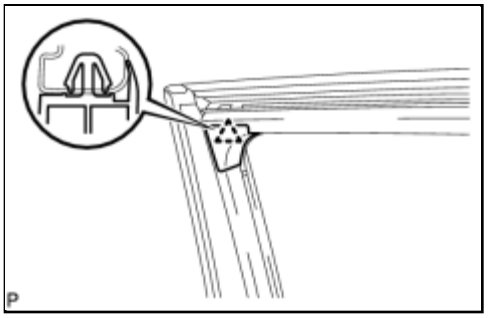
(b) w/ Wireless door lock system:



(1) Using a "TORX" socket wrench (T30), install the front door lock cylinder with the screw.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

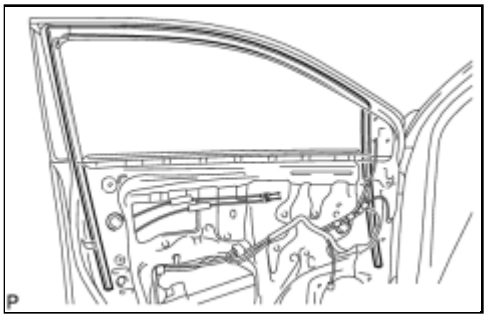
(2) Install the hole plug.



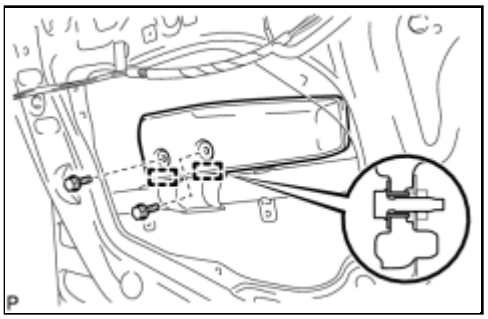
22. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt.

Torque: 6.2 N·m (63 kgf·cm, 55in·lbf)



23. INSTALL DOOR FRAME GARNISH

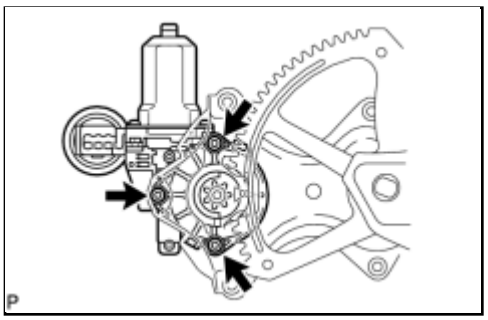


(a) Install a new door frame garnish with the clip.

24. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.

25. INSTALL FRONT DOOR NO. 2 STIFFENER CUSHION



(a) Insert the 2 guides and install the front door No. 2 stiffener cushion with the 2 bolts.

Torque: 6.2 N·m (63 kgf·cm, 55in·lbf)

26. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY (w/ Power Window)

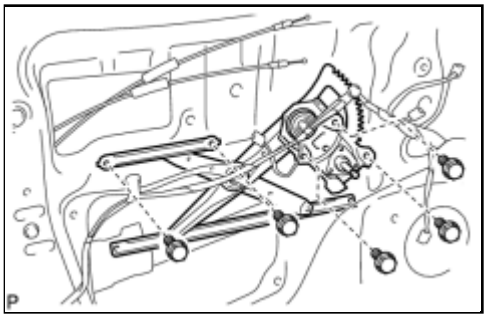
NOTICE:

The regulator arm must be below the intermediate position when installing the power window regulator motor.

(a) Using a "TORX" socket wrench (T25), install the front power window regulator motor assembly with the 3 screws.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

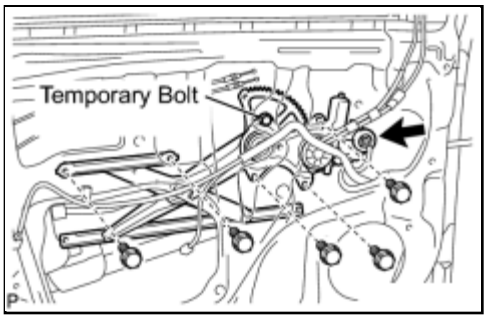
HINT:



A new front window regulator uses self-tapping screws to thread new installation holes when the self-tapping screws are inserted.

27. INSTALL FRONT DOOR WINDOW REGULATOR ASSEMBLY (w/o Power Window)

(a) Apply MP grease to the sliding parts of the front door window regulator assembly.



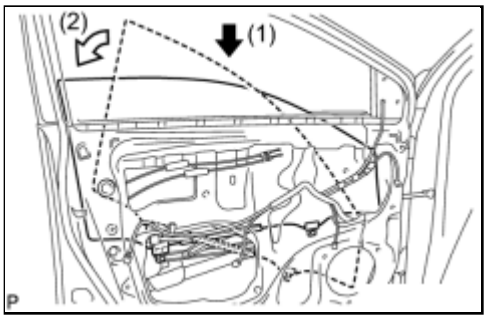
(b) Install the front door window regulator assembly with the 5 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

28. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window)

(a) Apply MP grease to the sliding parts of the front door window regulator sub-assembly.

(b) Install the temporary bolt to the front door window regulator sub-assembly.

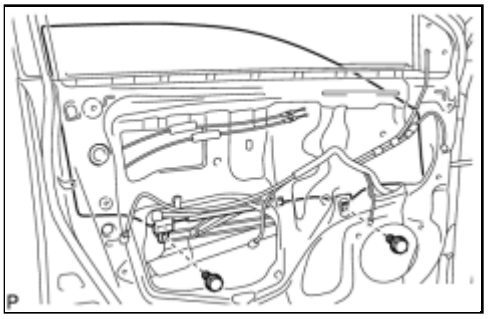


(c) Temporarily install the front door window regulator sub-assembly.

(d) Tighten the temporary bolt and 5 bolts to install the front door window regulator sub-assembly.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

(e) Connect the connector.

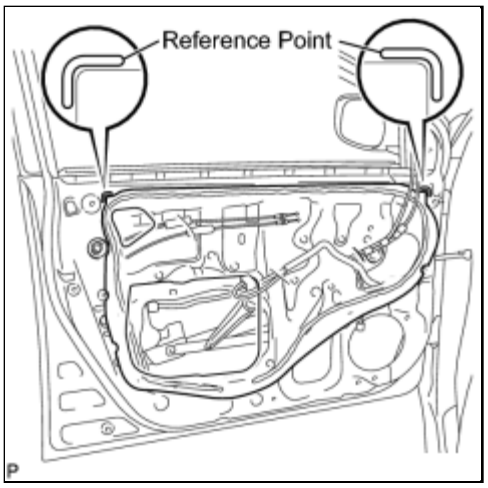


29. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY

(a) Insert the front door glass sub-assembly into the front door panel along the front door glass run as shown in the illustration.

(b) Install the front door glass sub-assembly with the 2 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

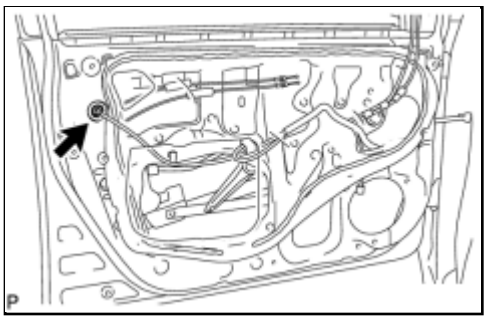


30. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY WITH COVER INFO

31. INSTALL FRONT DOOR SERVICE HOLE COVER

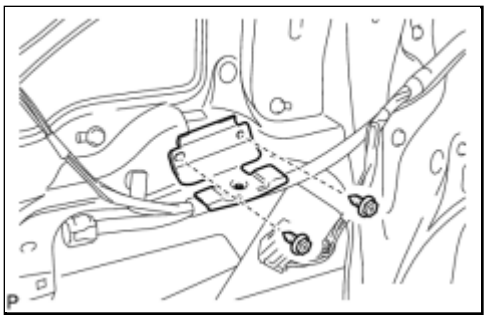
(a) Apply butyl tape to the front door panel.

(b) Pass the front door lock remote control cable and rear door inside locking cable through a new front door service hole cover.



(c) Attach the front door service hole cover according to the reference points on the front door panel.

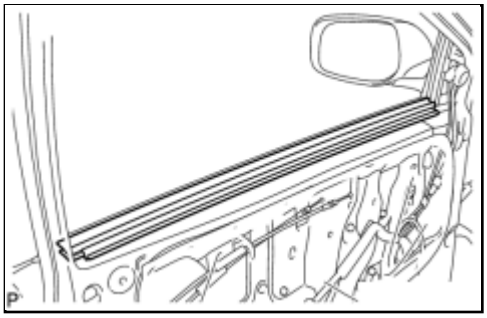
NOTICE:



Securely install the front door service hole cover preventing wrinkles and air bubbles.

(d) w/ Power door lock:

(1) Connect the connector.

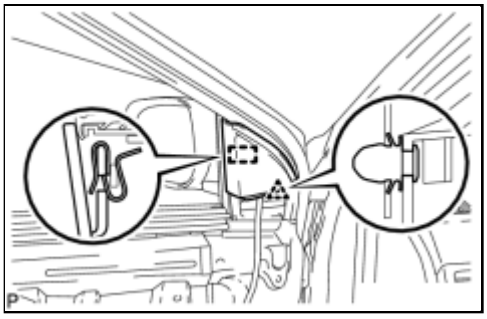


32. INSTALL FRONT DOOR TRIM BRACKET

(a) Install the front door trim bracket with the 2 screws.

33. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY INFO

34. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP

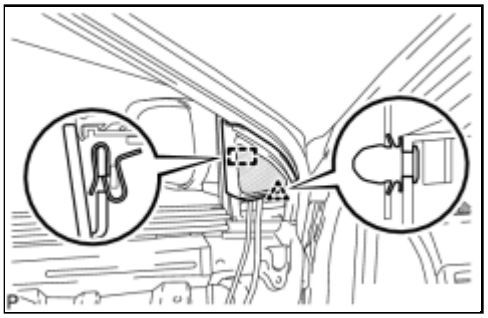


(a) Install the front door inner glass weatherstrip.

35. INSTALL FRONT NO. 3 SPEAKER ASSEMBLY (w/ Front No. 3 Speaker) INFO

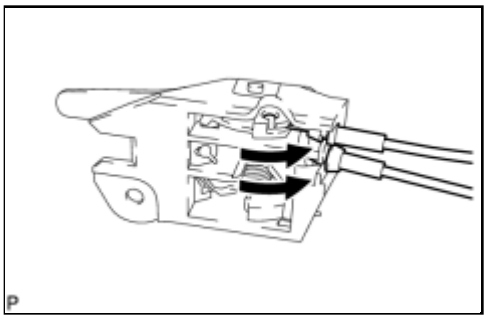
36. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (w/ Front No. 2 Speaker) INFO

37. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (w/o Front No. 2 Speaker)



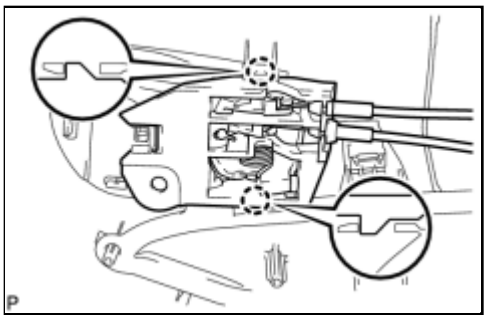
(a) Engage the clip and clamp, and install the front door lower frame bracket garnish.

38. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Front No. 2 Speaker)



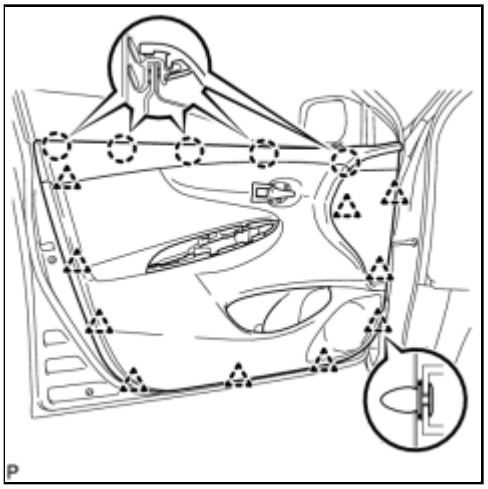
(a) Connect the connector.

(b) Engage the clip and clamp, and install the front door lower

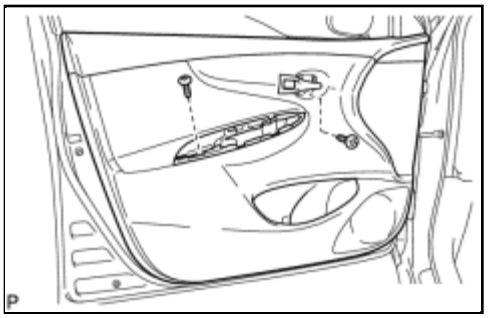


frame bracket garnish.

39. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

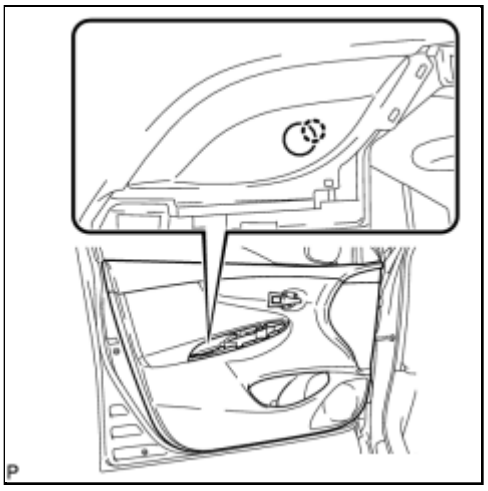


(a) Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.



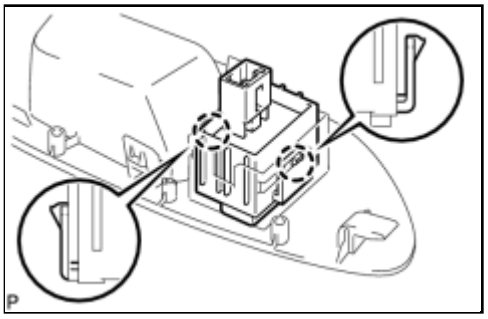
(b) Engage the 2 claws and install the front door inside handle sub-assembly to the front door trim board.

40. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

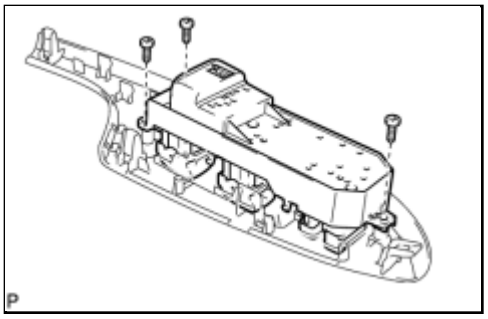


(a) Engage the front door trim board with the 5 claws on the front door inner glass weatherstrip.

(b) Engage the 10 clips and install the front door trim board to the front door panel.



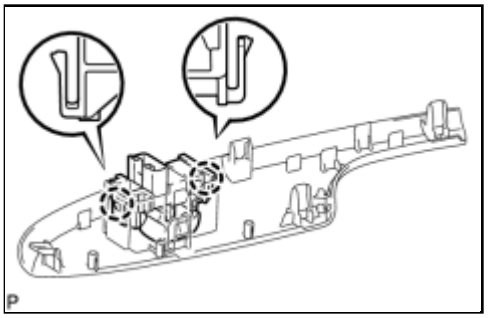
(c) Install the 2 screws.



(d) Engage the claw to install the door armrest cap.

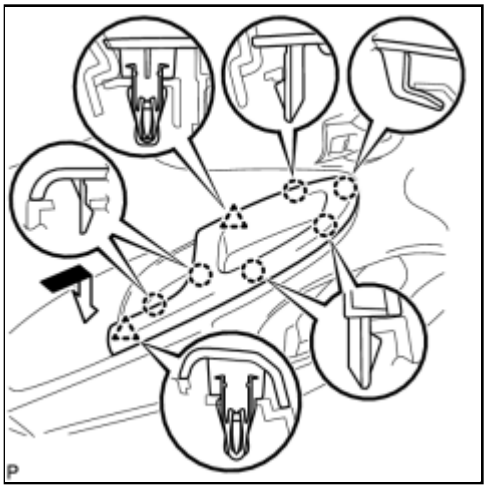
41. INSTALL DOOR CONTROL SWITCH ASSEMBLY (w/ Power Door Lock)

(a) Engage the 2 claws and install the door control switch assembly.



42. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (for Driver Side with Power Window)

(a) Install the power window regulator master switch assembly with the 3 screws.

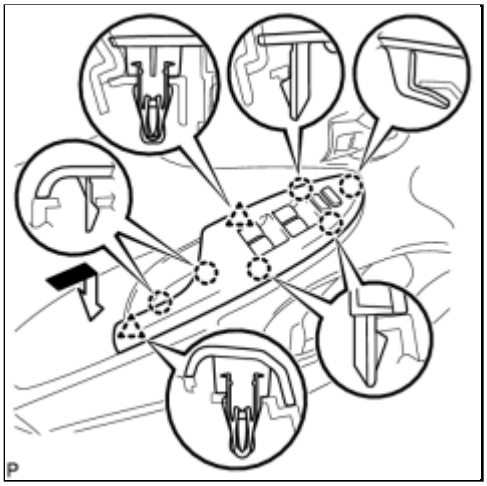


43. INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY (for Front Passenger Side with Power Window)

(a) Engage the 2 claws and install the power window regulator switch assembly.

44. INSTALL FRONT ARMREST UPPER BASE PANEL (w/o Power Window)

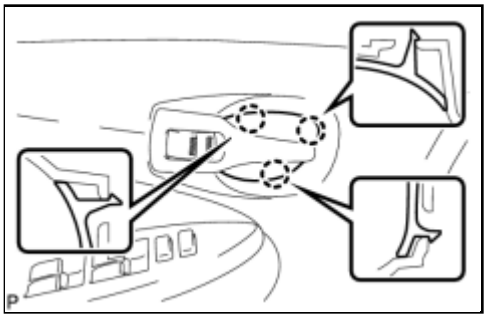
(a) Engage the 2 clips and 6 claws, and install the front armrest upper base panel.



(b) w/ Power Door Lock:

(1) Connect the connector.

45. INSTALL FRONT ARMREST UPPER BASE PANEL (w/ Power Window)

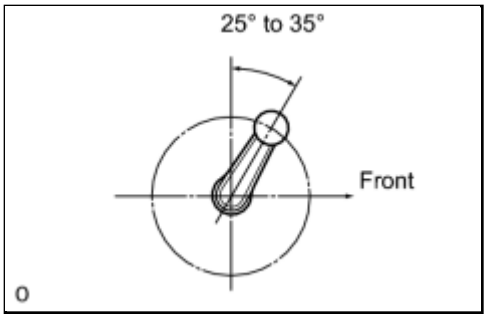


(a) Connect the connector.

(b) Engage the 2 clips and 6 claws, and install the front armrest upper base panel.

46. INSTALL FRONT DOOR INSIDE HANDLE BEZEL

(a) Engage the 3 claws and install the front door inside handle bezel.

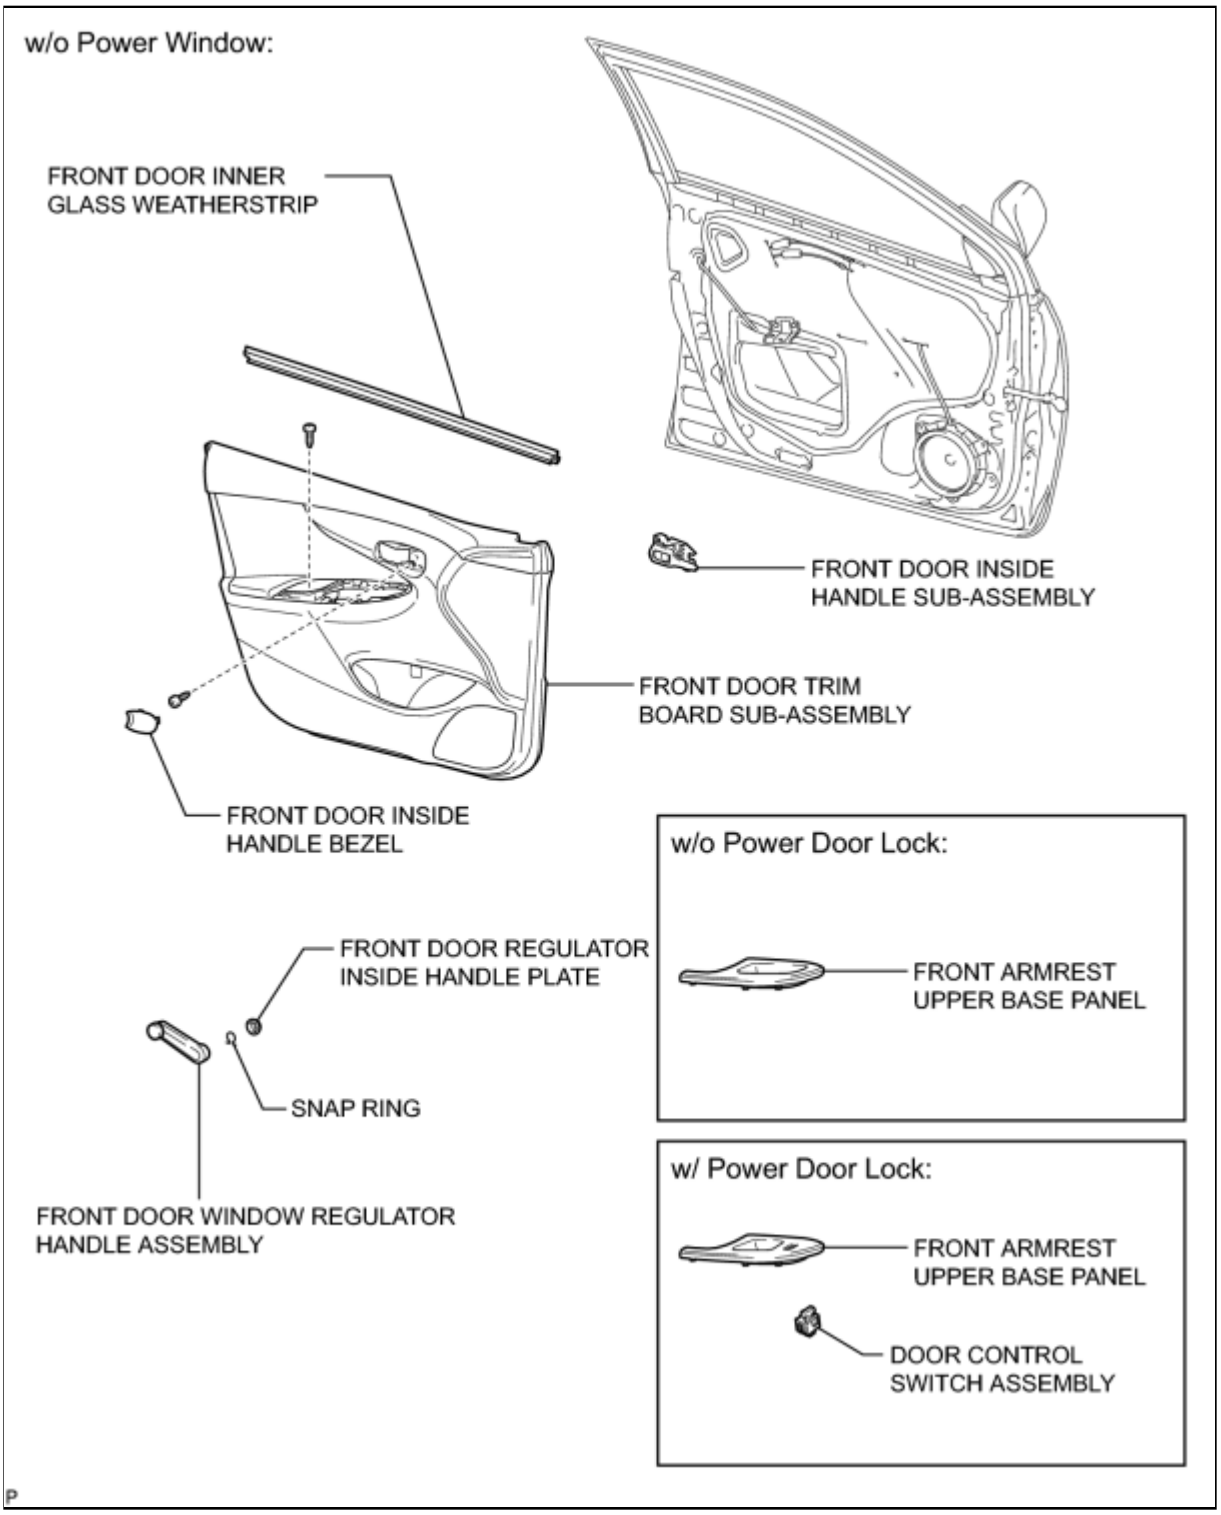


47. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Temporarily install the front door window regulator handle assembly and fully close the window glass.

(b) Install the front door regulator inside handle plate.

(c) Install the snap ring to the front door window regulator handle assembly.



(d) Install the front door window regulator handle assembly as shown in the illustration.

48. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Title: DOOR / HATCH: FRONT DOOR: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

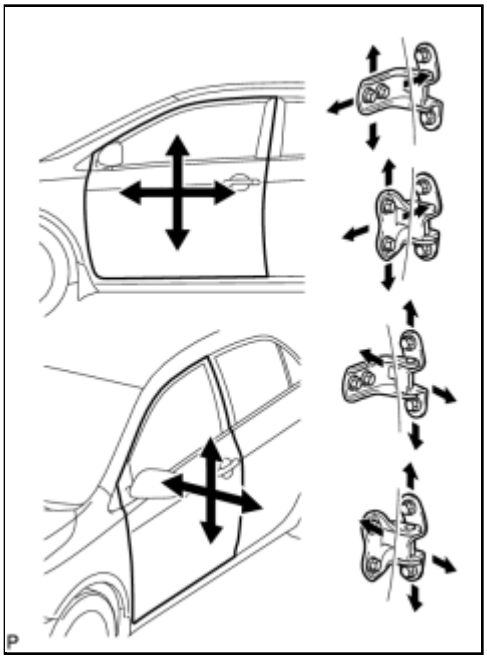
CAUTION:

Before adjusting the door positions of vehicles equipped with side and curtain shield airbags, be sure to disconnect the battery. After adjustment, check that the SRS warning light is operating normally and there are no SRS DTCs output.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart INFO .

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



CAUTION:

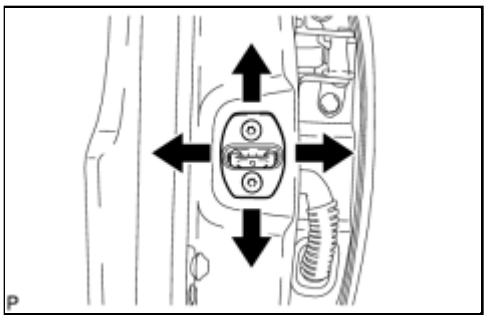
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO .

2. ADJUST FRONT DOOR

(a) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.

SST: 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.



Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.

Unpainted door hinge installation surface (door panel side) - Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

Painted door hinge installation surface (door panel side) - Torque: 34 N·m (347 kgf·cm, 25ft·lbf)

(e) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(f) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

4. INSPECT SRS WARNING LIGHT

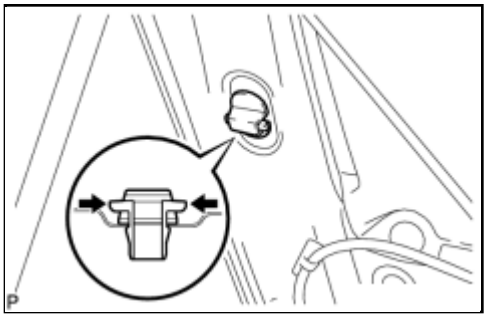
Title: DOOR / HATCH: HOOD: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT HOOD SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through E are within each standard range.



Standard Clearance:

AREA	MEASUREMENT	AREA	MEASUREMENT
A	3.1 to 6.1 mm (0.122 to 0.240 in.)	D	4.8 mm (0.189 in.)
B	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)	E	0.7 mm (0.0276 in.)
C	2.3 to 5.3 mm (0.0906 to 0.209 in.)	-	-

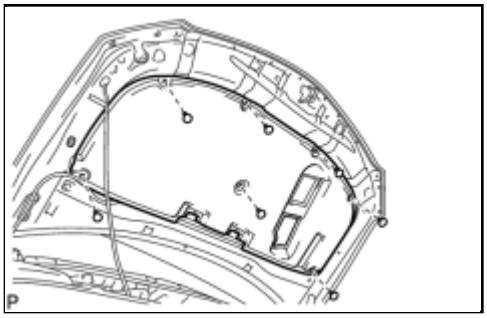
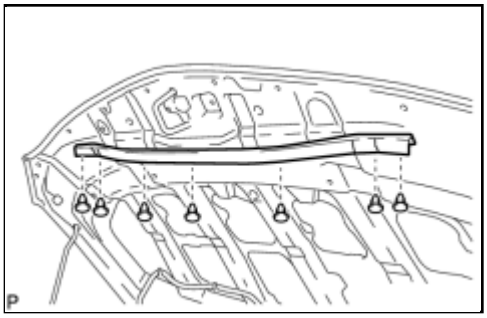
Title: DOOR / HATCH: HOOD: DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

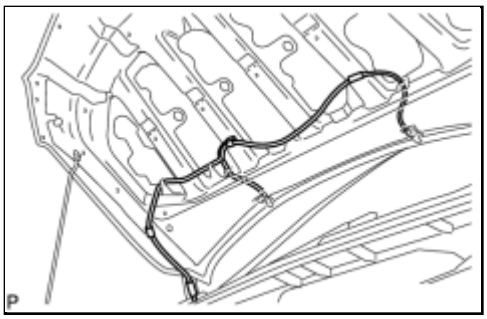
1. REMOVE HOOD PROTECTOR CLIP



(a) Disengage the 2 claws and remove the hood protector clip as shown in the illustration.

2. REMOVE HOOD INSULATOR (w/ Hood Insulator)

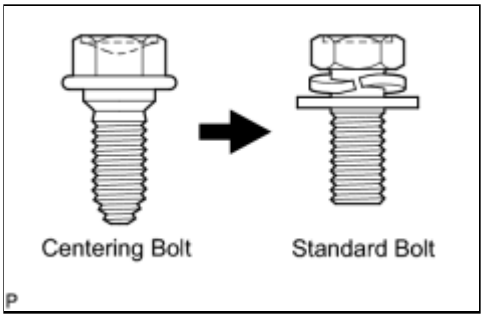
(a) Using a clip remover, remove the 7 clips and the hood insulator.



3. REMOVE HOOD TO RADIATOR SUPPORT SEAL

(a) Using a clip remover, remove the 7 clips and the hood to radiator support seal.

4. REMOVE WASHER NOZZLE SUB-ASSEMBLY INFO



5. DISCONNECT WASHER HOSE ASSEMBLY

(a) Disconnect the washer hose assembly.

Last Modified: 3-10-2010	6.4 N	**From:** 200901

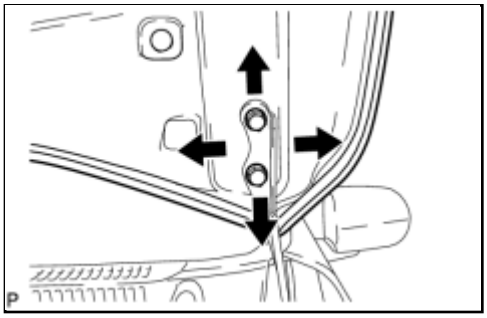
Title: DOOR / HATCH: HOOD: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT



HINT:

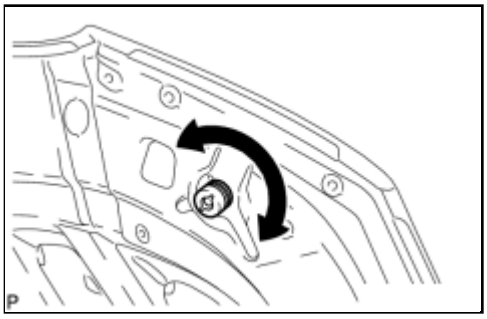
- Centering bolts are used to mount the hood hinge and hood lock. The hood and hood lock cannot be adjusted with the centering bolts installed. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart INFO .

1. ADJUST HOOD SUB-ASSEMBLY

(a) Horizontally and vertically adjust the hood.

(1) Loosen the 4 hinge bolts of the hood.

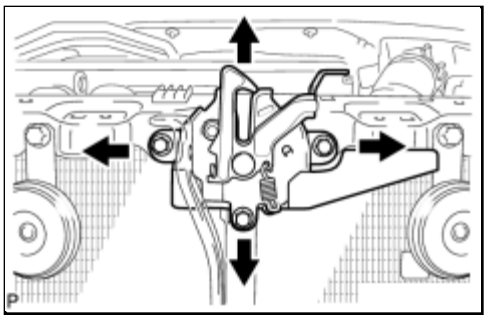
(2) Adjust the clearance between the hood and front fender by moving the hood.



(3) Tighten the 4 hinge bolts after the adjustment.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

(b) Adjust the height of the front end of the hood using the cushion rubber.



(1) Adjust the cushion rubber so that the heights of the hood and fender are aligned.

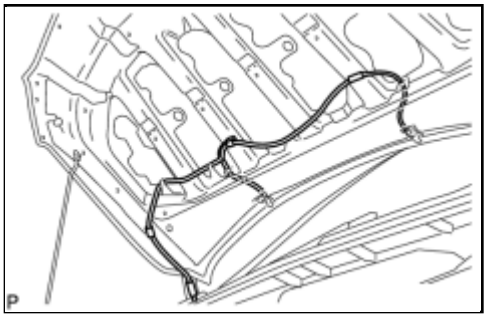
HINT:

Raise or lower the front end of the hood by turning the cushion rubber.

(c) Adjust the hood lock.

(1) Loosen the 3 bolts.

(2) Tighten the bolts after the adjustment.



Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

(3) Check that the striker engages the hood lock smoothly.

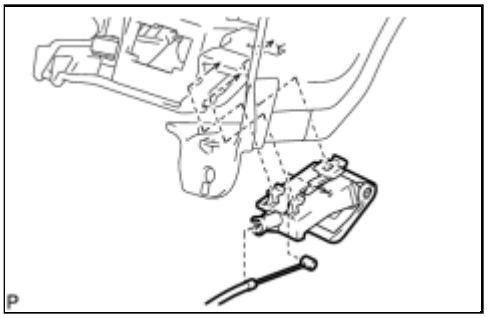
Title: DOOR / HATCH: HOOD LOCK CONTROL CABLE ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

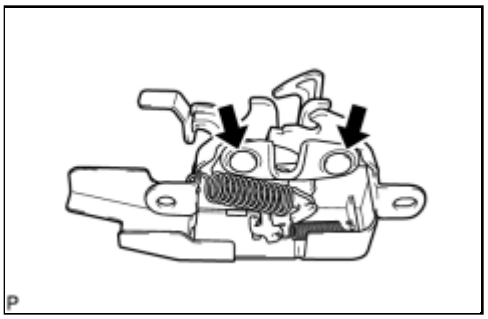
1. INSTALL HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Pass the hood lock control cable assembly into the engine compartment.



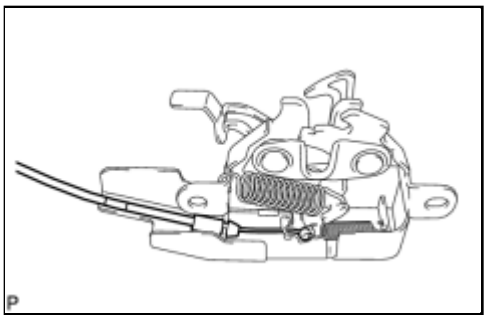
AREA	PART NAME	AREA	PART NAME
A	Hood lock control cable	E	Wire harness
B	Clamp	F	Front washer hose
C	Hood opener cable grommet	G	Radiator support
D	Wiring harness protector	H	Side radiator support

(b) Pass the cable through the upper radiator support.



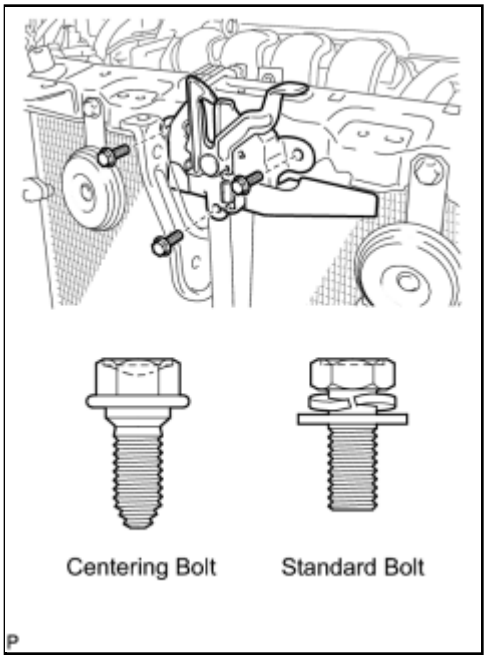
(c) Connect the clamps as shown in the illustration.

2. INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY



(a) Connect the hood lock control cable and install the hood lock control lever.

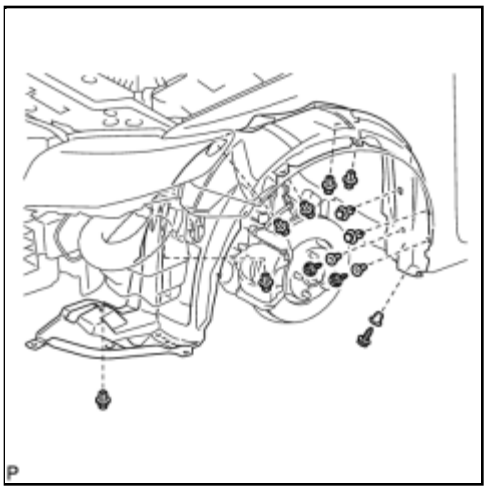
3. INSTALL HOOD LOCK ASSEMBLY



(a) Apply MP grease to the sliding areas of the lock.

(b) Connect the hood lock control cable.

(c) Install the hood lock assembly with the 3 bolts.



Centering Bolt - Torque: 7.5 N·m (77 kgf·cm, 66in·lbf)
Standard Bolt - Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

4. INSPECT HOOD SUB-ASSEMBLY INFO

5. ADJUST HOOD SUB-ASSEMBLY INFO

6. INSTALL FRONT FENDER LINER

(a) Install the front fender liner with 3 new grommets and the 3 screws.

(b) Install the 8 clips.

7. INSTALL FRONT WHEEL INFO

2. REMOVE NO. 4 ENGINE UNDER COVER (for 2AZ-FE) INFO

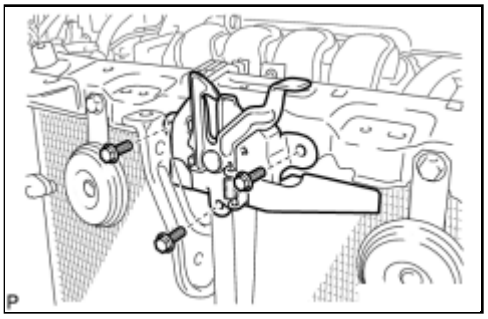
3. REMOVE FRONT BUMPER ASSEMBLY INFO

4. REMOVE SIDE MUDGUARD INFO

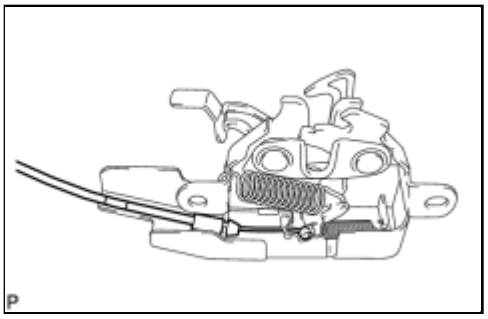
5. REMOVE FRONT WHEEL

6. REMOVE FRONT FENDER LINER

(a) Remove the 8 clips and 3 screws.



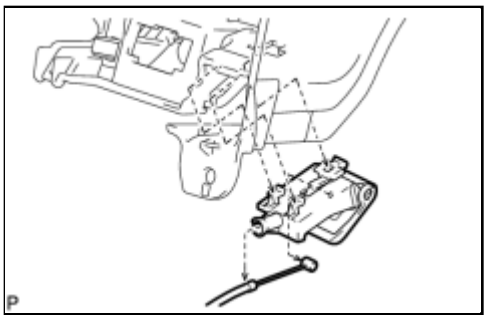
(b) Remove the 3 grommets and the front fender liner.



HINT:

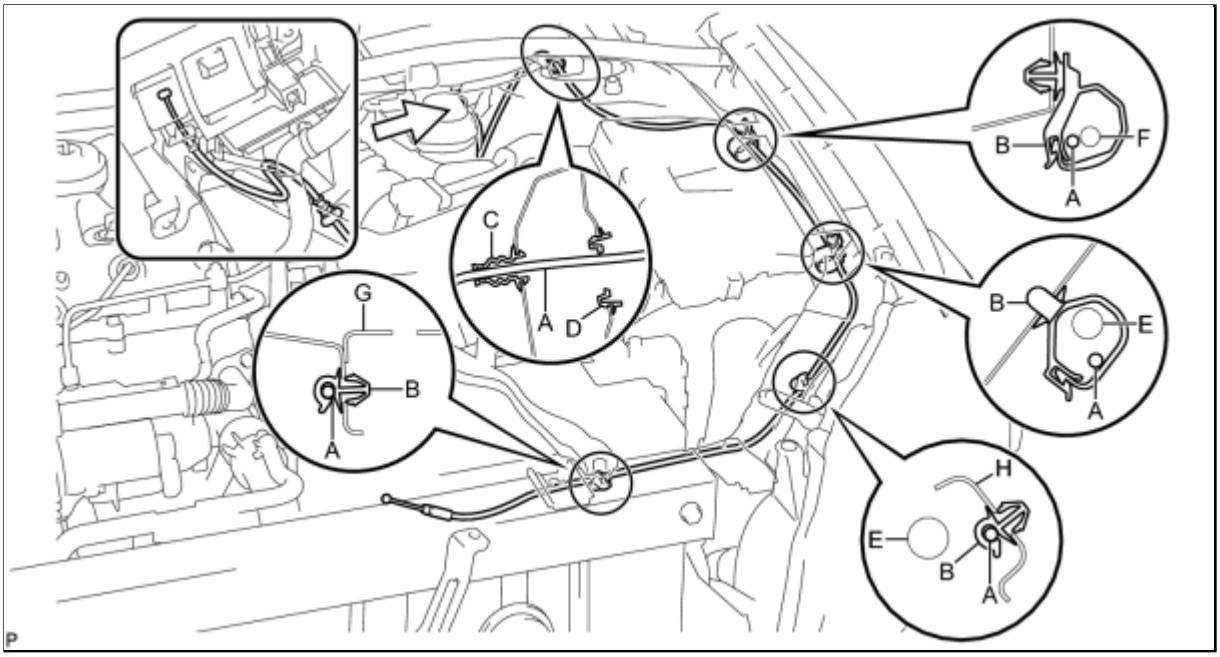
The grommets need to be replaced with new ones because they will break when they are removed.

7. REMOVE HOOD LOCK ASSEMBLY



(a) Remove the 3 bolts from the hood lock assembly.

(b) Disconnect the hood lock control cable and remove the hood lock assembly.



8. REMOVE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

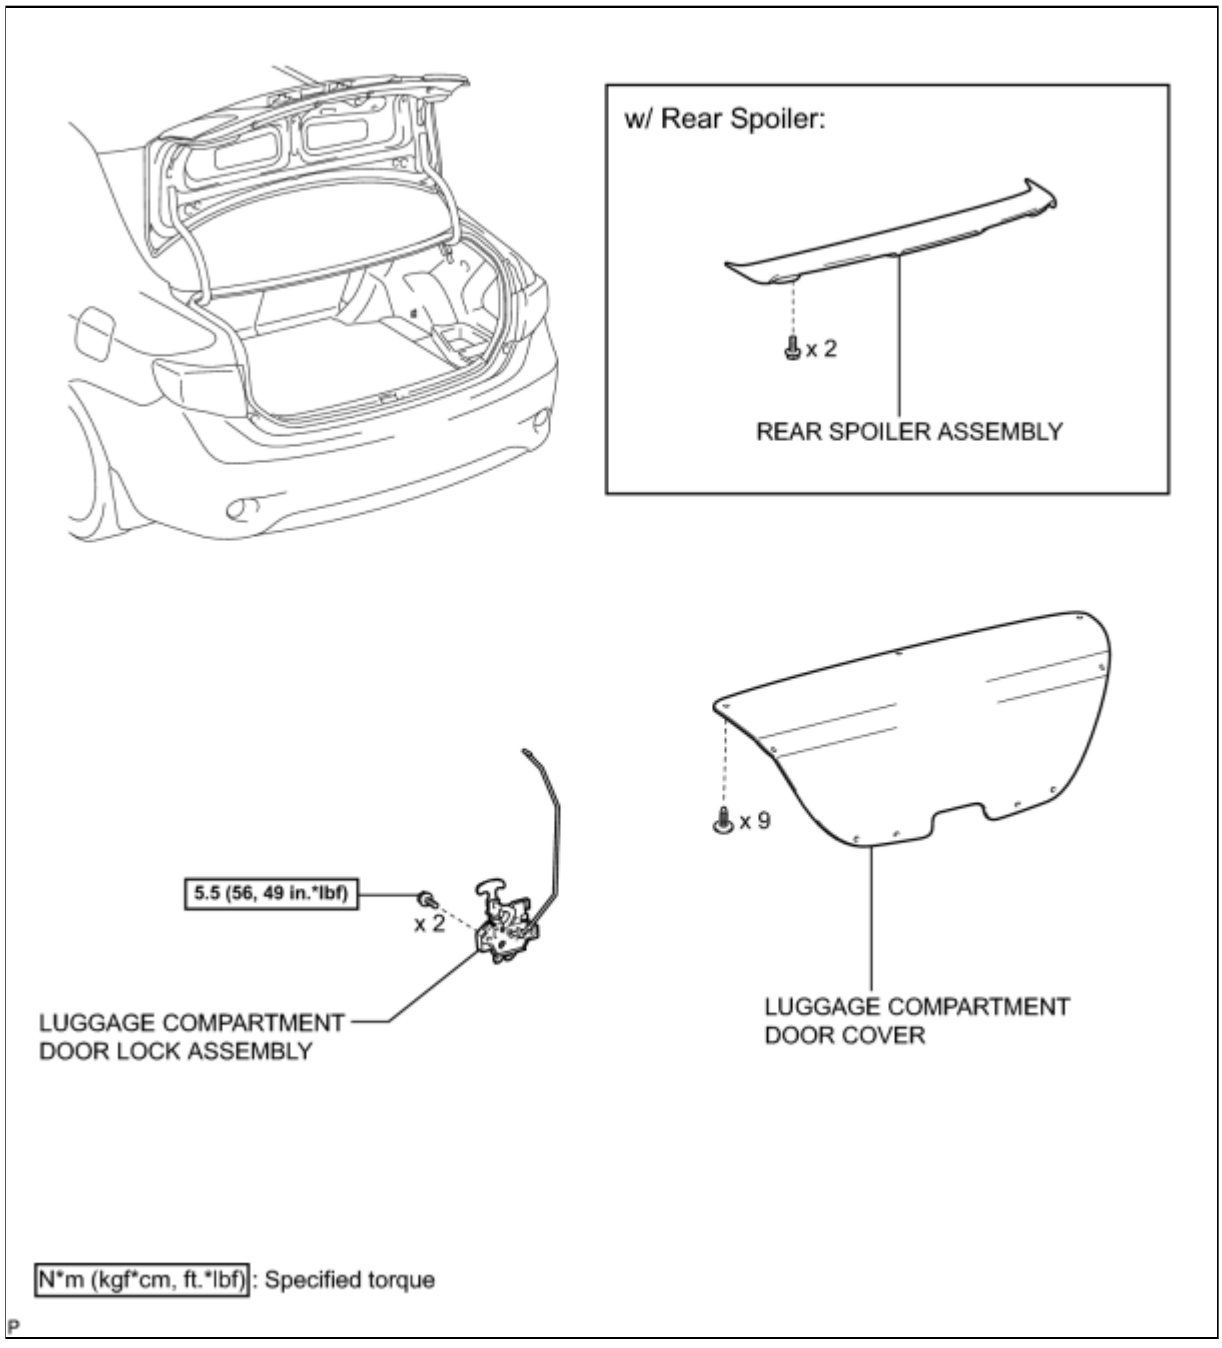
(a) Disconnect the hood lock control cable and remove the hood lock control lever.

9. REMOVE HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, disconnect the clamps shown in the illustration.

AREA	PART NAME	AREA	PART NAME
A	Hood lock control cable	E	Wire harness
B	Clamp	F	Front washer hose
C	Hood opener cable grommet	G	Radiator support
D	Wiring harness protector	H	Side radiator support

HINT:



Tape the screwdriver tip before use.

(b) Pull the cable from the engine compartment and remove it.

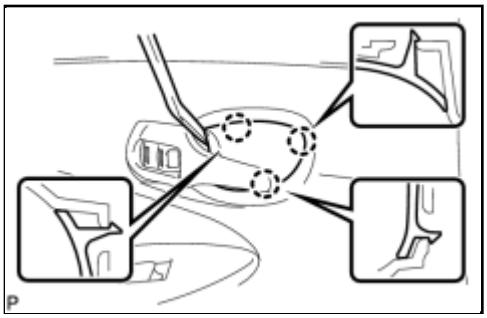
Title: DOOR / HATCH: REAR DOOR: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

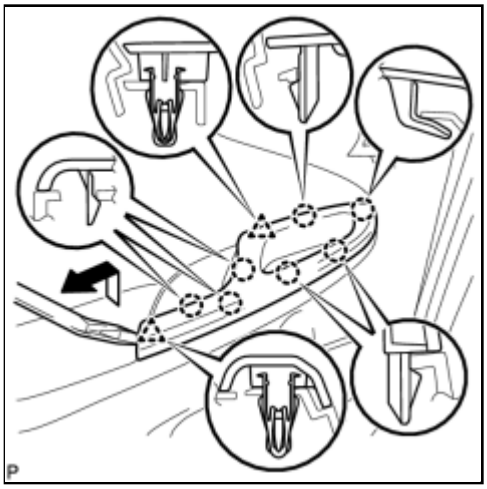
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



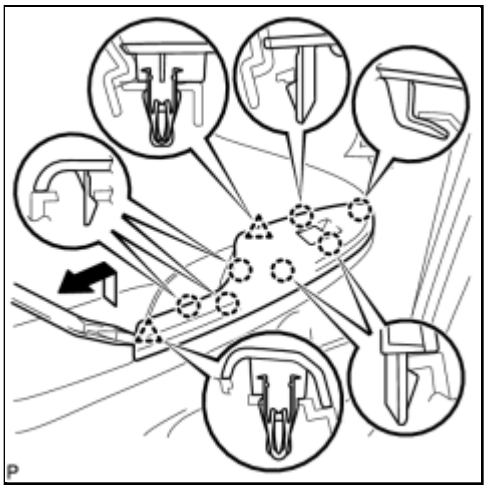
2. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Using a clip remover, remove the snap ring.

(b) Remove the rear door window regulator handle assembly and rear door regulator inside handle plate.



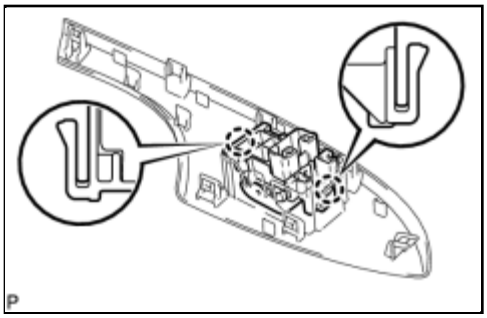
3. REMOVE REAR DOOR INSIDE HANDLE BEZEL



(a) Using a moulding remover, disengage the 3 claws and remove the rear door inside handle bezel.

4. REMOVE REAR DOOR ARMREST UPPER BASE PANEL (w/o Power Window)

(a) Using a moulding remover, disengage the 2 clips and 7 claws, and remove the rear door armrest upper base panel.

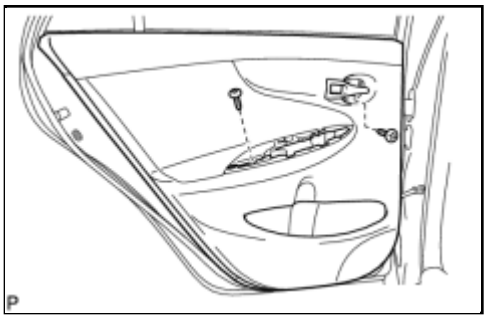


5. REMOVE REAR DOOR ARMREST UPPER BASE PANEL (w/ Power Window)

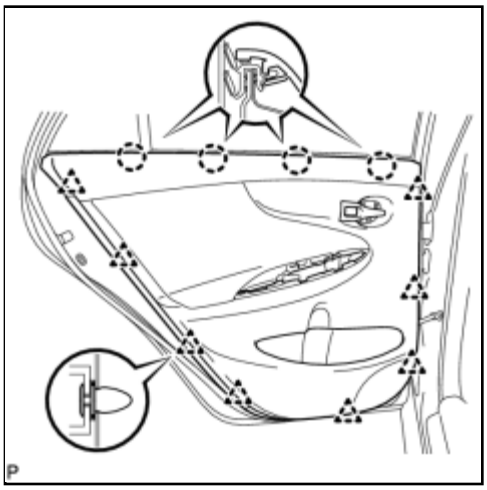
(a) Using a moulding remover, disengage the 2 clips and 7 claws.

(b) Disconnect the connector and remove the rear door armrest upper base panel.

6. REMOVE REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY (w/ Power Window)

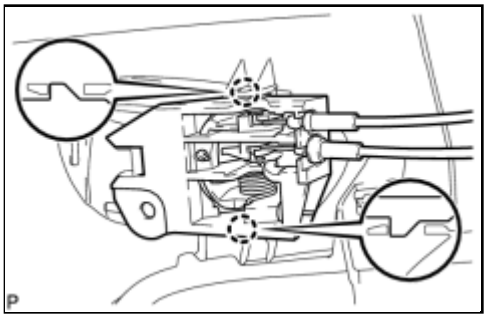


(a) Using a screwdriver with its tip wrapped with protective tape, disengage the 2 claws and remove the rear power window regulator switch assembly.

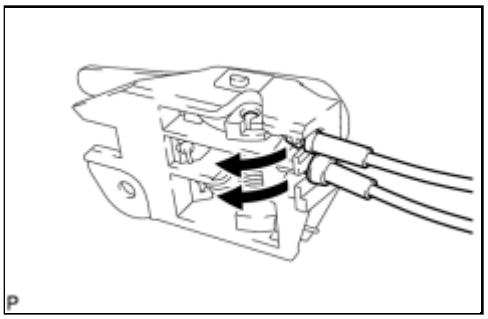


7. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

(a) Using a screwdriver with its tip wrapped with protective tape, disengage the claw and disconnect the door armrest cap.



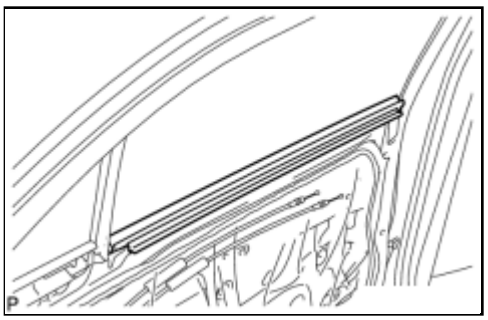
(b) Remove the 2 screws.



(c) Using a clip remover, disengage the 8 clips.

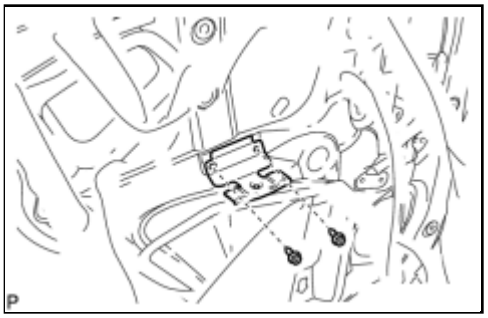
(d) Disengage the 4 claws and separate the rear door trim board sub-assembly from the rear door inner glass weatherstrip.

(e) Disengage the 2 claws and disconnect the rear door inside handle sub-assembly.



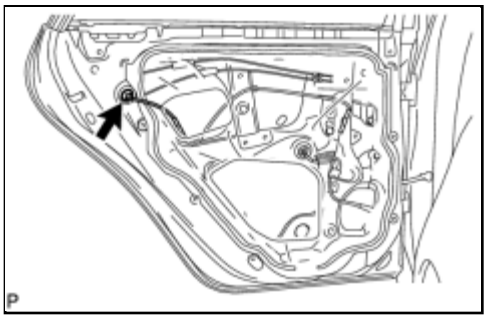
8. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disconnect the rear door lock remote control cable and rear door inside locking cable, and remove the rear door inside handle sub-assembly.



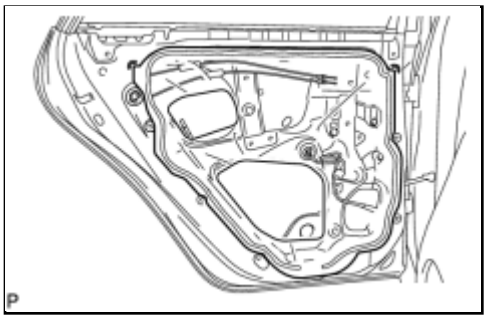
9. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP

(a) Remove the rear door inner glass weatherstrip from the rear door panel.



10. REMOVE REAR DOOR TRIM BRACKET

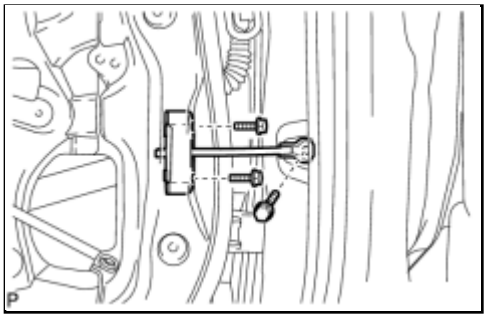
(a) Remove the 2 screws and the rear door trim bracket.



11. REMOVE REAR DOOR SERVICE HOLE COVER

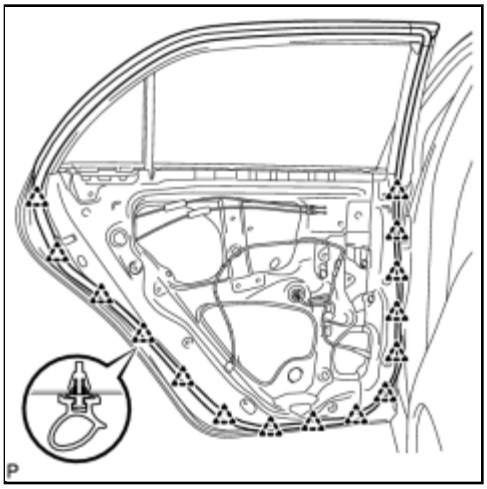
(a) w/ Power door lock:

(1) Disconnect the connector.



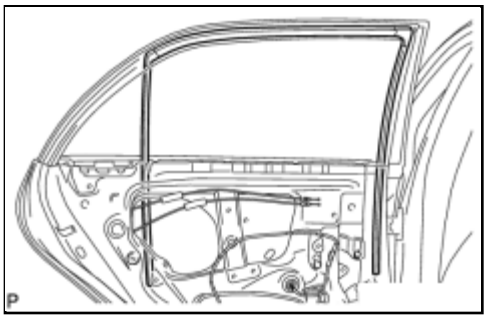
(b) Remove the rear door service hole cover.

HINT:



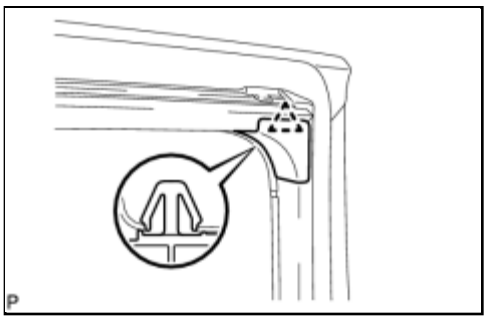
Remove any remaining butyl tape from the door.

12. REMOVE REAR DOOR CHECK ASSEMBLY



(a) Remove the 3 bolts and the rear door check assembly.

13. REMOVE REAR DOOR WEATHERSTRIP

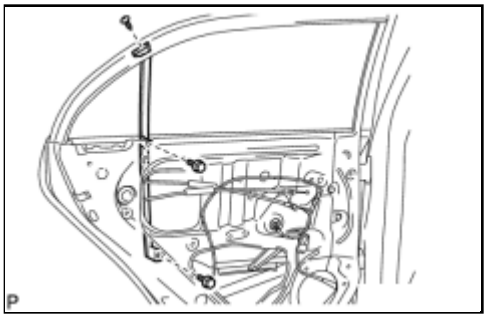


(a) Using a clip remover, disengage the 15 clips and remove the rear door weatherstrip.

14. REMOVE REAR DOOR GLASS RUN

(a) Remove the rear door glass run.

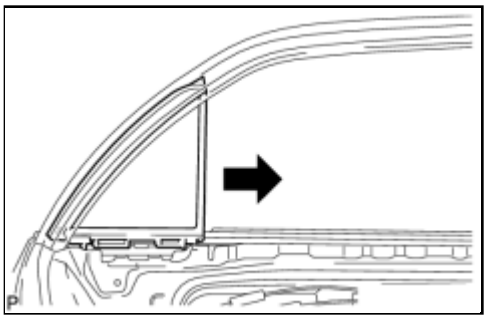
15. REMOVE REAR DOOR FRAME GARNISH



(a) Disengage the clip and remove the rear door frame garnish.

HINT:

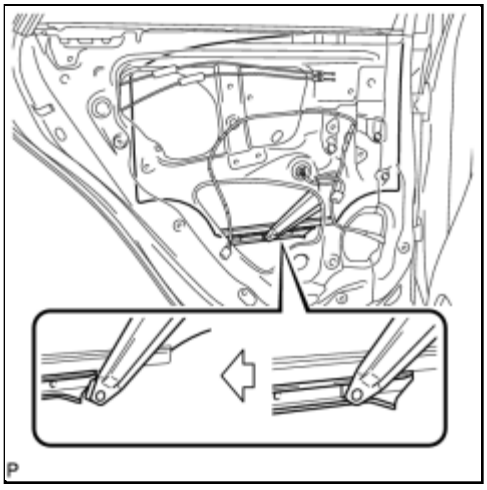
This garnish needs to be replaced with a new one because the clip will break when removing the rear door frame garnish.



16. REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

(a) Remove the 2 bolts, screw, and the rear door window

division bar sub-assembly.

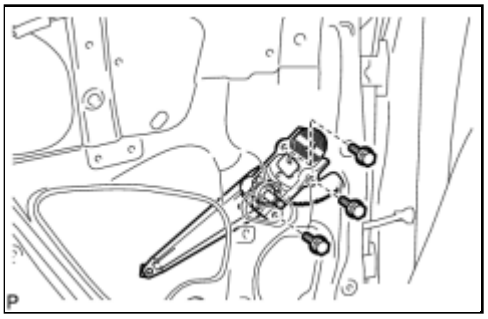


17. REMOVE REAR DOOR QUARTER WINDOW GLASS

(a) Remove the rear door quarter window glass and the rear door quarter window weatherstrip as a unit as shown in the illustration.

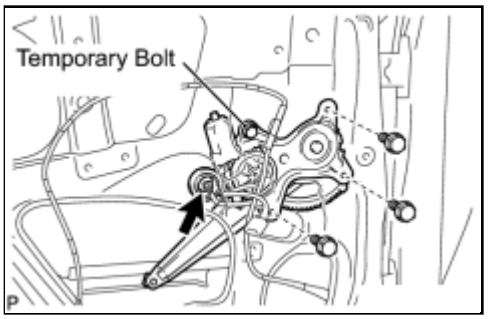
(b) Remove the rear door quarter window glass from the rear door quarter window weatherstrip.

18. REMOVE REAR DOOR GLASS SUB-ASSEMBLY



(a) Remove the rear door glass sub-assembly from the rear door window regulator sub-assembly as shown in the illustration.

NOTICE:



Do not damage the door glass.

19. REMOVE REAR DOOR WINDOW REGULATOR ASSEMBLY (w/o Power Window)

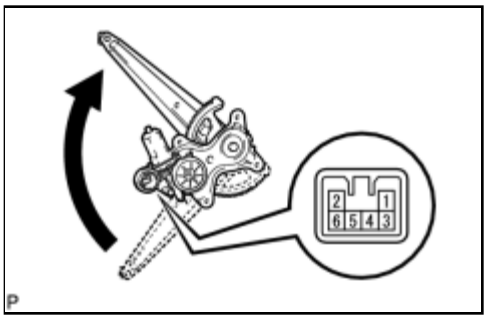
(a) Remove the 3 bolts and the rear door window regulator assembly.

20. REMOVE REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window)

(a) Disconnect the connector.

(b) Loosen the temporary bolt.

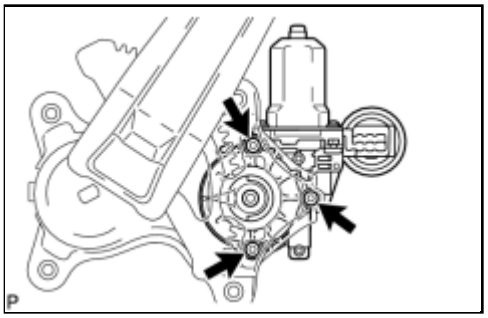
NOTICE:



Do not remove the temporary bolt. If the temporary bolt is removed, the rear door window regulator may fall and cause damage.

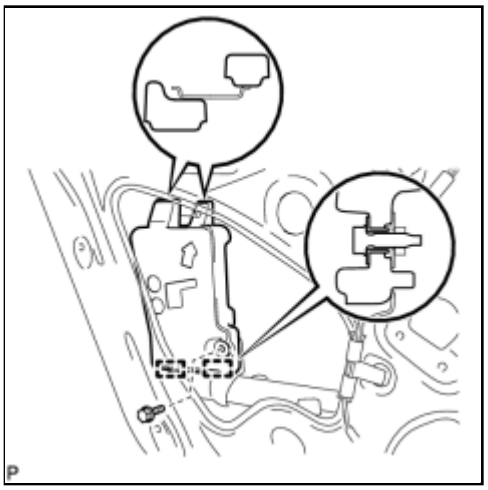
(c) Remove the 3 bolts.

(d) Remove the rear door window regulator sub-assembly and the rear power window regulator motor assembly as a unit.



(e) Remove the temporary bolt from the rear door window regulator sub-assembly.

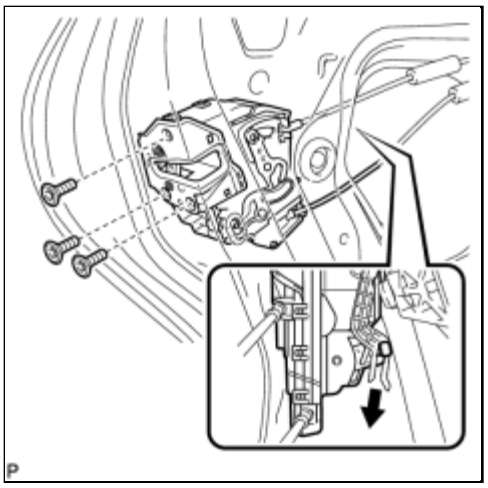
21. REMOVE REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY (w/ Power Window)



(a) Connect a positive (+) lead from the battery to terminal 1, and a negative (-) lead to terminal 2 of the rear power window regulator motor assembly to move the lift arm to the position shown in the illustration.

(b) Using a "TORX" socket wrench (T25), remove the 3

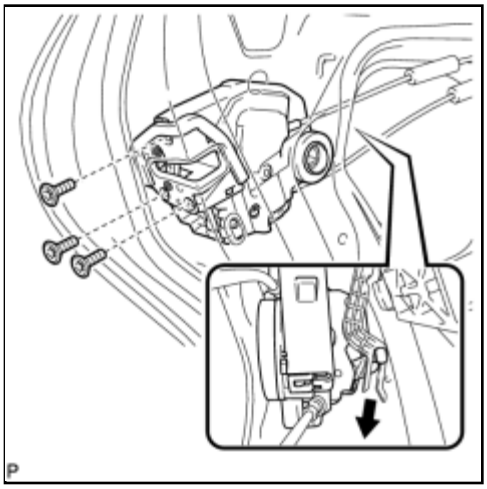
screws and the rear power window regulator motor assembly.



22. REMOVE SEPARATOR DOOR NO. 2 STIFFENER CUSHION

(a) Remove the bolt.

(b) Disengage the 2 guides and separator door No. 2 stiffener cushion.

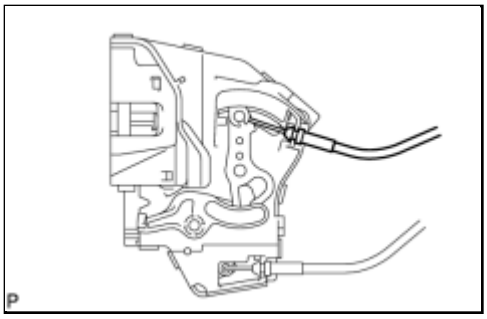


23. REMOVE REAR DOOR LOCK ASSEMBLY (w/o Power Door Lock)

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

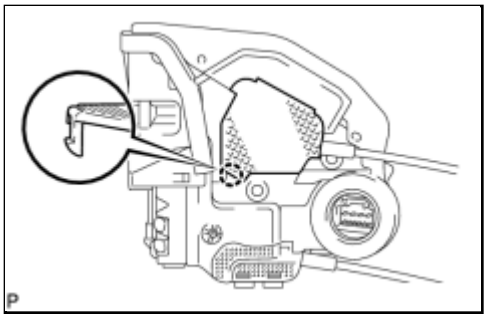
(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

24. REMOVE REAR DOOR LOCK ASSEMBLY (w/ Power Door Lock)



(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

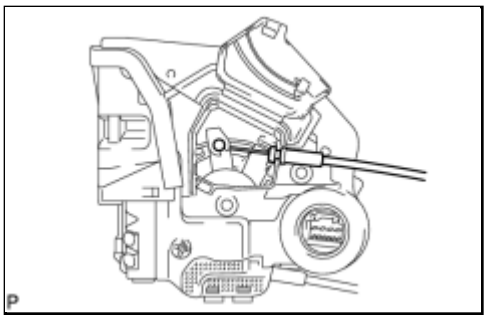
(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.



(c) Remove the door lock wiring harness seal from the rear door lock assembly.

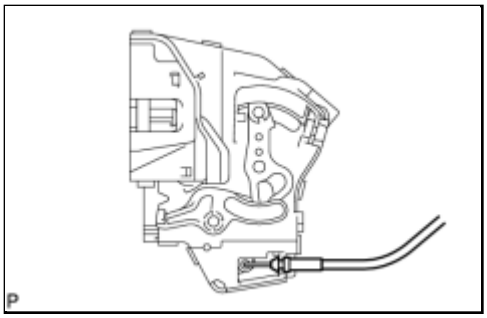
25. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)

(a) Remove the rear door lock remote control cable assembly.



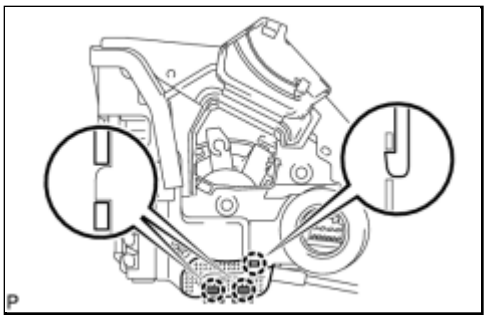
26. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Using a screwdriver, disengage the claw.



HINT:

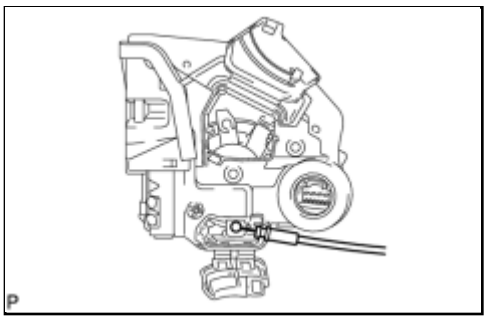
Tape the screwdriver tip before use.



(b) Remove the rear door lock remote control cable assembly.

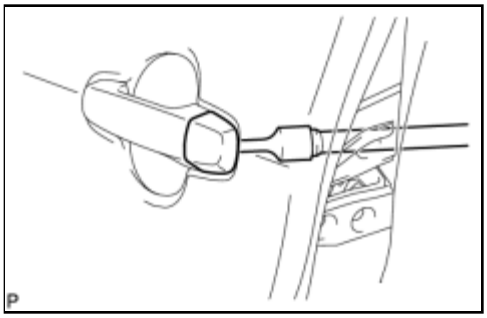
27. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)

(a) Remove the rear door inside locking cable assembly.



28. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)

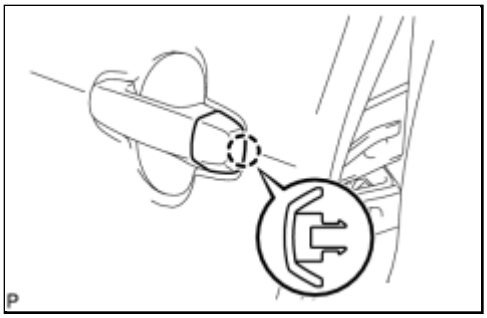
(a) Using a screwdriver, disengage the 3 claws.



HINT:

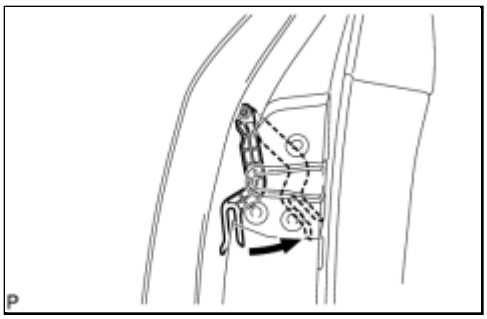
Tape the screwdriver tip before use.

(b) Remove the rear door inside locking cable assembly.



29. REMOVE REAR DOOR OUTSIDE HANDLE COVER

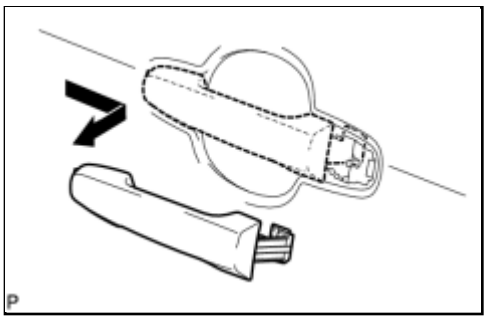
(a) Using a "TORX" socket wrench (T30), loosen the screw.



HINT:

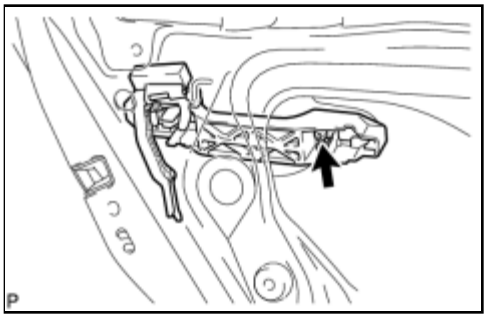
The screw cannot be removed because it is integrated into the rear door outside handle frame sub-assembly.

(b) Disengage the claw and remove the rear door outside handle cover.



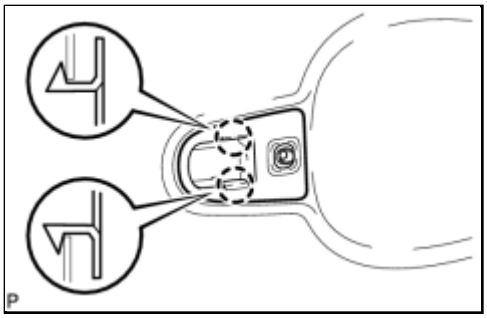
30. REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Pull and hold the release plate of the rear door outside handle frame sub-assembly as shown in the illustration.



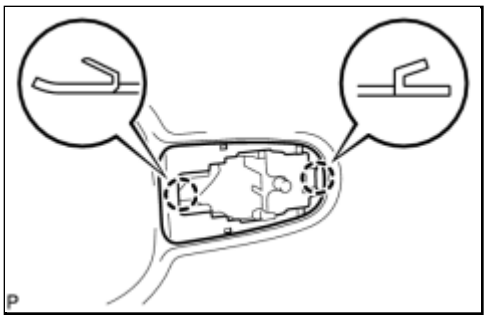
NOTICE:

The release plate may interfere with the rear door outside handle assembly and may be damaged when removing the rear door outside handle assembly, unless the release plate of the rear door outside handle frame sub-assembly is pulled and held.



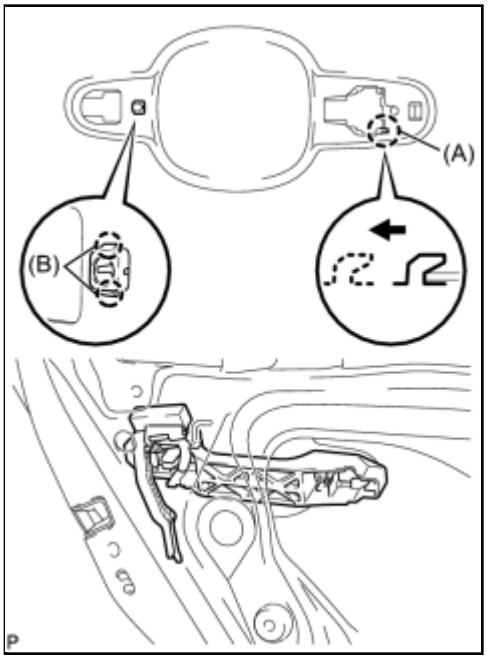
(b) Remove the rear door outside handle assembly as shown in the illustration.

31. REMOVE REAR DOOR FRONT OUTSIDE HANDLE PAD



(a) Using a "TORX" socket wrench (T30), remove the screw.

(b) Disengage the 2 claws and remove the rear door front outside handle pad.



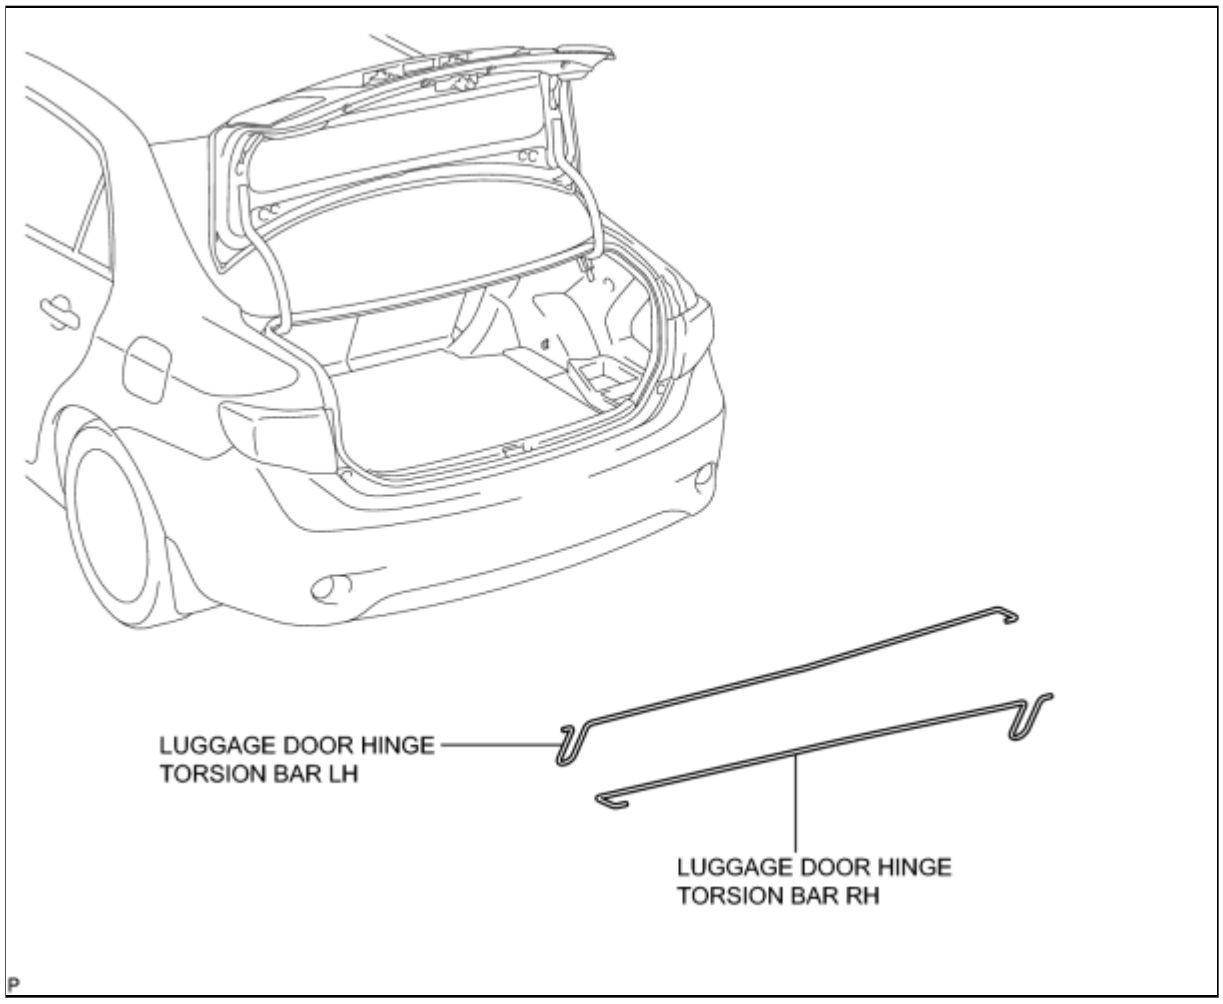
32. REMOVE REAR DOOR REAR OUTSIDE HANDLE PAD

(a) Disengage the 2 claws and remove the rear door rear outside handle pad.

33. REMOVE REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Disengage the 2 claws (B).

(b) Disengage the claw (A) and remove the rear door outside handle frame sub-assembly.



34. REMOVE REAR DOOR BELT MOULDING ASSEMBLY INFO

35. REMOVE NO. 2 BLACK OUT TAPE (w/ Black Out Tape) INFO

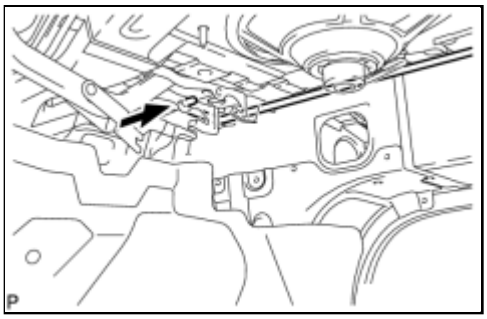
Title: DOOR / HATCH: LUGGAGE DOOR HINGE TORSION BAR: INSTALLATION (2010 Corolla)		

INSTALLATION

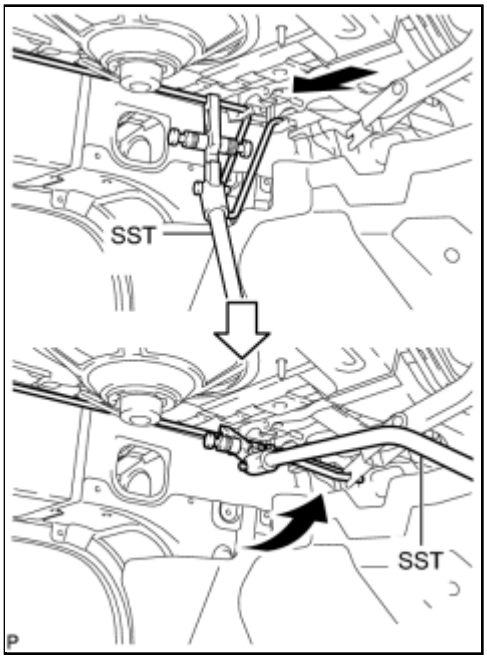


HINT:

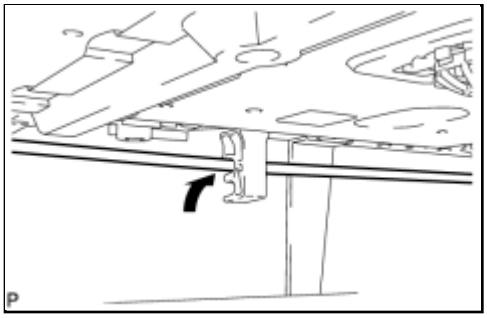
- Install the RH side first, then the LH side.
- After installing the torsion bar, use your hand to open and close the luggage door. Make sure that the luggage door can be opened and closed smoothly.

1. INSTALL LUGGAGE DOOR HINGE TORSION BAR RH

(a) Check the identification mark on the luggage door hinge torsion bar RH.



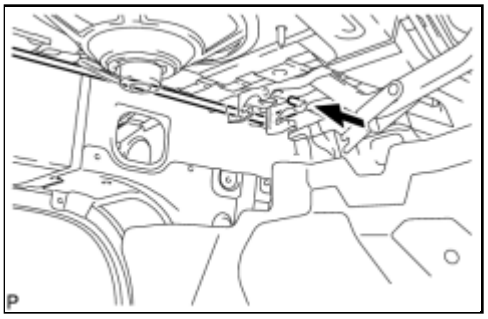
for TMC Made:
When replacing the luggage door hinge torsion bar RH with a new one:
Pink
When reusing the luggage door hinge torsion bar RH:
Red
for TMMC, NUMMI Made without Rear Spoiler:
Red
for TMMC, NUMMI Made with Rear Spoiler:
Yellow



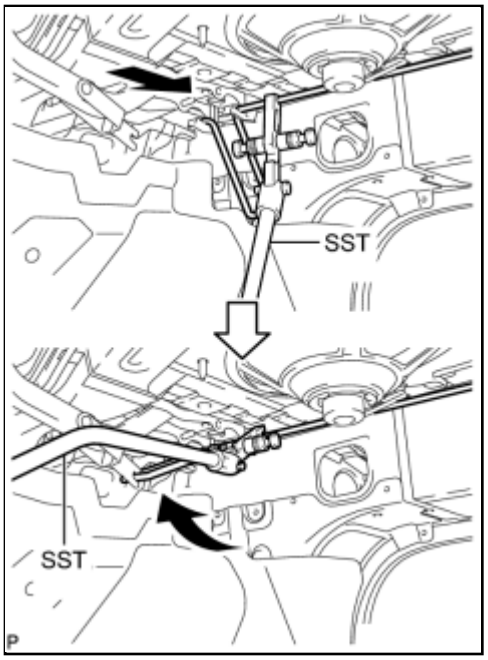
(b) Connect the left end of the luggage door hinge torsion bar RH to the vehicle body as shown in the illustration.

(c) Using SST, connect the right end of the luggage door hinge torsion bar RH to install it on the vehicle body as shown in the illustration.

SST: 09804-24010



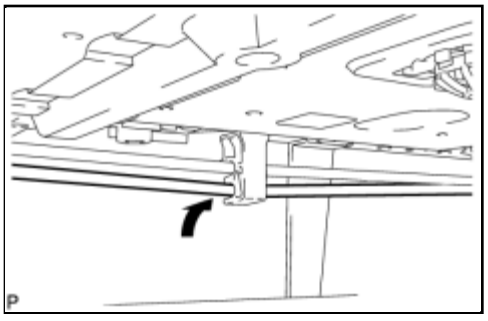
(d) Connect the luggage door hinge torsion bar RH to the luggage compartment door torsion bar support as shown in the illustration.



2. INSTALL LUGGAGE DOOR HINGE TORSION BAR LH

(a) Check the identification mark on the luggage door hinge torsion bar LH.

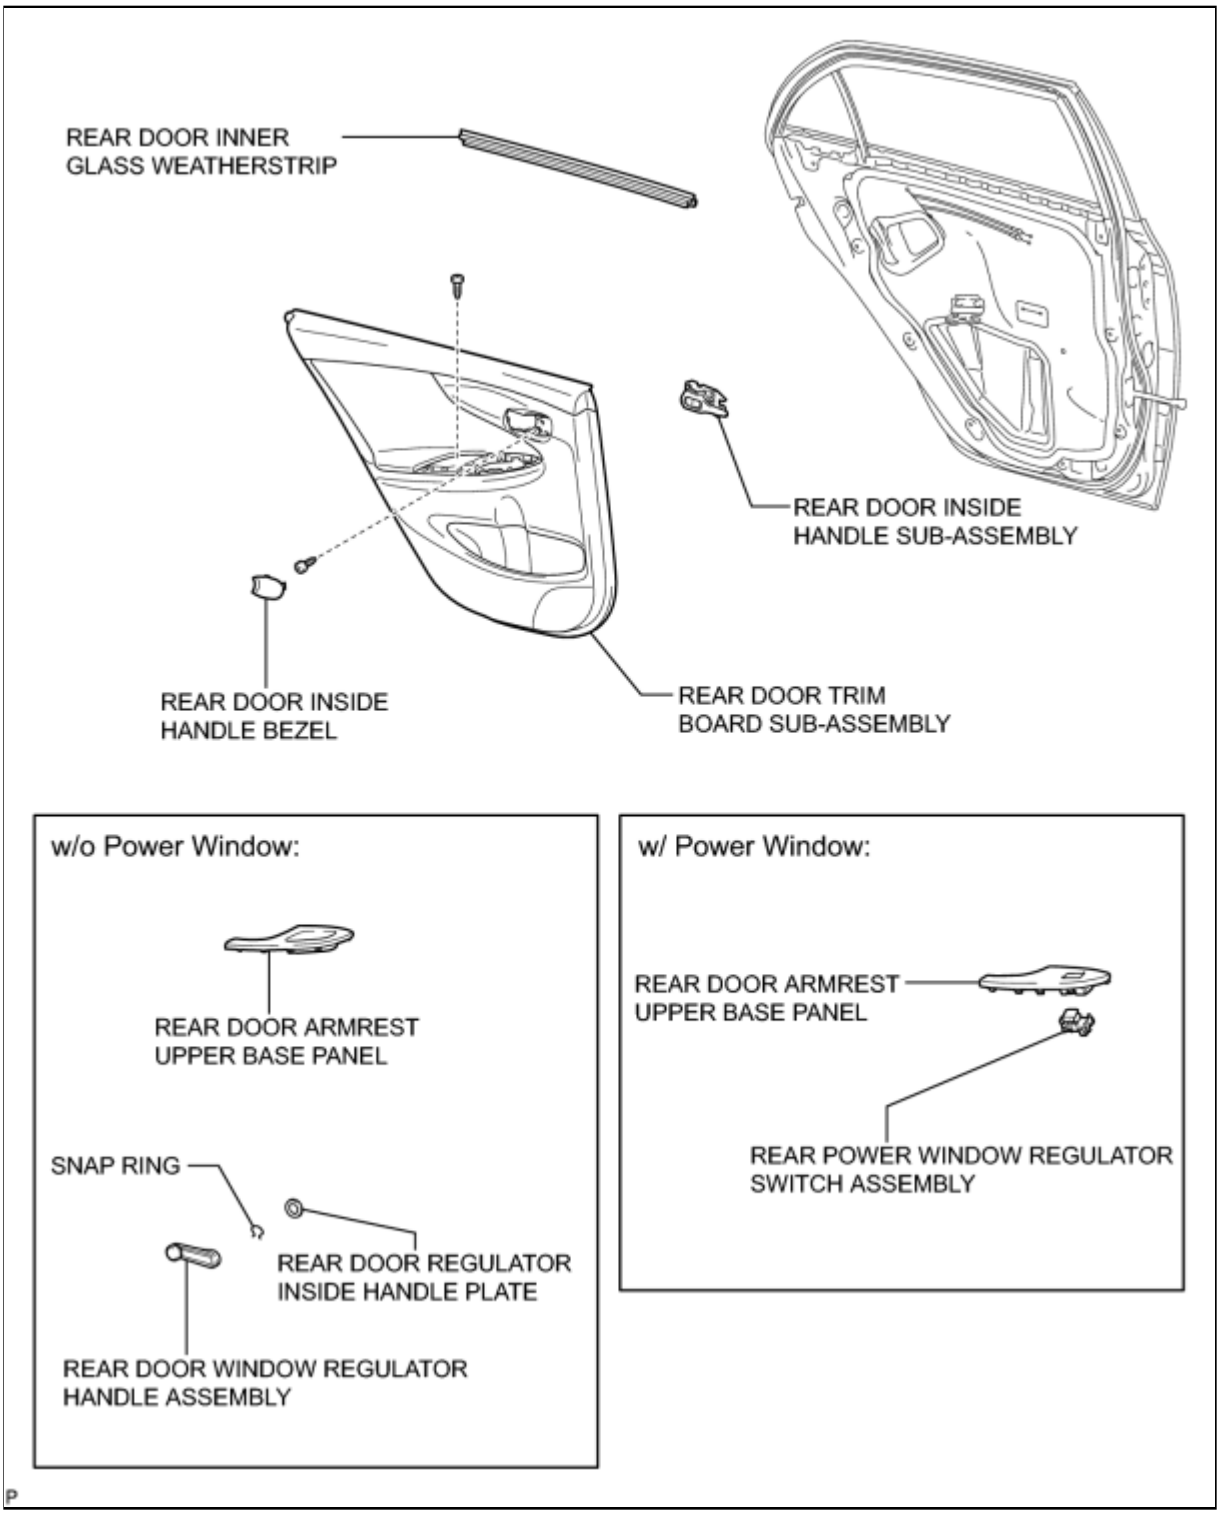
for TMC Made:
When replacing the luggage door hinge torsion bar LH with a new one:
Orange
When reusing the luggage door hinge torsion bar LH:
Light Blue
for TMMC, NUMMI Made without Rear Spoiler:
Light Blue
for TMMC, NUMMI Made with Rear Spoiler:
White



(b) Connect the right end of the luggage door hinge torsion bar LH to the vehicle body as shown in the illustration.

(c) Using SST, connect the left end of the luggage door hinge torsion bar LH to install it on the vehicle body as shown in the illustration.

SST: 09804-24010



(d) Connect the luggage door hinge torsion bar LH to the luggage compartment door torsion bar support as shown in the illustration.

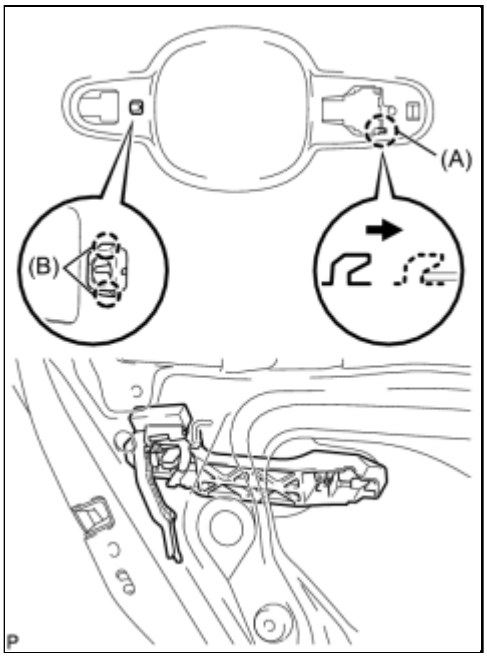
Title: DOOR / HATCH: REAR DOOR: REASSEMBLY (2010 Corolla)		

REASSEMBLY

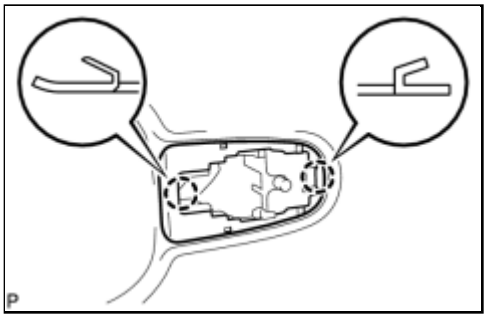


1. REPAIR INSTRUCTION (w/ Black Out Tape) INFO

2. INSTALL NO. 2 BLACK OUT TAPE (w/ Black Out Tape) INFO

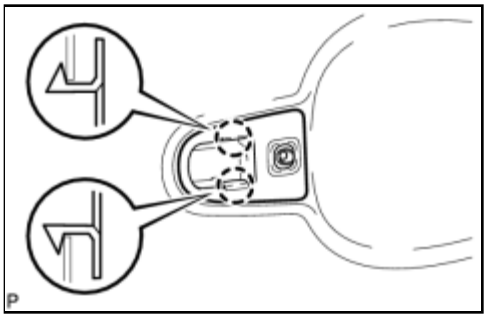
3. INSTALL REAR DOOR BELT MOULDING ASSEMBLY INFO

4. INSTALL REAR DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY



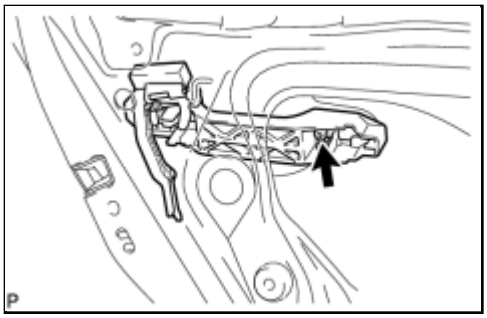
(a) Apply MP grease to the sliding parts of the rear door outside handle frame sub-assembly.

(b) Engage the claw (A) and install the rear door outside handle frame sub-assembly.



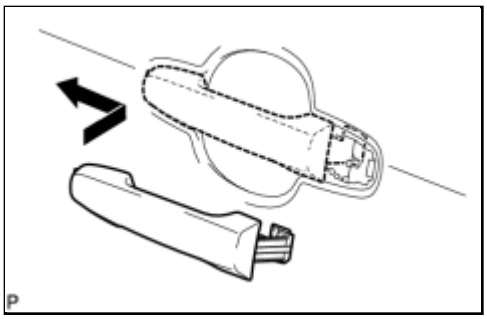
(c) Engage the 2 claws (B).

5. INSTALL REAR DOOR REAR OUTSIDE HANDLE PAD



(a) Engage the 2 claws and install the rear door rear outside handle pad.

6. INSTALL REAR DOOR FRONT OUTSIDE HANDLE PAD



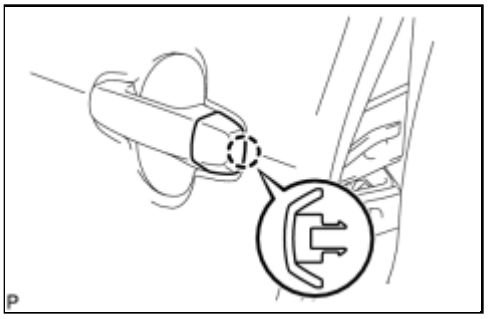
(a) Engage the 2 claws and install the rear door front outside handle pad.

(b) Using a "TORX" socket wrench (T30), install the screw.

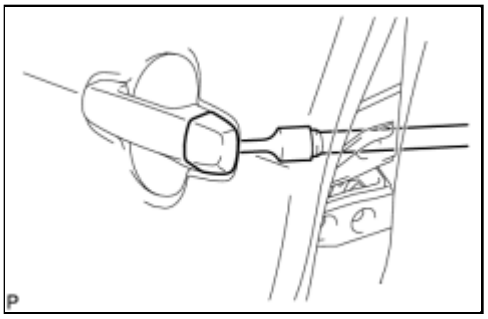
Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

7. INSTALL REAR DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the rear door outside handle assembly into the rear door outside handle frame.



NOTICE:

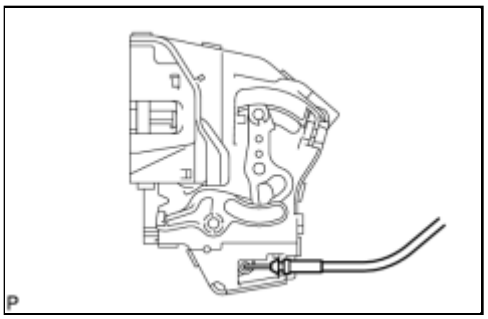


If the bellcrank lever is not pulled and held when installing the outside handle, the bellcrank lever will interfere with the outside handle and the release plate will be damaged.

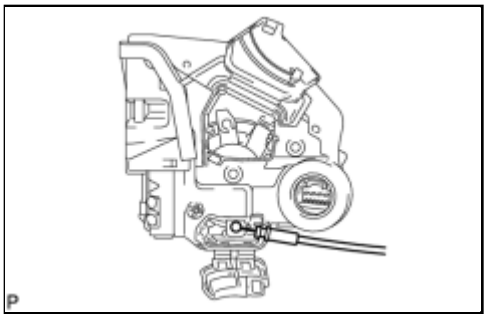
(b) Insert the rear end of the rear door outside handle assembly into the rear door outside handle frame. Next, slide the rear door outside handle assembly toward the front of the vehicle to install it.

8. INSTALL REAR DOOR OUTSIDE HANDLE COVER

(a) Engage the claw and install the rear door outside handle cover.

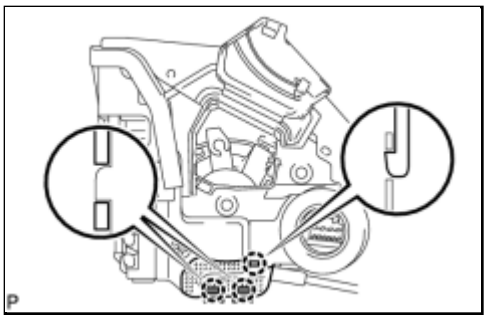


(b) Using a "TORX" socket wrench (T30), install the rear door outside handle cover with the screw.



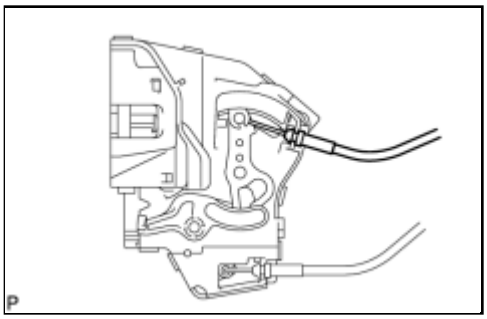
Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)

9. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)

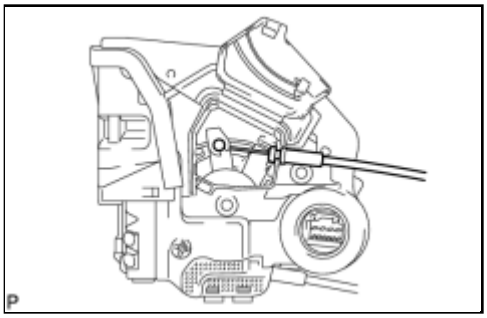


(a) Install the rear door inside locking cable assembly.

10. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)

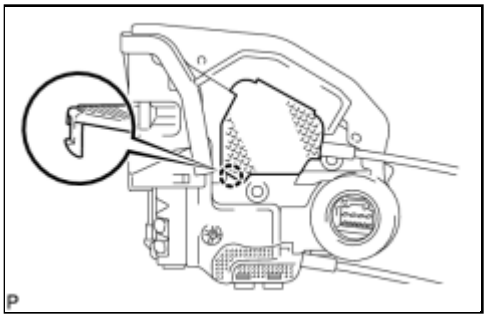


(a) Install the rear door inside locking cable assembly.



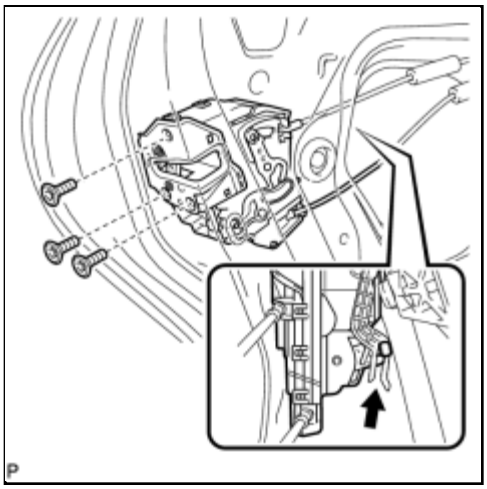
(b) Engage the 3 claws.

11. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)



(a) Install the rear door lock remote control cable assembly.

12. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)



(a) Install the rear door lock remote control cable assembly.

(b) Engage the claw.

13. INSTALL REAR DOOR LOCK ASSEMBLY (w/o Power Door Lock)

(a) Apply MP grease to the sliding parts of the rear door lock assembly.

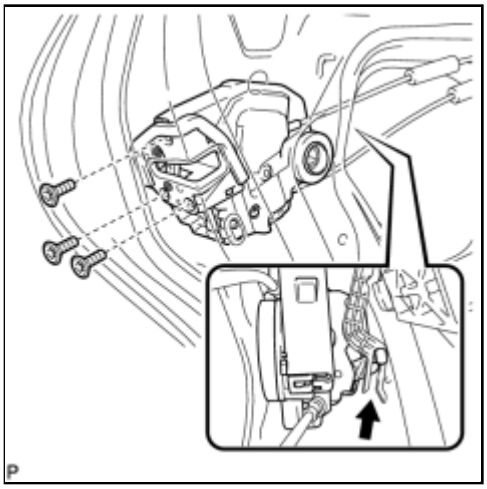
(b) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

(c) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

(d) Using a "TORX" socket wrench (T30), install the rear door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

14. INSTALL REAR DOOR LOCK ASSEMBLY (w/ Power Door Lock)



NOTICE:

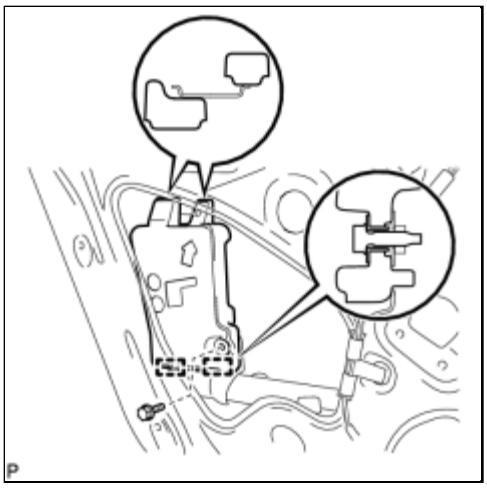
- When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the rear door lock assembly.

(a) Apply MP grease to the sliding parts of the rear door lock assembly.

(b) Install a new door lock wiring harness seal to the rear door lock assembly.

(c) Insert the rear door lock assembly to the rear door outside

handle release plate, and set it to the rear door panel.



(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

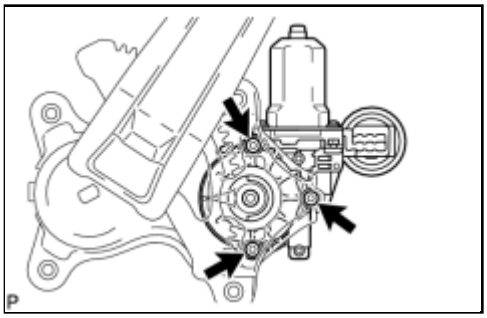
(e) Using a "TORX" socket wrench (T30), install the rear door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(f) Connect the connector.

15. INSTALL SEPARATOR DOOR NO. 2 STIFFENER CUSHION

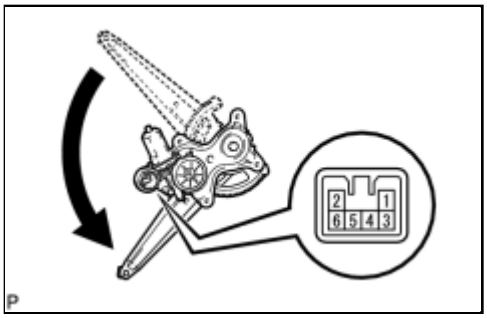
(a) Insert the 2 guides and install the separator door No. 2 stiffener cushion with the bolt as shown in the illustration.



16. INSTALL REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY (w/ Power Window)

NOTICE:

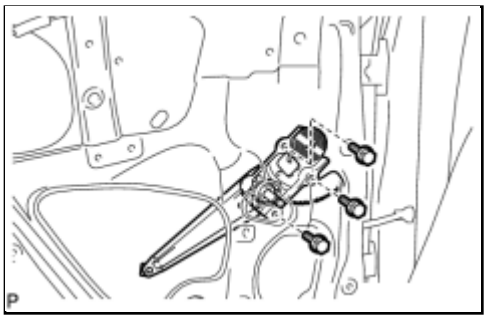
The regulator arm must be below the intermediate position when installing the rear power window regulator motor assembly.



(a) Using a "TORX" socket wrench (T25), install the rear power window regulator motor assembly with the 3 screws.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

HINT:

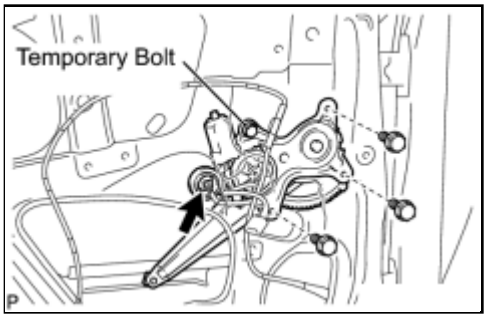


A new rear window regulator uses self-tapping screws to thread new installation holes when the self-tapping screws are inserted.

(b) Connect a positive (+) lead from the battery to terminal 2, and a negative (-) lead of the battery to terminal 1 of the rear power window regulator motor assembly to move the lift arm to the position shown in the illustration.

17. INSTALL REAR DOOR WINDOW REGULATOR ASSEMBLY (w/o Power Window)

(a) Apply MP grease to the sliding parts of the rear door window regulator assembly.



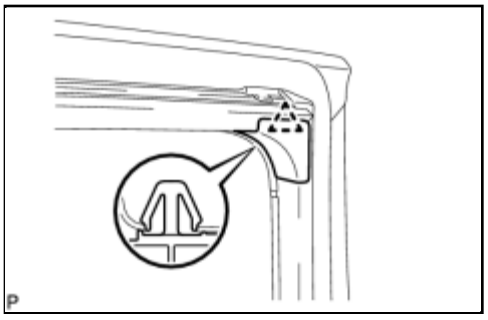
(b) Install the rear door window regulator assembly with the 3 bolts.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

18. INSTALL REAR DOOR WINDOW REGULATOR SUB-ASSEMBLY (w/ Power Window)

(a) Apply MP grease to the sliding parts of the rear door window regulator sub-assembly.

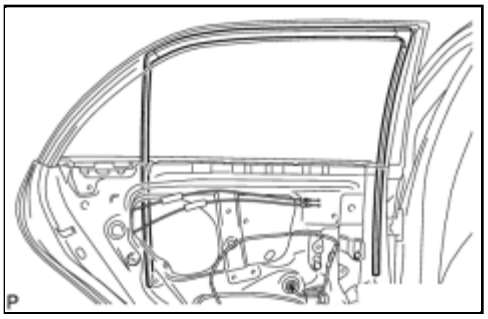
(b) Install the temporary bolt to the rear door window regulator sub-assembly.



(c) Temporarily install the rear door window regulator sub-assembly.

(d) Tighten the temporary bolt and 3 bolts to install the rear door window regulator sub-assembly.

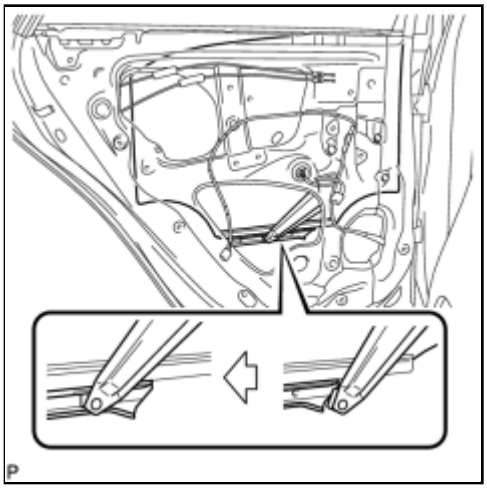
Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)



(e) Connect the connector.

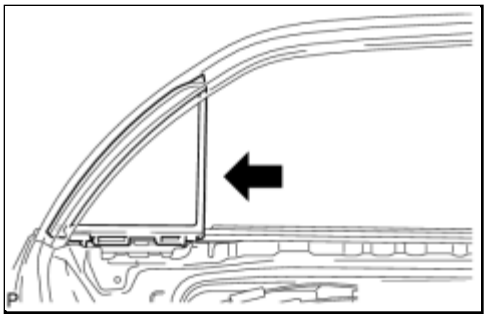
19. INSTALL REAR DOOR FRAME GARNISH

(a) Install a new rear door frame garnish with the clip.



20. INSTALL REAR DOOR GLASS RUN

(a) Install the rear door glass run.

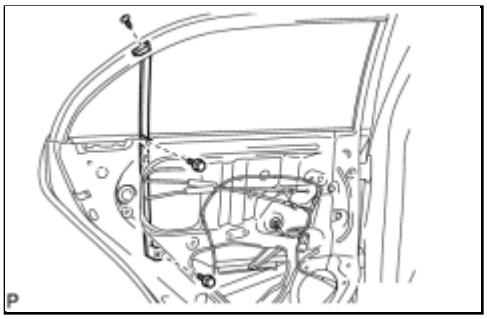


21. INSTALL REAR DOOR GLASS SUB-ASSEMBLY

(a) Slide the rear door glass sub-assembly to install it as shown in the illustration.

22. INSTALL REAR DOOR QUARTER WINDOW GLASS

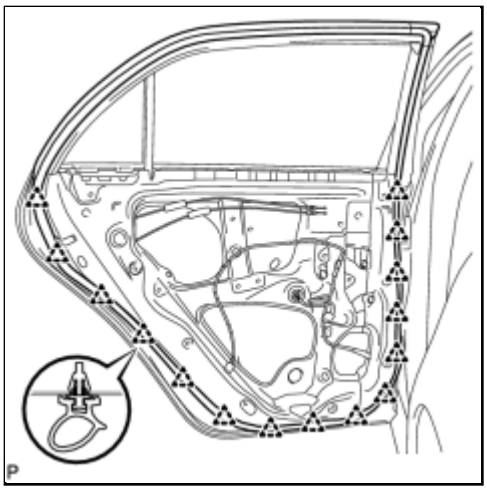
(a) Install the rear door quarter window glass to the rear door quarter window weatherstrip.



(b) Install the rear door quarter window glass together with the rear door quarter window weatherstrip in the direction indicated by the arrow in the illustration.

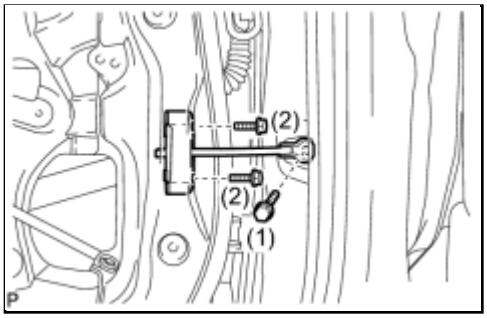
23. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY

(a) Insert the rear door window division bar sub-assembly from above.



(b) Install the rear door glass run to the rear door window division bar sub-assembly.

(c) Install the rear door window division bar sub-assembly with the 2 bolts and screw.

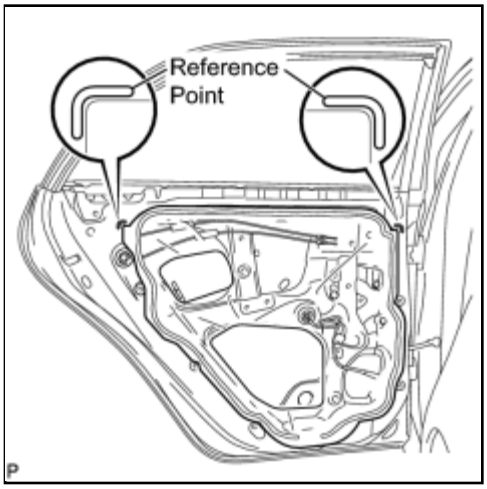


Torque: 6.2 N·m (63 kgf·cm, 55in·lbf)

24. INSTALL REAR DOOR WEATHERSTRIP

(a) Engage the 15 clips and install the rear door weatherstrip.

25. INSTALL REAR DOOR CHECK ASSEMBLY

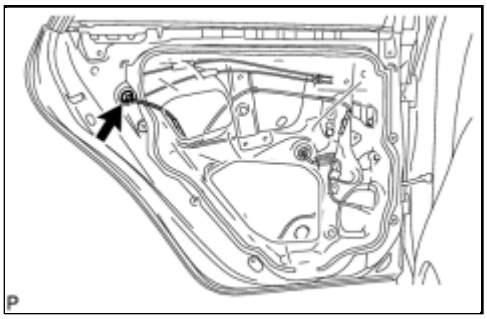


(a) Install the rear door check assembly with the 3 bolts.

Bolt (1) - Torque: 30 N·m (306 kgf·cm, 22ft·lbf)
Bolt (2) - Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

26. INSTALL REAR DOOR SERVICE HOLE COVER

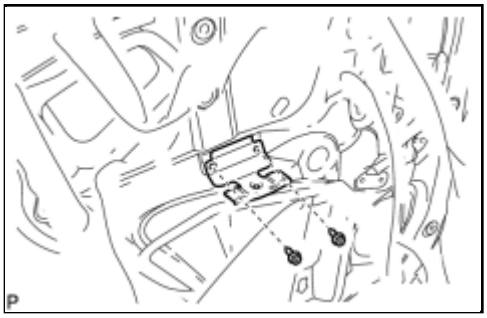
(a) Apply butyl tape to the rear door panel.



(b) Pass the rear door lock remote control cable, rear door inside locking cable and each connector through a new rear door service hole cover.

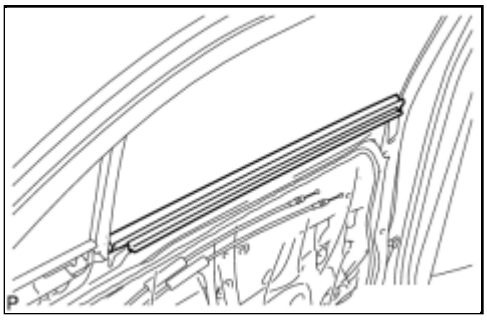
(c) Attach the rear door service hole cover according to the reference points on the rear door panel.

NOTICE:



Securely install the rear door service hole cover preventing wrinkles and air bubbles.

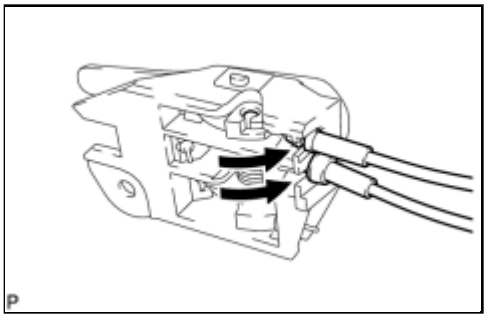
(d) w/ Power door lock:



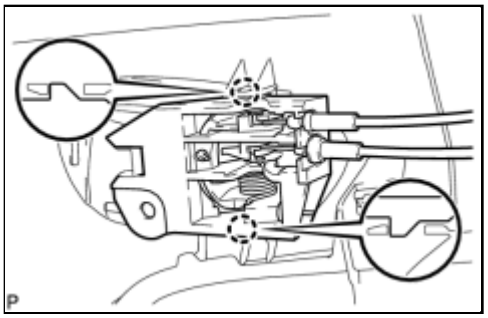
(1) Connect the connector.

27. INSTALL REAR DOOR TRIM BRACKET

(a) Install the rear door trim bracket with the 2 screws.

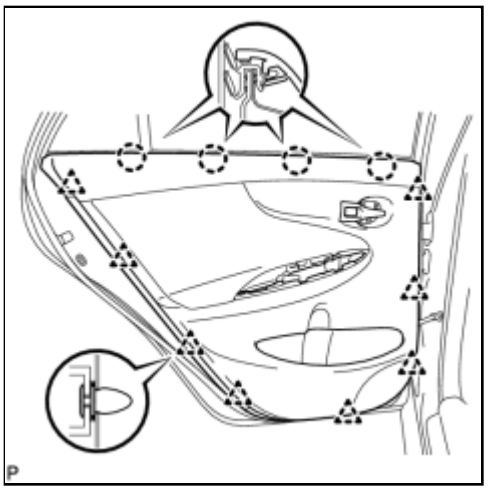


28. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP



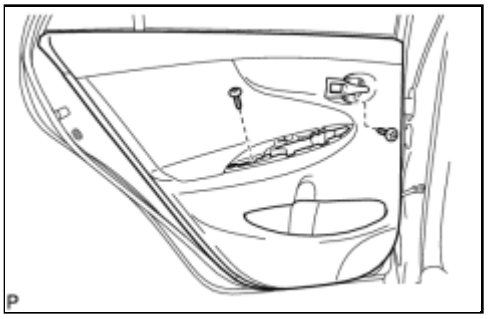
(a) Install the rear door inner glass weatherstrip.

29. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY

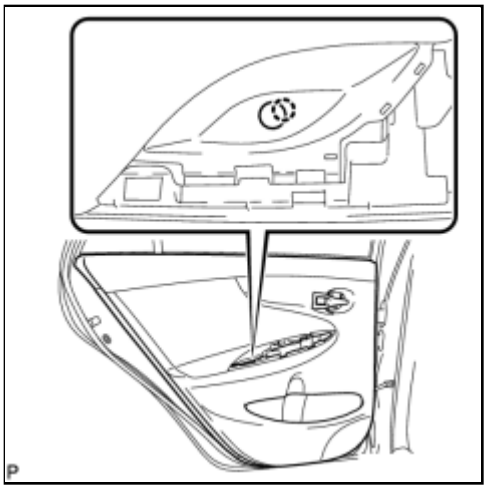


(a) Connect the rear door lock remote control cable and rear door inside locking cable to the rear door inside handle.

(b) Engage the 2 claws and install the rear door inside handle sub-assembly to the rear door trim board.

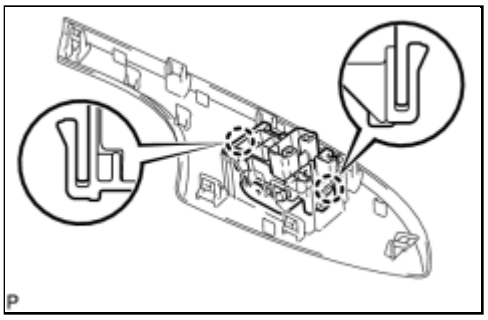


30. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY



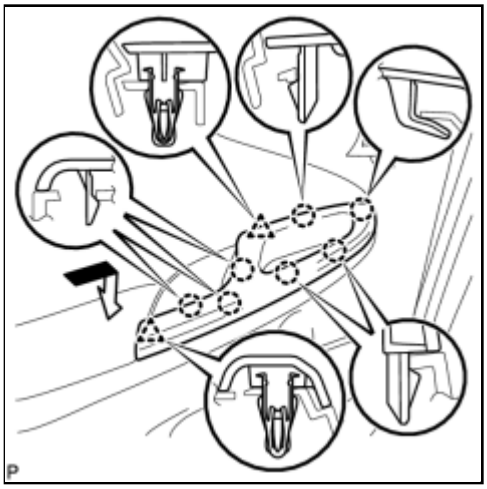
(a) Engage the rear door trim board with the 4 claws on the rear door inner glass weatherstrip.

(b) Engage the 8 clips to install the rear door trim board to the rear door panel.



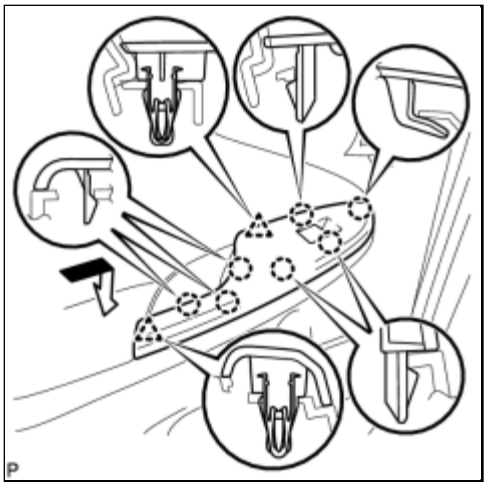
(c) Install the 2 screws.

(d) Engage the claw to install the door armrest cap.



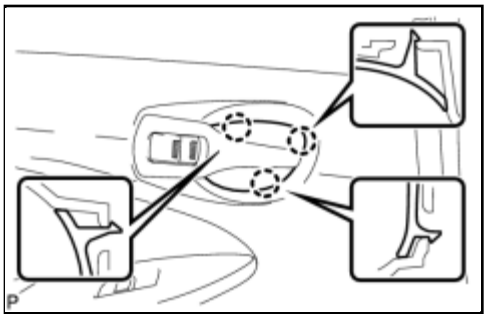
31. INSTALL REAR POWER WINDOW REGULATOR SWITCH ASSEMBLY (w/ Power Window)

(a) Engage the 2 claws and install the rear power window regulator switch assembly.



32. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/o Power Window)

(a) Engage the 2 clips and 7 claws, and install the rear door armrest upper base panel.

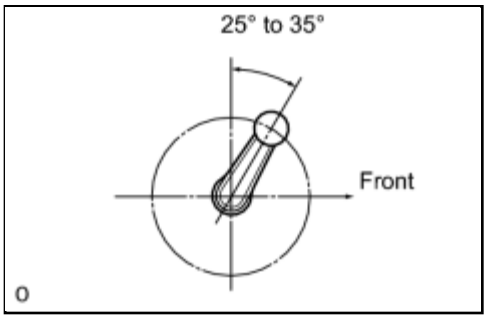


33. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/ Power Window)

(a) Connect the connector.

(b) Engage the 2 clips and 7 claws, and install the rear door armrest upper base panel.

34. INSTALL REAR DOOR INSIDE HANDLE BEZEL



(a) Engage the 3 claws and install the rear door inside handle bezel.

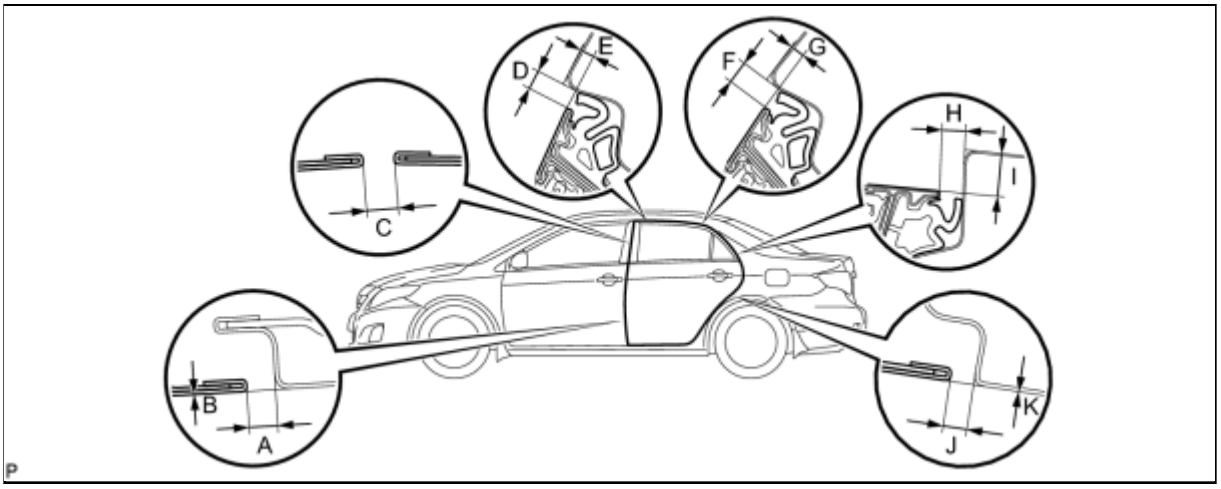
35. INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window)

(a) Temporarily install the rear door window regulator handle assembly and fully close the window glass.

(b) Install the rear door regulator inside handle plate.

(c) Install the snap ring to the rear door window regulator handle assembly.

(d) Install the rear door window regulator handle assembly as shown in the illustration.



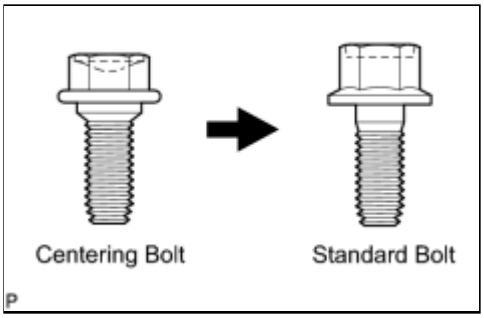
36. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XBL01WX
Title: DOOR / HATCH: REAR DOOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT REAR DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through K are within each standard range.



Standard Clearance:

AREA	MEASUREMENT	AREA	MEASUREMENT
A	3.0 to 6.0 mm (0.118 to 0.236 in.)	G	3.6 to 6.6 mm (0.142 to 0.260 in.)
B	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)	H	4.8 to 7.8 mm (0.189 to 0.307 in.)
C	3.0 to 6.0 mm (0.118 to 0.236 in.)	I	12.4 to 15.4 mm (0.488 to 0.606 in.)
D	3.8 to 6.8 mm (0.150 to 0.268 in.)	J	2.5 to 5.5 mm (0.0984 to 0.217 in.)
E	3.2 to 6.2 mm (0.126 to 0.244 in.)	K	-1.5 to 1.5 mm (-0.0591 to 0.0591 in.)
F	5.0 to 8.0 mm (0.197 to 0.315 in.)	-	-

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XBJ02HX
Title: DOOR / HATCH: REAR DOOR: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

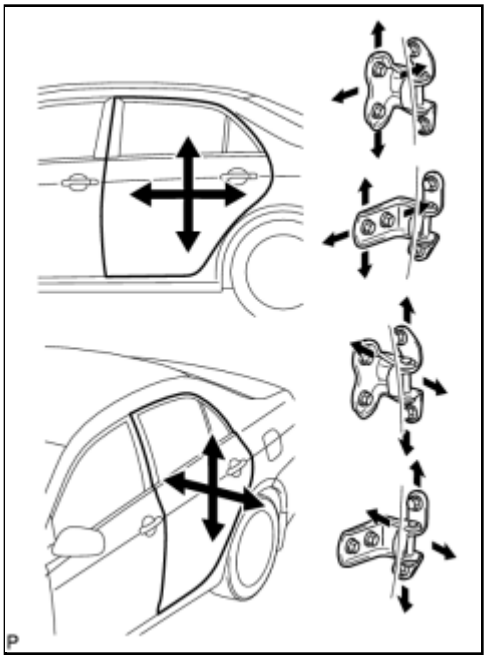
CAUTION:

Before adjusting the door positions of vehicles equipped with side and curtain shield airbags, be sure to disconnect the battery. After adjustment, check that the SRS warning light is operating normally and there are no SRS DTCs output.

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts when making adjustments.
- Specified torque for standard bolts is shown in the standard bolt chart INFO .

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



CAUTION:

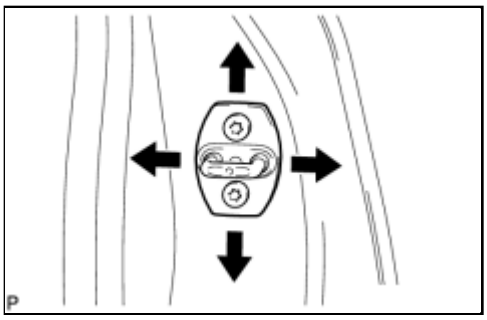
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO .

2. ADJUST REAR DOOR

(a) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.

SST: 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.



Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.

Unpainted door hinge installation surface (door panel side) - Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

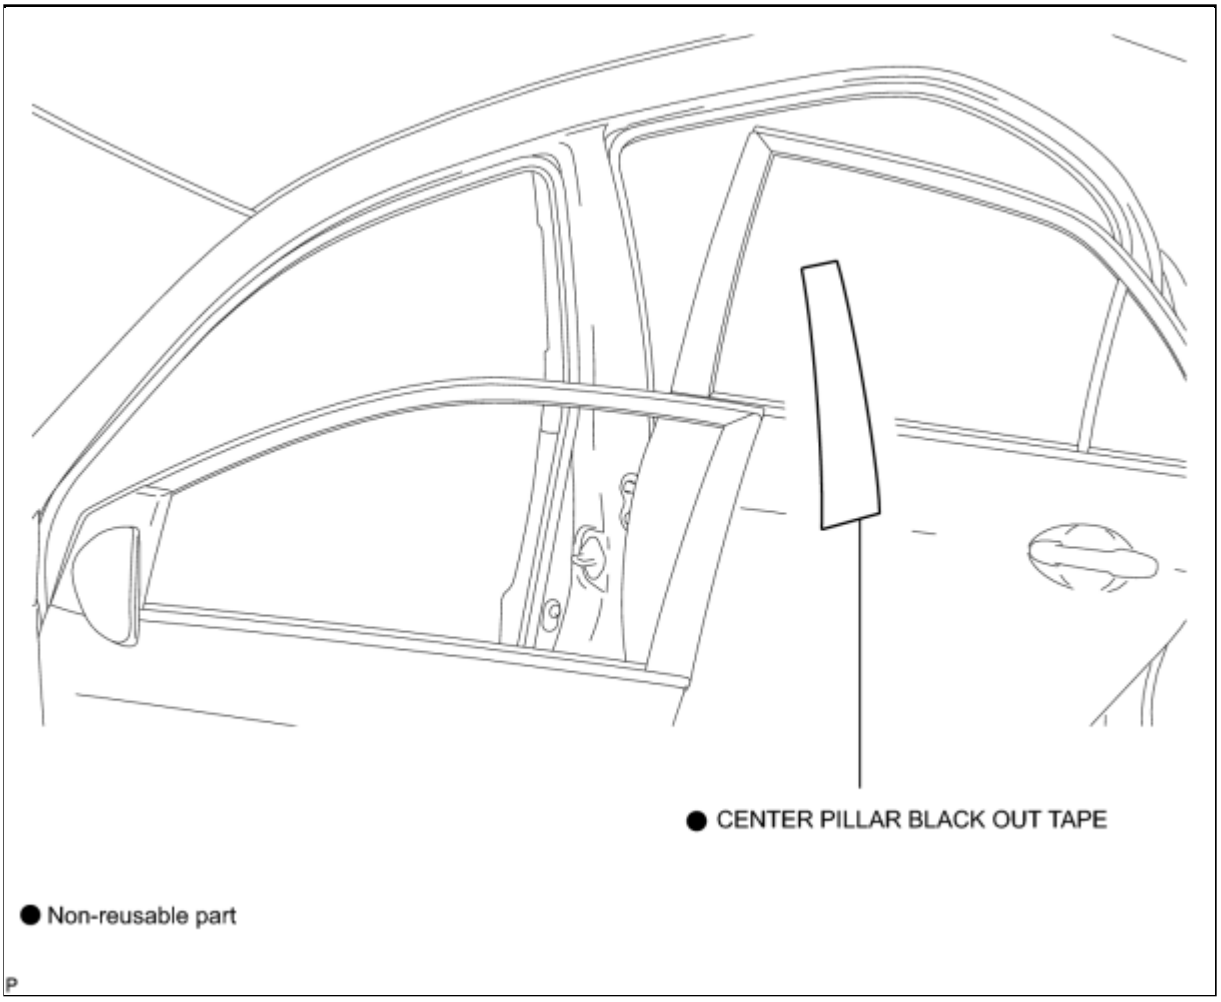
Painted door hinge installation surface (door panel side) - Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(e) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(f) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.

Torque: 23 N·m (235 kgf·cm, 17ft·lbf)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



4. INSPECT SRS WARNING LIGHT

INFO

Title: EXTERIOR PANELS / TRIM: BLACK OUT TAPE (for Center Pillar): COMPONENTS (2010 Corolla)		

COMPONENTS

ILLUSTRATION

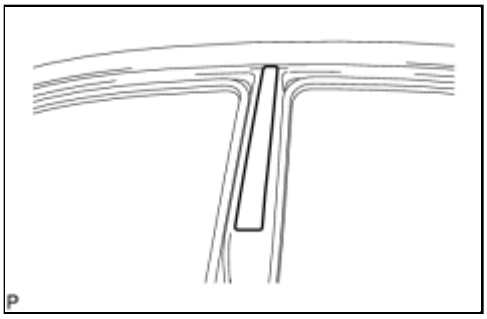
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000O5L018X
Title: EXTERIOR PANELS / TRIM: BLACK OUT TAPE (for Center Pillar): REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE CENTER PILLAR BLACK OUT TAPE



(a) Using a heat light, heat the center pillar black out tape.

Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(b) Pull back an edge of the center pillar black out tape and pull it parallel to the vehicle body to pull it off.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000O5K01AX
Title: EXTERIOR PANELS / TRIM: BLACK OUT TAPE (for Center Pillar): INSTALLATION (2010 Corolla)		

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When ambient temperature is below 15°C (59°F), perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 and 30°C (68 and 86°F) using a heat light. When ambient temperature is above 35°C (95°F), cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 and 30°C (68 and 86°F) prior to installation.

HINT:

- The most appropriate temperature for installing the tape is 25°C (77°F).
- When the temperature is low, the tape turns stiff and falls off easily. When the temperature is high, the tape loses elasticity.

(c) Before installation

(1) Remove any coating roughness and dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.

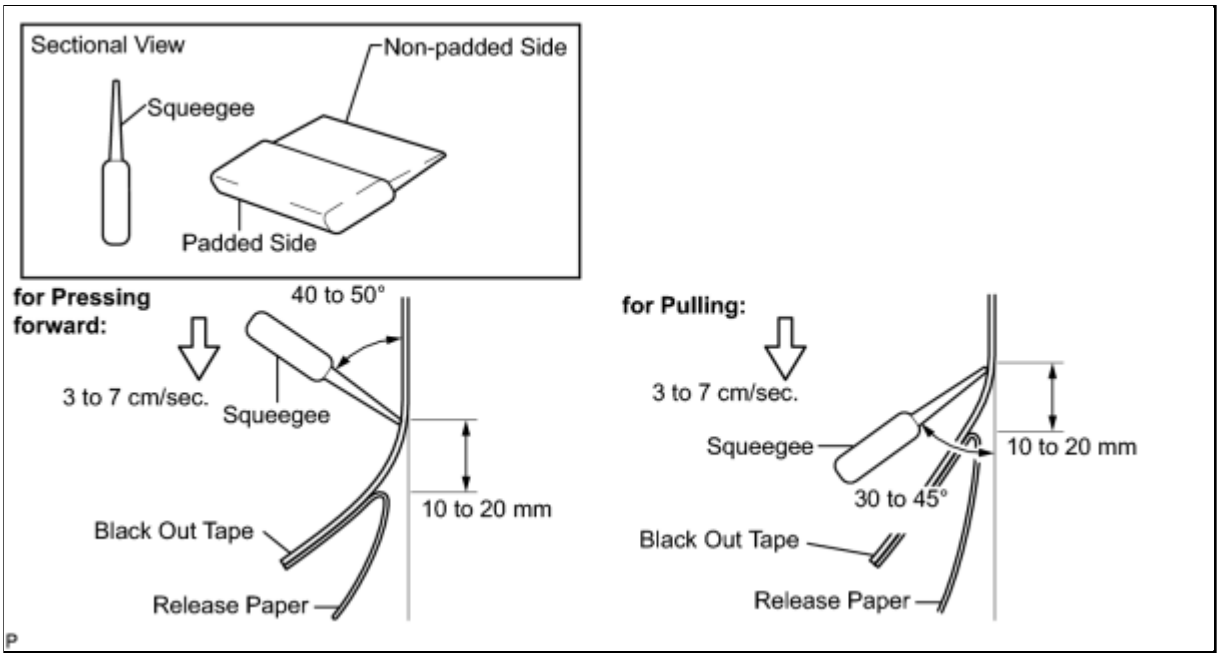
HINT:

Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.

NOTICE:



Do not bend the tape or leave it in high temperature places.

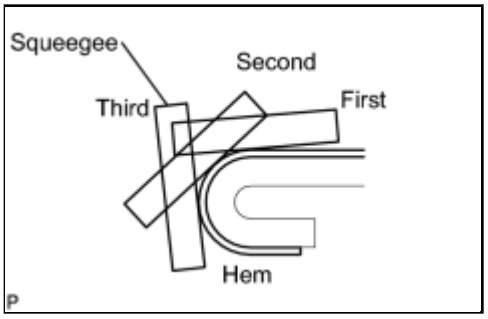
(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)

NOTICE:

- Conduct positioning of the tape with a high level of accuracy to achieve a neat finish and to avoid peeling.
- The tape cannot be reused because it deforms and will not fit any more after being removed.

(1) To avoid air bubbles, slightly raise the part of the tape that is going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at 40 to 50° (for pressing forward) or 30 to 45° (for pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf) at a constant slow speed of 3 to 7 cm (1.18 to 2.76 in.) per second.

NOTICE:



Be sure to observe the specified pressing speed, force, and angle of the squeegee to avoid wrinkles or air bubbles.

HINT:

- Either angle of the squeegee (for pressing forward or for pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm (0.393 to 0.787 in.) from the edge of the squeegee.

(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemmed surfaces)

(1) If it is difficult to press the tape, press it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small

hem.

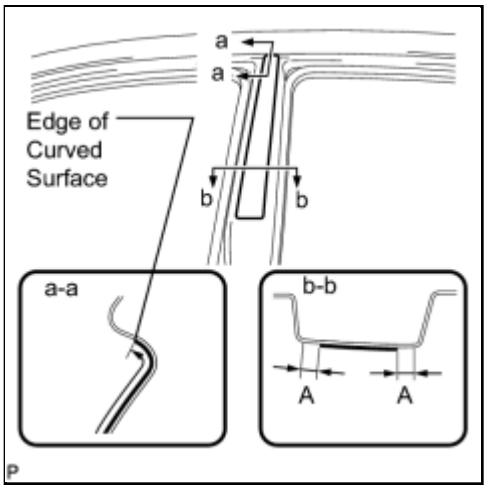
HINT:

When applying tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)

(1) Remove the release paper and apply the tape carefully with your fingers.

(2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it to avoid wrinkles on the tape and achieve a neat finish.



(h) Check after installation

(1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply new tape.

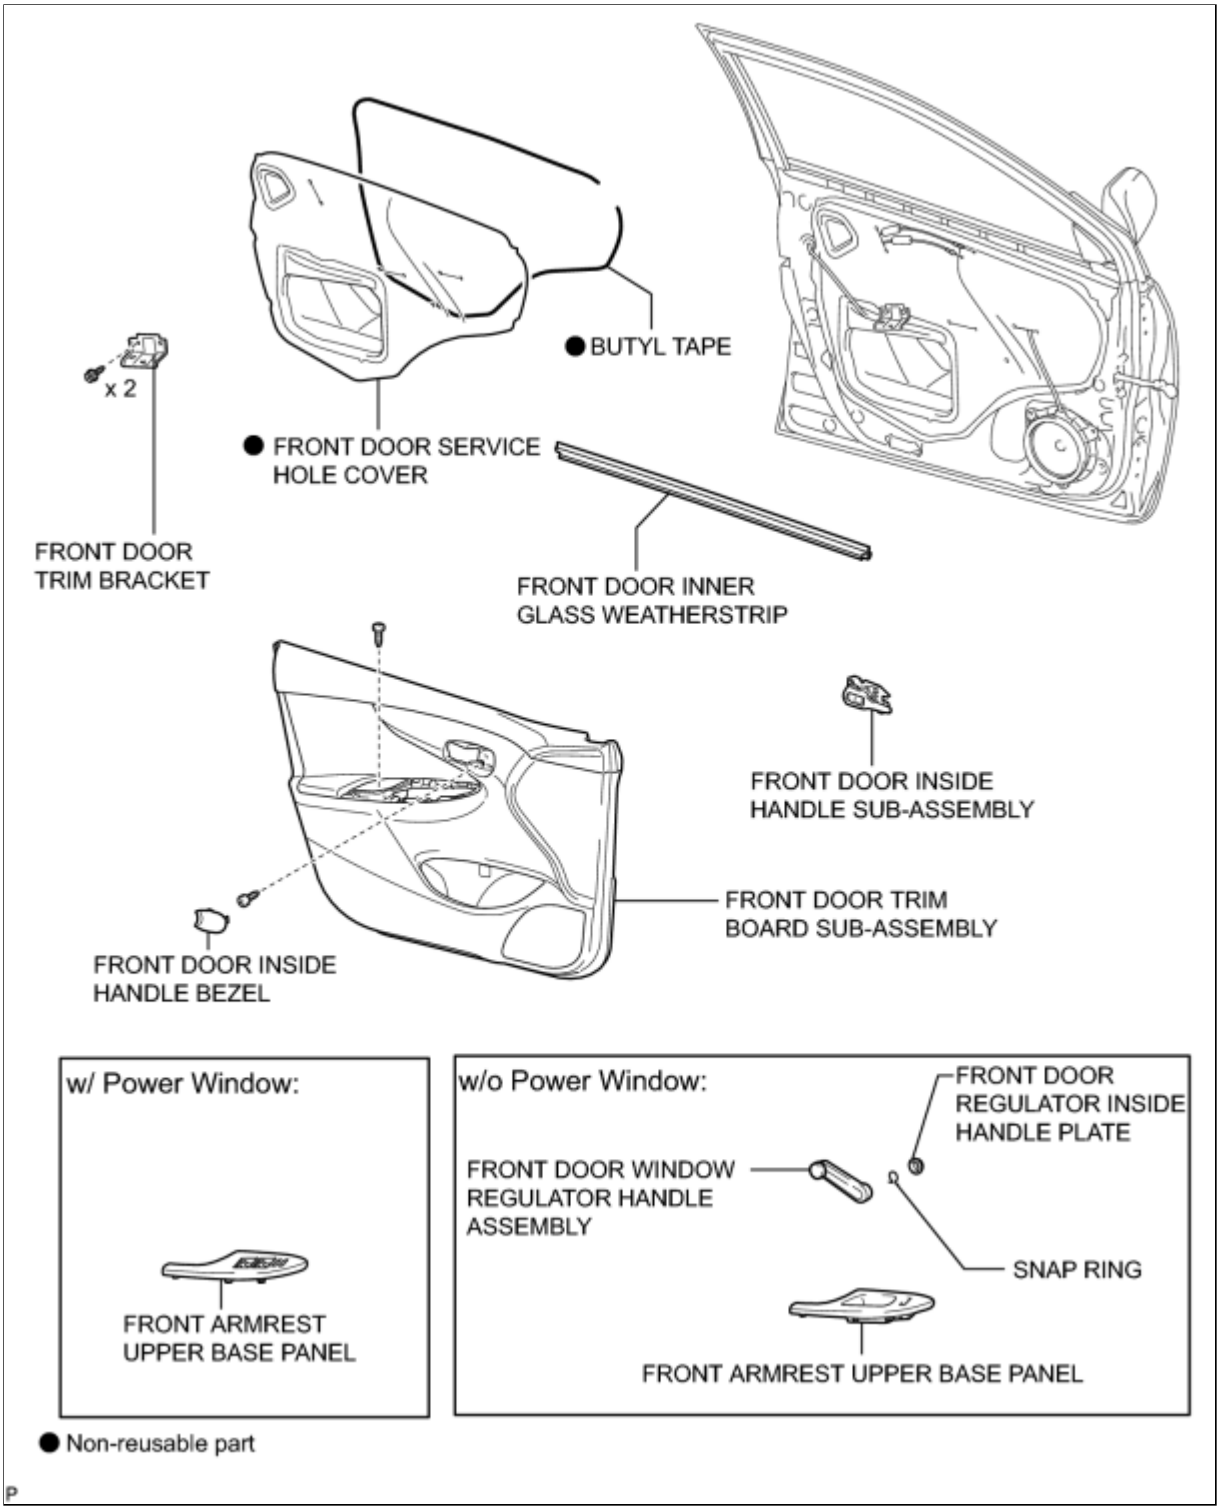
NOTICE:

Do not reuse the tape.

2. INSTALL CENTER PILLAR BLACK OUT TAPE

(a) Refer to the illustration to position the center pillar black out tape.

Reference Measurement:



AREA	MEASUREMENT
A	9.5 to 12.5 mm (0.374 to 0.492 in.)

(b) Remove the release paper and apply the tape.

14. REMOVE REAR DOOR BELT MOULDING ASSEMBLY INFO

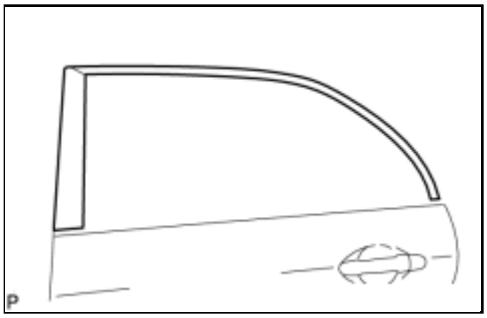
15. REMOVE REAR DOOR WEATHERSTRIP

(a) Remove the upper part of the rear door weatherstrip to the extent that allows removal of the black out tape.

16. REMOVE NO. 2 BLACK OUT TAPE

HINT:

When removing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.



Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(a) Using a heat light, heat the No. 2 black out tape.

(b) Pull back an edge of the No. 2 black out tape and pull it parallel to the vehicle body to pull it off.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000O5K019X
Title: EXTERIOR PANELS / TRIM: BLACK OUT TAPE (for Rear Door): INSTALLATION (2010 Corolla)		

INSTALLATION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When ambient temperature is below 15°C (59°F), perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 and 30°C (68 and 86°F) using a heat light. When ambient temperature is above 35°C (95°F), cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 and 30°C (68 and 86°F) prior to installation.

HINT:

- The most appropriate temperature for installing the tape is 25°C (77°F).
- When the temperature is low, the tape turns stiff and falls off easily. When the temperature is high, the tape loses elasticity.

(c) Before installation

(1) Remove any coating roughness and dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.

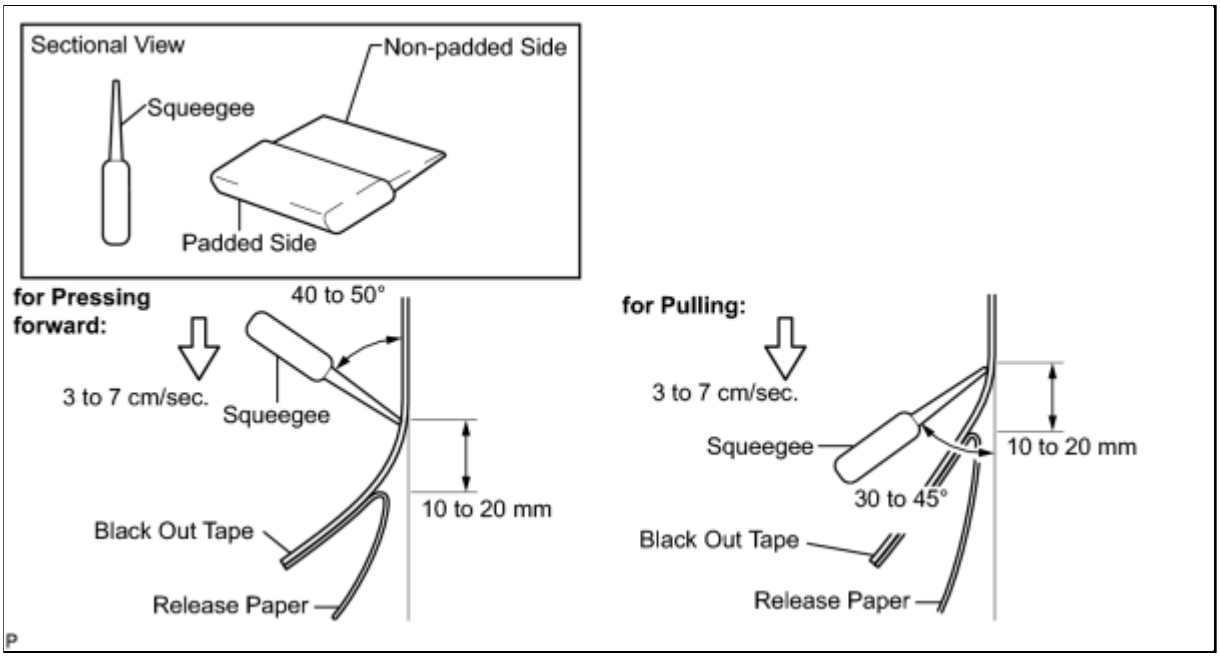
HINT:

Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.

NOTICE:



Do not bend the tape or leave it in high temperature places.

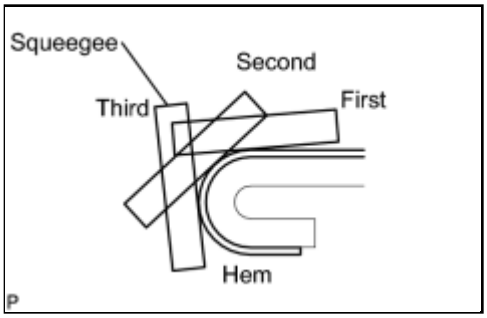
(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)

NOTICE:

- Conduct positioning of the tape with a high level of accuracy to achieve a neat finish and to avoid peeling.
- The tape cannot be reused because it deforms and will not fit any more after being removed.

(1) To avoid air bubbles, slightly raise the part of the tape that is going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at 40 to 50° (for pressing forward) or 30 to 45° (for pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf) at a constant slow speed of 3 to 7 cm (1.18 to 2.76 in.) per second.

NOTICE:



Be sure to observe the specified pressing speed, force, and angle of the squeegee to avoid wrinkles or air bubbles.

HINT:

- Either angle of the squeegee (for pressing forward or for pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm (0.393 to 0.787 in.) from the edge of the squeegee.

(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemmed surfaces)

(1) If it is difficult to press the tape, press it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small

hem.

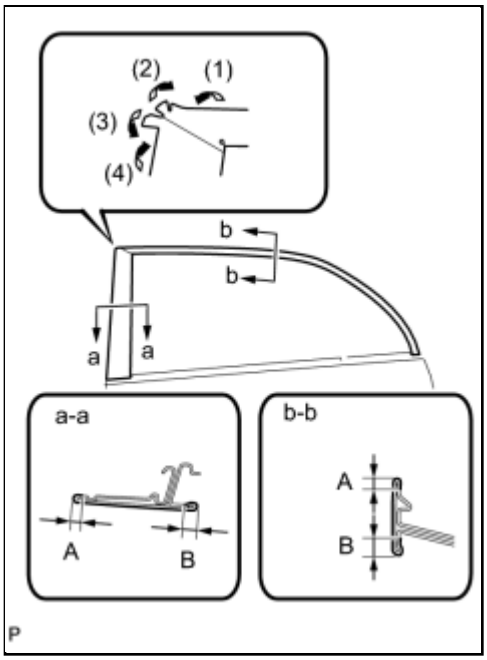
HINT:

When applying tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)

(1) Remove the release paper and apply the tape carefully with your fingers.

(2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it to avoid wrinkles on the tape and achieve a neat finish.



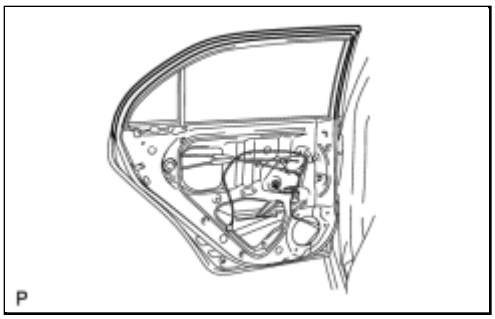
(h) Check after installation

(1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply new tape.

NOTICE:

Do not reuse the tape.

2. INSTALL NO. 2 BLACK OUT TAPE



(a) Refer to the illustration to position the No. 2 black out tape.

Reference Measurement:

AREA	MEASUREMENT
A	2 to 4 mm (0.0787 to 0.158 in.)
B	5 mm (0.197 in.)

(b) Remove the release paper and apply the tape.

3. INSTALL REAR DOOR WEATHERSTRIP

(a) Install the rear door weatherstrip.

4. INSTALL REAR DOOR BELT MOULDING ASSEMBLY INFO

5. INSTALL REAR DOOR GLASS RUN INFO

6. INSTALL REAR DOOR GLASS SUB-ASSEMBLY INFO

7. INSTALL REAR DOOR QUARTER WINDOW GLASS INFO

8. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY INFO

9. INSTALL REAR DOOR SERVICE HOLE COVER INFO

10. INSTALL REAR DOOR TRIM BRACKET INFO

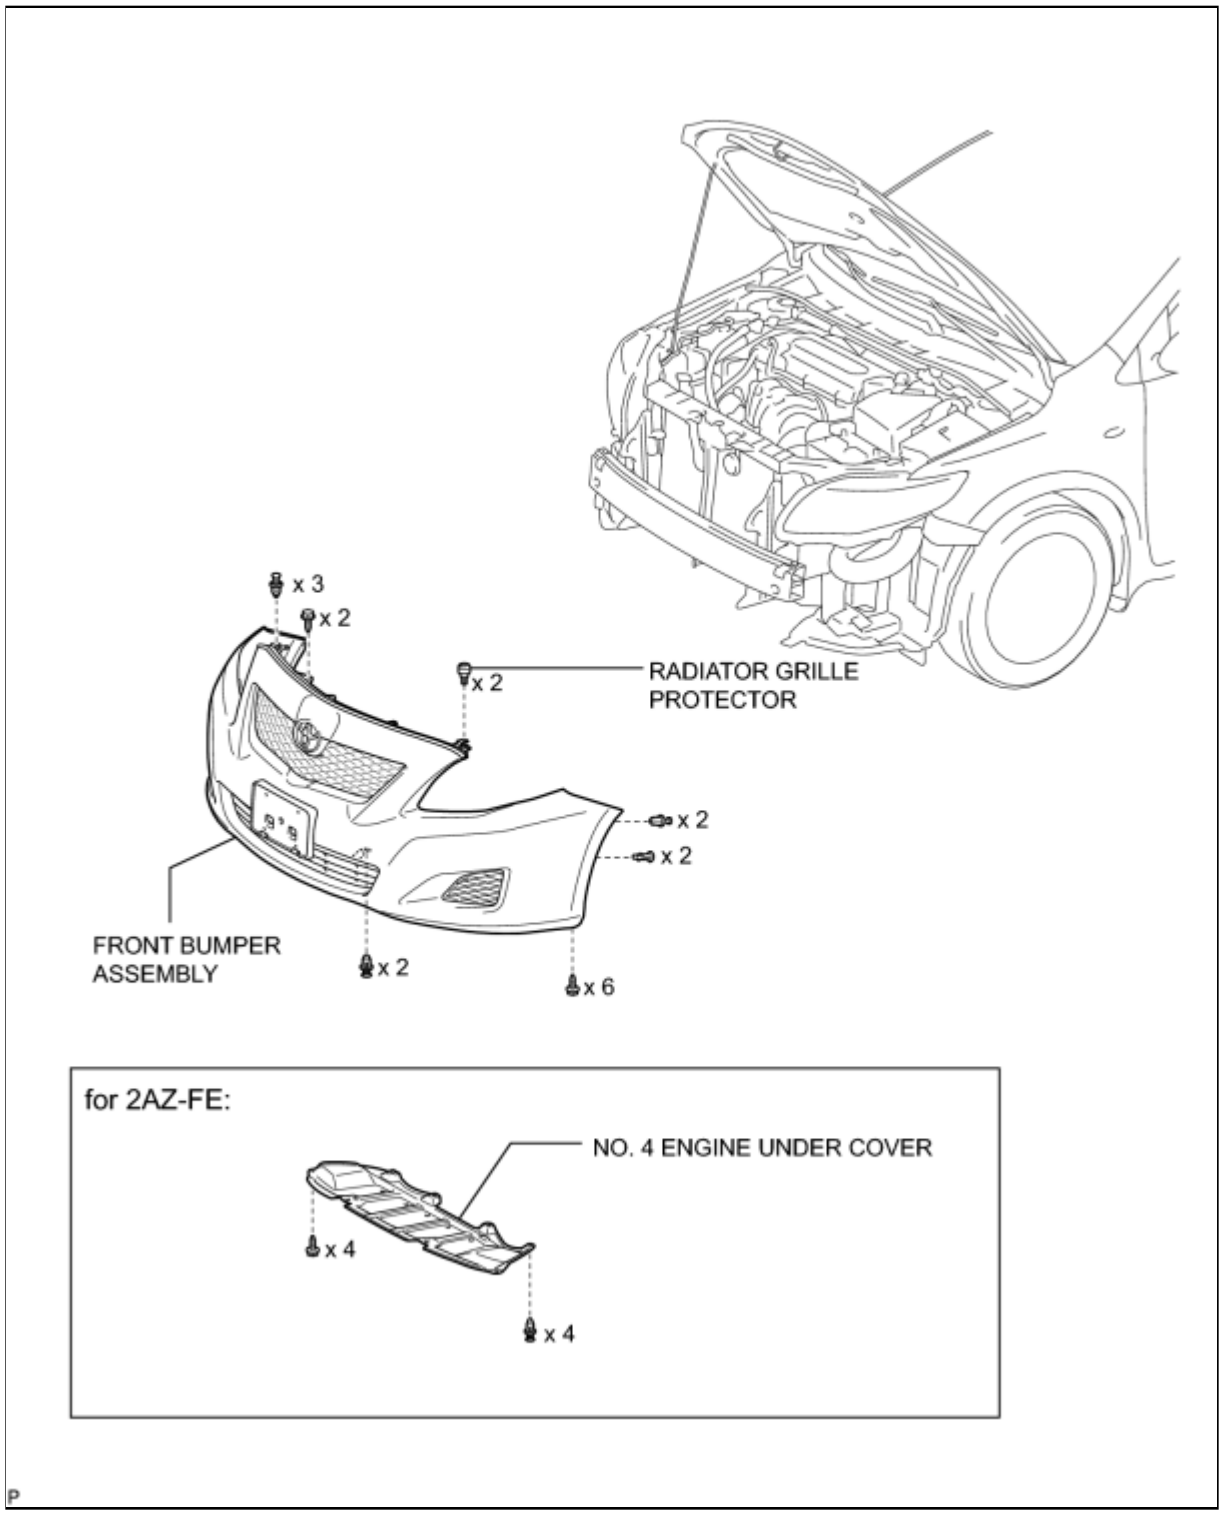
11. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP INFO

12. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY INFO

13. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY INFO

14. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/o Power Window) INFO

15. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/ Power Window) INFO



16. INSTALL REAR DOOR INSIDE HANDLE BEZEL INFO

17. INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

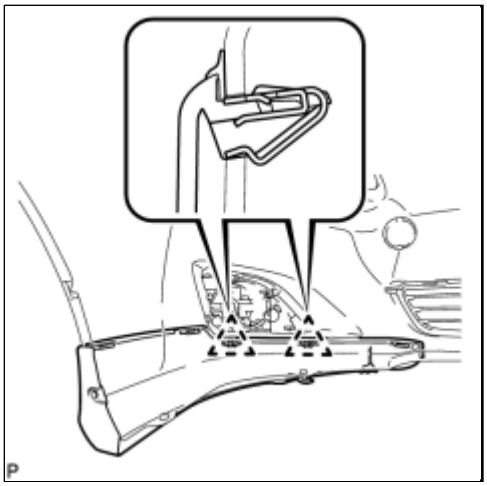
Title: EXTERIOR PANELS / TRIM: FRONT BUMPER: DISASSEMBLY (2010 Corolla)		

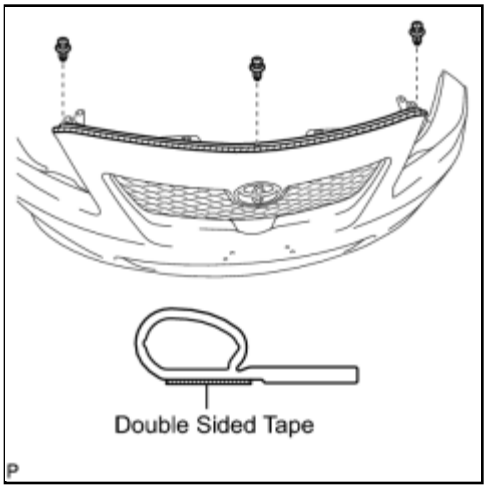
DISASSEMBLY



1. REMOVE FRONT SPOILER COVER LH (w/ Front Spoiler)

(a) Remove the screw and clip.

(b) Remove the 3 clips.

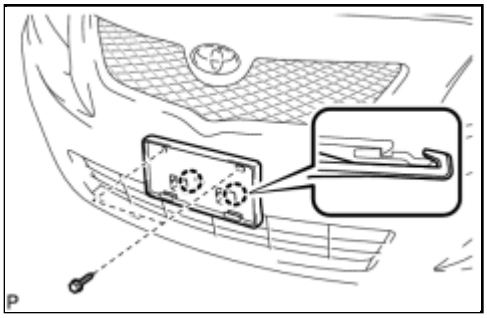


(c) Disengage the 2 claws and remove the front spoiler cover LH.

2. REMOVE FRONT SPOILER COVER RH (w/ Front Spoiler)

HINT:

Use the same procedure for the RH side and LH side.

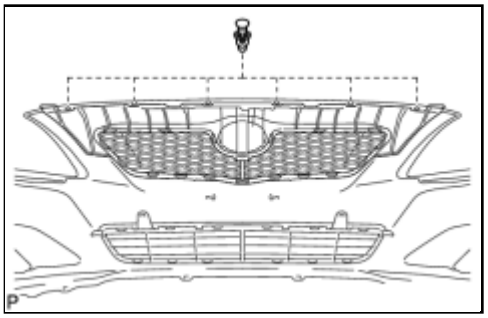


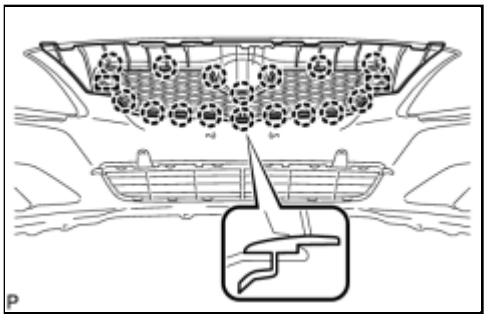
3. REMOVE HOOD TO FRONT END PANEL SEAL

(a) Remove the 3 clips.

(b) Remove the hood to front end panel seal.

4. REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET

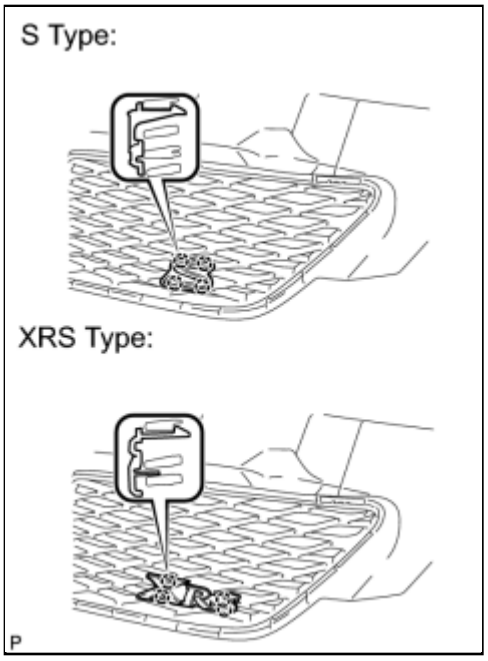




(a) Remove the 2 screws.

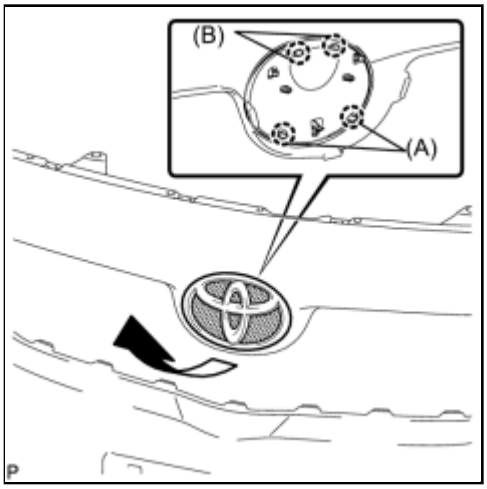
(b) Disengage the 2 claws and remove the front bumper extension mounting bracket.

5. REMOVE RADIATOR GRILLE



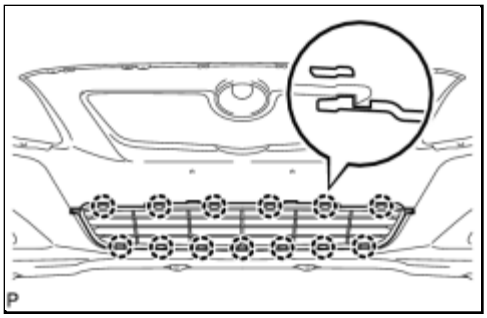
(a) Remove the 6 clips.

(b) Disengage the 16 claws and 2 guides, and remove the radiator grille.



6. REMOVE RADIATOR GRILLE NAME PLATE

(a) Disengage the 4 claws and remove the radiator grille name plate.



7. REMOVE FRONT PANEL EMBLEM

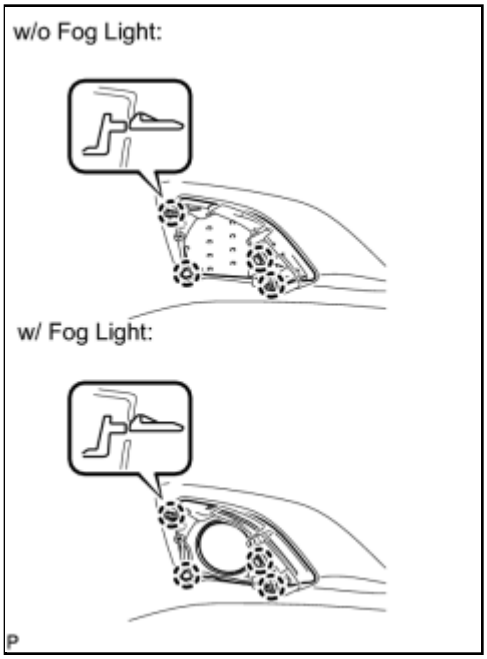
(a) Disengage the 2 claws (A).

(b) Disengage the 2 claws (B) and remove the front panel emblem.

8. REMOVE LOWER RADIATOR GRILLE

(a) Disengage the 13 claws and remove the lower radiator grille.

9. REMOVE FOG LIGHT ASSEMBLY LH (w/ Fog Light) INFO



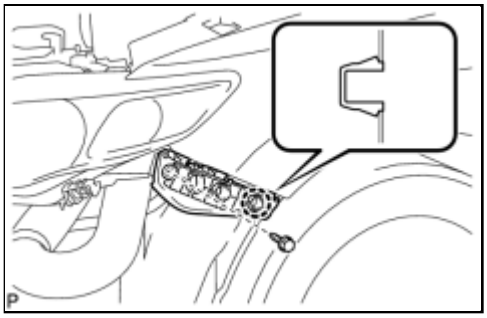
10. REMOVE FOG LIGHT ASSEMBLY RH (w/ Fog Light)

HINT:

Use the same procedure for the RH side and LH side.

11. REMOVE FOG LIGHT COVER LH

(a) Disengage the 4 claws and remove the fog light cover LH.



12. REMOVE FOG LIGHT COVER RH

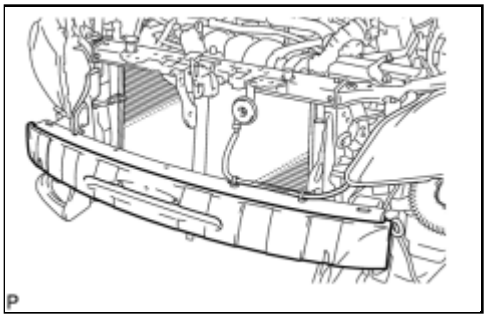
HINT:

Use the same procedure for the RH side and LH side.

13. REMOVE FRONT BUMPER SIDE SUPPORT LH

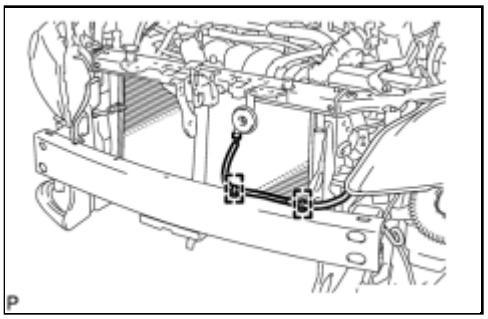
(a) Remove the bolt.

(b) Disengage the claw and remove the front bumper side support LH.



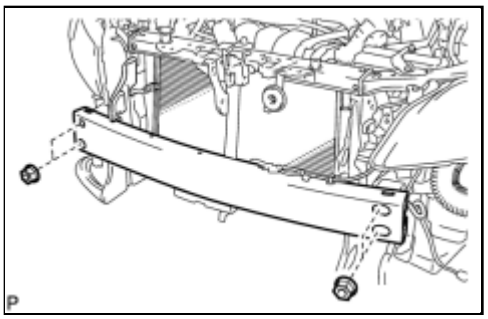
14. REMOVE FRONT BUMPER SIDE SUPPORT RH

HINT:



Use the same procedure for the RH side and LH side.

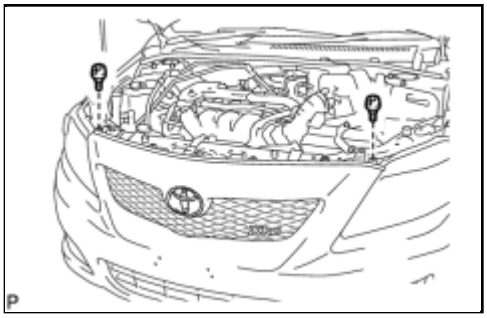
15. REMOVE FRONT BUMPER ENERGY ABSORBER



(a) Remove the front bumper energy absorber.

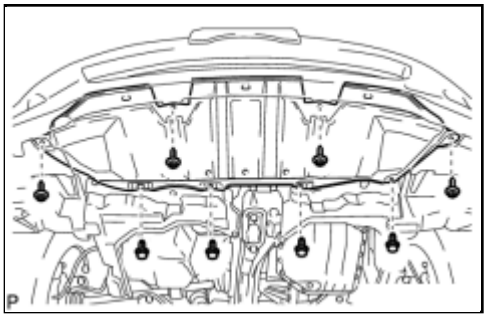
16. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Disengage each clamp.



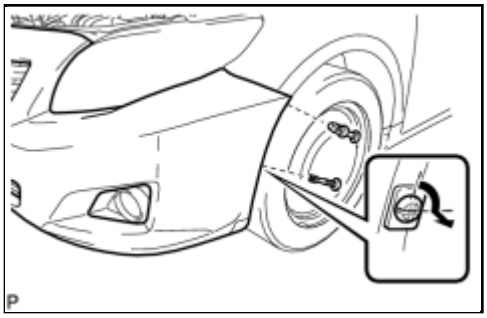
(b) Remove the 4 nuts and front bumper reinforcement sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WCN00CX
Title: EXTERIOR PANELS / TRIM: FRONT BUMPER: REMOVAL (2010 Corolla)		



REMOVAL

1. REMOVE RADIATOR GRILLE PROTECTOR



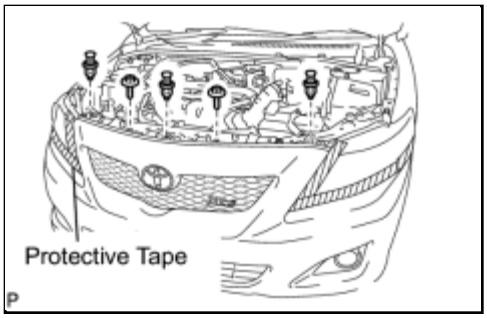
(a) Remove the 2 radiator grille protectors.

2. REMOVE NO. 4 ENGINE UNDER COVER (for 2AZ-FE)

(a) Remove the 4 screws, 4 clips and engine under cover.

3. REMOVE FRONT BUMPER ASSEMBLY

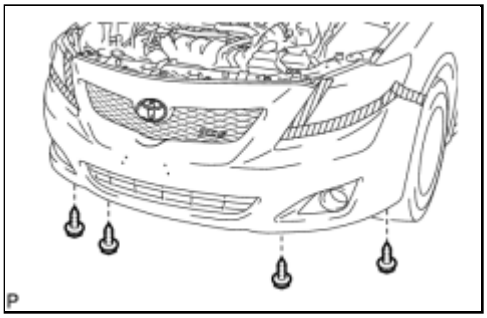
(a) Remove the clip.



HINT:

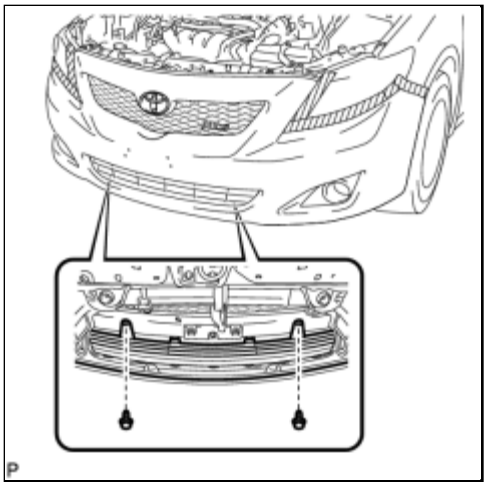
Use the same procedure for the RH side and LH side.

(b) Using a screwdriver, turn the pin 90 degrees and remove the pin hold clip.



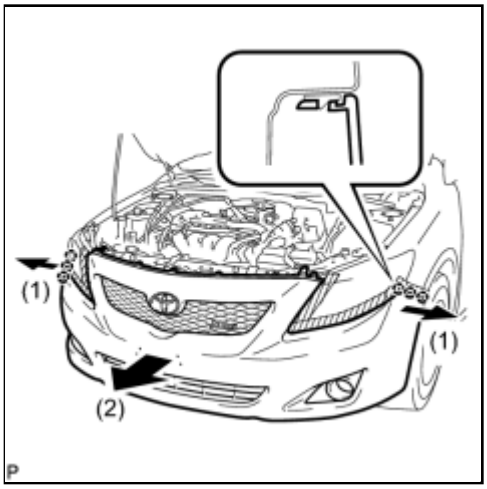
HINT:

Use the same procedure for the RH side and LH side.



(c) Put protective tape around the front bumper assembly.

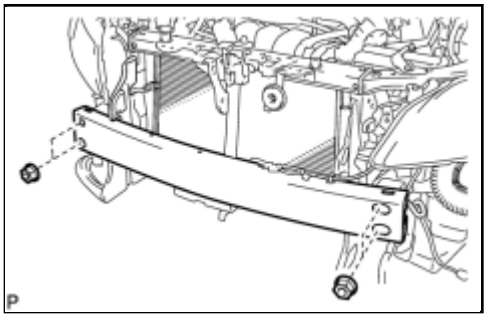
(d) Remove the 2 screws and 3 clips.



(e) Remove the 4 screws.

(f) Remove the 2 clips.

(g) Disengage the 6 claws and remove the front bumper assembly as shown in the illustration.



(h) Disconnect the fog light connector. (w/ Fog Light)

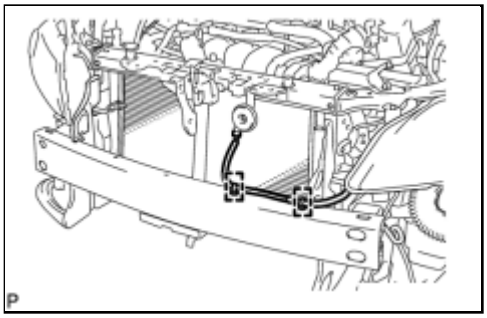
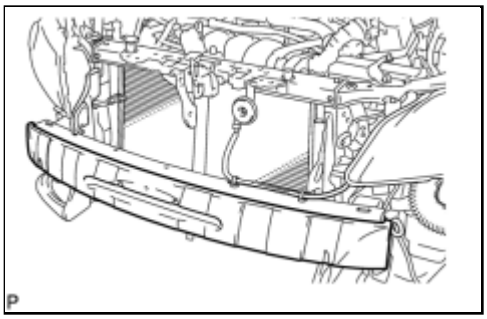
Title: EXTERIOR PANELS / TRIM: FRONT BUMPER: REASSEMBLY (2010 Corolla)		



REASSEMBLY

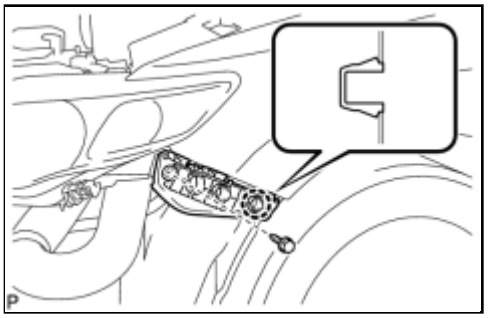
1. INSTALL FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY



(a) Install the front bumper reinforcement sub-assembly with the 4 nuts.

Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

(b) Engage each clamp.



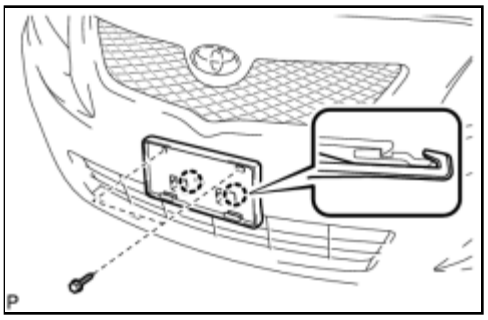
2. INSTALL FRONT BUMPER ENERGY ABSORBER

(a) Install the front bumper energy absorber.

3. INSTALL FRONT BUMPER SIDE SUPPORT LH

(a) Engage the claw and install the front bumper side support

LH.



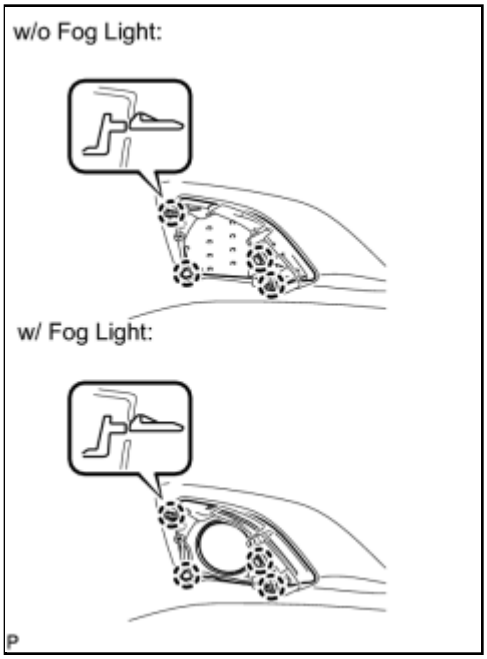
(b) Install the bolt.

4. INSTALL FRONT BUMPER SIDE SUPPORT RH

HINT:

Use the same procedure for the RH side and LH side.

5. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET



(a) Engage the 2 claws and install the front bumper extension mounting bracket.

(b) Install the 2 screws.

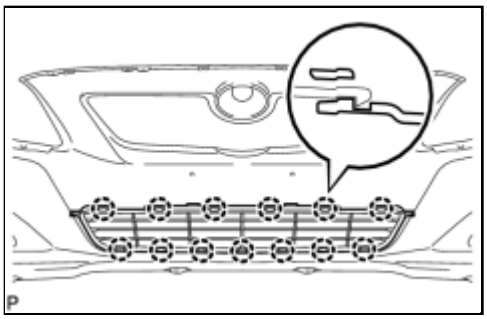
6. INSTALL FOG LIGHT COVER LH

(a) Engage the 4 claws and install the fog light cover LH.

7. INSTALL FOG LIGHT COVER RH

HINT:

Use the same procedure for the RH side and LH side.

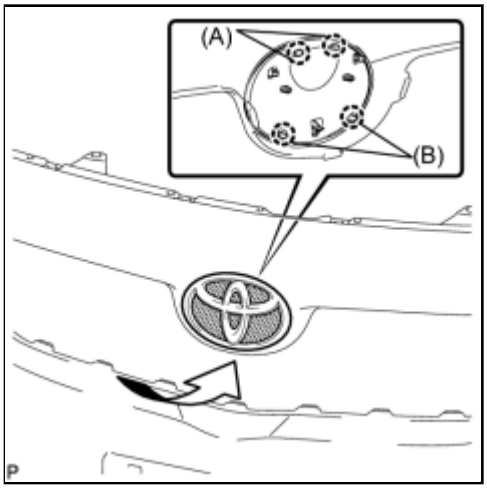


8. INSTALL FOG LIGHT ASSEMBLY LH (w/ Fog Light) INFO

9. INSTALL FOG LIGHT ASSEMBLY RH (w/ Fog Light)

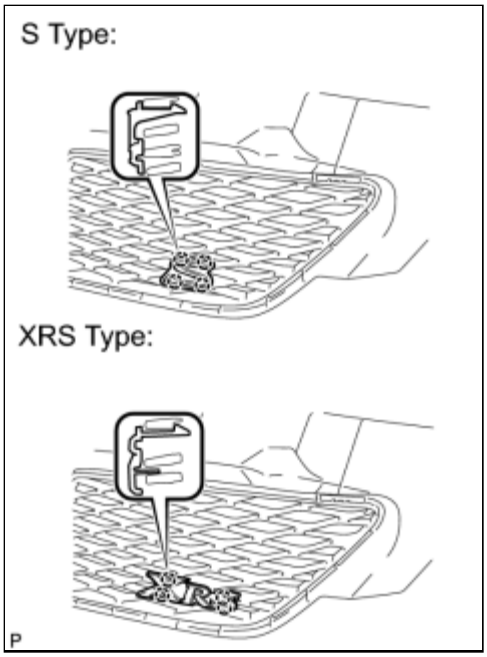
HINT:

Use the same procedure for the RH side and LH side.



10. INSTALL LOWER RADIATOR GRILLE

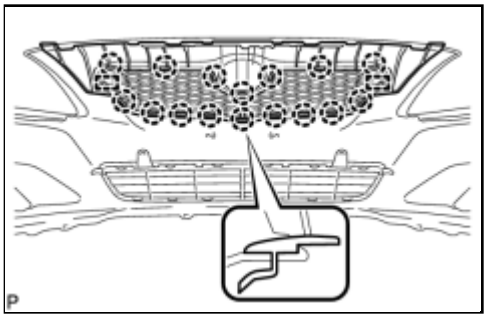
(a) Engage the 13 claws and install the lower radiator grille.



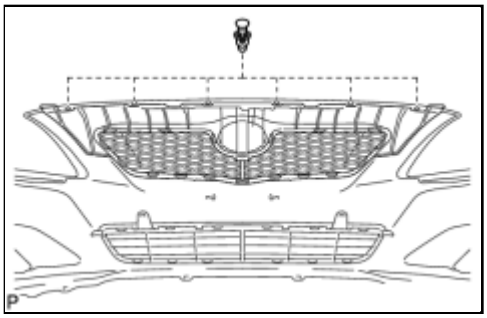
11. INSTALL FRONT PANEL EMBLEM

(a) Engage the 2 claws (A).

(b) Engage the 2 claws (B) and install the front panel emblem.



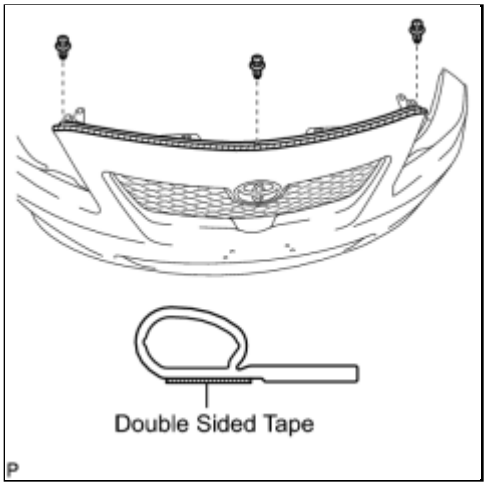
12. INSTALL RADIATOR GRILLE NAME PLATE



(a) Engage the 4 claws and install the radiator grille name plate.

13. INSTALL RADIATOR GRILLE

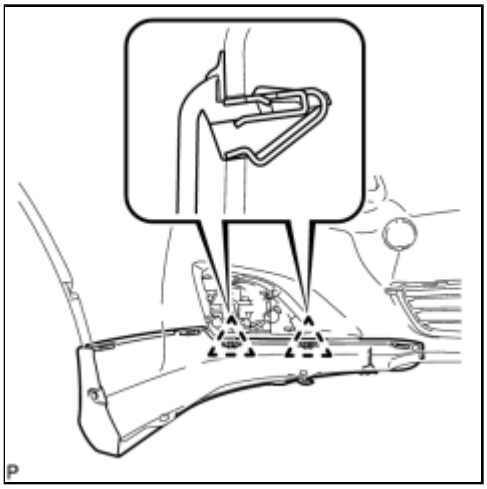
(a) Engage the 16 claws and 2 guides, and install the radiator grille.

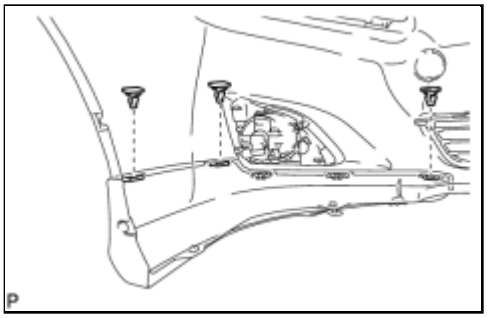


(b) Install the 6 clips.

14. INSTALL HOOD TO FRONT END PANEL SEAL

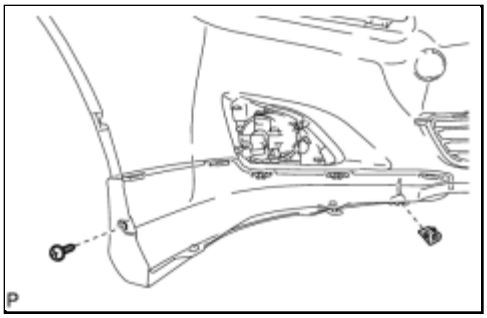
(a) Wipe off any tape adhesive residue with cleaner.





(b) Install a new hood to front end panel seal.

(c) Install the 3 clips.



15. INSTALL FRONT SPOILER COVER LH (w/ Front Spoiler)

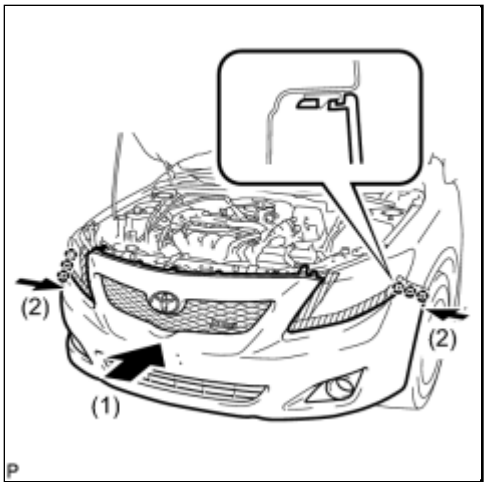
(a) Engage the 2 claws and install the front spoiler cover LH.

(b) Install the 3 clips.

(c) Install the screw and clip.

16. INSTALL FRONT SPOILER COVER RH (w/ Front Spoiler)

HINT:



Use the same procedure for the RH side and LH side.

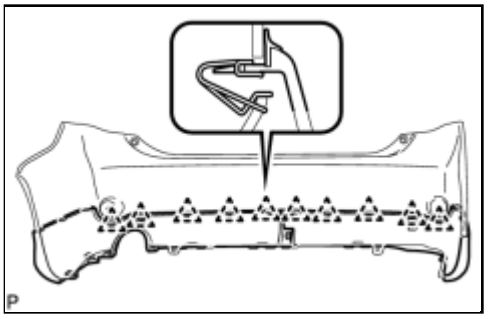
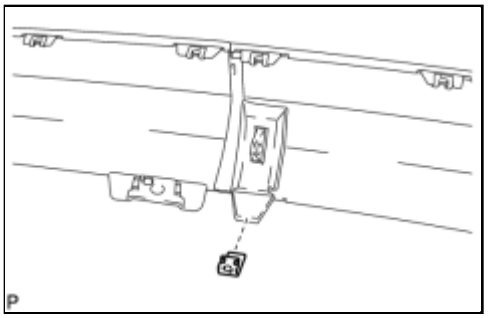
1. REMOVE REAR SPOILER (w/ Rear Spoiler)

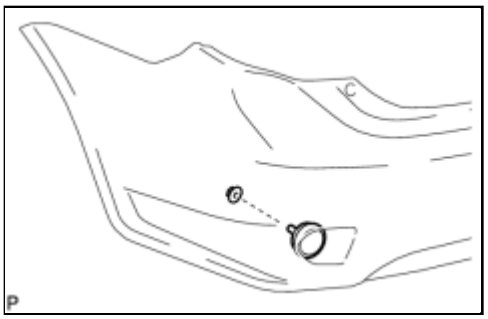
(a) Remove the 2 screws and 3 clips.





(b) Remove the 2 clips.

(c) Remove the 7 clips.



(d) Disengage the 10 clips and remove the rear spoiler.

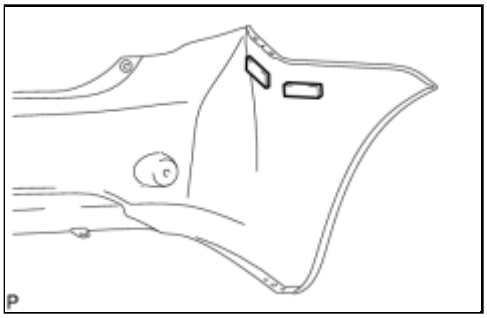
(e) Remove the clip.

2. REMOVE REFLEX REFLECTOR ASSEMBLY LH

(a) Remove the nut and reflector assembly LH.

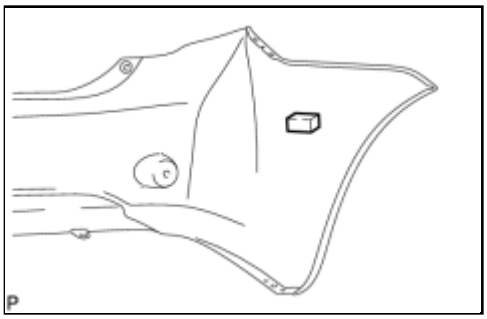
3. REMOVE REFLEX REFLECTOR ASSEMBLY RH

HINT:



Use the same procedure for the RH side and LH side.

4. REMOVE REAR BUMPER PAD

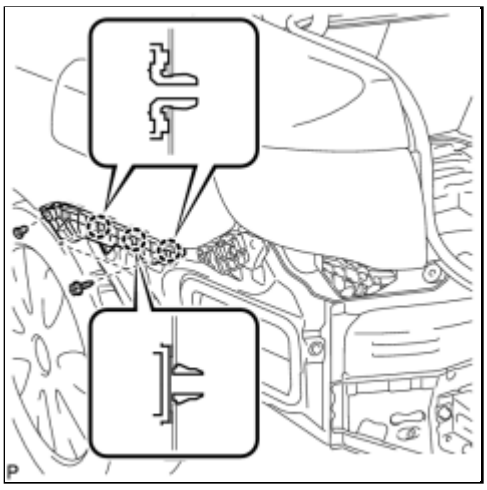


(a) Remove the 2 rear bumper pads.

HINT:

Use the same procedure for the RH side and LH side.

5. REMOVE REAR BUMPER PAD LH



(a) Remove the rear bumper pad LH.

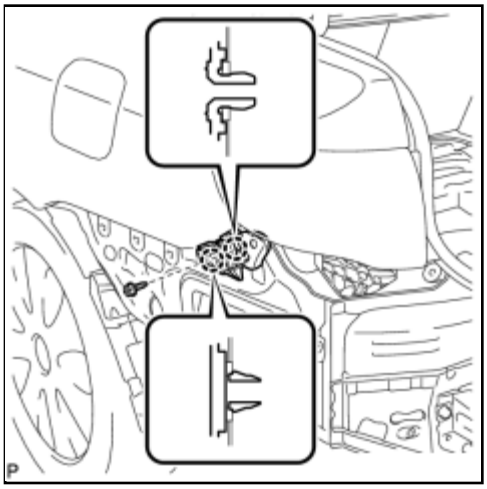
6. REMOVE REAR BUMPER PAD RH

HINT:

Use the same procedure for the RH side and LH side.

7. REMOVE REAR BUMPER SIDE SUPPORT LH

(a) Remove the 2 screws and clip.



(b) Disengage the 3 claws and remove the rear bumper side support LH.

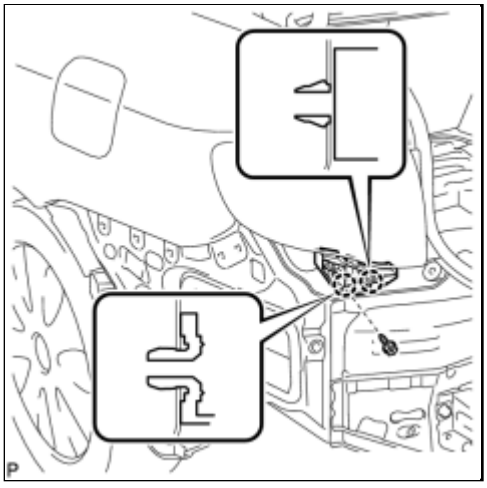
8. REMOVE REAR BUMPER SIDE SUPPORT RH

HINT:

Use the same procedure for the RH side and LH side.

9. REMOVE NO. 2 REAR BUMPER SIDE SUPPORT LH

(a) Remove the screw.



(b) Disengage the 2 claws and remove the No. 2 rear bumper side support LH.

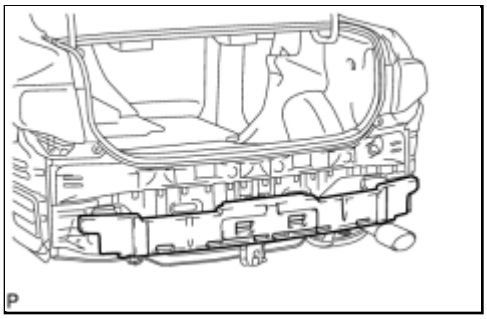
10. REMOVE NO. 2 REAR BUMPER SIDE SUPPORT RH

HINT:

Use the same procedure for the RH side and LH side.

11. REMOVE REAR UPPER BUMPER RETAINER LH

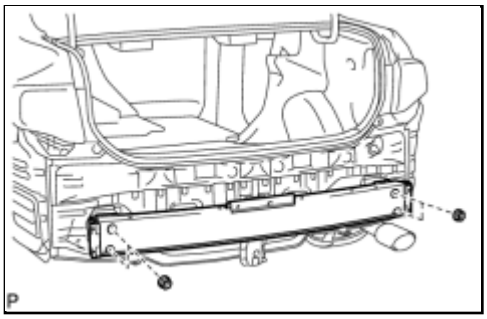
(a) Remove the screw.



(b) Disengage the 2 claws and remove the rear upper bumper retainer LH.

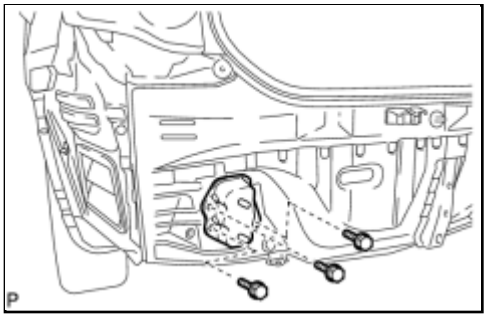
12. REMOVE REAR UPPER BUMPER RETAINER RH

HINT:



Use the same procedure for the RH side and LH side.

13. REMOVE REAR BUMPER ENERGY ABSORBER



(a) Remove the rear bumper energy absorber.

14. REMOVE NO. 1 REAR BUMPER REINFORCEMENT

(a) Remove the 4 nuts and No. 1 rear bumper reinforcement.

15. REMOVE REAR BUMPER ARM LH

(a) Remove the 3 bolts and rear bumper arm LH.

16. REMOVE REAR BUMPER ARM RH

HINT:

Use the same procedure for the RH side and LH side.

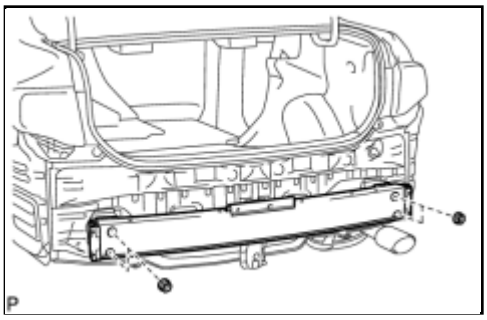
Title: EXTERIOR PANELS / TRIM: REAR BUMPER: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL REAR BUMPER ARM LH

(a) Install the rear bumper arm LH with the 3 bolts.



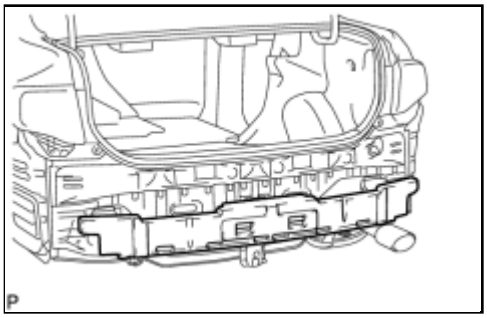
Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

2. INSTALL REAR BUMPER ARM RH

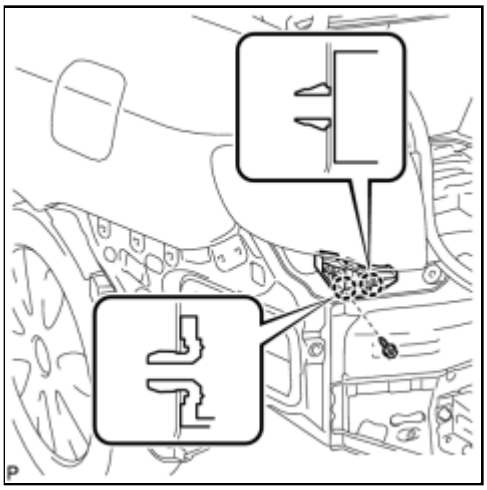
HINT:

Use the same procedure for the RH side and LH side.

3. INSTALL NO. 1 REAR BUMPER REINFORCEMENT



(a) Install the No. 1 rear bumper reinforcement with the 4 nuts.



Torque: 36 N·m (367 kgf·cm, 27ft·lbf)

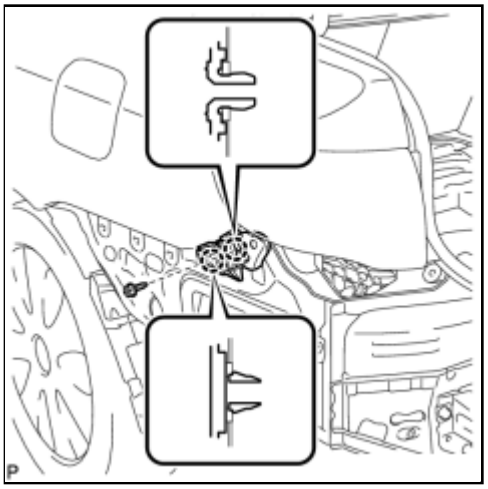
4. INSTALL REAR BUMPER ENERGY ABSORBER

(a) Install the rear bumper energy absorber.

5. INSTALL REAR UPPER BUMPER RETAINER LH

(a) Engage the 2 claws and install the rear upper bumper retainer LH.

(b) Install the screw.



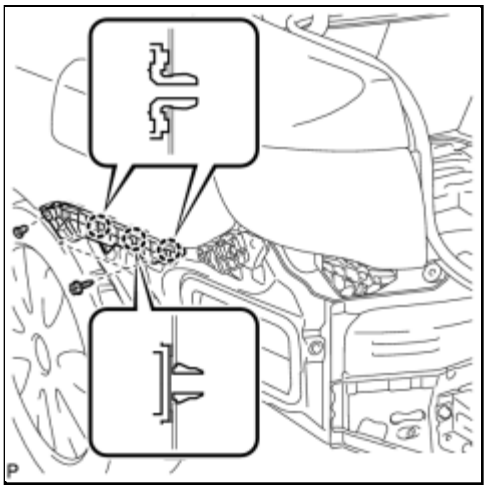
6. INSTALL REAR UPPER BUMPER RETAINER RH

HINT:

Use the same procedure for the RH side and LH side.

7. INSTALL NO. 2 REAR BUMPER SIDE SUPPORT LH

(a) Engage the 2 claws and install the No. 2 rear bumper side support LH.



(b) Install the screw.

8. INSTALL NO. 2 REAR BUMPER SIDE SUPPORT RH

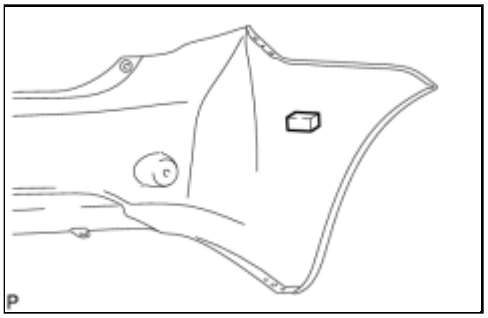
HINT:

Use the same procedure for the RH side and LH side.

9. INSTALL REAR BUMPER SIDE SUPPORT LH

(a) Engage the 3 claws and install the rear bumper side support LH.

(b) Install the 2 screws and clip.



10. INSTALL REAR BUMPER SIDE SUPPORT RH

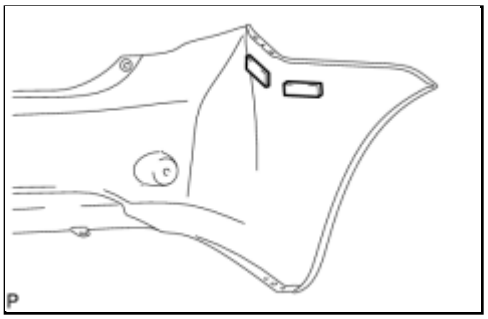
HINT:

Use the same procedure for the RH side and LH side.

11. INSTALL REAR BUMPER PAD LH

(a) Install a new rear bumper pad LH.

HINT:



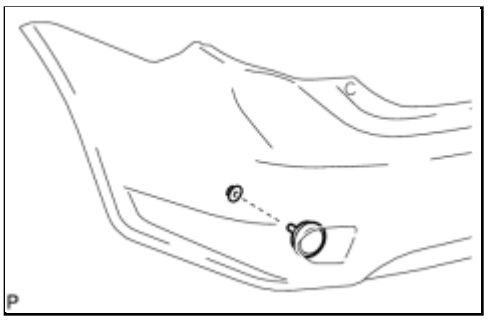
Attach the new bumper pad on the line marked on the rear bumper assembly.

12. INSTALL REAR BUMPER PAD RH

HINT:

Use the same procedure for the RH side and LH side.

13. INSTALL REAR BUMPER PAD

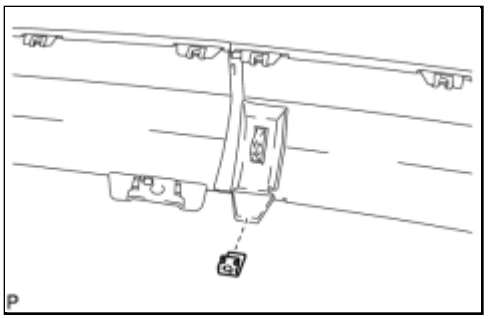


(a) Install 2 new rear bumper pads.

HINT:

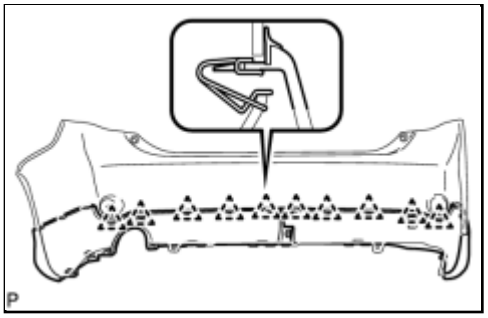
- Attach the new bumper pads on the line marked on the rear bumper assembly.
- Use the same procedure for the RH side and LH side.

14. INSTALL REFLEX REFLECTOR ASSEMBLY LH



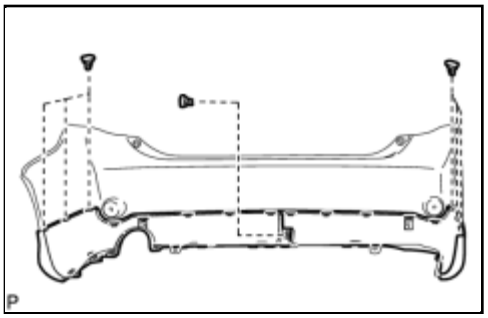
(a) Install the reflex reflector assembly with the nut.

15. INSTALL REFLEX REFLECTOR ASSEMBLY RH

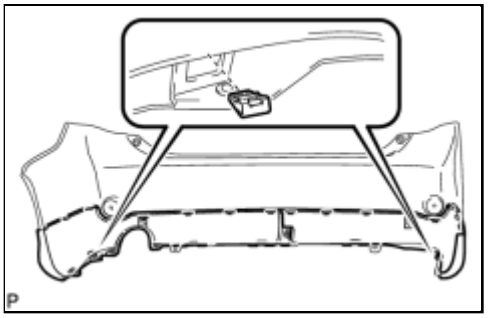


HINT:

Use the same procedure for the RH side and LH side.

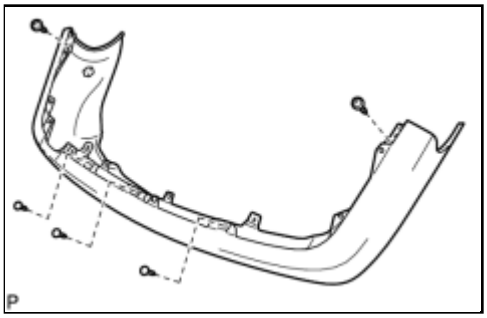


16. INSTALL REAR SPOILER (w/ Rear Spoiler)



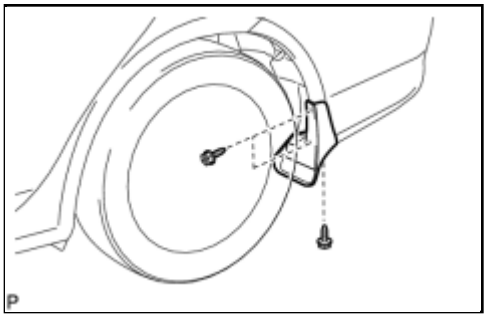
(a) Engage the clip.

(b) Engage the 10 clips and install the rear side spoiler.



(c) Install the 7 clips.

(d) Install the 2 clips.



(e) Install the 2 screws and 3 clips.

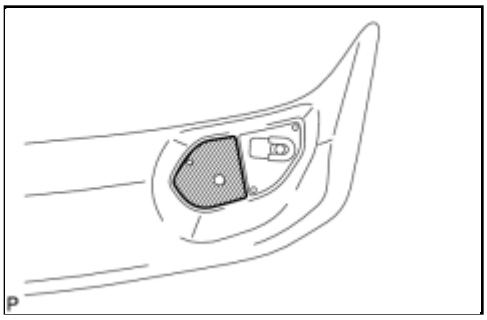
Title: EXTERIOR PANELS / TRIM: REAR SPOILER: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE REAR SPOILER LOWER TAPE LH



(a) Remove the rear spoiler lower tape.

2. REMOVE REAR SPOILER LOWER TAPE RH

HINT:

Use the same procedure for the RH side and LH side.

3. REMOVE REAR SPOILER SIDE PROTECTOR LH

(a) Remove the rear spoiler side protector.

4. REMOVE REAR SPOILER SIDE PROTECTOR RH

HINT:

Use the same procedure for the RH side and LH side.

5. REMOVE CENTER STOP LIGHT ASSEMBLY INFO

6. REMOVE CENTER STOP LIGHT CORD ASSEMBLY

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WJ600AX
Title: EXTERIOR PANELS / TRIM: REAR SPOILER: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL REAR SPOILER ASSEMBLY

HINT:

When installing the rear spoiler assembly, using a heat light and then heat the vehicle body and rear spoiler assembly.

Heating Temperature:

ITEM	TEMPERATURE
Vehicle Body	40 to 60°C (104 to 140°F)
Rear Spoiler	20 to 30°C (68 to 86°F)

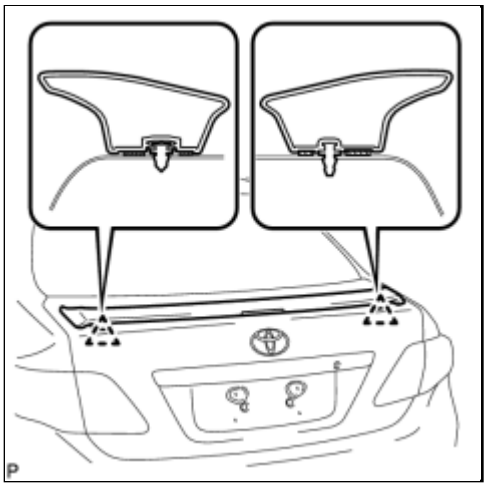
NOTICE:

Do not heat the vehicle body and rear spoiler assembly excessively.

(a) Clean the vehicle body surface.

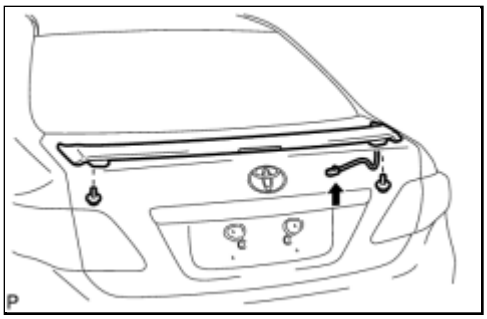
(1) Using a heat light, heat the vehicle body surface.

(2) Remove the double-sided tape from the vehicle body.



(3) Wipe off any tape adhesive residue with cleaner.

(b) Using a heat light, carefully heat the vehicle body and rear spoiler assembly.



(c) Remove the release paper from the face of the rear spoiler assembly.

HINT:

After removing the release paper, keep the exposed adhesive free from foreign matter.

(d) Engage the 2 clips and install the rear spoiler assembly.

(e) Install the 2 bolts.

(f) Connect the connector.

2. INSTALL LUGGAGE COMPARTMENT DOOR COVER INFO

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WJA00AX
Title: EXTERIOR PANELS / TRIM: REAR SPOILER: REASSEMBLY (2010 Corolla)		

REASSEMBLY

HINT:

When installing the protector, heat the rear spoiler using a heat light.

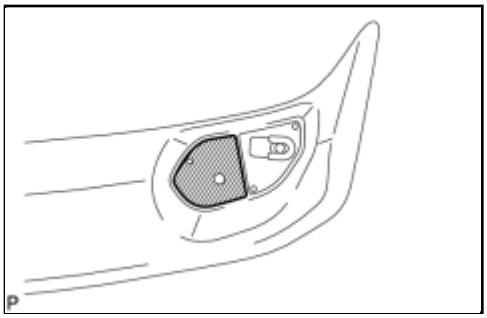
Heating Temperature:

ITEM	TEMPERATURE
Rear Spoiler	20 to 30°C (68 to 86°F)

NOTICE:

Do not heat the rear spoiler excessively.

1. INSTALL CENTER STOP LIGHT CORD ASSEMBLY



2. INSTALL CENTER STOP LIGHT ASSEMBLY INFO

3. INSTALL REAR SPOILER SIDE PROTECTOR LH

(a) Clean the rear spoiler (if reusing the rear spoiler).

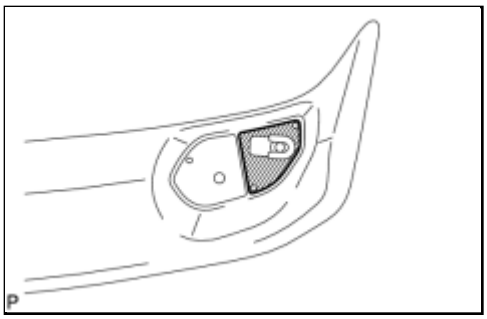
(1) Using a heat light, carefully heat the rear spoiler.

(2) Wipe off any tape adhesive residue with cleaner.

(3) Apply a new rear spoiler side protector to the rear spoiler.

4. INSTALL REAR SPOILER SIDE PROTECTOR RH

HINT:



Use the same procedure for the RH side and LH side.

5. INSTALL REAR SPOILER LOWER TAPE LH

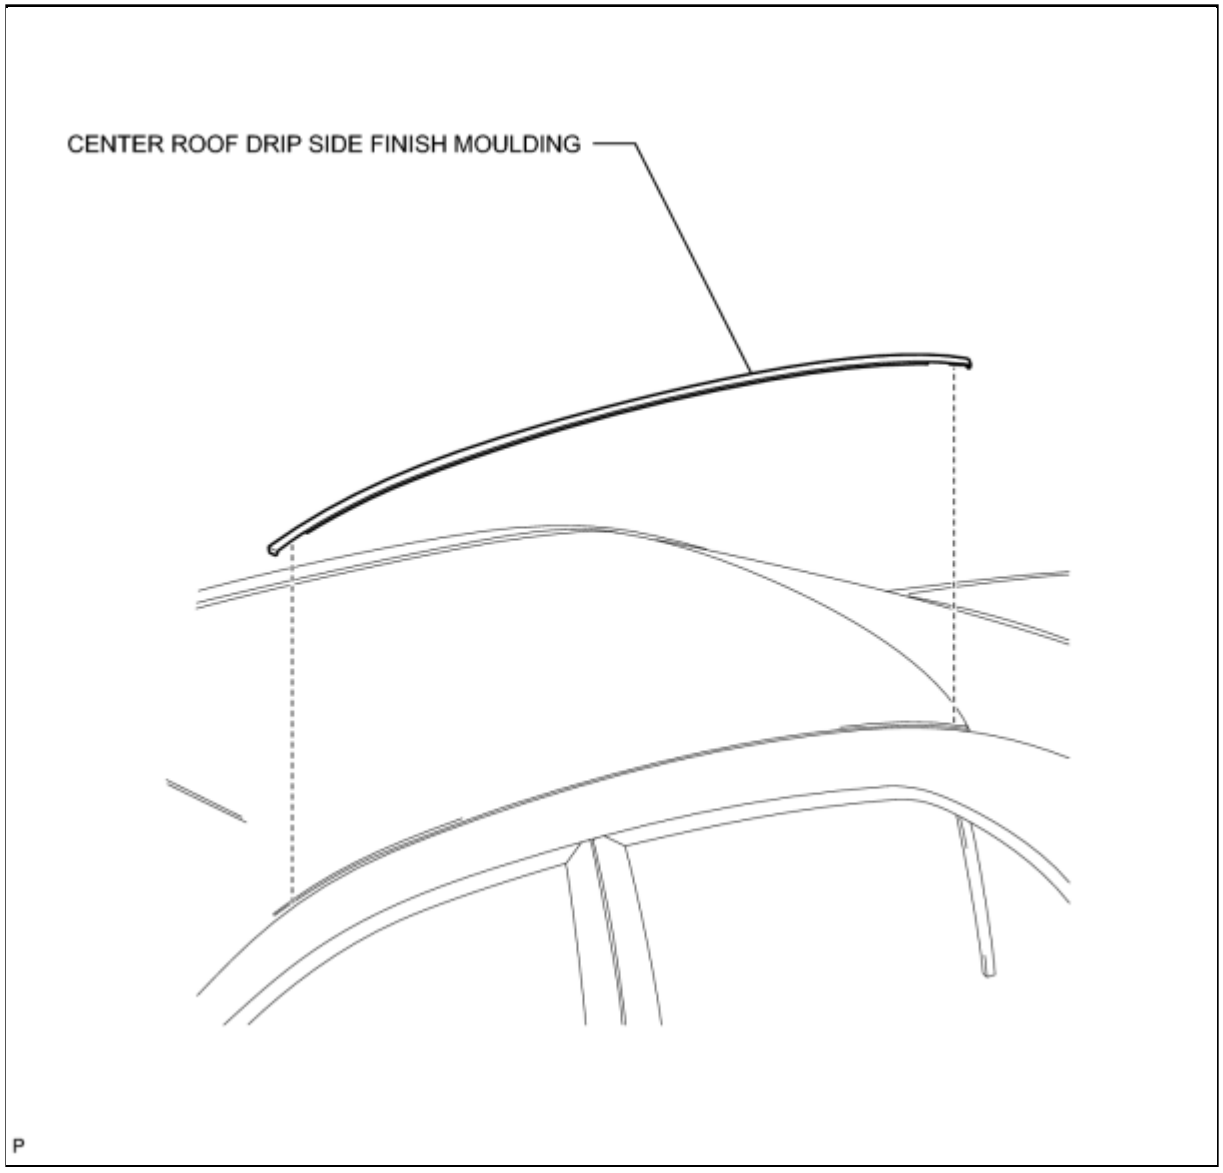
(a) Clean the rear spoiler (if reusing the rear spoiler).

(1) Using a heat light, carefully heat the rear spoiler.

(2) Wipe off any tape adhesive residue with cleaner.

(3) Apply a new rear spoiler lower tape to the rear spoiler.

6. INSTALL REAR SPOILER LOWER TAPE RH



HINT:

Use the same procedure for the RH side and LH side.

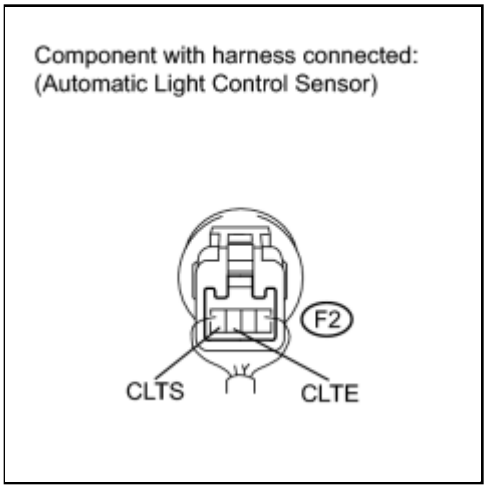
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
F2-1 (CLTB) - F2-3 (CLTE)	Ignition switch off	Below 1 V
	Ignition switch ON	11 to 14 V

If the result is not as specified, there is a malfunction on the wire harness side.

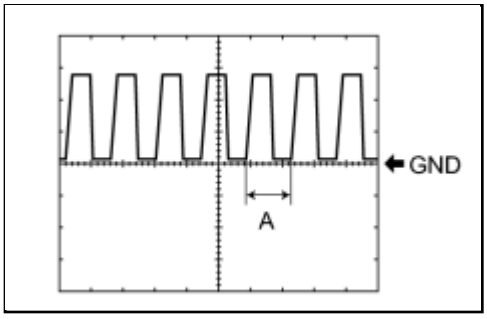


(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
F2-3 (CLTE) - Body ground	Always	Below 1 Ω

If the result is not as specified, there is a malfunction on the wire harness side.



(d) Reconnect the automatic light control sensor connector.

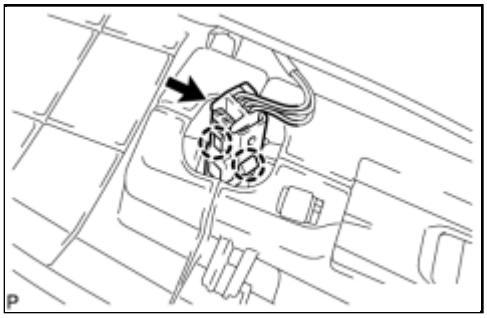
(e) Connect an oscilloscope to the automatic light control sensor connector.

(f) Check the waveform.

OK:

TESTER CONNECTION	TOOL SETTING	SWITCH CONDITION	SPECIFIED CONDITION
F2-3 (CLTE) - F2-4 (CLTS)	2 V/DIV., 5 ms./DIV	Ignition switch ON, light control switch off	Correct waveform is as shown

If the result is not as specified, replace the automatic light control sensor.



HINT:

If the ambient light becomes brighter, width A becomes narrower.

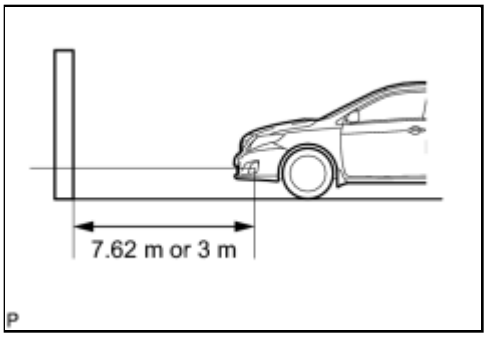
Title: LIGHTING (EXT): FOG LIGHT ASSEMBLY: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

HINT:



It is possible that a bulb is incorrectly installed, affecting fog light aim. Bulb installation should be checked prior to performing the adjustment procedure.

1. VEHICLE PREPARATION FOR FOG LIGHT AIMING ADJUSTMENT

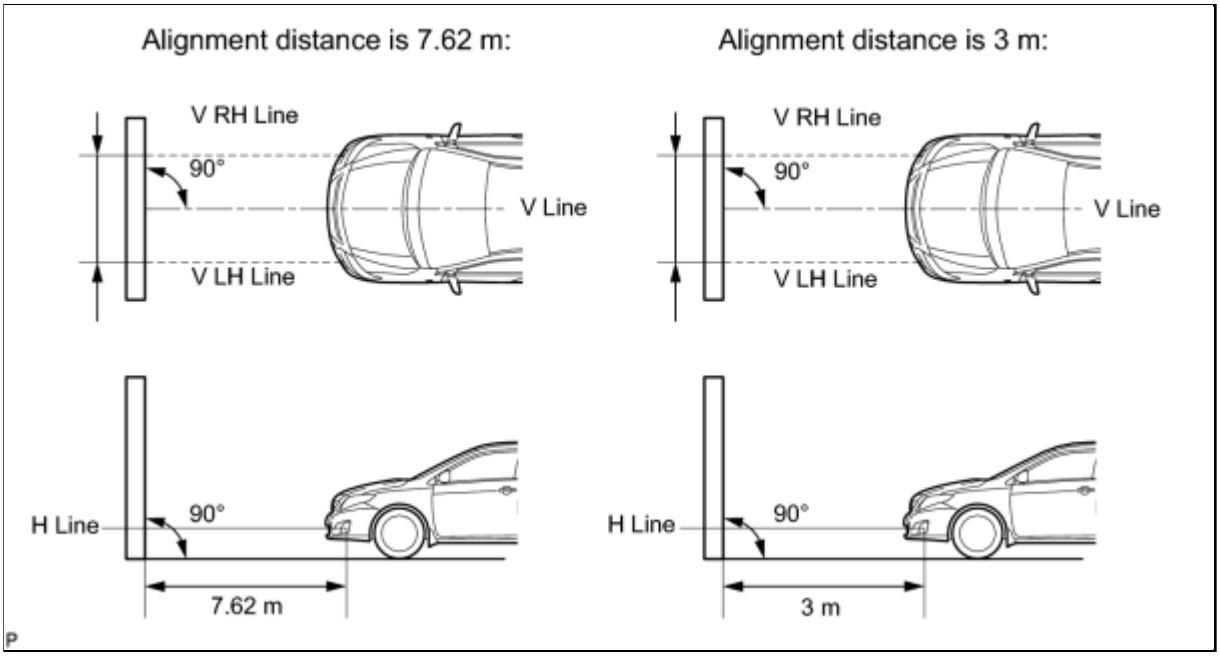
(a) Prepare the vehicle:

- Ensure that there is no damage or deformation to the body around the fog lights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools, and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.
- Vehicles with height adjustable suspension should set the vehicle height to the lowest setting prior to adjusting the fog light aim.

2. PREPARATION FOR FOG LIGHT AIMING

(a) Prepare the vehicle:

- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the fog lights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft.) distance between the vehicle (fog light bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Bounce the vehicle up and down several times to settle the suspension.



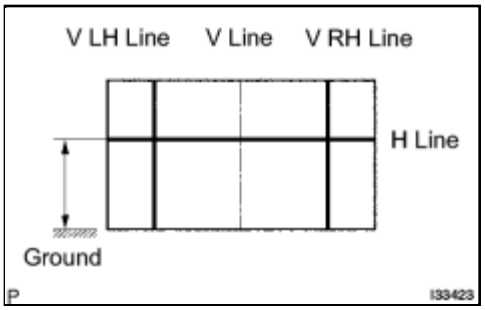
NOTICE:

A distance of 7.62 m (25 ft.) between the vehicle (fog light bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft.) to allow for checking and adjustment of fog light aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width)) to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.



HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

Mark the fog light bulb center marks on the screen. If the center mark cannot be observed on the fog light, use the center of the fog light bulb or the manufacturer's name marked on the fog light as the center mark.

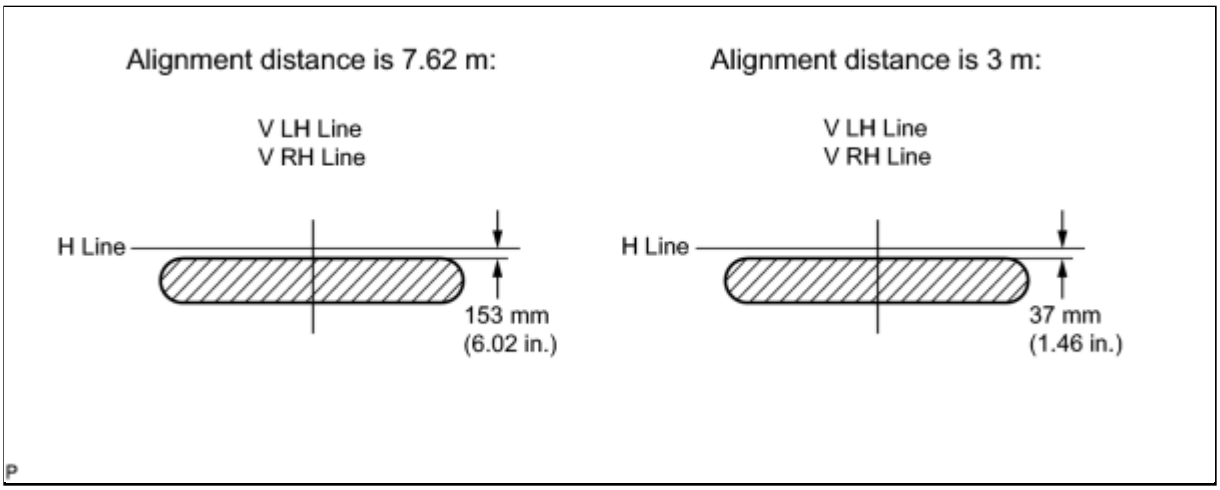
(1) H Line (Fog light height):

Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the fog light bulb center marks of the fog lights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) fog lights):

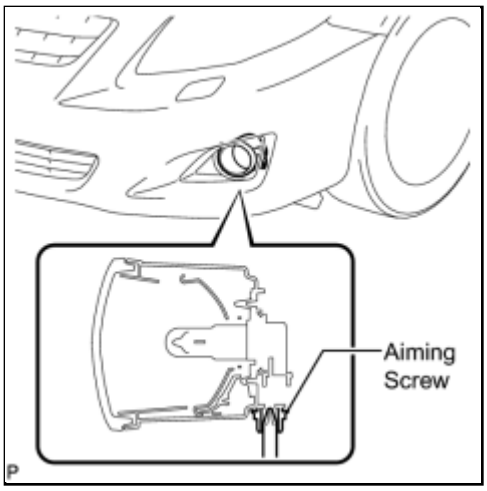
Draw two vertical lines so that they intersect the H line at each center mark aligned with the center of the fog light bulbs.

3. INSPECT FOG LIGHT AIMING



(a) Cover the fog light or disconnect the connector of the fog light on the opposite side to prevent light from the fog light that is not being inspected from affecting the fog light aiming inspection.

NOTICE:



Do not keep the fog light covered for more than 3 minutes. The fog light lens may melt or be damaged due to excessive heat.

(b) Start the engine.

(c) Turn on the fog light and check if the cutoff line falls within the specified area in the following illustration.

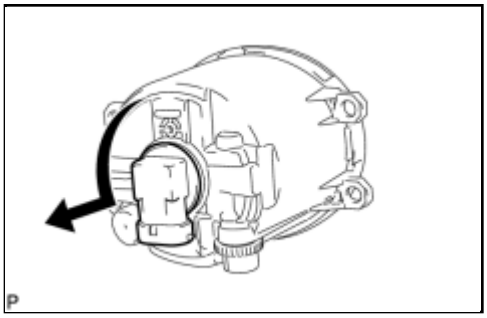
4. ADJUST FOG LIGHT AIMING

(a) Adjust the aim vertically:

Adjust the aim of each fog light to the specified range by turning each aiming screw with a screwdriver.

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.



HINT:

If it is not possible to correctly adjust fog light aim, check bulb, fog light unit, and fog light unit reflector installation.

Title: LIGHTING (EXT): HEADLIGHT ASSEMBLY: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

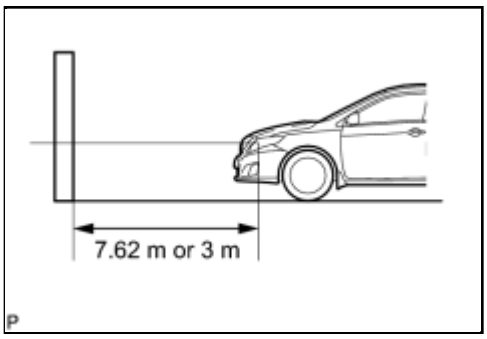
HINT:

It is possible that a bulb is incorrectly installed, affecting headlight aim. Bulb installation should be considered prior to performing the adjustment procedure.

1. VEHICLE PREPARATION FOR HEADLIGHT AIMING ADJUSTMENT

(a) Prepare the vehicle:

- Ensure that there is no damage or deformation to the body around the headlights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools, and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.
- Vehicles with height adjustable suspension should set the vehicle height to the lowest setting prior to adjusting the headlight aim.



2. PREPARATION FOR HEADLIGHT AIMING (Using a headlight aim test machine)

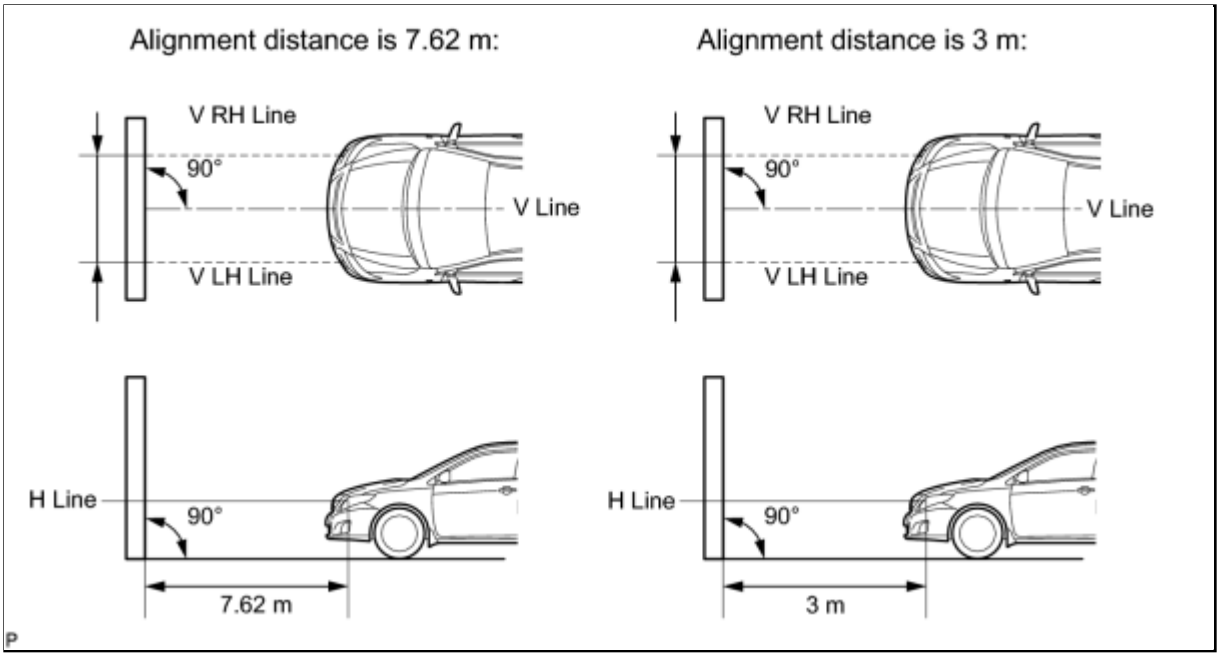
(a) Adjust the headlight aim in accordance with the headlight aim test machine instructions.

3. PREPARATION FOR HEADLIGHT AIMING (Using a Screen)

(a) Prepare the vehicle:

- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft.) distance between the vehicle (headlight bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Bounce the vehicle up and down several times to settle the suspension.

NOTICE:



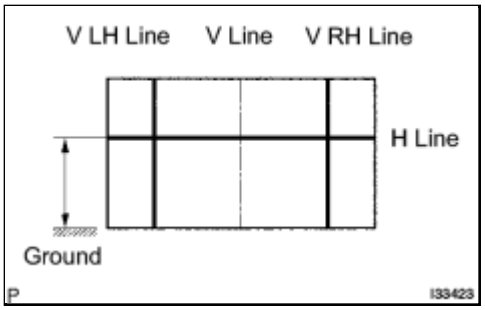
A distance of 7.62 m (25 ft.) between the vehicle (headlight bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft.) to allow for checking and adjustment of headlight aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width))

to use as a screen.

(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.



HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

- The base lines differ for "low-beam inspection" and "high-beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

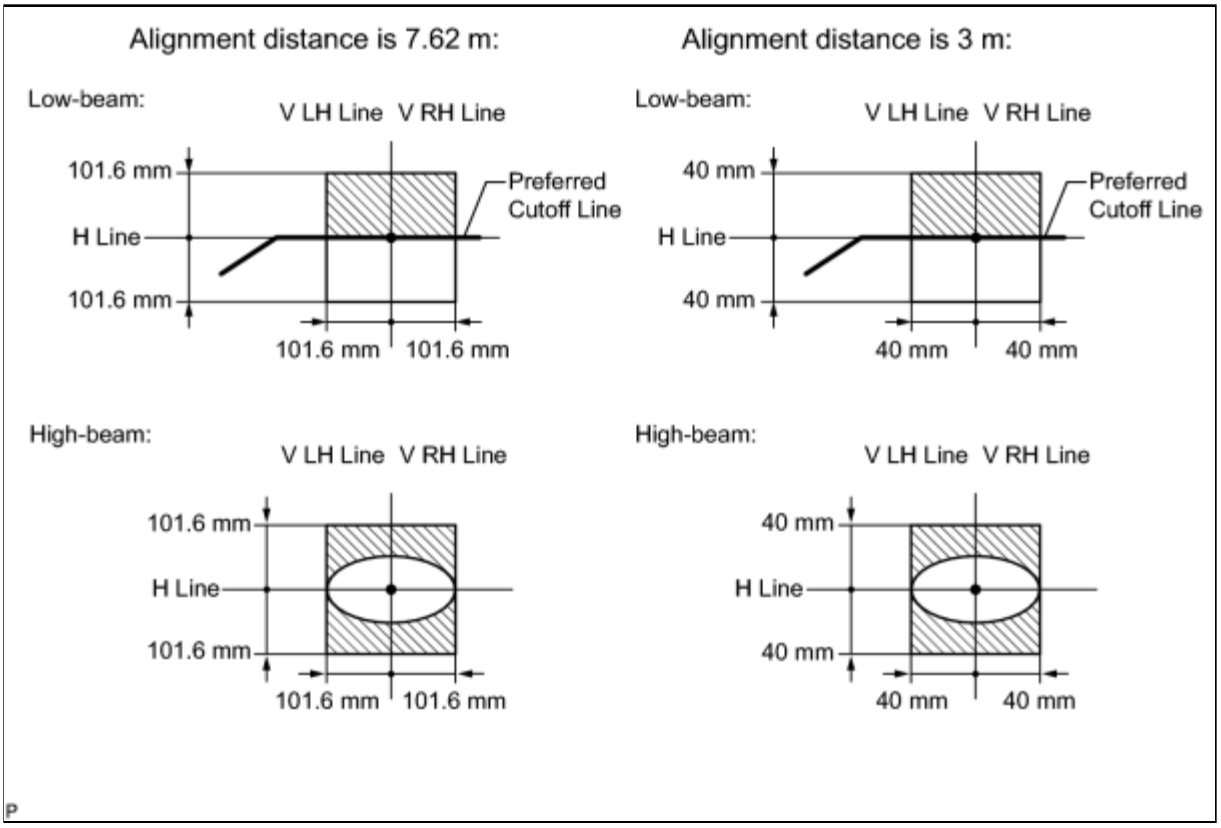
(1) H Line (Headlight height):

Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low-beam headlights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) headlights):

Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low-beam headlight bulbs).

4. INSPECT HEADLIGHT AIMING



(a) Cover the headlight or disconnect the connector of the headlight on the opposite side to prevent light from the headlight that is not being inspected from affecting the headlight aiming inspection.

NOTICE:

Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

(b) Start the engine.

(c) Turn on the headlight and check if the cutoff line matches the preferred cutoff line in the following illustration.

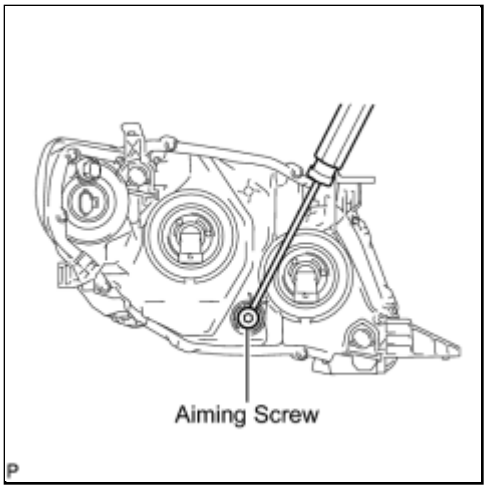
HINT:

- Since the low-beam light and the high-beam light are a unit, if the aim on the low-beam is correct, the high-beam should also be correct. However, check both beams to confirm.
- If the alignment distance is 7.62 m (25 ft.):

  The low-beam cutoff line should be within 101.6 mm (4.00 in.) above or below the H line as well as 101.6 mm (4.00 in.) left or right of the V line (SAE J599).
- If the alignment distance is 3 m (9.84 ft.):

  The low-beam cutoff line should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).
- If the alignment distance is 7.62 m (25 ft.):

  The high-beam center of intensity should be within 101.6 mm (4.00 in.) above or below the H line as well as 101.6 mm (4.00 in.) left or right of the V line (SAE J599).
- If the alignment distance is 3 m (9.84 ft.):



The high-beam center of intensity should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).

- The low-beam cutoff line should follow the preferred cutoff line target on the H line.

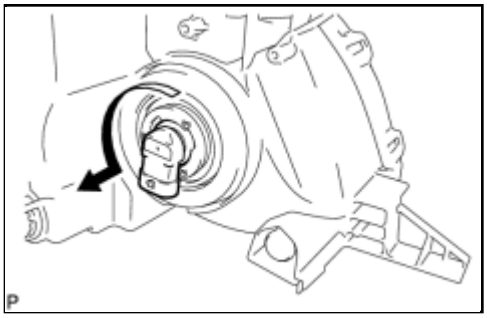
5. ADJUST HEADLIGHT AIMING

(a) Adjust the aim vertically:

Adjust the aim of each headlight to the specified range by turning each aiming screw with a screwdriver.

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.



HINT:

- The low-beam light and the high-beam light are a unit. Adjusting the aim on the low-beam to the correct position should also result in the high-beam adjustment being correct.
- If it is not possible to correctly adjust headlight aim, check bulb, headlight unit, and headlight unit reflector installation.
- The headlight aim moves up when turning the aiming screw clockwise, and moves down when turning the aiming screw counterclockwise.

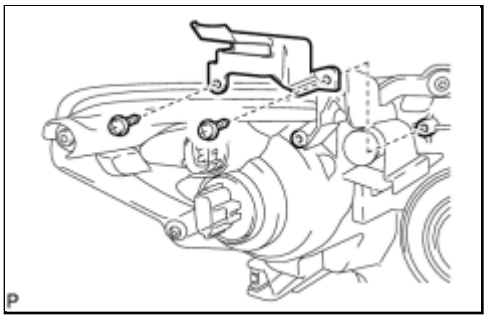
Title: LIGHTING (EXT): HEADLIGHT ASSEMBLY: REPAIR (2010 Corolla)		

REPAIR

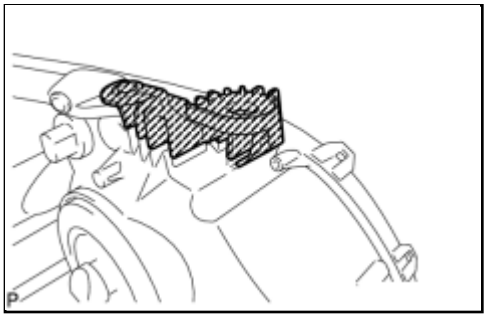
HINT:

- If the installation area of the headlight assembly is damaged, use the supply bracket for low-cost repair.
- Ensure that the headlight assembly is not damaged.



1. INSTALL UPPER HEADLIGHT PROTECTOR RETAINER

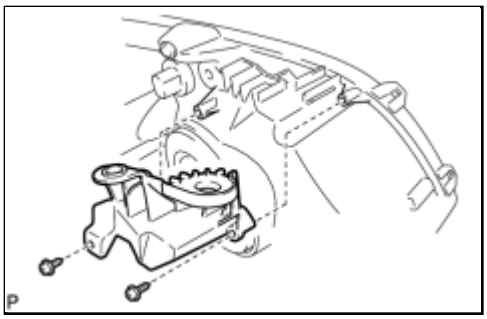
(a) Cut off the part shaded in the illustration and smooth with sandpaper.



NOTICE:

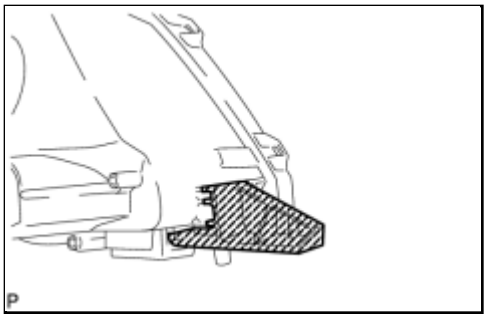
After cutting off the part, place the upper headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.

(b) Install the upper headlight protector retainer with the 2 screws.



2. INSTALL LOWER HEADLIGHT PROTECTOR RETAINER

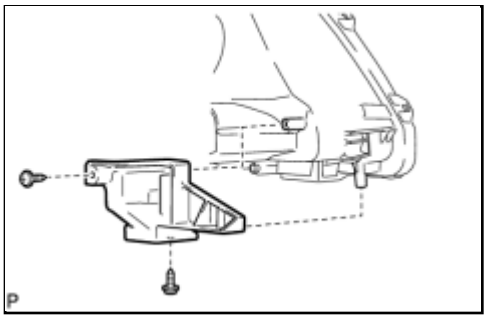
(a) Cut off the part shaded in the illustration and smooth with sandpaper.



NOTICE:

After cutting off the part, place the lower headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.

(b) Install the lower headlight protector retainer with the 2 screws.

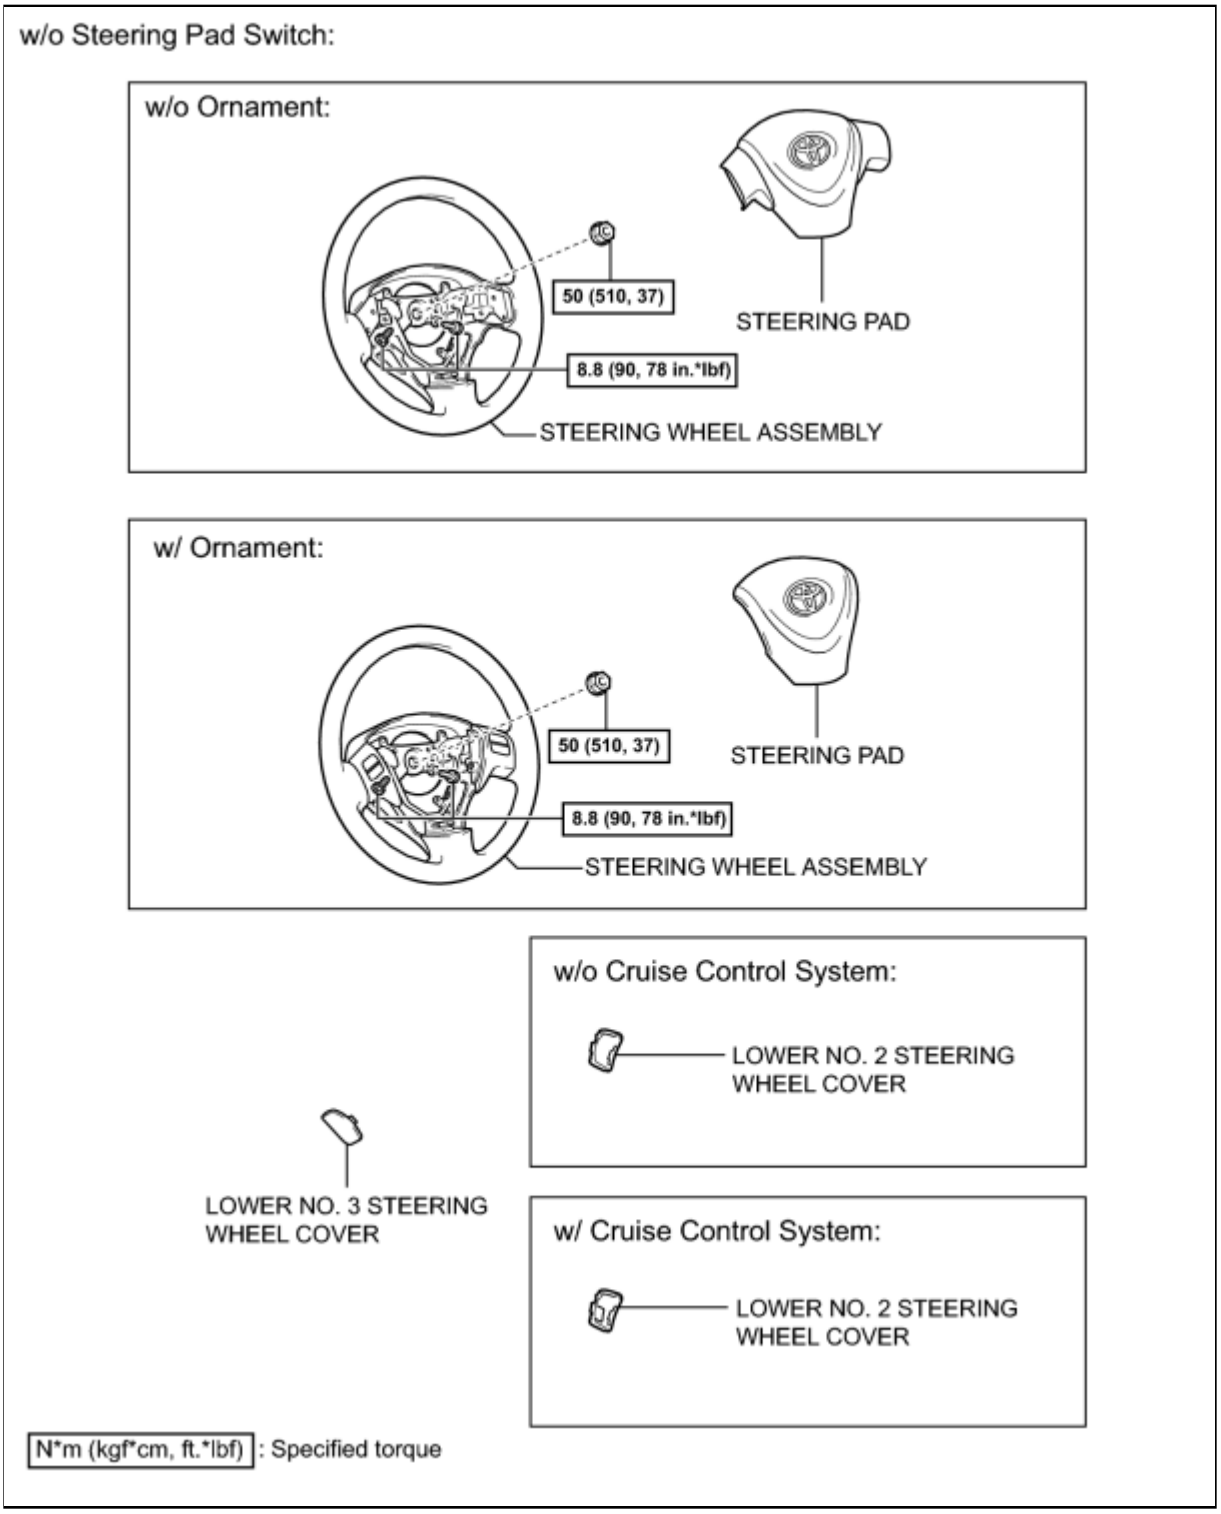


3. INSTALL LOWER HEADLIGHT BRACKET

(a) Cut off the part shaded in the illustration and smooth with sandpaper.

NOTICE:

After cutting off the part, place the lower headlight bracket against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.



(b) Install the lower headlight bracket with the 2 screws.

INSPECTION

1. INSPECT HIGH MOUNTED STOP LIGHT ASSEMBLY

(a) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead to terminal 1.

(b) Check that the high mounted stop light comes on.

OK:

The light comes on.

If the result is not as specified, replace the light assembly.

Title: LIGHTING (INT): LIGHTING SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. ILLUMINATED ENTRY SYSTEM

- The illuminated entry system provides convenience when getting in or out of the vehicle at night.
- This function is controlled by the main body ECU. The operation and condition of this control are described below.

OPERATION	CONDITION
Fade in	When any of the following conditions is met, the personal light*1, room light and engine switch illumination*2 fade in. ○ A key enters any actuation area around the doors when the ignition switch is off and all doors are closed*2. ○ Any door is opened. ○ Any door is unlocked when the ignition switch is off and all doors are closed*4. ○ Ignition switch is turned from ACC to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the personal light*1, room light and engine switch illumination*2 fade out. ○ Ignition switch is turned from off to ACC or ON when all doors are closed. ○ All doors are locked when the ignition switch is off*4.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the ignition switch is off.
Fade out (Battery saving control)	When all of the following conditions are met, the main body ECU turns off the lights. ○ A key is not inserted in the ignition key cylinder*3. ○ A key is not in the actuation area*2. ○ There is no change in the condition of the doors for 20 minutes. When any of the following conditions is met, the count of the battery save times will be cleared. ○ A key is inserted in the ignition key cylinder*3. ○ A key is in the actuation area*2.

OPERATION	CONDITION
	○ Any of the doors is opened.

Title: LIGHTING (INT): LIGHTING SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (w/o Smart Key System)

(a) Disconnect the 2B, 2E, 2F, and 2G instrument junction block connectors.

(b) Measure the voltage and resistance between the wire harness side connectors and body ground.

Standard Voltage:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2B-30 (BECU) - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V
2F-5 (ACC) - Body ground	W*1 - Body ground L*2 - Body ground	ACC power supply	Always	11 to 14 V
2G-1 - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

HINT:

- *1: for TMC Made
- *2: except TMC Made

(c) Reconnect the 2B, 2E, 2F and 2G instrument panel junction block connectors.

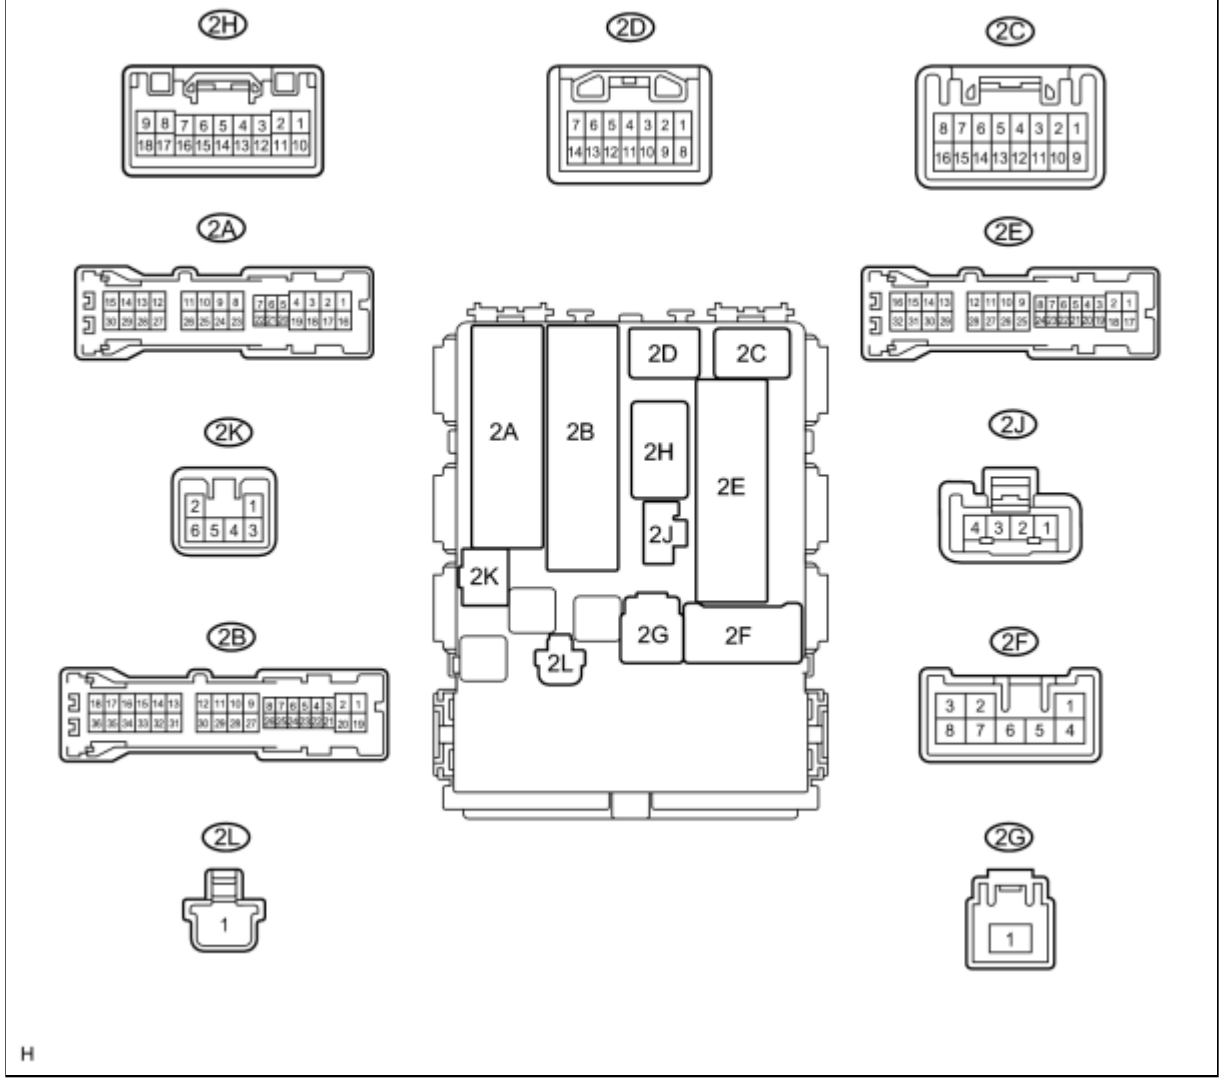
(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-7 (LGCY) - Body ground	LG - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	11 to 14 V
2A-21 (DCTY) - Body ground	W*1 - Body ground V*2 - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Driver side door closed	Pulse generation
2C-6 (DCTY) - Body ground	W*1 - Body ground R*2 - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Driver side door closed	Pulse generation
2E-19 (RCTY) - Body ground	LG*1 - Body ground Y*2 - Body ground	Rear door courtesy switch RH input	Rear door RH open	Below 1 V
			Rear door RH closed	Pulse generation
2E-20 (PCTY) - Body ground	BR*1 - Body ground BE*2 - Body ground	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
			Front passenger side door closed	Pulse generation
2K-2 (ILE) - Body ground	W*1 - Body ground GR*2 - Body ground	Interior light drive output	Interior light switch in DOOR position and interior light ON	Below 1 V
			Interior light switch in DOOR position and interior light OFF	11 to 14 V
E61-5 (LSWP) - Body ground	B*1 - Body ground	Front passenger side door lock position switch	Front passenger door unlocked	Below 1 V

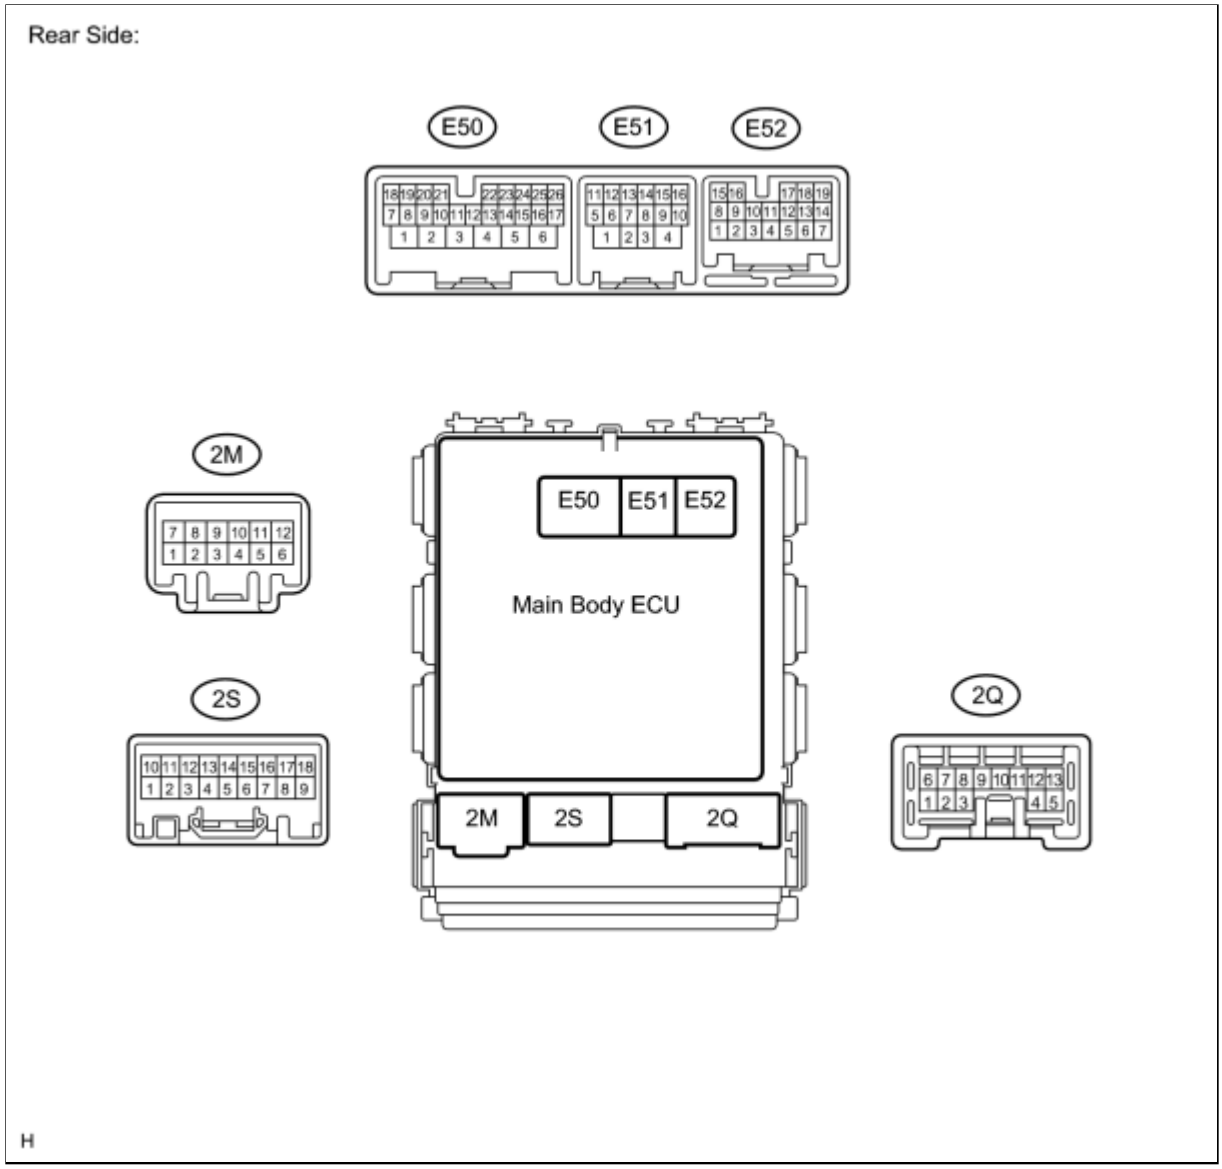
TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	R*2 - Body ground	input	Front passenger door locked	Pulse generation
E61-13 (LCTY) - Body ground	SB*1 - Body ground B*2 - Body ground	Rear door courtesy switch LH input	Rear door LH open	Below 1 V
			Rear door LH closed	Pulse generation
E61-21 (LSWD) - Body ground	Y - Body ground	Driver side door lock position switch input	Driver side door unlocked	Below 1 V
			Driver side door locked	Pulse generation
E61-24 (LSR) - Body ground	Y*1 - Body ground G*2 - Body ground	Rear door lock position switch input	Rear door LH or RH unlocked	Below 1 V
			Rear door LH and RH locked	Pulse generation

If the result is not as specified, the main body ECU (Instrument panel junction block) may have a malfunction.



HINT:

- *1: for TMC Made
- *2: except TMC Made



2. CHECK MAIN BODY ECU (w/ Smart Key System)

(a) Disconnect the 2B, 2E, 2F, and 2G instrument junction block connectors.

Front Side:

H

(b) Measure the voltage and resistance between the wire harness side connectors and body ground.

Standard Voltage:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2B-30 (BECU)*3 - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V
2F-5 (ACC) - Body ground	W*1 - Body ground L*2 - Body ground	ACC power supply	Always	11 to 14 V
2G-1 - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the 2B, 2E, 2F, 2G and E51 instrument panel junction block connectors.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-7 (LGCY) - Body ground	LG - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	Pulse generation
2A-21 (DCTY) - Body ground	W*1 - Body ground V*2 - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Driver side door closed	Pulse generation
2E-19 (RCTY) - Body ground	LG*1 - Body ground Y*2 - Body ground	Rear door courtesy switch RH input	Rear door RH open	Below 1 V
			Rear door RH closed	Pulse generation
2E-20 (PCTY) - Body ground	BR*1 - Body ground BE*2 - Body ground	Front passenger side door courtesy switch input	Passenger side door open	Below 1 V
			Passenger side door closed	Pulse generation
2K-2 (ILE) - Body ground	W*1 - Body ground GR*2 - Body ground	Interior light driver output	Interior light switch in DOOR position and interior light ON	Below 1 V
			Interior light switch in DOOR position and interior light OFF	11 to 14 V
E50-8 (LCTY) - Body ground	SB*1 - Body ground B*2 - Body ground	Rear left door courtesy switch input	Rear door LH open	Below 1 V
			Rear door RH closed	Pulse generation

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E50-10 (LSWP) - Body ground	B*1 - Body ground R*2 - Body ground	Front passenger side door lock position switch input	Front passenger door unlocked	Below 1 V
			Front passenger door locked	Pulse generation
E50-25 (LSWD) - Body ground	Y - Body ground	Driver side door lock position switch input	Driver side door locked	Pulse generation
			Driver side door unlocked	Below 1 V
E52-10 (LSR) - Body ground	Y*1 - Body ground G*2 - Body ground	Rear door lock position switch input	Rear door LH or RH unlocked	Below 1 V
			Rear door LH and RH locked	Pulse generation

If the result is not as specified, the main body ECU (Instrument panel junction block assembly) may have a malfunction.

HINT:

- *1: for TMC Made
- *2: except TMC Made
- *3: w/o Smart Key System

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003HLW002X
Title: LIGHTING (INT): LIGHTING SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. INSPECT ILLUMINATED ENTRY SYSTEM OPERATION

NOTICE:

Perform this inspection with the customize parameter at the initial setting.

HINT:

The illuminated entry system illuminates the lights below.

- Personal light*1
- Room light
- Engine switch illumination*2

(a) The operation and condition of this control are described below.

OPERATION	CONDITION
Fade in	When any of the following conditions is met, the personal light*1, room light and engine switch illumination*2 fade in. • A key enters any actuation area around the doors when the ignition switch is off and all doors are closed*2. • Any door is opened. • Any door is unlocked when the ignition switch is off and all doors are closed*4. • Ignition switch is turned from ACC to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the personal light*1, room light and engine switch illumination*2 fade out. • Ignition switch is turned from off to ACC or ON when all doors are closed. • All doors are locked when the ignition switch is off*4.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the ignition switch is off.
Fade out (Battery saving control)	When all of the following conditions are met, the main body ECU turns off the lights. • A key is not inserted in the ignition key cylinder*3. • A key is not in the actuation area*2. • There is no change in the condition of the doors for 20 minutes. When any of the following conditions is met, the count of the battery save times will be cleared.

OPERATION	CONDITION
	• A key is inserted in the ignition key cylinder*3. • A key is in the actuation area*2. • Any of the doors is opened.

Title: LIGHTING (INT): LIGHTING SYSTEM: CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.
- Be sure to record the current value before customizing.
- Before troubleshooting the lighting system, pay attention because there is a possibility that a function has been disabled by customizing. If the wireless operation does not function, check that the wireless operation has not been disabled by customizing, then perform troubleshooting.

Illuminated Entry

DISPLAY	DEFAULT	CONTENTS	SETTING
Lighting Time	15 s	Changes the lighting time of the personal light*1, room light and engine switch illumination*2 after closing all of the doors. (It will quickly fade out in case of turning the ignition switch to ON)	7.5 s / 15 s / 30 s
I/L when ACC OFF	ON	Lights up the personal light*1, room light and engine switch illumination*2 when the ignition switch is turned from ACC or ON to off.	ON / OFF
I/L ON W/Door Key Unlock*3	ON	Lights up the personal light*1, room light and engine switch illumination when the doors are unlocked using mechanical key or door control transmitter.	ON / OFF

Title: LIGHTING (INT): LIGHTING SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

CAUTION:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ACC SW	Ignition switch ACC signal/ON or OFF	ON: Ignition switch ACC OFF: Ignition switch off	-
IG SW	Ignition switch IG signal/ON or OFF	ON: Ignition switch ON OFF: Ignition switch off	-
D Door Courtesy SW	Driver side door courtesy switch signal/ON or OFF	ON: Driver side door open OFF: Driver side door closed	-

Luggage Courtesy SW	Luggage compartment door courtesy switch signal/ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Illuminated Entry System	Personal light*1, room light and engine switch illumination*2 (Personal switch OFF, interior light switch in DOOR position, and all doors closed.)	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicator for Lighting*2	Engine switch illumination (All doors are closed)	ON/OFF	-

HINT:

Title: LIGHTING (INT): LIGHTING SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Lighting system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

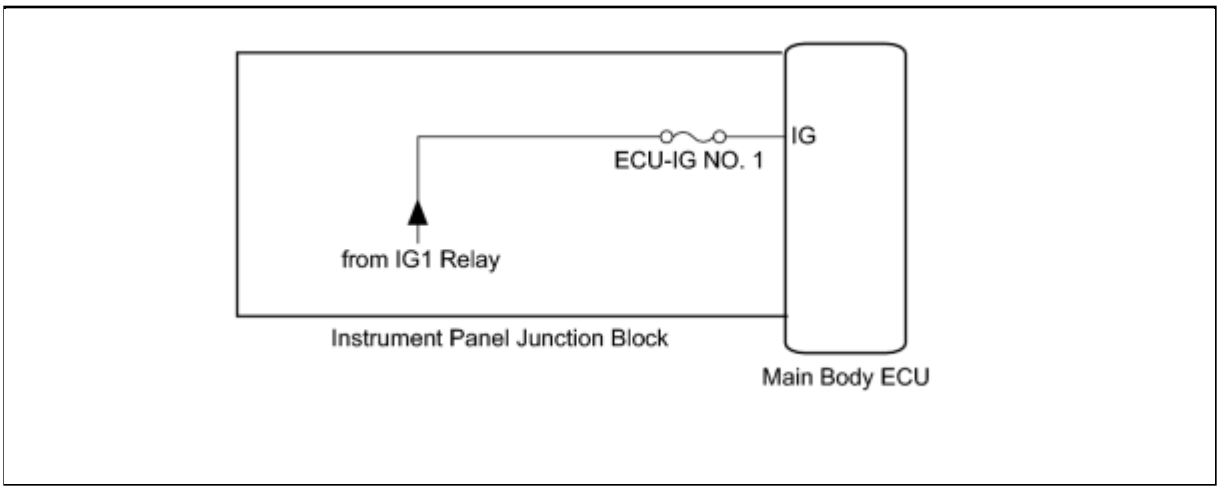
2. CHECK DLC3

(a) Check the DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011SQ01OX
Title: LIGHTING (INT): LIGHTING SYSTEM: IG Signal Circuit (2010 Corolla)		

IG Signal Circuit

DESCRIPTION

The main body ECU receives the IG signal to control the illuminated entry system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Ignition switch IG signal/ON or OFF	ON: Ignition switch ON OFF: Ignition switch off	-

OK:
Normal conditions listed above are displayed.

NG ▶ **INSPECT FUSE (ECU-IG NO. 1)**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT FUSE (ECU-IG NO. 1)**

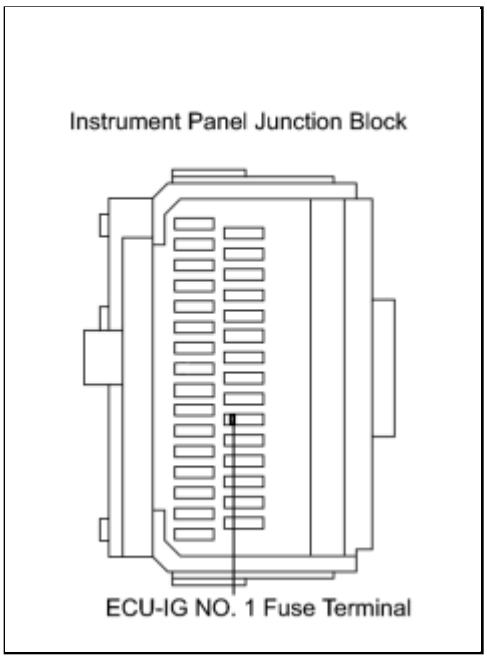
(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ECU-IG No. 1 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**



OK ▼

3.	**CHECK HARNESS AND CONNECTOR (IG POWER SOURCE CIRCUIT)**

(a) Measure the voltage between the loading slot of the fuse and body ground.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

ECU-IG No. 1 fuse terminal - Body ground	Ignition switch off	Below 1 V
	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

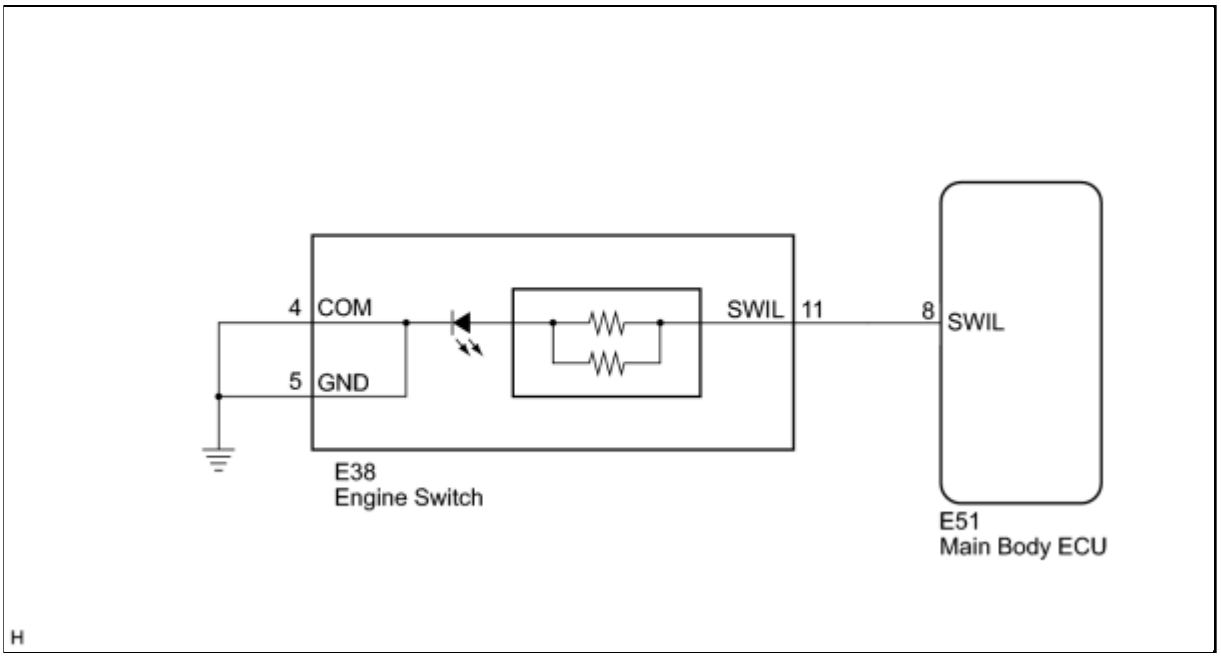
Title: LIGHTING (INT): LIGHTING SYSTEM: Engine Switch Illumination Circuit (2010 Corolla)		



Engine Switch Illumination Circuit

DESCRIPTION

When either of the following conditions is met, the engine switch illumination comes on.

- Light control switch is in TAIL position.
- Interior light is turned on by the illuminated entry system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

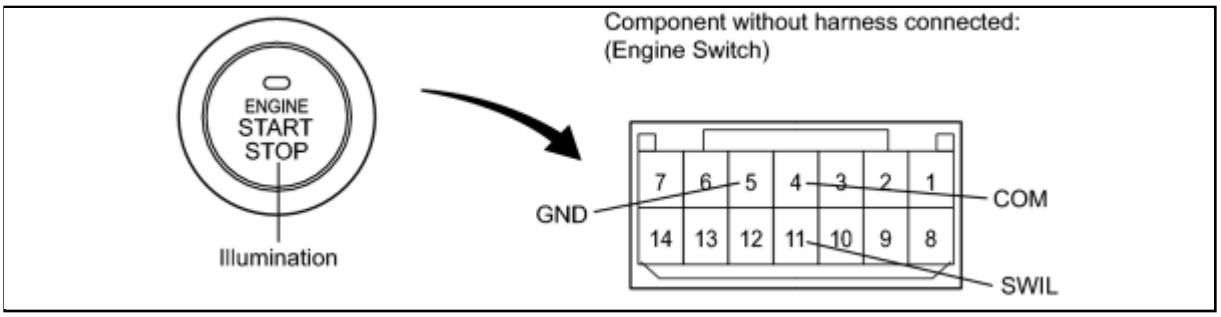
(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Check the operation.

Main Body (Main Body ECU)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicator for Lighting	Engine switch illumination (All doors are closed)	ON/OFF	-

OK:



Engine switch illumination comes on.

NG ▶ **INSPECT ENGINE SWITCH**

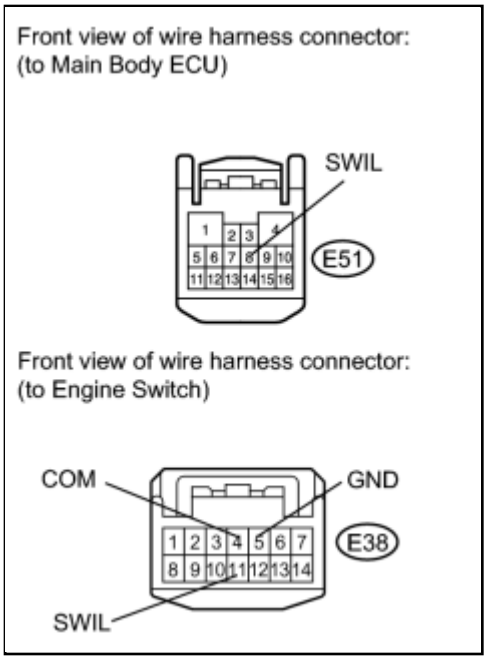
OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT ENGINE SWITCH**

(a) Remove the engine switch.

(b) Connect a (+) lead from the battery to terminal 11 and a (-) lead to terminal 4 or 5.

(c) Check that the illumination comes on.



OK:

Engine switch illumination comes on.

NG ▶ **REPLACE ENGINE SWITCH**

OK ▼

3.	**CHECK HARNESS OR CONNECTOR (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)**

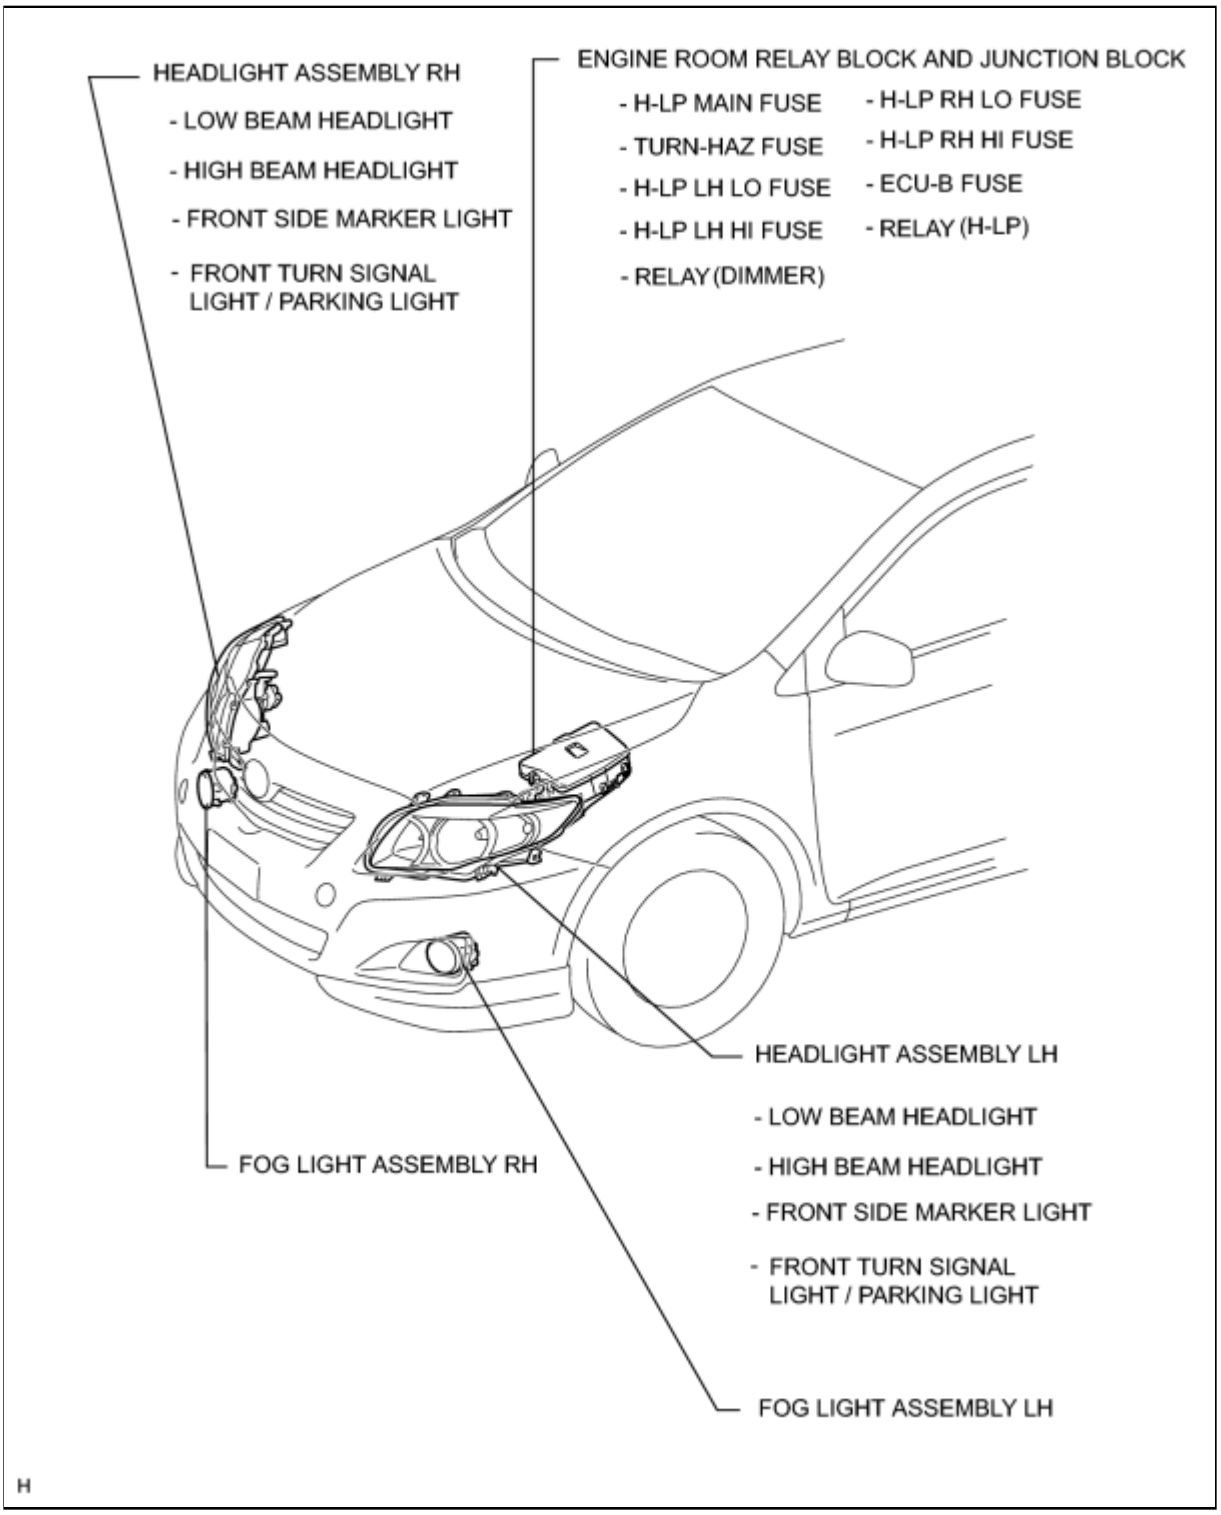
(a) Disconnect the E51 main body ECU connector.

(b) Disconnect the E38 engine switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E38-11 (SWIL) - E51-8 (SWIL)	Always	Below 1 Ω
E38-4 (COM) or E38-5 (GND) - Body ground	Always	Below 1 Ω
E51-8 (SWIL) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Title: LIGHTING (EXT): LIGHTING SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTION FOR HEADLIGHT BULB REPLACEMENT

(a) If even a thin film of oil is left on the surface of a halogen light, its service life will be shortened because the light will operate at a higher temperature.

(b) Handle each halogen light with care. Dropping, hitting or damaging the bulb in any way may result in it exploding and shattering because of the high internal pressure.

(c) Always prepare a new bulb for immediate replacement. While replacing the bulb, the lens may attract dust and moisture if removed from the vehicle for too long.

(d) Always use a bulb of the same wattage for replacement.

(e) Securely reinstall the socket after bulb replacement. The lens may become cloudy or the light cavity may fill with water through gaps around the socket if it is not installed correctly.

2. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch ON	ON	On (IG)
	Ignition switch ACC	ACC	On (ACC)
	Engine start	START	Start

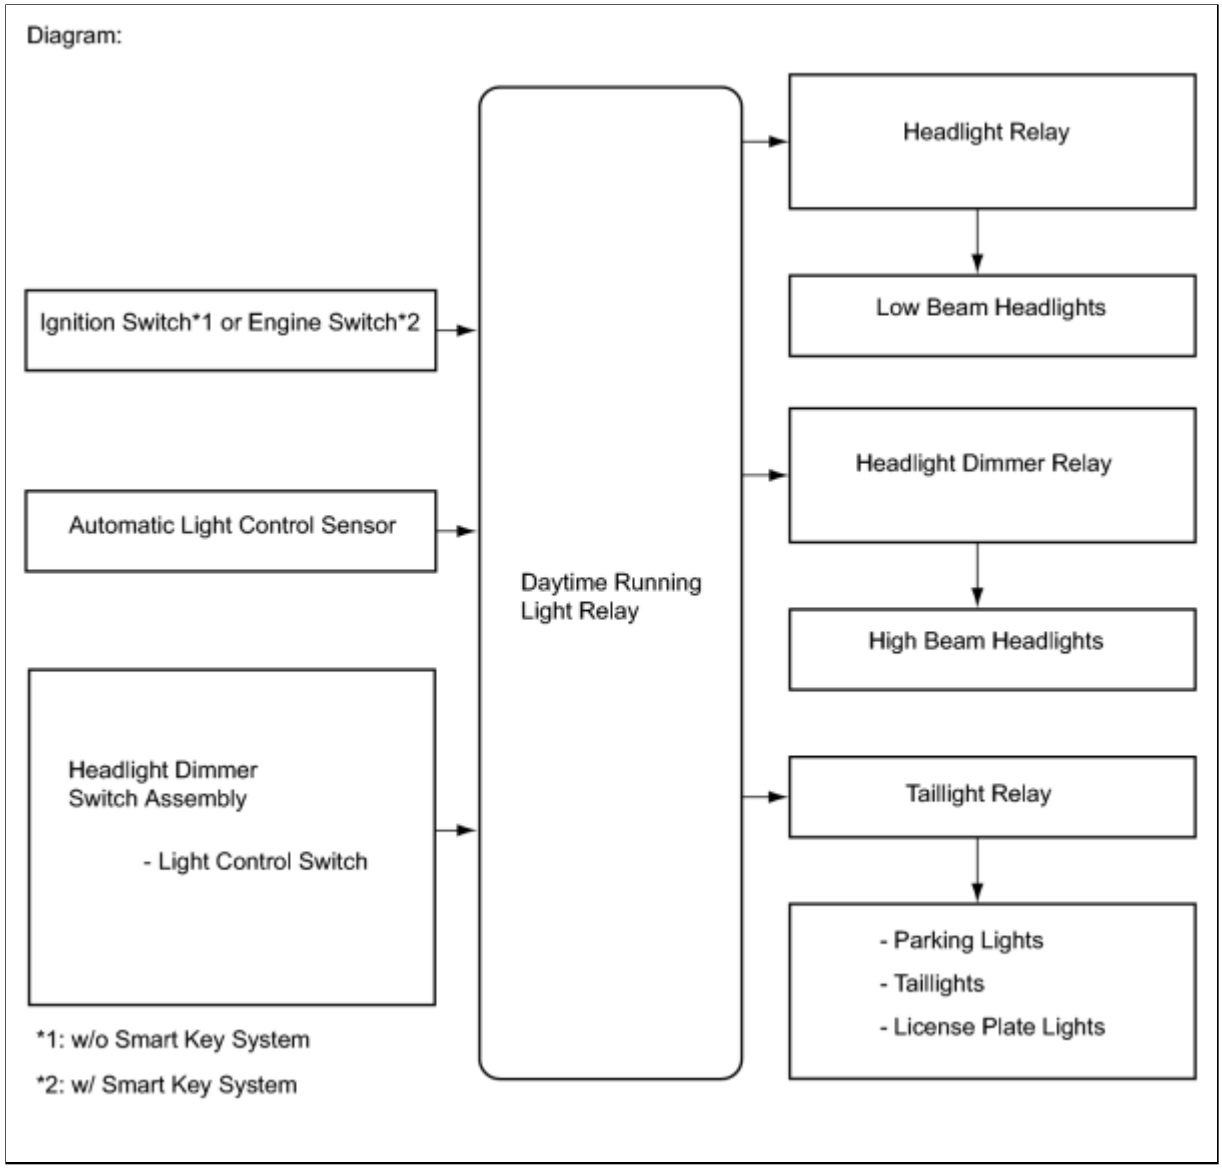
Title: LIGHTING (EXT): LIGHTING SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		



SYSTEM DESCRIPTION

1. EXTERIOR LIGHT CONTROL SYSTEM

The exterior light control system has the following functions:

- Automatic Light Control
- Manual Light Control
- High Beam Control
- Passing Light Control
- Front Fog Light Control
- Daytime Running Light Control
- Low beam headlight Indicator Light Control
- High beam headlight Indicator Light Control

(a) Automatic Light Control

(1) General

The automatic light control sensor detects ambient light, converts it into an electrical signal, and sends the signal to the daytime running light relay. The daytime running light relay automatically turns the headlights and taillights on or off according to the signal. During the day, only the daytime running lights are turned on. At night, taillights (parking lights, taillights and license plate lights) and low beam headlights are turned on.

(2) Fail-Safe

If the daytime running light relay does not receive a signal due to a light control sensor malfunction or open circuit, either of the following conditions will occur.

- If the taillights (parking lights, taillights and license plate lights) and the low beam headlights are on, they will remain on.
- If the taillights (parking lights, taillights and license plate lights) and the low beam headlights are not on, they will remain off.

(b) Manual Light Control

- Manual light control illuminates the low beam headlights and taillights (parking lights, taillights and license plate lights) by manual operation of the light control switch.
- When the light control switch is turned to the TAIL position, the daytime running light

relay assembly turns the taillights on. When the light control switch is turned to the HEAD position, the daytime running light relay turns the low beam headlights and taillights on.

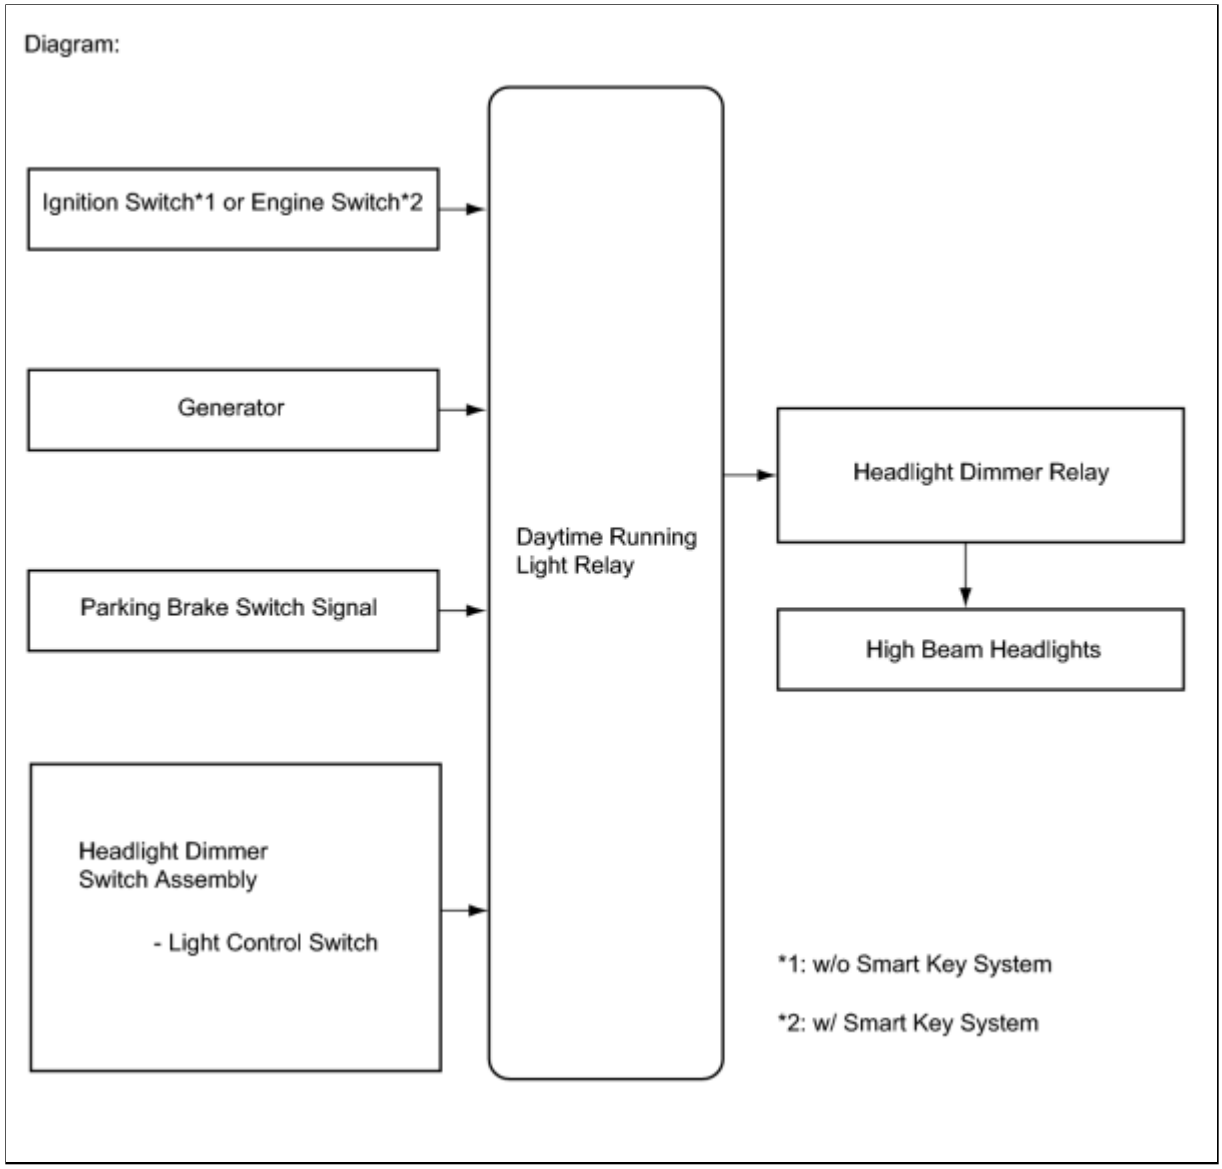
(c) High Beam Control

- High beam control illuminates farther ahead than normal.
- When both of the following conditions are met, the high beam headlights come on:
    - Low beam headlights are turned on by the automatic light control or manual light control.
    - Dimmer switch is in HIGH position.

(d) Passing Light Control

- Passing light control illuminates the high beam headlights in order to allow an oncoming vehicle to become aware of the vehicle's presence while driving with poor visibility.
- When the dimmer switch is turned to the HIGH FLASH position, the high beam headlights come on.

(e) Front Fog Light Control



- When both of the following conditions are met, the front fog lights come on:
    - The low beam headlights are turned on using either automatic light control or manual operation, and the high beam headlights are off.
    - Front fog light switch is on.

    HINT:

    The fog lights will turn on as long as the high beam headlights are off, even when the headlights are turned on via automatic light control.

- When either of the following conditions is met, the front fog lights turn off:
    - Front fog light switch is off.
    - Low beam headlight switch is off or high beam headlight switch is on.

(f) Daytime Running Light Control

- The daytime running light control is designed to automatically turn on the high beam headlights during the day to make the vehicle more visible to other drivers and pedestrians. Daytime running light control is operated by the daytime running light relay.

  HINT:

  The daytime running light relay dims the high beam headlights when operating them as daytime running lights.

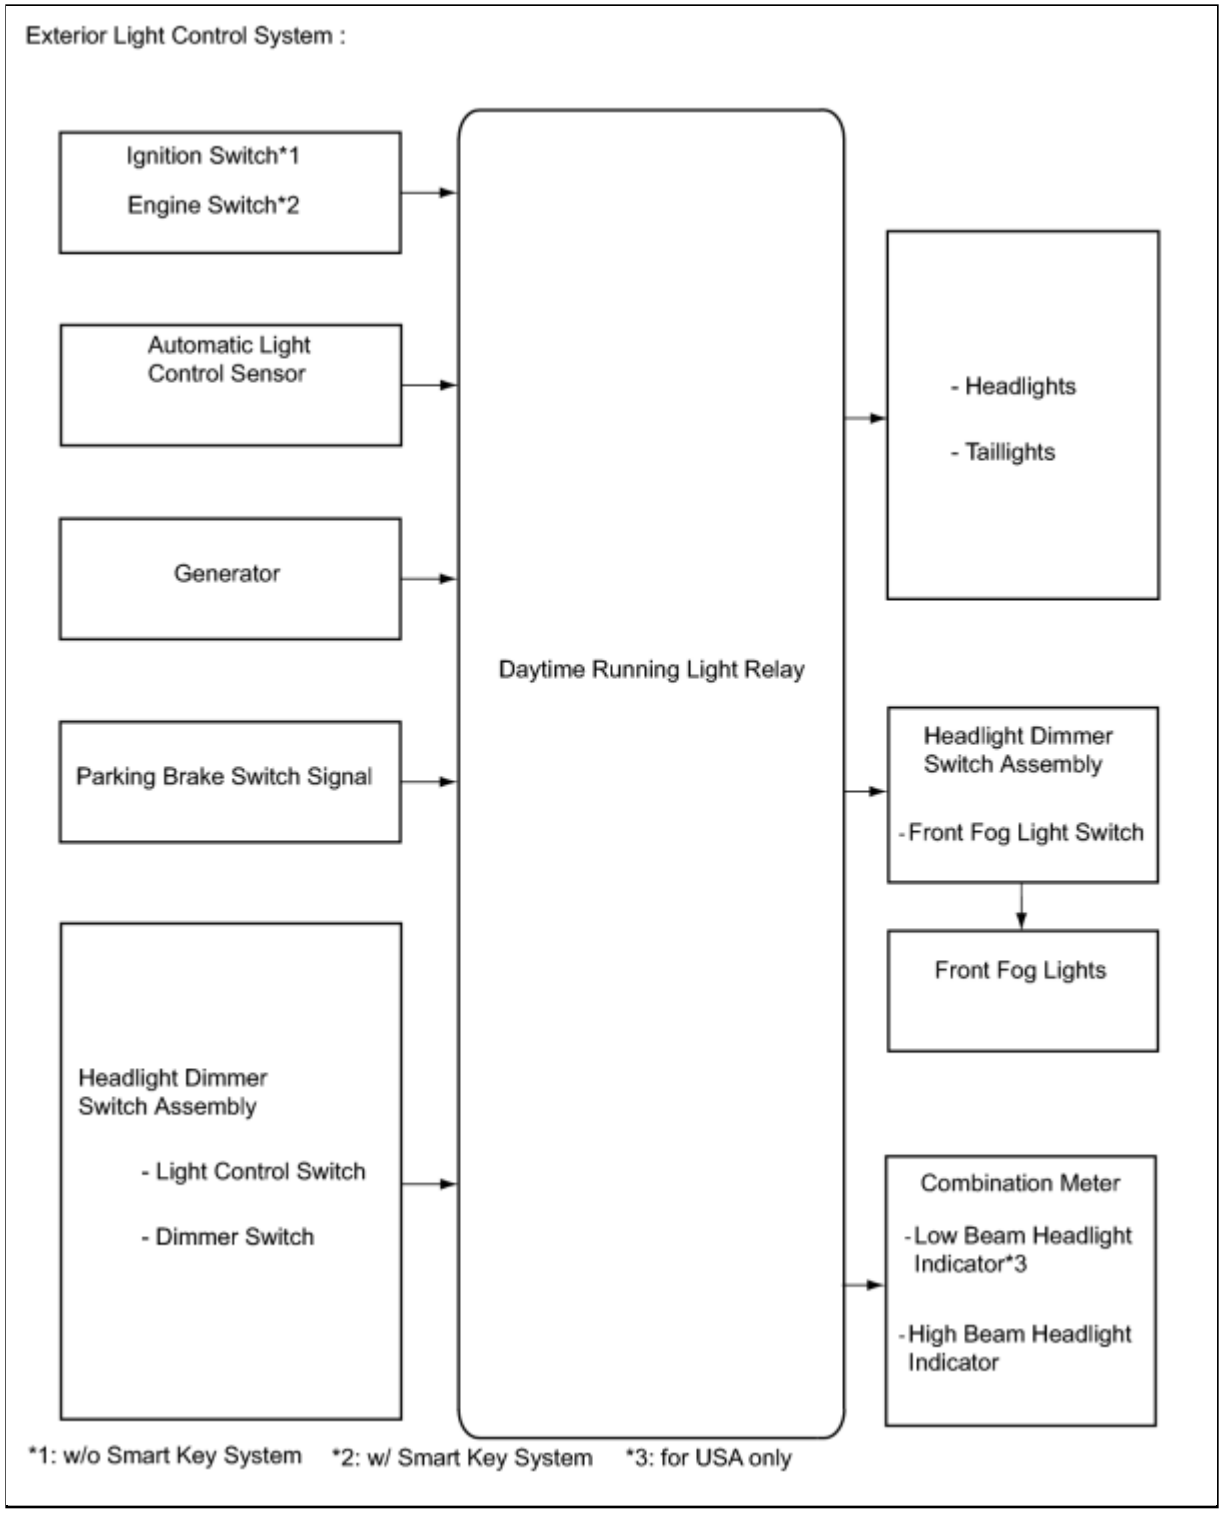
- The daytime running light control will begin operating when all of the following conditions are met:
  - Ignition switch is ON.
  - Engine is running.
  - Parking brake switch is off.
  - Light control switch is in OFF or TAIL.
- The daytime running light control will be cancelled if the light control switch is manually switched to the HEAD position during daytime running light control operation.

(g) Low beam headlight Indicator Light Control (for USA only)

- The low beam headlight indicator light is controlled by the daytime running light relay.
- The daytime running light relay will send a signal to the combination meter to illuminate the indicator when both of the following conditions are met:
    - Ignition switch is ON.
    - Low beam headlights are on.
- When either of the following conditions is met, the low beam headlight indicator turns off:
    - Ignition switch is off
    - Low beam headlights are off.

(h) High beam headlight Indicator Light Control

- The high beam headlight indicator light is controlled by the daytime running light relay.
- The daytime running light relay will send a signal to the combination meter to illuminate the indicator when both of the following conditions are met:
    - Ignition switch is ON.
    - High beam headlights are on.



HINT:

When the daytime running lights are operating, the high beam headlight indicator does not illuminate.

- When either of the following conditions is met, the high beam headlight indicator turns off:
    - Ignition switch is off.
    - High beam headlights are off.

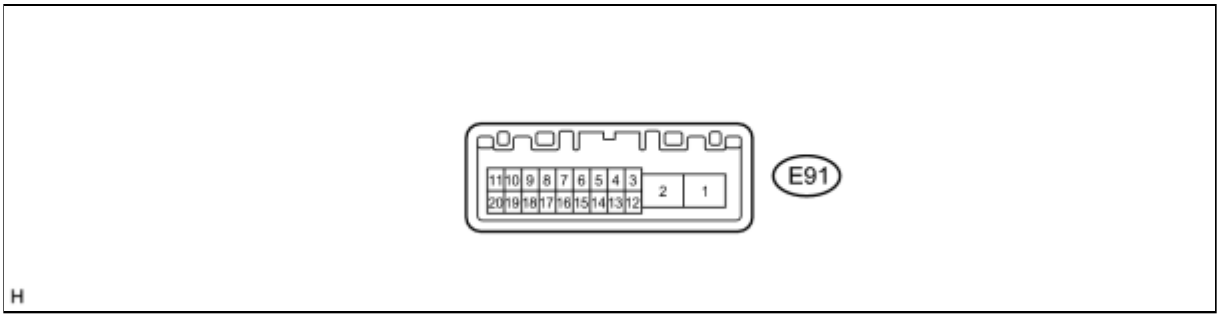
OPERATION CHECK

1. DAYTIME RUNNING LIGHT OPERATION CHECK

(a) Turn the light control switch off.

(b) Start the engine.

(c) Release the parking brake.



(d) Check that the daytime running lights (dimmed high beam headlights) come on.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002CE100YX
Title: LIGHTING (EXT): LIGHTING SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK DAYTIME RUNNING LIGHT RELAY

(a) Disconnect the E91 relay connector.

(b) Measure the voltage between the specified terminals of the wire harness side connectors and body ground.

Standard Voltage:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E91-12 (IG) - Body ground	L - Body ground	IG power supply	Ignition switch off	Below 1 V
			Ignition switch ON	11 to 14 V
E91-3 (+B) - Body ground	R - Body ground	Battery power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Measure the resistance between the specified terminals of the wire harness side connectors and body ground.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E91-2 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(d) Reconnect the E91 relay connector.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E91-11 (PKB) - Body ground	O*1 - Body ground BE*2 - Body ground	Parking brake switch signal	Parking brake switch OFF	10 kΩ or higher
			Parking brake switch ON	Below 1 Ω
E91-18 (CSE) - Body ground	G - Body ground	Ground	Always	Below 1 Ω

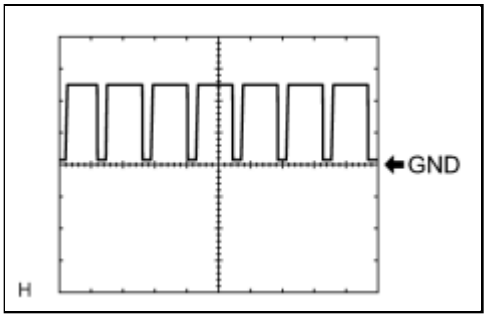
If the result is not as specified, the ECU may have a malfunction.

HINT:

- *1: for TMC Made
- *2: except TMC Made

(f) Measure the voltage according to the value(s) in the table below.

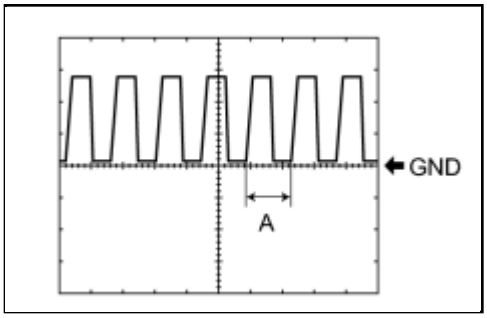
Standard Voltage:



TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E91-1 (DRL) - Body ground	R*1 - Body ground BR*2 - Body ground	Daytime running light drive output	Daytime running lights OFF	Below 1 V
			Daytime running lights ON	Pulse generation (See waveform 1)
E91-4 (FOG) - Body ground	W - Body ground	Front fog relay drive output	Front fog light switch ON and light control switch OFF	11 to 14 V
			Front fog light switch ON and light control switch in HEAD	Below 1 V
E91-5 (IND) - Body ground	GR - Body ground	Low beam headlight indicator drive output	Low beam headlight indicator ON	Below 1 V
			Low beam headlight indicator OFF	11 to 14 V
E91-6 (H-LP) - Body ground	B*1 - Body ground V*2 - Body ground	Low beam headlight relay drive output	Low beam headlights ON	Below 1 V
			Low beam headlights OFF	11 to 14 V
E91-7 (H) - Body ground	G - Body ground	Light control switch HEAD signal input	Light control switch in HEAD	Below 1 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			Light control switch not in HEAD	11 to 14 V
E91-8 (CHG-) - Body ground	Y - Body ground	Engine revolution signal input	Engine running	11 to 16 V
			Engine stopped	Below 1 V
E91-10 (HF) - Body ground	B - Body ground	Dimmer switch HIGH FLASH signal input	Dimmer switch in HIGH FLASH position	Below 1 V
			Dimmer switch not in HIGH FLASH position	11 to 14 V
E91-13 (DIM) - Body ground	P - Body ground	High beam headlight relay drive output	High beam headlights ON or daytime running lights ON	Below 1 V
			High beam headlights and daytime running lights OFF	11 to 14 V
E91-14 (TAIL) - Body ground	W*1 - Body ground SB*2 - Body ground	Taillight relay drive output	Taillights ON	Below 1 V
			Taillights OFF	11 to 14 V
E91-15 (T) - Body ground	W*1 - Body ground BR*2 - Body ground	Light control switch TAIL signal input	Light control switch in TAIL or HEAD	Below 1 V
			Light control switch in neither TAIL nor HEAD	11 to 14 V
E91-16 (HI) - Body ground	LG - Body ground	Dimmer switch HIGH signal input	Dimmer switch in HIGH	Below 1 V
			Dimmer switch in LOW	11 to 14 V
E91-17 (H-ON) - Body ground	L - Body ground	High beam headlight indicator drive output	High beam headlight indicator ON	Below 1 V
			High beam headlight indicator OFF	Below 1 V
E91-19 (CSO) - Body ground	SB - Body ground	Automatic light control sensor signal input	Ignition switch off	Below 1 V
			Ignition switch ON	Pulse generation (See waveform 2)
E91-20 (CSB) - Body ground	GR - Body ground	Automatic light control sensor power supply output	Ignition switch off	Below 1 V
			Ignition switch ON	11 to 14 V

If the result is not as specified, the ECU may have a malfunction.



HINT:

- *1: for TMC Made
- *2: except TMC Made

(1) Waveform 1

ITEM	CONTENT
Tool setting	5 V/DIV., 20 ms./DIV.

(2) Waveform 2

ITEM	CONTENT
Tool setting	2 V/DIV., 5 ms./DIV.

HINT:

If the ambient light becomes brighter, width A becomes narrower.

Title: LIGHTING (EXT): LIGHTING SYSTEM: Front Fog Light Circuit (2010 Corolla)		

Front Fog Light Circuit

DESCRIPTION

- When both of the following conditions are met, the front fog lights come on:
  - The low beam headlights are turned on using either automatic light control or manual operation, and the high beam headlights are off.
  - Front fog light switch is on.

WIRING DIAGRAM

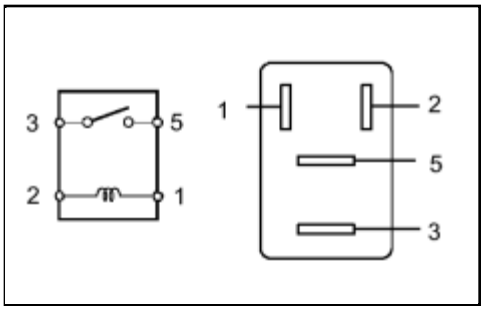
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (FR FOG)**

(a) Remove the FR FOG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
FR FOG fuse	Always	Below 1 Ω

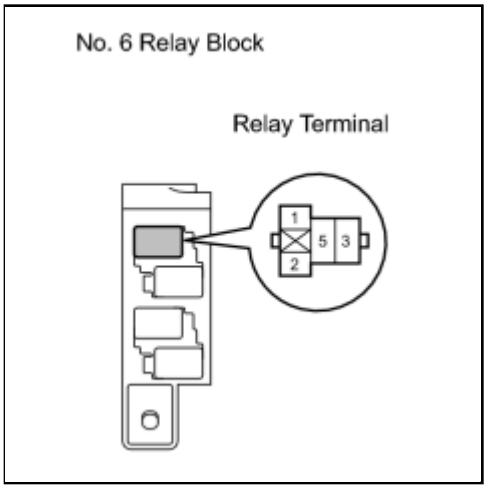
NG ▶ **REPLACE FUSE**

OK ▼

2.	**INSPECT FRONT FOG LIGHT RELAY**

(a) Remove the front fog light relay.

(b) Measure the resistance according to the value(s) in the table below.



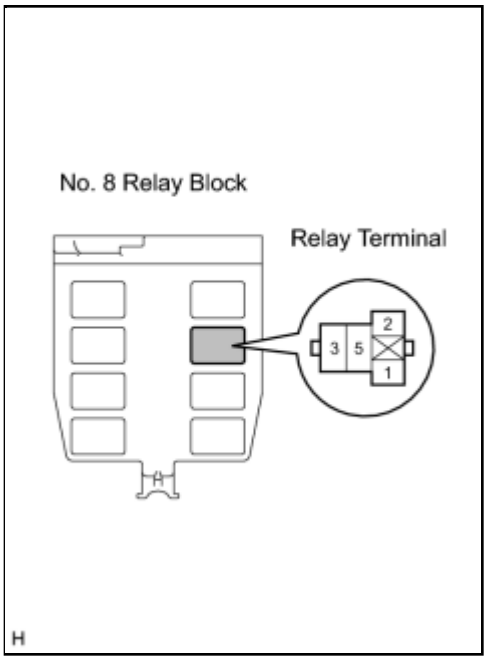
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

NG ▶ **REPLACE FRONT FOG LIGHT RELAY**

OK

3.	**CHECK HARNESS AND CONNECTOR (BATTERY - FRONT FOG LIGHT RELAY)**



(a) for TMC Made

(1) Install the FR FOG fuse.

(2) Measure the voltage according to the value(s) in the table below.

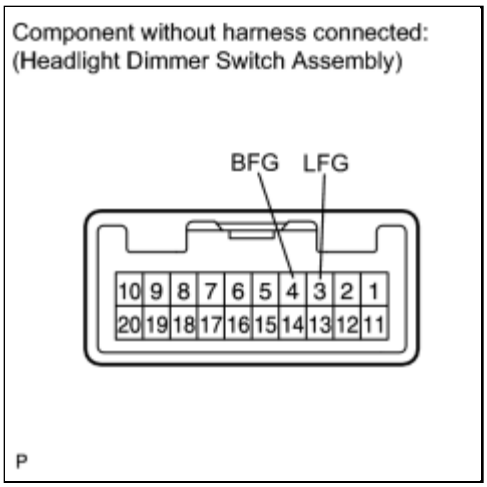
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 - Body ground	Always	11 to 14 V
5 - Body ground	Always	11 to 14 V

(b) except TMC Made

(1) Install the FR FOG fuse.

(2) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 - Body ground	Always	11 to 14 V
5 - Body ground	Always	11 to 14 V

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

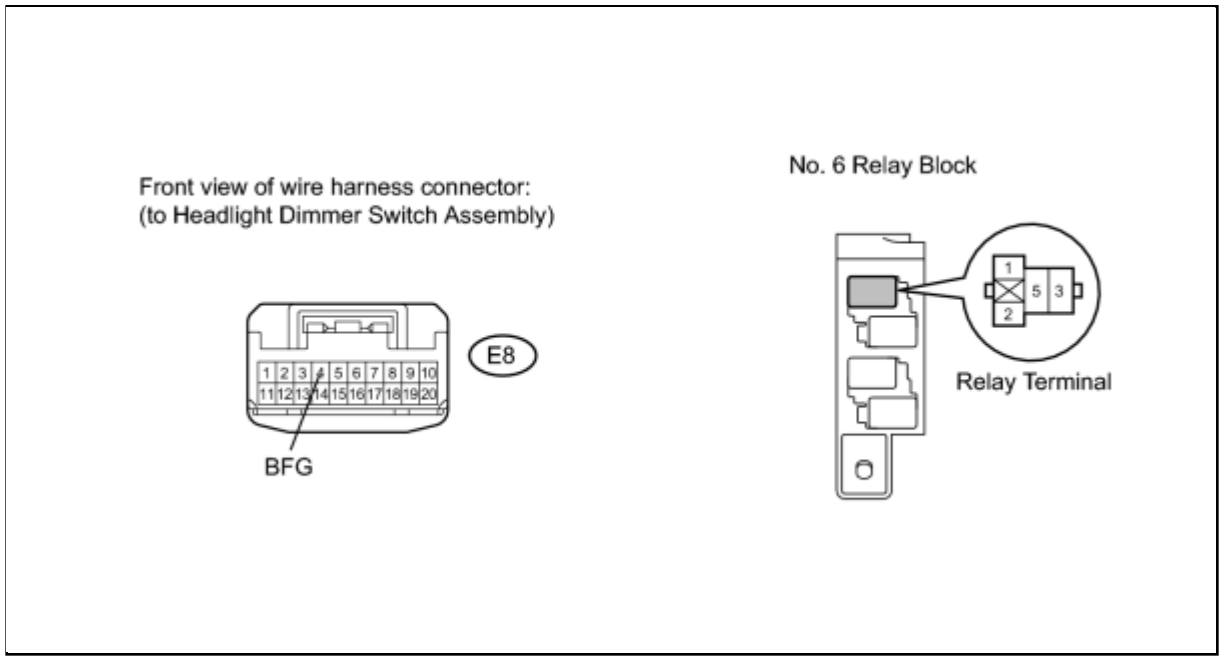
4.	**INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY**

(a) Remove the headlight dimmer switch assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (LFG) - 4 (BFG)	Fog light switch off	10 kΩ or higher
3 (LFG) - 4 (BFG)	Fog light switch on	Below 1 Ω



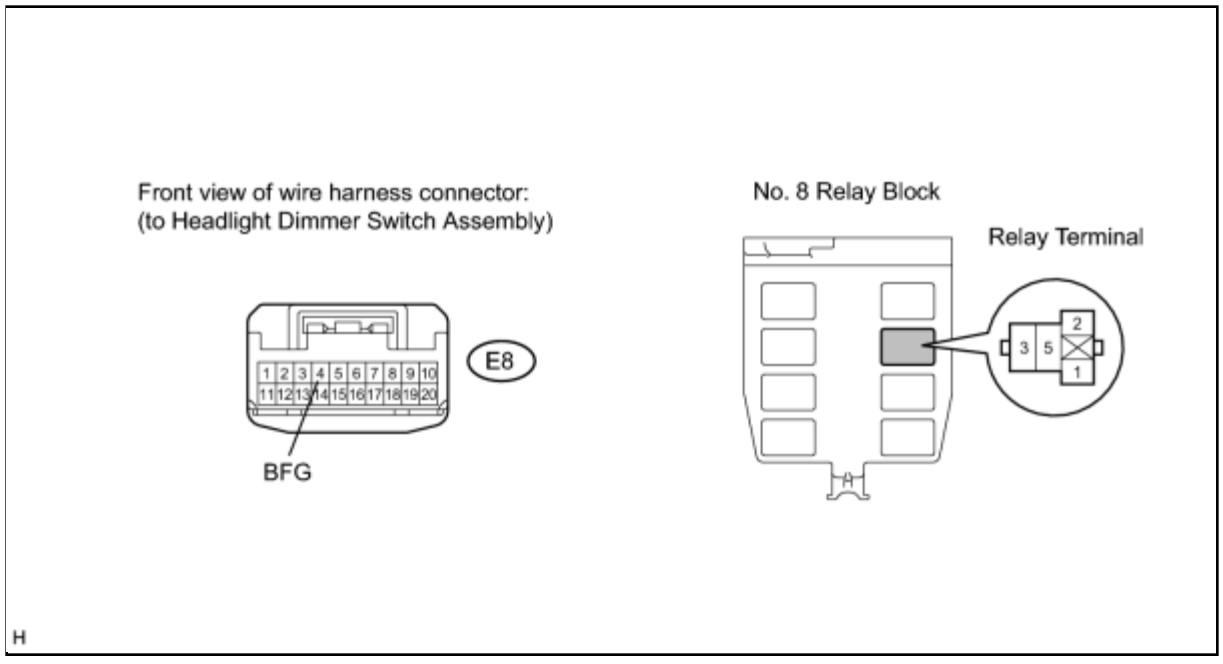
(c) Reinstall the headlight dimmer switch assembly.

NG ▶ **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

OK

5.	**CHECK HARNESS AND CONNECTOR (FRONT FOG LIGHT RELAY - HEADLIGHT DIMMER SWITCH ASSEMBLY)**

(a) for TMC Made



(1) Disconnect the E8 headlight dimmer switch assembly connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Front fog light relay terminal 1 - E8-4 (BFG)	Always	Below 1 Ω
Front fog light relay terminal 1 - Body ground	Always	10 kΩ or higher

(b) except TMC Made

(1) Disconnect the E8 headlight dimmer switch assembly connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Front fog light relay terminal 1 - E8-4 (BFG)	Always	Below 1 Ω
Front fog light relay terminal 1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

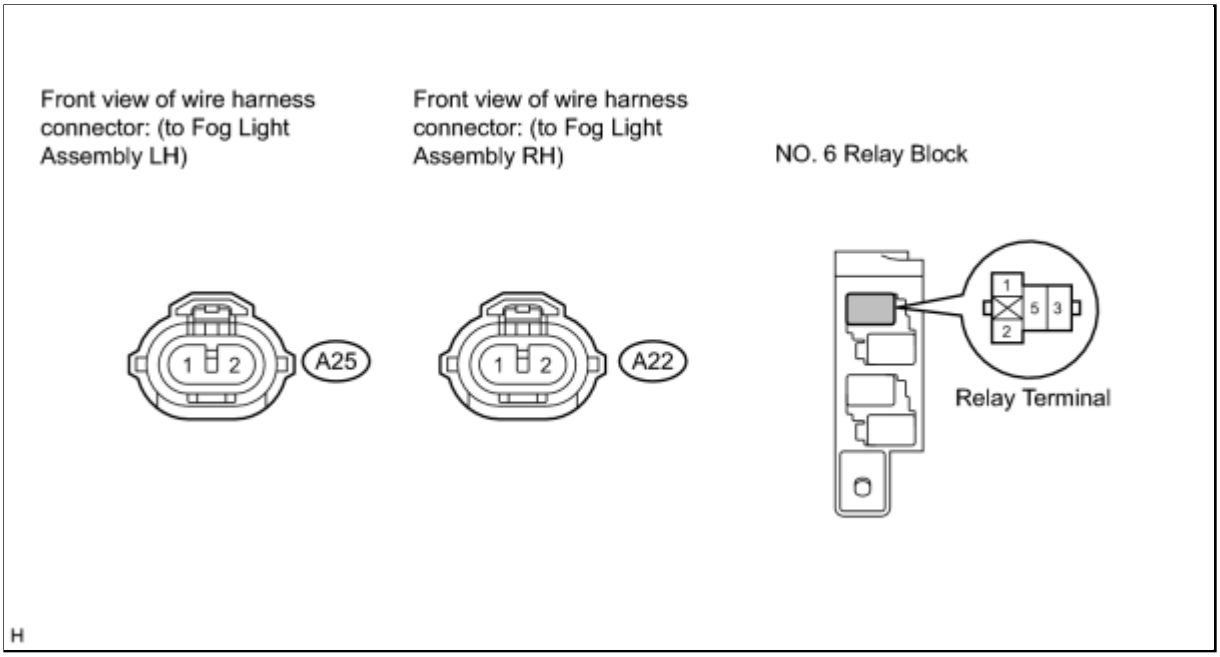
OK ▼

6.	**CHECK HARNESS AND CONNECTOR (HEADLIGHT DIMMER SWITCH ASSEMBLY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



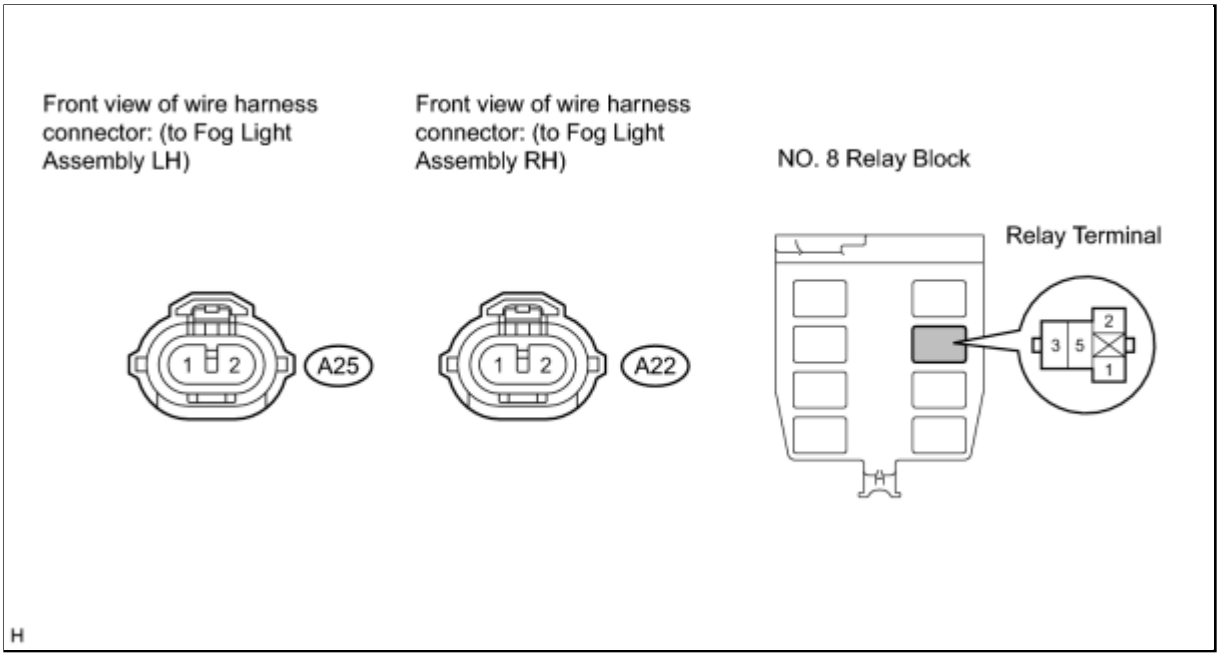
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E8-3 (LFG) - E91-4 (FOG)	Always	Below 1 Ω
E8-3 (LFG) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (FRONT FOG LIGHT RELAY - FOG LIGHT ASSEMBLY)**

(a) for TMC Made



(1) Disconnect the A25 fog light assembly LH connector and the A22 fog light assembly RH connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

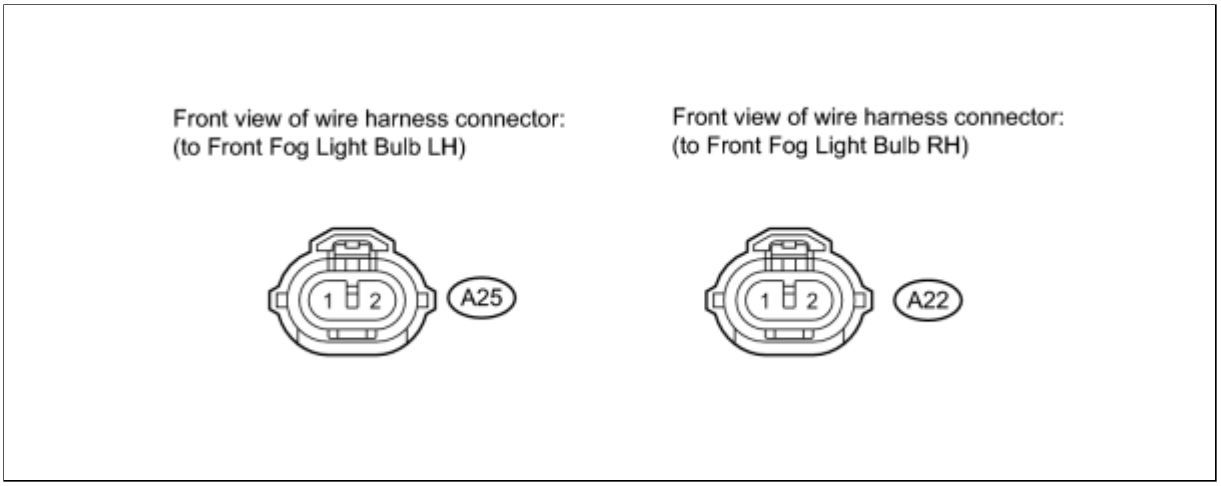
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Front fog light relay terminal 3 - A25-2	Always	Below 1 Ω
Front fog light relay terminal 3 - Body ground	Always	10 kΩ or higher
Front fog light relay terminal 3 - A22-2	Always	Below 1 Ω
Front fog light relay terminal 3 - Body ground	Always	10 kΩ or higher

(b) except TMC Made

(1) Disconnect the A25 fog light assembly LH connector and the A22 fog light assembly RH connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Front fog light relay terminal 3 - A25-2	Always	Below 1 Ω
Front fog light relay terminal 3 - Body ground	Always	10 kΩ or higher
Front fog light relay terminal 3 - A22-2	Always	Below 1 Ω
Front fog light relay terminal 3 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (FOG LIGHT ASSEMBLY - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

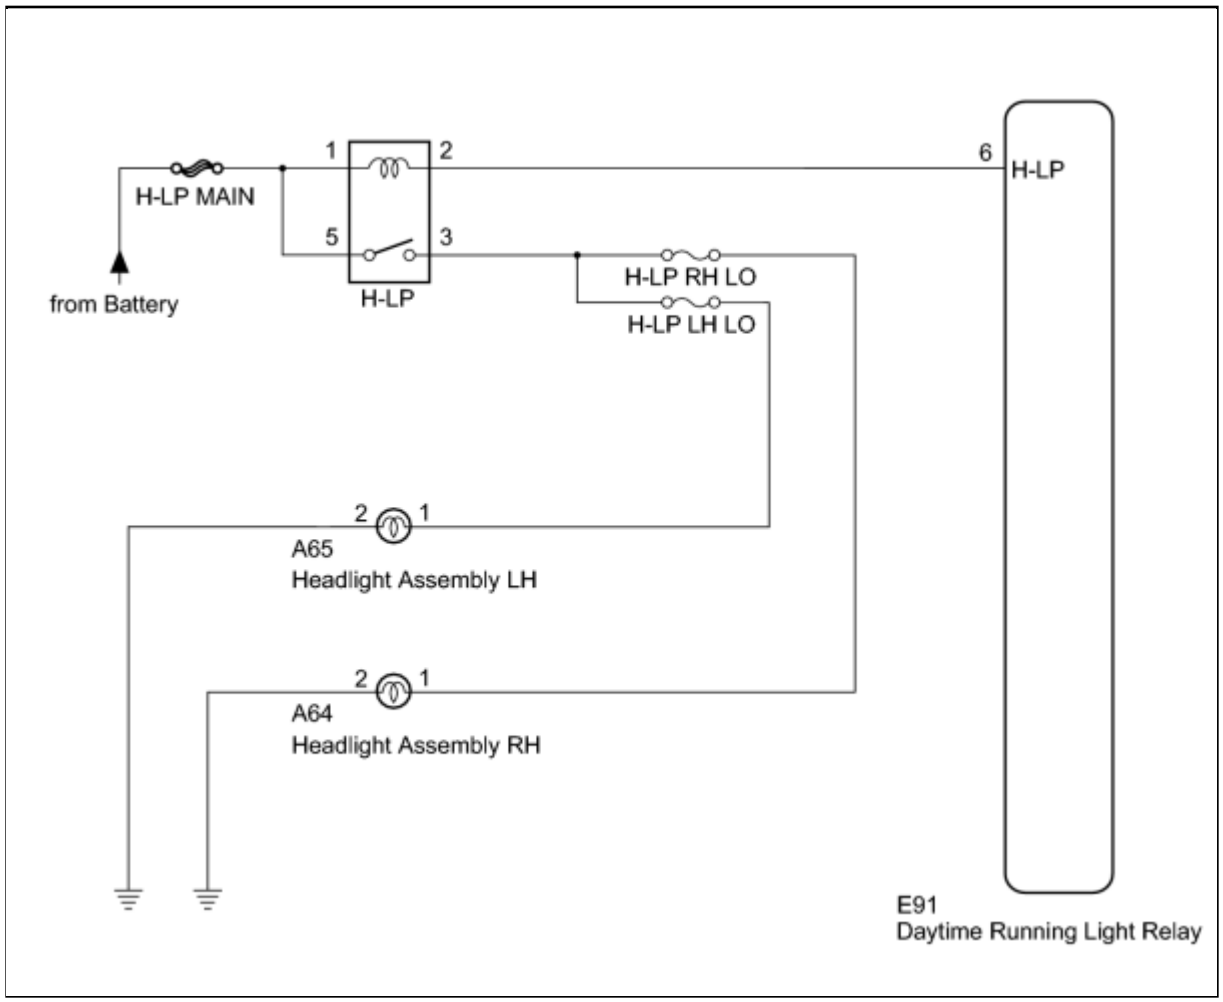
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A25-1 - Body ground	Always	Below 1 Ω
A22-1 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ZBM01SX
Title: LIGHTING (EXT): LIGHTING SYSTEM: Headlight Relay Circuit (2010 Corolla)		

Headlight Relay Circuit



DESCRIPTION

- The daytime running light relay receives the light control switch HEAD signal and the ambient light level signal from the automatic light control sensor to control the headlight relay.

HINT:

- If only a low beam headlight bulb on one side does not illuminate, inspect the bulb, fuse, or wire harness related to the bulb.

WIRING DIAGRAM

INSPECTION PROCEDURE

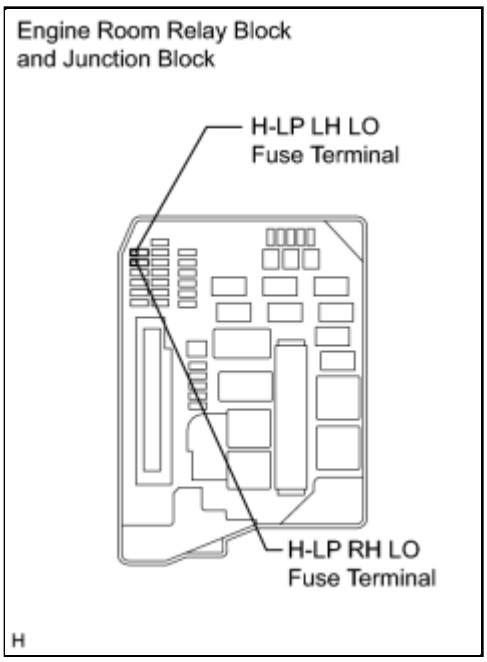
PROCEDURE

1.	**INSPECT FUSE (H-LP MAIN)**

(a) Remove the H-LP MAIN fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H-LP MAIN fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

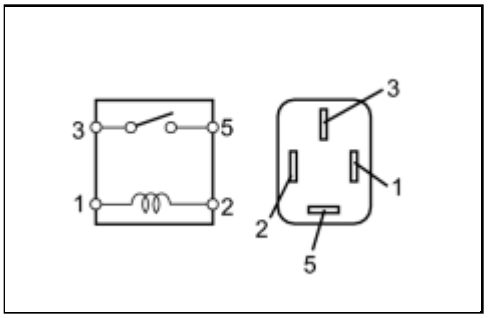
OK ▼

2.	**INSPECT ENGINE ROOM RELAY BLOCK**

(a) Install the H-LP MAIN fuse to the engine room relay block.

(b) Remove the H-LP LH LO fuse and H-LP RH LO fuse from the engine room relay block.

(c) Measure the voltage between the loading slot of each fuse and body ground.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
H-LP LH LO fuse terminal - Body ground	Light control switch OFF → HEAD	Below 1 V → 11 to 14 V
H-LP RH LO fuse terminal - Body ground	Light control switch OFF → HEAD	Below 1 V → 11 to 14 V

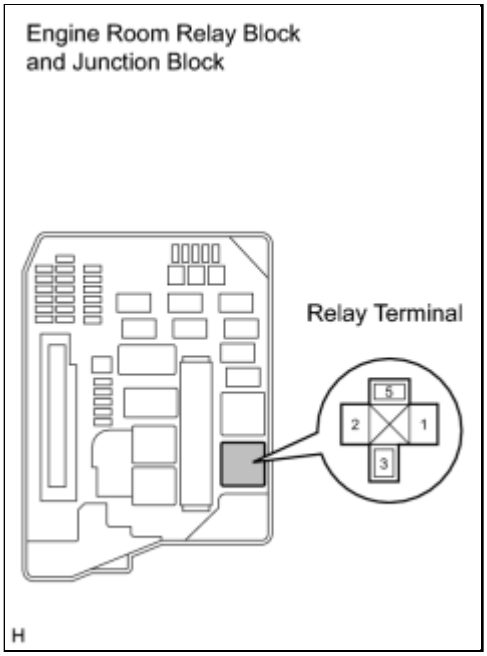
NG ▶ **INSPECT HEADLIGHT RELAY (H-LP)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUSE - BODY GROUND)**

3.	**INSPECT HEADLIGHT RELAY (H-LP)**

(a) Remove the headlight relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

NG ▶ **REPLACE HEADLIGHT RELAY**

OK ▼

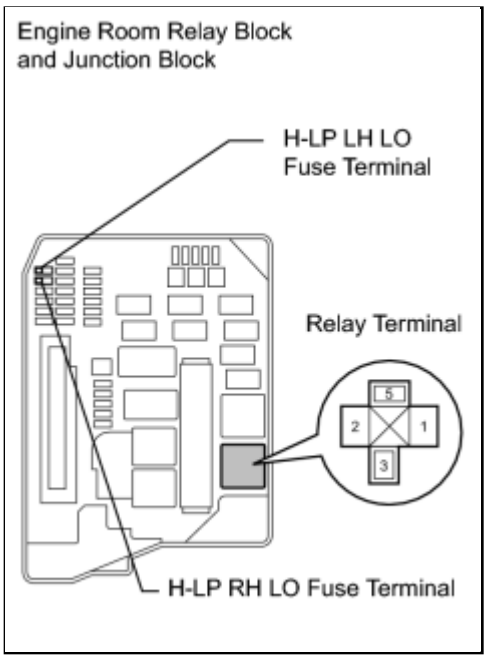
4.	CHECK HARNESS AND CONNECTOR (BATTERY - HEADLIGHT RELAY)

(a) Measure the voltage on the relay block side according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight relay terminal 5 - Body ground	Always	11 to 14 V
Headlight relay terminal 1 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

5.	CHECK HARNESS AND CONNECTOR (HEADLIGHT RELAY - FUSE)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight relay terminal 3 - H-LP LH LO fuse terminal	Always	Below 1 Ω
Headlight relay terminal 3 - H-LP RH LO fuse terminal	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (HEADLIGHT RELAY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight relay terminal 2 - E91-6 (H-LP)	Always	Below 1 Ω
E91-6 (H-LP) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002CE000XX
Title: LIGHTING (EXT): LIGHTING SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

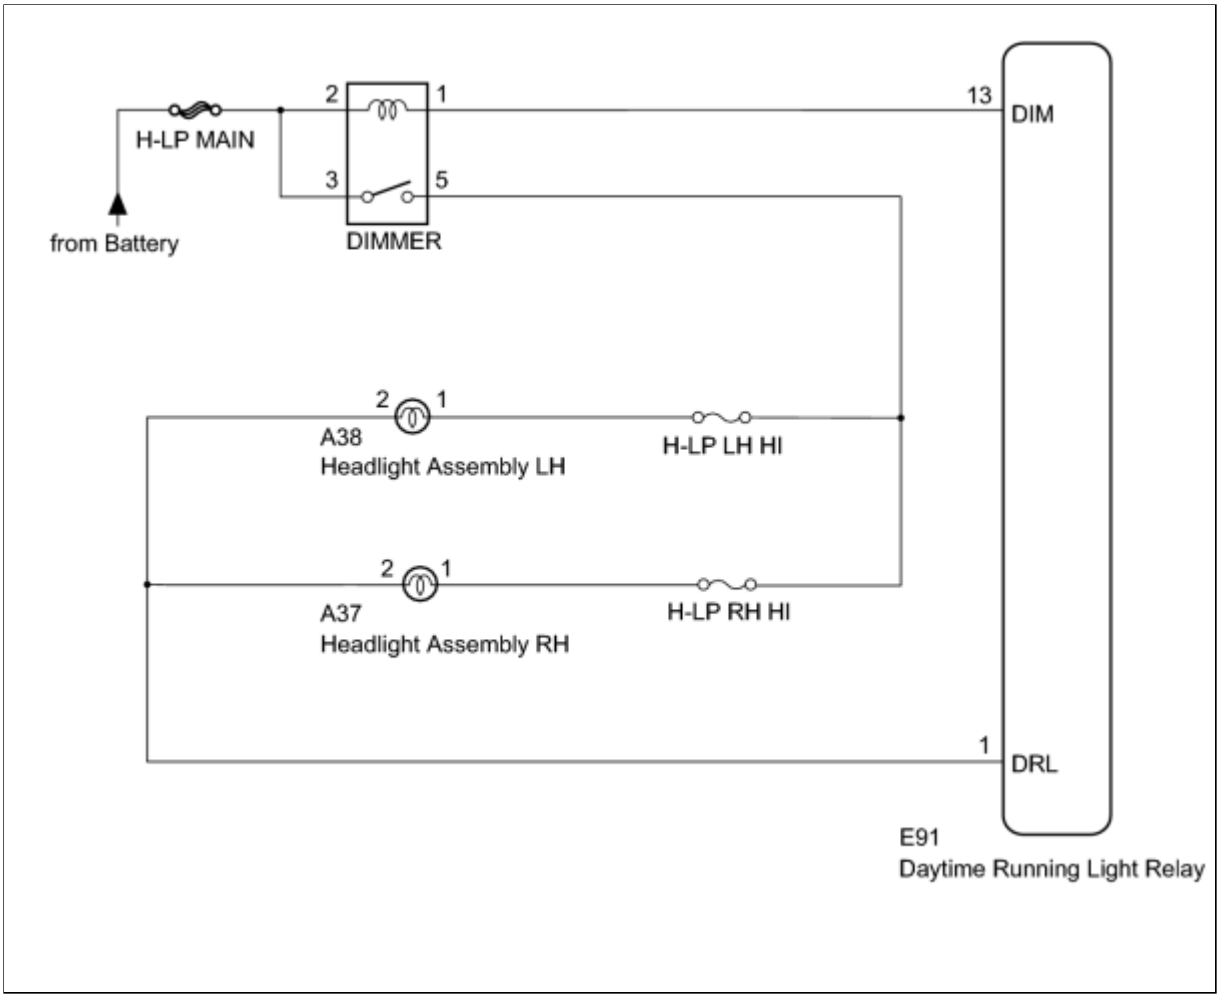
1. AUTOMATIC LIGHT CONTROL FUNCTION

(a) If the daytime running light relay does not receive a signal due to a automatic light control sensor malfunction or open circuit, either of the following conditions will occur.

CONDITION	SPECIFIED CONDITION
Taillights and low beam headlights are on.	• If the taillights and the low beam headlights are on, they will remain on.
Taillights and low beam headlights are off.	• If the taillights and the low beam headlights are not on, they will remain off.

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A7L01MX
Title: LIGHTING (EXT): LIGHTING SYSTEM: Headlight (HI-BEAM) Circuit (2010 Corolla)		

Headlight (HI-BEAM) Circuit

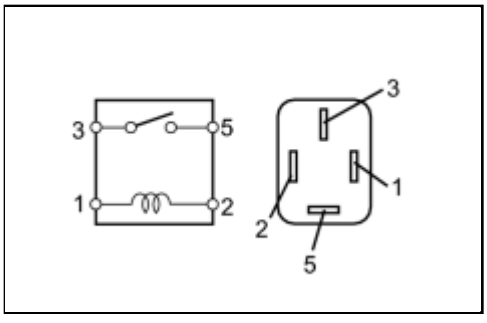


DESCRIPTION

- When both of the following conditions are met, the high beam headlights will come on.
    - Low beam headlights are turned on by the automatic light control or manual light control.
    - Dimmer switch is in HIGH position.
- The daytime running light relay dims the high beam headlights when operating them as daytime running lights.
- When the dimmer switch is turned to the HIGH FLASH position, the high beam headlights will come on.

HINT:

- If only a high beam headlight on one side does not illuminate, inspect the fuse, bulb, or wire harness that is related to the bulb.
- Before performing troubleshooting of the high beam headlight control, check that the low beam headlight operates normally.



WIRING DIAGRAM

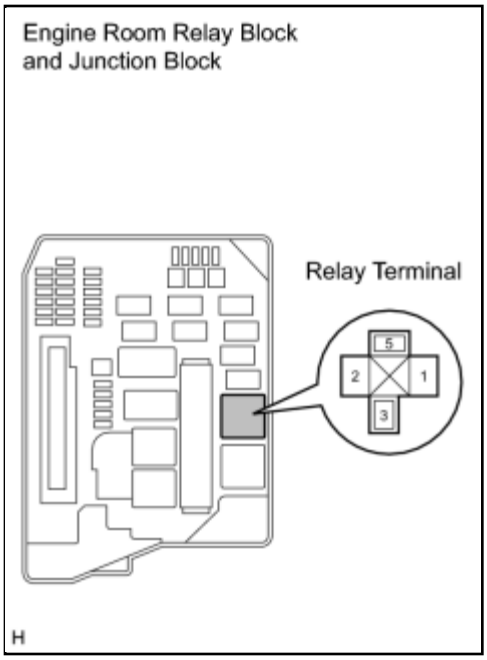
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT HEADLIGHT DIMMER RELAY (DIM)**

(a) Remove the headlight dimmer relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

NG ▶ **REPLACE HEADLIGHT DIMMER RELAY**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (BATTERY - HEADLIGHT DIMMER RELAY)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight dimmer relay terminal 2 - Body ground	Always	11 to 14 V
Headlight dimmer relay terminal 3 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

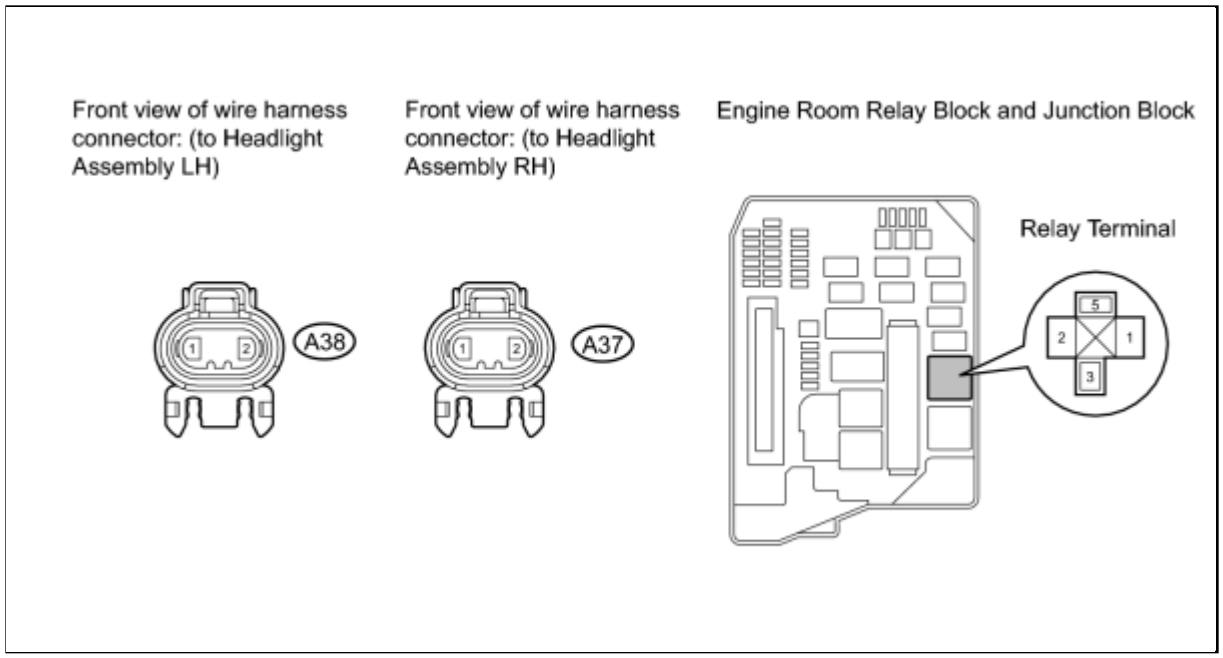
OK ▼

3.	**CHECK HARNESS AND CONNECTOR (HEADLIGHT DIMMER RELAY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight dimmer relay terminal 1 - E91-13 (DIM)	Always	Below 1 Ω
E91-13 (DIM) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (HEADLIGHT DIMMER RELAY - HEADLIGHT ASSEMBLY)**

(a) Disconnect the A38 headlight assembly LH and A37 headlight assembly RH connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight dimmer relay terminal 5 - A38-1	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Headlight dimmer relay terminal 5 - Body ground	Always	10 kΩ or higher
Headlight dimmer relay terminal 5 - A37-1	Always	Below 1 Ω
Headlight dimmer relay terminal 5 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (HEADLIGHT ASSEMBLY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

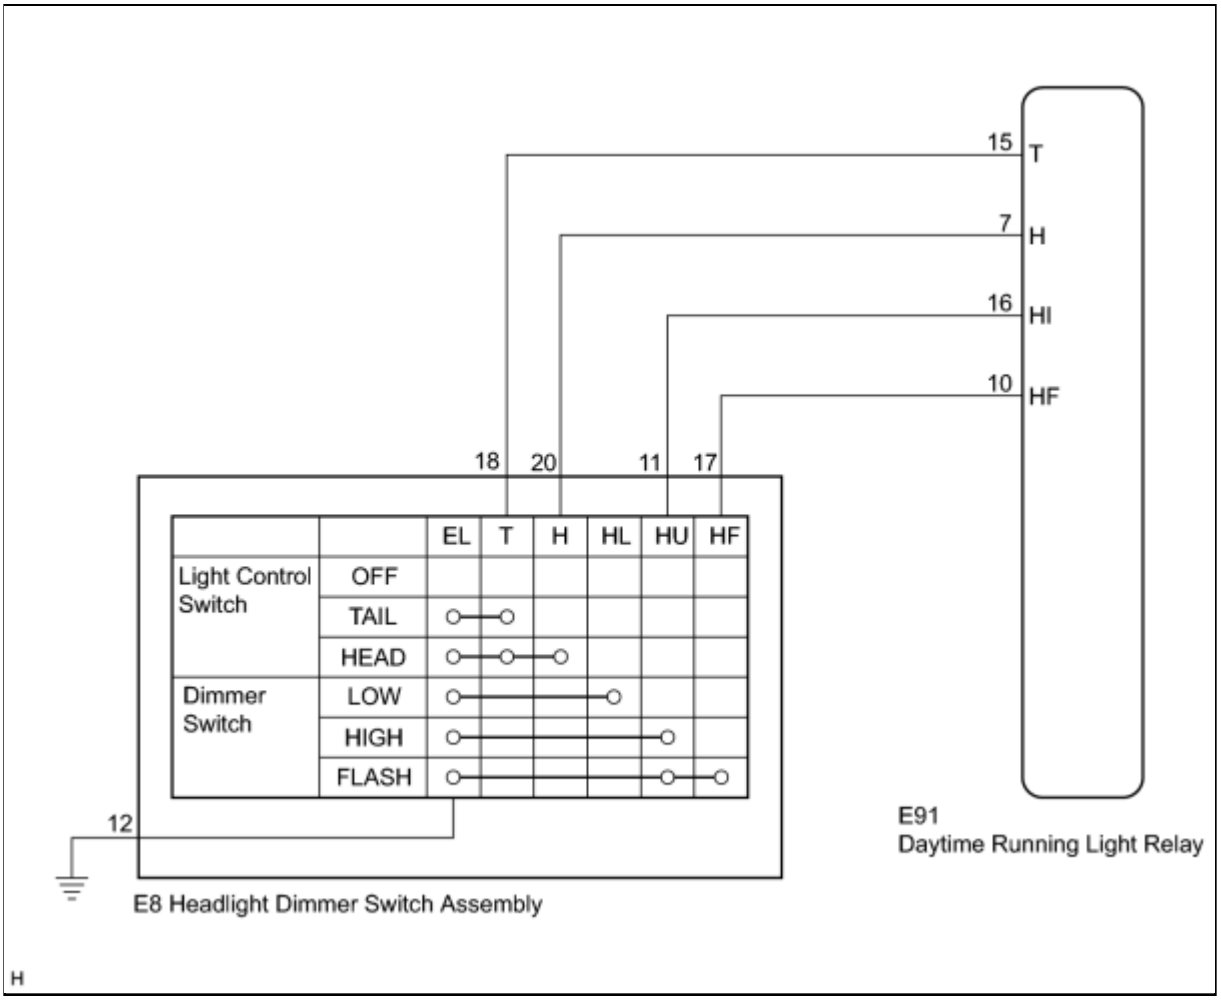
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A38-2 - E91-1 (DRL)	Always	Below 1 Ω
A38-2 - Body ground	Always	10 kΩ or higher
A37-2 - E91-1 (DRL)	Always	Below 1 Ω
A37-2 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011M301ZX
Title: LIGHTING (EXT): LIGHTING SYSTEM: Light Control Switch Circuit (2010 Corolla)		

Light Control Switch Circuit

DESCRIPTION

- The daytime running light relay receives the following signals:
  - Light control switch TAIL or HEAD signal
  - Dimmer switch HIGH or HIGH FLASH (PASS) signal

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Inspect the headlight dimmer switch assembly INFO .

OK:

Headlight dimmer switch assembly is normal.

NG ▶ REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY

OK ▼

2.	CHECK HARNESS AND CONNECTOR (SWITCH - DAYTIME RUNNING LIGHT RELAY)

(a) Disconnect the E8 headlight dimmer switch assembly connector.

(b) Disconnect the E91 daytime running light relay connectors.

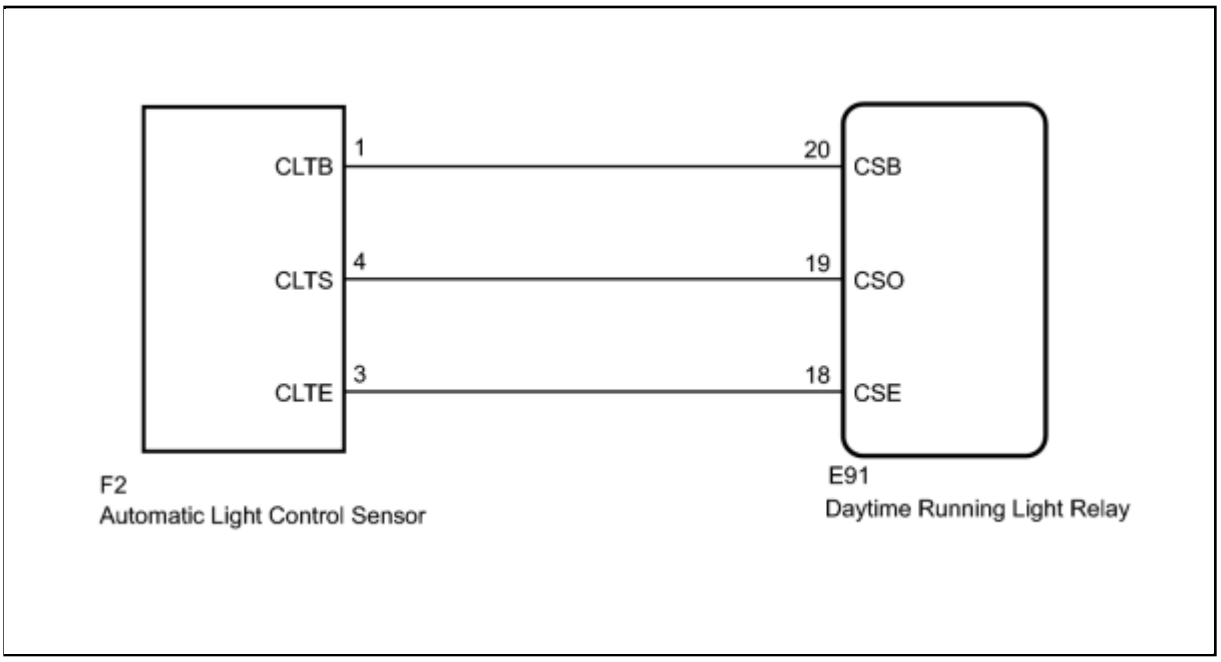
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E8-11 (HU) - E91-16 (HI)	Always	Below 1 Ω
E8-17 (HF) - E91-10 (HF)	Always	Below 1 Ω
E8-18 (T) - E91-15 (T)	Always	Below 1 Ω
E8-20 (H) - E91-7 (H)	Always	Below 1 Ω
E8-11 (HU) - Body ground	Always	10 kΩ or higher
E8-17 (HF) - Body ground	Always	10 kΩ or higher
E8-18 (T) - Body ground	Always	10 kΩ or higher
E8-20 (H) - Body ground	Always	10 kΩ or higher
E8-12 (EL) - Body ground	Always	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011TB00DX
Title: LIGHTING (EXT): LIGHTING SYSTEM: Automatic Light Control Sensor Circuit (2010 Corolla)		

Automatic Light Control Sensor Circuit

DESCRIPTION

The daytime running light relay receives a signal from the automatic light control sensor.

WIRING DIAGRAM

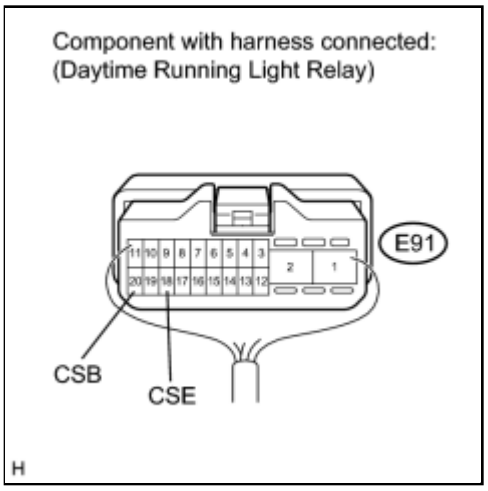
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (DAYTIME RUNNING LIGHT RELAY - AUTOMATIC LIGHT CONTROL SENSOR)**

(a) Disconnect the F2 automatic light control sensor connector and E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
F2-1 (CLTB) - E91-20 (CSB)	Always	Below 1 Ω
F2-3 (CLTE) - E91-18 (CSE)	Always	Below 1 Ω
F2-4 (CLTS) - E91-19 (CSO)	Always	Below 1 Ω
F2-1 (CLTB) - Body ground	Always	10 kΩ or higher
F2-3 (CLTE) - Body ground	Always	10 kΩ or higher
F2-4 (CLTS) - Body ground	Always	10 kΩ or higher

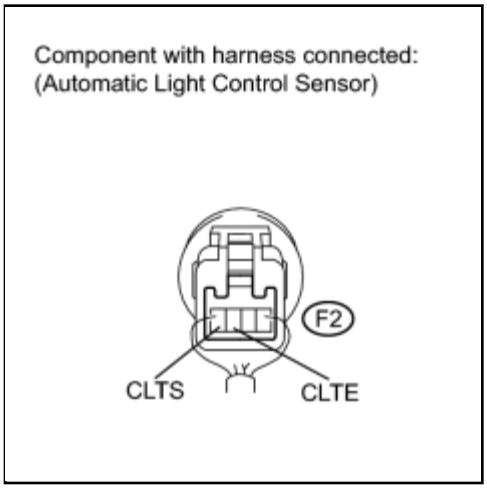
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**INSPECT DAYTIME RUNNING LIGHT RELAY**

(a) Reconnect the E91 daytime running light relay connector.

(b) Measure the voltage according to the value(s) in the table below.



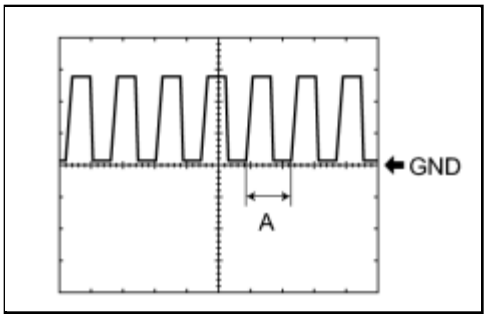
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED VOLTAGE
E91-20 (CSB) - E91-18 (CSE)	Ignition switch off → ON	Below 1 V → 11 to 14 V

NG ▶ **REPLACE DAYTIME RUNNING LIGHT RELAY**

OK

3.	**INSPECT AUTOMATIC LIGHT CONTROL SENSOR**



(a) Reconnect the F2 automatic light control sensor connector.

(b) Connect an oscilloscope to the automatic light control sensor connector.

(c) Check the waveform.

OK:

TESTER CONNECTION	TOOL SETTING	SWITCH CONDITION	SPECIFIED CONDITION
F2-3 (CLTE) - F2-4 (CLTS)	2 V/DIV., 5 ms./DIV.	Ignition switch ON, light control switch in off	Correct waveform is as shown

HINT:

If the ambient light becomes brighter, width A becomes narrower.

NG ▶ **REPLACE AUTOMATIC LIGHT CONTROL SENSOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Title: LIGHTING (EXT): LIGHTING SYSTEM: Generator Signal Circuit (2010 Corolla)		

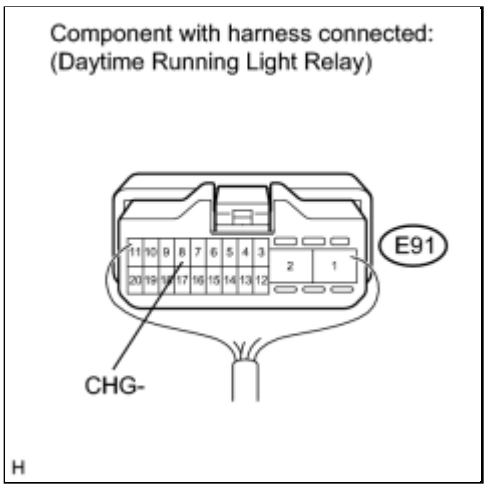
Generator Signal Circuit

DESCRIPTION

The daytime running light relay receives an engine condition signal via the generator.

WIRING DIAGRAM

INSPECTION PROCEDURE



PROCEDURE

1.	**CHECK DAYTIME RUNNING LIGHT RELAY**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-8 (CHG-) - Body ground	Engine running	11 to 14 V

NG ▶ **INSPECT GENERATOR ASSEMBLY**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT GENERATOR ASSEMBLY**

(a) Inspect generator assembly INFO for 2ZR-FE, INFO for 2AZ-FE).

Result:

RESULT	PROCEED TO
OK	A
NG (for 2ZR-FE)	B
NG (for 2AZ-FE)	C

C ▶ **REPLACE GENERATOR ASSEMBLY**

B ▶ **REPLACE GENERATOR ASSEMBLY**

A ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (GENERATOR ASSEMBLY - DAYTIME RUNNING LIGHT RELAY)**

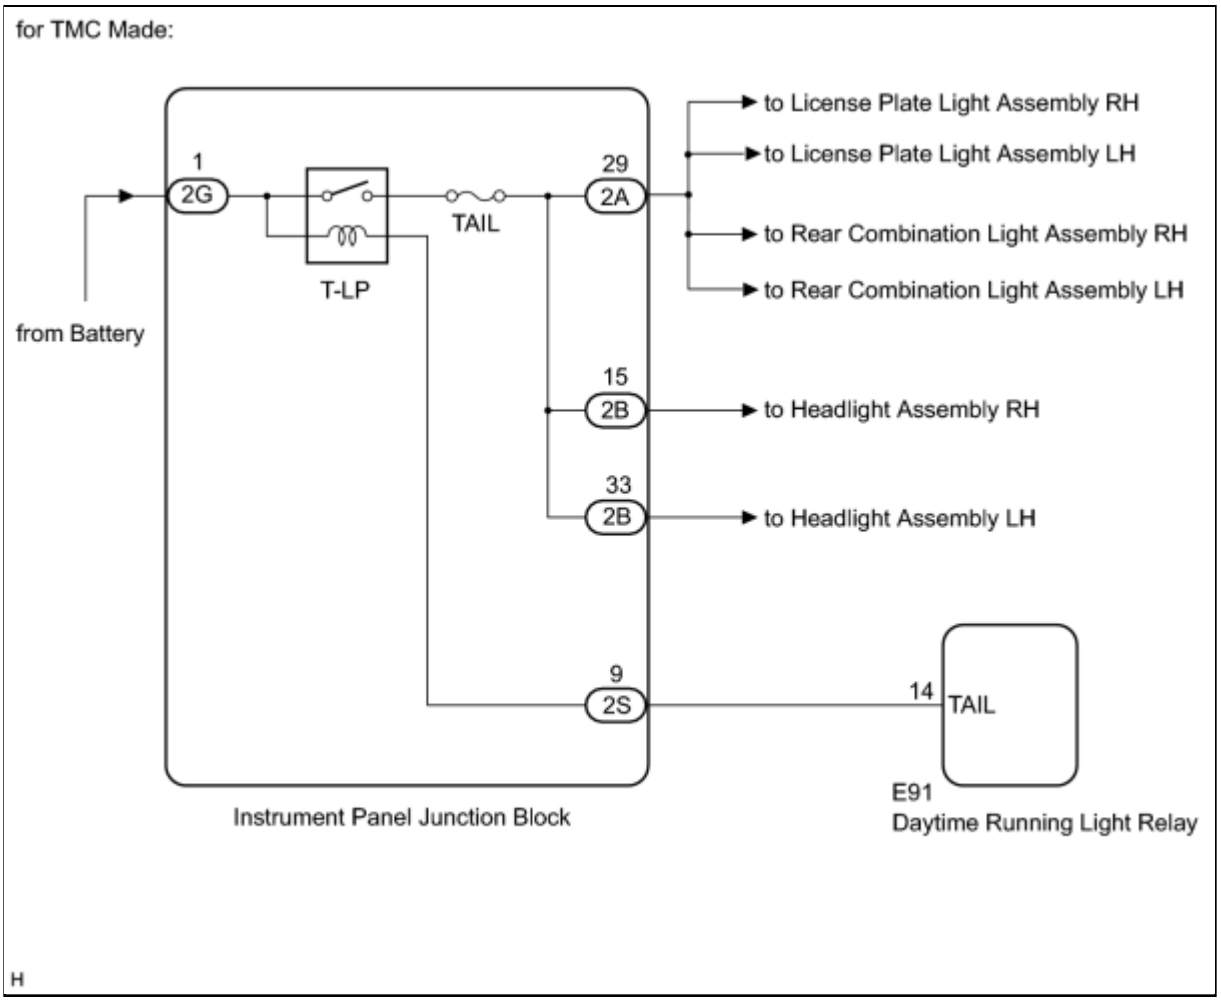
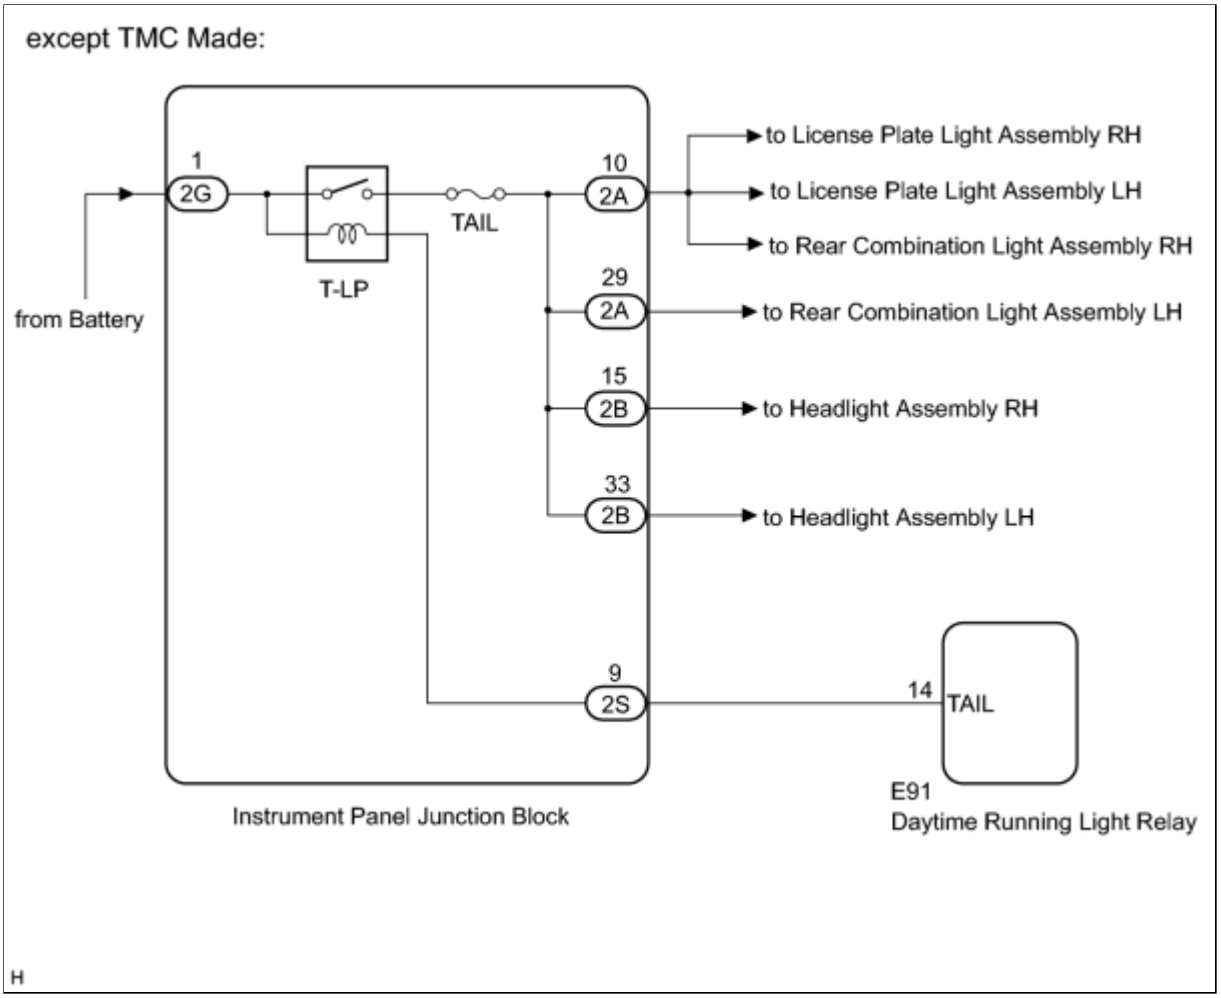
Title: LIGHTING (EXT): LIGHTING SYSTEM: Taillight Relay Circuit (2010 Corolla)		

Taillight Relay Circuit



DESCRIPTION



- The daytime running light relay receives the light control switch TAIL signal to control the taillight relay.

HINT:

- If only one taillight does not illuminate, check the bulb or wire harness related to the bulb.
- The taillight relay is installed in the instrument panel junction block, so unlike conventional relays, it can not be removed for inspection.

WIRING DIAGRAM

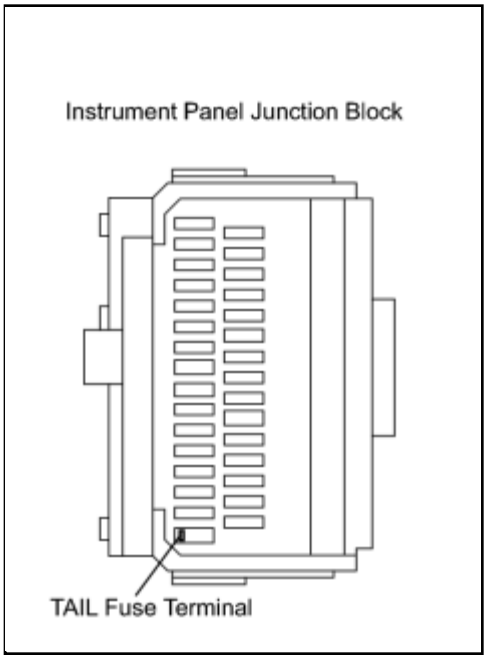
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (TAIL)**

(a) Remove the TAIL fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
TAIL fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK

2.	**INSPECT INSTRUMENT PANEL JUNCTION BLOCK**

(a) Measure the voltage between the loading slot of the TAIL fuse and body ground.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
TAIL fuse terminal - Body ground	Light control switch OFF → TAIL	Below 1 V → 11 to 14 V

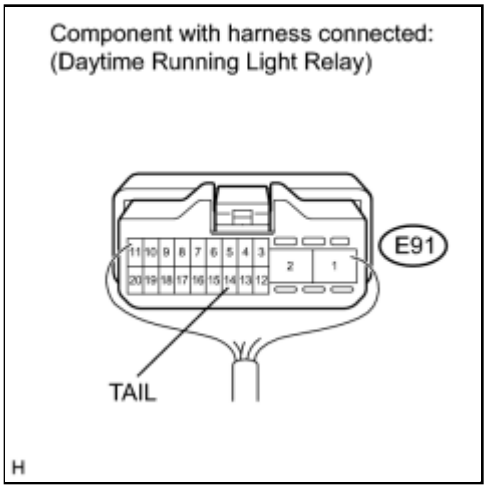
NG ▶ **CHECK HARNESS AND CONNECTOR (BATTERY - DAYTIME RUNNING LIGHT CONTROL RELAY)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUSE - EACH BULB)**

3.	**CHECK HARNESS AND CONNECTOR (BATTERY - DAYTIME RUNNING LIGHT CONTROL RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-14 (TAIL) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT DAYTIME RUNNING LIGHT RELAY**

(a) Reconnect the E91 daytime running light relay connector.

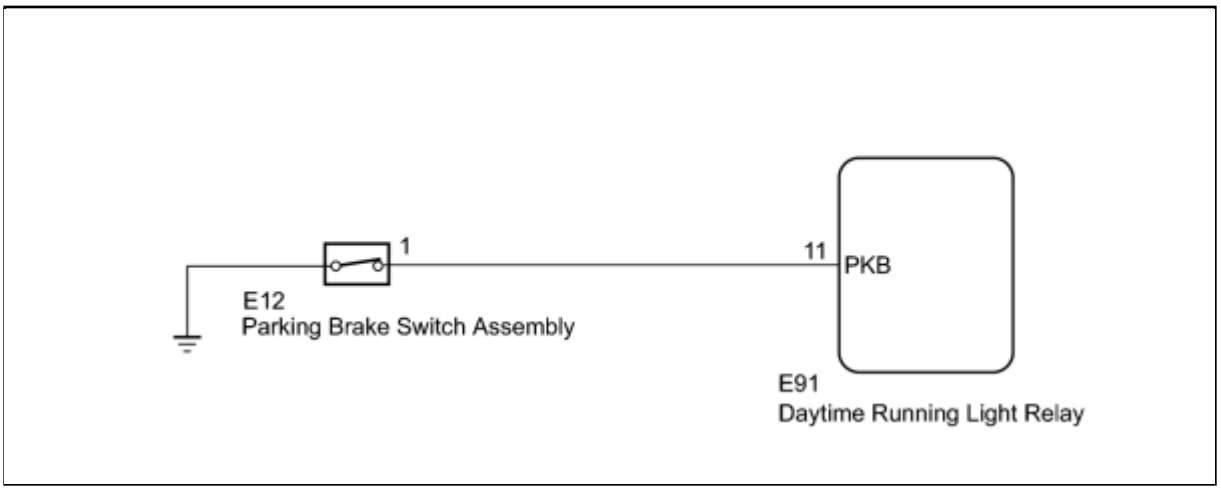
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-14 (TAIL) - Body ground	Light control switch OFF → TAIL	11 to 14 V → Below 1 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: LIGHTING (EXT): LIGHTING SYSTEM: Parking Brake Switch Circuit (2010 Corolla)		

Parking Brake Switch Circuit

DESCRIPTION

The daytime running light relay receives the parking brake switch signal.

WIRING DIAGRAM

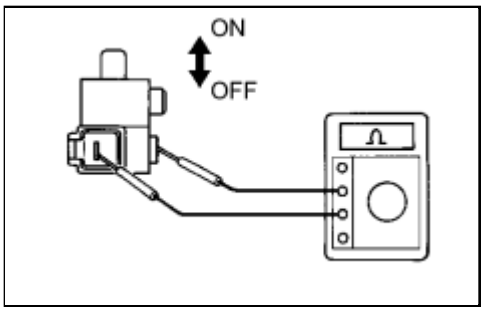
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (DAYTIME RUNNING LIGHT RELAY - BODY GROUND)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-11 (PKB) - Body ground	Parking brake is released	10 kΩ or higher
E91-11 (PKB) - Body ground	Parking brake is applied	Below 1 Ω

NG ▶ **INSPECT PARKING BRAKE SWITCH ASSEMBLY**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT PARKING BRAKE SWITCH ASSEMBLY**

(a) Remove the parking brake switch assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED RESISTANCE
1 - Switch body	OFF (When shaft is pressed)	10 kΩ or higher
1 - Switch body	ON (When shaft is not pressed)	Below 1 Ω

NG ▶ **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH CIRCUIT)**

Title: LIGHTING (EXT): LIGHTING SYSTEM: Indicator Circuit (2010 Corolla)		

Indicator Circuit

DESCRIPTION

The daytime running light relay receives headlight dimmer switch assembly information to control low beam and high beam headlight indicators.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

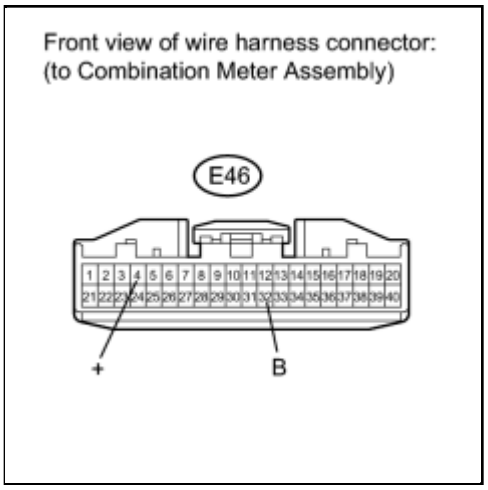
1.	**INSPECT FUSE**

(a) Remove the ECU-B fuse and H-LP RH HI fuse from the engine room relay block and

junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H-LP RH HI	Always	Below 1 Ω
ECU-B fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK ▼

2.	CHECK HARNESS AND CONNECTOR (FUSE - COMBINATION METER ASSEMBLY)

(a) Install the ECU-B fuse and H-LP RH HI fuse to the engine room relay block and junction block.

(b) Disconnect the E46 combination meter assembly connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-32 (B) - Body ground	Always	11 to 14 V
E46-4 (+) - Body ground	High beam headlight ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the resistance according to the value(s) in the table below.

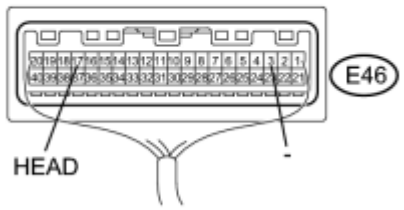
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-17 (HEAD) - E91-5 (IND)	Always	Below 1 Ω
E46-17 (HEAD) - Body ground	Always	10 kΩ or higher
E46-3 (-) - E91-17 (H-ON)	Always	Below 1 Ω
E46-3 (-) - Body ground	Always	10 kΩ or higher

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4.	**INSPECT COMBINATION METER ASSEMBLY**



(a) Reconnect the E46 combination meter assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

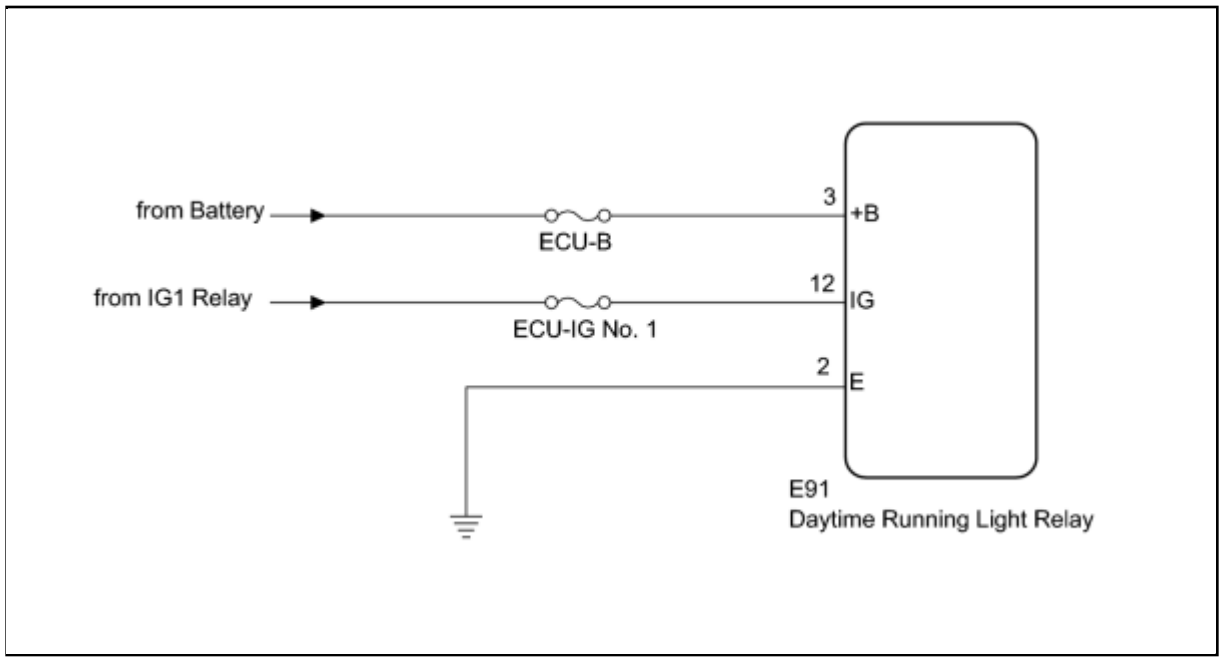
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-17 (HEAD) - Body ground	Light control switch OFF	11 to 14 V

Component with harness connected:
(Combination Meter Assembly)

E46-17 (HEAD) - Body ground	Light control switch in HEAD	Below 1 V
E46-3 (-) - Body ground	Dimmer switch OFF	11 to 14 V
E46-3 (-) - Body ground	Light control switch in HEAD and dimmer switch in HIGH	11 to 14 V

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011TZ017X
Title: LIGHTING (EXT): LIGHTING SYSTEM: Power Source Circuit (2010 Corolla)		

Power Source Circuit

DESCRIPTION

This circuit detects the state of the ignition switch, and sends it to the daytime running light relay.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (ECU-IG NO. 1, ECU-B)**

(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block assembly.

(b) Remove the ECU-B fuse from the engine room relay block and junction block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ECU-IG No. 1 fuse	Always	Below 1 Ω
ECU-B fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (BATTERY - DAYTIME RUNNING LIGHT RELAY)**

(a) Disconnect the E91 daytime running light relay connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-3 (+B) - Body ground	Always	11 to 14 V
E91-12 (IG) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

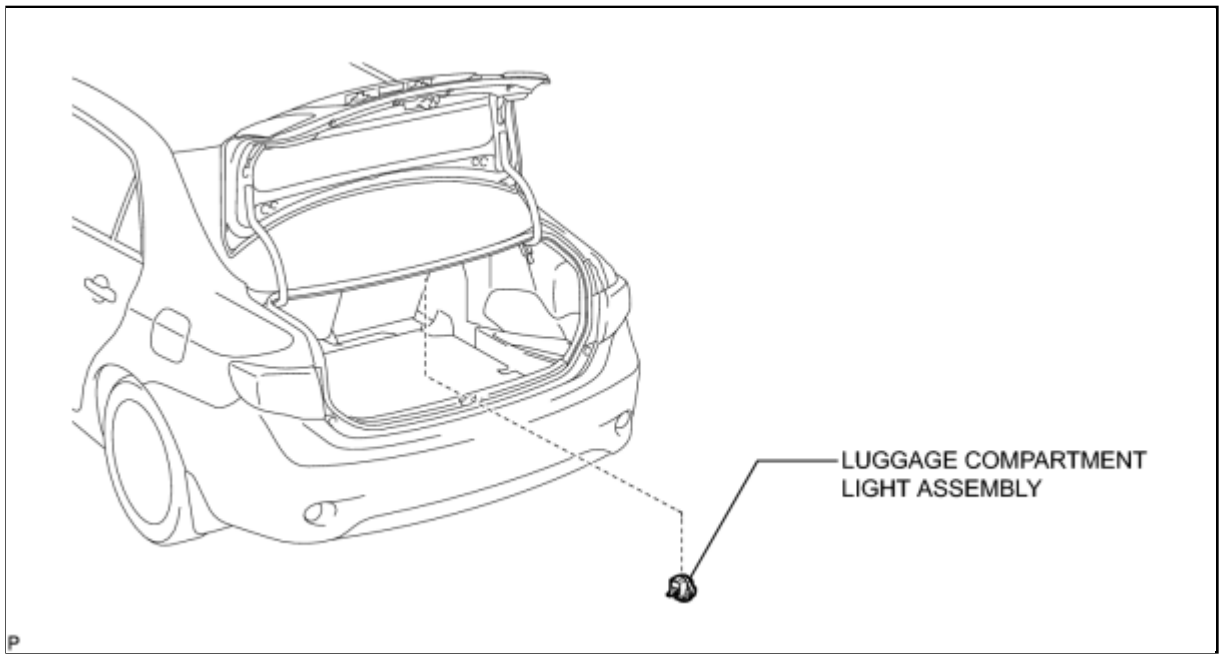
OK ▼

3.	**CHECK HARNESS AND CONNECTOR (DAYTIME RUNNING LIGHT RELAY - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E91-2 (E) - Body ground	Always	Below 1 Ω



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK	PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

INSPECTION

1. INSPECT LUGGAGE COMPARTMENT LIGHT ASSEMBLY

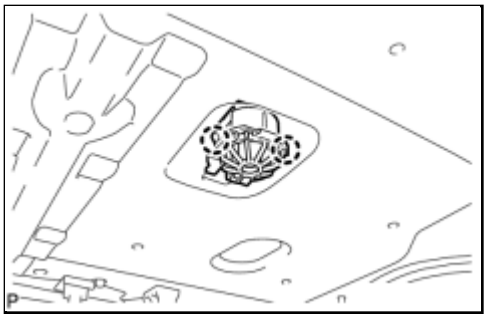
Component without harness connected:
(Light Assembly)

(a) Connect a (+) lead from the battery to terminal 1 and a (-) lead to terminal 2.

(b) Check that the light comes on.

OK:

The light comes on.



If the result is not as specified, replace the bulb or light assembly.

Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT REAR COMBINATION LIGHT ASSEMBLY

(a) Disconnect the connector from the rear combination light assembly.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

LH Side

RH Side

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L7-1 - L7-4	Light control switch OFF	Below 1 V
	Light control switch in TAIL	11 to 14 V
L7-2 - L7-4	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V
L7-3 - L7-4	Turn signal switch OFF	Below 1 V
	Ignition switch ON and Turn signal switch in LH	11 to 14 V (60 to 120 times per minute)

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L29-1 - L29-4	Light control switch OFF	Below 1 V
	Light control switch in TAIL	11 to 14 V
L29-2 - L29-4	Brake pedal released	Below 1 V
	Brake pedal depressed	11 to 14 V
L29-3 - L29-4	Turn signal switch OFF	Below 1 V
	Ignition switch ON and Turn signal switch in RH	11 to 14 V (60 to 120 times per minute)

If the result is not as specified, there is a malfunction on the wire harness side.

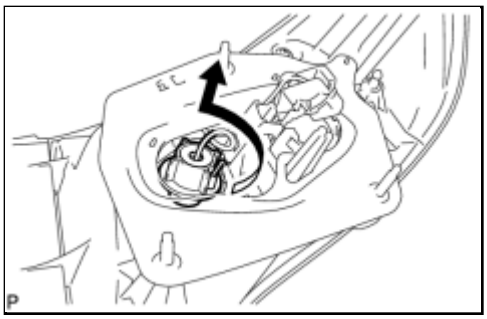
Title: LIGHTING (EXT): REAR COMBINATION LIGHT ASSEMBLY: DISASSEMBLY (2010 Corolla)		

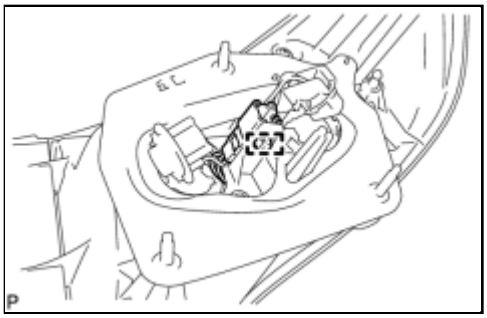
DISASSEMBLY



1. REMOVE TAIL AND STOP LIGHT BULB

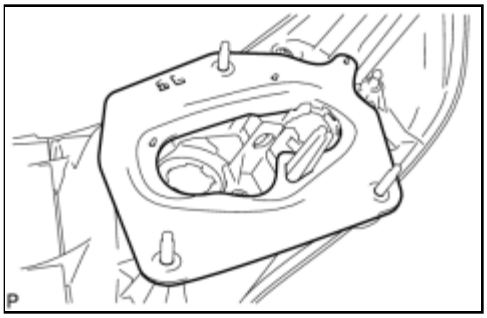
(a) Turn the tail and stop light bulb and the rear combination light socket and wire in the direction indicated by the arrow and disconnect them as a unit.

(b) Remove the tail and stop light bulb from the rear combination light socket and wire.



2. REMOVE REAR TURN SIGNAL LIGHT BULB

(a) Turn the rear turn signal light bulb and the rear combination light socket and wire in the direction indicated by the arrow and disconnect them as a unit.



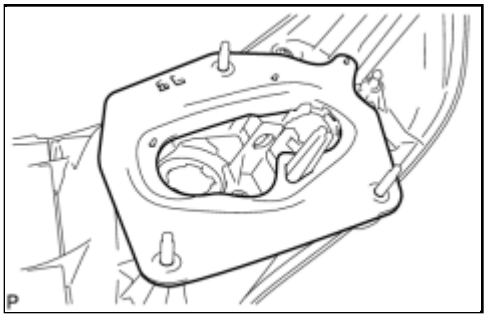
(b) Remove the rear turn signal light bulb from the rear combination light socket and wire.

3. REMOVE REAR COMBINATION LIGHT SOCKET AND WIRE

(a) Disengage the clamp and remove the rear combination light socket and wire.

4. REMOVE REAR COMBINATION LIGHT GASKET

(a) Remove the rear combination light gasket.



NOTICE:

- Be sure to remove all traces of the old gasket from the body.
- Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.

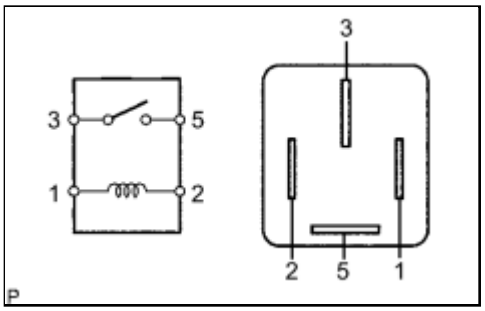
Title: LIGHTING (EXT): RELAY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT HEADLIGHT RELAY (H-LP)

(a) Remove the headlight relay from the engine room relay block.



(b) Measure the resistance according to the value(s) in the table below.

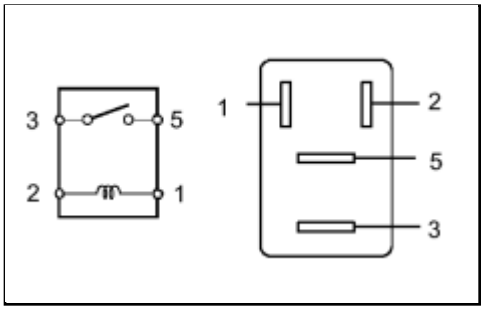
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

2. INSPECT HEADLIGHT DIMMER RELAY (DIMMER)

(a) Remove the headlight dimmer relay from the engine room relay block.



(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

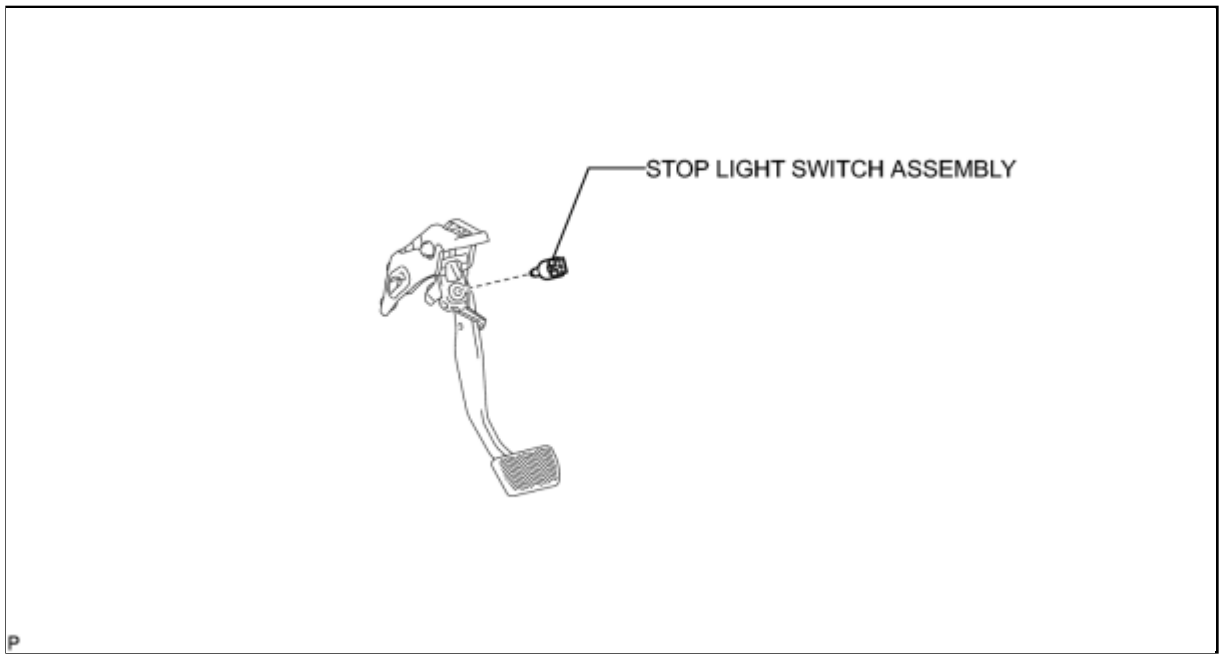
If the result is not as specified, replace the relay.

3. INSPECT FOG LIGHT RELAY (FR FOG)

(a) Remove the front fog light relay from the relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage is applied between terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

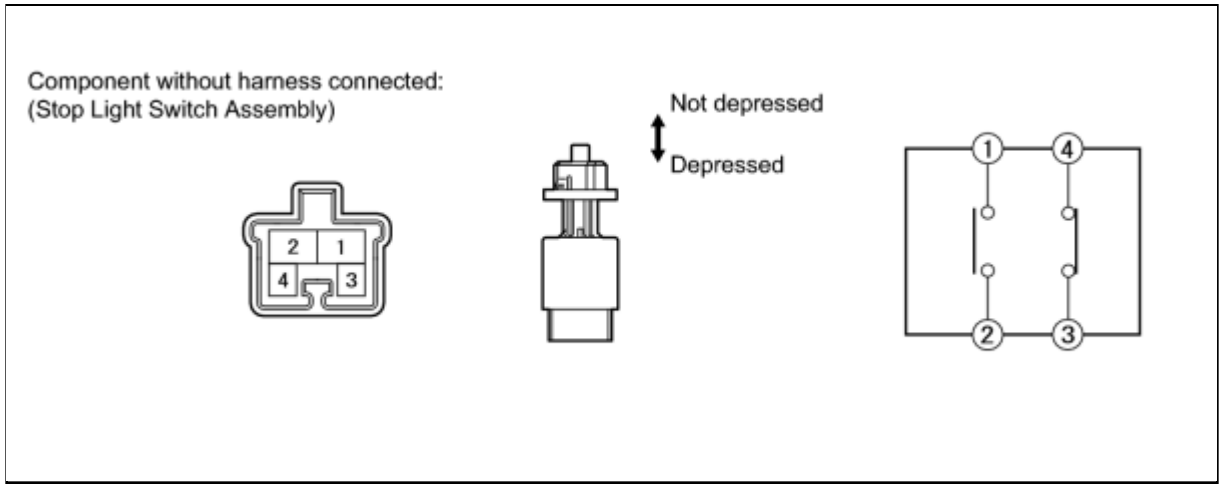
Title: LIGHTING (EXT): STOP LIGHT SWITCH: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE STOP LIGHT SWITCH ASSEMBLY

(a) Disconnect the connector.



(b) Turn the stop light switch assembly counterclockwise and remove the stop light switch assembly.

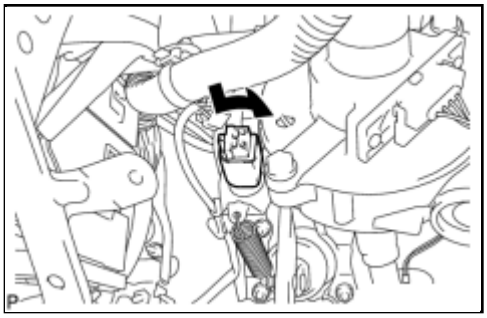
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000014D901AX
Title: LIGHTING (EXT): STOP LIGHT SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT STOP LIGHT SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Depressed	10 kΩ or higher
	Not depressed	Below 1 Ω
3 - 4	Depressed	Below 1 Ω
	Not depressed	10 kΩ or higher

If the result is not as specified, replace the stop light switch assembly.

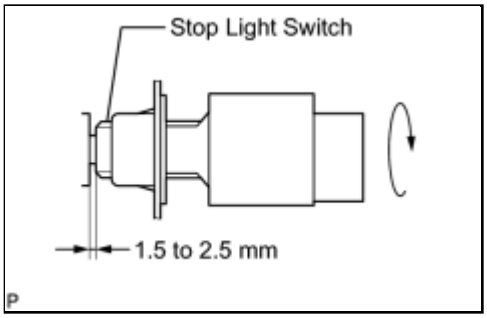
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002VPN00DX
Title: LIGHTING (EXT): STOP LIGHT SWITCH: INSTALLATION (2010 Corolla)		

INSTALLATION

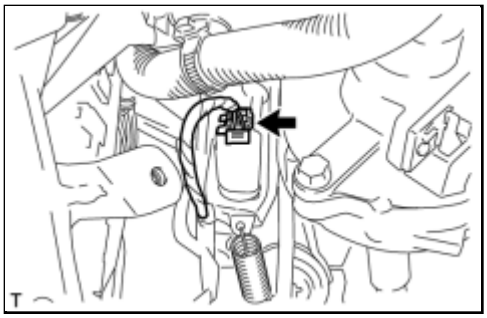


1. INSTALL STOP LIGHT SWITCH ASSEMBLY

(a) Insert the stop light switch assembly until the rod hits the cushion.

NOTICE:

When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

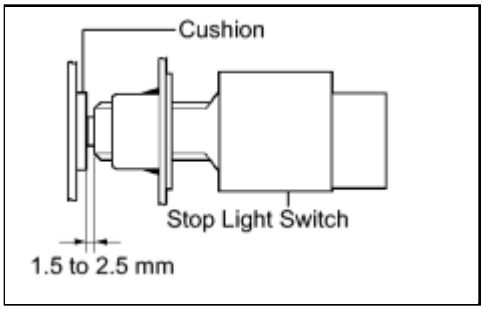


(b) Make a quarter turn clockwise to install the stop light switch assembly.

Torque: 1.5 N·m (15 kgf·cm, 13in·lbf) or less

NOTICE:

When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

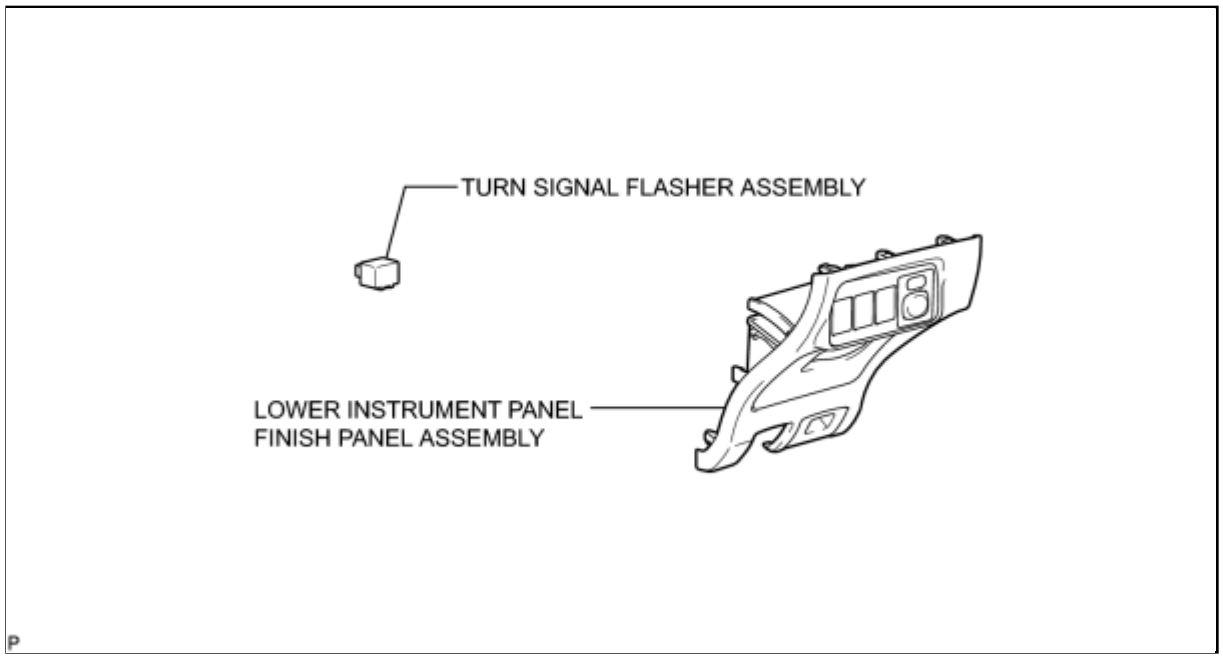


(c) Connect the connector.

(d) Check the protrusion of the rod.

Protrusion of the rod:
1.5 to 2.5 mm (0.059 to 0.098 in.)

If the protrusion is not within the specified range, adjust it.



NOTICE:

Do not depress the brake pedal.

Title: LIGHTING (EXT): TURN SIGNAL FLASHER ASSEMBLY: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT TURN SIGNAL FLASHER ASSEMBLY

(a) Remove the turn signal flasher assembly from the instrument panel junction block.

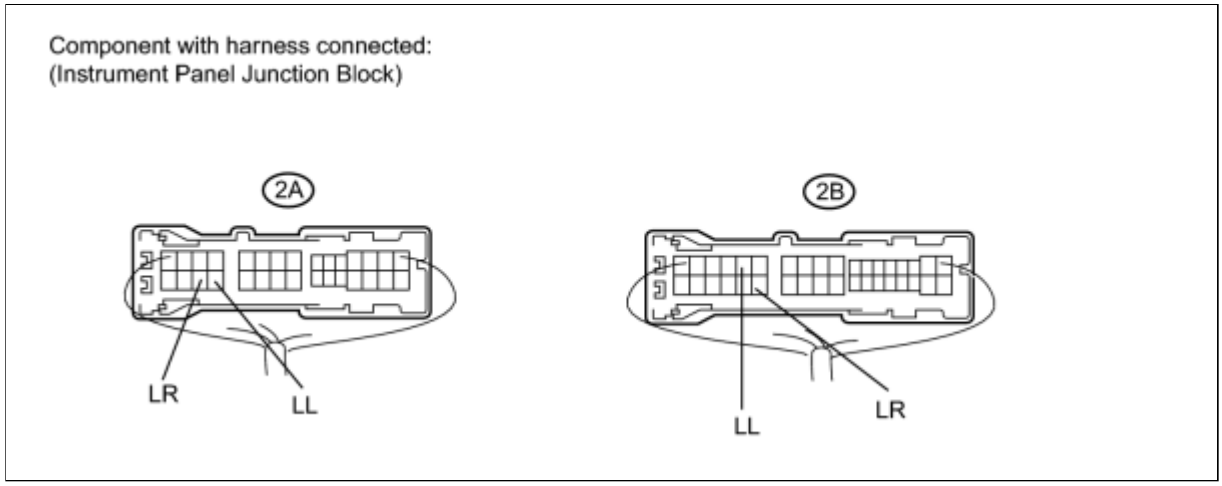
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 (+B) - Body ground	Always	11 to 14 V
1 (IG) - Body ground	Ignition switch off	Below 1 V
	Ignition switch ON	11 to 14 V

If the result is not as specified, there is a malfunction on the wire harness side.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (EL) - Body ground	Turn signal switch OFF	10 kΩ or higher
	Turn signal switch in LH	Below 1 Ω
6 (ER) - Body ground	Turn signal switch OFF	10 kΩ or higher
	Turn signal switch in RH	Below 1 Ω
7 (GND) - Body ground	Always	Below 1 Ω
8 (EHW) - Body ground	Hazard warning switch OFF	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
	Hazard warning switch ON	Below 1 Ω

If the result is not as specified, there is a malfunction on the wire harness side.

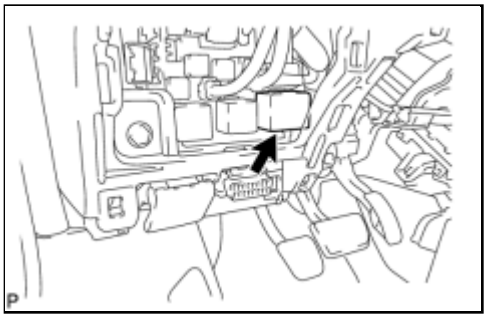
(d) Install the turn signal flasher assembly to the instrument panel junction block.

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2A-27 (LL) - Body ground	Turn signal switch OFF	Below 1 V
	Turn signal switch in LH	11 to 14 V (60 to 120 times per minute)
	Hazard warning switch OFF	Below 1 V
	Hazard warning switch ON	11 to 14 V (60 to 120 times per minute)
2A-28 (LR) - Body ground	Turn signal switch OFF	Below 1 V
	Turn signal switch in RH	11 to 14 V (60 to 120 times per minute)
	Hazard warning switch OFF	Below 1 V
	Hazard warning switch ON	11 to 14 V (60 to 120 times per minute)
2B-14 (LL) - Body ground	Turn signal switch OFF	Below 1 V
	Turn signal switch in LH	11 to 14 V (60 to 120 times per minute)
	Hazard warning switch OFF	Below 1 V
	Hazard warning switch ON	11 to 14 V (60 to 120 times per minute)
2B-31 (LR) - Body ground	Turn signal switch OFF	Below 1 V
	Turn signal switch in RH	11 to 14 V (60 to 120 times per minute)
	Hazard warning switch OFF	Below 1 V

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
	Hazard warning switch ON	11 to 14 V (60 to 120 times per minute)



If the result is not as specified, replace the turn signal flasher assembly.

INSPECTION

1. INSPECT OUTER MIRROR SWITCH ASSEMBLY

(a) Inspect the L position of the left/right adjustment switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance (for Left Side):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
4 (VL) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
	OFF	10 kΩ or higher
4 (VL) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
	OFF	10 kΩ or higher
5 (HL) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
	OFF	10 kΩ or higher
5 (HL) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω
	OFF	10 kΩ or higher

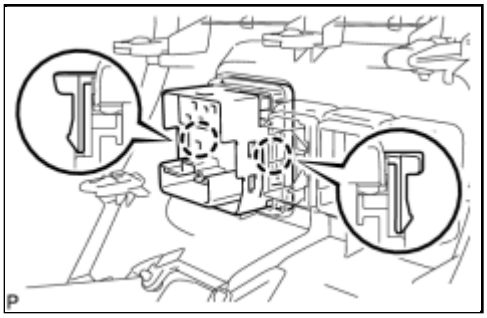
If the result is not as specified, replace the switch assembly.

(b) Inspect the R position of the left/right adjustment switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance (for Right Side):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3 (VR) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
	OFF	10 kΩ or higher
3 (VR) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
	OFF	10 kΩ or higher
2 (HR) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
	OFF	10 kΩ or higher



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2 (HR) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω
	OFF	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

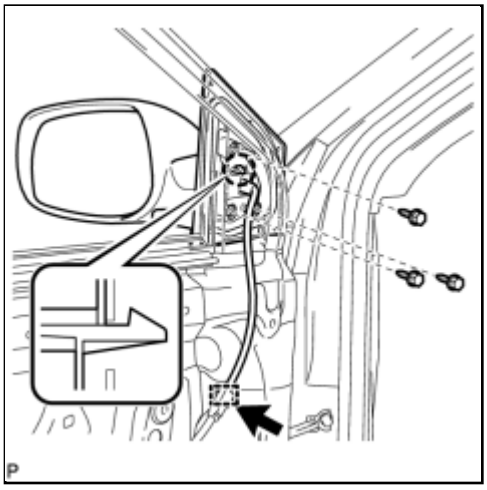
Title: MIRROR (EXT): OUTER REAR VIEW MIRROR: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

2. REMOVE FRONT DOOR INSIDE HANDLE BEZEL INFO

3. REMOVE FRONT ARMREST BASE PANEL UPPER (w/o Power Window) INFO



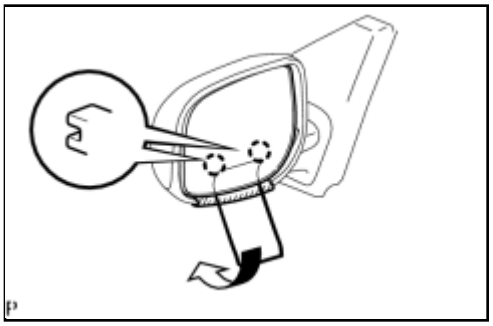
4. REMOVE FRONT ARMREST BASE PANEL UPPER (w/ Power Window) INFO

5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO

6. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/o Front No. 2 Speaker) INFO

7. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Front No. 2 Speaker) INFO

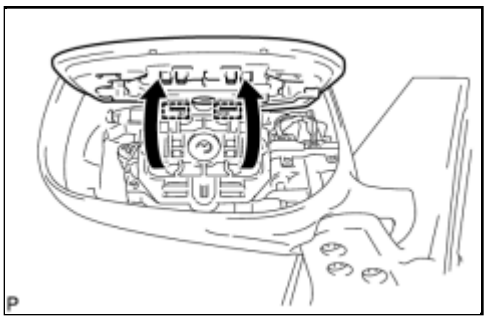
8. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY WITH COVER



(a) Disconnect the clamp and connector.

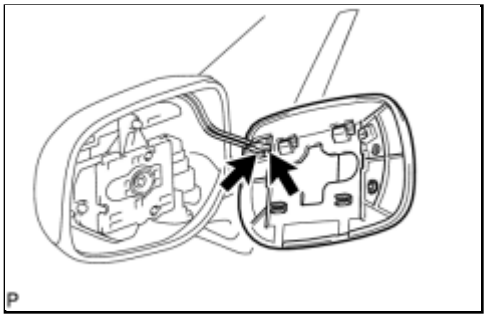
(b) Remove the 3 bolts.

(c) Disengage the claw and remove the outer rear view mirror assembly with cover.



9. REMOVE OUTER MIRROR GLASS (for TMC Made)

(a) Apply protective tape to the bottom of the visor of the door mirror.

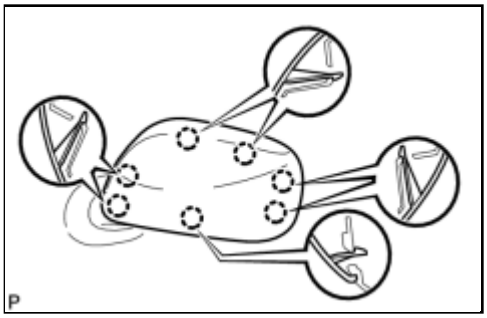


(b) Push the upper part of the mirror surface and tilt it.

(c) Using a moulding remover, disengage the 2 claws.

(d) Disengage the 2 guides at the upper part of the outer mirror as shown in the illustration.

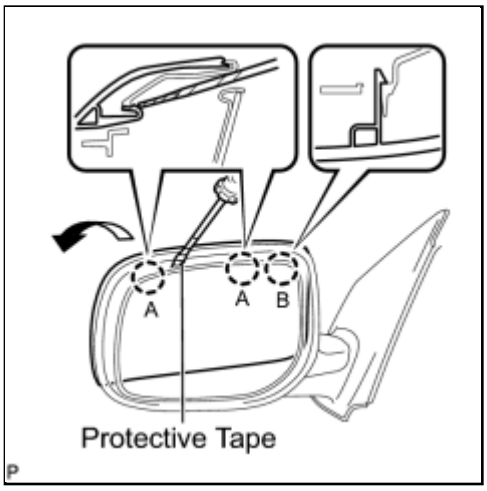
(e) w/ Heater:



(1) Disconnect the connectors.

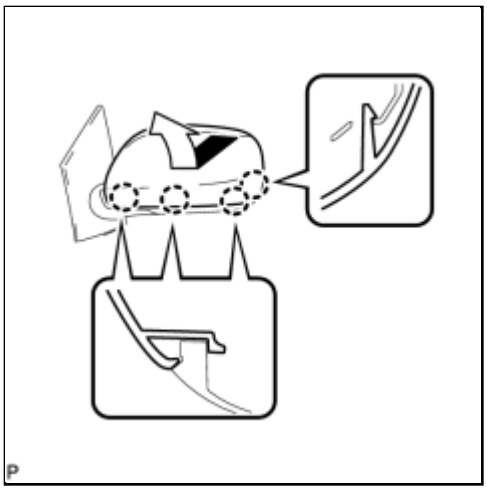
(f) Remove the outer mirror glass.

10. REMOVE OUTER MIRROR COVER (for TMC Made)



(a) Disengage the 7 claws and remove the outer mirror cover from the outer rear view mirror assembly with cover.

11. REMOVE OUTER MIRROR COVER (for TMMC, NUMMI Made)

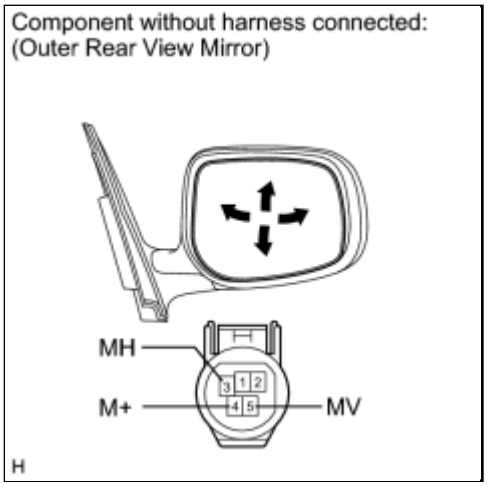


(a) Put protective tape around the outer mirror cover.

(b) Push the lower part of the mirror surface and tilt it.

(c) Using a screwdriver with the tip wrapped with protective tape, disengage the 2 claws B, from the clearance between the outer mirror glass and visor.

(d) Disengage the claw A.



(e) Disengage the 4 claws and remove the outer mirror cover.

Title: MIRROR (EXT): OUTER REAR VIEW MIRROR: INSPECTION (2010 Corolla)		

INSPECTION

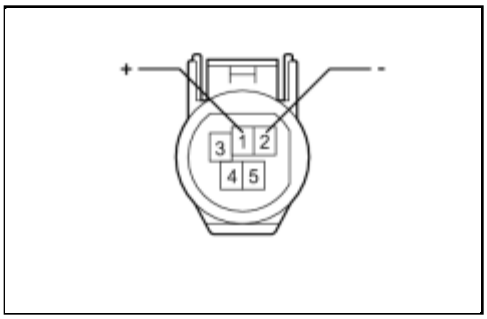
1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH

(a) Inspect outer mirror motor operation.

(1) Disconnect the mirror connector.

(2) Apply battery voltage and check the operation of the mirror.

OK:



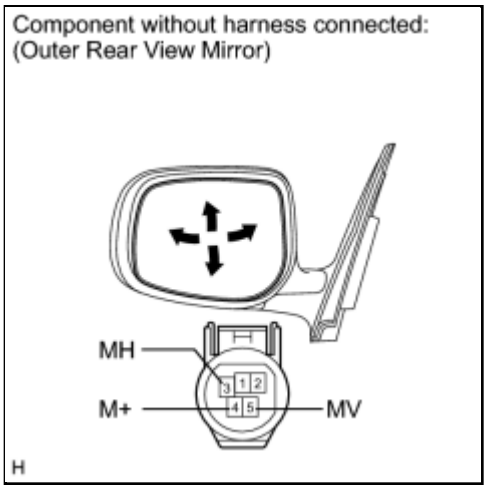
MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 5 (MV) Battery negative (-) → Terminal 4 (M+)	Turns upward
Battery positive (+) → Terminal 4 (M+) Battery negative (-) → Terminal 5 (MV)	Turns downward
Battery positive (+) → Terminal 3 (MH) Battery negative (-) → Terminal 4 (M+)	Turns left
Battery positive (+) → Terminal 4 (M+) Battery negative (-) → Terminal 3 (MH)	Turns right

If the result is not as specified, replace the mirror assembly.

(b) Inspect outer mirror heater operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.

OK:



MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 1 (+) Battery negative (-) → Terminal 2 (-)	Mirror surface temperature becomes higher

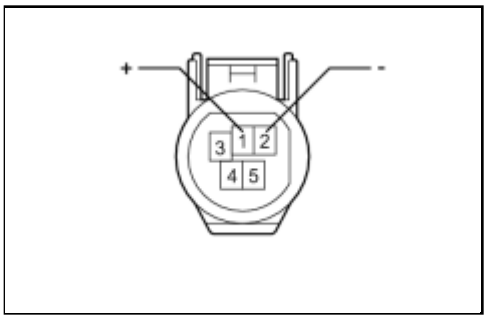
If the result is not as specified, replace the mirror assembly.

2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Inspect outer mirror motor operation.

(1) Disconnect the mirror connector.

(2) Apply battery voltage and check the operation of the mirror.



OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 5 (MV) Battery negative (-) → Terminal 4 (M+)	Turns upward
Battery positive (+) → Terminal 4 (M+) Battery negative (-) → Terminal 5 (MV)	Turns downward
Battery positive (+) → Terminal 3 (MH) Battery negative (-) → Terminal 4 (M+)	Turns left
Battery positive (+) → Terminal 4 (M+) Battery negative (-) → Terminal 3 (MH)	Turns right

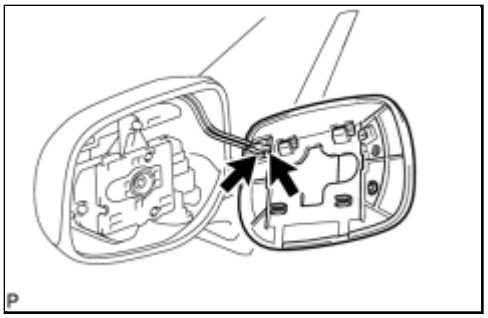
If the result is not as specified, replace the mirror assembly.

(b) Inspect outer mirror heater operation.

(1) Apply battery voltage and check operation of the mirror face, as shown in the table below.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 1 (+) Battery negative (-) → Terminal 2 (-)	Mirror surface temperature becomes higher



If the result is not as specified, replace the mirror assembly.

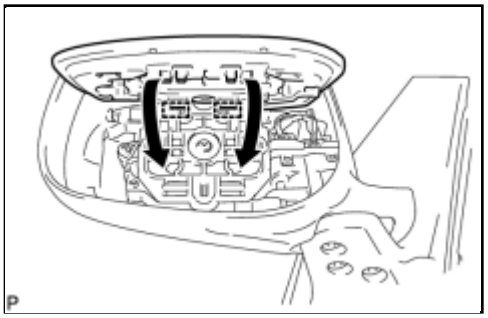
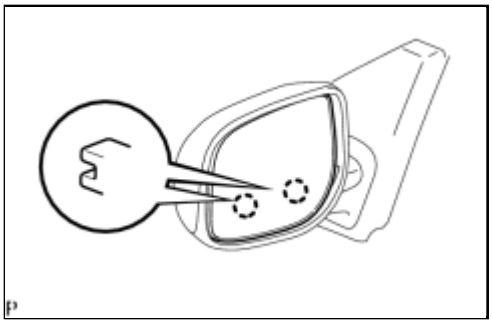
Title: MIRROR (EXT): OUTER REAR VIEW MIRROR: INSTALLATION (2010 Corolla)		



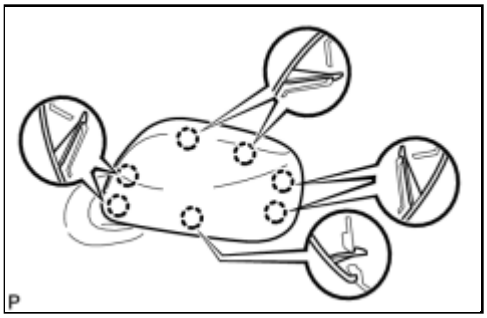
INSTALLATION

1. INSTALL OUTER MIRROR GLASS (for TMC Made)



(a) w/ Heater:

(1) Connect the connectors.

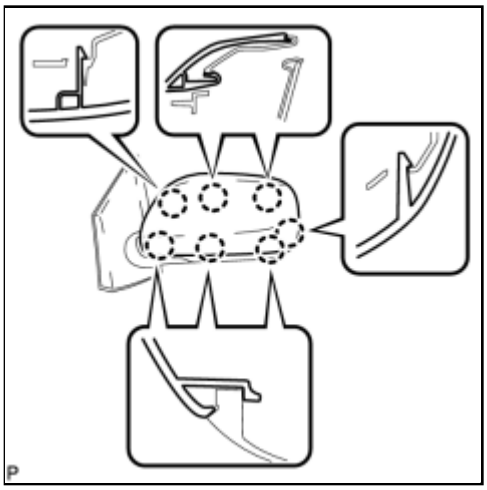


(b) Engage the 2 guides on the upper part of the outer mirror glass to the outer mirror as shown in the illustration.

(c) Engage the 2 claws on the lower part of the outer mirror glass to the outer mirror as shown in the illustration.

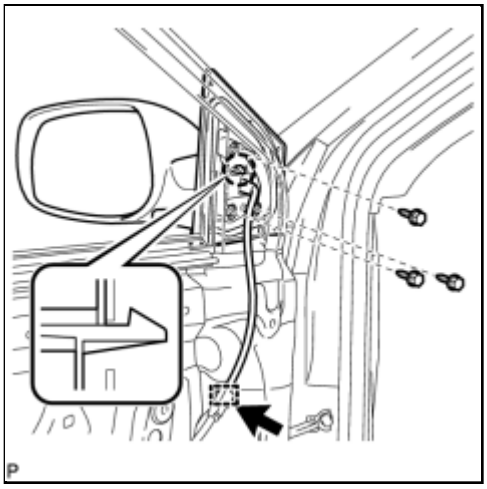
2. INSTALL OUTER MIRROR COVER (for TMC Made)

(a) Engage the 7 claws to install the outer mirror cover to the



outer rear view mirror assembly with cover.

NOTICE:



If there is a gap between the cover and the mirror body, it may cause noise during driving.

3. INSTALL OUTER MIRROR COVER (for TMMC, NUMMI Made)

(a) Engage the 7 claws to install the outer mirror cover.

4. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY WITH COVER

(a) Engage the claw, and temporarily install the outer rear view mirror assembly with cover.

(b) Install the 3 bolts.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

(c) Engage the clamp and connect the connector.

5. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (w/o Front No. 2 Speaker) INFO

6. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (w/ Front No. 2 Speaker) INFO

7. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO

8. INSTALL FRONT ARMREST BASE PANEL UPPER (w/o Power Window) INFO

9. INSTALL FRONT ARMREST BASE PANEL UPPER (w/ Power Window) INFO

10. INSTALL FRONT DOOR INSIDE HANDLE BEZEL INFO

11. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

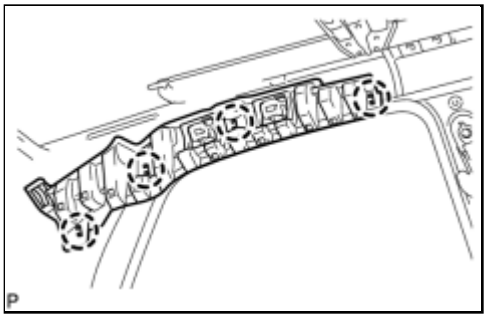
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF HOUSING: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE ROOF HEADLINING ASSEMBLY

(a) Remove the roof headlining assembly INFO .

2. REMOVE FRONT SIDE RAIL SPACER LH (w/o Curtain Shield Airbag)



(a) Disengage the 4 claws and remove the front side rail spacer LH.

3. REMOVE FRONT SIDE RAIL SPACER RH (w/o Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.

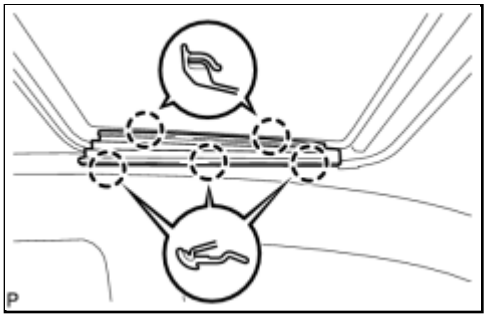
4. REMOVE REAR SIDE RAIL SPACER LH (w/o Curtain Shield Airbag)

(a) Disengage the 4 claws and remove the rear side rail spacer LH.

5. REMOVE REAR SIDE RAIL SPACER RH (w/o Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.



6. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY LH (w/ Curtain Shield Airbag) INFO

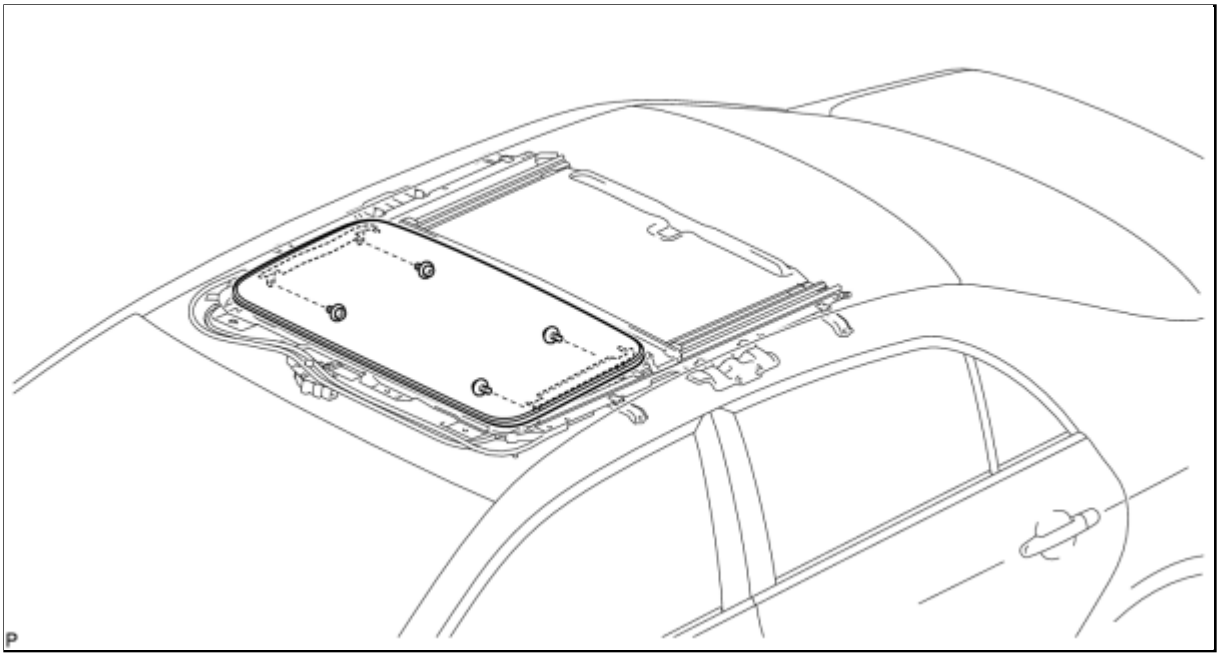
7. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY RH (w/ Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side INFO .

8. REMOVE SLIDING ROOF SIDE GARNISH LH

(a) Disengage the 5 claws and remove the sliding roof side garnish LH.



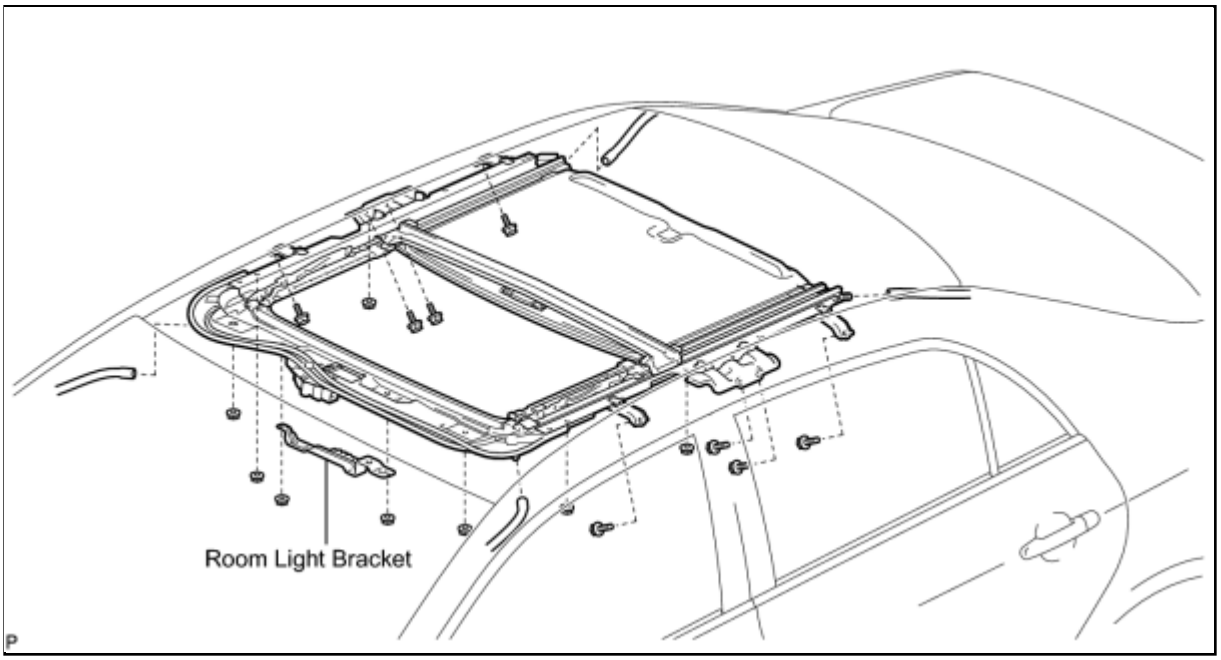
9. REMOVE SLIDING ROOF SIDE GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

10. REMOVE SLIDING ROOF GLASS SUB-ASSEMBLY

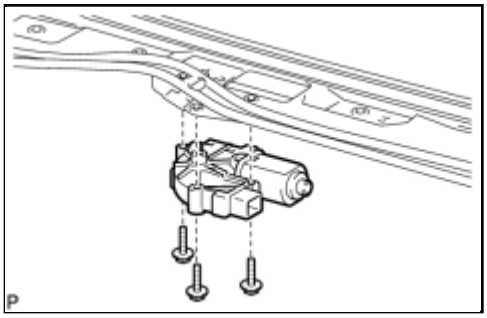
(a) Using a T25 "TORX" socket wrench, remove the 4 screws and sliding roof glass sub-assembly.



11. REMOVE SLIDING ROOF HOUSING SUB-ASSEMBLY

(a) Remove the 2 nuts and room light bracket.

(b) Disconnect the 4 sliding roof drain hoses.



(c) Remove the 8 bolts, 6 nuts, and sliding roof housing sub-assembly.

Room Light Bracket

Last Modified: 3-10-2010	6.4 A	**From:** 200901

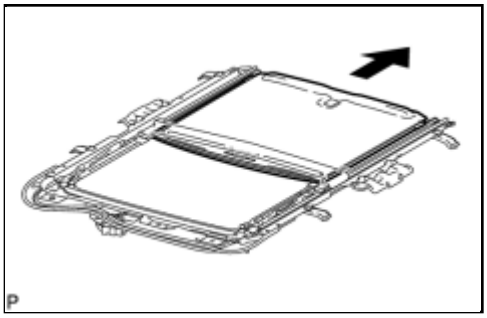
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF HOUSING: DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

1. REMOVE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

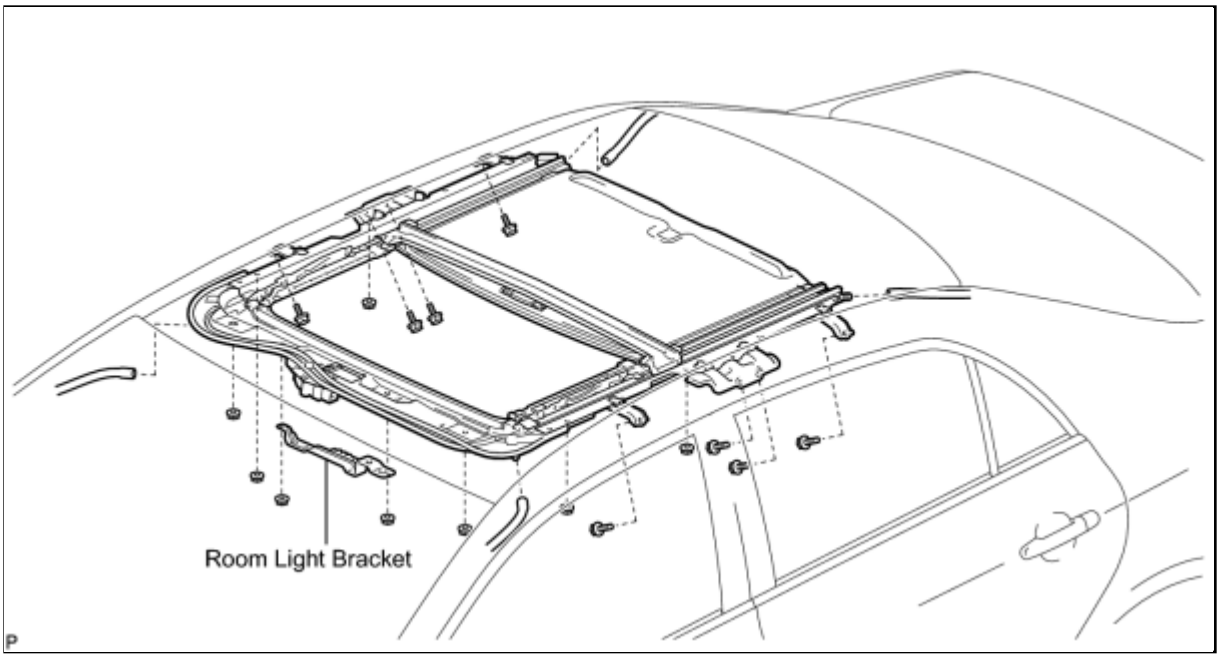
(a) Remove the 3 bolts and sliding roof drive gear sub-assembly.

2. REMOVE SUNSHADE TRIM SUB-ASSEMBLY

(a) Slide and remove the sunshade trim sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002X9U00NX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF HOUSING: INSTALLATION (2010 Corolla)		

INSTALLATION

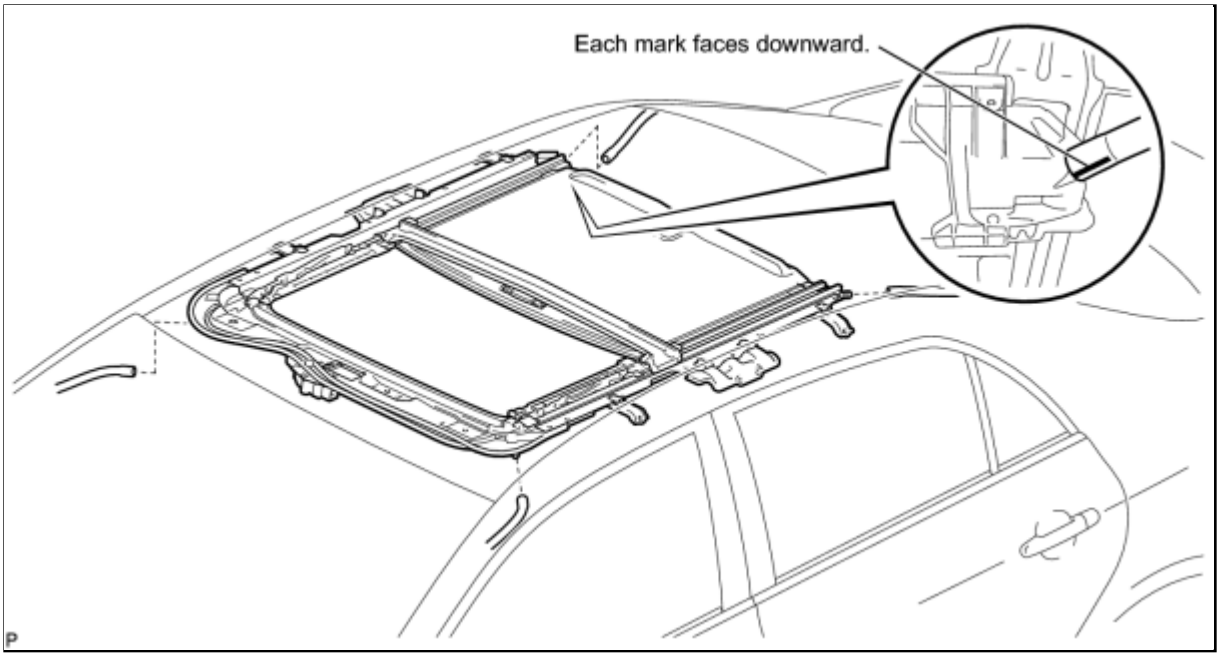


1. INSTALL SLIDING ROOF HOUSING SUB-ASSEMBLY

(a) Install the sliding roof housing sub-assembly with the 8 bolts and 6 nuts.

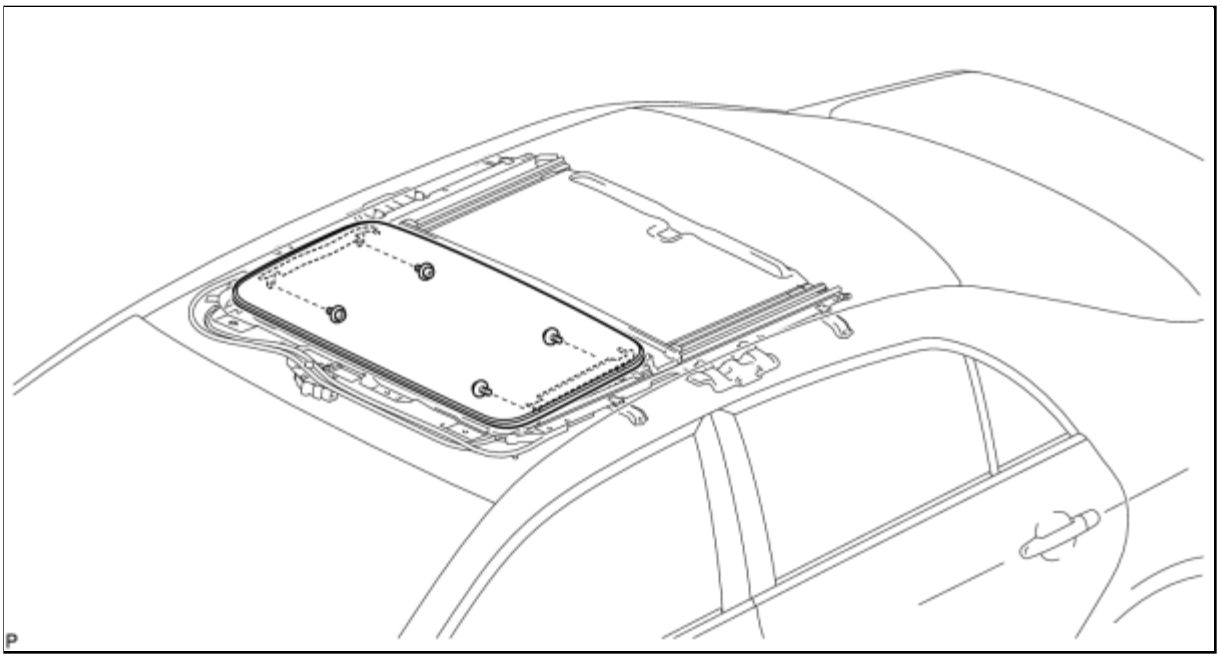
Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

(b) Install the room light bracket with the 2 nuts.



Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

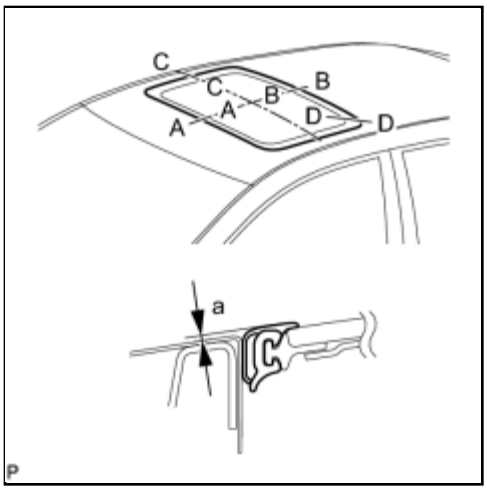
(c) Connect the 4 sliding roof drain hoses so that each mark faces downward.



NOTICE:

Be sure to install the drain hoses properly to prevent entry of water.

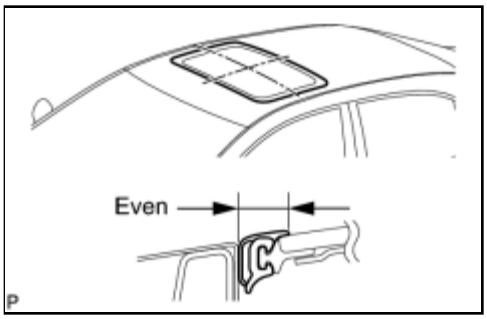
2. INSTALL SLIDING ROOF GLASS SUB-ASSEMBLY



(a) Using a T25 "TORX" driver, temporarily install the sliding roof glass sub-assembly with the 4 screws.

(b) Perform a level check.

(1) Check the difference in level "a" between the roof panel and the upper surface of the weatherstrip when the sliding roof glass is fully closed.



Standard

AREA	MEASUREMENT
A - A	0 + 1.0 mm (0 + 0.0393 in.) 0 - 2.0 mm (0 - 0.0784 in.)
B - B	0 + 2.0 mm (0 + 0.0784 in.) 0 - 1.0 mm (0 - 0.0393 in.)
C - C	0 + 1.5 mm (0 + 0.0590 in.) 0 - 1.5 mm (0 - 0.0590 in.)
D - D	0 + 1.5 mm (0 + 0.0590 in.) 0 - 1.0 mm (0 - 0.0393 in.)

HINT:

"+" represents the condition that the glass is above the panel level.
"-" represents the condition that the glass is below the panel level.

(c) Perform a gap check.

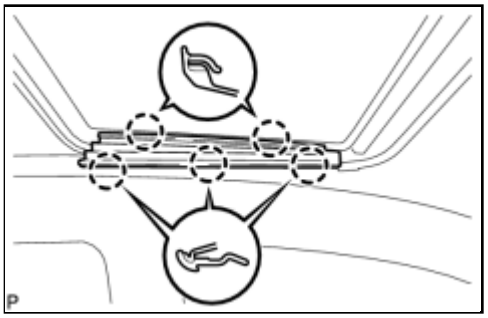
(1) Check the gap between the roof panel and roof glass.

NOTICE:

The gap must be even all around.

(d) After adjusting the sliding roof glass, using a T25 "TORX" socket wrench, install the sliding roof glass sub-assembly with the 4 screws.

Torque: 4.0 N·m (41 kgf·cm, 35in·lbf)



3. INSPECT FOR WATER LEAK

(a) After adjusting the sliding roof glass sub-assembly, inspect for water leaks.

(b) If there are any leaks, readjust the sliding roof glass sub-assembly.

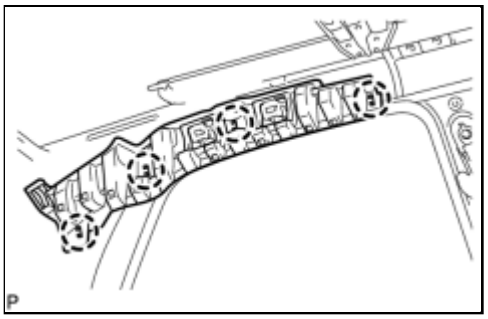
4. INSTALL SLIDING ROOF SIDE GARNISH LH

(a) Engage the 5 claws and install the sliding roof side garnish LH.

5. INSTALL SLIDING ROOF SIDE GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.



6. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY LH (w/ Curtain Shield Airbag) INFO

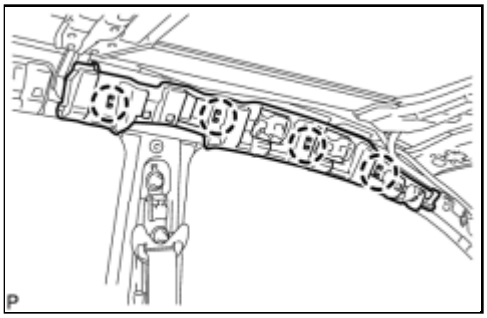
7. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY RH (w/ Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side INFO .

8. INSTALL REAR SIDE RAIL SPACER LH (w/o Curtain Shield Airbag)

(a) Engage the 4 claws and install the rear side rail spacer LH.



9. INSTALL REAR SIDE RAIL SPACER RH (w/o Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.

10. INSTALL FRONT SIDE RAIL SPACER LH (w/o Curtain Shield Airbag)

(a) Engage the 4 claws and install the front side rail spacer LH.

11. INSTALL FRONT SIDE RAIL SPACER RH (w/o Curtain Shield Airbag)

HINT:

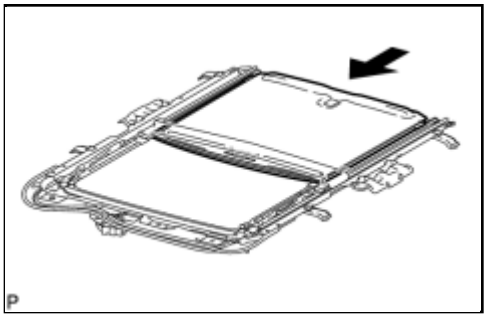
Use the same procedure for the RH side and LH side.

12. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining assembly INFO .

13. RESET SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

INFO



14. INSPECT SLIDING ROOF SYSTEM

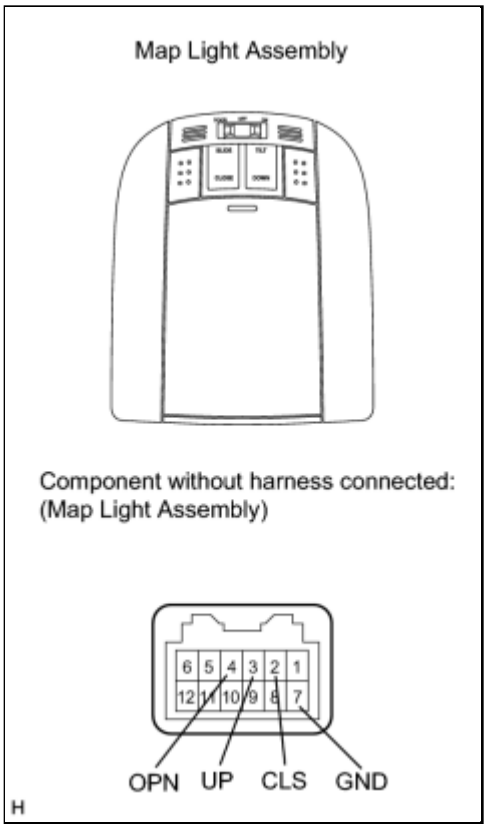
REMOVAL

1. REMOVE MAP LIGHT ASSEMBLY INFO



Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001I0400VX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SWITCH ASSEMBLY: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT MAP LIGHT ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
4 (OPN) - 7 (GND)	SLIDE OPEN switch pushed	Below 1 Ω
4 (OPN) - 7 (GND)	SLIDE OPEN switch not pushed	1 MΩ or higher
2 (CLS) - 7 (GND)	SLIDE CLOSE switch pushed	Below 1 Ω
2 (CLS) - 7 (GND)	SLIDE CLOSE switch not pushed	1 MΩ or higher
3 (UP) - 7 (GND)	TILT UP switch pushed	Below 1 Ω
3 (UP) - 7 (GND)	TILT UP switch not pushed	1 MΩ or higher
4 (OPN) - 7 (GND)	TILT DOWN switch not pushed	1 MΩ or higher
2 (CLS) - 7 (GND)	TILT DOWN switch not pushed	1 MΩ or higher

If the result is not as specified, replace the map light assembly.

(b) Measure the voltage using diode test mode.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Positive lead → 2 (CLS)	TILT DOWN switch pushed	0.4 to 1.2 V

Negative lead → 7 (GND)		
Positive lead → 4 (OPN) Negative lead → 7 (GND)	TILT DOWN switch pushed	0.4 to 1.2 V
Positive lead → 7 (GND) Negative lead → 2 (CLS)	TILT DOWN switch pushed	2.5 to 3.3 V
Positive lead → 7 (GND) Negative lead → 4 (OPN)	TILT DOWN switch pushed	2.5 to 3.3 V

NOTICE:

This procedure is for using a digital tester which has diode test mode such as a TOYOTA electrical tester. If a tester which does not have diode test mode is used, the diode may break.

Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Use the following procedure to troubleshoot the sliding roof system.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	PROBLEM SYMPTOMS TABLE

(a) Refer to Problem Symptoms Table INFO .

Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. GENERAL

This system has the following functions: manual slide open and close, auto slide open and close, manual tilt up and down, auto tilt up and down, jam protection, and key off operation.

2. FUNCTION OF MAIN COMPONENT

COMPONENT	FUNCTION
Sliding roof drive gear sub-assembly (Sliding roof control ECU)	The sliding roof control ECU operates the sliding roof motor forward and backward, which tilts or slides the sliding roof glass. The sliding roof control ECU is built into the sliding roof drive gear sub-assembly.
Map light assembly (Sliding roof switch assembly)	The sliding roof switch assembly outputs operational signals to the sliding roof control ECU. The sliding roof switch is built into the map light assembly.

3. SYSTEM OPERATION

The sliding roof has the following features.

FUNCTION	OUTLINE
Manual slide open and close	This function causes the sliding roof to open (or close) when the SLIDE OPEN switch (or SLIDE CLOSE switch) is pressed for a maximum of 0.3 seconds. The sliding roof stops as soon as the switch is released.
Auto slide open and close	This function causes the sliding roof to fully open (or close) when the SLIDE OPEN switch (or SLIDE CLOSE switch) is pressed for a minimum of 0.3 seconds.
Manual tilt up and down	This function causes the sliding roof to tilt up (or tilt down) when the TILT UP switch (or TILT DOWN switch) is pressed for a maximum of 0.3 seconds.
Auto tilt up and down	This function enables the sliding roof to tilt up (or down) when the TILT UP switch (or TILT DOWN switch) is pressed for a minimum of 0.3 seconds.
Jam protection function	The jam protection function automatically stops the sliding roof, or stops the sliding roof and opens it halfway (or fully tilts it upward) if a foreign object gets jammed in the sliding roof during closing operation (or tilt down operation).
Key off operation	This function makes it possible to operate the sliding roof for approximately 43 seconds after the ignition switch is turned off if the front doors are not opened.
Comfort stop function	This function stops the sliding roof in a position that reduces wind noise when fully opened.

FUNCTION	OUTLINE
Sliding roof open warning	When the ignition switch is turned from on to off and the driver door is opened with the sliding roof open, the multi buzzer in the combination meter sounds once.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002RO800BX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. CHECK AUTO OPERATION

(a) Turn the ignition switch to ON.

(b) When the roof glass is fully closed, press the SLIDE OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until comfort stop position. Press the SLIDE OPEN switch for 0.3 seconds or more again. Check that the roof glass automatically slides until it is fully opened.

(c) When the roof glass is fully open, press the SLIDE CLOSE switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully closed.

(d) When the roof glass is fully closed, press the TILT UP switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted upward.

(e) When the roof glass is fully open, press the TILT DOWN switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted downward.

(f) When the AUTO function is operating, check that pressing any sliding roof switch stops the roof glass operation.

HINT:

When pressing the switch for 0.3 seconds or less, the roof glass moves but the AUTO function does not operate.

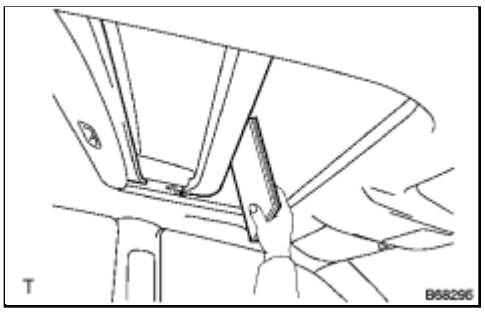
2. CHECK SLIDING ROOF OPERATION AFTER IGNITION SWITCH IS TURNED OFF

(a) Turn the ignition switch from on to off, and check that the sliding roof operates. Then open and close the driver side door once, and check that the sliding roof does not operate.

(b) Turn the ignition switch from on to off and wait for approximately 45 seconds. Check that the sliding roof does not operate.

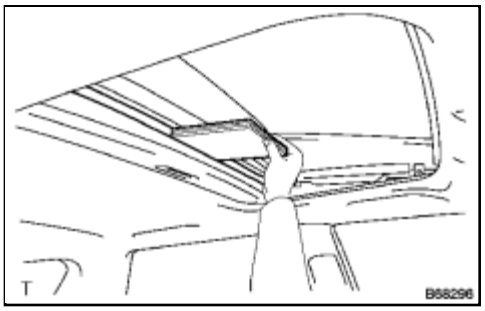
(c) Operate the AUTO (SLIDE OPEN/CLOSE or TILT UP/DOWN) function. While the roof glass is in motion, turn the ignition switch from on to off. Check that the AUTO function continues until the roof glass opens or closes fully.

3. CHECK JAM PROTECTION FUNCTION



CAUTION:

- Do not use a part of your body, for example, your hand, to check the jam protection.
- Do not allow anything to become caught in the sliding roof by accident in this procedure.
- Perform the inspection from the inside of the vehicle.



NOTICE:

- Do not use hard objects such as a hammer, to avoid damaging the roof.
- If the jam protection does not operate, reset the sliding roof drive gear (motor).

(a) When the sliding roof auto function is operating and a foreign object is caught between the vehicle body and

glass, check that the roof glass opens a distance of 189 mm (7.44 in.) from the point of contact with the object, or opens fully if an opening distance of 189 mm (7.44 in.) is not available.

(b) When the TILT UP/DOWN function is operating, and a foreign object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001VJR01ZX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

When removing the sliding roof drive gear sub-assembly, the sliding roof drive gear sub-assembly (sliding roof control ECU) requires initialization. If a reset is not executed, the following functions do not operate: auto operation, key off operation and jam protection function.

(a) Turn the ignition switch to ON.

(b) Make sure that the sliding roof is fully closed.

(c) Press the TILT UP switch until the sliding roof stops at the fully tilt up position. Then release the switch.

(d) Press and hold the TILT UP switch until the following movement finishes and then release the switch: approximately 10 seconds → tilt up (approximately 5 mm) → tilt down (approximately 5 mm).

(e) Within 5 seconds after finishing the previous step, press and hold the TILT UP switch until the following movement finishes and then release the switch: approximately 5 seconds → tilt down → fully closed → slide open → fully open → slide close → fully closed.

(f) Finish the initialization.

(g) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail:

- One of the following electric loads is given to the vehicle during the initialization: Cranking the engine, Power window operation, Rear defogger operation, Blower operation, Power seat operation, Power door lock operation or Headlight illumination.
- The ignition switch is turned off.
- Another switch is turned on during initialization.
- The vehicle experiences a strong vibration during initialization, such as slamming of a door.

HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE/UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear sub-assembly (sliding roof control ECU).

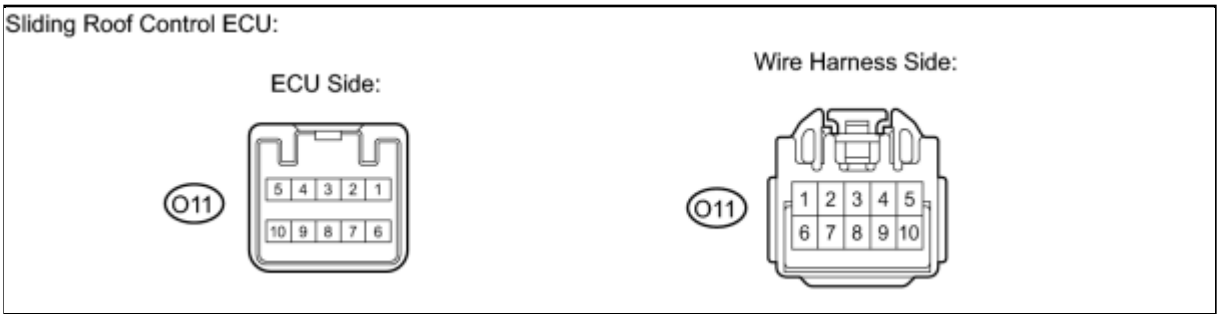
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System



SYMPTOM	SUSPECTED AREA	SEE PAGE
Sliding function and tilt function do not operate	Sliding roof ECU power source circuit	INFO
	Sliding roof control switch circuit	INFO
Either sliding function or tilt function does not operate	Sliding roof control switch circuit	INFO

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001VJL014X
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Disconnect the O11 ECU connector.

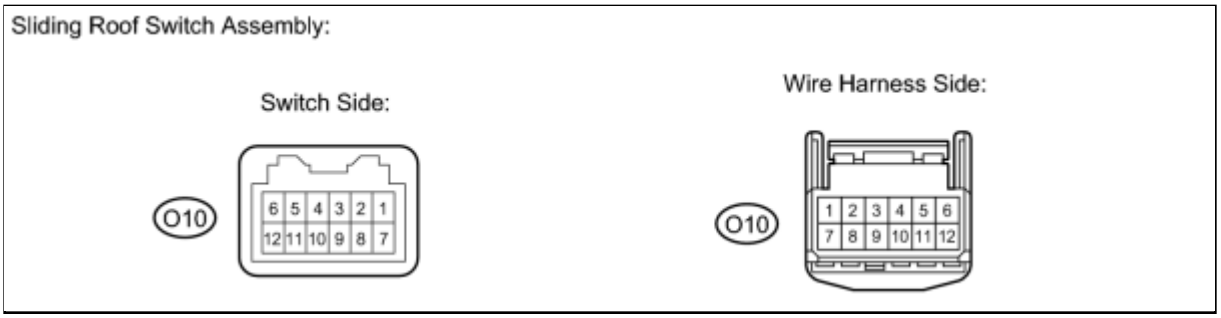
(b) Measure the resistance and voltage on the wire harness side according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
O11-10 (B) - O11-5 (E)	BE - W-B	+B power supply	Always	11 to 14 V
O11-3 (IG) - O11-5 (E)	Y - W-B	Power supply	Ignition switch off	Below 1 V
O11-3 (IG) - O11-5 (E)	Y - W-B	Power supply	Ignition switch ON	11 to 14 V
O11-1 (OPN) - O11-5 (E)	G - W-B	Sliding roof motor open	SLIDE OPEN switch OFF	10 kΩ or higher
O11-1 (OPN) - O11-5 (E)	G - W-B	Sliding roof motor open	SLIDE OPEN switch ON	Below 1 Ω
O11-2 (CLS) - O11-5 (E)	L - W-B	Sliding roof motor close	SLIDE CLOSE switch OFF	10 kΩ or higher
O11-2 (CLS) - O11-5 (E)	L - W-B	Sliding roof motor close	SLIDE CLOSE switch ON	Below 1 Ω
O11-6 (UP) - O11-5 (E)	R - W-B	Sliding roof motor up	TILT UP switch OFF	10 kΩ or higher
O11-6 (UP) - O11-5 (E)	R - W-B	Sliding roof motor up	TILT UP switch ON	Below 1 Ω

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
O11-5 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the O11 ECU connector.



(d) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
O11-1 (OPN) - O11-5 (E)	G - W-B	Sliding roof motor open	Ignition switch ON, sliding roof closed, SLIDE OPEN switch OFF	11 to 14 V
O11-1 (OPN) - O11-5 (E)	G - W-B	Sliding roof motor open	Ignition switch ON, sliding roof closed, SLIDE OPEN switch ON	Below 1 V
O11-2 (CLS) - O11-5 (E)	L - W-B	Sliding roof motor close	Ignition switch ON, sliding roof open, SLIDE CLOSE switch OFF	11 to 14 V
O11-2 (CLS) - O11-5 (E)	L - W-B	Sliding roof motor close	Ignition switch ON, sliding roof open, SLIDE CLOSE switch ON	Below 1 V
O11-6 (UP) - O11-5 (E)	R - W-B	Sliding roof motor up	Ignition switch ON, sliding roof closed, TILT UP switch OFF	11 to 14 V
O11-6 (UP) - O11-5 (E)	R - W-B	Sliding roof motor up	Ignition switch ON, sliding roof closed, TILT UP switch ON	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

2. CHECK MAP LIGHT ASSEMBLY (SLIDING ROOF SWITCH ASSEMBLY)

(a) Disconnect the O10 switch connector.

(b) Measure the resistance on the wire harness side according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
O10-7 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
O10-2 (CLS) - O10-7 (GND)	L - W-B	Sliding roof close switch signal	SLIDE CLOSE switch OFF	10 kΩ or higher
O10-2 (CLS) - O10-7 (GND)	L - W-B	Sliding roof close switch signal	SLIDE CLOSE switch ON	Below 1 Ω
O10-3 (UP) - O10-7 (GND)	R - W-B	Sliding roof up switch signal	TILT UP switch OFF	10 kΩ or higher
O10-3 (UP) - O10-7 (GND)	R - W-B	Sliding roof up switch signal	TILT UP switch ON	Below 1 Ω
O10-4 (OPN) - O10-7 (GND)	G - W-B	Sliding roof open switch signal	SLIDE OPEN switch OFF	10 kΩ or higher
O10-4 (OPN) - O10-7 (GND)	G - W-B	Sliding roof open switch signal	SLIDE OPEN switch ON	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the O10 switch connector.

(d) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
O10-2 (CLS) - O10-7 (GND)	L - W-B	Sliding roof close switch signal	Ignition switch ON, sliding roof open, SLIDE CLOSE switch OFF	11 to 14 V
O10-2 (CLS) - O10-7 (GND)	L - W-B	Sliding roof close switch signal	Ignition switch ON, sliding roof open, SLIDE CLOSE switch ON	Below 1 V
O10-3 (UP) - O10-7 (GND)	R - W-B	Sliding roof up switch signal	Ignition switch ON, sliding roof closed, TILT UP switch OFF	11 to 14 V
O10-3 (UP) - O10-7 (GND)	R - W-B	Sliding roof up switch signal	Ignition switch ON, sliding roof closed, TILT UP switch ON	Below 1 V
O10-4 (OPN) - O10-7 (GND)	G - W-B	Sliding roof open switch signal	Ignition switch ON, sliding roof closed, SLIDE OPEN switch OFF	11 to 14 V
O10-4 (OPN) - O10-7 (GND)	G - W-B	Sliding roof open switch signal	Ignition switch ON, sliding roof closed, SLIDE OPEN	Below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			switch ON	

If the result is not as specified, the switch may have a malfunction.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000X8Z03LX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. SLIDING ROOF OPERATION IN FAIL-SAFE MODE

(a) Operation switch is shorted to ground

- If a SLIDE OPEN/CLOSE or TILT UP/DOWN switch signal remains on for more than 30 seconds, the signal will be ignored after this 30 second time period elapses.

(b) Failure of one hall sensor

- When the ECU recognizes a failure of one hall sensor, the AUTO function will be prohibited.

(c) Failure of two hall sensors

- The ECU cannot recognize whether the hall sensors are malfunctioning or the motor is stalled. If the motor is operating, the ECU will stop the motor immediately. After stopping motor operation, the ECU will operate normally the next time a switch is pressed.

(d) Simultaneous input

- When both TILT UP and SLIDE OPEN/CLOSE signals are sent, the ECU will ignore the signals and stop operating the sliding roof.

(e) Sliding roof position problem

- If the ECU recognizes a problem with the position of the sliding roof, the ECU will stop the motor (if initialization is being performed, the motor will be allowed to operate). After stopping the motor, the ECU will clear its stored position data. As a result of clearing the stored position data, initialization will be required. Refer to Initialization for details.

(f) Exceeding maximum allowable motor runtime

- The ECU monitors the motor operation time to protect the motor. If the total motor operation time exceeds 120 seconds during SLIDE OPEN or TILT UP operation, the ECU will stop the motor. After the motor is stopped, the motor operation will be prohibited until 100 seconds have passed.

(g) Relay error

- If the ECU recognizes this error, the ECU will stop the motor immediately.

(h) Failure in EEPROM parameters

- If the ECU recognizes this failure, the ECU will stop the motor immediately. After the motor is stopped, all functions will be prohibited.

(i) Supply voltage out of range (9 to 15 V)

- If the ECU recognizes that the supply voltage is not within the specified range, the ECU will stop the motor. However, while a jam protection reverse operation is being performed, the motor will not be stopped until the reverse operation is completed. After the motor is stopped, all functions will be prohibited until the supply voltage returns to normal.

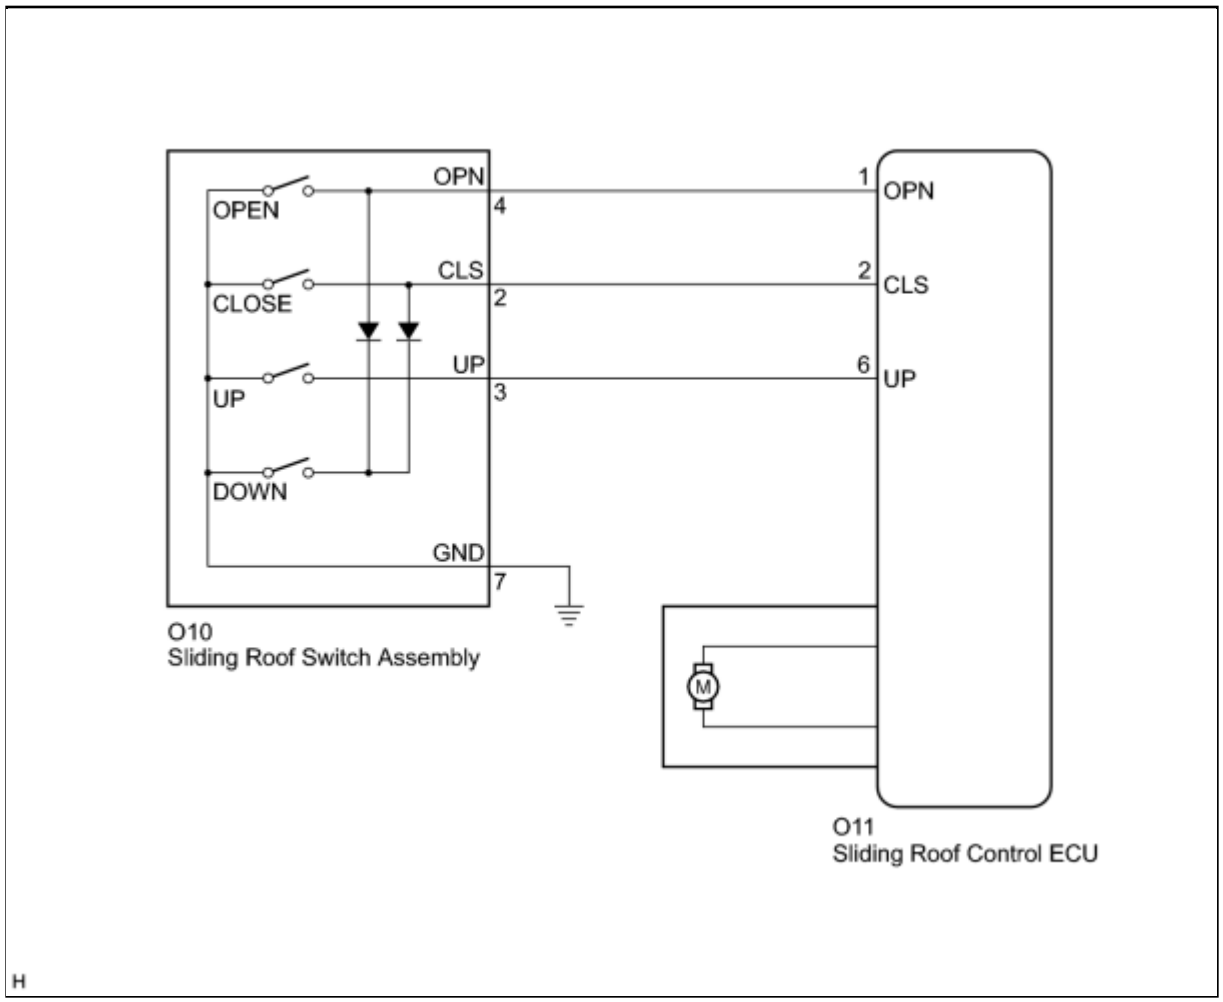
(j) Strong voltage spike (load dump detected*)

- When the ECU recognizes a strong voltage spike (load dump detected), the ECU will stop the

motor. After the motor is stopped, all functions are prohibited during the voltage spike.

HINT:

***: A load dump occurs when a large electrical load has been removed from the charging system, causing system voltage to spike.**



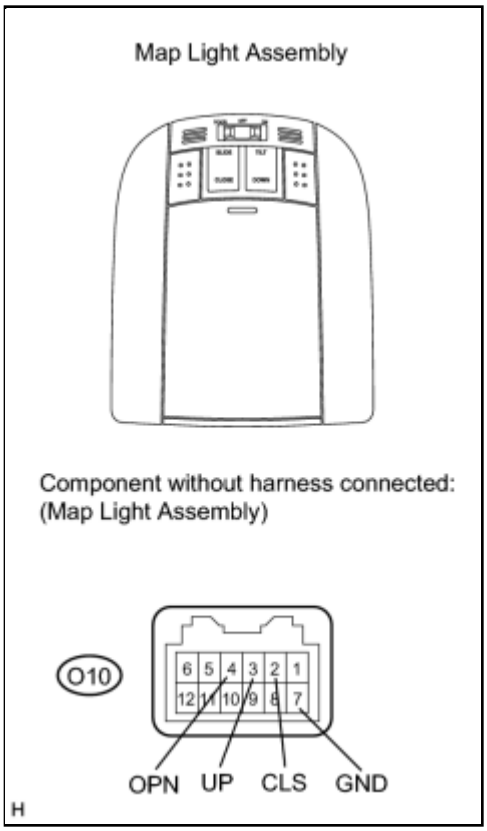
Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001VJU00OX
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: Sliding Roof Control Switch Circuit (2010 Corolla)		

Sliding Roof Control Switch Circuit

DESCRIPTION

If either the sliding function or tilt function does not operate, there may be a malfunction in the sliding roof switch assembly circuit.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When the sliding roof drive gear sub-assembly is reinstalled or replaced, the sliding roof drive gear sub-assembly must be initialized INFO **.**

PROCEDURE

1.	**INSPECT MAP LIGHT ASSEMBLY (SLIDING ROOF SWITCH ASSEMBLY)**

(a) Remove the map light assembly INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

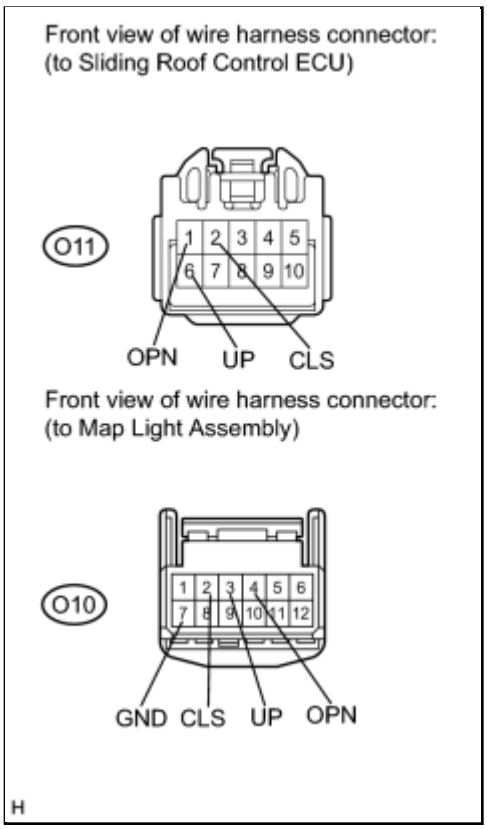
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
O10-4 (OPN) - O10-7 (GND)	SLIDE OPEN switch pushed	Below 1 Ω
O10-4 (OPN) - O10-7 (GND)	SLIDE OPEN switch not pushed	1 MΩ or higher
O10-2 (CLS) - O10-7 (GND)	SLIDE CLOSE switch pushed	Below 1 Ω
O10-2 (CLS) - O10-7 (GND)	SLIDE CLOSE switch not pushed	1 MΩ or higher
O10-3 (UP) - O10-7 (GND)	TILT UP switch pushed	Below 1 Ω
O10-3 (UP) - O10-7 (GND)	TILT UP switch not pushed	1 MΩ or higher
O10-4 (OPN) - O10-7 (GND)	TILT DOWN switch not pushed	1 MΩ or higher
O10-2 (CLS) - O10-7 (GND)	TILT DOWN switch not pushed	1 MΩ or higher

(c) Measure the voltage using diode test mode.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Positive lead → O10-2 (CLS) Negative lead → O10-7 (GND)	TILT DOWN switch pushed	0.4 to 1.2 V
Positive lead → O10-4 (OPN) Negative lead → O10-7 (GND)	TILT DOWN switch pushed	0.4 to 1.2 V
Positive lead → O10-7 (GND) Negative lead → O10-2 (CLS)	TILT DOWN switch pushed	2.5 to 3.3 V
Positive lead → O10-7 (GND) Negative lead → O10-4 (OPN)	TILT DOWN switch pushed	2.5 to 3.3 V

NOTICE:



This procedure is for using a digital tester which has diode test mode such as a TOYOTA electrical tester. If a tester which does not have diode test mode is used, the diode may break.

NG ▶ **REPLACE MAP LIGHT ASSEMBLY (SLIDING ROOF SWITCH ASSEMBLY)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (MAP LIGHT ASSEMBLY - SLIDING ROOF DRIVE GEAR AND BODY GROUND)**

(a) Disconnect the O11 ECU connector.

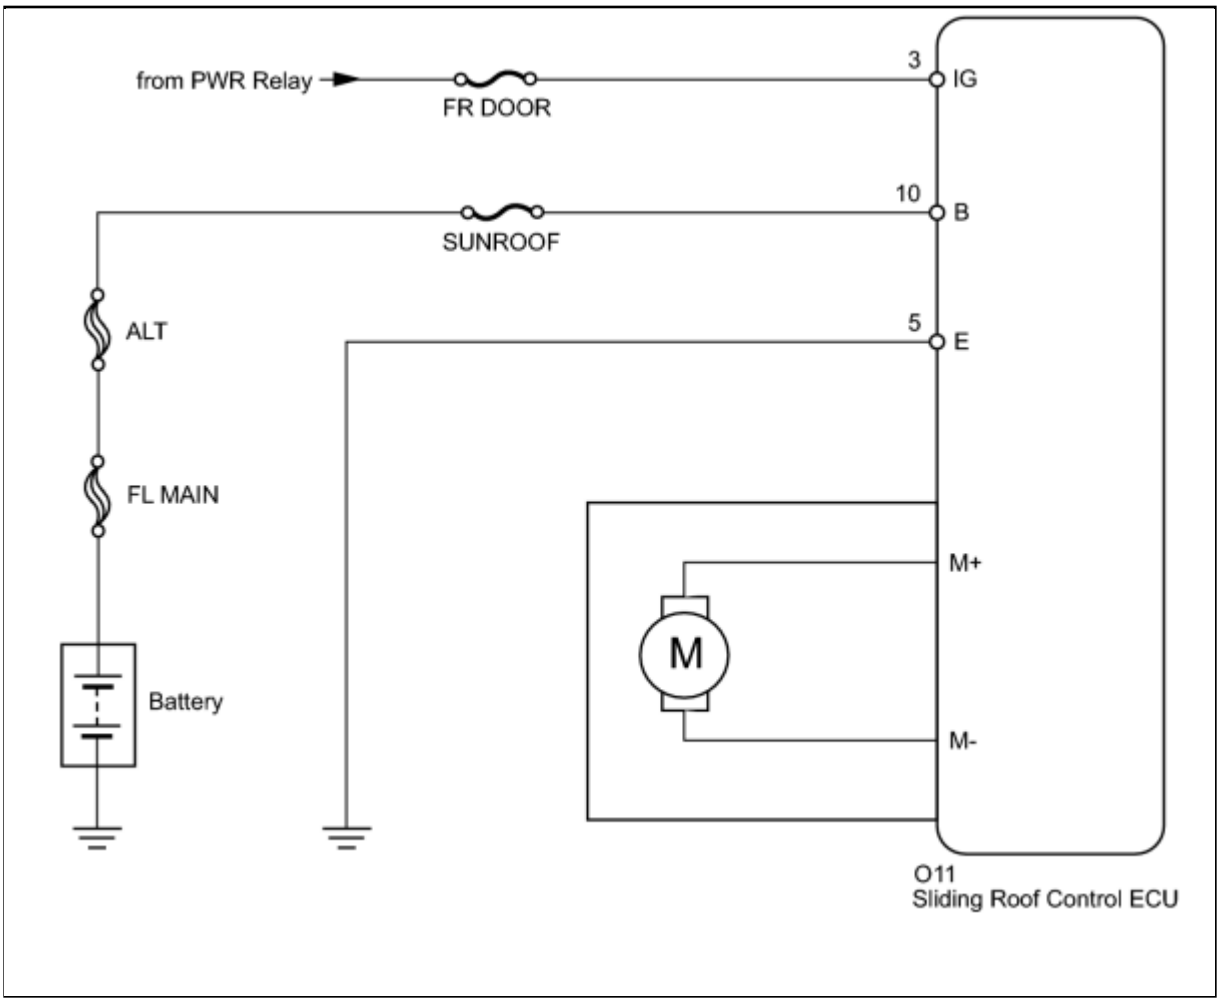
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
O11-1 (OPN) - O10-4 (OPN)	Always	Below 1 Ω
O11-2 (CLS) - O10-2 (CLS)	Always	Below 1 Ω
O11-6 (UP) - O10-3 (UP)	Always	Below 1 Ω
O11-1 (OPN) - Body ground	Always	10 kΩ or higher
O11-2 (CLS) - Body ground	Always	10 kΩ or higher
O11-6 (UP) - Body ground	Always	10 kΩ or higher
O10-7 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001VJT015X
Title: SLIDING ROOF / CONVERTIBLE: SLIDING ROOF SYSTEM: Sliding Roof ECU Power Source Circuit (2010 Corolla)		

Sliding Roof ECU Power Source Circuit

DESCRIPTION

If either the sliding function or tilt function does not operate, there may be a malfunction in the sliding roof control ECU power source circuit.

WIRING DIAGRAM

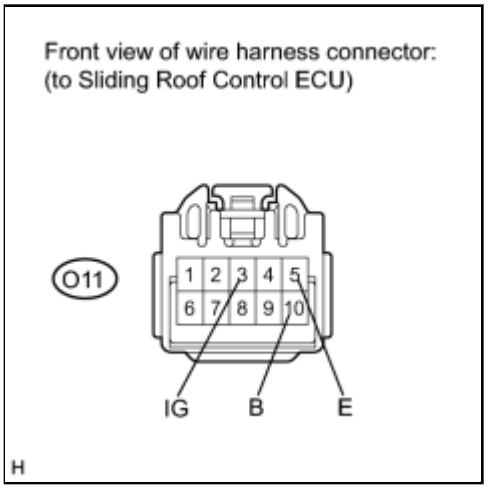
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (SUNROOF, FR DOOR)**

(a) Remove the SUNROOF and FR DOOR fuses from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
SUNROOF fuse	Always	Below 1 Ω
FR DOOR fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (SLIDING ROOF DRIVE GEAR - BATTERY, BODY GROUND)**

(a) Disconnect the O11 ECU connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
O11-10 (B) - Body ground	Always	11 to 14 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
O11-3 (IG) - Body ground	Ignition switch off	Below 1 V
O11-3 (IG) - Body ground	Ignition switch ON	11 to 14 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
O11-5 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000MKT021X
Title: WINDOW / GLASS: BACK WINDOW GLASS: INSTALLATION (2010 Corolla)		

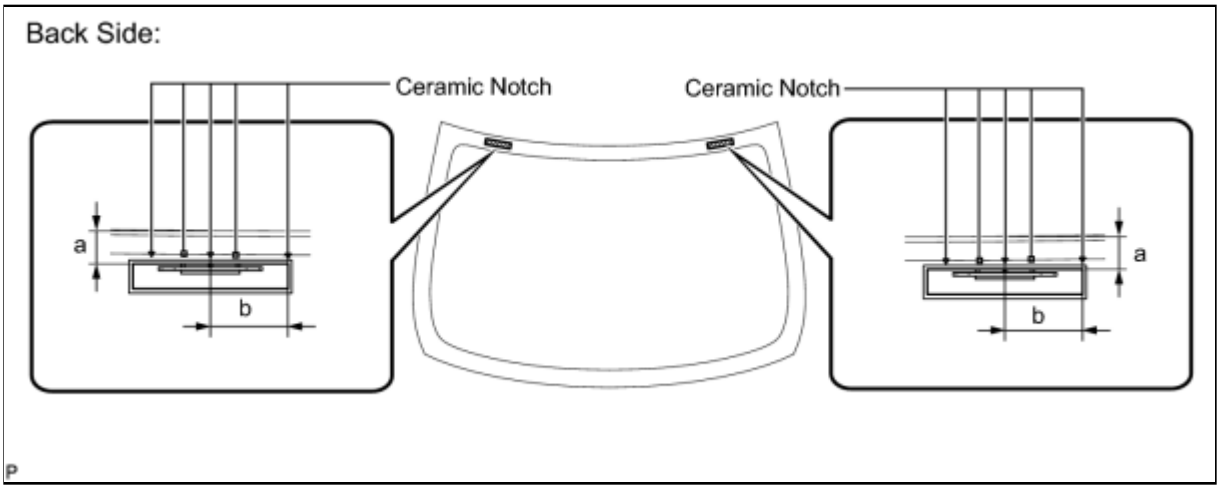
INSTALLATION

1. INSTALL NO. 2 BACK WINDOW GLASS STOPPER (for 2-piece Type)

(a) Using a brush or sponge, coat the application area of the 2 No. 2 back window glass stoppers with Primer G.

NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

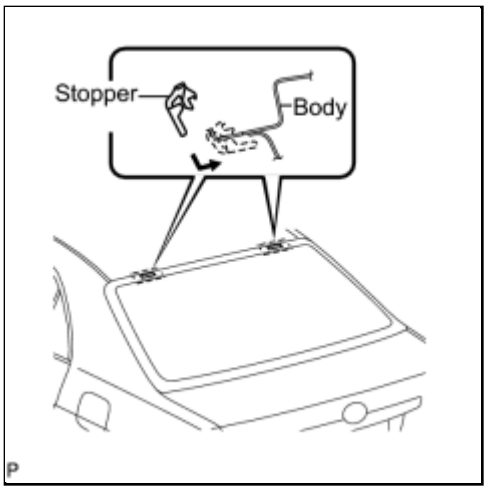


HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(b) Install 2 new No. 2 back window glass stoppers onto the back window glass as shown in the illustration.

HINT:

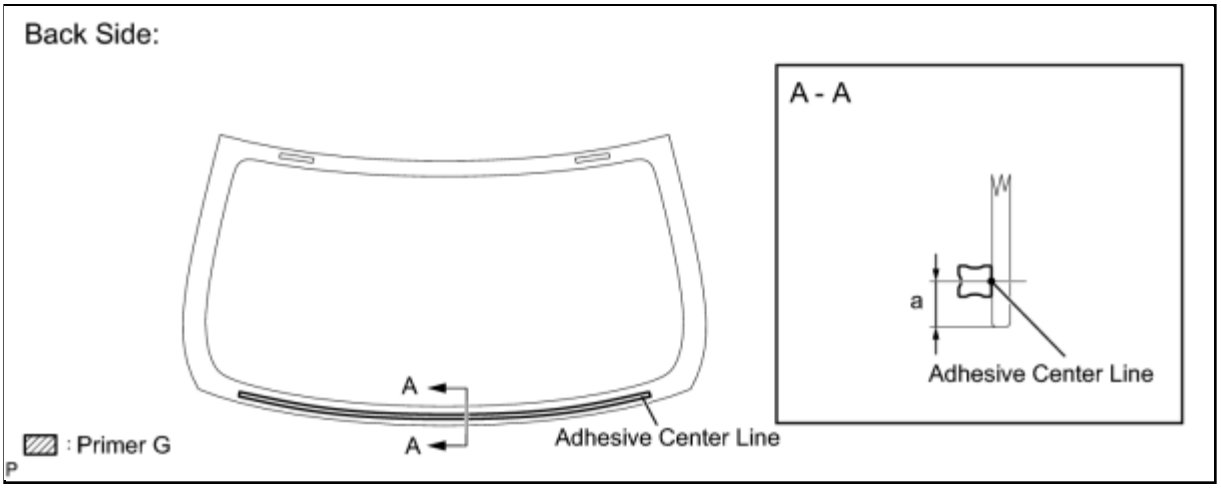


Only 2-piece type No. 2 back window glass stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

Standard Dimension:

AREA	DIMENSION
a	14.1 mm (0.555 in.)
b	40.0 mm (1.57 in.)

2. INSTALL NO. 1 BACK WINDOW GLASS STOPPER (for 2-piece Type)



(a) Install 2 new No. 1 back window glass stoppers to the vehicle body as shown in the illustration.

HINT:

Only 2-piece type No. 1 back window glass stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

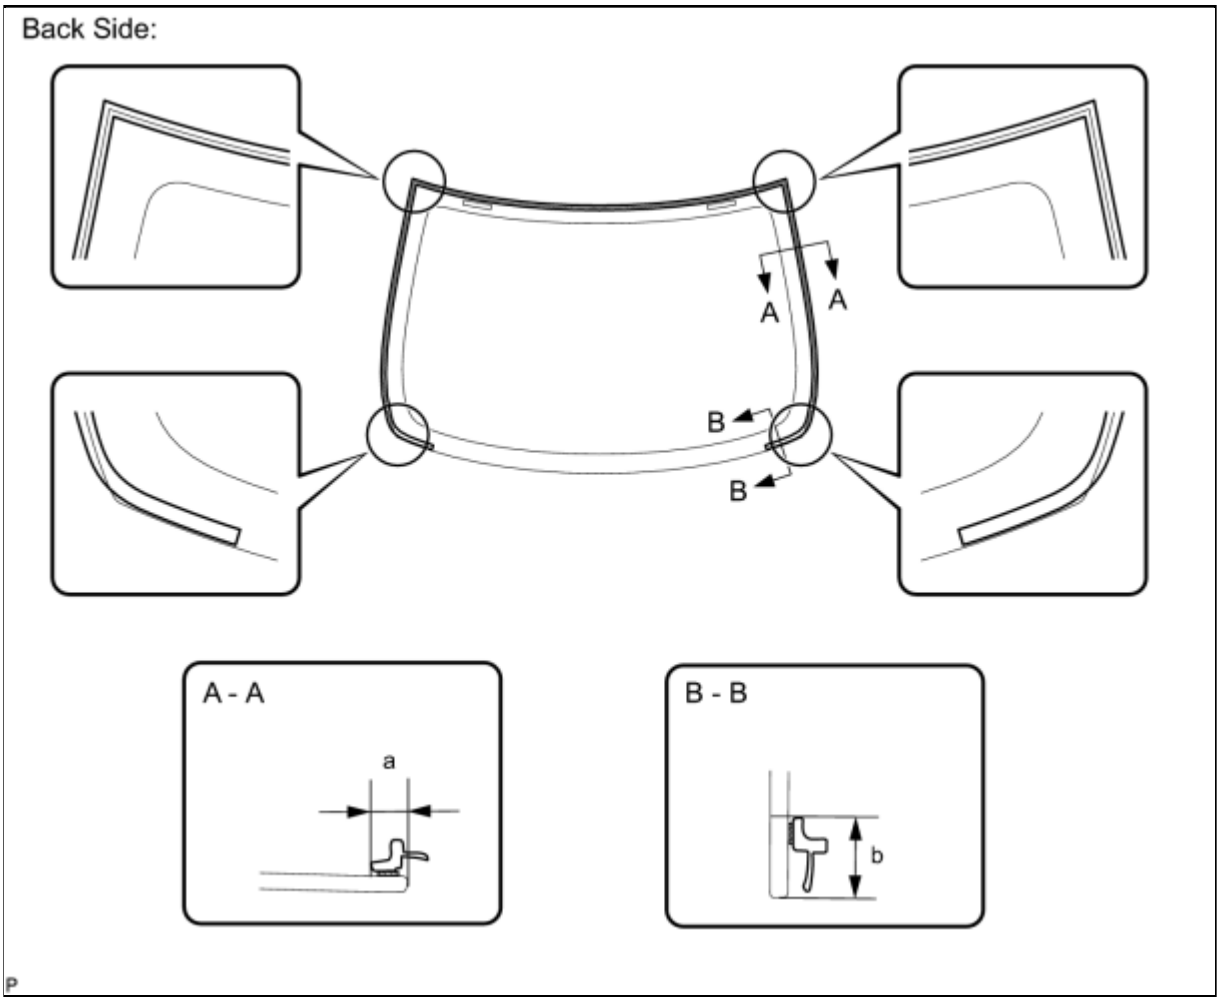
3. INSTALL BACK WINDOW GLASS ADHESIVE DAM

(a) Using a brush or sponge, coat the application area of the back window glass adhesive dam with Primer G.

Standard Dimension:

AREA	DIMENSION
a	6.1 mm (0.240 in.)

NOTICE:



- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

4. INSTALL NO. 1 BACK WINDOW MOULDING

(a) Using a brush or sponge, coat the application area of the No. 1 back window moulding with Primer G.

Standard Dimension:

AREA	DIMENSION
a	7.4 mm (0.291 in.)
b	15.5 mm (0.610 in.)

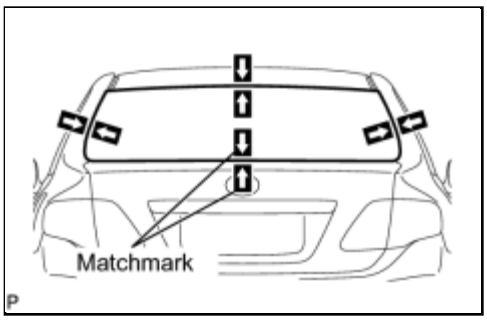
NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(b) Install a new No. 1 back window moulding onto the back window glass.



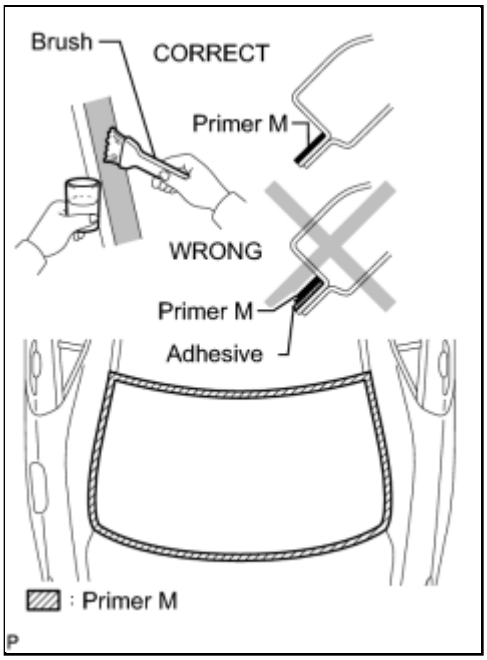
5. INSTALL BACK WINDOW GLASS

(a) Position the back window glass assembly.

(1) Using suction cups, place the back window glass assembly in the correct position.

(2) Check that the entire contact surface of the back window glass rim is perfectly even.

(3) Place the matchmarks on the back window glass and vehicle body on the locations indicated in the illustration.



HINT:

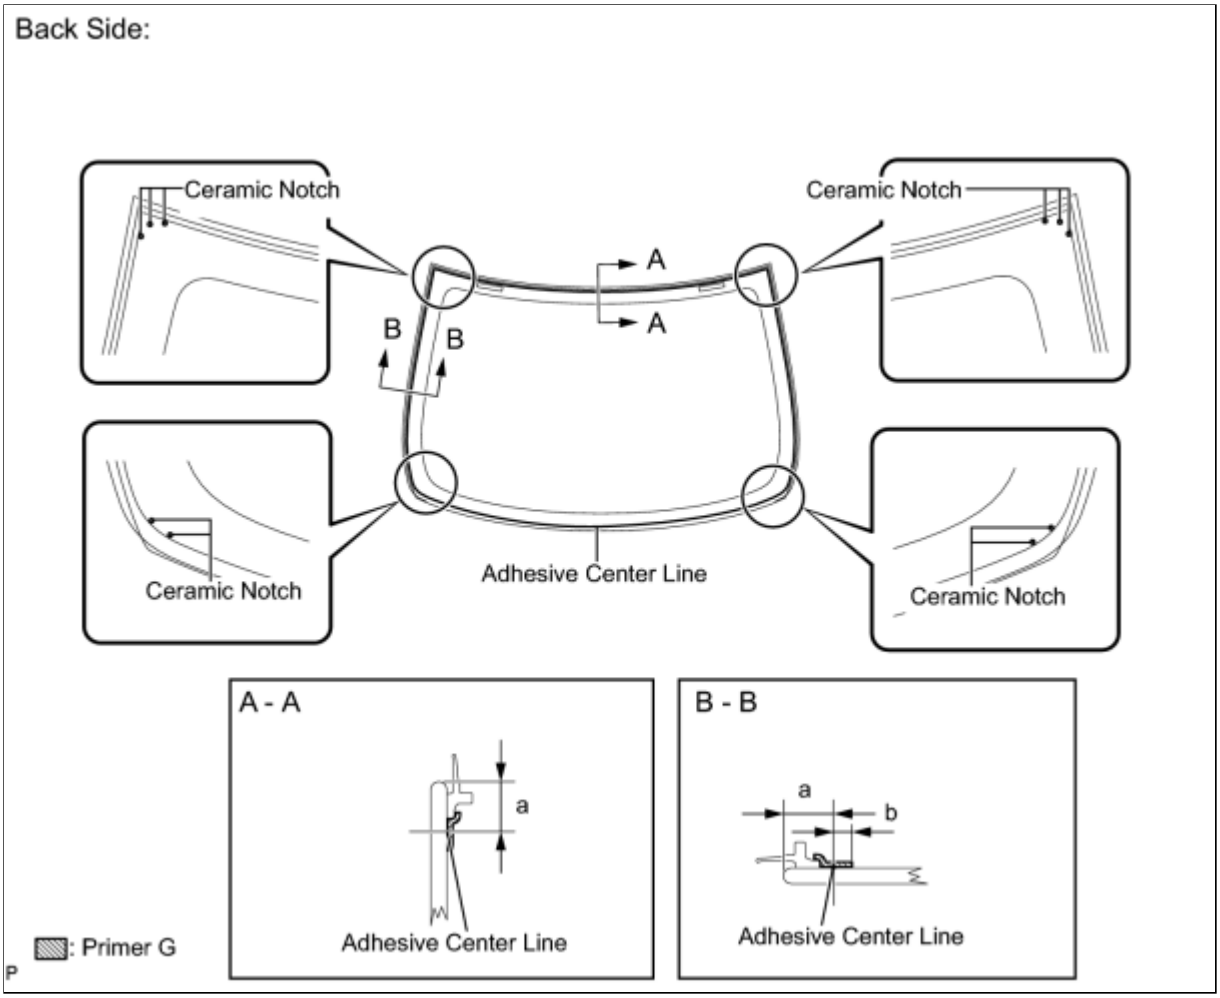
- Placing matchmarks is necessary only when installing a new glass. If it is the reused glass, matchmarks should already be present.
- When reusing the glass, check and correct the matchmark positions.

NOTICE:

Check that the stoppers are attached to the vehicle body correctly.

(4) Using suction cups, remove the back window glass assembly.

(b) Using a brush, coat the installation surface on the vehicle body with Primer M.



NOTICE:

- Do not coat the adhesive with Primer M.
- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(c) Using a brush or sponge, coat the application area of adhesive with Primer G.

Standard Dimension:

AREA	DIMENSION
a	9.5 mm (0.374 in.)
b	10.0 mm (0.394 in.)

NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

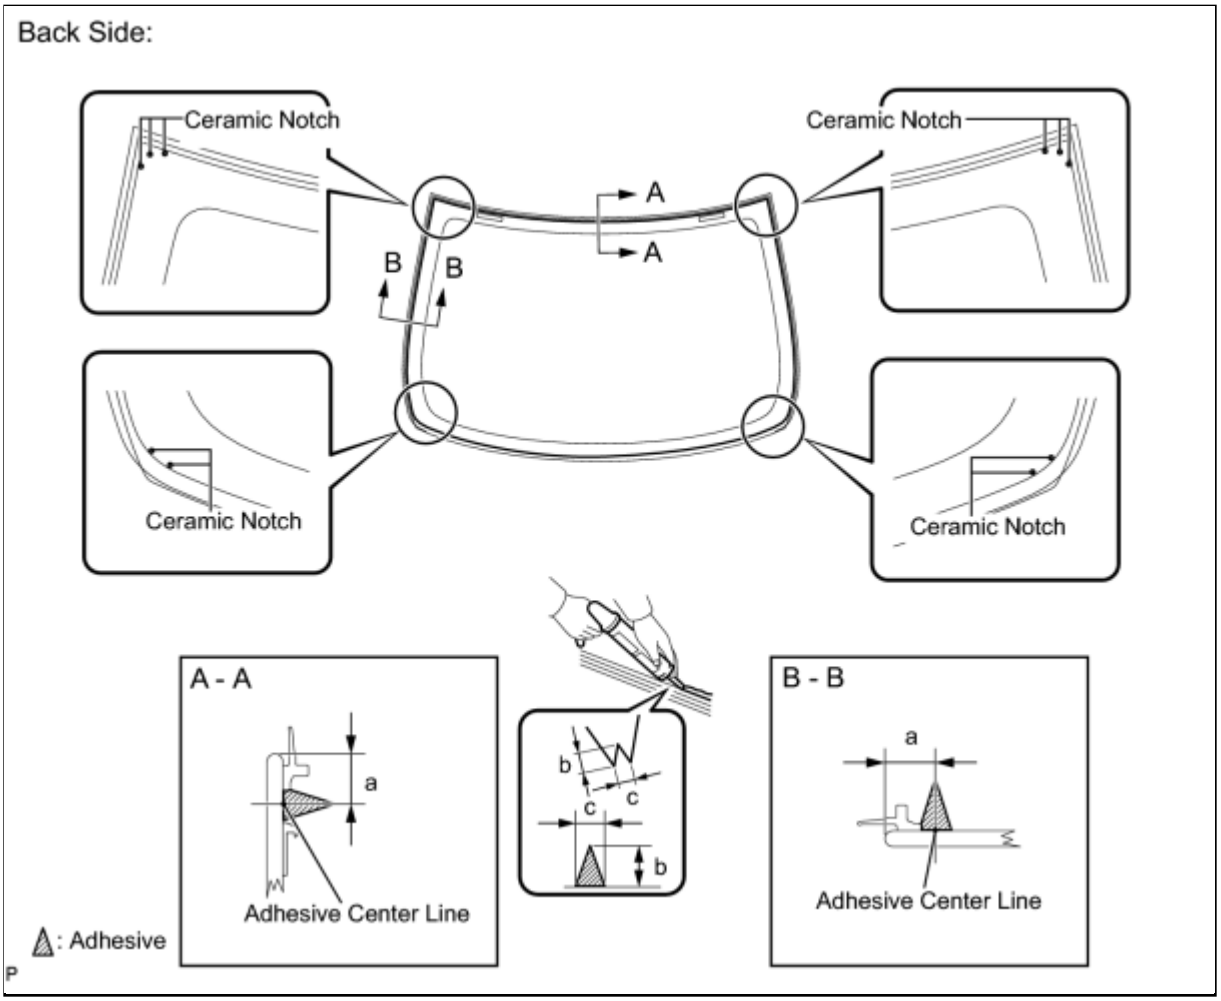
If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(d) Apply adhesive to the glass.

Adhesive:
Toyota Genuine Windshield Glass Adhesive or equivalent

(1) Cut off the tip of the cartridge nozzle as shown in the illustration.

HINT:



After cutting off the tip, use all adhesive within the time described in the table below.

Usage Time Frame:

TEMPERATURE	TACK-FREE TIME
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(2) Load the sealer gun with a cartridge.

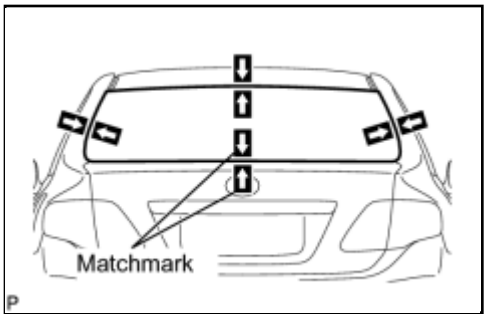
(3) Apply adhesive to the back window glass as shown in the illustration.

Standard Dimension:

AREA	DIMENSION
a	9.5 mm (0.374 in.)
b	12.0 mm (0.472 in.)
c	8.0 mm (0.315 in.)

HINT:

Apply adhesive onto the ceramic notches.



(e) Install the back window glass assembly.

(1) Using suction cups, position the back window glass so that the matchmarks are aligned, and press it in gently along the rim.

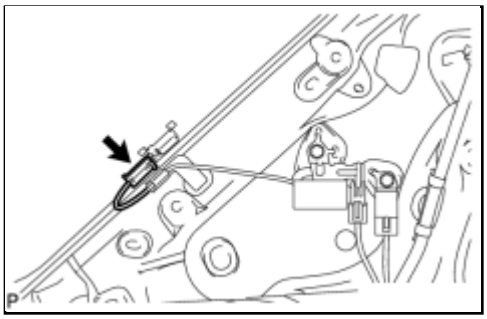
(2) Lightly press the outer surface of the back window glass to ensure that it is securely attached to the vehicle body.

NOTICE:

- Check that the back window glass stoppers are attached to the vehicle body correctly.
- Check the clearance between the vehicle body and back window glass.

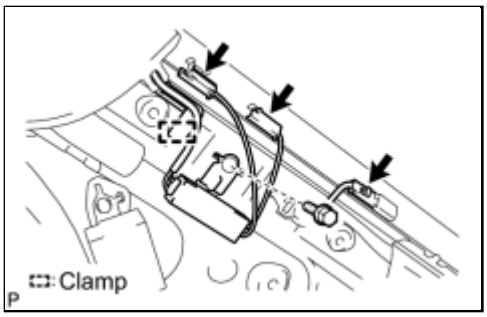
HINT:

Press the glass with a force of 98 N (10 kgf, 22 lbf) or more.



(3) Hold the back window glass using protective tape until applied adhesive becomes hard.

NOTICE:



Do not drive the vehicle for the amount of time described in the table below.

Minimum Time:

TEMPERATURE	MINIMUM TIME PRIOR TO DRIVING VEHICLE
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

(f) Connect the connector to the rear pillar LH.

(g) Install the amplifier antenna assembly to the rear pillar RH with the bolt.

Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(h) Engage the clamp.

(i) Connect the connectors.

6. INSPECT FOR LEAK AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

7. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (w/o Rear Spoiler) INFO

8. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (w/ Rear Spoiler) INFO

9. INSTALL PACKAGE TRAY TRIM BELT HOLE COVER INFO

10. INSTALL ROOF HEADLINING ASSEMBLY

Return the rear section of the roof headlining assembly to the original position.

11. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) INFO

12. INSTALL NO. 1 ROOM LIGHT ASSEMBLY INFO

13. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY INFO

14. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH INFO

15. INSTALL ROOF SIDE INNER GARNISH BOARD LH INFO

16. INSTALL REAR SEAT SIDE GARNISH LH INFO

17. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH INFO

18. INSTALL ROOF SIDE INNER GARNISH BOARD RH INFO

19. INSTALL REAR SEAT SIDE GARNISH RH INFO

20. INSTALL REAR SEATBACK ASSEMBLY RH INFO

21. INSTALL REAR SEATBACK ASSEMBLY LH INFO

22. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

23. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

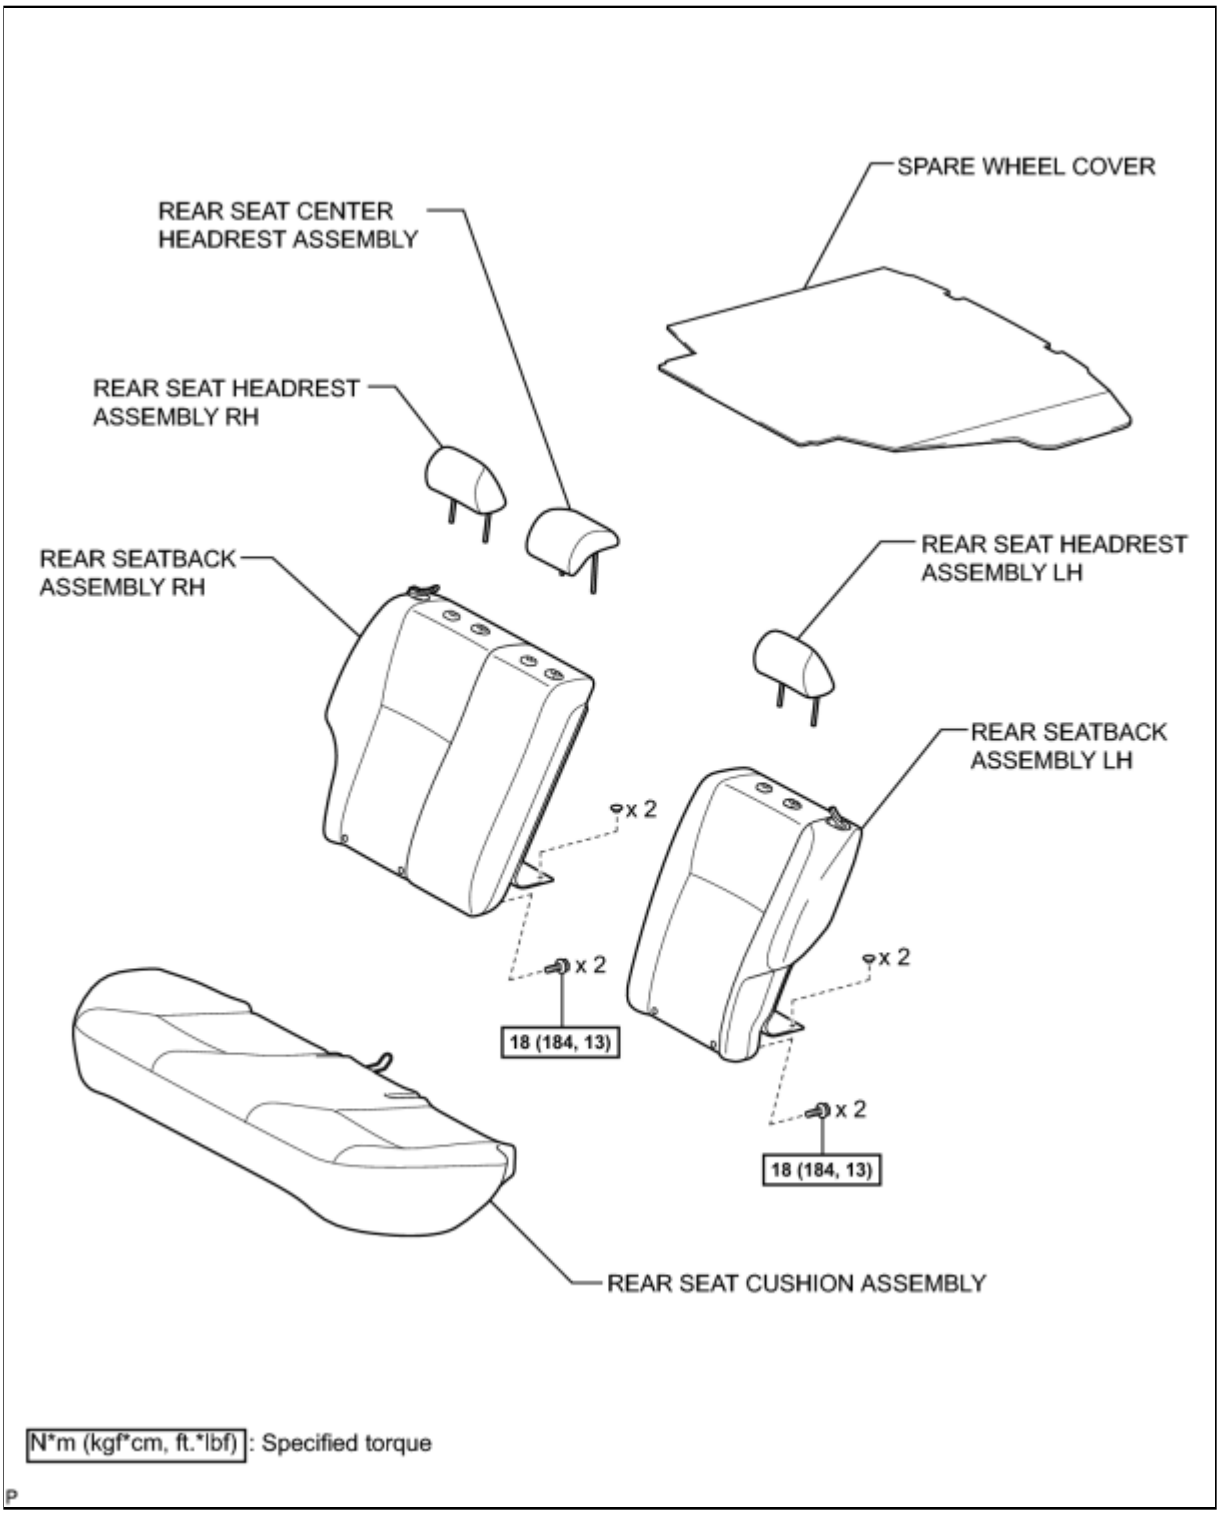
24. INSTALL REAR SEAT HEADREST ASSEMBLY RH

25. INSTALL REAR SEAT HEADREST ASSEMBLY LH

26. INSTALL SPARE WHEEL COVER

27. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH INFO

28. INSTALL REAR DOOR SCUFF PLATE LH INFO



29. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH INFO

30. INSTALL REAR DOOR SCUFF PLATE RH INFO

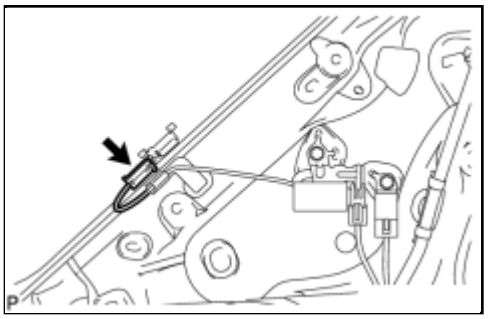
22. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (w/ Rear Spoiler)** INFO
23. **REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)** INFO
24. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)**

It is not necessary to completely remove the roof headlining assembly. Slightly lower the rear section of the roof headlining assembly so that the back window glass can be removed.

25. REMOVE NO. 1 BACK WINDOW MOULDING

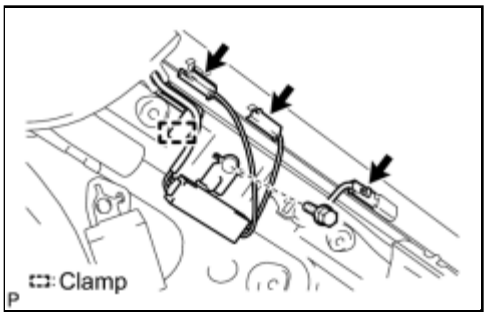
(a) Using a knife, cut off the moulding as shown in the illustration.

CAUTION:



- Do not damage the vehicle body with the knife.
- If the vehicle body is damaged, repair the damaged portion by applying an anti-rust coating after removing the back window glass.

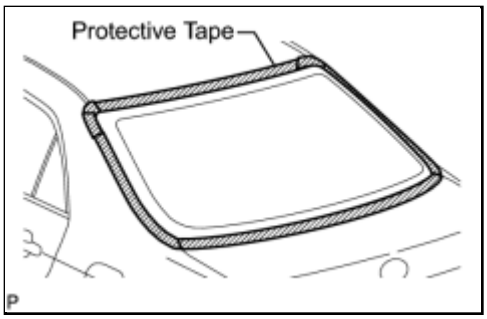
(b) Remove the remaining moulding from the back window glass.



HINT:

When removing the moulding, make a partial cut, then pull and remove it by hand.

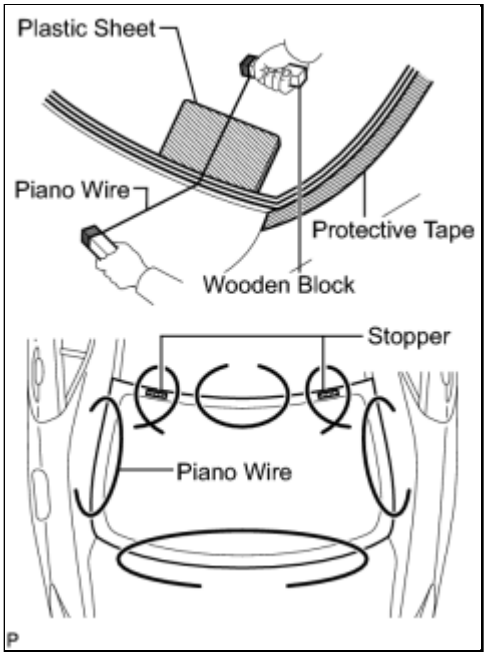
26. REMOVE BACK WINDOW GLASS



(a) Disconnect the connector from the rear pillar LH.

(b) Disconnect the connectors.

(c) Disengage the clamp.



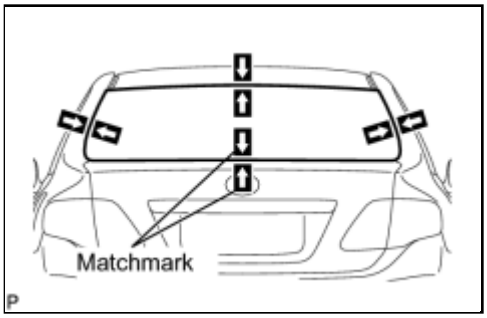
(d) Remove the bolt and disconnect the amplifier antenna assembly from the rear pillar RH.

(e) Apply protective tape to the installation position of the back window glass assembly on the vehicle body.

HINT:

Apply protective tape to the installation surface to prevent it from being scratched.

(f) Pass a piano wire between the vehicle body and back window glass assembly from the interior.

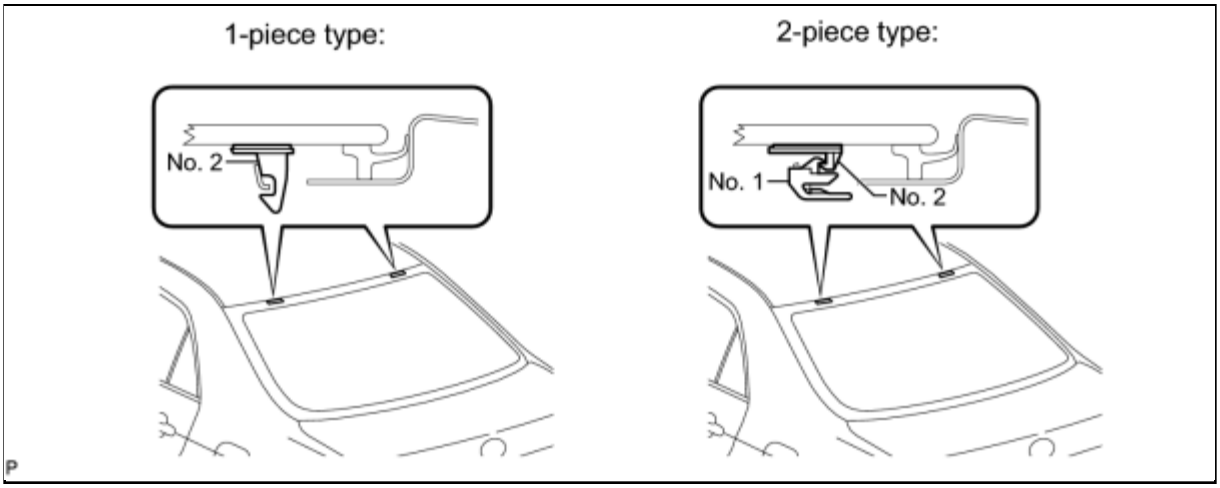


(g) Tie both wire ends to wooden blocks or similar objects.

(h) Cut off the adhesive by pulling the piano wire around the back window glass assembly.

NOTICE:

- When separating the back window glass assembly from the vehicle, be careful not to damage the vehicle's paint or the interior exterior ornaments.
- To prevent the package tray from being scratched when removing the back window glass assembly, place a plastic sheet between the piano wire and package tray.
- There are stoppers on the back window glass assembly as shown in the illustration. Be careful not to damage the back window glass when cutting off the adhesive.



(i) Place matchmarks on the back window glass assembly and vehicle body on the locations indicated in the illustration.

HINT:

Matchmarks do not need if the back window glass assembly is not going to be reused.

(j) Disconnect the back window glass stoppers.

NOTICE:

To prevent the back window glass assembly from dropping when performing this operation, be sure to hold the back window glass assembly using suction cups.

HINT:

Depending on vehicles, a 1-piece or 2-piece type stopper is used.

(k) Using a suction cup, remove the back window glass assembly.

NOTICE:

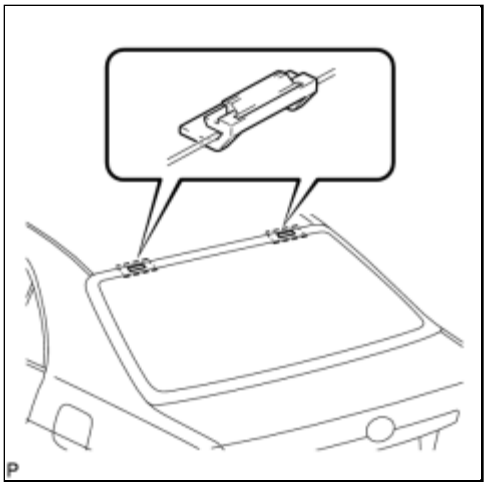
- Be careful not to drop the back window glass assembly.
- Leave as much adhesive on the vehicle body as possible when removing the back window glass assembly.

27. REMOVE BACK WINDOW GLASS ADHESIVE DAM

(a) Using a scraper, remove the back window glass adhesive dam.

NOTICE:

- Be careful not to damage the back window glass.
- Be sure to replace the back window glass adhesive dam with a new one.



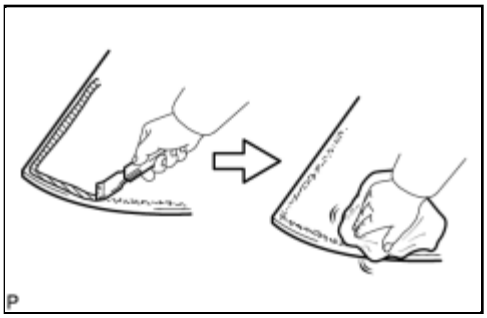
28. REMOVE NO. 2 BACK WINDOW GLASS STOPPER

(a) Using a scraper, remove the 2 No. 2 back window glass stoppers.

NOTICE:

- Be careful not to damage the back window glass.
- Be sure to replace the 2 No. 2 back window glass stoppers with new ones.

29. REMOVE NO. 1 BACK WINDOW GLASS STOPPER (for 2-piece Type)



(a) Remove the 2 No. 1 back window glass stoppers.

NOTICE:

Be sure to replace the 2 No. 1 back window glass stoppers with new ones.

30. CLEAN BACK WINDOW GLASS

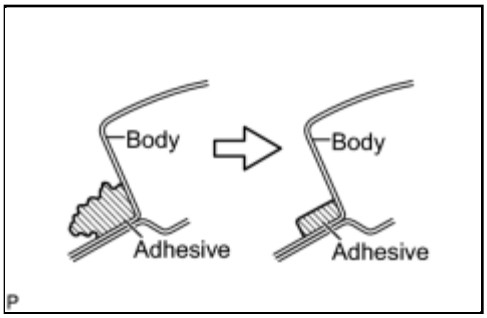
(a) Using a scraper, remove the adhesive tape and adhesive sticking to the back window glass.

NOTICE:

Be careful not to damage the back window glass.

(b) Clean the outer circumference of the back window glass with a non-residue solvent.

NOTICE:



- Do not touch it surface after cleaning it.
- Even if using a new back window glass, clean the back window glass with a non-residue solvent.

31. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) On the contact surface of the vehicle body, use a knife to cut away excess adhesive as shown in the illustration.

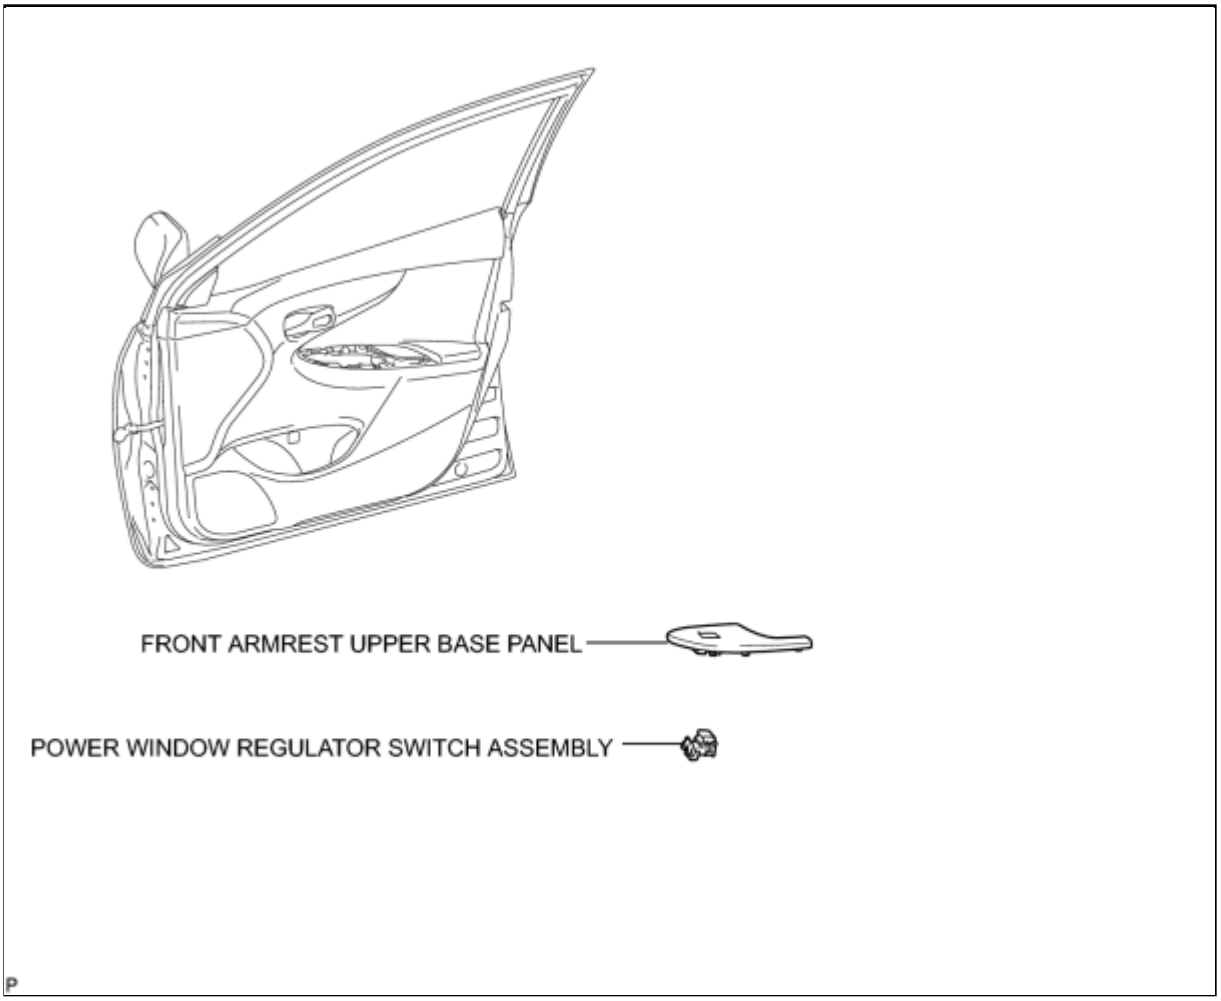
NOTICE:

Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(2) Clean the contact surface of the vehicle body with cleaner.



HINT:

Even if all the adhesive has been removed, clean the vehicle body.

Title: WINDOW / GLASS: FRONT PASSENGER SIDE POWER WINDOW SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT POWER WINDOW SWITCH ASSEMBLY (for Front Passenger Side)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (D) - 2 (SD) 3 (B) - 4 (U)	UP	Below 1 Ω
1 (D) - 2 (SD) 4 (U) - 5 (SU)	OFF	Below 1 Ω
1 (D) - 3 (B) 4 (U) - 5 (SU)	DOWN	Below 1 Ω

If the result is not specified, replace the power window switch assembly.

Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the power window control system.
- *: Using the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	PROBLEM SYMPTOMS TABLE

Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

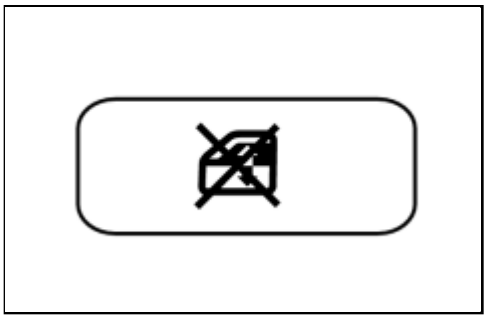
The power window control system controls the power window UP and DOWN function using the regulator motors.

The main controls of this system are: the power window master switch which is built into the driver side door, and the power window switches which are built into the front passenger side door and rear doors. Pressing the switch or any of the switches on the master switch transmits an UP or DOWN signal to the corresponding power window regulator motor.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	OUTLINE
Power Window Master Switch	• Controls window operations for all windows • When window lock switch is set to lock position, window operation is only possible with master switch
Power Window Switch	• Located on passenger side door and rear doors • Each regulator switch controls window operations for its respective window
Power Window Regulator Motor Assembly	Receives switch signals and changes signals into motor activation to change window position
Main Body ECU (Instrument Panel Junction Block)	Main body ECU (instrument panel junction block) controls the PWR relay (operation)

3. SYSTEM FUNCTION



The power window control system has the following functions.

FUNCTION	OUTLINE
Manual UP and DOWN function	• Driver side power window: Function that raises window while power window switch is pulled up, and lowers window while pushed halfway down (window stops as soon as switch is released) • Other power windows: Function that raises window while power window switch is pulled up, and lowers window while pushed down (window stops as soon as switch is released)
AUTO DOWN	Function that enables window of driver side door to be fully opened by one full

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003EK8003X
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. CHECK POWER WINDOW MASTER SWITCH (WINDOW LOCK SWITCH)

(a) Check that the passenger side power window and rear windows cannot be operated when the window lock switch of the power window master switch is pressed.

(b) Check that the passenger side power window and rear windows can be operated when the window lock switch is pressed again.

2. CHECK MANUAL UP / DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

OK

CONDITION	MASTER SWITCH	SWITCH OPERATION	POWER WINDOW
Ignition switch ON	Driver side	Pulled up	UP (closes)
Ignition switch ON	Driver side	Pushed halfway down	DOWN (opens)

(b) Check that the passenger side power window operates as follows:

OK

CONDITION	REGULATOR SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Passenger side	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Passenger side	Pushed down	DOWN (opens)

(c) Check that the rear LH power window operates as follows:

OK

CONDITION	REGULATOR SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Rear LH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear LH	Pushed down	DOWN (opens)

(d) Check that the rear RH power window operates as follows:

OK

CONDITION	REGULATOR SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Rear RH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear RH	Pushed down	DOWN (opens)

3. CHECK AUTO DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

OK

CONDITION	MASTER SWITCH	SWITCH OPERATION	POWER WINDOW
Ignition switch ON	Driver side	Fully pushed down	AUTO DOWN (fully opens)

4. CHECK REMOTE UP / DOWN FUNCTION

(a) Check that the passenger side power window operates as follows:

OK

CONDITION	MASTER SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Passenger side	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Passenger side	Pushed down	DOWN (opens)

(b) Check that the rear LH power window operates as follows:

OK

CONDITION	MASTER SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Rear LH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear LH	Pushed down	DOWN (opens)

(c) Check that the rear RH power window operates as follows:

OK

CONDITION	MASTER SWITCH	SWITCH OPERATION	POWER WINDOW
• Ignition switch ON • Window lock switch OFF	Rear RH	Pulled up	UP (closes)
• Ignition switch ON • Window lock switch OFF	Rear RH	Pushed down	DOWN (opens)

5. CHECK POWER WINDOW OPERATION FUNCTION AFTER IGNITION SWITCH IS TURNED OFF

(a) Check that all the power windows can be operated with the power window master switch after the ignition switch is turned off.

(b) Check that the key-off operation function does not operate after the driver or passenger side door is opened.

(c) Check that all the power windows cannot be operated after more than approximately 45 seconds elapse after the ignition switch is turned off.

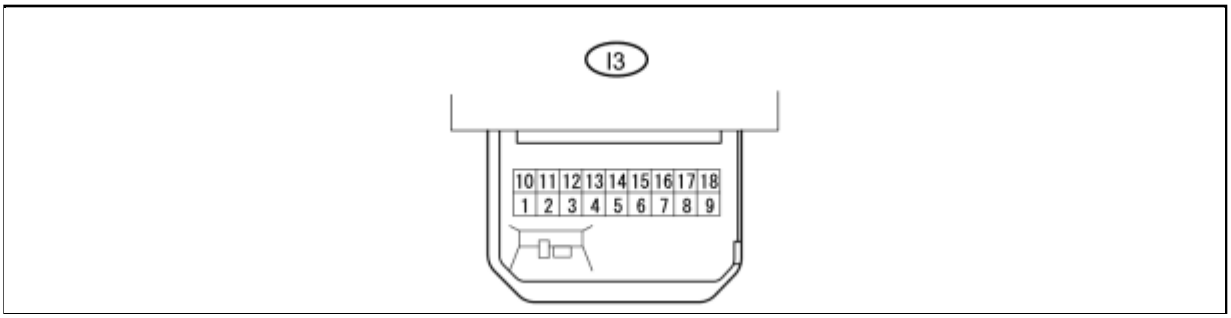
6. CHECK PTC OPERATION

HINT:

PTC operation is a function that prevents overloading of the power window regulator by stopping the motor.
PTC operation activates when the power window switch is operated for a predetermined amount of time.

(a) Pull up and hold the power window switch for more than 90 seconds. Then release the switch.

(b) Check that pressing the switch does not move the window.



(c) Wait until 60 seconds have passed since the switch was released in the first step. Check that pressing the switch results in normal window movement.

Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: TERMINALS OF ECU (2010 Corolla)		

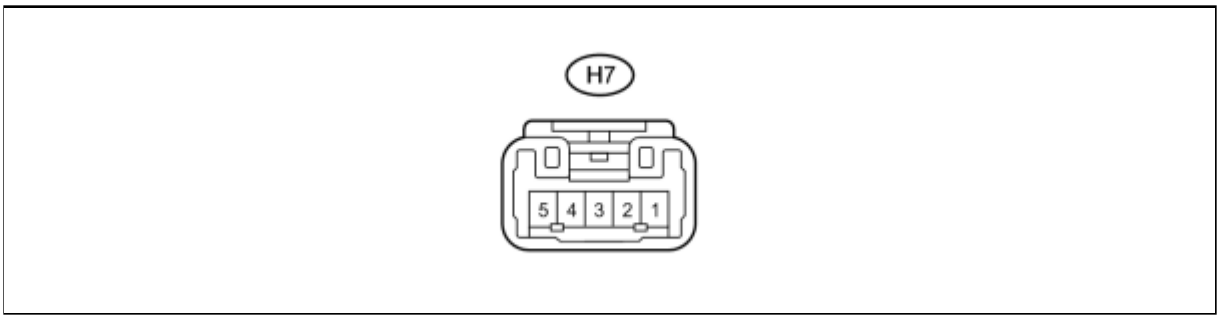
TERMINALS OF ECU

1. CHECK POWER WINDOW MASTER SWITCH

(a) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
I3-1 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
I3-3 (U) - I3-1 (E)	P - W-B*1 G - W-B*2	Power window motor UP output (driver side)	Ignition switch ON, driver side power window switch OFF	Below 1 V
I3-3 (U) - I3-1 (E)	P - W-B*1 G - W-B*2	Power window motor UP output (driver side)	Ignition switch ON, driver side power window switch UP (manual operation)	11 to 14 V
I3-4 (D) - I3-1 (E)	W - W-B*1 Y - W-B*2	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch OFF	Below 1 V
I3-4 (D) - I3-1 (E)	W - W-B*1 Y - W-B*2	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch DOWN (manual operation)	11 to 14 V
I3-4 (D) - I3-1 (E)	W - W-B*1 Y - W-B*2	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch OFF	Below 1 V
I3-4 (D) - I3-1 (E)	W - W-B*1 Y - W-B*2	Power window motor DOWN output (driver side)	Ignition switch ON, driver side power window switch fully DOWN (AUTO operation)	11 to 14 V
I3-6 (B) - Body ground	L - Body ground*1	Ignition power supply	Ignition switch off	Below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
	W - Body ground*2			
I3-6 (B) - Body ground	L - Body ground*1 W - Body ground*2	Ignition power supply	Ignition switch ON	11 to 14 V
I3-10 (U) - I3-1 (E)	G - W-B*1 B - W-B*2	Power window motor UP output (rear RH)	Ignition switch ON, rear RH side power window switch OFF	Below 1 V
I3-10 (U) - I3-1 (E)	G - W-B*1 B - W-B*2	Power window motor UP output (rear RH)	Ignition switch ON, rear RH side power window switch UP	11 to 14 V
I3-12 (U) - I3-1 (E)	R - W-B	Power window motor UP output (rear LH)	Ignition switch ON, rear LH side power window switch OFF	Below 1 V
I3-12 (U) - I3-1 (E)	R - W-B	Power window motor UP output (rear LH)	Ignition switch ON, rear LH side power window switch UP	11 to 14 V
I3-13 (D) - I3-1 (E)	L - W-B	Power window motor DOWN output (rear LH)	Ignition switch ON, rear LH side power window switch OFF	Below 1 V
I3-13 (D) - I3-1 (E)	L - W-B	Power window motor DOWN output (rear LH)	Ignition switch ON, rear LH side power window switch DOWN	11 to 14 V
I3-15 (D) - I3-1 (E)	BR - W-B	Power window motor DOWN output (passenger side)	Ignition switch ON, passenger side power window switch OFF	Below 1 V
I3-15 (D) - I3-1 (E)	BR - W-B	Power window motor DOWN output (passenger side)	Ignition switch ON, passenger side power window switch DOWN	11 to 14 V
I3-16 (U) - I3-1 (E)	G - W-B	Power window motor UP output (passenger side)	Ignition switch ON, passenger side power window switch OFF	Below 1 V
I3-16 (U) - I3-1 (E)	G - W-B	Power window motor UP output (passenger side)	Ignition switch ON, passenger side power window switch UP	11 to 14 V
I3-18 (D) - I3-1 (E)	BR - W-B*1 Y - W-B*2	Power window motor DOWN output (rear RH)	Ignition switch ON, rear RH side power window switch OFF	Below 1 V



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
I3-18 (D) - I3-1 (E)	BR - W-B*1 Y - W-B*2	Power window motor DOWN output (rear RH)	Ignition switch ON, rear RH side power window switch DOWN	11 to 14 V

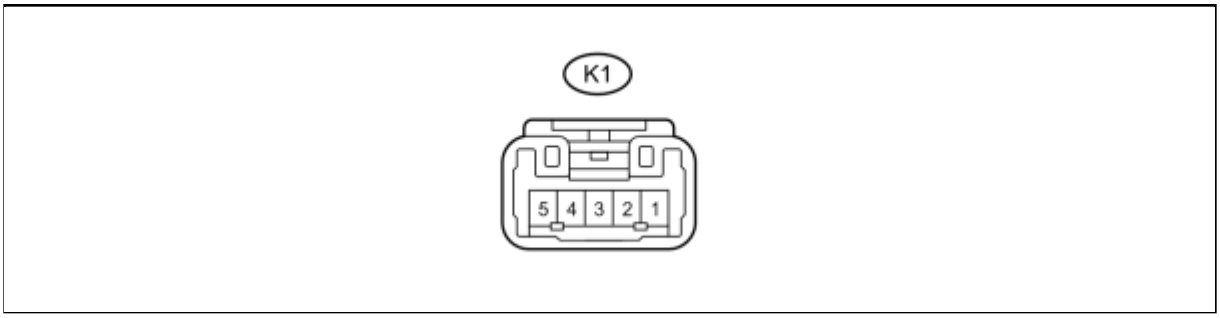
- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, the master switch or wire harness may have a malfunction.

2. CHECK POWER WINDOW SWITCH (PASSENGER SIDE)

(a) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
H7-1 (D) - Body ground	B - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch OFF	Below 1 V
H7-1 (D) - Body ground	B - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch DOWN	11 to 14 V
H7-2 (SD) - Body ground	BR - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
H7-3 (B) - Body ground	L - Body ground*1 Y - Body ground*2	Ignition power supply	Ignition switch OFF	Below 1 V
H7-3 (B) - Body ground	L - Body ground*1 Y - Body ground*2	Ignition power supply	Ignition switch ON	11 to 14 V
H7-2 (SD) - Body ground	BR - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch DOWN (Remote)	11 to 14 V



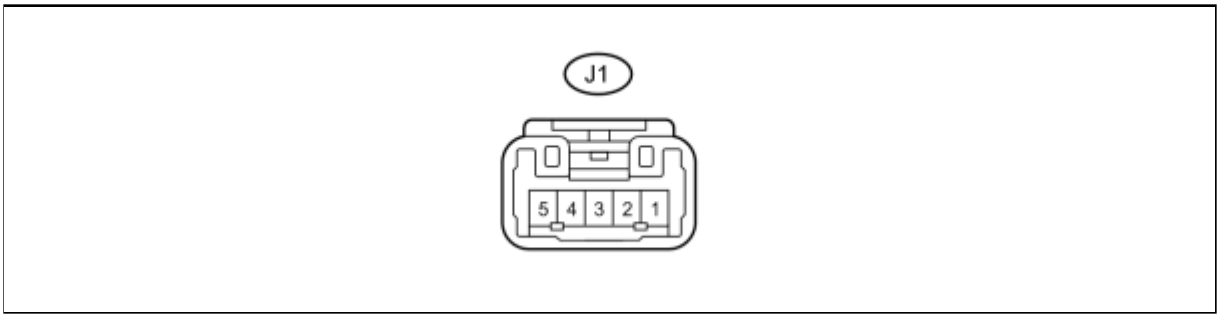
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
H7-4 (U) - Body ground	Y - Body ground*1 L - Body ground*2	Power window motor UP output	Ignition switch ON, power window switch OFF	Below 1 V
H7-4 (U) - Body ground	Y - Body ground*1 L - Body ground*2	Power window motor UP output	Ignition switch ON, power window switch UP	11 to 14 V
H7-5 (SU) - Body ground	G - Body ground	Power window motor UP input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
H7-5 (SU) - Body ground	G - Body ground	Power window motor UP input (Remote)	Ignition switch ON, power window master switch UP (Remote)	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, the switch or wire harness may have a malfunction.

3. CHECK POWER WINDOW SWITCH (REAR LH SIDE)

(a) Measure the voltage according to the value(s) in the table below.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
K1-1 (D) - Body ground	Y - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch OFF	Below 1 V
K1-1 (D) - Body ground	Y - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch DOWN	11 to 14 V
K1-2 (SD) - Body ground	L - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
K1-2 (SD) - Body ground	L - Body ground	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch DOWN (Remote)	11 to 14 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
K1-3 (B) - Body ground	P - Body ground	Ignition power supply	Ignition switch off	Below 1 V
K1-3 (B) - Body ground	P - Body ground	Ignition power supply	Ignition switch ON	11 to 14 V
K1-4 (U) - Body ground	G - Body ground	Power window motor UP output	Ignition switch ON, power window switch OFF	Below 1 V
K1-4 (U) - Body ground	G - Body ground	Power window motor UP output	Ignition switch ON, power window switch UP	11 to 14 V
K1-5 (SU) - Body ground	R - Body ground	Power window motor UP input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
K1-5 (SU) - Body ground	R - Body ground	Power window motor UP input (Remote)	Ignition switch ON, power window master switch UP (Remote)	11 to 14 V

If the result is not as specified, the switch or wire harness may have a malfunction.

4. CHECK POWER WINDOW SWITCH (REAR RH SIDE)

(a) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
J1-1 (D) - Body ground	G - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch OFF	Below 1 V
J1-1 (D) - Body ground	G - Body ground	Power window motor DOWN output	Ignition switch ON, power window switch DOWN	11 to 14 V
J1-2 (SD) - Body ground	BR - Body ground*1 Y - Body ground*2	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
J1-2 (SD) - Body ground	BR - Body ground*1 Y - Body	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch DOWN (Remote)	11 to 14 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	SWITCH CONDITION	SPECIFIED CONDITION
	ground*2			
J1-3 (B) - Body ground	L - Body ground*1 BE - Body ground*2	Ignition power supply	Ignition switch off	Below 1 V
J1-3 (B) - Body ground	L - Body ground*1 BE - Body ground*2	Ignition power supply	Ignition switch ON	11 to 14 V
J1-4 (U) - Body ground	R - Body ground	Power window motor UP output	Ignition switch ON, power window switch OFF	Below 1 V
J1-4 (U) - Body ground	R - Body ground	Power window motor UP output	Ignition switch ON, power window switch UP	11 to 14 V
J1-5 (SU) - Body ground	G - Body ground*1 B - Body ground*2	Power window motor UP input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V
J1-5 (SU) - Body ground	G - Body ground*1 B - Body ground*2	Power window motor UP input (Remote)	Ignition switch ON, power window master switch UP (Remote)	11 to 14 V
J1-2 (SD) - Body ground	BR - Body ground*1 Y - Body ground*2	Power window motor DOWN input (Remote)	Ignition switch ON, power window master switch OFF	Below 1 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, the switch or wire harness may have a malfunction.

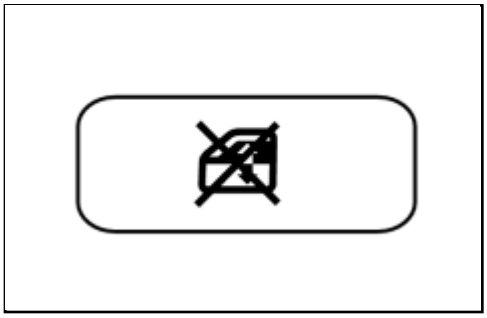
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Remote Up / Down Function does not Operate (2010 Corolla)		

Remote Up / Down Function does not Operate

DESCRIPTION

With the ignition switch ON, the power window master switch transmits remote switch signals to the switches of the front passenger door power window and rear door power windows. Then, each regulator switch drives its respective power window regulator motor.



WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER WINDOW MASTER SWITCH**

(a) Turn the window lock switch OFF and operate the switches on the master switch. Check that the remote UP and DOWN function operates normally.

OK:

Remote UP and DOWN function operates normally.

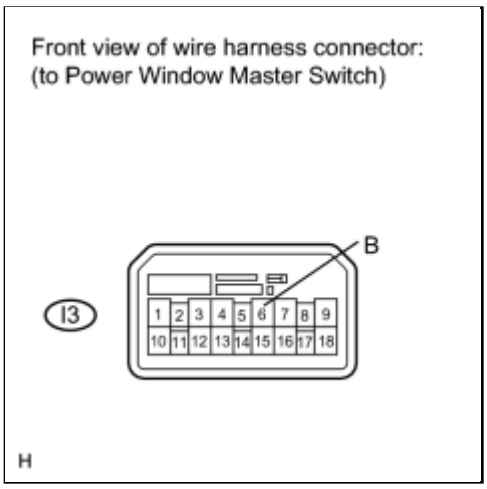
NG ▶ **CHECK MANUAL UP / DOWN FUNCTION**

OK ▶ **END**

2.	**CHECK MANUAL UP / DOWN FUNCTION**

(a) Check that the passenger door power window and rear door power window manual UP and DOWN function operates normally.

OK:



Manual UP and DOWN function operates normally.

NG ▶ **CHECK HARNESS AND CONNECTOR (POWER WINDOW MASTER SWITCH - BATTERY)**

OK ▶ **REPLACE POWER WINDOW MASTER SWITCH**

3.	**CHECK HARNESS AND CONNECTOR (POWER WINDOW MASTER SWITCH - BATTERY)**

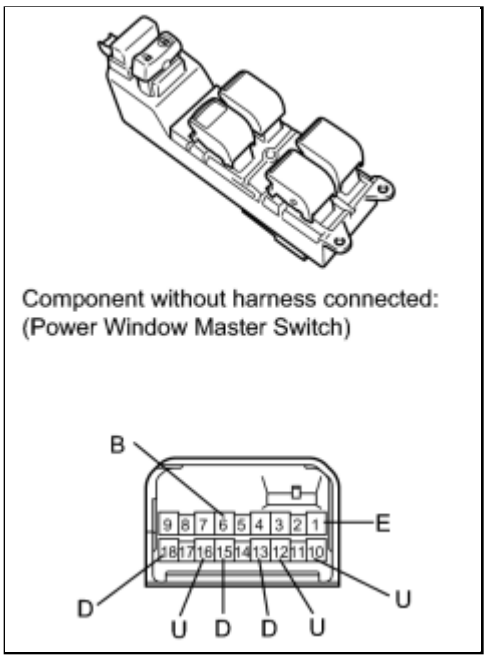
(a) Disconnect the power window master switch connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
I3-6 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

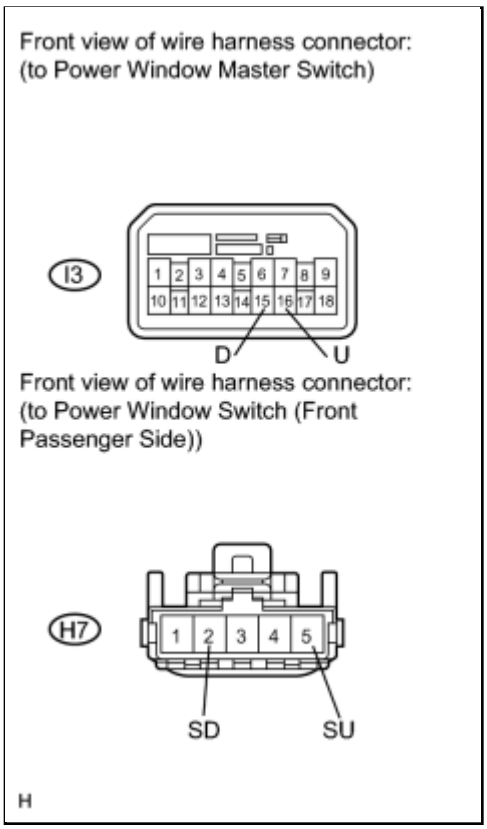
4.	**INSPECT POWER WINDOW MASTER SWITCH**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
6 (B) - 16 (U) 15 (D) - 1 (E)	UP (Passenger side)	Below 1 Ω
6 (B) - 15 (D) 16 (U) - 1 (E)	DOWN (Passenger side)	Below 1 Ω
6 (B) - 12 (U) 13 (D) - 1 (E)	UP (Rear LH)	Below 1 Ω

6 (B) - 13 (D) 12 (U) - 1 (E)	DOWN (Rear LH)	Below 1 Ω
6 (B) - 10 (U) 18 (D) - 1 (E)	UP (Rear RH)	Below 1 Ω
6 (B) - 18 (D) 10 (U) - 1 (E)	DOWN (Rear RH)	Below 1 Ω



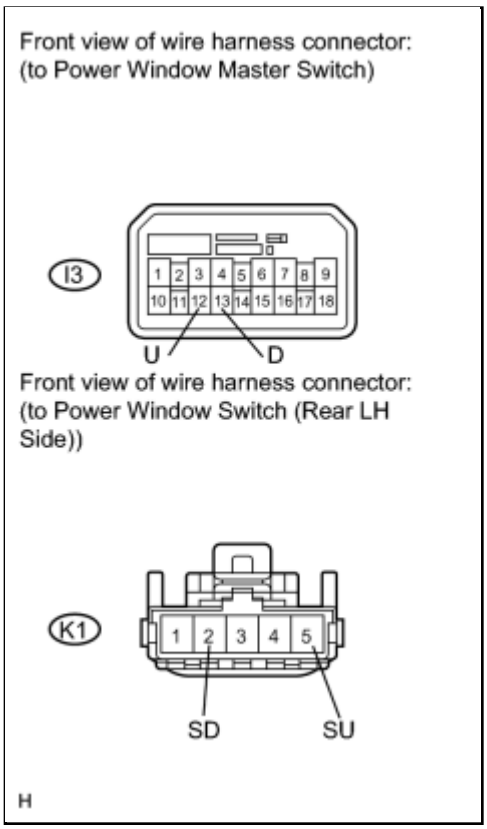
NG ▶ **REPLACE POWER WINDOW MASTER SWITCH**

OK
▼

5.	**CHECK HARNESS AND CONNECTOR (MASTER SWITCH - FRONT PASSENGER, REAR LH/RH SWITCH)**

(a) Front passenger side:

(1) Disconnect the power window switch (passenger side) connector.



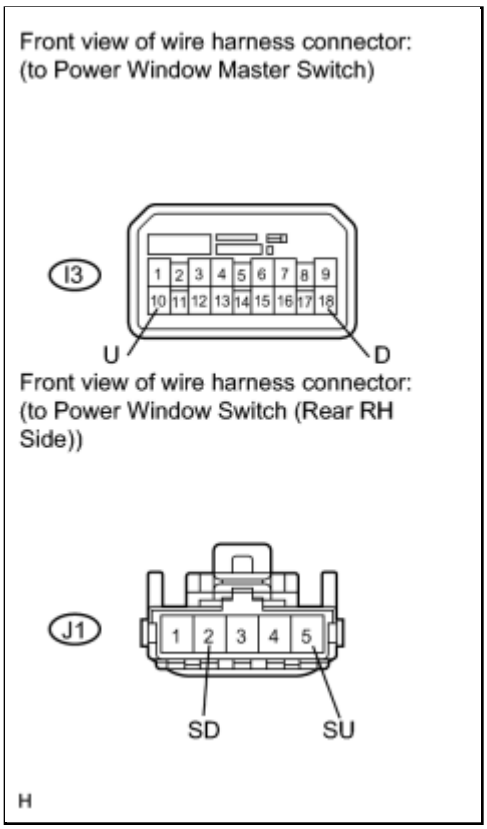
(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-16 (U) - H7-5 (SU)	Always	Below 1 Ω
I3-15 (D) - H7-2 (SD)	Always	Below 1 Ω
I3-16 (U) - Body ground	Always	10 kΩ or higher
I3-15 (D) - Body ground	Always	10 kΩ or higher

(b) Rear LH side:

(1) Disconnect the power window switch (rear LH side) connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-12 (U) - K1-5 (SU)	Always	Below 1 Ω
I3-13 (D) - K1-2 (SD)	Always	Below 1 Ω
I3-12 (U) - Body ground	Always	10 kΩ or higher
I3-13 (D) - Body ground	Always	10 kΩ or higher

(c) Rear RH side:

(1) Disconnect the power window switch (rear RH side) connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-10 (U) - J1-5 (SU)	Always	Below 1 Ω
I3-18 (D) - J1-2 (SD)	Always	Below 1 Ω
I3-10 (U) - Body ground	Always	10 kΩ or higher
I3-18 (D) - Body ground	Always	10 kΩ or higher

Result:

RESULT	PROCEED TO
NG	A
OK (Front passenger side)	B
OK (Rear LH side)	C
OK (Rear RH side)	D

D ▶ **REPLACE POWER WINDOW SWITCH (REAR RH SIDE)**

C ▶ **REPLACE POWER WINDOW SWITCH (REAR LH SIDE)**

B ▶ REPLACE POWER WINDOW SWITCH (FRONT PASSENGER SIDE)

A ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menu: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D Door Courtesy SW	Driver side door courtesy switch signal/ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menu: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
IG OFF P/W Control Permission Output	Power window	ON or OFF (After ignition switch is turned off)	-

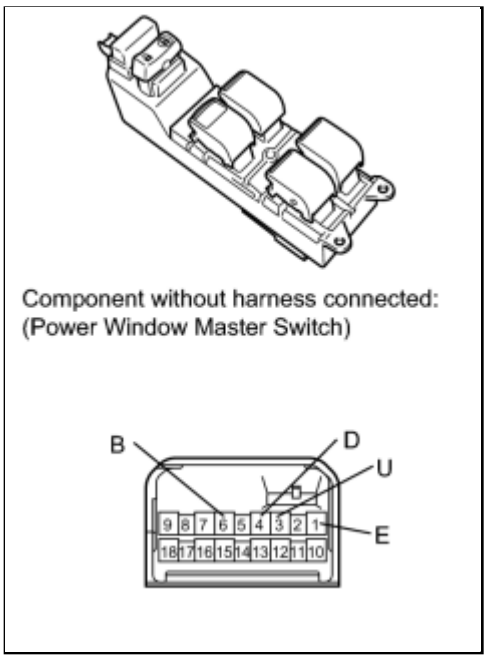
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Driver Side Power Window does not Operate with Power Window Master Switch (2010 Corolla)		

Driver Side Power Window does not Operate with Power Window Master Switch

DESCRIPTION

If the manual UP or DOWN and AUTO DOWN functions do not operate, a malfunction may exist in the power window master switch, power window regulator motor or wire harness.

WIRING DIAGRAM



INSPECTION PROCEDURE

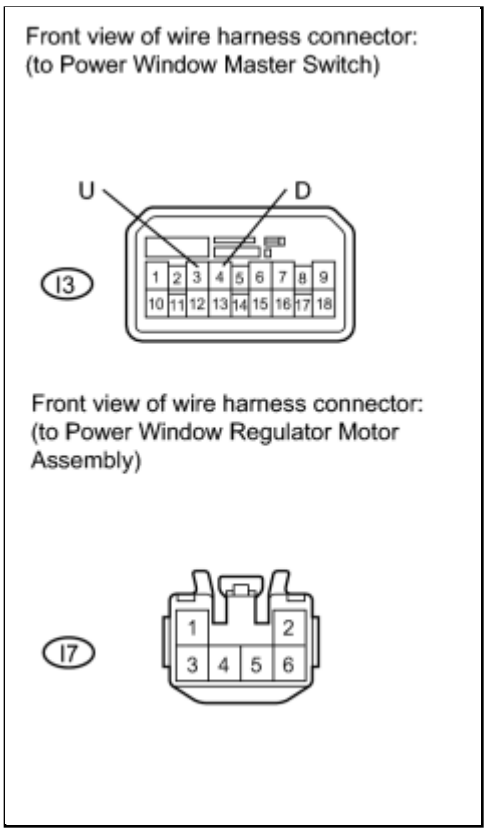
PROCEDURE

1.	**INSPECT POWER WINDOW MASTER SWITCH (DRIVER SWITCH)**

(a) Remove the power window master switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (E) - 4 (D) 3 (U) - 6 (B)	UP	Below 1 Ω
1 (E) - 3 (U) 1 (E) - 4 (D)	OFF	Below 1 Ω
1 (E) - 3 (U) 6 (B) - 4 (D)	DOWN	Below 1 Ω
1 (E) - 3 (U) 6 (B) - 4 (D)	AUTO DOWN	Below 1 Ω

NG ▶ **REPLACE POWER WINDOW MASTER SWITCH**

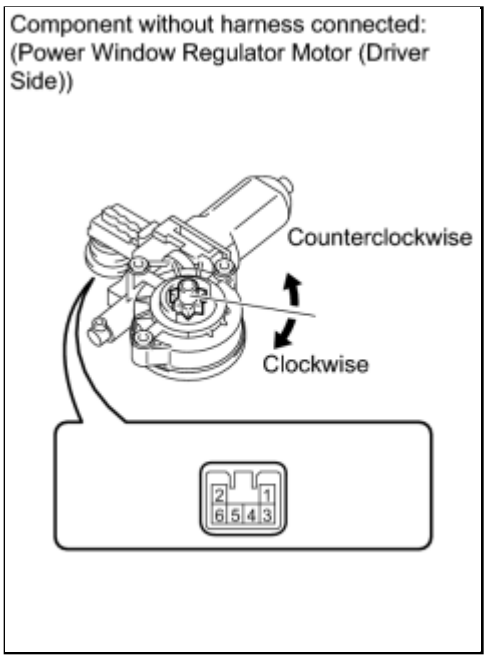
OK ▼

2.	**CHECK HARNESS AND CONNECTOR (MASTER SWITCH - MOTOR (DRIVER SIDE))**

(a) Disconnect the power window regulator motor assembly (driver side) motor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-4 (D) - I7-1	Always	Below 1 Ω
I3-3 (U) - I7-2	Always	Below 1 Ω
I3-4 (D) - Body ground	Always	10 kΩ or higher
I3-3 (U) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (DRIVER SIDE)**

(a) Remove the power window regulator motor assembly INFO .

(b) Check power window regulator motor operation:

(1) Apply battery voltage to connector terminals 1 and 2.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

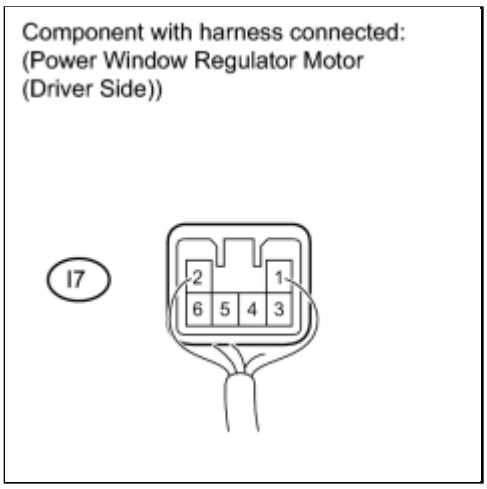
(2) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates counterclockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates clockwise

(c) Check PTC operation:

NOTICE:



This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Install the power window regulator motor INFO .

(2) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(3) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(4) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

Standard:

4 to 90 seconds

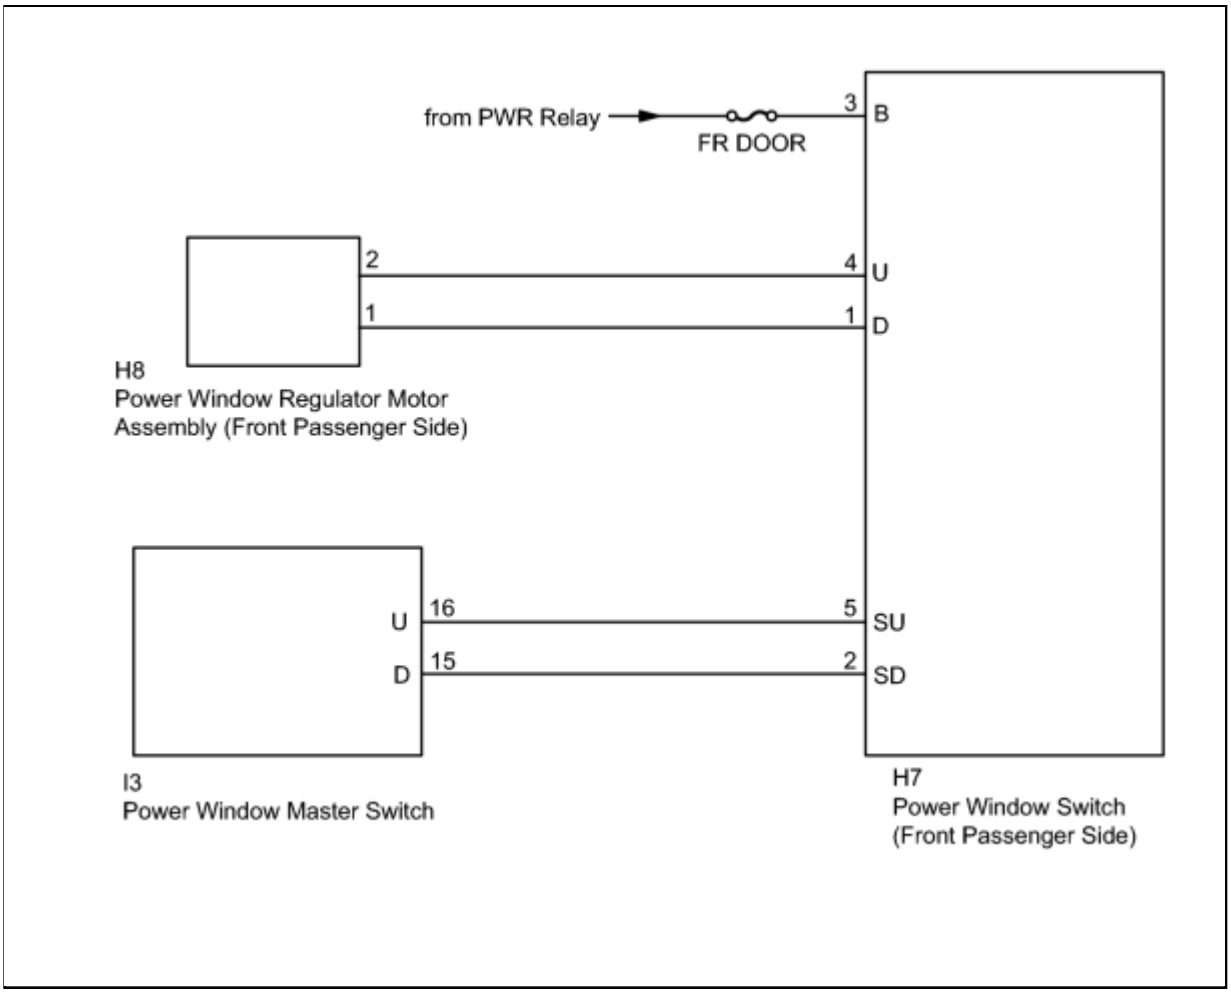
(5) Wait for 60 seconds after the previous step, and then push down press the power window switch (driver side).

OK:

The driver side window goes down.

NG ▶ **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (DRIVER SIDE)**

OK ▶ **REPLACE POWER WINDOW MASTER SWITCH**

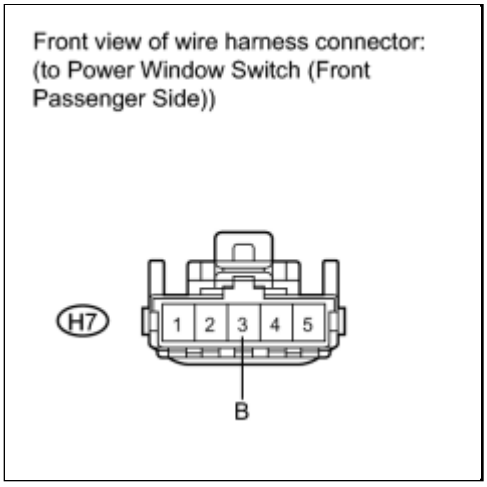


Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010ZL01RX
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Front Passenger Side Power Window does not Operate with Front Passenger Side Power Window Switch (2010 Corolla)		

Front Passenger Side Power Window does not Operate with Front Passenger Side Power Window Switch

DESCRIPTION

If the passenger side manual UP or DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window switch, power window master switch or wire harness.



WIRING DIAGRAM

INSPECTION PROCEDURE

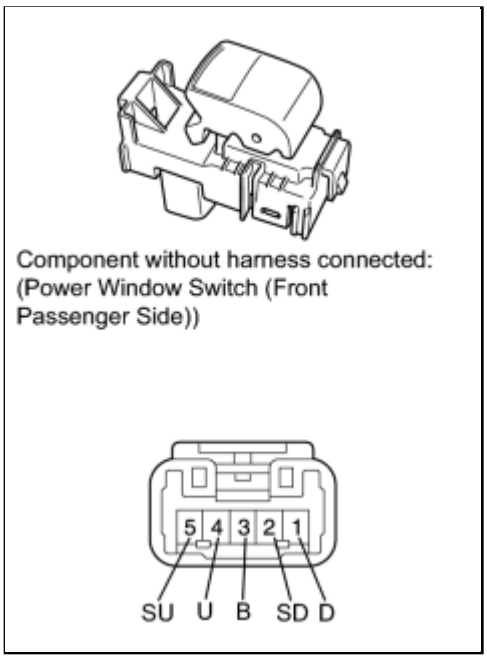
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (POWER SOURCE)**

(a) Disconnect the power window switch (front passenger side) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
H7-3 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

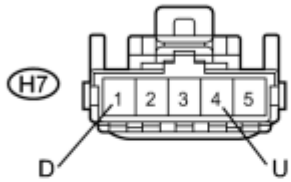
2.	**INSPECT POWER WINDOW SWITCH (FRONT PASSENGER SIDE)**

(a) Remove the power window switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

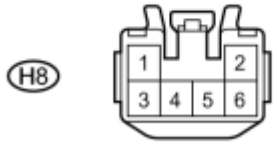
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3 (B) - 4 (U) 2 (SD) - 1 (D)	UP	Below 1 Ω
5 (SU) - 4 (U) 2 (SD) - 1 (D)	OFF	Below 1 Ω
5 (SU) - 4 (U) 3 (B) - 1 (D)	DOWN	Below 1 Ω



NG ▶ **REPLACE POWER WINDOW SWITCH (FRONT PASSENGER SIDE)**

OK ▼



3.	**CHECK HARNESS AND CONNECTOR (SWITCH (PASSENGER SIDE) - MOTOR (PASSENGER SIDE))**

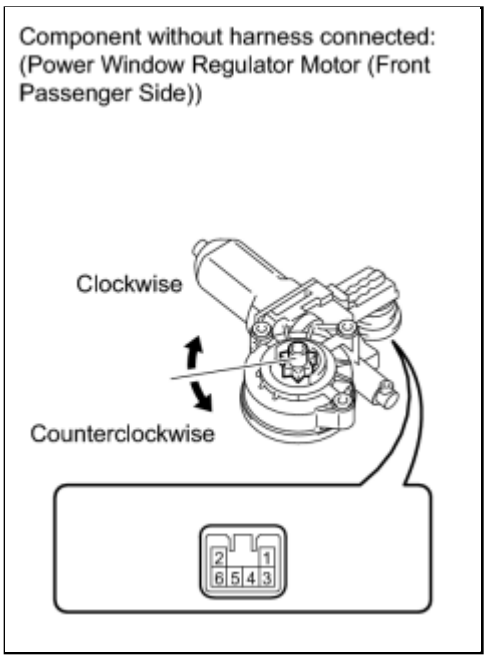
(a) Disconnect the power window regulator motor assembly (front passenger side) connector.

Front view of wire harness connector:
(to Power Window Switch (Front Passenger Side))

Front view of wire harness connector:
(to Power Window Regulator Motor Assembly (Front Passenger Side))

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H7-1 (D) - H8-1	Always	Below 1 Ω
H7-4 (U) - H8-2	Always	Below 1 Ω
H7-1 (D) - Body ground	Always	10 kΩ or higher
H7-4 (U) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (FRONT PASSENGER SIDE)**

(a) Remove the power window regulator motor assembly INFO .

(b) Check power window regulator motor operation:

(1) Apply battery voltage to connector terminals 1 and 2.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

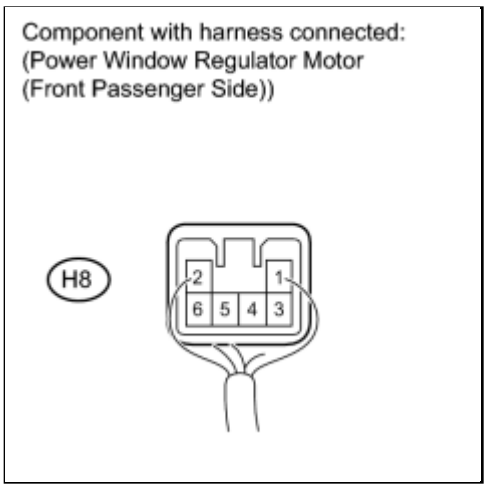
(2) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates clockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates counterclockwise

(c) Check PTC operation:

NOTICE:



This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Install the power window regulator motor INFO .

(2) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(3) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(4) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

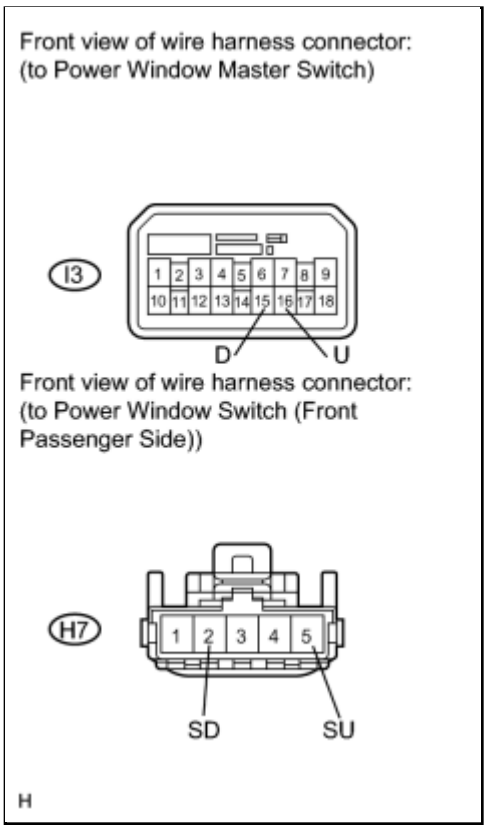
Standard:

4 to 90 seconds

(5) Wait for 60 seconds after the previous step, and then push down the power window switch (passenger side).

OK:

The passenger side window goes down.



NG ▶ **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (FRONT PASSENGER SIDE)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (FRONT PASSENGER SIDE))**

(a) Disconnect the power window master switch connector.

(b) Disconnect the power window switch (front passenger side) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-16 (U) - H7-5 (SU)	Always	Below 1 Ω
I3-15 (D) - H7-2 (SD)	Always	Below 1 Ω
I3-16 (U) - Body ground	Always	10 kΩ or higher
I3-15 (D) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE POWER WINDOW MASTER SWITCH**

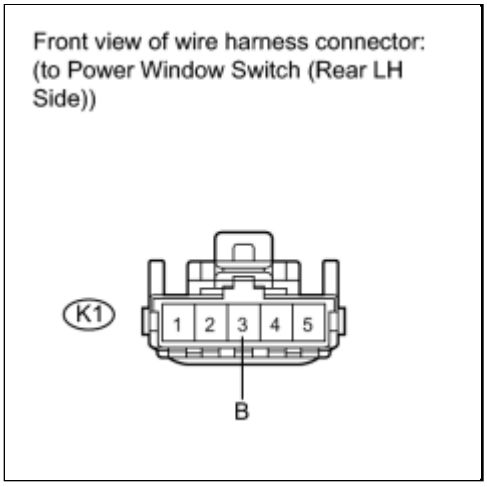
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Rear Power Window LH does not Operate with Rear Power Window Switch LH (2010 Corolla)		

Rear Power Window LH does not Operate with Rear Power Window Switch LH

DESCRIPTION

If the rear LH side manual UP or DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window switch, power window master switch or wire harness.



WIRING DIAGRAM

INSPECTION PROCEDURE

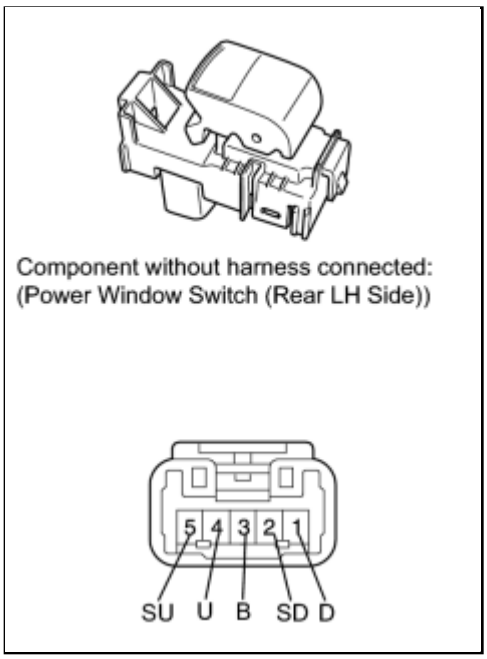
PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (POWER SOURCE)

(a) Disconnect the power window switch (rear LH side) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
K1-3 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

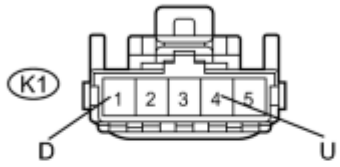
2.	INSPECT POWER WINDOW SWITCH (REAR LH SIDE)

(a) Remove the power window switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

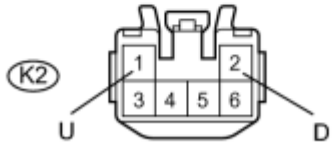
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (D) - 2 (SD) 3 (B) - 4 (U)	UP	Below 1 Ω
4 (U) - 5 (SU) 1 (D) - 2 (SD)	OFF	Below 1 Ω
2 (SD) - 3 (B) 4 (U) - 5 (SU)	DOWN	Below 1 Ω



NG ▶ **REPLACE POWER WINDOW SWITCH (REAR LH SIDE)**

OK ▼



3.	**CHECK HARNESS AND CONNECTOR (SWITCH (REAR LH SIDE) - MOTOR (REAR LH SIDE))**

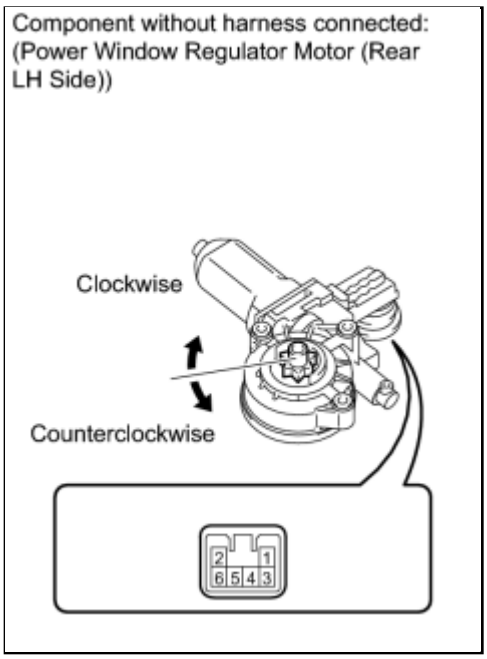
(a) Disconnect the power window regulator motor assembly (rear LH side) connector.

Front view of wire harness connector:
(to Power Window Switch (Rear LH Side))

Front view of wire harness connector:
(to Power Window Regulator Motor Assembly (Rear LH Side))

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
K1-4 (U) - K2-1 (U)	Always	Below 1 Ω
K1-1 (D) - K2-2 (D)	Always	Below 1 Ω
K1-4 (U) - Body ground	Always	10 kΩ or higher
K1-1 (D) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR LH SIDE)**

(a) Remove the power window regulator motor assembly INFO .

(b) Check power window regulator motor operation:

(1) Apply battery voltage to connector terminals 1 and 2.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

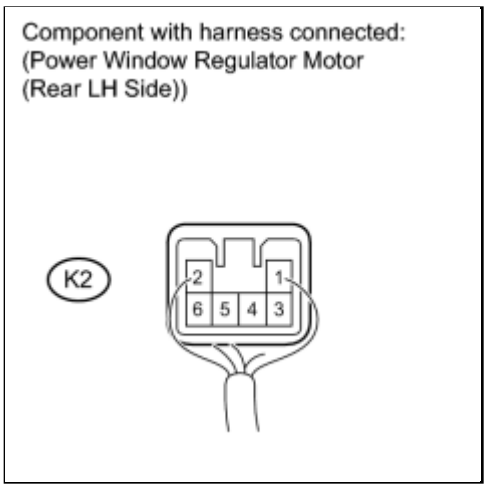
(2) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates clockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates counterclockwise

(c) Check PTC operation:

NOTICE:



This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Install the power window regulator motor INFO .

(2) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

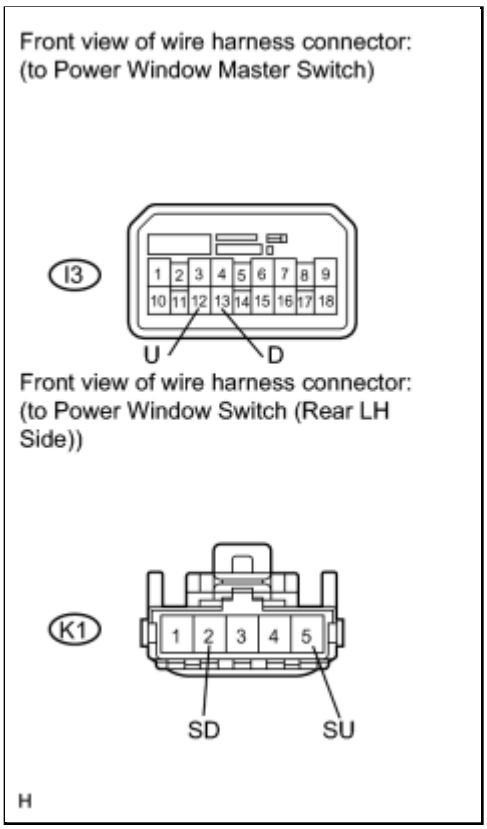
(3) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(4) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

Standard:
4 to 90 seconds

(5) Wait for 60 seconds after the previous step, and then push down the power window switch (rear LH side).

OK:
The rear LH side window goes down.



NG ▶ **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR LH)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (REAR LH SIDE))**

(a) Disconnect the power window master switch connector.

(b) Disconnect the power window switch (rear LH side) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-12 (U) - K1-5 (SU)	Always	Below 1 Ω
I3-13 (D) - K1-2 (SD)	Always	Below 1 Ω
I3-12 (U) - Body ground	Always	10 kΩ or higher
I3-13 (D) - Body ground	Always	10 kΩ or higher

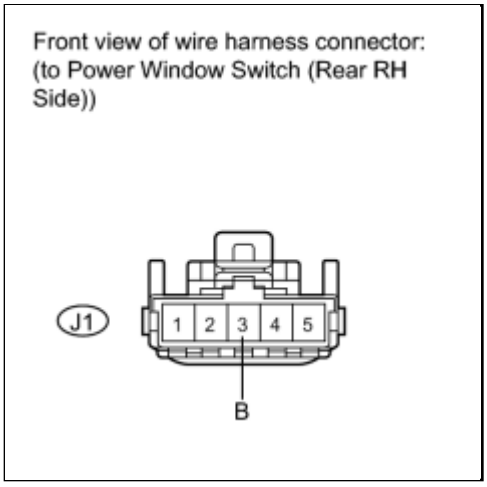
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Rear Power Window RH does not Operate with Rear Power Window Switch RH (2010 Corolla)		

Rear Power Window RH does not Operate with Rear Power Window Switch RH

DESCRIPTION

If the rear RH side manual UP or DOWN function does not operate, a malfunction may exist in the power window regulator motor, power window switch, power window master switch or wire harness.



WIRING DIAGRAM

INSPECTION PROCEDURE

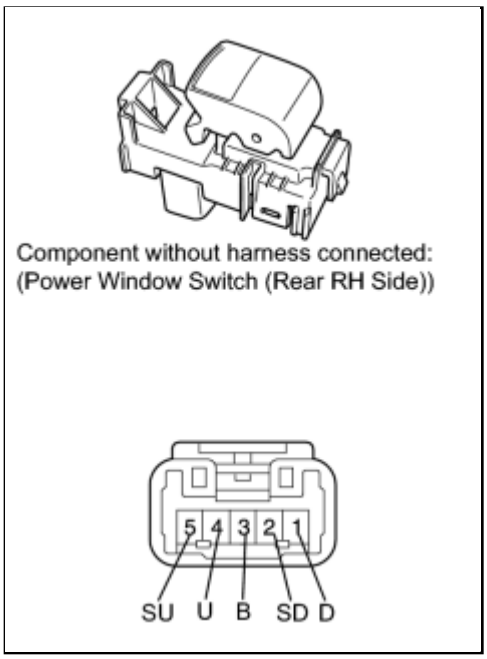
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (POWER SOURCE)**

(a) Disconnect the power window switch (rear RH side) connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
J1-3 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

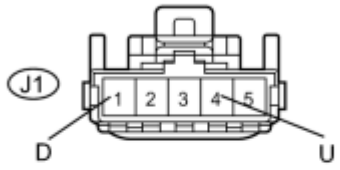
2.	**INSPECT POWER WINDOW SWITCH (REAR RH SIDE)**

(a) Remove the power window switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

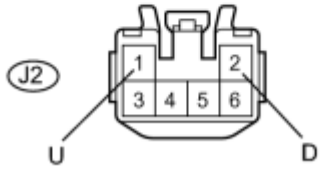
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (D) - 2 (SD) 3 (B) - 4 (U)	UP	Below 1 Ω
1 (D) - 2 (SD) 4 (U) - 5 (SU)	OFF	Below 1 Ω
2 (SD) - 3 (B) 4 (U) - 5 (SU)	DOWN	Below 1 Ω



NG ▶ **REPLACE POWER WINDOW SWITCH (REAR RH SIDE)**

OK ▼



3.	**CHECK HARNESS AND CONNECTOR (SWITCH (REAR RH SIDE) - MOTOR (REAR RH SIDE))**

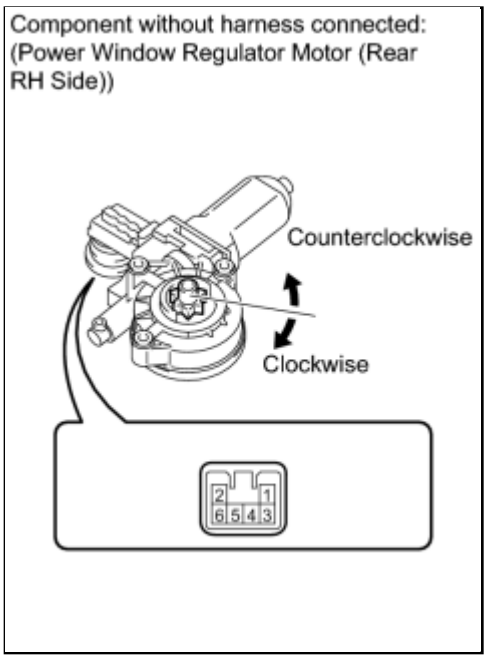
(a) Disconnect the power window regulator motor assembly (rear RH side) connector.

Front view of wire harness connector:
(to Power Window Switch (Rear RH Side))

Front view of wire harness connector:
(to Power Window Regulator Motor Assembly (Rear RH Side))

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
J1-4 (U) - J2-1 (U)	Always	Below 1 Ω
J1-1 (D) - J2-2 (D)	Always	Below 1 Ω
J1-4 (U) - Body ground	Always	10 kΩ or higher
J1-1 (D) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR RH SIDE)**

(a) Remove the power window regulator motor assembly INFO .

(b) Check power window regulator motor operation:

(1) Apply battery voltage to connector terminals 1 and 2.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

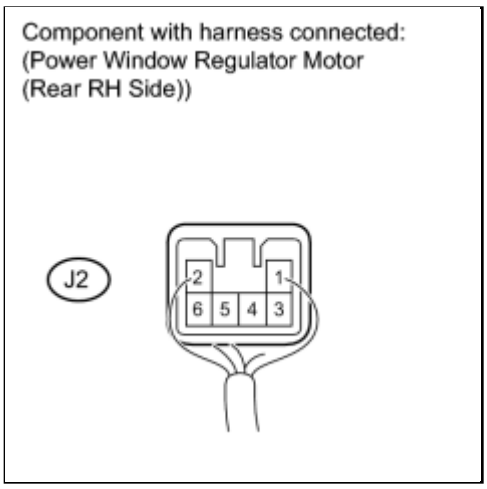
(2) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 1 Battery negative (-) → 2	Motor gear rotates counterclockwise
Battery positive (+) → 2 Battery negative (-) → 1	Motor gear rotates clockwise

(c) Check PTC operation:

NOTICE:



This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Install the power window regulator motor INFO .

(2) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

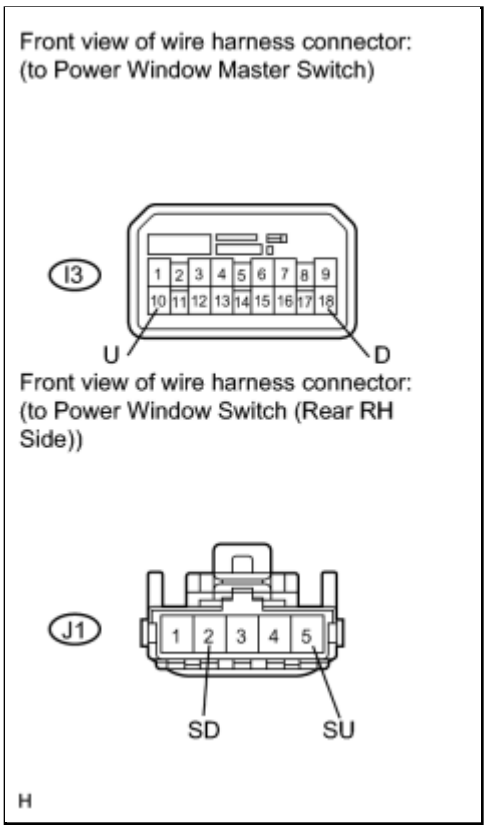
(3) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(4) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

Standard:
4 to 90 seconds

(5) Wait for 60 seconds after the previous step, and then push down the power window switch (rear RH side).

OK:
The rear RH side window goes down.



NG ▶ **REPLACE POWER WINDOW REGULATOR MOTOR ASSEMBLY (REAR RH)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (MASTER SWITCH - SWITCH (REAR RH SIDE))**

(a) Disconnect the power window master switch connector.

(b) Disconnect the power window switch (rear RH side) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-10 (U) - J1-5 (SU)	Always	Below 1 Ω
I3-18 (D) - J1-2 (SD)	Always	Below 1 Ω
I3-10 (U) - Body ground	Always	10 kΩ or higher
I3-18 (D) - Body ground	Always	10 kΩ or higher

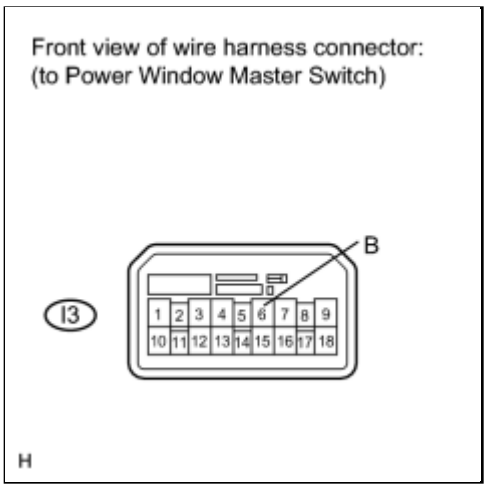
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Power Windows do not Operate at All (2010 Corolla)		

Power Windows do not Operate at All

DESCRIPTION

If none of the power windows operate, a malfunction may exist in the power window master switch, main body ECU (instrument panel junction block) or wire harness.

WIRING DIAGRAM



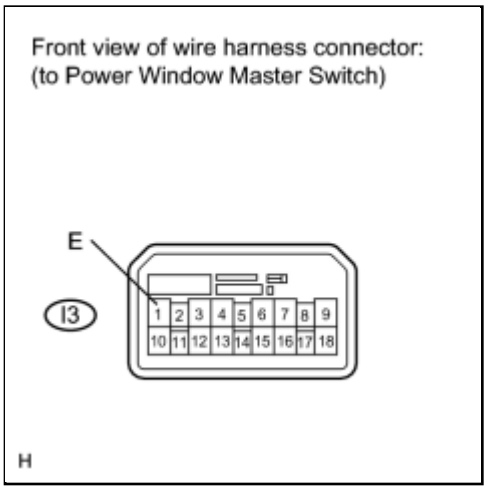
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (POWER WINDOW POWER SOURCE)**

(a) Disconnect the power window master switch connector.

(b) Measure the voltage according to the value(s) table below.



Standard Voltage:

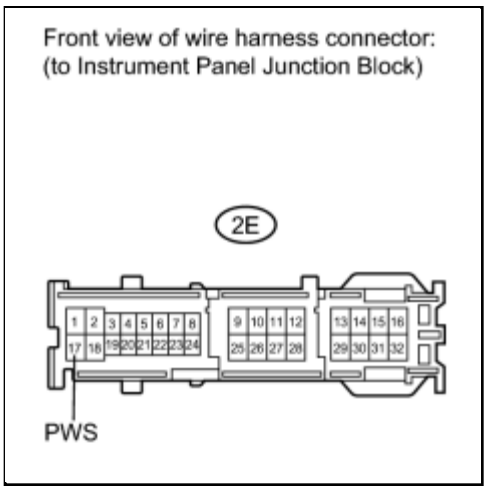
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
I3-6 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BODY GROUND)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (POWER WINDOW MASTER SWITCH - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-1 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE POWER WINDOW MASTER SWITCH**

3.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BODY GROUND)**

(a) Disconnect the instrument panel junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-17 (PWS) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000014PG01QX
Title: WINDOW / GLASS: POWER WINDOW CONTROL SYSTEM: Key-off Operation Function Operates even if Operating Conditions are not Satisfied (2010 Corolla)		

Key-off Operation Function Operates even if Operating Conditions are not Satisfied

DESCRIPTION

When the driver door has not been opened and closed, each door power window regulator motor can control its power window operation for approximately 45 seconds after the ignition switch is turned from ON to off (the key is removed) by receiving operation permission signals from the main body ECU. However, when approximately 45 seconds have elapsed, or the driver door or front passenger side door is opened within approximately 45 seconds of the ignition switch being turned off (the key is removed), the power window regulator motor stops operating.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK OPERATION FUNCTION AFTER IGNITION SWITCH IS TURNED OFF**

(a) Check the power window operation function after the ignition switch is turned off.

Result

STATUS	PROCEED TO
When power window can still be operated even after approximately 45 seconds have elapsed after ignition switch is turned off	A
When power window can still be operated even after opening driver door or front passenger door within approximately 45 seconds of ignition switch being turned off	B

A ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

B ▼

2.	**CHECK LIGHTING SYSTEM (ILLUMINATED ENTRY SYSTEM)**

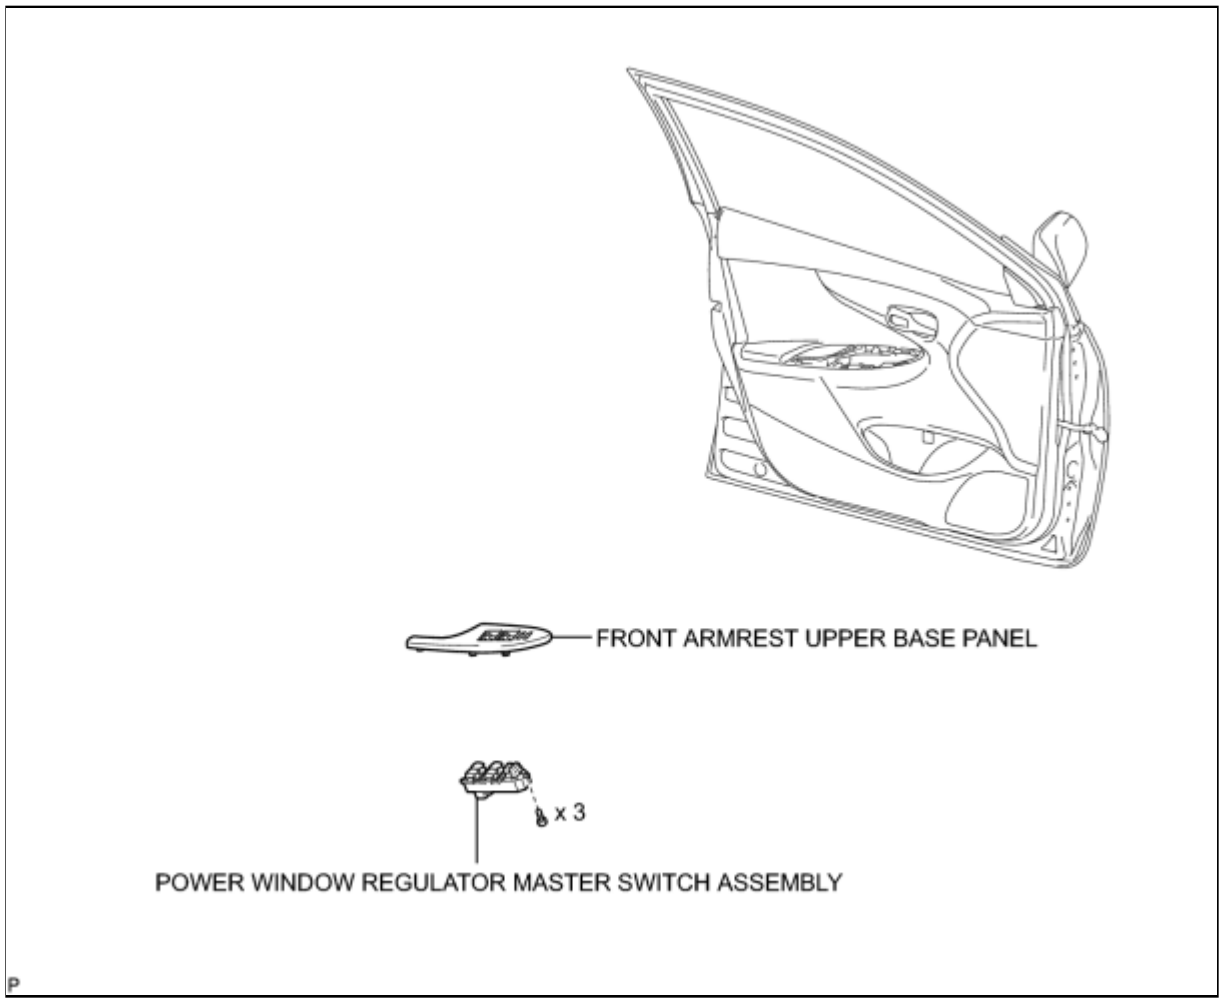
(a) Check the lighting system (illuminated entry system) operates normally.

HINT:

The illuminated entry system provides convenience when getting in or out of the vehicle at night. This system controls the interior light.

Both the key off operation function and lighting system (illuminated entry system) use same door courtesy switch signal.

OK:
Illuminated entry system function operates normally.



NG ▶ **GO TO LIGHTING SYSTEM (Door Courtesy Switch Circuit)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

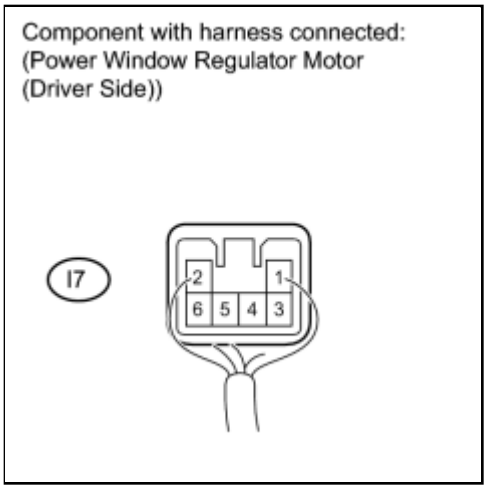
Title: WINDOW / GLASS: POWER WINDOW REGULATOR MOTOR (for Front Door): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION



1. INSPECT FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(3) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

Standard:

4 to 90 seconds

If the result is not as specified, replace the front power window regulator motor assembly LH.

(4) Wait for 60 seconds after the previous step, and then push down press the power window switch (driver side).

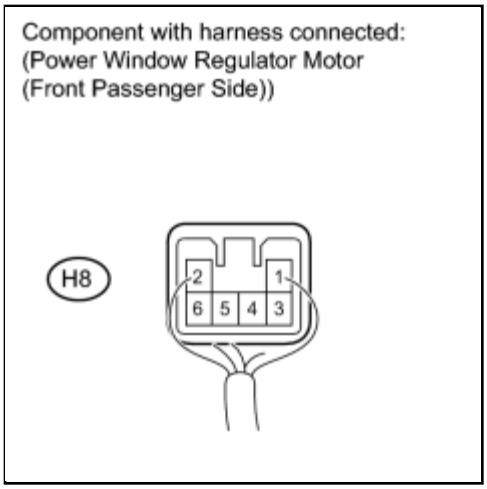
OK:

The driver side window goes down.

If the result is not as specified, replace the front power window regulator motor assembly LH.

2. INSPECT FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH

(a) Inspect the operation of the PTC inside the power window regulator motor.



NOTICE:

This check must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 2.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pulling up the power window switch. Wait for approximately 60 seconds.

(3) Continue to pull up the power window switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (current shut-off inspection).

Standard:

4 to 90 seconds

If the result is not as specified, replace the front power window regulator motor assembly RH.

(4) Wait for 60 seconds after the previous step, and then push down the power window switch (front passenger side).

OK:

The front passenger side window goes down.

If the result is not as specified, replace the front power window regulator motor assembly RH.

Title: WINDOW / GLASS: POWER WINDOW REGULATOR MOTOR (for Front Door): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY LH

(a) Apply battery voltage to connector terminals 1 and 2.

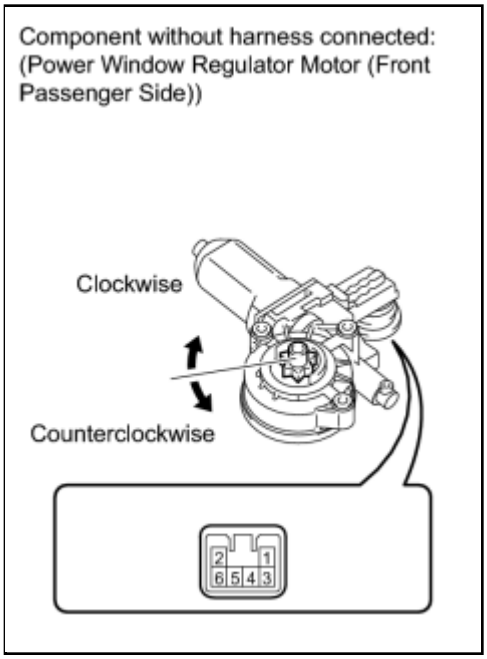
NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

(b) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise



If the result is not specified, replace the front power window regulator motor assembly LH.

2. INSPECT FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY RH

(a) Apply battery voltage to connector terminals 1 and 2.

NOTICE:

Do not apply battery voltage to any terminals except terminals 1 and 2.

(b) Check that the motor gear rotates smoothly as follows.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise

If the result is not specified, replace the front power window regulator motor assembly RH.

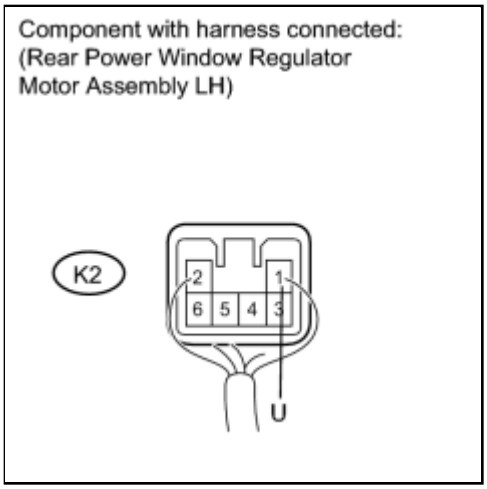
Title: WINDOW / GLASS: POWER WINDOW REGULATOR MOTOR (for Rear Door): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION



1. INSPECT REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY LH

(a) Inspect the operation of the PTC inside the power window regulator motor.

NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

If the result is not as specified, replace the rear power window regulator motor assembly LH.

(4) 60 seconds after the previous step, press the power window DOWN switch (rear LH side).

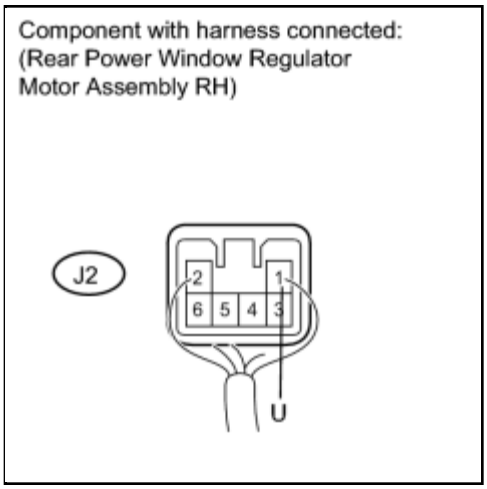
OK:

The rear LH side window goes down.

If the result is not as specified, replace the rear power window regulator motor assembly LH.

2. INSPECT REAR POWER WINDOW REGULATOR MOTOR ASSEMBLY RH

(a) Inspect the operation of the PTC inside the power window regulator motor.



NOTICE:

The work must be performed with the power window regulator and door glass installed on the vehicle.

(1) Connect an electrical tester DC 400 A probe to the wire harness of terminal 1.

NOTICE:

Match the arrow mark of the probe with the direction of the current flow.

(2) Fully close the door glass by pressing the power window UP switch. Wait for approximately 60 seconds.

(3) Continue to press the power window UP switch and measure how long it takes for the electrical current to change from a range of 16 to 28 A to approximately 1 A (Inspection of current shut-off).

Standard:

4 to 90 seconds

If the result is not as specified, replace the rear power window regulator motor assembly RH.

(4) 60 seconds after the previous step, press the power window DOWN switch (rear RH side).

OK:

The rear RH side window goes down.

If the result is not as specified, replace the rear power window regulator motor assembly RH.

Title: WINDOW / GLASS: REAR POWER WINDOW SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT REAR POWER WINDOW SWITCH ASSEMBLY

(a) for Rear LH Side:

(1) Measure the resistance when the switch is operated according to the value(s) in the table below.

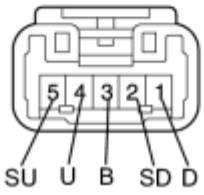
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (D) - 2 (SD) 3 (B) - 4 (U)	UP	Below 1 Ω
1 (D) - 2 (SD) 4 (U) - 5 (SU)	OFF	Below 1 Ω
2 (SD) - 3 (B) 4 (U) - 5 (SU)	DOWN	Below 1 Ω

If the result is not specified, replace the rear power window switch assembly.

(b) for Rear RH Side:

(1) Measure the resistance when the switch is operated according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (D) - 2 (SD) 3 (B) - 4 (U)	UP	Below 1 Ω
1 (D) - 2 (SD) 4 (U) - 5 (SU)	OFF	Below 1 Ω
2 (SD) - 3 (B) 4 (U) - 5 (SU)	DOWN	Below 1 Ω

If the result is not specified, replace the rear power

Component without harness connected:

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the defogger system.
- The Techstream should be used in step 5.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	PROBLEM SYMPTOMS TABLE

Result:

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. GENERAL

The defogger system thin heater wires are attached to the inside of the rear window and defog the window surface quickly. The indicator light illuminates while the system is operating. The system automatically turns off after approximately 15 minutes.

HINT:

The rear window defogger is linked with the mirror defogger (w/ mirror defogger).

2. FUNCTION OF MAIN COMPONENT

COMPONENT	OUTLINE
DEF Relay	Receives rear defogger activation request signals from the air conditioning amplifier assembly and supplies power to the rear window defogger.
Rear Window Defogger	Receives power from the DEF relay and heats the defogger wire.

3. DESCRIPTION

FUNCTION	OUTLINE
Defogs the rear window surface	• Receives rear defogger activation request signals from the air conditioning amplifier assembly and supplies power to the rear window defogger. • Receives power from the DEF relay and heats the defogger wire.

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Disconnect the E30 air conditioning amplifier connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

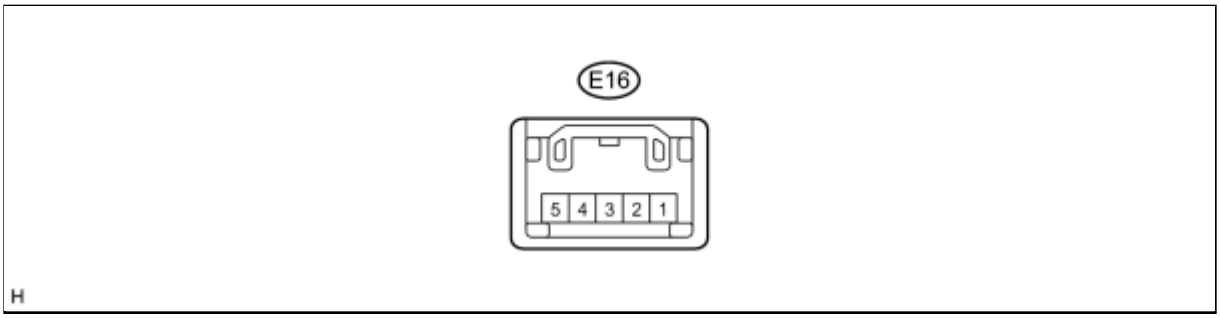
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E30-38 (RDFG) - E30-14 (GND)	B - BR*1 BE - W-B*2	Rear defogger signal	Ignition switch ON, Rear window defogger switch OFF	11 to 14 V
E30-38 (RDFG) - E30-14 (GND)	B - BR*1 BE - W-B*2	Rear defogger signal	Ignition switch ON, Rear window defogger switch ON	Below 1 V
E30-1 (IG+) - E30-14 (GND)	Y - BR*1 R - W-B*2	Power source (IG)	Ignition switch ON	11 to 14 V
E30-1 (IG+) - E30-14 (GND)	Y - BR*1 R - W-B*2	Power source (IG)	Ignition switch off	Below 1 V
E30-21 (B) - E30-14 (GND)	W - BR*1 BR - W-B*2	Power source (Back-up)	Always	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E30-14 (GND) - Body ground	BR - Body ground*1 W-B - Body ground*2	Ground	Always	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK AIR CONDITIONING CONTROL ASSEMBLY

(a) Disconnect the E16 air conditioning control connector.

(b) Measure the voltage according to the value(s) in the table below.

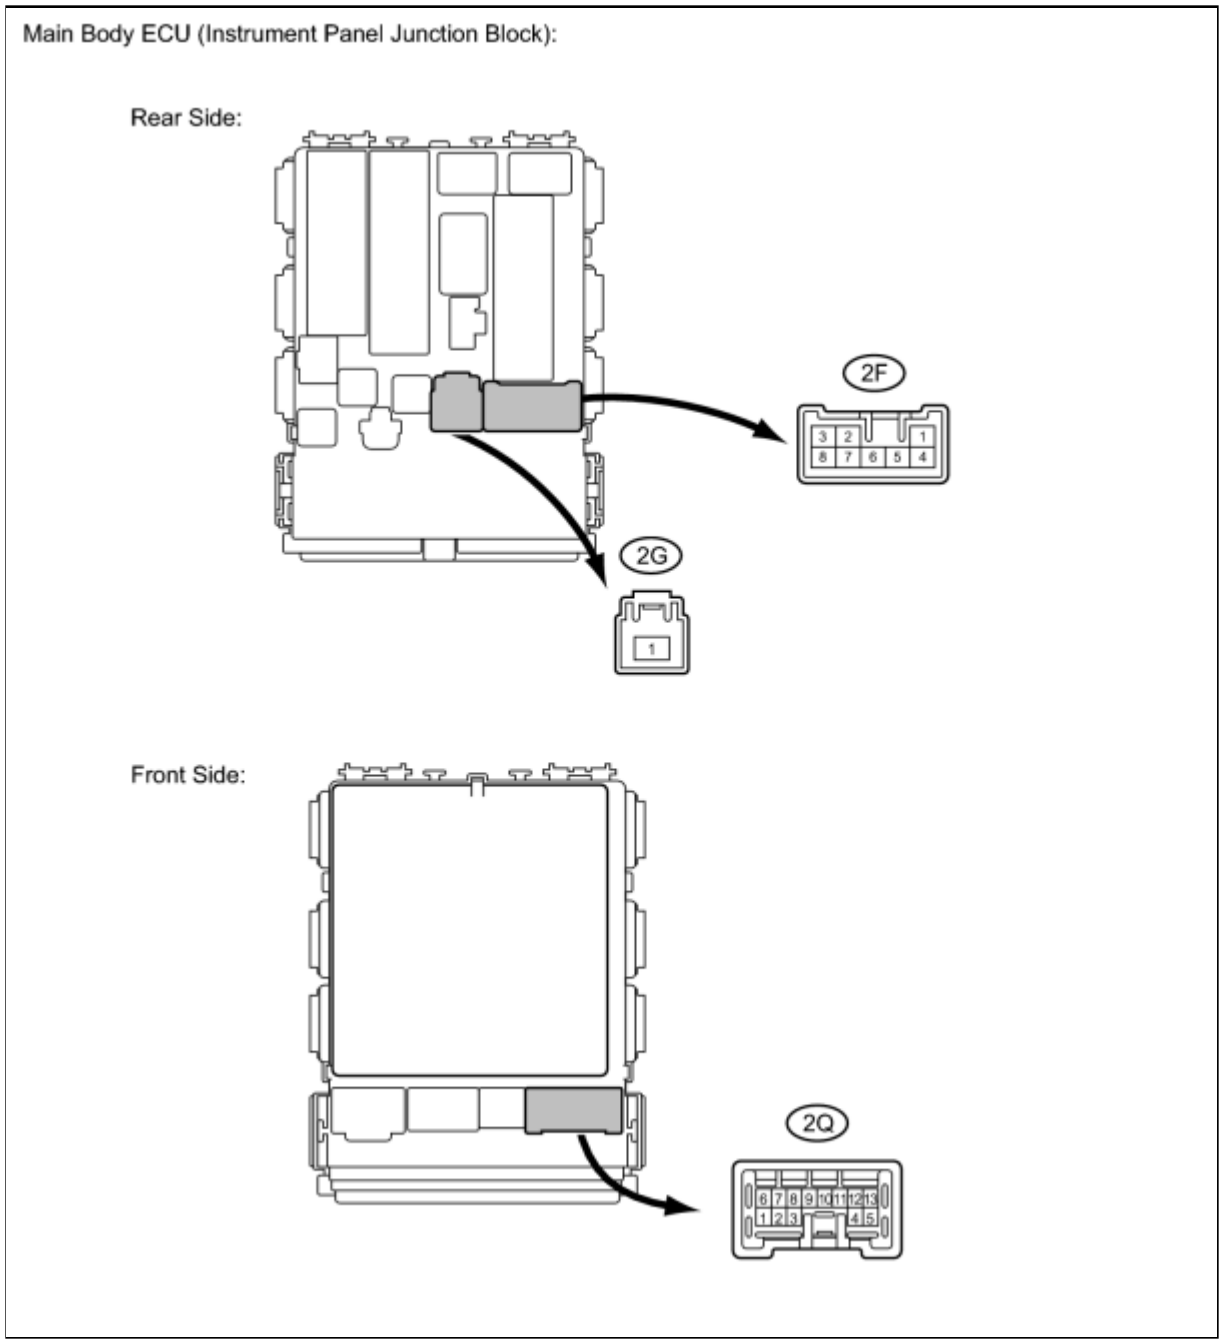
Standard Voltage:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E16-5 (IG+) - E16-2 (GND)	B - W-B*1 V - W-B*2	Power source (IG)	Ignition switch ON	11 to 14 V
E16-5 (IG+) - E16-2 (GND)	B - W-B*1 V - W-B*2	Power source (IG)	Ignition switch off	Below 1 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E16-2 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

3. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2G, 2F and 2Q instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	W - Body ground	Power source	Always	11 to 14 V
	B - Body			

- *1: for TMC Made

- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness.

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): Rear Window Defogger System does not Operate (2010 Corolla)		

Rear Window Defogger System does not Operate

DESCRIPTION

When the rear window defogger switch, which is built into the air conditioning control assembly, is operated, the operation signals are transmitted to the air conditioning amplifier assembly through LIN. When the air conditioning amplifier assembly receives the signals, it turns on the DEF relay to operate the rear window defogger.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.

(e) Select the Active Test, use the Techstream to issue a control command, and then check the window defogger operation.

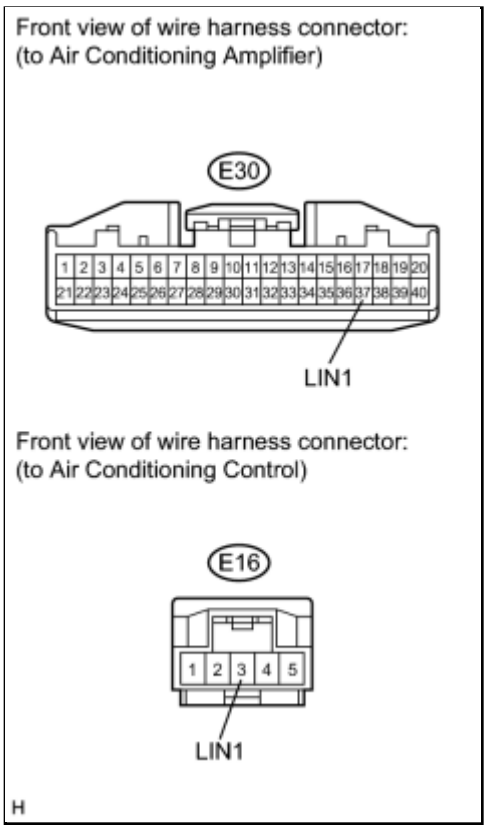
Air Conditioner

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Defogger Relay	Turns rear window defogger	OFF/ON	-

(f) Check that operation sound of the DEF relay is heard.

Result:

RESULT	PROCEED TO
The window defogger system operates normally when operating it through the Techstream.	A
The window defogger system does not operate normally when operating it through the Techstream and relay operating sound is not heard.	B
The window defogger system does not operate normally when operating it through the Techstream and relay operating sound is heard.	C



C ▶ **CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - INSTRUMENT PANEL JUNCTION BLOCK)**

B ▶ **CHECK FUSES (DEF, ECU-IG NO. 2)**

A ▼

2.	**CHECK HARNESS AND CONNECTOR (LIN COMMUNICATION LINE)**

(a) Disconnect the E30 air conditioning amplifier and E16 air conditioning control connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-37 (LIN1) - E16-3 (LIN1)	Always	Below 1 Ω
E30-37 (LIN1) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**REPLACE AIR CONDITIONING CONTROL ASSEMBLY**

(a) Replace the air conditioning control assembly INFO .

NEXT

4.	CONFIRM REAR WINDOW DEFOGGER OPERATION

(a) Turn the ignition switch to ON, press the defogger switch, and check that the window defogger operates.

OK:

Window defogger system operates normally

NG ▶ **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

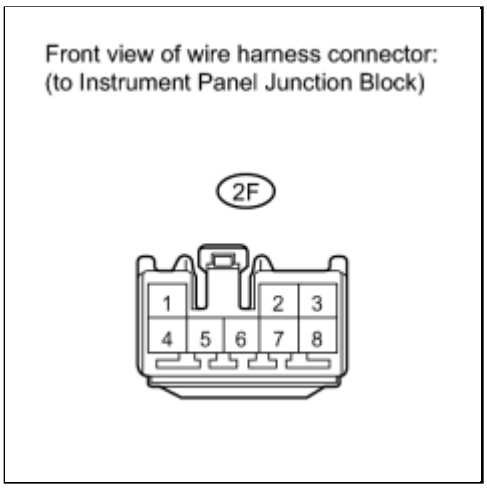
OK ▶ **END**

5.	CHECK FUSES (DEF, ECU-IG NO. 2)

(a) Remove the DEF and ECU-IG No. 2 fuses from the instrument panel junction block.

(b) Measure the resistance of the fuses.

Standard Resistance:



ITEM	CONDITION	SPECIFIED CONDITION
DEF fuse	Always	Below 1 Ω
ECU-IG No. 2 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSES**

OK ▼

6.	CHECK HARNESS AND CONNECTOR (IG1 RELAY POWER SOURCE)

(a) Disconnect the 2F instrument panel junction block connector.

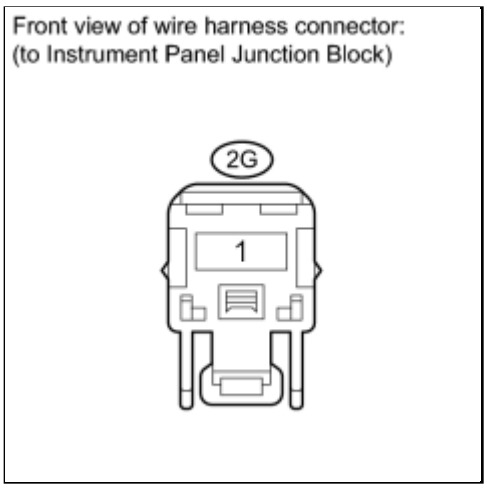
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2F-3 - Body ground	Ignition switch ON	11 to 14 V

Result:

RESULT	PROCEED TO
OK	A
NG (w/ Smart Key System)	B
NG (w/o Smart Key System)	C



C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

B ▶ **GO TO SMART KEY SYSTEM**

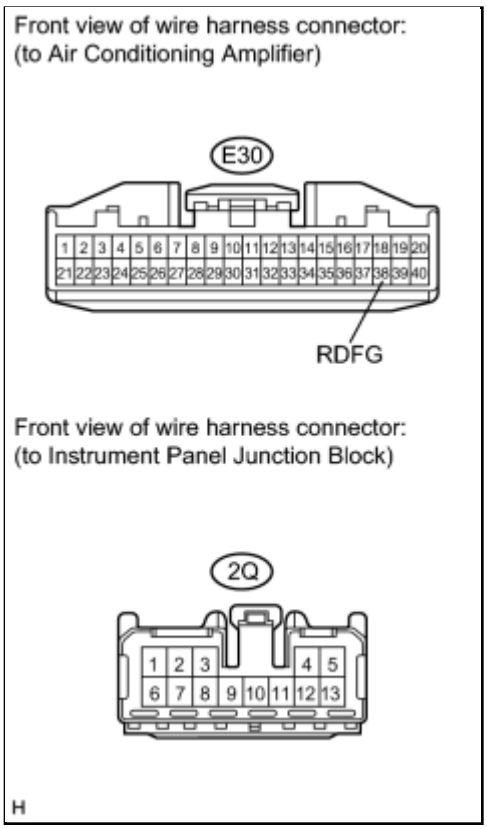
A ▼

7.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER SYSTEM POWER SOURCE)**

(a) Disconnect the 2G instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

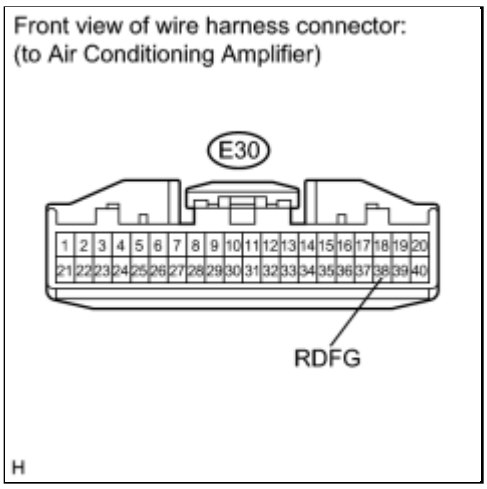
OK ▼

8.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER ASSEMBLY - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the E30 air conditioning amplifier and 2Q instrument panel junction block connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-38 (RDFG) - 2Q-12	Always	Below 1 Ω
E30-38 (RDFG) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

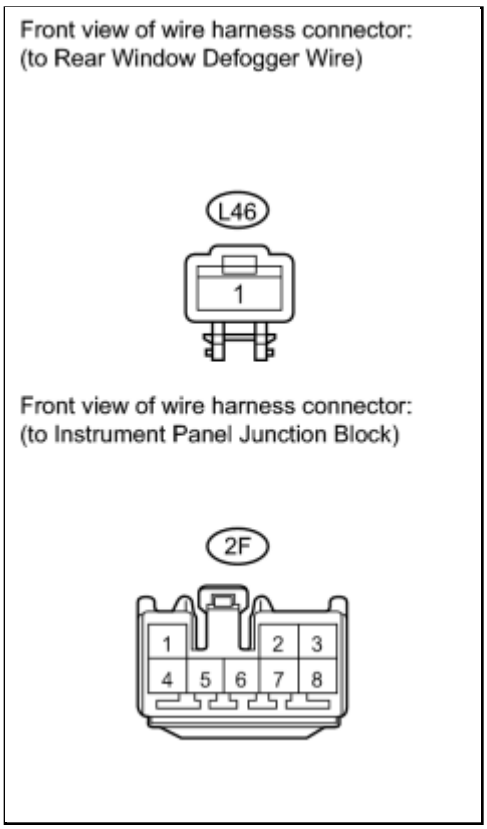
OK ▼

9.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER ASSEMBLY - BATTERY)**

(a) Reconnect the 2Q instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-38 (RDFG) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

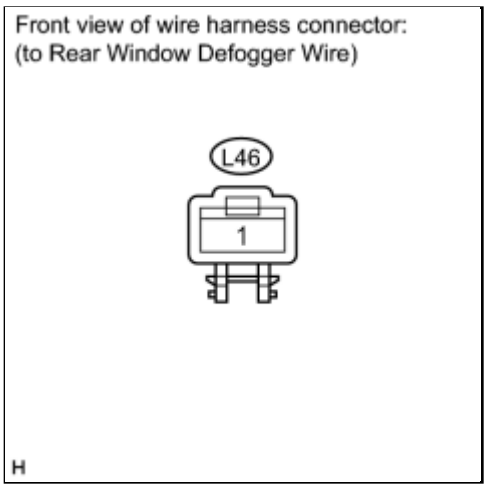
OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY**

10.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the 2F instrument panel junction block and L46 rear window defogger wire connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L46-1 - 2F-2	Always	Below 1 Ω
L46-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

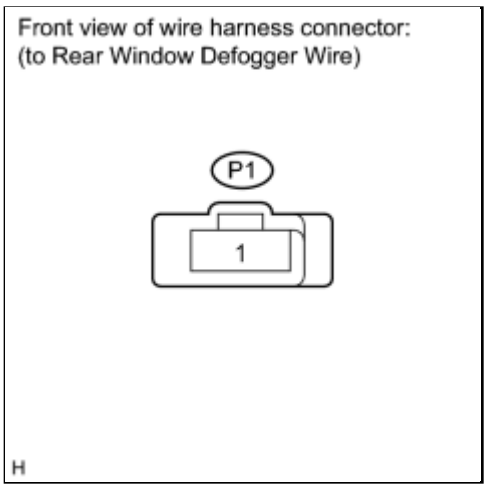
OK ▼

11.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - BATTERY)**

(a) Reconnect the 2F instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L46-1 - Body ground	Ignition switch ON, Rear window defogger switch on	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - BODY GROUND)**

(a) Disconnect the P1 rear window defogger wire connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
P1-1 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPAIR OR REPLACE REAR WINDOW DEFOGGER WIRE**

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WPU02DX
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 INFO .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WPV02HX
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Air Conditioner

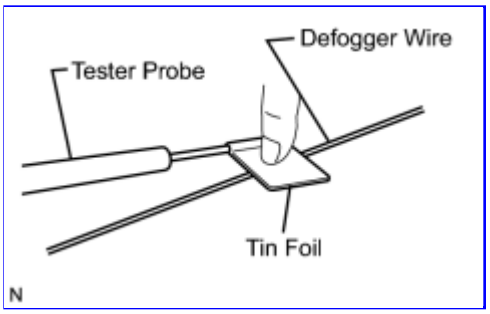
TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Defogger Relay	Turns rear window defogger	OFF/ON	-

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000U8V030X
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK REAR WINDOW DEFOGGER SYSTEM OPERATION

(a) When the ignition switch is turned to ON and the defogger switch is pressed, check that the rear window defogger operates.

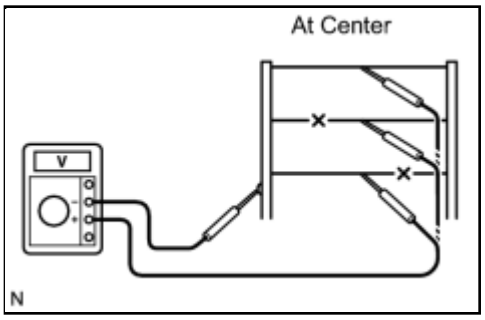


HINT:

After 15 minutes, check that the defogger automatically turns off.

2. INSPECT BACK WINDOW (DEFOGGER WIRE)

NOTICE:

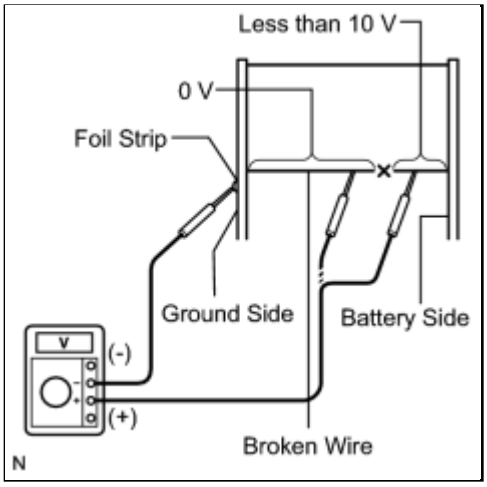


- When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.
- Do not use detergents or glass cleaners that have abrasive ingredients.
- When measuring voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.

(a) Turn the ignition switch to ON.

(b) Turn the defogger switch on.

(c) Check the voltage at the center of each defogger wire, as shown in the illustration.



Standard Voltage:

VOLTAGE	CRITERIA
Approx. 5 V	Wire is not broken
Approx. 10 or 0 V	Wire is broken

HINT:

If there is approximately 10 V, the wire may be faulty between the center of the wire and the wire end on the battery side. If there is no

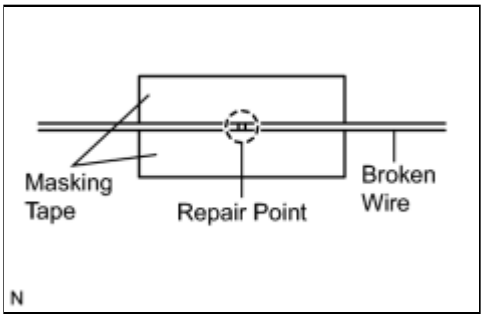
voltage, the wire may be faulty between the center of the wire and the wire end on the ground side.

(d) Place a voltmeter positive (+) lead against the defogger wire on the battery side.

(e) Place a voltmeter negative (-) lead with the foil strip against the wire on the ground side.

(f) Slide the positive (+) lead from the battery side to the ground side.

(g) The point where the voltage drops from approximately 10 V to 0 V is the place where the defogger wire is broken.



HINT:

If the defogger wire is not broken, the voltmeter should indicate 0 V at the positive (+) end of the defogger wire but gradually increase to approximately 12 V as the meter probe moves to the other end.

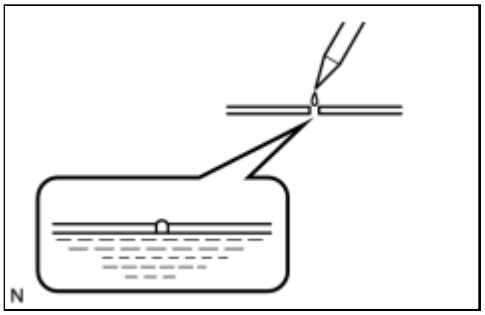
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Automatic Air Conditioning System): REPAIR (2010 Corolla)		



REPAIR

1. REPAIR WINDOW DEFOGGER WIRE

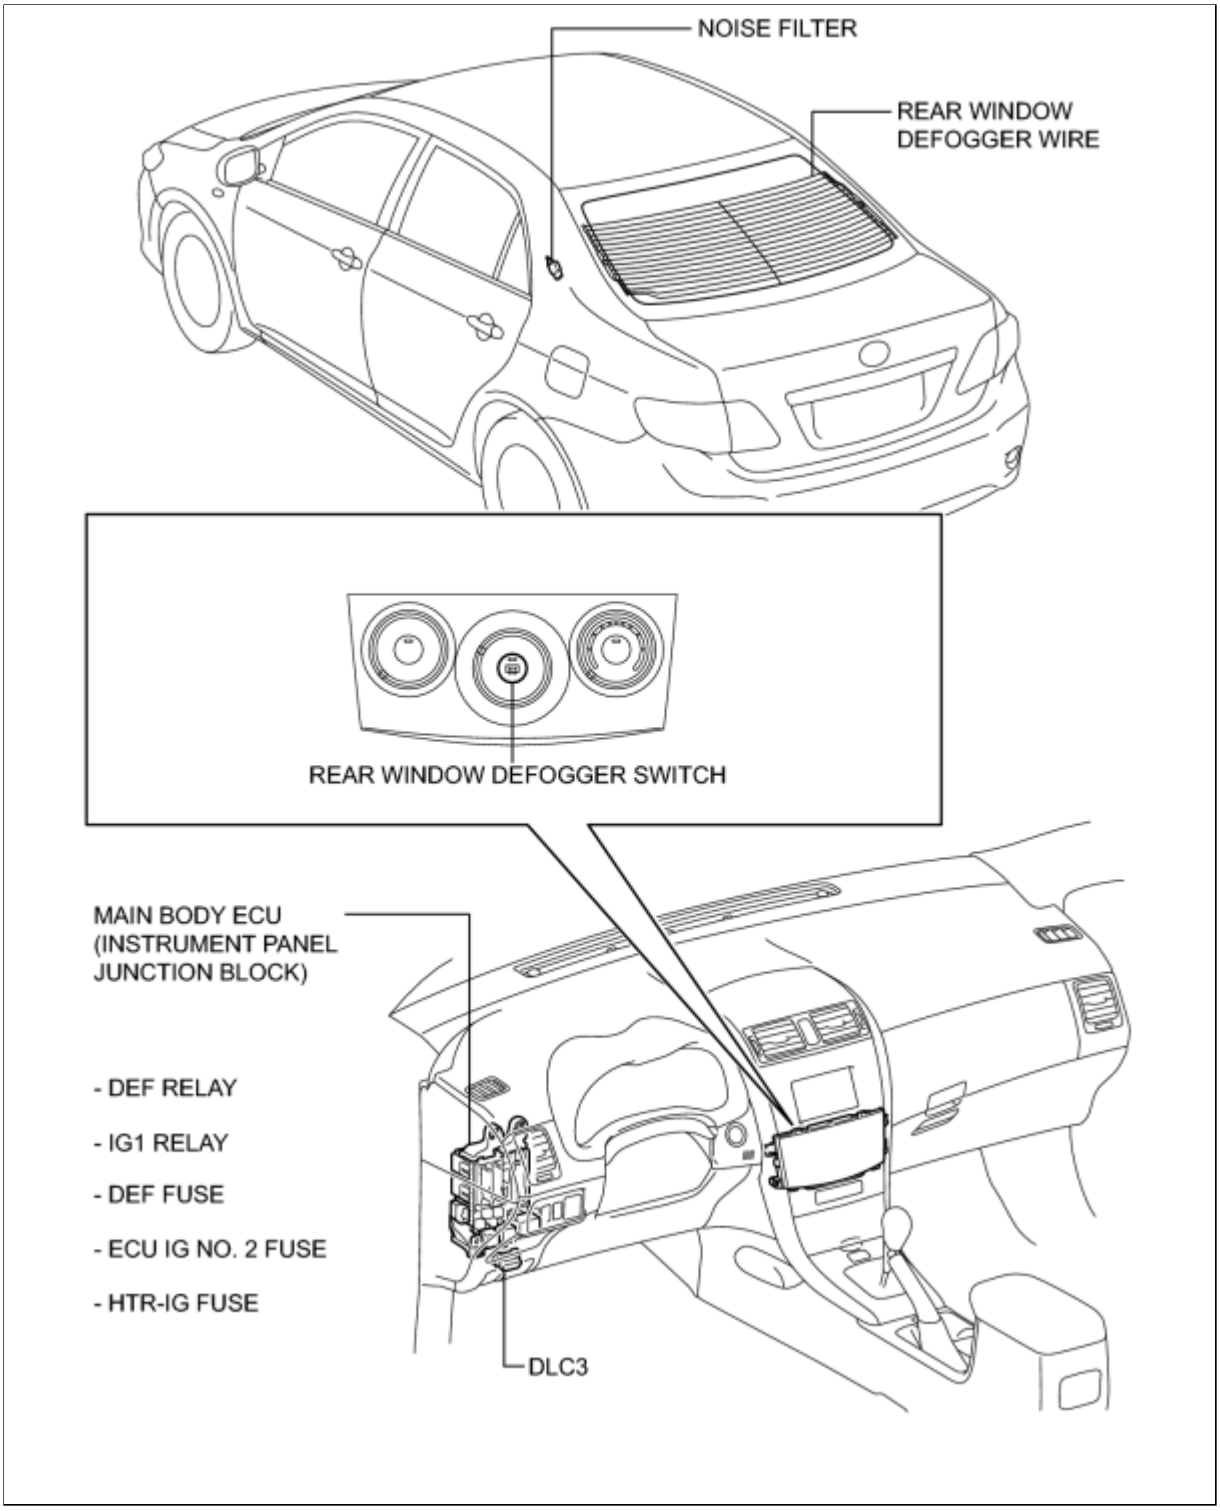
(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place the masking tape along both sides of the wire.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.



NOTICE:

Do not repair the defogger wire again for at least 24 hours.

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Use the following procedure to troubleshoot the defogger system.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. GENERAL

The defogger system thin heater wires are attached to the inside of the rear window and defog the window surface quickly. The indicator light illuminates while the system is operating. The system automatically turns off after approximately 15 minutes.

HINT:

The rear window defogger is linked with the mirror defogger (w/ mirror defogger).

2. FUNCTION OF MAIN COMPONENT

COMPONENT	OUTLINE
DEF Relay	Receives rear defogger activation request signals from the heater control (blower switch) and supplies power to the rear window defogger.
Rear Window Defogger	Receives power from the DEF relay and heats the defogger wire.

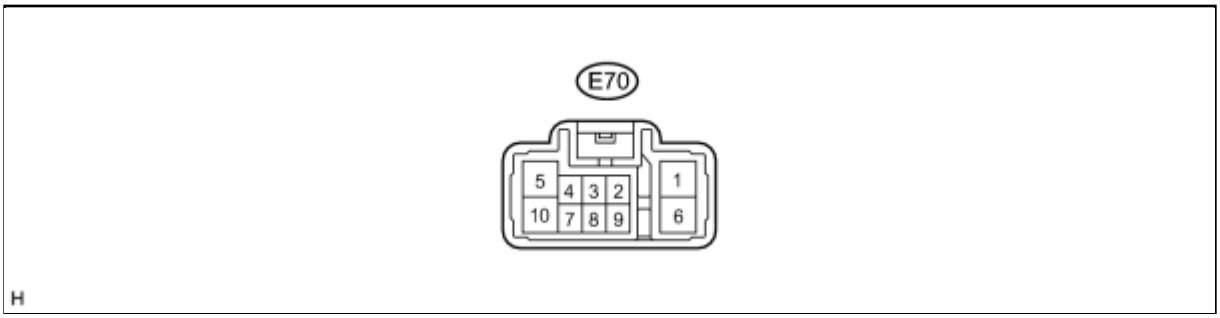
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Window Defogger System



SYMPTOM	SUSPECTED AREA	SEE PAGE
Rear window defogger does not operate	ECU-IG No. 2, DEF and HTR-IG fuses	INFO
	DEF and IG1 relays	INFO
	Wire harness	INFO
	Rear window defogger wire	INFO

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK HEATER CONTROL (BLOWER SWITCH)

(a) Disconnect the E70 heater control (blower switch) connector.

(1) Measure the voltage according to the value(s) in the table below.

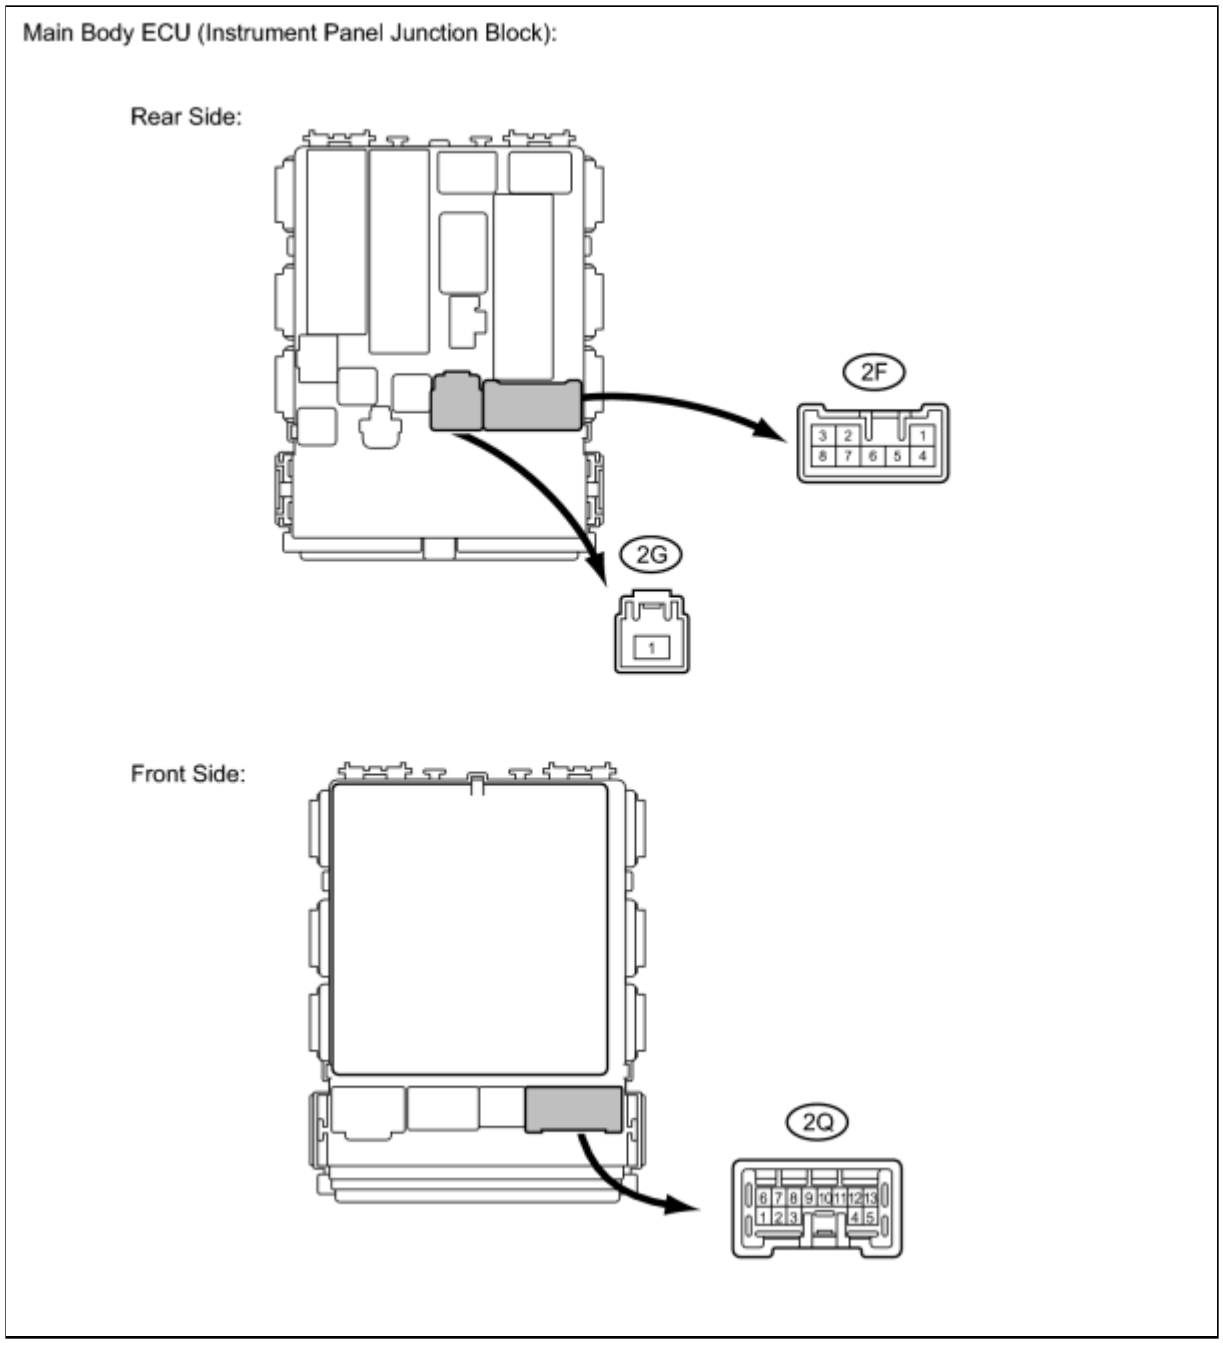
Standard Voltage:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E70-2 (RDEF) - E70-5 (E)	B - W-B*1 BE - W-B*2	Rear defogger signal	Ignition switch ON, Rear window defogger switch OFF	11 to 14 V
			Ignition switch ON, Rear window defogger switch ON	Below 1 V
E70-3 (IG+) - E70-5 (E)	Y - W-B*1 R - W-B*2	Power source (IG)	Ignition switch ON	11 to 14 V
			Ignition switch off	Below 1 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E70-5 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2F, 2G and 2Q instrument panel junction block connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	W - Body ground	Power source	Always	11 to 14 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2Q-12 - Body ground	B - Body ground*1 BE - Body ground*2	DEF Relay operation signal	Ignition switch ON, Rear window defogger switch OFF	11 to 14 V
			Ignition switch ON, Rear window defogger switch ON	Below 1 V
2F-2 - Body ground	B - Body ground	Defogger wire operation signal	Ignition switch ON, Rear window defogger switch OFF	Below 1 V
			Ignition switch ON, Rear window defogger switch ON	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction in the wire harness or main body ECU (instrument panel junction block).

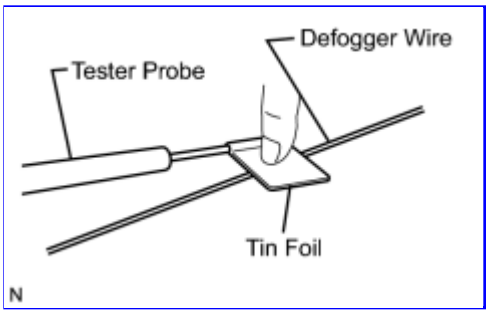
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK REAR WINDOW DEFOGGER SYSTEM OPERATION

(a) When the ignition switch is turned to ON and the defogger switch is pressed, check that the rear window defogger operates.

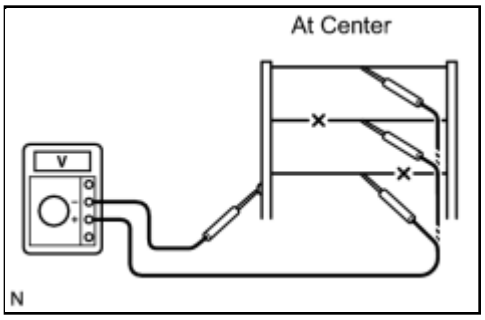


HINT:

After 15 minutes, check that the defogger automatically turns off.

2. INSPECT BACK WINDOW (DEFOGGER WIRE)

NOTICE:

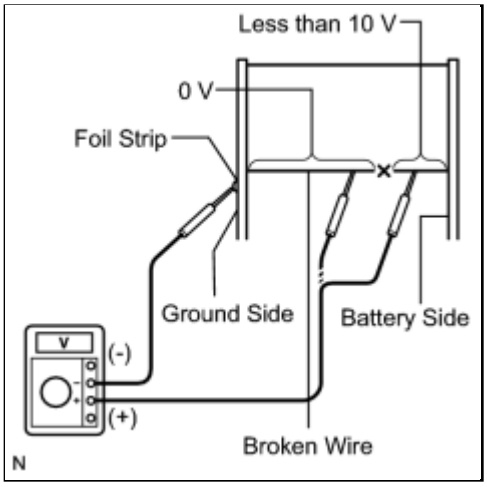


- When cleaning the glass, wipe the glass along the wire using a soft and dry cloth. Take care not to damage the wires.
- Do not use detergents or glass cleaners that have abrasive ingredients.
- When measuring voltage, wrap a piece of tin foil around the tip of the negative tester probe and press the foil against the wire with your finger, as shown in the illustration.

(a) Turn the ignition switch to ON.

(b) Turn the defogger switch on.

(c) Check the voltage at the center of each defogger wire, as shown in the illustration.



Standard Voltage:

VOLTAGE	CRITERIA
Approx. 5 V	Wire is not broken
Approx. 10 or 0 V	Wire is broken

HINT:

If there is approximately 10 V, the wire may be faulty between the center of the wire and the wire end on the battery side. If there is no

voltage, the wire may be faulty between the center of the wire and the wire end on the ground side.

(d) Place a voltmeter positive (+) lead against the defogger wire on the battery side.

(e) Place a voltmeter negative (-) lead with the foil strip against the wire on the ground side.

(f) Slide the positive (+) lead from the battery side to the ground side.

(g) The point where the voltage drops from approximately 10 V to 0 V is the place where the defogger wire is broken.

HINT:

If the defogger wire is not broken, the voltmeter should indicate 0 V at the positive (+) end of the defogger wire but gradually increase to approximately 12 V as the meter probe moves to the other end.

Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): Rear Window Defogger System does not Operate (2010 Corolla)		

Rear Window Defogger System does not Operate

DESCRIPTION

When the rear window defogger switch, which is built into the heater control (blower switch), is operated, the operation signals are transmitted to the DEF relay (coil side). When the DEF relay (coil side) receives the signals, it turns on the DEF relay (switch side) to operate the rear window defogger.

WIRING DIAGRAM

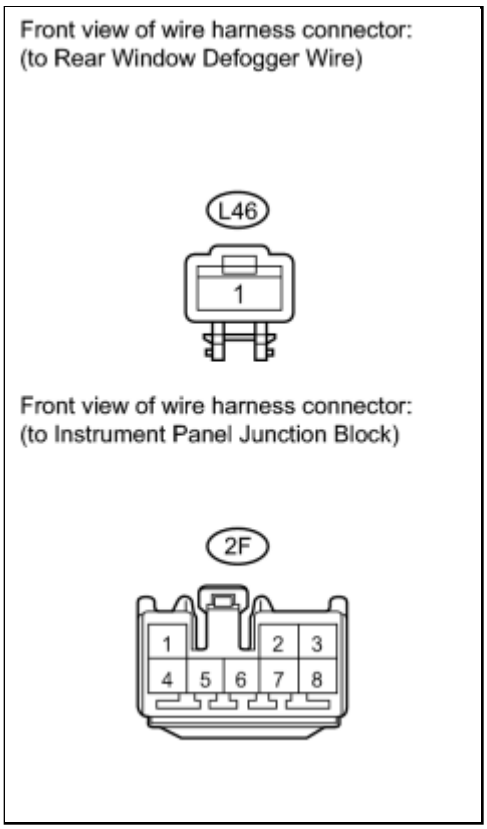
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK REAR WINDOW DEFOGGER SYSTEM**

(a) Turn the window defogger switch on.

(b) Check that operation sound of the DEF relay is heard.



OK:

Relay operating sound is heard

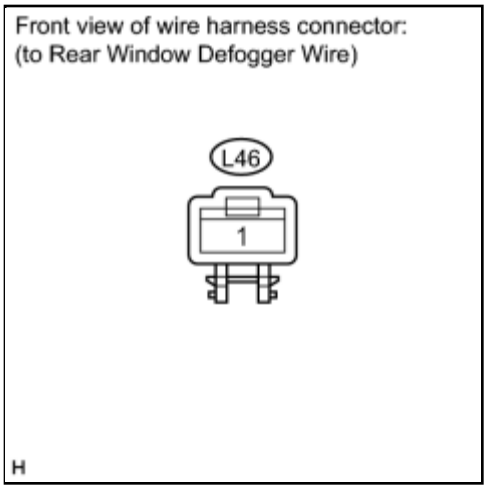
NG ▶ **INSPECT FUSES (DEF, ECU-IG NO. 2, HTR-IG)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the 2F instrument panel junction block and L46 rear window defogger wire connectors.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L46-1 - 2F-2	Always	Below 1 Ω
L46-1 - Body ground	Always	10 kΩ or higher

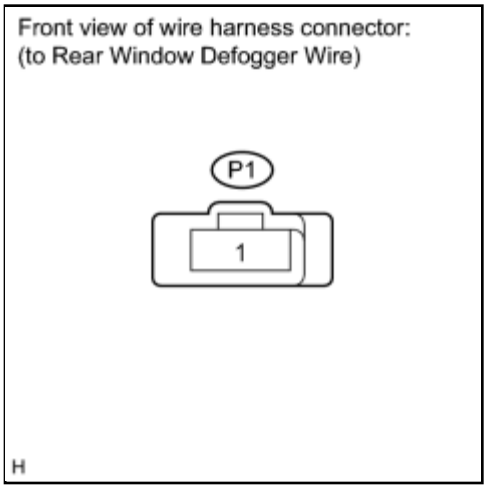
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - BATTERY)

(a) Reconnect the 2F instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L46-1 - Body ground	Ignition switch ON, Rear window defogger switch ON	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

4.	**CHECK HARNESS AND CONNECTOR (REAR WINDOW DEFOGGER WIRE - BODY GROUND)**

(a) Disconnect the P1 rear window defogger wire connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
P1-1 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

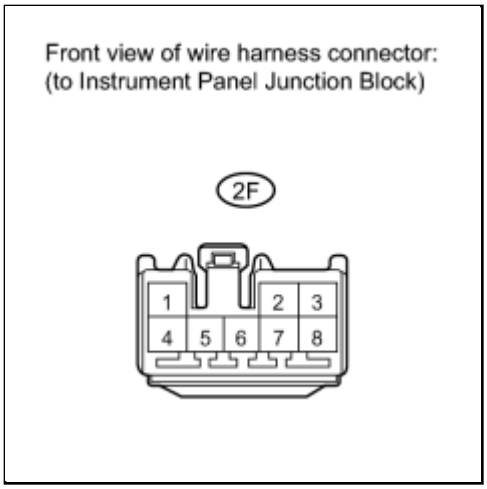
OK ▶ **REPAIR OR REPLACE REAR WINDOW DEFOGGER WIRE**

5.	**INSPECT FUSES (DEF, ECU-IG NO. 2, HTR-IG)**

(a) Remove the DEF, ECU-IG No. 2 and HTR-IG fuses from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



ITEM	CONDITION	SPECIFIED CONDITION

ITEM	CONDITION	SPECIFIED CONDITION
DEF fuse	Always	Below 1 Ω
ECU-IG No. 2 fuse	Always	Below 1 Ω
HTR-IG fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSES**

OK ▼

6.	CHECK HARNESS AND CONNECTOR (IG1 RELAY POWER SOURCE)

(a) Disconnect the 2F instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

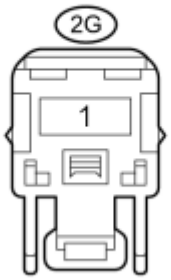
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2F-3 - Body Ground	Ignition switch ON	11 to 14 V

Result:

RESULT	PROCEED TO
OK	A
NG (w/ Smart Key System)	B
NG (w/o Smart Key System)	C

C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



B ▶ **GO TO SMART KEY SYSTEM**

A

▼

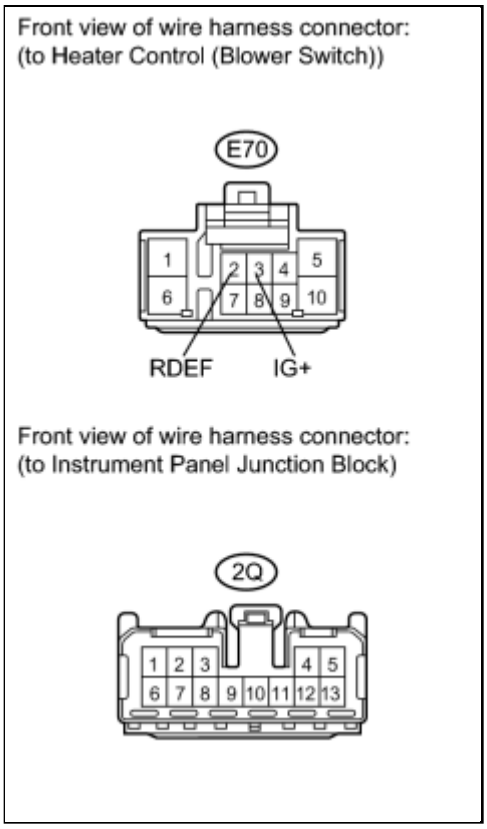
7.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BATTERY)**

Front view of wire harness connector:
(to Instrument Panel Junction Block)

(a) Disconnect the 2G instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

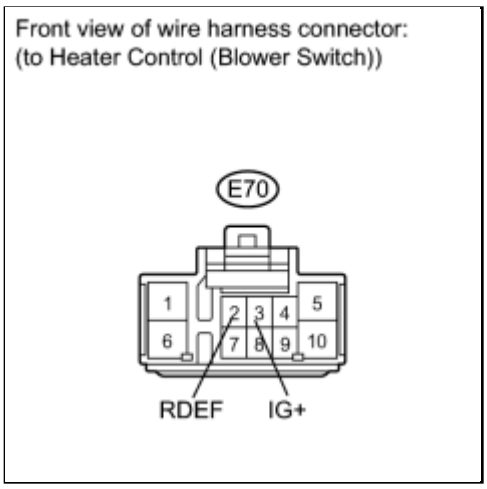
▼

8.	**CHECK HARNESS AND CONNECTOR (HEATER CONTROL (BLOWER SWITCH) - INSTRUMENT PANEL J/B)**

(a) Disconnect the E70 heater control (blower switch) and 2Q instrument panel junction block connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E70-2 (RDEF) - 2Q-12	Always	Below 1 Ω
E70-3 (IG+) - 2Q-10	Always	Below 1 Ω
E70-2 (RDEF) - Body ground	Always	10 kΩ or higher
E70-3 (IG+) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

9.	**CHECK HARNESS AND CONNECTOR (HEATER CONTROL (BLOWER SWITCH) - BATTERY)**

(a) Reconnect the 2Q instrument panel junction block

connector.

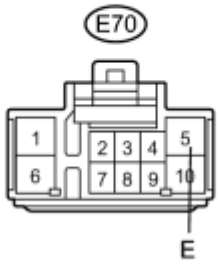
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E70-2 (RDEF) - Body ground	Ignition switch ON	11 to 14 V
E70-3 (IG+) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▼



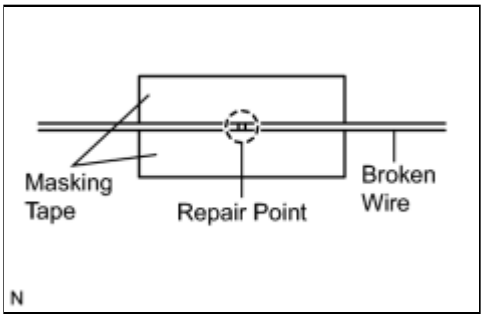
10.	**CHECK HARNESS AND CONNECTOR (HEATER CONTROL (BLOWER SWITCH) - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E70-5 (E) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to Heater Control (Blower Switch))



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE HEATER CONTROL (BLOWER SWITCH)**

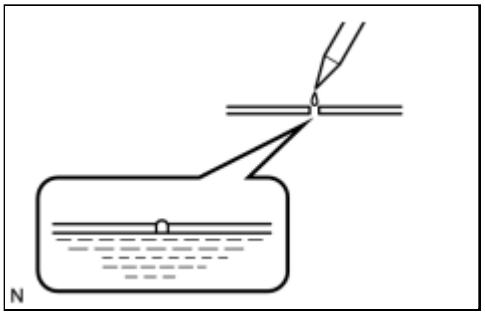
Title: WINDOW / GLASS: WINDOW DEFOGGER SYSTEM (for Manual Air Conditioning System): REPAIR (2010 Corolla)		



REPAIR

1. REPAIR WINDOW DEFOGGER WIRE

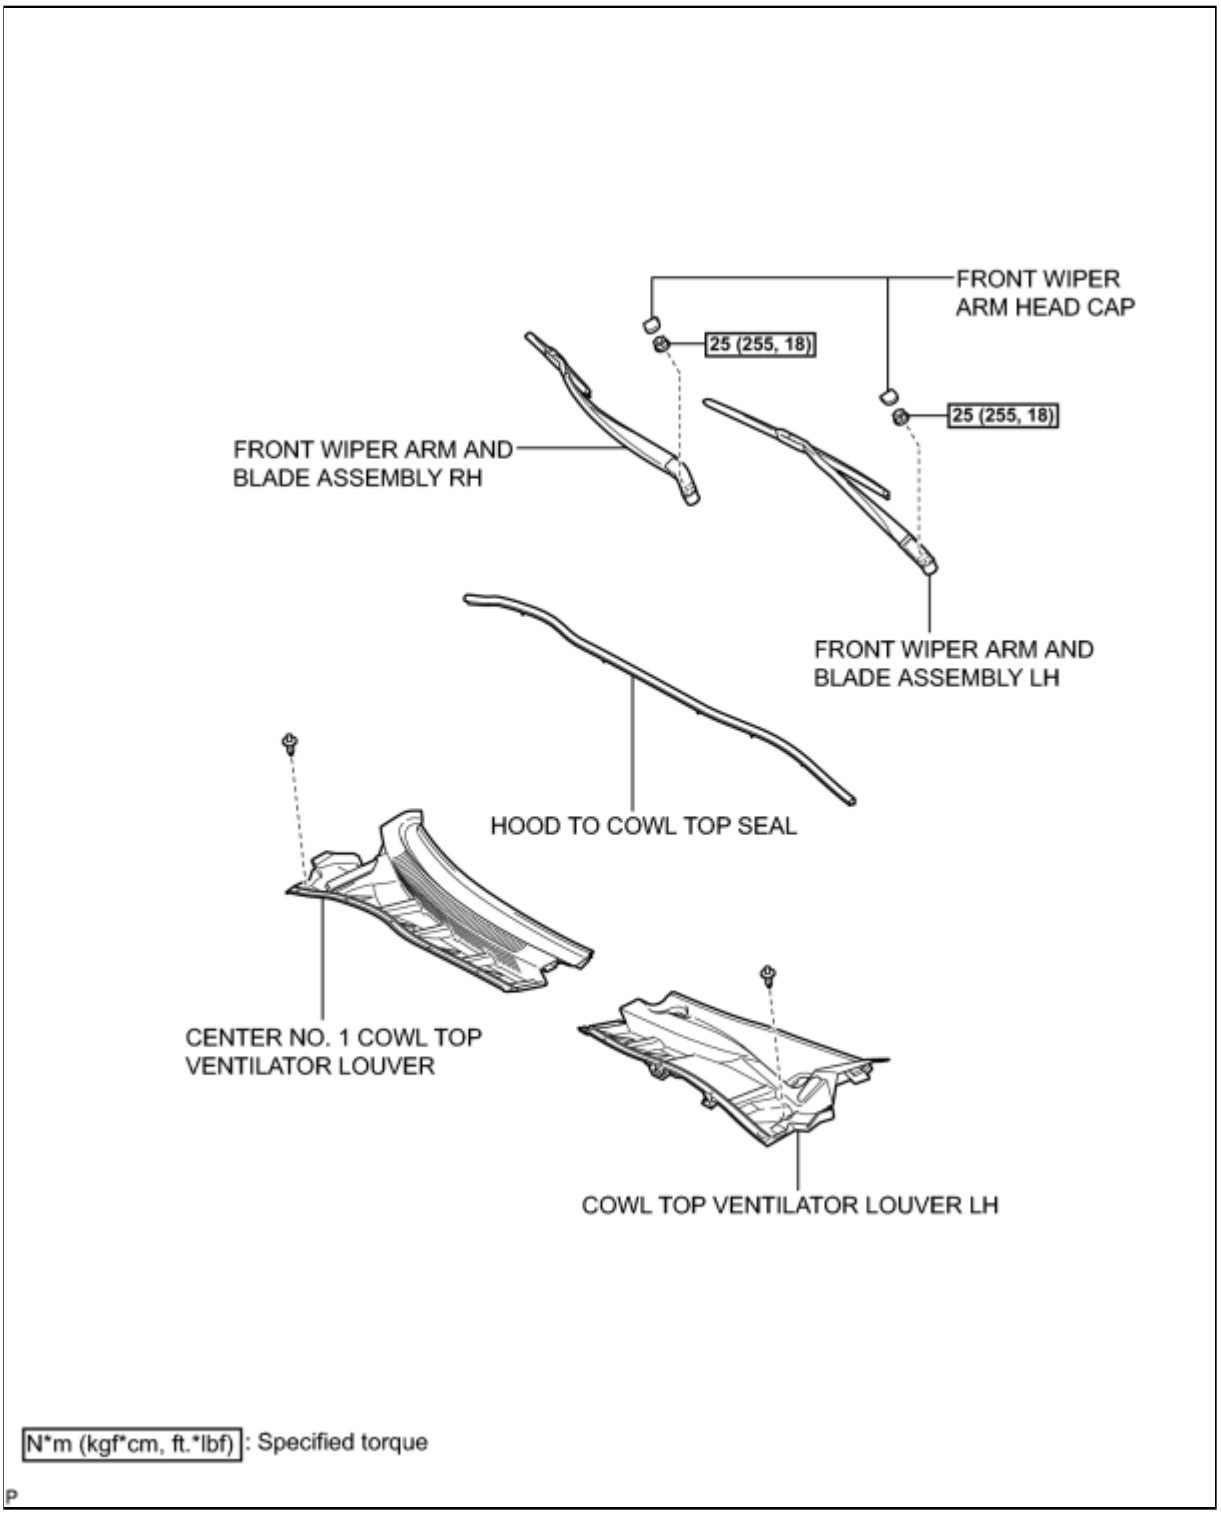
(a) Clean the broken wire tips with a grease, wax and silicone remover.

(b) Place the masking tape along both sides of the wire.

(c) Thoroughly mix the repair agent (Dupont paste No. 4817 or equivalent).

(d) Using a fine tip brush, apply a small amount of the agent to the wire.

(e) After a few minutes, remove the masking tape.



NOTICE:

Do not repair the defogger wire again for at least 24 hours.

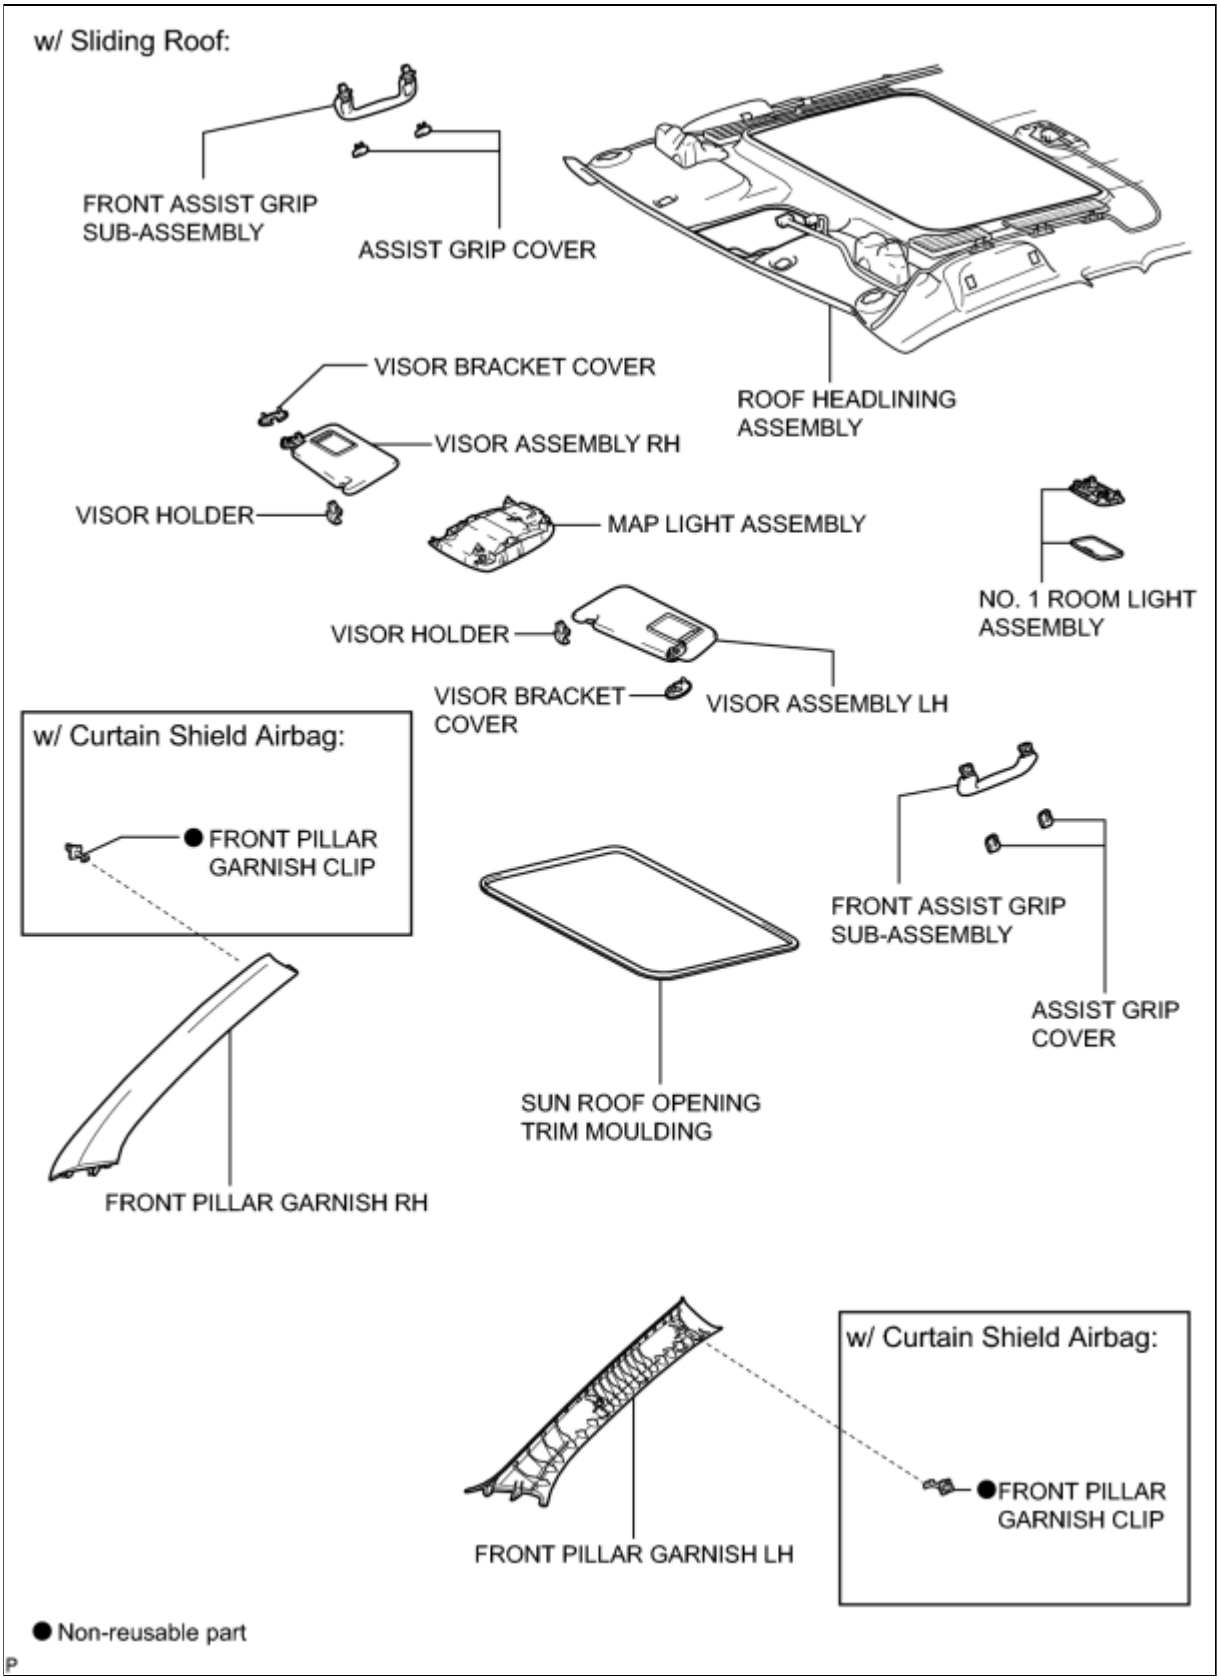
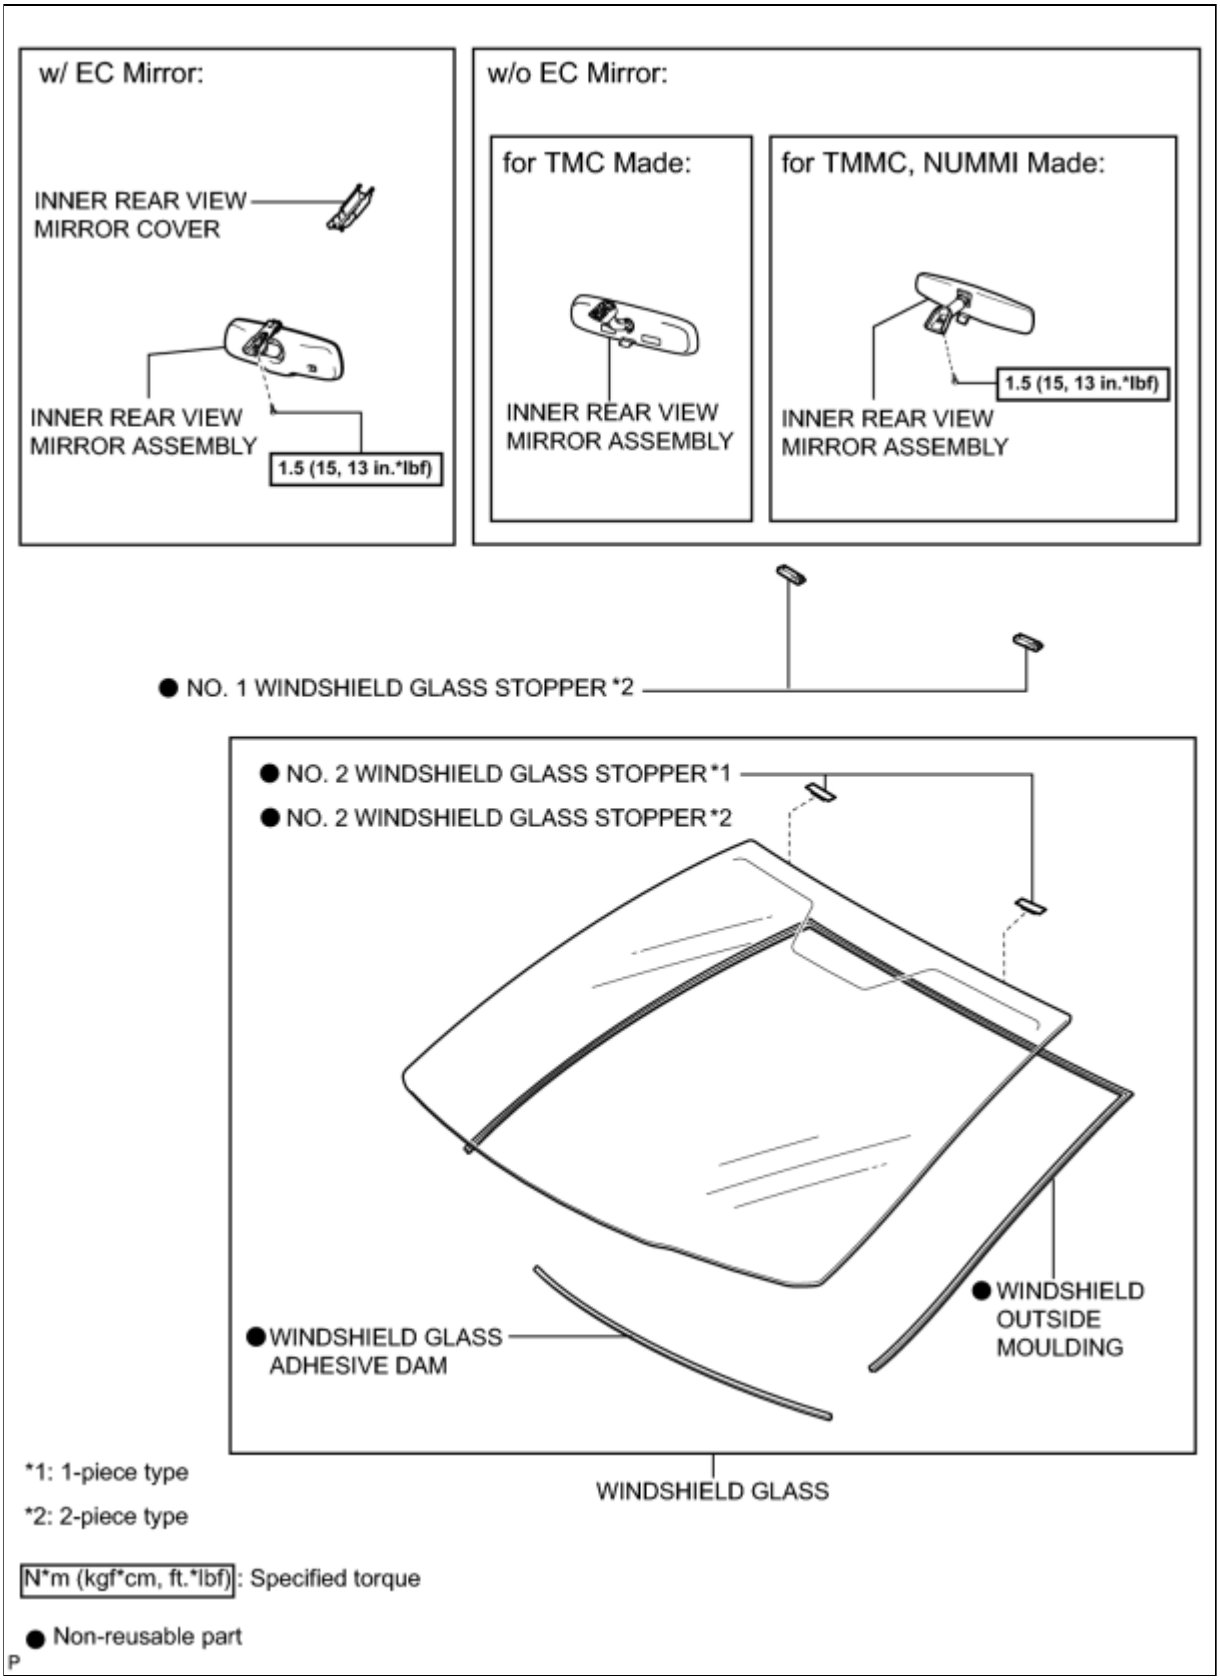
COMPONENTS



ILLUSTRATION



ILLUSTRATION

ILLUSTRATION

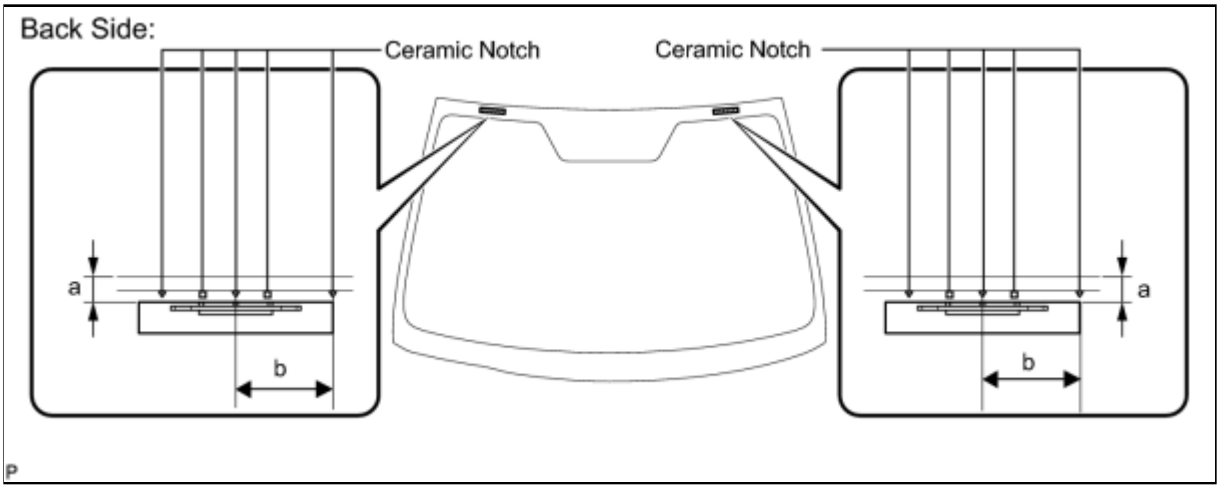
ILLUSTRATION

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000013KE022X
Title: WINDOW / GLASS: WINDSHIELD GLASS: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL NO. 2 WINDSHIELD GLASS STOPPER

(a) Using a brush or sponge, coat the application area of the 2 No. 2 windshield glass stoppers with Primer G.



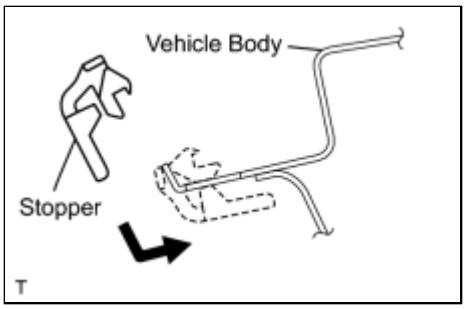
NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If an area other than that specified is coated by accident, apply a non-reusable part solvent to a clean cloth and wipe off the primer.

(b) Install 2 new No. 2 windshield glass stoppers onto the windshield glass as shown in the illustration.



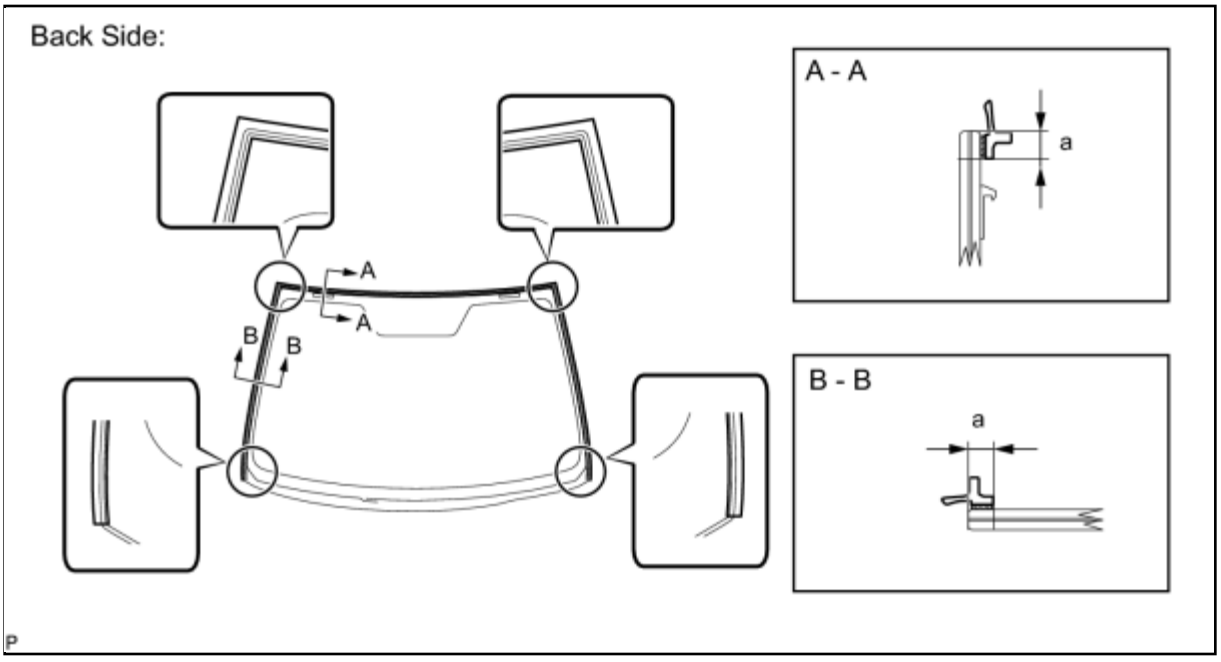
HINT:

Only 2-piece type No. 2 windshield glass stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

Standard Dimension:

AREA	DIMENSION
a	13.6 mm (0.535 in.)
b	40.0 mm (1.57 in.)

2. INSTALL NO. 1 WINDSHIELD GLASS STOPPER (for 2-piece Type)



(a) Install 2 new No. 1 windshield glass stoppers to the vehicle body as shown in the illustration.

HINT:

Only 2-piece type No. 1 windshield glass stoppers are supplied. Use the 2-piece type stoppers even if a 1-piece type was used.

3. INSTALL WINDSHIELD OUTSIDE MOULDING

(a) Using a brush or sponge, coat the application area of the windshield outside moulding with Primer G.

Standard Dimension:

AREA	DIMENSION
a	7.0 mm (0.276 in.)

NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

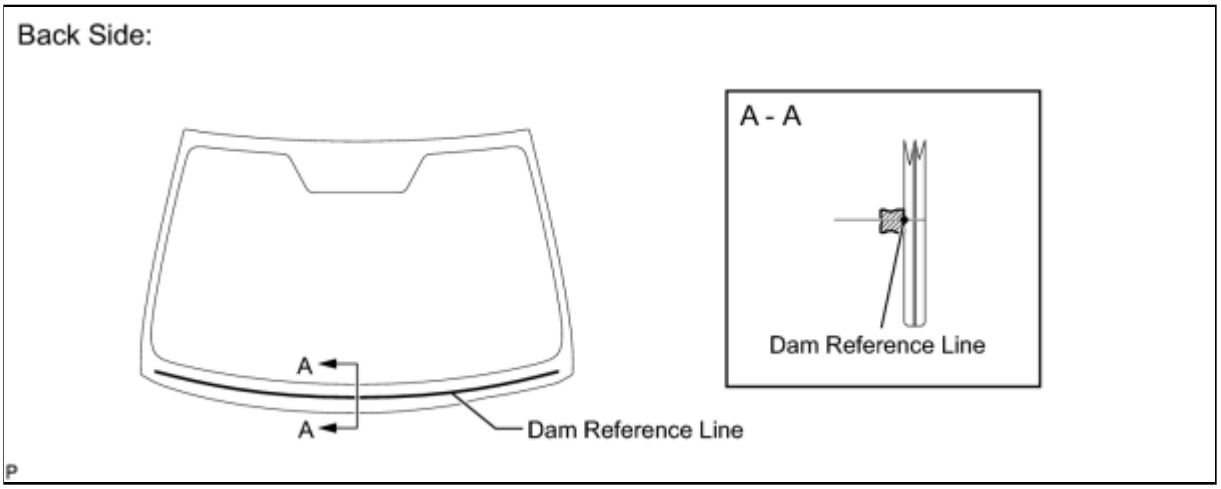
HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(b) Install a new windshield outside moulding onto the windshield glass as shown in the illustration.

4. INSTALL WINDSHIELD GLASS ADHESIVE DAM

(a) Using a brush or sponge, coat the application area of the windshield glass adhesive dam with Primer G.

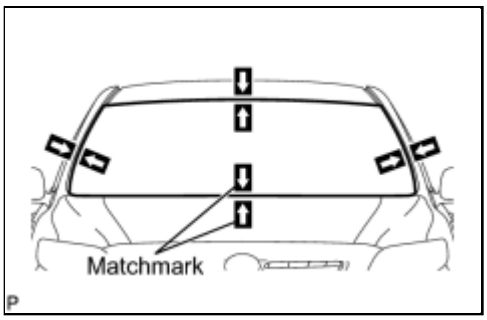


NOTICE:

- Do not apply too much primer.
- Allow the primer coating to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If the primer is applied to an area that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.



(b) Install a new windshield glass adhesive dam onto the windshield glass as shown in the illustration.

NOTICE:

Install the a adhesive dam along the dam reference line.

5. INSTALL WINDSHIELD GLASS

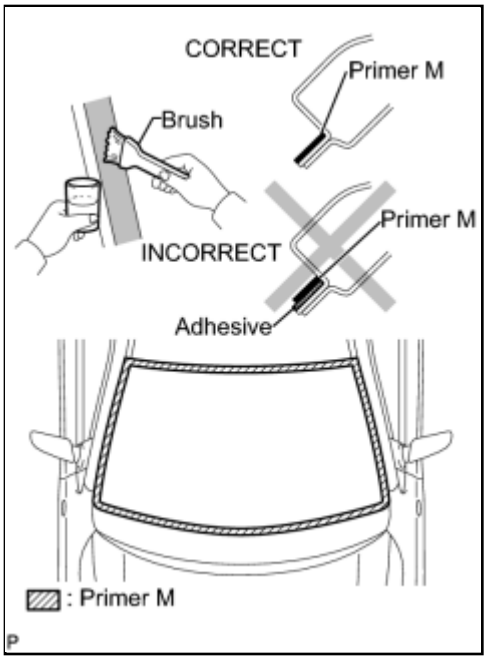
(a) Position the windshield glass assembly.

(1) Using suction cups, place the windshield glass assembly in the correct position.

(2) Check that the entire contact surface of the windshield glass rim is perfectly even.

(3) Place matchmarks on the windshield glass and vehicle body on the locations indicated in the illustration.

HINT:



- Placing matchmarks is necessary only when installing a new glass. If it is the reused glass, matchmarks should already be present.
- When reusing the glass, check and correct the matchmark

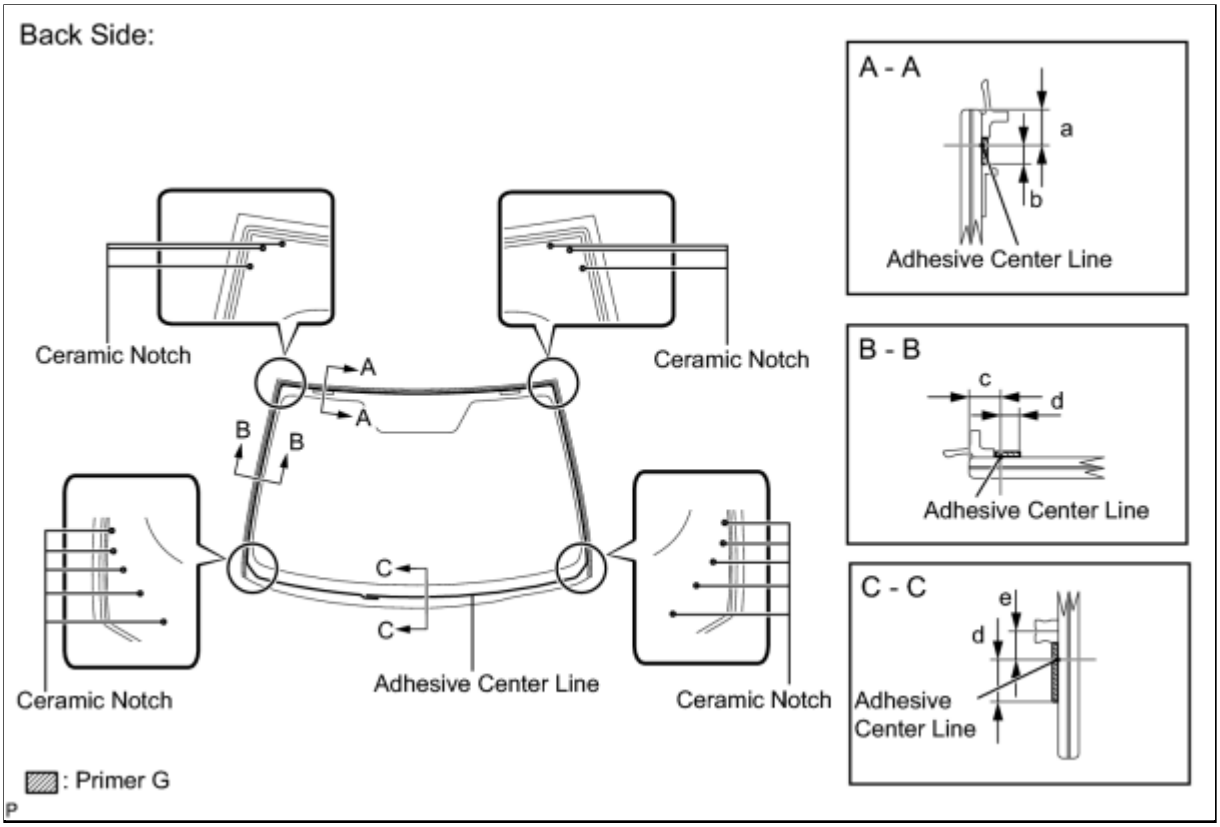
positions.

NOTICE:

Check that the stoppers are attached to the vehicle body correctly.

(4) Using suction cups, remove the windshield glass assembly.

(b) Using a brush, coat the installation surface on the vehicle body with Primer M.



NOTICE:

- Do not coat the adhesive with Primer M.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(c) Using a brush or sponge, coat the application area of adhesive with Primer G.

Standard Dimension:

AREA	DIMENSION
a	9.5 mm (0.374 in.)
b	4.6 mm (0.181 in.)
c	9.5 mm (0.374 in.)
d	7.0 mm (0.276 in.)
e	7.5 mm (0.295 in.)

NOTICE:

- Do not apply too much primer.
- Allow the primer to dry for 3 minutes or more.
- Throw away any leftover Primer G.

HINT:

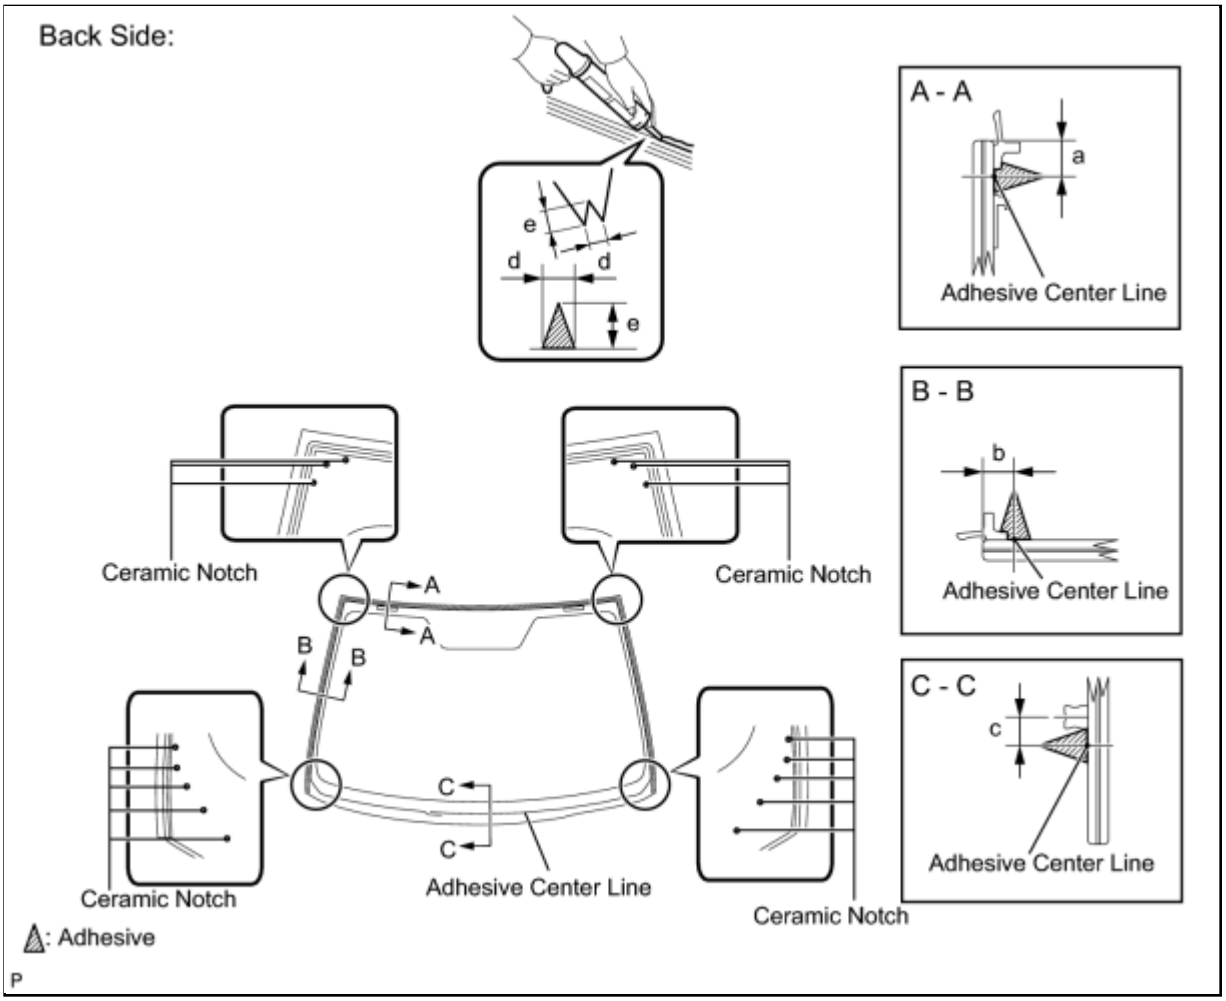
If an area other than that specified is coated by accident, apply a non-residue solvent to a clean cloth and wipe off the excess primer.

(1) Apply adhesive to the glass.

Adhesive:
Toyota Genuine Windshield Glass Adhesive or equivalent

(2) Cut off the tip of the cartridge nozzle, as shown in the illustration.

HINT:



After cutting off the tip, use all adhesive within the time described in the table below.

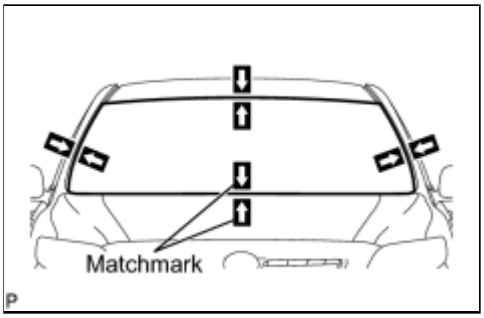
Tack-Free Time:

TEMPERATURE	TACK-FREE TIME
35°C (95°F)	15 minutes
20°C (68°F)	1 hour and 40 minutes
5°C (41°F)	8 hours

(3) Load the sealer gun with the cartridge.

(4) Apply adhesive to the windshield glass as shown in the illustration.

Standard Dimension:



AREA	DIMENSION
a	9.5 mm (0.374 in.)
b	9.5 mm (0.374 in.)
c	7.5 mm (0.295 in.)

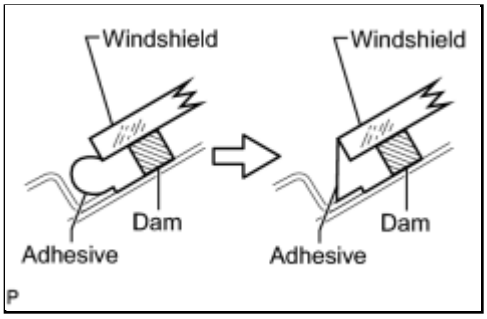
AREA	DIMENSION
d	8.0 mm (0.315 in.)
e	12.0 mm (0.472 in.)

HINT:

Apply adhesive onto the ceramic notches.

(d) Install the windshield glass assembly.

(1) Using suction cups, position the glass so that the matchmarks are aligned and press it in gently along the rim.



(2) Lightly press the outer surface of the windshield glass to ensure that it is securely attached to the vehicle body.

NOTICE:

- Check that the windshield glass stoppers are attached to the vehicle body correctly.
- Check the clearance between the vehicle body and windshield glass.

HINT:

Press the glass with force of 98 N (10 kgf, 22 lbf) or more.

(3) If necessary, use a scraper to correct the level or position of adhesive that has been applied.

NOTICE:

Apply adhesive onto the windshield glass rim.

(4) Hold the windshield glass using protective tape until applied adhesive becomes hard.

NOTICE:

Do not drive the vehicle for the amount of time described in the table below.

Minimum Time:

TEMPERATURE	MINIMUM TIME PRIOR TO DRIVING VEHICLE
35°C (95°F)	1 hour and 30 minutes
20°C (68°F)	5 hours
5°C (41°F)	24 hours

6. INSPECT FOR LEAK AND REPAIR

(a) After the adhesive has hardened, apply water from the outside of the vehicle. Check that no water leaks into the cabin.

(b) If water leaks into the cabin, allow the water to dry and add adhesive.

(c) Remove the protective tape.

7. INSTALL ROOF HEADLINING ASSEMBLY

Return the front section of the roof headlining assembly to the original position.

8. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) INFO

9. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/o EC Mirror)

for TMC Made: INFO

for TMMC, NUMMI Made: INFO

10. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror) INFO

11. INSTALL INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

12. INSTALL VISOR HOLDER INFO

13. INSTALL NO. 1 ROOM LIGHT ASSEMBLY INFO

14. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY INFO

15. INSTALL VISOR ASSEMBLY LH INFO

16. INSTALL VISOR ASSEMBLY RH INFO

Title: WINDOW / GLASS: WINDSHIELD GLASS: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

2. REMOVE FRONT WIPER ARM HEAD CAP INFO

3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

4. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

5. REMOVE HOOD TO COWL TOP SEAL INFO

6. REMOVE CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

7. REMOVE COWL TOP VENTILATOR LOUVER LH INFO

8. REMOVE FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

9. REMOVE FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

10. REMOVE FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag) INFO

11. INSTALL FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

12. REMOVE MAP LIGHT ASSEMBLY (w/o Sliding Roof) INFO

13. REMOVE MAP LIGHT ASSEMBLY (w/ Sliding Roof) INFO

14. REMOVE VISOR ASSEMBLY LH INFO

15. REMOVE VISOR ASSEMBLY RH INFO

16. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY INFO

17. REMOVE NO. 1 ROOM LIGHT ASSEMBLY INFO

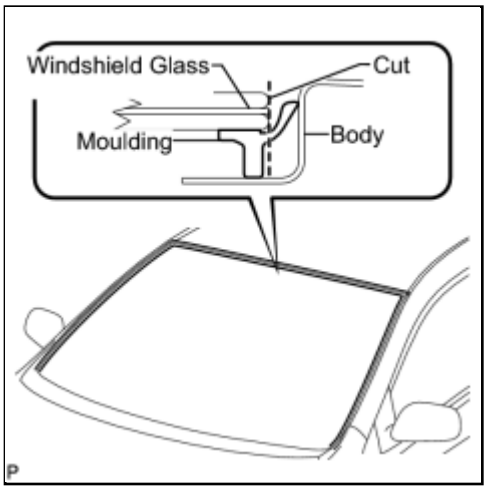
18. REMOVE VISOR HOLDER INFO

19. REMOVE INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

20. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/o EC Mirror)

for TMC Made: INFO

for TMMC, NUMMI Made: INFO



21. REMOVE INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror) INFO

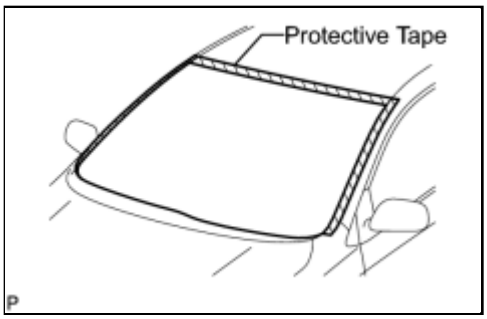
22. REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) INFO

23. REMOVE ROOF HEADLINING ASSEMBLY

It is not necessary to completely remove the roof headlining assembly. Slightly lower the front section of the roof headlining assembly so that the windshield glass can be removed.

24. REMOVE WINDSHIELD GLASS

(a) Using a knife, cut off the upper windshield outside moulding as shown in the illustration.



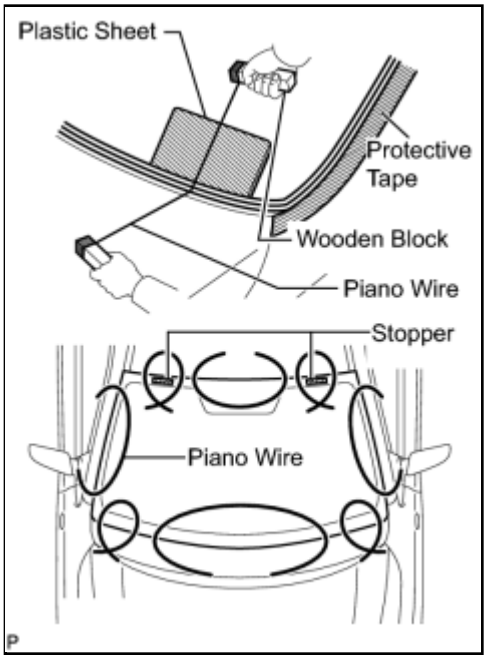
NOTICE:

Be careful not to damage the vehicle body.

(b) Remove the remaining windshield outside moulding.

HINT:

Make a partial cut in the windshield outside moulding, then pull and remove it by hand.

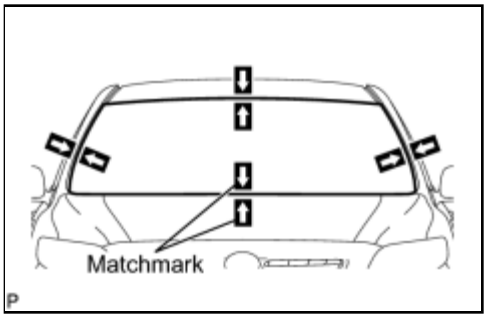


(c) Apply protective tape to the installation position of the windshield glass sub-assembly on the vehicle body.

NOTICE:

Apply protective tape to the installation surface to prevent it from being scratched.

(d) Pass a piano wire between the vehicle body and windshield glass sub-assembly from the interior.

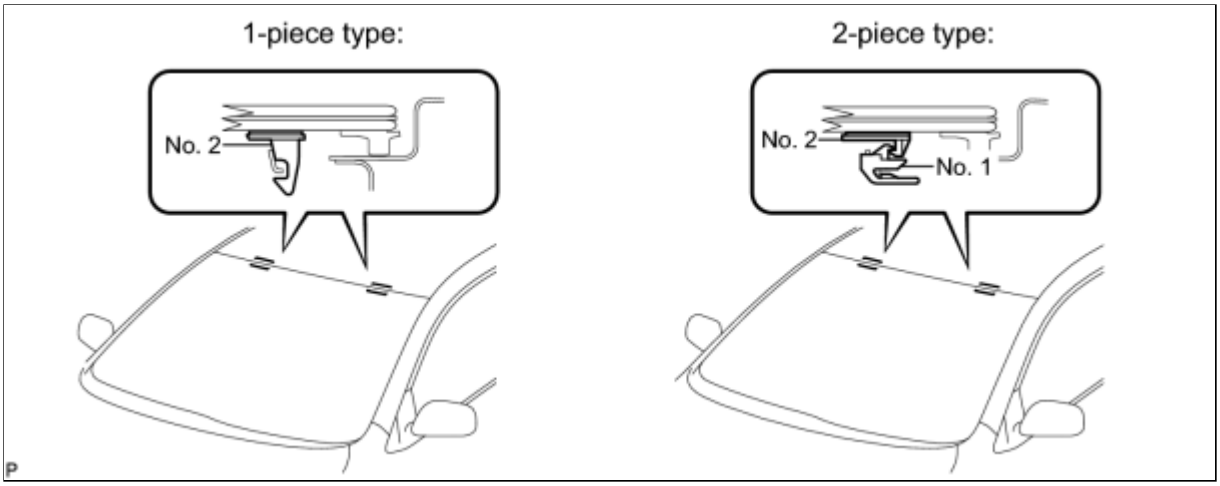


(e) Tie both wire ends to wooden blocks or similar objects.

(f) Cut off the adhesive by pulling the piano wire around the windshield glass sub-assembly.

NOTICE:

- When separating the windshield glass sub-assembly from the vehicle, be careful not to damage the vehicle's paint or interior/exterior ornaments.
- To prevent the instrument panel from being scratched when removing the windshield glass sub-assembly, place a plastic sheet between the piano wire and instrument panel.



(g) Place matchmarks on the windshield glass sub-assembly and vehicle body on the locations indicated in the illustration.

HINT:

Matchmarks do not need if the windshield glass sub-assembly is not going to be reused.

(h) Disconnect the windshield glass stoppers.

NOTICE:

- There are the No. 1 and No. 2 stoppers on the windshield glass sub-assembly as shown in the illustration. Be careful not to damage the windshield glass when cutting off the adhesive.
- To prevent the windshield glass sub-assembly from dropping when performing this operation, be sure to hold the windshield glass sub-assembly using suction cups.

HINT:

Depending on vehicles, a 1-piece or 2-piece type stopper is used.

(i) Using suction cups, remove the windshield glass sub-assembly.

NOTICE:

- Be careful not to drop the windshield glass sub-assembly.
- Leave as much adhesive on the vehicle body as possible when removing the windshield glass sub-assembly.

25. REMOVE WINDSHIELD OUTSIDE MOULDING

(a) Using a scraper, remove the windshield outside moulding.

NOTICE:

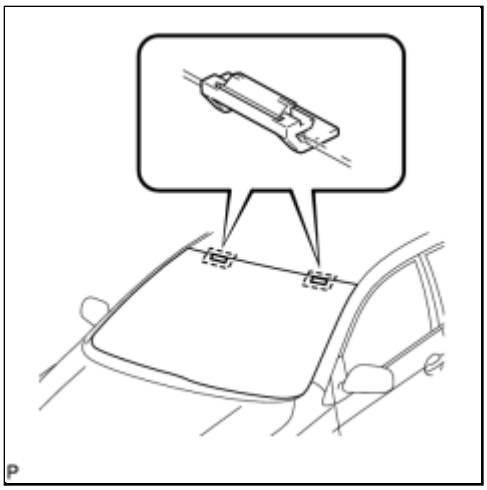
- Be careful not to damage the windshield glass.
- Be sure to replace the outside moulding with a new one.

26. REMOVE WINDSHIELD GLASS ADHESIVE DAM

(a) Using a scraper, remove the windshield glass adhesive dam.

NOTICE:

- Be careful not to damage the windshield glass.
- Be sure to replace the adhesive dam with a new one.



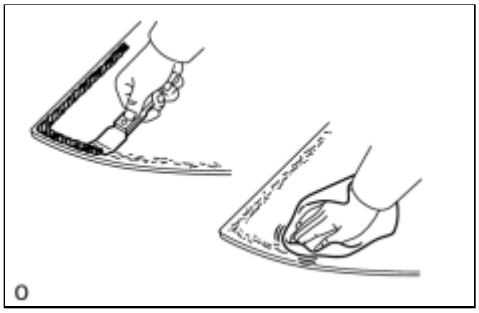
27. REMOVE NO. 2 WINDSHIELD GLASS STOPPER

(a) Using a scraper, remove the 2 No. 2 windshield glass stoppers.

NOTICE:

- Be careful not to damage the windshield glass.
- Be sure to replace the 2 No. 2 windshield glass stoppers with new ones.

28. REMOVE NO. 1 WINDSHIELD GLASS STOPPER (for 2-piece Type)

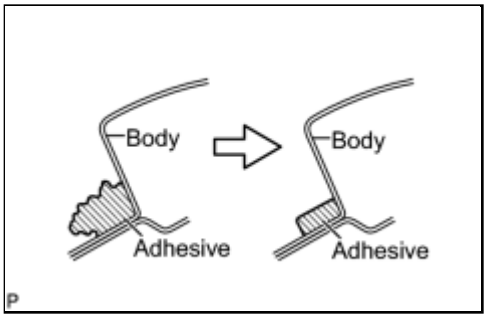


(a) Remove the 2 No. 1 windshield glass stoppers.

NOTICE:

Be sure to replace the 2 No. 1 windshield glass stoppers with new ones.

29. CLEAN WINDSHIELD GLASS



(a) Using a scraper, remove the damaged stoppers, dams and adhesive sticking to the windshield glass.

(b) Clean the outer edges of the glass with a non-residue solvent.

- Do not touch the glass surface after cleaning it.
- Even if using a new windshield glass, clean it with a non-residue solvent.

30. CLEAN VEHICLE BODY

(a) Clean and shape the contact surface of the vehicle body.

(1) On the contact surface of the vehicle body, use a knife to cut away excess adhesive as shown in the illustration.

NOTICE:

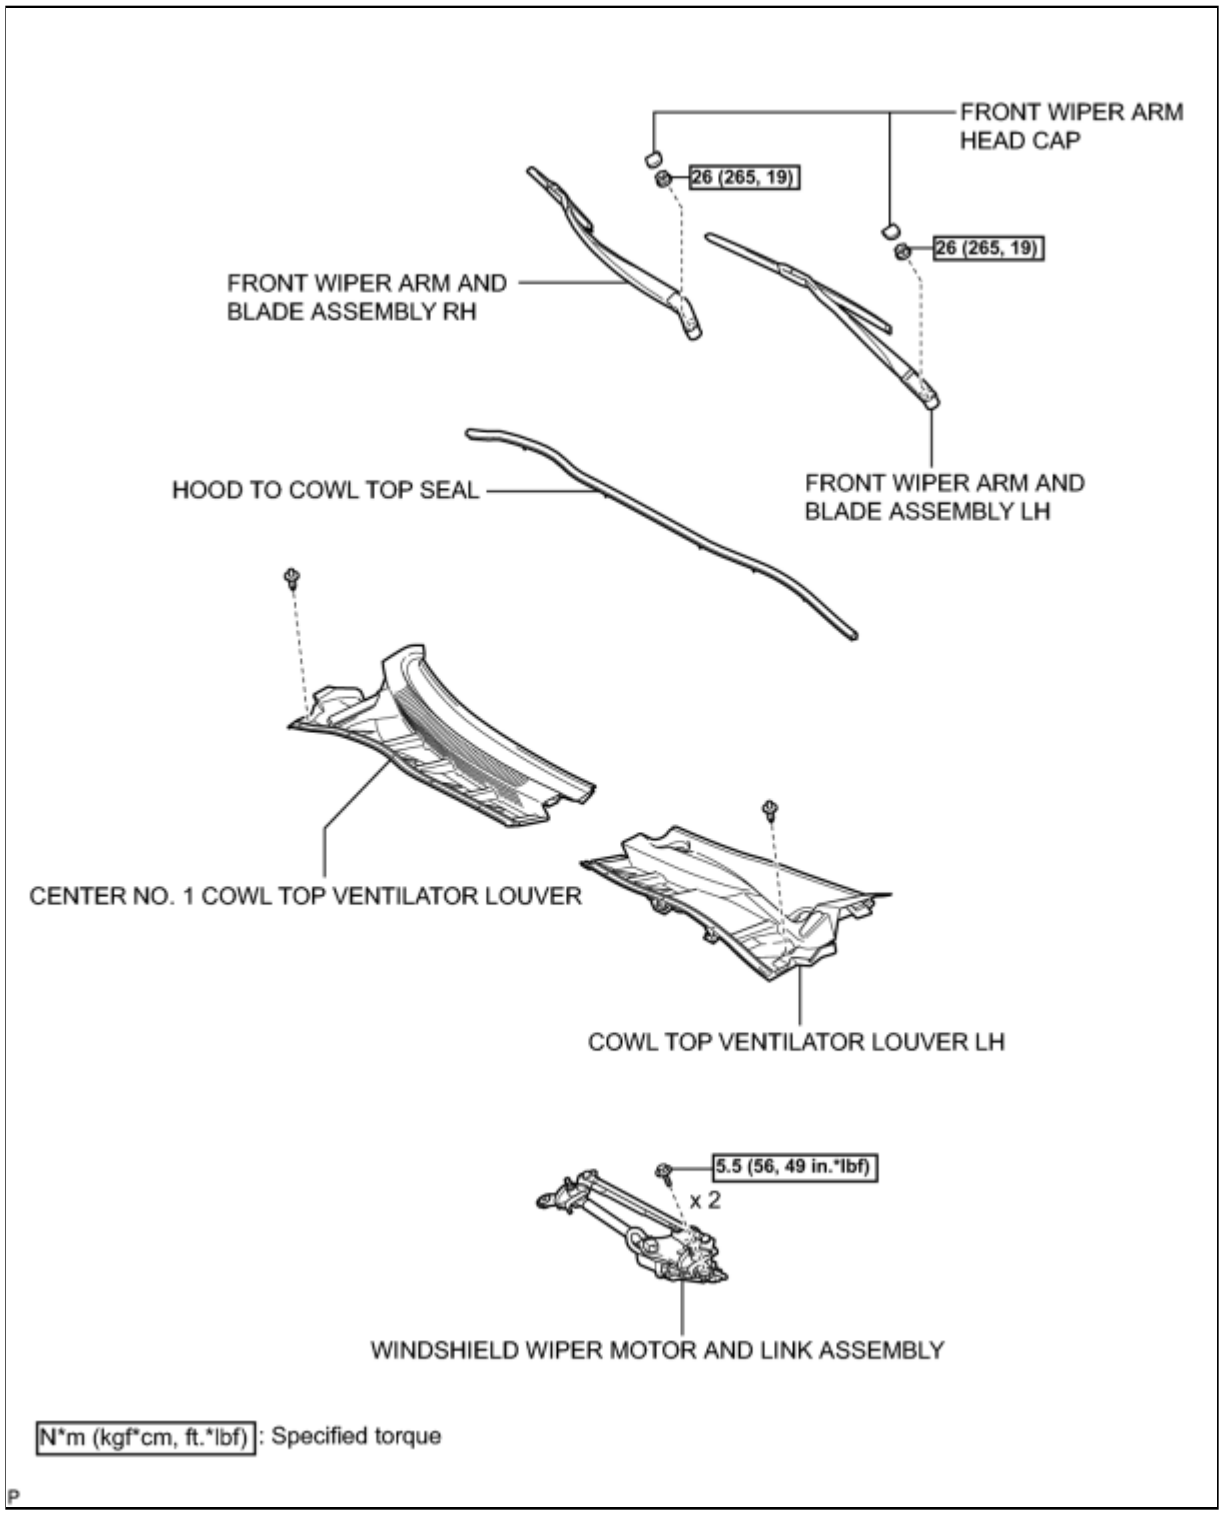
Be careful not to damage the vehicle body.

HINT:

Leave as much adhesive on the vehicle body as possible.

(b) Clean the contact surface of the vehicle body with cleaner.

HINT:



Even if all the adhesive has been removed, clean the vehicle body.

Title: WIPER / WASHER: FRONT WIPER MOTOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY

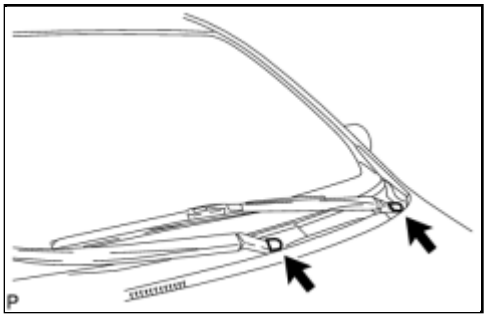
(a) Operate the windshield wiper motor.

(b) Stop the windshield wiper motor operation.

(c) Check the automatic stop position.

OK:

The windshield wipers stop at the positions shown in the illustration.



If the result is not as specified, the windshield wiper motor may have a malfunction.

AREA	MEASUREMENT
A	27.5 to 42.5 mm (1.08 to 1.67 in.)
B	22.5 to 37.5 mm (0.886 to 1.48 in.)

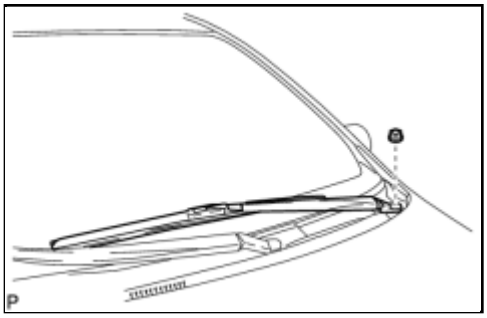
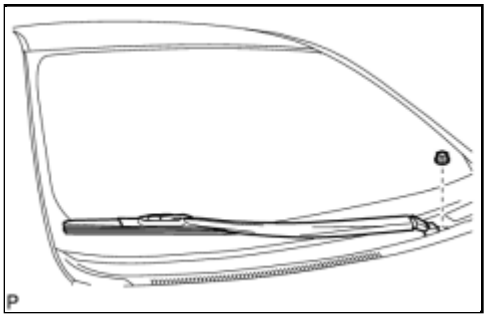
Title: WIPER / WASHER: FRONT WIPER MOTOR: REMOVAL (2010 Corolla)		



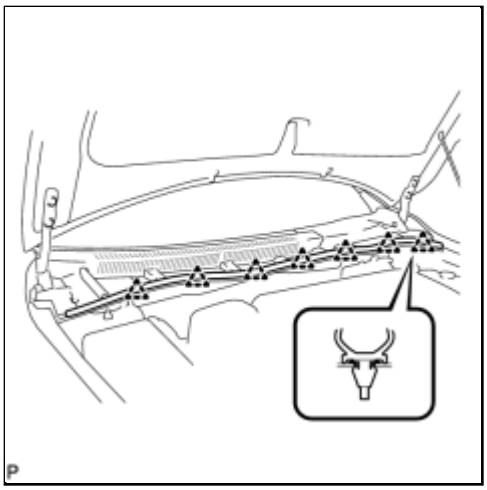
REMOVAL

1. REMOVE FRONT WIPER ARM HEAD CAP



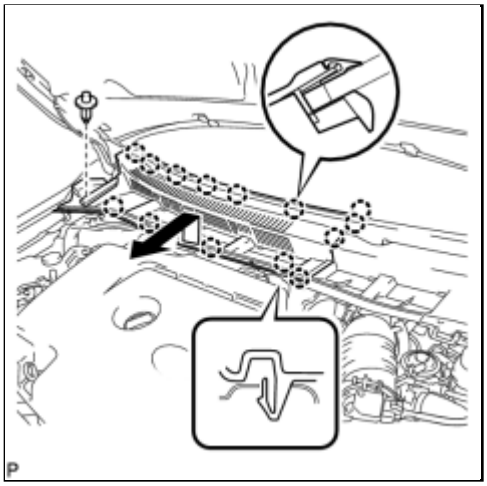
(a) Remove the 2 windshield wiper arm covers.

2. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH



(a) Remove the nut and the front wiper arm and blade assembly LH.

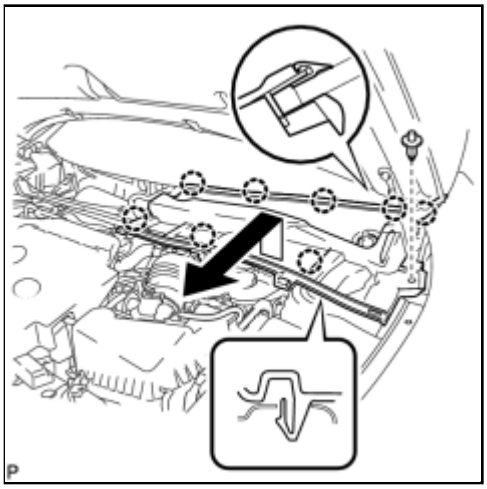
3. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH



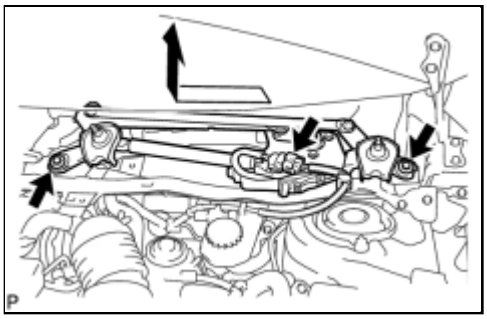
(a) Remove the nut and the front wiper arm and blade assembly RH.

4. REMOVE HOOD TO COWL TOP SEAL

(a) Disengage the 7 clips and remove the hood to cowl top seal.



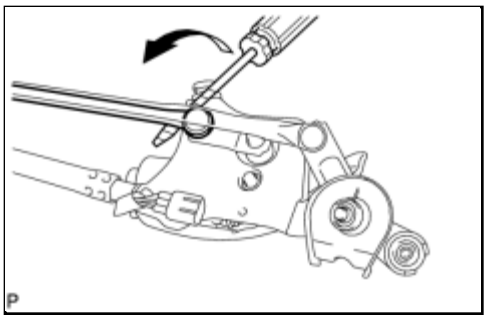
5. REMOVE CENTER NO. 1 COWL TOP VENTILATOR LOUVER



(a) Disengage the clip and 14 claws, and remove the center No. 1 cowl top ventilator louver.

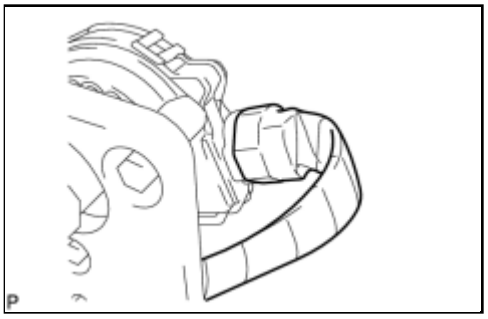
6. REMOVE COWL TOP VENTILATOR LOUVER LH

(a) Disengage the clip and 8 claws, and remove the cowl top ventilator louver LH.

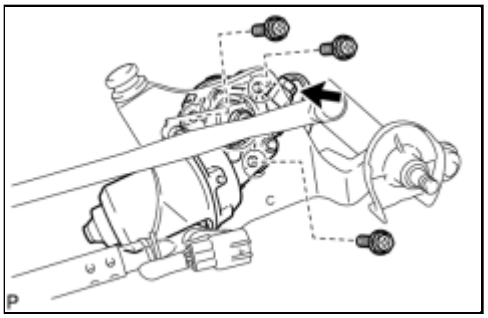


7. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

(a) Disconnect the connector.



(b) Remove the 2 bolts and the windshield wiper motor and link assembly.



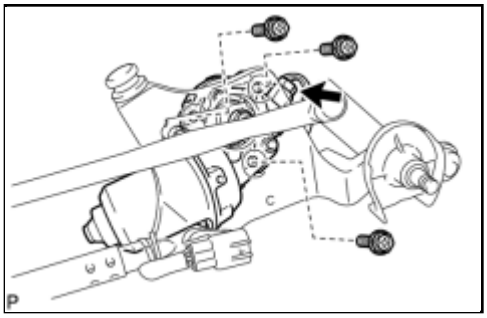
8. REMOVE WINDSHIELD WIPER MOTOR ASSEMBLY

(a) Using a screwdriver with its tip taped, disconnect the rod of the windshield wiper link assembly from the crank arm pivot of the windshield wiper motor assembly as shown in the illustration.

(b) Remove the electrical tape from the wire harness so that the connector can be disconnected.

(c) Disconnect the connector.

(d) Remove the 3 bolts and the windshield wiper motor assembly .



HINT:

If the windshield wiper motor assembly cannot be removed from the windshield wiper link assembly, turn the crank arm so that the windshield wiper motor assembly can be removed.

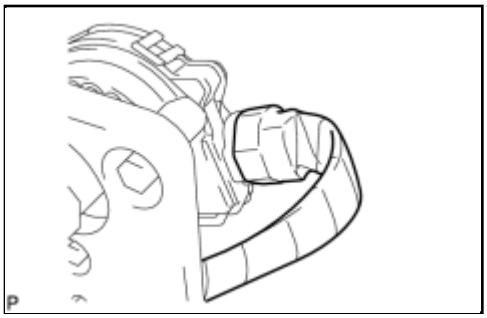
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XJ300GX
Title: WIPER / WASHER: FRONT WIPER MOTOR: INSTALLATION (2010 Corolla)		

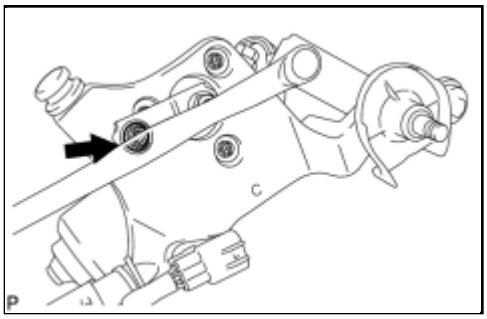
INSTALLATION



1. INSTALL WINDSHIELD WIPER MOTOR ASSEMBLY

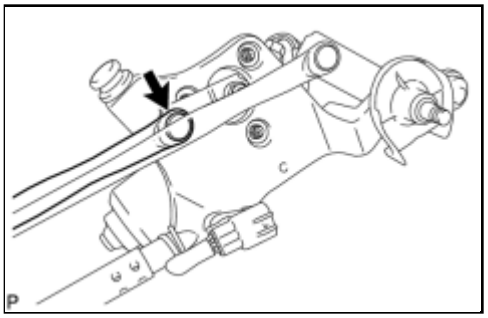
(a) Install the windshield wiper motor assembly with the 3 bolts.

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)



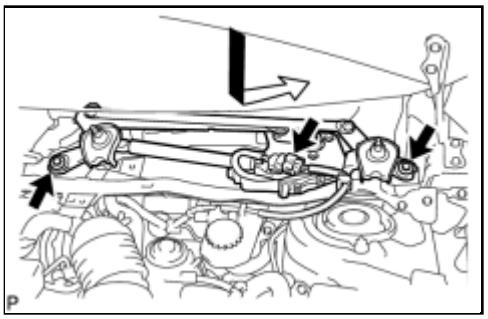
(b) Connect the connector.

(c) Apply new electrical tape to the wire harness.



HINT:

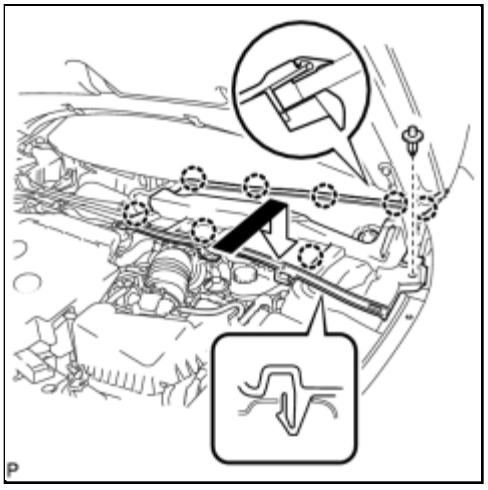
For the area where the electrical tape was removed, apply new electrical tape so that the wire harness is firmly attached to the board.



(d) Apply MP grease to the crank arm pivot of the windshield wiper motor assembly.

(e) Connect the rod of the windshield wiper link assembly to the crank arm pivot of the windshield wiper motor assembly.

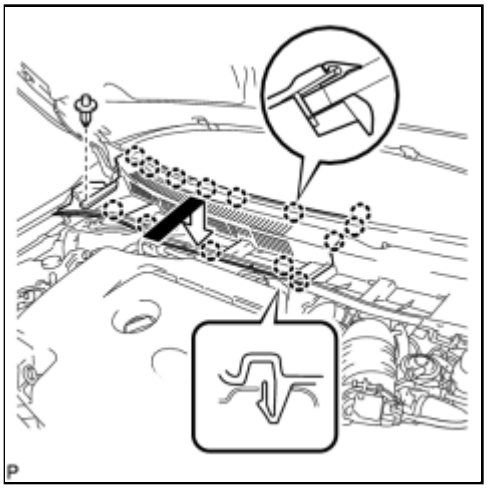
2. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY



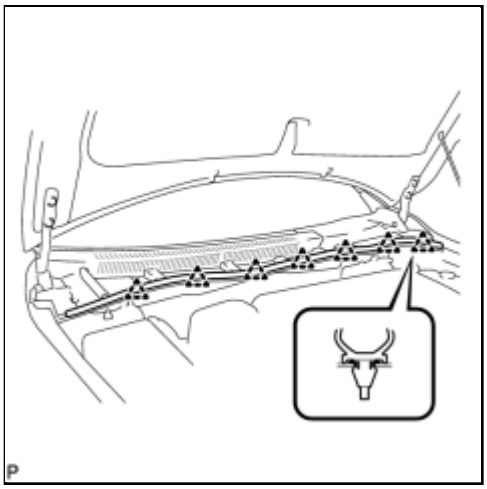
(a) Install the windshield wiper motor and link assembly with the 2 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

(b) Connect the connector.



3. INSTALL COWL TOP VENTILATOR LOUVER LH

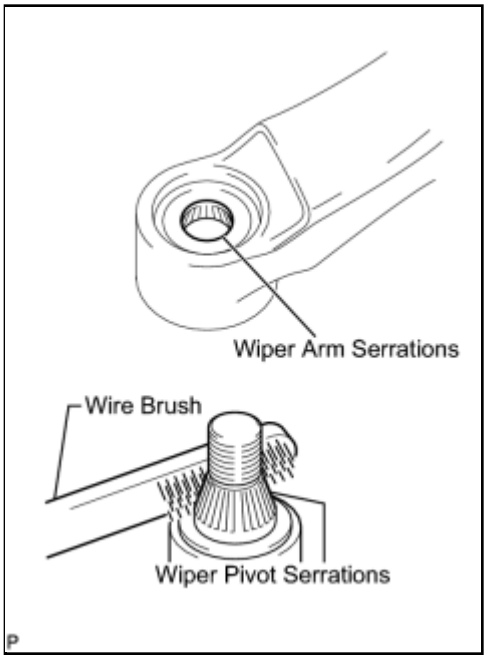


(a) Engage the clip and 8 claws, to install the cowl top ventilator louver LH.

4. INSTALL CENTER NO. 1 COWL TOP VENTILATOR LOUVER

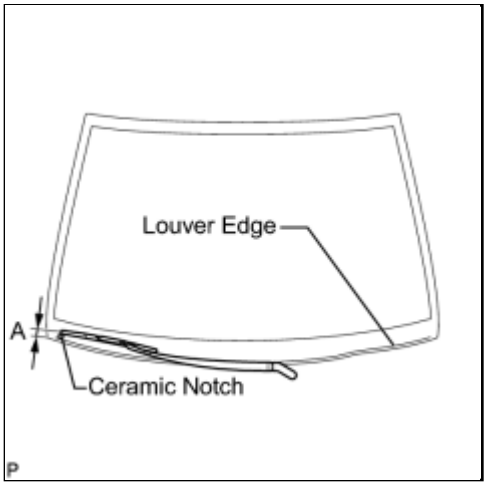
(a) Engage the clip and 14 claws, to install the center No. 1 cowl top ventilator louver.

5. INSTALL HOOD TO COWL TOP SEAL



(a) Engage the 7 clips to install the hood to cowl top seal.

6. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH



(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.

(b) Clean the wiper arm serrations.

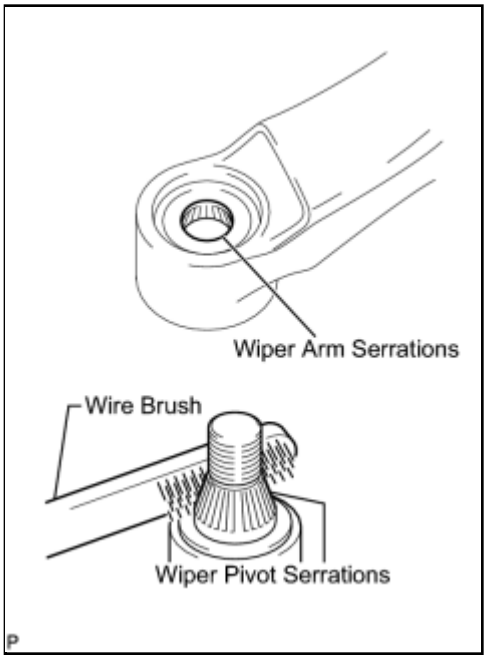
(c) When reinstalling:

(1) Clean the wiper pivot serrations with a wire brush.

(d) Install the front wiper arm and blade assembly RH with the nut to the position shown in the illustration.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

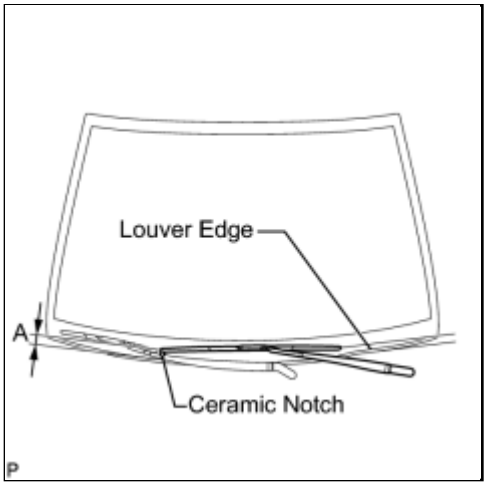
HINT:



Hold the arm hinge by hand to fasten the nut.

AREA	MEASUREMENT
A	27.5 to 42.5 mm (1.08 to 1.67 in.)

7. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH



(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.

(b) Clean the wiper arm serrations.

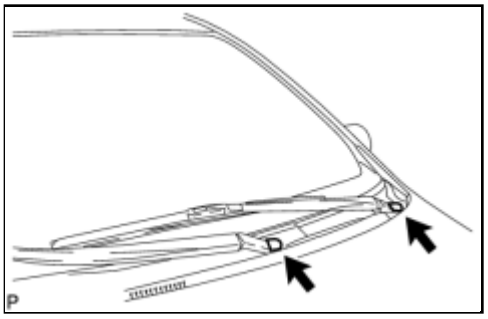
(c) When reinstalling:

(1) Clean the wiper pivot serrations with a wire brush.

(d) Install the front wiper arm and blade assembly LH with the nut to the position shown in the illustration.

Torque: 26 N·m (265 kgf·cm, 19ft·lbf)

HINT:

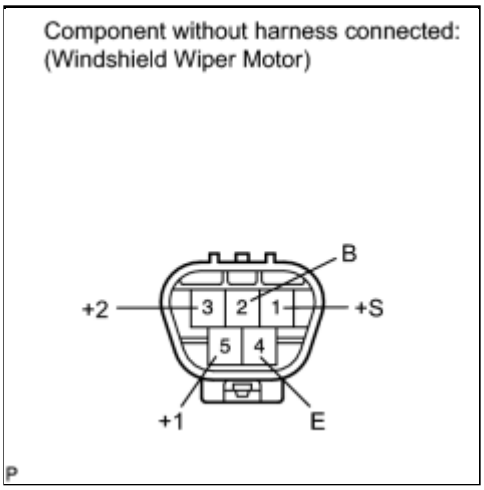


Hold the arm hinge by hand to fasten the nut.

AREA	MEASUREMENT
A	22.5 to 37.5 mm (0.886 to 1.48 in.)

(e) Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and the wipers do not come into contact with the vehicle body.

8. INSTALL FRONT WIPER ARM HEAD CAP



(a) Install the 2 caps.

D

P

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XJR00OX
Title: WIPER / WASHER: FRONT WIPER MOTOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY

(a) Check LO operation.

(1) Connect a battery positive (+) lead to terminal 5 (+1) and a negative (-) lead to terminal 4 (E), and check that the motor operates at low speed (LO).

OK:

Motor operates at low speed (LO).

(b) Check HI operation.

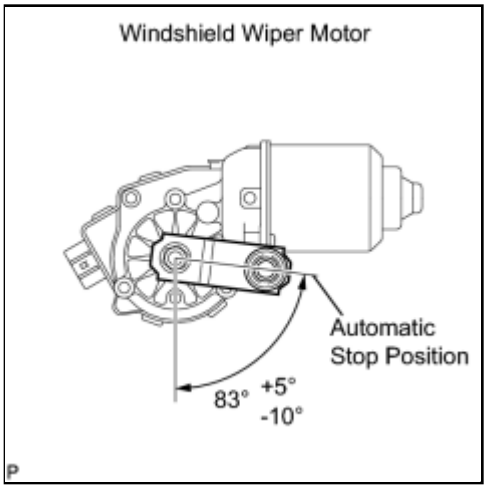
(1) Connect a battery positive (+) lead to terminal 3 (+2) and a negative (-) lead to terminal 4 (E), and check that the motor operates at high speed (HI).

OK:

Motor operates at high speed (HI).

(c) Check automatic stop operation.

(1) Connect a battery positive (+) lead to terminal 5 (+1) and a negative (-) lead to terminal 4 (E). With the motor rotating at low speed (LO), disconnect terminal 5 (+1) to stop the wiper motor operation at any position other than the automatic stop position.



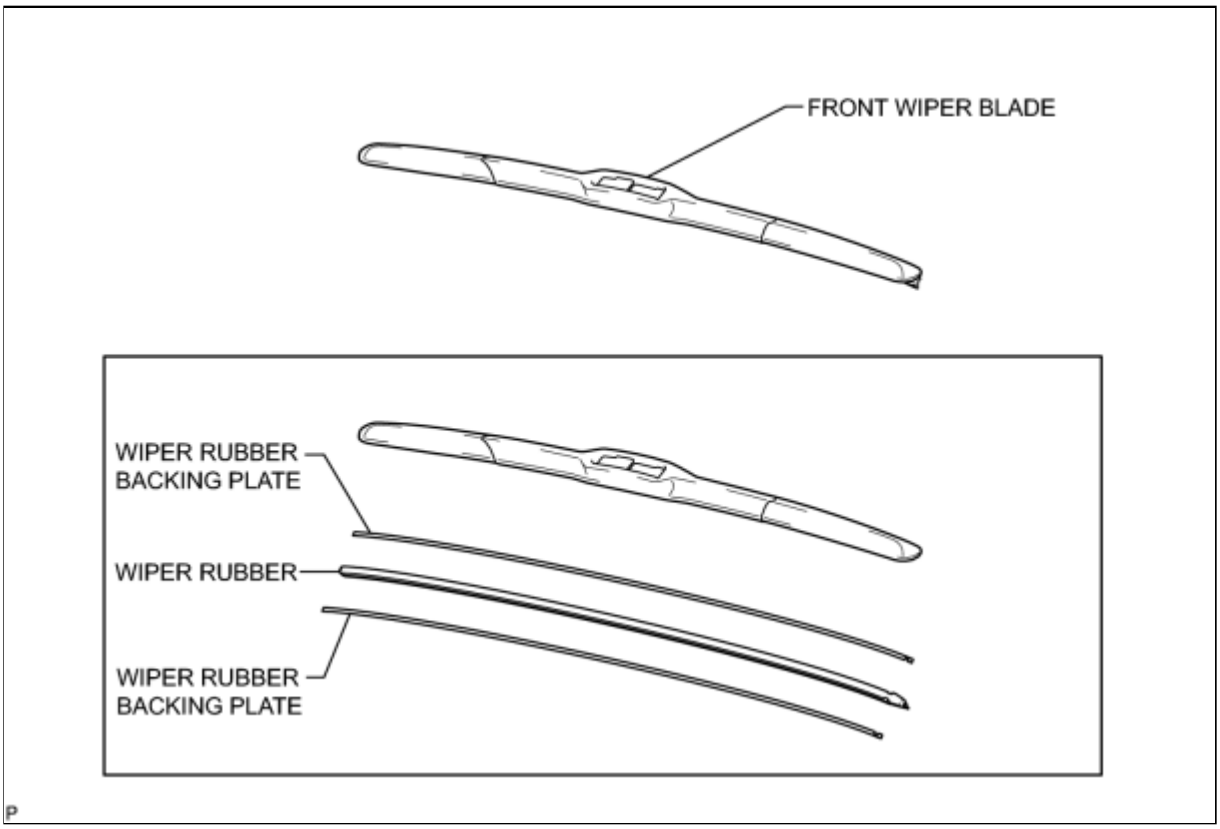
(2) Using SST, connect terminals 1 (+S) and 5 (+1). Then connect a battery positive (+) lead to terminal 2 (B) and a negative (-) lead to terminal 4 (E) to restart the motor operation at low speed (LO).

SST: 09843-18040

(3) Check that the motor stops automatically at the automatic stop position.

OK:

Motor stops automatically at the automatic stop position.



If the result is not as specified, replace the motor assembly.

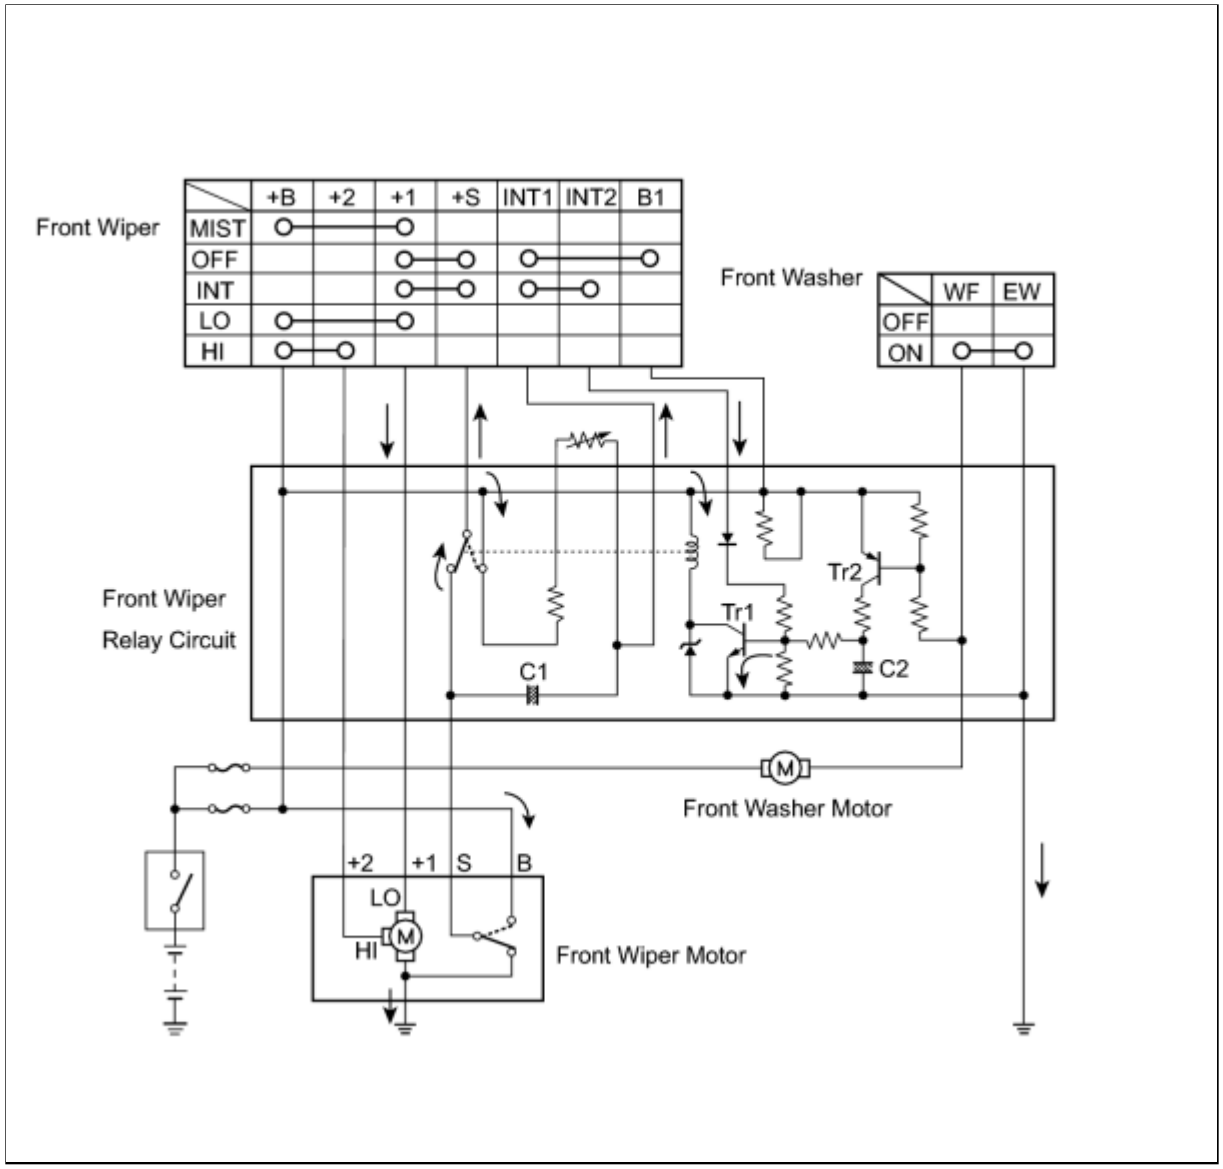
Title: WIPER / WASHER: WIPER AND WASHER SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. WASHER LINKED OPERATION

(a) This system operates the front wipers at low speed immediately after a jet of washer fluid when the front washer switch is turned on for 0.3 seconds or more. The system operates the front wipers at low speed for approximately 2.2 seconds and then stops operation when the washer switch is turned on for 1.5 seconds or more.



2. INTERMITTENT OPERATION

(a) The system operates the front wipers once in approximately 1.6 to 10.7 seconds when the front wiper switch is turned to the INT position. The intermittent time can be adjusted from 1.6 to 10.7 seconds by using the intermittent time adjust dial.

(b) If the front wiper switch is turned to the INT position, current flows from the already charged capacitor C1 through terminals INT1 and INT2 of the front wiper switch to Tr1 (transistor). When Tr1 turns on, current flows from terminal +S of the front wiper switch to terminal +1 of the front wiper switch, to terminal +1 of the wiper motor, to the wiper motor and finally to ground, causing the wiper motor to operate. At the same time, current flows from capacitor C1 to terminal INT1 and INT2 of the front wiper switch. When the current flows from capacitor C1 ends, Tr1 shuts off the relay to stop the wiper motor.

When the relay contact point turns off, capacitor C1 begins to charge again and Tr1 remains off until charging has been completed. This period corresponds to the intermittent time. When capacitor C1 is fully charged, Tr1 turns on and then the relay contact point turns on, causing the motor to operate again. This cycle is the intermittent operation.

The intermittent time can be adjusted by using the intermittent time adjust dial (variable resistor) to change the charge time of capacitor C1.

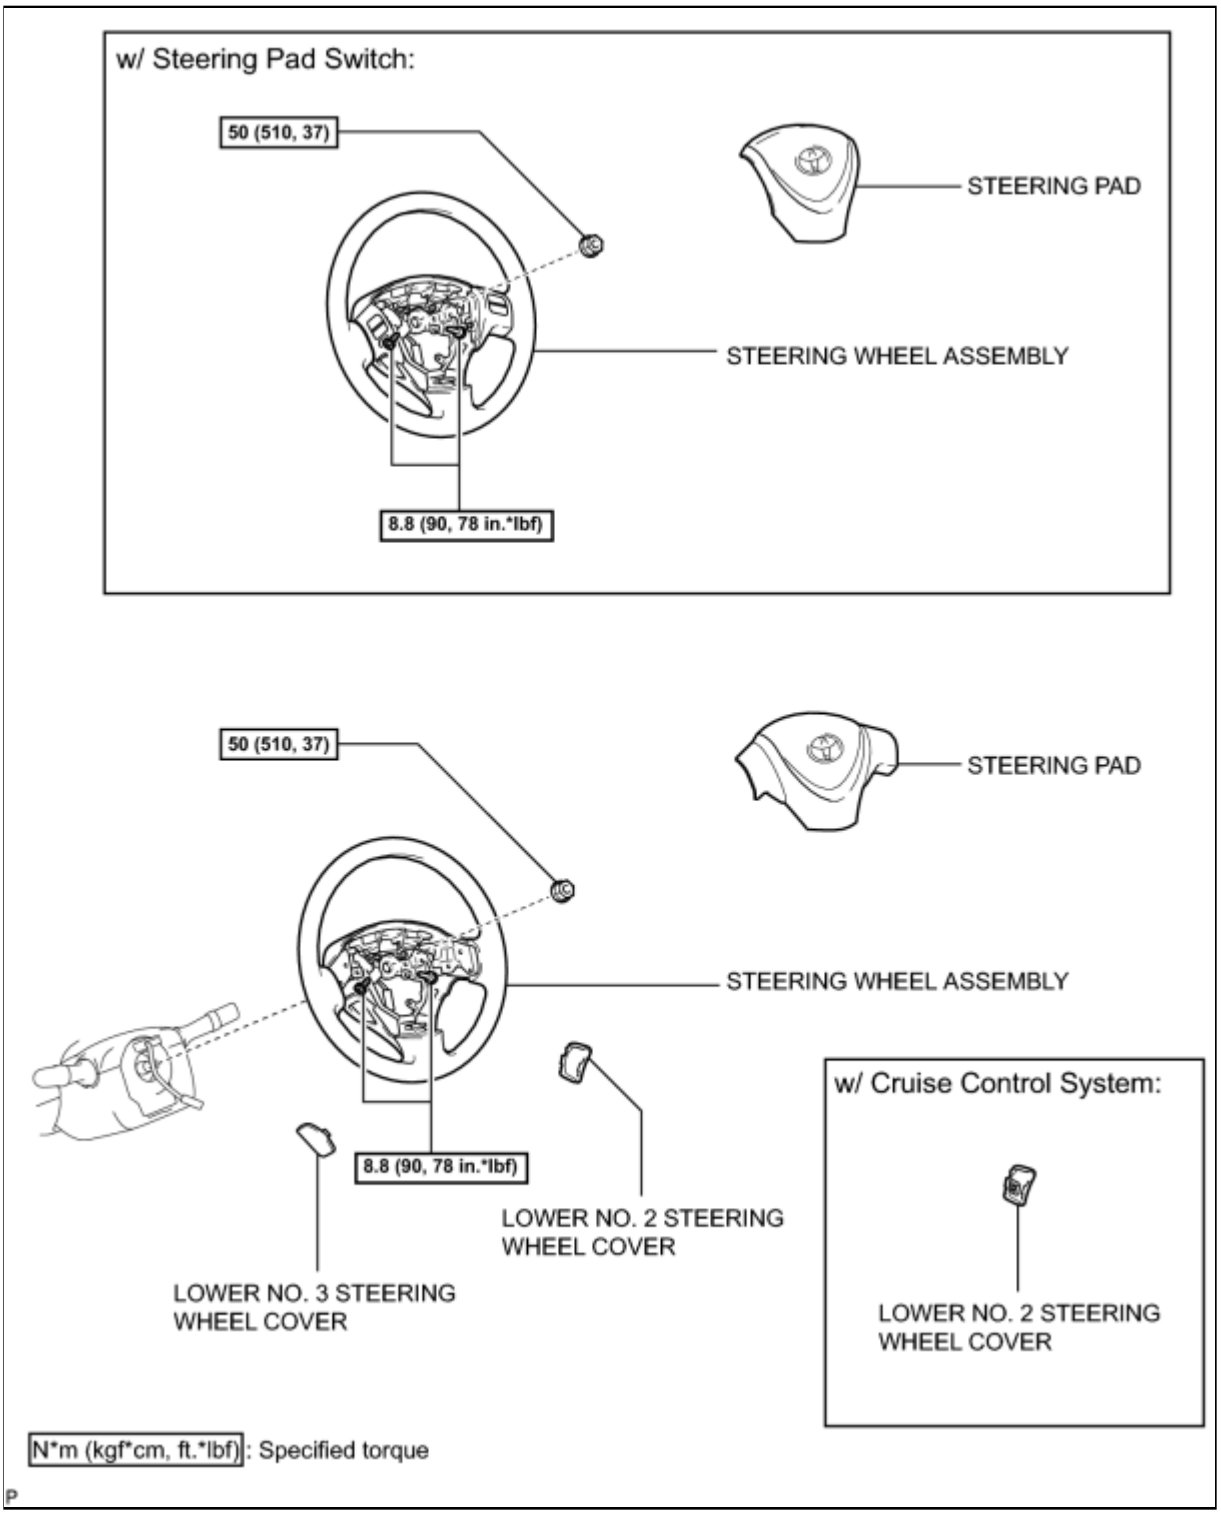
PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.



Wiper and Washer System

SYMPTOM	SUSPECTED AREA	SEE PAGE
Front wiper and washer system do not operate.	Windshield wiper switch	INFO

Title: WIPER / WASHER: WIPER SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Check the front wiper switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E10-1 (+S) - E10-3 (+1)	INT	Below 1 Ω
	OFF	
E10-2 (+B) - E10-3 (+1)	MIST	
	LO	
E10-2 (+B) - E10-4 (+2)	HI	

If the result is not as specified, replace the switch assembly.

(b) Check the front washer switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E9-2 (EW) - E9-3 (WF)	ON	Below 1 Ω
	OFF	10 kΩ or higher

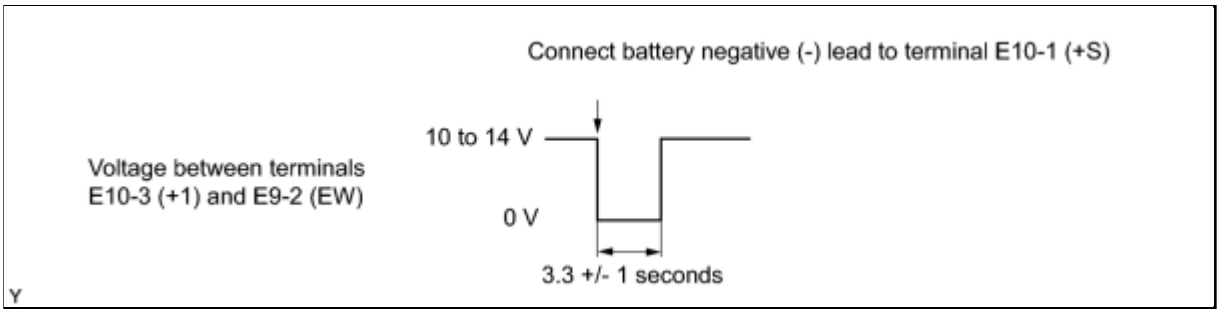
If the result is not as specified, replace the switch assembly.

(c) Check intermittent operation (w/o Intermittent timing adjustment).

(1) Connect a voltmeter positive (+) lead to terminal E10-3 (+1) and a negative (-) lead to terminal E9-2 (EW).

(2) Connect a battery positive (+) lead to terminal E10-2 (+B) and a negative (-) lead to

terminals E9-2 (EW) and E10-1 (+S).



(3) Turn the front wiper switch to the INT position.

(4) Connect a battery positive (+) lead to terminal E10-1 (+S) for 5 seconds.

(5) Connect a battery negative (-) lead to terminal E10-1 (+S). Operate the intermittent wiper relay and check the voltage between terminals E10-3 (+1) and E9-2 (EW).

OK:

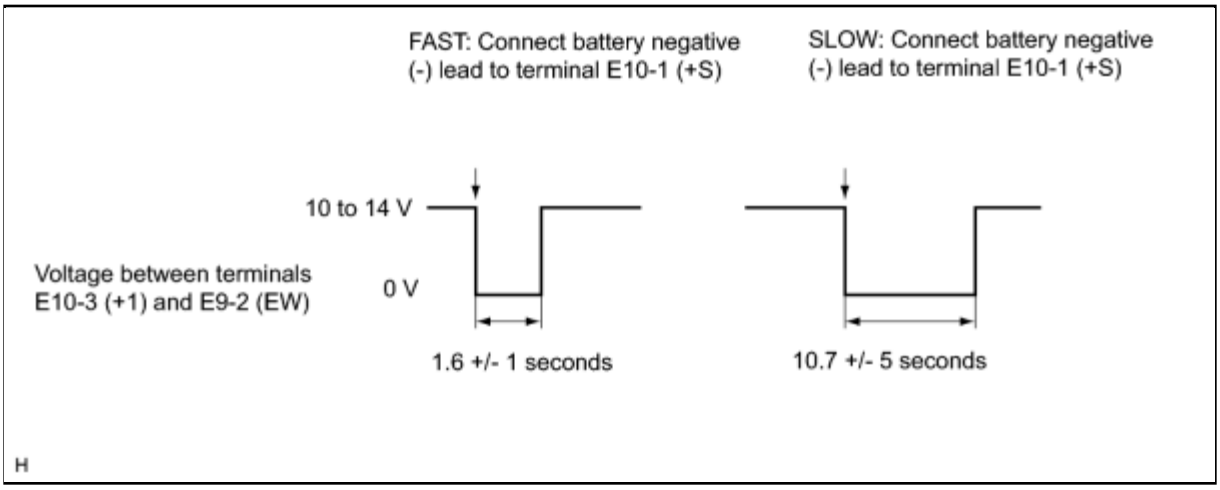
Voltage changes as shown in the following illustration.

If the result is not as specified, replace the switch assembly.

(d) Check intermittent operation (w/ Intermittent timing adjustment).

(1) Connect a voltmeter positive (+) lead to terminal E10-3 (+1) and a negative (-) lead to terminal E9-2 (EW).

(2) Connect a battery positive (+) lead to terminal E10-2 (+B) and a negative (-) lead to terminals E9-2 (EW) and E10-1 (+S).



(3) Turn the front wiper switch to the INT position.

(4) Connect a battery positive (+) lead to terminal E10-1 (+S) for 5 seconds.

(5) Connect a battery negative (-) lead to terminal E10-1 (+S). Operate the intermittent wiper relay and check the voltage between terminals E10-3 (+1) and E9-2 (EW).

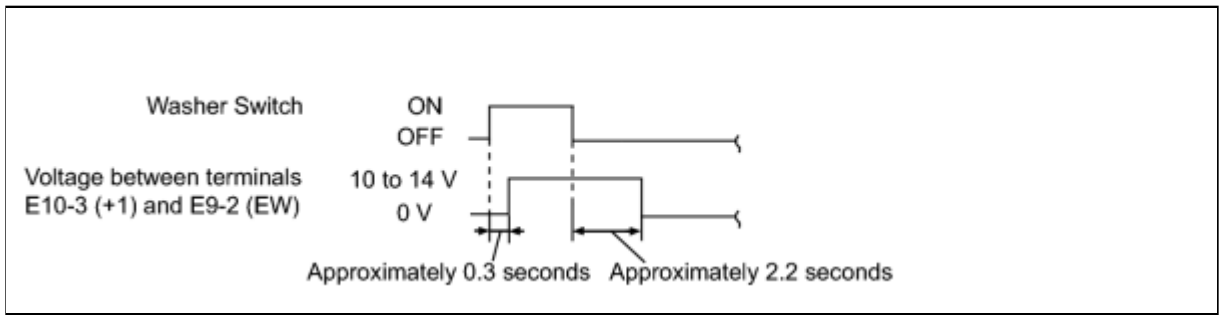
OK:

Voltage changes as shown in the illustration below.

If the result is not as specified, replace the switch assembly.

(e) Check front washer operation.

(1) Turn the front washer switch OFF.



(2) Connect a battery positive (+) lead to terminal E10-2 (+B) and a negative (-) lead to terminals E10-1 (+S) and E9-2 (EW).

(3) Connect a voltmeter positive (+) lead to E10-3 (+1) and a negative (-) lead to terminal E9-2 (EW).

(4) Turn the front washer switch ON and OFF, and check the voltage between terminals E10-3 (+1) and E9-2 (EW).

OK:

Voltage changes as shown in the following illustration.

If the result is not as specified, replace the switch assembly.

Title: WIPER / WASHER: WIPER SWITCH: REMOVAL (2010 Corolla)		

REMOVAL

1. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

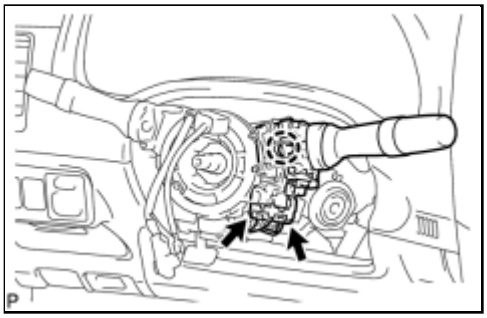
CAUTION:

Wait for 90 seconds after disconnecting the cable to prevent airbag deployment INFO .

3. REMOVE LOWER NO.3 STEERING WHEEL COVER INFO

4. REMOVE LOWER NO.2 STEERING WHEEL COVER INFO

5. REMOVE STEERING PAD INFO



6. REMOVE STEERING WHEEL ASSEMBLY INFO

7. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

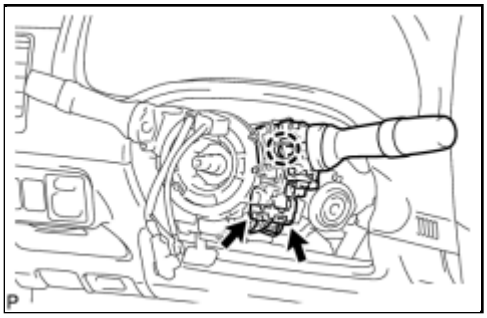
8. REMOVE LOWER STEERING COLUMN COVER INFO

9. REMOVE UPPER STEERING COLUMN COVER INFO

10. REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Disconnect the 2 connectors.

(b) Disengage the claw and remove the windshield wiper switch assembly as shown in the illustration.



NOTICE:

If the claw is pushed with excessive force, it may break.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XKC00LX
Title: WIPER / WASHER: WIPER SWITCH: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY

(a) Engage the claw and install the windshield wiper switch assembly as shown in the illustration.

(b) Connect the 2 connectors.

2. INSTALL UPPER STEERING COLUMN COVER INFO

3. INSTALL LOWER STEERING COLUMN COVER INFO

4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

5. TURN FRONT WHEELS TO FACE STRAIGHT AHEAD

6. ADJUST SPIRAL CABLE INFO

7. INSTALL STEERING WHEEL ASSEMBLY INFO

8. INSTALL STEERING PAD INFO

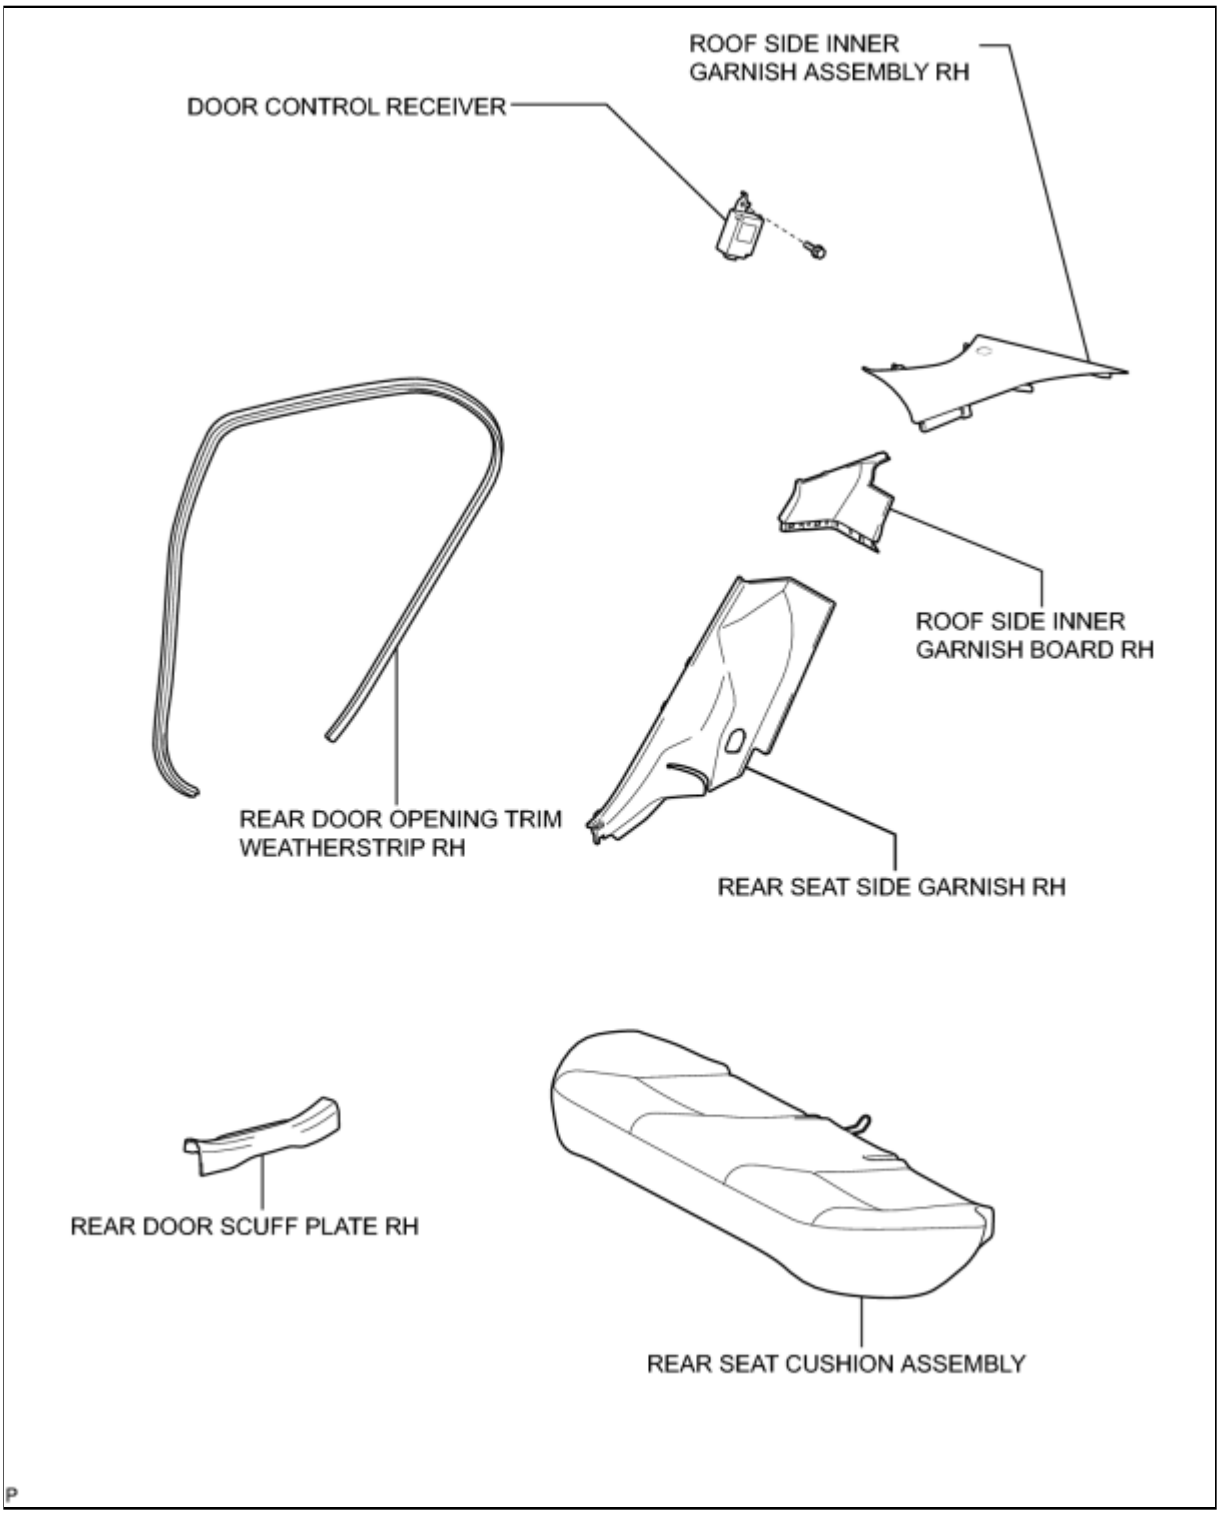
9. INSTALL LOWER NO.3 STEERING WHEEL COVER INFO

10. INSTALL LOWER NO.2 STEERING WHEEL COVER INFO

11. INSPECT STEERING WHEEL CENTER POINT

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

13. INSPECT STEERING PAD INFO



14. INSPECT SRS WARNING LIGHT

Title: DOOR LOCK: DOOR CONTROL SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

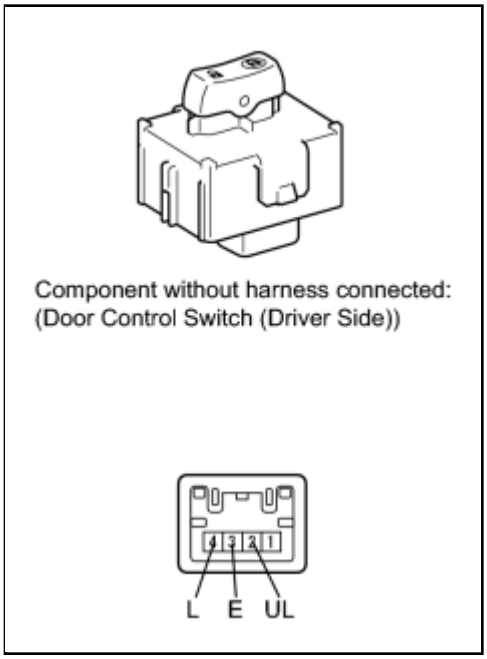
1. INSPECT POWER WINDOW MASTER SWITCH (for Driver Side with Power Window)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

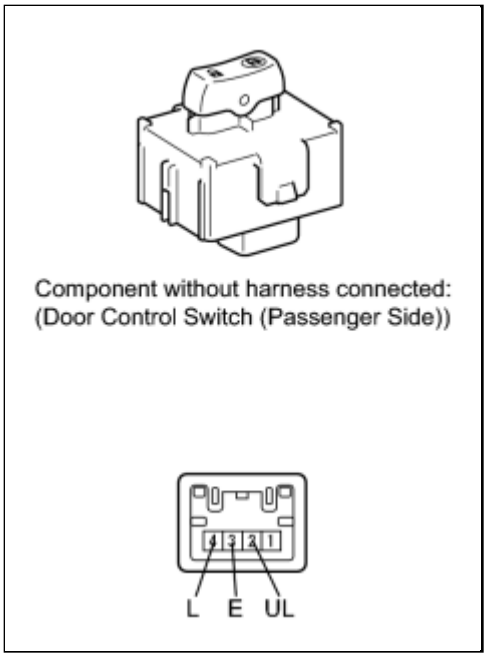
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (E) - 2 (L)	Lock	Below 1 Ω
1 (E) - 2 (L) 1 (E) - 9 (UL)	OFF (Free)	10 kΩ or higher
1 (E) - 9 (UL)	Unlock	Below 1 Ω

If the result is not specified, replace power window master switch.



2. INSPECT DOOR CONTROL SWITCH ASSEMBLY (for Driver Side without Power Window)

(a) Measure the resistance according to the value(s) in the table below.



Standard resistance:

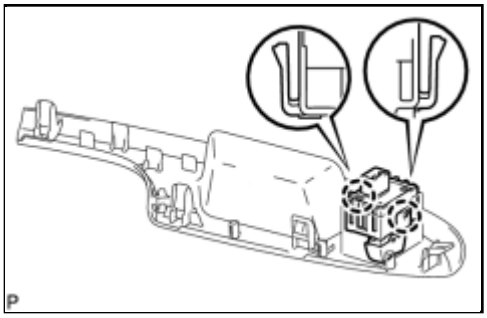
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (E) - 4 (L)	Lock	Below 1 Ω
3 (E) - 4 (L) 2 (UL) - 3 (E)	OFF (Free)	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 1 Ω

If the result is not specified, replace door control switch.

3. INSPECT DOOR CONTROL SWITCH ASSEMBLY (for Front Passenger Side)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (E) - 4 (L)	Lock	Below 1 Ω
3 (E) - 4 (L) 2 (UL) - 3 (E)	OFF (Free)	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 1 Ω

If the result is not specified, replace door control switch.

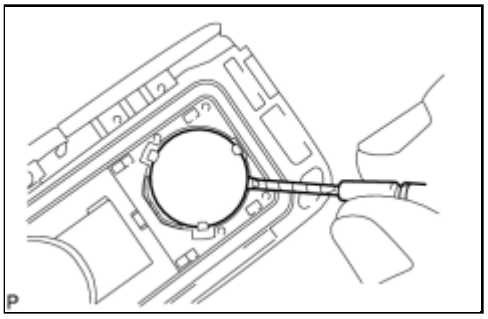
Title: DOOR LOCK: DOOR CONTROL TRANSMITTER (w/ Smart Key System): REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE TRANSMITTER BATTERY

(a) Remove the mechanical key.

(b) Insert a screwdriver into the gap, and turn the screwdriver to detach the cover.



HINT:

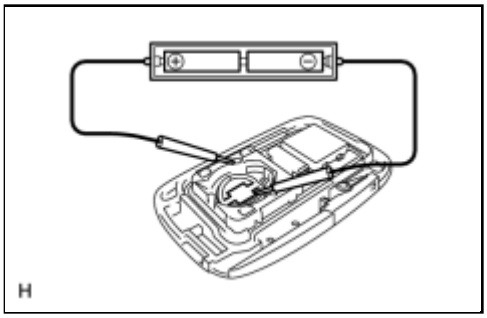
Tape the screwdriver tip before use.

(c) Insert a screwdriver into the gap and gently remove the battery (lithium battery).

NOTICE:

- Do not push the terminals with your finger.
- Do not forcibly pry up the battery (lithium battery) because doing so will deform the terminals.

- Do not touch the battery with wet hands. Water may result in corrosion.
- Do not touch or move any components inside the transmitter because handling the components may interfere with proper operation of the transmitter.



Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001L9A02BX
Title: DOOR LOCK: DOOR CONTROL TRANSMITTER (w/ Smart Key System): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER

(a) Inspect operation of the transmitter.

(1) Remove the battery (lithium battery) from the transmitter INFO .

(2) Install a new or normal battery (lithium battery).

HINT:

If a new or normal battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and apply 3 V to the transmitter, as shown in the illustration.

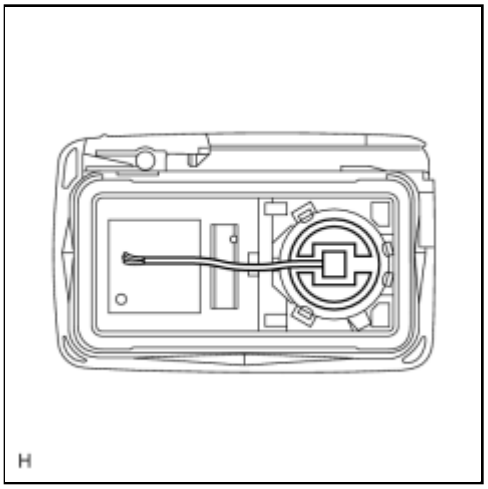
(3) From outside the vehicle, approximately 1 m (3.28 ft.) away from the driver side outside door handle, test the transmitter by pointing its key plate at the vehicle and pressing a transmitter switch.

OK:

The door lock can be operated via the transmitter.

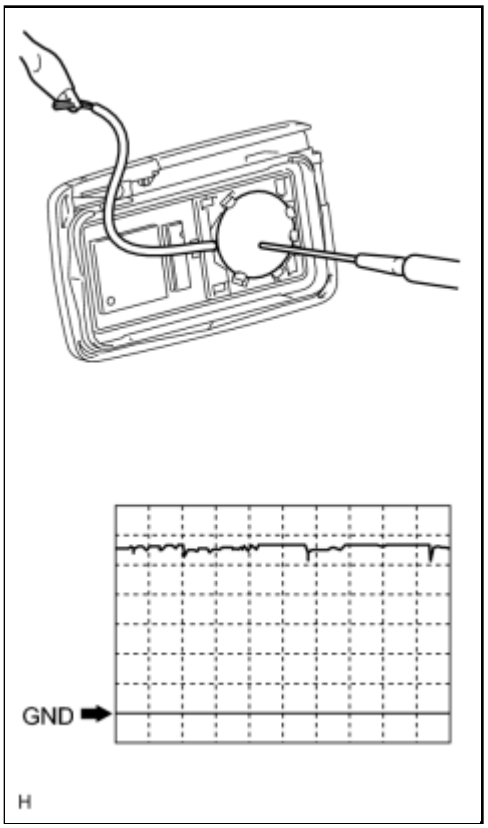
The LED comes on more than once.

- The operational area differs depending on the user, the way the transmitter is held, and the location.
- The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operation area may be shortened or the transmitter may not function.



(b) Inspect the battery capacity.

(1) Remove the battery from the electrical key transmitter that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) in diameter or less including wire sheath) with tape or equivalent to the negative terminal INFO .



NOTICE:

Do not wrap the lead wire around a terminal, wedge it between the terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

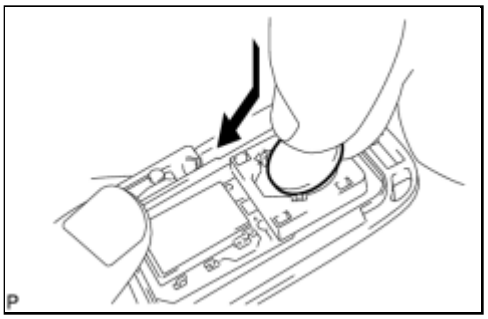
(2) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

(3) Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, while operating the lock switch of a door handle, bring the electrical key transmitter within the entry operating range to perform the measurement. For the entry operating range, refer to SYSTEM DESCRIPTION INFO **.**

Standard voltage:



ITEM	CONTENT
Tester Connection	Battery positive (+) - Battery negative (-)
Tool Setting	0.5 V/DIV., 100 ms/DIV.
Condition	Engine switch OFF, all doors closed and lock switch pushed
Specified Condition	2.2 to 3.2 V (Refer to the waveform)

If the result is not as specified, replace the transmitter battery.

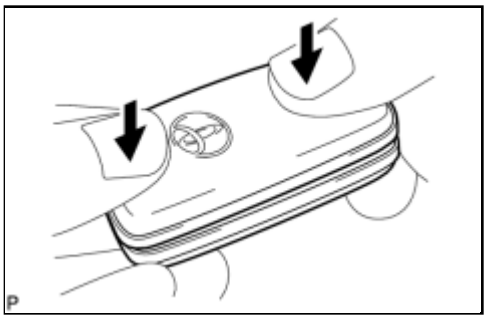
Title: DOOR LOCK: DOOR CONTROL TRANSMITTER (w/ Smart Key System): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL TRANSMITTER BATTERY

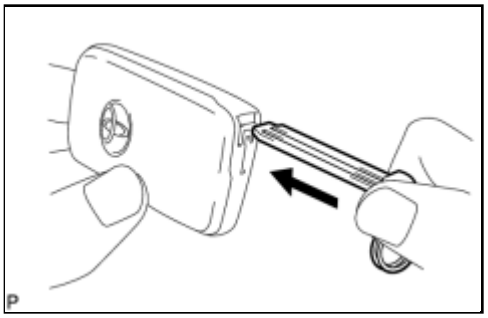


(a) Install a new battery (lithium battery) with the positive (+) side up as shown in the illustration.

(b) Press down gently on the battery to set it in place.

NOTICE:

- Be sure that the positive and negative sides of the transmitter battery are positioned correctly.
- Be careful not to bend the terminals of the transmitter battery during installation.
- Keep the interior of the transmitter case free of dust, water, and oil.

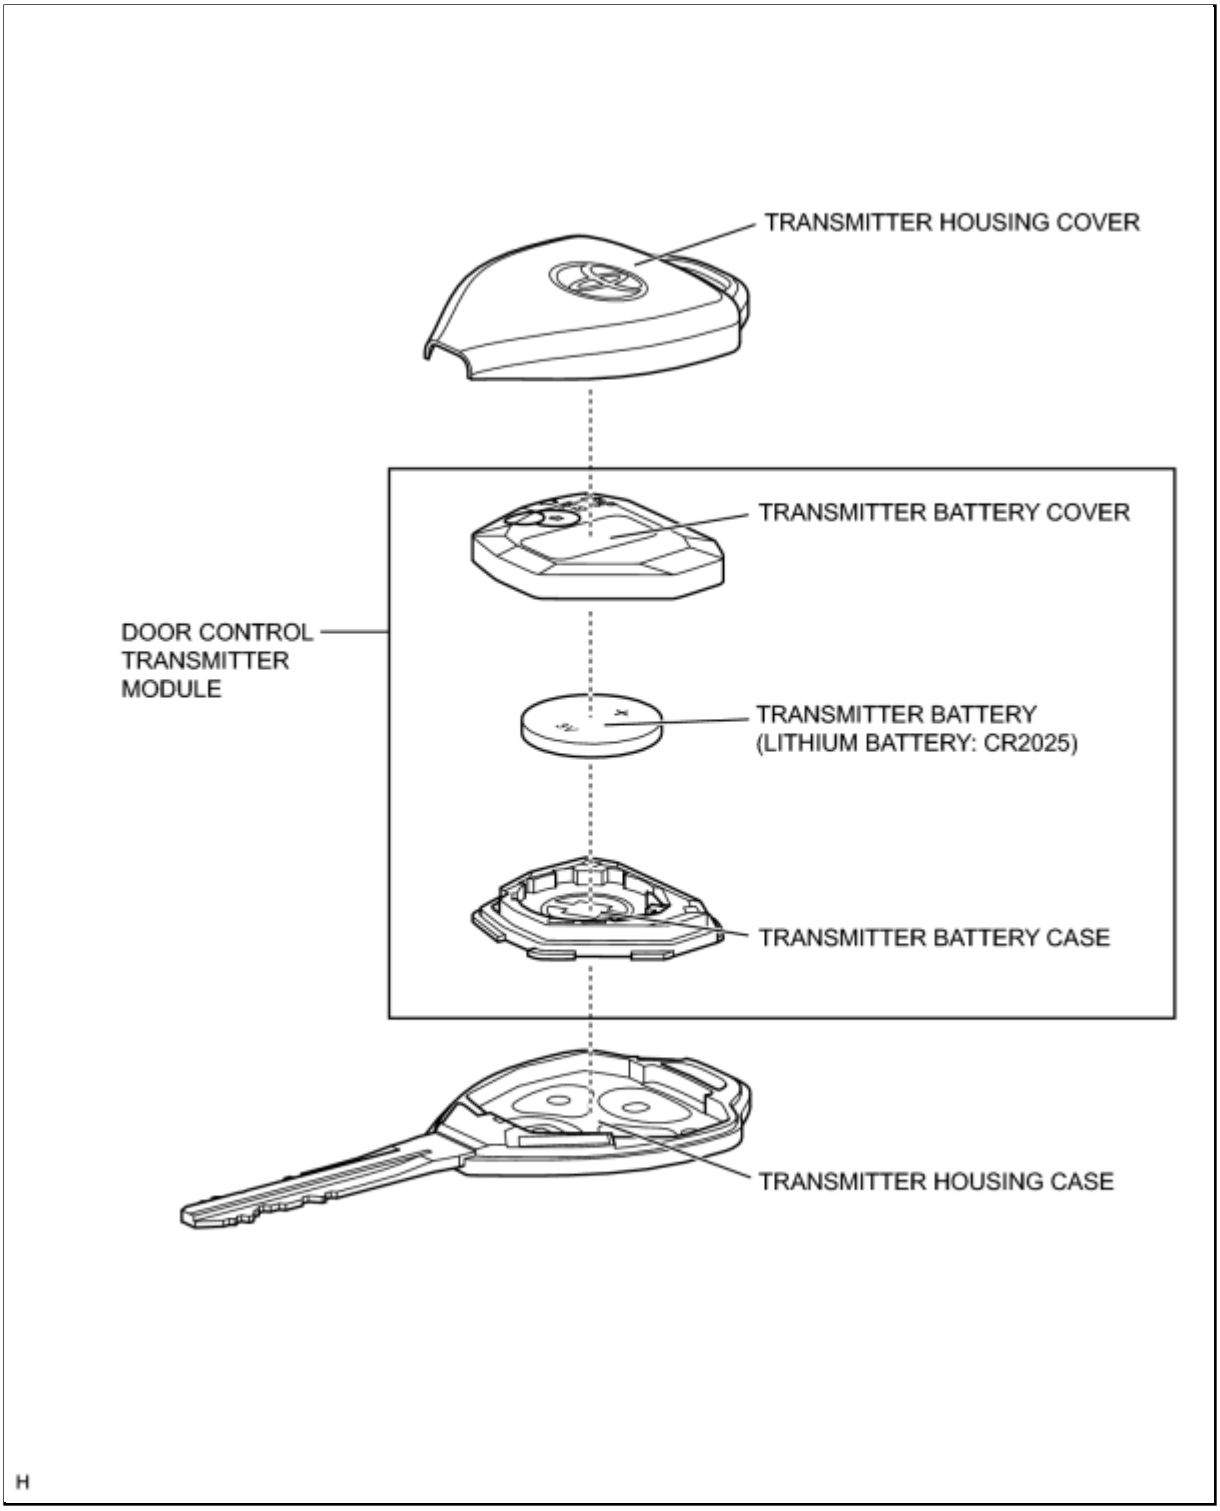


(c) Install the cover by pressing it as shown in the illustration.

(d) Install the mechanical key.

HINT:

After the installation, press one of the transmitter switches and check



that the LED illuminates.

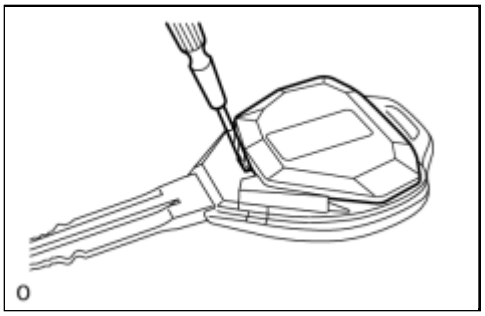
REMOVAL

1. REMOVE TRANSMITTER HOUSING COVER

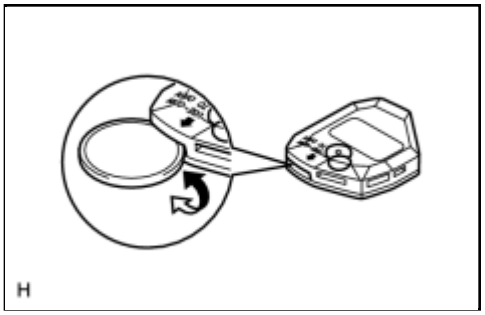


(a) Using a screwdriver with its tip wrapped in protective tape, pry open the transmitter housing cover.

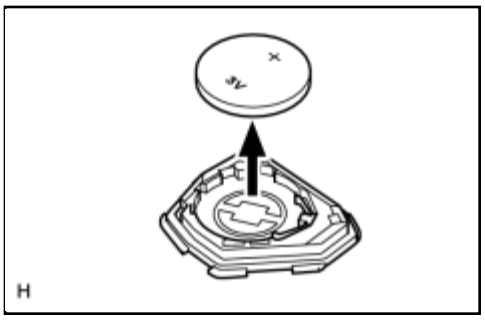
NOTICE:

Do not forcibly pry the cover.

2. REMOVE DOOR CONTROL TRANSMITTER MODULE



(a) Using a screwdriver with its tip wrapped in protective tape, remove the door control transmitter module from the transmitter housing case.



NOTICE:

Handle each part with care as they are delicate electrical parts.

3. REMOVE TRANSMITTER BATTERY

(a) Twist the coin in the direction of the arrow mark in the illustration, and remove the transmitter battery cover.

(b) Remove the battery (lithium battery: CR2025).

NOTICE:

- Do not push the terminals with your finger.
- Do not forcibly pry up the battery. The terminals may become damaged.
- Do not touch the battery with wet hands. Water may cause rust.
- Do not touch or move any components inside the transmitter. It may cease to work.

Title: DOOR LOCK: FRONT DOOR LOCK: INSPECTION (2010 Corolla)		

INSPECTION

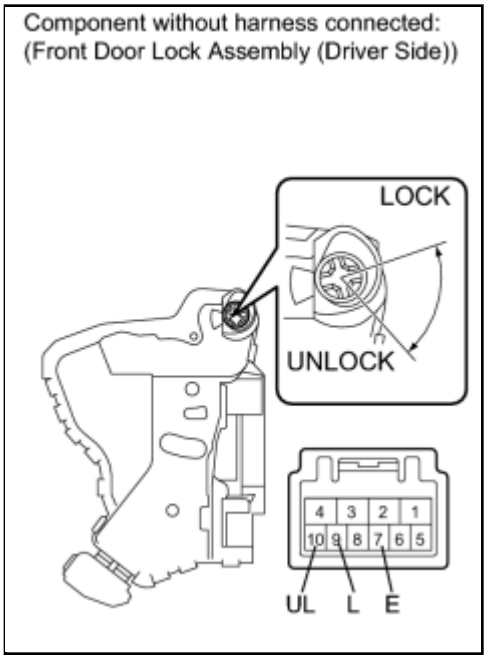
1. INSPECT FRONT DOOR LOCK ASSEMBLY (for Driver Side)

(a) Apply battery voltage to the motor terminals and check the operation of the door lock motor.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.



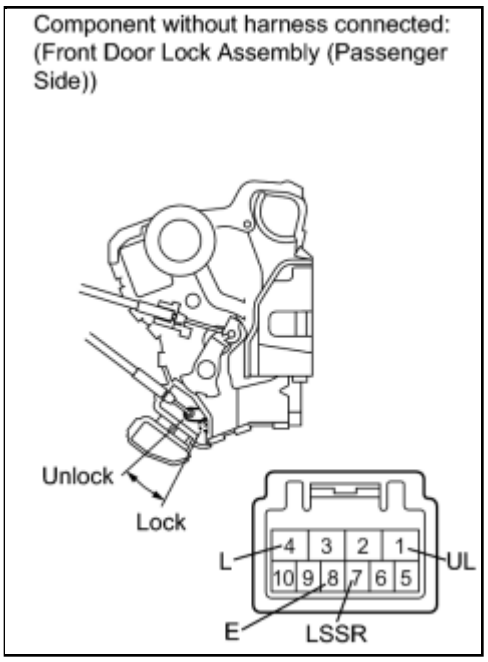
(b) Measure the resistance of the door lock position switch.

Standard resistance:

TESTER CONNECTION	MEASUREMENT CONDITION	DOOR LOCK CONDITION	SPECIFIED CONDITION
7 (E) - 8 (LSSR)	Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	Lock	10 kΩ or higher
7 (E) - 8 (LSSR)	Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

(c) Measure the resistance of the door key lock and unlock switch.



Standard resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
9 (L) - 7 (E)	ON (Door lock set to LOCK)	Below 1 Ω
9 (L) - 7 (E) 10 (UL) - 7 (E)	OFF (Free)	10 kΩ or higher
10 (UL) - 7 (E)	ON (Door lock set to UNLOCK)	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

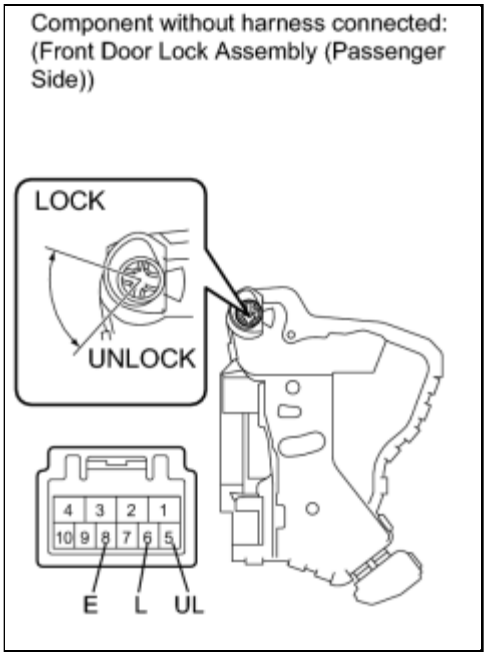
2. INSPECT FRONT DOOR LOCK ASSEMBLY (for Front Passenger Side)

(a) Apply battery voltage to the motor terminals and check the operation of the door lock motor.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	Lock
Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.



(b) Measure the resistance of the door lock position switch. (w/ Wireless Door Lock System)

Standard resistance:

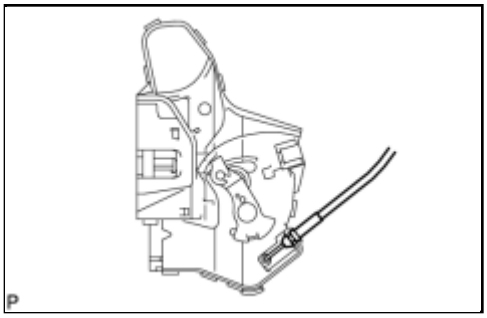
TESTER CONNECTION	MEASUREMENT CONDITION	DOOR LOCK CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	MEASUREMENT CONDITION	DOOR LOCK CONDITION	SPECIFIED CONDITION
7 (LSSR) - 8 (E)	Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	LOCK	10 kΩ or higher
7 (LSSR) - 8 (E)	Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	UNLOCK	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

(c) Measure the resistance of the door key lock and unlock switch. (w/o Wireless Door Lock System)

Standard resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
6 (L) - 8 (E)	ON (Door lock set to LOCK)	Below 1 Ω
6 (L) - 8 (E) 5 (UL) - 8 (E)	OFF (Free)	10 kΩ or higher
5 (UL) - 8 (E)	ON (Door lock set to UNLOCK)	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

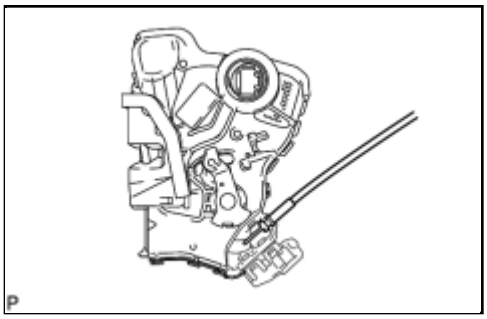
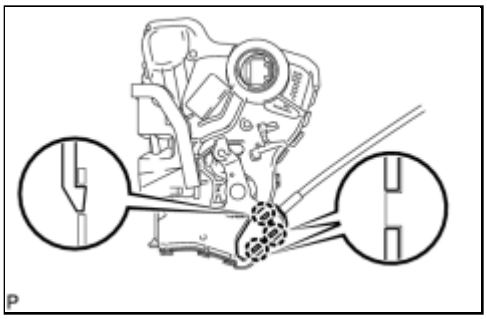
Title: DOOR LOCK: FRONT DOOR LOCK: INSTALLATION (2010 Corolla)		



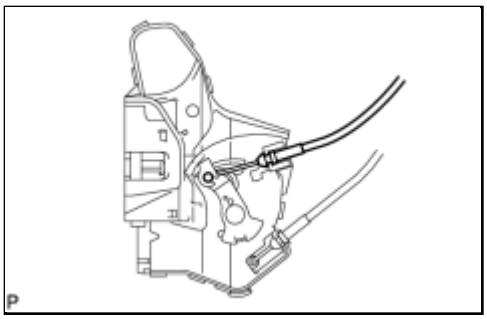
INSTALLATION

1. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)

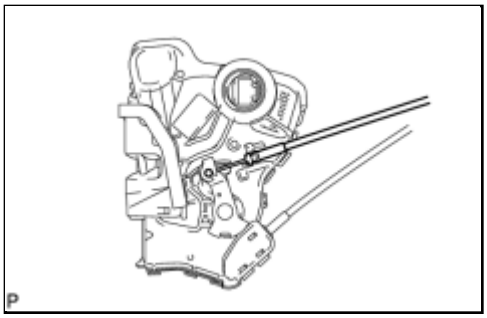


(a) Install the front door inside locking cable assembly.

2. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)



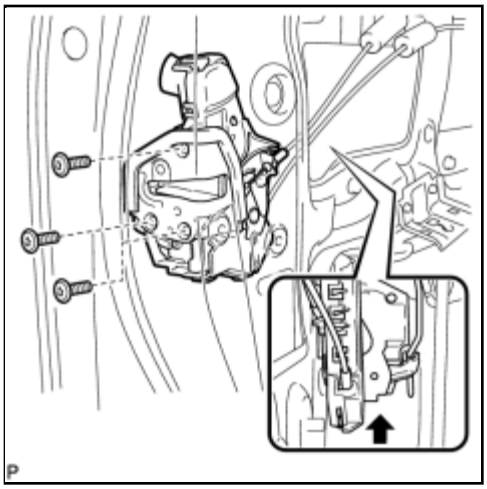
(a) Install the front door inside locking cable assembly.



(b) Engage the 3 claws.

3. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)

(a) Install the front door lock remote control cable assembly.



4. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Install the front door lock remote control cable assembly.

5. INSTALL FRONT DOOR LOCK ASSEMBLY (w/o Power Door Lock)

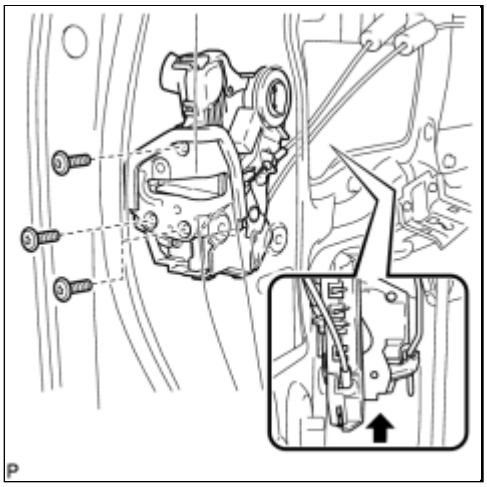
(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Insert the front door lock open rod to the front door lock assembly.

(c) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(d) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)



6. INSTALL FRONT DOOR LOCK ASSEMBLY (w/ Power Door Lock)

NOTICE:

- When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion. This may result in a malfunction of the front door lock assembly.

(a) Apply MP grease to the sliding parts of the front door lock assembly.

(b) Install a new door lock wiring harness seal to the front door lock assembly.

(c) Insert the front door lock open rod to the front door lock assembly.

(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.

(e) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

7. INSTALL FRONT DOOR OUTSIDE HANDLE COVER INFO

8. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY INFO

9. INSTALL FRONT DOOR GLASS RUN INFO

10. INSTALL FRONT DOOR NO. 2 STIFFENER CUSHION INFO

11. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY INFO

12. INSTALL FRONT DOOR SERVICE HOLE COVER INFO

13. INSTALL FRONT DOOR TRIM BRACKET INFO

14. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP INFO

15. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY INFO

16. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO

17. INSTALL FRONT ARMREST UPPER BASE PANEL (w/o Power Window) INFO

18. INSTALL FRONT ARMREST UPPER BASE PANEL (w/ Power Window) INFO

19. INSTALL FRONT DOOR INSIDE HANDLE BEZEL INFO

20. INSTALL FRONT DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

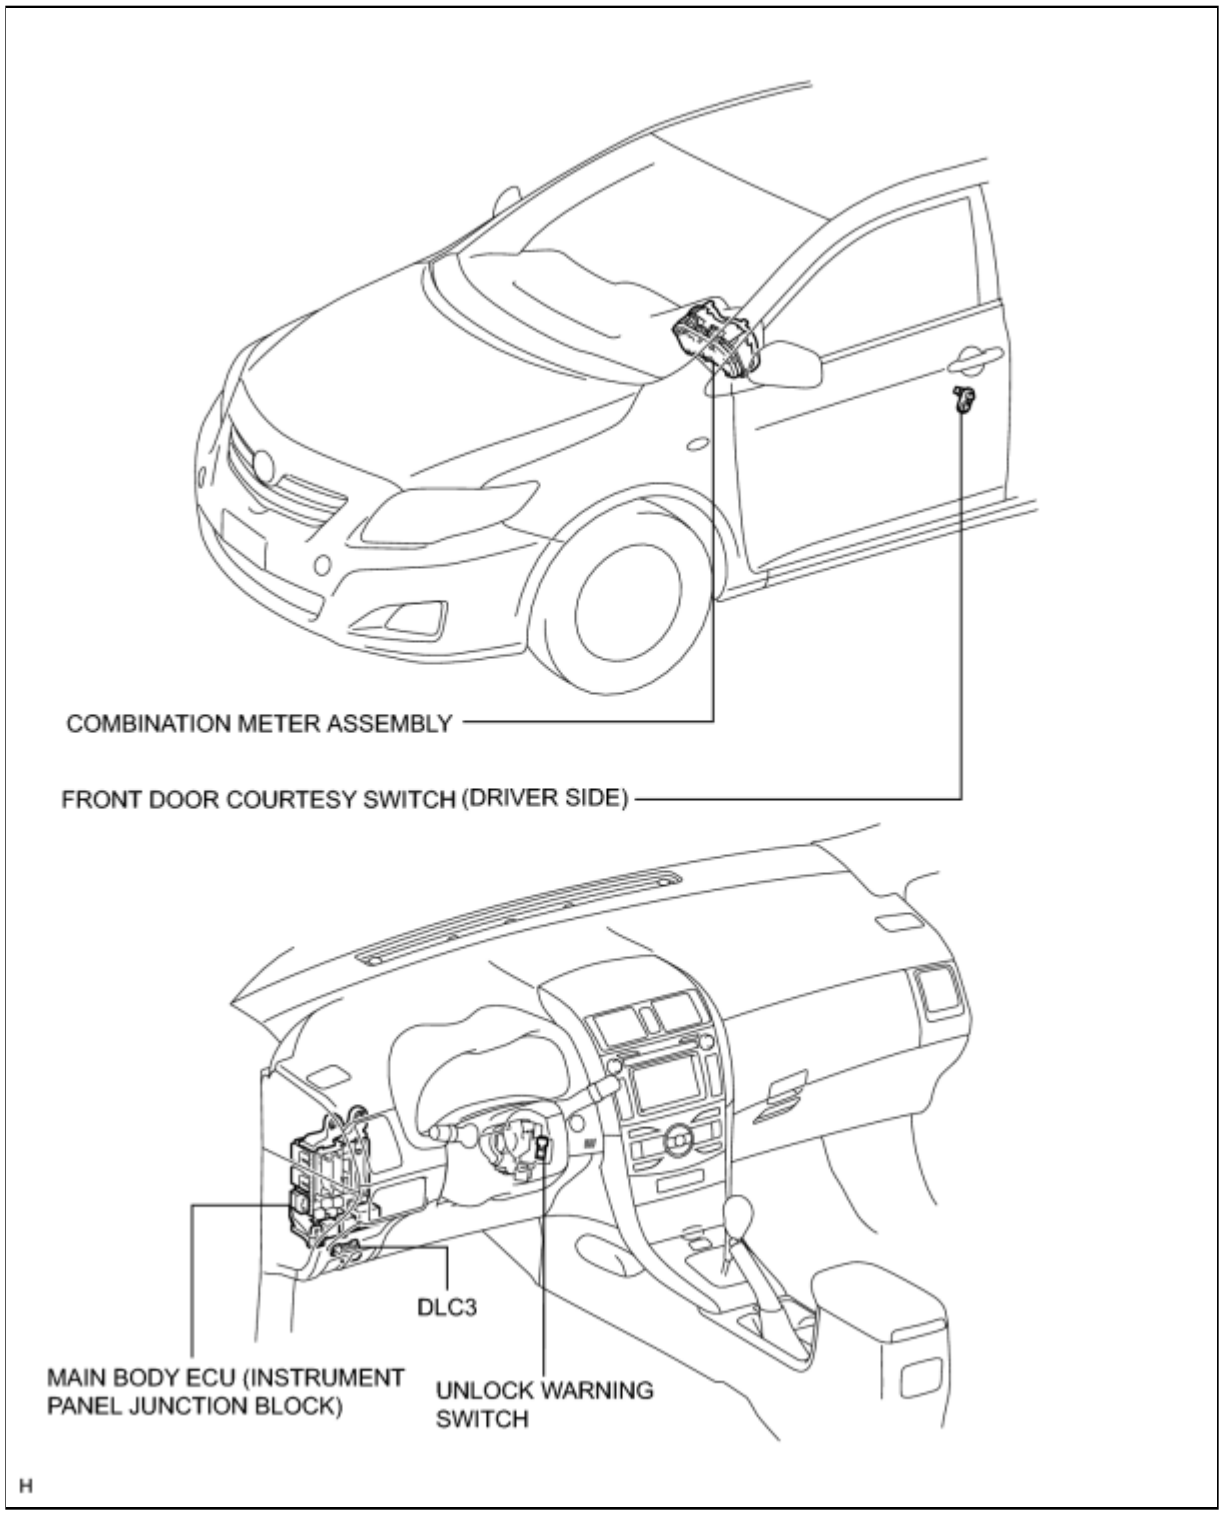
Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTION FOR KEY REMINDER WARNING SYSTEM

(a) For the inspection procedure of the key reminder warning system for models equipped with the smart key system, refer to the Smart Key System INFO .

2. PRECAUTIONS WHEN USING TECHSTREAM



(a) When using the Techstream to troubleshoot: Connect the Techstream to the vehicle while the ignition switch is off, and turn a courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and the vehicle begins.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the ignition switch is turned to ON.

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. KEY REMINDER WARNING SYSTEM DESCRIPTION

(a) When the driver side door is opened with the ignition key in ACC or LOCK, this system causes a buzzer to sound in order to warn the driver that the ignition key has not been removed.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000133202FX
Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. CHECK FUNCTION

(a) Check that the key reminder warning buzzer sounds.

(1) With the driver side door closed, insert the key into the ignition key cylinder and then make sure that the key is in LOCK or ACC.

(2) Check that the buzzer sounds intermittently if the driver side door is opened.

(b) Check that the key reminder warning buzzer stops.

(1) Check that the buzzer stops sounding if any of the following operations is performed while the buzzer is sounding:

- Close the driver side door (front door courtesy light switch is off).
- Turn the ignition switch to ON.
- Pull out the key from the ignition key cylinder.

Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2A, 2B and 2E junction block connectors.

(b) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2B-30 (BECU) - Body ground	W - Body ground	Power Source	Always	11 to 14 V

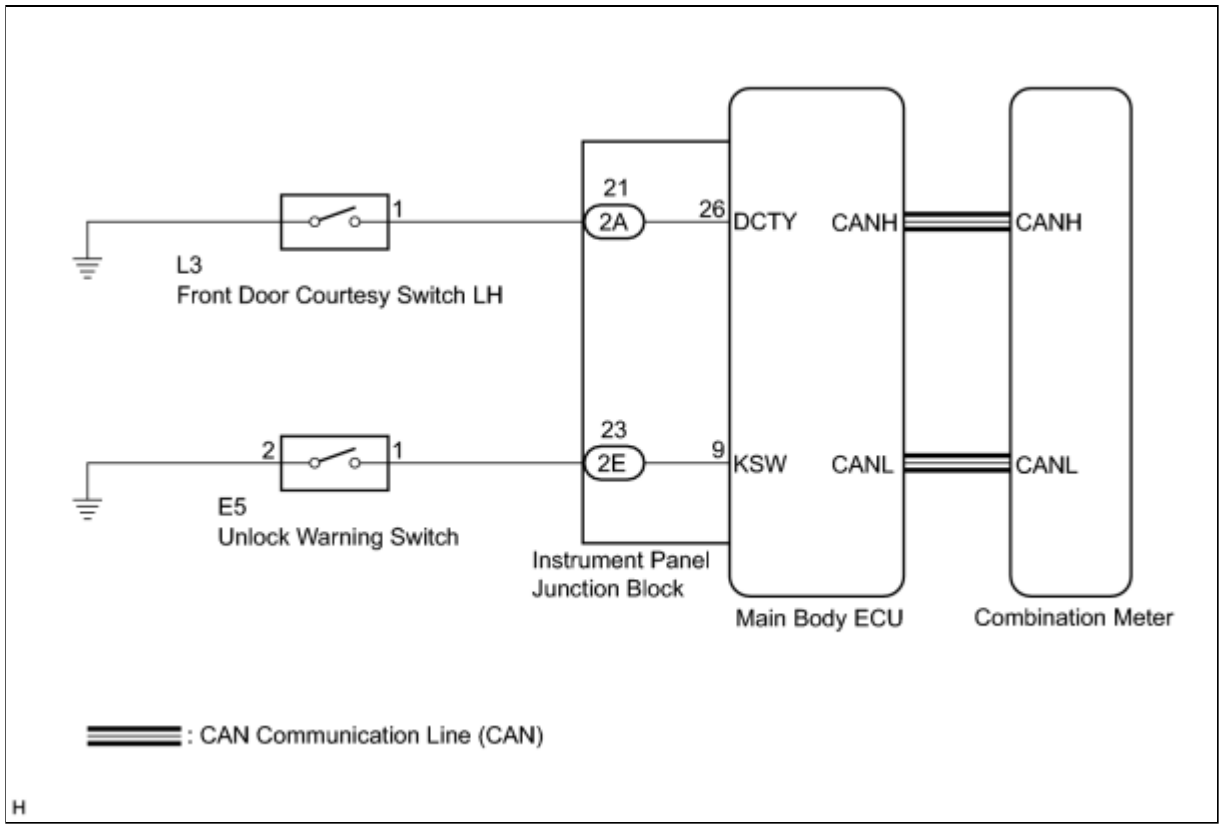
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-21 (DCTY) - Body ground	W - Body ground*1 V - Body ground*2	Driver door courtesy light switch signal	Switch pushed (Door closed)	10 kΩ or higher
2A-21 (DCTY) - Body ground	W - Body ground*1 V - Body ground*2	Driver door courtesy light switch signal	Switch free (Door open)	Below 1 Ω
2E-23 (KSW) - Body ground	L - Body ground	Key unlock warning switch signal	No key is in ignition key cylinder	10 kΩ or higher
2E-23 (KSW) - Body ground	L - Body ground	Key unlock warning switch signal	Key is in ignition key cylinder	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC made

If the result is not as specified, there may be a malfunction on the wire harness side.

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001PD901BX
Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: Key Reminder Buzzer does not Sound (2010 Corolla)		

Key Reminder Buzzer does not Sound



DESCRIPTION

The key reminder warning buzzer sounds when the driver side door is opened while the ignition switch is in LOCK or ACC. The key reminder warning buzzer is activated when the main body ECU sends a key switch signal and driver side courtesy switch signal to the combination meter.

HINT:

Since the key reminder warning system has functions that use CAN communication, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the How to Proceed with Troubleshooting procedure. Then, conduct the following inspection procedure.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK COMBINATION METER ASSEMBLY (BUZZER OPERATION)

(a) Turn the ignition switch to ON. Place luggage on the passenger seat to cause the passenger seat belt warning light to blink.

(b) When driving the vehicle at 15 km/h (9 mph) or higher, check that the seat belt warning buzzer sounds to inform that the passenger seat belt is not fastened.

HINT:

The key reminder warning system sounds the buzzer built into the combination meter as a key reminder warnings. This buzzer is also used for the seat belt warning system. Therefore, check the operation of the combination meter buzzer by checking if the buzzer sounds to inform that the seat belt is not fastened.

OK:
Combination meter buzzer sounds.

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK ▼

2.	READ VALUE USING TECHSTREAM (DOOR COURTESY SWITCH)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Select D Door Courtesy SW in the Data List and read the Techstream display.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D Door Courtesy SW	Driver side door courtesy switch signal/ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

OK:
ON or OFF appears on the screen according to the driver side door condition.

NG ▶ INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)

OK ▼

3.	READ VALUE USING TECHSTREAM (UNLOCK WARNING SWITCH)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

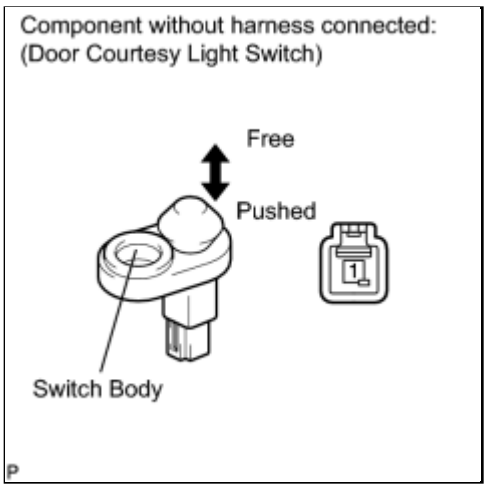
(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Select Key Unlock Warning SW in the Data List and read the Techstream display.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key Unlock Warning SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:



ON or OFF appears on the screen according to whether the key is in the ignition key cylinder.

NG ▶ INSPECT UNLOCK WARNING SWITCH ASSEMBLY

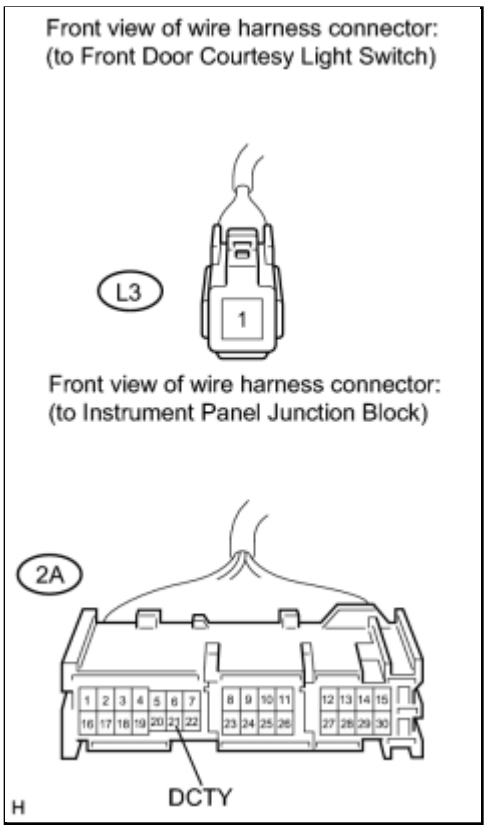
OK ▶ REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

4.	INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)

(a) Remove the driver side front door courtesy light switch (driver side) INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - Switch body	Courtesy switch pushed (Door closed)	10 kΩ or higher
1 - Switch body	Courtesy switch free (Door open)	Below 1 Ω

NG ▶ **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)**

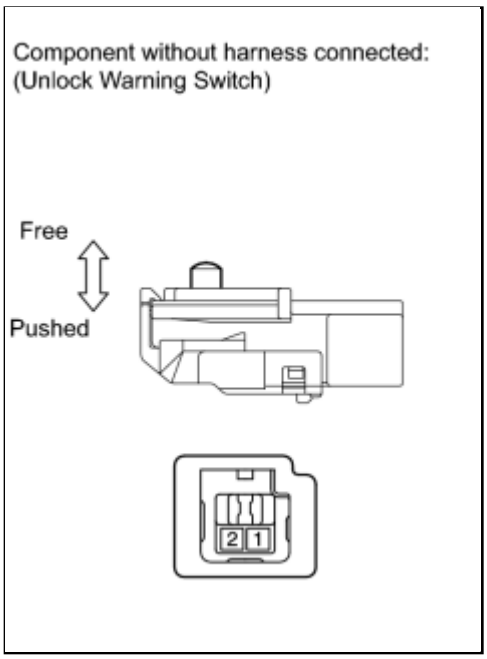
OK ▼

5.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY LIGHT SWITCH - MAIN BODY ECU)**

(a) Disconnect the 2A instrument panel junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L3-1 - 2A-21 (DCTY)	Always	Below 1 Ω
L3-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

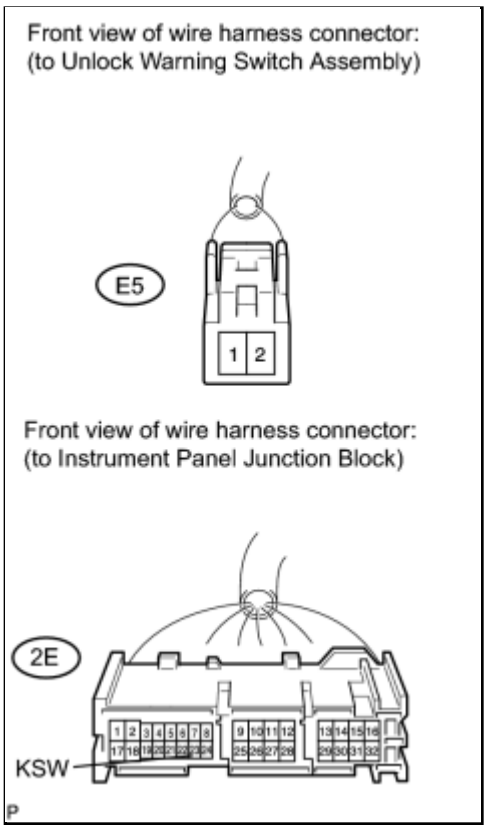
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

6.	**INSPECT UNLOCK WARNING SWITCH ASSEMBLY**

(a) Remove the unlock warning switch assembly INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Switch free (Key removed)	10 kΩ or higher
1 - 2	Switch pushed (Key set)	Below 1 Ω

NG ▶ **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - MAIN BODY ECU)**

(a) Disconnect the 2E instrument panel junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-1 - 2E-23 (KSW)	Always	Below 1 Ω
E5-2 - Body ground	Always	Below 1 Ω
E5-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011G7023X
Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 INFO .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011WG02FX
Title: DOOR LOCK: KEY REMINDER WARNING SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the following table, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

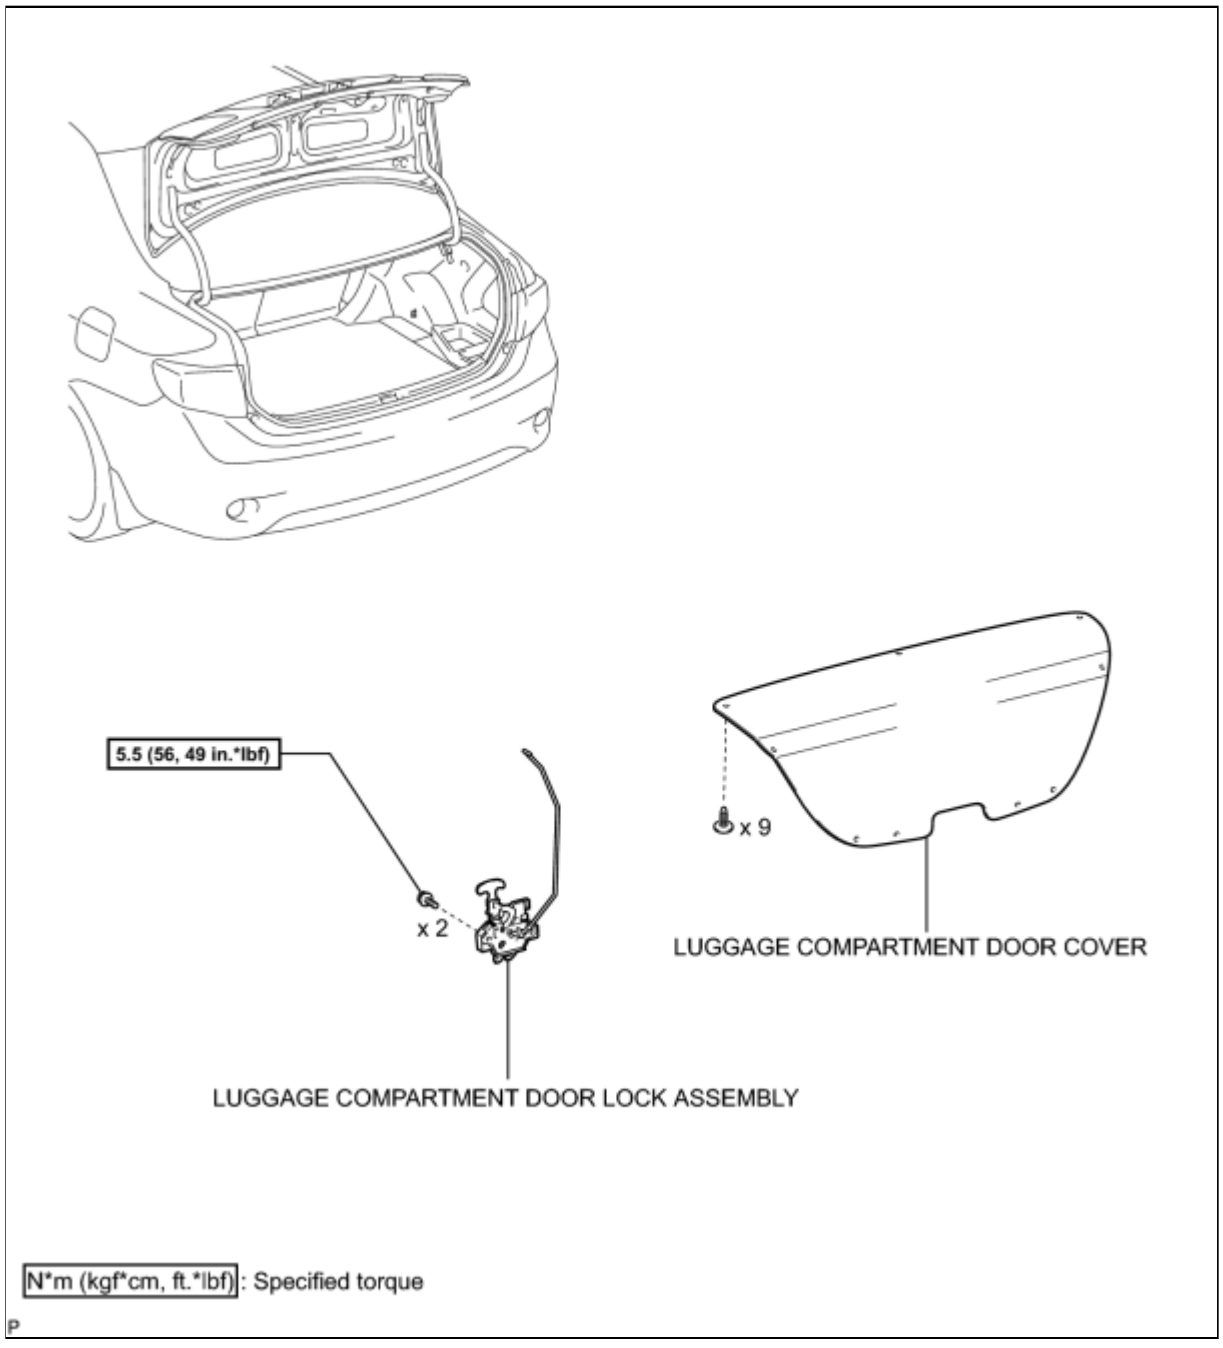
(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.



Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key Unlock Warning SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D Door Courtesy SW	Driver side door courtesy switch signal/ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all the doors.

The master switch and the door control switch on the passenger door send "lock/unlock" request signals to the main body ECU (instrument panel junction block). Then, the main body ECU (instrument panel junction block) sends these request signals to the lock motors in each door to lock/unlock all the doors at once in response to the inputs.

Operating the driver's door lock using a mechanical key sends request signals to lock/unlock the doors to the main body ECU (instrument panel junction block).

2. FUNCTION OF MAIN COMPONENT

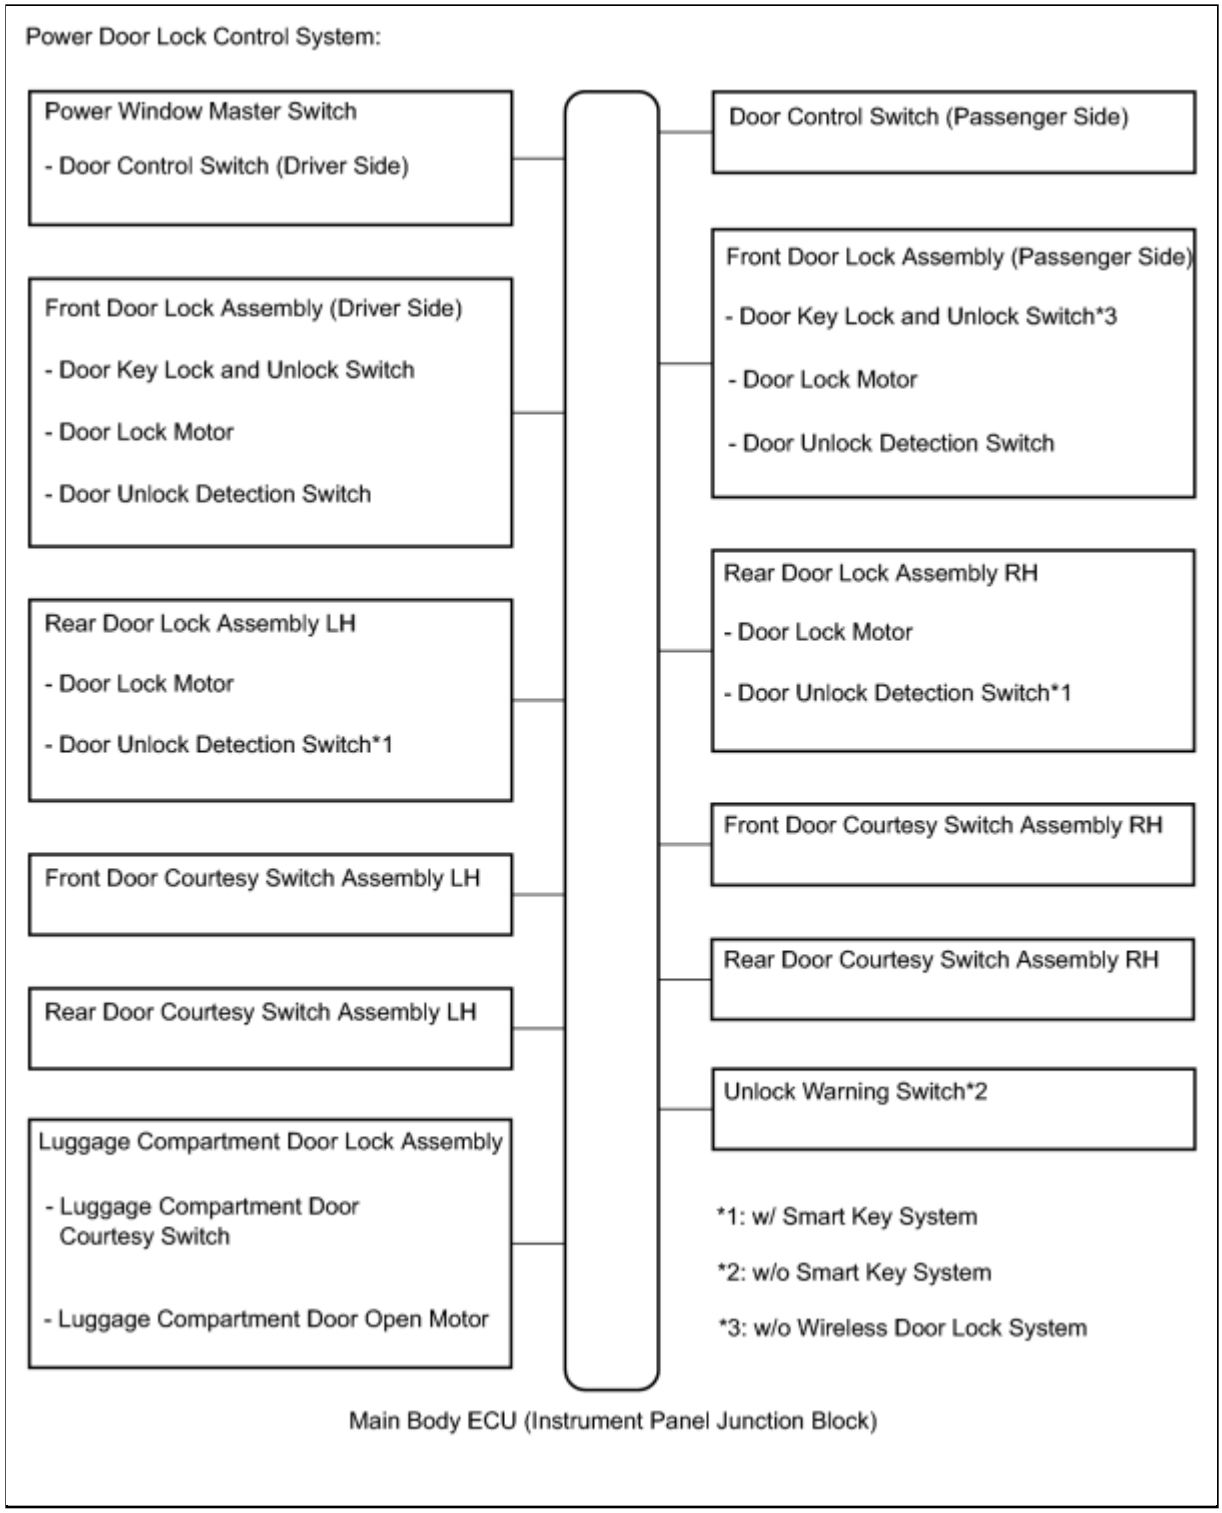
COMPONENT	FUNCTION
Power window master switch	Door control switch on master switch locks/unlocks all doors.
Door courtesy switch	Placed on each door. Detects door status (open or closed) and outputs data to main body ECU (instrument panel junction block). Turns on when door is open and turns off when door is closed.
Driver side door lock	• Built-in motor locks/unlocks door. • Built-in door control switch (key-linked) detects door key operation door status (locked or unlocked) and outputs data to main body ECU (instrument panel junction block). • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU (instrument panel junction block). This switch turns off when door is locked and turns on when door is unlocked.
Passenger side door lock	• Built-in motor locks/unlocks door. • Built-in door control switch*1 (key-linked) detects door key operation's door status (locked or unlocked) and outputs data to main body ECU (instrument panel junction block). • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU (instrument panel junction block). This switch turns off when door is locked and turns on when door is unlocked.
Rear LH and RH door locks	• Built-in motor locks/unlocks door. • Built-in position switch*2 detects door status (locked or unlocked) and outputs data to main body ECU (instrument panel junction block). This switch turns off when door is locked and turns on when door is

COMPONENT	FUNCTION
	unlocked.
Luggage compartment door lock	Built-in luggage door open motor.

- *1: w/o Wireless Door Lock System
- *2: w/ Smart Key System

3. SYSTEM FUNCTION

(a) This system is controlled by the main body ECU (instrument panel junction block). The main body ECU (instrument panel junction block) outputs signals to each door lock motor. The vehicle door lock control system has the following functions:



FUNCTION	OUTLINE
Manual lock and unlock function	This function can lock or unlock all doors by the door lock control switch operation.
Key-linked lock and unlock function	This function, which is linked with the mechanical key cylinder, can lock or unlock all the doors.
Manual unlock prohibition function	Performing the door lock operation with an electrical key*1 or a mechanical key*2 or key linked operation will prohibit the unlock operation by the door lock control switch.
Key lock-in prevention function	If each door lock*1 or driver's door lock*2 and passenger's door lock*3 operation is performed when the electrical key*1 or mechanical key*2 is in the cabin*1 or ignition key cylinder*2, all the doors will be unlocked.
Shift-linked automatic door lock function (A/T)	When the conditions listed below are met consecutively, this function causes all the doors to be automatically locked. • All doors are closed. • The engine is started. • The shift lever is moved out of P.
Shift-linked automatic door unlock function (A/T)	If the shift lever is moved out of P after the engine is started, all the doors will be automatically unlocked.
2-step unlock function	This function is provided to unlock the driver's door by turning the key cylinder once and to unlock the remaining doors by turning it twice.
Speed-sensitive automatic door lock function*3	When the conditions listed below are met consecutively, this function causes all the doors to be automatically locked. • Vehicle speed is higher than approximately 20 km/h (12 mph). • All doors are closed. • Any one of the door's is unlocked.

FUNCTION	OUTLINE
Opening driver's door-linked automatic door unlock*4	All doors are unlocked automatically when the driver's door is opened within 10 seconds after the power source is changed from "IG-ON" to "ACC" or "OFF".

- *1: w/ Smart Key System
- *2: w/o Smart Key System
- *3: w/o Wireless Door Lock Control System
- *4: Default setting is OFF

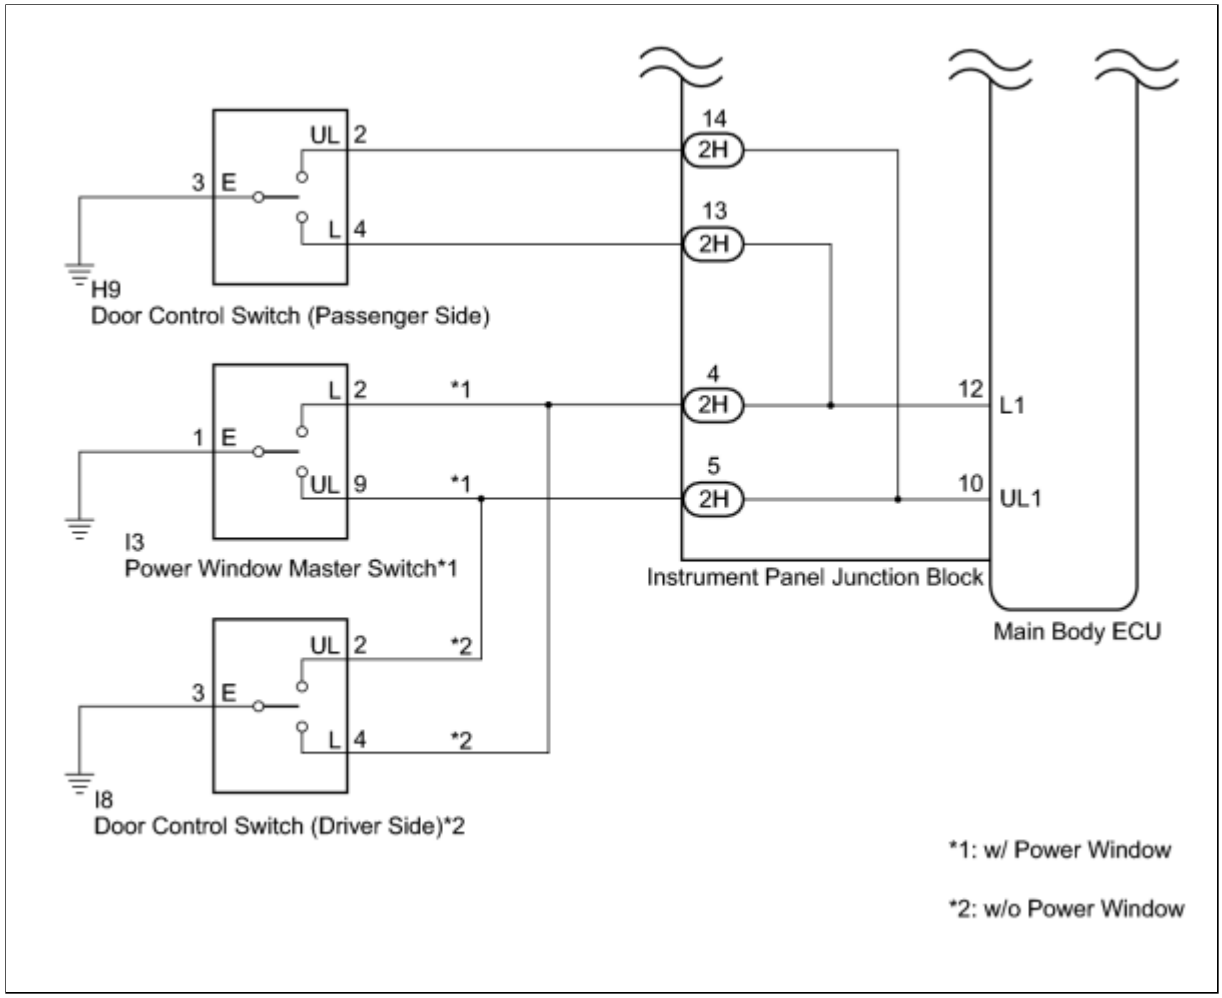
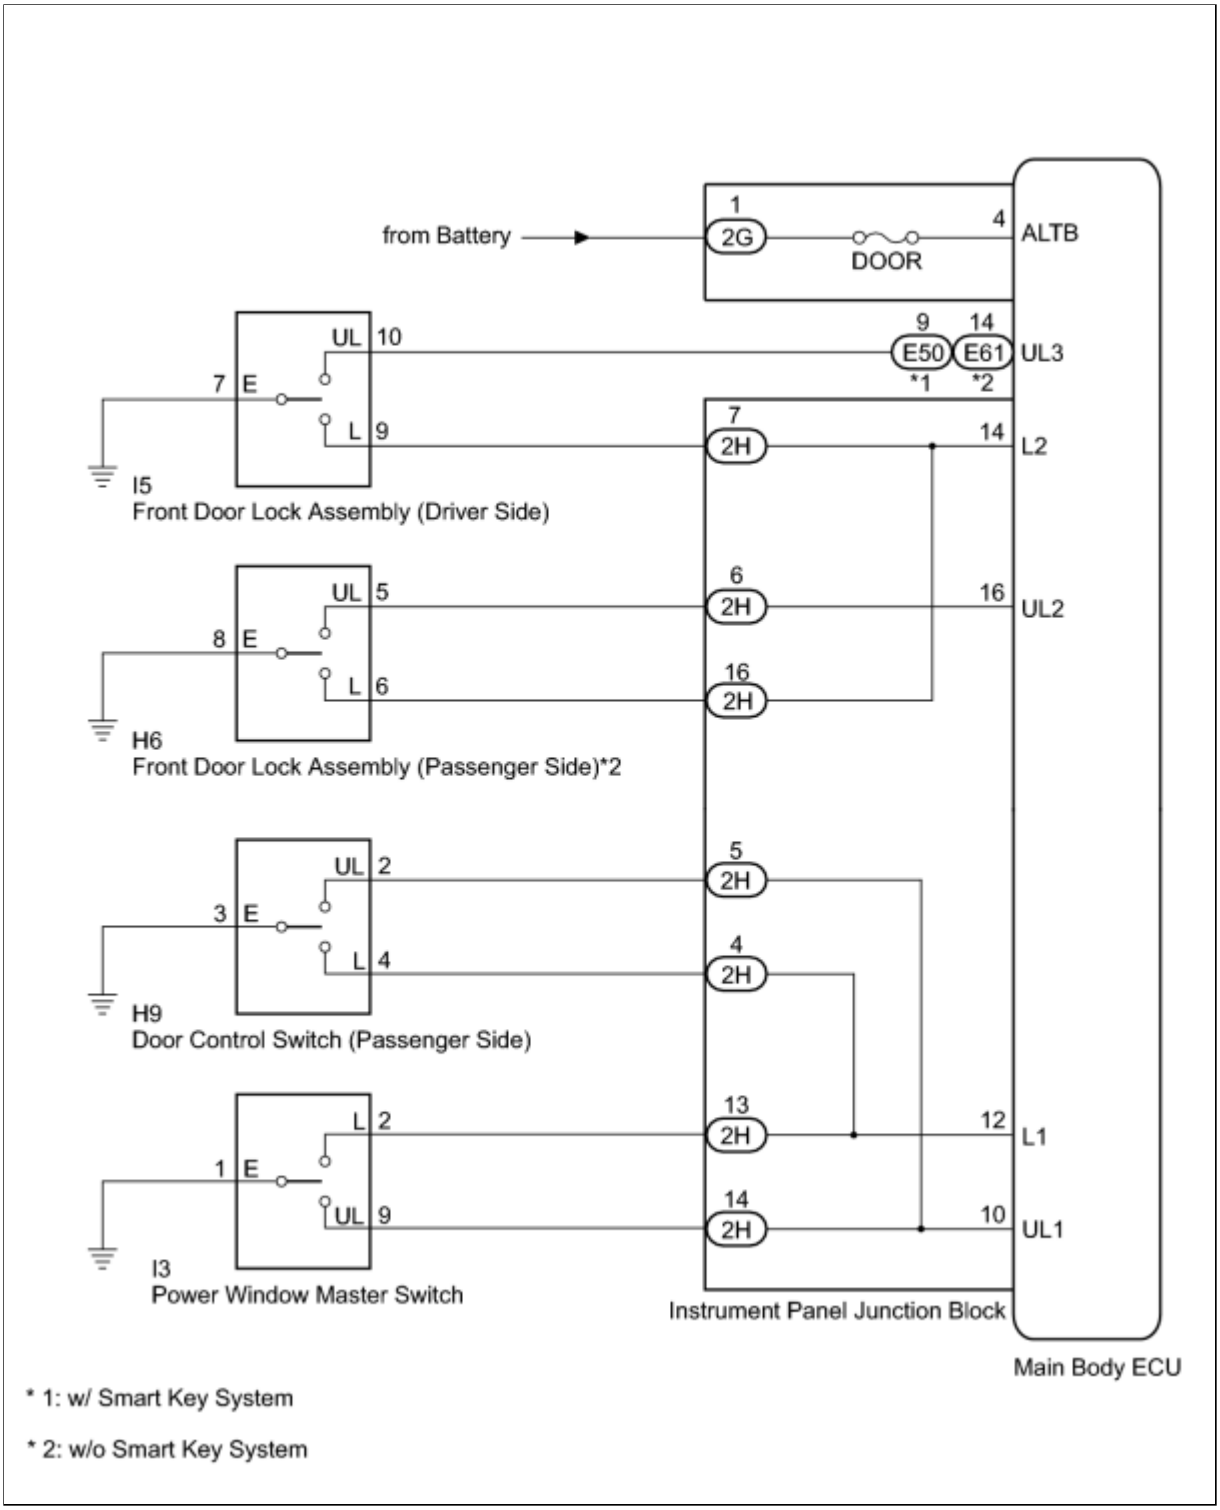
All Doors LOCK / UNLOCK Functions do not Operate Via Master Switch, Both Front Door Key Cylinders



DESCRIPTION

The main body ECU (instrument panel junction block) receives switch signals from the door control switch and front door key cylinder, and activates the door lock motor on each door according to these signals.



WIRING DIAGRAM

1. Except for TMC made:

2. for TMC Made:

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (DOOR)**

(a) Remove the DOOR fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
DOOR fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK ▼

2.	CHECK DOOR LOCK OPERATION (ALL DOORS LOCK / UNLOCK)

(a) All doors can be locked/unlocked at once using the following:

- Door control switch on the driver side (switch operation)
- Door control switch on the passenger side (switch operation)
- Door key cylinder linked with door lock on the driver side (key operation)
- Door key cylinder linked with door lock on the passenger side (key operation) (w/o Wireless Door Control System)

(b) Proceed to the next step according to symptom if all the doors cannot be locked/unlocked at once.

Result:

RESULT	PROCEED TO
All doors cannot be locked/unlocked at once by using door control switch.	A
All doors cannot be locked/unlocked at once by using door key cylinder.	B

B ▶ **CHECK DOOR LOCK OPERATION (DOOR KEY CYLINDER)**

A ▼

3.	CHECK DOOR LOCK OPERATION (DOOR CONTROL SWITCH)

(a) Proceed to the next step according to symptom if all the doors cannot be

locked/unlocked at once.

Result:

RESULT	PROCEED TO
All doors cannot be locked/unlocked at once by using door control switch on driver side or power window master switch.	A
All doors cannot be locked/unlocked at once by using door control switch on passenger side.	B
All doors cannot be locked/unlocked at once by using both driver and passenger side door control switch.	C

C ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

B ▶ **READ VALUE USING TECHSTREAM (DOOR CONTROL SWITCH (PASSENGER SIDE))**

A ▼

4.	READ VALUE USING TECHSTREAM (DOOR CONTROL SWITCH (DRIVER SIDE))

(a) Connect the Techstream

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

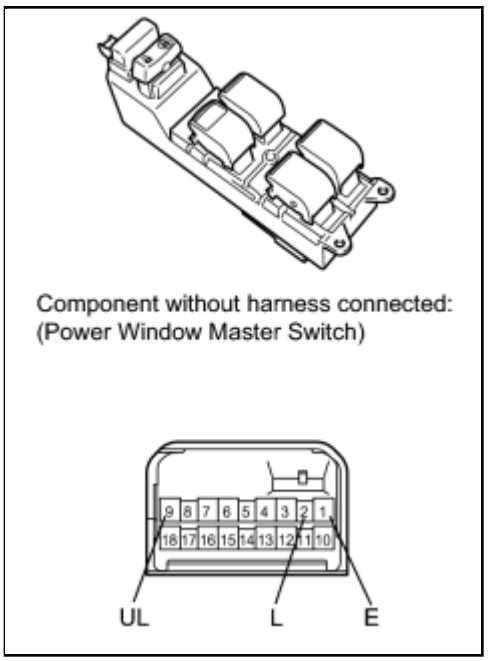
(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Lock SW-Lock	Driver door manual lock switch signal / ON or OFF	ON: Driver side door control switch is pushed to lock position OFF: Driver side door control switch is released	-
Door Lock SW-Unlock	Driver door manual unlock switch signal / ON or OFF	ON: Driver side door control switch is pushed to unlock	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
		position OFF: Driver side door control switch is released	

OK:



The Techstream indicates ON or OFF according to the switch operation as shown in the table above.

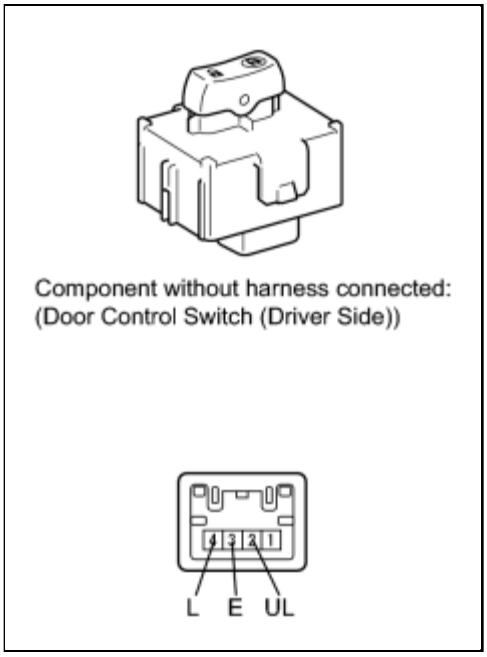
NG ▶ **INSPECT DOOR CONTROL SWITCH ASSEMBLY (DRIVER SIDE)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

5.	INSPECT DOOR CONTROL SWITCH ASSEMBLY (DRIVER SIDE)

(a) w/ Power Window:

(1) Remove the power window master switch INFO .



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (E) - 2 (L)	Lock	Below 1 Ω

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (E) - 2 (L) 1 (E) - 9 (UL)	OFF (Free)	10 kΩ or higher
1 (E) - 9 (UL)	Unlock	Below 1 Ω

(b) w/o Power Window: (Except for TMC made)

(1) Remove the door control switch INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

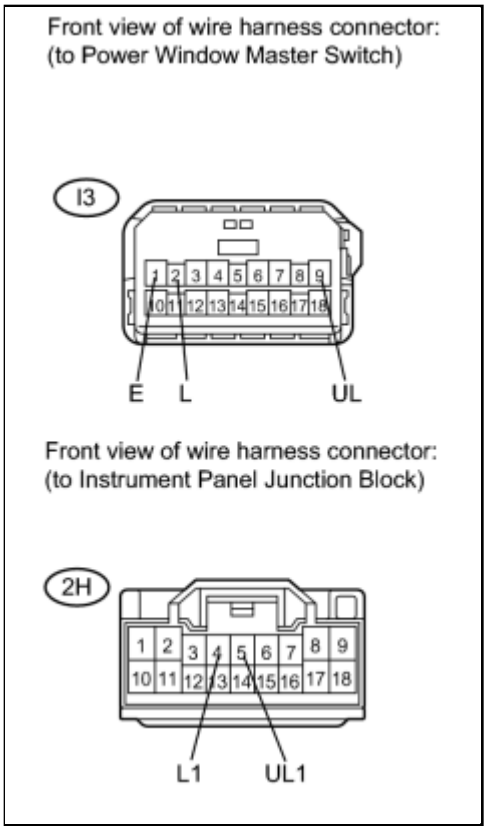
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3 (E) - 4 (L)	Lock	Below 1 Ω
3 (E) - 4 (L) 2 (UL) - 3 (E)	OFF (Free)	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 1 Ω

Result:

RESULT	PROCEED TO
OK	A
NG (for Driver Side with Power Window)	B
NG (for Driver Side without Power Window)	C

C ▶ REPLACE DOOR CONTROL SWITCH ASSEMBLY

(DRIVER SIDE)



B ▶ REPLACE POWER WINDOW MASTER SWITCH

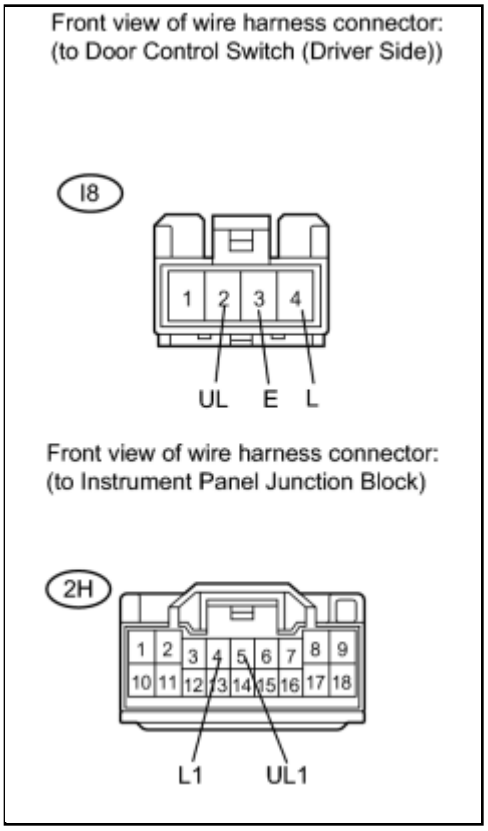
A ▼

6.	CHECK HARNESS AND CONNECTOR (JUNCTION BLOCK - DOOR CONTROL SWITCH (DRIVER SIDE))

(a) Disconnect the 2H junction block connector.

(b) w/ Power Window: (Except for TMC made)

(1) Disconnect the I3 switch connector.



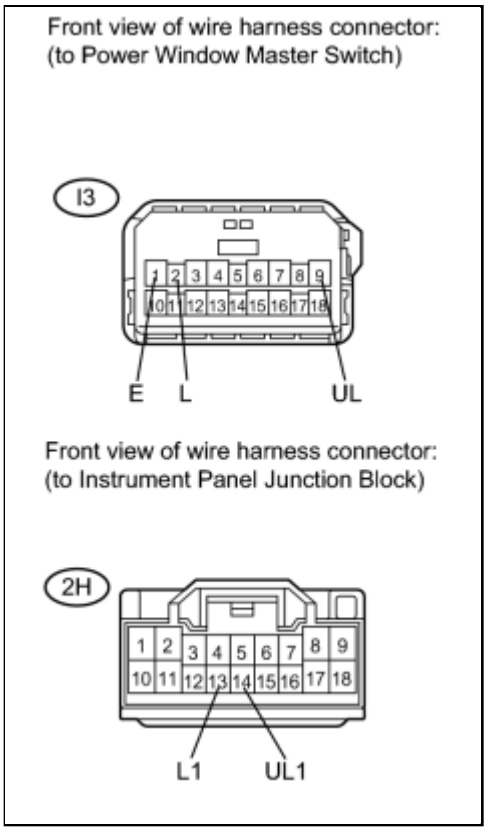
(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-2 (L) - 2H-4 (L1)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-9 (UL) - 2H-5 (UL1)	Always	Below 1 Ω
I3-1 (E) - Body ground	Always	Below 1 Ω
I3-2 (L) - Body ground	Always	10 kΩ or higher
I3-9 (UL) - Body ground	Always	10 kΩ or higher

(c) w/o Power Window: (Except for TMC made)



(1) Disconnect the 2H J/B connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I8-4 (L) - 2H-4 (L1)	Always	Below 1 Ω
I8-2 (UL) - 2H-5 (UL1)	Always	Below 1 Ω
I8-3 (E) - Body ground	Always	Below 1 Ω
I8-4 (L) - Body ground	Always	10 kΩ or higher
I8-2 (UL) - Body ground	Always	10 kΩ or higher

(d) w/ Power Window: (for TMC made)

(1) Disconnect the I3 switch connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I3-2 (L) - 2H-13 (L1)	Always	Below 1 Ω
I3-9 (UL) - 2H-14 (UL1)	Always	Below 1 Ω
I3-1 (E) - Body ground	Always	Below 1 Ω
I3-2 (L) - Body ground	Always	10 kΩ or higher
I3-9 (UL) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

7.	**READ VALUE USING TECHSTREAM (DOOR CONTROL SWITCH (PASSENGER SIDE))**

(a) Connect the Techstream

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

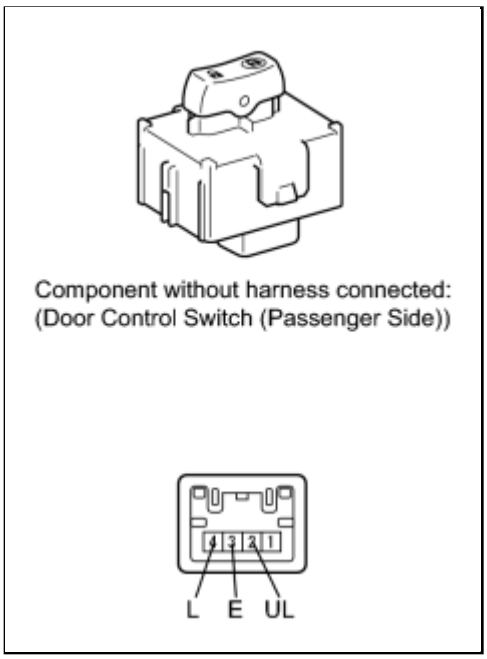
(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Lock SW-Lock	Passenger door manual lock switch signal / ON or OFF	ON: Passenger side door control switch is pushed to lock position OFF: Passenger side door control switch is released	-
Door Lock SW-Unlock	Passenger door manual unlock switch signal / ON or OFF	ON: Passenger side door control switch is pushed to unlock position OFF: Passenger side door control switch is released	-

OK:



The Techstream indicates ON or OFF according to the switch operation as shown in the table above.

NG ▶ **INSPECT DOOR CONTROL SWITCH ASSEMBLY (PASSENGER SIDE)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

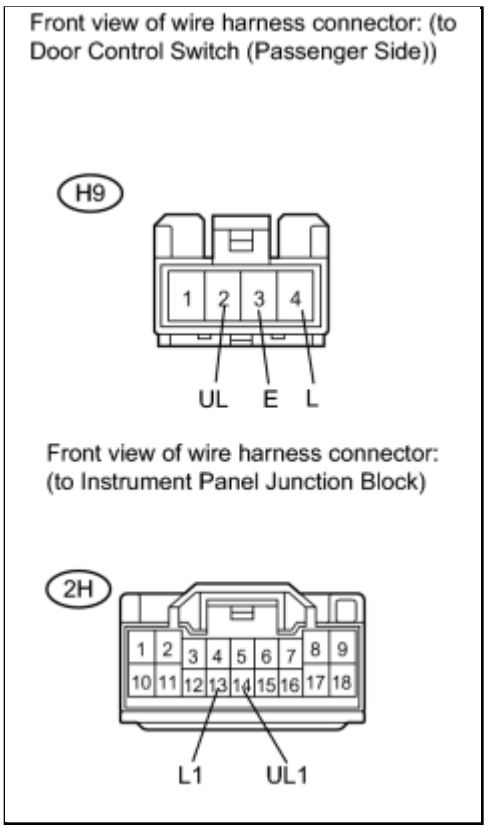
8.	**INSPECT DOOR CONTROL SWITCH ASSEMBLY (PASSENGER SIDE)**

(a) Remove the door control switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3 (E) - 4 (L)	Lock	Below 1 Ω
3 (E) - 4 (L) 2 (UL) - 3 (E)	OFF (Free)	10 kΩ or higher
2 (UL) - 3 (E)	Unlock	Below 1 Ω



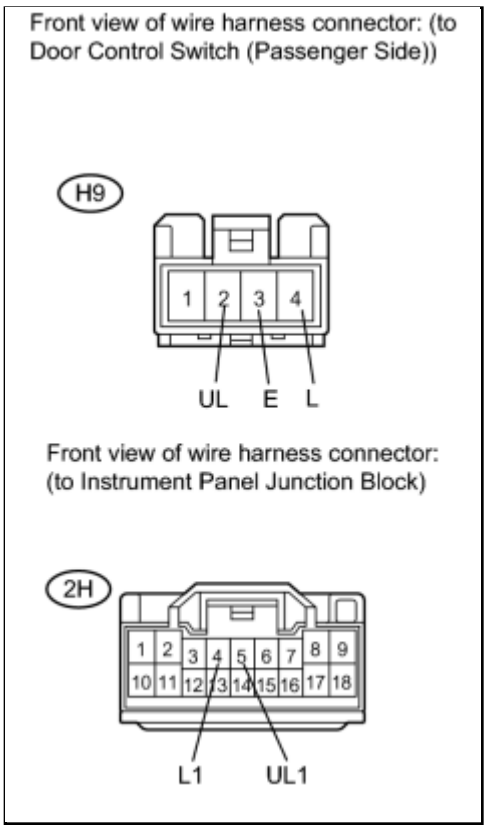
NG ▶ **REPLACE DOOR CONTROL SWITCH ASSEMBLY (PASSENGER SIDE)**

OK ▼

9.	**CHECK HARNESS AND CONNECTOR (JUNCTION BLOCK - DOOR CONTROL SWITCH (PASSENGER SIDE))**

(a) Except for TMC made:

(1) Disconnect the 2H junction block connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H9-4 (L) - 2H-13 (L1)	Always	Below 1 Ω
H9-2 (UL) - 2H-14 (UL1)	Always	Below 1 Ω
H9-3 (E) - Body ground	Always	Below 1 Ω
H9-4 (L) - Body ground	Always	10 kΩ or higher
H9-2 (UL) - Body ground	Always	10 kΩ or higher

(b) for TMC made:

(1) Disconnect the 2H junction block connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H9-4 (L) - 2H-4 (L1)	Always	Below 1 Ω
H9-2 (UL) - 2H-5 (UL1)	Always	Below 1 Ω
H9-3 (E) - Body ground	Always	Below 1 Ω
H9-4 (L) - Body ground	Always	10 kΩ or higher
H9-2 (UL) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

10.	**CHECK DOOR LOCK OPERATION (DOOR KEY CYLINDER)**

(a) Proceed to the next step according to symptom if all the doors cannot be locked/unlocked at once.

Result:

RESULT	PROCEED TO
All doors cannot be locked/unlocked at once by using door key cylinder on driver side.	A
All doors cannot be locked/unlocked at once by using door key cylinder on passenger side.	B
All doors cannot be locked/unlocked at once by using either driver and passenger side door key cylinder.	C

C ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

B ▶ **READ VALUE USING TECHSTREAM (DOOR KEY LINKED LOCK AND UNLOCK SWITCH (PASSENGER SIDE))**

A

11.	**READ VALUE USING TECHSTREAM (DOOR KEY LINKED LOCK AND UNLOCK SWITCH (DRIVER SIDE))**

(a) Connect the Techstream

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

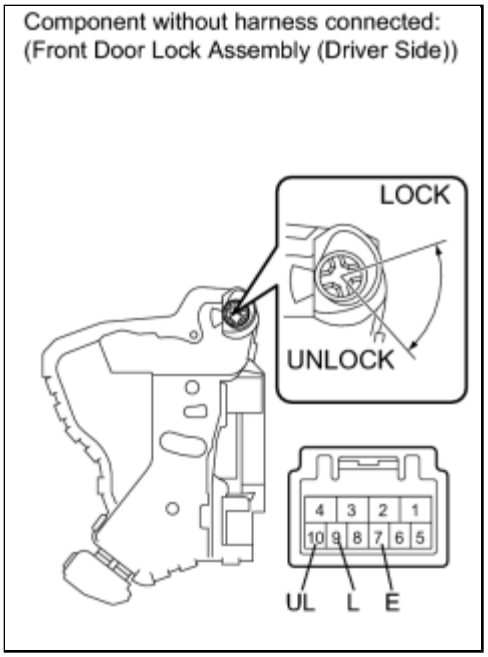
(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Key SW-Lock	Driver side door key linked lock switch signal/ON or OFF	ON: Driver side door key cylinder is turned to lock position OFF: Driver side door key cylinder is not turned	-
D-Door Key SW-UL	Driver side door key linked unlock switch signal/ON or OFF	ON: Driver side door key cylinder is turned to unlock position	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
		OFF: Driver side door key cylinder is not turned	



OK:

The Techstream indicates ON or OFF according to the switch operation as shown in the table above.

NG ▶ **INSPECT FRONT DOOR LOCK ASSEMBLY (DRIVER SIDE)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

12.	INSPECT FRONT DOOR LOCK ASSEMBLY (DRIVER SIDE)

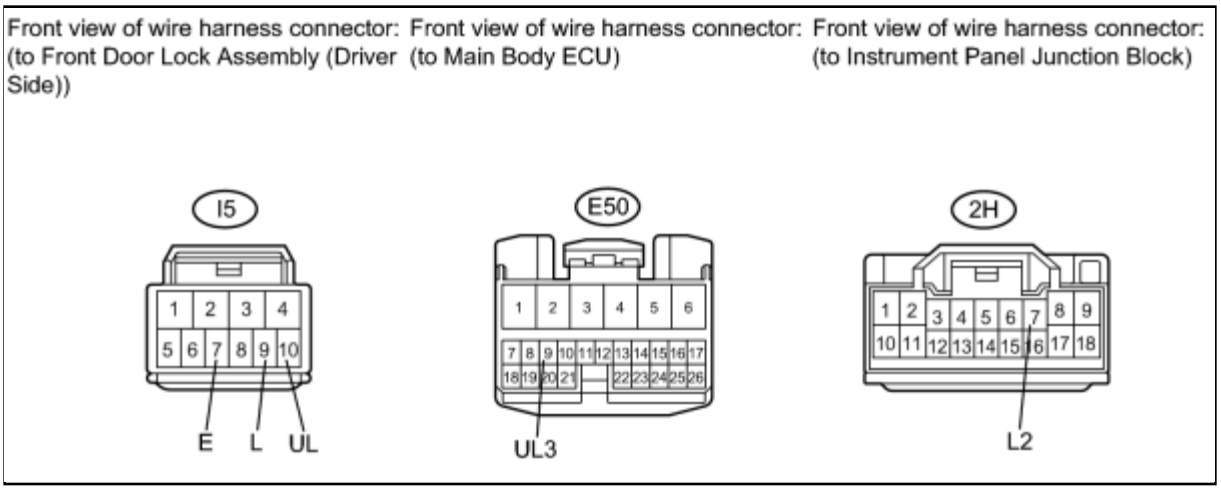
(a) Remove the front door lock assembly (driver side) INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
9 (L) - 7 (E)	ON (Door lock set to LOCK)	Below 1 Ω
9 (L) - 7 (E) 10 (UL) - 7 (E)	OFF (Free)	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
10 (UL) - 7 (E)	ON (Door lock set to UNLOCK)	Below 1 Ω



NG ▶ **REPLACE FRONT DOOR LOCK ASSEMBLY (DRIVER SIDE)**

OK ▼

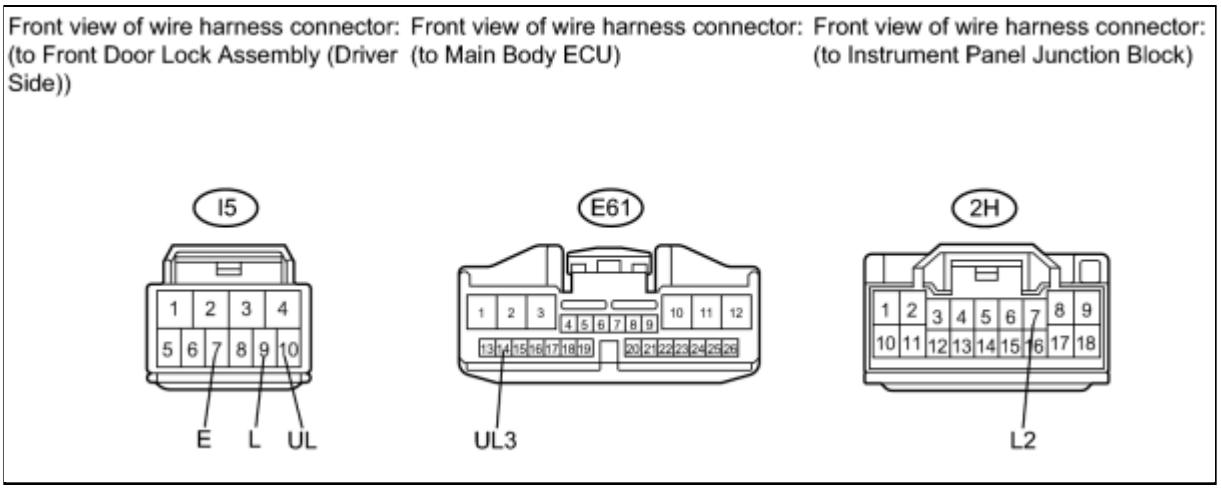
13.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))**

(a) w/ Smart Key System:

(1) Disconnect the 2H junction block connector.

(2) Disconnect the E50 ECU connector.

(3) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I5-9 (L) - 2H-7 (L2)	Always	Below 1 Ω
I5-10 (UL) - E50-9 (UL3)	Always	Below 1 Ω
I5-7 (E) - Body ground	Always	Below 1 Ω
I5-9 (L) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I5-10 (UL) - Body ground	Always	10 kΩ or higher

(b) w/o Smart Key System:

(1) Disconnect the 2H junction block connector.

(2) Disconnect the E61 ECU connector.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
I5-9 (L) - 2H-7 (L2)	Always	Below 1 Ω
I5-10 (UL) - E61-14 (UL3)	Always	Below 1 Ω
I5-7 (E) - Body ground	Always	Below 1 Ω
I5-9 (L) - Body ground	Always	10 kΩ or higher
I5-10 (UL) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

14.	**READ VALUE USING TECHSTREAM (DOOR KEY LINKED LOCK AND UNLOCK SWITCH (PASSENGER SIDE))**

(a) Connect the Techstream

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

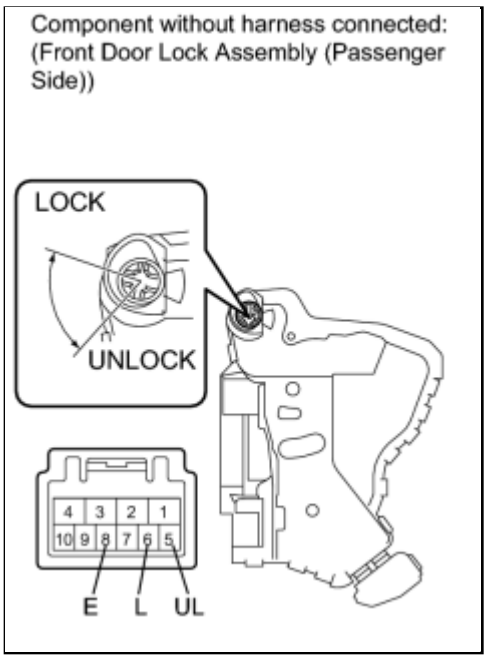
(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body ECU

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Door Key SW-Lock	Passenger side door key linked lock switch signal/ON or OFF	ON: Passenger side door key cylinder is turned to lock position OFF: Passenger side door key cylinder is not turned	-
Door Key SW-Unlock	Passenger side door key linked unlock switch signal/ON or OFF	ON: Passenger side door key cylinder is turned to unlock position OFF: Passenger side door key cylinder is not turned	-

OK:



The Techstream indicates ON or OFF according to the switch operation as shown in the table above.

NG ▶ **INSPECT FRONT DOOR LOCK ASSEMBLY (PASSENGER SIDE)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

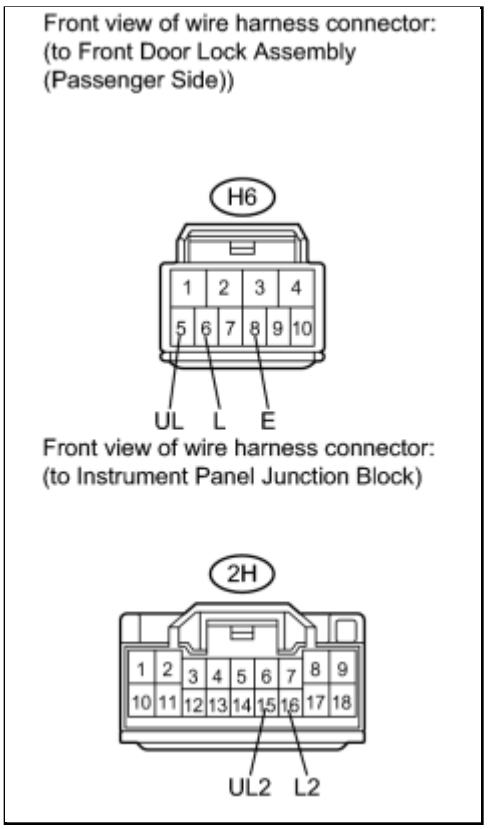
15.	**INSPECT FRONT DOOR LOCK ASSEMBLY (PASSENGER SIDE)**

(a) Remove the front door lock assembly (passenger side) INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
6 (L) - 8 (E)	ON (Door lock set to LOCK)	Below 1 Ω
6 (L) - 8 (E) 5 (UL) - 8 (E)	OFF (Free)	10 kΩ or higher
5 (UL) - 8 (E)	ON (Door lock set to UNLOCK)	Below 1 Ω



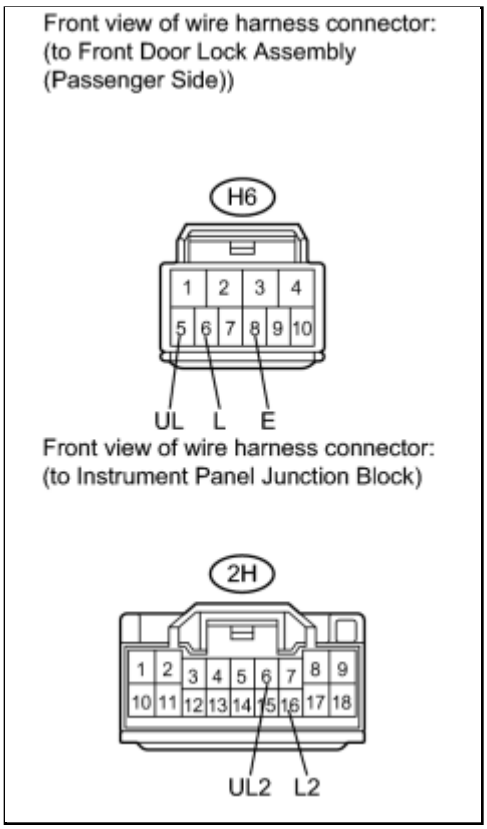
NG ▶ **REPLACE FRONT DOOR LOCK ASSEMBLY (PASSENGER SIDE)**

OK
▼

16.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR LOCK - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Except for TMC made:

(1) Disconnect the 2H junction block connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H6-6 (L) - 2H-16 (L2)	Always	Below 1 Ω
H6-5 (UL) - 2H-15 (UL2)	Always	Below 1 Ω
H6-8 (E) - Body ground	Always	Below 1 Ω
H6-6 (L) - Body ground	Always	10 kΩ or higher
H6-5 (UL) - Body ground	Always	10 kΩ or higher

(b) for TMC made:

(1) Disconnect the 2H junction block connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
H6-6 (L) - 2H-16 (L2)	Always	Below 1 Ω
H6-5 (UL) - 2H-6 (UL2)	Always	Below 1 Ω
H6-8 (E) - Body ground	Always	Below 1 Ω
H6-6 (L) - Body ground	Always	10 kΩ or higher
H6-5 (UL) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. CHECK POWER DOOR LOCK CONTROL OPERATION

NOTICE:

The following procedure is based on the assumption that the functions have not been customized using the Techstream.

(a) Check basic functions.

(1) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.

(2) Check that all doors lock when either driver or passenger* side door lock key cylinder is turned to LOCK using the mechanical key.

- *: w/o Wireless Door Lock System

(b) Check the electrical key lock-in prevention function (w/ Smart Key System).

NOTICE:

In order to prevent the electrical key from being actually locked-in, the following inspection should be performed with the driver side door window open.

(1) Place the electrical key in the cabin.

(2) With the driver or passenger side door open, turn the driver side door lock knob or door control switch to LOCK, and then close the driver side door. Then check that all doors unlock.

(c) Check the key lock-in prevention function (w/o Smart Key System).

NOTICE:

In order to prevent the key from being actually locked-in, the inspection should be performed with the driver side door window open.

(1) Insert the key into the ignition key cylinder.

(2) With either driver or passenger side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With either driver or passenger side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With either driver or passenger side door open, turn the driver side door lock knob to LOCK, and close the driver side door. Check that all doors unlock.

(d) Check the security function.

(1) Close all doors with the driver side door glass open so that the door control switch can be operated from outside the vehicle.

(2) Remove the key from the inside of the vehicle, open either driver or passenger side door and then close and lock the door without using the key. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(3) Remove the key from the inside of the vehicle, then close and lock either driver or passenger side door with the key operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(4) Remove the key from the inside of the vehicle, close either driver or passenger side door and lock the door with the wireless door lock operation. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

HINT:

Check that the security function is canceled under the following conditions:

- The ignition switch is turned ON.
- The driver side door is unlocked using the key.
- The door control switch (for manual operation) is turned to UNLOCK after the door lock knob is unlocked manually.
- The doors are unlocked by wireless operation.

(e) Check the illumination function.

(1) Set the room light switch to the DOOR position.

(2) With all doors locked, check that the either driver or passenger side door unlocks when either driver or passenger side door lock cylinder is turned to UNLOCK using the key. At the same time, the room light comes on.

(3) Check that the room light goes off in approximately 15 seconds if the doors have not been opened.

(f) Check the key-linked 2-step unlock function.

(1) Lock all doors.

(2) Check that only the driver side door unlocks when the driver side door lock cylinder is turned to UNLOCK once using the key and other doors unlock when turned to UNLOCK consecutively once again.

(g) Check the shift linked automatic door lock function.

(1) When the ignition switch is turned ON and all doors close and the shift lever is moved from P to a position other than P, check that all doors lock automatically.

- *: for A/T

(h) Check the shift linked automatic door unlock function.

(1) When the ignition switch is turned ON and the shift lever is moved to P from a position other than P, check that all doors unlock automatically.

- *: for A/T

(i) Check the speed-sensitive automatic door lock function*.

(1) When a door is unlocked and the vehicle is driven at approximately 20 km/h (12 mph) or more, check that all doors automatically lock at once (automatic door lock).

HINT:

***: Default setting is OFF**

(j) Check the driver's door-linked automatic unlock function*.

(1) When the driver's door is closed, turning the ignition switch ON to off and opening the driver door within 10 seconds will automatically unlock all the doors.

HINT:

***: Default setting is OFF**

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WI3026X
Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

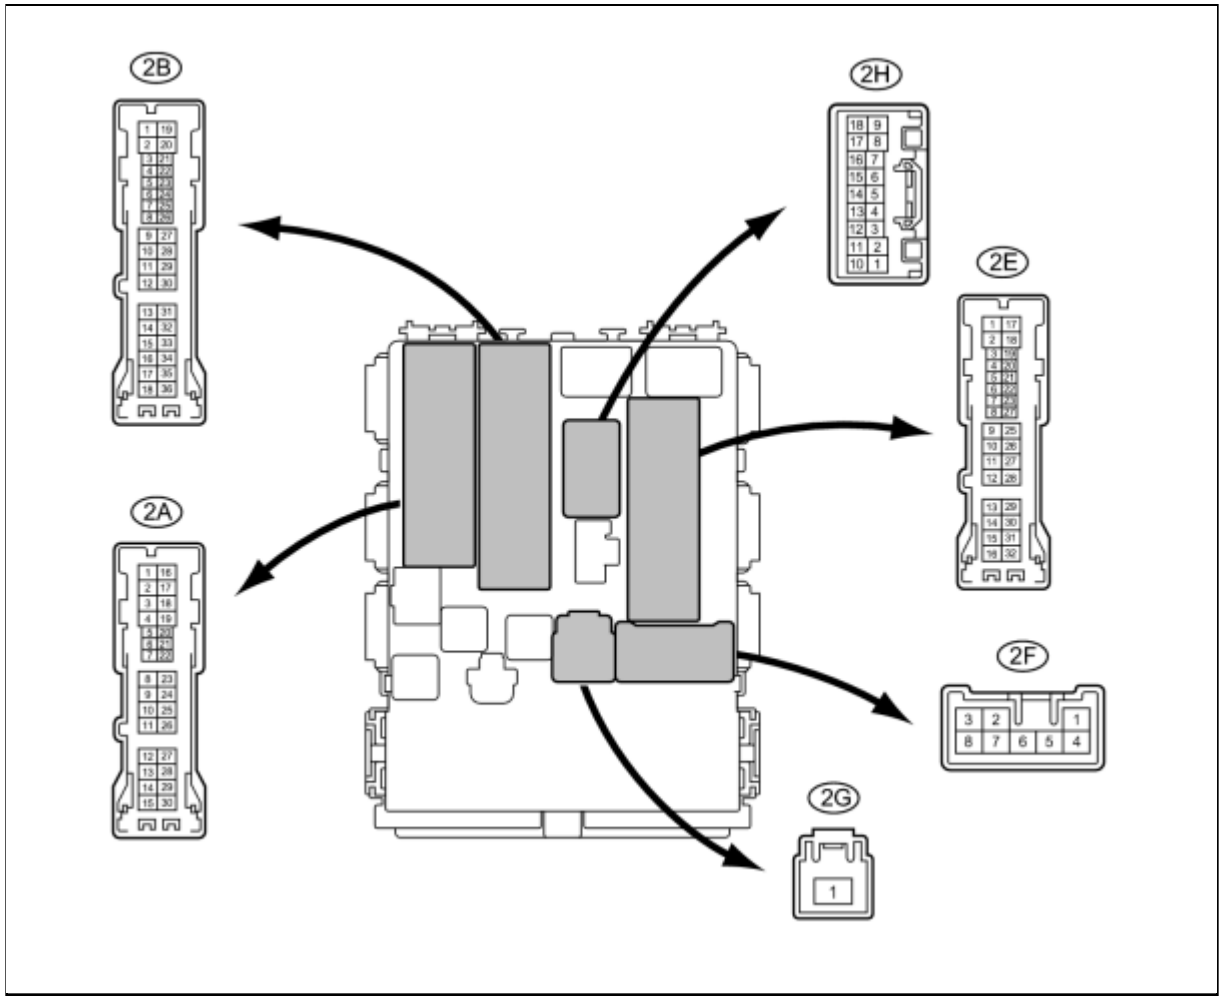
(c) Turn the Techstream on.

(d) Enter the following menus: Customize Setting / Door Lock.

(e) Select the setting by referring to the table below.

Main Body

TESTER DISPLAY	DEFAULT	CONTENTS	SETTING
Unlock Key Twice	ON	Function that unlocks only driver side door when driver side door key cylinder is turned to UNLOCK once, and unlock all doors when it is turned to UNLOCK twice. For OFF setting, turning it once unlocks all doors.	ON/OFF
Auto Lock/Shift*	ON	Function that locks all doors when shift lever is shifted from P to any other position with engine running and all doors closed	ON/OFF
Auto Unlock/Shift*	ON	Function that unlocks all doors when shift lever is shifted to P from any other position while the ignition switch is ON	ON/OFF
All Unlock/Open-Close	OFF	Function that unlocks all doors when opening driver door within 10 seconds after turning the ignition switch is OFF	ON/OFF
Auto Lock	OFF	Function that locks all doors when vehicle speed reaches a certain level	ON/OFF



- *: for A/T

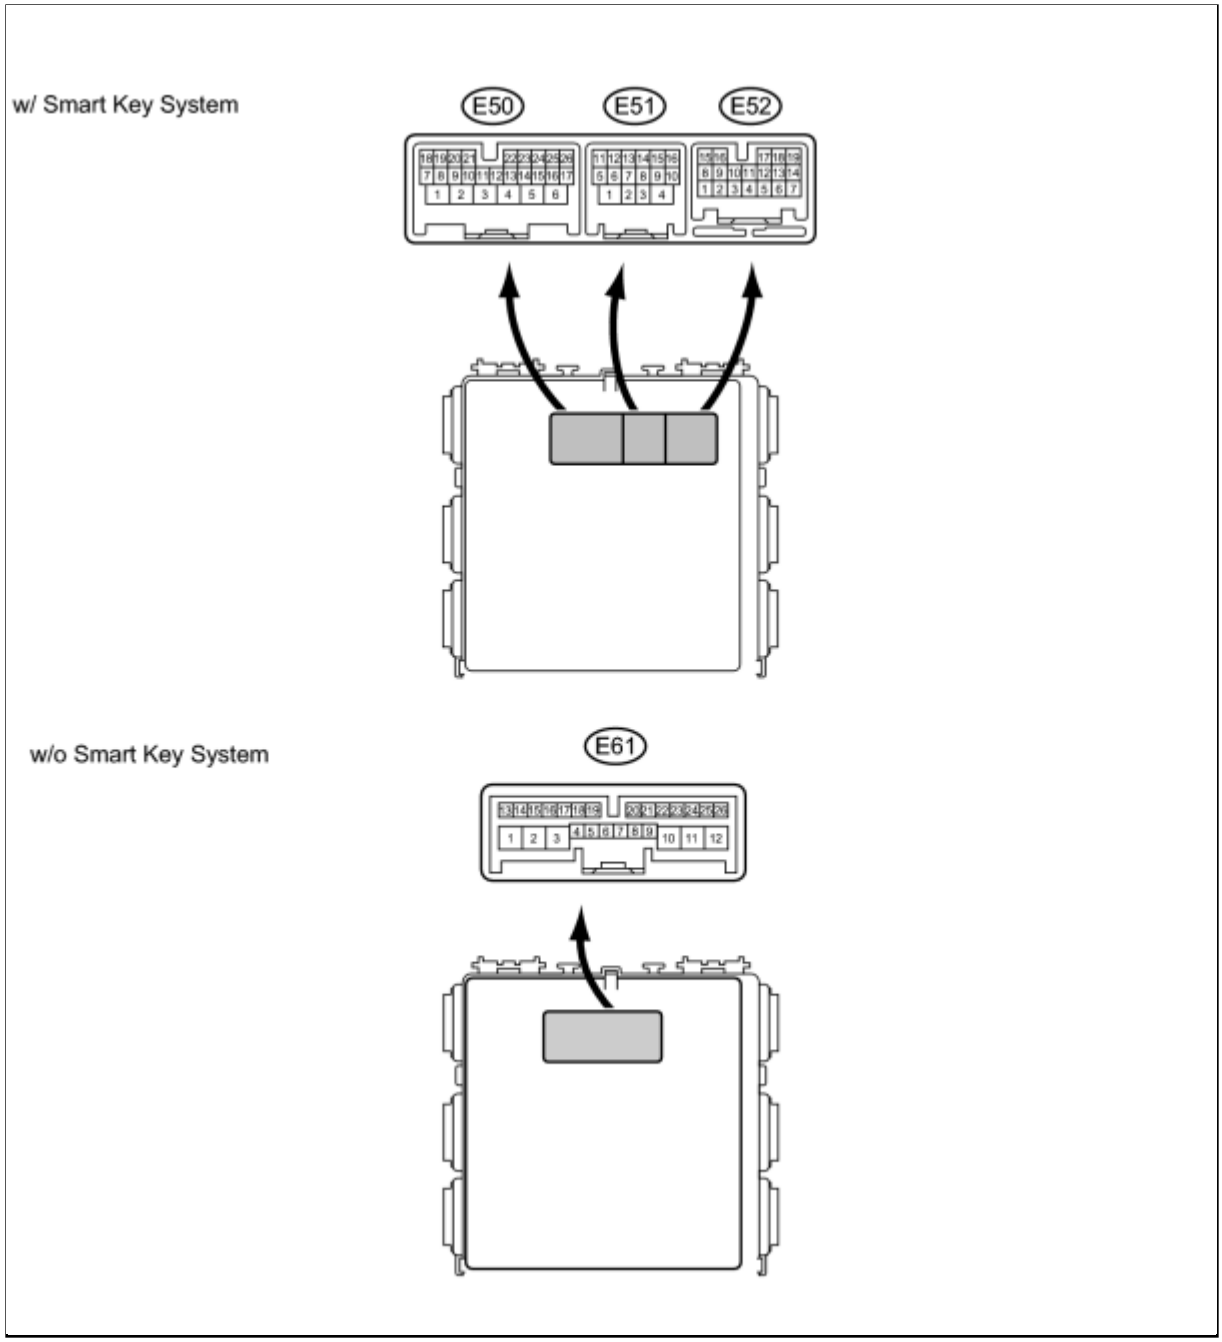
Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: TERMINALS OF ECU (2010 Corolla)		



TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2A, 2B, 2E, 2F, 2G and 2H junction block connectors.

(b) Disconnect the E61 and E50 ECU connector.

(c) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-21 (DCTY) - Body ground	Driver door courtesy switch	Driver door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
2E-19 (RCTY) - Body ground	Rear right door courtesy switch input	Rear right door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
2E-20 (PCTY) - Body ground	Passenger door courtesy switch input	Passenger door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω

TESTER CONNECTION	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E50-8 (LCTY) - Body ground*1	Rear left door courtesy switch input	Rear left door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
E61-13 (LCTY) - Body ground*2	Rear left door courtesy switch input	Rear left door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
2G-1 (ALTB) - Body ground	+B power supply	Always	11 to 14 V
2E-17 (E) - Body ground	Ground	Always	Below 1 Ω
2F-5 (ACC) - Body ground	ACC power supply	Ignition switch ON → OFF	11 to 14 V → Below 1 V
2H-4 (L1) - Body ground*3	Driver door control switch LOCK input	Driver door control switch or power window master switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
2H-13 (L1) - Body ground*4	Power window master switch LOCK input	Driver door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
2H-5 (UL1) - Body ground*3	Driver door control switch UNLOCK input	Driver door control switch or power window master switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
2H-14 (UL1) - Body ground*4	Power window master switch UNLOCK input	Driver door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
2H-13 (L1) - Body ground*3	Passenger door control switch LOCK input	Passenger door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
2H-4 (L1) - Body ground*4	Passenger door control switch LOCK input	Passenger door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
2H-14 (UL1) - Body ground*3	Passenger door control switch UNLOCK input	Passenger door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
2H-5 (UL1) - Body ground*4	Passenger door control switch UNLOCK input	Passenger door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
2B-30 (BECU) - Body ground*2	+B (BECU) power supply	Always	11 to 14 V
2A-7 (LGCY) - Body ground	Luggage door courtesy switch signal input	Luggage door CLOSE → OPEN	10 kΩ or higher → Below 1 Ω
2E-23 (KSW) - Body ground*2	Unlock warning switch signal input	No key is in ignition key cylinder → Key is in ignition key cylinder	10 kΩ or higher → Below 1 Ω

- *1: w/ Smart Key System
- *2: w/o Smart Key System
- *3: Except for TMC made
- *4: for TMC made

If the result is not as specified, there may be a malfunction on the wire harness side.

(d) Reconnect the ECU and junction block connectors.

(e) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E50-9 (UL3) - Body ground*1	Driver door key-linked door unlock switch	Driver door lock cylinder is turned LOCK → UNLOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
E61-14 (UL3) - Body ground*2	Driver door key-linked door unlock switch	Driver door lock cylinder is turned LOCK → UNLOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-15 (UL2) - Body ground*2,*3	Passenger door key-linked door unlock switch	Passenger door lock cylinder is turned LOCK → UNLOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-6 (UL2) - Body ground*4	Passenger door key-linked door unlock switch	Passenger door lock cylinder is turned LOCK → UNLOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-7 (L2) - Body ground	Driver door key-linked door lock switch	Driver door lock cylinder is turned UNLOCK → LOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-16 (L2) - Body ground*2	Passenger door key-linked door lock switch	Passenger door lock cylinder is turned UNLOCK → LOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-8 (ACT+) - Body ground	Passenger door key-linked door lock switch	Passenger door lock cylinder is turned UNLOCK → LOCK with key	Below 1 V → 11 to 14 V (or pulse generation)
2H-8 (ACT+) - Body ground 2H-17 (ACT+) - Body ground 2A-3 (ACT+) - Body ground	Door lock motor LOCK drive output (All doors)	Door control switch (Driver side or passenger side switch) or driver side door key cylinder or passenger side door key cylinder OFF → LOCK → OFF	Below 1 V → 11 to 14 V → Below 1 V
E61-21 (LSWD) - Body ground*2	Driver door lock position switch input	Driver door UNLOCK → LOCK	Below 1 V → 11 to 14 V (or pulse generation)
2H-9 (ACT-) - Body ground*3 2H-18 (ACT-) - Body ground 2A-4 (ACT-) - Body ground	Door lock motor UNLOCK drive output (All doors)	Door control switch (Driver side or passenger side switch) or driver side door key cylinder or passenger side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 11 to 14 V → Below 1 V
E50-25 (LSWD) - Body ground*1	Driver door lock position switch input	Driver door UNLOCK → LOCK	Below 1 V → 11 to 14 V (or pulse

TESTER CONNECTION	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			generation)

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: Key Lock-in Prevention Function does not Work Properly (2010 Corolla)		

Key Lock-in Prevention Function does not Work Properly

DESCRIPTION

When the key is in the ignition key cylinder or the door courtesy switch ON signal is output to the main body ECU (instrument panel junction block), performing the door lock operation with the lock switch does not lock the door.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (UNLOCK WARNING SWITCH AND COURTESY**

	SWITCHES)

(a) Connect the Techstream

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

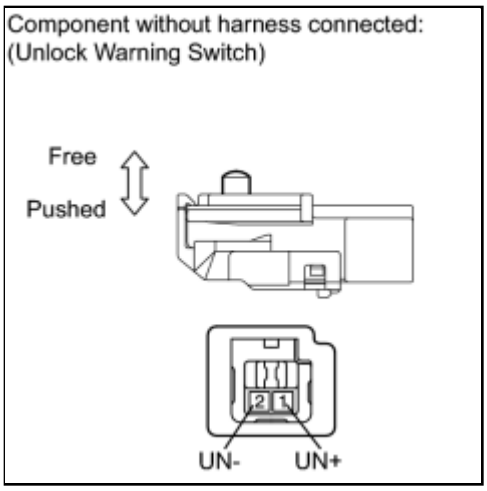
TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key Unlock Warning SW	Unlock warning switch signal / ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P Door Courtesy SW	Passenger side door courtesy light switch signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-

OK:

The Techstream indicates ON or OFF according to the switch operation as shown in the table above.

Result:

RESULT	PROCEED TO
OK	A
NG (Unlock Warning Switch)	B
NG (Front Door Courtesy Light Switch (Driver Side))	C
NG (Front Door Courtesy Light Switch (Passenger Side))	D



D ▶ **INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (PASSENGER SIDE)**

C ▶ **INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)**

B ▶ INSPECT UNLOCK WARNING SWITCH ASSEMBLY

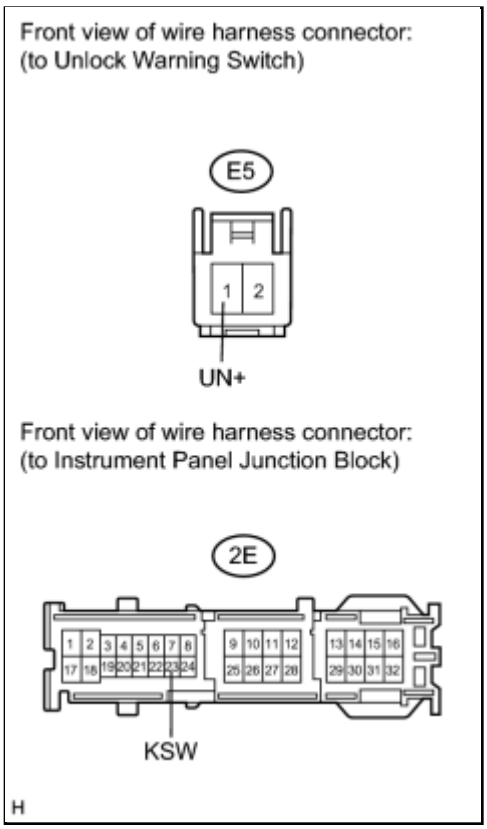
A ▶ REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

2.	**INSPECT UNLOCK WARNING SWITCH ASSEMBLY**

(a) Remove the unlock warning switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (UN+) - 2 (UN-)	Pushed	10 kΩ or higher
1 (UN+) - 2 (UN-)	Not pushed	Below 1 Ω

NG ▶ REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - JUNCTION BLOCK)**

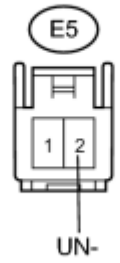
(a) Disconnect the 2E junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-1 (UN+) - 2E-23 (KSW)	Always	Below 1 Ω
E5-1 (UN+) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

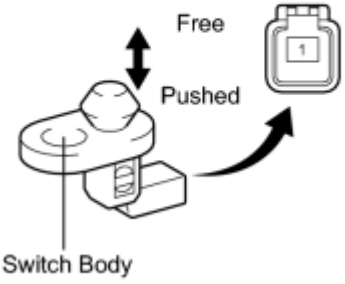
4.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Front view of wire harness connector:
(to Unlock Warning Switch)

H



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-2 (UN-) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

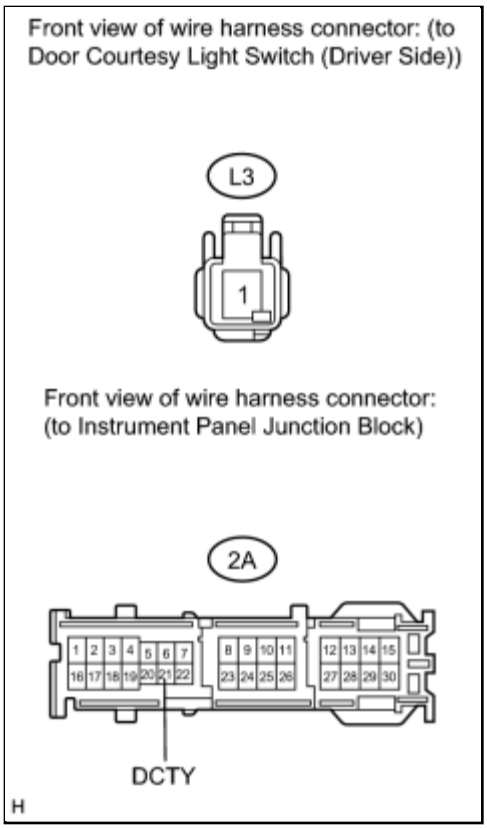
5.	**INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)**

Component without harness connected:
(Front Door Courtesy Light Switch (Driver Side))

H

(a) Remove the front door courtesy light switch (driver side) INFO .

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - Switch ground	Not pushed (ON)	Below 1 Ω
1 - Switch ground	Pushed (OFF)	10 kΩ or higher

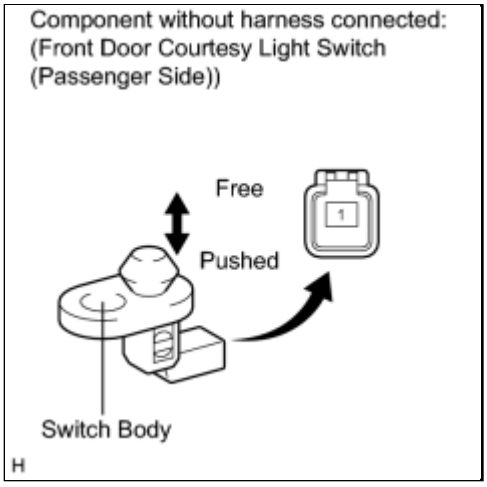
NG ▶ **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (DRIVER SIDE)**

OK

6.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY LIGHT SWITCH - JUNCTION BLOCK)**

(a) Disconnect the 2A junction block connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L3-1 - 2A-21 (DCTY)	Always	Below 1 Ω
L3-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

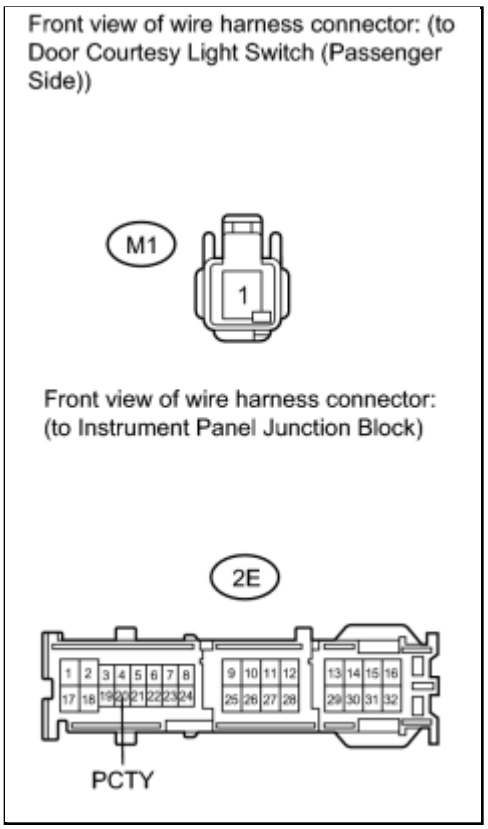
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

7.	**INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (PASSENGER SIDE)**

(a) Remove the front door courtesy light switch (passenger side) INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - Switch ground	Not pushed (ON)	Below 1 Ω
1 - Switch ground	Pushed (OFF)	10 kΩ or higher

NG ▶ **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY (PASSENGER SIDE)**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY LIGHT SWITCH - JUNCTION BLOCK)**

(a) Disconnect the 2E junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M1-1 - 2E-20 (PCTY)	Always	Below 1 Ω
M1-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TNZ03NX
Title: DOOR LOCK: POWER DOOR LOCK CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key Unlock Warning SW*1	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
D Door Courtesy SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door is OPEN OFF: Driver side door is CLOSED	-
P Door Courtesy SW	Passenger side door courtesy light switch signal/ON or OFF	ON: Passenger side door is OPEN OFF: Passenger side door is CLOSED	-
RR Door Courtesy SW	Rear right door courtesy light switch signal/ON or OFF	ON: Rear right door is OPEN OFF: Rear right door is CLOSED	-
RL Door Courtesy SW	Rear left door courtesy light switch signal/ON or OFF	ON: Rear left door is OPEN OFF: Rear left door is CLOSED	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D-Door Lock Pos SW	Driver side door lock position switch signal/ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P-Door Lock Pos SW	Front passenger side door lock position switch signal/ON or OFF	ON: Front passenger side door is unlocked OFF: Front passenger side door is locked	-
Door Lock SW-Lock	Door control switch lock signal/ON or OFF	ON: Door control switch is pushed to lock position OFF: Door control switch is not pushed to lock position	-
Door Lock SW-Unlock	Door control switch unlock signal/ON or OFF	ON: Door control switch is pushed to unlock position OFF: Door control switch is not pushed to unlock position	-
Door Key SW-Lock	Front door lock/unlock switch lock signal (key-linked lock switch)/ON or OFF	ON: Front door key cylinder is turned to lock position OFF: Front door key cylinder is turned to unlock position	-
Door Key SW-Unlock*2	Passenger door lock/unlock switch unlock signal (key-linked unlock switch)/ON or OFF	ON: Passenger door key cylinder is turned to unlock position OFF: Passenger door key cylinder is turned to lock position	-
D-Door Key SW-UL	Driver door lock/unlock switch unlock signal (key-linked unlock switch)/ON or OFF	ON: Driver side door key cylinder is turned to unlock position OFF: Driver side door key cylinder is turned to lock position	-
Luggage Courtesy SW	Luggage courtesy light switch signal/ON or OFF	ON: Luggage door is OPEN OFF: Luggage door is CLOSED	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Unlock Key Twice	Key-linked 2-step unlock function/ON or OFF	Customized value is displayed	-
Auto Lock	Speed-sensitive automatic door lock function/ON or OFF	Customized value is displayed	-
Auto Lock/Shift	Shift-linked automatic door lock function/ON or OFF	Customized value is displayed	-
Auto Unlock/Shift	Shift-linked automatic door unlock function/ON or OFF	Customized value is displayed	-
All Unlock/Open-Close	Driver door-linked automatic door unlock function/ON or OFF	Customized value is displayed	-

- *1: w/o Smart Key System
- *2: w/o Wireless Door Lock Control System

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Door Lock	Door lock motor	LOCK/UNLOCK	-
D-Door Unlock	Driver side door lock motor	ON/OFF	-

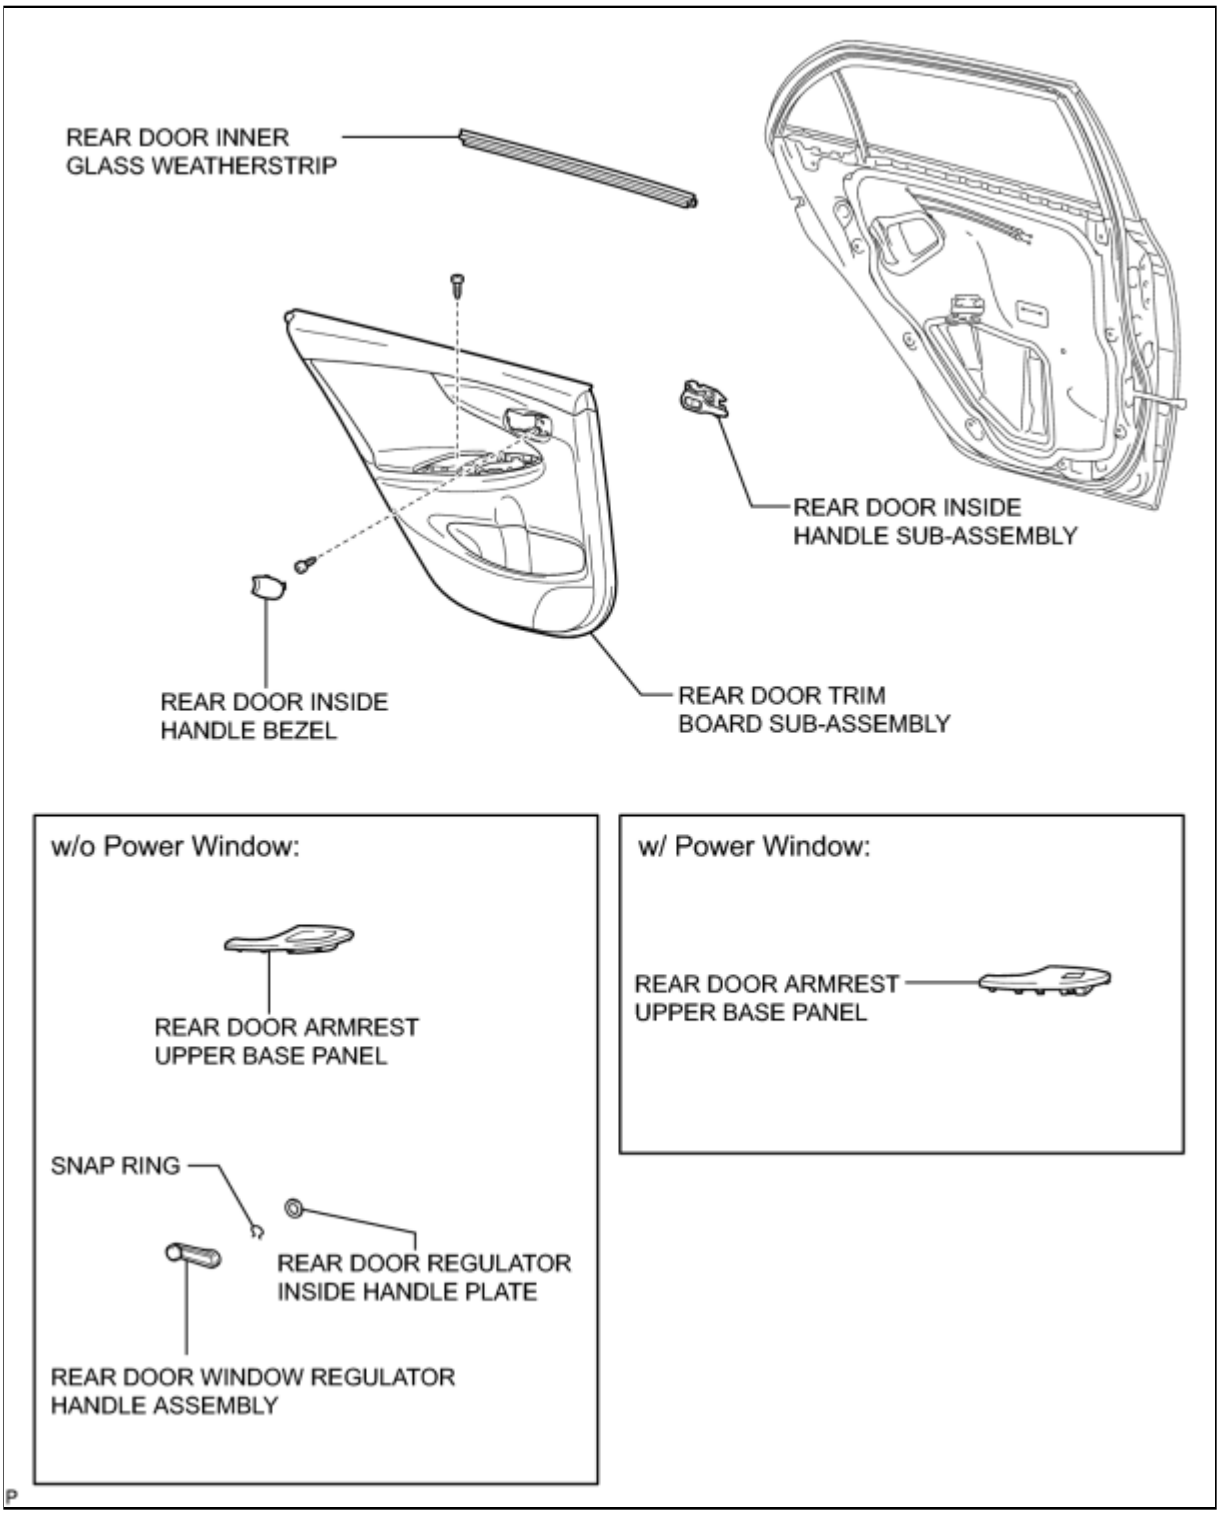
DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 INFO .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.



Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

REMOVAL

1. REMOVE REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

2. REMOVE REAR DOOR INSIDE HANDLE BEZEL INFO

3. REMOVE REAR DOOR ARMREST UPPER BASE PANEL (w/o Power Window) INFO

4. REMOVE REAR DOOR ARMREST UPPER BASE PANEL (w/ Power Window) INFO

5. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY INFO

6. REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY INFO

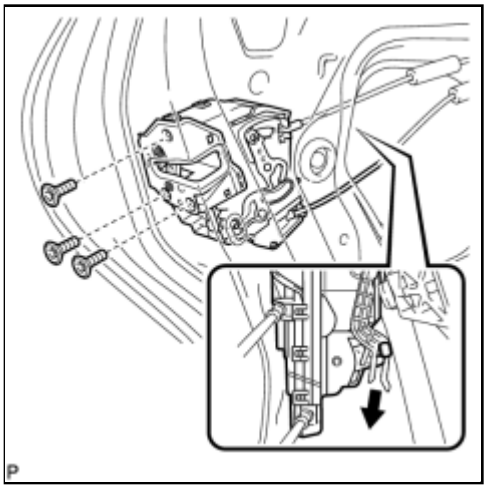
7. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP INFO

8. REMOVE DOOR TRIM BRACKET INFO

9. REMOVE REAR DOOR SERVICE HOLE COVER INFO

10. REMOVE REAR DOOR WEATHERSTRIP INFO

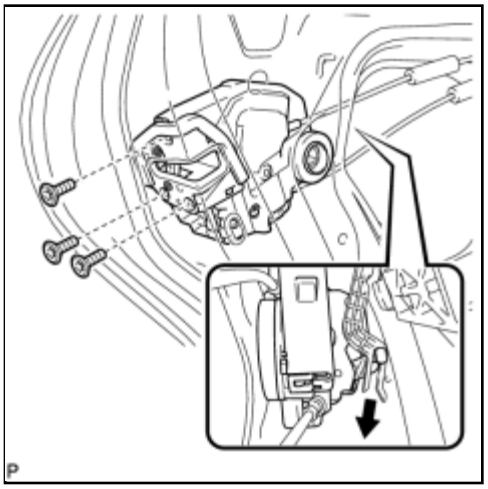
11. REMOVE REAR DOOR GLASS RUN INFO



12. REMOVE REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY INFO

13. REMOVE REAR DOOR QUARTER WINDOW GLASS INFO

14. REMOVE REAR DOOR GLASS SUB-ASSEMBLY INFO

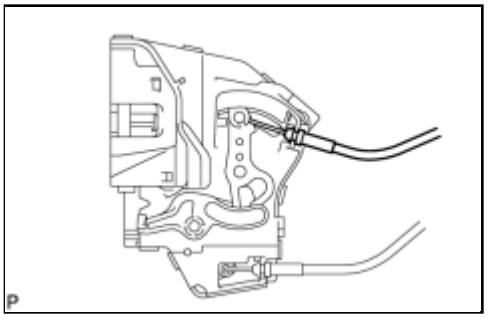


15. REMOVE REAR DOOR LOCK ASSEMBLY (w/o Power Door Lock)

(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

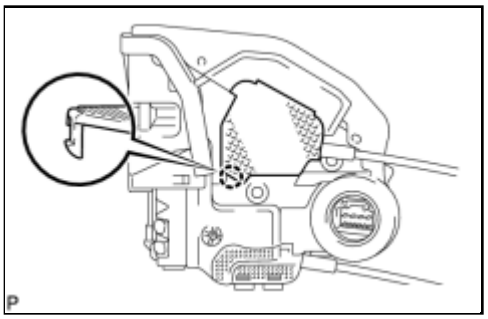
(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.

16. REMOVE REAR DOOR LOCK ASSEMBLY (w/ Power Door Lock)



(a) Using a "TORX" socket wrench (T30), remove the 3 screws.

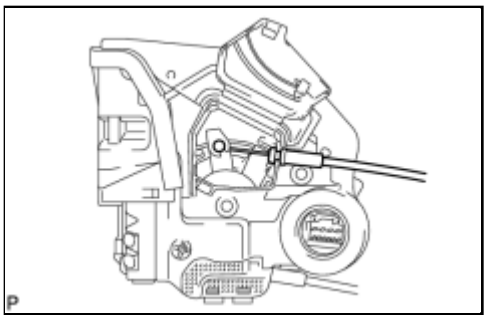
(b) Move the rear door lock assembly downward and pull the release plate out of the rear door outside handle frame.



(c) Remove the door lock wiring harness seal from the rear door lock assembly.

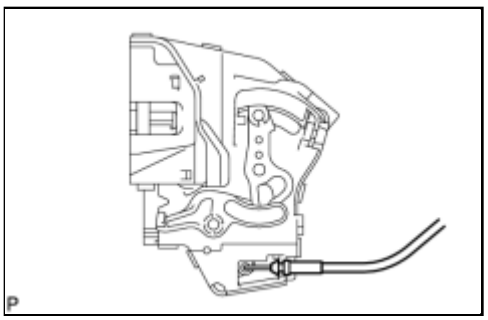
17. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)

(a) Remove the rear door lock remote control cable assembly.



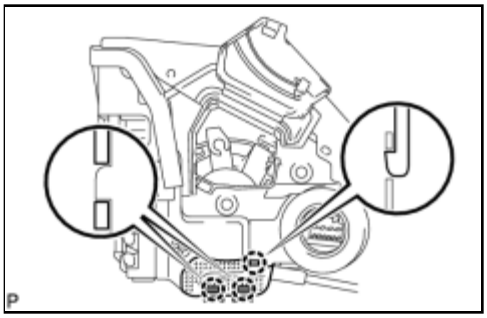
18. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Using a screwdriver, disengage the claw.



HINT:

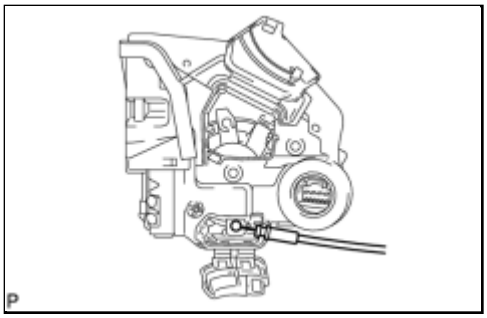
Tape the screwdriver tip before use.



(b) Remove the rear door lock remote control cable assembly.

19. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)

(a) Remove the rear door inside locking cable assembly.

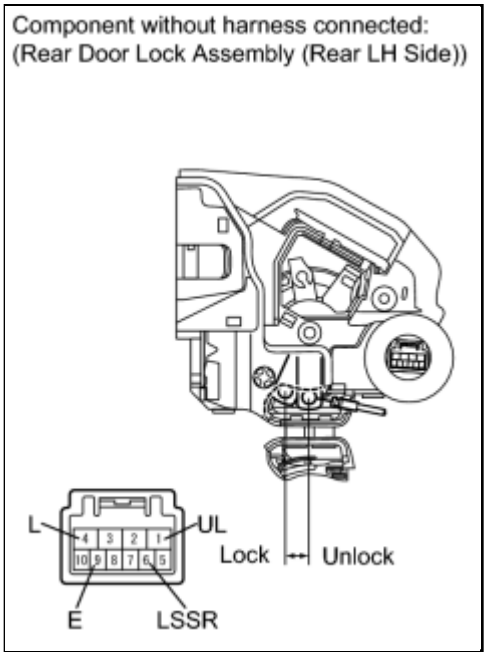


20. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)

(a) Using a screwdriver, disengage the 3 claws.

HINT:

Tape the screwdriver tip before use.



(b) Remove the rear door inside locking cable assembly.

Title: DOOR LOCK: REAR DOOR LOCK: INSPECTION (2010 Corolla)		

INSPECTION

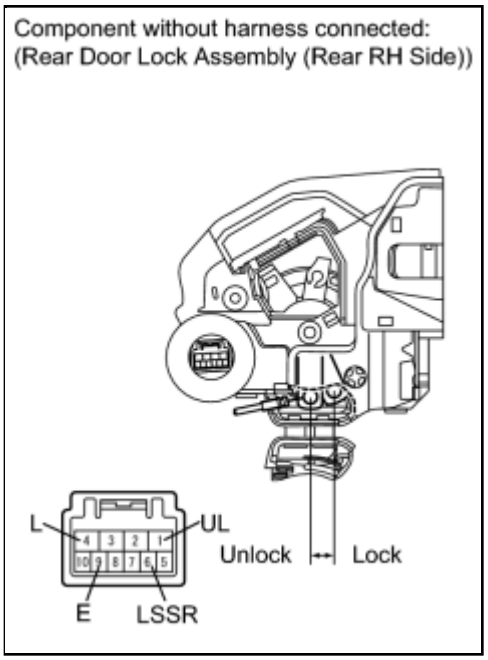
1. INSPECT REAR DOOR LOCK ASSEMBLY LH

(a) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	Lock
Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.



(b) Measure the resistance of the door lock position switch. (w/ Smart Key System)

Standard resistance:

TESTER CONNECTION	MEASUREMENT CONDITION	DOOR LOCK CONDITION	SPECIFIED CONDITION
6 (LSSR) - 9 (E)	Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	LOCK	10 kΩ or higher
6 (LSSR) - 9 (E)	Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	UNLOCK	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

2. INSPECT REAR DOOR LOCK ASSEMBLY RH

(a) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

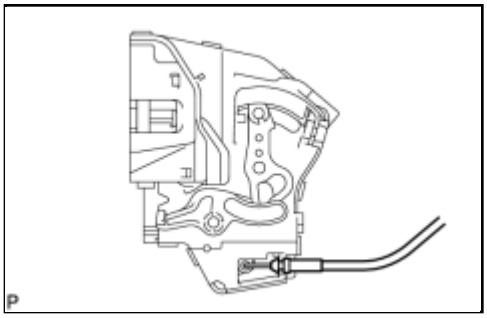
OK:

MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	Lock
Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

(b) Measure the resistance of the door lock position switch. (w/ Smart Key System)

Standard resistance:



TESTER CONNECTION	MEASUREMENT CONDITION	DOOR LOCK CONDITION	SPECIFIED CONDITION
6 (LSSR) - 9 (E)	Battery positive (+) → Terminal 4 (L) Battery negative (-) → Terminal 1 (UL)	LOCK	10 kΩ or higher
6 (LSSR) - 9 (E)	Battery positive (+) → Terminal 1 (UL) Battery negative (-) → Terminal 4 (L)	UNLOCK	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

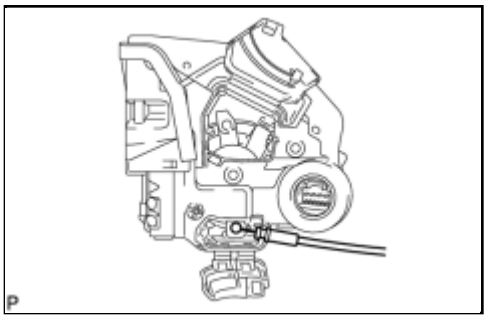
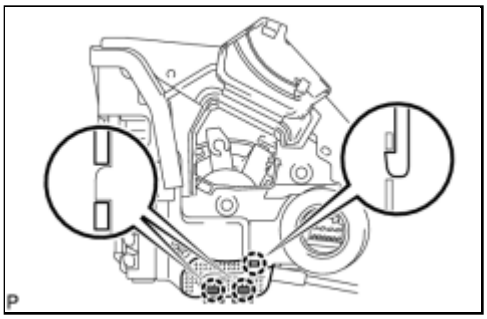
Title: DOOR LOCK: REAR DOOR LOCK: INSTALLATION (2010 Corolla)		



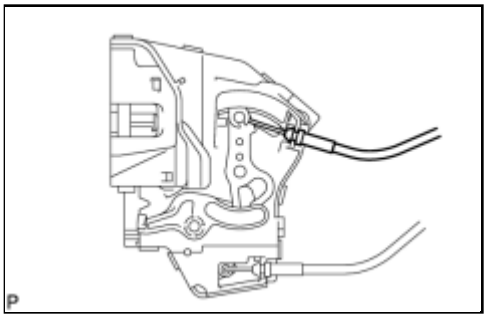
INSTALLATION

1. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/o Power Door Lock)

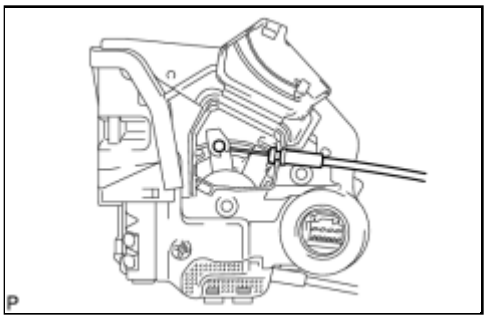


(a) Install the rear door inside locking cable assembly.

2. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY (w/ Power Door Lock)

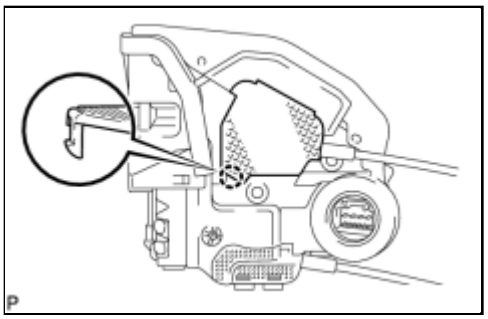


(a) Install the rear door inside locking cable assembly.



(b) Engage the 3 claws.

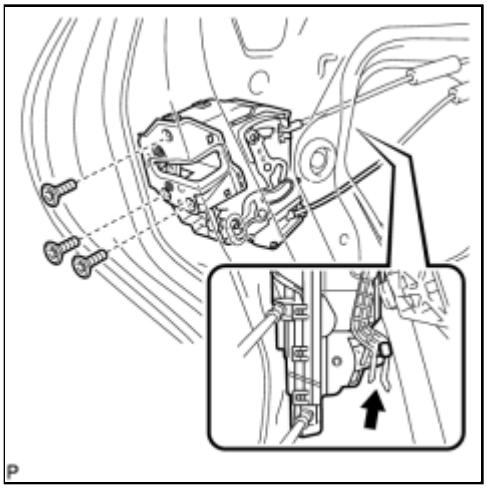
3. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/o Power Door Lock)



(a) Install the rear door lock remote control cable assembly.

4. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY (w/ Power Door Lock)

(a) Install the rear door lock remote control cable assembly.



(b) Engage the claw.

5. INSTALL REAR DOOR LOCK ASSEMBLY (w/o Power Door Lock)

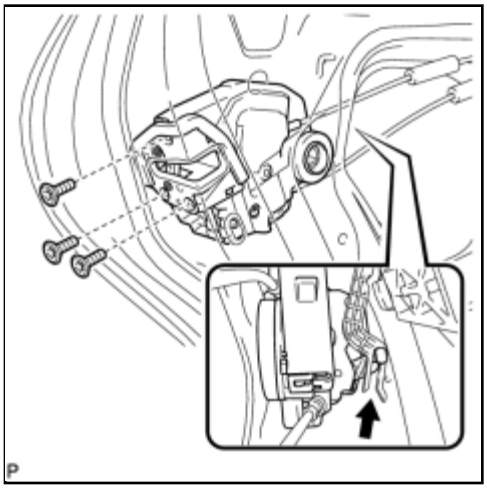
(a) Apply MP grease to the sliding parts of the rear door lock assembly.

(b) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

(c) Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

(d) Using a "TORX" socket wrench (T30), install the rear door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)



6. INSTALL REAR DOOR LOCK ASSEMBLY (w/ Power Door Lock)

NOTICE:

- When reusing the removed rear door lock assembly, replace the door lock wiring harness seal on the connector with a new one.
- Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.
- Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion to the connection. This may result in a malfunction of the rear door lock assembly.

(a) Apply MP grease to the sliding parts of the rear door lock assembly.

(b) Install a new door lock wiring harness seal to the rear door lock assembly.

(c) Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

(d) Make sure that the rear door outside handle frame release plate is securely connected to the rear

door lock assembly.

(e) Using a "TORX" socket wrench (T30), install the rear door lock assembly with the 3 screws.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(f) Connect the connector.

7. INSTALL REAR DOOR GLASS RUN INFO

8. INSTALL REAR DOOR GLASS SUB-ASSEMBLY INFO

9. INSTALL REAR DOOR QUARTER WINDOW GLASS INFO

10. INSTALL REAR DOOR WINDOW DIVISION BAR SUB-ASSEMBLY INFO

11. INSTALL REAR DOOR WEATHERSTRIP INFO

12. INSTALL REAR DOOR SERVICE HOLE COVER INFO

13. INSTALL DOOR TRIM BRACKET INFO

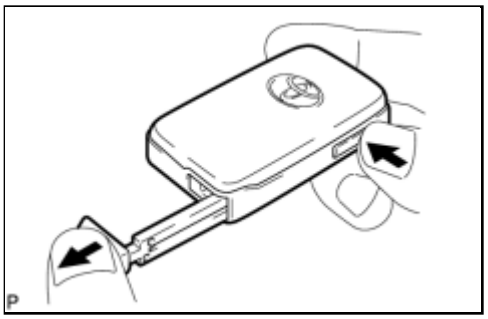
14. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP INFO

15. INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY INFO

16. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY INFO

17. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/o Power Window) INFO

18. INSTALL REAR DOOR ARMREST UPPER BASE PANEL (w/ Power Window) INFO



19. INSTALL REAR DOOR INSIDE HANDLE BEZEL INFO

20. INSTALL REAR DOOR WINDOW REGULATOR HANDLE ASSEMBLY (w/o Power Window) INFO

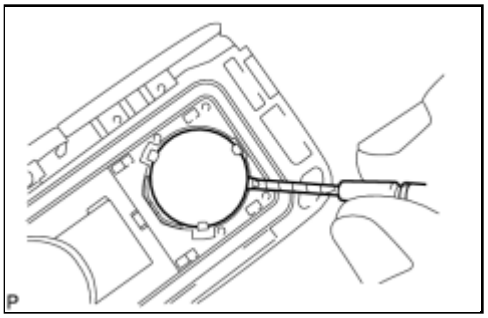
Title: DOOR LOCK: TRANSMITTER BATTERY (w/ Smart Key System): REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REMOVE TRANSMITTER BATTERY

(a) Remove the mechanical key.

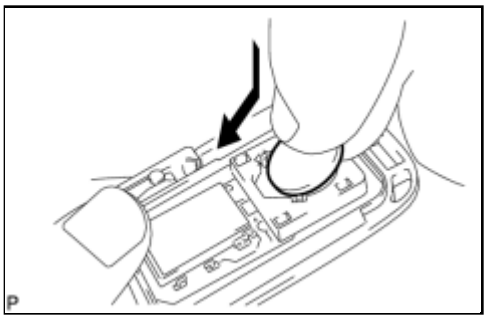
(b) Insert a screwdriver into the gap, and turn the screwdriver to detach the cover.



HINT:

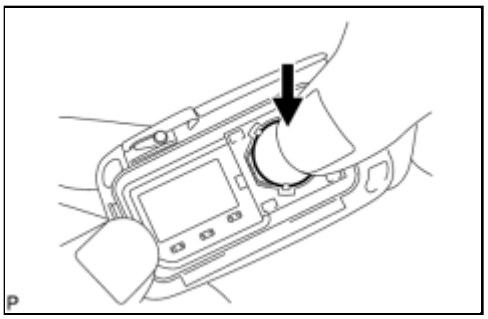
Tape the screwdriver tip before use.

(c) Insert a screwdriver into the gap and gently remove the battery (lithium battery).



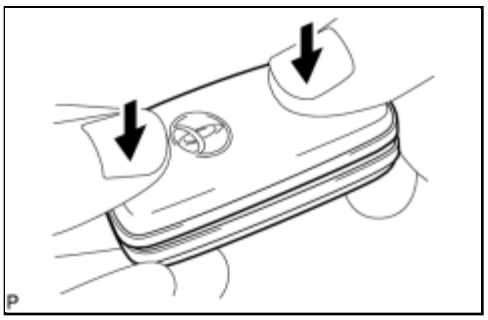
NOTICE:

- Do not push the terminals with your finger.
- Do not forcibly pry up the battery (lithium battery) because doing so will deform the terminals.



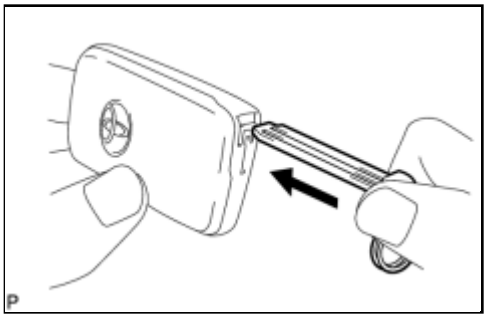
- Do not touch the battery with wet hands. Water may result in corrosion.
- Do not touch or move any components inside the transmitter because handling the components may interfere with proper operation of the transmitter.

2. INSTALL TRANSMITTER BATTERY



(a) Install a new battery (lithium battery) with the positive (+) side up as shown in the illustration.

(b) Press down gently on the battery to set it in place.

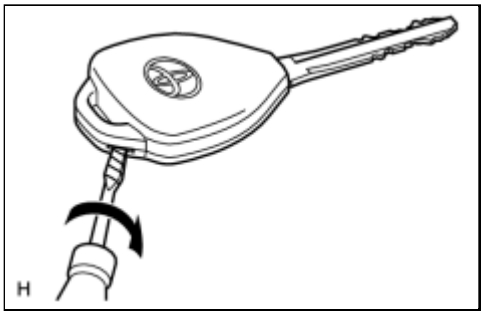


NOTICE:

- Be sure that the positive and negative sides of the transmitter battery are positioned correctly.
- Be careful not to bend the terminals of the transmitter battery during installation.
- Keep the interior of the transmitter case free of dust, water, and oil.

(c) Install the cover by pressing it as shown in the illustration.

(d) Install the mechanical key.



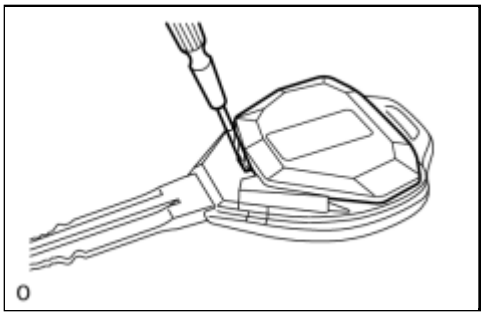
HINT:

After the installation, press one of the transmitter switches and check that the LED illuminates.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003D3H005X
Title: DOOR LOCK: TRANSMITTER BATTERY (w/o Smart Key System): REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REMOVE TRANSMITTER HOUSING COVER

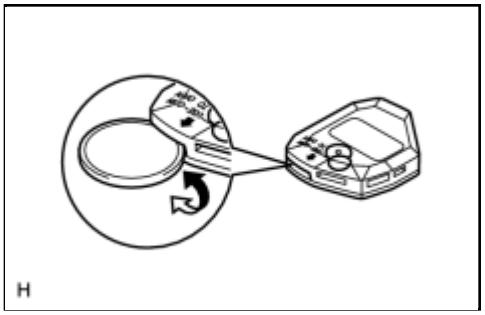


(a) Using a screwdriver with its tip wrapped in protective tape, pry open the transmitter housing cover.

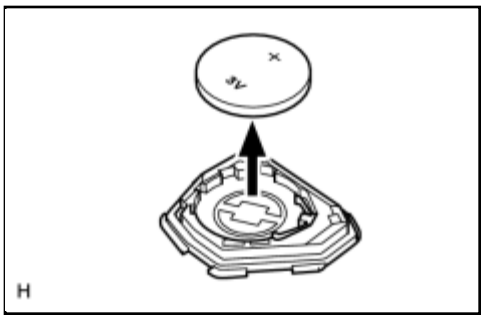
NOTICE:

Do not forcibly pry the cover.

2. REMOVE DOOR CONTROL TRANSMITTER MODULE



(a) Using a screwdriver with its tip wrapped in protective tape, remove the door control transmitter module from the transmitter housing case.

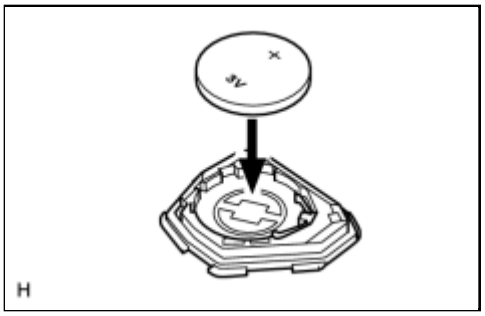


NOTICE:

Handle each part with care as they are delicate electrical parts.

3. REMOVE TRANSMITTER BATTERY

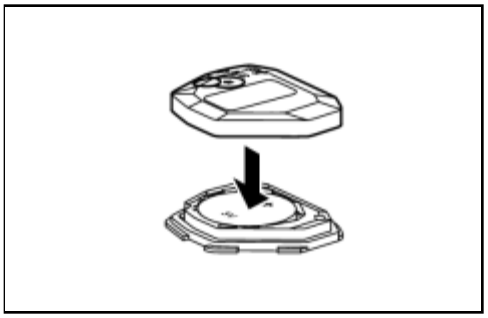
(a) Twist the coin in the direction of the arrow mark in the illustration, and remove the transmitter battery cover.



(b) Remove the battery (lithium battery: CR2025).

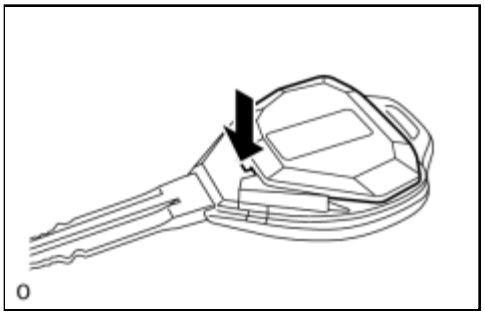
NOTICE:

- Do not push the terminals with your finger.
- Do not forcibly pry up the battery. The terminals may become damaged.
- Do not touch the battery with wet hands. Water may cause rust.
- Do not touch or move any components inside the transmitter. It may cease to work.



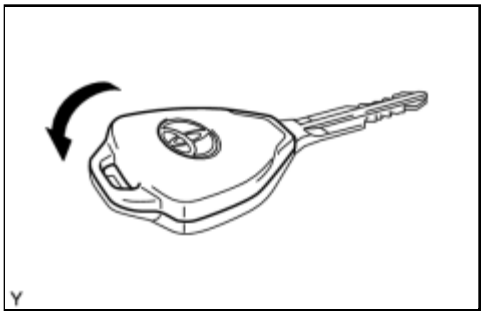
4. INSTALL TRANSMITTER BATTERY

(a) Install a battery (lithium battery: CR2025) with the positive (+) side facing upward, as shown in the illustration.



NOTICE:

- Be careful not to bend the transmitter battery electrode during insertion.
- Keep the transmitter cover interior free of dust and oil.



(b) Install the cover.

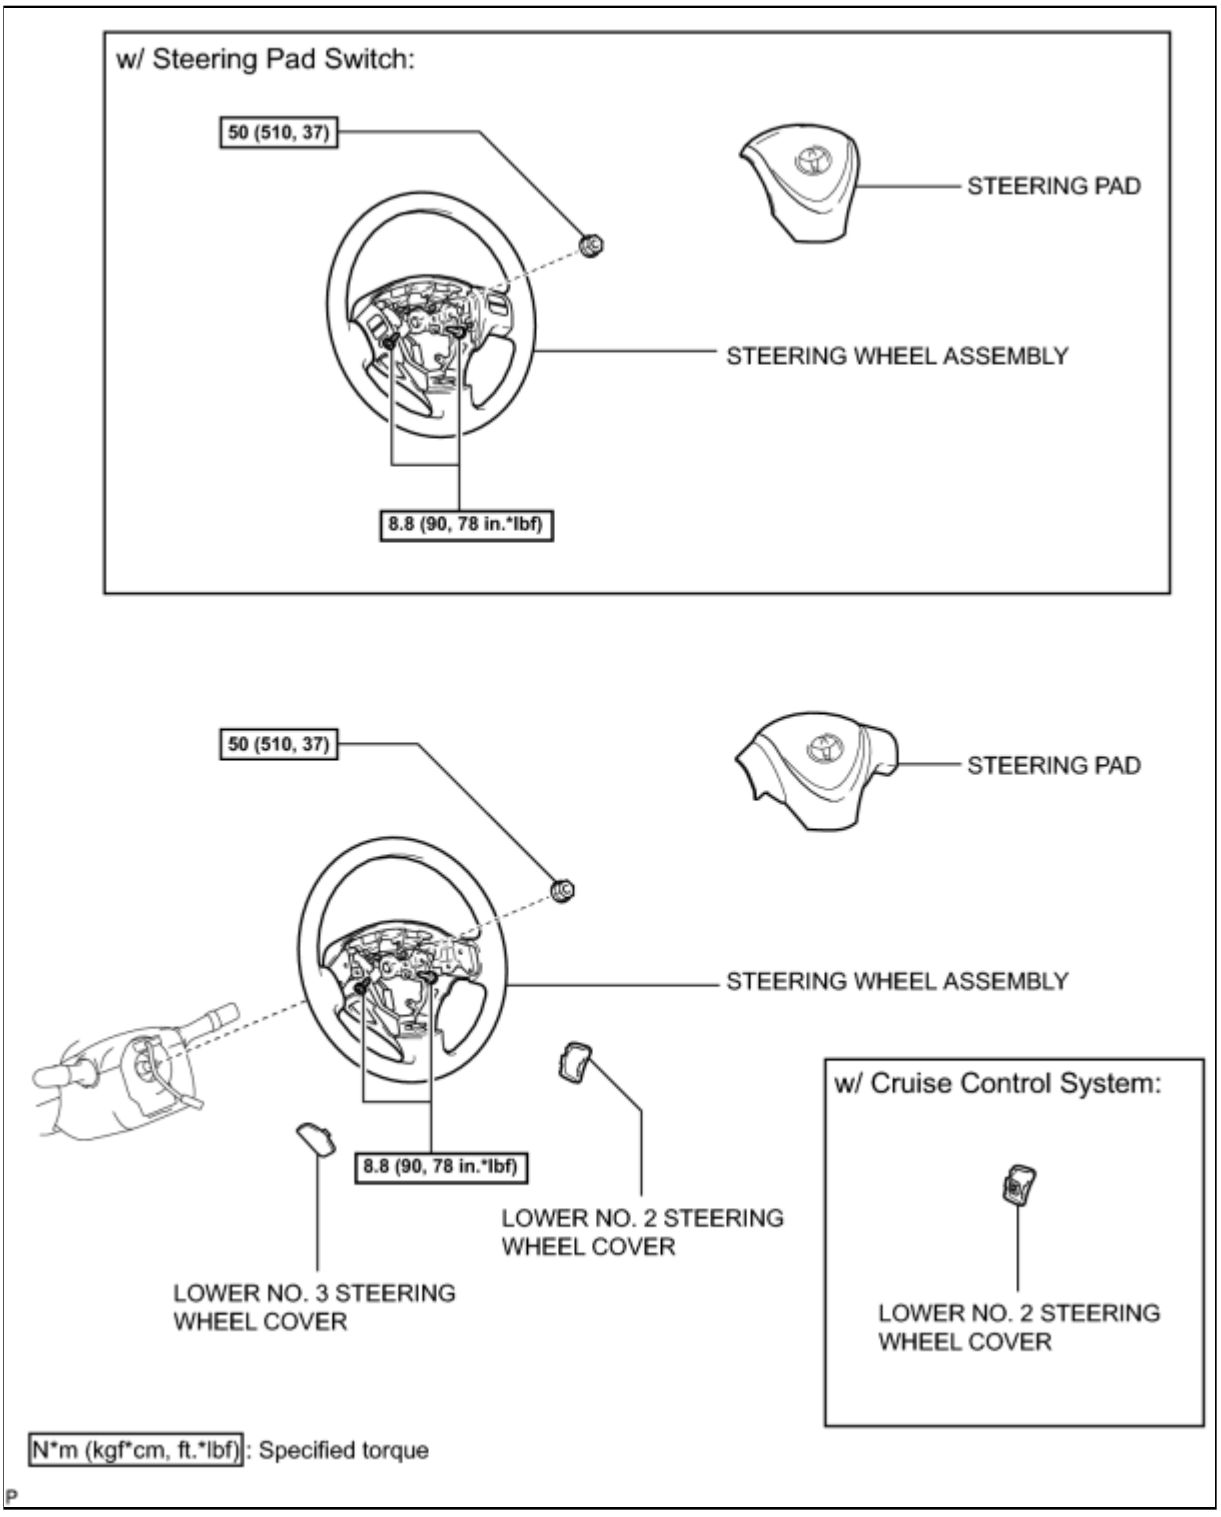
5. INSTALL DOOR CONTROL TRANSMITTER MODULE

(a) Install the door control transmitter module into the transmitter housing case, and install the transmitter housing cover securely onto the transmitter housing case.

6. INSTALL TRANSMITTER HOUSING COVER

(a) Install the transmitter housing cover to the transmitter housing case.

(b) Check that the transmitter LED illuminates when the switch is pressed.



OK:

Transmitter LED illuminates when switch is pressed.

Title: DOOR LOCK: WIRELESS DOOR LOCK BUZZER: INSPECTION (2010 Corolla)		

INSPECTION

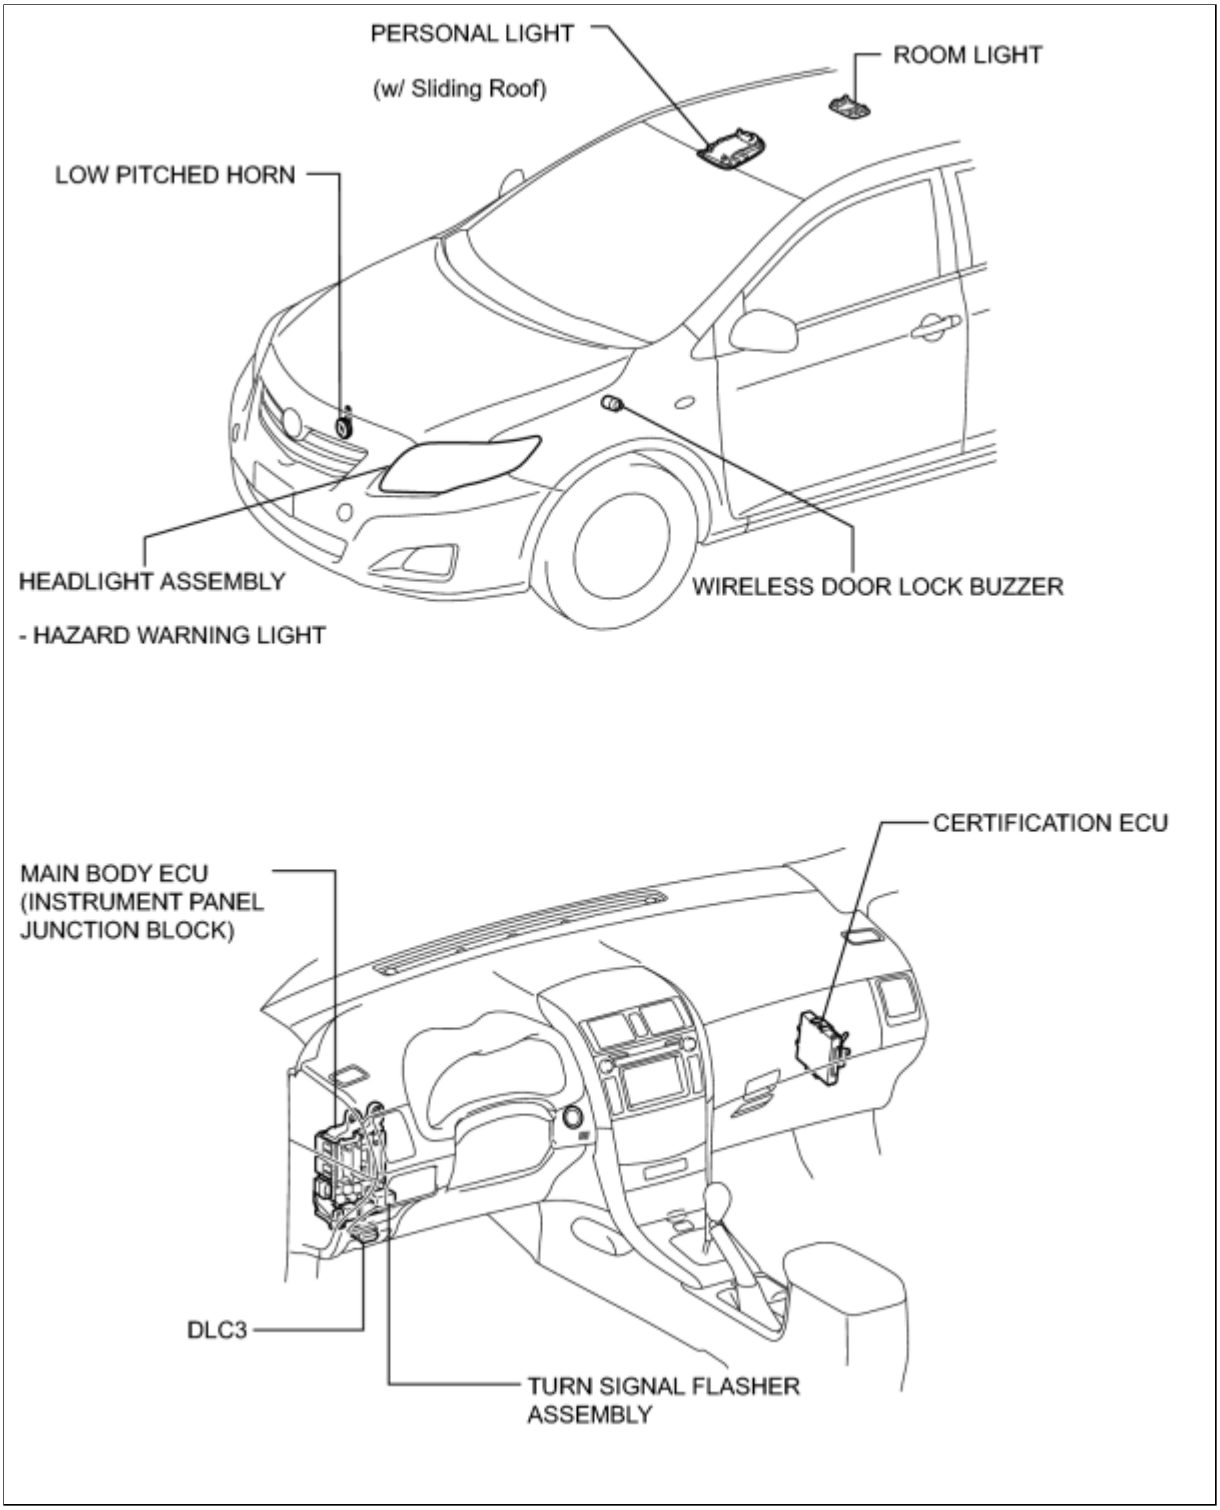
1. INSPECT WIRELESS DOOR LOCK BUZZER

(a) Measure the resistance according to the value(s) in the table below.

HINT:

The buzzer activation circuit is built into the ECU, not into the buzzer itself. When battery voltage is applied directly to the buzzer, the buzzer will not sound.

Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A42-1 - A42-2	Always	950 to 1050 Ω

If the result is not as specified, replace the wireless door lock buzzer.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system functions to lock and unlock all the doors from a distance. The system is controlled by a hand-held transmitter which sends radio waves to the door control receiver. The certification ECU performs an ID code identification process and engages the door lock.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Door control transmitter	• Has LOCK, UNLOCK, LUGGAGE OPEN and PANIC switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver.
Door control receiver	Receives weak radio waves from the door control transmitter and sends them to the certification ECU.
• Front door courtesy light switch • Rear door courtesy light switch • Luggage compartment door courtesy light switch	Turns on when a door is opened and turns off when it is closed. Outputs door status codes (open or closed) to the main body ECU.
Door lock position switch	Transmits the door lock positions of each door to the main body ECU.
Certification ECU	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each ECU.

3. SYSTEM FUNCTION

The door control transmitter has LOCK, UNLOCK, LUGGAGE OPEN and PANIC switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are ON. Some of these functions can be customized INFO **.**

FUNCTION	OPERATION
All door lock	Pressing the LOCK switch locks all doors.
All door unlock (Unlock 2 operation)	Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver's door is unlocked.
Automatic lock	If none of the doors is opened within 60 seconds after they are unlocked by the wireless door lock control, all the doors will lock again automatically.
Luggage compartment door open	Pressing the LUGGAGE OPEN switch of the transmitter opens the luggage compartment door.
Answer back	• When the doors are locked by wireless operation, the hazard warning lights flash once, and wireless door lock buzzer sounds once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice and wireless door lock buzzer sounds twice. • When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.
Panic alarm	Pressing the PANIC switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate: • Sounds the horn. • Flashes the hazard lights. • Illuminates the front interior light (when the switch is in the DOOR position). While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.
Door ajar warning	The buzzer sounds when the LOCK switch is pressed when any of the doors are ajar, and it sounds for 10 seconds continuously. The buzzer stops when all doors are closed or the UNLOCK switch is pressed.
Illuminated Entry	When all the doors are locked, pressing the UNLOCK switch causes the interior light to come on simultaneously with the unlock operation.

Last Modified: 3-10-2010	6.4 D	**From:** 200901

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

(a) This wireless door lock control function operates only when the following 4 conditions are met:

(1) There is no wireless transmitter in the cabin.

(2) All the doors are closed.

(3) The power door lock system is functioning normally.

(4) The function is not disabled by customization.

HINT:

The UNLOCK function operates even when any of the doors are open.

(b) The wireless transmitter operational range differs depending on the situation.

(1) The operational range differs depending on the user, the way the transmitter is held, and the location.

(2) In certain areas, the operational range will be reduced due to the vehicle body shape and the influence of the surrounding environment.

(3) Since the transmitter uses weak radio waves, the operational range may be reduced or the transmitter may not function if interference or stronger radio waves occur in the area where the transmitter is used.

(4) When the battery is low, the operational range is reduced and/or the transmitter may not function.

HINT:

If the transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, the battery may be weakened or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switches built into the door control transmitter send radio waves to the door lock control receiver.
- The operational range must be taken into account during checks.

(a) Establish conditions that allow the wireless control function to be operated successfully.

(b) Check these basic functions.

(1) Check that all the doors lock when the LOCK switch is pressed.

(2) Check that the driver side door unlock when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds.

(3) Check that the luggage compartment door opens when the LUGGAGE OPEN switch is pressed and held 0.8 second.

(c) Check the automatic lock function.

(1) Check that if all doors are unlocked with the UNLOCK switch and none of the doors is opened or locked within approximately 60 seconds, the doors automatically re-lock.

(2) Check that if all doors are unlocked with the UNLOCK switch and a door is opened or locked within approximately 60 seconds, the automatic lock function does not operate.

(d) Check the interior light ON function.

HINT:

Turn the interior light switch to the DOOR position before the check.

(1) Check that the interior lights come on simultaneously with the unlocking operation when the UNLOCK switch has been pressed.

(2) Check that the interior lights go off in approximately 15 seconds if none of the doors is opened after the unlocking operation.

(e) Check the answer back function.

(1) When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once.

(2) When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice.

(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.

(f) Check the switch operation fail-safe function.

(1) Check that the doors cannot be locked or unlocked by operating a switch on the unregistered transmitter, and that the doors are locked and unlocked by operating a switch on the registered transmitter.

(g) Check the chattering prevention function.

(1) Check that the corresponding operation occurs only once, and does not repeat itself while the switch is held down. Check that the corresponding operation is carried out when the switch is operated repeatedly at 1-second intervals.

(h) Check the door ajar warning function.

(1) Check that the wireless door lock buzzer sounds for approximately 10 seconds when the LOCK switch is pressed with any of the doors ajar or open.

(i) Check the remote panic function.

(1) Check that the horn sounds, the headlights and taillights flash and the interior light remains on (when the light switch is turned to the DOOR position) for 60 seconds by the theft alarm function, when the PANIC switch is held down for 0.8 seconds or more. Also, check that the horn stops sounding and the lights stop flashing when either switch of the transmitter is pressed.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.
- Be sure to record the current settings before each customization.
- When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: If the wireless function does not operate, first check that the wireless function is not set to "OFF", then perform troubleshooting).

1. CUSTOMIZE

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (ACC).

(c) Turn the Techstream on.

(d) Enter the following menu:

Customize Setting

(e) Select the setting by referring to the table below.

Wireless Door Lock Control System

DISPLAY (ITEM)	DEFAULT	FUNCTION	SETTING
Wireless Control	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
Hazard Answer Back	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
Wireless Auto Lock	ON	This function turns the wireless auto lock function on or off.	ON / OFF
Open Door Warning	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
Unlock 2 Operation	ON	Function that unlocks driver side door when unlock switch on transmitter is pressed once, and unlocks all	ON/OFF

DISPLAY (ITEM)	DEFAULT	FUNCTION	SETTING
		doors when pressed twice. If setting is OFF, pressing unlock switch once makes all doors unlock.	
Panic Function	ON	Function to operate theft deterrent system by continuously pressing panic switch on transmitter for 0.8 seconds	ON/OFF
Auto Lock Time	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s/120 s
Wireless Buzzer Resp	ON	Wireless door lock buzzer response / ON or OFF	ON/OFF
Trunk Lid Operation	0.8PR	This function changes operation method of transmitter to open luggage compartment door. • 1TIME: Push once • 2 TIMES: Push twice • 0.8PR: Push and hold for 0.8 seconds • OFF: Does not operate	1TIME/2 TIMES/0.8PR/OFF

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026DD01IX
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

If a normal system code is displayed during the DTC check, but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Wireless Door Lock Control System

SYMPTOM	SUSPECTED AREA	SEE PAGE

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2A, 2B, 2C, 2E, 2F and 2G instrument panel junction block connectors and E50 and E51 main body ECU connectors.

(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-7 (LGCY) - Body ground	LG - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-20 (PCTY) - Body ground	BR - Body ground*1 BE - Body ground*2	Passenger side door courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2B-30 (BECU) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V

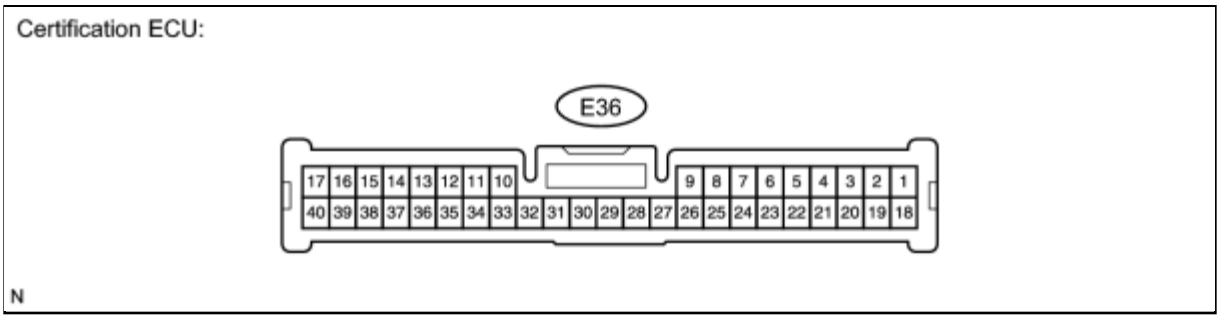
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2C-6 (DCTY) - Body ground	W - Body ground*1 R - Body ground*2	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2E-19 (RCTY) - Body ground	LG - Body ground*1 Y - Body ground*2	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2F-5 (ACC) - Body ground	W - Body ground*1 L - Body ground*2	IG supply (ACC signal)	Engine switch on (ACC) → off	11 to 14 V → Below 1 V
2G-1 (IG) - Body ground	W - Body ground	IG supply (IG signal)	Engine switch on (IG) → off	11 to 14 V → Below 1 V
2G-1 (ALTB) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	11 to 14 V
E50-8 (LCTY) - Body ground	SB - Body ground*1 B - Body ground*2	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
E51-4 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

- *1: for TMC Made
- *2: Except for TMC made

(c) Reconnect the main body (instrument panel junction block) connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2S-17 (HAZ) - Body ground	GR - Body ground*3 BE - Body ground*4	Turn signal flasher relay signal	Transmitter LOCK or UNLOCK switch is pressed → not pressed	Below 1 V*1 → 11 to 14 V
E50-1 (TR+)- Body ground	R - Body ground*3	Luggage compartment door	Luggage compartment door CLOSED (LOCKED) →	Below 1 V → 11 to 14 V*2

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	P - Body ground*4	opener motor	OPEN (UNLOCKED)	

- *1: When operating the answer back function.
- *2: When operating the motor.
- *3: for TMC Made
- *4: Except for TMC made

2. CHECK CERTIFICATION ECU ASSEMBLY

(a) Disconnect the E36 ECU connector.

(b) Measure the voltage and resistance of the wire harness side connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - E36-17 (E)	W - W-B*1 BR - W-B*2	Battery power supply	Always	11 to 14 V
E36-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E36 ECU connector.

(d) Measure the voltage of the connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-29 (RC0) - E36-17 (E)	V - W-B*1 LG - W-B*2	Door control receiver power supply	Engine switch off, all doors closed and transmitter switch not pressed	Below 1 V
E36-29 (RC0) - E36-17 (E)	V - W-B*1	Door control receiver power	Engine switch off, all doors closed and transmitter	4.6 to 5.4 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	LG - W-B*2	supply	switch pressed	
E36-38 (RDA) - E36-17 (E)	Y - W-B*1 P - W-B*2	Door control receiver output signal	Engine switch off, all doors closed and transmitter switch not pressed	11 to 14 V
E36-38 (RDA) - E36-17 (E)	Y - W-B*1 P - W-B*2	Door control receiver output signal	Engine switch off, all doors closed and transmitter switch pressed	Pulse generation
E36-18 (IG) - E36-17 (E)	L - W-B*1 B - W-B*2	IG power supply	Engine switch on (IG)	11 to 14 V
E36-18 (IG) - E36-17 (E)	L - W-B*1 B - W-B*2	IG power supply	Engine switch off	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

- *1: for TMC Made
- *2: Except for TMC made

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001PQX057X
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU stores trouble codes if a vehicle malfunction occurs.

The diagnostic system allows for reading of the trouble codes from the DLC3 using the Techstream.

Use the Techstream to diagnose and solve the problem.

2. CHECK DLC3

(a) Check the DLC3 INFO .

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027AI026X
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch on (IG).

(c) Enter the following menus: Body / Main Body or Entry & Start / Data List.

(d) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Wireless Control	Wireless door lock control function/ON or OFF	ON: Operating OFF: Not operating	-
Hazard Answer Back	Hazard answer-back of wireless/ON or OFF	ON: Operating OFF: Not operating	-
Wireless Buzzer Resp	Wireless door lock buzzer response/ON or OFF	ON: Operating OFF: Not operating	-
Open Door Warning	Open door warning/ON or OFF	ON: Operating OFF: Not operating	-
Unlock 2 Operation	Unlock 2 Operation of wireless unlock/ON or OFF	ON: All doors unlock when UNLOCK switch is pressed twice OFF: All doors unlock when UNLOCK switch is pressed once	-
Trunk Lid Operation	Luggage compartment door open function type / 1 TIME/2 TIMES/0.8PR/OFF	1 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed once 2 TIMES: Luggage compartment door opens when LUGGAGE OPEN switch is pressed twice	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
		0.8PR: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 0.8 seconds. OFF: Not operating	
Auto Lock Time	Automatic lock time/120 s, 60 s or 30 s	120 s: 120 seconds 60 s: 60 seconds 30 s: 30 seconds	-

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Panic Alarm Function	Panic function/ON or OFF	ON: Operating OFF: Not operating	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts.

This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Enter the following menus: Body / Main Body or Entry & Start / Active Test.

(d) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Hazard	Turn signal flasher relay	ON/OFF	Observe headlight and rear combination light for correct operation
Vehicle Horn	Vehicle horns	ON/OFF	-
Illuminated Entry System	Interior light and engine switch light (Interior light switch is in DOOR position and all doors are closed)	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Trunk and Back-Door Open	Back door opener motor	ON/OFF	Observe back door

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Wireless Buzzer Operation	Wireless door lock buzzer	ON/OFF	-

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (USING TECHSTREAM)

(a) DTC check

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Read DTCs on the Techstream screen.

(b) DTC clear

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Clear the DTCs following the prompts on the Techstream screen.

HINT:

The Techstream has a SNAPSHOT function which records the monitored data.

Refer to the Techstream operator's manual for further details.

Last Modified: 3-10-2010	6.4 C	**From:** 200901

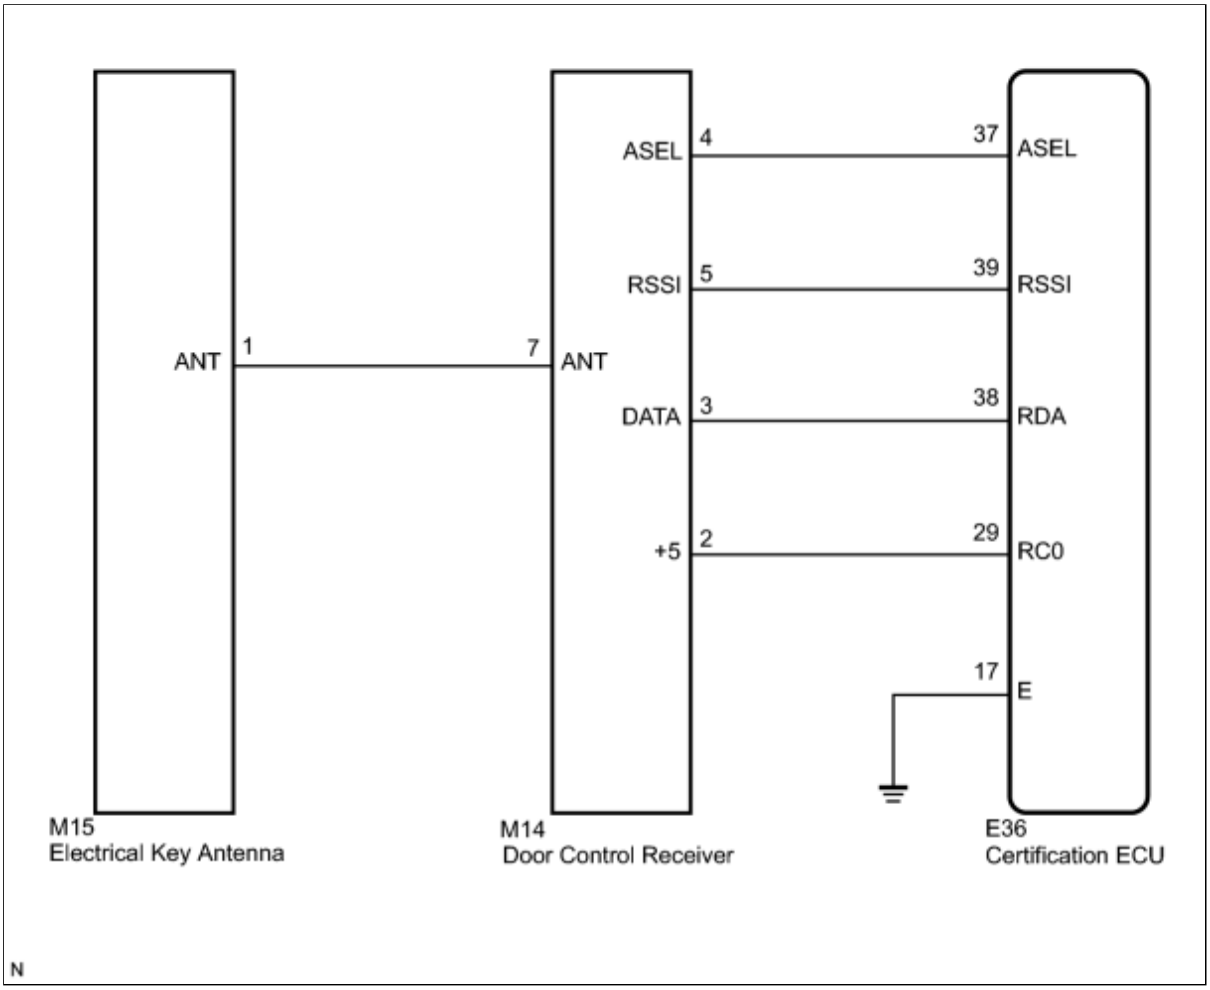
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): B1242: Wireless Door Lock Tuner Circuit Malfunction (2010 Corolla)		



DTC	**B1242**	**Wireless Door Lock Tuner Circuit Malfunction**

DESCRIPTION

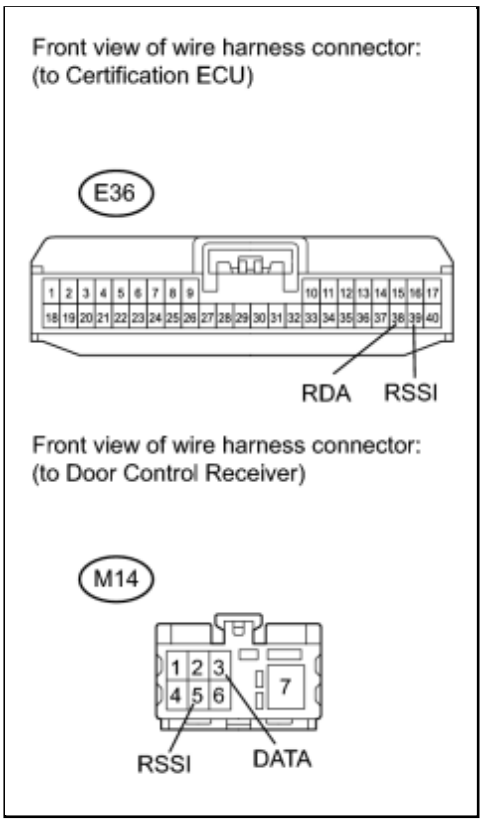
- The electrical key antenna is used to receive electric waves relating to the entry functions of the smart key system with push-button start. The certification ECU decodes the requested smart key system with push-button start operation by identifying a key code based on electric waves received via the electrical key antenna and the door control receiver.
- The door control receiver receives a signal from the wireless door control transmitter and sends signals to the main body ECU through the certification ECU.
- The certification ECU then sends a command, according to the requested operation, to each ECU. (e.g. If door lock operation is requested, the certification ECU sends a door lock command to the main body ECU.)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1242	The certification ECU detects that there is a short in the circuit between terminals RSSI, or between terminals DATA and RDA.	• Door Control Receiver • Wire harness or connector • Certification ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE



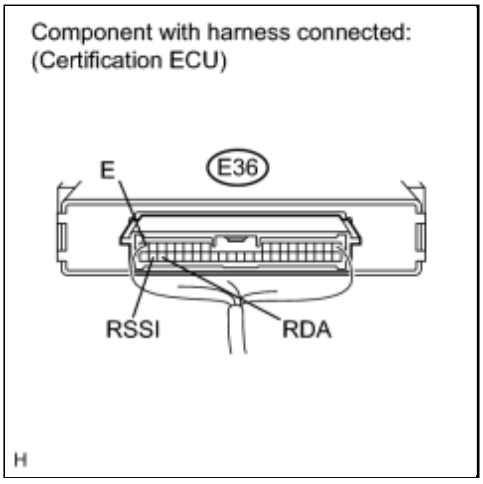
1.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

(a) Disconnect the E36 certification ECU connector and M14 door control receiver connector.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-39 (RSSI) - M14-5 (RSSI)	Always	Below 1 Ω



E36-38 (RDA) - M14-3 (DATA)	Always	Below 1 Ω
E36-39 (RSSI) - E36-38 (RDA)	Always	10 kΩ or higher
E36-39 (RSSI) - Body ground	Always	10 kΩ or higher
E36-38 (RDA) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK CERTIFICATION ECU**

(a) Reconnect the E36 ECU connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-39 (RSSI) - E36-17 (E)	Engine switch off, all doors closed, the electrical key is not in the actuation area	Below 1 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
	Engine switch off, all doors closed, the electrical key is in the actuation area	4.6 to 5.4 V
E36-38 (RDA) - E36-17 (E)	Engine switch off, all doors closed and transmitter switch not pressed	Below 1 V
	Engine switch off, all doors closed and transmitter switch pressed	4.6 to 5.4 V

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU)**

OK ▼

3.	REPLACE DOOR CONTROL RECEIVER

(a) Replace the door control receiver with a known good one INFO .

NEXT ▼

4.	CONFIRM DTC

(a) Clear the DTCs INFO .

(b) Check if the same DTC is detected.

Result:

RESULT	PROCEED TO

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU)**

A ▶ **END (DOOR CONTROL RECEIVER IS DEFECTIVE)**

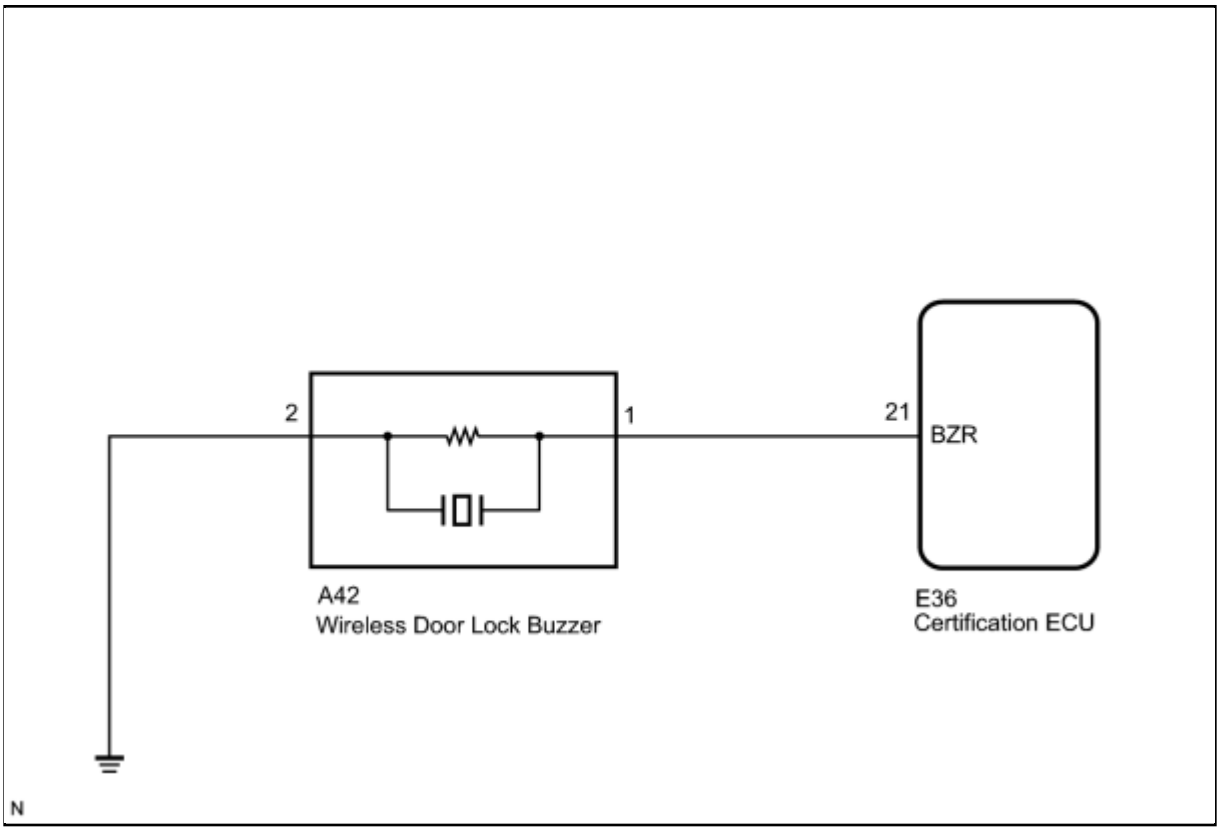
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/ Smart Key System): No Answer-Back (2010 Corolla)		

No Answer-Back



DESCRIPTION

In some cases, wireless door lock control functions are normal but the hazard warning lights and/or wireless door lock buzzer answer-back function(s) do not operate. In such cases, the certification ECU (smart key ECU assembly) hazard warning light and/or wireless door lock buzzer signal outputs may be malfunctioning.

NOTICE:

Troubleshooting should be started after confirming that the customize status of the answer-back function has been switched ON.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK WIRELESS DOOR LOCK CONTROL FUNCTION**

(a) Check the wireless door lock control functions by operating the transmitter switch.

Result:

RESULT	PROCEED TO
Wireless door lock functions are normal but hazard warning lights answer-back does not occur	A
Wireless door lock functions are normal but wireless door lock buzzer answer-back does not occur	B
Doors cannot be locked and unlocked using transmitter	C

C ▶ **GO TO FLOWCHART**

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)**

A ▼

2.	**CHECK HAZARD WARNING LIGHT**

(a) Check that the hazard warning lights flash continuously when the hazard warning signal switch is pressed.

OK:

Hazard warning lights flash continuously.

NG ▶ **GO TO LIGHTING SYSTEM**

OK ▼

3.	**REPLACE MAIN BODY ECU**

(a) Replace the main body ECU with a known good one.

NEXT

4.	**CHECK HAZARD WARNING LIGHTS**

(a) Check that the hazard warning lights flash continuously when the door control transmitter LOCK or UNLOCK switch is pressed.

OK:

Hazard warning lights flash continuously.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU)**

OK ▶ **END (MAIN BODY ECU IS DEFECTIVE)**

5.	**PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)**

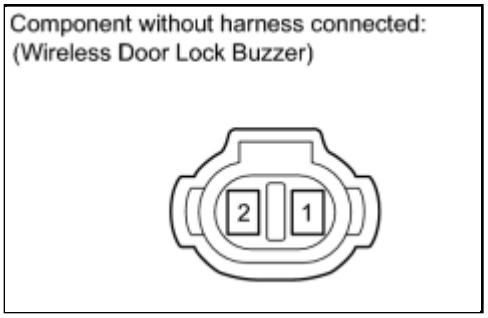
(a) Enter Active Test, using the Techstream to generate a control command, and then check that the wireless buzzer operates normally.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Wireless Buzzer	Wireless Door Lock Buzzer	ON/OFF	-

OK:

Wireless buzzer turns ON/OFF.



NG ▶ **INSPECT WIRELESS DOOR LOCK BUZZER**

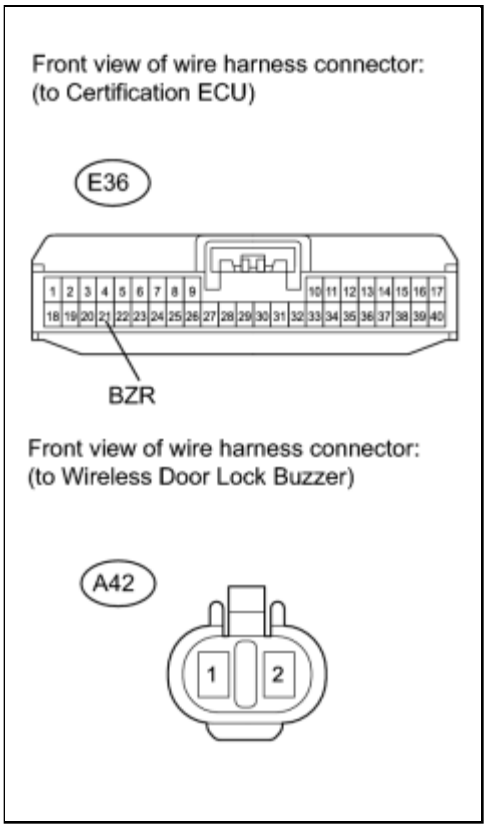
OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU)**

6.	**INSPECT WIRELESS DOOR LOCK BUZZER**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	950 to 1050 Ω



NOTICE:

When battery voltage is directly applied to the buzzer, the buzzer does not sound.

NG ▶ **REPLACE WIRELESS DOOR LOCK BUZZER**

OK ▼

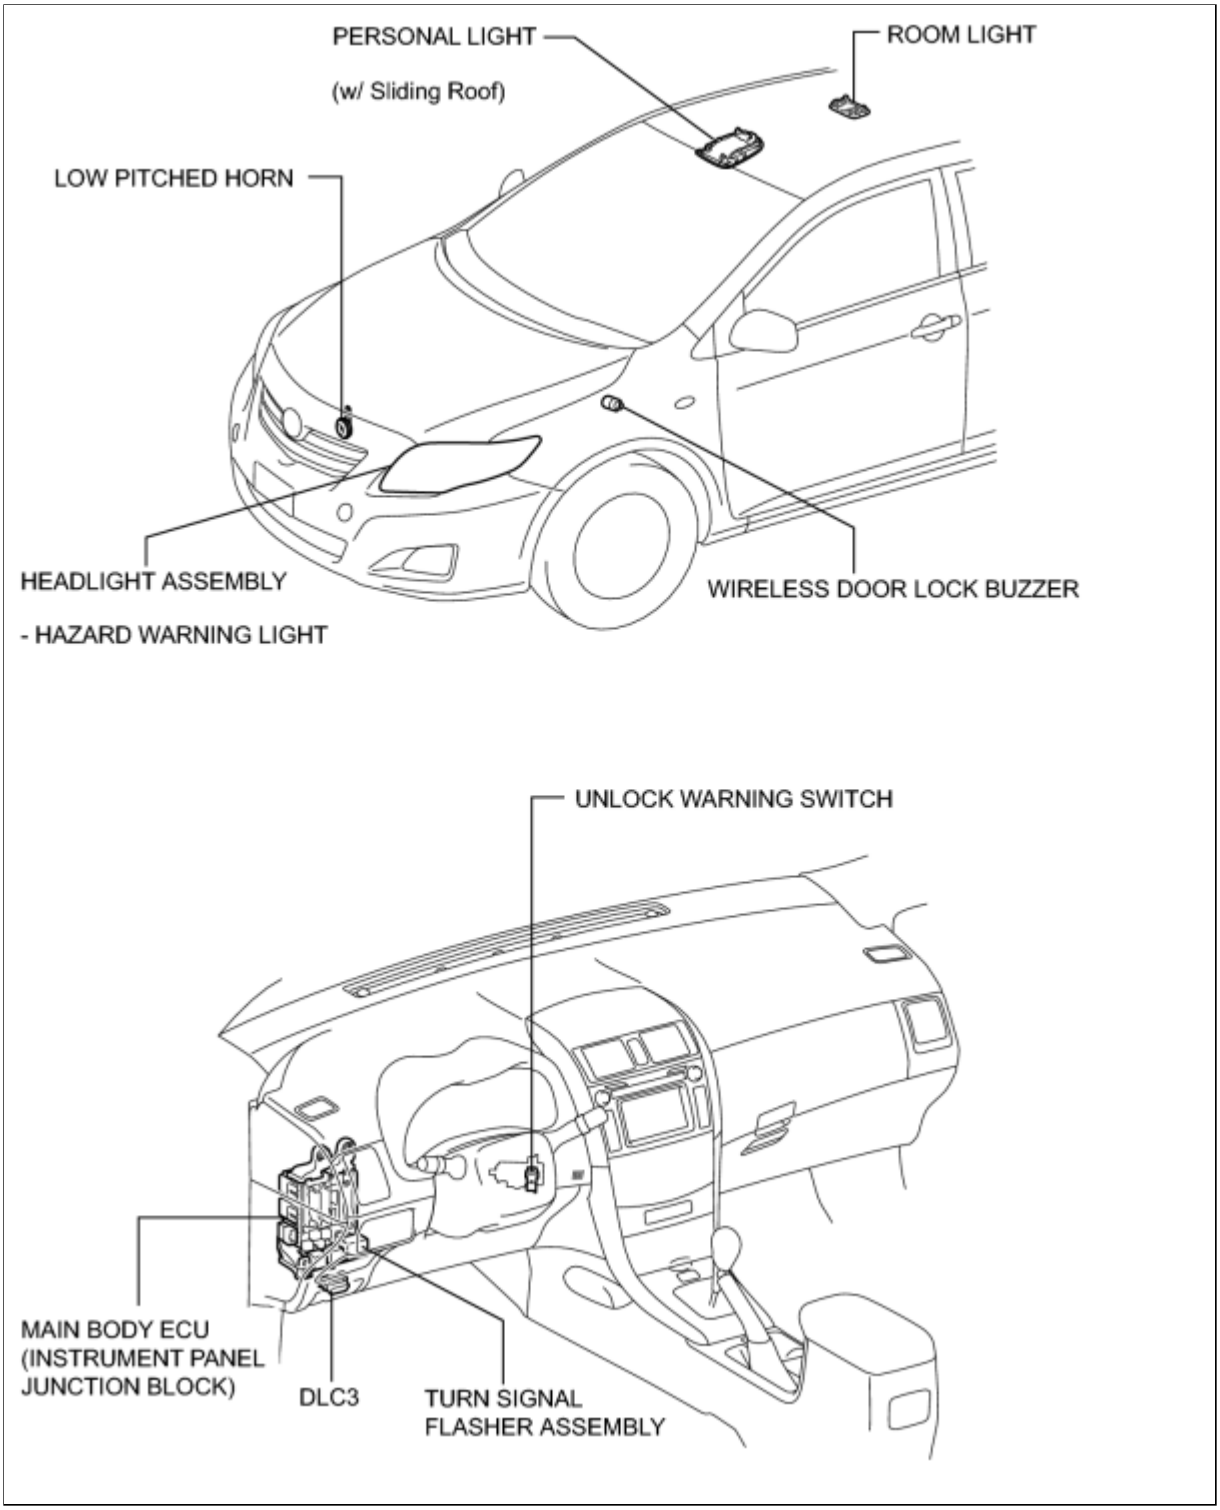
7.	**CHECK WIRE HARNESS (WIRELESS DOOR LOCK BUZZER - CERTIFICATION ECU AND BODY GROUND)**

(a) Disconnect the E36 certification ECU connector and A42 wireless door lock buzzer connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-21 (BZR) - A42-1	Always	Below 1 Ω
E36-21 (BZR) - Body ground	Always	10 kΩ or higher
A42-2 - Body ground	Always	Below 1 Ω



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU)**

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system functions to lock and unlock all the doors from a distance. The system is controlled by a hand-held transmitter which sends radio waves to the door control receiver. The main body ECU performs an ID code identification process and engages the door lock.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Door control transmitter	• Has LOCK, UNLOCK, LUGGAGE OPEN and PANIC switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver. • Illuminates the indicator light (LED) during transmission.
Door control receiver	Receives weak radio waves (recognition codes and function codes) and outputs them as code data to the main body ECU.
• Front door courtesy light switch • Rear door courtesy light switch • Luggage compartment door courtesy light switch	Turns on when a door is opened and turns off when it is closed. Outputs door status codes (open or closed) to the main body ECU.
Unlock warning switch	Detects if the key is inserted in the ignition key cylinder or not.
Door lock position switch	Transmits the door lock positions of each door to the main body ECU.
Main body ECU	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each switch.

3. SYSTEM FUNCTION

The door control transmitter has the LOCK, UNLOCK, LUGGAGE OPEN and PANIC switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are ON. Some of these functions can be customized INFO **.**

FUNCTION	OPERATION
All door lock	Pressing the LOCK switch locks all doors.
All door unlock (Unlock 2 operation)	Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver's door is unlocked.
Automatic lock	If none of the doors is opened within 60 seconds after they are unlocked by the wireless door lock control, all the doors will lock again automatically.
Luggage compartment door open	Pressing the LUGGAGE OPEN switch of the transmitter opens the luggage compartment door.
Answer back	• When the doors are locked by wireless operation, the hazard warning lights flash once, and wireless door lock buzzer sounds once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice and wireless door lock buzzer sounds twice. • When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.
Panic alarm	Pressing the PANIC switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate: • Sounds the horn. • Flashes the hazard lights. • Illuminates the front interior lights (when the switch is in the DOOR position). While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.
Door ajar warning	The buzzer sounds when the LOCK switch is pressed when any of the doors are ajar, and it sounds for 10 seconds continuously. The buzzer stops when all doors are closed or the UNLOCK switch is pressed.
Illuminated entry	When all the doors are locked, pressing UNLOCK switch causes the interior lights to come on simultaneously with the unlock operation.
Self-diagnostic mode	The following are conditions to enter the self-diagnostic mode: • If the door control receiver receives normal radio waves from the door control transmitter when the system is in diagnostic mode, it flashes the interior lights and sounds the wireless door lock buzzer in a normal pattern that corresponds to the function of each switch. • Read DTCs using the Techstream.
Transmitter recognition code registration	Enables the registration (writing and storing) of 6 types of transmitter recognition codes in the EEPROM that is contained in the door control receiver.

4. TRANSMITTER RECOGNITION CODE REGISTRATION FUNCTION

The table below shows the 4 ID registration function modes by which up to 6 different codes can be registered. The codes are electronically registered (written and stored) in the EEPROM that is contained in the door control receiver.

MODE	FUNCTION
Add mode	Adds a newly received code while preserving any previously registered codes. This mode is used when adding a new transmitter. If the number of registered codes exceeds 6, the oldest registered code is erased first.
Rewrite mode	Erases all previously registered codes and registers only newly input codes.
Confirmation mode	Confirms how many codes are currently registered. When adding a new code, this mode is used to check how many codes already exist.
Prohibition mode	Deletes all the registered codes and disables the wireless door lock function. This mode is used when the transmitter is lost.

5. CONDITIONS THAT WIRELESS FUNCTIONS DO NOT OPERATE

(a) Lock function will not operate when:

- Any of the doors is open.
- The key is inserted in the ignition key cylinder.

(b) Unlock function will not operate when:

- The key is inserted in the ignition key cylinder.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

(a) This wireless door lock control function operates only when the following 4 conditions are met:

(1) There is no key in the ignition key cylinder.

(2) All the doors are closed.

(3) The power door lock system is functioning normally.

(4) The function is not disabled by customization.

HINT:

The UNLOCK function operates even when any of the doors are open.

(b) The wireless transmitter operational range differs depending on the situation.

(1) The operational range differs depending on the user, the way the transmitter is held and the location.

(2) In certain areas, the operational range will be reduced due to the vehicle body shape and the influence of the surrounding environment.

(3) Since the transmitter uses weak radio waves, the operational range may be reduced or the transmitter may not function if interference or stronger radio waves occur in the area where the transmitter is used.

(4) When the battery is low, the operational range is reduced and/or the transmitter may not function.

HINT:

If the transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, the battery may be weakened or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:

- The switches built into the door control transmitter send radio waves to the door lock control receiver.
- The operational range must be taken into account during checks.

(a) Establish conditions that allow the wireless control function to be operated successfully.

(b) Check the following basic functions.

(1) Check that the transmitter LED lights up 3 times when each switch is pressed 3 times and that the LED blinks when each switch is pressed and held down.

HINT:

If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.

(2) Check that all the doors lock when the LOCK switch is pressed.

(3) Check that the driver side door unlock when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds.

(4) Check that the luggage compartment door opens when the LUGGAGE OPEN switch is pressed and held 0.6 second.

(c) Check the automatic lock function.

(1) Check that if the all doors are unlocked with the UNLOCK switch and none of the doors is opened or locked within approximately 60 seconds, the doors automatically re-lock.

(2) Check that if the all doors are unlocked with the UNLOCK switch and a door is opened or locked within approximately 60 seconds, the automatic lock function does not operate.

(d) Check the interior light ON function.

HINT:

Turn the interior light switch to the DOOR position before the check.

(1) Check that the interior lights come on simultaneously with the unlocking operation when the UNLOCK switch is pressed.

(2) Check that the interior lights go off in approximately 15 seconds if none of the doors is opened after the unlocking operation.

(e) Check the answer back function.

(1) When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once.

(2) When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice.

(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.

(f) Check the switch operation fail-safe function.

(1) Check that the doors cannot be locked by operating a switch while the key is in the ignition key cylinder.

HINT:

This check cannot be made when the system is in recognition code registration mode.

(g) Check the chattering prevention function.

(1) Check that the corresponding operation occurs only once, and does not repeat itself while the switch is held down pressed. Check that the corresponding operation is carried out when the switch is operated repeatedly at 1-second intervals.

(h) Check the door ajar warning function.

(1) Check that the wireless door lock buzzer sounds for approximately 10 seconds when the LOCK switch is pressed with any of the doors ajar or open.

(i) Check the remote panic function.

(1) Check that the horn sounds, the headlights and taillights flash and the interior light remains on (when the light switch is turned to the DOOR position) for 60 seconds by the theft alarm function, when the PANIC switch is held down for 0.8 seconds or more. Also, check that the horn stops sounding and the lights stop flashing when either switch of the transmitter is pressed.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): REGISTRATION (2010 Corolla)		

REGISTRATION

HINT:

- Register a new recognition code when replacing the door control transmitter or the door control receiver.
- Add mode is used to retain the already registered codes while registering a new recognition code. This mode is used when adding a transmitter. If the number of registered codes exceeds 6, the previously registered code will be correspondingly erased in order, starting from the code registered first.
- Rewrite mode is used to erase all the previously registered codes and register only new recognition codes. This mode is used when exchanging the transmitter or the door control receiver for new one.
- Confirmation mode is used to confirm how many recognition codes have already been registered before an additional registration of a recognition code.
- Prohibition mode is used to erase all the registered codes and cancel the wireless door lock function. Use this mode when the transmitter is lost.
- All of the steps in the following registration procedure must be performed in sequential order continuously.

1. REGISTRATION OF RECOGNITION CODE (MANUAL OPERATION)

(a) The following conditions should be met.

(1) No key is inserted in the ignition key cylinder.

(2) Only driver side door is opened.

(b) Perform the following operations to select the desired mode.

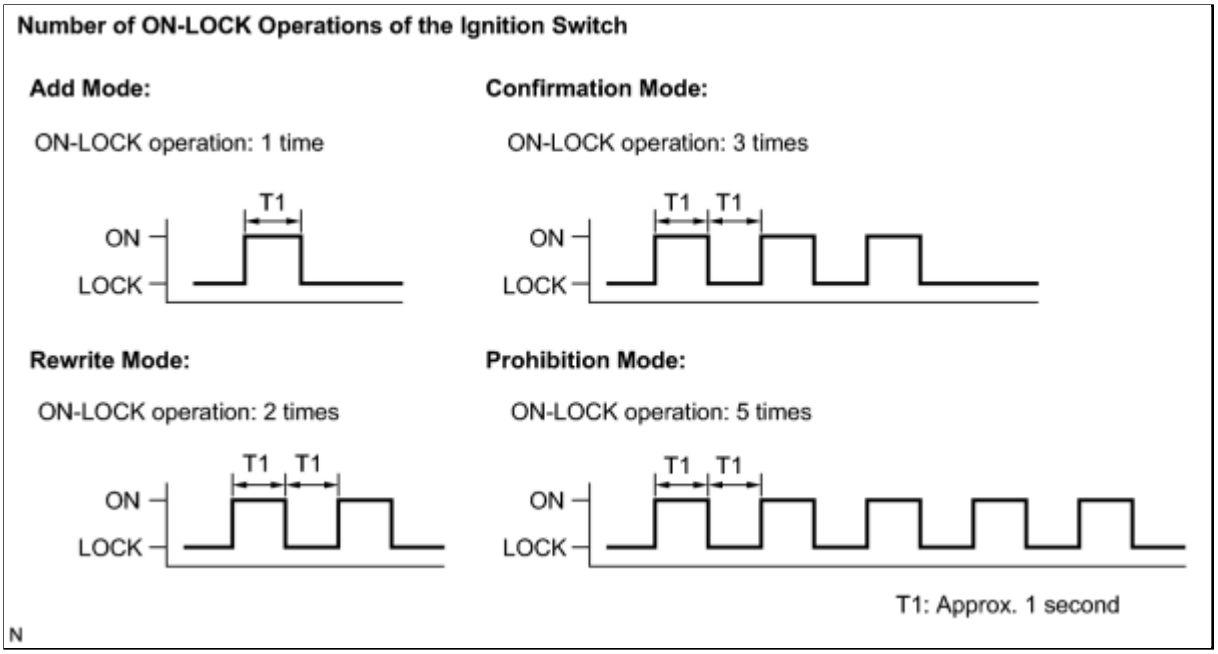
(1) Insert and remove the key from the ignition switch twice within 5 seconds. (End in removed)

(2) After the above operation, close and open the driver's door twice. (End in open)

Then insert the key into the ignition key cylinder and remove it.

HINT:

Complete this procedure within 40 seconds.



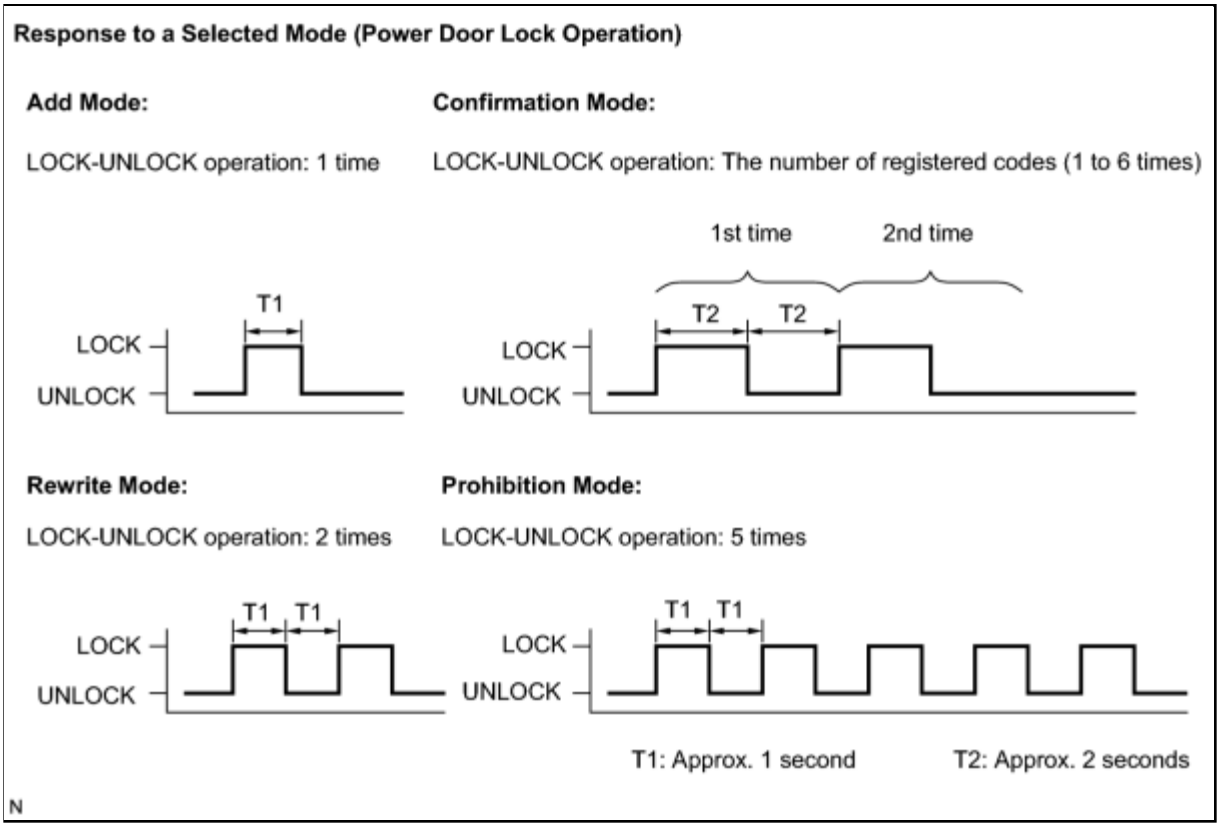
(3) After the above operations, close and open the driver side door twice. (End in open)

Then insert the key into the ignition key cylinder and close the door.

HINT:

Complete this procedure within 40 seconds.

(4) Turn the ignition switch from LOCK to ON and back to LOCK at approximately 1 second intervals 1 to 5 times to select a mode (see the illustration). Then remove the key from the ignition key cylinder.



HINT:

Complete this procedure within 40 seconds.

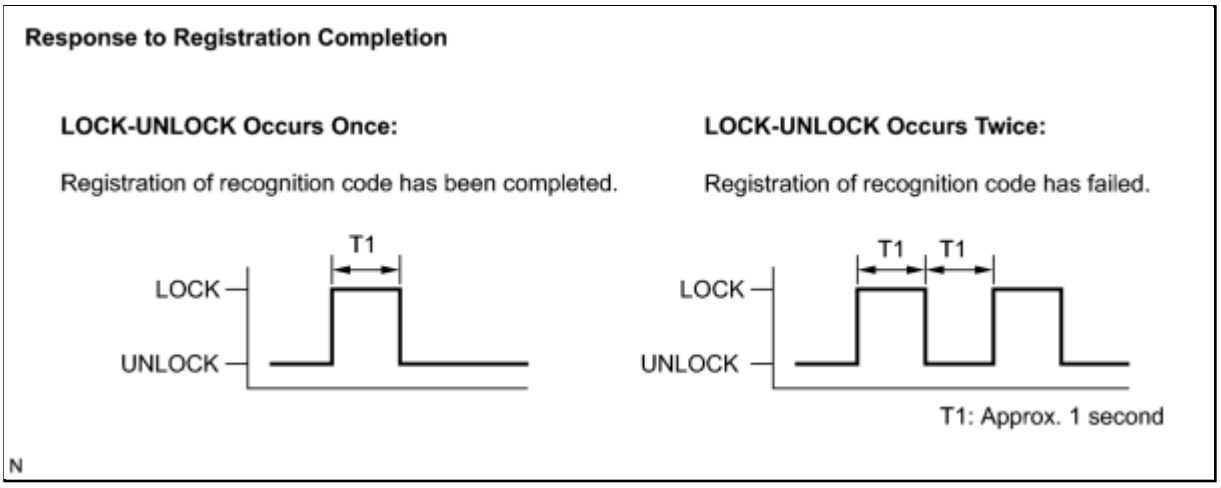
NOTICE:

If the number of the ON-LOCK operations of the ignition switch is 0, 4, 6 or more, there will be no response to inform which mode has been selected.

(5) After selecting a mode, the main body ECU automatically performs the power door LOCK-UNLOCK operation within 5 seconds to inform the selected mode (see the illustration).

HINT:

- In confirmation mode, the LOCK- UNLOCK operation will occur once for each recognition code that has been registered. For example, if 2 recognition codes have been registered, the LOCK-UNLOCK operation will occur 2 times.
- In confirmation mode and prohibition mode, once a LOCK-UNLOCK operation response has occurred, the registration procedure will end.



(c) Register new recognition codes (Add mode or Rewrite mode):

(1) Within 45 seconds after add mode or rewrite mode has been selected, press the LOCK and UNLOCK switches on the transmitter switch simultaneously for 1.0 to 1.5 seconds.

Then, press either one of the switches for more than 1.0 second (Procedure "A").

(2) Within 5 seconds after the transmitter switch has been released, the LOCK-UNLOCK operation will be automatically performed once if the registration of the recognition code of the transmitter is completed correctly.

If the LOCK-UNLOCK operation is performed twice, registration of the recognition code has failed. Perform the registration procedure from the beginning (Procedure "B").

(3) If multiple transmitters need to be registered, repeat procedures "A" and "B" within 45 seconds each.

HINT:

- Up to 6 recognition codes can be registered at once.
- If even one of the following conditions is satisfied, registration mode will end.
  - 40 seconds have elapsed after a recognition code has been registered.
  - Any of the doors are opened.
  - The key is inserted into the ignition key cylinder.
  - 6 recognition codes are registered.

2. REGISTRATION OF RECOGNITION CODE (USING TECHSTREAM)

(a) Turn the ignition switch to ON.

(b) Select either add or rewrite mode according to the Techstream display.

(c) The number of registered codes is indicated.

(d) Registration of the door control transmitter.

(1) If either add mode or rewrite mode has been selected, press the LOCK and UNLOCK switches on the transmitter simultaneously.

(2) Within 3 seconds of releasing the LOCK and UNLOCK switches, press either of the switches on the door control transmitter.

NOTICE:

- Do not press the LOCK and UNLOCK switches simultaneously for more than 1.5 seconds.
- Perform this operation within 1 meter of the driver's seat to register the transmitter.
- Do not push other transmitter switches during the transmitter registration process.

(3) The main body ECU automatically performs the power door LOCK-UNLOCK operation once in order to indicate whether registration has been completed correctly or not.

(4) If continuing registration, the next recognition code must be registered in the door control transmitter within 30 seconds.

HINT:

Up to 6 recognition codes can be registered.

(e) Completing the registration mode.

(1) Registration mode will end when any of the following occurs:

- 30 seconds or more have elapsed after a code is registered.
- The Techstream is used to finish registration.
- The Techstream is disconnected.
- The ignition switch is turned off.

(f) Perform the following after registration is completed.

(1) Perform the wireless door lock control operation check 

.

HINT:

If the wireless door lock control does not operate, perform the registration procedure again.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.
- Be sure to record the current settings before customization.
- When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: If the wireless function does not operate, first check that the wireless function is not set to "OFF", then perform troubleshooting).

1. CUSTOMIZE

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menu:

Customize Setting

(e) Select the setting by referring to the table below.

Wireless Door Lock Control System

DISPLAY (ITEM)	DEFAULT	FUNCTION	SETTING
Wireless Control	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
Hazard Answer Back	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
Wireless Auto Lock	ON	This function turns the wireless auto lock function on or off.	ON / OFF
Wireless Buzzer Resp	ON	Wireless door lock buzzer response / ON or OFF	ON/OFF
Open Door Warning	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

If a normal system code is displayed during the DTC check, but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2A, 2B, 2C, 2E, 2F and 2G junction block connectors and E61 main body ECU connector.

(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2A-7 (LGCY) - Body ground	LG - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-20 (PCTY) - Body ground	BR - Body ground*1 BE - Body ground*2	Passenger side door courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2B-30 (BECU) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
2C-6 (DCTY) - Body ground	W - Body ground*1 R - Body ground*2	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2E-19 (RCTY) - Body ground	LG - Body ground*1 Y - Body ground*2	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-23 (KSW) - Body ground	L - Body ground	Unlock warning switch input	No key in ignition key cylinder (OFF) → Key inserted (ON)	10 kΩ or higher → Below 1 Ω
2F-5 (ACC) - Body ground	W - Body ground*1 L - Body ground*2	Ignition power supply (ACC signal)	Ignition switch ACC → off	11 to 14 V → Below 1 V
2G-1 (IG) - Body ground	W - Body ground	Ignition power supply (IG signal)	Ignition switch ON → off	11 to 14 V → Below 1 V
2G-1 (ALTB) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	11 to 14 V
E61-13 (LCTY) - Body ground	SB - Body ground*1 B - Body ground*2	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

- *1: for TMC Made
- *2: Except for TMC made

(c) Reconnect the main body ECU and instrument panel junction block connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2R-8 (HAZ) - Body ground	GR - Body ground	Turn signal flasher relay signal	Transmitter LOCK or UNLOCK switch is pressed → not pressed	Below 1 V* → 11 to 14 V

- *: When operating the answer back function.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001NN601LX
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (USING TECHSTREAM)

(a) DTC check

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Read DTCs on the Techstream screen.

(b) DTC clear

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Clear the DTCs following the prompts on the Techstream screen.

HINT:

The Techstream has a SNAPSHOT function which records the monitored data.

Refer to the Techstream operator's manual for further details.

2. SELF-DIAGNOSTIC MODE (OPERATING IGNITION KEY CYLINDER)

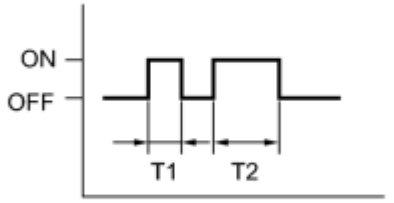
(a) Switch to self-diagnostic mode.

(1) Insert the key into the ignition key cylinder and remove it.

(2) Within 5 seconds after the key is removed, insert it into the ignition key cylinder and then turn the ignition switch to ON then OFF 1 time. (End in OFF)

(3) Within 30 seconds of turning the ignition switch off, perform the following 9 times: Turn the ignition switch to ON then off. (End in OFF)

HINT:

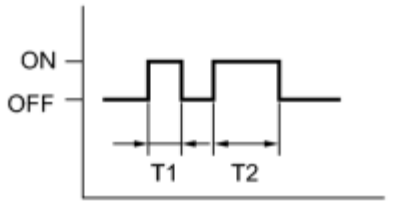


Turning the ignition switch to ON after the procedure above has been completed will end the self-diagnostic mode.

NOTICE:

If the system fails to enter self-diagnostic mode, the system will return to normal mode.

(b) Check that the system has switched to self-diagnostic mode by checking the interior light output pattern.

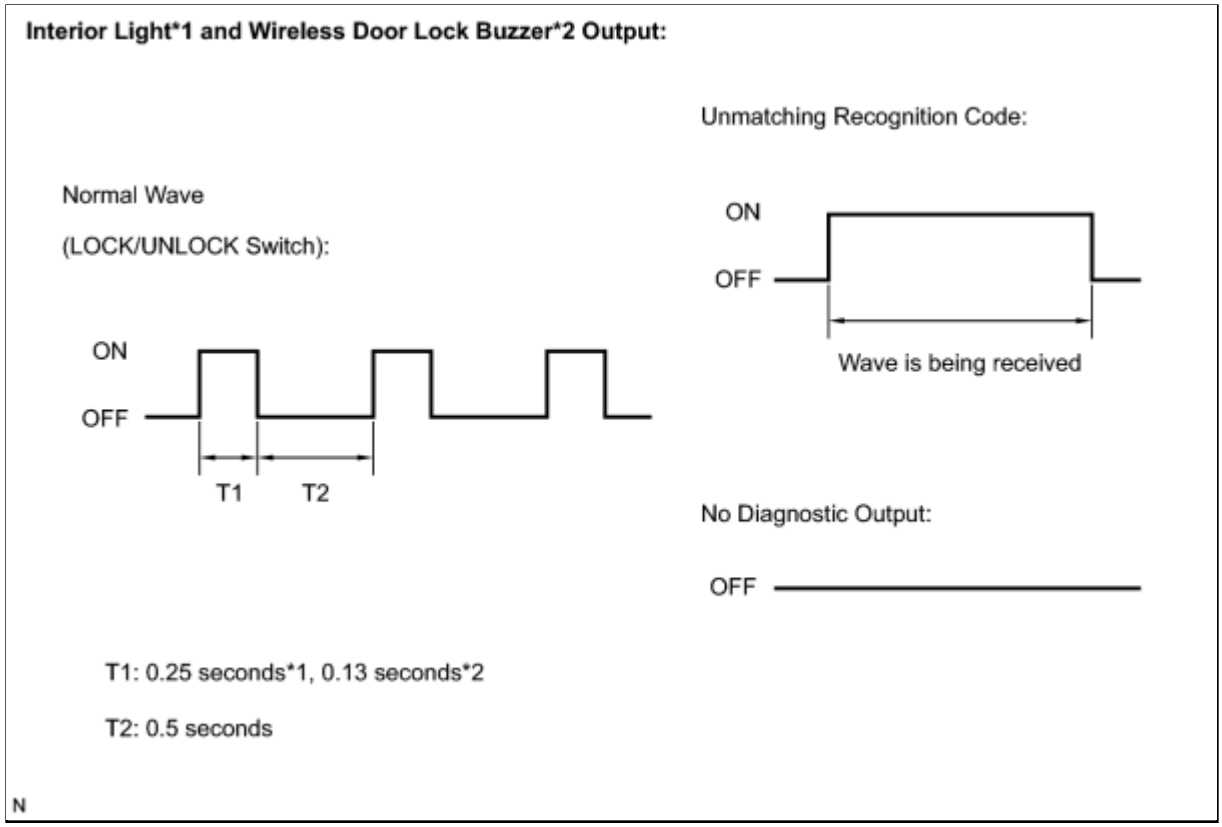


Interior Light Output:

T1: 0.25 seconds

T2: 0.5 seconds

Wireless Door Lock Buzzer Output:



T1: 0.13 seconds

T2: 0.5 seconds

(c) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer output pattern.

(d) Check the diagnostic outputs when the door control transmitter switch is held down. The diagnostic outputs can be checked by the interior light and wireless door lock buzzer patterns.

Interior Light*1 and Wireless Door Lock Buzzer*2 Output:

N

3. SELF-DIAGNOSTIC MODE (USING TECHSTREAM)

(a) Switch to self-diagnostic mode.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON and turn the Techstream main switch on.

HINT:

Refer to the Techstream operator's manual for further details.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001PQX058X
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU stores trouble codes if a vehicle malfunction occurs.

The diagnostic system allows for reading of the trouble codes from the DLC3 using the Techstream.

Use the Techstream to diagnose and solve the problem.

2. CHECK DLC3

(a) Check the DLC3 INFO .

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000027AI027X
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Body / Main Body / Data List.

(d) Read the Data List according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key Unlock Warning SW	Unlock warning switch/ON or OFF	ON: Ignition key is inserted OFF: Ignition key is not inserted	-
Wireless Control	Wireless door lock control function/ON or OFF	ON: Operating OFF: Not operating	-
Hazard Answer Back	Hazard answer-back of wireless/ON or OFF	ON: Operating OFF: Not operating	-
Wireless Buzzer Resp	Wireless door lock buzzer response/ON or OFF	ON: Operating OFF: Not operating	-
Open Door Warning	Open door warning/ON or OFF	ON: Operating OFF: Not operating	-
Unlock 2 Operation	Unlock 2 Operation of wireless unlock/ON or OFF	ON: All doors unlock when UNLOCK switch pressed twice OFF: All doors unlock when UNLOCK switch pressed once	-
Panic Function	Panic function/ON or OFF	ON: Operating OFF: Not operating	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Trunk Lid Operation	Luggage compartment door open function type/1tim ON/2tim ON/Long1/Long2/Prohibit	1tim ON: Luggage compartment door opens when LUGGAGE OPEN switch is pressed once 2tim ON: Luggage compartment door opens when LUGGAGE OPEN switch is pressed twice Long1: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 0.6 seconds Long2: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 1.6 seconds Prohibit: Does not operating	-
Auto Lock Time	Automatic lock time/120 s, 60 s or 30 s	120 s: 120 seconds 60 s: 60 seconds 30 s: 30 seconds	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts.

This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

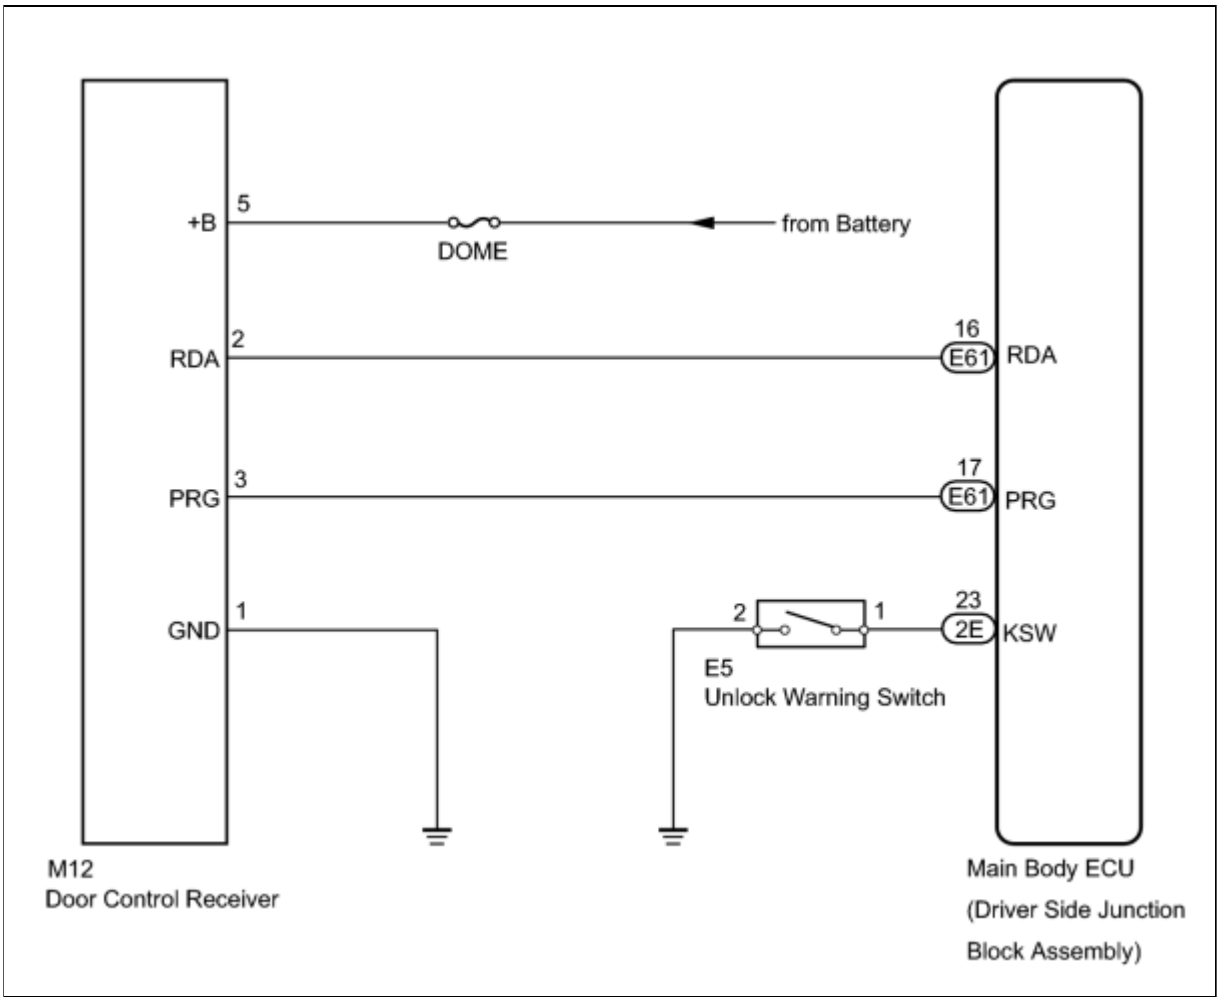
(c) Enter the following menus: Body / Main Body / Active Test.

(d) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Hazard	Turns the turn signal flasher relay	ON/OFF	Observe headlight and rear combination light for correct operation
Illuminated Entry System	Interior light and ignition key cylinder light (Interior light switch is in DOOR position and all doors are closed)	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Vehicle Horn	Turns the vehicle horns	ON/OFF	-
Trunk and Back-Door Open	Turns the back door opener motor	ON/OFF	Observe back door
Wireless Buzzer	Wireless door lock buzzer	ON/OFF	-



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001WYB019X
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): Only Wireless Control Function is Inoperative (2010 Corolla)		

Only Wireless Control Function is Inoperative

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU. The main body ECU then controls all doors by sending lock/unlock signals to each door, and sends hazard flasher relay signals to the turn signal flasher relay (hazard warning lights).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK POWER DOOR LOCK OPERATION

(a) When the door control switch on the master switch assembly is operated, check that the locked doors unlock INFO .

OK:

Locked doors unlock.

NG ▶ GO TO POWER DOOR LOCK CONTROL SYSTEM

OK ▼

2.	CHECK KEY REMINDER WARNING SYSTEM

(a) Check that the key reminder warning buzzer operates normally.

OK:

Key reminder warning buzzer operates normally.

NG ▶ GO TO KEY REMINDER WARNING SYSTEM

OK ▼

3.	CHECK DOOR CONTROL TRANSMITTER ASSEMBLY

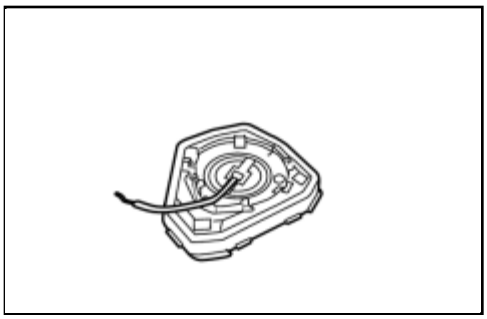
(a) When another registered door control transmitter is used, check that the wireless operates normally.

Result:

RESULT	PROCEED TO
Wireless door LOCK/UNLOCK function operates and door control transmitter that did not operate is electrical key transmitter	A
Wireless door LOCK/UNLOCK function does not operate	B

B CHECK WAVE ENVIRONMENT

A



4.	CHECK TRANSMITTER BATTERY

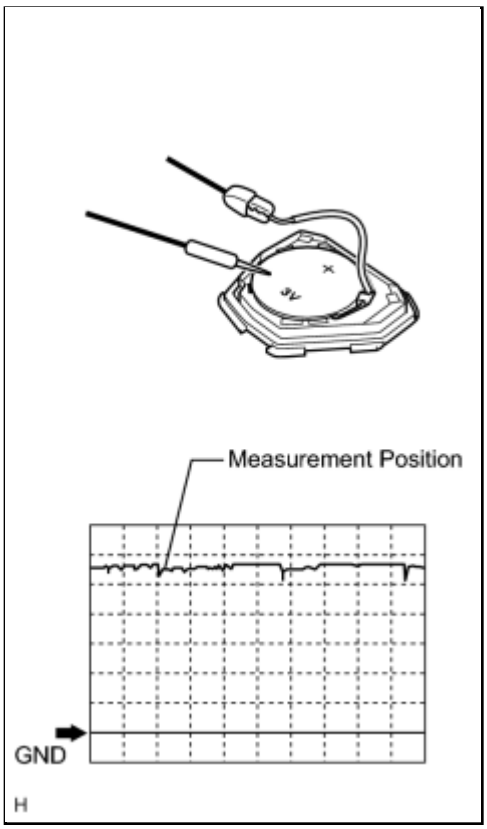
(a) Inspect the battery capacity.

(1) Remove the battery from the electrical key transmitter that does not operate INFO. Attach a lead wire (0.6 mm (0.0236 in.) in diameter or less including wire sheath) with tape or equivalent to the negative terminal.

NOTICE:

Do not wrap the lead wire around a terminal, wedge it between the terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

(b) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.



(c) Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

Measure the transmitter battery voltage while pressing the LOCK or UNLOCK switch on the transmitter.

Standard Voltage:

ITEM	CONTENT
Tester Connection	Battery positive (+) - Battery negative (-)
Tool Setting	0.5 V/DIV., 100 ms/DIV.
Condition	Ignition switch off, all doors closed and lock or unlock switch is pressed

Specified Condition	2.2 to 3.2 V (Refer to the waveform)

NG ▶ **REPLACE TRANSMITTER BATTERY**

OK ▶ **REPLACE DOOR CONTROL TRANSMITTER MODULE**

5.	**CHECK WAVE ENVIRONMENT**

(a) Bring the transmitter near the door control receiver, and perform a wireless operation check.

HINT:

- When the transmitter is brought near the door control receiver, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the inspection result is that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

Wireless functions operate normally.

NG ▶ **AFFECTED BY WAVE INTERFERENCE**

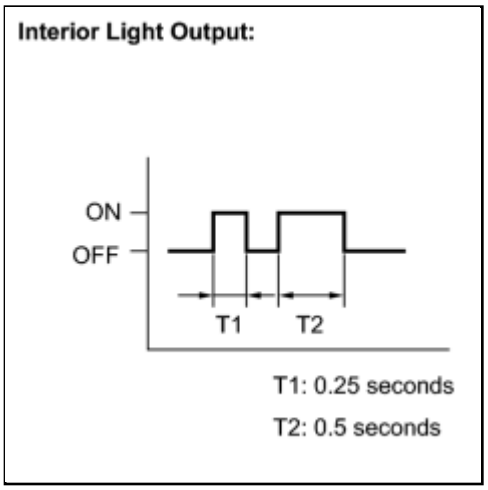
OK

6.	SWITCH TO SELF-DIAGNOSTIC MODE

(a) Switch to self-diagnostic mode by operating the ignition key cylinder.

(1) Make sure the vehicle is in its initial condition. Then insert the key into the ignition key cylinder and remove it.

(2) Within 5 seconds after removing the key, insert the key into the ignition key cylinder (ignition switch off). Then turn the ignition switch to ON and off.

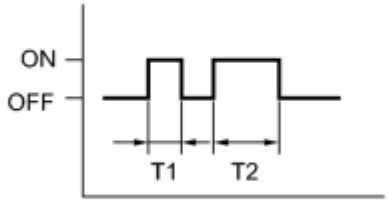


(3) Within 30 seconds after turning the ignition switch off, perform the following operation 9 times: turn the ignition switch to ON and then off.

NOTICE:

If the system cannot enter self-diagnostic mode, the system returns to normal mode.

HINT:



- Turning the ignition switch to ON after the above operations have been completed ends self-diagnostic mode.
- Do not lock or unlock doors during self-diagnostic mode.

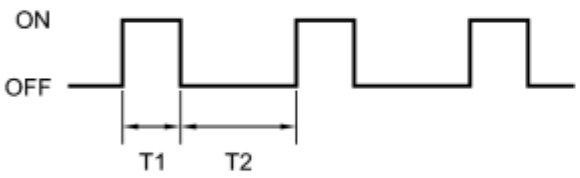
(b) Check that the system has switched to self-diagnostic mode by checking the room light output pattern.

(c) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer output pattern.

Wireless Door Lock Buzzer Output:

T1: 0.13 seconds

T2: 0.5 seconds



NEXT

7.	CHECK SELF DIAGNOSTIC MODE

Interior Light*1 and Wireless Door Lock Buzzer*2 Output:

Normal Wave

(LOCK/UNLOCK Switch):

Unmatching Recognition Code:

Wave is being received

No Diagnostic Output:

T1: 0.25 seconds*1, 0.13 seconds*2

T2: 0.5 seconds

N

(a) Inspect the diagnostic outputs when the door control transmitter switch is held down. The diagnostic outputs can be checked by the flash patterns of the interior lights and the buzzer patterns of the wireless door lock buzzer.

Result:

RESULT	PROCEED TO
Normal wave (light flash pattern and buzzer pattern) is output	A
Unmatching recognition code is output	B
No diagnosis outputs	C

C ▶ **CHECK DOOR CONTROL RECEIVER (RESPONSE)**

B ▶ **REGISTER RECOGNITION CODE**

A ▶ **REPLACE MAIN BODY ECU**

8.	REGISTER RECOGNITION CODE

(a) Check that the system can be switched to rewrite mode or add mode, and that a recognition code can be registered INFO .

OK:
Recognition code can be registered.

NG ▶ **REPLACE DOOR CONTROL RECEIVER**

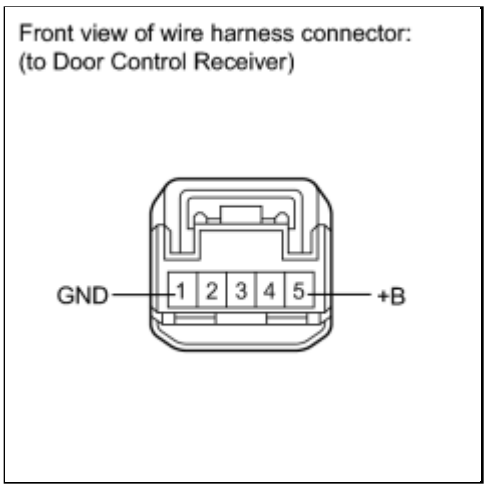
OK ▶ **END (GO TO OPERATION CHECK)**

9.	CHECK DOOR CONTROL RECEIVER (RESPONSE)

(a) Prepare the door control transmitter from another vehicle.

(b) Press and hold down the door control transmitter switch.

(c) Check that an unmatching recognition code is output.



OK:
Unmatching recognition code is output.

NG ▶ **CHECK DOOR CONTROL RECEIVER (+B, GND)**

OK ▶ **REPLACE DOOR CONTROL TRANSMITTER MODULE**

10.	CHECK DOOR CONTROL RECEIVER (+B, GND)

(a) Disconnect the door control receiver.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

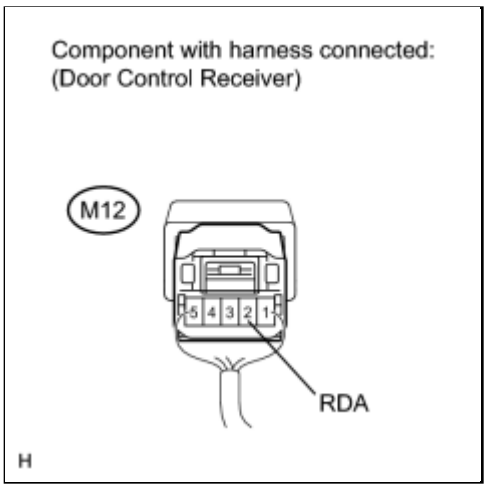
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (GND) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (+B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



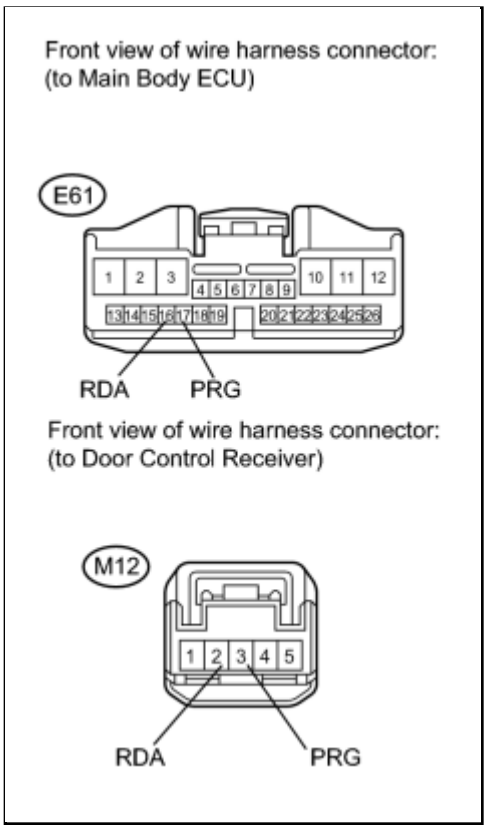
OK ▼

11.	**CHECK DOOR CONTROL RECEIVER (OUTPUT)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
M12-2 (RDA) -	Transmitter switch OFF	6 V or higher →



Body ground	→ ON (No key in ignition key cylinder, all doors closed)	Below 1 V → 6 V or higher

NG ▶ **REPLACE DOOR CONTROL RECEIVER**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL RECEIVER)**

(a) Disconnect the E61 main body ECU connector and the M12 door control receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E61-16 (RDA) - M12-2 (RDA)	Always	Below 1 Ω
E61-16 (RDA) - Body ground	Always	10 kΩ or higher
E61-17 (PRG) - M12-3 (PRG)	Always	Below 1 Ω
E61-17 (PRG) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK
▼

13.	**REPLACE DOOR CONTROL RECEIVER**

(a) Temporarily replace the door lock control receiver with a new or known good one INFO .

NEXT
▼

14.	**REGISTER RECOGNITION CODE**

(a) Perform the Registration procedure INFO .

NEXT
▼

15.	**CHECK DOOR CONTROL RECEIVER (OPERATION)**

(a) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

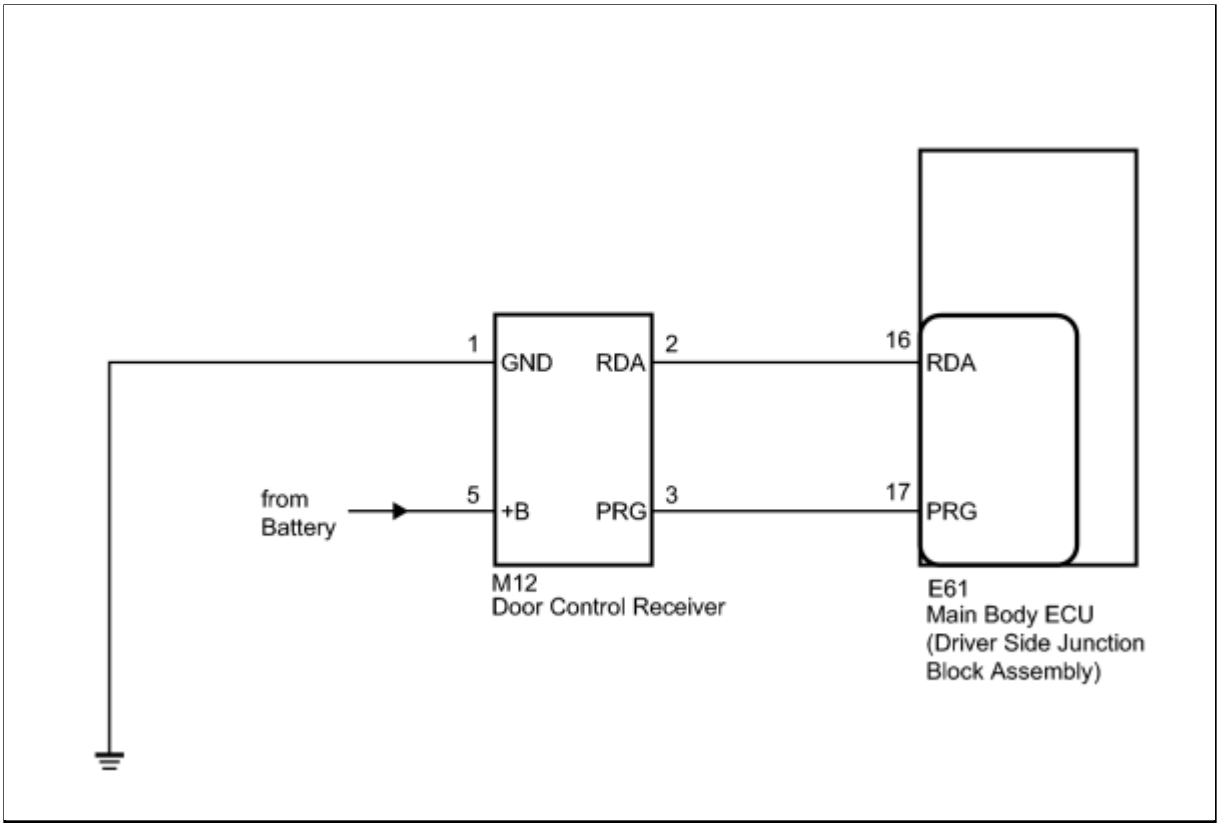
OK:

Doors can be locked and unlocked using transmitter.

NG ▶ **REPLACE MAIN BODY ECU**

OK ▶ **END (DOOR CONTROL RECEIVER IS DEFECTIVE)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001NN301EX
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): B1242: Wireless Door Lock Tuner Circuit Malfunction (2010 Corolla)		



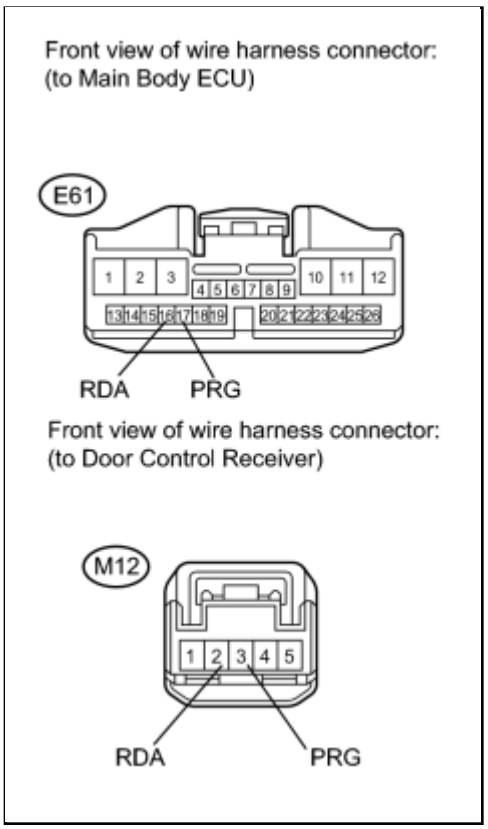
DTC	**B1242**	**Wireless Door Lock Tuner Circuit Malfunction**

DESCRIPTION

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1242	In diagnostic mode, an applicable RDA signal cannot be received within 2.4 second after an PRG signal has been output from the main body ECU.	• Wire harness or connector • Door control receiver • Main body ECU (Instrument panel junction block)

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

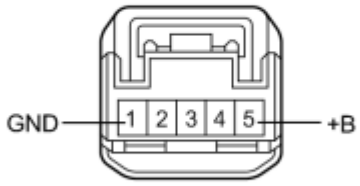
1.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR CONTROL RECEIVER)**

(a) Disconnect the E61 main body ECU connector and the M12 door control receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E61-16 (RDA) - M12-2 (RDA)	Always	Below 1 Ω
E61-16 (RDA) - Body ground	Always	10 kΩ or higher
E61-17 (PRG) - M12-3 (PRG)	Always	Below 1 Ω
E61-17 (PRG) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (BATTERY, BODY GROUND)**

(a) Measure the voltage and resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Door Control Receiver)

Standard:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M12-1 (GND) - Body ground	Always	Below 1 Ω
M12-5 (+B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**REPLACE DOOR CONTROL RECEIVER**

(a) Temporarily replace the door lock control receiver with a new or known good one INFO .

NEXT ▼

4.	**REGISTER RECOGNITION CODE**

(a) Perform the Registration procedure INFO .

NEXT ▼

5.	**CONFIRM DTC**

(a) Clear the DTCs INFO .

(b) Check if the same DTC is detected.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

A ▶ **END (DOOR CONTROL RECEIVER IS DEFECTIVE)**

Last Modified: 3-10-2010	6.4 S	**From:** 200901

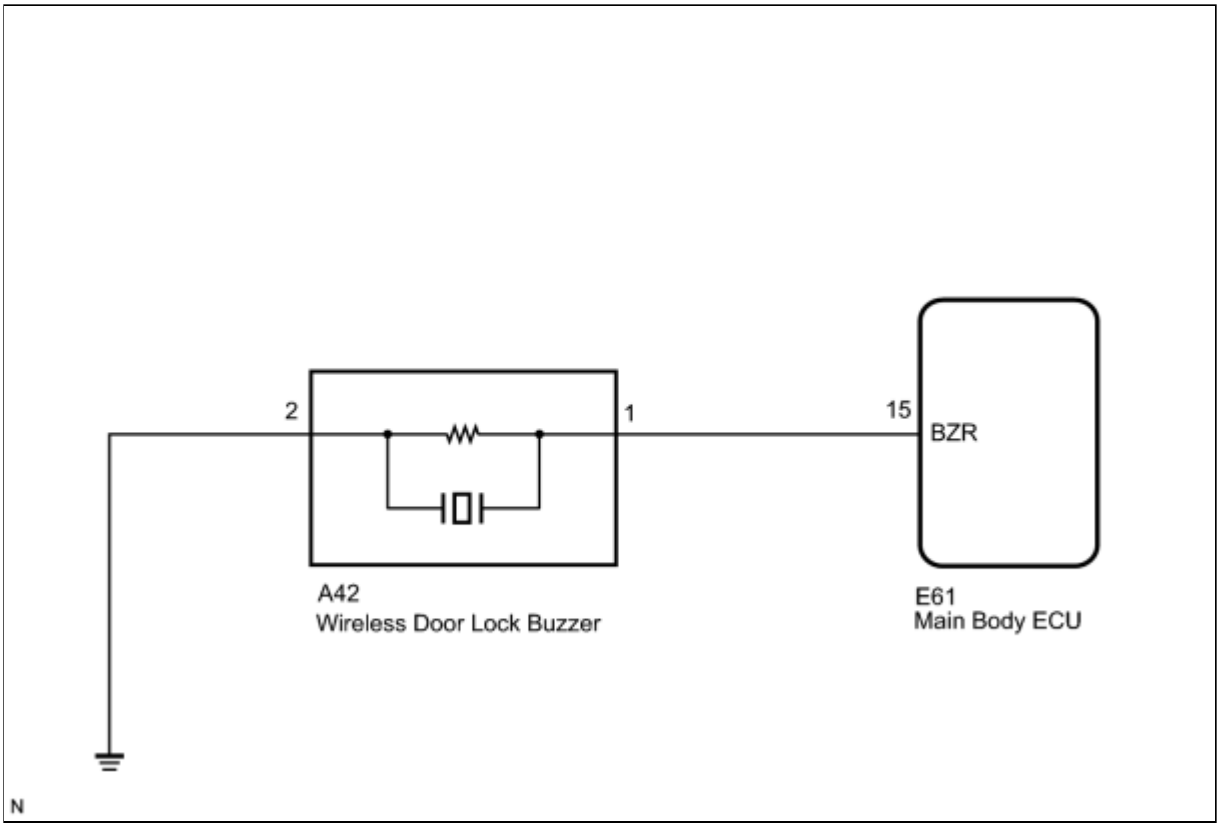
Title: DOOR LOCK: WIRELESS DOOR LOCK CONTROL SYSTEM (w/o Smart Key System): No Answer-Back (2010 Corolla)		

No Answer-Back



DESCRIPTION

In some cases, wireless door lock control functions are normal but the hazard warning lights and/or wireless door lock buzzer answer-back function(s) do not operate. In such cases, the main body ECU hazard warning lights and/or wireless door lock buzzer signal outputs may be malfunctioning.

NOTICE:

Troubleshooting should be started after confirming that the customize status of the answer-back function has been switched ON.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK WIRELESS DOOR LOCK CONTROL FUNCTION

(a) Check the wireless door lock control functions by operating the transmitter switch.

Result:

RESULT	PROCEED TO
Wireless door lock functions are normal but hazard warning lights answer-back does not occur	A
Wireless door lock functions are normal but wireless door lock buzzer answer-back does not occur	B
Doors cannot be locked and unlocked using transmitter	C

C ▶ **GO TO PROBLEM SYMPTOMS TABLE**

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)**

A ▼

2.	CHECK HAZARD WARNING LIGHT

(a) Check that the hazard warning lights flash continuously when the hazard warning signal switch is pressed.

OK:

Hazard warning lights flash continuously.

NG ▶ **GO TO LIGHTING SYSTEM**

OK ▶ **REPLACE MAIN BODY ECU**

3.	PERFORM ACTIVE TEST USING TECHSTREAM (WIRELESS DOOR LOCK BUZZER)

(a) Enter Active Test, using the Techstream to generate a control command, and then check that the wireless buzzer operates normally.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Wireless Buzzer	Wireless Door Lock Buzzer	ON/OFF	-

OK:

Wireless buzzer turns ON/OFF.

NG ▶ **INSPECT WIRELESS DOOR LOCK BUZZER**

OK ▶ **REPLACE MAIN BODY ECU**

4.	**INSPECT WIRELESS DOOR LOCK BUZZER**

(a) Measure the resistance according to the value(s) in the table below.

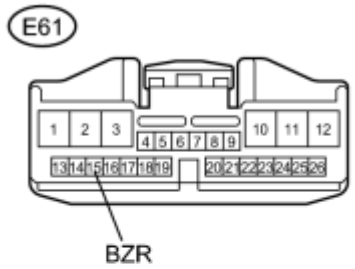
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	Always	950 to 1050 Ω

Component without harness connected:
(Wireless Door Lock Buzzer)

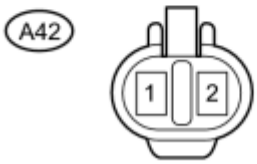
NOTICE:

When battery voltage is directly applied to the buzzer, the buzzer does not sound.



NG ▶ **REPLACE WIRELESS DOOR LOCK BUZZER**

OK ▼



5.	**CHECK HARNESS AND CONNECTOR (WIRELESS DOOR LOCK BUZZER - MAIN BODY ECU AND BODY GROUND)**

(a) Disconnect the E61 main body ECU connector.

Front view of wire harness connector:
(to Main Body ECU)

Front view of wire harness connector:
(to Wireless Door Lock Buzzer)

(b) Disconnect the A42 wireless door lock buzzer connector.

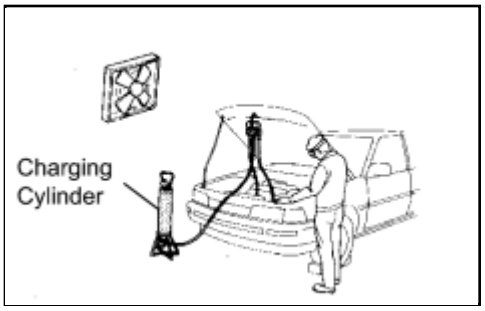
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E61-15 (BZR) - A42-1	Always	Below 1 Ω
E61-15 (BZR) - Body ground	Always	10 kΩ or higher
A42-2 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

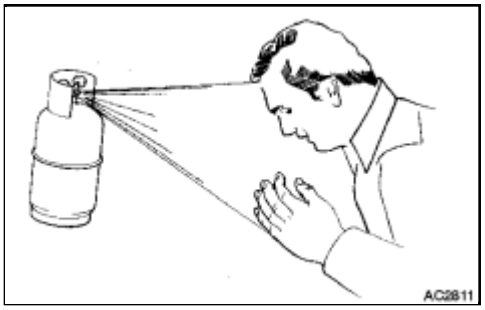
OK ▶ **REPLACE MAIN BODY ECU**



Last Modified: 3-10-2010	6.4 L	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Y5Q03GX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH



(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch ON	ON	On (IG)
	Ignition switch ACC	ACC	On (ACC)
	Engine start	START	Start

2. DO NOT HANDLE REFRIGERANT IN AN ENCLOSED AREA OR NEAR AN OPEN FLAME

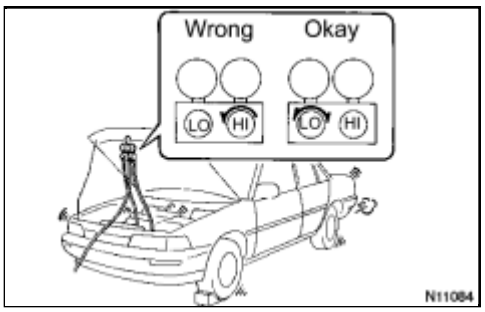
3. ALWAYS WEAR EYE PROTECTION

4. BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN

If liquid refrigerant gets in your eyes or on your skin:

(a) Wash the affected area with lots of cold water.

CAUTION:



Do not rub your eyes or skin.

(b) Apply clean petroleum jelly to the skin.

(c) Go immediately to a hospital or see a physician for professional treatment.

5. NEVER HEAT CONTAINER OR EXPOSE THE CONTAINER TO AN OPEN FLAME

6. BE CAREFUL NOT TO DROP CONTAINER OR APPLY PHYSICAL SHOCKS TO IT

7. DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM

If there is not enough refrigerant in the A/C system, oil lubrication will be insufficient and the compressor may be damaged.

Ensure that the system is fully charged and free of leaks to avoid this.

8. DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING

(a) Open and close only the low pressure valve.

If the high pressure valve is opened, refrigerant flows in the reverse direction causing the charging cylinder to rupture.

9. BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT

If refrigerant is overcharged, it will cause problems such as insufficient cooling, poor fuel economy, engine overheating, etc.

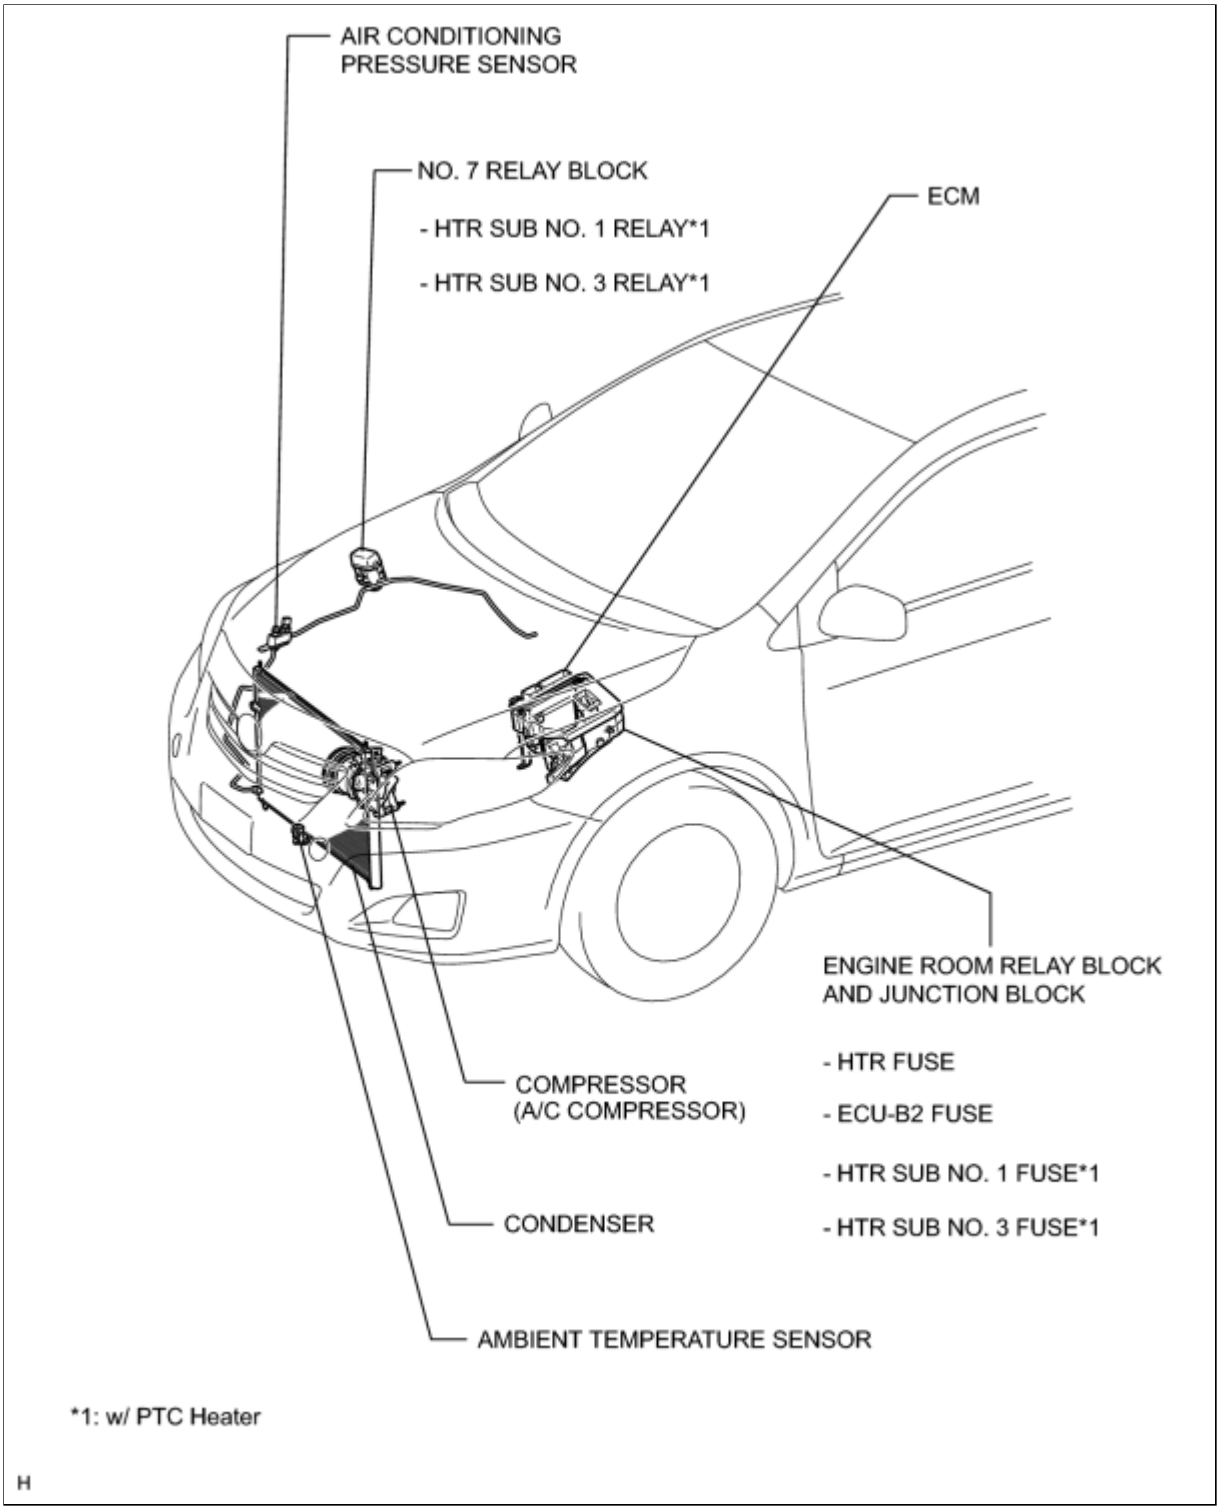
10. DO NOT OPERATE ENGINE WITHOUT REFRIGERANT

CAUTION:

Doing so may damage the inside of the compressor because the compressor parts will always move regardless of whether the A/C system is turned on or off.

11. SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

(a) This vehicle is equipped with an SRS (Supplemental Restraint System) consisting of the driver, front passenger, side, and curtain shield airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices INFO .



12. GENERAL PRECAUTION

(a) While using battery voltage during the inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

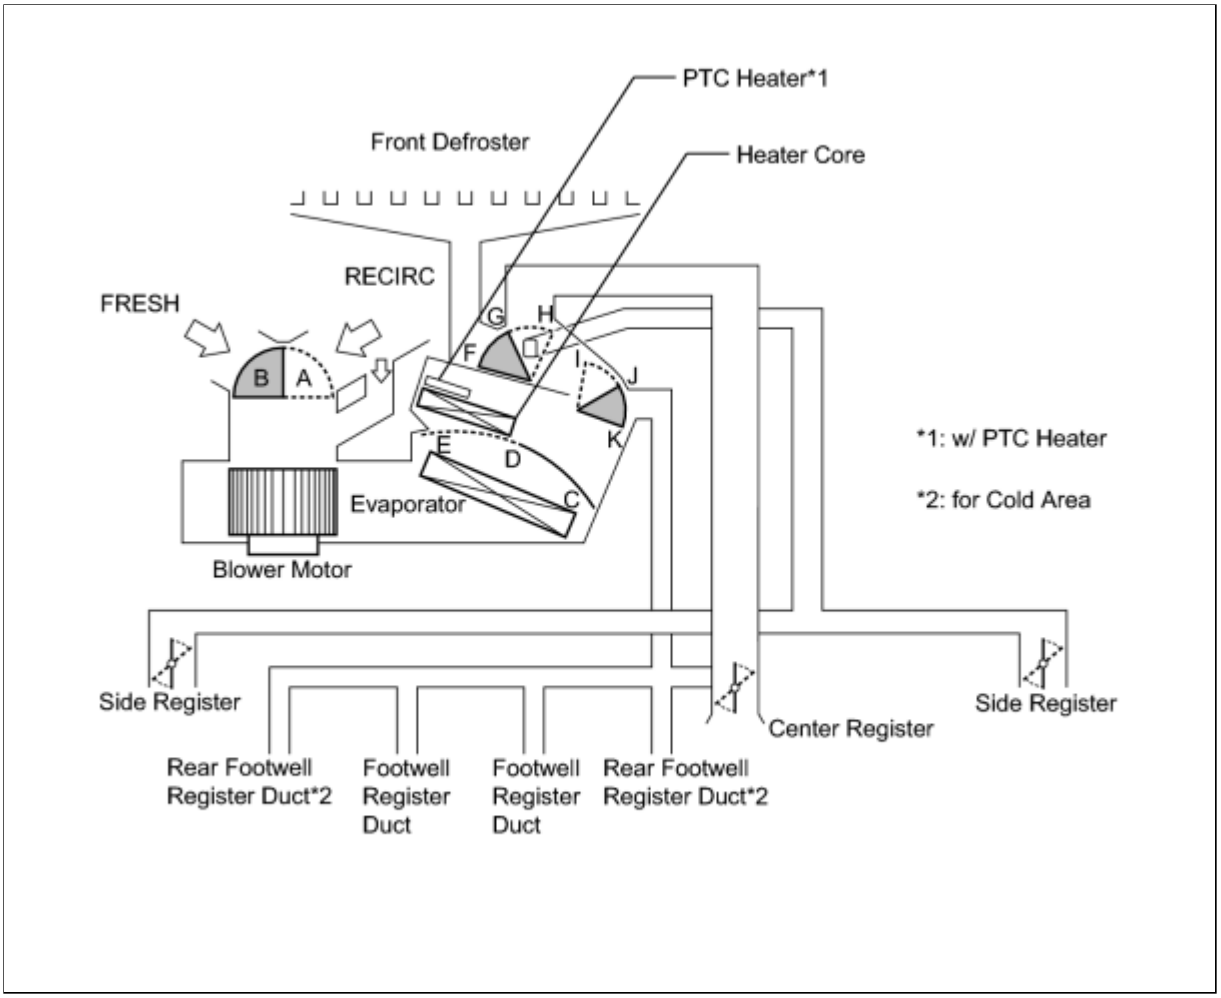
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION



1. GENERAL

The air conditioning system has the following controls:

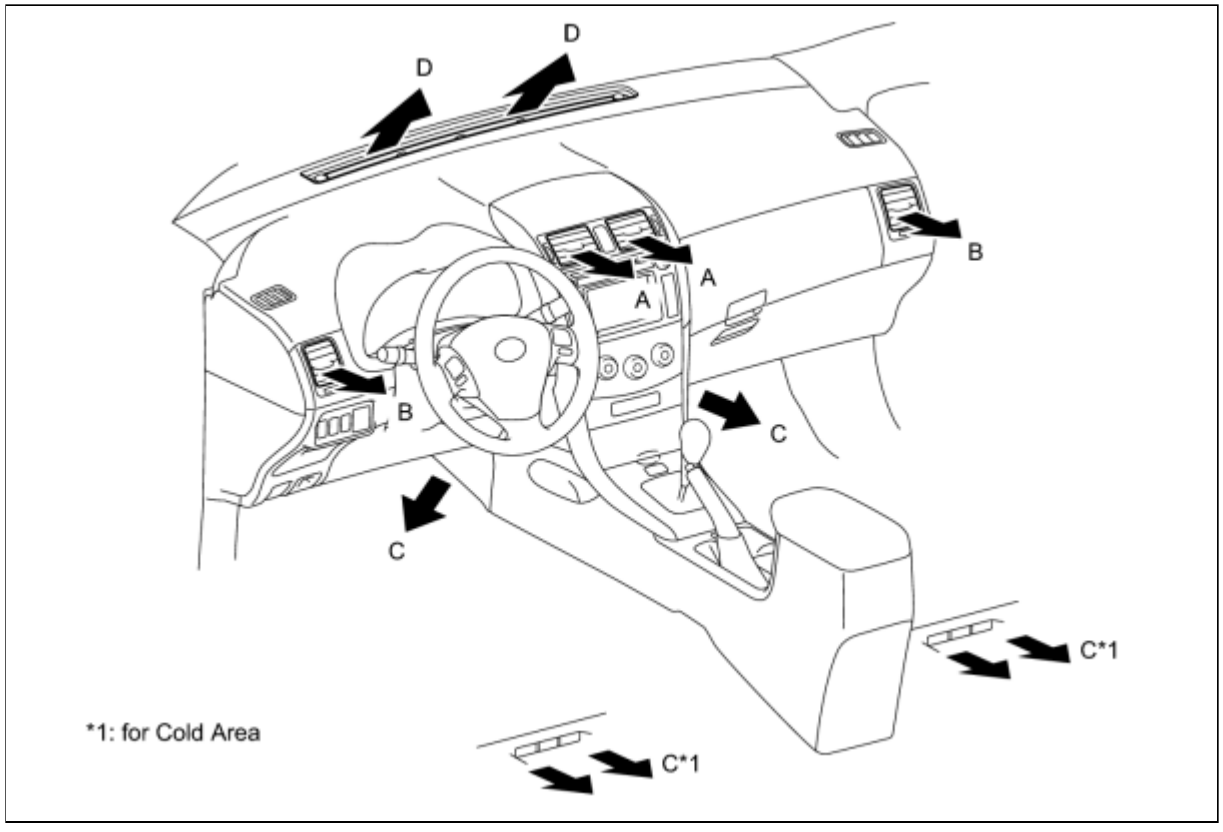
CONTROL	OUTLINE
Variable Capacity Compressor Control	Controls the compressor to turn ON or OFF and the discharge capacity based on the signals from various sensors.
Self-diagnosis	Checks the sensors in accordance with operation of air conditioning switches, then clock displays a DTC (Diagnosis Trouble Code) to indicate if there is a malfunction or not (sensor check function).

2. MODE POSITION AND DAMPER OPERATION

(a) Mode Position and Damper Operation

Functions of Main Dampers

CONTROL DAMPER	OPERATION POSITION	DAMPER POSITION	OPERATION
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.
Air Mix Control Damper	MAX COLD to MAX HOT Temperature Setting 16°C (61°F) to 30°C (86°F)	C - D - E	Varies the mixture ratio of the fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COLD.
Mode Control Damper	DEF 	H, K	Defrosts the windshield through the front defroster and side register.
	FOOT/DEF 	H, J	Defrosts the windshield through the front defroster and side register, while air is also blown out from the front footwell register duct and rear foot well register duct*2.



CONTROL DAMPER	OPERATION POSITION	DAMPER POSITION	OPERATION
	FOOT 	H, I	Air blows out of the footwell register duct, rear footwell register duct*2, and side register. In addition, air blows out slightly from the front defroster.
	BI-LEVEL 	F, I	Air blows out of the center register, side register, front footwell register duct and rear footwell register duct*2.
	FACE 	F, K	Air blows out of the center register and side register.

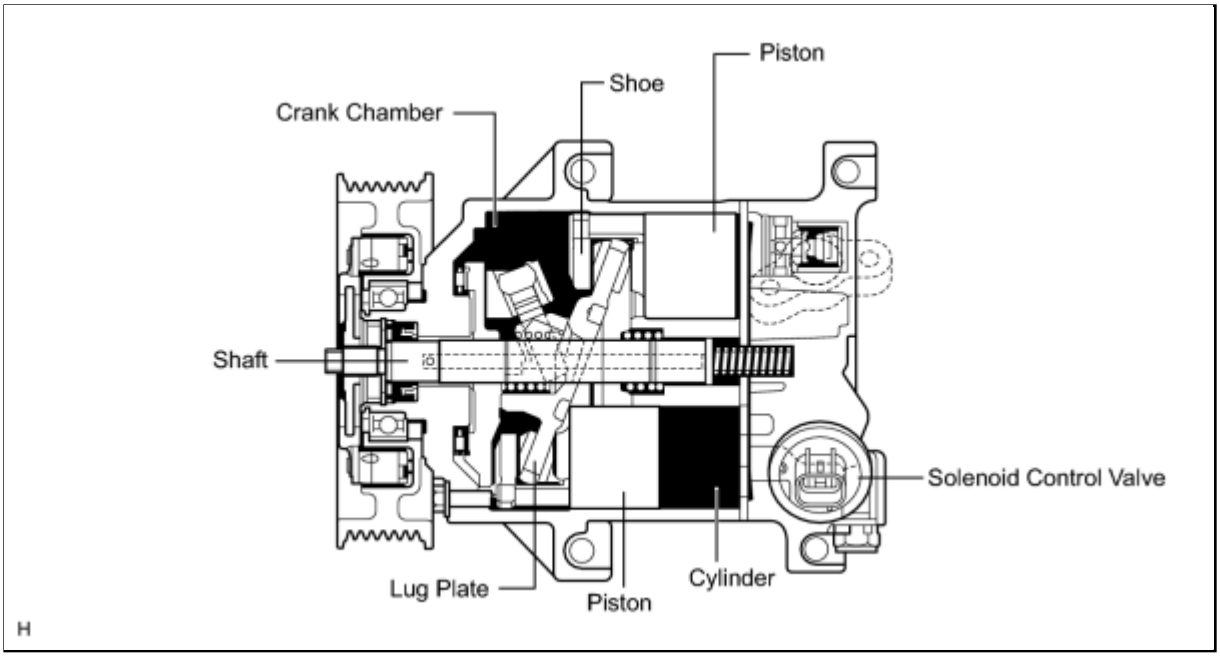
The size of the circle ○ indicates the proportion of airflow volume.

4. A/C COMPRESSOR

(a) General

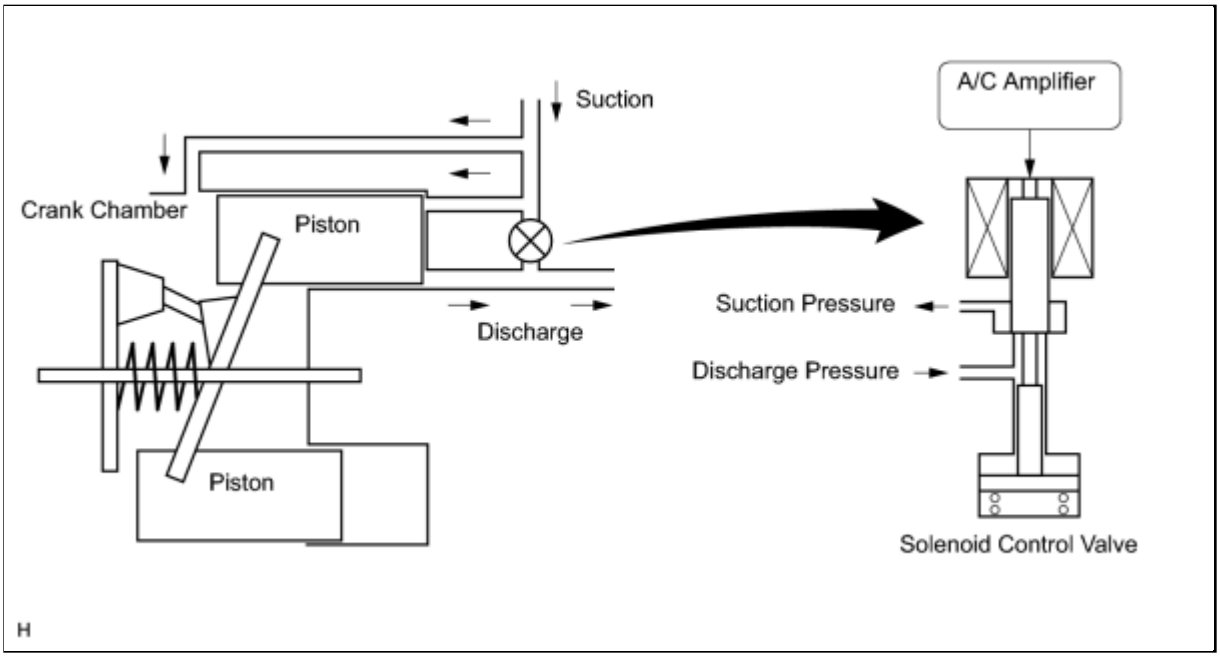


(1) The A/C compressor is a continuously variable capacity type in which its capacity varies with the cooling load of the air conditioning system.

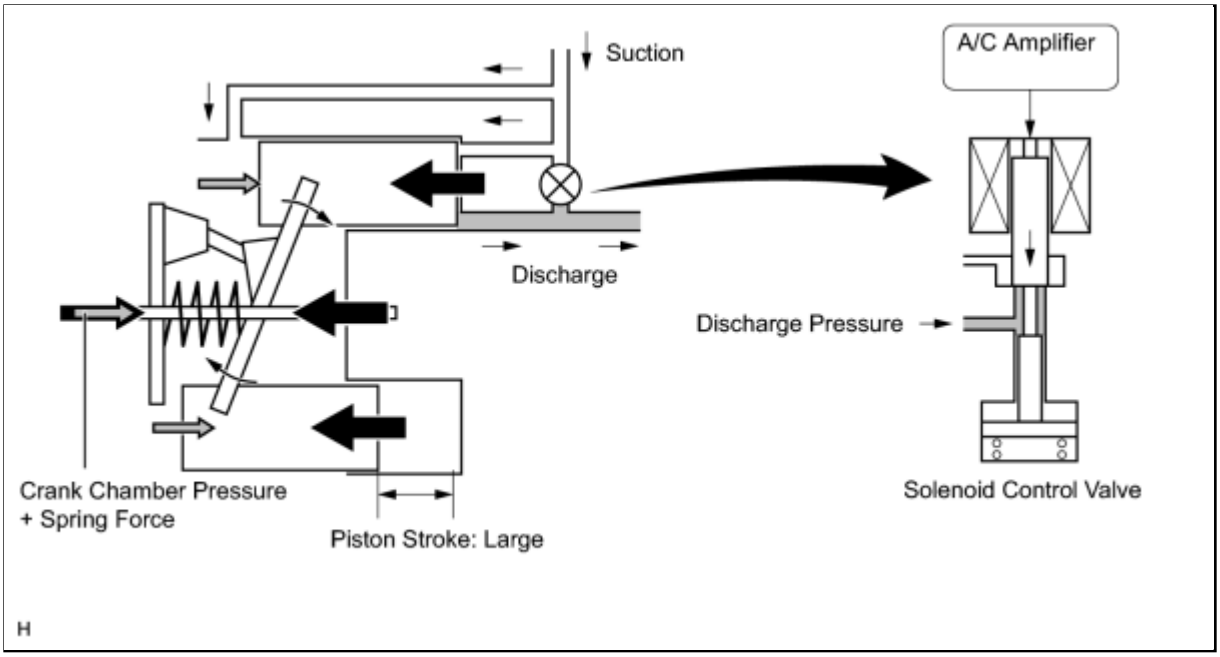
(2) The compressor consists of the shaft, lug plate, piston, shoe, crank chamber, cylinder, and solenoid control valve.

(3) The solenoid control valve adjusts the suction pressure is provided to enable to be controlled as desired.

(4) A plastic DL (Damper Limiter) type A/C pulley is used.

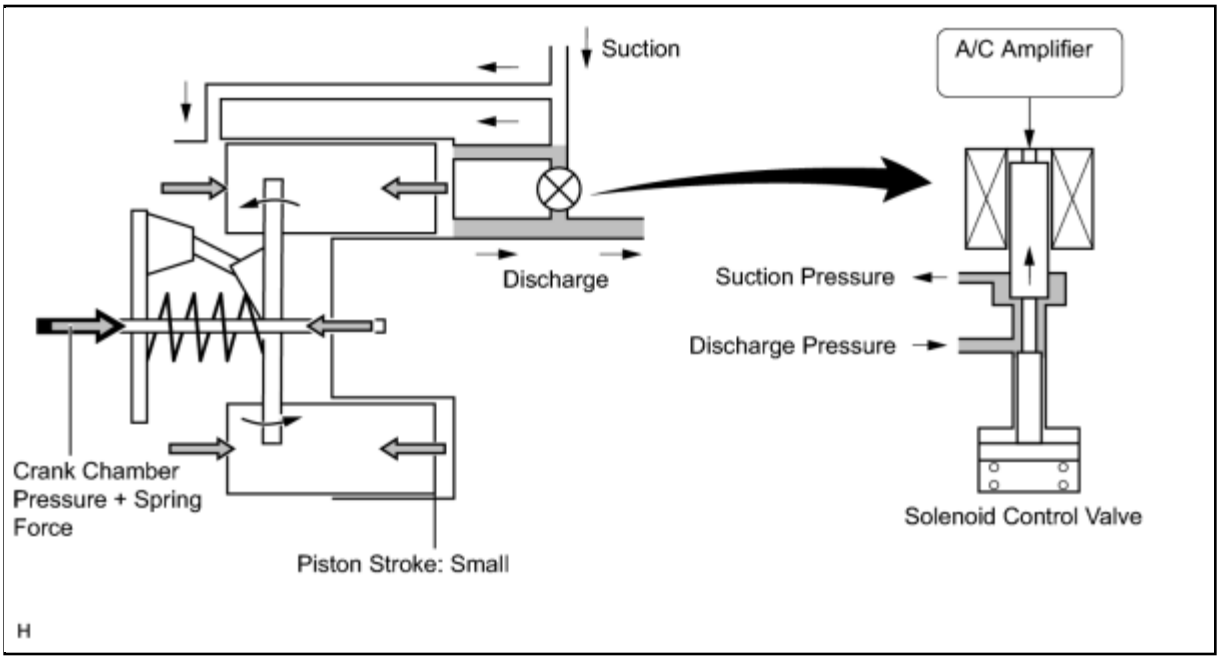


(5) A rotary valve uses suction to pull refrigerant gas into the cylinder.



(b) Operation

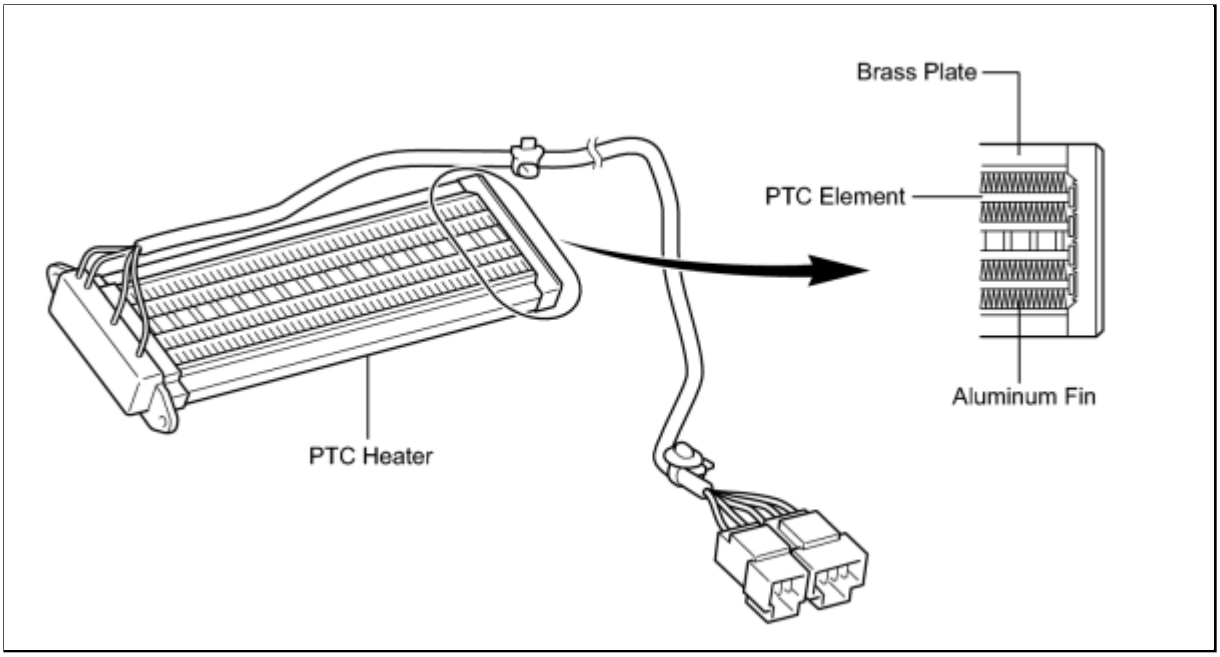
(1) The crank chamber is connected to the suction passage. A solenoid control valve is provided between the suction passage (low pressure) and the discharge passage (high pressure).



(2) The solenoid control valve duty cycle is controlled in accordance with the signals from the air conditioning amplifier.

(3) When the solenoid control valve closes (solenoid coil is energized), a difference in pressure is created and the crank chamber pressure decreases. Then, the pressure that is applied to the right side of the piston becomes greater than the pressure that is applied to the left side. This compresses the spring and tilts the lug plate. As a result, there is a large piston stroke and the discharge capacity increases.

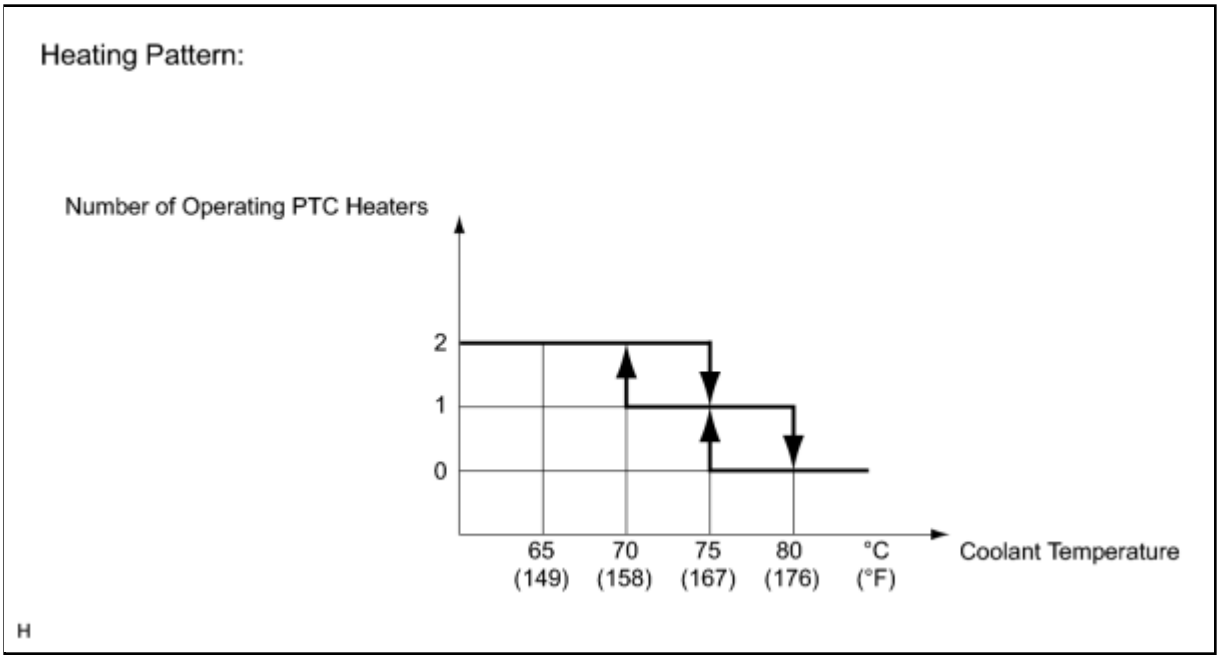
(4) When the solenoid control valve opens (solenoid coil is not energized), the pressure is equalized. The pressure applied to the left side of the piston becomes equal to the right side. This is performed when the spring elongates and eliminates the tilt of the lug plate. As a result, there is a small piston stroke and the discharge capacity decreases.



5. PTC HEATER (w/ PTC Heater)

(a) General

(1) The PTC heater is located above the heater core in the air conditioner unit.



(2) The PTC heater consists of a PTC element, aluminum fin, and brass plate. When current is applied to the PTC element, it generates heat to warm the air that passes through the unit.

(b) PTC Heater Operating Conditions

(1) The PTC heater is turned on and off by the air conditioning amplifier in accordance with the coolant temperature, ambient temperature, engine speed, air mix setting, and electrical load (generator power ratio).

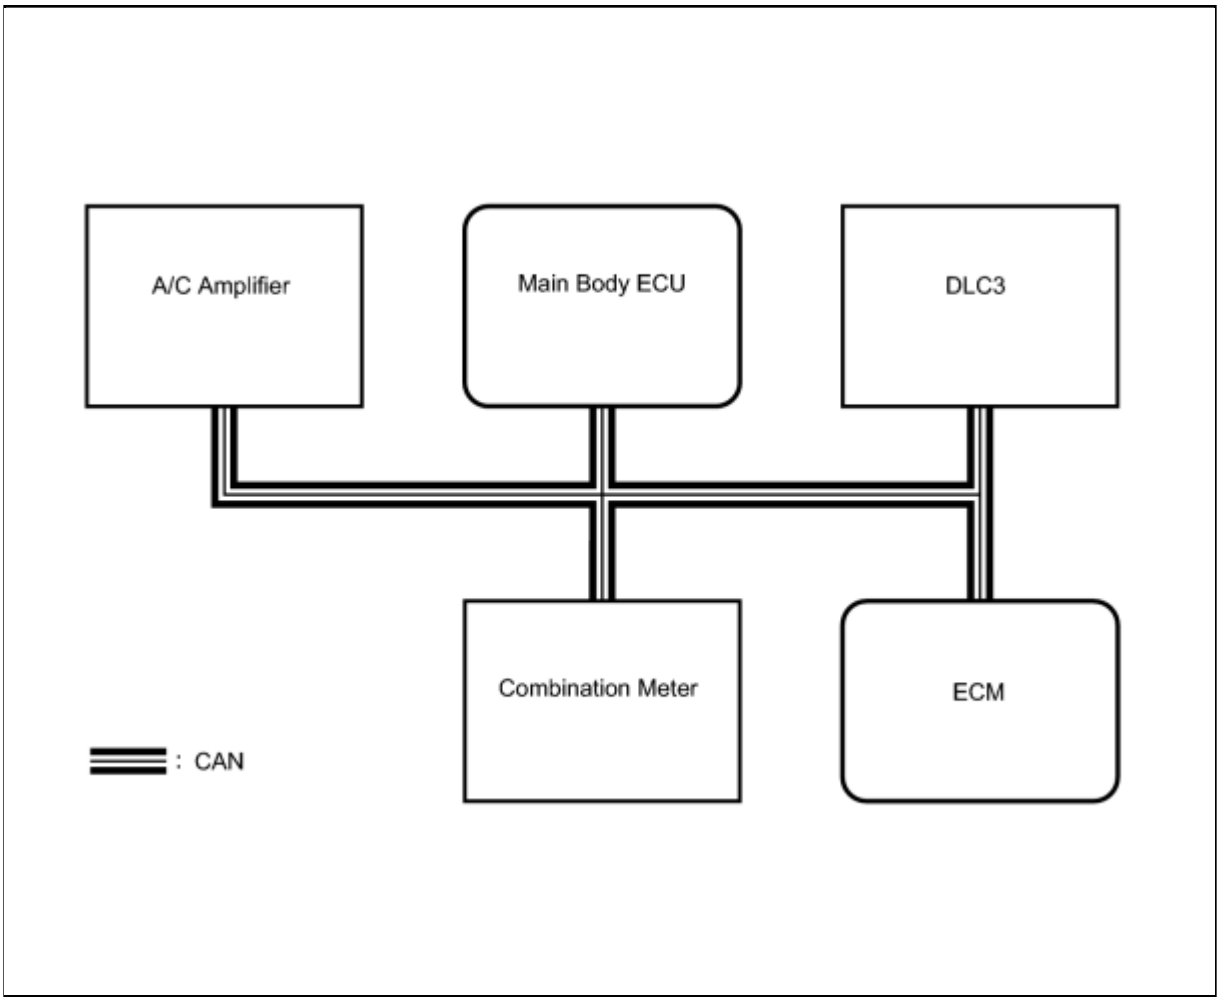
For example, the number of the operating PTC heaters varies by the coolant temperature as in the graph below.

6. AMBIENT TEMPERATURE SENSOR

The ambient temperature sensor detects the outside temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

7. EVAPORATOR TEMPERATURE SENSOR

The evaporator temperature sensor detects the temperature of the cool air immediately past the evaporator in the form of resistance changes, and outputs it to the A/C amplifier.



8. A/C PRESSURE SENSOR

The A/C pressure sensor detects the refrigerant pressure and outputs it to the A/C amplifier in the form of voltage changes.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the air conditioning system.
- *: Use the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**INSPECT BATTERY VOLTAGE**

(a) Inspect the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3.	**CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM***

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A

RESULT	PROCEED TO
CAN DTC is output	B

B ▶ **Go to CAN COMMUNICATION SYSTEM**

A ▼

4.	CHECK FOR DTC*

(a) Check for DTCs and note any codes that are output.

HINT:

Refer to DTC Check / Clear INFO .

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output above, try to force the A/C system to output DTCs by simulating the conditions indicated by the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ **Go to step 7**

A ▼

5.	PROBLEM SYMPTOMS TABLE

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

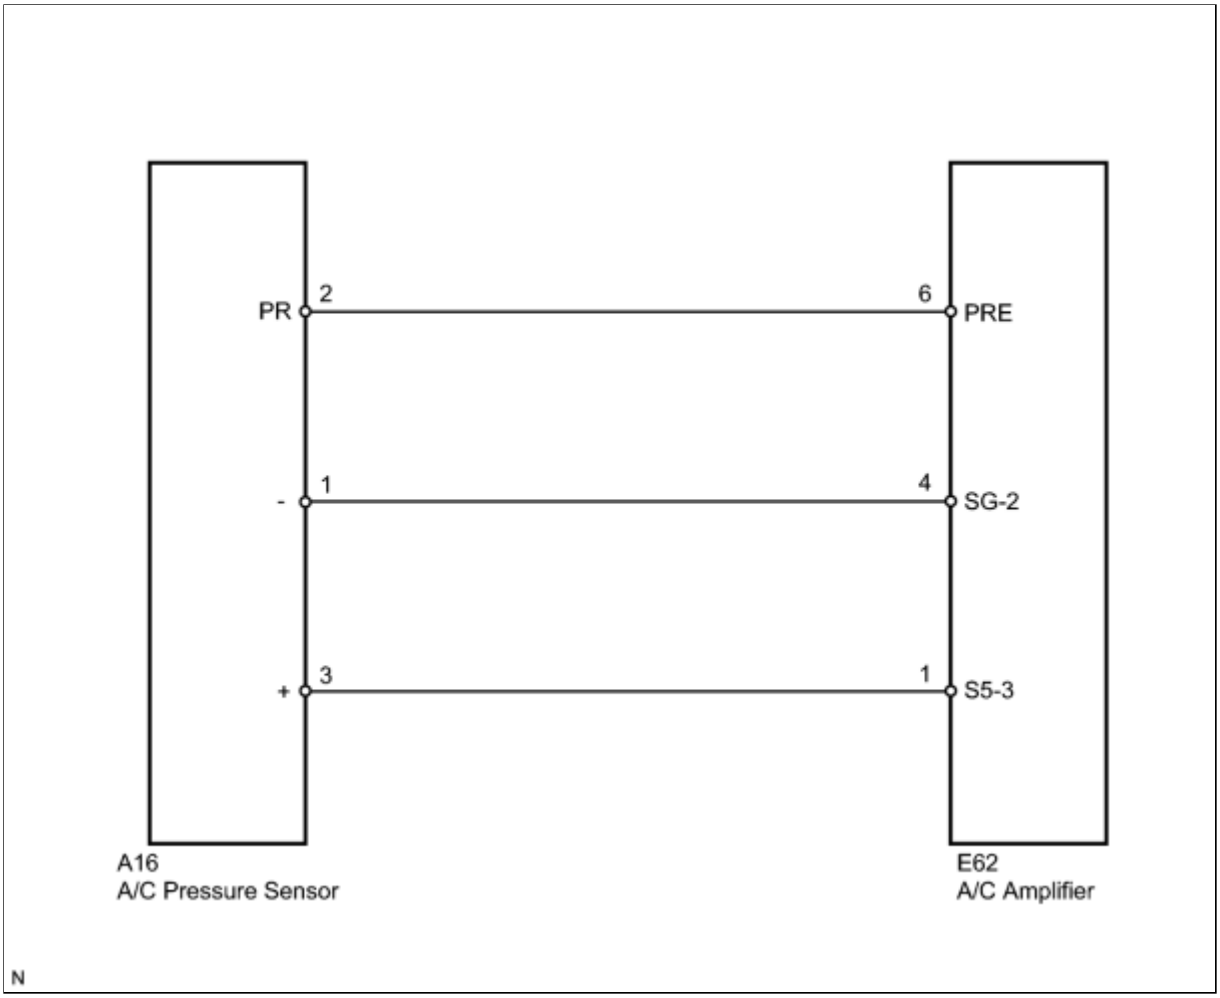
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000STP03TX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): B1423: Pressure Sensor Circuit (2010 Corolla)		



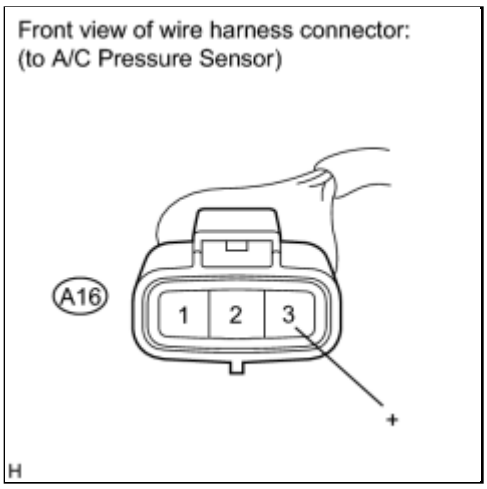
DTC	**B1423**	**Pressure Sensor Circuit**

DESCRIPTION

This DTC is output when refrigerant pressure on the high pressure side is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more). The A/C pressure sensor, installed on the high pressure line to detect refrigerant pressure, outputs a refrigerant pressure signal to the A/C amplifier. The A/C amplifier converts this signal to a pressure value according to the sensor characteristics to control the compressor.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1423	• Open or short in A/C pressure sensor circuit • Refrigerant pressure on the high pressure line is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more).	• A/C Pressure sensor • Harness or connector between A/C pressure sensor and A/C amplifier • A/C amplifier • Expansion valve (blocked, stuck) • Condenser (blocked, deterioration of cooling capacity due to dirt) • Cooler dryer (moisture in the refrigerant cycle cannot be absorbed) • Cooling fan system (condenser cannot be cooled down) • A/C system (leaks, blocked)

WIRING DIAGRAM



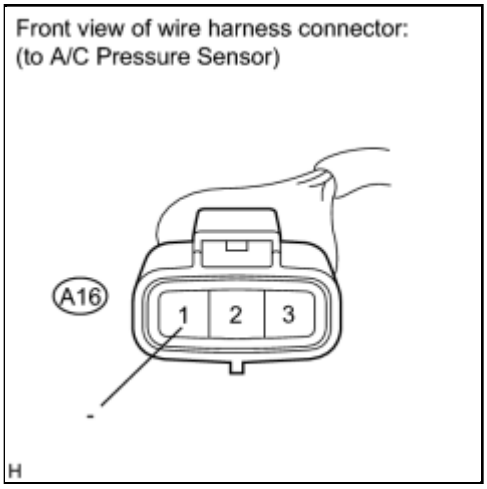
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)**

(a) Disconnect the connector from the A/C pressure sensor.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A16-3 (+) - Body ground	Ignition switch ON	4.75 to 5.25 V

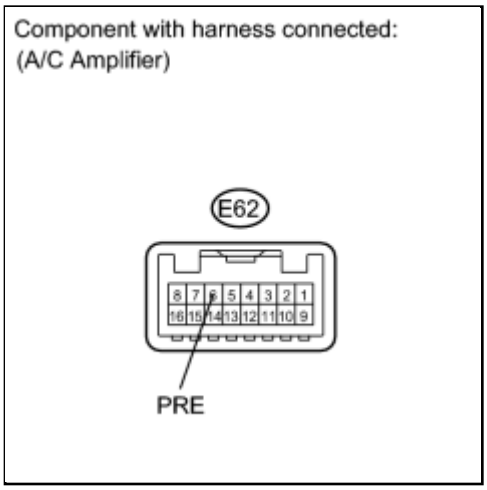
NG ▶ **CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (GROUND CIRCUIT)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-1 (-) - Body ground	Always	Below 1 Ω

NG ▶ CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)

OK ▼

3.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

(a) Reconnect the connector to the A/C pressure sensor.

(b) Remove the A/C amplifier with the connectors still connected.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E62-6 (PRE) - Body ground	Ignition switch ON (A/C: OFF)	0.7 to 4.8 V

HINT:

If the measured voltage is not within the normal range, there may be a malfunction in the A/C amplifier, A/C pressure sensor, or wire harness. It is also possible that the amount of refrigerant may not be appropriate.

NG ▶ CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)

OK

4.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

(a) Measure the voltage when the following conditions are satisfied.

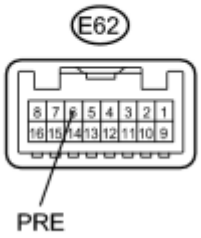
ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

- If refrigerant pressure on the high pressure line becomes extremely high during the inspection (if the voltage exceeds 4.8 V), the fail-safe function stops compressor operation. Therefore, measure the voltage before the fail-safe function operates.
- It is necessary to measure the voltage over a period of time (approximately 10 minutes) because the problem symptom may recur after a while.

HINT:

When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.



(1) Measure the voltage according to the value(s) in the table below.

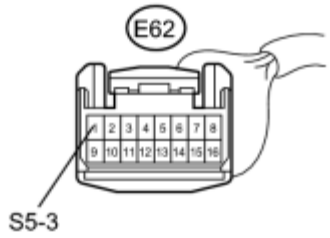
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E62-6 (PRE) - Body ground	Ignition switch ON (A/C: ON)	0.7 to 4.8 V

Result:

Component with harness connected:
(A/C Amplifier)

RESULT	PROCEED TO
OK (When troubleshooting according to DTC)	A
OK (When troubleshooting according to Problem Symptoms Table)	B
NG	C



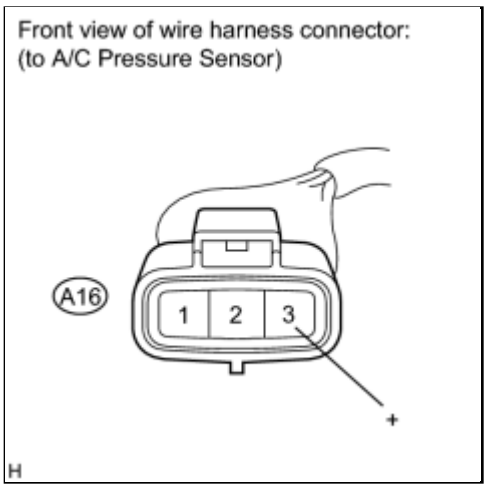
C ▶ **INSPECT COOLING FAN SYSTEM**

B ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

5.	CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)

Front view of wire harness connector:
(to A/C Amplifier)



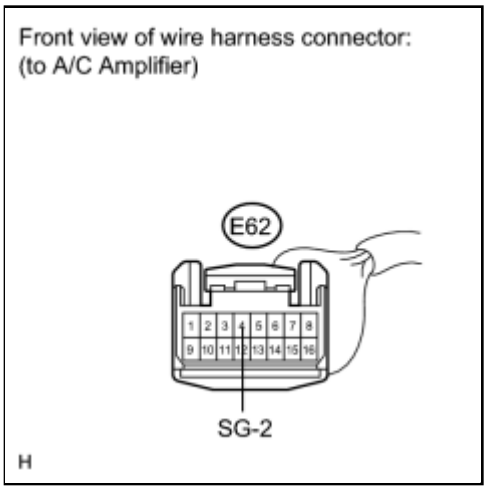
H

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

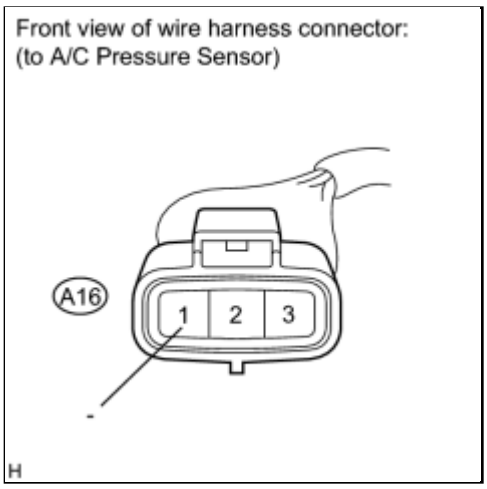


A16-3 (+) - E62-1 (S5-3)	Always	Below 1 Ω
E62-1 (S5-3) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

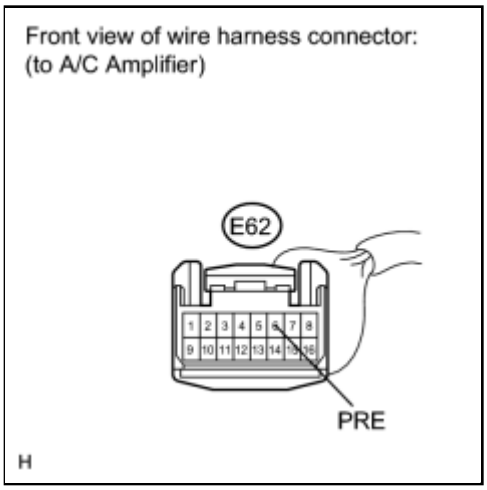
6.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**



(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

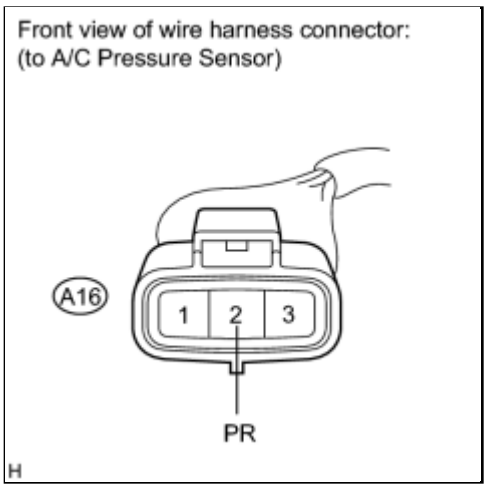


TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-1 (-) - E62-4 (SG-2)	Always	Below 1 Ω
E62-4 (SG-2) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

7.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**



(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-2 (PR) - E62-6 (PRE)	Always	Below 1 Ω
E62-6 (PRE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	**CHECK FOR A/C SYSTEM LEAK**

(a) Install the manifold gauge set.

(b) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

(c) Evacuate the A/C system and check that vacuum can be maintained.

OK:
Vacuum can be maintained in the A/C system.

HINT:

If vacuum cannot be maintained in the A/C system, there may be a refrigerant leak. In this case, it is necessary to repair or replace the leaking part of the A/C system.

NG ▶ **REPAIR A/C SYSTEM LEAK**

OK ▼

9.	**CHARGE REFRIGERANT**

(a) Add an appropriate amount of refrigerant INFO .

NEXT

10.	**RECHECK DTC**

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

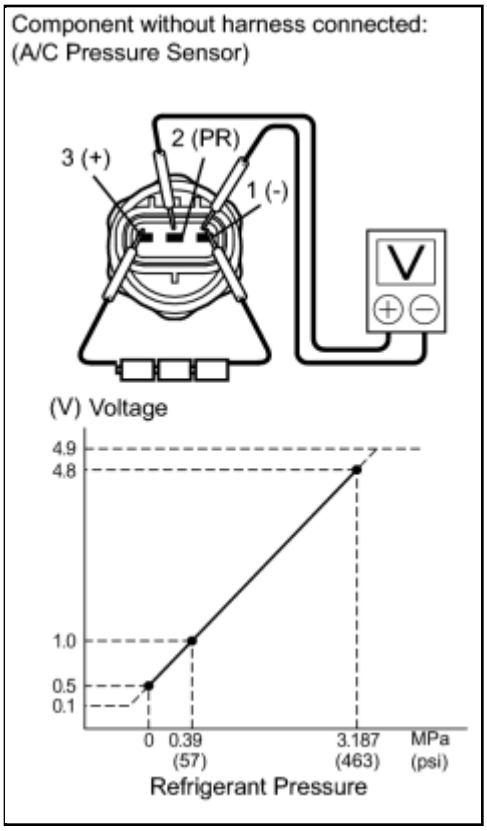
If refrigerant pressure on the high pressure line is excessive, this DTC will be set. Therefore, it is necessary to measure the voltage over a period of time (approximately 10 minutes) because this DTC may be set after the A/C has been operating for a while.

HINT:

When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to signals from the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.

Result:

RESULT	PROCEED TO
DTC B1423 is output	A
DTC B1423 is not output	B



NOTICE:

If the DTC was set due to an insufficient or excessive amount of refrigerant, the problem may have been solved after performing the previous step. However, the root cause of insufficient refrigerant may be refrigerant leaks. The root cause of excessive refrigerant may be adding refrigerant when the level was insufficient. Therefore, identify and repair any refrigerant leaks as necessary.

B **END**

A

11.	INSPECT A/C PRESSURE SENSOR

(a) Install the manifold gauge set.

(b) Disconnect the connector from the A/C pressure sensor.

(c) Connect the three 1.5 V dry cell batteries' positive (+) lead to terminal 3, and the negative (-) lead to terminal 1.

(d) Connect the voltmeter's positive (+) lead to terminal 2, and the negative (-) lead to terminal 1.

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (PR) - 1 (-)	Refrigerant pressure: 0.39 to 3.187 MPa (57 to 463 psi)	1.0 to 4.8 V

NG ▶ REPLACE A/C PRESSURE SENSOR

OK ▶ REPLACE AIR CONDITIONING AMPLIFIER

12.	REPAIR A/C SYSTEM LEAK

(a) Identify the area where refrigerant leaks from INFO.

(b) Repair the identified area of the A/C system.

(c) Evacuate the A/C system.

NEXT ▶ CHARGE REFRIGERANT

13.	INSPECT COOLING FAN SYSTEM

(a) Check that the cooling fan operates normally.

HINT:

- Cooling Fan Circuit INFO for 2AZ-FE).
- Cooling Fan Circuit INFO for 2ZR-FE).

NG ▶ REPAIR COOLING FAN SYSTEM

OK ▼

14.	CHARGE REFRIGERANT

(a) Use a refrigerant recovery unit to recover refrigerant.

(b) Evacuate the A/C system.

(c) Add an appropriate amount of refrigerant INFO .

HINT:

If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for DTCs.

NEXT ▼

15.	RECHECK DTC

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

If refrigerant pressure on the high pressure line is excessive, this DTC will be set. Therefore, it is necessary to measure the voltage over a period of time (approximately 10 minutes) because DTC may be set after the A/C has been operating for a while.

HINT:

- When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to signals from the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.
- If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for DTCs. If the DTC is not output, it indicates that the cooler dryer in the condenser is not able to absorb moisture in the refrigerant. In this case, to complete the repair, it is necessary to replace the cooler dryer.

Result:

RESULT	PROCEED TO
DTC B1423 is output	A
DTC B1423 is not output	B

B ▶ **REPLACE COOLER DRYER**

A ▼

16.	**REPLACE EXPANSION VALVE**

(a) Replace the expansion valve with a new one INFO .

HINT:

Replace the expansion valve with a normal one because the expansion valve is either stuck or clogged.

NEXT

17.	**CHARGE REFRIGERANT**

(a) Add an appropriate amount of refrigerant INFO .

NEXT

18.	**RECHECK DTC**

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

If refrigerant pressure on the high pressure line is excessive, this DTC will be set. Therefore, it is necessary to measure the voltage over a period of time (approximately 10 minutes) because this DTC may be set after the A/C has been operating for a while.

HINT:

- When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.
- If refrigerant pressure is not normal after replacing the expansion valve with a new one, the

condenser or pipes may be clogged with dirt, dust or other contaminants. In this case, clean or replace the condenser or pipes.

Result:

RESULT	PROCEED TO
DTC B1423 is not output	A
DTC B1423 is output	B

B ▶ **REPLACE CONDENSER**

A ▶ **END**

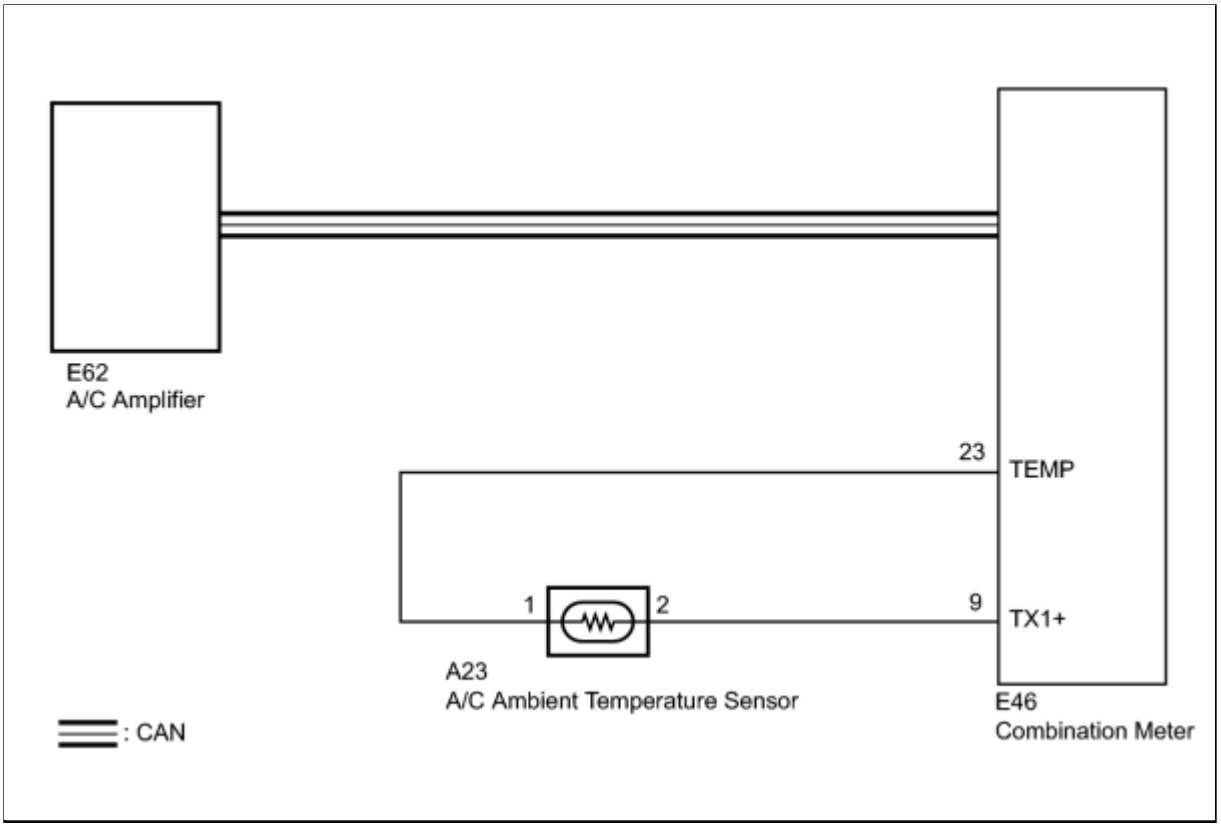
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): B1412: Ambient Temperature Sensor Circuit (2010 Corolla)		



DTC	**B1412**	**Ambient Temperature Sensor Circuit**

DESCRIPTION

The ambient temperature sensor is installed in front of the condenser. This sensor detects the temperature outside the cabin and sends the appropriate signals to the A/C amplifier via the CAN communication system.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1412	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness or connector between ambient temperature sensor and combination meter • Combination meter • A/C amplifier • CAN communication system

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CAN COMMUNICATION SYSTEM**

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A
CAN DTC is output	B

B ▶ **GO TO CAN COMMUNICATION SYSTEM**

A ▼

2.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the item below in the Data List, and read the display on the Techstream.

Data List / Air Conditioner

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Ambient Temp Sensor (Ambi Temp Sens)	Ambient temperature sensor / Min: -23.3°C (-9.94°F), Max: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open in circuit: -23.3°C (-9.94°F) Short in circuit: 65.95°C (150.71°F)

OK:
The display is as specified in the "Normal Condition" column.
Result:

RESULT	PROCEED TO
NG	A

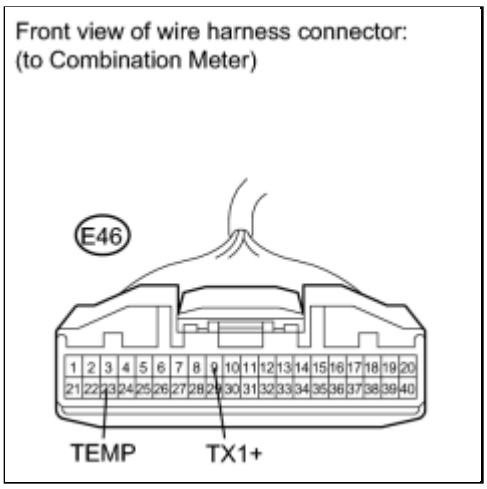
OK (When troubleshooting according to the DTC output)	C



C ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

B ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A ▼

3.	**CHECK HARNESS AND CONNECTOR (AMBIENT TEMPERATURE SENSOR CIRCUIT)**

(a) Disconnect the connector from the combination meter.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-9 (TX1+) - E46-23 (TEMP)	25°C (77°F)	1.60 to 1.80 kΩ
E46-9 (TX1+) - E46-23 (TEMP)	40°C (104°F)	0.80 to 1.00 kΩ

NG ▶ **INSPECT AMBIENT TEMPERATURE SENSOR**

OK ▼

4.	**INSPECT COMBINATION METER**

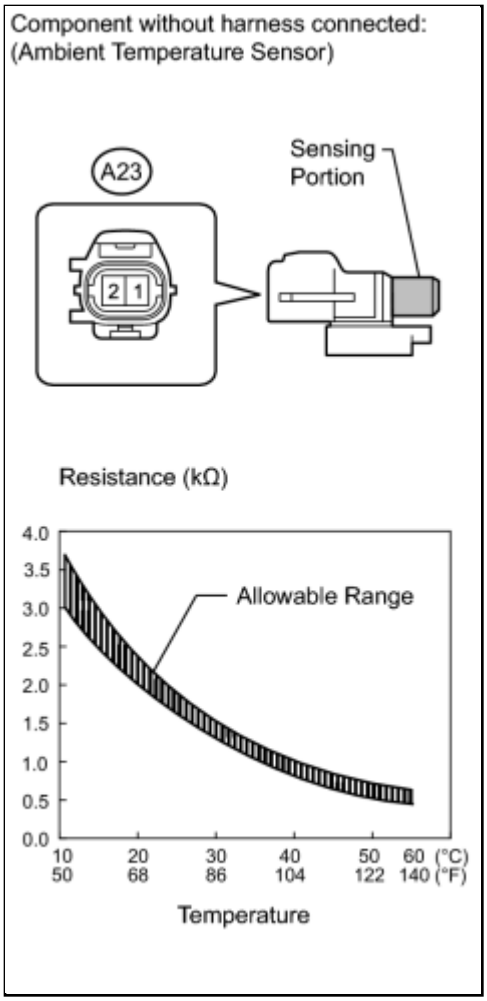
(a) Temporarily replace the combination meter with a known good one INFO.

HINT:

Since the combination meter cannot be inspected while it is removed from the vehicle, replace the combination meter with a known good one and check that the condition returns to normal.

(b) Check for DTCs.

Result:



RESULT	PROCEED TO
DTC B1412 is not output	A
DTC B1412 is output	B

B ▶ REPLACE AIR CONDITIONING AMPLIFIER

A ▶ REPLACE COMBINATION METER

5.	INSPECT AMBIENT TEMPERATURE SENSOR

(a) Remove the ambient temperature sensor.

(b) Disconnect the connector from the ambient temperature sensor.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A23-1 - A23-2	10°C (50°F)	3.00 to 3.73 kΩ
A23-1 - A23-2	15°C (59°F)	2.45 to 2.88 kΩ
A23-1 - A23-2	20°C (68°F)	1.95 to 2.30 kΩ

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A23-1 - A23-2	25°C (77°F)	1.60 to 1.80 kΩ
A23-1 - A23-2	30°C (86°F)	1.28 to 1.47 kΩ
A23-1 - A23-2	35°C (95°F)	1.00 to 1.22 kΩ
A23-1 - A23-2	40°C (104°F)	0.80 to 1.00 kΩ
A23-1 - A23-2	45°C (113°F)	0.65 to 0.85 kΩ
A23-1 - A23-2	50°C (122°F)	0.50 to 0.70 kΩ
A23-1 - A23-2	55°C (131°F)	0.44 to 0.60 kΩ
A23-1 - A23-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).

NG ▶ **REPLACE AMBIENT TEMPERATURE SENSOR**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AMBIENT TEMPERATURE SENSOR - COMBINATION METER)**

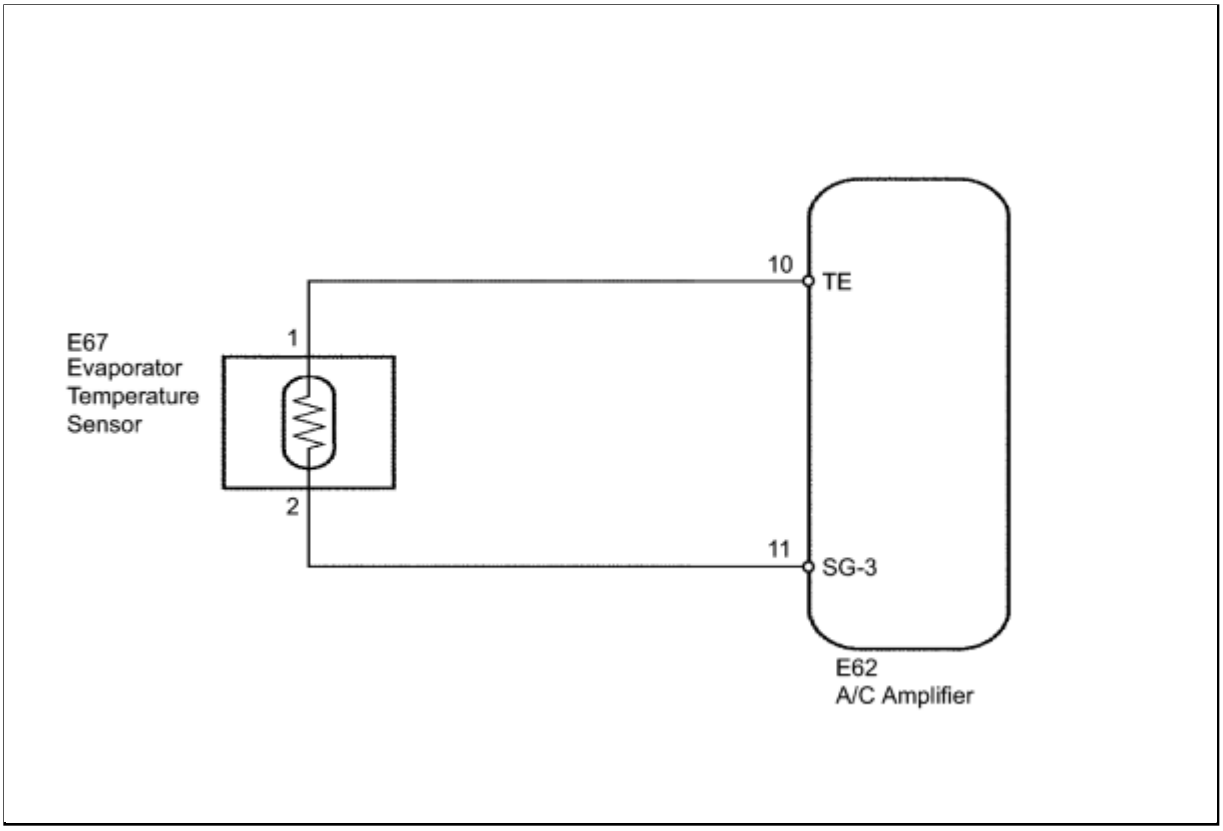
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): B1413: Evaporator Temperature Sensor Circuit (2010 Corolla)		

DTC	**B1413**	**Evaporator Temperature Sensor Circuit**



DESCRIPTION

The evaporator temperature sensor (A/C thermistor) is installed on the evaporator in the air conditioning unit. It detects the temperature of the cooled air passed through the evaporator and its signal sent to the A/C amplifier is used to control the air conditioning. The resistance of the evaporator temperature sensor (A/C thermistor) changes in accordance with the temperature of the cooled air passed through the evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The A/C amplifier applies voltage (5 V) to the evaporator temperature sensor (A/C thermistor) and reads voltage changes as the resistance of the evaporator temperature sensor (A/C thermistor) changes. This sensor is used to prevent the evaporator from freezing.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1413	Open or short in evaporator temperature sensor circuit	• Evaporator temperature sensor • Harness or connector between evaporator temperature sensor and A/C amplifier • A/C amplifier

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Recirculation Damper Servo Motor Circuit (2010 Corolla)		

Recirculation Damper Servo Motor Circuit

DESCRIPTION

The recirculation damper servo motor and No. 1 heater control (air inlet control switch) are powered through the HTR-IG fuse. Operating the No. 1 heater control (air inlet control switch) drives the recirculation damper servo motor to switch between "FRESH" and "RECIRCULATION".

WIRING DIAGRAM

INSPECTION PROCEDURE

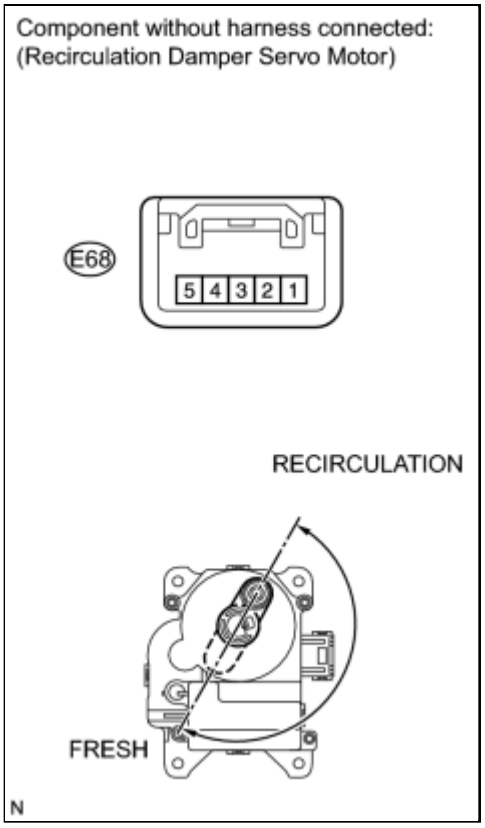
PROCEDURE

1.	**INSPECT FUSE (HTR-IG)**

(a) Remove the HTR-IG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR-IG fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (HTR-IG)**

OK ▼

2.	**INSPECT RECIRCULATION DAMPER SERVO MOTOR**

(a) Remove the recirculation damper servo motor.

(b) Disconnect the connector from the recirculation damper servo motor.

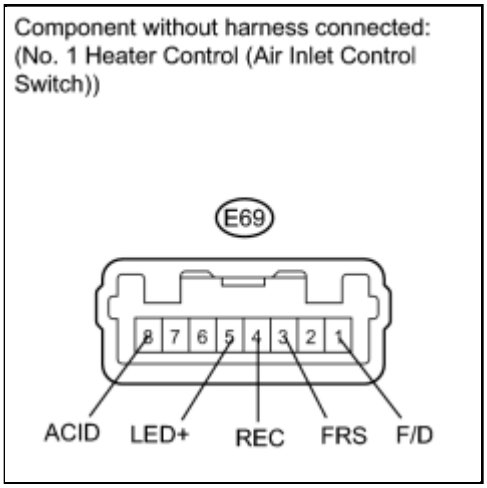
(c) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 2, then check that the arm turns to the "FRESH" side smoothly.

OK:

Lever turns to "FRESH" side smoothly.

(d) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 1, then check that the arm turns to the "RECIRCULATION" side smoothly.

OK:



Lever turns to "RECIRCULATION" side smoothly.

NG ▶ **REPLACE RECIRCULATION DAMPER SERVO MOTOR**

OK ▼

3.	**INSPECT NO. 1 HEATER CONTROL (AIR INLET CONTROL SWITCH)**

(a) Remove the No. 1 heater control (air inlet control switch).

(b) Disconnect the connector from the No. 1 heater control (air inlet control switch).

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E69-3 (FRS) - E69-4 (REC)	Air inlet control switch: FREE	Below 1 Ω
E69-3 (FRS) - E69-4 (REC)	Air inlet control switch: LOCK	10 kΩ or higher
E69-1 (F/D) - E69-8 (ACID)	Mode control dial: except Foot/DEF position and DEF position	10 kΩ or higher
E69-1 (F/D) - E69-8 (ACID)	Mode control dial: Foot/DEF position or DEF position	Below 1 Ω

(d) Check that the indicator light comes on.

(1) Turn the heater control base (air inlet control switch) to LOCK.

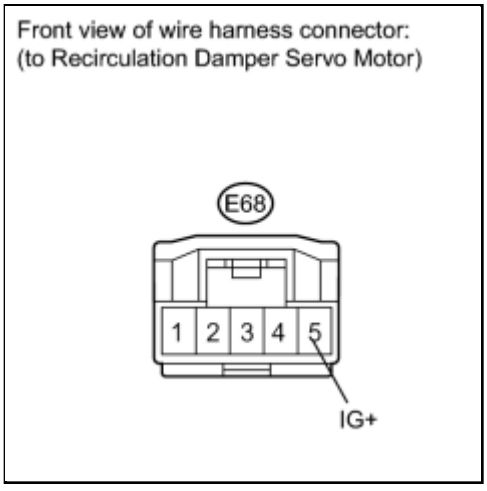
(2) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead from the battery to terminal 4, and check that the indicator light comes on.

OK:

The indicator light comes on.

(e) Check that the illumination comes on.

(1) Connect a positive (+) lead from the battery to terminal 7 and negative (-) lead from the battery to terminal 6, and check that the illumination comes on.



OK:

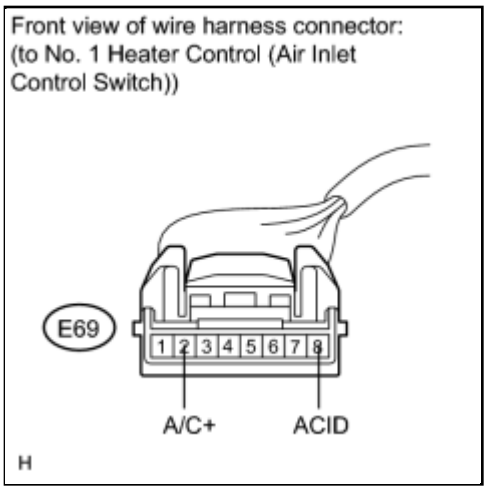
The illumination comes on.

NG ▶ **REPLACE NO. 1 HEATER CONTROL (AIR INLET CONTROL SWITCH)**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (RECIRCULATION DAMPER SERVO MOTOR - BATTERY)**

(a) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E68-5 (IG+) - Body ground	Ignition switch off	Below 1 V
E68-5 (IG+) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

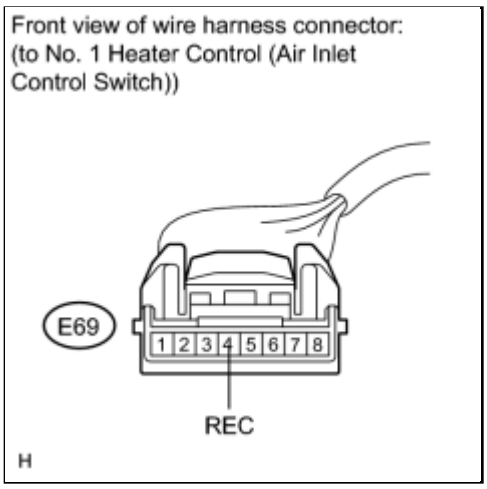
5.	**CHECK HARNESS AND CONNECTOR (NO. 1 HEATER CONTROL (AIR INLET CONTROL SWITCH) - BATTERY)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E69-2 (A/C+) - Body ground	Ignition switch off	Below 1 V
E69-2 (A/C+) - Body ground	Ignition switch ON	11 to 14 V
E69-8 (ACID) - Body ground	Ignition switch off	Below 1 V
E69-8 (ACID) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

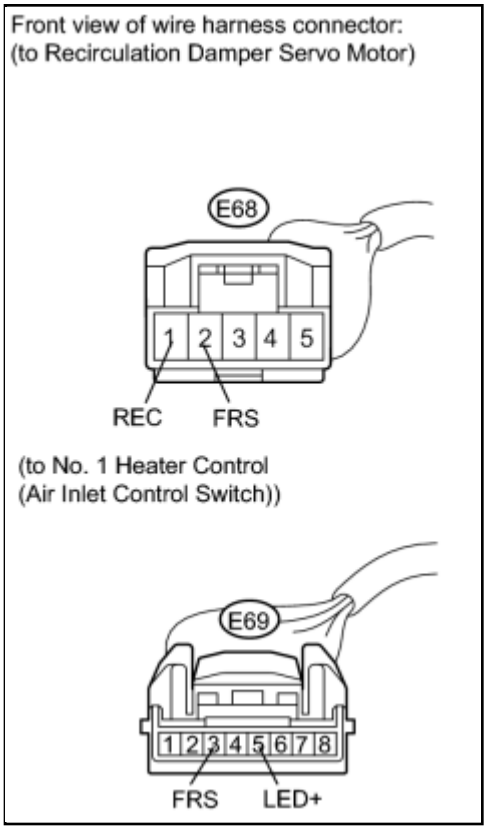


OK ▼

6.	**CHECK HARNESS AND CONNECTOR (NO. 1 HEATER CONTROL(AIR INLET CONTROL SWITCH) - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



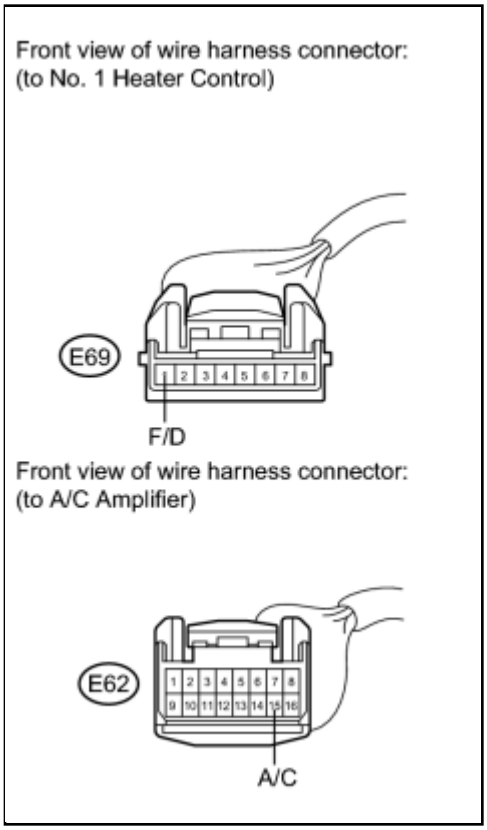
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E69-4 (REC) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (NO. 1 HEATER CONTROL - RECIRCULATION DAMPER SERVO MOTOR)**

(a) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E69-3 (FRS) - E68-2 (FRS)	Always	Below 1 Ω
E69-5 (LED+) - E68-1 (REC)	Always	Below 1 Ω
E69-3 (FRS) - Body ground	Always	10 kΩ or higher
E69-5 (LED+) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	CHECK HARNESS AND CONNECTOR (NO. 1 HEATER CONTROL - A/C AMPLIFIER)

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E69-1 (F/D) - E62-15 (A/C)	Always	Below 1 Ω
E69-1 (F/D) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Blower Motor Circuit (2010 Corolla)		

Blower Motor Circuit

DESCRIPTION

When the No. 2 heater control (blower switch) is operated, the HTR relay will turn on and send current to operate the blower motor. Operating the No. 2 heater control (blower switch) adjusts the flow of current between the blower resistor and body ground, thus, adjusting the speed of the blower motor.

WIRING DIAGRAM

INSPECTION PROCEDURE

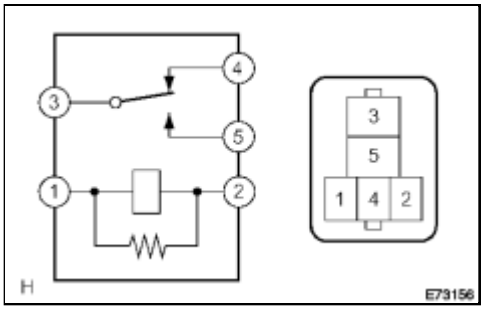
PROCEDURE

1.	**INSPECT FUSE (HTR, ECU-IG NO. 2)**

(a) Remove the HTR fuse from the engine room relay block and junction block.

(b) Remove the ECU-IG No. 2 fuse from the instrument panel junction block.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR fuse	Always	Below 1 Ω
ECU-IG NO. 2 fuse	Always	Below 1 Ω

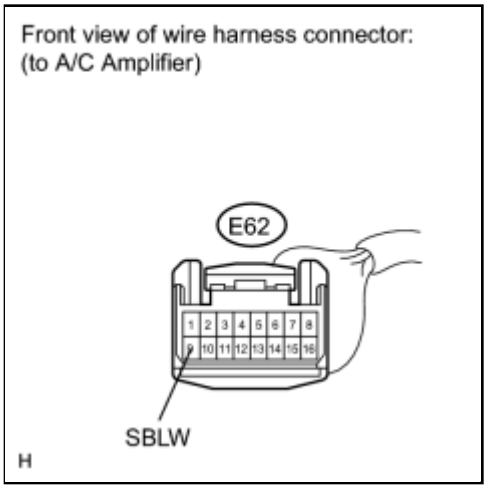
NG ▶ **REPLACE FUSE (HTR, ECU-IG NO. 2)**

OK ▼

2.	**INSPECT RELAY (HTR)**

(a) Remove the HTR relay from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SPECIFIED CONDITION
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (When battery voltage is applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG ▶ REPLACE RELAY (HTR)

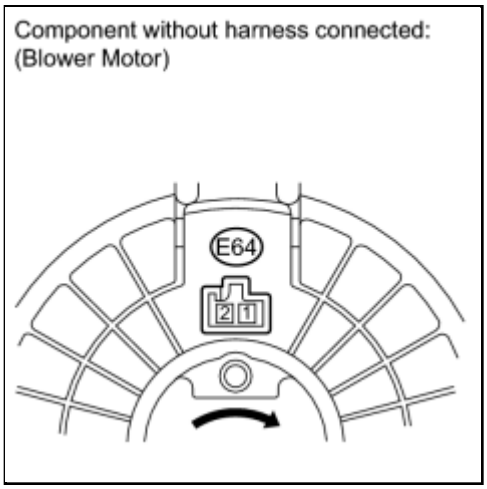
OK ▼

3.	CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - BATTERY)

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E62-9 (SBLW) - Body ground	Ignition switch ON Blower switch: OFF	11 to 14 V
E62-9 (SBLW) - Body ground	Ignition switch ON Blower switch: ON	Below 1 V

NG ▶ INSPECT BLOWER MOTOR

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

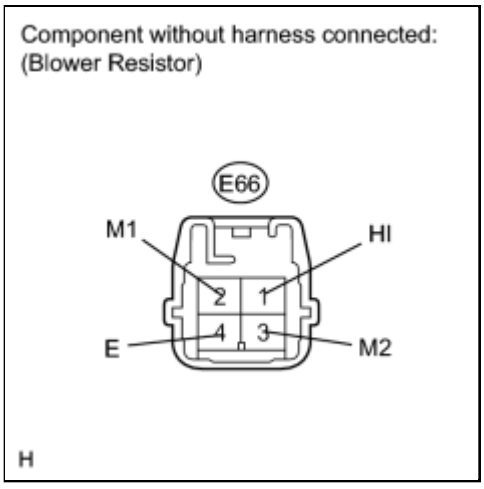
4.	INSPECT BLOWER MOTOR

(a) Remove the blower motor.

(b) Disconnect the connector from the blower motor.

(c) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead from the battery to terminal 1, and check that the motor operates.

OK:



The blower motor operates smoothly.

NG ▶ **REPLACE BLOWER MOTOR**

OK ▼

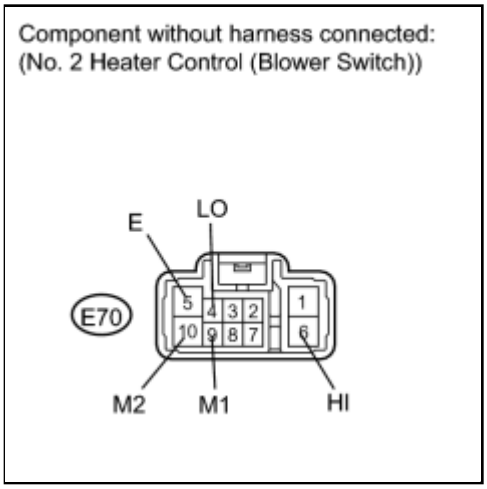
5.	**INSPECT BLOWER RESISTOR**

(a) Remove the blower resistor.

(b) Disconnect the connector from the blower resistor.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E66-1 (HI) - E66-4 (E)	Always	3.12 to 3.60 Ω
E66-1 (HI) - E66-2 (M1)	Always	1.45 to 1.67 Ω
E66-1 (HI) - E66-3 (M2)	Always	0.52 to 0.60 Ω

NG ▶ **REPLACE BLOWER RESISTOR**

OK ▼

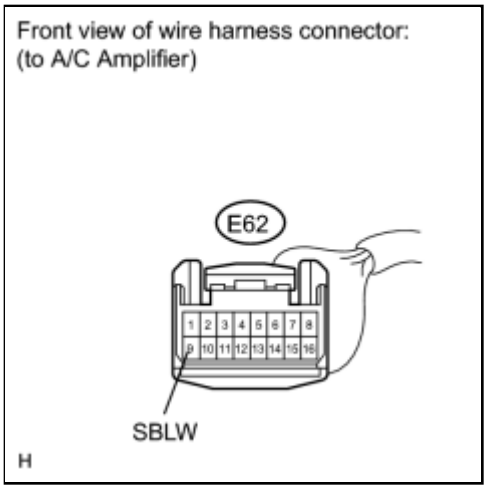
6.	**INSPECT NO. 2 HEATER CONTROL (BLOWER SWITCH)**

(a) Remove the No. 2 heater control (blower switch).

(b) Disconnect the connector from the No. 2 heater control (blower switch).

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E70-4 (LO), E70-6 (HI), E70-9 (M1), E70-10 (M2) - E70-5 (E)	Blower switch: OFF	10 kΩ or higher
E70-4 (LO) - E70-5 (E)	Blower switch: LO	Below 1 Ω
E70-4 (LO), E70-9 (M1) - E70-5 (E)	Blower switch: M1	Below 1 Ω

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E70-4 (LO), E70-10 (M2) - E70-5 (E)	Blower switch: M2	Below 1 Ω
E70-4 (LO), E70-6 (HI) - E70-5 (E)	Blower switch: HI	Below 1 Ω

NG ▶ **REPLACE NO. 2 HEATER CONTROL (BLOWER SWITCH)**

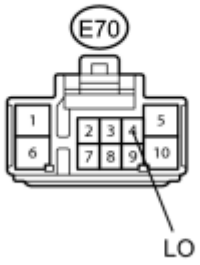
OK ▼

7.	CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - BATTERY)

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E62-9 (SBLW) - Body ground	Ignition switch ON	11 to 14 V
E62-9 (SBLW) - Body ground	Ignition switch off	Below 1 V



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

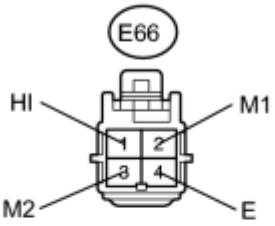
8.	CHECK HARNESS AND CONNECTOR (NO. 2 HEATER CONTROL (BLOWER SWITCH) - BATTERY)

(a) Measure the voltage according to the value(s) in the table below.

Front view of wire harness connector:
(to No. 2 Heater Control (Blower Switch))

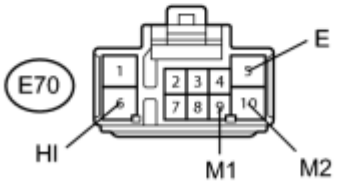
N

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E70-4 (LO) - Body ground	Ignition switch ON	11 to 14 V
E70-4 (LO) - Body ground	Ignition switch off	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

9.	**CHECK HARNESS AND CONNECTOR (BLOWER RESISTOR - NO. 2 HEATER CONTROL (BLOWER SWITCH))**

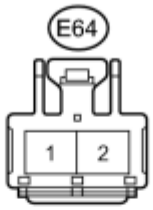
Front view of wire harness connector:
(to Blower Resistor)

Front view of wire harness connector:
(to No. 2 Heater Control (Blower Switch))

(a) Measure the resistance according to the value(s) in the table below.

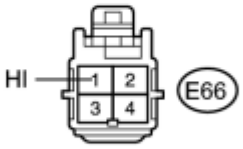
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E66-1 (HI) - E70-6 (HI)	Always	Below 1 Ω
E66-3 (M2) - E70-10 (M2)	Always	Below 1 Ω
E66-2 (M1) - E70-9 (M1)	Always	Below 1 Ω
E66-4 (E) - Body ground	Always	Below 1 Ω
E70-5 (E) - Body ground	Always	Below 1 Ω
E66-1 (HI) - Body ground	Always	10 kΩ or higher



E66-3 (M2) - Body ground	Always	10 kΩ or higher
E66-2 (M1) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

10.	**CHECK HARNESS AND CONNECTOR (BLOWER MOTOR - BLOWER RESISTOR, NO. 2 HEATER CONTROL)**

Front view of wire harness connector:
(to Blower Motor)

Front view of wire harness connector:
(to Blower Resistor)

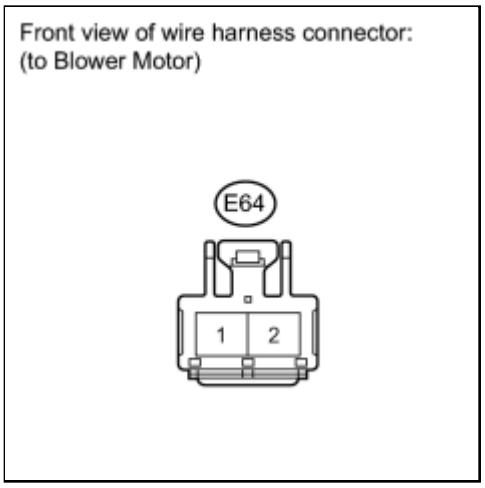
Front view of wire harness connector:
(to No. 2 Heater Control (Blower Switch))

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E64-1 - E66-1 (HI)	Always	Below 1 Ω
E64-1 - E70-6 (HI)	Always	Below 1 Ω
E64-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK

11.	CHECK HARNESS AND CONNECTOR (BLOWER MOTOR - BATTERY, BODY GROUND)

(a) Reconnect the connector to the A/C amplifier.

(b) Reconnect the connector to the blower resistor.

(c) Reconnect the connector to the No. 2 heater control (blower switch).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E64-2 - Body ground	Ignition switch ON Blower switch: OFF	Below 1 V
E64-2 - Body ground	Ignition switch ON Blower switch: ON	11 to 14 V

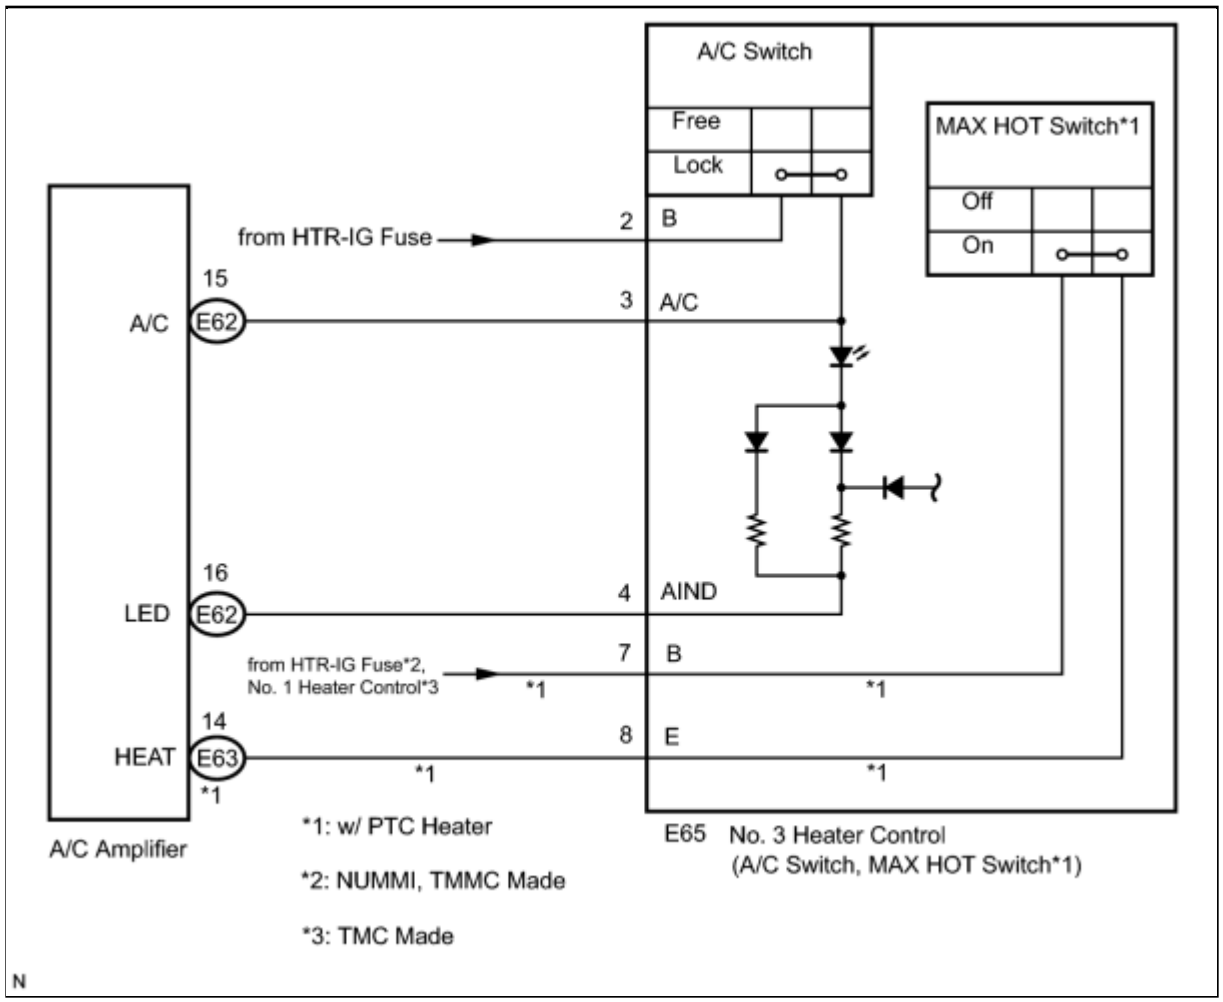
(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E64-2 - Body ground	Ignition switch off Blower switch: OFF	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y1M00VX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Heater Control Switch Circuit (2010 Corolla)		

Heater Control Switch Circuit

DESCRIPTION

The No. 3 heater control is powered through the HTR-IG fuse. The No. 3 heater control transmits operational signals of each switch to the A/C amplifier.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

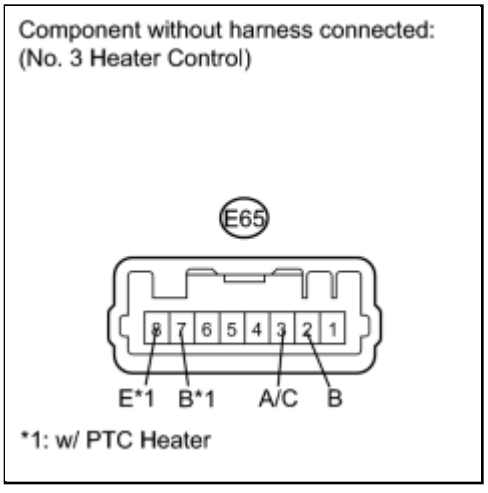
1.	**INSPECT FUSE (HTR-IG)**

(a) Remove the HTR-IG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR-IG fuse	Always	Below 1 Ω



NG ▶ **REPLACE FUSE (HTR-IG)**

OK ▼

2.	**INSPECT NO. 3 HEATER CONTROL**

(a) Measure the resistance.

(1) Remove the No. 3 heater control.

(2) Disconnect the connector from the No. 3 heater control.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E65-2 (B) - E65-3 (A/C)	A/C switch: LOCK	Below 1 Ω
E65-2 (B) - E65-3 (A/C)	A/C switch: FREE	10 kΩ or higher
E65-7 (B) - E65-8 (E)*1	Air mix control dial: MAX HOT position	Below 1 Ω
E65-7 (B) - E65-8 (E)*1	Air mix control dial: except MAX HOT position	10 kΩ or higher

HINT:

***1: w/ PTC Heater**

(b) Check that the indicator light comes on.

(1) Connect a positive (+) lead from the battery to terminal 3 and a negative (-) lead from the battery to terminal 4, and check that the indicator light comes on.

OK:

The indicator light comes on.

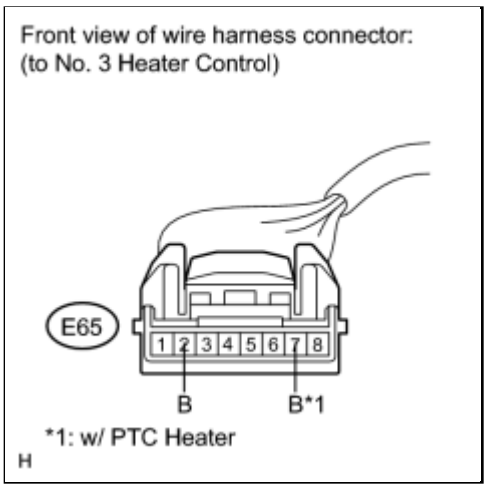
(c) Check that the illumination comes on.

(1) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 6, and check that the illumination comes on.

OK:

The illumination comes on.

NG ▶ **REPLACE NO. 3 HEATER CONTROL**



OK ▼

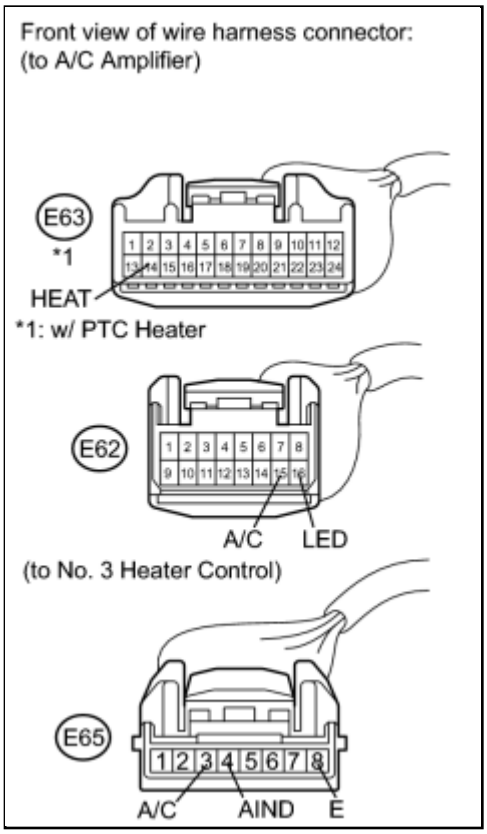
3.	CHECK HARNESS AND CONNECTOR (NO. 3 HEATER CONTROL - BATTERY)

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E65-2 (B) - Body ground	Ignition switch ON	11 to 14 V

E65-2 (B) - Body ground	Ignition switch off	Below 1 V
E65-7 (B) - Body ground*1	Ignition switch ON	11 to 14 V
E65-7 (B) - Body ground*1	Ignition switch off	Below 1 V



HINT:

***1: w/ PTC Heater**

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (NO. 3 HEATER CONTROL - A/C AMPLIFIER)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E65-3 (A/C) - E62-15 (A/C)	Always	Below 1 Ω
E65-4 (AIND) - E62-16 (LED)	Always	Below 1 Ω
E65-8 (E) - E63-14 (HEAT)*1	Always	Below 1 Ω
E65-3 (A/C) - Body ground	Always	10 kΩ or higher
E65-4 (AIND) - Body ground	Always	10 kΩ or higher
E65-8 (E) - Body ground*1	Always	10 kΩ or higher

HINT:

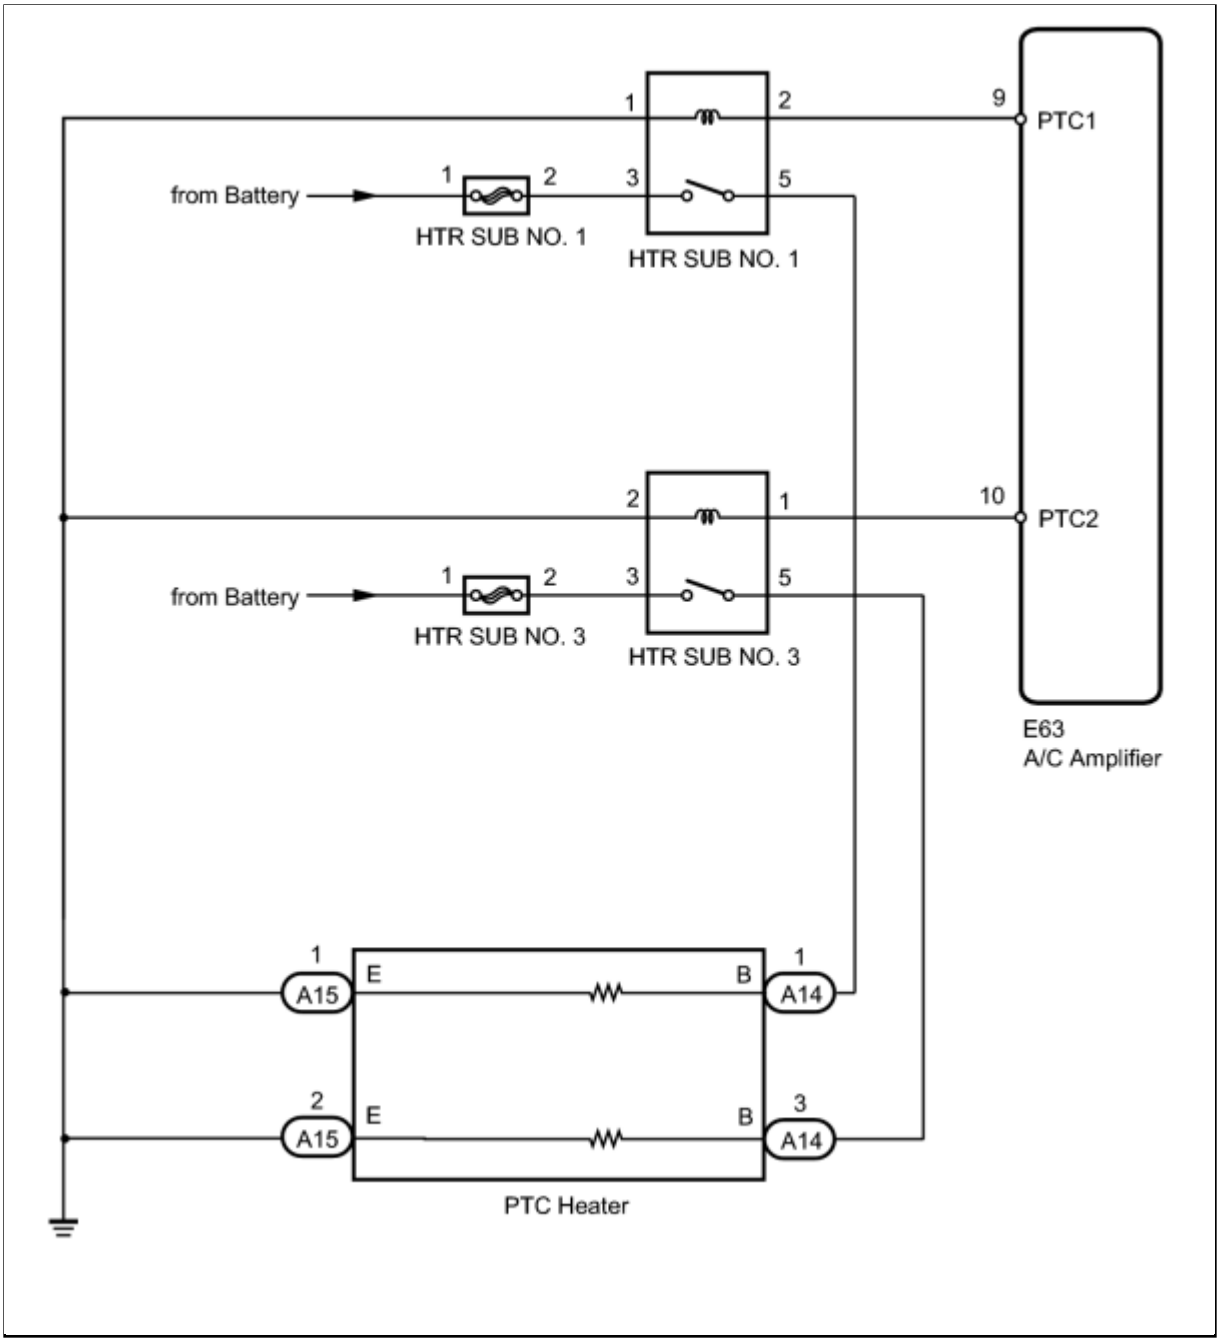
***1: w/ PTC Heater**

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002BRP00LX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): PTC Heater Circuit (2010 Corolla)		

PTC Heater Circuit



DESCRIPTION

The PTC heater is installed in the heater unit and operates when the coolant temperature is low and normal heater operation is insufficient.

The A/C amplifier switches the circuit in the PTC relay and operates the PTC heater when the operating conditions (the coolant temperature is below 65°C (149°F), setting temperature is MAX. HOT, ambient temperature is below 10°C (50°F) and blower switch is not OFF) are met.

The PTC heater controls the number of the heater elements to be heated based on the electrical load and the amount of voltage generated. Therefore, when inspecting the PTC heater, be sure to turn off other electrical devices.

WIRING DIAGRAM

INSPECTION PROCEDURE

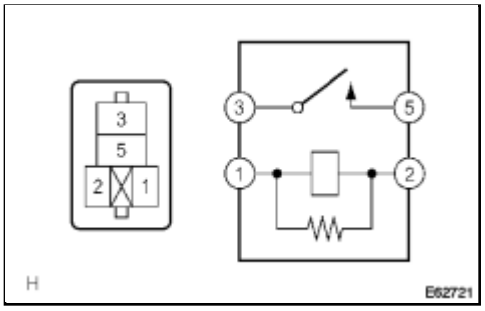
PROCEDURE

1.	**INSPECT FUSE (HTR SUB NO. 1, HTR SUB NO. 3)**

(a) Remove the HTR SUB No. 1 and HTR SUB No. 3 fuses from the engine room relay block and junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR SUB No. 1 fuse	Always	Below 1 Ω
HTR SUB No. 3 fuse	Always	Below 1 Ω

(c) Install the HTR SUB No. 1 and HTR SUB No. 3 fuses to the engine room relay block and junction block.

NG ▶ **REPLACE FUSE (HTR SUB NO. 1, HTR SUB NO. 3)**

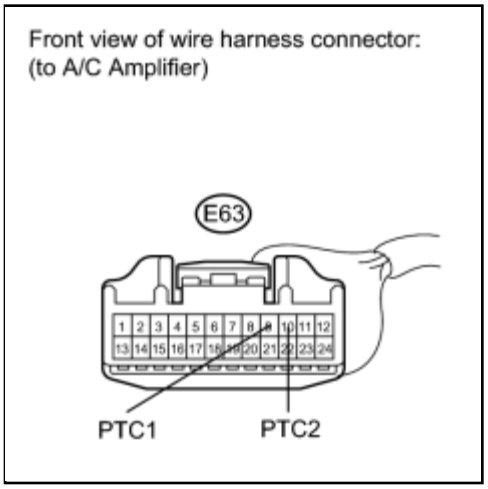
OK ▼

2.	**INSPECT RELAY (HTR SUB NO. 1, HTR SUB NO. 3)**

(a) Remove the HTR SUB No. 1 and HTR SUB No. 3 relays from the No. 7 relay block.

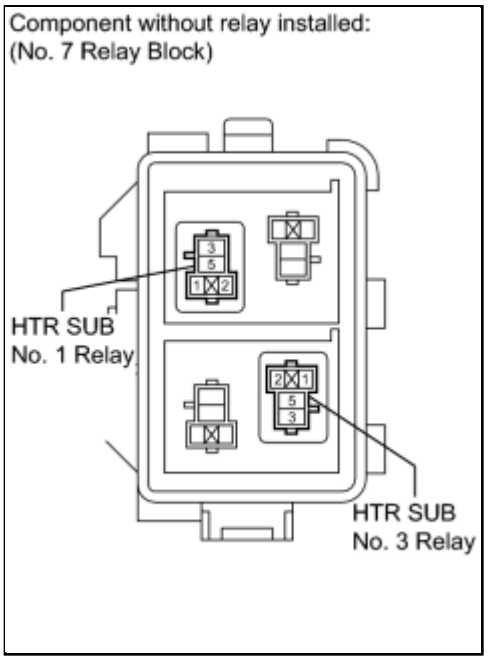
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SPECIFIED CONDITION
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

(c) Install the HTR SUB No. 1 and HTR SUB No. 3 relays to the No. 7 relay block.



NG ▶ **REPLACE RELAY (HTR SUB NO. 1, HTR SUB NO. 3)**

OK

3.	**CHECK HARNESS AND CONNECTOR (NO. 7 RELAY BLOCK - A/C AMPLIFIER, BODY GROUND)**

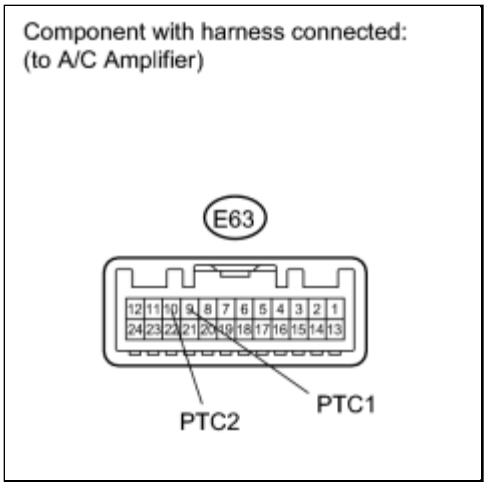
(a) Disconnect the connector from the A/C amplifier.

(b) Remove the HTR SUB No. 1 and HTR SUB No. 3 fuses from the No. 7 relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-9 (PTC1) - HTR SUB No. 1 relay terminal 2	Always	Below 1 Ω
E63-10 (PTC2) - HTR SUB No. 3 relay terminal 1	Always	Below 1 Ω
E63-9 (PTC1) - Body ground	Always	10 kΩ or higher
E63-10 (PTC2) - Body ground	Always	10 kΩ or higher
HTR SUB No. 1 relay terminal 1 - Body ground	Always	Below 1 Ω
HTR SUB No. 3 relay terminal 2 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT AIR CONDITIONING AMPLIFIER**

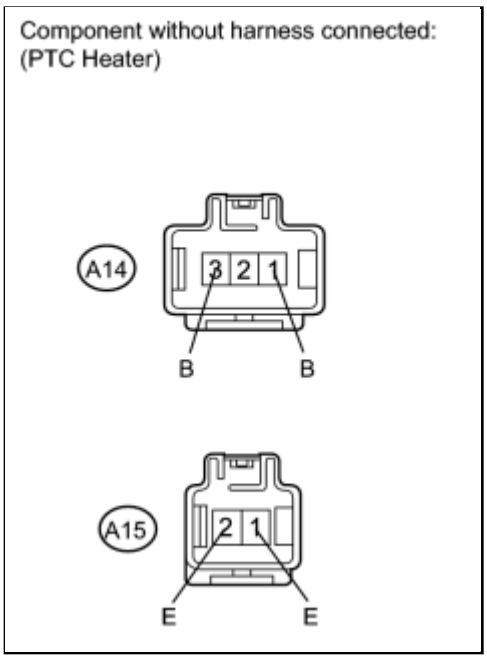
(a) Reconnect the connector to the A/C amplifier.

(b) Remove the A/C amplifier with the connectors still connected.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-9 (PTC1) - Body ground	Ignition switch ON Temperature setting: MAX. HOT	Below 1 V



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
	Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	
E63-9 (PTC1) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V
E63-10 (PTC2) - Body ground	Ignition switch ON Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	Below 1 V
E63-10 (PTC2) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▼

5.	**INSPECT PTC HEATER**

(a) Disconnect the connector from the PTC heater.

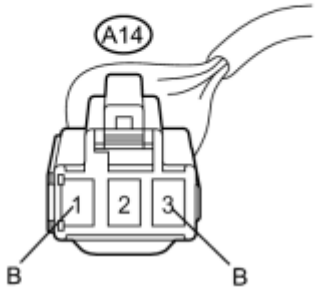
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-1 (B) - A15-1 (E)	Always	Below 1 Ω
A14-3 (B) - A15-2 (E)	Always	Below 1 Ω

NG ▶ **REPLACE PTC HEATER**

OK ▼



6.	**CHECK HARNESS AND CONNECTOR (PTC HEATER - BATTERY)**

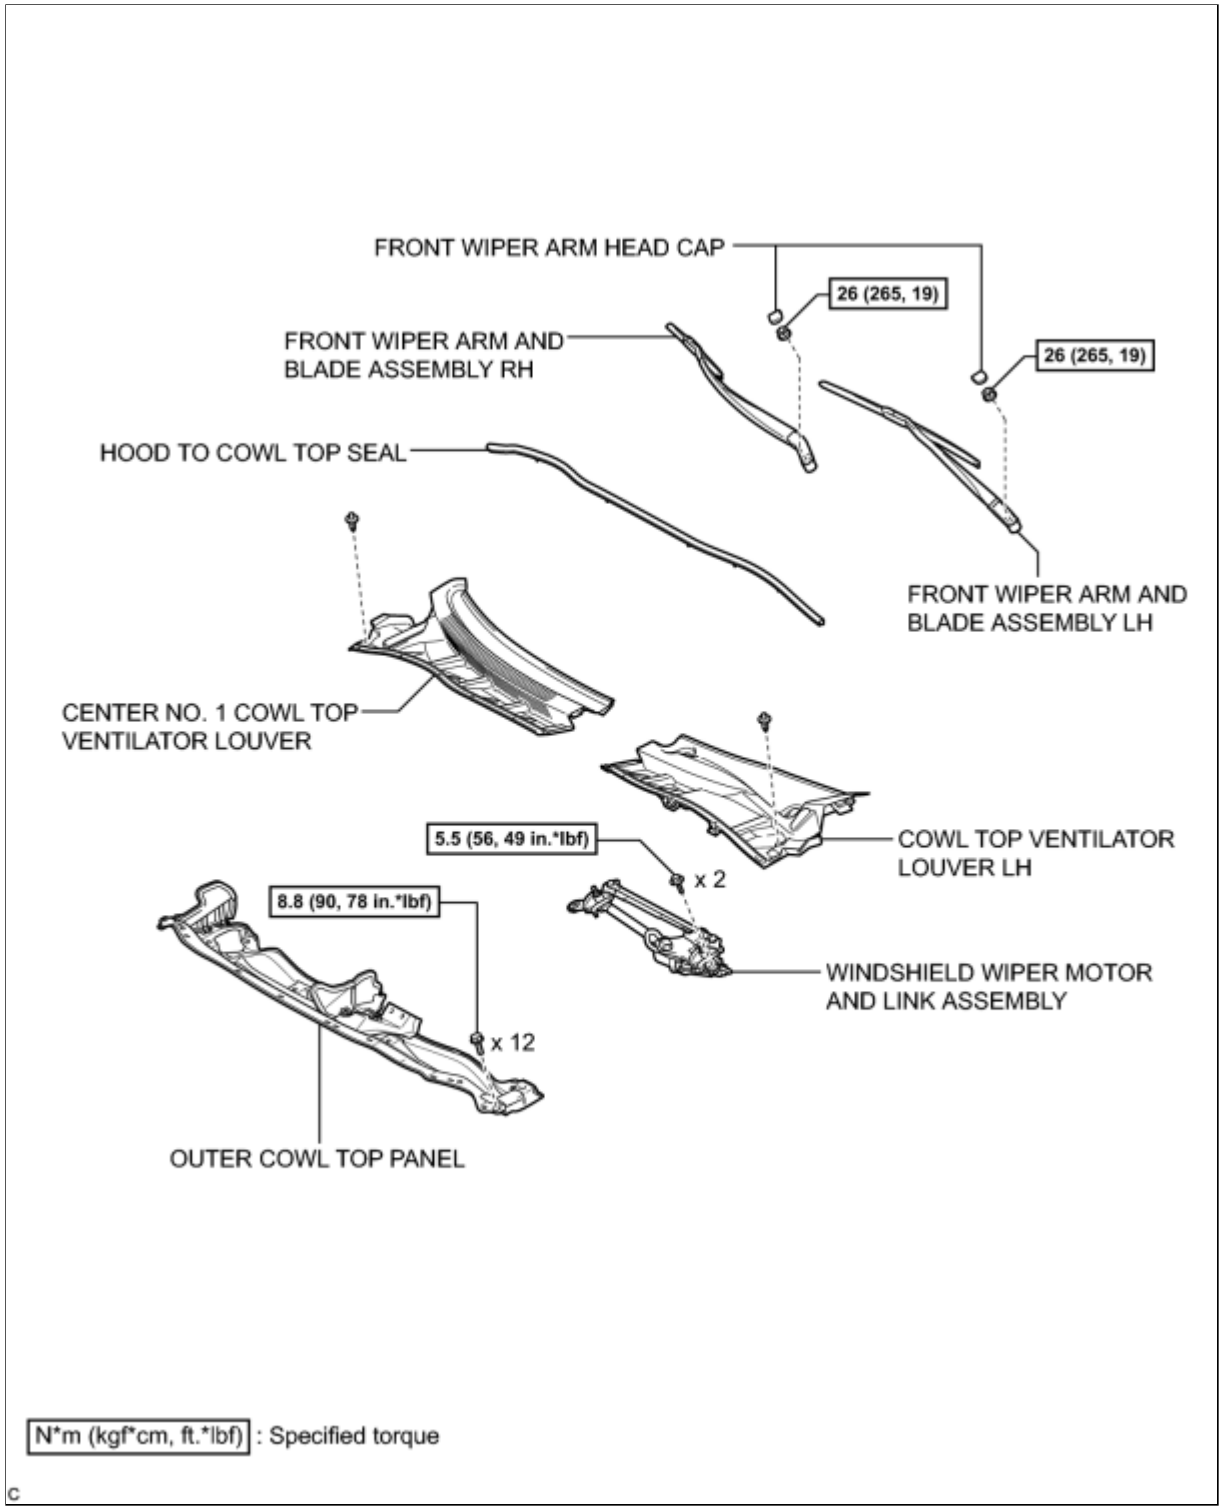
(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-1 (B) - Body ground	Ignition switch ON Temperature setting:	Below 1 V

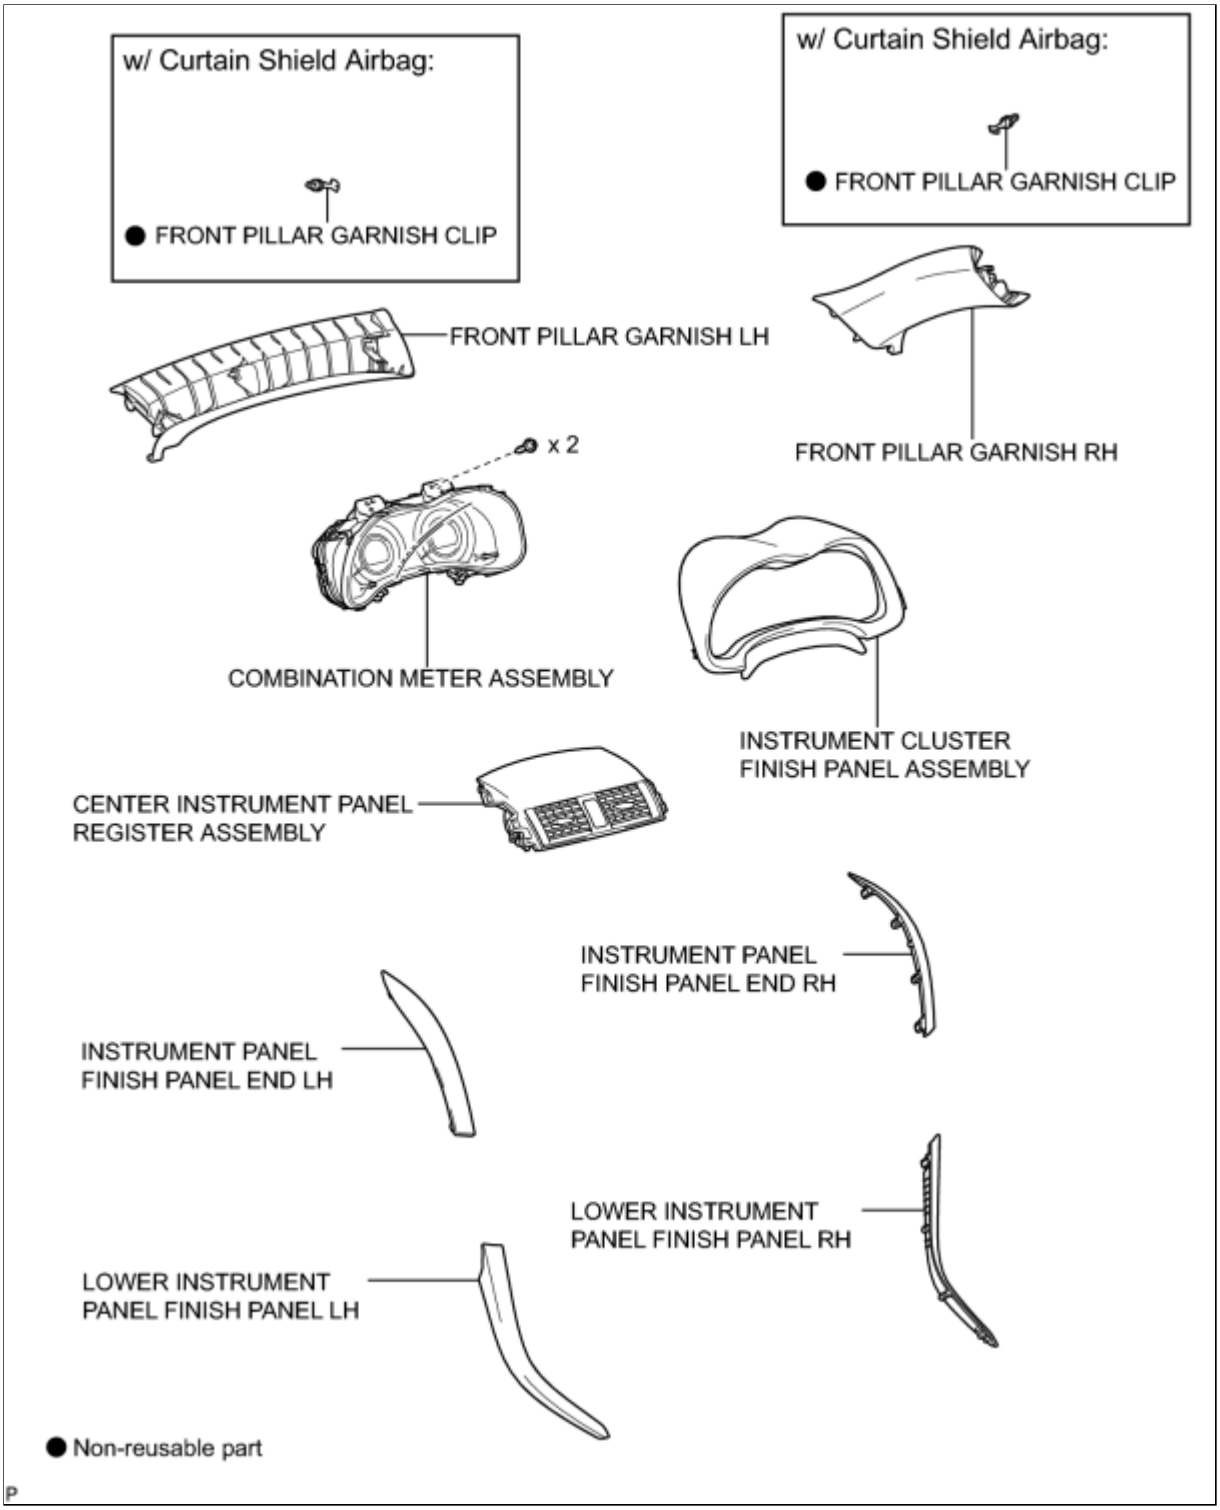
Front view of wire harness connector:
(to PTC Heater)

	MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	
A14-1 (B) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V
A14-3 (B) - Body ground	Ignition switch ON Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	Below 1 V
A14-3 (B) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (PTC HEATER - BODY GROUND)



Last Modified: 3-10-2010	6.4 K	**From:** 200901

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: REMOVAL (2010 Corolla)		

REMOVAL

1. PRECAUTION

INFO

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO **.**

HINT:

Before disconnecting the cable, set the air conditioning control switch to DEF-MODE. (for Automatic Air Conditioning System)

4. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM INFO

5. REMOVE FRONT WIPER ARM HEAD CAP INFO

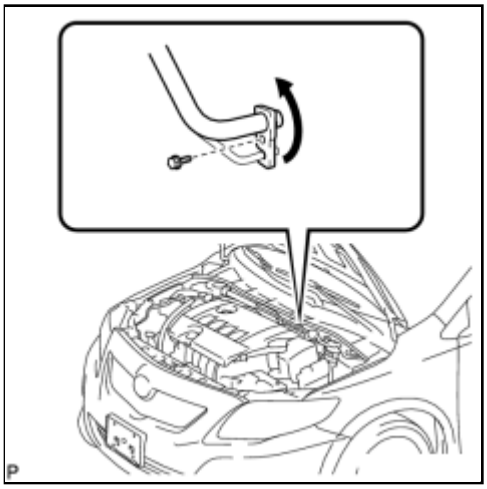
6. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

7. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

8. REMOVE HOOD TO COWL TOP SEAL INFO

9. REMOVE CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

10. REMOVE COWL TOP VENTILATOR LOUVER LH INFO



11. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

12. REMOVE OUTER COWL TOP PANEL (for TMC Made) INFO

13. REMOVE OUTER COWL TOP PANEL (except TMC Made) INFO

14. DISCONNECT SUCTION PIPE SUB-ASSEMBLY

(a) Remove the bolt and slide the hook connector.

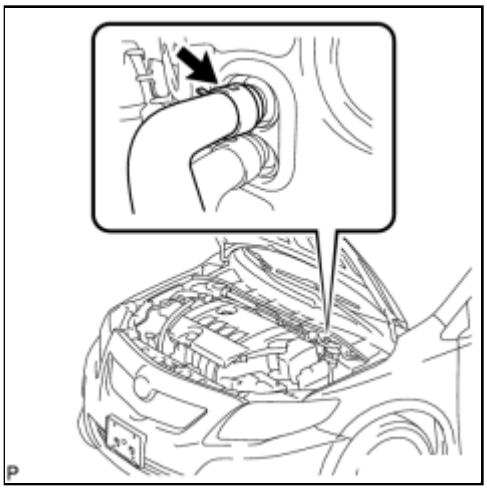
(b) Disconnect the suction pipe sub-assembly.

(c) Remove the O-ring from the suction hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

15. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY



(a) Disconnect the air conditioning tube assembly.

(b) Remove the O-ring from the air conditioning tube assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

16. DISCONNECT HEATER WATER HOSE OUTLET

(a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater outlet water hose.

NOTICE:

- Do not apply excessive force to the heater outlet water hose.
- Prepare a drain pan or a piece of cloth in case the coolant leaks.

17. DISCONNECT HEATER WATER HOSE INLET

HINT:

Disconnection procedure for the heater inlet water hose is the same as that for the heater outlet water hose.

18. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH INFO
19. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

69. REMOVE NO. 1 SWITCH HOLE BASE (w/ Smart Key System) INFO

70. REMOVE FRONT DOOR SCUFF PLATE RH INFO

71. REMOVE COWL SIDE TRIM BOARD RH INFO

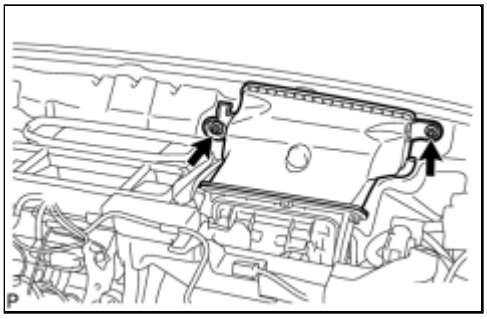
72. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO

73. REMOVE FRONT NO. 2 CONSOLE BOX INSERT INFO

74. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

75. REMOVE CONSOLE BOX CARPET INFO

76. REMOVE CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

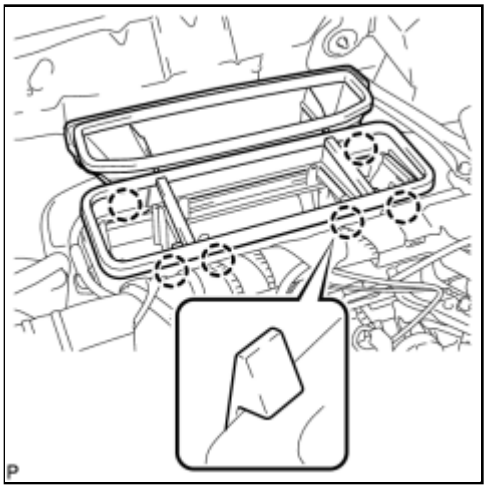


77. REMOVE CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

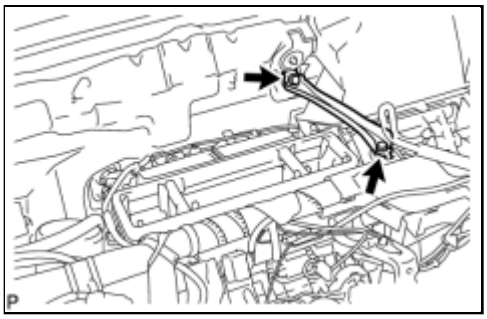
78. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY INFO

79. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY INFO

80. REMOVE SMART KEY ECU ASSEMBLY (w/ Smart Key System) INFO



81. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY



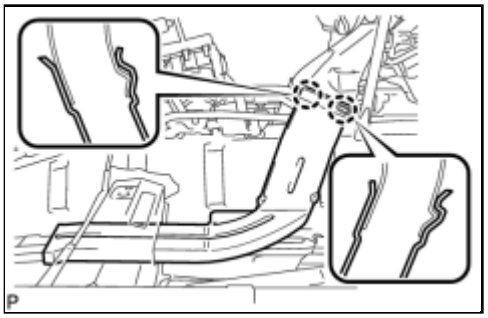
(a) Remove the 2 nuts and the No. 1 air duct sub-assembly.

82. REMOVE LOWER DEFROSTER NOZZLE ASSEMBLY

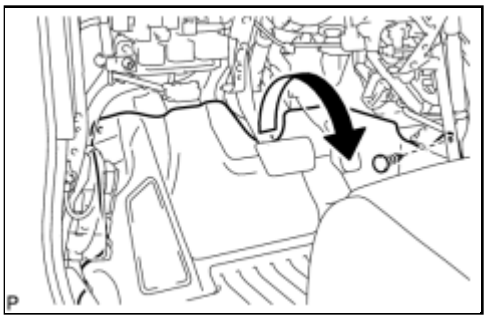
(a) Disengage the 6 claws and remove the lower defroster nozzle assembly.

83. REMOVE CENTER INSTRUMENT PANEL TO COWL BRACE

(a) Remove the 2 bolts and the center instrument panel to cowl brace.



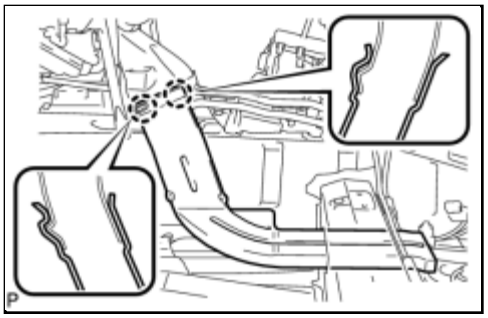
84. REMOVE REAR NO. 2 AIR DUCT (w/ Rear Air Duct)



(a) Remove the clip.

(b) Turn back the floor carpet.

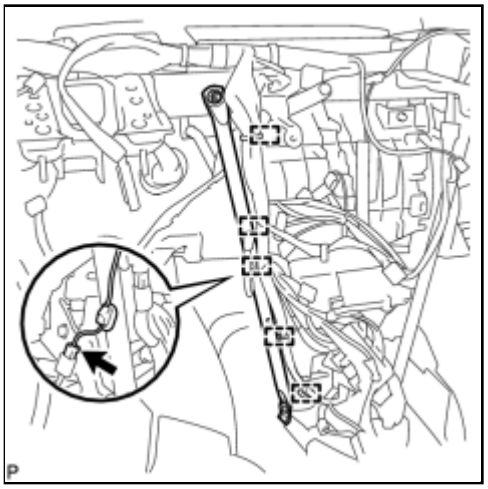
(c) Disengage the 2 claws and remove the rear No. 2 air duct.



85. REMOVE REAR NO. 3 AIR DUCT (w/ Rear Air Duct)

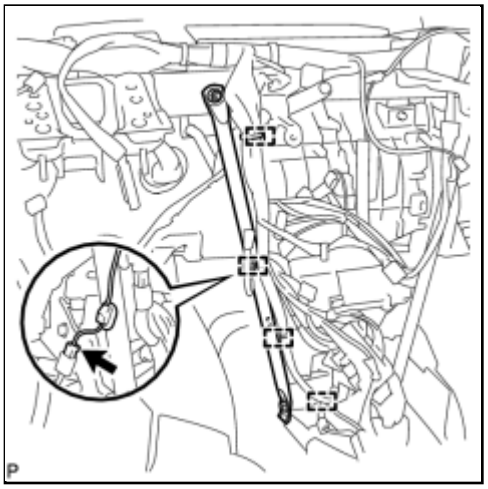
(a) Remove the clip.

(b) Turn back the floor carpet.



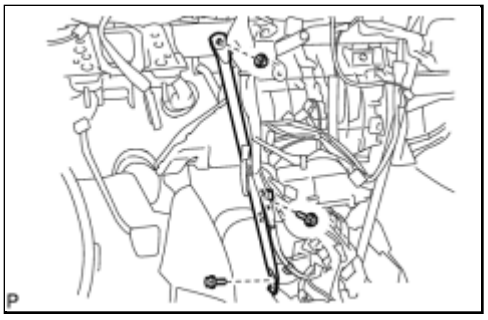
(c) Disengage the 2 claws and remove the rear No. 3 air duct.

86. REMOVE NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Manual Air Conditioning System)



(a) for TMC made:

(1) Disconnect the connector.



(2) Disengage each clamp.

(b) for TMMC, NUMMI made:

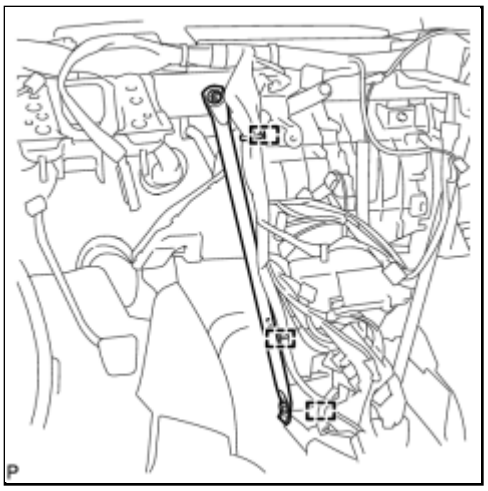
(1) Disconnect the connector.

(2) Disengage each clamp.

(c) Remove the screw.

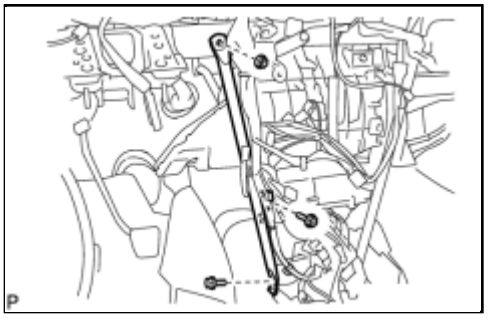
(d) Remove the bolt, the nut, and the No. 1 instrument panel brace sub-assembly.

87. REMOVE NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Automatic Air



Conditioning System)

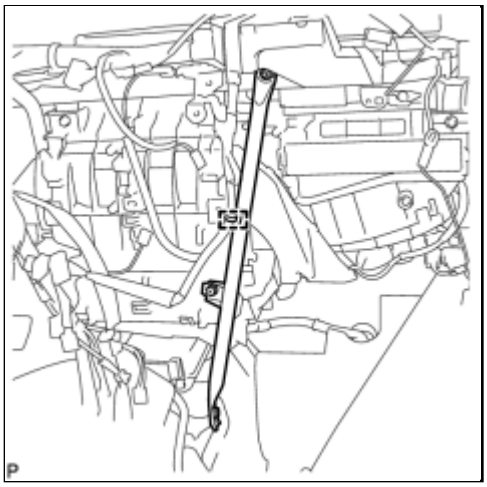
(a) for TMC Made:



(1) Disengage each clamp.

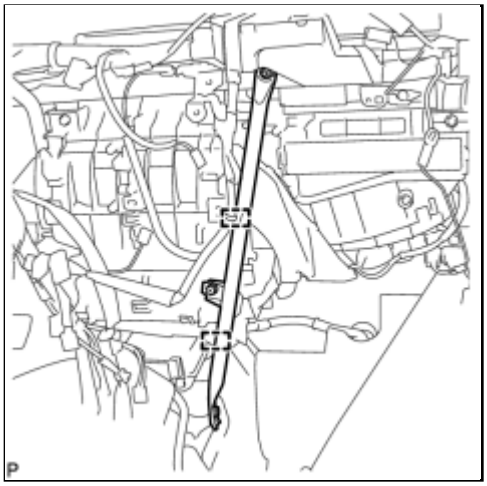
(b) for TMMC, NUMMI Made:

(1) Disengage each clamp.



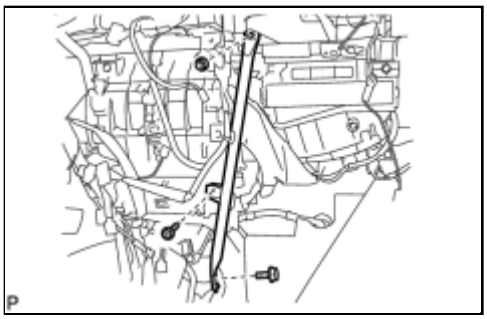
(c) Remove the screw.

(d) Remove the bolt, the nut, and the No. 1 instrument panel brace sub-assembly.



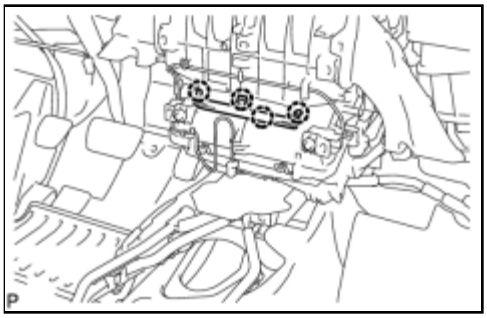
88. REMOVE NO. 2 INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) for TMC Made:



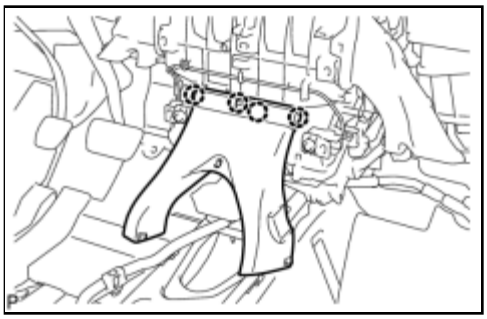
(1) Disengage each clamp.

(b) for TMMC, NUMMI Made:



(1) Disengage each clamp.

(c) Remove the screw.

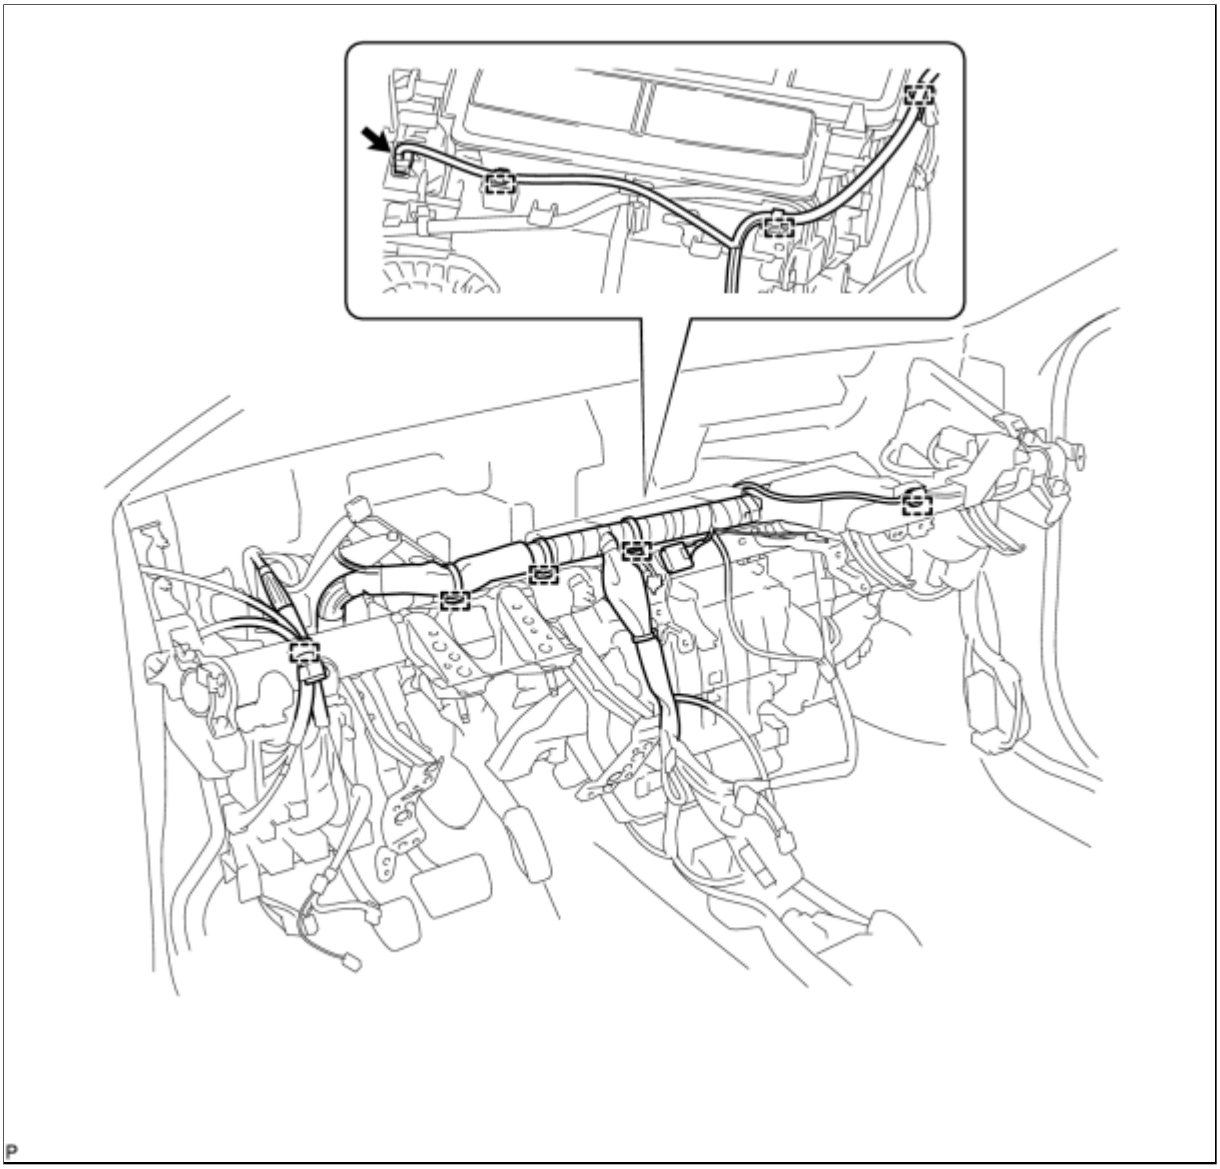


(d) Remove the bolt, the nut, and the No. 2 instrument panel brace sub-assembly.

89. REMOVE HEATER COVER (w/ Cover)

(a) Disengage the 4 claws and remove the heater cover.

90. REMOVE REAR NO. 1 AIR DUCT (w/ Rear Air Duct)

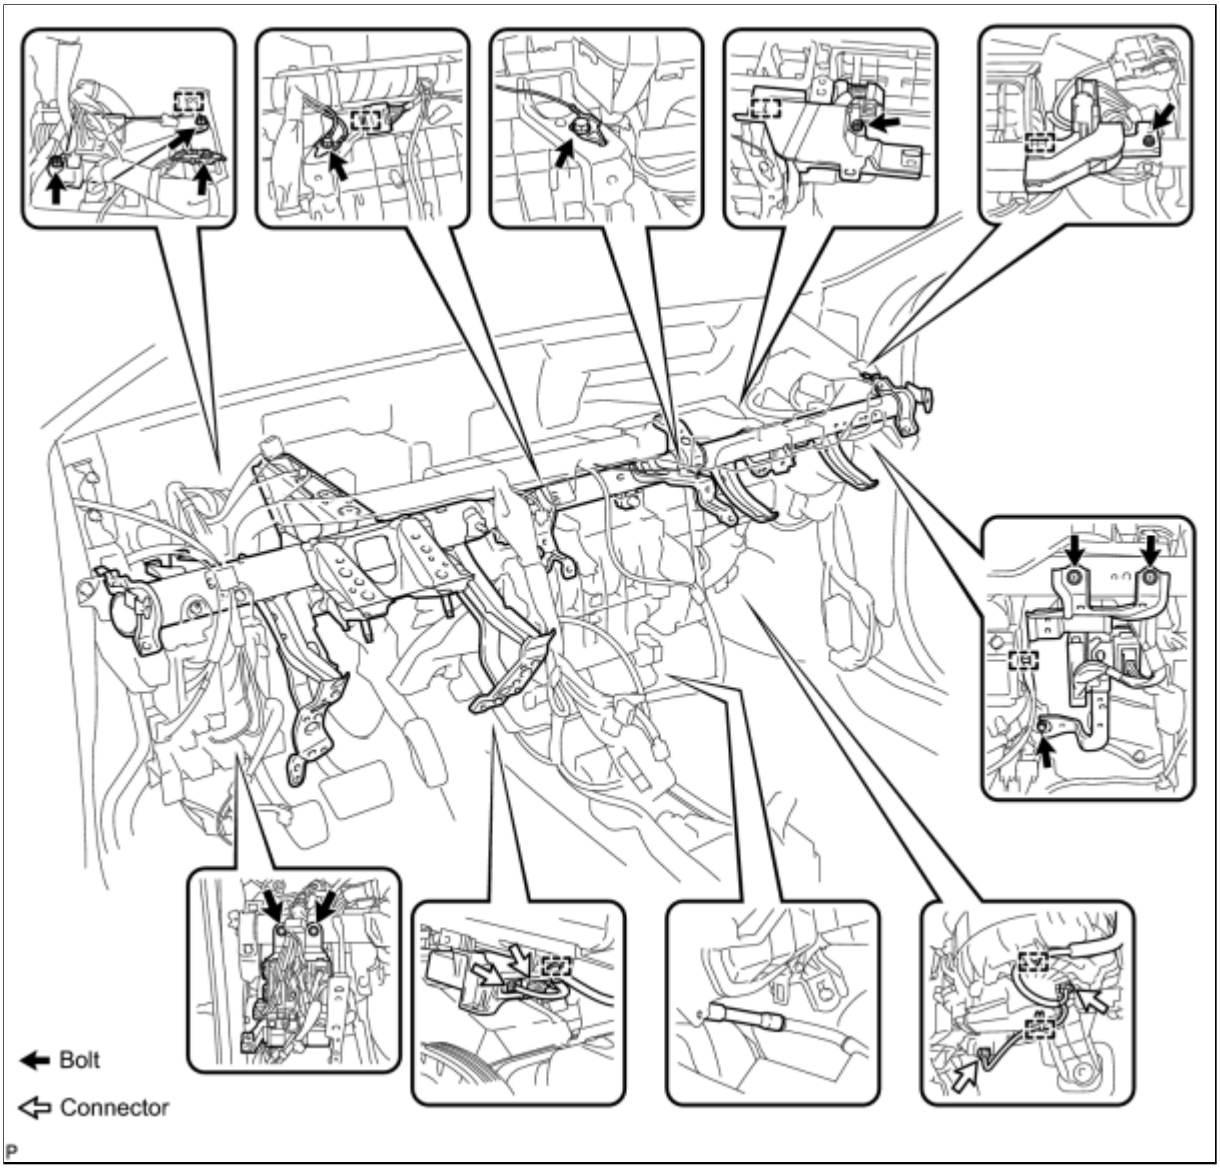


(a) Disengage the 4 claws and remove the rear No. 1 air duct.

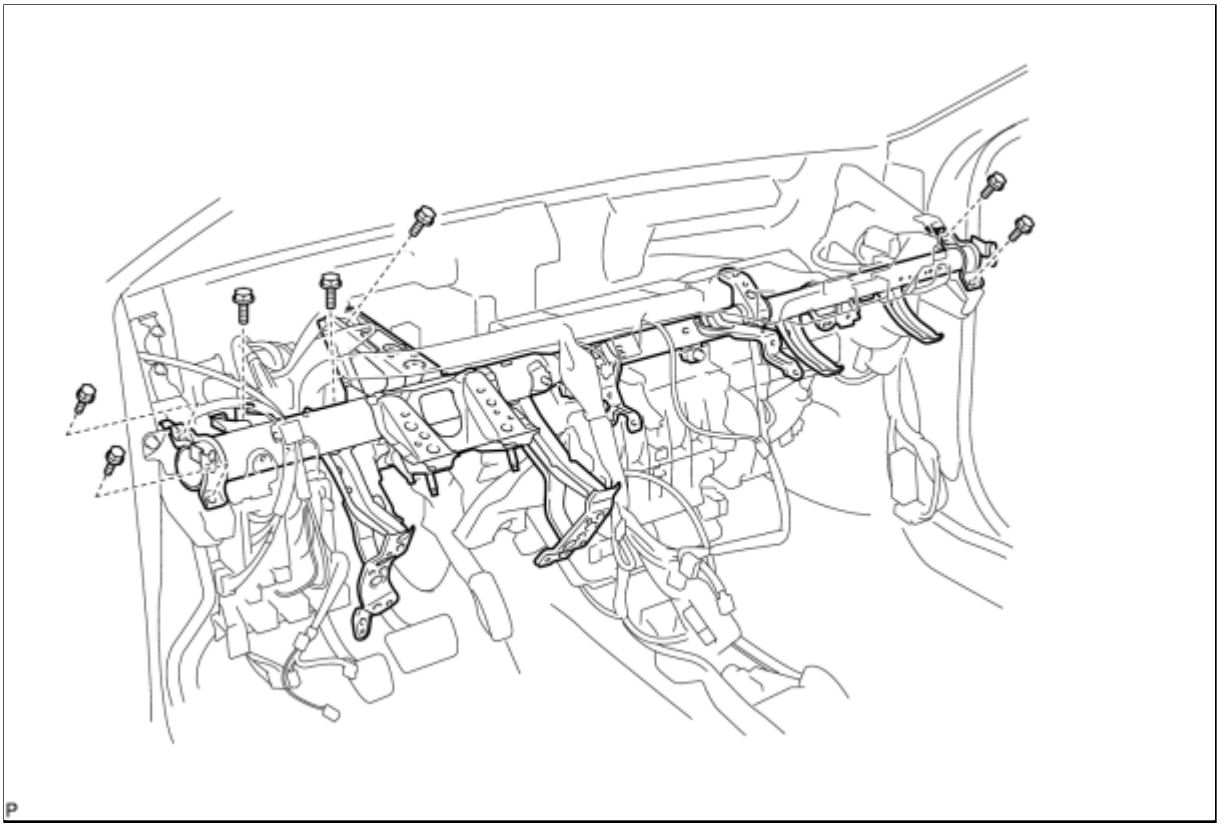
91. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Manual Air Conditioning System)

(a) Disconnect the connector.

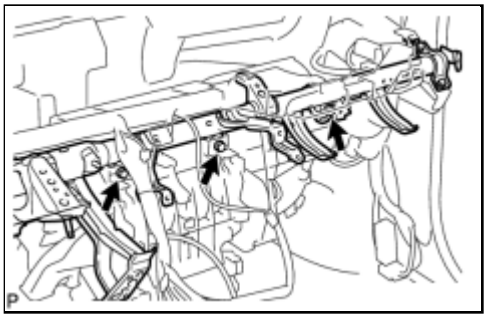
(b) Disengage each clamp and the wire harness.



(c) Disconnect each connector.



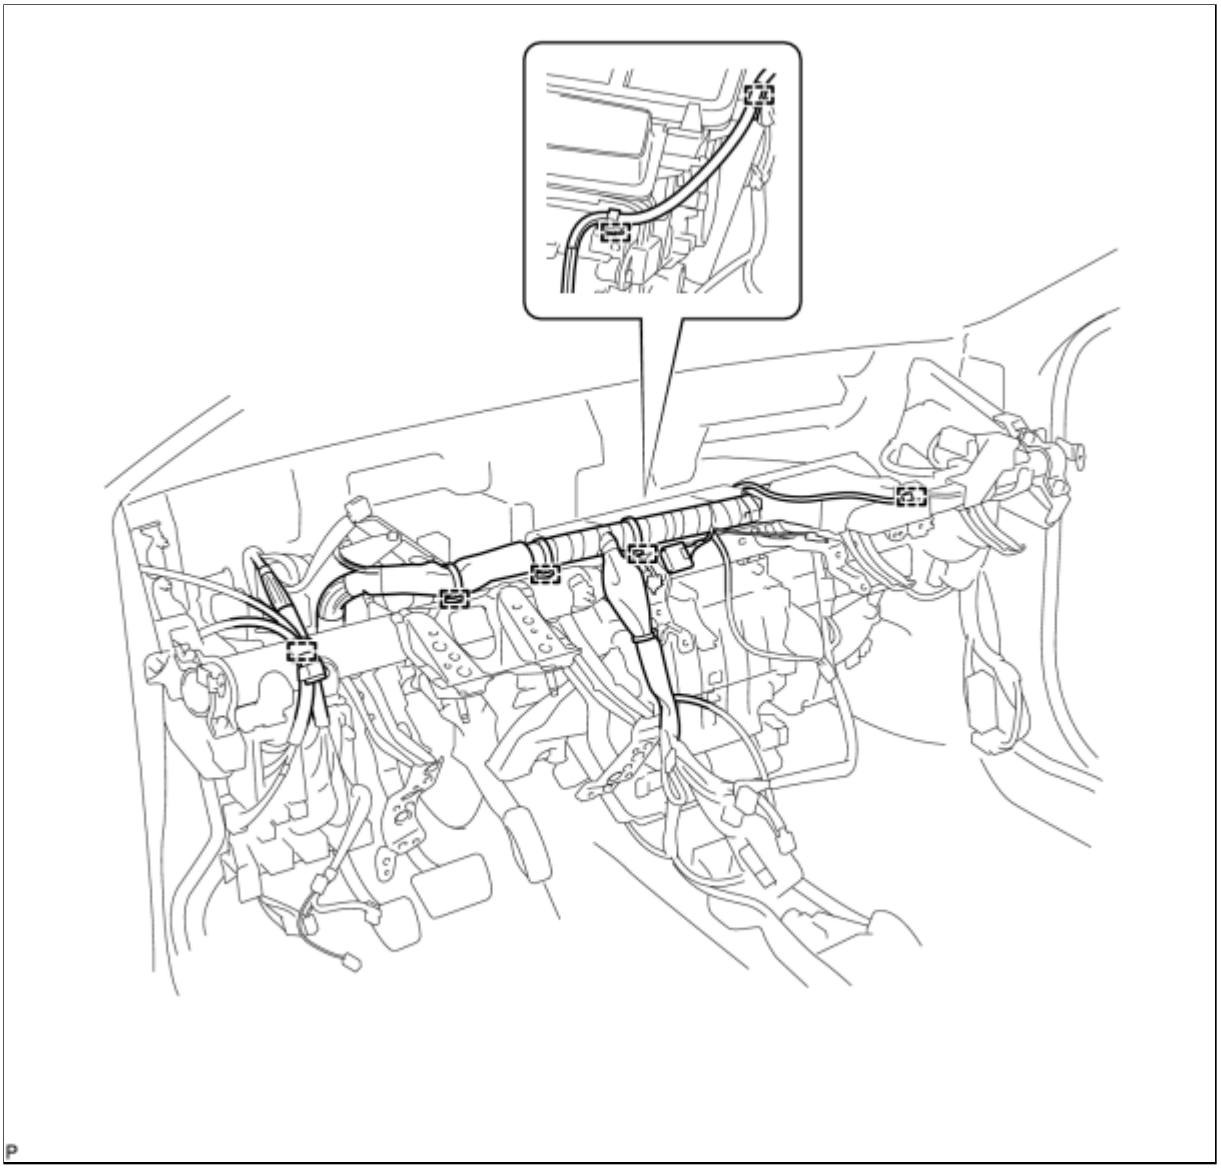
(d) Disengage each clamp.



(e) Remove the 12 bolts, and disengage the wire harness and junction block.

(f) Disengage the cooler drain hose.

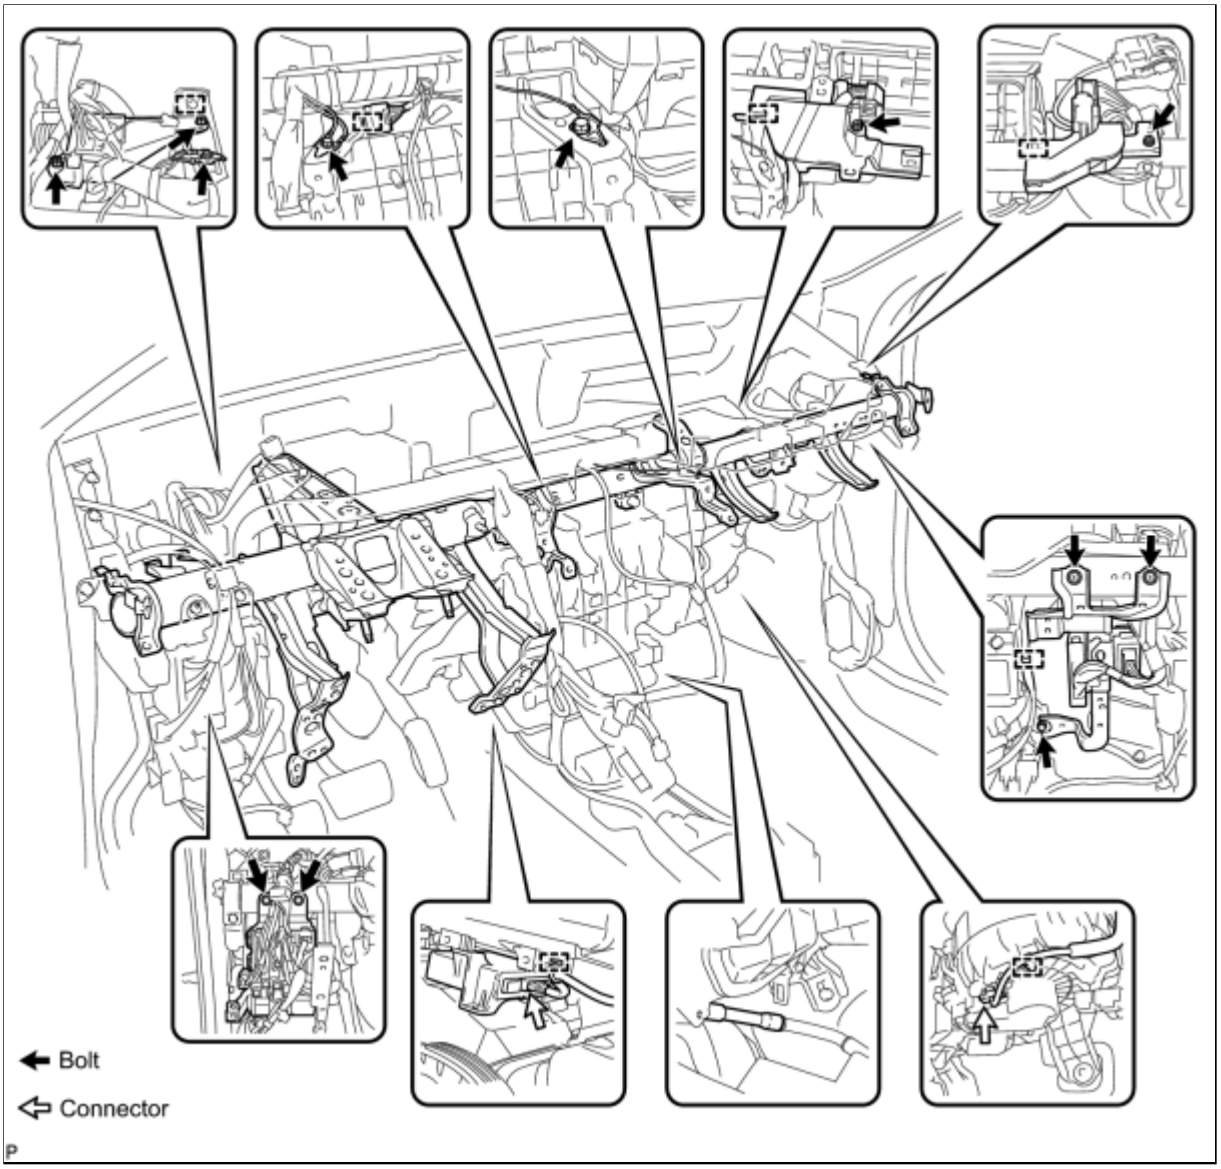
(g) Remove the 7 bolts.



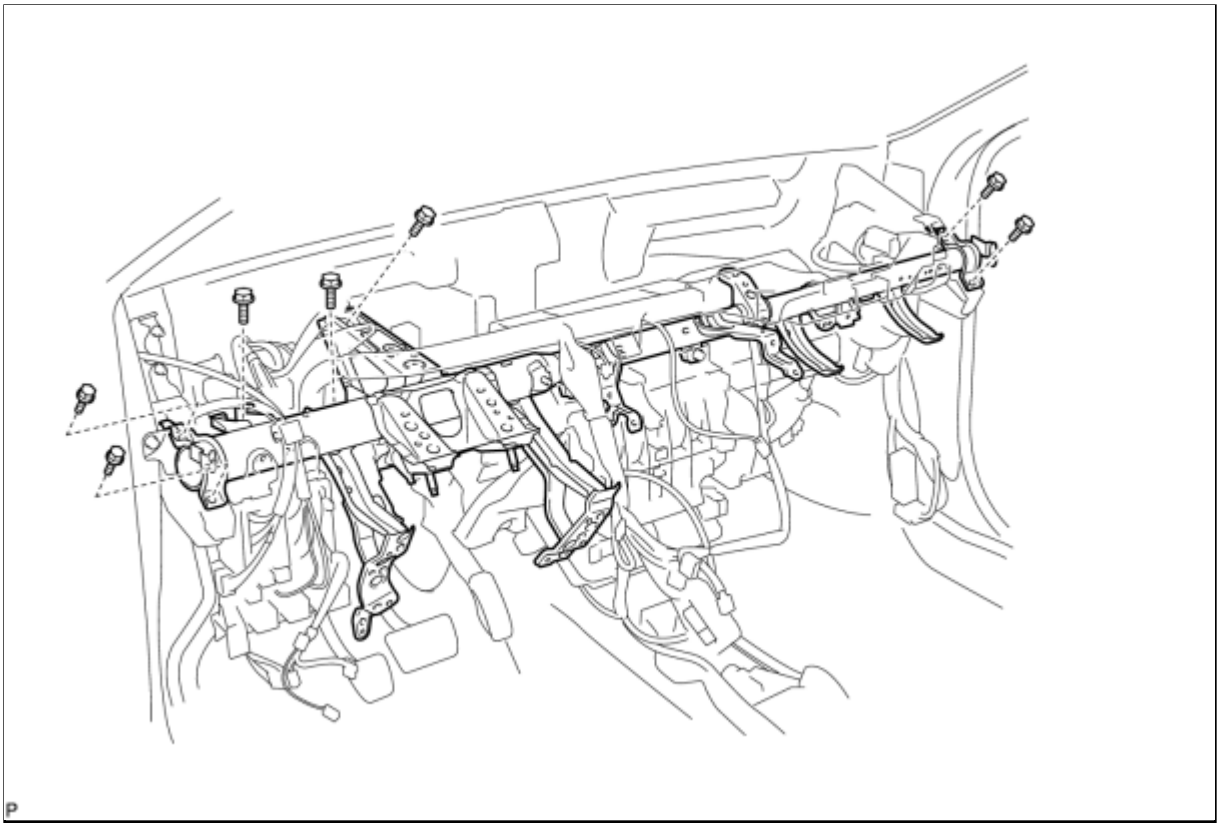
(h) Remove the 3 bolts and the instrument panel reinforcement assembly.

92. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Automatic Air Conditioning System)

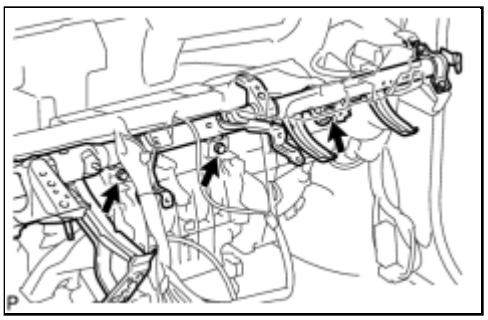
(a) Disengage each clamp and the wire harness.



(b) Disconnect each connector.

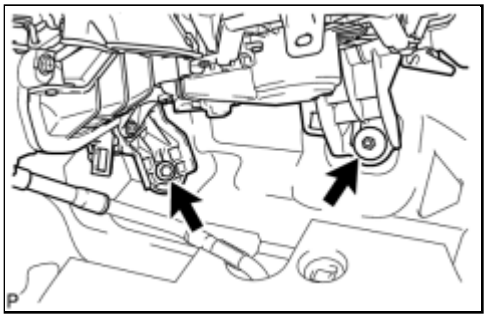


(c) Disengage each clamp.



(d) Remove the 12 bolts, and disengage the wire harness and junction block.

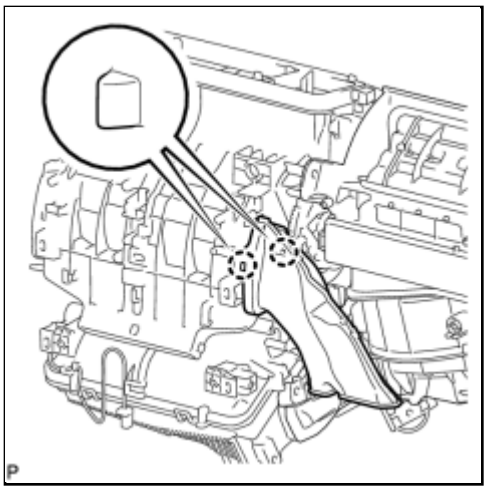
(e) Disengage the cooler drain hose.



(f) Remove the 7 bolts.

(g) Remove the 3 bolts and the instrument panel reinforcement assembly.

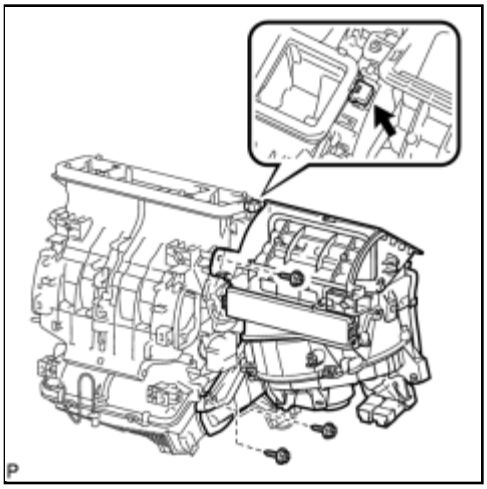
93. REMOVE AIR CONDITIONING UNIT



(a) Remove the bolt, the nut, and the air conditioning unit.

NOTICE:

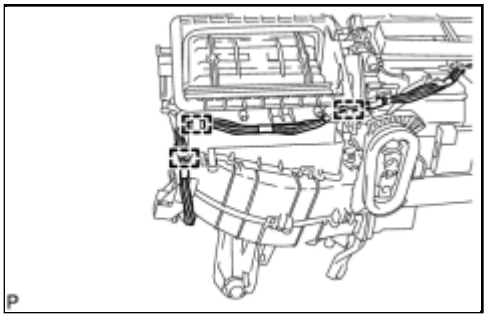
- Be sure to support the air conditioning unit assembly when removing it because failure to do so may cause the bracket of the air conditioning unit assembly to break.
- When disassembling the air conditioning unit, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.



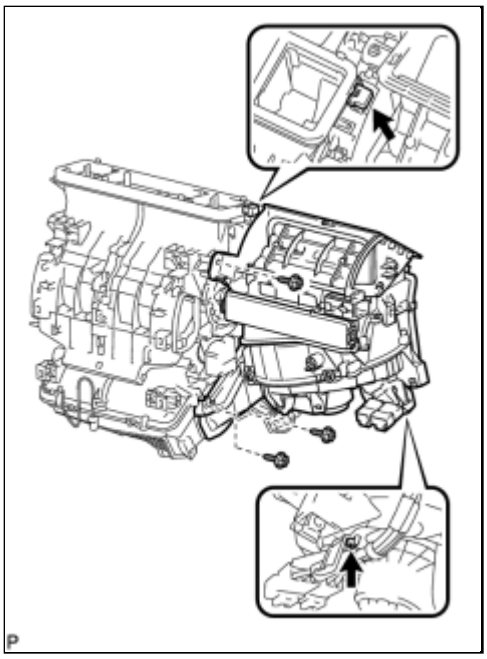
94. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Disengage the 2 claws and remove the No. 2 air duct sub-assembly.

95. REMOVE BLOWER ASSEMBLY (w/o PTC Heater)



(a) for Automatic Air Conditioning System:



(1) Disconnect the connector.

(b) Remove the 3 screws and the blower assembly.

96. REMOVE BLOWER ASSEMBLY (w/ PTC Heater)

(a) Disengage each clamp.

(b) Remove the screw and disengage the quick heater connector.

(c) for Automatic Air Conditioning System:

(1) Disconnect the connector.

(d) Remove the 3 screws and the blower assembly.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y1L00KX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Headlight Signal Circuit (2010 Corolla)		

Headlight Signal Circuit

DESCRIPTION

The A/C amplifier receives headlight operational signals to determine the electrical load. The electrical load signals are used for controlling the number of the PTC heater elements to be heated.

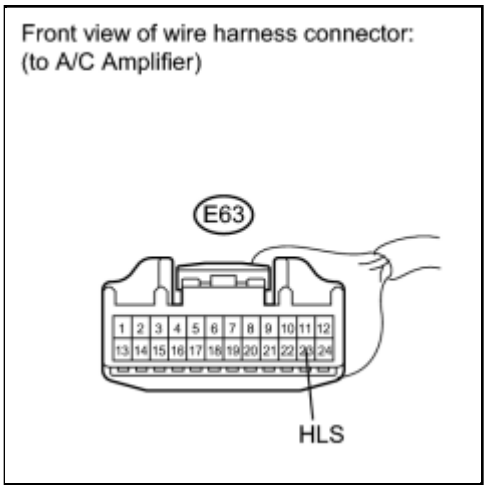
WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT HEADLIGHT ASSEMBLY

(a) Check if the headlights come on when the light control switch is turned to the HEAD position.



OK:

The headlights come on.

NG ▶ GO TO LIGHTING SYSTEM

OK ▼

2.	CHECK HARNESS AND CONNECTOR (HEADLIGHT SIGNAL)

(a) Disconnect the connector from the A/C amplifier.

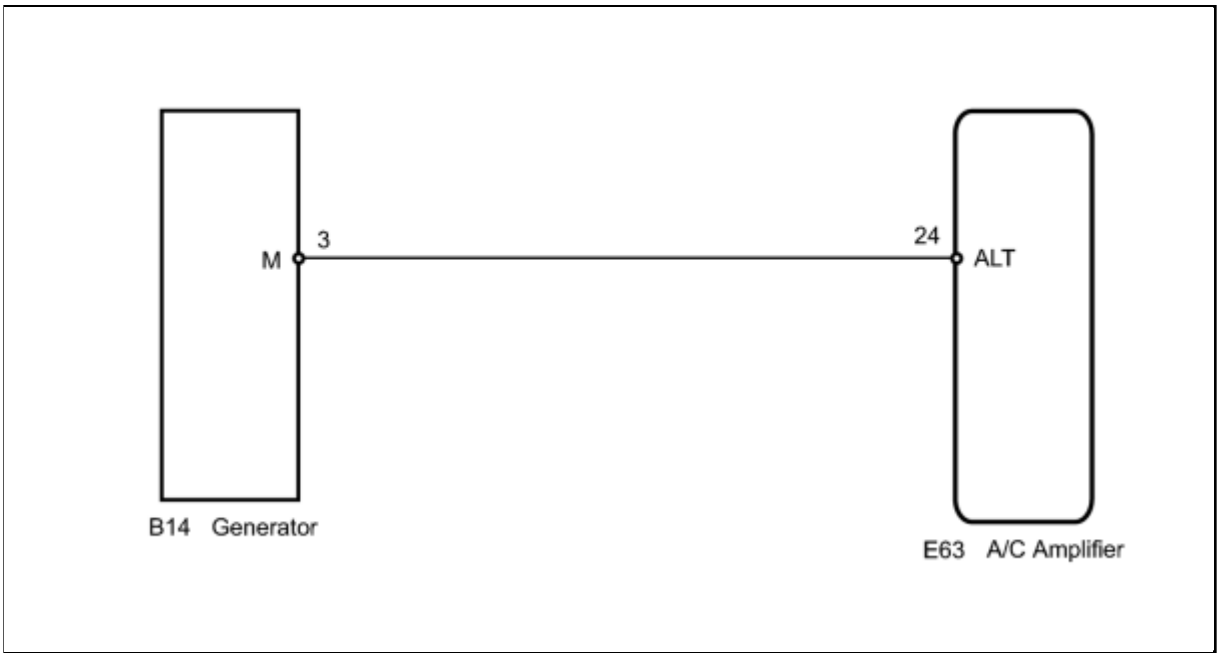
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-23 (HLS) - Body ground	Light control switch: OFF	11 to 14 V
E63-23 (HLS) - Body ground	Light control switch: HEAD	Below 1 V

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



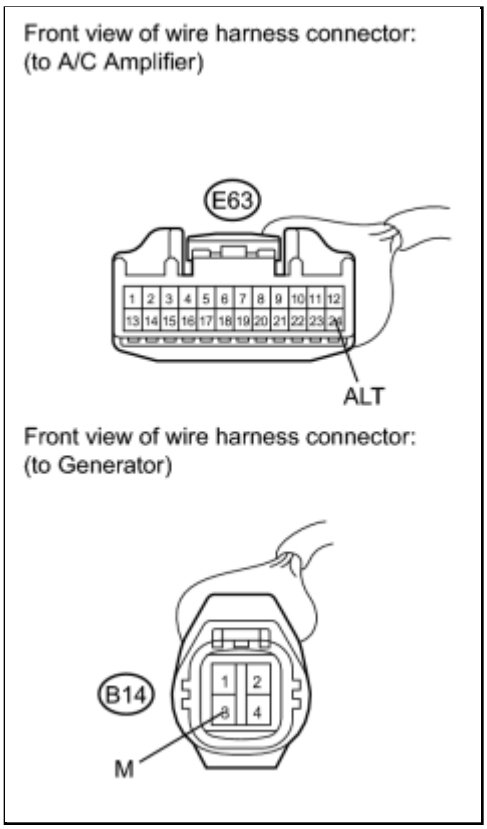
Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y8100KX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Generator Signal Circuit (2010 Corolla)		

Generator Signal Circuit

DESCRIPTION

When the engine is started, the generator rotates and a pulsed voltage signal is generated. This signal is used by the A/C amplifier. The generated voltage signals sent from the generator are used for controlling the number of the heater elements to be heated.

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - GENERATOR)**

(a) Disconnect the connector from the A/C amplifier.

(b) Disconnect the connector from the generator.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-24 (ALT) - B14-3 (M)	Always	Below 1 Ω
E63-24 (ALT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**INSPECT GENERATOR**

(a) Inspect the generator.

(1) for 2AZ-FE:

Inspect the generator INFO for On-vehicle Inspection, INFO for Inspection).

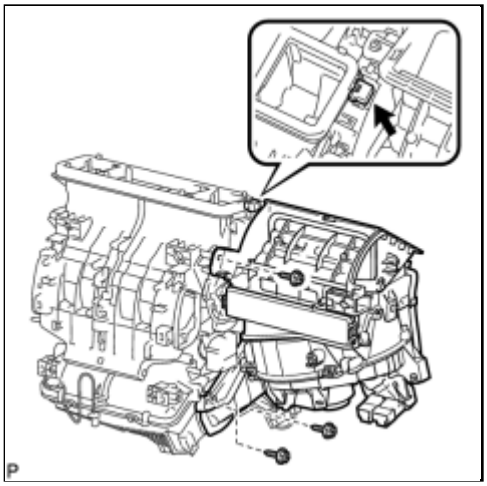
(2) for 2ZR-FE:

Inspect the generator INFO for On-vehicle Inspection, INFO for Inspection).

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ **REPLACE GENERATOR (for 2ZR-FE)**



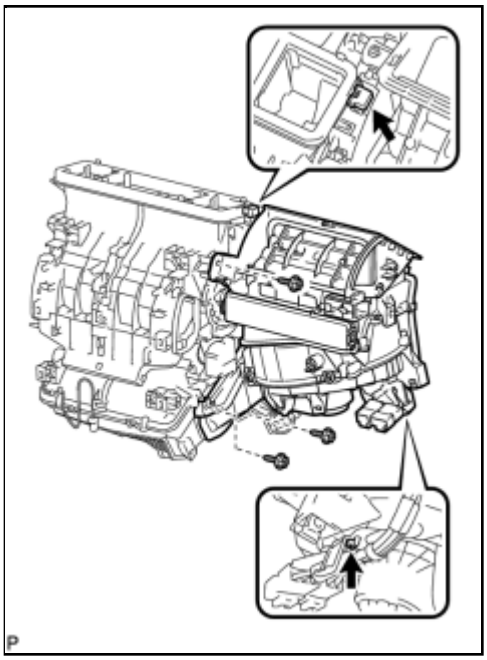
B ▶ **REPLACE GENERATOR (for 2AZ-FE)**

A ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HLU0AAX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL BLOWER ASSEMBLY (w/o PTC Heater)

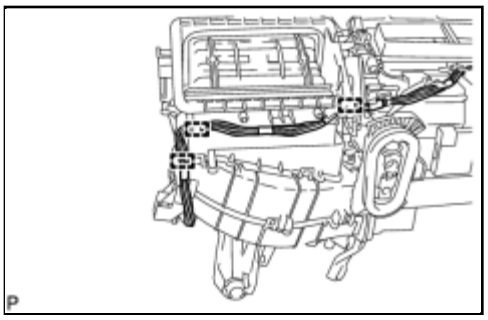


(a) Install the blower assembly with the 3 screws.

(b) for Automatic Air Conditioning System:

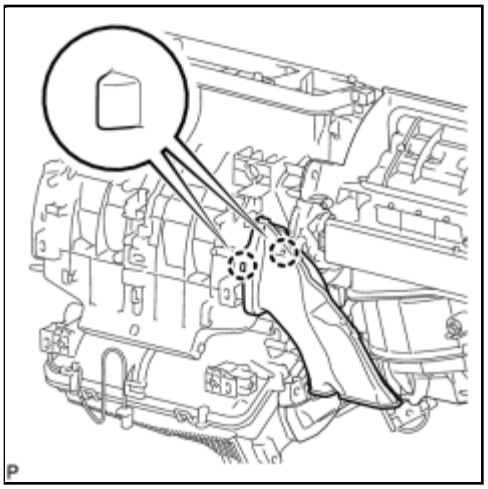
(1) Connect the connector.

2. INSTALL BLOWER ASSEMBLY (w/ PTC Heater)



(a) Install the blower assembly with the 3 screws.

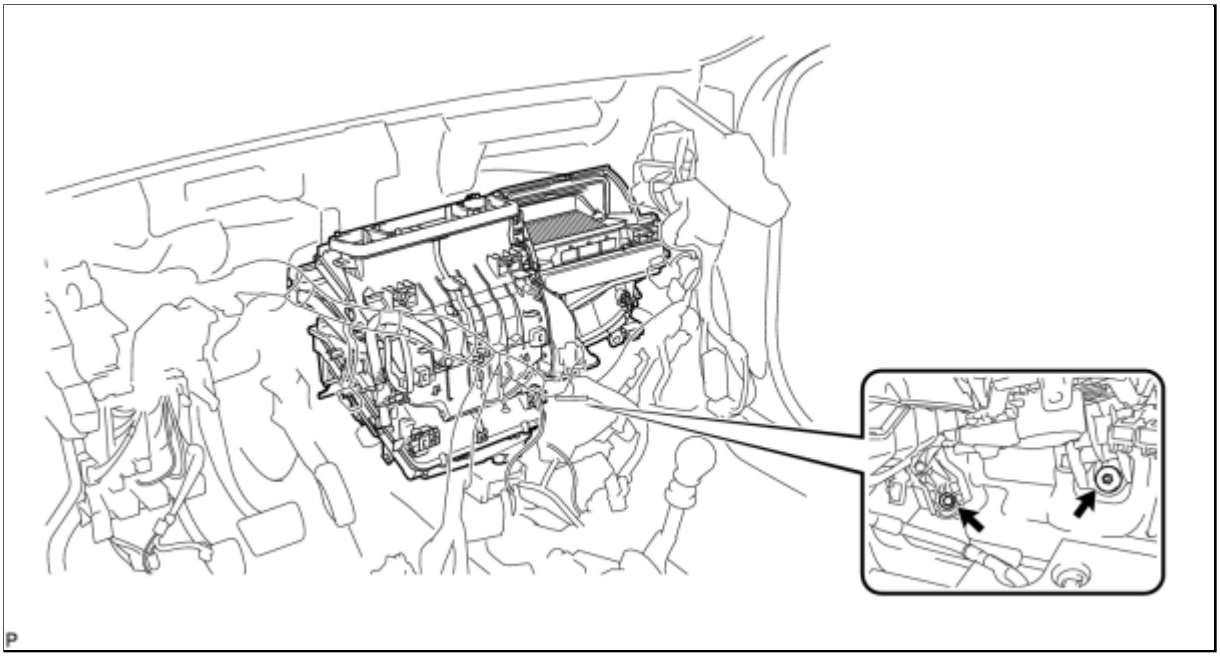
(b) Engage the quick heater connector and install the screw.



(c) for Automatic Air Conditioning System:

(1) Connect the connector.

(d) Engage each clamp.

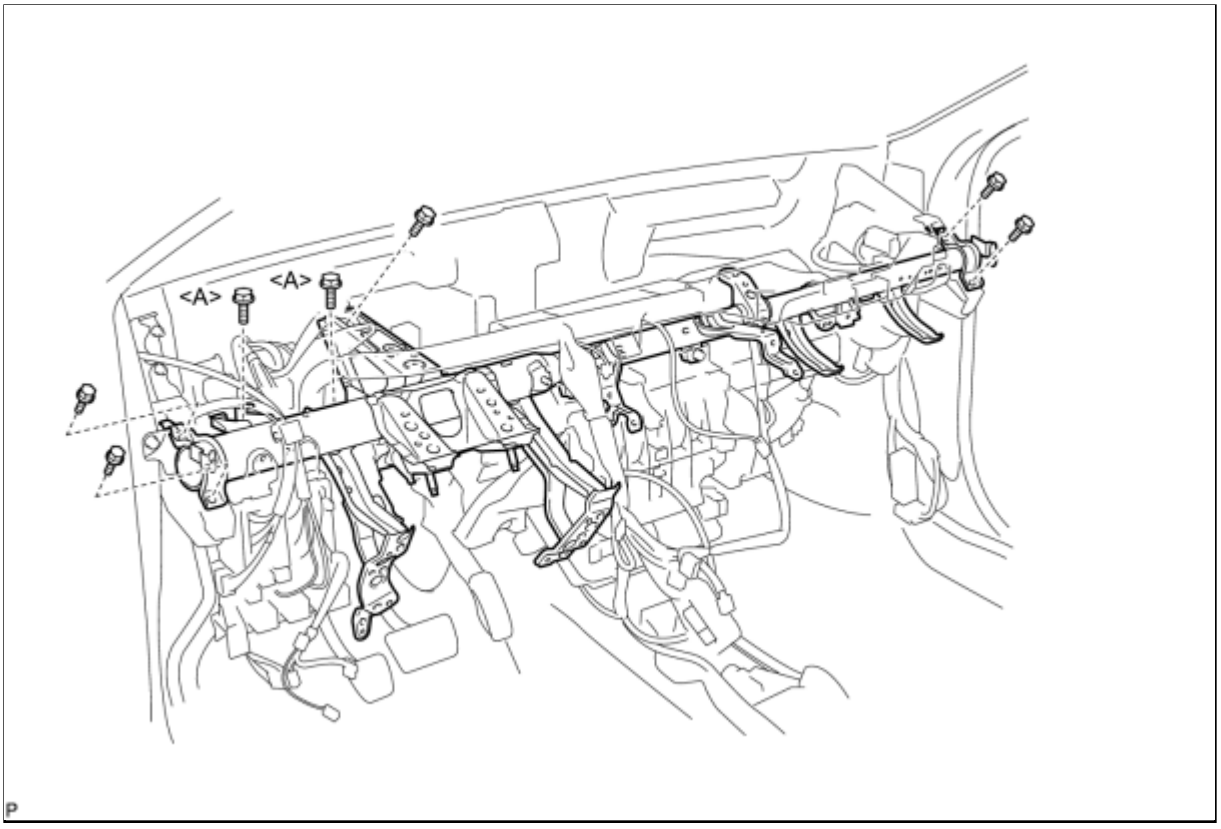


3. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Engage the 2 claws and install the No. 2 air duct sub-assembly.

4. TEMPORARILY TIGHTEN AIR CONDITIONING UNIT

(a) Temporarily tighten the air conditioning unit with the bolt and the nut.



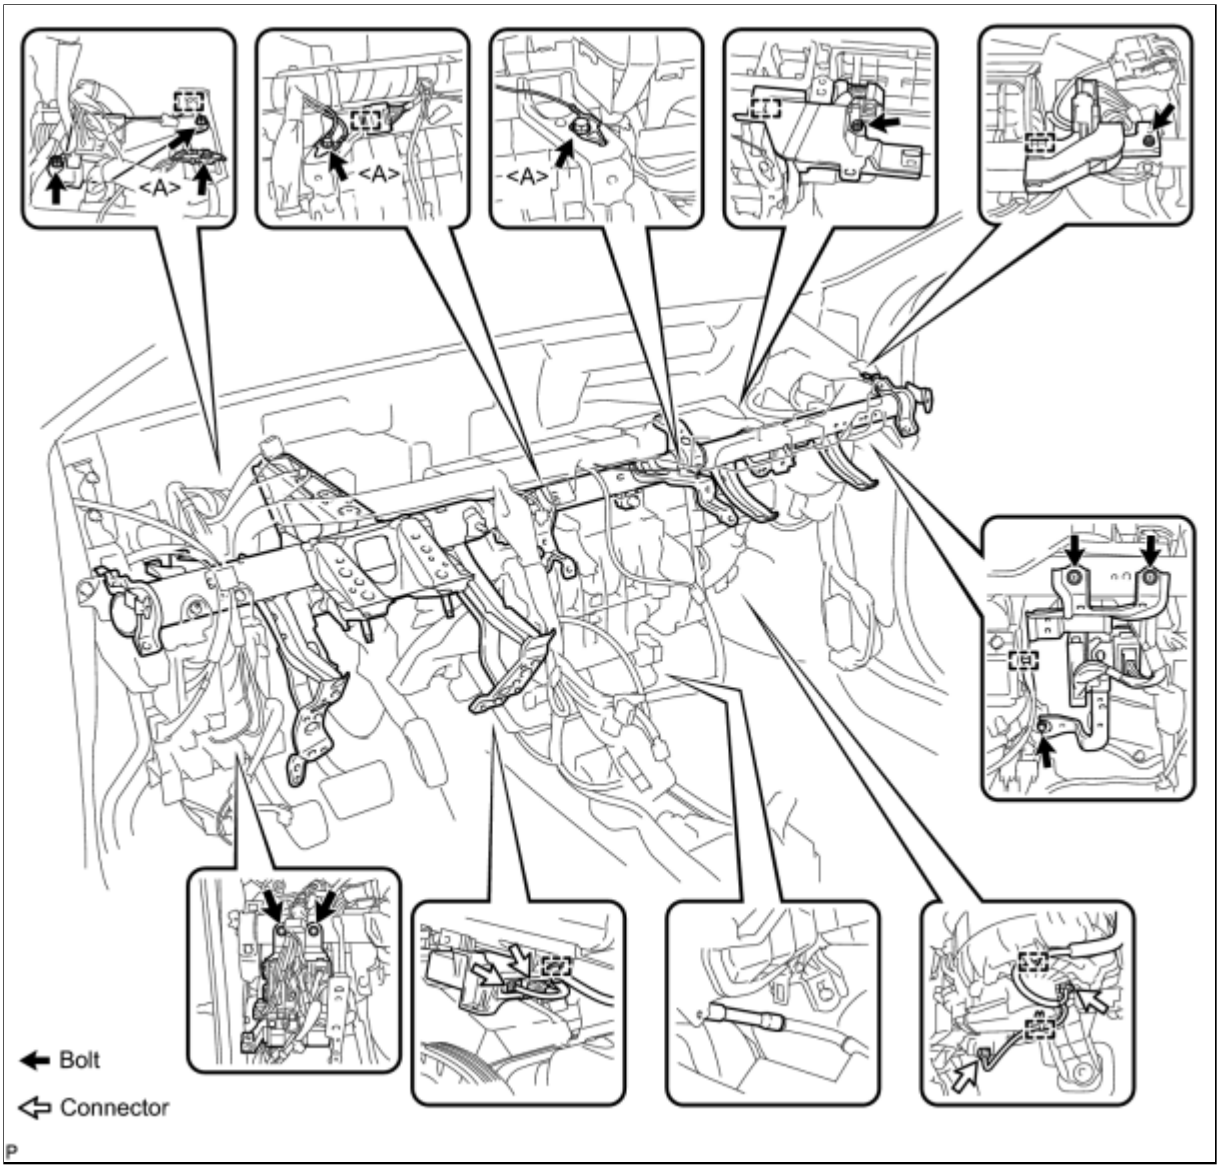
NOTICE:

- Be sure to support the air conditioning unit assembly when removing it because failure to do so may cause the bracket of the air conditioning unit assembly to break.
- When installing the air conditioning unit, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

5. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Manual Air Conditioning System)

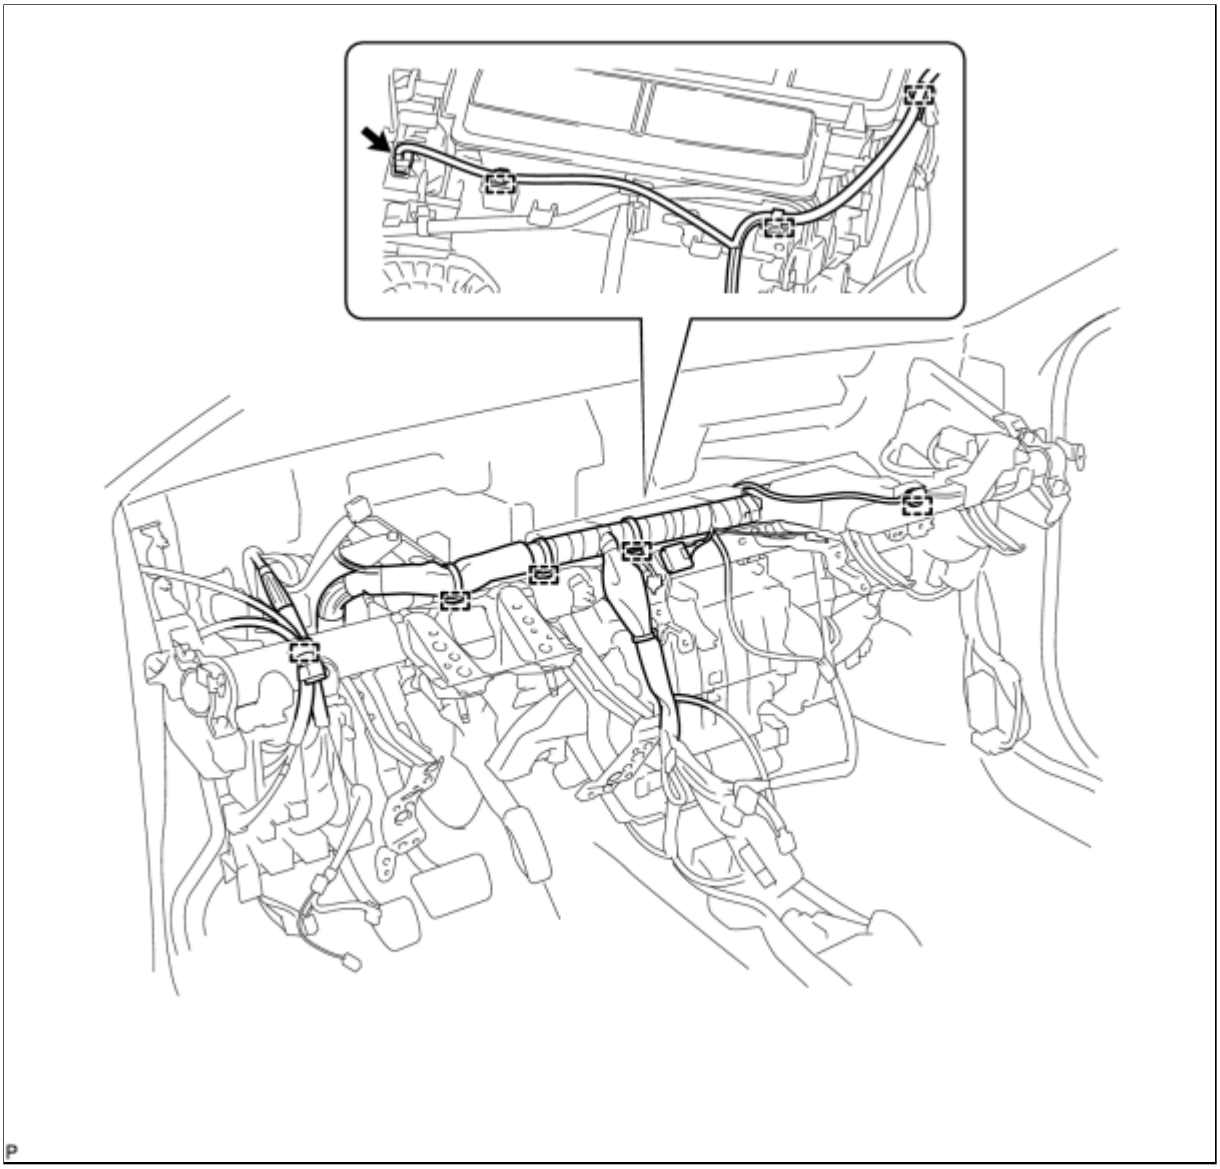
(a) Install the instrument panel reinforcement assembly with the 7 bolts.

<A> - Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



(b) Connect each connector.

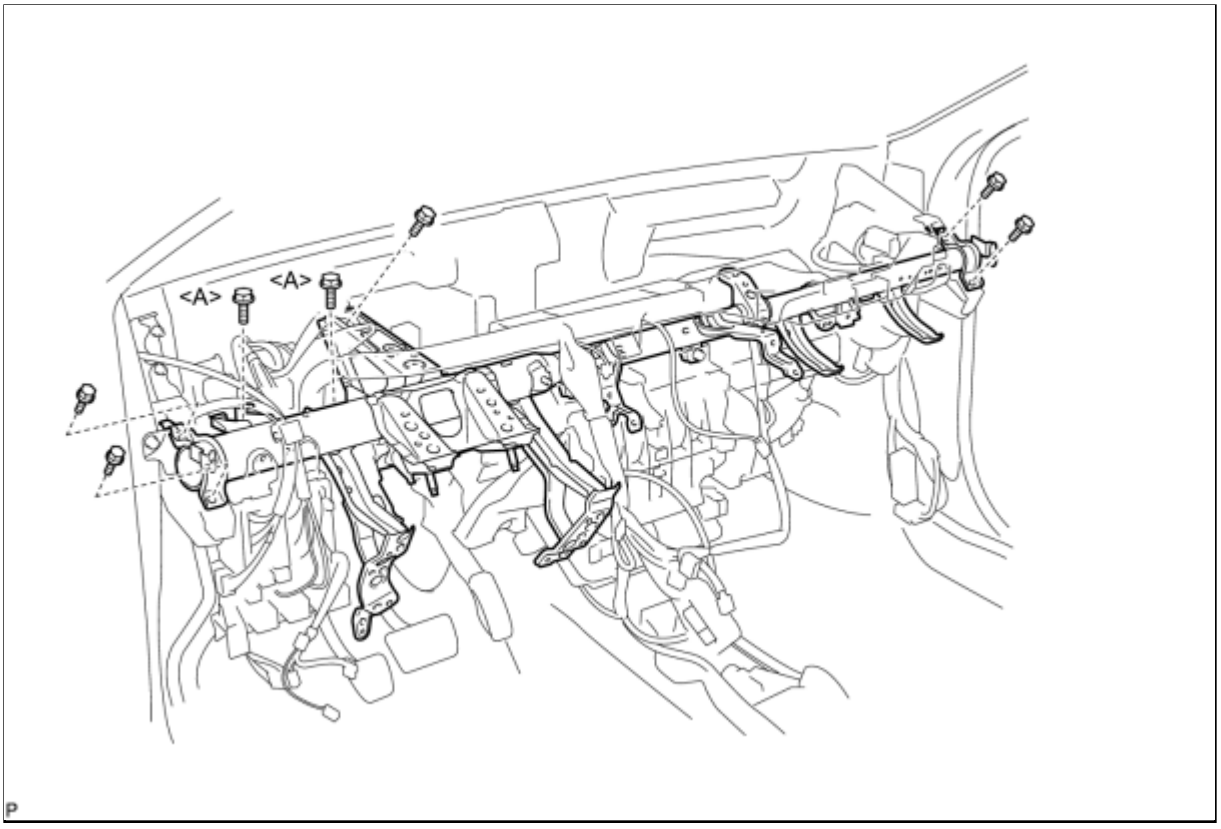
(c) Engage each clamp.



(d) Engage the wire harness and junction block with the 12 bolts.

<A> - Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(e) Engage the cooler drain hose.

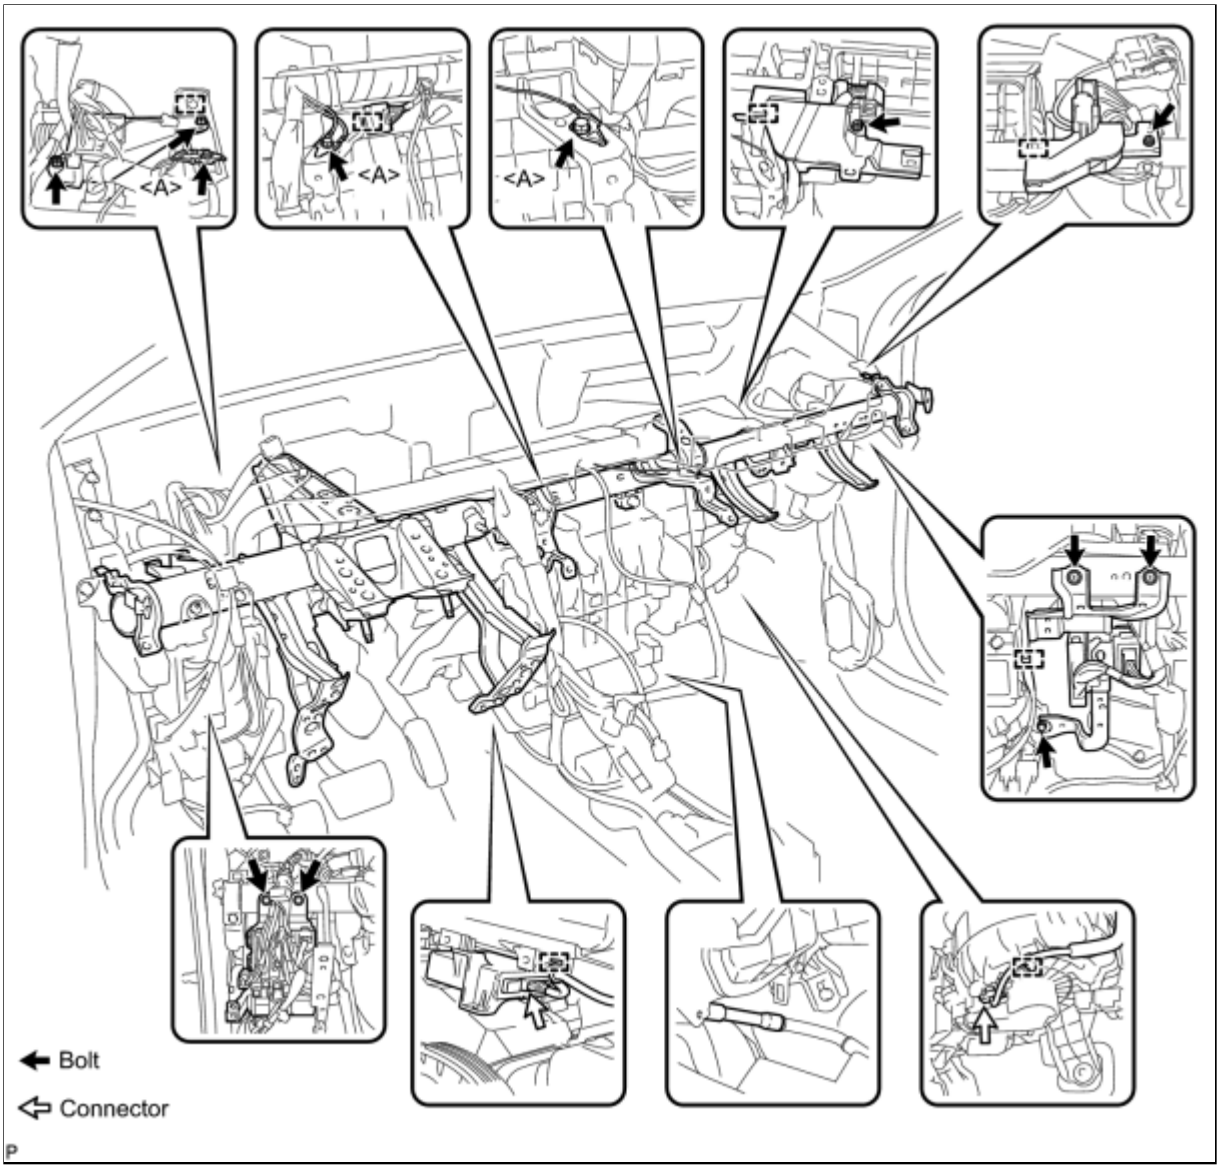


(f) Engage each clamp and the wire harness.

6. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Automatic Air Conditioning System)

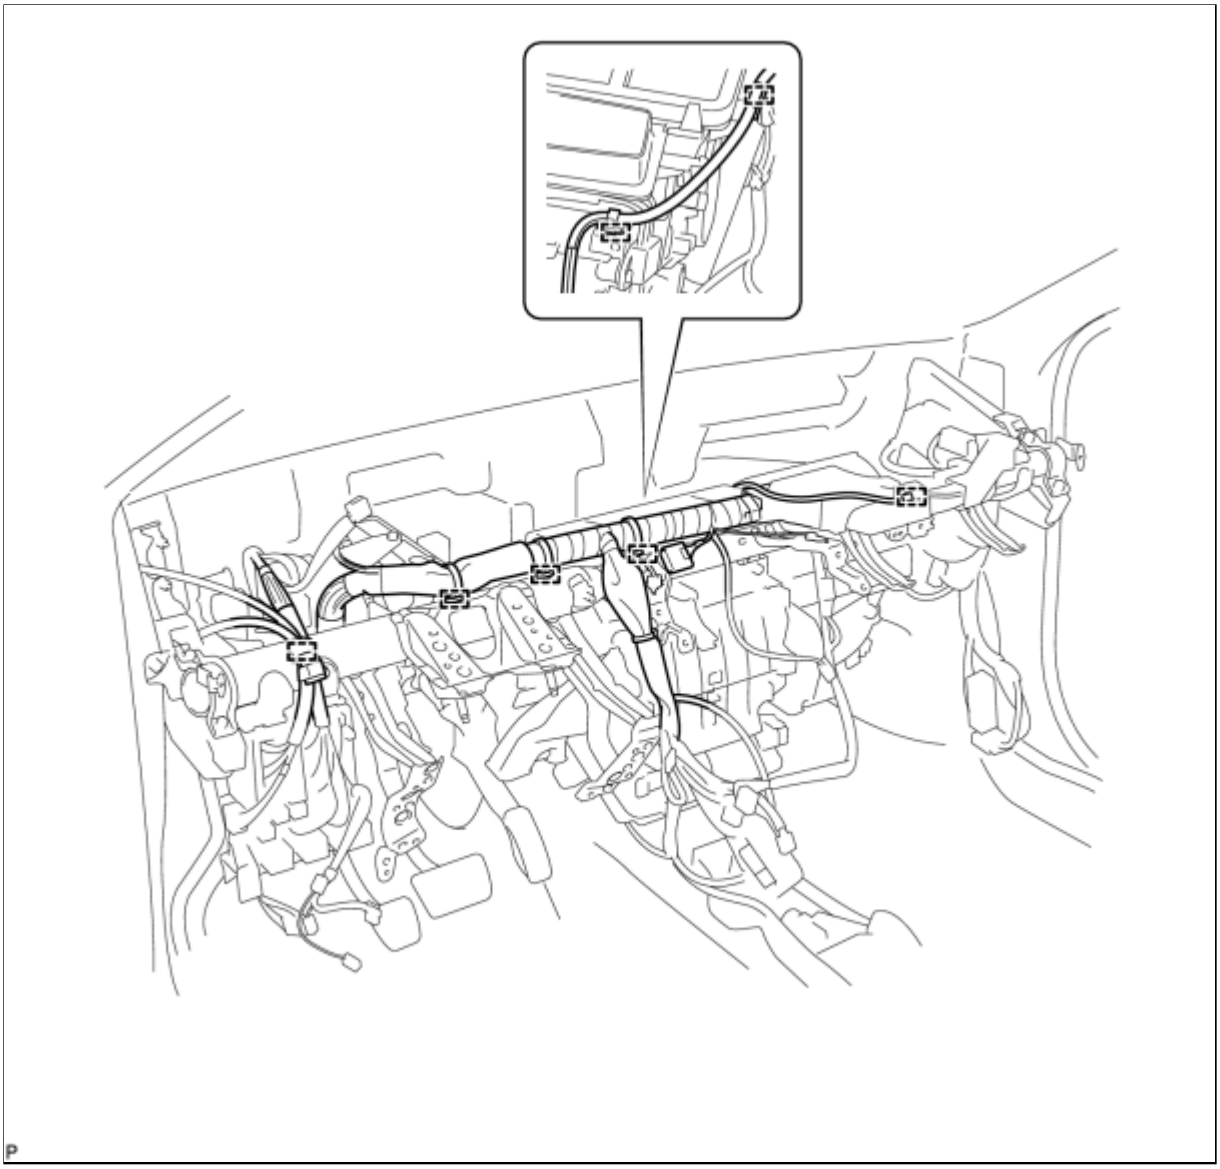
(a) Install the instrument panel reinforcement assembly with the 7 bolts.

<A> - Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



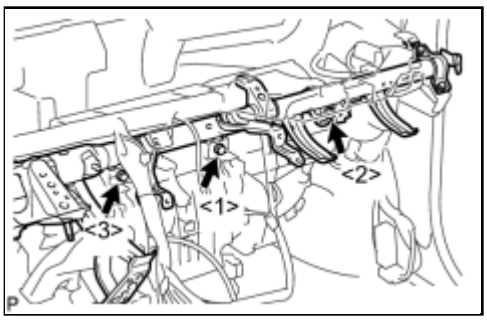
(b) Connect each connector.

(c) Engage each clamp.



(d) Engage the wire harness and junction block with the 12 bolts.

<A> - Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

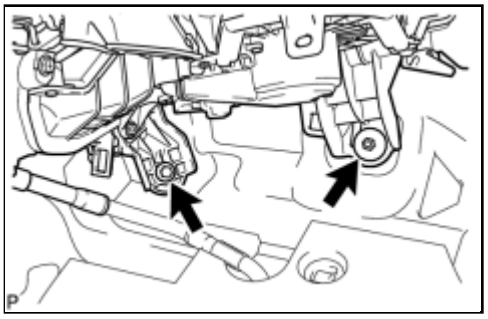


(e) Engage the cooler drain hose.

(f) Engage each clamp and the wire harness.

7. INSTALL AIR CONDITIONING UNIT

(a) Install the 3 bolts.

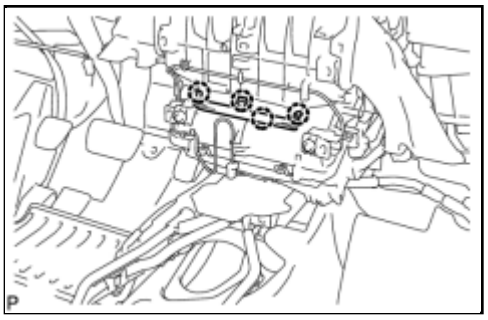


Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

HINT:

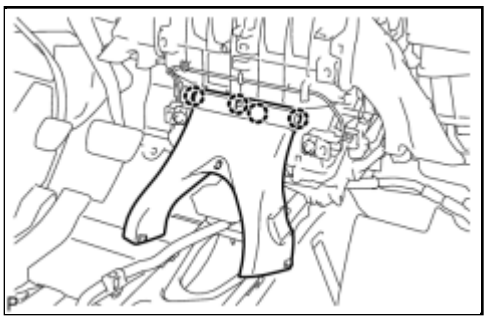
Tighten the bolts in the order shown in the illustration.

(b) Install the bolt.



Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(c) Install the air conditioning unit with the nut.

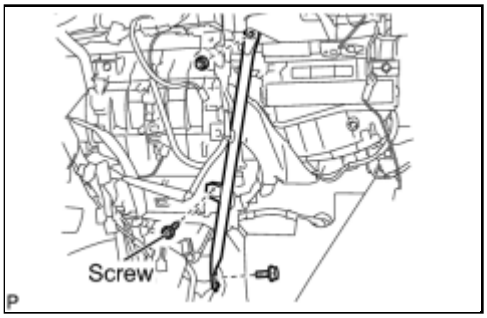


Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

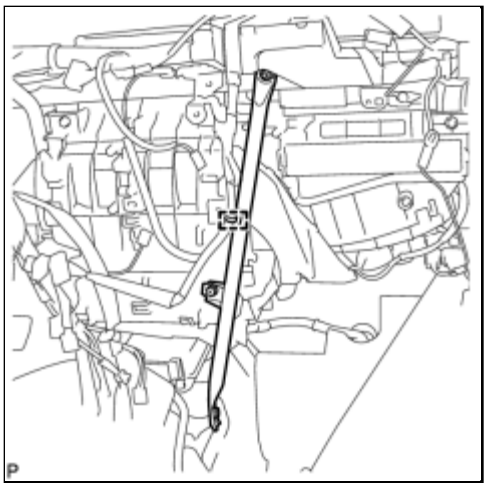
8. INSTALL HEATER COVER (w/ Cover)

(a) Engage the 4 claws and install the heater cover.

9. REMOVE REAR NO. 1 AIR DUCT (w/ Rear Air Duct)



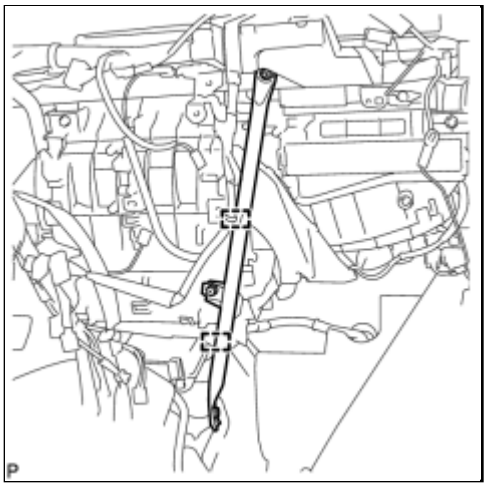
(a) Engage the 4 claws and install the rear No. 1 air duct.



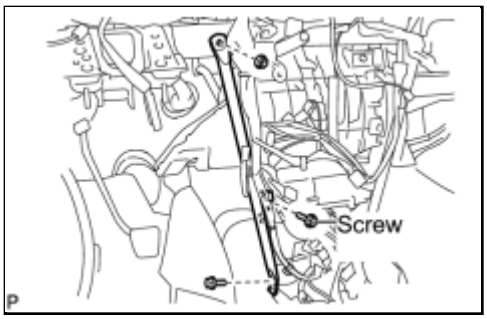
10. INSTALL NO. 2 INSTRUMENT PANEL BRACE SUB-ASSEMBLY

(a) Install the No. 2 instrument panel brace sub-assembly with the bolt, screw and the nut.

Screw - Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)



(b) for TMC Made:



(1) Engage the clamp.

(c) for TMMC, NUMMI Made:

(1) Engage each clamp.

11. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Manual Air Conditioning System)

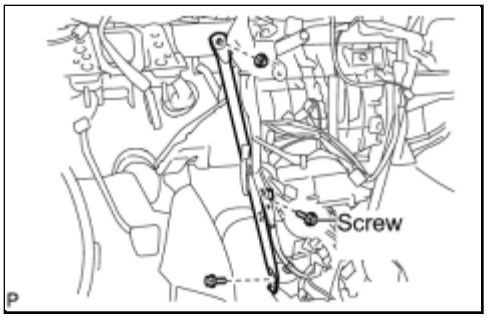
(a) Install the No. 1 instrument panel brace sub-assembly with the bolt, screw and the nut.

Screw - Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(b) for TMC Made:

(1) Engage each clamp.

(2) Connect the connector.



(c) for TMMC, NUMMI Made:

(1) Engage each clamp.

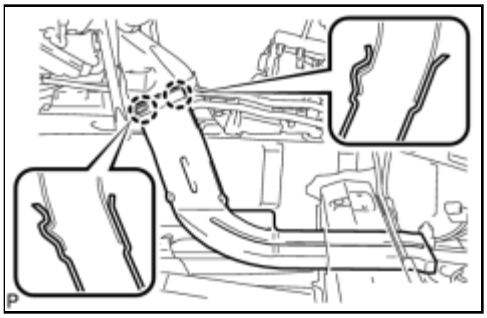
(2) Connect the connector.

12. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Automatic Air Conditioning System)

(a) Install the No. 1 instrument panel brace sub-assembly with the bolt, screw and the nut.

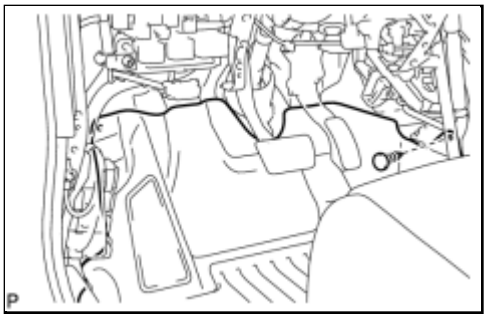
Screw - Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(b) for TMC Made:



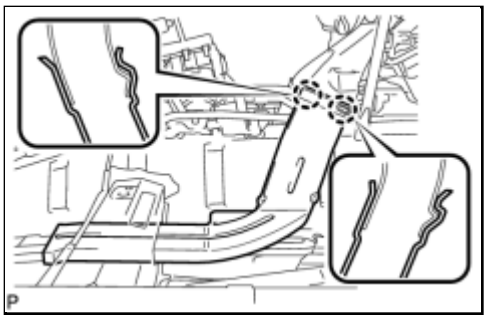
(1) Engage each clamp.

(c) for TMMC, NUMMI Made:

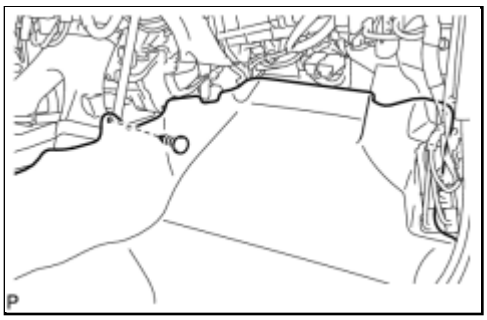


(1) Engage each clamp.

13. INSTALL REAR NO. 3 AIR DUCT (w/ Rear Air Duct)

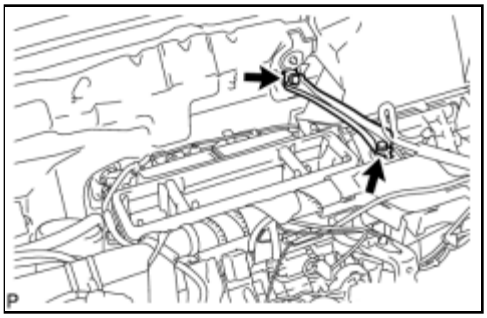


(a) Engage the 2 claws to install the rear No. 3 air duct.

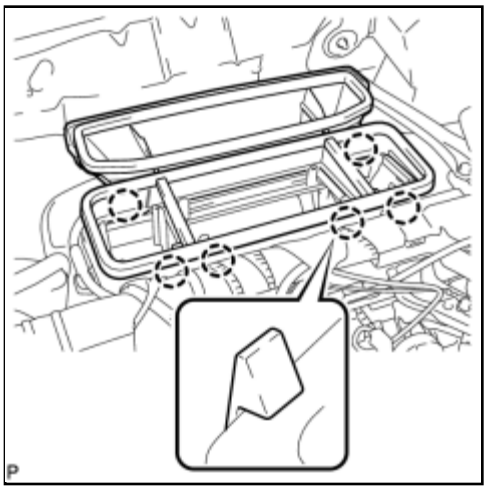


(b) Engage the clip and install the floor carpet.

14. INSTALL REAR NO. 2 AIR DUCT (w/ Rear Air Duct)

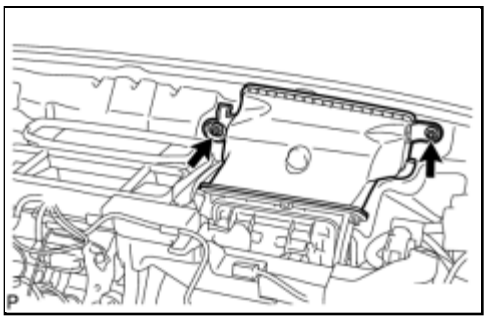


(a) Engage the 2 claws to install the rear No. 2 air duct.



(b) Engage the clip and install the floor carpet.

15. INSTALL CENTER INSTRUMENT PANEL TO COWL BRACE



(a) Install the center instrument panel to cowl brace with the 2 bolts.

16. INSTALL LOWER DEFROSTER NOZZLE ASSEMBLY

(a) Engage the 6 claws and install the lower defroster nozzle assembly.

17. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY

(a) Install the No. 1 air duct sub-assembly with the 2 nuts.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

18. INSTALL SMART KEY ECU ASSEMBLY (w/ Smart Key System) INFO

19. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY INFO

20. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY INFO

21. INSTALL CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

22. INSTALL CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

23. INSTALL CONSOLE BOX CARPET INFO

24. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

25. INSTALL NO. 1 SWITCH HOLE BASE (w/o Smart Key System) INFO

26. INSTALL NO. 1 SWITCH HOLE BASE (w/ Smart Key System) INFO

27. INSTALL FRONT NO. 1 CONSOLE BOX INSERT INFO

28. INSTALL COWL SIDE TRIM BOARD LH INFO

29. INSTALL FRONT DOOR SCUFF PLATE LH INFO

30. INSTALL FRONT NO. 2 CONSOLE BOX INSERT INFO

31. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO

32. INSTALL COWL SIDE TRIM BOARD RH INFO

33. INSTALL FRONT DOOR SCUFF PLATE RH INFO

35. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (for Automatic Air Conditioning System) INFO

36. INSTALL INSTRUMENT PANEL HOLE COVER INFO

37. INSTALL INSTRUMENT PANEL BOX ASSEMBLY INFO

38. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

39. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

40. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) INFO

41. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) INFO

42. INSTALL RADIO RECEIVER WITH BRACKET (w/o Navigation System) INFO

43. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Navigation System) INFO

44. INSTALL NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) INFO

45. INSTALL STEERING POST ASSEMBLY (for 2ZR-FE) INFO

46. INSTALL STEERING POST ASSEMBLY (for 2AZ-FE) INFO

47. TURN FRONT WHEELS FACING STRAIGHT AHEAD

48. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

49. INSTALL STOP LIGHT SWITCH ASSEMBLY INFO

50. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY INFO

51. INSTALL INSTRUMENT PANEL SUB REINFORCEMENT INFO

52. INSTALL COLUMN HOLE COVER SILENCER SHEET INFO

53. INSTALL TRANSPONDER KEY AMPLIFIER (w/o Smart Key System) INFO

54. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY INFO

55. INSTALL UPPER STEERING COLUMN COVER INFO

56. INSTALL LOWER STEERING COLUMN COVER INFO

57. TURN FRONT WHEELS FACING STRAIGHT AHEAD

58. ADJUST SPIRAL CABLE INFO

59. INSTALL STEERING WHEEL ASSEMBLY INFO

60. INSTALL STEERING PAD INFO

61. INSTALL LOWER NO. 3 STEERING WHEEL COVER INFO

62. INSTALL LOWER NO. 2 STEERING WHEEL COVER INFO

63. INSPECT STEERING WHEEL CENTER POINT

64. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

65. INSTALL POWER STEERING ECU ASSEMBLY (for 2ZR-FE) INFO

66. INSTALL POWER STEERING ECU ASSEMBLY (for 2AZ-FE) INFO

67. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY INFO

68. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

69. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

70. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

71. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH INFO

72. INSTALL NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY INFO

73. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY INFO

74. INSTALL FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

75. INSTALL FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

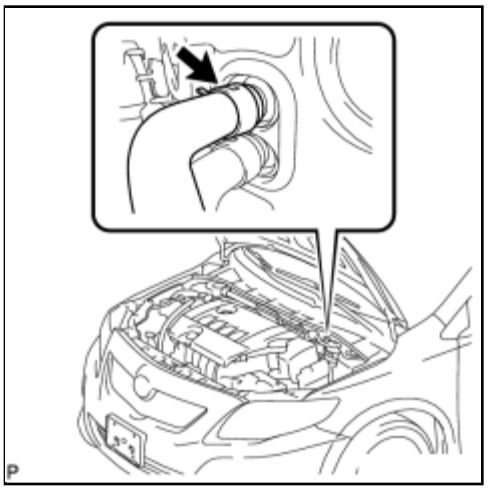
76. INSTALL FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

77. INSTALL FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag) INFO

78. INSTALL COMBINATION METER ASSEMBLY INFO

79. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

80. INSTALL CENTER INSTRUMENT PANEL REGISTER ASSEMBLY INFO



81. INSTALL INSTRUMENT PANEL FINISH PANEL END LH INFO

82. INSTALL INSTRUMENT PANEL FINISH PANEL END RH INFO

83. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

84. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

85. INSTALL HEATER WATER HOSE OUTLET

(a) Install the water hose and attach the clip.

86. INSTALL HEATER WATER HOSE INLET

HINT:

Use the same procedure described for the heater outlet water hose.

87. INSTALL AIR CONDITIONING TUBE ASSEMBLY

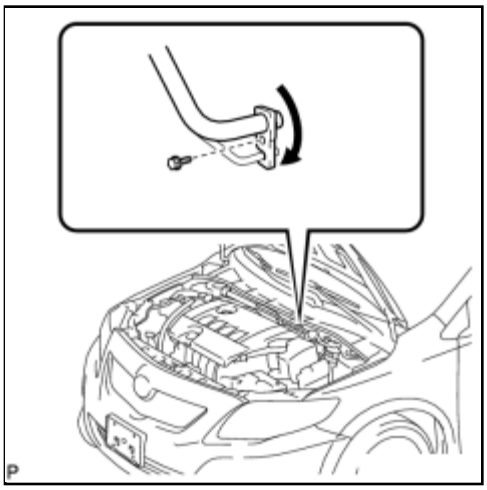
(a) Remove the attached vinyl tape from the tube.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the air conditioning tube assembly.

Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring on the air conditioning tube assembly.

(d) Install the air conditioning tube assembly.



88. INSTALL SUCTION PIPE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.

(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction hose sub-assembly.

Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring on the suction hose sub-assembly.

(d) Move the hook connector in the direction indicated by the arrow in the illustration.

(e) Insert the pipe joint into the fitting hole securely and tighten the bolt.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

89. INSTALL OUTER COWL TOP PANEL (for TMC Made) INFO

90. INSTALL OUTER COWL TOP PANEL (except TMC Made) INFO

91. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

92. INSTALL COWL TOP VENTILATOR LOUVER LH INFO

93. INSTALL CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

94. INSTALL HOOD TO COWL TOP SEAL INFO

95. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

96. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

97. INSTALL FRONT WIPER ARM HEAD CAP INFO

98. CHARGE WITH REFRIGERANT INFO

99. ADD ENGINE COOLANT (for 2ZR-FE) INFO

100. ADD ENGINE COOLANT (for 2AZ-FE) INFO

101. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

102. INSPECT FOR COOLANT LEAK (for 2ZR-FE) INFO

103. INSPECT FOR COOLANT LEAK (for 2AZ-FE) INFO

104. INSPECT STEERING PAD INFO

105. INSPECT SRS WARNING LIGHT

INFO

106. WARM UP ENGINE INFO

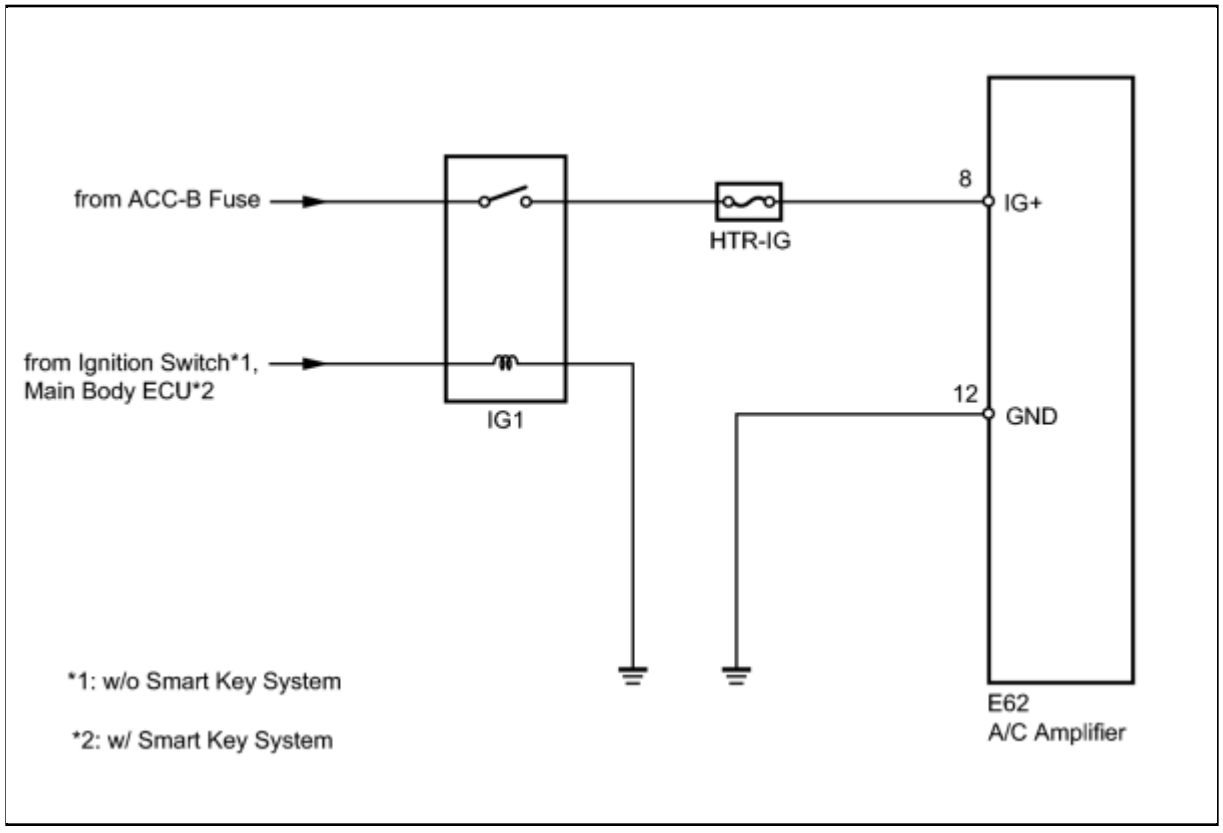
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): IG Power Source Circuit (2010 Corolla)		



IG Power Source Circuit

DESCRIPTION

The main power source is supplied to the A/C amplifier when the ignition switch is turned to ON.

The power source is used for operating the A/C amplifier and servo motor, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

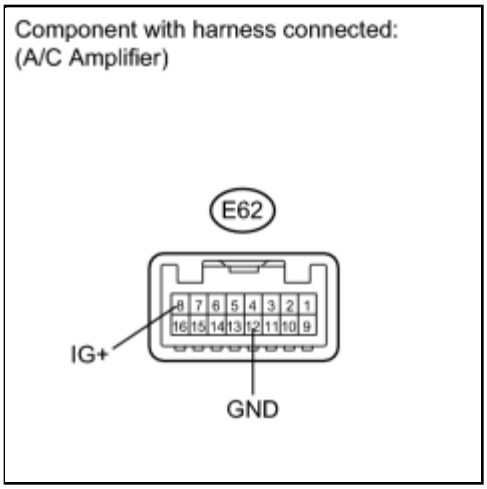
Start the engine before inspection. Check the IG1 relay or battery if the engine does not start.

PROCEDURE

1.	**INSPECT FUSE (HTR-IG)**

(a) Remove the HTR-IG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR-IG fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (HTR-IG)**

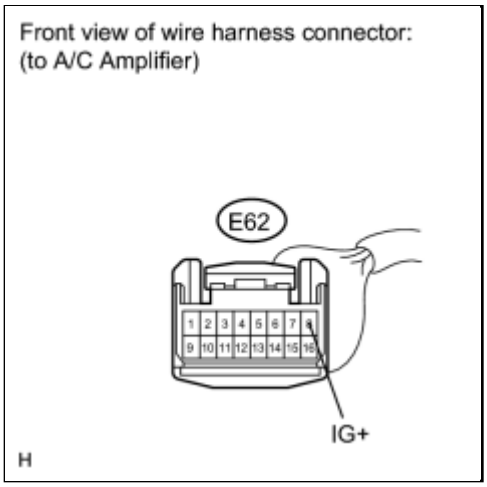
OK ▼

2.	**INSPECT AIR CONDITIONING AMPLIFIER (IG+ - GND)**

(a) Remove the A/C amplifier with the connectors still connected.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E62-8 (IG+) - E62-12 (GND)	Ignition switch ON	11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)**

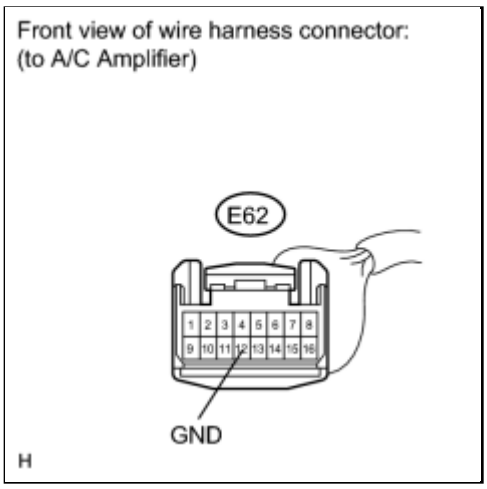
OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

3.	**CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E62-8 (IG+) - Body ground	Ignition switch off	Below 1 V
	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BODY GROUND)**

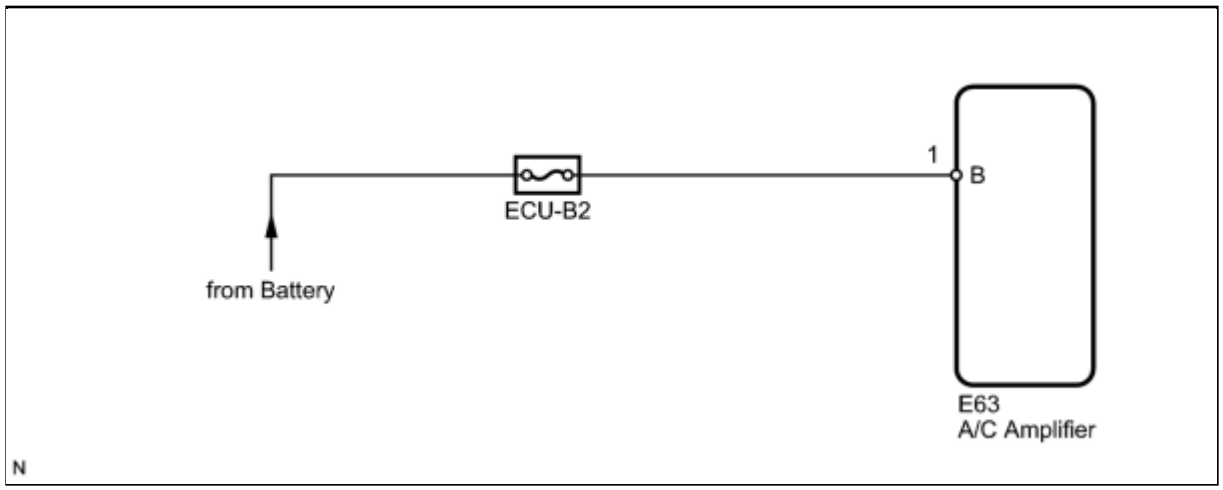
(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E62-12 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Manual Air Conditioning System): Back-up Power Source Circuit (2010 Corolla)		

Back-up Power Source Circuit

DESCRIPTION

The back-up power source circuit for the A/C amplifier is shown below. Power used for DTC memory etc is supplied even when the ignition switch is off.

WIRING DIAGRAM

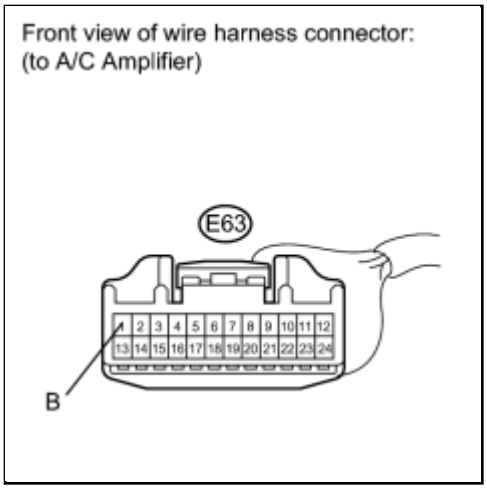
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (ECU-B2)**

(a) Remove the ECU-B2 fuse from the engine room relay block and junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
ECU-B2 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (ECU-B2)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BODY GROUND)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E63-1 (B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

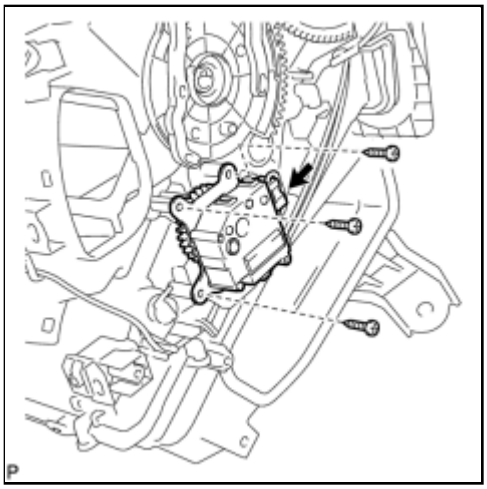
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE IMMOBILISER CODE ECU (w/ Smart Key System) INFO

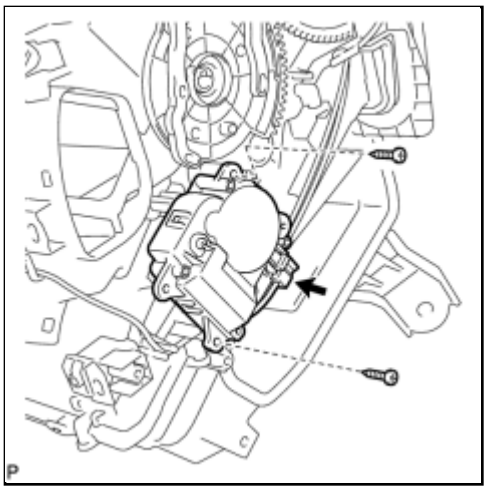
2. REMOVE TRANSPONDER KEY ECU (w/o Smart Key System) INFO



3. REMOVE AIR OUTLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

(a) Disconnect the connector.

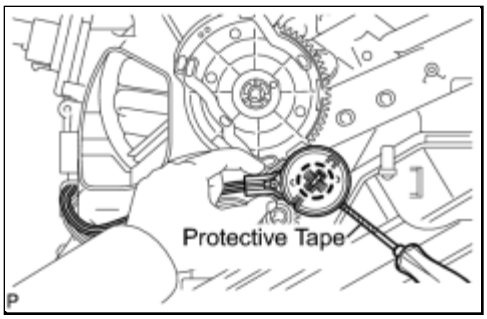
(b) Remove the 3 screws and the air outlet control servo motor.



4. REMOVE AIR MIX CONTROL SERVO MOTOR (for TMC Made with Automatic Air Conditioning System)

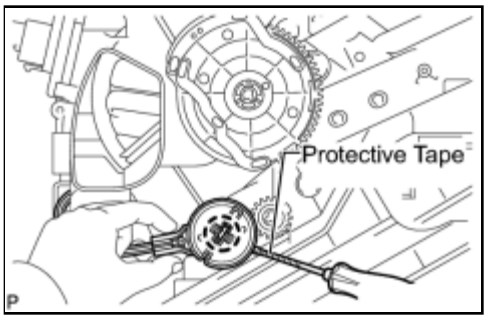
(a) Disconnect the connector.

(b) Remove the 3 screws and the air mix control servo motor.



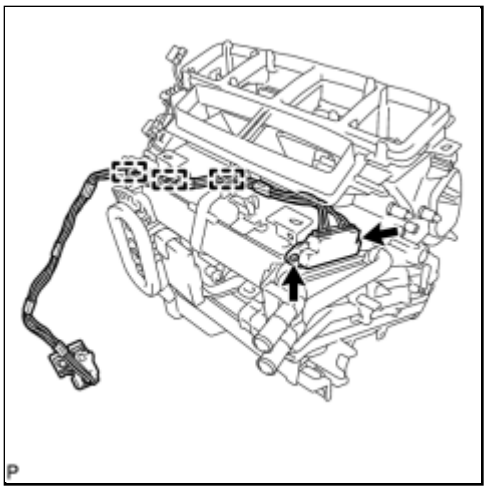
5. REMOVE AIR MIX CONTROL SERVO MOTOR (for TMMC, NUMMI Made with Automatic Air Conditioning System)

(a) Disconnect the connector.



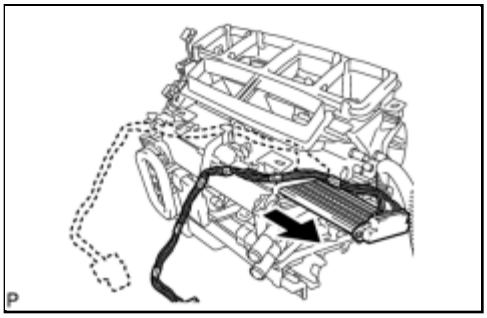
(b) Remove the 2 screws and the air mix control servo motor.

6. REMOVE NO. 2 HEATER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)



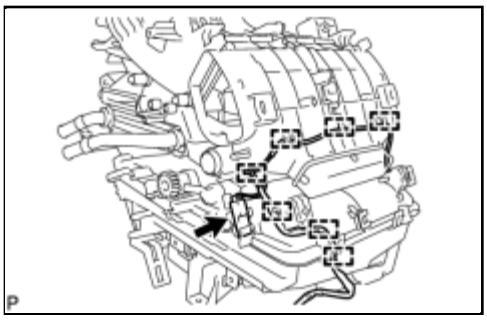
(a) Using a screwdriver with the tip taped, disengage the claw and remove the No. 2 heater control cable sub-assembly.

7. REMOVE AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)



(a) Using a screwdriver with the tip taped, disengage the claw and remove the air mix damper control cable sub-assembly.

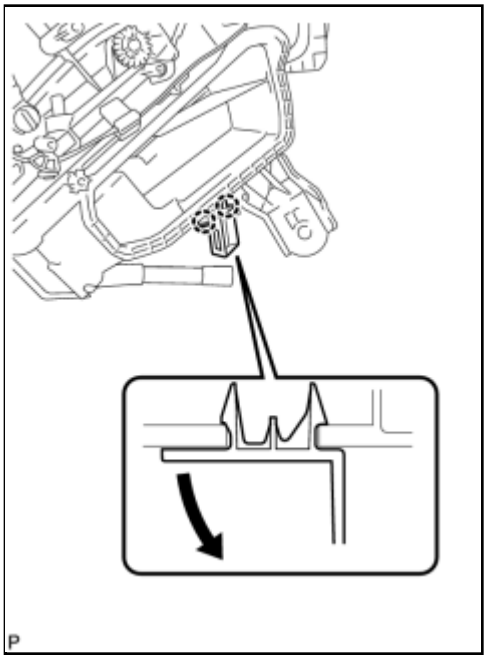
8. REMOVE QUICK HEATER ASSEMBLY (w/ PTC Heater)



(a) Disengage each clamp.

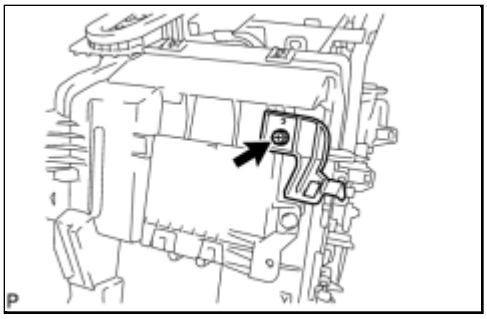
(b) Remove the 2 screws.

(c) Remove the quick heater assembly as shown in the illustration.



9. REMOVE AIR CONDITIONING HARNESS ASSEMBLY (for Automatic Air Conditioning System)

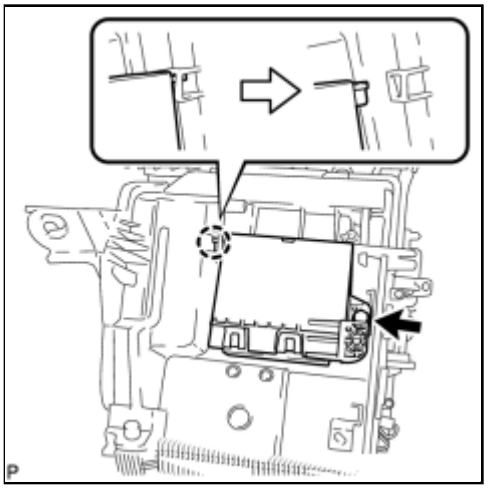
(a) Disengage each clamp and remove the air conditioning harness.



10. REMOVE CONSOLE MOUNTING BRACKET RH

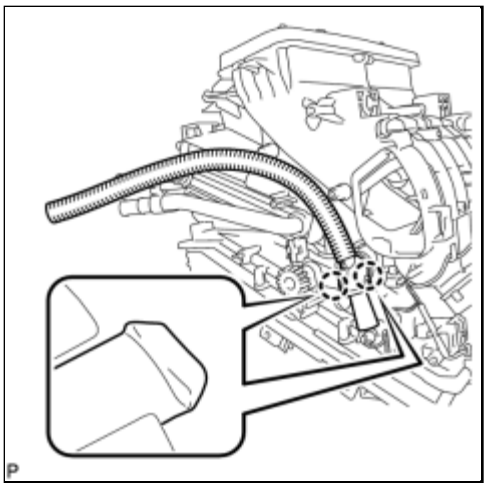
(a) Disengage the 2 claws and remove the console mounting

bracket RH as shown in the illustration.



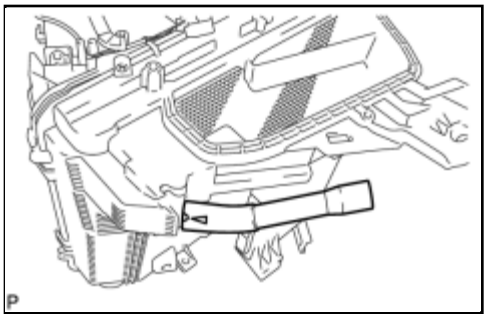
11. REMOVE CONSOLE MOUNTING BRACKET LH

(a) Remove the screw and the console mounting bracket LH.



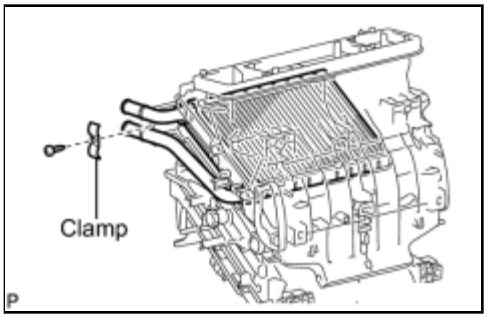
12. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Remove the screw.



(b) Disengage the claw and remove the air conditioning amplifier assembly as shown in the illustration.

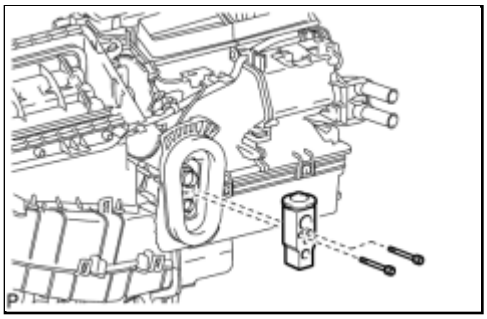
13. REMOVE AIR CONDITIONING DUCT SUB-ASSEMBLY (for Automatic Air Conditioning System)



(a) Disengage the 2 claws and remove the air conditioning duct sub-assembly.

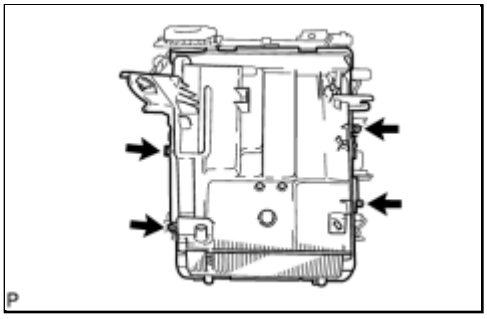
14. REMOVE DRAIN COOLER HOSE

(a) Remove the drain cooler hose from the air conditioning radiator assembly.



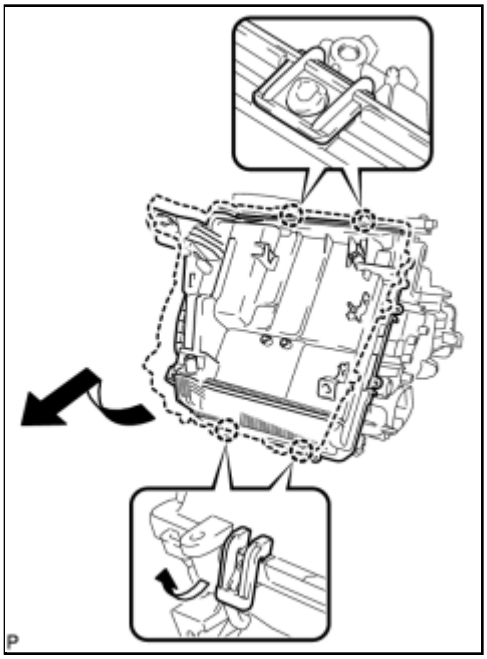
15. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Remove the screw and the clamp.

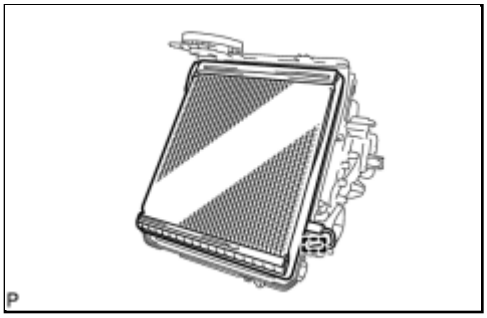


(b) Remove the heater radiator unit sub-assembly from the air conditioning unit assembly.

16. REMOVE COOLER EXPANSION VALVE



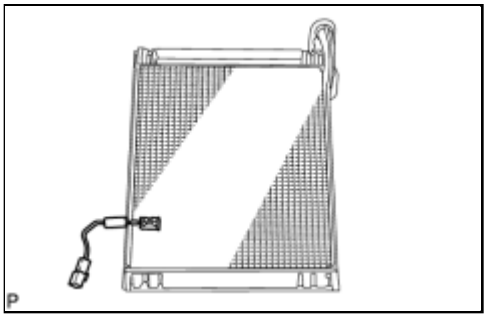
(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and cooler expansion valve.



17. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

(a) Remove the 4 screws.

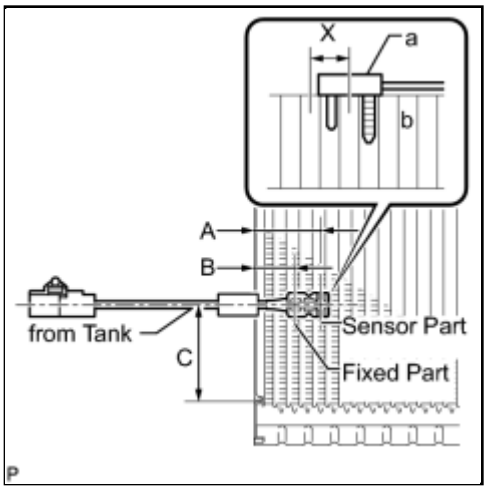
(b) Disengage the 4 claws and remove the lower heater case.



(c) Disengage the clamp, and remove the No. 1 cooler evaporator sub-assembly together with the No. 1 cooler thermistor.

(d) Remove the 2 O-rings.

18. REMOVE NO. 1 COOLER THERMISTOR



(a) Remove the No. 1 cooler thermistor from the No. 1 cooler evaporator sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HLY01UX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING UNIT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL NO. 1 COOLER THERMISTOR

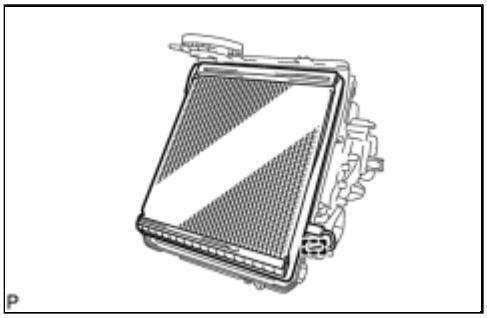
(a) Install the No. 1 cooler thermistor as shown in the illustration.

PART	LENGTH	
A	34.3 mm	1.35 in.
B	20.9 mm	0.823 in.
C	50 mm	1.96 in.

NOTICE:

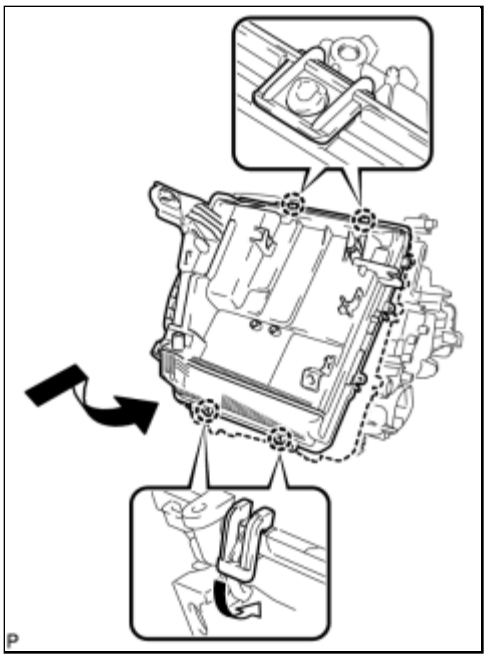
- Be sure to insert the thermistor only once because reinserting it will not allow it to be firmly secured.
- When reusing the evaporator, insert the thermistor one row next to the one that has been used previously (X in the illustration).
- After inserting the thermistor, do not apply excessive force to the wire.
- Directly insert the thermistor until the edge of plastic case "a" comes into contact with evaporator "b".

2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY



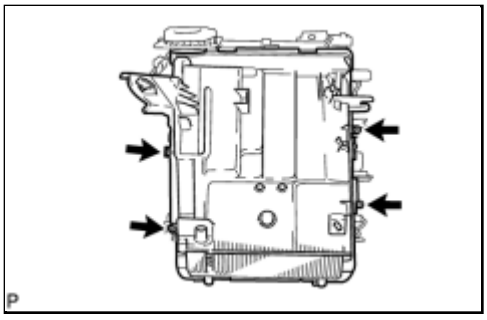
(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surfaces. Install the 2 O-rings to the No. 1 cooler evaporator sub-assembly.

Compressor oil:
ND-OIL 8 or equivalent



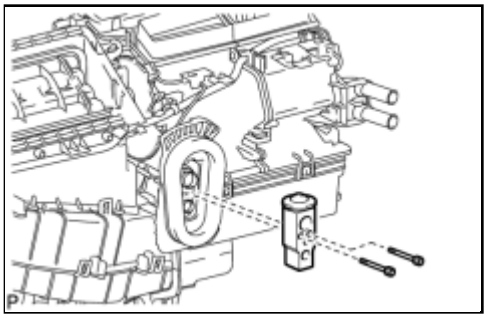
NOTICE:

Keep the O-rings and O-ring fitting surfaces clean from dirt or foreign matter.



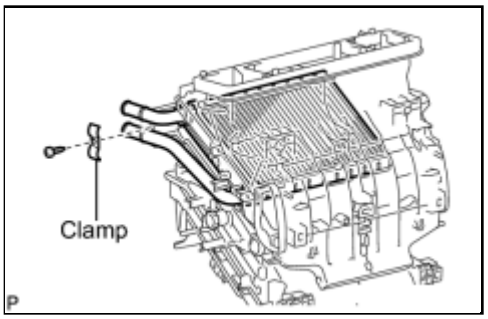
(b) Install the No. 1 cooler evaporator sub-assembly together with the No. 1 cooler thermistor as a set.

(c) Engage the clamp.



(d) Engage the 4 claws as shown in the illustration.

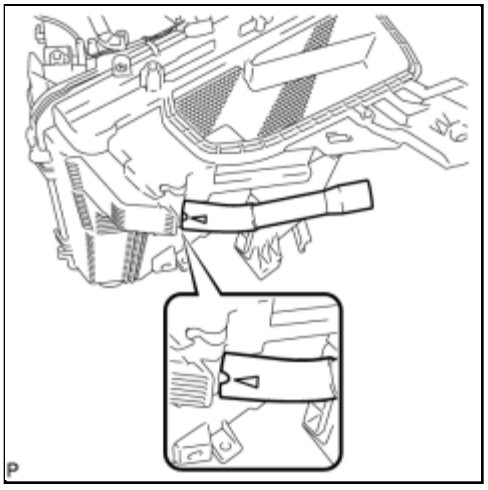
(e) Install the lower heater case with the 4 screws.



3. INSTALL COOLER EXPANSION VALVE

(a) Using a 4 mm hexagon wrench, install the cooler expansion valve with the 2 hexagon bolts.

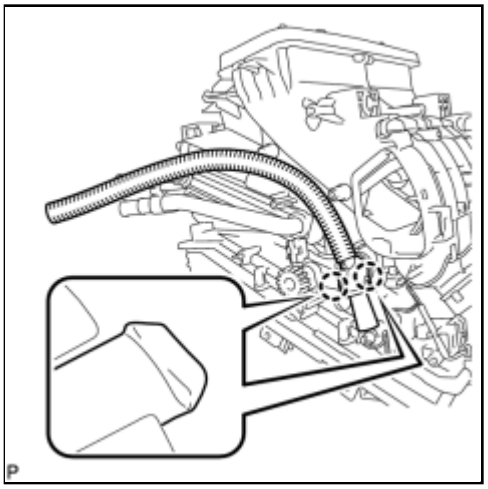
Torque: 3.5 N·m (36 kgf·cm, 31in·lbf)



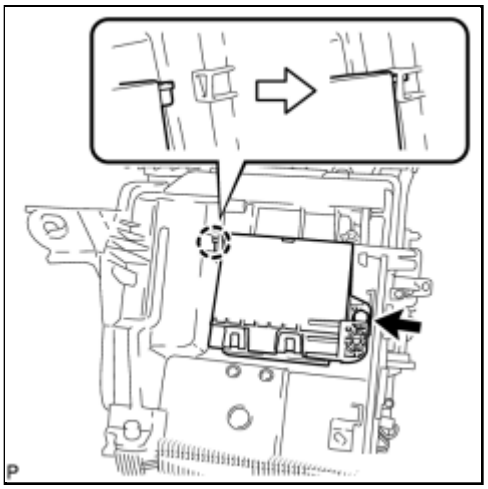
4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Install the heater radiator unit sub-assembly to the air conditioning unit assembly.

(b) Install the clamp with the screw.



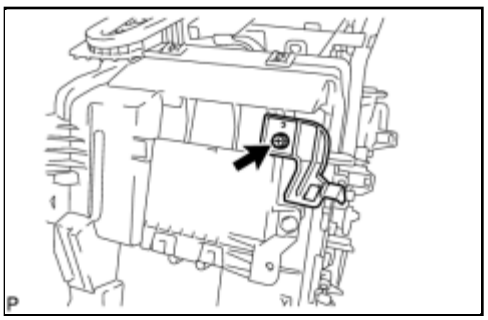
5. INSTALL DRAIN COOLER HOSE



(a) Install the drain cooler hose to the air conditioning unit assembly.

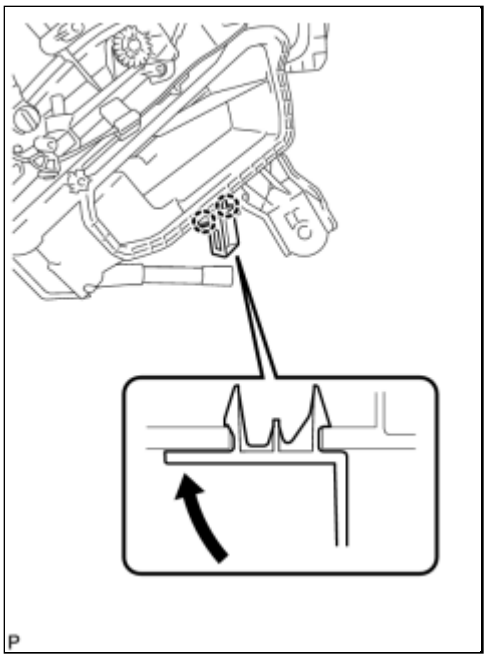
6. INSTALL AIR CONDITIONING DUCT SUB-ASSEMBLY (for Automatic Air Conditioning System)

(a) Engage the 2 claws and install the air conditioning duct sub-assembly.



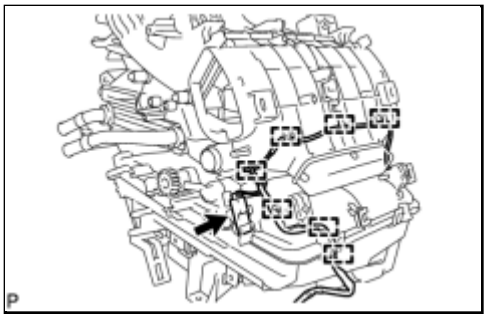
7. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

(a) Engage the claw.



(b) Install the air conditioning amplifier assembly with the screw.

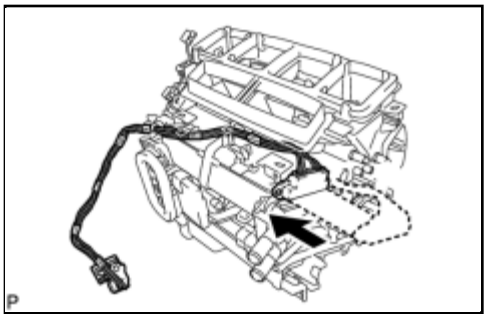
8. INSTALL CONSOLE MOUNTING BRACKET LH



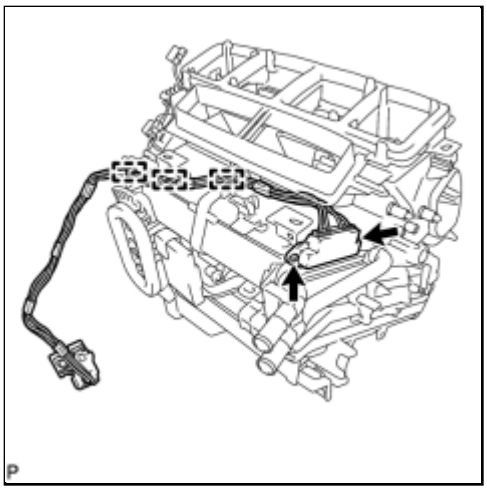
(a) Install the console mounting bracket LH with the screw.

9. INSTALL CONSOLE MOUNTING BRACKET RH

(a) Engage the 2 claws and install the console mounting bracket RH as shown in the illustration.



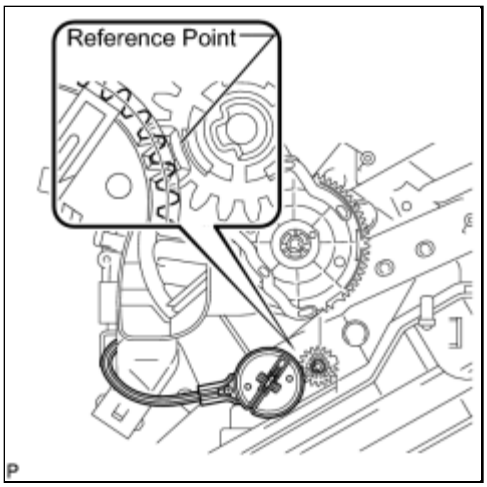
10. INSTALL AIR CONDITIONING HARNESS ASSEMBLY (for Automatic Air Conditioning System)



(a) Connect the connector.

(b) Engage each clamp and install the air conditioning harness assembly.

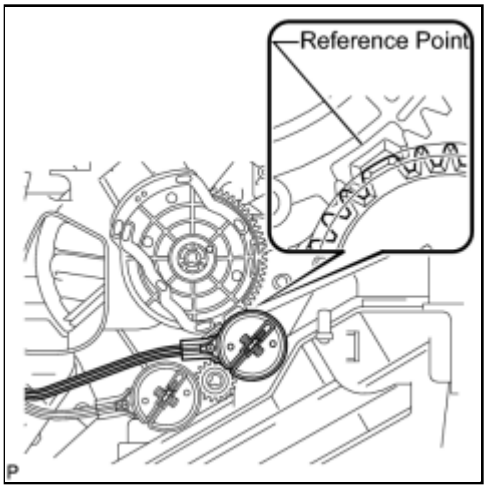
11. INSTALL QUICK HEATER ASSEMBLY (w/ PTC Heater)



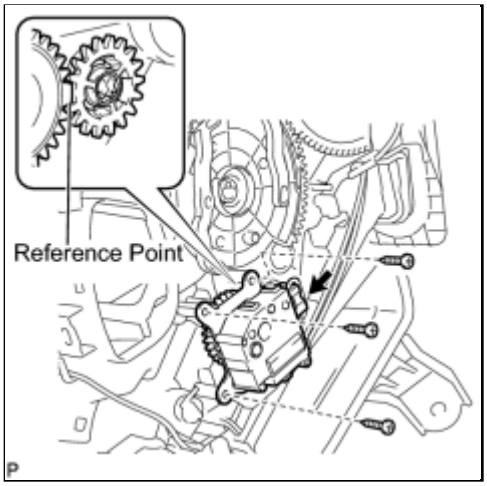
(a) Install the quick heater assembly as shown in the illustration.

(b) Install the 2 screws.

(c) Engage each clamp.



12. INSTALL AIR MIX DAMPER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)

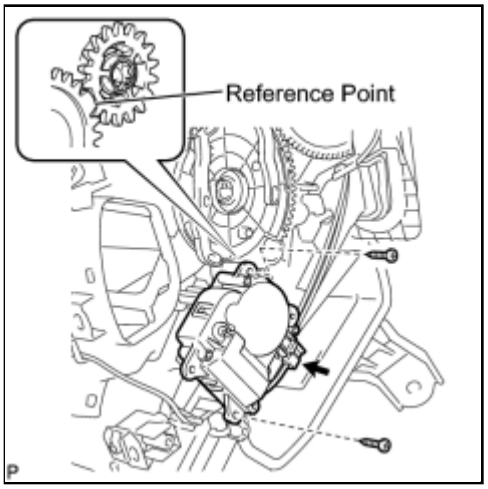


(a) Position the gear of the air mix damper control cable sub-assembly and the unit gear as shown in the illustration, and install the air mix damper control cable sub-assembly.

13. INSTALL NO. 2 HEATER CONTROL CABLE SUB-ASSEMBLY (for Manual Air Conditioning System)

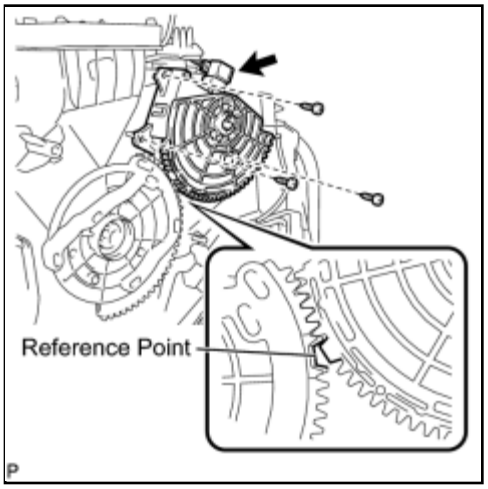
(a) Position the gear of the No. 2 heater control cable sub-assembly and the unit link as shown in the illustration, and install the No. 2 heater control cable sub-assembly.

14. INSTALL AIR MIX CONTROL SERVO MOTOR (for TMC Made with Automatic Air Conditioning System)



(a) Using the reference point, install the air mix control servo motor with the 3 screws.

(b) Connect the connector.



15. INSTALL AIR MIX CONTROL SERVO MOTOR (for TMMC, NUMMI Made with Automatic Air Conditioning System)

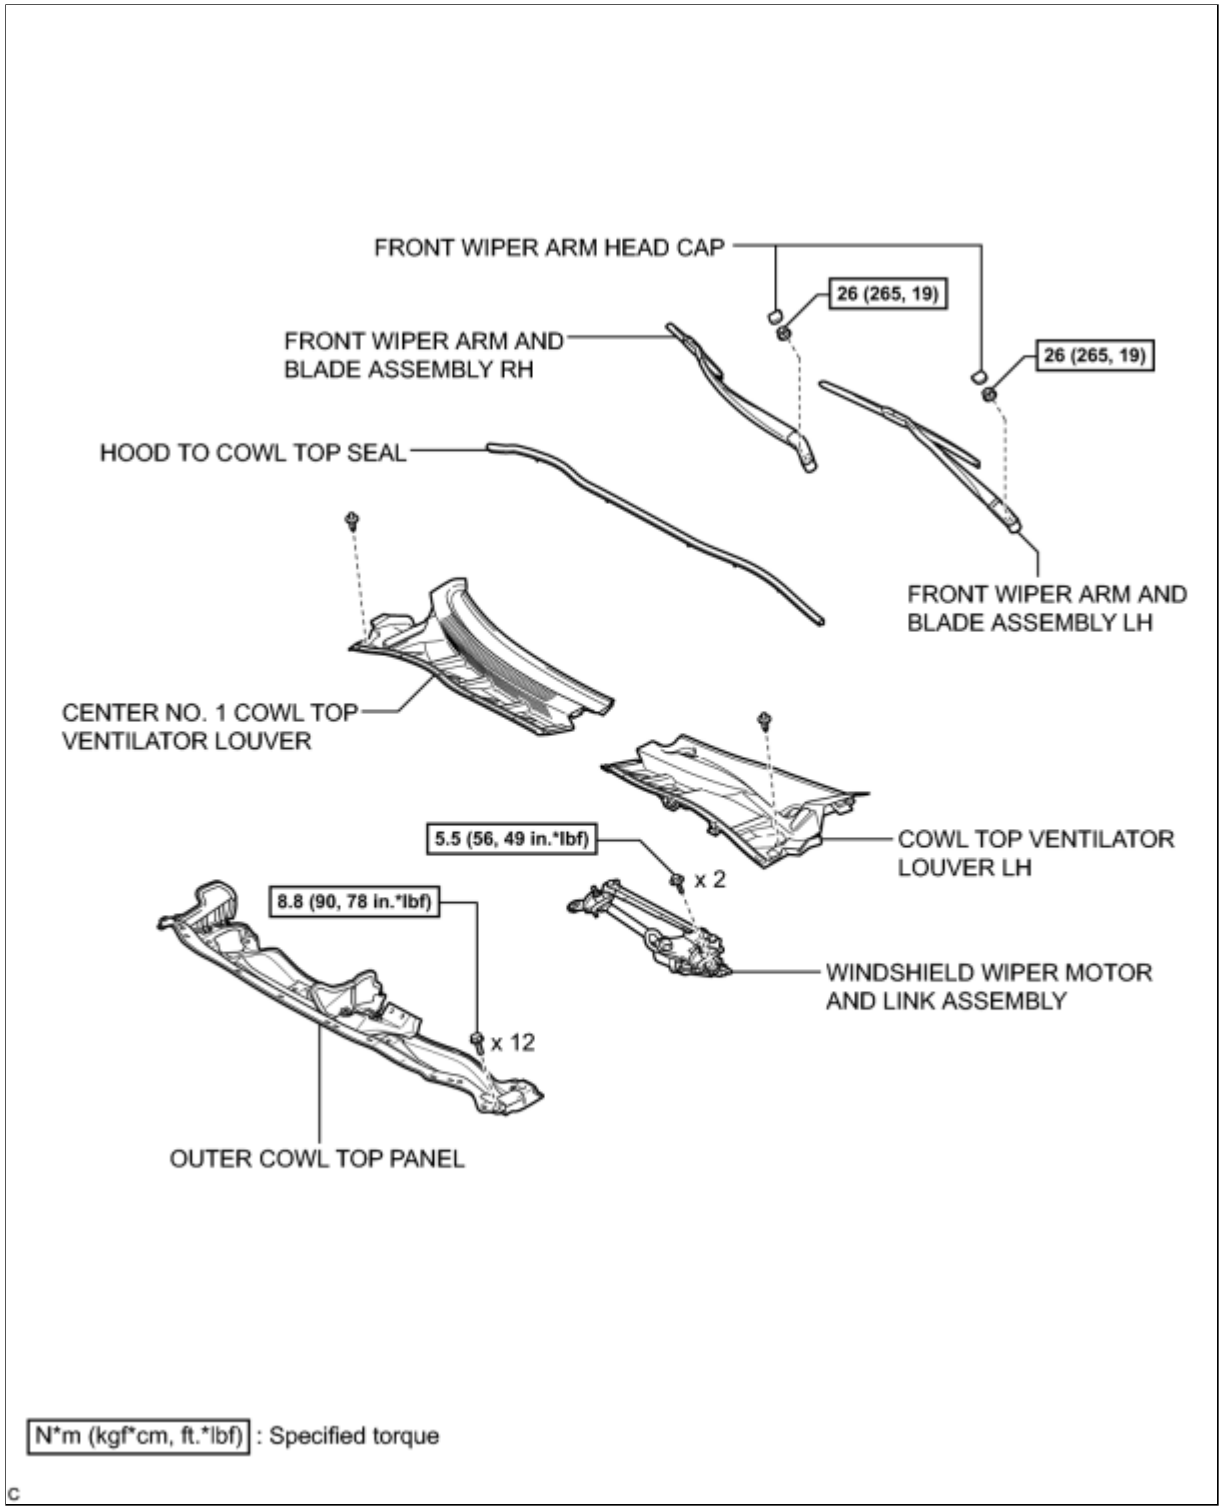
(a) Using the reference point, install the air mix control servo motor with the 2 screws.

(b) Connect the connector.

16. INSTALL AIR OUTLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

(a) Using the reference point, install the air outlet control servo motor with the 3 screws.

(b) Connect the connector.



17. INSTALL IMMOBILISER CODE ECU (w/ Smart Key System) INFO

18. INSTALL TRANSPONDER KEY ECU (w/o Smart Key System) INFO

Title: HEATING / AIR CONDITIONING: AIR INLET CONTROL SERVO MOTOR: REMOVAL (2010 Corolla)		

REMOVAL

1. PRECAUTION

INFO

2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO **.**

HINT:

Before disconnecting the cable, set the air conditioning control switch to DEF-MODE. (for Automatic Air Conditioning System)

4. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM INFO

5. REMOVE FRONT WIPER ARM HEAD CAP INFO

6. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH INFO

7. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH INFO

8. REMOVE HOOD TO COWL TOP SEAL INFO

9. REMOVE CENTER NO. 1 COWL TOP VENTILATOR LOUVER INFO

10. REMOVE COWL TOP VENTILATOR LOUVER LH INFO

11. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY INFO

12. REMOVE OUTER COWL TOP PANEL (for TMC Made) INFO

13. REMOVE OUTER COWL TOP PANEL (except TMC Made) INFO

14. DISCONNECT SUCTION PIPE SUB-ASSEMBLY INFO

15. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY INFO

16. DISCONNECT HEATER WATER HOSE OUTLET INFO

17. DISCONNECT HEATER WATER HOSE INLET INFO

18. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

19. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

20. REMOVE INSTRUMENT PANEL FINISH PANEL END LH INFO

21. REMOVE INSTRUMENT PANEL FINISH PANEL END RH INFO

22. REMOVE CENTER INSTRUMENT PANEL REGISTER ASSEMBLY INFO

23. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

24. REMOVE COMBINATION METER ASSEMBLY INFO

25. REMOVE FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

26. REMOVE FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

27. REMOVE FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag) INFO

28. REMOVE FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

29. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

30. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

31. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY INFO

32. REMOVE NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY INFO

33. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH INFO

34. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

35. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY INFO

36. REMOVE POWER STEERING ECU ASSEMBLY (for 2ZR-FE) INFO

37. REMOVE POWER STEERING ECU ASSEMBLY (for 2AZ-FE) INFO

38. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

39. REMOVE LOWER NO. 3 STEERING WHEEL COVER INFO

40. REMOVE LOWER NO. 2 STEERING WHEEL COVER INFO

41. REMOVE STEERING PAD INFO

42. REMOVE STEERING WHEEL ASSEMBLY INFO

43. REMOVE LOWER STEERING COLUMN COVER INFO

44. REMOVE UPPER STEERING COLUMN COVER INFO

45. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY INFO

46. REMOVE COLUMN HOLE COVER SILENCER SHEET INFO

47. SEPARATE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

48. REMOVE INSTRUMENT PANEL SUB REINFORCEMENT INFO

49. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY INFO

50. REMOVE TRANSPONDER KEY AMPLIFIER (w/ Smart Key System) INFO

51. REMOVE STOP LIGHT SWITCH ASSEMBLY INFO

52. REMOVE STEERING POST ASSEMBLY (for 2ZR-FE) INFO

53. REMOVE STEERING POST ASSEMBLY (for 2AZ-FE) INFO

54. REMOVE RADIO RECEIVER WITH BRACKET (w/o Navigation System) INFO

55. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Navigation System) INFO

56. REMOVE NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) INFO

57. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) INFO

58. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) INFO

59. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

60. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

61. REMOVE INSTRUMENT PANEL BOX ASSEMBLY INFO

62. REMOVE INSTRUMENT PANEL HOLE COVER INFO

63. REMOVE AIR CONDITIONING PANEL ASSEMBLY (for Manual Air Conditioning System) INFO

64. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (for Automatic Air Conditioning System) INFO

65. REMOVE FRONT DOOR SCUFF PLATE LH INFO

66. REMOVE COWL SIDE TRIM BOARD LH INFO

67. REMOVE FRONT NO. 1 CONSOLE BOX INSERT INFO

68. REMOVE NO. 1 SWITCH HOLE BASE (w/o Smart Key System) INFO

69. REMOVE NO. 1 SWITCH HOLE BASE (w/ Smart Key System) INFO

70. REMOVE FRONT DOOR SCUFF PLATE RH INFO

71. REMOVE COWL SIDE TRIM BOARD RH INFO

72. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO

73. REMOVE FRONT NO. 2 CONSOLE BOX INSERT INFO

74. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

75. REMOVE CONSOLE BOX CARPET INFO

76. REMOVE CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

77. REMOVE CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

78. REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY INFO

79. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY INFO

80. REMOVE SMART KEY ECU ASSEMBLY (w/ Smart Key System) INFO

81. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY INFO

82. REMOVE LOWER DEFROSTER NOZZLE ASSEMBLY INFO

83. REMOVE CENTER INSTRUMENT PANEL TO COWL BRACE INFO

84. REMOVE REAR NO. 2 AIR DUCT (w/ Rear Air Duct) INFO

85. REMOVE REAR NO. 3 AIR DUCT (w/ Rear Air Duct) INFO

86. REMOVE NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Manual Air Conditioning System) INFO

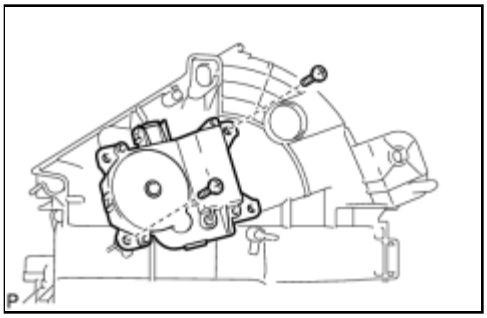
87. REMOVE NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Automatic Air Conditioning System) INFO

88. REMOVE NO. 2 INSTRUMENT PANEL BRACE SUB-ASSEMBLY INFO

89. REMOVE REAR NO. 1 AIR DUCT (w/ Rear Air Duct) INFO

90. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Manual Air Conditioning System) INFO

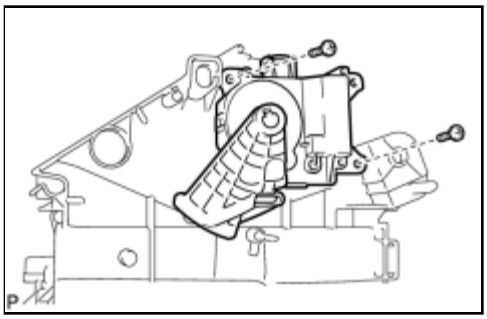
91. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Automatic Air Conditioning System) INFO



92. REMOVE AIR CONDITIONING UNIT INFO

93. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY INFO

94. REMOVE BLOWER ASSEMBLY (w/o PTC Heater) INFO

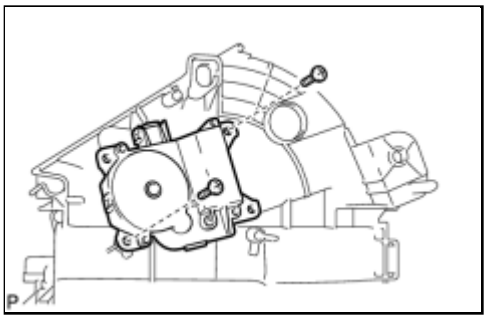


95. REMOVE BLOWER ASSEMBLY (w/ PTC Heater) INFO

96. REMOVE AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)

(a) Remove the 2 screws and the air inlet control servo motor.

97. REMOVE AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)



(a) Remove the 2 screws and the air inlet control servo motor.

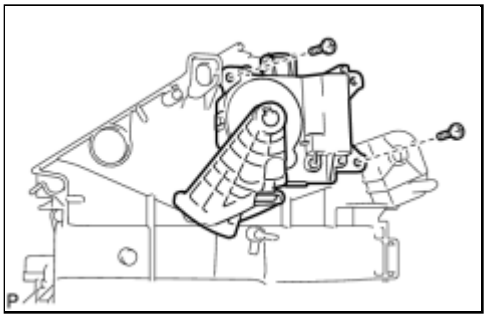
Title: HEATING / AIR CONDITIONING: AIR INLET CONTROL SERVO MOTOR: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)

(a) Install the air inlet control servo motor with the 2 screws.

2. INSTALL AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)

(a) Install the air inlet control servo motor with the 2 screws.

3. INSTALL BLOWER ASSEMBLY (w/o PTC Heater) INFO

4. INSTALL BLOWER ASSEMBLY (w/ PTC Heater) INFO

5. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY INFO

6. TEMPORARILY TIGHTEN AIR CONDITIONING UNIT INFO

7. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Manual Air Conditioning System) INFO

8. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (for Automatic Air Conditioning System) INFO

9. INSTALL AIR CONDITIONING UNIT INFO

10. REMOVE REAR NO. 1 AIR DUCT (w/ Rear Air Duct) INFO

11. INSTALL NO. 2 INSTRUMENT PANEL BRACE SUB-ASSEMBLY INFO

12. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Manual Air Conditioning System) INFO

13. INSTALL NO. 1 INSTRUMENT PANEL BRACE SUB-ASSEMBLY (for Automatic Air Conditioning System) INFO

14. INSTALL REAR NO. 3 AIR DUCT (w/ Rear Air Duct) INFO

15. INSTALL REAR NO. 2 AIR DUCT (w/ Rear Air Duct) INFO

16. INSTALL CENTER INSTRUMENT PANEL TO COWL BRACE INFO

17. INSTALL LOWER DEFROSTER NOZZLE ASSEMBLY INFO

18. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY INFO

19. INSTALL SMART KEY ECU ASSEMBLY (w/ Smart Key System) INFO

20. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY INFO

21. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY INFO

22. INSTALL CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

23. INSTALL CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

24. INSTALL CONSOLE BOX CARPET INFO

25. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

26. INSTALL NO. 1 SWITCH HOLE BASE (w/o Smart Key System) INFO

27. INSTALL NO. 1 SWITCH HOLE BASE (w/ Smart Key System) INFO

28. INSTALL FRONT NO. 1 CONSOLE BOX INSERT INFO

29. INSTALL COWL SIDE TRIM BOARD LH INFO

30. INSTALL FRONT DOOR SCUFF PLATE LH INFO

31. INSTALL FRONT NO. 2 CONSOLE BOX INSERT INFO

32. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO

33. INSTALL COWL SIDE TRIM BOARD RH INFO

34. INSTALL FRONT DOOR SCUFF PLATE RH INFO

35. INSTALL AIR CONDITIONING PANEL ASSEMBLY (for Manual Air Conditioning System)

INFO

36. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (for Automatic Air Conditioning System) INFO

37. INSTALL INSTRUMENT PANEL HOLE COVER INFO

38. INSTALL INSTRUMENT PANEL BOX ASSEMBLY INFO

39. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

40. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

41. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) INFO

42. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) INFO

43. INSTALL RADIO RECEIVER WITH BRACKET (w/o Navigation System) INFO

44. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Navigation System) INFO

45. INSTALL NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) INFO

46. INSTALL STEERING POST ASSEMBLY (for 2ZR-FE) INFO

47. INSTALL STEERING POST ASSEMBLY (for 2AZ-FE) INFO

48. TURN FRONT WHEELS FACING STRAIGHT AHEAD

49. CONNECT NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY INFO

50. INSTALL STOP LIGHT SWITCH ASSEMBLY INFO

51. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY INFO

Title: HEATING / AIR CONDITIONING: AIR INLET CONTROL SERVO MOTOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT RECIRCULATION DAMPER SERVO MOTOR (for Manual Air Conditioning System)

(a) Disconnect the connector from the recirculation damper servo motor.

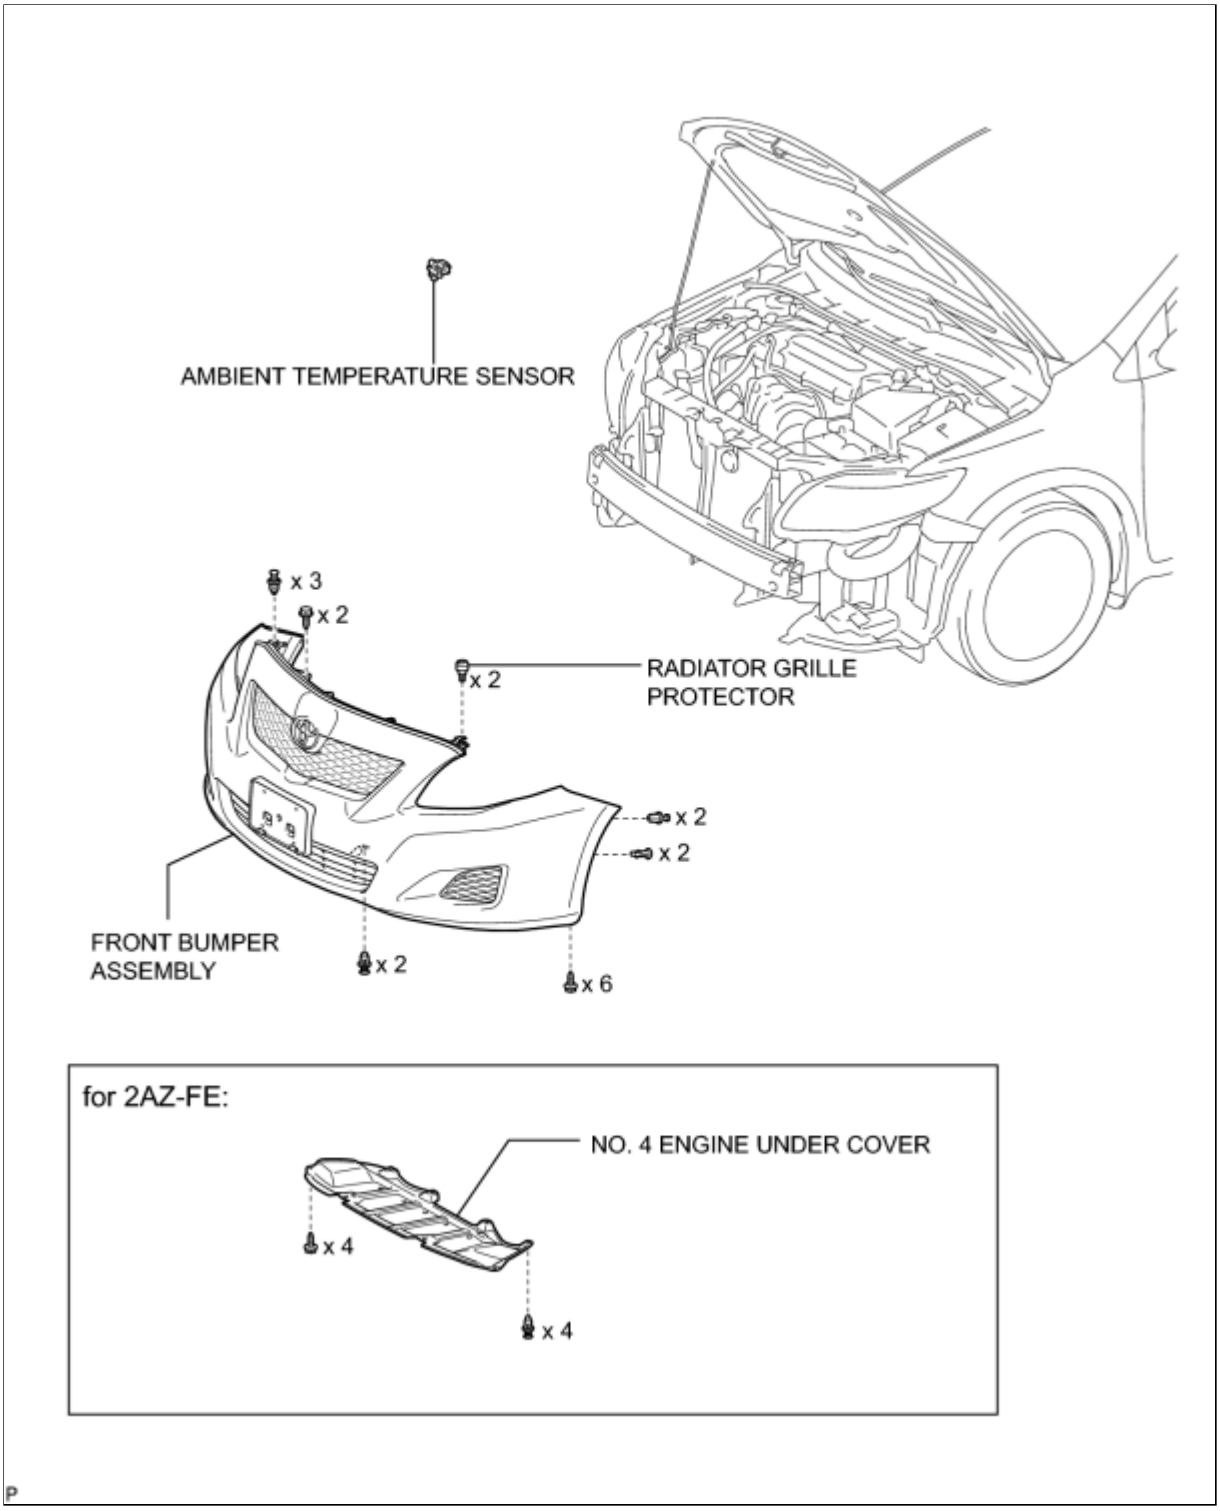
(b) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 2, then check that the arm turns to the "FRESH" side smoothly.

OK:

Lever turns to "FRESH" side smoothly.

(c) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 1, then check that the arm turns to the "RECIRCULATION" side smoothly.

OK:



Lever turns to "RECIRCULATION" side smoothly.

If the result is not as specified, replace the recirculation damper servo motor.

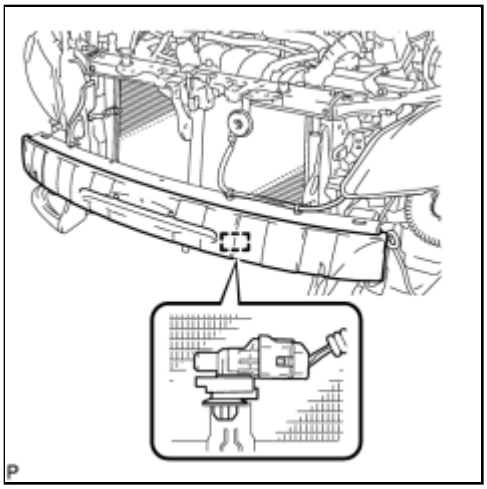
Title: HEATING / AIR CONDITIONING: AMBIENT TEMPERATURE SENSOR: REMOVAL (2010 Corolla)		



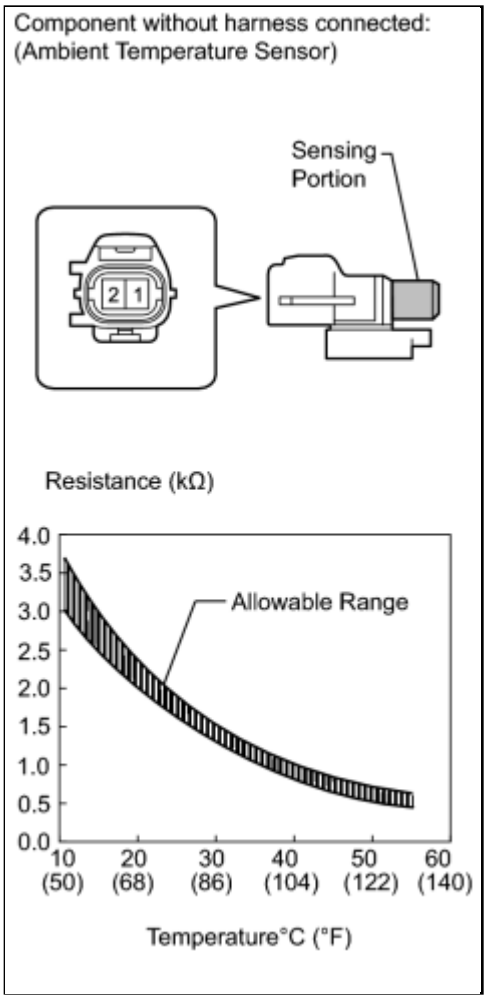
REMOVAL

1. REMOVE RADIATOR GRILLE PROTECTOR INFO

2. REMOVE NO. 4 ENGINE UNDER COVER (for 2AZ-FE) INFO

3. REMOVE FRONT BUMPER ASSEMBLY INFO

4. REMOVE AMBIENT TEMPERATURE SENSOR



(a) Disconnect the connector.

(b) Disengage the clamp and the ambient temperature sensor.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000201P020X
Title: HEATING / AIR CONDITIONING: AMBIENT TEMPERATURE SENSOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT AMBIENT TEMPERATURE SENSOR

(a) Disconnect the connector from the ambient temperature sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

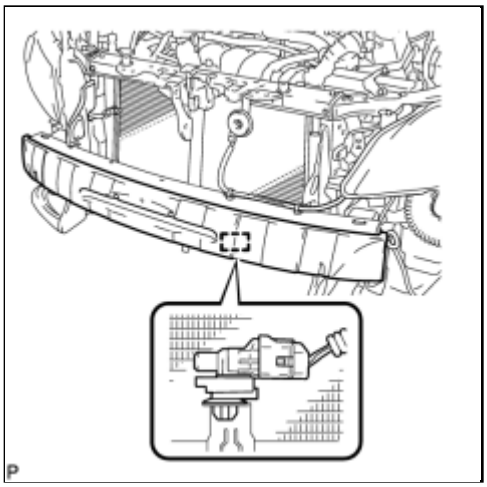
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:



As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the ambient temperature sensor.

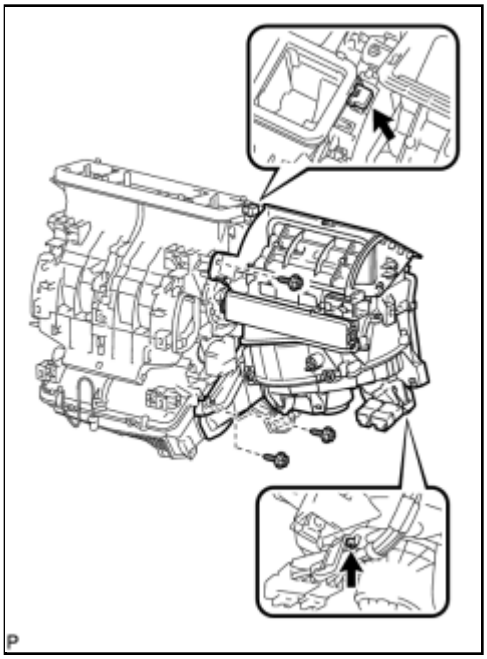
(a) for Automatic Air Conditioning System:

(1) Disconnect the connector.



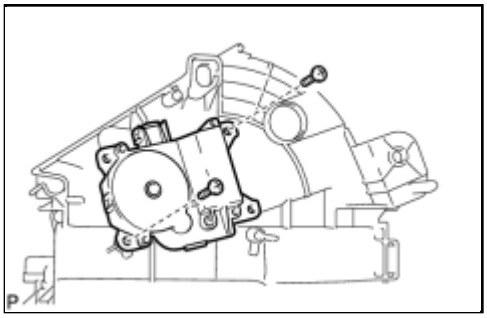
(b) Remove the 3 screws and the blower assembly.

95. REMOVE BLOWER ASSEMBLY (w/ PTC Heater)

(a) Disengage each clamp.

(b) Remove the screw and disengage the quick heater connector.

(c) for Automatic Air Conditioning System:



(1) Disconnect the connector.

(d) Remove the 3 screws and the blower assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

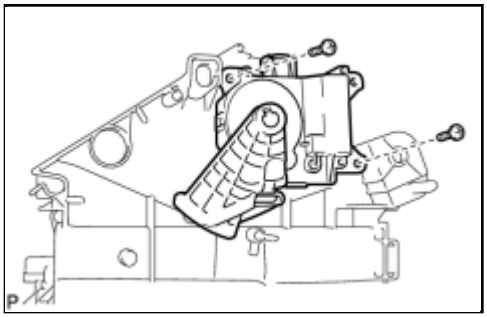
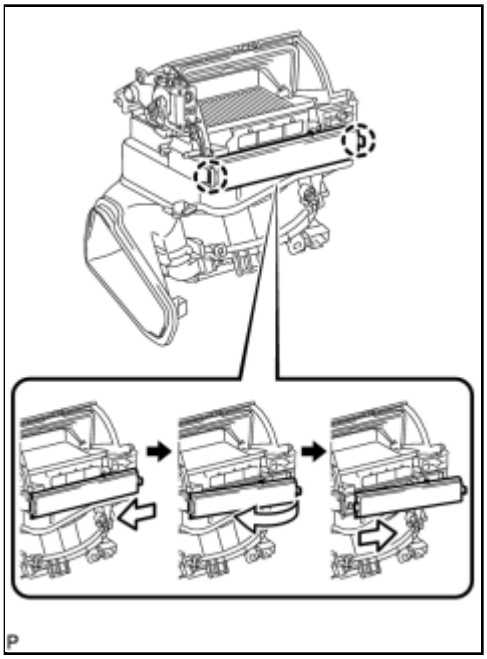
Title: HEATING / AIR CONDITIONING: BLOWER UNIT: DISASSEMBLY (2010 Corolla)		



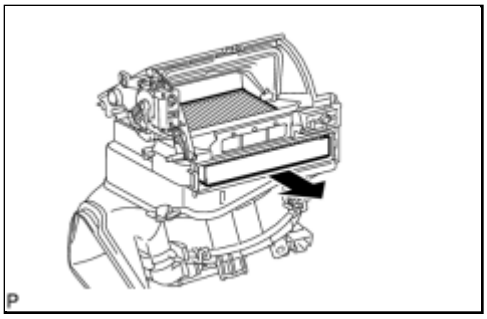
DISASSEMBLY

1. REMOVE AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)

(a) Remove the 2 screws and the air inlet control servo motor.



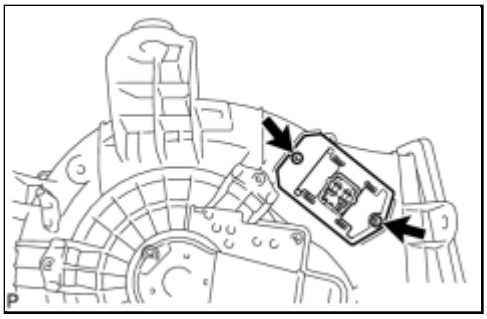
2. REMOVE AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)



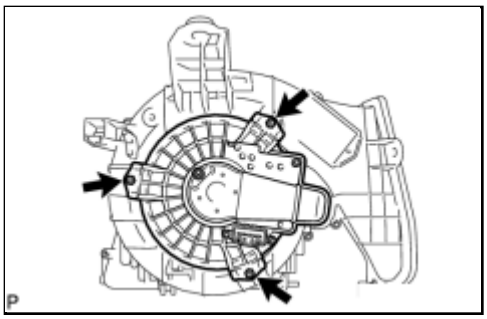
(a) Remove the 2 screws and the air inlet control servo motor.

3. REMOVE AIR FILTER CASE

(a) Disengage the 2 claws and remove the air filter case as shown in the illustration.



4. REMOVE CLEAN AIR FILTER

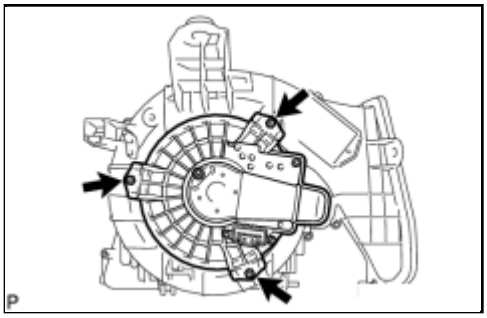


(a) Remove the clean air filter as shown in the illustration.

5. REMOVE BLOWER RESISTOR (for Manual Air Conditioning System)

(a) Remove the 2 screws and the blower resistor.

6. REMOVE BLOWER MOTOR SUB-ASSEMBLY



(a) Remove the 3 screws and the blower motor sub-assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

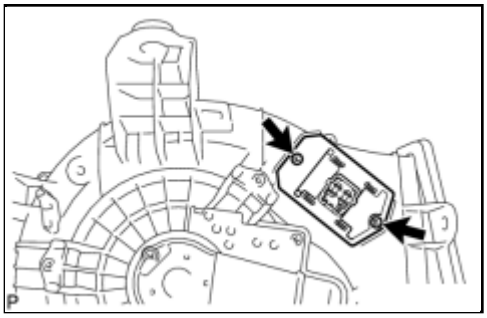
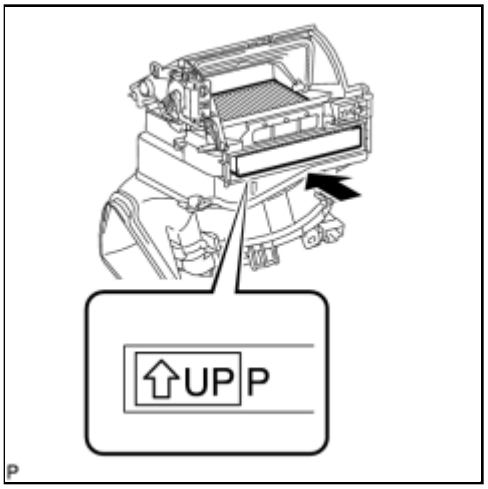
Title: HEATING / AIR CONDITIONING: BLOWER UNIT: REASSEMBLY (2010 Corolla)		



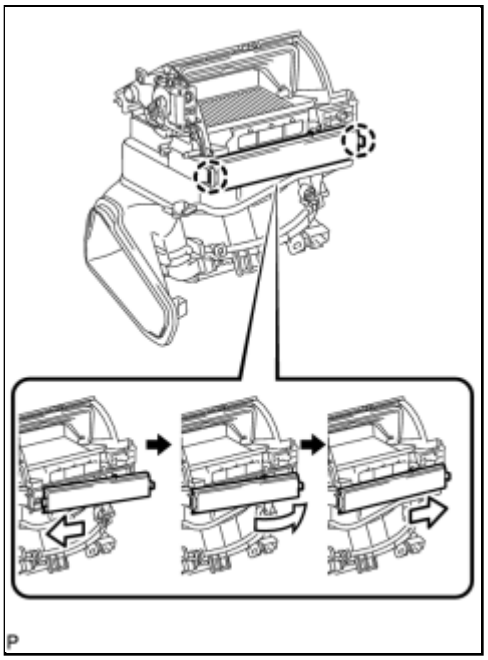
REASSEMBLY

1. INSTALL BLOWER MOTOR SUB-ASSEMBLY

(a) Install the blower motor sub-assembly with the 3 screws.



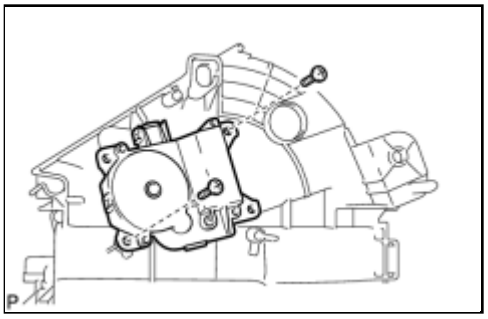
2. INSTALL BLOWER RESISTOR



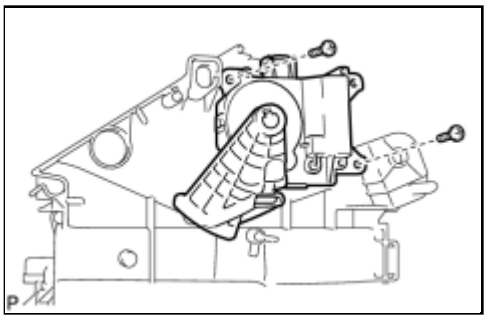
(a) Install the blower resistor with the 2 screws.

3. INSTALL CLEAN AIR FILTER

(a) Install the clean air filter as shown in the illustration.



4. INSTALL AIR FILTER CASE

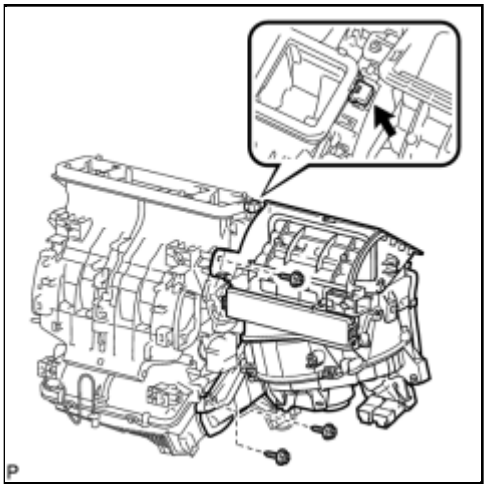


(a) Engage the 2 claws and install the air filter case as shown in the illustration.

5. INSTALL AIR INLET CONTROL SERVO MOTOR (for Manual Air Conditioning System)

(a) Install the air inlet control servo motor with the 2 screws.

6. INSTALL AIR INLET CONTROL SERVO MOTOR (for Automatic Air Conditioning System)



(a) Install the air inlet control servo motor with the 2 screws.

Title: HEATING / AIR CONDITIONING: COMPRESSOR (for 2AZ-FE): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT COMPRESSOR FOR METALLIC SOUND

(a) Check if there is abnormal metallic sound from the compressor when the A/C switch is on and the compressor operates.

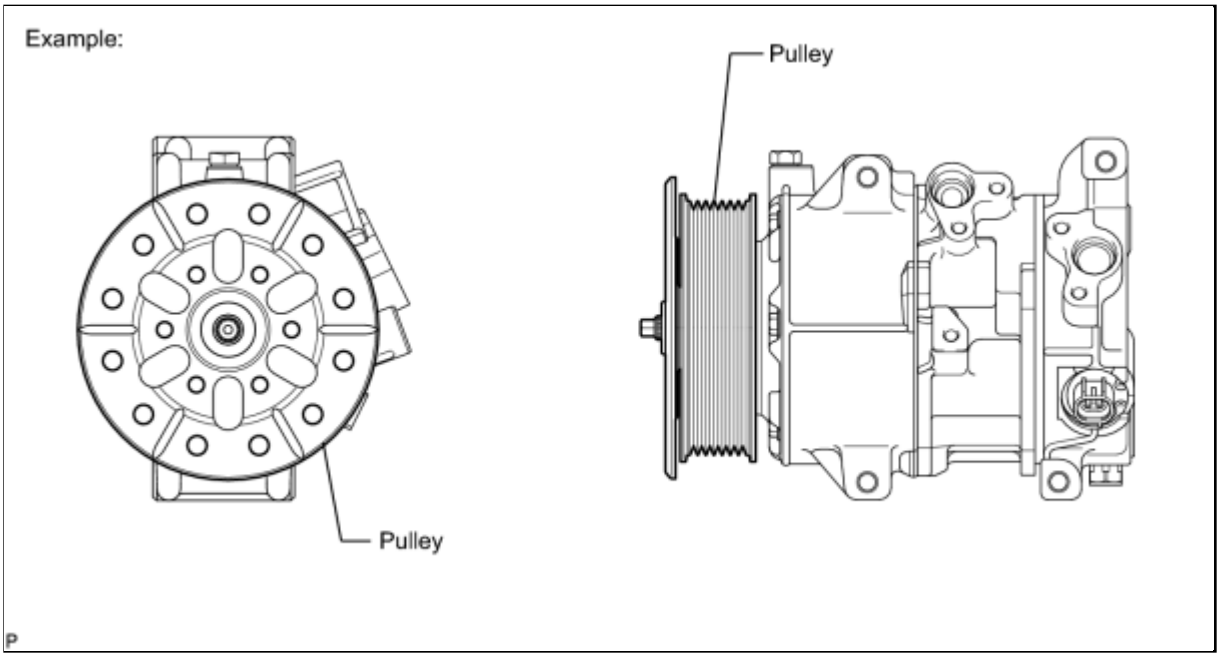
If abnormal metallic sound is heard, replace the compressor and pulley.

2. INSPECT REFRIGERANT PRESSURE

(a) Inspect the refrigerant pressure INFO .

3. INSPECT FOR LEAKAGE OF REFRIGERANT

(a) Using a gas leak detector, check for leakage of refrigerant.



If there is any leakage, replace the compressor and pulley.

4. INSPECT COMPRESSOR AND PULLEY

(a) Check operation of compressor and pulley.

(1) Start the engine.

(2) Inspect the compressor pulley.

Standard:

The compressor shaft rotates along with the pulley.

If the result is not as specified, replace the compressor and pulley.

Last Modified: 3-10-2010	6.4 A	**From:** 200901

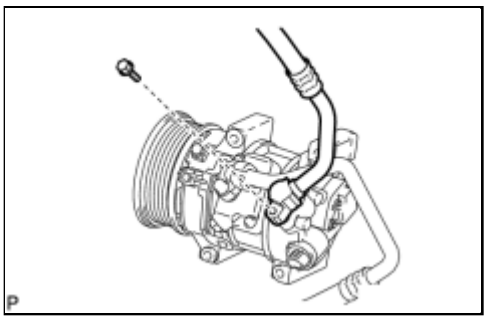
Title: HEATING / AIR CONDITIONING: COMPRESSOR (for 2AZ-FE): REMOVAL (2010 Corolla)		



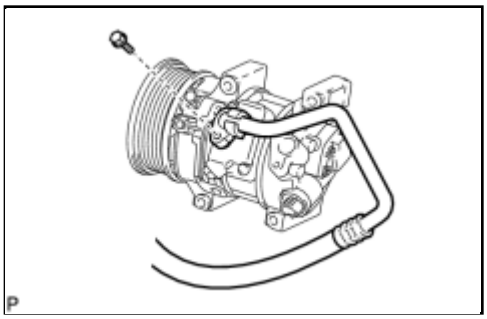
REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM INFO

2. REMOVE ENGINE UNDER COVER RH

3. REMOVE V-RIBBED BELT INFO

4. DISCONNECT SUCTION HOSE SUB-ASSEMBLY



(a) Remove the bolt and disconnect the suction hose sub-assembly from the compressor assembly with pulley.

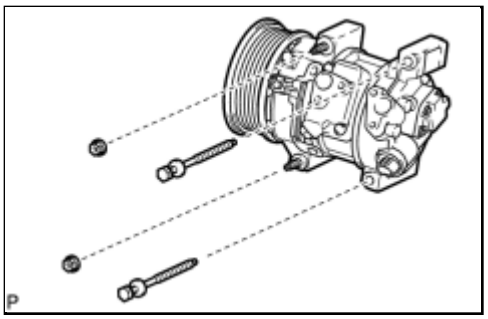
(b) Remove the O-ring from the suction hose sub-assembly.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

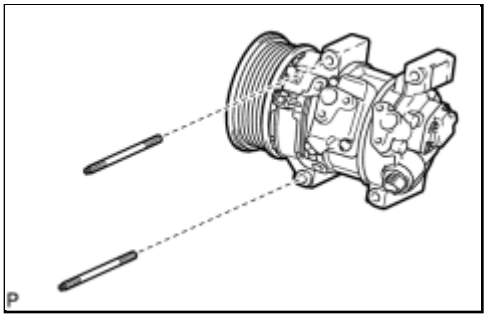
5. DISCONNECT DISCHARGE HOSE SUB-ASSEMBLY

(a) Remove the bolt and disconnect the discharge hose sub-assembly from the compressor assembly with pulley.



(b) Remove the O-ring from the discharge hose sub-assembly.

NOTICE:

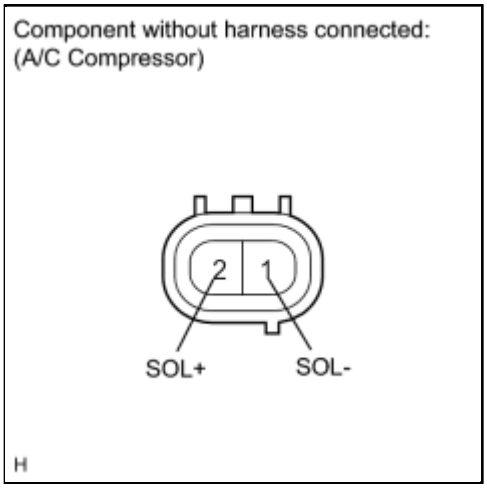


Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

6. REMOVE COMPRESSOR ASSEMBLY WITH PULLEY

(a) Disconnect the connector.

(b) Remove the 2 bolts and the 2 nuts.



(c) Using a "TORX" socket wrench (E8), remove the 2 stud bolts and the compressor assembly with pulley.

Last Modified: 3-10-2010	6.4 G	**From:** 200901

Title: HEATING / AIR CONDITIONING: COMPRESSOR (for 2AZ-FE): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT COMPRESSOR AND PULLEY (A/C COMPRESSOR)

(a) Disconnect the connector from the compressor and pulley.

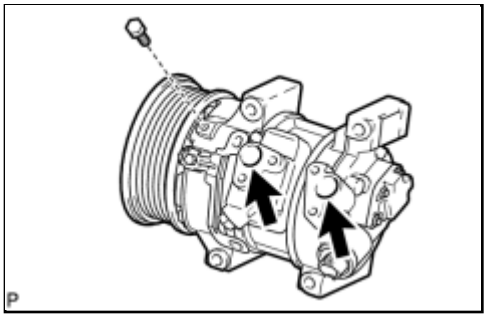
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (SOL+) - 1 (SOL-)	20°C (68°F)	10 to 11 Ω

If the resistance is not as specified, replace the compressor and pulley.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XUK00YX
Title: HEATING / AIR CONDITIONING: COMPRESSOR (for 2AZ-FE): INSTALLATION (2010 Corolla)		



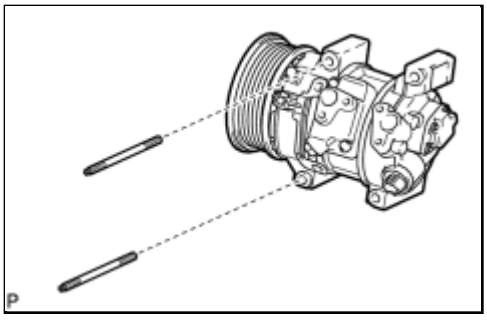
INSTALLATION

1. ADJUST COMPRESSOR OIL LEVEL

(a) When replacing the cooler compressor assembly with a new one, gradually discharge the inert gas (helium) from the service valve, and drain the following amount of oil from the vents indicated by the arrows in the illustration before installation.

HINT:

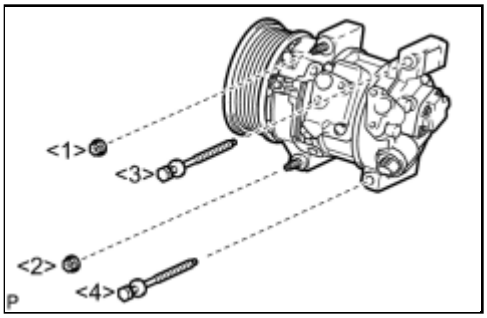
The drain bolt and washer can be reused.



Standard:
(Oil capacity inside the new compressor: 90 + 15 cc (3 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- If a new compressor is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be excessive. This prevents heat exchange in the refrigerant cycle and causes refrigeration system failure.
- If the volume of oil remaining in the removed compressor is too small, check for oil leaks.
- Be sure to use ND-OIL 8 or equivalent for compressor oil.



2. INSTALL COMPRESSOR ASSEMBLY WITH PULLEY

(a) Using a "TORX" socket wrench (E8), install the compressor assembly with pulley with the 2 stud bolts.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

(b) Install the compressor assembly with pulley with the 2

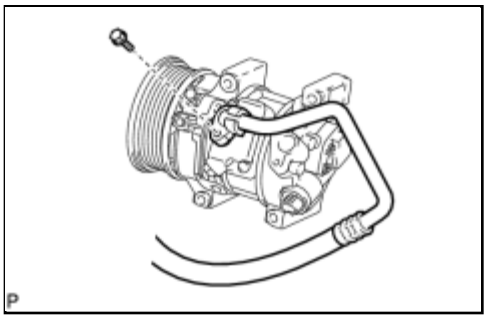
bolts and the 2 nuts.

HINT:

Tighten the bolts and the nuts in the order shown in the illustration.

Torque: 25 N·m (255 kgf·cm, 18ft·lbf)

(c) Connect the connector.



3. CONNECT DISCHARGE HOSE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.

(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor assembly with pulley.

Compressor oil:
ND-OIL 8 or equivalent

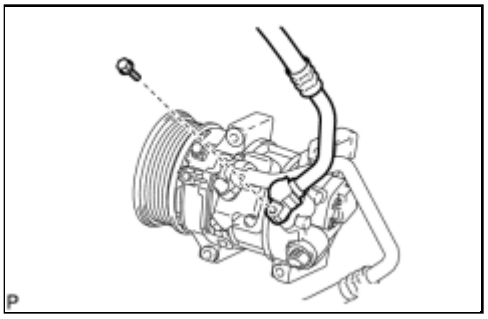
(c) Install the O-ring onto the discharge hose sub-assembly.

(d) Install the discharge hose sub-assembly onto the compressor assembly with pulley with the bolt.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

4. CONNECT SUCTION HOSE SUB-ASSEMBLY

(a) Remove the attached vinyl tape from the hose.



(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the compressor assembly with pulley.

Compressor oil:
ND-OIL 8 or equivalent

(c) Install the O-ring onto the suction hose sub-assembly.

(d) Install the suction hose sub-assembly onto the compressor assembly with pulley with the bolt.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

5. INSTALL V-RIBBED BELT INFO

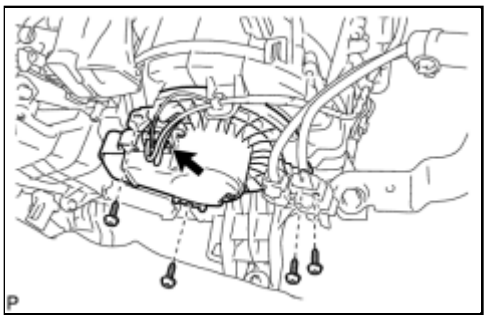
Title: HEATING / AIR CONDITIONING: FRONT BLOWER MOTOR: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO



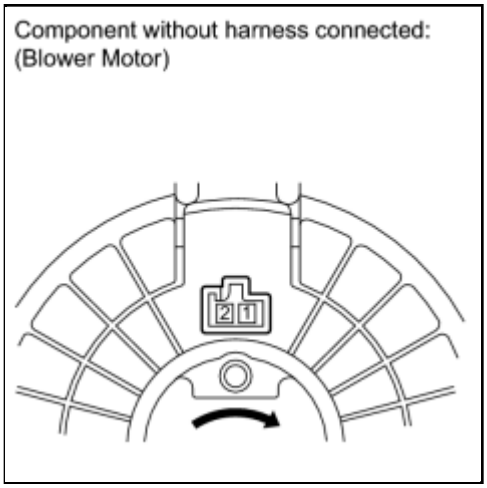
2. REMOVE BLOWER MOTOR SUB-ASSEMBLY (w/o PTC Heater)

(a) Disconnect the connector.

(b) Remove the 3 screws and the blower motor sub-assembly.

3. REMOVE BLOWER MOTOR SUB-ASSEMBLY (w/ PTC Heater)

(a) Remove the quick heater connector screw.



(b) Disconnect the connector.

(c) Remove the 4 screws and the blower motor sub-assembly.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000314T00QX
Title: HEATING / AIR CONDITIONING: FRONT BLOWER MOTOR: INSPECTION (2010 Corolla)		

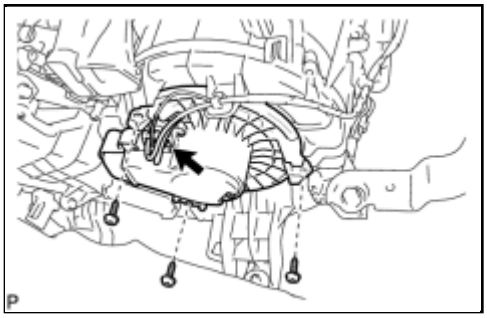
INSPECTION

1. INSPECT BLOWER MOTOR (for Manual Air Conditioning System)

(a) Disconnect the connector from the blower motor.

(b) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead from the battery to terminal 1, and check that the motor operates.

OK:

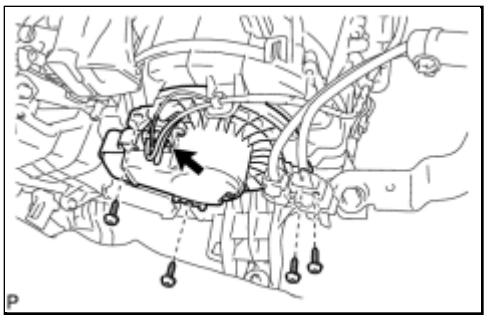


The blower motor operates smoothly.

If the result is not as specified, replace the blower motor.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XU700FX
Title: HEATING / AIR CONDITIONING: FRONT BLOWER MOTOR: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL BLOWER MOTOR SUB-ASSEMBLY (w/o PTC Heater)

(a) Install the blower motor sub-assembly with the 3 screws.

(b) Connect the connector.

2. INSTALL BLOWER MOTOR SUB-ASSEMBLY (w/ PTC Heater)

(a) Install the blower motor sub-assembly with the 3 screws.

(b) Connect the connector.

(c) Install the quick heater connector screw.

3. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover) INFO

Title: HEATING / AIR CONDITIONING: FRONT EVAPORATOR TEMPERATURE SENSOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT EVAPORATOR TEMPERATURE SENSOR

(a) Disconnect the connector from the evaporator temperature sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ

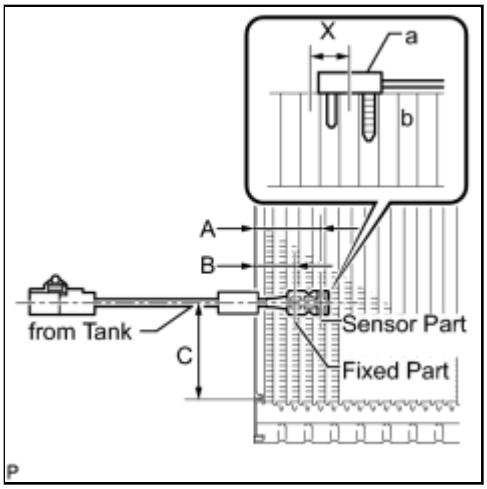
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:

As the temperature increases, the resistance decreases (see the graph).



If the resistance is not as specified, replace the evaporator temperature sensor.

Title: HEATING / AIR CONDITIONING: FRONT EVAPORATOR TEMPERATURE SENSOR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL NO. 1 COOLER THERMISTOR

(a) Install the No. 1 cooler thermistor as shown in the illustration.

PART	LENGTH	
A	34.3 mm	1.35 in.
B	20.9 mm	0.823 in.
C	50 mm	1.96 in.

NOTICE:

- Be sure to insert the thermistor only once because reinserting it will not allow it to be firmly secured.
- When reusing the evaporator, insert the thermistor one row next to the one that has been used previously (X in the illustration).
- After inserting the thermistor, do not apply excessive force to the wire.
- Directly insert the thermistor until the edge of plastic case "a" comes into contact with evaporator "b".

2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY INFO

Title: HEATING / AIR CONDITIONING: PTC HEATER ASSEMBLY: INSPECTION (2010 Corolla)		

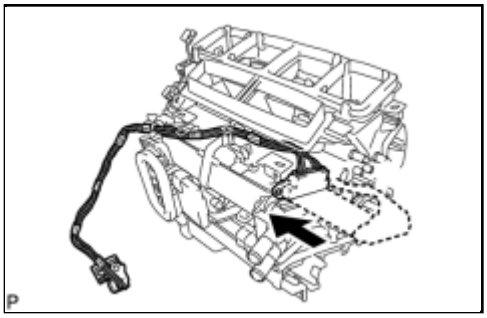
INSPECTION

1. INSPECT PTC HEATER

(a) Disconnect the connector from the PTC heater.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A-1 (B) - B-1 (E)	Always	Below 1 Ω
A-3 (B) - B-2 (E)	Always	Below 1 Ω

If the resistance is not as specified, replace the PTC heater.

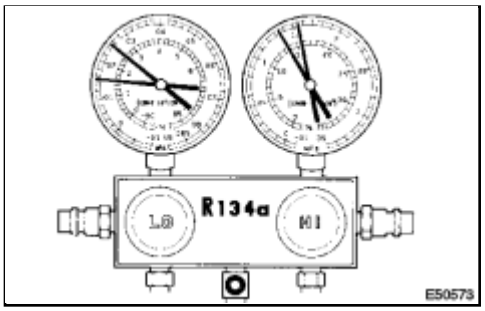
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000114701QX
Title: HEATING / AIR CONDITIONING: REFRIGERANT: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

HINT:



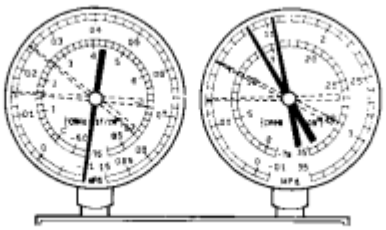
This is a method where a manifold gauge set is used to help locate the problem.

(a) Read the manifold gauge pressure when the following conditions are established.

Test conditions:

- Temperature at the air inlet with the switch set at RECIRC is 30 to 35°C (86 to 95°F).
- Engine is running at 1500 rpm.
- Blower speed control switch is at "HI".
- Temperature control dial is at "COOL".
- A/C switch is ON.
- Doors are fully open.

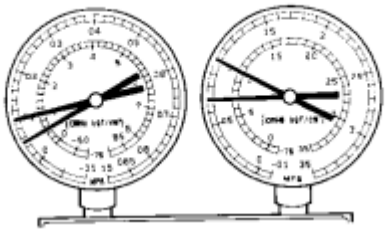
(1) Normally functioning refrigeration system



Gauge Reading

PRESSURE SIDE	REFRIGERANT VOLUME
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2, 21 to 36 psi)
High	1.37 to 1.57 MPa (13.9 to 16.0 kgf/cm^2, 198 to 227 psi)

(2) Moisture is present in refrigeration system.

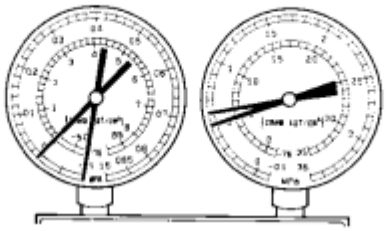


Condition:
Periodically cools and then fails to cool.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
During operation, pressure on low pressure side cycles between normal and vacuum	• Moisture in the A/C system will freeze at the expansion valve orifice, causing the refrigeration cycle to temporarily stop • After the system stops, and warms up again, the ice will melt and normal operation will be temporarily restored	• Cooler dryer (integrated into the condenser tank) in oversaturated state • Moisture in the refrigeration system freezes at the expansion valve orifice and blocks circulation of refrigerant	1. Replace the cooler dryer 2. Remove moisture in the system by repeatedly evacuating air 3. Supply a proper amount of new refrigerant

(3) Insufficient cooling

Condition: Cooling system does not function effectively.

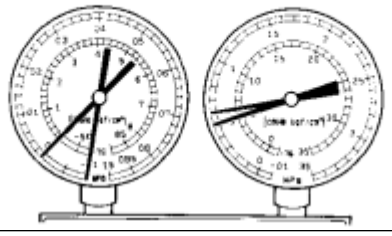


I22118

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Pressure is low on both low and high pressure sides • Insufficient cooling performance	Gas leakage from the refrigeration system	• Insufficient refrigerant • Refrigerant leaking	1. Check for gas leaks and repair if necessary 2. Supply a proper amount of new refrigerant 3. If the gauge indicates a pressure of close to 0, then it will be necessary to evacuate the system after repairing the leak

(4) Poor circulation of refrigerant

Condition: Cooling system does not function effectively.

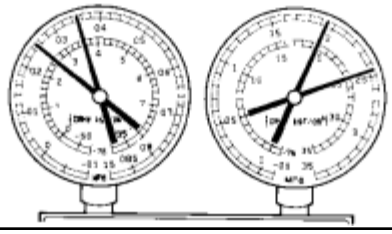


I22119

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Pressure is low on both low and high pressure sides • Frost exists on pipe from condenser to unit	Refrigerant flow is obstructed by dirt inside the pipes of the condenser core	Receiver is clogged	Replace the condenser

(5) Refrigerant does not circulate.

Condition: Cooling system does not function. (Sometimes it may function.)



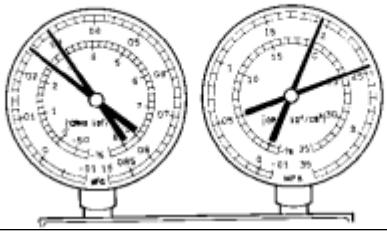
I22120

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Vacuum is indicated on low pressure side and very low pressure is indicated on high pressure side • Frost or condensation is seen on piping on both sides of receiver/drier or expansion valve	• Refrigerant flow is obstructed by moisture or dirt in the refrigeration system • Refrigerant flow is obstructed by gas leaking internally through the expansion valve	Refrigerant does not circulate	1. Check the expansion valve 2. Replace the expansion valve 3. Replace the condenser 4. Evacuate air and supply a proper amount of new refrigerant 5. For internal gas leak at the expansion valve, replace

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
			the expansion valve

(6) Refrigerant is overcharged or cooling effectiveness of the condenser is insufficient.

Condition: Cooling system does not function.

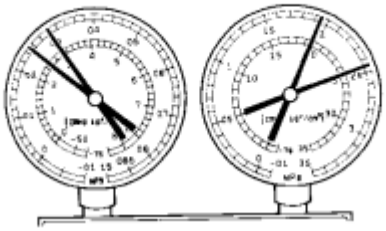


I22121

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
Pressure is too high on both low and high pressure sides	• Unable to develop sufficient performance due to an excessive use of refrigeration system • Cooling effectiveness of the condenser is insufficient	• Excessive refrigerant in cycle → excessive refrigerant was added during recharging • Condenser cooling effectiveness is insufficient → condenser fins are clogged at the cooling fan	1. Clean the condenser 2. Check the operation of the condenser cooling fan 3. If 1 and 2 are normal state, check the amount of refrigerant and supply the proper amount of refrigerant

(7) Air is present in the refrigeration system.

Condition: Cooling system does not function.



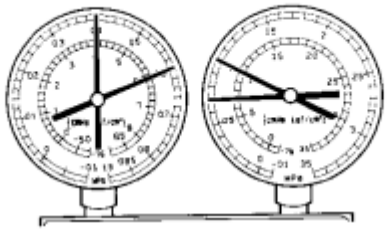
NOTE: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging.

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Pressure is too high on both low and high pressure sides • The low pressure piping is too hot to touch	Air in the system	• Air present in the refrigeration system • Insufficient vacuum purging	1. Check compressor oil to see if it is dirty or insufficient 2. Evacuate the system and recharge it with new or purified refrigerant

(8) Expansion valve malfunction

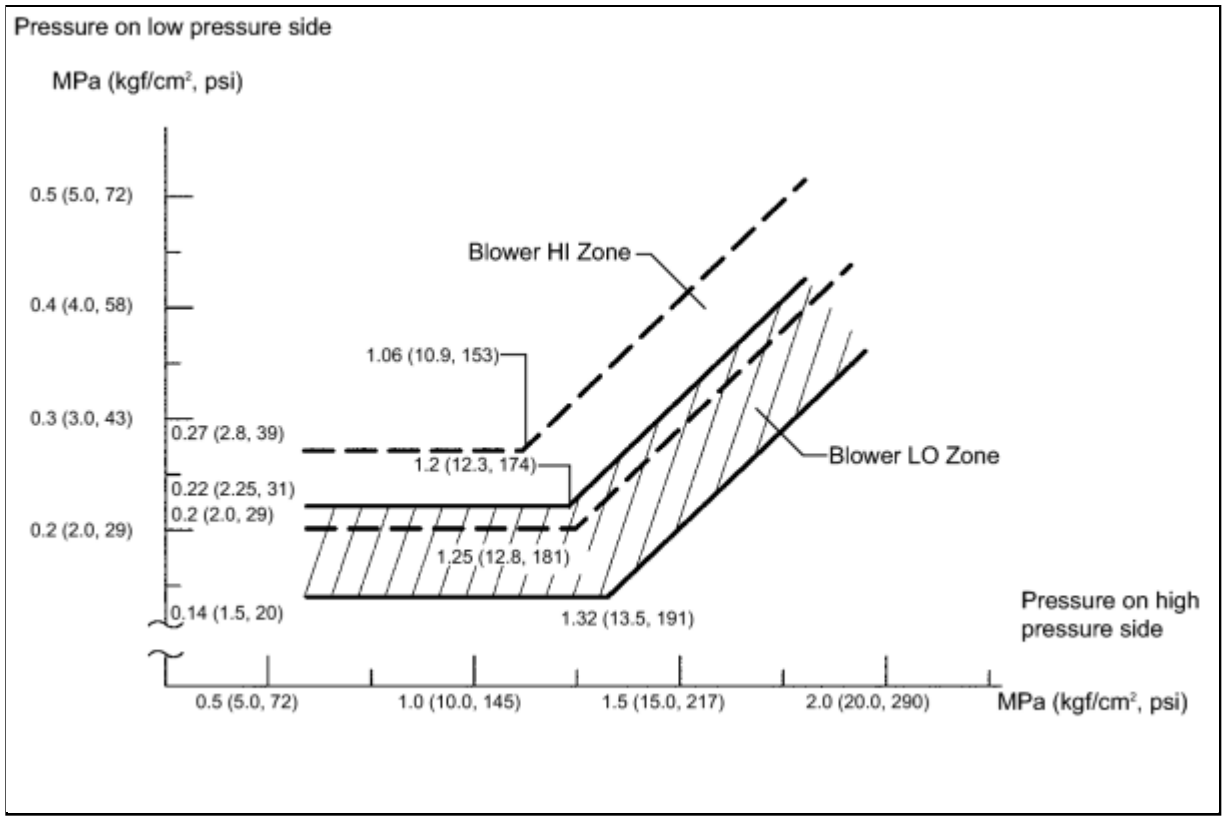
Condition: Insufficient cooling



I22128

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Pressure is too high on both low and high pressure sides • Frost or a large amount of condensation on piping on low pressure side	Expansion valve may be sticking	• Excessive refrigerant in low pressure piping • Expansion valve opened too wide	Check expansion valve

(9) Insufficient compressor compression



Condition: Insufficient cooling

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION

SYMPTOM	PROBABLE CAUSE	DIAGNOSIS	CORRECTIVE ACTION
• Pressure is too high both on low and high pressure sides • Pressure is too low on high pressure side	Internal leak in the compressor	• Low compression • Leak from a damaged valve, or parts may be broken	Replace the compressor

Gauge readings (Reference)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000114601TX
Title: HEATING / AIR CONDITIONING: REFRIGERANT: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Start up the engine.

(b) Turn the A/C switch on.

(c) Operate the cooler compressor at an engine speed of approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant. This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.

(d) Stop the engine.

(e) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. CHARGE WITH REFRIGERANT

(a) Perform vacuum purging using a vacuum pump.

(b) Charge with refrigerant HFC-134a (R134a).

Standard:
410 to 470 g (14.5 to 16.6 oz.)

SST: 09985-20010

09985-02130
09985-02150
09985-02090
09985-02110
09985-02010
09985-02050
09985-02060
09985-02070
09985-02140
09985-02080

NOTICE:

Do not turn the A/C on before charging with refrigerant. Doing so will cause the cooler compressor to work without refrigerant, resulting in overheating of the cooler compressor.

HINT:

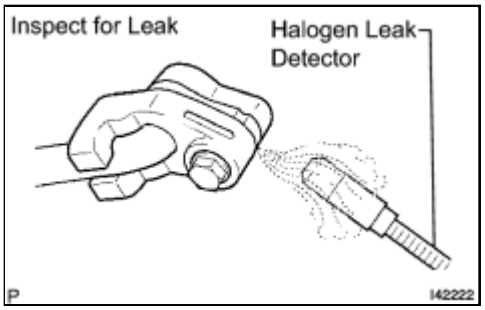
Ensure that sufficient refrigerant is available to recharge the system when using a refrigerant recovery unit. Refrigerant recovery units are not always able to recover 100% of the refrigerant from an A/C system.

3. WARM UP ENGINE

(a) Keep the A/C switch on for at least 2 minutes to warm up the compressor.

NOTICE:

Be sure to warm up the compressor when turning the A/C on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.



4. INSPECT FOR REFRIGERANT LEAK

(a) After recharging with refrigerant, inspect for refrigerant leaks using a halogen leak detector.

(b) Carry out the test under the following conditions:

- Turn the ignition switch off.
- Secure good ventilation (the halogen leak detector may react to volatile gases which are not refrigerant, such as evaporated gasoline and exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that there is some refrigerant remaining in the refrigeration system.

  When the compressor is off: approx. 392 to 588 kPa (3.9 to 5.9 kgf/cm^2, 57 to 85 psi).

(c) Using a halogen leak detector, inspect for refrigerant leaks from the refrigerant lines.

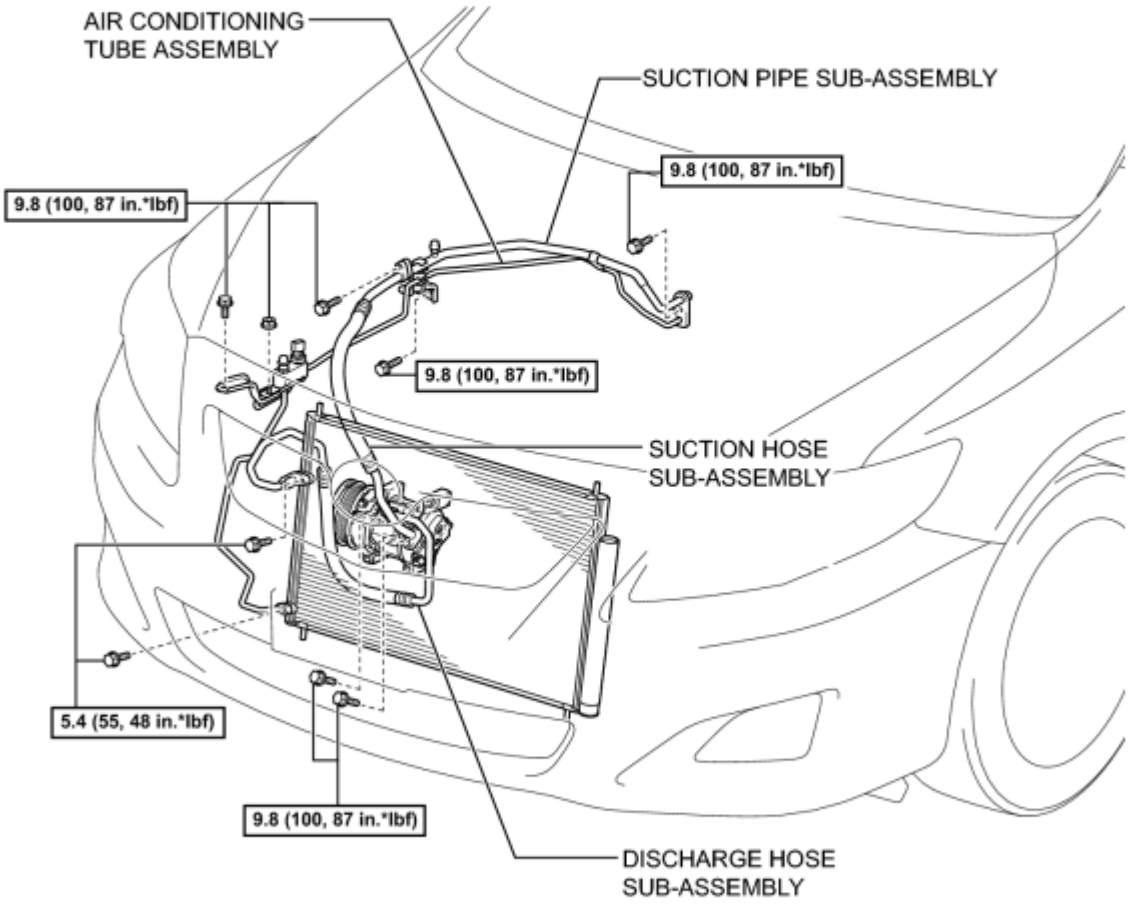
(d) Bring the halogen leak detector close to the drain hose with the detector's power off, and then turn the detector on.

HINT:

- After the blower motor has stopped, let the cooling unit stand for more than 15 minutes.
- Bring the halogen leak detector sensor under the drain hose.
- When bringing the halogen leak detector close to the drain hose, make sure that the halogen leak detector does not react to volatile gases.

  If it is not possible to avoid interference from volatile gases, the vehicle should be lifted up to allow testing.

(e) If a refrigerant leak is not detected from the drain hose, remove the blower motor control from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.



(f) Disconnect the pressure switch connector and leave it for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

Title: HEATING / AIR CONDITIONING: ROOM TEMPERATURE SENSOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT ROOM TEMPERATURE SENSOR

(a) Disconnect the connector from the room temperature sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

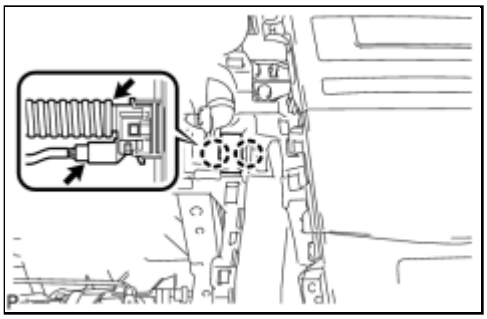
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:



As the temperature increases, the resistance decreases (see the graph).

If the resistance is not as specified, replace the room temperature sensor.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING PANEL (for Manual Air Conditioning System): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT NO. 1 HEATER CONTROL (AIR INLET CONTROL SWITCH)

(a) Disconnect the connector from the No. 1 heater control (air inlet control switch).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
3 (FRS) - 4 (REC)	Air inlet control switch: FREE	Below 1 Ω
3 (FRS) - 4 (REC)	Air inlet control switch: LOCK	10 kΩ or higher
1 (F/D) - 8 (ACID)	Mode control dial: except Foot/DEF position and DEF position	10 kΩ or higher
1 (F/D) - 8 (ACID)	Mode control dial: Foot/DEF position or DEF position	Below 1 Ω

(c) Check that the indicator light comes on.

(1) Turn the No. 1 heater control (air inlet control switch) to LOCK.

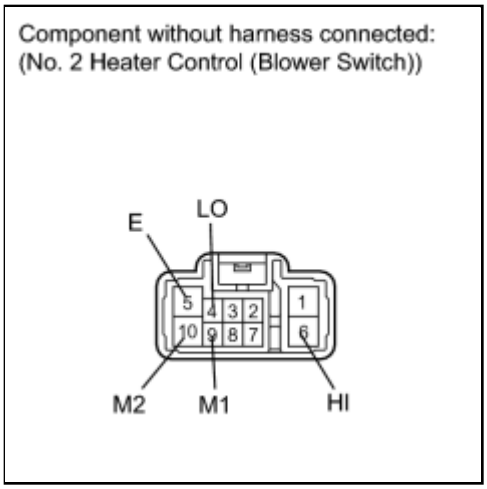
(2) Connect a positive (+) lead from the battery to terminal 2 and a negative (-) lead from the battery to terminal 4, and check that the indicator light comes on.

OK:

The indicator light comes on.

(d) Check that the illumination comes on.

(1) Connect a positive (+) lead from the battery to terminal 7 and negative (-) to terminal 6, and



check that the illumination comes on.

OK:

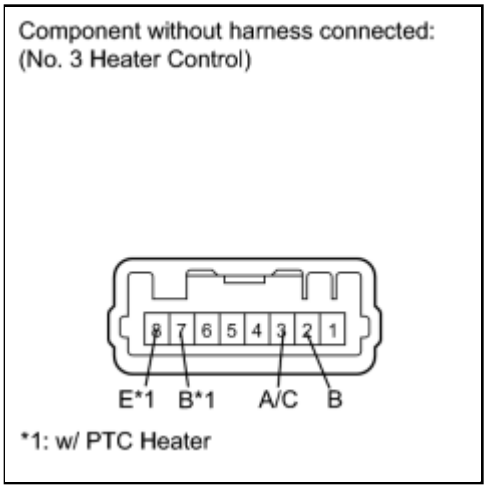
The illumination comes on.

If the result is not as specified, replace the No. 1 heater control (air inlet control switch).

2. INSPECT NO. 2 HEATER CONTROL (BLOWER SWITCH)

(a) Disconnect the connector from the No. 2 heater control (blower switch).

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
4 (LO), 6 (HI), 9 (M1), 10 (M2) - 5 (E)	Blower switch: OFF	10 kΩ or higher
4 (LO) - 5 (E)	Blower switch: LO	Below 1 Ω
4 (LO), 9 (M1) - 5 (E)	Blower switch: M1	Below 1 Ω
4 (LO), 10 (M2) - 5 (E)	Blower switch: M2	Below 1 Ω
4 (LO), 6 (HI) - 5 (E)	Blower switch: HI	Below 1 Ω

If the resistance is not as specified, replace the No. 2 heater control (blower switch).

3. INSPECT NO. 3 HEATER CONTROL

(a) Disconnect the connector from the No. 3 heater control.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2 (B) - 3 (A/C)	A/C switch: LOCK	Below 1 Ω
2 (B) - 3 (A/C)	A/C switch: FREE	10 kΩ or higher
7 (B) - 8 (E)*1	Air mix control dial: MAX HOT position	Below 1 Ω
7 (B) - 8 (E)*1	Air mix control dial: except MAX HOT position	10 kΩ or higher

HINT:

***1: w/ PTC heater**

(c) Check that the indicator light comes on.

(1) Connect a positive (+) lead from the battery to terminal 3 and a negative (-) lead from the battery to terminal 4, and check that the indicator light comes on.

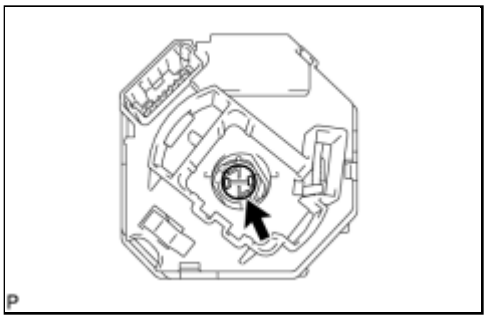
OK:

The indicator light comes on.

(d) Check that the illumination comes on.

(1) Connect a positive (+) lead from the battery to terminal 5 and a negative (-) lead from the battery to terminal 6, and check that the illumination comes on.

OK:



The illumination comes on.

If the result is not as specified, replace the No. 3 heater control.

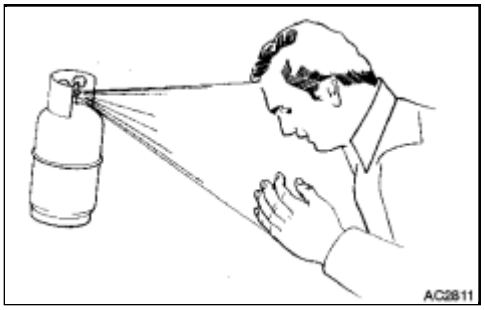
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH



(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch ON	ON	On (IG)
	Ignition switch ACC	ACC	On (ACC)
	Engine start	START	Start

2. DO NOT HANDLE REFRIGERANT IN AN ENCLOSED AREA OR NEAR AN OPEN FLAME

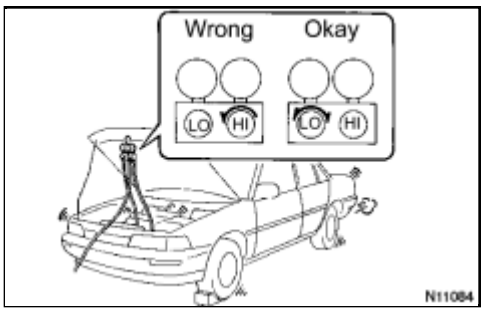
3. ALWAYS WEAR EYE PROTECTION

4. BE CAREFUL NOT TO GET LIQUID REFRIGERANT IN YOUR EYES OR ON YOUR SKIN

If liquid refrigerant gets in your eyes or on your skin:

(a) Wash the area with lots of cold water.

CAUTION:



Do not rub your eyes or skin.

(b) Apply clean petroleum jelly to the skin.

(c) Go immediately to a hospital or see a physician for professional treatment.

5. NEVER HEAT CONTAINER OR EXPOSE THE CONTAINER TO AN OPEN FLAME

6. BE CAREFUL NOT TO DROP CONTAINER OR APPLY PHYSICAL SHOCKS TO IT

7. DO NOT OPERATE COMPRESSOR WITHOUT ENOUGH REFRIGERANT IN REFRIGERANT SYSTEM

If there is not enough refrigerant in the A/C system, oil lubrication will be insufficient and the compressor may be damaged.

Necessary care should be taken to avoid this.

8. DO NOT OPEN HIGH PRESSURE MANIFOLD VALVE WHILE COMPRESSOR IS OPERATING

(a) Open and close only the low pressure valve.

If the high pressure valve is opened, refrigerant flows in the reverse direction, causing the charging cylinder to rupture.

9. BE CAREFUL NOT TO OVERCHARGE SYSTEM WITH REFRIGERANT

If refrigerant is overcharged, it causes problems such as insufficient cooling, poor fuel economy, engine overheating, etc.

10. DO NOT OPERATE ENGINE AND COMPRESSOR WITH NO REFRIGERANT

CAUTION:

Doing so may damage the inside of the compressor because the compressor parts always move regardless of whether the A/C system is turned on or off.

11. SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

(a) This vehicle is equipped with an SRS (Supplemental Restraint System) consisting of the driver, front passenger, side, and curtain shield airbags. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the precautionary notices INFO .

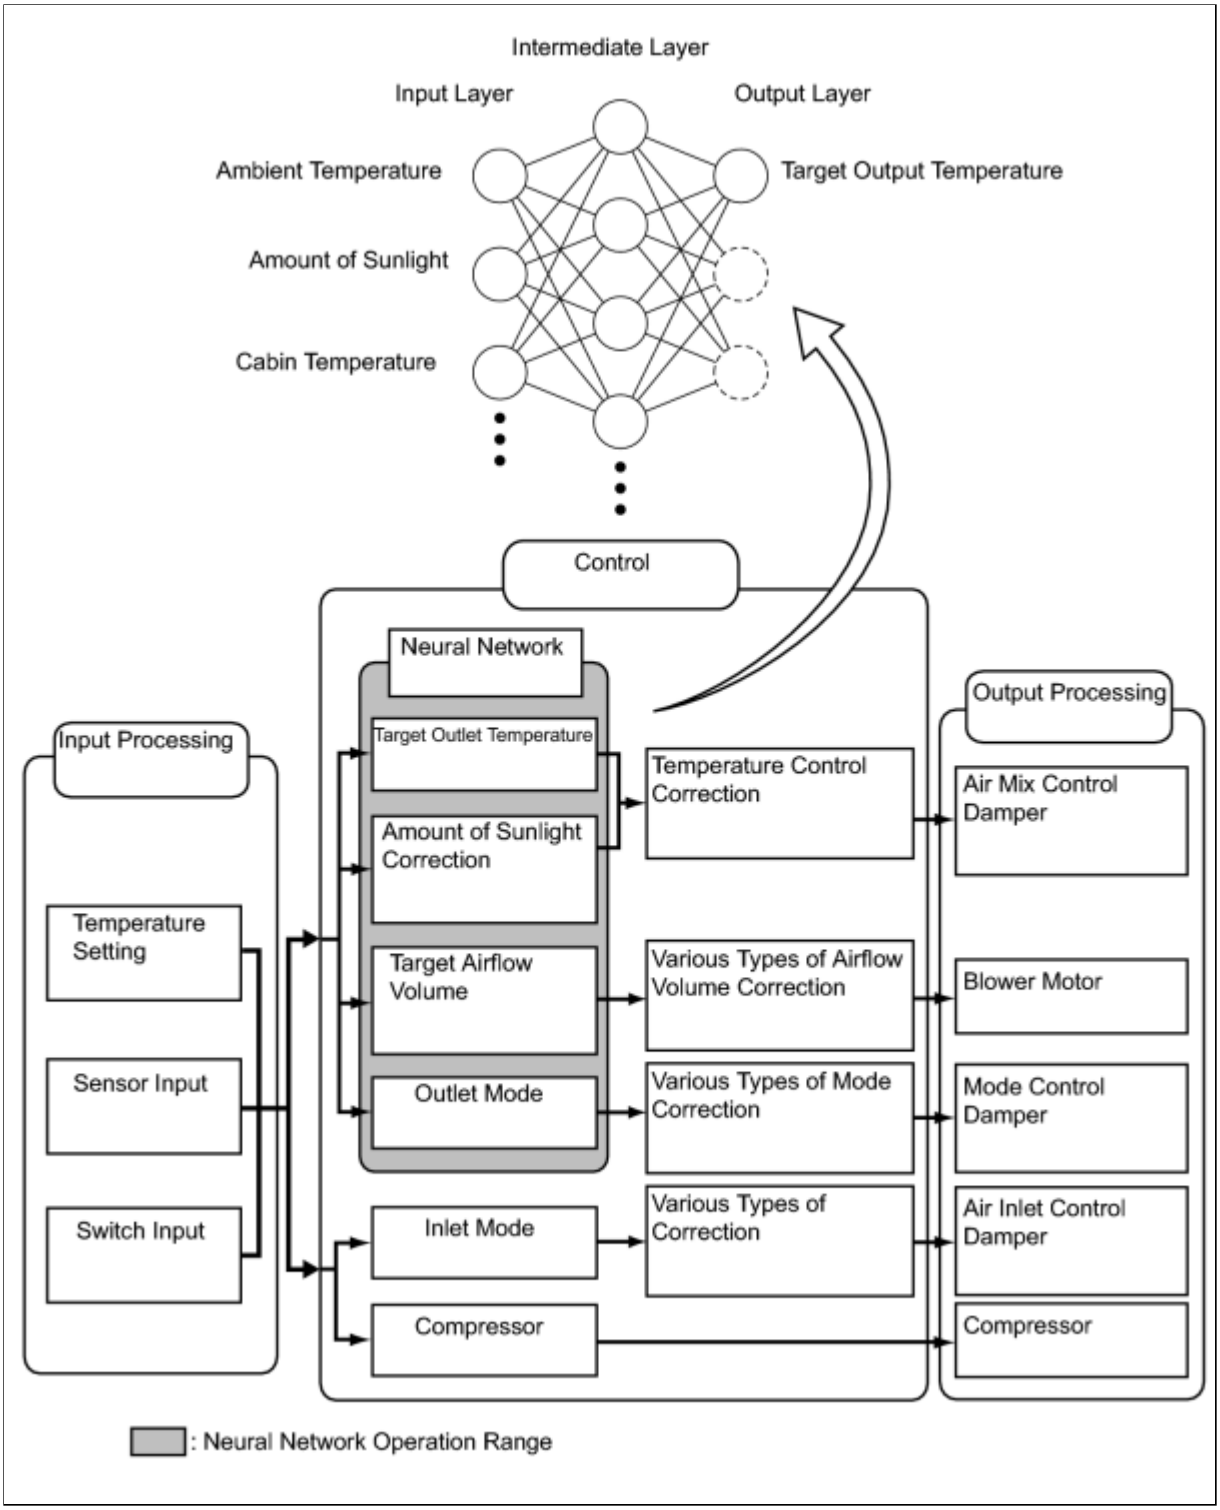
12. GENERAL PRECAUTION

(a) While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001O7U026X
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

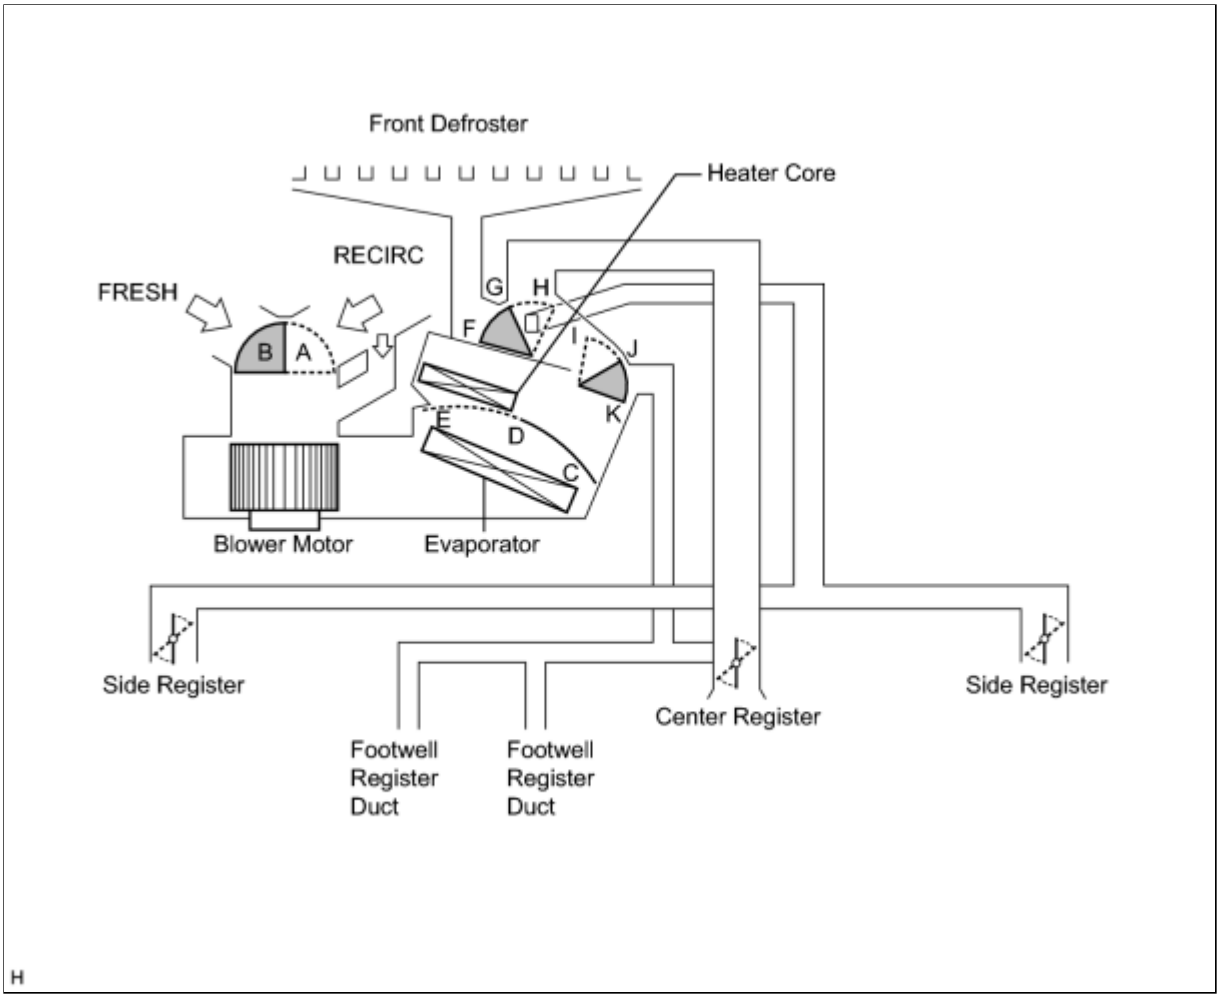
1. GENERAL



The air conditioning system has the following controls:

CONTROL	OUTLINE
Neural Network Control	This control is capable of effecting complex control by artificially simulating the information processing method of the nervous system of living organisms in order to establish a complex input or output relationship that is similar to a human brain.
Outlet Air Temperature Control	In compliance with the temperature set at the temperature control switch, the neural network control calculates the outlet temperature based on the input signals from various sensors. In addition, corrections in accordance with the signals from the evaporative temperature sensor and engine coolant temperature sensor are added to control the outlet air temperature.
Blower Control	Controls the blower motor in accordance with the airflow volume that has been calculated by the neural network control based on the input signals from various sensors.
Air Outlet Control	Automatically switches the outlets in accordance with the outlet mode ratio that has been calculated by the neural network control based on the input signals from various sensors.
Air Inlet Control	Automatically controls the air inlet control damper in accordance with the airflow volume that has been calculated by the neural network control.
Variable Capacity Compressor Control	Controls the compressor to turn ON or OFF and the discharge capacity based on the signals from various sensors.
Ambient Temperature Indication Control	Based on the signals from the ambient temperature sensor, this control calculates the ambient temperature, which is then corrected in the air conditioning amplifier, and shown in the multi-information display in the combination meter.
Rear Window Defogger Control	Switches the rear defogger and outside rear view mirror heaters on for 15 minutes when the rear defogger button is pressed. Switches them OFF if the button is pressed while they are operating.
Self-diagnosis	Checks the sensors in accordance with the operation of air conditioning switches, then temperature setting displays a DTC (Diagnosis Trouble Code) to indicate if there is a malfunction or not (sensor check function).
	Drives the actuators through a predetermined sequence in accordance with the operation of the air conditioning switches (actuator check function).

2. NEURAL NETWORK CONTROL

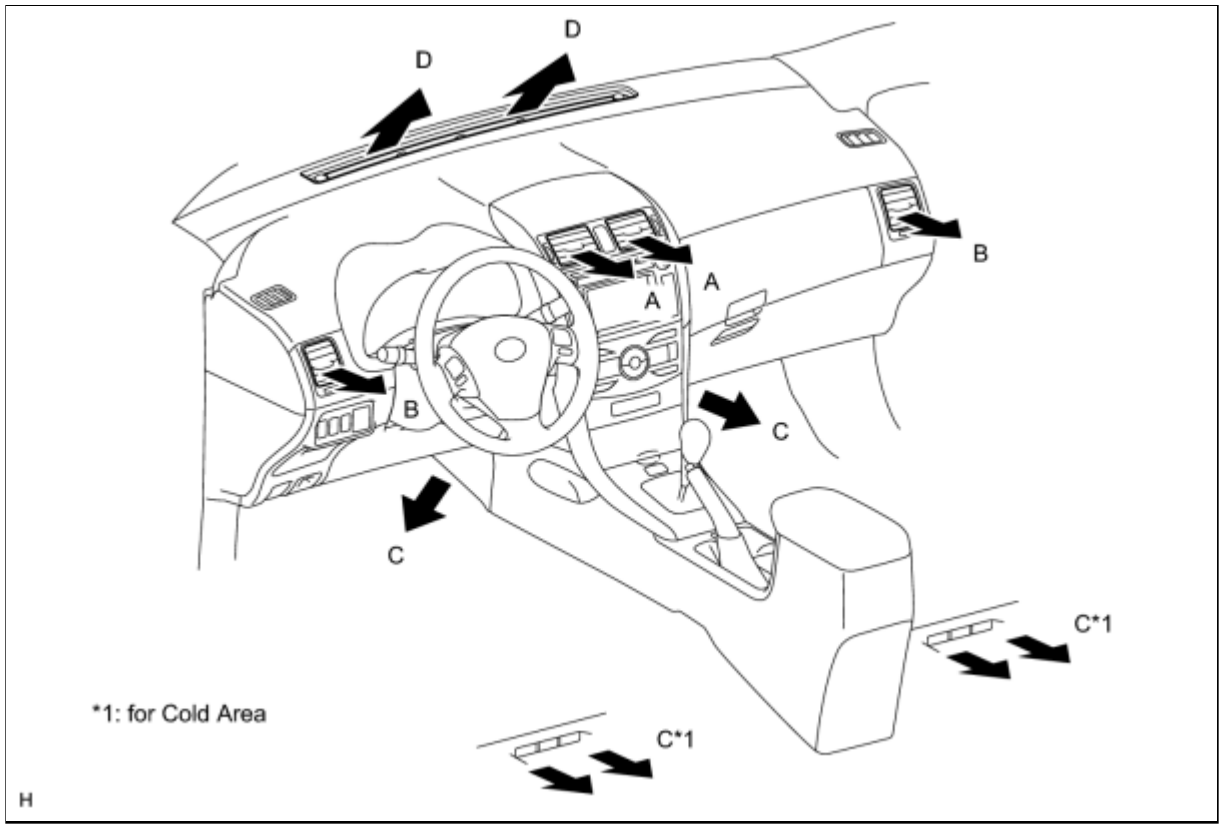


- In previous automatic air conditioning systems, the A/C amplifier determined the required outlet air temperature and blower air volume in accordance with the calculation formula that has been obtained based on information received from the sensors.

  However, because the senses of a person are rather complex, a given temperature is sensed differently, depending on the environment in which the person is situated. For example, a given amount of solar radiation can feel comfortably warm in a cold climate, or extremely uncomfortable in a hot climate. Therefore, as a technique for effecting a higher level of control, a neural network has been adopted in the automatic air conditioning system. With this technique, the data that has been collected under varying environmental conditions is stored in the A/C amplifier. The A/C amplifier can then effect control to provide enhanced air conditioning comfort.
- The neural network control consists of neurons in the input layer, intermediate layer, and output layer. The input layer neurons process the input data of the outside temperature, the amount of sunlight, and the cabin temperature based on the outputs of the switches and sensors, and output them to the intermediate layer neurons. Based on this data, the intermediate layer neurons adjust the strength of the links among the neurons. The sum of these is then calculated by the output layer neurons in the form of the required outlet temperature, solar correction, target airflow volume, and outlet mode control volume. Accordingly, the A/C amplifier controls the servo motors and blower motor in accordance with the control volumes that have been calculated by the neural network control.

3. MODE POSITION AND DAMPER OPERATION

(a) Mode position and damper operation



Functions of Main Dampers:

CONTROL DAMPER	OPERATION POSITION	DAMPER POSITION	OPERATION
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.
Air Mix Control Damper	MAX COLD to MAX HOT Temperature Setting 16°C (61°F) to 30°C (86°F)	C - D - E	Varies the mixture ratio of the fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COLD.
Mode Control Damper	DEF 	H, K	Defrosts the windshield through the front defroster and side register.
	FOOT/DEF 	H, J	Defrosts the windshield through the front defroster and side register, while air is also blown out from the front foot well register ducts.

CONTROL DAMPER	OPERATION POSITION	DAMPER POSITION	OPERATION
	FOOT 	H, I	Air blows out of the footwell register duct and side register. In addition, air blows out slightly from the front defroster.
	BI-LEVEL 	F, I	Air blows out of the center register, side register, and front footwell register ducts.
	FACE 	F, K	Air blows out of the center register and side register.

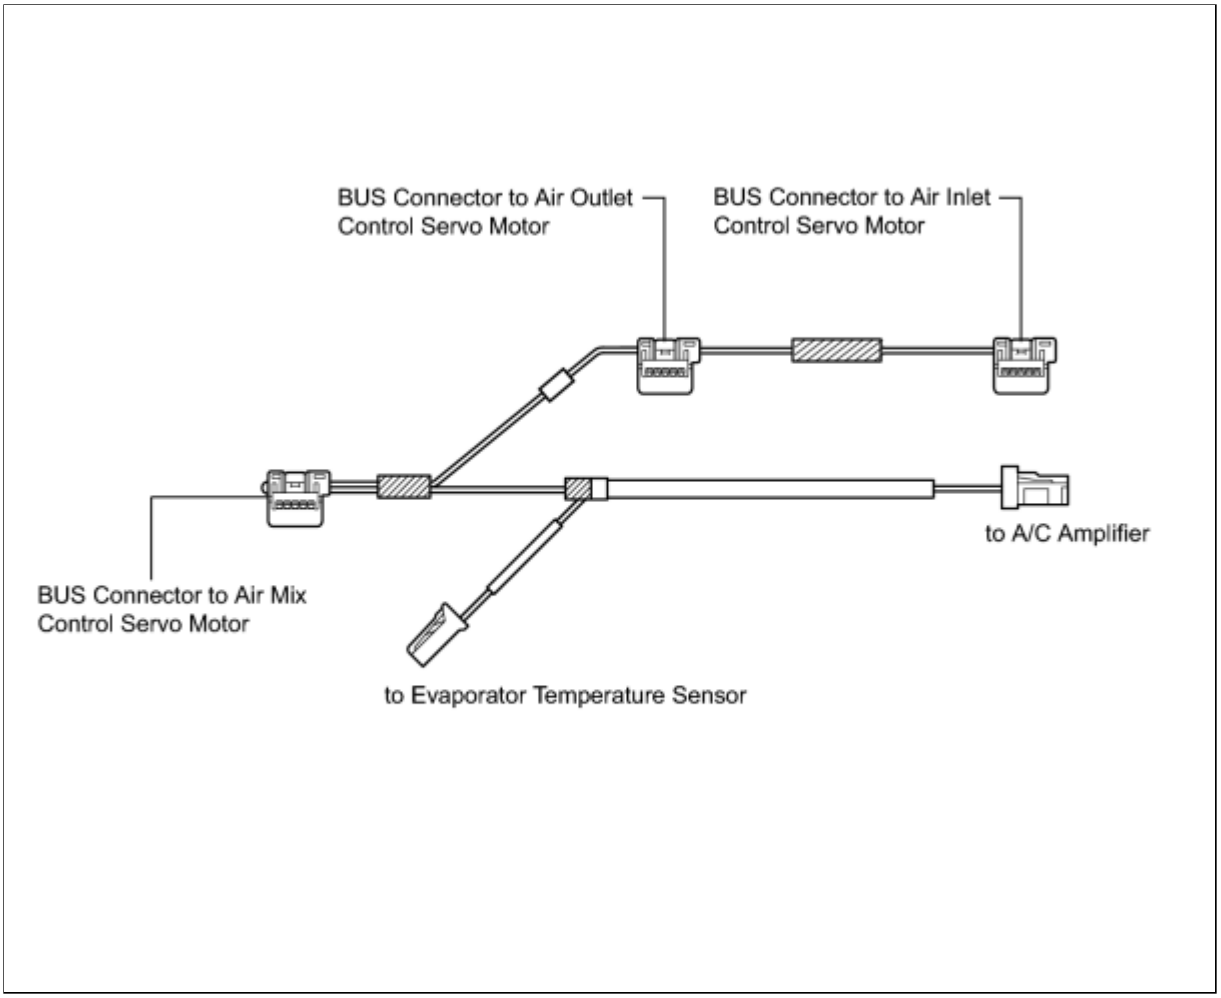
4. AIR OUTLETS AND AIRFLOW VOLUME

(a) Air Outlets and Airflow Volume

INDICATION (MODE)	CTR	SIDE	FOOTWELL	DEFROSTER
	A	B	C	D

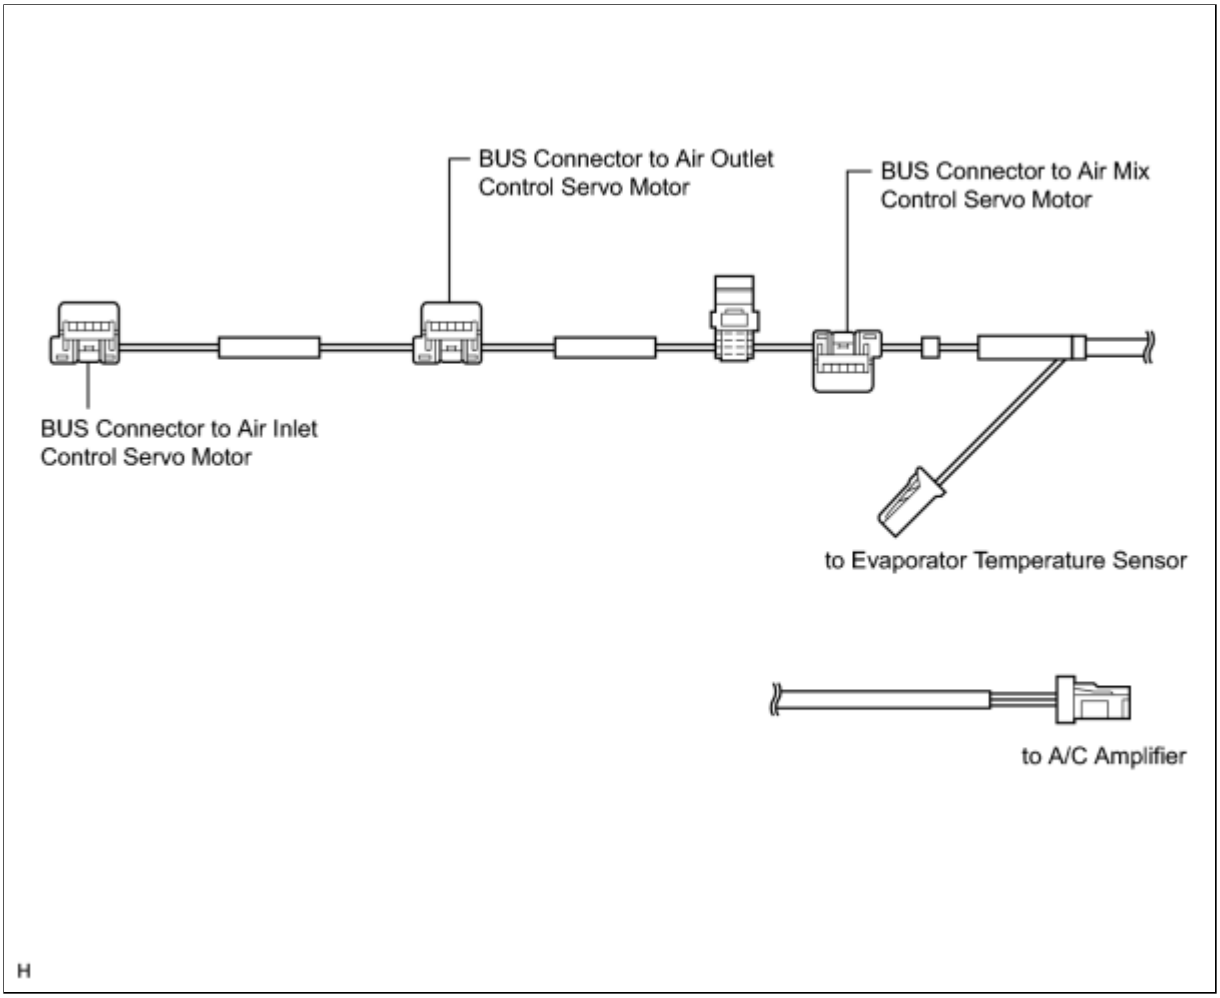
INDICATION (MODE)	CTR	SIDE	FOOTWELL	DEFROSTER
	A	B	C	D
 FACE	◯	◯	—	—
 BI-LEVEL	○	○	◯	—
 FOOT	—	○	◯	○
 FOOT/DEF	—	○	○	○
 DEF	—	○	—	◯

The size of the circle ○ indicates the proportion of airflow volume.



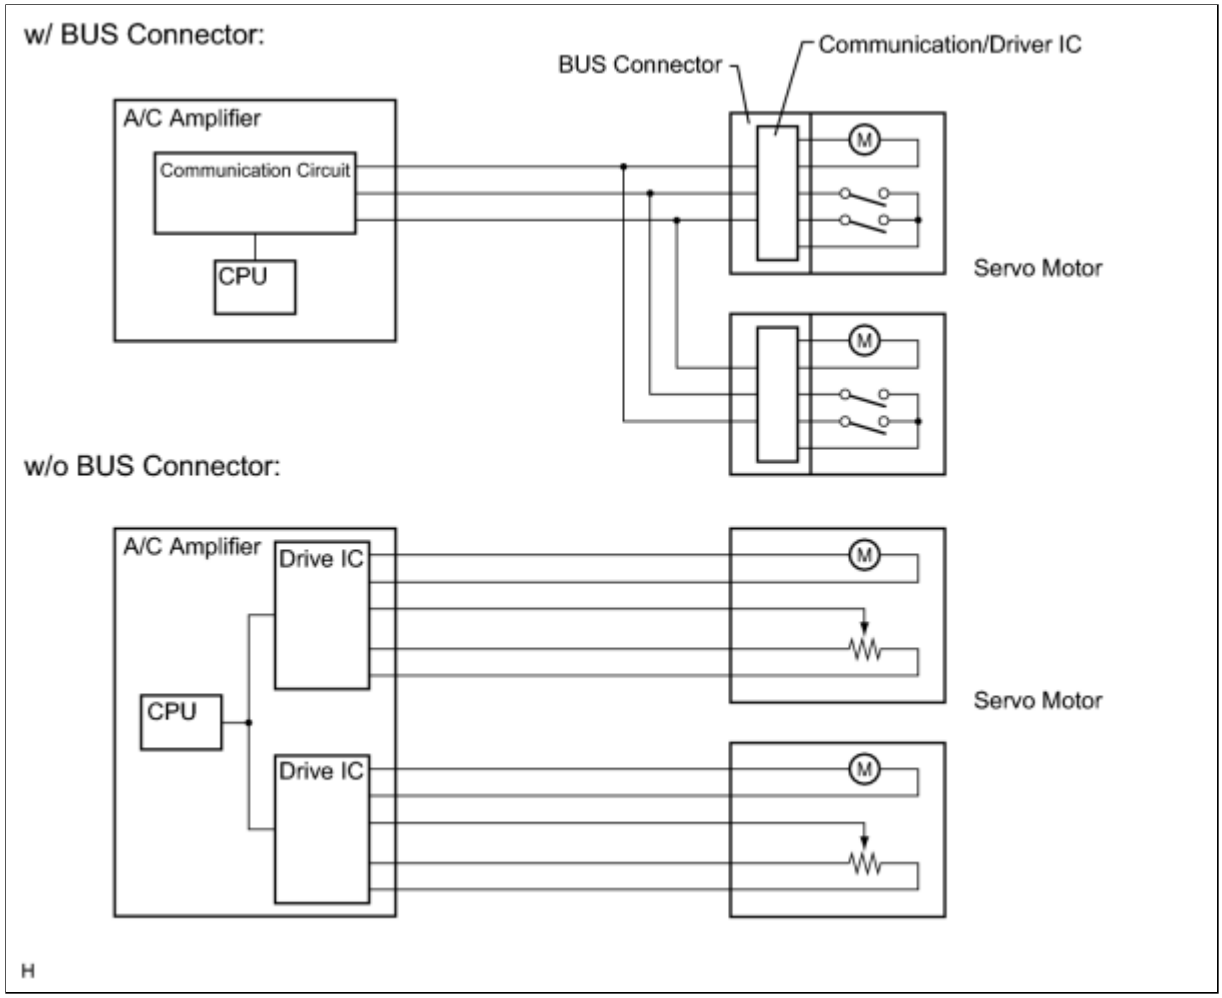
5. BLOWER MOTOR

The blower motor has a built-in blower controller, and is controlled with duty control from the A/C amplifier.



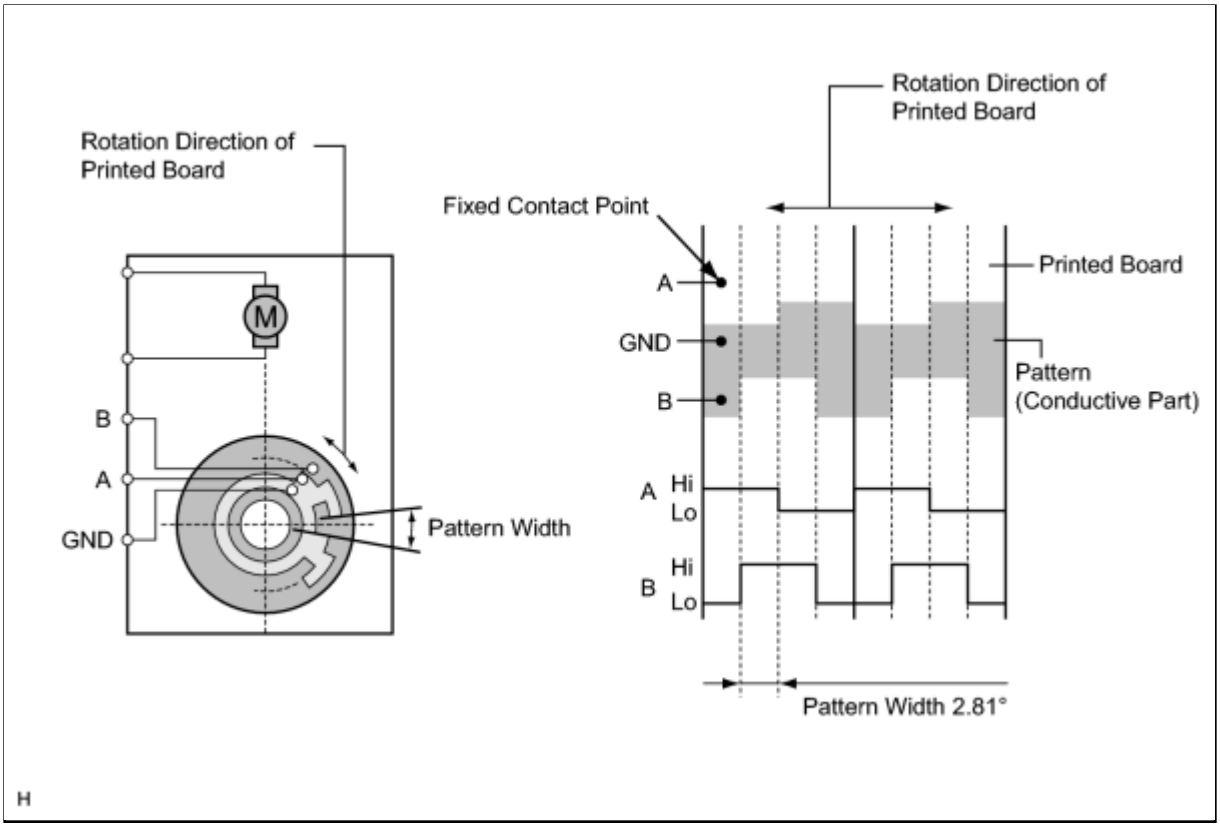
6. BUS CONNECTOR

(a) A BUS connector is used in the wire harness connection that connects the servo motor from the A/C amplifier.



(1) for TMC Made

(2) for NUMMI, TMMC Made



(b) Each BUS connector has a built-in communication/driver IC which communicates with each servo motor connector, actuates the servo motor, and has a position detection function. This enables bus communication for the servo motor wire harness, for a more lightweight construction and a reduced number of wires.

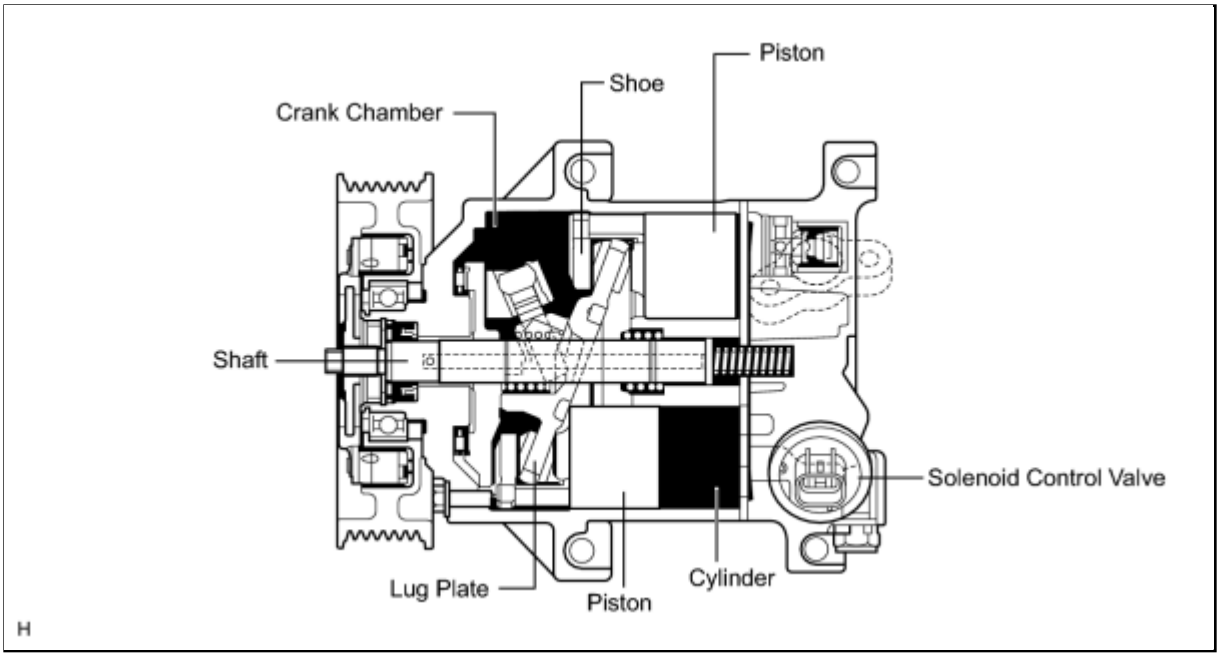
7. SERVO MOTOR

(a) In contrast to the previous type that detects the position using potentiometer voltage, the pulse pattern type servo motor detects the relative position using the 2-bit ON/OFF signals.

The forward and reverse revolutions of this motor are detected by way of two phases, A and B, which output four types of patterns. The air conditioning amplifier counts the number of pulse patterns in order to determine the stopped position.

8. A/C COMPRESSOR

(a) General

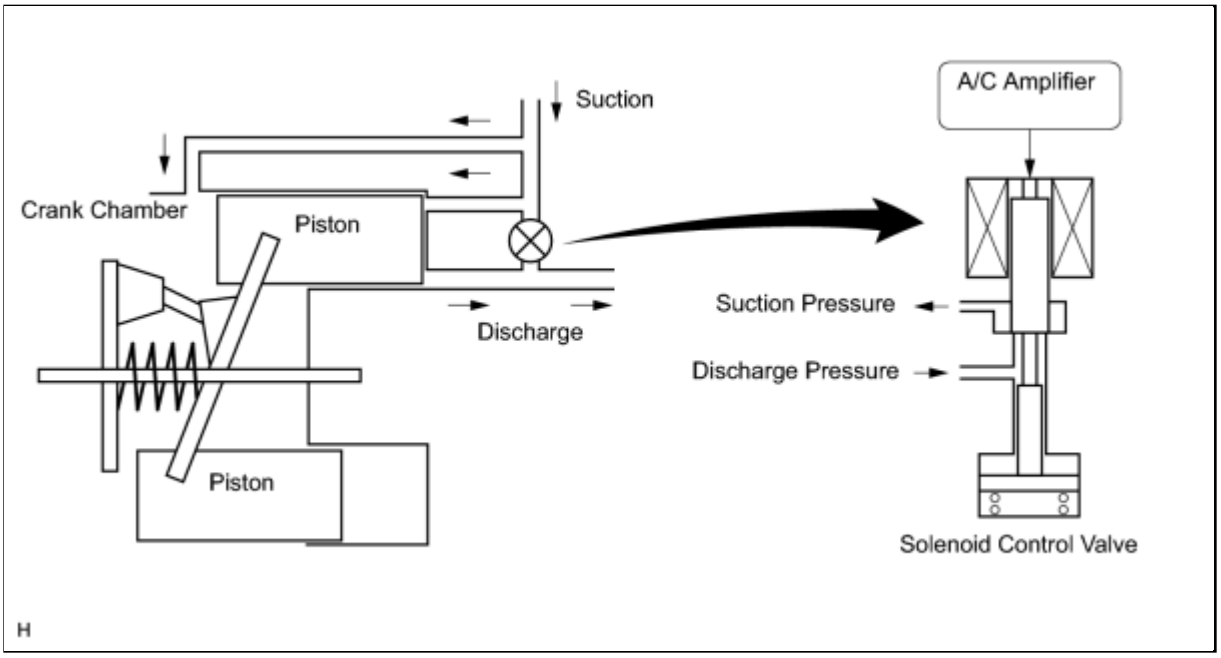


(1) The A/C compressor is a continuously variable capacity type in which its capacity varies in accordance with the cooling load of the air conditioning system.

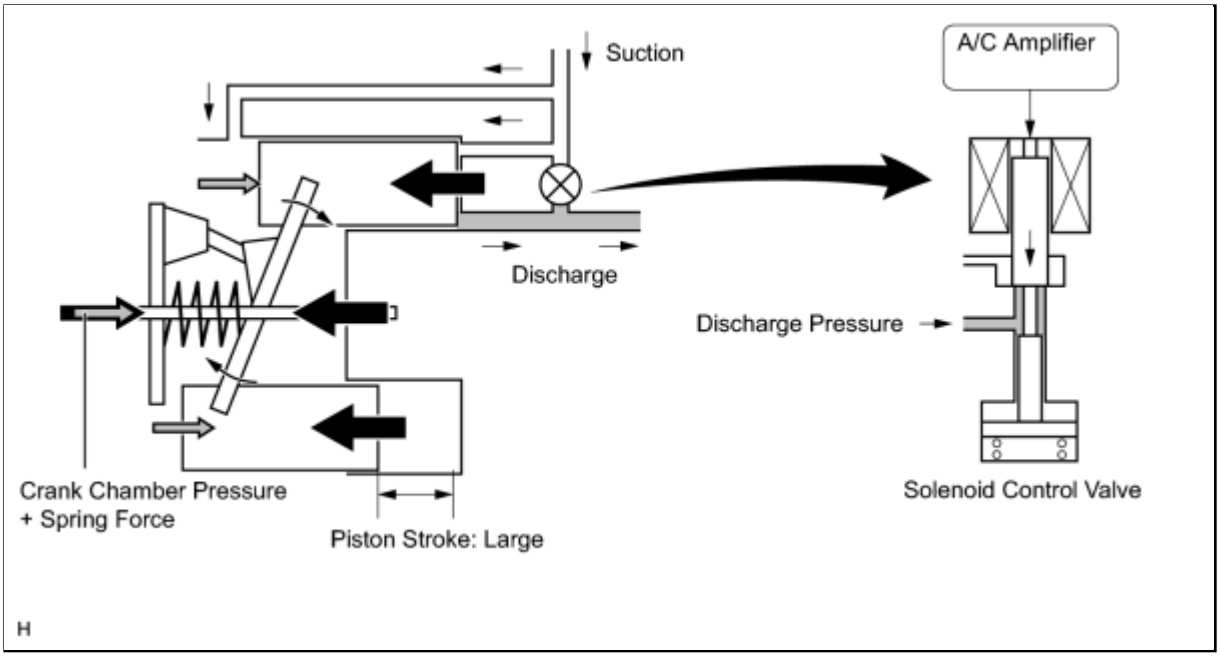
(2) The compressor consists of the shaft, lug plate, piston, shoe, crank chamber, cylinder, and solenoid control valve.

(3) The solenoid control valve is provided to enable the suction pressure to be controlled as desired.

(4) A plastic DL (Damper Limiter) type A/C pulley is used.

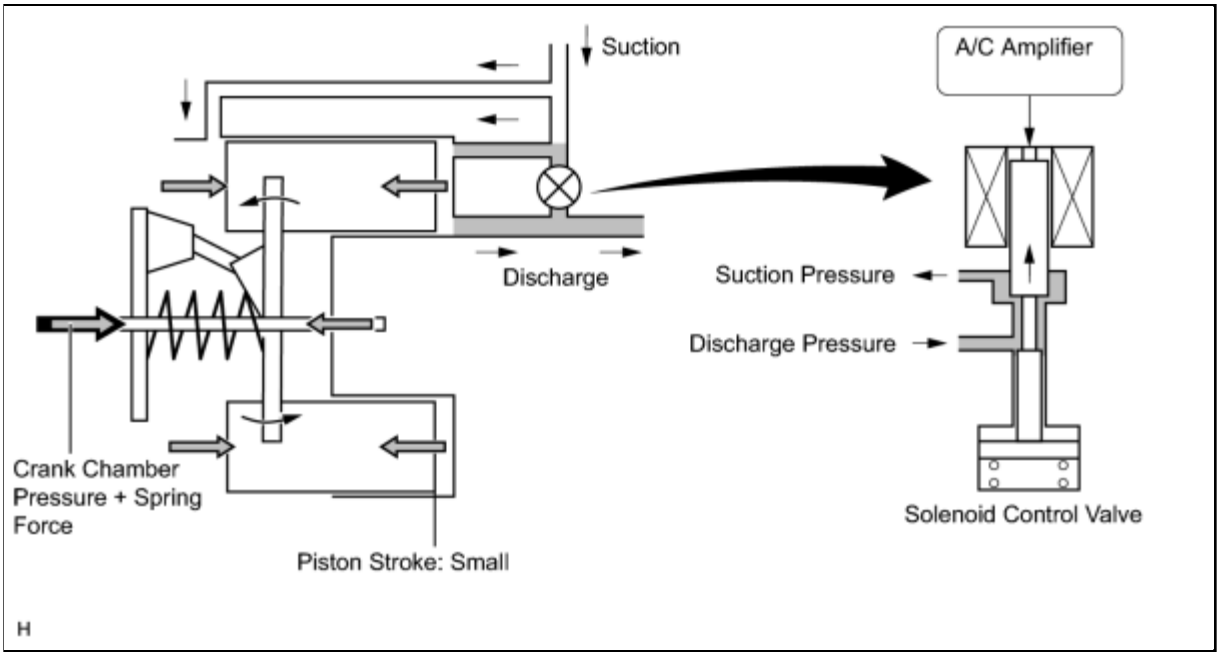


(5) A rotary type valve is used to suction refrigerant gas into the cylinder.



(b) Operation

(1) The crank chamber is connected to the suction passage. A solenoid control valve is provided between the suction passage (low pressure) and the discharge passage (high pressure).



(2) The solenoid control valve operates under duty cycle control in accordance with the signals from the air conditioning amplifier.

(3) When the solenoid control valve closes (solenoid coil is energized), a difference in pressure is created and the pressure in the crank chamber decreases. Then, the pressure that is applied to the right side of the piston becomes greater than the pressure that is applied to the left side of the piston. This compresses the spring and tilts the lug plate. As a result, there is a large piston stroke and the discharge capacity increases.

(4) When the solenoid control valve opens (solenoid coil is not energized), the difference in pressure disappears. Then, the pressure that is applied to the left side of the piston becomes the same as the pressure that is applied to the right side of the piston. Thus, the spring elongates and eliminates the tilt of the lag plate. As a result, there is a small piston stroke and the discharge capacity decreases.

9. ROOM TEMPERATURE SENSOR

The room temperature sensor detects the cabin temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

10. AMBIENT TEMPERATURE SENSOR

The ambient temperature sensor detects the outside temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

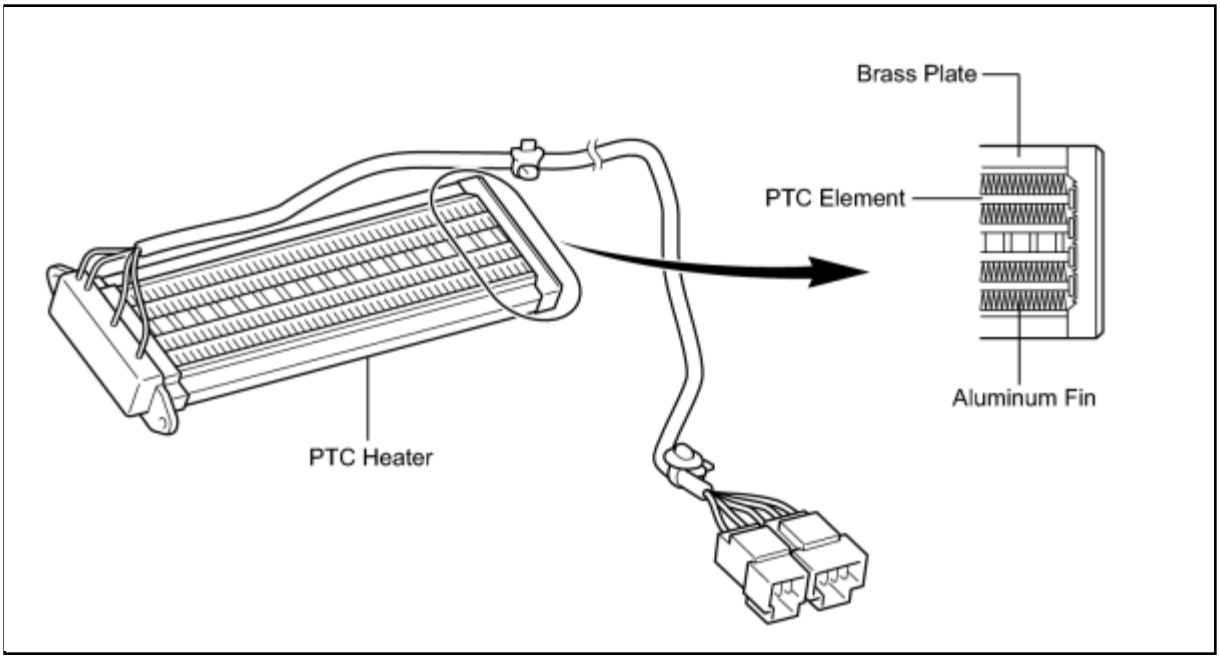
11. EVAPORATOR TEMPERATURE SENSOR

The evaporator temperature sensor detects the temperature of the cool air immediately after the evaporator in the form of resistance changes, and outputs it to the A/C amplifier.

12. SOLAR SENSOR

The solar sensor detects the changes in the amount of sunlight and outputs it to the A/C amplifier in the form of voltage changes.

13. A/C PRESSURE SENSOR



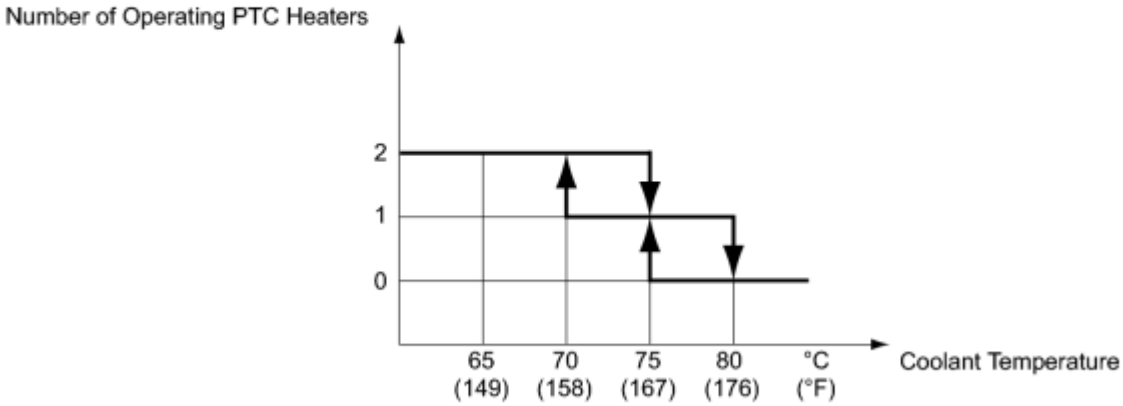
The A/C pressure sensor detects the refrigerant pressure and outputs it to the A/C amplifier in the form of voltage changes.

14. PTC HEATER (w/ PTC Heater)

(a) General

(1) The PTC heater is located above the heater core in the air conditioner unit.

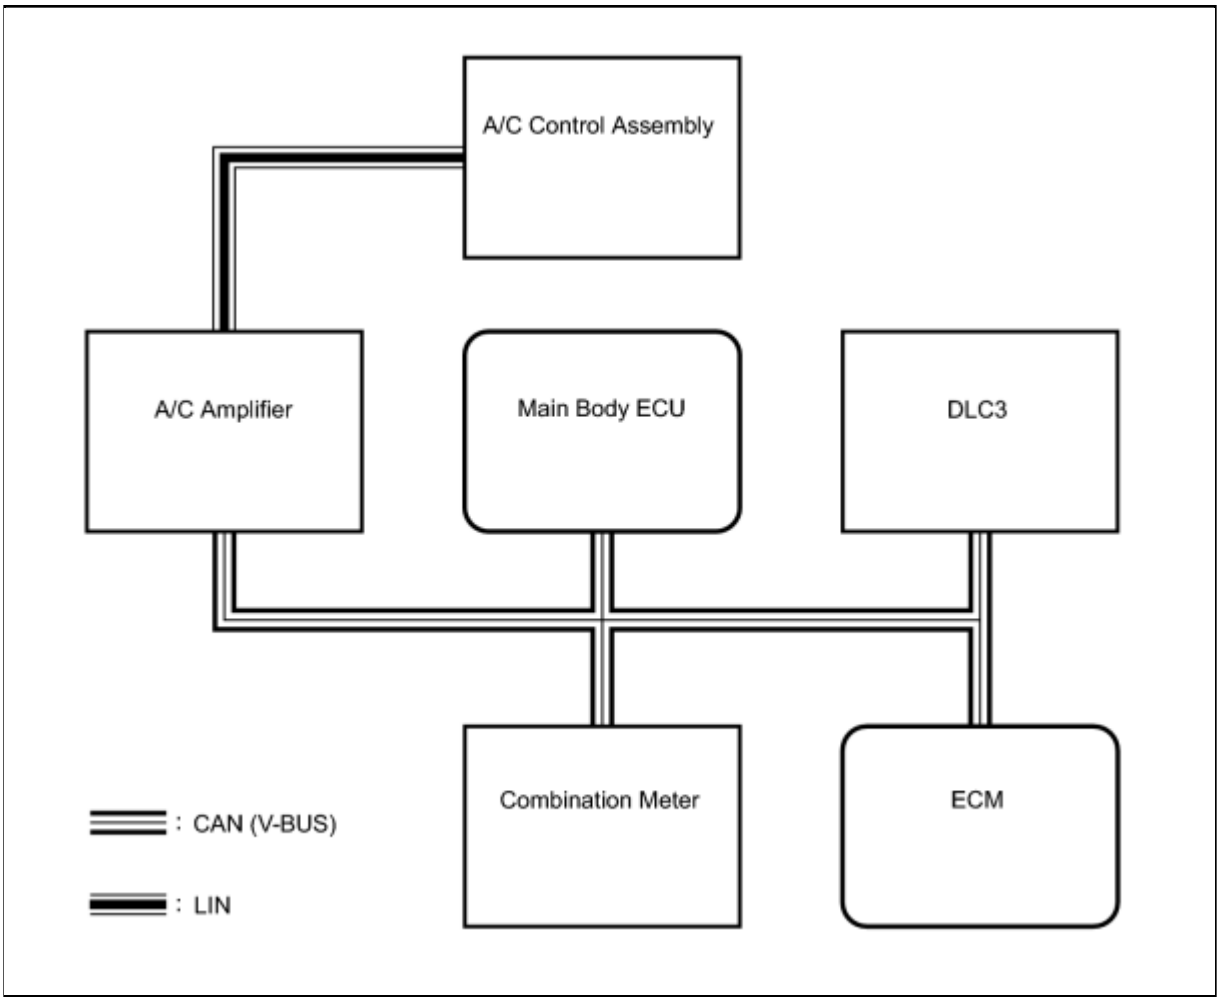
(2) The PTC heater consists of a PTC element, aluminum fin, and brass plate. When current is applied to the PTC element, it generates heat to warm the air that passes through the unit.



(b) PTC Heater Operating Conditions

(1) The PTC heater is turned on and off by the air conditioning amplifier in accordance with the coolant temperature, ambient temperature, engine speed, air mix setting, and electrical load (generator power ratio).

For example, the number of the operating PTC heaters varies by the coolant temperature as in the graph below.



Heating Pattern:

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the air conditioning system.
- *: Use the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**INSPECT BATTERY VOLTAGE**

(a) Inspect the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3.	**CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM***

(a) Use the Techstream to check if the CAN Communication System is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is not output	A

RESULT	PROCEED TO
CAN DTC is output	B

B ▶ INFO **Go to CAN COMMUNICATION SYSTEM**

A ▼

4.	CHECK FOR DTC*

(a) Check for DTCs and write down any codes that are output.

HINT:

Refer to DTC Check / Clear INFO **.**

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output above, try to force the A/C system to output DTCs by simulating the conditions indicated by the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ **GO TO STEP 7**

A ▼

5.	PROBLEM SYMPTOMS TABLE

(a) Refer to Problem Symptoms Table INFO .

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): CUSTOMIZE PARAMETERS (2010 Corolla)		

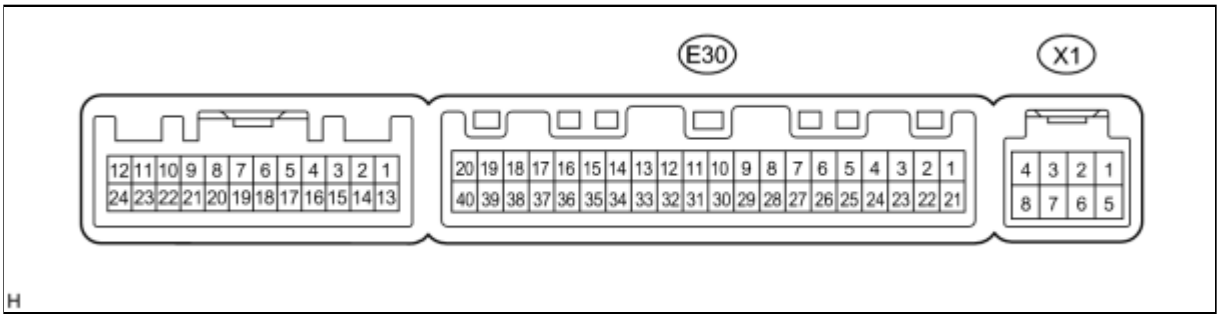
CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.



Air Conditioner

TESTER DISPLAY	DEFAULT	CONTENTS	SETTING
Set Temperature Shift	NORMAL	Function to shift the temperature against the displayed temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
Air Inlet Mode	AUTO	When turning the A/C ON to make the cabin cool down quickly, this is the function to change the mode automatically to RECIRCULATION mode	MANUAL / AUTO
Compressor Mode	AUTO	Function to turn the A/C ON automatically by pressing the AUTO button when the blower is ON and the A/C is OFF	MANUAL / AUTO
Compressor/Air Inlet DEF operation	LINK	Function to turn the A/C ON automatically linked with the FRONT DEF button when the A/C is OFF	NORMAL / LINK
Evaporator Control	AUTO	Function to set the evaporator control to the coldest position	MANUAL / AUTO
Foot/DEF Auto Mode	ON	Function to turn the airflow from FOOT / DEF ON automatically when AUTO MODE is ON	OFF / ON
Foot/DEF Automatic Blow Up Function	ON	Function to change the blower level automatically when the defroster is ON	OFF / ON

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. A/C AMPLIFIER

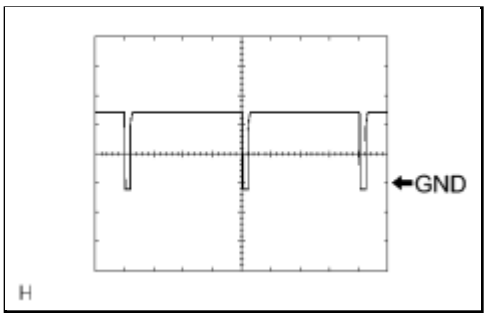
HINT:

Check from the rear of the connector while it is connected to the A/C amplifier.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E30-1 (IG+) - E30-14 (GND)	Y*1, R*2 - W-B	Power source (IG)	Ignition switch ON	11 to 14 V
E30-1 (IG+) - E30-14 (GND)	Y*1, R*2 - W-B	Power source (IG)	Ignition switch off	Below 1 V
E30-2 (SOL+) - E30-14 (GND)	LG*1, V*2 - W-B	A/C compressor operation signal	Engine is running A/C switch: ON Blower switch: LO	Pulse generation (See waveform 1)
E30-3 (PTC1) - E30-14 (GND)*3	W*1, P*2 - W-B	PTC heater operation signal	Engine is running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 75°C (167°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E30-9 (PRE) - E30-13 (SG-2)	L - G	A/C pressure sensor signal	Engine is running, A/C system is operating, Refrigerant pressure: Abnormal pressure (more than 3140 kPa (32.0 kgf/cm^2, 455 psi))	4.848 V or higher
E30-9 (PRE) - E30-13 (SG-2)	L - G	A/C pressure sensor signal	Engine is running, A/C system is operating, Refrigerant pressure: Abnormal pressure (less than 196 kPa (2.0 kgf/cm^2, 28 psi))	Below 0.734 V
E30-9 (PRE) - E30-13 (SG-2)	L - G	A/C pressure sensor signal	Engine is running, A/C system is operating, Refrigerant pressure: Normal pressure (less than 3140 kPa (32.0 kgf/cm^2, 455 psi) and more than 196 kPa (2.0 kgf/cm^2, 28 psi))	0.734 to 4.848 V
E30-10 (S5-3) - E30-13 (SG-2)	B - G	Power supply for A/C pressure sensor	Ignition switch ON A/C switch: ON	4.75 to 5.25 V
E30-10 (S5-3) - E30-13 (SG-2)	B - G	Power supply for A/C pressure sensor	Ignition switch ON A/C switch: OFF	Below 1 V
E30-11 (CANH) - E30-12 (CANL)	V - W	CAN communication circuit	Ignition switch ON	Pulse generation
E30-13 (SG-2) - Body ground	G - Body ground	Ground for A/C pressure sensor	Always	Below 1 V
E30-14 (GND) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 V
E30-21 (B) - E30-14 (GND)	W*1, BR*2 - W-B	Power source (Back-up)	Always	11 to 14 V
E30-22 (PTC2) - E30-14 (GND)*3	B - W-B	PTC heater operation signal	Engine is running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 70°C (158°F) or lower	11 to 14 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
			Light control switch: OFF Blower switch: ON	
E30-23 (BLW) - E30-14 (GND)	R*1, L*2 - W-B	Blower motor speed control signal	Ignition switch ON Blower switch: ON	Pulse generation (See waveform 2)
E30-25 (ALT) - E30-14 (GND)*3	L - W-B	Alternator signal (PTC Heater line control)	Start engine	Pulse generation
E30-27 (HLS) - E30-14 (GND)*3	B*1, V*2 - W-B	Headlight signal (PTC Heater line control)	Start engine Headlight switch: OFF	11 to 14 V
E30-27 (HLS) - E30-14 (GND)*3	B*1, V*2 - W-B	Headlight signal (PTC Heater line control)	Start engine Headlight switch: ON	Below 1 V
E30-29 (TR) - E30-34 (SG-1)	GR*1, W*2 - V*1, SB*2	Room temperature sensor signal	Ignition switch ON Cabin temperature at 25°C (77°F)	1.8 to 2.2 V
E30-29 (TR) - E30-34 (SG-1)	GR*1, W*2 - V*1, SB*2	Room temperature sensor signal	Ignition switch ON Cabin temperature at 40°C (104°F)	1.2 to 1.6 V
E30-31 (S5-4) - E30-14 (GND)	LG*1, Y*2 - W-B	Solar sensor power source	Ignition switch ON A/C switch: ON	4.5 to 5.5 V
E30-33 (TS) - E30-14 (GND)	P*1, R*2 - W-B	Solar sensor signal	Ignition switch ON Solar sensor is subjected to light.	0.8 to 4.3 V
E30-33 (TS) - E30-14 (GND)	P*1, R*2 - W-B	Solar sensor signal	Ignition switch ON Solar sensor is covered with cloth.	Below 0.8 V
E30-34 (SG-1) - Body ground	V*1, SB*2 - Body ground	Ground for room temperature sensor	Always	Below 1 V
E30-37 (LIN1) - E30-14 (GND)	SB*1, LG*2 - W-B	LIN communication signal	Ignition switch ON	Pulse generation



TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E30-38 (RDFG) - E30-14 (GND)	B*1, BE*2 - W-B	DEF relay signal	Ignition switch ON REAR DEF switch: ON	Below 1 V
E30-38 (RDFG) - E30-14 (GND)	B*1, BE*2 - W-B	DEF relay signal	Ignition switch ON REAR DEF switch: OFF	11 to 14 V
X1-2 (BUS G) - Body ground	-	Ground for BUS IC	Always	Below 1 V
X1-3 (BUS) - X1-2 (BUS G)	-	BUS IC control signal	Ignition switch off → ON	Pulse generation
X1-4 (B BUS) - X1-2 (BUS G)	-	Power supply for BUS IC	Ignition switch off	Below 1 V
X1-4 (B BUS) - X1-2 (BUS G)	-	Power supply for BUS IC	Ignition switch ON	11 to 14 V
X1-5 (SGA) - Body ground	-	Ground for evaporator temperature sensor	Always	Below 1 V
X1-6 (TEA) - X1-5 (SGA)	-	Evaporator temperature sensor signal	Ignition switch ON Evaporator temperature at 0°C (32°F)	1.7 to 2.1 V
X1-6 (TEA) - X1-5 (SGA)	-	Evaporator temperature sensor signal	Ignition switch ON Evaporator temperature at 15°C (59°F)	0.9 to 1.3 V

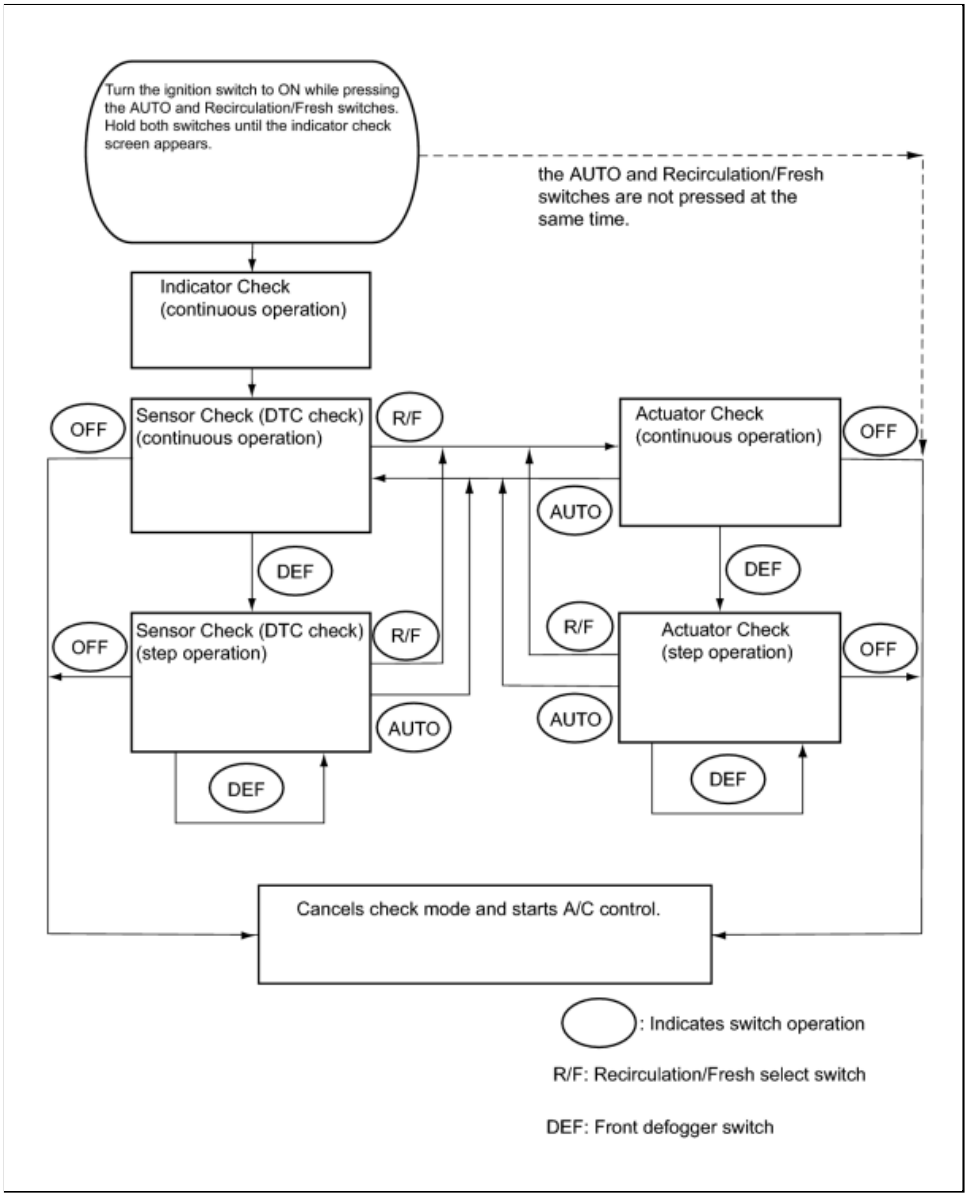
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

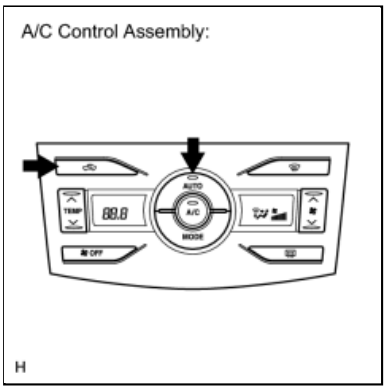
1. DESCRIPTION



(a) Air conditioning system data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform troubleshooting.

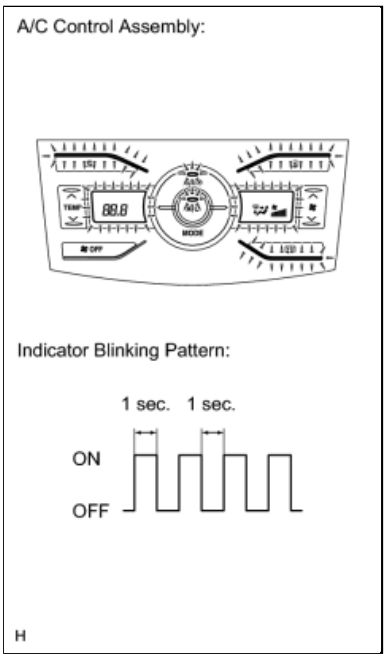
2. CHECK DLC3

(a) Check the DLC3 INFO .



3. LIST OF OPERATION METHODS

(a) By operating each of the air conditioning control switches as shown in the diagram below, it is possible to enter the diagnostic check mode.



4. INDICATOR CHECK

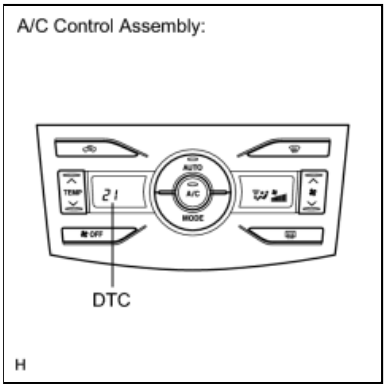
(a) Turn the ignition switch off.

(b) Turn the ignition switch to ON while pressing the A/C control assembly "AUTO" switch and "R/F" switch simultaneously. Hold both switches until the indicator check screen appears.

(c) The indicator check is automatically performed when panel diagnosis is activated. Check that the indicators light up and go off at 1 second intervals 4 times in succession.

HINT:

- The sensor check automatically starts when the indicator check is completed.
- Press the "OFF" switch to cancel the check mode.
- If a navigation system is installed, the indicator will blink and the buzzer will sound.



5. SENSOR CHECK (DTC CHECK)

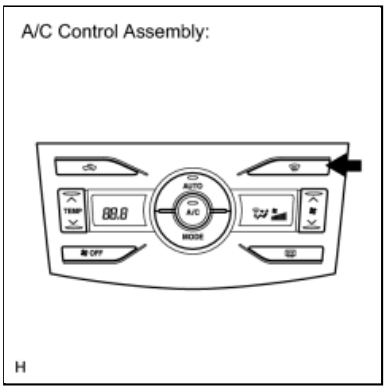
(a) Start the engine and warm it up.

(b) Perform the indicator check.

HINT:

After the indicator check is completed, the system enters the DTC check mode automatically.

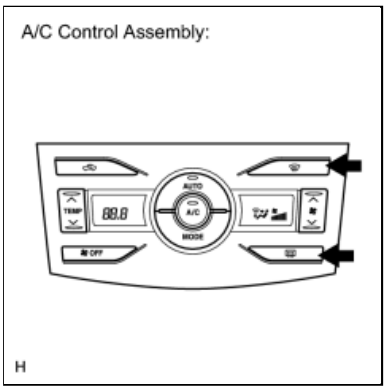
(c) Read the DTC displayed on the panel.



NOTICE:

- In the sensor check mode, which is automatically entered after indicator check mode, troubleshooting may be partially performed. Be sure to perform the actuator and sensor checks again.
- If the check is performed in a dark place, DTC 21 may be displayed even though the system is normal.

HINT:

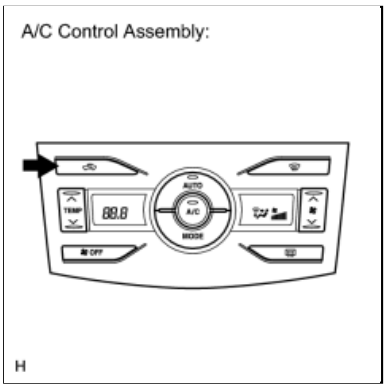


Refer to the DTC chart (Diagnostic Trouble Code chart) for details of the codes INFO **.**

- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that display code 21 is output.

(d) If the steps are difficult to read because they change automatically, push the "DEF" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "DEF" switch is pushed.

- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the actuator check mode.



(e) Clear the DTC

(1) During the sensor check, press the "DEF" switch and "REAR DEF" switch at the same time.

6. ACTUATOR CHECK

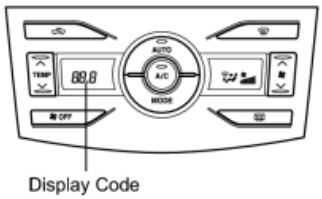
(a) Start the engine and warm it up.

(b) Perform the indicator check.

(c) Push the "R/F" switch to perform the actuator check.

HINT:

Be sure to perform the actuator check after starting the engine.



(d) As the actuator check is repeated from steps 1 to 10 at 1 second intervals, check the temperature and air flow visually and by hand.

HINT:

- The display blinks at 1 second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

STEP	DISPLAY	CONDITION

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. Data List

Use the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Data List.

(e) Check the value(s) by referring to the table below.

Air Conditioner

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Room Temperature Sensor (Room Temp)	Room temperature sensor / Min.: -6.5°C (20.3°F), Max.: 57.25°C (135.05°F)	Actual cabin temperature is displayed	-
Ambient Temp Sensor (Ambi Temp Sens)	Ambient temperature sensor / Min.: -23.3°C (-9.94°F), Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	-
Adjusted Ambient Temp (Ambi Temp)	Adjusted ambient temperature / Min.: -30.8°C (-23.44°F), Max.: 50.8°C (123.44°F)	-	-
Evaporator Fin Thermistor (Evap Fin Temp)	Evaporator fin thermistor / Min.: -29.7°C (-21.46°F), Max.: 59.55°C (139.19°F)	Actual evaporator temperature is displayed	-
Solar Sensor (D side) (Solar Sens-D)	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor value increases as brightness increases	-
Engine Coolant Temp (Coolant Temp)	Engine coolant temperature / Min.: 1.3°C (34.34°F), Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed while engine is warmed up	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Set Temperature (D side) (Set Temp-D)	Driver side set temperature / Min.: 18°C (65°F), Max.: 32°C (85°F)	Driver side set temperature is displayed	-
Blower Motor Speed Level (Blower Level)	Blower motor speed level / Min.: 0, Max.: 31	Increases in the range between 0 and 31 as the blower motor speed increases	-
Regulator Pressure Sensor (Reg Press Sens)	Regulator pressure sensor / Min.: -0.45668 MPaG, Max.: 3.29437 MPaG	Actual refrigerant pressure is displayed	-
Regulator Control Current (Reg Ctrl Currnt)	Compressor variable output current / Min.: 0 A, Max.: 0.997 A	-	-
Air Mix Servo Targ Pulse(D) (Air Mix Pulse-D)	Driver side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 93 (pulse) MAX. HOT: 6 (pulse)	-
Air Outlet Servo Pulse (D) (Air Out Pulse-D)	Driver side air outlet servo motor target pulse / Min.: 0, Max.: 255	FACE: 47 (pulse) B/L: 37 (pulse) FOOT: 17 (pulse) FOOT/DEF: 9 (pulse) DEF: 5 (pulse)	-
Air Inlet Damper Targ Pulse (A/I Damp Targ Pls)	Air inlet damper target pulse / Min.: 0, Max.: 255	• RECIRCULATION: 19 (pulse) • FRESH: 7 (pulse)	-
Number of Trouble Codes (#Codes)	Number of trouble codes / Min.: 0, Max.: 255	Number of DTCs will be displayed	-

2. Active Test

HINT:

Using the Techstream to perform Active Tests allows the relay actuator and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Air Conditioner / Active Test.

(e) Check the operation by referring to the table below.

Air Conditioner

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Blower Motor (Blower Motor)	Blower motor	Min.: 0, Max.: 31	-
Defogger Relay (Rear) (Defogger Rly-R)	Defogger relay (Rear)	OFF, ON	-
Heater Active Level (Heater Level)	Heater active level	Min.: 0, Max.: 3	-
Air Mix Servo Targ Pulse(D) (Air Mix Pulse-D)	Driver side air mix servo motor pulse	Min.: 0, Max.: 255	-
Air Outlet Servo Pulse (D) (Air Out Pulse-D)	Driver side air outlet servo motor pulse	Min.: 0, Max.: 255	-
Air Inlet Damper Targ Pulse (A/I Damp Targ Pls)	Air inlet damper target pulse	Min.: 0, Max.: 255	-

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Trouble Codes.

(e) Check for DTCs.

2. DTC CLEAR USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Trouble Codes.

(e) Clear DTCs by pressing the YES button on the Techstream display.

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): ACTUATOR CHECK (2010 Corolla)		

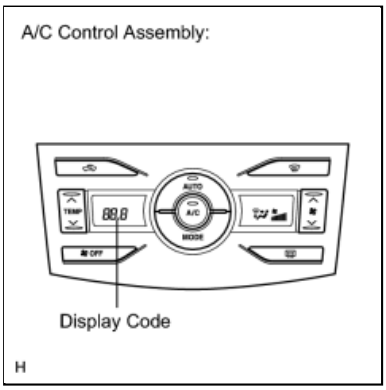
ACTUATOR CHECK

1. ACTUATOR CHECK

(a) Start the engine and warm it up.

(b) Perform the indicator check INFO .

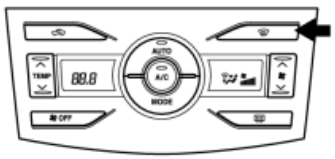
(c) Push the "R/F" switch to perform the actuator check.



HINT:

Be sure to perform the actuator check after starting the engine.

(d) As the actuator check is repeated from steps 1 to 10 at 1 second intervals, check the temperature and air flow visually and by hand.



HINT:

- The display blinks at 1 second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

STEP NO.	DISPLAY CODE	CONDITION				
		BLOWER LEVEL	AIR MIX DAMPER	AIRFLOW VENT	AIR INLET DAMPER	COMPRESSOR
1	0	0	0% open	FACE	FRESH	OFF
2	1	1	0% open	FACE	FRESH	OFF

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and turn the Techstream main switch on.

(c) Select the item below in the Data List, and read the display on the Techstream.

Data List / Air Conditioner

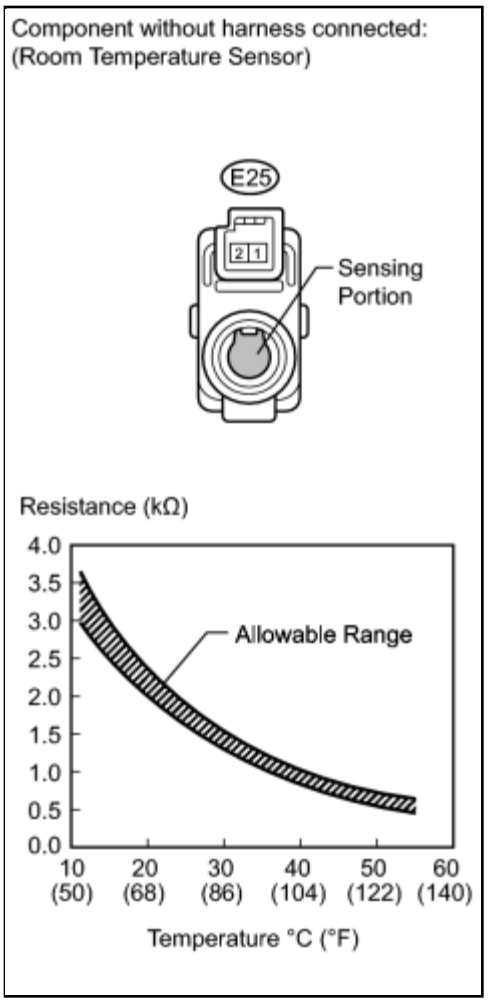
TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Room Temperature Sensor (Room Temp)	Room temperature sensor / Min.: -6.5°C (20.3°F), Max.: 57.25°C (135.05°F)	Actual cabin temperature is displayed	-

OK:

The display is as specified in the "Normal Condition" column.

Result:

RESULT	PROCEED TO
NG	A
OK (When troubleshooting according to Problem Symptoms Table)	B
OK (When troubleshooting according to DTC)	C



C ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

B ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A ▼

2.	**INSPECT ROOM TEMPERATURE SENSOR**

(a) Remove the room temperature sensor.

(b) Disconnect the connector from the room temperature sensor.

(c) Measure the resistance according to the value(s) in the table below.

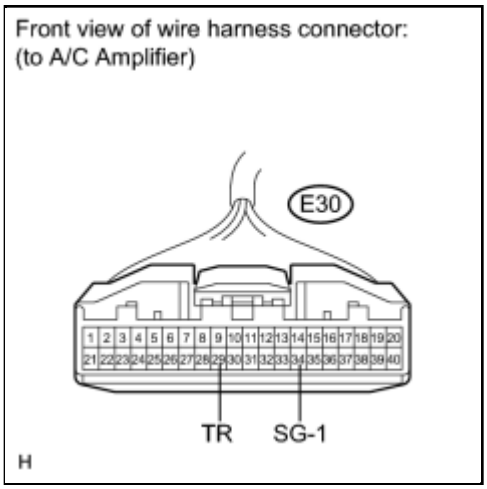
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E25-1 - E25-2	10°C (50°F)	3.00 to 3.73 kΩ
E25-1 - E25-2	15°C (59°F)	2.45 to 2.88 kΩ
E25-1 - E25-2	20°C (68°F)	1.95 to 2.30 kΩ
E25-1 - E25-2	25°C (77°F)	1.60 to 1.80 kΩ
E25-1 - E25-2	30°C (86°F)	1.28 to 1.47 kΩ
E25-1 - E25-2	35°C (95°F)	1.00 to 1.22 kΩ
E25-1 - E25-2	40°C (104°F)	0.80 to 1.00 kΩ
E25-1 - E25-2	45°C (113°F)	0.65 to 0.85 kΩ
E25-1 - E25-2	50°C (122°F)	0.50 to 0.70 kΩ

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E25-1 - E25-2	55°C (131°F)	0.44 to 0.60 kΩ
E25-1 - E25-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.



HINT:

As the temperature increases, the resistance decreases (see the graph).

NG ▶ **REPLACE ROOM TEMPERATURE SENSOR**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (ROOM TEMPERATURE SENSOR - AIR CONDITIONING AMPLIFIER)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

Front view of wire harness connector:
(to Room Temperature Sensor)

H

E30-29 (TR) - E25-1	Always	Below 1 Ω

3.	**CHECK HARNESS AND CONNECTOR (AMBIENT TEMPERATURE SENSOR CIRCUIT)**

(a) Disconnect the connector from the combination meter.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-9 (TX1+) - E46-23 (TEMP)	Outside temperature: 25°C (77°F)	1.60 to 1.80 kΩ
E46-9 (TX1+) - E46-23 (TEMP)	Outside temperature: 40°C (104°F)	0.80 to 1.00 kΩ

HINT:

As the temperature increases, the resistance decreases.

NG ▶ **INSPECT AMBIENT TEMPERATURE SENSOR**

OK ▼

4.	**REPLACE COMBINATION METER**

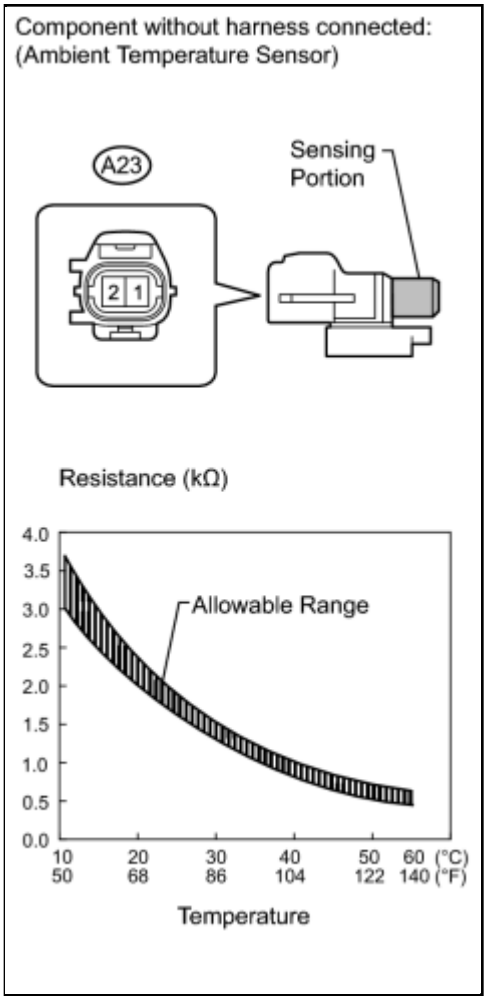
(a) Replace the combination meter INFO .

HINT:

Since the combination meter cannot be inspected while it is removed from the vehicle, replace the combination meter with a known good one and check that the condition returns to normal.

(b) Check for DTCs.

Result:



RESULT	PROCEED TO
DTC B1412 is not output	A
DTC B1412 is output	B

B ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

A ▶ **END**

5.	INSPECT AMBIENT TEMPERATURE SENSOR

(a) Remove the ambient temperature sensor.

(b) Disconnect the connector from the ambient temperature sensor.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A23-1 - A23-2	10°C (50°F)	3.00 to 3.73 kΩ
A23-1 - A23-2	15°C (59°F)	2.45 to 2.88 kΩ
A23-1 - A23-2	20°C (68°F)	1.95 to 2.30 kΩ
A23-1 - A23-2	25°C (77°F)	1.60 to 1.80 kΩ
A23-1 - A23-2	30°C (86°F)	1.28 to 1.47 kΩ
A23-1 - A23-2	35°C (95°F)	1.00 to 1.22 kΩ
A23-1 - A23-2	40°C (104°F)	0.80 to 1.00 kΩ
A23-1 - A23-2	45°C (113°F)	0.65 to 0.85 kΩ
A23-1 - A23-2	50°C (122°F)	0.50 to 0.70 kΩ
A23-1 - A23-2	55°C (131°F)	0.44 to 0.60 kΩ
A23-1 - A23-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

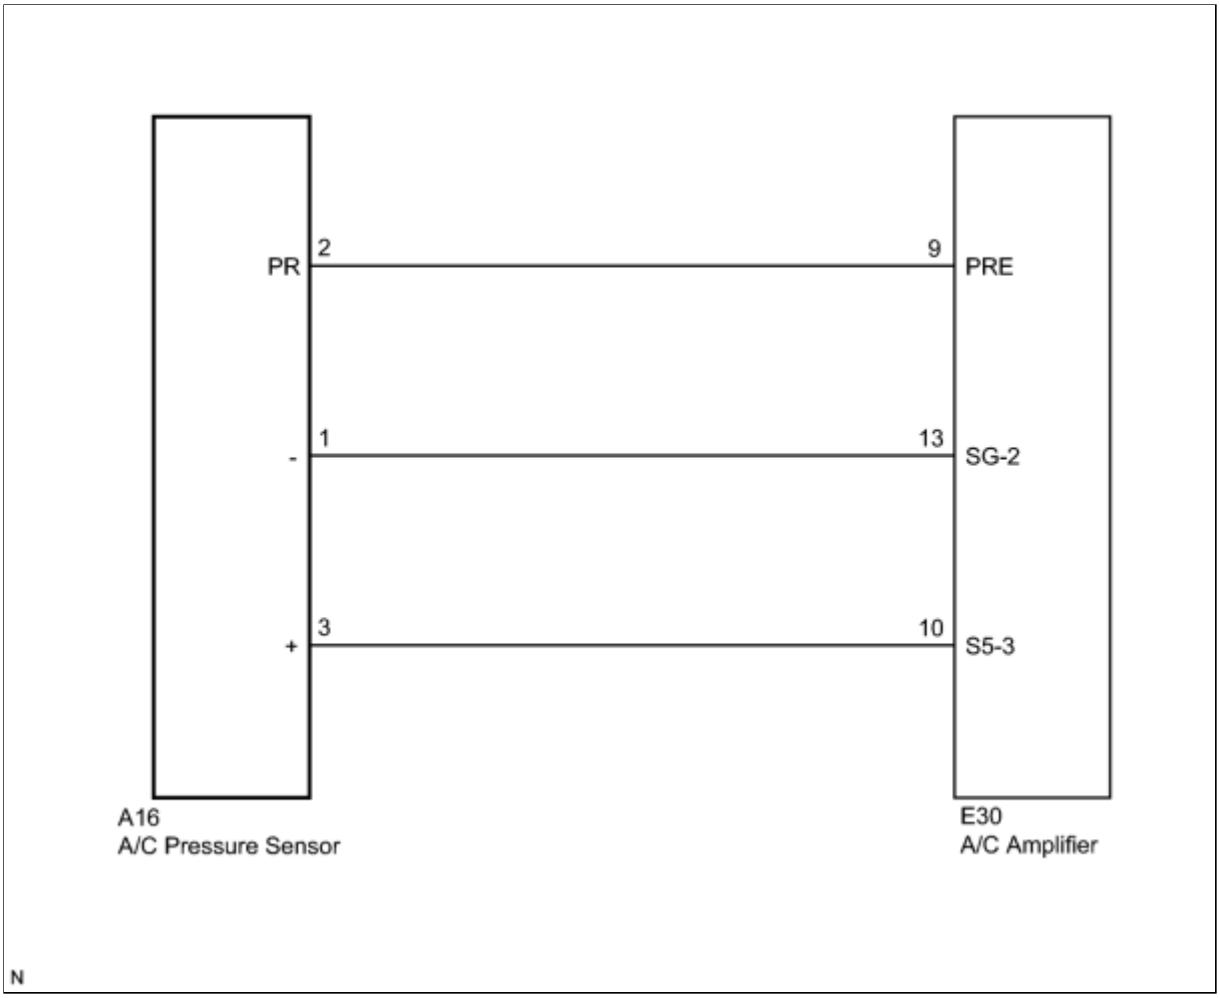
HINT:

As the temperature increases, the resistance decreases (see the graph).

NG ▶ **REPLACE AMBIENT TEMPERATURE SENSOR**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - AMBIENT TEMPERATURE SENSOR)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000STP03SX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): B1423/23: Pressure Sensor Circuit (2010 Corolla)		



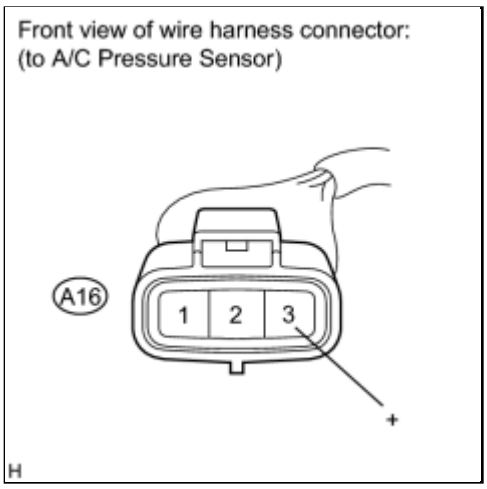
DTC	**B1423/23**	**Pressure Sensor Circuit**

DESCRIPTION

This DTC is output when refrigerant pressure on the high pressure side is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more). The A/C pressure sensor, which is installed on the high pressure side pipe to detect refrigerant pressure, outputs a refrigerant pressure signal to the A/C amplifier. The A/C amplifier converts this signal to a pressure value according to the sensor characteristics to control the compressor.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1423/23	• Open or short in A/C pressure sensor circuit • Refrigerant pressure on the high pressure side is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more).	• A/C pressure sensor • Harness or connector between A/C pressure sensor and A/C amplifier • A/C amplifier • Expansion valve (blocked, stuck) • Condenser (blocked, deterioration of cooling capacity due to dirt) • Cooler dryer (moisture in the refrigerant cycle cannot be absorbed) • Cooling fan system (condenser cannot be cooled down) • A/C system (leaks, blocked)

WIRING DIAGRAM



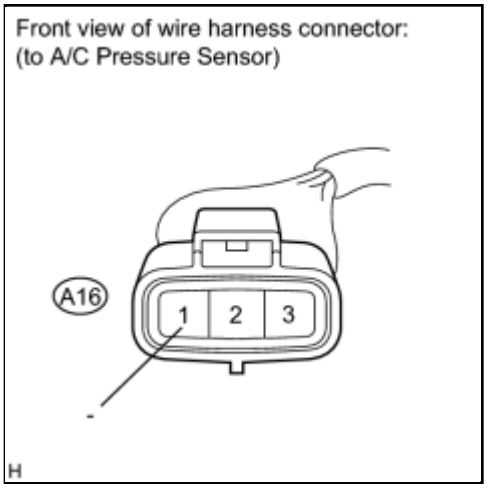
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)**

(a) Disconnect the connector from the A/C pressure sensor.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A16-3 (+) - Body ground	Ignition switch ON	4.75 to 5.25 V

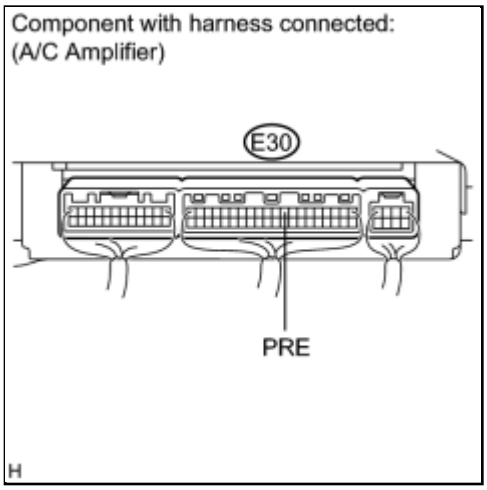
NG ▶ **CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (GROUND CIRCUIT)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-1 (-) - Body ground	Always	Below 1 Ω

NG ▶ CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)

OK ▼

3.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

(a) Reconnect the connector to the A/C pressure sensor.

(b) Remove the A/C amplifier with the connectors still connected.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-9 (PRE) - Body ground	Ignition switch ON (A/C: OFF)	0.7 to 4.8 V

HINT:

If the measured voltage is not within the normal range, there may be a malfunction in the A/C amplifier, A/C pressure sensor, or wire harness. It is also possible that the amount of refrigerant may not be appropriate.

NG ▶ CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)

OK

4.	INSPECT A/C PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

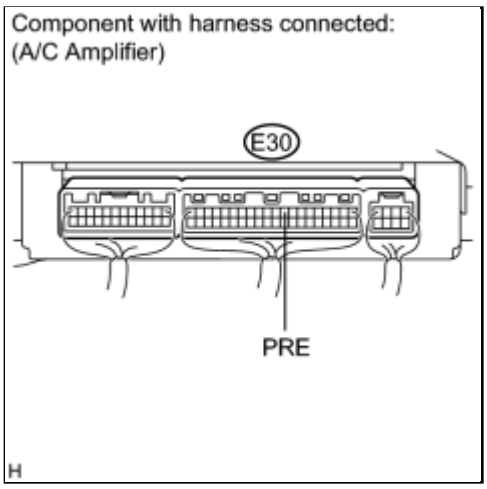
(a) Measure the voltage when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

- If refrigerant pressure on the high pressure side becomes extremely high during the inspection (if the voltage exceeds 4.8 V), the fail-safe function stops compressor operation. Therefore, measure the voltage before the fail-safe function operates.
- It is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the problem symptom may recur after a while.

HINT:



When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to the operation of the ambient temperature and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-9 (PRE) - Body ground	Ignition switch ON (A/C: ON)	0.7 to 4.8 V

Result:

RESULT	PROCEED TO
NG	A
OK (When troubleshooting according to Problem Symptoms Table)	B
OK (When troubleshooting according to DTC)	C

C ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

B ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A
▼

5.	INSPECT COOLING FAN SYSTEM

(a) Check that the cooling fan operates normally.

HINT:

- INFO for 2AZ-FE.
- INFO for 2ZR-FE.

NG ▶ **REPAIR COOLING FAN SYSTEM**

OK
▼

6.	CHARGE REFRIGERANT

(a) Use a refrigerant recovery unit to recover refrigerant.

(b) Evacuate the A/C system.

(c) Add an appropriate amount of refrigerant INFO .

HINT:

If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, in order to confirm the problem, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for DTCs.

NEXT

7.	**RECHECK DTC**

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

If refrigerant pressure on the high pressure side becomes high, the DTC will be set. Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be set after the A/C operates for a while.

HINT:

- When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.
- If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, in order to confirm the problem, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for DTCs. If the DTC is not output after this work, it indicates that the cooler dryer in the condenser is not able to absorb moisture in the refrigerant cycle. In this case, to complete the repair, it is necessary to replace the cooler dryer.

Result:

RESULT	PROCEED TO
DTC B1423 is not output	A
DTC B1423 is output	B

B ▶ **REPLACE EXPANSION VALVE**

A ▶ **REPLACE COOLER DRYER**

8.	REPLACE EXPANSION VALVE

(a) Replace the expansion valve with a new one INFO .

HINT:

Replace the expansion valve with a new one because the expansion valve is either stuck or clogged.

NEXT

9.	CHARGE REFRIGERANT

(a) Add an appropriate amount of refrigerant INFO .

NEXT

10.	RECHECK DTC

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open

ITEM	CONDITION
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

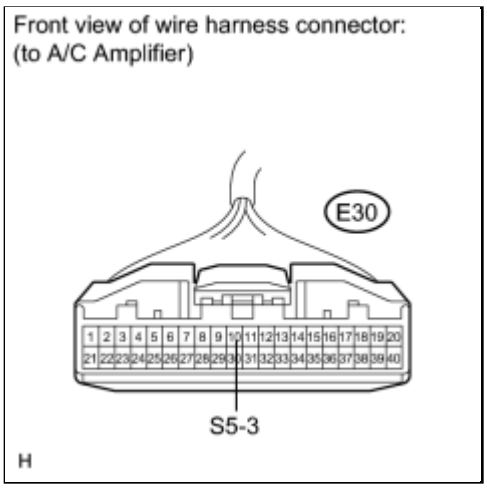
NOTICE:

If refrigerant pressure on the high pressure side becomes high, the DTC will be set. Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be set after the A/C operates for a while.

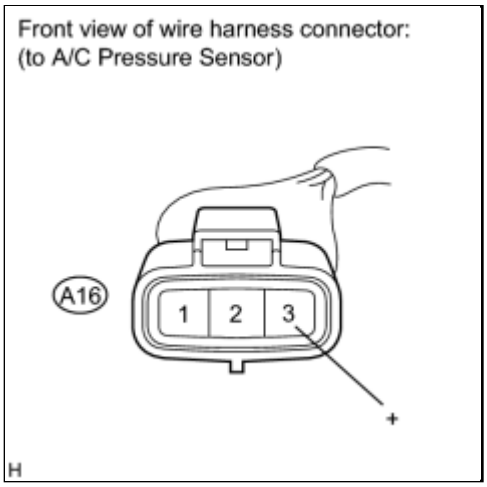
HINT:

- When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to the operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.
- If refrigerant pressure is not normal after replacing the expansion valve with a new one, the condenser or pipes may be clogged due to dirt, dust or other contaminants. In this case, clean or replace the condenser or pipes.

Result:



RESULT	PROCEED TO
DTC B1423 is not output	A
DTC B1423 is output	B



B ▶ **REPLACE CONDENSER**

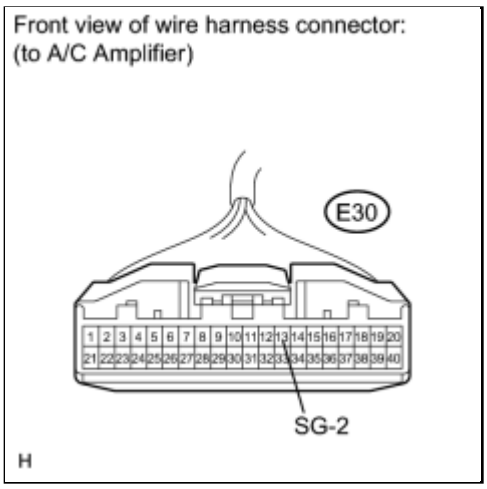
A ▶ **END**

11.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**

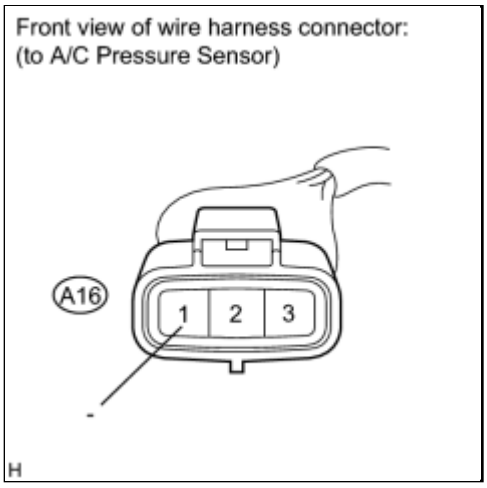
(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-3 (+) - E30-10 (S5-3)	Always	Below 1 Ω
E30-10 (S5-3) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

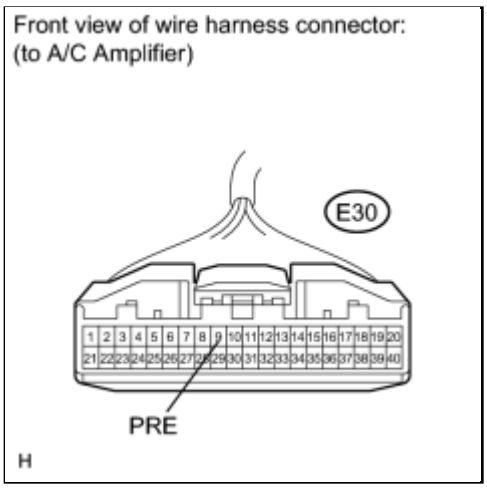
OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

12.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**

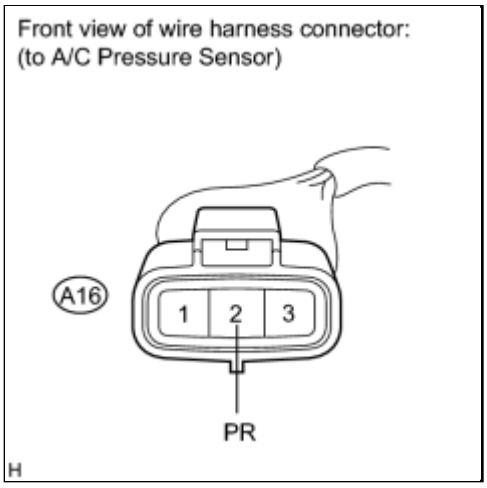
(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-1 (-) - E30-13 (SG-2)	Always	Below 1 Ω
E30-13 (SG-2) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

13.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - A/C PRESSURE SENSOR)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-2 (PR) - E30-9 (PRE)	Always	Below 1 Ω
E30-9 (PRE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

14.	INSPECT FOR A/C SYSTEM LEAK

(a) Install the manifold gauge set.

(b) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

(c) Evacuate the A/C system and check that vacuum can be maintained.

OK:

Vacuum can be maintained in the A/C system.

HINT:

If vacuum cannot be maintained in the A/C system, there may be a refrigerant leak. In this case, it is necessary

to repair or replace the leaking part of the A/C system.

NG ▶ REPAIR A/C SYSTEM LEAK

OK ▼

15.	CHARGE REFRIGERANT

(a) Add an appropriate amount of refrigerant INFO .

NEXT ▼

16.	RECHECK DTC

(a) Recheck for DTCs when the following conditions are satisfied.

ITEM	CONDITION
Vehicle Doors	Fully open
Temperature Setting	MAX COLD
Blower Speed	HI
A/C Switch	ON
R/F Switch	RECIRCULATION
Interior Temperature	25 to 35°C (77 to 95°F)
Engine Speed	2000 rpm

NOTICE:

If refrigerant pressure on the high pressure side becomes high, the DTC will be set. Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be set after the A/C operates for a while.

HINT:

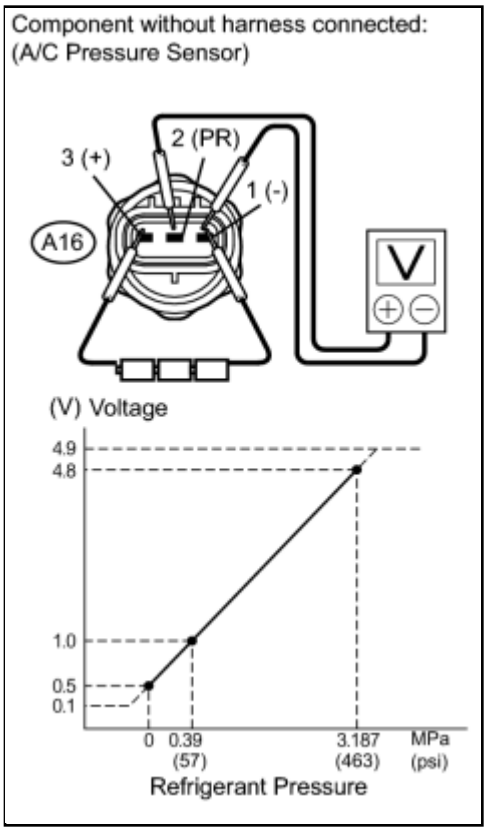
When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to the operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.

Result:

RESULT	PROCEED TO
DTC B1423 is not output	A
DTC B1423 is output	B

NOTICE:

If the DTC was set due to an insufficient or excessive amount of refrigerant, the problem may have been solved after performing the previous step. However, the root cause of insufficient refrigerant may be refrigerant leaks. The root cause of excessive refrigerant may be adding refrigerant when the level was insufficient. Therefore, identify and repair the area where refrigerant leaks from as necessary.



B ▶ **INSPECT A/C PRESSURE SENSOR**

A ▶ **END**

17.	INSPECT A/C PRESSURE SENSOR

(a) Install the manifold gauge set.

(b) Disconnect the connector from the A/C pressure sensor.

(c) Connect the three 1.5 V dry cell batteries' positive (+) lead to terminal 3, and the negative (-) lead to terminal 1.

(d) Connect the voltmeter's positive (+) lead to terminal 2, and the negative (-) lead to

terminal 1.

(e) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A16-2 (PR) - A16-1 (-)	Refrigerant pressure: 0.39 to 3.187 MPa (57 to 463 psi)	1.0 to 4.8 V

NG ▶ **REPLACE A/C PRESSURE SENSOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

18.	**REPAIR A/C SYSTEM LEAK**

(a) Identify the area where refrigerant leaks from INFO.

(b) Repair the identified area of the A/C system.

(c) Evacuate the A/C system.

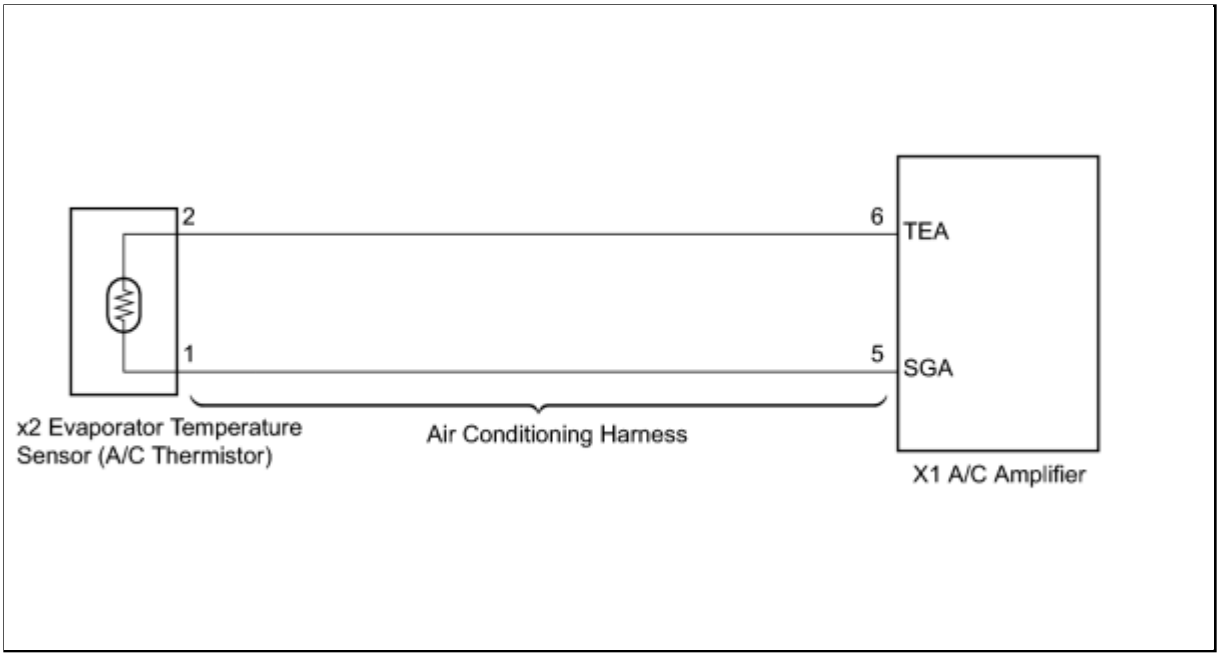
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): B1413/13: Evaporator Temperature Sensor Circuit (2010 Corolla)		

DTC	**B1413/13**	**Evaporator Temperature Sensor Circuit**



DESCRIPTION

The evaporator temperature sensor (A/C thermistor) is installed on the evaporator in the air conditioning unit. It detects the temperature of the cooled air that has passed through the evaporator and its signal is used to control the air conditioning. It sends a signal to the A/C amplifier. The resistance of the evaporator temperature sensor (A/C thermistor) changes in accordance with the temperature of the cooled air that has passed through the evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The A/C amplifier applies voltage (5 V) to the evaporator temperature sensor (A/C thermistor) and reads voltage changes as the resistance of the evaporator temperature sensor (A/C thermistor) changes. This sensor is used to prevent the evaporator from freezing.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

2.	**INSPECT EVAPORATOR TEMPERATURE SENSOR**

(a) Remove the evaporator temperature sensor.

(b) Disconnect the connector from the evaporator temperature sensor.

(c) Measure the resistance according to the value(s) in the table below.

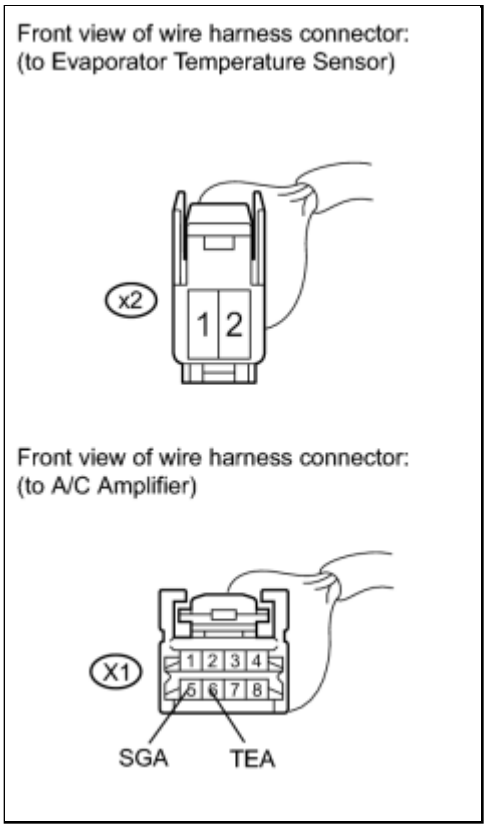
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
x2-1 - x2-2	-10°C (14°F)	7.30 to 9.10 kΩ
x2-1 - x2-2	-5°C (23°F)	5.65 to 6.95 kΩ
x2-1 - x2-2	0°C (32°F)	4.40 to 5.35 kΩ
x2-1 - x2-2	5°C (41°F)	3.40 to 4.15 kΩ
x2-1 - x2-2	10°C (50°F)	2.70 to 3.25 kΩ
x2-1 - x2-2	15°C (59°F)	2.14 to 2.58 kΩ
x2-1 - x2-2	20°C (68°F)	1.71 to 2.05 kΩ
x2-1 - x2-2	25°C (77°F)	1.38 to 1.64 kΩ
x2-1 - x2-2	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- Hold the sensor only by its connector. Touching the sensor may change the resistance value.
- When measuring, the sensor temperature must be the same as the ambient temperature.

HINT:



As the temperature increases, the resistance decreases (see the graph).

NG ▶ **REPLACE EVAPORATOR TEMPERATURE SENSOR**

OK
▼

3.	INSPECT AIR CONDITIONING HARNESS

(a) Remove the air conditioning harness.

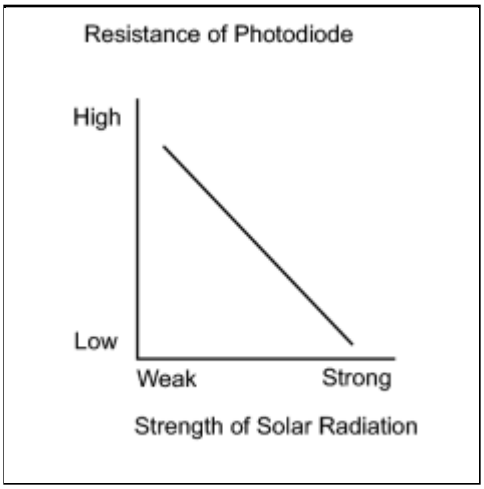
(1) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
X1-6 (TEA) - x2-2	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
X1-5 (SGA) - x2-1	Always	Below 1 Ω
X1-6 (TEA) - Body ground	Always	10 kΩ or higher
X1-5 (SGA) - Body ground	Always	10 kΩ or higher



NG ▶ **REPLACE AIR CONDITIONING HARNESS**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

Last Modified: 3-10-2010	6.4 C	**From:** 200901

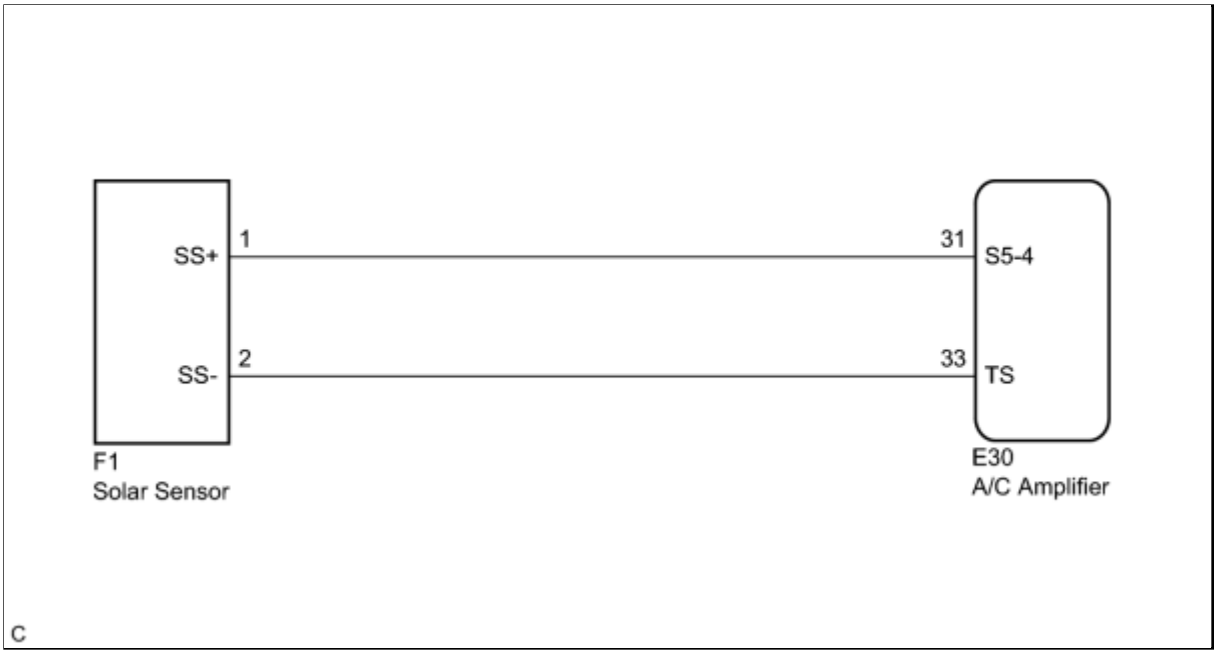
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): B1421/21: Solar Sensor Circuit (Passenger Side) (2010 Corolla)		

DTC	**B1421/21**	**Solar Sensor Circuit (Passenger Side)**



DESCRIPTION

The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in AUTO mode. The output voltage from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases. The A/C amplifier detects voltage output from the solar sensor.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1421/21	Open or short in passenger side solar sensor circuit	• Solar sensor • Harness or connector between solar sensor and A/C amplifier • A/C amplifier

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

If the check is performed in a dark place, DTC B1421/21 (solar sensor circuit abnormal) may be output even though the system is normal.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and turn the Techstream on.

(c) Expose the sensing portion of the solar sensor to light.

HINT:

Use an incandescent light for inspection.

(d) Select the item below in the Data List, and read the display on the Techstream.

Data List / Air Conditioner

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Solar Sensor (D side) (Solar	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor value increases as brightness increases	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

OK (When troubleshooting according to Problem Symptoms Table)	B
OK (When troubleshooting according to DTC)	C

C ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

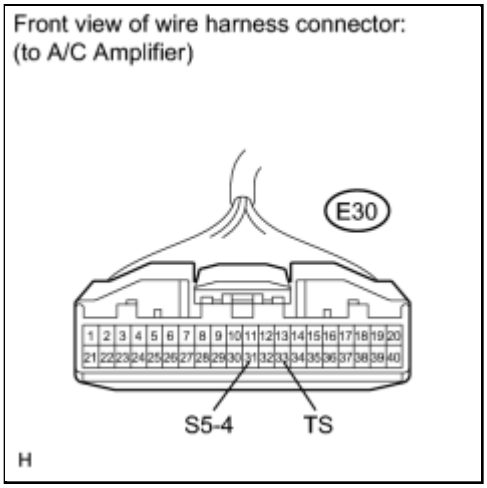
B ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

A ▼

2.	CHECK HARNESS AND CONNECTOR (SOLAR SENSOR)

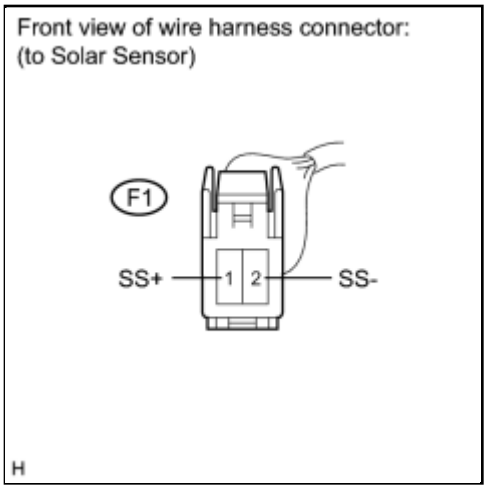
(a) Disconnect the connector from the solar sensor.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
F1-1 (SS+) - F1-2 (SS-)	Ignition switch off	Below 1 V
F1-1 (SS+) - F1-2 (SS-)	Ignition switch ON	11 to 14 V



NG ▶ **CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - A/C AMPLIFIER)**

OK ▶ **REPLACE SOLAR SENSOR**

3.	CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - A/C AMPLIFIER)

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-33 (TS) - F1-2 (SS-)	Always	Below 1 Ω
E30-31 (S5-4) - F1-1 (SS+)	Always	Below 1 Ω
E30-33 (TS) - Body ground	Always	10 kΩ or higher
E30-31 (S5-4) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ REPLACE AIR CONDITIONING AMPLIFIER

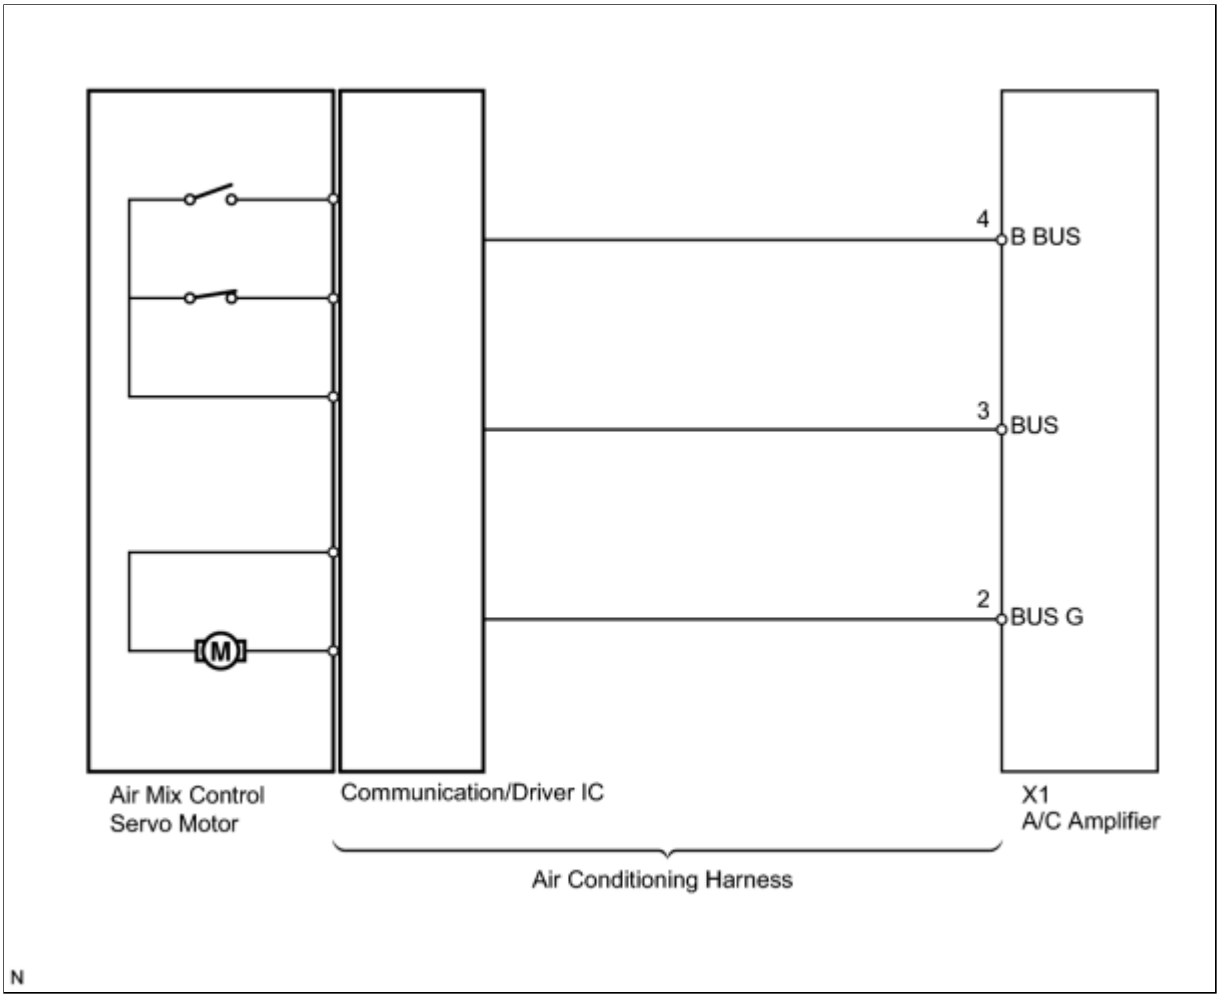
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): B1441/41: Air Mix Damper Control Servo Motor Circuit (Passenger Side) (2010 Corolla)		

DTC	**B1441/41**	**Air Mix Damper Control Servo Motor Circuit (Passenger Side)**

DESCRIPTION



The air mix damper servo sends pulse signals to inform the air conditioning amplifier of the damper position. The air conditioning amplifier activates the motor (normal, reverse) based on the signals to move the air mix damper (passenger seat) to any position, which adjusts the amount of air passing the heater core after passing the evaporator to control the blowing temperature. The A/C amplifier communicates with the servo through a communication/driver IC and wiring assembly called the air conditioning harness.

HINT:

Confirm that no mechanical problem is present because this DTC can be output when either a damper link or the damper is mechanically locked.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1441/41	Air mix damper position sensor value does not change even if air conditioning amplifier operates air mix control servo motor	• Air mix control servo motor • Air conditioning harness • A/C amplifier

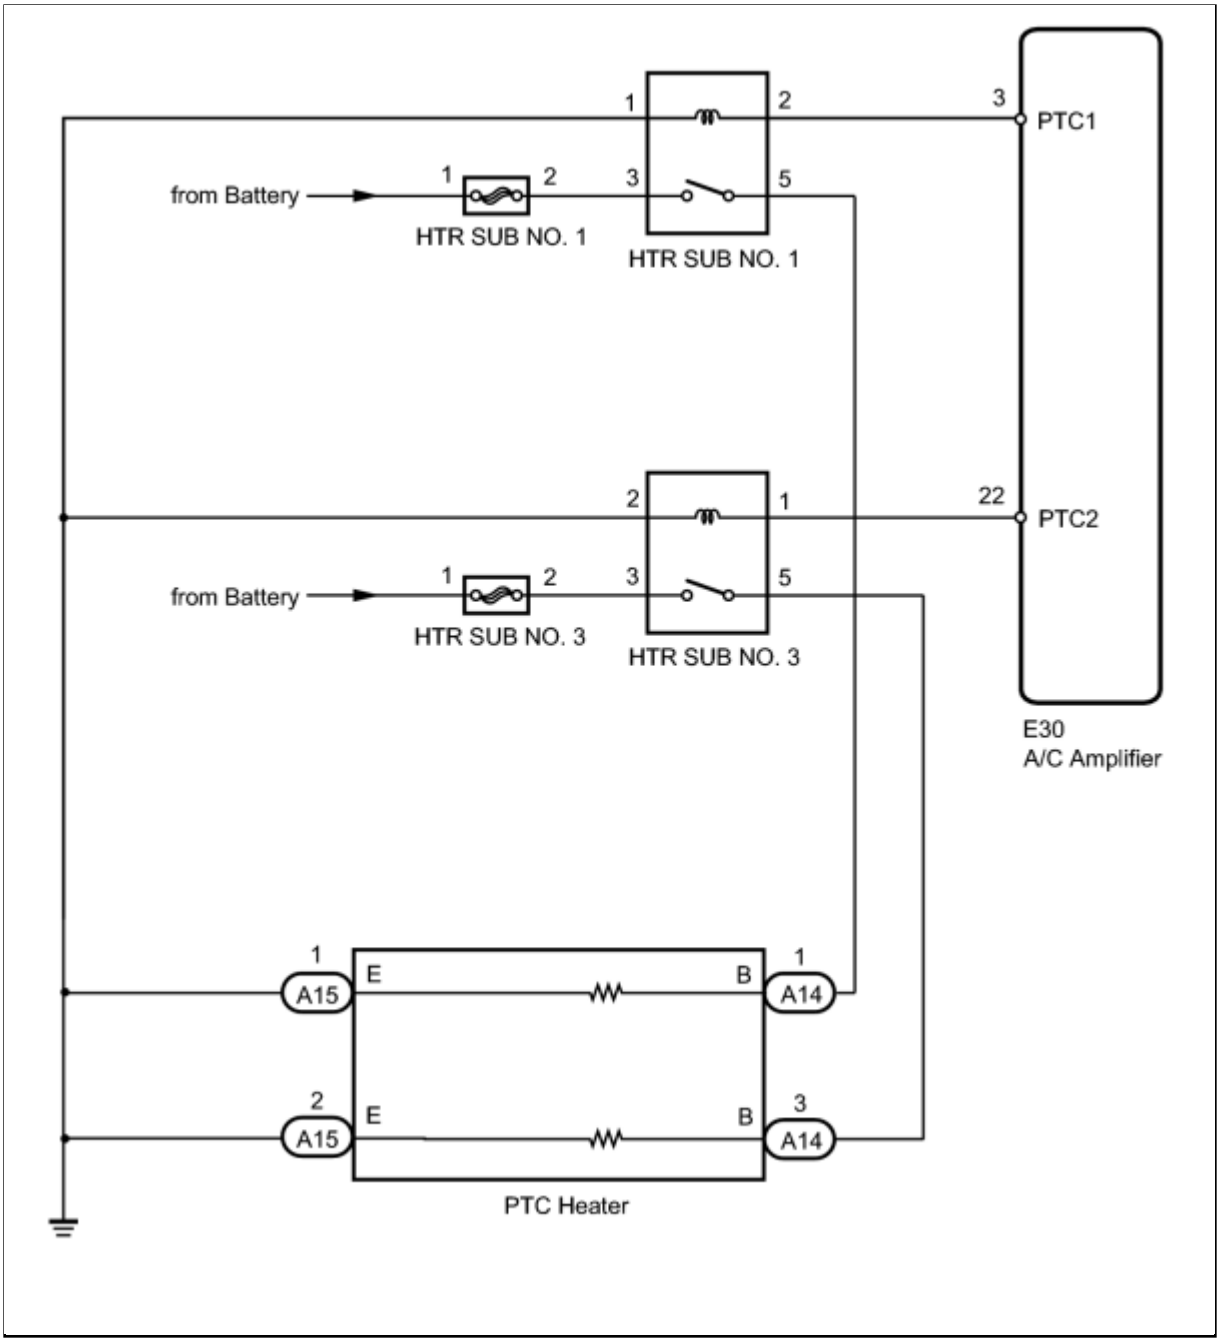
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): PTC Heater Circuit (2010 Corolla)		

PTC Heater Circuit



DESCRIPTION

The PTC heater is installed in the heater unit and operates when the coolant temperature is low and normal heater operation is insufficient.

The A/C amplifier switches the circuit in the PTC relay and operates the PTC heater when the operating conditions (the coolant temperature is below 65°C (149°F), setting temperature is MAX. HOT, ambient temperature is below 10°C (50°F) and blower switch is not OFF) are met.

The PTC heater controls the number of the heater elements to be heated based on the electrical load and the amount of voltage generated. Therefore, when inspecting the PTC heater, be sure to turn off other electrical devices.

WIRING DIAGRAM

INSPECTION PROCEDURE

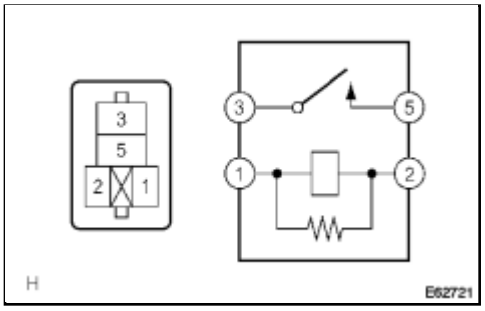
PROCEDURE

1.	**INSPECT FUSE (HTR SUB NO. 1, HTR SUB NO. 3)**

(a) Remove the HTR SUB No. 1 and HTR SUB No. 3 fuses from the engine room relay block and junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR SUB No. 1 fuse	Always	Below 1 Ω
HTR SUB No. 3 fuse	Always	Below 1 Ω

(c) Install the HTR SUB No. 1 and HTR SUB No. 3 fuses to the engine room relay block and junction block.

NG ▶ **REPLACE FUSE (HTR SUB NO. 1, HTR SUB NO. 3)**

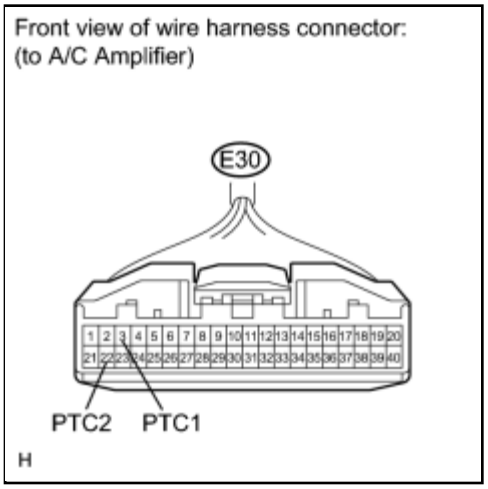
OK ▼

2.	**INSPECT RELAY (HTR SUB NO. 1, HTR SUB NO. 3)**

(a) Remove the HTR SUB No. 1 and HTR SUB No. 3 relays from the No. 7 relay block.

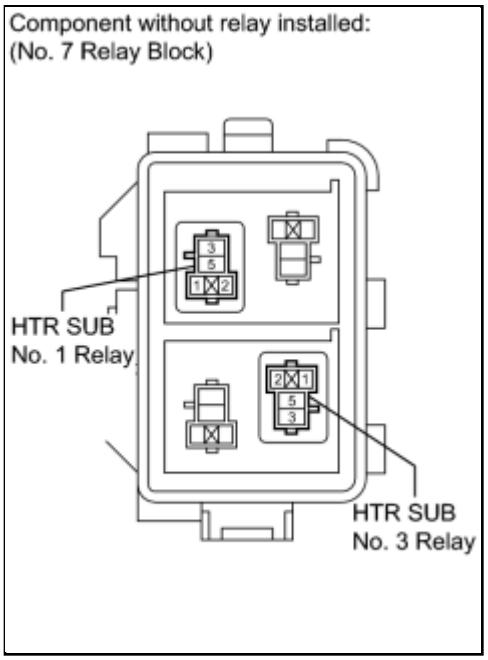
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SPECIFIED CONDITION
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage applied to terminals 1 and 2)

(c) Install the HTR SUB No. 1 and HTR SUB No. 3 relays to the No. 7 relay block.



NG ▶ **REPLACE RELAY (HTR SUB NO. 1, HTR SUB NO. 3)**

OK

3.	**CHECK HARNESS AND CONNECTOR (NO. 7 RELAY BLOCK - A/C AMPLIFIER, BODY GROUND)**

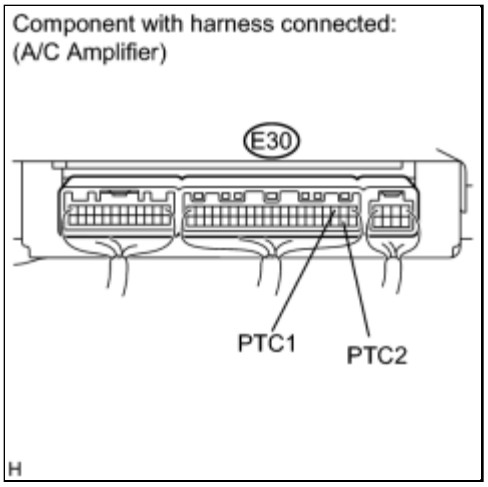
(a) Disconnect the connector from the A/C amplifier.

(b) Remove the HTR SUB No. 1 and HTR SUB No. 3 fuses from the No. 7 relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-3 (PTC1) - HTR SUB No. 1 relay terminal 2	Always	Below 1 Ω
E30-22 (PTC2) - HTR SUB No. 3 relay terminal 1	Always	Below 1 Ω
E30-3 (PTC1) - Body ground	Always	10 kΩ or higher
E30-22 (PTC2) - Body ground	Always	10 kΩ or higher
HTR SUB No. 1 relay terminal 1 - Body ground	Always	Below 1 Ω
HTR SUB No. 3 relay terminal 2 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT AIR CONDITIONING AMPLIFIER**

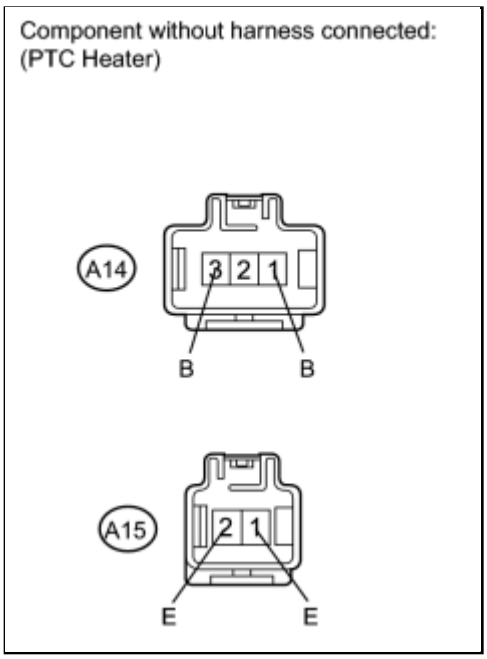
(a) Reconnect the connector to the A/C amplifier.

(b) Remove the A/C amplifier with the connectors still connected.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-3 (PTC1) - Body ground	Ignition switch: ON Temperature setting: MAX. HOT	Below 1 V



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
	Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	
E30-3 (PTC1) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V
E30-22 (PTC2) - Body ground	Ignition switch: ON Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	Below 1 V
E30-22 (PTC2) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 70°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V

NG ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK ▼

5.	**INSPECT PTC HEATER**

(a) Disconnect the connector from the PTC heater.

(b) Measure the resistance according to the value(s) in the table below.

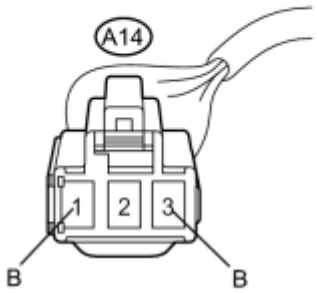
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-1 (B) - A15-1 (E)	Always	Below 1 Ω
A14-3 (B) - A15-2 (E)	Always	Below 1 Ω

NG ▶ **REPLACE PTC HEATER**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (PTC HEATER - BATTERY)**



(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

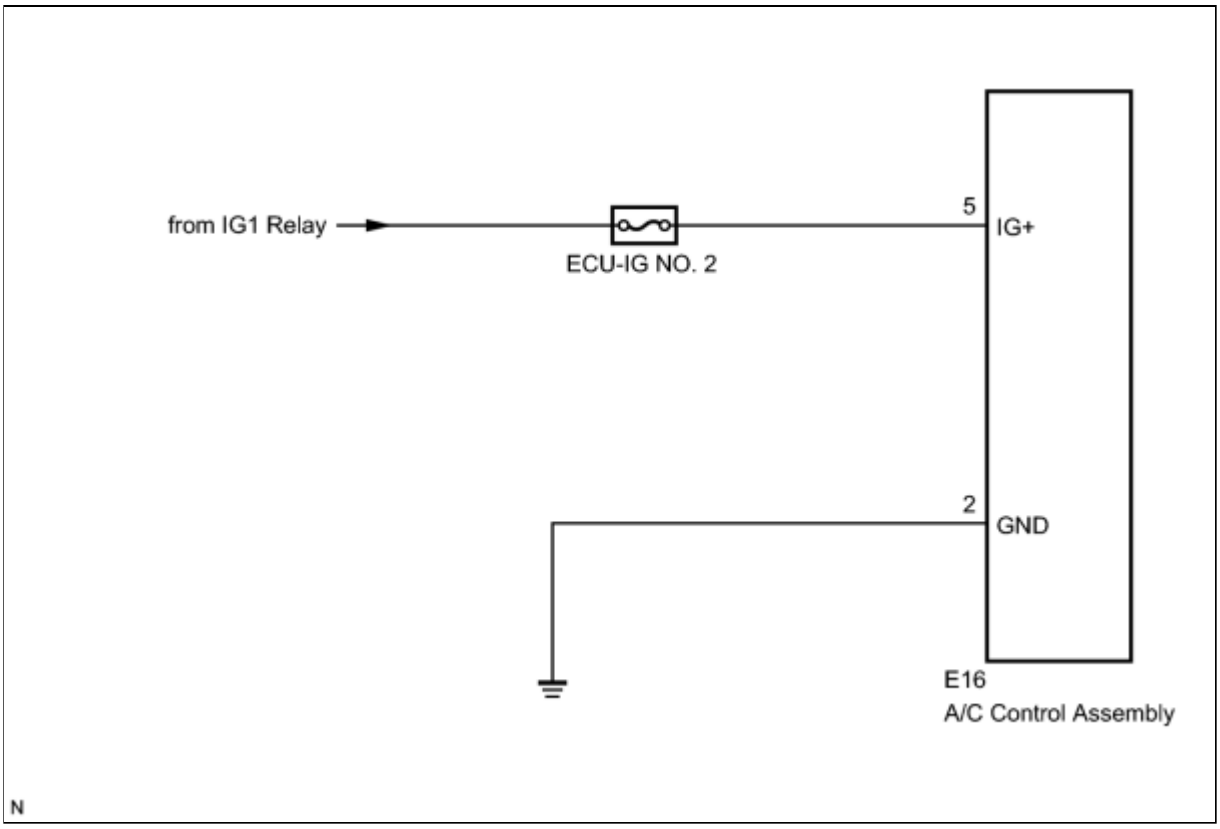
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A14-1 (B) - Body ground	Ignition switch: ON Temperature setting:	Below 1 V

	MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	
A14-1 (B) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V
A14-3 (B) - Body ground	Ignition switch: ON Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: OFF	Below 1 V
A14-3 (B) - Body ground	Engine running (1250 rpm or higher) Temperature setting: MAX. HOT Ambient temperature: 10°C (50°F) or lower Engine coolant temperature: 65°C (149°F) or lower Light control switch: OFF Blower switch: ON	11 to 14 V

Front view of wire harness connector: (to PTC Heater)

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (PTC HEATER - BODY GROUND)

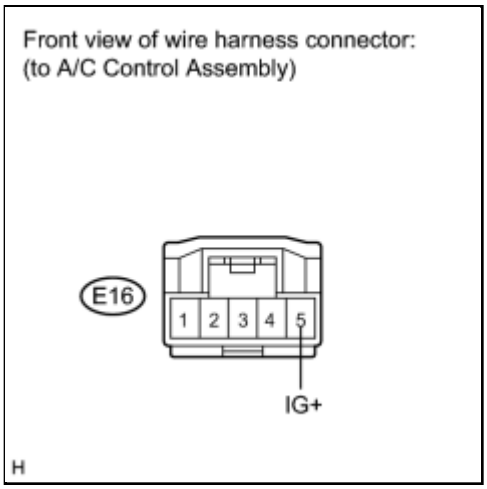


Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001O7Q01GX
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): Heater Control Panel Power Source Circuit (2010 Corolla)		

Heater Control Panel Power Source Circuit

DESCRIPTION

Battery voltage is supplied to the A/C control assembly through the ECU-IG No. 2 fuse.



WIRING DIAGRAM

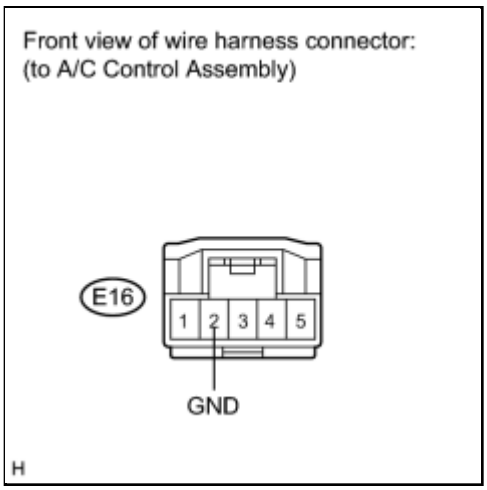
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (IG+ - BODY GROUND)**

(a) Disconnect the connector from the A/C control assembly.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E16-5 (IG+) - Body ground	Ignition switch ON	11 to 14 V
E16-5 (IG+) - Body ground	Ignition switch off	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (GND - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E16-2 (GND) - Body ground	Always	Below 1 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): Headlight Signal Circuit (2010 Corolla)		

Headlight Signal Circuit

DESCRIPTION

The A/C amplifier receives headlight operational signals to determine the electrical load. The electrical load signals are used for controlling the number of the PTC heater elements to be heated.

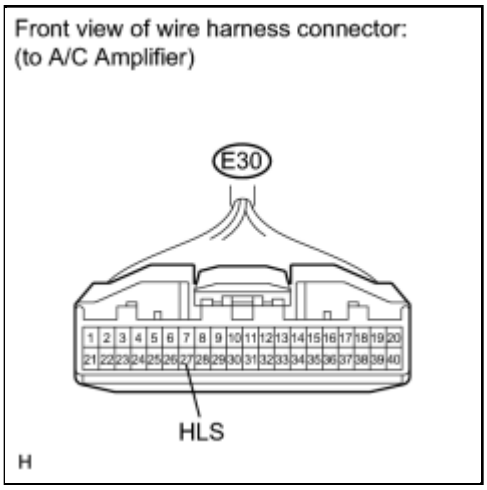
WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT HEADLIGHT ASSEMBLY

(a) Check if the headlights come on when the light control switch is turned to the HEAD position.



OK:

The headlights come on.

NG ▶ GO TO LIGHTING SYSTEM

OK ▼

2.	CHECK HARNESS AND CONNECTOR (HEADLIGHT SIGNAL)

(a) Disconnect the connector from the A/C amplifier.

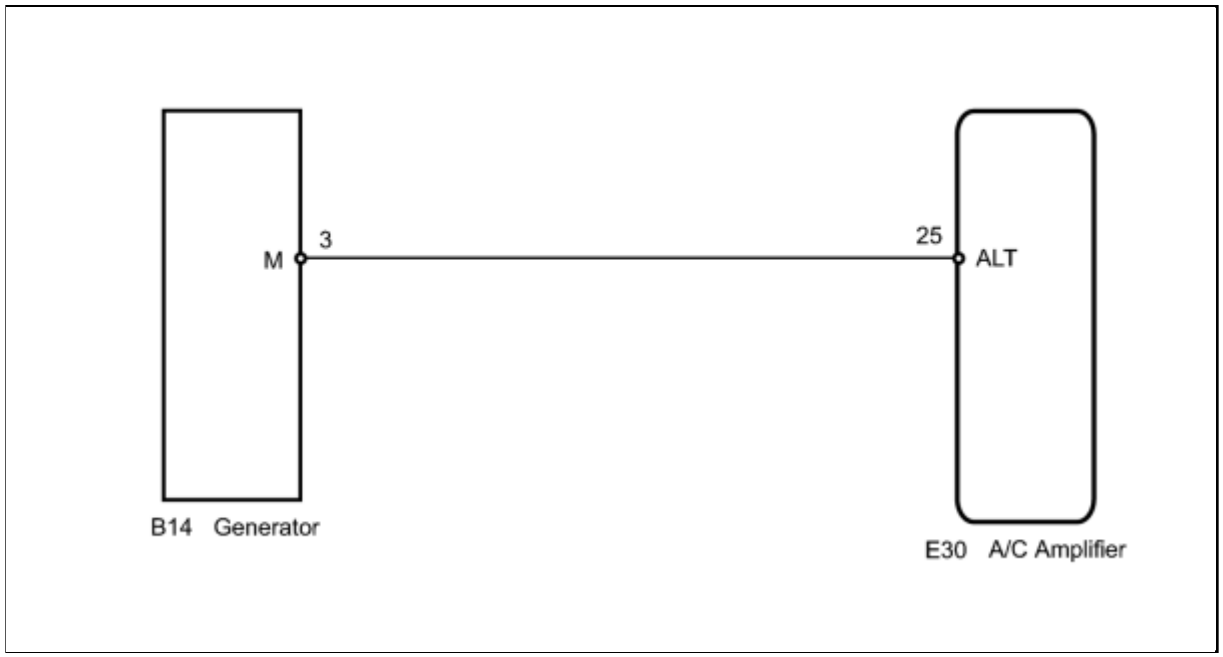
(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E30-27 (HLS) - Body ground	Light control switch: OFF	11 to 14 V
E30-27 (HLS) - Body ground	Light control switch: HEAD	Below 1 V

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



Last Modified: 3-10-2010	6.4 J	**From:** 200901

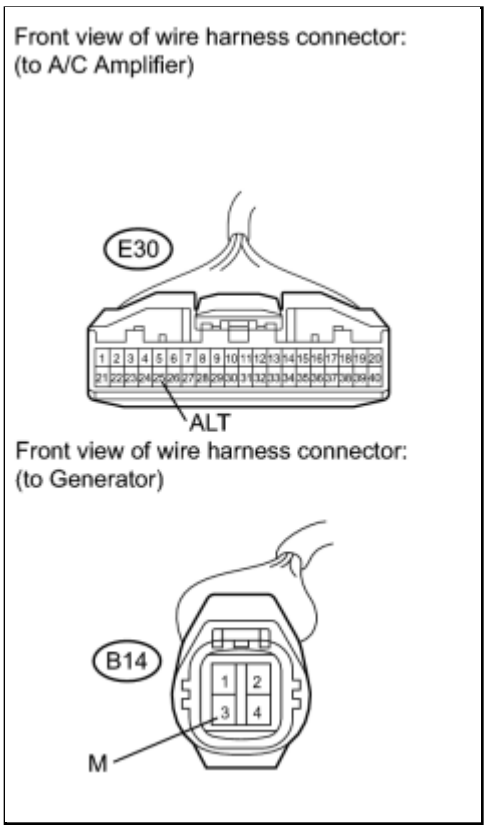
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): Generator Signal Circuit (2010 Corolla)		

Generator Signal Circuit

DESCRIPTION

When the engine is started, the generator rotates and a pulsed voltage signal is generated. This signal is used by the A/C amplifier. The generated voltage signals sent from the generator are used for controlling the number of the heater elements to be heated.

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - GENERATOR)**

(a) Disconnect the connector from the A/C amplifier.

(b) Disconnect the connector from the generator.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-25 (ALT) - B14-3 (M)	Always	Below 1 Ω
E30-25 (ALT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**INSPECT GENERATOR**

(a) Inspect the generator.

(1) for 2AZ-FE:

Inspect the generator INFO for On-vehicle Inspection, INFO for Inspection).

(2) for 2ZR-FE:

Inspect the generator INFO for On-vehicle Inspection, INFO for Inspection).

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ **REPLACE GENERATOR (for 2ZR-FE)**

B ▶ **REPLACE GENERATOR (for 2AZ-FE)**

A ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 J	**From:** 200901

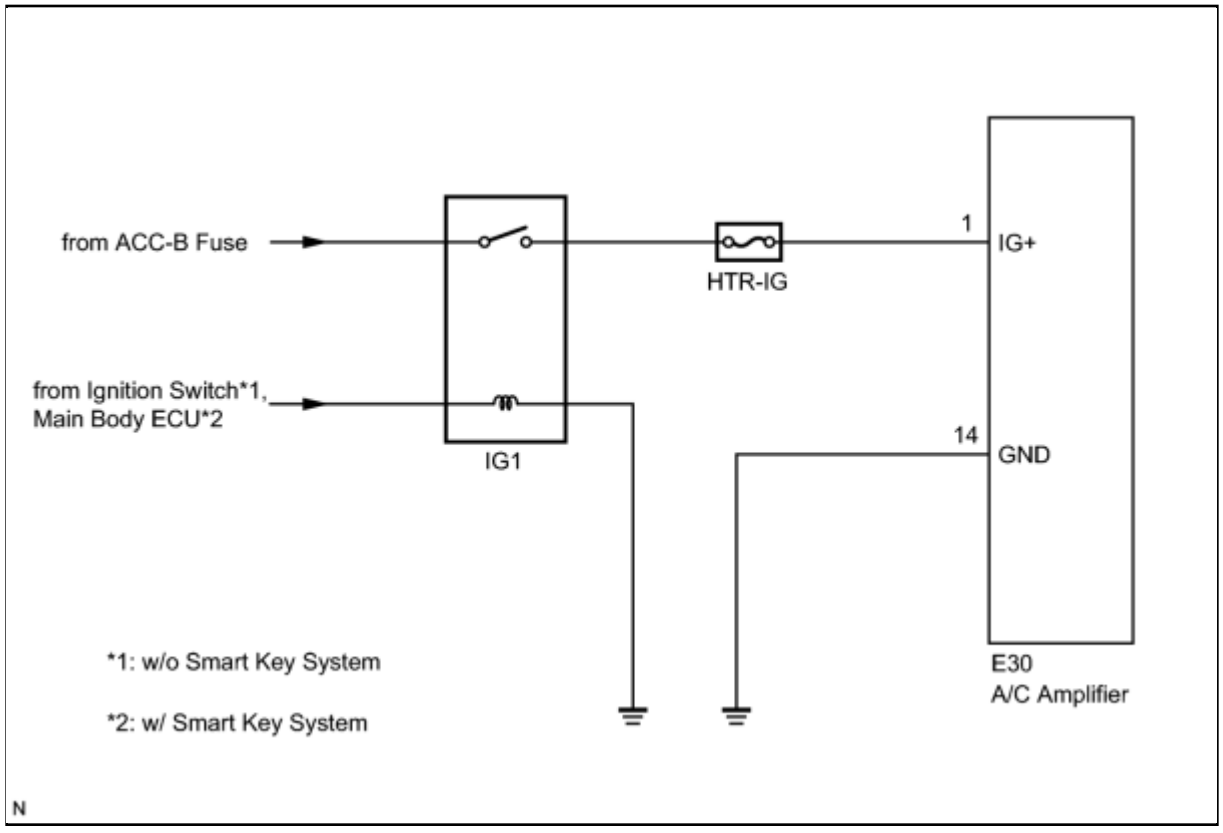
Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): IG Power Source Circuit (2010 Corolla)		



IG Power Source Circuit

DESCRIPTION

The main power source is supplied to the A/C amplifier when the ignition switch is ON.

The power source is used for operating the A/C amplifier and servo motor, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

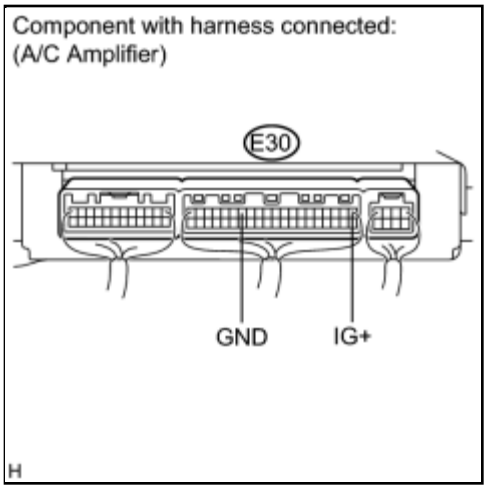
Start the engine before inspection. Check the IG1 relay or battery if the engine does not start.

PROCEDURE

1.	INSPECT FUSE (HTR-IG)

(a) Remove the HTR-IG fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
HTR-IG fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (HTR-IG)**

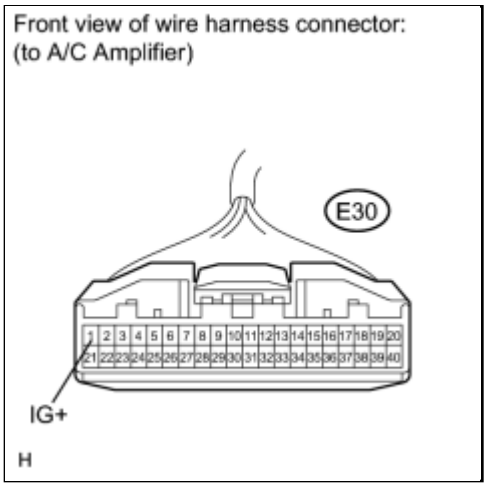
OK ▼

2.	INSPECT AIR CONDITIONING AMPLIFIER (IG+ - GND)

(a) Remove the A/C amplifier with its connectors still connected.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E30-1 (IG+) - E30-14 (GND)	Ignition switch ON	11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)**

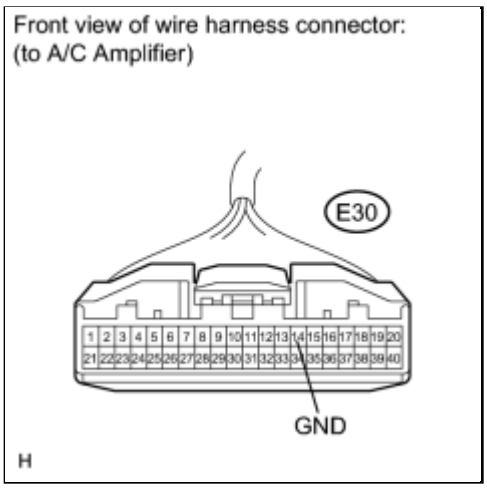
OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

3.	**CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E30-1 (IG+) - Body ground	Ignition switch off	Below 1 V
	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-14 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE AIR CONDITIONING AMPLIFIER**

Title: HEATING / AIR CONDITIONING: AIR CONDITIONING SYSTEM (for Automatic Air Conditioning System): Back-up Power Source Circuit (2010 Corolla)		

Back-up Power Source Circuit

DESCRIPTION

The back-up power source circuit for the A/C amplifier is shown below. Power is supplied even when the ignition switch is off and is used for diagnostic trouble code memory, etc.

WIRING DIAGRAM

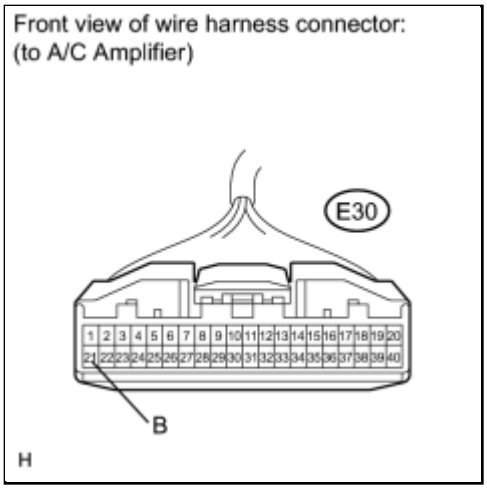
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUSE (ECU-B2)**

(a) Remove the ECU-B2 fuse from the engine room relay block and junction block.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TEST ITEM	CONDITION	SPECIFIED CONDITION
ECU-B2 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (ECU-B2)**

OK ▼

2.	**INSPECT AIR CONDITIONING AMPLIFIER (AIR CONDITIONING AMPLIFIER - BODY GROUND)**

(a) Disconnect the connector from the A/C amplifier.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E30-21 (B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

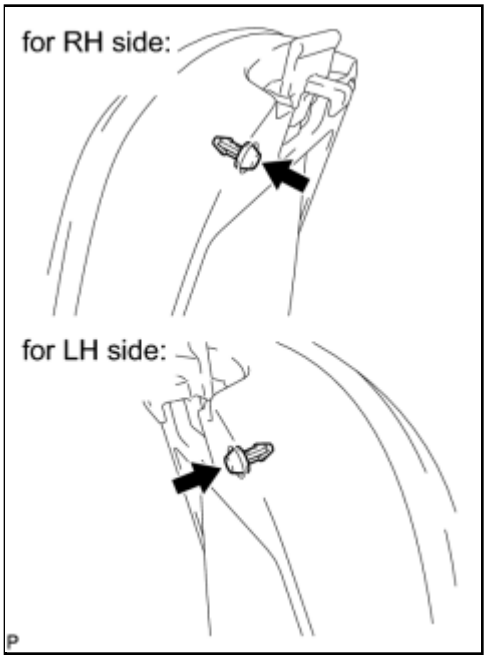
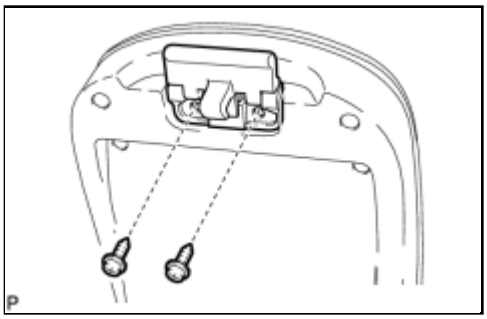
DISASSEMBLY

1. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/o Lower Console Box)

(a) Remove the 2 screws and the console compartment door sub-assembly.



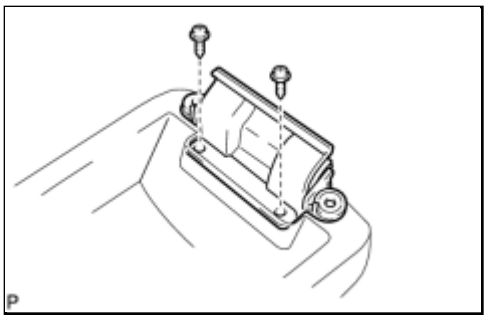
2. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/ Lower Console Box)



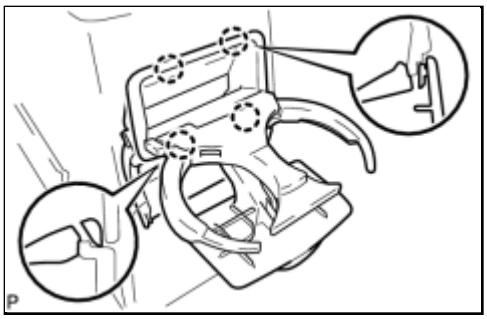
(a) Remove the 2 screws and the console compartment door sub-assembly.

3. REMOVE CONSOLE COMPARTMENT DOOR CUSHION

(a) Remove the 2 console compartment door cushions from the console compartment door.

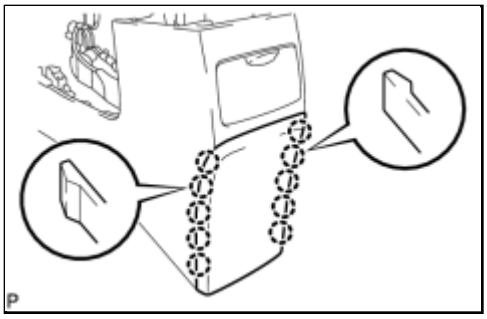


4. REMOVE CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY (w/o Lower Console Box)



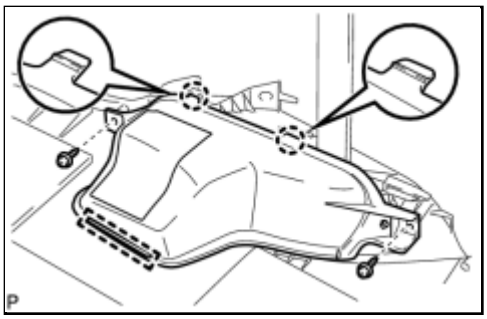
(a) Remove the 2 screws and the console compartment door lock sub-assembly.

5. REMOVE CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY (w/o Lower Console Box)



(a) Remove the 2 screws and the console compartment door hinge sub-assembly.

6. REMOVE INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY

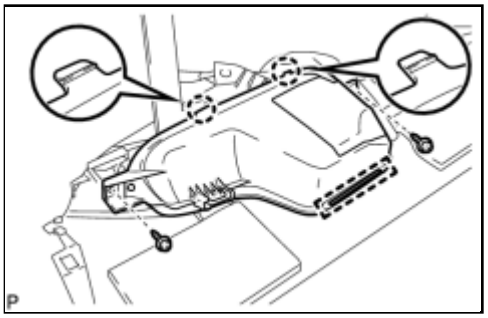


(a) Disengage the 4 claws and remove the instrument panel cup holder sub-assembly.

7. REMOVE CONSOLE REAR END PANEL (for TMMC, NUMMI Made)

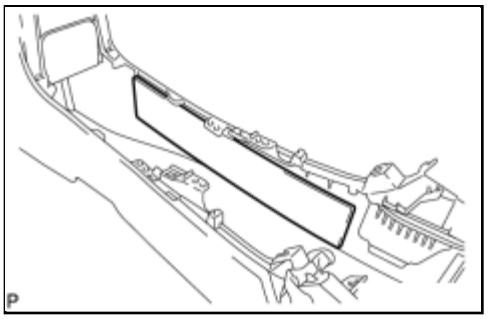
(a) Disengage the 10 claws and remove the console rear end panel.

8. REMOVE NO. 1 CONSOLE BOX HOLE COVER (for TMMC, NUMMI Made)



(a) Remove the 2 screws.

(b) Disengage the 2 claws and guide, and remove the No. 1 console box hole cover.

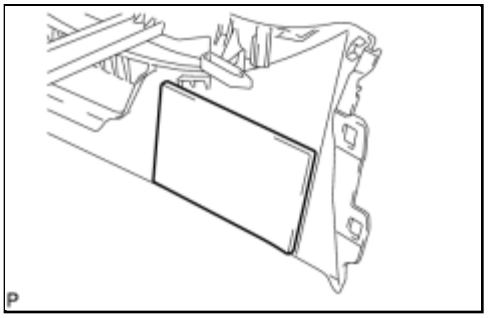


9. REMOVE NO. 2 CONSOLE BOX HOLE COVER (for TMMC, NUMMI Made)

(a) Remove the 2 screws.

(b) Disengage the 2 claws and guide, and remove the No. 2 console box hole cover.

10. REMOVE NO. 1 CONSOLE BOX SILENCER PAD (for TMMC, NUMMI Made)



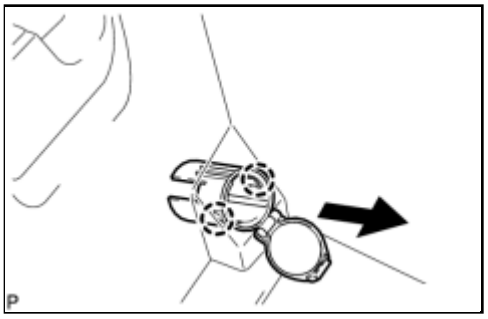
(a) Remove the No. 1 console box silencer pad.

HINT:

Use the same procedure for the RH side and LH side.

11. REMOVE NO. 2 CONSOLE BOX SILENCER PAD (for TMMC, NUMMI Made)

(a) Remove the No. 2 console box silencer pad.

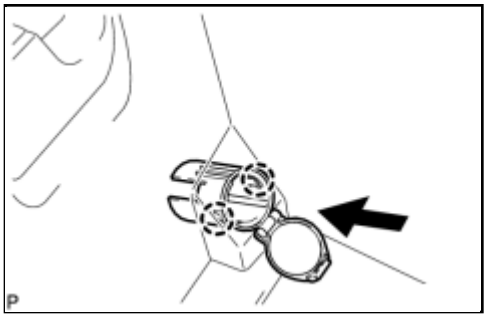


HINT:

Use the same procedure for the RH side and LH side.

12. REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY INFO

13. REMOVE CENTER POWER OUTLET SOCKET COVER



(a) Disengage the 2 claws and remove the center power outlet socket cover.

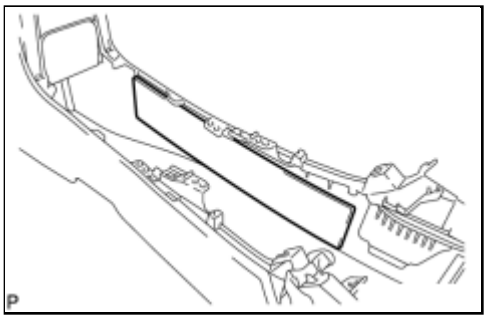
Title: INTERIOR PANELS / TRIM: FRONT CONSOLE BOX: REASSEMBLY (2010 Corolla)		

REASSEMBLY

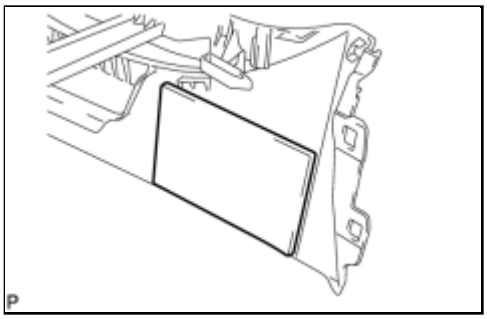


1. INSTALL CENTER POWER OUTLET SOCKET COVER

(a) Engage the 2 claws and install the center power outlet socket cover.

2. INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY INFO

3. INSTALL NO. 1 CONSOLE BOX SILENCER PAD (for TMMC, NUMMI Made)

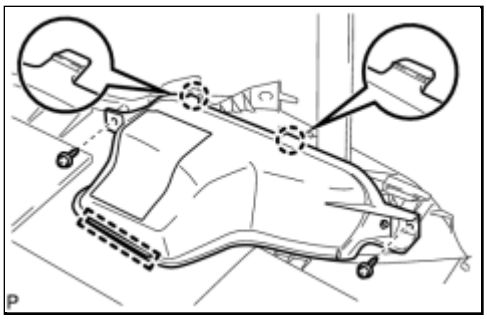


(a) Install the No. 1 console box silencer pad.

HINT:

Use the same procedure for the RH side and LH side.

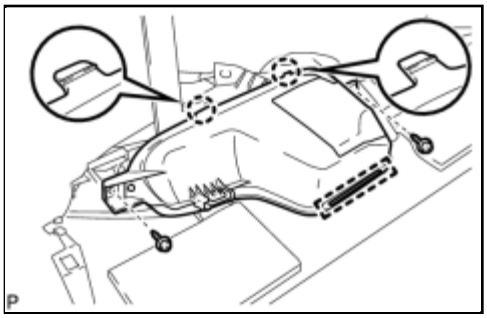
4. INSTALL NO. 2 CONSOLE BOX SILENCER PAD (for TMMC, NUMMI Made)



(a) Install the No. 2 console box silencer pad.

HINT:

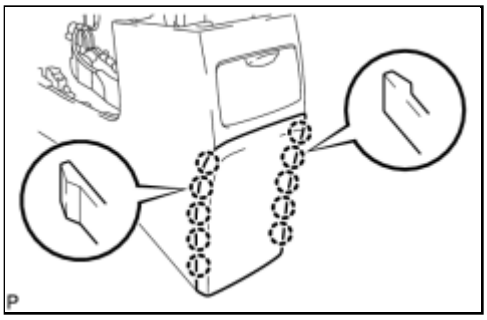
Use the same procedure for the RH side and LH side.



5. INSTALL NO. 1 CONSOLE BOX HOLE COVER (for TMMC, NUMMI Made)

(a) Engage the 2 claws and guide.

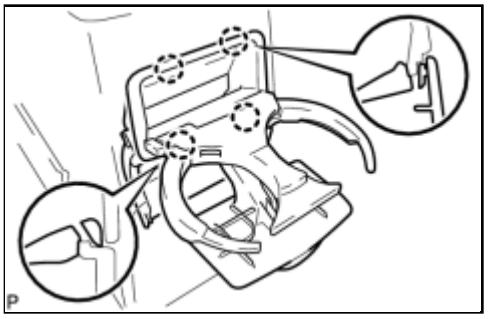
(b) Install the No. 1 console box hole cover with the 2 screws.



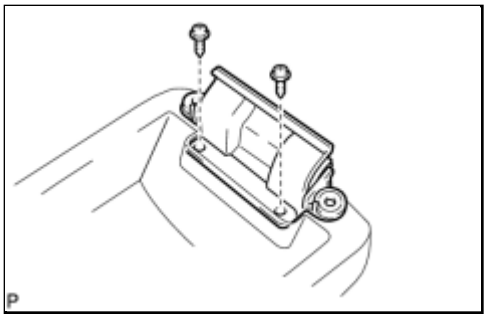
6. INSTALL NO. 2 CONSOLE BOX HOLE COVER (for TMMC, NUMMI Made)

(a) Engage the 2 claws and guide.

(b) Install the No. 2 console box hole cover with the 2 screws.



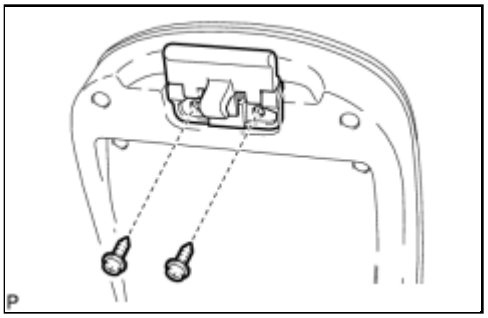
7. INSTALL CONSOLE REAR END PANEL (for TMMC, NUMMI Made)



(a) Engage the 10 claws and install the console rear end panel.

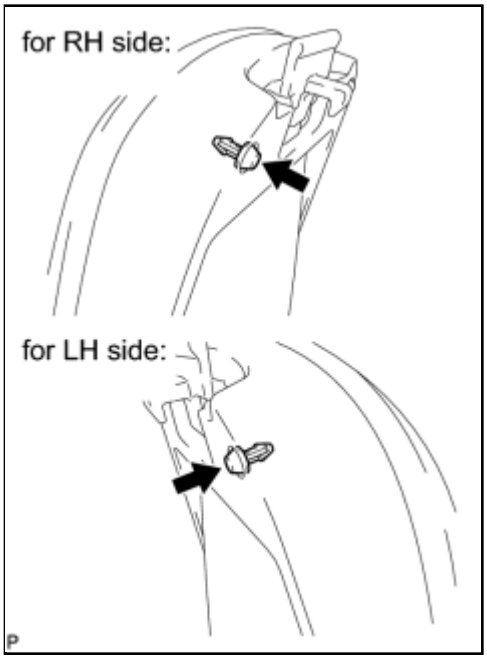
8. INSTALL INSTRUMENT PANEL CUP HOLDER SUB-ASSEMBLY

(a) Engage the 4 claws and install the instrument panel cup holder sub-assembly.

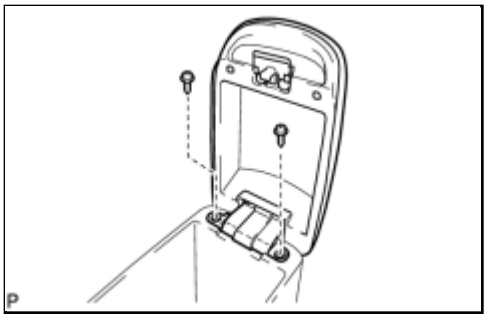


9. INSTALL CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY (w/o Lower Console Box)

(a) Install the console compartment door hinge sub-assembly with the 2 screws.



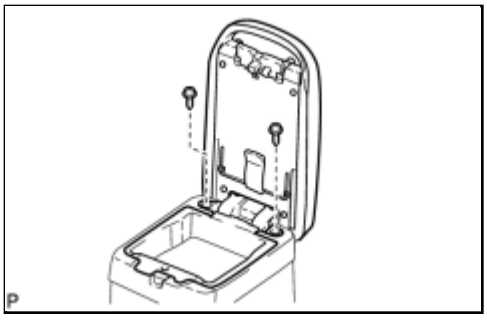
10. INSTALL CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY (w/o Lower Console Box)



(a) Install the console compartment door lock sub-assembly with the 2 screws.

11. INSTALL CONSOLE COMPARTMENT DOOR CUSHION

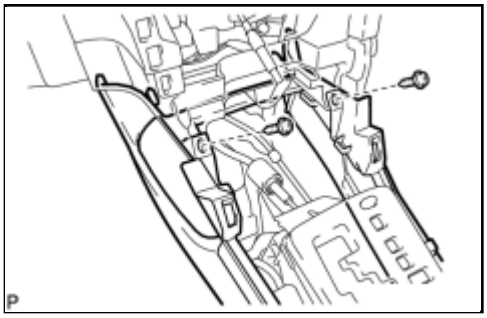
(a) Install the 2 console compartment door cushions to the console compartment door.



12. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/o Lower Console Box)

(a) Install the console compartment door sub-assembly with the 2 screws.

13. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY (w/ Lower Console Box)



(a) Install the console compartment door sub-assembly with the 2 screws.

Title: INTERIOR PANELS / TRIM: LOWER INSTRUMENT PANEL: INSTALLATION (2010 Corolla)		

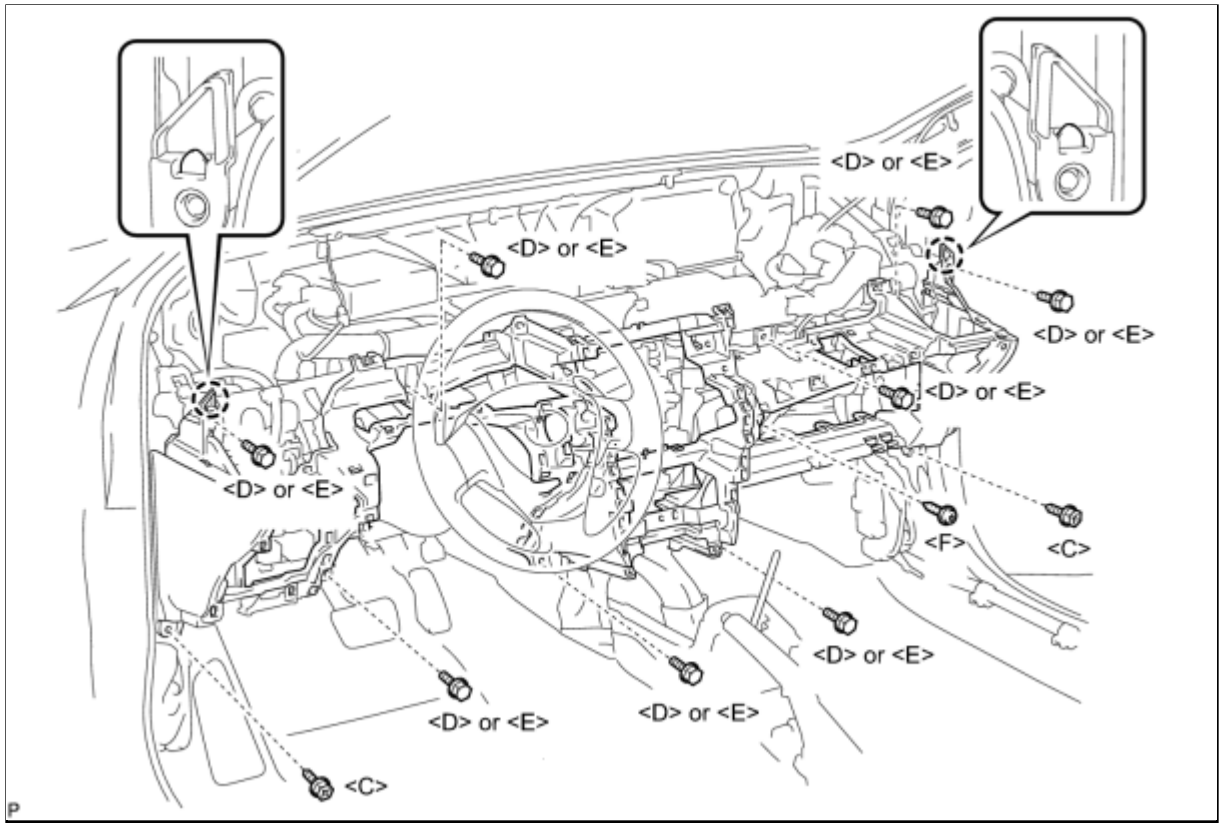
INSTALLATION

1. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) When using a new lower instrument panel sub-assembly:

(1) Immediately before installing the lower instrument panel sub-assembly, twist and cut off the portions shown in the illustration (joints for moulding).

(b) Install the lower instrument panel sub-assembly and engage the 2 claws.

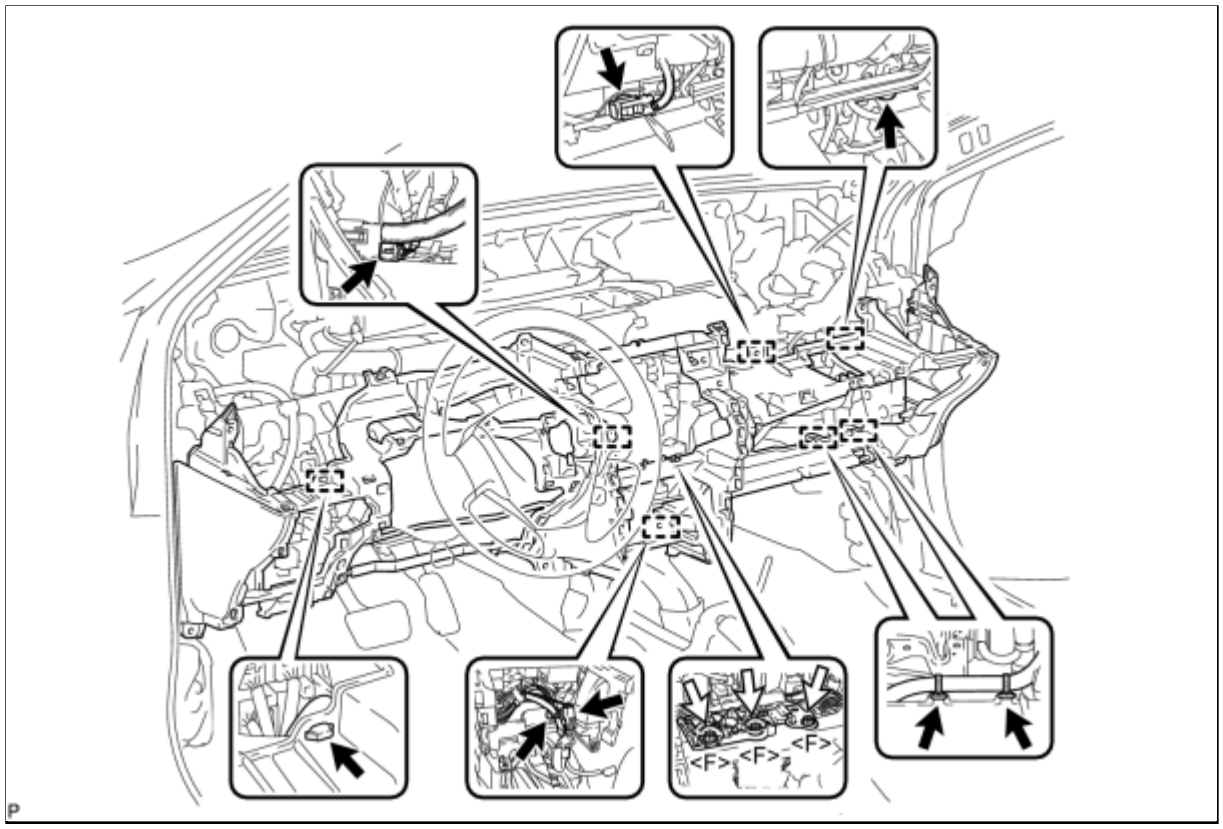


NOTICE:

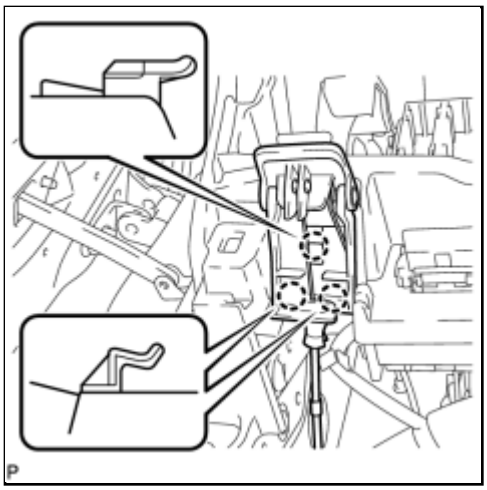
Do not allow the wire harness to get caught in the claws.

(c) Install the screw <F>.

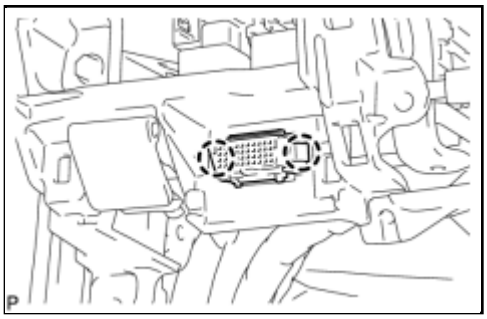
(d) Install the 2 bolts <C>.



(e) Install the 8 screws <D> or <E>.



(f) Engage each clamp.



(g) Install the 3 screws <F>.

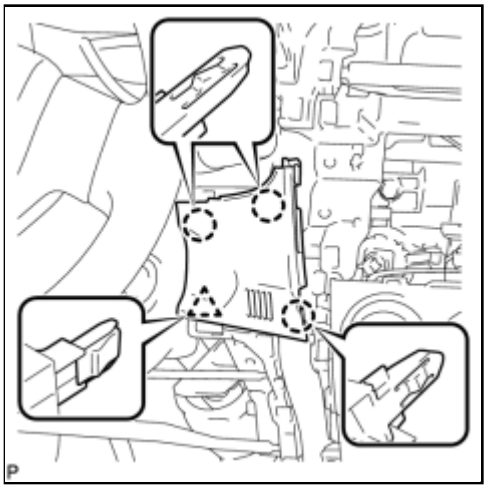
(h) Connect each connector.

(i) Engage the 3 claws and install the hood lock control cable assembly.

(j) Engage the 2 claws and install the DLC3.

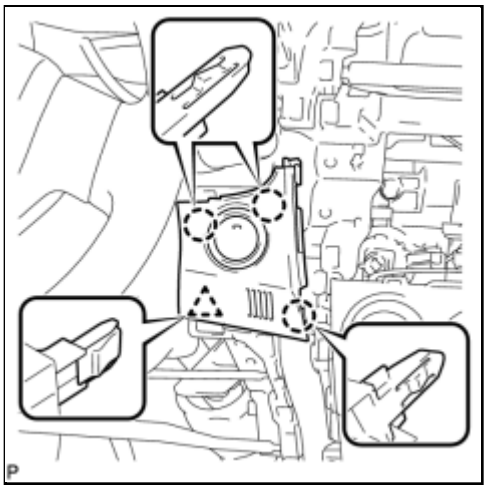
2. INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY INFO

3. INSTALL CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO



4. INSTALL CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

5. INSTALL CONSOLE BOX CARPET INFO

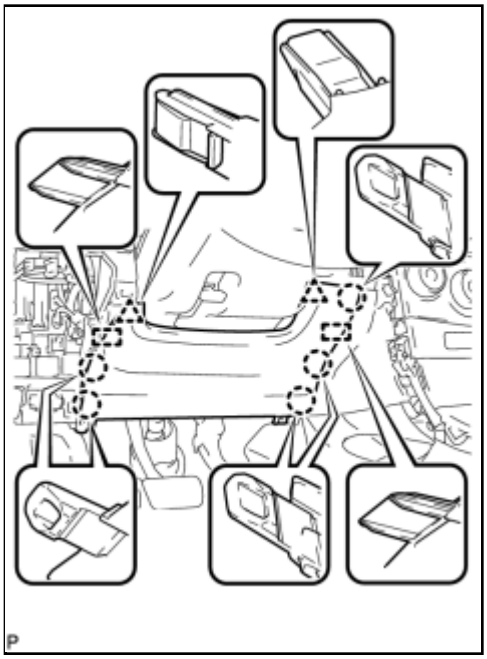


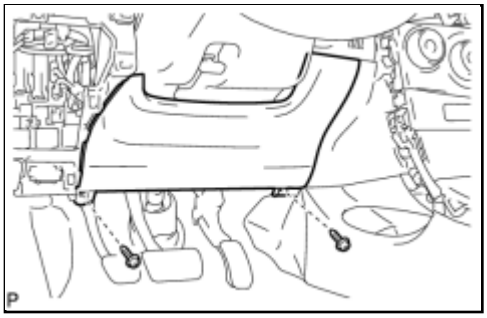
6. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

7. INSTALL NO. 1 SWITCH HOLE BASE (w/o Smart Key System)

(a) Engage the 3 claws and clip, and install the No. 1 switch hole base.

8. INSTALL NO. 1 SWITCH HOLE BASE (w/ Smart Key System)

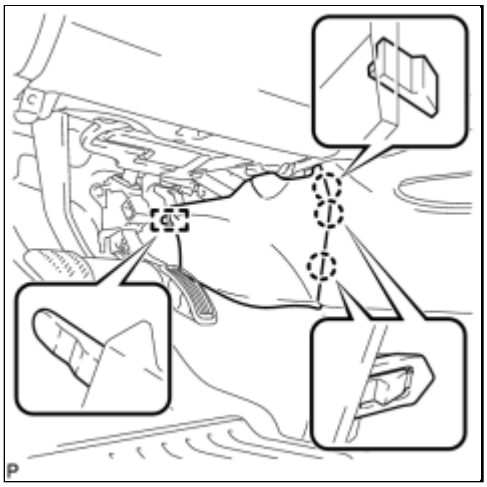




(a) Connect the connector.

(b) Engage the 3 claws and install the No. 1 switch hole base.

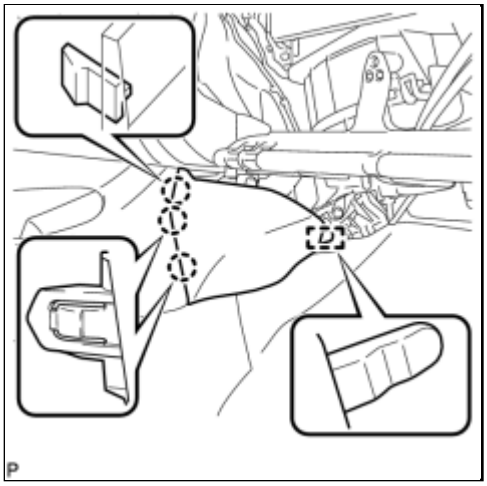
9. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY



(a) Engage the 5 claws, 2 clips and 2 guides.

(b) Install the lower instrument panel finish panel sub-assembly with the 2 screws <B>.

10. INSTALL FRONT NO. 1 CONSOLE BOX INSERT

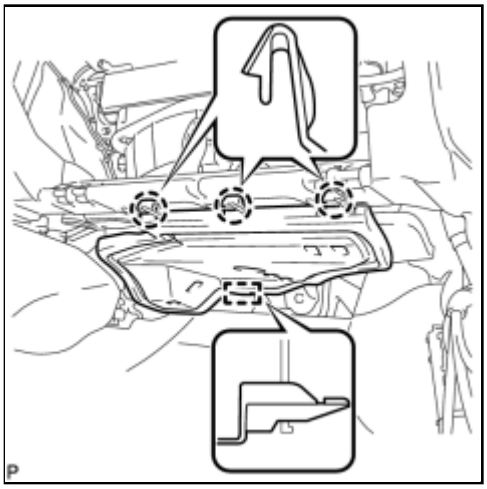


(a) Engage the guide.

(b) Engage the 3 claws and install the front No. 1 console box insert.

11. INSTALL COWL SIDE TRIM BOARD LH INFO

12. INSTALL FRONT DOOR SCUFF PLATE LH INFO



13. INSTALL FRONT NO. 2 CONSOLE BOX INSERT

(a) Engage the guide.

(b) Engage the 3 claws and install the front No. 2 console box insert.

14. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Instrument Panel Under Cover)

(a) Engage the guide.

(b) Engage the 3 claws and install the No. 2 instrument panel under cover sub-assembly.

15. INSTALL COWL SIDE TRIM BOARD RH

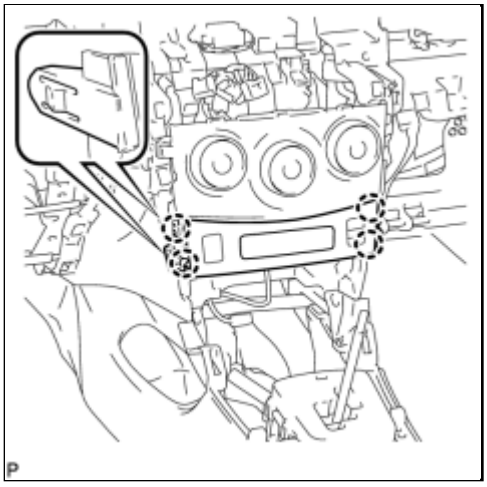
HINT:

Use the same procedure for the RH side and LH side.

16. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure for the RH side and LH side.



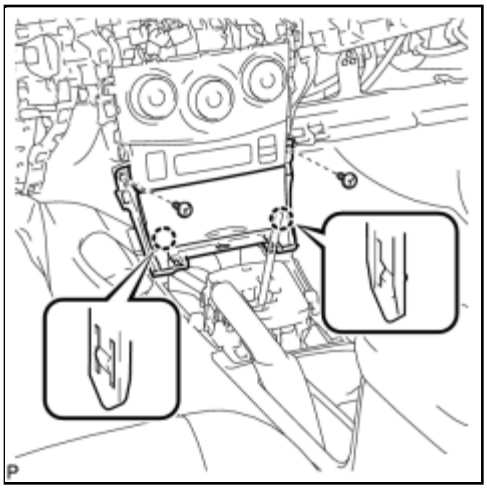
17. INSTALL AIR CONDITIONING PANEL ASSEMBLY (for Manual Air Conditioning System)

INFO

18. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (for Automatic Air Conditioning System)

INFO

19. INSTALL INSTRUMENT PANEL HOLE COVER

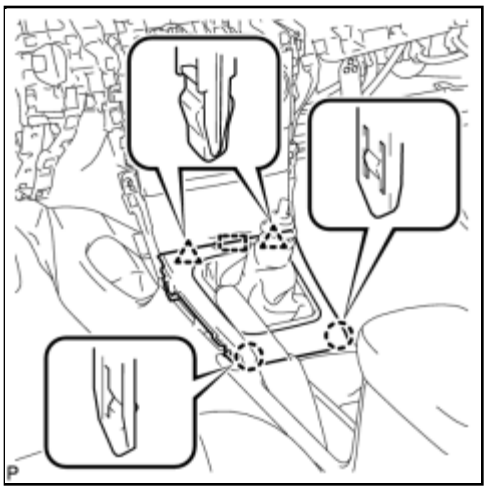


(a) Connect the each connector.

(b) Engage the 4 claws and install the instrument panel hole cover.

20. INSTALL INSTRUMENT PANEL BOX ASSEMBLY

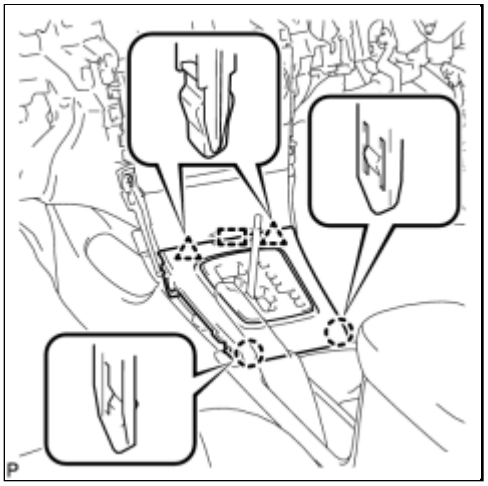
(a) Connect the connector.



(b) Engage the 2 claws.

(c) Install the instrument panel box assembly with the 2 screws <B>.

21. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual

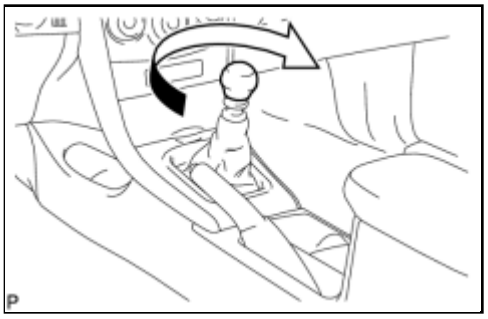


Transaxle)

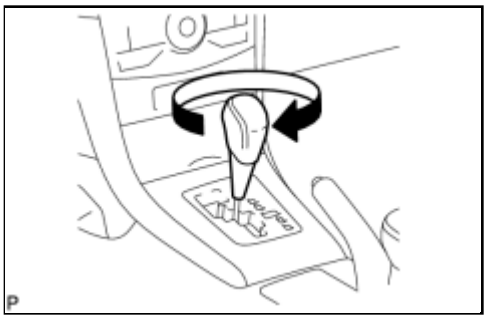
(a) Engage the guide.

(b) Engage the 2 claws and 2 clips, and install the center No.1 instrument cluster finish panel assembly.

22. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle)



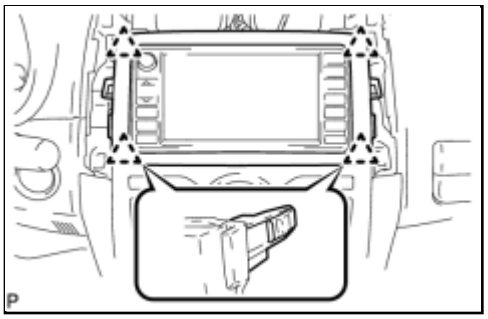
(a) Engage the guide.



(b) Engage the 2 claws and 2 clips, and install the center No.1 instrument cluster finish panel assembly.

23. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)

(a) Turn the shift lever knob clockwise and install the shift lever knob sub-assembly.



24. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)

(a) Turn the shift lever knob clockwise and install the shift lever knob sub-assembly.

25. INSTALL RADIO RECEIVER WITH BRACKET (w/o Navigation System) INFO

26. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Navigation System)

(a) Engage the 4 clips and install the center instrument cluster finish panel sub-assembly.

27. INSTALL NAVIGATION RECEIVER WITH BRACKET (w/ Navigation System) INFO

28. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY INFO

29. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

30. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

31. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

32. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure for the RH side and LH side.

33. INSTALL NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY INFO

34. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY INFO

35. INSTALL FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

36. INSTALL FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

37. INSTALL FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

38. INSTALL FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.

39. INSTALL COMBINATION METER ASSEMBLY INFO

40. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

41. INSTALL CENTER INSTRUMENT PANEL REGISTER ASSEMBLY INFO

42. INSTALL INSTRUMENT PANEL FINISH PANEL END LH INFO

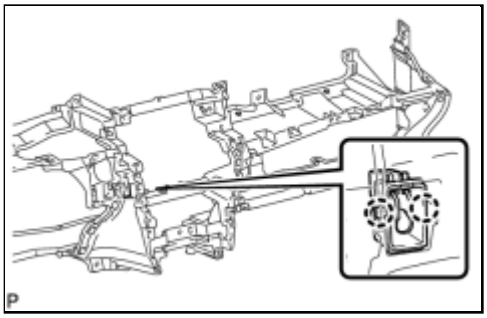
43. INSTALL INSTRUMENT PANEL FINISH PANEL END RH INFO

44. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

45. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

46. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

47. INSPECT SRS WARNING LIGHT



INFO

Title: INTERIOR PANELS / TRIM: ROOF HEADLINING: REMOVAL (2010 Corolla)		

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

3. **REMOVE OUTER SEAT TRACK COVER LH (for Manual Seat)** INFO

4. **REMOVE INNER SEAT TRACK COVER LH (for Manual Seat)** INFO

5. **REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)** INFO

6. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

7. **REMOVE OUTER SEAT TRACK COVER LH (for Power Seat)** INFO

8. **REMOVE INNER SEAT TRACK COVER LH (for Power Seat)** INFO

9. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)** INFO

10. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

11. **REMOVE OUTER SEAT TRACK COVER RH (for Manual Seat)**

HINT:

Use the same procedure for the RH side and LH side INFO **.**

12. **REMOVE INNER SEAT TRACK COVER RH (for Manual Seat)**

HINT:

Use the same procedure for the RH side and LH side INFO **.**

13. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**

HINT:

Use the same procedure for the RH side and LH side INFO **.**

14. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH** INFO

15. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH** INFO

16. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle)** INFO

17. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle)** INFO

18. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

19. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

20. REMOVE INSTRUMENT PANEL BOX ASSEMBLY INFO

21. REMOVE FRONT NO. 1 CONSOLE BOX INSERT INFO

22. REMOVE FRONT NO. 2 CONSOLE BOX INSERT INFO

23. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

24. REMOVE CONSOLE BOX CARPET INFO

25. REMOVE CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

26. REMOVE CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

27. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Manual Transaxle)

for C59: INFO

for E351: INFO

28. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY (for Automatic Transaxle)

for U250E: INFO

for U341E: INFO

29. REMOVE SHIFT LEVER ASSEMBLY (for Manual Transaxle)

for C59: INFO

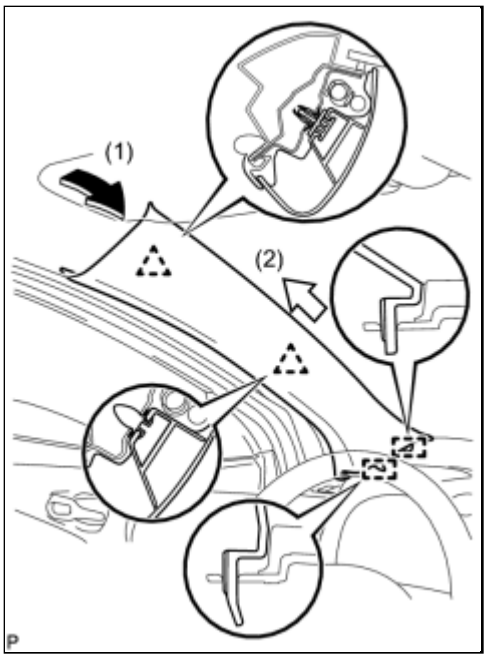
for E351: INFO

30. REMOVE SHIFT LOCK CONTROL UNIT ASSEMBLY (for Automatic Transaxle)

for U250E: INFO

for U341E: INFO

31. REMOVE INSTRUMENT PANEL FINISH PANEL END LH INFO

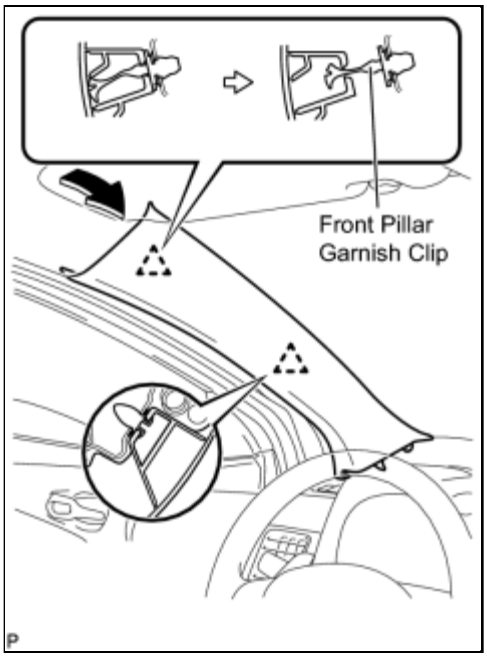


32. REMOVE INSTRUMENT PANEL FINISH PANEL END RH INFO

33. REMOVE CENTER INSTRUMENT PANEL REGISTER ASSEMBLY INFO

34. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

35. REMOVE COMBINATION METER ASSEMBLY INFO

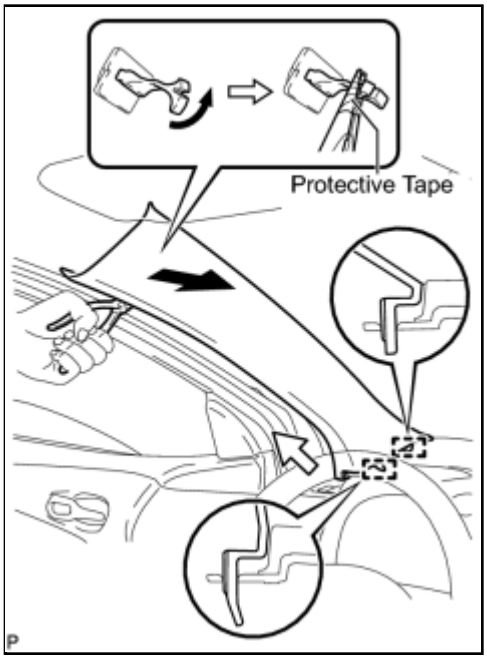


36. REMOVE FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag)

(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the 2 clips.

(b) Disengage the 2 guides and remove the front pillar garnish LH.

37. REMOVE FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag)

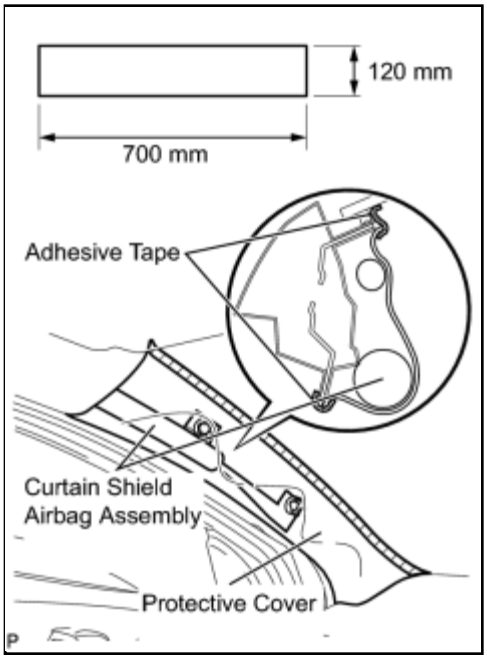


(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the garnish from the base of 2 clips.

HINT:

Make the front pillar garnish LH hang down from the front pillar garnish clip.

(b) Turn the end of the front pillar garnish clip 90° with needle-nosed pliers and remove it from the front pillar garnish LH.



NOTICE:

- Front pillar garnish clips are reusable if they are not removed from the vehicle and have no damage.
- Replace the front pillar garnish clips with new ones if they are removed from the vehicle.

HINT:

Tape the tips of the needle-nosed pliers before use.

(c) Disengage the 2 guides at the front end of the front pillar garnish LH and remove it.

(d) Protect the curtain shield airbag assembly.

(1) Cover the airbag with a 700 mm (27.56 in.) x 120 mm (4.72 in.) cloth or piece of nylon and secure the ends of the cover with tape, as shown in the illustration.

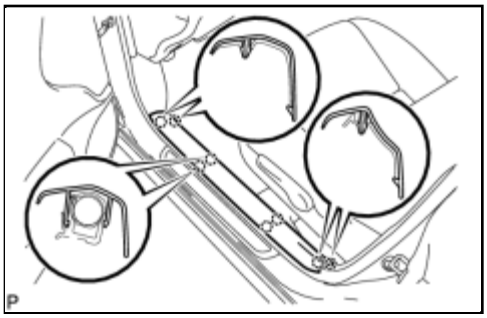
NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

38. REMOVE FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag)

HINT:

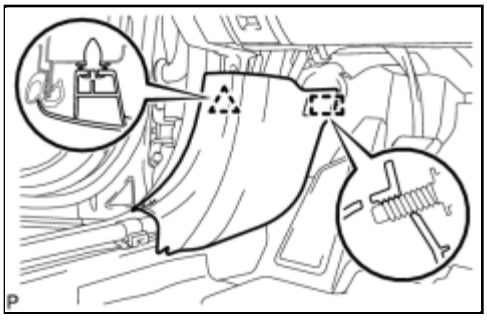
Use the same procedure for the RH side and LH side.



39. REMOVE FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag)

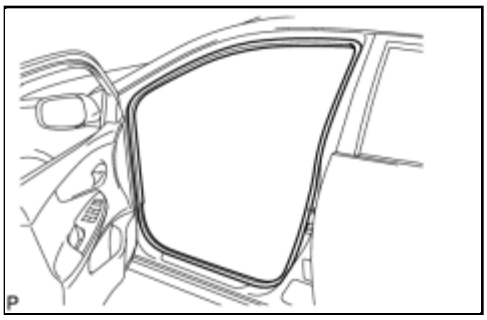
HINT:

Use the same procedure for the RH side and LH side.



40. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

41. REMOVE FRONT DOOR SCUFF PLATE LH



(a) Disengage the 8 claws and remove the front door scuff plate LH.

42. REMOVE COWL SIDE TRIM BOARD LH

(a) Disengage the clip and guide, and remove the cowl side trim board LH.

43. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Remove the front door opening trim weatherstrip LH.

44. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY INFO

45. REMOVE NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY INFO

46. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

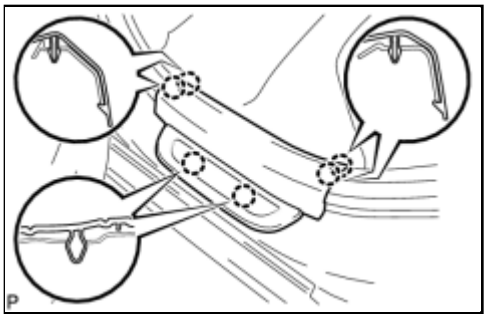
Use the same procedure for the RH side and LH side.

47. REMOVE COWL SIDE TRIM BOARD RH

HINT:

Use the same procedure for the RH side and LH side.

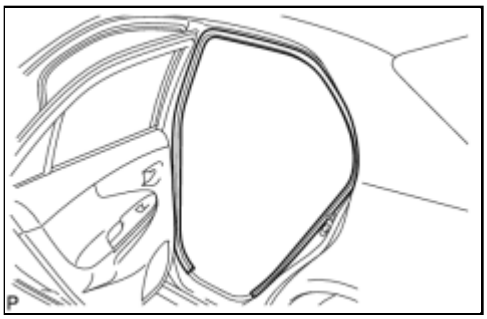
48. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH



HINT:

Use the same procedure for the RH side and LH side.

49. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

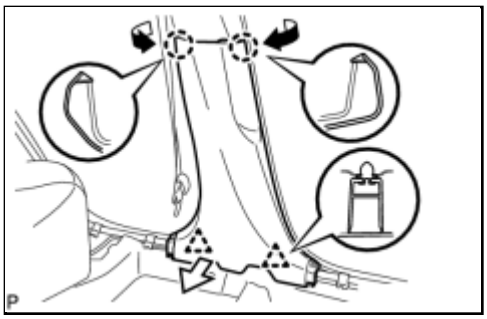


50. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY INFO

51. REMOVE REAR DOOR SCUFF PLATE LH

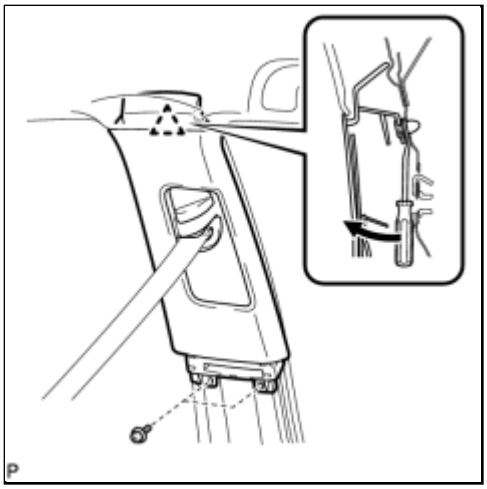
(a) Disengage the 6 claws and remove the rear door scuff plate LH.

52. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH



(a) Remove the rear door opening trim weatherstrip LH.

53. REMOVE LAP BELT OUTER ANCHOR COVER (for LH Side) INFO



54. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH INFO

55. REMOVE LOWER CENTER PILLAR GARNISH LH

(a) Disengage the 2 claws and 2 clips, and remove the lower center pillar garnish LH.

56. REMOVE UPPER CENTER PILLAR GARNISH LH

(a) Remove the 2 screws.

(b) Using a clip remover, disengage the clip, and remove the upper center pillar garnish LH.

57. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedure for the RH side and LH side.

58. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedure for the RH side and LH side.

59. REMOVE LAP BELT OUTER ANCHOR COVER (for RH Side) INFO

60. REMOVE LOWER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

61. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH INFO

62. REMOVE UPPER CENTER PILLAR GARNISH RH

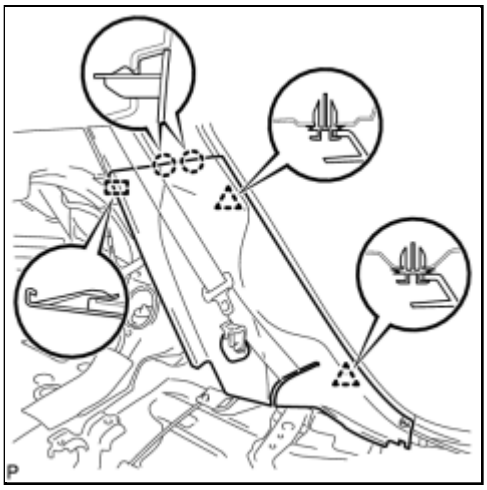
HINT:

Use the same procedure for the RH side and LH side.

63. REMOVE SPARE WHEEL COVER INFO

64. REMOVE REAR SEAT HEADREST ASSEMBLY LH

65. REMOVE REAR SEAT HEADREST ASSEMBLY RH

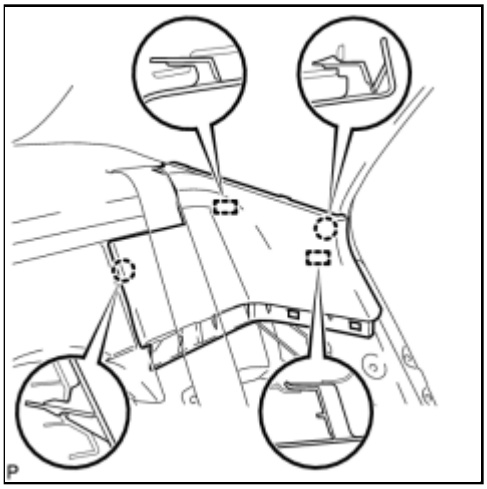


66. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY

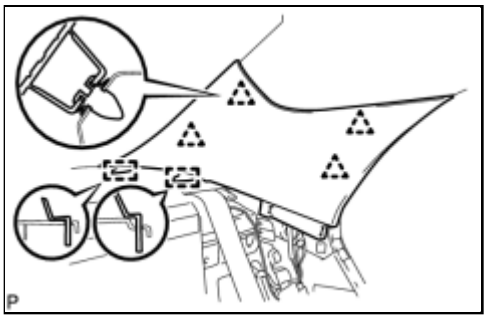
67. REMOVE REAR SEAT CUSHION ASSEMBLY INFO

68. REMOVE REAR SEATBACK ASSEMBLY LH INFO

69. REMOVE REAR SEATBACK ASSEMBLY RH INFO



70. REMOVE REAR SEAT SIDE GARNISH LH



(a) Disengage the 2 claws, 2 clips and guide, and remove the rear seat side garnish LH.

71. REMOVE ROOF SIDE INNER GARNISH BOARD LH

(a) Disengage the 2 claws and 2 guides, and remove the roof side inner garnish board LH.

72. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY LH

(a) Disengage the 4 clips and 2 guides, and remove the roof side inner garnish assembly LH.

73. REMOVE REAR SEAT SIDE GARNISH RH

HINT:

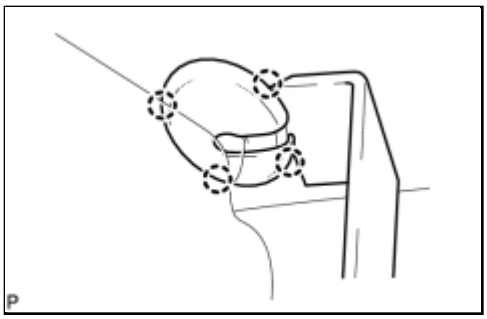
Use the same procedure for the RH side and LH side.

74. REMOVE ROOF SIDE INNER GARNISH BOARD RH

HINT:

Use the same procedure for the RH side and LH side.

75. REMOVE ROOF SIDE INNER GARNISH ASSEMBLY RH

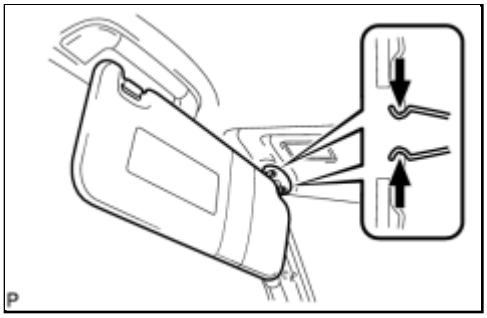


HINT:

Use the same procedure for the RH side and LH side.

76. REMOVE MAP LIGHT ASSEMBLY (w/o Sliding Roof) INFO

77. REMOVE MAP LIGHT ASSEMBLY (w/ Sliding Roof) INFO



78. REMOVE VISOR ASSEMBLY LH

(a) Using a moulding remover, disengage the 4 claws and remove the visor bracket cover.

NOTICE:

Visor bracket cover cannot be reused.

(b) Disengage the 2 clips and remove the visor assembly LH.

(c) Remove the 2 clips from the vehicle body.

79. REMOVE VISOR ASSEMBLY RH

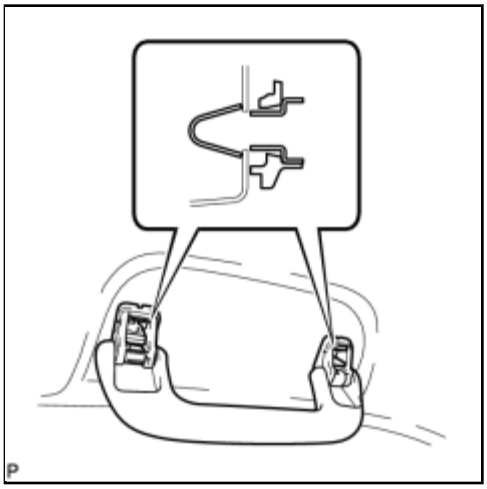
HINT:

Use the same procedure for the RH side and LH side.

80. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

(a) Using a moulding remover, disengage the 4 claws.

NOTICE:



Do not forcibly pry the assist grip covers to prevent them from being deformed.

HINT:

Gently pry on the assist grip covers as shown in the illustration to remove them.

(b) Pull off the 2 assist grip covers by hand.

(c) Disengage the 2 clips and remove the front assist grip sub-assembly.

(d) Remove the 2 clips from the vehicle body.

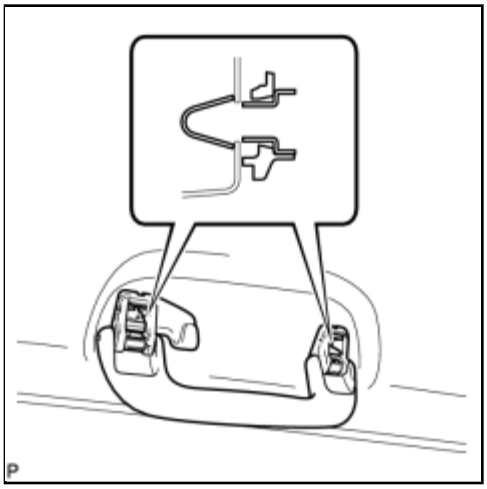
HINT:

Use the same procedure for the RH side and LH side.

81. REMOVE REAR ASSIST GRIP SUB-ASSEMBLY

(a) Using a moulding remover, disengage the 4 claws.

NOTICE:



Do not forcibly pry the assist grip covers to prevent them from being deformed.

HINT:

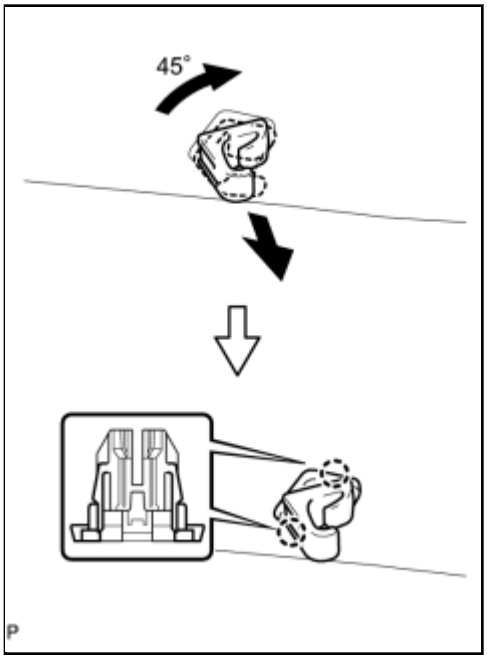
Gently pry on the assist grip covers as shown in the illustration to remove them.

(b) Pull off the 2 assist grip covers by hand.

(c) Disengage the 2 clips and remove the rear assist grip sub-assembly.

(d) Remove the 2 clips from the vehicle body.

HINT:



Use the same procedure for the RH side and LH side.

82. REMOVE NO. 1 ROOM LIGHT ASSEMBLY INFO

83. REMOVE INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

84. REMOVE VISOR HOLDER

(a) Turn the visor holder approximately 45° and pull it out as

shown in the illustration.

(b) Disengage the 2 claws and remove the visor holder.

HINT:

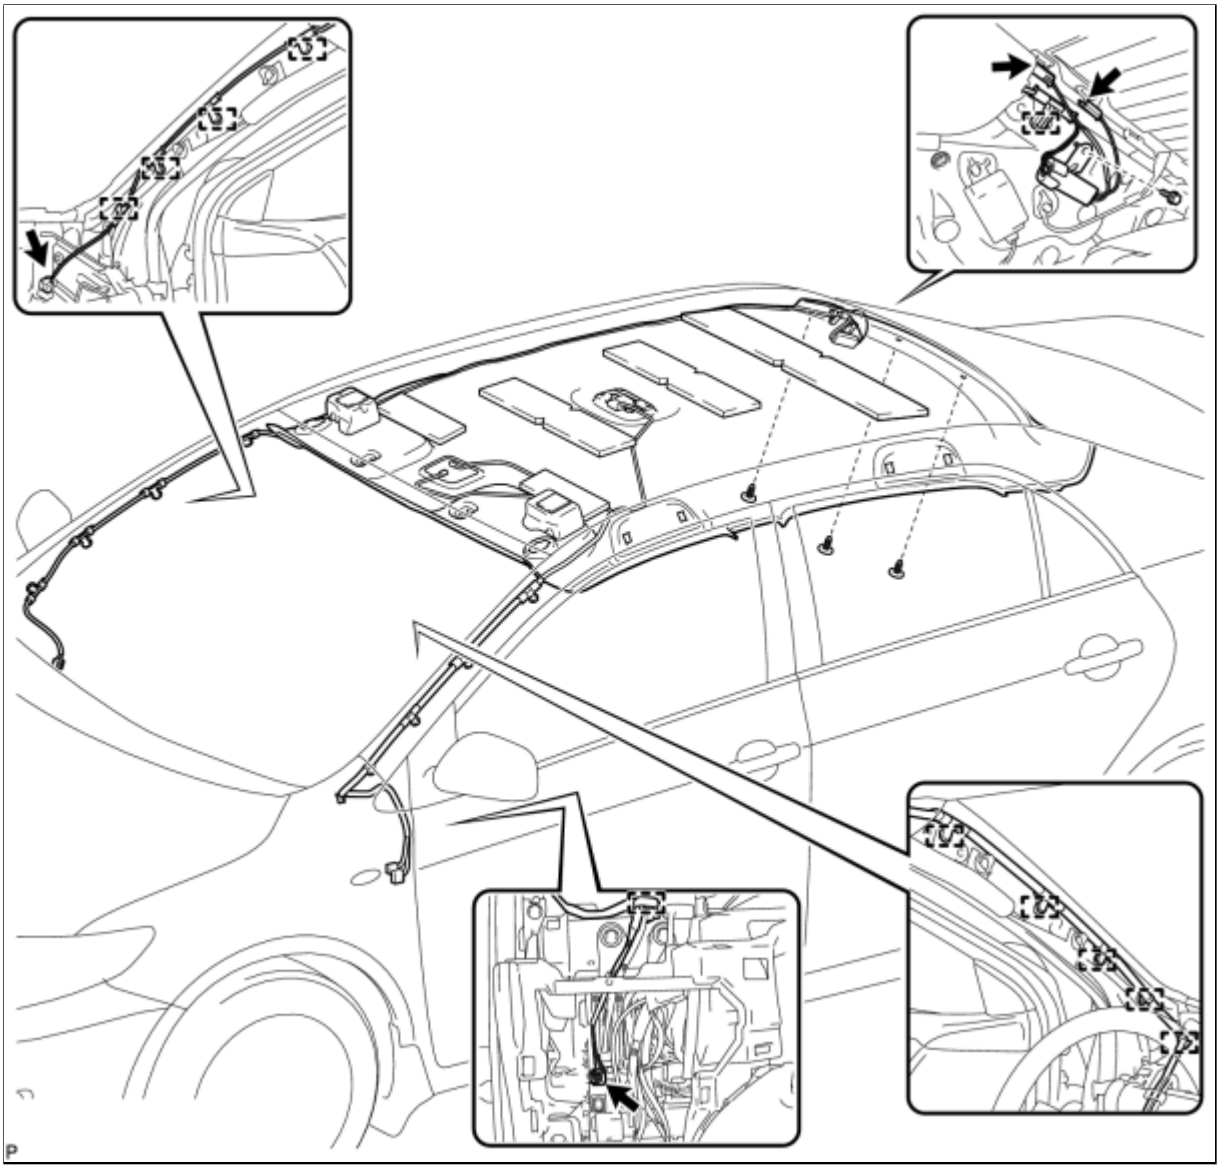
Use the same procedure for the RH side and LH side.

85. REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)

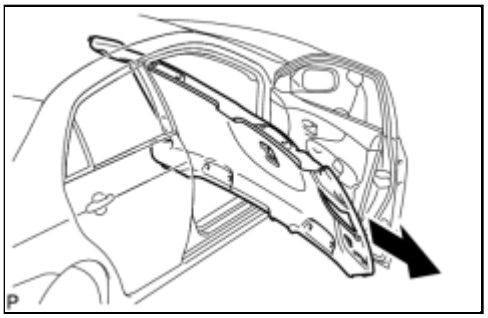
(a) Remove the sun roof opening trim moulding.

86. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Disconnect the amplifier antenna assembly connector and disengage each clamp from the front pillar RH.



(b) Disconnect the amplifier antenna assembly connectors and disengage the clamp from the rear pillar RH.



(c) Remove the bolt and disconnect the amplifier antenna assembly from the rear pillar RH.

(d) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

(e) Disconnect the No. 1 roof wire connector from the instrument panel junction block.

(f) Remove the 3 clips.

(g) Remove the roof headlining assembly from the cabin through the front passenger door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

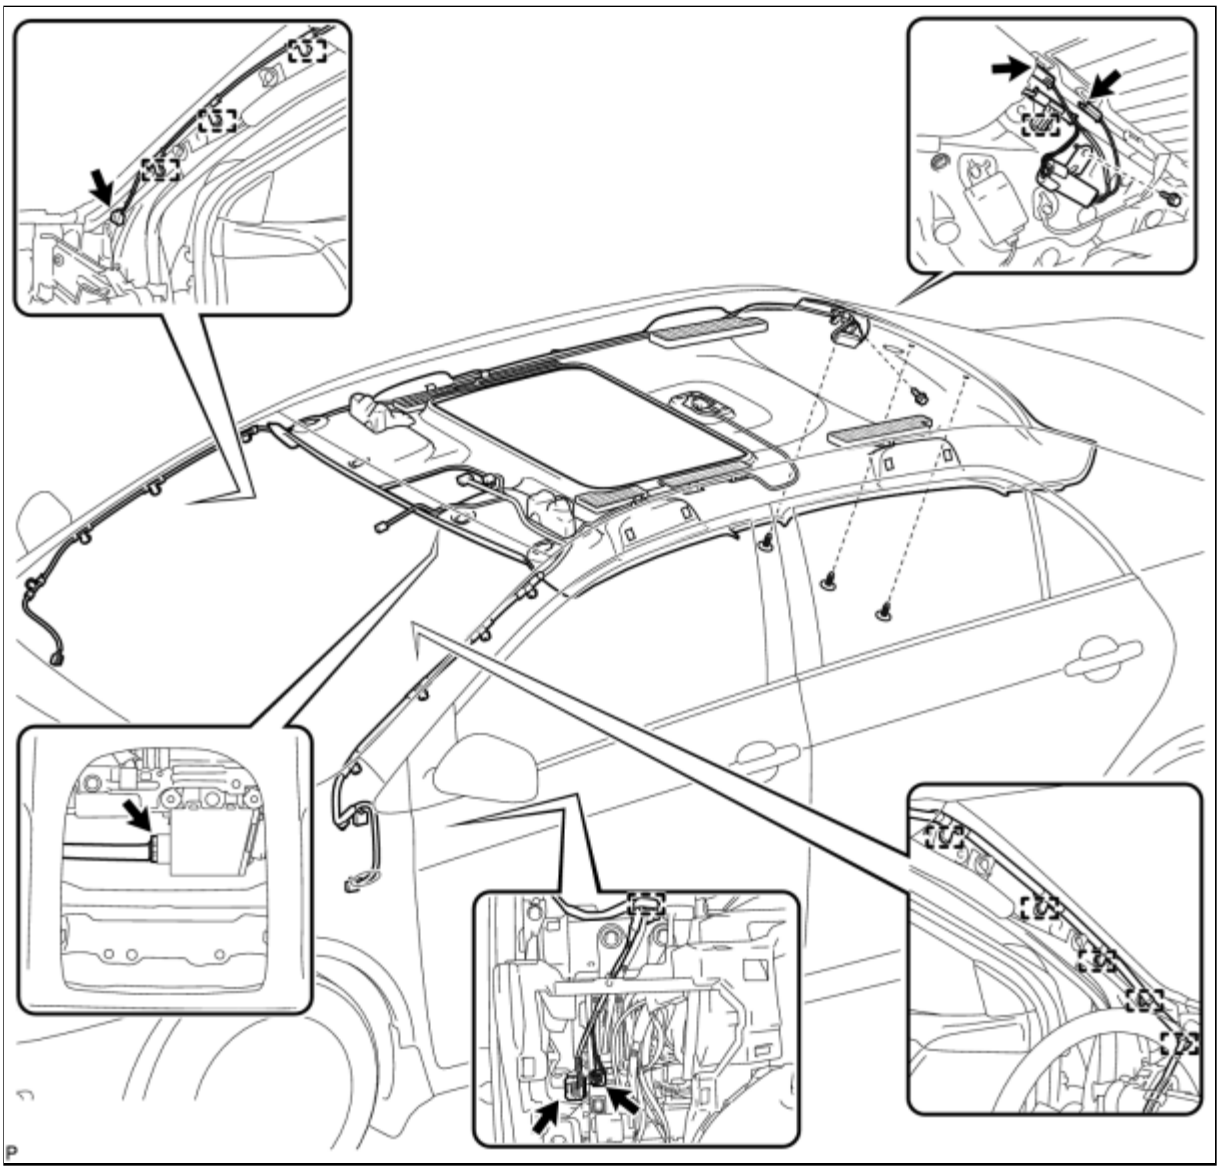
87. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

(a) w/ EC Mirror:

(1) Disconnect the connector.

(b) Disconnect the amplifier antenna assembly connector and disengage each clamp from the front pillar RH.

(c) Disconnect the amplifier antenna assembly connectors and disengage the clamp from the rear pillar RH.

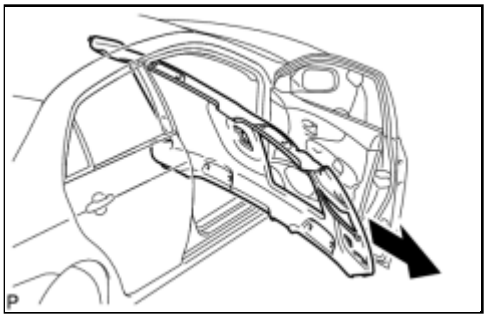


(d) Remove the bolt and disconnect the amplifier antenna assembly from the rear pillar RH.

(e) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.

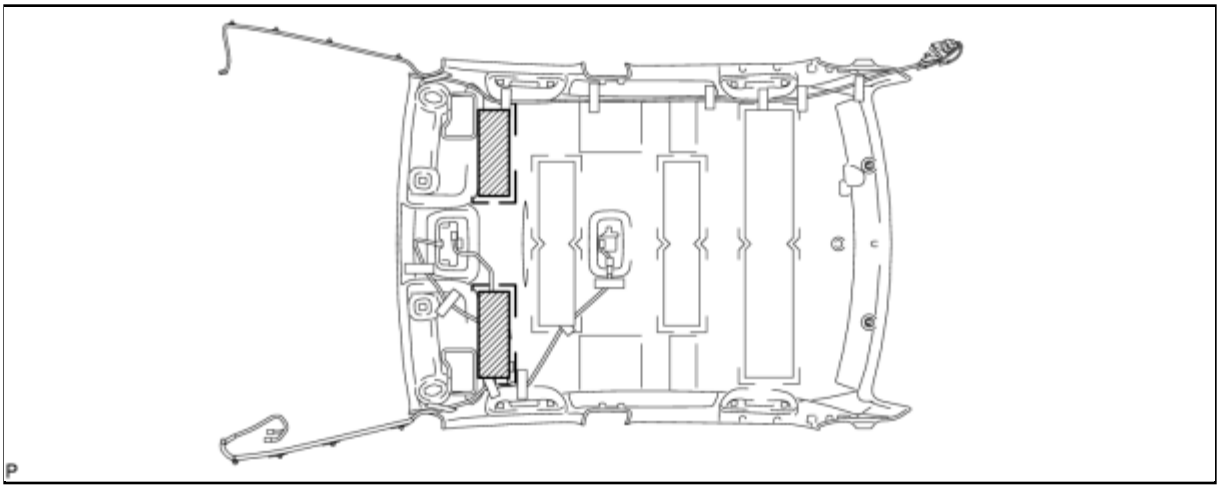
(f) Disconnect the No. 1 roof wire connectors from the instrument panel junction block.

(g) Disconnect the sliding roof drive gear connector.



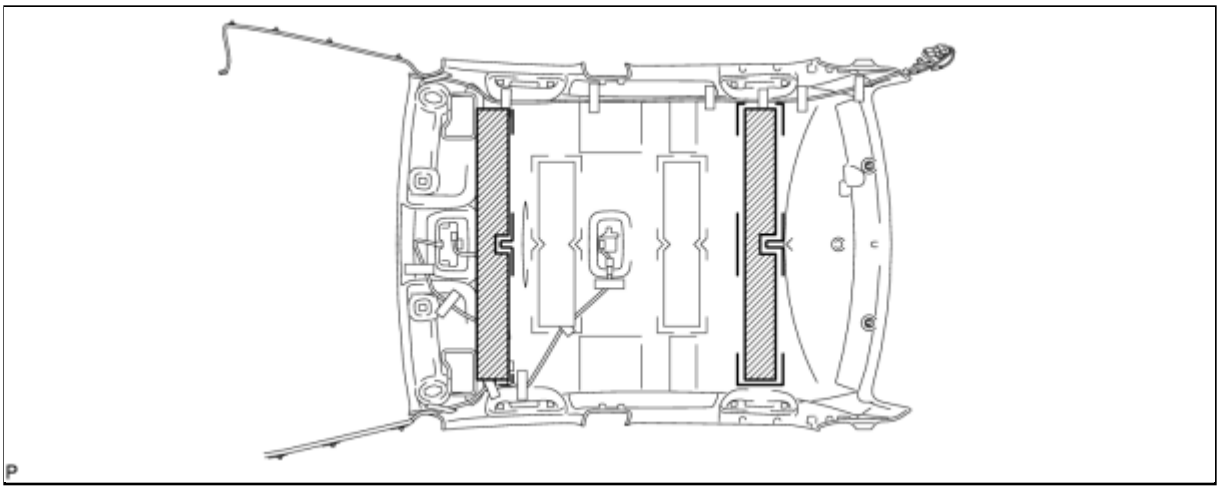
(h) Remove the 3 clips.

(i) Remove the roof headlining assembly from the cabin through the front passenger door.



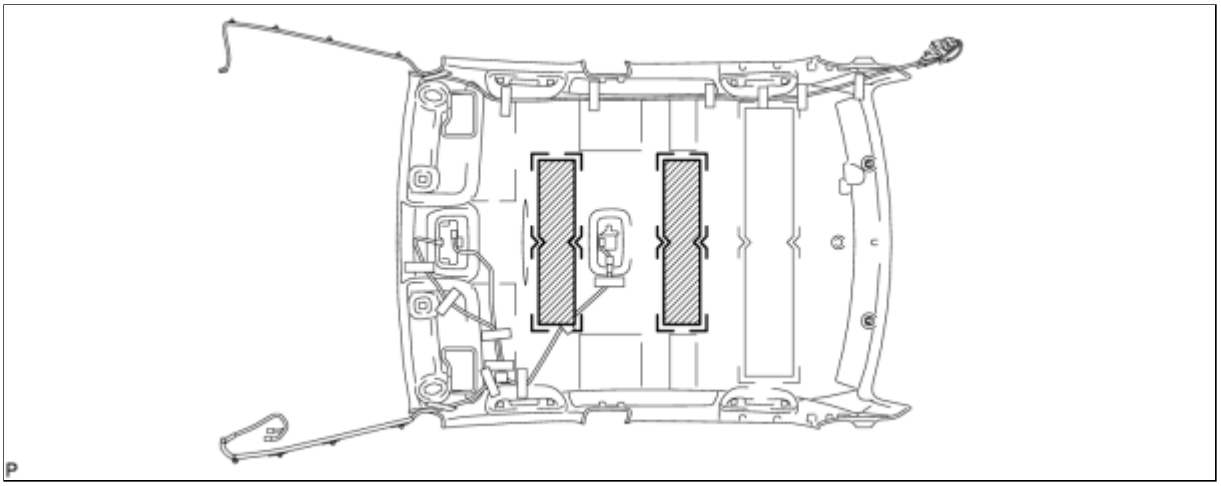
NOTICE:

Do not damage the roof headlining assembly or body interior.



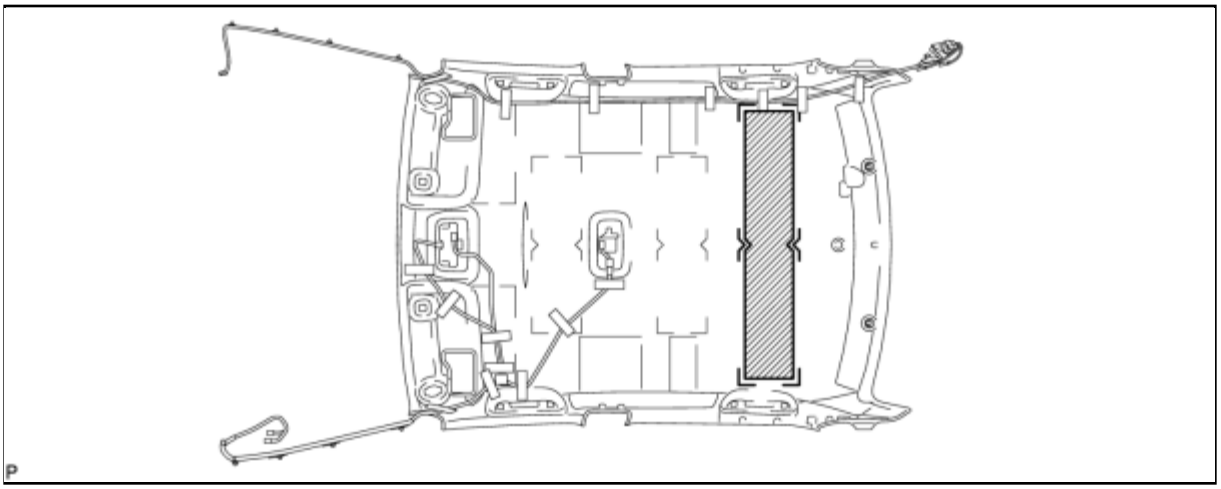
88. REMOVE NO. 1 ROOF SILENCER PAD (for TMC Made without Sliding Roof)

(a) Remove the 2 No. 1 roof silencer pads from the roof headlining assembly.



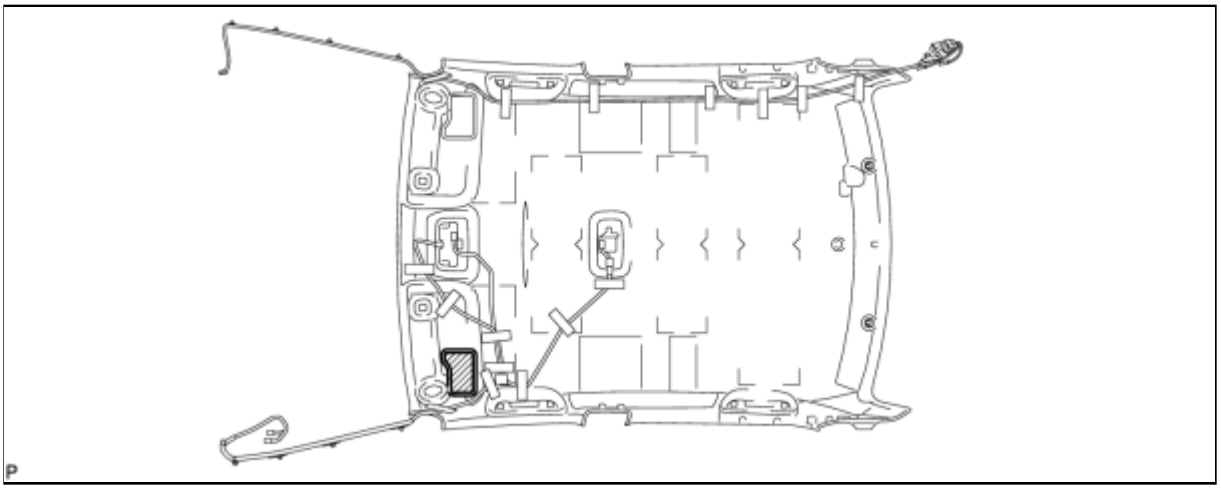
89. REMOVE NO. 1 ROOF SILENCER PAD (for TMMC, NUMMI Made without Sliding Roof)

(a) Remove the 2 No. 1 roof silencer pads from the roof headlining assembly.



90. REMOVE NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Remove the 2 No. 2 roof silencer pads from the roof headlining assembly.

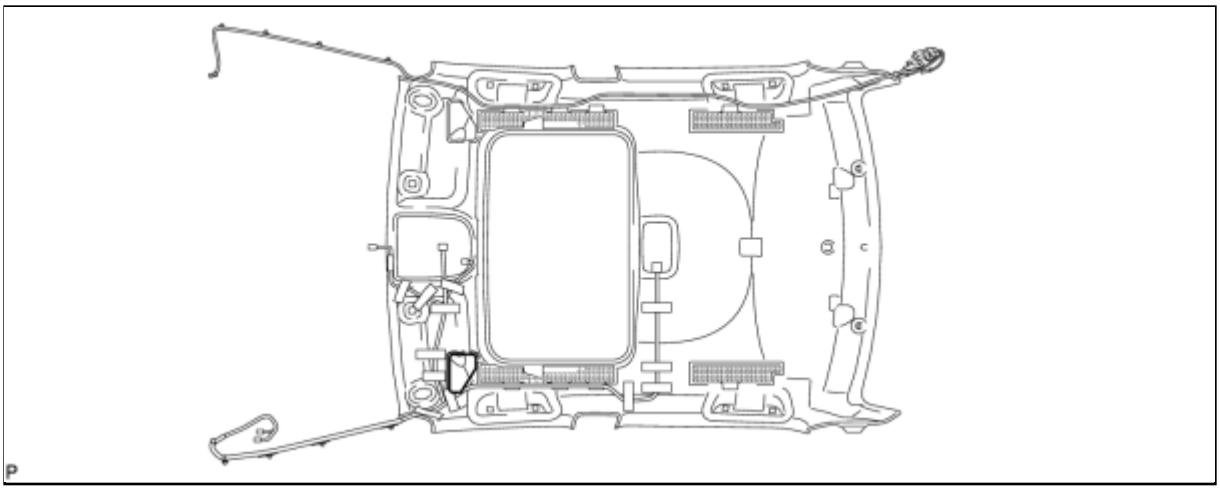


91. REMOVE NO. 3 ROOF SILENCER PAD (for TMC Made without Sliding Roof)

(a) Remove the No. 3 roof silencer pad from the roof headlining assembly.

92. REMOVE ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)

(a) Remove the roof side rail silencer pad LH from the roof headlining assembly.



93. REMOVE ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.

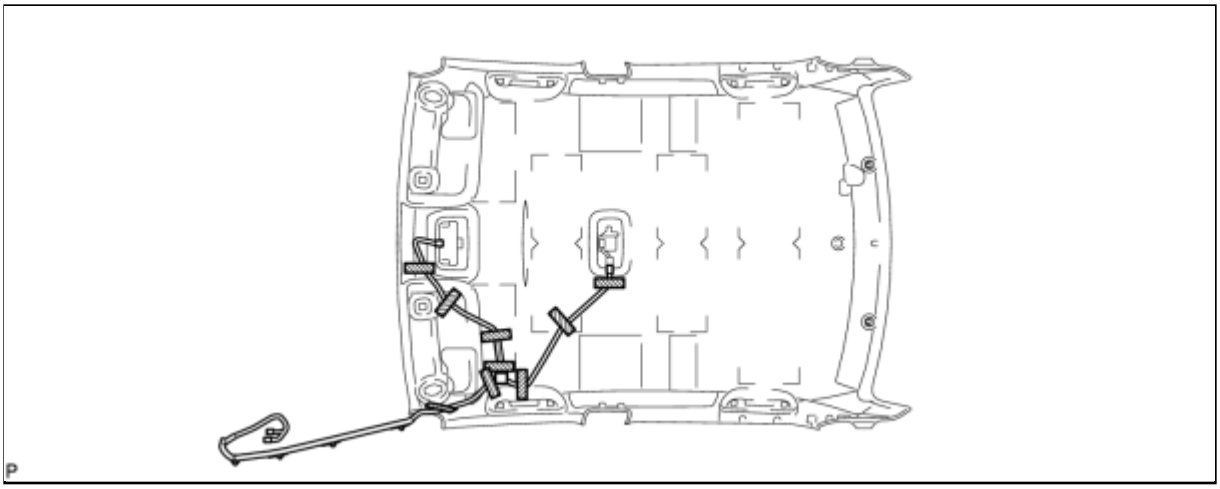
94. REMOVE ROOF SIDE RAIL SILENCER PAD LH (w/ Sliding Roof)

(a) Remove the roof side rail silencer pad LH from the roof headlining assembly.

95. REMOVE ROOF SIDE RAIL SILENCER PAD RH (w/ Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.

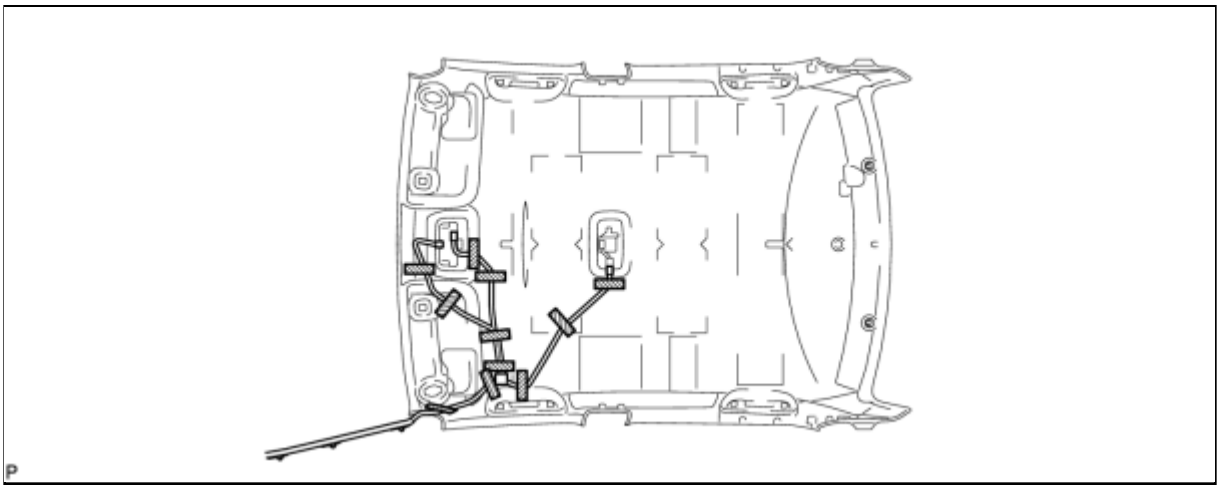


96. REMOVE AMPLIFIER ANTENNA ASSEMBLY (w/o Sliding Roof) INFO

97. REMOVE AMPLIFIER ANTENNA ASSEMBLY (w/ Sliding Roof) INFO

98. REMOVE NO. 1 ROOF WIRE (for TMC Made without Sliding Roof)

(a) Remove the adhesive tape from the roof headlining assembly.

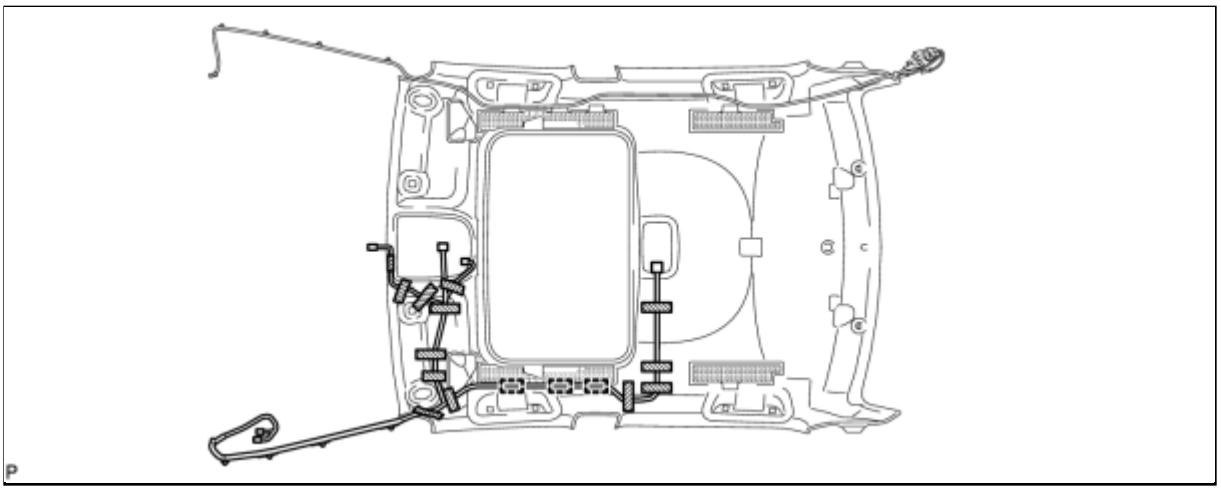


(b) Remove the No. 1 roof wire from the roof headlining assembly.

99. REMOVE NO. 1 ROOF WIRE (for TMMC, NUMMI Made without Sliding Roof)

(a) Remove the adhesive tape from the roof headlining assembly.

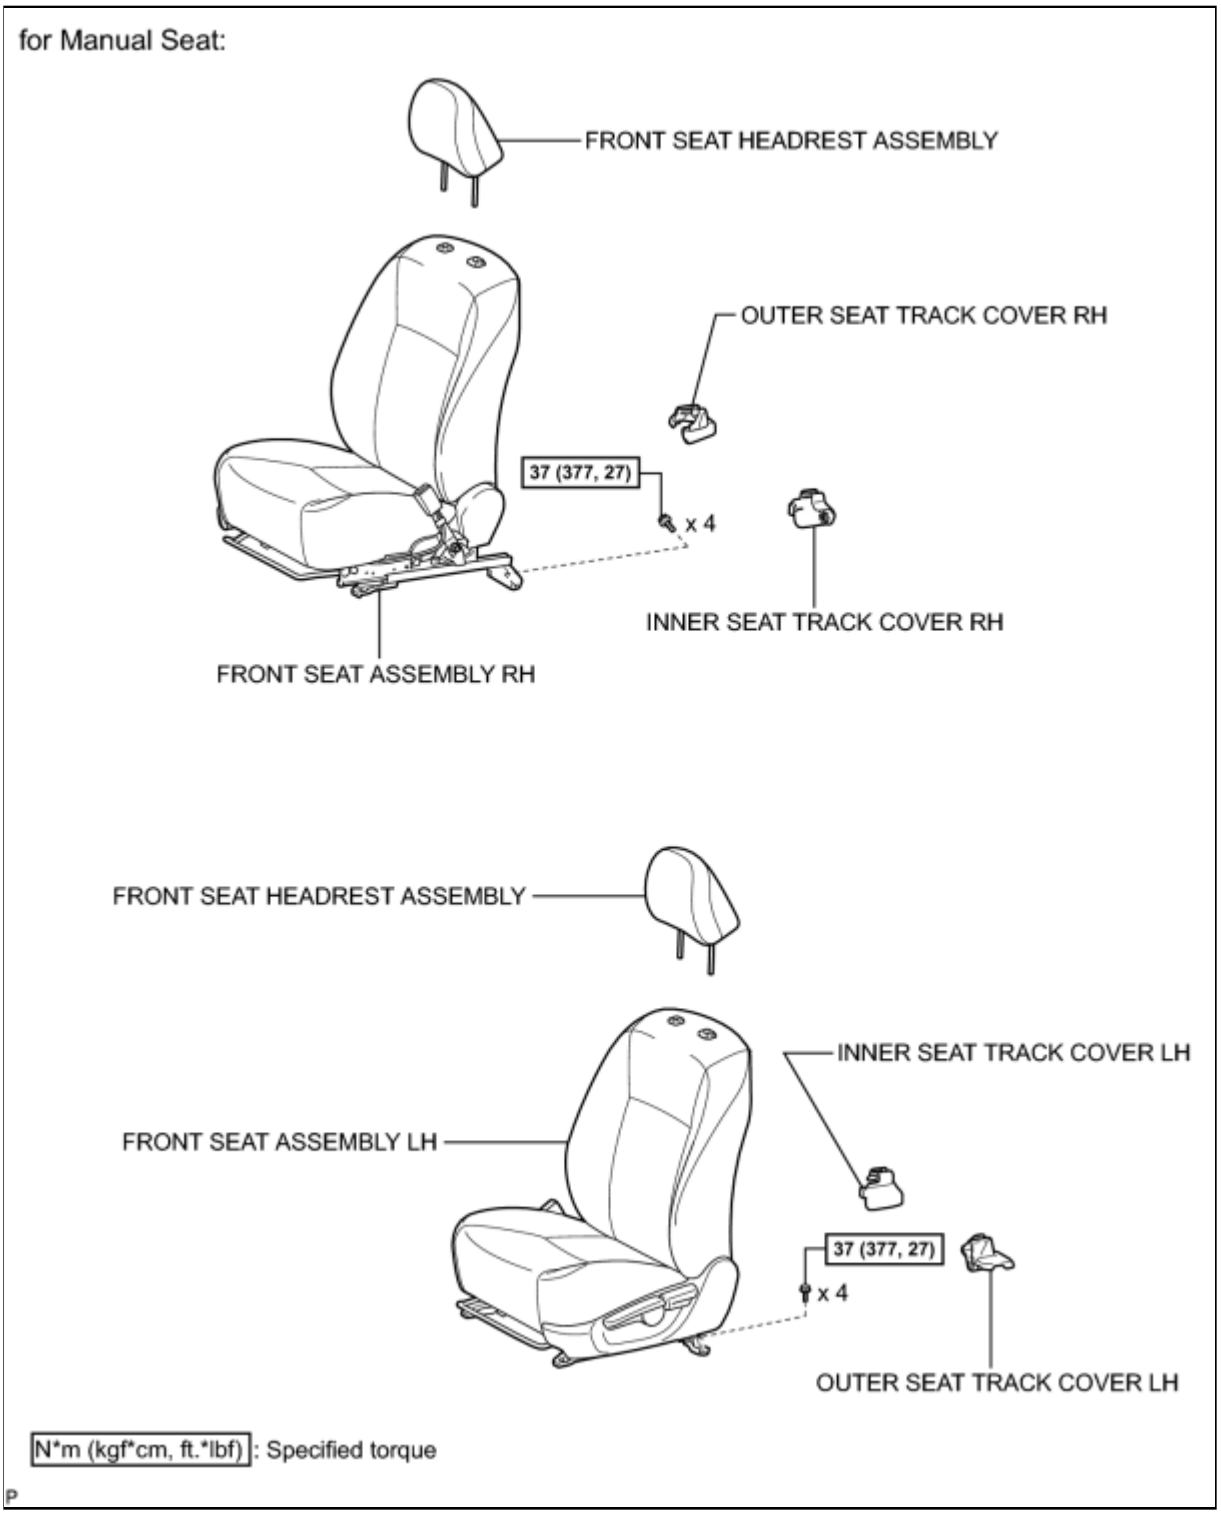
(b) Remove the No. 1 roof wire from the roof headlining assembly.



100. REMOVE NO. 1 ROOF WIRE (w/ Sliding Roof)

(a) Disengage the 3 clamps.

(b) Remove the adhesive tape from the roof headlining assembly.



(c) Remove the No. 1 roof wire from the roof headlining assembly.

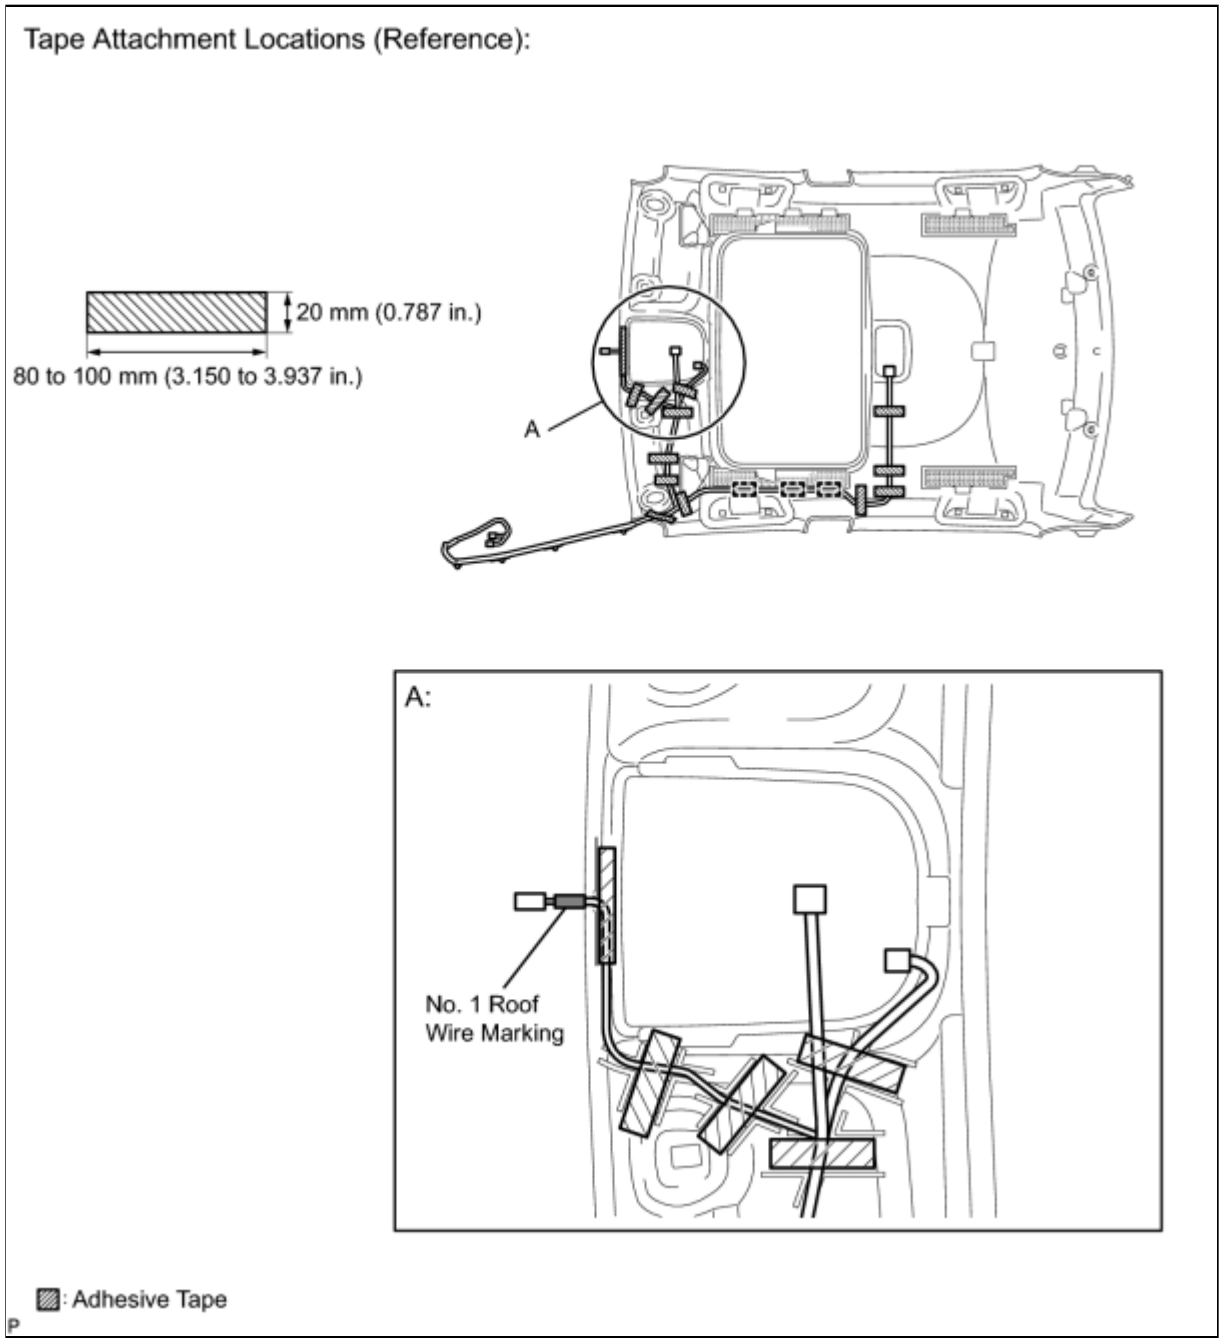
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002X9U00MX
Title: INTERIOR PANELS / TRIM: ROOF HEADLINING: INSTALLATION (2010 Corolla)		

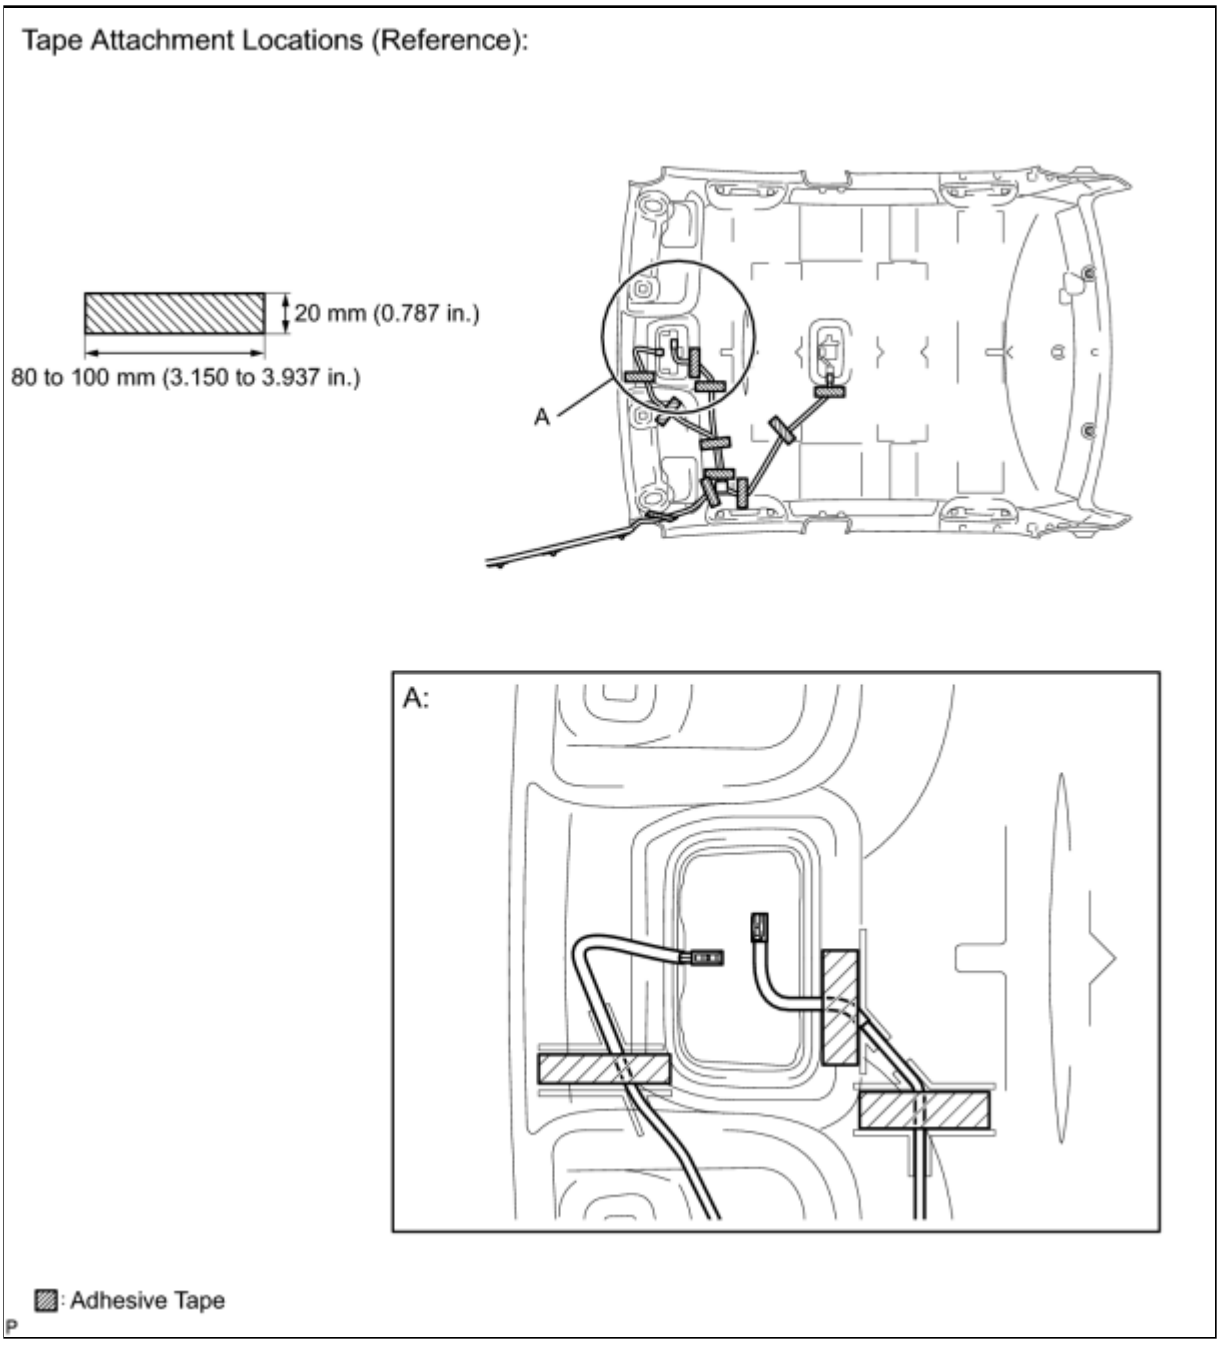


INSTALLATION

1. INSTALL NO. 1 ROOF WIRE (w/ Sliding Roof)

(a) Temporarily install the No. 1 roof wire aligned with the markings on the roof headlining assembly.

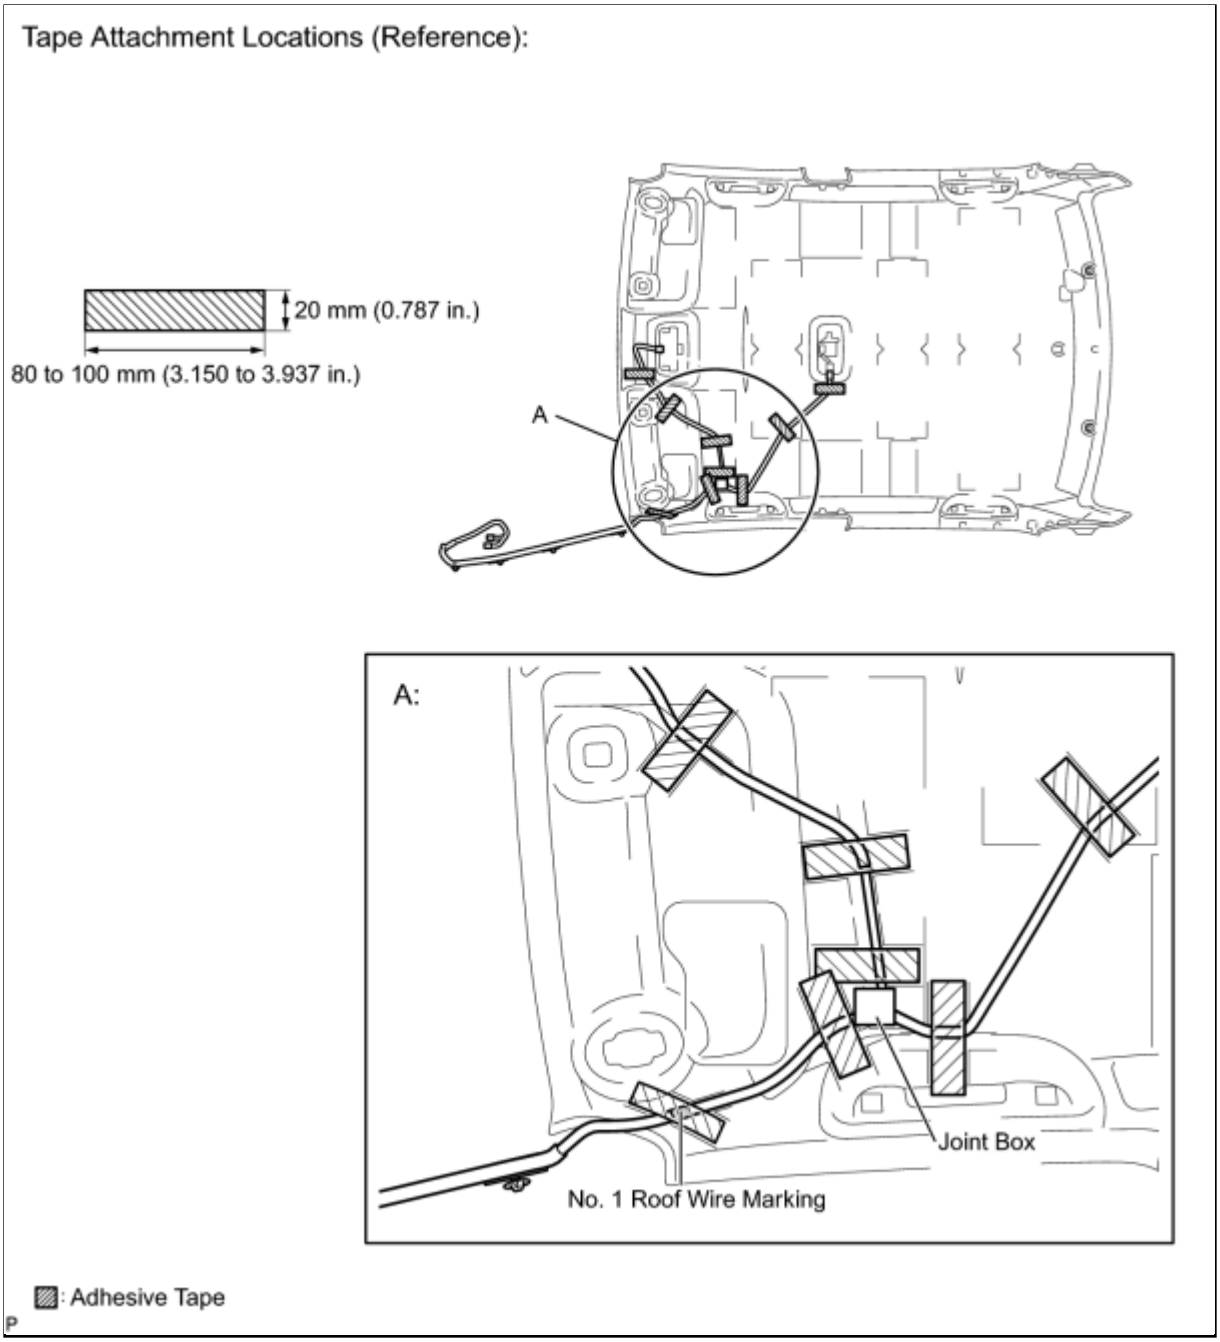
(b) Apply adhesive tape to the locations shown in the illustration.



(c) Engage the 3 clamps.

2. INSTALL NO. 1 ROOF WIRE (for TMMC, NUMMI Made without Sliding Roof)

(a) Temporarily install the No. 1 roof wire aligned with the markings on the roof headlining assembly.



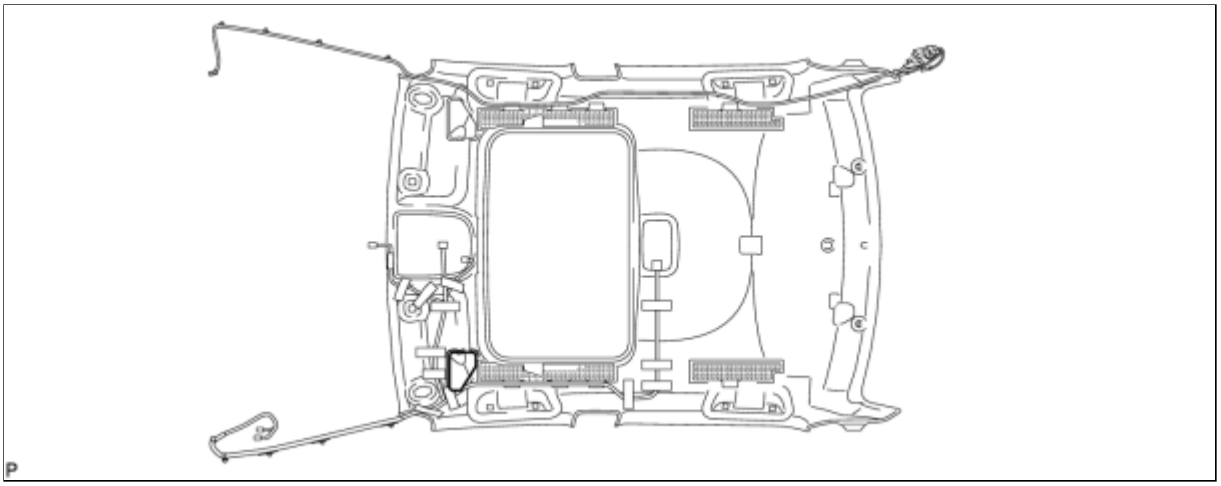
(b) Apply adhesive tape to the locations shown in the illustration.

3. INSTALL NO. 1 ROOF WIRE (for TMC Made without Sliding Roof)

(a) Temporarily install the No. 1 roof wire aligned with the markings on the roof headlining assembly.

(b) Apply adhesive tape to the locations shown in the illustration.

HINT:



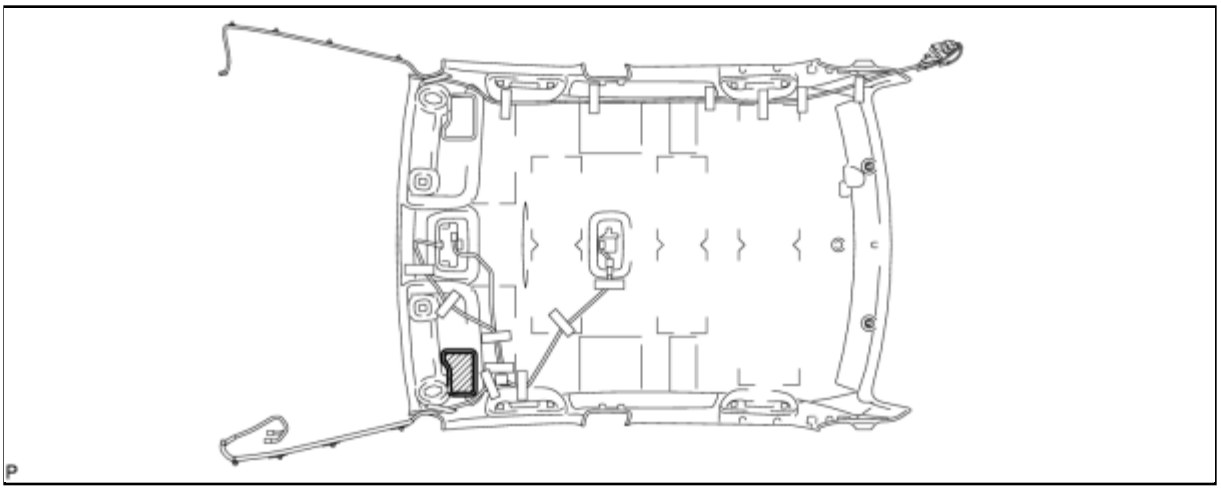
- Align the No. 1 roof wire marking in area A in the illustration with the reference point on the roof headlining assembly.
- Align the joint box with the markings on the roof headlining assembly.

4. INSTALL AMPLIFIER ANTENNA ASSEMBLY (w/ Sliding Roof) INFO

5. INSTALL AMPLIFIER ANTENNA ASSEMBLY (w/o Sliding Roof) INFO

6. INSTALL ROOF SIDE RAIL SILENCER PAD LH (w/ Sliding Roof)

(a) Align the markings on the roof headlining assembly with the roof side rail silencer pad LH and install the silencer pad using hot-melt glue or double-sided tape as shown in the illustration.



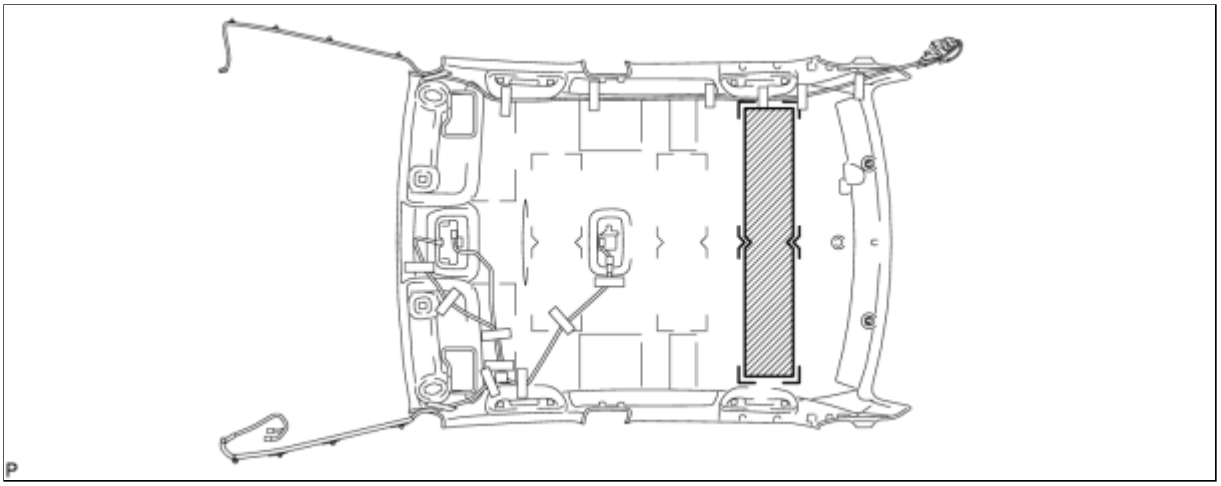
7. INSTALL ROOF SIDE RAIL SILENCER PAD RH (w/ Sliding Roof)

HINT:

Use the same procedure for the RH side and LH side.

8. INSTALL ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)

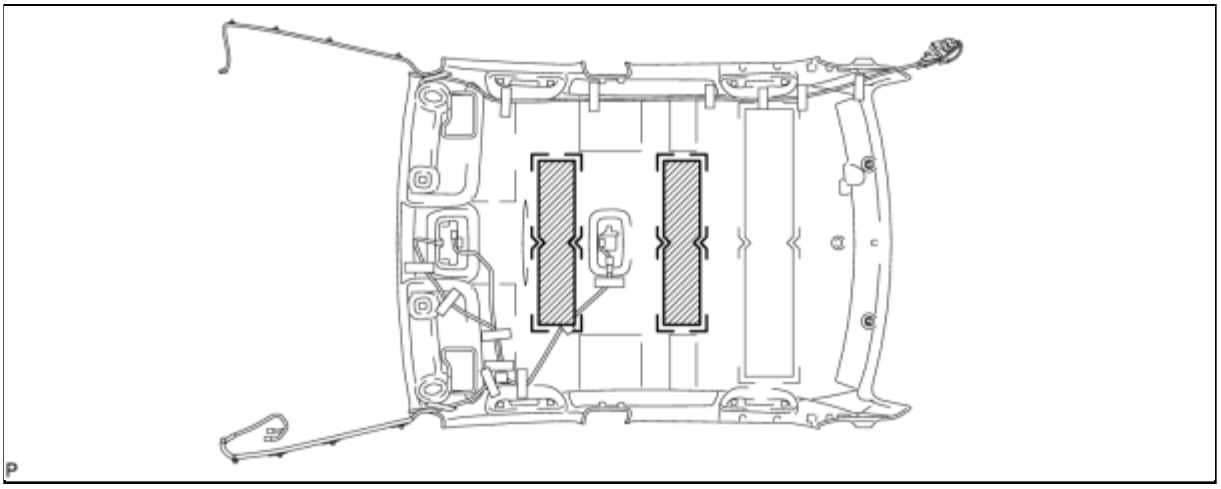
(a) Align the markings on the roof headlining assembly with the roof side rail silencer pad LH and install the silencer pad using hot-melt glue or double-sided tape as shown in the illustration.



9. INSTALL ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)

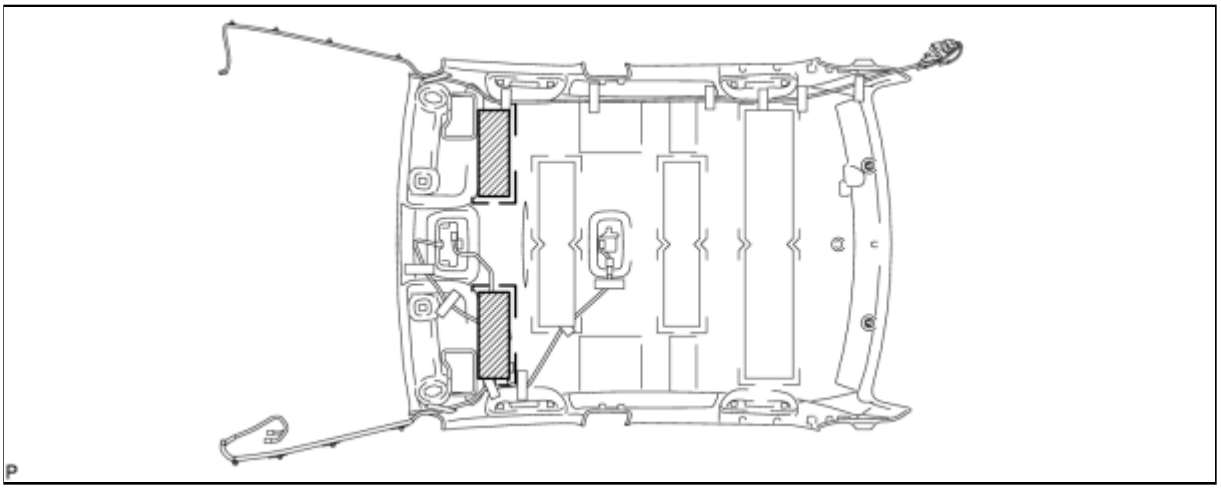
HINT:

Use the same procedure for the RH side and LH side.



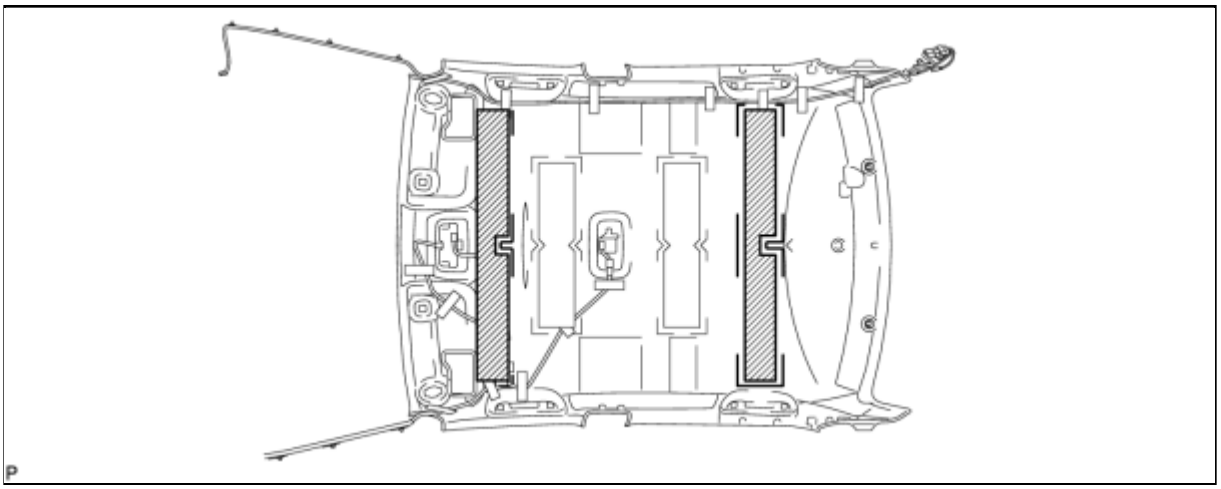
10. INSTALL NO. 3 ROOF SILENCER PAD (for TMC Made without Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 3 roof silencer pad and install the silencer pad using hot-melt glue or double-sided tape as shown in the illustration.



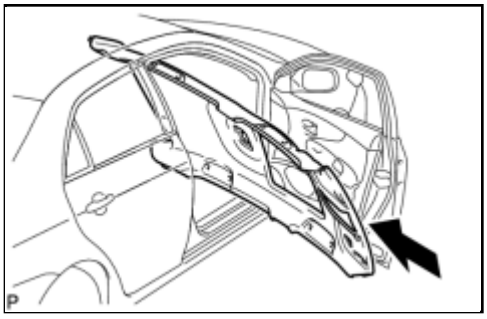
11. INSTALL NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the 2 No. 2 roof silencer pads and install the silencer pads using hot-melt glue or double-sided tape as shown in the illustration.



12. INSTALL NO. 1 ROOF SILENCER PAD (for TMC Made without Sliding Roof)

(a) Align the markings on the roof headlining assembly with the 2 No. 1 roof silencer pads and install the silencer pads using hot-melt glue or double-sided tape as shown in the illustration.



13. INSTALL NO. 1 ROOF SILENCER PAD (for TMMC, NUMMI Made without Sliding Roof)

(a) Align the markings on the roof headlining assembly with the 2 No. 1 roof silencer pads and install the silencer pads using hot-melt glue or double-sided tape as shown in the illustration.

14. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

(a) Pass the roof headlining assembly into the vehicle through the front passenger door.

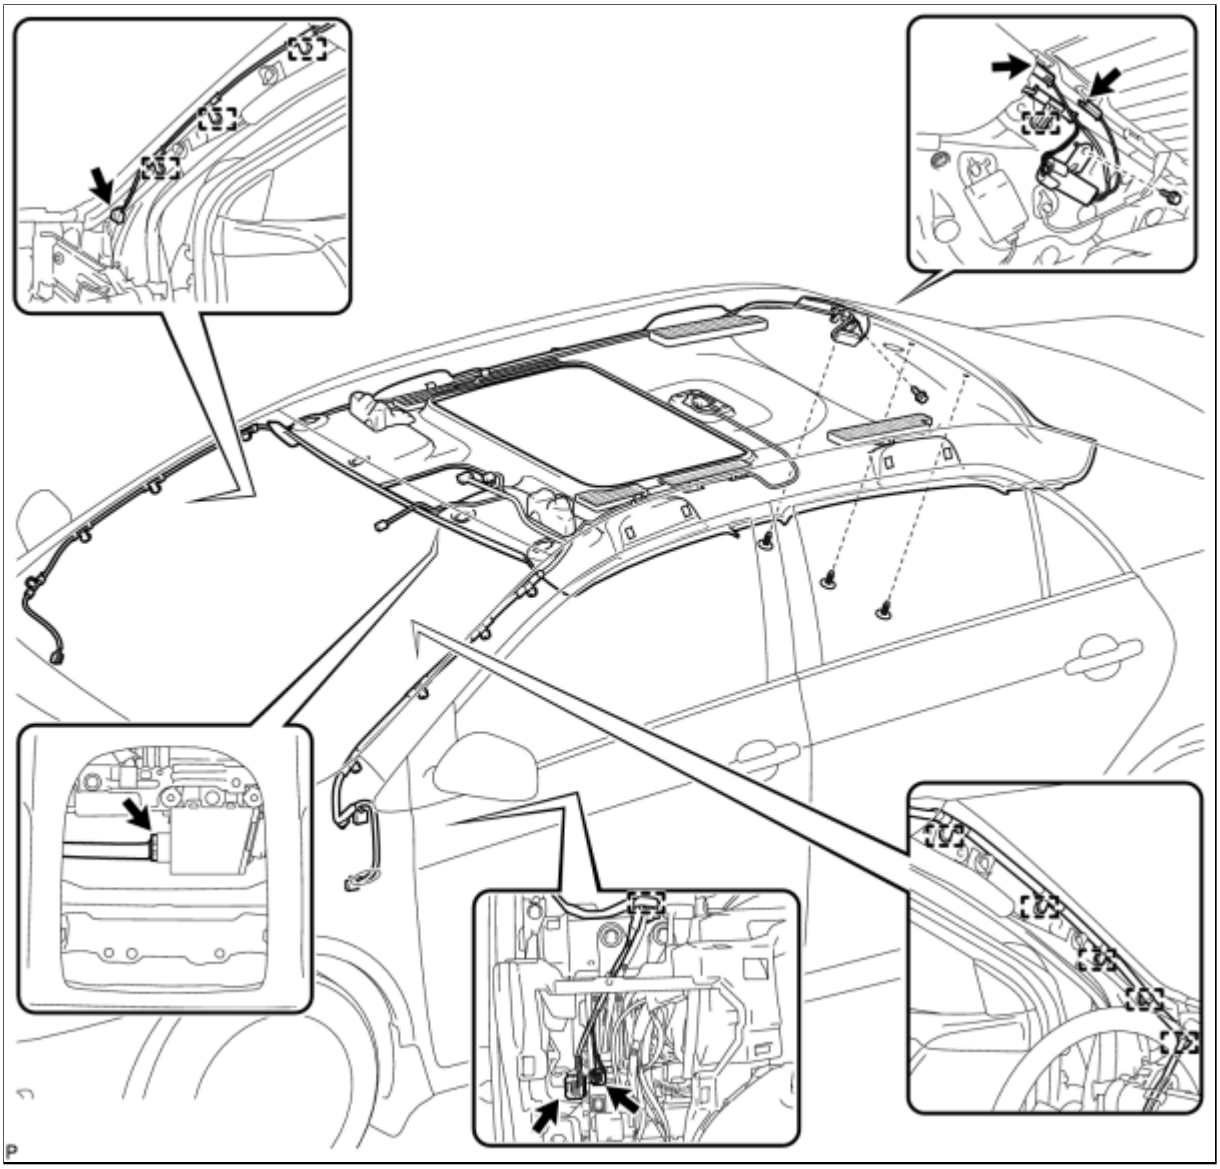
NOTICE:

Do not damage the roof headlining assembly or body interior.

(b) Install the 3 clips.

(c) Connect the sliding roof drive gear connector.

(d) Connect the amplifier antenna assembly and install the bolt to the rear pillar RH.

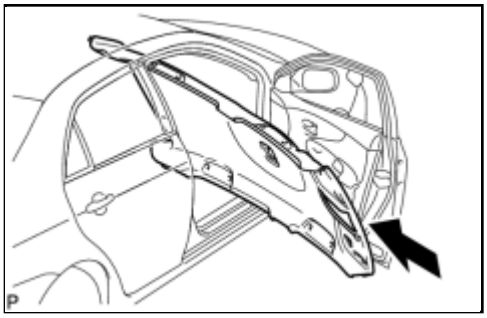


Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(e) Connect the amplifier antenna assembly connectors and engage the clamp to the rear pillar RH.

(f) Connect the amplifier antenna assembly connector and engage each clamp to the front pillar RH.

(g) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.



(h) Connect the No. 1 roof wire connectors to the instrument panel junction block.

(i) w/ EC Mirror:

(1) Connect the connector.

15. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

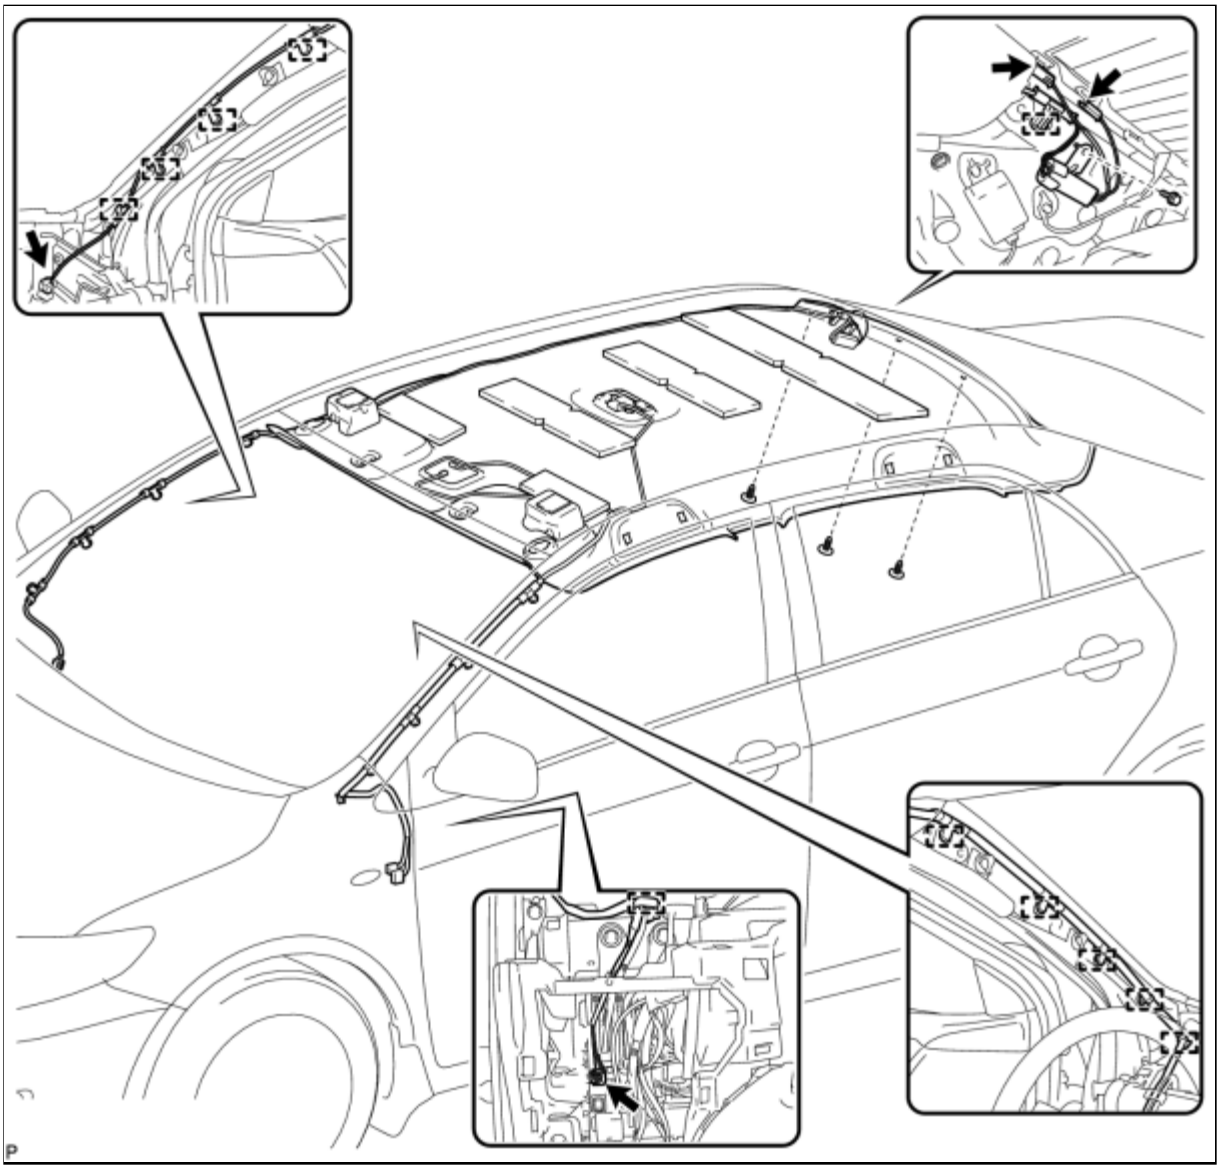
(a) Pass the roof headlining assembly into the vehicle through the front passenger door.

NOTICE:

Do not damage the roof headlining assembly or body interior.

(b) Install the 3 clips.

(c) Connect the amplifier antenna assembly and install the bolt to the rear pillar RH.



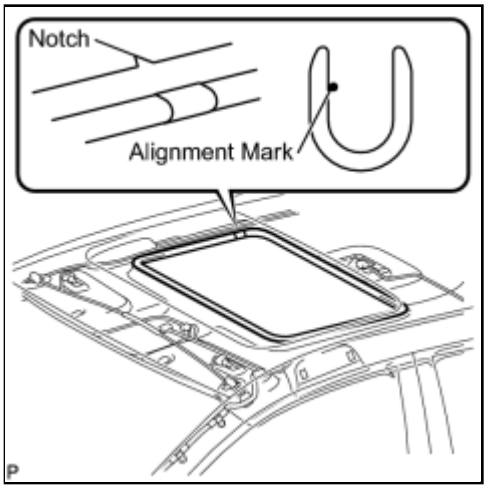
Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(d) Connect the amplifier antenna assembly connectors and engage the clamp to the rear pillar RH.

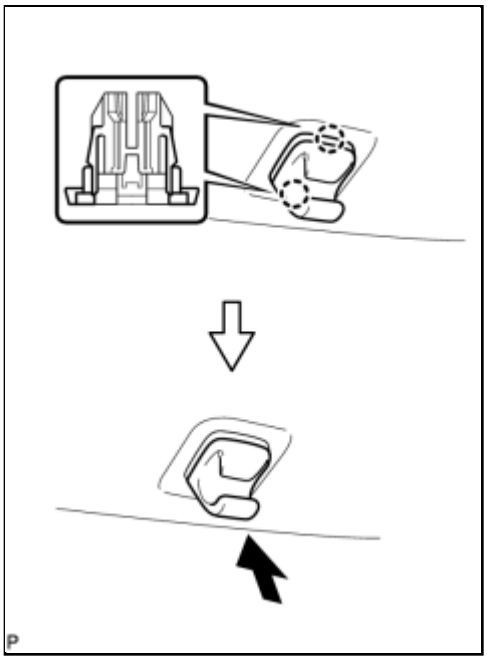
(e) Connect the amplifier antenna assembly connector and engage each clamp to the front pillar RH.

(f) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.

(g) Connect the No. 1 roof wire connectors to the instrument panel junction block.



16. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)



(a) Align the alignment mark on the inner surface of the opening trim moulding with the notch of the roof headlining, and install the sun roof opening trim moulding so that the alignment mark on the opening trim is on the right side of the vehicle as shown in the illustration.

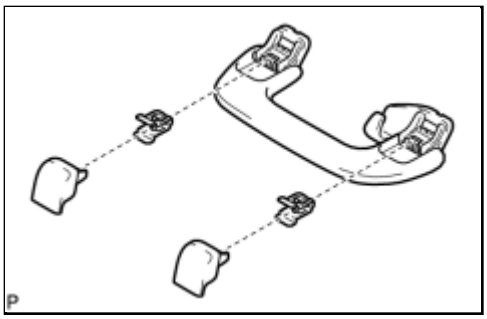
NOTICE:

After installation, check that the corners fit correctly.

17. INSTALL VISOR HOLDER

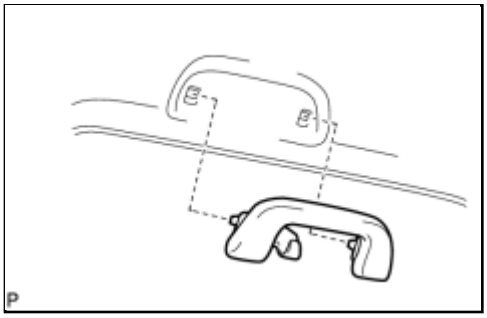
(a) Engage the 2 claws.

(b) Push in the visor holder as shown in the illustration.



HINT:

Use the same procedure for the RH side and LH side.

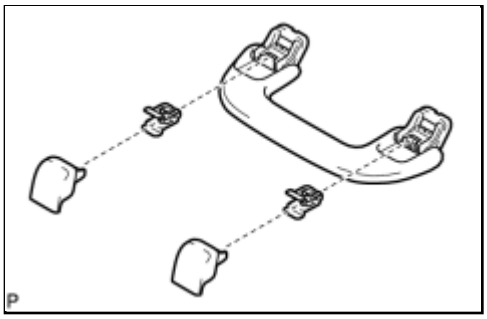


18. INSTALL INNER REAR VIEW MIRROR COVER (w/ EC Mirror) INFO

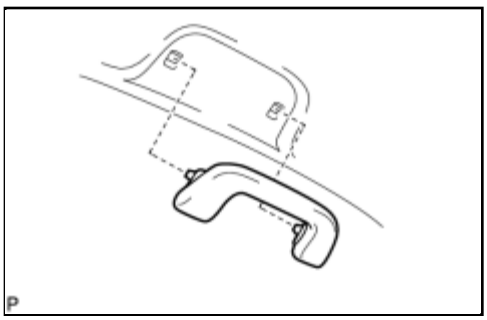
19. INSTALL NO. 1 ROOM LIGHT ASSEMBLY INFO

20. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY

(a) Assemble the rear assist grip sub-assembly as shown in the illustration.



(b) Install the rear assist grip sub-assembly.

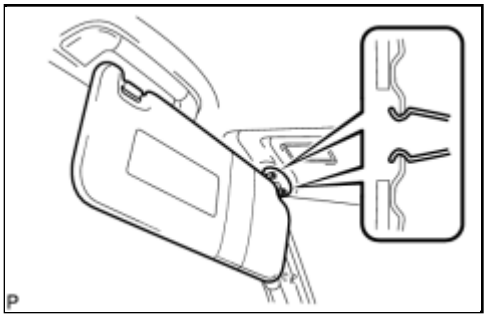


HINT:

Use the same procedure for the RH side and LH side.

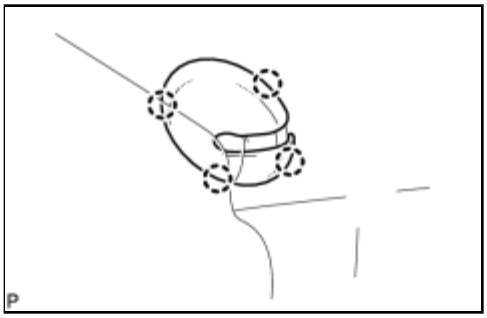
21. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

(a) Assemble the front assist grip sub-assembly as shown in the illustration.



(b) Install the front assist grip sub-assembly.

HINT:



Use the same procedure for the RH side and LH side.

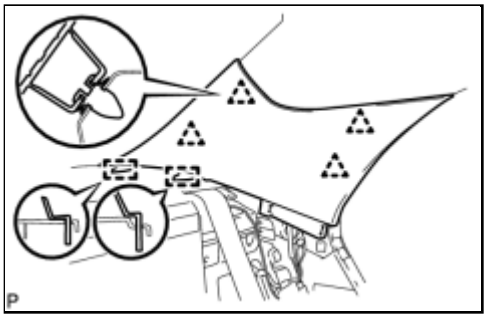
22. INSTALL VISOR ASSEMBLY LH

(a) Install the 2 clips to the visor assembly LH.

(b) Engage the 2 clips and install the visor assembly LH.

(c) Engage the 4 claws and install a new visor bracket cover.

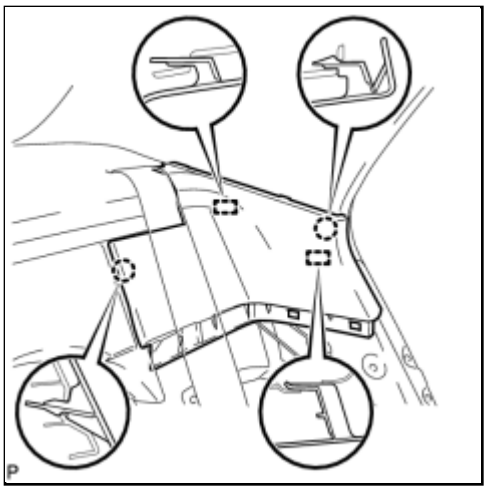
23. INSTALL VISOR ASSEMBLY RH



HINT:

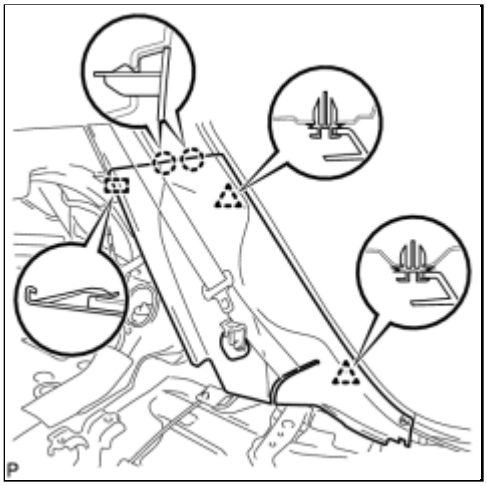
Use the same procedure for the RH side and LH side.

24. INSTALL MAP LIGHT ASSEMBLY (w/ Sliding Roof) INFO



25. INSTALL MAP LIGHT ASSEMBLY (w/o Sliding Roof) INFO

26. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY LH



(a) Engage the 2 guides and 4 clips, and install the roof side inner garnish assembly LH.

27. INSTALL ROOF SIDE INNER GARNISH BOARD LH

(a) Engage the 2 guides and 2 claws, and install the roof side inner garnish board LH.

28. INSTALL REAR SEAT SIDE GARNISH LH

(a) Engage the 2 claws, 2 clips and guide, and install the rear seat side garnish LH.

29. INSTALL ROOF SIDE INNER GARNISH ASSEMBLY RH

HINT:

Use the same procedure for the RH side and LH side.

30. INSTALL ROOF SIDE INNER GARNISH BOARD RH

HINT:

Use the same procedure for the RH side and LH side.

31. INSTALL REAR SEAT SIDE GARNISH RH

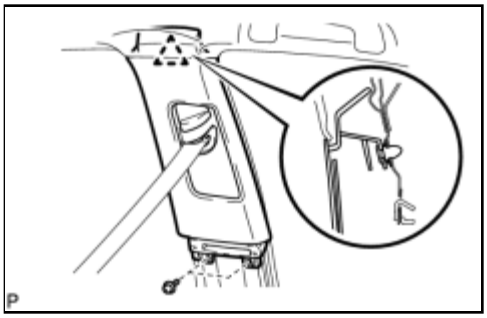
HINT:

Use the same procedure for the RH side and LH side.

32. INSTALL REAR SEATBACK ASSEMBLY LH INFO

33. INSTALL REAR SEATBACK ASSEMBLY RH INFO

34. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

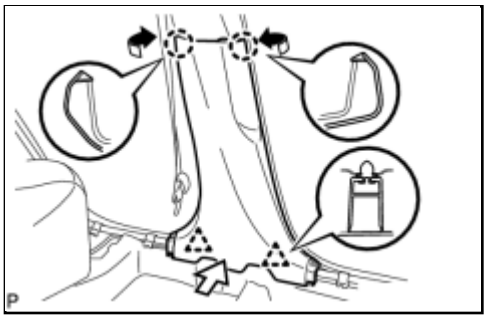


35. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

36. INSTALL REAR SEAT HEADREST ASSEMBLY LH

37. INSTALL REAR SEAT HEADREST ASSEMBLY RH

38. INSTALL SPARE WHEEL COVER INFO

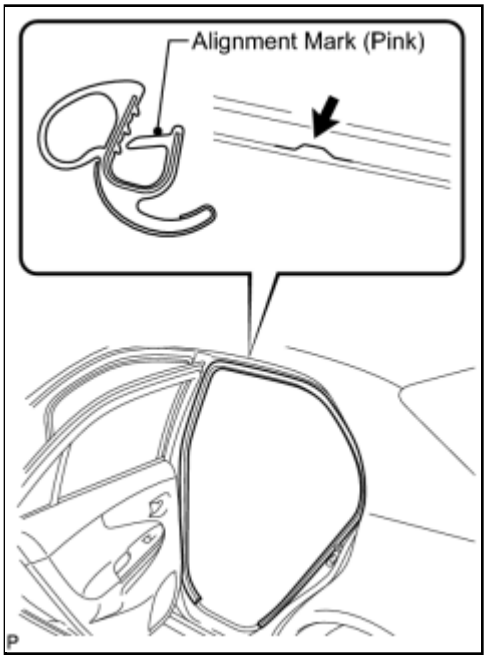


39. INSTALL UPPER CENTER PILLAR GARNISH LH

(a) Engage the clip.

(b) Install the upper center pillar garnish LH with the 2 screws.

40. INSTALL LOWER CENTER PILLAR GARNISH LH

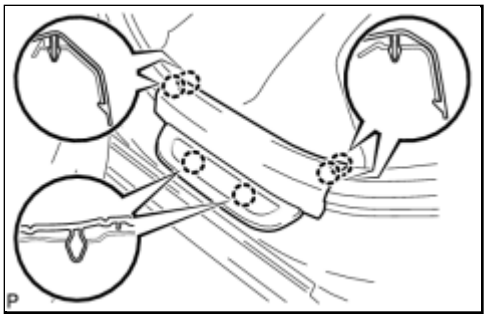


(a) Engage the 2 claws and 2 clips, and install the lower center pillar garnish LH.

41. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH INFO

42. INSTALL LAP BELT OUTER ANCHOR COVER (for LH Side) INFO

43. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH



(a) Align the alignment mark (pink) on the weatherstrip and the protruding portion on the body indicated by the arrow in the illustration, and install the rear door opening trim weatherstrip LH.

NOTICE:

After installation, check that the corners fit correctly.

44. INSTALL REAR DOOR SCUFF PLATE LH

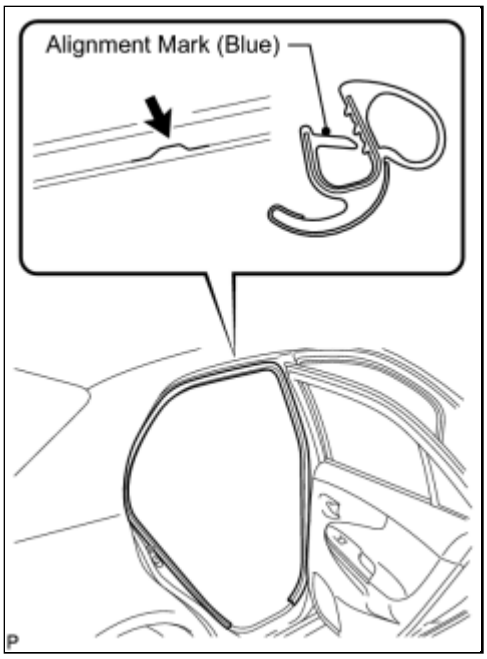
(a) Engage the 6 claws and install the rear door scuff plate LH.

45. INSTALL UPPER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

46. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH INFO



47. INSTALL LOWER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and LH side.

48. INSTALL LAP BELT OUTER ANCHOR COVER (for RH Side) INFO

49. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

(a) Align the alignment mark (blue) on the weatherstrip and the protruding portion on the body indicated by the arrow in the illustration, and install the rear door opening trim weatherstrip RH.

NOTICE:

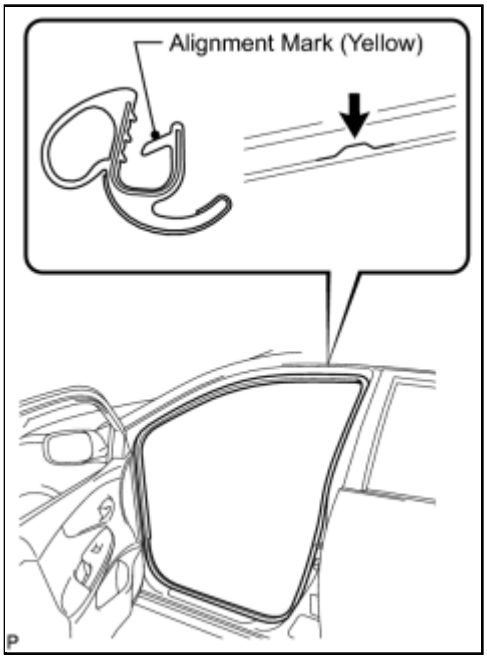
After installation, check that the corners fit correctly.

50. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

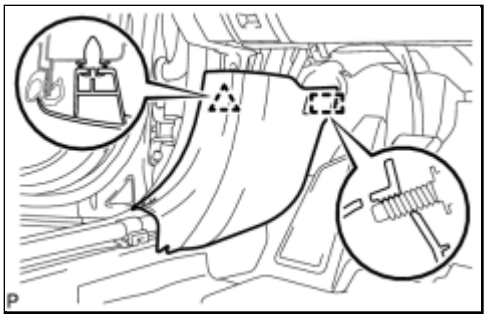
Use the same procedure for the RH side and LH side.

51. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY INFO



52. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

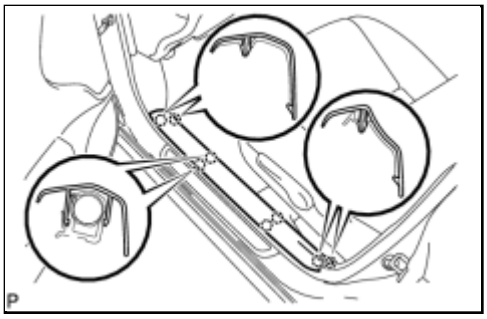
53. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH



(a) Align the alignment mark (yellow) on the weatherstrip and the protruding portion on the body indicated by the arrow in the illustration, and install the front door opening trim weatherstrip LH.

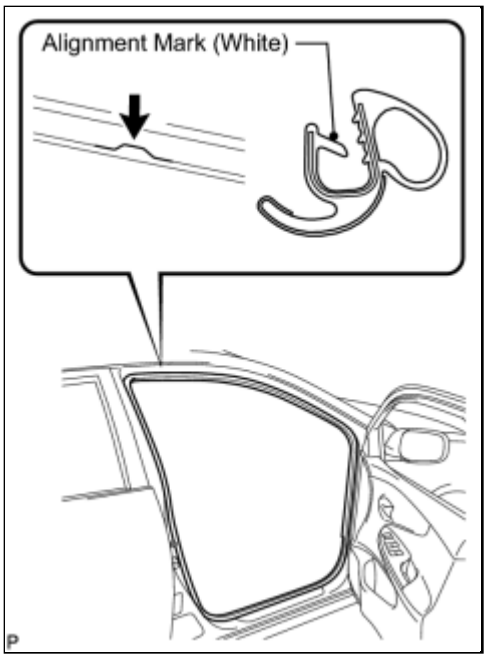
NOTICE:

After installation, check that the corners fit correctly.



54. INSTALL COWL SIDE TRIM BOARD LH

(a) Engage the guide and clip, and install the cowl side trim board LH.



55. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 8 claws and install the front door scuff plate LH.

56. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY INFO

57. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

(a) Align the alignment mark (white) on the weatherstrip and the protruding portion on the body indicated by the arrow in the illustration, and install the front door opening trim weatherstrip RH.

NOTICE:

After installation, check that the corners fit correctly.

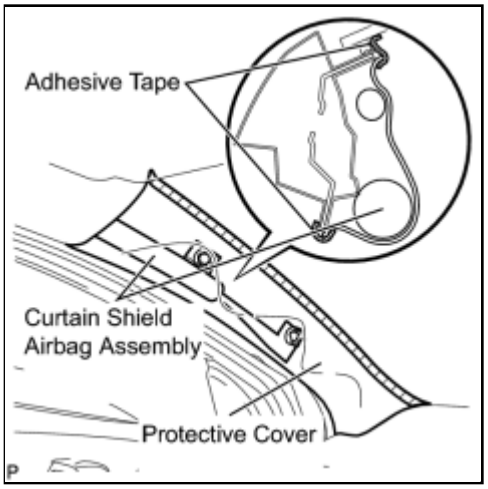
58. INSTALL COWL SIDE TRIM BOARD RH

HINT:

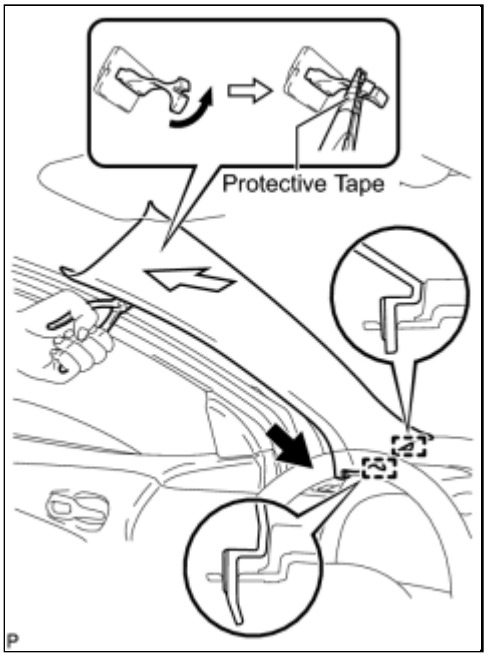
Use the same procedure for the RH side and LH side.

59. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:



Use the same procedure for the RH side and LH side.



60. INSTALL NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY INFO

61. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY INFO

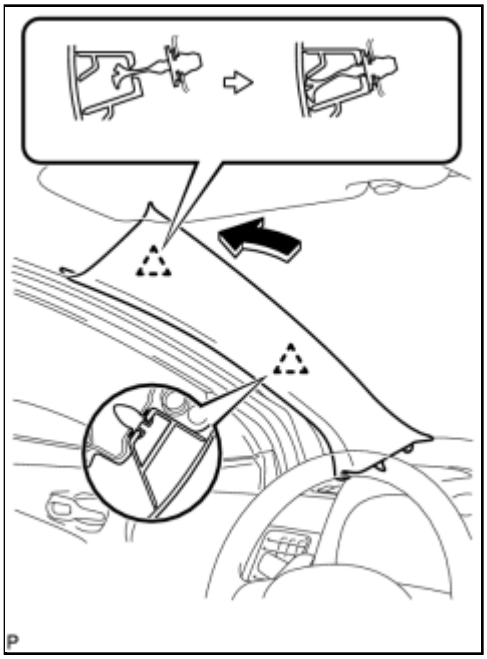
62. INSTALL FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag)

(a) Remove the protective cover.

(b) Make sure that the front pillar garnish clip is not damaged.

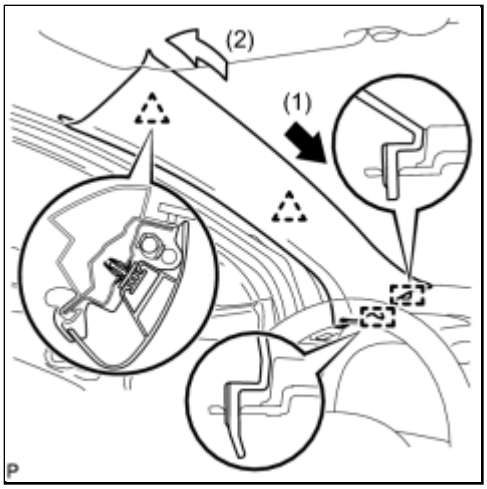
NOTICE:

- If there is any damage, replace the garnish clip with a new one.
- When a garnish clip is being replaced, make sure to install it in the direction shown in the illustration.



(c) Engage the 2 guides.

(d) Turn the end of the front pillar garnish clip 90° with needle-nosed pliers and install it to the front pillar garnish LH.



HINT:

Tape the tips of the needle-nosed pliers before use.

(e) Engage the 2 clips to install the front pillar garnish LH.

63. INSTALL FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag)

(a) Engage the 2 guides and 2 clips, and install the front pillar garnish LH.

64. INSTALL FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.

65. INSTALL FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag)

HINT:

Use the same procedure for the RH side and LH side.

66. INSTALL COMBINATION METER ASSEMBLY INFO

67. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

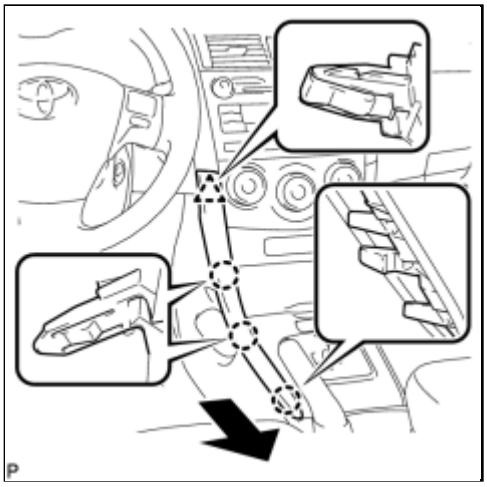
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000024DD03SX
Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: REMOVAL (2010 Corolla)		

REMOVAL

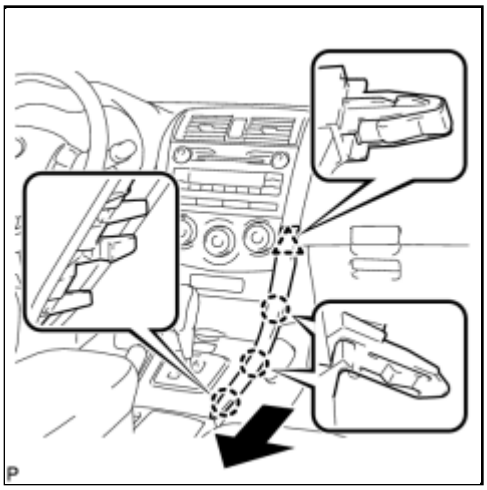
1. PRECAUTION



INFO

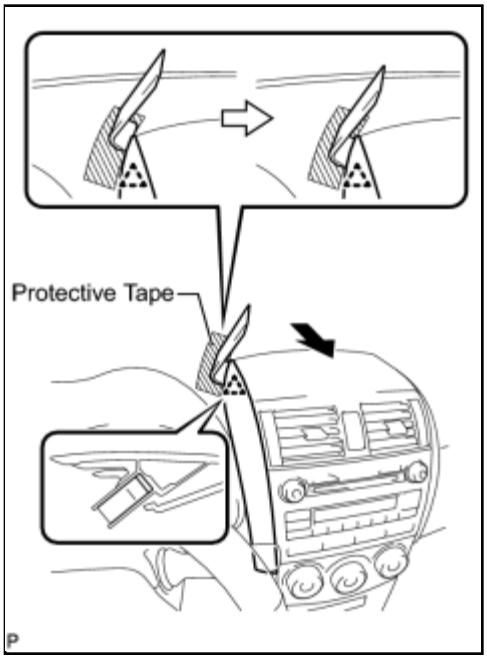
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

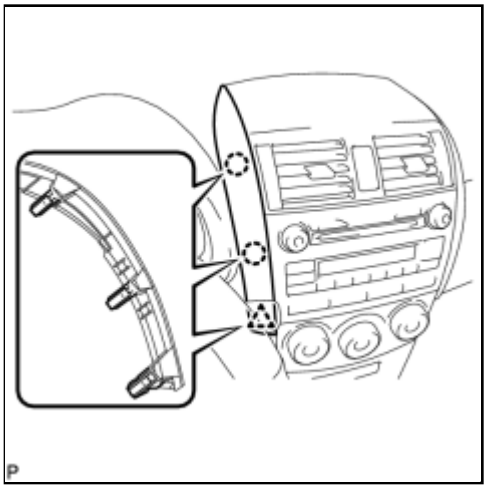
3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH



(a) Disengage the 3 claws and clip, and then remove the lower instrument panel finish panel LH.

4. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH

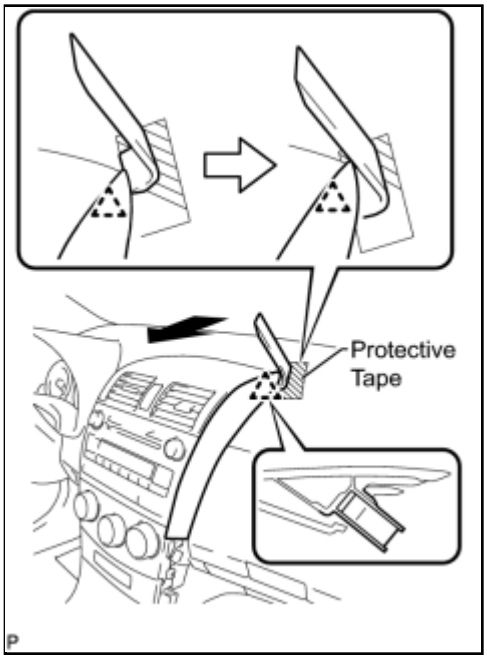
(a) Disengage the 3 claws and clip, and then remove the lower instrument panel finish panel RH.



5. REMOVE INSTRUMENT PANEL FINISH PANEL END LH

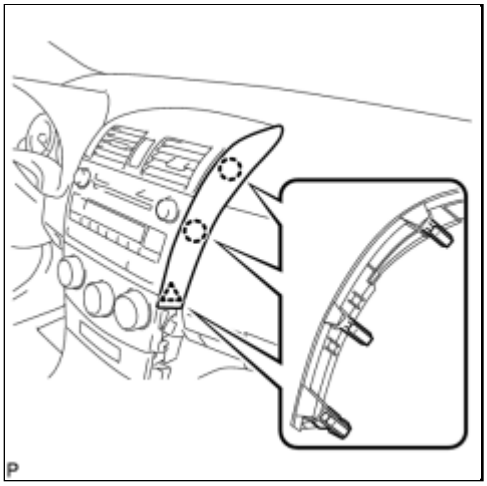
(a) Apply protective tape to the area shown in the illustration.

(b) Insert a roof moulding remover and slide it toward the clip.



(c) Pull the remover with both hands to disengage the clip as shown in the illustration.

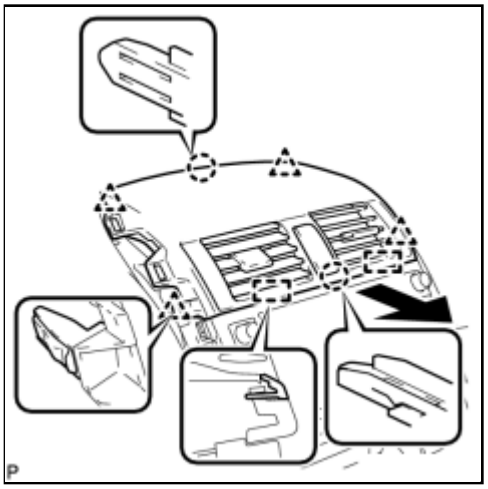
(d) Disengage the 2 claws and clip, and remove the instrument panel finish panel end LH.



6. REMOVE INSTRUMENT PANEL FINISH PANEL END RH

(a) Apply protective tape to the area shown in the illustration.

(b) Insert a roof moulding remover and slide it toward the clip.



(c) Pull the remover with both hands to disengage the clip as shown in the illustration.

(d) Disengage the 2 claws and clip, and remove the instrument panel finish panel end RH.

7. REMOVE CENTER INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Disengage the 2 claws, 4 clips, and 2 guides.

(b) Disconnect the connectors and remove the center instrument panel register assembly.

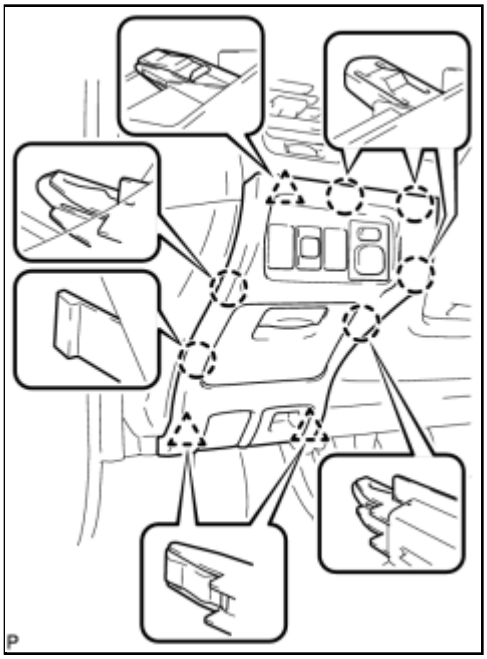
8. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

9. REMOVE COMBINATION METER ASSEMBLY INFO

10. REMOVE FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

11. REMOVE FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

12. REMOVE FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag)

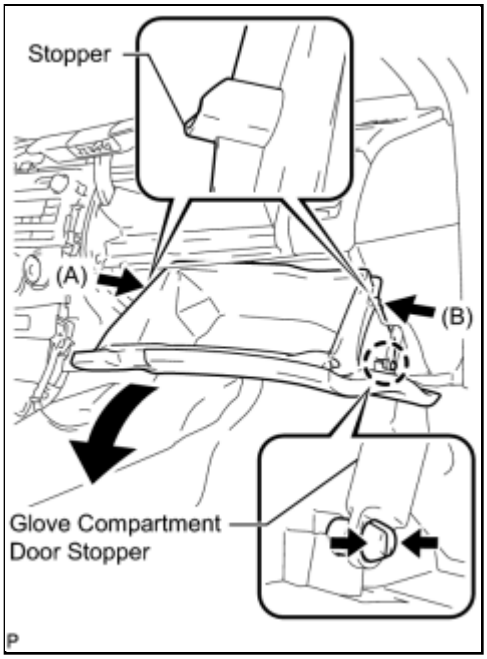


HINT:

Use the same procedure for the RH side and LH side.

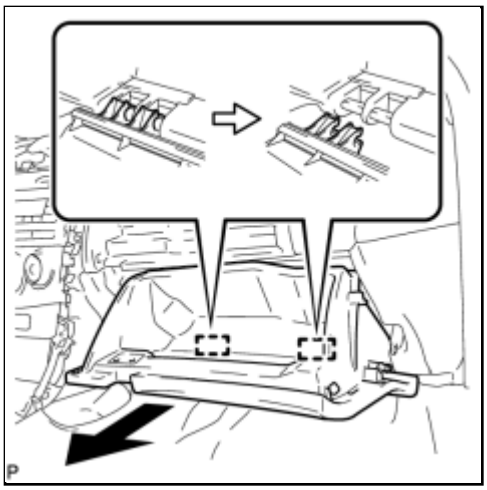
13. REMOVE FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

14. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY



(a) Disengage the 6 claws and 3 clips.

(b) Disconnect each connector and remove the lower instrument panel finish panel assembly.

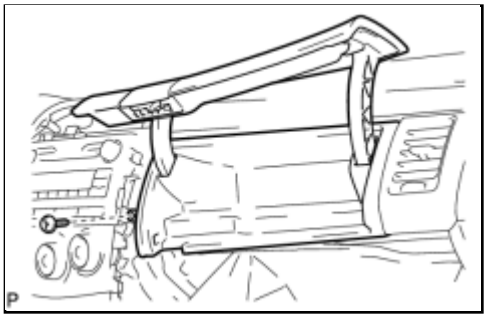


15. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

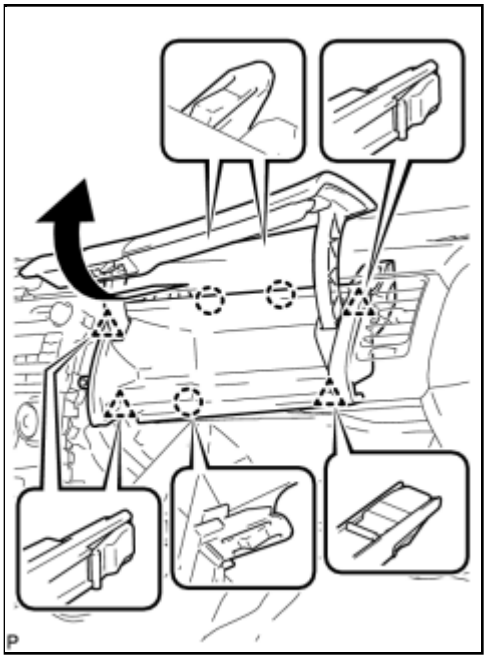
16. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Disengage the claw and release the glove compartment door stopper.

(b) Bend portions (A) and (B) in the direction indicated by the arrows in the illustration to release the 2 stoppers, and lower the glove compartment door assembly until the front of the door is level.



(c) Pull the glove compartment door assembly horizontally toward the rear of the vehicle to release the 2 hinges, and remove the glove compartment door assembly.



NOTICE:

Pulling the glove compartment door assembly upward to remove it will cause the hinges to deform. Be sure to pull out the compartment door horizontally.

17. REMOVE NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY

(a) Remove the screw <B>.

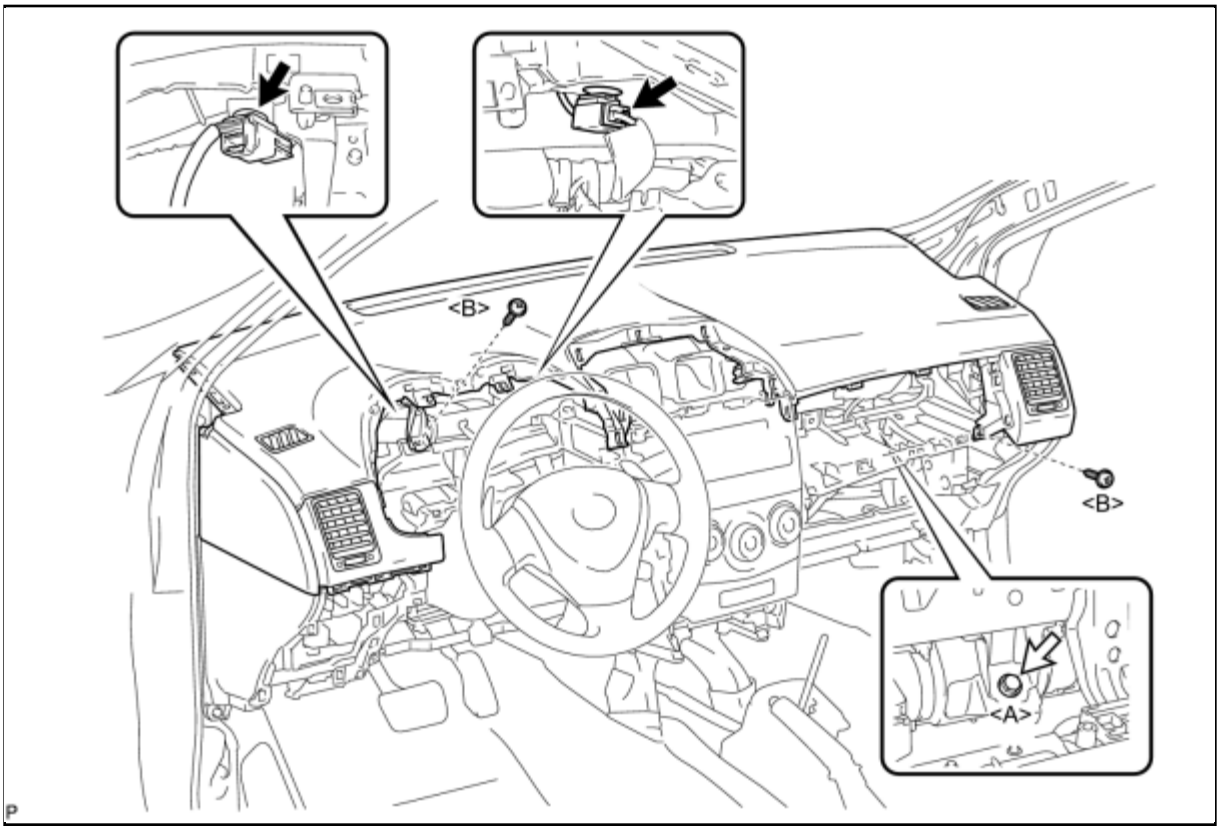
(b) Disengage the 3 claws and 4 clips, and then remove the No. 1 instrument panel box door sub-assembly.

18. DISCONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

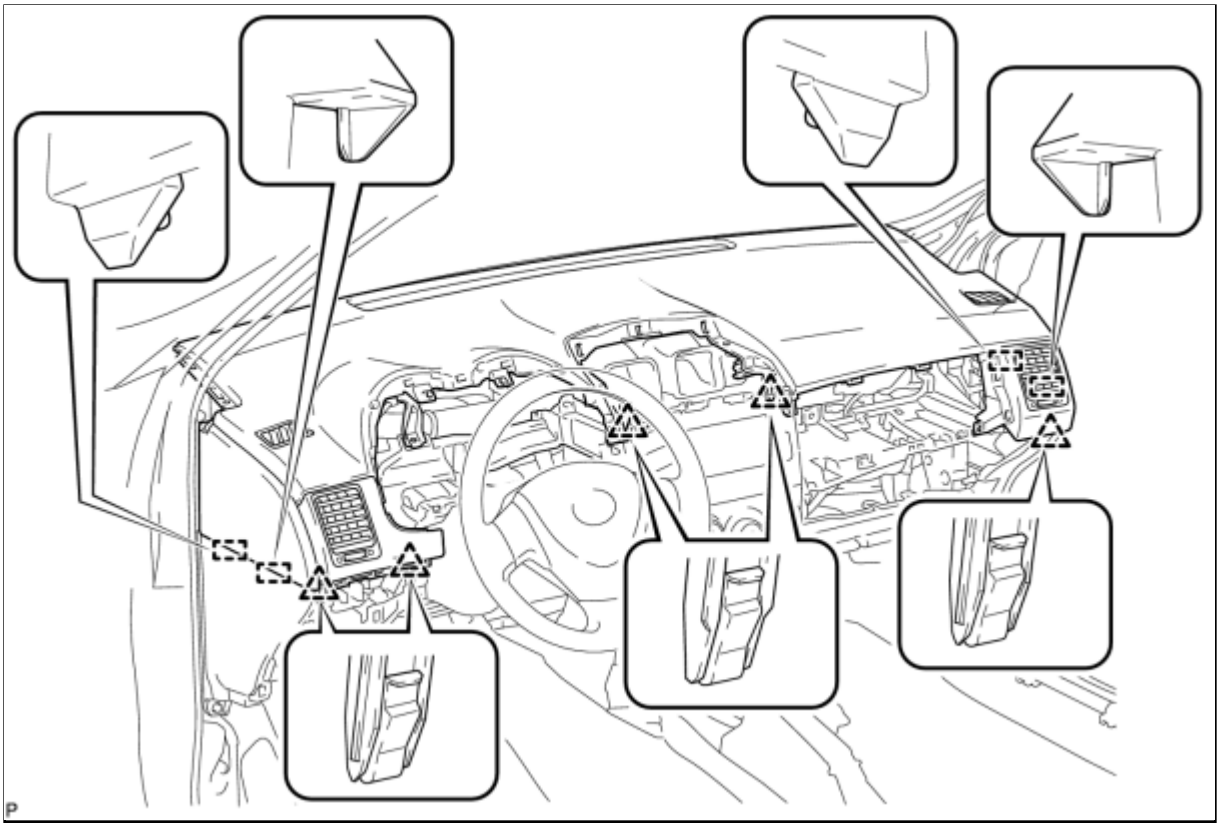
Use the same procedure for the RH side and LH side.

19. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO



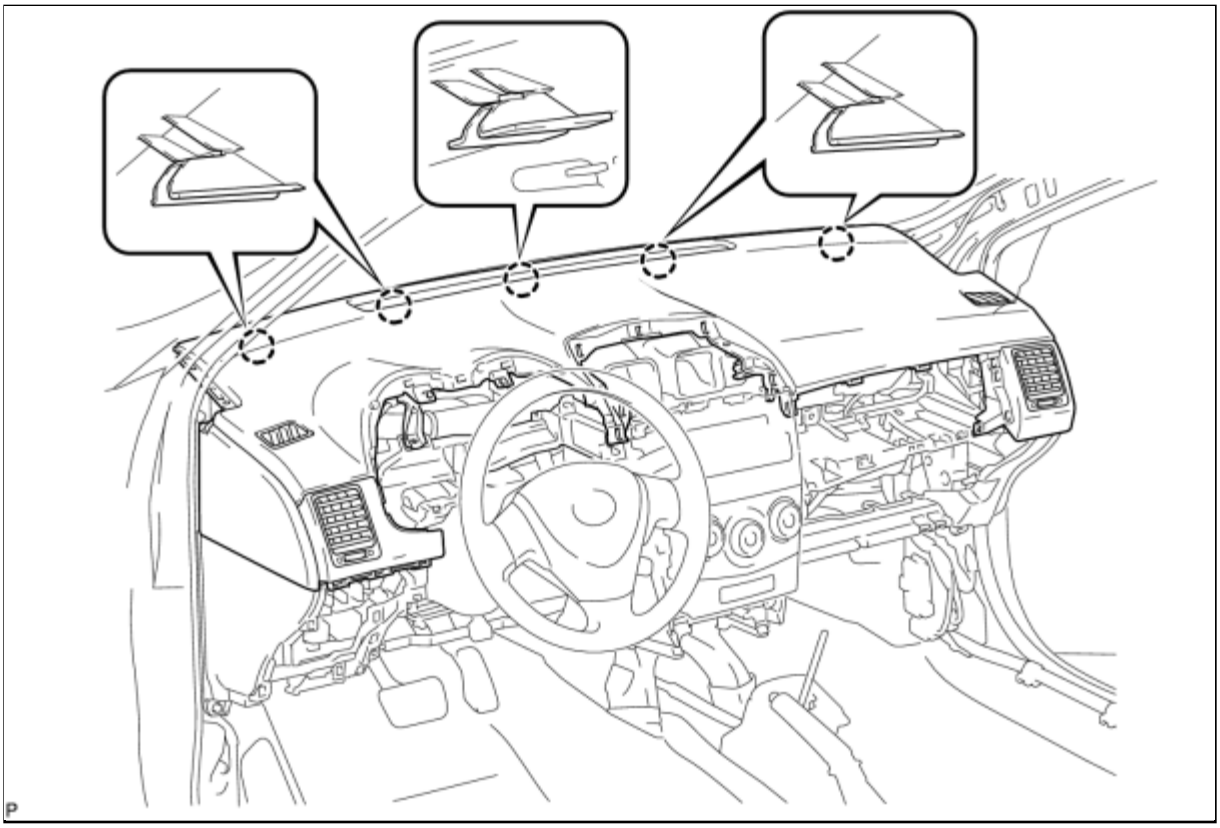
20. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Operate the tilt lever to lower the steering wheel assembly.



(b) Disconnect each connector.

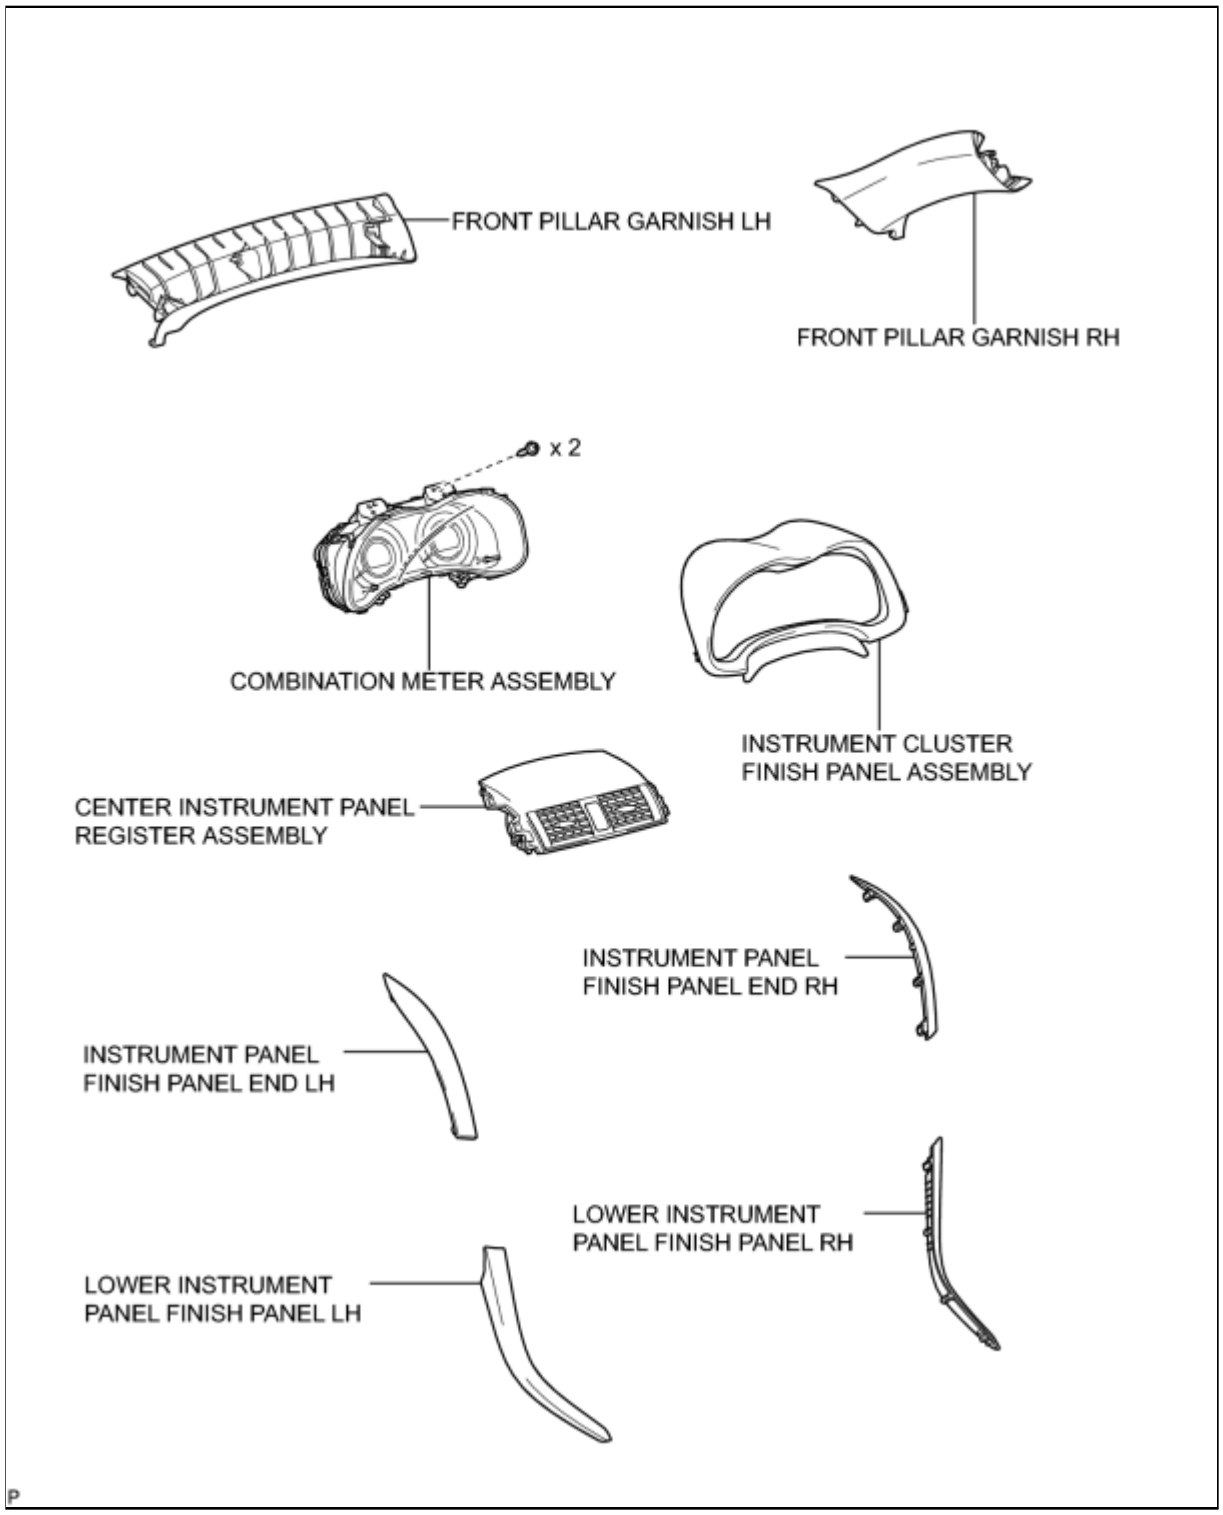
(c) Remove the 2 screws <B>.



(d) Remove the passenger airbag bolt <A>.

(e) Disengage the 5 clips and 4 guides.

(f) Disengage the 5 claws and then remove the upper instrument panel sub-assembly.



NOTICE:

When removing the upper instrument panel sub-assembly, be careful not to damage it or the steering wheel assembly.

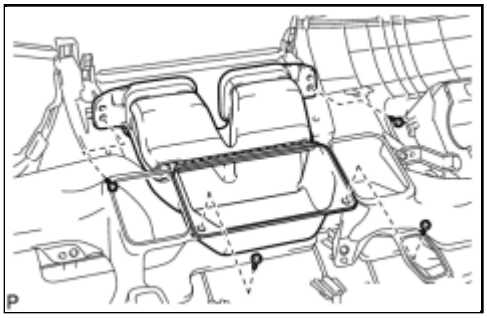
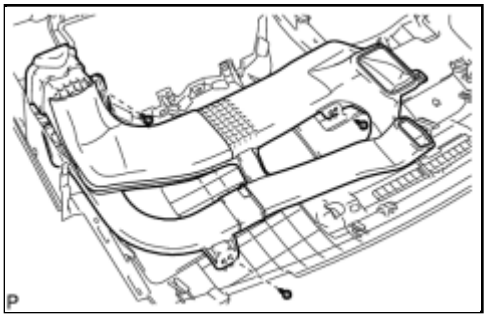
Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: DISASSEMBLY (2010 Corolla)		



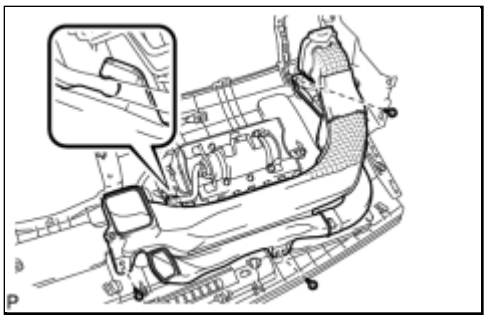
DISASSEMBLY

1. REMOVE DEFROSTER NOZZLE ASSEMBLY



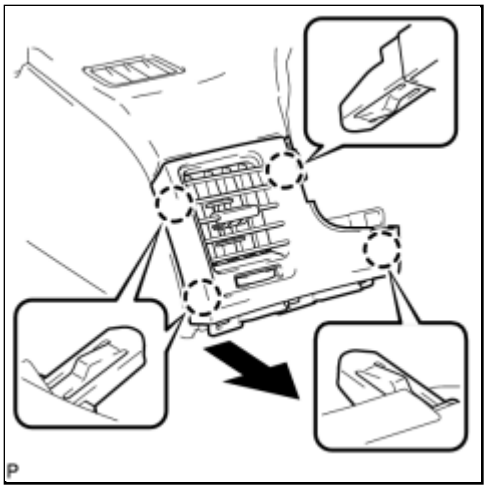
(a) Remove the 3 screws <B> and the defroster nozzle assembly.

2. REMOVE NO. 2 HEATER TO REGISTER DUCT



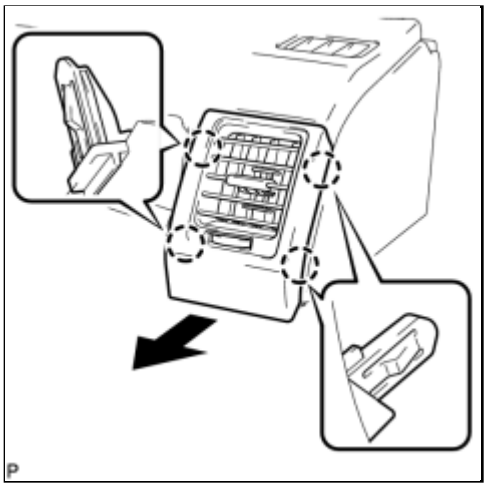
(a) Remove the 4 screws <B> and the No. 2 heater to register duct.

3. REMOVE NO. 1 HEATER TO REGISTER DUCT



(a) Remove the 3 screws <B> and the No. 1 heater to register duct.

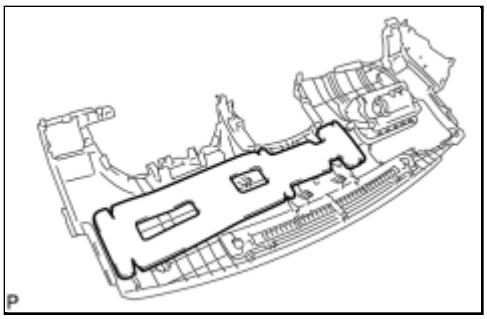
4. REMOVE NO. 3 HEATER TO REGISTER DUCT



(a) Remove the 3 screws <B> and the No. 3 heater to register duct.

5. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Disengage the 4 claws and remove the No. 1 instrument panel register assembly.

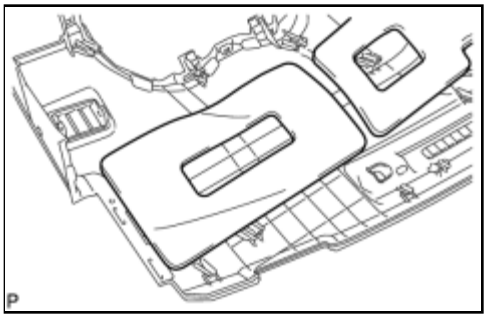


6. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

(a) Disengage the 4 claws and remove the No. 2 instrument panel register assembly.

7. REMOVE NO. 2 INSTRUMENT PANEL CUSHION (for TMC Made)

(a) Factory-installed components:

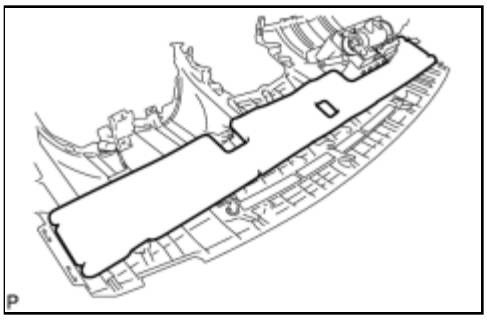


(1) Remove the No. 2 instrument panel cushion.

NOTICE:

Always replace the No. 2 instrument panel cushion with a new one.

(b) Except factory-installed components:



(1) Remove the No. 2 instrument panel cushion.

NOTICE:

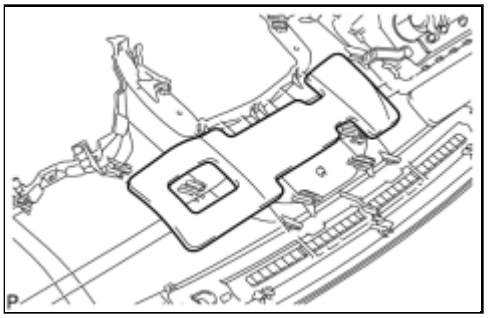
Always replace the No. 2 instrument panel cushion with a new one.

8. REMOVE NO. 2 INSTRUMENT PANEL CUSHION (for TMMC, NUMMI Made)

(a) Remove the No. 2 instrument panel cushion.

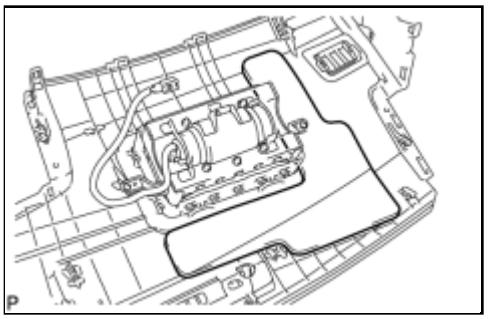
NOTICE:

Always replace the No. 2 instrument panel cushion with a new one.



9. REMOVE NO. 3 INSTRUMENT PANEL CUSHION (for TMC Made)

(a) Except factory-installed components:



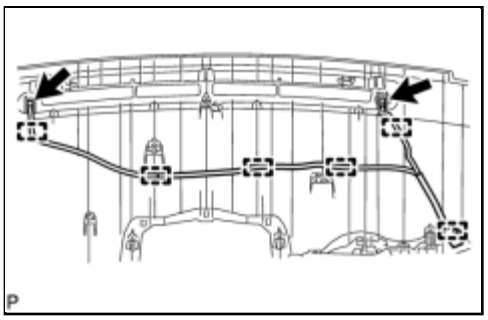
(1) Remove the No. 3 instrument panel cushion.

NOTICE:

Always replace the No. 3 instrument panel cushion with a new one.

10. REMOVE NO. 4 INSTRUMENT PANEL CUSHION (for TMC Made)

(a) Remove the No. 4 instrument panel cushion.



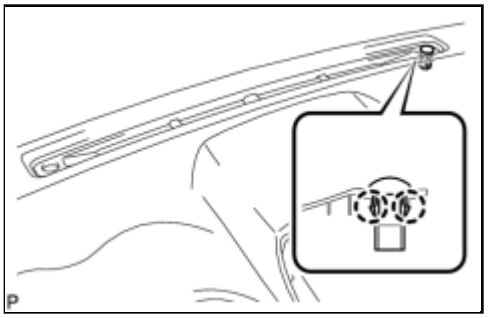
NOTICE:

Always replace the No. 4 instrument panel cushion with a new one.

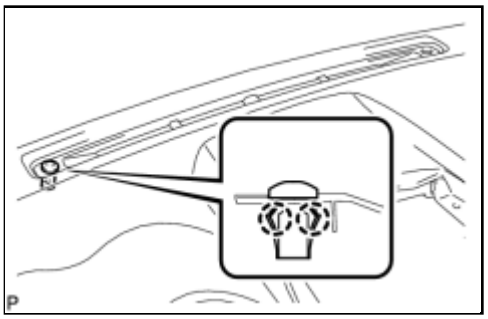
11. REMOVE NAVIGATION ANTENNA ASSEMBLY (w/ Navigation System) INFO

12. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY INFO

13. REMOVE NO. 2 INSTRUMENT PANEL WIRE (w/ Automatic Light Control System)



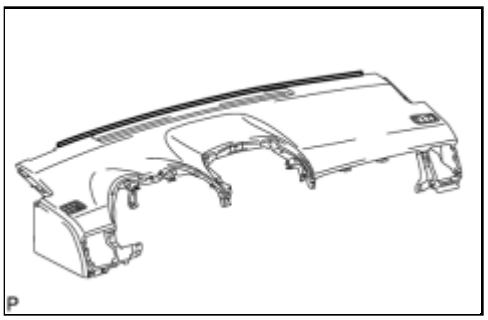
(a) Disconnect each connector.



(b) Disengage the 6 clamps and remove the No. 2 instrument panel wire.

14. REMOVE AUTOMATIC LIGHT CONTROL SENSOR (w/ Automatic Light Control System)

(a) Disengage the 2 claws and remove the automatic light control sensor.

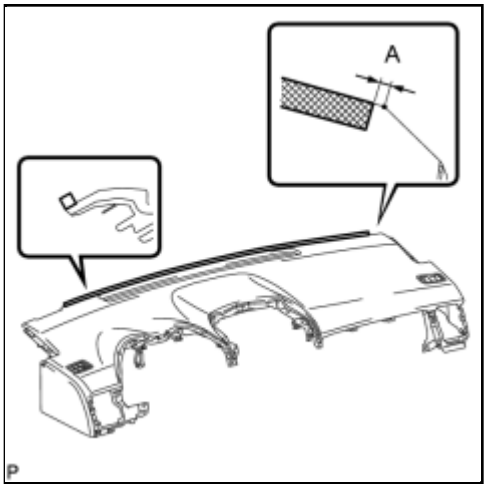


15. REMOVE SOLAR SENSOR (for Automatic Air Conditioning System)

(a) Disengage the 2 claws and remove the solar sensor.

16. REMOVE NO. 1 INSTRUMENT PANEL CUSHION

(a) Remove the No. 1 instrument panel cushion.



NOTICE:

Always replace the No. 1 instrument panel cushion with a new one.

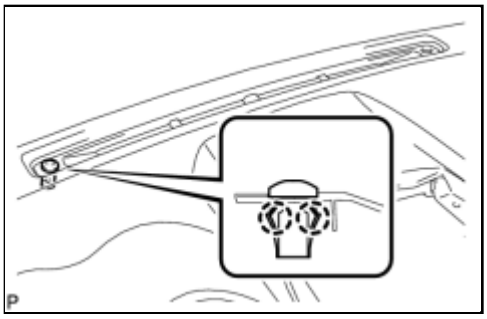
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000024DF02DX
Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: REASSEMBLY (2010 Corolla)		

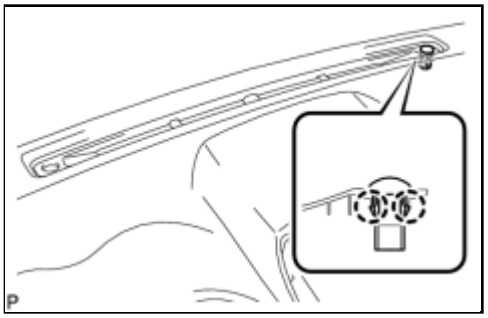
REASSEMBLY



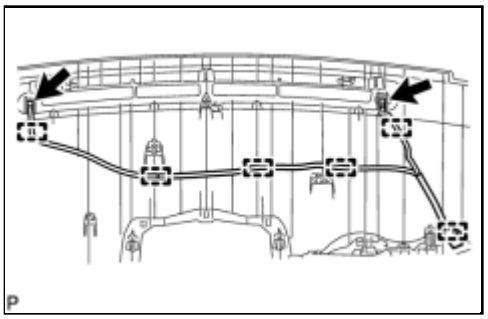
1. INSTALL NO. 1 INSTRUMENT PANEL CUSHION

(a) Install a new No. 1 instrument panel cushion as shown in the illustration.

AREA	MEASUREMENT
A	0 to 10 mm (0 to 0.394 in.)



2. INSTALL SOLAR SENSOR (for Automatic Air Conditioning System)



(a) Engage the 2 claws and install the solar sensor.

3. INSTALL AUTOMATIC LIGHT CONTROL SENSOR (w/ Automatic Light Control System)

(a) Engage the 2 claws and install the automatic light control sensor.
