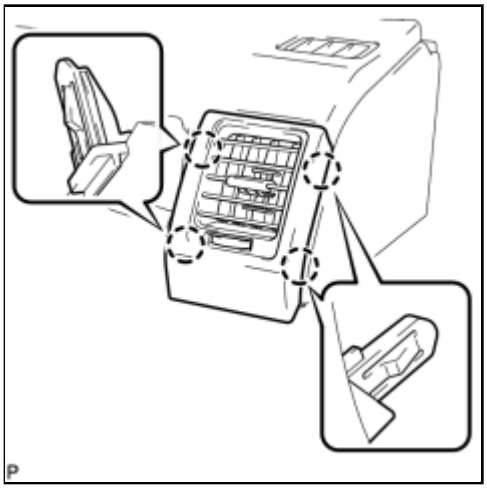
4. INSTALL NO. 2 INSTRUMENT PANEL WIRE (w/ Automatic Light Control System)

(a) Engage the 6 clamps.

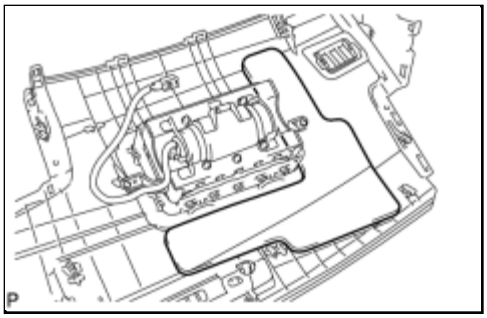
(b) Connect each connector and install the No. 2 instrument panel wire.



5. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

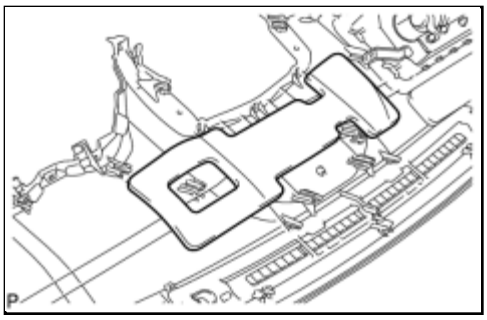
(a) Engage the 4 claws and install the No. 1 instrument panel register assembly.

6. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY



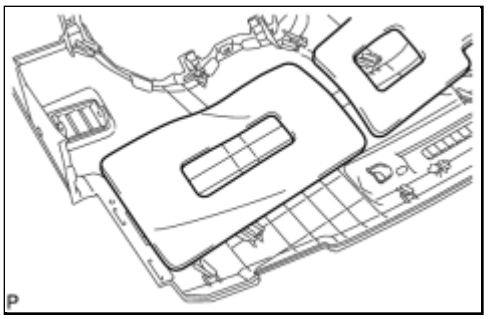
(a) Engage the 4 claws and install the No. 2 instrument panel register assembly.

7. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY INFO



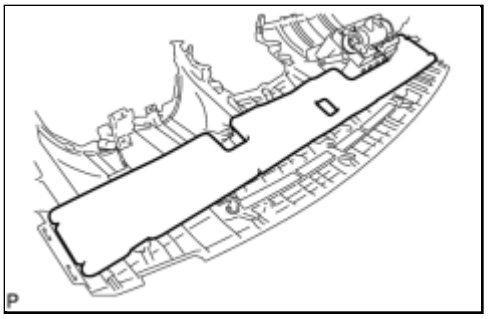
8. INSTALL NAVIGATION ANTENNA ASSEMBLY (w/ Navigation System) INFO

9. INSTALL NO. 4 INSTRUMENT PANEL CUSHION (for TMC Made)



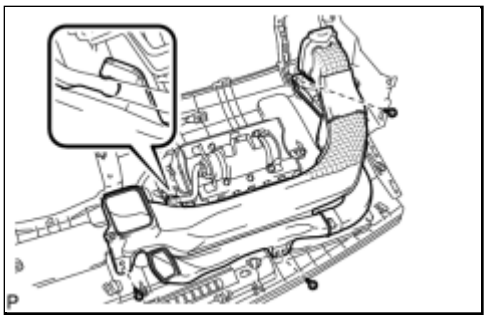
(a) Install a new No. 4 instrument panel cushion.

10. INSTALL NO. 3 INSTRUMENT PANEL CUSHION (for TMC Made)



(a) Install a new No. 3 instrument panel cushion.

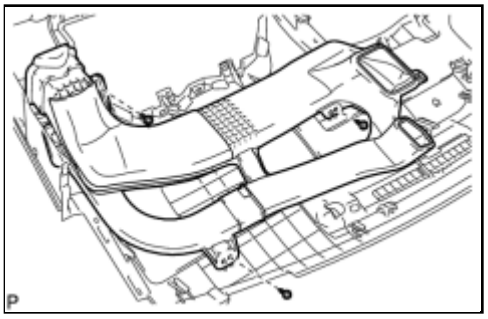
11. INSTALL NO. 2 INSTRUMENT PANEL CUSHION (for TMC Made)



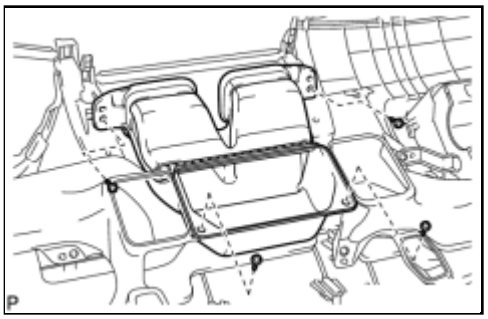
(a) Install a new No. 2 instrument panel cushion.

12. INSTALL NO. 2 INSTRUMENT PANEL CUSHION (for TMMC, NUMMI Made)

(a) Install a new No. 2 instrument panel cushion.



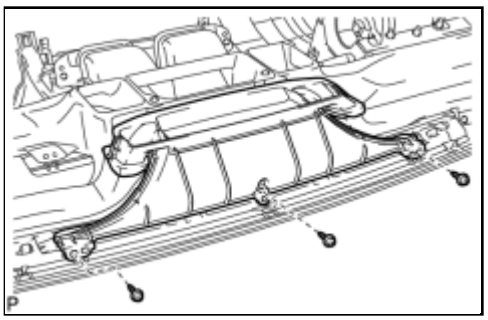
13. INSTALL NO. 3 HEATER TO REGISTER DUCT



(a) Install the No. 3 heater to register duct with the 3 screws <B>.

14. INSTALL NO. 1 HEATER TO REGISTER DUCT

(a) Install the No. 1 heater to register duct with the 3 screws <B>.



15. INSTALL NO. 2 HEATER TO REGISTER DUCT

(a) Install the No. 2 heater to register duct with the 4 screws <B>.

16. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Install the defroster nozzle assembly with the 3 screws <B>.

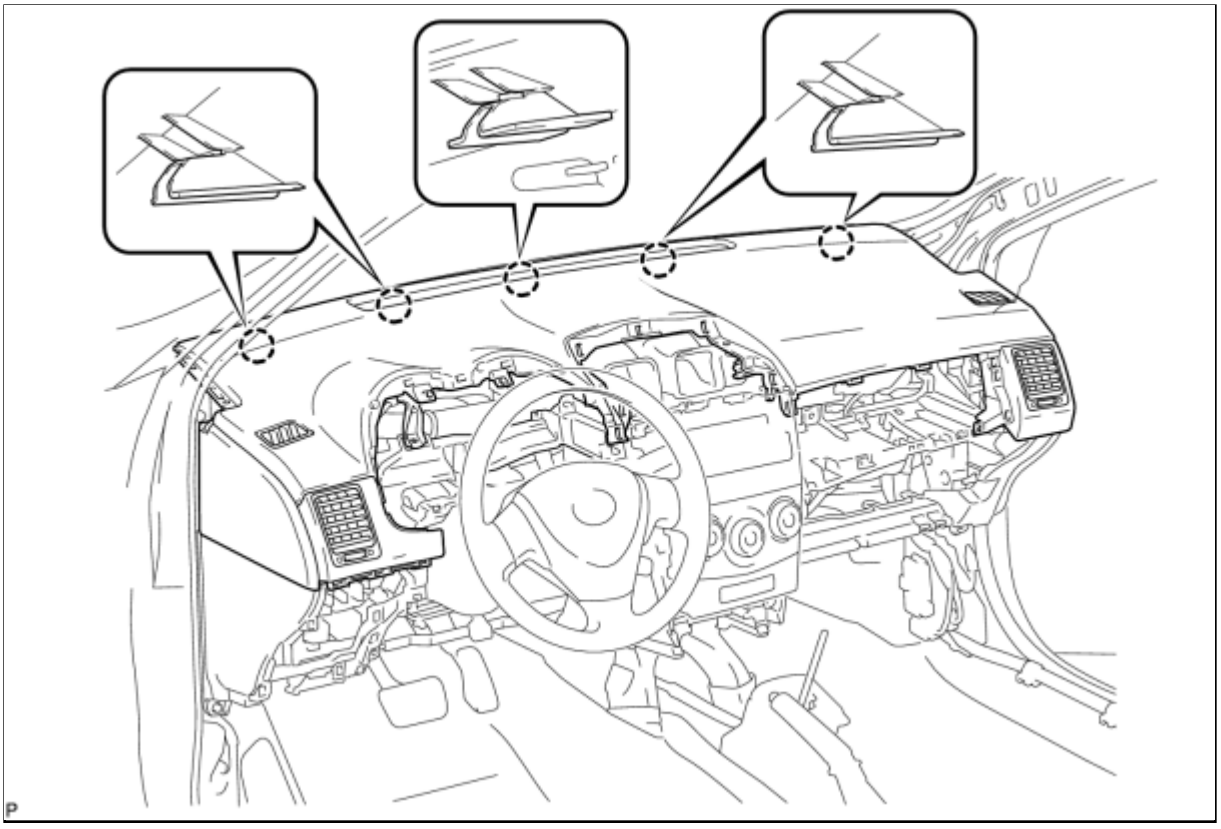
Title: INTERIOR PANELS / TRIM: UPPER INSTRUMENT PANEL: INSTALLATION (2010 Corolla)		

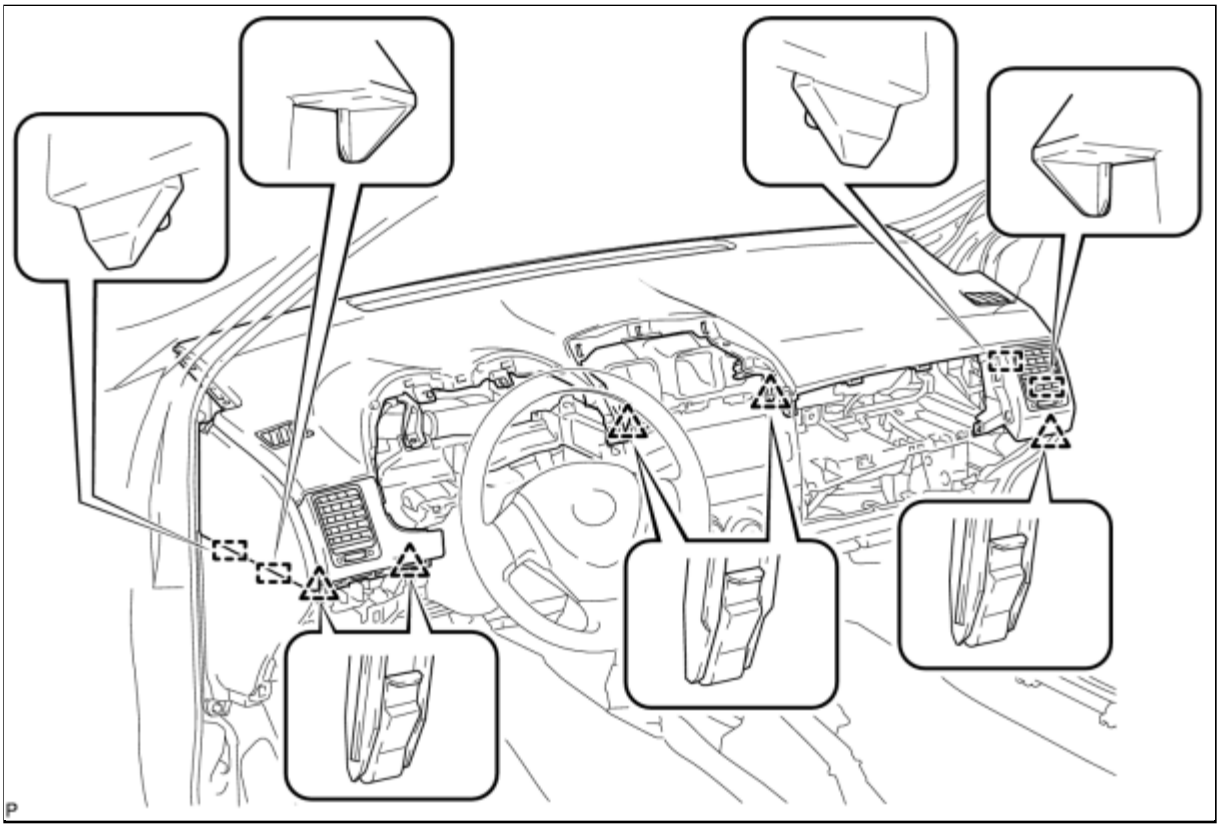
INSTALLATION

1. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

(a) When using a new upper instrument panel sub-assembly:



(1) Immediately before installing the upper instrument panel sub-assembly, twist and cut off the portions shown in the illustration (joints for moulding).

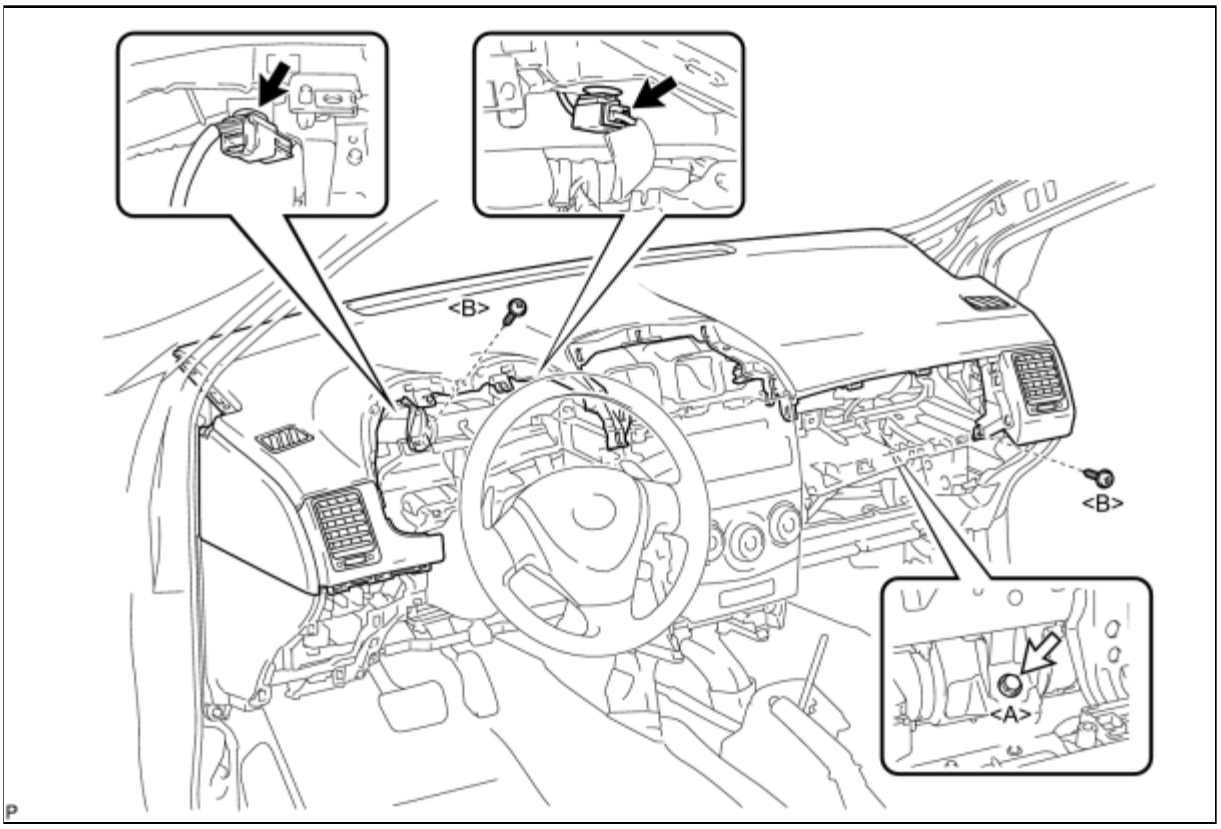


(b) Install the upper instrument panel sub-assembly and engage the 5 claws.

NOTICE:

- When installing the upper instrument panel sub-assembly, be careful not to damage it or the steering wheel assembly.
- Do not allow the wire harness to get caught in the claws.

(c) Engage the 5 clips and 4 guides.

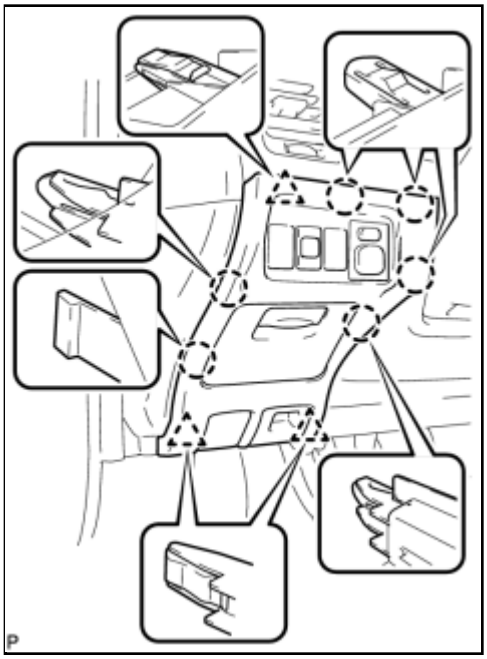


(d) Install the 2 screws <B>.

(e) Install the passenger airbag bolt <A>.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

(f) Connect each connector.



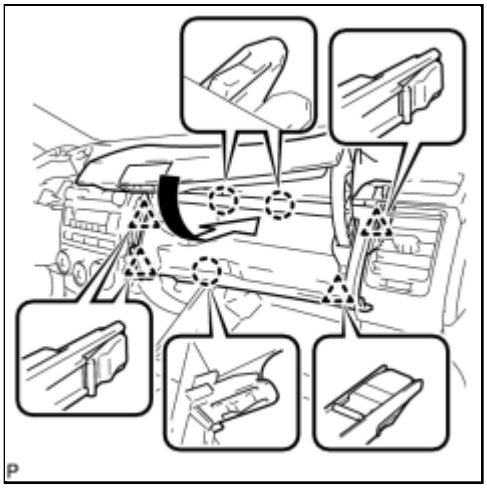
2. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY INFO

3. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP LH INFO

4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL ASSEMBLY

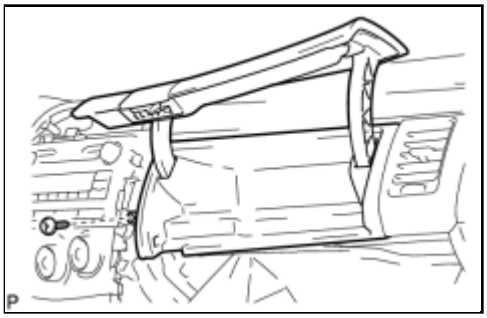
(a) Connect each connector.

(b) Engage the 6 claws and 3 clips to install the lower instrument panel finish panel assembly.



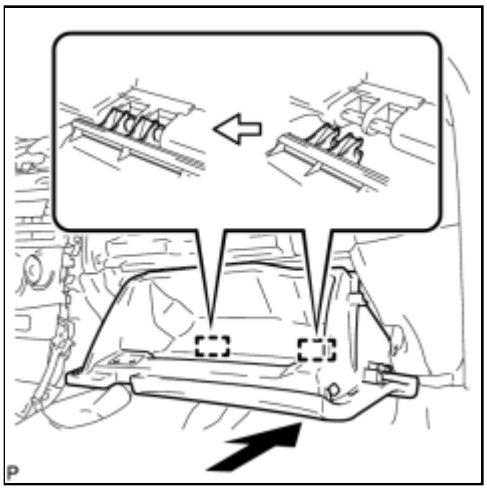
5. CONNECT FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:



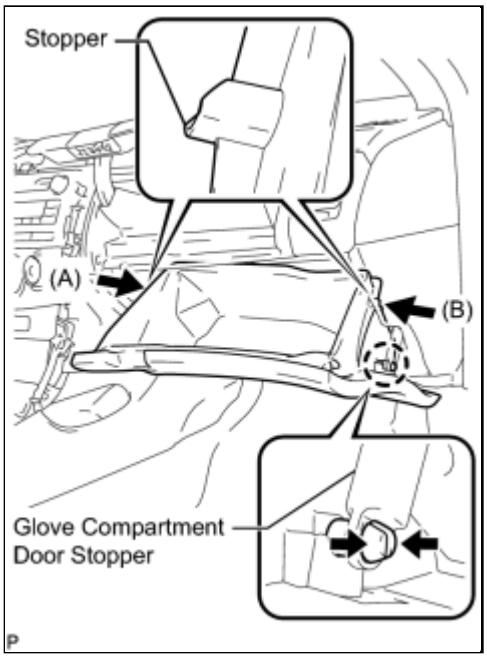
Use the same procedure for the RH side and LH side.

6. INSTALL NO. 1 INSTRUMENT PANEL BOX DOOR SUB-ASSEMBLY



(a) Engage the 3 claws and 4 clips.

(b) Install the No. 1 instrument panel box door sub-assembly with the screw <B>.



7. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Insert the glove compartment door assembly horizontally and engage the 2 hinges.

NOTICE:

Engaging the hinges from the above will deform the hinges. Be sure to install the glove compartment door assembly horizontally.

(b) Bend portions (A) and (B) in the direction indicated by the arrows in the illustration to engage the 2 stoppers.

(c) Engage the claw, connect the glove compartment door stopper, and install the glove compartment

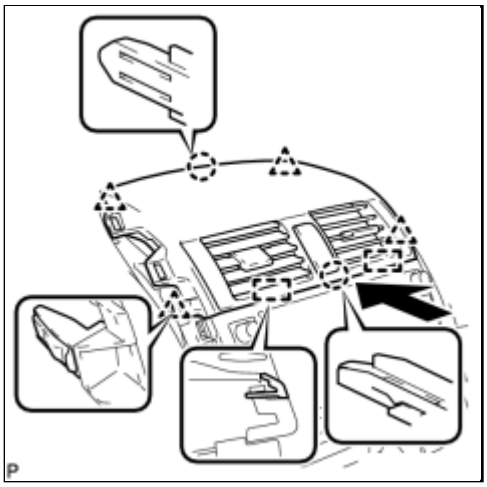
door assembly.

8. INSTALL FRONT PILLAR GARNISH LH (w/ Curtain Shield Airbag) INFO

9. INSTALL FRONT PILLAR GARNISH LH (w/o Curtain Shield Airbag) INFO

10. INSTALL FRONT PILLAR GARNISH RH (w/ Curtain Shield Airbag) INFO

11. INSTALL FRONT PILLAR GARNISH RH (w/o Curtain Shield Airbag)



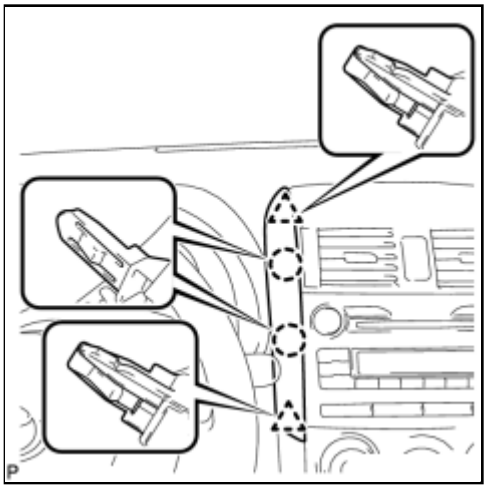
HINT:

Use the same procedure for the RH side and LH side.

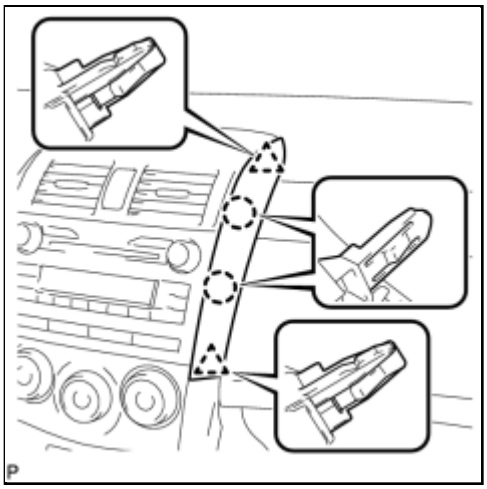
12. INSTALL COMBINATION METER ASSEMBLY INFO

13. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

14. INSTALL CENTER INSTRUMENT PANEL REGISTER ASSEMBLY



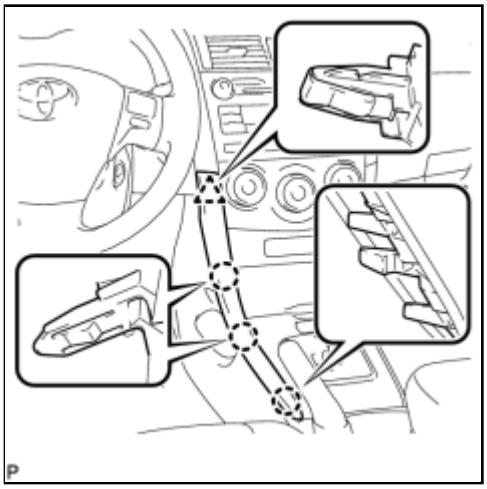
(a) Connect the connector.



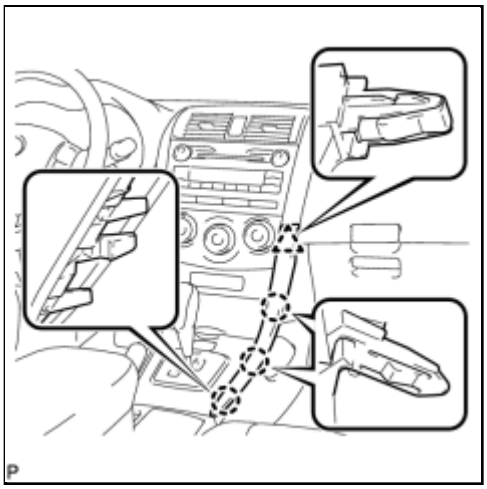
(b) Engage the 2 guides, 2 claws and 4 clips, and install the center instrument panel register assembly.

15. INSTALL INSTRUMENT PANEL FINISH PANEL END LH

(a) Engage the 2 claws and 2 clips, and then install the instrument panel finish panel end LH.



16. INSTALL INSTRUMENT PANEL FINISH PANEL END RH



(a) Engage the 2 claws and 2 clips, and then install the instrument panel finish panel end RH.

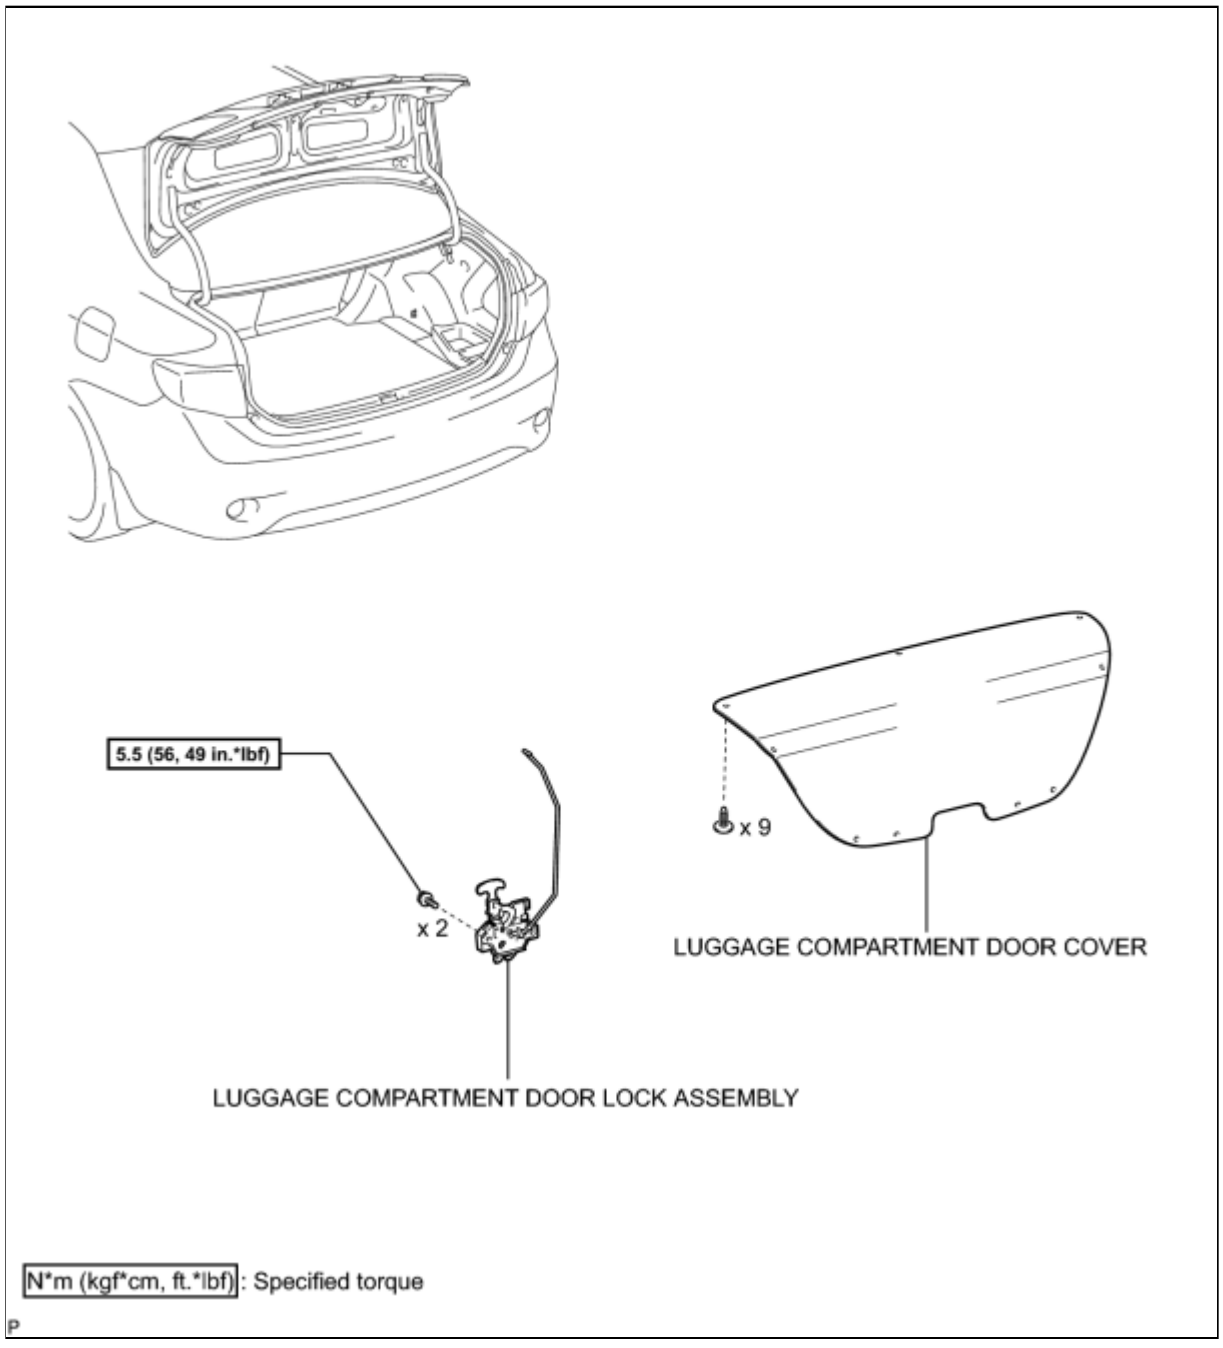
17. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH

(a) Engage the 3 claws and clip, and then install the lower instrument panel finish panel LH.

18. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH

(a) Engage the 3 claws and clip, and then install the lower instrument panel finish panel RH.

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



20. INSPECT SRS WARNING LIGHT

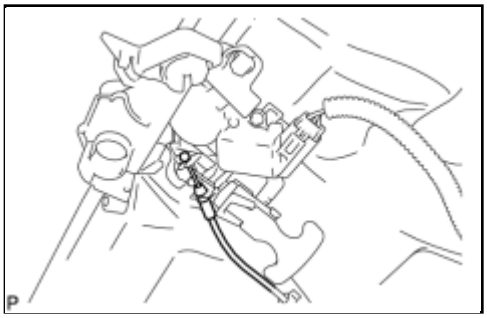
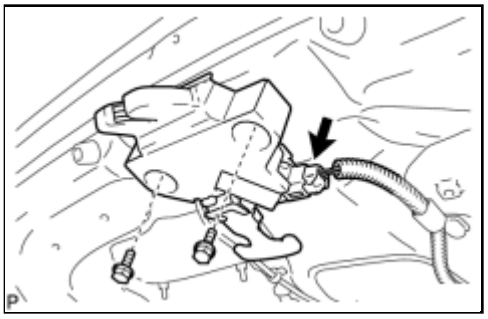
REMOVAL

1. REMOVE LUGGAGE COMPARTMENT DOOR COVER INFO



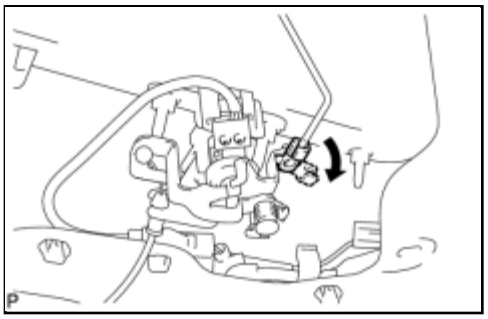
2. REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (w/o Smart Key System)

(a) Disconnect the rod as shown in the illustration.



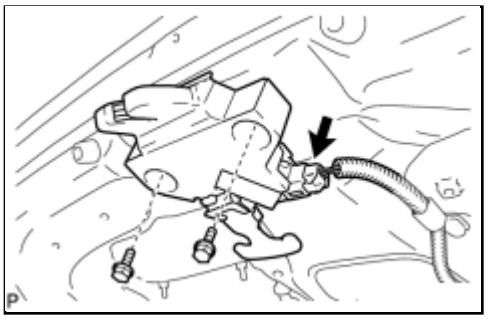
(b) Raise the cover of the luggage compartment door lock as shown in the illustration.

(c) Disconnect the luggage door lock control cable sub-assembly.



(d) Return the cover of the luggage compartment door lock to its original position.

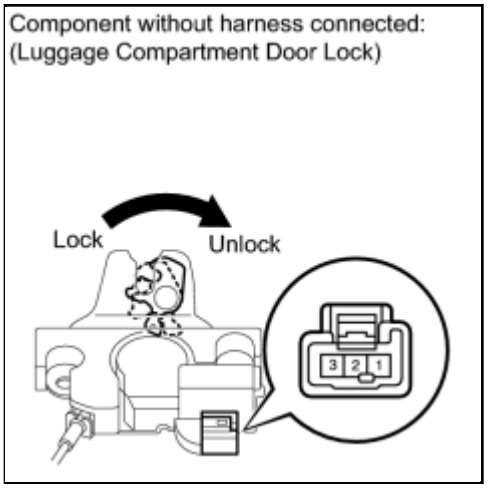
(e) Disconnect the connector.



(f) Remove the 2 bolts and luggage compartment door lock assembly.

3. REMOVE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (w/ Smart Key System)

(a) Disconnect the rod as shown in the illustration.



(b) Disconnect the connector.

(c) Remove the 2 bolts and luggage compartment door lock assembly.

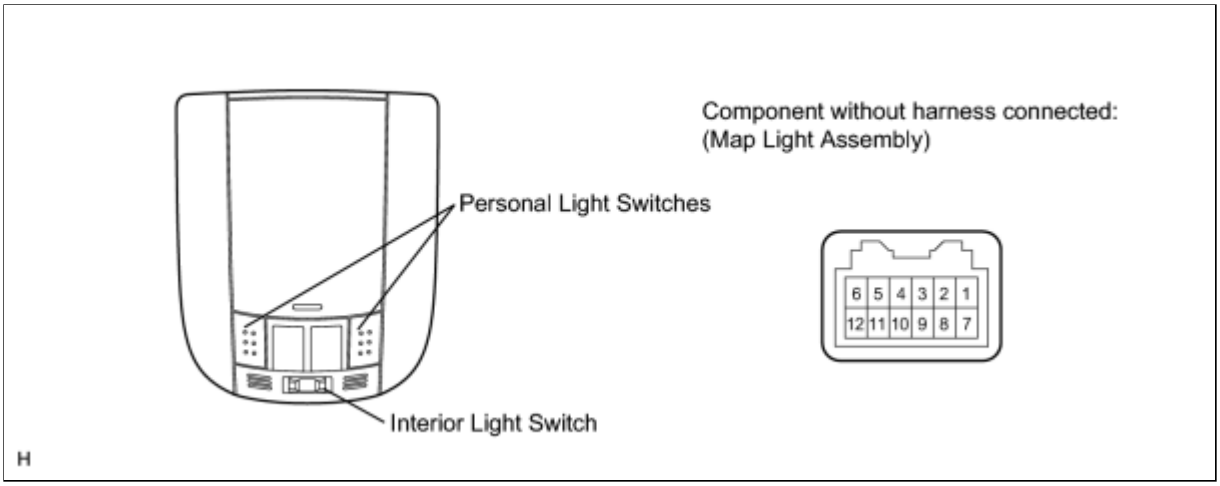
Title: LIGHTING (INT): PERSONAL LIGHT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT MAP LIGHT ASSEMBLY (w/o Sliding Roof)

(a) Connect a positive (+) lead from the battery to terminal 1 and a negative (-) lead to terminal 2.

(b) Check that the personal lights come on.



OK:

CONDITION	SPECIFIED CONDITION
Personal light switch LH ON	Personal light LH comes on
Personal light switch LH OFF	Personal light LH does not come on
Personal light switch RH ON	Personal light RH comes on
Personal light switch RH OFF	Personal light RH does not come on

If the result is not as specified, replace the bulb or personal light assembly.

2. INSPECT MAP LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Personal light switch operation

(1) Connect a positive (+) lead from the battery to terminal 6 and a negative (-) lead to terminal 7.

(2) Inspect the personal light operation while the interior light switch is off.

OK:

CONDITION	SPECIFIED CONDITION
Personal light switch LH ON	Personal light LH comes on
Personal light switch LH OFF	Personal light LH does not come on
Personal light switch RH ON	Personal light RH comes on
Personal light switch RH OFF	Personal light RH does not come on

If the result is not as specified, replace the bulb or map light assembly.

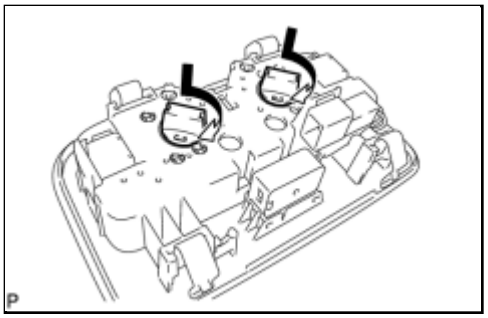
(b) Interior light switch operation

(1) Connect a positive (+) lead from the battery to terminal 6 and a negative (-) lead to both terminals 1 and 7.

(2) Inspect the personal light operation while both of the personal light switches (LH and RH) are off.

OK:

CONDITION	SPECIFIED CONDITION
Interior light switch is in OFF position	Personal lights (LH and RH) do not come on
Interior light switch is in ON position	Personal lights (LH and RH) come on
Interior light switch is in DOOR position	Personal lights (LH and RH) come on



If the result is not as specified, replace the bulb or map light assembly.

Title: LIGHTING (INT): ROOM LIGHT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT NO. 1 ROOM LIGHT ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

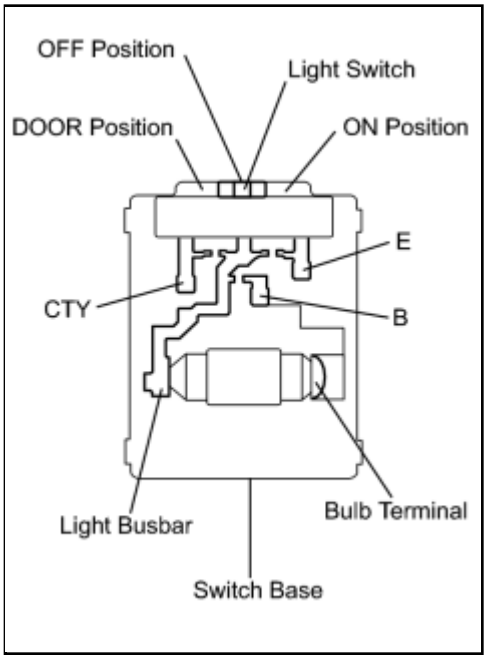
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal E - Body ground	Always	Below 1 Ω

If the result is not as specified, repair or replace harness or connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal B - Body ground	Always	11 to 14 V



If the result is not as specified, repair or replace the harness or connector.

(c) Remove the wire harness from the room light assembly.

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Terminal E - Light Busbar	Light switch OFF	10 kΩ or higher
	Light switch ON	Below 1 Ω

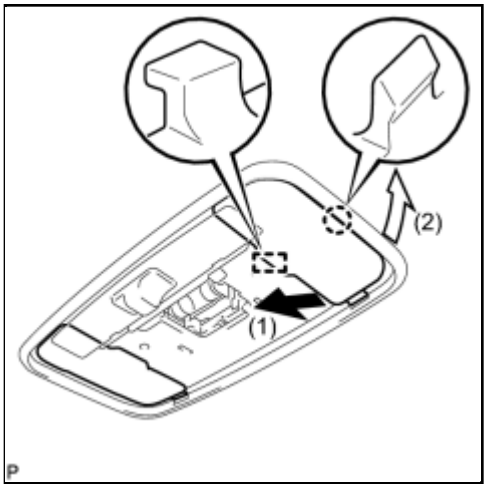
Terminal CTY - Light Busbar	Light switch OFF	10 kΩ or higher
	Light switch in DOOR	Below 1 Ω
Terminal B - Bulb Terminal	Always	Below 1 Ω

If the result is not as specified, replace the switch base.

(e) Connect a (+) lead from the battery to terminal B and a (-) lead to light busbar.

(f) Check that the light comes on.

OK:



The light comes on.

If the result is not as specified, replace the bulb.

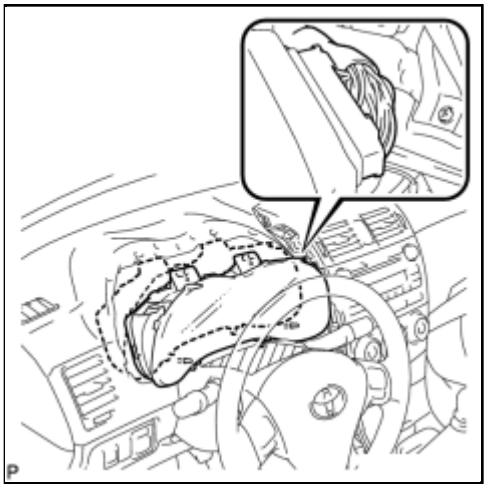
Title: METER / GAUGE / DISPLAY: COMBINATION METER: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL COMBINATION METER GLASS

(a) Engage the 8 claws and install the combination meter glass.

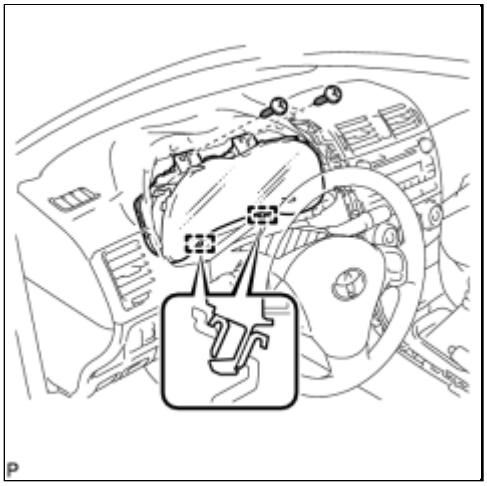


NOTICE:

When installing the combination meter glass, be careful of invasion of dust or a foreign substance.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000024D501HX
Title: METER / GAUGE / DISPLAY: COMBINATION METER: INSTALLATION (2010 Corolla)		

INSTALLATION



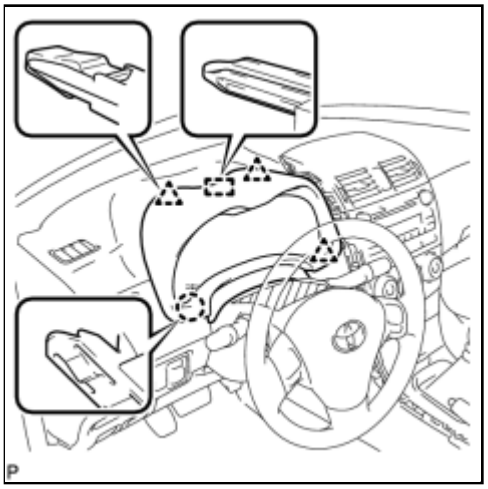
1. INSTALL COMBINATION METER ASSEMBLY

(a) Connect the connector and temporarily install the combination meter assembly.

NOTICE:

When installing the combination meter assembly, do not damage the upper instrument panel sub-assembly or combination meter assembly.

(b) Engage the 2 guides.



NOTICE:

- When installing the combination meter assembly, be careful not to break the guide.
- When installing the combination meter assembly, insert the guides securely into the holes on the upper instrument panel sub-assembly.

(c) Install the combination meter assembly with the 2 screws.

2. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY

(a) Engage the guide, claw and 3 clips, and install the instrument cluster finish panel assembly.

(b) Remove the applied protective tape on the steering column cover.

3. INSTALL INSTRUMENT PANEL FINISH PANEL END LH INFO

4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

Last Modified: 3-10-2010	6.4 L	**From:** 200901

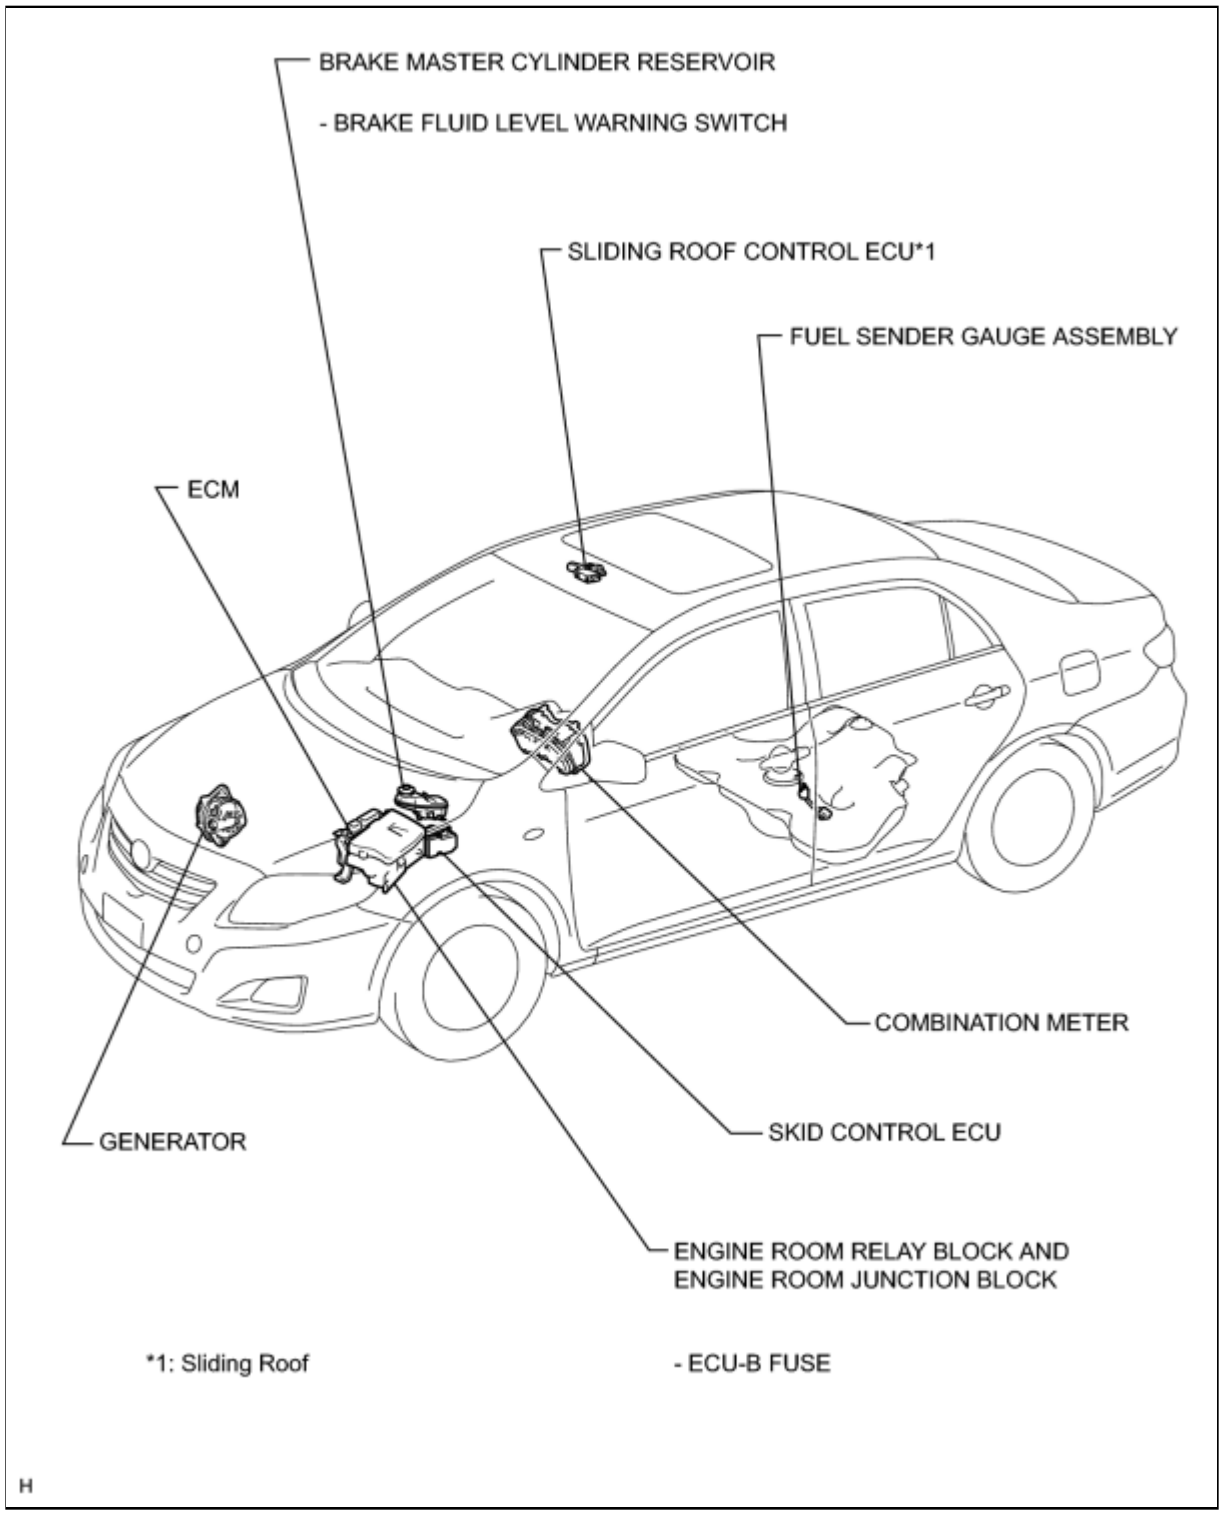
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH



The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ON	ON	On (IG)
Ignition Switch ACC	ACC	On (ACC)
Engine Start	START	Start

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. OUTLINE OF THE COMBINATION METER

(a) Meter/Gauge

ITEM	DETAIL
Speedometer	Indicates the vehicle speed based on a signal from the skid control ECU. (CAN (CAN No. 1 Bus))
Tachometer	Indicates the engine speed based on a signal received from the ECM. (CAN (CAN No. 1 Bus))

ITEM	DETAIL
Engine Coolant Temperature Receiver Gauge	Indicates the engine coolant temperature based on a signal received from the ECM. (CAN (CAN No. 1 Bus))
Fuel Receiver Gauge	Indicates the fuel level based on a fuel level signal received from the fuel sender gauge (Direct Line)

(b) Warning/Indicator

ITEM	DETAIL
Turn	Receives a turn signal from the turn signal flasher. (Direct Line)
High beam	Receives a high beam indicator light signal from the H-LP RH HI Fuse. (Direct Line)
Charge	Receives a charge indicator light signal from the generator. (Direct Line)
MIL (Check engine)	Receives a check engine warning light signal from the ECM. (Direct Line)
Door	Open door warning light comes on receiving a door condition signal from the main body ECU. (CAN (CAN MS Bus))
Driver side seat belt	Receives a driver side seat belt signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
Front passenger side seat belt	Receives a front passenger side seat belt signal from the center airbag sensor assembly (CAN (CAN No. 1 Bus)) and transmits a passenger side seat belt condition signal to the telltale light assembly. (Direct Line)
Head*2	Receives a head*2 indicator light signal from the DRL relay. (Direct Line)
Tail*3	Receives a tail*3 indicator light signal from TAIL fuse. (Direct Line)
Front fog*4	Receives a front fog indicator light signal from the FR FOG relay. (Direct Line)
A/T shift	Receives an A/T shift condition signal from park/neutral switch and the ECM. (CAN (CAN No. 1 Bus))
Fuel	Receives a fuel signal from the fuel sender gauge. (Direct Line)
ABS	Receives an ABS signal from the skid control ECU. (CAN (CAN No. 1 Bus))
Slip*1	Receives a slip signal from the skid control ECU. (CAN (CAN No. 1 Bus))
Brake	Receives a brake signal from the brake fluid level warning switch (Direct Line) and the skid control ECU. (CAN (CAN No. 1 Bus))
Cruise	Receives a cruise signal from the ECM. (CAN (CAN No. 1 Bus))
SRS	Receives an SRS signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
VSC OFF*1	Receives an VSC off signal from the skid control ECU. (CAN (CAN No. 1 Bus))
EPS	Receives an EPS signal from the power steering ECU. (CAN (CAN No. 1 Bus))
Oil pressure	Receives an oil pressure signal from the oil pressure switch. (Direct Line)

ITEM	DETAIL
Washer*3	Receives an washer signal from the washer level warning switch. (Direct Line)
Tire pressure*5	Receives a tire pressure signal from the tire pressure warning ECU. (Direct Line)
Smart key indicator*6	Receives a smart key indicator light signal from the certification ECU. (CAN (CAN No. 1 Bus))
Oil maintenance reminder*2	An oil change reminder light comes on/blinks to remind the driver to change the engine oil depending on the vehicle driving distance.

- *1: w/ VSC
- *2: for U.S.A.
- *3: except for U.S.A.
- *4: w/ Front Fog Light
- *5 w/ Tire Pressure Warning System
- *6 w/ Smart Key System

(c) Cruise Information Display

ITEM	DETAIL	
Cruise information display	Outside temperature	Seven types of information (outside temperature, average fuel consumption, instantaneous fuel consumption, average vehicle speed, driving distance, driving time, and clock) can be displayed.
	Average fuel consumption	
	Instantaneous fuel consumption	
	Average vehicle speed	
	Driving distance	
	Driving time	
	Clock*	

*: for Telltale Light Assembly w/o Clock.

2. LED INITIAL CHECK

(a) The illumination function of the warning, indicator, or reminder light listed below can be confirmed when turning the ignition switch to ON.

OK:

INDICATOR/WARNING LIGHT	SPECIFIED CONDITION
Brake, ABS, Slip*1, EPS, VSC OFF*1, Tire pressure warning*2	Indicator/Warning light comes on for about 3 seconds after turning the ignition switch to ON.

INDICATOR/WARNING LIGHT	SPECIFIED CONDITION
Airbag	Warning light comes on for about 6 seconds after turning the ignition switch to ON.
Charge, Oil pressure	Indicator/Warning light comes on after turning the ignition switch to ON.
MIL (Check engine)	Warning light comes on while turning the ignition switch to ON and engine does not start.
Oil maintenance reminder*3	Indicator light comes on for about 3 seconds after turning the ignition switch to ON.

- *1: w/ VSC
- *2: w/ Tire Pressure Warning System
- *3: for U.S.A.

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. COMBINATION METER

(a) Measure the voltage according to the value(s) in the table below.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E46-1 (WRNP) - Body ground	O*1 or W*2 - Body ground	Front passenger side seat belt warning light signal	Front passenger seat occupied, ignition switch ON, front passenger side seat belt warning light OFF	11 to 14 V
			Front passenger seat occupied, ignition switch ON, front passenger side seat belt warning light is blinking	Below 1 V ⟷ 11 to 14 V
E46-2 (WLVL)*3 - Body ground	BE - Body ground	Washer level warning light signal	Ignition switch ON, washer level warning light OFF	11 to 14 V
			Ignition switch ON, washer level warning light ON	Below 1 V
E46-3 (-) - Body ground	L - Body ground	Headlight Hi-beam indicator light signal	Always	Below 1 V
E46-4 (+) -	R - Body	Headlight Hi-beam	Hi-beam switch OFF	11 to 14 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
Body ground	ground	indicator light signal	Hi-beam switch ON	Below 1 V
E46-5 (B) - Body ground	L - Body ground	Turn indicator light signal	Ignition switch ON, turn signal RH indicator light OFF	Below 1 V
			Ignition switch ON, turn signal RH indicator light ON	11 to 14 V
E46-6 (B) - Body ground	Y - Body ground	Turn indicator light signal	Ignition switch ON, turn signal LH indicator light OFF	Below 1 V
			Ignition switch ON, turn signal LH indicator light ON	11 to 14 V
E46-7 (TIRE) - Body ground	P - Body ground	Tire pressure warning light signal	Ignition switch ON, tire pressure warning light OFF	3.2 V or more
			Ignition switch ON, tire pressure warning light ON	0.9 to 3.2 V
E46-9 (TX1+) - Body ground	G*1 or LG*2 - Body ground	Outside temperature signal	Ignition switch ON	5 V or less
E46-10 (E) - Body ground	BR - Body ground	Ground (Fuel ground)	Always	Below 1 V
E46-11 (EP) - Body ground	W-B - Body ground	Ground (Illumination ground)	Always	Below 1 V
E46-13 (TX-) - Body ground	W - Body ground	CAN communication signal	Ignition switch ON	Pulse generation
E46-14 (TX1-) - Body ground	G - Body ground	CAN communication signal	Ignition switch ON	Pulse generation
E46-16 (FOG)*4 - Body ground	P - Body ground	Front fog indicator light signal	Front fog light switch off, front fog indicator light OFF	Below 1 V
			Front fog light switch on, front fog indicator light ON	11 to 14 V
E46-17 (HEAD)*5 - Body ground	GR - Body ground	Head indicator light signal	Ignition switch ON, head indicator light OFF	11 to 14 V
			Ignition switch ON, head indicator light ON	Below 1 V
E46-20 (EFI) - Body ground	P*1 or R*2 - Body ground	MIL (Check engine warning light) signal	Ignition switch ON, MIL OFF	11 to 14 V
			Ignition switch ON, MIL ON	Below 3 V
E46-23 (TEMP) - Body ground	W*1 or GR*2 - Body	Outside temperature signal	Ignition switch ON, outside temperature 25°C (77°F)	Approximately 1.3 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	ground			
E46-24 (ILL+) - Body ground	V*1 or G*2 - Body ground	Tail indicator light signal	Headlight dimmer switch off, tail indicator light OFF	Below 1 V
			Headlight dimmer switch is at the TAIL position, tail indicator light ON	11 to 14 V
E46-25 (L) - Body ground	Y*1 or P*2 - Body ground	Fuel signal	Ignition switch ON, fuel level is EMPTY	3 to 7 V
			Ignition switch ON, fuel level is FULL	Below 1 V
E46-26 (ILL-) - Body ground	V*1 or W*2 - Body ground	Illumination signal	Ignition switch ON, headlight dimmer switch OFF	Below 1 V
			Ignition switch ON, headlight dimmer switch is at the TAIL or HEAD position	Below 1 V ←→ 11 to 14 V
E46-27 (CANH) - E46-28 (CANL)	G - W	CAN communication signal	Ignition switch ON	Pulse generation
E46-28 (CANL) - E46-27 (CANH)	W - G	CAN communication signal	Ignition switch ON	Pulse generation
E46-29 (ILL-) - Body ground	O*1 or W*2 - Body ground	Illumination signal	Ignition switch ON, headlight dimmer switch OFF	Below 1 V
			Ignition switch ON, headlight dimmer switch TAIL or HEAD position	Below 1 V ←→ 11 to 14 V
E46-30 (ET) - Body ground	BR - Body ground	Ground (Signal ground)	Always	Below 1 V
E46-32 (B) - Body ground	W*1 or R*2 - Body ground	Battery	Always	11 to 14 V
E46-33 (IG+) - Body ground	P*1 or B*2 - Body ground	Ignition switch signal	Ignition switch off	Below 1 V
			Ignition switch ON	11 to 14 V
E46-35 (SI) - Body ground	V*1 or LG*2 - Body ground	Speed signal for other systems (Input)	Ignition switch ON, wheel turned slowly	Pulse generation (See waveform)

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - Body ground	V - Body ground	Speed signal for other systems (Output)	Wheel turned slowly	Pulse generation (See waveform)
E46-38 (S) - Body ground	Y*1 or G*2 - Body ground	Engine oil pressure warning light signal	Ignition switch ON, engine oil pressure warning light OFF	11 to 14 V
			Ignition switch ON, engine oil pressure warning light ON	Below 1 V
E46-39 (CHG-) - Body ground	Y - Body ground	Charge warning light signal	Ignition switch ON, charge warning light OFF	11 to 14 V
			Ignition switch ON, charge warning light ON	Below 1 V
E46-40 (SW) - Body ground	O*1 or BE*2 - Body ground	Brake fluid level warning light signal	Ignition switch ON, brake warning light OFF	11 to 14 V
			Ignition switch ON, brake warning light ON	Below 1 V

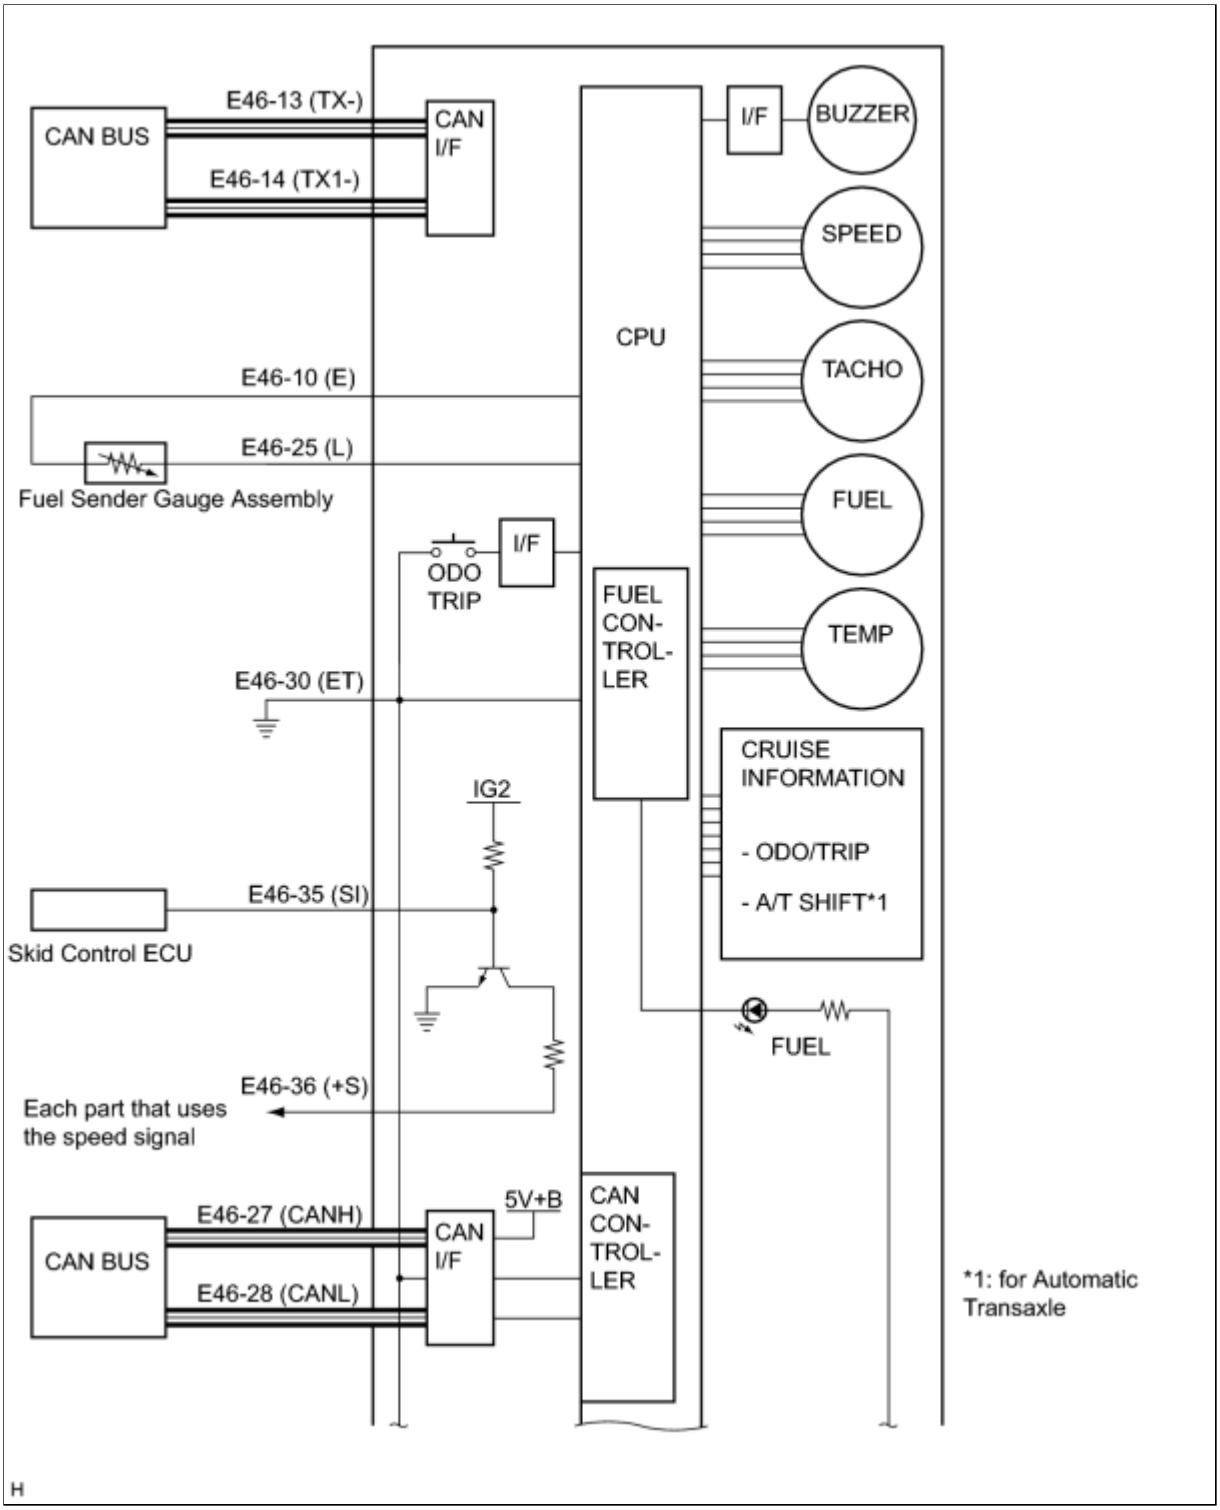
- *2: except TMC Made
- *3: except for U.S.A.
- *4: w/ Front Fog Light
- *5: for U.S.A.

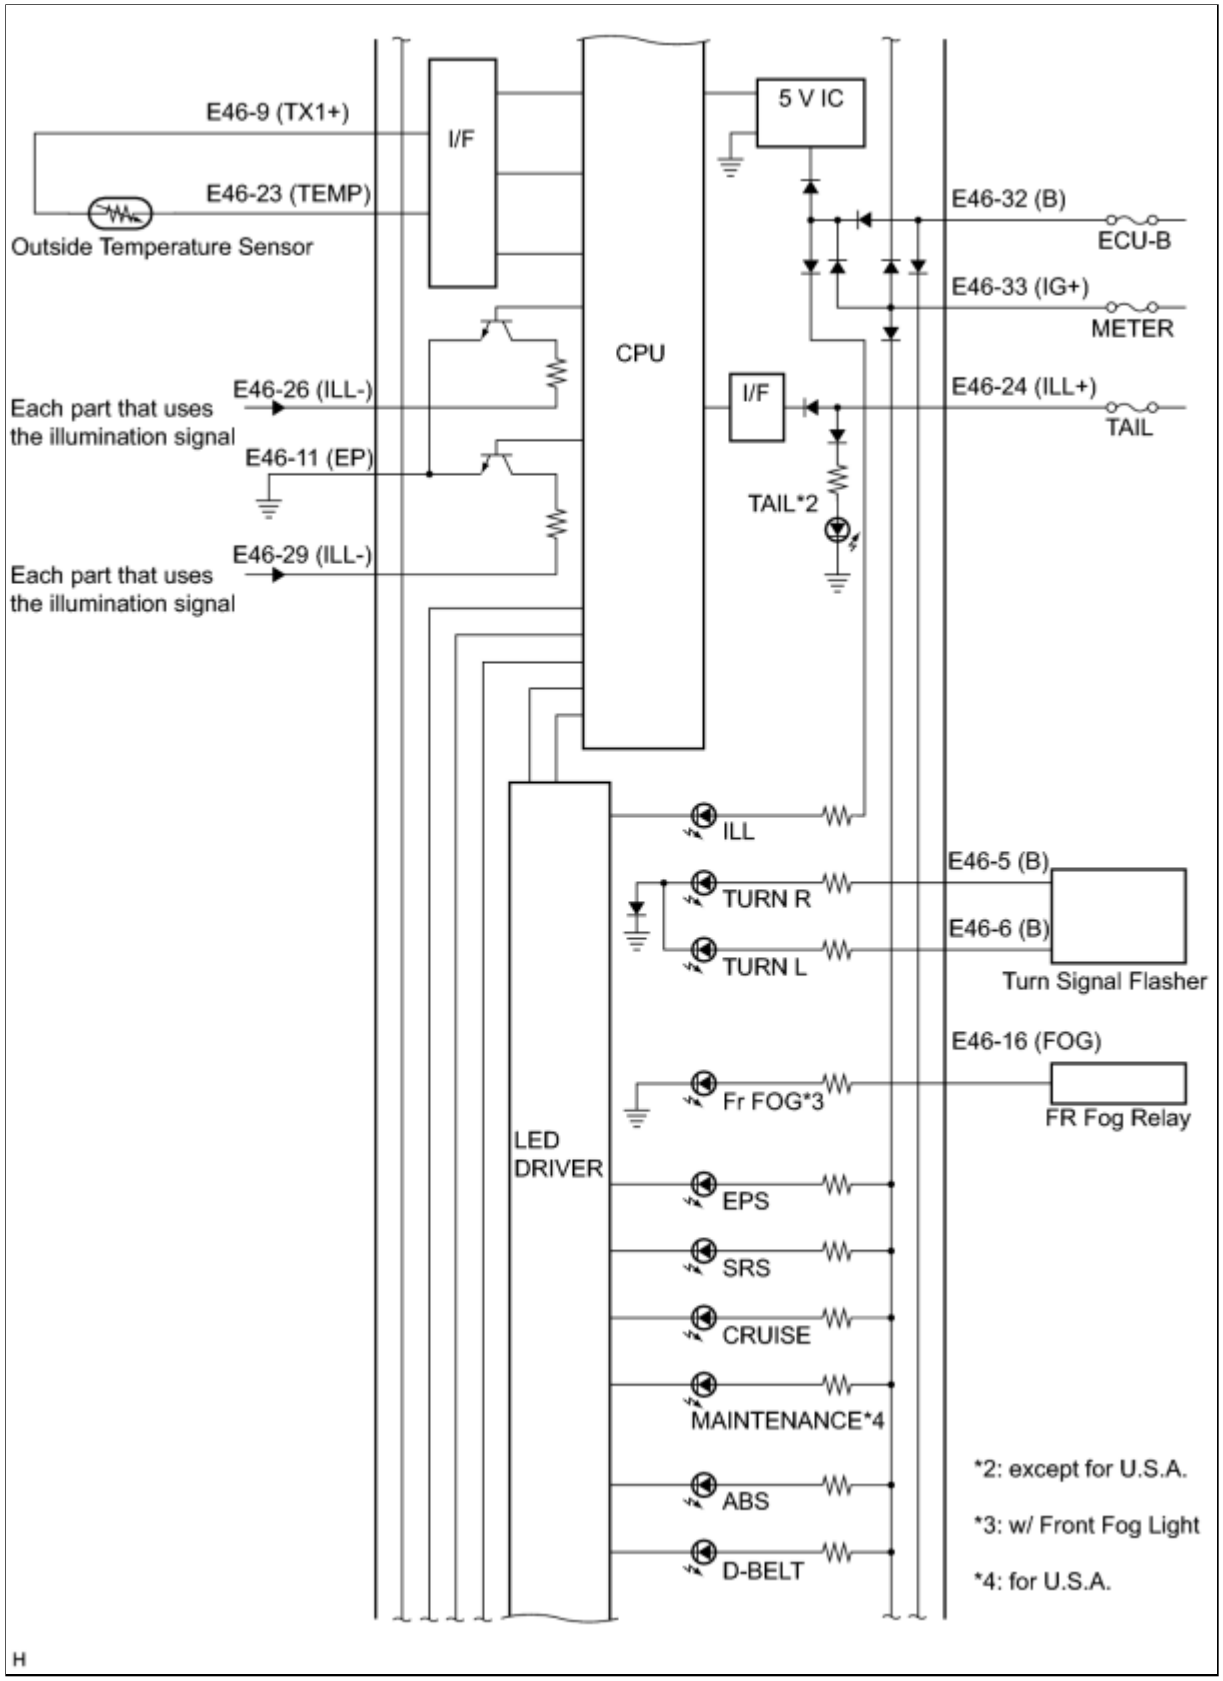
2. COMBINATION METER INNER CIRCUIT

(a) Combination Meter Inner Circuit

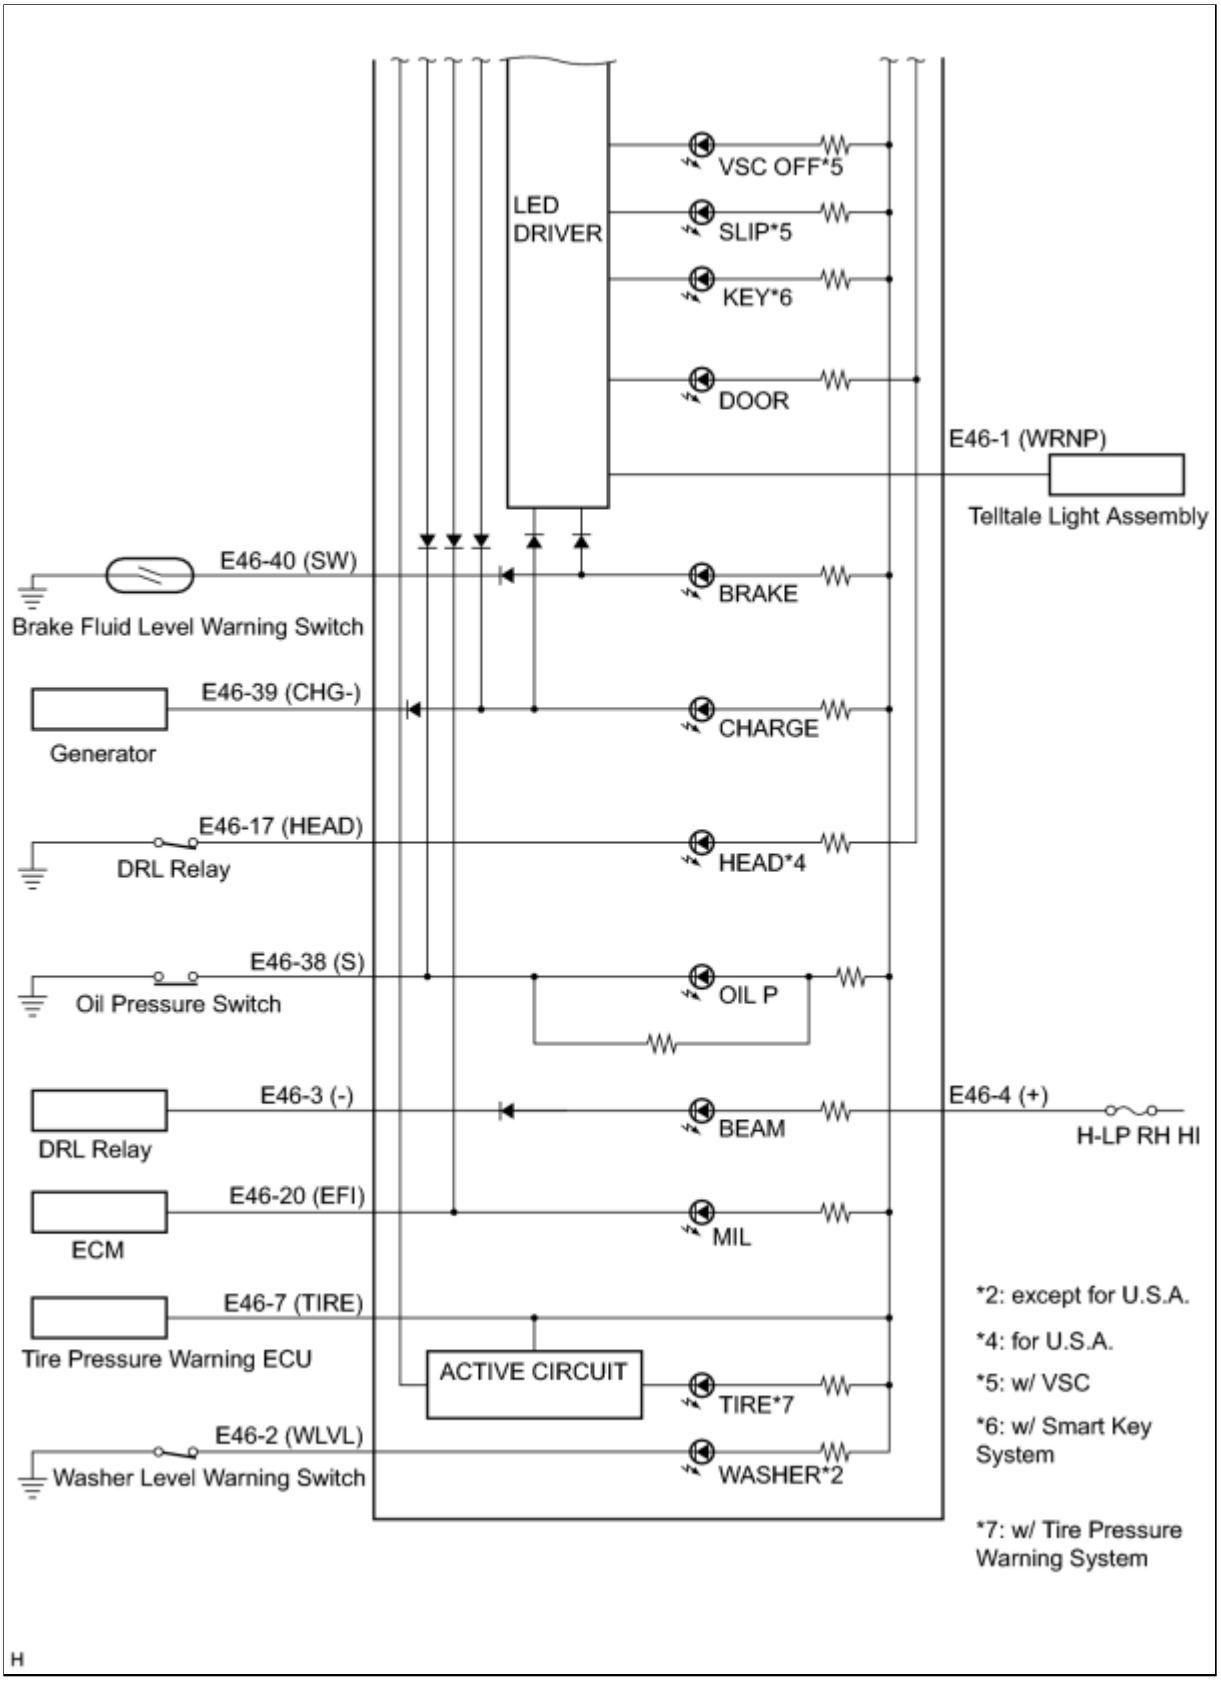
(b) Waveform (Reference): Using oscilloscope:

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approximately 12 mph (20 km/h)





HINT:



- Vehicle speed signal that has been received and transmitted via the direct line is used for another system, and is not used for combination meter operation.
- When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptoms by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

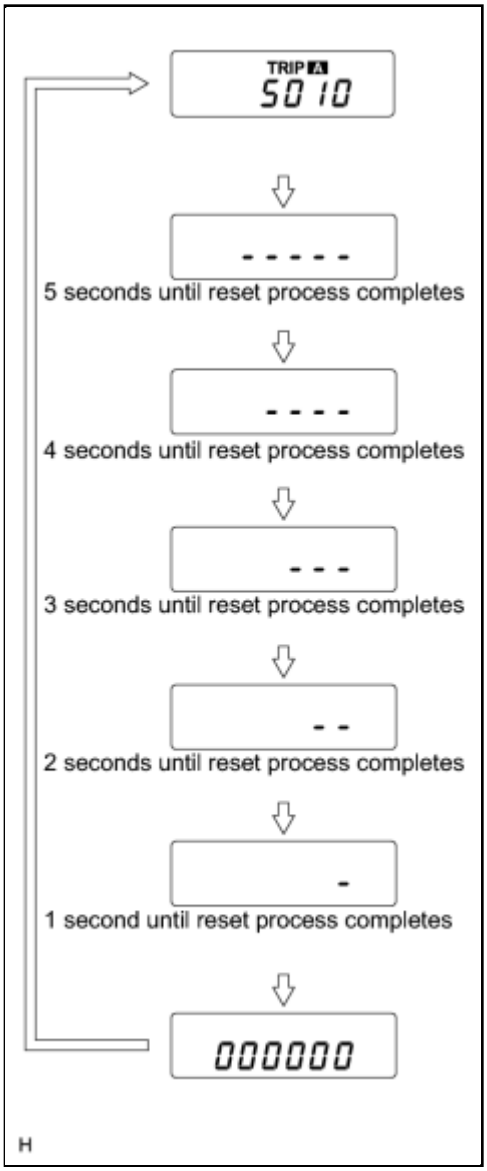
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. OIL MAINTENANCE REMINDER RESET PROCEDURE



HINT:

- The TRIP meter reset knob is located below the speedometer.
- This reset operation is required only for U.S.A..

(a) Turn the ignition switch to ON.

(b) Press the ODO/TRIP switch until the TRIP A meter appears.

(c) Turn the ignition switch off.

(d) Turn the ignition switch to ON while pressing and holding the TRIP meter reset knob. Hold the TRIP meter reset knob until the following conditions are met and 5 seconds have passed.

HINT:

When oil maintenance reminder light turns off, the reset is complete.

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) Check the DLC3 INFO .

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000012G704EX
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus:

(1) for Combination Meter: Body Electrical / Combination Meter / Data List.

(2) for ABS/TRAC/VSC: Chassis / ABS/VSC/TRAC / Data List.

(3) for Engine and ECT: Powertrain / Engine and ECT / Data List.

(g) Check values by referring to the table below.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Tail Relay SW	Headlight dimmer switch is OFF or ON	OFF: Headlight dimmer switch is off	-
		ON: Headlight dimmer switch is TAIL	
Tail Cancel SW	Tail cancel switch / OFF or ON	OFF: Turn the light control rheostat knob is not fully clockwise	-
		ON: Turn the light control rheostat knob fully clockwise	-
ODO/TRIP Change SW	ODO/TRIP switch / OFF or ON	OFF: Switch is released	-
		ON: Switch is pushed	-
Vehicle Speed Meter	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost the same as actual vehicle speed (When driving)	-

2. ACTIVE TEST

Using the Techstream to perform Active Tests allows the relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the table below.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Speed Meter	Speedometer	0, 40, 80, 120 mph*1	Confirm that the vehicle

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Operation		0, 40, 80, 120, 160, 200, 240 km/h*2	is stopped, engine idling
Tacho Meter Operation	Tachometer	0, 1000, 2000, 3000, 4000, 5000, 6000, 7000 (rpm)	Confirm that the vehicle is stopped, engine idling
Fuel Meter Operation	Fuel receiver gauge	EMPTY, 1/2, FULL	Confirm that the vehicle is stopped, engine idling
Water Temperature Meter Operation	Engine coolant temperature receiver gauge	Low, Normal, High	Confirm that the vehicle is stopped, engine idling
A/T Indicator Operation*1	A/T shift indicator S, 5	OFF or ON	Confirm that the vehicle is stopped, engine idling
Meter Display 1	All the dots in the multi-information display	OFF or ON	Confirm that the vehicle is stopped, engine idling
Meter Display 2	The segments in the A/T shift indicator display	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Airbag	Airbag warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Doors All Open	Open door indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Front Passenger Side Seat Belt	Front passenger side seat belt warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Driver Side Seat Belt	Driver side seat belt warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp ABS	ABS warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Charge	Charge warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp VSC*2	VSC off indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Slip*2	Slip indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Fuel	Low fuel warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Tire Pressure Warning System	Tire pressure warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Lamp Cruise	Cruise indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Lamp Brake	Brake warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. EPS	EPS warning light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. KEY*3	Key indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling
Indicat. Oil Maintenance*4	Oil maintenance reminder light	OFF or ON	Confirm that the vehicle is stopped, engine idling

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

Engine Coolant Temperature Receiver Gauge

CONDITION	RESPONSE	RECOVERY
Engine coolant temperature data is interrupted for 3.1 seconds.	The gauge needle indicates below C.	Normal data is received.

Shift Indicator*1

CONDITION	RESPONSE	RECOVERY
Shift position data is interrupted for 3.1 seconds.	All indicator lights go off.	Normal data is received.

ABS, EBD, BA, TRAC, and VSC

CONDITION	RESPONSE	RECOVERY
ABS, brake, or slip*2 data are interrupted for 1 second.	The warning light comes on.	Normal data is received.

Door

CONDITION	RESPONSE	RECOVERY
Each door condition data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

Driver Side Seat Belt

CONDITION	RESPONSE	RECOVERY
Driver side front seat inner belt assembly data is interrupted for 6 seconds.	The data received most recently remains indicated.	Normal data is received.

Tire Pressure*3

CONDITION	RESPONSE	RECOVERY
Tire pressure data is interrupted for 6 seconds.	The tire pressure indicator light blinks for 60 to 64 seconds, then comes on.	Ignition switch to ON, the terminal voltage is 0.9 V or more for 3 seconds or more.

Maintenance*4

CONDITION	RESPONSE	RECOVERY
The meter CPU is unable to verify at what mileage the oil maintenance reminder light resetting procedure was last performed, resulting in the CPU assuming the mileage to be 0.	Oil maintenance reminder light comes on/blinks.	The meter CPU is able to verify at what mileage the oil maintenance reminder light resetting procedure was last performed.
The meter ECU is unable to verify the current driving distance.	Oil maintenance reminder light comes on/blinks.	The meter ECU is able to verify the current driving distance.

Airbag

CONDITION	RESPONSE	RECOVERY
Airbag data is interrupted for 10 seconds or there is a malfunction in the combination meter (meter CPU).	The warning light comes on.	Normal data is received.

Front Passenger Side Seat Belt

CONDITION	RESPONSE	RECOVERY
Regular data is interrupted.	The data received most recently remains indicated.	Normal data is received.

EPS

CONDITION	RESPONSE	RECOVERY
Regular data is interrupted for 1 second.	The warning light comes on.	Normal data is received.

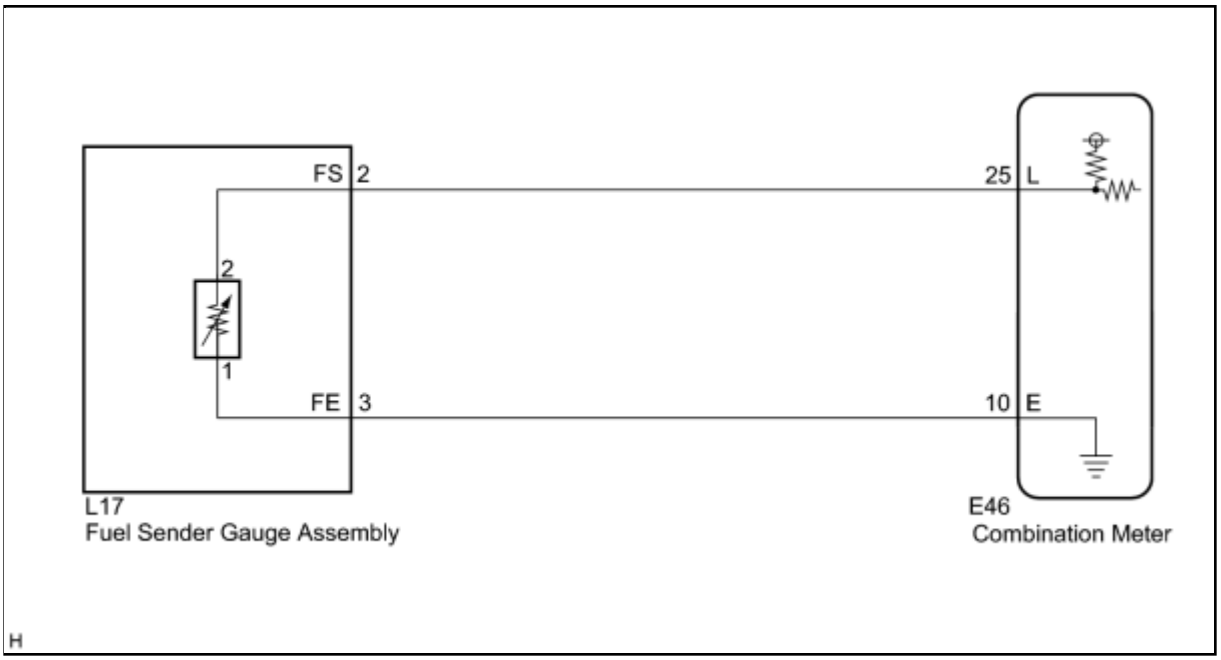
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: B1500: Fuel Sender Open Detected (2010 Corolla)		

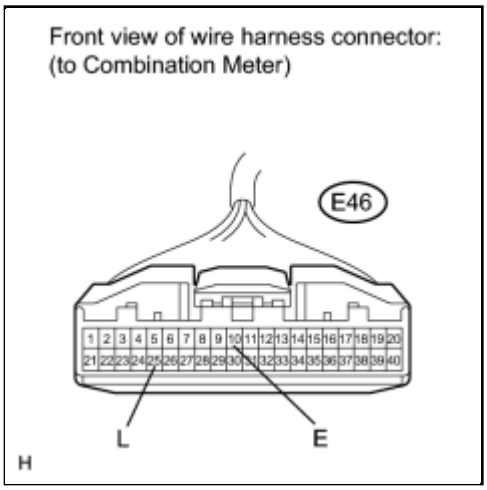


DTC	**B1500**	**Fuel Sender Open Detected**

DESCRIPTION

This DTC is output when the combination meter detects the fuel sender gauge malfunction via the direct line.

DTC CODE	DTC DETECTION CONDITION	TROUBLE AREA
B1500	When either of the following conditions is detected: • 10 seconds have elapsed since the engine started and IG voltage is 10.5 V or more • Fuel sender gauge operation malfunction	• Harness or connector • Combination meter • Fuel sender gauge assembly



WIRING DIAGRAM

INSPECTION PROCEDURE

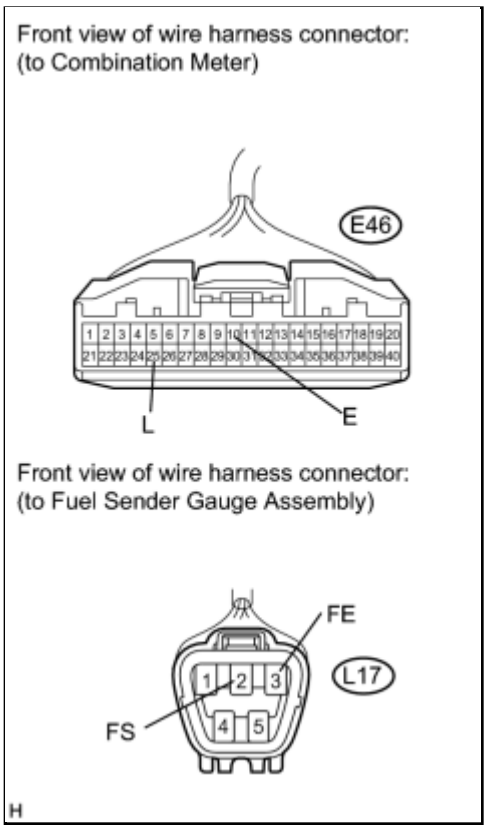
PROCEDURE

1.	**INSPECT COMBINATION METER**

(a) Disconnect the E46 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-10 (E) - E46-25 (L)	Always	13.5 to 414.5 Ω

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - FUEL SENDER GAUGE ASSEMBLY)**

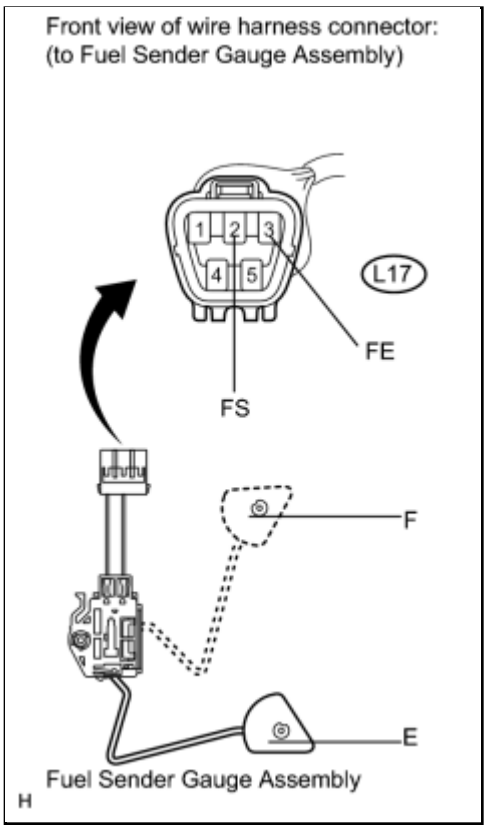
OK ▶ **REPLACE COMBINATION METER**

2.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - FUEL SENDER GAUGE ASSEMBLY)**

(a) Disconnect the L17 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-10 (E) - L17-3 (FE)	Always	Below 1 Ω
L17-3 (FE) - Body ground	Always	10 kΩ or higher
E46-25 (L) - L17-2 (FS)	Always	Below 1 Ω
E46-25 (L) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**INSPECT FUEL SENDER GAUGE ASSEMBLY**

(a) Remove the fuel sender gauge assembly.

(b) Check that the float moves smoothly between E and F.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L17-2 (FS) - L17-3 (FE)	Float level is F (upper)	13.5 to 16.5 Ω
L17-2 (FS) - L17-3 (FE)	Float level is between F (upper) and E (lower)	13.5 to 414.5 Ω (Gradually changes)
L17-2 (FS) - L17-3 (FE)	Float level is E (lower)	405.5 to 414.5 Ω

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ **REPLACE FUEL SENDER GAUGE ASSEMBLY (for 2ZR-FE)**

B ▶ REPLACE FUEL SENDER GAUGE ASSEMBLY (for 2AZ-FE)

A ▶ REPLACE COMBINATION METER

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000014WB031X
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Reference: mph (for U.S.A.)

CHASSIS DYNAMOMETER INDICATION (MPH)	ACCEPTABLE RANGE (MPH)
20	20.0 to 23.0
40	40.0 to 43.5
60	60.0 to 64.0
80	80.0 to 84.5
100	100.0 to 105.0
120	120.0 to 125.5
140	140.0 to 146.0

Reference: km/h (except for U.S.A.)

CHASSIS DYNAMOMETER INDICATION (KM/H)	ACCEPTABLE RANGE (KM/H) DATA IN ( ) IS FOR REFERENCE
20	(17.5 to 21.5)
40	38.0 to 42.0
60	58.0 to 63.0
80	78.0 to 84.0
100	98.5 to 104.5
120	119.0 to 125.0
140	139.0 to 146.0
160	159.0 to 167.0
180	179.0 to 188.0
200	199.0 to 209.0
220	219.0 to 230.0
240	239.0 to 251.0

NOTICE:

Tire wear as well as over or under inflation will cause errors.

(2) Check the deviation of the speedometer indication from the acceptable range.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:

If the indication is not as specified, go to Problem Symptoms Table INFO **.**

2. INSPECT TACHOMETER

(a) Connect the Techstream, and start the engine.

(b) Compare the test results with the tachometer indications.

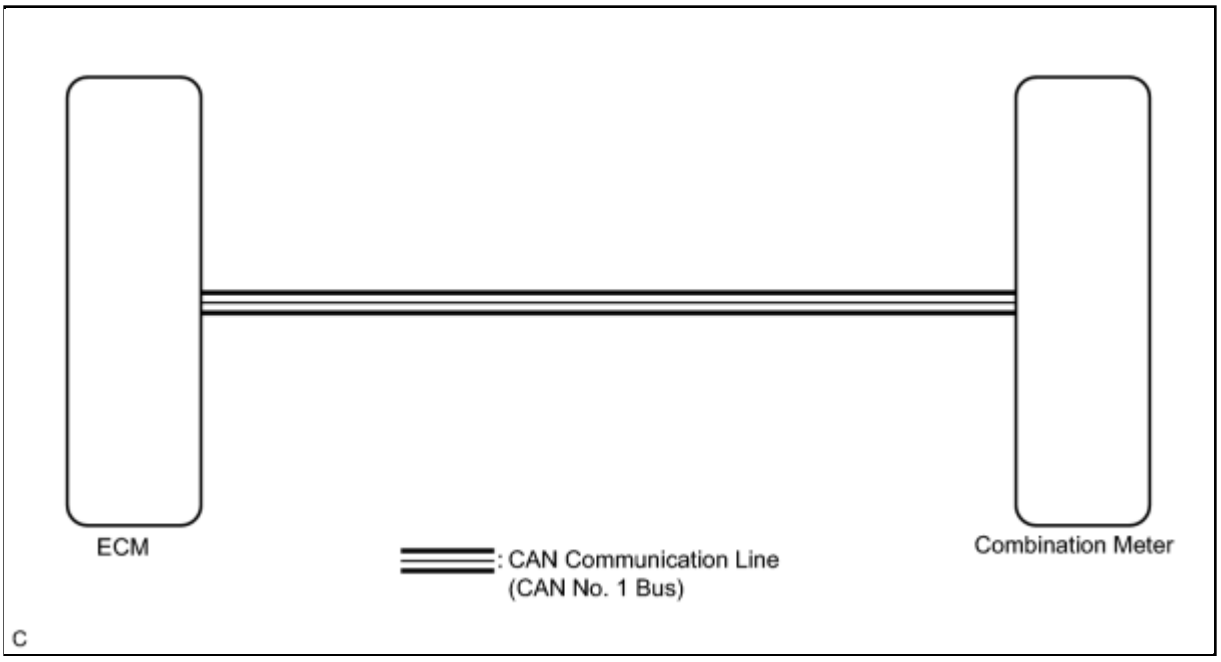
DC 13.5 V, at 25°C (77°F)

TECHSTREAM INDICATION (RPM)	ACCEPTABLE RANGE (RPM) DATA IN ( ) IS FOR REFERENCE
700	630 to 770
1,000	(900 to 1100)
2,000	(1850 to 2150)
3,000	2800 to 3200
4,000	(3800 to 4200)
5,000	4800 to 5200
6,000	(5750 to 6250)
7,000	6700 to 7300
8,000	(7700 to 8300)

HINT:

If the indication is not as specified, go to Problem Symptoms Table INFO **.**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029ZA01QX
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: U0100: Lost Communication with ECM / PCM "A" (2010 Corolla)		



DTC	**U0100**	**Lost Communication with ECM / PCM "A"**

DESCRIPTION

The combination meter communicates with the ECM via the CAN communication line (CAN No. 1 Bus).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
U0100	When either of the following conditions is detected: 1. Vehicle speed 5 km/h (3.1 mph) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (No communication to ECM and skid control ECU continues for 60 seconds or more)	• CAN communication system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	CONFIRM DTC OUTPUT

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the tester on.

(d) Clear the stored DTCs by entering the following menus on the Techstream: Body Electrical / Trouble Codes.

(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.

(f) Stop the vehicle.

(g) Check for DTCs INFO .

Result:

RESULT	PROCEED TO
DTC is output.	A
DTC is not output.	B

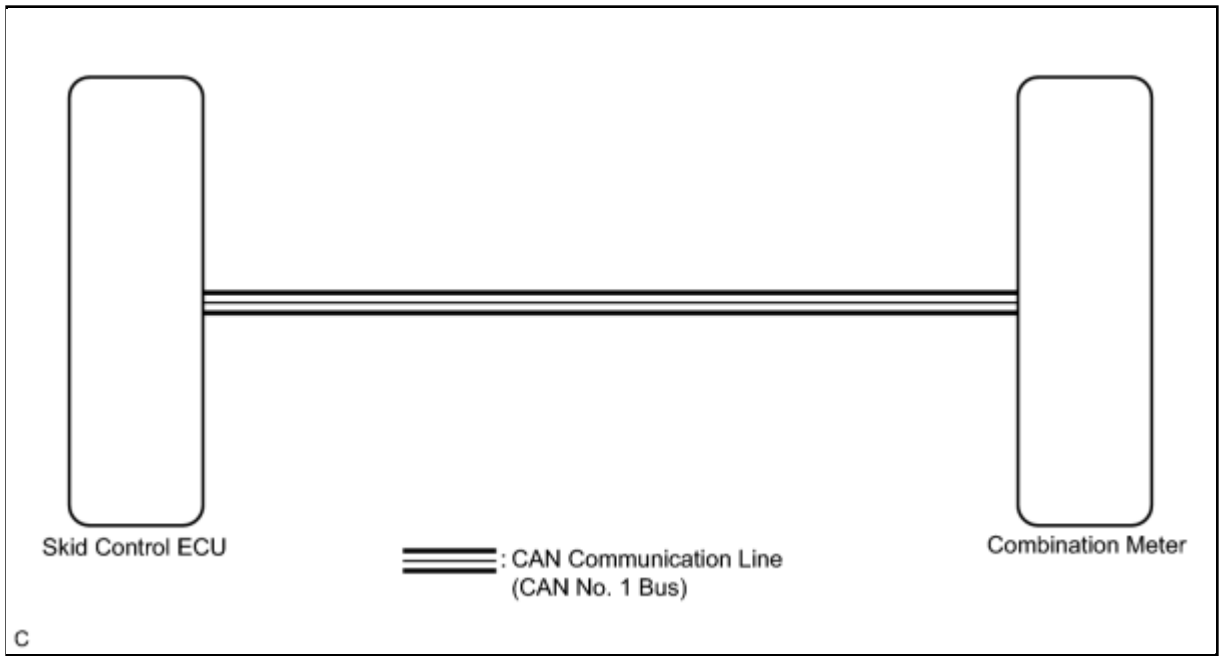
HINT:

If the CAN communication system DTC U0100 and another DTC are output at the same time, perform troubleshooting for the CAN communication system DTC U0100 first.

B ▶ **USE SIMULATION METHOD TO CHECK**

A ▶ **GO TO CAN COMMUNICATION SYSTEM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000029ZB01CX
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: U0129: Lost Communication with Skid Control ECU (2010 Corolla)		



DTC	**U0129**	**Lost Communication with Skid Control ECU**

DESCRIPTION

The combination meter communicates with the skid control ECU via the CAN communication system (CAN No. 1 Bus).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
U0129	When either of the following conditions is detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with skid control ECU continues for 3 seconds or more (No communication with ECM and skid control ECU continues for 60 seconds or more)	• Skid control ECU • CAN communication system

INSPECTION PROCEDURE

PROCEDURE

1.	**CONFIRM DTC OUTPUT**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the stored DTCs by entering the following menus on the Techstream: Body Electrical / Trouble Codes.

(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.

(f) Stop the vehicle.

(g) Check for DTCs INFO .

Result:

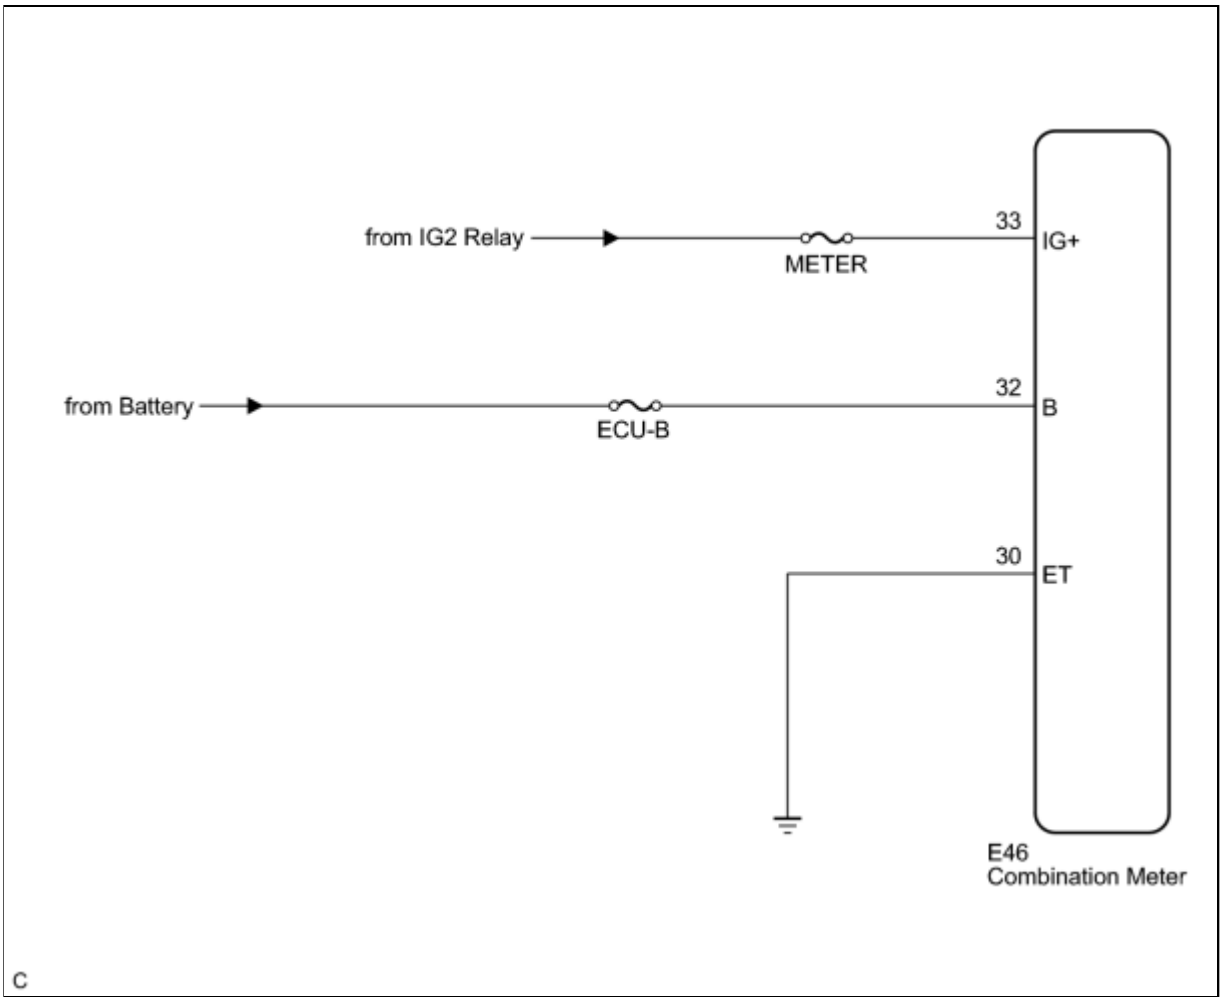
RESULT	PROCEED TO
DTC is output.	A
DTC is not output.	B

HINT:

If the CAN communication system DTC U0129 and another DTC are output at the same time, perform troubleshooting for the CAN communication system DTC U0129 first.

B ▶ **USE SIMULATION METHOD TO CHECK**

A ▶ **GO TO CAN COMMUNICATION SYSTEM**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

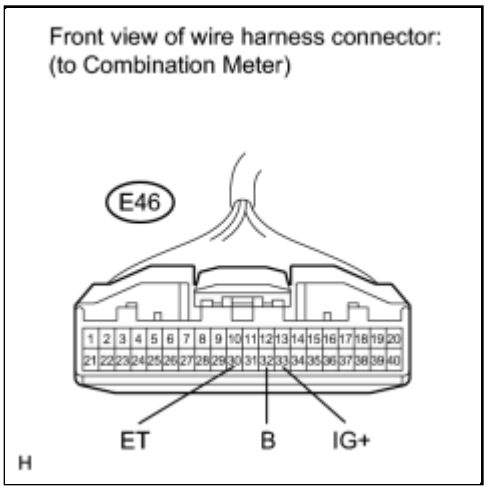
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Entire Combination Meter does not Operate (2010 Corolla)		

Entire Combination Meter does not Operate

DESCRIPTION

This circuit is the power source circuit for the meter. This circuit provides two types of power sources; one is a constant power source mainly used as a backup power source, and the other is a power source mainly used for signal transmission. The constant power source is mainly used as a backup power source of the meter CPU, however, it is also used for communication. If a voltage of 12 V is not applied to terminal IG+ when the ignition switch is turned to ON, the indicator will not operate.



WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT COMBINATION METER**

(a) Disconnect the E46 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-30 (ET) - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

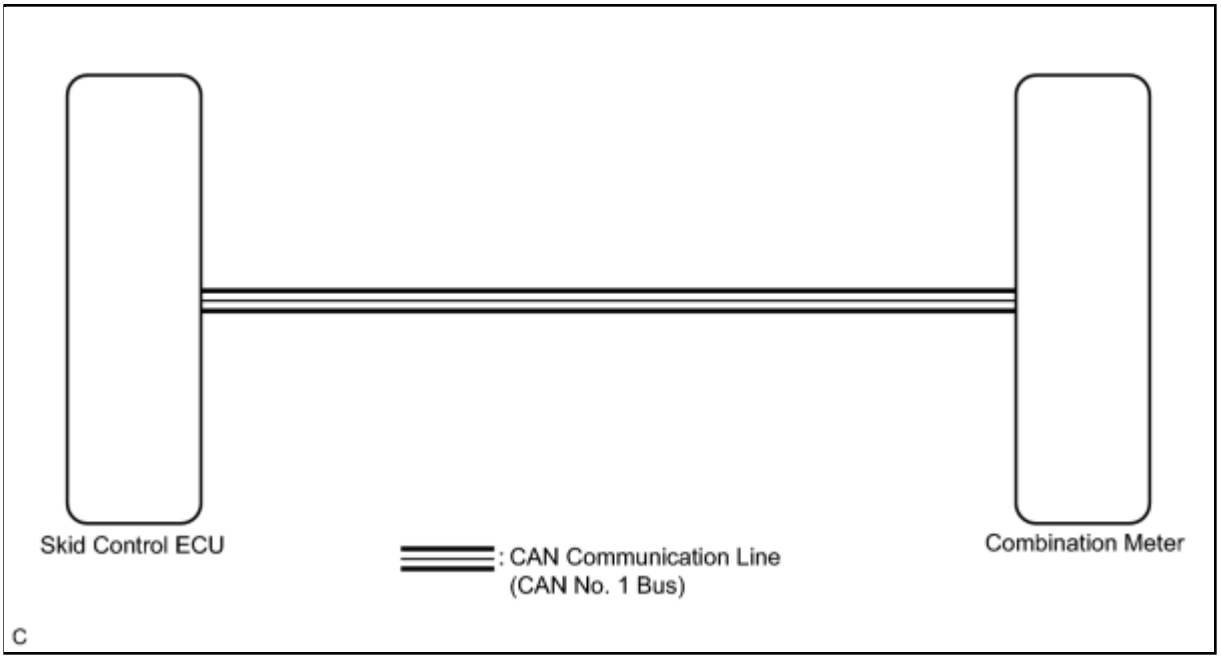
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-32 (B) - Body ground	Always	11 to 14 V
E46-33 (IG+) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE COMBINATION METER**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000012GD02TX
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Speedometer Malfunction (2010 Corolla)		

Speedometer Malfunction



DESCRIPTION

The meter CPU receives vehicle speed signals from the skid control ECU via the CAN communication line (CAN No. 1 Bus). The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

HINT:

If the vehicle speed sensor circuit has a malfunction, the skid control ECU outputs the DTCs. Perform troubleshooting with the Brake Control System INFO (w/o VSC), INFO (w/ VSC)).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CAN COMMUNICATION SYSTEM**

(a) Check if CAN communication DTC is output INFO.

Result:

RESULT	PROCEED TO
CAN communication DTC is not output.	A
CAN communication DTC is output.	B

B ▶ **GO TO CAN COMMUNICATION SYSTEM**

2.	PERFORM ACTIVE TEST USING TECHSTREAM (SPEED METER OPERATION)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the values in the table below.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Speed Meter Operation	Speedometer	0, 40, 80, 120 mph*1	Confirm that the vehicle is stopped, engine idling
		0, 40, 80, 120, 160, 200, 240 km/h*2	

- *1: for U.S.A.
- *2: except for U.S.A.

OK:

Speedometer indication is normal.

NG ▶ **REPLACE COMBINATION METER**

OK
▼

3.	READ VALUE USING TECHSTREAM (VEHICLE SPEED METER)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Data List.

(e) Check the values by referring to the values in the table below.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed Meter	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the Techstream is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG ▶ **READ VALUE USING TECHSTREAM (FR/FL/RR/RL WHEEL SPEED)**

OK ▶ **REPLACE COMBINATION METER**

4.	READ VALUE USING TECHSTREAM (FR/FL/RR/RL WHEEL SPEED)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Chassis / ABS/VSC/TRAC / Data List.

(e) Check the values by referring to the table below.

ABS/VSC/TRAC

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
FR Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
FL Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-
RR Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-
RL Wheel Speed	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the Techstream is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

Result:

RESULT	PROCEED TO
OK	A
NG (w/o VSC)	B
NG (w/ VSC)	C

C ▶ **GO TO BRAKE CONTROL SYSTEM (w/ VSC)**

B ▶ **GO TO BRAKE CONTROL SYSTEM (w/o VSC)**

A

▼

5.	REPLACE SKID CONTROL ECU

(a) Replace the skid control ECU with a new or a known good one INFO (w/o VSC), INFO (w/ VSC)).

OK:

The operation of the speedometer returns to normal.

NG ▶ **REPLACE COMBINATION METER**

OK ▶ **END**

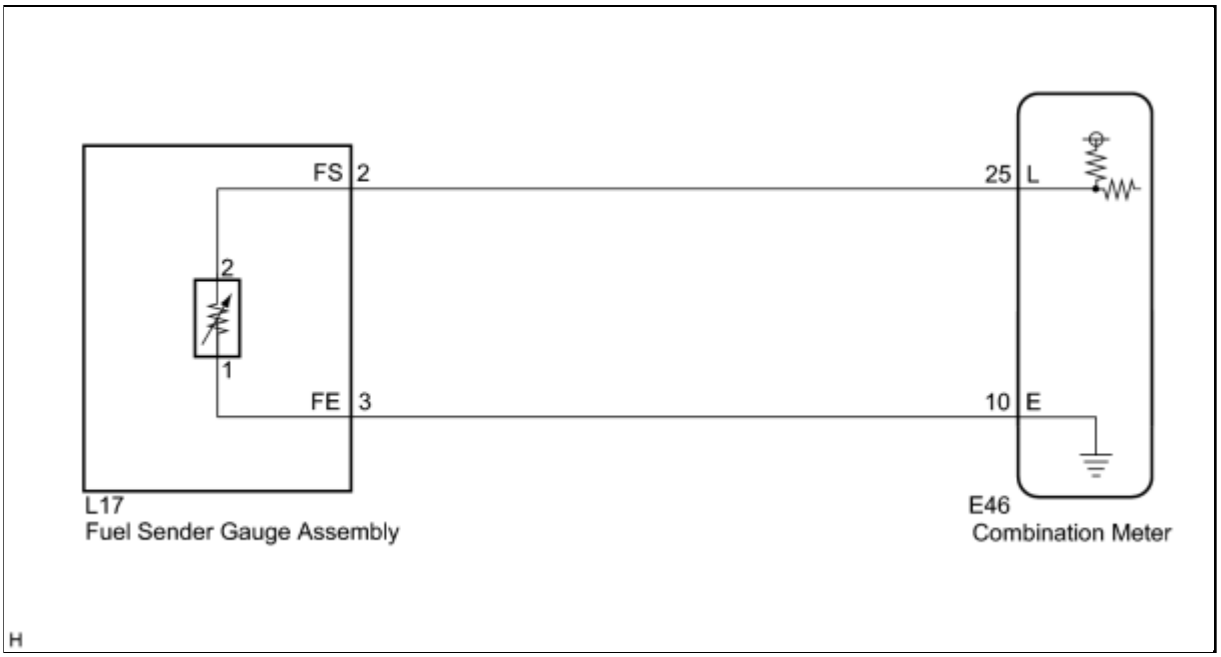
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Fuel Receiver Gauge Malfunction (2010 Corolla)		

Fuel Receiver Gauge Malfunction



DESCRIPTION

The meter CPU uses the fuel sender gauge assembly to determine the level of the fuel in the fuel tank. The resistance of the fuel sender gauge will vary between approximately 15.0 Ω with the float at the full position, and 410.0 Ω with the float at the empty position. The meter outputs battery voltage through two 820 Ω resistors that are mounted in parallel inside the meter CPU. The meter CPU measures the voltage between the variable resistor in the fuel sender gauge and the two resistors mounted in parallel in the meter. Voltage measured at this point will vary as the float of the fuel sender gauge is moved. The highest voltage observed should be approximately half of battery voltage.

HINT:

The fuel level warning light will come on when the fuel level is below 7.5 liters (2.0 gallons).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM (FUEL METER OPERATION)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the table below.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Fuel Meter Operation	Fuel receiver gauge	EMPTY, 1/2, FULL	Confirm that the vehicle is stopped, engine idling

OK:
Gauge indication is normal.

NG ▶ **REPLACE COMBINATION METER**

OK ▼

2.	**READ VALUE USING TECHSTREAM (FUEL INPUT)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

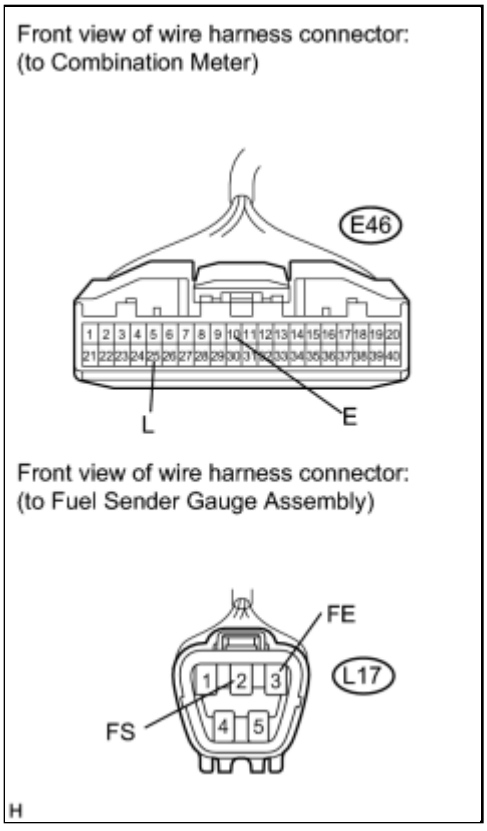
(c) Turn the Techstream on.

(d) Enter following menus: Body Electrical / Combination Meter / Data List.

(e) Check the values by referring to the table below.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Fuel Input	Fuel input signal Min.: 0, Max.:	Fuel gauge indicates (E): 5.5	-



TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	127.5	(L)	
		Fuel gauge indicates (1/2): 27.5 (L)	
		Fuel gauge indicates (F): 49.5 (L)	

OK:
Fuel value signal displayed on the Techstream is almost the same as fuel receiver gauge indication.

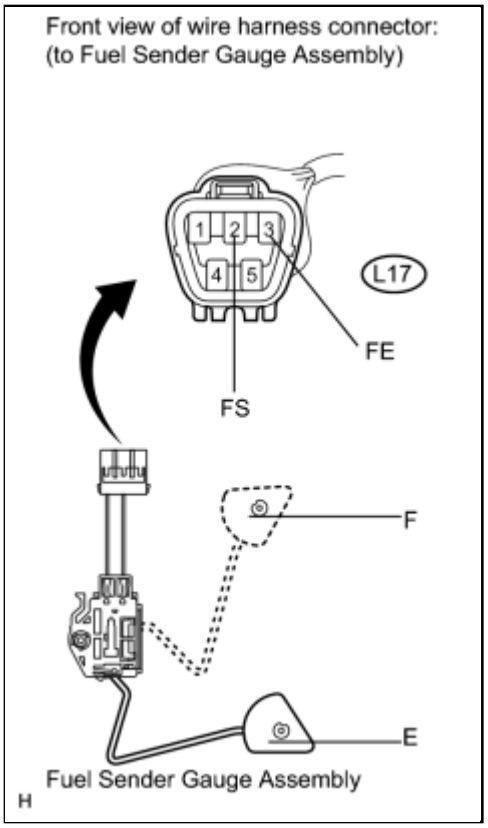
NG ▶ **REPLACE COMBINATION METER**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - FUEL SENDER GAUGE ASSEMBLY)**

(a) Disconnect the E46 and L17 connectors.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-10 (E) - L17-3 (FE)	Always	Below 1 Ω
L17-3 (FE) - Body ground	Always	10 kΩ or higher
E46-25 (L) - L17-2 (FS)	Always	Below 1 Ω
E46-25 (L) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**INSPECT FUEL SENDER GAUGE ASSEMBLY**

(a) Remove the fuel sender gauge assembly.

(b) Check that the float moves smoothly between E and F.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L17-2 (FE) - L17-3 (FE)	Float level is F (upper)	13.5 to 16.5 Ω
L17-2 (FE) - L17-3 (FE)	Float level is between F (upper) and E (lower)	13.5 to 414.5 Ω (Gradually changes)
L17-2 (FE) - L17-3 (FE)	Float level is E (lower)	405.5 to 414.5 Ω

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ **REPLACE FUEL SENDER GAUGE ASSEMBLY (for 2ZR-FE)**

B ▶ **REPLACE FUEL SENDER GAUGE ASSEMBLY (for 2AZ-FE)**

A ▶ **REPLACE COMBINATION METER**

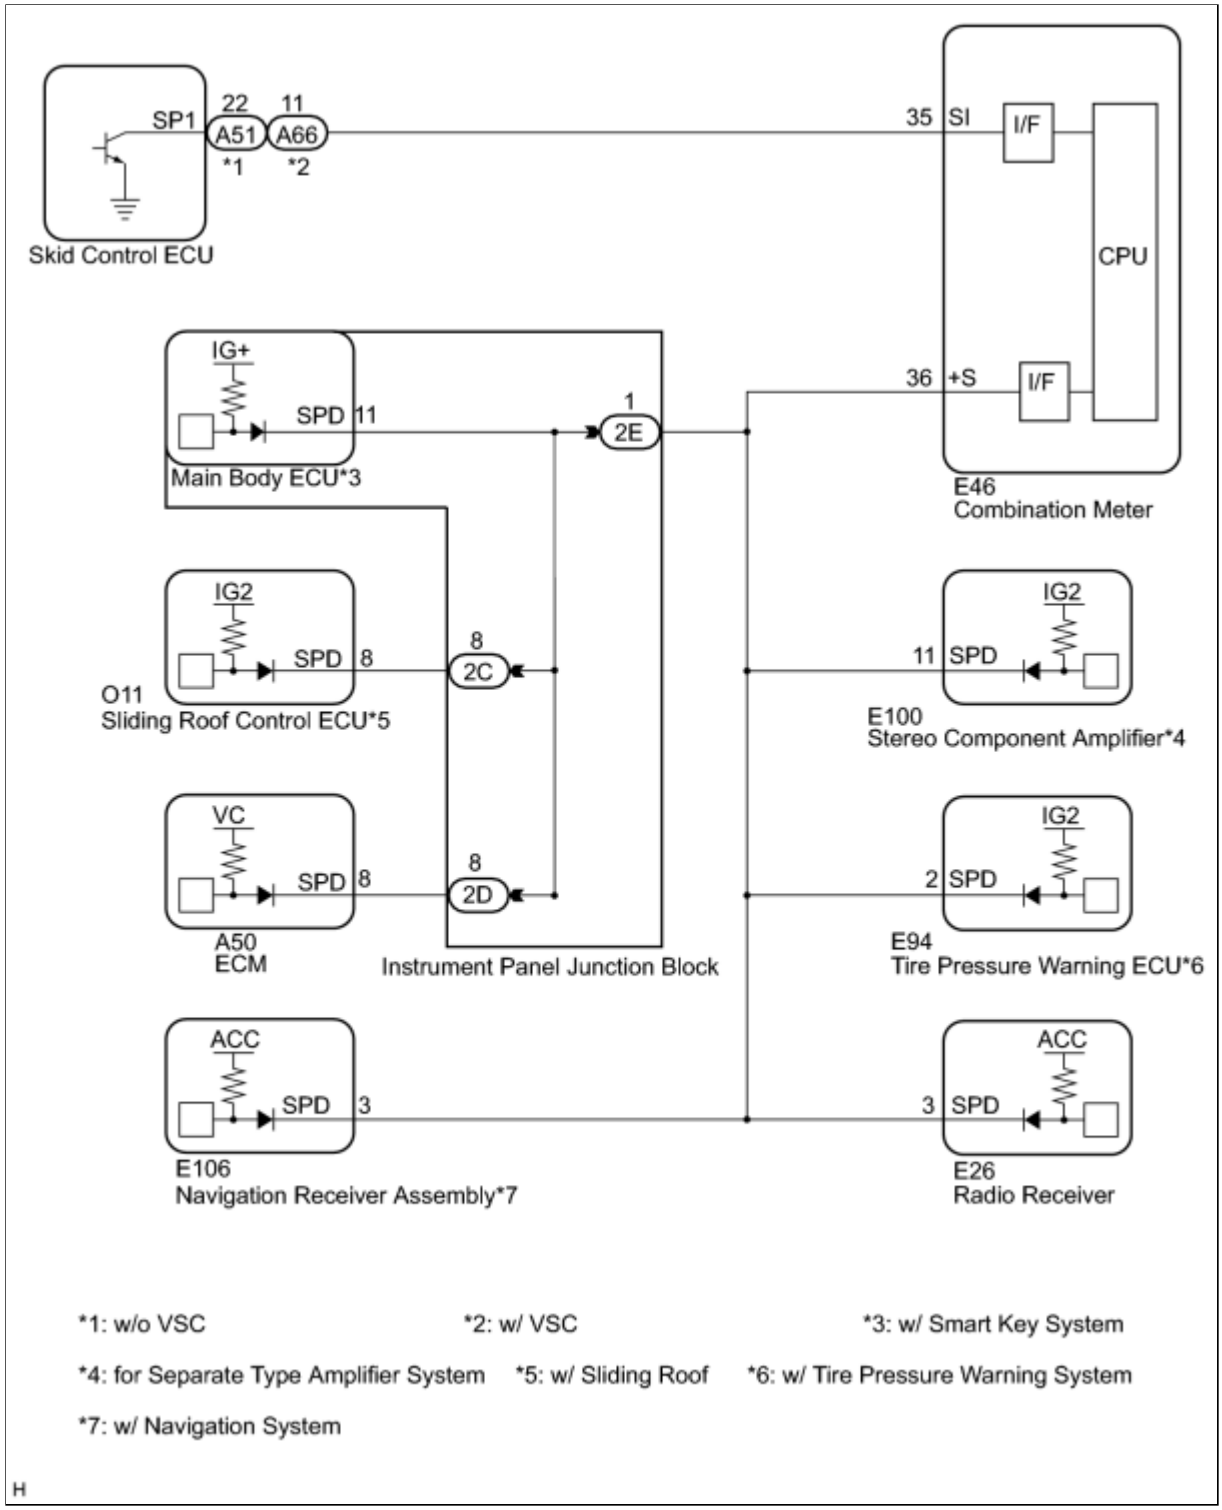
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002UD701MX
Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Speed Signal Circuit (2010 Corolla)		

Speed Signal Circuit

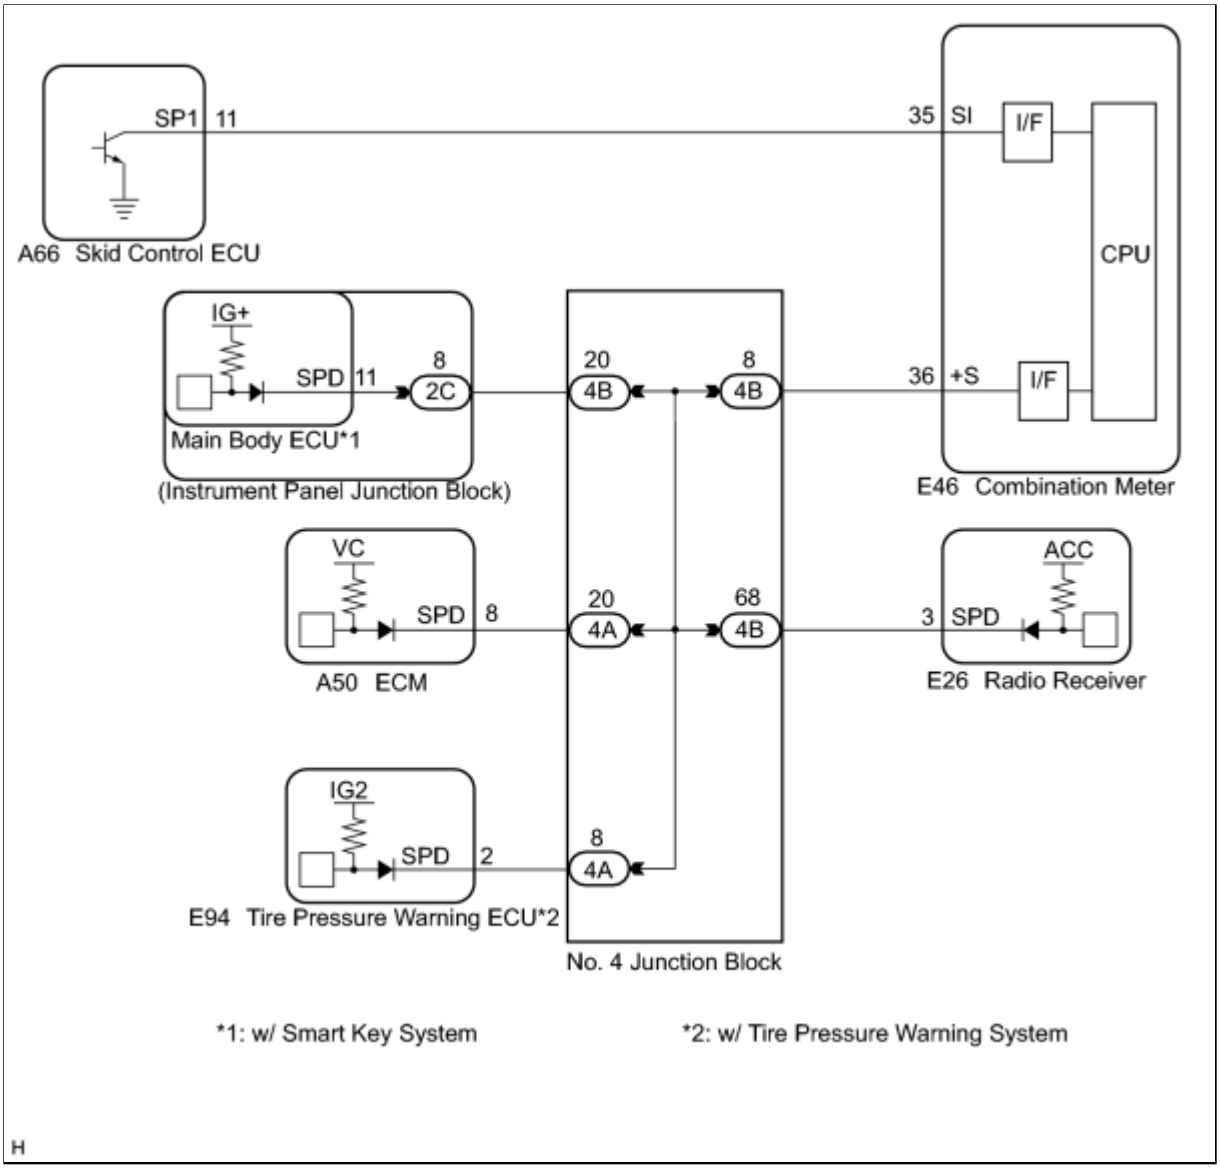
DESCRIPTION

The combination meter receives the vehicle speed signal from this circuit. The wheel speed sensors produce an output that varies according to the vehicle speed. The wheel speed sensor output is received by the skid control ECU which uses this information to create the vehicle speed sensor signal*. The vehicle speed sensor signal consists of pulses sent to the combination meter from the skid control ECU. To create this signal, 12 V is output from IG2 which is behind a resistor in the combination meter. This voltage is sent to the skid control ECU. The pulse signal is created by switching the transistor in the skid control ECU on and off, making the voltage on the wire drop to 0 V. A similar system is used for the output of this signal from the combination meter via terminal +S. A voltage of 12 V or 5 V is applied to terminal +S from each ECU or relay that is connected to this terminal. The transistor in the combination meter is controlled by the signal from the skid control ECU. When this transistor is turned on, this transistor makes the voltage supplied by the various ECUs (via their respective internal resistors) drop to 0 V. Each ECU connected to terminal +S of the combination meter controls its respective system based on the pulse signal.



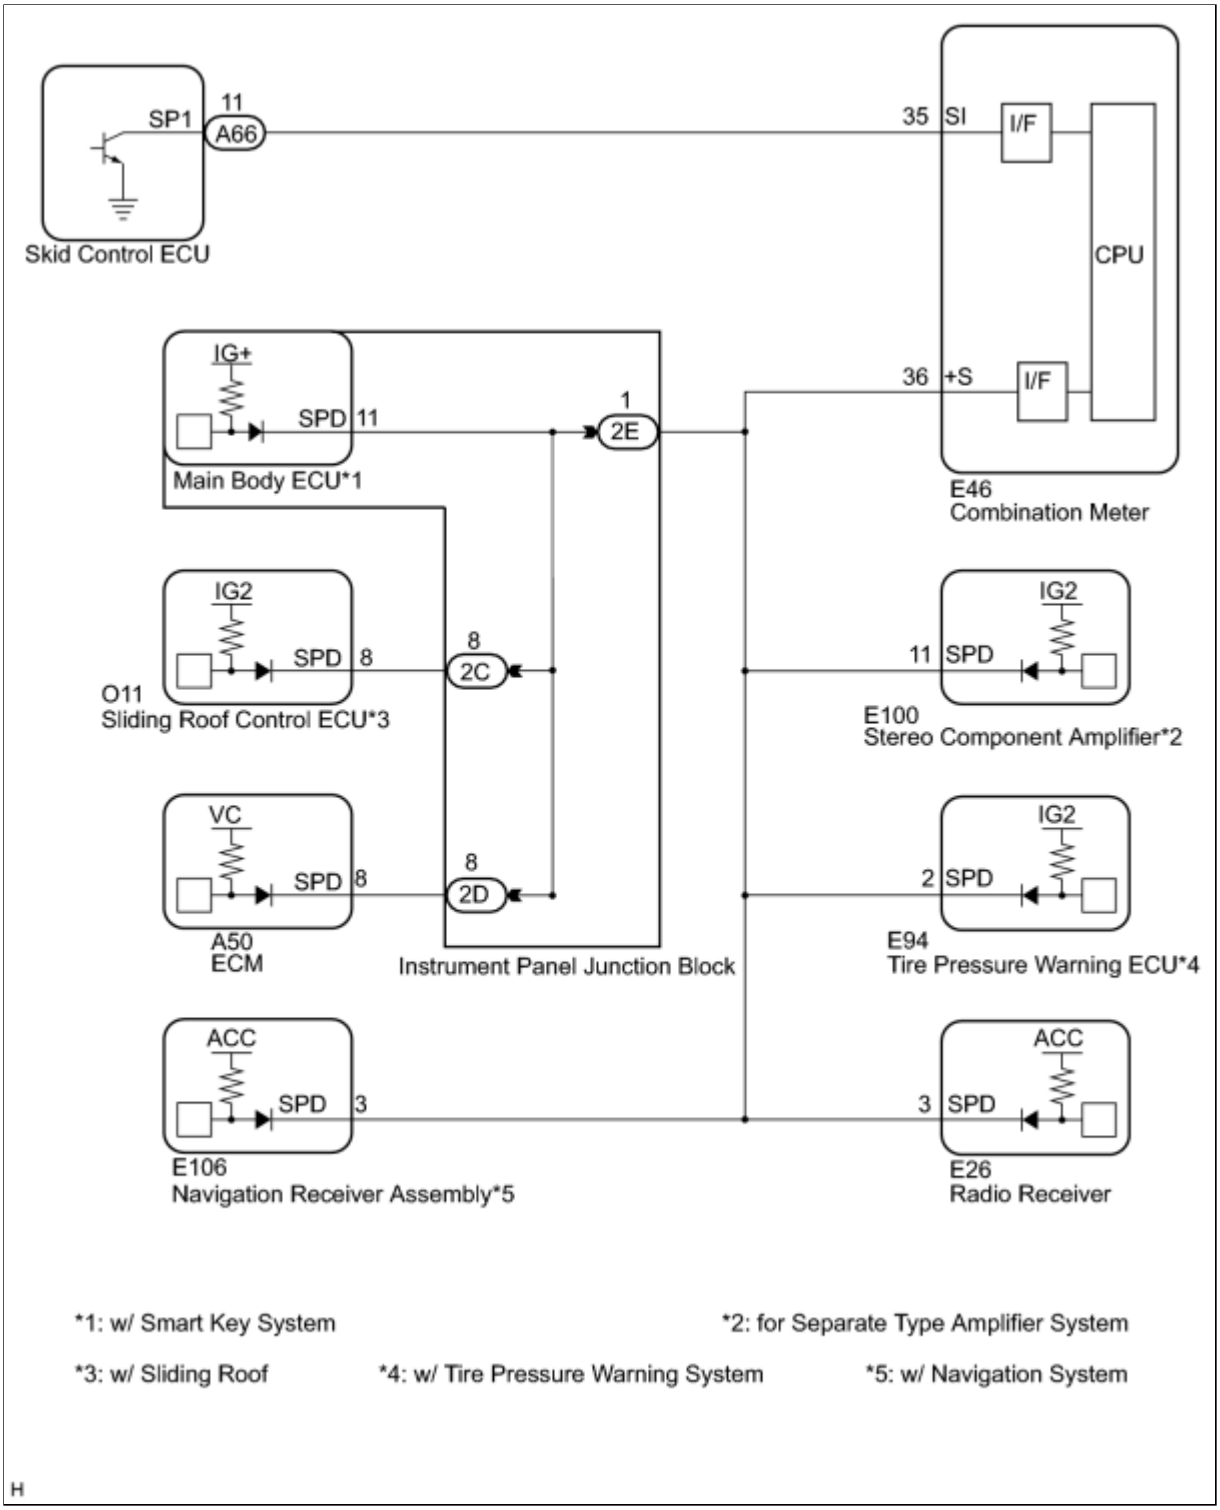
- *: This vehicle speed sensor signal is created by the skid control ECU. There is no actual component that is referred to as the vehicle speed sensor. In addition, for some other systems, vehicle speed information may be exchanged using CAN communication.

HINT:



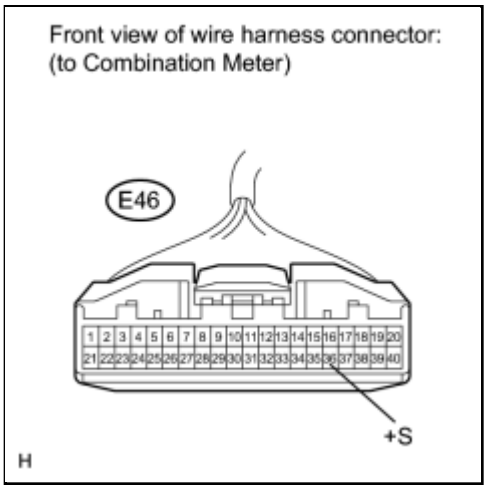
This circuit is used for the systems connected to terminal +S. This signal is not used for combination meter operation. Combination meter components such as the speedometer operate using data received via CAN communication.

WIRING DIAGRAM



1. except TMC Made 2ZR-FE

2. for TMC Made 2ZR-FE



3. except TMC Made 2AZ-FE

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT ECU TERMINAL VOLTAGE (INPUT VOLTAGE)**

(a) Disconnect the E46 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

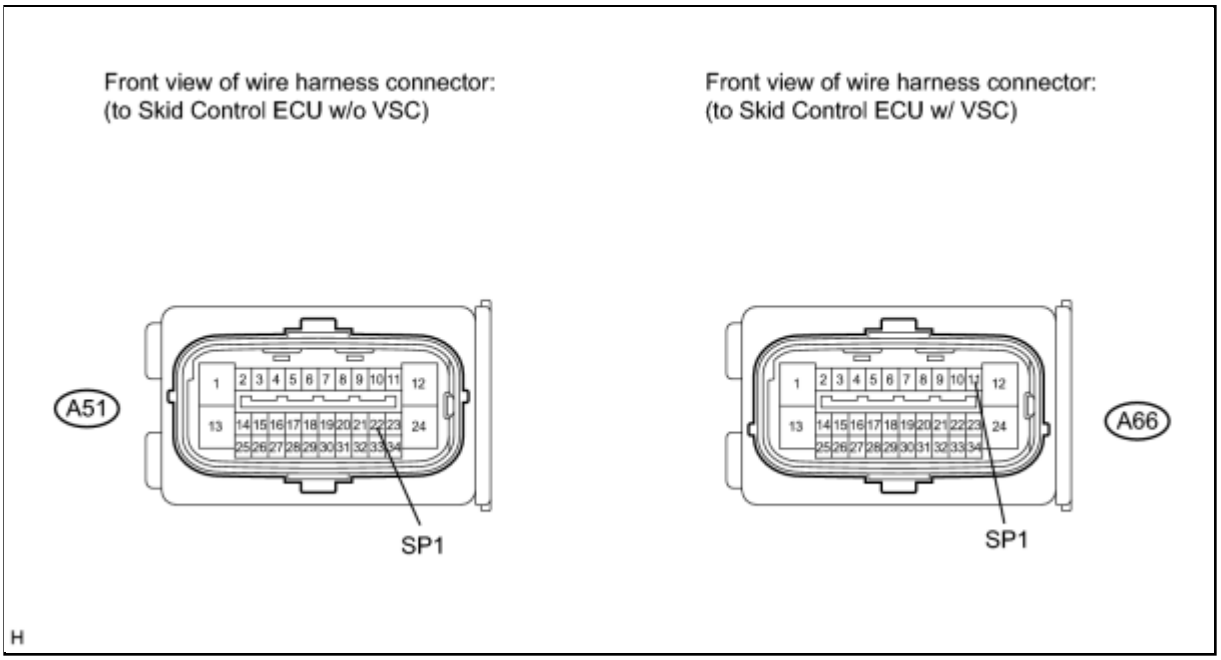
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - Body ground	Ignition switch ON	4.5 to 14 V

HINT:

If any of the ECUs specified in the wiring diagram supplied power to the combination meter, the combination meter will output a waveform.

Result:

RESULT	PROCEED TO
OK	A
NG (for TMC Made)	B
NG (except for TMC Made)	C



C ▶ **CHECK HARNESS AND CONNECTOR**

B ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - NO. 4 JUNCTION BLOCK)**

A ▼

2.	**INSPECT COMBINATION METER (OUTPUT VOLTAGE)**

(a) Reconnect the E46 connector.

(b) Disconnect the A51*1 or A66*2 connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-22 (SP1)*1 - Body ground	Ignition switch ON	11 to 14 V
A66-11 (SP1)*2 - Body ground	Ignition switch ON	11 to 14 V

- *1: w/o VSC
- *2: w/ VSC

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - SKID CONTROL ECU)**

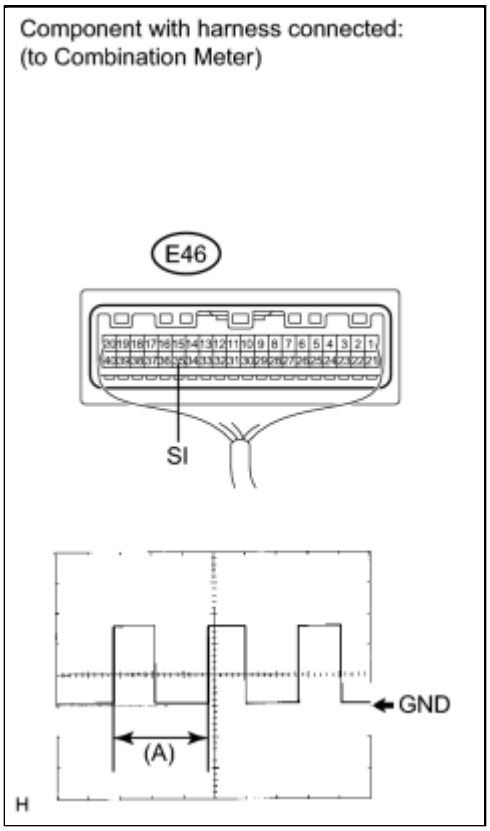
OK ▼

3.	**INSPECT SKID CONTROL ECU (INPUT WAVEFORM)**

(a) Check the input waveform.

(1) Reconnect the A51*1 or A66*2 connector.

- *1: w/o VSC
- *2: w/ VSC



(2) Remove the combination meter with the connector(s) still connected.

(3) Connect the oscilloscope to terminals E46-35 (SI) and body ground.

(4) Turn the ignition switch to ON.

(5) Turn the wheel slowly.

(6) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV.
Vehicle condition	Driving at approximately 12 mph (20 km/h)

OK:

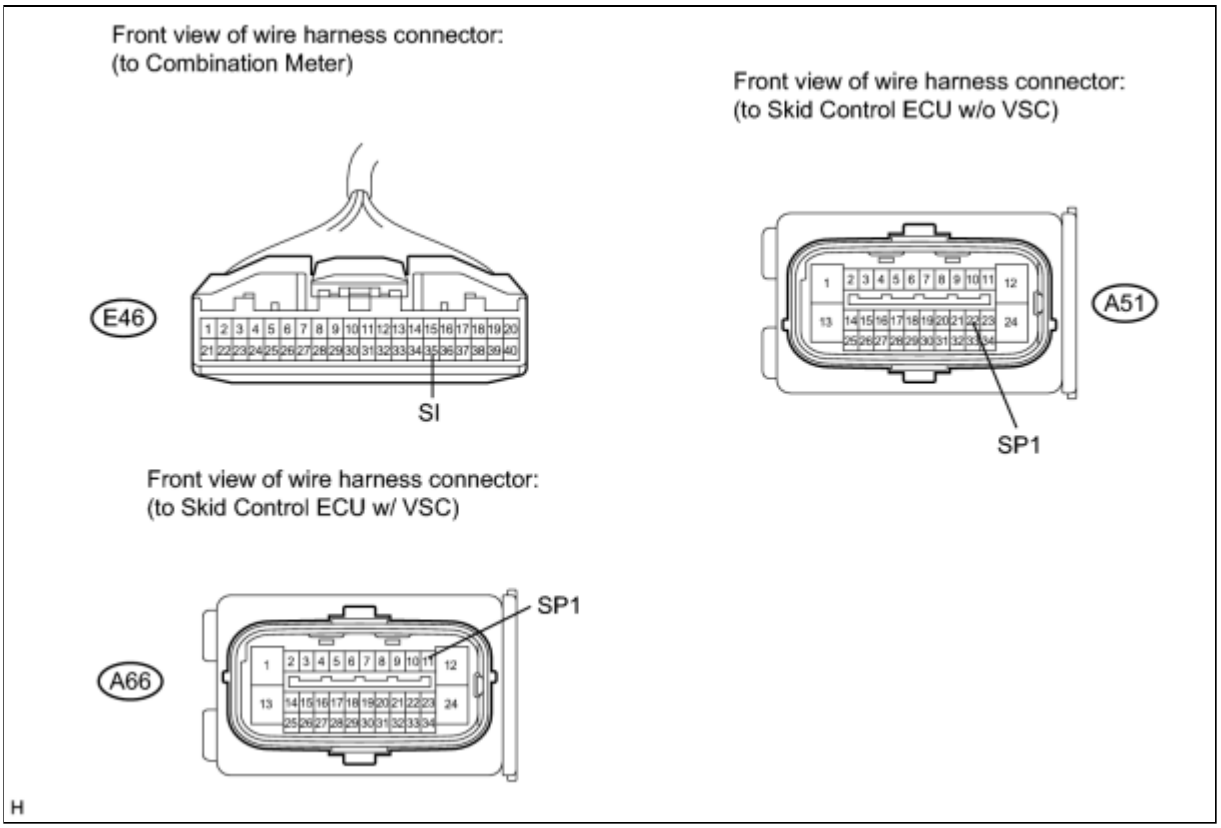
The waveform is displayed as shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

Result:

RESULT	PROCEED TO
OK	A
NG (w/o VSC)	B
NG (w/ VSC)	C



C ▶ **REPLACE SKID CONTROL ECU (w/ VSC)**

B ▶ **REPLACE SKID CONTROL ECU (w/o VSC)**

A ▶ **REPLACE COMBINATION METER**

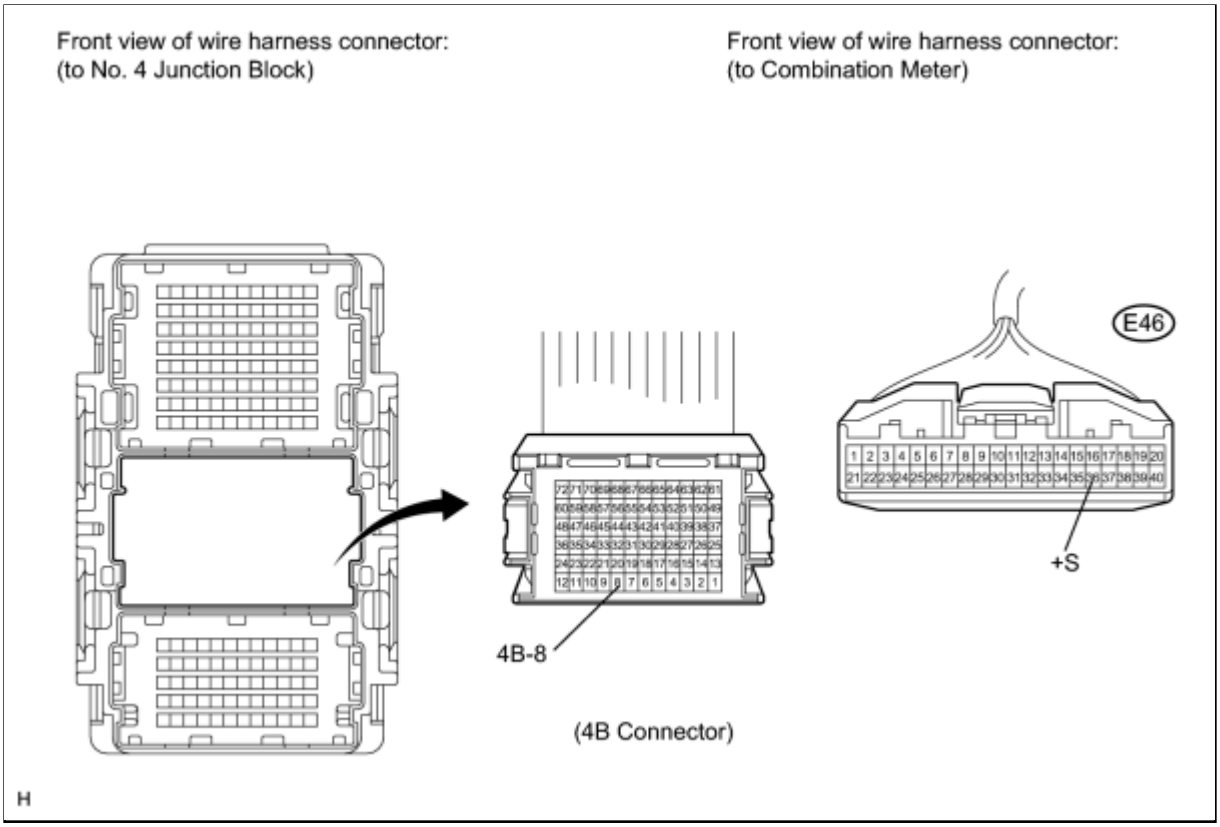
4.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - SKID CONTROL ECU)**

(a) Disconnect the E46 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A51-22 (SP1)*1 - E46-35 (SI)	Always	Below 1 Ω
A51-22 (SP1)*1 - Body ground	Always	10 kΩ or higher
A66-11 (SP1)*2 - E46-35 (SI)	Always	Below 1 Ω
A66-11 (SP1)*2 - Body ground	Always	10 kΩ or higher



- *1: w/o VSC
- *2: w/ VSC

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE COMBINATION METER**

5.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - NO. 4 JUNCTION BLOCK)**

(a) Disconnect the 4B connector.

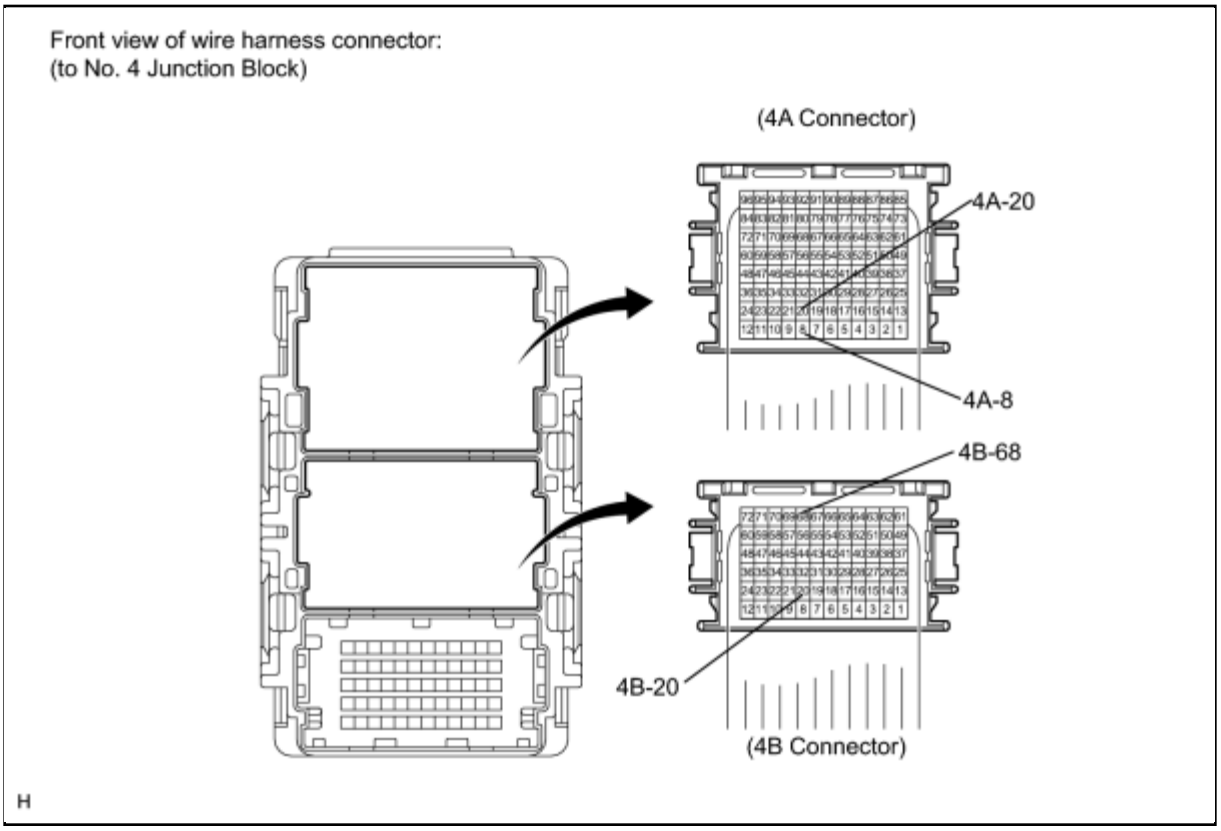
(b) Measure the voltage according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - 4B-8	Always	Below 1 Ω
4B-8 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼



6.	**CHECK HARNESS AND CONNECTOR (NO. 4 JUNCTION BLOCK)**

(a) Inspect for a short in the circuit that is connected to the combination meter shown in the wiring diagram.

HINT:

If voltage is not present, the circuit (ECU) was possibly the malfunctioning circuit. This is the circuit that will be diagnosed by following the A step that follows.

(1) Disconnect 4A connector.

(2) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4A-8*1 - Body ground	Ignition switch ON	4.5 to 14 V
4A-20 - Body ground	Ignition switch ON	4.5 to 14 V
4B-20*2 - Body ground	Ignition switch ON	4.5 to 14 V
4B-68 - Body ground	Ignition switch ON	4.5 to 14 V

- *1: w/ Tire Pressure Warning System
- *2: w/ Smart Key System

Result:

RESULT	PROCEED TO
Voltage is not present in one circuit.	A
Voltage is present in all the circuits.	B

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 4 JUNCTION BLOCK)**

OK

7.	SYSTEM CHECK

(a) Select the circuit that did not present the voltage in the step 6.

Result:

TESTER CONNECTION	SYSTEM THAT USES THE CIRCUIT	PROCEED TO
4A-8*1 - Body ground	Tire pressure warning System	A
4A-20 - Body ground	SFI System	B
4B-20*2 - Body ground	Starting System	C
4B-68 - Body ground	Audio/visual System	D

- *1: w/ Tire Pressure Warning System

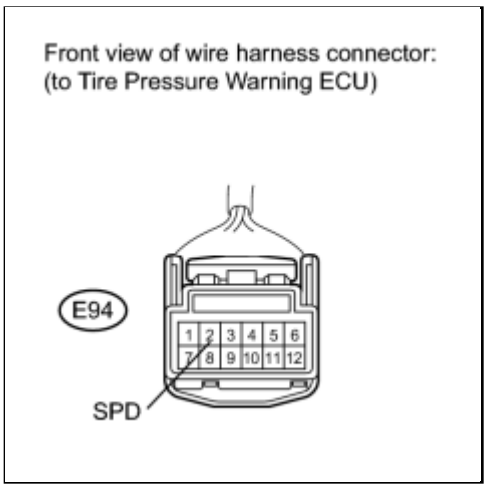
D ▶ **CHECK HARNESS AND CONNECTOR (RADIO RECEIVER CIRCUIT)**



C ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU CIRCUIT)**

B ▶ **CHECK HARNESS AND CONNECTOR (ECM CIRCUIT)**

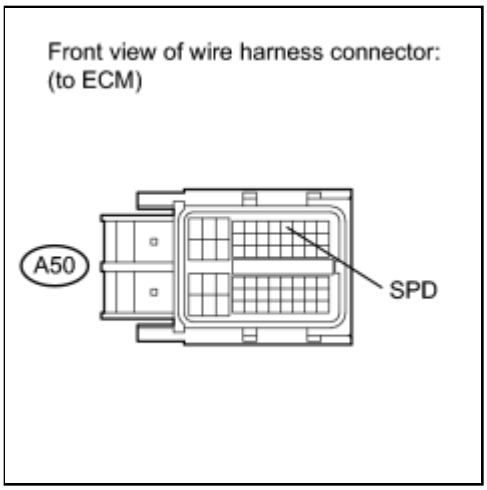
A

8.	CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING ECU CIRCUIT)

(a) Disconnect the E94 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-2 (SPD)* - Body ground	Always	10 kΩ or higher

- *: w/ Tire Pressure Warning System

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TIRE PRESSURE WARNING ECU**

9.	**CHECK HARNESS AND CONNECTOR (ECM CIRCUIT)**

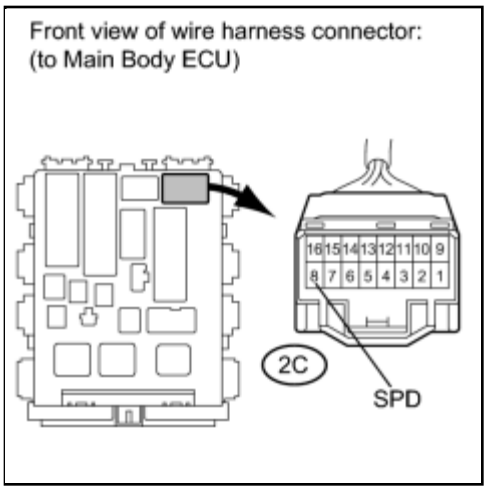
(a) Disconnect the A50 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-8 (SPD) - Body ground	Always	10 kΩ or higher

Result:



RESULT	PROCEED TO
OK (for 2AZ-FE)	A
OK (for 2ZR-FE)	B
NG	C

C ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

B ▶ **REPLACE ECM (for 2ZR-FE)**

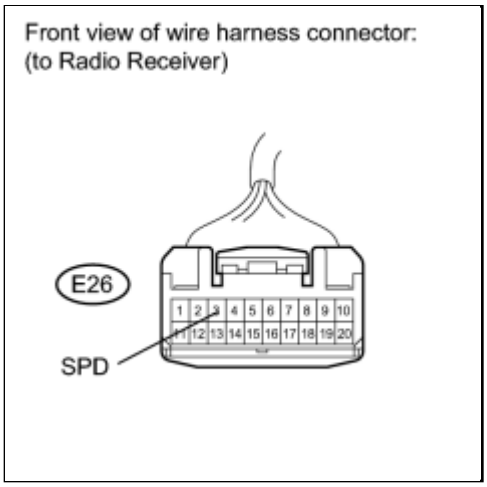
A ▶ **REPLACE ECM (for 2AZ-FE)**

10.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU CIRCUIT)

(a) Disconnect the 2C connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-8 (SPD)* - Body ground	Always	10 kΩ or higher

- *: w/ Smart Key System

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU**

11.	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER CIRCUIT)

(a) Disconnect the E26 connector.

(b) Measure the resistance according to the value(s) in the table below.

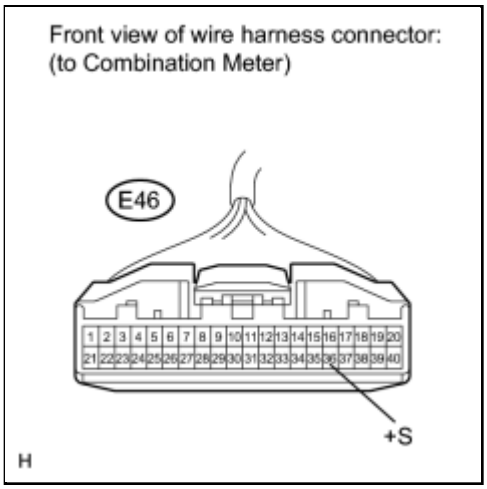
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E26-3 (SPD) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE RADIO RECEIVER**

12.	CHECK HARNESS AND CONNECTOR



(a) Inspect for a short in the circuit that is connected to the combination meter shown in the wiring diagram.

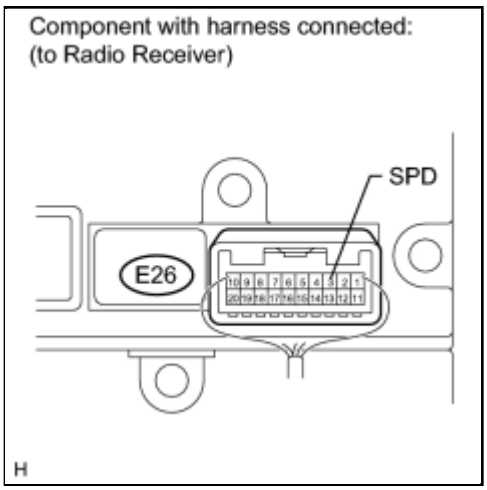
HINT:

If voltage is not present, the circuit (ECU) was possibly the malfunctioning circuit.

(1) Disconnect the E26, E94*1, E100*2, E106*3, and 2E connectors.

- *1: w/ Tire Pressure Warning System
- *2: for Separate Type Amplifier System
- *3: w/ Navigation System

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

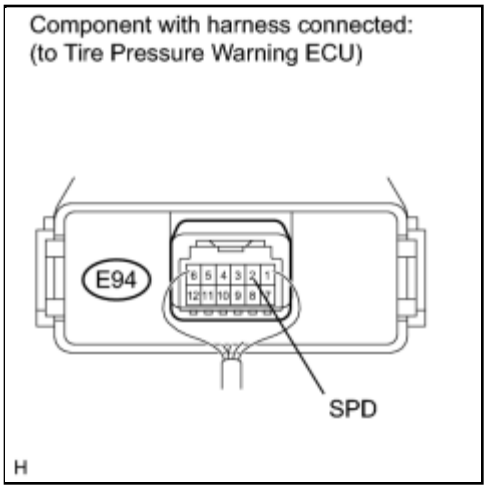
13.	INSPECT RADIO RECEIVER (CHECK FOR A SHORT)

(a) Disconnect the E26 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E26-3 (SPD) - Body ground	Always	10 kΩ or higher



NG ▶ **REPLACE RADIO RECEIVER**

OK

14.	**INSPECT TIRE PRESSURE WARNING ECU (CHECK FOR A SHORT)**

HINT:

If the vehicle does not equipped with the tire pressure warning system, proceed to the next step.

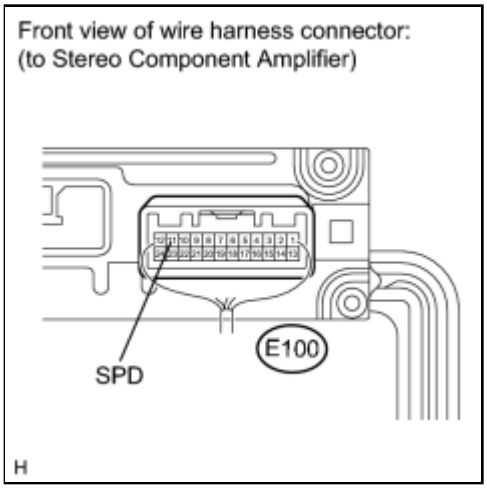
(a) Disconnect the E94 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E94-2 (SPD)* - Body ground	Always	10 kΩ or higher

- *: w/ Tire Pressure Warning System



NG ▶ **REPLACE TIRE PRESSURE WARNING ECU**

OK

15.	**INSPECT STEREO COMPONENT AMPLIFIER (CHECK FOR A SHORT)**

HINT:

If the vehicle does not equipped with the stereo component amplifier, proceed to the next step.

(a) Disconnect the E100 connector.

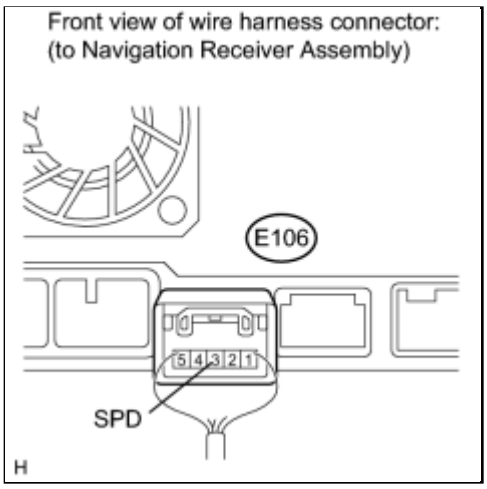
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E100-11 (SPD)* - Body ground	Always	10 kΩ or higher

- *: for Separate Type Amplifier System

NG ▶ **REPLACE STEREO COMPONENT AMPLIFIER**



OK ▼

16.	**INSPECT NAVIGATION RECEIVER ASSEMBLY (CHECK FOR A SHORT)**

HINT:

If the vehicle does not equipped with the navigation system, proceed to the next step.

(a) Disconnect the E106 connector.

(b) Measure the resistance according to the value(s) in the table below.

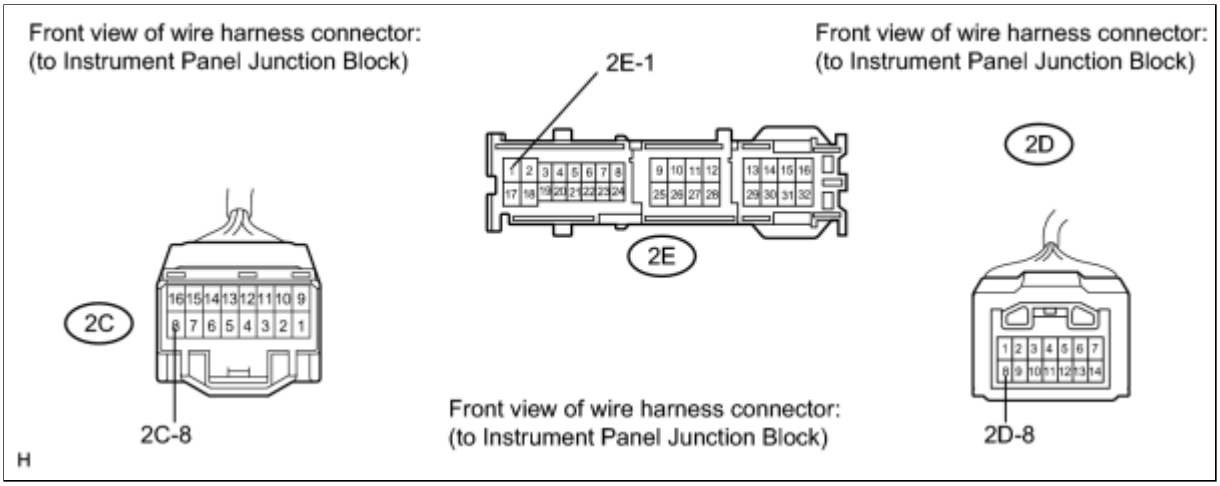
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E106-3 (SPD)* - Body ground	Always	10 kΩ or higher

- *: w/ Navigation System

NG ▶ **REPLACE NAVIGATION RECEIVER ASSEMBLY**

OK ▼



17.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Inspect for a short in the circuit that is connected to the combination meter shown in the wiring diagram.

HINT:

If voltage is not present, the circuit (ECU) was possibly the malfunctioning circuit. This is the circuit that will be diagnosed by following the A step that follows.

(1) Disconnect 2C, 2D, and 2Econnector.

(2) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-8*2 - Body ground	Ignition switch ON	4.5 to 14 V
2D-8 - Body ground	Ignition switch ON	4.5 to 14 V
2E-1*1 - Body ground	Ignition switch ON	4.5 to 14 V

A ▶ **REPLACE ECM (for 2AZ-FE)**

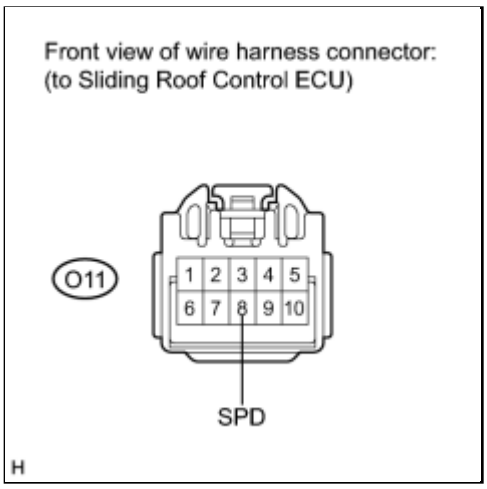
20.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU CIRCUIT)

(a) Disconnect the 2C connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-8 (SPD)* - Body ground	Always	10 kΩ or higher



- *: w/ Smart Key System

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU**

21.	CHECK HARNESS AND CONNECTOR (SLIDING ROOF CONTROL ECU CIRCUIT)

(a) Disconnect the O11 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
O11-8 (SPD)* - Body ground	Always	10 kΩ or higher

- *: w/ Sliding Roof

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE SLIDING ROOF CONTROL ECU**

Title: METER / GAUGE / DISPLAY: METER / GAUGE SYSTEM: Engine Coolant Temperature Receiver Gauge Malfunction (2010 Corolla)		

Engine Coolant Temperature Receiver Gauge Malfunction

DESCRIPTION

In this circuit, the meter CPU receives engine coolant temperature signals from the ECM using the CAN communication line (CAN No. 1 Bus). The meter CPU displays engine coolant temperature that is calculated based on the data received from the ECM.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

If there is an open or short in the engine coolant temperature sensor circuit, the ECM outputs the DTCs.

Perform troubleshooting with the SFI System INFO (for 2AZ-FE), INFO (for 2ZR-FE)).

PROCEDURE

1.	**CHECK CAN COMMUNICATION SYSTEM**

(a) Check if CAN communication DTC is output INFO .

Result:

RESULT	PROCEED TO
CAN communication DTC is not output.	A
CAN communication DTC is output.	B

B ▶ **GO TO CAN COMMUNICATION SYSTEM**

A

▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM (WATER TEMPERATURE METER OPERATION)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the operation by referring to the values in the table below.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Water Temperature Meter Operation	Engine coolant temperature receiver gauge	Low, Normal, Hi	Confirm that the vehicle is stopped, engine idling

OK:

Gauge indication is normal.

NG ▶ **REPLACE COMBINATION METER**

OK

▼

3.	READ VALUE USING TECHSTREAM (COOLANT TEMPERATURE)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Data List.

(e) Check the values by referring to the values in the table below.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Coolant Temp	Engine coolant temperature/Min.: -40°C (-40°F), Max.: 140°C (284°F)	After warming up: 80 to 100°C (176 to 212°F)	-

Result:

RESULT	PROCEED TO
The engine coolant temperature receiver gauge indication is almost the same as the Techstream indication.	A
The engine coolant temperature receiver indication is differ from the Techstream indication.	B

B ▶ **REPLACE COMBINATION METER**

A ▼

4.	READ VALUE USING TECHSTREAM (COOLANT TEMP)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List.

(e) Check the values by referring to the values in the table below.

Engine and ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Coolant Temp	Engine coolant temperature/Min.: -40°C (-40°F), Max.: 140°C (284°F)	After warming up: 80 to 100°C (176 to 212°F)	-

Result:

RESULT	PROCEED TO
The engine coolant temperature receiver gauge indication is almost the same as the actual engine coolant temperature.	A
The engine coolant temperature receiver gauge indication is differ from the actual engine coolant temperature. (for 2AZ-FE)	B
The engine coolant temperature receiver gauge indication is differ from the actual engine coolant temperature. (for 2ZR-FE)	C

C ▶ **GO TO SFI SYSTEM (for 2ZR-FE)**

B ▶ **GO TO SFI SYSTEM (for 2AZ-FE)**

A ▼

5.	**REPLACE COMBINATION METER**

(a) Replace the combination meter with a new or a known good one INFO .

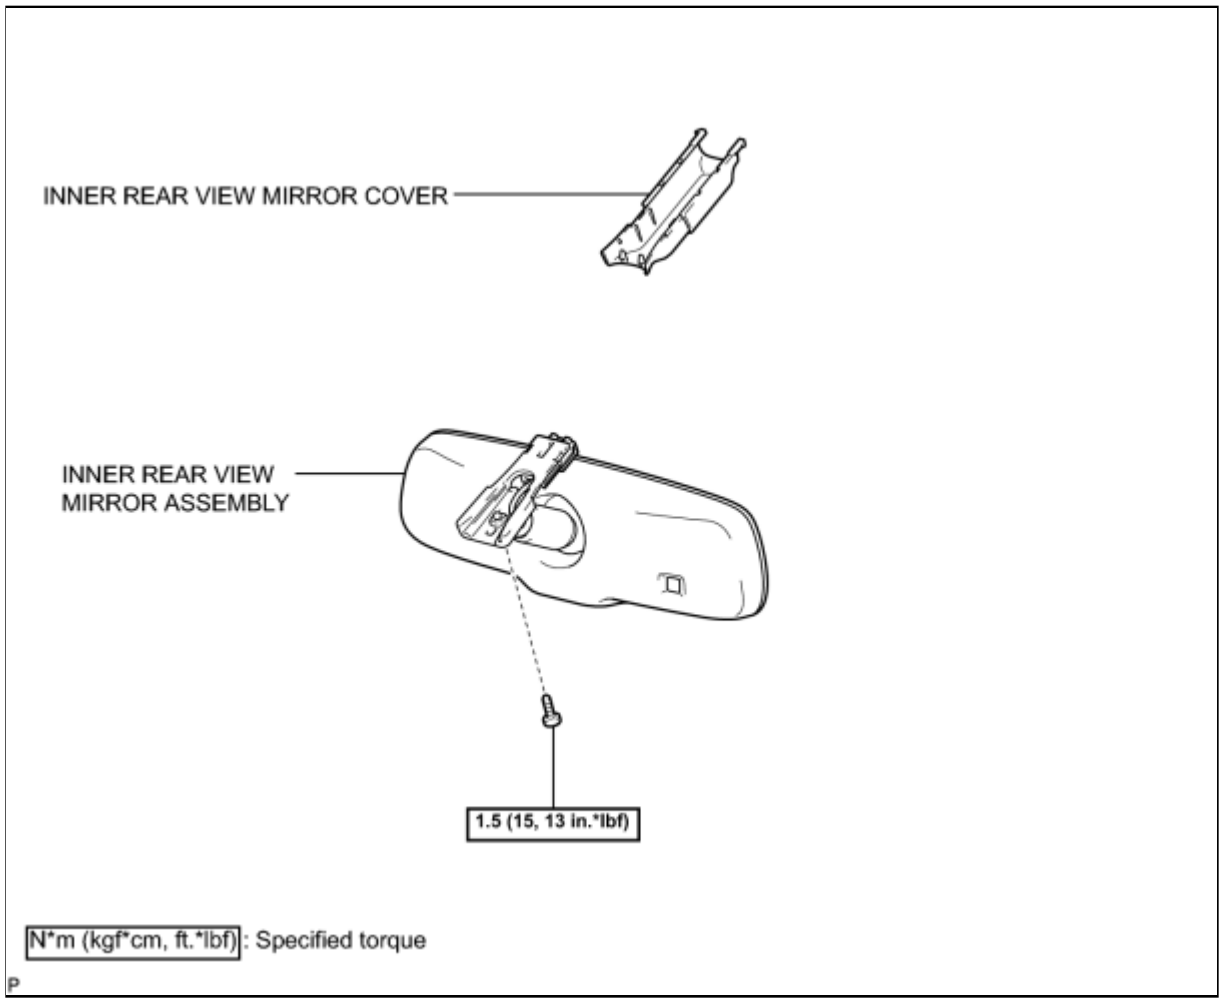
OK:

The operation of the combination meter returns to normal.

Result:

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ REPLACE ECM (for 2ZR-FE)



B ▶ REPLACE ECM (for 2AZ-FE)

A ▶ END

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003H7X002X
Title: MIRROR (INT): INNER REAR VIEW MIRROR (w/ EC Mirror): CALIBRATION (2010 Corolla)		

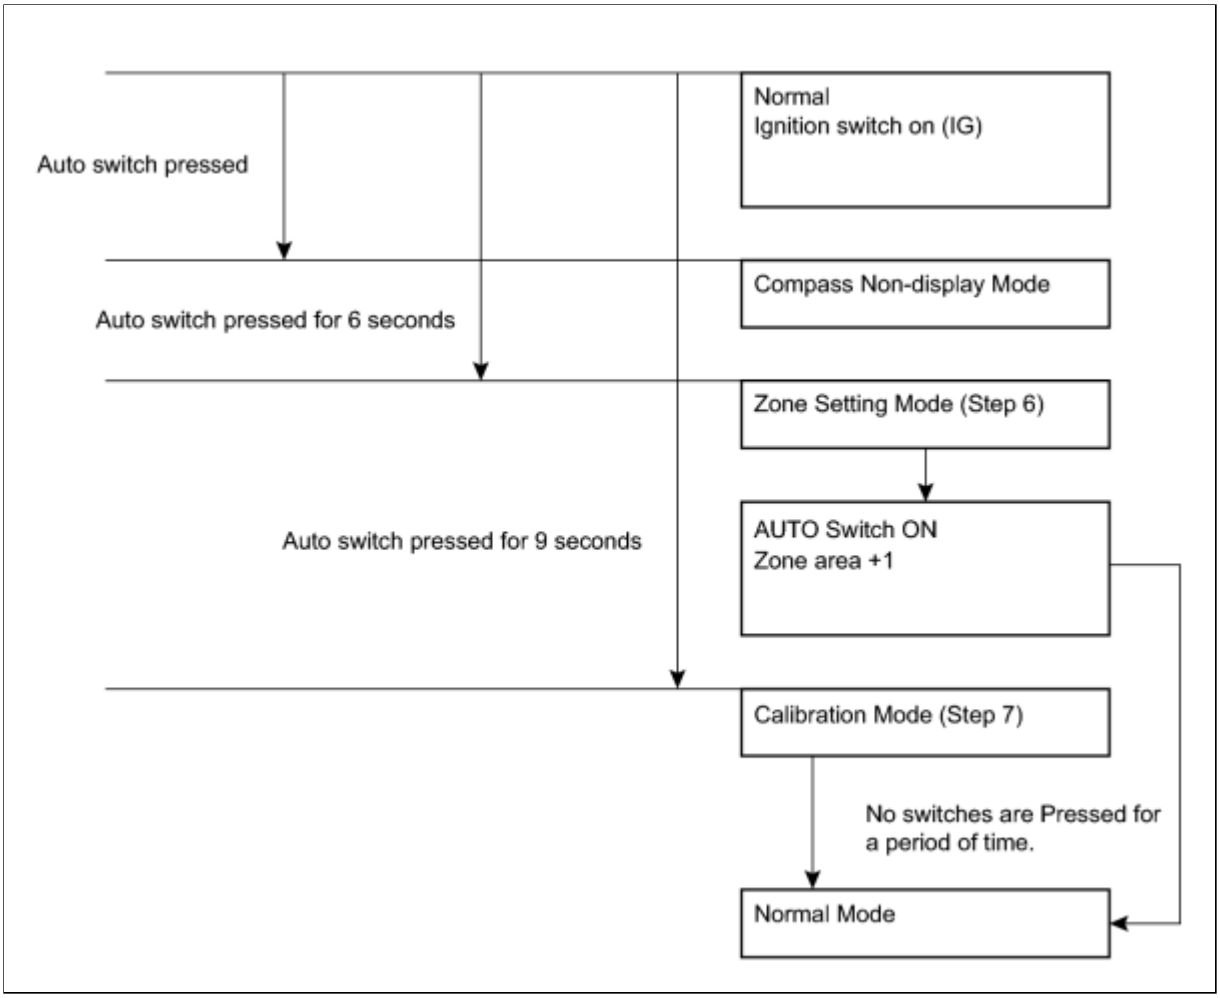
CALIBRATION

1. SELECT COMPASS DISPLAY MODE

(a) The AUTO switch allows you to select whether or not the compass is displayed.

2. SET ZONE

(a) The compass indicates the direction that the vehicle is heading by detecting the direction and strength of the earth's magnetic field (magnetic north). However, there is a difference between magnetic north and actual north that depends on the location of the vehicle. To compensate for this difference, depending on the location, it is necessary to set the zone in which the vehicle will be used (Refer to Compass Zone Map). The zone setting can be changed using the AUTO switch of the inner mirror.



3. PERFORM CALIBRATION

(a) Because each vehicle has its own magnetic field, calibration should be performed. The calibration function is used to compensate for the residual magnetism of the vehicle.

4. WHEN COMPASS IS MAGNETIZED

(a) The compass or vehicle may become magnetized while the vehicle is being shipped. As a result, it is necessary to perform calibration for the compass before the vehicle is delivered to the customer. If calibration cannot be performed successfully (calibration cannot be completed in spite of driving around several times), it may be caused by excessive magnetization of the vehicle. Demagnetize the vehicle using a demagnetizer and perform calibration again.

5. SET COMPASS

6. ZONE SETTING MODE

(a) When the compass is in normal mode, pressing the AUTO switch for 6 seconds will activate the zone setting mode. A number from 1 to 15 will be displayed on the compass display.

HINT:

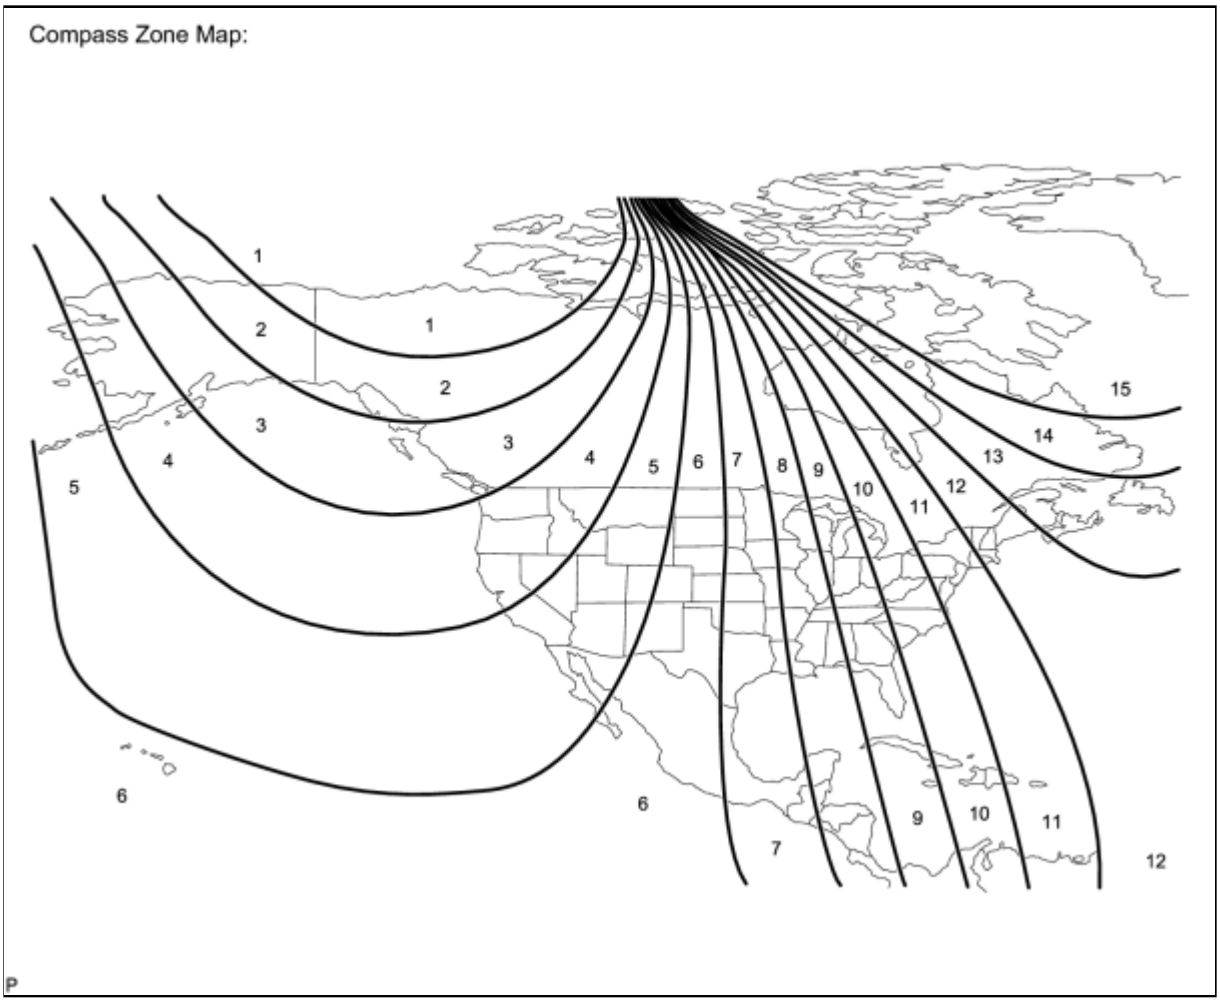
When the initial zone setting has not been changed, 8 will be displayed.

(b) The displayed number increases by 1 every time the AUTO switch is pressed. Referring to the map, check the number for the area where the vehicle will be used and set the zone number.

(c) Leave the mirror untouched for several seconds after setting the zone. Check that the compass display shows a direction (N, NE, E, SE, S, SW, W, or NW). In some cases, the compass may display "C".

7. CALIBRATION MODE

(a) When the compass is in normal mode, pressing the AUTO switch for 9 seconds will activate the calibration mode.



(b) Drive the vehicle in a circle at a speed of 8 km/h (5 mph) or less.

(c) After driving around in a circle 1 to 3 times, the direction (N, NE, E, SE, S, SW, W, or NW) will be displayed on the compass display. This indicates that calibration has finished.

HINT:

After calibration is performed, it is not necessary to repeat the calibration procedure unless the magnetic field

of the vehicle changes drastically. If the magnetic field changes drastically, this will be indicated by the compass display changing to "C".

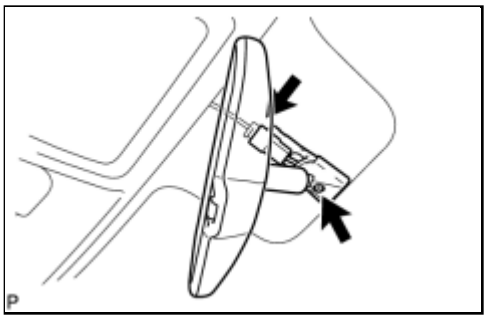
Title: MIRROR (INT): INNER REAR VIEW MIRROR (w/ EC Mirror): REMOVAL (2010 Corolla)		

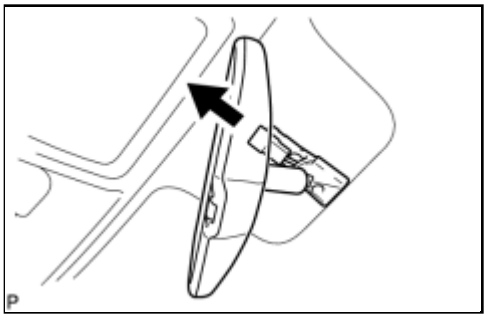
REMOVAL

1. REMOVE INNER REAR VIEW MIRROR COVER



(a) Disengage the 2 claws and slide the inner rear view mirror cover as shown in the illustration.

(b) Disengage the 6 claws and remove the inner rear view mirror cover.

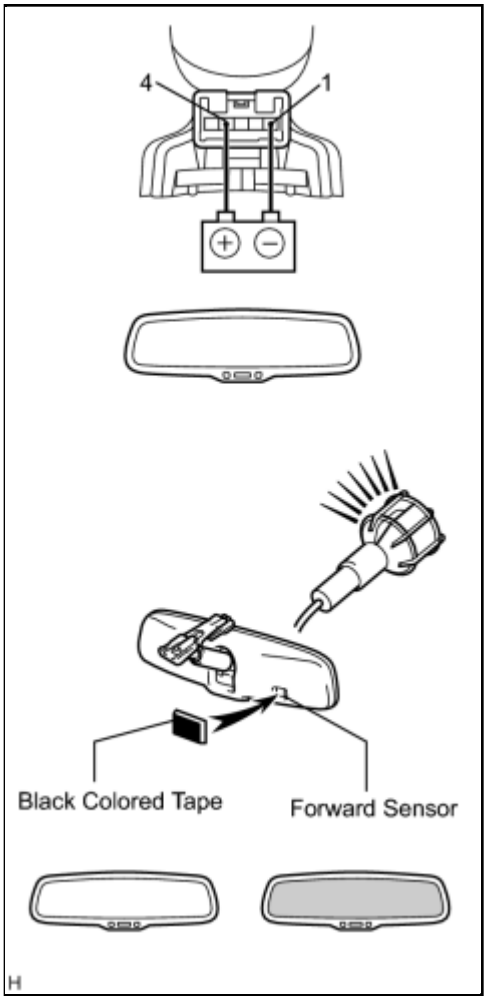


2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) Disconnect the connector.

(b) Using a "TORX" socket wrench (T20), remove the from and the inner rear view mirror.

(c) Slide the inner rear view mirror assembly in the direction



indicated by the arrow shown in the illustration to remove it.

Title: MIRROR (INT): INNER REAR VIEW MIRROR (w/ EC Mirror): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY

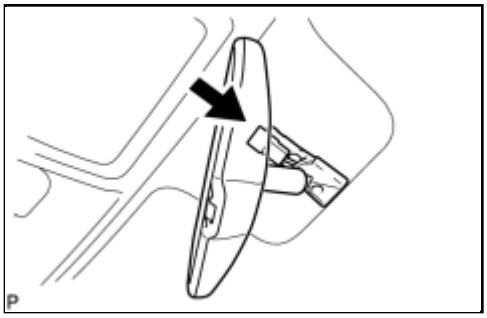
(a) Inspect operation of the electrochromic inner mirror.

(1) Connect a positive (+) lead from the battery to terminal 4 and a negative (-) lead to terminal 1.

(2) Attach black colored tape to the forward sensor to prevent it from sensing.

(3) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

OK:



Mirror surface changes from bright to dark.

If the result is not as specified, replace the mirror assembly.

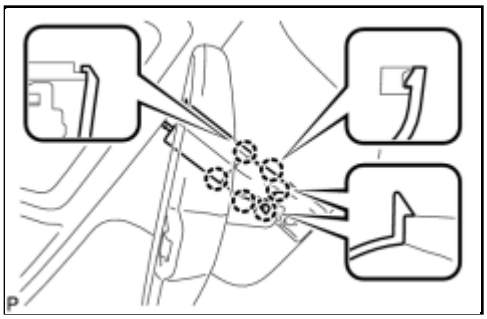
Title: MIRROR (INT): INNER REAR VIEW MIRROR (w/ EC Mirror): INSTALLATION (2010 Corolla)		

INSTALLATION

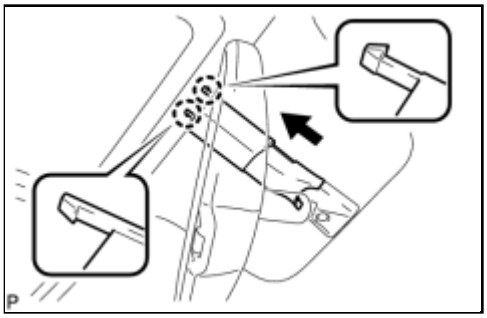
1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

(a) Slide the inner rear view mirror assembly in the direction indicated by the arrow shown in the illustration to install it.



(b) Using a "TORX" socket wrench (T20), install the inner rear view mirror with the screw.

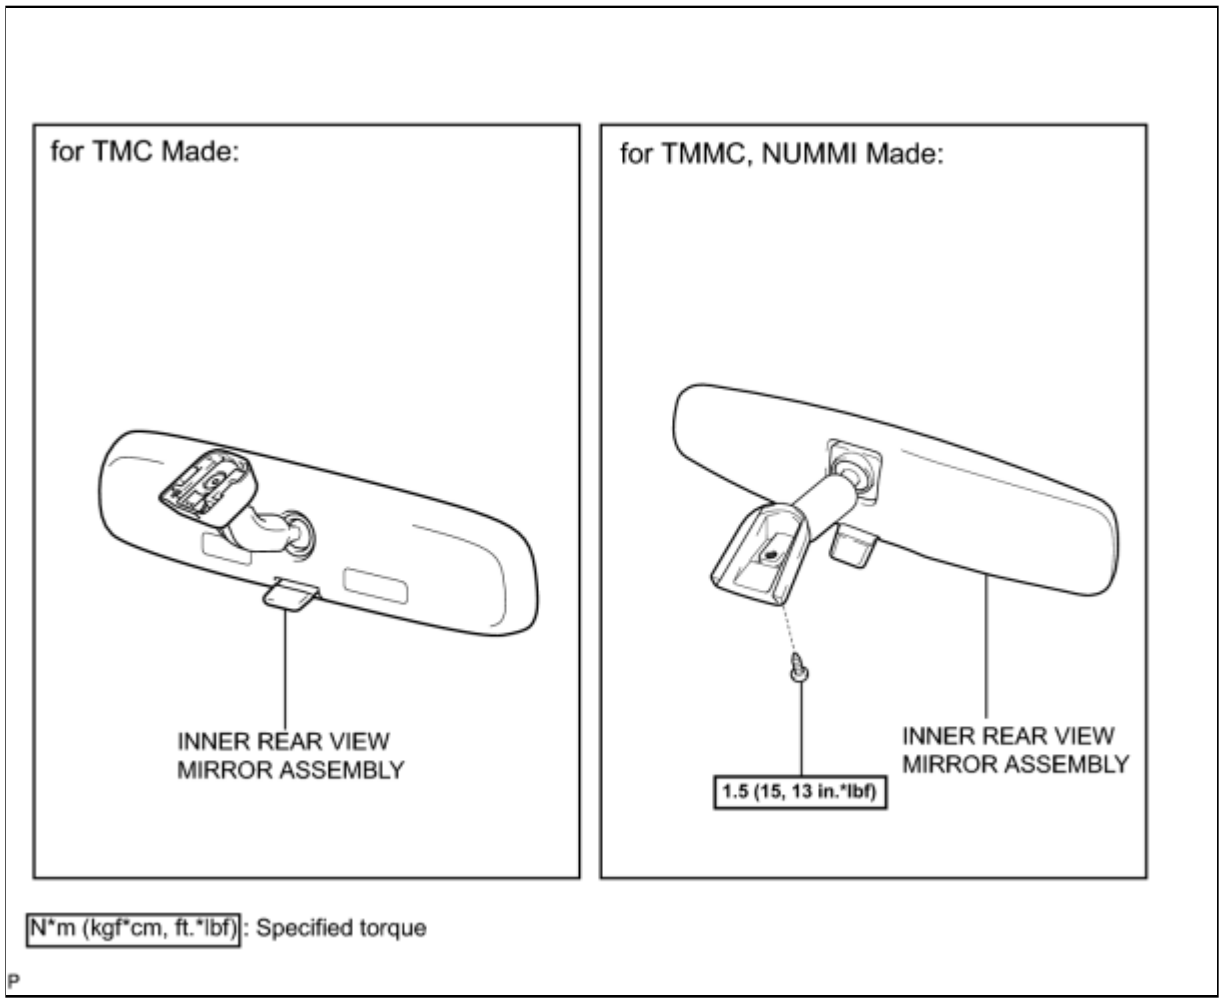
Torque: 1.5 N·m (15 kgf·cm, 13in·lbf)



(c) Connect the connector.

2. INSTALL INNER REAR VIEW MIRROR COVER

(a) Engage the 6 claws and temporarily install the inner rear view mirror cover.



(b) Slide the inner rear view mirror cover and engage the 2 claws as shown in the illustration to install the cover.

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: PRECAUTION (2010 Corolla)		

PRECAUTION

CAUTION:

Replace the faulty parts of the seat belt systems (outer belt, inner belt, bolts, nuts, adjustable shoulder anchor, tether anchor hardware and other related parts). When inspecting a vehicle that was in a collision, be sure to check all of the seat belt systems regardless of whether or not the system was activated in the collision. Replace any damaged or malfunctioning systems.

1. RUNNING TEST (IN SAFE AREA)

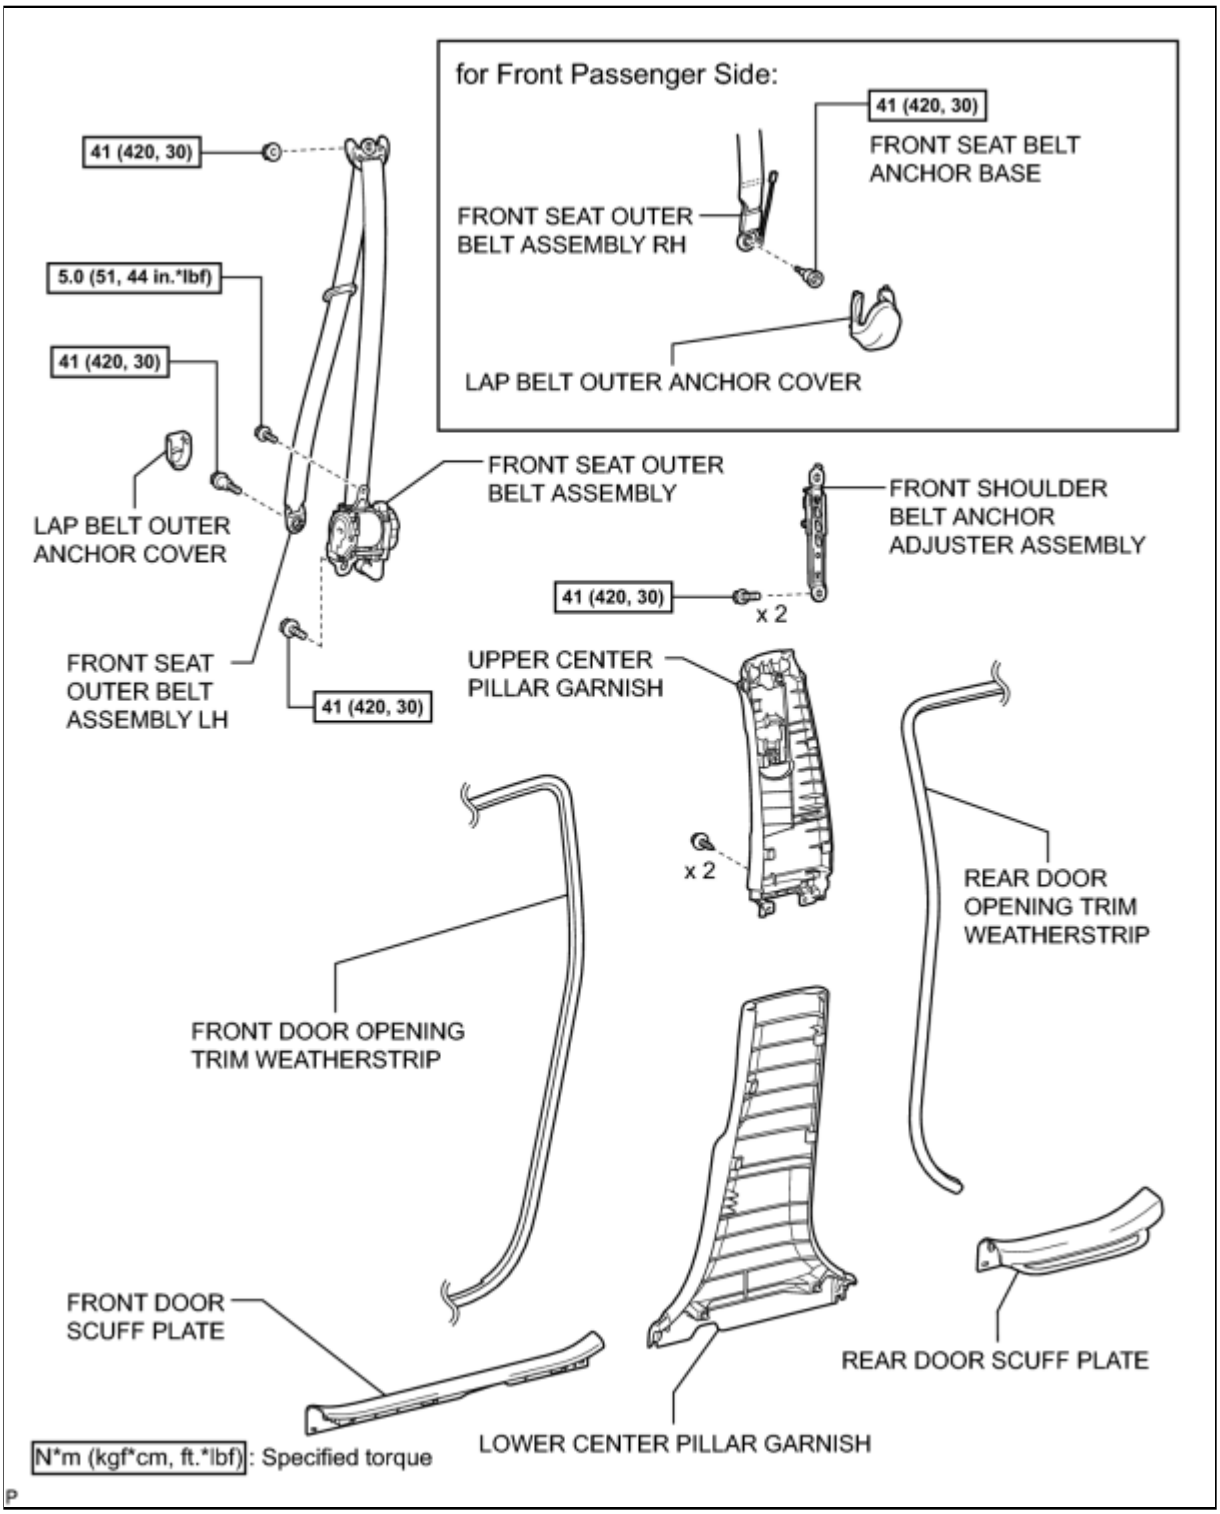
CAUTION:

Conduct this test in a safe area.

(a) Fasten the front seat belt.

(b) Drive the vehicle at 16 km/h (10 mph) and firmly depress the brake pedal. Check that the belt locks and cannot be extended at this time.

If the belt does not lock, replace the seat belt assembly INFO .



HINT:

Inspect the seat belt assembly before installing it INFO **.**

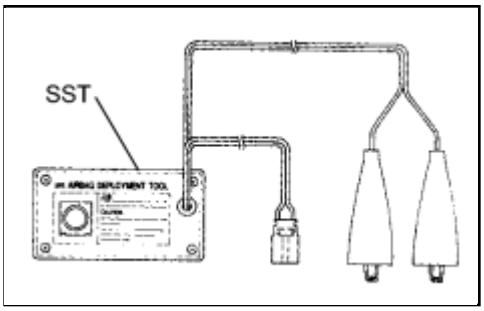
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011CX02JX
Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: DISPOSAL (2010 Corolla)		

DISPOSAL

HINT:



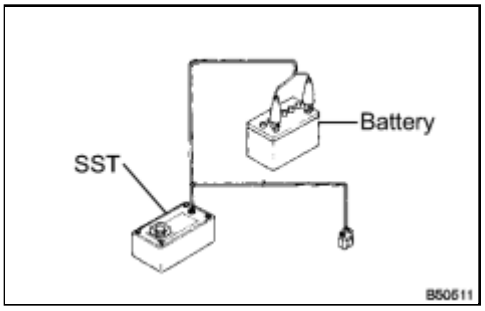
When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt (with a seat belt pretensioner), always deploy the seat belt pretensioner first in accordance with the procedures described below. If any abnormality occurs during deployment of the seat belt pretensioner, contact the service dept. of the distributor.

1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN INSTALLED IN VEHICLE)

NOTICE:

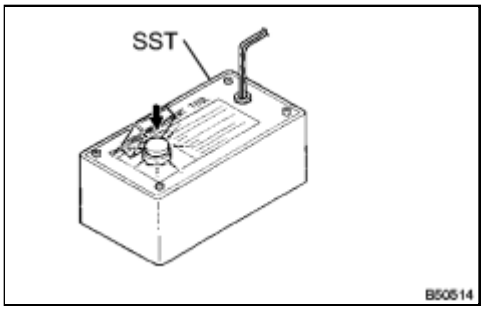
- Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.
- The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.
- When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft.) away from the front seat outer belt.
- Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.
- When deploying the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical interference.
- Be sure to follow the procedures listed below when deploying the seat belt pretensioner.

(a) Check the function of SST.



SST: 09082-00700
SST: 09082-00770

CAUTION:

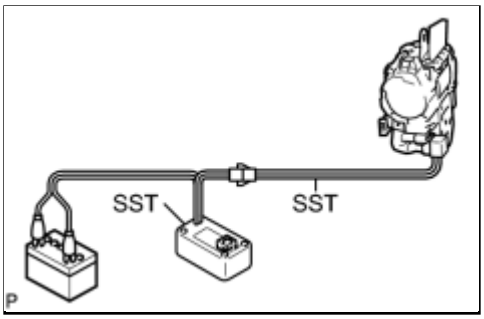


When deploying the seat belt pretensioner, always use the specified SST.

(1) Connect the red clip of SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

HINT:

At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.



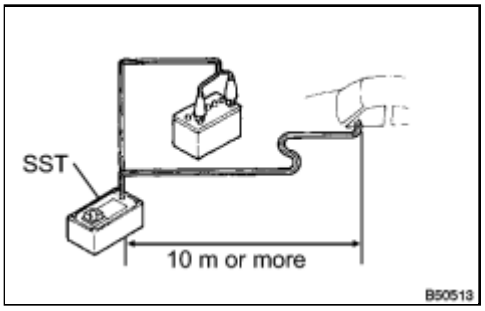
(2) Press the SST deployment switch and check that the LED of the SST deployment switch lights up.

CAUTION:

If the LED is lit when the deployment switch is not pressed, SST may be malfunctioning. Therefore, do not use SST.

(b) Connect SST.

(1) Connect SST, and then connect them to the front seat outer belt pretensioner.



SST: 09082-00700

SST: 09082-00770

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.

(2) Move SST at least 10 m (33 ft.) away from the front of the vehicle.

(3) Close all the doors and windows of the vehicle.

NOTICE:

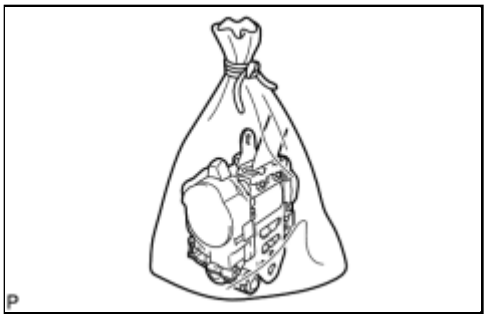
Do not damage the SST wire harness.

(c) Deploy the front seat outer belt pretensioner.

(1) Confirm that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

(2) Connect the red clip of SST to the battery positive (+) terminal and the black clip to the negative (-) terminal.

(3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.



HINT:

The seat belt pretensioner will deploy at the same time as the LED of SST illuminates.

(d) Dispose of the front seat outer belt assembly.

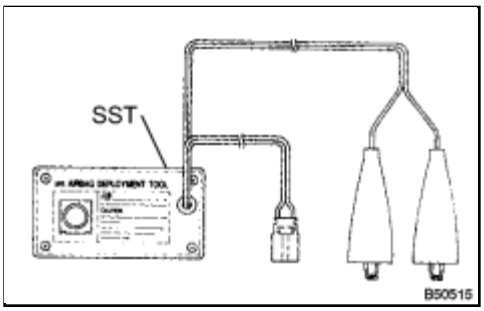
(1) Remove the front seat outer belt assembly and SST.

(2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.

CAUTION:

- The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.
- Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.

HINT:



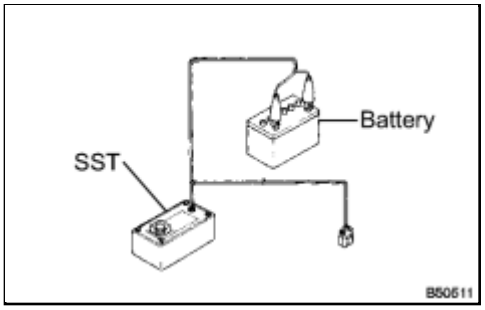
When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.
- The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.
- When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft.) away from the front seat outer belt.
- Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.
- When disposing of a pretensioner equipped front seat outer belt, never deploy the belt in the customer's vehicle.
- Be sure to follow the procedure listed below when deploying the seat belt pretensioner.

(a) Check the function of SST.



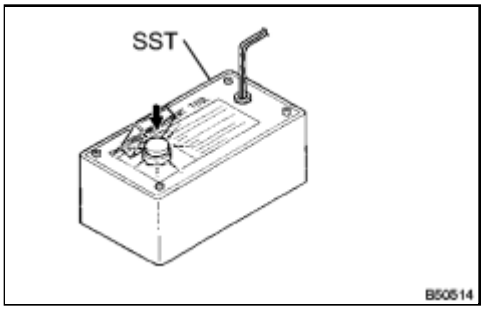
SST: 09082-00700

SST: 09082-00770

CAUTION:

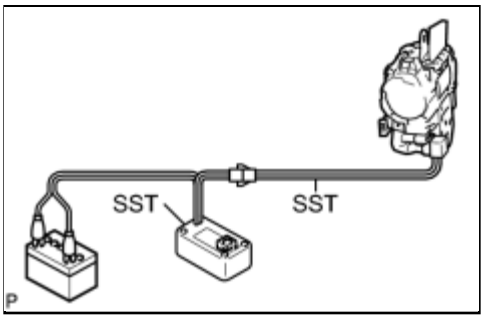
When deploying the seat belt pretensioner, always use the specified SST.

(1) Connect the red clip of SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.



HINT:

At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.

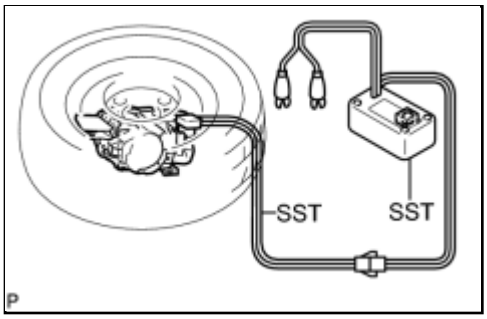


(2) Press the SST deployment switch and check that the LED of the SST deployment switch lights up.

CAUTION:

If the LED is lit when the deployment switch is not pressed, SST may be malfunctioning. Therefore, do not use SST.

(b) Connect SST.



(1) Connect SST, and then connect them to the front seat outer belt pretensioner.

SST: 09082-00700

SST: 09082-00770

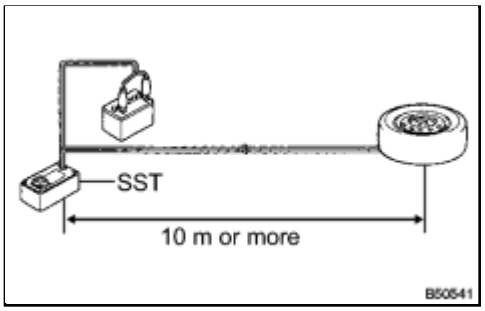
NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.

(2) Place the outer belt on the ground and cover it with a tire and wheel assembly.

NOTICE:

Position the front seat outer belt assembly as shown in the illustration.



(3) Position and hold SST at least 10 m (33 ft.) away from the wheel.

NOTICE:

Do not damage the SST wire harness.

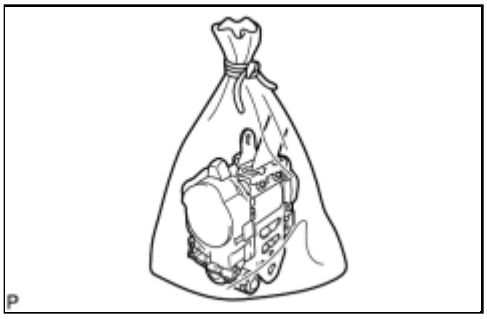
(c) Deploy the front seat outer belt pretensioner.

(1) Check that no one is within a 10 m (33 ft.) radius of the wheel.

(2) Connect the red clip of SST to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

(3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.

HINT:



The seat belt pretensioner will deploy at the same time as the LED of SST illuminates.

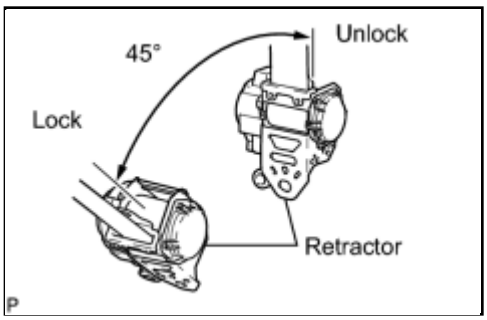
(d) Dispose of the front seat outer belt assembly.

(1) Remove the wheel and SST.

(2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general parts.

CAUTION:

- The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.
- Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.
- Always wash your hands with water after completing the operation.
- Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.



HINT:

When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: INSPECTION (2010 Corolla)		

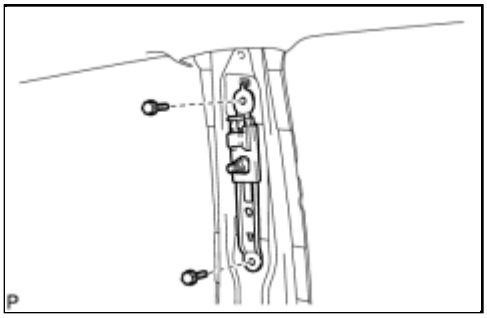
INSPECTION

1. INSPECT FRONT SEAT OUTER BELT ASSEMBLY

NOTICE:

Do not disassemble the retractor.

(a) Before installing the outer belt, check the ELR.

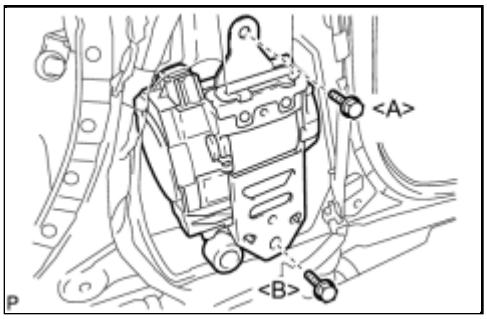


(1) When the inclination of the retractor is 15° or less, check that the belt can be pulled from the retractor. When the inclination of the retractor is over 45°, check that the belt locks.

If the result is not as specified, replace the outer belt assembly.

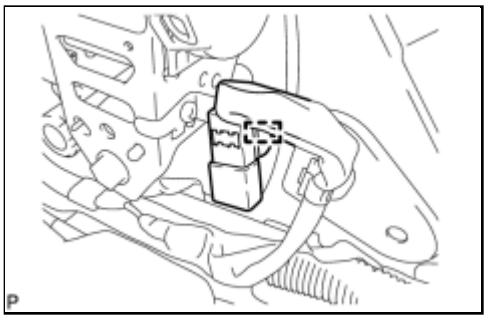
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000120901TX
Title: SEAT BELT: FRONT SEAT OUTER BELT ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

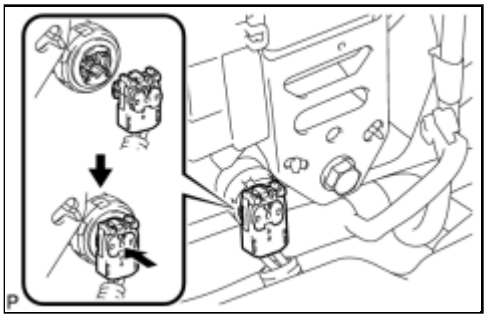
(a) Engage the adjuster positioning hole with the claw and install the front shoulder belt anchor adjuster assembly with the 2 bolts.



Torque: 41 N·m (420 kgf·cm, 30ft·lbf)

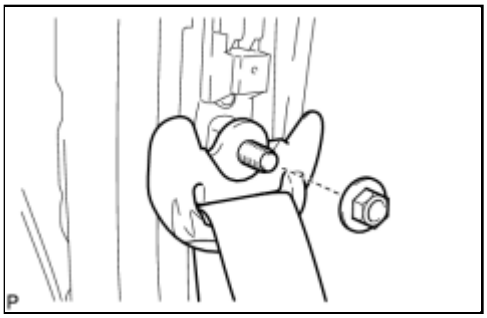
2. INSTALL FRONT SEAT OUTER BELT ASSEMBLY

(a) Install the front seat outer belt assembly with the 2 bolts.



Bolt A - Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)
Bolt B - Torque: 41 N·m (420 kgf·cm, 30ft·lbf)

(b) for Front Passenger Side:

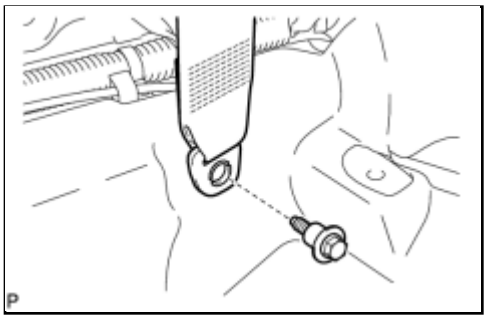


(1) Engage the clamp.

(c) Connect the connector and lock the locking button as shown in the illustration.

NOTICE:

Securely lock the locking button.



(d) Connect the shoulder anchor of the front seat outer belt assembly with the nut.

Torque: 41 N·m (420 kgf·cm, 30ft·lbf)

3. INSTALL UPPER CENTER PILLAR GARNISH INFO

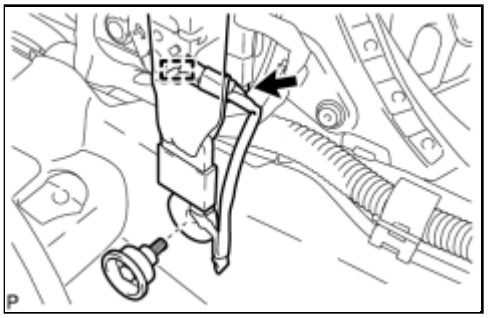
4. INSTALL LOWER CENTER PILLAR GARNISH INFO

5. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (for Driver Side)

(a) Install the floor end of the front seat outer belt assembly with the bolt.

Torque: 41 N·m (420 kgf·cm, 30ft·lbf)

(b) Check if the ELR locks.



NOTICE:

The check should be performed with the outer belt assembly installed.

(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

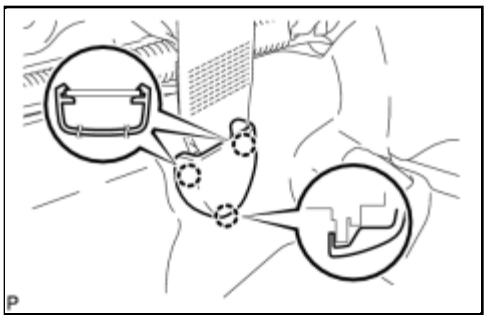
6. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (for Front Passenger Side)

(a) Install the floor end of the front seat outer belt assembly with the front seat belt anchor base.

Torque: 41 N·m (420 kgf·cm, 30ft·lbf)

(b) Engage the clamp.

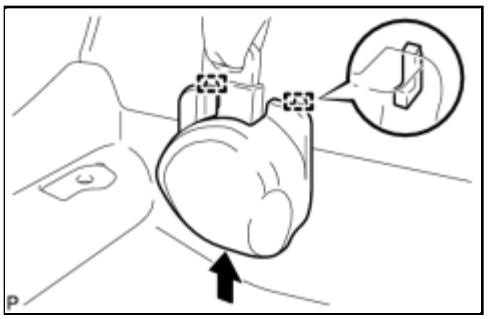
(c) Connect the connector.



(d) Check if the ELR locks.

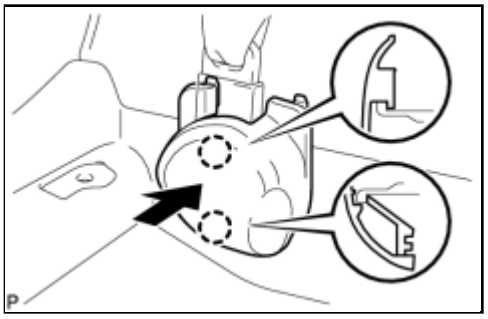
NOTICE:

The check should be performed with the outer belt assembly installed.



(1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

7. INSTALL LAP BELT OUTER ANCHOR COVER (for Driver Side)



(a) Engage the 3 claws and install the lap belt outer anchor cover.

8. INSTALL LAP BELT OUTER ANCHOR COVER (for Front Passenger Side)

(a) Engage the 2 guides.

(b) Engage the 2 claws and install the lap belt outer anchor cover.

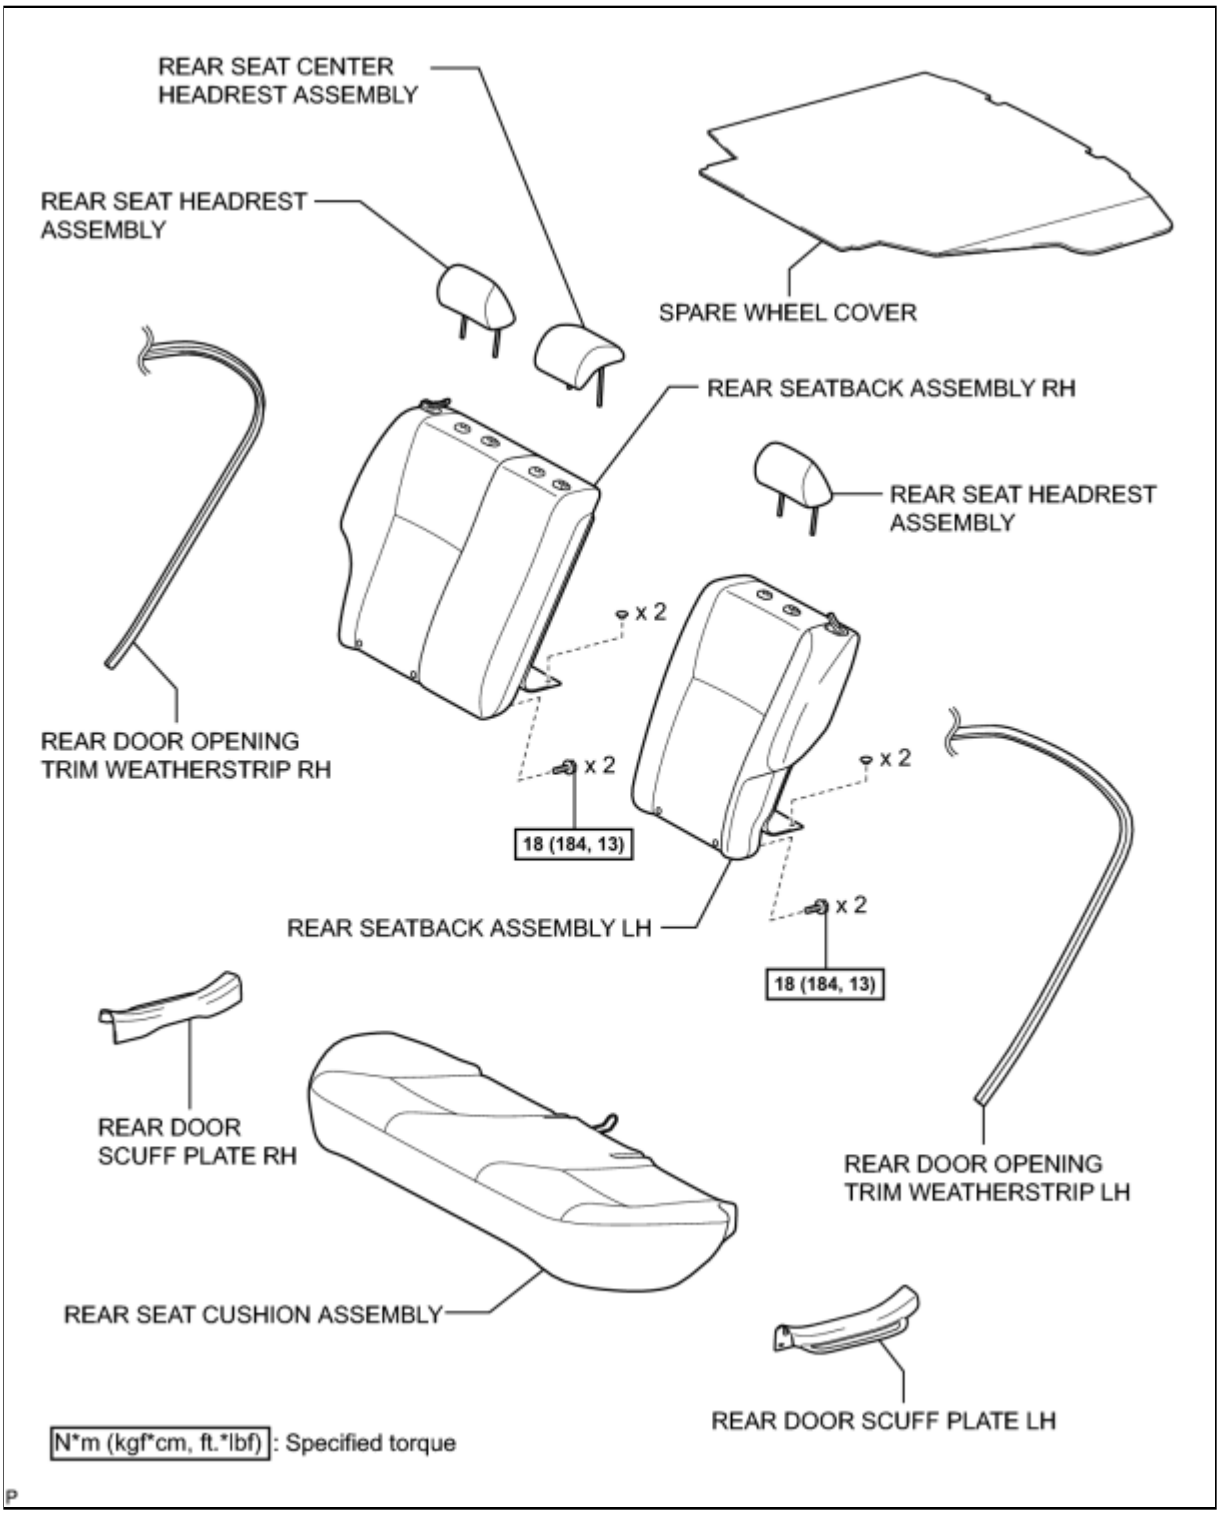
9. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP INFO

10. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP INFO

11. INSTALL REAR DOOR SCUFF PLATE INFO

12. INSTALL FRONT DOOR SCUFF PLATE INFO

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



14. INSPECT SRS WARNING LIGHT

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. DRIVER SEAT BELT WARNING LIGHT

(a) When the driver seat belt is not fastened with the ignition switch ON, the driver seat belt warning light on the combination meter assembly comes on to inform the driver. The center airbag assembly detects the driver seat belt condition and sends signals to the body ECU and the meter assembly via CAN communication.

2. PASSENGER SEAT BELT WARNING

(a) When the passenger seat belt is not fastened with ignition switch ON and the passenger seat occupied, check that the passenger seat belt warning light on telltale light blinks. The occupant detection sensor detects if the passenger seat is occupied and sends signals to the combination meter assembly. The inner belt detects the passenger seat belt condition and sends signals to the combination meter assembly. After receiving the signals from the occupant detection sensor and inner belt, the meter assembly sends signals to telltale light to request the passenger seat belt warning light to blink or go off.

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The seat belt warning system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000012G704FX
Title: SEAT BELT: SEAT BELT WARNING SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Perform Active Test according to the display on the Techstream.

HINT:

The ignition switch must be turned to ON to proceed with the Active Test using the Techstream.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Front Passenger Side Seat Belt	Front passenger side seat belt warning light	Front passenger side seat belt warning light is OFF / ON	Confirm that the vehicle is stopped, engine idling
Driver Side Seat Belt	Driver side seat belt warning light	Driver side seat belt warning light is OFF / ON	Confirm that the vehicle is stopped, engine idling

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT DRIVER SIDE SEAT BELT WARNING

(a) Turn the ignition switch to ON.

(b) When the driver seat belt is not fastened, check that the driver seat belt warning light on the combination meter blinks.

(c) When the driver seat belt is fastened, check that the driver seat belt warning light on the combination meter is off.

2. INSPECT PASSENGER SIDE SEAT BELT WARNING

(a) Turn the ignition switch to ON.

(b) When the front passenger seat belt is not fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the telltale light assembly blinks.

(c) When the front passenger seat belt is fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the telltale light is off.

Title: SEAT BELT: SEAT BELT WARNING SYSTEM: Driver Side Seat Belt Warning Light does not Operate (2010 Corolla)		

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

When the ignition switch is on (IG), the center airbag sensor assembly transmits front seat inner belt status signals to the combination meter assembly through CAN. If the driver seat belt is not fastened, the combination meter assembly blinks the driver seat belt warning light. If the seat belt is fastened, the warning light goes off.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The seat belt warning system uses CAN. Before troubleshooting the seat belt warning system, perform Communication Function Check by following How to Proceed with Troubleshooting to confirm that the communication systems are normal.

PROCEDURE

1.	**CHECK FOR DTC**

(a) Check for DTCs.

Result:

RESULT	PROCEED TO
CAN communication system DTC is output	A
Airbag system DTC is output	B
DTC is not output	C

B ▶ **GO TO AIRBAG SYSTEM**

A ▶ **GO TO CAN COMMUNICATION SYSTEM**

C ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the Driver side seat belt warning light by performing the Active Test.

Combination Meter:

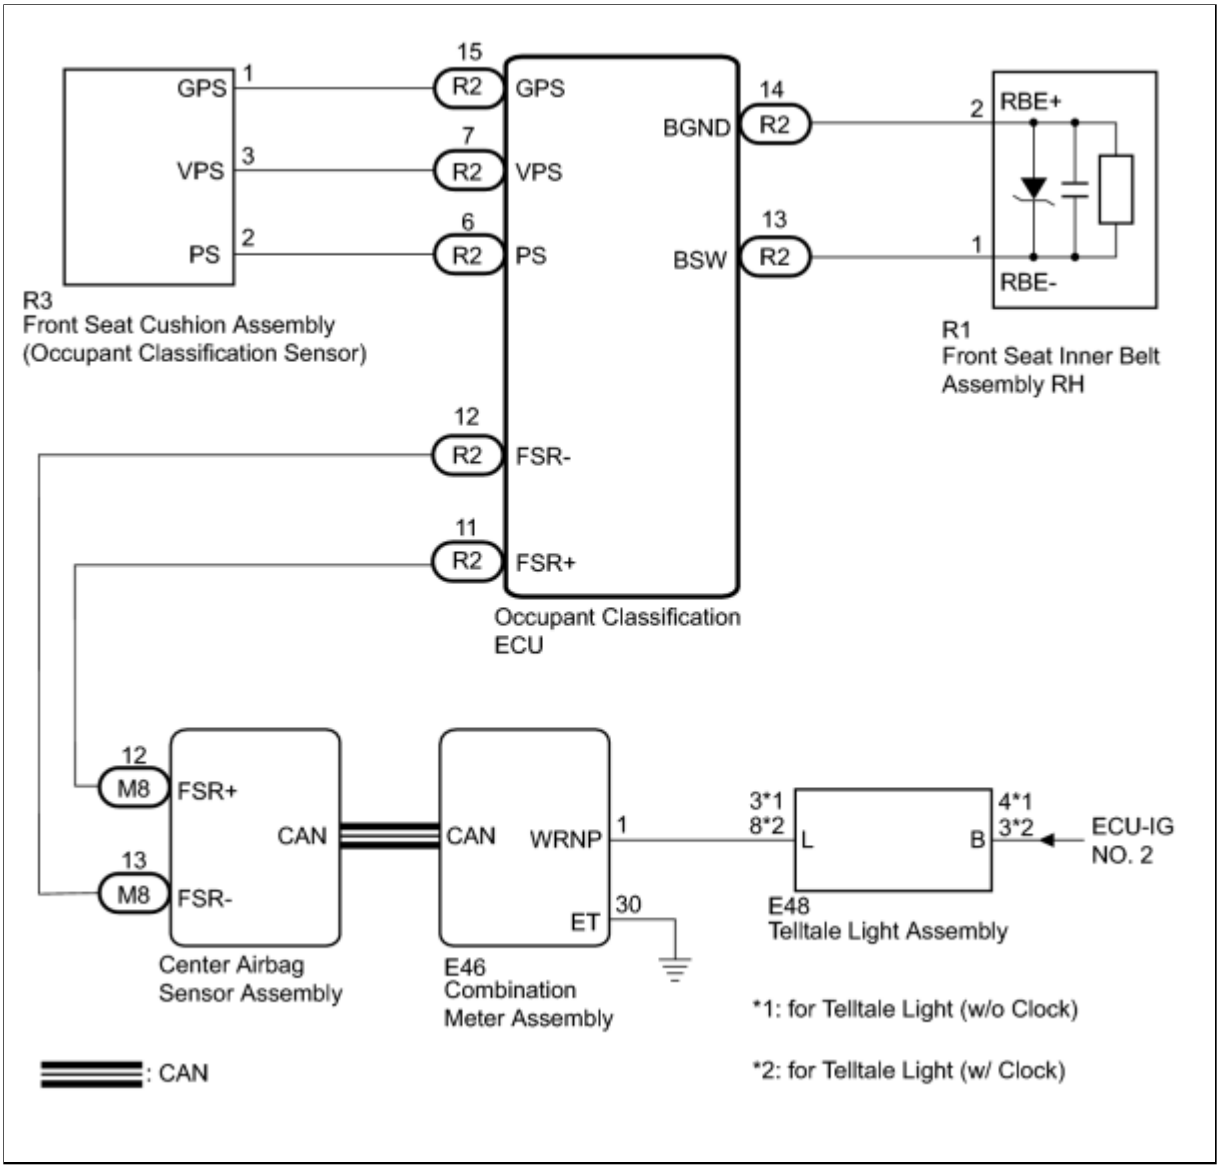
TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Driver Side Seat Belt	Driver side seat belt warning light	Driver side seat belt warning light is OFF / ON	Confirm that the vehicle is stopped, engine idling

OK:

Switch condition (ON/OFF) can be switched by Active Test.

NG ▶ **REPLACE COMBINATION METER**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000014DL02XX
Title: SEAT BELT: SEAT BELT WARNING SYSTEM: Front Passenger Side Seat Belt Warning Light Malfunction (2010 Corolla)		

Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

The occupant detection ECU detects the state of the front seat inner belt assembly RH and road sensor when the front passenger seat is occupied with the ignition switch on (IG). If the front passenger seat belt is not fastened, the front seat belt warning light on the telltale light assembly blinks. If the seat belt is fastened, the warning light goes off.

2.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

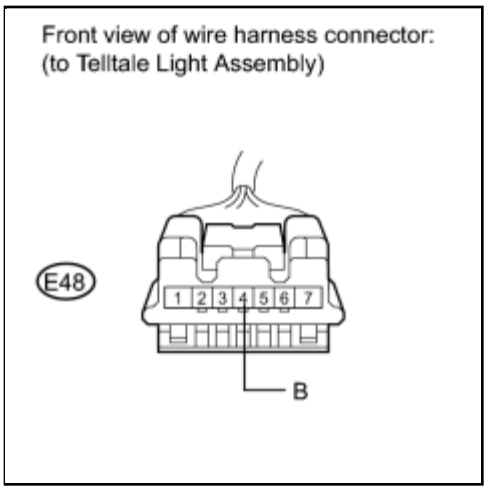
(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the Front passenger side seat belt warning light by performing the Active Test.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Front Passenger Side Seat Belt	Front passenger side seat belt warning light	Front passenger side seat belt warning light is OFF / ON	Confirm that the vehicle is stopped, engine idling

OK:
Switch condition (ON/OFF) can be switched by Active Test.



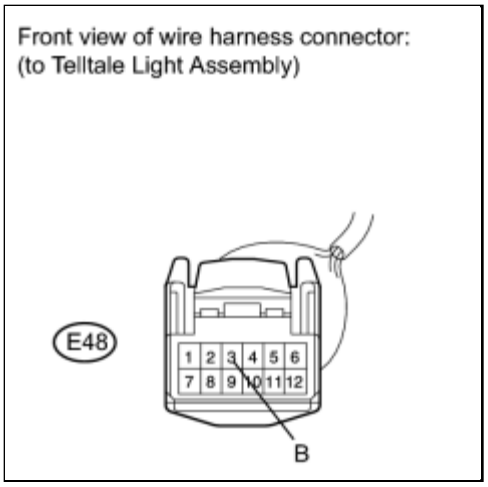
NG ▶ **CHECK WIRE HARNESS (BATTERY POSITIVE AND BODY GROUND)**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

3.	**CHECK WIRE HARNESS (BATTERY POSITIVE AND BODY GROUND)**

(a) Disconnect the E48 connector.

(b) for Telltale Light (w/o Clock):



(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

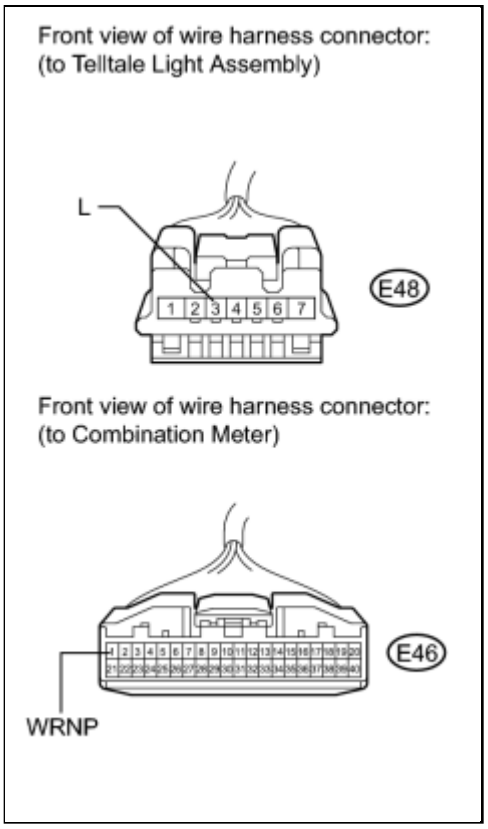
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E48-4 (B) - Body ground	Ignition switch on (IG)	11 to 14 V

(c) for Telltale Light (w/ Clock):

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E48-3 (B) - Body ground	Ignition switch on (IG)	11 to 14 V



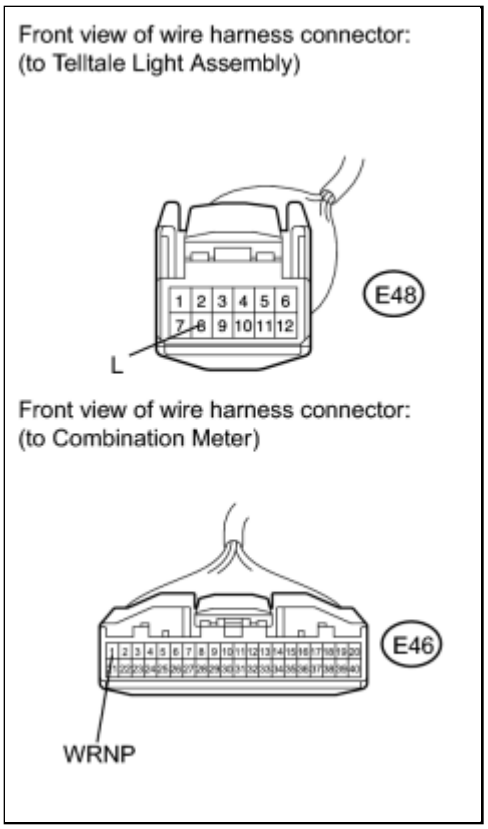
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR REPLACE FUSE**

OK
▼

4.	**CHECK HARNESS OR CONNECTOR (TELLTALE LIGHT ASSEMBLY - COMBINATION METER)**

(a) Disconnect the E46 connector.

(b) for Telltale Light (w/o Clock):



(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

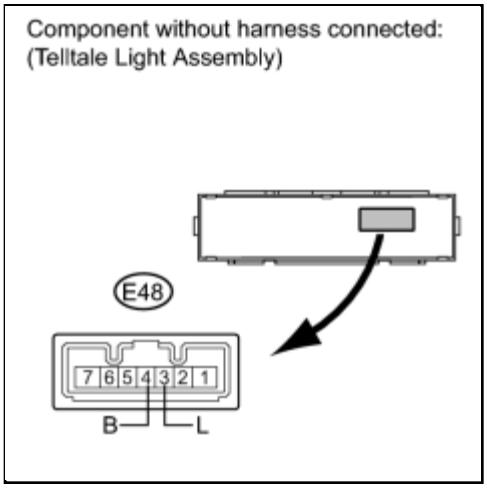
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-3 (L) - E46-1 (WRNP)	Always	Below 1 Ω
E46-3 (L) or E46-1 (WRNP) - Body ground	Always	10 kΩ or higher

(c) for Telltale Light (w/ Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-8 (L) - E46-1 (WRNP)	Always	Below 1 Ω
E46-8 (L) or E46-1 (WRNP) - Body ground	Always	10 kΩ or higher



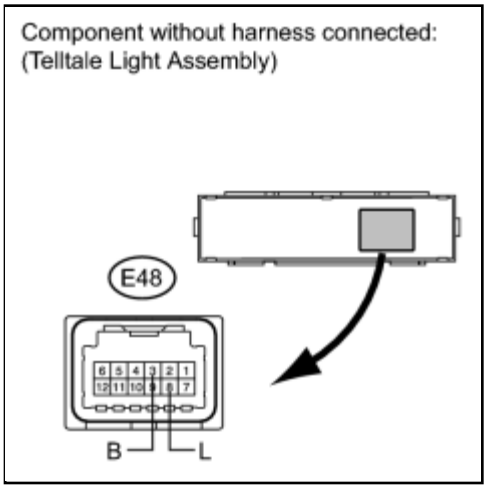
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**INSPECT TELLTALE LIGHT ASSEMBLY**

(a) Check the telltale light assembly (front passenger seat belt warning light) condition.

(b) for Telltale Light (w/o Clock):



(1) Apply battery voltage to the connector according to the table below.

OK:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive (+) → E48-4 (B) Battery negative (-) → E48-3 (L)	Always	Seat belt warning light comes on

(c) for Telltale Light (w/ Clock):

(1) Apply battery voltage to the connector according to the table below.

OK:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive (+) → E48-3 (B) Battery negative (-) → E48-8 (L)	Always	Seat belt warning light comes on

NG ▶ **REPLACE TELLTALE LIGHT ASSEMBLY**

OK ▶ REPLACE COMBINATION METER ASSEMBLY

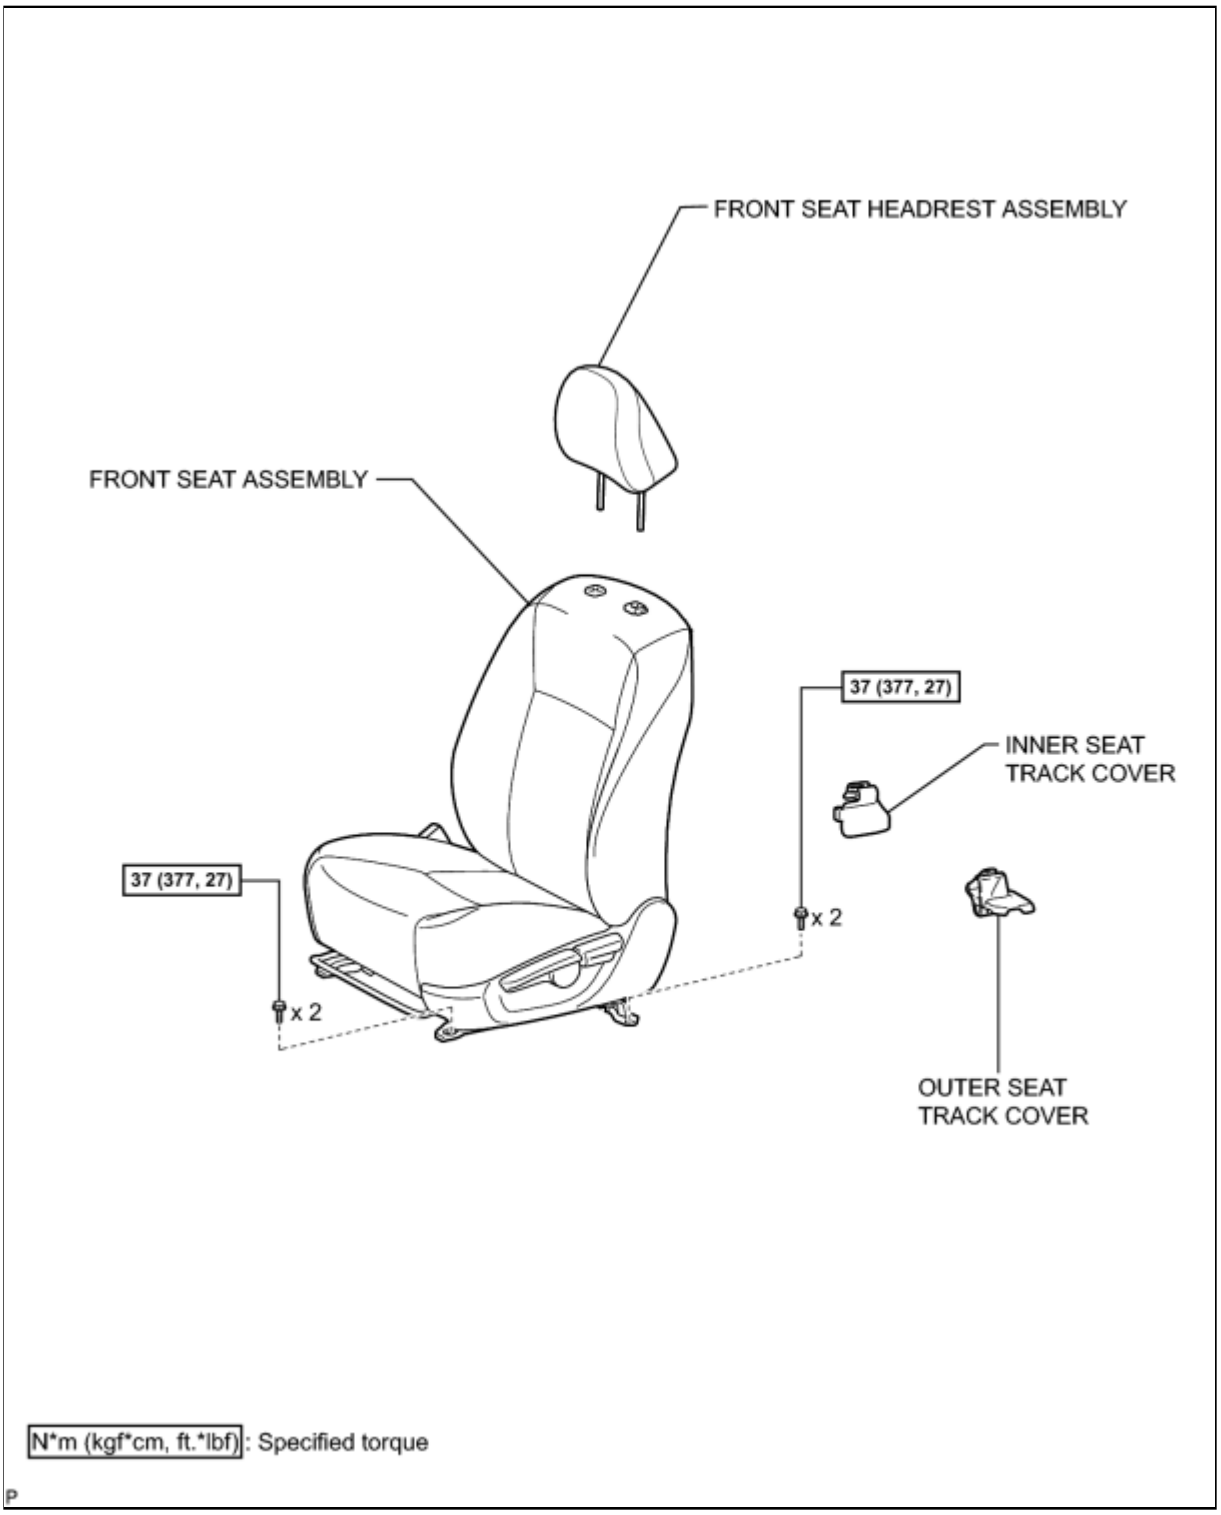
Title: SEAT: FRONT POWER SEAT CONTROL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. FRONT POWER SEAT CONTROL SYSTEM DESCRIPTION

The driver seat is equipped with slide, reclining, lifter, front vertical and lumbar support adjustment functions.

2. FUNCTION OF MAIN COMPONENTS



The following functions are available:

COMPONENTS	FUNCTION
Front seat assembly (slide motor)	Activated based on a signal from the power seat switch, a motor is activated and slides the seat forward and rearward.
Front seat assembly (reclining motor)	Activated based on a signal from the power seat switch, a motor is activated and tilts and reclines the seat.
Power seat motor assembly (front vertical motor)	Activated based on a signal from the power seat switch and raises and lowers the seat cushion front vertically.
Front seat assembly (lifter motor)	Activated based on a signal from the power seat switch and raises and lowers the seat vertically.
Lumbar support adjuster assembly	Activated based on a signal from the front power seat lumbar switch and adjusts lumbar support.
Front power seat lumbar switch	Based on switches operated, the seat is adjusted accordingly.

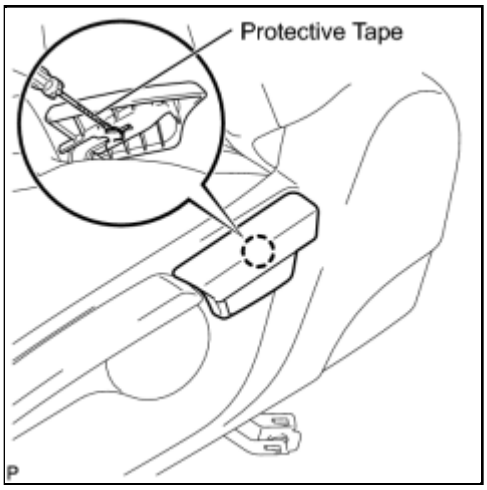
Title: SEAT: FRONT SEAT ASSEMBLY (for Manual Seat): DISASSEMBLY (2010 Corolla)		

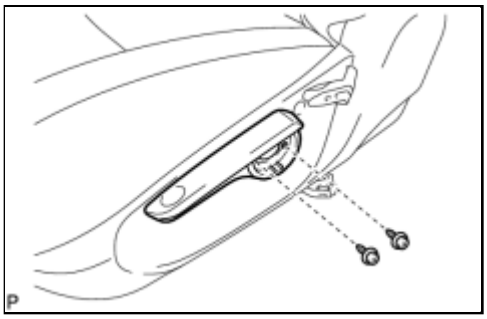


DISASSEMBLY

1. REMOVE SEAT ADJUSTER COVER CAP

(a) Remove the 2 seat adjuster cover caps.

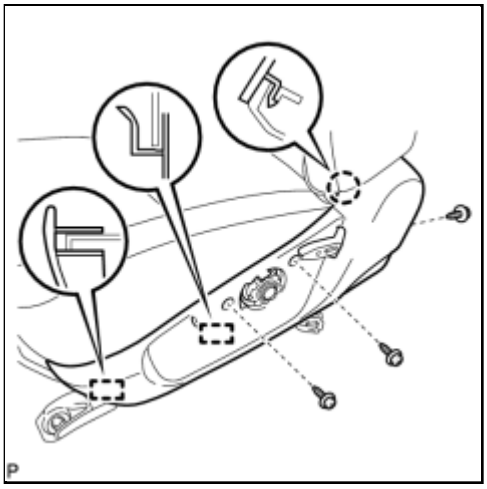
2. REMOVE RECLINING ADJUSTER RELEASE HANDLE



(a) Using a screwdriver wrapped with protective tape, disengage the claw and remove the reclining adjuster release handle.

3. REMOVE VERTICAL SEAT ADJUSTER KNOB CAP

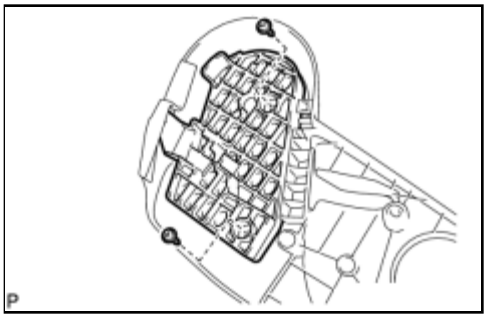
(a) Using a screwdriver wrapped with protective tape, disengage the 2 claws and remove the vertical seat adjuster knob cap.



4. REMOVE VERTICAL ADJUSTING HANDLE

(a) Remove the 2 screws and the vertical adjusting handle.

5. REMOVE FRONT SEAT CUSHION SHIELD



(a) Remove the 3 screws.

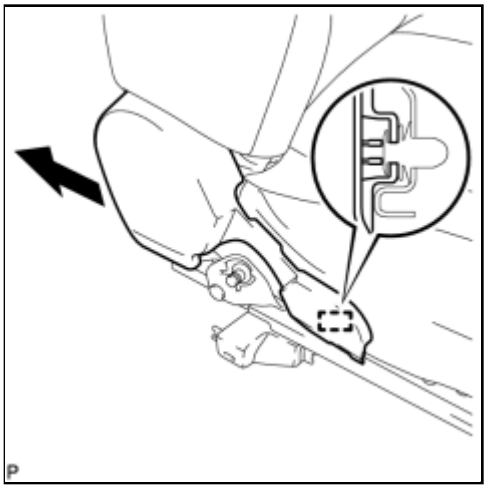
(b) Disengage the claw.

(c) Disengage the 2 guides and remove the front seat cushion shield.

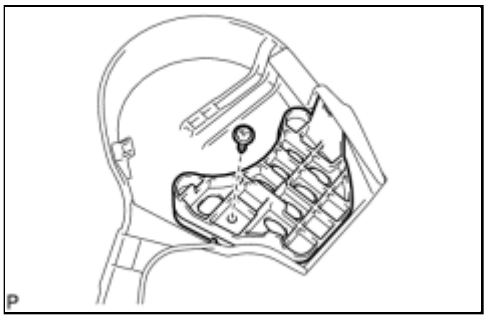
6. REMOVE NO. 1 SEAT TRACK LOWER SPACER

(a) Remove the 2 screws and the No. 1 seat track lower spacer.

7. REMOVE FRONT SEAT INNER BELT ASSEMBLY INFO



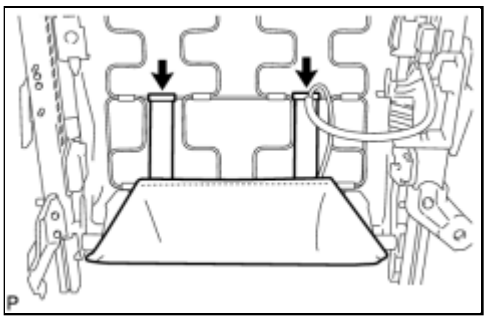
8. REMOVE FRONT SEAT CUSHION INNER SHIELD



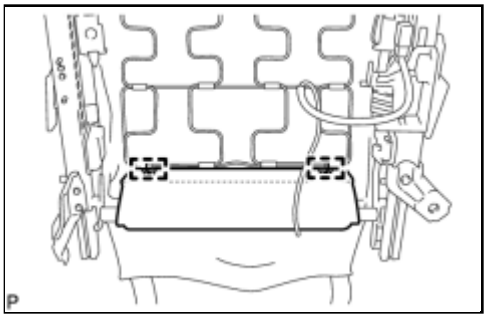
(a) Remove the screw.

(b) Disengage the claw.

(c) Separate the guide and remove the front seat cushion inner shield as shown in the illustration.

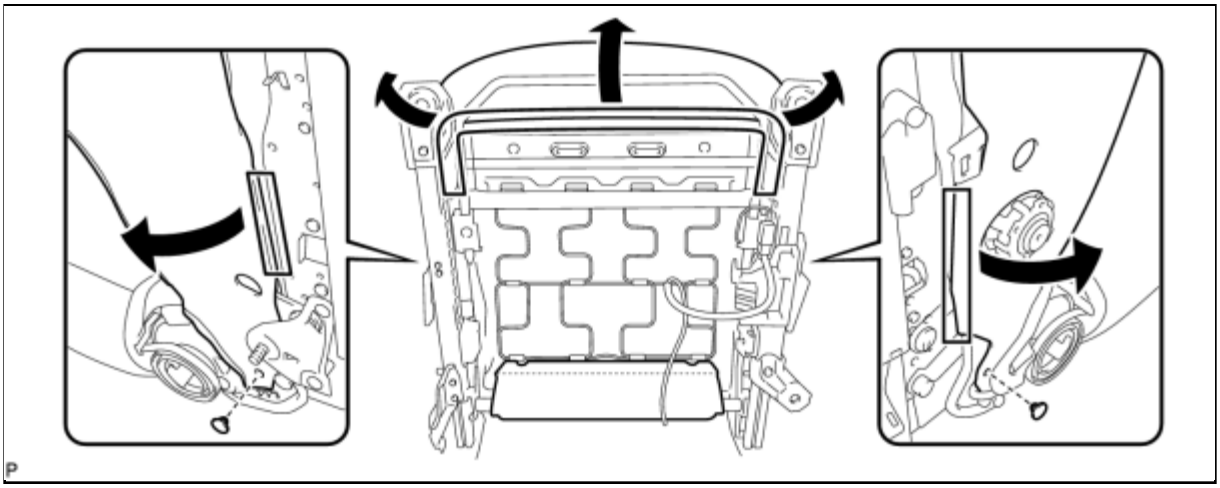


9. REMOVE NO. 2 SEAT TRACK LOWER SPACER



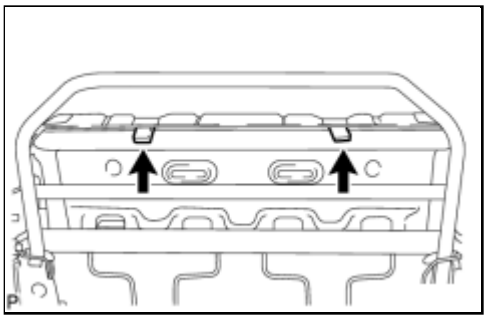
(a) Remove the screw and the No. 2 seat track lower spacer.

10. REMOVE FRONT SEAT CUSHION COVER WITH PAD



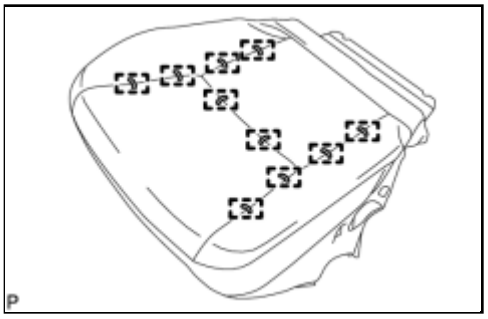
(a) Disengage the 2 hooks.

(b) Remove the 2 hog rings.

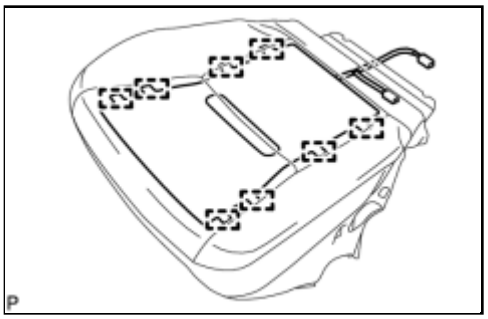


(c) Using a clip remover, remove the 2 clips.

(d) Disengage the hooks and remove the front seat cushion cover with pad as shown in the illustration.



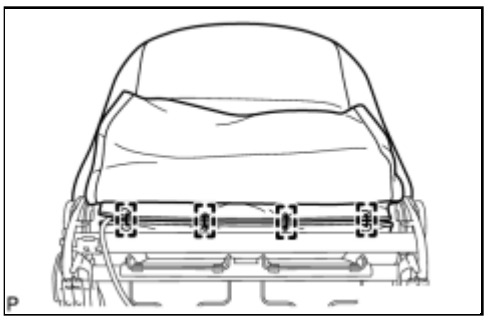
11. REMOVE FRONT SEAT CUSHION EDGE PROTECTOR



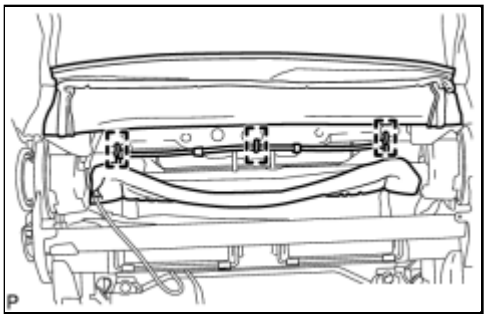
(a) Remove the 2 front seat cushion edge protectors.

12. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 10 hog rings and the separate type front seat cushion cover.

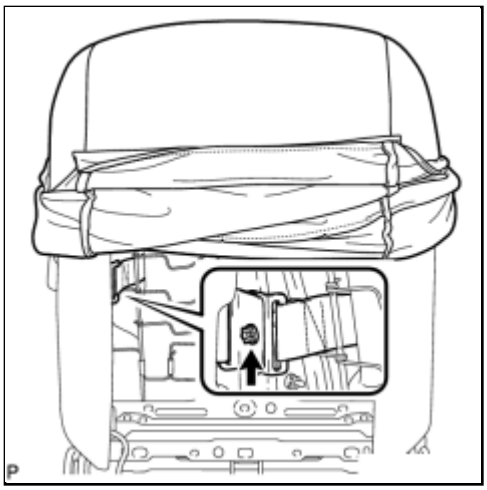


13. REMOVE FRONT SEAT CUSHION HEATER ASSEMBLY (w/ Seat Heater System)

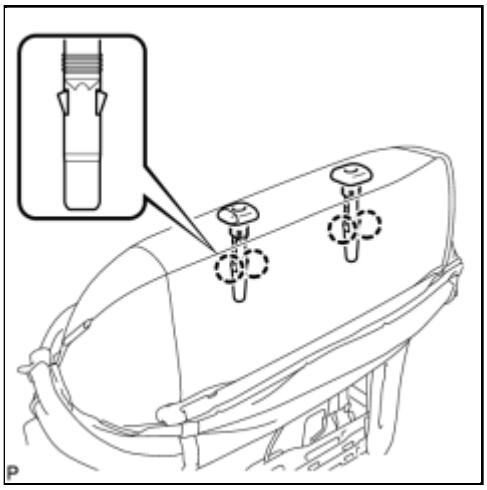


(a) Cut off the 8 tack pins and remove the front seat cushion heater assembly.

14. REMOVE FRONT SEATBACK COVER WITH PAD

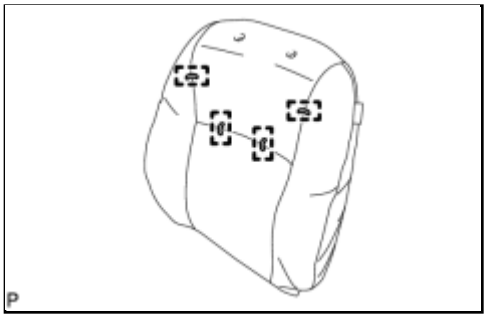


(a) Remove the 4 hog rings.



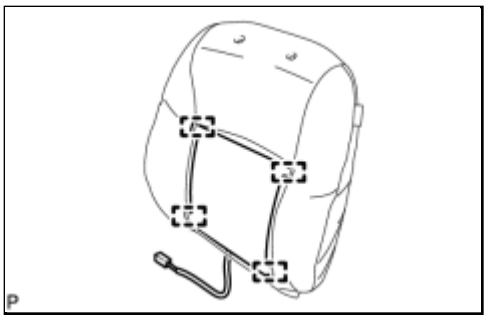
(b) Remove the 3 hog rings.

(c) w/ Front Seat Side Airbag:



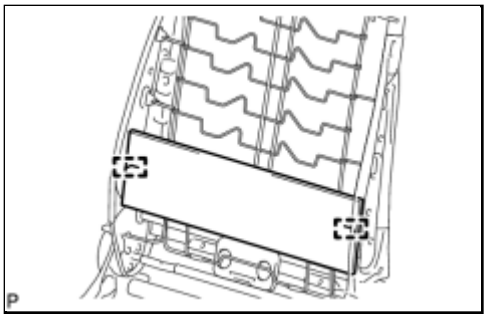
(1) Turn back the separate type front seatback cover to remove the nut, and separate the bracket of the separate type front seatback cover.

(d) Disengage the 4 claws and remove the 2 front seat headrest supports.



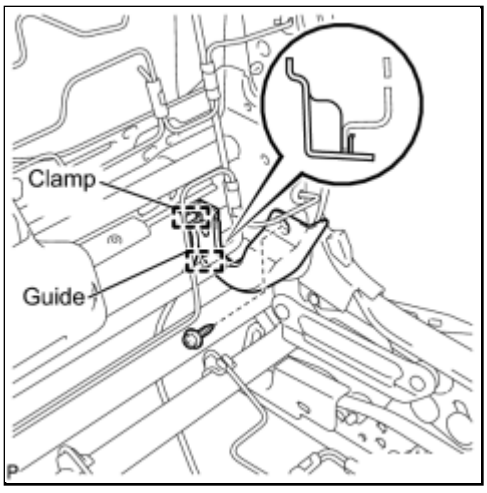
(e) Remove the front seatback cover with pad from the front seat frame assembly with adjuster.

15. REMOVE SEPARATE TYPE FRONT SEATBACK COVER



(a) Remove the 4 hog rings and the separate type front seatback cover.

16. REMOVE FRONT SEATBACK HEATER ASSEMBLY (w/ Seat Heater System)

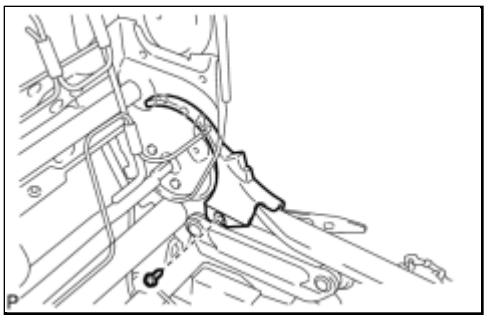


(a) Cut off the 4 tack pins and remove the front seatback heater assembly.

17. REMOVE LUMBAR SUPPORT PLATE (for TMMC, NUMMI Made)

(a) Disengage the 2 hooks and remove the lumbar support plate.

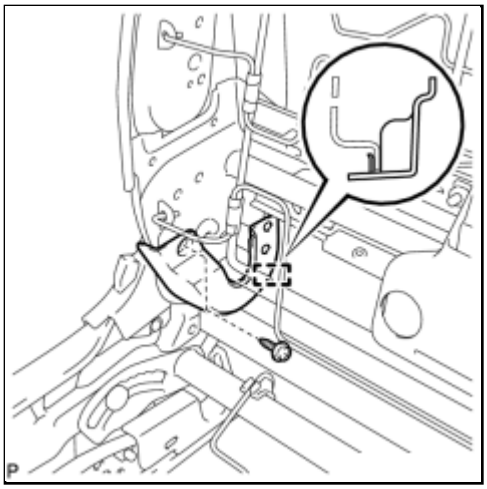
18. REMOVE RECLINING ADJUSTER INSIDE COVER LH



(a) Remove the screw.

(b) Disengage the guide.

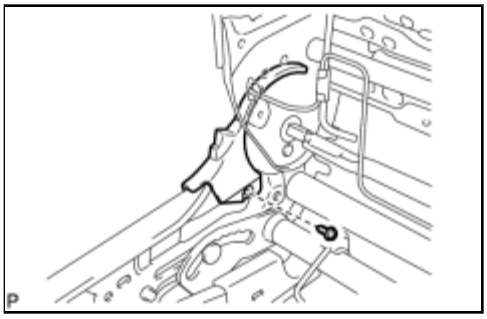
(c) w/ Front Seat Side Airbag:



(1) Disengage the clamp and remove the reclining adjuster inside cover LH.

19. REMOVE RECLINING ADJUSTER INSIDE COVER LH

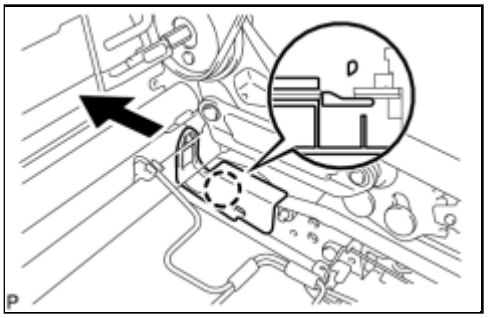
(a) Remove the screw and the reclining adjuster inside cover LH.



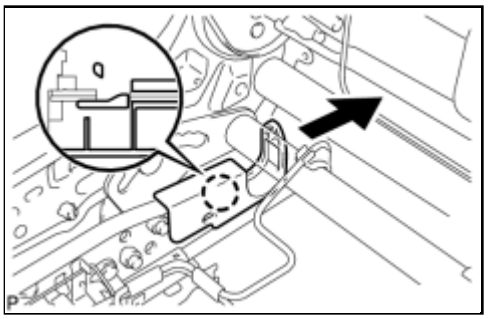
20. REMOVE RECLINING ADJUSTER INSIDE COVER RH

(a) Remove the screw.

(b) Disengage the guide and remove the reclining adjuster inside cover RH.



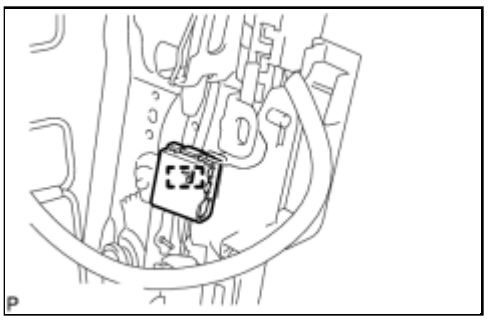
21. REMOVE RECLINING ADJUSTER INSIDE COVER RH



(a) Remove the screw and the reclining adjuster inside cover RH.

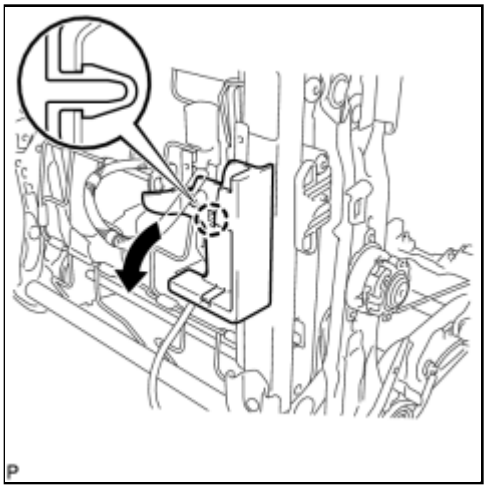
22. REMOVE FRONT SEAT LOWER CUSHION SHIELD LH

(a) Disengage the claw and remove the front seat lower cushion shield LH as shown in the illustration.

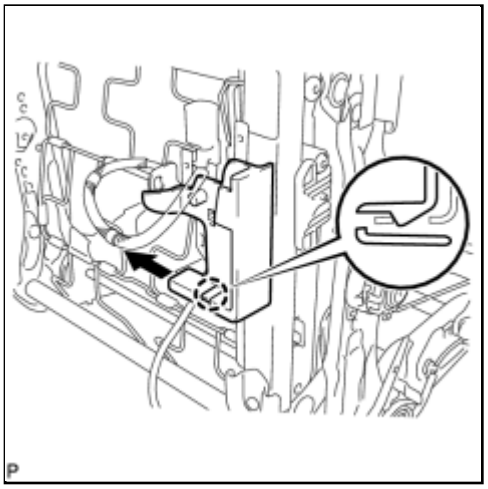


23. REMOVE FRONT SEAT LOWER CUSHION SHIELD RH

(a) Disengage the claw and remove the front seat lower cushion shield RH as shown in the illustration.

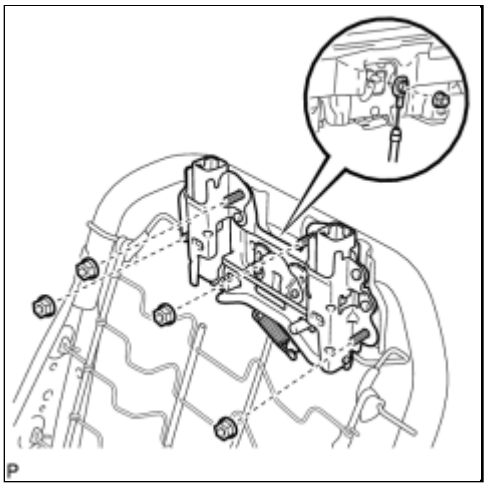


24. REMOVE SEAT TRACK CONTROL CABLE CLAMP



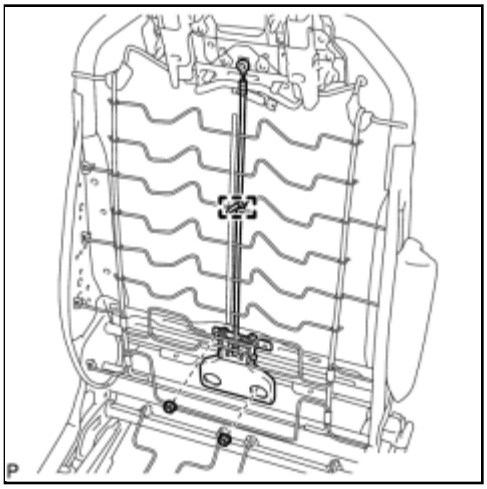
(a) Disengage the clamp and remove the seat track control cable clamp.

25. REMOVE FRONT SEAT OUTER TRACK BRACKET COVER



(a) Disengage the claw as shown in the illustration.

(b) Disengage the claw and remove the front seat outer track bracket cover as shown in the illustration.

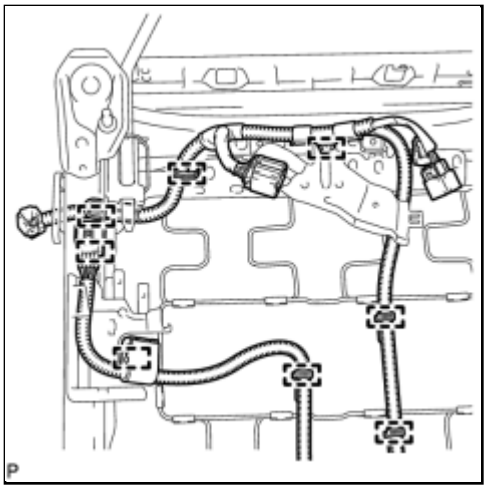


26. REMOVE ACTIVE HEADREST UPPER UNIT (w/ Active Headrest)

(a) Remove the nut and disconnect the cable from the active headrest upper unit as shown in the illustration.

(b) Remove the 4 nuts and the active headrest upper unit.

27. REMOVE ACTIVE HEADREST LOWER UNIT (w/ Active Headrest)



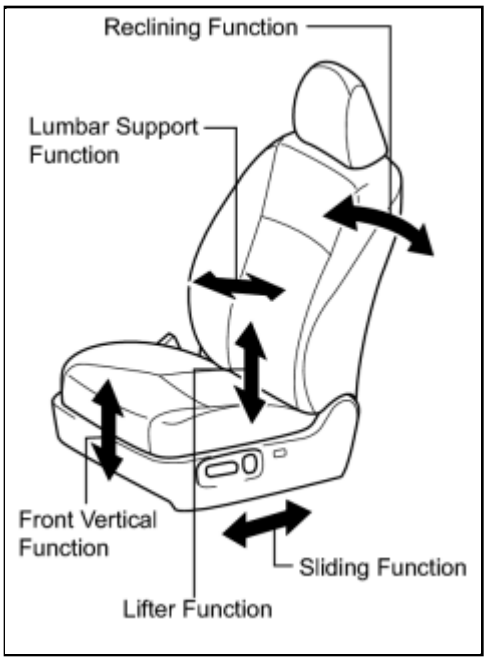
(a) Remove the clamp.

(b) Remove the 2 nuts and the active headrest lower unit.

28. REMOVE OCCUPANT CLASSIFICATION ECU (for Front Passenger Side) INFO

29. REMOVE SEAT POSITION SENSOR INFO

30. REMOVE FRONT SEAT WIRE (for Front Passenger Side)



(a) Disengage the 8 clamps and remove the front seat wire.

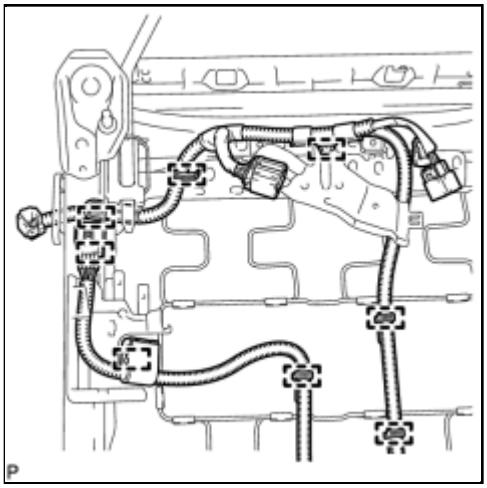
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001R8S012X
Title: SEAT: FRONT POWER SEAT CONTROL SYSTEM: OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

1. CHECK POWER SEAT FUNCTION

(a) Check the basic functions.



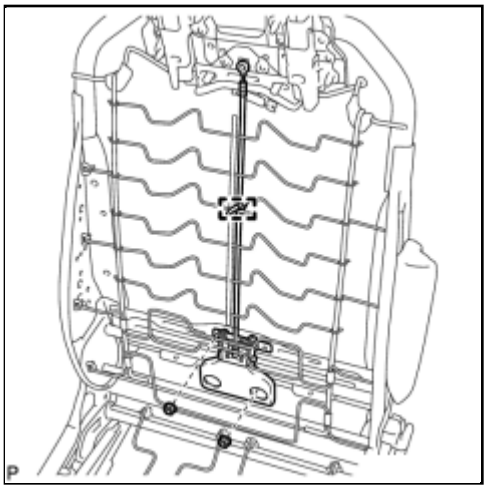
(1) Operate the power seat switches and check that the following functions work:

- Sliding
- Reclining
- Front vertical
- Lumbar support
- Lifter

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000VBI03RX
Title: SEAT: FRONT SEAT ASSEMBLY (for Manual Seat): REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL FRONT SEAT WIRE (for Front Passenger Side)

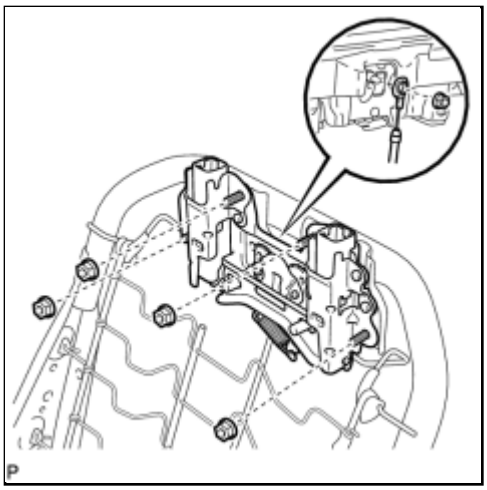


(a) Engage the 8 clamps and install the front seat wire.

2. INSTALL SEAT POSITION SENSOR INFO

3. INSTALL OCCUPANT CLASSIFICATION ECU (for Front Passenger Side) INFO

4. INSTALL ACTIVE HEADREST LOWER UNIT (w/ Active Headrest)

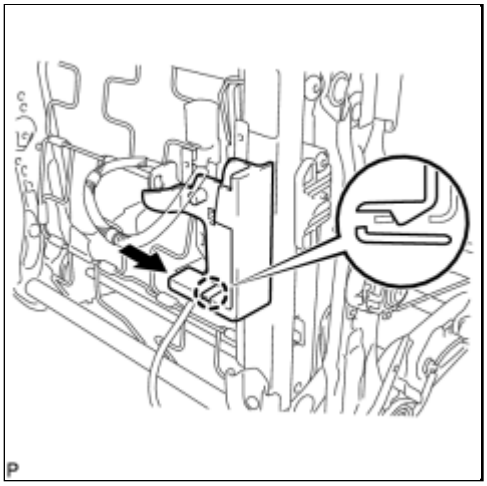


(a) Install the 2 nuts.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(b) Install the active headrest lower unit with the new clamp.

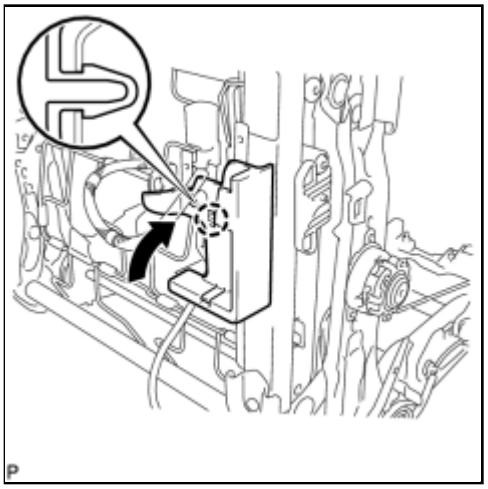
5. INSTALL ACTIVE HEADREST UPPER UNIT (w/ Active Headrest)



(a) Install the active headrest upper unit with the 4 nuts.

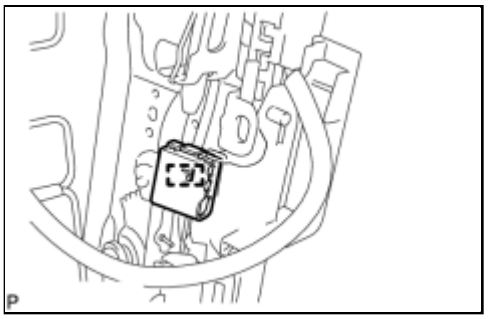
Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

(b) Connect the cable to the active headrest upper unit with the nut as shown in the illustration.



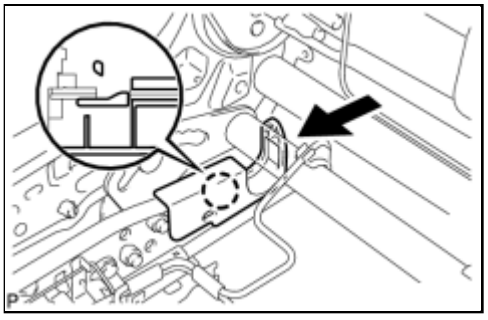
Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

6. INSTALL FRONT SEAT OUTER TRACK BRACKET COVER



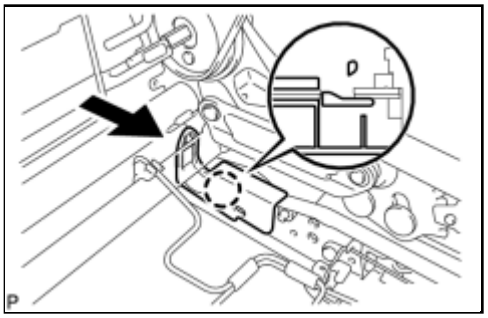
(a) Engage the claw as shown in the illustration.

(b) Engage the claw and install the front seat outer track bracket cover as shown in the illustration.

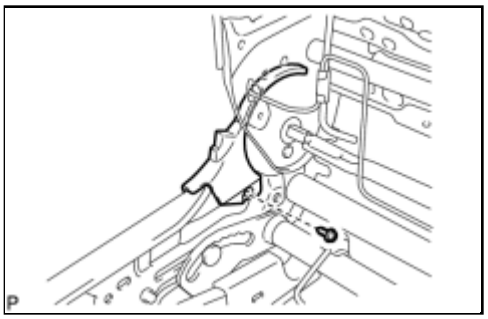


7. INSTALL SEAT TRACK CONTROL CABLE CLAMP

(a) Engage the clamp and install the seat track control cable clamp.



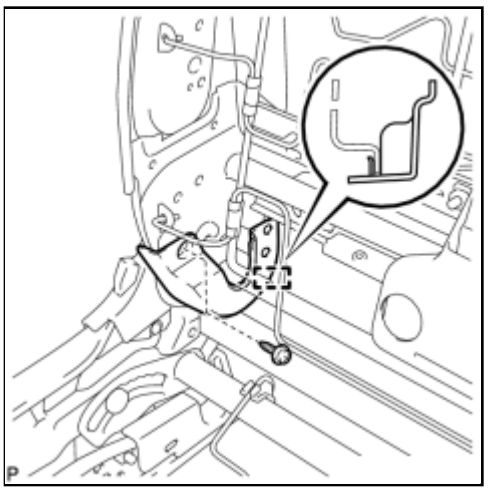
8. INSTALL FRONT SEAT LOWER CUSHION SHIELD RH



(a) Engage the claw and install the front seat lower cushion shield RH as shown in the illustration.

9. INSTALL FRONT SEAT LOWER CUSHION SHIELD LH

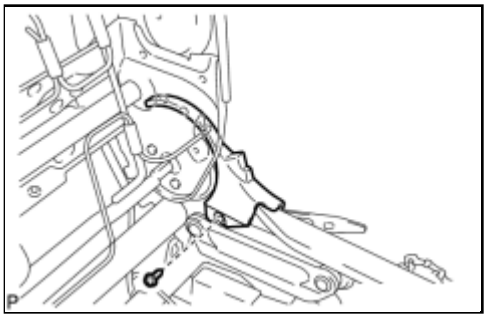
(a) Engage the claw and install the front seat lower cushion shield LH as shown in the illustration.



10. INSTALL RECLINING ADJUSTER INSIDE COVER RH

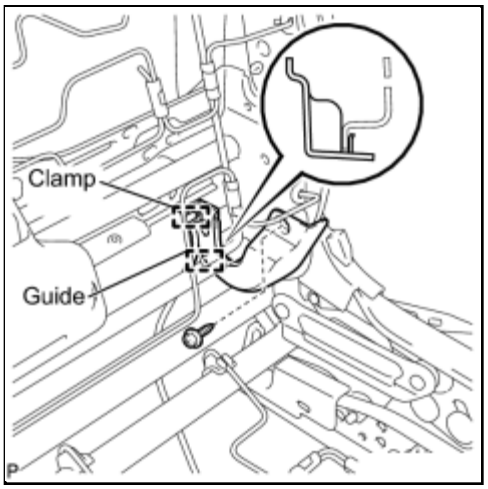
(a) Install the reclining adjuster inside cover RH with the screw.

11. INSTALL RECLINING ADJUSTER INSIDE COVER RH



(a) Engage the guide.

(b) Install the reclining adjuster inside cover RH with the screw.

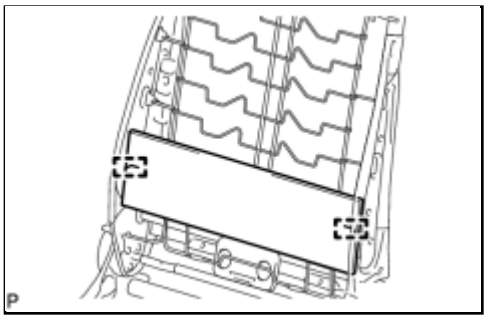


12. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) Install the reclining adjuster inside cover LH with the screw.

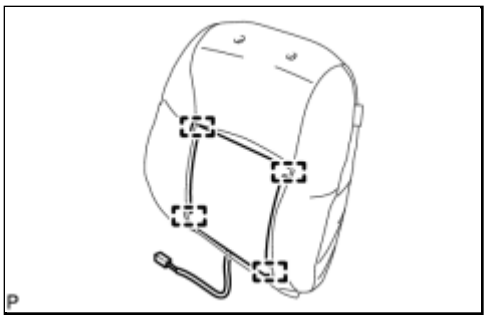
13. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) w/ Front Seat Side Airbag:



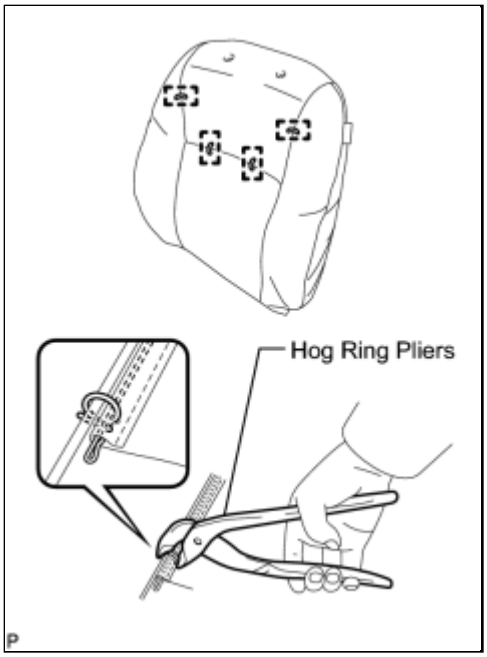
(1) Engage the clamp.

(b) Engage the guide.



(c) Install the reclining adjuster inside cover LH with the screw.

14. INSTALL LUMBAR SUPPORT PLATE (for TMMC, NUMMI Made)



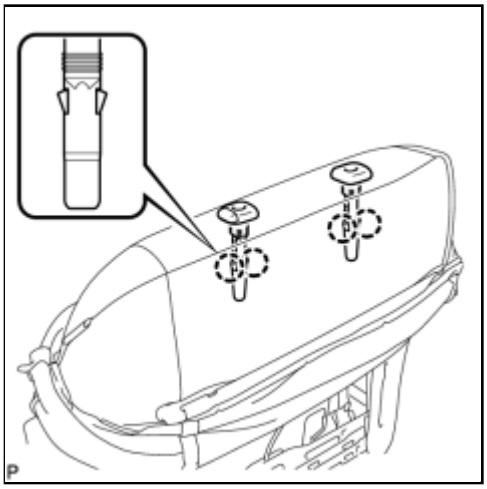
(a) Engage the 2 hooks and install the lumbar support plate.

15. INSTALL FRONT SEATBACK HEATER ASSEMBLY (w/ Seat Heater System)

(a) Using a tacker, install the front seatback heater assembly to the end of the seatback cover with the 4 tack pins.

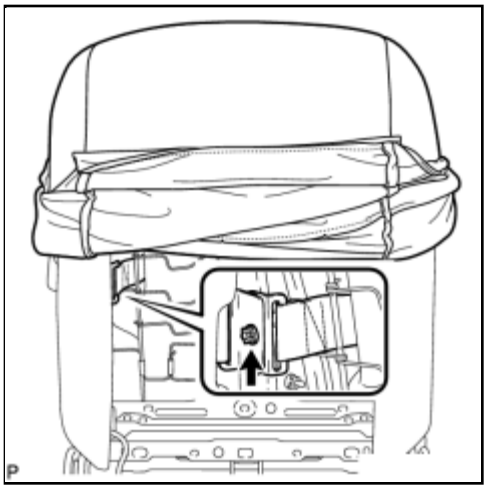
16. INSTALL SEPARATE TYPE FRONT SEATBACK COVER

(a) Using hog ring pliers, install the separate type front seatback cover with 4 new hog rings.



NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.



17. INSTALL FRONT SEATBACK COVER WITH PAD

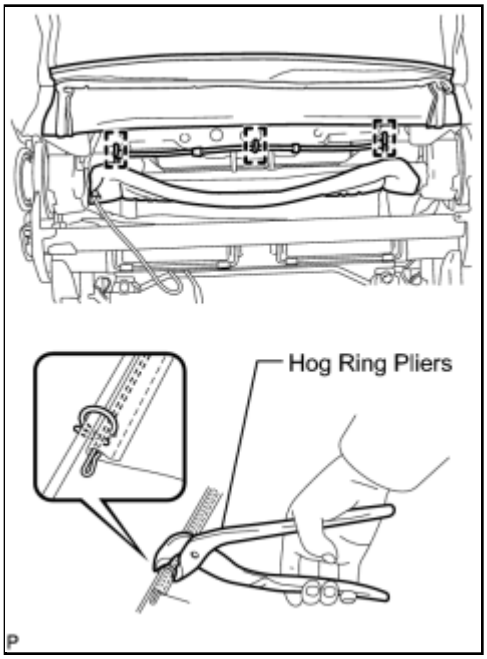
(a) Temporarily install the front seatback cover with pad to the front seat frame assembly with adjuster.

(b) Engage the 4 claws and install the 2 front seat headrest supports.

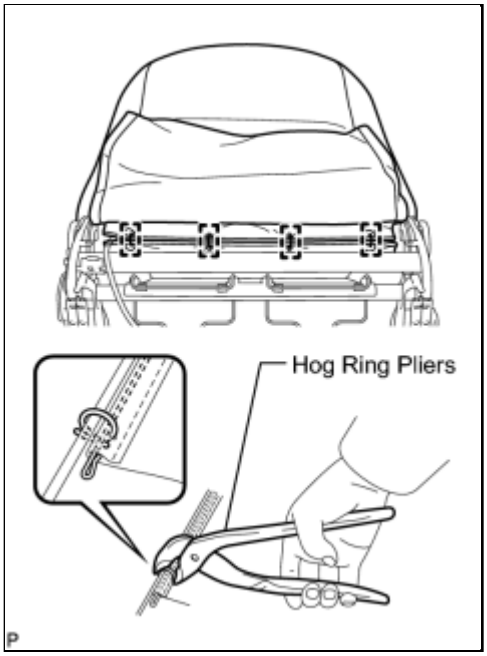
(c) w/ Front Seat Side Airbag:

(1) Install the front seatback cover bracket with the nut.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)



NOTICE:

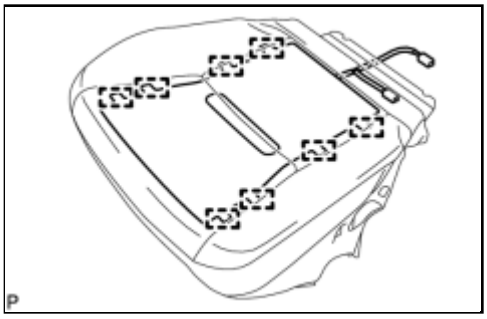


- For vehicles with side airbags, the side airbags may not be activated normally unless the front seatback cover is securely installed.
- Check that the strap is not twisted after installing the bracket.
- Install the bracket securely.

(d) Using hog ring pliers, install 3 new hog rings.

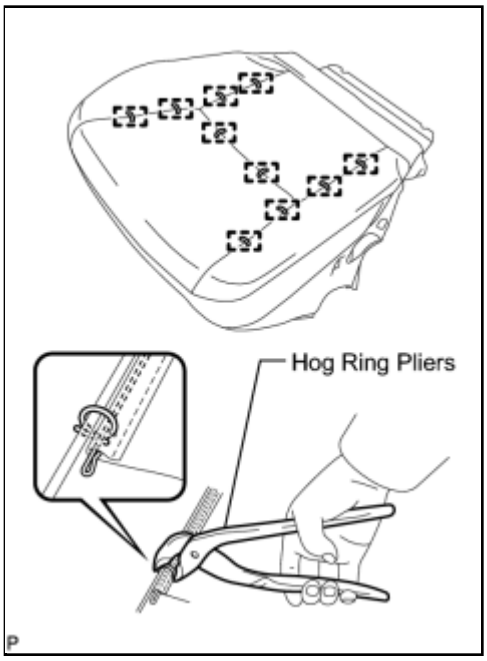
NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.



(e) Using hog ring pliers, install the front seatback cover with pad with 4 new hog rings.

NOTICE:

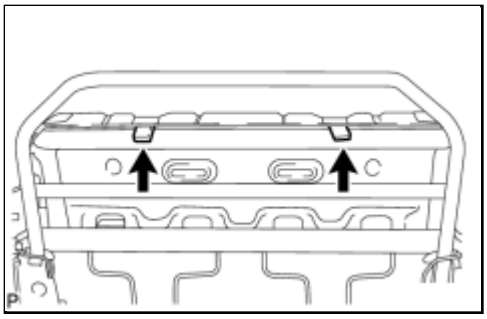


- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

18. INSTALL FRONT SEAT CUSHION HEATER ASSEMBLY (w/ Seat Heater System)

(a) Using a tacker, install the front seat cushion heater assembly to the end of the seat cushion cover with the 8 tack pins.

19. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

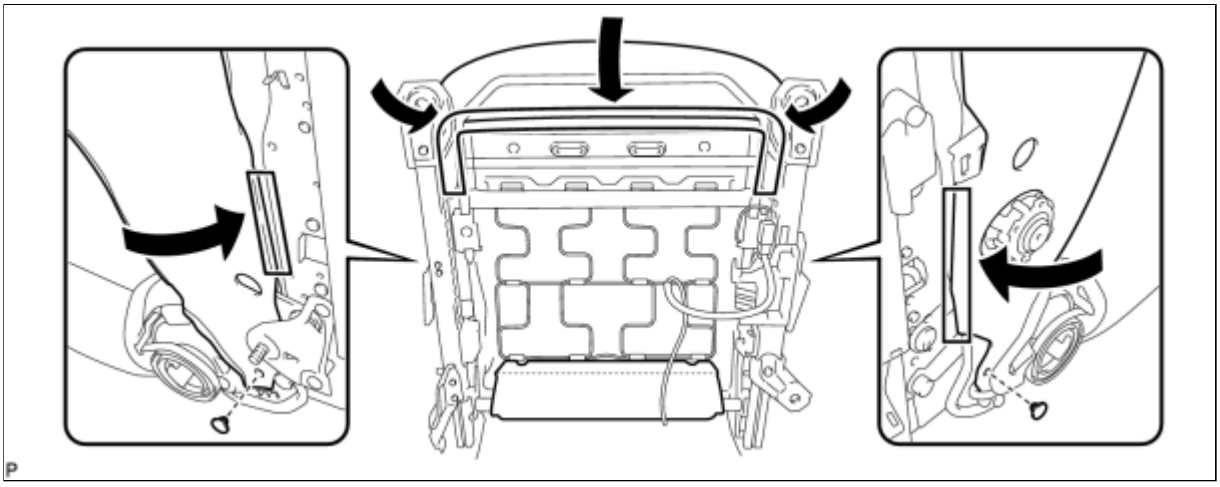


(a) Using hog ring pliers, install the separate type front seat cushion cover with 10 new hog rings.

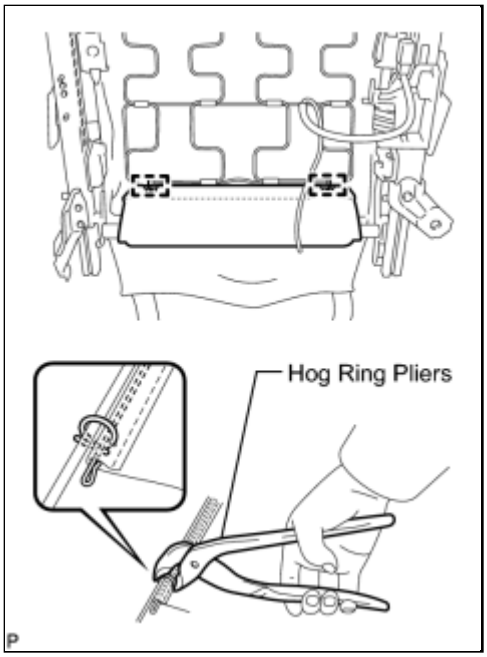
NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

20. INSTALL FRONT SEAT CUSHION EDGE PROTECTOR

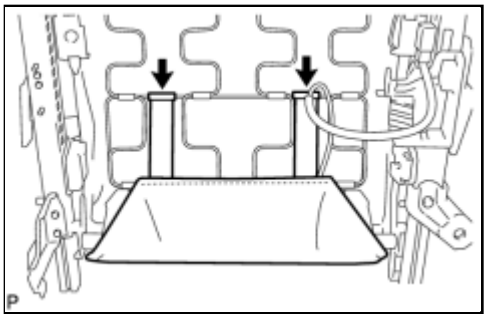


(a) Install the 2 front seat cushion edge protectors.



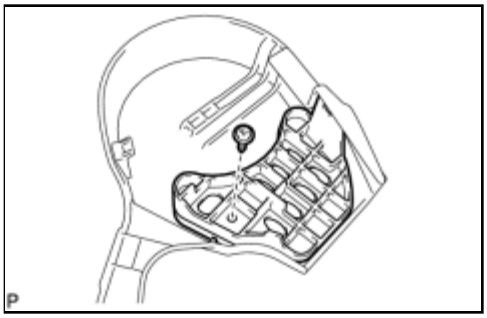
21. INSTALL FRONT SEAT CUSHION COVER WITH PAD

(a) Temporarily install the front seat cushion cover with pad to the front seat frame assembly with adjuster.

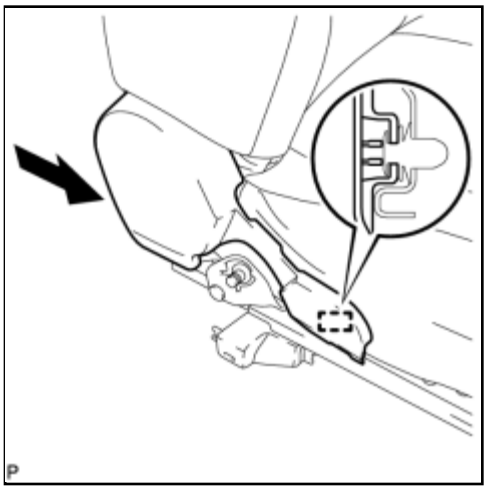


(b) Engage the hooks.

(c) Install the front seat cushion cover with pad with the 2 clips.

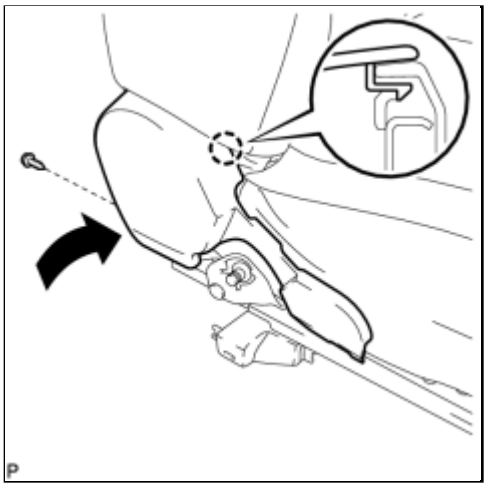


(d) Using hog ring pliers, install 2 new hog rings.



(e) Engage the 2 hooks.

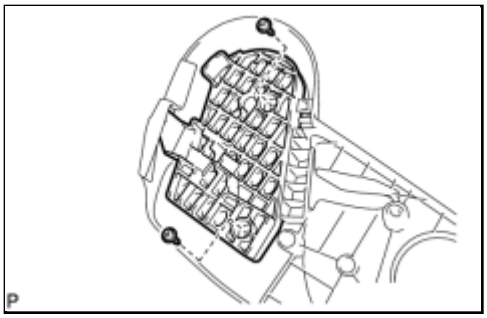
22. INSTALL NO. 2 SEAT TRACK LOWER SPACER



(a) Install the No. 2 seat track lower spacer with the screw.

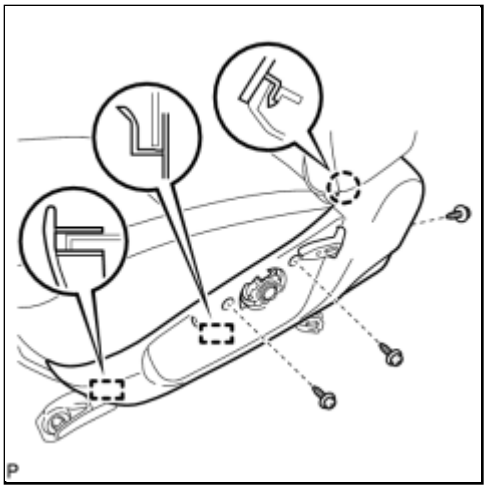
23. INSTALL FRONT SEAT CUSHION INNER SHIELD

(a) Insert the guide and temporarily install the front seat cushion inner shield as shown in the illustration.



(b) Engage the claw.

(c) Install the front seat cushion inner shield with the screw.

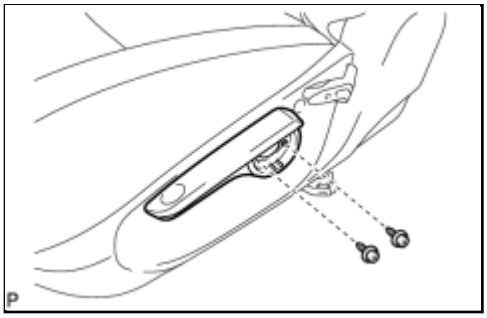


24. INSTALL FRONT SEAT INNER BELT ASSEMBLY INFO

25. INSTALL NO. 1 SEAT TRACK LOWER SPACER

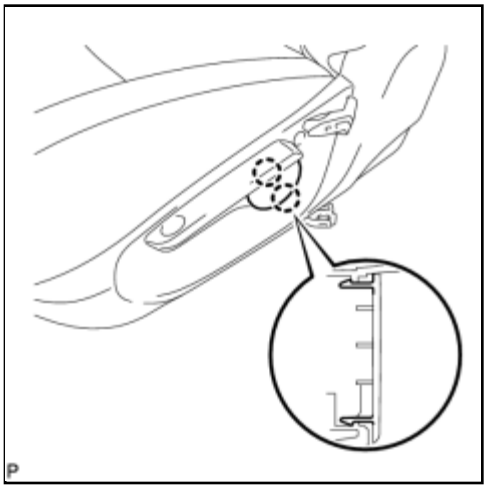
(a) Install the No. 1 seat track lower spacer with the 2 screws.

26. INSTALL FRONT SEAT CUSHION SHIELD



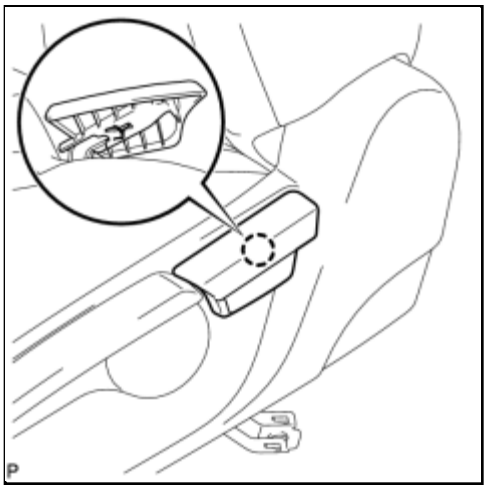
(a) Engage the 2 guides.

(b) Engage the claw.



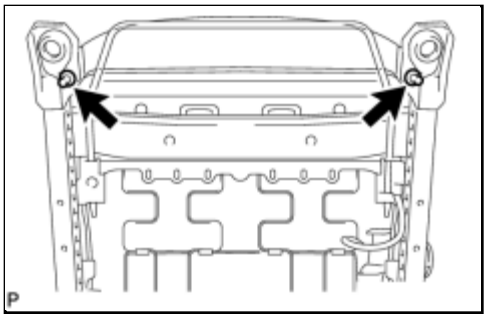
(c) Install the front seat cushion shield with the 3 screws.

27. INSTALL VERTICAL ADJUSTING HANDLE



(a) Install the vertical adjusting handle with the 2 screws.

28. INSTALL VERTICAL SEAT ADJUSTER KNOB CAP



(a) Engage the 2 claws and install the vertical adjuster knob cap.

29. INSTALL RECLINING ADJUSTER RELEASE HANDLE

(a) Engage the claw and install the reclining adjuster release handle.

30. INSTALL SEAT ADJUSTER COVER CAP

(a) Install the 2 seat adjuster cover caps.

Title: SEAT: FRONT SEAT ASSEMBLY (for Manual Seat): REMOVAL (2010 Corolla)		

REMOVAL

1. PRECAUTION

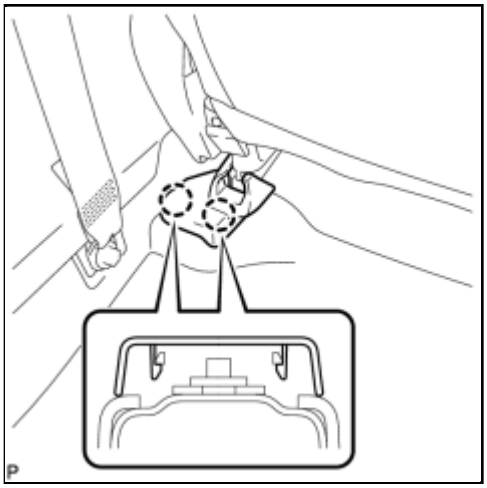
CAUTION:

Be sure to read Precaution thoroughly before servicing INFO .

NOTICE:

When replacing the occupant classification ECU, perform registration INFO .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (w/ Front Seat Side Airbag)

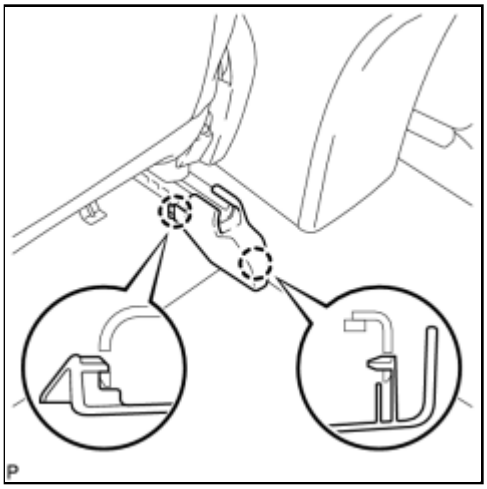


CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO .

3. REMOVE FRONT SEAT HEADREST ASSEMBLY

4. REMOVE OUTER SEAT TRACK COVER

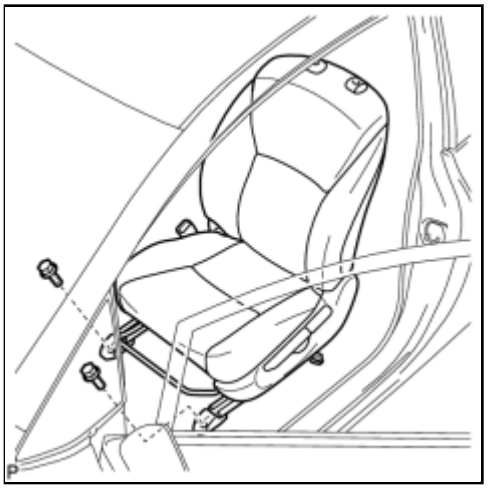


(a) Lift up the seat track adjusting handle and move the seat to the foremost position.

(b) Disengage the 2 claws and remove the outer seat track cover.

5. REMOVE INNER SEAT TRACK COVER

(a) Disengage the 2 claws and remove the inner seat track cover.



6. REMOVE FRONT SEAT ASSEMBLY

(a) Remove the 2 bolts on the rear side of the seat.

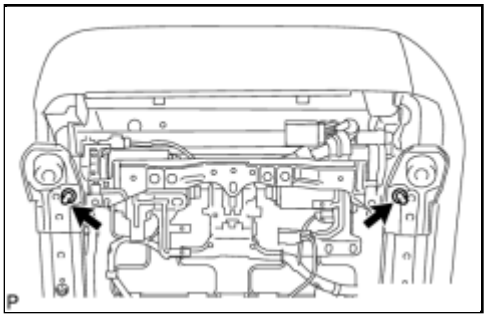
(b) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(c) Remove the 2 bolts on the front side of the seat.

(d) Lift up the seat track adjusting handle and move the seat to the center position. Also, operate the reclining adjuster release handle and move the seatback to the upright position.

(e) Disconnect the connectors under the front seat assembly.

(f) Remove the front seat assembly.



NOTICE:

Be careful not to damage the vehicle body.

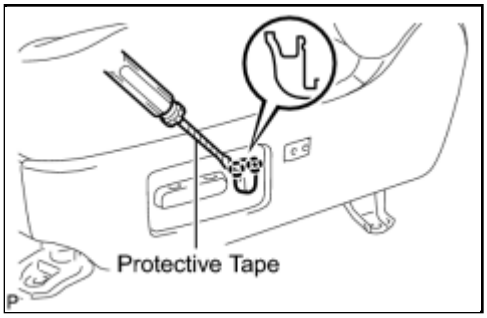
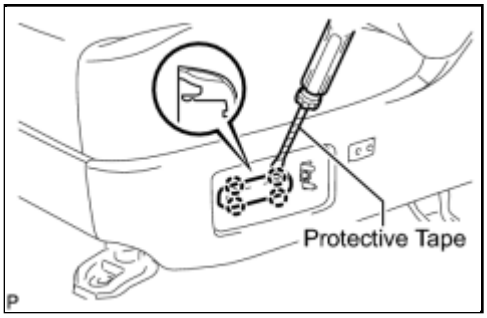
Title: SEAT: FRONT SEAT ASSEMBLY (for Power Seat): DISASSEMBLY (2010 Corolla)		



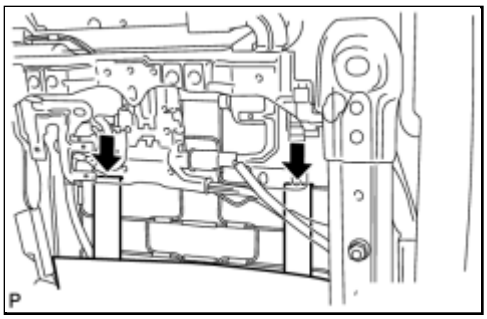
DISASSEMBLY

1. REMOVE SEAT ADJUSTER COVER CAP



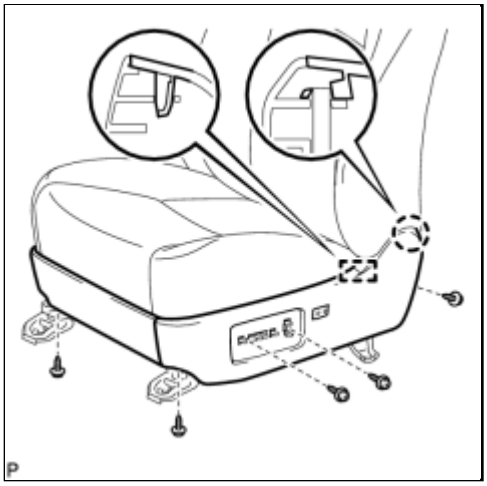
(a) Remove the 2 seat adjuster cover caps.

2. REMOVE RECLINING POWER SEAT SWITCH KNOB



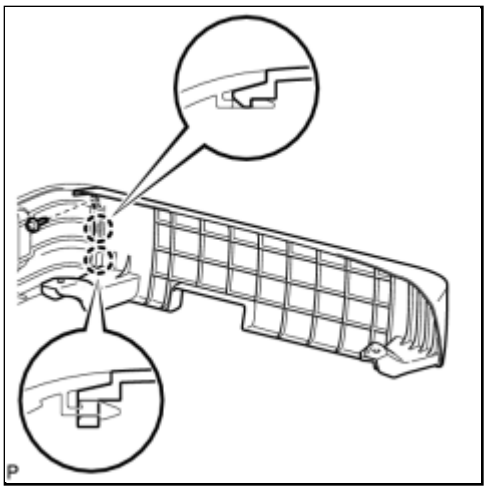
(a) Using a screwdriver with the tip taped, disengage the 2 claws and remove the reclining power seat switch knob.

3. REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB



(a) Using a screwdriver with the tip taped, disengage the 4 claws and remove the slide and vertical power seat switch knob.

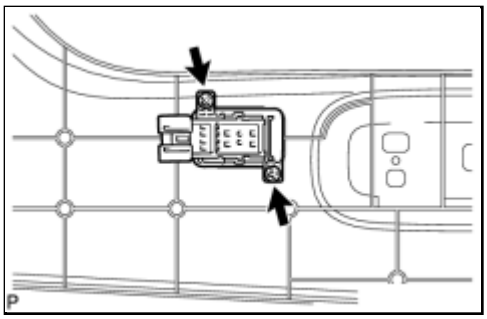
4. REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY



(a) Remove the 2 hooks.

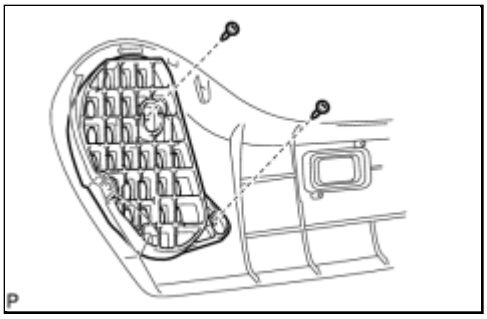
(b) Remove the 5 screws.

(c) Disengage the claw and the guide and remove the front seat cushion shield assembly.



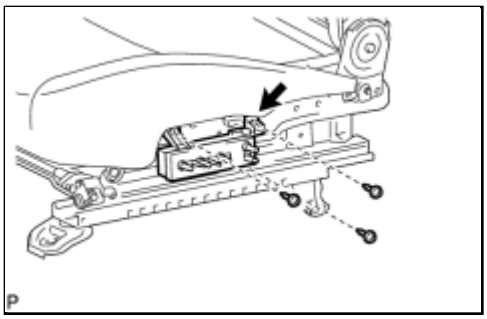
5. REMOVE NO. 1 FRONT SEAT CUSHION INNER SHIELD

(a) Remove the screw.



(b) Disengage the 2 claws and remove the No. 1 front seat cushion inner shield.

6. REMOVE LUMBAR SWITCH

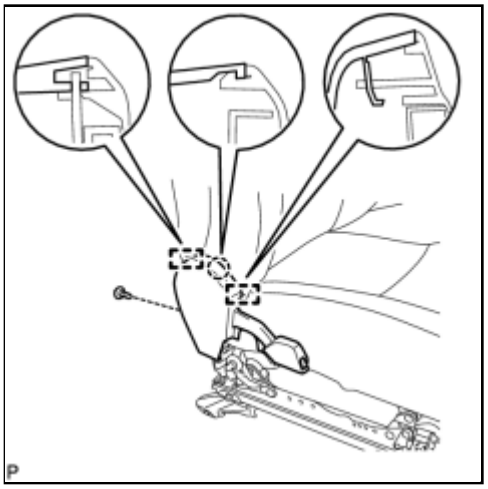


(a) Remove the 2 screws and the lumbar switch.

7. REMOVE NO. 1 SEAT TRACK LOWER SPACER

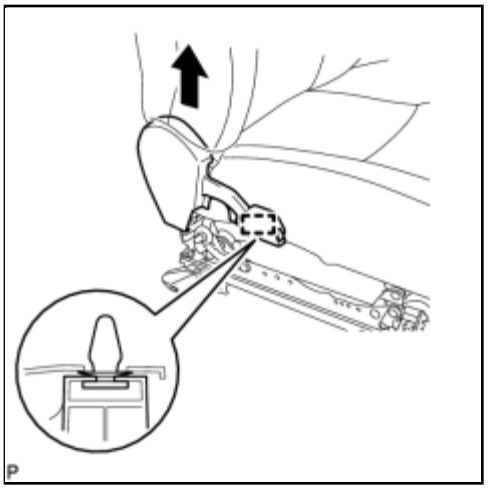
(a) Remove the 2 screws and the No. 1 seat track lower spacer.

8. REMOVE POWER SEAT SWITCH



(a) Remove the 3 screws.

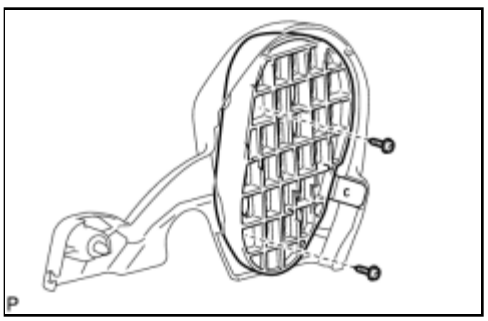
(b) Disconnect the connector and remove the power seat switch.



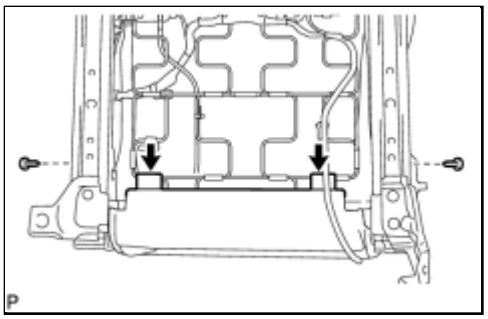
9. REMOVE FRONT SEAT INNER BELT ASSEMBLY INFO

10. REMOVE FRONT SEAT CUSHION INNER SHIELD

(a) Remove the screw.

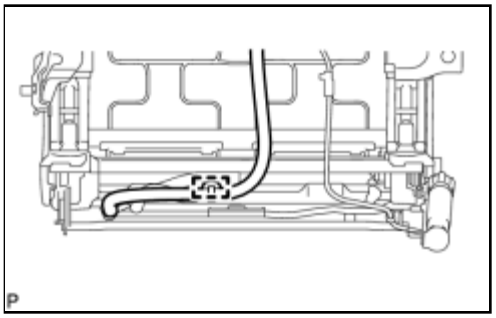


(b) Disengage the claw and the 2 guides.



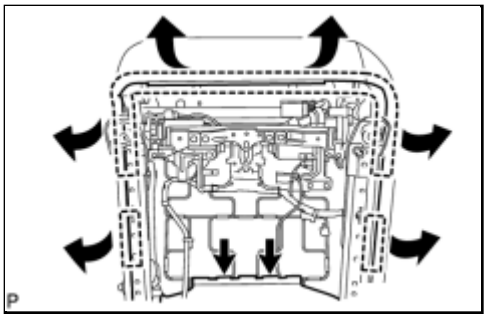
(c) Separate the guide and remove the front seat cushion inner shield as shown in the illustration.

11. REMOVE NO. 2 SEAT TRACK LOWER SPACER



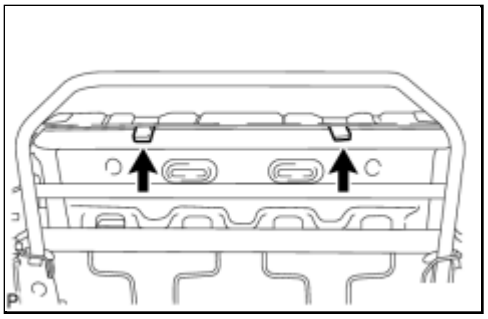
(a) Remove the 2 screws and the No. 2 seat track lower spacer.

12. REMOVE FRONT SEAT CUSHION COVER WITH PAD

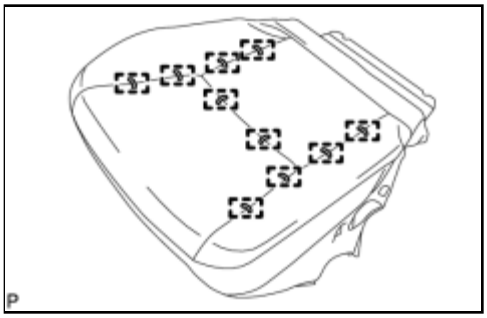


(a) Remove the 2 clips.

(b) Disengage the 2 hooks.

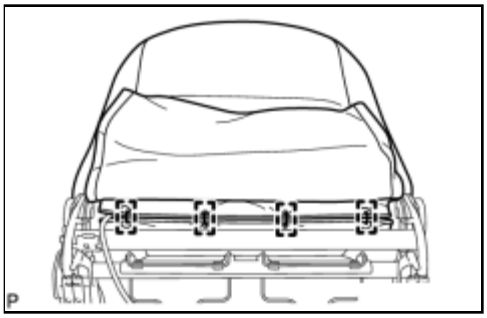


(c) Disengage the clamp.



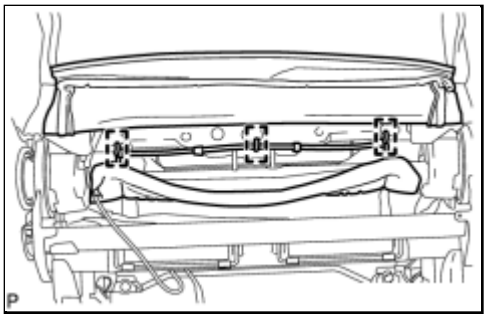
(d) Disengage the hooks and the front seat cushion cover with pad.

13. REMOVE FRONT SEAT CUSHION EDGE PROTECTOR



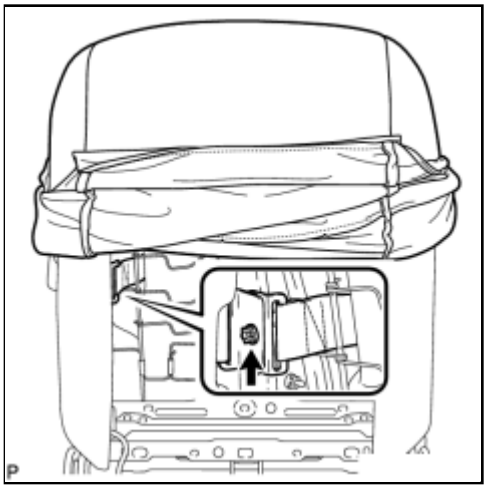
(a) Remove the 2 front seat cushion edge protectors.

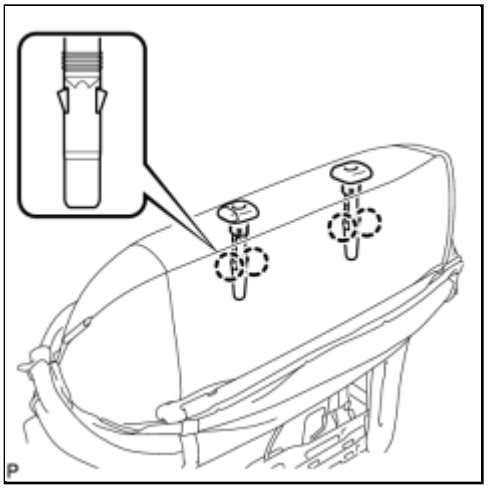
14. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER



(a) Remove the 10 hog rings and the separate type front seat cushion cover.

15. REMOVE FRONT SEATBACK COVER WITH PAD

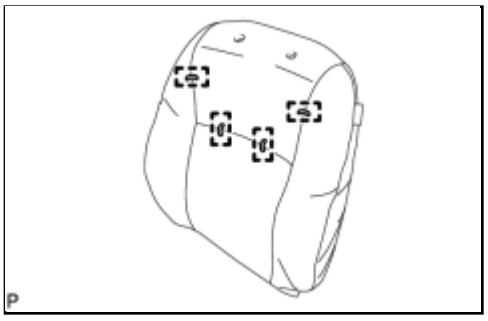




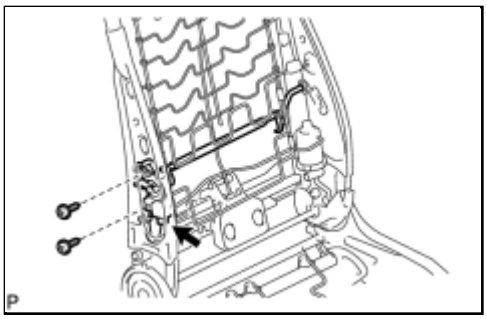
(a) Remove the 4 hog rings.

(b) Remove the 3 hog rings.

(c) Turn back the separate type front seatback cover to remove the nut, and separate the bracket of the separate type front seatback cover RH.



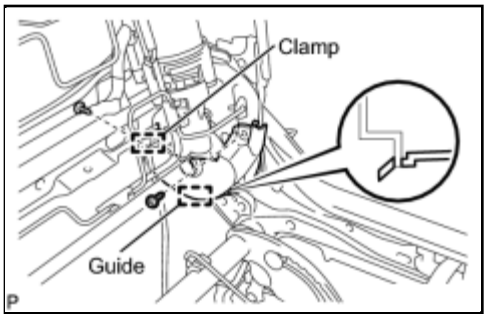
(d) Disengage the 4 claws and remove the 2 front seat headrest supports.



(e) Remove the separate type front seatback cover with pad from the front seat frame assembly with adjuster.

16. REMOVE SEPARATE TYPE FRONT SEATBACK COVER

(a) Remove the 4 hog rings and the separate type front seatback cover.

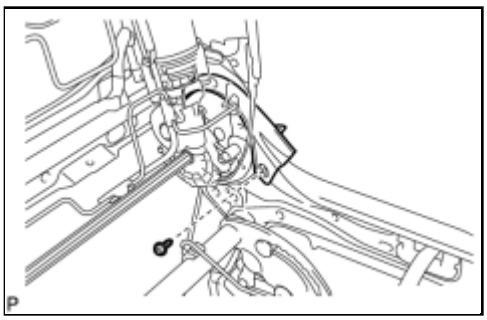


17. REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Disconnect the connector.

(b) Remove the 2 screws and the lumbar support adjuster assembly.

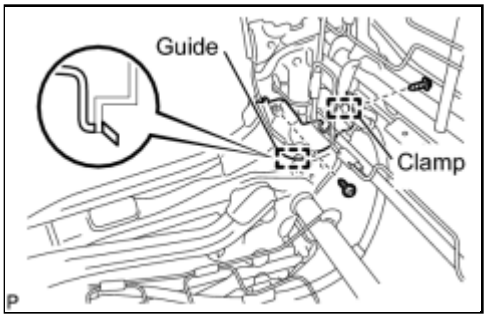
18. REMOVE RECLINING ADJUSTER INSIDE COVER LH



(a) Remove the 2 screws.

(b) Disengage the guide.

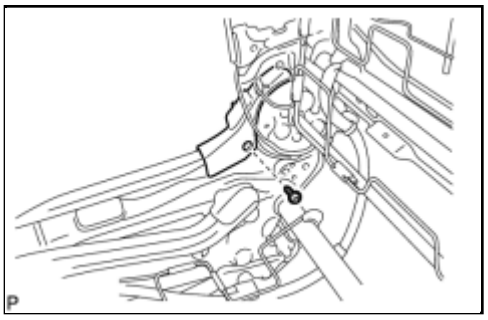
(c) Disengage the clamp and remove the reclining adjuster inside cover LH.



19. REMOVE RECLINING ADJUSTER INSIDE COVER LH

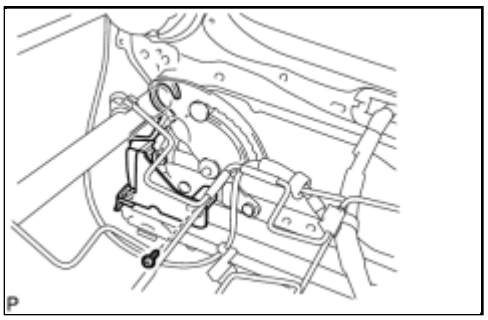
(a) Remove the screw and the reclining adjuster inside cover LH.

20. REMOVE RECLINING ADJUSTER INSIDE COVER RH



(a) Remove the 2 screws.

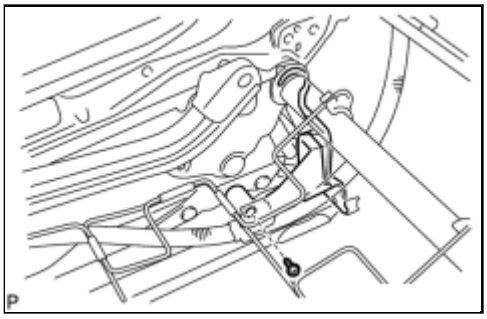
(b) Disengage the guide.



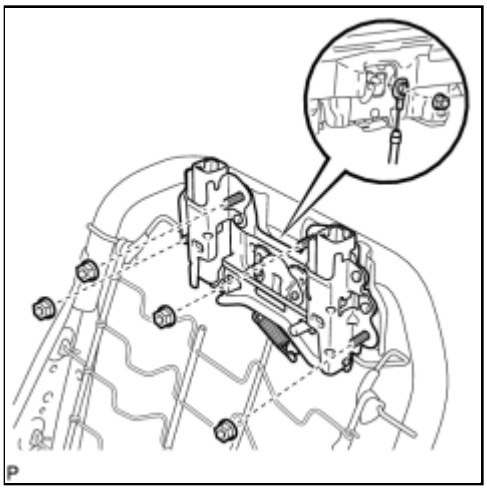
(c) Disengage the clamp and remove the reclining adjuster inside cover RH.

21. REMOVE RECLINING ADJUSTER INSIDE COVER RH

(a) Remove the screw and the reclining adjuster inside cover RH.



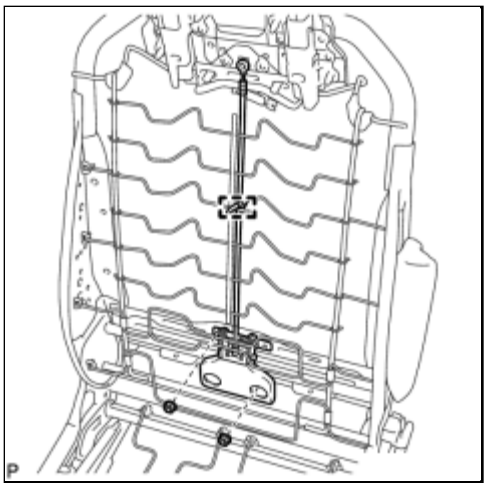
22. REMOVE FRONT SEAT LOWER CUSHION SHIELD LH



(a) Remove the screw and the front seat lower cushion shield LH.

23. REMOVE FRONT SEAT LOWER CUSHION SHIELD RH

(a) Remove the screw and the front seat lower cushion shield RH.

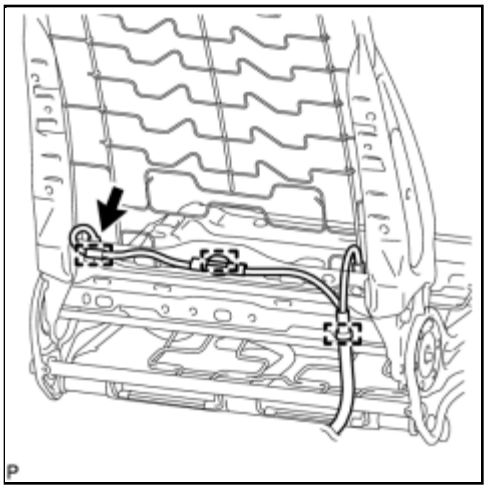


24. REMOVE ACTIVE HEADREST UPPER UNIT

(a) Remove the nut and disconnect the cable from the active headrest upper unit as shown in the illustration.

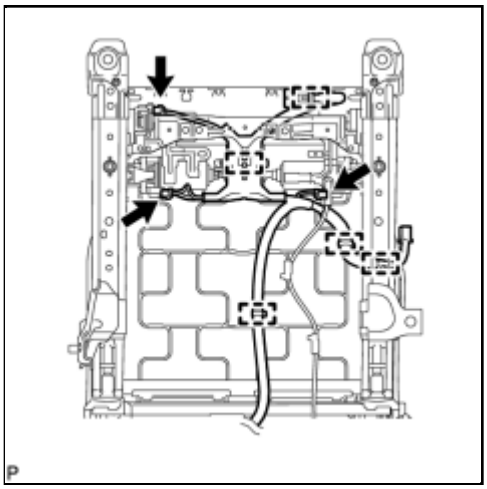
(b) Remove the 4 nuts and the active headrest upper unit.

25. REMOVE ACTIVE HEADREST LOWER UNIT



(a) Remove the clamp.

(b) Remove the 2 nuts and the active headrest lower unit.



26. REMOVE SEAT POSITION SENSOR

27. REMOVE FRONT SEAT WIRE

(a) Disconnect the connector.

(b) Disengage the 3 clamps.

(c) Disconnect the 3 connectors.

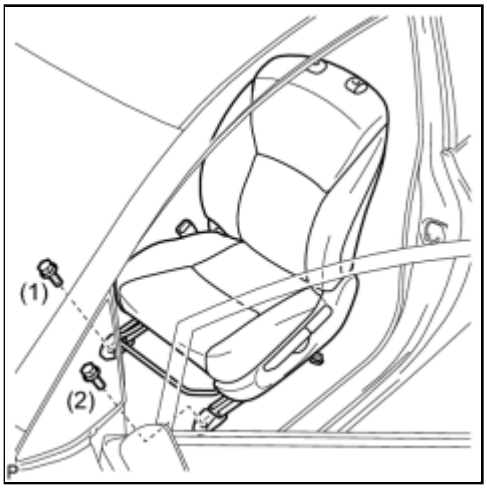
(d) Disengage the 5 clamps and remove the front seat wire.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z8T03CX
Title: SEAT: FRONT SEAT ASSEMBLY (for Manual Seat): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat assembly in the cabin.



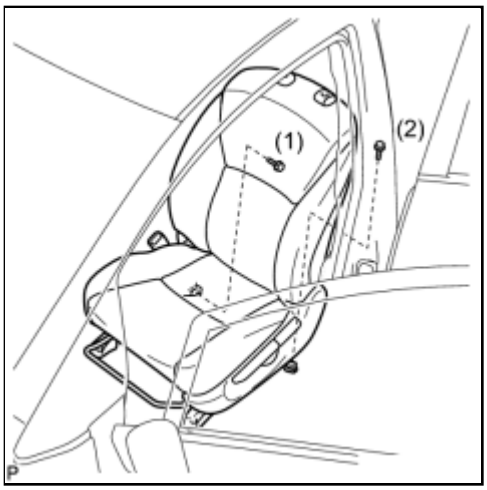
NOTICE:

Be careful not to damage the vehicle body.

(b) Connect the connectors under the seat.

(c) Temporarily install the front seat assembly with the 4 bolts.

(d) Lift up the seat track adjusting handle and move the seat to the rearmost position.



(e) Tighten the 2 bolts on the front side of the seat.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

HINT:

Tighten the bolts in the order indicated in the illustration.

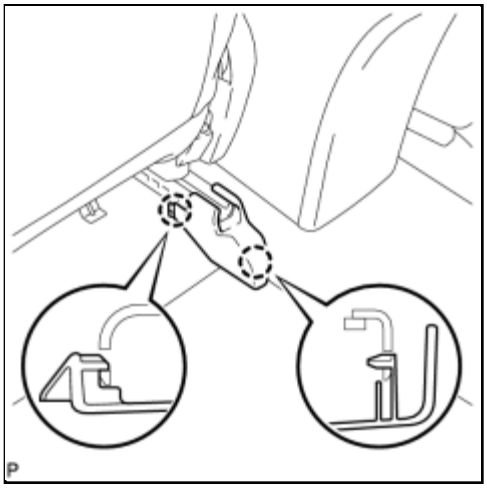
(f) Lift up the seat track adjusting handle and move the seat to the foremost position.

(g) Tighten the 2 bolts on the rear side of the seat.

Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

HINT:

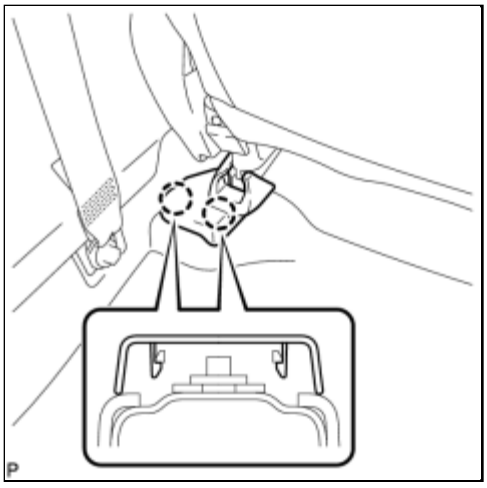
Tighten the bolts in the order indicated in the illustration.



2. INSPECT FRONT SEAT SLIDE ADJUSTER LOCK

(a) While sliding the front seat, check that the left and right adjusters move together smoothly and lock simultaneously.

If the seat adjusters do not lock simultaneously, loosen the bolts securing the seat to adjust the adjuster position.



3. INSTALL INNER SEAT TRACK COVER

(a) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(b) Engage the 2 claws and install the inner seat track cover.

4. INSTALL OUTER SEAT TRACK COVER

(a) Engage the 2 claws and install the outer seat track cover.

5. INSTALL FRONT SEAT HEADREST ASSEMBLY

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (w/ Front Seat Side Airbag)

7. PERFORM REGISTRATION

HINT:

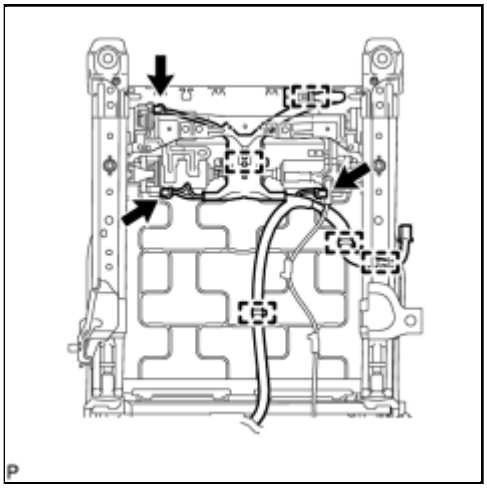
If the occupant classification ECU has been replaced, perform registration INFO .

8. ZERO POINT CALIBRATION AND SENSITIVITY CHECK

HINT:

If the occupant classification ECU has been replaced, perform zero point calibration and sensitivity check INFO .

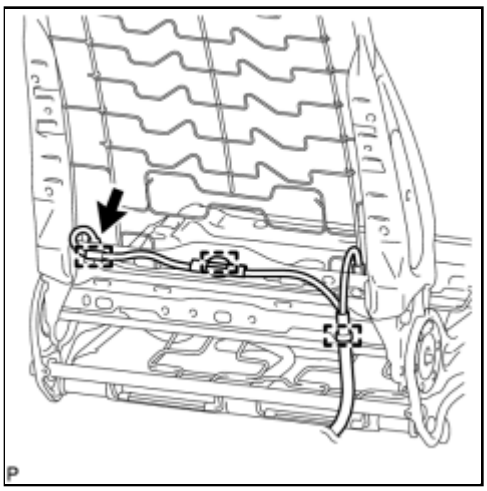
9. INSPECT SRS WARNING LIGHT (w/ Front Seat Side Airbag)



HINT:

Inspect the SRS warning light INFO .

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ARB00EX
Title: SEAT: FRONT SEAT ASSEMBLY (for Power Seat): REASSEMBLY (2010 Corolla)		

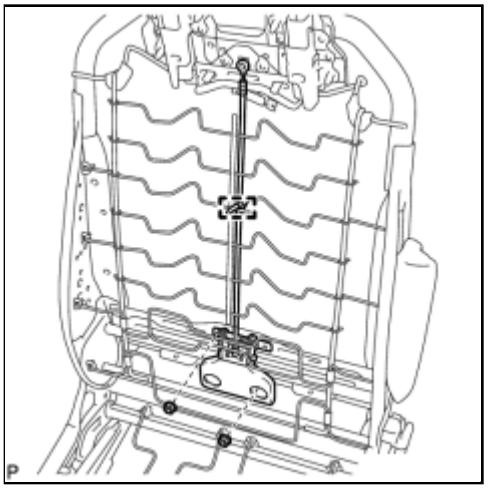


REASSEMBLY

1. INSTALL FRONT SEAT WIRE

(a) Engage the 5 clamps.

(b) Connect the 3 connectors.

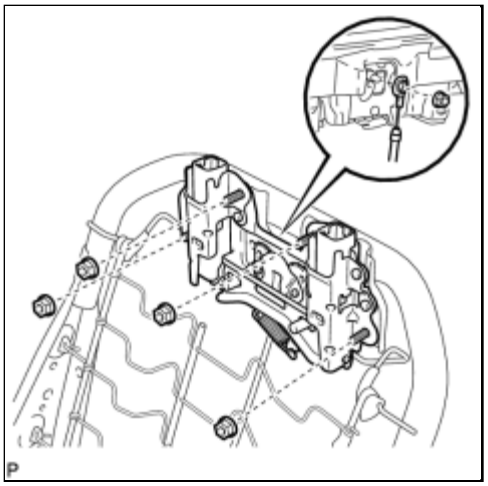


(c) Engage the 3 clamps and install the front seat wire.

(d) Connect the connector.

2. INSTALL SEAT POSITION SENSOR

3. INSTALL ACTIVE HEADREST LOWER UNIT



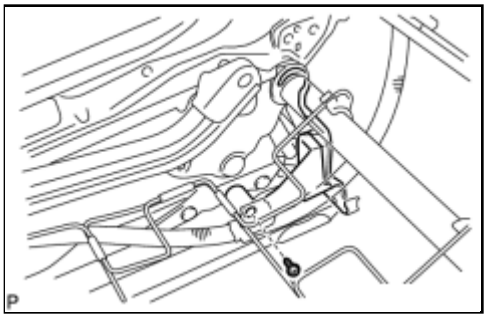
(a) Install the 2 nuts.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(b) Install the active headrest lower unit with new clamp.

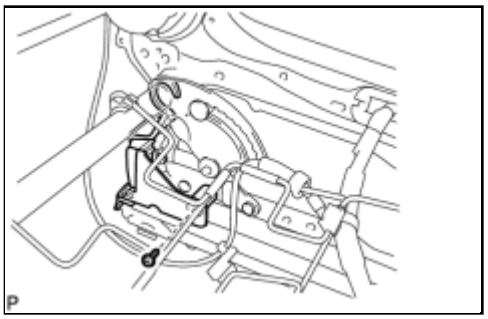
4. INSTALL ACTIVE HEADREST UPPER UNIT

(a) Install the 4 nuts and the active headrest upper unit.



Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

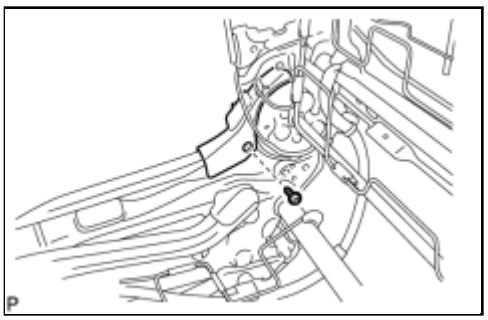
(b) Install the nut and connect the cable to the active headrest upper unit as shown in the illustration.



Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

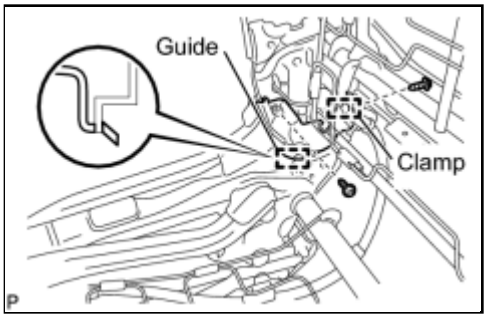
5. INSTALL FRONT SEAT LOWER CUSHION SHIELD RH

(a) Install the front seat lower cushion shield RH with the screw.



6. INSTALL FRONT SEAT LOWER CUSHION SHIELD LH

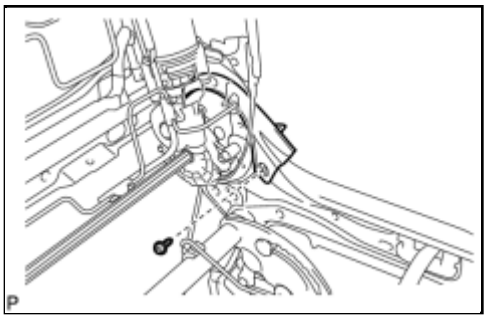
(a) Install the front seat lower cushion shield LH with the screw.



7. INSTALL RECLINING ADJUSTER INSIDE COVER RH

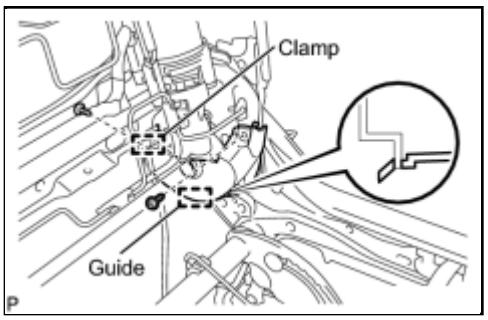
(a) Install the reclining adjuster inside cover RH with the screw.

8. INSTALL RECLINING ADJUSTER INSIDE COVER RH



(a) Engage the guide.

(b) Install the reclining adjuster inside cover RH with the 2 screws.

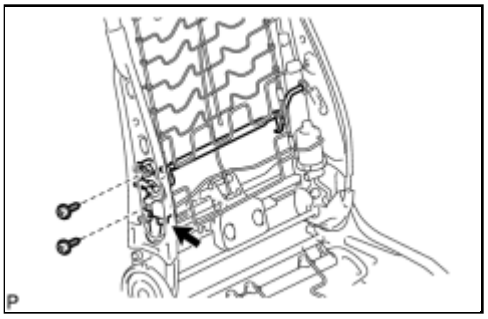


(c) Engage the clamp.

9. INSTALL RECLINING ADJUSTER INSIDE COVER LH

(a) Install the reclining adjuster inside cover LH with the screw.

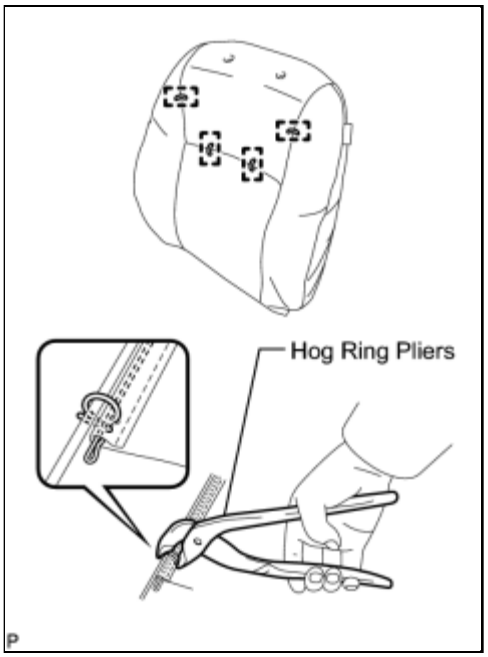
10. INSTALL RECLINING ADJUSTER INSIDE COVER LH



(a) Engage the guide.

(b) Install the reclining adjuster inside cover LH with the 2 screws.

(c) Engage the clamp.



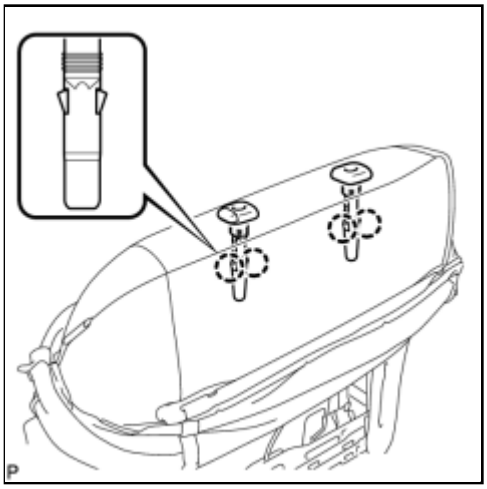
11. INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Install the lumbar support adjuster assembly with the 2 screws.

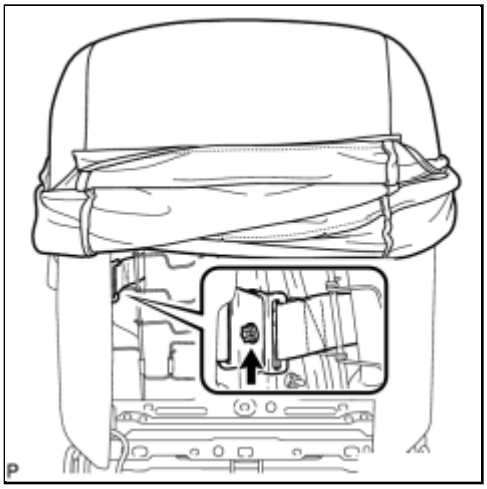
(b) Connect the connector.

12. INSTALL SEPARATE TYPE FRONT SEATBACK COVER

(a) Using hog ring pliers, install the separate type front seatback cover with 4 new hog rings.



NOTICE:



- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

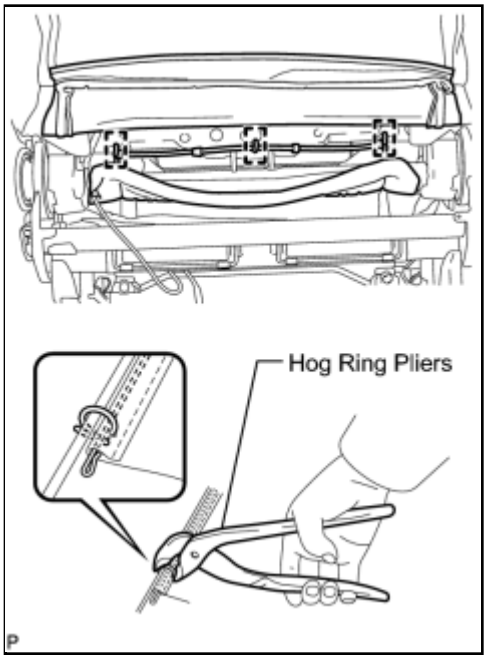
13. INSTALL FRONT SEATBACK COVER WITH PAD

(a) Temporarily install the front seatback cover with pad to the front seat frame assembly with adjuster.

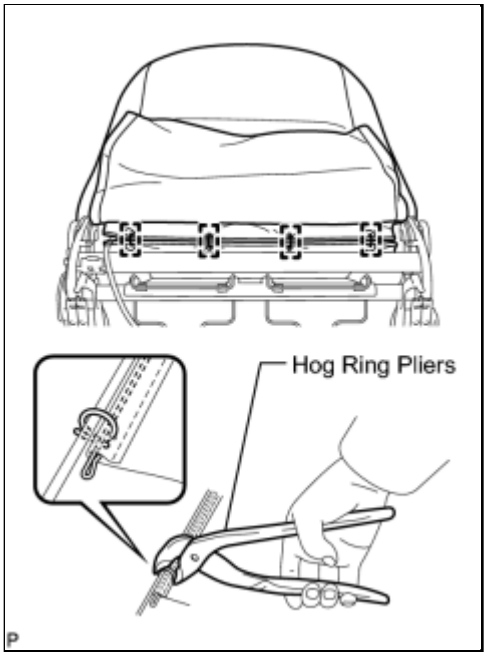
(b) Engage the 4 claws and install the 2 front seat headrest supports.

(c) Install the front seatback cover bracket with the nut.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)



NOTICE:



- For vehicles with side airbags, the side airbags may not be activated normally unless the front seatback cover is securely installed.
- Check that the strap is not twisted after installing the bracket.
- Install the bracket securely.

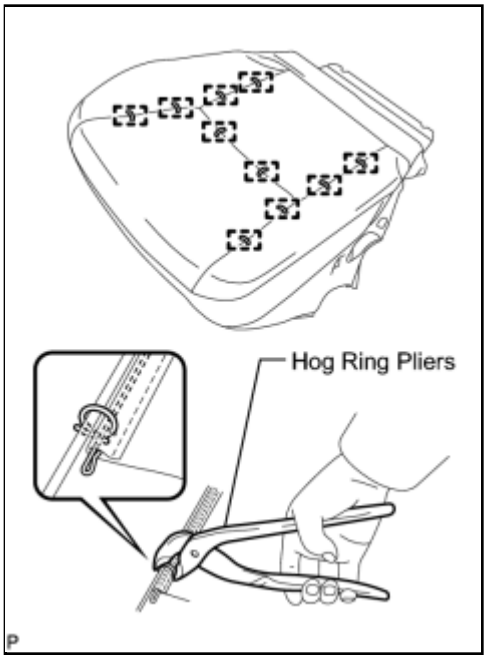
(d) Using hog ring pliers, install 3 new hog rings.

NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(e) Using hog ring pliers, install 4 new hog rings.

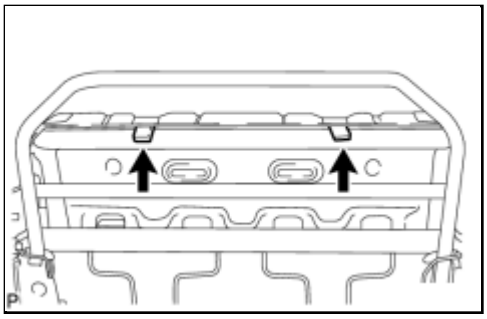
NOTICE:



- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

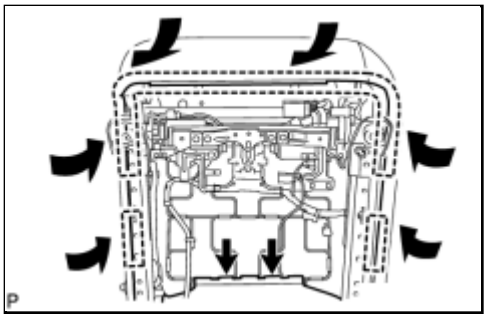
14. INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Using hog ring pliers, install the separate type front seat cushion cover with 10 new hog rings.



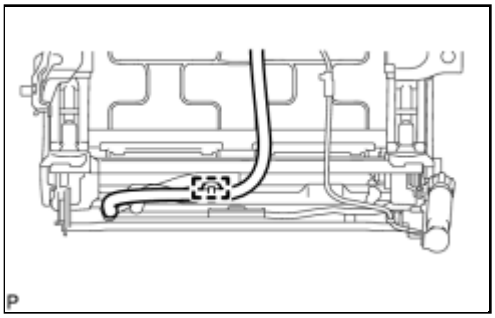
NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize

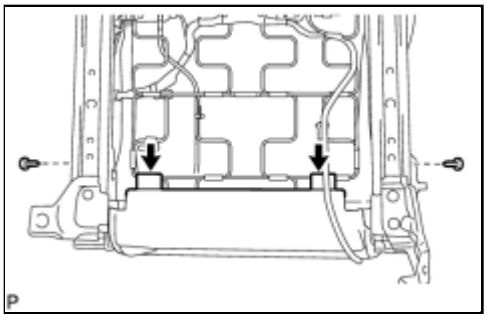


wrinkles as much as possible.

15. INSTALL FRONT SEAT CUSHION EDGE PROTECTOR



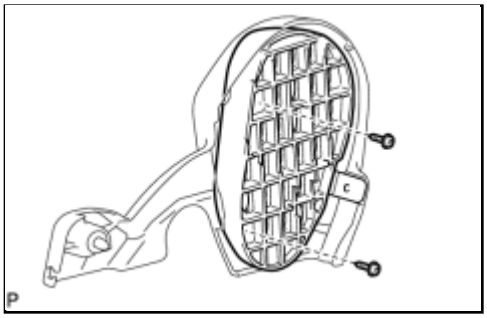
(a) Install the 2 front seat cushion edge protectors.



16. INSTALL FRONT SEAT CUSHION COVER WITH PAD

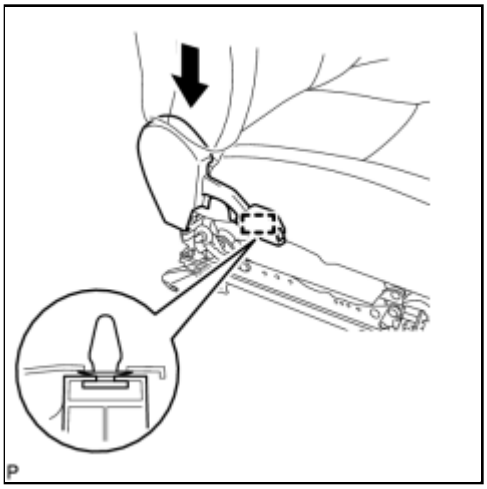
(a) Engage the hooks.

(b) Engage the clamp.

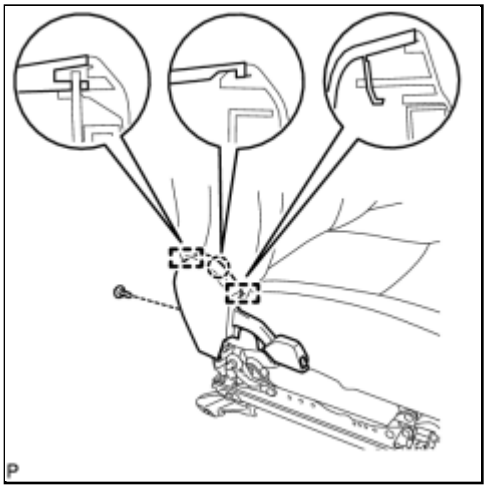


(c) Engage the 2 hooks.

(d) Install the 2 clips and the front seat cushion cover with pad.



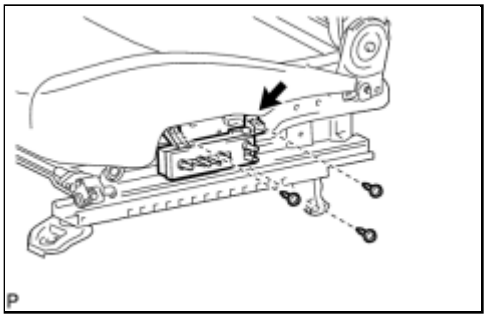
17. INSTALL NO. 2 SEAT TRACK LOWER SPACER



(a) Install the 2 screws and the No. 2 seat track lower spacer.

18. INSTALL FRONT SEAT CUSHION INNER SHIELD

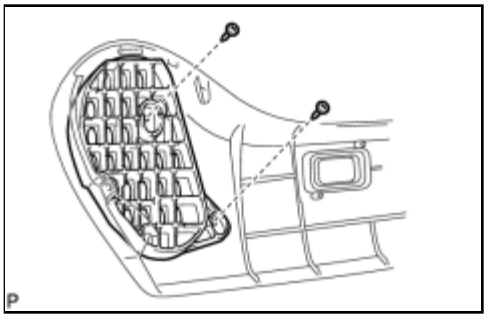
(a) Insert the guide and temporarily install the front seat cushion inner shield as shown in the illustration.



(b) Engage the claw and the 2 guides.

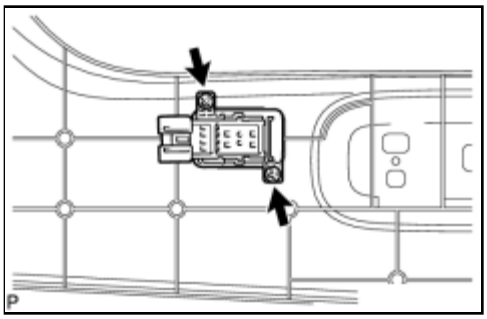
(c) Install the front seat cushion inner shield with the screw.

19. INSTALL FRONT SEAT INNER BELT ASSEMBLY INFO



20. INSTALL POWER SEAT SWITCH

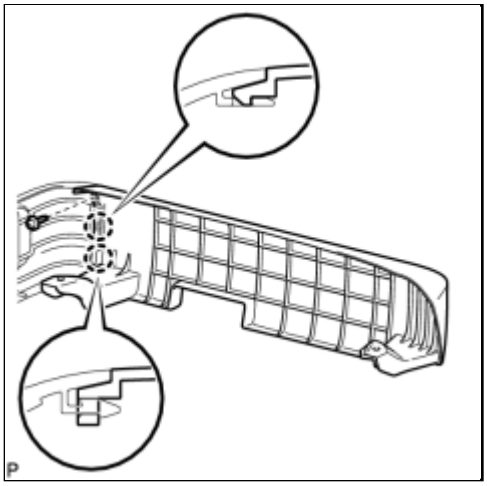
(a) Connect the connector.



(b) Install the power seat switch with the 3 screws.

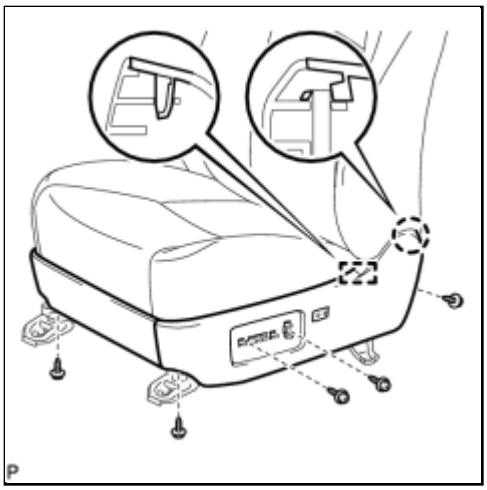
21. INSTALL NO. 1 SEAT TRACK LOWER SPACER

(a) Install the 2 screws and the No. 1 seat track lower spacer.



22. INSTALL LUMBAR SWITCH

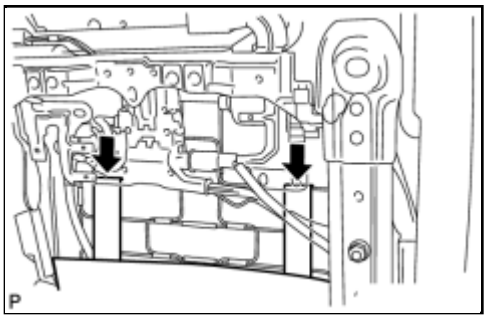
(a) Install the lumbar switch with the 2 screws.



23. INSTALL NO. 1 FRONT SEAT CUSHION INNER SHIELD

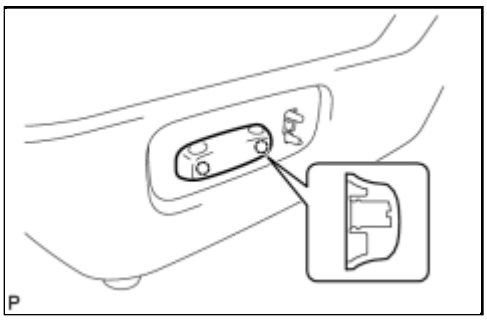
(a) Engage the 2 claws.

(b) Install the No. 1 front seat cushion inner shield with the screw.



24. INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY

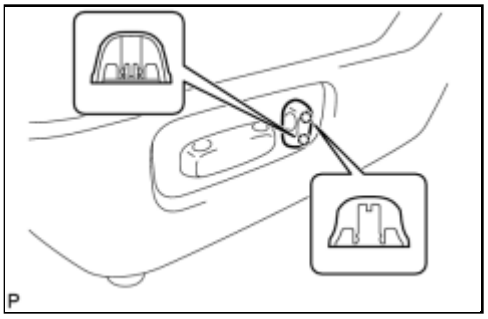
(a) Connect the connector to the front power seat lumbar switch.



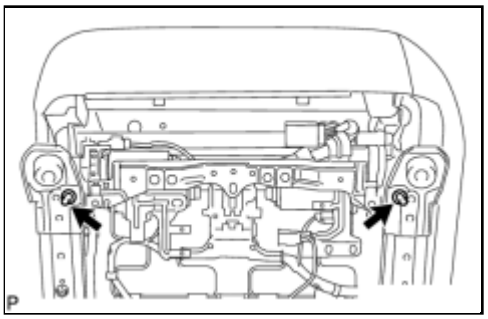
(b) Engage the claw and the guide.

(c) Install the front seat cushion shield assembly with the 5 screws.

(d) Install the 2 hooks.



25. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

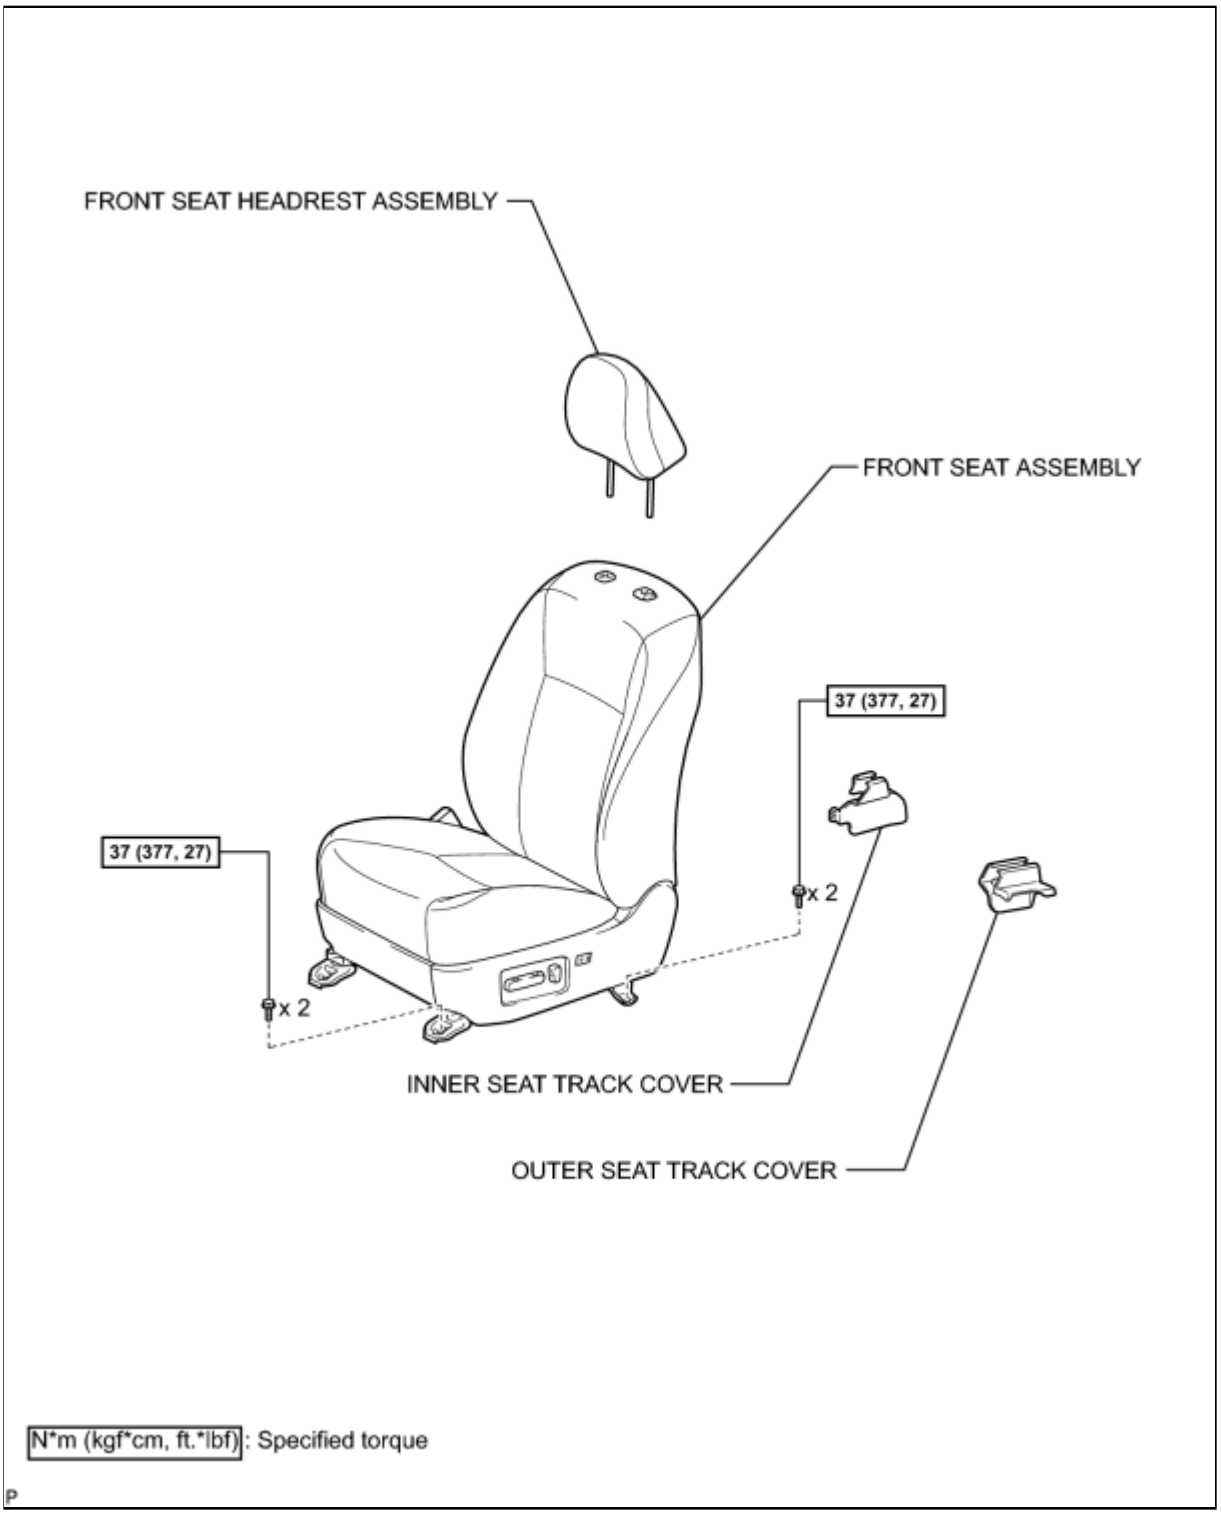


(a) Engage the 2 claws and install the slide and vertical power seat switch knob.

26. INSTALL RECLINING POWER SEAT SWITCH KNOB

(a) Engage the 2 claws and install the reclining power seat switch knob.

27. INSTALL SEAT ADJUSTER COVER CAP



(a) Install the 2 seat adjuster cover caps.

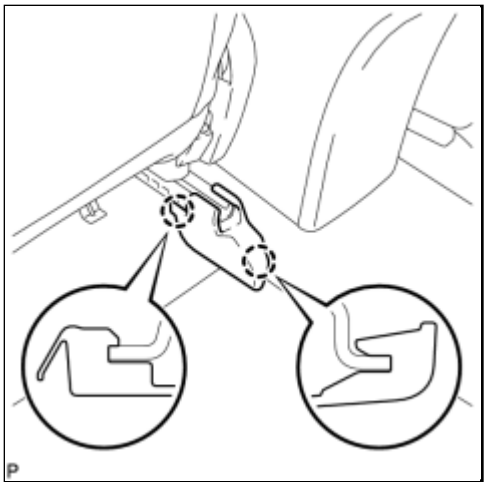
Title: SEAT: FRONT SEAT ASSEMBLY (for Power Seat): REMOVAL (2010 Corolla)		

REMOVAL

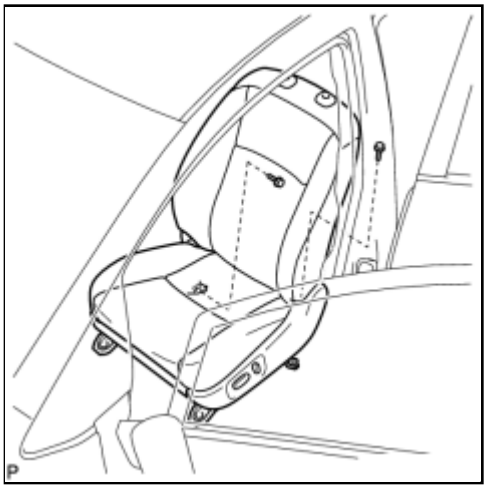
1. REMOVE FRONT SEAT HEADREST ASSEMBLY



2. REMOVE OUTER SEAT TRACK COVER

(a) Operate the power seat switch knob and move the seat to the foremost position.

(b) Disengage the 2 claws and remove the outer seat track cover.



3. REMOVE INNER SEAT TRACK COVER

(a) Disengage the 2 claws and remove the inner seat track cover.

4. REMOVE FRONT SEAT ASSEMBLY

(a) Remove the 2 bolts on the rear side of the seat.

(b) Operate the power seat switch knob and move the seat to the rearmost position.

(c) Remove the 2 bolts on the front side of the seat.

(d) Operate the power seat switch knob and move the seat to the center position. Also, operate the power seat switch knob and move the seatback to the upright position.

(e) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system INFO **.**

(f) Disconnect the connectors under the seat.

(g) Remove the seat.

NOTICE:

Be careful not to damage the vehicle body.

Title: SEAT: FRONT SEAT CUSHION HEATER: INSPECTION (2010 Corolla)		

INSPECTION

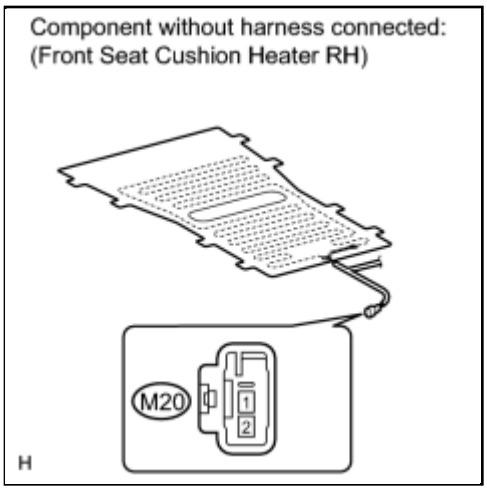
1. INSPECT FRONT SEAT CUSHION HEATER LH

(a) Check the seat cushion heater.

(1) Connect the front seatback heater LH connector.

(2) Apply battery voltage and check the seat cushion heater.

OK:



CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive (+) → L53-1 Battery negative (-) → L53-2	Always	Seat cushion heater becomes warm

NOTICE:

Immediately after confirming that the seat heater is functioning normally, remove the battery leads. Failing to do so may cause the seat heater to overheat.

If the result is not as specified, replace the seat cushion heater.

2. INSPECT FRONT SEAT CUSHION HEATER RH

(a) Check the seat cushion heater.

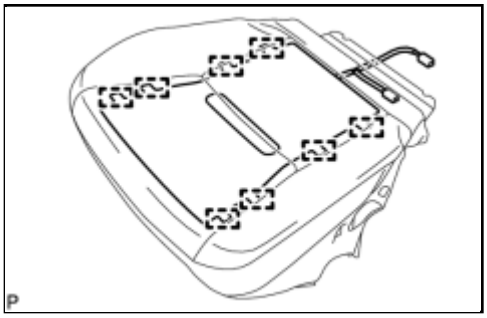
(1) Connect the front seatback heater RH connector.

(2) Apply battery voltage and check the seat cushion heater.

OK:

CONNECTION	CONDITION	SPECIFIED CONDITION
Battery positive (+) → M20-1 Battery negative (-) → M20-2	Always	Seat cushion heater becomes warm

NOTICE:



Immediately after confirming that the seat heater is functioning normally, remove the battery leads. Failing to do so may cause the seat heater to overheat.

If the result is not as specified, replace the seat cushion heater.

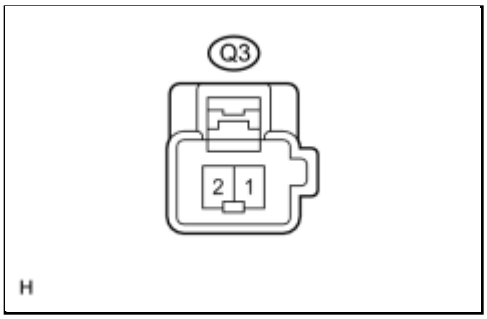
Title: SEAT: FRONT SEAT FRAME WITH ADJUSTER: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT SEAT FRAME WITH ADJUSTER

(a) Check the operation of the seat frame (slide motor).

(1) Check if the seat frame operates smoothly when the battery voltage is applied to the slide motor connector terminals.



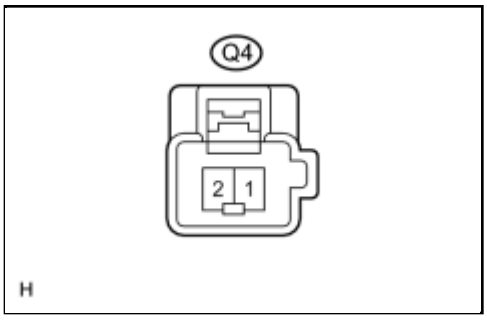
OK:

MEASUREMENT CONDITION	OPERATIONAL DIRECTION
Battery positive (+) → Q1-1 Battery negative (-) → Q1-2	Forward
Battery positive (+) → Q1-2 Battery negative (-) → Q1-1	Backward

If the result is not as specified, replace the seat frame with adjuster.

(b) Check the operation of the seat frame (front vertical motor).

(1) Check if the seat frame operates smoothly when the battery voltage is applied to the front vertical motor connector terminals.



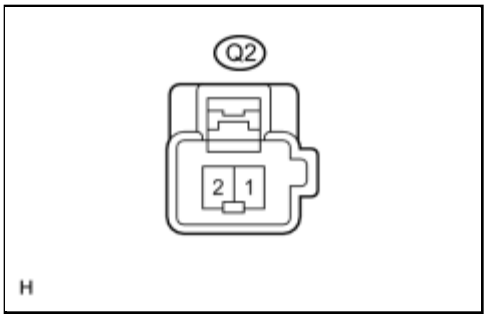
OK:

MEASUREMENT CONDITION	OPERATIONAL DIRECTION
Battery positive (+) → Q3-1 Battery negative (-) → Q3-2	Upward
Battery positive (+) → Q3-2 Battery negative (-) → Q3-1	Downward

If the result is not as specified, replace the seat frame with adjuster.

(c) Check the operation of the seat frame (reclining motor).

(1) Check if the seat frame operates smoothly when the battery voltage is applied to the reclining motor connector terminals.



OK:

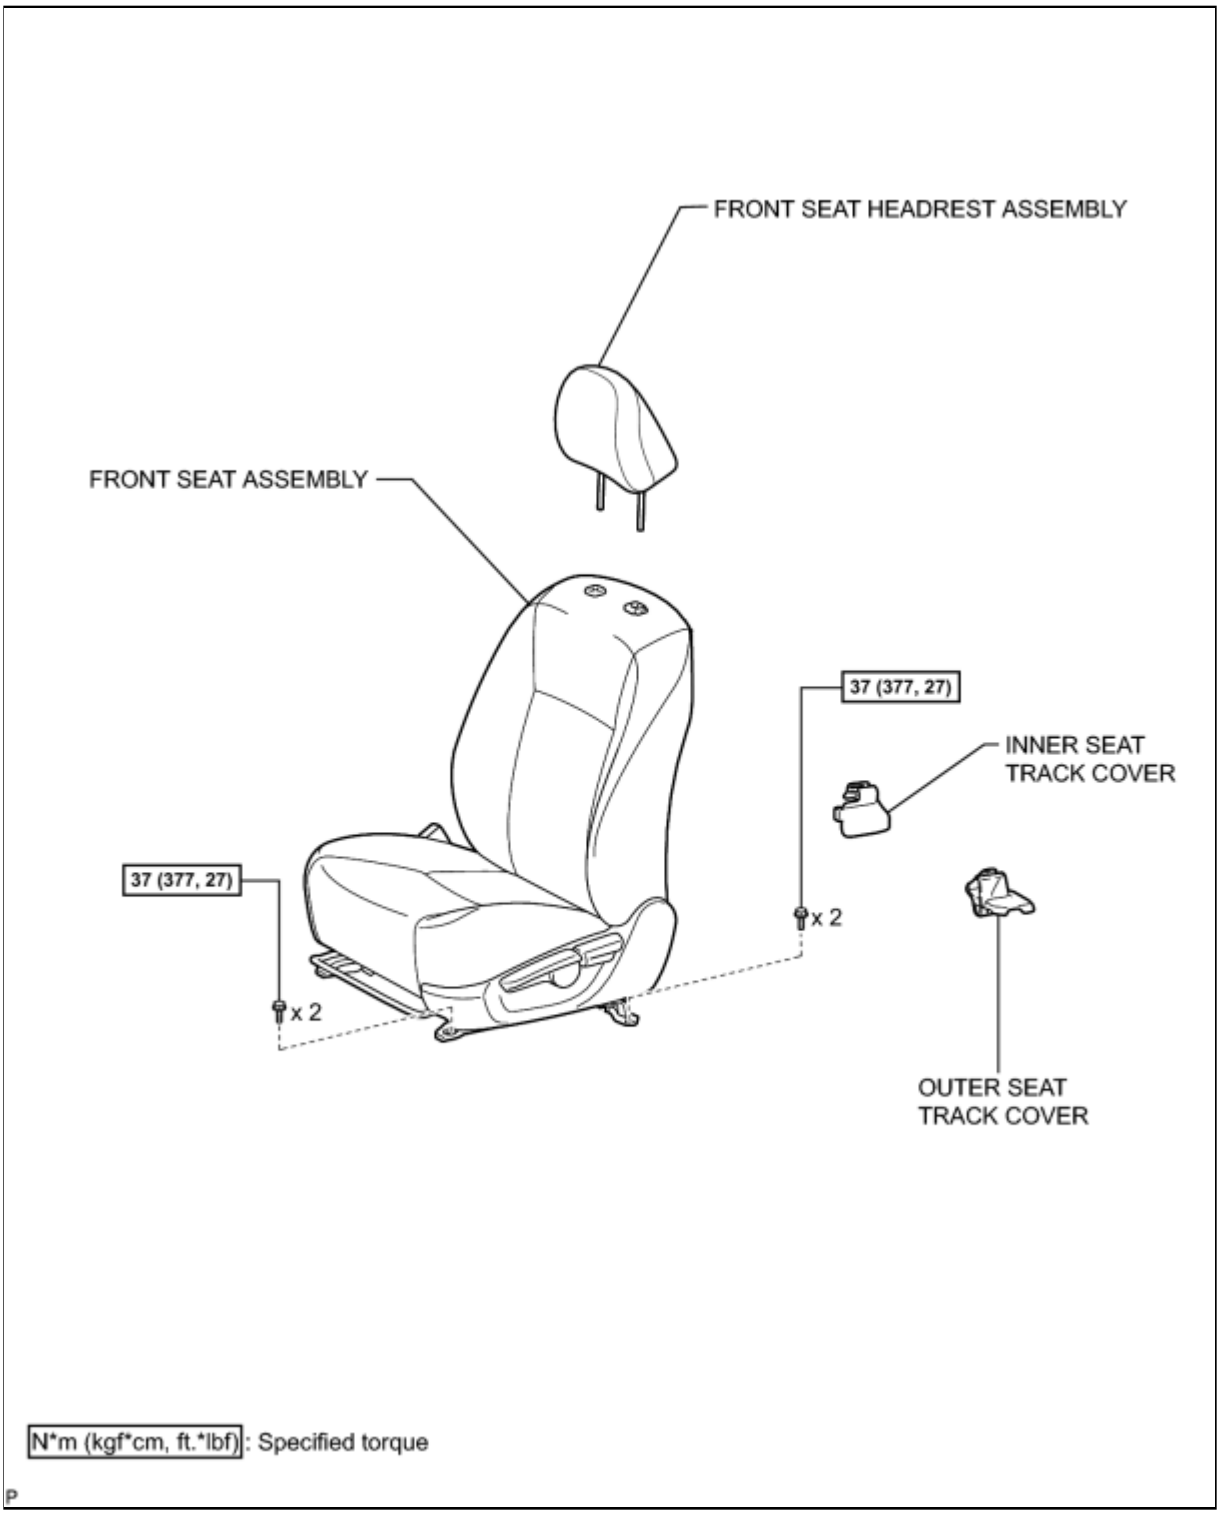
MEASUREMENT CONDITION	OPERATIONAL DIRECTION
Battery positive (+) → Q4-2 Battery negative (-) → Q4-1	Forward
Battery positive (+) → Q4-1 Battery negative (-) → Q4-2	Backward

If the result is not as specified, replace the seat frame with adjuster.

(d) Check the operation of the seat frame (lifter motor).

(1) Check if the seat frame operates smoothly when the battery voltage is applied to the lifter motor connector terminals.

OK:



MEASUREMENT CONDITION	OPERATIONAL DIRECTION
Battery positive (+) → Q2-2 Battery negative (-) → Q2-1	Upward
Battery positive (+) → Q2-1 Battery negative (-) → Q2-2	Downward

If the result is not as specified, replace the seat frame with adjuster.

INSPECTION

1. INSPECT POWER SEAT SWITCH

(a) Measure the resistance between the terminals when each switch is operated.

Standard Resistance (Slide Switch):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 9 (SLDF)	FRONT	Below 1 Ω
4 (E) - 6 (SLDR)	FRONT	Below 1 Ω
4 (E) - 6 (SLDR)	OFF	Below 1 Ω
4 (E) - 9 (SLDF)	OFF	Below 1 Ω
1 (B) - 6 (SLDR)	REAR	Below 1 Ω
4 (E) - 9 (SLDF)	REAR	Below 1 Ω

Standard Resistance (Front Vertical Switch):

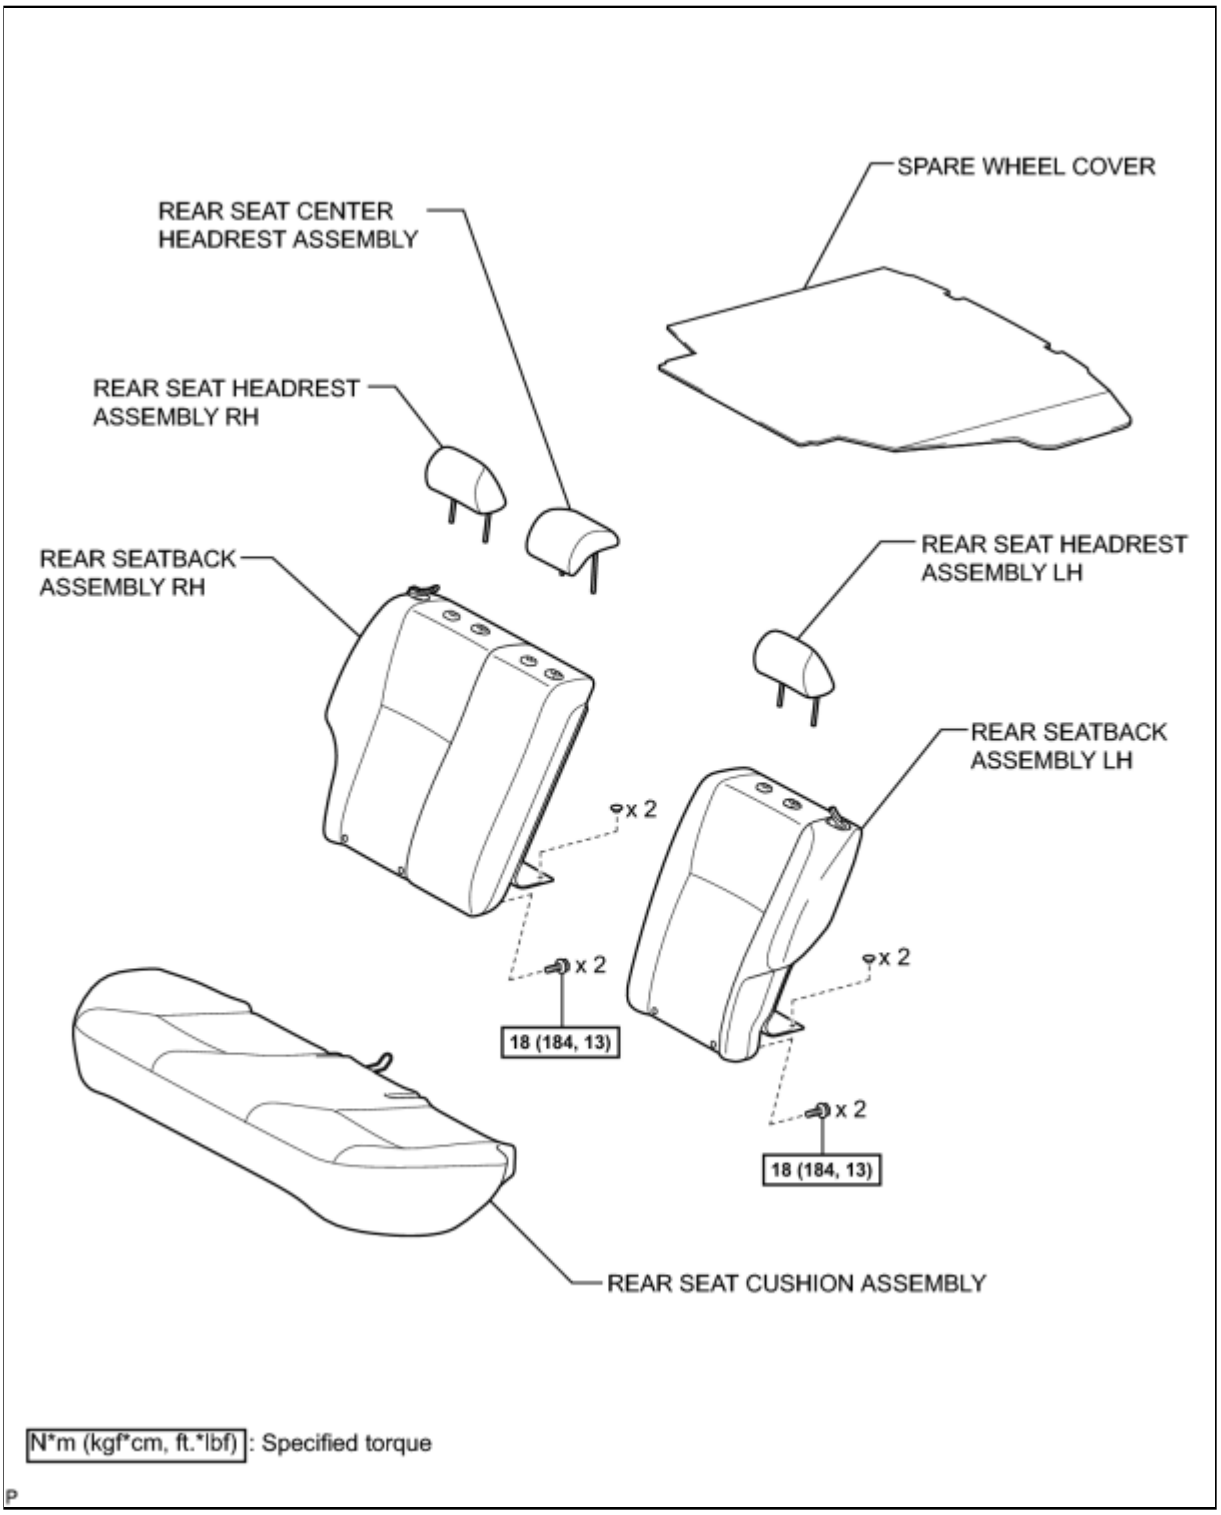
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 10 (FUP)	UP	Below 1 Ω
4 (E) - 5 (FDWN)	UP	Below 1 Ω
4 (E) - 10 (FUP)	OFF	Below 1 Ω
4 (E) - 5 (FDWN)	OFF	Below 1 Ω
1 (B) - 10 (FUP)	DOWN	Below 1 Ω
1 (B) - 5 (FDWN)	DOWN	Below 1 Ω

Standard Resistance (Lifter Switch):

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 7 (LUP)	UP	Below 1 Ω
4 (E) - 8 (LDWN)	UP	Below 1 Ω
4 (E) - 8 (LDWN)	OFF	Below 1 Ω

4 (E) - 7 (LUP)	OFF	Below 1 Ω
1 (B) - 8 (LDWN)	DOWN	Below 1 Ω
4 (E) - 7 (LUP)	DOWN	Below 1 Ω

Standard Resistance (Reclining Switch):



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (B) - 3 (RCLF)	FRONT	Below 1 Ω
2 (RCLR) - 4 (E)	FRONT	Below 1 Ω
2 (RCLR) - 4 (E)	OFF	Below 1 Ω
3 (RCLF) - 4 (E)	OFF	Below 1 Ω
1 (B) - 2 (RCLR)	REAR	Below 1 Ω
3 (RCLF) - 4 (E)	REAR	Below 1 Ω

If the result is not as specified, replace the switch.

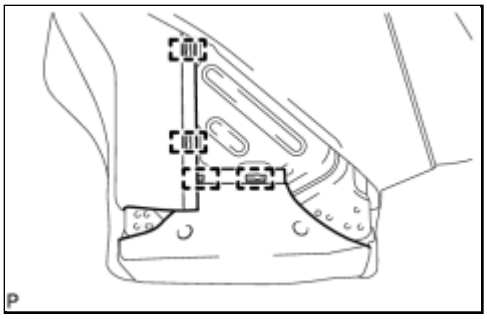
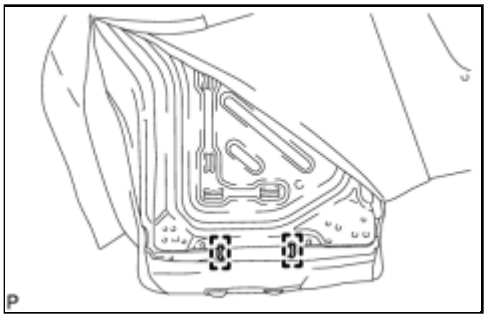
Title: SEAT: REAR SEAT ASSEMBLY: DISASSEMBLY (2010 Corolla)		

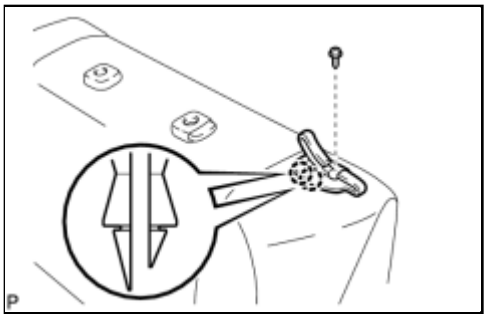
DISASSEMBLY



1. REMOVE REAR SEATBACK COVER WITH PAD LH

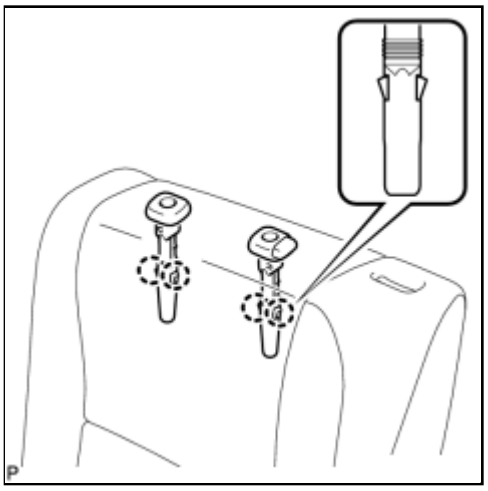
(a) Using a clip remover, remove the 2 clips.



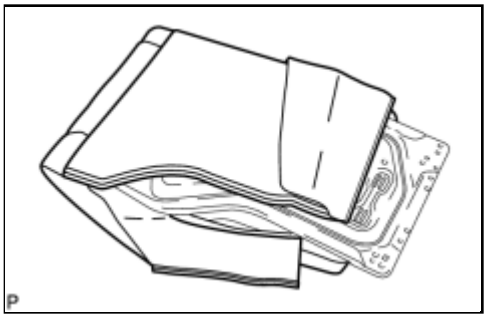


(b) Unfasten and flip back the rear seatback cover with pad LH as shown in the illustration.

(c) Disengage the 4 hooks.

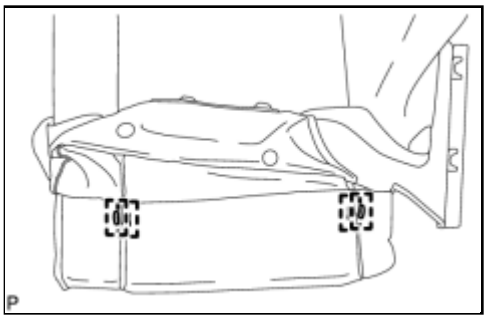


(d) Remove the 2 hog rings.

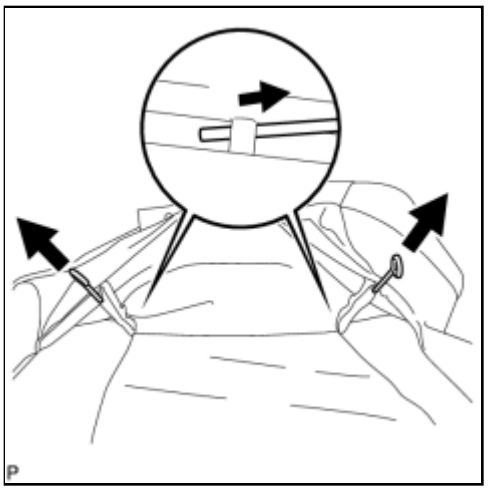


(e) Remove the screw.

(f) Disengage the 2 claws and remove the rear seat shoulder belt guide LH.

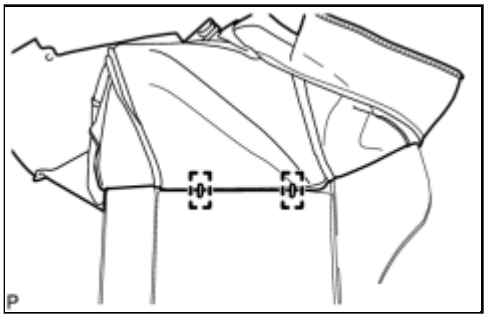


(g) Disengage the 4 claws and remove the 2 rear seat headrest supports.

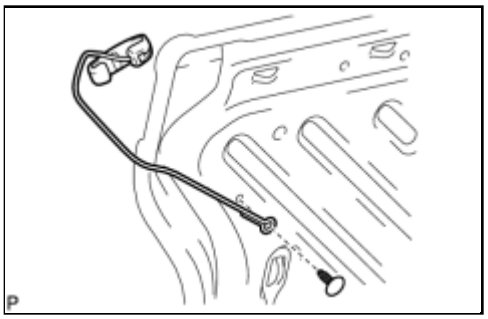


(h) Remove the rear seatback cover with pad LH from the rear seatback frame sub-assembly LH.

2. REMOVE SEPARATE TYPE REAR SEATBACK COVER LH

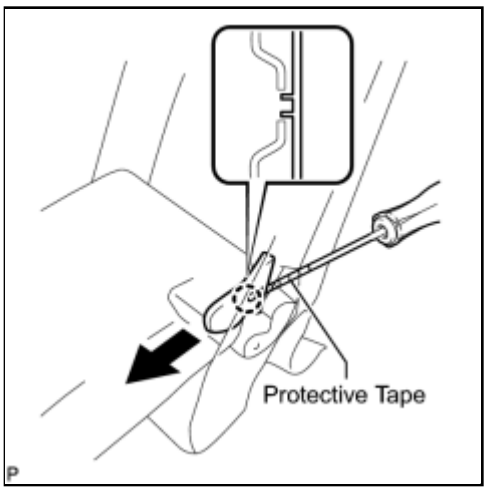


(a) Remove the 4 hog rings.



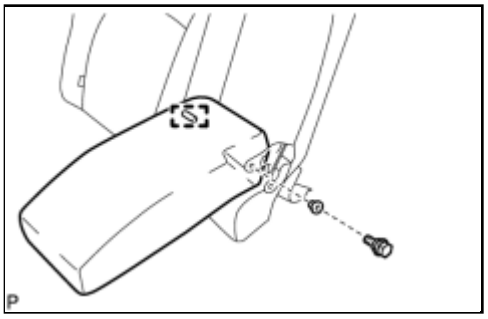
(b) Remove the rod from the separate type rear seatback cover LH as shown in the illustration.

(c) Remove the 2 hog rings and the separate type rear seatback cover LH.

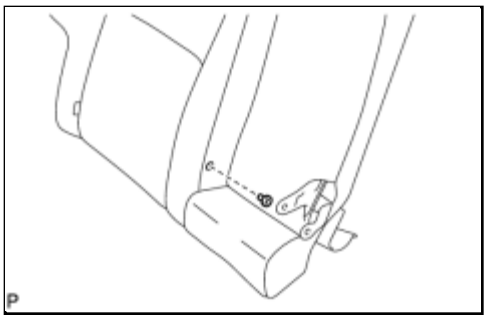


3. REMOVE REAR SEAT BELT HOOK LH

(a) Remove the clip and the rear seat belt hook LH.



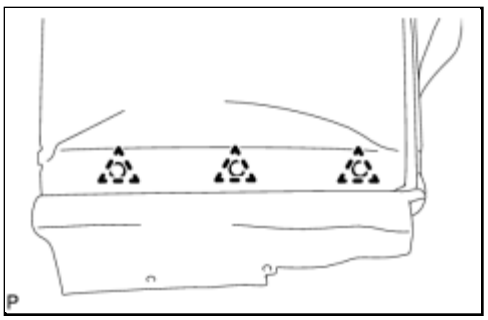
4. REMOVE CENTER ARMREST HINGE COVER (w/ Center Armrest)



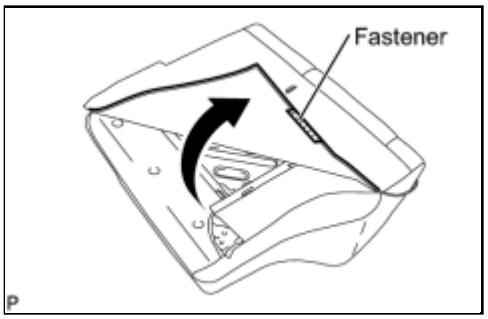
(a) Using a screwdriver with the tip taped, disengage the claw and remove the center armrest hinge cover as shown in the illustration.

5. REMOVE REAR SEAT CENTER ARMREST ASSEMBLY (w/ Center Armrest)

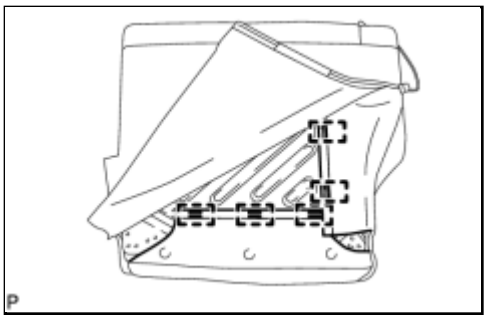
(a) Remove the bolt and bush.



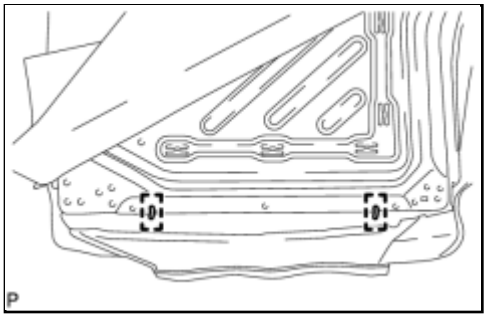
(b) Separate the pin and remove the center armrest assembly.



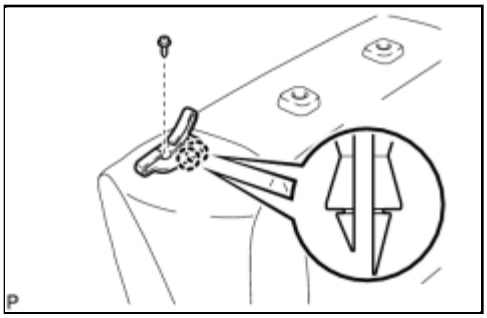
(c) Remove the bush.



6. REMOVE REAR SEATBACK COVER WITH PAD RH

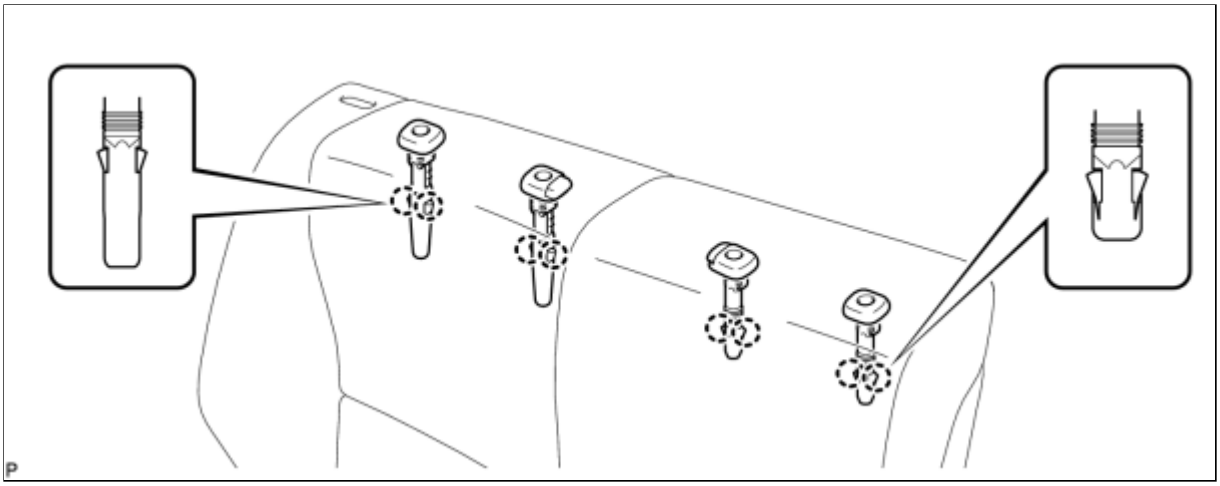


(a) Using a clip remover, remove the 3 clips.

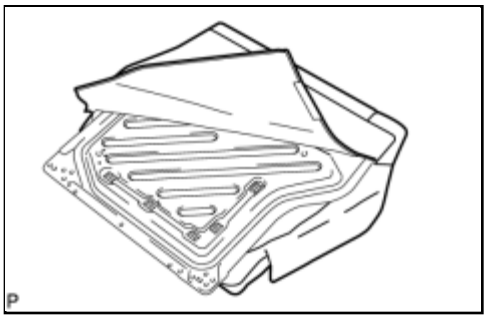


(b) Unfasten and flip back the rear seatback cover with pad LH as shown in the illustration.

(c) Disengage the 5 hooks.



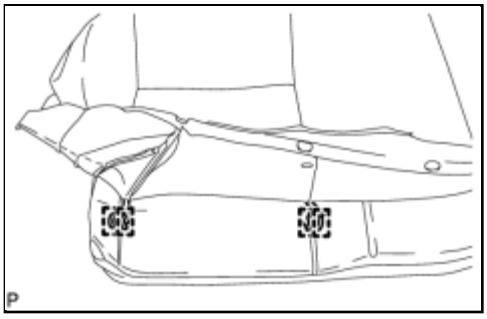
(d) Remove the 2 hog rings.



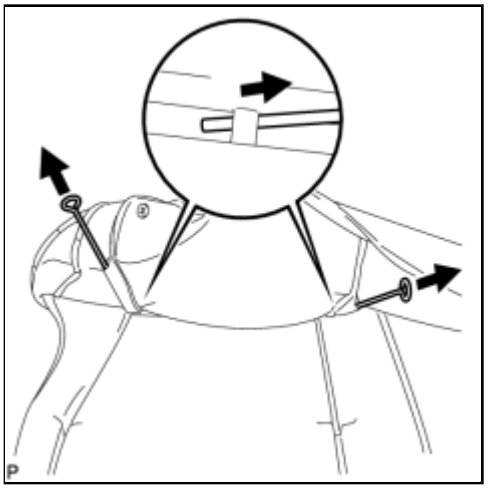
(e) Remove the screw.

(f) Disengage the 2 claws and remove the rear seat shoulder belt guide RH.

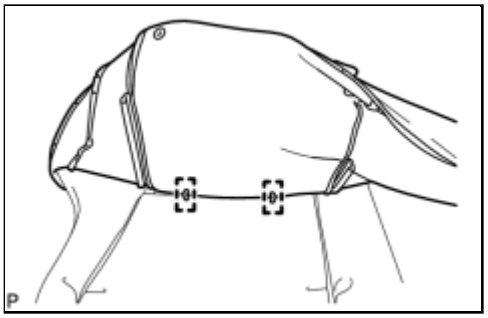
(g) Disengage the 4 claws and remove the 2 rear seat headrest supports.



(h) Disengage the 4 claws and remove the 2 rear seat center headrest supports.

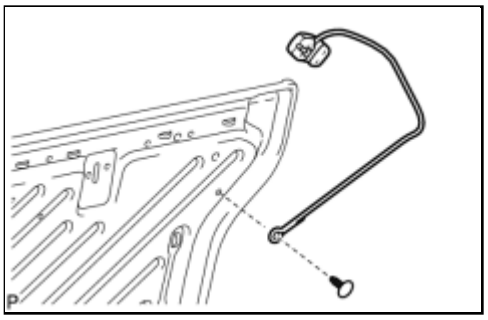


(i) Remove the rear seatback cover with pad RH from the rear seatback frame sub-assembly RH.



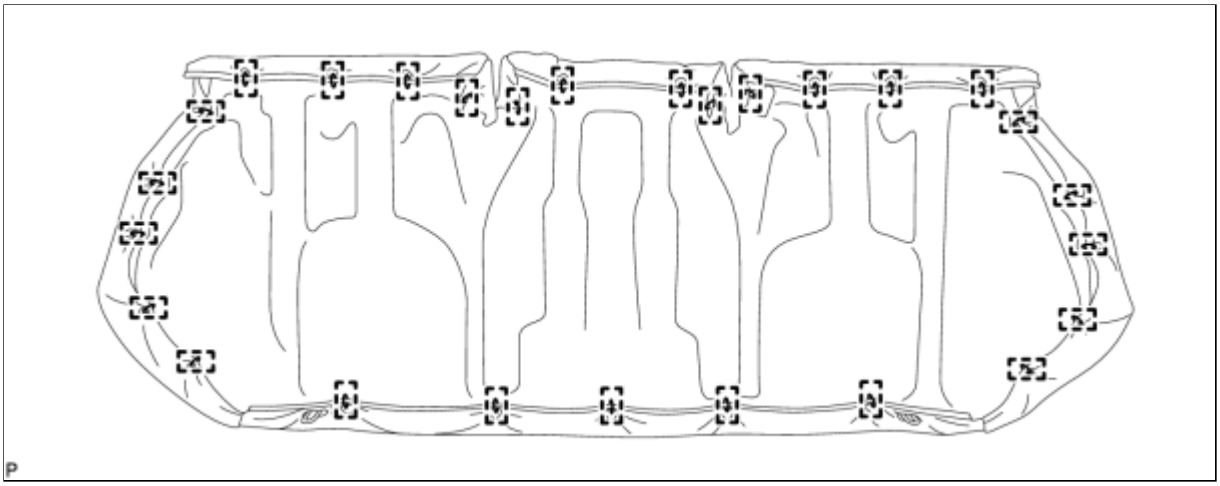
7. REMOVE SEPARATE TYPE REAR SEATBACK COVER RH

(a) Remove the 4 hog rings.

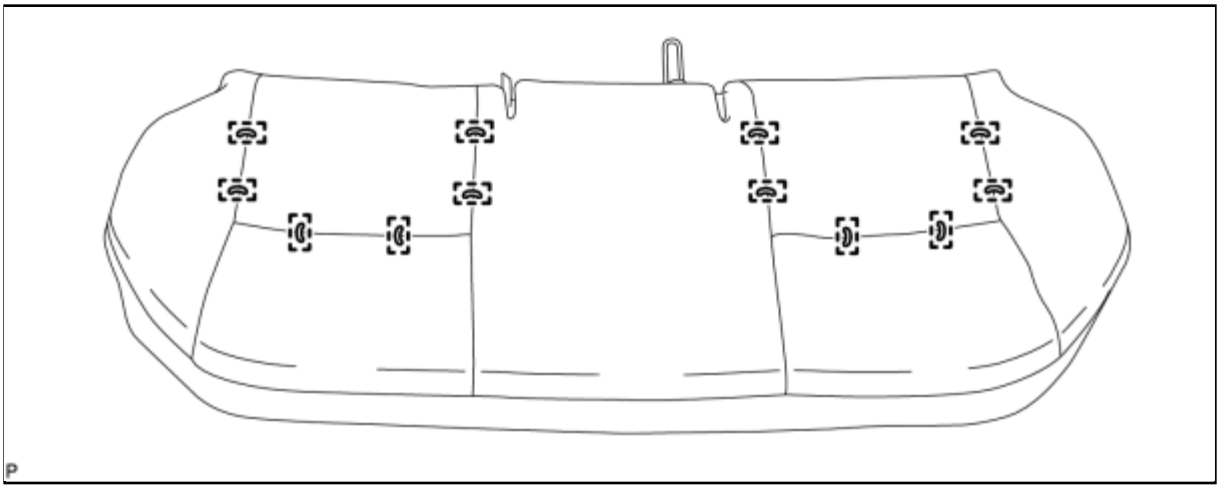


(b) Remove the rod from the separate type rear seatback cover RH as shown in the illustration.

(c) Remove the 2 hog rings and the separate type rear seatback cover RH.



8. REMOVE REAR SEAT BELT HOOK RH

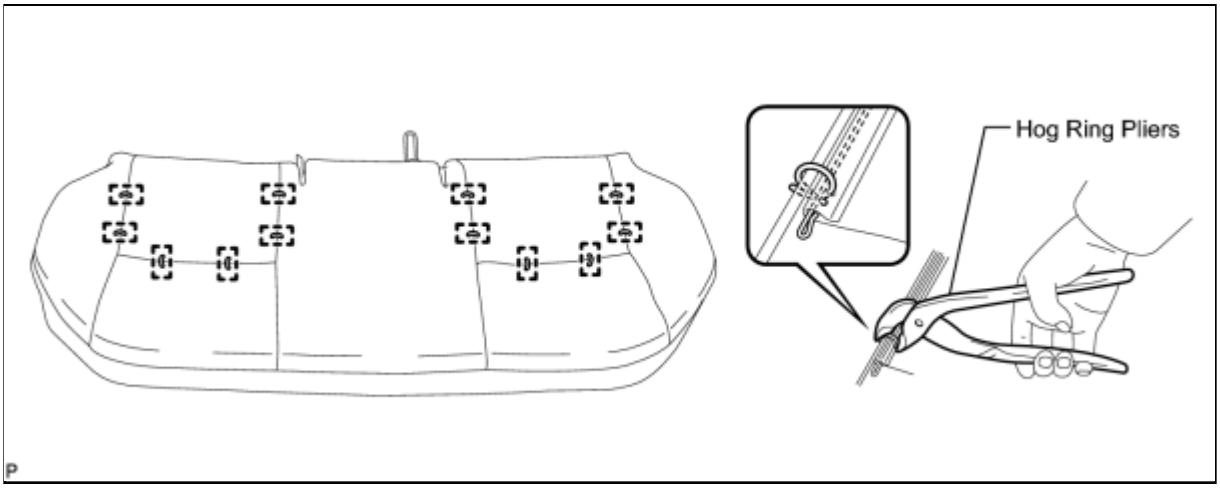


(a) Remove the clip and the rear seat belt hook RH.

9. REMOVE BENCH TYPE REAR SEAT CUSHION COVER

(a) Remove the 27 hog rings.

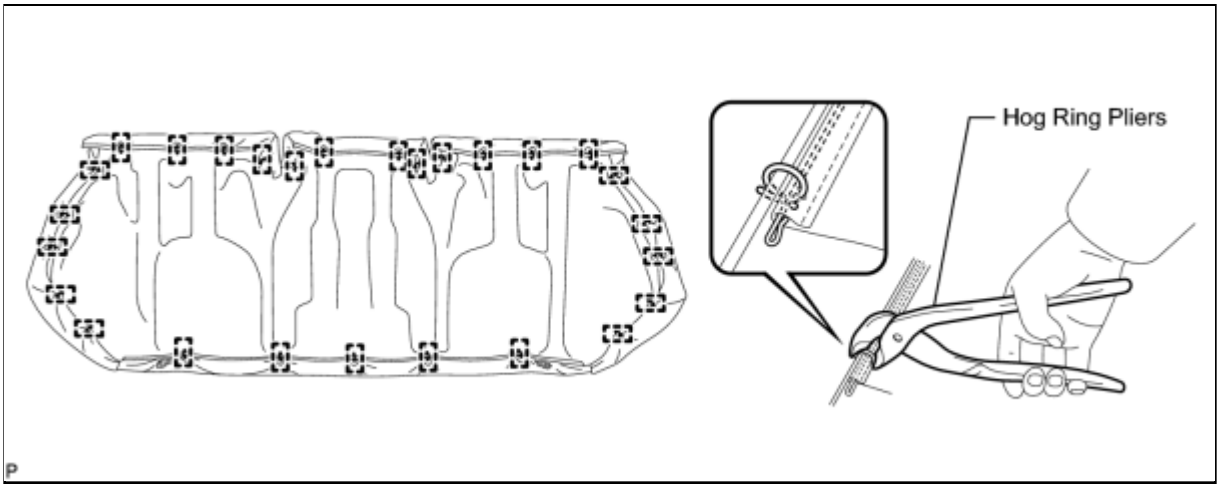
(b) Remove the 12 hog rings and the rear seat cushion cover sub-assembly.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XNY00GX
Title: SEAT: REAR SEAT ASSEMBLY: REASSEMBLY (2010 Corolla)		

REASSEMBLY

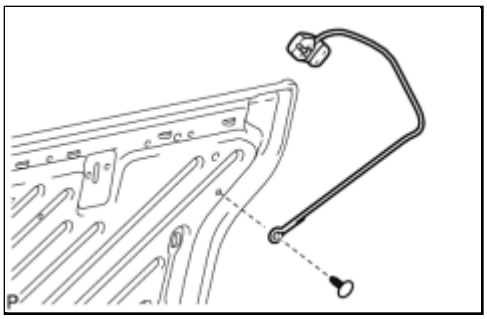
1. INSTALL BENCH TYPE REAR SEAT CUSHION COVER



(a) Using hog ring pliers, install the rear seat cushion cover sub-assembly with 12 new hog rings.

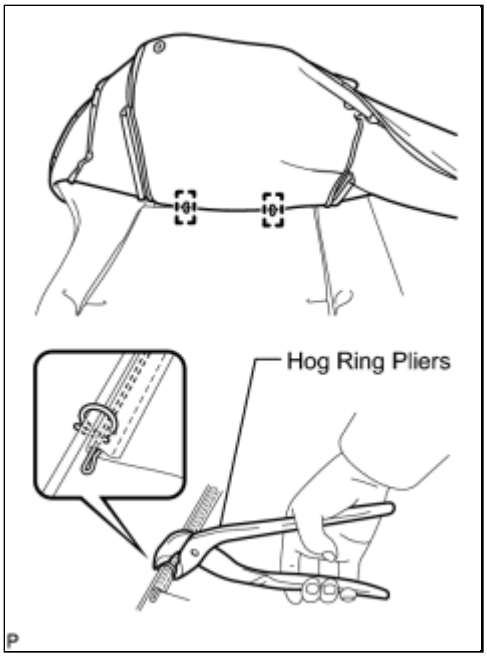
NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.



(b) Using hog ring pliers, install the rear seat cushion cover sub-assembly with 27 new hog rings.

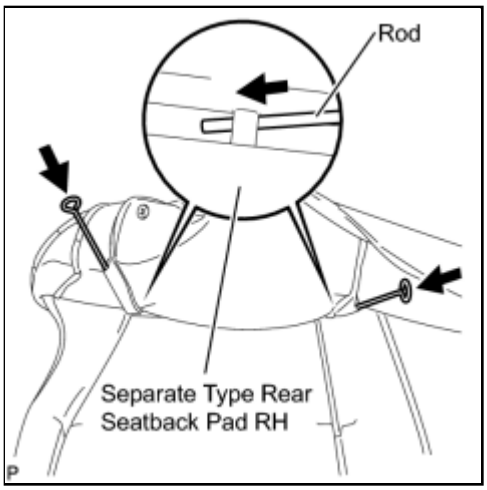
NOTICE:



- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

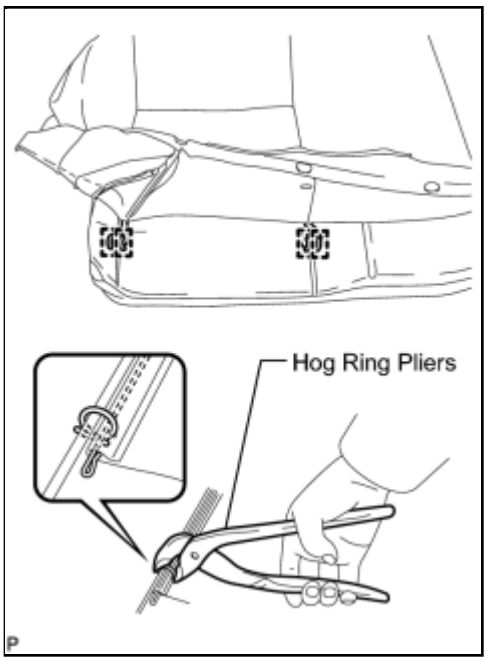
2. INSTALL REAR SEAT BELT HOOK RH

(a) Install the rear seat belt hook RH with the clip.



3. INSTALL SEPARATE TYPE REAR SEATBACK COVER RH

(a) Using hog ring pliers, install the separate type rear seatback cover RH to the separate type rear seatback pad RH with 2 new hog rings.

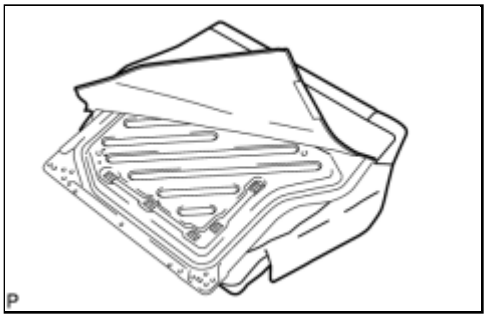


NOTICE:

- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

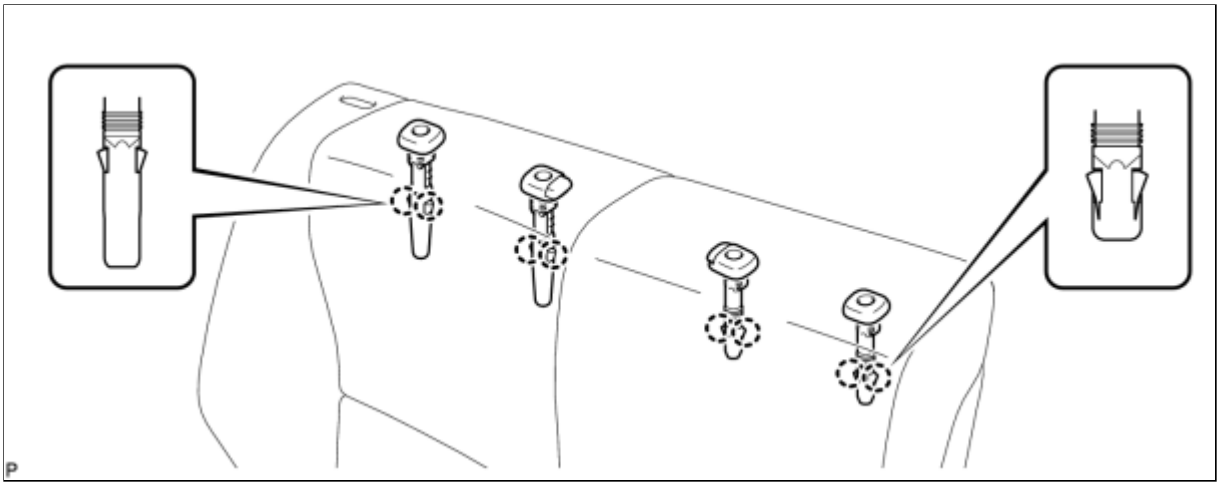
(b) Install the rod to the separate type rear seatback cover RH.

(c) Insert the rod to the separate type rear seatback pad RH as shown in the illustration.



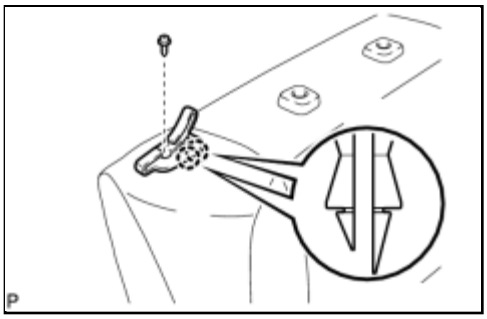
(d) Using hog ring pliers, install the separate type rear seatback cover RH to the separate type rear seatback pad RH with 4 new hog rings.

NOTICE:



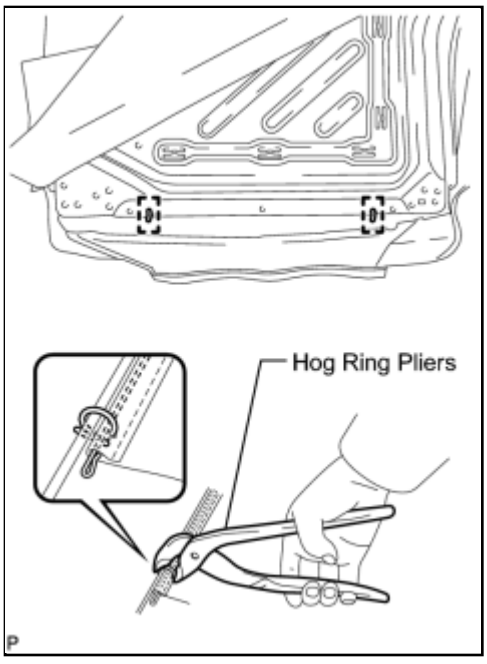
- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

4. INSTALL REAR SEATBACK COVER WITH PAD RH



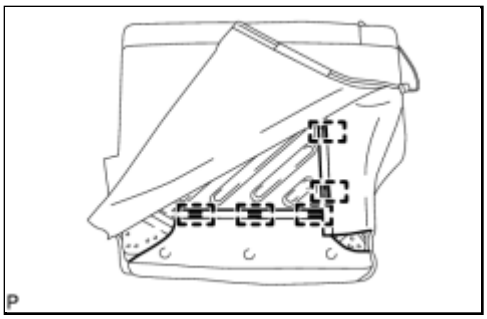
(a) Temporarily install the rear seatback cover with pad RH to the rear seatback frame sub-assembly RH.

(b) Engage the 4 claws and install the 2 rear seat center headrest supports.

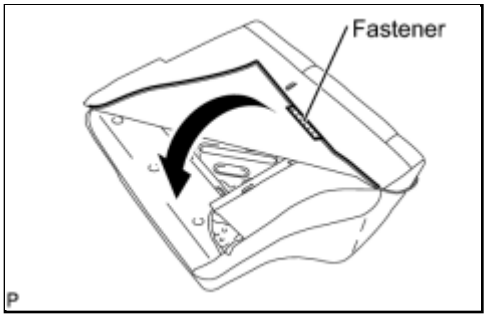


(c) Engage the 4 claws and install the 2 rear seat headrest supports.

(d) Engage the 2 claws.

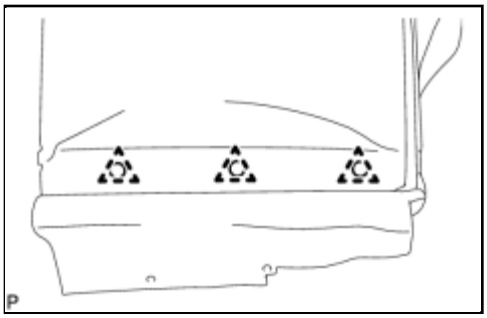


(e) Install the rear seat shoulder belt guide RH with the screw.



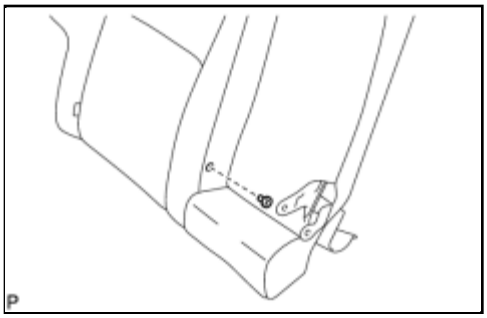
(f) Using hog ring pliers, install 2 new hog rings.

NOTICE:

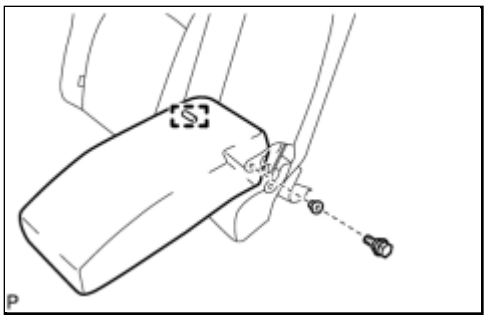


- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(g) Engage the 5 hooks.



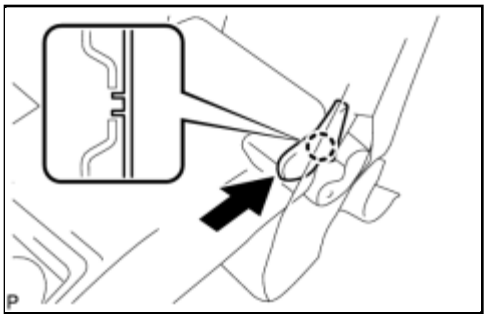
(h) Fasten the rear seatback cover with pad RH.



(i) Install the 3 clips.

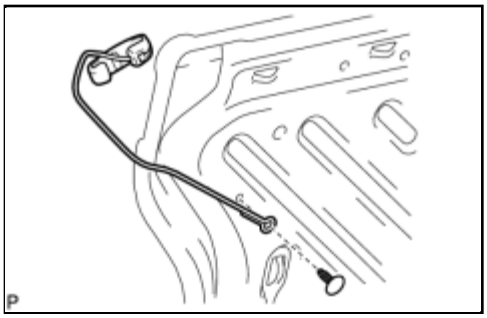
5. INSTALL REAR SEAT CENTER ARMREST ASSEMBLY (w/ Center Armrest)

(a) Install the bush.



(b) Insert the pin into the rear seatback.

Torque: 4.5 N·m (46 kgf·cm, 40in·lbf)

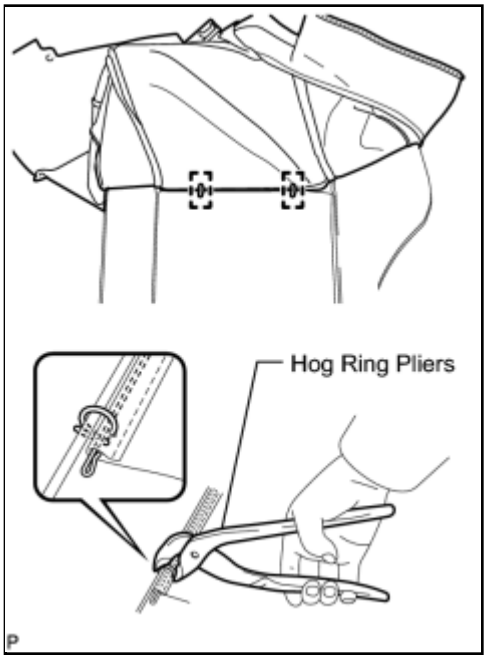


(c) Install the rear seat center armrest assembly with the bolt and bush.

6. INSTALL CENTER ARMREST HINGE COVER (w/ Center Armrest)

(a) Engage the claw and install the center armrest hinge cover as shown in the illustration.

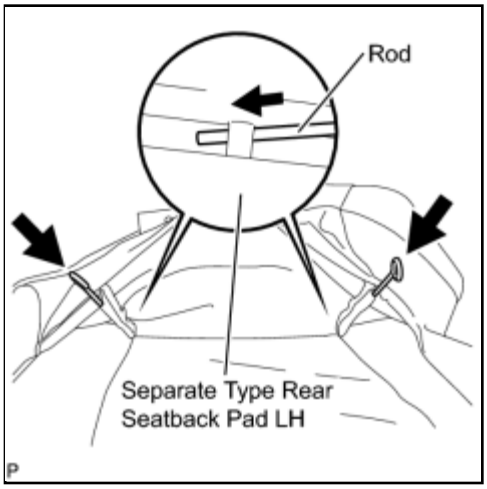
7. INSTALL REAR SEAT BELT HOOK LH



(a) Install the rear seat belt hook LH with the clip.

8. INSTALL SEPARATE TYPE REAR SEATBACK COVER LH

(a) Using hog ring pliers, install the separate type rear seatback cover LH to the separate type rear seatback pad LH with 2 new hog rings.

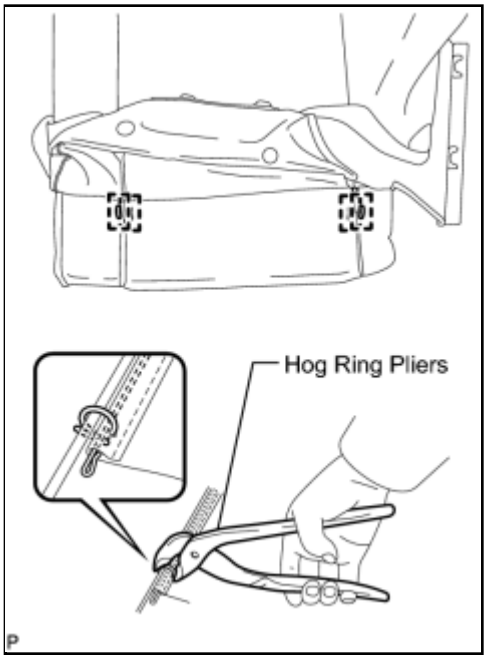


NOTICE:

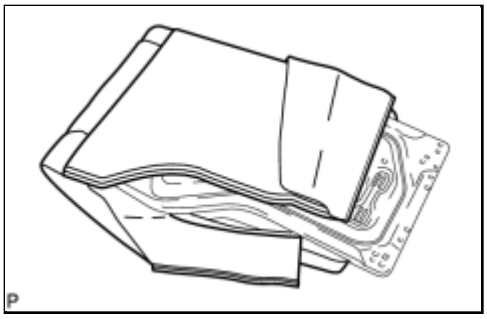
- Be careful not to damage the cover.

- When installing the hog rings, take care to minimize wrinkles as much as possible.

(b) Install the rod to the separate type rear seatback cover LH.

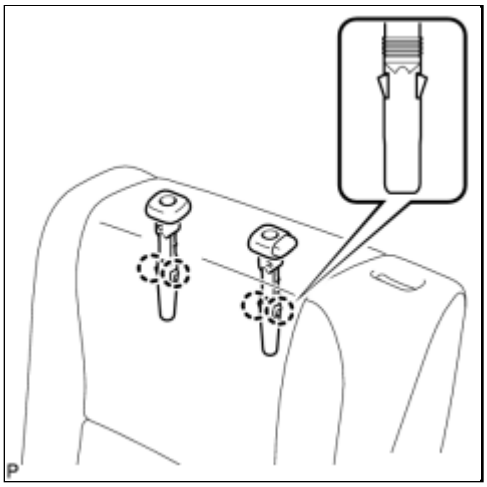


(c) Insert the rod to the separate type rear seatback pad LH as shown in the illustration.

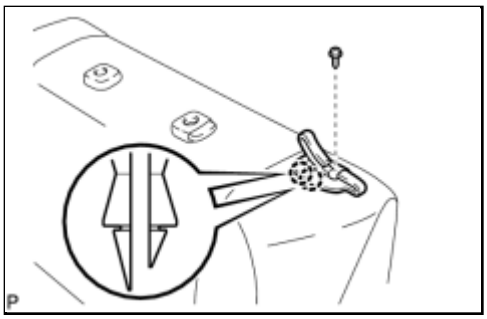


(d) Using hog ring pliers, install the separate type rear seatback cover LH to the separate type rear seatback pad LH with 4 new hog rings.

NOTICE:

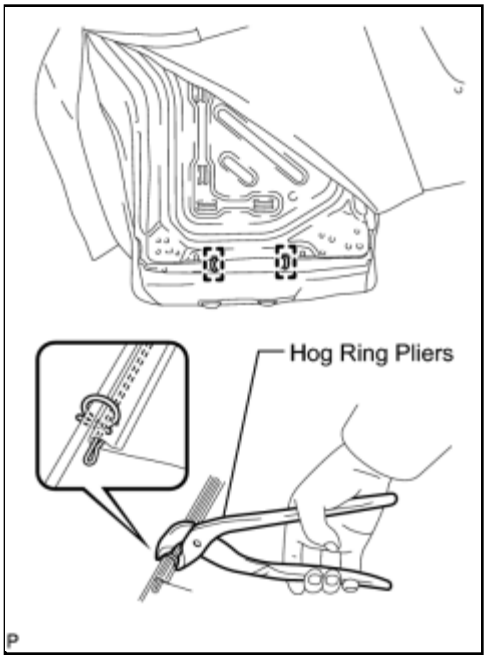


- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.



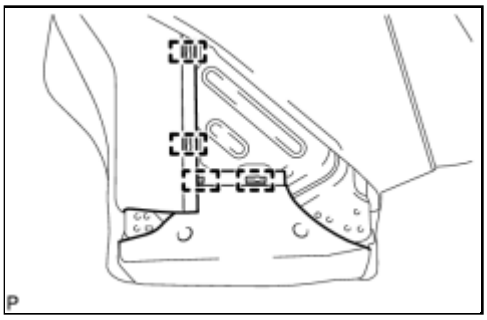
9. INSTALL REAR SEATBACK COVER WITH PAD LH

(a) Temporarily install the rear seatback cover with pad LH to the rear seatback frame sub-assembly LH.



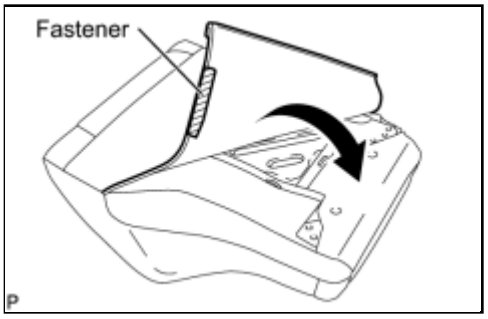
(b) Engage the 4 claws and install the 2 rear seat headrest supports.

(c) Engage the 2 claws.

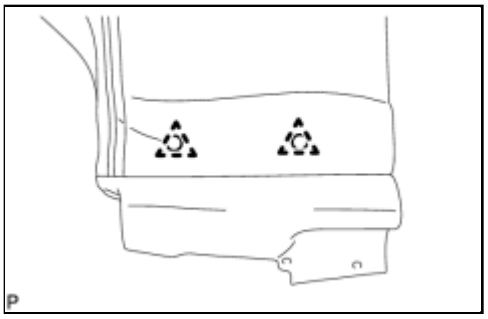


(d) Install the rear seat shoulder belt guide LH with the screw.

(e) Using hog ring pliers, install 2 new hog rings.



NOTICE:



- Be careful not to damage the cover.
- When installing the hog rings, take care to minimize wrinkles as much as possible.

(f) Engage the 4 hooks.

(g) Fasten the rear seatback cover with pad LH.

(h) Install the 2 clips.

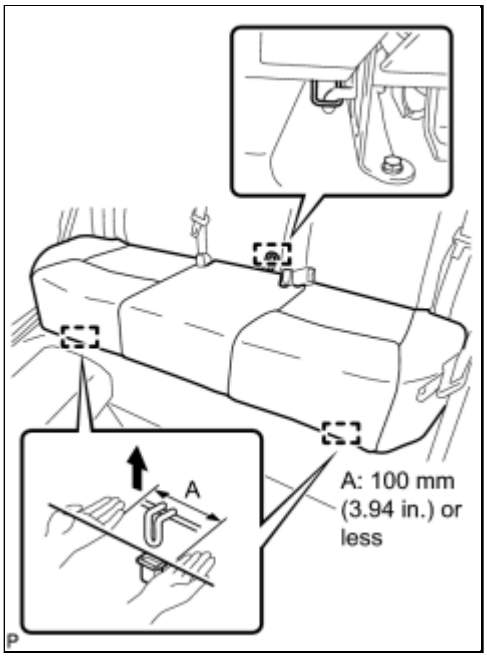
Title: SEAT: REAR SEAT ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL



1. REMOVE SPARE WHEEL COVER INFO

2. REMOVE REAR SEAT HEADREST ASSEMBLY LH

3. REMOVE REAR SEAT HEADREST ASSEMBLY RH

4. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY

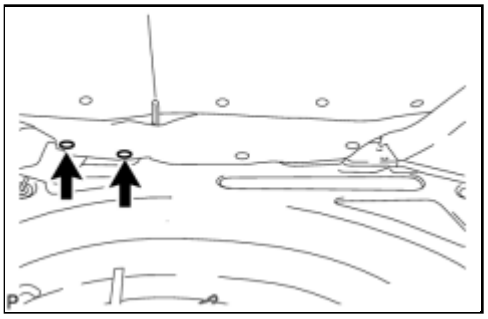
5. REMOVE REAR SEAT CUSHION ASSEMBLY

(a) Detach the 2 front hooks of the seat cushion from the vehicle body as shown in the illustration.

NOTICE:

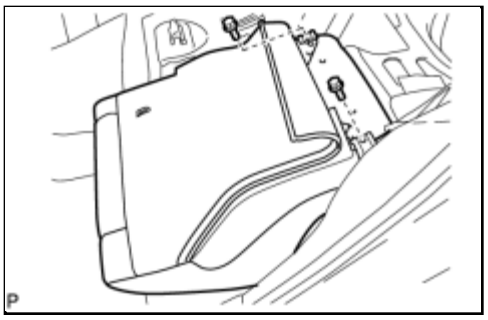
Follow the instructions below carefully as the cushion frame deforms easily.

(1) Choose a hook to detach first. Place your hands near the hook as shown in the illustration. Then lift the seat cushion to detach the hook.



(2) Repeat the above procedure for the other hook.

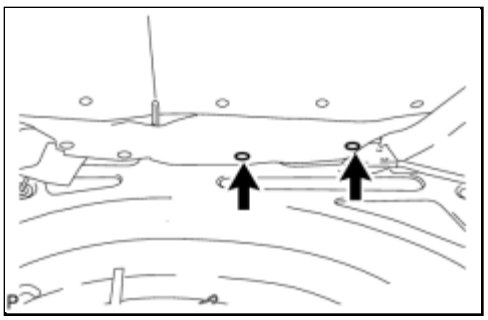
(b) Detach the rear hook of the seat cushion from the seatback.



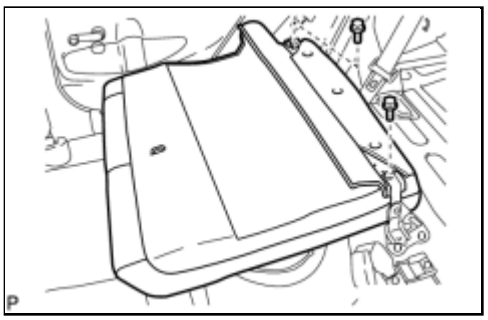
(c) Remove the rear seat cushion assembly.

6. REMOVE REAR SEATBACK ASSEMBLY LH

(a) Using a clip remover, remove the 2 rear seat back clips.



(b) Fold the rear seatback assembly LH forward.



(c) Remove the 2 bolts and the rear seatback assembly LH.

7. REMOVE REAR SEATBACK ASSEMBLY RH

(a) Using a clip remover, remove the 2 rear seat back clips.

(b) Fold the rear seatback assembly RH forward.

(c) Remove the 2 bolts and the rear seatback assembly RH.

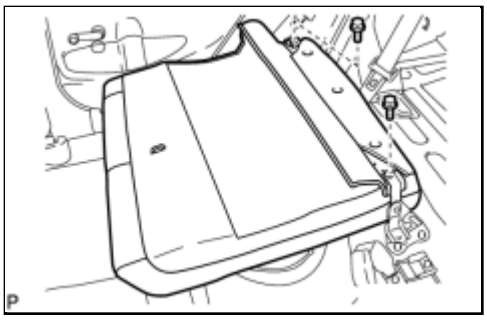
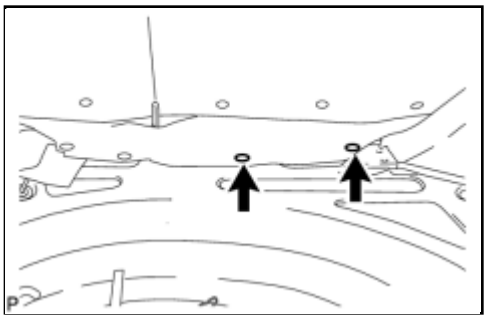
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002XNU00GX
Title: SEAT: REAR SEAT ASSEMBLY: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL REAR SEATBACK ASSEMBLY RH

(a) Place the rear seatback assembly RH in the cabin.



NOTICE:

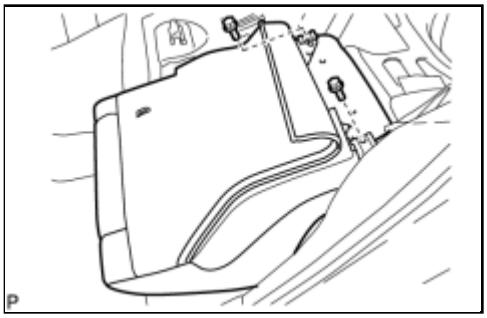
Be careful not to damage the vehicle body.

(b) Install the rear seatback assembly RH with the 2 bolts.

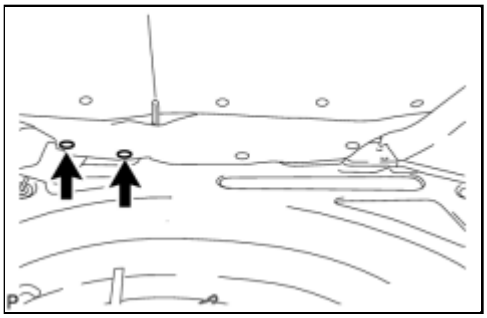
Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(c) Install the 2 rear seatback clips.

2. INSTALL REAR SEATBACK ASSEMBLY LH



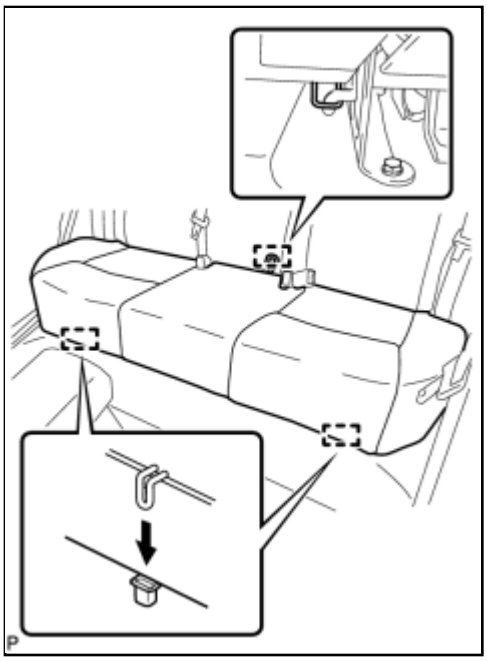
(a) Place the rear seatback assembly LH in the cabin.



NOTICE:

Be careful not to damage the vehicle body.

(b) Install the rear seatback assembly LH with the 2 bolts.



Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

(c) Install the 2 rear seatback clips.

3. INSTALL REAR SEAT CUSHION ASSEMBLY

(a) Attach the rear hook of the seat cushion to the seatback.

(b) Attach the 2 front hooks of the seat cushion to the vehicle body.

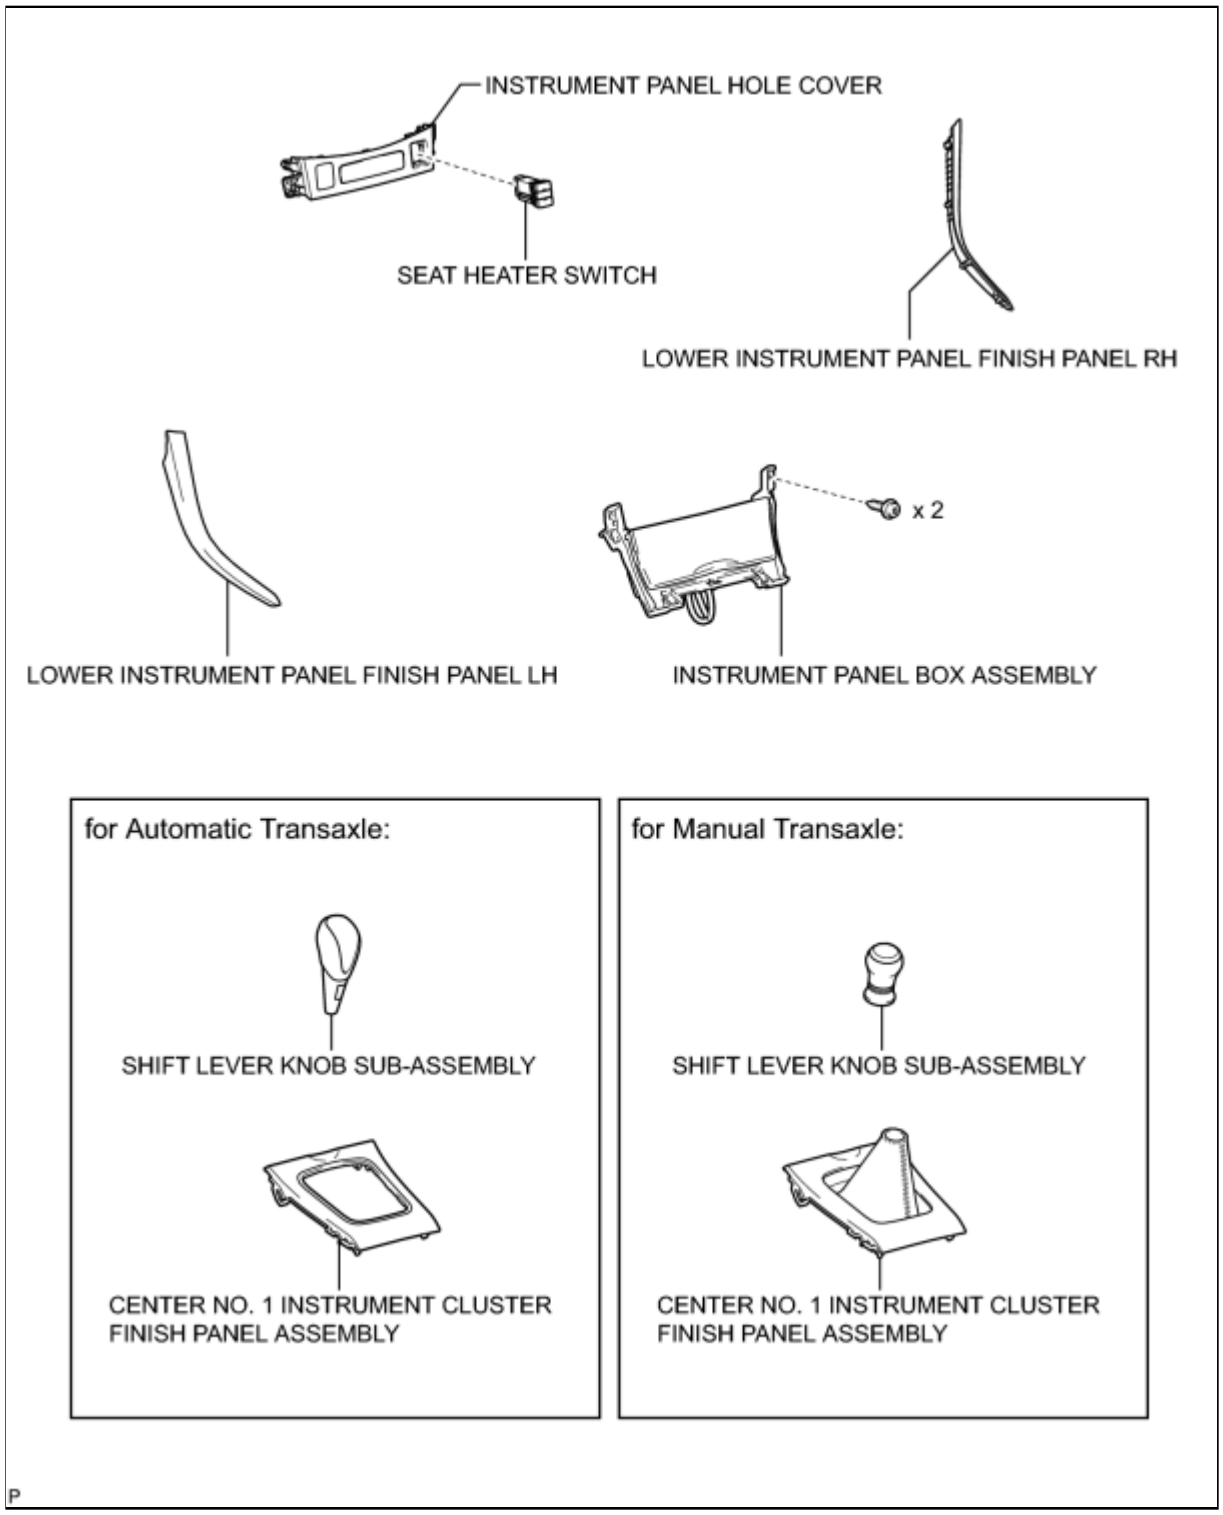
(c) Confirm that the seat cushion is firmly installed.

NOTICE:

When installing the seat cushion, make sure that the seat belt buckle is not under the seat cushion.

4. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

5. INSTALL REAR SEAT HEADREST ASSEMBLY RH



6. INSTALL REAR SEAT HEADREST ASSEMBLY LH

7. INSTALL SPARE WHEEL COVER INFO

Title: SEAT: SEAT HEATER SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT SEAT HEATER SWITCH

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

LH Side

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E105-5 (IG) - E105-6 (LH)	OFF	10 kΩ or higher
E105-5 (IG) - E105-6 (LH)	ON	Below 1 Ω

RH Side

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E105-4 (IG) - E105-3 (RH)	OFF	10 kΩ or higher
E105-4 (IG) - E105-3 (RH)	ON	Below 1 Ω

If the result is not as specified, replace the seat heater switch.

(b) Turn the seat heater switch on and check if the seat heater switch indicator comes on.

OK:

LH Side

CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) → E105-5 (IG) Battery negative (-) → E105-2 (E)	ON	Comes on

RH Side

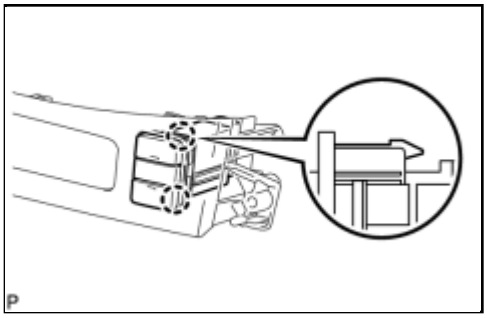
CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) → E105-4 (IG) Battery negative (-) → E105-2 (E)	ON	Comes on

If the result is not as specified, replace the seat heater switch.

(c) Check if the seat heater switch comes on.

OK:

CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Battery positive (+) → E105-7 (ILL+) Battery negative (-) → E105-8 (ILL-)	Always	Comes on



If the result is not as specified, replace the seat heater switch.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000KT1074X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

HINT:

- In the airbag system, the center airbag sensor assembly, front airbag sensors LH and RH, side airbag sensors LH* and RH*, and rear airbag sensors LH* and RH* are collectively referred to as the airbag sensors.

  The steering pad, front passenger airbag assembly, front seat side airbag assembly*, curtain shield airbag assembly*, center airbag sensor assembly, front airbag sensor, side airbag sensor*, rear airbag sensor*, seat position airbag sensor, front seat inner belt assembly or front seat outer belt assembly are collectively referred to as the SRS parts.

- *: For vehicles equipped with the front seat side airbags and curtain shield airbags.

CAUTION:

- The vehicle is equipped with a Supplemental Restraint System (SRS). It consists of a driver airbag, front passenger airbag, center airbag sensor, front seat side airbags*, curtain shield airbags*, front seat belt pretensioners, seat position airbag sensor, seat belt buckle switch, front airbag sensors, side airbag sensors* and rear airbag sensors*. Failure to carry out service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing, possibly leading to a serious accident. Further, if a mistake is made when servicing the SRS, it is possible that the SRS may fail to operate when required. Before performing servicing (including removal or installation of parts, inspection or replacement), be sure to read the following items carefully, then follow the procedures exactly as indicated in the repair manual.
- Wait at least 90 seconds after the ignition switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting the operation.

  (The SRS is equipped with a backup power source, so if work is started within 90 seconds after disconnecting the cable from the negative (-) battery terminal, the SRS may be deployed.)
- Do not expose any of the SRS parts directly to hot air or flames.

NOTICE:

- Malfunction symptoms of the SRS are difficult to confirm, so DTCs are the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect DTCs before disconnecting the battery.
- Even in the case of a minor collision that does not cause the SRS to deploy, the SRS parts should be inspected.
- Before beginning repairs, remove the airbag sensors if any kind of shock is likely to occur to the airbag sensors during the operation.
- Never use SRS parts from another vehicle. When replacing parts, replace them with new ones.
- Never disassemble or repair any of the SRS parts in order to reuse them. If any of these parts have been dropped, or any defect is found (e.g. cracks, dents or any other defects) in any of the housings, brackets or connectors, replace the part with a new one.
- Use a volt/ohmmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.
- Information labels are attached near the SRS parts. Follow the instructions noted in the caution.
- After work on the SRS is completed, perform an SRS warning light check 

.

- When the cable is disconnected from the negative (-) battery terminal, the memory will be cleared. Because of this, be sure to make a record of the contents memorized in each system before starting work. When work is finished, adjust each system to its previous state. Never use a backup power supply for the purpose of retaining the memory of vehicle electronic systems.
- If the vehicle is equipped with a mobile communication system, refer to the precautions in the INTRODUCTION section.

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

(a) Before starting the following operations, wait for at least 90 seconds after disconnecting the cable from the negative (-) battery terminal:

(1) Replacement of the airbag sensors.

(2) Adjustment of the front/rear doors of a vehicle equipped with front seat side airbags and curtain shield airbags (fitting adjustment).

(b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.

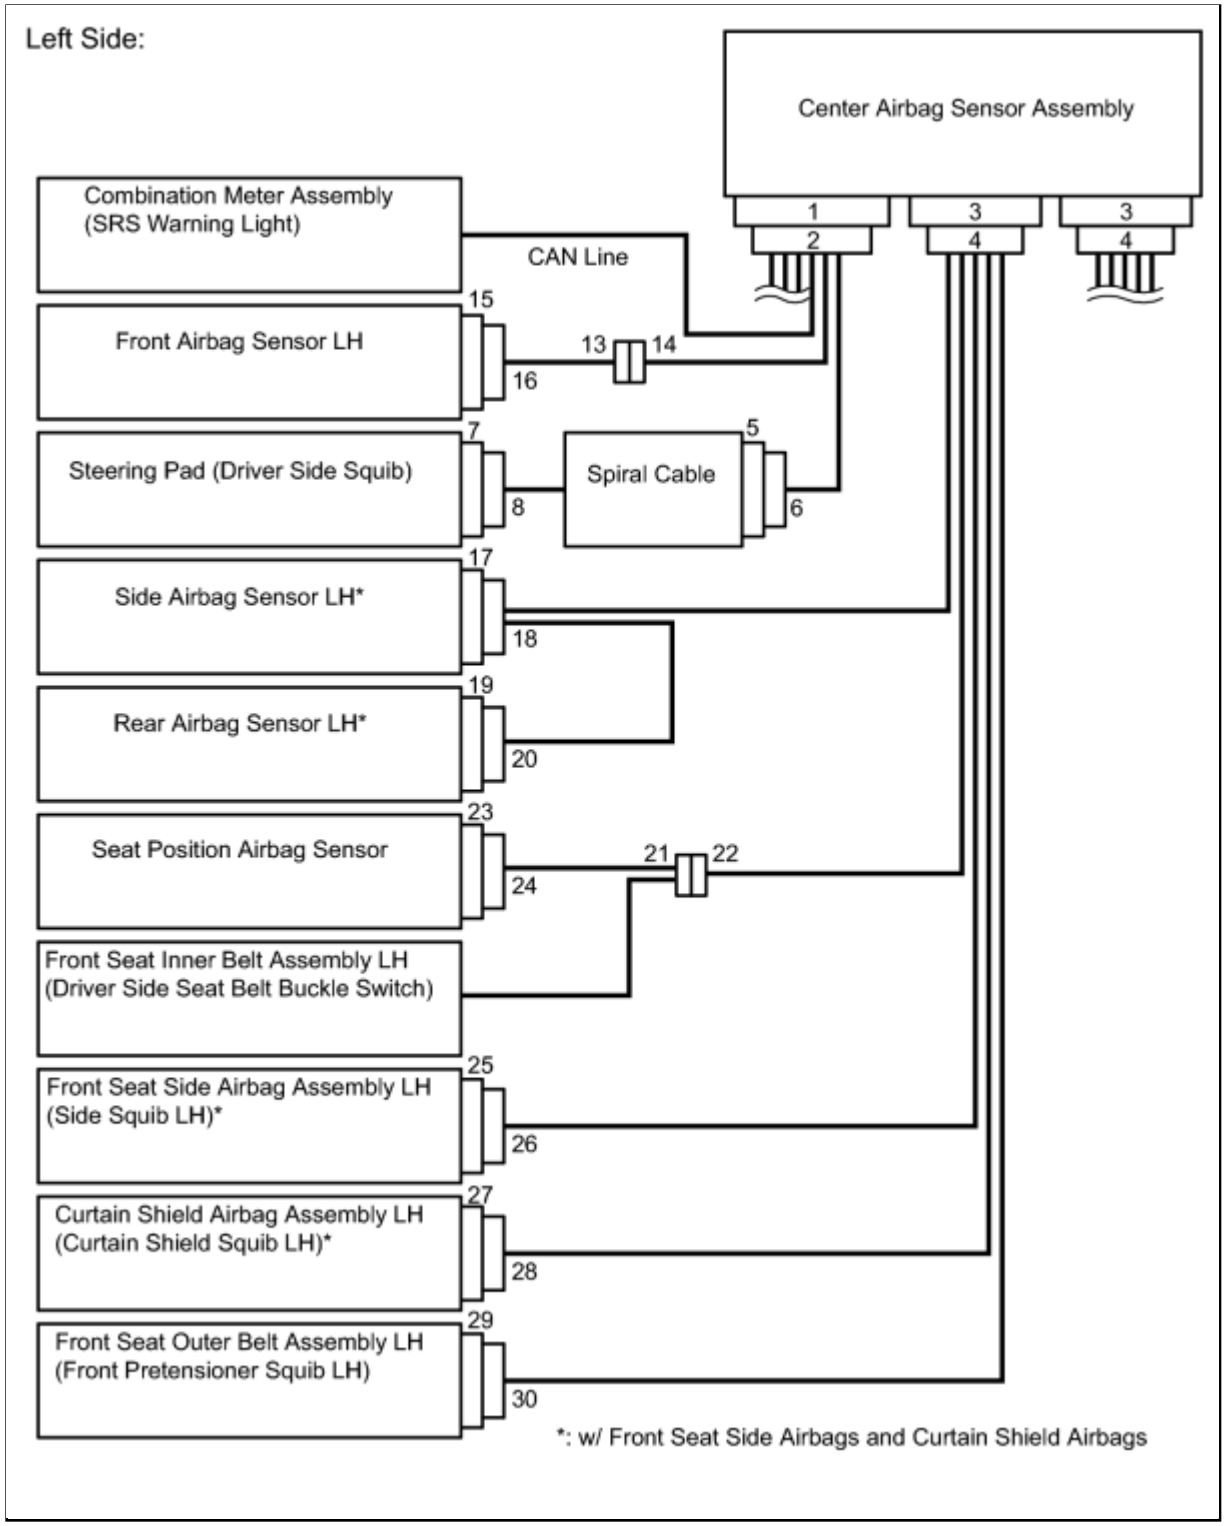
(c) Do not use airbag sensors which have been dropped.

(d) Do not disassemble the airbag sensors.

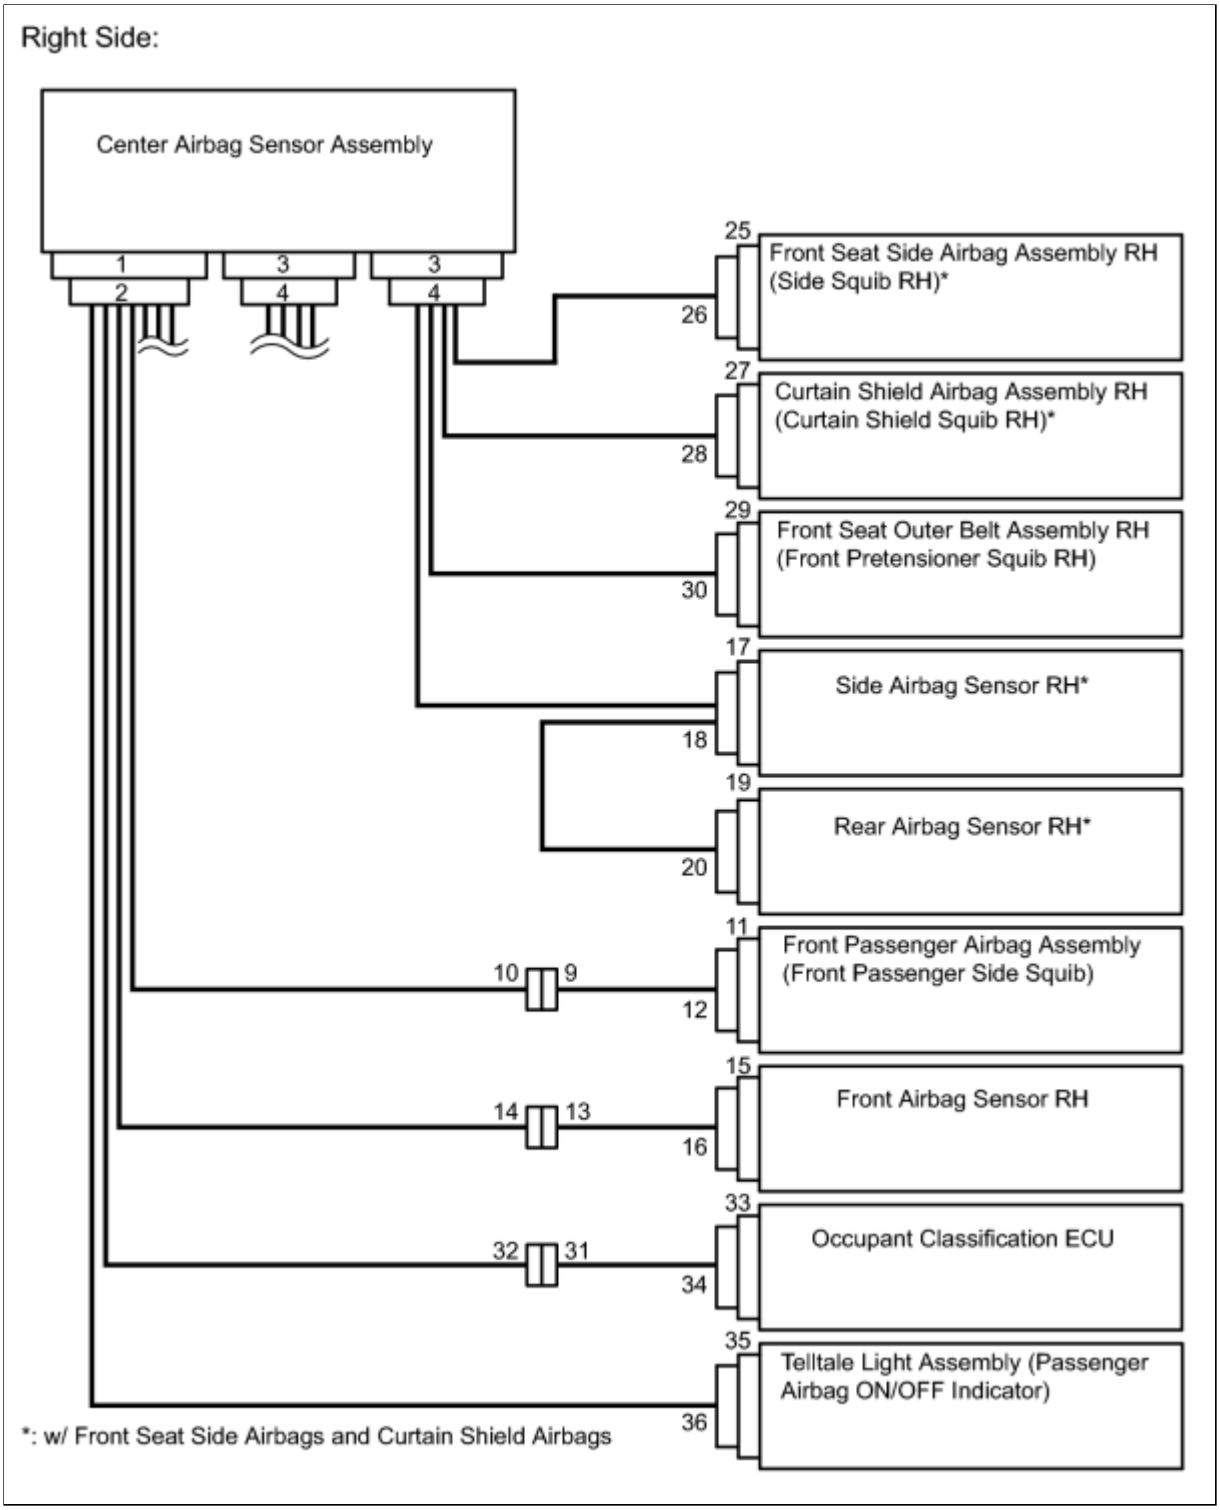
2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) If any of the airbags have not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.

(b) If any of the airbags deployed, replace the airbag sensors and check the installation condition.



3. EXPRESSIONS OF IGNITION SWITCH



(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ON	ON	On (IG)
Ignition Switch ACC	ACC	On (ACC)
Engine Start	START	Start

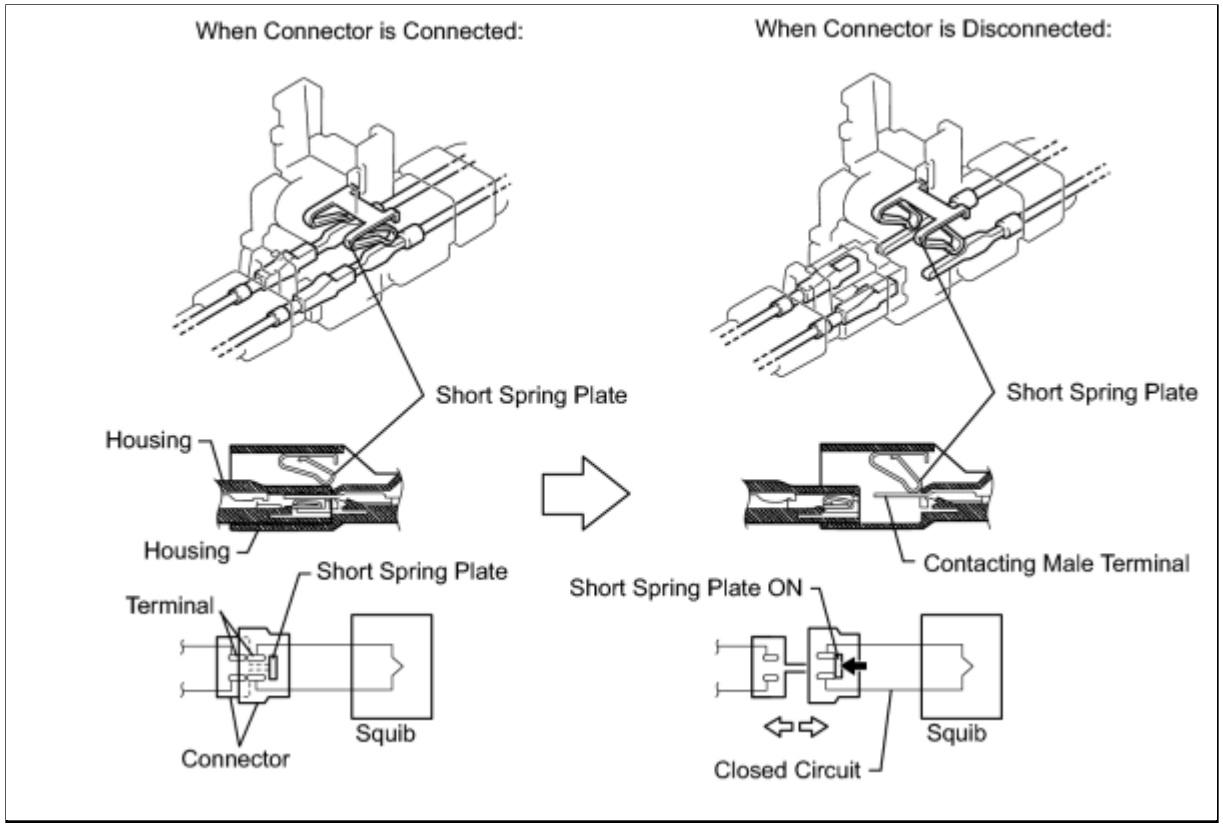
NO.	CONNECTOR TYPE	APPLICATION
(1)	Terminal Twin-Lock Mechanism	Connectors 5, 6, 9, 10, 13, 14, 18, 20
(2)	Activation Prevention Mechanism	Connectors 2, 4, 5, 7, 9, 11, 25, 27, 29
(3)	Half Connection Prevention Mechanism	Connectors 6, 10, 13, 18, 20
(4)	Connector Position Assurance Mechanism	Connectors 16, 26

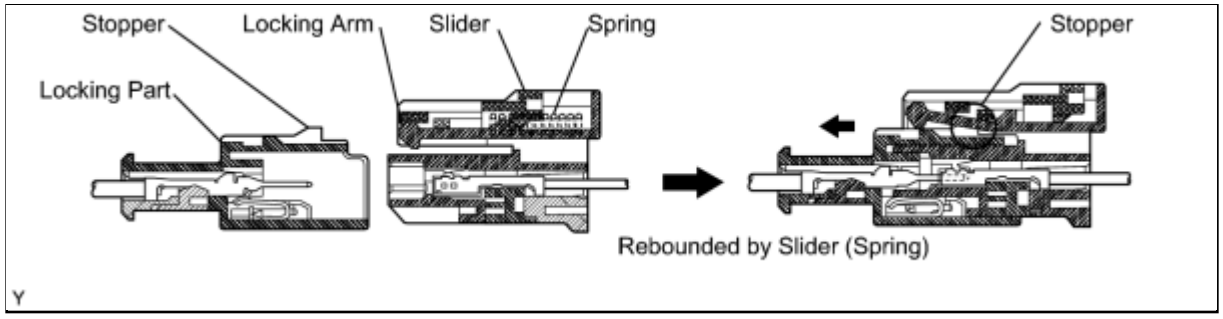
NO.	CONNECTOR TYPE	APPLICATION
(5)	Connector Lock Mechanism (1)	Connectors 8, 12, 26, 28
(6)	Connector Lock Mechanism (2)	Connectors 2, 4
(7)	Improper Connection Prevention Lock Mechanism	Connectors 1, 3

(b) Connectors in the SRS are colored yellow to distinguish them from other connectors. These connectors have special functions, and are specially designed for the SRS. All SRS connectors use durable gold-plated terminals, and are placed in the locations shown on the previous page to ensure high reliability.



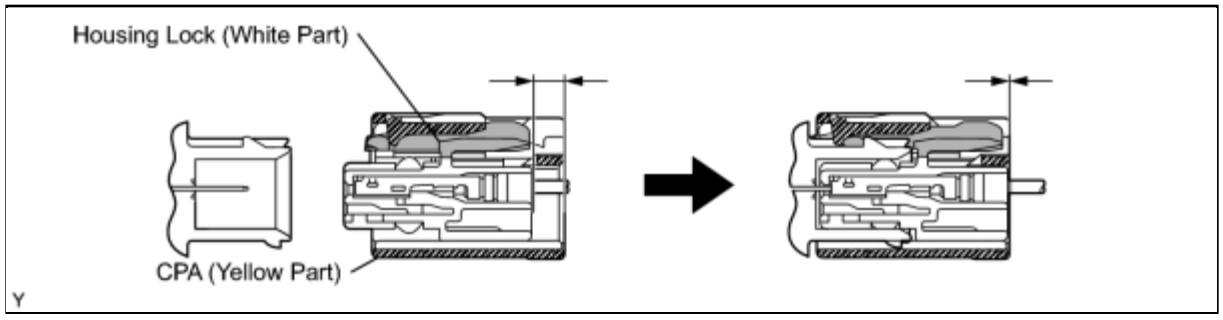
(1) Terminal twin-lock mechanism:

All connectors with a terminal twin-lock mechanism have a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.



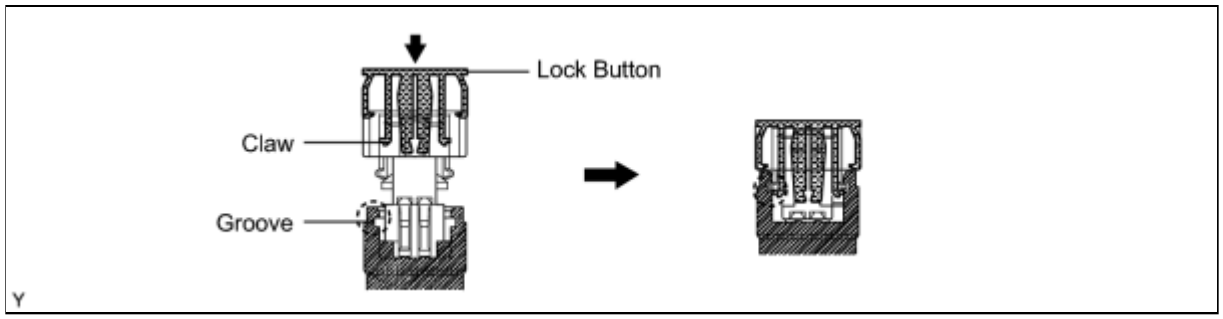
(2) Activation prevention mechanism:

All connectors with an activation prevention mechanism contain a short spring plate. When these connectors are disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.



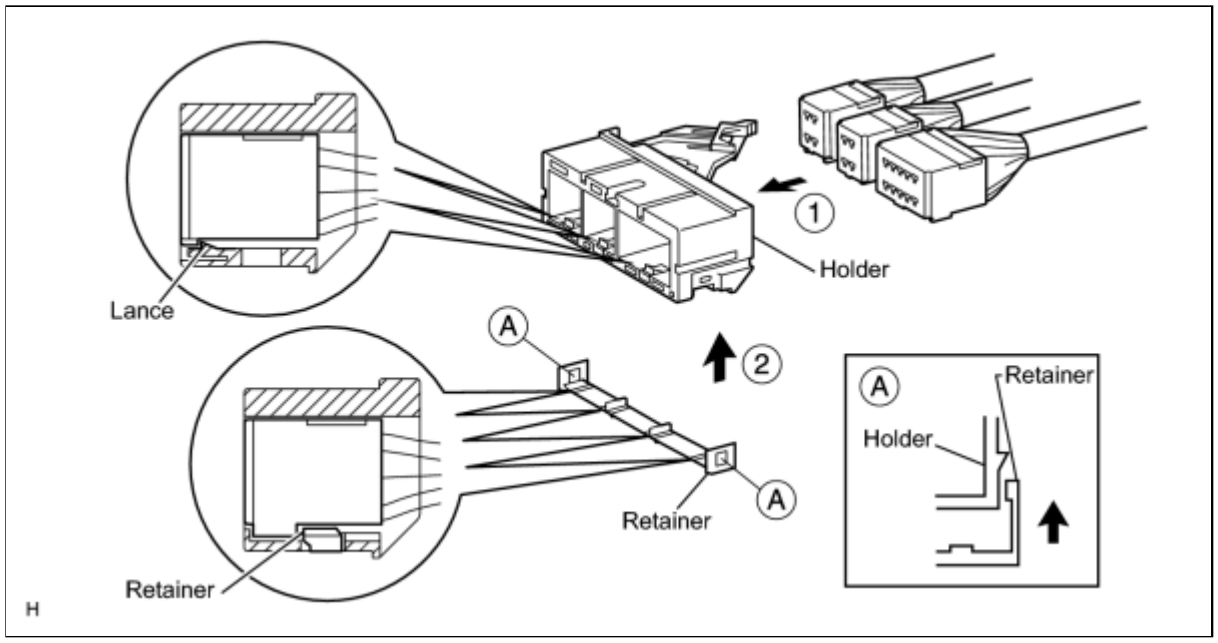
(3) Half connection prevention mechanism:

If the connector is not completely connected, the connector is disconnected due to the spring force so that no continuity exists.



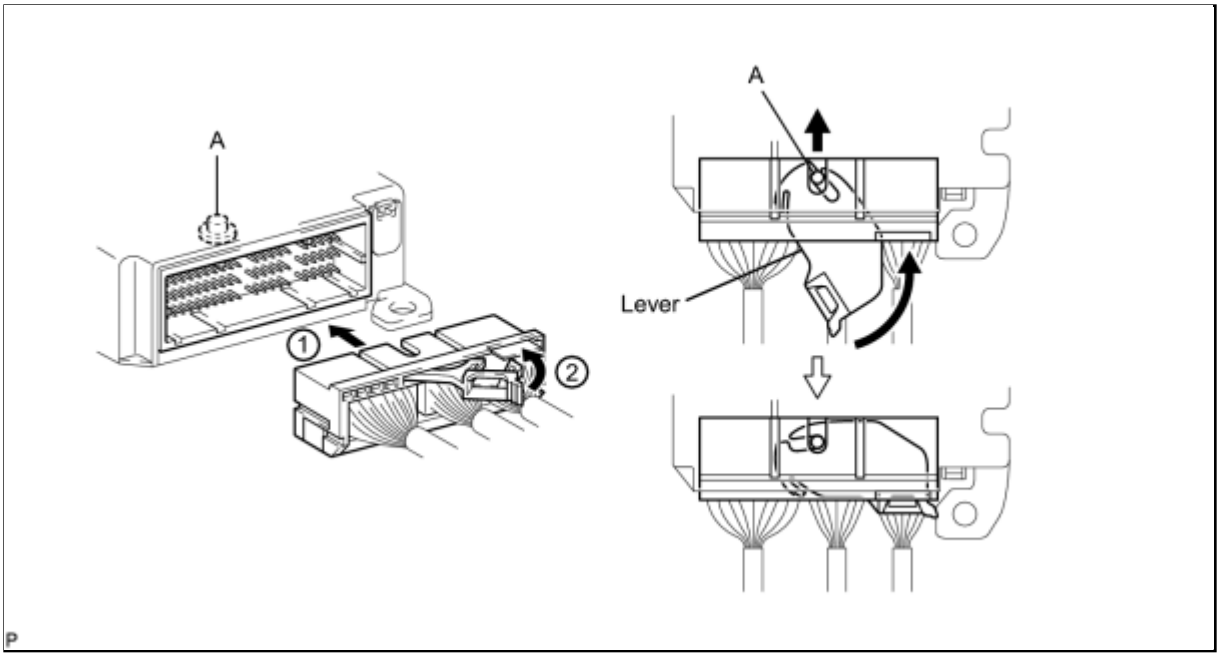
(4) Connector position assurance mechanism:

Only when the housing lock (white part) is completely engaged, the CPA (yellow part) slides, which completes the connector engagement.



(5) Connector lock mechanism (1):

Locking the connector lock button connects the connector securely.

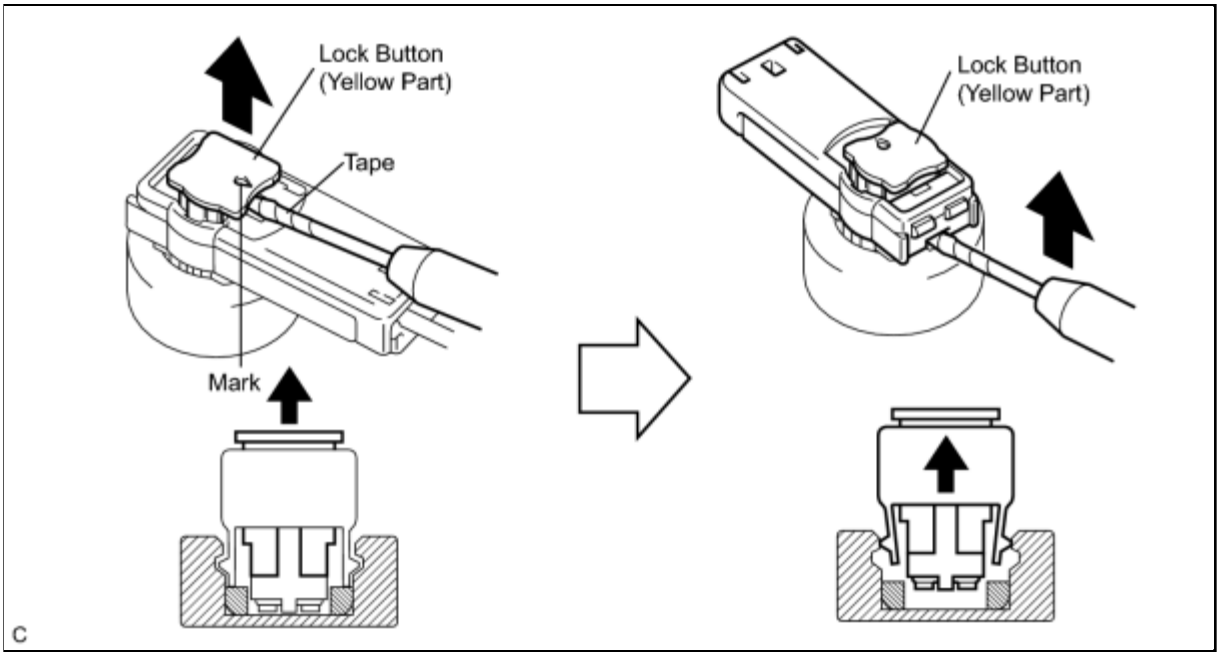


(6) Connector lock mechanism (2):

Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from becoming disconnected.

(7) Improper connection prevention lock mechanism:

When the holder is connected, the lever is pushed into the end by rotating around the A axis to lock the holder securely.

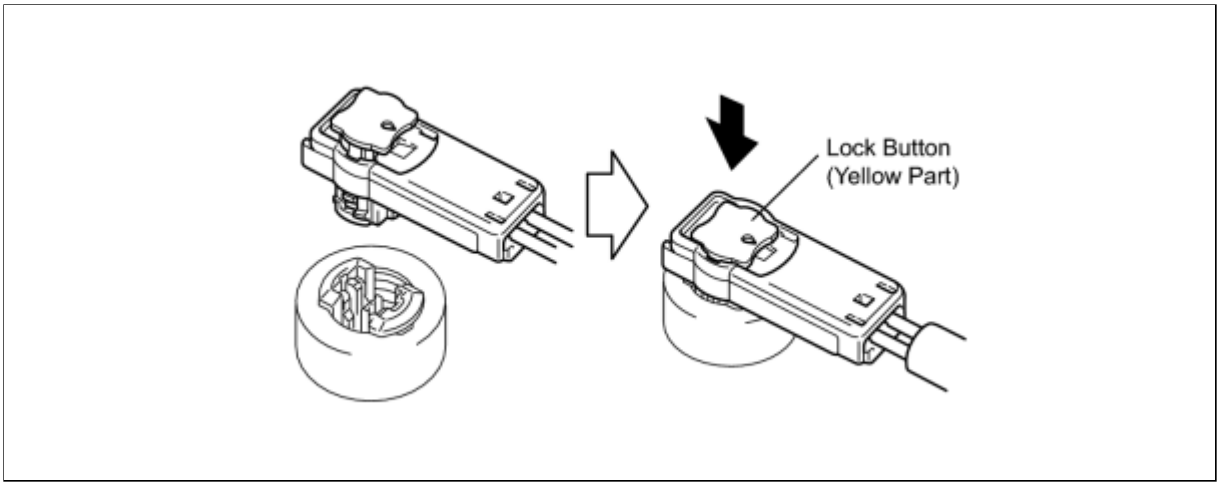


5. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY, AND FRONT SEAT OUTER BELT ASSEMBLY

HINT:

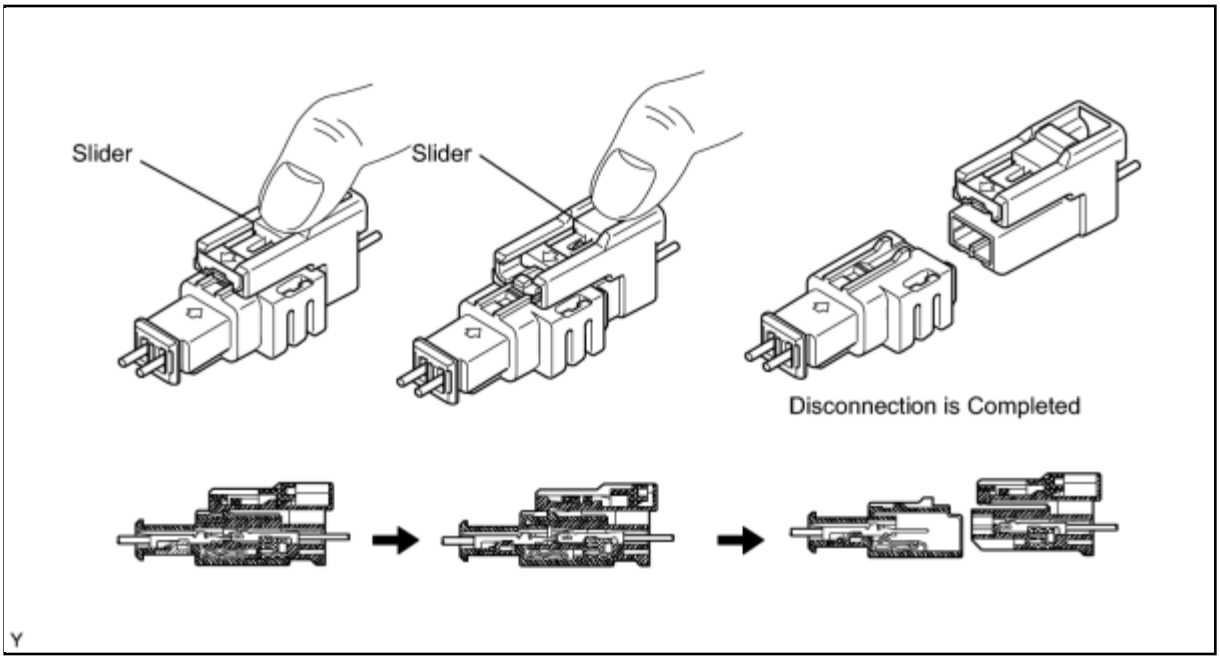
Tape the screwdriver tip before use.

(a) Release the lock button (yellow part) of the connector using a screwdriver.



(b) Insert the screwdriver tip between the connector and the base, and then raise the connector.

6. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY, AND FRONT SEAT OUTER BELT ASSEMBLY

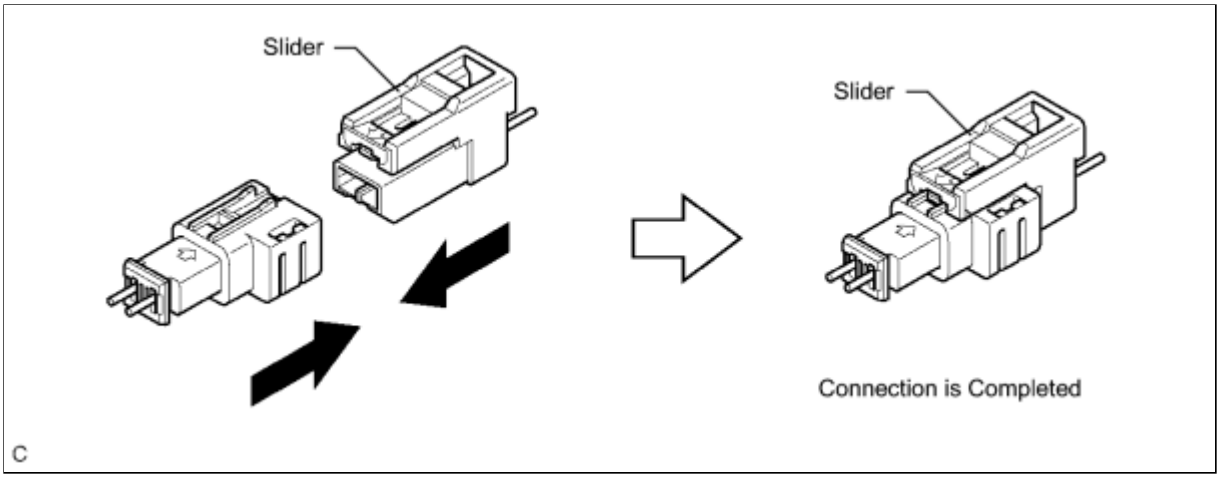


(a) Connect the connector.

(b) Push down securely on the lock button (yellow part) of the connector. (When locked, a click sound can be heard.)

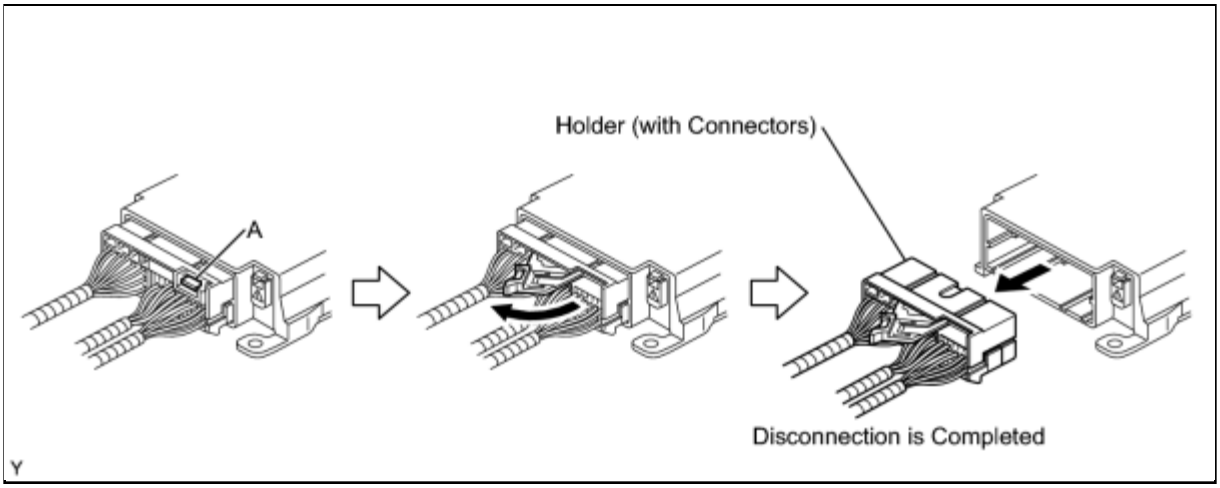
7. DISCONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE)

(a) Slide the slider to release the lock, and then disconnect the connector.



8. CONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE)

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)

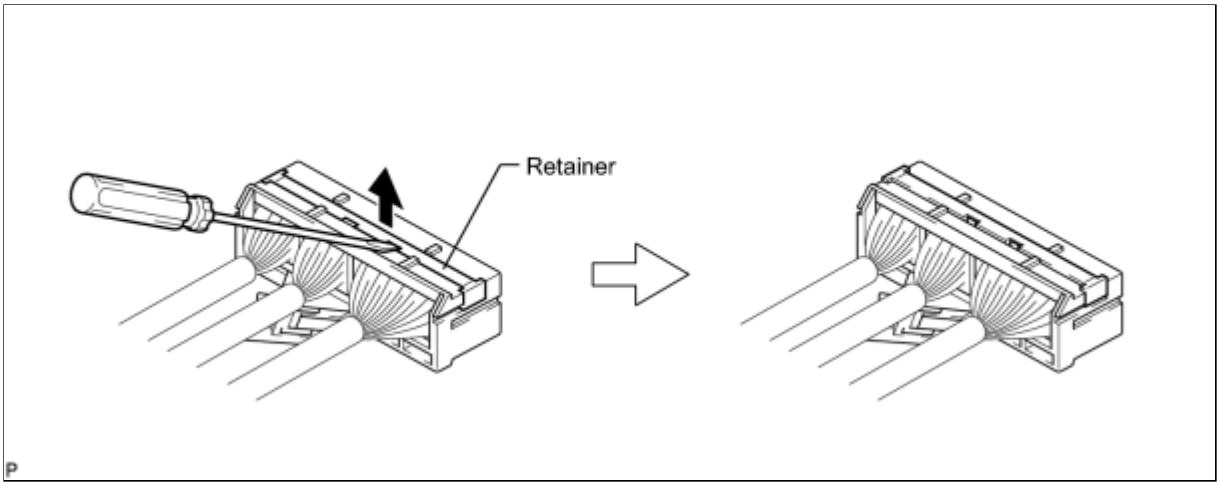


HINT:

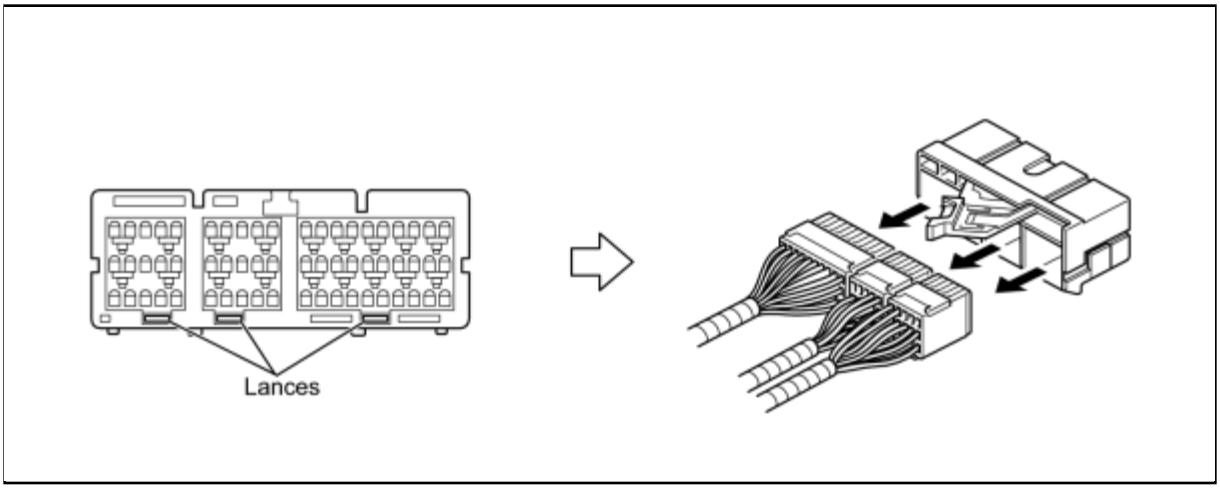
When connected, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

9. DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

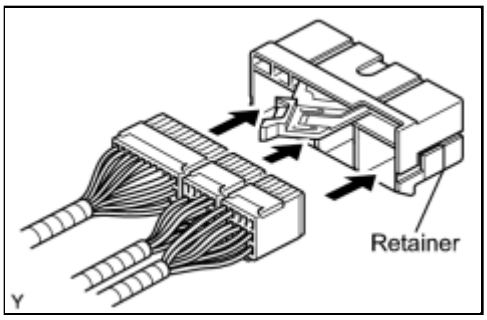
(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).



HINT:



Perform the following procedures when replacing the holder.



(b) Remove the holder.

(1) Using a screwdriver, unlock the retainer.

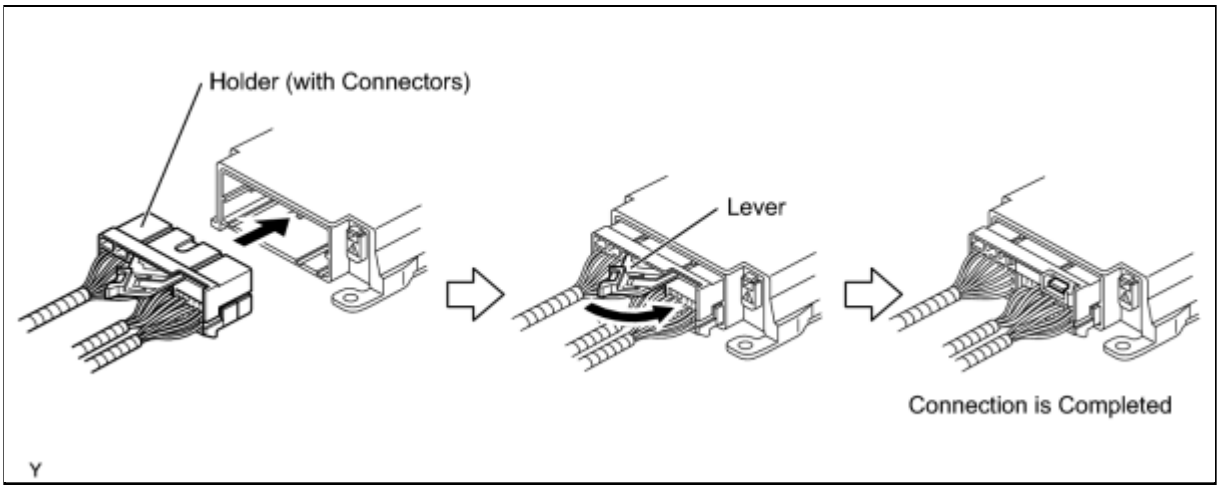
(2) Release the fitting lances and remove the holder.

(c) Install the holder.

(1) Install the connectors to the holder. (When locked, a click sound can be heard.)

HINT:

The retainer is locked when the holder is connected.



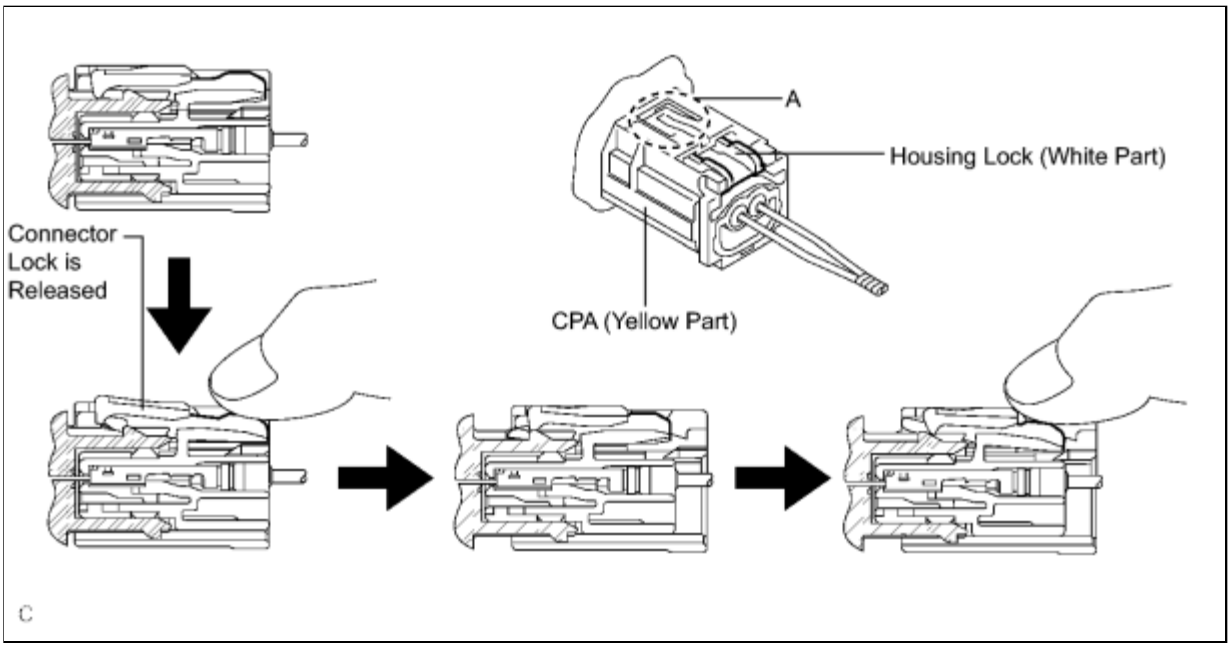
10. CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Firmly insert the holder (with connectors) into the center airbag sensor assembly until it cannot be pushed any further.

(b) Push the lever to connect the holder (with connectors). (When locked, a click sound can be heard.)

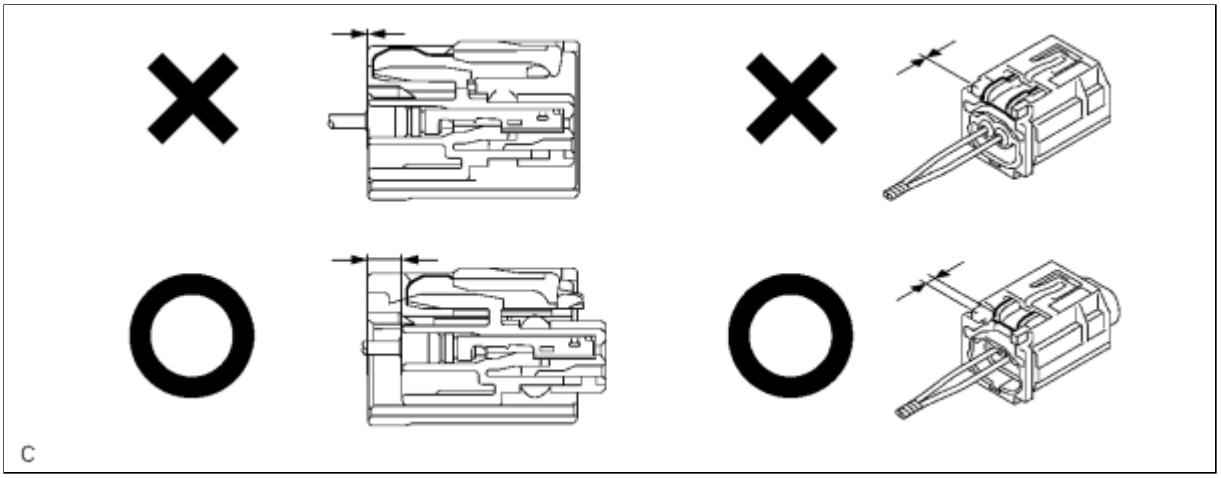
HINT:

The holder slides into the center airbag sensor assembly when it is being connected. Be sure not to hold the holder while connecting, as it may result in an insecure fit.



11. DISCONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR AND FRONT SEAT SIDE AIRBAG ASSEMBLY

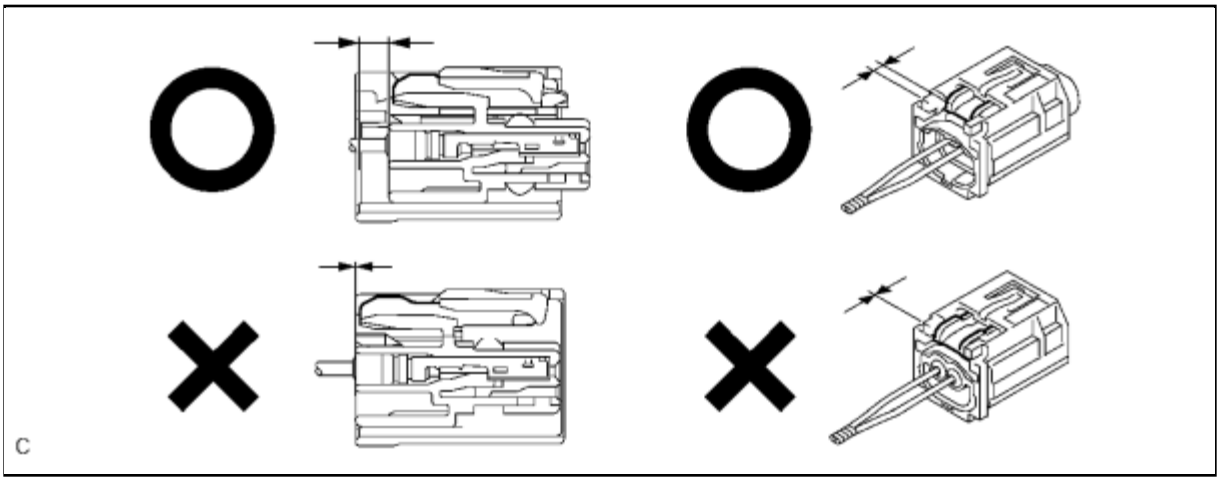
(a) Push down the housing lock (white part) and slide the CPA (yellow part). (At this time, the connector cannot be disconnected yet.)



(b) Push down the housing lock (white part) again and disconnect the connector.

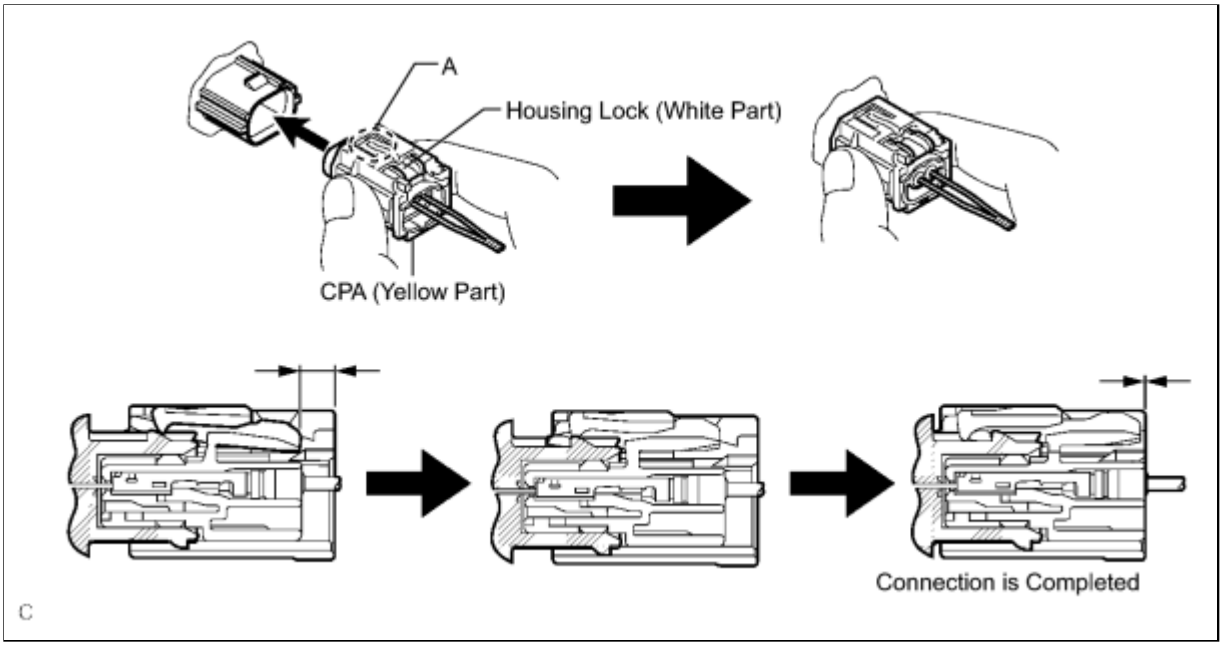
HINT:

Do not push down part A shown in the illustration when disconnecting.

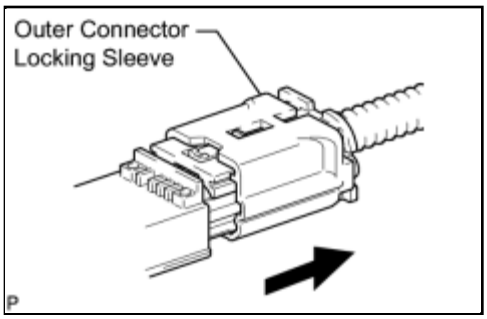


(c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

12. CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR AND FRONT SEAT SIDE AIRBAG ASSEMBLY



(a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

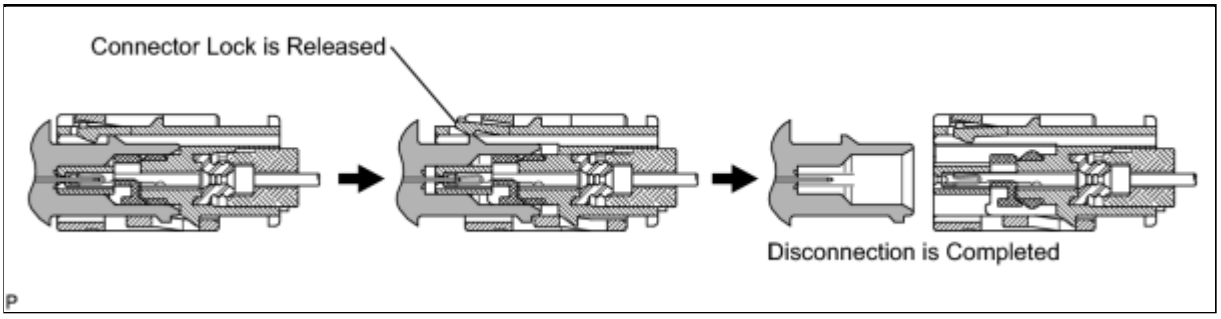


(b) Be sure to engage the connectors until they are locked. (When locking, make sure that a click sound can be heard.)

HINT:

When engaged, the housing lock (white part) will slide. Be sure not to hold the housing lock (white part) and part A, as it may result in an insecure fit.

13. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

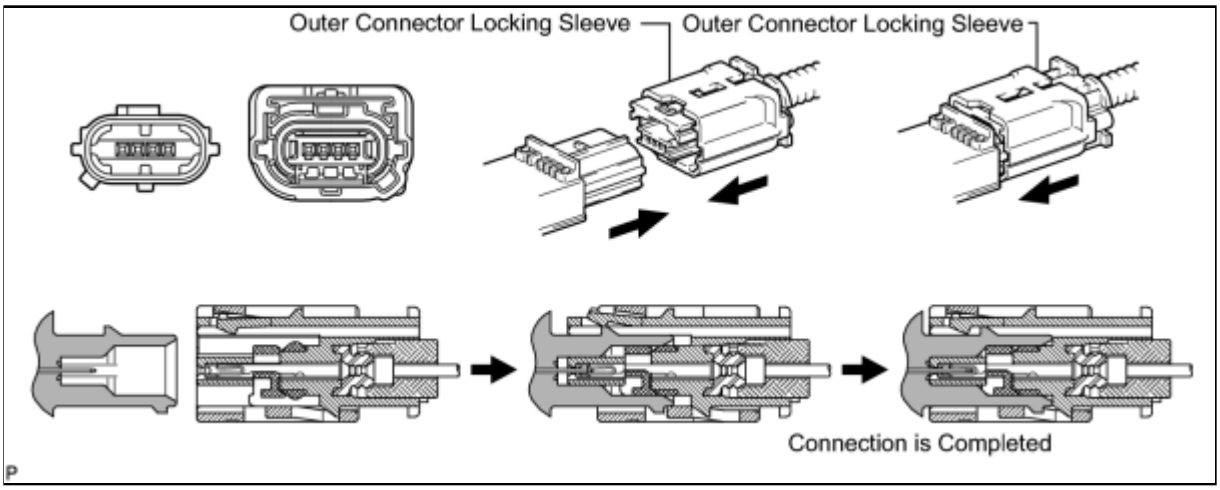


(a) While holding the sides of the outer connector locking sleeve, slide the outer in the direction shown by the arrow.

(b) When the connector lock is released, the connectors can be disconnected.

HINT:

Be sure to hold both outer flank sides. Holding the top and bottom will make disconnection difficult.

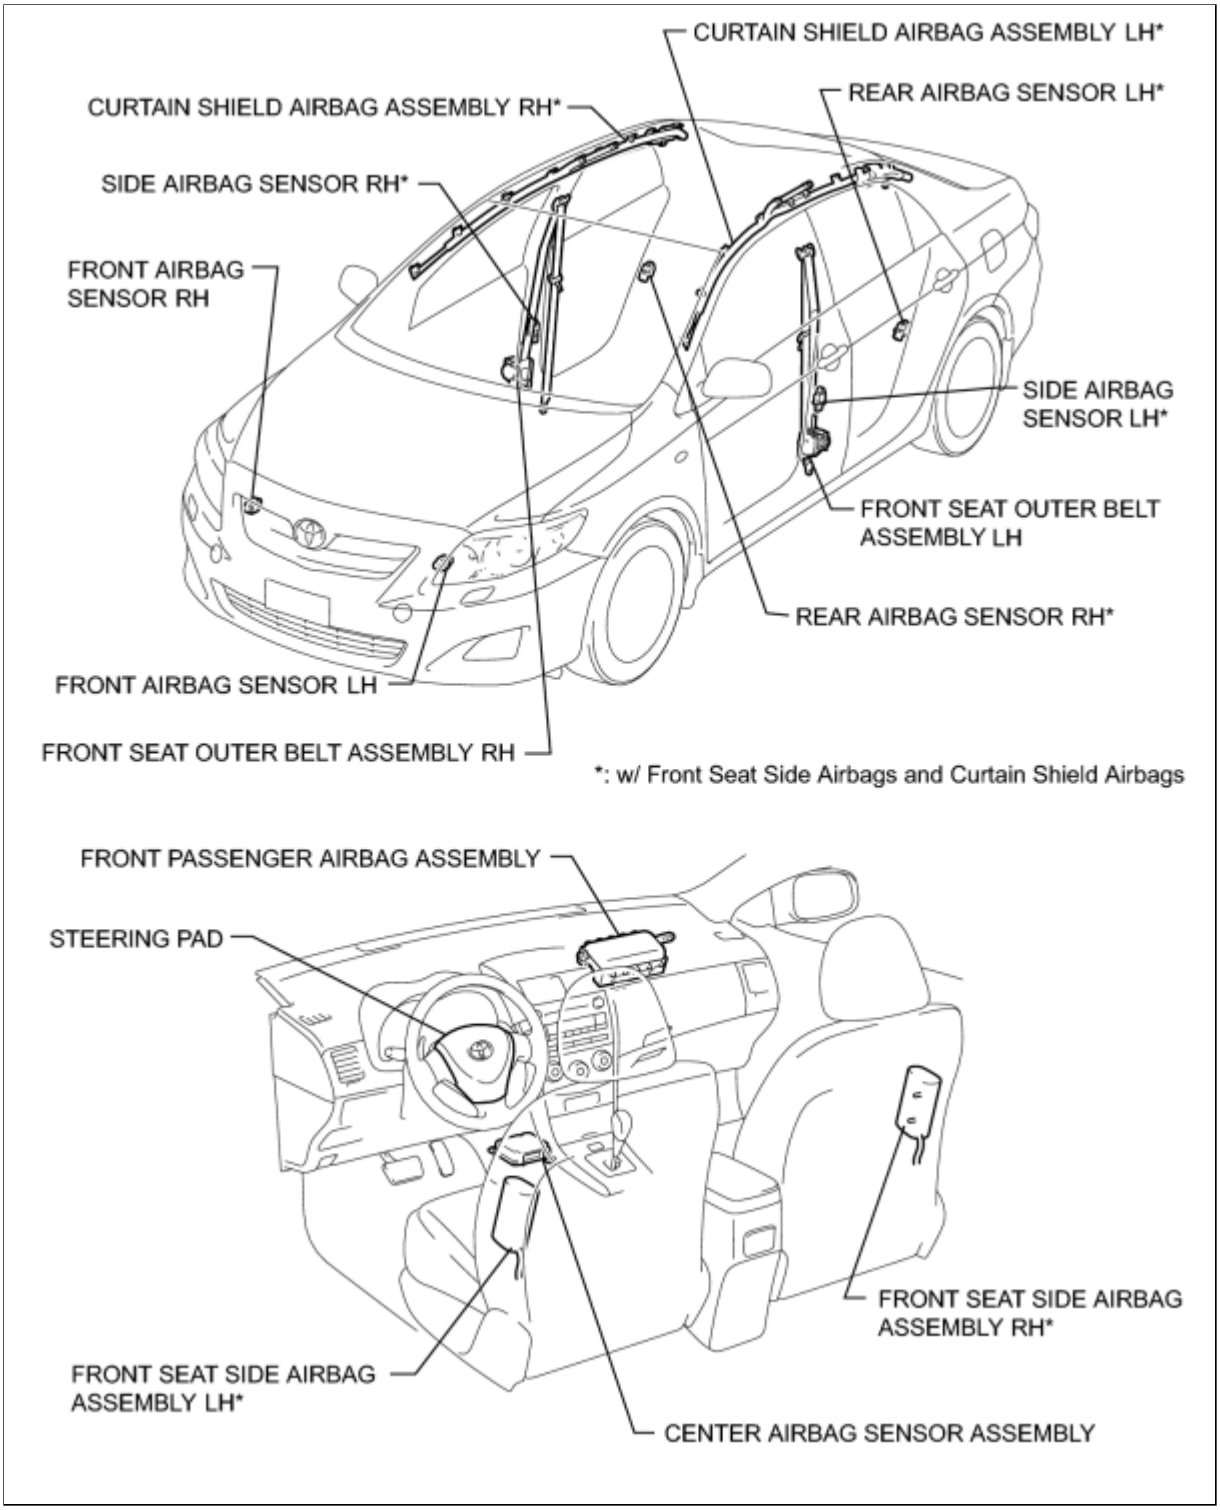


14. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

(a) Connect the connector as shown in the illustration (When locking, make sure that the outer

returns to its original position and a click sound can be heard).

HINT:



When connected, the outer will slide. Be sure not to hold the outer while connecting, as it may result in an insecure fit.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. GENERAL

(a) FRONTAL COLLISION

(1) The driver airbag and front passenger airbag are designed to supplement seat belts in the event of a frontal collision in order to help reduce shock to the head and chest.

(2) Frontal collisions are detected by the center airbag sensor and two front airbag sensors. The driver airbag, front passenger airbag and seat belt pretensioners then operate simultaneously.

(b) SIDE COLLISION

(1) The front seat side airbags and curtain shield airbags are designed to help reduce shock to the driver, front passenger and rear outer passengers in the event of a side collision.

(2) Side collisions are detected by the side airbag sensor installed in the bottom of the center pillar and the rear airbag sensor installed in the bottom of the rear pillar.

(3) Front side collisions are detected by the side airbag sensor, causing the front seat side airbag and curtain shield airbag to deploy simultaneously. Rear side collisions are detected by the rear airbag sensor to deploy only the curtain shield airbag.

2. CONSTRUCTION AND OPERATION

(a) FRONT AIRBAG SENSOR

(1) The front airbag sensors are installed on the right and left radiator supports respectively.

(2) The front airbag sensor uses an electrical type deceleration sensor.

(3) The deceleration sensor is built into the front airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a frontal collision. Accordingly, the extent of the initial collision can be detected in detail.

(b) SIDE AIRBAG SENSOR

(1) The side airbag sensors are installed on the bottom of the right and left center pillars respectively.

(2) The side airbag sensor uses an electrical type deceleration sensor.

(3) The deceleration sensor is built into the side airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front side collision. Accordingly, the extent of the initial collision can be detected in detail.

(c) REAR AIRBAG SENSOR

(1) The rear airbag sensors are installed on the right and left rear pillars respectively.

(2) The rear airbag sensor uses an electrical type deceleration sensor.

(3) The deceleration sensor is built into the rear airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision. Accordingly, the extent of the initial collision can be detected in detail.

(d) CENTER AIRBAG SENSOR

(1) General

- The center airbag sensor is installed on the center floor under the instrument panel.
- The center airbag sensor consists of a deceleration sensor, safing sensor, ignition control circuit, and diagnostic circuit, etc.
- The center airbag sensor receives signals from the deceleration sensor and safing sensor built into the center airbag sensor and front airbag sensor, and determines whether the driver airbag, front passenger airbag, and front seat belt pretensioner should be activated. In addition, the center airbag sensor diagnoses system malfunctions.
- The center airbag sensor receives signals from the deceleration sensor and the safing sensor built into the center airbag sensor, the side airbag sensor and the rear airbag sensor, and determines whether the front seat side airbag and the curtain shield airbag should be activated. In addition, the center airbag sensor diagnoses system malfunctions.
- The center airbag sensor sends the airbag deployment signal to the ECM through CAN (Controller Area Network) to operate the fuel pump control.

(2) Deceleration sensor and ignition control circuit

- The deceleration sensor is built into the center airbag sensor, front airbag sensor, side airbag sensor and rear airbag sensor, and the distortion created based on the deceleration of the vehicle during a frontal, front side or rear side collision is converted into an electric signal.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor, front airbag sensor, side airbag sensor and rear airbag sensor. If the calculated values are greater than the specified values, it activates an ignition operation.

(3) Safing sensor

The safing sensor is built into the center airbag sensor. When a frontal, side or rear collision occurs, the sensor turns on and outputs an ON signal to the center airbag sensor if the deceleration rate sent to the safing sensor is greater than the specified value.

(4) Backup power source

The backup power source consists of a power supply capacitor and a DC-DC converter. When the power system does not function during a collision, the power supply capacitor discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

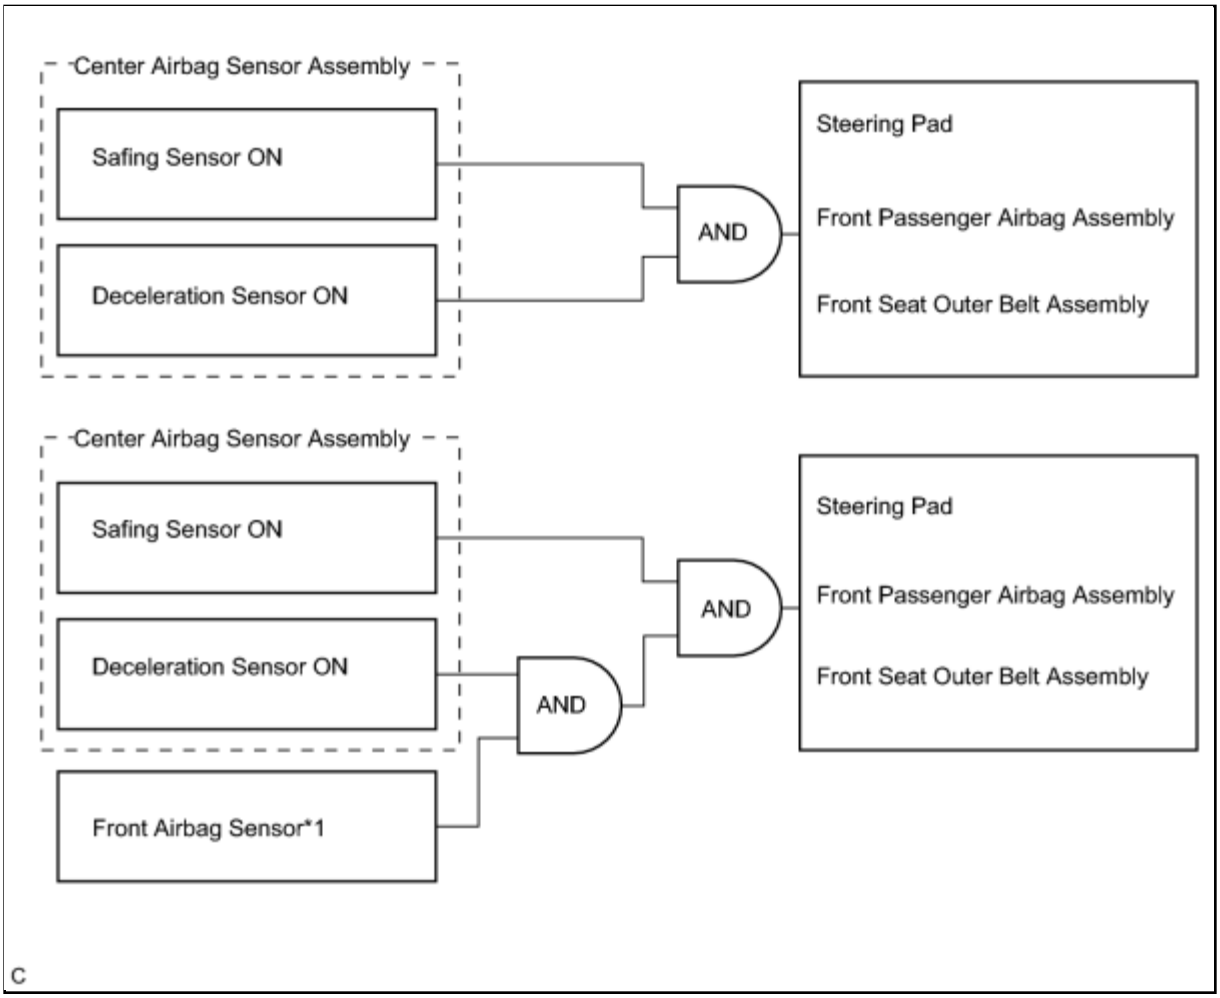
(5) Diagnostic circuit

This circuit constantly diagnoses system malfunctions. When a malfunction is detected, it turns on the SRS warning light on the combination meter assembly to inform the driver.

(6) Memory circuit

When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

(e) SRS WARNING LIGHT

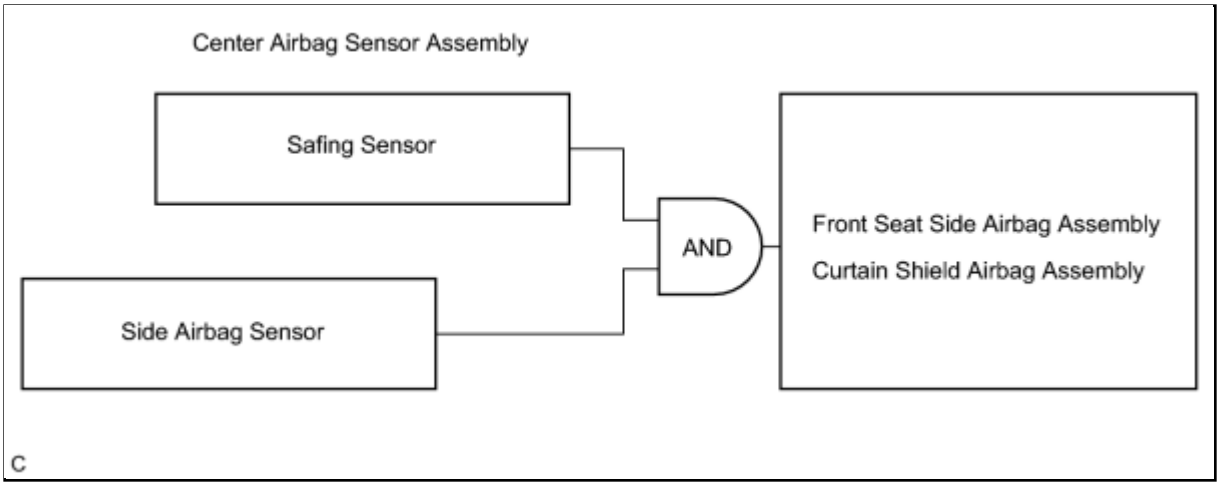


(1) The SRS warning light is located on the combination meter assembly. It comes on to inform the driver of system trouble when a malfunction is detected in self-diagnosis of the center airbag sensor. Under normal operating conditions, when the ignition switch is turned to ON, it comes on for approximately 6 seconds and then goes off.

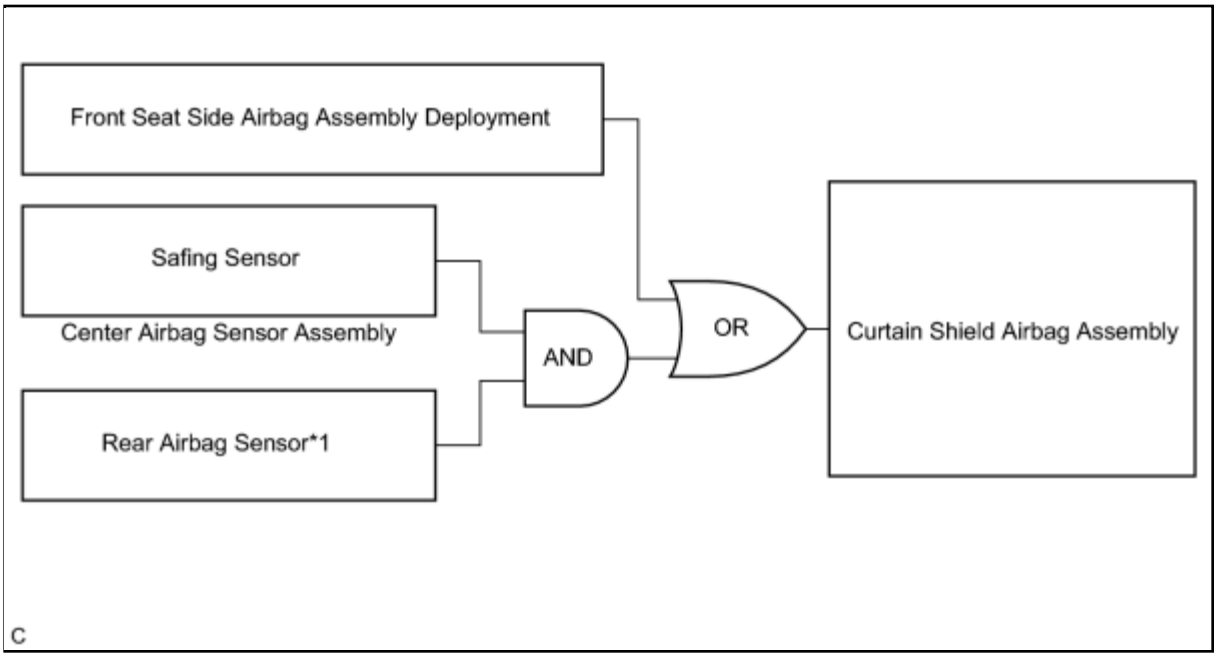
3. DEPLOYMENT CONDITION

If the vehicle collides and the shock is greater than the specified value, the SRS is activated

automatically. The center airbag sensor assembly includes the safing sensor and deceleration sensor. The safing sensor is designed to turn on at a lower deceleration rate than the deceleration sensor.



(a) The center airbag sensor assembly determines whether ignition is necessary based on signals from the deceleration sensor and the front airbag sensor*1. If the safing sensor turns on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.



HINT:

***1: In case of frontal collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.**

(b) The center airbag sensor assembly determines whether ignition is necessary based on signals from the side airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

(c) The center airbag sensor assembly determines whether ignition is necessary based on signals from the rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below*1.

HINT:

***1: If the front seat side airbag assembly deploys, the curtain shield airbag assembly will also deploy, regardless of whether the signal is output from the rear airbag sensor.**

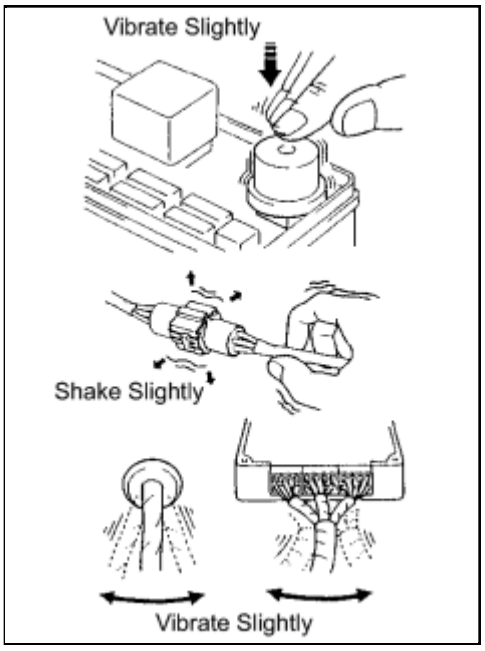
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3



(a) Check the DLC3 INFO .

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and the environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he/she proceeds to troubleshooting without confirming the problem symptoms, he/she will likely overlook something important and make a wrong guess at some points in the repair operation.

This leads to a standstill in troubleshooting.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period of approximately 6 seconds after the ignition switch is turned to ON.

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

(2) Slightly shake the connector vertically and horizontally.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

3. FUNCTION OF SRS WARNING LIGHT

(a) Primary check

(1) Turn the ignition switch off. Wait for at least 2 seconds, then turn the ignition switch to ON. The SRS warning light comes on for approximately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.

HINT:

If trouble is detected during the primary check, the SRS warning light remains on even after the primary check

period of approximately 6 seconds.

(b) Constant check

(1) After the primary check, the center airbag sensor assembly constantly monitors the airbag system for trouble.

HINT:

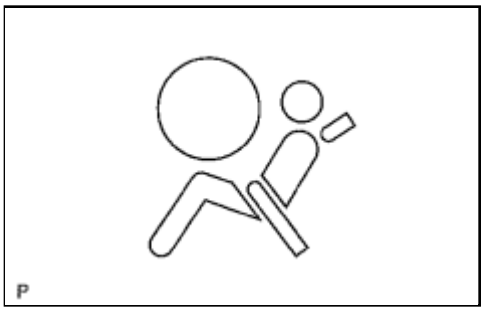
If trouble is detected during the constant check, the center airbag sensor assembly functions as follows:

- The SRS warning light comes on.
- The SRS warning light goes off, and then comes on. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review

(1) When the airbag system is normal:

The SRS warning light comes on only during the primary check period of approximately 6 seconds after the ignition switch is turned to ON.



(2) When the airbag system has trouble:

- The SRS warning light remains on even after the primary check period.
- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light does not come on when turning the ignition switch from off to ON.

HINT:

The center airbag sensor assembly functions to keep the SRS warning light on if the airbag has been deployed.

4. SRS WARNING LIGHT CHECK

(a) Turn the ignition switch to ON, and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the ignition switch is turned to ON (constant check).

HINT:

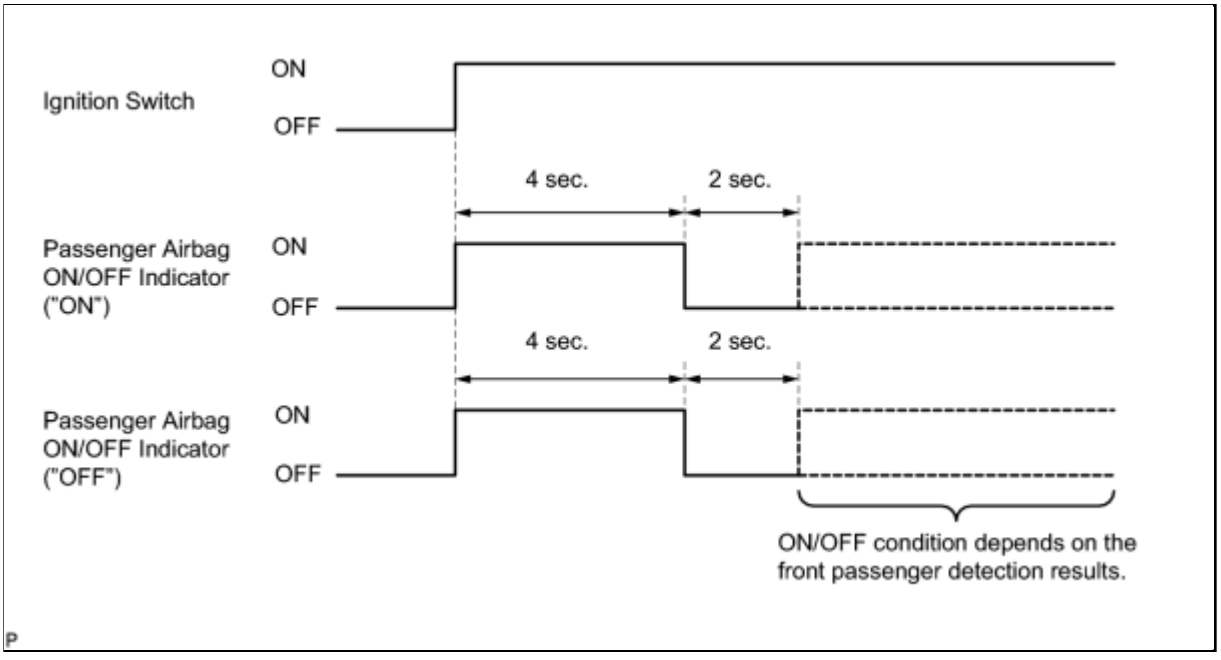
When any of the following symptoms occur, refer to Problem Symptoms Table INFO **.**

- The SRS warning light comes on occasionally after the primary check period.
- The SRS warning light comes on, but a DTC is not output.
- The ignition switch is turned from off to ON, but the SRS warning light does not come on.

5. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

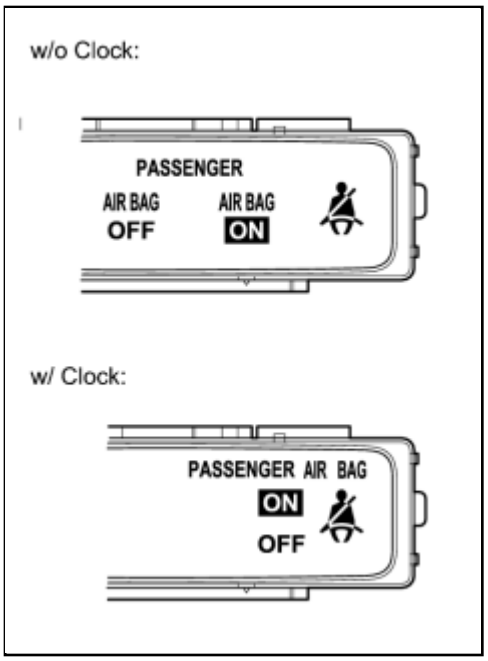
(a) Initial check

(1) Turn the ignition switch to ON.



(2) The passenger airbag ON/OFF indicator comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

(3) Approximately 6 seconds after the ignition switch is turned to ON, the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.



FRONT PASSENGER SEAT CONDITION	PASSENGER AIRBAG ON/OFF INDICATOR		SRS WARNING LIGHT
	ON INDICATOR	OFF INDICATOR	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is set.	OFF	ON	OFF
Front passenger occupant classification failure	OFF	ON	ON

HINT:

- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in the airbag system first. Then troubleshoot the occupant classification system if DTC B1650/32 is detected, and troubleshoot the passenger airbag ON/OFF indicator if DTC B1660/43 is detected.

6. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the ignition switch to ON.

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

HINT:

Refer to the table in step 5 regarding the passenger airbag ON/OFF indicator when the ignition switch is turned to ON and approximately 6 seconds pass.

7. ACTIVATION PREVENTION MECHANISM

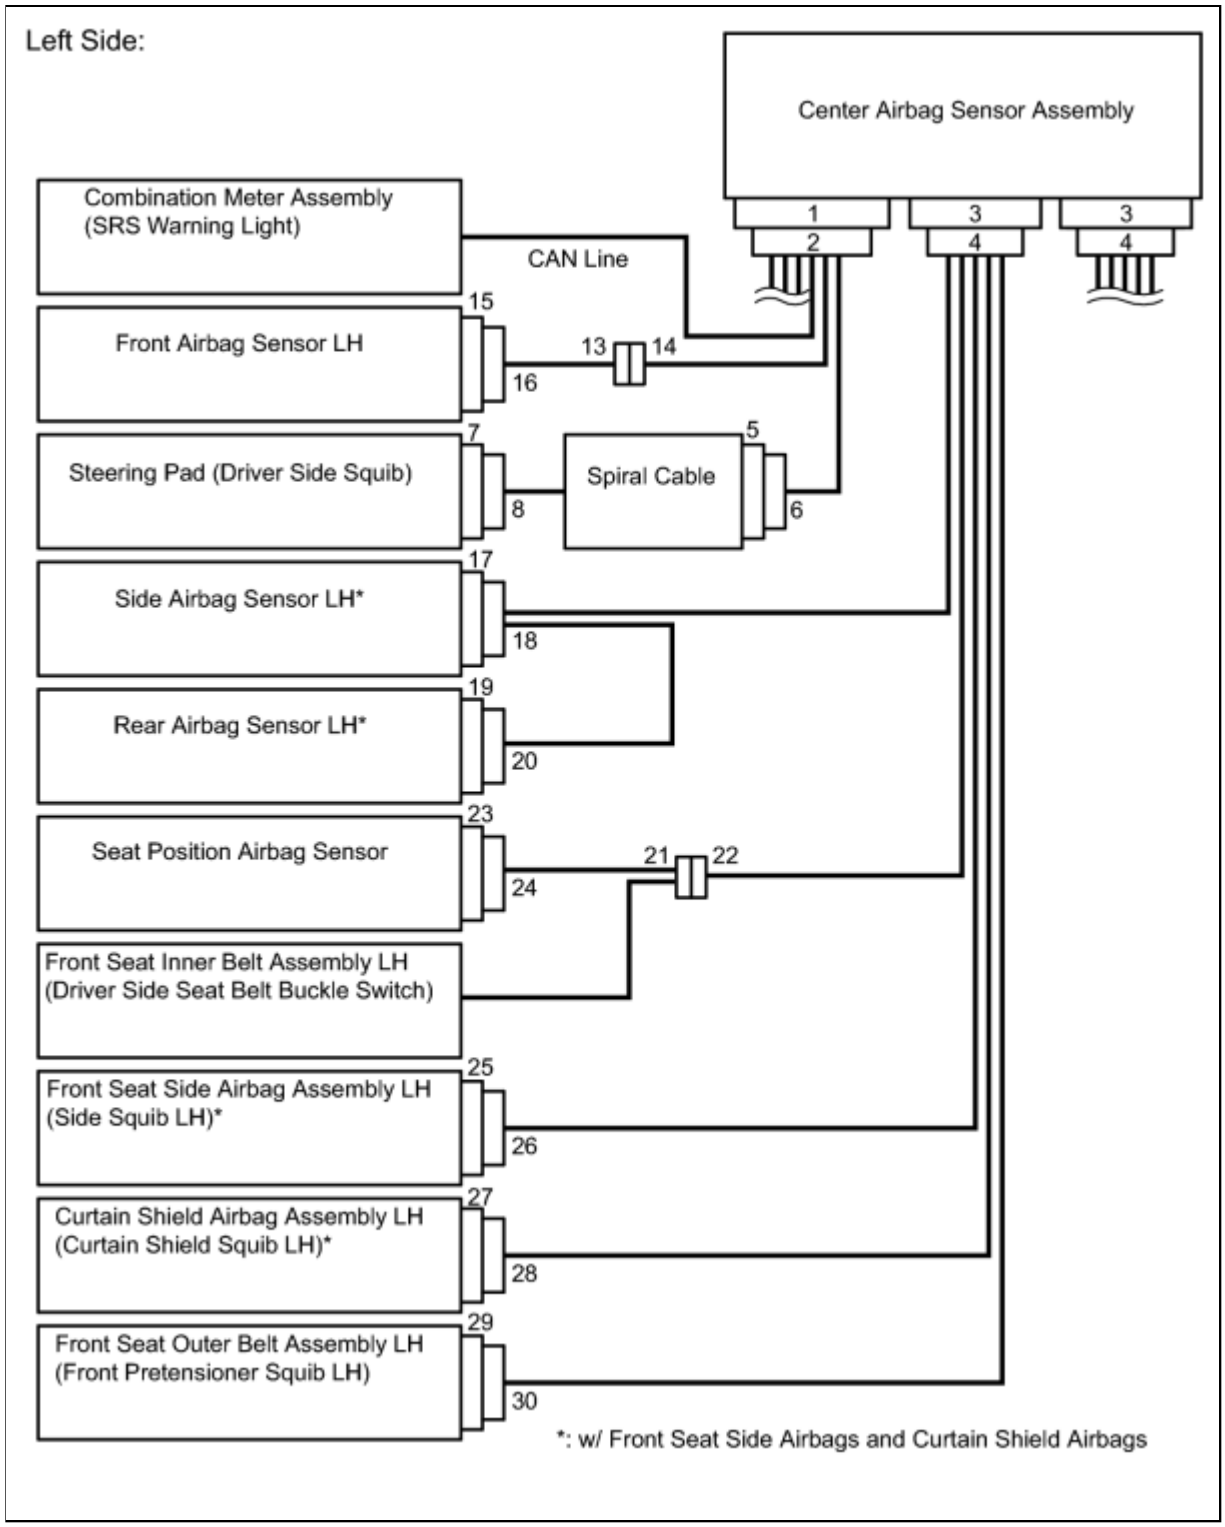
(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

(1) An activation prevention mechanism is built into the connector (on the center airbag sensor assembly side) of the airbag system squib circuit to prevent accidental airbag activation.

(2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and insulating the circuit from external power sources to prevent accidental airbag activation.

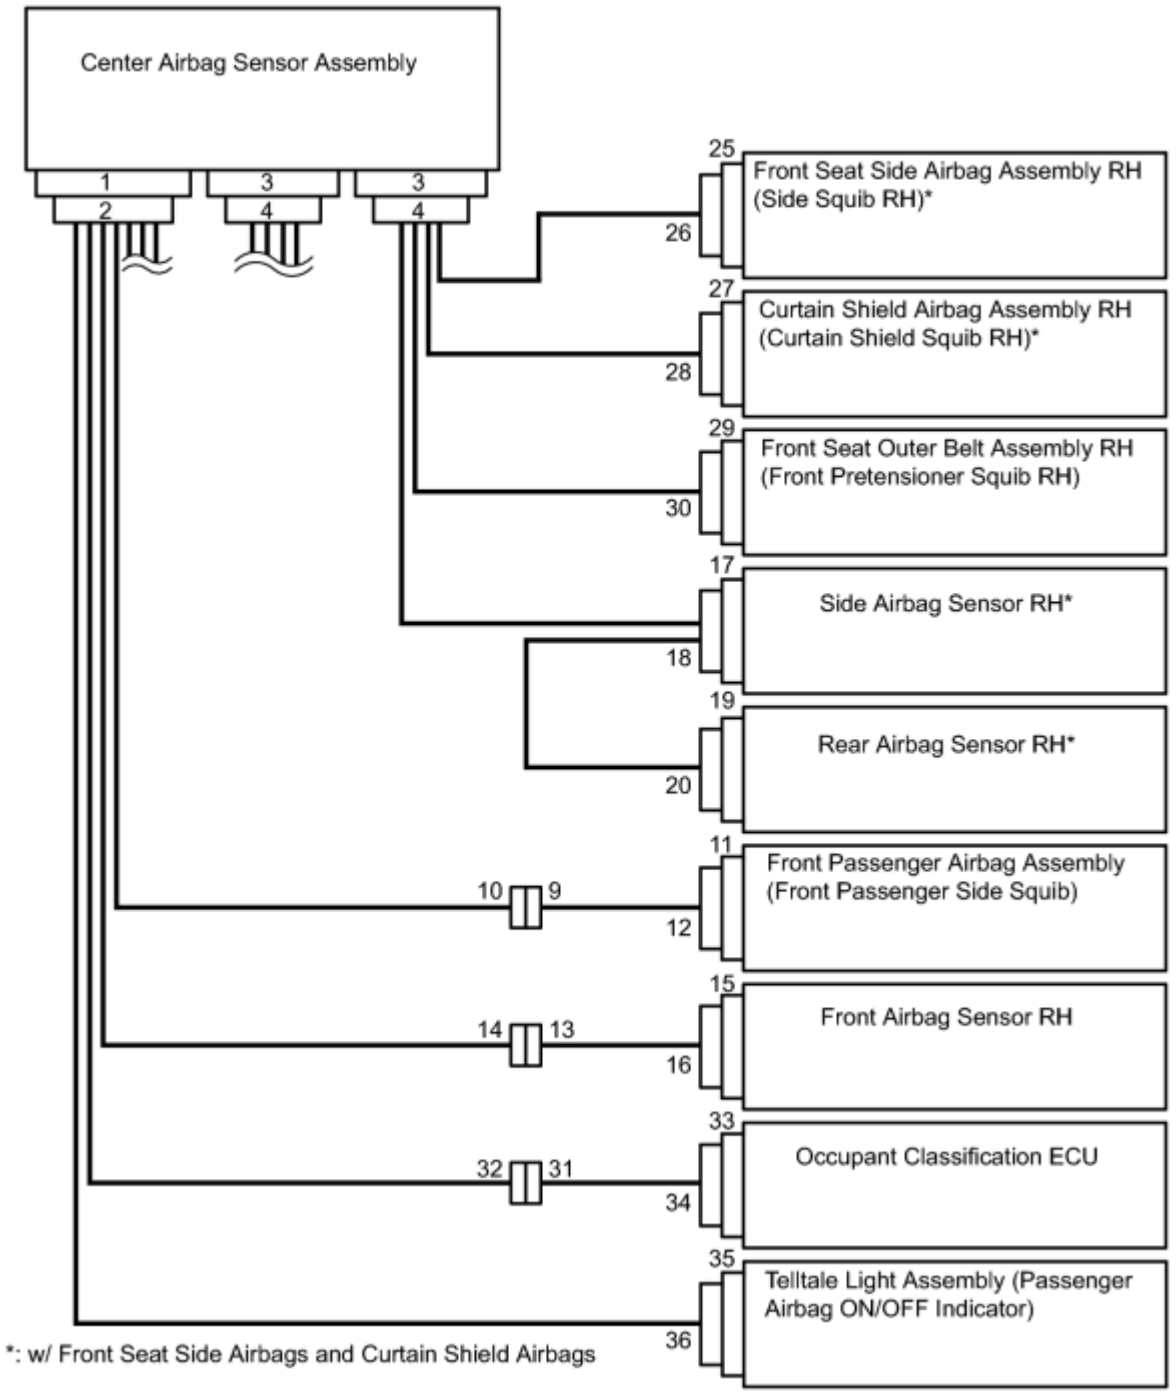
(b) RELEASING OF ACTIVATION PREVENTION MECHANISM

(1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm (0.0197 in.)) between the terminals and the short spring to break the connection.



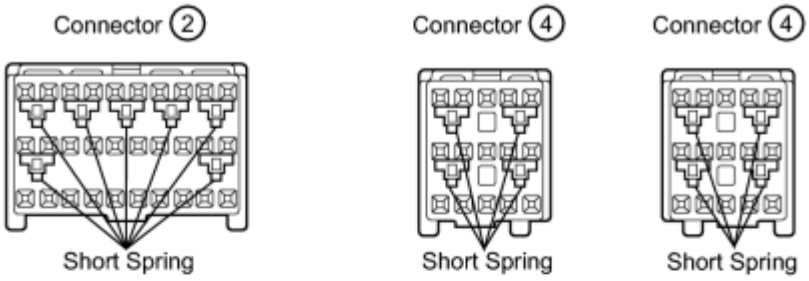
(2) Refer to the following illustrations concerning connectors utilizing the activation prevention mechanism and its release method.

CAUTION:



Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:



- Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.
- To prevent the terminal and the short spring from being damaged, always use a piece of paper with the same thickness as the male terminal.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Check the DTCs (Present trouble code).

(1) Turn the ignition switch to ON, and wait for approximately 60 seconds.

(2) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check the DTCs (Past trouble code).

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

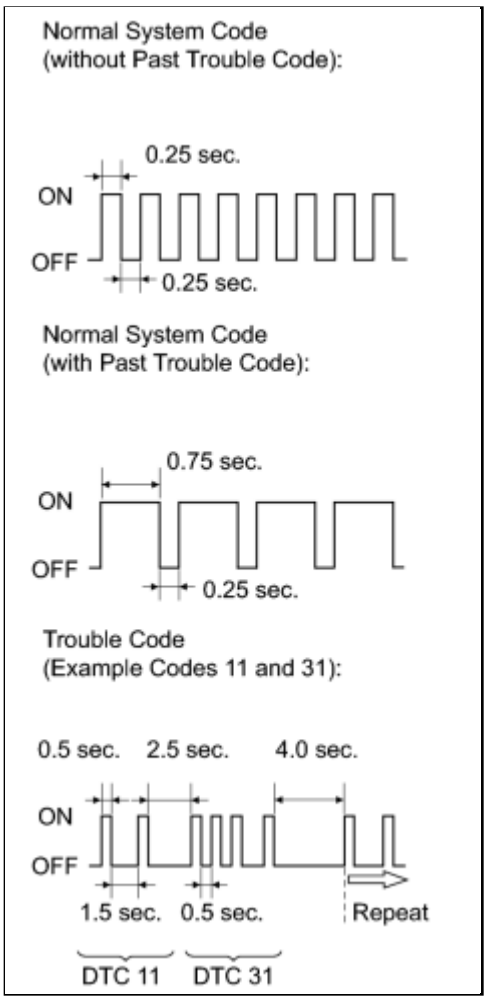
NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the ignition switch to ON, and wait for approximately 60 seconds.

(c) Read the DTCs.

(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and trouble codes 11 and 31 are shown in the illustration.



- Normal system code indication (without past trouble code)

  The light blinks twice per second.
- Normal system code indication (with past trouble code)

  When the past trouble code is stored in the center airbag sensor assembly, the light blinks only once per second.
- Trouble code indication

  The first blinks indicate the first DTC. The second blinks occur after a 1.5-second pause.

If there is more than 1 code, there will be a 2.5-second pause between each code. After all codes are shown,

there will be a 4.0-second pause, and then all codes will be repeated.

HINT:

- If 2 or more malfunctions are found, the indication begins with the smaller-numbered code.
- If DTCs are indicated without connecting the terminals, proceed to TC and CG Terminal Circuit INFO .

2. DTC CLEAR (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) When the ignition switch is turned off, the DTCs are cleared.

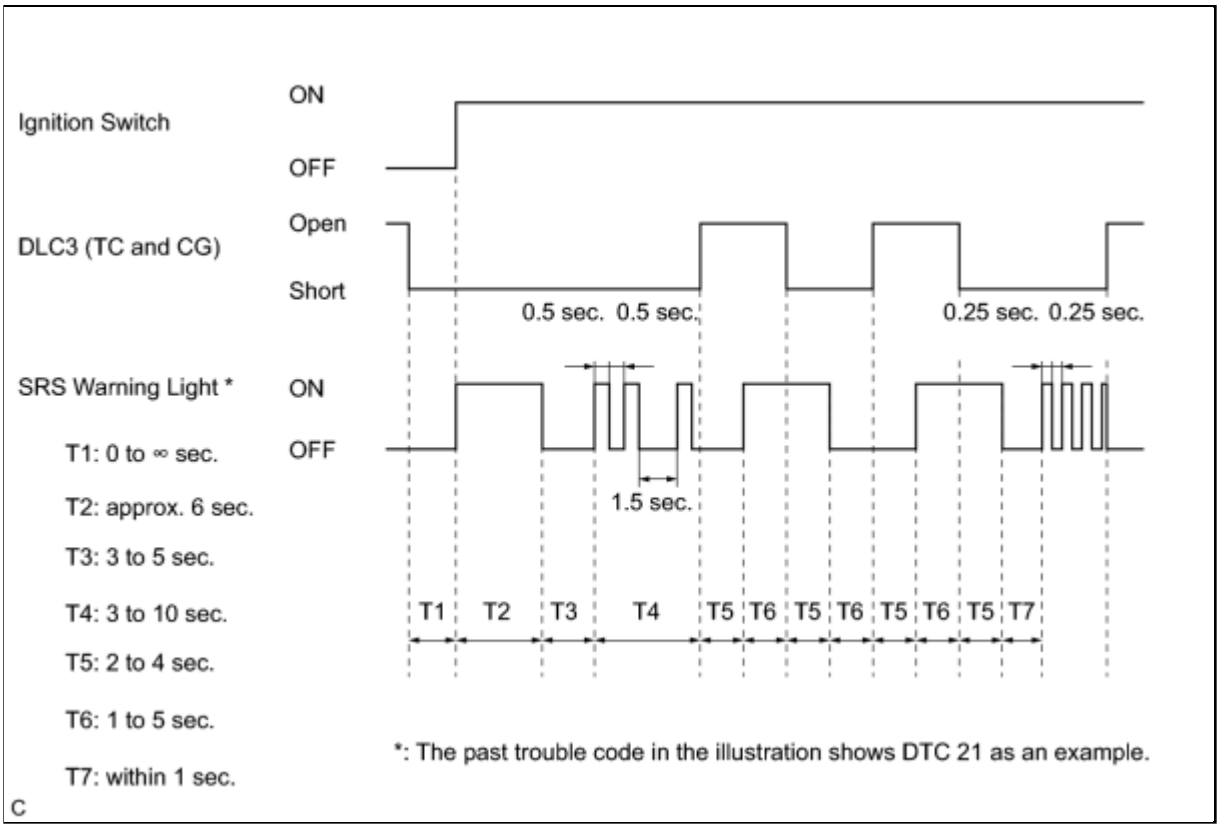
HINT:

Depending on the DTC, the code may not be cleared by turning off the ignition switch. In this case, proceed to the next procedure.

(2) Using SST, connect terminals TC and CG of the DLC3, and then turn the ignition switch to ON.

SST: 09843-18040

(3) Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.



(4) Within 2 to 4 seconds after the SRS warning light comes on, connect terminals TC and CG of the DLC3.

(5) The SRS warning light should go off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Then, disconnect terminal TC within 2 to 4 seconds after the SRS warning light goes off.

(6) The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal TC. Then, reconnect terminals TC and CG within 2 to 4 seconds after the SRS warning light comes on.

(7) Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.

If DTCs are not cleared, repeat this procedure until the codes are cleared.

3. DTC CHECK (USING TECHSTREAM)

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / SRS Airbag / Trouble Code.

(e) Check the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

4. DTC CLEAR (USING TECHSTREAM)

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / SRS Airbag / Trouble Code.

(e) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XFF05UX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: CHECK MODE PROCEDURE (2010 Corolla)		

CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / SRS Airbag / Utility / Signal Check.

(e) Select Signal Check, and proceed with checking using the Techstream.

NOTICE:

Select Signal Check from the Trouble Code screen displayed on the Techstream to clear the output DTCs (both present and past).

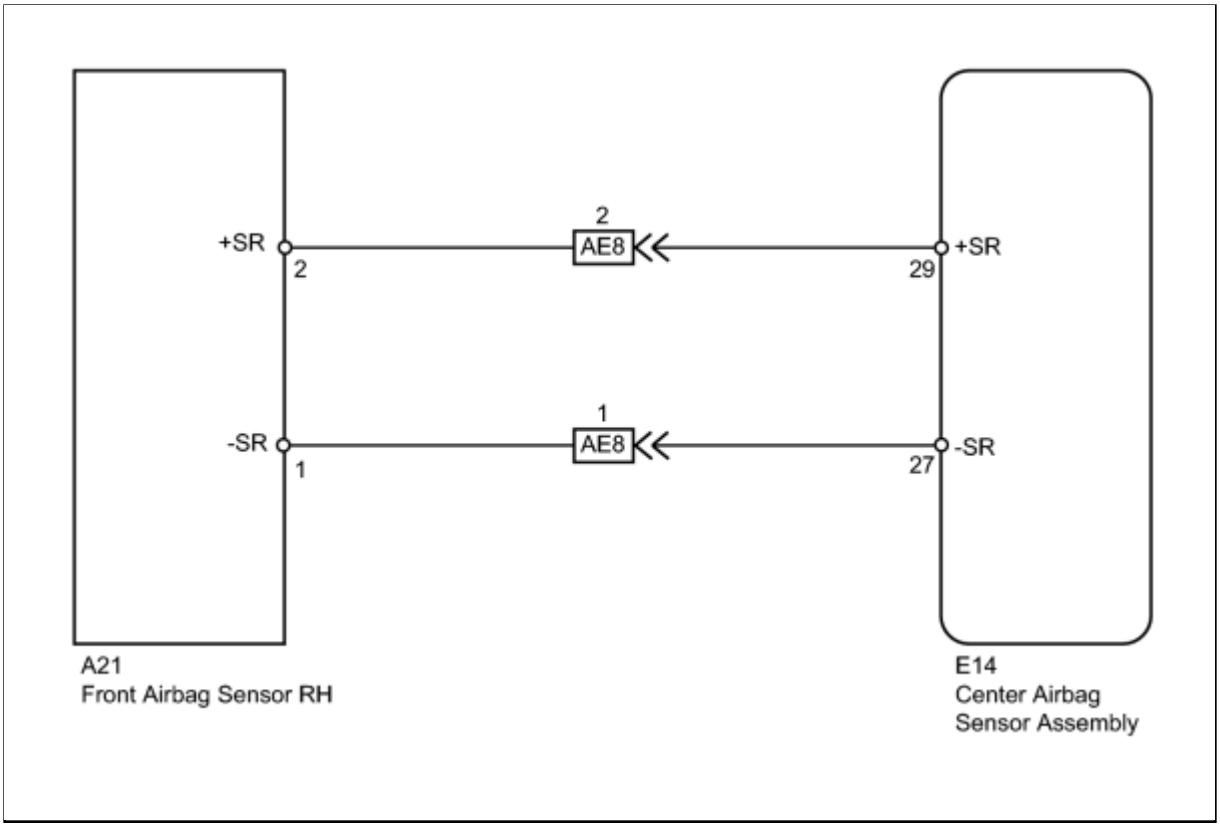
HINT:

- DTCs can be detected more sensitively in check mode than in a normal diagnosis.
- Perform check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through a normal diagnosis inspection.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YTM03LX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1610/13: Front Airbag Sensor RH Circuit Malfunction (2010 Corolla)		

DTC	**B1610/13**	**Front Airbag Sensor RH Circuit Malfunction**

DESCRIPTION



The front airbag sensor RH circuit consists of the center airbag sensor assembly and front airbag sensor RH.

The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1610/13 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1610/13	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH. Also check that the connectors that link the engine room main wire and instrument panel wire are properly connected.

OK:

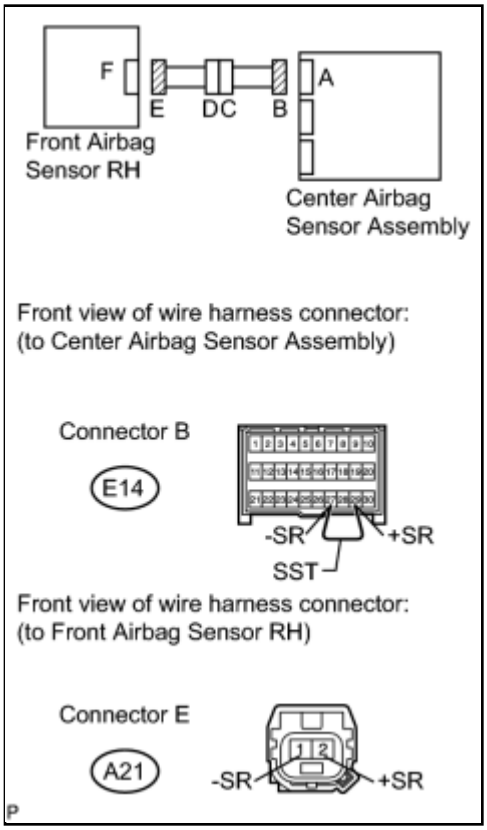
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly and the front airbag sensor RH. Also disconnect the connectors that link the engine room main wire and instrument panel wire.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	**CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)**

(a) Connect the connectors that link the engine room main wire and instrument panel wire.

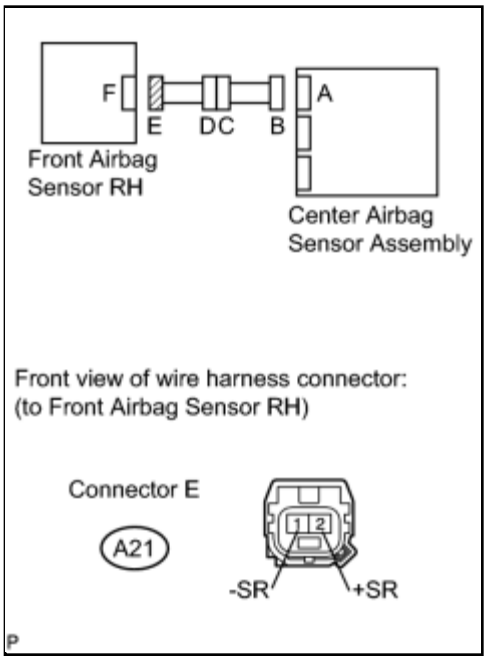
(b) Using SST, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A21-2 (+SR) - A21-1 (-SR)	Always	Below 1 Ω

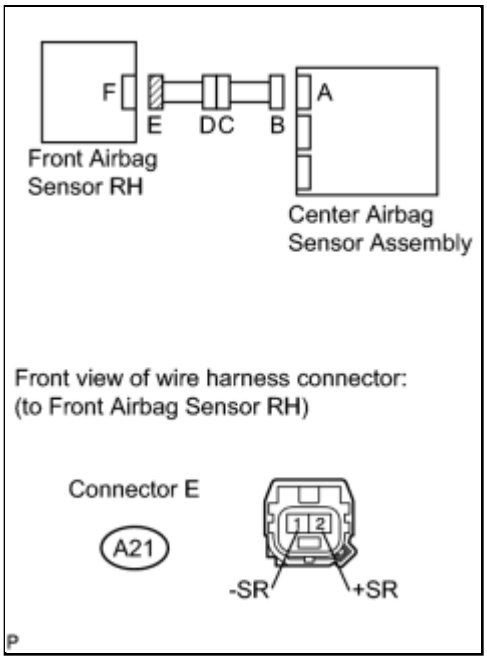
NG ▶ CHECK INSTRUMENT PANEL WIRE (OPEN)

OK ▼

3.	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT)

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A21-2 (+SR) - A21-1 (-SR)	Always	1 MΩ or higher

NG ▶ CHECK INSTRUMENT PANEL WIRE (SHORT)

OK ▼

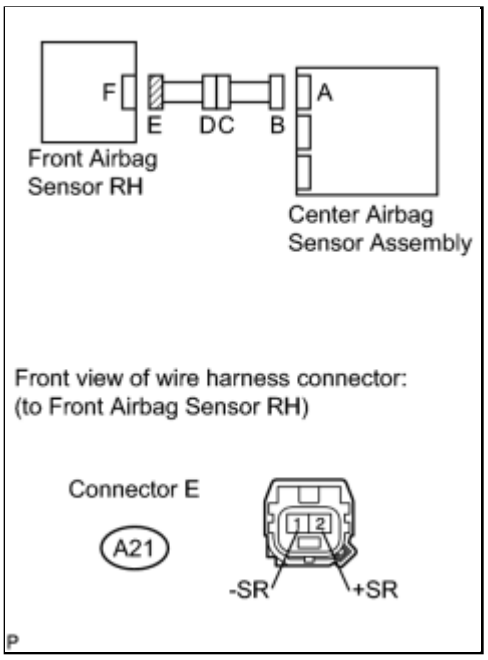
4.	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A21-2 (+SR) - Body ground	Ignition switch ON	Below 1 V
A21-1 (-SR) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)**

OK ▼

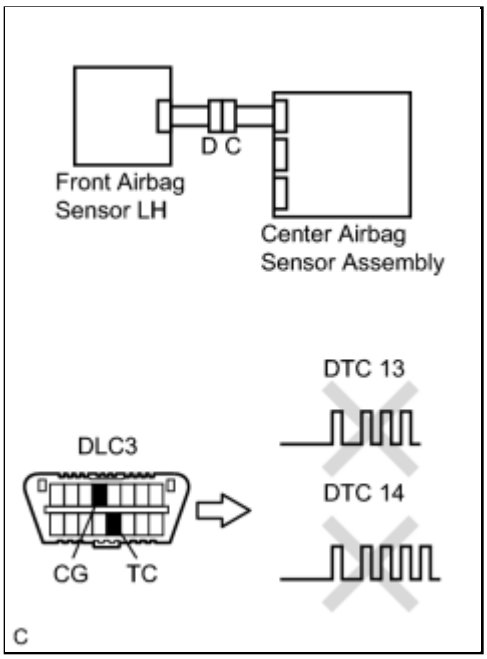
5.	**CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO GROUND)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A21-2 (+SR) - Body ground	Always	1 MΩ or higher
A21-1 (-SR) - Body ground	Always	1 MΩ or higher

NG ▶ **CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)**

OK ▼

6.	**CHECK FRONT AIRBAG SENSOR RH**

(a) Connect the connector to the center airbag sensor assembly.

(b) Interchange the front airbag sensor LH with RH and connect the connectors.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

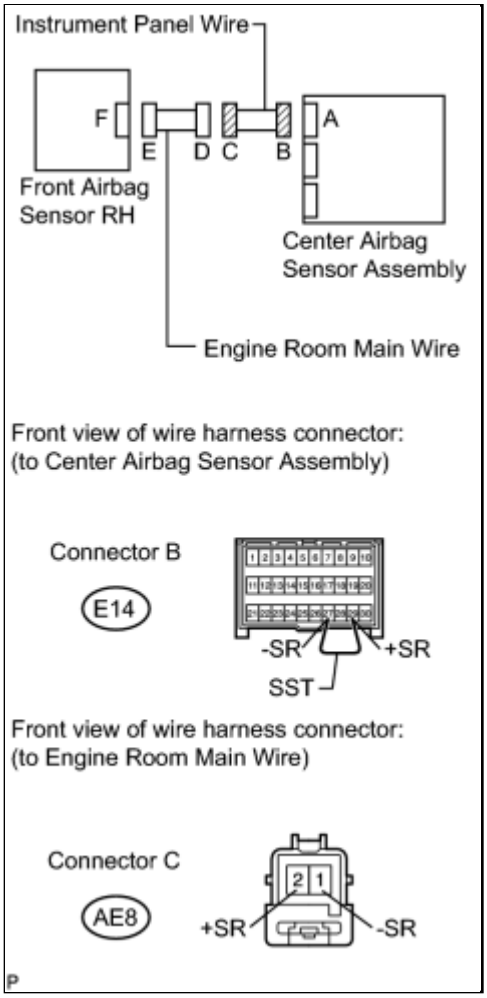
(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

Result:

RESULT	PROCEED TO
DTC B1610/13 and B1615/14 are not output.	A
DTC B1610/13 is output.	B
DTC B1615/14 is output.	C

HINT:



Codes other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

C ▶ **REPLACE FRONT AIRBAG SENSOR RH**

B ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

A ▶ **USE SIMULATION METHOD TO CHECK**

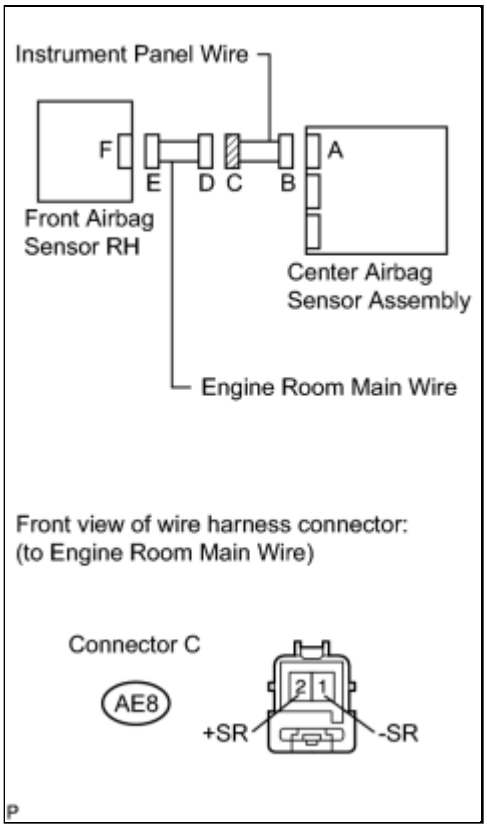
7.	CHECK INSTRUMENT PANEL WIRE (OPEN)

(a) Disconnect the instrument panel wire connector from the engine room main wire.

HINT:

SST has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AE8-2 (+SR) - AE8-1 (-SR)	Always	Below 1 Ω

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

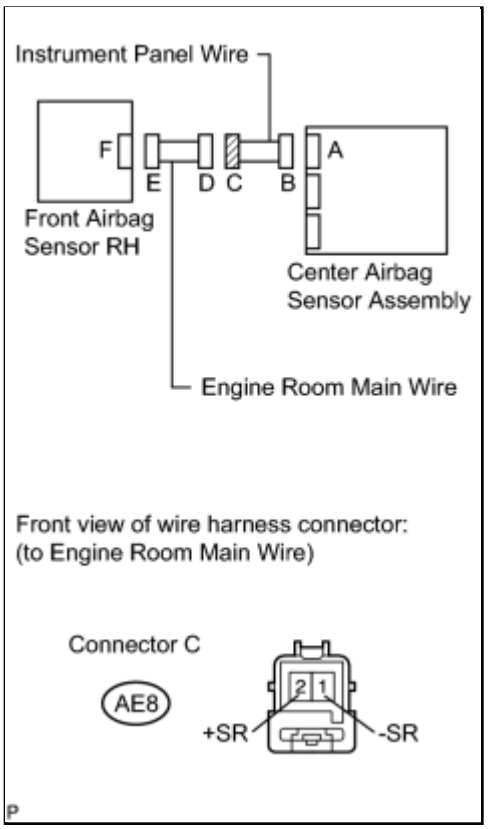
OK ▶ **REPLACE ENGINE ROOM MAIN WIRE**

8.	CHECK INSTRUMENT PANEL WIRE (SHORT)

(a) Disconnect the instrument panel wire connector from the engine room main wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AE8-2 (+SR) - AE8-1 (-SR)	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▶ **REPLACE ENGINE ROOM MAIN WIRE**

9.	**CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

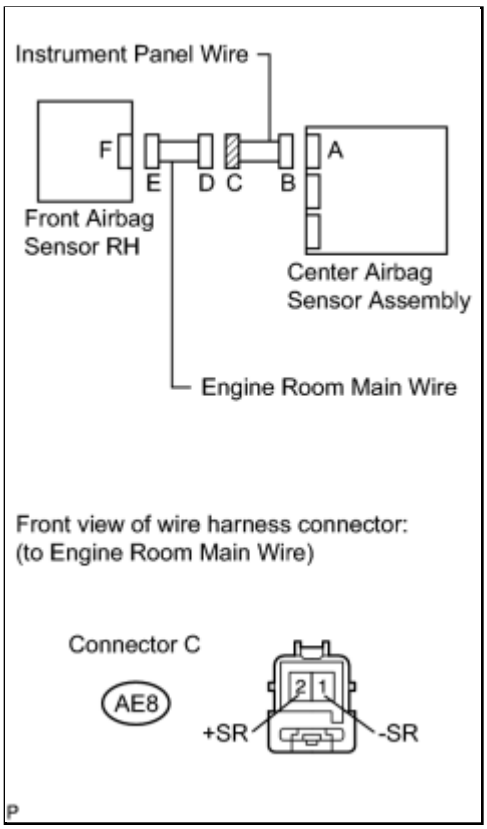
(c) Disconnect the instrument panel wire connector from the engine room main wire.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
AE8-2 (+SR) - Body ground	Ignition switch ON	Below 1 V
AE8-1 (-SR) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▶ **REPLACE ENGINE ROOM MAIN WIRE**

10.	**CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)**

(a) Disconnect the instrument panel wire connector from

the engine room main wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
AE8-2 (+SR) - Body ground	Always	1 MΩ or higher
AE8-1 (-SR) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▶ **REPLACE ENGINE ROOM MAIN WIRE**

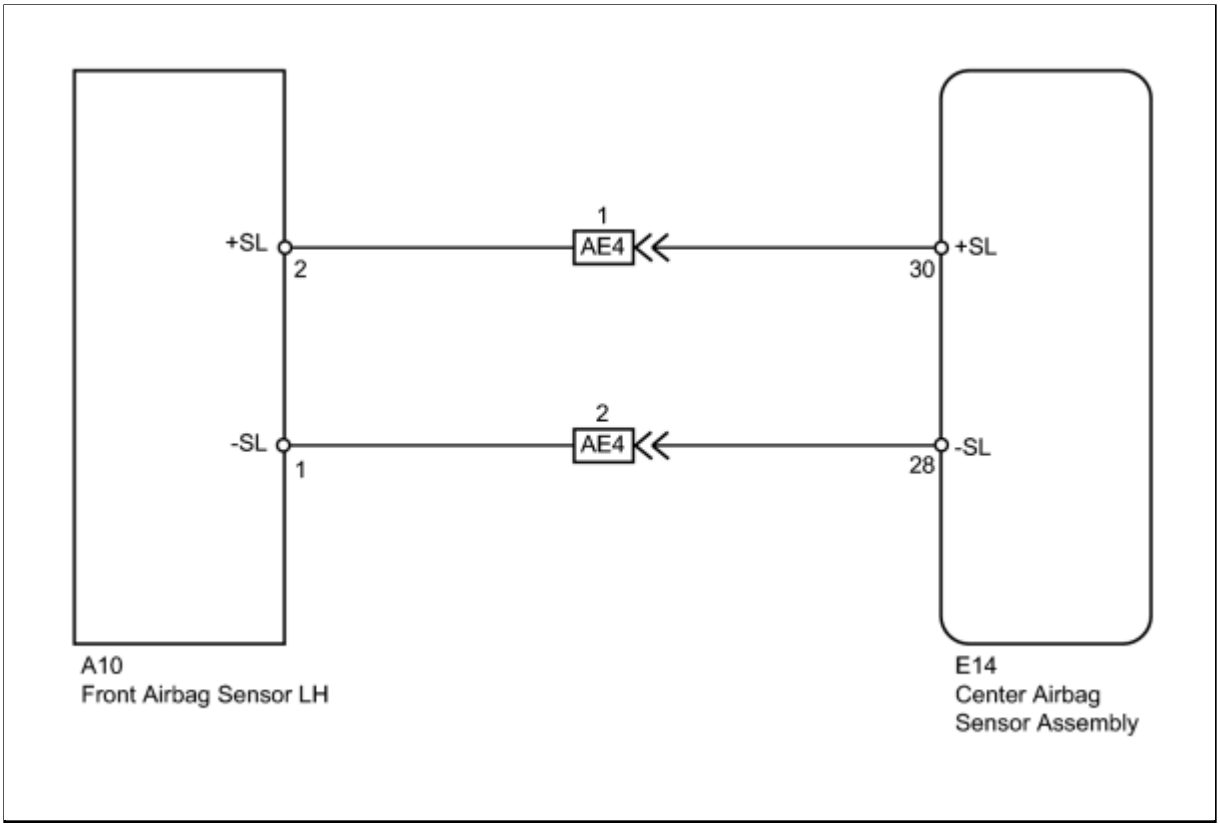
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1615/14: Front Airbag Sensor LH Circuit Malfunction (2010 Corolla)		

DTC	**B1615/14**	**Front Airbag Sensor LH Circuit Malfunction**

DESCRIPTION



The front airbag sensor LH circuit consists of the center airbag sensor assembly and front airbag sensor LH.

The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1615/14 is recorded when a malfunction is detected in the front airbag sensor LH circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1615/14	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • Front airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH. Also check that the connectors that link the engine room main wire and instrument panel wire are properly connected.

OK:

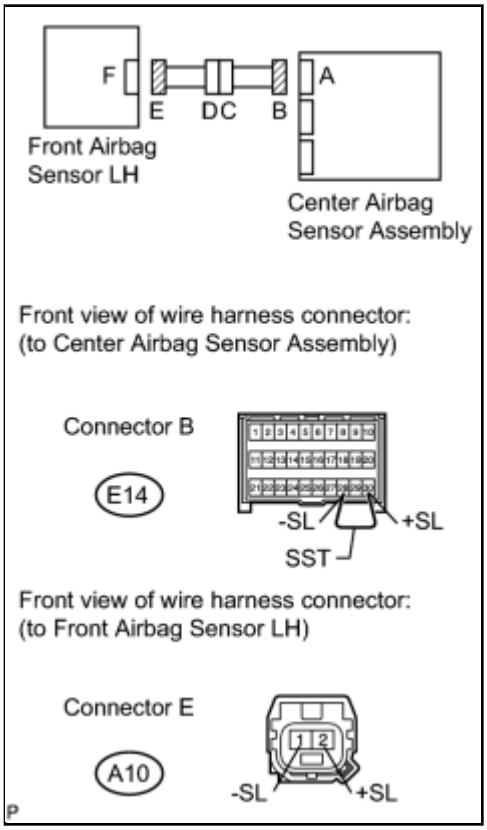
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly and the front airbag sensor LH. Also disconnect the connectors that link the engine room main wire and instrument panel wire.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	**CHECK FRONT AIRBAG SENSOR LH CIRCUIT (OPEN)**

(a) Connect the connectors that link the engine room main wire and instrument panel wire.

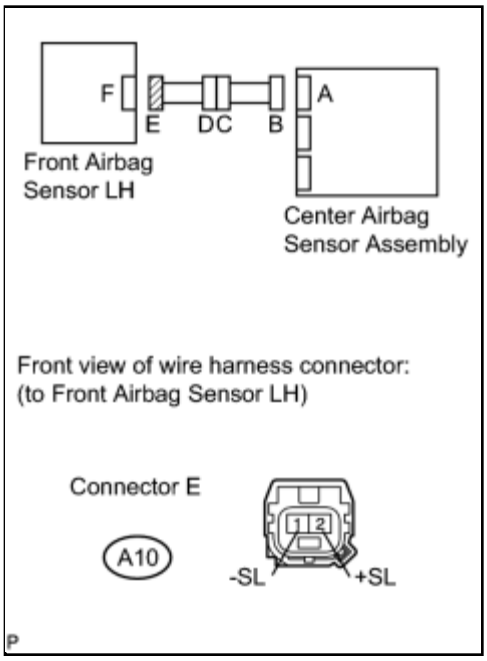
(b) Using SST, connect connectors 30 (+SL) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A10-2 (+SL) - A10-1 (-SL)	Always	Below 1 Ω

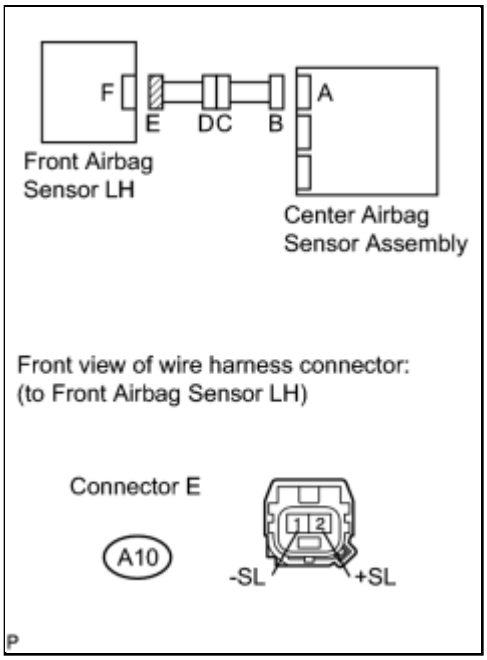
NG ▶ CHECK INSTRUMENT PANEL WIRE (OPEN)

OK ▼

3.	CHECK FRONT AIRBAG SENSOR LH CIRCUIT (SHORT)

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A10-2 (+SL) - A10-1 (-SL)	Always	1 MΩ or higher

NG ▶ CHECK INSTRUMENT PANEL WIRE (SHORT)

OK ▼

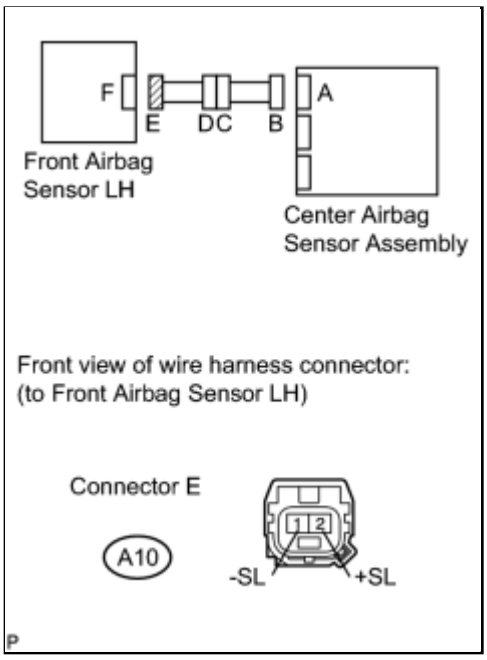
4.	CHECK FRONT AIRBAG SENSOR LH CIRCUIT (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A10-2 (+SL) - Body ground	Ignition switch ON	Below 1 V
A10-1 (-SL) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)**

OK ▼

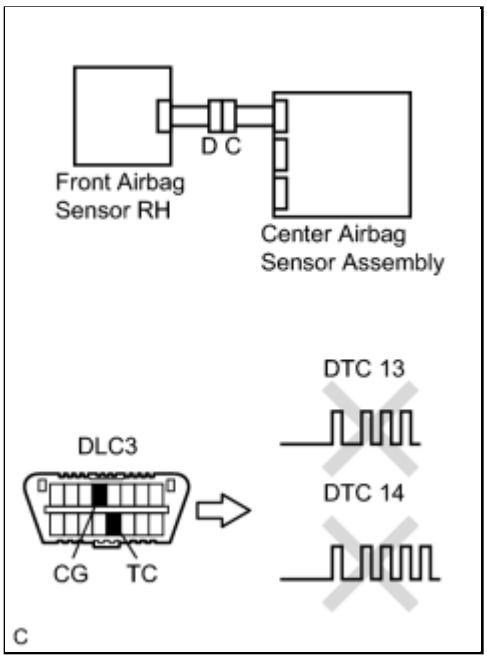
5.	**CHECK FRONT AIRBAG SENSOR LH CIRCUIT (SHORT TO GROUND)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A10-2 (+SL) - Body ground	Always	1 MΩ or higher
A10-1 (-SL) - Body ground	Always	1 MΩ or higher

NG ▶ **CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)**

OK ▼

6.	**CHECK FRONT AIRBAG SENSOR LH**

(a) Connect the connector to the center airbag sensor assembly.

(b) Interchange the front airbag sensor RH with LH and connect the connectors.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (refer to the appropriate page).

HINT:

- When the SRS warning light remains on and the DTC output is the normal system code, a voltage source drop is likely to occur. This malfunction is not stored in the memory by the center airbag sensor assembly. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more codes are indicated, the code with the lower number appears first.
- If a code is not listed on the display chart, the center airbag sensor assembly may have failed.
- In the case of any malfunction concerning an open circuit, short to ground, or short to B+ due to a squib, other trouble codes may not be detected. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Mark in the check mode column:

  *1: DTC does not correspond to check mode.

  *2: DTC corresponds to check mode.
- DTCs marked *3 are output only on vehicles equipped with the front seat side airbags and curtain shield airbags.

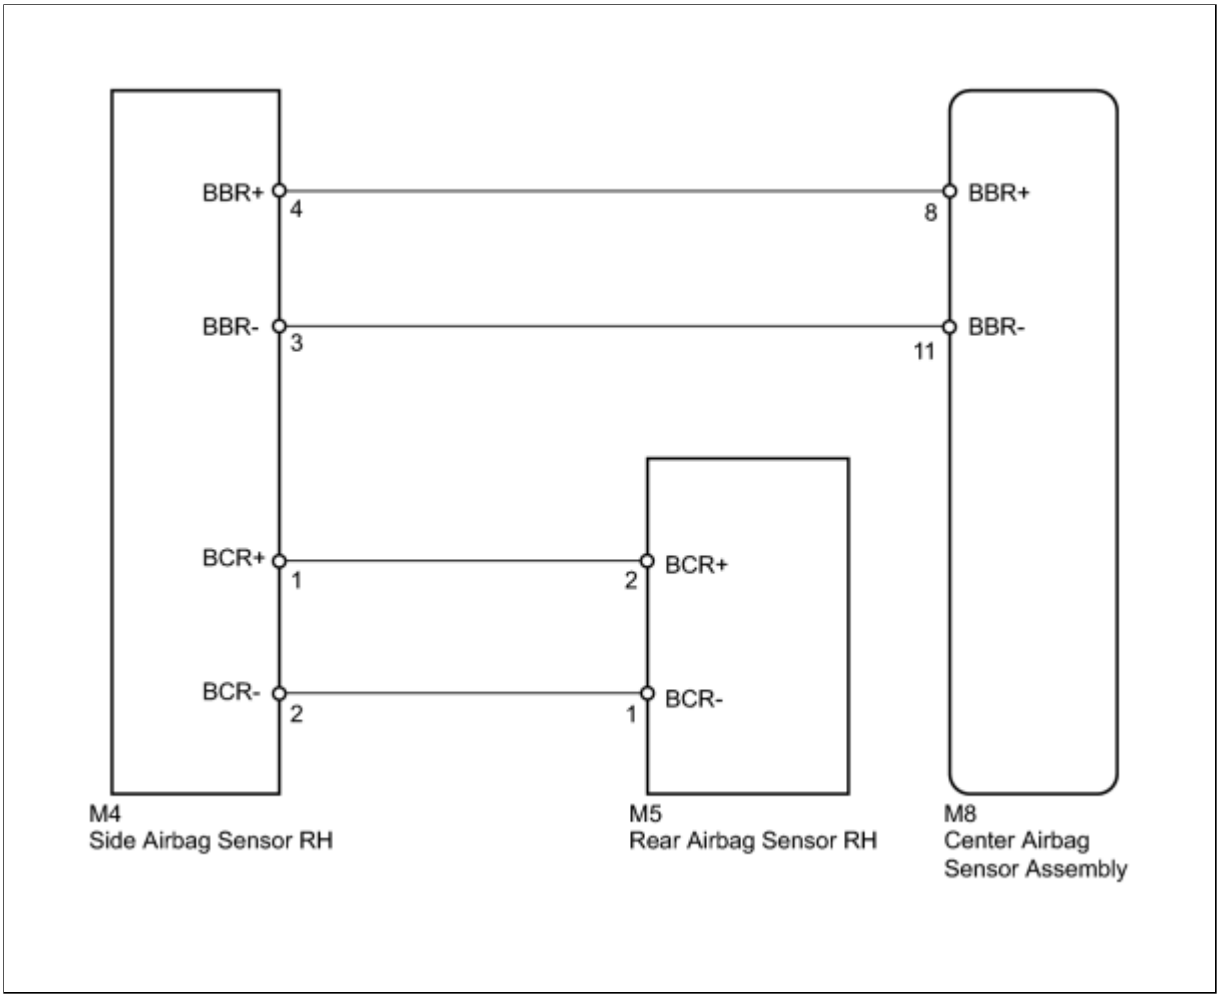
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1620/21: Side Airbag Sensor RH Circuit Malfunction (2010 Corolla)		

DTC	**B1620/21**	**Side Airbag Sensor RH Circuit Malfunction**

DESCRIPTION



The side airbag sensor RH circuit consists of the center airbag sensor assembly, side airbag sensor RH and rear airbag sensor RH.

The side airbag sensor RH and rear airbag sensor RH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1620/21 is recorded when a malfunction is detected in the side airbag sensor RH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1620/21	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the side airbag RH sensor circuit for 2 seconds. • Side airbag sensor RH malfunction • Rear airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly, side airbag sensor RH and rear airbag sensor RH.

OK:

The connectors are properly connected.

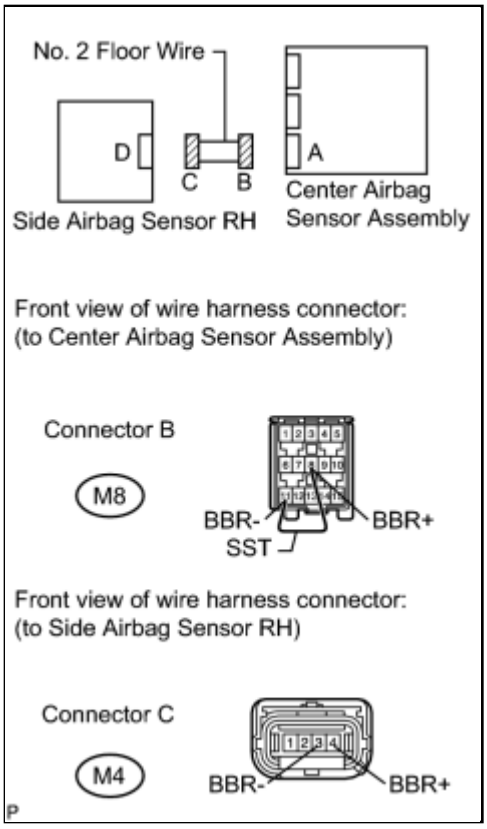
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly, side airbag sensor

RH and rear airbag sensor RH.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

2.	**CHECK NO. 2 FLOOR WIRE (OPEN)**

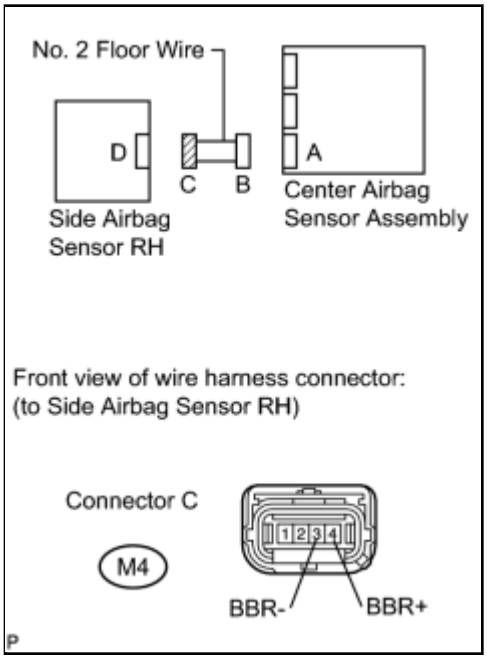
(a) Using SST, connect terminals 8 (BBR+) and 11 (BBR-) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-4 (BBR+) - M4-3 (BBR-)	Always	Below 1 Ω

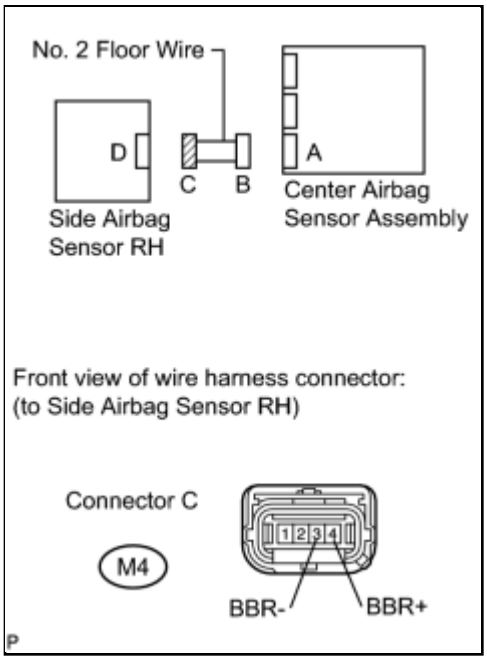
NG ▶ REPLACE NO. 2 FLOOR WIRE

OK ▼

3.	CHECK NO. 2 FLOOR WIRE (SHORT)

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-4 (BBR+) - M4-3 (BBR-)	Always	1 MΩ or higher

NG ▶ REPLACE NO. 2 FLOOR WIRE

OK ▼

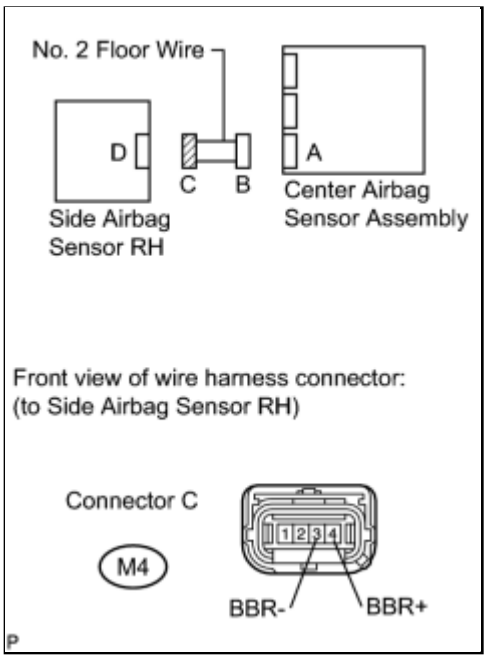
4.	CHECK NO. 2 FLOOR WIRE (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
M4-4 (BBR+) - Body ground	Ignition switch ON	Below 1 V
M4-3 (BBR-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

5.	**CHECK NO. 2 FLOOR WIRE (SHORT TO GROUND)**

(a) Turn the ignition switch off.

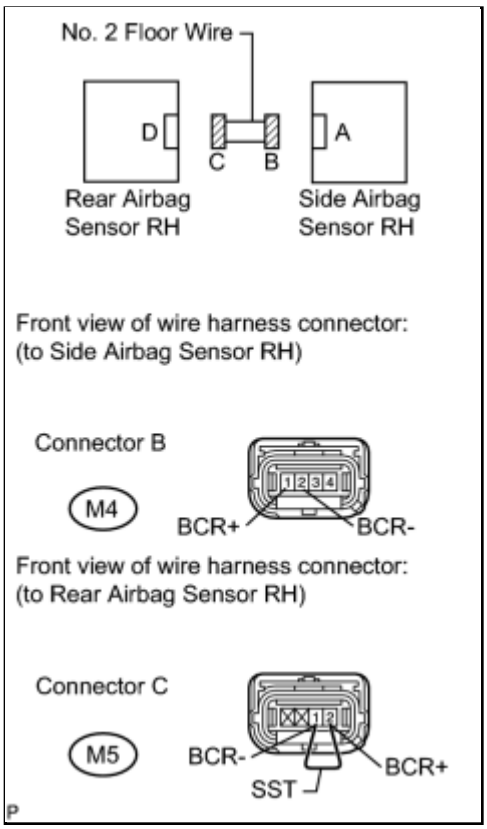
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-4 (BBR+) - Body ground	Always	1 MΩ or higher
M4-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**



OK ▼

6.	**CHECK NO. 2 FLOOR WIRE (OPEN)**

(a) Using SST, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

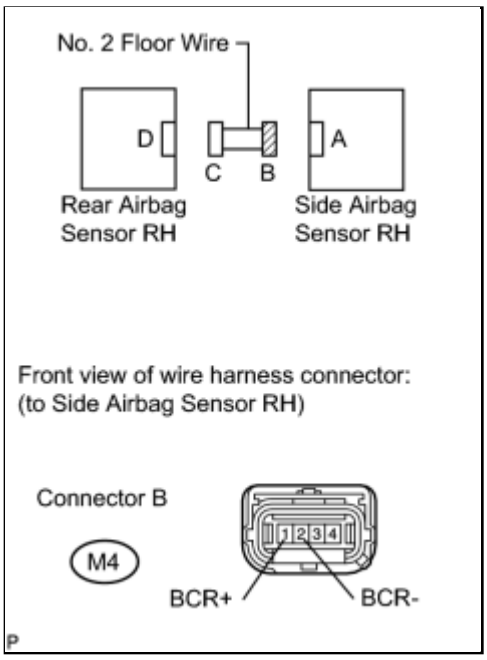
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-1 (BCR+) - M4-2 (BCR-)	Always	Below 1 Ω

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

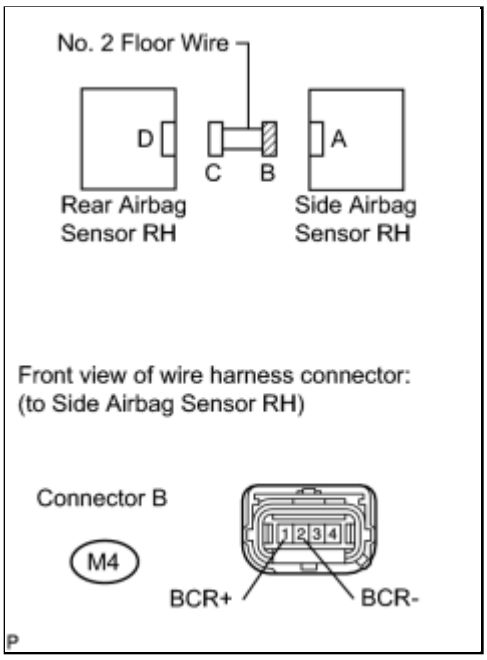
OK ▼

7.	**CHECK NO. 2 FLOOR WIRE (SHORT)**

(a) Disconnect SST from connector C.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-1 (BCR+) - M4-2 (BCR-)	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

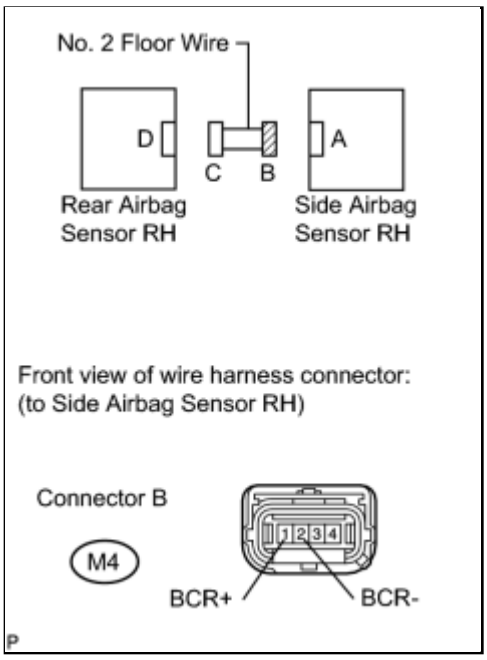
8.	**CHECK NO. 2 FLOOR WIRE (SHORT TO B+)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
M4-1 (BCR+) - Body ground	Ignition switch ON	Below 1 V
M4-2 (BCR-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

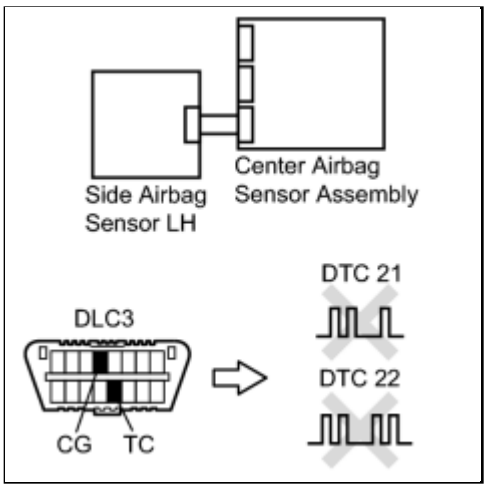
9.	**CHECK NO. 2 FLOOR WIRE (SHORT TO GROUND)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M4-1 (BCR+) - Body ground	Always	1 MΩ or higher
M4-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

10.	**CHECK SIDE AIRBAG SENSOR RH**

(a) Connect the connectors to the center airbag sensor assembly and rear airbag sensor RH.

(b) Interchange the side airbag sensor LH with RH and connect the connectors.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

Result:

RESULT	PROCEED TO

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. DATA LIST FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / SRS Airbag / Data List.

(e) Check the values by referring to the table below.

Data List

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE

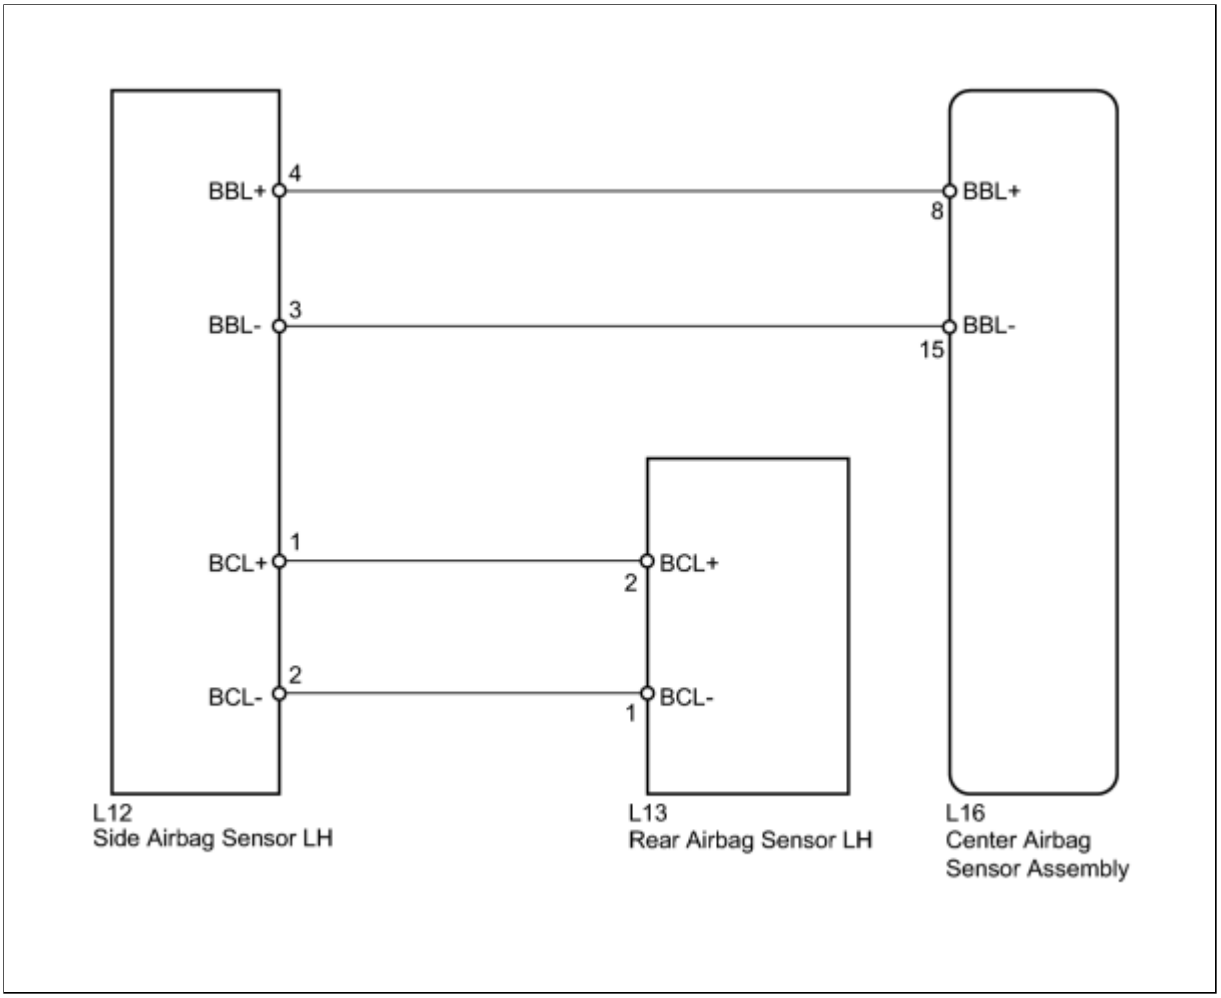
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1625/22: Side Airbag Sensor LH Circuit Malfunction (2010 Corolla)		

DTC	**B1625/22**	**Side Airbag Sensor LH Circuit Malfunction**

DESCRIPTION



The side airbag sensor LH circuit consists of the center airbag sensor assembly, side airbag sensor LH and rear airbag sensor LH.

The side airbag sensor LH and rear airbag sensor LH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1625/22 is recorded when a malfunction is detected in the side airbag sensor LH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1625/22	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the side airbag sensor LH circuit for 2 seconds. • Side airbag sensor LH malfunction • Rear airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly, side airbag sensor LH and rear airbag sensor LH.

OK:

The connectors are properly connected.

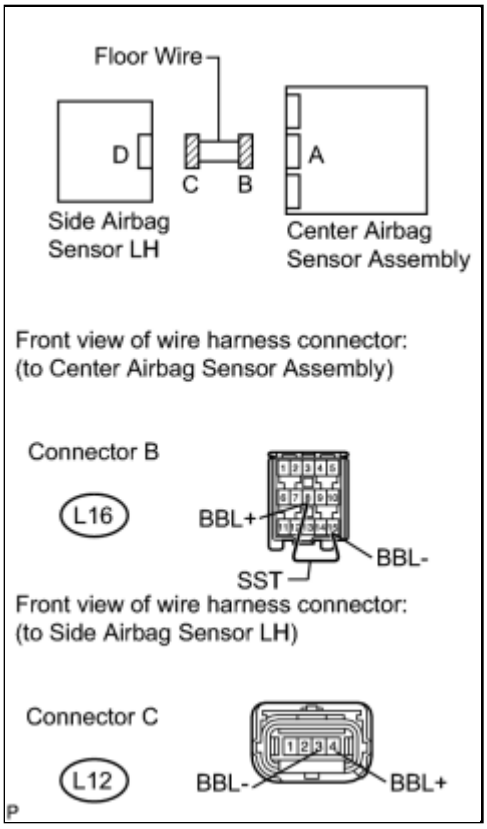
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly, side airbag sensor

LH and rear airbag sensor LH.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

2.	**CHECK FLOOR WIRE (OPEN)**

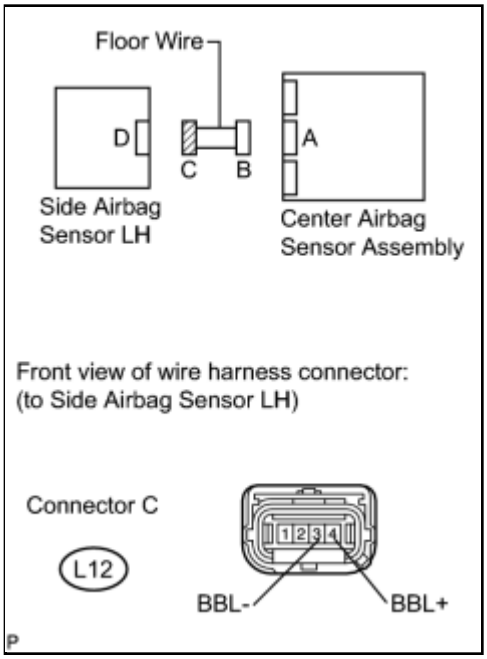
(a) Using SST, connect terminals 8 (BBL+) and 15 (BBL-) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-4 (BBL+) - L12-3 (BBL-)	Always	Below 1 Ω

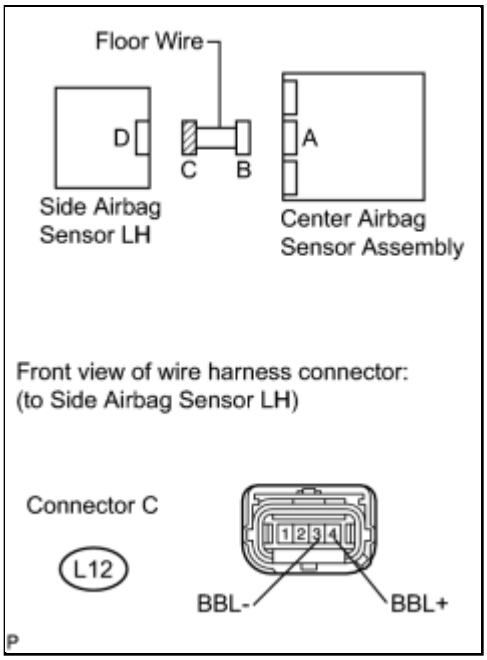
NG ▶ **REPLACE FLOOR WIRE**

OK ▼

3.	**CHECK FLOOR WIRE (SHORT)**

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-4 (BBL+) - L12-3 (BBL-)	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

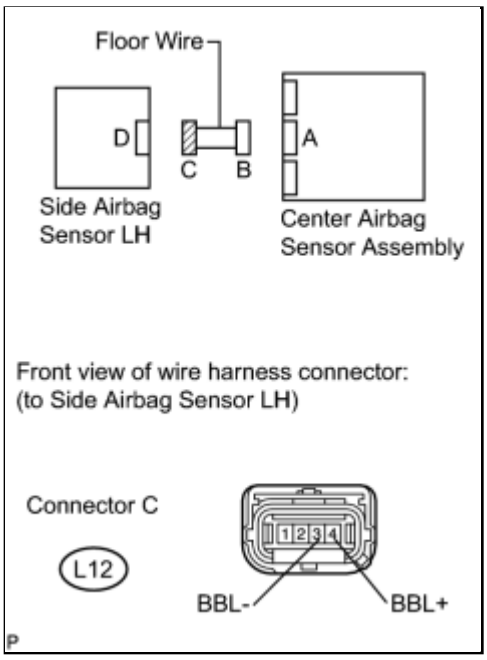
4.	**CHECK FLOOR WIRE (SHORT TO B+)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L12-4 (BBL+) - Body ground	Ignition switch ON	Below 1 V
L12-3 (BBL-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

5.	**CHECK FLOOR WIRE (SHORT TO GROUND)**

(a) Turn the ignition switch off.

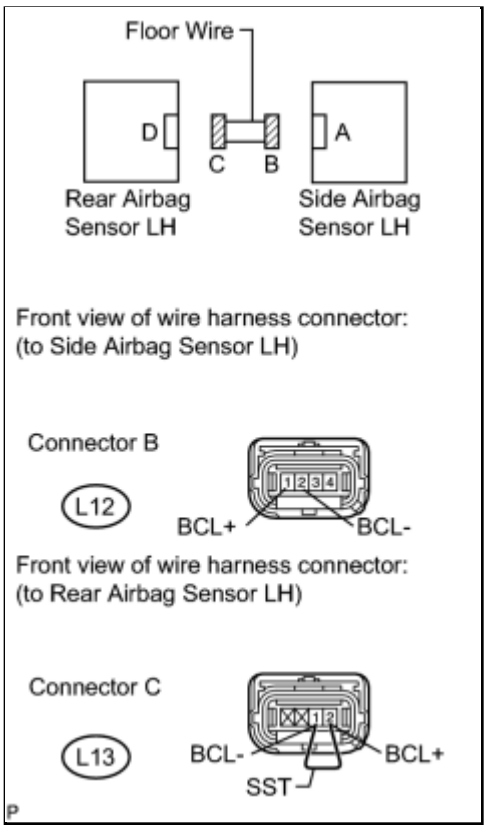
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-4 (BBL+) - Body ground	Always	1 MΩ or higher
L12-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**



OK ▼

6.	**CHECK FLOOR WIRE (OPEN)**

(a) Using SST, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

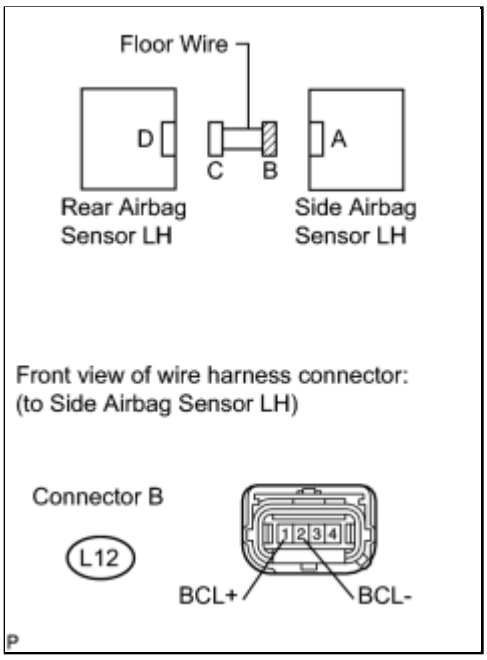
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-1 (BCL+) - L12-2 (BCL-)	Always	Below 1 Ω

NG ▶ **REPLACE FLOOR WIRE**

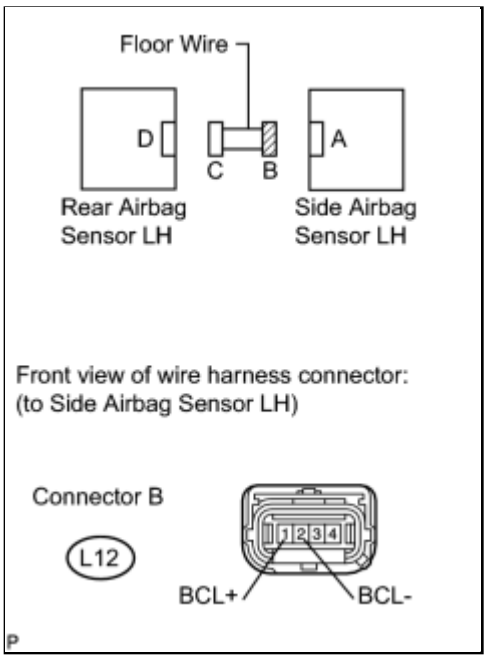
OK ▼

7.	**CHECK FLOOR WIRE (SHORT)**

(a) Disconnect SST from connector C.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-1 (BCL+) - L12-2 (BCL-)	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

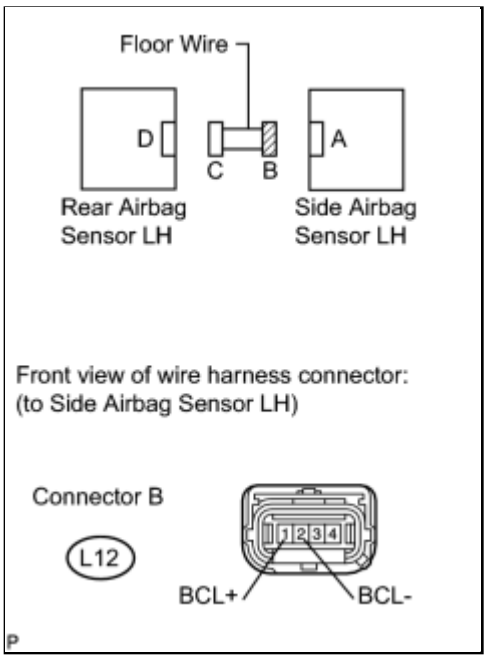
8.	**CHECK FLOOR WIRE (SHORT TO B+)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L12-1 (BCL+) - Body ground	Ignition switch ON	Below 1 V
L12-2 (BCL-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

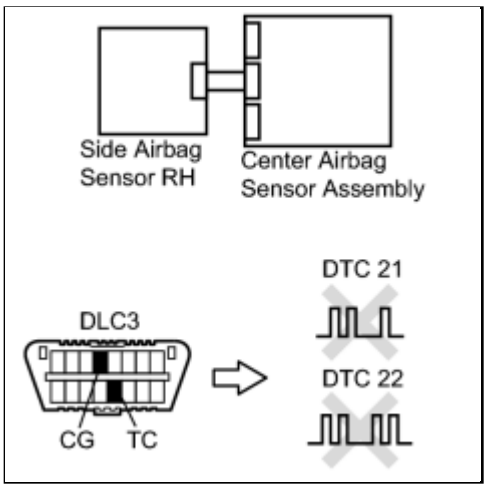
9.	**CHECK FLOOR WIRE (SHORT TO GROUND)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L12-1 (BCL+) - Body ground	Always	1 MΩ or higher
L12-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

10.	**CHECK SIDE AIRBAG SENSOR LH**

(a) Connect the connectors to the center airbag sensor assembly and the rear airbag sensor LH.

(b) Interchange the side airbag sensor RH with LH and connect the connectors.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

Result:

RESULT	PROCEED TO
DTC B1625/22 is output.	A

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1000/31: Center Airbag Sensor Assembly Malfunction (2010 Corolla)		

DTC	**B1000/31**	**Center Airbag Sensor Assembly Malfunction**

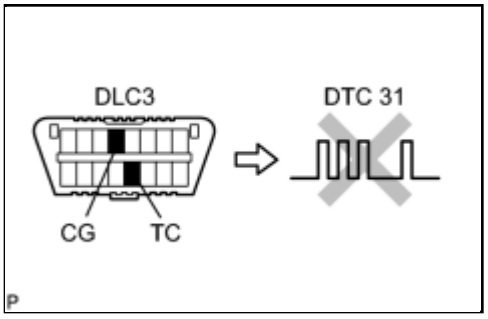
DESCRIPTION

The center airbag sensor assembly consists of the deceleration sensor, the safing sensor, the drive circuit, the diagnosis circuit, the ignition control, etc.

If the center airbag sensor assembly receives signals from the deceleration sensor, it determines whether the airbag squib and pretensioner squib should be activated.

DTC B1000/31 is recorded when a malfunction is detected in the center airbag sensor assembly.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1000/31	Center airbag sensor assembly malfunction	Center airbag sensor assembly



INSPECTION PROCEDURE

HINT:

When a trouble code is output simultaneously with B1000/31, repair the malfunction indicated by this code (except B1000/31) first.

PROCEDURE

1.	**CHECK CENTER AIRBAG SENSOR ASSEMBLY**

(a) Turn the ignition switch to ON, and wait for at least 60 seconds.

(b) Clear the DTCs stored in the memory INFO.

(c) Turn the ignition switch off.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Check for DTCs INFO .

OK:

DTC B1000/31 is not output.

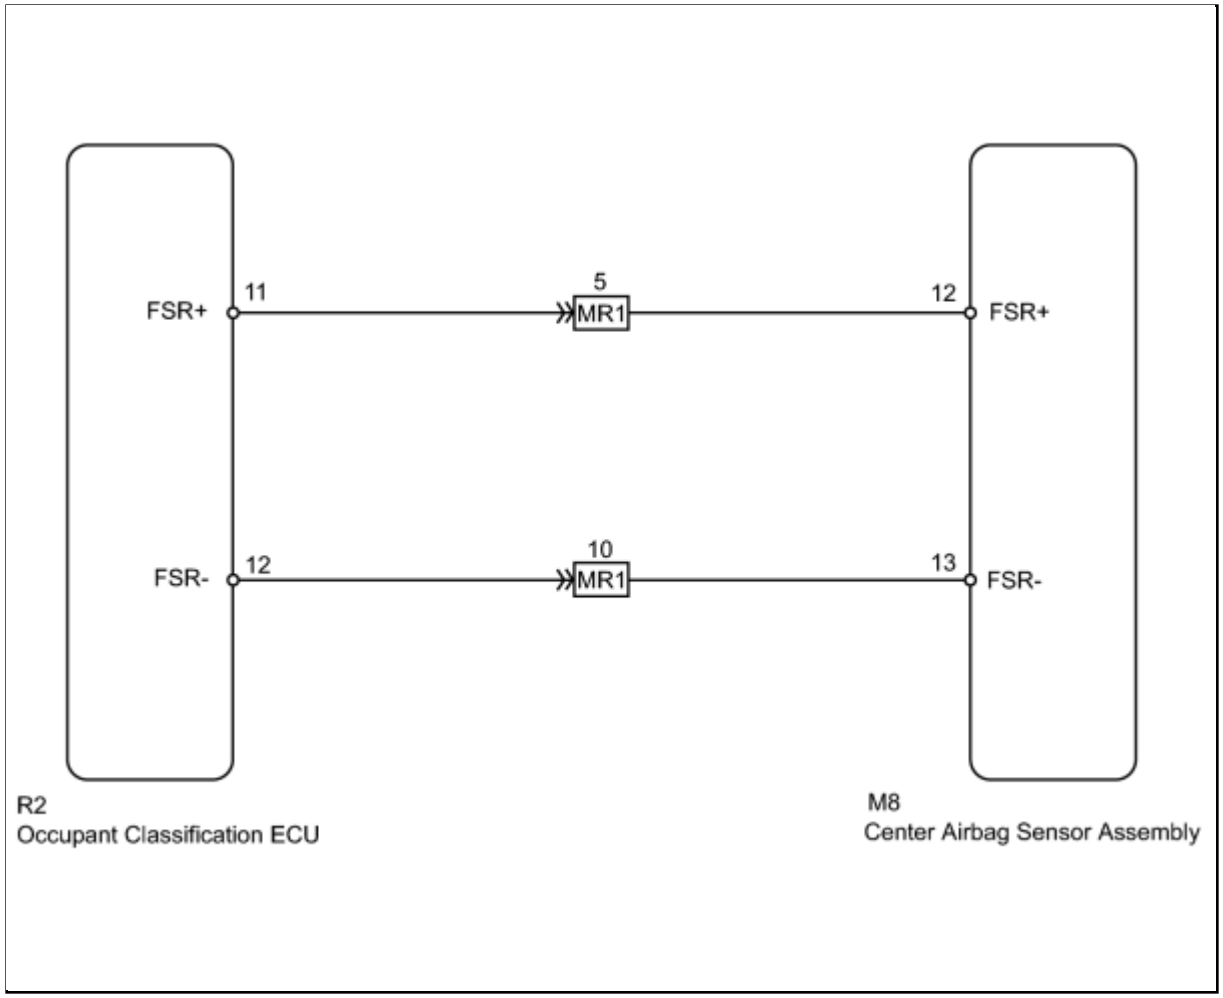
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1650/32: Occupant Classification System Malfunction (2010 Corolla)		

DTC	**B1650/32**	**Occupant Classification System Malfunction**

DESCRIPTION



The occupant classification system circuit consists of the center airbag sensor assembly and the occupant classification ECU.

If the center airbag sensor assembly receives signals from the occupant classification ECU, it determines whether the front passenger airbag, the front seat side airbag RH and front seat belt pretensioner RH should be operated.

DTC B1650/32 is recorded when a malfunction is detected in the occupant classification system circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1650/32	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification system circuit for 2 seconds. • Occupant classification ECU malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Front seat wire RH • Occupant classification system • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK FOR DTC (OCCUPANT CLASSIFICATION ECU)**

(a) Turn the ignition switch to ON.

(b) Using the Techstream, check for occupant classification ECU DTCs INFO .

NG ▶ **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

OK ▼

2.	CHECK CONNECTORS

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the occupant classification ECU. Also check that the connectors that link the front seat wire RH and No. 2 floor wire are properly connected.

OK:

The connectors are properly connected.

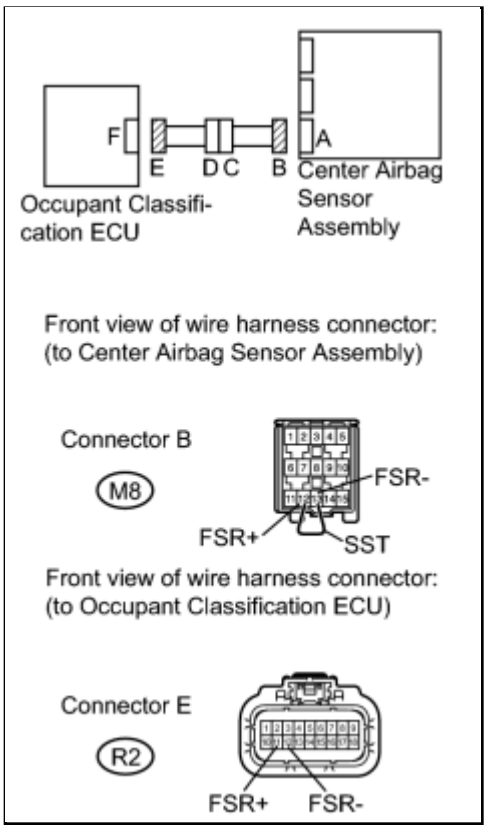
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly and the occupant classification ECU. Also disconnect the connectors that link the front seat wire RH and No. 2 floor wire.

(e) Check that the terminals of the connectors are not damaged.

OK:



The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

3.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)

(a) Connect the connectors that link the front seat wire RH and No. 2 floor wire.

(b) Using SST, connect terminals 12 (FSR+) and 13 (FSR-) of connector B.

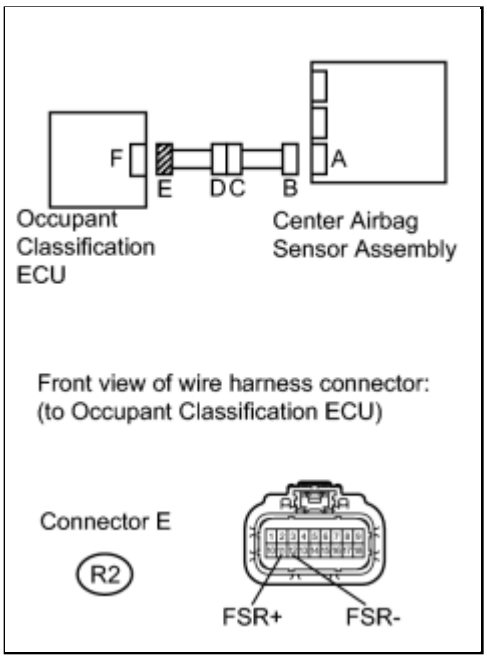
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - R2-12 (FSR-)	Always	Below 1 Ω

NG ▶ **CHECK NO. 2 FLOOR WIRE (OPEN)**

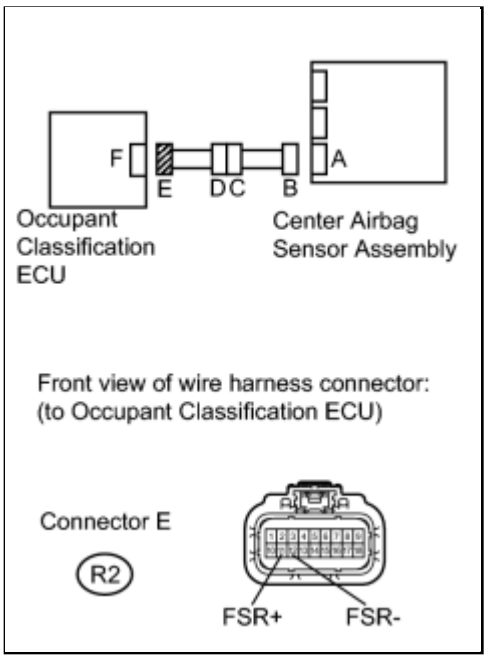
OK ▼

4.	**CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)**

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - R2-12 (FSR-)	Always	1 MΩ or higher

NG ▶ **CHECK NO. 2 FLOOR WIRE (SHORT)**

OK ▼

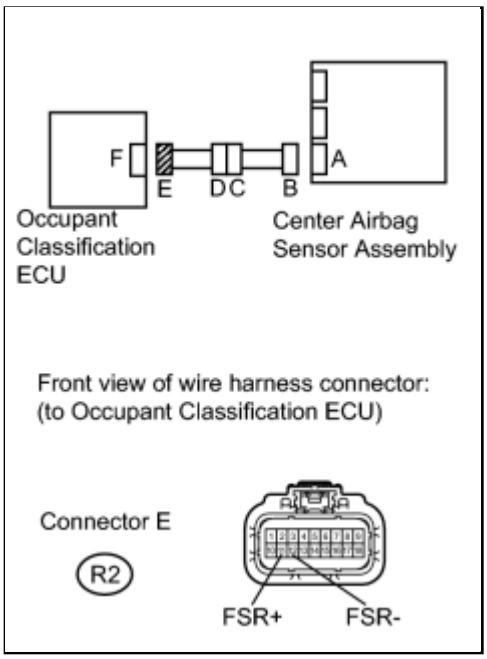
5.	**CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO B+)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - Body ground	Ignition switch ON	Below 1 V
R2-12 (FSR-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK NO. 2 FLOOR WIRE (SHORT TO B+)**

OK ▼

6.	**CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO GROUND)**

(a) Turn the ignition switch off.

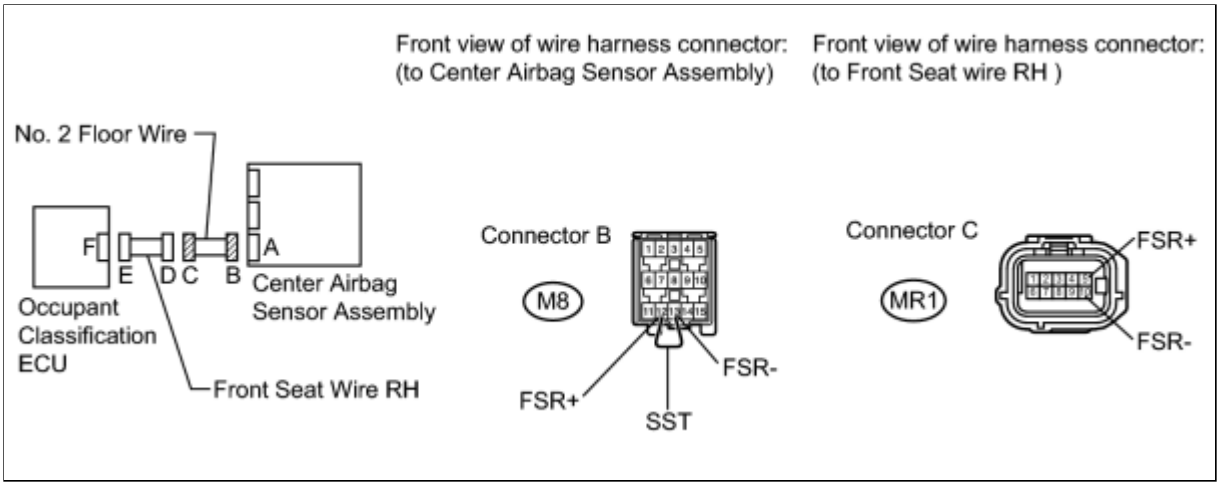
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - Body ground	Always	1 MΩ or higher
R2-12 (FSR-) - Body ground	Always	1 MΩ or higher

HINT:



After replacing the center airbag sensor assembly, check for DTCs of the center airbag sensor assembly. If DTC B1650/32 is detected, replace the occupant classification ECU INFO and perform the zero point calibration and sensitivity check of the occupant classification system INFO .

NG ▶ CHECK NO. 2 FLOOR WIRE (SHORT TO GROUND)

OK ▶ REPLACE CENTER AIRBAG SENSOR ASSEMBLY

7.	**CHECK NO. 2 FLOOR WIRE (OPEN)**

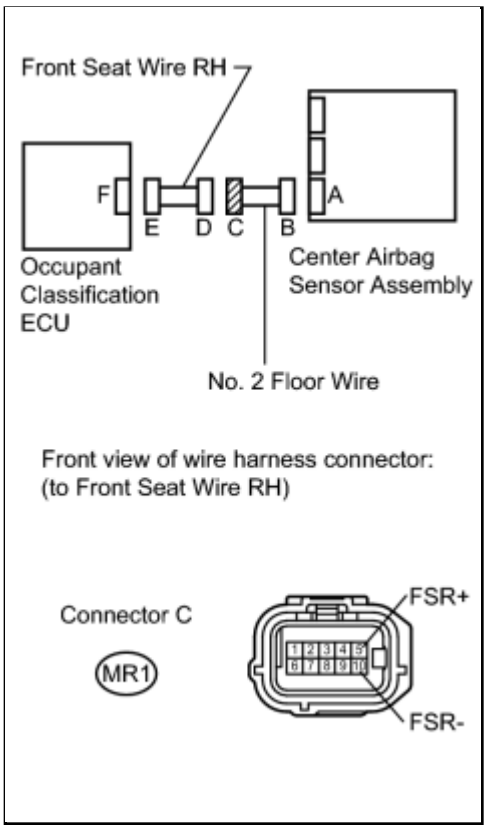
(a) Disconnect the front seat wire RH connector from the No. 2 floor wire.

HINT:

SST has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MR1-5 (FSR+) - MR1-10 (FSR-)	Always	Below 1 Ω

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

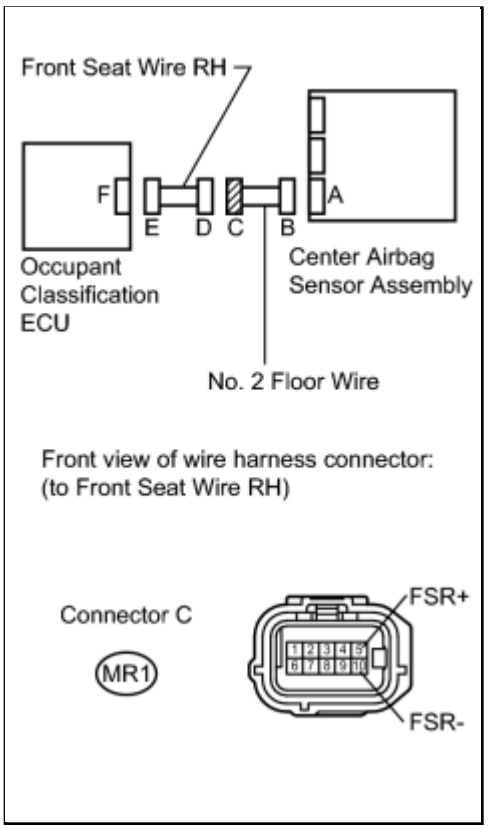
OK ▶ **REPLACE FRONT SEAT WIRE RH**

8.	**CHECK NO. 2 FLOOR WIRE (SHORT)**

(a) Disconnect the front seat wire RH connector from the No. 2 floor wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MR1-5 (FSR+) - MR1-10 (FSR-)	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT WIRE RH**

9.	**CHECK NO. 2 FLOOR WIRE (SHORT TO B+)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

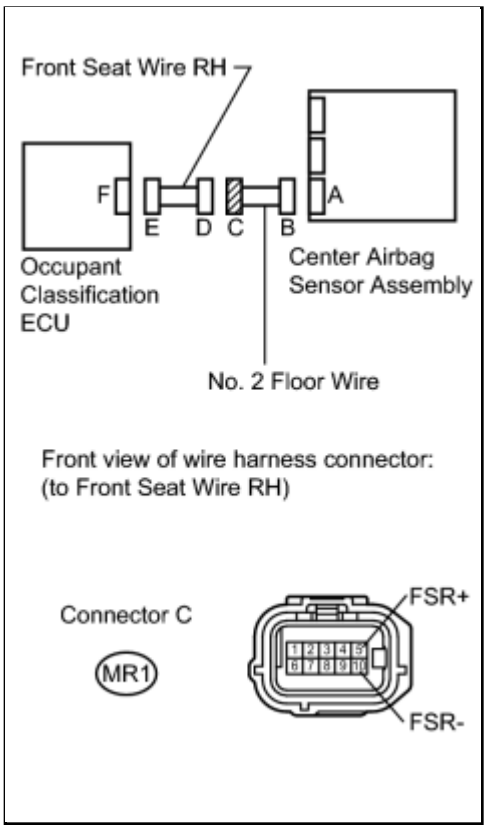
(c) Disconnect the front seat wire RH connector from the No. 2 floor wire.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
MR1-5 (FSR+) - Body ground	Ignition switch ON	Below 1 V
MR1-10 (FSR-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT WIRE RH**

10.	**CHECK NO. 2 FLOOR WIRE (SHORT TO GROUND)**

(a) Disconnect the front seat wire RH connector from the

No. 2 floor wire.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

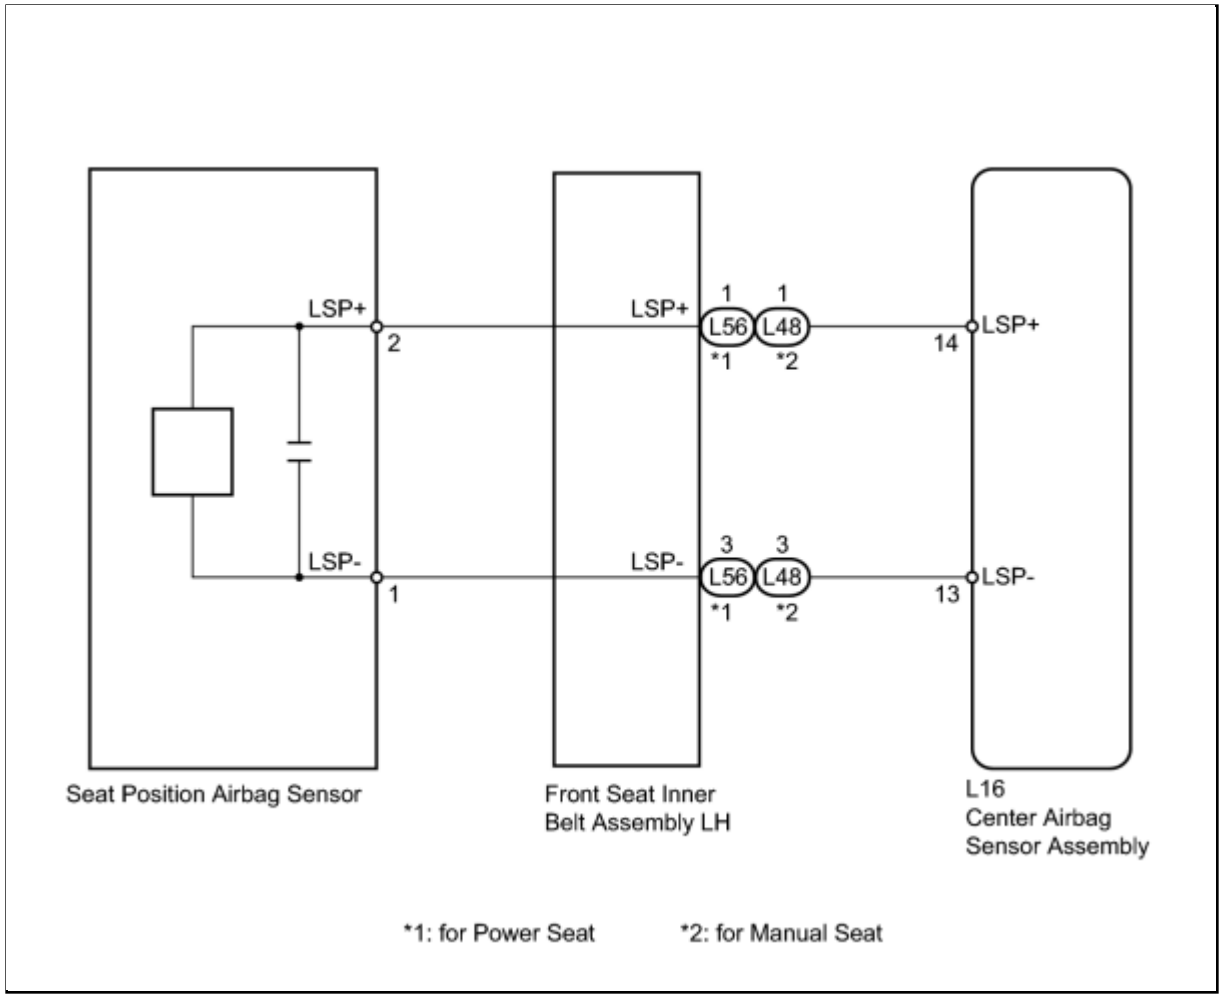
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
MR1-5 (FSR+) - Body ground	Always	1 MΩ or higher
MR1-10 (FSR-) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT WIRE RH**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YTS04PX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1653/35: Seat Position Airbag Sensor Circuit Malfunction (2010 Corolla)		

DTC	**B1653/35**	**Seat Position Airbag Sensor Circuit Malfunction**



DESCRIPTION

The seat position airbag sensor circuit consists of the center airbag sensor assembly, front seat inner belt assembly LH and the seat position airbag sensor.

DTC B1653/35 is recorded when a malfunction is detected in the seat position airbag sensor circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1653/35	• The center airbag sensor assembly receives a short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat position airbag sensor circuit for 2 seconds. • Front seat inner belt assembly LH malfunction • Seat position airbag sensor malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat inner belt assembly LH • Seat position airbag sensor • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the center airbag sensor assembly, front seat inner belt assembly LH and the seat position airbag sensor.

OK:

The connectors are properly connected.

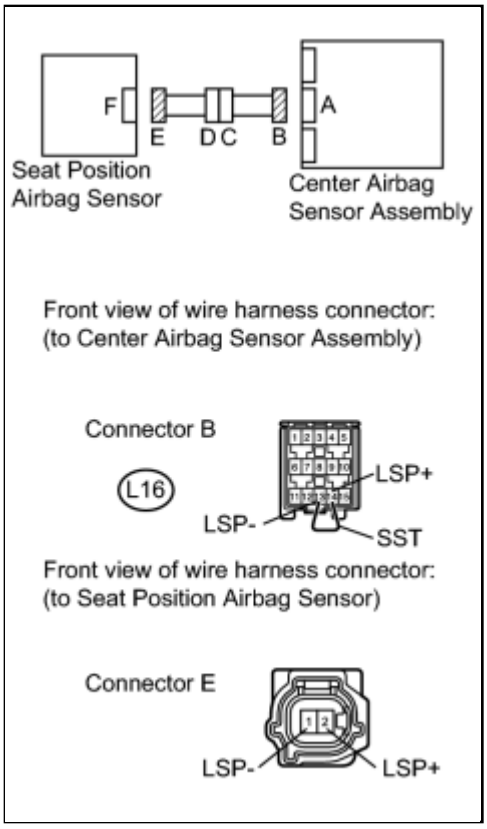
HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly, front seat inner belt

assembly LH and the seat position airbag sensor.

(e) Check that the connector terminals are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	**CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (OPEN)**

(a) Connect the connectors to the front seat inner belt assembly LH and floor wire.

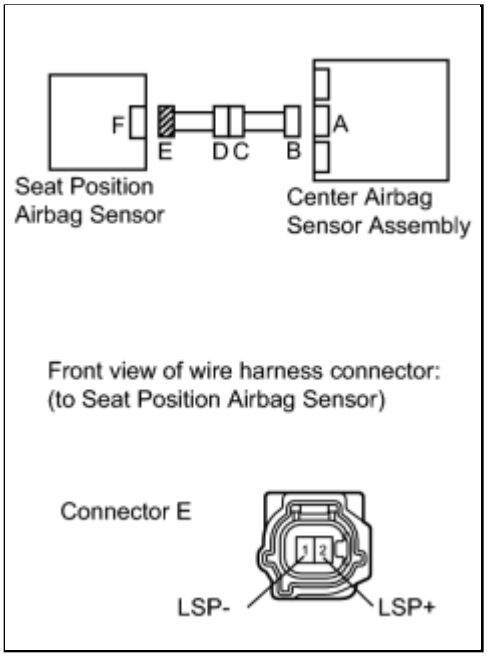
(b) Using SST, connect terminals 14 (LSP+) and 13 (LSP-) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (LSP+) - 1 (LSP-)	Always	Below 1 Ω

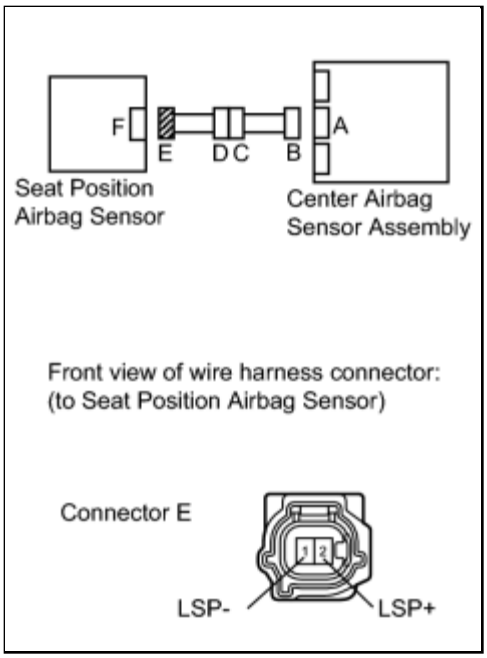
NG ▶ **CHECK FLOOR WIRE (OPEN)**

OK ▼

3.	CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT)

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (LSP+) - 1 (LSP-)	Always	1 MΩ or higher

NG ▶ **CHECK FLOOR WIRE (SHORT)**

OK

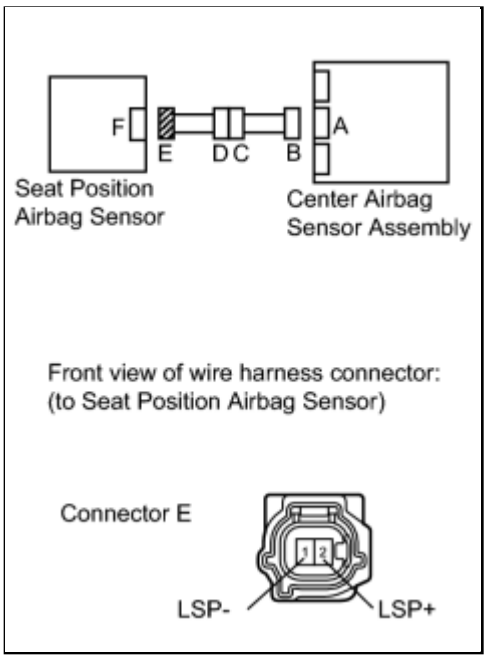
4.	CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2 (LSP+) - Body ground	Ignition switch ON	Below 1 V
1 (LSP-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK FLOOR WIRE (SHORT TO B+)**

OK

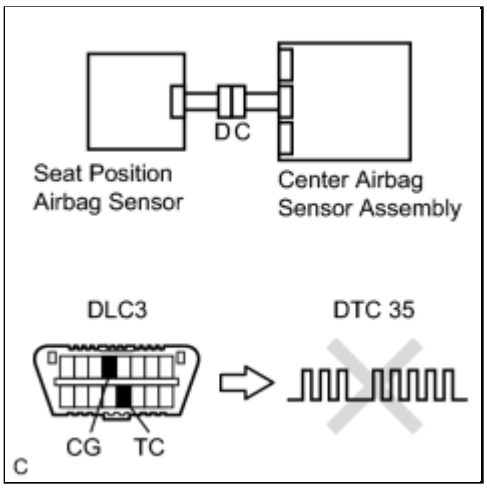
5.	CHECK SEAT POSITION AIRBAG SENSOR CIRCUIT (SHORT TO GROUND)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (LSP+) - Body ground	Always	1 MΩ or higher
1 (LSP-) - Body ground	Always	1 MΩ or higher

NG ▶ **CHECK FLOOR WIRE (SHORT TO GROUND)**

OK ▼

6.	**CHECK SEAT POSITION AIRBAG SENSOR**

(a) Connect the connectors to the center airbag sensor assembly and the seat position airbag sensor.

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON, and wait for at least 60 seconds.

(d) Clear the DTCs stored in the memory INFO .

(e) Turn the ignition switch off.

(f) Turn the ignition switch to ON, and wait for at least 60 seconds.

(g) Check for DTCs INFO .

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

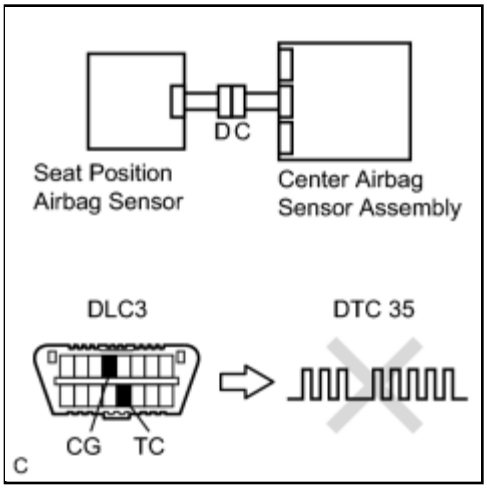
NG ▶ **REPLACE SEAT POSITION AIRBAG SENSOR**

OK ▶ **USE SIMULATION METHOD TO CHECK**

7.	**REPLACE SEAT POSITION AIRBAG SENSOR**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



(c) Replace the seat position airbag sensor with a known good part INFO .

HINT:

Perform the following inspection using known good parts from another vehicle if possible.

NEXT

8.	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON, and wait for at least 60 seconds.

(c) Clear the DTCs stored in the memory INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

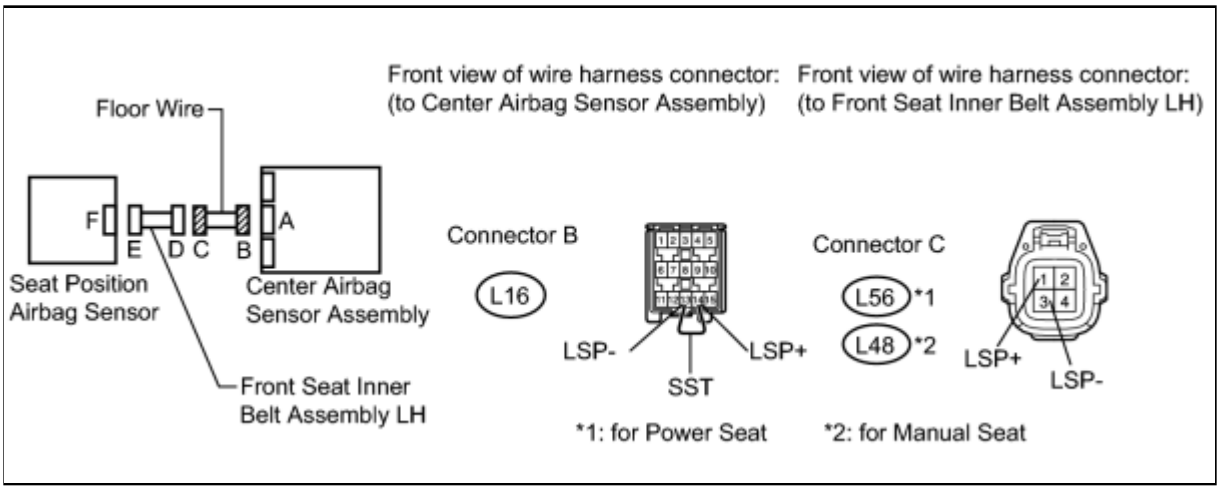
(f) Check for DTCs INFO .

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**



OK ▶ **END**

9.	CHECK FLOOR WIRE (OPEN)

(a) Disconnect the floor wire from the front seat inner belt assembly LH.

HINT:

SST has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for Power Seat

for Manual Seat

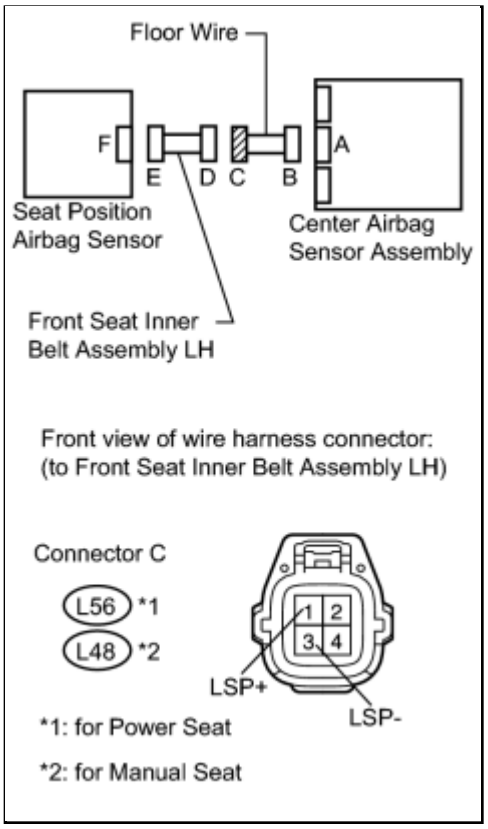
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L56-1 (LSP+) - L56-3 (LSP-)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L48-1 (LSP+) - L48-3 (LSP-)	Always	Below 1 Ω

NG ▶ **REPLACE FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

10.	**CHECK FLOOR WIRE (SHORT)**



(a) Disconnect the floor wire from the front seat belt inner belt assembly LH.

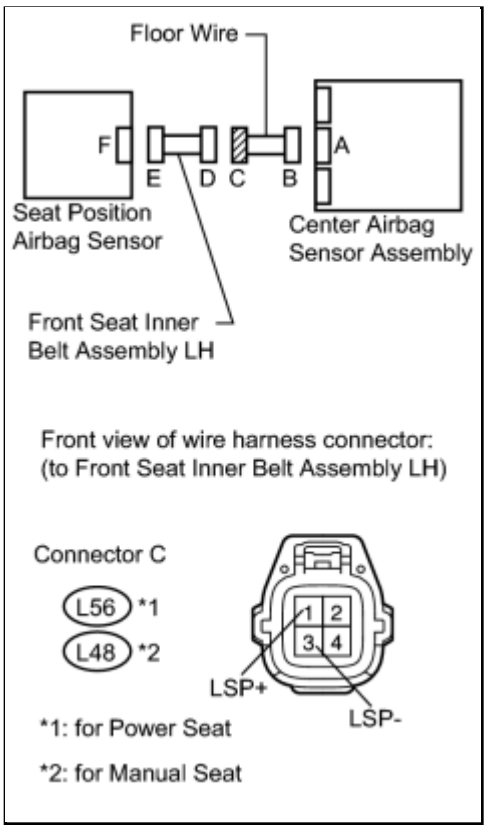
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for Power Seat

for Manual Seat

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L56-1 (LSP+) - L56-3 (LSP-)	Always	1 MΩ or higher



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L48-1 (LSP+) - L48-3 (LSP-)	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

11.	**CHECK FLOOR WIRE (SHORT TO B+)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect the floor wire from the front seat inner belt assembly LH.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for Power Seat

for Manual Seat

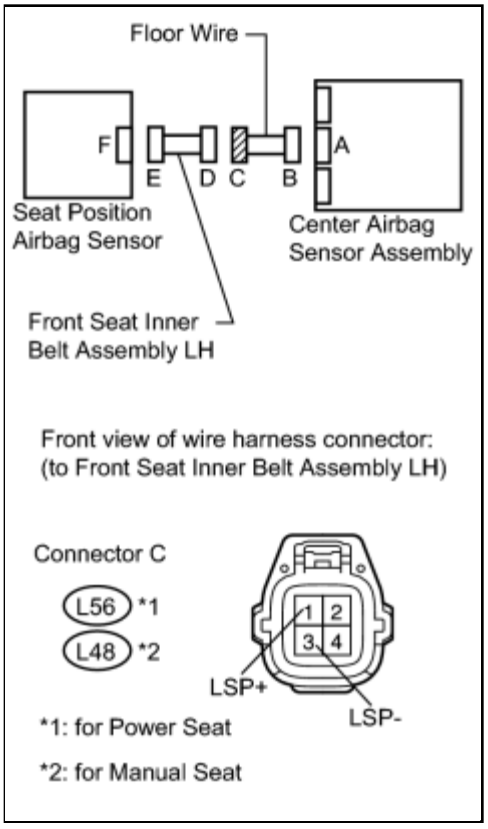
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L56-1 (LSP+) - Body ground	Ignition switch ON	Below 1 V
L56-3 (LSP-) - Body ground	Ignition switch ON	Below 1 V

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L48-1 (LSP+) - Body ground	Ignition switch ON	Below 1 V
L48-3 (LSP-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FLOOR WIRE**

OK ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

12.	CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Disconnect the floor wire from the front seat inner belt assembly LH.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for Power Seat

for Manual Seat

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L56-1 (LSP+) - Body ground	Always	1 MΩ or higher
L56-3 (LSP-) - Body ground	Always	1 MΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L48-1 (LSP+) - Body ground	Always	1 MΩ or higher
L48-3 (LSP-) - Body ground	Always	1 MΩ or higher

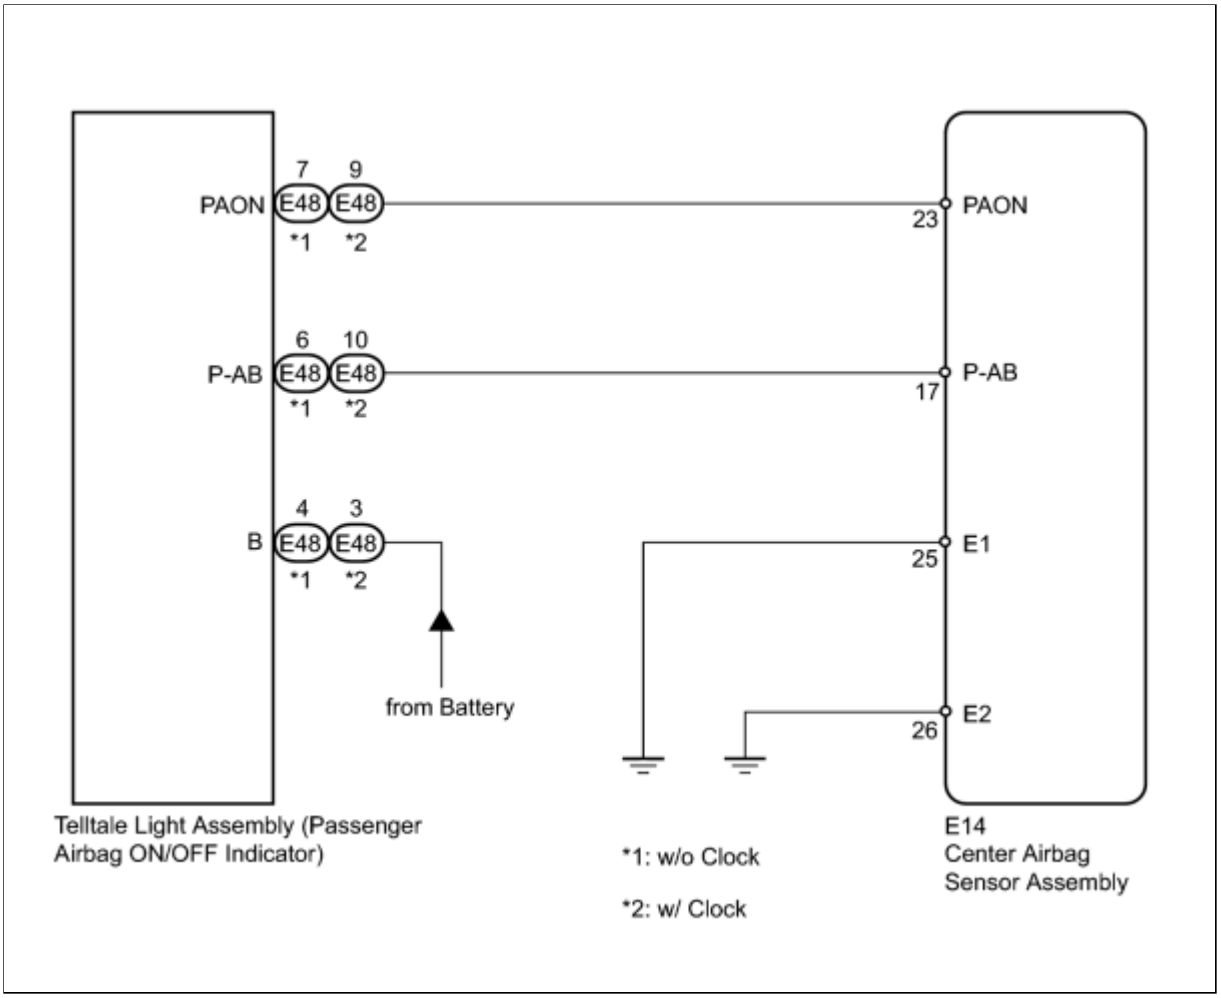
NG ▶ **REPLACE FLOOR WIRE**

OK ▶ **REPLACE FRONT SEAT INNER BELT ASSEMBLY LH**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001W28033X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1660/43: Passenger Airbag ON/OFF Indicator Circuit Malfunction (2010 Corolla)		

DTC	**B1660/43**	**Passenger Airbag ON/OFF Indicator Circuit Malfunction**

DESCRIPTION



The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor assembly and the telltale light assembly.

The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag, the front seat side airbag RH and front seat belt pretensioner RH.

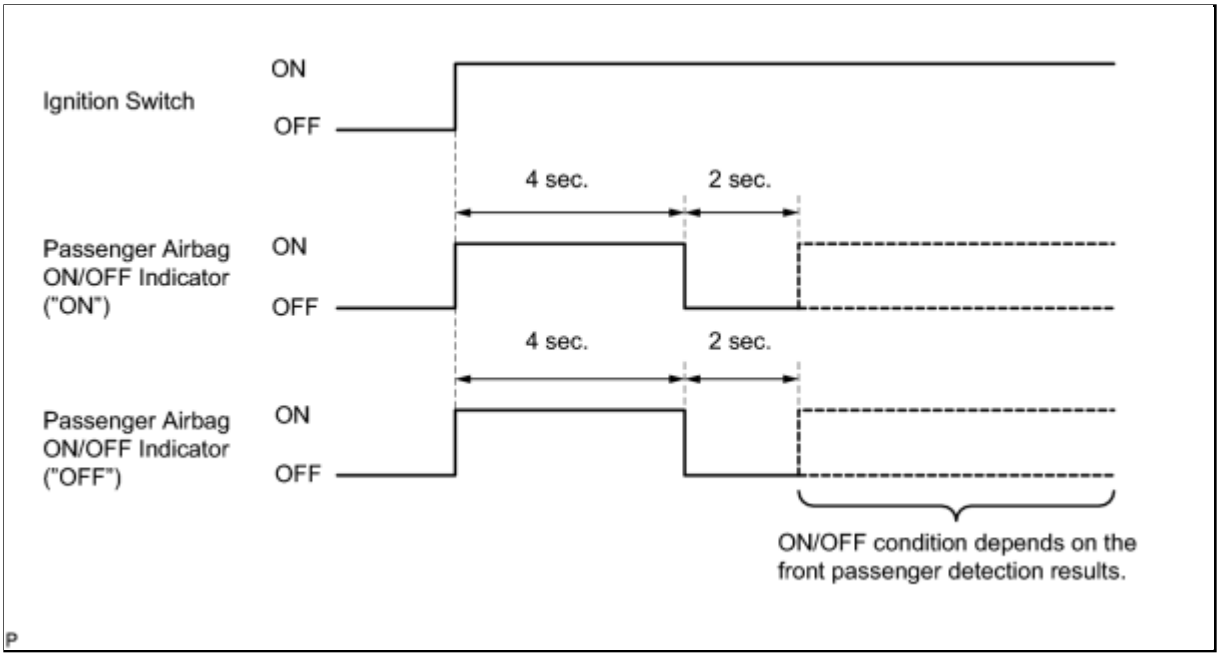
DTC B1660/43 is recorded when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1660/43	• The center airbag sensor assembly receives an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds. • Telltale light assembly malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Telltale light assembly (Passenger airbag ON/OFF indicator) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE



1.	**CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION**

(a) Turn the ignition switch to ON.

(b) Check the passenger airbag ON/OFF indicator operation.

HINT:

Refer to the normal condition of the passenger airbag ON/OFF indicator INFO .

Result:

ON/OFF INDICATOR ILLUMINATION	PROCEED TO
Always ON	A
OFF	B

B ▶ CHECK CONNECTORS

A ▼

2.	**CHECK CONNECTOR**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connector is properly connected to the center airbag sensor assembly.

OK:

The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(d) Disconnect the connector from the center airbag sensor assembly.

(e) Check that the terminal of the connector is not damaged.

OK:

The terminal is not deformed or damaged.

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

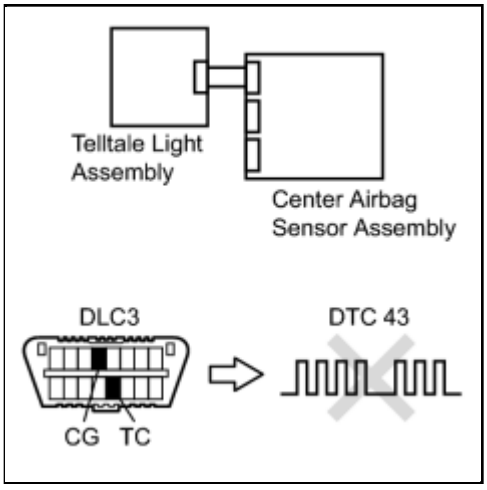
OK ▼

3.	**CHECK PASSENGER AIRBAG ON/OFF INDICATOR**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Check the passenger airbag ON/OFF indicator operation.



OK:

The passenger airbag ON/OFF indicator does not come on.

NG ▶ **CHECK CONNECTOR**

OK ▼

4.	**CHECK CENTER AIRBAG SENSOR ASSEMBLY**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Connect the connector to the center airbag sensor assembly.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON, and wait for at least 60 seconds.

(f) Clear the DTCs stored in the memory INFO .

(g) Turn the ignition switch off.

(h) Turn the ignition switch to ON, and wait for at least 60 seconds.

(i) Check for DTCs INFO .

OK:

DTC B1660/43 is not output.

HINT:

Codes other than DTC B1660/43 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK ▶ **USE SIMULATION METHOD TO CHECK**

5.	**CHECK CONNECTOR**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connector is properly connected to the telltale light assembly.

OK:

The connector is properly connected.

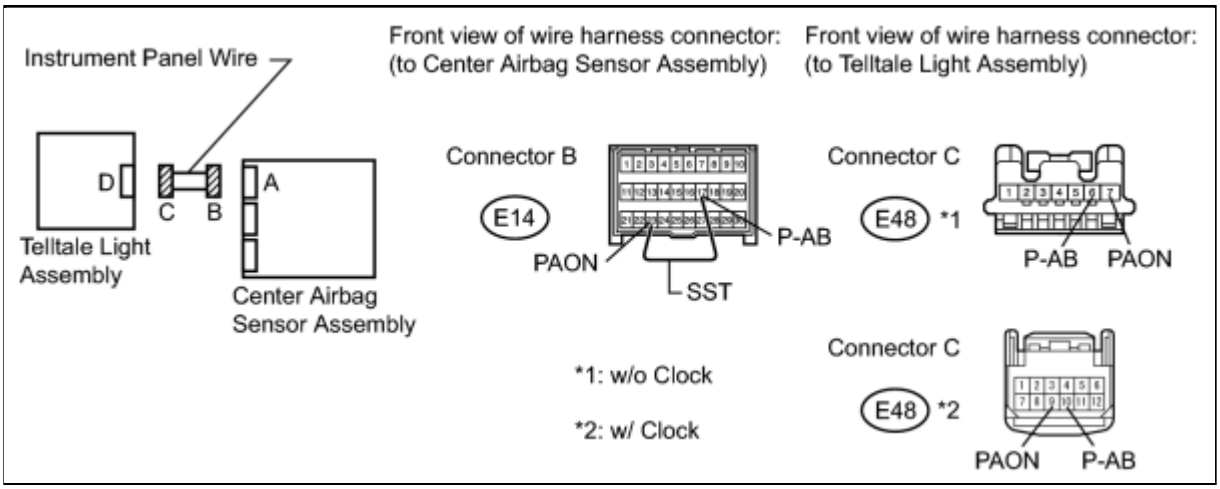
HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(d) Disconnect the connector from the telltale light assembly.

(e) Check that the terminal of the connector is not damaged.

OK:



The terminal is not deformed or damaged.

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK

6.	CHECK INSTRUMENT PANEL WIRE (OPEN)

(a) Using SST, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/o Clock

w/ Clock

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-7 (PAON) - E48-6 (P-AB)	Always	Below 1 Ω

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1800/51	• The center airbag sensor assembly receives a short circuit signal 5 times in the driver side squib circuit during primary check. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	• The center airbag sensor assembly receives an open circuit signal in the driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1802/51	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

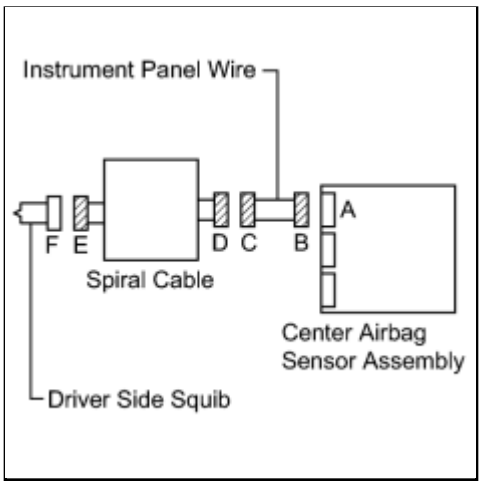
INSPECTION PROCEDURE



HINT:

- Perform the simulation method by selecting Check Mode (signal check) using the Techstream INFO .
- After selecting Check Mode (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road INFO .

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the steering pad, spiral cable and center airbag sensor assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the steering pad, spiral cable and center airbag sensor assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

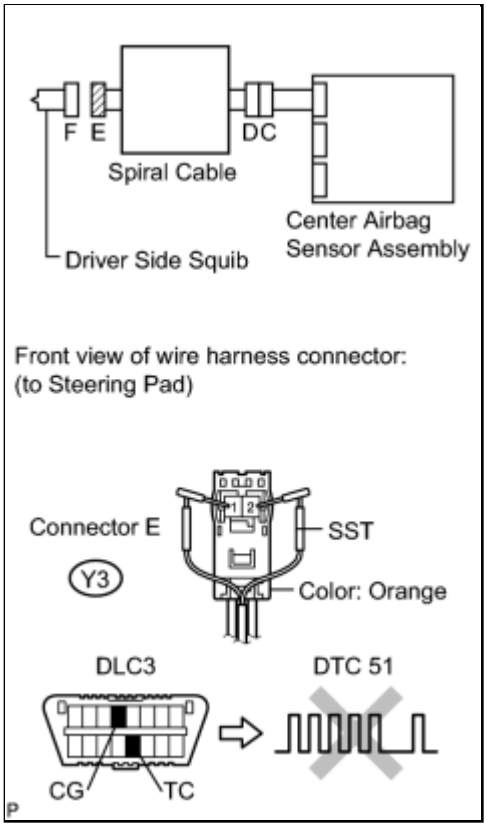
The terminals are not deformed or damaged.

(f) Check that the spiral cable connector (on the steering pad side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

(g) Check that the short springs for the instrument panel wire and spiral cable with the activation prevention mechanism are not deformed or damaged.



OK:

The short springs are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	CHECK STEERING PAD (DRIVER SIDE SQUIB)

(a) Connect the instrument panel wire to the center airbag sensor assembly and spiral cable.

(b) Connect SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

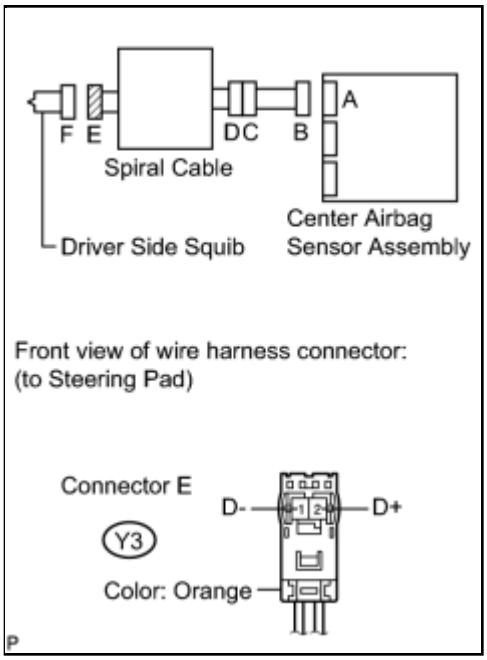
(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1800, B1801, B1802, B1803, or 51 is not output.



HINT:

Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

NG ▶ **CHECK DRIVER SIDE SQUIB CIRCUIT**

OK ▶ **REPLACE STEERING PAD**

3.	CHECK DRIVER SIDE SQUIB CIRCUIT

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect SST from connector E.

(d) Disconnect the instrument panel wire from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Body ground	Ignition switch ON	Below 1 V
Y3-1 (D-) - Body ground	Ignition switch ON	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Y3-1 (D-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

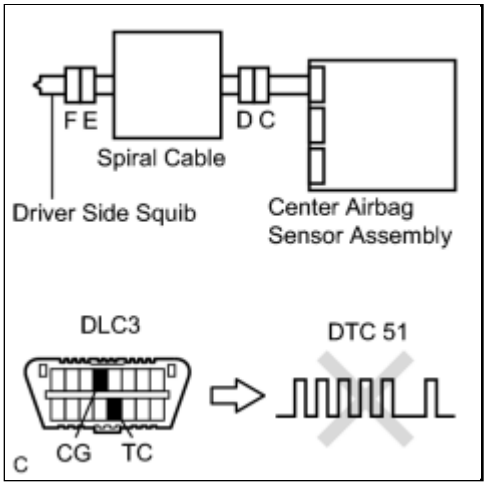
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Body ground	Always	1 MΩ or higher
Y3-1 (D-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Y3-1 (D-)	Always	1 MΩ or higher

NG ▶ **CHECK INSTRUMENT PANEL WIRE**

OK ▼

4.	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Connect the connectors to the steering pad and the center airbag sensor assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

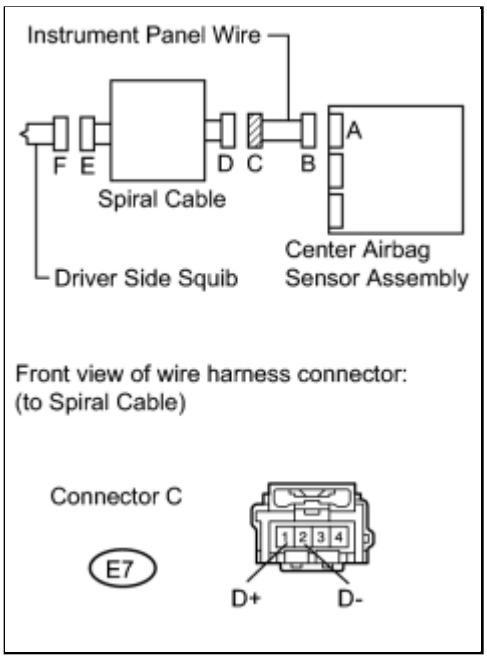
(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:
DTC B1800, B1801, B1802, B1803, or 51 is not output.

HINT:



Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK ▶ **USE SIMULATION METHOD TO CHECK**

5.	CHECK INSTRUMENT PANEL WIRE

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Disconnect the instrument panel wire from the spiral cable.

(c) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E7-1 (D+) - Body ground	Ignition switch ON	Below 1 V
E7-2 (D-) - Body ground	Ignition switch ON	Below 1 V

(d) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-1 (D+) - E7-2 (D-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-1 (D+) - Body ground	Always	1 MΩ or higher
E7-2 (D-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

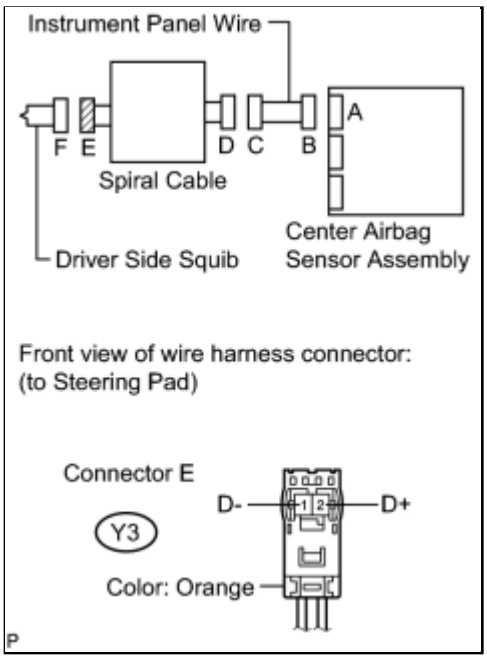
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-1 (D+) - E7-2 (D-)	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▼

6.	**CHECK SPIRAL CABLE**

(a) Check for a short to B+ in the circuit.



(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Body ground	Ignition switch ON	Below 1 V

Y3-1 (D-) - Body ground	Ignition switch ON	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Y3-1 (D-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Body ground	Always	1 MΩ or higher
Y3-1 (D-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y3-2 (D+) - Y3-1 (D-)	Always	1 MΩ or higher

NG ▶ **REPLACE SPIRAL CABLE**

OK ▶ **USE SIMULATION METHOD TO CHECK**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XFJ06IX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1805/52-B1808/52: Short in Front Passenger Side Squib Circuit (2010 Corolla)		

DTC	**B1805/52**	**Short in Front Passenger Side Squib Circuit**

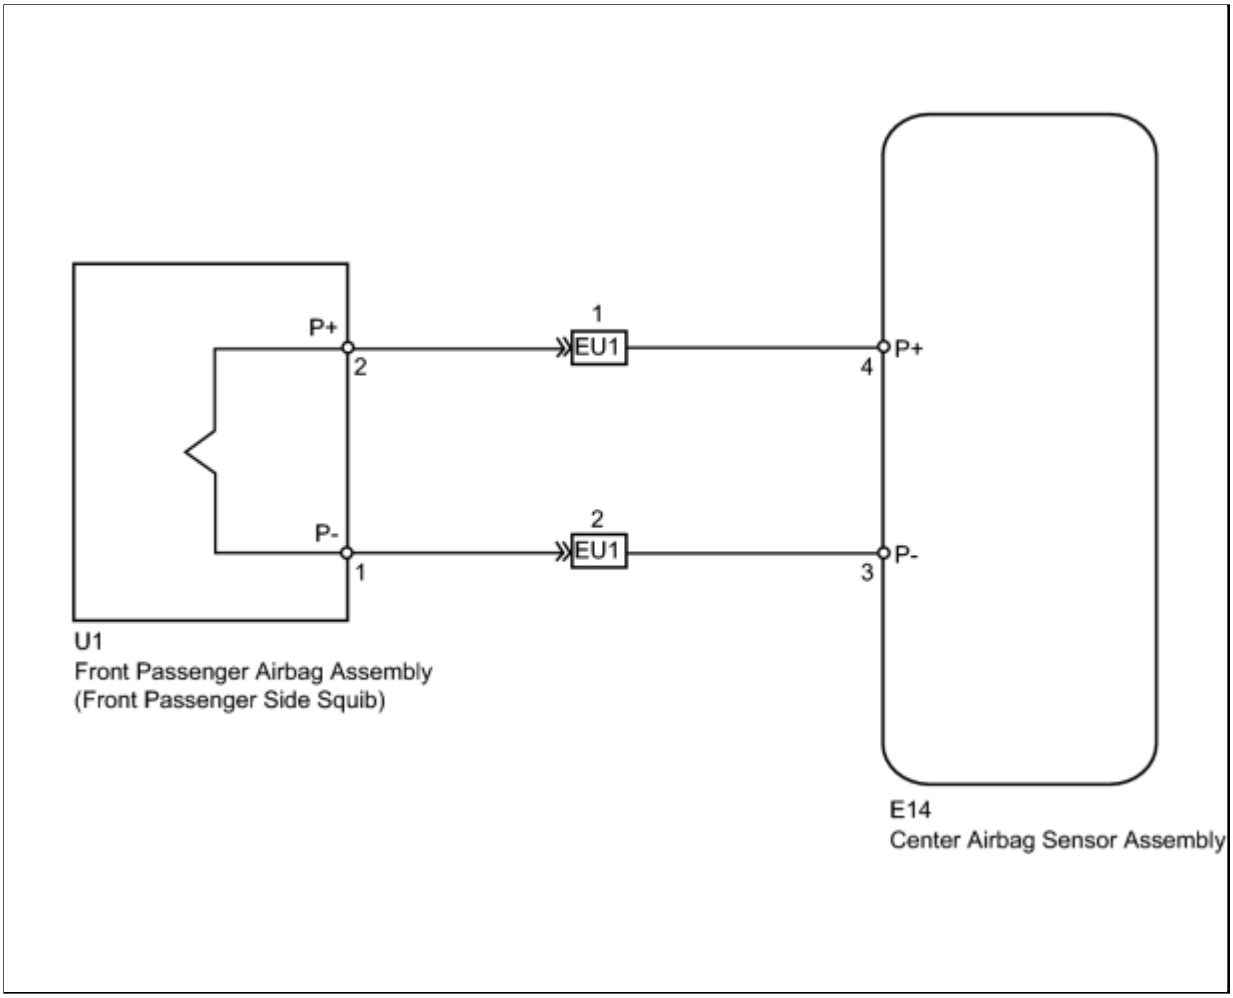
DTC	**B1806/52**	**Open in Front Passenger Side Squib Circuit**

DTC	**B1807/52**	**Short to GND in Front Passenger Side Squib Circuit**

DTC	**B1808/52**	**Short to B+ in Front Passenger Side Squib Circuit**

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.



The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side squib circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1805/52	• The center airbag sensor assembly receives a short circuit signal 5 times in the front passenger side squib circuit during primary check. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
		• Center airbag sensor assembly
B1807/52	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

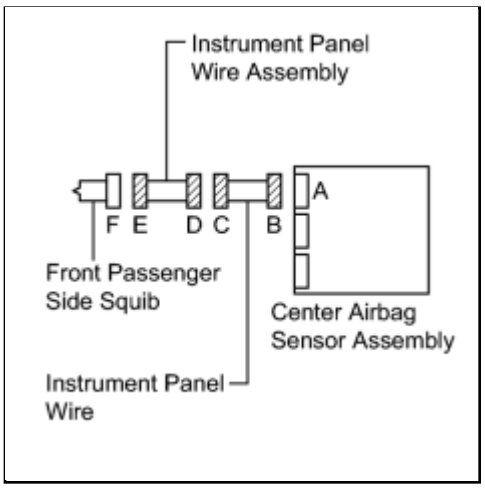
INSPECTION PROCEDURE



HINT:

- Perform the simulation method by selecting Check Mode (signal check) using the Techstream INFO .
- After selecting Check Mode (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road INFO .

PROCEDURE

1.	**CHECK CONNECTOR**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the front passenger airbag assembly and center airbag sensor assembly. Also check that the connectors that link the instrument panel wire assembly and instrument panel wire are properly connected.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the front passenger airbag assembly and center airbag sensor assembly. Also disconnect the instrument panel wire from the instrument panel wire assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

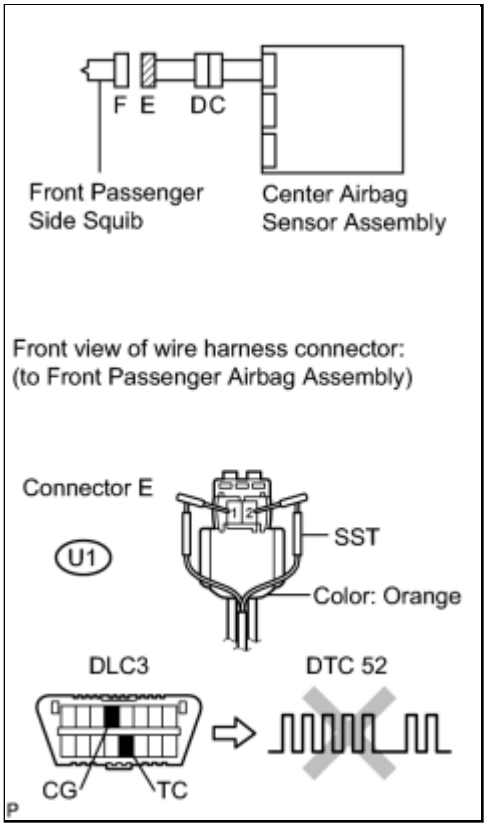
The terminals are not deformed or damaged.

(f) Check that the instrument panel wire assembly connector (on the front passenger airbag assembly side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

(g) Check that the short springs for the instrument panel wire and instrument panel wire assembly with the activation prevention mechanism are not deformed or damaged.



OK:

The short springs are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB)

(a) Connect the instrument panel wire to the instrument panel wire assembly and center airbag sensor assembly.

(b) Connect SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the front passenger airbag assembly (front passenger side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

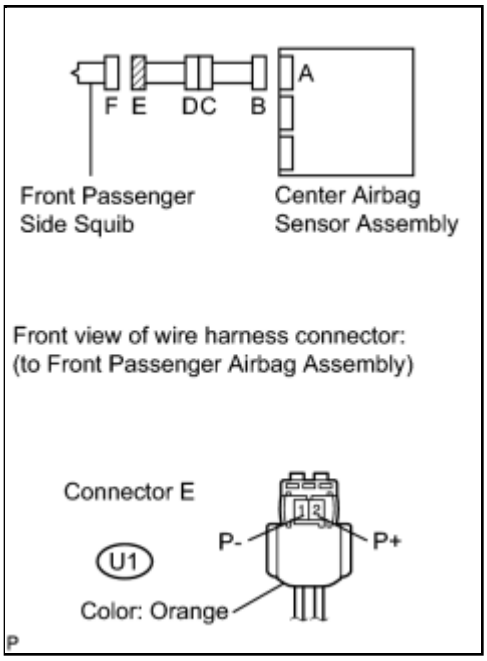
(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1805, B1806, B1807, B1808, or 52 is not output.



HINT:

Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

NG ▶ **CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT**

OK ▶ **REPLACE FRONT PASSENGER AIRBAG ASSEMBLY**

3.	**CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect SST from connector E.

(d) Disconnect the instrument panel wire from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
U1-2 (P+) - Body ground	Ignition switch ON	Below 1 V
U1-1 (P-) - Body ground	Ignition switch ON	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - U1-1 (P-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

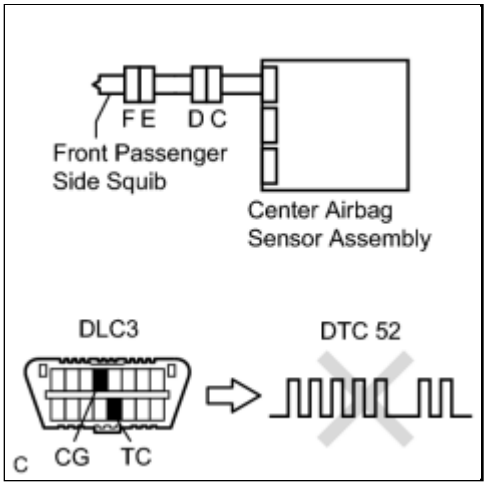
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - Body ground	Always	1 MΩ or higher
U1-1 (P-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - U1-1 (P-)	Always	1 MΩ or higher

OK ▼

4.	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

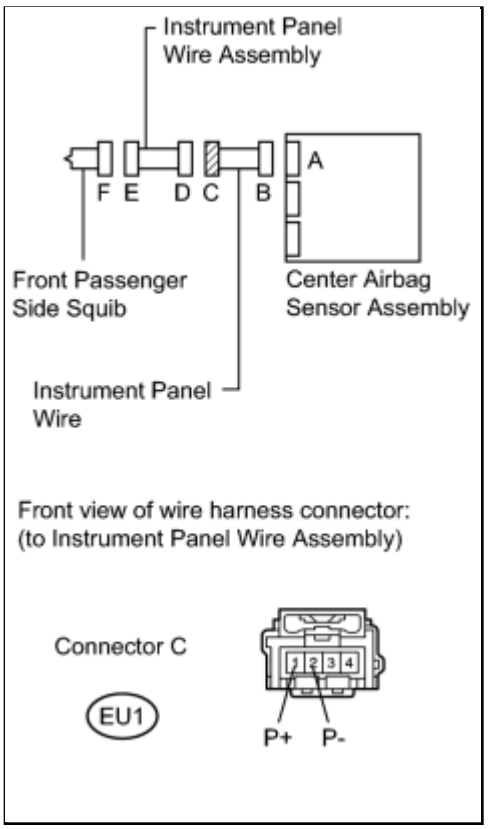
(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1805, B1806, B1807, B1808, or 52 is not output.

HINT:



Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK ▶ **USE SIMULATION METHOD TO CHECK**

5.	CHECK INSTRUMENT PANEL WIRE

(a) Restore the released activation prevention

mechanism of connector B to the original condition.

(b) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
EU1-1 (P+) - Body ground	Ignition switch ON	Below 1 V
EU1-2 (P-) - Body ground	Ignition switch ON	Below 1 V

(c) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-1 (P+) - EU1-2 (P-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-1 (P+) - Body ground	Always	1 MΩ or higher
EU1-2 (P-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

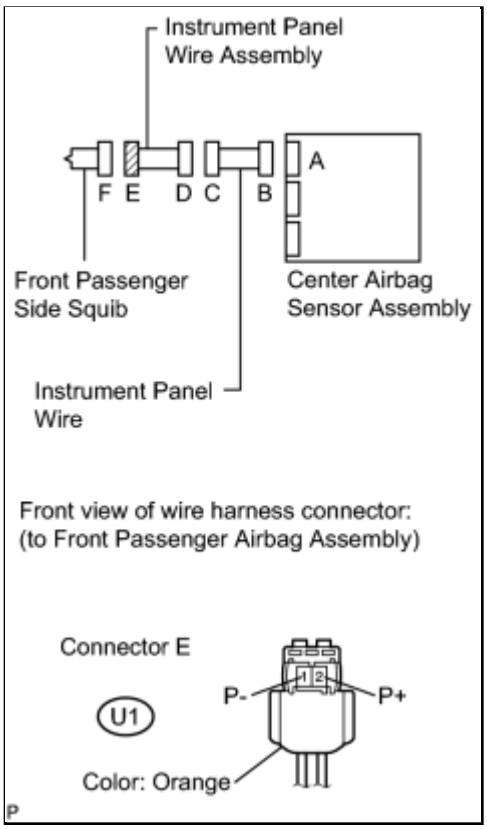
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-1 (P+) - EU1-2 (P-)	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▼

6.	**CHECK INSTRUMENT PANEL WIRE ASSEMBLY**

(a) Check for a short to B+ in the circuit.



(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
U1-2 (P+) - Body ground	Ignition switch ON	Below 1 V

U1-1 (P-) - Body ground	Ignition switch ON	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - U1-1 (P-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - Body ground	Always	1 MΩ or higher
U1-1 (P-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U1-2 (P+) - U1-1 (P-)	Always	1 MΩ or higher

5.	CHECK INSTRUMENT PANEL WIRE

(a) Restore the release activation prevention mechanism of connector B to the original condition.

(b) Disconnect the instrument panel wire from the spiral cable.

(c) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E7-4 (D2+) - Body ground	Ignition switch ON	Below 1 V
E7-3 (D2-) - Body ground	Ignition switch ON	Below 1 V

(d) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-4 (D2+) - E7-3 (D2-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-4 (D2+) - Body ground	Always	1 MΩ or higher
E7-3 (D2-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

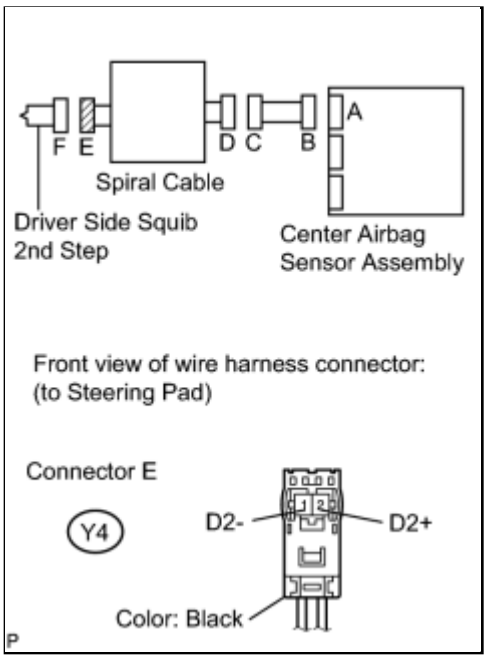
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E7-4 (D2+) - E7-3 (D2-)	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▼

6.	**CHECK SPIRAL CABLE**

(a) Check for a short to B+ in the circuit.



(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
Y4-2 (D2+) - Body ground	Ignition switch ON	Below 1 V

Y4-1 (D2-) - Body ground	Ignition switch ON	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y4-2 (D2+) - Y4-1 (D2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y4-2 (D2+) - Body ground	Always	1 MΩ or higher
Y4-1 (D2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y4-2 (D2+) - Y4-1 (D2-)	Always	1 MΩ or higher

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1815/54-B1818/54: Short in Front Passenger Side Squib 2nd Step Circuit (2010 Corolla)		

DTC	**B1815/54**	**Short in Front Passenger Side Squib 2nd Step Circuit**

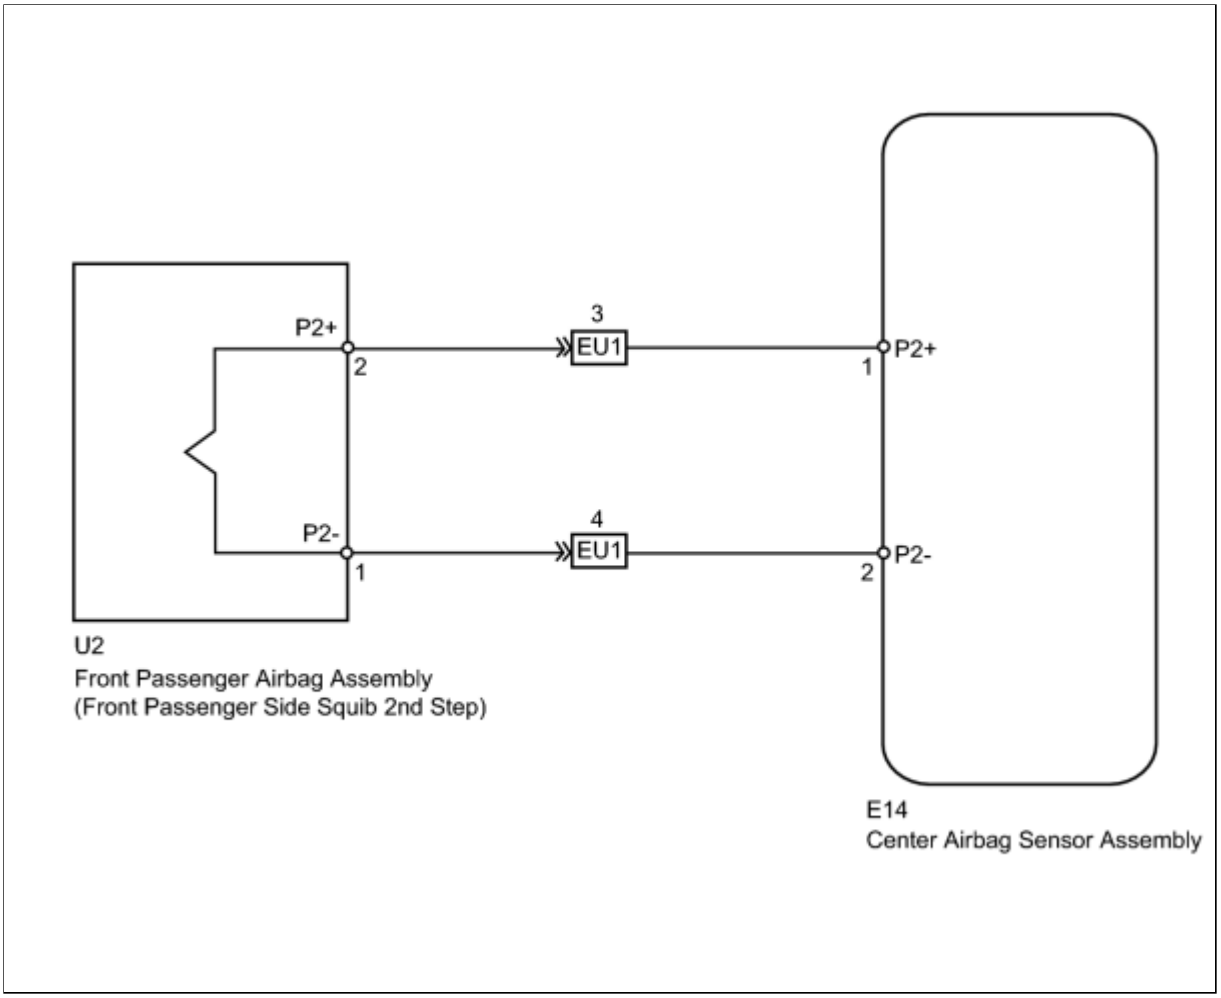
DTC	**B1816/54**	**Open in Front Passenger Side Squib 2nd Step Circuit**

DTC	**B1817/54**	**Short to GND in Front Passenger Side Squib 2nd Step Circuit**

DTC	**B1818/54**	**Short to B+ in Front Passenger Side Squib 2nd Step Circuit**

DESCRIPTION

The front passenger side squib 2nd step circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.



The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side squib 2nd step circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1815/54	• The center airbag sensor assembly receives a short circuit signal 5 times in the front passenger side squib 2nd step circuit during primary check. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1816/54	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib 2nd step circuit for 2 seconds.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting Check Mode (signal check) using the Techstream INFO .
- After selecting Check Mode (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road INFO .

PROCEDURE

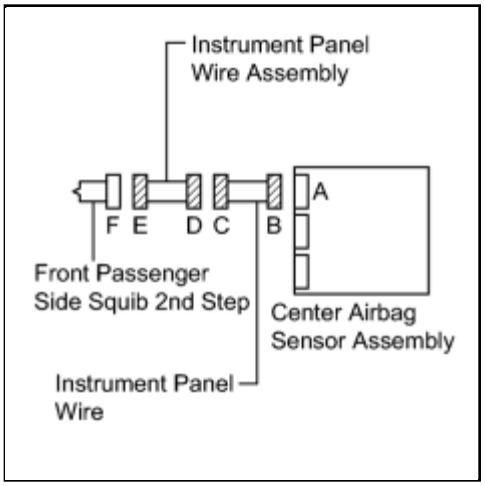
1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to

the front passenger airbag assembly and center airbag sensor assembly. Also check that the connectors that link the instrument panel wire assembly and instrument panel wire are properly connected.



OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the front passenger airbag assembly and center airbag sensor assembly. Also disconnect the instrument panel wire from the instrument panel wire assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

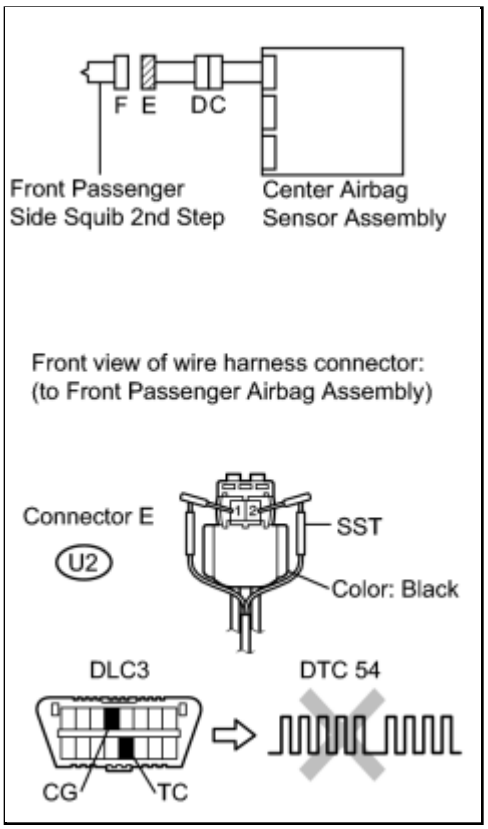
(f) Check that the instrument panel wire assembly connector (on the front passenger airbag assembly side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

(g) Check that the short springs for the instrument panel wire and instrument panel wire assembly with the activation prevention mechanism are not deformed or damaged.

OK:



The short springs are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	**CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB 2ND STEP)**

(a) Connect the instrument panel wire to the instrument

panel wire assembly and center airbag sensor assembly.

(b) Connect SST (resistance 2.1 Ω) to connector E (black connector).

CAUTION:

Never connect the tester to the front passenger airbag assembly (front passenger side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

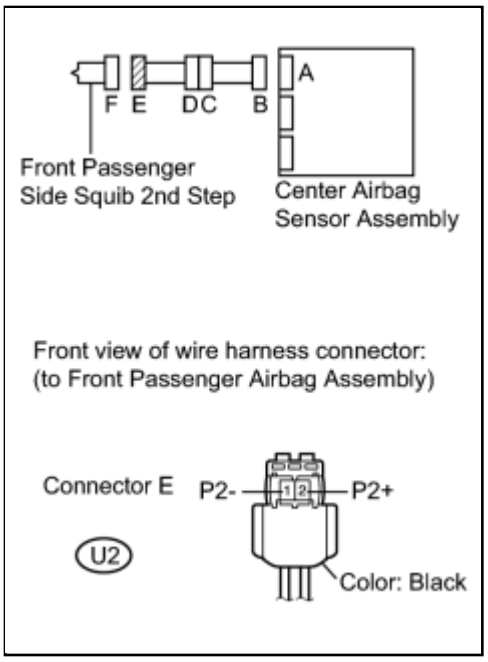
(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1815, B1816, B1817, B1818, or 54 is not output.



HINT:

Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

NG ▶ CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT

OK ▶ REPLACE FRONT PASSENGER AIRBAG ASSEMBLY

3.	CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect SST from connector E.

(d) Disconnect the instrument panel wire from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - Body ground	Ignition switch ON	Below 1 V
U2-1 (P2-) - Body ground	Ignition switch ON	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - U2-1 (P2-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

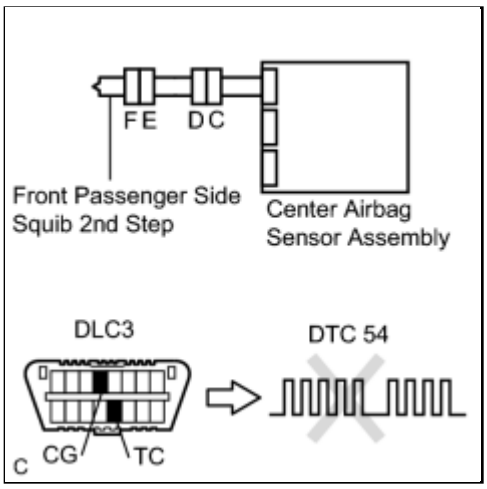
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - Body ground	Always	1 MΩ or higher
U2-1 (P2-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - U2-1 (P2-)	Always	1 MΩ or higher

NG ▶ **CHECK INSTRUMENT PANEL WIRE**

OK ▼

4.	**CHECK CENTER AIRBAG SENSOR ASSEMBLY**

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

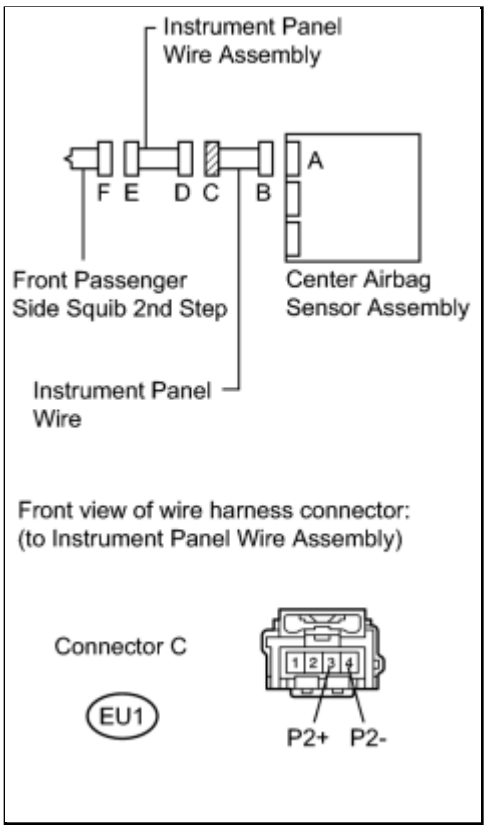
(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1815, B1816, B1817, B1818, or 54 is not output.

HINT:



Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK ▶ **USE SIMULATION METHOD TO CHECK**

5.	**CHECK INSTRUMENT PANEL WIRE**

(a) Restore the release activation prevention mechanism of connector B to the original condition.

(b) Disconnect the instrument panel wire assembly from the instrument panel wire.

(c) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
EU1-3 (P2+) - Body ground	Ignition switch ON	Below 1 V
EU1-4 (P2-) - Body ground	Ignition switch ON	Below 1 V

(d) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-3 (P2+) - EU1-4 (P2-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-3 (P2+) - Body ground	Always	1 MΩ or higher
EU1-4 (P2-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.

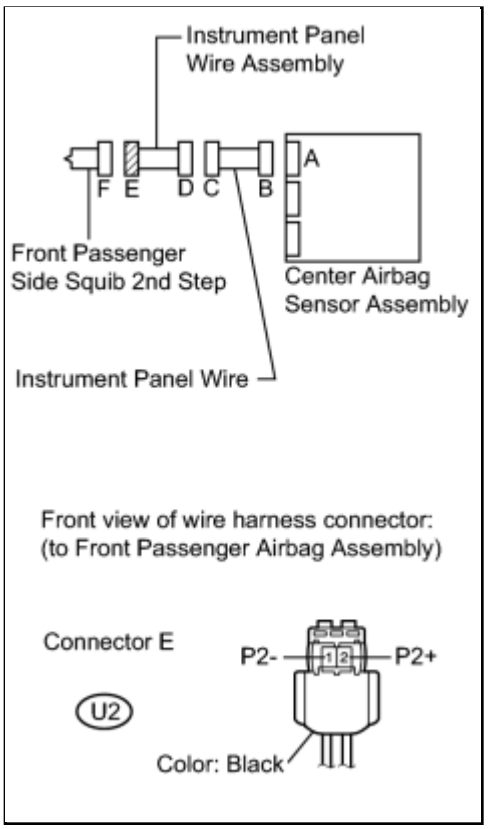
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EU1-3 (P2+) - EU1-4 (P2-)	Always	1 MΩ or higher

NG ▶ **REPLACE INSTRUMENT PANEL WIRE**

OK ▼

6.	**CHECK INSTRUMENT PANEL WIRE ASSEMBLY**



(a) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - Body ground	Ignition switch ON	Below 1 V
U2-1 (P2-) - Body ground	Ignition switch ON	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - U2-1 (P2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - Body ground	Always	1 MΩ or higher
U2-1 (P2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D INFO .

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
U2-2 (P2+) - U2-1 (P2-)	Always	1 MΩ or higher

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: B1830/57-B1833/57: Short in Curtain Shield Squib RH Circuit (2010 Corolla)		

DTC	**B1830/57**	**Short in Curtain Shield Squib RH Circuit**

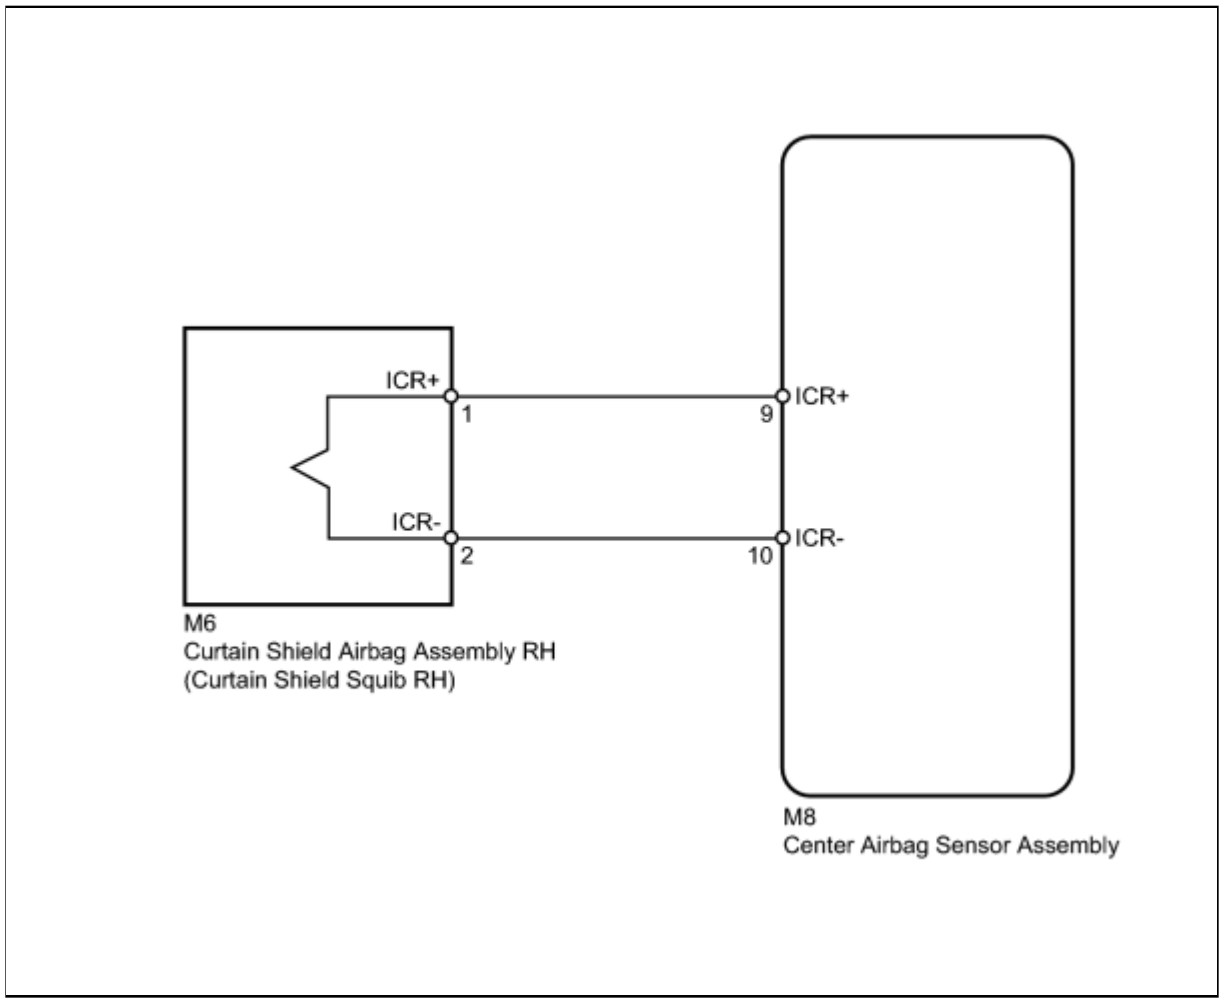
DTC	**B1831/57**	**Open in Curtain Shield Squib RH Circuit**

DTC	**B1832/57**	**Short to GND in Curtain Shield Squib RH Circuit**

DTC	**B1833/57**	**Short to B+ in Curtain Shield Squib RH Circuit**

DESCRIPTION

The curtain shield squib RH circuit consists of the center airbag sensor assembly and the curtain shield airbag assembly RH.



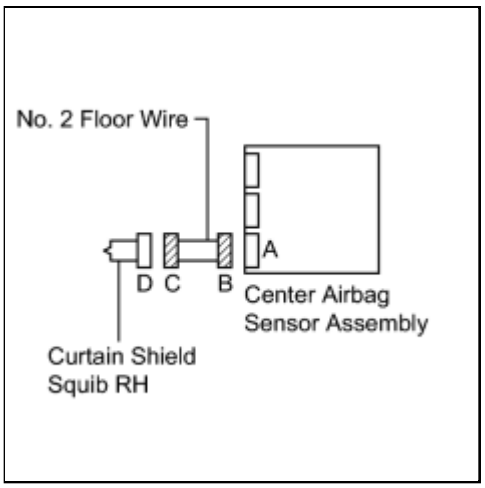
The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the curtain shield squib RH circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1830/57	• The center airbag sensor assembly receives a short circuit signal 5 times in the curtain shield squib RH circuit during primary check. • Curtain shield squib RH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly
B1831/57	• The center airbag sensor assembly receives an open circuit signal in the curtain shield squib RH circuit for 2 seconds. • Curtain shield squib RH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1832/57	• The center airbag sensor assembly receives a short circuit to ground signal in the curtain shield squib RH circuit for 0.5 seconds. • Curtain shield squib RH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly
B1833/57	• The center airbag sensor assembly receives a short circuit to B+ signal in the curtain shield squib RH circuit for 0.5 seconds. • Curtain shield squib RH malfunction • Center airbag sensor assembly malfunction	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting Check Mode (signal check) using the Techstream INFO .
- After selecting Check Mode (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road INFO .

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the curtain shield airbag assembly RH and center airbag sensor assembly.

OK:

The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the curtain shield airbag assembly RH and center airbag sensor assembly.

(e) Check that the terminals of the connectors are not damaged.

OK:

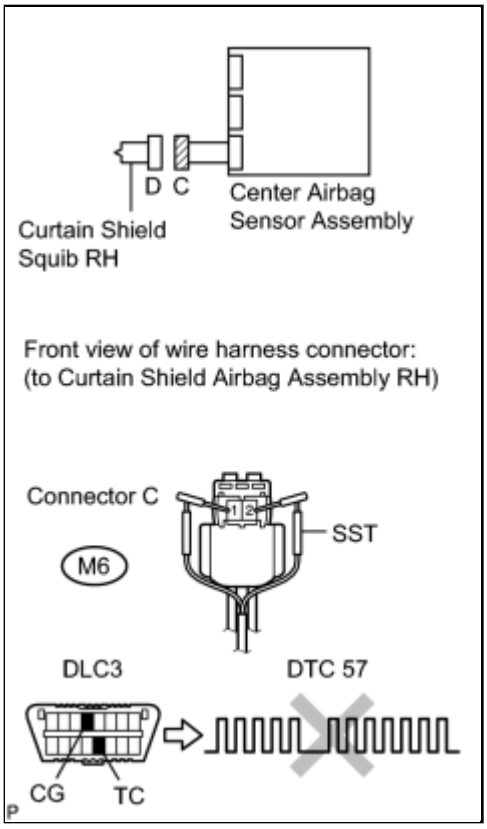
The terminals are not deformed or damaged.

(f) Check that the No. 2 floor wire connector (on the curtain shield airbag assembly RH side) is not damaged.

OK:

The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

(g) Check that the short spring for the No. 2 floor wire with the activation prevention mechanism is not deformed or damaged.



OK:

The short spring is not deformed or damaged.

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

2.	**CHECK CURTAIN SHIELD AIRBAG ASSEMBLY RH (CURTAIN SHIELD SQUIB RH)**

(a) Connect the connector to the center airbag sensor assembly.

(b) Connect SST (resistance 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the curtain shield airbag assembly RH (curtain shield squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- Do not forcibly insert SST into the terminals of the connector when connecting.
- Insert SST straight into the terminals of the connector.

SST: 09843-18061

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

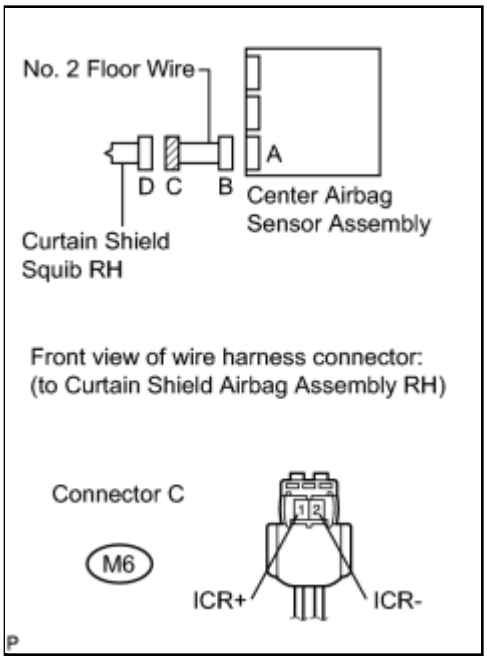
(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1830, B1831, B1832, B1833, or 57 is not output.



HINT:

Codes other than DTC B1830, B1831, B1832, B1833, and 57 may be output at this time, but they are not related to this check.

NG ▶ **CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD SQUIB RH CIRCUIT)**

OK ▶ **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH**

3.	**CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD SQUIB RH CIRCUIT)**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect SST from connector C.

(d) Disconnect the connector from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
M6-1 (ICR+) - Body ground	Ignition switch ON	Below 1 V
M6-2 (ICR-) - Body ground	Ignition switch ON	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M6-1 (ICR+) - M6-2 (ICR-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

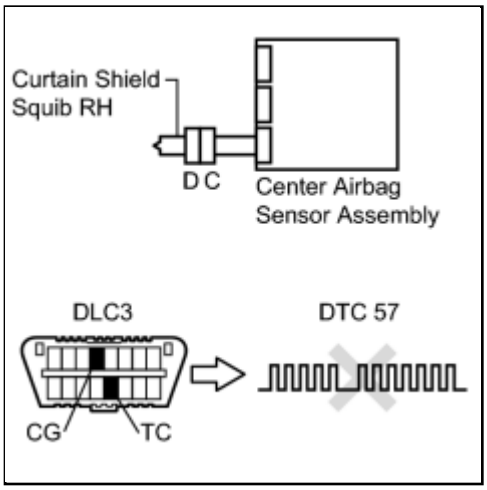
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M6-1 (ICR+) - Body ground	Always	1 MΩ or higher
M6-2 (ICR-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M6-1 (ICR+) - M6-2 (ICR-)	Always	1 MΩ or higher

NG ▶ **REPLACE NO. 2 FLOOR WIRE**

OK ▼

4.	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Connect the connectors to the curtain shield airbag assembly RH and the center airbag sensor assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:

DTC B1830, B1831, B1832, B1833, or 57 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832, B1833, and 57 may be output at this time, but they are not related to this check.

NG ▶ **CHECK FLOOR WIRE (FRONT PRETENSIONER SQUIB LH CIRCUIT)**

OK ▶ **REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH**

3.	CHECK FLOOR WIRE (FRONT PRETENSIONER SQUIB LH CIRCUIT)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Disconnect SST from connector C.

(d) Disconnect the connector from the center airbag sensor assembly.

(e) Check for a short to B+ in the circuit.

(1) Connect the cable to the negative (-) battery terminal.

(2) Turn the ignition switch to ON.

(3) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L4-1 (L+) - Body ground	Ignition switch ON	Below 1 V
L4-2 (L-) - Body ground	Ignition switch ON	Below 1 V

(f) Check for an open in the circuit.

(1) Turn the ignition switch off.

(2) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L4-1 (L+) - L4-2 (L-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

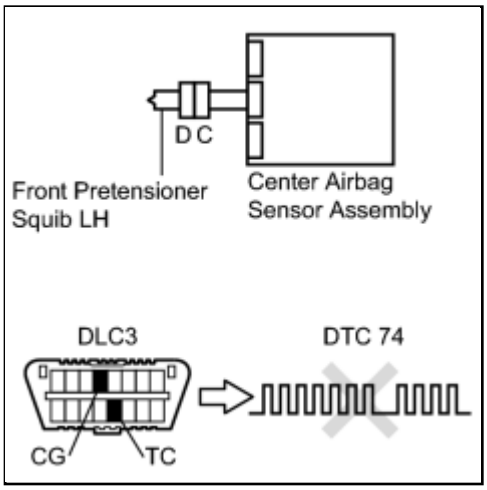
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L4-1 (L+) - Body ground	Always	1 MΩ or higher
L4-2 (L-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B INFO .

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L4-1 (L+) - L4-2 (L-)	Always	1 MΩ or higher

NG ▶ **REPLACE FLOOR WIRE**

OK ▼

4.	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Connect the connectors to the front seat outer belt assembly LH and the center airbag sensor assembly.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON, and wait for at least 60 seconds.

(e) Clear the DTCs stored in the memory INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON, and wait for at least 60 seconds.

(h) Check for DTCs INFO .

OK:
DTC B1905, B1906, B1907, B1908, or 74 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907, B1908, and 74 may be output at this time, but they are not related to this check.

NG ▶ REPLACE CENTER AIRBAG SENSOR ASSEMBLY

OK ▶ USE SIMULATION METHOD TO CHECK

Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: SRS Warning Light Remains ON (2010 Corolla)		

SRS Warning Light Remains ON

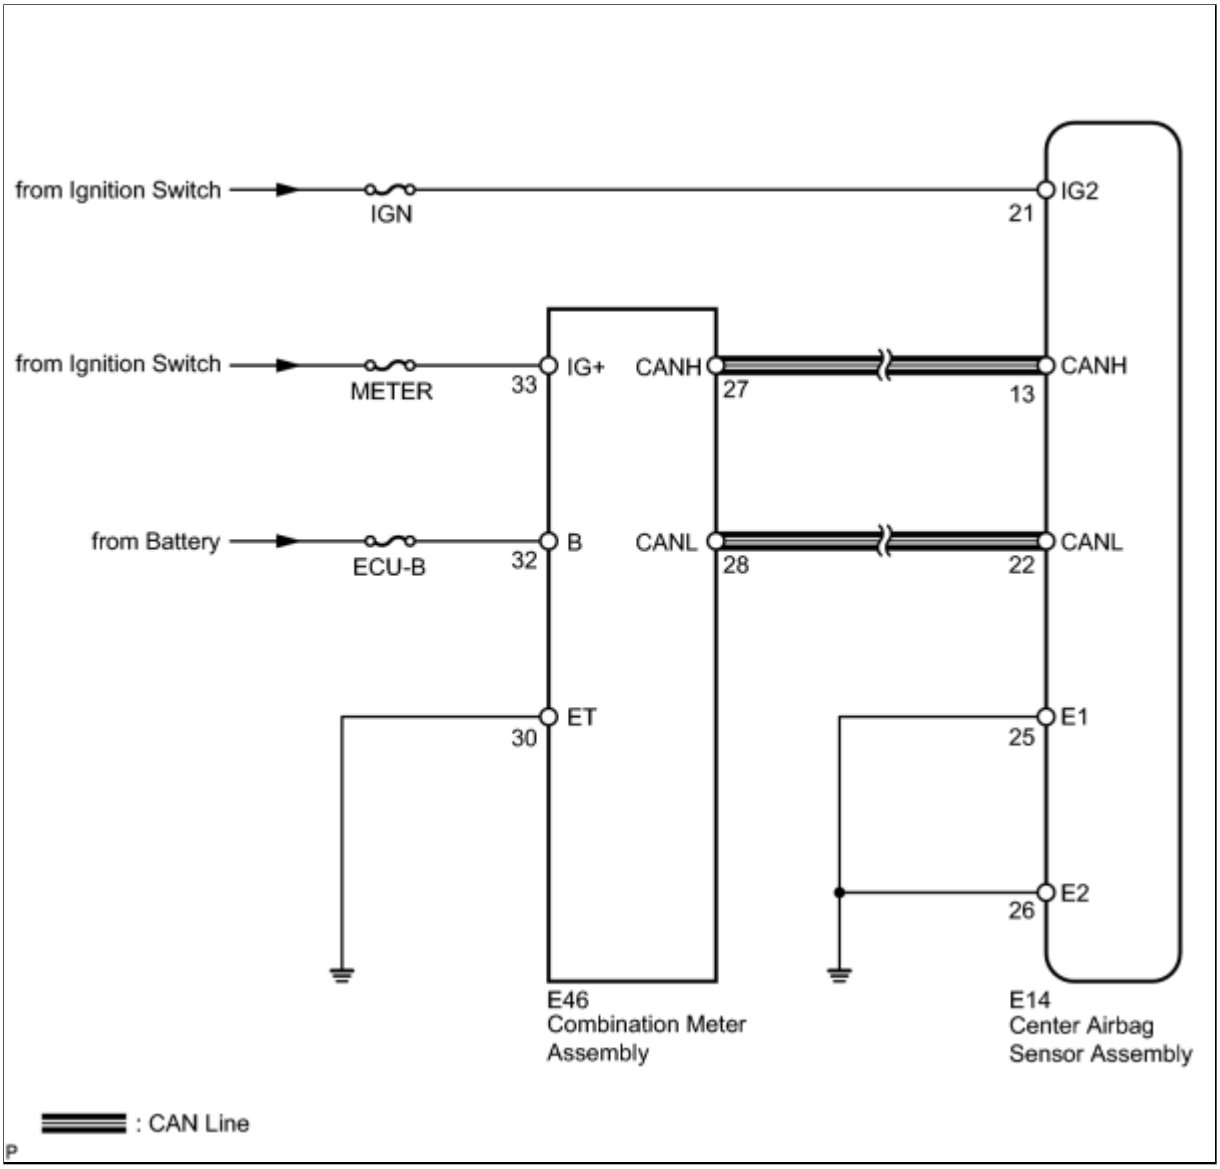
DESCRIPTION

The SRS warning light is located on the combination meter assembly.

When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from off to ON, and then goes off automatically.

If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.

When terminals TC and CG of the DLC3 are connected, the DTC is indicated by blinking pattern of the SRS warning light.



The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor assembly in case the source voltage drops.

When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.

A malfunction in this circuit is not recorded in the center airbag sensor assembly. The SRS warning light automatically goes off when the source voltage returns to normal.

The signal to illuminate the SRS warning light is transmitted from the center airbag sensor assembly to the combination meter assembly through the CAN communication system.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK SRS WARNING LIGHT OPERATION**

(a) Check the SRS warning light operation approximately 6 seconds after the ignition switch is turned to ON.

Result:

SRS WARNING LIGHT ILLUMINATION	PROCEED TO
Remains on	A
Remains on after it goes off	B

B ▶ CHECK CAN COMMUNICATION SYSTEM

A ▼

2.	**CHECK BATTERY VOLTAGE**

(a) Measure the voltage of the battery.

Standard Voltage:

11 to 14 V

Result

RESULT	PROCEED TO
OK	A
NG (for 2AZ-FE)	B
NG (for 2ZR-FE)	C

C ▶ INSPECT CHARGING SYSTEM AND BATTERY

B ▶ INSPECT CHARGING SYSTEM AND BATTERY

A ▼

3.	**CHECK CONNECTOR**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connector is properly connected to the center airbag sensor assembly.

OK:

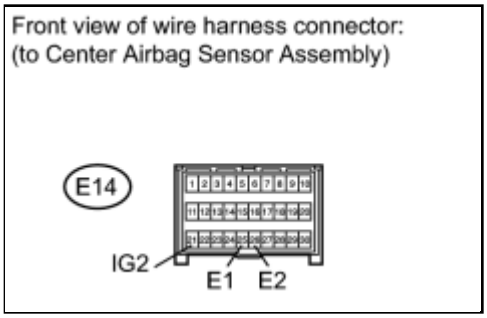
The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(d) Disconnect the connector from the center airbag sensor assembly.

(e) Check that the terminal of the connector is not damaged.



OK:

The terminal is not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

4.	CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BODY GROUND)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Operate all components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E14-21 (IG2) - Body ground	Ignition switch ON	8 to 16 V

(e) Turn the ignition switch off.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E14-25 (E1) - Body ground	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E14-26 (E2) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

5.	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch to ON.

(b) Check the SRS warning light condition.

OK:

After the primary check period, the SRS warning light goes off for approximately 10 seconds and remains on.

HINT:

The primary check period is approximately 6 seconds after the ignition switch is turned to ON.

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

6.	CHECK CAN COMMUNICATION SYSTEM

(a) Use the Techstream to check if the CAN communication system is functioning normally.

HINT:

- Refer to Bus Check for the CAN communication system INFO .
- The center airbag sensor assembly is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

Result:

RESULT	PROCEED TO
DTC is not output	A

RESULT	PROCEED TO
DTC is output	B

8.	CHECK CONNECTOR

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connector is properly connected to the center airbag sensor assembly.

OK:

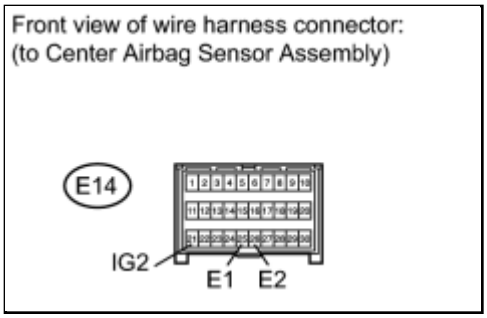
The connector is properly connected.

HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(d) Disconnect the connector from the center airbag sensor assembly.

(e) Check that the terminal of the connector is not damaged.



OK:

The terminal is not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

9.	**CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BODY GROUND)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Operate all components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E14-21 (IG2) - Body ground	Ignition switch ON	8 to 16 V

(e) Turn the ignition switch off.

(f) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E14-25 (E1) - Body ground	Always	Below 1 Ω
E14-26 (E2) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

10.	CHECK CONNECTOR

(a) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(b) Check that the connector is properly connected to the combination meter assembly.

OK:

The connector is properly connected.

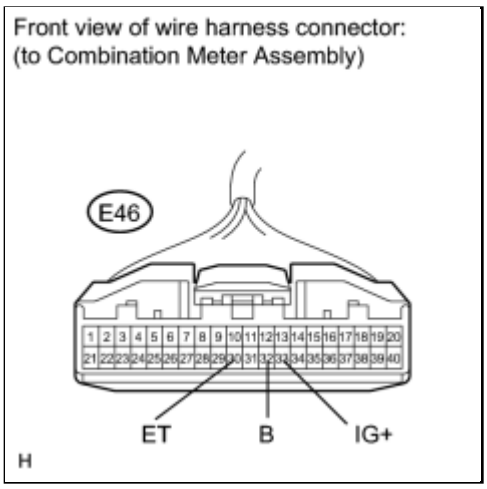
HINT:

If the connector is not connected securely, reconnect the connector and proceed to the next inspection.

(c) Disconnect the connector from the combination meter assembly.

(d) Check that the terminal of the connector is not damaged.

OK:



The terminal is not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

11.	CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BODY GROUND)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-32 (B) - Body ground	Always	11 to 14 V
E46-33 (IG+) - Body ground	Ignition switch ON	11 to 14 V

(d) Turn the ignition switch off.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-30 (ET) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

12.	**CHECK SRS WARNING LIGHT**

(a) Connect the connector to the combination meter assembly.

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON.

(d) Check the SRS warning light condition.

OK:

After the primary check period, the SRS warning light goes off for approximately 10 seconds and remains on.

HINT:

The primary check period is approximately 6 seconds after the ignition switch is turned to ON.

NG ▶ **REPLACE COMBINATION METER ASSEMBLY**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

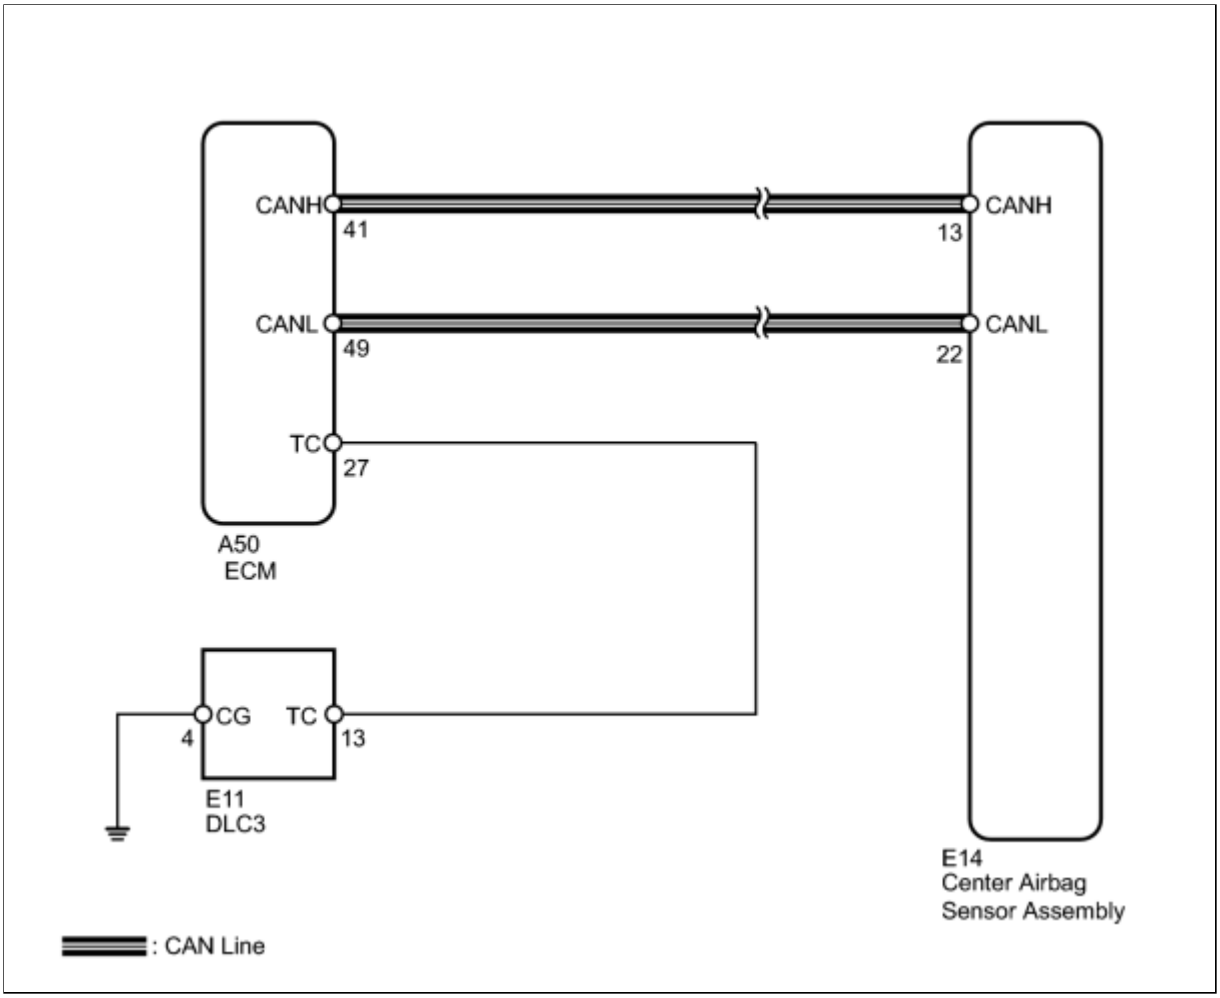
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: AIRBAG SYSTEM: TC and CG Terminal Circuit (2010 Corolla)		

TC and CG Terminal Circuit

DESCRIPTION



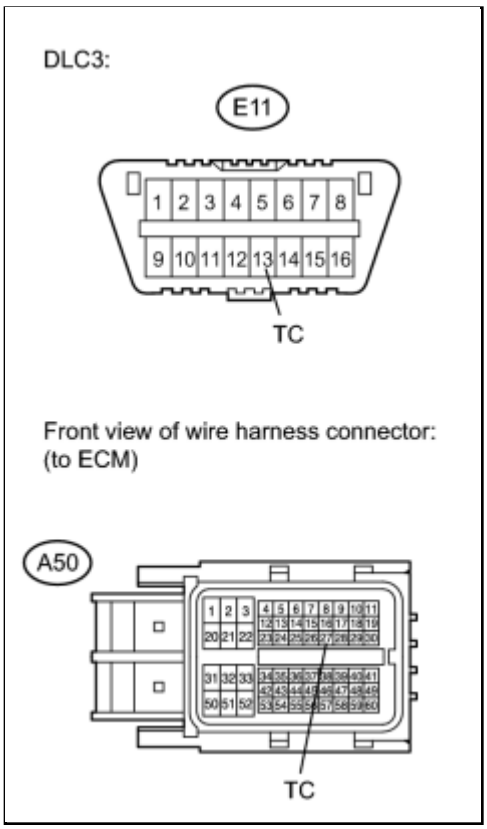
DTC output mode is set by connecting terminals TC and CG of the DLC3.

DTCs are indicated by blinking pattern of the SRS warning light.

HINT:

- When the SRS warning light remains blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the center airbag sensor assembly is suspected.
- A DTC output mode signal is transmitted through the CAN communication system to each ECU including the center airbag sensor assembly. Thus when all systems do not enter DTC output mode, there may be an ECM malfunction.

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK WIRE HARNESS (TC OF DLC3 - TC OF ECM)**

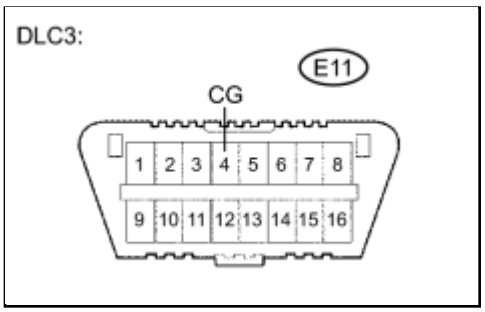
(a) Turn the ignition switch off.

(b) Disconnect the connector from the ECM.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-13 (TC) - A50-27 (TC)	Always	Below 1 Ω



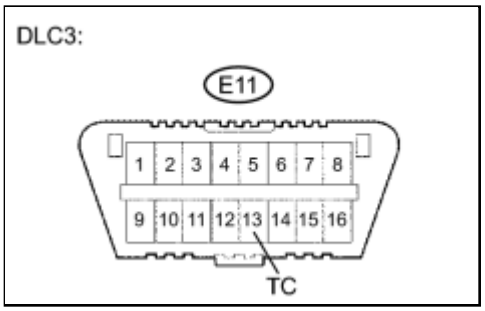
NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	**CHECK WIRE HARNESS (CG OF DLC3 - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-4 (CG) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE WIRE HARNESS**

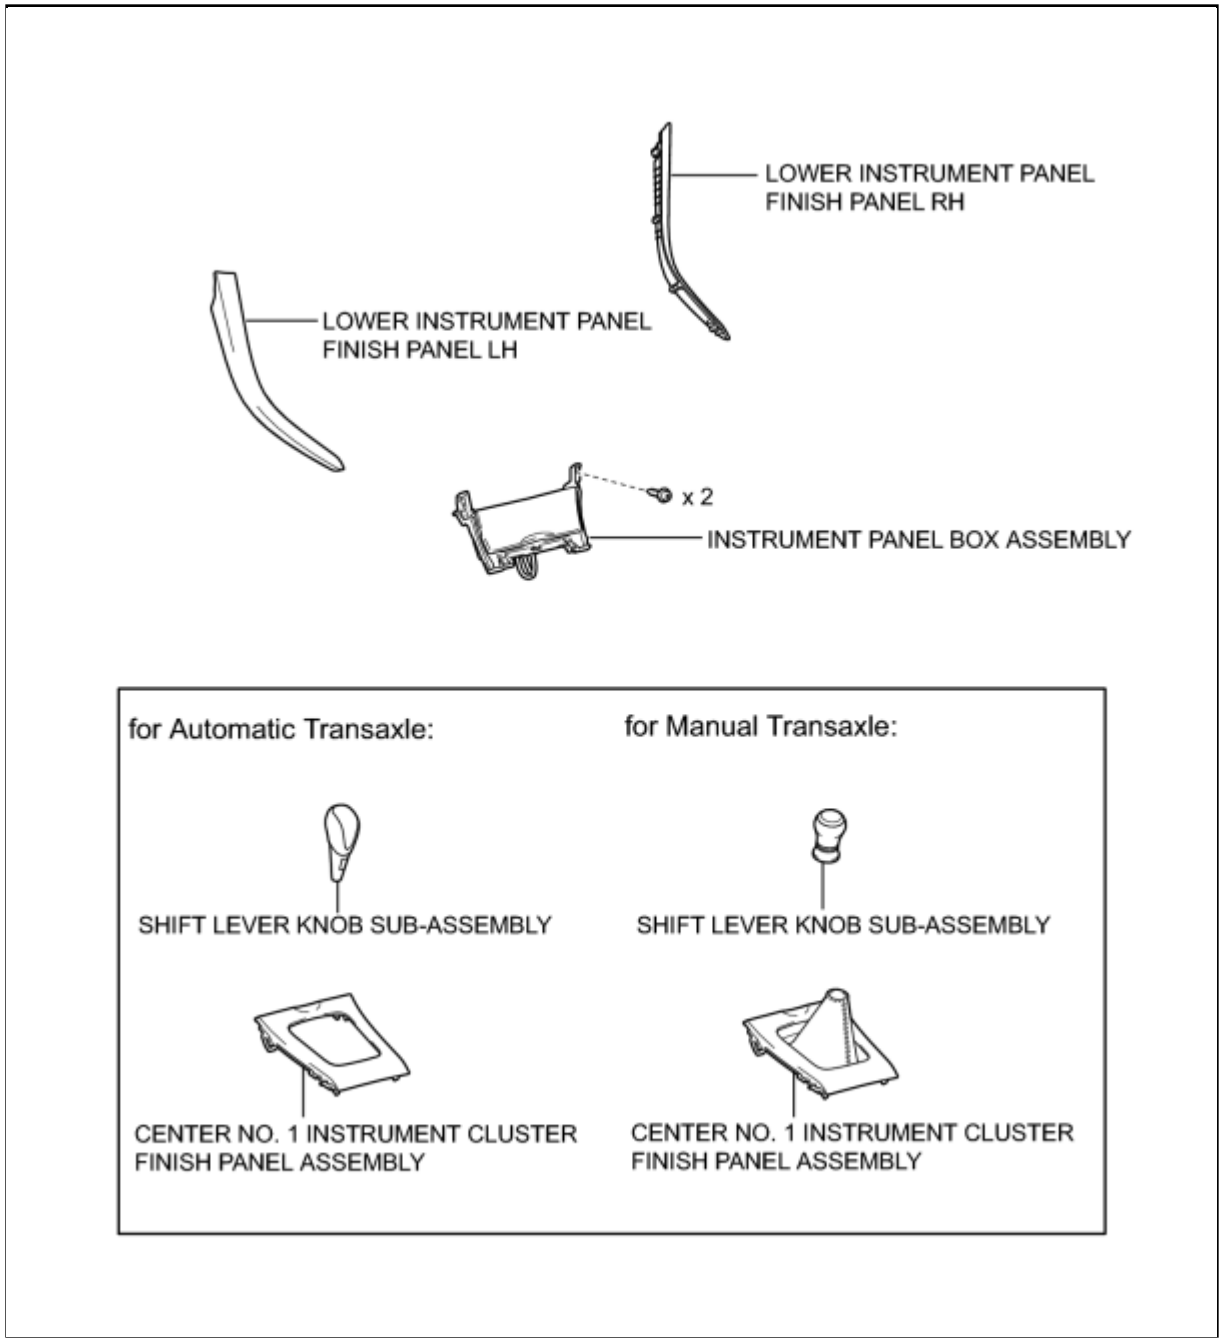
OK ▼

3.	CHECK WIRE HARNESS (TC OF DCL3 - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-13 (TC) - Body ground	Always	1 MΩ or higher



NG ▶ **REPLACE WIRE HARNESS OR EACH ECU**

OK ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CENTER AIRBAG SENSOR ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

4. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

5. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) INFO

6. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) INFO

7. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

8. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

9. REMOVE INSTRUMENT PANEL BOX ASSEMBLY INFO

10. REMOVE FRONT NO. 1 CONSOLE BOX INSERT INFO

11. REMOVE FRONT NO. 2 CONSOLE BOX INSERT INFO

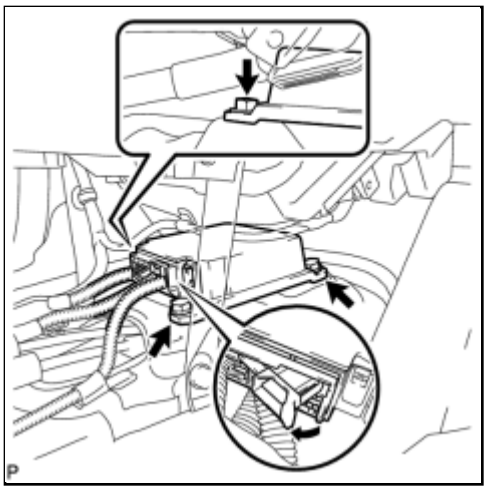
12. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

13. REMOVE CONSOLE BOX CARPET INFO

14. REMOVE CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

15. REMOVE CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

16. REMOVE CENTER AIRBAG SENSOR ASSEMBLY



(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Turn back the carpet.

(d) Disconnect the holder (with connectors).

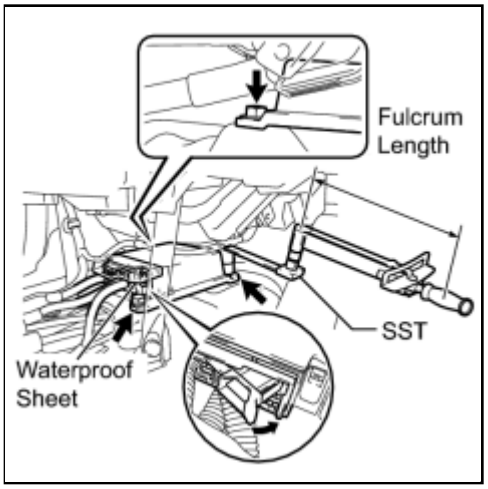
NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.

(e) Remove the 3 bolts and center airbag sensor assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UWS042X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CENTER AIRBAG SENSOR ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL CENTER AIRBAG SENSOR ASSEMBLY

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Using SST, install the center airbag sensor assembly with the 3 bolts.

SST: 09961-01270

without SST - Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

with SST - Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when SST is parallel to a torque wrench.
- If the center airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the center airbag sensor assembly, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- When the ignition switch is first turned to ON after the center airbag sensor assembly has been replaced, make sure that no one is in the vehicle.

(d) Connect the holder (with connectors).

NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.

(e) Check that there is no looseness in the installation parts of the center airbag sensor assembly.

(f) Check that the waterproof sheet is properly set.

2. INSTALL CONSOLE BOX ASSEMBLY (for Manual Transaxle) INFO

3. INSTALL CONSOLE BOX ASSEMBLY (for Automatic Transaxle) INFO

4. INSTALL CONSOLE BOX CARPET INFO

5. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

6. INSTALL FRONT NO. 1 CONSOLE BOX INSERT INFO

7. INSTALL FRONT NO. 2 CONSOLE BOX INSERT INFO

8. INSTALL INSTRUMENT PANEL BOX ASSEMBLY INFO

9. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Manual Transaxle) INFO

10. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Automatic Transaxle) INFO

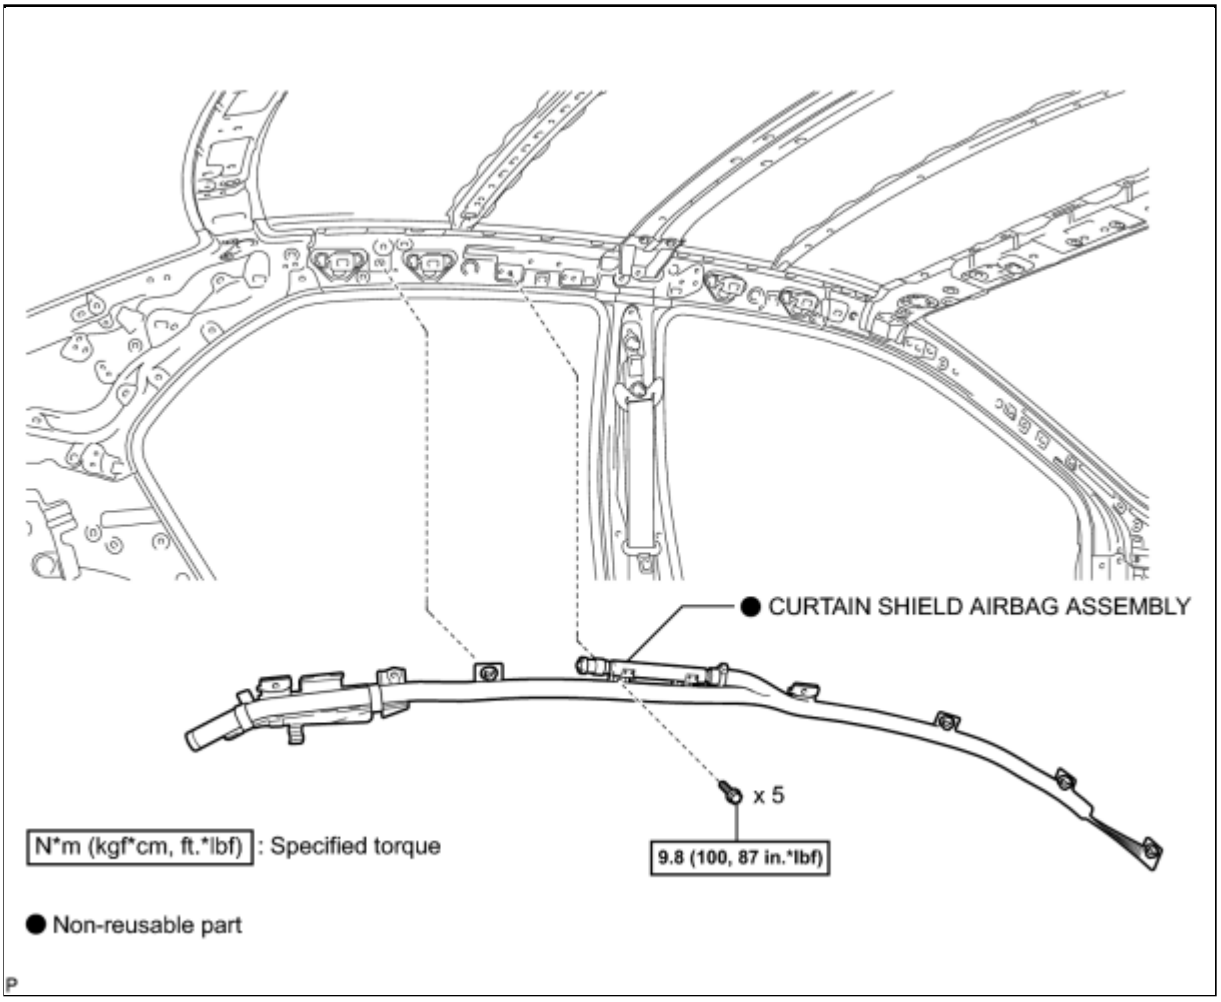
11. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transaxle) INFO

12. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Automatic Transaxle) INFO

13. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

14. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



16. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

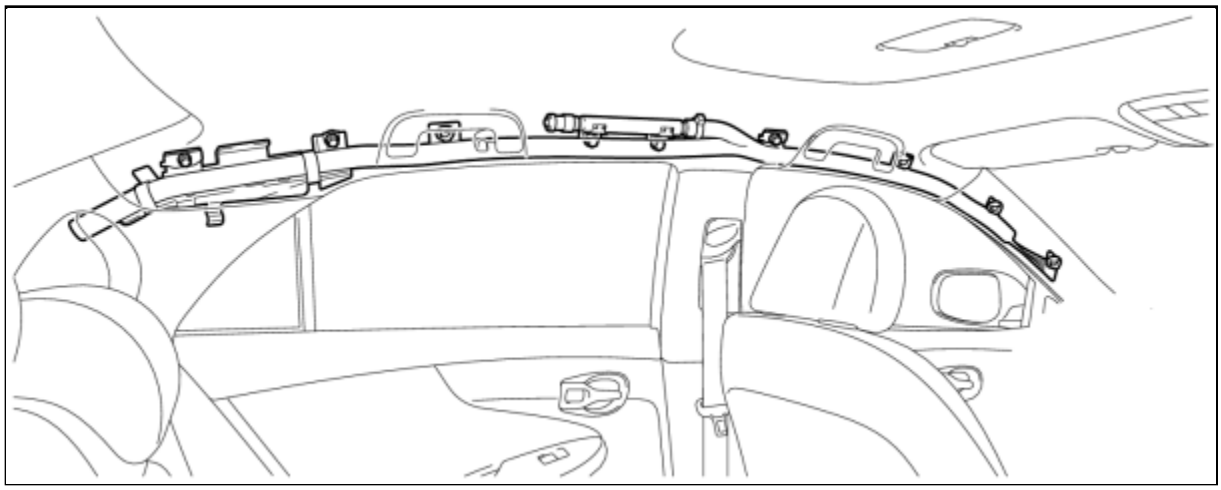
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2010 Corolla)		



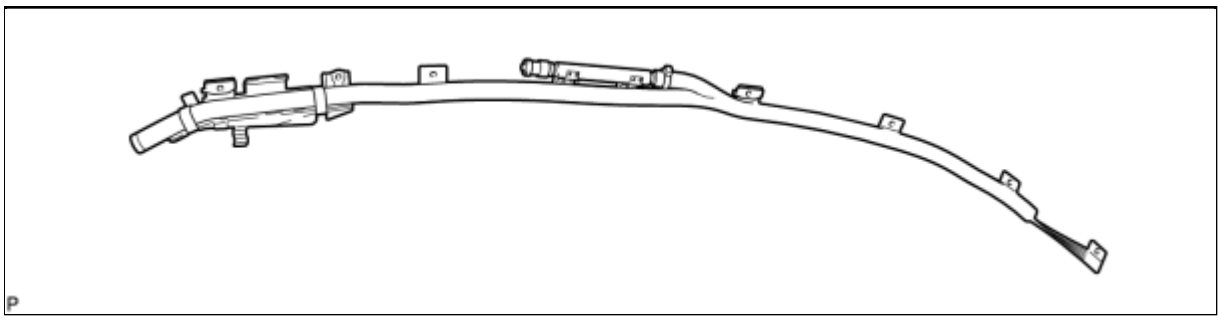
ON-VEHICLE INSPECTION

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check INFO .

(b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If there are any following defects, replace the front pillar garnish or roof headlining assembly with a new one:

- Cuts, minute cracks or marked discoloration on the front pillar garnish or roof headlining assembly around the curtain shield airbag assembly.



2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) With the roof headlining assembly removed from the vehicle, perform a visual check. If there are any following defects, replace the curtain shield airbag assembly with a new one:

- Cuts, minute cracks or marked discoloration on the curtain shield airbag assembly.
- Cracks or other damage to the connectors.

CAUTION:

Be sure to follow the correct removal and installation procedures of the curtain shield airbag assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UXG03PX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

NOTICE:

If the curtain shield airbag assembly is removed, replace it with a new one.

HINT:

- Use the same procedure for the RH side and LH side.
- The following procedure is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO **.**

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

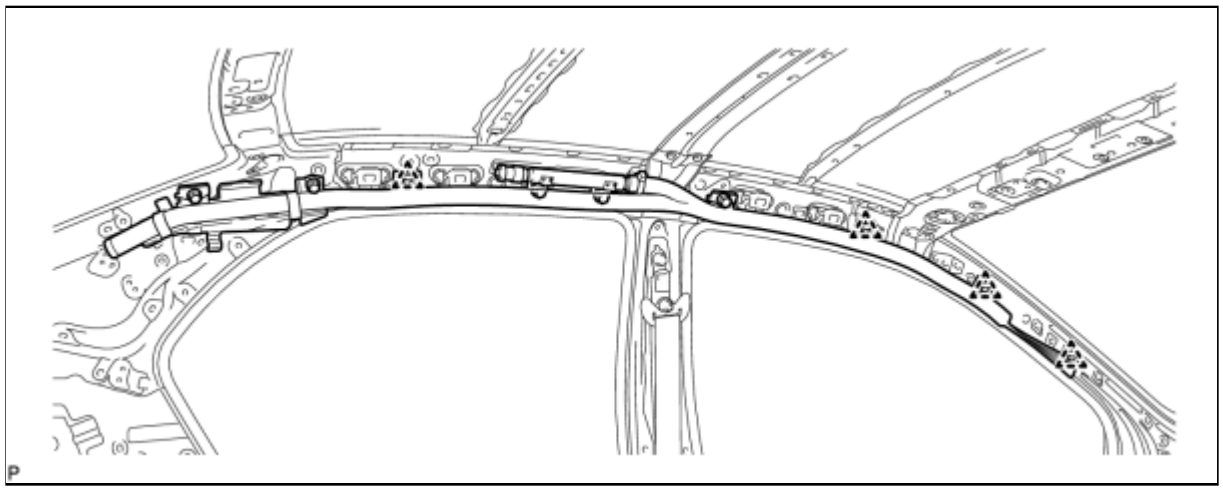
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

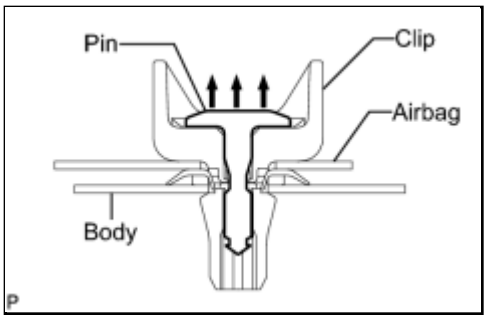
3. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure up to Remove Roof Headlining Assembly INFO **.**

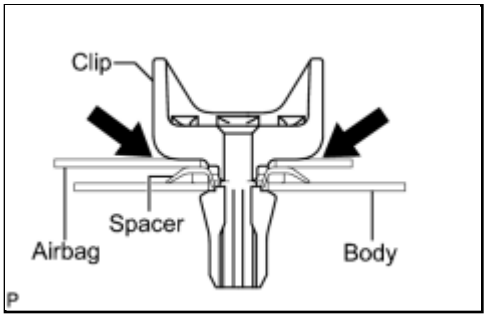


4. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY



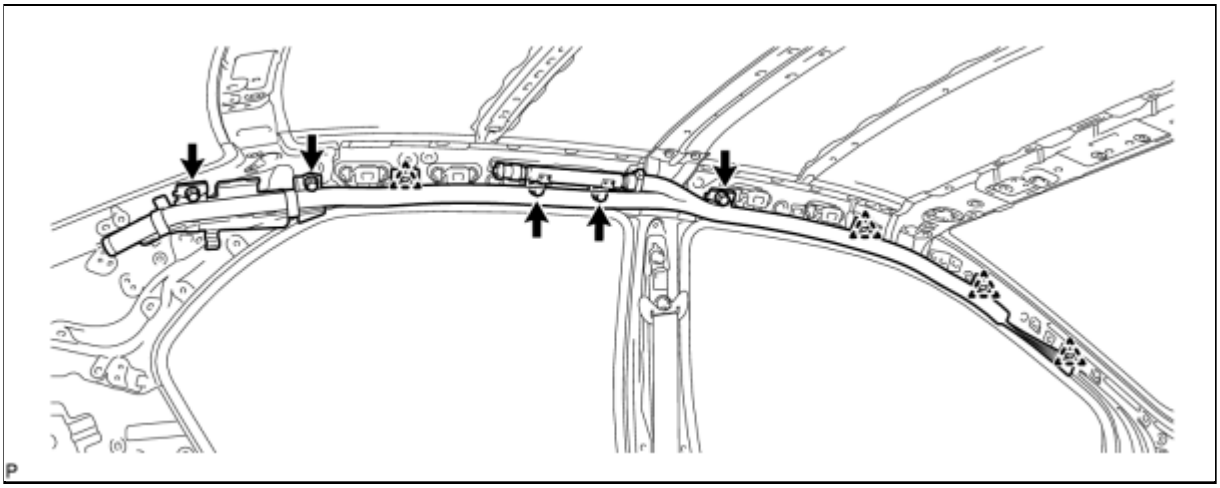
(a) Disconnect the curtain shield airbag connector.

NOTICE:



When disconnecting the airbag connector, take care not to damage the airbag wire harness.

(b) Separate the 4 clips from the body panel.



(1) Using a clip remover, remove the 4 pins.

(2) Using needle-nose pliers, separate the 4 clips and curtain shield airbag assembly from the body as shown in the illustration.

(c) Remove the 5 bolts and curtain shield airbag assembly with the 4 spacers and 4 clips.

NOTICE:

If the curtain shield airbag assembly is removed, replace it with a new one.

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UXC04OX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: DISPOSAL (2010 Corolla)		

DISPOSAL

CAUTION:

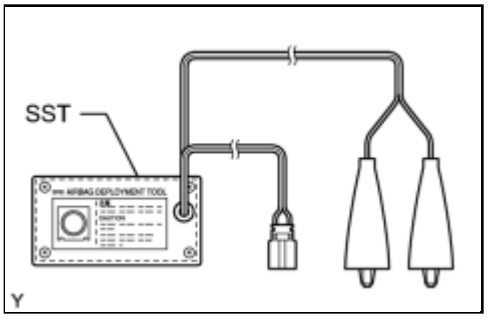
Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:



- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.
- Never dispose of a curtain shield airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the curtain shield airbag assembly.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

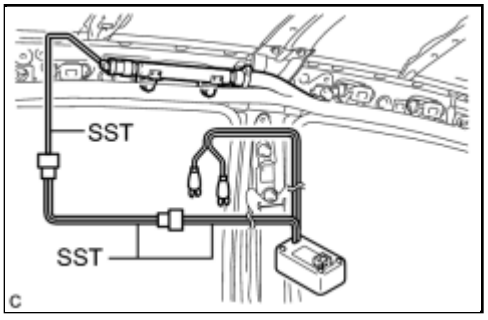
(a) Check the function of SST INFO .

(b) Refer to Precaution INFO .

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



(d) Remove the roof headlining assembly INFO .

(e) Install SST.

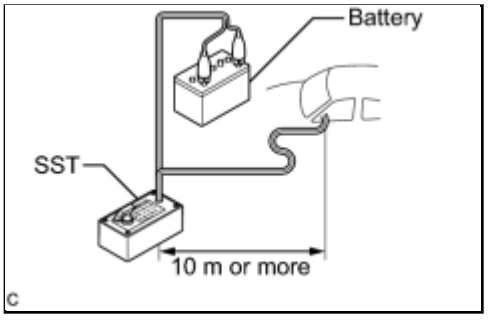
(1) Disconnect the connector from the curtain shield airbag assembly.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

(2) After connecting SST below to each other, connect them to the curtain shield airbag assembly.

SST: 09082-00700



SST: 09082-00802

09082-10801

09082-20801

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the vehicle rear side window.

(4) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

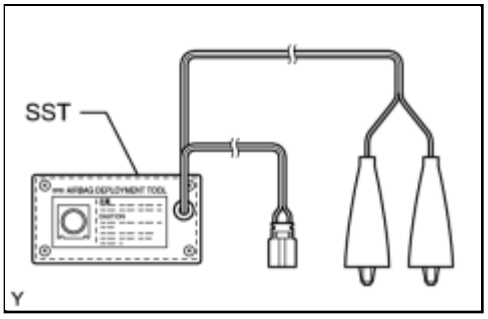
(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- When deploying the airbag, make sure that no one is near the vehicle.
- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.



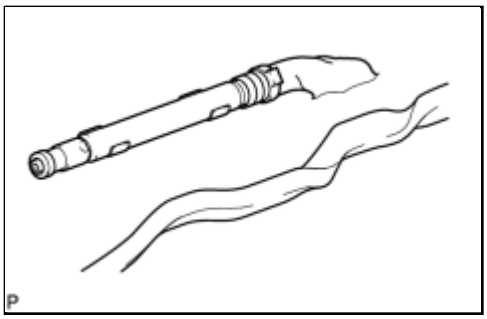
3. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to follow the following procedure when deploying the airbag.

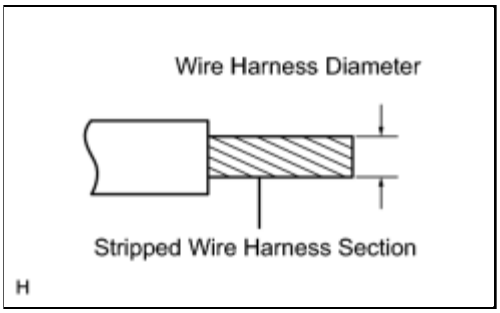
HINT:

Prepare a battery as the power source to deploy the airbag.



(a) Check the function of SST INFO .

(b) Remove the curtain shield airbag assembly INFO .



CAUTION:

When removing the curtain shield airbag assembly, before the work is started, leave the vehicle at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.

(c) Cut off the deployment section of the curtain shield airbag assembly.

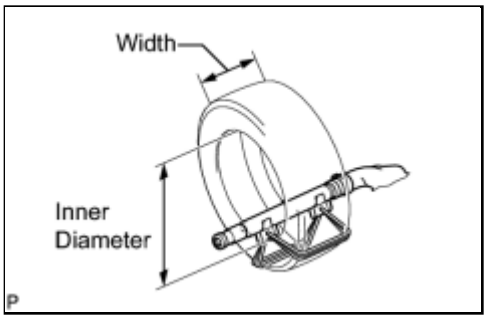
(d) Using a service-purpose wire harness for the vehicle, tie down the curtain shield airbag assembly to the tire.

Wire harness:

Stripped wire harness section

1.25 mm^2 (0.0019 $in.^2$) or more

CAUTION:



If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x (Diameter)^2 divided by 4

(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.

Tire size:

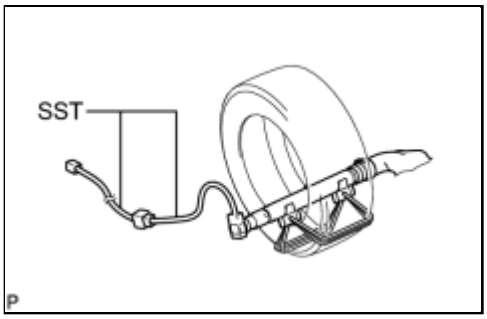
Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (14.2 in.)



CAUTION:

Make sure that the wire harness is tight. If there is slack in the wire harness, the curtain shield airbag assembly may become loose due to the shock when the airbag is deployed.

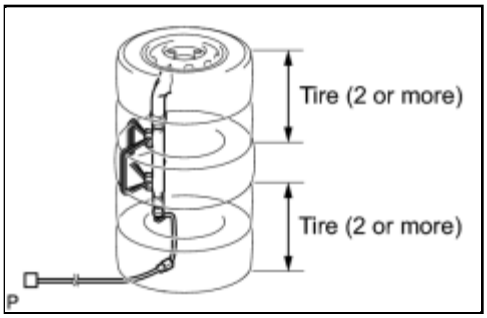
NOTICE:

The tire may be damaged by the airbag deployment, so use an extra tire.

(e) Install SST.

(1) After connecting SST below to each other, connect them to the curtain shield airbag assembly.

SST: 09082-00802



09082-10801

09082-20801

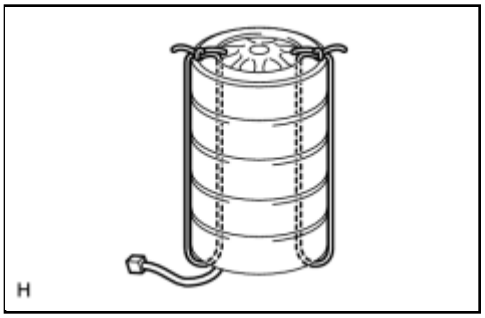
(f) Place the tires.

CAUTION:

Do not place the deployment direction of the curtain shield airbag assembly facing toward the ground.

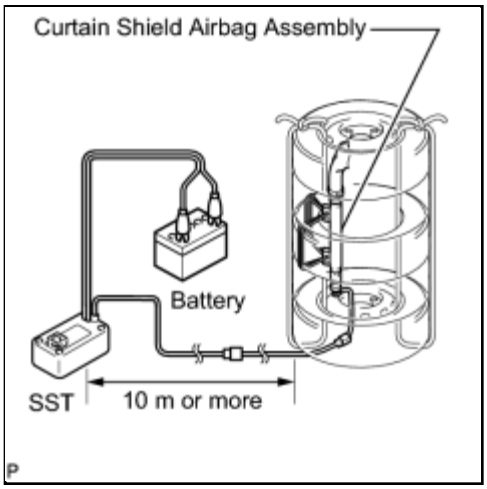
(1) Place at least 2 tires under the tire tied to the curtain shield airbag assembly.

(2) Place at least 2 tires onto the tire tied to the curtain shield airbag assembly. The top tire should have the disc wheel installed.



NOTICE:

Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with the 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

(g) Install SST.

(1) Connect the SST connector.

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(2) Move SST at least 10 m (33 ft.) away from the airbag tied down to the tire.

(h) Deploy the airbag.

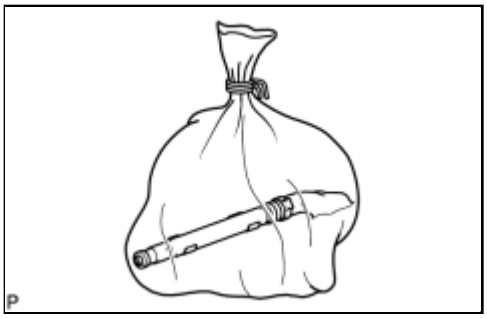
(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (33 ft.) radius of the tire which the curtain shield airbag assembly is tied to.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.



HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(i) Dispose of the curtain shield airbag assembly.

CAUTION:

- The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.

- Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.
- Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the curtain shield airbag assembly from the tire.

(2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly, and dispose of it as other general part disposal.

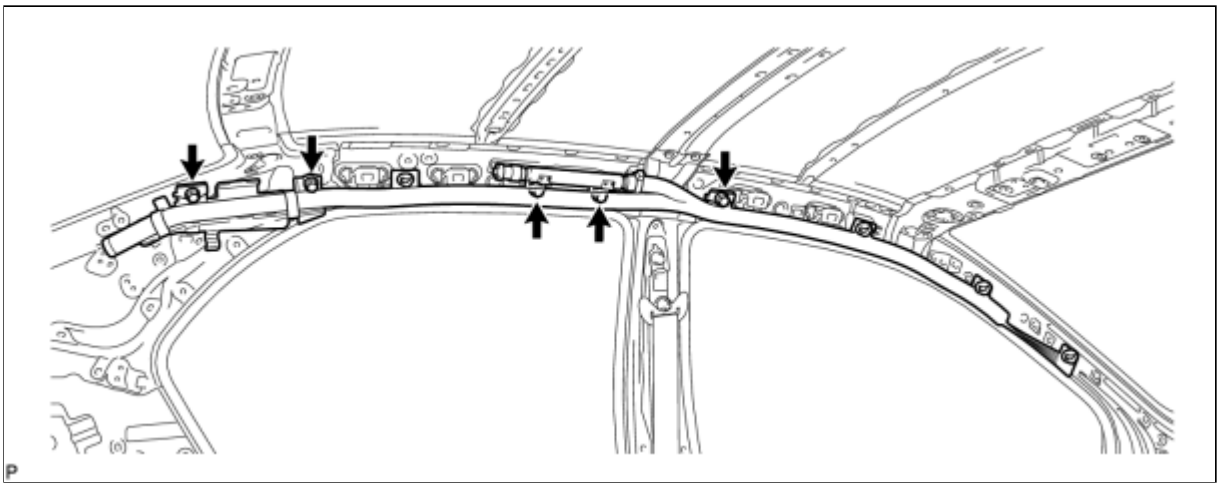
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: CURTAIN SHIELD AIRBAG ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY



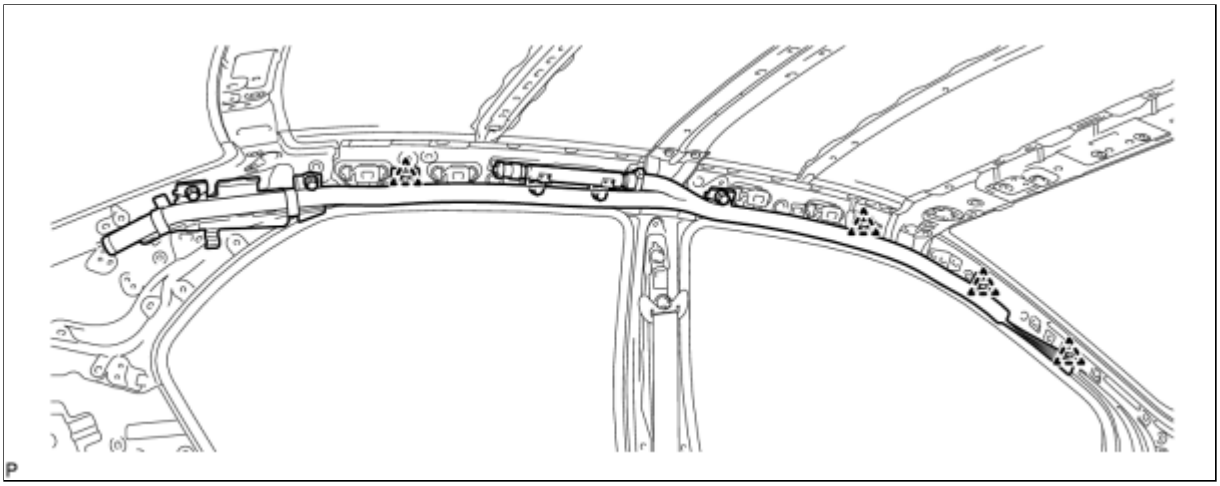
(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

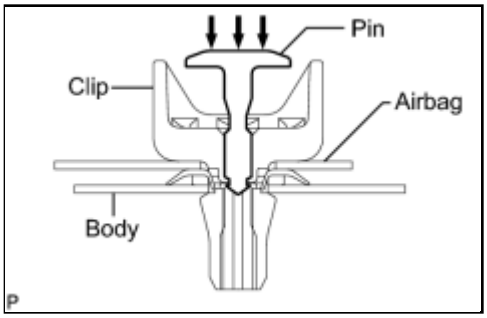
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Install a new curtain shield airbag assembly with the 5 bolts.



Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

NOTICE:



- If the curtain shield airbag assembly is removed, replace it with a new one.
- Do not twist the curtain shield airbag assembly when installing it.

(d) Install the 4 clips with the curtain shield airbag assembly to the body panel.

NOTICE:

Do not twist the curtain shield airbag assembly when installing it.

(e) Install the 4 pins as shown in the illustration.

NOTICE:

Make sure that the pins of the clips are pushed in firmly.

(f) Connect the curtain shield airbag connector.

NOTICE:

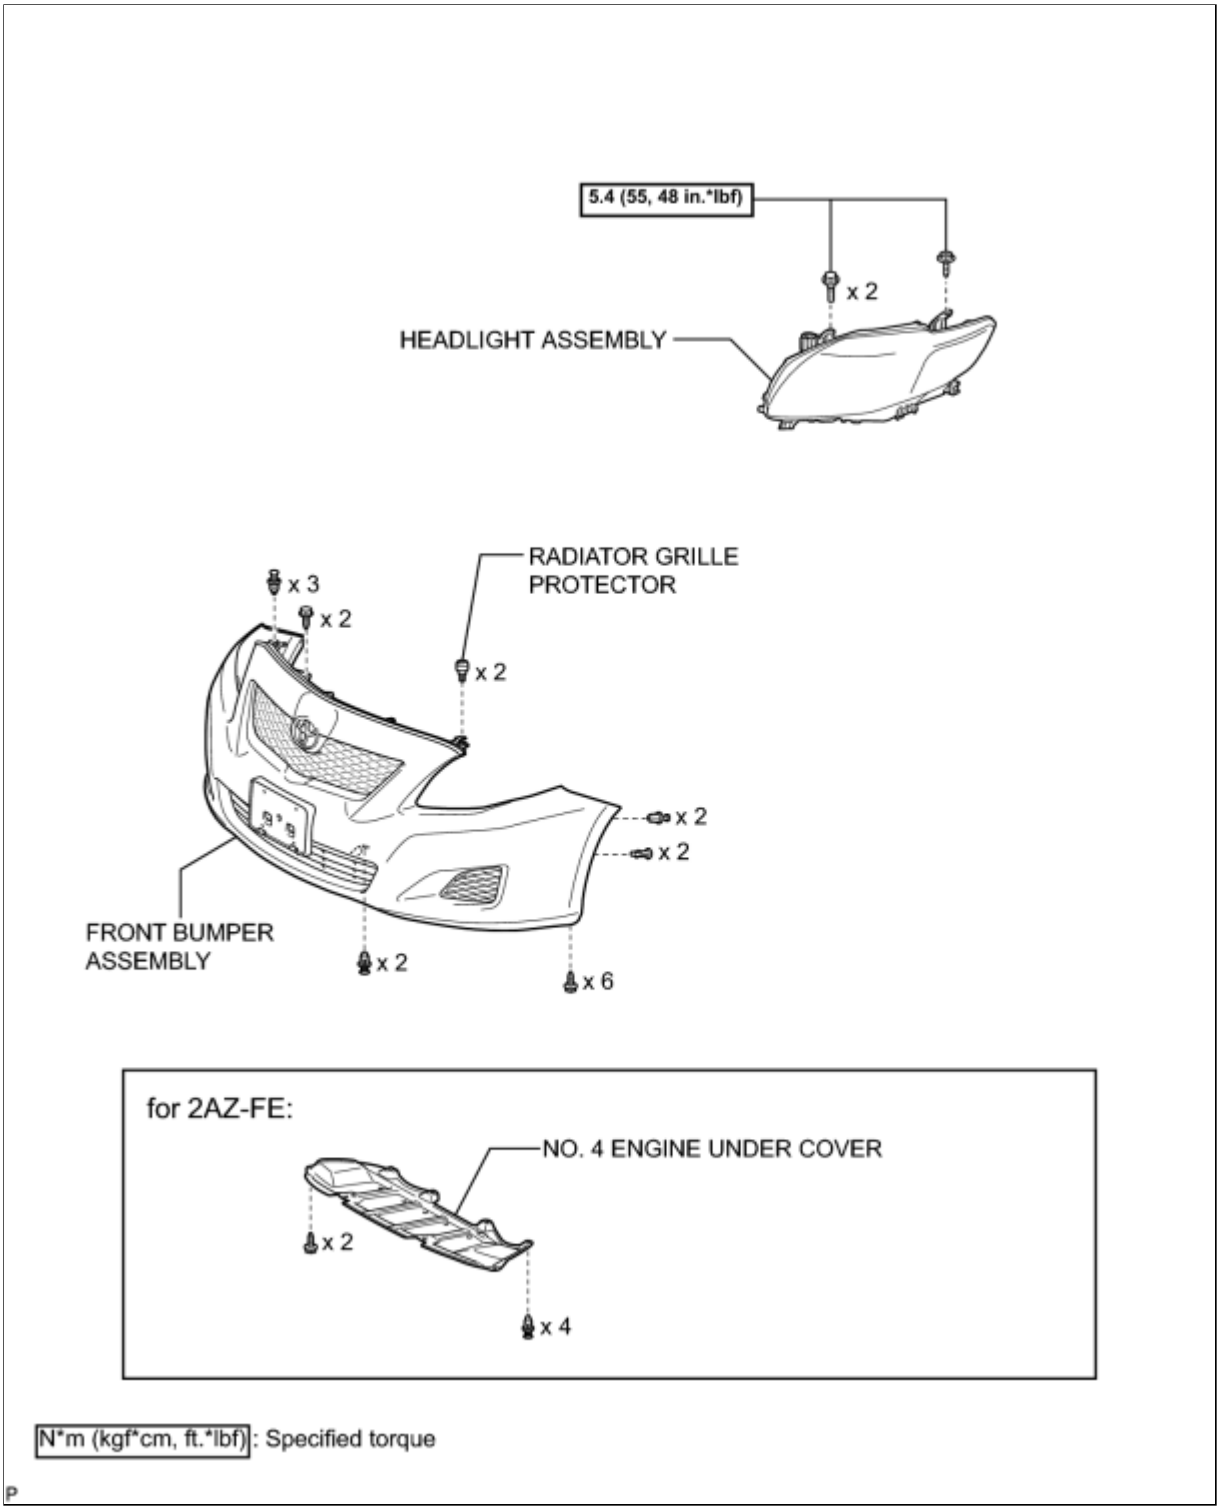
When connecting the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

Refer to the procedure from Install Roof Headlining Assembly INFO .

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



4. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

Last Modified: 3-10-2010	6.4 K	**From:** 200901

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT AIRBAG SENSOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT FRONT AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check INFO .

2. INSPECT FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) When the front bumper of the vehicle or the surrounding area is damaged, check if there is any damage to the front airbag sensor. If there are any following defects, replace the front airbag sensor with a new one:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

Be sure to follow the correct removal and installation procedures of the front airbag sensor.

3. INSPECT FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) When airbags have deployed as the result of a collision, be certain to replace all front airbag sensors in the damaged area (anywhere in need of repair). Furthermore, it is also necessary to replace any front airbag sensors in undamaged areas that have registered a major collision, or which exhibit any of the following abnormalities:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

Be sure to follow the correct removal and installation procedures of the front airbag sensor.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UWZ040X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT AIRBAG SENSOR: REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The following procedure is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO **.**

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

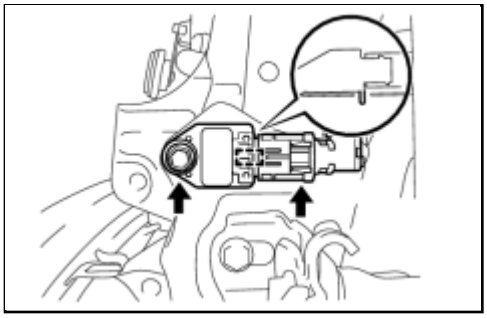
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

3. REMOVE RADIATOR GRILLE PROTECTOR INFO

4. REMOVE NO. 4 ENGINE UNDER COVER (for 2AZ-FE) INFO

5. REMOVE FRONT BUMPER ASSEMBLY INFO

6. REMOVE HEADLIGHT ASSEMBLY INFO



7. REMOVE FRONT AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connector from the front airbag sensor.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

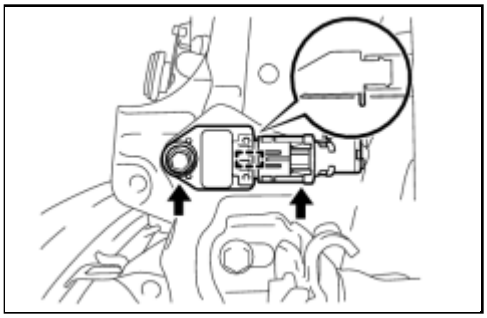
(d) Remove the bolt and front airbag sensor from the body.

NOTICE:

Loosen the bolt while holding the front airbag sensor because the front airbag sensor pin (stopper) is easily damaged.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UWW040X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT AIRBAG SENSOR: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL FRONT AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Install the front airbag sensor with the bolt and pin.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

NOTICE:

- If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the front airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- Make sure that the pin is securely inserted into the body hole.
- Tighten the bolt while holding the front airbag sensor because the front airbag sensor pin (stopper) is easily damaged.

(d) Connect the connector.

NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.

(e) Check that there is no looseness in the installation parts of the front airbag sensor.

2. INSTALL HEADLIGHT ASSEMBLY INFO

3. INSTALL FRONT BUMPER ASSEMBLY INFO

4. INSTALL NO. 4 ENGINE UNDER COVER INFO

5. INSTALL RADIATOR GRILLE PROTECTOR INFO

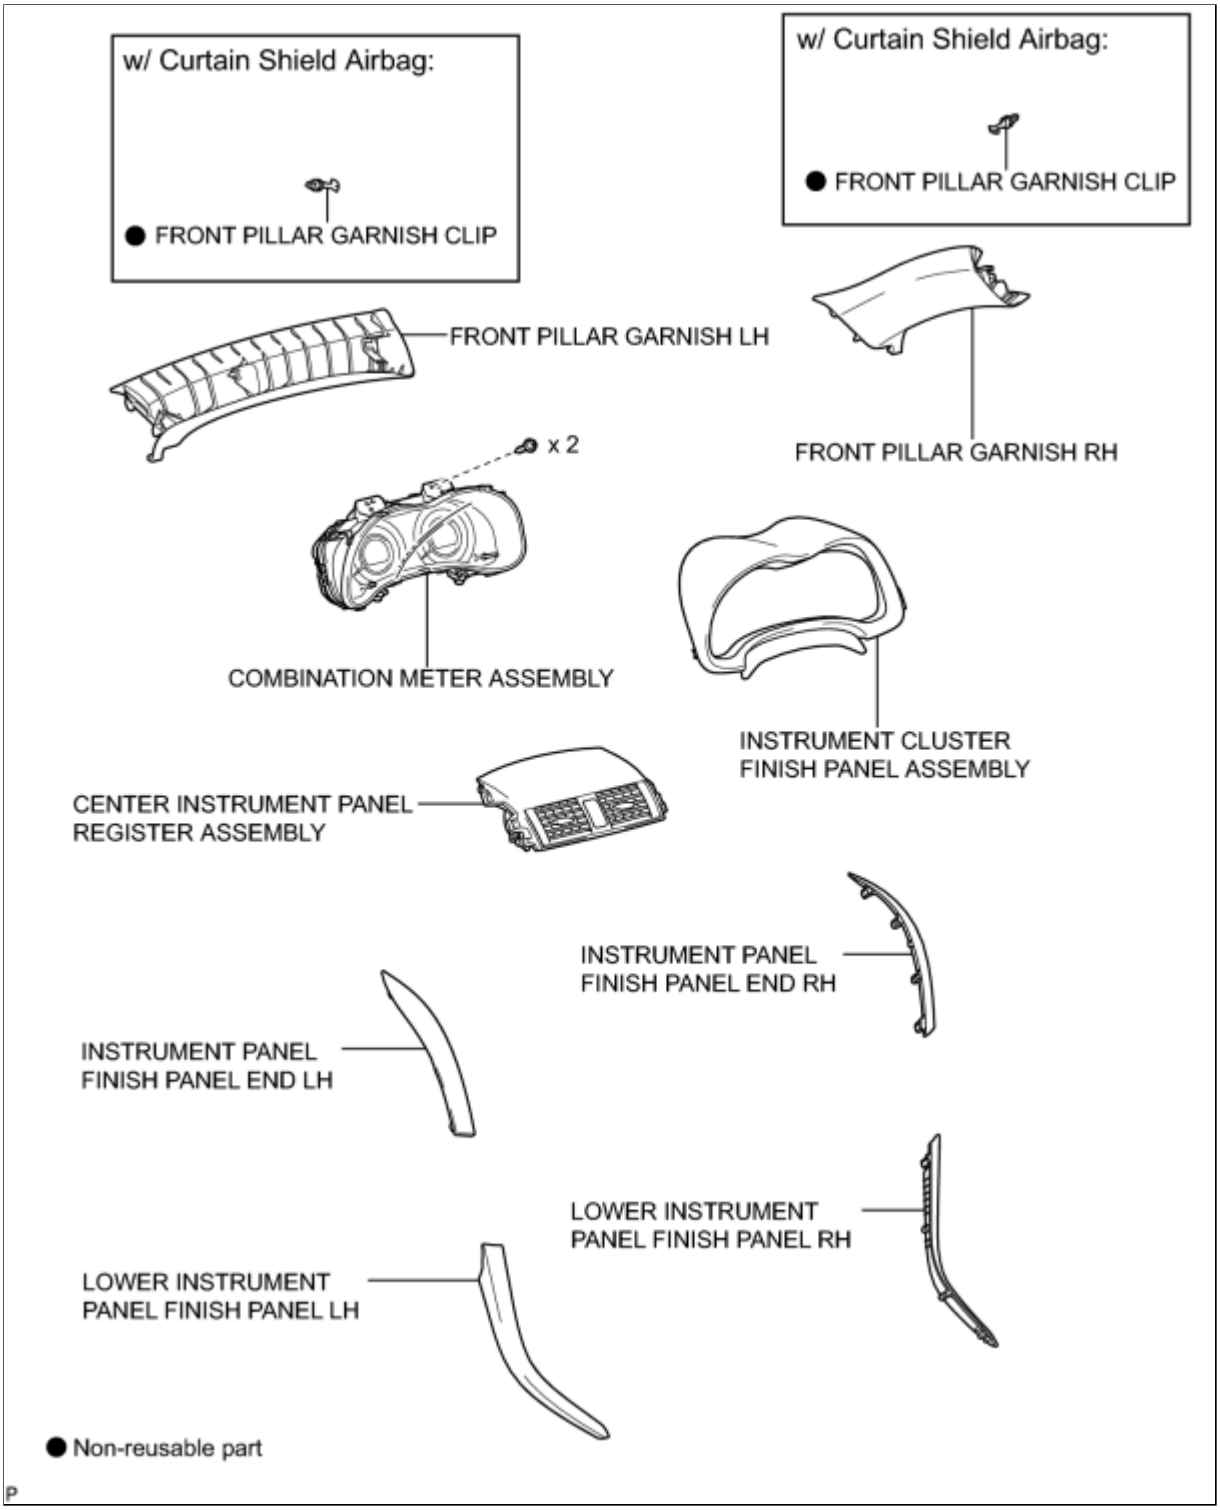
6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

7. INSPECT AND ADJUST HEADLIGHT AIMING

(a) Inspect and adjust headlight aiming INFO .

8. INSPECT AND ADJUST FOG LIGHT AIMING (w/ Fog Light)

(a) Inspect and adjust fog light aiming INFO .



9. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

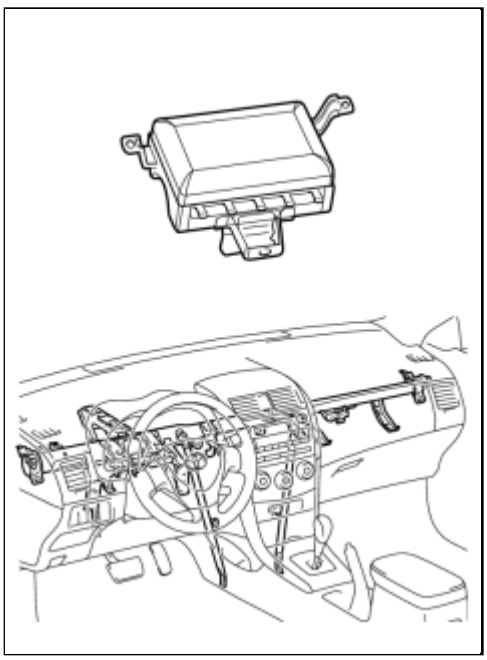
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT PASSENGER AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check INFO .



(b) With the front passenger airbag assembly installed on the vehicle, perform a visual check. If there are any following defects, replace the instrument panel with a new one:

Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag assembly.

2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) With the front passenger airbag assembly removed from the vehicle, perform a visual check. If there are any following defects, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one:

- Cuts, minute cracks or marked discoloration on the front passenger airbag assembly.
- Cracks or other damage to the connectors.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

CAUTION:

Be sure to follow the correct removal and installation procedures of the front passenger airbag assembly.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UX604DX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT PASSENGER AIRBAG ASSEMBLY: DISPOSAL (2010 Corolla)		

DISPOSAL

CAUTION:

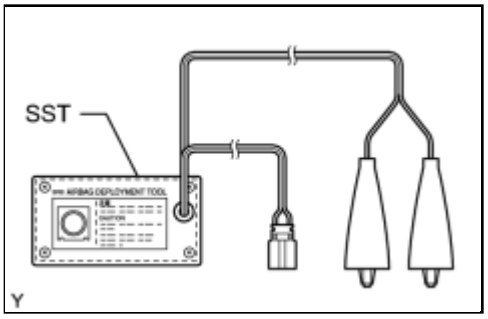
Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the front passenger airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:



- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.
- Never dispose of a front passenger airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the front passenger airbag assembly.
- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

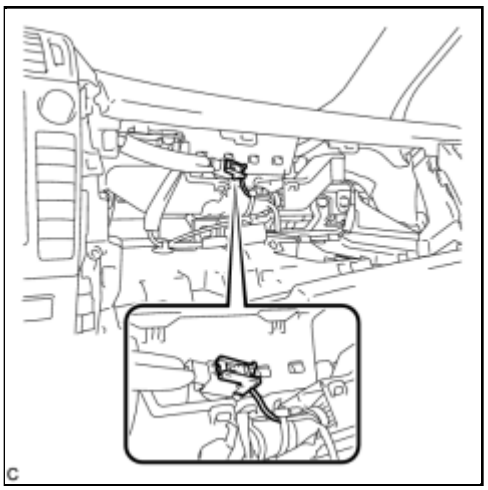
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO .

(b) Refer to Precaution INFO .

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

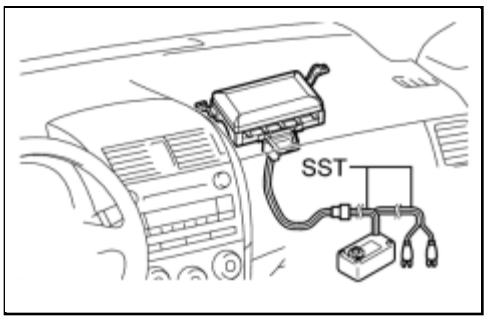


Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Remove the lower instrument panel finish panel RH INFO .

(e) Remove the instrument panel finish panel end RH INFO .

(f) Remove the No. 1 instrument panel box door sub-assembly INFO .

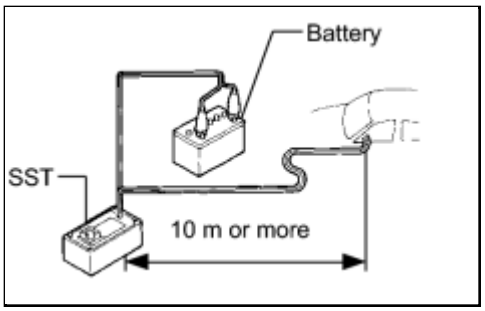


(g) Install SST.

(1) Disconnect the connector.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.



(2) Connect the SST connector to the instrument panel wire assembly.

SST: 09082-00700

SST: 09082-00760

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the vehicle front side window.

(4) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(h) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

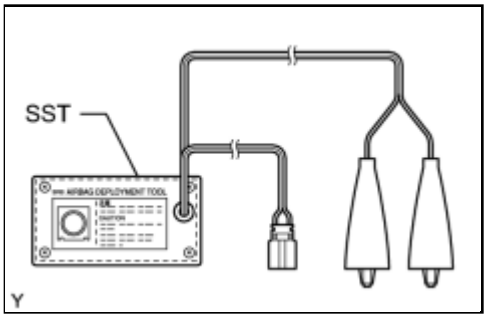
CAUTION:

- When deploying the airbag, make sure that no one is near the vehicle.
- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)



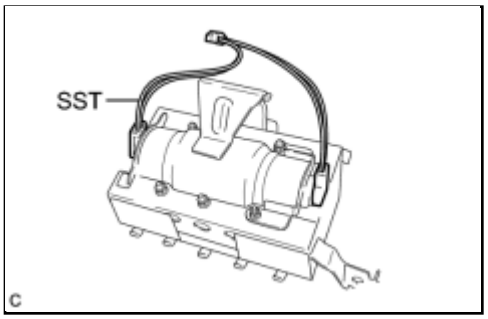
NOTICE:

- When disposing of the front passenger airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to follow the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO .

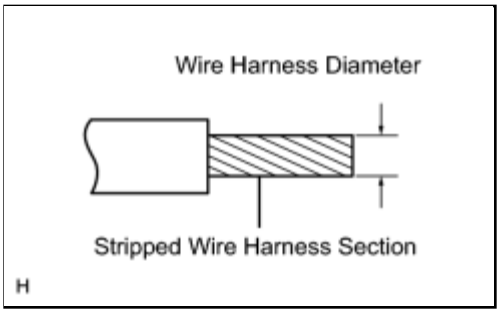


(b) Remove the front passenger airbag assembly INFO .

CAUTION:

- When removing the front passenger airbag assembly, before the work is started, leave the vehicle at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.

(c) Install SST.



(1) After connecting SST below to each other, connect them to the front passenger airbag assembly.

SST: 09082-00802

09082-10801

09082-40800

(d) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.

Wire harness:

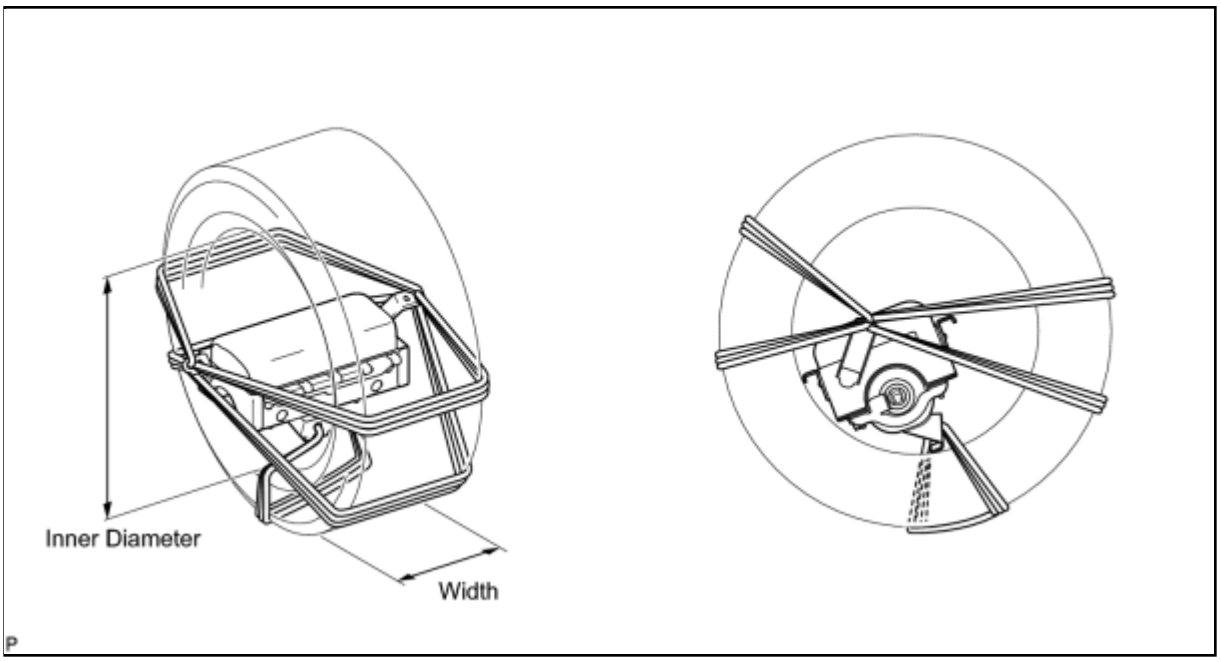
Stripped wire harness section

1.25 mm^2 (0.0019 $in.^2$) or more

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for

vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).



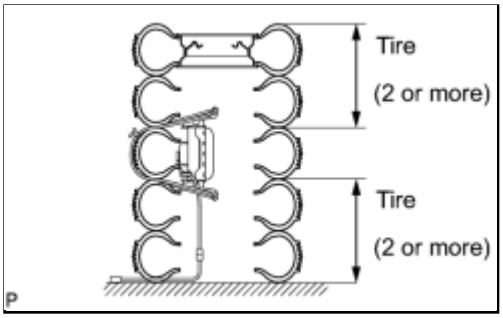
HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x $(Diameter)^2$ divided by 4

(1) Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)



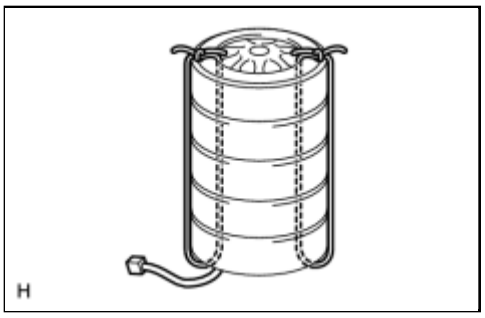
CAUTION:

- Make sure that the wire harness is tight. If there is slack in the wire harness, the front passenger airbag assembly may become loose due to the shock when the airbag is deployed.
- Always tie down the front passenger airbag assembly with the airbag deployment side facing inside the tire.

NOTICE:

The tire will be marked by the airbag deployment, so use an extra tire.

(e) Place the tires.

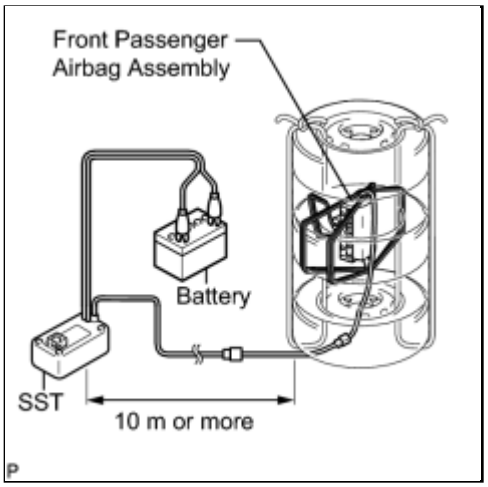


(1) Place at least 2 tires under the tire tied to the front passenger airbag assembly.

(2) Place at least 2 tires onto the tire tied to the front passenger airbag assembly. The top tire should have a disc wheel installed.

NOTICE:

Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with the 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

(f) Install SST.

(1) Connect the SST connector.

SST: 09082-00700

NOTICE:

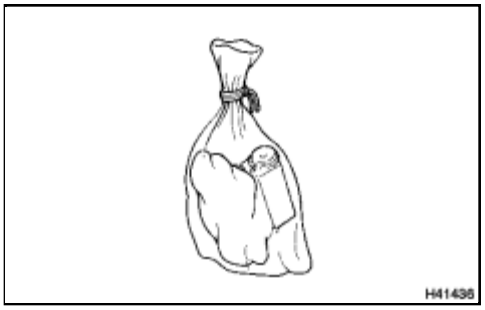
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(2) Move SST at least 10 m (33 ft.) away from the airbag tied down to the tire.

(g) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (33 ft.) radius of the tire which the front passenger airbag assembly is tied to.



(3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

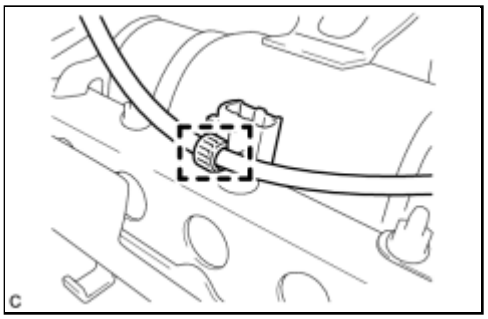
HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the front passenger airbag assembly.

CAUTION:

- The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.



(1) Remove the front passenger airbag assembly from the tire.

(2) Place the front passenger airbag assembly in a plastic bag, tie it tightly, and dispose of it as other general part disposal.

INSTALLATION

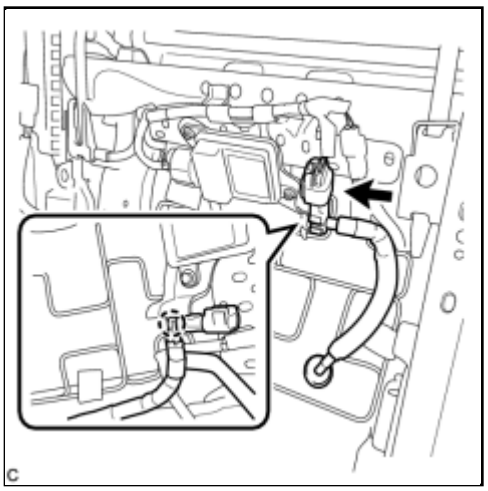
1. INSTALL OCCUPANT CLASSIFICATION ECU INFO



2. INSTALL OCCUPANT CLASSIFICATION SENSOR

(a) Install the occupant classification sensor with the 2 new clips.

NOTICE:

- Do not reuse the clip.
- Securely install the clip.
- Do not reuse an occupant classification sensor which has been dropped.
- Make sure that there is no foreign matter between the occupant classification sensor and seat assembly.

(b) Install the connector with the claw.

(c) Install the clamp and connect the connector.

CAUTION:

- Make sure the gel mat pressure hose is closer to the floor than the main harness.
- When setting the pressure hose, make sure the hose is not twisted. 1 full twist or more will damage the pressure hose.
- Make sure the radius of the circular path of the pressure hose is 20 mm (0.787 in.) or more.
- After connecting the connectors, make sure that the connectors are not strained or pulled apart.
- Make sure that the pressure hose is not pinched between other components.
- Do not kink the pressure hose.

3. INSTALL FRONT SEAT CUSHION COVER WITH PAD RH INFO

4. INSTALL FRONT SEAT CUSHION INNER SHIELD RH INFO

5. INSTALL FRONT SEAT INNER BELT ASSEMBLY RH INFO

6. INSTALL FRONT SEAT CUSHION SHIELD RH INFO

7. INSTALL RECLINING ADJUSTER RELEASE HANDLE RH INFO

8. INSTALL FRONT SEAT ASSEMBLY RH INFO

9. INSPECT FRONT SEAT SLIDE ADJUSTER LOCK INFO

10. INSTALL INNER SEAT TRACK COVER RH INFO

11. INSTALL OUTER SEAT TRACK COVER RH INFO

12. INSTALL FRONT SEAT HEADREST ASSEMBLY

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

14. PERFORM REGISTRATION

(a) If the occupant classification ECU has been replaced, perform registration INFO .

15. PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK

(a) If the occupant classification ECU has been replaced, perform zero point calibration and sensitivity check INFO .

16. INSPECT SRS WARNING LIGHT

(a) Inspect SRS warning light INFO .

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UX004UX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT SEAT SIDE AIRBAG ASSEMBLY: DISPOSAL (2010 Corolla)		

DISPOSAL

CAUTION:

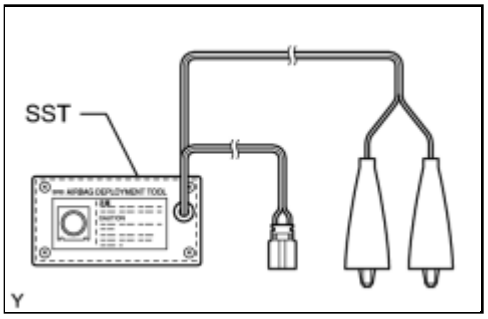
Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the front seat side airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:



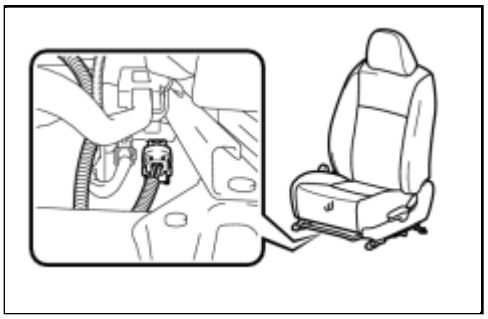
- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.
- Never dispose of a front seat side airbag assembly with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the front seat side airbag assembly.
- The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO .



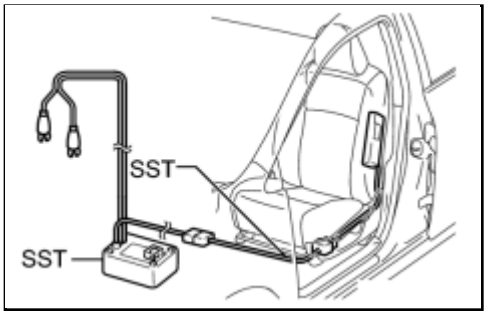
(b) Refer to Precaution INFO .

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(d) Install SST.



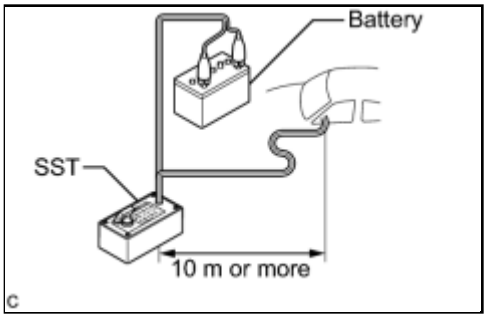
(1) Slide the front seat to the back of the vehicle.

(2) Disconnect the connector (yellow colored one) from the front seat side airbag assembly.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

(3) Connect the SST connector to the front seat side airbag assembly connector.



SST: 09082-00700

SST: 09082-00820

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(4) Move SST at least 10 m (33 ft.) away from the vehicle front side window.

(5) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(6) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(e) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

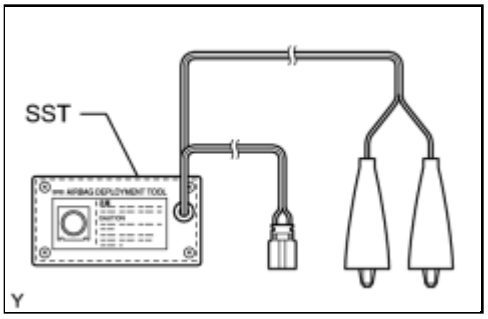
CAUTION:

- When deploying the airbag, make sure that no one is near the vehicle.
- The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)



NOTICE:

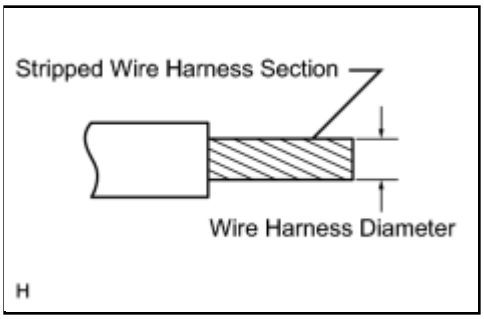
- When disposing of the front seat side airbag assembly, never use the customer's vehicle to deploy the airbag.
- Be sure to follow the following procedure when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST INFO .

(b) Remove the front seat side airbag assembly.



(1) Remove the front seat assembly INFO for manual seat, INFO for power seat).

(2) Remove the 2 nuts and the front seat side airbag assembly from the seatback assembly INFO for manual seat, INFO for power seat).

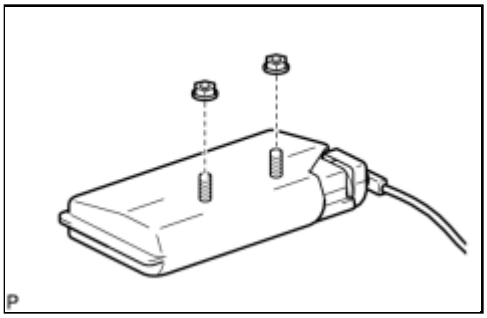
CAUTION:

- When removing the front seat side airbag assembly, before the work is started, leave the vehicle at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the front seat side airbag assembly, keep the airbag deployment side facing upward.

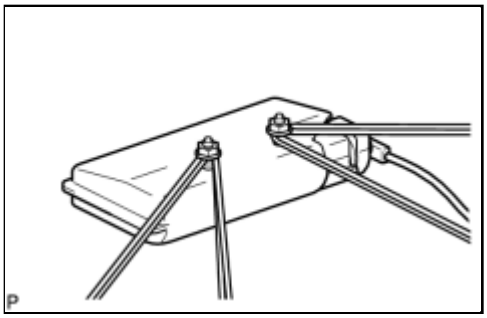
(c) Using a service-purpose wire harness for the vehicle, tie down the front seat side airbag assembly to the tire.

Wire harness:
Stripped wire harness section
1.25 mm^2 (0.0019 $in.^2$) or more

CAUTION:



If the wire harness is too thin or an alternative object is used to tie down the front seat side airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

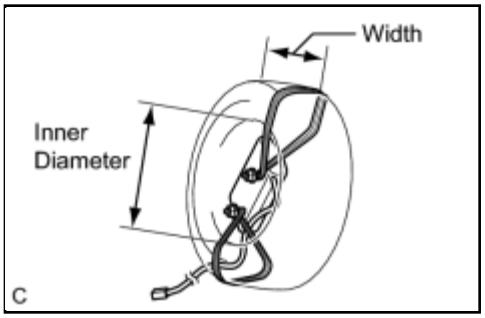


HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x (Diameter)^2 divided by 4

(1) Install the 2 nuts to the front seat side airbag assembly.



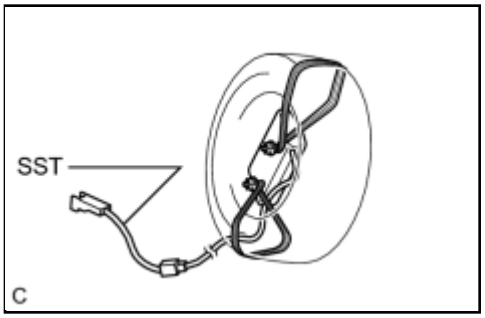
(2) Wind the wire harness around the stud bolts of the front seat side airbag assembly as shown in the illustration.

(3) Position the front seat side airbag assembly inside the tire.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

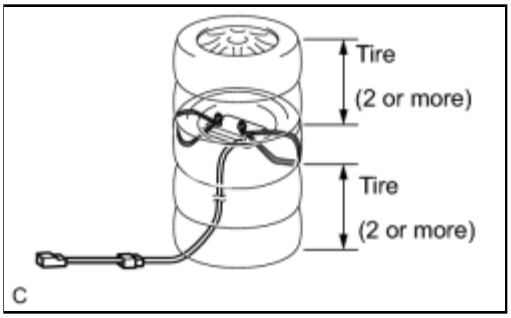
CAUTION:

- Make sure that the wire harness is tight. If there is slack in the wire harness, the front seat side airbag assembly may become loose due to the shock when the airbag is deployed.
- Always tie down the front seat side airbag assembly with the airbag deployment direction facing inside the tire.



NOTICE:

The tire will be marked by the airbag deployment, so use an extra tire.

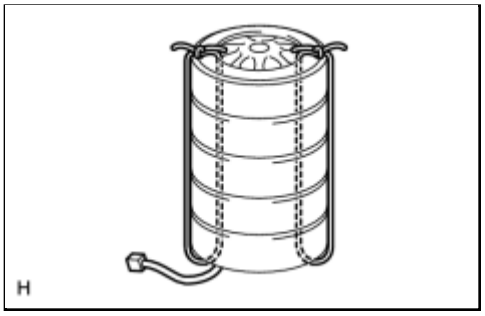


(d) Install SST.

(1) Connect the SST connector to the front seat side airbag assembly connector.

SST: 09082-00820

(e) Place the tires.



(1) Place at least 2 tires under the tire tied to the front seat side airbag assembly.

(2) Place at least 2 tires onto the tire tied to the front seat side airbag assembly. The top tire should have the disc wheel installed.

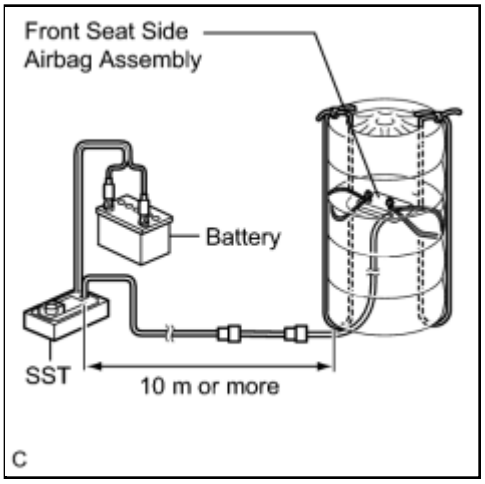
NOTICE:

Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with the 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.



(f) Install SST.

(1) Connect the SST connector.

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(2) Move SST at least 10 m (33 ft.) away from the airbag tied down to the tire.

(g) Deploy the airbag.

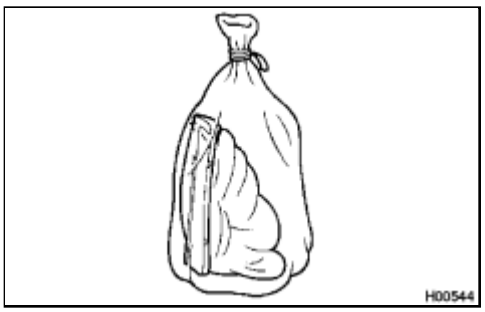
(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (33 ft.) radius of the tire which the front seat side airbag assembly is tied to.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.



HINT:

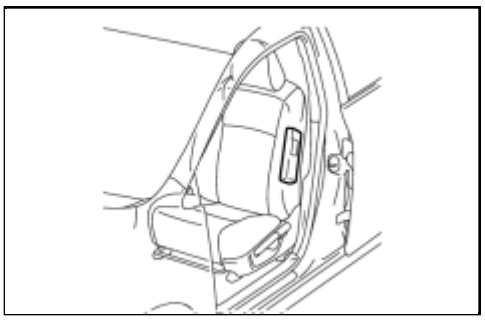
The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the front seat side airbag assembly.

CAUTION:

- The front seat side airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a front seat side airbag assembly with a deployed airbag.
- Do not apply water, etc. to a front seat side airbag assembly with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the front seat side airbag assembly from the tire.



(2) Place the front seat side airbag assembly in a plastic bag, tie it tightly, and dispose of it as other general part disposal.

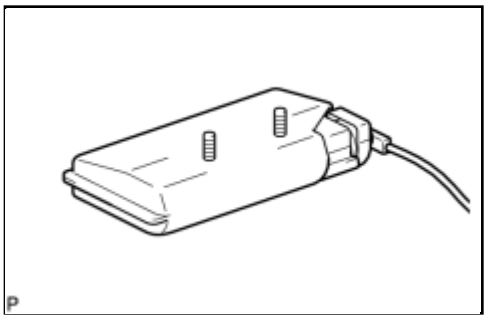
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000VPS04KX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: FRONT SEAT SIDE AIRBAG ASSEMBLY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check INFO .



(b) With the front seat side airbag assembly installed on the vehicle, perform a visual check. If there are any following defects, replace the front seat assembly with a new one:

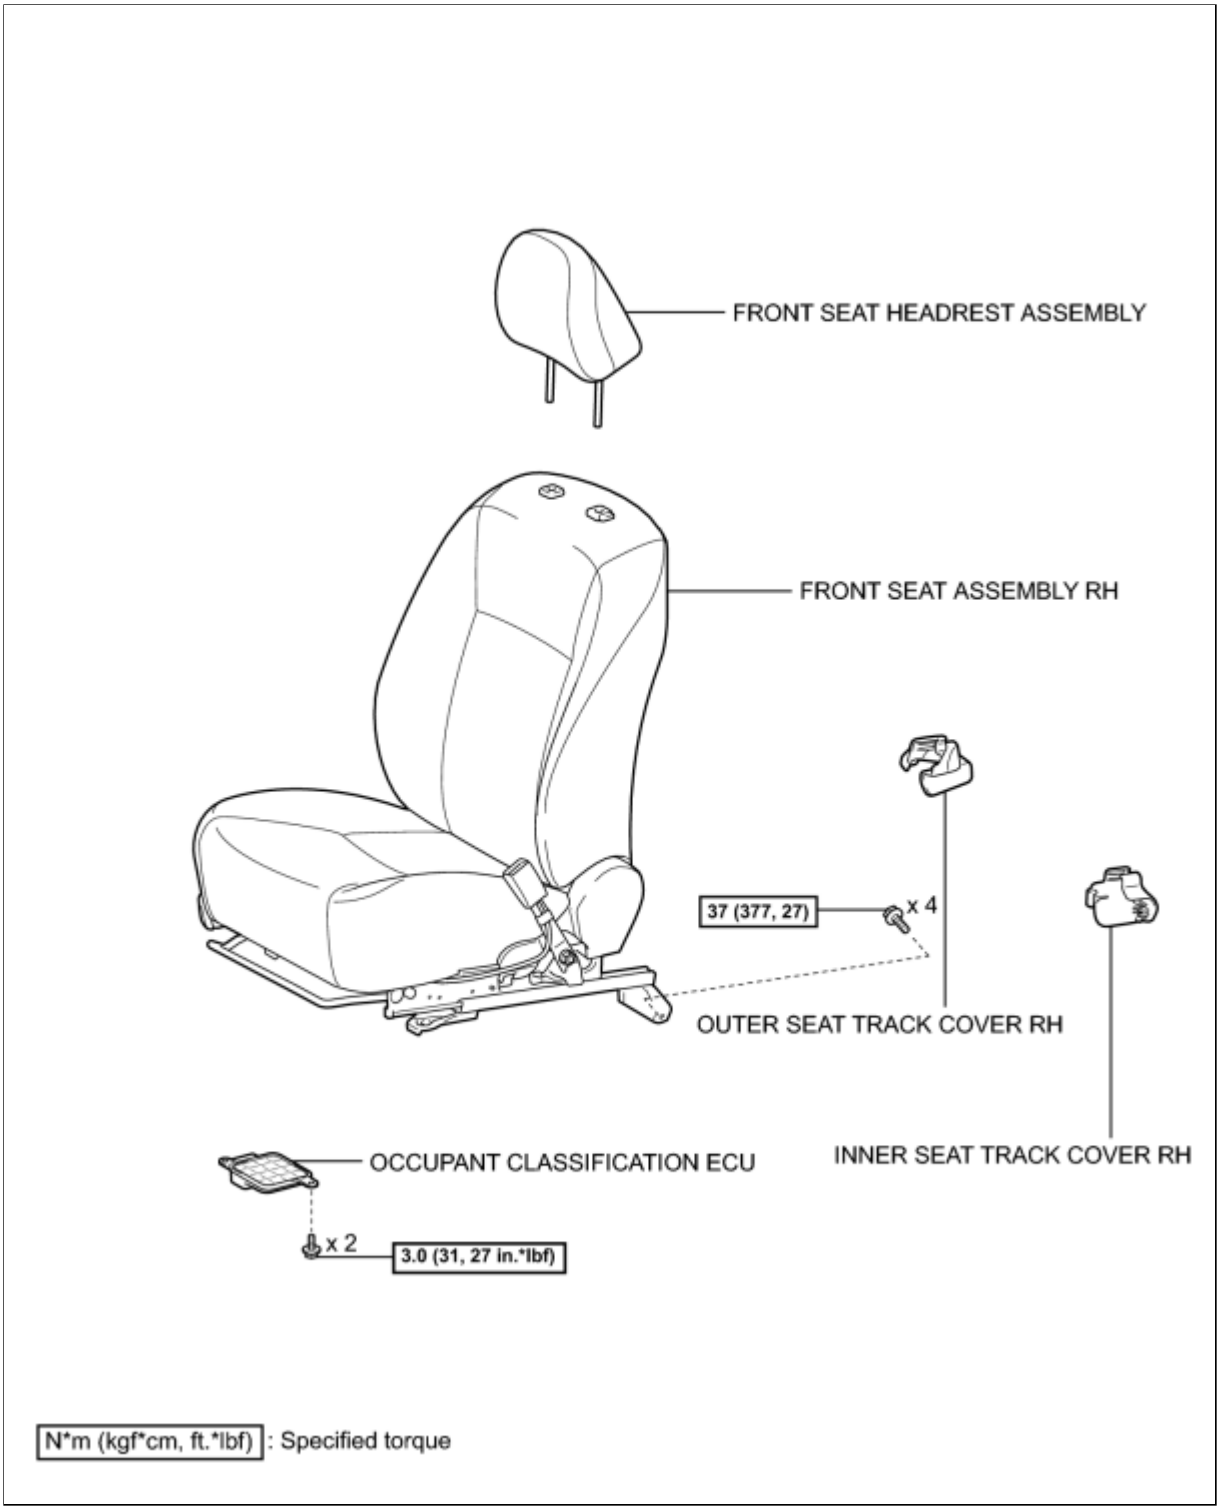
Cuts, minute cracks or marked discoloration on the front seatback assembly around the front seat side airbag assembly.

2. INSPECT FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) With the front seat side airbag assembly removed from the vehicle, perform a visual check. If there are any following defects, replace the front seat assembly with a new one:

- There are scratches, broken or frayed threads on the surface of the front seat side airbag assembly base fabric.
- A front seat side airbag assembly that has been dropped.
- A front seat side airbag assembly with a deformed installation part.
- Cracks or other damage to the wire harness or connector.



CAUTION:

Be sure to follow the correct removal and installation procedures of the front seat assembly.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION ECU: REMOVAL (2010 Corolla)		

REMOVAL

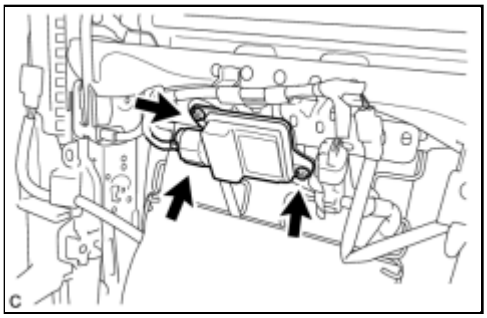
1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO .

NOTICE:

When replacing the occupant classification ECU, perform registration INFO .



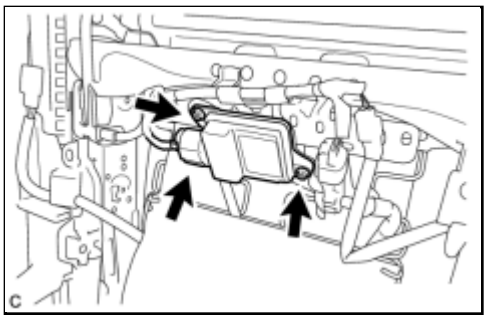
2. REMOVE FRONT SEAT ASSEMBLY RH

(a) Remove the front seat assembly RH.

HINT:

Use the same procedure for the RH side and the LH side INFO .

3. REMOVE OCCUPANT CLASSIFICATION ECU



(a) Disconnect the connector from the occupant classification ECU.

(b) Remove the 2 screws and occupant classification ECU.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000011JE016X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION ECU: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL OCCUPANT CLASSIFICATION ECU

(a) Install the occupant classification ECU with the 2 claws.

Torque: 3.0 N·m (31 kgf·cm, 27in·lbf)

NOTICE:

- If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the occupant classification ECU with a new one.
- When installing the occupant classification ECU, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- Do not allow oil or grease to adhere to the occupant classification ECU during installation.

(b) Connect the connector.

2. INSTALL FRONT SEAT ASSEMBLY RH

(a) Install the front seat assembly RH.

HINT:

Use the same procedure for the RH side and LH side INFO .

3. PERFORM REGISTRATION

(a) If the occupant classification ECU has been replaced, perform registration INFO .

4. ZERO POINT CALIBRATION AND SENSITIVITY CHECK

(a) If the occupant classification ECU has been replaced, perform zero point calibration and sensitivity check INFO .

Last Modified: 3-10-2010	6.4 L	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010V0041X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

NOTICE:

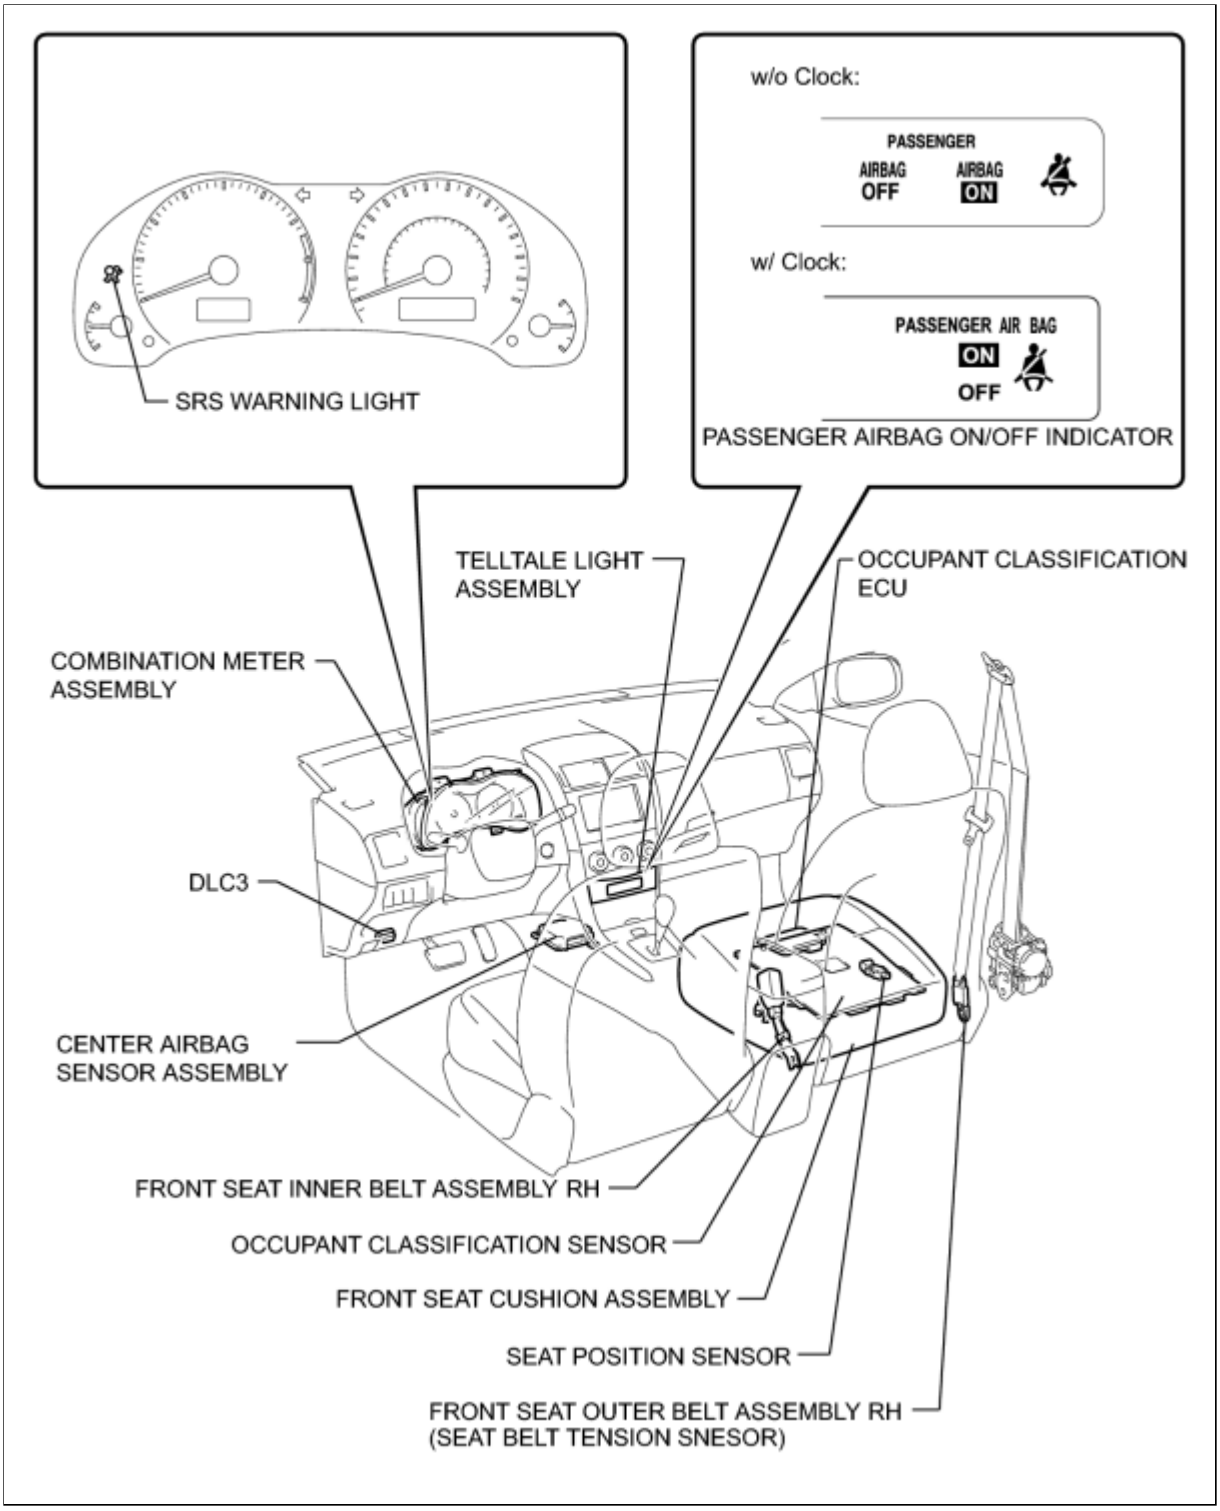
Do not use seat accessories (such as cushions or covers) that cover the front seats. Also, do not modify or replace the upholstery of the front seat. Doing so may prevent the front passenger airbag system from activating correctly, disable the system or cause the front passenger airbag to inflate accidentally, and result in death or serious injury.

1. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT

(a) Perform the zero point calibration and sensitivity check if any of the following conditions are met:

- The occupant classification ECU is replaced.
- The passenger airbag ON/OFF indicator indicates OFF when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair after an accident or a collision.

2. EXPRESSIONS OF IGNITION SWITCH



(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ON	ON	On (IG)
Ignition Switch ACC	ACC	On (ACC)
Engine Start	START	Start

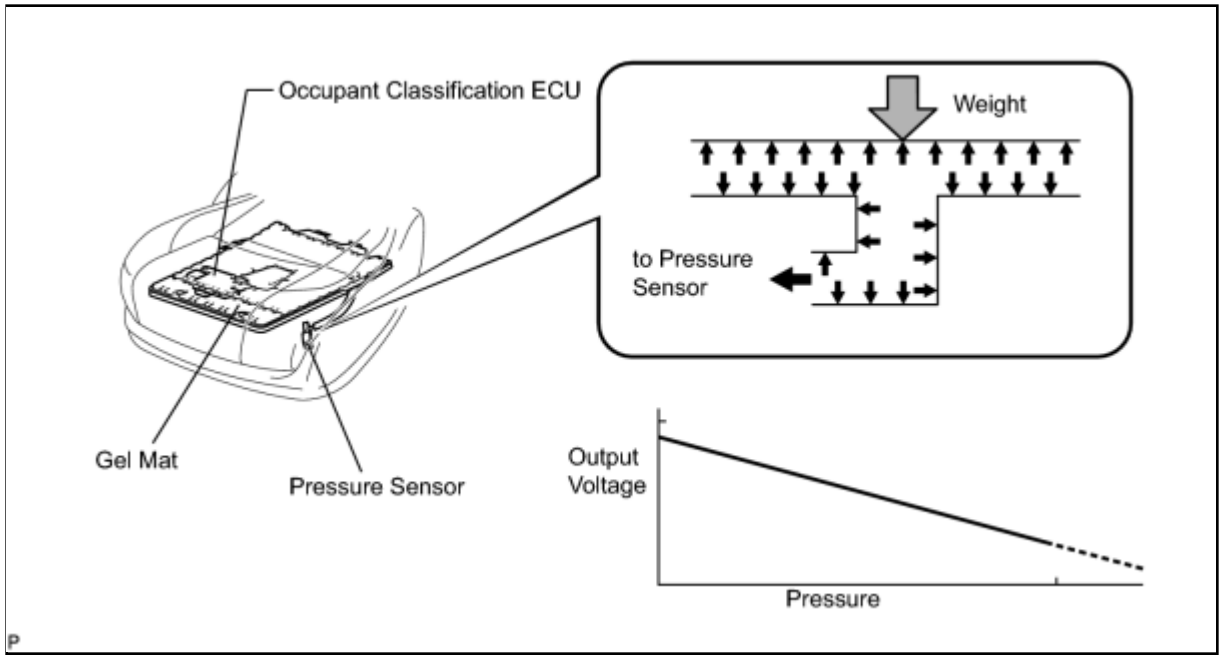
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. GENERAL DESCRIPTION



(a) In the occupant classification system, the occupant classification ECU calculates the weight of the front passenger based on a signal from the occupant classification sensor. This system judges the occupant to be a child, and disables the front passenger airbag and front seat side airbag RH.

(b) This system is mainly composed of the occupant classification sensor that detects the load on the front passenger seat. The occupant classification ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag and front seat side airbag RH.

2. OCCUPANT CLASSIFICATION SENSOR

(a) The occupant classification sensor consists of the gel mat and the pressure sensor.

When weight is applied to the gel mat, the pressure applied through the silicone to the pressure sensor changes. The pressure sensor converts these changes into voltages and transmits them to the occupant classification ECU.

(b) The occupant classification sensor is installed between the seat cushion frame and seat cushion pad. The pressure sensor is installed on the seat frame.

(c) The pressure sensor detects the pressure applied to the front passenger seat as a seated passenger. The occupant classification ECU determines whether the front passenger airbag and front seat side airbag RH are deployed based on signals from the pressure sensor.

3. SEAT BELT TENSION SENSOR

(a) The seat belt tension sensor is installed on the front seat outer belt to detect a CRS (Child Restraint System).

Last Modified: 3-10-2010	6.4 M	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001QX401DX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: REGISTRATION (2010 Corolla)		

REGISTRATION

1. REGISTRATION

NOTICE:

- If any DTCs related to the occupant classification ECU are output, troubleshoot those DTCs by referring to Diagnostic Trouble Code Chart.
- When ECU data saving or loading operations cannot be performed, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

HINT:

- When the occupant classification ECU is replaced, the previous ECU data must be saved in the Techstream and loaded into the new ECU by following the procedure below.
- Until the data from the previous ECU are loaded into the new occupant classification ECU, these data are not cleared even when the Techstream is turned off.
- ECU EXCHANGE PROCEDURE (Before Exchange) describes the procedure to save the data in the Techstream from the occupant classification ECU installed on the vehicle. ECU EXCHANGE PROCEDURE (After Exchange) describes the procedure to load the data from the previous ECU, stored in the Techstream, into the new ECU.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Store the occupant classification ECU data in the Techstream by following the prompts on the Techstream screen.

HINT:

If the ECU data cannot be stored in the Techstream, replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor).

(d) Turn the ignition switch to ON.

(e) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Load the data from the previous ECU stored in the Techstream into the newly installed ECU by following the prompts on the Techstream screen.

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010VN041X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation.

HINT:

Perform the zero point calibration if any of the following conditions is met:

- The occupant classification ECU is replaced.
- The passenger airbag ON/OFF indicator indicates OFF when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair after an accident or a collision.

1. ZERO POINT CALIBRATION

(a) Zero point calibration procedures

(1) Check that all of the following conditions are met:

- The vehicle is parked on a flat surface.
- No objects are placed on the front passenger seat.
- The front passenger seat belt buckle switch is OFF.

(2) Adjust the seat position according to the table below.

ADJUSTMENT ITEM	POSITION
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

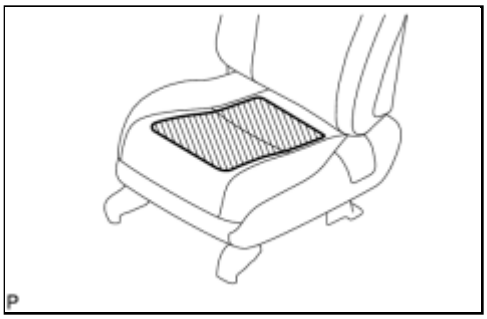
(3) Connect the Techstream to the DLC3.

(4) Turn the ignition switch to ON.

(5) Enter the following menus: Body Electrical / Occupant Detection / Utility / Zero Point Calibration.

(6) Perform the zero point calibration by following the prompts on the Techstream screen.

HINT:



- Refer to the Techstream operator's manual for further details.
- If the zero point calibration is performed when the calibration conditions are not satisfied, DTC B1797 is output.
- If the zero point calibration has failed, DTC B1797 is output.
- If After Exchange is selected before the previous ECU data are stored in the Techstream, the display screen returns to CONDITION SELECT ECU: Occupant Detect.

ITEM	PROCEDURE
DTC	Perform DTC check and repair
Write error	Replace front seat cushion assembly (with occupant classification ECU and occupant classification sensor)
Temperature	Check value of THERMISTOR TEMP in ECU DATA LIST
Pressure	Check value of FILTERED PRESS in ECU DATA LIST
Crash counter	-

2. SENSITIVITY CHECK

(a) Sensitivity check procedures

(1) Turn the ignition switch off.

(2) Place a 20 kg (44.0 lb) weight on the front passenger seat.

NOTICE:

- Do not allow the weight to come into contact with the seatback when placing it on the seat cushion.
- Place the weight in the area shown in the illustration.

(3) Turn the ignition switch to ON, and wait for at least 6 seconds.

(4) Check that the passenger airbag ON/OFF indicator indicates OFF.

OK:

The passenger airbag ON/OFF indicator indicates OFF.

(5) Add a 30 kg (66.1 lb) weight to the front passenger seat (total 50 kg (110.2 lb)).

NOTICE:

- Do not allow the weight to come into contact with the seatback when placing it on the seat cushion.
- Place the weight in the area shown in the illustration.

(6) Check that the passenger airbag ON/OFF indicator indicates ON.

OK:

The passenger airbag ON/OFF indicator indicates ON.

Last Modified: 3-10-2010	6.4 T	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010V502VX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

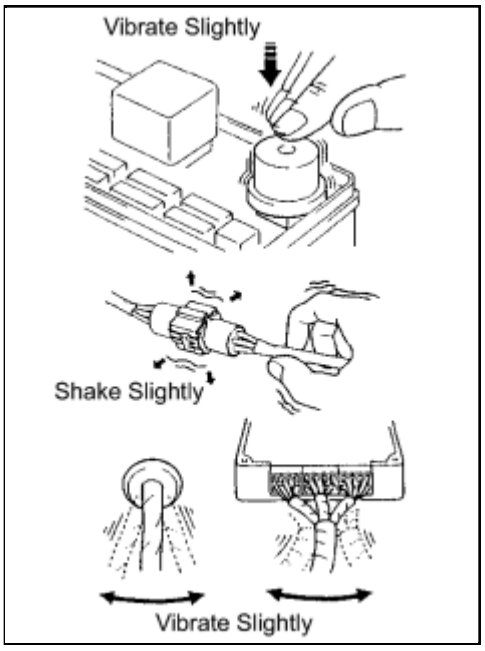
Occupant Classification System

SYMPTOM	SUSPECTED AREA	SEE PAGE
The front passenger seat condition differs from the indication by the passenger airbag ON/OFF indicator (DTC is not output).	Passenger Airbag ON/OFF Indicator	INFO

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010VJ044X
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3



(a) Check the DLC3 INFO .

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and the environment in which the problem occurred in the customer's vehicle should be simulated. No matter how experienced or skilled a technician may be, if he/she proceeds to troubleshooting without confirming the problem symptoms, he/she will likely overlook something important and make a wrong guess at some points in the repair operation.

This leads to a standstill in troubleshooting.

(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period of approximately 6 seconds after the ignition switch is turned to ON.

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

(2) Slightly shake the connector vertically and horizontally.

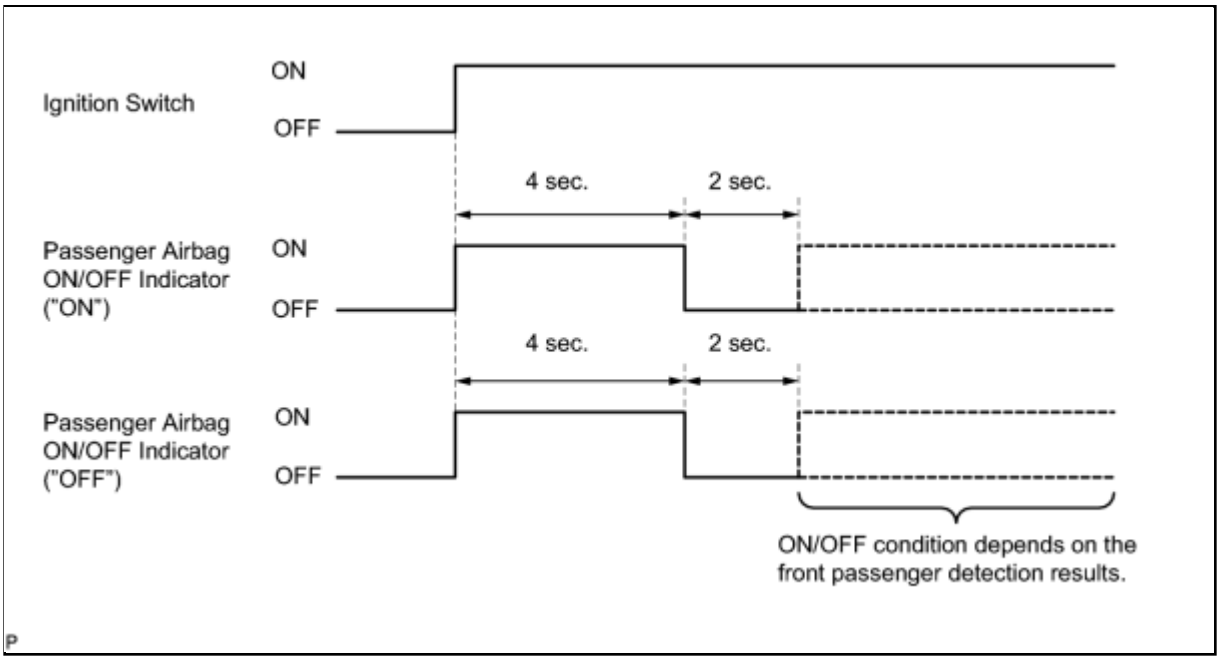
(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

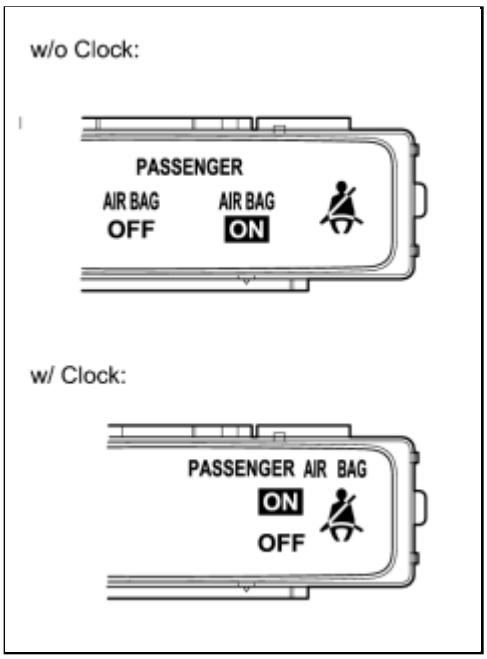
(1) Turn the ignition switch to ON.



(2) The passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

(3) Approximately 6 seconds after the ignition switch is turned to ON, the passenger airbag ON/OFF indicator will indicate ON or OFF depending on the conditions listed below.

FRONT PASSENGER SEAT CONDITION	PASSENGER AIRBAG ON/OFF INDICATOR		SRS WARNING LIGHT
	ON INDICATOR	OFF INDICATOR	
Vacant	OFF	OFF	OFF
Adult is seated.	ON	OFF	OFF
Child is seated.	OFF	ON	OFF
Child restraint system is set.	OFF	ON	OFF
Front passenger occupant classification failure	OFF	ON	ON



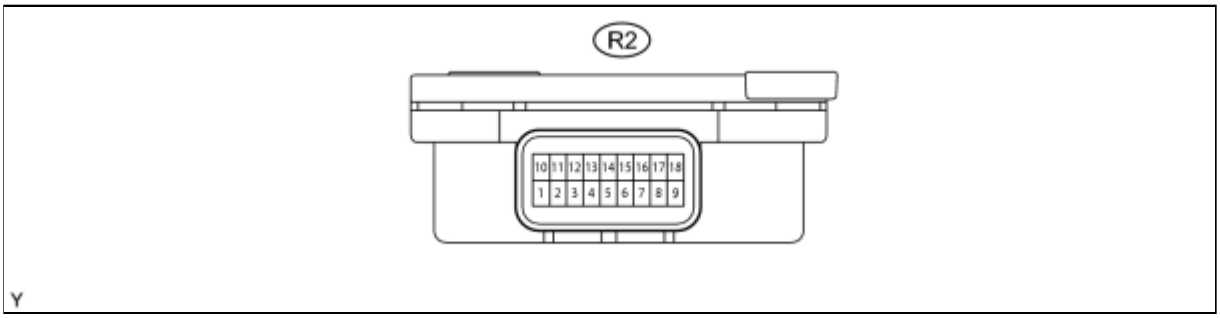
HINT:

- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in the airbag system first.

4. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the ignition switch to ON.

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.



HINT:

Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when the ignition switch is turned to ON and approximately 6 seconds pass.

Last Modified: 3-10-2010	6.4 U	**From:** 200901

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

HINT:

Use the Techstream to read and clear the DTC of the occupant classification ECU, otherwise the DTCs cannot be read or cleared.

1. DTC CHECK

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / Occupant Detection / Trouble Code.

(e) Check the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. DTC CLEAR

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / Occupant Detection / Trouble Code.

(e) Clear the DTCs by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

Last Modified: 3-10-2010	6.4 U	**From:** 200901

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and turn the Techstream on.

(d) Enter the following menus: Body Electrical / Occupant Detection / Data List.

(e) Check the values by referring to the table below.

HINT:

The Specified Condition for Zero Point Calibration in the table below must be satisfied when the zero point calibration is performed.

Data List

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	SPECIFIED CONDITION FOR ZERO POINT CALIBRATION	DIAGNOSTIC NOTE
Passenger Classification	Passenger classification/ NG: Data is not determined AM50: Adult is seated and seat is in rear position AF05: Adult is seated and seat is in front position CHILD: Child is seated OFF: Vacant	AM50/AF05/CHILD/OFF	OFF	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	SPECIFIED CONDITION FOR ZERO POINT CALIBRATION	DIAGNOSTIC NOTE
Passenger Buckle SW	Buckle switch (Passenger side)/ Set: Passenger side seat belt is fastened Unset: Passenger side seat belt is unfastened NG: Data is not determined	Unset/Set	Unset	-
Pressure Sensor Output	Pressure sensor output/ Min.: 0 Max.: 255	0 to 210	0 to 2	-
Filtered Pressure Sensor Output	Filtered pressure sensor output/ Min.: 0 Max.: 255	38 to 240	38 to 75	If value is outside range of Specified Condition for Zero Point Calibration, check whether any objects placed on seat cushion and that seat cushion fitted correctly.
Thermistor Temperature Output	Thermistor temperature output/ Min.: -40°C (-40°F) Max.: 90°C (194°F)	-40 to 85°C (-40 to 185°F)	3 to 40°C (37 to 104°F)	If value is outside range of Specified Condition for Zero Point Calibration, adjust temperature to proper range by using air conditioner, etc.
Weight Threshold	Weight threshold/ Min.: 0 Max.: 255	36 to 67 (reference value)	36 to 67 (reference value)	-
Filtered Belt Tension Output	Filtered belt tension output/ Min.: 0 Max.: 255	39 to 229	39 to 64 (no load)	-
Empty Threshold Value from the Seat Factory	Empty threshold value from seat factory/ Min.: 0 Max.: 255	38 to 75	38 to 75	-
Allow Threshold	Threshold value for adult passenger or	43 to 64 (reference	43 to 64 (reference value)	-

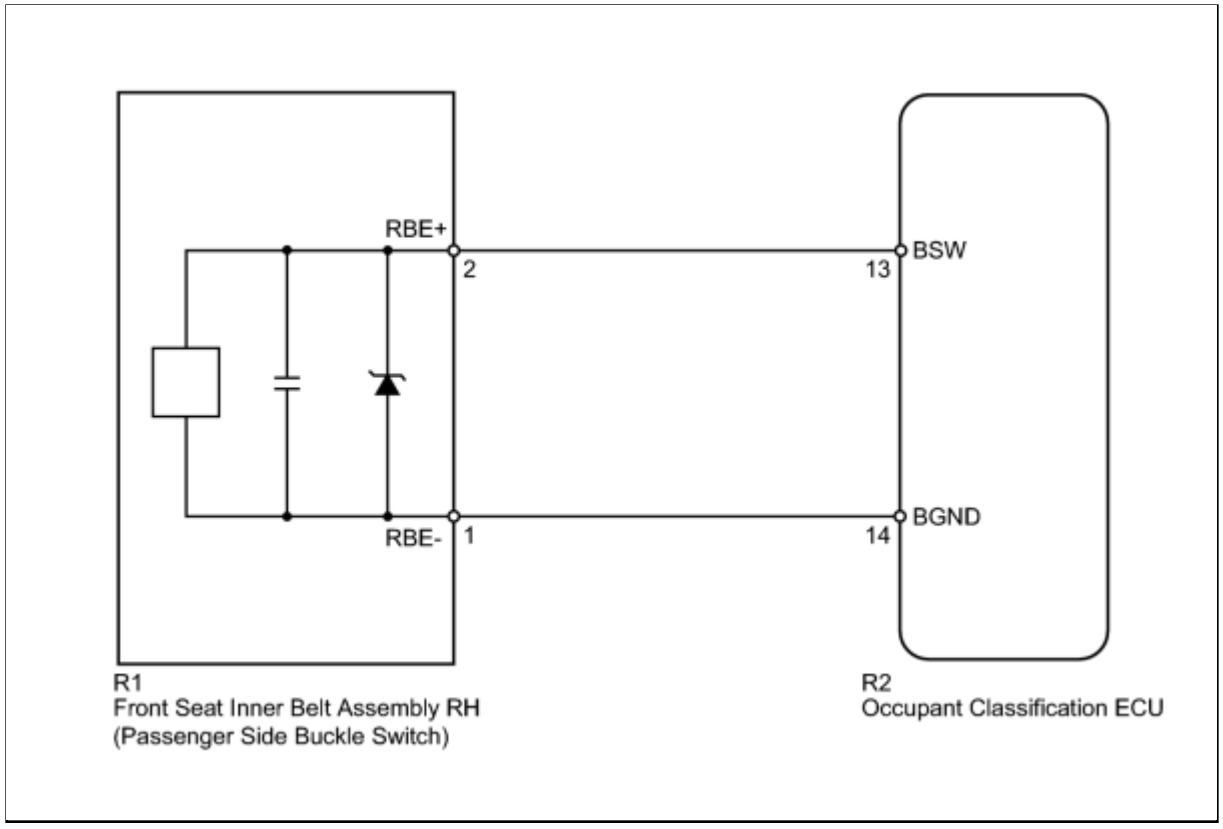
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1771: Passenger Side Buckle Switch Circuit Malfunction (2010 Corolla)		

DTC	**B1771**	**Passenger Side Buckle Switch Circuit Malfunction**

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.



DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1771	• The occupant classification ECU receives a short circuit signal, open circuit signal and short circuit to ground signal or a short circuit to B+ signal in passenger side buckle switch circuit for 2 seconds • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat inner belt assembly RH (Passenger side buckle switch) • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1771 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to access the underside of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may damage the seat or deform the seat rails. Hold the seat only as necessary.

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.

OK:

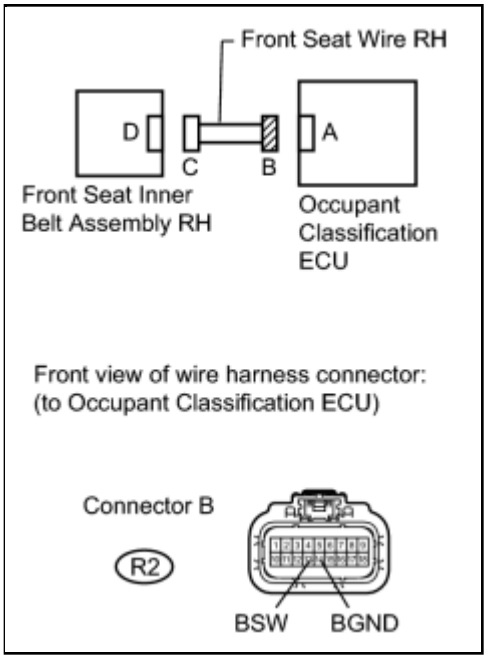
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

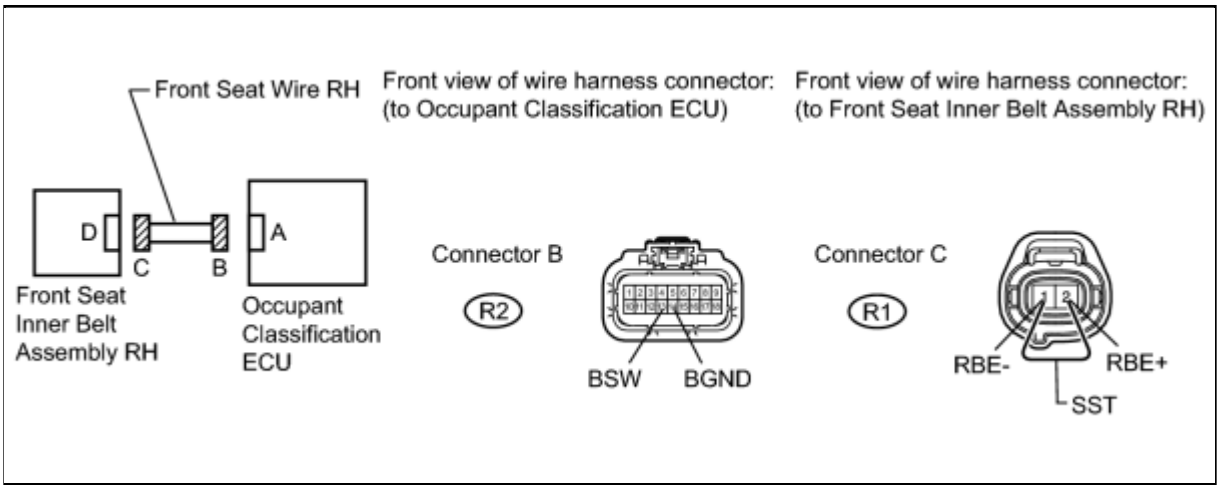
2.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-13 (BSW) - Body ground	Ignition switch ON	Below 1 V
R2-14 (BGND) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK

3.	CHECK FRONT SEAT WIRE RH (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

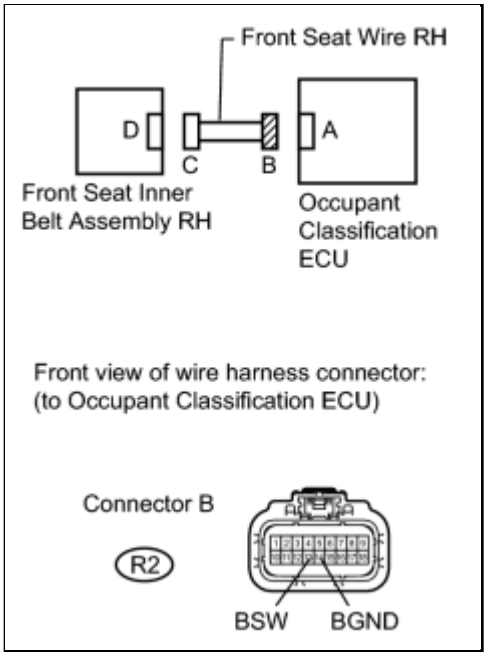
(c) Using SST, connect terminals 2 (RBE+) and 1 (RBE-) of connector C.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-13 (BSW) - R2-14 (BGND)	Always	Below 1 Ω

NG **REPLACE FRONT SEAT WIRE RH**

OK

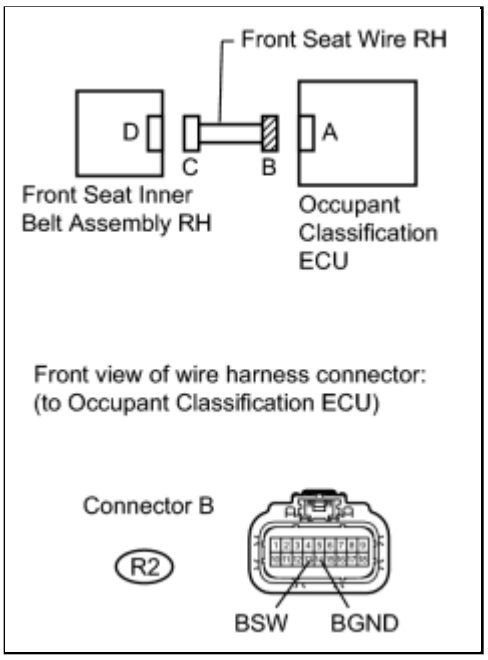
4.	CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)

(a) Disconnect SST wire from connector C.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-13 (BSW) - Body ground	Always	1 MΩ or higher
R2-14 (BGND) - Body ground	Always	1 MΩ or higher



NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

5.	CHECK FRONT SEAT WIRE RH (SHORT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-13 (BSW) - R2-14 (BGND)	Always	1 MΩ or higher

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

6.	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON.

(d) Clear the DTCs stored in the occupant classification ECU INFO .

(e) Clear the DTCs stored in the center airbag sensor assembly INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON.

(h) Check for DTCs INFO .

OK:

DTC B1771 is not output.

HINT:

Codes other than B1771 may be output at this time, but they are not related to this check.

NG ▶ INSPECT FRONT SEAT INNER BELT ASSEMBLY RH

OK ▶ USE SIMULATION METHOD TO CHECK

7.	INSPECT FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the front seat inner belt assembly RH with a known good part INFO .

HINT:

Perform an inspection using known good parts from another vehicle if possible.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

(g) Clear the DTCs stored in the center airbag sensor assembly INFO .

(h) Turn the ignition switch off.

(i) Turn the ignition switch to ON.

(j) Check for DTCs INFO .

OK:

DTC B1771 is not output.

HINT:

Codes other than B1771 may be output at this time, but they are not related to this check.

NG ▶ REPLACE OCCUPANT CLASSIFICATION ECU

OK ▶ END

8.	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, save the ECU data from the ECU currently installed on the vehicle INFO .

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, load the previous ECU data stored into the new ECU INFO .

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

9.	**PERFORM SENSITIVITY CHECK**

(a) Perform the sensitivity check INFO .

NEXT **END**

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1773,B1776: Belt Tension Sensor Circuit Malfunction (2010 Corolla)		

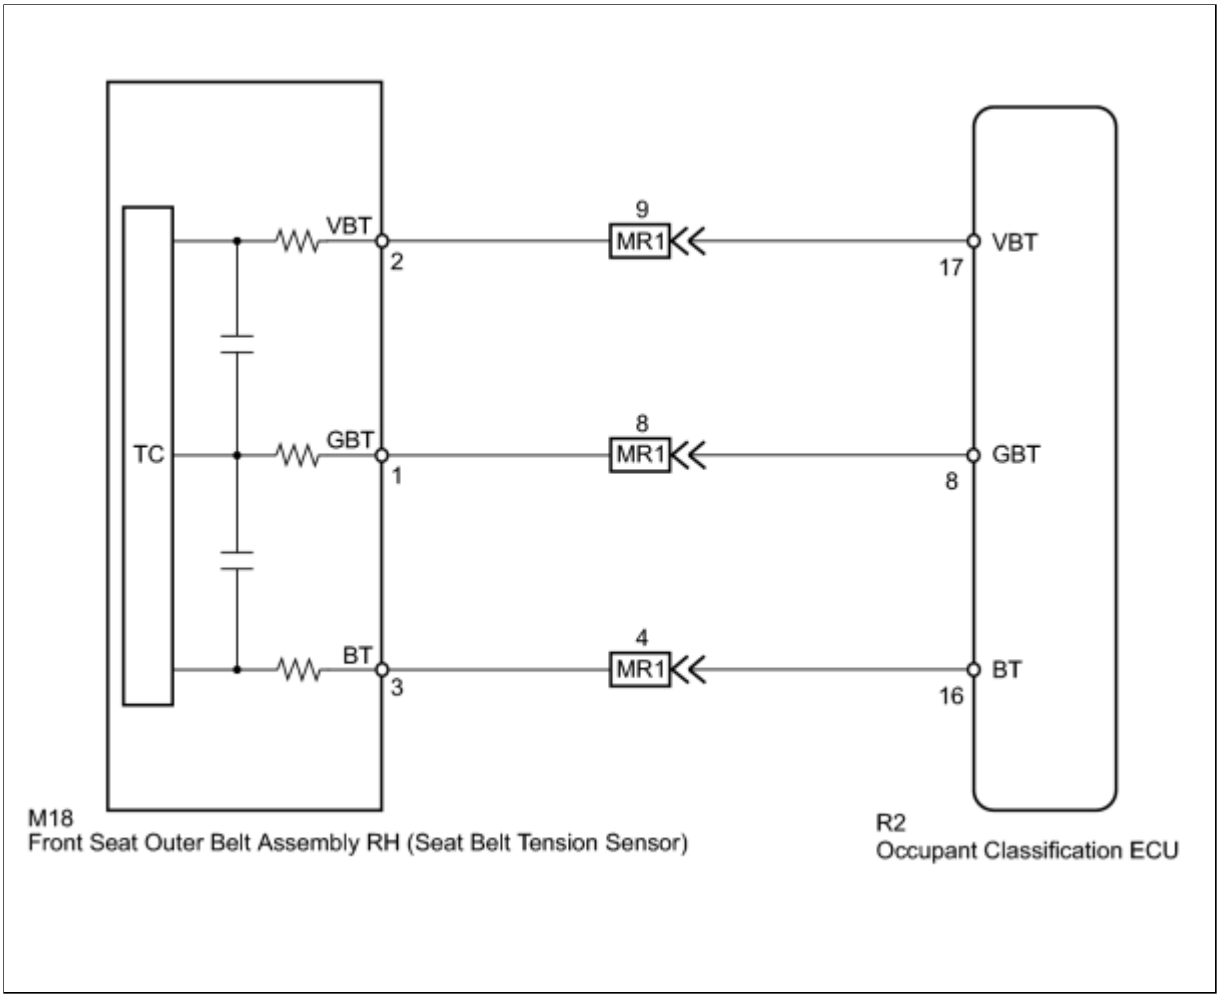
DTC	**B1773**	**Belt Tension Sensor Circuit Malfunction**

DTC	**B1776**	**Seat Belt Tension Sensor Power Source Circuit Malfunction**

DESCRIPTION

The seat belt tension sensor circuit consists of the occupant classification ECU and the seat belt tension sensor.

The seat belt tension sensor sends the seat belt tension signal to the occupant classification ECU.



DTC B1773 and B1776 are recorded when a malfunction is detected in the seat belt tension sensor circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1773 B1776	• The occupant classification ECU receives a short circuit signal, open circuit signal and short circuit to ground signal or a short circuit to B+ signal in the seat belt tension sensor circuit for 2 seconds. • Seat belt tension sensor malfunction • Occupant classification ECU malfunction	• No. 2 floor wire • Front seat wire RH • Front seat outer belt assembly RH (Seat belt tension sensor) • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1773 and B1776 are output, perform troubleshooting for those DTCs.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the passenger seat installation bolts to access the underside of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may damage the seat or deform the seat rails. Hold the seat only as necessary.

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the occupant classification ECU and the seat belt tension sensor.

OK:

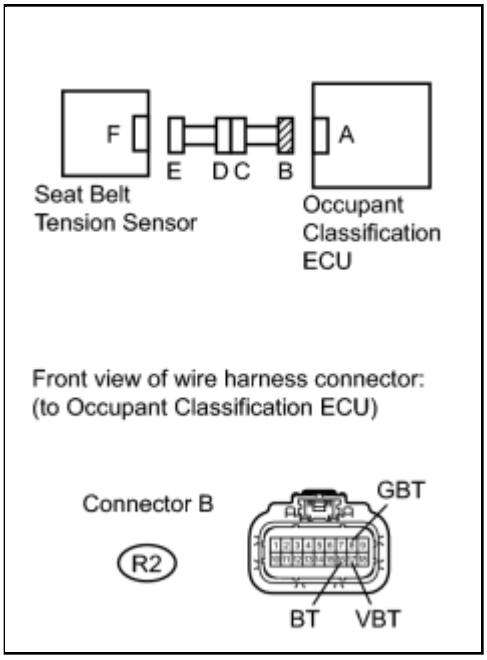
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and the seat belt tension sensor.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

2.	CHECK SEAT BELT TENSION SENSOR CIRCUIT (SHORT TO B+)

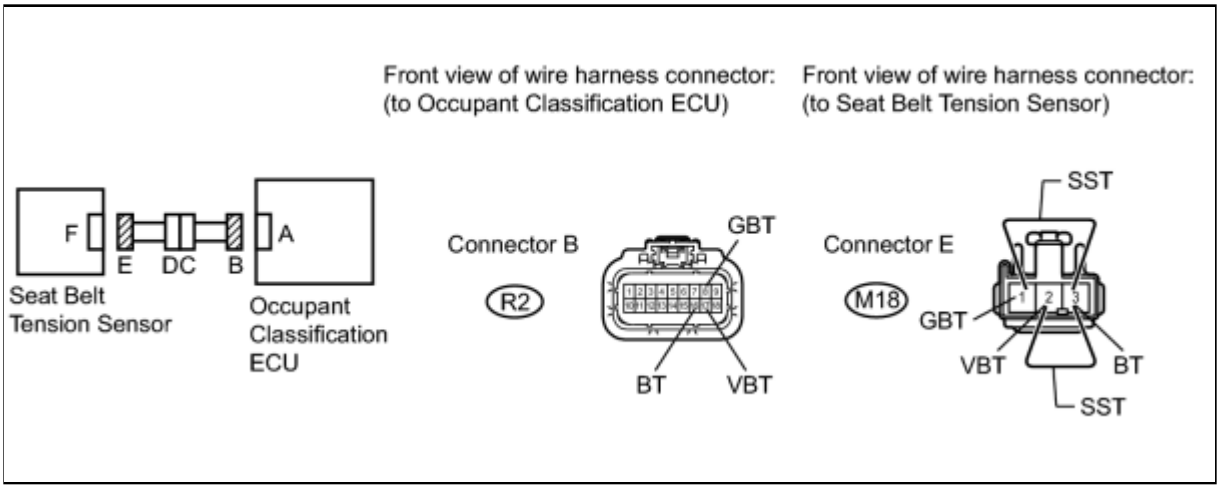
(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-8 (GBT) - Body ground	Ignition switch ON	Below 1 V



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-16 (BT) - Body ground	Ignition switch ON	Below 1 V
R2-17 (VBT) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK FRONT SEAT WIRE RH (SHORT TO B+)**

OK ▼

3.	CHECK SEAT BELT TENSION SENSOR CIRCUIT (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Using SST, connect terminals 1 (GBT) and 3 (BT), and connect terminals 2 (VBT) and 3 (BT) of connector E.

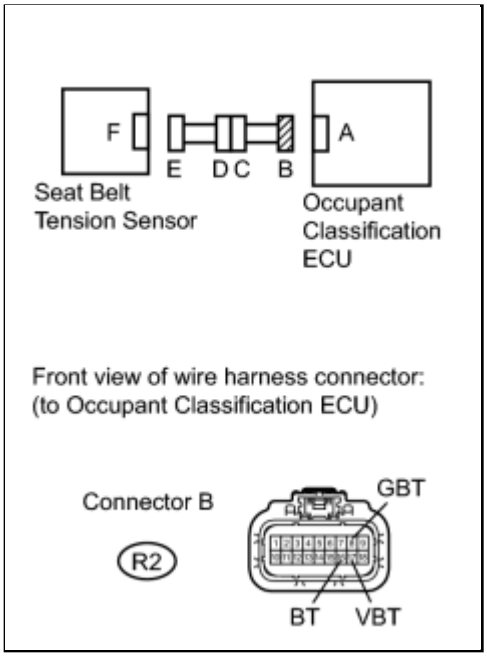
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-16 (BT) - R2-8 (GBT)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-17 (VBT) - R2-16 (BT)	Always	Below 1 Ω

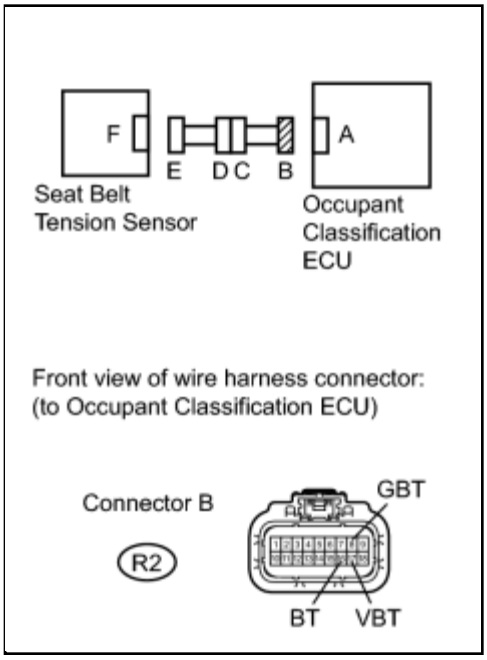
NG ▶ CHECK FRONT SEAT WIRE RH (OPEN)

OK ▼

4.	CHECK SEAT BELT TENSION SENSOR CIRCUIT (SHORT TO GROUND)

(a) Disconnect SST from connector E.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-8 (GBT) - Body ground	Always	1 MΩ or higher
R2-16 (BT) - Body ground	Always	1 MΩ or higher
R2-17 (VBT) - Body ground	Always	1 MΩ or higher

NG ▶ CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)

OK

5.	CHECK SEAT BELT TENSION SENSOR CIRCUIT (SHORT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-16 (BT) - R2-8 (GBT)	Always	1 MΩ or higher
R2-17 (VBT) - R2-16 (BT)	Always	1 MΩ or higher

NG ▶ **CHECK FRONT SEAT WIRE RH (SHORT)**

OK

6.	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the seat belt tension sensor.

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON.

(d) Clear the DTCs stored in the occupant classification ECU INFO .

(e) Clear the DTCs stored in the center airbag sensor assembly INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON.

(h) Check for DTCs INFO .

OK:
DTC B1773 and B1776 are not output.

HINT:

Codes other than B1773 and B1776 may be output at this time, but they are not related to this check.

NG ▶ **INSPECT FRONT SEAT OUTER BELT ASSEMBLY RH**

OK ▶ **USE SIMULATION METHOD TO CHECK**

7.	INSPECT FRONT SEAT OUTER BELT ASSEMBLY RH

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the front seat outer belt assembly RH with a known good part INFO .

HINT:

Perform an inspection using known good parts from another vehicle if possible.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

(g) Clear the DTCs stored in the center airbag sensor assembly INFO .

(h) Turn the ignition switch off.

(i) Turn the ignition switch to ON.

(j) Check the DTCs INFO .

OK:
DTC B1773 and B1776 are not output.

HINT:

Codes other than B1773 and B1776 may be output at this time, but they are not related to this check.

OK ▶ **REPLACE OCCUPANT CLASSIFICATION ECU**

NG ▶ **END**

8.	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, save the ECU data from the ECU currently installed on the vehicle INFO .

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, load the previous ECU data stored into the new ECU INFO .

(j) Turn the ignition switch off.

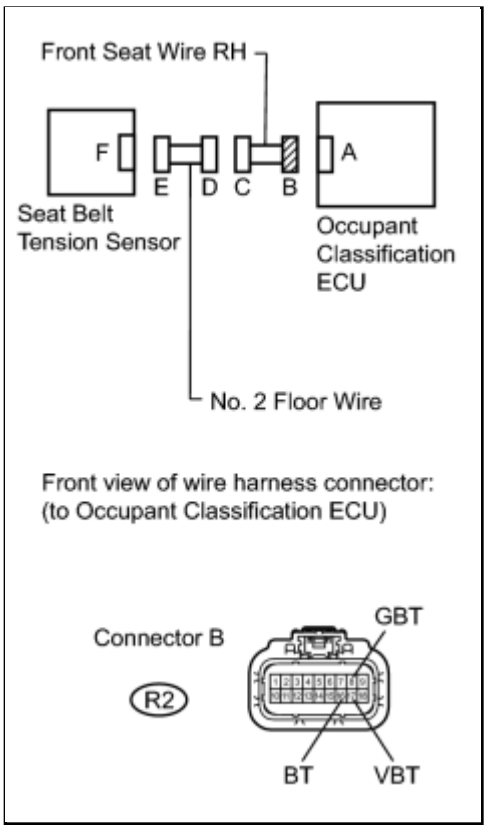
(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT



9.	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check INFO .

NEXT **END**

10.	CHECK FRONT SEAT WIRE RH (SHORT TO B+)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

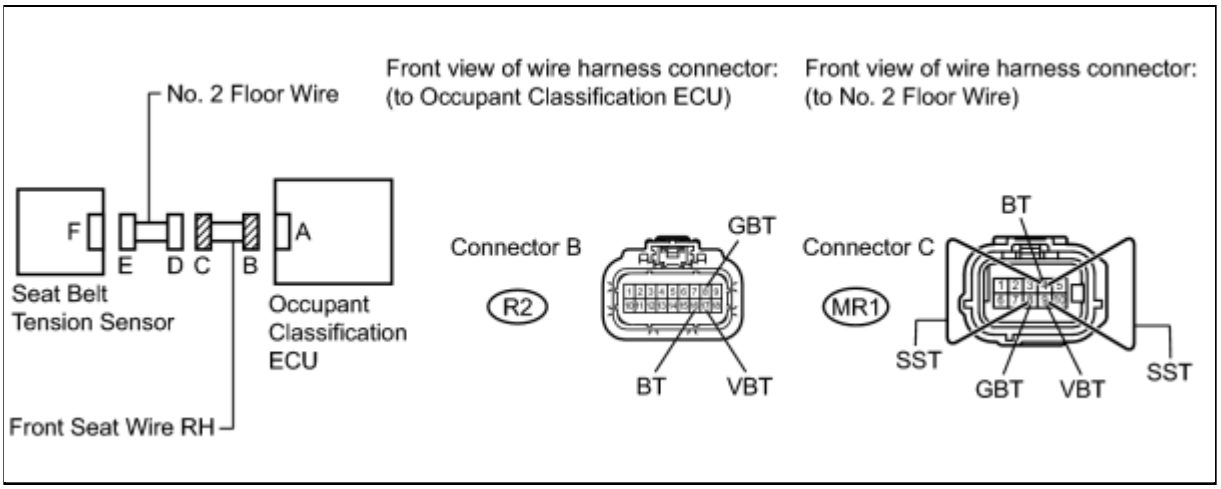
(c) Disconnect the No. 2 floor wire connector from the front seat wire RH.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-8 (GBT) - Body ground	Ignition switch ON	Below 1 V
R2-16 (BT) - Body ground	Ignition switch ON	Below 1 V
R2-17 (VBT) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▶ **REPLACE NO. 2 FLOOR WIRE**

11.	**CHECK FRONT SEAT WIRE RH (OPEN)**

(a) Disconnect the No. 2 floor wire connector from the front seat wire RH.

(b) Using SST, connect terminals 4 (BT) and 8 (GBT), and connect terminals 4 (BT) and 9 (VBT) of connector C.

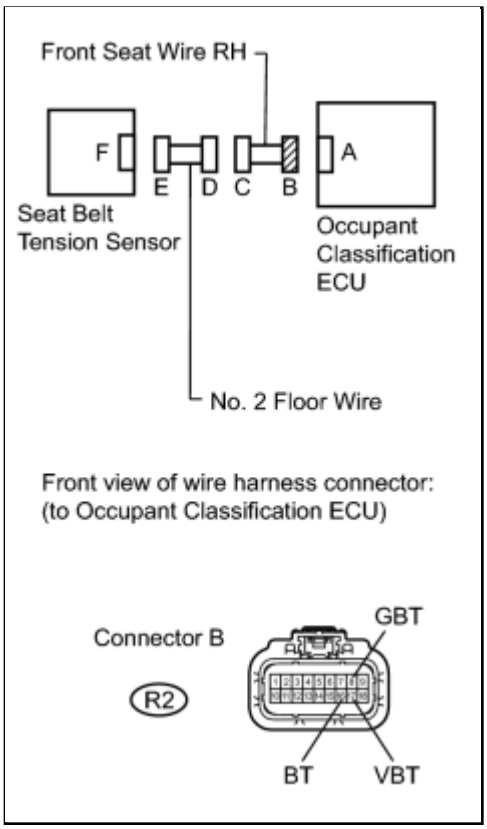
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-16 (BT) - R2-8 (GBT)	Always	Below 1 Ω
R2-16 (BT) - R2-17 (VBT)	Always	Below 1 Ω

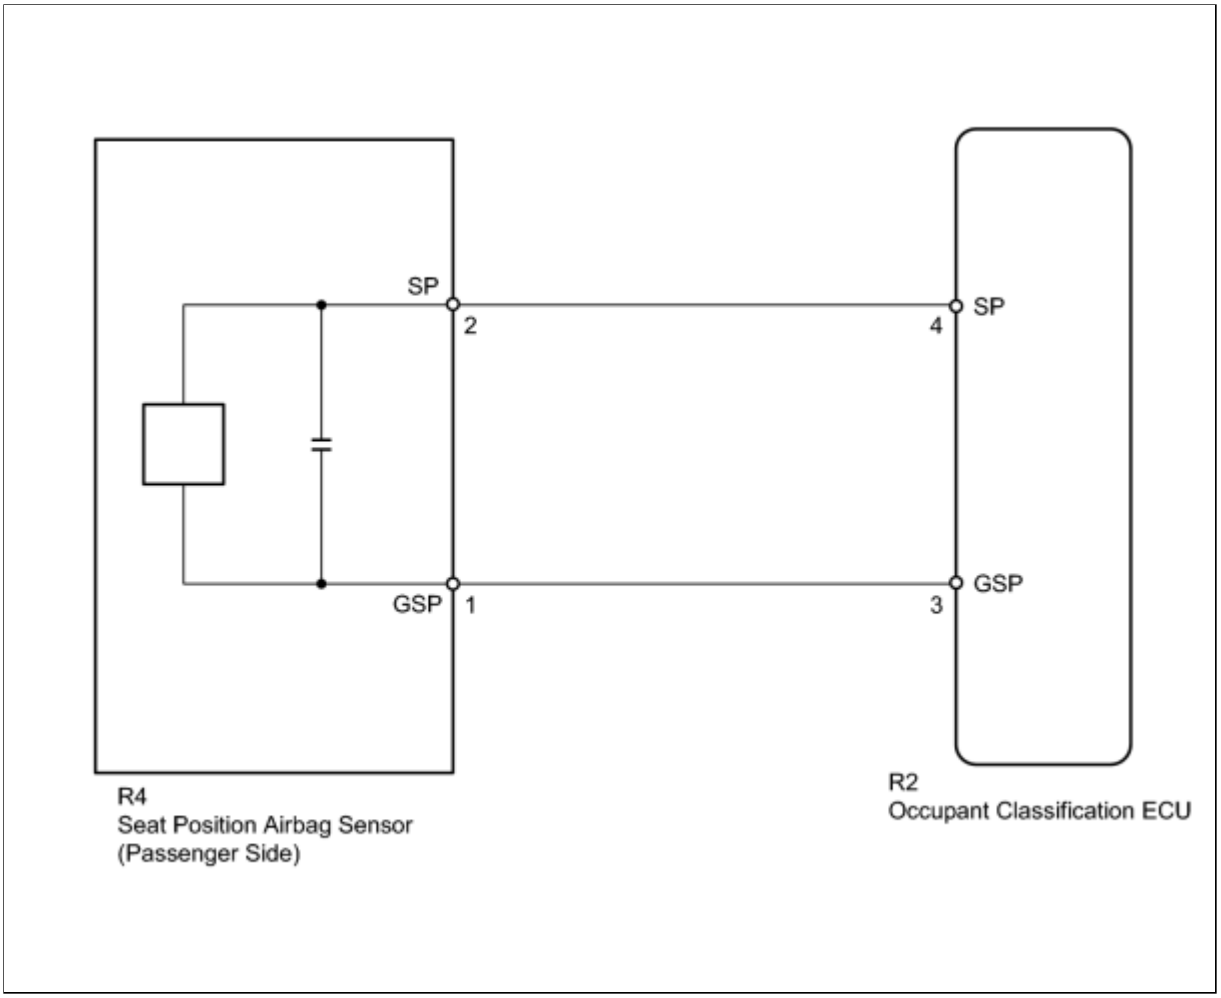
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1772: Seat Position Sensor Circuit Malfunction (2010 Corolla)		

DTC	**B1772**	**Seat Position Sensor Circuit Malfunction**

DESCRIPTION

The seat position sensor circuit consists of the occupant classification ECU and the seat position airbag sensor (passenger side).

The seat position airbag sensor sends the seat position signal to the occupant classification ECU to control the dual stage deployment of the front passenger airbag.



DTC B1772 is recorded when a malfunction is detected in the seat position sensor circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1772	• Occupant classification ECU receives a short circuit signal, open circuit signal and short circuit to ground signal or short circuit to B+ signal in seat position sensor circuit for 2 seconds. • Seat position airbag sensor (Passenger side) malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Seat position airbag sensor (Passenger side) • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU, and perform troubleshooting for those DTCs first.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the passenger seat installation bolts to access the underside of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat up for a long period of time may damage the seat or deform the seat rails. Hold the seat up only for as long as necessary.

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the occupant classification ECU and the seat position airbag sensor (passenger side).

OK:

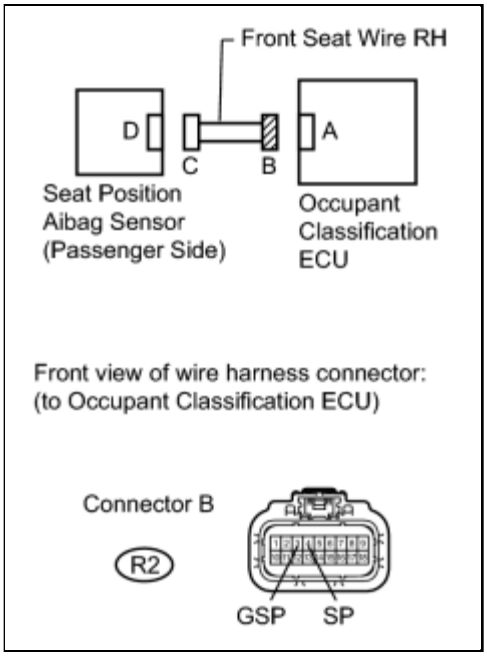
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and the seat position airbag sensor (passenger side).

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

2.	**CHECK FRONT SEAT WIRE RH (SHORT TO B+)**

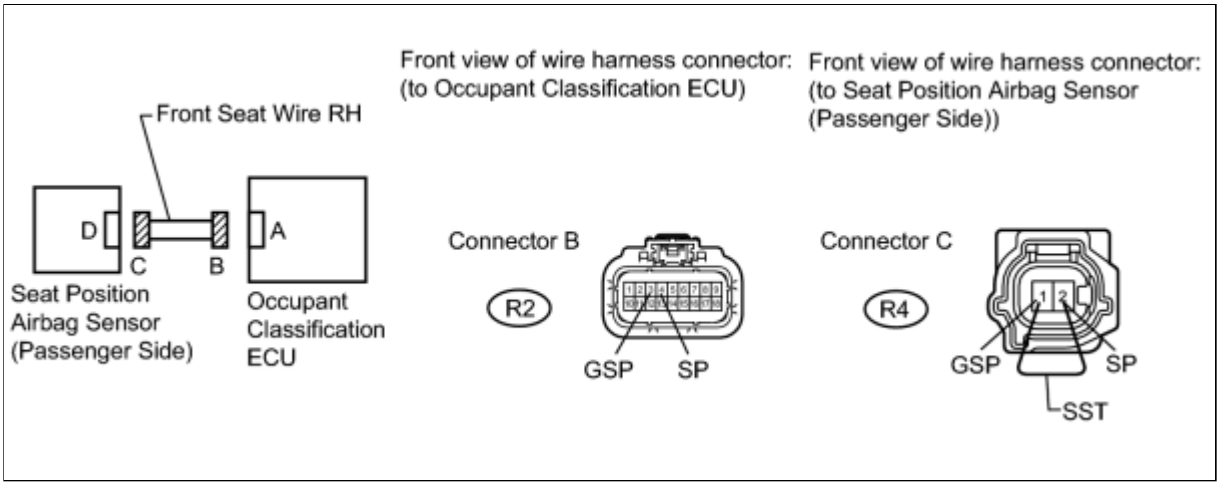
(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-4 (SP) - Body ground	Ignition switch ON	Below 1 V
R2-3 (GSP) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

3.	CHECK FRONT SEAT WIRE RH (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

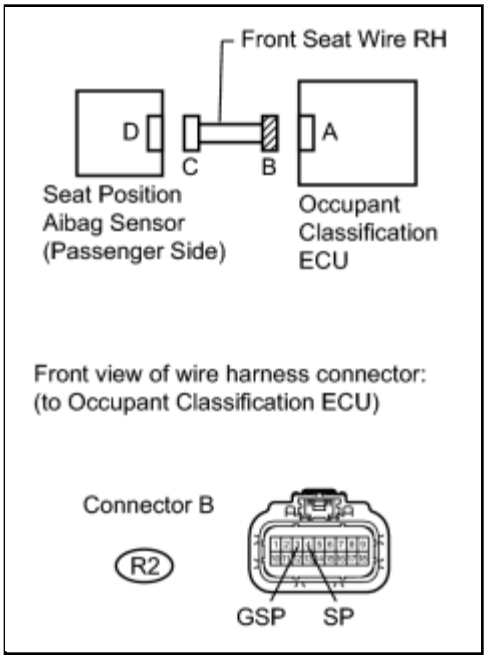
(c) Using SST, connect terminals 2 (SP) and 1 (GSP) of connector C.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-4 (SP) - R2-3 (GSP)	Always	Below 1 Ω

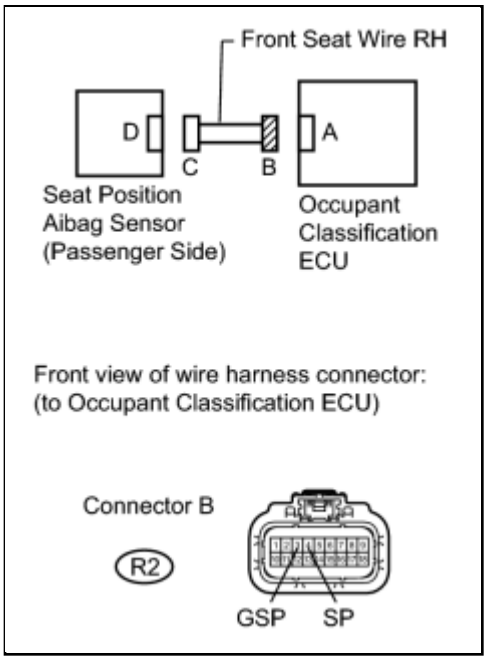
NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK

4.	**CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)**

(a) Disconnect SST from connector C.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-4 (SP) - Body ground	Always	1 MΩ or higher
R2-3 (GSP) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK

5.	**CHECK FRONT SEAT WIRE RH (SHORT)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-4 (SP) - R2-3 (GSP)	Always	1 MΩ or higher

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

6.	**CHECK FOR DTC**

(a) Connect the connectors to the occupant classification ECU and the seat position airbag sensor (passenger side).

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON.

(d) Clear the DTCs stored in the occupant classification ECU INFO .

(e) Clear the DTCs stored in the center airbag sensor assembly INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON.

(h) Check for DTCs INFO .

OK:

DTC B1772 is not output.

HINT:

DTCs other than B1772 may be output at this time, but they are not related to this check.

NG ▶ **INSPECT SEAT POSITION AIRBAG SENSOR (PASSENGER SIDE)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

7.	INSPECT SEAT POSITION AIRBAG SENSOR (PASSENGER SIDE)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the seat position airbag sensor with a known good part (passenger side) INFO .

HINT:

- Perform an inspection using known good parts from another vehicle if possible.
- The seat position airbag sensor is installed on the driver side.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

(g) Clear the DTCs stored in the center airbag sensor assembly INFO .

(h) Turn the ignition switch off.

(i) Turn the ignition switch to ON.

(j) Check for DTCs INFO .

OK:
DTC B1772 is not output.

HINT:

DTCs other than B1772 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE OCCUPANT CLASSIFICATION ECU**

OK ▶ **END**

8.	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, save the ECU data from the ECU currently installed on the vehicle INFO .

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, load the previous ECU data stored into the new ECU INFO .

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

9.	**PERFORM SENSITIVITY CHECK**

(a) Perform the sensitivity check INFO .

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1774,B1775: Pressure Sensor Circuit Malfunction (2010 Corolla)		

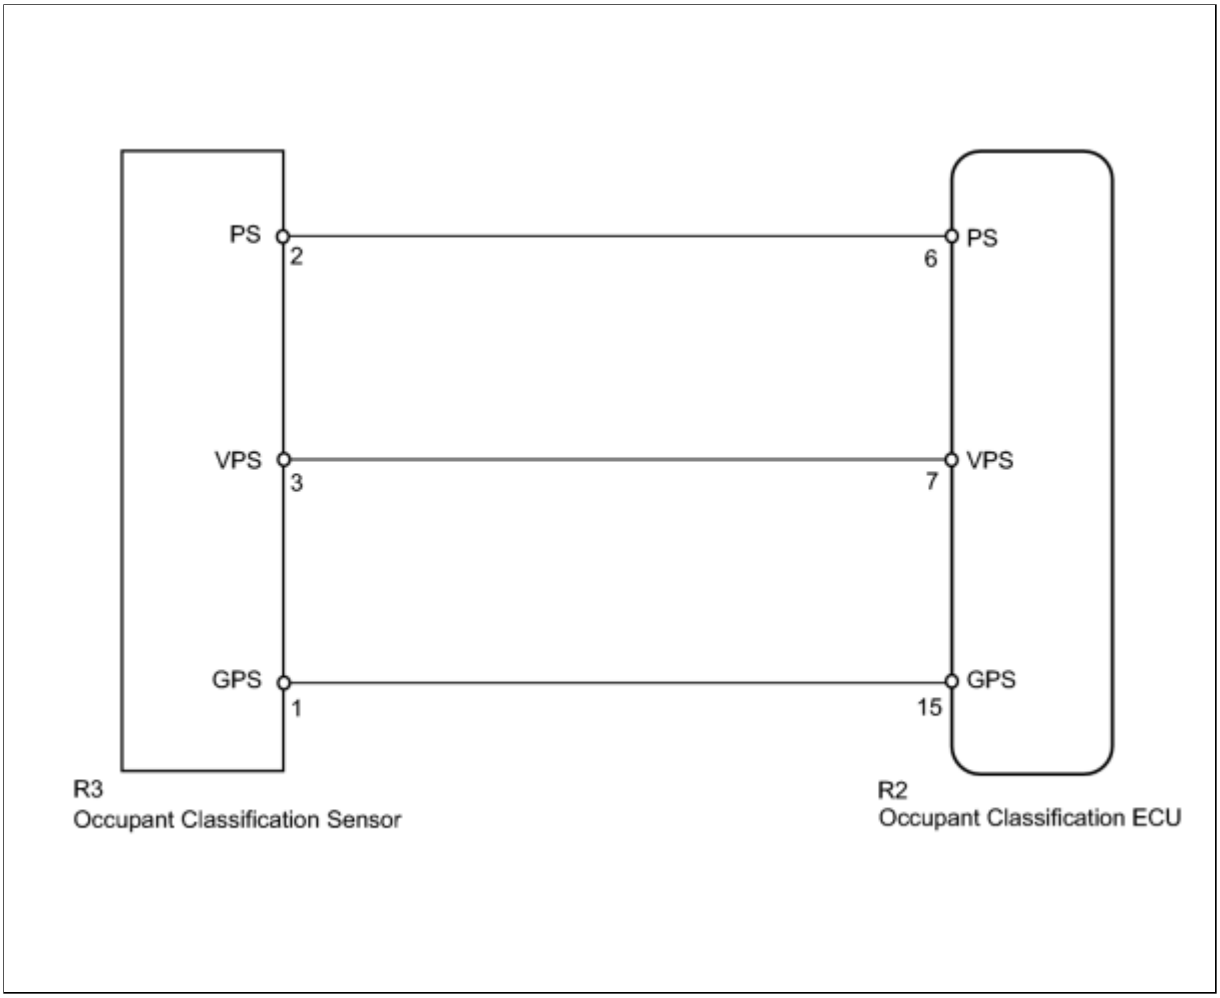
DTC	**B1774**	**Pressure Sensor Circuit Malfunction**

DTC	**B1775**	**Pressure Sensor Power Source Circuit Malfunction**

DESCRIPTION

The pressure sensor circuit consists of the occupant classification ECU and the occupant classification sensor.

The occupant classification sensor sends the pressure signal to the occupant classification ECU.



DTC B1774 and B1775 are recorded when a malfunction is detected in the pressure sensor circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1774 B1775	• The occupant classification ECU receives a short circuit signal, open circuit signal and short circuit to ground signal or a short circuit to B+ signal in the pressure sensor circuit for 2 seconds. • Occupant classification sensor malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Occupant classification sensor • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1774 and B1775 are output, perform troubleshooting for those DTCs.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the passenger seat installation bolts to access the underside of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may damage the seat and deform the seat rails. Hold the seat only as necessary.
- After performing the zero point calibration, check for DTCs to confirm that the calibration is completed normally. (If it fails, DTC B1797 will be output.)

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensor.

OK:

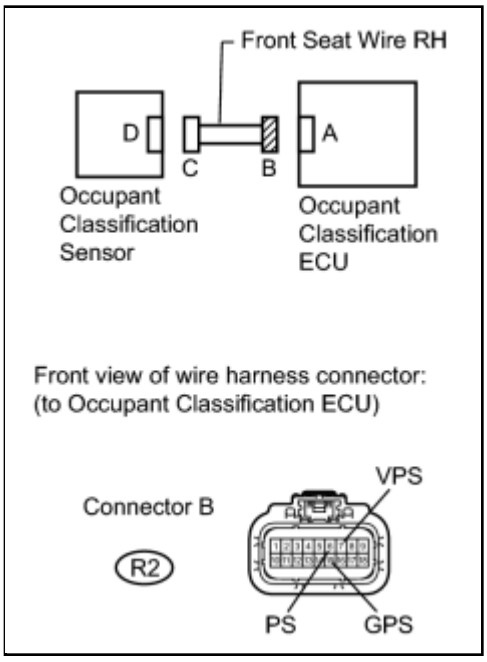
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

2.	**CHECK FRONT SEAT WIRE RH (SHORT TO B+)**

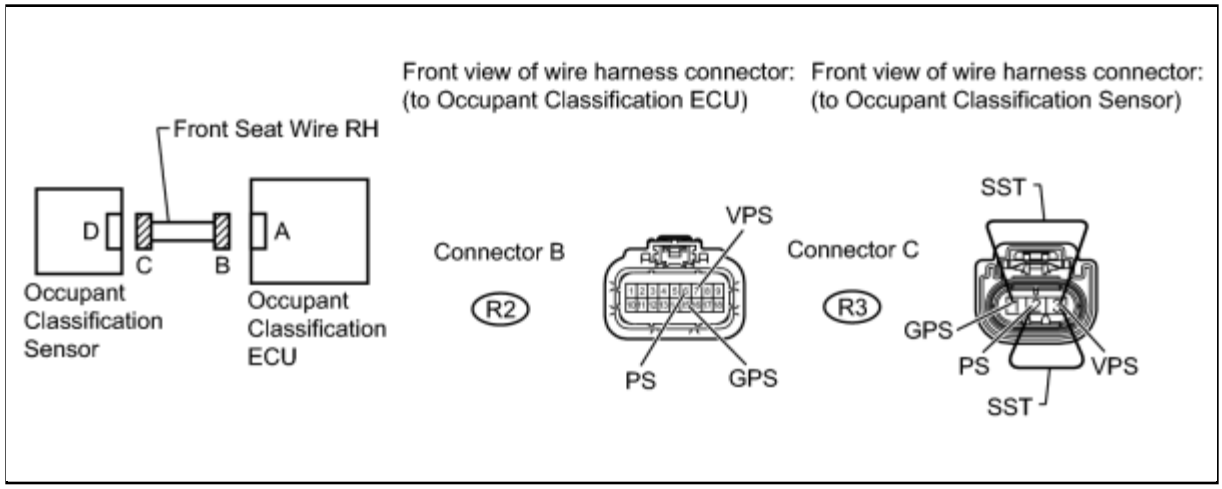
(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-6 (PS) - Body ground	Ignition switch ON	Below 1 V
R2-7 (VPS) - Body ground	Ignition switch ON	Below 1 V
R2-15 (GPS) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

3.	CHECK FRONT SEAT WIRE RH (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Using SST, connect terminals 1 (GPS) and 3 (VPS), and connect terminals 2 (PS) and 3 (VPS) of connector C.

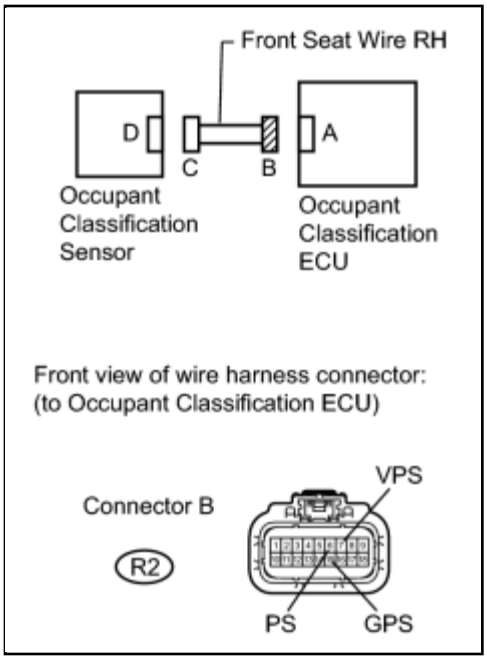
NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-6 (PS) - R2-7 (VPS)	Always	Below 1 Ω
R2-7 (VPS) - R2-15 (GPS)	Always	Below 1 Ω

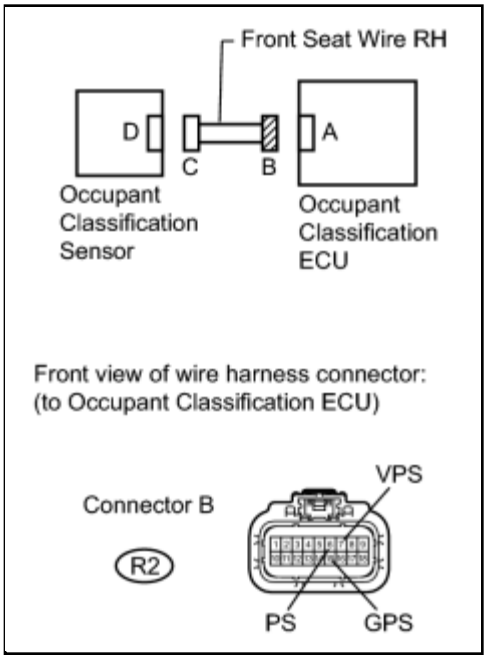
NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

4.	**CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)**

(a) Disconnect SST from connector C.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-6 (PS) - Body ground	Always	1 MΩ or higher
R2-7 (VPS) - Body ground	Always	1 MΩ or higher
R2-15 (GPS) - Body ground	Always	1 MΩ or higher

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK

5.	CHECK FRONT SEAT WIRE RH (SHORT)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-6 (PS) - R2-15 (GPS)	Always	1 MΩ or higher
R2-7 (VPS) - R2-15 (GPS)	Always	1 MΩ or higher

NG **REPLACE FRONT SEAT WIRE RH**

OK

6.	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the occupant classification sensor.

(b) Connect the cable to the negative (-) battery terminal.

(c) Turn the ignition switch to ON.

(d) Clear the DTCs stored in the occupant classification ECU INFO .

(e) Clear the DTCs stored in the center airbag sensor assembly INFO .

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON.

(h) Check for DTCs INFO .

OK:
DTCs B1774 and B1775 are not output.

HINT:

Codes other than B1774 and B1775 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE OCCUPANT CLASSIFICATION SENSOR (FRONT SEAT CUSHION ASSEMBLY)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

7.	REPLACE OCCUPANT CLASSIFICATION SENSOR (FRONT SEAT CUSHION ASSEMBLY)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor) with a known good part INFO .

HINT:

Perform an inspection using known good parts from another vehicle if possible.

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

(g) Clear the DTCs stored in the center airbag sensor assembly INFO .

(h) Turn the ignition switch off.

(i) Turn the ignition switch to ON.

(j) Check for DTCs INFO .

OK:
DTC B1774 and B1775 are not output.

HINT:

Codes other than B1774 and B1775 may be output at this time, but they are not related to this check.

NEXT

8.	PERFORM ZERO POINT CALIBRATION

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, perform the zero point calibration INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

9.	CHECK FOR DTC

HINT:

Check that the zero point calibration is completed normally. If either of the following conditions is met, DTC B1797 will be output (Refer to Initialization: INFO):

- Zero point calibration is performed when the conditions for the calibration are not satisfied.
- Zero point calibration has failed.

(a) Turn the ignition switch to ON.

(b) Clear the DTCs stored in the occupant classification ECU INFO .

(c) Clear the DTCs stored in the center airbag sensor assembly INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

(f) Check for DTCs INFO .

OK:

DTC B1797 is not output.

NG ▶ **GO TO DTC B1797**

OK ▼

10.	**PERFORM SENSITIVITY CHECK**

(a) Perform the sensitivity check INFO .

NEXT ▶ **END**

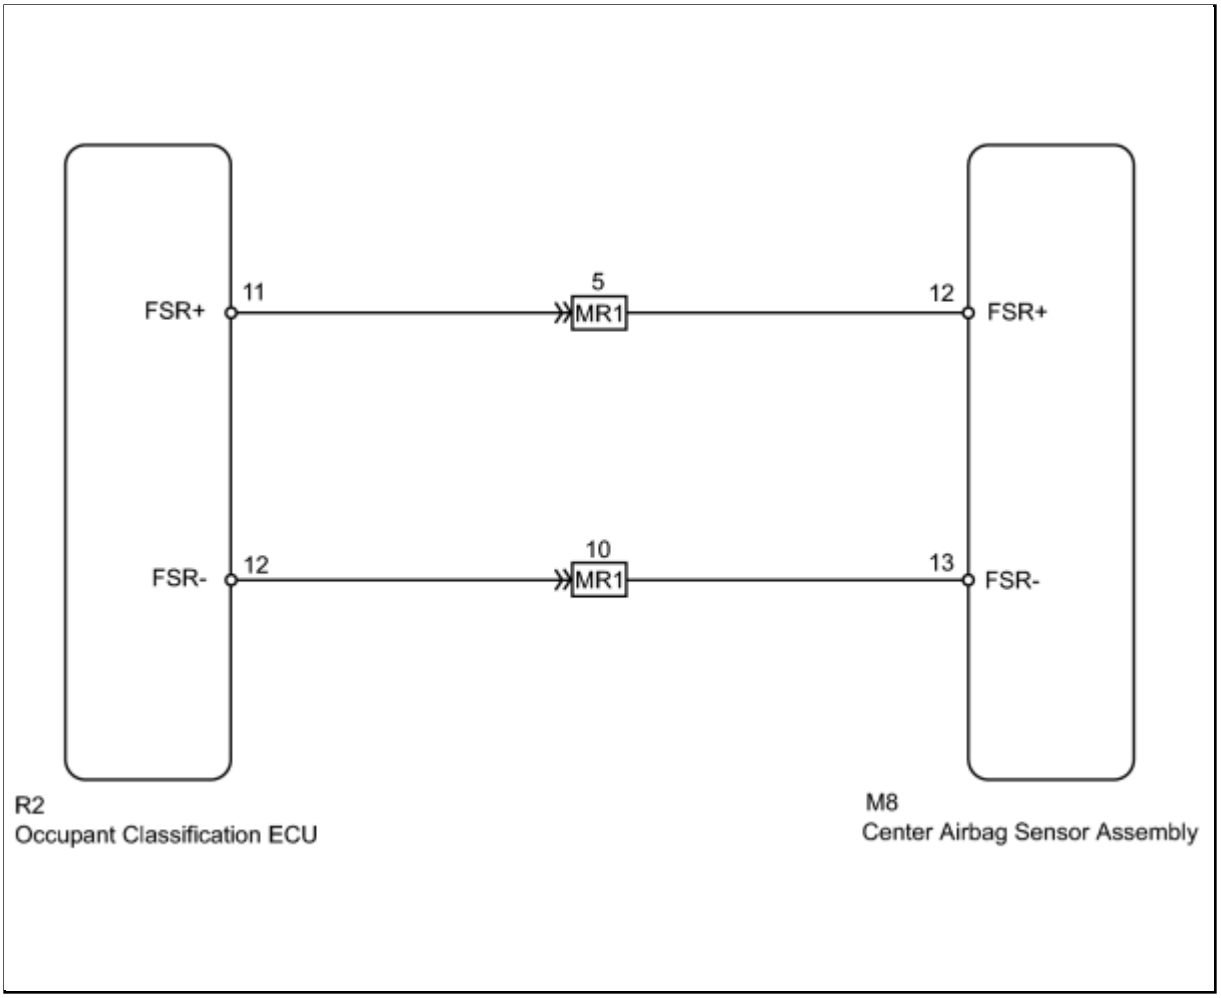
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1790: Center Airbag Sensor Assembly Communication Circuit Malfunction (2010 Corolla)		

DTC	**B1790**	**Center Airbag Sensor Assembly Communication Circuit Malfunction**

DESCRIPTION

The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.



DTC B1790 is recorded when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1790	• The occupant classification ECU receives a short circuit signal, an open circuit signal and short circuit to ground signal or a short circuit to B+ signal in the center airbag sensor assembly communication circuit for 2 seconds. • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• No. 2 floor wire • Front seat wire RH • Occupant classification ECU • Center airbag sensor assembly

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1790 is output, perform troubleshooting for the DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to access the underside of the seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may damage the seat or deform the seat rails. Hold the seat only as necessary.

PROCEDURE

1.	**CHECK CONNECTORS**

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.

OK:

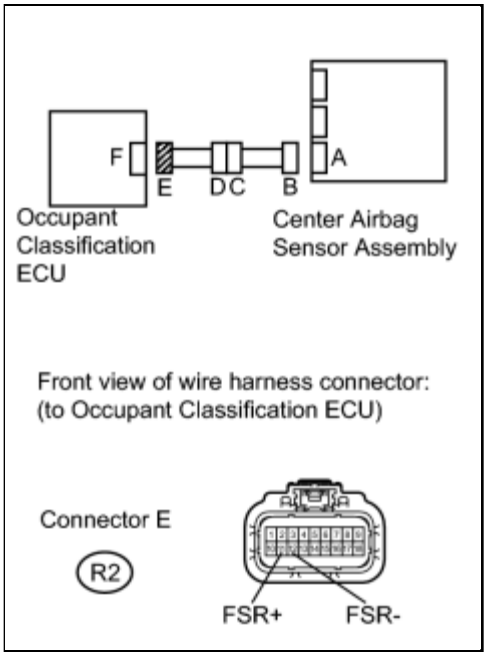
The connectors are properly connected.

HINT:

If the connectors are not connected securely, reconnect the connectors and proceed to the next inspection.

(d) Disconnect the connectors from the center airbag sensor assembly and the occupant classification ECU.

(e) Check that the terminals of the connectors are not damaged.



OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE WIRE HARNESS**

OK ▼

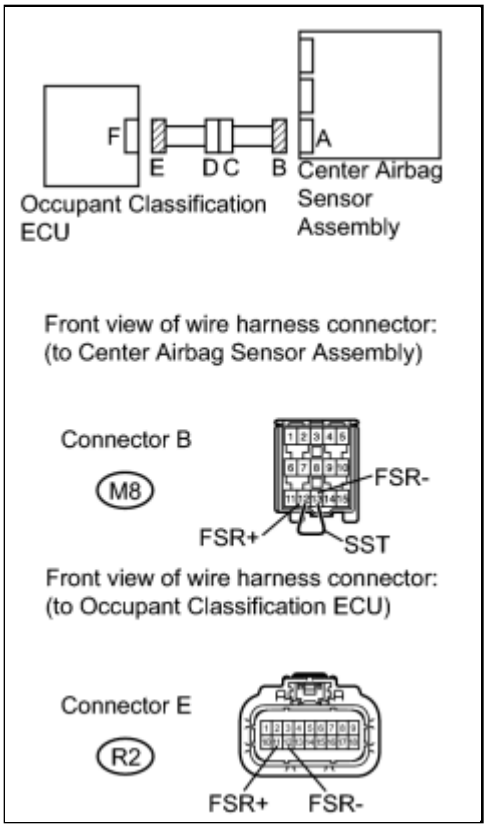
2.	**CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO B+)**

(a) Connect the cable to the negative (-) battery terminal.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - Body ground	Ignition switch ON	Below 1 V
R2-12 (FSR-) - Body ground	Ignition switch ON	Below 1 V

NG ▶ **CHECK NO. 2 FLOOR WIRE (SHORT TO B+)**

OK ▼

3.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

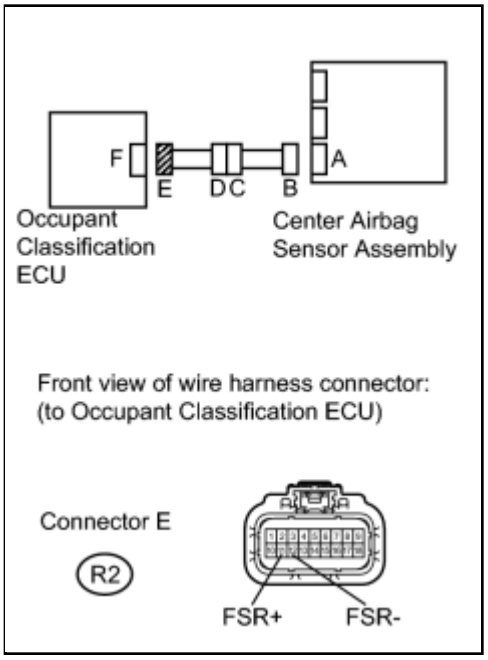
(c) Using SST, connect terminals 12 (FSR+) and 13 (FSR-) of connector B.

NOTICE:

Do not forcibly insert SST into the terminals of the connector when connecting the wire.

SST: 09843-18040

(d) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - R2-12 (FSR-)	Always	Below 1 Ω

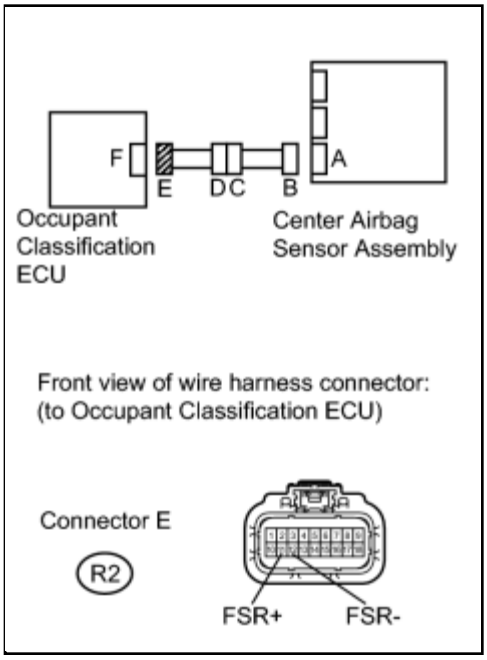
NG ▶ **CHECK NO. 2 FLOOR WIRE (OPEN)**

OK ▼

4.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)

(a) Disconnect SST from connector B.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - R2-12 (FSR-)	Always	1 MΩ or higher

NG ▶ **CHECK NO. 2 FLOOR WIRE (SHORT)**

OK

5.	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
R2-11 (FSR+) - Body ground	Always	1 MΩ or higher
R2-12 (FSR-) - Body ground	Always	1 MΩ or higher

NG ▶ **CHECK NO. 2 FLOOR WIRE (SHORT TO GROUND)**

OK

6.	RECHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.

(b) Connect the Techstream to the DLC3.

(c) Connect the cable to the negative (-) battery terminal.

(d) Turn the ignition switch to ON.

(e) Clear the DTCs stored in the occupant classification ECU INFO .

(f) Clear the DTCs stored in the center airbag sensor assembly INFO .

(g) Turn the ignition switch off.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, check for occupant classification ECU DTCs INFO .

OK:
DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE OCCUPANT CLASSIFICATION ECU**

OK ▶ **USE SIMULATION METHOD TO CHECK**

7.	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, save the ECU data from the ECU currently installed on the vehicle INFO .

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, load the previous ECU data stored into the new ECU INFO .

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

8.	**RECHECK FOR DTC**

(a) Turn the ignition switch to ON.

(b) Clear the DTCs stored in the occupant classification ECU INFO .

(c) Clear the DTCs stored in the center airbag sensor assembly INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

(f) Using the Techstream, check for occupant classification ECU DTCs INFO .

OK:
DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG ▶ **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

9.	**PERFORM SENSITIVITY CHECK**

(a) Perform the sensitivity check INFO .

NEXT ▶ **END**

10.	**REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

(a) Turn the ignition switch off.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: B1797: Calibration Malfunction (2010 Corolla)		

DTC	**B1797**	**Calibration Malfunction**

DESCRIPTION

DTC B1797 is output when the following conditions are met:

- Zero point calibration is performed when the conditions for the calibration are not satisfied.
- Zero point calibration has failed.

Condition for the Zero Point Calibration

ITEM	CONDITION
DTC	Not recorded
Front passenger seat occupant	Vacant
Front passenger side buckle switch	OFF (The seat belt is not fastened)
ECU temperature	0 to 46°C (32 to 114.8°F)
Filtered pressure	38 to 75 count

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
B1797	• Zero point calibration is performed when the conditions for the calibration are not satisfied. • Zero point calibration has failed.	• There is no malfunction if this DTC is not output again after performing occupant classification system zero point calibration. • Occupant classification sensor • Occupant classification ECU

HINT:

When DTC B1650/32 is detected as a result of troubleshooting for the airbag system, check the DTCs stored in the occupant classification ECU. When DTC B1797 is output, perform troubleshooting for the DTC.

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK FOR DTC

(a) Turn the ignition switch to ON.

(b) Clear the DTCs stored in the occupant classification ECU INFO .

(c) Clear the DTCs stored in the center airbag sensor assembly INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON, and wait for at least 10 seconds.

(f) Check for DTCs INFO .

OK:
DTC B1797 is not output.

HINT:

Codes other than B1797 may be output at this time, but they are not related to this check.

NG ▶ **READ VALUE USING DATA LIST (SPECIFIED CONDITION FOR ZERO POINT CALIBRATION)**

(b) Turn the ignition switch to ON.

(c) Using the Techstream, save the ECU data from the ECU currently installed on the vehicle INFO .

(d) Turn the ignition switch off.

(e) Disconnect the cable from the negative (-) battery terminal.

(f) Replace the occupant classification ECU INFO .

(g) Connect the cable to the negative (-) battery terminal.

(h) Turn the ignition switch to ON.

(i) Using the Techstream, load the previous ECU data stored into the new ECU INFO .

(j) Turn the ignition switch off.

(k) Turn the ignition switch to ON.

(l) Clear the DTCs stored in the memory INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

3.	PERFORM SENSITIVITY CHECK

(a) Perform the sensitivity check INFO .

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: OCCUPANT CLASSIFICATION SYSTEM: Trouble in Passenger Airbag ON/OFF Indicator (2010 Corolla)		

Trouble in Passenger Airbag ON/OFF Indicator

DESCRIPTION

The occupant classification system detects the front passenger seat condition. It then informs a passenger of the front passenger airbag assembly and front seat side airbag assembly condition (activated/not activated) by the passenger airbag ON/OFF indicator.

HINT:

Approximately 6 seconds after the ignition switch is turned to ON, the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

FRONT PASSENGER SEAT CONDITION	PASSENGER AIRBAG ON/OFF INDICATOR		SRS WARNING LIGHT
	ON INDICATOR	OFF INDICATOR	
Adult is seated	ON	OFF	OFF
Child is seated	OFF	ON	OFF
Vacant	OFF	OFF	OFF
Occupant classification system failure	OFF	ON	ON

INSPECTION PROCEDURE

HINT:

When the indicator is malfunctioning, if the SRS warning light is off, follow the procedures below as a DTC is not output. If the SRS warning light is on, a DTC is output. Troubleshoot the output DTC.

PROCEDURE

1.	**PERFORM ZERO POINT CALIBRATION**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, perform the zero point calibration INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

2.	**CHECK FOR DTC**

(a) Turn the ignition switch to ON.

(b) Clear the DTCs stored in the occupant classification ECU INFO .

(c) Clear the DTCs stored in the center airbag sensor assembly INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

(f) Check the DTCs of the occupant classification ECU INFO .

OK:
DTC B1797 is not output.

HINT:

Codes other than DTC B1797 may be output at this time, but they are not related to this check.

NG ▶ **GO TO DTC B1797**

OK

3.	**CHECK PASSENGER AIRBAG ON/OFF INDICATOR (PERFORM SENSITIVITY CHECK)**

(a) Perform the sensitivity check INFO .

NG ▶ READ VALUE USING DATA LIST (PASSENGER SIDE BUCKLE SWITCH)

OK ▶ END

4.	READ VALUE USING DATA LIST (PASSENGER SIDE BUCKLE SWITCH)

(a) Turn the ignition switch to ON.

(b) Using the Techstream, read the Data List INFO .

(1) Read the display when the passenger side buckle switch is operated.

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Passenger Buckle SW	Buckle switch (Passenger side)/ Unset: The seat belt is not fastened Set: The seat belt is fastened NG: Data is not determined	Unset/Set	-

OK:
The Techstream display changes correctly in accordance with the operation of the buckle switch.

NG ▶ REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

OK ▼

5.	READ VALUE USING DATA LIST (SEAT BELT TENSION SENSOR)

(a) Fasten the passenger side seat belt.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, read the value of the Data List INFO .

TESTER DISPLAY	MEASUREMENT	NORMAL	DIAGNOSTIC

	ITEM/RANGE	CONDITION	NOTE
Filtered Pressure Sensor Output	Filtered belt tension output/ Min.: 0 Max.: 255	39 to 64 (no load)	-

OK:

When there is no tension on the belt, 39 to 64 is displayed on the Techstream.

NG ▶ **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

OK ▼

6.	CHECK CONNECTORS

(a) Disconnect the connectors from the occupant classification ECU and the occupant classification sensor.

(b) Check that the terminals of the connectors are not damaged.

OK:

The terminals are not deformed or damaged.

NG ▶ **REPLACE FRONT SEAT WIRE RH**

OK ▼

7.	REPLACE FRONT SEAT CUSHION ASSEMBLY

(a) Turn the ignition switch off.

(b) Disconnect the cable from the negative (-) battery terminal.

(c) Replace the front seat cushion assembly (with occupant classification ECU and occupant classification sensor) INFO .

(d) Connect the cable to the negative (-) battery terminal.

(e) Turn the ignition switch to ON.

(f) Clear the DTCs stored in the occupant classification ECU INFO .

(g) Clear the DTCs stored in the center airbag sensor assembly INFO .

(h) Turn the ignition switch off.

(i) Turn the ignition switch to ON.

(j) Check for DTCs INFO .

OK:

DTC is not output.

NEXT

8.	PERFORM ZERO POINT CALIBRATION

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Using the Techstream, perform the zero point calibration INFO .

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON.

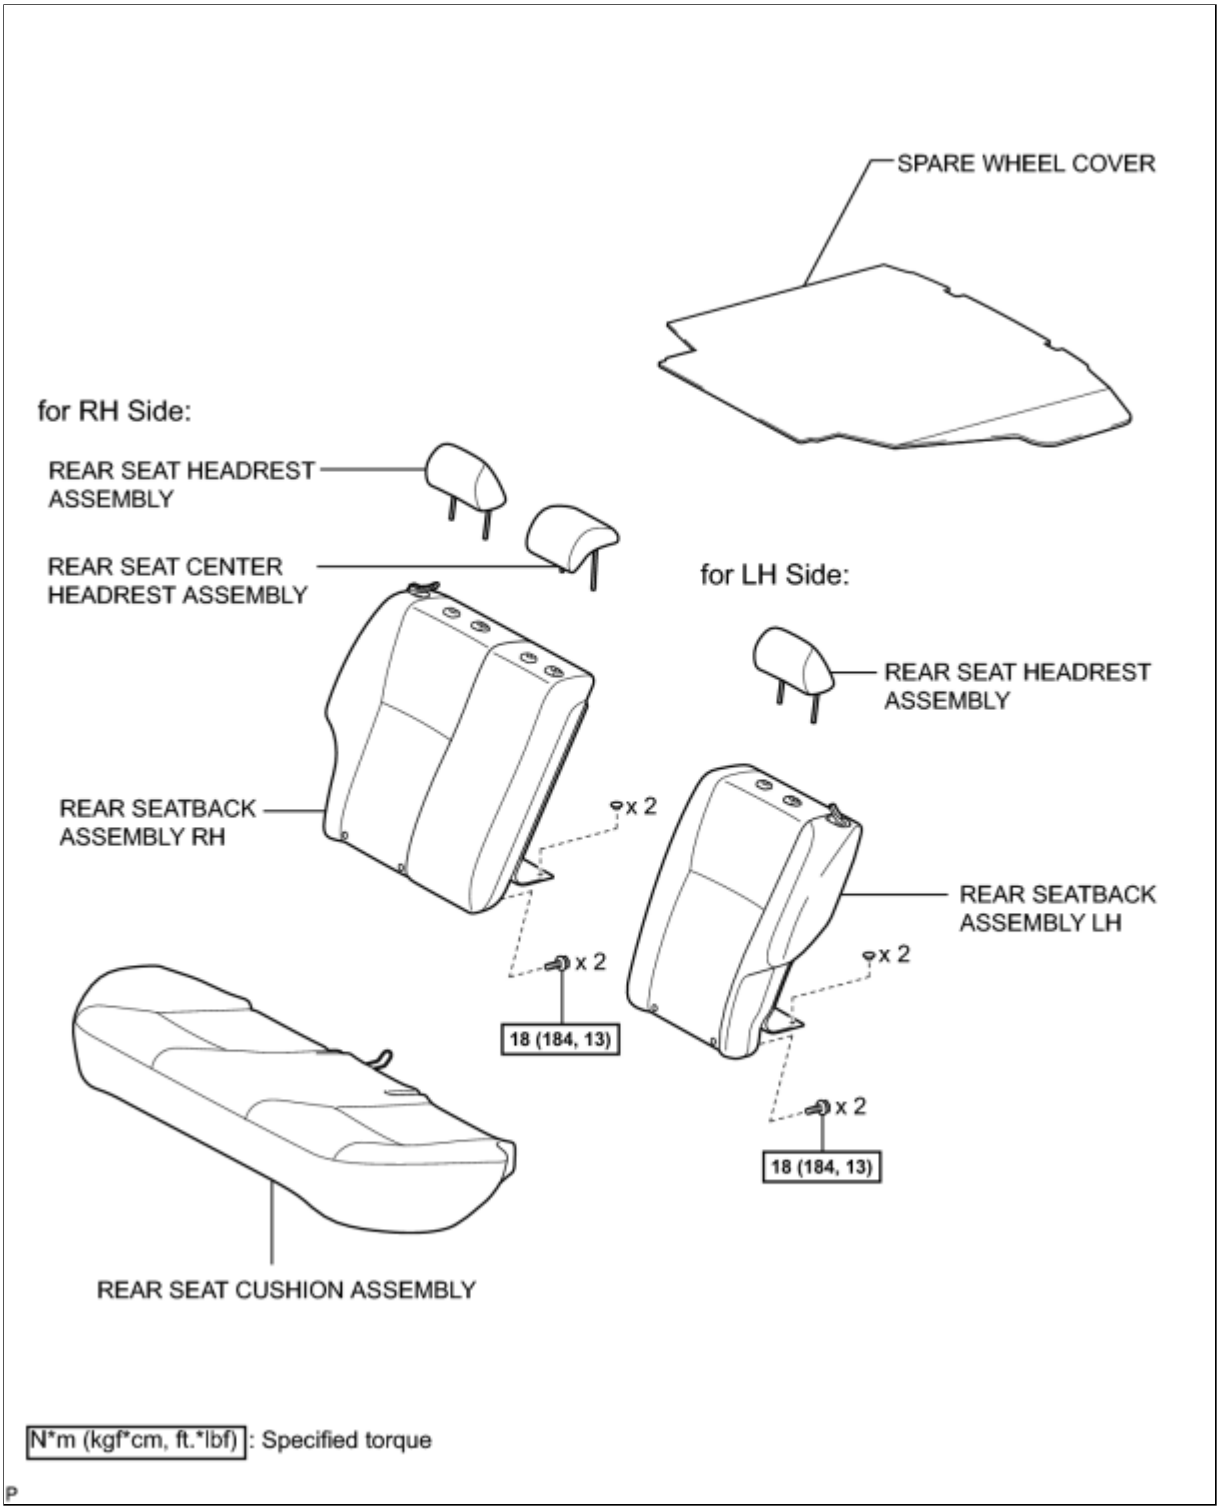
(f) Clear the DTCs stored in the occupant classification ECU INFO .

HINT:

If the DTCs are not cleared at this time, past DTCs will remain.

NEXT

9.	PERFORM SENSITIVITY CHECK



(a) Perform the sensitivity check INFO .

NEXT **END**

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT REAR AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check INFO .

2. INSPECT REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) When the quarter panel of the vehicle or the surrounding area is damaged, check if there is any damage to the rear airbag sensor. If there are any following defects, replace the rear airbag sensor with a new one:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

Be sure to follow the correct removal and installation procedures of the rear airbag sensor.

3. INSPECT REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)

(a) When airbags have deployed as the result of a collision, be certain to replace all rear airbag sensors in the damaged area (anywhere in need of repair). Furthermore, it is also necessary to replace any rear airbag sensors in undamaged areas that have registered a major collision, or which exhibit any of the following abnormalities:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

Be sure to follow the correct removal and installation procedures of the rear airbag sensor.

Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The following procedure is for the LH side.

1. PRECAUTION

CAUTION:

Be sure to read Precaution thoroughly before servicing INFO **.**

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

3. REMOVE REAR DOOR SCUFF PLATE INFO

4. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP INFO

5. REMOVE SPARE WHEEL COVER INFO

6. REMOVE REAR SEAT CUSHION ASSEMBLY INFO

7. REMOVE REAR SEAT HEADREST ASSEMBLY (for LH Side)

8. REMOVE REAR SEATBACK ASSEMBLY LH (for LH Side) INFO

9. REMOVE REAR SEAT HEADREST ASSEMBLY (for RH Side)

10. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY (for RH Side)

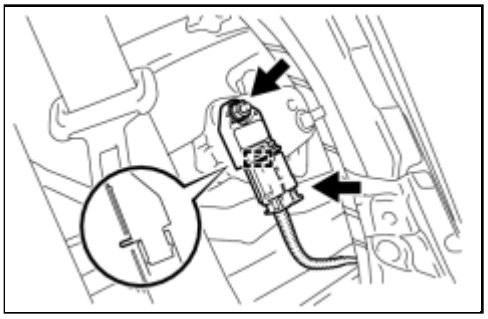
11. REMOVE REAR SEATBACK ASSEMBLY RH (for RH Side) INFO

12. REMOVE REAR SEAT SIDE GARNISH INFO

13. REMOVE REAR AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.



CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Disconnect the connector.

NOTICE:

When disconnecting the airbag connector, take care not to

damage the airbag wire harness.

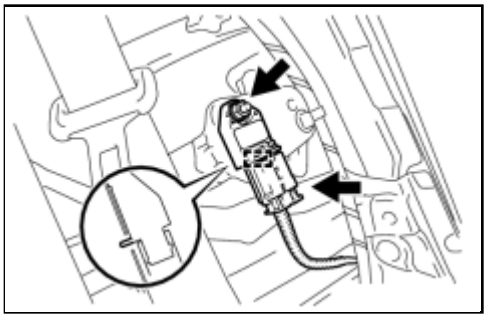
(d) Remove the nut and rear airbag sensor.

NOTICE:

Loosen the nut while holding the rear airbag sensor because the rear airbag sensor pin (stopper) is easily damaged.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UWO03QX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: REAR AIRBAG SENSOR: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL REAR AIRBAG SENSOR

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Install the rear airbag sensor with the nut and pin.

Torque: 9.0 N·m (92 kgf·cm, 80in·lbf)

NOTICE:

- If the rear airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.
- When installing the rear airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.
- Make sure that the pin is securely inserted into the body hole.
- Tighten the nut while holding the rear airbag sensor because the rear airbag sensor pin (stopper) is easily damaged.

(d) Connect the connector.

NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.

(e) Check that there is no looseness in the installation parts of the rear airbag sensor.

2. INSTALL REAR SEAT SIDE GARNISH INFO

3. INSTALL REAR SEATBACK ASSEMBLY LH (for LH Side) INFO

4. INSTALL REAR SEAT HEADREST ASSEMBLY (for LH Side)

5. INSTALL REAR SEATBACK ASSEMBLY RH (for RH Side) INFO

6. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY (for RH Side)

7. INSTALL REAR SEAT HEADREST ASSEMBLY (for RH Side)

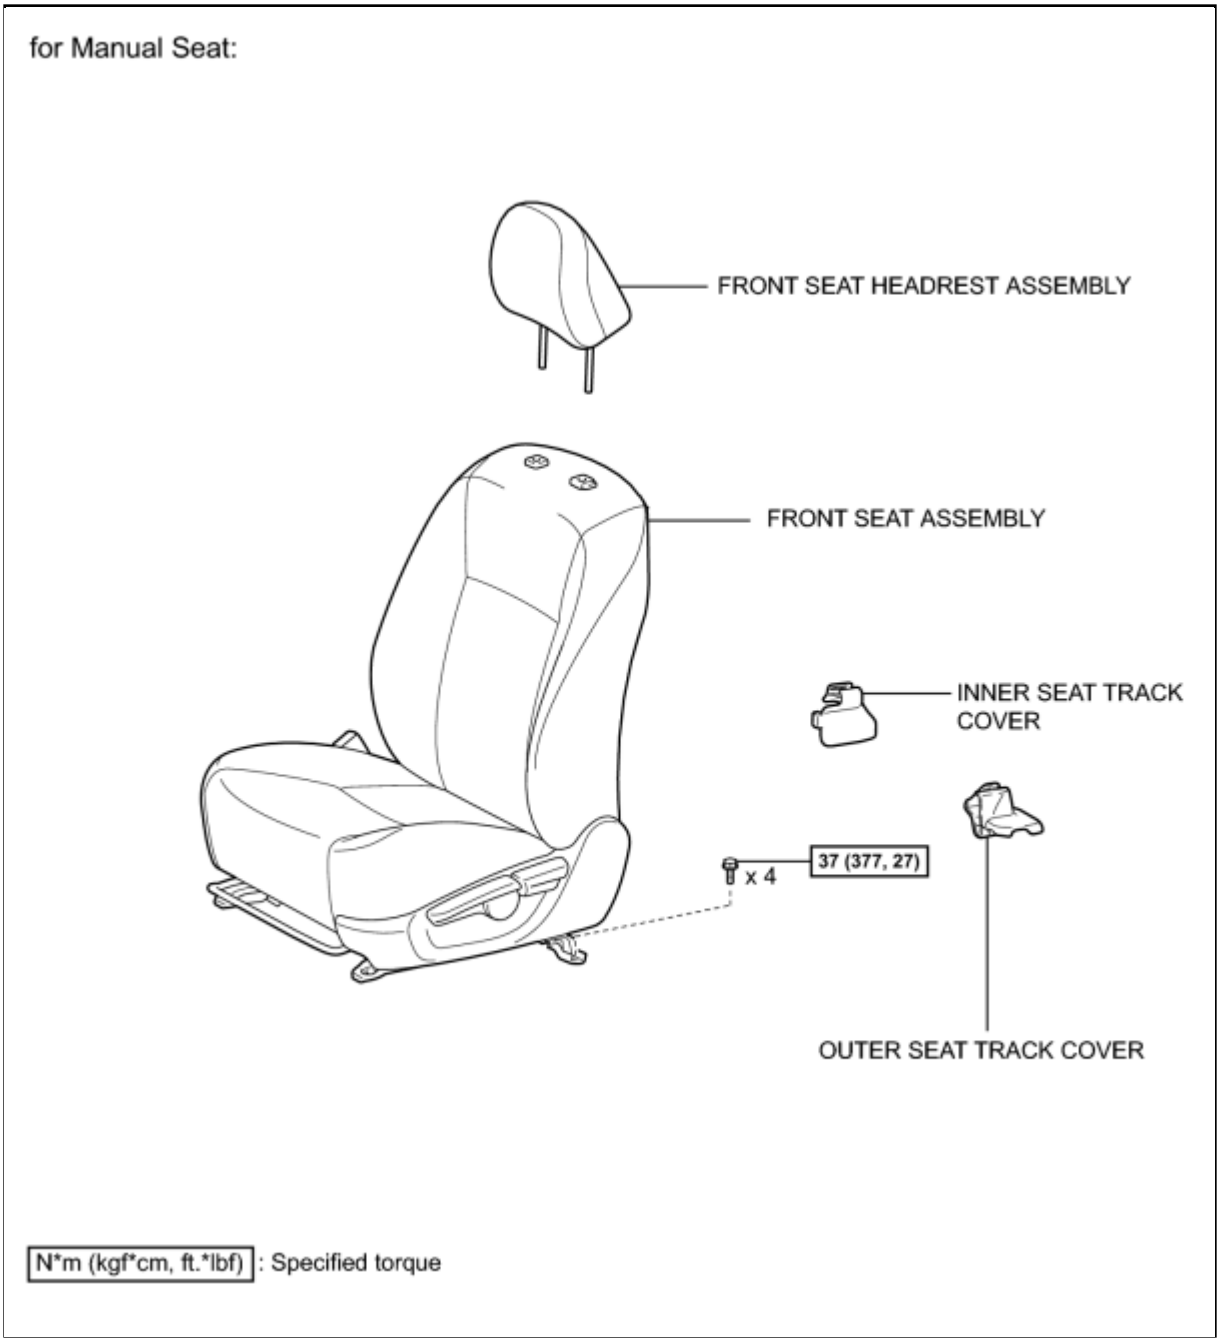
8. INSTALL REAR SEAT CUSHION ASSEMBLY INFO

9. INSTALL SPARE WHEEL COVER INFO

10. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP INFO

11. INSTALL REAR DOOR SCUFF PLATE INFO

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



13. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

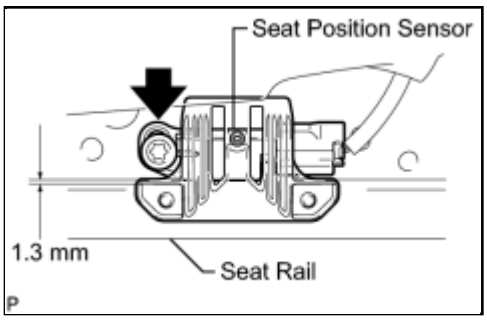
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SEAT POSITION SENSOR: INSTALLATION (2010 Corolla)		

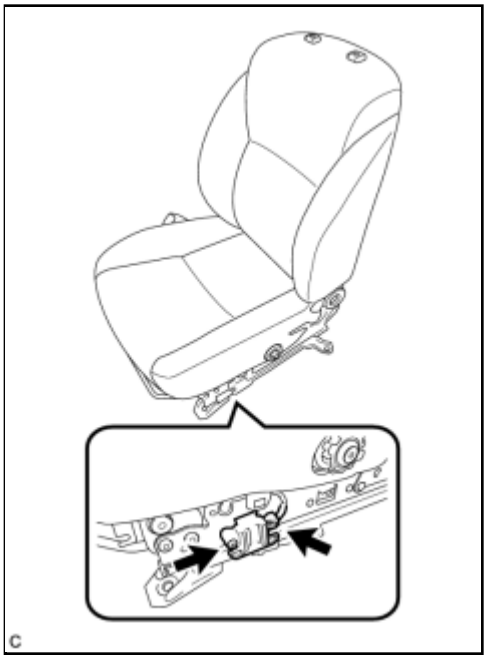


INSTALLATION

1. INSTALL SEAT POSITION SENSOR (for Manual Seat)

(a) Install the seat position sensor to the seat slide position sensor protector with the pin as shown in the illustration.

(b) Using a 1.3 mm (0.0512 in.) feeler gauge, temporarily install the seat position sensor with seat slide position sensor protector.



NOTICE:

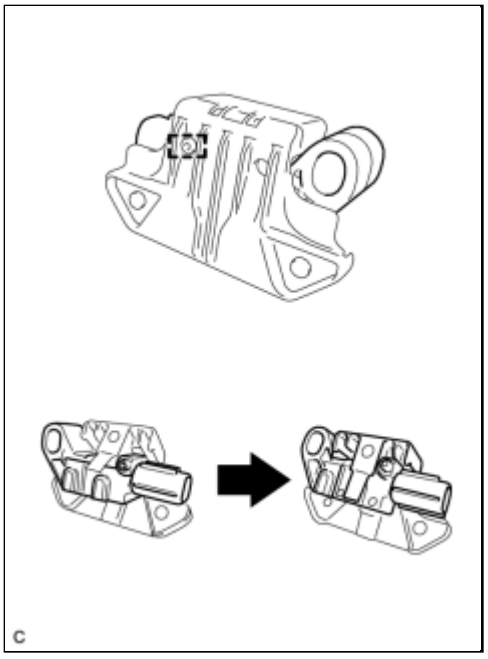
- If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.
- When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.

HINT:

Be sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm (0.0236 in.) to 2.0 mm (0.0787 in.).

(c) Using a "TORX" socket wrench (T30), tighten the "TORX"

screw to install the seat position sensor with seat slide position sensor protector.

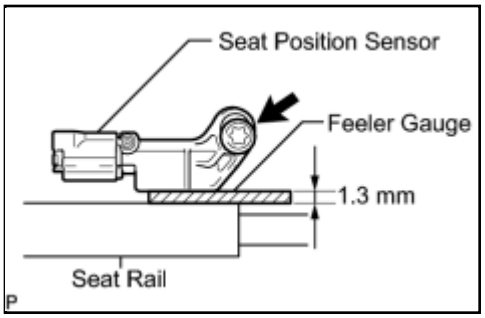


Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

(d) Make sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm (0.0236 in.) to 2.0 mm (0.0787 in.).

(e) Connect the connector.

(f) Check that there are no loose parts after installing the seat position sensor.

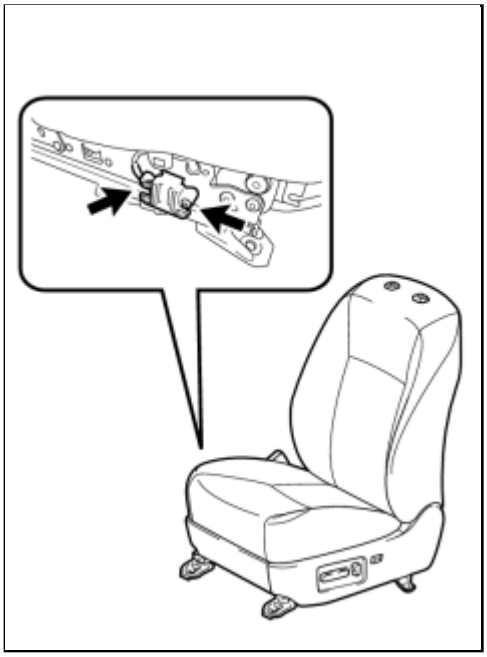


2. INSTALL SEAT POSITION SENSOR (for Power Seat)

(a) Install the seat position sensor to the seat slide position sensor protector with the pin as shown in the illustration.

(b) Using a 1.3 mm (0.0512 in.) feeler gauge, temporarily

install the seat position sensor with seat slide position sensor protector.



NOTICE:

- If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.
- When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.

HINT:

Be sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm (0.0236 in.) to 2.0 mm (0.0787 in.).

(c) Using a "TORX" socket wrench (T30), tighten the "TORX" screw to install the seat position sensor with seat slide position sensor protector.

Torque: 8.0 N·m (82 kgf·cm, 71in·lbf)

(d) Make sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm (0.0236 in.) to 2.0 mm (0.0787 in.).

(e) Connect the connector.

(f) Check that there are no loose parts after installing the seat position sensor.

3. INSTALL FRONT SEAT CUSHION SHIELD (for Manual Seat) INFO

4. INSTALL VERTICAL ADJUSTING HANDLE (for Manual Seat) INFO

5. INSTALL VERTICAL SEAT ADJUSTER KNOB CAP (for Manual Seat) INFO

6. INSTALL RECLINING ADJUSTER RELEASE HANDLE (for Manual Seat) INFO

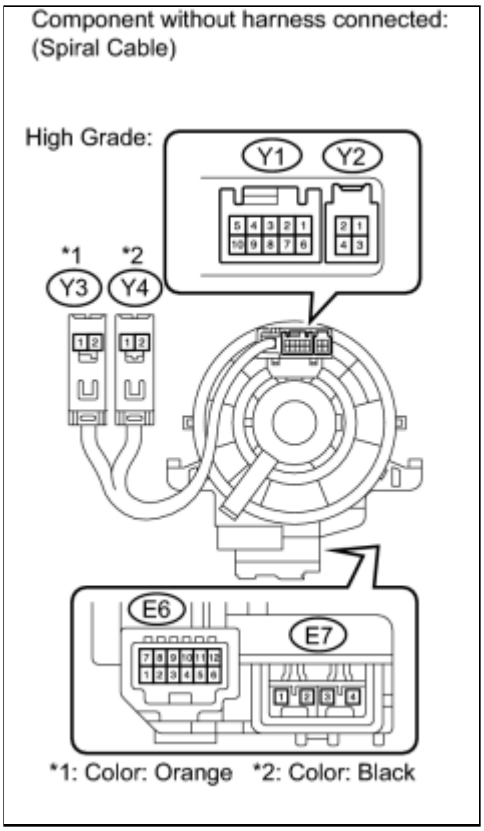
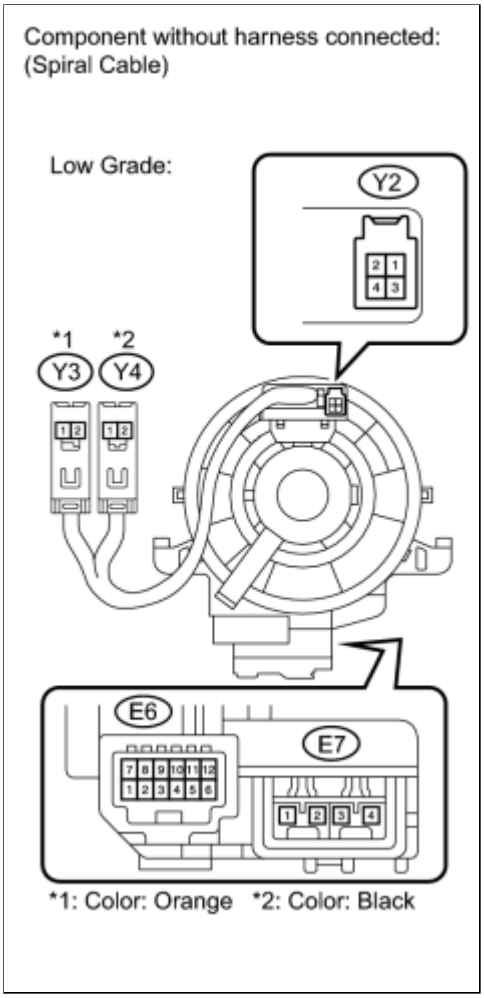
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SPIRAL CABLE: INSPECTION (2010 Corolla)		



INSPECTION



1. INSPECT SPIRAL CABLE

(a) If there are any defects as mentioned below, replace the spiral cable with a new one:

- Scratches, cracks, dents or chips on the connector or the spiral cable.

(b) Inspect the spiral cable.

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:

To avoid breakage of the spiral cable, do not turn the spiral cable more than necessary.

If the value is not within the specified range, replace the spiral cable.

Standard Resistance

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y1-1 - E6-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
Y1-5 - E6-12 (IL+2)	Center	Below 1 Ω

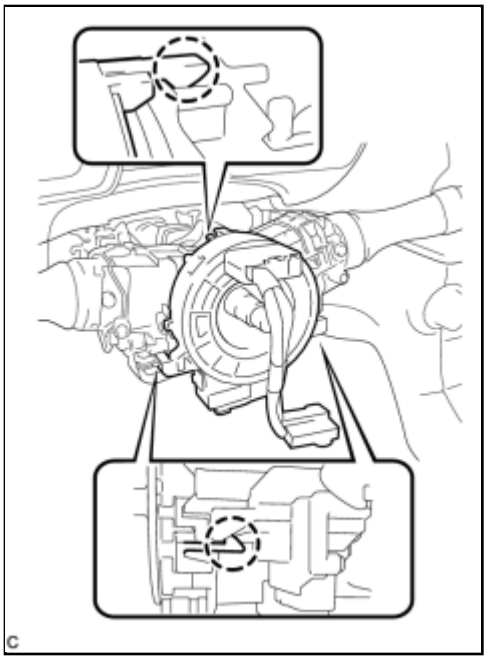
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: SPIRAL CABLE: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL SPIRAL CABLE (w/o VSC)

(a) Check that the front wheels are facing straight ahead.

(b) Set the turn signal switch to the neutral position.

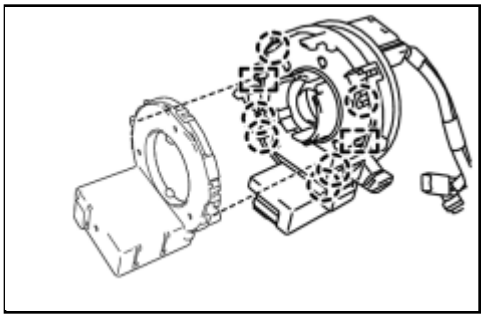
NOTICE:

If it is not in the neutral position, the turn signal switch pin may be snapped.

(c) Install the spiral cable with the 3 claws.

NOTICE:

When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.



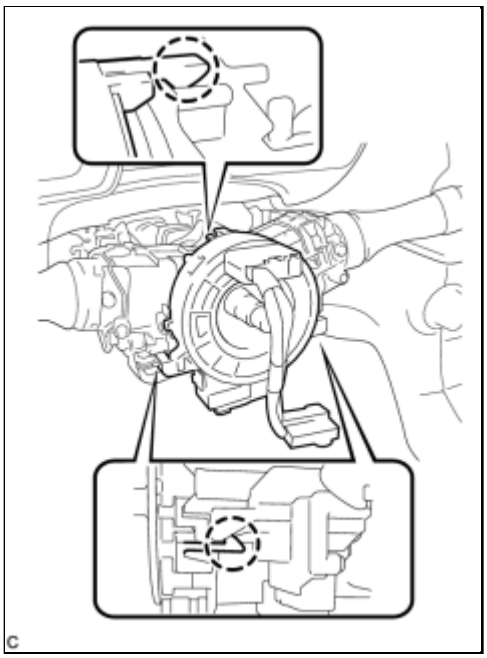
(d) Connect the connectors to the spiral cable.

NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL SPIRAL CABLE (w/ VSC)

(a) Install the spiral cable to the steering angle sensor with the 6 claws and 2 pins.



3. INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR (w/ VSC)

(a) Check that the front wheels are facing straight ahead.

(b) Set the turn signal switch to the neutral position.

NOTICE:

If it is not in the neutral position, the turn signal switch pin may be snapped..

(c) Install the spiral cable with steering angle sensor with the 3 claws.

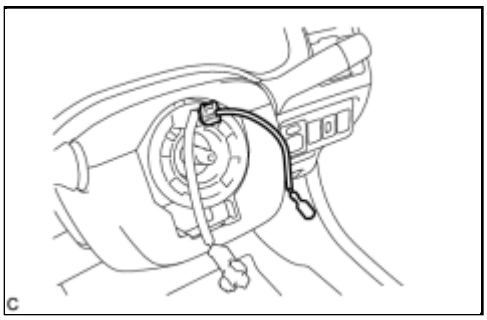
NOTICE:

When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.

(d) Connect the connectors to the spiral cable with steering angle sensor.

NOTICE:

When connecting the airbag connector, take care not to damage the airbag wire harness.



4. INSTALL UPPER STEERING COLUMN COVER INFO

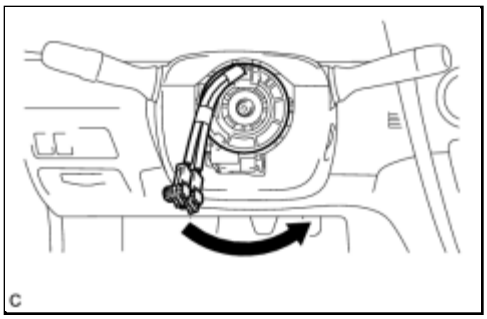
5. INSTALL LOWER STEERING COLUMN COVER INFO

6. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY INFO

7. INSTALL HORN BUTTON WIRE SUB-ASSEMBLY (w/o Steering Pad Switch and Cruise Control System)

(a) w/o Ornament:

(1) Connect the connector and install the horn button wire sub-assembly.

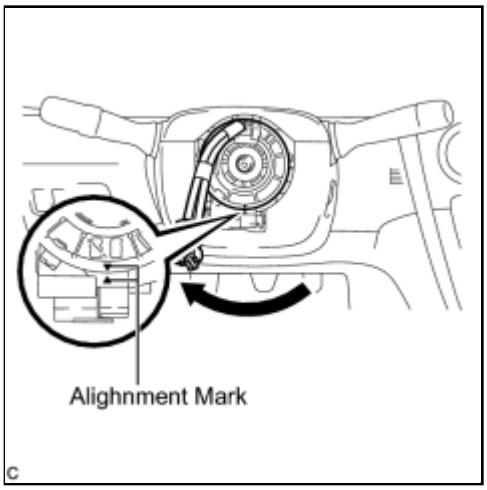


8. ADJUST SPIRAL CABLE

(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

(c) Rotate the spiral cable counterclockwise slowly by hand until it stops.

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

(d) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.

NOTICE:

Do not turn the spiral cable using the airbag wire harness.

HINT:

The spiral cable will rotate approximately 2.5 turns to both the left and right from the center.

9. INSTALL STEERING WHEEL ASSEMBLY INFO

10. INSTALL STEERING PAD INFO

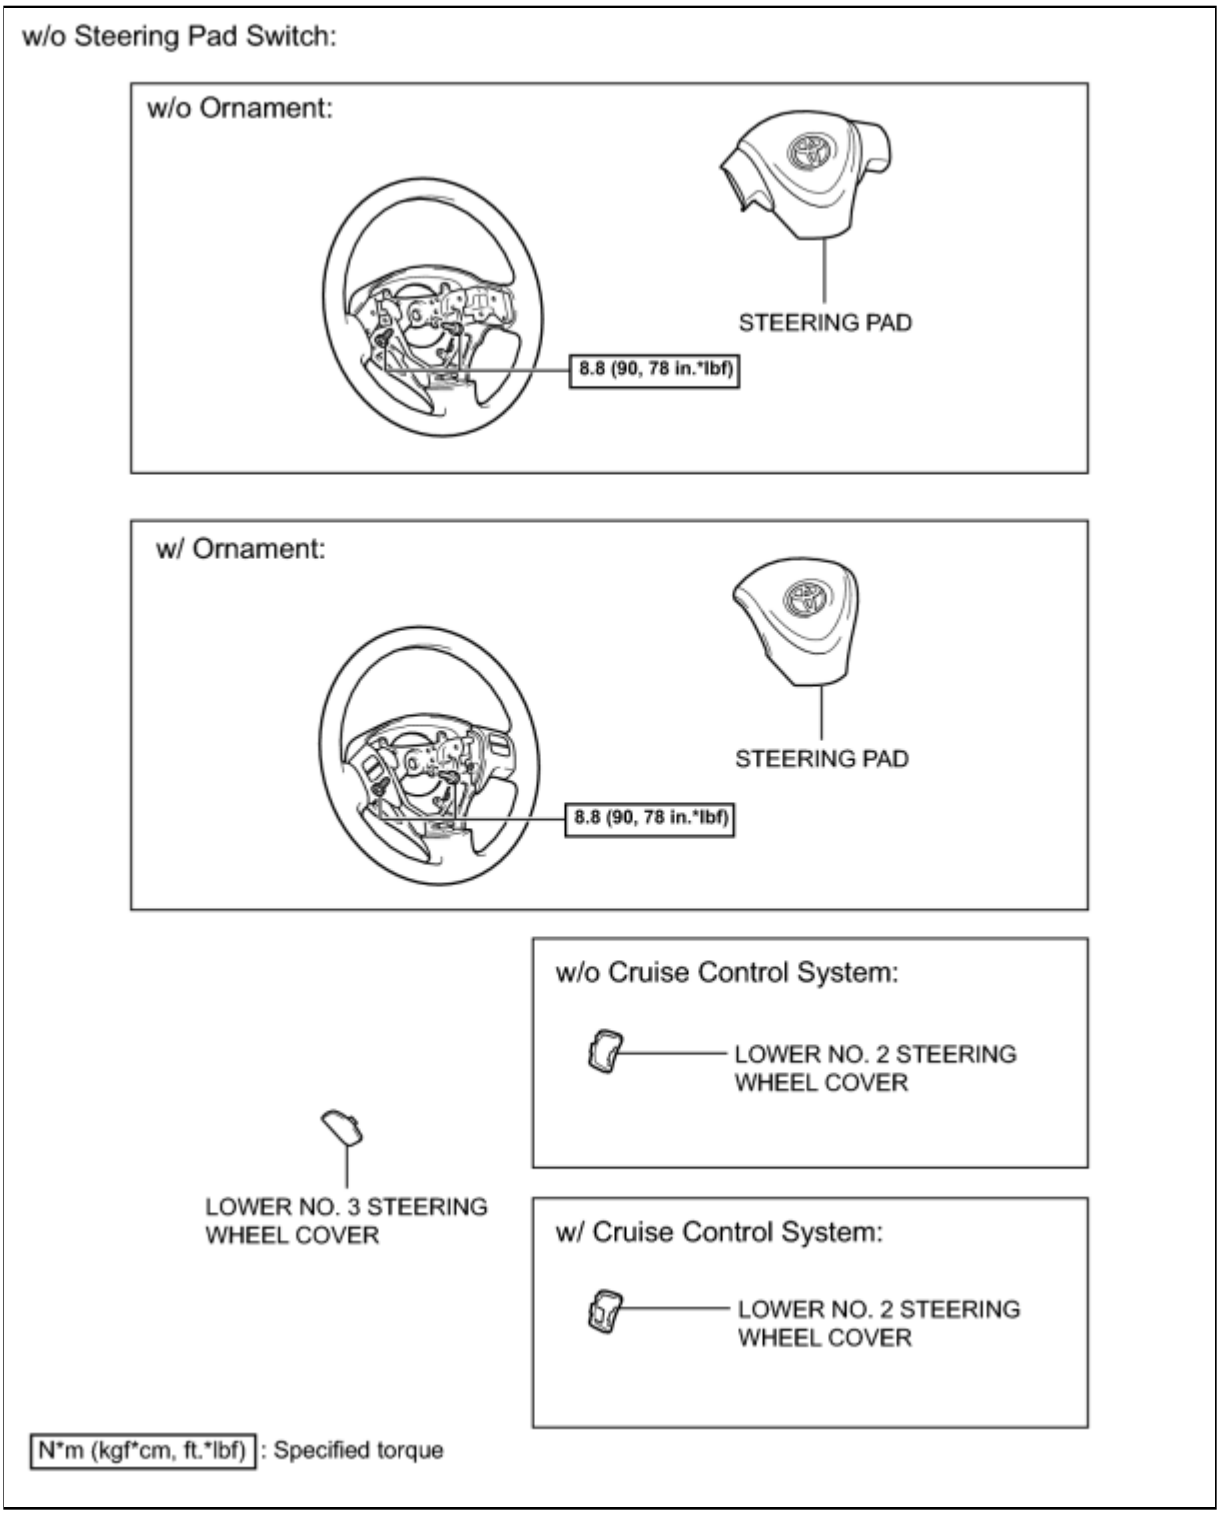
11. INSTALL LOWER NO. 3 STEERING WHEEL COVER INFO

12. INSTALL LOWER NO. 2 STEERING WHEEL COVER INFO

13. INSPECT STEERING WHEEL CENTER POINT

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

15. INSPECT STEERING PAD INFO



16. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UW504FX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: DISPOSAL (2010 Corolla)		

DISPOSAL

CAUTION:

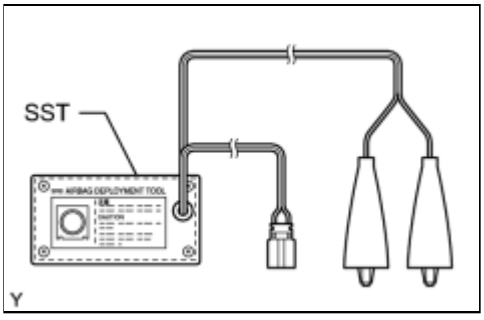
Before performing pre-disposal deployment of any SRS component, review and closely follow all applicable environmental and hazardous material regulations. Pre-disposal deployment may be considered hazardous material treatment.

1. PRECAUTION

HINT:

When scrapping a vehicle equipped with an SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the Service Dept. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:



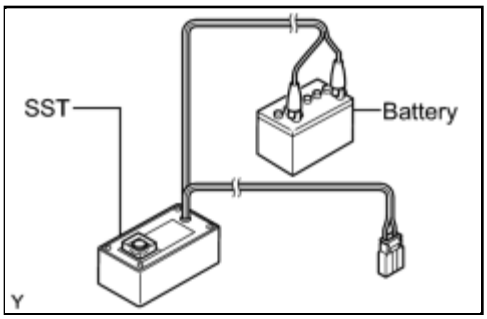
- An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.
- Never dispose of a steering pad with an undeployed airbag.
- The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.
- When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.
- When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the steering pad.
- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water, etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

2. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

HINT:

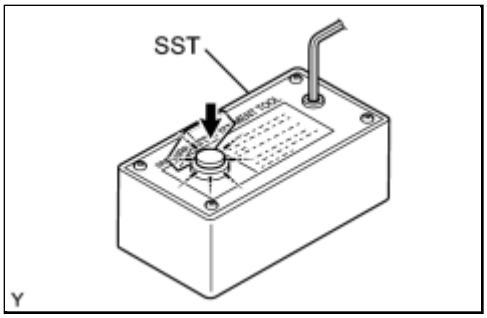
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.



SST: 09082-00700

CAUTION:



When deploying the airbag, always use the specified SST:

SRS Airbag Deployment Tool

(1) Connect SST to the battery.

Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check the function of SST.

Press the SST activation switch and check that the LED of the SST activation switch comes on.

CAUTION:

- Do not connect the SST connector (yellow colored one) to the airbag.
- If the LED comes on when the activation switch is not being pressed, an SST malfunction is possible, so replace SST with a new one.

(3) Disconnect SST from the battery.

(b) Refer to Precaution INFO .

(c) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

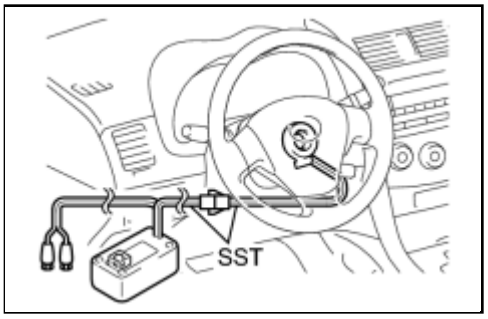
(d) Remove the steering column cover (lower) INFO .

(e) Install the steering wheel assembly INFO .

(f) Install the steering pad INFO .

(g) Install SST.

CAUTION:



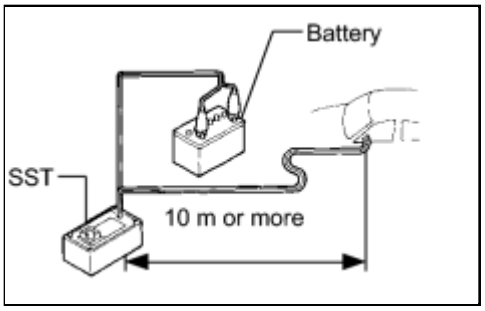
Check that there is no looseness in the steering wheel assembly and steering pad.

(1) Disconnect the airbag connector (yellow colored one) from the spiral cable.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

(2) Connect the SST connector to the airbag connector of



the spiral cable.

SST: 09082-00700

SST: 09082-00780

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the vehicle front side window.

(4) Maintaining sufficient clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(h) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

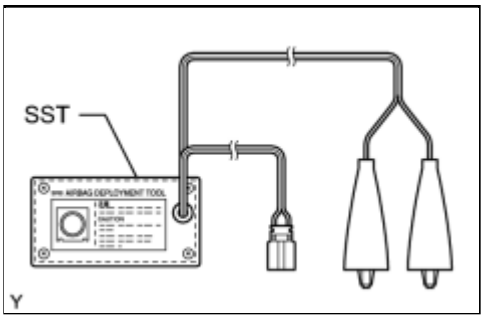
CAUTION:

- When deploying the airbag, make sure that no one is near the vehicle.
- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water, etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

3. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)



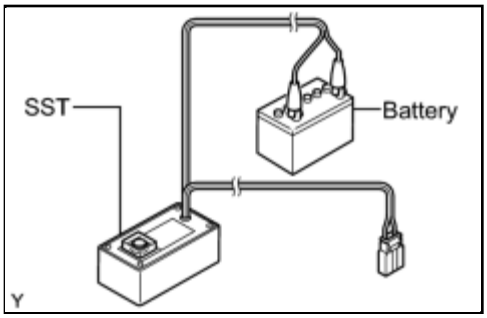
NOTICE:

- When disposing of the steering pad, never use the customer's vehicle to deploy the airbag.
- Be sure to follow the following procedure when deploying the airbag.

HINT:

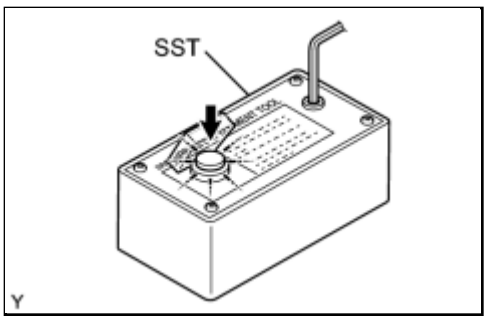
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of SST.



SST: 09082-00700

CAUTION:



When deploying the airbag, always use the specified SST:

SRS Airbag Deployment Tool

(1) Connect SST to the battery.

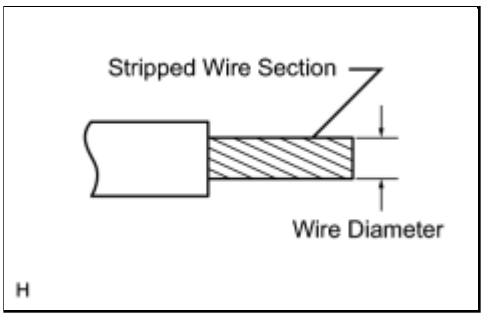
Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check the function of SST.

Press the SST activation switch and check that the LED of the SST activation switch comes on.

CAUTION:

- Do not connect the SST connector (yellow colored one) to the airbag.
- If the LED comes on when the activation switch is not being pressed, an SST malfunction is possible, so replace SST with a new one.



(3) Disconnect SST from the battery.

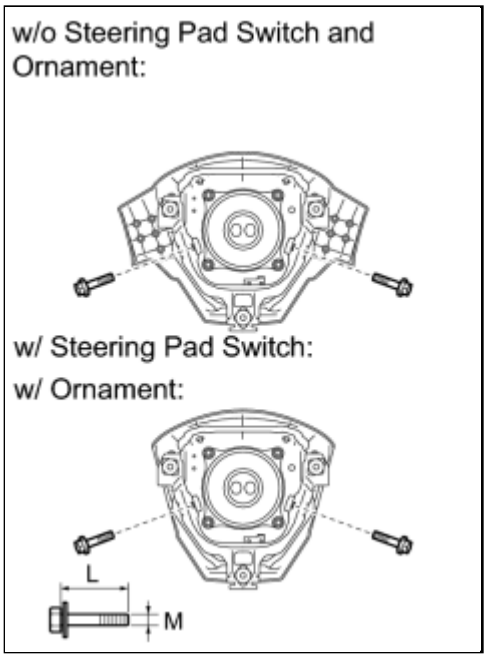
(b) Remove the steering pad INFO .

CAUTION:

- When removing the steering pad, before the work is started, leave the vehicle at least 90 seconds after turning the ignition switch off and disconnecting the cable from the negative (-) battery terminal.
- When storing the steering pad, keep the airbag deployment side facing upward.

(c) Using braided wire, tie down the steering pad to an unneeded wheel.

Wire:
Stripped wire section
1.25 mm^2 (0.0019 $in.^2$) or more



CAUTION:

If the wire is too thin or an alternative object is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. Always use a wire for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:

To calculate the area of the stripped wire section:

Area = 3.14 x (Diameter)^2 divided by 4

(1) Install the 2 bolts with washers into the 2 bolt holes on the steering pad.

Bolt:

L

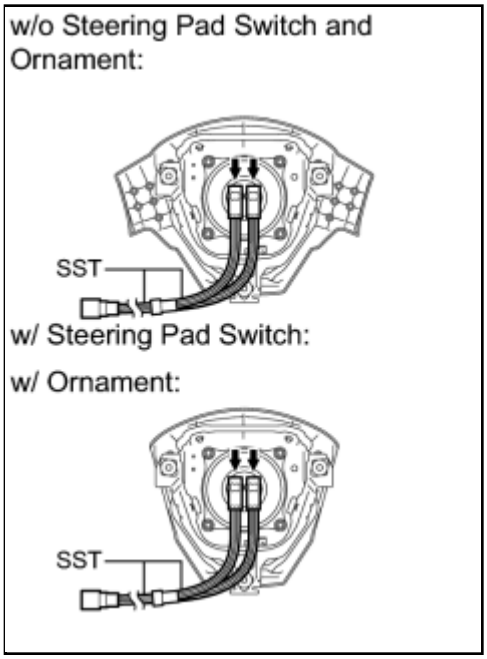
35.0 mm (1.38 in.)

M

6.0 mm (0.236 in.)

Pitch

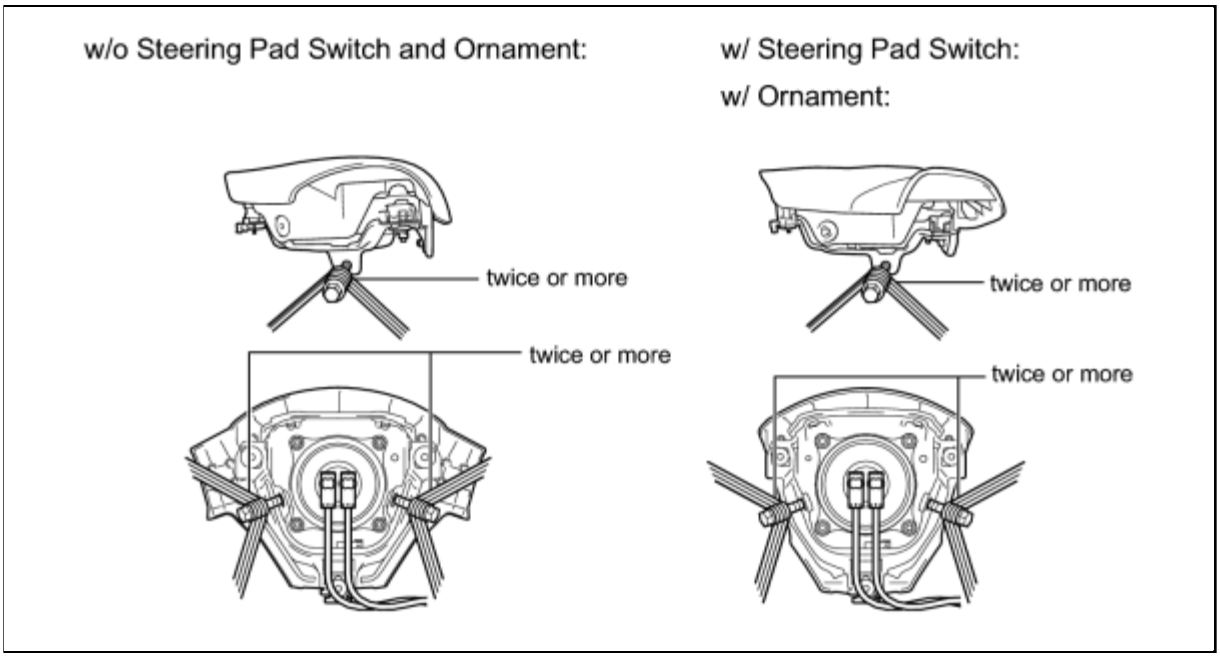
1.0 mm (0.0394 in.)



NOTICE:

- Tighten the bolts by hand until they become difficult to turn.
- Do not tighten the bolts excessively.

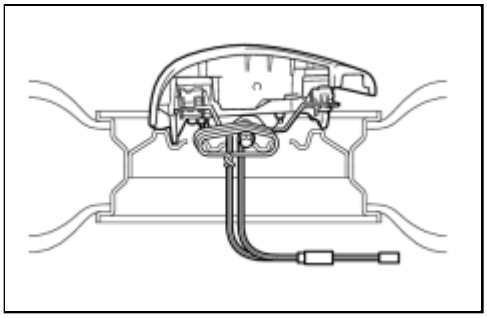
(2) After connecting the following SST to each other, connect them to the steering pad.



SST: 09082-00802

09082-10801

09082-30801



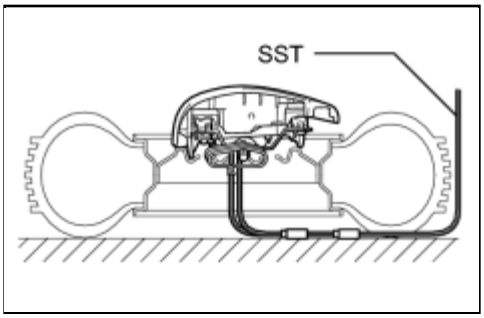
(3) Wind 3 wires at least twice each around each of the bolts installed on the left and right sides of the steering pad.

CAUTION:

- Tightly wind the wires around the bolts so that there is no slack.
- Make sure that the wires are tight. If there is slack in the wires, the steering pad may break loose due to the shock when the airbag is deployed.

(4) Face the airbag deployment side of the steering pad upward on top of an unneeded tire and wheel set.

Separately tie the left and right sides of the steering pad to the wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole of the wheel.



CAUTION:

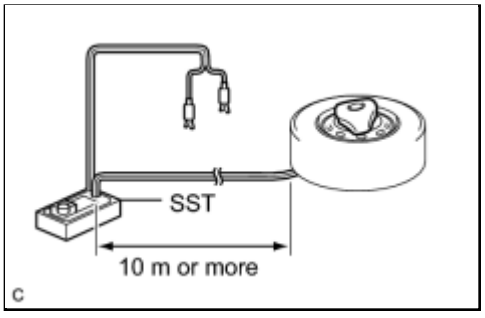
- Make sure that the wires are tight. If there is slack in the wires, the steering pad may break loose due to the shock when the airbag is deployed.
- Always tie down the steering pad with the airbag deployment side facing upward.

NOTICE:

The wheel will be damaged by the airbag deployment, so use an unneeded wheel.

(d) Install SST.

CAUTION:



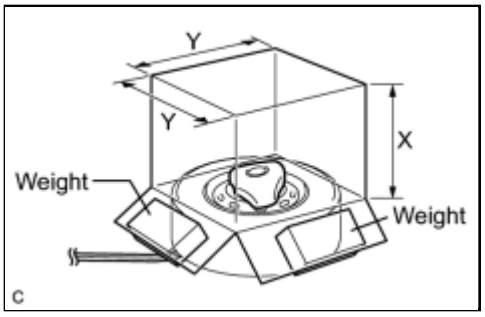
Place the wheel on level ground.

(1) Connect the SST connector.

SST: 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.



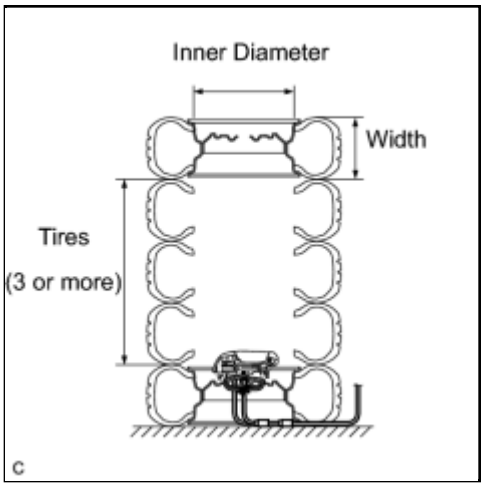
(2) Move SST at least 10 m (33 ft.) away from the airbag tied down to the wheel.

(e) Cover the steering pad (using a cardboard box).

(1) Cover the steering pad with the cardboard box.

(2) Place weights on the cardboard box in 4 places totalling at least 190 N (19 kg, 42.7 lb).

Minimum cardboard box size:
Must exceed the following dimensions
X
460 mm (18.1 in.)
Y
650 mm (25.6 in.)



NOTICE:

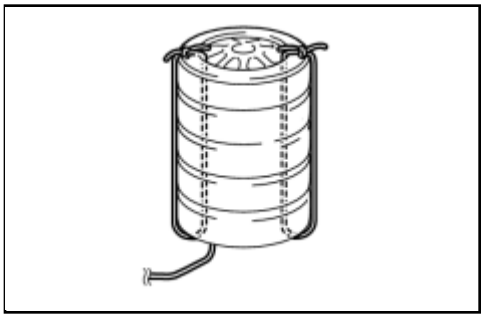
- When dimension Y of the cardboard box exceeds the diameter of the wheel and tire which the steering pad is tied to, X should be the following size.

  X = 460 mm (18.1 in.) + width of tire
- If a cardboard box which is smaller than the specified size is used, the cardboard box may be broken by the shock from the airbag deployment.

(f) Cover the steering pad (using tires).

(1) Place at least 3 tires without wheels onto the wheel and tire which the steering pad is tied to.

(2) Place the wheel and tire on top of them.



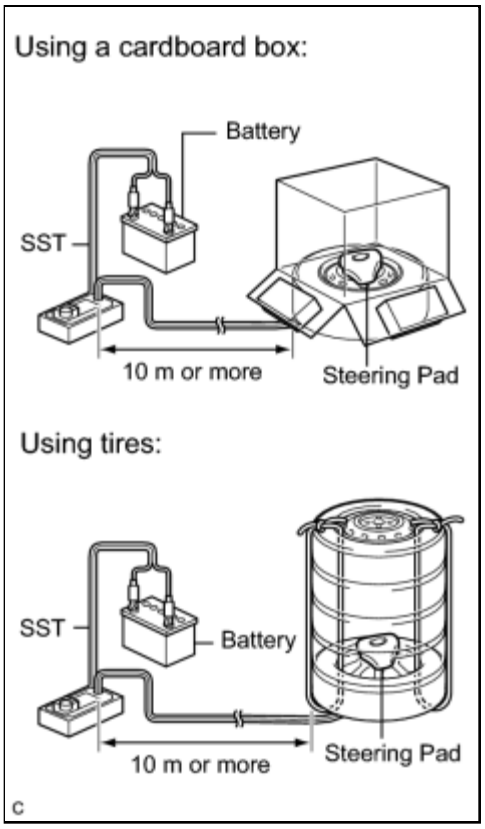
Minimum tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

CAUTION:

Do not use tires with wheels except for on the top and bottom.

NOTICE:

- The tires may be damaged by the airbag deployment, so use an extra tires.
- Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with the 2 wires.

CAUTION:

Make sure that the wires are tight. Looseness in the wires results in the tires breaking loose due to the shock when the airbag is deployed.

(g) Deploy the airbag.

(1) Connect the red clip of SST to the positive (+) battery terminal and the black clip of SST to the negative (-) battery terminal.

(2) Check that no one is within a 10 m (33 ft.) radius of the wheel which the steering pad is tied to.

(3) Press the SST activation switch and deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the steering pad.

CAUTION:

- The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.
- Use gloves and safety glasses when handling a steering pad with a deployed airbag.
- Do not apply water, etc. to a steering pad with a deployed airbag.
- Always wash your hands with water after completing the operation.

(1) Remove the steering pad from the wheel.

(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it according to local regulations.

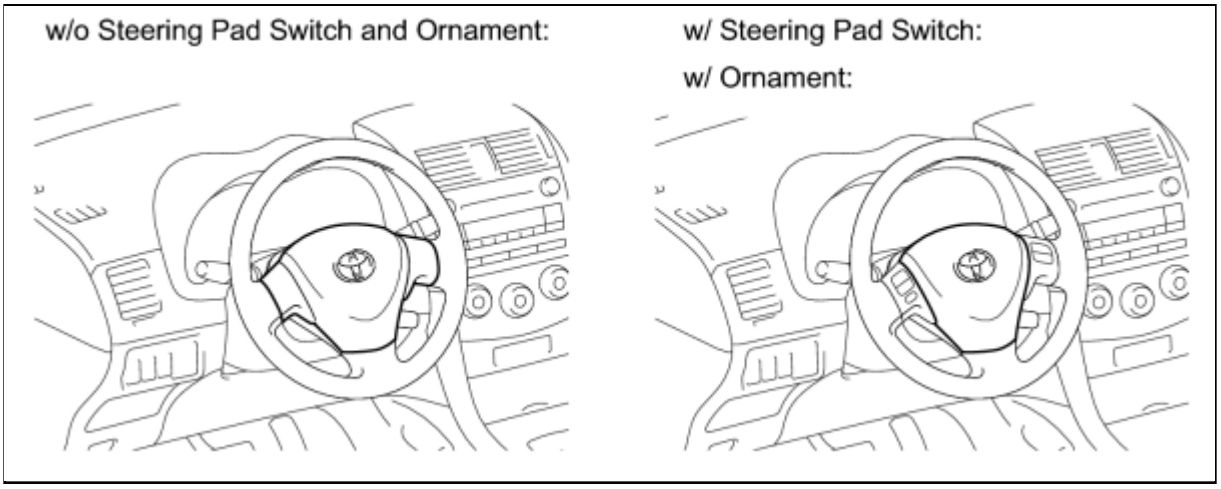
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: ON-VEHICLE INSPECTION (2010 Corolla)		



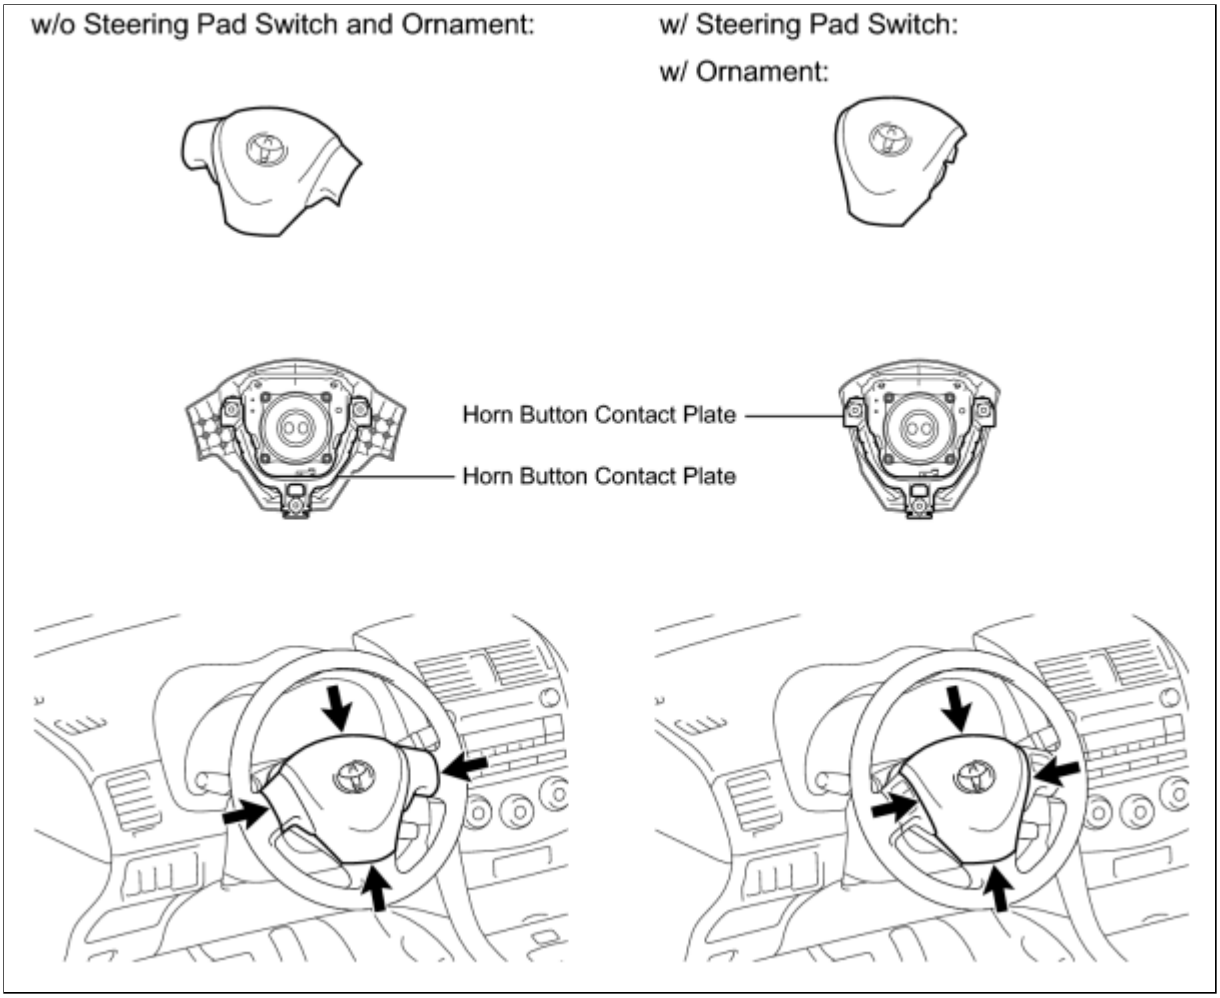
ON-VEHICLE INSPECTION

1. INSPECT STEERING PAD (VEHICLE NOT INVOLVED IN COLLISION) (w/o Steering Pad Switch)

(a) Perform a diagnostic system check INFO .

(b) With the steering pad installed on the vehicle, perform a visual check. If there are any following defects, replace the steering pad with a new one:

- Cuts, minute cracks or marked discoloration on the steering pad top surface or grooves.



2. INSPECT STEERING PAD (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check INFO .

(b) With the steering pad removed from the vehicle, perform a visual check. If there are any following defects, replace the steering pad or steering wheel assembly with a new one:

- Cuts, minute cracks or marked discoloration on the steering pad top surface or grooves.
- Cracks or other damage to the connectors.
- Deformation of the steering wheel assembly.
- Deformation of the horn button contact plate of the steering pad.
- There should be no interference between the steering pad and steering wheel assembly, and the clearance should be uniform all the way around when a new steering pad is installed on the steering wheel assembly.

CAUTION:

Be sure to follow the correct removal and installation procedures of the steering pad.

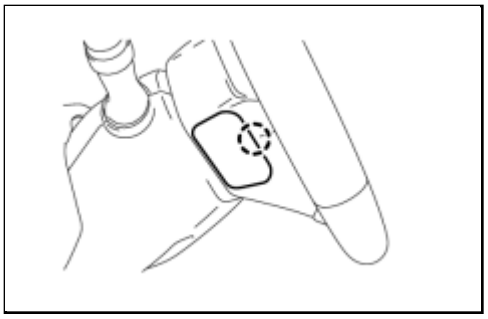
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: REMOVAL (2010 Corolla)		

REMOVAL

1. PRECAUTION

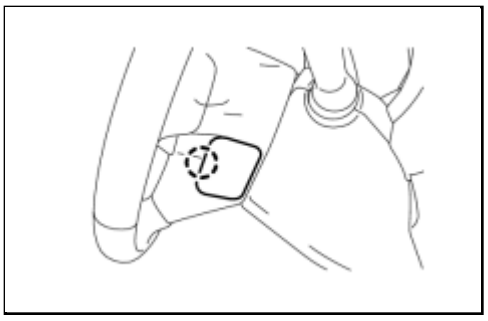
CAUTION:



Be sure to read Precaution thoroughly before servicing INFO **.**

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

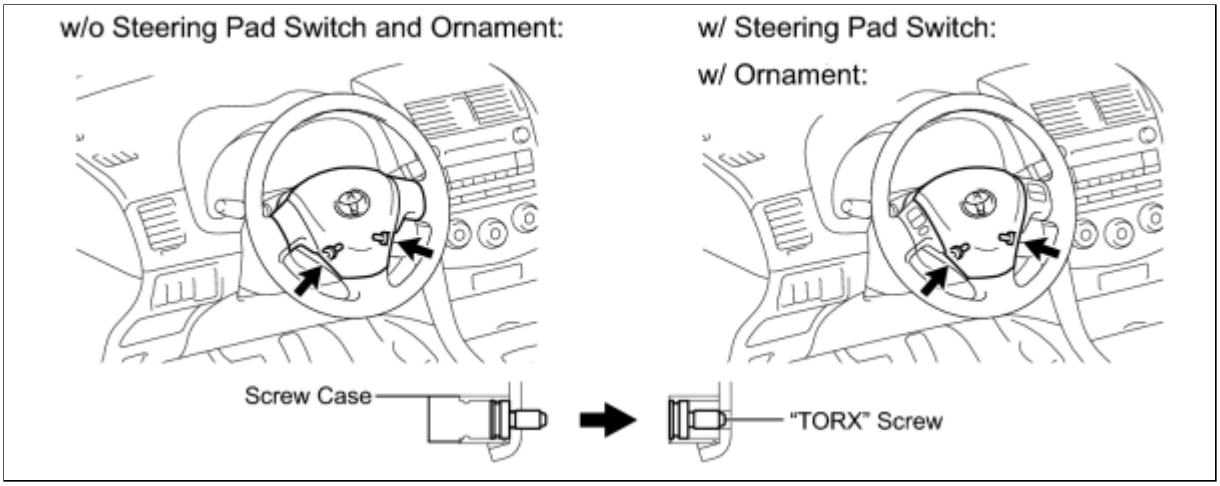
CAUTION:



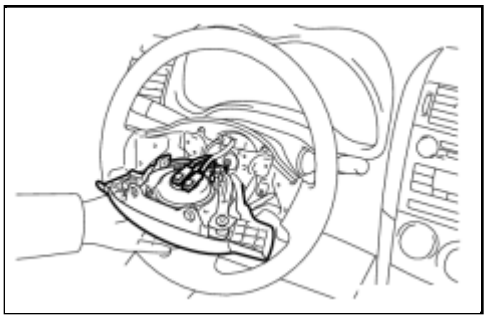
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

3. REMOVE LOWER NO. 3 STEERING WHEEL COVER

(a) Disengage the claw and remove the lower No. 3 steering wheel cover.



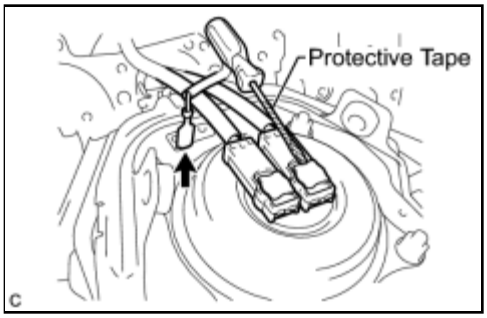
4. REMOVE LOWER NO. 2 STEERING WHEEL COVER



(a) Disengage the claw and remove the lower No. 2 steering wheel cover.

5. REMOVE STEERING PAD

(a) Using a "TORX" socket wrench (T30), loosen the 2 "TORX" screws until the groove along the screw circumference catches on the screw case.



(b) Pull out the steering pad from the steering wheel assembly and support the steering pad with one hand as shown in the illustration.

NOTICE:

When removing the steering pad, do not pull the airbag wire harness.

(c) Disconnect the horn connector from the steering pad.

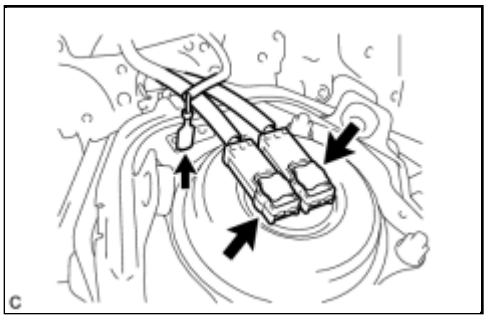
(d) Using a screwdriver with the tip wrapped with protective tape, disconnect the 2 airbag connectors and remove the steering pad.

NOTICE:

When disconnecting the airbag connector, take care not to damage the airbag wire harness.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000UW604CX
Title: SUPPLEMENTAL RESTRAINT SYSTEMS: STEERING PAD: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL STEERING PAD

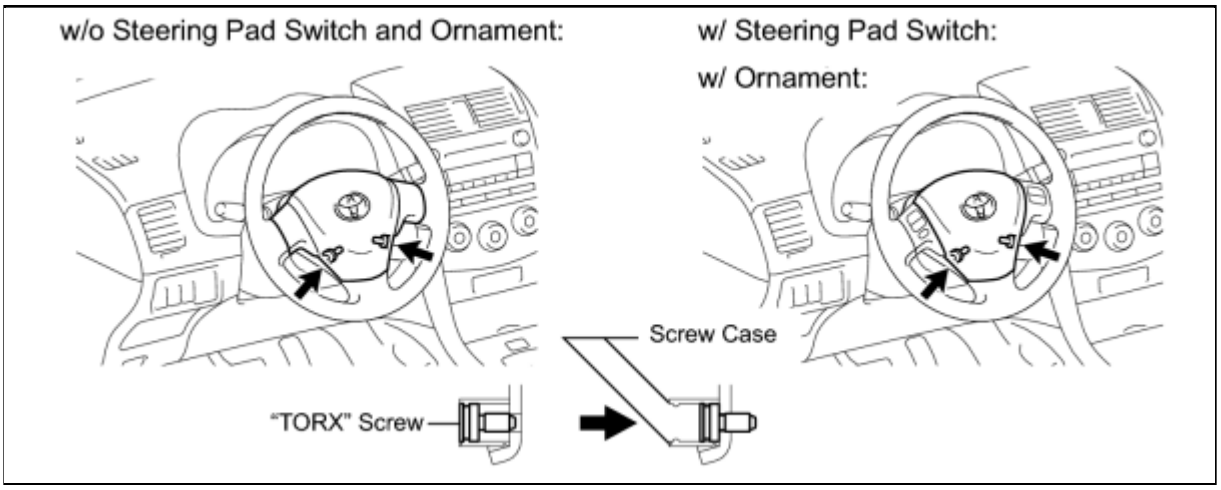
(a) Check that the ignition switch is off.

(b) Check that the cable is disconnected from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

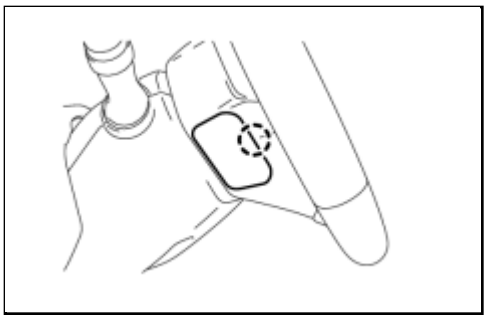
(c) Connect the 2 airbag connectors to the steering pad.



NOTICE:

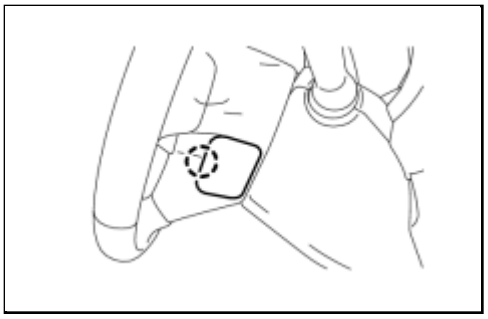
When connecting the airbag connector, take care not to damage the airbag wire harness.

(d) Connect the horn connector to the steering pad.



(e) Confirm that the circumference groove of the "TORX" screw fits in the screw case, and place the steering pad onto the steering wheel assembly.

(f) Using a "TORX" socket wrench (T30), tighten the 2 "TORX" screws.

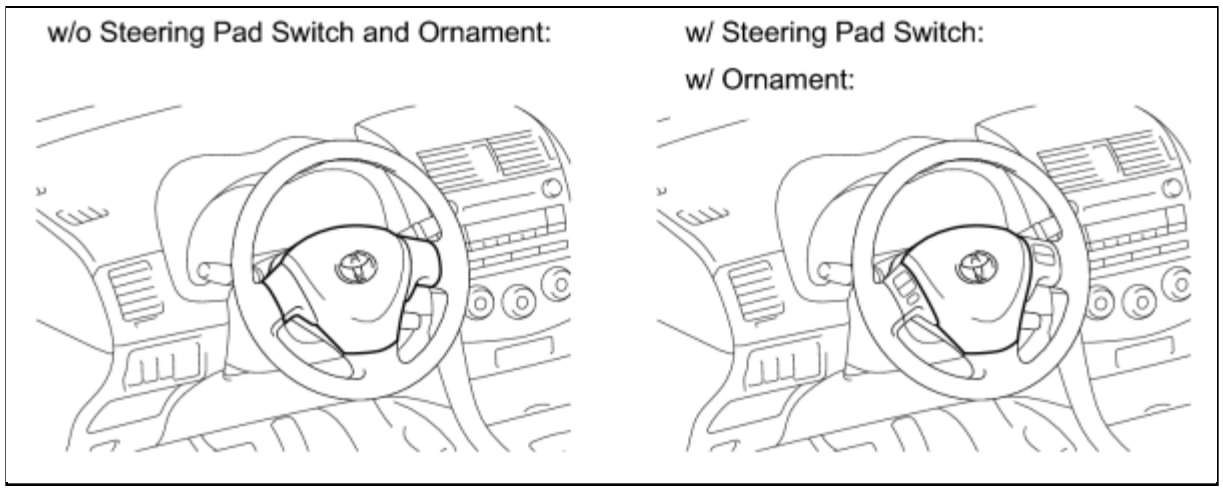


Torque: 8.8 N·m (90 kgf·cm, 78in·lbf)

2. INSTALL LOWER NO. 3 STEERING WHEEL COVER

(a) Install the lower No. 3 steering wheel cover with the claw.

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER



(a) Install the lower No. 2 steering wheel cover with the claw.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

5. INSPECT STEERING PAD

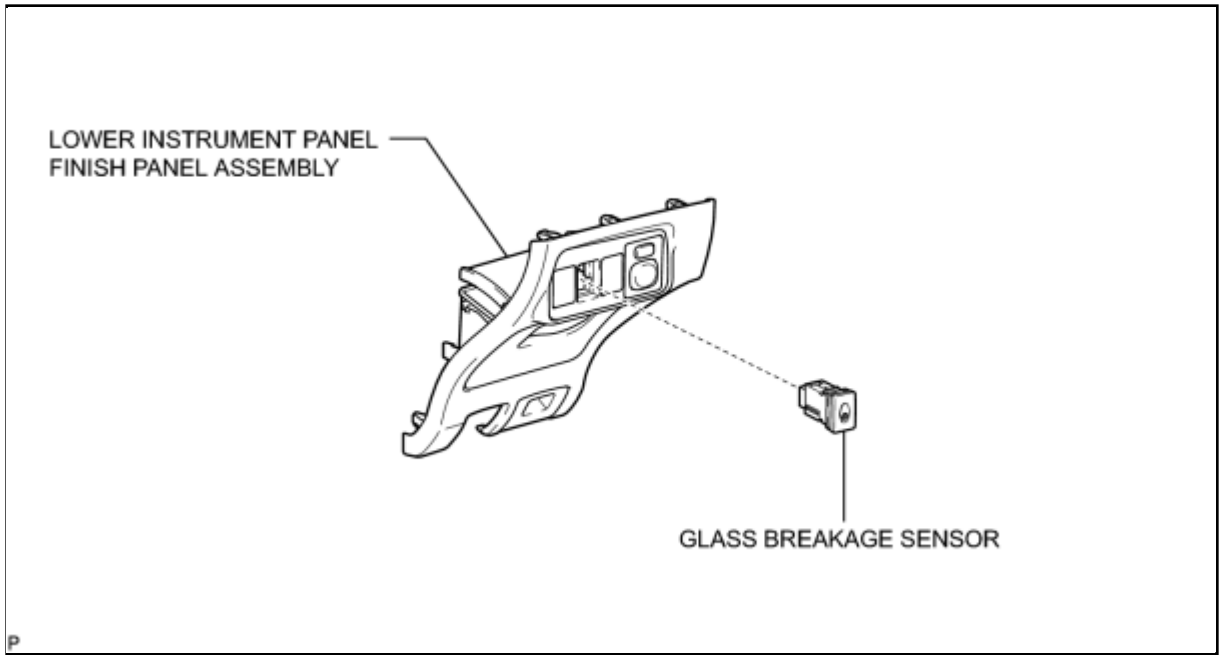
(a) With the steering pad installed on the vehicle, perform a visual check. If there are any following defects, replace the steering pad with a new one:

- Cuts, minute cracks or marked discoloration on the steering pad top surface or grooves.

(b) Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system INFO .



6. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light INFO .

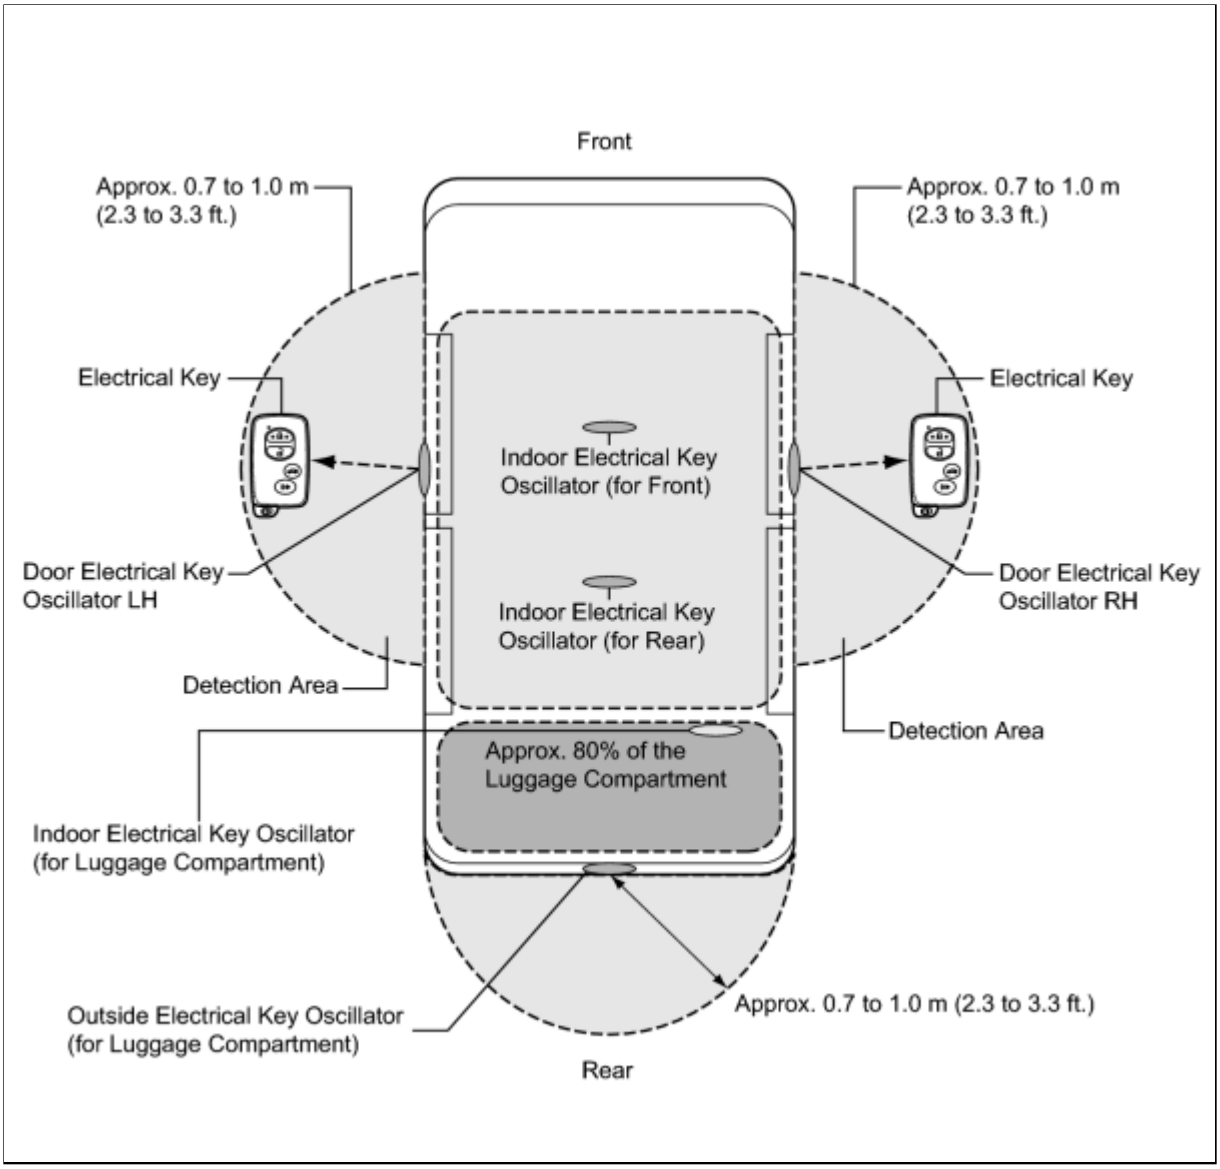
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

CAUTION:



If using a pacemaker, be sure to read the manual of the pacemaker before using the key because the radio waves of the key may affect the pacemaker.

1. SMART KEY SYSTEM DESCRIPTION

(a) In addition to conventional mechanical key and wireless door lock control functions, the smart key system enables door locking/unlocking, steering lock releasing, engine starting, and luggage compartment door opening without operating the key. The only requirement is that the key is in the user's possession.

- This system is controlled by the certification ECU (smart key ECU assembly). When the certification ECU (smart key ECU assembly) detects the presence of a key in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- The detection areas are formed by 6 electrical key oscillators (2 door electrical key oscillators, 3 indoor electrical key oscillators, and 1 outside electrical key oscillator).

2. DETECTION AREA

(a) Precautions for the entire system:

- Be sure to carry the key during inspection of the smart key system.
- As weak radio waves are used to detect the key, the key detection area may decrease, or the key may not be detected correctly in the following situations:
    a. The key battery is depleted.
    b. Any facilities that generate strong radio waves, such as a TV tower, power plant, broadcast station, or gas station, are located near the inspection site.
    c. A wireless device, such as a cellular phone, is carried with the key.
    d. The key is in contact with or covered with metal.
    e. Another wireless door lock control function is operated near the vehicle.
    f. The key is located near a device that generates high voltage or noise.
- The key may be difficult to operate for a reason relating to the vehicle body shape.
- The key may not be detected correctly if it is around the vehicle's windows, the door handle, or the center of the bumper even when it is in the detection area outside the vehicle.
- The key may not be detected correctly if it is on the instrument panel, rear package tray, floor, or in the glove box even when it is in the detection area inside the vehicle.
- The engine cannot be started even when the key is in the detection area inside the

luggage compartment.

- The key may not operate if the key is not held properly.
- The smart key system does not operate in the following conditions:

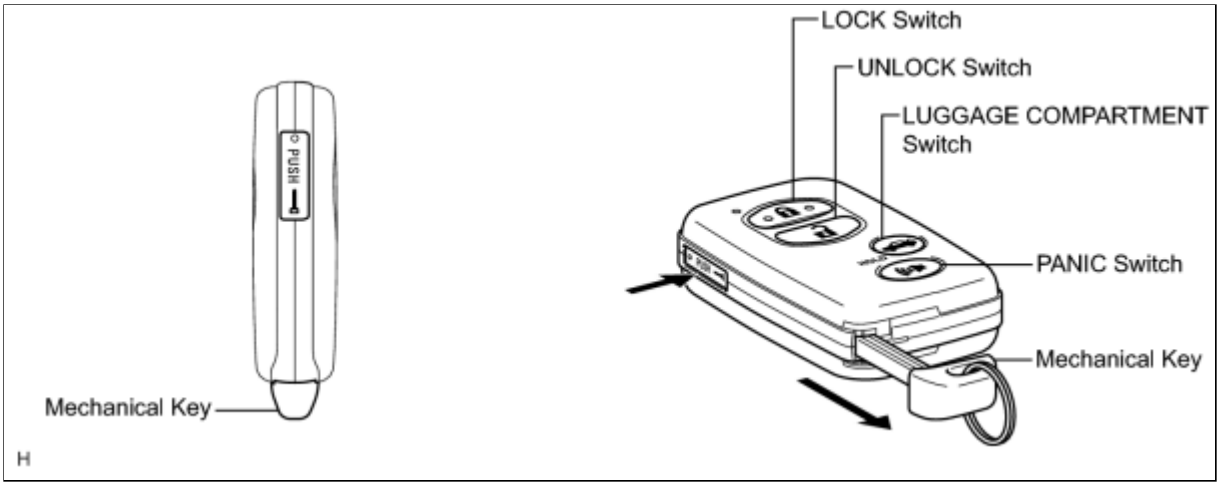
    a. The smart key system is canceled.
    b. The key battery is completely depleted (the indicator does not blink when pushing any of the buttons on the key).

3. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Key	Consists of mechanical key, transmitter for wireless door lock control, and transceiver for smart key system
Certification ECU (smart key ECU assembly)	Controls smart key system in accordance with signals from each electrical key oscillator, various switches, ECUs, and key • Judges and certifies ID code from door control receiver • Transmits engine immobiliser unset signal to ID code box (immobiliser code ECU) • Transmits steering unlock signals to steering lock ECU
Main Body ECU (instrument panel junction block)	Controls push button start function in accordance with signals from various switches, ECUs, and combination meter • Transmits key verification request signal to certification ECU (smart key ECU assembly) in accordance with engine switch signal, and turns relays ON and OFF • Receives request signal from certification ECU (smart key ECU assembly) and actuates door lock motor to unlock or lock door • Transmits each door condition signal to certification ECU (smart key ECU assembly)
ID Code Box (immobiliser code ECU)	Receives steering unlock or engine immobiliser unset signals from certification ECU (smart key ECU assembly), certifies them, and transmits unset signals to steering lock ECU or ECM
Outside Door Handle (driver door and passenger door) (antenna)	Transmits request signals
Outside Door Handle (driver door and passenger door) (touch sensor)	Detects that person touches inside of outside handle
Outside Door Handle (driver door and passenger door) (lock switch)	Transmits door lock request signals to certification ECU (smart key ECU assembly)
Door Electrical Key Oscillator (driver door and passenger door)	Receives request signal from certification ECU (smart key ECU assembly), and forms detection area around front door

COMPONENT	FUNCTION
Indoor Electrical Key Oscillator (front and rear)	Receives request signal from certification ECU (smart key ECU assembly), and forms detection area in vehicle interior
Indoor Electrical Key Oscillator (luggage compartment)	Receives request signal from certification ECU (smart key ECU assembly), and forms detection area in luggage compartment
Outside Electrical Key Oscillator (luggage compartment)	Receives request signal from certification ECU (smart key ECU assembly), and forms detection area around luggage compartment door
Door Control Receiver	• Receives ID code from key in detection area and transmits it to certification ECU (smart key ECU assembly) • Receives ID code from key in luggage compartment and transmits it to certification ECU (smart key ECU assembly)
Electrical Key Antenna	Receives ID code from key and transmits it to door control receiver
Luggage Compartment Door Opener Outer Switch	Transmits luggage compartment door open request signal to certification ECU (smart key ECU assembly)
Stop Light Switch	Outputs state of brake pedal to main body ECU (instrument panel junction block)

• Wireless Door Lock Buzzer
• Combination Meter
  ○ Multi-information Display
  ○ Buzzer
	When certification ECU (smart key ECU assembly) detects human errors such as those below, it warns driver by sounding wireless door lock buzzer, displaying information and sounding a buzzer in combination meter in accordance with request signal from ECU
	Example:
	• Key is taken out of vehicle
	• Driver leaves vehicle while engine is still running



4. CONSTRUCTION AND OPERATION

(a) Key

The key consists of a mechanical key, a transmitter for the wireless door lock control, and a transceiver for the smart key system.

- The transceiver for the smart key system receives signals from the oscillators and sends the ID code to the tuner.
- The transmitter for the wireless door lock control has a LOCK switch, UNLOCK switch, LUGGAGE COMPARTMENT switch.
- This mechanical key works for the driver door, luggage compartment door, and glove box, but cannot start the engine.

A total of 4 keys can be registered.

(b) Electrical key oscillator (door electrical key oscillators, indoor electrical key oscillators (front, rear and luggage compartment) and outside electrical key oscillator (luggage compartment))

Each electrical key oscillator transmits the request signal received from the certification ECU (smart key ECU assembly), and forms a key detection area to detect the presence of a key. The detection area formed by the door electrical key oscillator and outside electrical key oscillator (luggage compartment) is approximately 0.7 to 1.0 m (2.3 to 3.3 ft.) from the outside handle of the door or the center of the rear bumper.

- The detection area of the door electrical key oscillator is formed by transmitting a request signal every 0.25 seconds while the engine switch is off and each door is locked. In this way, the oscillator detects the proximity of a key. During entry lock, the detection area is formed with the lock switch on.
- The detection area of the outside electrical key oscillator (luggage compartment) is formed when the power luggage door open switch is on.
- The detection area of the indoor electrical key oscillator (front and rear) is formed when the driver door is opened or closed, during start ignition, when a warning is activated, or the lock switch is on.
- The detection area of the indoor electrical key oscillator (luggage compartment) is formed when the luggage compartment door is closed, or the luggage compartment opener outer switch is pressed.

5. ENTRY FUNCTION OPERATION

(a) The smart key system has the following functions:

FUNCTION	OUTLINE
Mechanical Key	Operation is same as conventional mechanical key.
Wireless Door Lock Control	This function remotely locks and unlocks all doors or luggage compartment. Operation is same as wireless door lock control system. However, receiver in certification ECU (smart key ECU assembly) uses entry door control receiver to control locking and unlocking.
Entry Illumination	When person carrying key enters detection area, door will enter unlock standby mode and front map light will illuminate.
Entry Unlock	When key is located in detection area of door electrical key oscillator, door will unlock by touching inside of outside door handle.

FUNCTION	OUTLINE
Entry Unlock Mode Switching INFO	Changes doors that can be unlocked with entry unlock function between 2 modes. • Driver door mode • All door mode
Entry Lock	When key is located in detection area of door electrical key oscillator and engine switch is off, door can be locked by pressing lock switch on outside door handle.
Entry Luggage Compartment Open	When key is in detection area of outside electrical key oscillator (luggage compartment), luggage compartment door opens by pressing luggage compartment opener outer switch.
Key Lock-in Prevention	• Prevents confinement of key if door is locked using outside door handle while key is still inside vehicle. • If all doors are locked and luggage compartment door is closed while key is still in luggage compartment, warning buzzer sounds. If luggage compartment open switch is operated, luggage compartment door can be opened.
Warning	When any of situations below occur, smart key system causes certification ECU (smart key ECU assembly) to sound buzzer in combination meter and wireless door lock buzzer in order to alert driver. • Occupant leaves with key. • Engine switch is operated while key is outside actuation area. • Entry lock is operated while key is inside vehicle. • Key battery is weak. • The key is left in the vehicle. • A door is ajar. • The key is left in the luggage compartment. • Steering lock does not release. • The steering lock mechanism is malfunctioning. • The main body ECU (instrument panel junction block) is malfunctioning.
Battery Saving	If key is constantly located within actuation area of door electrical key oscillator, system maintains periodic communication with key. Therefore, if vehicle remains parked in that state for a long time, key battery and vehicle battery could be drained.
Key Cancel INFO	Following key functions can be cancelled by performing certain operations: • Entry Unlock/Lock • Entry Luggage Compartment Open • Key Lock-in Prevention • Warning
Key Code Registration	The total number of keys that can be registered is four. Enables the registration (writing and storing) of transmitter recognition codes in the EEPROM that is contained in the certification ECU (smart key ECU assembly).

6. WIRELESS DOOR LOCK AND UNLOCK AND LUGGAGE COMPARTMENT OPEN FUNCTION

Push the LOCK/UNLOCK/LUGGAGE COMPARTMENT switch on the key to operate each function. For details, INFO .

7. ENTRY UNLOCK FUNCTION

(a) The detection area is formed by communication between a door electrical key oscillator and door control receiver when the door is locked in order to detect access of the person carrying the key.

(b) When the person carrying the key enters the detection area around the vehicle, the matching of the ID codes for a door electrical key oscillator and key will automatically be performed. After the matching is completed, the door will enter unlock standby mode.

(c) In unlock standby mode, the antenna built into the outside handle starts sensing. If the outside handle is held (the back side of the handle is touched), the door unlock operation will be performed. At this time, the hazard warning light blinks twice and the wireless door lock buzzer sounds twice.

(d) If any of the doors are not opened after a door unlock operation, all doors will automatically lock after 60 seconds.

8. ENTRY LOCK FUNCTION

(a) After leaving the vehicle carrying the key, push the lock switch on the outside handle when all the doors are closed.

(b) The certification ECU (smart key ECU assembly) determines whether the key is located inside or outside the cabin based on the information from a door electrical key oscillator and indoor electrical key oscillator. Then matching of the ID codes is performed.

(c) When the matching result shows that the ID codes of the key and indoor antenna do not match and the ID codes of the key and door electrical key oscillator match, the door lock function will operate. At this time, the hazard warning lights blink once and the wireless door lock buzzer sounds once.

(d) If the key is located inside the cabin, the door lock function will not operate and the alarm buzzer (beep sound) will sound for 2 seconds.

9. ENTRY LUGGAGE COMPARTMENT OPEN FUNCTION

Stand in front of the luggage compartment with the key and push the power luggage compartment opener switch to start the matching of the ID codes for the outside electrical key oscillator (luggage compartment). If the ID codes match, luggage compartment door open operation will be performed.

10. KEY LOCK-IN PREVENTION FUNCTION

(a) If you attempt to lock the door through keyless operation (move the lock knob to the lock position and then close the door) with the key in the cabin, the system determines that the key is located in the cabin and unlocks the door.

(b) If the luggage compartment is closed with the key in it, the alarm will sound and the luggage compartment can be opened only when all the doors are locked in order to prevent key confinement in the vehicle.

11. WARNING FUNCTION

(a) General

When any of the situations below occur, the smart key system causes the certification ECU (smart key ECU assembly) to sound the buzzer in the combination meter and the wireless door

lock buzzer in order to alert the driver.

WARNING FUNCTION OPERATION CONDITION	SITUATION
Exit warning if shift lever position is not P and power source mode is not off.	A
Exit warning if shift lever position is P and power source mode is not off.	B
An occupant leaves with the key.	C
The engine switch is operated while the key is outside the detection area.	D
Entry lock is operated while the key is inside the cabin or luggage compartment.	E
The key battery is weak.	F
The key reminder warning sounds.	G
A door is ajar.	H
The key is left in the luggage compartment.	I
Steering lock does not release.	J
The steering lock mechanism is malfunctioning.	K
The main body ECU (instrument panel junction block) is malfunctioning.	L

(b) Situation A

There are 2 patterns for situation A.

Pattern 1: In situation A, the door is opened and the user tries to leave the vehicle.

Pattern 2: Then the user holds the key and tries to move away from the vehicle.

In these situations, the following control is performed:

- Pattern 1

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: ○ The shift lever position is not P. ○ The engine switch is not off. ○ The driver side door is opened. ○ Vehicle speed is less than 5 km/h (3.1 mph).
Combination Meter ○ Buzzer	Warning: Continuous sound
Combination Meter ○ Smart Key Indicator Light	-

Wireless Door Lock Buzzer	-
Warning Stop Condition	The warning is stopped when one of the following conditions is met: ○ The engine switch is off. ○ The shift lever position is P. ○ The driver side door is closed. ○ Vehicle speed is above 5 km/h (3.1 mph).

- Pattern 2

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: ○ The shift lever position is not P. ○ The engine switch is not off. ○ The driver side door is opened and closed. ○ Vehicle speed is 0 km/h (0 mph). ○ The key is not in the cabin or luggage compartment.
Combination Meter ○ Buzzer	Warning: Continuous sound The warning is stopped when one of the following conditions is met: ○ The engine switch is off. ○ The shift lever position is P. ○ The key is in the cabin or luggage compartment. ○ Vehicle speed is above 0 km/h (0 mph).
Combination Meter ○ Smart Key Indicator Light	Flashes
Wireless Door Lock Buzzer	Warning: Continuous sound The warning is stopped when one of the following conditions is met: ○ The engine switch is off. ○ The shift lever position is P. ○ The key is in the cabin or luggage compartment. ○ Vehicle speed is above 0 km/h (0 mph).

(c) Situation B

There are 2 patterns for situation B.

Pattern 1: In situation B, the door is opened and the user tries to leave the vehicle.

Then the user holds the key and tries to move away from the vehicle.

Pattern 2: Then the user tries to use the entry lock and presses the lock switch.

In these situations, the following control is performed:

- Pattern 1

Possible Effects without Warning	Vehicle theft, engine cannot be restarted
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: ○ The shift lever position is P. ○ The engine switch is not off. ○ The driver side door is opened and closed. ○ The key is not in the cabin or luggage compartment.
Combination Meter ○ Buzzer	Warning: Sounds once
Combination Meter ○ Smart Key Indicator Light	Flashes
Wireless Door Lock Buzzer	Warning: Sounds 3 times The warning is stopped when either of the following conditions is met: ○ The engine switch is off. ○ The key is in the cabin or luggage compartment.

- Pattern 2

Possible Effects without Warning	Vehicle theft
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: ○ The shift lever position is P. ○ The engine switch is not off. ○ All doors are closed. ○ The lock switch is "ON". ○ The key is not in the cabin or luggage compartment. ○ The key is outside vehicle (within one of the

	actuation areas).
Combination Meter ○ Buzzer	-
Combination Meter ○ Smart Key Indicator Light	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(d) Situation C

In this situation, the following control is performed:

Possible Effects without Warning	Engine cannot be restarted
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: • The engine switch is not off. • Any door other than driver side door is opened and closed. • The key is not in the cabin or luggage compartment.
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Smart Key Indicator Light	Flashes
Wireless Door Lock Buzzer	Warning: Sounds 3 times The warning is stopped when one of the following conditions is met: • The engine switch is off. • Vehicle speed is above 0 km/h (0 mph). • The key is in the cabin or luggage compartment.

(e) Situation D

In this situation, the following control is performed:

Possible Effects without Warning	Confuses the user

Warning Condition	The certification ECU (smart key ECU assembly) gives warning when both of the following conditions are satisfied: • The engine switch is off → on (IG). • The key is not in the cabin.
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Smart Key Indicator Light	Flashes Information is displayed on the combination meter for 8seconds (disappears after 8 seconds).
Wireless Door Lock Buzzer	-

(f) Situation E

In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied: • The engine switch is off. • All doors are closed. • The lock switch is "ON". • The key is in the cabin or luggage compartment.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(g) Situation F

In this situation, the following control is performed:

Possible Effects without Warning	Smart key system does not function
Warning Condition	The certification ECU (smart key ECU assembly) gives warning when all following conditions are satisfied:

	• The engine switch is turned off after being left on (IG) for over 20 minutes. • The key battery voltage is low. • The key is in the cabin.
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	-

(h) Situation G

There are 2 patterns for situation G.

- Pattern 1: When the driver's door is open, the driver turns the engine switch on (ACC) and attempts to leave the vehicle.
- Pattern 2: When the driver's door is open, the driver turns the engine switch from on (IG) to off and attempts to leave the vehicle.

In these situations, the following control is performed:

Pattern 1 and Pattern 2

Possible Effects without Warning	Vehicle theft
Warning Condition	The warning is activated when either of the following conditions is met: • The engine switch is on (ACC) and the driver door is opened. • The engine switch is off, the steering is unlocked, and the driver door is opened.
Combination Meter • Buzzer	Continues to sound at short and even intervals
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	-
Engine Switch Indicator Light	-

Warning Stop Condition	The warning is stopped when one of the following conditions is met: • The engine switch is on (IG). • The driver side door is closed. • The engine switch is off and the steering is locked.

(i) Situation H

The lock switch on the door outside handle is pressed to perform entry lock with a door open. In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	The warning is activated when all of the following conditions are met: • The engine switch is off. • Any doors are opened. • The entry lock button on the outer door handle is operated.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	Warning: Continuous sound
Engine Switch Indicator Light	-
Warning Stop Condition	The warning is stopped when one of the following conditions is met: • The engine switch is off. • All doors are closed. • Wireless door lock remote function is unlocked. • Entry unlock is operated. • 10 seconds have elapsed since the wireless door lock buzzer was activated.

(j) Situation I

The luggage compartment door is closed with the key left in the luggage compartment. In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft

Warning Condition	The warning is activated when all of the following conditions are met: • Vehicle speed is 0 km/h (0 mph). • All doors are closed and all doors are locked or the state where the door after unlock operation is waiting to open. • Entry luggage compartment open function is available.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	Sounds for 2 seconds
Warning Stop Condition	-

(k) Situation J

The steering lock cannot be released. In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	The steering lock cannot be released, thus the engine is prevented from starting.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	Flashes
Wireless Door Lock Buzzer	-
Engine Switch Indicator Light	The green indicator blinks at 1-second intervals (goes off automatically in 30 seconds).
Warning Stop Condition	The engine switch is pressed while the steering wheel is turned left and right, and the steering lock is successfully released.

(l) Situation K

A malfunction of the steering lock ECU is detected. In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft

Warning Condition	A malfunction of the steering lock ECU is detected.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	Flashes
Wireless Door Lock Buzzer	-
Engine Switch Indicator Light	The amber indicator blinks at 2-second intervals (goes off automatically in 15 seconds).
Warning Stop Condition	The steering lock ECU returns to normal.

(m) Situation L

A malfunction of the main body ECU (instrument panel junction block) is detected. In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	A malfunction in the main body ECU (instrument panel junction block) is detected.
Combination Meter • Buzzer	-
Combination Meter • Smart Key Indicator Light	-
Wireless Door Lock Buzzer	-
Engine Switch Indicator Light	The amber indicator blinks at 2-second intervals (goes off automatically in 15 seconds).
Warning Stop Condition	The main body ECU (instrument panel junction block) returns to normal.

12. BATTERY SAVING

(a) Vehicle Battery Saving Function

In the smart key system, signals are emitted outside the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below are carried out:

CONDITION	CONTROL

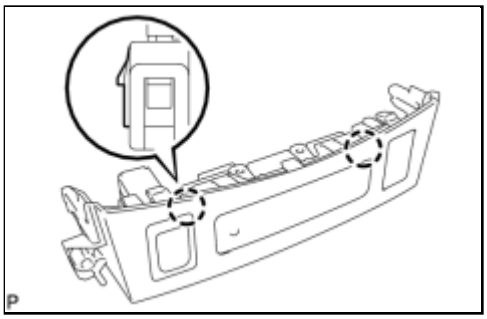
CONDITION	CONTROL
Both conditions below are met for 5 days: • Key is not in detection area. • Touch sensor or lock switch operation is not performed.	Signal transmission interval is extended from 0.25 to 0.75 seconds.
Both conditions below are met for 14 days: • Key is not in detection area. • Touch sensor or lock switch operation is not performed.	The smart key system is automatically deactivated.

Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

(b) Key Battery and Vehicle Battery Saving Function

In the smart key system, if the key is constantly located within the vehicle exterior detection area of the doors, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, the key battery and the vehicle battery could be drained. For this reason, if this state continues longer than 10 minutes, the smart key system automatically becomes deactivated.



Reinstatement Conditions

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS WHEN USING TECHSTREAM

(a) When troubleshooting the smart key system using the Techstream with the engine switch off, connect the Techstream to the vehicle and repeat turning any of the courtesy light switches on and off until communication between the Techstream and the vehicle begins (the interval between ON and OFF should be less than 1.5 seconds).

(b) After DTCs are all cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).

2. PRECAUTIONS FOR EACH FUNCTION

(a) Precautions for the key:

The key is a precision instrument. Be sure to observe the following:

(1) Do not drop or strike the key.

(2) Do not keep the key in a high temperature area for a long time.

(3) Do not use an ultrasonic washing machine to clean the key.

(4) Keep the key away from magnets or magnetized items during use.

(5) Do not attach any stickers to the key.

(6) If a key is lost, delete all registered key ID codes and then reregister the remaining keys.

(b) Precautions for the entry unlock function:

(1) As the sensor is built into the backside of the outside door handle, the user must touch the backside of the handle when performing the unlock function.

(2) If the backside of the handle is touched with gloved hands, the response of the door may be delayed.

(3) During the entry unlock operation, if the door handle is pulled before the door unlocks, the unlock function cannot be completed. Confirm that the door has been unlocked before pulling the door handle to open the door.

(4) Make sure that the doors are unlocked when touching the touch sensor on the outside door handle while the key is being carried.

If the doors cannot be unlocked, the certification ECU (smart key ECU assembly) orders the main body ECU (instrument panel junction block) to perform the door unlock operation 4 times at intervals of 0.75 seconds.

At this time, the door may not be unlocked because the handle is being pulled due to some mechanical reasons.

Be sure to return the door handle to its original position.

If the door cannot be opened by pulling the handle, perform the entry unlock operation again.

(5) If the key is too close to the electrical key oscillator on the outside of the vehicle, the door may not be unlocked because the key cannot react to the strong wave output from the transmitter.

(6) If the key is within the vehicle exterior detection area, the door can be unlocked even when a person other than the person carrying the key holds the door handle.

However, the doors other than the door that the codes match will not be unlocked.

(If the key is within the driver side door's detection area outside the vehicle, the doors will be unlocked when the person carrying the key holds the driver side door handle. However, if any door handle other than that of the driver side door is held, the doors will not be unlocked).

(7) If a door is not opened after the door unlock operation, the doors automatically lock after approximately 60 seconds.

(8) If a large amount of water is applied to the door handle due to a car wash or heavy rain, the key being within the vehicle exterior detection area may cause the doors to be unlocked.

However, the doors will be locked again after approximately 60 seconds if a door is not opened.

(9) If the key of the smart key system is used while it is being carried with the key of another smart key system, the time before the entry unlock operation will become longer than usual. This is not a malfunction.

(c) Precautions for the entry lock function:

(1) When performing the entry lock operation, firmly press the lock switch on the outside door handle.

If the lock switch is pressed too quickly or lightly, the entry lock may not operate.

(2) Signals output from the indoor electrical key antenna may leak through the window. Also, if the key is too close to a door electrical key oscillator, the electrical key oscillator output signals are too strong and the key cannot respond. As a result, when the key is near the vehicle (window, door handle), the entry lock function may not operate. Also, the key reminder warning buzzer may sound and the entry unlock operation may stop functioning. In this situation, move the key away from the vehicle (window, door handle), perform the entry lock operation and perform the entry unlock operation.

(3) Do not touch the lock switch while opening or closing a door.

If the lock switch is pressed when opening or closing a door while the key is being carried, the door ajar warning buzzer sounds (beeps outside the vehicle for 10 seconds).

(4) If the key is on the instrument panel, rear package tray, floor, or in the glove box, the key reminder function may not operate and the key may be locked in the vehicle. Always carry the key.

(5) If the key is outside the vehicle but is very close to a window or door handle (the ECU determines that the key is inside the vehicle) and the transmitter or mechanical key is used to lock the doors (entry lock is not used), entry unlock will not operate. To unlock the doors, perform a wireless door unlock operation. The entry lock function operates in this way to prevent the user from unintentionally unlocking the doors from outside the vehicle. For example, when a user operates the wireless door lock operation from inside the vehicle, radio waves from a door electrical key oscillator may leak into the vehicle interior and the doors may unlock.

(6) To allow the user enough time to check if the doors are locked after performing a door lock operation (entry lock function or wireless door lock operation), the entry unlock function will not be permitted for 3 seconds after the door lock operation.

(d) Precautions for luggage compartment door entry function:

Even if the key is within the outside electrical key oscillator (luggage compartment) detection area, the luggage compartment door cannot be opened if the key is in the following areas:

- Near the center of the bumper
- Too close to the ground or in a high place

(e) Precautions for the function to prevent key confinement in the luggage compartment:

(1) Do not place the key in the luggage compartment.

If the luggage compartment door is closed with the key in it when all the doors are locked, the alarm to indicate key confinement will operate (beeping sound for 2 seconds outside of the vehicle). However, the alarm may not operate for some reason relating to the key location (near the spare tire or the side of the luggage compartment), the key condition (covered with metal or near metal), or ambient radio waves.

(2) If the luggage compartment door is closed with the key in it when any of the doors is unlocked or open, the key confinement prevention function will not operate. In this case, use the luggage compartment opener in the cabin to open the luggage compartment door and take out the key.

(3) The alarm may erroneously operate in the following conditions. If you can confirm that you are carrying the key or that the key is in the cabin, there is no problem. The entry luggage compartment open function may not operate if the alarm erroneously operates. In this case, use the luggage compartment opener in the cabin or perform a wireless operation to open the luggage compartment door.

- The key is brought into the cabin after the luggage compartment door is opened, and then the luggage compartment door is closed.

- The luggage compartment door is closed by the person who is carrying the key.

(4) If the alarm operates when the luggage compartment door is closed with all the doors locked, the key is in the cabin or luggage compartment. Check the cabin and luggage compartment to find the key.

(5) If the luggage compartment door is closed with the key in it when all the doors are locked, the alarm will sound and the luggage compartment door can be opened. This may increase the risk of the vehicle being stolen.

(6) Do not open or close the luggage compartment door after all the doors are locked if you want to keep the spare keys in the cabin. As a result, the alarm may sound and the luggage compartment door can be opened. This may increase the risk of the vehicle being stolen.

(f) Precautions for the battery built into the key and the vehicle battery:

(1) The key is constantly checking for signals from the vehicle, which requires power from the key's built-in battery. The life of the battery is approximately 1 to 2 years depending on the usage conditions. Be sure to replace the battery when its power is low. When replacing the battery, do not touch the inner circuit board or other inner parts.

(2) The key is constantly checking for signals from the vehicle using battery power to determine whether the key is being used or not. Even if the user is carrying 2 keys and only 1 key is used, both keys will consume battery power.

(3) The key receives radio waves at approximately 314 MHz. If the key continuously receives strong, identical frequency waves, the key's battery may be drained. Store the key at least 1 m (3.3 ft.) away from TVs, personal computers, or other electrical products.

(4) When a door is being locked, the vehicle battery is used to transmit radio waves. The battery may be dead if the vehicle remains stopped for a long time. If the vehicle is not used for a long time, remove the battery from the vehicle or cancel the smart key system.

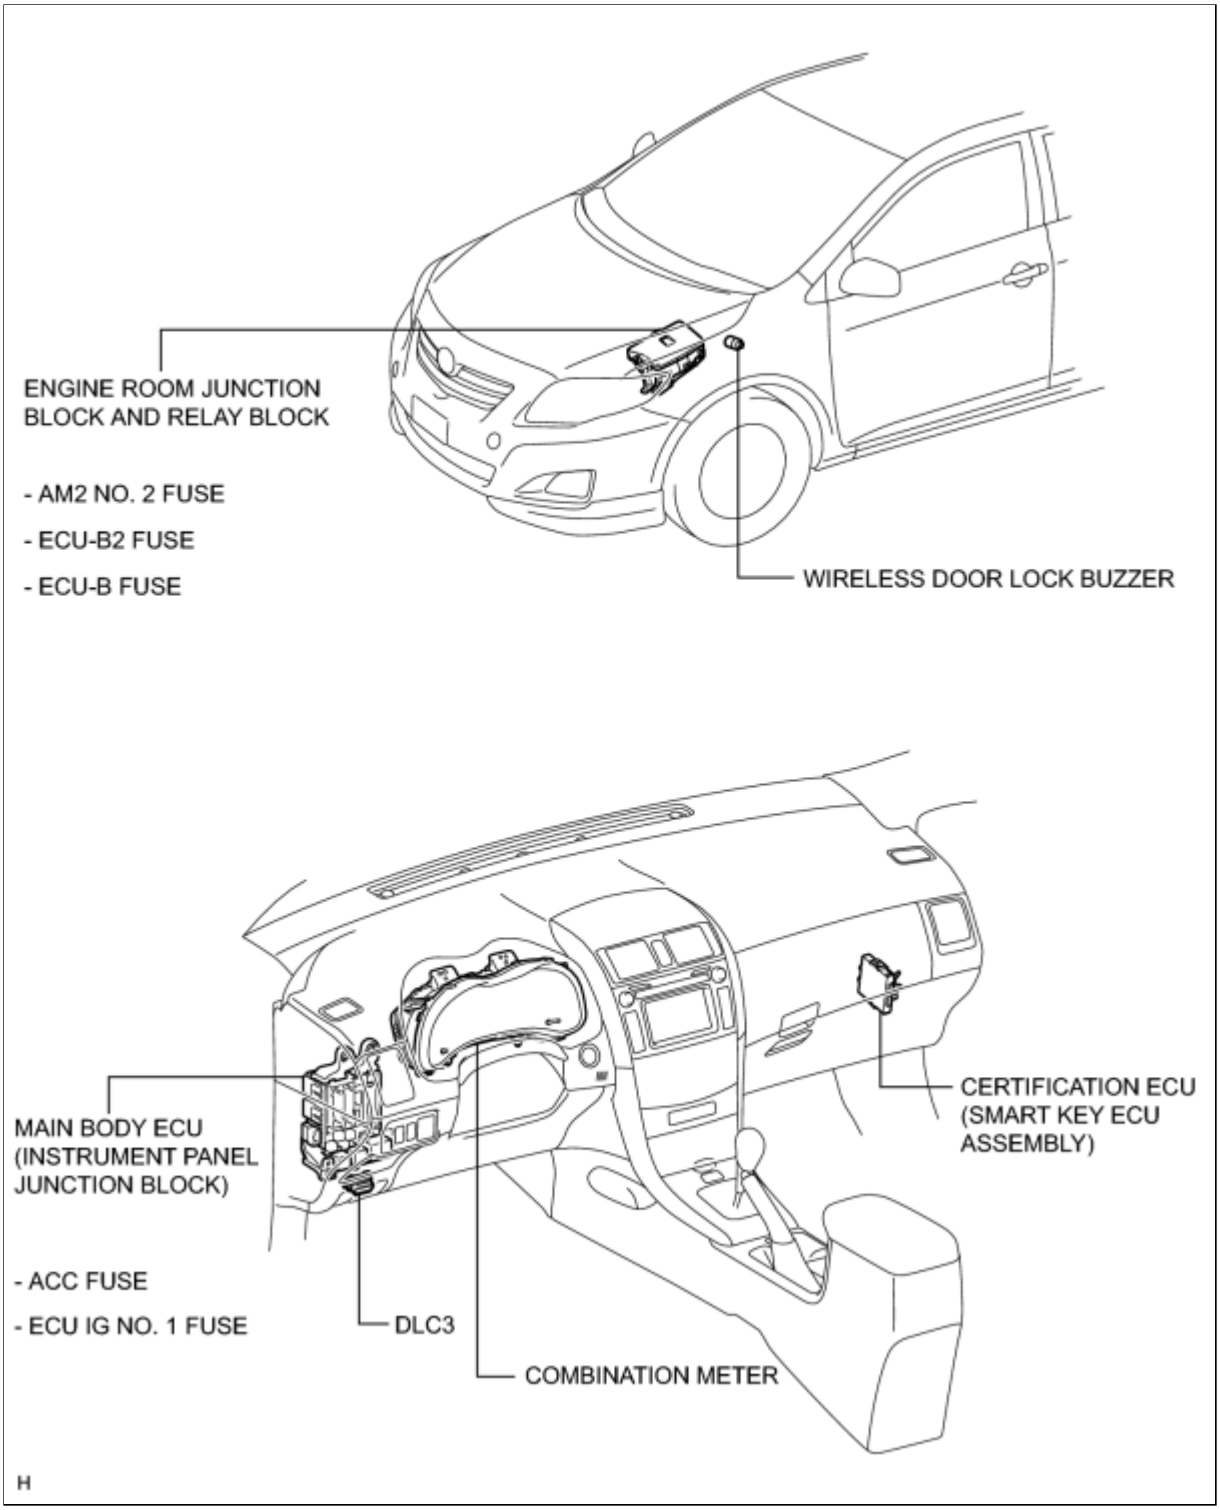
(5) When a door is being locked with the key in the detection area of a door electrical key oscillator, the battery is used for regular communication between the key and vehicle. If the

vehicle is not used, keep the key away from the vehicle (more than 2 m (6.6 ft.)).

(6) After disconnecting and reconnecting the battery cable, the entry unlock function may not operate. If this occurs, perform a wireless door unlock and lock operation.

(g) Precautions for the entry unlock mode switching function:

(1) Use the entry unlock mode switching function within a 1 m (3.3 ft.) area around the vehicle.



(2) The entry unlock mode switching function cannot be used within 5 seconds of the previous mode change. Wait 5 seconds or more before performing a mode change.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the smart key system.
- *: Use the Techstream.
- When troubleshooting the smart key system using the Techstream with the engine switch off, connect the Techstream to the vehicle and repeat turning any of the courtesy light switches on and off until communication between the Techstream and the vehicle begins (the interval between ON and OFF should be less than 1.5 seconds).

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS CHECK**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM (CAN)*

(a) Use the Techstream to check if the CAN communication system is functioning normally.

Result:

RESULT	PROCEED TO
CAN DTC is output.	A
CAN DTC is not output.	B

A INFO **Go to DIAGNOSTIC TROUBLE CODE CHART**

B

5.	INSPECT COMMUNICATION FUNCTION OF LIN COMMUNICATION SYSTEM (LIN)*

(a) Use the Techstream to check if the Multiplex Communication System (MPX) is functioning normally.

Result:

RESULT	PROCEED TO
LIN DTC is output.	A
LIN DTC is not output.	B

A ▶ INFO **Go to DIAGNOSTIC TROUBLE CODE CHART**

B
▼

6.	**CHECK DTC OUTPUT***

(a) Check for DTCs. Based on the DTCs output, try to cause the same steering lock system DTC, engine immobiliser system DTC, wireless door lock control system DTC or smart key system (for start function) DTC to be output by simulating the symptoms indicated by the DTCs.

Result:

RESULT	PROCEED TO
Steering lock system DTC is not output.	A
Engine immobiliser system DTC is output.	B
Wireless door lock control system DTC is output.	C
Smart key system (for start function) DTC is output.	D
DTC is not output.	E

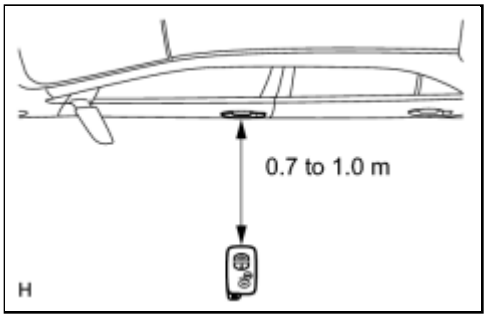
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): OPERATION CHECK (2010 Corolla)		

OPERATION CHECK

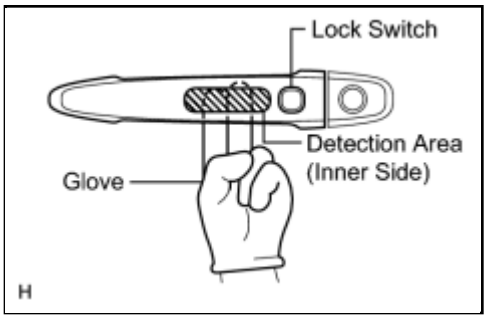


1. SMART KEY SYSTEM OPERATION INSPECTION

(a) Check the entry unlock function.

(1) Use the wireless lock operation to lock the doors. With the key in your possession, touch a door's outside handle (touch sensor) and check that the door unlocks.

(b) Check the entry unlock operation's detection area.



(1) Step 1: Hold the key at the same height as the door's outside handle (approximately 0.8 m (2.62 ft.)). Pay attention to the direction of the key shown in the illustration.

(2) Step 2: Check that when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, the system enters unlock standby mode.

HINT:

Unlock standby mode is signified by the key's red LED illuminating.

(3) Step 3: After the system enters unlock standby mode, touch the outside handle's sensor within 3 seconds. Check that the door unlocks.

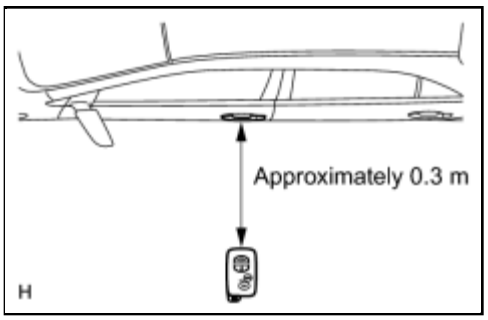
NOTICE:

The key may not be able to communicate with the system within a 0.2 m (0.656 ft.) radius of each outside handle.

(4) Step 4: Repeat step 2 and step 3 for the remaining doors.

(5) Step 5: Inspect the door electrical key oscillator's response sensitivity. Wear protective gloves, set the system to unlock standby mode, and check that touching the inner side of the outside handle (the highlighted area in the illustration) with your finger causes the door to unlock.

NOTICE:



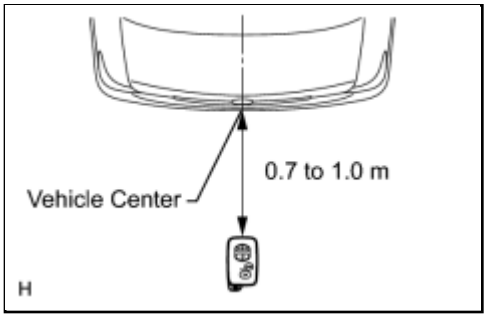
When touching the highlighted area, tapping too quickly or having extended contact may not trigger the sensor. In such a case, the door will not unlock.

(6) Step 6: Repeat step 5 for the remaining doors.

(c) Check the entry lock function.

(1) Step 1: Close all of the vehicle's doors. With the key in your possession outside of the vehicle, check that pressing the lock switch locks the doors.

HINT:



- When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.
- Due to the key being unable to communicate with the system within a 0.2 m (0.656 ft.) distance from the outside handle, do not press the lock switch with the same hand that is holding the key. The doors may not lock.
- If the key lock-in prevention function buzzer sounds*, radio waves from the indoor electrical key oscillator may be leaking from the vehicle. Perform this same check for the front passenger side and rear doors.

*: Except Europe and China

(2) Step 2: Repeat step 1 for the remaining doors.

(d) Check the entry luggage compartment door open function.

(1) Close the luggage compartment door. With the key in your possession, check that pressing the luggage door opener switch opens the luggage compartment door.

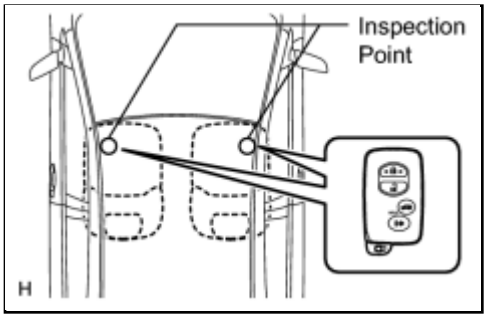
(2) Inspect the entry luggage compartment door open operation's detection area. Hold the key at the same height as the luggage door opener switch (approximately 0.8 m (2.62 ft.)) aligning it with the center of the rear of the vehicle. Pay attention to the direction of the key shown in the illustration. Check that when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, pressing the luggage door opener switch opens the luggage compartment door.

(e) Check the entry ignition function.

(1) When the engine is stopped:

With the key in your possession and the brake pedal depressed, check that pressing the engine switch releases the steering wheel lock and starts the engine.

HINT:

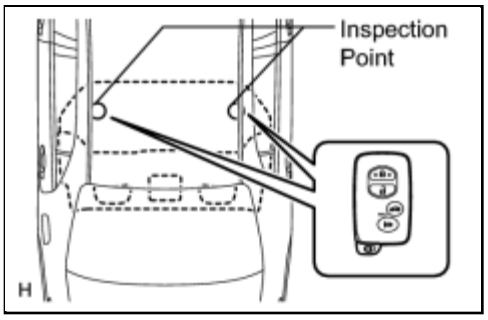


The engine can be started only when the engine switch indicator illuminates in green.

(2) When the engine is running:

With the key in your possession, check that pressing the engine switch stops the engine and activates the steering wheel lock.

HINT:

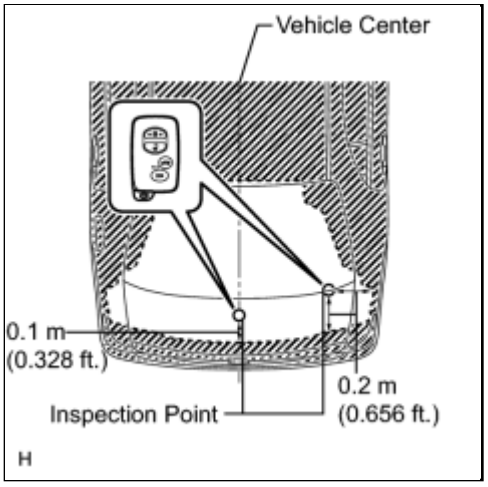


The shift position must be P to stop the engine.

(3) Inspect the entry ignition operation's detection area (front seat). Pay attention to the direction of the key in the illustration. When the key is in either of the 2 locations in the illustration, check that the engine can start.

NOTICE:

The engine cannot be started when the key is on the instrument panel or rear package tray, or in the glove box.



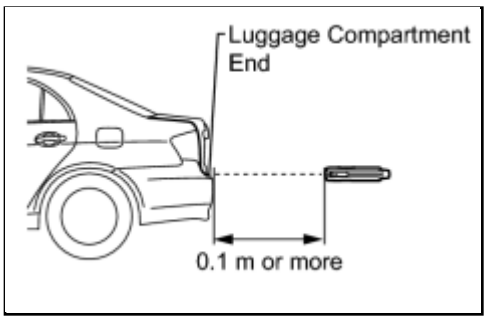
(4) Inspect the entry ignition operation's detection area (rear seat). Pay attention to the direction of the key shown in the illustration. When the key is in either of the 2 locations in the illustration, check that the engine can start.

NOTICE:

The engine cannot be started when the key is on the instrument panel or rear package tray, or in the glove box.

(f) Check the key lock-in prevention function (for luggage compartment).

(1) Place the key in the luggage compartment with all doors locked. Check that: 1) closing the luggage compartment door triggers the key's wireless buzzer (which lasts approximately 2 seconds), and 2) pressing the luggage door opener switch opens the luggage compartment door.



(2) Inspect the key lock-in prevention's detection area. Pay attention to the direction of the key shown in the illustration. When the key is in either of the 2 locations in the illustration, check that: 1) closing the luggage compartment door sounds the wireless buzzer, and 2) pressing the luggage door opener switch opens the luggage compartment door.

NOTICE:

If the key is inside a metal storage item, such as a metal briefcase or metal box, the key will not be able to be detected by the system.

(3) Inspect the key lock-in prevention's detection area and the entry door control receiver for wave leaks. Hold the key at the same height as the lower edge of the luggage compartment door aligning it with the center of the rear of the vehicle. Pay attention to the direction

and position of the key shown in the illustration. Check that when the key is more than 0.1 m (0.328 ft.) away from the vehicle's rear bumper, the wireless buzzer does not sound. If the warning buzzer sounds, the entry door control receiver may have a wave leak.

(g) Check the key cancel function.

(1) While the engine switch is on (IG), check that the luggage door opener switch is the only switch that can be operated in the smart key system.

(2) While the key cancel function (smart key system cancel function) is ON, check that all functions of the smart key system cannot be operated.

(h) Check the answer-back function (hazard warning light flashing and buzzer sounding).

ENTRY OPERATION	HAZARD WARNING LIGHT	BUZZER
Entry Door Lock	Flashes once	Sounds once
Entry Door Unlock	Flashes twice	Sounds twice
Entry Luggage Compartment Door Open	Flashes once	Sounds once

(i) Check that the key reminder warning buzzer sounds.

(1) Carry the key in the vehicle and close the driver side door. Then turn the engine switch off or on (ACC).

(2) Open the driver side door and check that the buzzer sounds intermittently.

(j) Check that the key reminder warning buzzer stops.

(1) When the buzzer is sounding, check that the buzzer stops sounding if either of the following is performed:

- Close the driver side door (front door courtesy light switch is off).
- Turn the engine switch on (IG).

2. KEY DIAGNOSTIC MODE

HINT:

Key diagnostic mode checks if the electrical key transmitter within a selected oscillator/amplifier detection area is operating normally. The results are output through the wireless door lock buzzer.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode).

(e) Check the values by referring to the table below.

Smart Key

TESTER DISPLAY	INSPECTION RANGE
Overhead + Driver Side	Door electrical key oscillator (driver side)
Overhead + Passenger Side	Door electrical key oscillator (front passenger side)
Overhead + Front Room	Indoor electrical key oscillator (front floor)
Overhead + Rear Room	Indoor electrical key oscillator (rear floor)
Overhead + Luggage (outside)	Outside electrical key oscillator (luggage compartment)
Overhead + Luggage (inside)	Indoor electrical key oscillator (luggage compartment)
Immobiliser Amp	Amplifier (engine switch)

(f) When the electrical key transmitter is brought near the selected oscillator/amplifier, check that the wireless door lock buzzer sounds.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUG035X
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The items in the table below can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current setting before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

HINT:

The following functions' default settings are ON. Part of these functions can be customized.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menu: Customize Setting / Smart Key/Access.

(e) Select the setting by referring to the table.

Smart Key/Access (Certification ECU (Smart Key ECU assembly))

DISPLAY (ITEM)	DEFAULT	CONTENT	SETTING
Park Wait Time	2.5s	Function to set waiting time to permit opening door after door is locked with entry lock function.	0.5s / 1.5s / 2.5s / 5.0s
Ignition Available Area	ALL	Function to choose the available area for key to start the engine and cancel the steering lock.	FRONT / ALL
Trunk Open Mode	ON	Function to open the luggage compartment door when the driver has the key and presses the luggage open button.	ON / OFF
Key Low Battery Warning	ON	Function to set a warning function for a low battery.	ON / OFF

2. ENTRY UNLOCK MODE SWITCHING FUNCTION

(a) To change the vehicle to entry unlock mode switching function, make sure that the engine switch is off and simultaneously press and hold the electrical key's LOCK switch and another electrical key switch for 5 seconds.

- Driver door unlock default setting:

When the switches are pressed and held for 5 seconds, the entry door unlock mode changes in the following order: driver door mode, all door mode.

NOTICE:

After pressing and holding the switches for 5 seconds, wait 5 seconds before performing the same procedure again.

- Driver door unlock mode:

  When the driver door's touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.

- All door unlock mode:

  When the touch sensor is touched, all doors unlock.

(b) The certification ECU (smart key ECU assembly) receives this signal from the entry door control receiver and changes the smart key system to the entry unlock mode.

(c) The certification ECU (smart key ECU assembly) sounds the wireless door lock buzzer and combination meter buzzer to inform the user that the mode has been switched.

MODE	WIRELESS DOOR LOCK BUZZER	COMBINATION METER BUZZER
Driver Door (Default)	Sounds 3 times	Sounds once
All Doors (Customized)	Sounds 2 times	Sounds once

HINT:

The function only changes the entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

3. ELECTRICAL KEY CANCEL

The electrical key cancel operation disables the following functions:

- Entry Unlock / Lock
- Entry Luggage Compartment Open
- Key Lock-in Prevention
- Warning

(a) The operation procedures are as follows:

Precondition:

Engine switch off, driver side door closed and unlocked.

(1) Unlock the driver side door once with the UNLOCK switch of the key.

(2) Open the driver door within 5 seconds.

(3) Unlock the driver side door twice with the UNLOCK switch of the key within 5 seconds.

(4) Close and open the driver door twice within 30 seconds.

(Driver door: Close → Open → Close → Open)

(5) Unlock the driver side door twice with the UNLOCK switch of the key within 5 seconds.

(6) Close and open the driver door within 30 seconds.

(Driver door: Close → Open)

(7) Close the driver door within 5 seconds.

When electrical key cancel is activated, the wireless door lock buzzer sounds twice.

To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the E36 certification ECU (smart key ECU assembly) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - Body ground	W - Body ground*1 BR - Body ground*2	+B power supply	Always	11 to 14 V
E36-18 (IG) - Body ground	L - Body ground*1 B - Body ground*2	Ignition power supply	Engine switch off	Below 1 V
E36-18 (IG) - Body ground	L - Body ground*1 B - Body ground*2	Ignition power supply	Engine switch on (IG)	11 to 14 V
E36-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E36-19 (ACC) - Body ground	GR - Body ground	ACC power supply	Engine switch off	Below 1 V
E36-19 (ACC) - Body ground	GR - Body ground	ACC power supply	Engine switch on (ACC)	11 to 14 V
E36-3 (TSW1) - Body ground	V - Body ground	Entry lock switch (driver side) signal	Front lock switch not pushed	10 kΩ or higher

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-3 (TSW1) - Body ground	V - Body ground	Entry lock switch (driver side) signal	Front lock switch pushed	Below 1 Ω
E36-4 (TSW2) - Body ground	R - Body ground*1 W - Body ground*2	Entry lock switch (passenger side) signal	Front lock switch not pushed	10 kΩ or higher
E36-4 (TSW2) - Body ground	R - Body ground*1 W - Body ground*2	Entry lock switch (passenger side) signal	Front lock switch pushed	Below 1 Ω
E36-10 (LIN) - Body ground	V - Body ground	LIN line	Always	10 kΩ or higher
E36-27 (CANH) - Body ground	SB - Body ground	CAN line	Always	10 kΩ or higher
E36-28 (CANL) - Body ground	W - Body ground	CAN line	Always	10 kΩ or higher
E36-40 (AGND) - Body ground	BR - Body ground*1 GR - Body ground*2	Ground	Always	Below 1 Ω
E36-7 (TSW5) - Body ground	V - Body ground*1 GR - Body ground*2	Luggage compartment door opener outer switch signal	Opener switch OFF	10 kΩ or higher
E36-7 (TSW5) - Body ground	V - Body ground*1 GR - Body ground*2	Luggage compartment door opener outer switch signal	Opener switch ON	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC Made

If the result is not as specified, the wire harness side may have a malfunction.

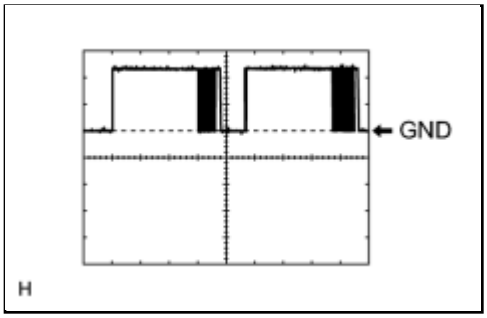
(c) Reconnect the E36 certification ECU (smart key ECU assembly) connector.

(d) Measure the voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-33 (CLG1) - E36-17 (E)	R - W-B*1 BR - W-B*2	Door electrical key oscillator (driver side) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-33 (CLG1) - E36-17 (E)	R - W-B*1 BR - W-B*2	Door electrical key oscillator (driver side) sensor signal	Door unlocked or door open	Below 1 V
E36-22 (SEN1) - E36-17 (E)	R - W-B*1 LG - W-B*2	Touch sensor (driver side) detection signal	Outside door handle touched	Below 1 V
E36-22 (SEN1) - E36-17 (E)	R - W-B*1 LG - W-B*2	Touch sensor (driver side) detection signal	Outside door handle not touched (Have the key outside the cabin)	11 to 14 V
E36-5 (SEL1) - E36-17 (E)	Y - W-B	Touch sensor (driver side) activation control signal	The key is more than 5 m (16.4 ft.) away from the driver door.	11 to 14 V
E36-5 (SEL1) - E36-17 (E)	Y - W-B	Touch sensor (driver side) activation control signal	The key brought to the outside handle	Below 1 V
E36-35 (CLG2) - E36-17 (E)	B - W-B*1 R - W-B*2	Door electrical key oscillator (passenger side) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
E36-35 (CLG2) - E36-17 (E)	B - W-B*1 R - W-B*2	Door electrical key oscillator (passenger side) sensor signal	Door unlocked or door open	Below 1 V
E36-23 (SEN2) - E36-17 (E)	W - W-B*1 BR - W-B*2	Touch sensor (passenger side) detection signal	Outside door handle touched	Below 1 V
E36-23 (SEN2) - E36-17 (E)	W - W-B*1 BR - W-B*2	Touch sensor (passenger side) detection signal	Outside door handle not touched (Have the key outside the cabin)	11 to 14 V
E36-6 (SEL2) - E36-17 (E)	LG - W-B*1 B - W-B*2	Touch sensor (passenger side) activation control signal	The key is more than 5 m (16.4 ft.) away from the passenger door.	11 to 14 V
E36-6 (SEL2) - E36-17 (E)	LG - W-B*1 B - W-B*2	Touch sensor (passenger side) activation control signal	The key brought to the outside handle	Below 1 V
E36-11 (CLG5) - E36-12 (CG5B)	R - G*1 L - LG*2	Indoor electrical key oscillator (front) sensor signal	Within 30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below -5 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-11 (CLG5) - E36-12 (CG5B)	R - G*1 L - LG*2	Indoor electrical key oscillator (front) sensor signal	Engine switch on (IG)	Below 1 V
E36-13 (CLG6) - E36-14 (CG6B)	W - B*1 W - BR*2	Indoor electrical key oscillator (rear) sensor signal	Within 30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below -5 V
E36-13 (CLG6) - E36-14 (CG6B)	W - B*1 W - BR*2	Indoor electrical key oscillator (rear) sensor signal	Engine switch on (IG)	Below 1 V
E36-15 (CLG7) - E36-16 (CG7B)	R - G*1 GR - W*2	Indoor electrical key oscillator (luggage compartment) sensor signal	Luggage compartment door opener switch ON	Alternating between 5 V and below -5 V
E36-15 (CLG7) - E36-16 (CG7B)	R - G*1 GR - W*2	Indoor electrical key oscillator (luggage compartment) sensor signal	Luggage compartment door opener switch OFF	Below 1 V
E36-31 (CLG8) - E36-32 (CG8B)	LG - P*1 SB- Y*2	Outside electrical key oscillator (luggage compartment) sensor signal	Luggage compartment door opener switch ON	Alternating between 5 V and below -5 V
E36-31 (CLG8) - E36-32 (CG8B)	LG - P*1 SB- Y*2	Outside electrical key oscillator (luggage compartment) sensor signal	Luggage compartment door opener switch OFF	Below 1 V
E36-29 (RC0) - E36-17 (E)	V - W-B*1 LG - W-B*2	Entry door control receiver power source	Engine switch off, all doors closed and key switch on	4.5 to 5.5 V
E36-29 (RC0) - E36-17 (E)	V - W-B*1 LG - W-B*2	Entry door control receiver power source	Engine switch off, all doors closed and key switch off	Below 1 V
E36-39 (RSSI) - E36-17 (E)	R - W-B*1 L - W-B*2	Entry door control receiver electric wave existence signal	Engine switch off, all doors closed, and the key is not in the detection area.	11 to 14 V
E36-39 (RSSI) - E36-17 (E)	R - W-B*1 L - W-B*2	Entry door control receiver electric wave existence signal	Engine switch off, all doors closed, and the key is in the detection area.	Below 1 V
E36-38 (RDA) - E36-17 (E)	Y - W-B*1 P - W-B*2	Entry door control receiver data input signal	Engine switch off, all doors closed and key switch off	11 to 14 V (Pulse generation)

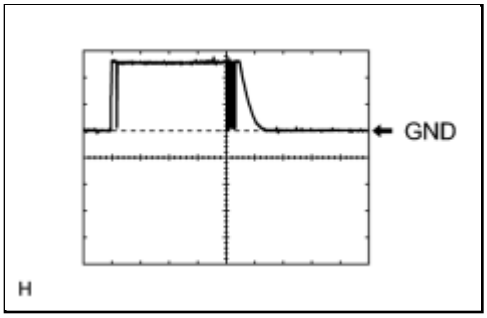


TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-38 (RDA) - E36-17 (E)	Y - W-B*1 P - W-B*2	Entry door control receiver data input signal	Engine switch off, all doors closed and key switch on	Pulse generation
E36-38 (RDA) - Body ground	Y - Body ground*1 P - Body ground*2	Tuner input signal	Engine switch off, all doors closed, and the key is not in the detection area.	11 to 14 V (Pulse generation)
E36-38 (RDA) - Body ground	Y - Body ground*1 P - Body ground*2	Tuner input signal	The key is in the detection area.	Pulse generation
E36-37 (ASEL) - Body ground	L - Body ground*1 B - Body ground*2	Cabin / luggage receiver select signal	Engine switch off, luggage compartment door closed and the key is in the luggage detection area.	4.6 to 6.0 V
E36-37 (ASEL) - Body ground	L - Body ground*1 B - Body ground*2	Cabin / luggage receiver select signal	Engine switch off, luggage compartment door open	Below 1 V
E36-30 (VC5) - Body ground	SB - Body ground*1 BE - Body ground*2	Transponder key amplifier power supply	Key is not in the cabin.	Below 1 V
E36-30 (VC5) - Body ground	SB - Body ground*1 BE - Body ground*2	Transponder key amplifier power supply	The key is outside the cabin and the driver's door is open.	4.5 to 5.5 V
E36-8 (TXCT) - Body ground	L - Body ground*1 SB - Body ground*2	Transponder key amplifier output signal	Key is not in the cabin.	Below 1 V
E36-8 (TXCT) - Body ground	L - Body ground*1 SB - Body ground*2	Transponder key amplifier output signal	The key is outside the cabin and the driver's door is open.	Pulse generation (see waveform 1)
E36-9 (CODE) - Body ground	P - Body ground*1 G - Body ground*2	Transponder key amplifier communication signal	Key is not in the cabin.	Below 1 V
E36-9 (CODE) - Body ground	P - Body ground*1 G - Body	Transponder key amplifier communication signal	The key is outside the cabin and the driver's door is open. The key is close to	Pulse generation (see waveform 2)

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	ground*2		the engine switch with the brake pedal depressed.	
E36-21 (BZR) - Body ground	L - Body ground*1 R - Body ground*2	Wireless door lock buzzer signal	Wireless door lock buzzer OFF	Below 1 V
E36-21 (BZR) - Body ground	L - Body ground*1 R - Body ground*2	Wireless door lock buzzer signal	Wireless door lock buzzer ON	Pulse generation

- *1: for TMC Made
- *2: Except for TMC Made

If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

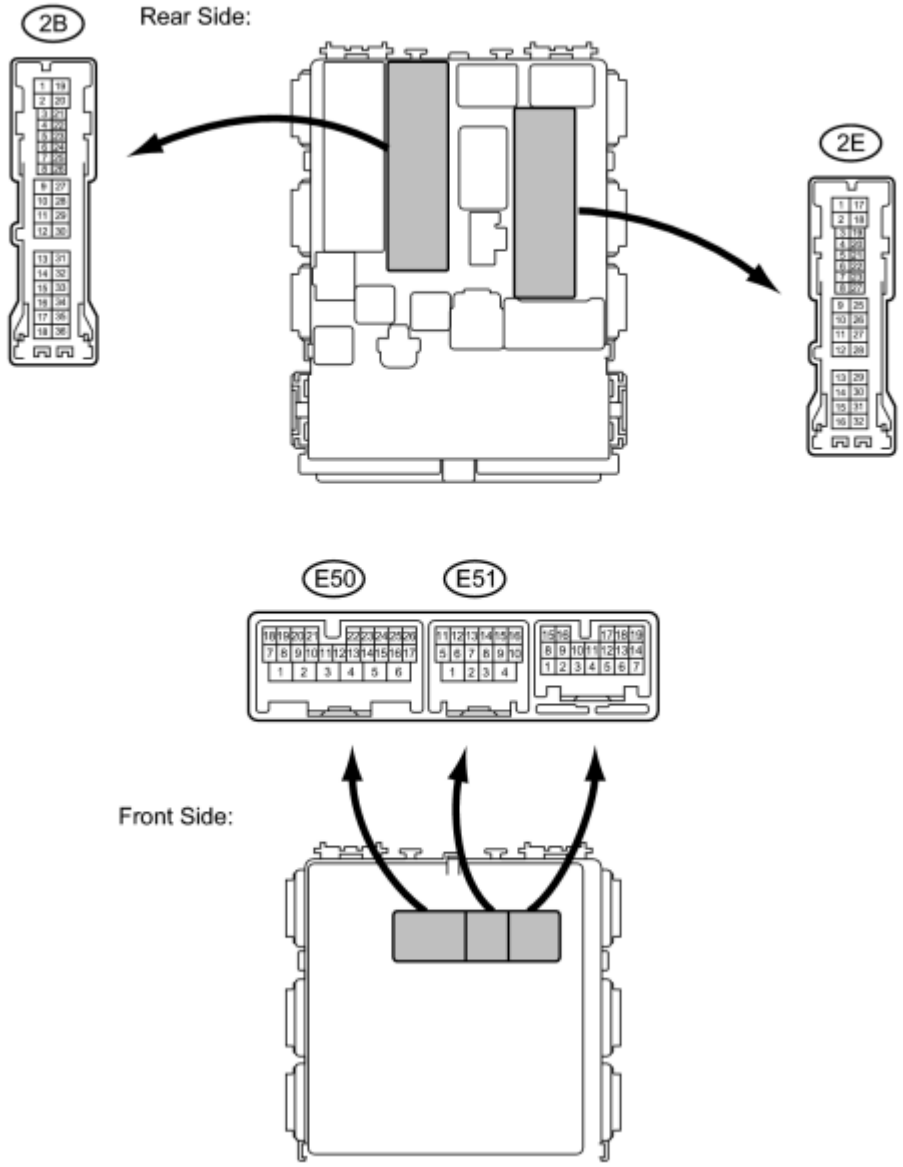


(e) Inspect using an oscilloscope.

Waveform 1 (Reference)

Tester Connection	E36-8 (TXCT) - Body ground
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	The key is outside the cabin and the driver's door is open.

(f) Inspect using an oscilloscope.



Waveform 2 (Reference)

Tester Connection	E36-9 (CODE) - Body ground
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	The key is outside the cabin and the driver's door is open. The key is close to the engine switch with the brake pedal depressed.

2. MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Measure the voltage and resistance according to the value(s) in the table below.

Main Body ECU (Instrument Panel Junction Block):

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2B-30 (BECU) - Body ground	W - Body ground	Battery power supply	Always	11 to 14 V
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E51-4 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E51-12 (CANN) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E51-11 (CANP) - Body ground	R - Body ground	CAN Line	Always	10 kΩ or higher
E50-14 (STP) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	11 to 14 V
E50-14 (STP) - Body ground	L - Body ground	Stop light switch signal	Brake pedal released	Below 1 V

If the result is not as specified, the junction block may have a malfunction.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Smart Key System

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUF033X
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key or Main Body / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D-Door Touch Sensor	Driver side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
P-Door Touch Sensor	Front passenger side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
D-Door Trigger SW	Driver side door lock switch/ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
P-Door Trigger SW	Front passenger side door lock switch/ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
Tr/B-Door Unlock SW	Luggage compartment door opener outer switch/ON or OFF	ON: Switch is pushed OFF: Switch is not pushed	-
Ignition Switch	Engine switch/ON or OFF	ON: Engine switch is on (IG) OFF: Engine switch is off	-
Unmatch V-ID	Unmatched vehicle-ID/YES or NO	YES: Key ID matches vehicle NO: Key ID does not match vehicle	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
No Response	No communication condition between vehicle and electrical key transmitter (response) / Yes or No	Yes: Key ID code not matched to vehicle, No: Key ID code matched to vehicle.	-
Unmatch Format	Unmatched response code and format/YES or NO	YES: Key ID code matches NO: Key ID code does not match	-

Main Body (Main Body ECU (Instrument Panel Junction Block))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Engine switch/ON or OFF	ON: Engine switch is on (IG) OFF: Engine switch is off	-
D Door Courtesy SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door open OFF: Driver side door closed	-
P Door Courtesy SW	Front passenger side door courtesy light switch signal/ON or OFF	ON: Front passenger side door open OFF: Front passenger side door closed	-
RR Door Courtesy SW	Rear door courtesy light switch RH signal/ON or OFF	ON: Rear door open OFF: Rear door closed	-
RL Door Courtesy SW	Rear door courtesy light switch LH signal/ON or OFF	ON: Rear door open OFF: Rear door closed	-
Luggage Courtesy SW	Luggage compartment door courtesy light switch signal/ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key or Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Overhead Tuner Power Supply ON	Entry door control receiver	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Inside Luggage Tuner Power Supply ON	Luggage receiver	ON/OFF	-
Fr-Seat Inside Transmitter	Indoor electrical key oscillator (console)	ON/OFF	-
Rr-Seat Inside Transmitter	Indoor electrical key oscillator (rear seat)	ON/OFF	-
Inside Trunk/Backdoor Transmitter	Luggage compartment door inner oscillator	ON/OFF	-
Outside Trunk/Backdoor Transmitter	Luggage compartment door outer oscillator	ON/OFF	-
P-Seat Select	Front passenger side selection	ON/OFF	-
Wireless Buzzer	Wireless buzzer	ON/OFF	-
Security Indicator	Security indicator	ON/OFF	-

Main Body (Main Body ECU (Instrument Panel Junction Block))

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Trunk and Back-door Open	Luggage compartment door opener outer switch	ON/OFF	-

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUD02UX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. CHECK DLC3

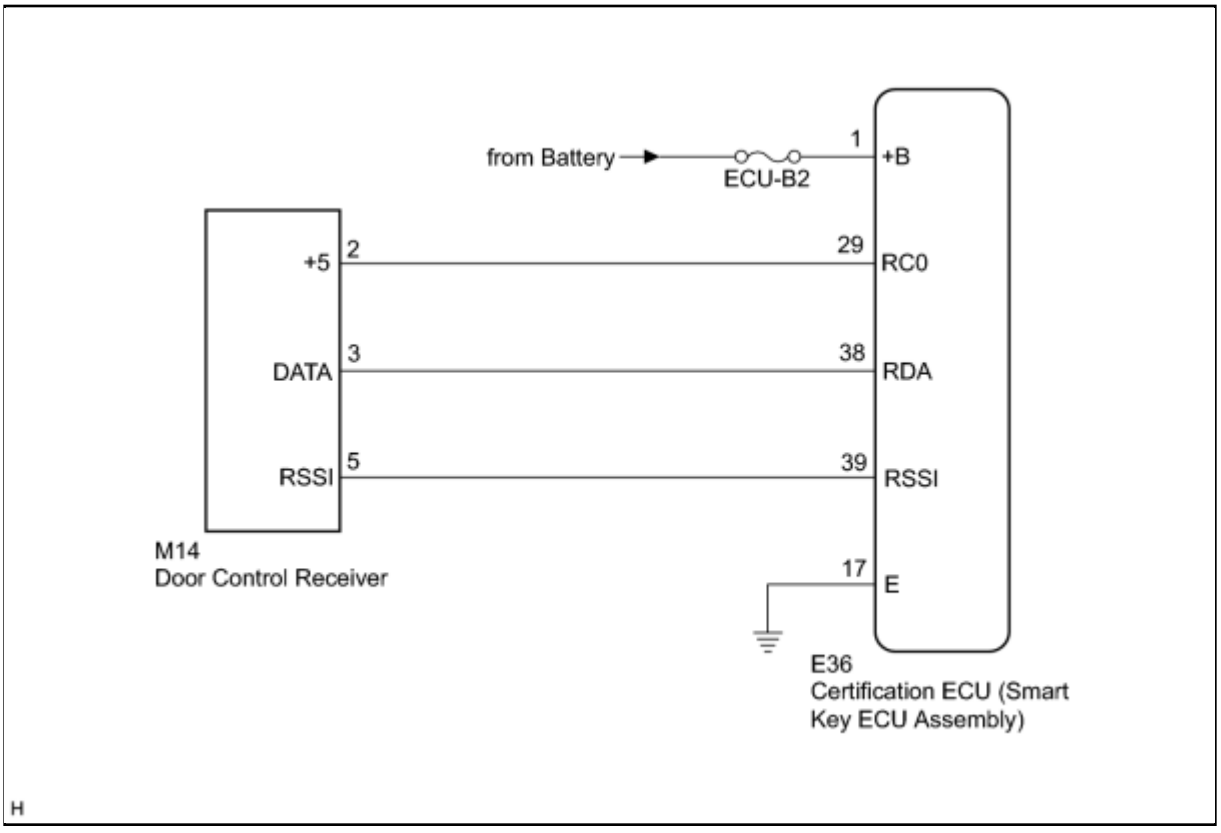
(a) Check the DLC3 INFO .

2. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002VHD01QX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): All Door Entry Lock/Unlock Functions and Wireless Functions do not Operate (2010 Corolla)		

All Door Entry Lock/Unlock Functions and Wireless Functions do not Operate

DESCRIPTION

When the entry functions and wireless door lock functions do not operate, a malfunction or wave interference may be occurring in either of the following: 1) signal communication between the door control receiver and certification ECU (smart key ECU assembly) (communication shared by entry and wireless functions); or 2) electrical key transmitter.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Check that there are not electrical key transmitters in the vehicle.
- Before performing the inspection, check that DTC B1242 (wireless door lock control) is not output INFO .

PROCEDURE

1.	CHECK POWER DOOR LOCK OPERATION

(a) When the master switch assembly's door control switch is operated, check that the doors unlock and lock according to switch operation INFO.

OK:

Door locks operate normally.

NG ▶ GO TO POWER DOOR LOCK CONTROL SYSTEM

OK ▼

2.	CHECK ELECTRICAL KEY TRANSMITTER

(a) When another registered electrical key transmitter is used, check that the entry functions operate normally.

Result:

RESULT	PROCEED TO
Entry functions do not operate normally	A
Entry functions operate normally	B

A ▶ CHECK WAVE ENVIRONMENT

B ▼

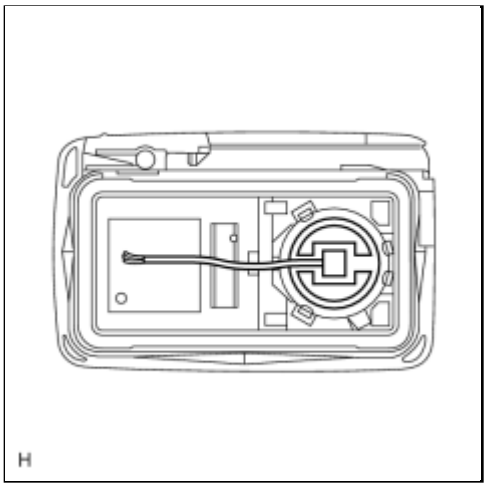
3.	CHECK ELECTRICAL KEY TRANSMITTER (LED)

(a) Check that the transmitter's LED illuminates 3 times when the switch is pressed 3 times.

Result:

RESULT	PROCEED TO
Transmitter's LED illuminates 3 times when switch is pressed 3 times	A
Transmitter's LED does not illuminate the second or third time	B
Transmitter's LED does not illuminate when switch is pressed 3 times	C

HINT:



If the transmitter's LED does not illuminate the second or third time, replace the transmitter battery as it is depleted.

B ▶ **REPLACE ELECTRICAL TRANSMITTER BATTERY**

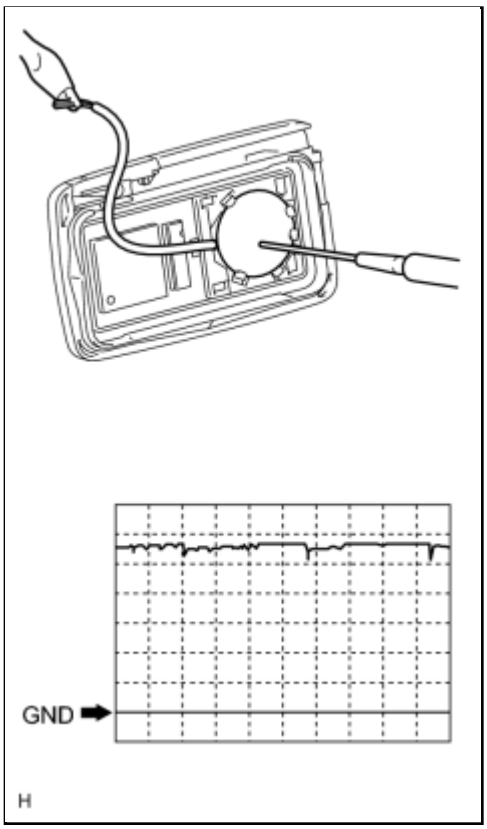
A ▶ **REPLACE ELECTRICAL KEY TRANSMITTER**

C ▼

4.	INSPECT ELECTRICAL TRANSMITTER BATTERY (VOLTAGE)

(a) Remove the battery from the electrical key transmitter that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) or less in diameter including wire sheath) with tape or equivalent to the negative terminal.

NOTICE:



Do not wrap the lead wire around a terminal, wedge it between the terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

(b) Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

(c) Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, while operating the lock switch

of a door outside handle, bring the electrical key transmitter within the entry operating range to perform the measurement. For the entry operating range, refer to System Description INFO .

Standard Voltage:

ITEM	CONTENT
Tester Connection	Battery positive (+) - Battery negative (-)
Tool Setting	0.5 V/DIV., 100 ms/DIV.
Condition	Engine switch off, all doors closed and lock switch pushed
Specified Condition	2.2 to 3.2 V (Refer to the waveform)

NG ▶ **REPLACE ELECTRICAL TRANSMITTER BATTERY**

OK ▶ **REPLACE ELECTRICAL KEY TRANSMITTER**

5.	**CHECK WAVE ENVIRONMENT**

(a) Bring the electrical key transmitter near the door control receiver, and perform a wireless operation check.

HINT:

When the electrical key transmitter is brought near the door control receiver, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.

Result:

RESULT	PROCEED TO
Operation check is normal	A
Operation check fails	B

HINT:

If the inspection result indicates that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If

installed, remove them and perform the operation check.

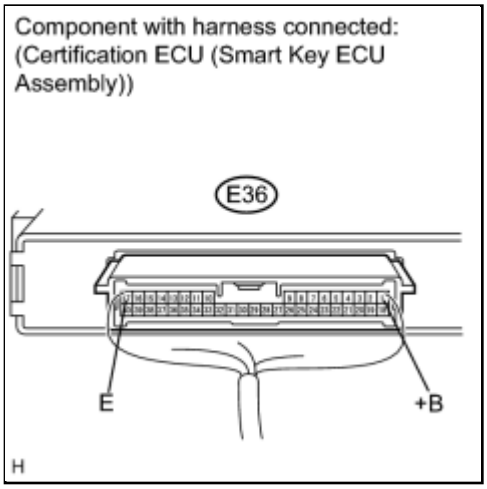
A ▶ **AFFECTED BY WAVE INTERFERENCE**

B ▼

6.	**INSPECT FUSE (ECU-B2)**

(a) Remove the ECU-B2 fuse from the main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ECU-B2 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE**

OK ▼

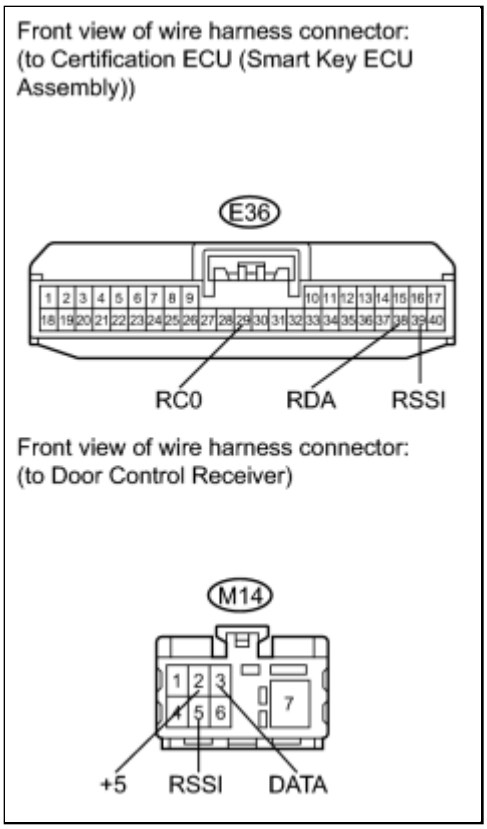
7.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BATTERY AND GROUND)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - Body ground	Always	11 to 14 V



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-17 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - CERTIFICATION ECU)**

(a) Disconnect the door control receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-39 (RSSI) - M14-5 (RSSI)	Always	Below 1 Ω
E36-38 (RDA) - M14-3 (DATA)	Always	Below 1 Ω
E36-29 (RC0) - M14-2 (+5)	Always	Below 1 Ω
E36-39 (RSSI) - Body ground	Always	10 kΩ or higher
E36-38 (RDA) - Body ground	Always	10 kΩ or higher
E36-29 (RC0) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

9.	REPLACE DOOR CONTROL RECEIVER

(a) Replace the door control receiver INFO .

NEXT ▼

10.	CHECK DOOR CONTROL RECEIVER (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (DOOR CONTROL RECEIVER IS DEFECTIVE)**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WEG01GX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Entry Answer-back Buzzer does not Sound (2010 Corolla)		

Entry Answer-back Buzzer does not Sound

DESCRIPTION

The smart key system uses the wireless door lock buzzer to perform various vehicle exterior warnings. When each warning's conditions are met, the certification ECU (smart key ECU assembly) sends a buzzer signal to the wireless door lock buzzer, and the wireless door lock buzzer sounds.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK WIRELESS DOOR LOCK BUZZER OPERATION**

(a) When the wireless operation is used to lock and unlock the doors, check that the wireless door lock buzzer sounds normally.

HINT:

Turn the wireless door lock buzzer controller ON.

Result:

RESULT	PROCEED TO
Buzzer does not sound	A
Buzzer sounds	B

A ▶ **GO TO WIRELESS DOOR LOCK CONTROL SYSTEM**

B ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUH02BX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): All Door Entry Lock/Unlock Functions do not Operate, but Wireless Functions Operate (2010 Corolla)		

All Door Entry Lock/Unlock Functions do not Operate, but Wireless Functions Operate

DESCRIPTION

When the wireless functions can be used to lock and unlock the doors, communication between the door control receiver and certification ECU (smart key ECU assembly) is normal. When the entry functions do not operate, one of the following may be the cause: 1) entry cancel function is set through customization; 2) malfunction in smart key system communication (electrical key transmitter and vehicle); or 3) wave interference.

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

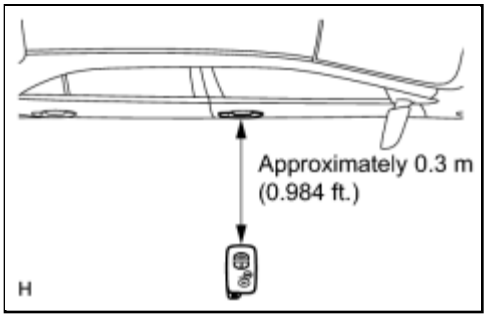
Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Auto Entry Cancel SW	Entry function cancel / ON or OFF	Mode status is displayed	-

Result:

RESULT	PROCEED TO
Entry function is ON	A
Entry function is OFF	B

A ▶ PERFORM CANCELLATION OF ENTRY KEY CANCEL FUNCTION

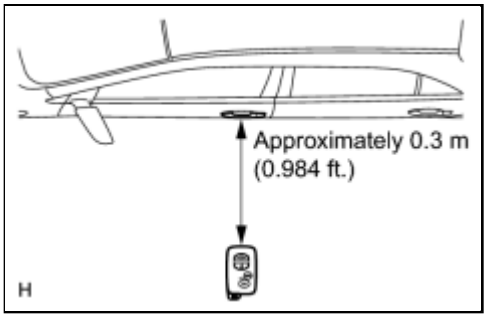


B ▼

2.	CHECK WAVE ENVIRONMENT

(a) Move the electrical key transmitter as described below and perform the operation inspection.

HINT:



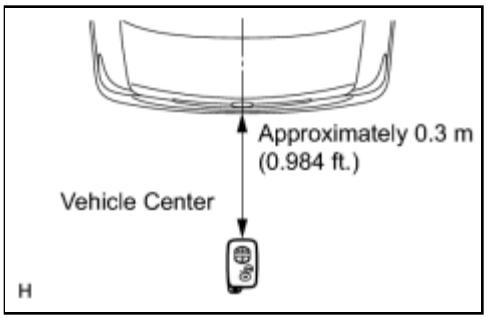
- When the electrical key transmitter is brought near the door outside handle or electrical key antenna, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- The transmitting waves of the wireless functions and entry functions are the same, but the wave logic is different. As a result, it is possible that only the wireless functions or only the entry functions are affected by wave interference.

(b) Bring the electrical key transmitter near the front RH door outside handle, and perform a front RH door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

(c) Bring the electrical key transmitter near the front LH door outside handle, and perform a front LH door entry lock and unlock operation check.



NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

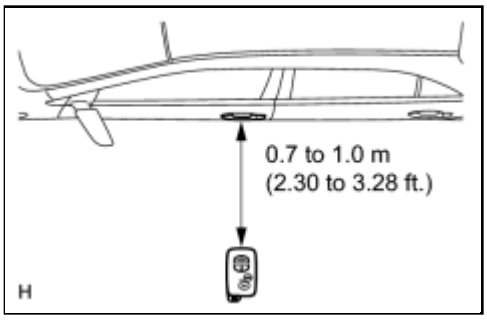
(d) Bring the electrical key transmitter near the electrical key antenna (in rear bumper), and perform an entry luggage compartment open function check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear bumper, communication is not possible.

HINT:

If the inspection result indicates that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.



Result:

RESULT	PROCEED TO
Some operation checks are normal	A
All operation checks fail	B

A **AFFECTED BY WAVE INTERFERENCE**

B

3.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection

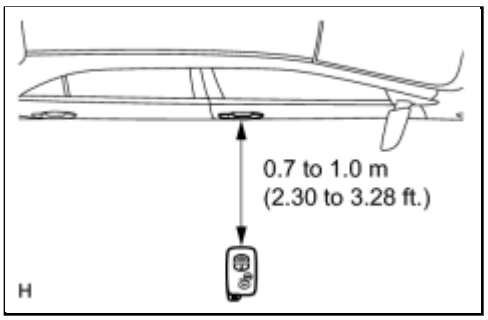
(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Driver Side.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

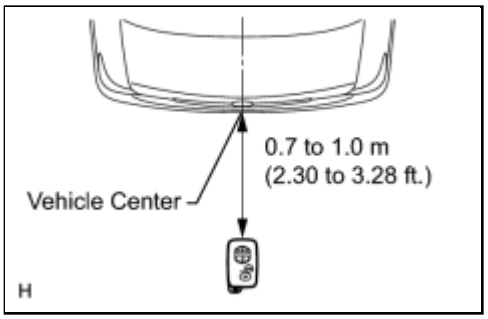


(b) Diagnostic mode inspection

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.



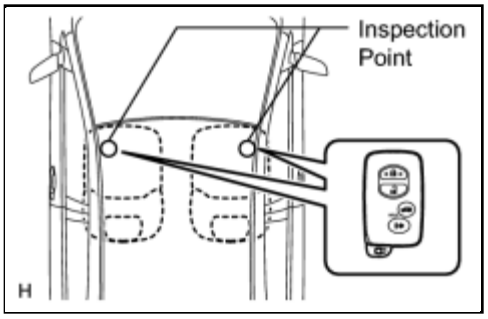
(4) Enter the following menus: Body Electrical / Smart

Key / Utility / Communication Check (Key Diag Mode) / Overhead + Passenger Side.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

(c) Diagnostic mode inspection

(1) Connect the Techstream to the DLC3.



(2) Turn the engine switch on (IG).

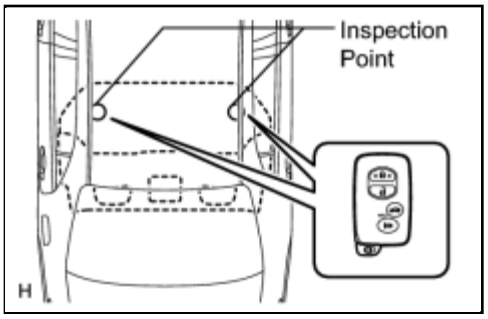
(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Luggage (outside).

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

(d) Diagnostic mode inspection

(1) Connect the Techstream to the DLC3.



(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Access / Utility / Communication Check (Key Diag Mode) / Overhead + Front Room.

(5) When the electrical key transmitter is placed on the driver seat or front passenger seat cushion, check that the wireless door lock buzzer sounds.

(e) Diagnostic mode inspection

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

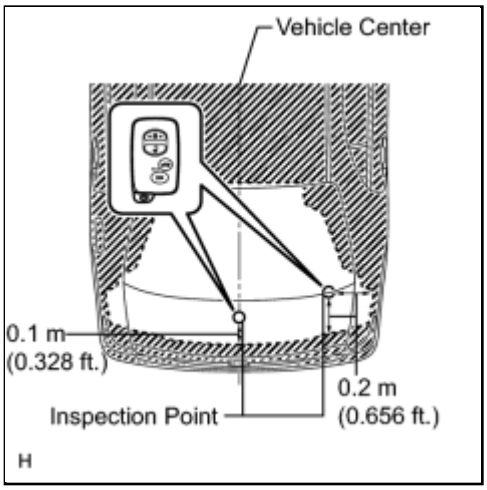
(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Rear Room.

(5) When the electrical key transmitter is in the position

shown in the illustration, check that the wireless door lock buzzer sounds.

(f) Diagnostic mode inspection



(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Luggage (inside).

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

Result:

RESULT	PROCEED TO
Some diagnostic mode inspections fail (door)	A
Some diagnostic mode inspections fail (indoor)	B
Some diagnostic mode inspections fail (luggage compartment)	C
All diagnostic mode inspections are normal	D
All diagnostic mode inspections fail	E

D ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

C ▶ **GO TO OTHER PROBLEM**

B ▶ **GO TO OTHER PROBLEM**

A ▶ **GO TO OTHER PROBLEM (PROCEED TO PROBLEM SYMPTOM TABLE FOR EACH DOOR)**

E ▼

4.	**REPLACE ELECTRICAL KEY TRANSMITTER**

(a) Replace the electrical key transmitter.

NEXT

5.	REGISTER ELECTRICAL KEY TRANSMITTER

(a) Register the electrical key transmitter INFO .

NEXT

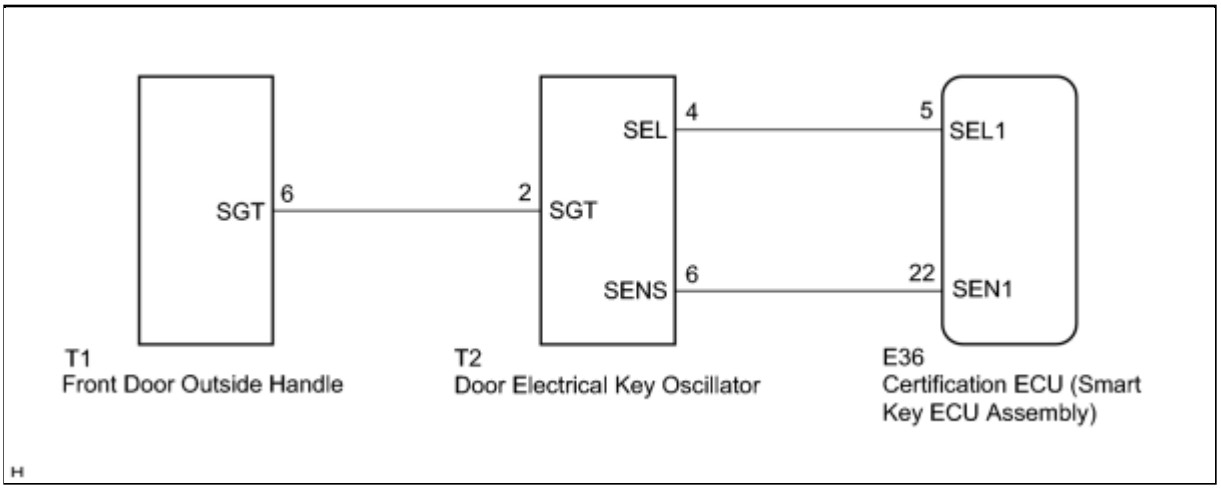
6.	CHECK OPERATION

(a) Check that the entry functions operate normally.

OK:
Entry functions operate normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ END (ELECTRICAL KEY TRANSMITTER IS DEFECTIVE)



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WBW02CX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Driver Side Door Entry Unlock Function does not Operate (2010 Corolla)		

Driver Side Door Entry Unlock Function does not Operate

DESCRIPTION

If the driver door entry unlock function does not operate but the entry lock function operates, communication between the vehicle and electrical key transmitter is normal. As a result, the touch sensor circuit can be considered to be faulty (certification ECU (smart key ECU assembly) → driver side door outside handle → driver side door electrical key oscillator).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER DOOR LOCK OPERATION**

(a) When the master switch assembly's door control switch is operated, check that the locked doors unlock INFO .

OK:

Door locks operate normally.

NG ▶ **GO TO POWER DOOR LOCK CONTROL SYSTEM**

OK

2.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

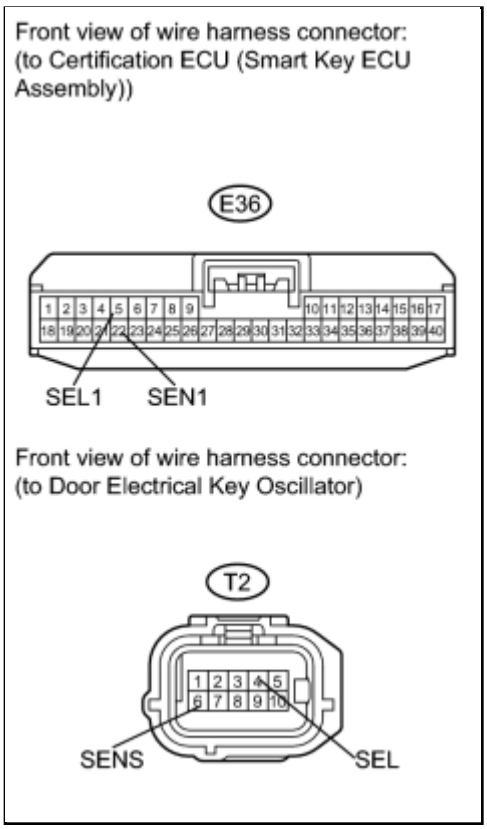
(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D-Door Touch Sensor	Driver side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-

OK:
On the Techstream screen, the item changes between ON and OFF according to the chart above.



NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

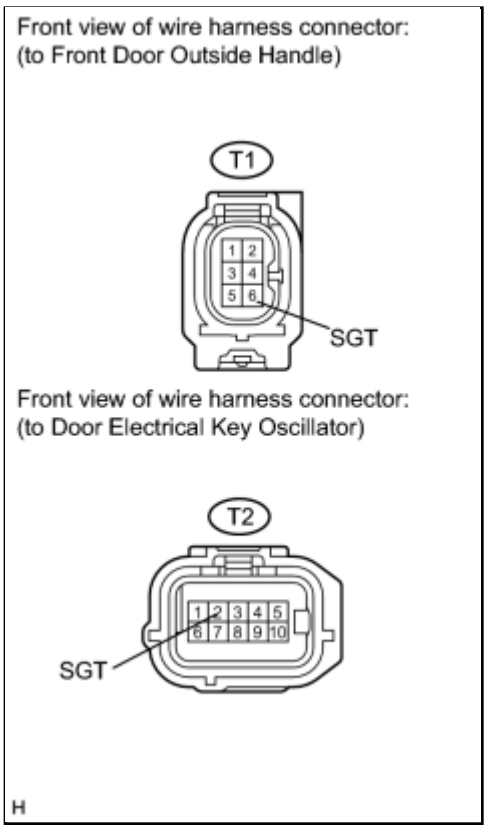
3.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-5 (SEL1) - T2-4 (SEL)	Always	Below 1 Ω
E36-22 (SEN1) - T2-6 (SENS)	Always	Below 1 Ω
E36-5 (SEL1) - Body ground	Always	10 kΩ or higher
E36-22 (SEN1) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the front door outside handle connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T1-6 (SGT) - T2-2 (SGT)	Always	Below 1 Ω
T1-6 (SGT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**REPLACE DOOR ELECTRICAL KEY OSCILLATOR**

(a) Replace the electrical key oscillator INFO .

NEXT

6.	CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE FRONT DOOR OUTSIDE HANDLE

OK ▶ END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

7.	REPLACE FRONT DOOR OUTSIDE HANDLE

(a) Replace the front door outside handle (driver side) INFO .

NEXT

8.	CHECK FRONT DOOR OUTSIDE HANDLE (OPERATION)

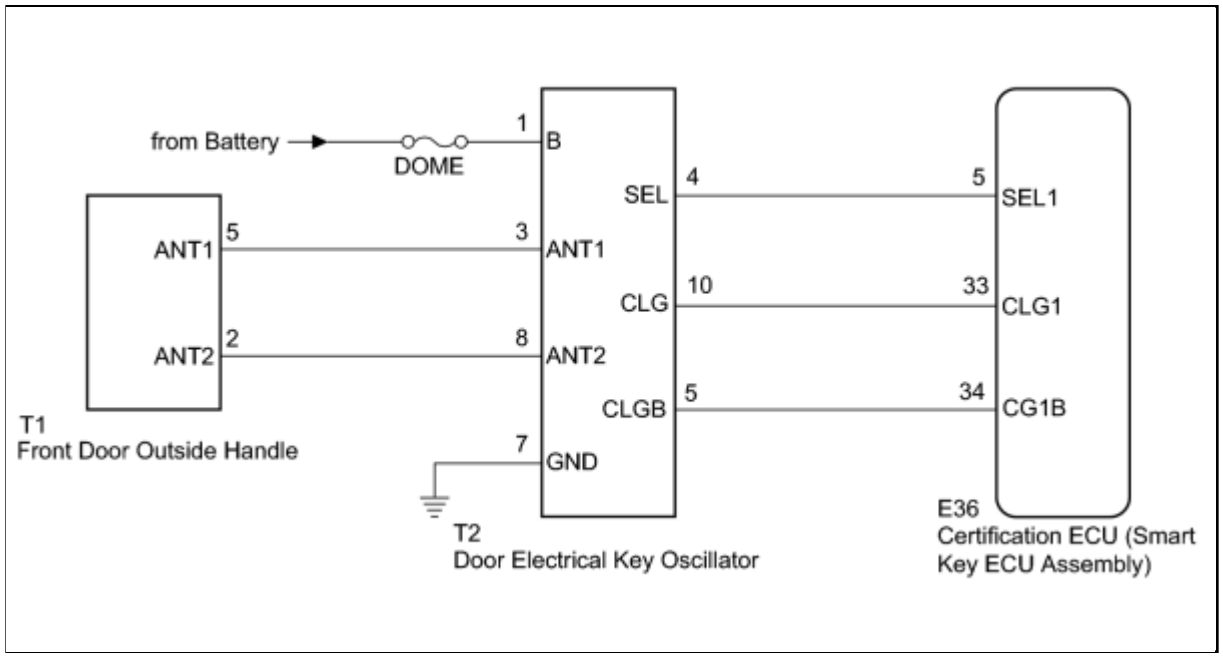
(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ END (FRONT DOOR OUTSIDE HANDLE IS DEFECTIVE)



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUI02YX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Driver Side Door Entry Lock and Unlock Functions do not Operate (2010 Corolla)		

Driver Side Door Entry Lock and Unlock Functions do not Operate

DESCRIPTION

When the driver door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock control system, 2) driver side door electrical key oscillator, or 3) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER DOOR LOCK OPERATION**

(a) When the master switch assembly's door control switch is operated, check that the doors unlock and lock according to switch operation INFO.

OK:

Door locks operate normally.

NG ▶ GO TO POWER DOOR LOCK CONTROL SYSTEM

OK ▼

2.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

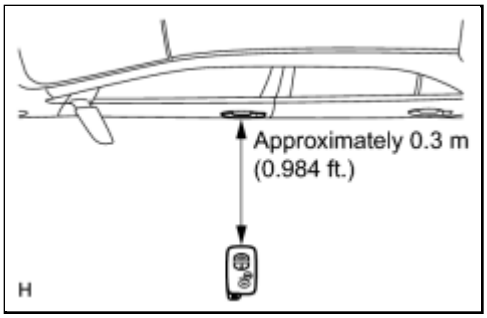
(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D-Door Touch Sensor	Driver side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
D-Door Trigger SW	Driver side door lock switch/ON or OFF	ON: Switch is touched OFF: Switch is not touched	-

OK:



On the Techstream screen, each item changes between ON and OFF according to the chart above.

NG ▶ REPLACE FRONT DOOR OUTSIDE HANDLE

OK ▼

3.	CHECK WAVE ENVIRONMENT

(a) Bring the electrical key transmitter near the driver door outside handle, and perform a driver door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

HINT:

- When the electrical key transmitter is brought near the driver door outside handle, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

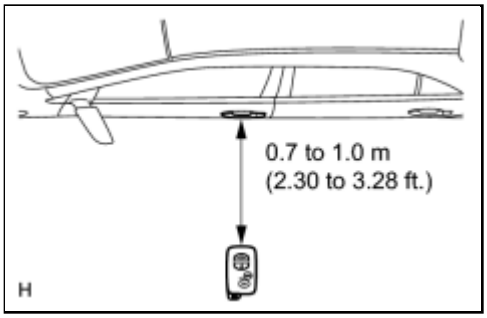
Entry functions operate normally.

NG ▶ **PERFORM KEY DIAGNOSTIC MODE INSPECTION**

OK ▶ **AFFECTED BY WAVE INTERFERENCE**

4.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection



(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

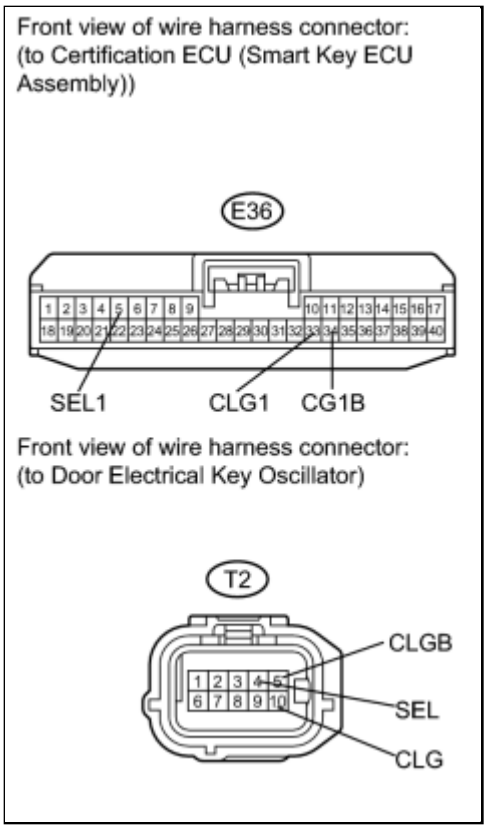
(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Driver Side.

(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the driver seat outside transmitter is operating normally.

OK:



Wireless door lock buzzer sounds.

NG ▶ CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)

OK ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

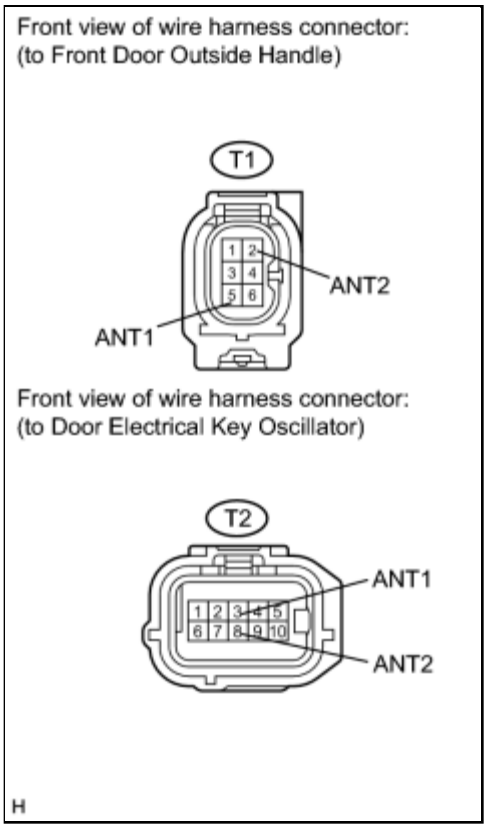
5.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-5 (SEL1) - T2-4 (SEL)	Always	Below 1 Ω
E36-33 (CLG1) - T2-10 (CLG)	Always	Below 1 Ω
E36-34 (CG1B) - T2-5 (CLGB)	Always	Below 1 Ω
E36-5 (SEL1) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-33 (CLG1) - Body ground	Always	10 kΩ or higher
E36-34 (CG1B) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

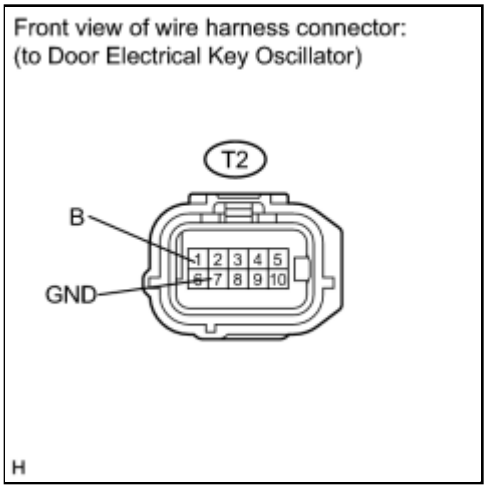
OK ▼

6.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the front door outside handle connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T1-2 (ANT2) - T2-8 (ANT2)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T1-5 (ANT1) - T2-3 (ANT1)	Always	Below 1 Ω
T1-2 (ANT2) - Body ground	Always	10 kΩ or higher
T1-5 (ANT1) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T2-1 (B) - T2-7 (GND)	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	**REPLACE DOOR ELECTRICAL KEY OSCILLATOR**

(a) Replace the door electrical key oscillator INFO .

NEXT

9.	**CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)**

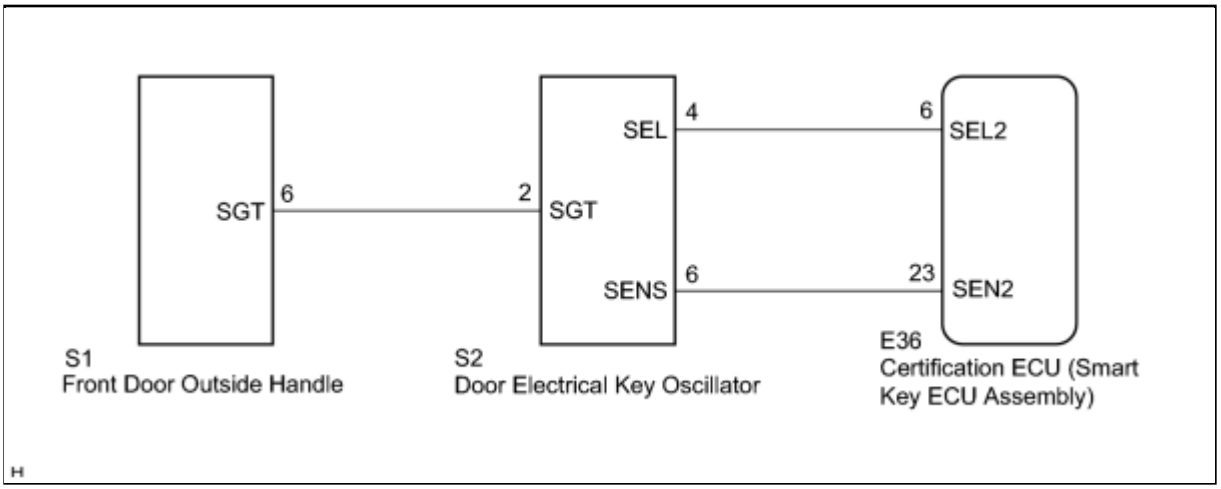
(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK → **END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002WBX013X
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Front Passenger Side Door Entry Unlock Function does not Operate (2010 Corolla)		

Front Passenger Side Door Entry Unlock Function does not Operate

DESCRIPTION

If the front passenger door entry unlock function does not operate but the entry lock function operates, communication between the vehicle and electrical key transmitter is normal. As a result, the touch sensor circuit can be considered to be faulty (certification ECU (smart key ECU assembly) → front passenger side outside handle → front passenger side door electrical key oscillator).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER DOOR LOCK OPERATION**

(a) When the master switch assembly's door control switch is operated, check that the locked doors unlock INFO .

OK:

Door locks operate normally.

NG ▶ **GO TO POWER DOOR LOCK CONTROL SYSTEM**

OK

2.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

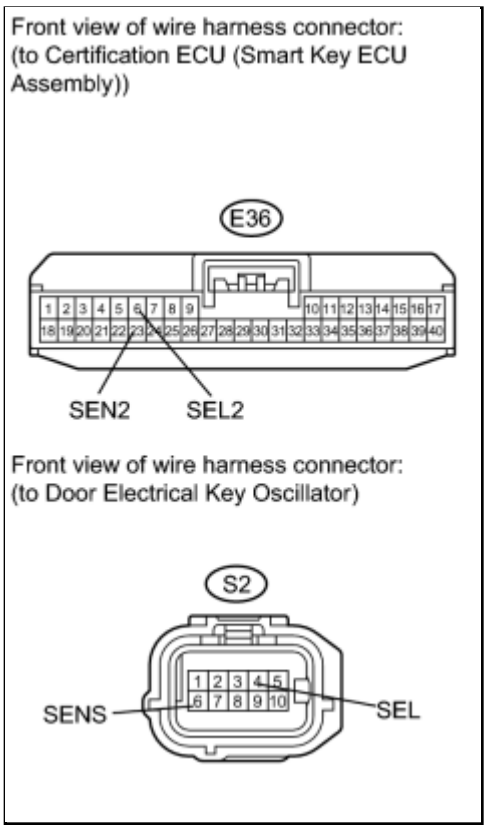
(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
P-Door Touch Sensor	Front passenger side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-

OK:

On the Techstream screen, the item changes between ON and OFF according to the chart above.



NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

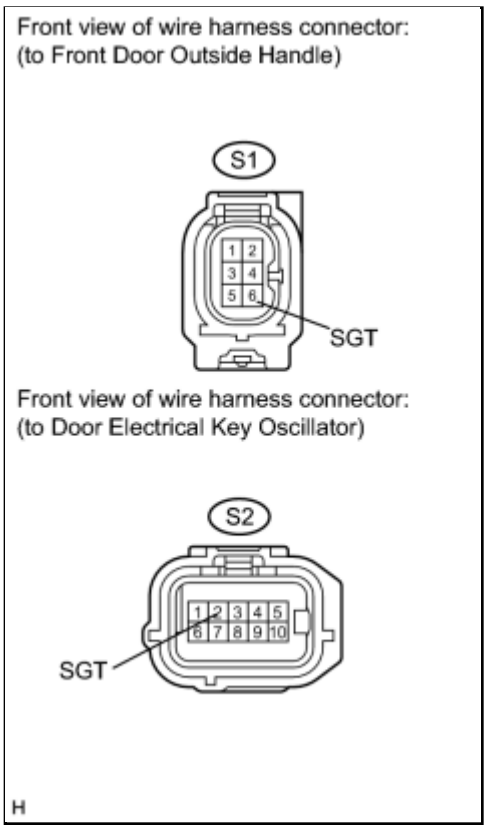
3.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-6 (SEL2) - S2-4 (SEL)	Always	Below 1 Ω
E36-23 (SEN2) - S2-6 (SENS)	Always	Below 1 Ω
E36-6 (SEL2) - Body ground	Always	10 kΩ or higher
E36-23 (SEN2) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the front door outside handle connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S1-6 (SGT) - S2-2 (SGT)	Always	Below 1 Ω
S1-6 (SGT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**REPLACE DOOR ELECTRICAL KEY OSCILLATOR**

(a) Replace the door electrical key oscillator INFO .

NEXT

6.	CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE FRONT DOOR OUTSIDE HANDLE

OK ▶ END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

7.	REPLACE FRONT DOOR OUTSIDE HANDLE

(a) Replace the front door outside handle (front passenger side) INFO .

NEXT

8.	CHECK FRONT DOOR OUTSIDE HANDLE (OPERATION)

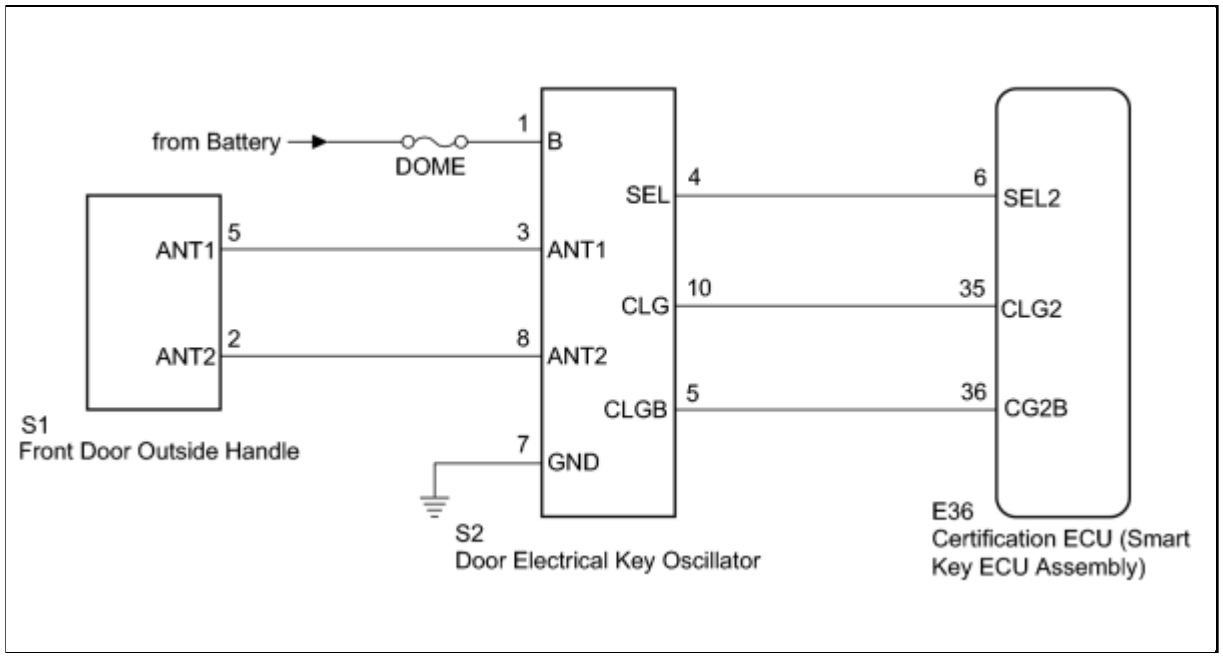
(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ END (FRONT DOOR OUTSIDE HANDLE IS DEFECTIVE)



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUJ01OX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Front Passenger Side Door Entry Lock and Unlock Functions do not Operate (2010 Corolla)		

Front Passenger Side Door Entry Lock and Unlock Functions do not Operate

DESCRIPTION

When the front passenger door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock control system, 2) door electrical key oscillator front passenger side, or 3) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER DOOR LOCK OPERATION**

(a) When the master switch assembly's door control switch is operated, check that the doors unlock and lock according to switch operation.

OK:

Door locks operate normally.

NG ▶ GO TO POWER DOOR LOCK CONTROL SYSTEM

OK ▼

2.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

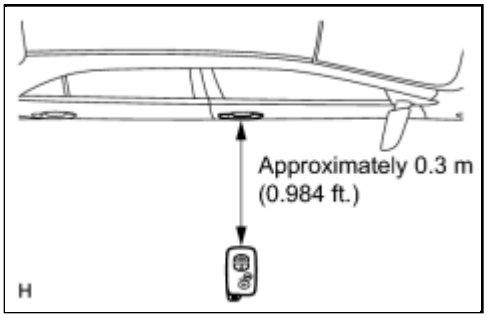
Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
P-Door Touch Sensor	Front passenger side door touch sensor/ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
P-Door Trigger SW	Front passenger side door lock switch/ON or OFF	ON: Switch is touched OFF: Switch is not touched	-

OK:
On the Techstream screen, each item changes between ON and OFF according to the chart above.

NG ▶ REPLACE FRONT DOOR OUTSIDE HANDLE

OK ▼



3.	CHECK WAVE ENVIRONMENT

(a) Bring the electrical key transmitter near the front

passenger door outside handle, and perform a front passenger door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

HINT:

- When the electrical key transmitter is brought near the front passenger door outside handle, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

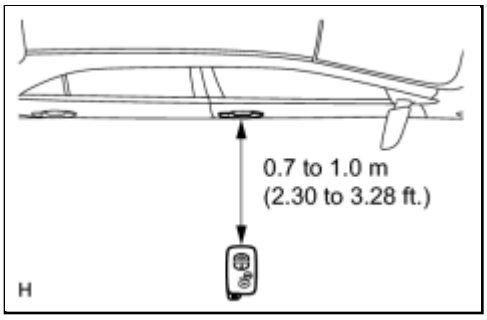
Entry functions operate normally.

NG ▶ **PERFORM KEY DIAGNOSTIC MODE INSPECTION**

OK ▶ **AFFECTED BY WAVE INTERFERENCE**

4.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection



(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Passenger Side.

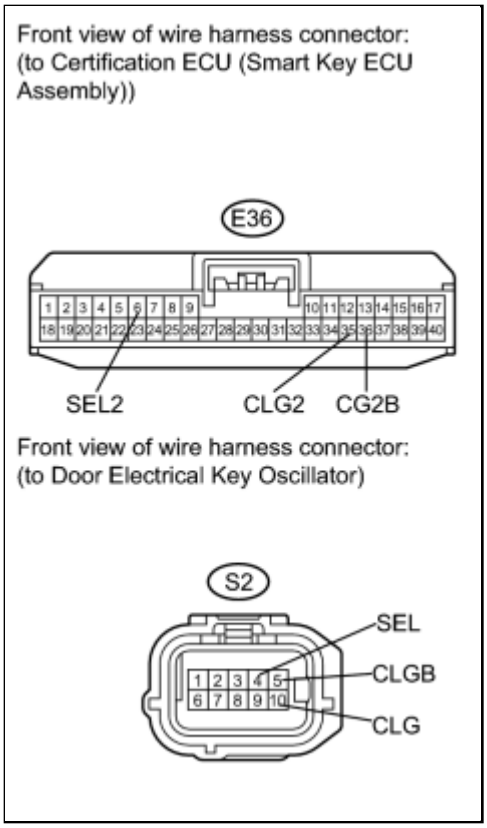
(5) When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the front passenger seat outside transmitter is operating normally.

OK:

Wireless door lock buzzer sounds.



NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY**

OSCILLATOR)

OK ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

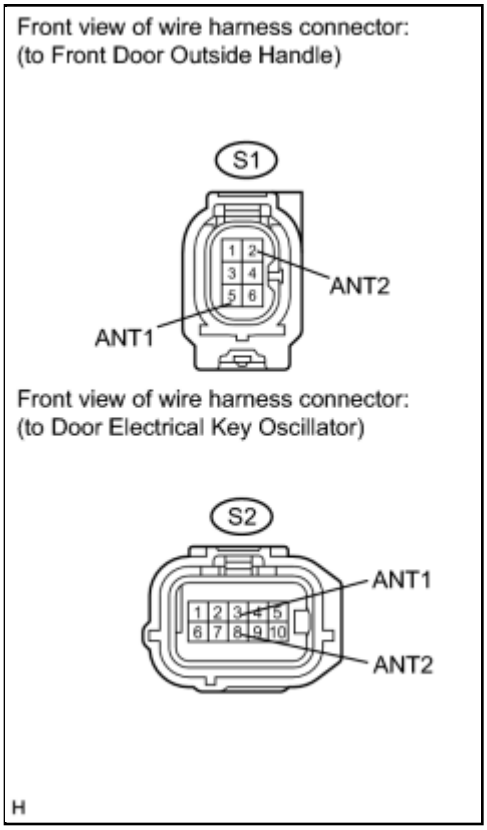
5.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-6 (SEL2) - S2-4 (SEL)	Always	Below 1 Ω
E36-35 (CLG2) - S2-10 (CLG)	Always	Below 1 Ω
E36-36 (CG2B) - S2-5 (CLGB)	Always	Below 1 Ω
E36-6 (SEL2) - Body ground	Always	10 kΩ or higher
E36-35 (CLG2) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-36 (CG2B) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

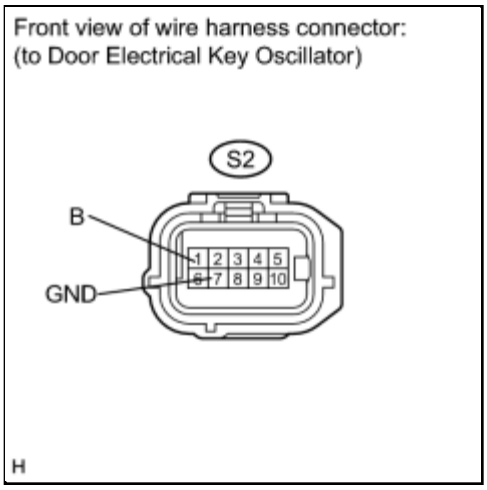
OK ▼

6.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the front door outside handle connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S1-2 (ANT2) - S2-8 (ANT2)	Always	Below 1 Ω
S1-5 (ANT1) - S2-3 (ANT1)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S1-2 (ANT2) - Body ground	Always	10 kΩ or higher
S1-5 (ANT1) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S2-1 (B) - S2-7 (GND)	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

8.	**REPLACE DOOR ELECTRICAL KEY OSCILLATOR**

(a) Replace the door electrical key oscillator INFO .

NEXT

9.	**CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)**

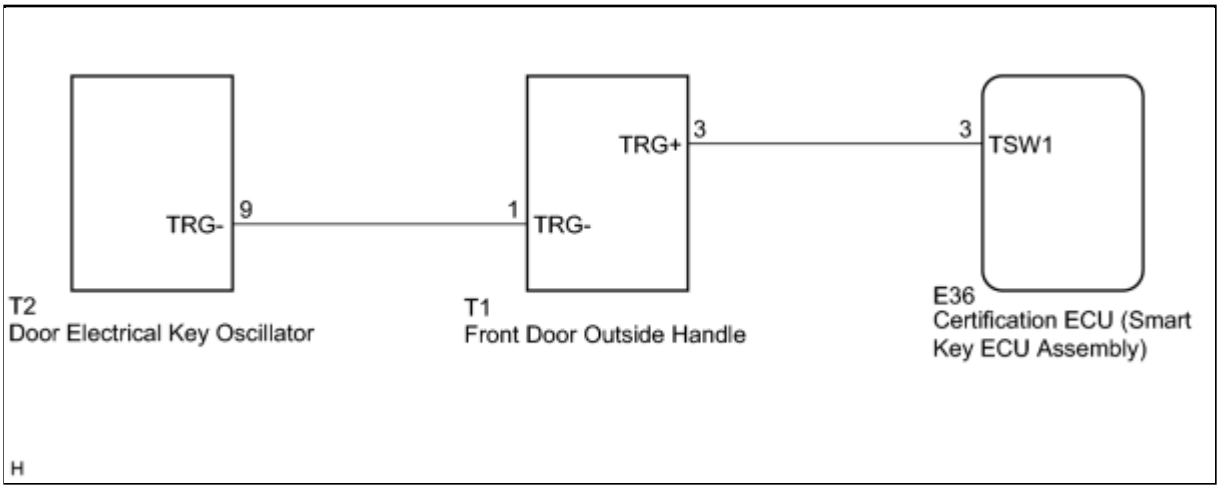
(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK → **END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUQ02XX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Driver Side Door Entry Lock Function does not Operate (2010 Corolla)		

Driver Side Door Entry Lock Function does not Operate

DESCRIPTION

If the driver door entry lock function does not operate but the entry unlock function operates, communication between the vehicle and electrical key transmitter is normal. As a result, the entry lock switch circuit can be considered to be faulty (certification ECU (smart key ECU assembly) → driver side outside handle (entry lock switch) → driver side door electrical key oscillator).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK POWER DOOR LOCK OPERATION**

(a) When the master switch assembly's door control switch is operated, check that the doors lock INFO .

OK:

Door locks operate normally.

OK

2.	READ VALUE USING TECHSTREAM (OUTSIDE HANDLE)

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

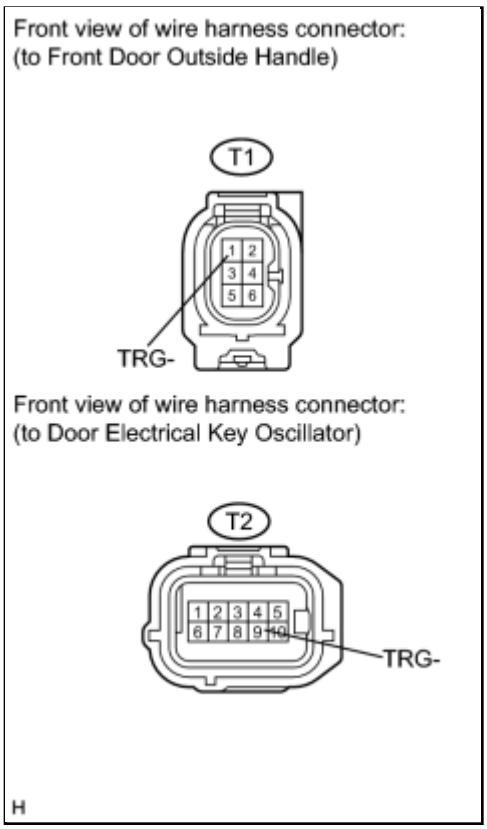
(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D-Door Trigger SW	Driver side door lock switch/ON or OFF	ON: Switch is touched OFF: Switch is not touched	-

OK:
On the Techstream screen, the item changes between ON and OFF according to the chart above.



NG ▶ **CHECK HARNESS AND CONNECTOR (FRONT DOOR OUTSIDE HANDLE - DOOR ELECTRICAL KEY OSCILLATOR)**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

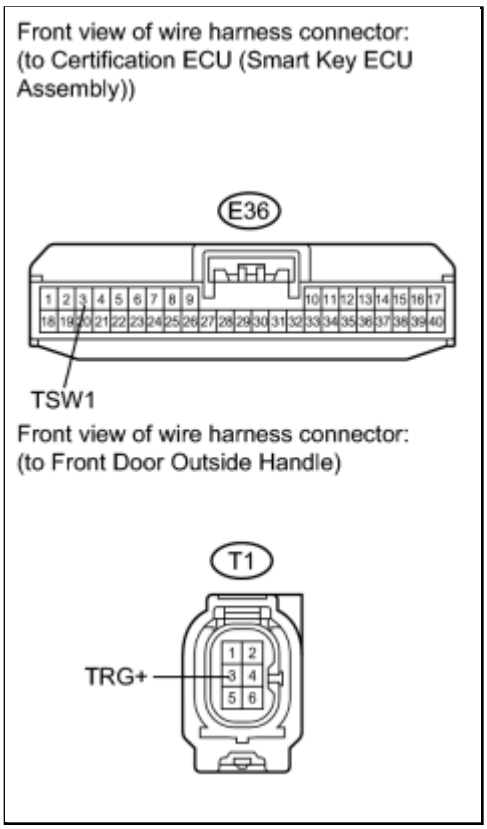
3.	CHECK HARNESS AND CONNECTOR (FRONT DOOR OUTSIDE HANDLE - DOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the front door outside handle.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T2-9 (TRG-) - T1-1 (TRG-)	Always	Below 1 Ω
T2-9 (TRG-) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

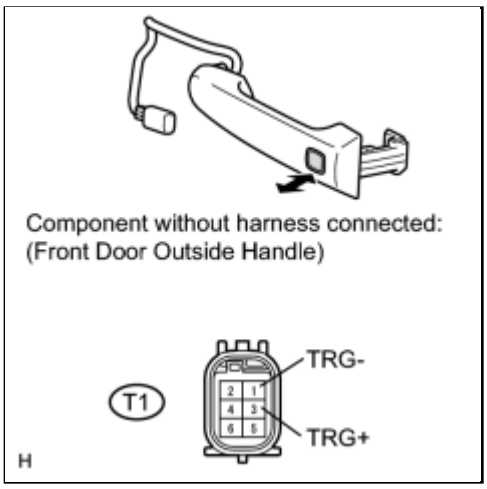
4.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-3 (TSW1) - T1-3 (TRG+)	Always	Below 1 Ω
E36-3 (TSW1) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**INSPECT FRONT DOOR OUTSIDE HANDLE (for Driver Side)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T1-1 (TRG-) - T1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
T1-1 (TRG-) - T1-3 (TRG+)	Lock switch pushed	Below 1 Ω

NG ▶ **REPLACE FRONT DOOR OUTSIDE HANDLE**

OK
▼

6.	REPLACE DOOR ELECTRICAL KEY OSCILLATOR

(a) Replace the door electrical key oscillator INFO .

NEXT
▼

7.	CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (DOOR ELECTRICAL OSCILLATOR IS DEFECTIVE)**

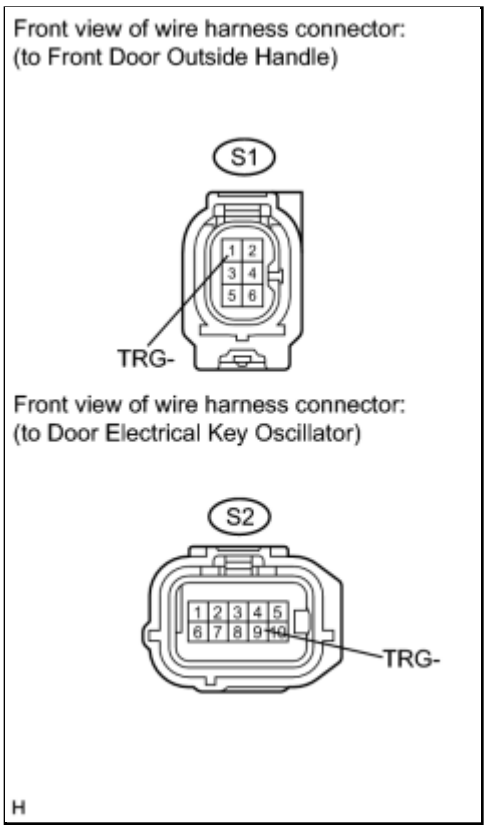
On the Techstream screen, the item changes between ON and OFF according to the chart above.



NG → **CHECK HARNESS AND CONNECTOR (FRONT DOOR OUTSIDE HANDLE - DOOR ELECTRICAL KEY OSCILLATOR)**

OK → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

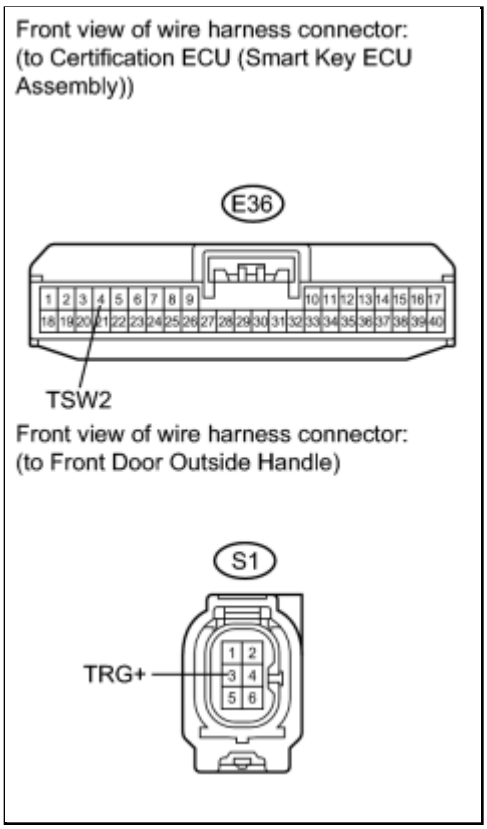
3.	CHECK HARNESS AND CONNECTOR (FRONT DOOR OUTSIDE HANDLE - DOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the front door outside handle connector.

(b) Disconnect the door electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S2-9 (TRG-) - S1-1 (TRG-)	Always	Below 1 Ω
S2-9 (TRG-) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

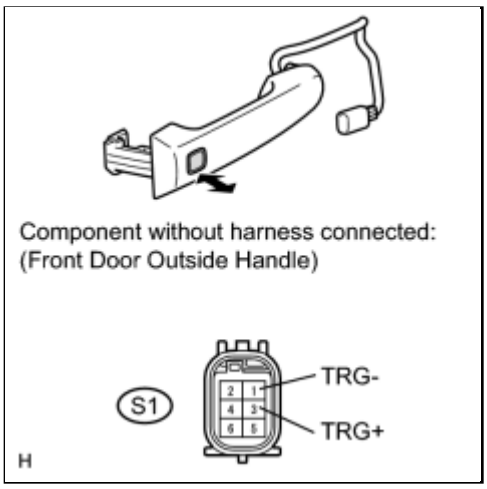
4.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - FRONT DOOR OUTSIDE HANDLE)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-4 (TSW2) - S1-3 (TRG+)	Always	Below 1 Ω
E36-4 (TSW2) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**INSPECT FRONT DOOR OUTSIDE HANDLE (for Front Passenger Side)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S1-1 (TRG-) - S1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
S1-1 (TRG-) - S1-3 (TRG+)	Lock switch pushed	Below 1 Ω

NG ▶ **REPLACE FRONT DOOR OUTSIDE HANDLE**

OK ▼

6.	REPLACE DOOR ELECTRICAL KEY OSCILLATOR

(a) Replace the door electrical key oscillator INFO .

NEXT ▼

7.	CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

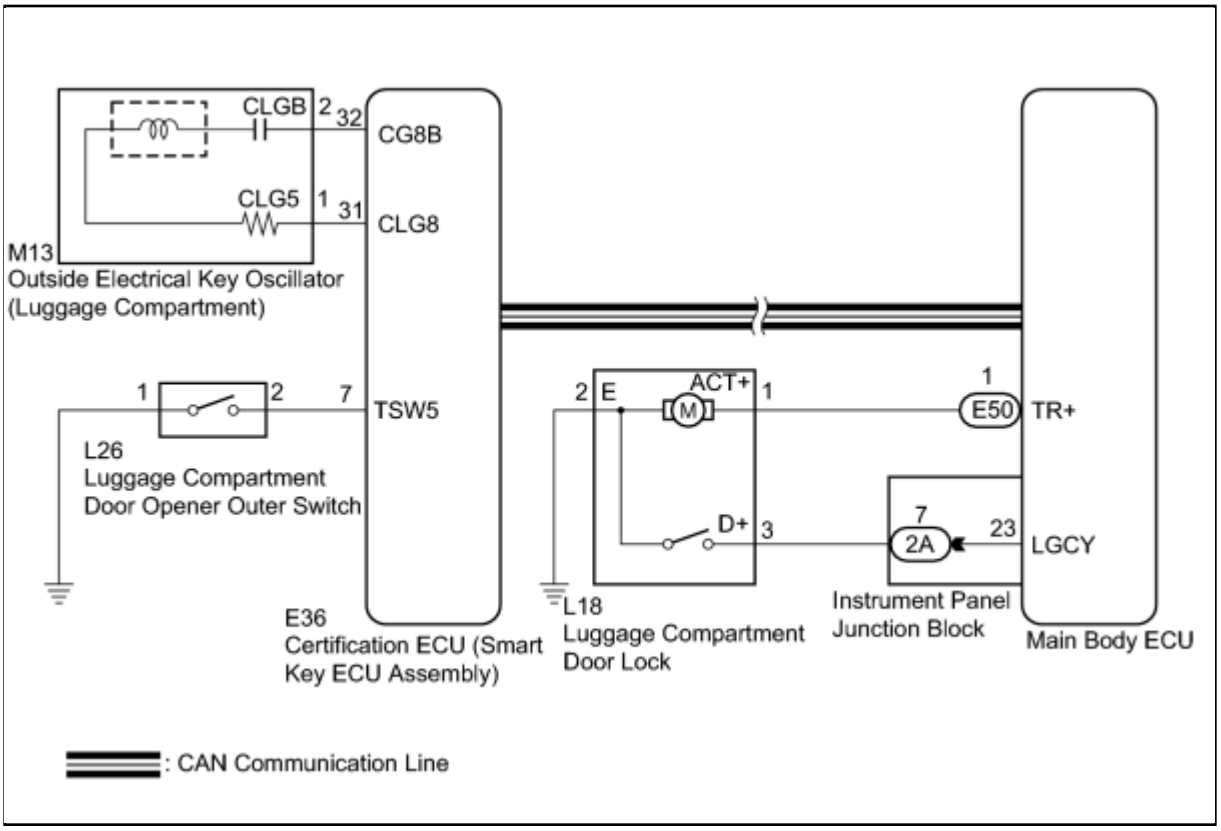
(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Luggage Compartment Door Entry Unlock Function does not Operate when Key is Outside Luggage Compartment (2010 Corolla)		

Luggage Compartment Door Entry Unlock Function does not Operate when Key is Outside Luggage Compartment

DESCRIPTION

When the luggage compartment door entry unlock function does not operate, one of the following may be the cause: 1) luggage compartment door opener outer switch malfunction; 2) communication malfunction between the electrical key antenna and electrical key transmitter; 3) the main body ECU (instrument panel junction block) receives the luggage compartment door opener outer switch ON signal, but is unable to send the signal to the certification ECU (smart key ECU assembly) through CAN communication; or 4) certification ECU (smart key ECU assembly) malfunction.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK SMART KEY SYSTEM (Entry Function)**

(a) Check that entry lock and unlock functions can be operated at each door.

OK:

Entry lock and unlock functions operate normally.

NG ▶ **GO TO OTHER PROBLEM (PROBLEM SYMPTOMS TABLE)**

OK ▼

2.	**READ VALUE USING TECHSTREAM (LUGGAGE COMPARTMENT DOOR OPENER SWITCH)**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Tr/B-Door Unlock SW	Luggage compartment door opener switch / ON or OFF	ON: Luggage compartment door opener outer switch is pushed OFF: Luggage compartment door opener outer switch is not pushed	-

OK:

On the Techstream screen, the item changes between ON and OFF according to above chart.

NG ▶ **INSPECT LUGGAGE COMPARTMENT DOOR OPENER OUTER SWITCH**

OK

3.	PERFORM ACTIVE TEST USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

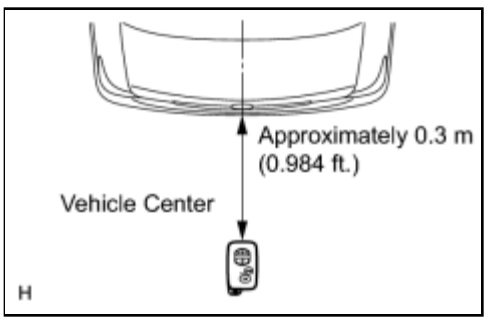
(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Main Body (Main Body ECU (Instrument Panel Junction Block))

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Trunk and Back-door Open	Luggage compartment open switch	ON/OFF	-



OK:

Luggage compartment door lock motor operates according to the Techstream operation.

NG ▶ **INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

OK

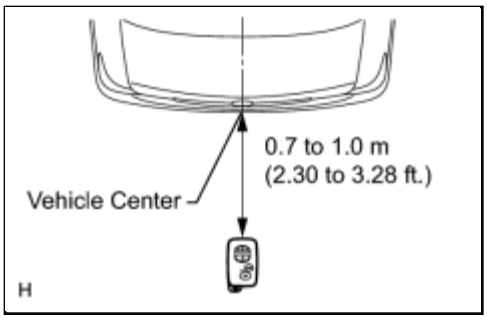
4.	CHECK WAVE ENVIRONMENT

(a) Bring the electrical key transmitter near the outside electrical key oscillator (luggage compartment), and perform an entry luggage compartment open function check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft) of the rear bumper, communication is not possible.

HINT:



- When the electrical key transmitter is brought near the electrical key antenna, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:
Entry functions operate normally.

NG ▶ **PERFORM KEY DIAGNOSTIC MODE INSPECTION**

OK ▶ **AFFECTED BY WAVE INTERFERENCE**

5.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection (outside electrical key oscillator (luggage compartment))

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

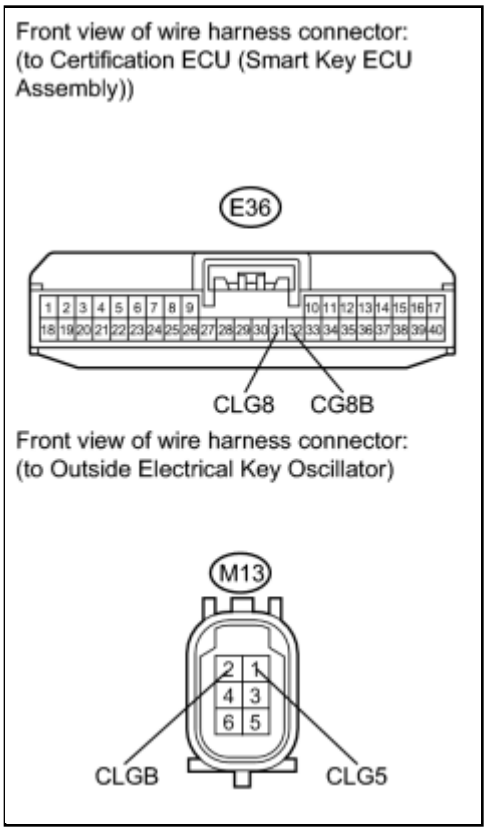
(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Luggage (outside).

(5) When the electrical key transmitter is held at the same height as the rear bumper upper surface aligning it with the center of the rear of the vehicle, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the luggage compartment exterior transmitter is operating normally.



OK:
Wireless door lock buzzer sounds.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - OUTSIDE ELECTRICAL KEY OSCILLATOR)**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

6.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - OUTSIDE ELECTRICAL KEY OSCILLATOR)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the outside electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-32 (CG8B) - M13-2 (CLGB)	Always	Below 1 Ω
E36-31 (CLG8) - M13-1 (CLG5)	Always	Below 1 Ω
E36-32 (CG8B) - Body ground	Always	10 kΩ or higher
E36-31 (CLG8) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

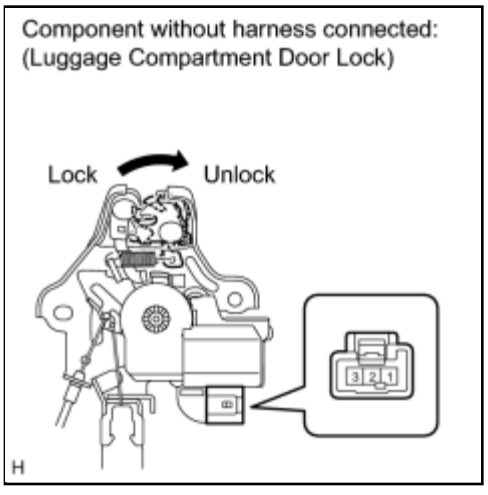
7.	REPLACE OUTSIDE ELECTRICAL KEY OSCILLATOR (Luggage Compartment)

(a) Replace the outside electrical key oscillator (luggage compartment) INFO .

NEXT

8.	CHECK OUTSIDE ELECTRICAL KEY OSCILLATOR (OPERATION)

(a) Check that the entry functions operate normally.



OK:

Entry functions operate normally.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (OUTSIDE ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

9.	INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY

(a) Remove the luggage compartment door lock assembly INFO .

(b) Check the operation of the door lock motor.

(1) Move the door lock to the lock position.

(2) Apply battery voltage to the door lock motor and check the operation of the door lock motor.

OK:

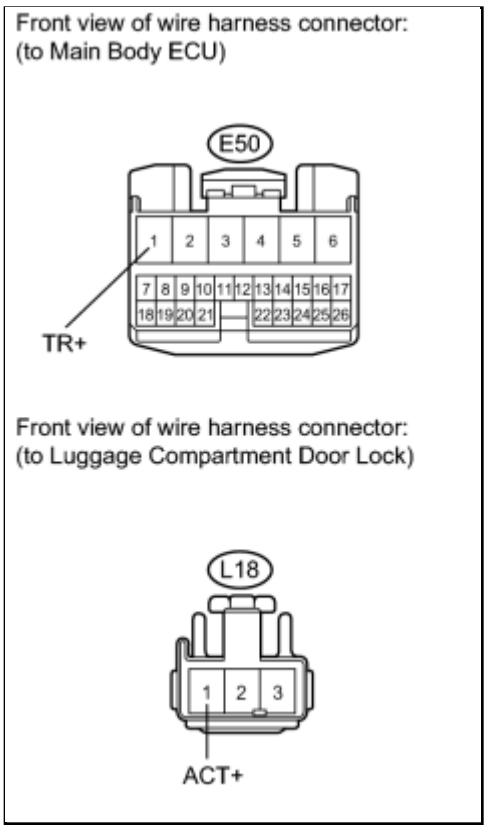
MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Unlock

(c) Check the operation of the door courtesy switch.

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 - 3	Unlock	Below 1 Ω
2 - 3	Lock	10 kΩ or higher



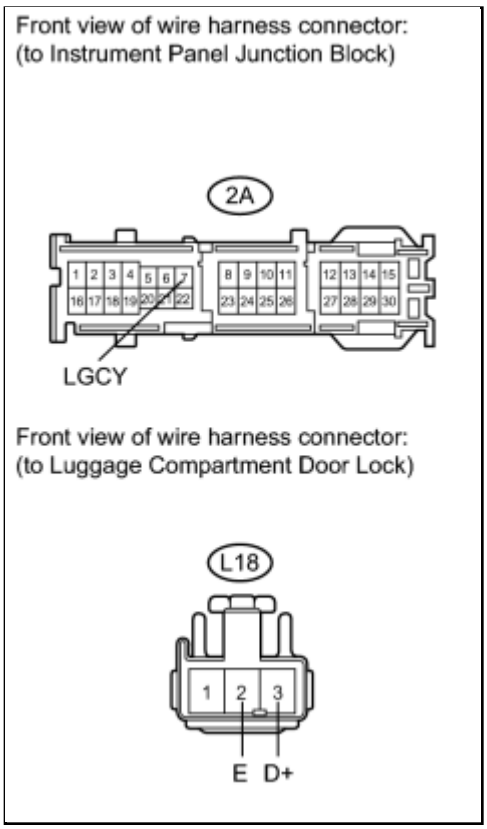
NG ▶ **REPLACE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

OK ▼

10.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - LUGGAGE COMPARTMENT DOOR LOCK)**

(a) Luggage compartment door lock motor:

(1) Disconnect the main body ECU (instrument panel junction block) connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

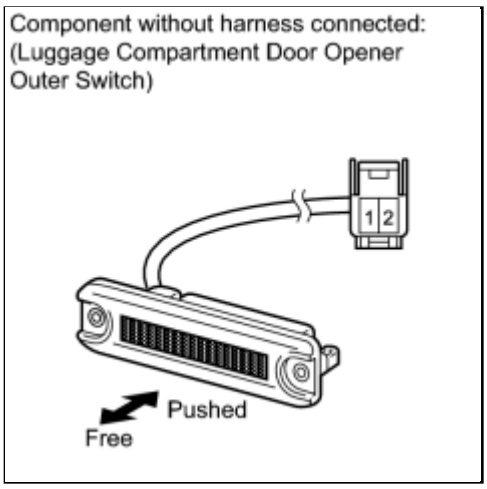
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-1 (TR+) - L18-1 (ACT+)	Always	Below 1 Ω
E50-1 (TR+) - Body ground	Always	10 kΩ or higher

(b) Luggage compartment door courtesy switch:

(1) Disconnect the instrument panel junction block connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L18-2 (E) - Body ground	Always	Below 1 Ω
2A-7 (LGCY) - L18-3 (D+)	Always	Below 1 Ω
2A-7 (LGCY) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

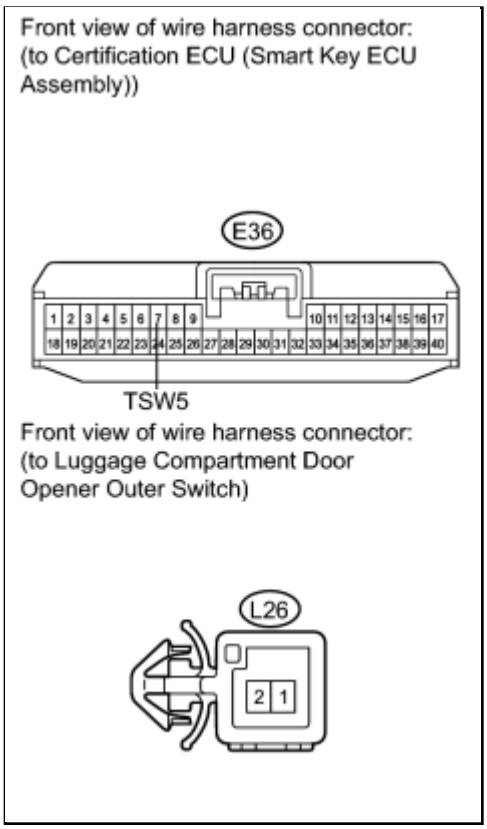
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

11.	**INSPECT LUGGAGE COMPARTMENT DOOR OPENER OUTER SWITCH**

(a) Disconnect the luggage compartment door opener outer switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Luggage compartment door opener outer switch not pushed (OFF)	10 kΩ or higher
1 - 2	Luggage compartment door opener outer switch pushed (ON)	Below 1 Ω

NG ▶ **REPLACE LUGGAGE COMPARTMENT DOOR OPENER OUTER SWITCH**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - LUGGAGE COMPARTMENT DOOR OPENER SWITCH)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

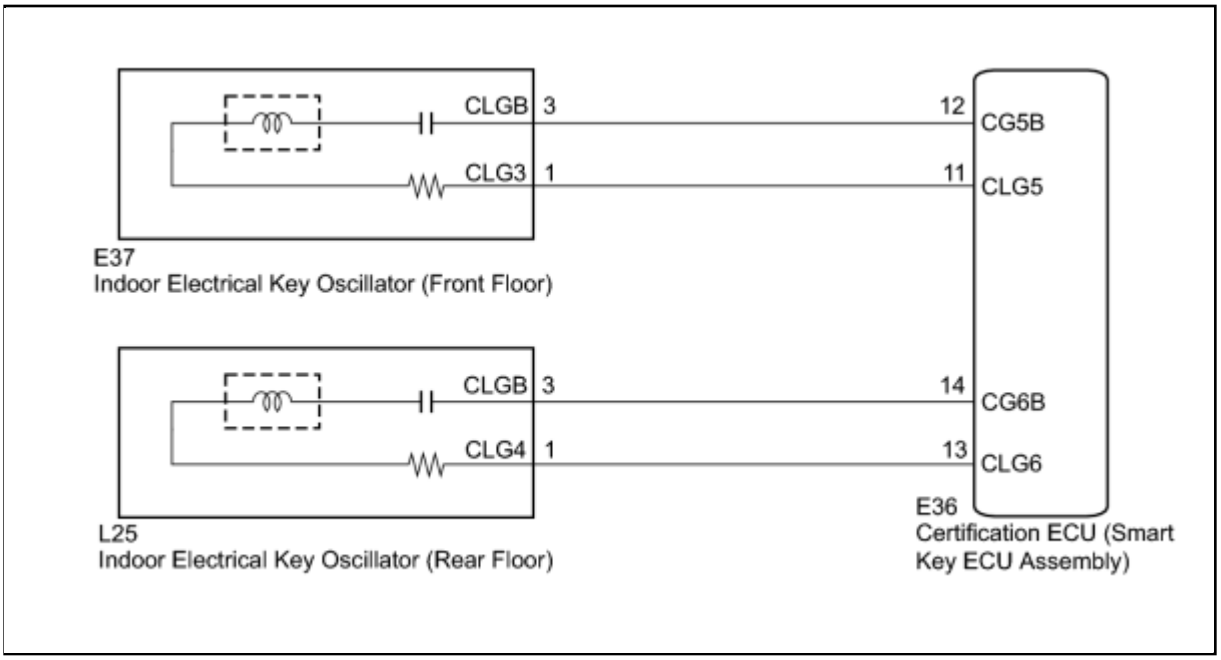
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L26-1 - Body ground	Always	Below 1 Ω
L26-2 - E36-7 (TSW5)	Always	Below 1 Ω
L26-2 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUU02KX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Room Oscillator does not Recognize Key (2010 Corolla)		

Room Oscillator does not Recognize Key

DESCRIPTION

If the indoor electrical key oscillator does not recognize a key, either of the following may be the cause: 1) communication between the indoor electrical key oscillator (front floor) and electrical key transmitter cannot be performed; or 2) communication between the indoor electrical key oscillator (rear floor) and electrical key transmitter cannot be performed.

WIRING DIAGRAM

INSPECTION PROCEDURE

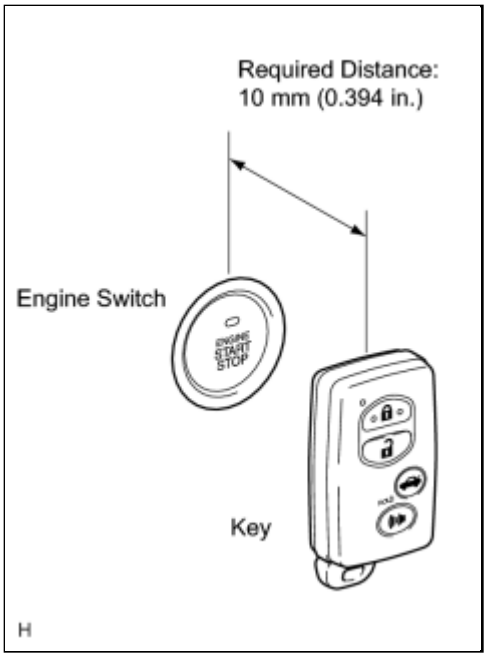
NOTICE:

When using the Techstream to troubleshoot with the engine switch off: Connect the Techstream to the vehicle, and turn a courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

PROCEDURE

1.	**CHECK SMART KEY SYSTEM (Entry Function)**

(a) Check that entry lock and unlock functions can be operated at each door.



OK:

Entry lock and unlock functions operate normally.

NG ▶ **GO TO OTHER PROBLEM (PROCEED TO PROBLEM SYMPTOMS TABLE FOR EACH DOOR)**

OK ▼

2.	**CHECK SMART KEY SYSTEM (Start Function)**

(a) Remove the battery of the electrical key transmitter INFO .

(b) With the brake pedal depressed, face the logo side of the key to the engine switch.

(c) When operating the engine switch, check whether the power source mode changes.

OK:

Power source mode changes.

HINT:

- When the electrical key transmitter cannot be verified even though it is within the specified range, the engine start check can be performed by removing the transmitter battery from the electrical key transmitter and holding the transmitter against the engine switch.
- When performing the check, if the power source mode changes, there is a problem with key certification inside the cabin.

NG ▶ **GO TO SMART KEY SYSTEM (Power Source Mode**

does not Change)

OK

3.	CHECK WAVE ENVIRONMENT

(a) Install the battery to the electrical key transmitter.

(b) Bring the electrical key transmitter near the indoor electrical key oscillator (front floor), and check that the engine can be started.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator (front floor), communication is not possible.

(c) Bring the electrical key transmitter near the indoor electrical key oscillator (rear floor), and check that the engine can be started.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator (rear floor), communication is not possible.

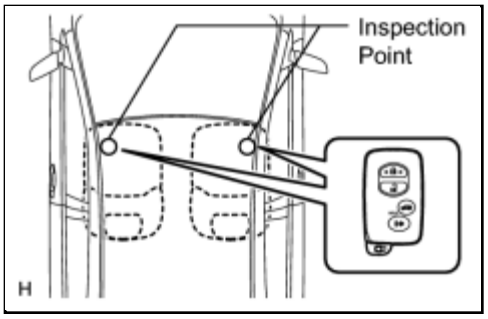
HINT:

- When the electrical key transmitter is brought near the indoor electrical key oscillator, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:

The engine starts.

NG ▶ **PERFORM KEY DIAGNOSTIC MODE INSPECTION**



OK ▶ **AFFECTED BY WAVE INTERFERENCE**

4.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection (indoor electrical key oscillator (front floor))

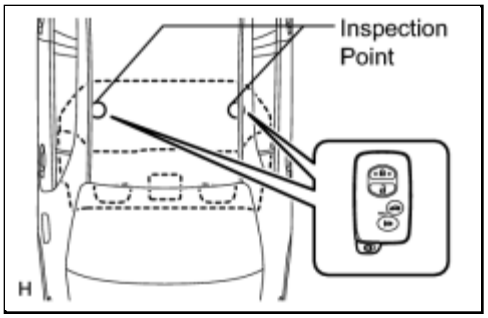
(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Access / Utility / Communication Check (Key Diag Mode) / Overhead + Front Room.

(5) When the electrical key transmitter is placed on the driver seat or front passenger seat cushion, check that the wireless door lock buzzer sounds.



(b) Diagnostic mode inspection (indoor electrical key oscillator (rear floor))

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

(4) Enter the following menus: Body Electrical / Smart Access / Utility / Communication Check (Key Diag Mode) / Overhead + Rear Room.

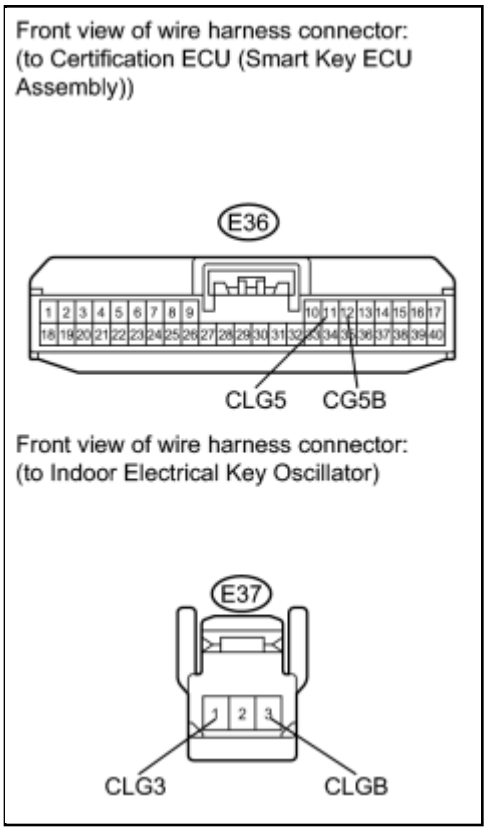
(5) When the electrical key transmitter is placed on the rear seat cushion, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the indoor electrical key oscillators are operating normally.

Result:

RESULT	PROCEED TO
Front and rear operation checks are normal or fail	A
Rear operation check is normal	B
Front operation check is normal	C



B ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)**

A ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

C

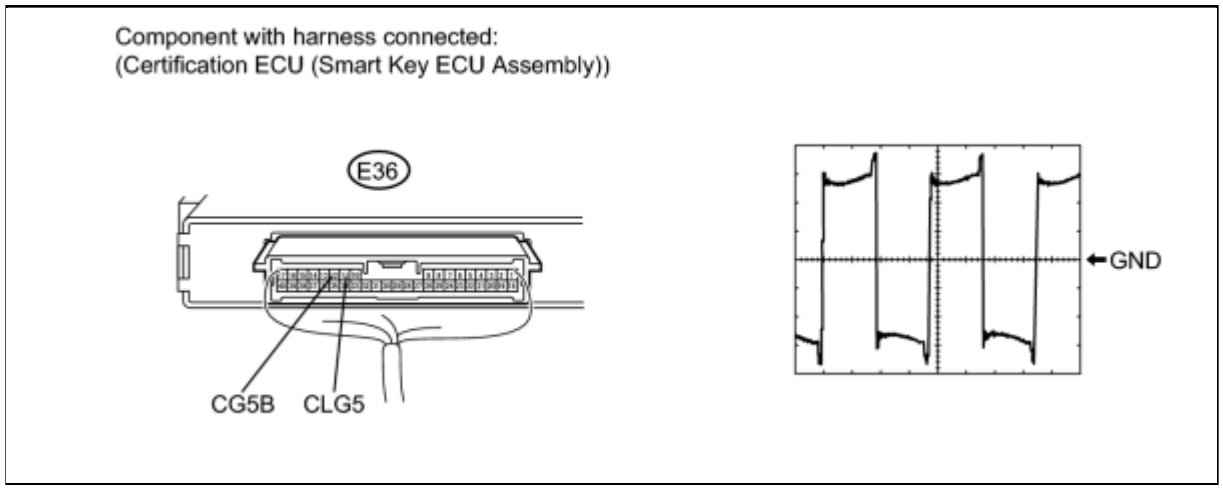
5.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the indoor electrical key oscillator (front floor) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-11 (CLG5) - E37-1 (CLG3)	Always	Below 1 Ω
E36-12 (CG5B) - E37-3 (CLGB)	Always	Below 1 Ω
E36-11 (CLG5) - Body ground	Always	10 kΩ or higher
E36-12 (CG5B) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

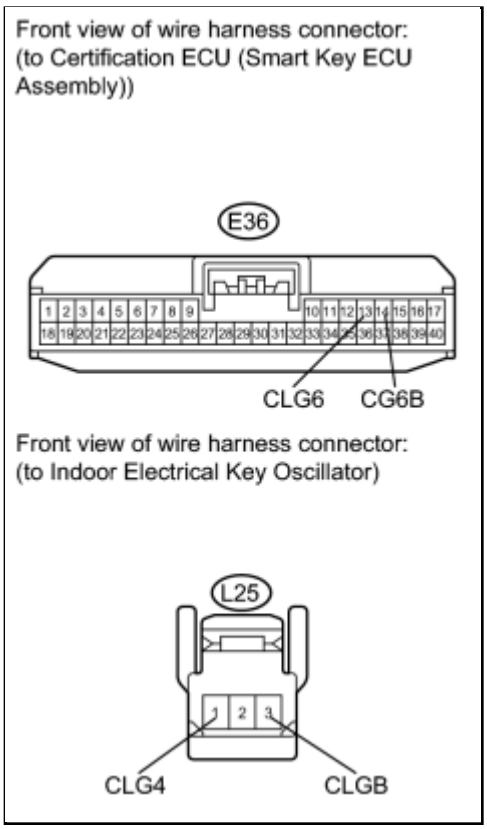
OK

6.	INSPECT INDOOR ELECTRICAL KEY OSCILLATOR (FRONT FLOOR)

(a) Measure the voltage according to the value(s) in the table below.

Standard:

TESTER CONNECTION	TOOL SETTING	SWITCH CONDITION	SPECIFIED CONDITION
E36-11 (CLG5) - E36-12 (CG5B)	2 V/DIV, 2 µs/DIV. (Reference)	Engine switch on (IG)	Pulse generation



NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **REPLACE INDOOR ELECTRICAL KEY OSCILLATOR (Front Side)**

7.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

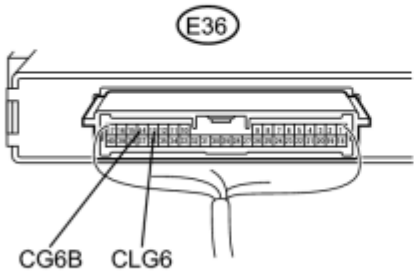
(b) Disconnect the indoor electrical key oscillator (rear

floor) connector.

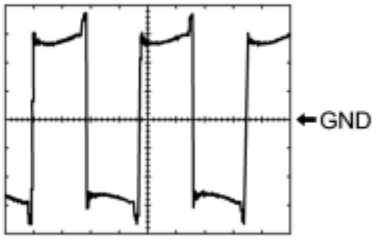
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-13 (CLG6) - L25-1 (CLG4)	Always	Below 1 Ω
E36-14 (CG6B) - L25-3 (CLGB)	Always	Below 1 Ω
E36-13 (CLG6) - Body ground	Always	10 kΩ or higher
E36-14 (CG6B) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

8.	**INSPECT INDOOR ELECTRICAL KEY OSCILLATOR (REAR FLOOR)**

(a) Measure the voltage according to the value(s) in the table below.

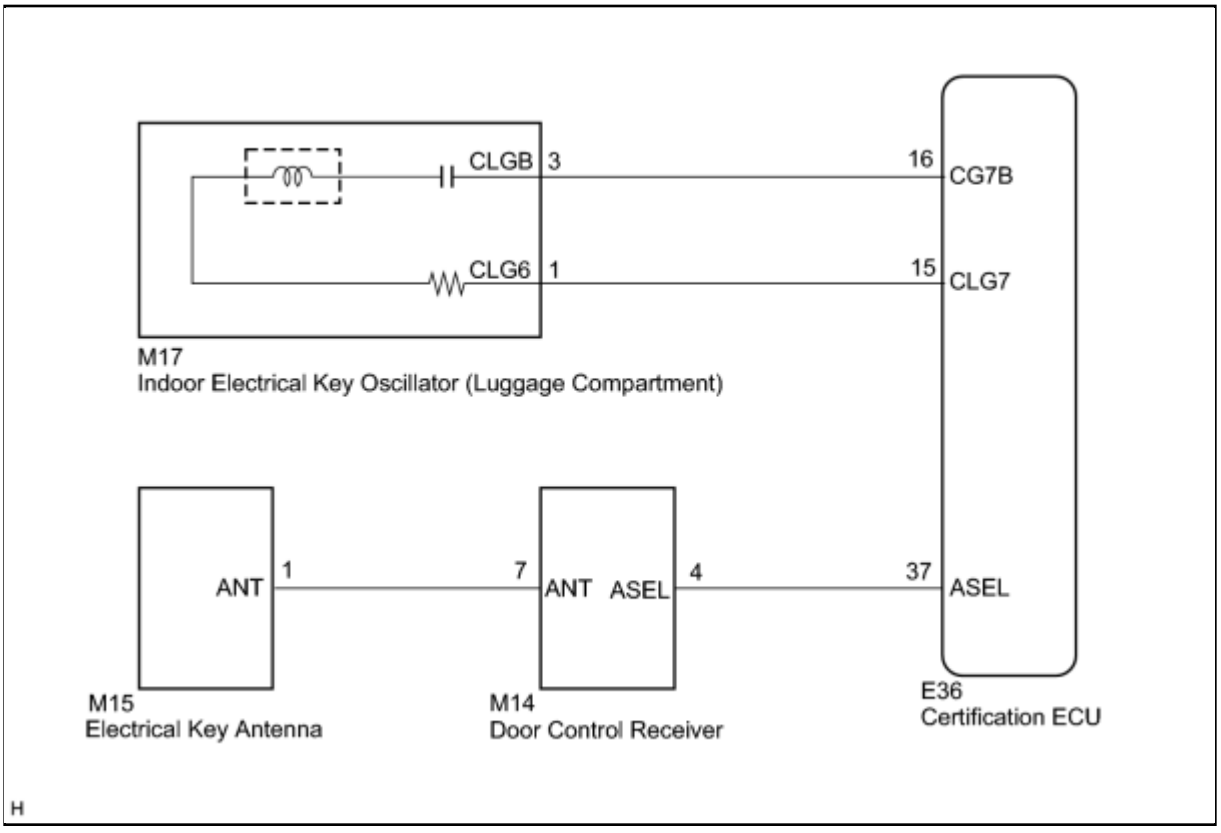
Component with harness connected:
(Certification ECU (Smart Key ECU Assembly))

Standard:

TESTER CONNECTION	TOOL SETTING	SWITCH CONDITION	SPECIFIED CONDITION
E36-13 (CLG6) - E36-14 (CG6B)	2 V/DIV, 2 µs/DIV. (Reference)	Engine switch on (IG)	Pulse generation

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **REPLACE INDOOR ELECTRICAL KEY OSCILLATOR (Rear Side)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUW01OX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Key Luggage Compartment Lock-in Prevention Function does not Operate (2010 Corolla)		

Key Luggage Compartment Lock-in Prevention Function does not Operate

DESCRIPTION

If the key luggage compartment lock-in prevention function does not operate, either of the following may be the cause: 1) communication between the indoor electrical key oscillator (luggage compartment) and electrical key transmitter cannot be performed; or 2) a malfunction in the certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK SMART KEY SYSTEM (Entry Function)**

(a) Check that the luggage compartment door entry unlock function operates.

Result:

RESULT	PROCEED TO
Luggage compartment door entry unlock function does not operate	A
Luggage compartment door entry unlock function operates	B

A ▶ **GO TO OTHER PROBLEM**

B ▼

2.	**CHECK WAVE ENVIRONMENT**

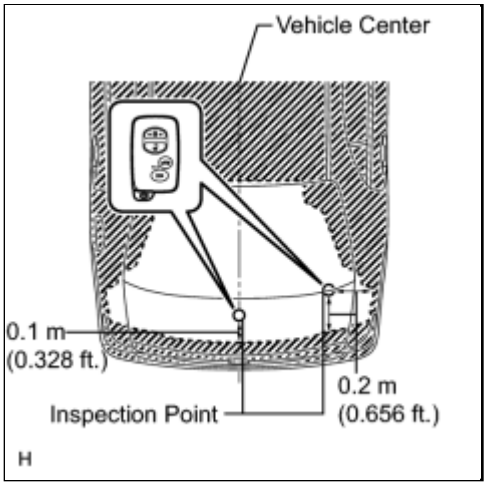
(a) Bring the electrical key transmitter near the indoor electrical key oscillator (luggage compartment), and check that the key luggage compartment lock-in prevention function operates.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the indoor electrical key oscillator, communication is not possible.

HINT:

- When the electrical key transmitter is brought near the indoor electrical key oscillator (luggage compartment), the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.
- If the operation is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.



OK:

Key lock-in prevention function operates normally.

NG ▶ **PERFORM KEY DIAGNOSTIC MODE INSPECTION**

OK ▶ **AFFECTED BY WAVE INTERFERENCE**

3.	PERFORM KEY DIAGNOSTIC MODE INSPECTION

(a) Diagnostic mode inspection (indoor electrical key oscillator)

(1) Connect the Techstream to the DLC3.

(2) Turn the engine switch on (IG).

(3) Turn the Techstream on.

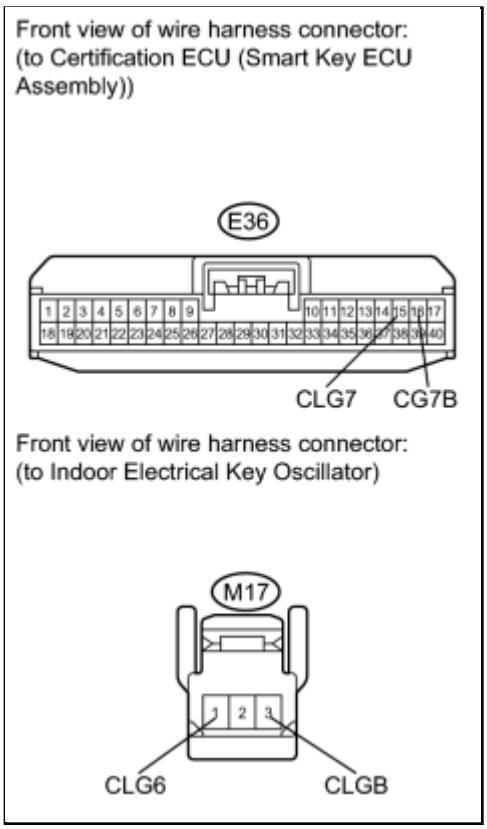
(4) Enter the following menus: Body Electrical / Smart Key / Utility / Communication Check (Key Diag Mode) / Overhead + Luggage (inside).

(5) When the electrical key transmitter is held at the same height as the rear bumper upper surface aligning it with the center of the rear of the vehicle, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the luggage compartment interior transmitter is operating normally.

OK:
Wireless door lock buzzer sounds.



NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

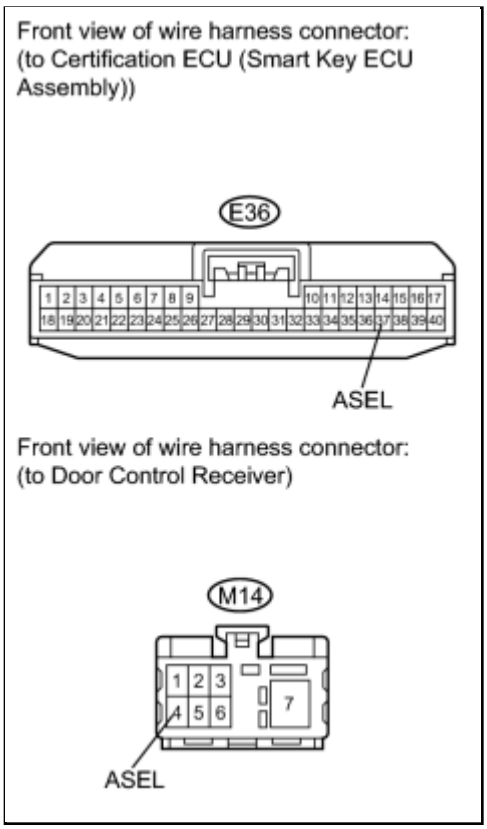
4.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - INDOOR ELECTRICAL KEY OSCILLATOR)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the indoor electrical key oscillator connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-16 (CG7B) - M17-3 (CLGB)	Always	Below 1 Ω
E36-15 (CLG7) - M17-1 (CLG6)	Always	Below 1 Ω
E36-16 (CG7B) - Body ground	Always	10 kΩ or higher
E36-15 (CLG7) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

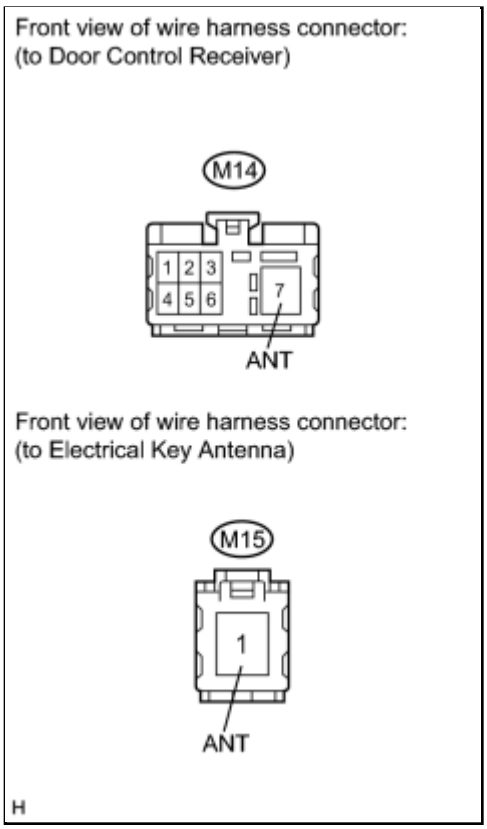
OK ▼

5.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)**

(a) Disconnect the door control receiver connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-37 (ASEL) - M14-4 (ASEL)	Always	Below 1 Ω
E36-37 (ASEL) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - ELECTRICAL KEY ANTENNA)**

(a) Disconnect the electrical key antenna connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
M14-7 (ANT) - M15-1 (ANT)	Always	Below 1 Ω
M14-7 (ANT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

7.	**REPLACE INDOOR ELECTRICAL KEY OSCILLATOR (Luggage Compartment)**

(a) Replace the indoor electrical key oscillator (luggage compartment) INFO .

NEXT

8.	CHECK INDOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE ELECTRICAL KEY ANTENNA

OK ▶ END (INDOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

9.	REPLACE ELECTRICAL KEY ANTENNA

(a) Replace the indoor electrical key antenna.

NEXT

10.	CHECK ELECTRICAL KEY ANTENNA (OPERATION)

(a) Check that the entry functions operate normally.

OK:

Entry functions operate normally.

NG ▶ REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK ▶ END (ELECTRICAL KEY ANTENNA IS DEFECTIVE)

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XUX02CX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Entry Function): Entry Interior Alarm does not Sound (2010 Corolla)		

Entry Interior Alarm does not Sound

DESCRIPTION

The smart key system uses the combination meter buzzer to perform various vehicle interior warnings. When each warning's conditions are met, the certification ECU (smart key ECU assembly) sends a buzzer signal to the meter ECU, and the combination meter buzzer sounds.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK COMBINATION METER ASSEMBLY (OPERATION)**

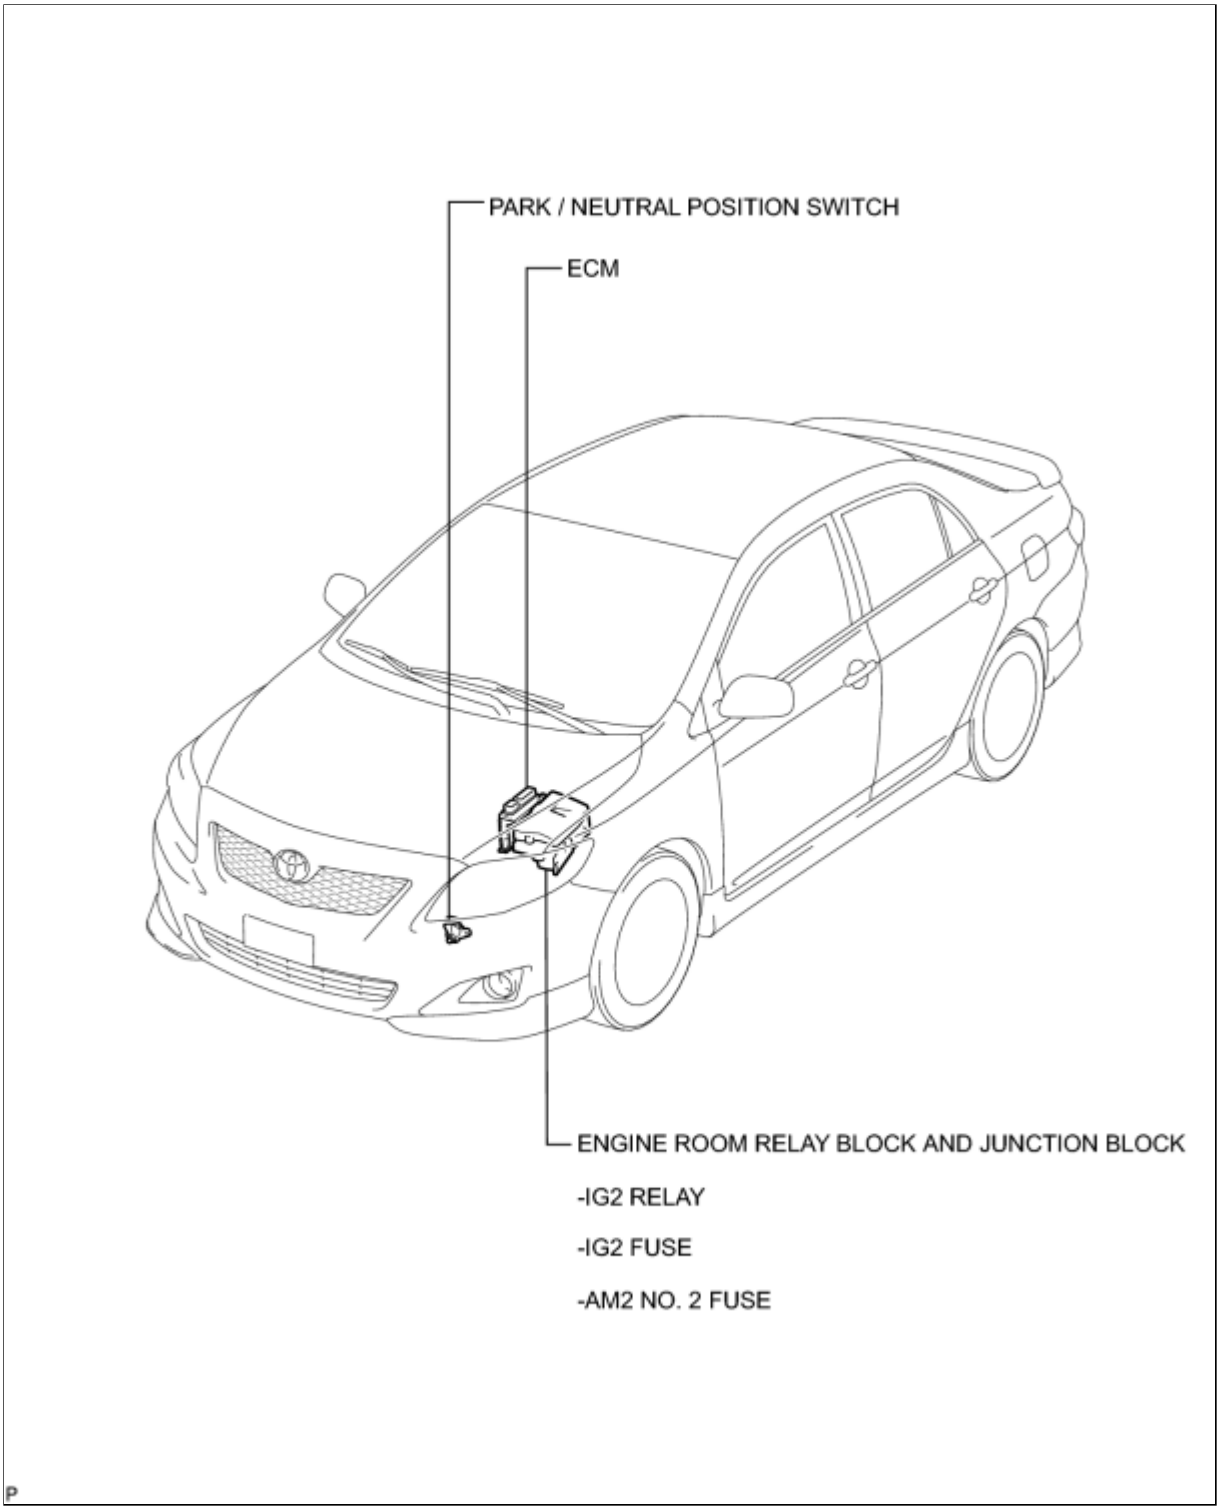
(a) Turn the engine switch on (IG). Place luggage on the front passenger seat to cause the front passenger seat belt warning light to blink.

(b) When driving the vehicle at 15 km/h (9 mph) or higher, check that the seat belt warning buzzer sounds to inform that the passenger seat belt is not fastened.

HINT:

The smart key system sounds the buzzer built into the combination meter for indoor warnings. This buzzer is also used for the seat belt warning system. Therefore, check the operation of the combination meter buzzer by checking if the buzzer sounds to inform that the seat belt is not fastened.

OK:
Combination meter buzzer sounds.



NG ▶ **GO TO METER / GAUGE SYSTEM**

OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): PRECAUTION (2010 Corolla)		

PRECAUTION

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU (instrument panel junction block). This may result in the engine not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in the P or N.

To activate the starter:

(1) Turn the engine switch from off to on (ACC).

(2) Press and hold the engine switch for 15 seconds.

2. PRECAUTIONS FOR PUSH-BUTTON START FUNCTION:

(a) Before starting the engine, firmly depress the brake pedal until the indicator in the engine switch turns green.

(b) The power source mode (off, on (ACC), on (IG)) is always retained in memory by the vehicle. If the battery is disconnected, the power source mode that was present before disconnection will be restored after the battery is reconnected. Be sure to turn the engine switch off before disconnecting the cable from the negative battery terminal. Be careful if the power source mode of a vehicle with a discharged battery is not known.

(c) After the battery is reconnected, be sure to wait 10 seconds or more before attempting to start the engine. The engine may not start immediately after the battery is reconnected.

(d) If the electrical key is held near the engine switch to start the engine when the electrical key battery is depleted, the following warnings will sound:

(1) Driver's door open → closed

- An exit warning will sound if the power source is in a mode other than off.

(2) Doors other than the driver door open → closed

- A warning will sound to indicate that the electrical key has been taken out of the vehicle.

These warnings will sound because it is not possible for the vehicle to determine if the key is present in the vehicle (due to the depleted key battery). These warnings do not indicate system malfunctions.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XI304RX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. PUSH-BUTTON START FUNCTION DESCRIPTION

(a) The push-button start function uses a push-type engine switch, which the driver can operate by merely carrying the electrical key. This system consists primarily of the main body ECU (instrument panel junction block), engine switch, ID code box (immobiliser code ECU), steering lock ECU, electrical key, ACC relay, IG1 relay, IG2 relay and certification ECU (smart key ECU assembly). The main body ECU (instrument panel junction block) controls the function. This function operates in cooperation with the smart key system.

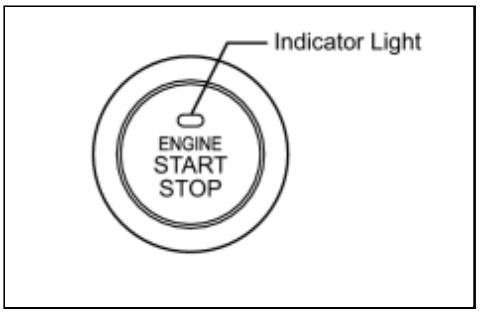
2. FUNCTION OF COMPONENT

COMPONENT	FUNCTION
Engine switch • Transponder key amplifier	• Transmits engine switch signal to main body ECU (instrument panel junction block). • Informs driver of power source mode or system abnormality with illumination of indicator light. • Receives ID code and transmits it to certification ECU (smart key ECU assembly) when key battery is low.
Electrical key	Receives signals from oscillators and returns ID code to door control receiver.
Indoor oscillator • Front and rear	Receives request signals from certification ECU (smart key ECU assembly) and forms detection area in vehicle interior.
Steering lock ECU	Receives lock/unlock request signals from certification ECU (smart key ECU assembly) and main body ECU (instrument panel junction block).
Stop light switch	Outputs state of brake pedal to main body ECU (instrument panel junction block).
Door control receiver	Receives ID code from electrical key and transmits it to certification ECU (smart key ECU assembly).
Main body ECU (instrument panel junction block)	• Changes power source mode in 4 stages (off, on (ACC), on (IG), start) in accordance with shift position and state of stop light switch. • Controls push-button start function in accordance with signals received from switches and each ECU.
Certification ECU (smart key ECU assembly)	Certifies ID code received from door control receiver and transmits certification results to ID code box (immobiliser code ECU) and steering lock ECU.

COMPONENT	FUNCTION
ID code box (immobiliser code ECU)	Receives steering unlock or engine immobiliser unset signals from certification ECU (smart key ECU assembly), certifies them, and transmits each unset signal to steering lock ECU or ECM.
ECM	• Receives engine start request signal from main body ECU (instrument panel junction block), turns ON starter relay, and starts engine. • Receives signal from ID code box (immobiliser code ECU) and performs engine ignition and injection.

3. SYSTEM FUNCTION

The electric controls of the push-button start function are described below:



CONTROL	OUTLINE
Engine switch control	When driver operates engine switch with electrical key in driver's possession, certification ECU (smart key ECU assembly) starts indoor oscillator, which transmits request signal to electrical key. Upon receiving this signal, the electrical key transmits ID code matching result signal to main body ECU (instrument panel junction block).
Diagnosis	When main body ECU (instrument panel junction block) detects malfunction, main body ECU (instrument panel junction block) diagnoses and memorizes failed section.

4. CONSTRUCTION AND OPERATION

(a) Engine Switch

The engine switch consists of a momentary type switch, 2 color (amber, green) LEDs, and a transponder key amplifier.

- The amber and green LEDs are for the indicator lights. The driver can check the present power source mode and whether the engine can start in accordance with the illumination state of the indicator light.
- When the main body ECU (instrument panel junction block) detects an abnormality in the push-button start function, it makes the amber indicator light flash. If the engine is stopped in this state, it may not be possible to restart it.

(b) Indicator Light Condition

Engine Switch Indicator Light Condition

POWER SOURCE	INDICATOR LIGHT CONDITION

MODE/CONDITION		
	BRAKE PEDAL RELEASED	BRAKE PEDAL DEPRESSED, SHIFT LEVER IN P OR N
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
Engine running	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

(c) Main body ECU (instrument panel junction block)

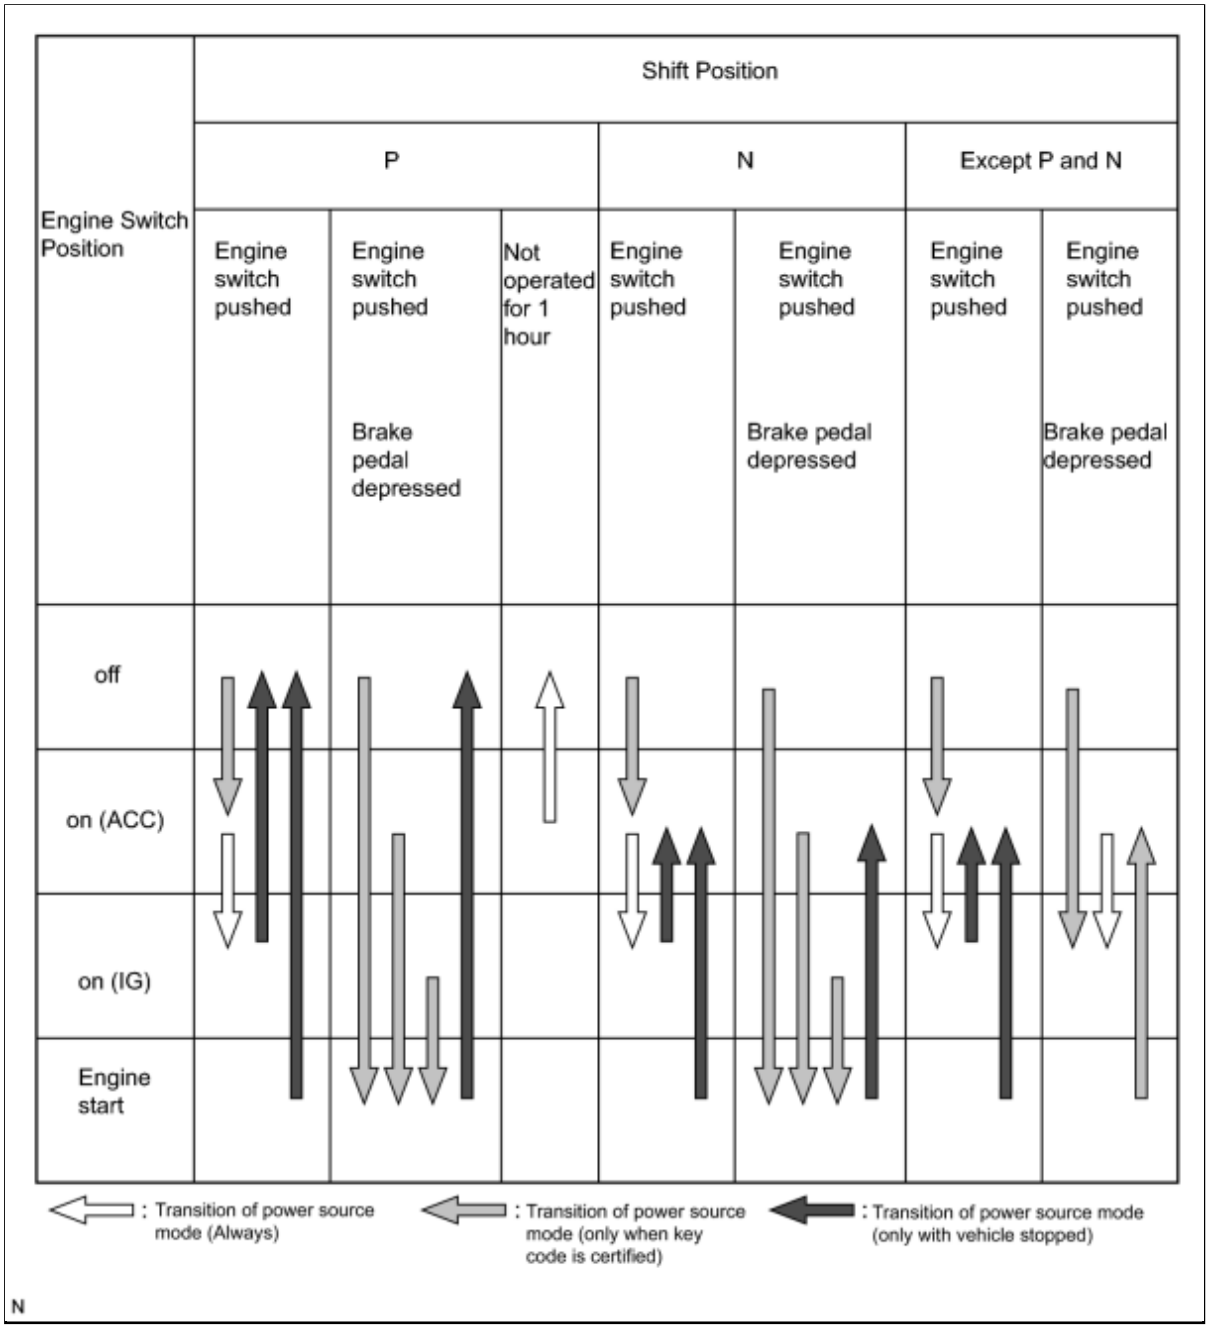
The main body ECU (instrument panel junction block) consists of the IG1 and IG2 relay actuation circuits and CPU.

HINT:

Before removing the battery, make sure to turn the engine switch off. The main body ECU (instrument panel junction block) constantly stores the present power source mode in its memory. Therefore, if the main body ECU (instrument panel junction block) is interrupted by disconnecting the battery, the main body ECU (instrument panel junction block) restores the power source mode after the battery is reconnected. For this reason, if the battery is disconnected when the engine switch is not off, the power will be restored to the vehicle at the same time the power is restored to the main body ECU (instrument panel junction block) (by reconnecting the battery).

5. PUSH-BUTTON START FUNCTION OPERATION

(a) This system has different power source mode patterns depending on the brake pedal condition and shift lever position.



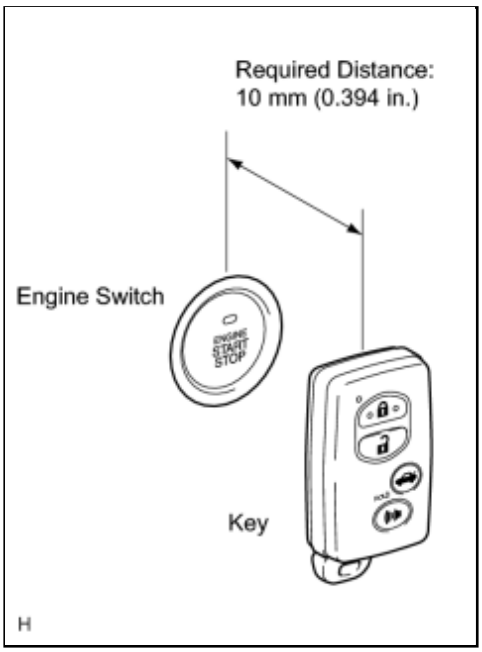
BRAKE PEDAL	SHIFT LEVER	POWER SOURCE MODE PATTERN
Depressed	P or N	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start

BRAKE PEDAL	SHIFT LEVER	POWER SOURCE MODE PATTERN
Not depressed	P	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
	Except P	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → off
-	Except P	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → on (ACC)

When the battery of the key is low, the push-button start function can be operated by holding the key against the engine switch.

- After approximately 1 hour has passed with the engine switch on (ACC) and the shift position in P, the main body ECU (instrument panel junction block) will automatically cut the power supply (the power source mode changes to off).
- The illustration below shows the transition of power source modes.

Transition of power source mode:



HINT:

While the vehicle is being driven normally, operation of the engine switch is disabled. However, if the engine must be stopped in an emergency while the vehicle is being driven, pressing the engine switch for 3 seconds or more stops the engine. Power source mode changes from start to on (ACC).

6. WHEN KEY BATTERY IS LOW

(a) To operate the push-button start function when the key battery is low, hold the key close to the engine switch with the brake pedal depressed.

(b) The main body ECU (instrument panel junction block) transmits a key verification request signal to the certification ECU (smart key ECU assembly).

(c) The certification ECU (smart key ECU assembly) does not receive an ID code response from the door control receiver, so it actuates the transponder key amplifier built into the engine switch.

(d) The transponder key amplifier outputs an engine immobiliser radio wave to the key.

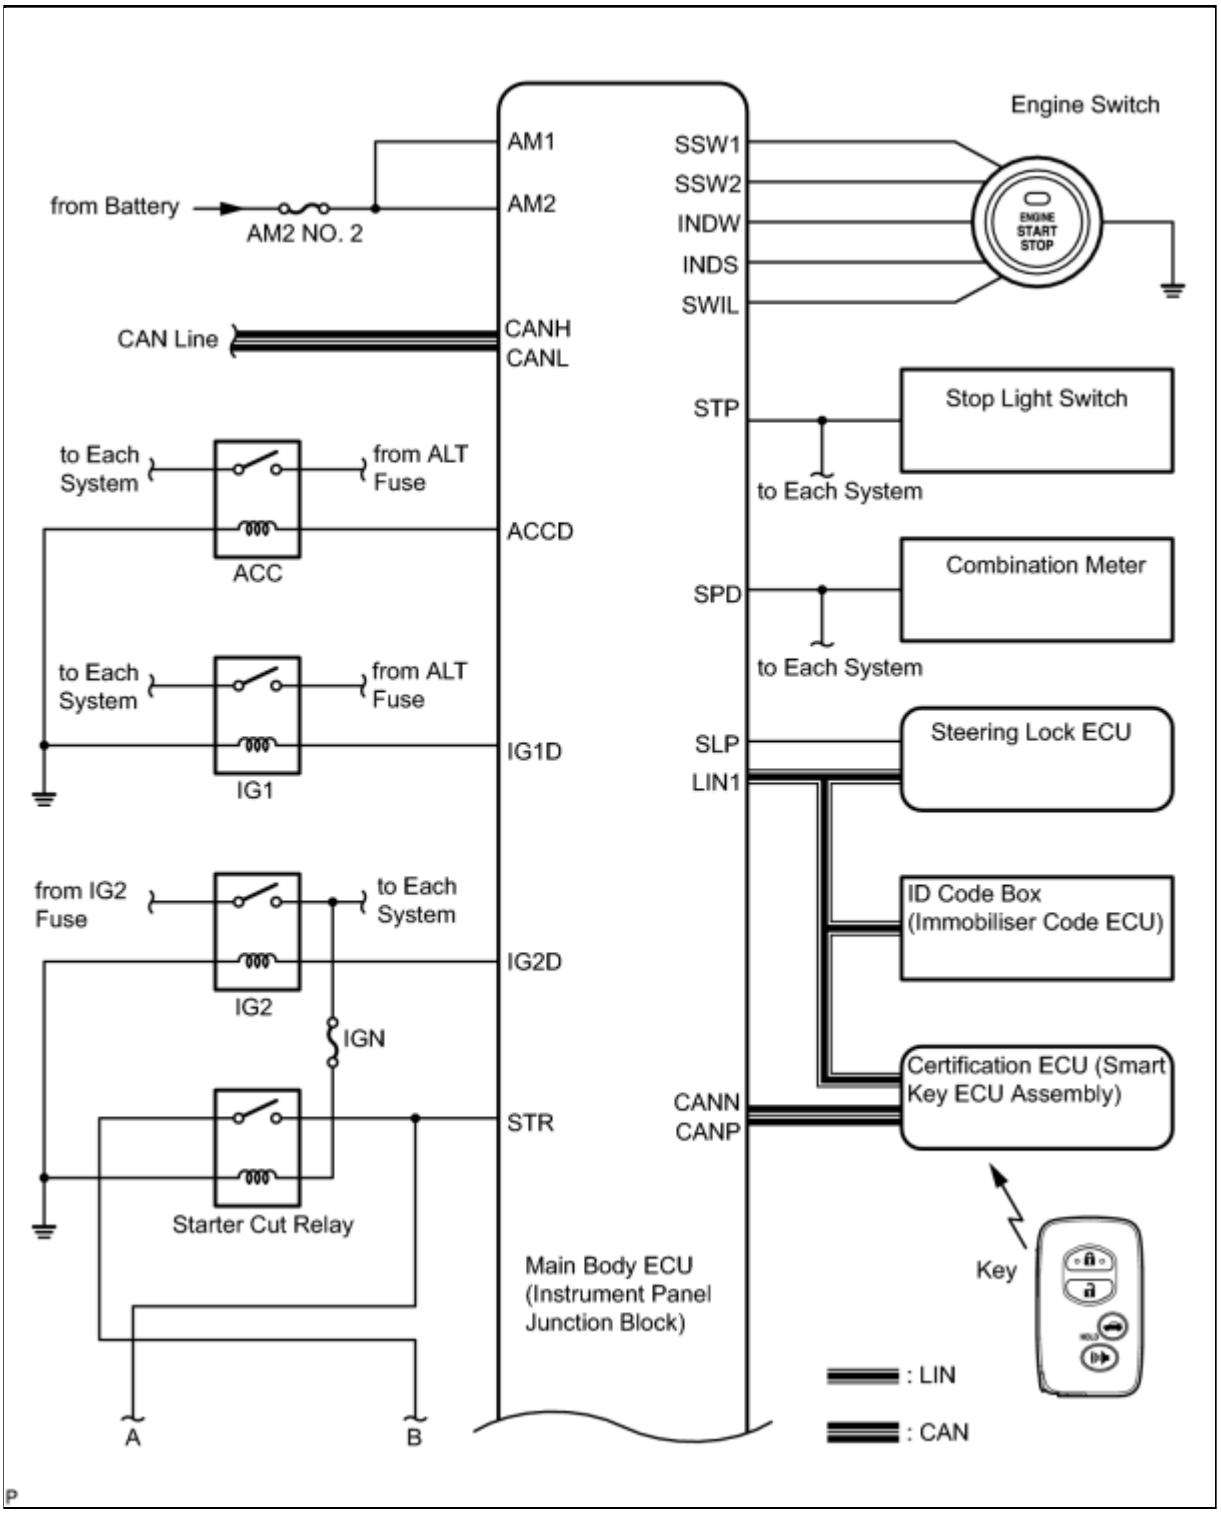
(e) The key receives the radio wave, and returns a radio wave response to the transponder key amplifier.

(f) The transponder key amplifier combines the key ID codes with the radio wave response, and transmits it to the certification ECU (smart key ECU assembly).

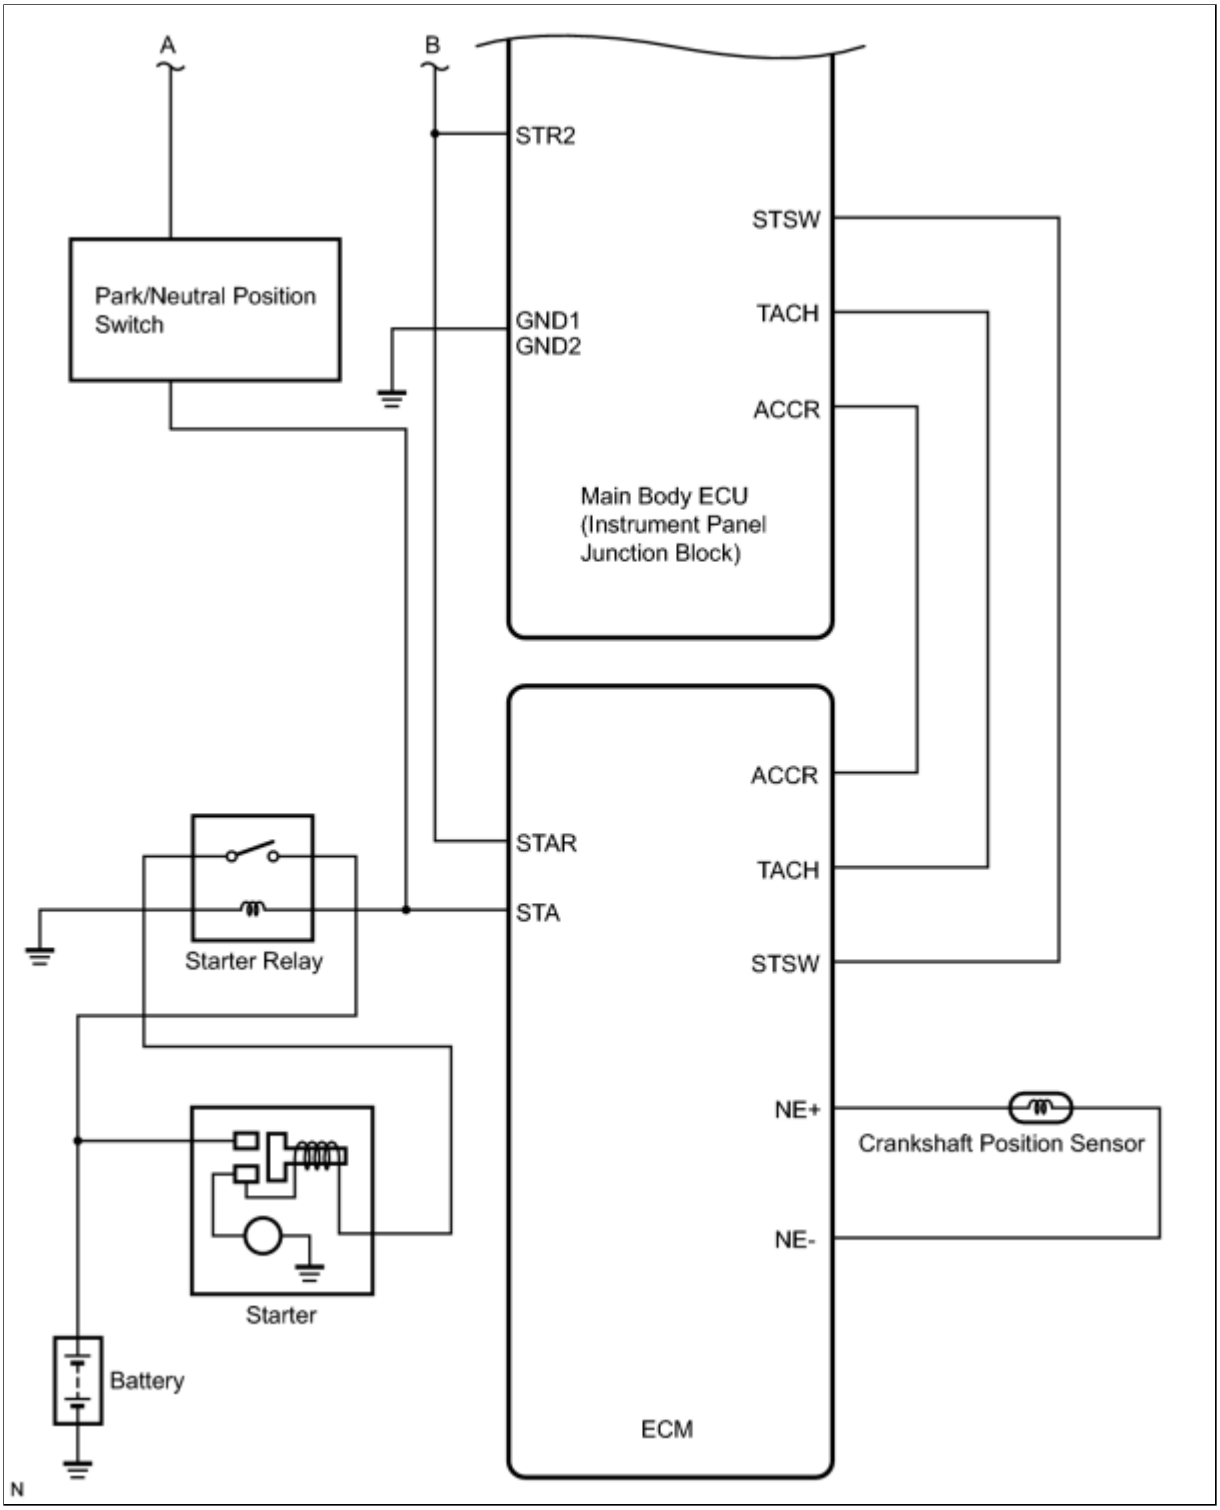
(g) The certification ECU (smart key ECU assembly) judges and verifies the ID code, and transmits a key verification OK signal to the main body ECU (instrument panel junction block). The buzzer in the combination meter sounds at the same time.

(h) After the buzzer sounds, if the engine switch is pressed within 5 seconds with the brake pedal not depressed, the power source mode changes to on (ACC) or on (IG), the same as in the normal condition.

7. DIAGNOSIS



The main body ECU (instrument panel junction block) can detect malfunctions in the push-button start function when the power source mode is on (IG).



When the ECU detects a malfunction, the amber or green indicator light of the engine switch flashes to warn the driver. At the same time, the ECU stores a 5-digit DTC (Diagnostic Trouble Code) in the memory.

- The indicator light warning continues for 15 seconds even after the power source mode is changed to off.
- The DTC can be read by connecting the Techstream to the DLC3.
- The push-button start function cannot be operated if a malfunction occurs.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the push-button start function.
- *: Use the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS CHECK**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
  - The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	**INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4.	**INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM***

E51-6 (IG1D) - E51-4 (GND2)	W - W-B*4 G - W-B*5	IG1 signal	Engine switch on (ACC)	Below 1 V
E52-3 (STR) - E51-4 (GND2)	BR - W-B*4 W - W-B*5	Park/Neutral position switch signal	Engine switch on (IG), shift lever except P or N → P or N	Below 2 V → Pulse generation*3
E50-18 (SLP) - E51-4 (GND2)	G - W-B*4 BR - W-B*5	Steering lock actuator position signal	Steering lock is locked	Pulse generation (See waveform 3)
E50-18 (SLP) - E51-4 (GND2)	G - W-B*4 BR - W-B*5	Steering lock actuator position signal	Steering lock is released	Pulse generation (See waveform 3)
E50-7 (SLR+) - E51-4 (GND2)	P - W-B*4 LG - W-B*5	Steering lock motor signal	Steering lock motor operating	Below 1 V
E50-7 (SLR+) - E51-4 (GND2)	P - W-B*4 LG - W-B*5	Steering lock motor signal	Steering lock motor does not operate	Output voltage at terminal AM1 or AM2 is -2 V or more.
E50-4 (ACCD) - E51-4 (GND2)	GR - W-B	ACC signal	Engine switch on (ACC)	Output voltage at terminal AM1 or AM2 is -2 V or more.
E50-4 (ACCD) - E51-4 (GND2)	GR - W-B	ACC signal	Engine switch off	Below 1 V
E51-8 (SWIL) - E51-4 (GND2)	G - W-B*4 L - W-B*5	Illumination signal	Light control switch TAIL or HEAD	Output voltage at terminal AM1 or AM2 is -2 V or more.
E52-2 (TACH) - E51-4 (GND2)	GR - W-B	Tachometer signal	Engine running	Pulse generation (See waveform 2)
2C-8 (SPD) - E51-4 (GND2)	V - W-B	Vehicle speed signal	Engine switch on (IG), rotate rear wheel slowly	Pulse generation (See waveform 1)
E52-4 (STSW) - E51-4 (GND2)	W - W-B*4 B - W-B*5	Starter activation request signal	Brake pedal depressed, engine switch held on (ST)	Output voltage at terminal AM1 or AM2 is -2 V or more.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E52-14 (STR2) - E51-4 (GND2)	W - W-B*4 Y - W-B*5	Starter signal (Sub)	Brake pedal depressed, shift lever P or N, engine switch on (ST)	Output voltage at terminal AM1 or AM2 is -3.5 V or more.*2
2F-5 (ACC) - Body ground	W - Body ground*4 L - Body ground*5	ACC power supply	Always	11 to 14 V
2G-1 (IG) - Body ground	W - Body ground	IG power supply	Always	11 to 14 V
E50-14 (STP) - E51-4 (GND2)	L - W-B	Stop light signal	Brake pedal depressed	Output voltage at terminal AM1 or AM2 is -2 V or more.
E50-14 (STP) - E51-4 (GND2)	L - W-B	Stop light signal	Brake pedal released	Below 1 V

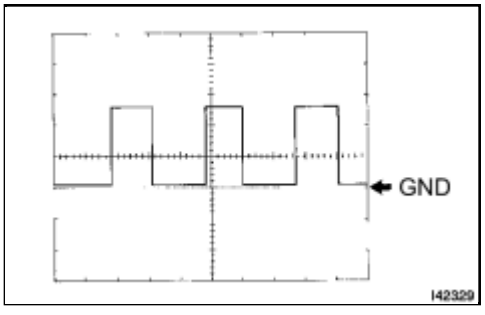
HINT:

***1: Voltage is output only when the engine is cranking.**

***2: Voltage is output for 0.3 seconds when the engine is cranking to start. Disconnect the B31 connector from the ECM and starter cut relay before measuring the voltage.**

***3: Remove the starter cut relay before measuring the voltage.**

***4: for TMC Made**



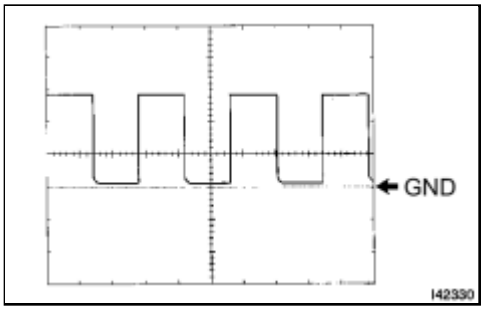
***5: for except TMC Made**

If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

(1) Waveform 1

Waveform 1 (Reference)



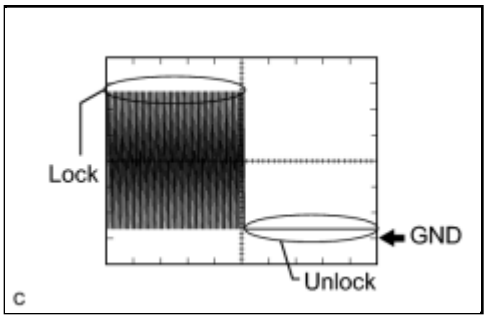
Terminal No.	2C-8 (SPD) - E51-4 (GND2)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Driving at approx. 20 km/h (12 mph)

HINT:

As the vehicle speed increases, the wavelength shortens.

(2) Waveform 2

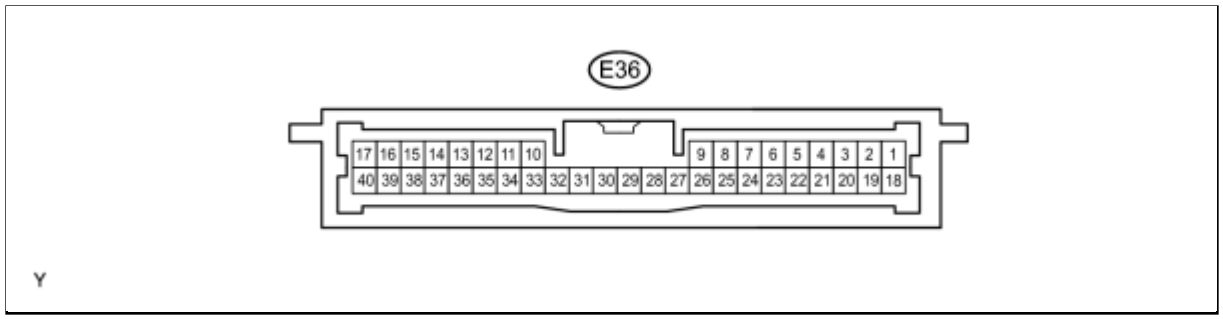
Waveform 2 (Reference)



Terminal No.	E52-2 (TACH) - E51-4 (GND2)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Engine idling

HINT:

As the engine revolution speed increases, the wavelength shortens.



(3) Waveform 3

Waveform 3 (Reference)

Terminal No.	E50-18 (SLP) - E51-4 (GND2)
Tool Setting	2 V/DIV., 100 ms./DIV.
Vehicle Condition	Steering lock/unlock

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the E36 ECU connector.

(b) Measure the voltage and resistance of the wire harness side connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - Body ground	W - Body ground*1 BR - Body ground*2	+B power supply	Always	11 to 14 V

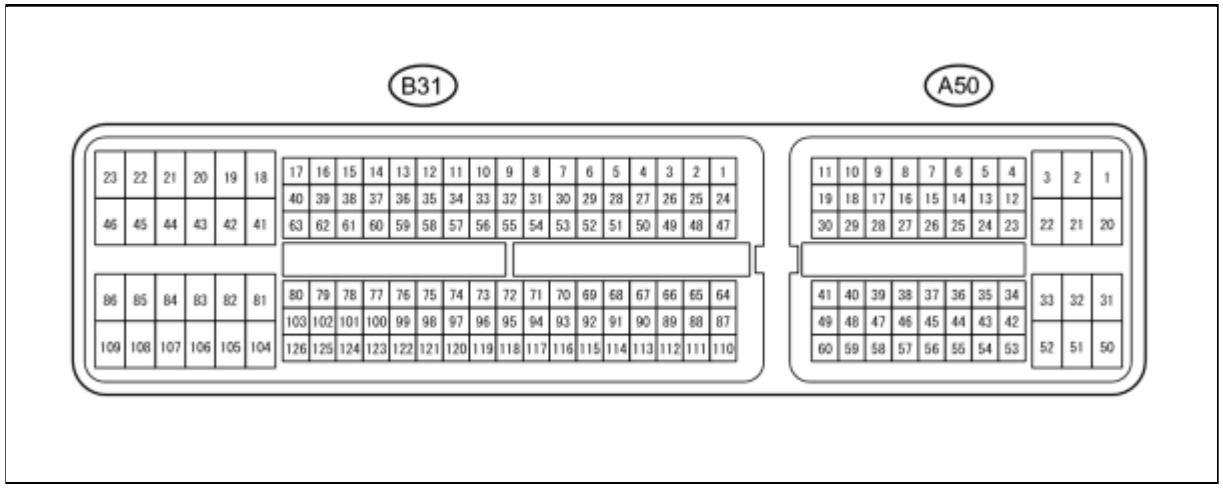
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-10 (LIN) - Body ground	V - Body ground	LIN line	Always	10 kΩ or higher
E36-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the ECU connector.

(d) Measure the voltage of the connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-18 (IG) - Body ground	L - Body ground*1 B - Body ground*2	Ignition power supply	Engine switch on (IG)	11 to 14 V
E36-18 (IG) - Body ground	L - Body ground*1 B - Body ground*2	Ignition power supply	Engine switch off	Below 1 V



HINT:

***1: for TMC Made**

***2: for except TMC Made**

If the result is not as specified, the ECU may have a malfunction.

3. CHECK ECM

(a) Disconnect the B31 and A50 ECM connectors.

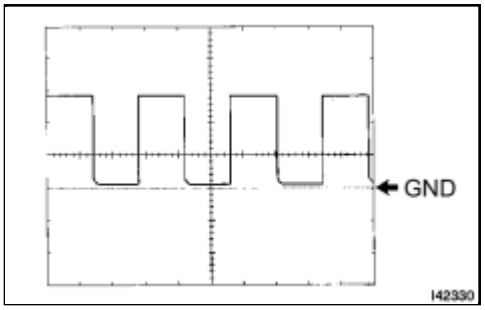
(b) Measure the voltage and resistance of the wire harness side connectors.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-1 (+B2) - Body ground	B - Body ground	Power source of ECM	Engine switch on (IG)	11 to 14 V
A50-2 (+B) - Body ground	B - Body ground	Power source of ECM	Engine switch on (IG)	11 to 14 V
A50-28 (IGSW) - Body ground	B - Body ground	Engine switch signal	Engine switch on (IG)	11 to 14 V
B31-43 (ME01) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B31-44 (E02) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B31-45 (E01) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B31-46 (E04) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
A50-32 (EC) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B31-104 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
B31-86 (E03) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

(c) Reconnect the ECM connectors.

(d) Measure the voltage of the connectors.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-13 (ACCR) - B31-104 (E1)	L-Y - BR	ACC relay cut signal (output)	Brake pedal depressed, shift lever P or N, engine switch is pushed once → on (IG)	0.1 to 0.8 V* → Output voltage at terminal AM1 or AM2 is -2 V or more.
A50-14 (STSW) - B31-104 (E1)	W-G - BR	Starter activation request signal	Brake pedal depressed, engine switch held (IG)	Output voltage at terminal AM1 or AM2 is -2 V or more.
A50-15 (TACH) - B31-104 (E1)	GR - BR	Engine revolution signal (output)	Idling	Pulse generation (see waveform 1)
A50-36 (STP) - B31-104 (E1)	L - BR	Stop light switch signal (input)	Brake pedal depressed	7.5 to 14 V



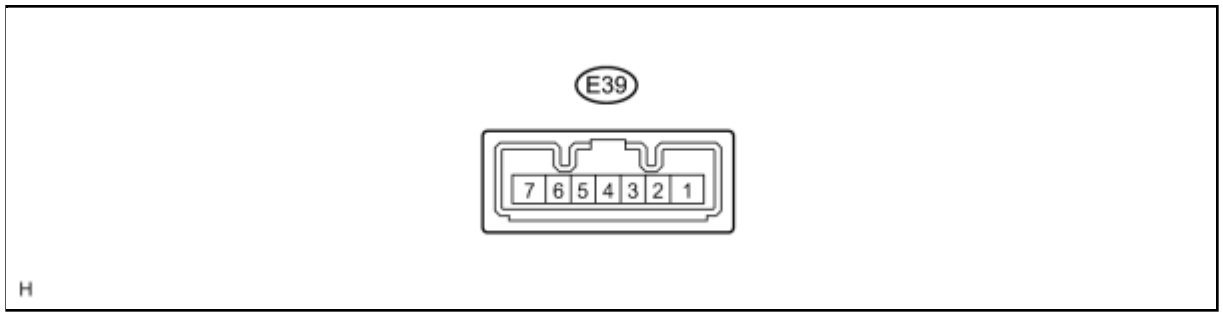
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-36 (STP) - B31-104 (E1)	L - BR	Stop light switch signal (input)	Brake pedal released	Below 1.5 V
A50-48 (STA) - B31-104 (E1)	LG - BR	Starter relay operation signal	Cranking	11 to 14 V
B31-52 (STAR) - B31-104 (E1)	W - BR	Starter signal (Main)	Brake pedal depressed, shift lever P or N, engine switch on (ST)	11 to 14 V

HINT:

***: Voltage is output only when the engine is cranking.**

If the result is not as specified, the ECM may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECM.



Waveform 1 (Reference)

Terminal No.	A50-15 (TACH) - B31-104 (E1)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Engine idling

HINT:

As the vehicle speed increases, the wavelength shortens.

4. CHECK STEERING LOCK ECU

(a) Disconnect the E39 ECU connector.

(b) Measure the voltage and resistance of the wire harness side connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E39-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E39-2 (SGND) - Body ground	BR - Body ground*1 W-B - Body ground*2	Ground	Always	Below 1 Ω
E39-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	11 to 14 V
E39-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
E39-7 (B) - Body ground	L - Body ground	+B power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E39 ECU connector.

(d) Measure the voltage of the connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E39-4 (SLP1) - E39-1 (GND)	G - W-B*1 BR - W-B*2	Steering lock actuator position signal	Steering is locked	11 to 14 V
E39-4 (SLP1) - E39-1 (GND)	G - W-B*1 BR - W-B*2	Steering lock actuator position signal	Steering is released	Below 1 V

- If the result is not as specified, the ECU may have a malfunction.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH TECHSTREAM

HINT:

The items in the table below can be customized.

NOTICE:

- When the customer requests a change in a function, first make sure that the function can be customized.
- Be sure to make a note of the current setting before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

HINT:

The following functions' default settings are ON. Part of these functions can be customized.

Smart Key / Access

DISPLAY (ITEM)	DEFAULT	CONTENT	SETTING
Ignition Available Area (Entry ignition available area)	All	Function to choose the available area for electrical key to start E/G and cancel the steering lock.	Front / All

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptom. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to the system before inspecting the suspected areas below.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Push-button start function data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the function seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XI504UX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Connect the Techstream to the DLC3.

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 or less second intervals until communication between the tester and vehicle starts.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
ACC SW	Engine switch on (ACC) / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-
IG SW	Engine switch on (IG) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
Stop Light SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Start Switch 1	Start switch 1 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-
Start Switch 2	Start switch 2 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Steering Unlock Switch	Steering lock condition / ON or OFF	ON: Steering is unlocked (Engine switch on (ACC)) OFF: Steering is locked (Engine switch off)	-
Neutral SW / Clutch SW	Park/Neutral position switch / ON or OFF	ON: Shift position is N OFF: Shift position is except N	-
Shift P Signal	Shift P position signal / ON or OFF	ON: Shift position is P OFF: Shift position is not P	-
Vehicle Speed Signal	Vehicle speed signal / Stop or Run	Stop: Vehicle is stopped Run: Vehicle is running	-
Engine Condition	Engine condition / Stop or Run	Stop: Engine is stopped Run: Engine is running	-

IG2 Relay Monitor (Outside)	IG2 relay monitor (outer) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG1 Relay Monitor (Inside)	IG1 relay monitor (inner) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
IG2 Relay Monitor (Inside)	IG2 relay monitor (inner) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
ACC Relay Monitor	ACC relay monitor / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-
Latch Circuit	Ratch circuit / ON or OFF	ON: Engine switch on (IG) or engine running OFF: Engine switch off or on (ACC)	-
Starter Request Signal	Starter request signal monitor / ON or OFF	ON: Starter relay is ON OFF: Starter relay is OFF	Engine switch pressed and held with shift lever in P or N

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Power Supply Condition	Power supply condition / All, ACC ON, IG1 IG2, ST ON	All: All relays are OFF ACC ON: ACC relay is ON IG1: IG1 relay is ON IG2: IG2 relay is ON ST ON: ST request signal is ON	-
ACC Relay Cut Signal	ACC relay cut signal / ON or OFF	ON: Engine is cranking OFF: Engine is not cranking	-
Starter Relay Monitor	STARTER relay monitor / ON or OFF	ON: Engine is cranking OFF: Engine is not cranking	Engine is cranking with engine switch on (IG) and shift lever in P or N
Communication Entry&Start	Communication for certification ECU (smart key ECU assembly) / OK or Stop	OK: Communication Stop: No communication	-

2. PERFORM ACTIVE TEST

HINT:

Using the Techstream to perform Active Test allows the relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing the Active Test early in troubleshooting is one way to save diagnostic time. The Data List can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Perform the Active Test according to the display on the Techstream.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicator for Lighting	Indicator for lighting	ON / OFF	-
Indicator Condition	Engine switch indicator	Green / Amber / No Sig	-
P Supply for Steering lock	Power supply for steering lock ECU	ON / OFF	-

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YEH04XX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the DTC by following the prompts on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

2. CLEAR DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Clear the DTC by following the directions on the Techstream screen.

HINT:

Refer to the Techstream operator's manual for further details.

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): ON-VEHICLE INSPECTION (2010 Corolla)		

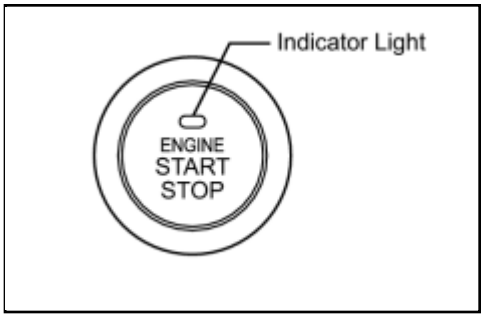
ON-VEHICLE INSPECTION

1. CHECK POWER SOURCE MODE CHANGE FUNCTION

(a) Check the function of the engine switch.

(1) Check that power source mode changes in accordance with the conditions of the shift position and brake pedal.

BRAKE PEDAL	SHIFT LEVER	POWER SOURCE MODE PATTERN
Depressed	P or N	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start
Not depressed	P	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
	Except P	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → off
-	Except P	When the engine switch is pushed with power source mode on (IG) (engine running). • on (IG) → on (ACC)



(b) Check if power source mode changes without pressing the engine switch.

(1) With power source mode on (ACC) and the shift position in P, wait for at least 1 hour. Check that power source mode changes from on (ACC) to off automatically.

2. CHECK INDICATOR CONDITION

(a) Check the indicator on the engine switch.

(1) Check that the engine switch indicator turns on and changes color according to the table below.

POWER SOURCE MODE/CONDITION	INDICATOR LIGHT CONDITION	
	BRAKE PEDAL RELEASED	BRAKE PEDAL DEPRESSED, SHIFT LEVER IN P OR N
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
Engine running	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

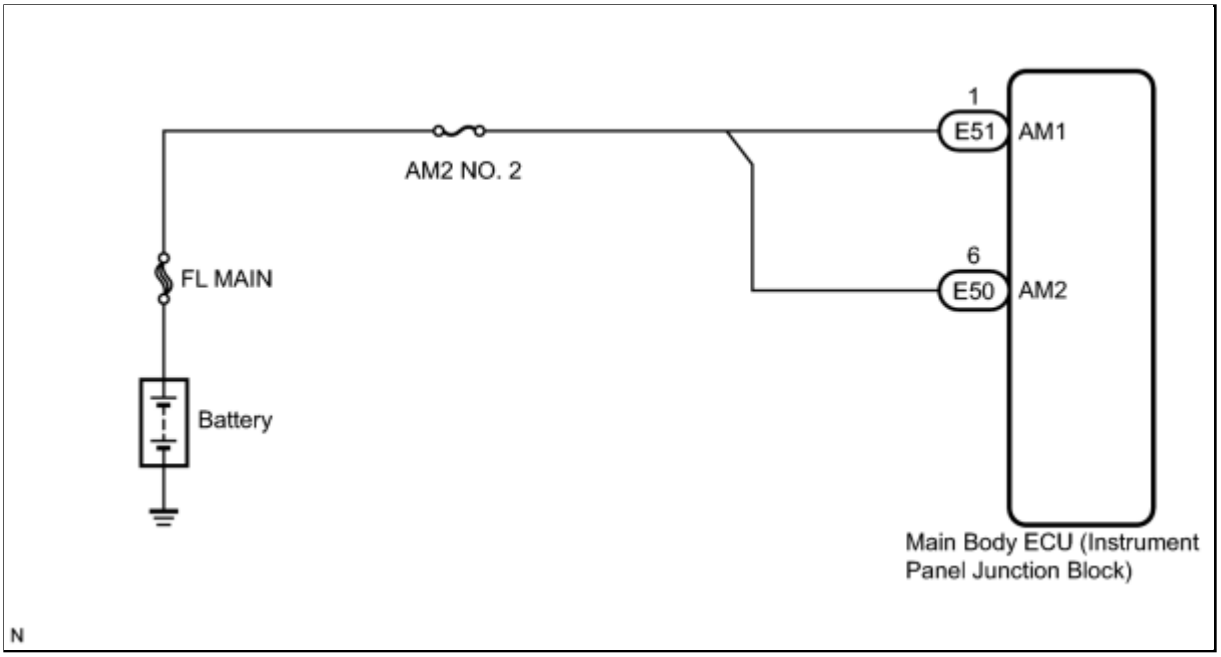
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2271: Ignition Hold Monitor Malfunction (2010 Corolla)		

DTC	**B2271**	**Ignition Hold Monitor Malfunction**

DESCRIPTION

This DTC is output when a problem such as an open in the AM2 NO. 2 fuse, an open or short in the wire harness between the fuse and main body ECU (instrument panel junction block), a short in the IG output circuit inside the main body ECU (instrument panel junction block), a short between the main body ECU (instrument panel junction block) and relay, and a short in the relay is detected.



HINT:

When the main body ECU (instrument panel junction block) is replaced with a new one and the cable from the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU (instrument panel junction block) is replaced, perform the registration procedures for the engine immobiliser system INFO **.**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2271	Hold circuit, IG1 relay actuation circuit or IG2 relay actuation circuit inside main body ECU (instrument panel junction block) is open or shorted	• AM2 NO. 2 fuse • Main body ECU (instrument panel junction block) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

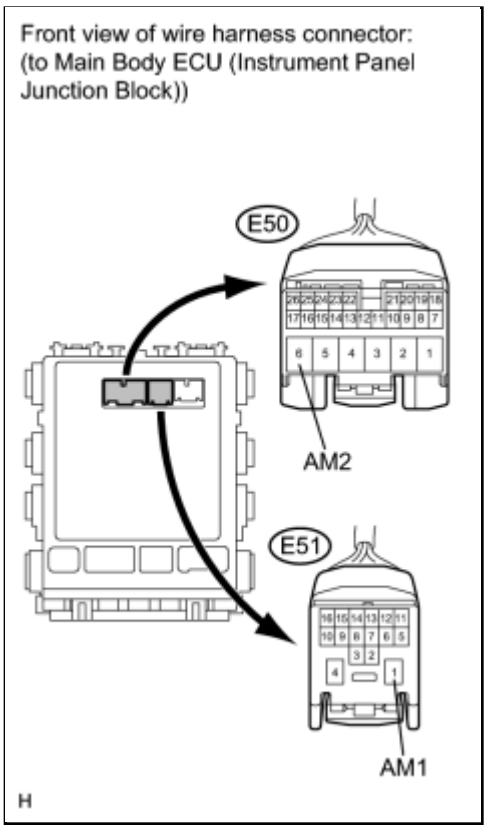
1.	**CHECK FOR DTC**

(a) Clear the DTCs INFO.

(b) After all DTCs are cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).

(c) Check for DTCs again.

OK:



DTC is not output.

NG ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) - BATTERY)**

OK ▶ **USE SYMPTOM METHOD TO CHECK**

2.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) - BATTERY)**

(a) Disconnect the E50 and E51 ECU connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-1 (AM1) - Body ground	Always	11 to 14 V
E50-6 (AM2) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR FUSE**

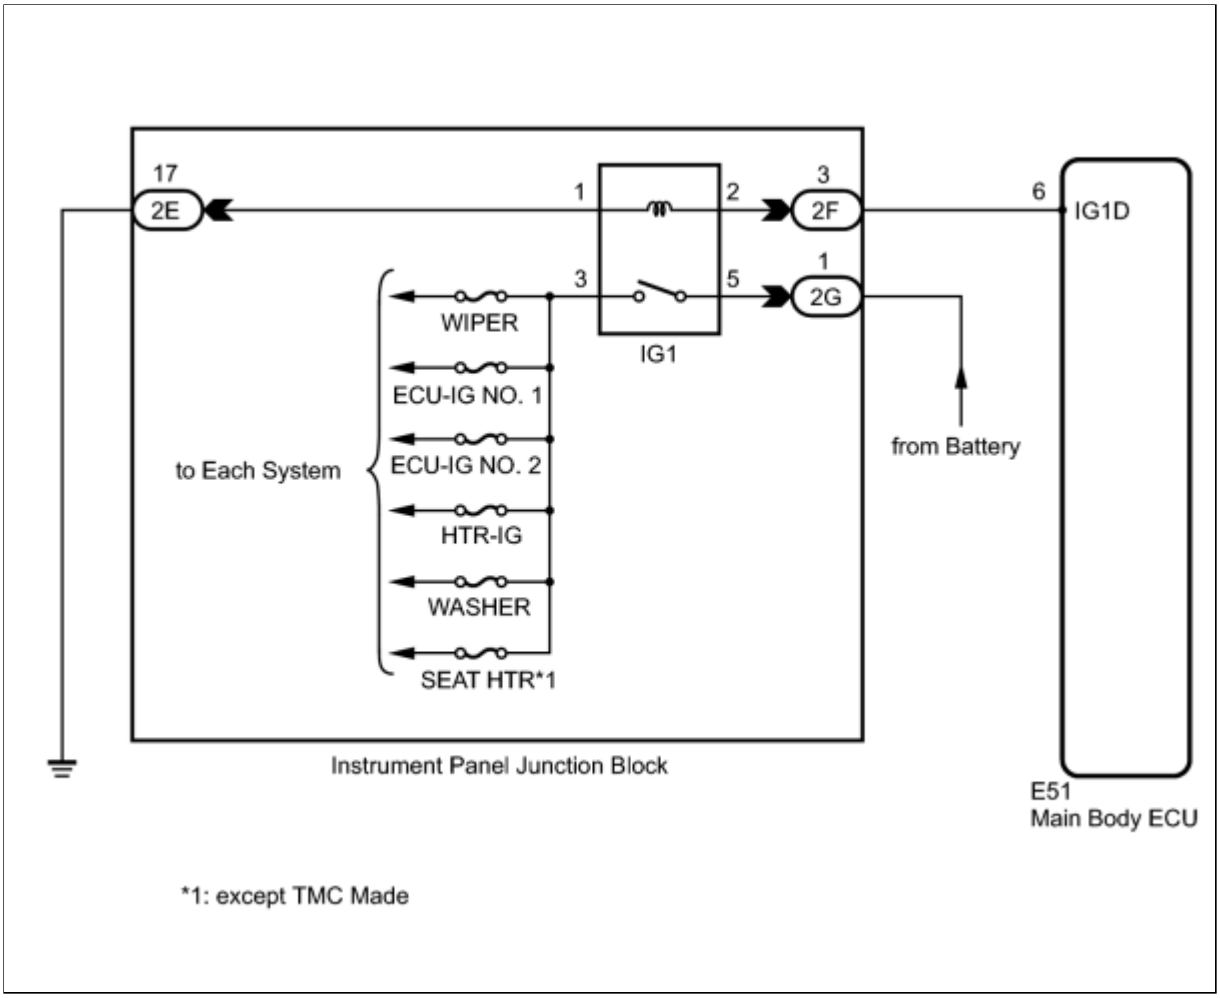
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001LUW024X
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2272: Ignition 1 Monitor Malfunction (2010 Corolla)		

DTC	**B2272**	**Ignition 1 Monitor Malfunction**

DESCRIPTION

This DTC is output when there is a problem in the IG1D output circuit, which is from the inside of the main body ECU (instrument panel junction block) to the IG1 relay.



HINT:

When the main body ECU (instrument panel junction block) is replaced with a new one and the cable from the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU (instrument panel junction block) is replaced, perform the registration procedures for the engine immobiliser system INFO **.**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2272	IG1 relay actuation circuit inside main body ECU (instrument panel junction block) or other related circuit is malfunctioning	• Main body ECU (instrument panel junction block) • IG1 relay • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG) and turn the Techstream on.

(c) Select the item below in the Data List, and read the display on the Techstream.

HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC

			NOTE
IG1 Relay Monitor (Outside)	Status of IG1 relay monitor (outer) / ON or OFF	ON: Engine switch on (IG) (IG1 relay is ON) OFF: Engine switch off (IG1 relay is OFF)	-

OK:
"ON" (engine switch on (IG)) appears on the screen.

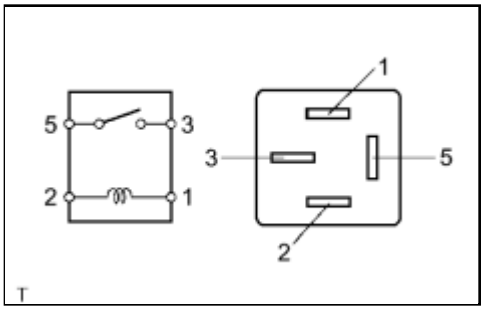
NG ▶ **INSPECT RELAY (IG1 RELAY)**

OK ▼

2.	CHECK FOR DTC

(a) Clear the DTC INFO.

(b) Turn the engine switch on (IG).



(c) After 10 seconds have elapsed, check if the trouble occurs again.

OK:
DTC B2272 is not output.

NG ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

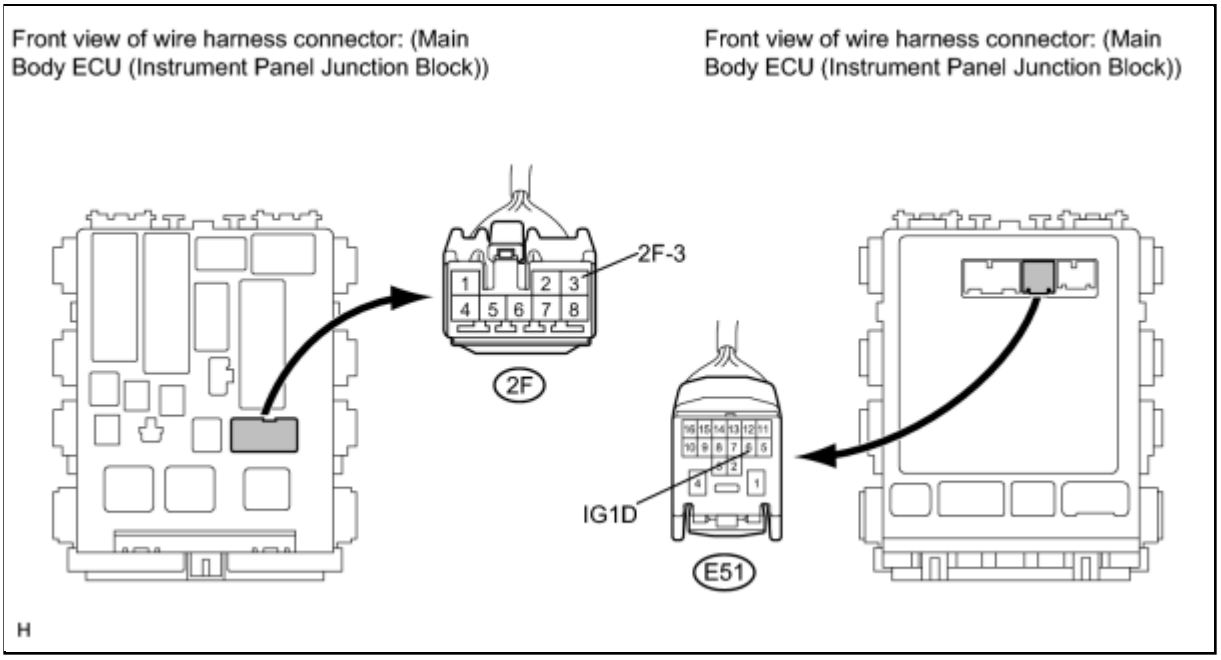
OK ▶ **USE SIMULATION METHOD TO CHECK**

3.	INSPECT RELAY (IG1 RELAY)

(a) Remove the IG1 relay from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG ▶ **REPLACE IG1 RELAY**

OK ▼

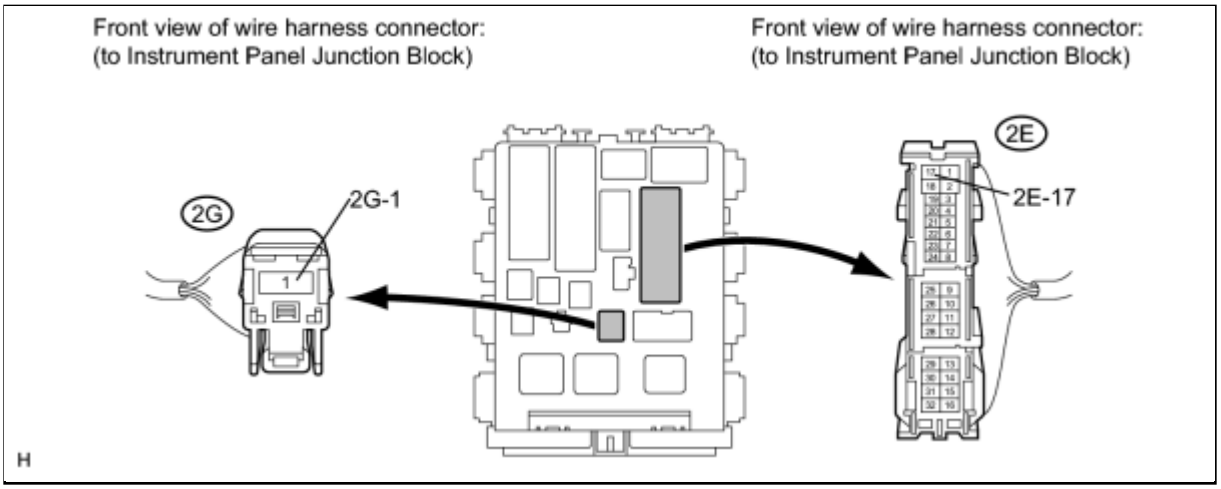
4.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - MAIN BODY ECU)**

(a) Disconnect the 2F junction block connector.

(b) Disconnect the E51 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2F-3 - E51-6 (IG1D)	Always	Below 1 Ω
E51-6 (IG1D) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - MAIN BODY ECU)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BATTERY AND BODY GROUND)**

(a) Disconnect the 2E and 2G junction block connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-17 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BATTERY AND BODY GROUND)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

INSPECTION PROCEDURE

PROCEDURE

1.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG) and turn the Techstream on.

(c) Read the Data List according to the displays on the Techstream.

HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG2 Relay Monitor (Outside)	Status of IG2 relay monitor (outer) / ON or OFF	ON: Engine switch on (IG) (IG2 relay is ON) OFF: Engine switch off (IG2 relay is OFF)	-

OK:
"ON" (Engine switch on (IG)) appears on the screen.

NG ▶ **CHECK HARNESS AND CONNECTOR (ENGINE ROOM JUNCTION BLOCK - MAIN BODY ECU AND BODY GROUND)**

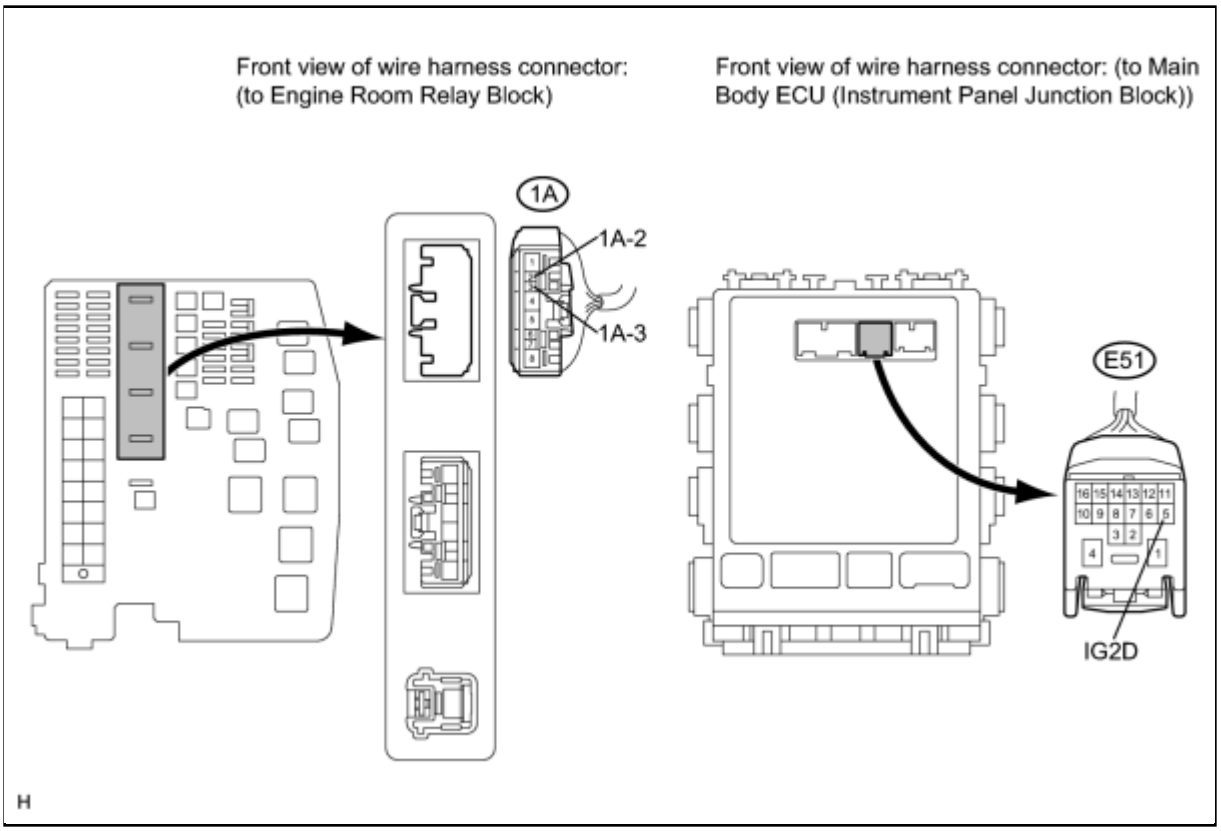
OK ▼

2.	CHECK FRO DTC

(a) Clear the DTC INFO .

(b) Turn the engine switch on (IG).

(c) After 10 seconds have elapsed, check if the trouble occurs again.



OK:
DTC B2273 is not output.

NG ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

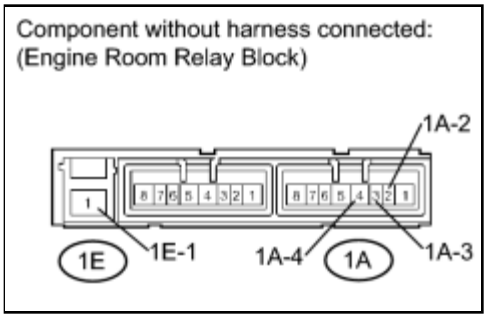
OK ▶ USE SIMULATION METHOD TO CHECK

3.	**CHECK HARNESS AND CONNECTOR (ENGINE ROOM JUNCTION BLOCK - MAIN BODY ECU AND BODY GROUND)**

(a) Disconnect the 1A connector from the engine room junction block.

(b) Disconnect the E51 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-2 - E51-5 (IG2D)	Always	Below 1 Ω
1A-2 - Body ground	Always	10 kΩ or higher
1A-3 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM JUNCTION BLOCK - MAIN BODY ECU AND BODY GROUND)**

OK

4.	INSPECT ENGINE ROOM JUNCTION BLOCK (IG2 RELAY)

(a) Disconnect the 1E connector from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-4 - 1E-1	When battery voltage is not applied to terminals 1A-3 and 1A-2	10 kΩ or higher
1A-4 - 1E-1	When battery voltage is applied to terminals 1A-3 and 1A-2	Below 1 Ω

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK**

OK → **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

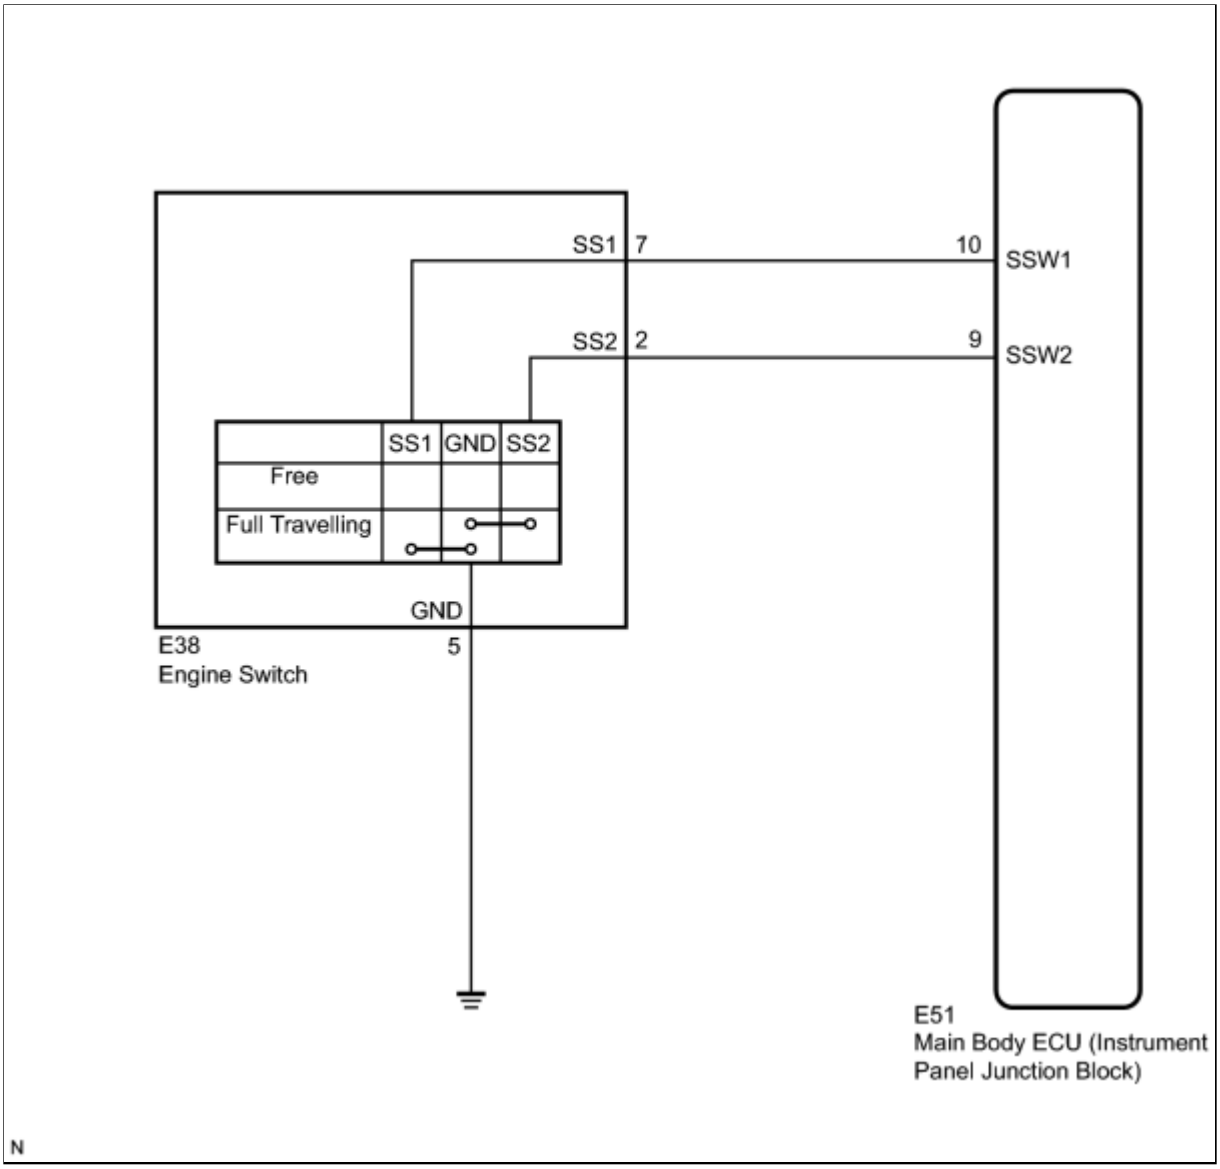
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2278: Engine Switch Circuit Malfunction (2010 Corolla)		

DTC	**B2278**	**Engine Switch Circuit Malfunction**

DESCRIPTION

This DTC is output when 1) a malfunction is detected between the main body ECU (instrument panel junction block) and the engine switch; or 2) either of the switches inside the engine switch is malfunctioning.



HINT:

When the main body ECU (instrument panel junction block) is replaced with a new one and the cable from the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU (instrument panel junction block) is replaced, perform the registration procedures for the engine immobiliser system INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2278	Communication is abnormal between the main body ECU (instrument panel junction block) and engine switch or the engine switch is defective	• Engine switch • Main body ECU (instrument panel junction block) • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (START SWITCH)**

(a) Connect the Techstream to the DLC3.

(b) Check the Data List for proper functioning of the start switch.

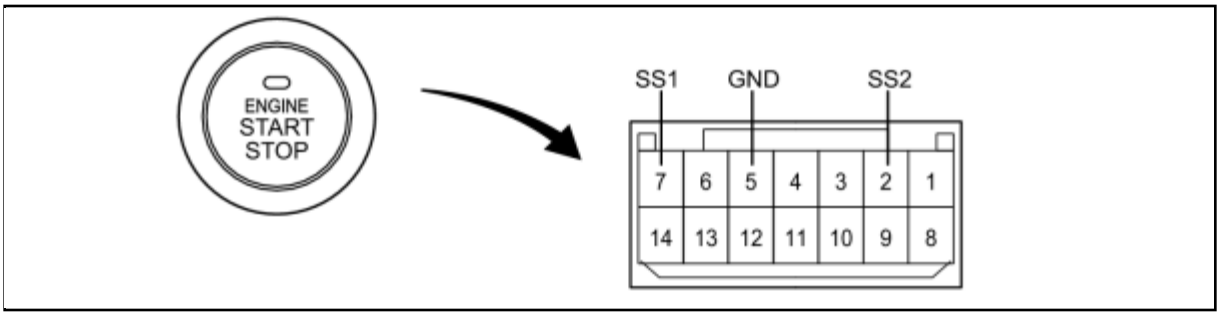
HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Start Switch 1	Start Switch 1 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-
Start Switch 22	Start Switch 2 / ON or OFF	ON: Engine switch is pushed OFF: Engine switch is not pushed	-

OK:



ON (engine switch is pushed) and OFF (engine switch is not pushed) appear on the screen.

NG ▶ **INSPECT ENGINE SWITCH**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

2.	**INSPECT ENGINE SWITCH**

(a) Remove the engine switch INFO .

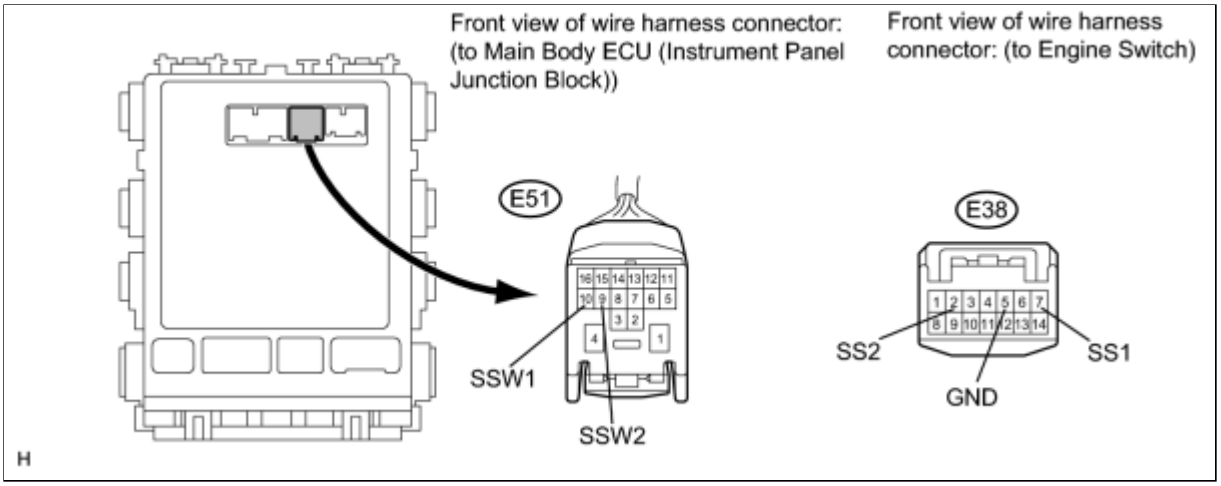
(b) Disconnect the switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

HINT:



This switch is a momentary type switch.

NG ▶ **REPLACE ENGINE SWITCH**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)**

(a) Disconnect the E51 ECU connector.

(b) Disconnect the E38 switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E38-7 (SS1) - E51-10 (SSW1)	Always	Below 1 Ω
E38-2 (SS2) - E51-9 (SSW2)	Always	Below 1 Ω
E38-5 (GND) - Body ground	Always	Below 1 Ω
E38-7 (SS1) or E51-10 (SSW1) - Body ground	Always	10 kΩ or higher
E38-2 (SS2) or E51-9 (SSW2) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)**

OK ▶ REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2282,B2283: Vehicle Speed Signal Malfunction (2010 Corolla)		

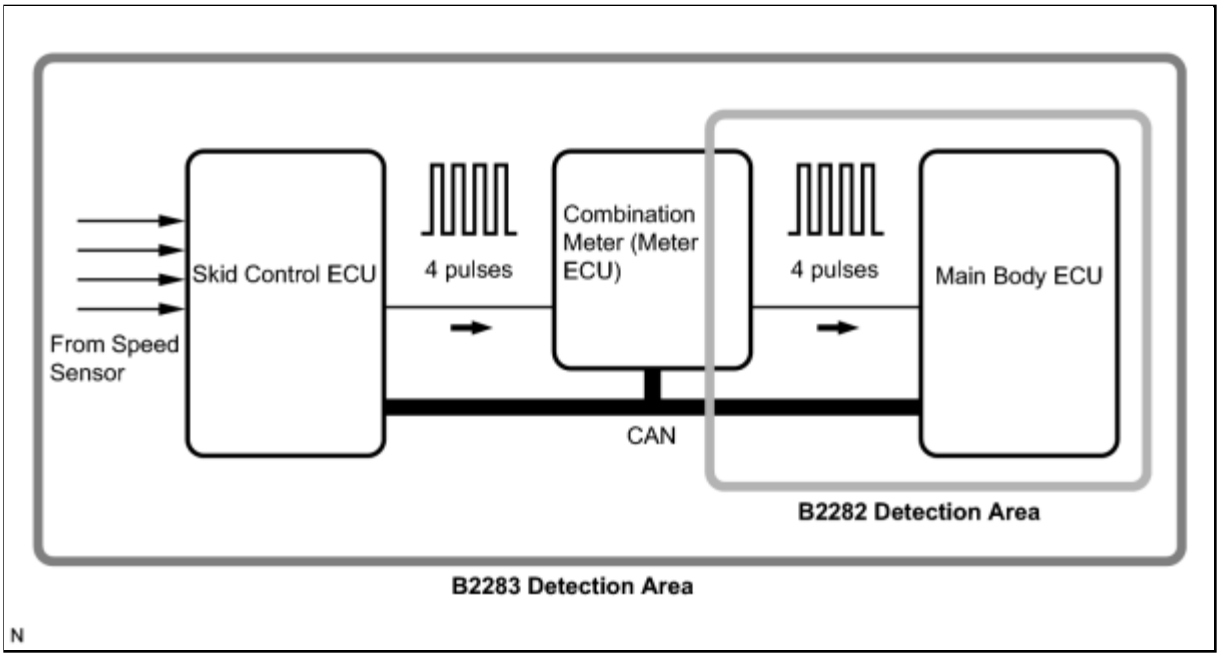
DTC	**B2282**	**Vehicle Speed Signal Malfunction**

DTC	**B2283**	**Vehicle Speed Sensor Malfunction**

DESCRIPTION

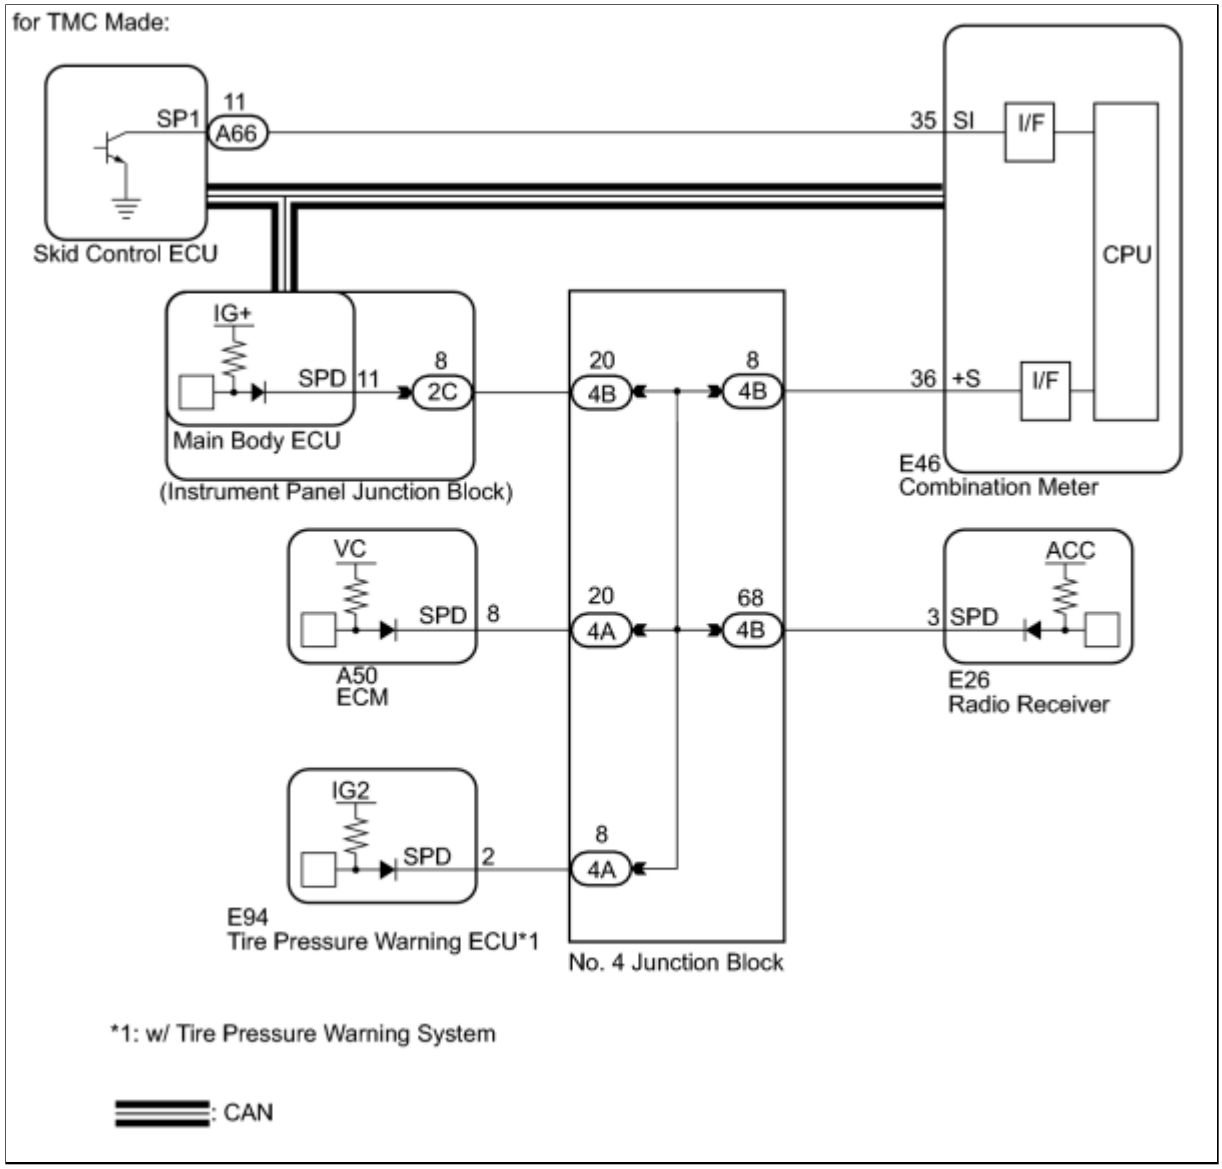
The skid control ECU converts these signals into 4-pulse signals and sends them to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the main body ECU (instrument panel junction block). The main body ECU (instrument panel junction block) determines the vehicle speed based on the frequency of these pulse signals.

The main body ECU (instrument panel junction block) and the combination meter are connected by a cable and the CAN. DTC B2282 is output when the cable information and CAN information are inconsistent.

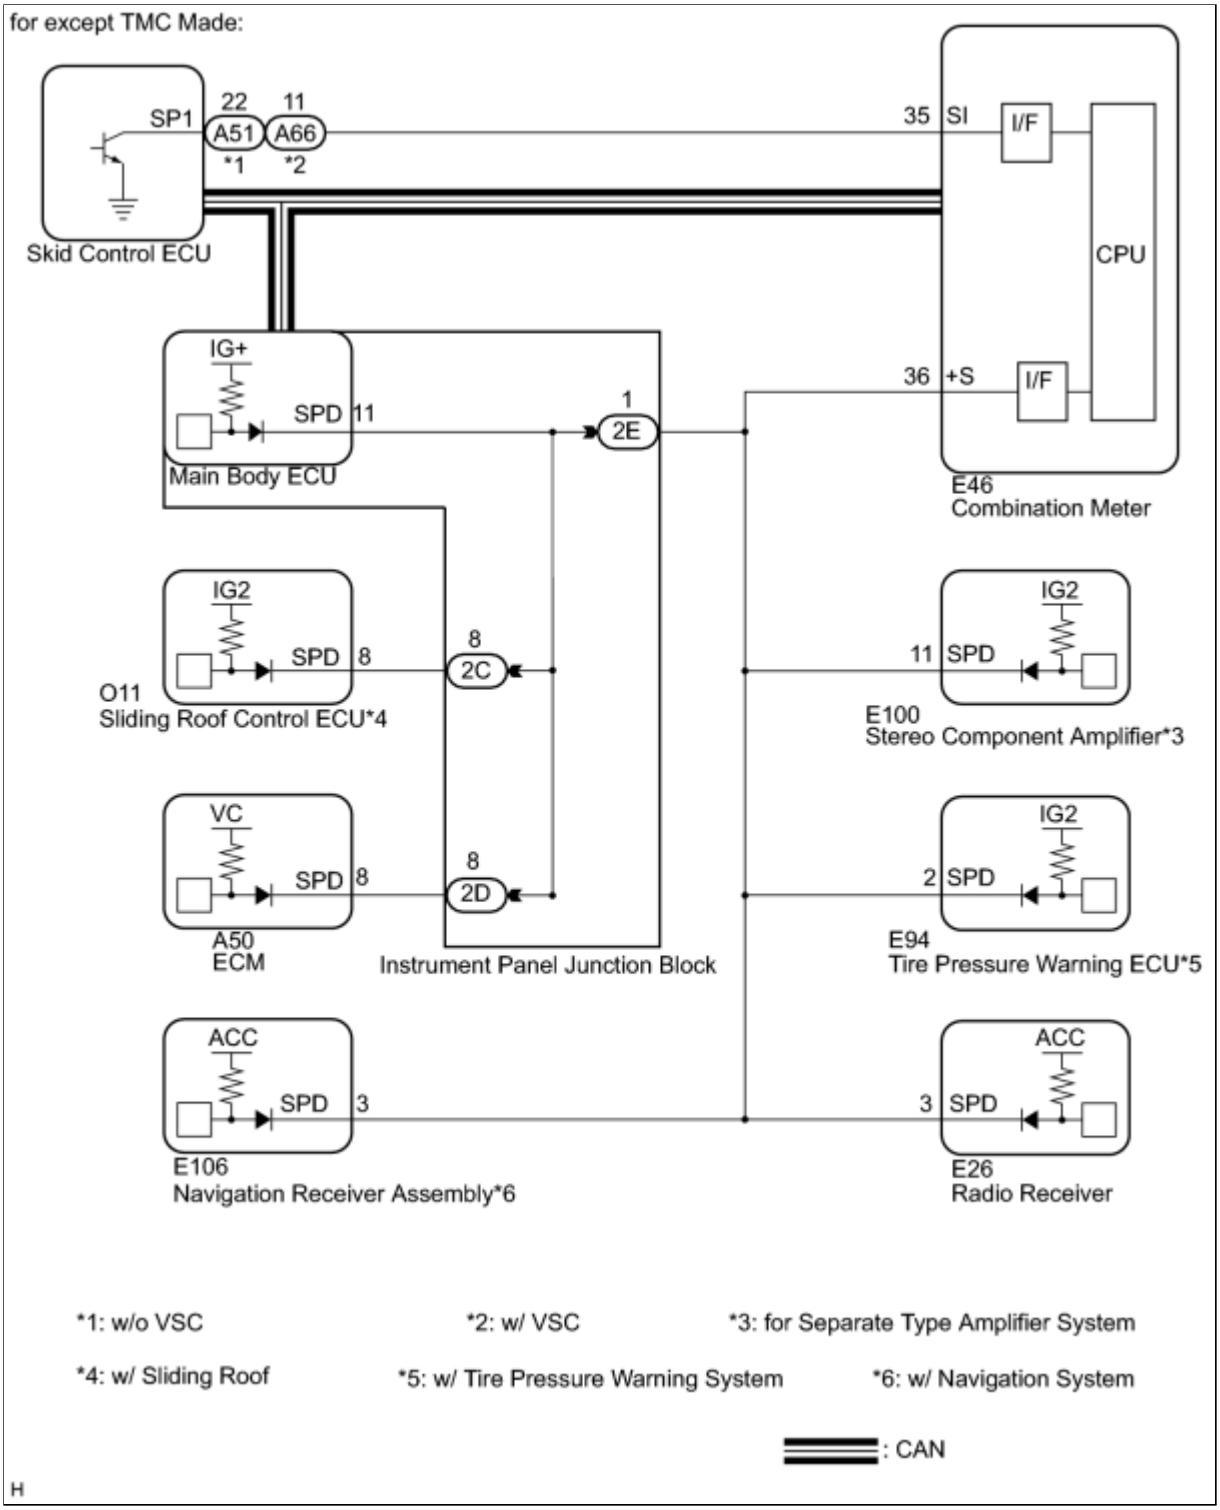


HINT:

When the main body ECU (instrument panel junction block) is replaced with a new one and the cable from the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.



After the main body ECU (instrument panel junction block) is replaced, perform the registration procedures for the engine immobiliser system INFO **.**



DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2282	Cable information and CAN information between the main body ECU (instrument panel junction block) and the combination meter are inconsistent	• CAN communication system • Combination meter system • Main body ECU (instrument panel junction block) • Wire harness or connector

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2283	When either of conditions below is met: • Over-deceleration in vehicle speed • Vehicle speed and engine speed do not match	• DTC B2282 detection area • Combination meter • Speed sensor • Skid control ECU • Main body ECU (instrument panel junction block) • Wire harness or connector

HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram above will not operate normally.

INSPECTION PROCEDURE

PROCEDURE

1.	CHECK CAN COMMUNICATION SYSTEM

(a) Check for CAN communication system DTCs INFO .

HINT:

If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first.

Result:

RESULT	PROCEED TO
CAN communication DTC is not output	A
CAN communication DTC is output	B

B ▶ **GO TO CAN COMMUNICATION SYSTEM**

A ▼

2.	CHECK SPEEDOMETER OPERATION

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Enter the following menus: Body Electrical / Combination Meter / Data List.

(d) Check the values by referring to the values in the table below.

Combination Meter

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed Meter	Vehicle speed/Min.: 0 km/h (0mph), Max.: 255 km/h (158 mph)	Almost same as actual speed (When driving)	-

OK:

Vehicle speed displayed on the Techstream is almost the same as the actual vehicle speed measured using a speedometer tester (calibrated chassis dynamometer).

NG ▶ **GO TO METER / GAUGE SYSTEM (SPEEDOMETER MALFUNCTION)**

OK

3.	**READ VALUE USING TECHSTREAM (VEHICLE SPEED SIGNAL)**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Vehicle Speed Signal	Vehicle speed signal / STOP or RUN	STOP: Vehicle is stopped Run: Vehicle is running	-

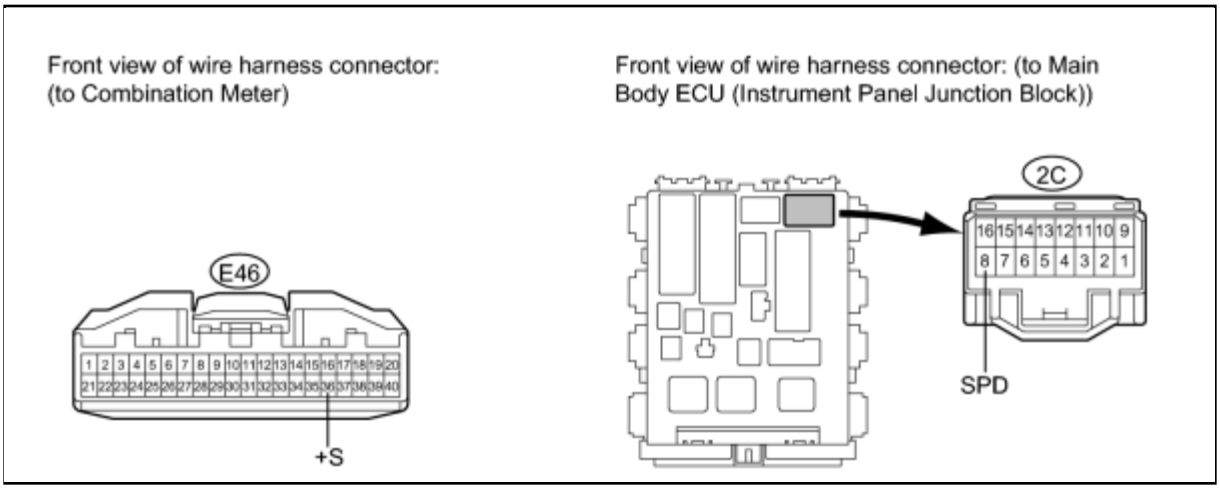
OK:

"STOP" (Vehicle is stopped) and "OFF" (Vehicle is running) appear on the screen.

(d) Proceed to the next step based on the inspection result.

Result:

RESULT	PROCEED TO
OK	A
NG (TMC made)	B
NG (except TMC Made)	C



C **CHECK HARNESS AND CONNECTOR (COMBINATION METER - INSTRUMENT PANEL JUNCTION BLOCK)**

B **CHECK HARNESS AND CONNECTOR (COMBINATION METER - MAIN BODY ECU)**

A **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

4.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - MAIN BODY ECU)**

(a) Disconnect the E46 meter connector.

(b) Disconnect the 2C connector.

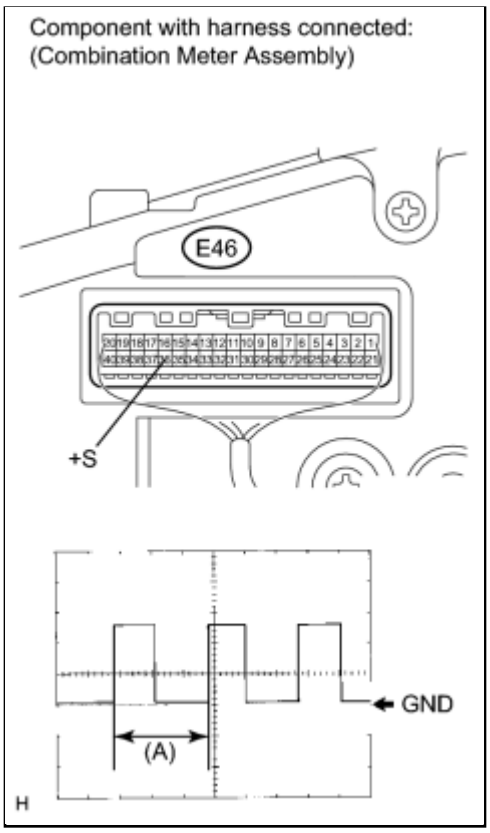
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-8 (SPD) - E46-36 (+S)	Always	Below 1 Ω
2C-8 (SPD) or E46-36 (+S) - Body ground	Always	10 kΩ or higher

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - NO. 4 JUNCTION BLOCK)**

OK ▼



5.	**INSPECT COMBINATION METER ASSEMBLY**

(a) Check the output waveform.

(1) Remove the combination meter with the connector(s) still connected INFO .

(2) Connect the oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the engine switch on (IG).

(4) Turn the wheel slowly.

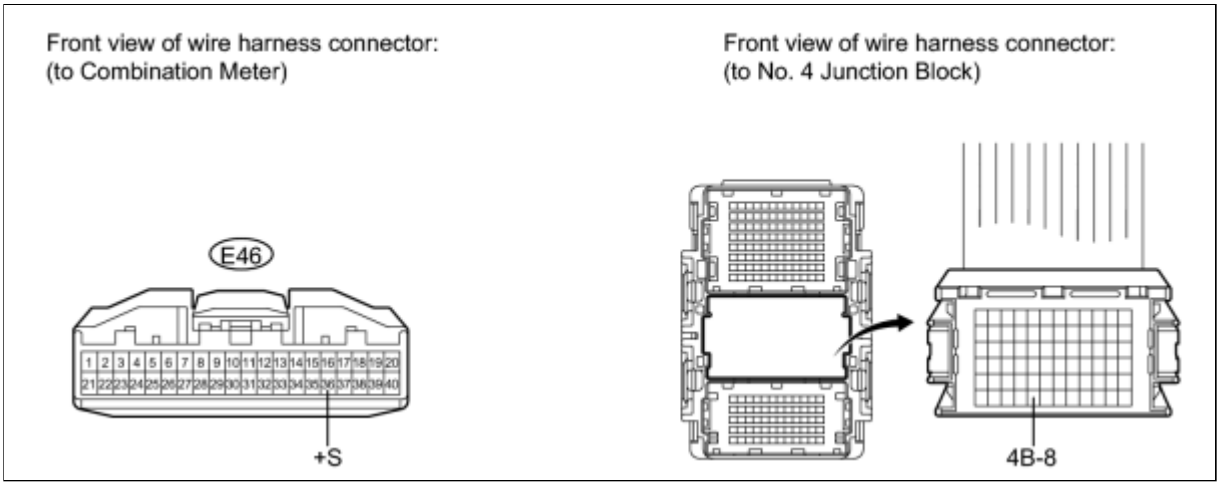
(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV
Vehicle condition	Driving at approx. 20 km/h

OK:

The waveform is displayed as shown in the illustration.

HINT:



When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG ▶ **GO TO METER / GAUGE SYSTEM**

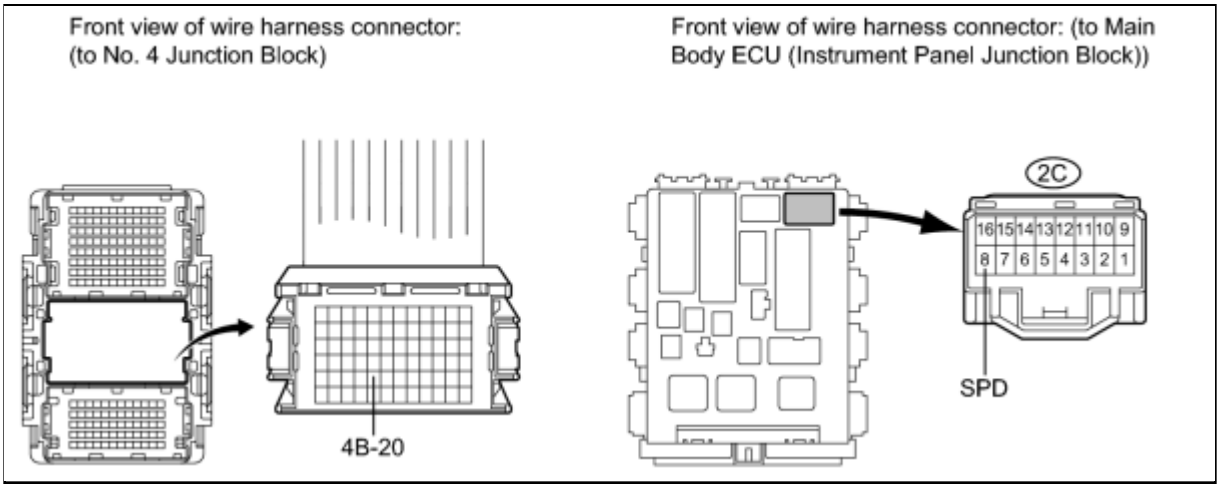
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

6.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - NO. 4 JUNCTION BLOCK)**

(a) Disconnect the 4B connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - 4B-8	Always	Below 1 Ω
E46-36 (+S) or 4B-8 - Body ground	Always	Below 1 Ω

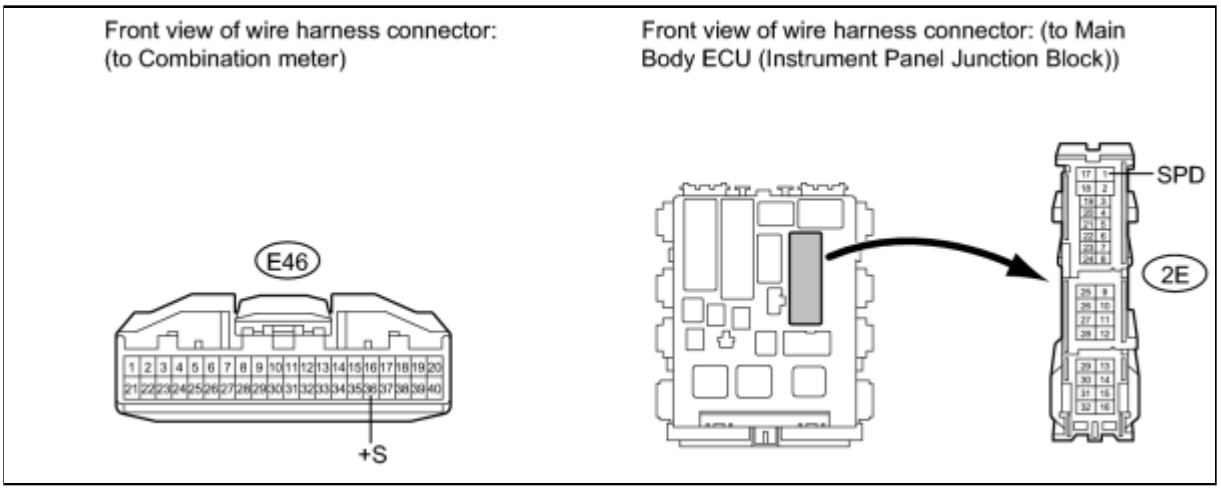
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - NO. 4 JUNCTION BLOCK)**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - NO. 4 JUNCTION BLOCK)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-8 (SPD) - 4B-20	Always	Below 1 Ω
2C-8 (SPD) or 4B-20 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - NO. 4 JUNCTION BLOCK)**

OK ▶ **REPLACE JUNCTION CONNECTOR**

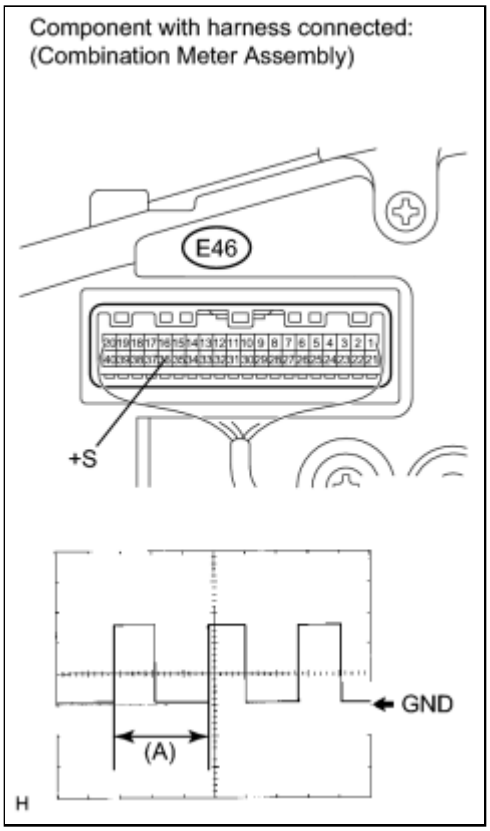
8.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the E46 meter connector.

(b) Disconnect the 2E connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-1 (SPD) - E46-36 (+S)	Always	Below 1 Ω
2E-1 (SPD) or E46-36 (+S) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - INSTRUMENT PANEL JUNCTION BLOCK))**

OK ▼

9.	**INSPECT COMBINATION METER**

(a) Check the output waveform.

(1) Remove the combination meter with the connector(s) still connected INFO .

(2) Connect the oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the engine switch on (IG).

(4) Turn the wheel slowly.

(5) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms./DIV
Vehicle condition	Driving at approx. 20 km/h

OK:

The waveform is displayed as shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

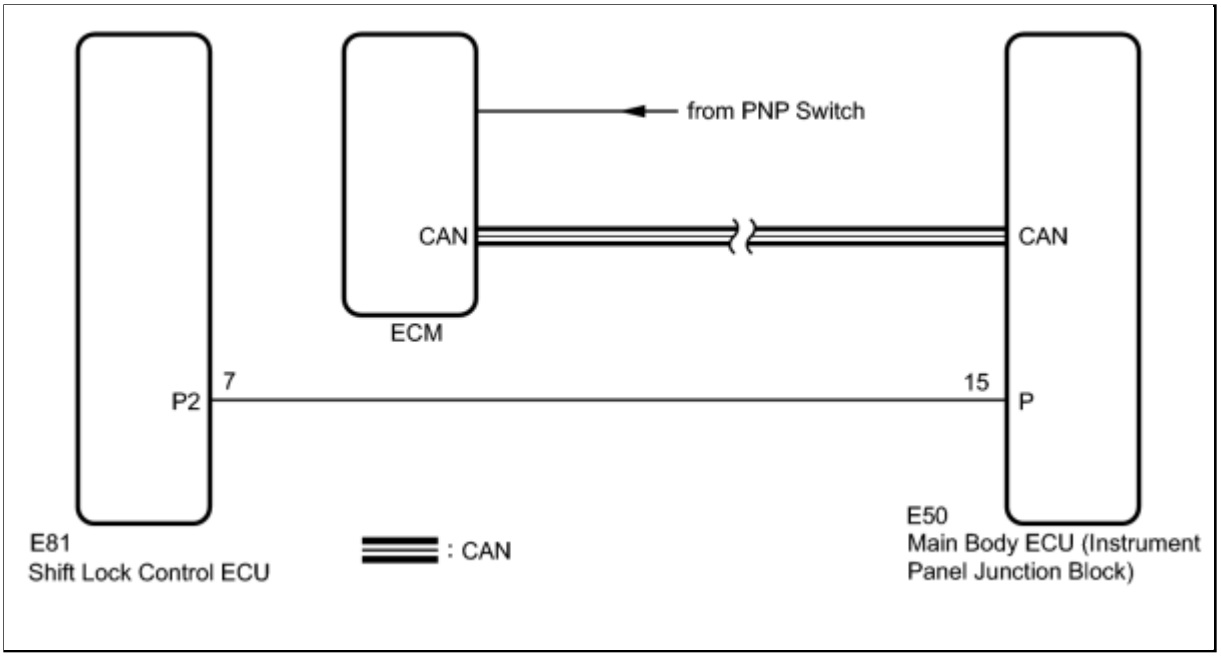
NG ▶ **GO TO METER / GAUGE SYSTEM**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001LV201TX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2281: "P" Signal Malfunction (2010 Corolla)		

DTC	**B2281**	**"P" Signal Malfunction**

DESCRIPTION



The ECM and the shift lock control ECU are connected by a cable and the CAN. If the cable information and CAN information are inconsistent, this DTC will be output.

HINT:

If the main body ECU (instrument panel junction block) is replaced with a new one while the cable from the negative (-) battery terminal is connected, the power source mode will be in IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored. After the main body ECU (instrument panel junction block) is replaced, perform the registration procedure for the engine immobiliser system INFO **.**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2281	Cable information and CAN information between main body ECU (instrument panel junction block) and shift lock control ECU are inconsistent	• Main body ECU (instrument panel junction block) • Shift lock control ECU • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK CAN COMMUNICATION SYSTEM**

(a) Check for CAN communication system DTCs INFO .

HINT:

If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first.

Result:

RESULT	PROCEED TO
CAN communication DTC is not output	A
CAN communication DTC is output	B

B **GO TO CAN COMMUNICATION SYSTEM**

A

2.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

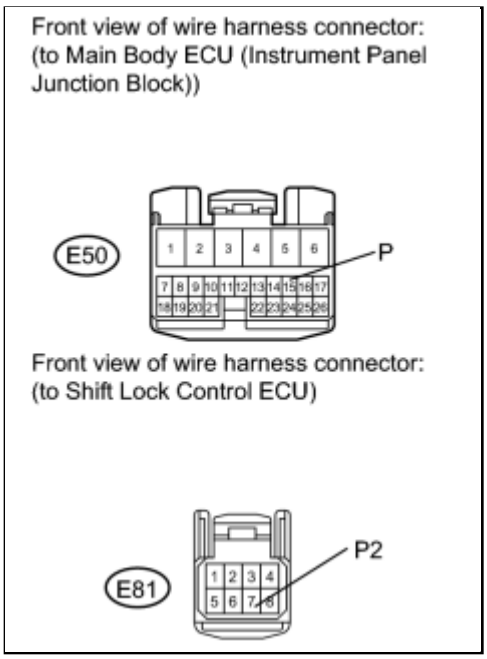
(b) Turn the engine switch on (IG) and turn the Techstream main switch on.

(c) Read the Data List according to the displays on the Techstream.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Shift P Signal	Shift P Signal / ON or OFF	ON: Shift P signal ON (Shift position is P) OFF: Shift P signal OFF (Shift position is not P)	-

OK:



"ON" (P signal is ON) and "OFF" (P signal is OFF) appear on the screen.

NG ▶ **GO TO SHIFT CONTROL SYSTEM**

OK ▼

3.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SHIFT LOCK CONTROL ECU)

(a) Disconnect the E50 and E81 ECU connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TERMINAL NO. (SYMBOL)	CONDITION	SPECIFIED CONDITION
E50-15 (P) - E81-7 (P2)	Always	Below 1 Ω
E50-15 (P) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - SHIFT LOCK CONTROL ECU)**

OK ▼

4.	CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) OPERATION

(a) After replacing the main body ECU (instrument panel junction block) with a normally functioning ECU, check that the engine can start normally.

OK:

Engine can start normally.

NG ▶ **REPLACE SHIFT LOCK CONTROL ECU**

OK ▶ **END (MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) DEFECTIVE)**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YA105EX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): Engine does not Start (2010 Corolla)		

Engine does not Start

DESCRIPTION

1. ENGINE START SYSTEM FUNCTION

(a) If the engine switch is pressed with the shift lever is in P or N and the brake pedal depressed, the main body ECU (instrument panel junction block) determines that it is an engine start request.

(b) The certification ECU (smart key ECU assembly) and other ECUs perform key verification via the LIN communication line.

(c) The main body ECU (instrument panel junction block) activates the ACC relay.

(d) The main body ECU (instrument panel junction block) activates the IG1 and IG2 relays.

(e) The certification ECU (smart key ECU assembly) outputs a steering UNLOCK signal. The signal is sent to the main body ECU (instrument panel junction block) via the steering lock ECU.

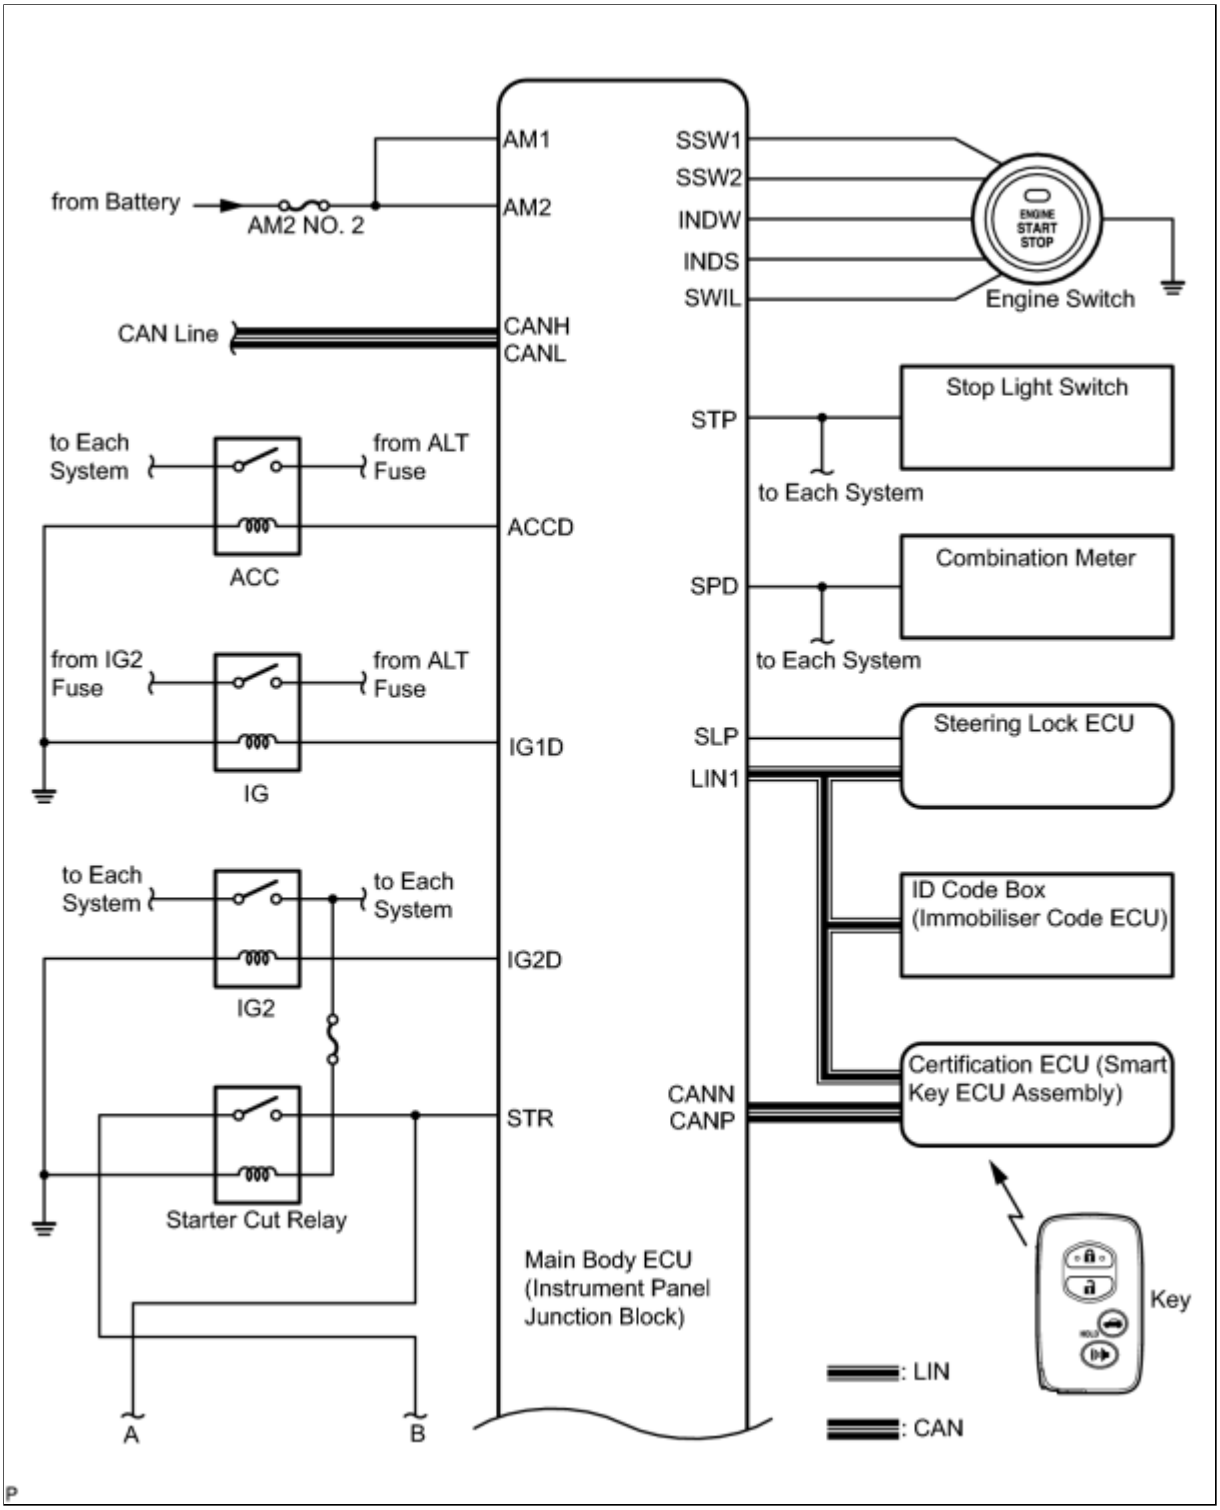
(f) The main body ECU (instrument panel junction block) sends an engine start request signal to the ECM.

(g) The ECM sends an ACC cut request signal to the main body ECU (instrument panel junction block).

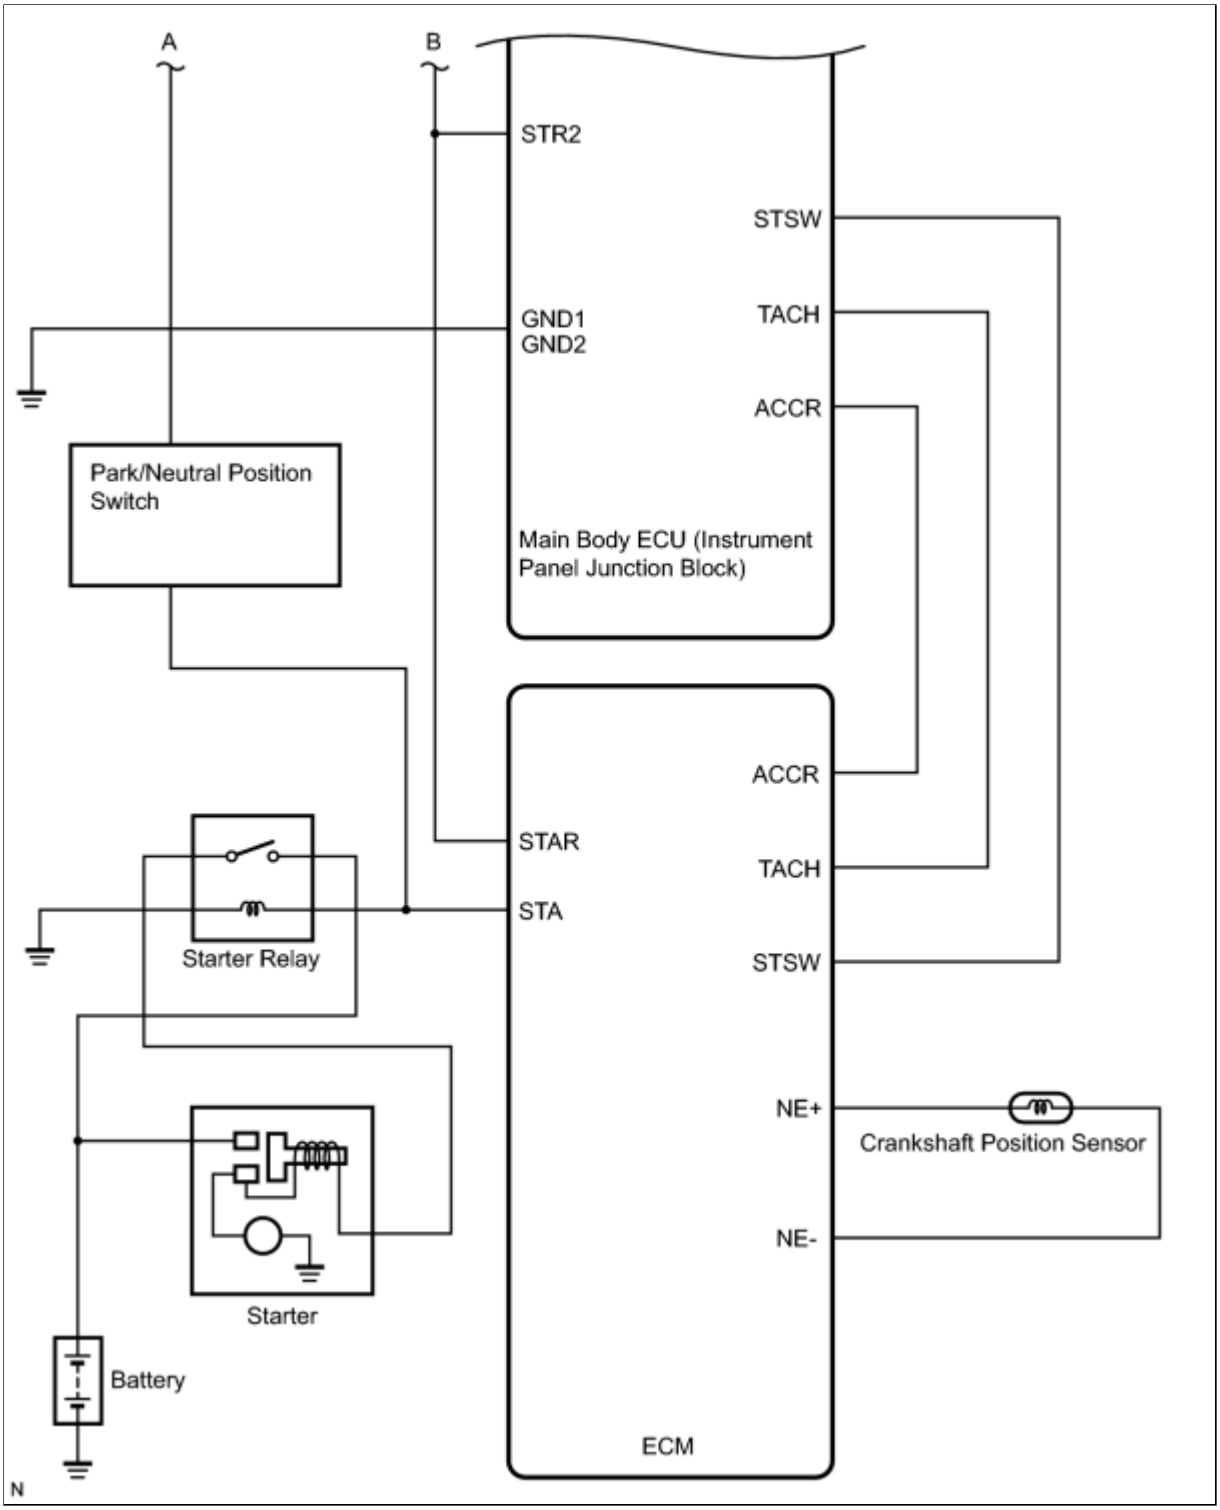
(h) The ECM and main body ECU (instrument panel junction block) activate the starter relay.

(i) The main body ECU (instrument panel junction block) deactivates the ACC relay until the main body ECU (instrument panel junction block) detects an engine start.

(j) When engine revolution speed reaches 1200 rpm, the ECM determines that the engine has been started.



The ECM stops sending an ACC cut request signal to the main body ECU.



The main body ECU (instrument panel junction block) reactivates the ACC relay and turns off the engine switch indicator light, when engine revolution speed reaches 800 rpm.

SYMBOL OF MAIN BODY ECU	SIGNAL

INSPECTION PROCEDURE

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU (instrument panel junction block). This may result in the engine

not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in P.

To activate the starter:

(1) Turn the engine switch from off to on (ACC).

(2) Hold pressing and hold the engine switch for 15 seconds.

HINT:

After the main body ECU (instrument panel junction block), certification ECU (smart key ECU assembly), steering lock ECU, ID code box (immobiliser code ECU) and/or ECM are/is replaced, perform the registration procedures for the engine immobiliser system INFO **.**

PROCEDURE

1.	**CHECK THE ENGINE SWITCH CONDITION**

(a) Check the power source mode changes.

(1) When the key is inside the vehicle and the shift lever is in P, check that the power source mode changes.

OK:

off → on (ACC) → on (IG) → off

NG ▶ **GO TO OTHER FLOW CHART**

OK ▼

2.	**CHECK FOR DTC**

(a) Clear the DTCs INFO .

(b) Check for DTCs again.

(c) Proceed to the next step based on the inspection result.

Result:

RESULT	PROCEED TO
No DTC is output	A
Smart key system (for start function) DTCs are output	B

RESULT	PROCEED TO
Steering lock DTCs are output	C
Engine immobiliser system DTCs are output	D
Vehicle stability control system DTCs are output	E

E ▶ **GO TO DIAGNOSTIC TROUBLE CODE CHART (VEHICLE STABILITY CONTROL SYSTEM)**

D ▶ **GO TO DIAGNOSTIC TROUBLE CODE CHART (ENGINE IMMOBILISER SYSTEM)**

C ▶ **GO TO DIAGNOSTIC TROUBLE CODE CHART (STEERING LOCK SYSTEM)**

B ▶ **GO TO DIAGNOSTIC TROUBLE CODE CHART (SMART KEY SYSTEM (STARTING))**

A ▼

3.	CHECK CRANKING FUNCTION

(a) Check the engine cranking function.

(1) When there is fuel in the fuel tank, the key is inside the vehicle, and the shift lever is in P, check that depressing the brake pedal and pressing the engine switch crank the engine.

Result:

RESULT	PROCEED TO
Engine cranks	A
Engine does not crank	B

A ▶ **GO TO SFI SYSTEM**

B

4.	READ VALUE USING TECHSTREAM (STARTER CONTROL)

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream screen.

Engine and ECT

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Starter Control	Starter switch signal / ON or OFF	ON: Engine switch on (ST) OFF: Engine switch except on (ST)	-

Standard:

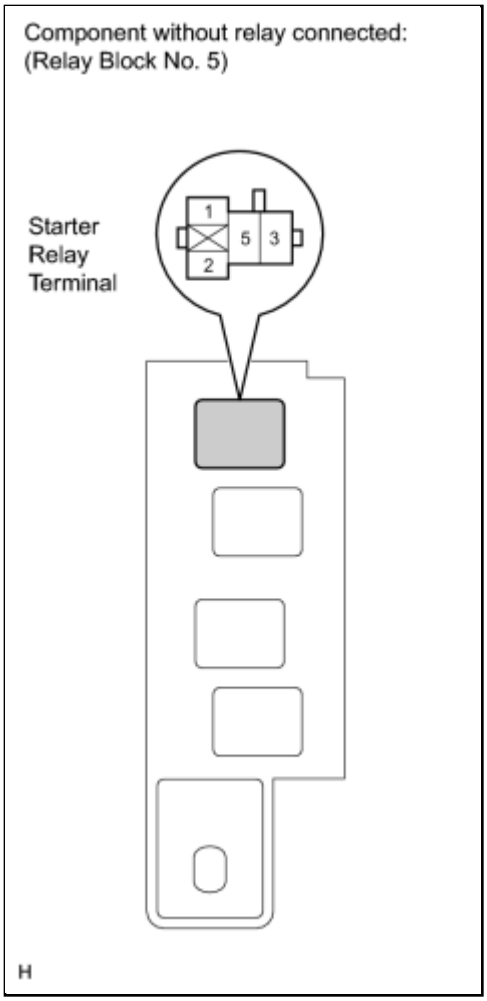
ENGINE SWITCH CONDITION	TESTER DISPLAY
When engine switch is on (ST)	ON
When engine switch is except on (ST)	OFF

NG READ VALUE USING TECHSTREAM (PARK/NEUTRAL POSITION SWITCH)

OK

5.	PERFORM ACTIVE TEST USING TECHSTREAM (STARTER RELAY)

(a) Connect the Techstream to the DLC3.



(b) Turn the engine switch on (IG).

(c) Perform Active Test according to the prompts displayed on the Techstream.

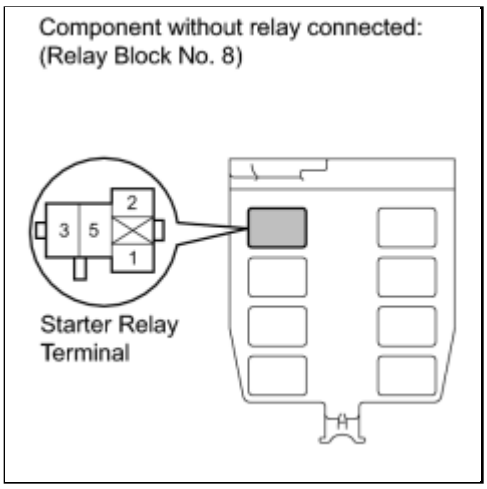
Engine and ECT

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Activate the Starter Relay	Starter	ON or OFF	-

(d) for TMC Made:

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



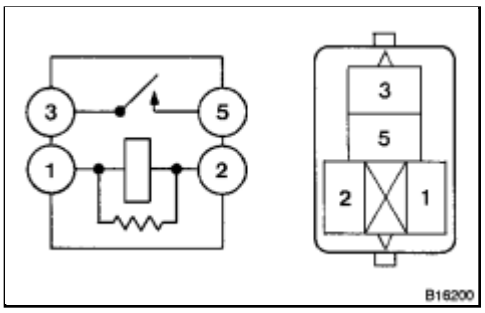
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 5 starter relay terminal 2 - Relay block No. 5 starter relay terminal 1	When starter relay is ON by Active test using Techstream	8 to 14 V
Relay block No. 5 starter relay terminal 2 - Relay block No. 5 starter relay terminal 1	When starter relay is OFF by Active test using Techstream	Below 1 V

(e) for except TMC Made:

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 8 starter relay terminal 2 - Relay block No. 8 starter relay terminal 1	When starter relay is ON by Active test using Techstream	8 to 14 V



Relay block No. 8 starter relay terminal 2 - Relay block No. 8 starter relay terminal 1	When starter relay is OFF by Active test using Techstream	Below 1 V

NG ▶ **INSPECT STARTER CUT RELAY**

OK ▼

6.	**INSPECT STARTER RELAY**

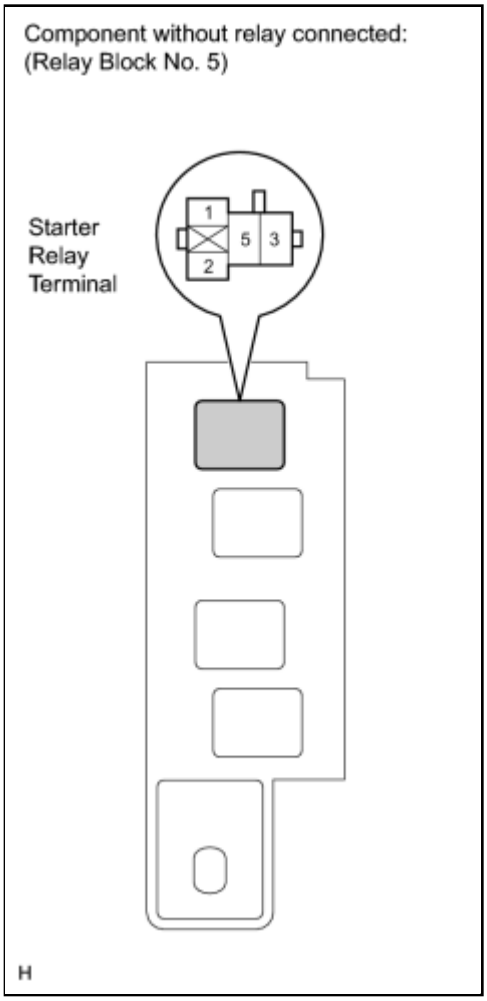
(a) Remove the starter relay from the relay block No. 5*1.

(b) Remove the starter relay from the relay block No. 8*2.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω



HINT:

- *1: for TMC Made
- *2: for except TMC Made

NG ▶ **REPLACE STARTER RELAY**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (STARTER RELAY TERMINAL VOLTAGE AND RESISTANCE)**

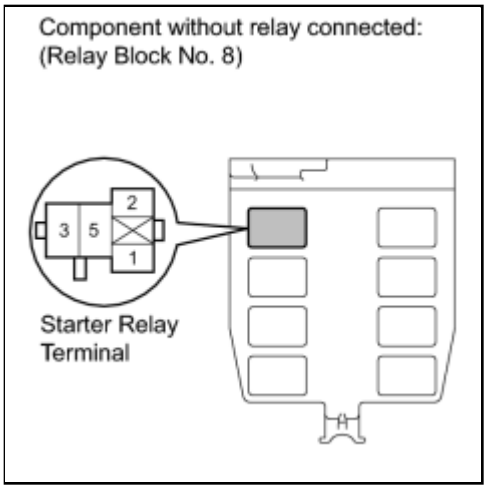
(a) for TMC Made:

(1) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 5 starter relay terminal 5 - Body ground	Always	11 to 14 V

(2) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay Block No. 5 starter relay terminal 1 - Body ground	Always	Below 1 Ω

(b) for except TMC Made:

(1) Measure the voltage according to the value(s) in the table below.

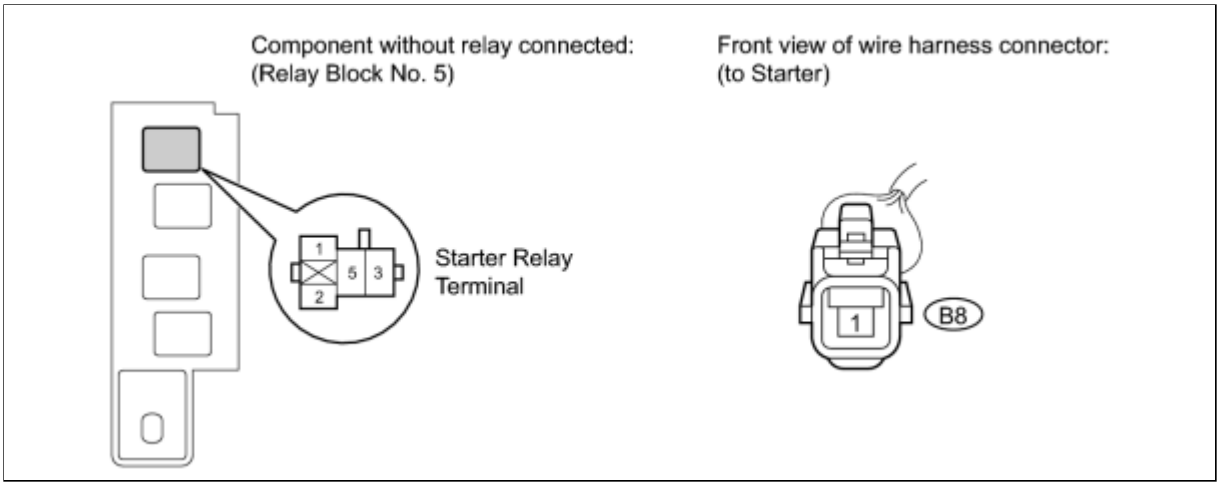
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 8 starter relay terminal 5 - Body ground	Always	11 to 14 V

(2) Measure the resistance according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 8 starter relay terminals 1 - Body ground	Always	Below 1 Ω



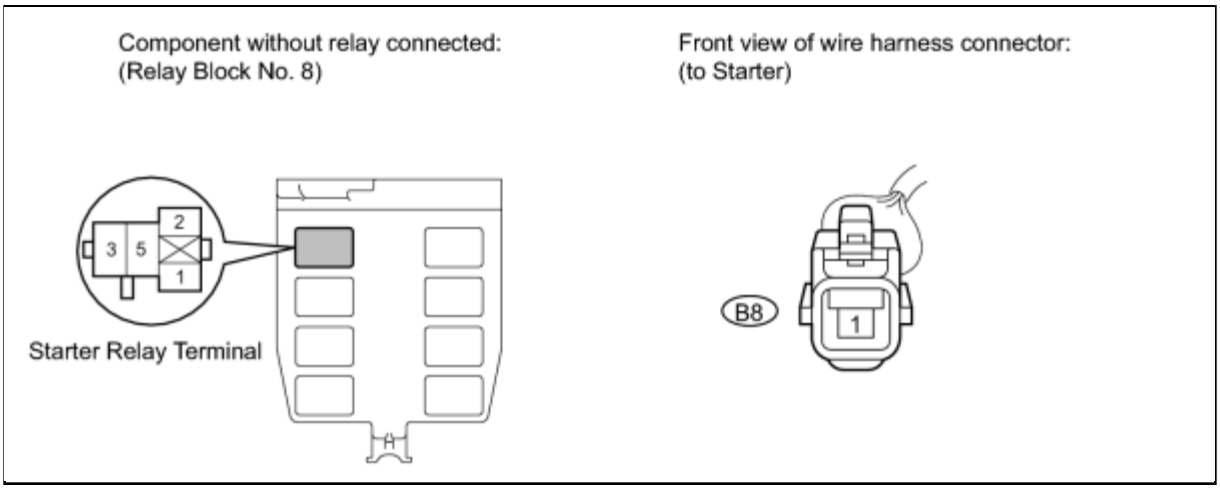
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR REPLACE FUSE**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (STARTER RELAY - STARTER)**

(a) for TMC Made:

(1) Disconnect the B8 connector.



(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

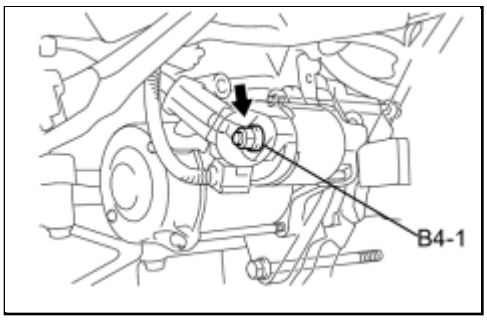
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 5 starter relay terminal 3 - B8-1	Always	Below 1 Ω
Relay block No. 5 starter relay terminal 3 or B8-1 - Body ground	Always	10 kΩ or higher

(b) for except TMC Made:

(1) Disconnect the B8 connector.

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Relay block No. 8 starter relay terminal 3 - B8-1	Always	Below 1 Ω
Relay block No. 8 starter relay terminal 3 or B8-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER RELAY - STARTER)**

OK ▼

9.	CHECK HARNESS AND CONNECTOR (BATTERY - STARTER)

(a) Disconnect the B4 connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B4-1 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - STARTER)**

OK ▶ **REPLACE STARTER ASSEMBLY**

10.	READ VALUE USING TECHSTREAM (PARK/NEUTRAL POSITION SWITCH)

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream screen.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
N SW / C SW	Park/Neutral position switch / ON or OFF	ON: Shift position is P or N OFF: Shift position is not P nor N	-

OK:
"ON" (Shift position is P or N) and "OFF" (Shift position is not P nor N) appear on the screen.

NG ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BODY GROUND)**

OK ▼

11.	READ VALUE USING TECHSTREAM (S CODE)

(a) Connect the Techstream to the DLC3.

HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream.

Smart Key

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
S Code Chk	S code check / OK or NG	OK: Normal NG: Malfunction	-

OK:
"OK" is displayed on the screen.

NG ▶ **REGISTER RECOGNITION CODE (ECU CODE)**

OK

12.	READ VALUE USING TECHSTREAM (L CODE)

(a) Connect the Techstream to the DLC3.

HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream.

Smart Key

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
L Code Chk	L code check / OK or NG	OK: Normal NG: Malfunction	-

OK:
"OK" is displayed on the screen.

NG ▶ **REGISTER RECOGNITION CODE (ECU CODE)**

OK

13.	READ VALUE USING TECHSTREAM (IMMOBILISER SYSTEM STATUS)

(a) Connect the Techstream to the DLC3.

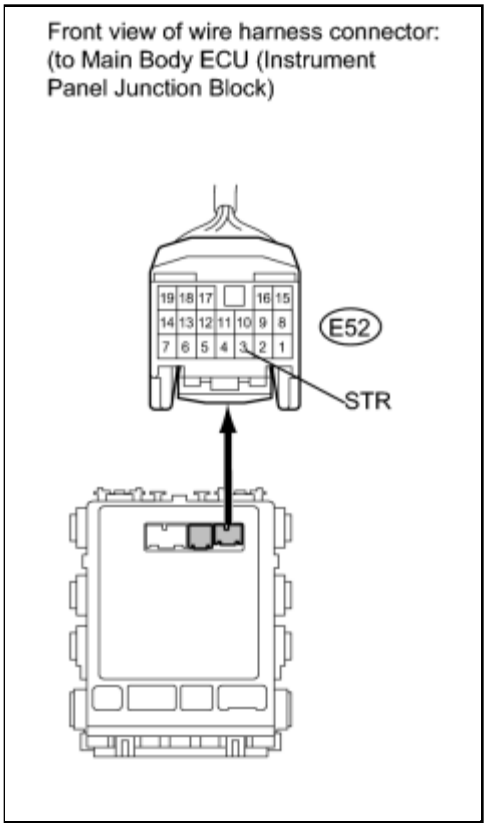
HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

(b) Turn the engine switch on (IG).

(c) Read the Data List according to the displays on the Techstream.

Immobiliser



TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Immobiliser	Immobiliser system status / SET or UNSET	UNSET: Engine switch ON SET: Without key	-

OK:
UNSET (Engine switch ON) appears on the screen.

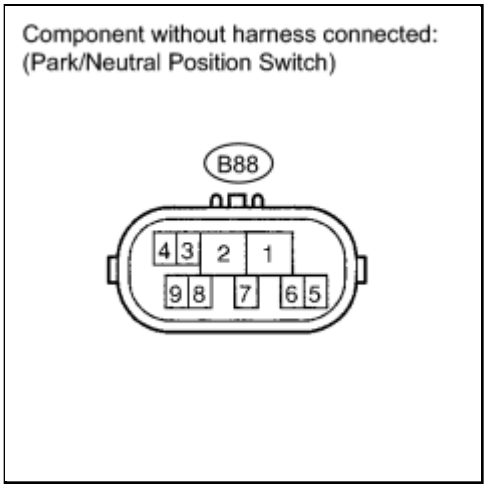
NG ▶ **READ VALUE USING TECHSTREAM (ENGINE START REQUEST)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

14.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BODY GROUND)

(a) Disconnect the E52 connector from the main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E52-3 (STR) - Body ground	Shift position is P or N	105 to 115 Ω
E52-3 (STR) - Body ground	Shift position is not P nor N	10 kΩ or higher

NG ▶ **INSPECT PARK/NEUTRAL POSITION SWITCH**

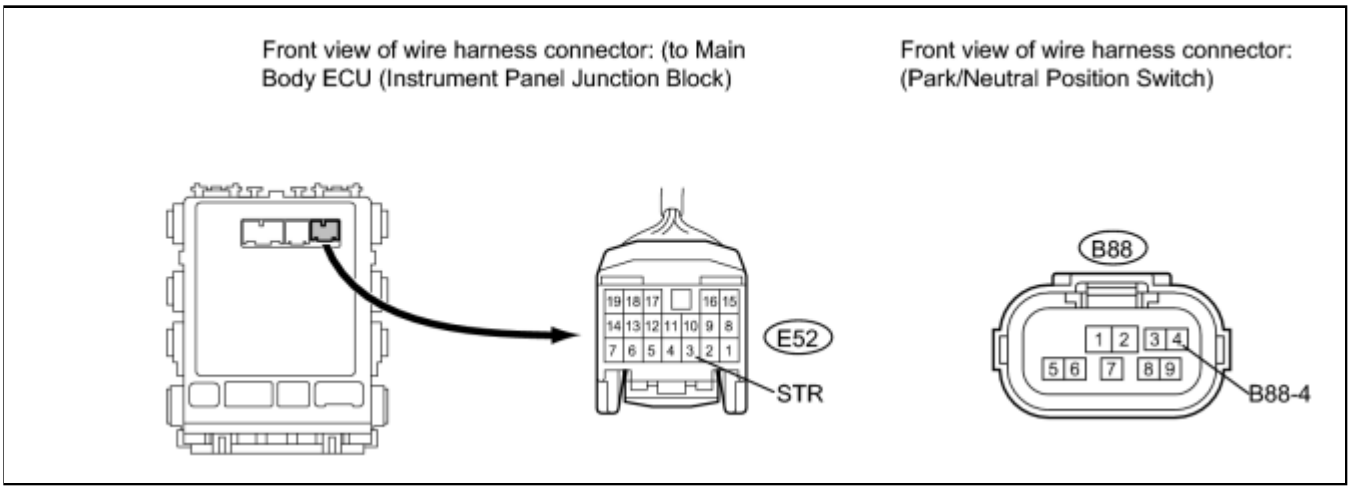
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

15.	**INSPECT PARK/NEUTRAL POSITION SWITCH**

(a) Disconnect the B88 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - 5	P	Below 1 Ω
4 - 5	N	Below 1 Ω
4 - 5	Except P and N	10 kΩ or higher

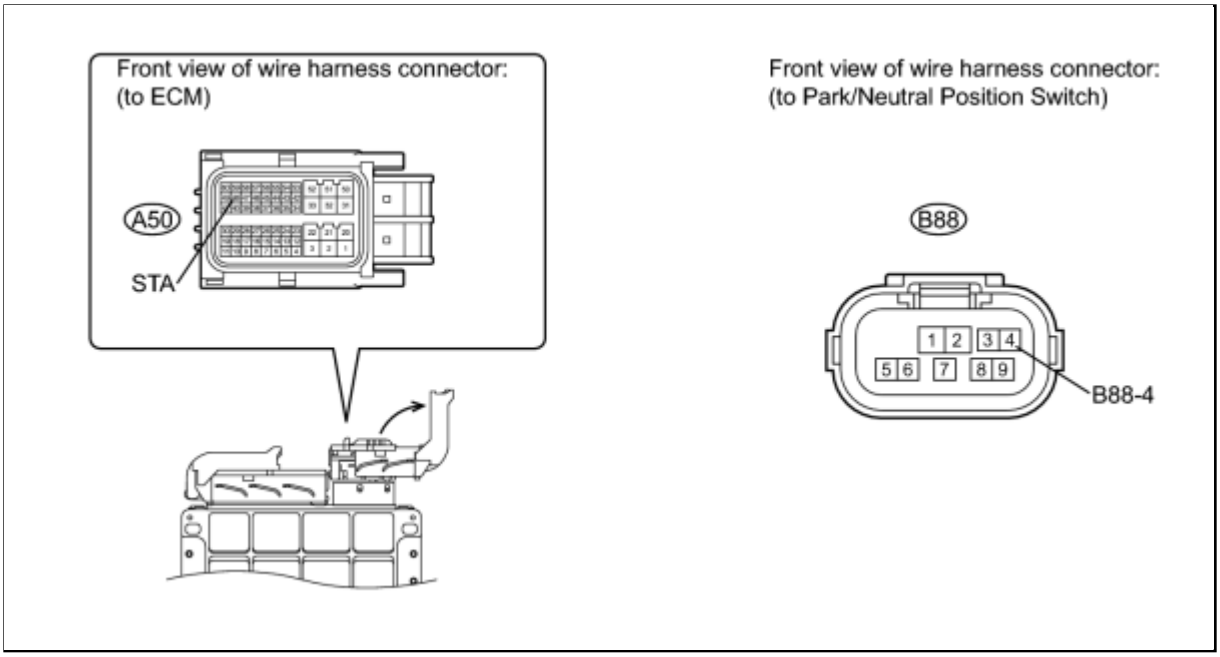
NG ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK ▼

16.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E52-3 (STR) - B88-4	Always	Below 1 Ω
E52-3 (STR) or B88-4 - Body ground	Always	10 kΩ or higher

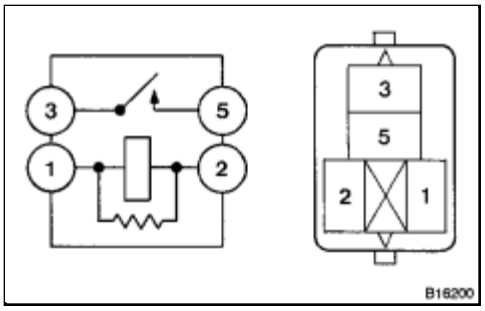
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - PARK/NEUTRAL POSITION SWITCH)**

OK ▼

17.	**CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

(a) Disconnect the E50 connector from the ECM.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-4 - A50-48 (STA)	Always	Below 1 Ω
B88-4 or A50-48 (STA) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

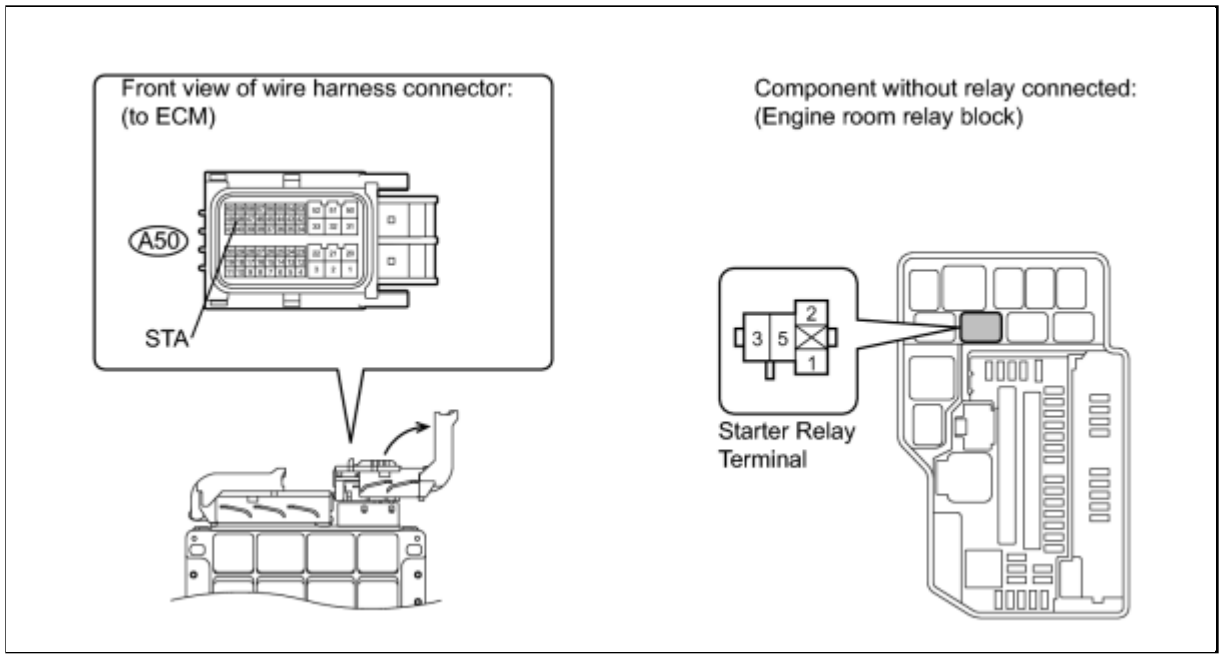
OK ▼

18.	**INSPECT STARTER RELAY**

(a) Remove the starter relay from engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

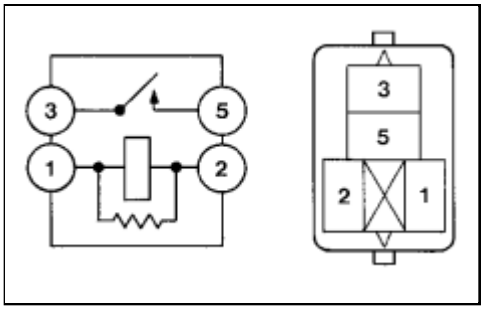
NG ▶ **REPLACE STARTER RELAY**

OK ▼

19.	CHECK HARNESS AND CONNECTOR (ECM - STARTER RELAY)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Engine room relay block starter relay terminal 2 - A50-48 (STA)	Always	Below 1 Ω
Engine room relay block starter relay terminal 2 or A50-48 (STA) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - STARTER RELAY)**

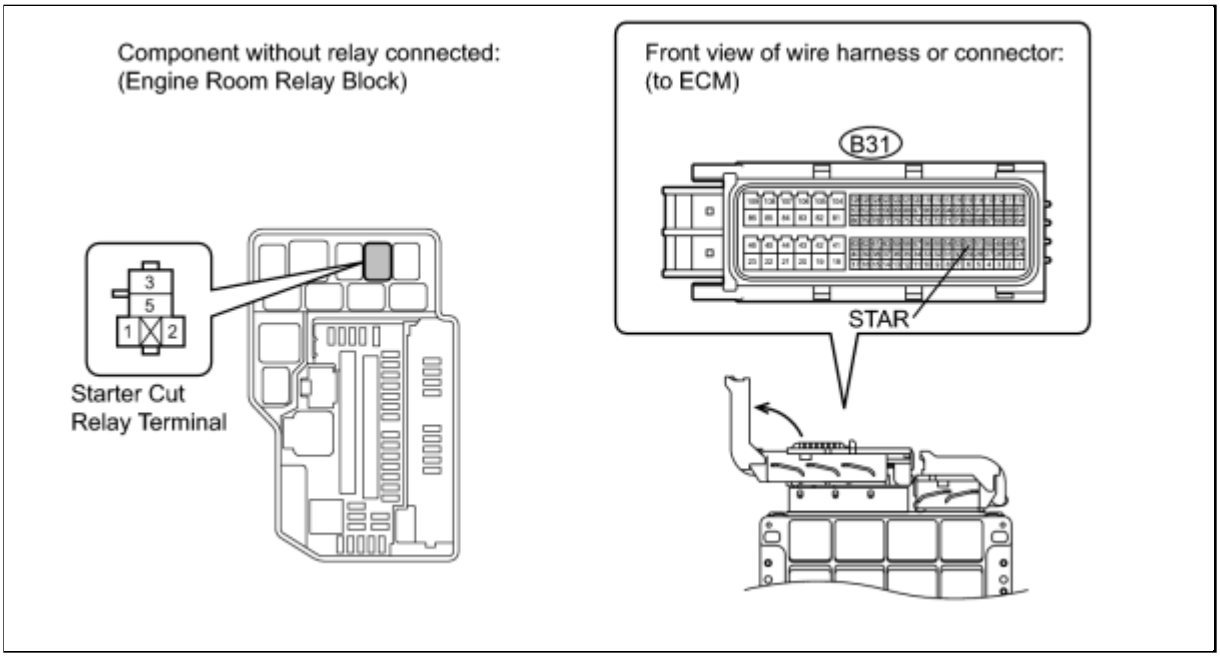
OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER RELAY - BODY GROUND)**

20.	**INSPECT STARTER CUT RELAY**

(a) Remove the starter cut relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher

NG ▶ **REPLACE STARTER CUT RELAY**

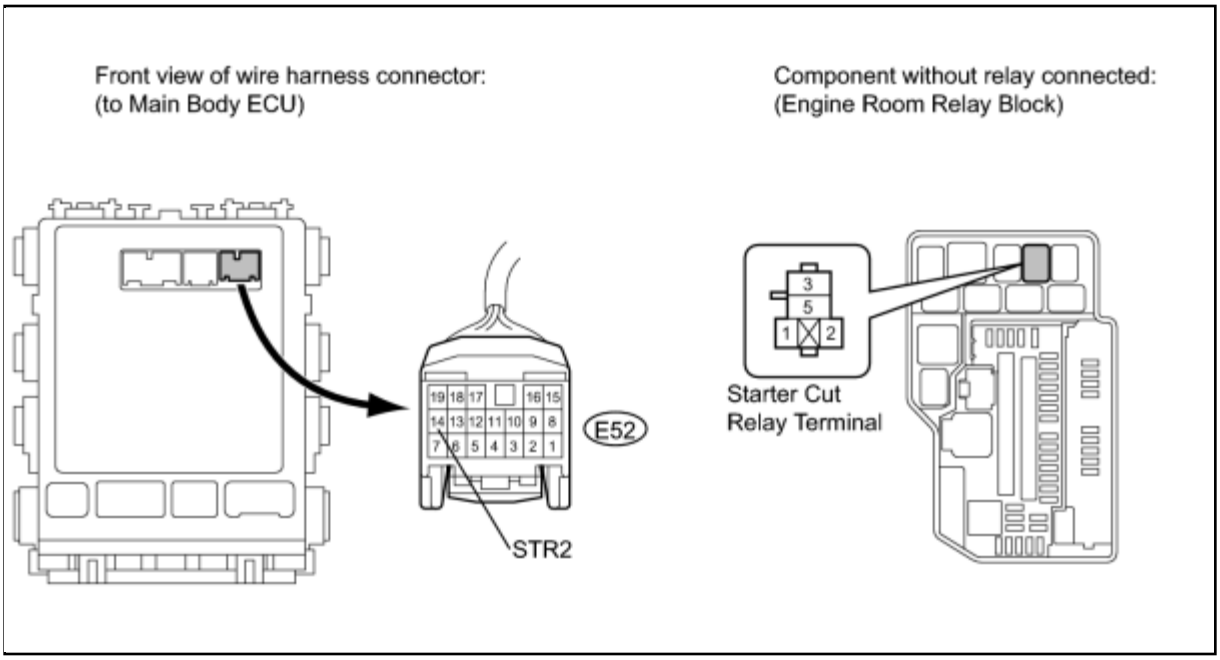
OK ▼

21.	CHECK HARNESS AND CONNECTOR (STARTER CUT RELAY - ECM)

(a) Disconnect the B31 connector from the ECM.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Engine room relay block starter cut relay terminal 5 - B31-52 (STAR)	Always	Below 1 Ω
Engine room relay block starter cut relay terminal 5 or B31-52 (STAR) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER CUT RELAY - ECM)**

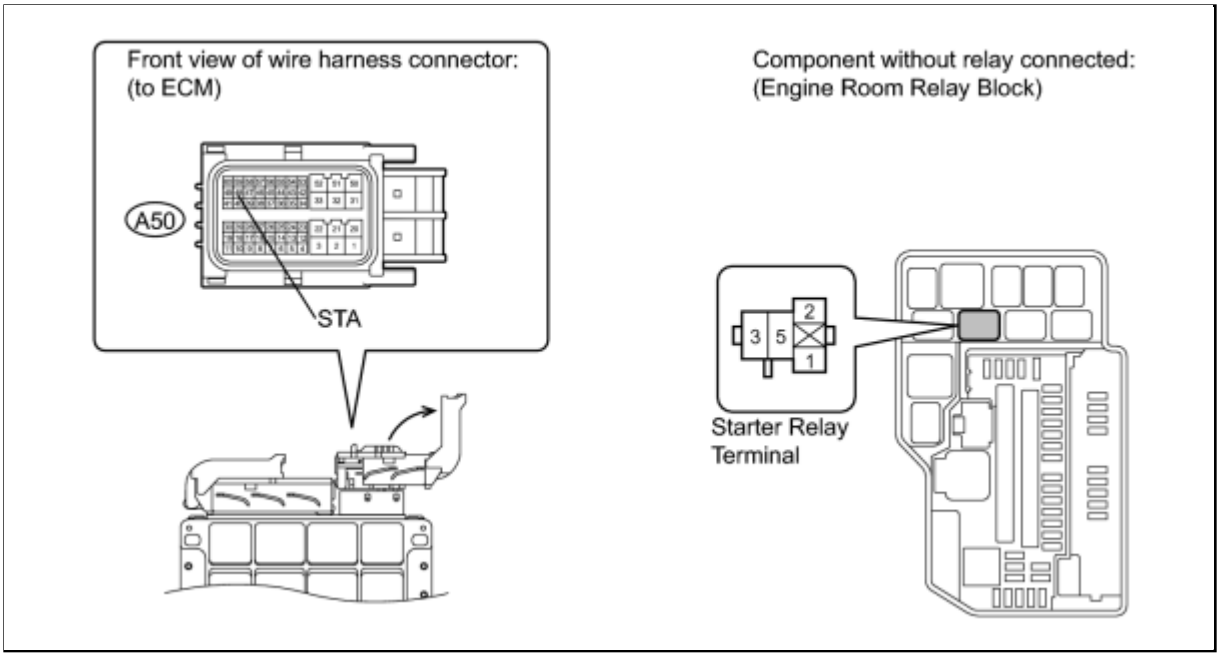
OK ▼

22.	CHECK HARNESS AND CONNECTOR (STARTER CUT RELAY - MAIN BODY ECU)

(a) Disconnect the E52 connector from the main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Engine room relay block starter cut relay terminal 5 - E52-14 (STR2)	Always	Below 1 Ω
Engine room relay block starter cut relay terminal 5 or E52-14 (STR2) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STARTER CUT RELAY - MAIN BODY ECU)**

OK ▼

23.	**CHECK HARNESS AND CONNECTOR (ECM - STARTER RELAY)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Engine room relay block starter relay terminal 2 - A50-48 (STA)	Always	Below 1 Ω
Engine room relay block starter relay terminal 2 or A50-48 (STA) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - STARTER RELAY)**

OK ▶ **REPLACE ECM**

24.	**REGISTER RECOGNITION CODE (ECU CODE)**

(a) Register the recognition code (ECU code) INFO .

NEXT

25.	**CHECK CRANKING FUNCTION**

(a) Check the engine cranking function.

(1) When there is fuel in the fuel tank, the key is inside the vehicle, and the shift lever is in P, check that depressing the brake pedal and pressing the engine switch crank the engine.

Result:

RESULT	PROCEED TO
Engine does not crank	A
Engine cranks	B

B ▶ END

A ▼

INSPECTION PROCEDURE

1. EMERGENCY ENGINE START CONTROL

(a) If there is a malfunction in the stop light switch or STOP fuse, their signals may not be correctly transmitted to the main body ECU. This may result in the engine not starting even if the engine switch is pressed while the brake pedal is depressed and the shift lever is in P.

To activate the starter:

(1) Turn the engine switch from off to on (ACC).

(2) Press and hold the engine switch for 15 seconds.

PROCEDURE

1.	CHECK FOR DTC (CAN COMMUNICATION SYSTEM)

(a) Clear the DTCs INFO.

(b) Check for CAN communication system DTCs INFO.

HINT:

If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first.

OK:
No DTC is output.

NG ▶ **GO TO CAN COMMUNICATION SYSTEM**

OK ▼

2.	CHECK FOR DTC (ENGINE CONTROL SYSTEM)

(a) Clear the DTCs INFO.

(b) Check for DTC P0500 (Vehicle speed sensor A).

OK:
No DTC is output.

NG ▶ **GO TO ENGINE CONTROL SYSTEM**

OK ▼

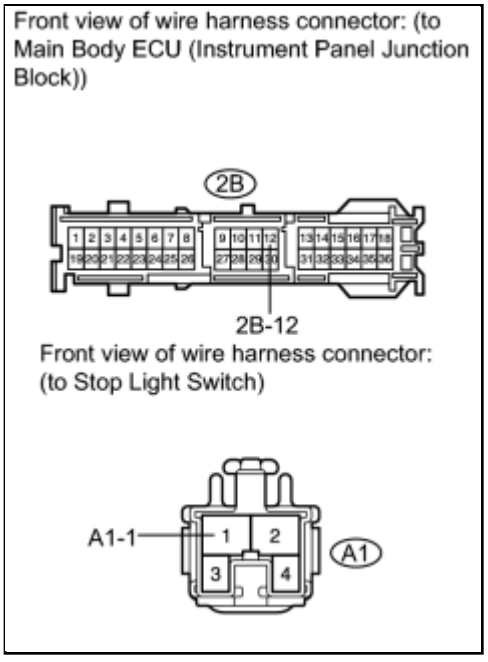
3.	READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH)

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Check the Data List for proper functioning of the stop light switch.

Main Body



TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light SW	Stop light switch/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal depressed) and OFF (brake pedal released) appear on the screen.

NG ▶ **CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - INSTRUMENT PANEL JUNCTION BLOCK)**

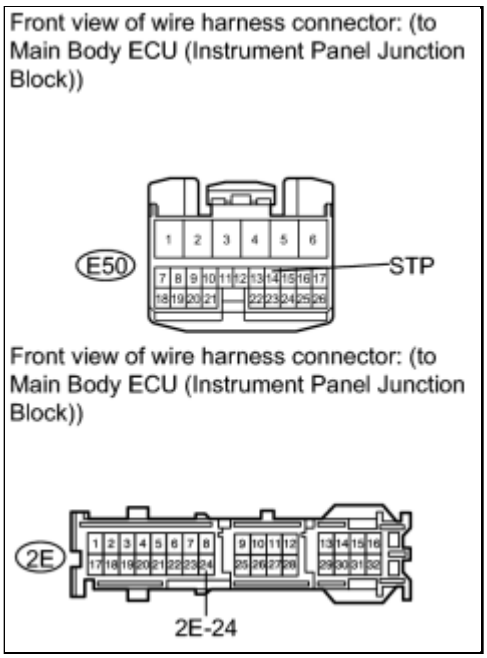
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

4.	**CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the A1 switch connector.

(b) Disconnect the 2B junction block connector.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A1-1 - 2B-12	Always	Below 1 Ω
A1-1 or 2B-12 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - INSTRUMENT PANEL JUNCTION BLOCK)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - MAIN BODY ECU)**

(a) Disconnect the 2E junction block connector.

(b) Disconnect the E50 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-24 - E50-14 (STP)	Always	Below 1 Ω
2E-24 or E50-14 (STP) - Body ground	Always	10 kΩ or higher

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - MAIN BODY ECU)

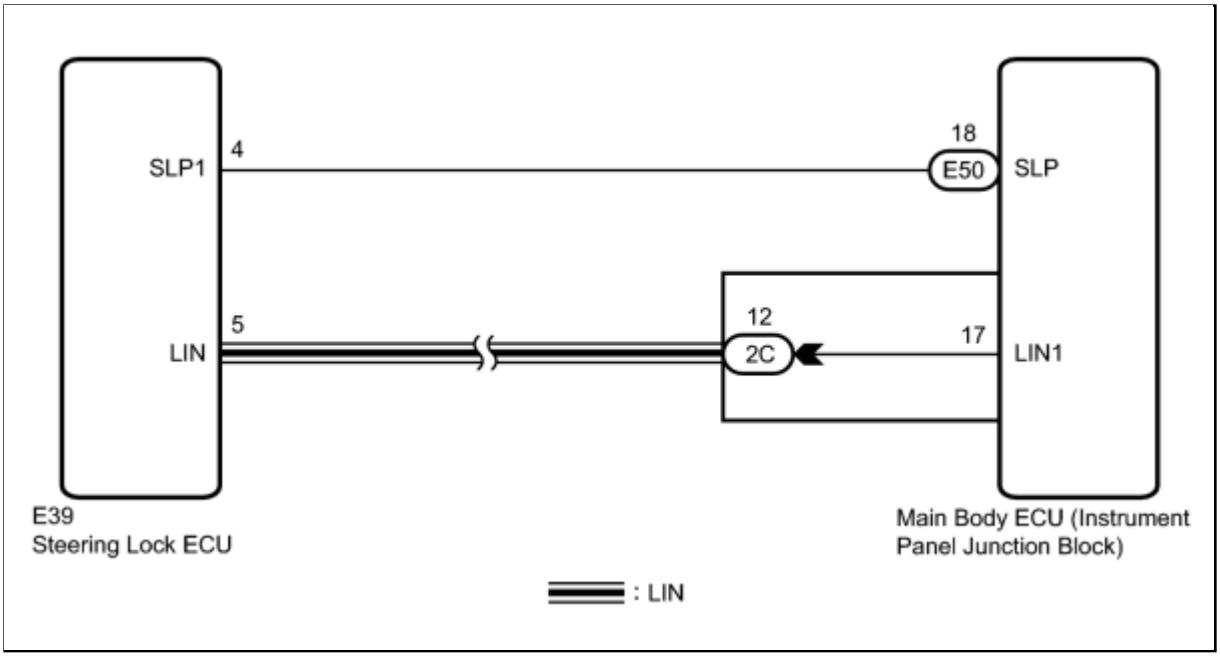
OK ▶ REPLACE INSTRUMENT PANEL JUNCTION BLOCK

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000YD304TX
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2285: Steering Lock Position Signal Circuit Malfunction (2010 Corolla)		

DTC	**B2285**	**Steering Lock Position Signal Circuit Malfunction**

DESCRIPTION

This DTC is output when serial communication signals and LIN communication signals in the circuit between the main body ECU (instrument panel junction block) and steering lock actuator (steering lock ECU) are inconsistent.



HINT:

When the main body ECU (instrument panel junction block) is replaced with a new one and the cable from the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU (instrument panel junction block) or steering lock ECU is replaced, perform the registration procedures for the engine immobiliser system INFO **.**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2285	Cable and LIN information between the main body ECU (instrument panel junction block) and the steering lock ECU are inconsistent	• Main body ECU (instrument panel junction block) • Steering lock ECU • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Check the Data List for proper functioning of the steering lock function.

HINT:

When using the Techstream with the engine switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the Techstream and vehicle starts.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Steering Unlock Switch	Steering lock condition / ON or OFF	ON: Steering is unlocked (Engine switch on (ACC)) OFF: Steering is locked (Engine switch off)	-

OK:
ON (steering is unlocked) and OFF (steering is locked) appear on the screen.

NG ▶ **CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - STEERING LOCK ECU)**

OK

2.	CHECK FOR DTC

(a) Clear the DTCs INFO .

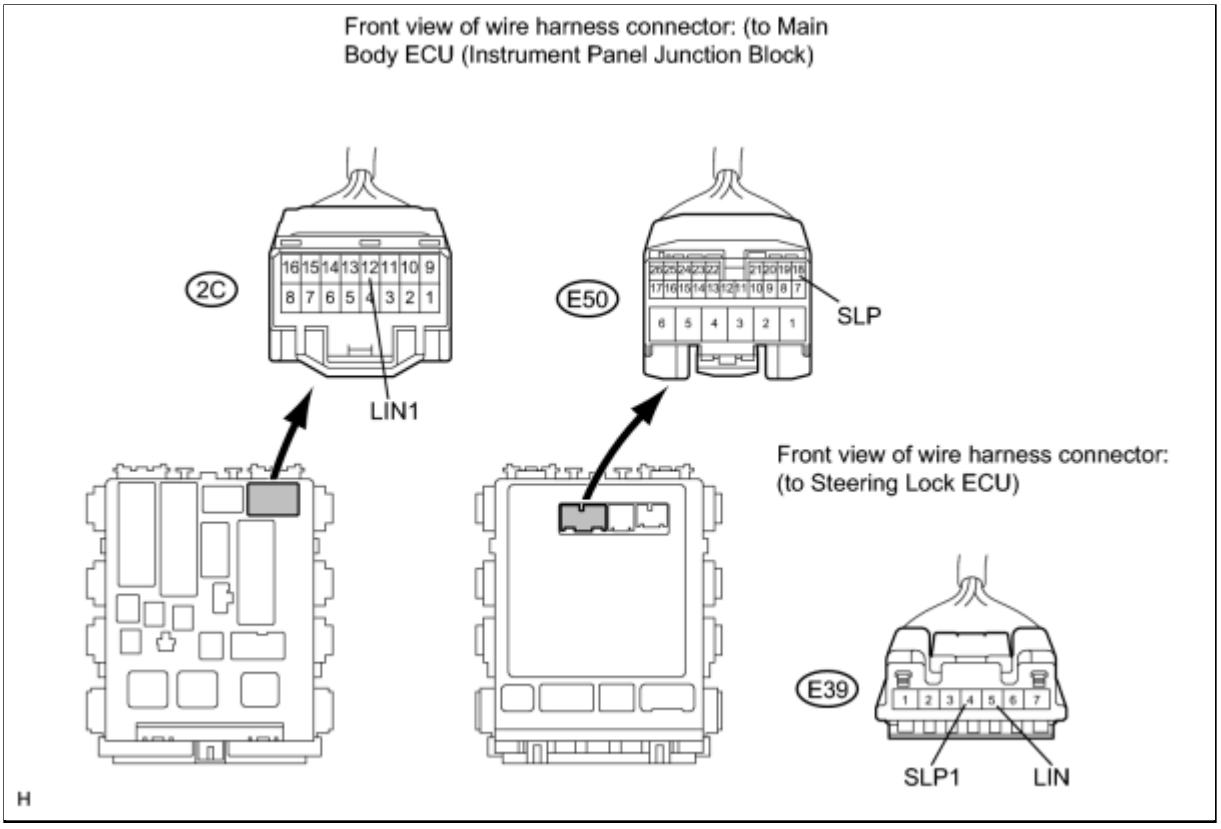
(b) Check for DTC B2285 (Steering lock position signal circuit malfunction), DTC B2287 (LIN communication master malfunction) and DTC B2785 (Communication malfunction between ECUs connected by LIN).

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
"DTC B2285" only	A
"DTC B2287" and/or "DTC B2785"	B
No DTC	C

HINT:

- If DTC B2287 is output INFO .
- If DTC B2785 is output INFO .



C **CHECK INTERMITTENT PROBLEMS**

B **GO TO DTC CHART**

A **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

3.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - STEERING LOCK ECU)

(a) Disconnect the E50, 2C and E39 ECU connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-18 (SLP) - E39-4 (SLP1)	Always	Below 1 Ω
2C-12 (LIN1) - E39-5 (LIN)	Always	Below 1 Ω
E50-18 (SLP) or E39-4 (SLP1) - Body ground	Always	10 kΩ or higher
2C-12 (LIN1) or E39-5 (LIN) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK MAIN BODY ECU OPERATION**

(a) After replacing the main body ECU with a normally functioning ECU, check that the engine starts. Make sure the brake pedal is depressed and the shift position is P at this time.

(b) Check that the engine switch mode can be changed by pushing the engine switch.

HINT:

Without depressing the brake pedal, push the engine switch repeatedly. Engine switch mode should turn from off to on (ACC) to on (IG) and back to off. With the brake pedal depressed, push the engine switch repeatedly. Engine switch mode should turn to ENGINE START from any status.

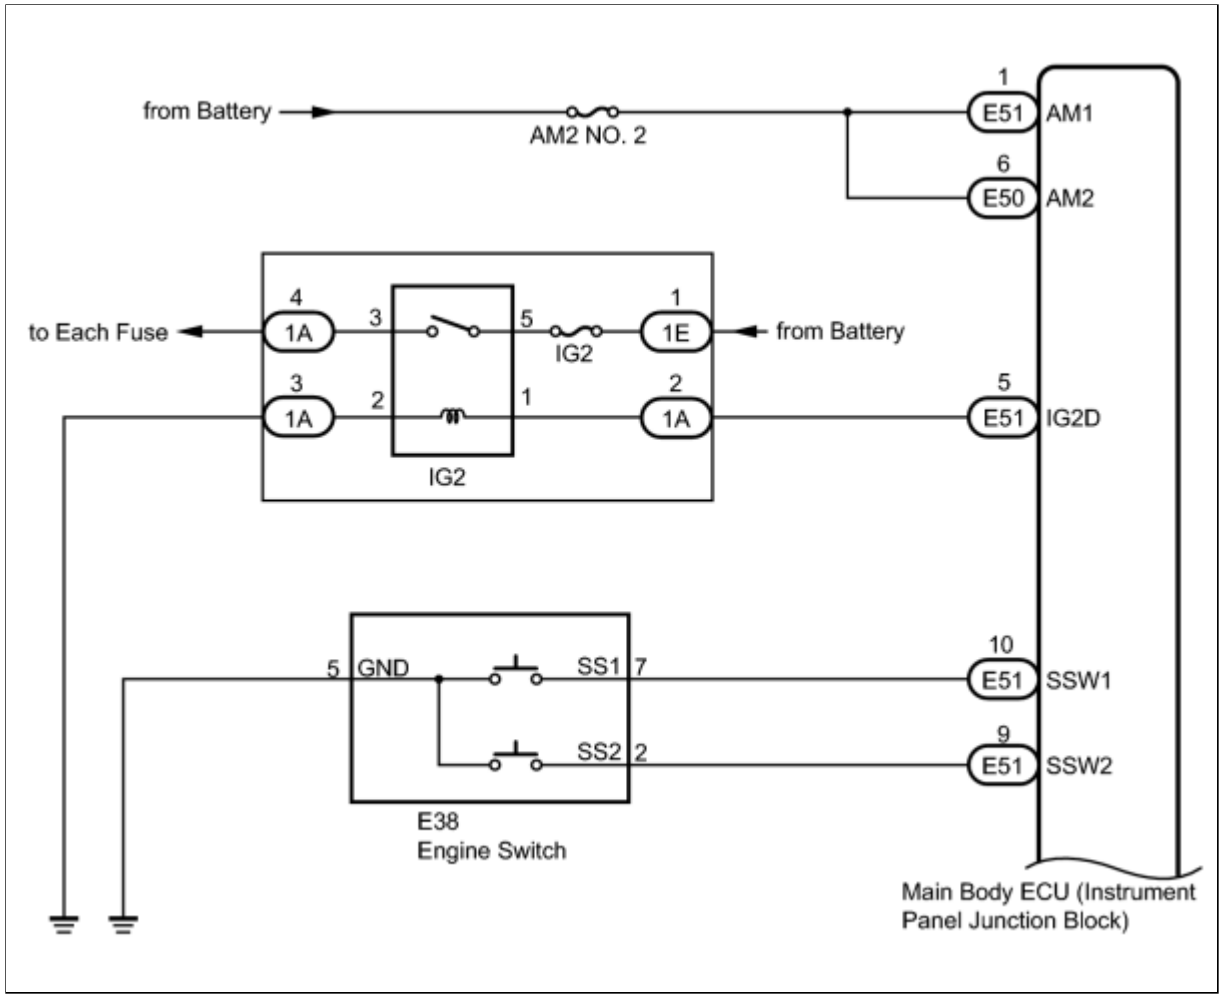
OK:
Engine starts normally.

NG ▶ **REPLACE STEERING LOCK ECU**

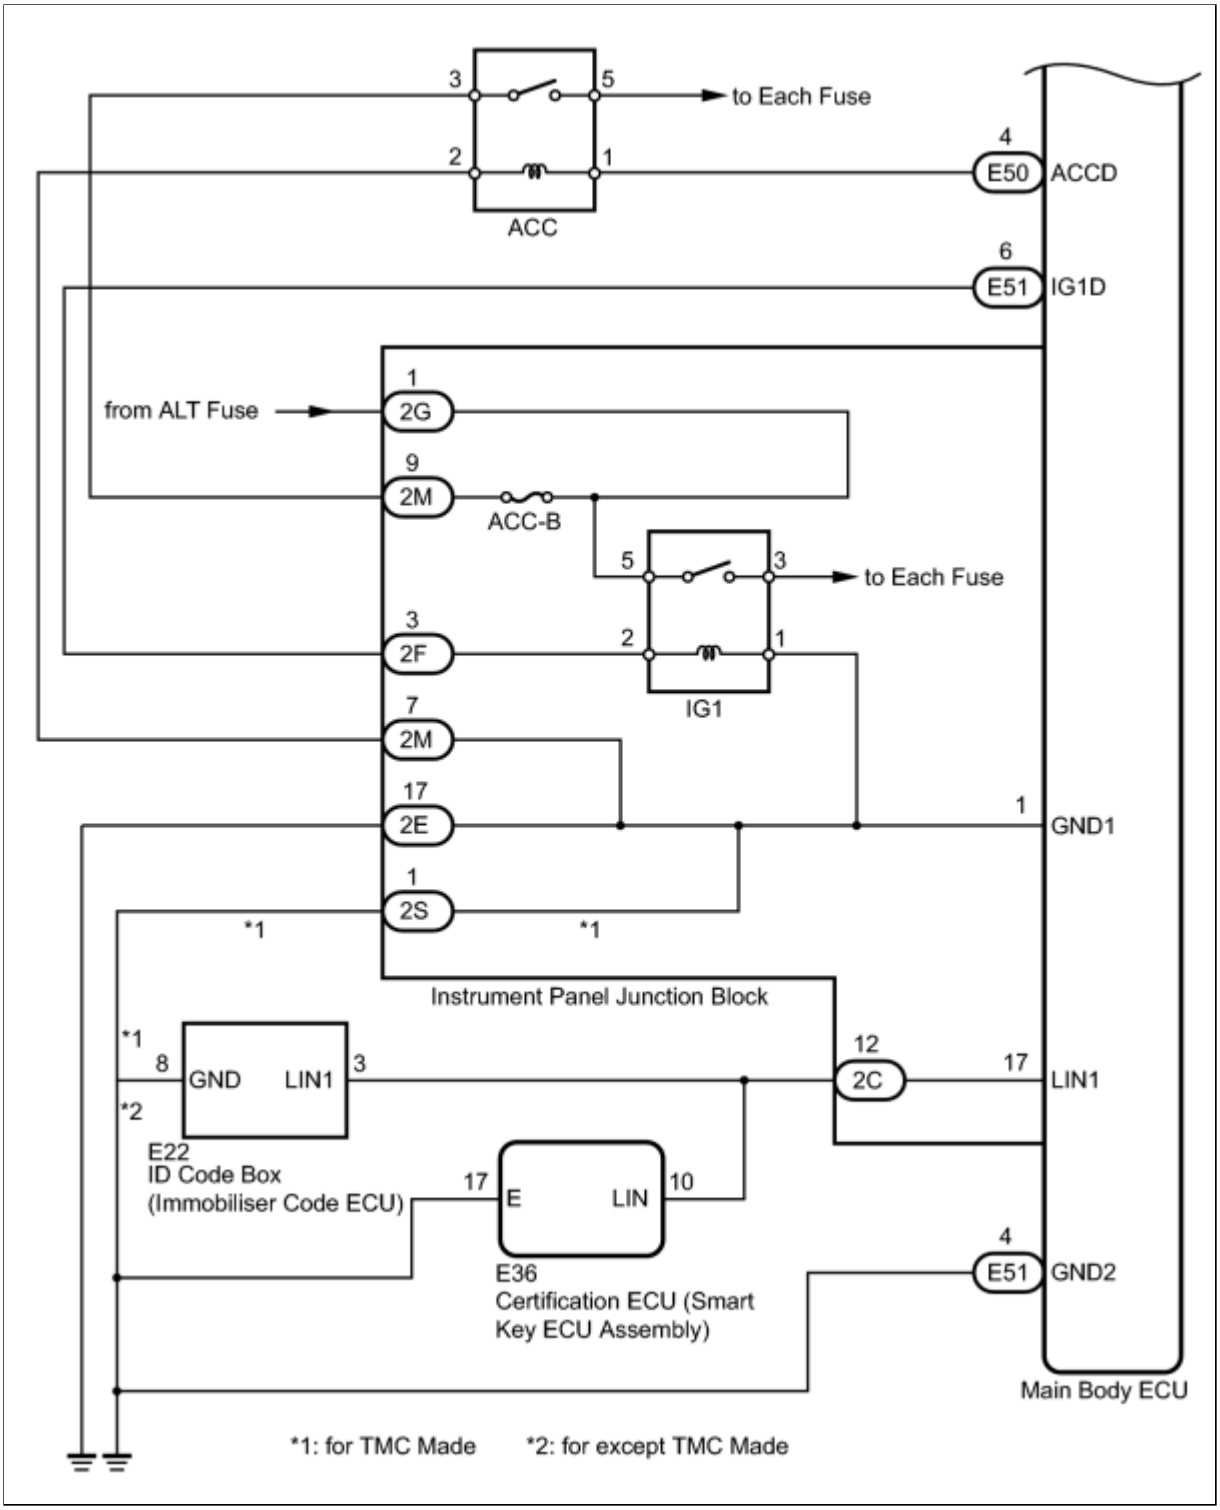
OK ▶ **END (MAIN BODY ECU DEFECTIVE)**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000020S9034X
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): Power Source Mode does not Change (2010 Corolla)		

Power Source Mode does not Change



DESCRIPTION



When the engine switch is pushed with the electrical key in the cabin, the main body ECU (instrument panel junction block) receives signals to switch the power source mode.

HINT:

To allow use of the Techstream to inspect the push-button start function when the engine switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the Techstream and the main body ECU (instrument panel junction block). (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK SMART KEY SYSTEM**

(a) Remove the battery of the electrical key transmitter INFO .

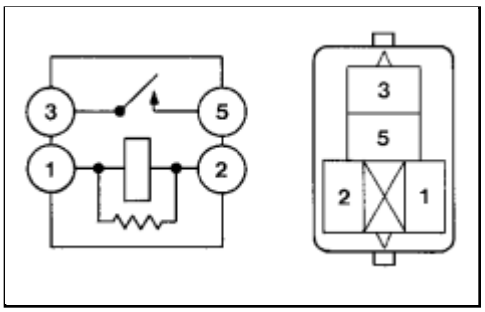
(b) Touch the logo side mark of the key or card key to the engine witch.

(c) Check that the engine switch can be turned on (IG).

Result:

RESULT	PROCEED TO
Power source mode does not change to on (ACC)	A
Power source mode does not change to on (IG)	B
Power source mode does not change to on (IG and ACC)	C
Power source mode is turned on	D

D ▶ **GO TO SMART KEY SYSTEM (ENTRY FUNCTION)**



C ▶ **CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

B ▶ **INSPECT IG1 RELAY**

A ▼

2. INSPECT ACC RELAY

(a) Remove the ACC relay from the relay block No. 5*1.

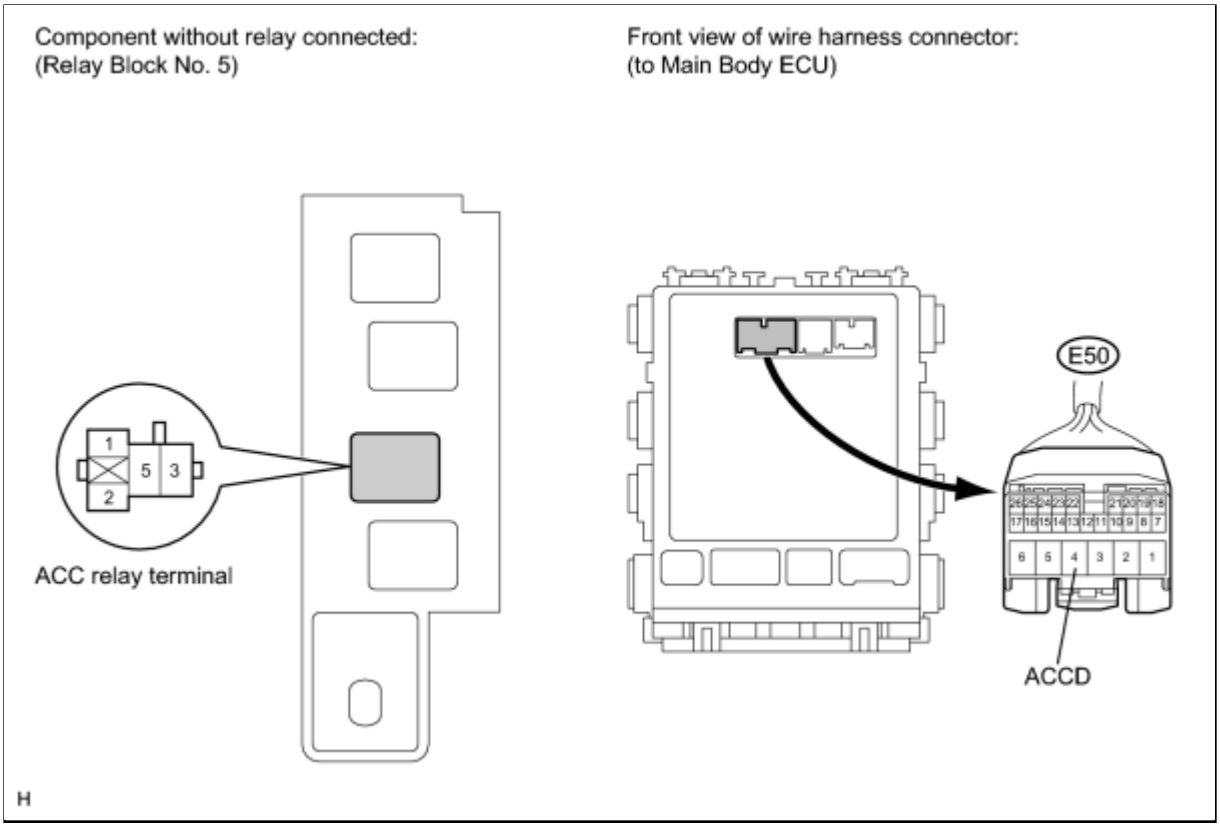
(b) Remove the ACC relay from the relay block No. 8*2.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

HINT:



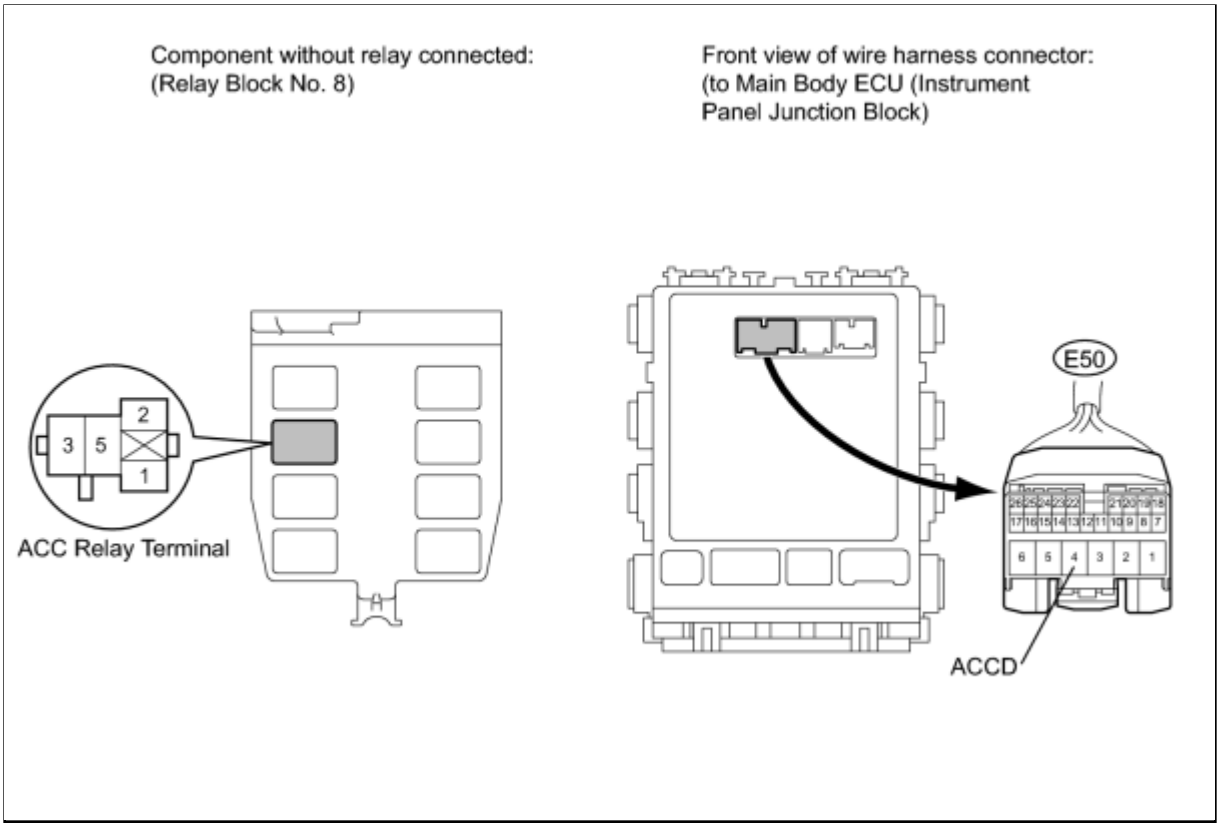
- *1: for TMC Made
- *2: for except TMC Made

NG ▶ **REPLACE ACC RELAY**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ACC RELAY)**

(a) for TMC Made:



(1) Disconnect the E50 connector from the main body ECU (instrument panel junction block).

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-4 (ACCD) - Relay block No. 5 ACC relay terminal 1	Always	Below 1 Ω
E50-4 (ACCD) or Relay block No. 5 ACC relay terminal 1 - Body ground	Always	10 kΩ or higher

(b) for except TMC Made:

(1) Disconnect the E50 connector from the main body ECU (instrument panel junction block).

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-4 (ACCD) - Relay block No. 8 ACC relay terminal 1	Always	Below 1 Ω
E50-4 (ACCD) or Relay block No. 8 ACC relay terminal 1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - ACC RELAY)**

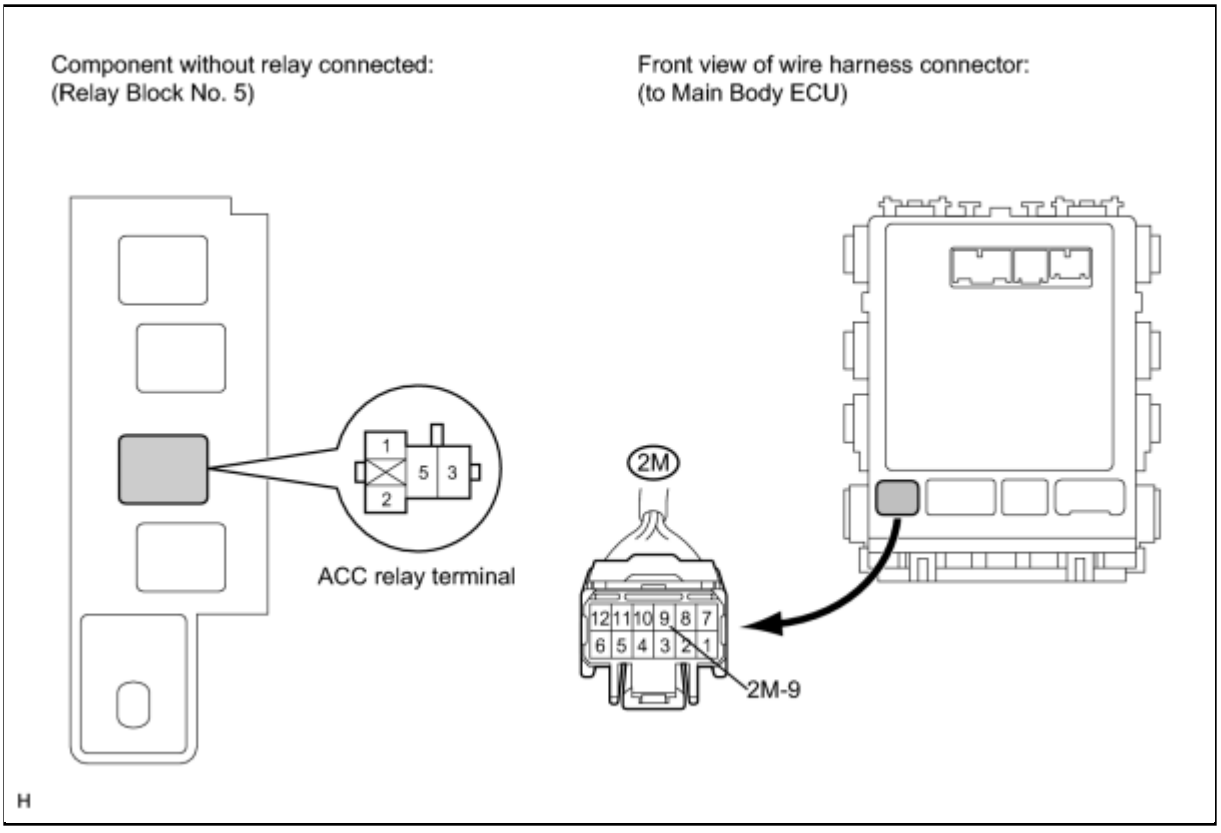
OK ▼

4.	**INSPECT FUSE (ACC-B FUSE)**

(a) Remove the ACC-B fuse from the main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



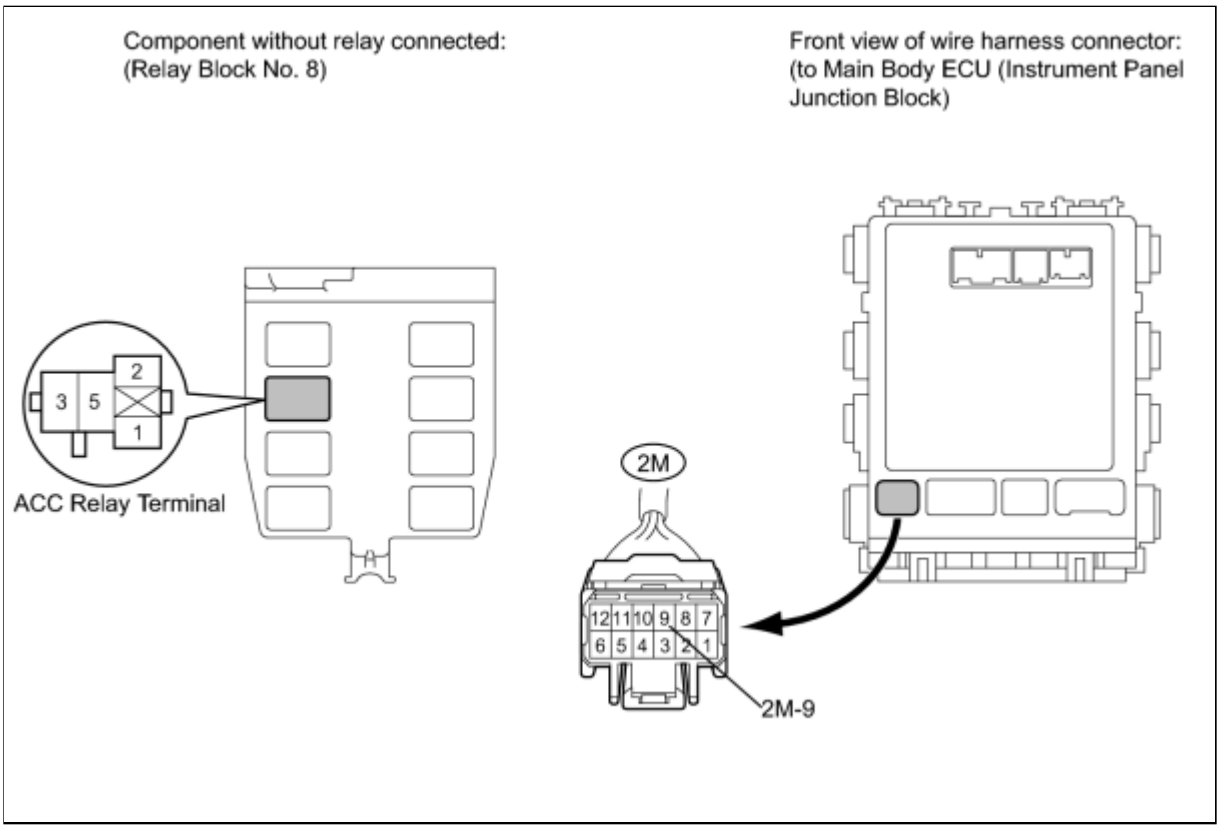
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ACC-B fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (ACC-B FUSE)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - ACC RELAY)**

(a) for TMC Made:



(1) Disconnect the 2M connector from the main body ECU (Instrument panel junction block).

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

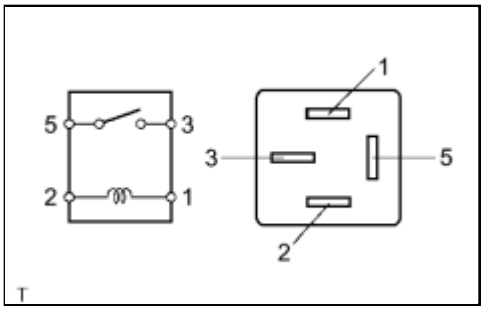
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2M-9 - Relay block No. 5 ACC relay terminal 3	Always	Below 1 Ω
2M-9 or Relay block No. 5 ACC relay terminal 3 - Body ground	Always	10 kΩ or higher

(b) for except TMC Made:

(1) Disconnect the 2M connector from the main body ECU (instrument panel junction block)

(2) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2M-9 - Relay block No. 8 ACC relay terminal 3	Always	Below 1 Ω
2M-9 or Relay block No. 8 ACC relay terminal 3 - Body ground	Always	10 k Ω or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - ACC**

RELAY)

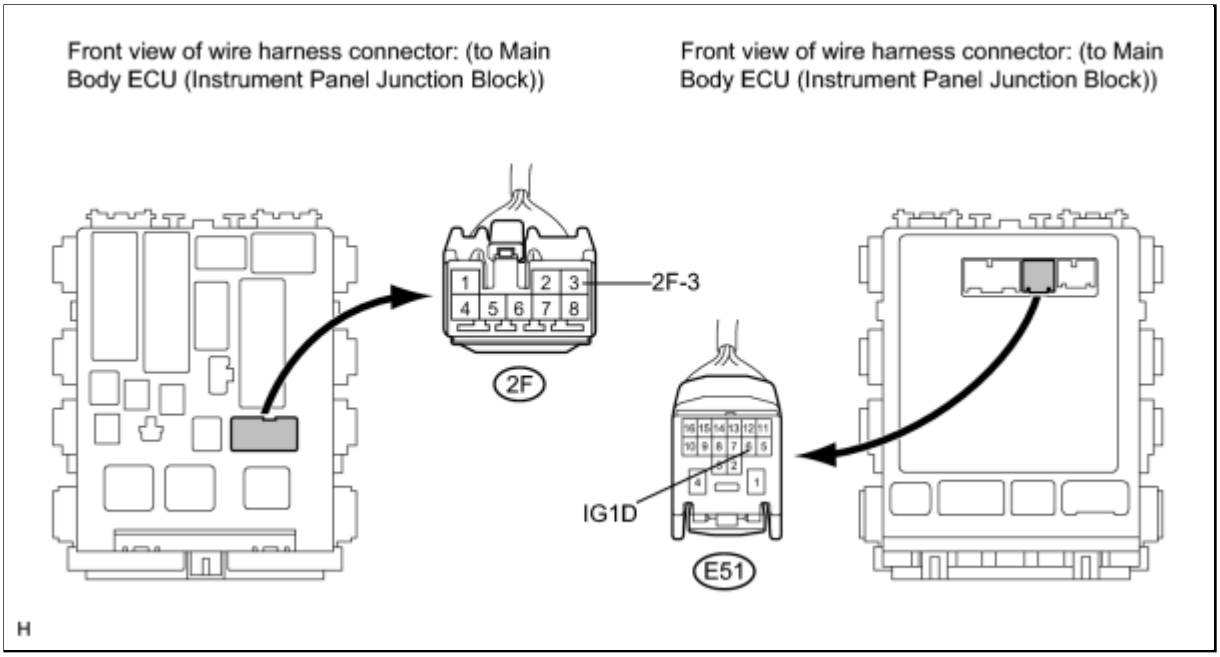
OK ▶ REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK

6.	INSPECT IG1 RELAY

(a) Remove the IG1 relay from the main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	When battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG ▶ REPLACE IG1 RELAY

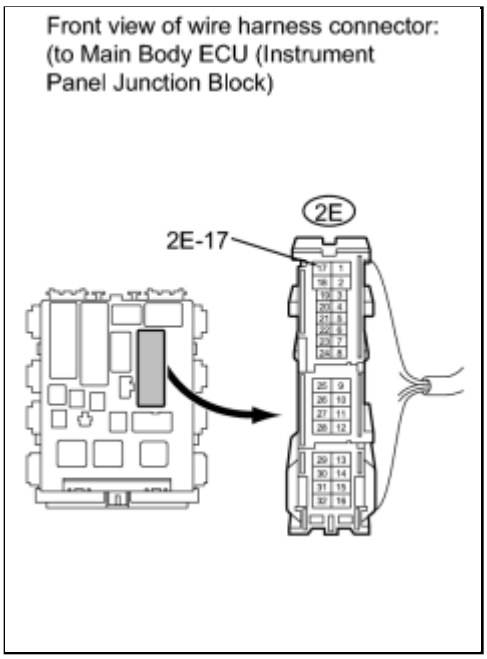
OK ▼

7.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the E51 and 2F connectors from the main body ECU (Instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-6 (IG1D) - 2F-3	Always	Below 1 Ω
E51-6 (IG1D) or 2F-3 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - INSTRUMENT PANEL JUNCTION BLOCK)**

OK ▼

8.	**CHECK HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BODY GROUND)**

(a) Disconnect the 2E connector from main body ECU (Instrument panel junction block).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-17 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BODY GROUND)**

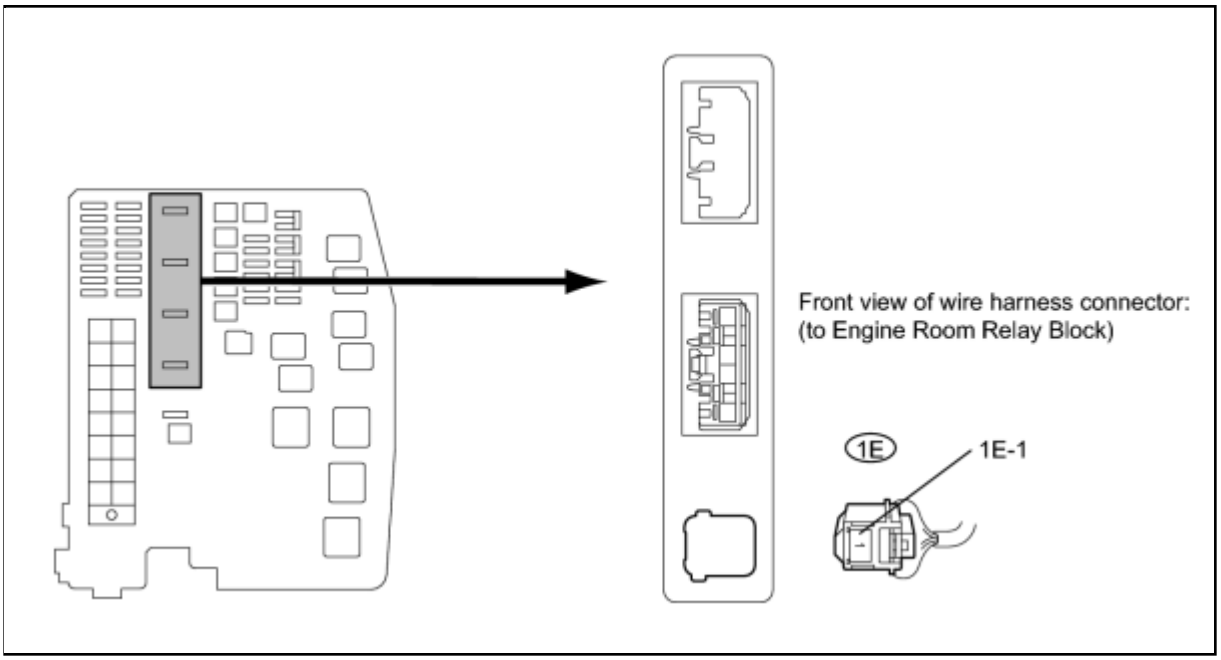
OK ▼

9.	**INSPECT FUSE (IG2 FUSE)**

(a) Remove the IG2 fuse from engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 fuse	Always	Below 1 Ω

NG ▶ **REPLACE FUSE (IG2 FUSE)**

OK

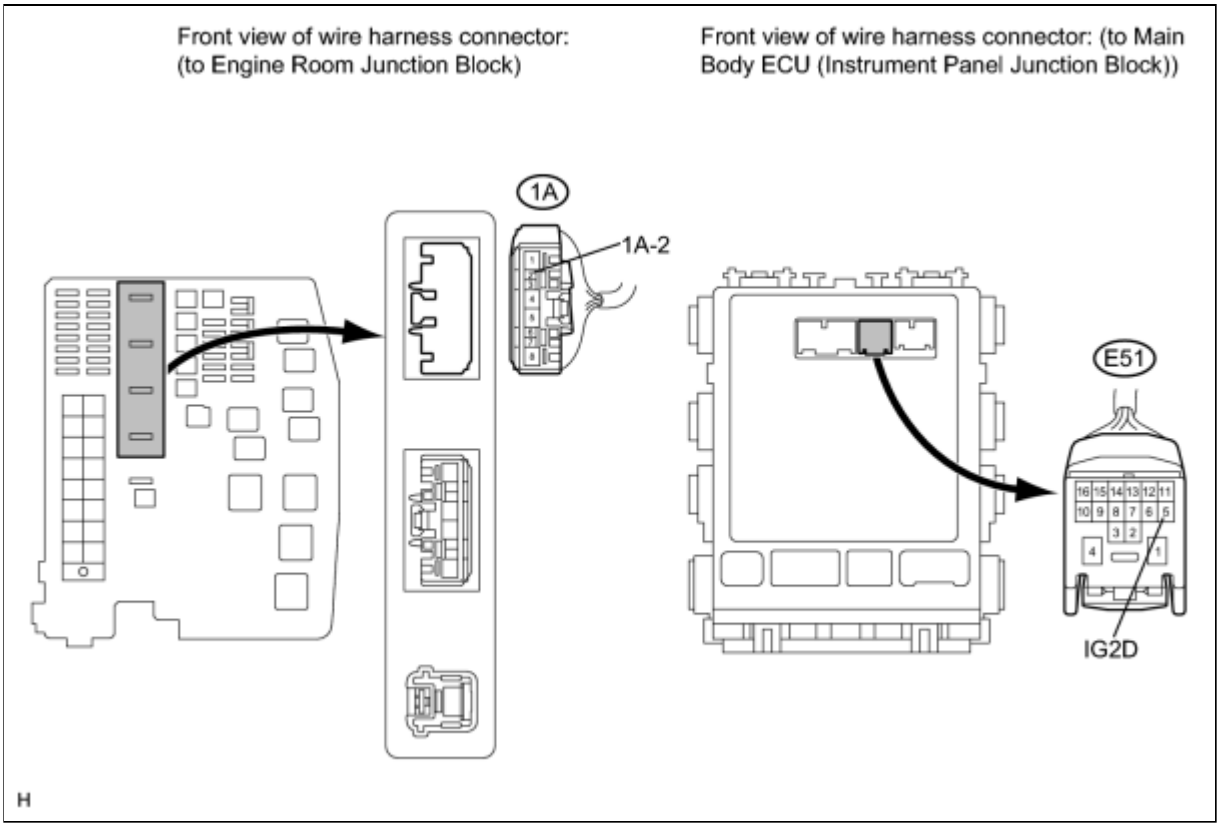
10.	**CHECK HARNESS AND CONNECTOR (BATTERY - ENGINE ROOM RELAY BLOCK)**

(a) Disconnect the 1E connector from engine room relay block.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - Body ground	Always	11 to 14 V



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - ENGINE ROOM RELAY BLOCK)**

OK

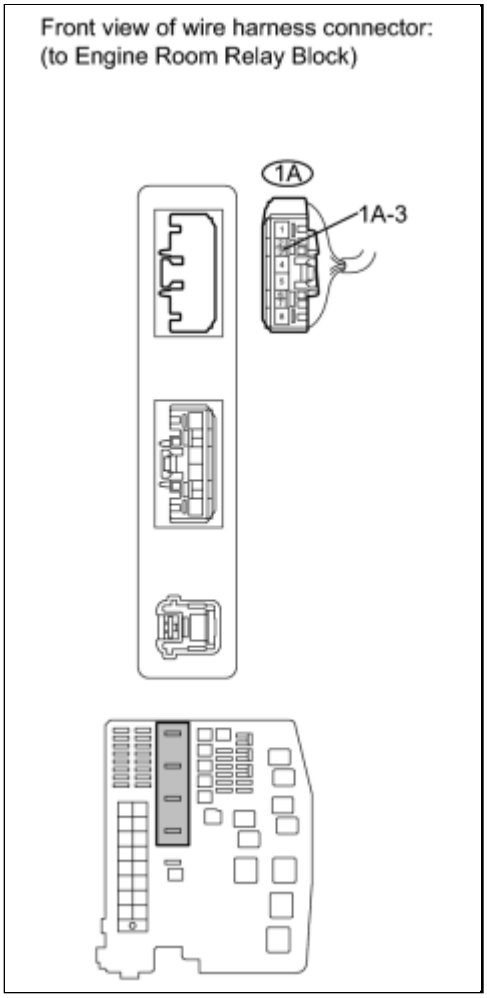
11.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ENGINE ROOM RELAY**

	BLOCK)

(a) Disconnect the E51 connector from the main body ECU (instrument panel junction block).

(b) Disconnect the 1A connector from engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-5 (IG2D) - 1A-2	Always	Below 1 Ω
E51-5 (IG2D) or 1A-2 - Body ground	Always	10 kΩ or higher

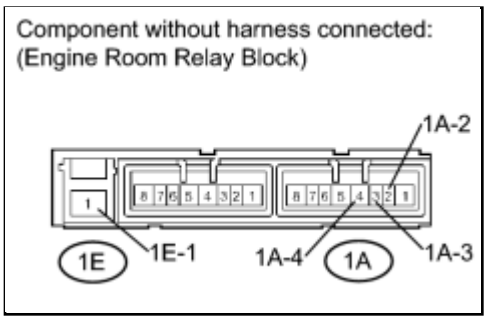
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - ENGINE ROOM RELAY BLOCK)**

OK ▼

12.	CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-3 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - BODY GROUND)**

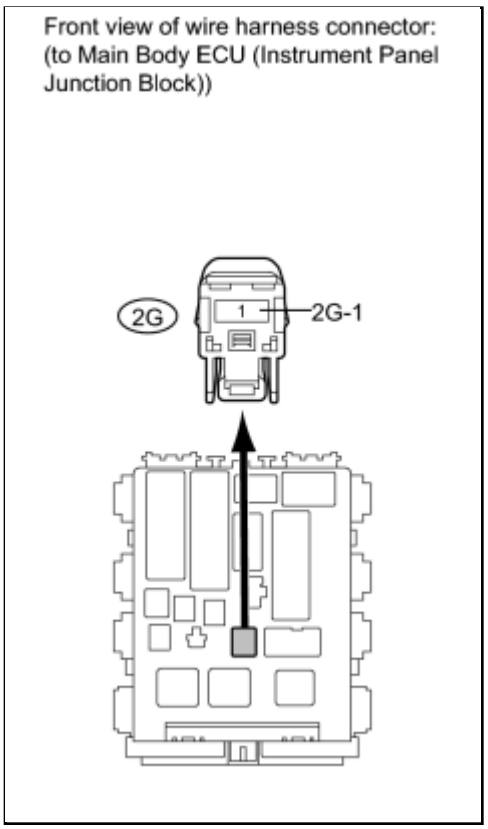
OK ▼

13.	INSPECT ENGINE ROOM RELAY BLOCK (IG2 RELAY)

(a) Remove the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - 1A-4	When battery voltage is not applied to terminals 1A-2 and 1A-3	10 kΩ or higher
1E-1 - 1A-4	When battery voltage is applied to terminals 1A-2 and 1A-3	Below 1 Ω

NG ▶ **REPLACE ENGINE ROOM RELAY BLOCK**

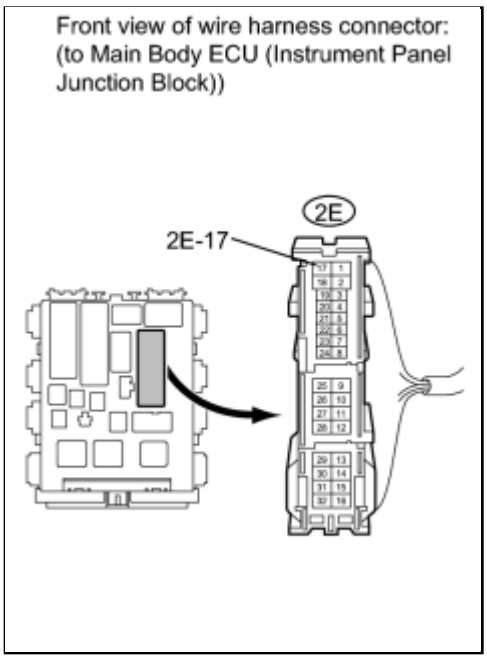
OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

14.	**CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the 2G connector from main body ECU (Instrument panel junction block).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

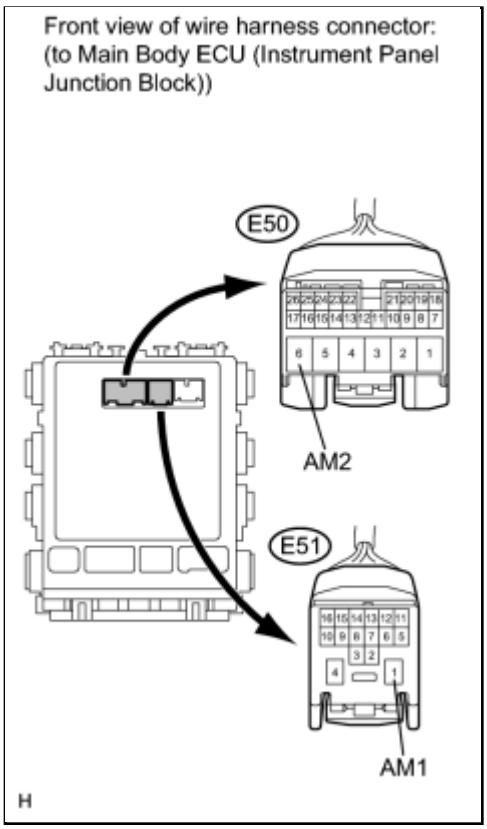
OK ▼

15.	**CHECK HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BODY GROUND)**

(a) Disconnect the 2E connector from main body ECU (instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-17 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BODY GROUND)**

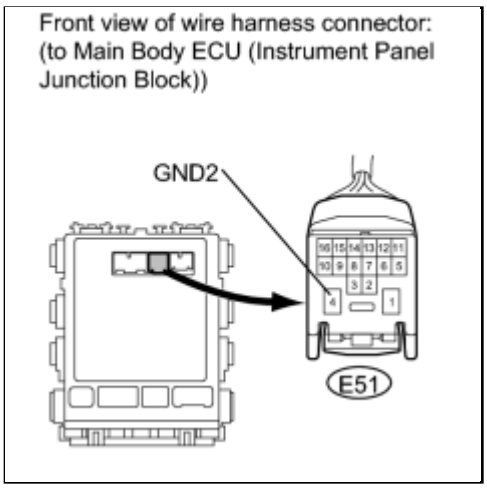
OK ▼

16.	**CHECK HARNESS AND CONNECTOR (BATTERY - MAIN BODY ECU)**

(a) Disconnect the E50 and E51 connectors from the main body ECU (Instrument panel junction block).

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E50-6 (AM2) - Body ground	Always	11 to 14 V
E51-1 (AM1) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - MAIN BODY ECU)**

OK ▼

17.	**CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BODY GROUND)**

(a) Disconnect the E51 connector from main body ECU (Instrument panel junction block).

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E51-4 (GND2) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - BODY GROUND)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

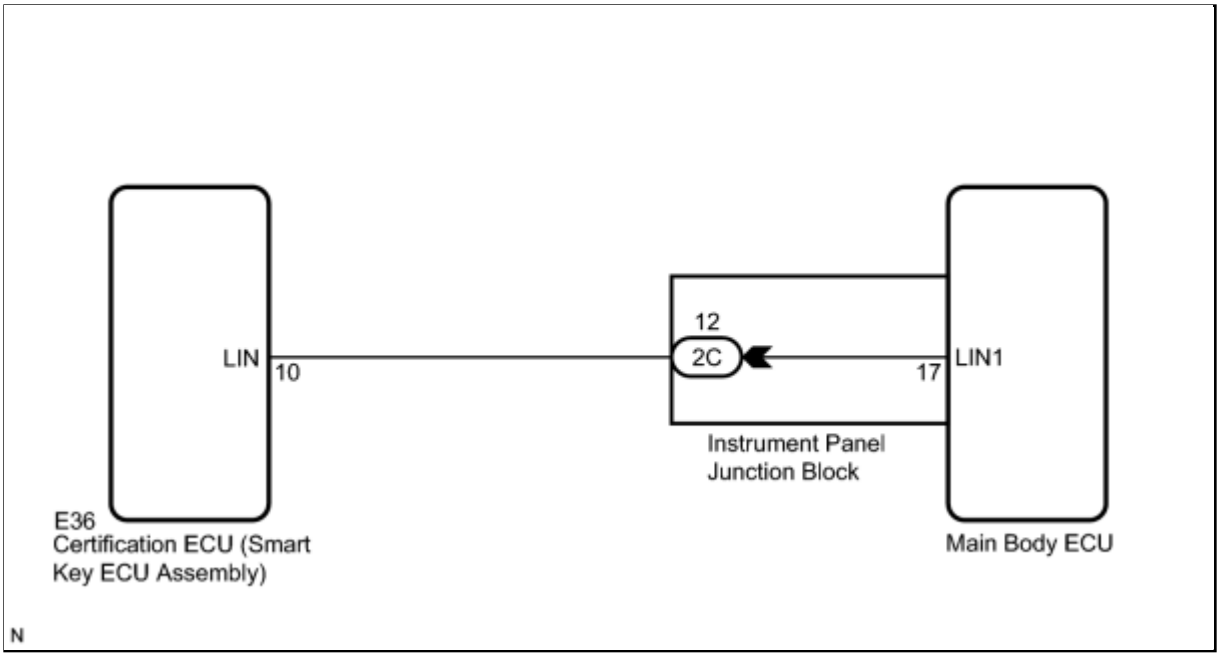
Title: THEFT DETERRENT / KEYLESS ENTRY: SMART KEY SYSTEM (for Start Function): B2289: Key Collation Waiting Time Over (2010 Corolla)		

DTC	**B2289**	**Key Collation Waiting Time Over**

DESCRIPTION



This DTC is output when there is a LIN communication problem between the main body ECU (instrument panel junction block) and certification ECU (smart key ECU assembly) or when there is a problem in the entry function.

HINT:

After the main body ECU (instrument panel junction block) is replaced, perform the registration procedures for the engine immobiliser system INFO **.**

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2289	Either condition below is met: • LIN communication is abnormal between the main body ECU (instrument panel junction block) and the certification ECU (smart key ECU assembly) • The engine immobiliser system is malfunctioning	• Main body ECU (instrument panel junction block) • Smart key system (entry function) • Wire harness or connector • Certification ECU (smart key ECU assembly)

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK FOR DTC**

(a) Clear the DTCs INFO.

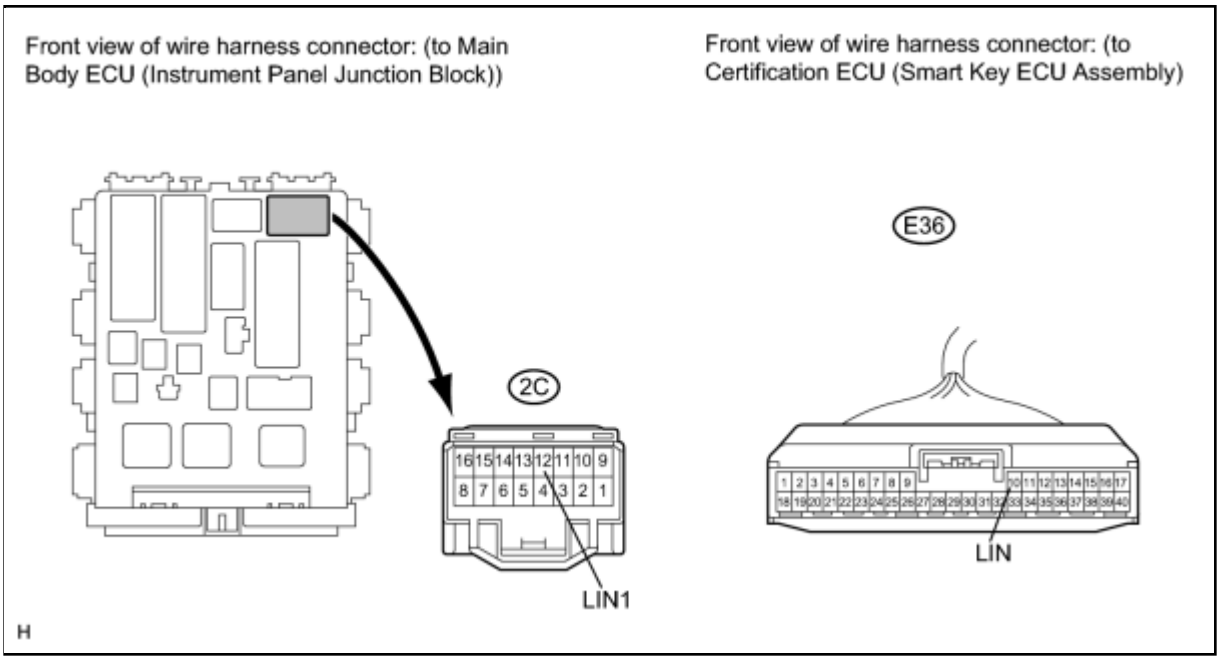
(b) Check for DTC B2289 (Key collection waiting time over) and B2785 (Communication malfunction between ECUs connected by LIN).

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
"DTC B2289" only	A
"DTC B2785" only	B
No DTC	C

HINT:

- If DTC B2785 is output, perform troubleshooting for DTC B2785 first.



C ▶ **USE SIMULATION METHOD TO CHECK**

B ▶ **GO TO DTC B2785**

A

2.	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - CERTIFICATION ECU)

(a) Disconnect the E36 ECU and 2C junction block connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2C-12 (LIN1) - E36-10 (LIN)	Always	Below 1 Ω
2C-12 (LIN1) or E36-10 (LIN) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU - CERTIFICATION ECU)**

OK

3.	**CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK) OPERATION**

(a) After replacing the main body ECU (instrument panel junction block) with a normally functioning ECU, check that the engine starts.

OK:

Engine starts normally.

HINT:

If the engine does not start, refer to Problem Symptoms Table of the smart key system (entry function) (Room Oscillator does not Recognized Key).

NG ▶ **GO TO SMART KEY SYSTEM (ENTRY FUNCTION)**

OK ▶ **END (MAIN BODY ECU DEFECTIVE)**

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT ENGINE SWITCH**

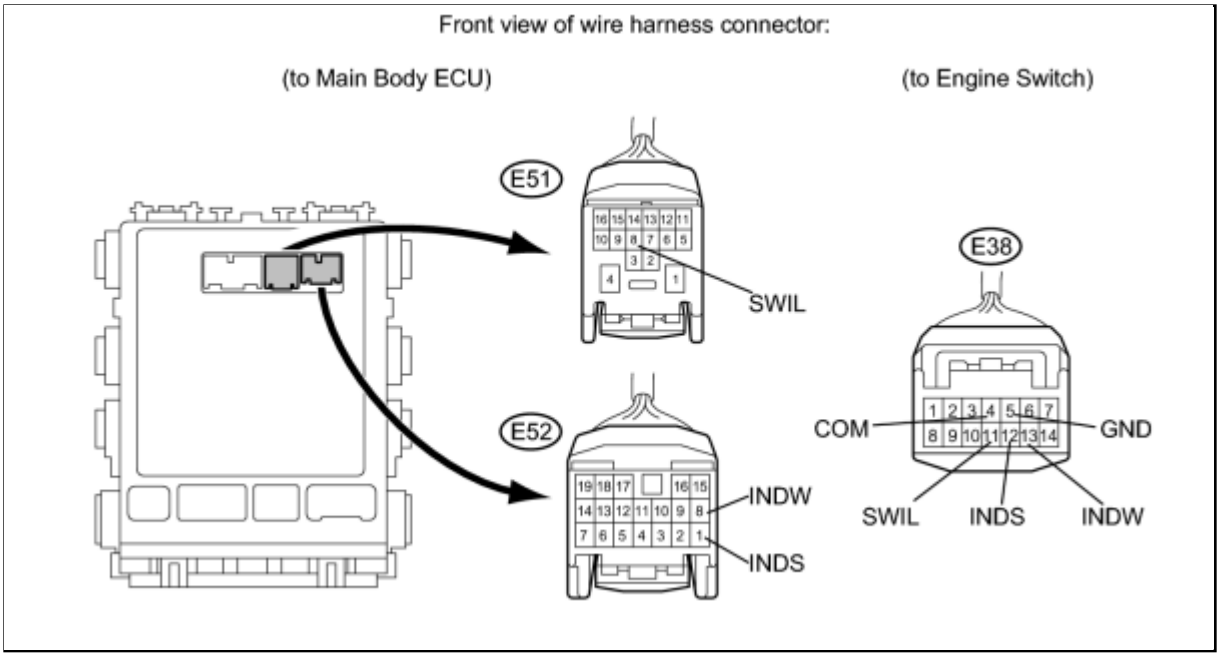
(a) Remove the engine switch INFO .

(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

NOTICE:

- If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator will not illuminate.
- If the voltage is too low, the indicator will not illuminate.

OK:



MEASUREMENT CONDITION	SPECIFIED CONDITION
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 12 (INDS) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 13 (INDW) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates

NG ▶ **REPLACE ENGINE SWITCH**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (ENGINE SWITCH - MAIN BODY ECU AND BODY GROUND)**

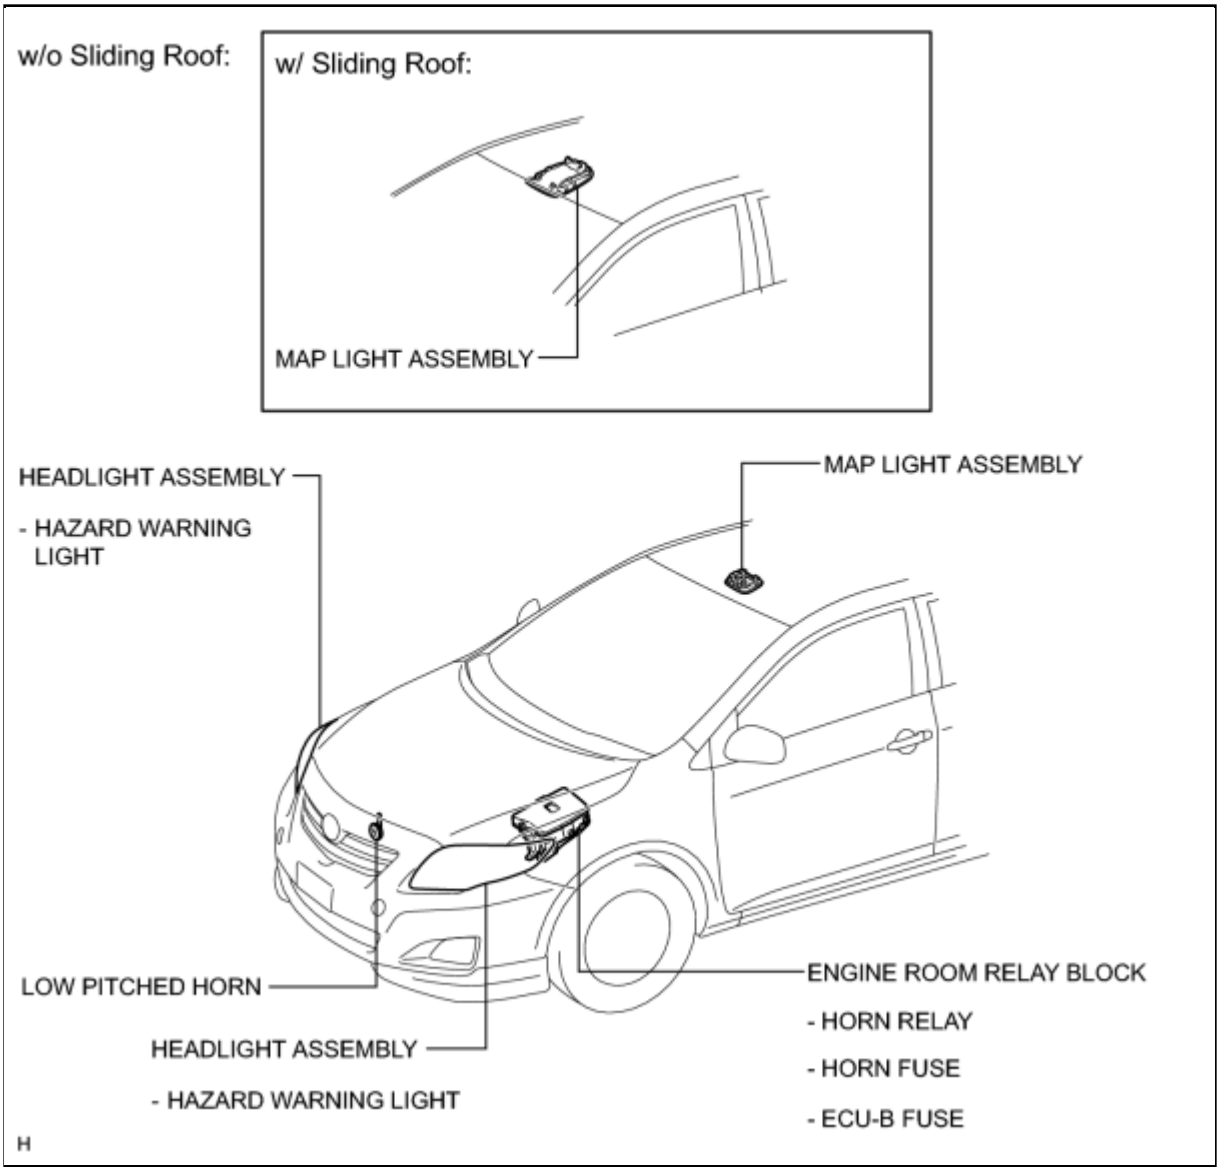
(a) Disconnect the E38 switch connector.

(b) Disconnect the E51 and E52 ECU connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E38-11 (SWIL) - E51-8 (SWIL)	Always	Below 1 Ω
E38-12 (INDS) - E52-1 (INDS)		
E38-13 (INDW) - E52-8 (INDW)		
E38-5 (GND) - Body ground		
E38-4 (COM) - Body ground		
E38-11 (SWIL) or E51-8 (SWIL) - Body ground		10 kΩ or higher
E38-12 (INDS) or E52-1 (INDS) - Body ground		
E38-13 (INDW) or E52-8 (INDW) - Body ground		



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. OUTLINE OF THEFT DETERRENT SYSTEM

- The theft deterrent system can be set by locking the doors using the transmitter or key, or by opening and closing the doors (see Active Arming Mode or Passive Arming Mode for details).
- The alarm function will be activated when someone attempts to forcibly unlock the any of the doors, open any of the doors or the luggage compartment door while the system is in the armed state.
- In the alarm sounding state, the system illuminates the interior light and blinks the hazard warning lights, the headlights and taillights. At the same time, the system sounds the vehicle horn to deter break-in and theft as well as to warn people around the vehicle.
- The alarm can be cancelled by unlocking the doors using the transmitter or key.
- There are two arming modes for this system: active arming mode and passive arming mode. When the active arming mode has been set, the theft deterrent system will be set after the user locks the doors via the transmitter or key. When the passive arming mode has been set, the theft deterrent system will be set after the key is removed and the driver door is closed.

(a) Disarmed state:

- The alarm function is not operating.
- The theft deterrent system is not operating.

(b) Arming preparation state:

- The time until the system goes into the armed state.
- The theft deterrent system is not operating.

(c) Armed state:

- The theft deterrent system is operating.

(d) Alarm sounding state:

- The alarm function is operating.

Alarm time:
Approx. 57 sec.

Refer to the table below for alarm methods and time

Alarm Method	Headlights	Blinking
	Taillights	Blinking
	Hazard Warning Lights	Blinking
	Interior Light	Illuminating
	Vehicle Horn	Sounding (approx. 0.4-second cycles)

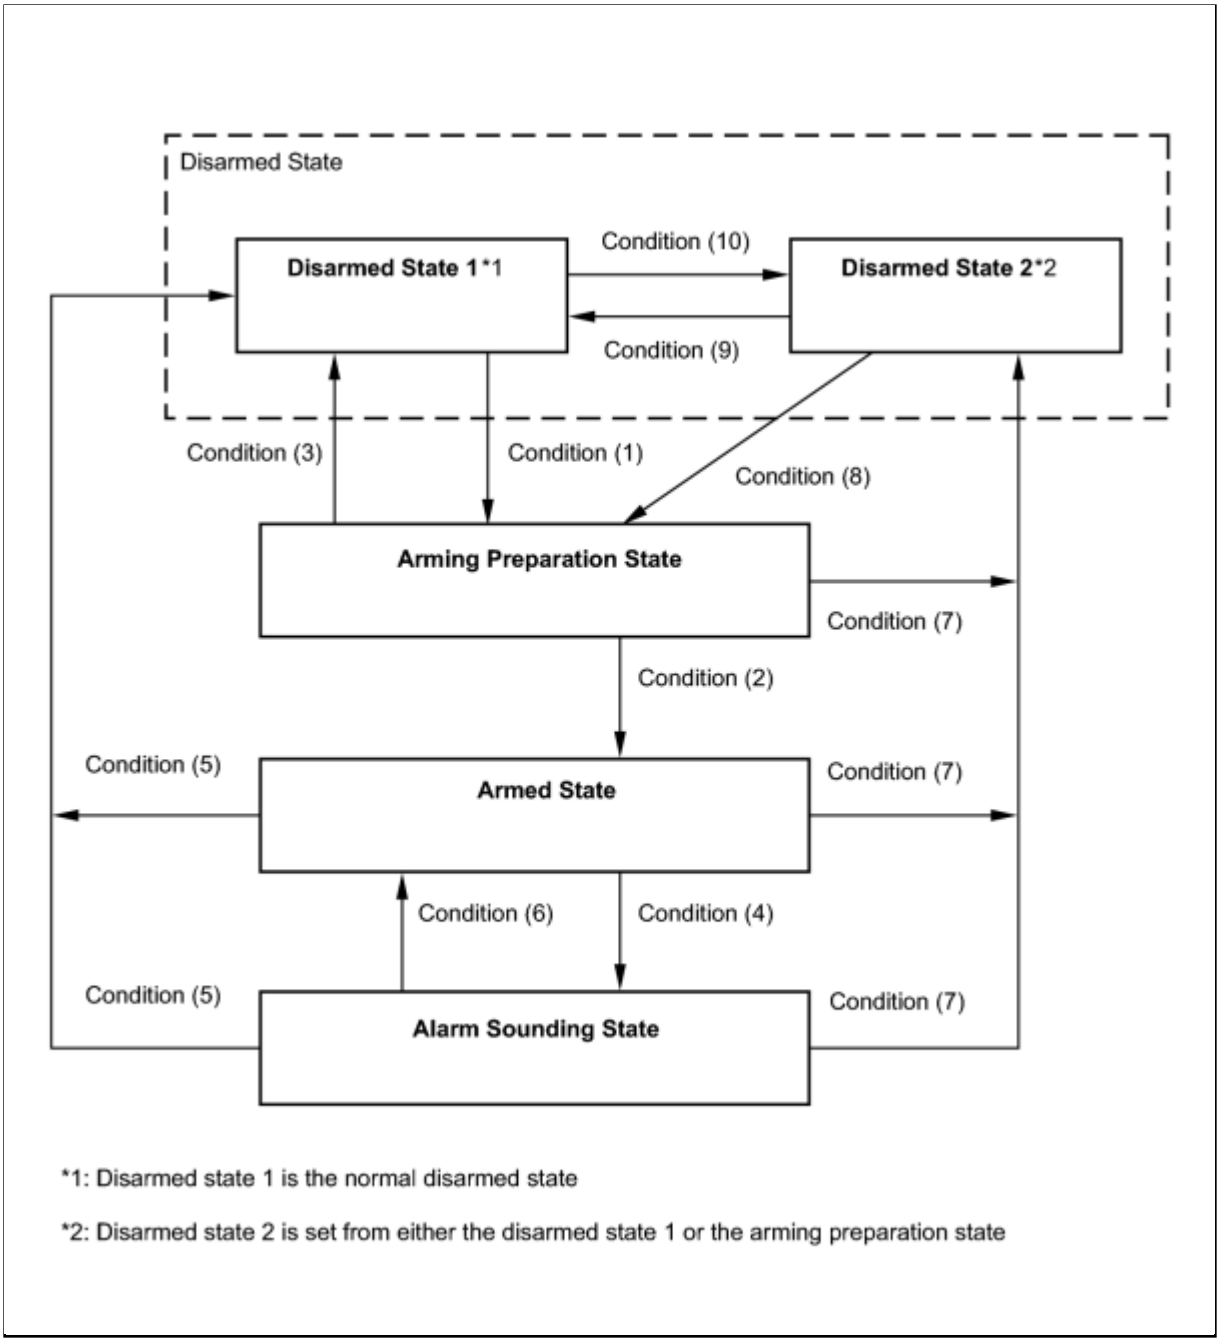
Alarm Time	Approx. 57 sec.

HINT:

If any of the doors are unlocked when the key is not in the key cylinder during the armed state, a forced door lock signal will be output (see Forced Door Lock Control).

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	FUNCTION
Security indicator light	Informs driver of theft deterrent system status.
Headlights	Blink when attempted break-in or theft is detected.
Taillights	• Blink when attempted break-in or theft is detected. • Come on when theft deterrent system has entered into alarm sounding state.
Hazard warning lights	Blink when attempted break-in or theft is detected.
Interior light	Comes on when attempted break-in or theft is detected.
Vehicle horn	Sounds when attempted break-in or theft is detected.
Door courtesy light switch	Detects door status (open or closed).
Door unlock detection switch	Detects door status (locked or unlocked).
Luggage courtesy switch	Detects luggage compartment door status (open or closed).
Glass breakage sensor	When detecting that any door glass is tapped or broken, the glass breakage sensor microphone sends an analog signal to the glass breakage sensor ECU assembly. After receiving the analog signal, the glass breakage sensor ECU assembly sends a signal to the theft warning ECU assembly to sound the alarm.



3. ACTIVE ARMING MODE

HINT:

Active arming mode starts the alarm control immediately after the doors are locked.

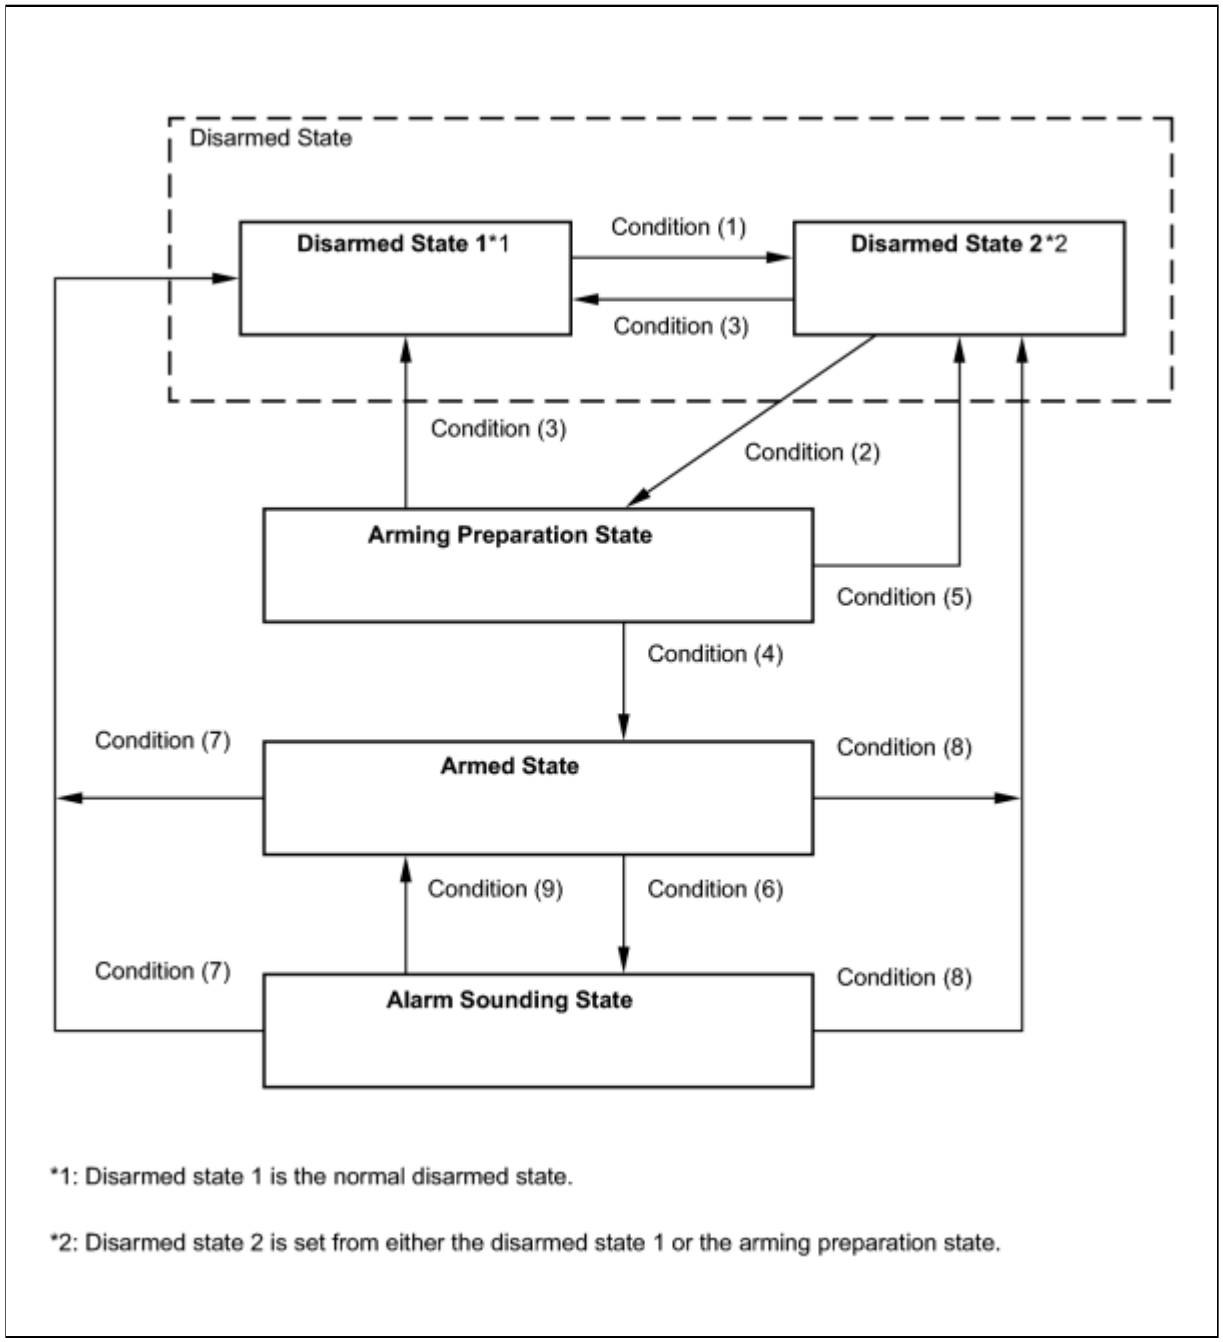
(a) Active arming mode:

This system operates as described in the diagram below when one of the items for each condition is met.

CONDITION	ITEM
Condition (1)	In the disarmed state, the system state is switched if one of the following conditions is met when the key is not in the ignition key cylinder: • With all doors and luggage compartment door closed, all doors are locked by key operation. • With all doors and luggage compartment door closed, all doors are locked by wireless operation. • With all door lock position switches locked and luggage compartment door closed, all doors are closed.
Condition (2)	Approx. 30 seconds elapse after condition (1) is met.

CONDITION	ITEM
Condition (3)	• A wireless unlock signal is received. • All doors are unlocked by key operation. • Any door is unlocked. • Any door is opened. • The luggage compartment is opened. • The key is inserted into the ignition key cylinder. • The ignition switch is turned to ON or ACC. • The battery is reconnected.
Condition (4)	• The battery is reconnected. • The luggage compartment is opened. • Any door is opened. • Any door is unlocked when all doors are locked without using the key. • Any door is unlocked when all doors are locked without using the wireless operation. • Glass breakage sensor impacts to or breakage of the glass.
Condition (5)	• A wireless unlock signal is received. • All door are unlocked by key operation. • The ignition switch is turned to ON and the engine is run for more than 2 seconds.
Condition (6)	Approx. 57 seconds elapse. (The alarm stops and the system returns to the armed state.)
Condition (7)	• Luggage compartment door is opened by wireless trunk opener operation. • Luggage compartment door is opened by key operation.
Condition (8)	• Luggage compartment door is closed.
Condition (9)	• Any door is unlocked when all doors are locked. • Any door is opened. • The key is inserted into the ignition key cylinder. • The ignition switch is turned to ON or ACC. • The battery is reconnected. • All doors are unlocked by wireless operation. • All doors are unlocked by key operation.
Condition (10)	In the disarmed state, the system state is switched if one of the following conditions is met when the key is not in the ignition key cylinder: • With all doors closed and luggage compartment door opened, all doors are locked by key operation. • With all doors closed and luggage compartment door opened, all doors are locked by wireless operation. • With all doors lock position locked and luggage compartment door opened, all doors are closed.

4. PASSIVE ARMING MODE



HINT:

- Passive arming mode starts the alarm control after the key is removed from the key cylinder and the doors are closed.
- Passive arming mode can be switched ON/OFF using the Techstream.
- The alarm is initially set (when shipped from the factory) to active arming mode (not passive arming mode).

- During passive arming mode, the theft deterrent system goes into the armed state even if the doors are not locked.
- Detecting that the doors are unlocked does not set off the alarm during passive arming mode.
- A forced door lock signal is not output during passive arming mode (see Forced Door Lock Control).
- Although the theft deterrent system detects that the doors are opened during passive arming mode, the alarm will not go off immediately because an entry delay time is set.
- If condition (1) of active arming mode is met during passive arming mode, the theft deterrent system will switch to active arming mode.

(a) Passive arming mode:

This system operates as described in the diagram below when one of the items for each condition is met.

CONDITION	ITEM
Condition (1)	• With the ignition switch off, any door is opened and then the key is removed from the ignition key cylinder. • With the ignition switch off, the key is removed from the ignition key cylinder and then any door is opened.
Condition (2)	• With luggage compartment door closed, all doors are closed. • With all doors closed, luggage compartment door is closed.
Condition (3)	• A wireless unlock signal is received. • All doors are unlocked by key operation. • The battery is reconnected. • The key is inserted into the ignition key cylinder. • The ignition switch is turned to ON or ACC.
Condition (4)	Approx. 30 seconds elapse after condition (1) is met.
Condition (5)	• Any door is opened. • Luggage compartment door is opened by key operation. • Luggage compartment door is opened by wireless trunk opener operation.
Condition (6)	• Any door is opened and the entry delay time* elapse. • Luggage compartment door is opened. • The battery is reconnected. • The ignition switch is turned to ON without using the key. • The ignition switch is turned to ON within 5 seconds after it is turned off.
Condition (7)	• A wireless unlock signal is received. • All doors are unlocked by key operation. • The ignition switch is turned to ON and the engine is run for more than 2 seconds. • Insert the key into the ignition key cylinder and turn the ignition switch to ON.
Condition (8)	• Luggage compartment door is opened by key operation. • Luggage compartment door is opened by wireless trunk opener operation.
Condition (9)	Approx. 57 seconds elapse. (The alarm stops and the system returns to the armed state.)

- *: When any door is opened while all the doors are closed during passive arming mode, the entry delay time starts. If the switch condition (armed state → disarmed state (1) or (2)) is met during the entry delay time, the theft deterrent system will return to disarmed state (1) or (2). However, if the switch condition for disarmed state (1) or (2) is not met, the theft deterrent system will recognize it as a theft and set off the alarm. Entry delay time of 0, 14 or 30 sec. can be selected by the customizing function.

5. FORCED DOOR LOCK CONTROL

(a) The forced door lock control prevents the vehicle from being tampered with. Immediately after a door is unlocked (alarm starts), all doors are forced to lock by a forced door lock signal.

(1) Conditions that force the doors to lock:

The key is not in the key cylinder and both of the following conditions are met:

- The theft deterrent system is in the alarm sounding state of active arming mode.
- Any door is unlocked.

6. ALARM MEMORY FUNCTION

(a) If the alarm is set off (tampering is detected) while the theft deterrent system is armed, it will be recorded by the alarm memory function. Whenever the theft deterrent system is cancelled, the alarm memory function causes the taillights to light up for 2 seconds in order to inform you that the alarm has been set off.

(1) Conditions of the alarm memory function that cause the taillights to light up for 2 seconds:

- When the theft deterrent system has entered into the alarm sounding state (tempering has been detected) even once.
- When switched to disarmed state 1 from the armed state during passive arming mode.

HINT:

Active arming mode: See Active Arming Mode.

Passive arming mode: See Passive Arming Mode.

7. PANIC ALARM CONTROL

(a) The panic alarm control makes it possible to voluntarily set off the panic alarm by pressing the panic switch on the wireless transmitter.

(1) When the PANIC switch on the wireless transmitter is pressed, the panic alarm control sets off the panic alarm if any of the following conditions is met:

- The ignition switch is off.
- The theft deterrent system is not in the alarm sounding state. (This condition is common both to active arming mode and to passive arming mode.)

(2) Conditions that cause the panic alarm control to shut off the alarm:

The panic alarm control shuts off the panic alarm when any of the following conditions is met during panic alarm operation:

- The ignition switch is turned to ON.
- The panic alarm switch is turned on again.
- Either of the switches on the wireless transmitter (LOCK/UNLOCK/TRUNK OPENER) is pressed.
- The panic alarm ends (approx. 57 sec. have elapsed).
- The theft deterrent system switches to the alarm sounding state. Under this condition, the theft deterrent system is controlling the alarm rather than the panic alarm control. In order to cancel this alarm, refer to the theft deterrent system alarm sounding state cancellation procedure. (This condition is common both to active arming mode and to passive arming mode.)

HINT:

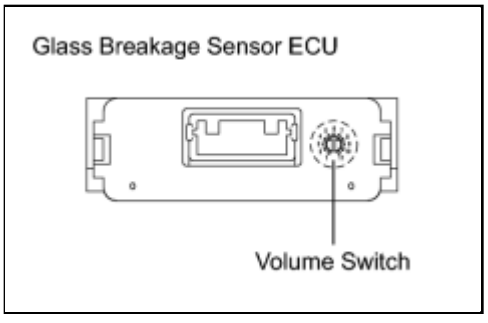
- Active arming mode: See Active Arming Mode.
- Passive arming mode: See Passive Arming Mode.

8. SECURITY INDICATOR OUTPUT

(a) The main body ECU outputs a signal to come on the security indicator light assembly, according to the state of the theft deterrent system. However, some of the actual lighting conditions of the security indicator light assembly are different from the output signals of the main body ECU.

Output

STATE OF THEFT DETERRENT SYSTEM	SECURITY INDICATOR	
	OUTPUT SIGNAL FROM MAIN BODY ECU	ACTUAL LIGHTING CONDITION
Disarmed state (1), (2)	OFF	OFF (Immobiliser system unset) BLINKING (Immobiliser system set)
Arming preparation state	ON	ON
Armed state	OFF	BLINKING
Alarm sounding state	ON	ON



Blinking Cycle

TIME	SECURITY INDICATOR
0.25 sec.	ON
1.8 sec.	OFF

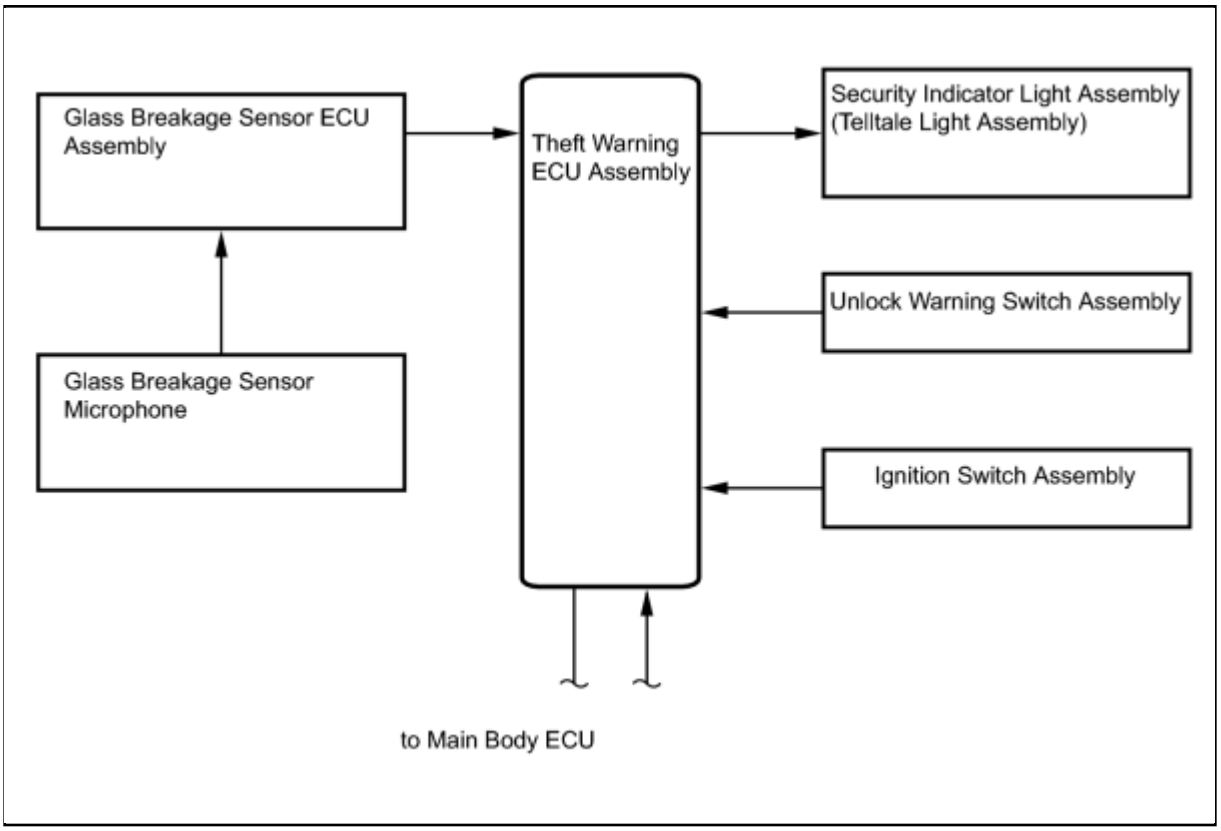
HINT:

When the immobiliser system is set, the security indicator light assembly blinks during both the disarmed state and the armed state, due to output signals from the immobiliser system.

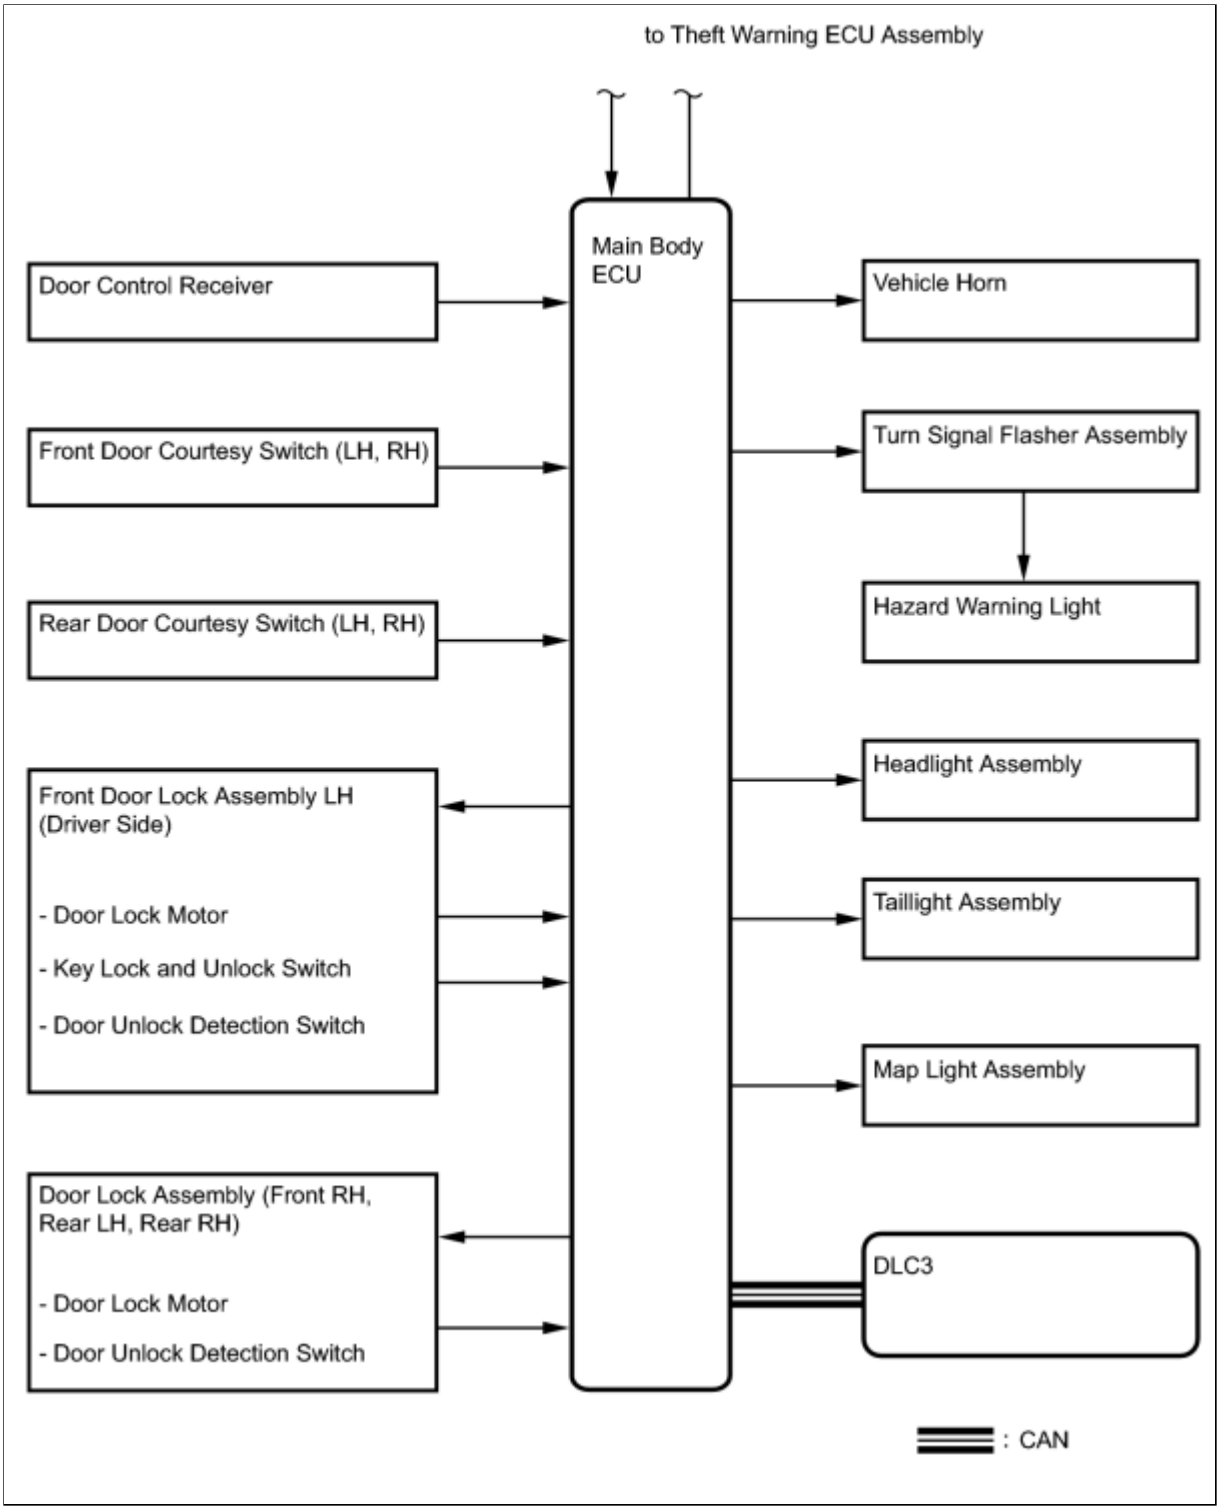
9. GLASS BREAKAGE SENSOR

(a) The glass breakage sensor detects impacts or breakage of the glass. If the sensor detects any impacts or breakage while the theft deterrent system is functioning, it will sound an alarm for 57 seconds.

(b) The sensitivity of the glass breakage sensor can be adjusted by the volume switch in the glass breakage sensor ECU.



HINT:



The glass breakage sensor may issue a false alarm if the sensor sensitivity is set too high.

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: CUSTOMIZE PARAMETERS (2010 Corolla)		

CUSTOMIZE PARAMETERS

HINT:

The following items can be customized.

NOTICE:

- After confirming whether the items requested by the customer are applicable or not for customization, perform customizing operations.
- Be sure to record the current settings before customization.
- When troubleshooting, make sure that the item in question is not set to "OFF" as a result of customization (Example: For the system, "the wireless function does not operate", first check that the wireless function is not set to "OFF", then perform troubleshooting).

1. CUSTOMIZE

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Customize Setting.

(e) Select the setting by referring to the table below.

Security

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
Passive Mode	OFF	• Passive Mode is a function that switches the theft deterrent system from the arming preparation state to the armed state 30 seconds after the key is removed from the key cylinder and all doors and luggage compartment door are closed, even if the doors are not locked by wireless or door key lock operation. • In Passive Mode, if the following operations are not performed within 14 seconds after a door is opened during the armed state, the theft deterrent system will judge that condition as a theft and switch to the alarm sounding state. • Unlock any door by key or wireless operation • Turn the ignition switch to ON • Open the luggage compartment door by key or wireless operation	ON/OFF
Warning by Glass Sen	ON	Function that turns the glass breakage sensor on/off this function is only effective for vehicles with glass breakage sensor.	ON/OFF

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
Entry Delay Time	14 s	Function that changes entry delay time (time before warning starts) for Passive Mode	0 s/14 s/30 s

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: TERMINALS OF ECU (2010 Corolla)		

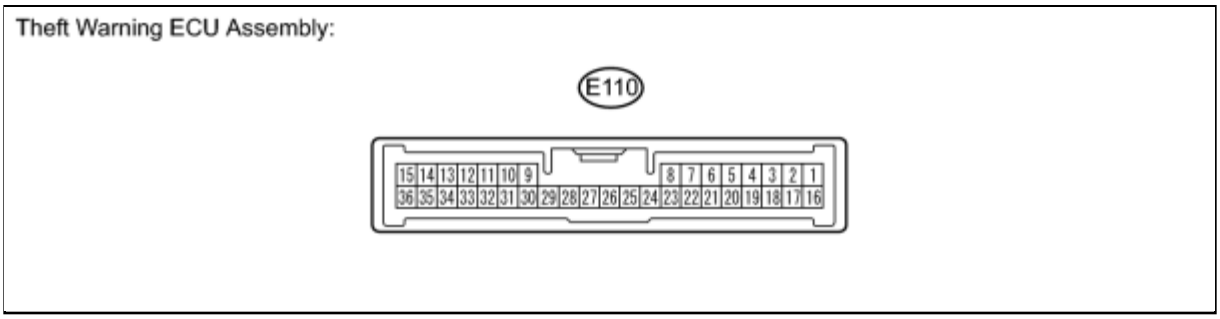
TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2A, 2B, 2E, 2F, 2G and E61 junction block connectors and main body ECU connector.

(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2H-7 (LGCY) - Body ground	LG - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2A-21 (DCTY) - Body ground	V - Body ground	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2B-30 (BECU) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
2E-19 (RCTY) - Body ground	Y - Body ground	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
2E-20 (PCTY) - Body ground	BR - Body ground	Passenger side courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2F-5 (ACC) - Body ground	L - Body ground	Ignition power supply (ACC signal)	Ignition switch ACC → off	11 to 14 V → Below 1 V
2G-1 (IG) - Body ground	W - Body ground	Ignition power supply (IG signal)	Ignition switch ON → off	11 to 14 V → Below 1 V
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E61-13 (LCTY) -Body ground	B - Body ground	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

HINT:

If the result is not as specified, there may be a malfunction on the wire harness side.

2. CHECK THEFT WARNING ECU ASSEMBLY

(a) Disconnect the E110 theft warning ECU assembly connector.

(b) Measure the voltage and resistance between each terminal of the wire harness side connectors and body ground.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E110-7 (KSW) - E110-16 (E)	L - W-B	Unlock warning switch input	No key in ignition key cylinder (OFF) → Key inserted (ON)	10 kΩ or higher → Below 1 Ω
E110-9 (IG) - E110-16 (E)	L -W-B	Ignition power supply (IG signal)	Ignition switch ON → off	11 to 14 V → Below 1 V
E110-11 (+B1) - E110-16 (E)	R - W-B	+B power supply	Always	11 to 14 V
E110-16 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E110 theft warning ECU assembly connector.

(d) Measure the voltage between each terminal of the connector.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E110-24 (BRK+) - E110-16 (E)	LG - W-B	Alarm BERKES communication	Theft deterrent system is in alarm sounding state	Pulse generation (1.5 V ← → Below 1.2 V)
E110-25 (BRK-) - E110-16 (E)	W - W-B	Alarm BERKES communication	All doors are locked using key (Theft deterrent system is in arming preparation state.)	Pulse generation (1.5 V ← → Below 1.2 V)
E110-29 (IND) - E110-16 (E)	Y - W-B	Security indicator output	Security indicator light assembly in on (It comes on only in arming preparation state or alarm sounding state. It flashes when immobiliser is operating.)	3 to 6 V
E110-3 (GBS) - E110-16 (E)	BE - W-B	Glass breakage sensor ECU communication	Armed state → Alarm sounds (on glass breakage detection)	Below 1 V → Pulse generation

Last Modified: 3-10-2010	6.4 D	**From:** 200901

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU stores trouble codes when trouble occurs on the vehicle.

The diagnostic system allows for reading of the trouble codes from the DLC3.

Use the Techstream to check and solve the problem.

2. CHECK DLC3

(a) Check the DLC3 INFO .

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001NN601NX
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (USING TECHSTREAM)

(a) DTC check

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON .

(3) Read DTCs on the Techstream screen.

(b) DTC clear

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Clear the DTCs following the prompts on the Techstream screen.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001PQY01OX
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body or Security / Data List.

(e) According to the display on the Techstream, read the Data List.

Main Body

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
D Door Courtesy SW	D door courtesy switch / ON or OFF	ON: Driver door is OPEN OFF: Driver door is CLOSED	-
P Door Courtesy SW	P door courtesy switch / ON or OFF	ON: Front passenger side door is OPEN OFF: Front passenger side door is CLOSED	-
RR Door Courtesy SW	Rear right door courtesy switch / ON or OFF	ON: Rear right door is OPEN OFF: Rear right door is CLOSED	-
RL Door Courtesy SW	Rear left door courtesy switch / ON or OFF	ON: Rear left door is OPEN OFF: Rear left door is CLOSED	-
D-Door Lock Pos SW	Driver's door lock position switch / ON or OFF	ON: Driver door is UNLOCKED OFF: Driver door is LOCKED	-
P-Door Lock Pos SW	Passenger door lock position switch / ON or OFF	ON: Front passenger door is UNLOCKED OFF: Front passenger door is LOCKED	-

Security

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Glass Sensor Detection	Glass breakage sensor detection / ON or OFF	ON: Glass breakage sensor operates OFF: Glass breakage sensor does not operate	-
Key Unlock Warning SW	Unlock warning switch signal / ON or OFF	ON: Key is inserted in the ignition key cylinder OFF: Key is removed from the ignition key cylinder	-

Warning by Glass Sensor	Warning by glass breakage sensor / ON or OFF	ON: Warns when glass breakage is detected OFF: Does not warn when glass breakage is detected	-
Entry Delay Time	Entry delay time during passive mode	0s: Entry delay time is 0 sec. 14s: Entry delay time is 14 sec. 30s: Entry delay time is 30 sec.	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Main Body or Security / Active Test.

(e) According to the display on the Techstream, perform the Active Test.

Main Body

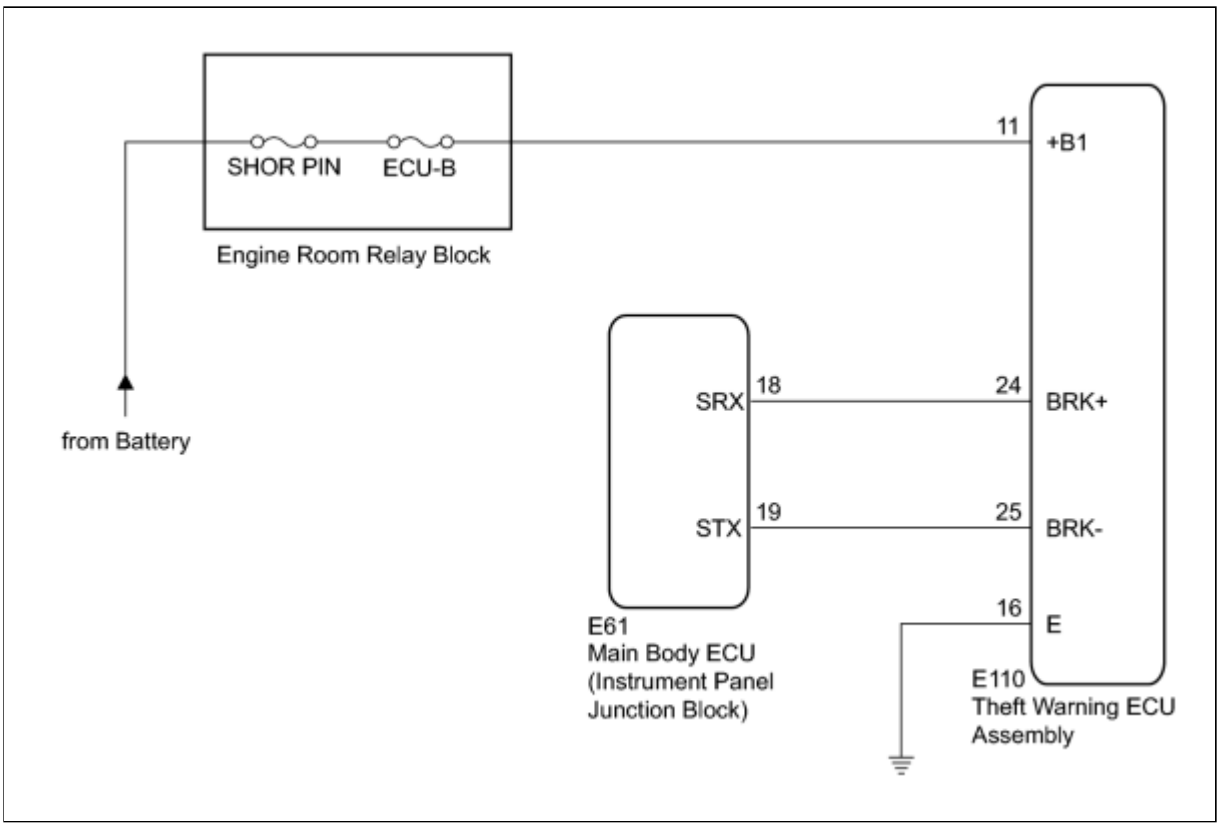
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: B1269: Theft Deterrent ECU Communication Stop (2010 Corolla)		



DTC	**B1269**	**Theft Deterrent ECU Communication Stop**

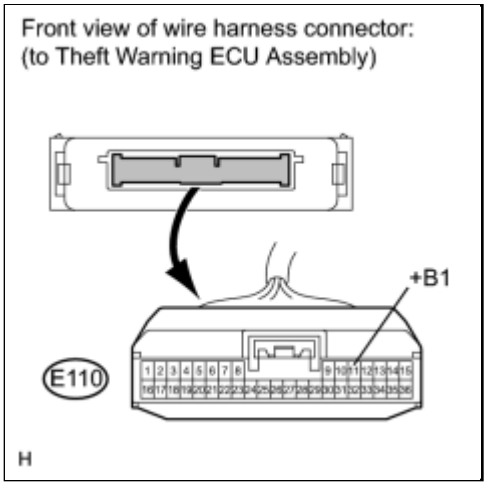
DESCRIPTION

DTC B1269 is stored when the communication between the theft warning ECU assembly and the main body ECU stops for more than 10 seconds.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B1269	No communication from theft warning ECU assembly for more than 10 seconds.	• Wire harness and connector • Theft warning ECU assembly • Main body ECU (instrument panel junction block)

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

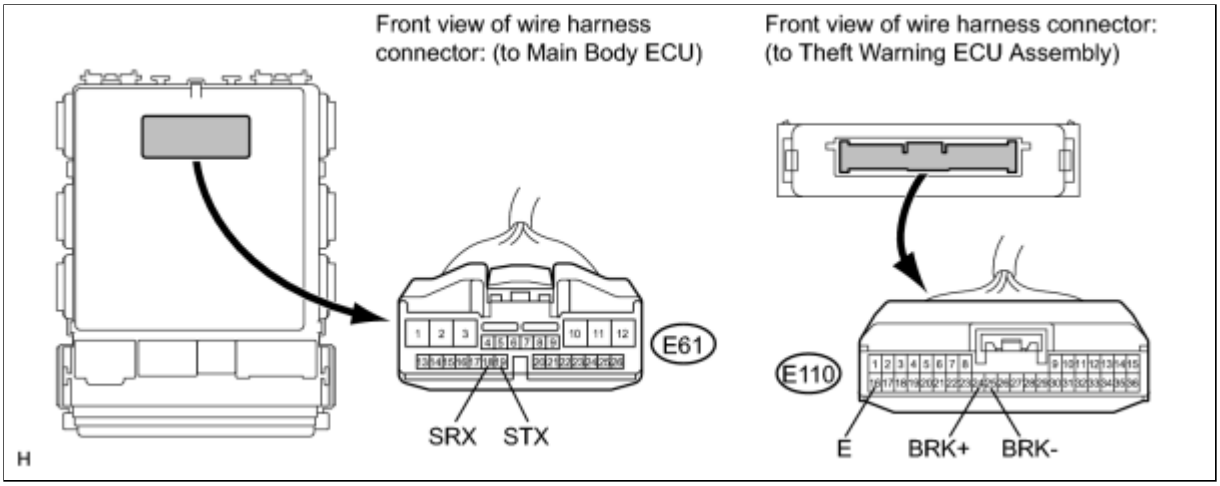
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (BATTERY VOLTAGE)**

(a) Disconnect the E110 theft warning ECU assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-11 (+B1) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - MAIN BODY ECU)**

(a) Disconnect the E61 main body ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-24 (BRK+) - E61-18 (SRX)	Always	Below 1 Ω
E110-25 (BRK-) - E61-19 (STX)	Always	Below 1 Ω
E110-24 (BRK+) - Body ground	Always	10 kΩ or higher
E110-25 (BRK-) - Body ground	Always	10 kΩ or higher
E110-16 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**CONFIRM DTC**

(a) Clear the DTC INFO .

(b) Check if the same DTC is detected.

HINT:

Reinstall the sensors, connectors, etc. and restore the previous vehicle conditions before rechecking for DTCs.

Result:

RESULT	PROCEED TO

RESULT	PROCEED TO
DTC is output	A
DTC is not output	B

B ▶ **USE SIMULATION METHOD TO CHECK**

A

4.	**REPLACE THEFT WARNING ECU ASSEMBLY**

(a) Replace the theft warning ECU assembly INFO

NEXT

5.	**CONFIRM DTC**

(a) Clear the DTC INFO .

(b) Check if the same DTC is detected.

HINT:

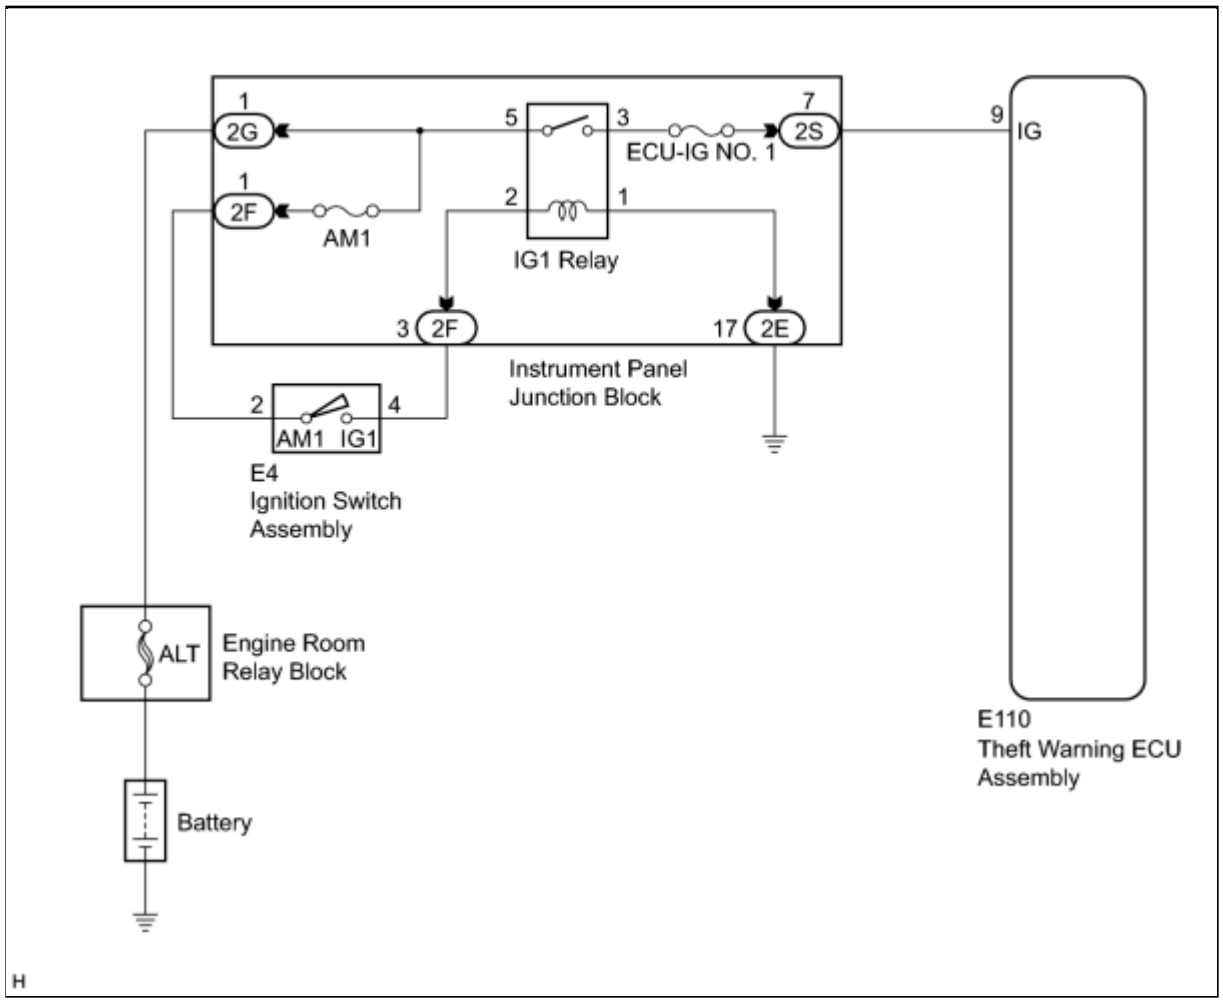
Reinstall the sensors, connectors, etc. and restore the previous vehicle conditions before rechecking for DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC is output	B

B ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)**

A ▶ **END**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Ignition Switch Circuit (2010 Corolla)		

Ignition Switch Circuit

DESCRIPTION

The theft warning ECU assembly determines the ignition switch assembly (off, ON) based on signals from the IG circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

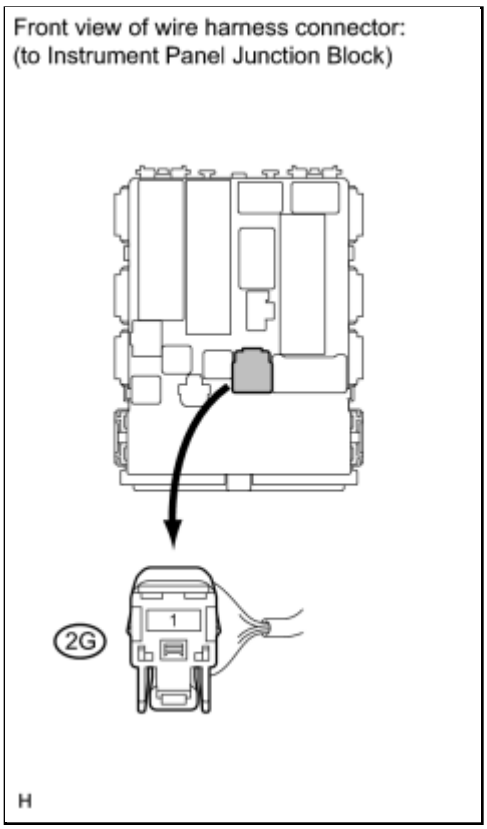
(c) Turn the Techstream on.

(d) Select the items below in the Data List and read the display on the Techstream.

Security

ITEM	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
IG SW	Ignition switch ON signal ON/OFF	ON: Ignition switch is ON OFF: Ignition switch is off	-

OK:



When the ignition switch assembly is operated, the display changes as shown in the table.

NG ▶ **CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

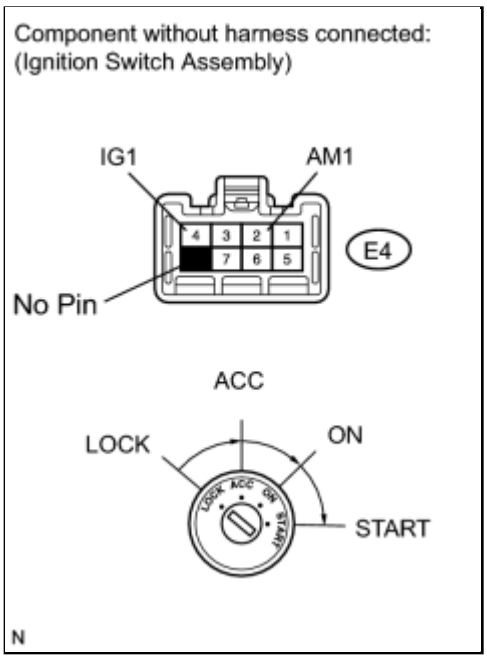
OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the 2G instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2G-1 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR OR ALT FUSE**

OK ▼

3.	**INSPECT IGNITION SWITCH ASSEMBLY**

(a) Disconnect the E4 ignition switch assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

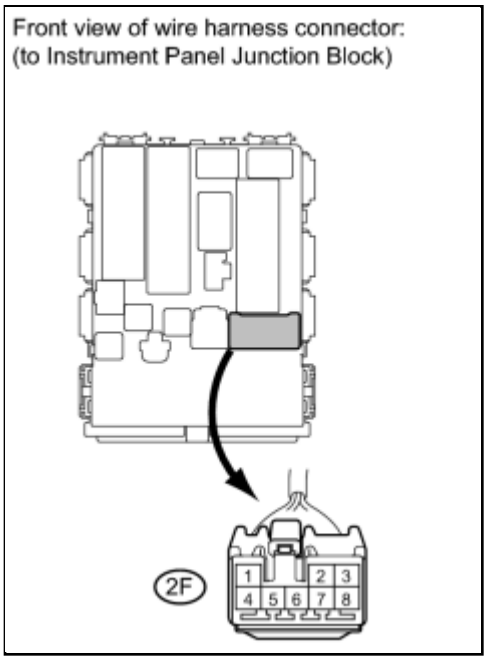
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-2 (AM1) - E4-4 (IG1)	Ignition switch ON	Below 1 Ω
E4-2 (AM1) - E4-4 (IG1)	Ignition switch off	10 kΩ or higher

Result:

RESULT	PROCEED TO
OK	A
NG (2AZ-FE)	B
NG (2ZR-FE)	C

C ▶ **REPLACE IGNITION SWITCH ASSEMBLY (2ZR-FE)**



B ▶ **REPLACE IGNITION SWITCH ASSEMBLY (2AZ-FE)**

A ▼

4.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B - INSTRUMENT PANEL**

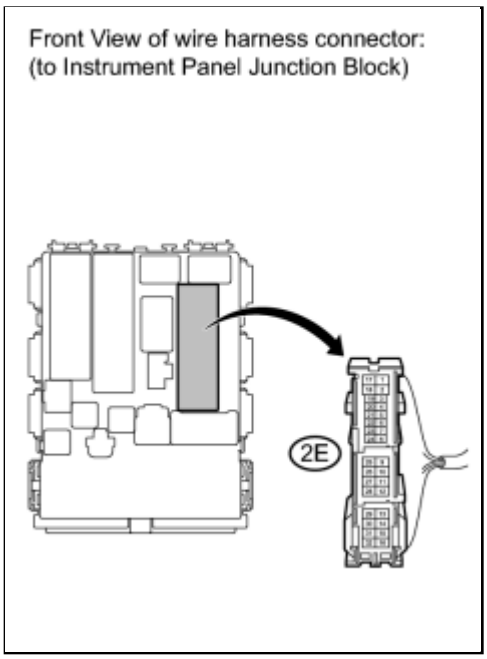
	J/B)

(a) Reconnect the E4 ignition switch assembly connector.

(b) Disconnect the 2F instrument panel junction block connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2F-1 - 2F-3	Ignition switch ON	Below 1 Ω
2F-1 - 2F-3	Ignition switch off	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

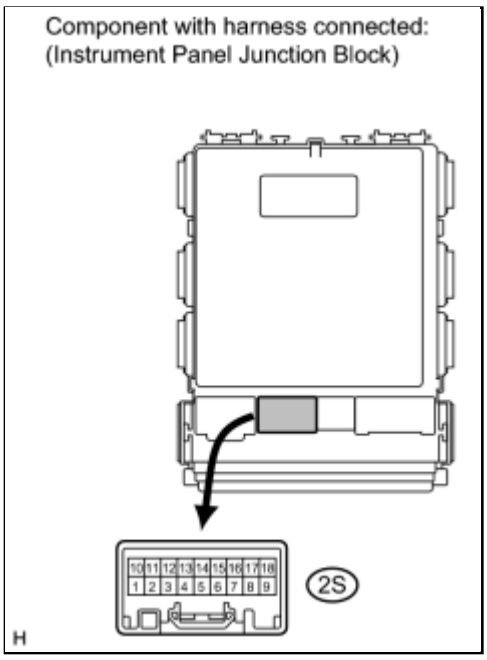
OK ▼

5.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - BODY GROUND)**

(a) Disconnect the 2E instrument panel junction block connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2E-17 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

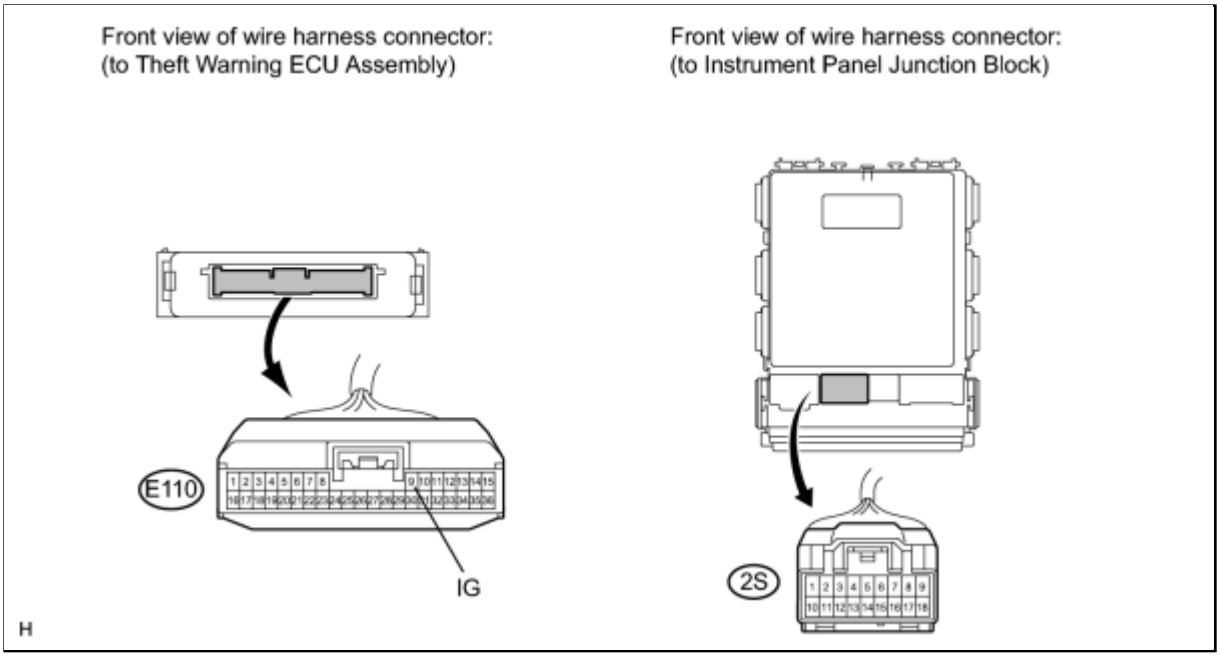
OK ▼

6.	**INSPECT MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK (IG SIGNAL))**

(a) Reconnect the 2G, 2F and 2E instrument panel junction block connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2S-7 - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the E110 theft warning ECU assembly and 2S instrument panel junction block connectors.

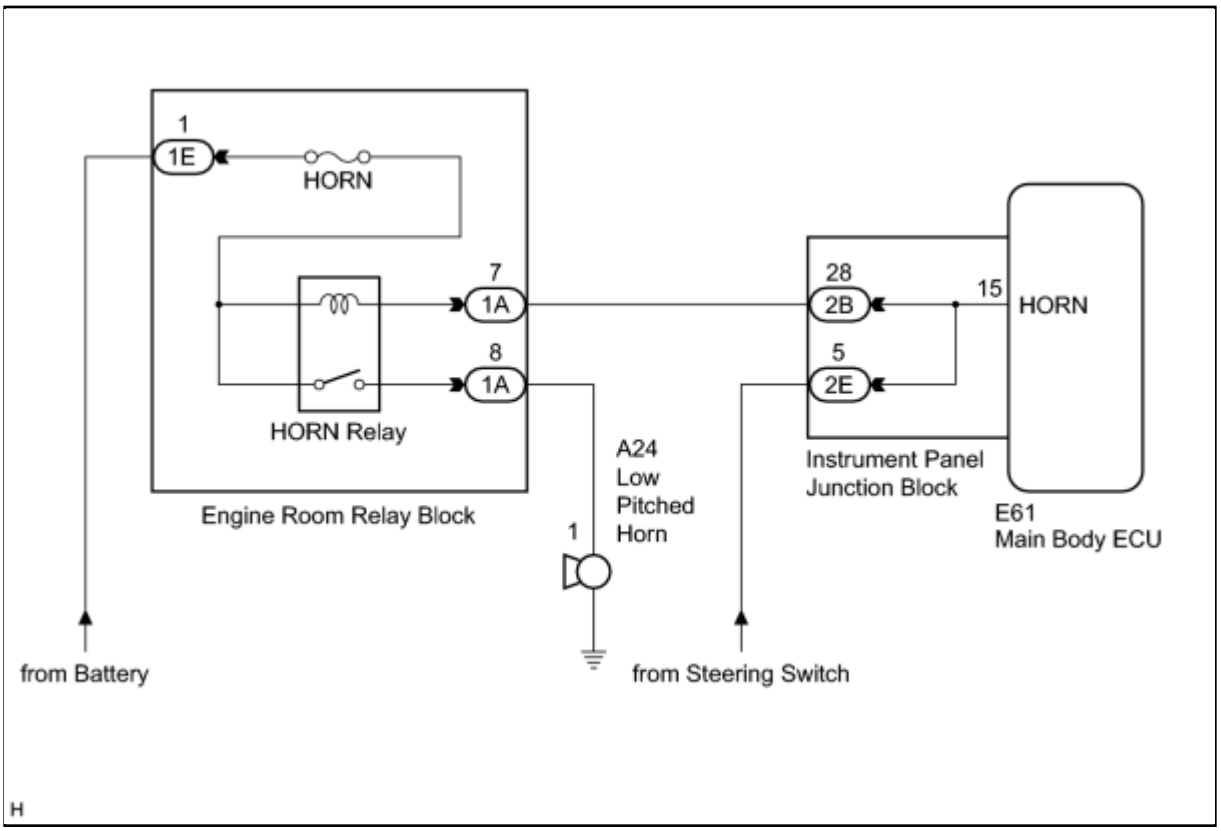
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-9 (IG) - 2S-7	Always	Below 1 Ω
E110-9 (IG) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE THEFT WARNING ECU ASSEMBLY**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001PR402HX
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Horn Circuit (2010 Corolla)		

Horn Circuit

DESCRIPTION

When the theft deterrent system is switched from the armed state to the alarm sounding state, the main body ECU transmits a signal to cause the horn to sound at intervals of 0.4 seconds.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

PROCEDURE

1.	**INSPECT HORN**

(a) Press the horn switch and check if the horn sound.

Result:

RESULT	PROCEED TO
Horn sounds	A
Horn does not sound	B

B ▶ **GO TO HORN SYSTEM**

A ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

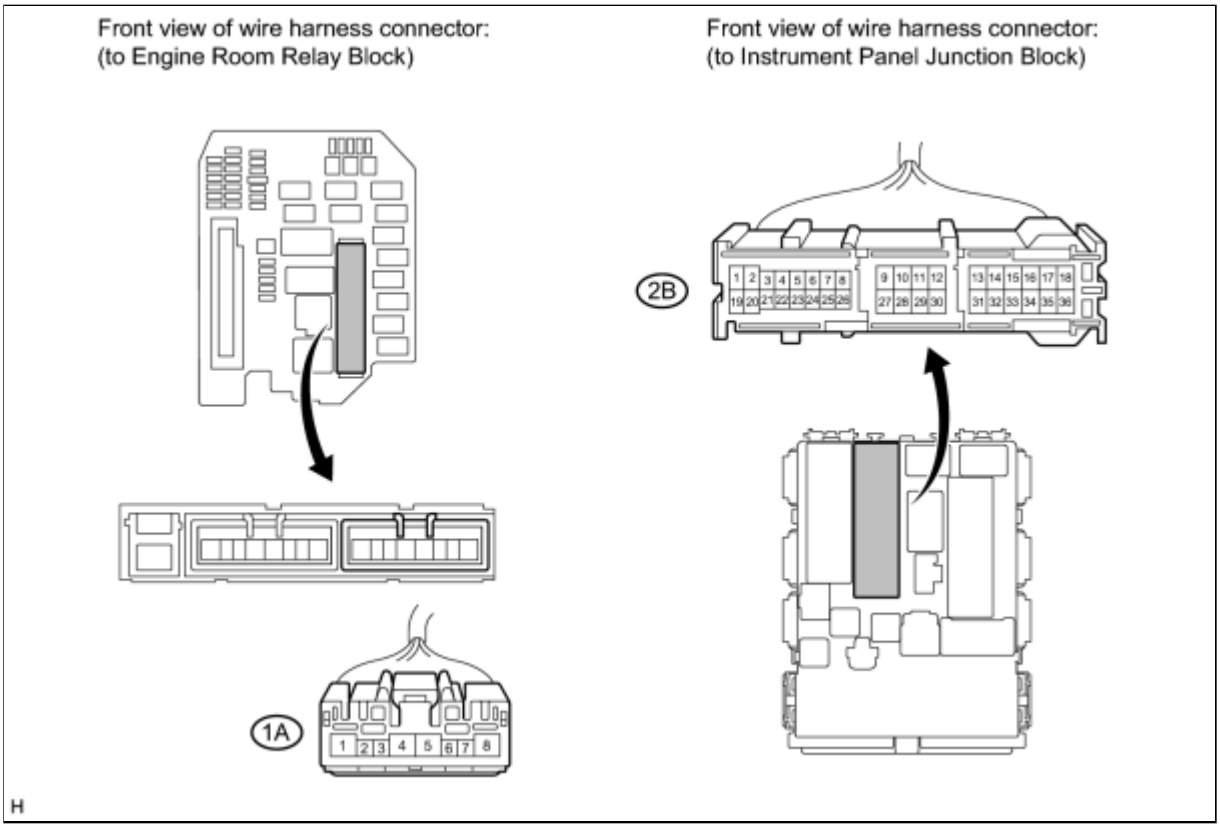
(c) Turn the Techstream on.

(d) Select the item below in the Active Test and then check that the horn operate.

Main Body

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Vehicle Horn	Vehicle horn	ON / OFF	-

OK:



The vehicle horn sounds or stops correctly when operating them through the Techstream.

NG ▶ **CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - ENGINE ROOM RELAY BLOCK)**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

3.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - ENGINE ROOM RELAY BLOCK)**

(a) Disconnect the 2B instrument panel junction block and 1A engine room relay block connectors.

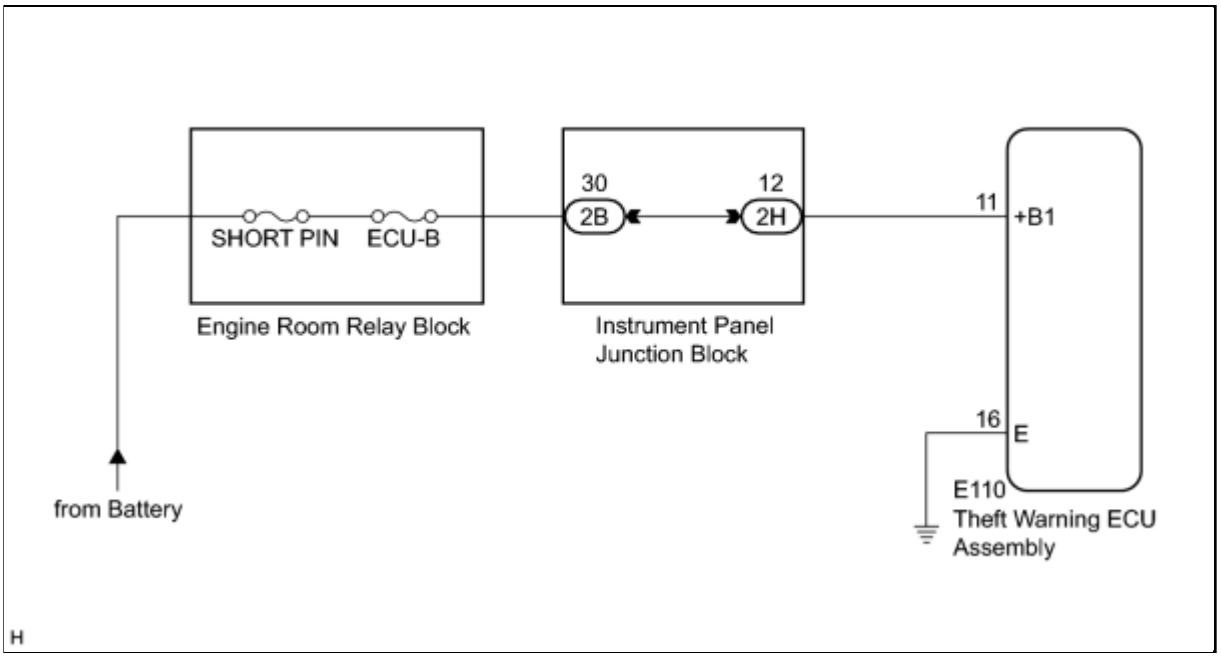
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-28 - 1A-7	Always	Below 1 Ω
2B-28 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

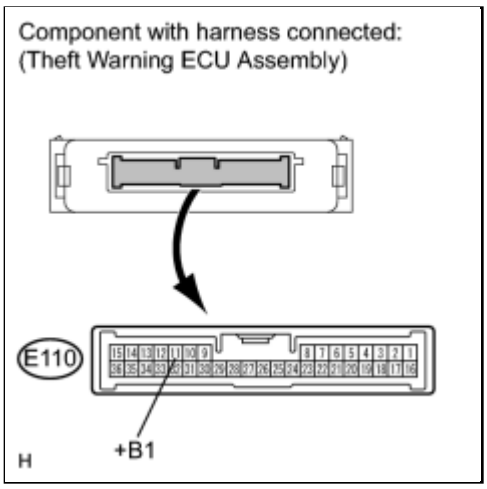
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Theft Warning ECU Power Source Circuit (2010 Corolla)		

Theft Warning ECU Power Source Circuit

DESCRIPTION

This circuit provides power for theft warning ECU assembly operation.

WIRING DIAGRAM



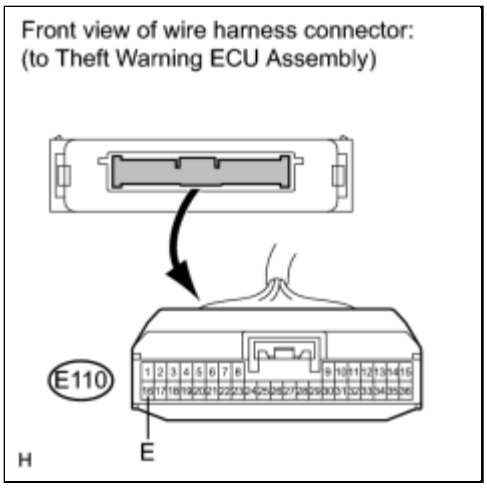
INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK THEFT WARNING ECU ASSEMBLY**

(a) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-11 (+B1) - Body ground	Always	11 to 14 V

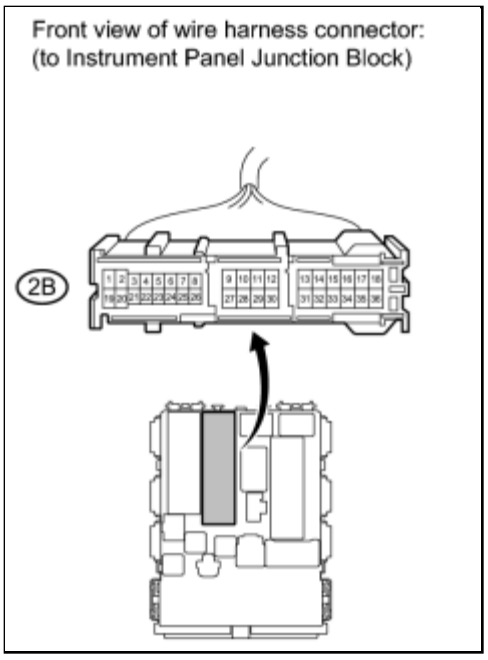
NG ▶ **CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - BODY GROUND)**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - BODY GROUND)**

(a) Disconnect the E110 theft warning ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-16 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

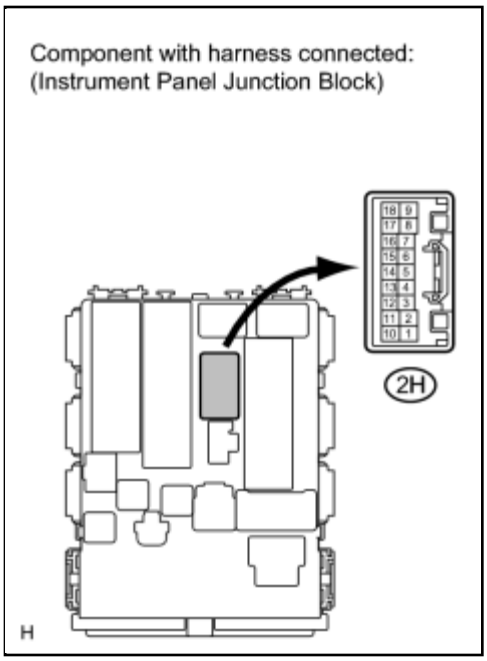
OK

3.	**CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)**

(a) Disconnect the 2B instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-30 - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR OR SHORT PIN OR ECU-B**

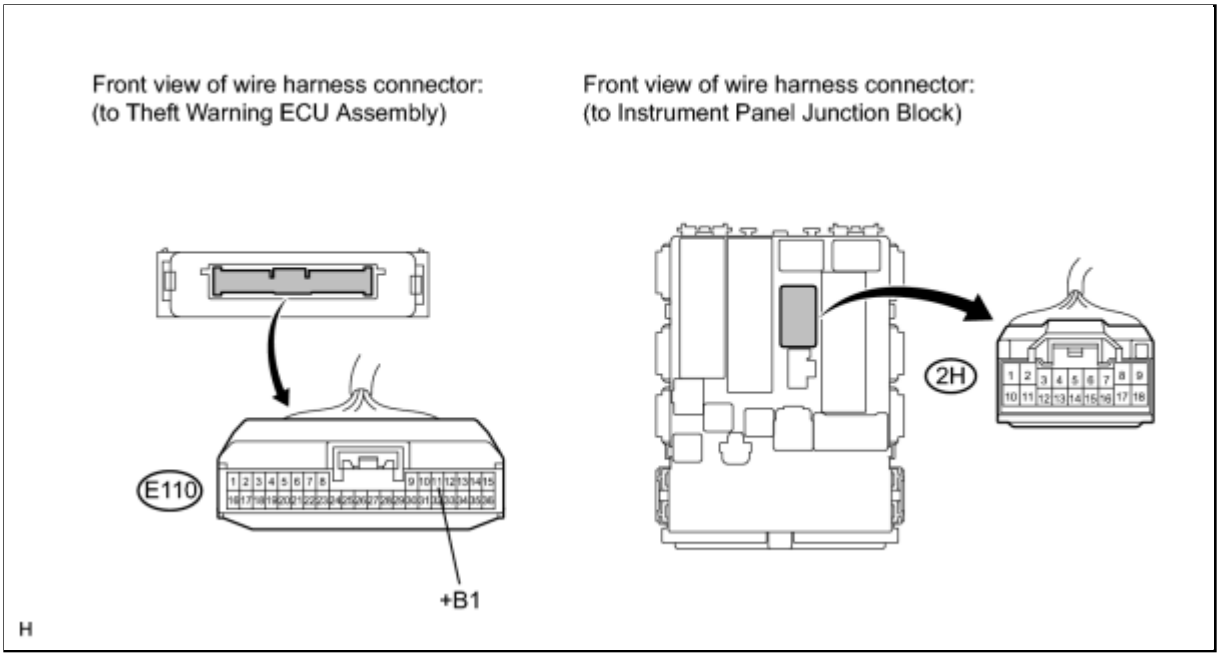
OK

4.	**CHECK INSTRUMENT PANEL JUNCTION BLOCK (POWER SOURCE)**

(a) Reconnect the 2B instrument panel junction block connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2H-12 - Body ground	Always	11 to 14 V

NG ▶ **REPLACE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - THEFT WARNING ECU ASSEMBLY)**

(a) Disconnect the 2H instrument panel junction block and E110 theft warning ECU assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2H-12 - E110-11 (+B1)	Always	Below 1 Ω
2H-12 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE THEFT WARNING ECU ASSEMBLY**

Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Glass Breakage Sensor Circuit (2010 Corolla)		

Glass Breakage Sensor Circuit

DESCRIPTION

When the glass breakage sensor detects that any door glass is tapped or broken, the sensor will set off an alarm for 57 seconds.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

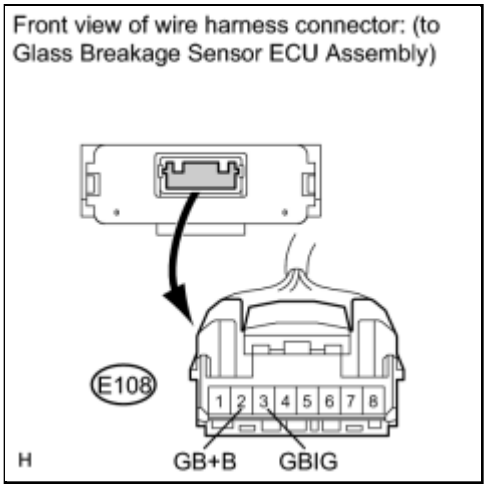
(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the item below in the Data List and then check that the indicator operates.

Security

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Glass break sensor detection	Glass breakage sensor detection / ON or OFF	ON: Glass breakage sensor operates OFF: Glass breakage sensor does not operate	-



OK:

When tapping on the glass breakage sensor microphone with your finger, "ON" is displayed on the Techstream screen.

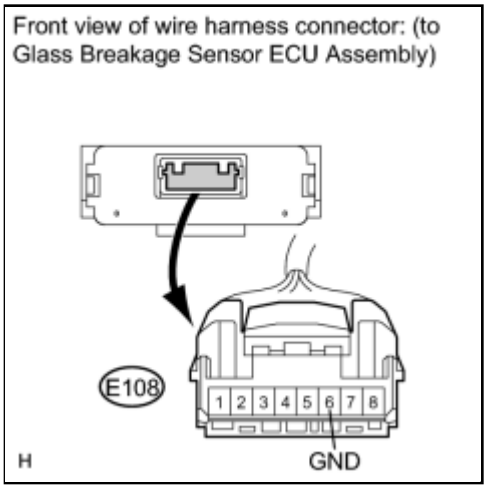
NG ▶ **CHECK HARNESS AND CONNECTOR (GLASS BREAKAGE SENSOR ECU ASSEMBLY - POWER SOURCE)**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**CHECK HARNESS AND CONNECTOR (GLASS BREAKAGE SENSOR ECU ASSEMBLY - POWER SOURCE)**

(a) Disconnect the E108 glass breakage sensor ECU assembly connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E108-2 (GB+B) - Body ground	Always	11 to 14 V
E108-3 (GBIG) - Body ground	Ignition switch ON	11 to 14 V
E108-3 (GBIG) - Body ground	Ignition switch off	Below 1 V

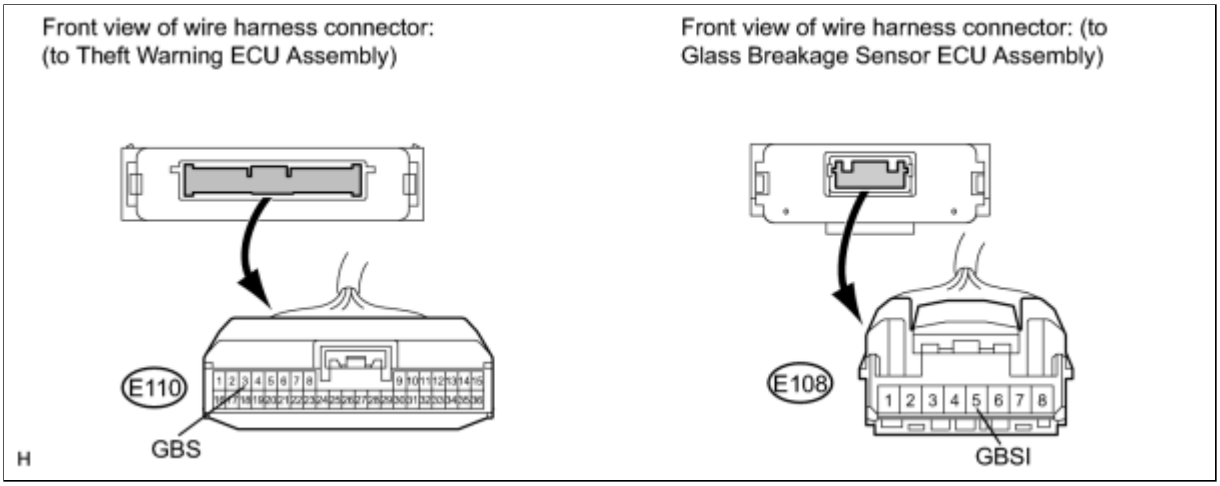
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (GLASS BREAKAGE SENSOR ECU ASSEMBLY - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E108-6 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

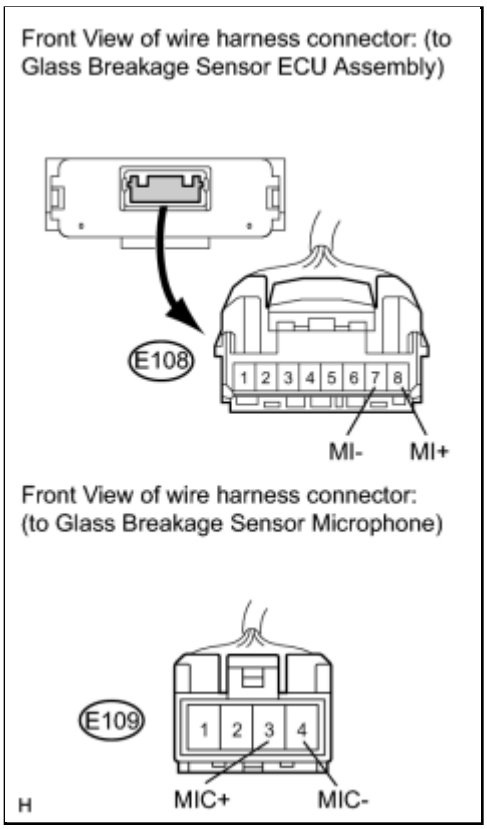
OK ▼

4.	**CHECK HARNESS AND CONNECTOR (THEFT WARNING ECU ASSEMBLY - GLASS BREAKAGE SENSOR ECU)**

(a) Disconnect the E110 theft warning ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-3 (GBS) - E108-5 (GBSI)	Always	Below 1 Ω
E110-3 (GBS) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

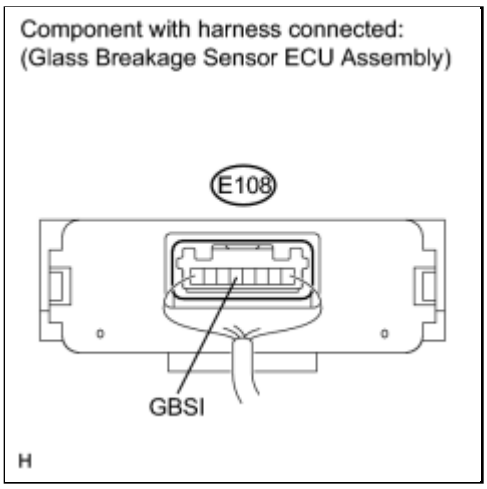
OK
▼

5.	**CHECK HARNESS AND CONNECTOR (GLASS BREAKAGE SENSOR ECU - GLASS BREAKAGE SENSOR MICROPHONE)**

(a) Disconnect the E109 glass breakage sensor microphone connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

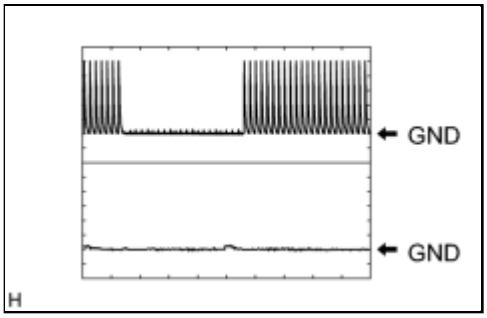


TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E108-7 (MI-) - E109-4 (MIC-)	Always	Below 1 Ω
E108-8 (MI+) - E109-3 (MIC+)	Always	Below 1 Ω
E108-7 (MI+) - Body ground	Always	10 kΩ or higher
E108-8 (MI-) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

6.	**INSPECT GLASS BREAKAGE SENSOR ECU ASSEMBLY (MICROPHONE OUTPUT)**



(a) Reconnect the E108 glass breakage sensor ECU assembly, E109 glass breakage sensor microphone and E110 theft warning ECU assembly connectors.

(b) Connect an oscilloscope to terminal 5 (GBSI) of the glass breakage sensor ECU assembly and body ground.

(c) Turn the ignition switch to ON.

(d) Check the signal waveform according to the condition(s) in the table below.

ITEM	CONDITION
Tool setting	1 V/DIV, 50 ms/DIV
Vehicle condition	Tap the glass breakage sensor microphone with a hard object such as your fingernail.

OK:

Waveform is as shown in the illustration.

NG ▶ **REPLACE GLASS BREAKAGE SENSOR MICROPHONE**

OK ▶ **REPLACE GLASS BREAKAGE SENSOR ECU ASSEMBLY**

7.	REPLACE GLASS BREAKAGE SENSOR MICROPHONE

(a) Replace glass breakage sensor microphone INFO.

NEXT

8.	CHECK GLASS BREAKAGE SENSOR

(a) Check the glass breakage sensor operation INFO .

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Select the item below in the Data List and then check that the indicator operates.

Security

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Glass break sensor detection	Glass breakage sensor detection / ON or OFF	ON: Glass breakage sensor operates OFF: Glass breakage sensor does not operates	-

OK:

When tapping on the glass breakage sensor microphone with your finger, "ON" is displayed on the Techstream screen.

Result:

RESULT	PROCEED TO
Glass breakage sensor operates	OK
Glass breakage sensor does not operate	NG

NG ▶ **REPLACE GLASS BREAKAGE SENSOR ECU ASSEMBLY**

OK ▶ **END**

9.	REPLACE GLASS BREAKAGE SENSOR ECU ASSEMBLY

(a) Replace glass breakage sensor ECU assembly INFO .

NEXT

10.	CHECK GLASS BREAKAGE SENSOR

(a) Check the glass breakage sensor operation INFO .

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Select the item below in the Data List and then check that the indicator operates.

Security

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Glass break sensor detection	Glass breakage sensor detection / ON or OFF	ON: Glass breakage sensor operates OFF: Glass breakage sensor does not operates	-

OK:

When tapping on the glass breakage sensor microphone with your finger, "ON" is displayed on the Techstream screen.

Result:

RESULT	PROCEED TO
Glass breakage sensor operates	OK
Glass breakage sensor does not operate	NG

NG ▶ **REPLACE THEFT WARNING ECU ASSEMBLY**

OK ▶ **END**

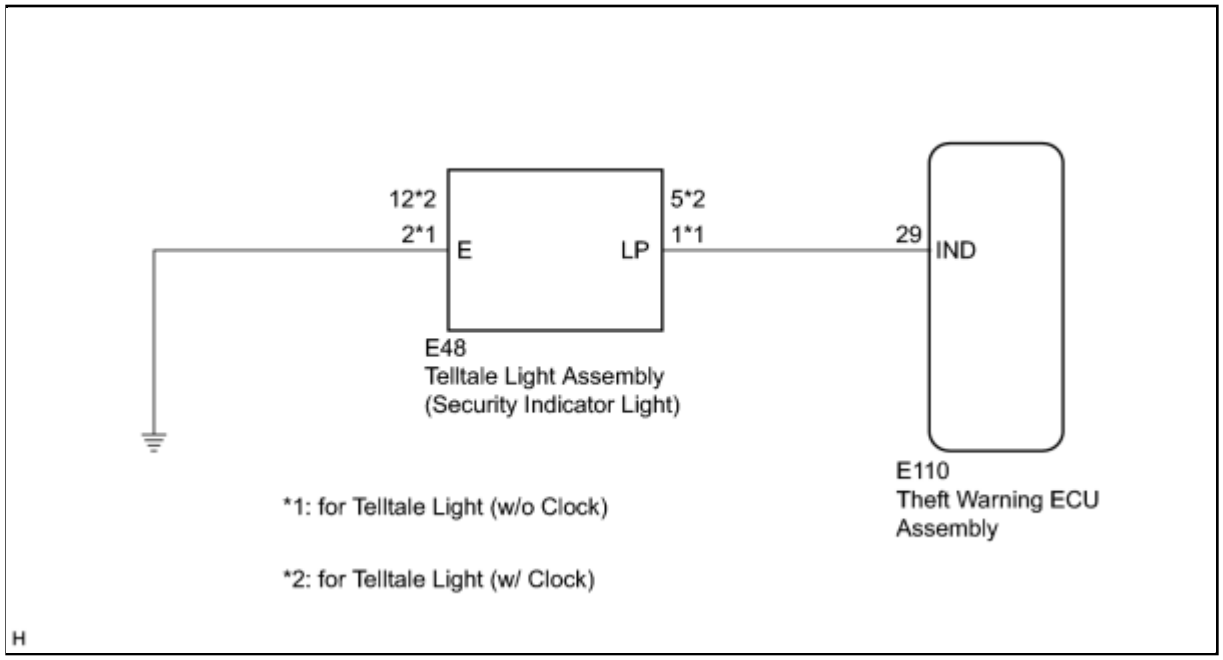
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Security Indicator Light Circuit (2010 Corolla)		



Security Indicator Light Circuit

DESCRIPTION

Even when the theft deterrent system is in the disarmed state, the telltale light assembly (security indicator light) blinks due to a signal output from the immobiliser system. The telltale light assembly (security indicator light) blinks continuously due to a continuous signal received from the immobiliser system while in the armed state.

The theft warning ECU assembly causes the telltale light assembly (security indicator light) to come on only during the arming preparation and alarm sounding states.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

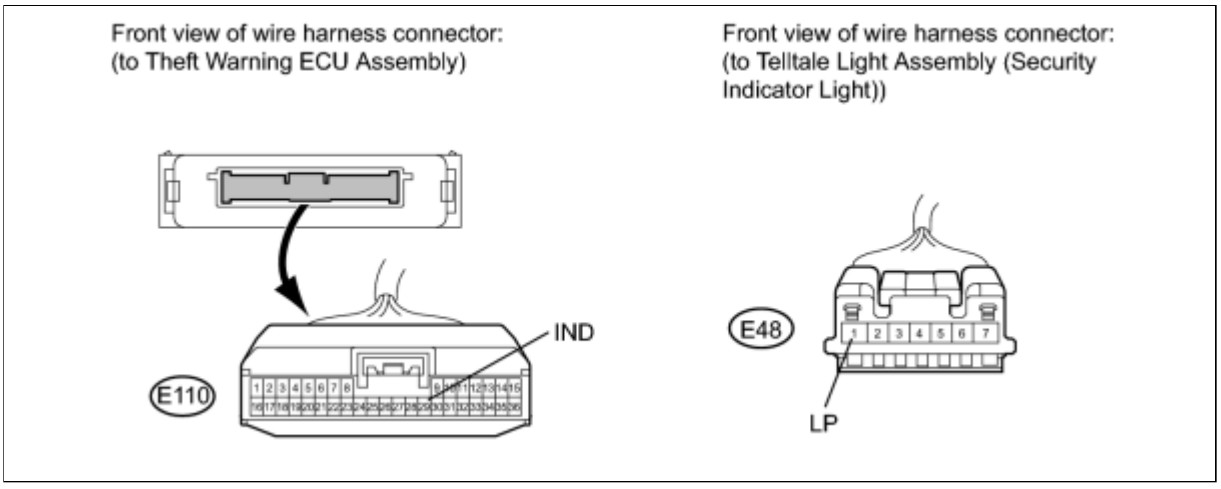
(d) Select the item below in the Active Test and then check that the indicator operates.

Security

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Security Indicator	Security indicator	ON / OFF	-

OK:

The security indicator light flashes or goes off correctly when operating it through the Techstream.



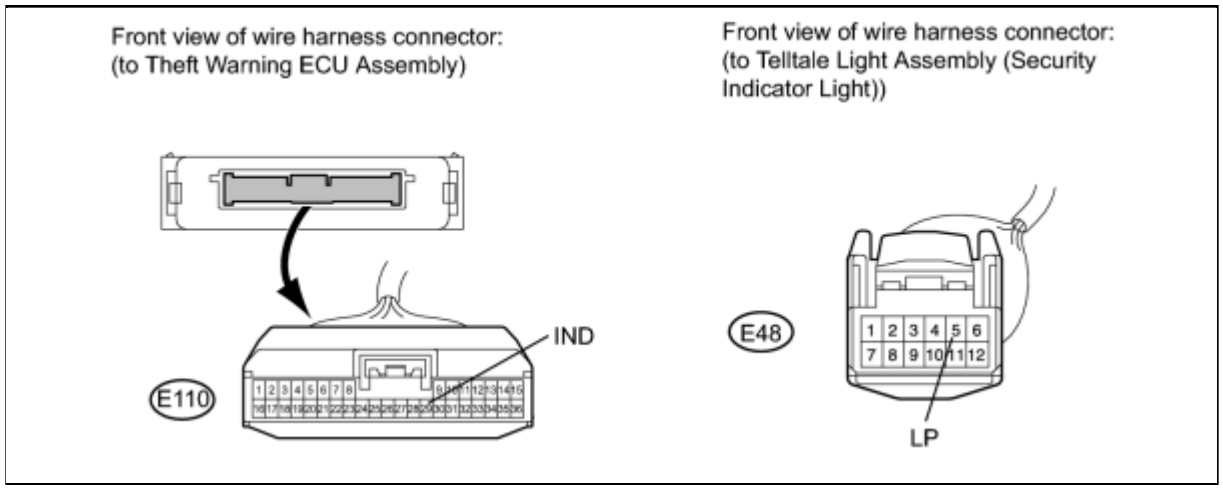
NG ▶ **CHECK HARNESS AND CONNECTOR (THEFT DETERRENT ECU ASSEMBLY - TELLTALE LIGHT ASSEMBLY)**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**CHECK HARNESS AND CONNECTOR (THEFT DETERRENT ECU ASSEMBLY - TELLTALE LIGHT ASSEMBLY)**

(a) Disconnect the E110 theft warning ECU assembly and E48 telltale light assembly (security indicator light) connectors.

(b) for Telltale Light (w/o Clock):



(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-29 (IND) - E48-1 (LP)	Always	Below 1 Ω
E110-29 (IND) - Body ground	Always	10 kΩ or higher

(c) for Telltale Light (w/ Clock):

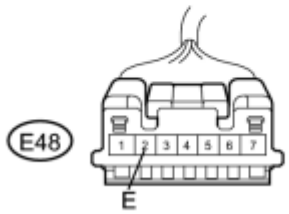
(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E110-29 (IND) - E48-5 (LP)	Always	Below 1 Ω
E110-29 (IND) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

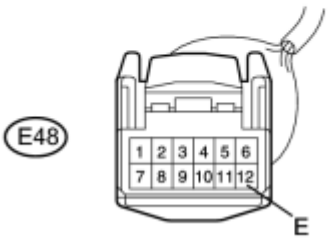


3.	**CHECK HARNESS AND CONNECTOR (TELLTALE LIGHT ASSEMBLY - BODY GROUND)**

(a) for Telltale Light (w/o Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Front view of wire harness connector:
(to Telltale Light Assembly (Security Indicator Light))

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-2 (E) - Body ground	Always	Below 1 Ω

(b) for Telltale Light (w/ Clock):

Front view of wire harness connector:
(to Telltale Light Assembly (Security Indicator Light))

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-12 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TELLTALE LIGHT ASSEMBLY (SECURITY INDICATOR LIGHT)**

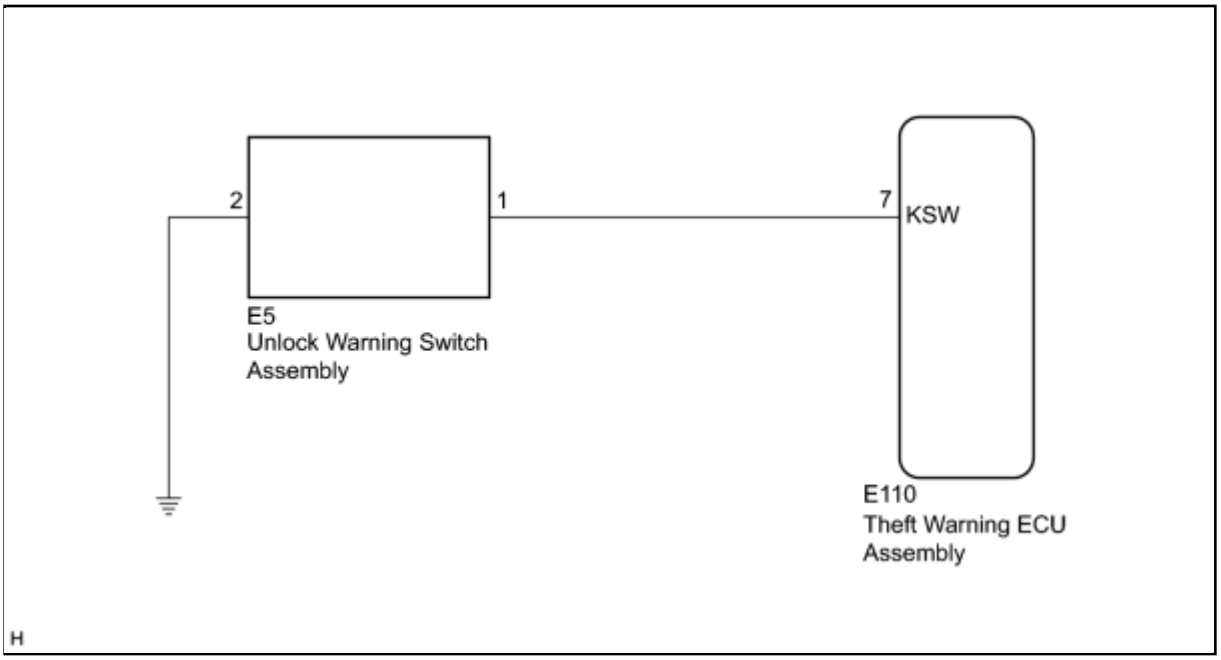
Title: THEFT DETERRENT / KEYLESS ENTRY: THEFT DETERRENT SYSTEM: Unlock Warning Switch Circuit (2010 Corolla)		



Unlock Warning Switch Circuit

DESCRIPTION

The key unlock warning switch assembly turns on when the ignition key is inserted into the ignition key cylinder and turns off when the ignition key is removed.

The theft warning ECU assembly operates the key confinement prevention function while the key unlock warning switch assembly is on.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (UNLOCK WARNING SWITCH ASSEMBLY)**

(a) Connect the Techstream to the DLC3.

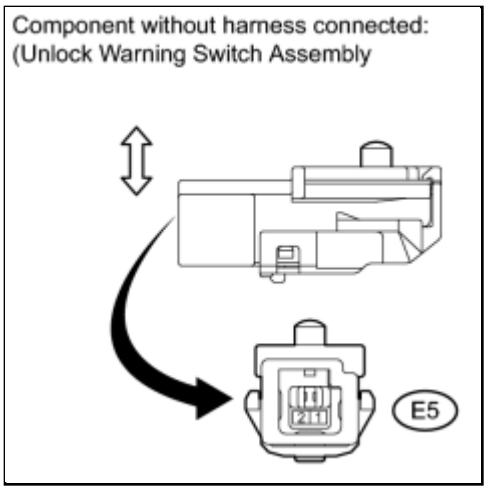
(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the item below in the Data List and then read the display on the Techstream.

Security

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key unlock warning switch	Unlock warning switch signal / ON or OFF	ON: Key is inserted into ignition key cylinder OFF: Key is removed from ignition key cylinder	-



OK:

When the key is in the ignition key cylinder, "ON" appears on the screen.

NG ▶ **INSPECT UNLOCK WARNING SWITCH ASSEMBLY**

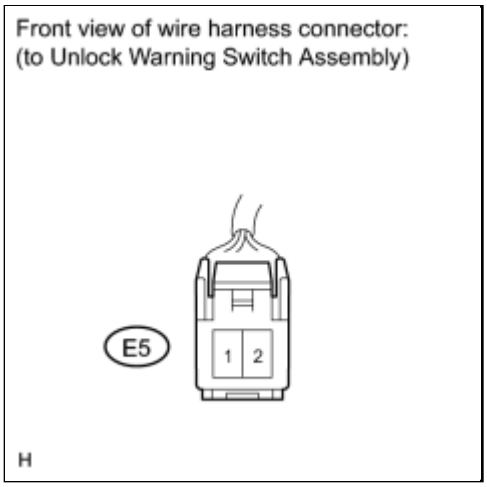
OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT UNLOCK WARNING SWITCH ASSEMBLY**

(a) Remove the unlock warning switch assembly INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-1 - E5-2	Free (Key removed)	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-1 - E5-2	Pushed (Key set)	Below 1 Ω

NG ▶ **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

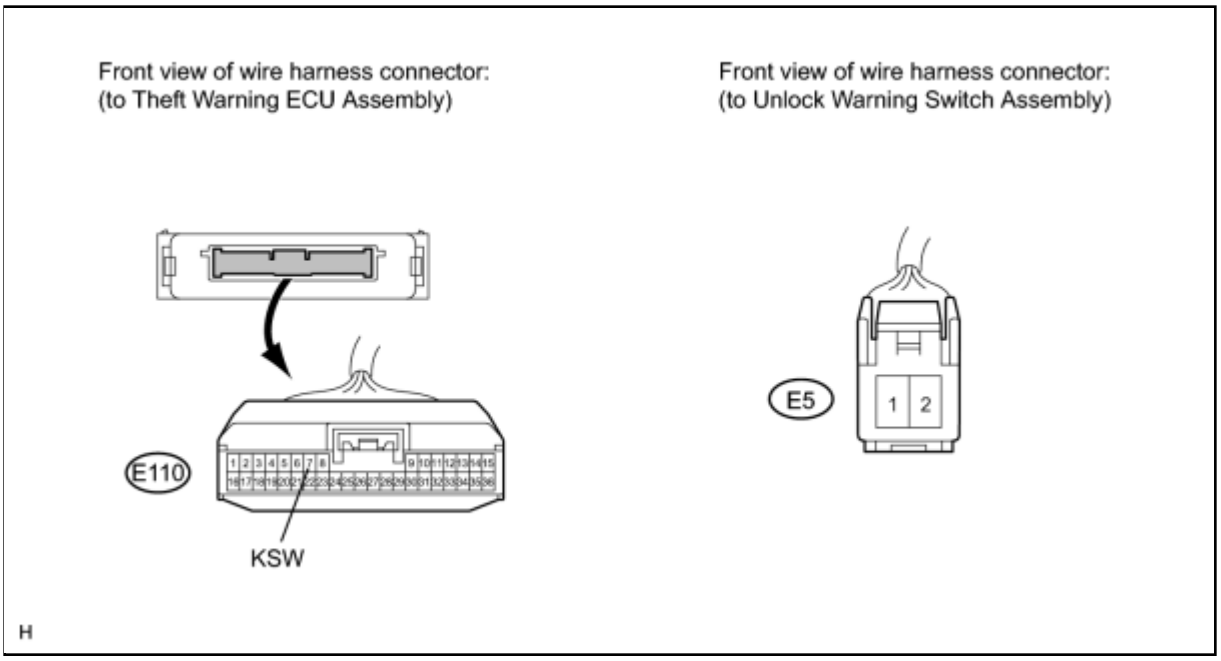
OK ▼

3.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - BODY GROUND)**

(a) Disconnect the E5 unlock warning switch assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-2 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

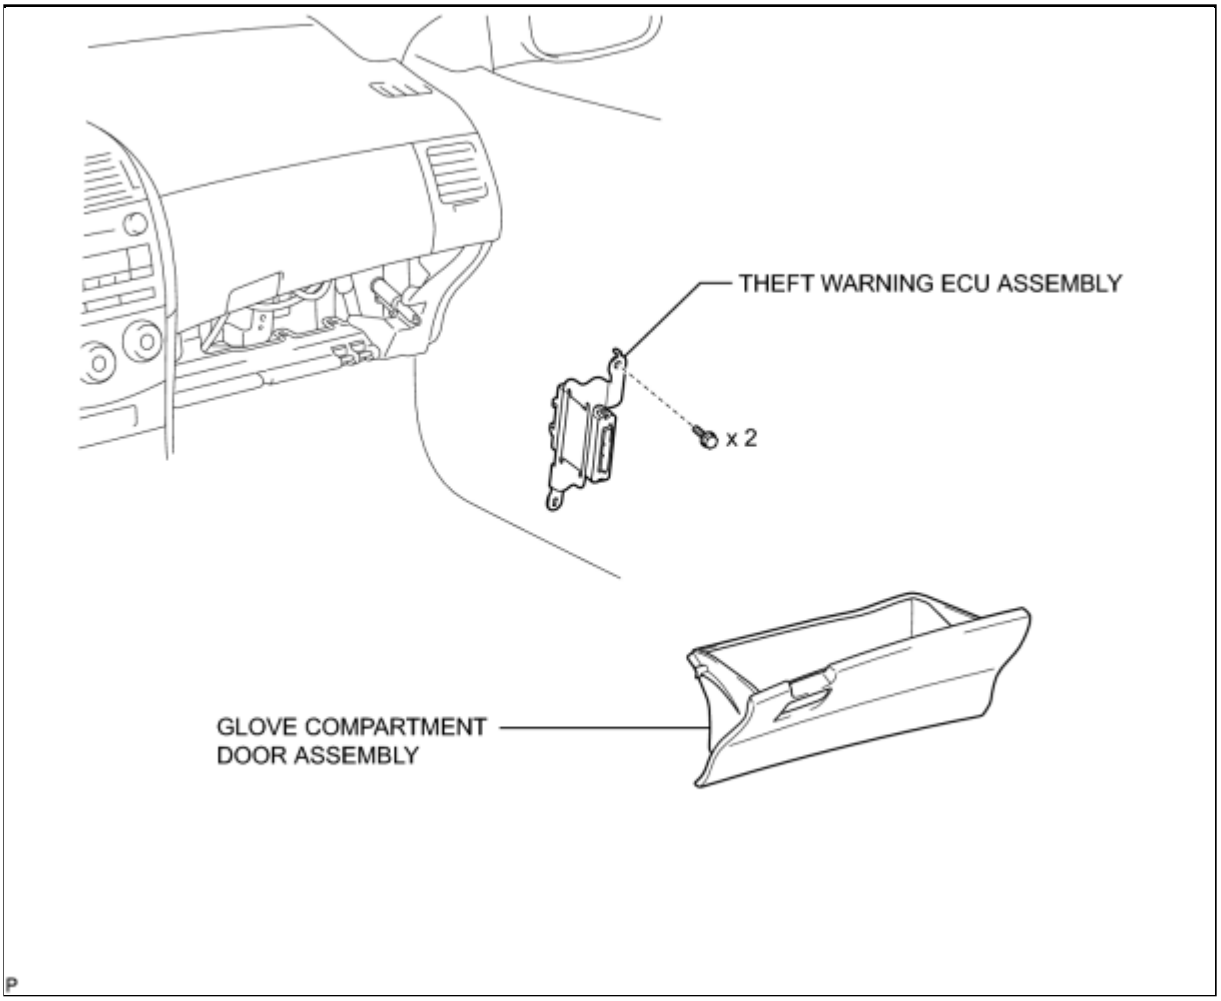
4.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - THEFT WARNING ECU ASSEMBLY)**

(a) Disconnect the E110 theft warning ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-1 - E110-7 (KSW)	Always	Below 1 Ω



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE THEFT WARNING ECU ASSEMBLY**

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS WHEN USING TECHSTREAM

(a) When using the Techstream to troubleshoot the smart key system: Connect the Techstream to the DLC3 while the engine switch is off, and turn a door courtesy light switch on and off at 1.5-second intervals until communication between the Techstream and vehicle begins.

2. PRECAUTIONS FOR EACH FUNCTION

(a) Precautions for the key:

- The key is a precision instrument. Be sure to observe the following:

  (1) Do not drop or strike the key.

  (2) Do not keep the key in a high temperature area for a long time.

  (3) Do not use an ultrasonic washing machine to clean the key.

  (4) Keep the key away from magnets or magnetized items during use.

  (5) Do not attach any stickers to the key.

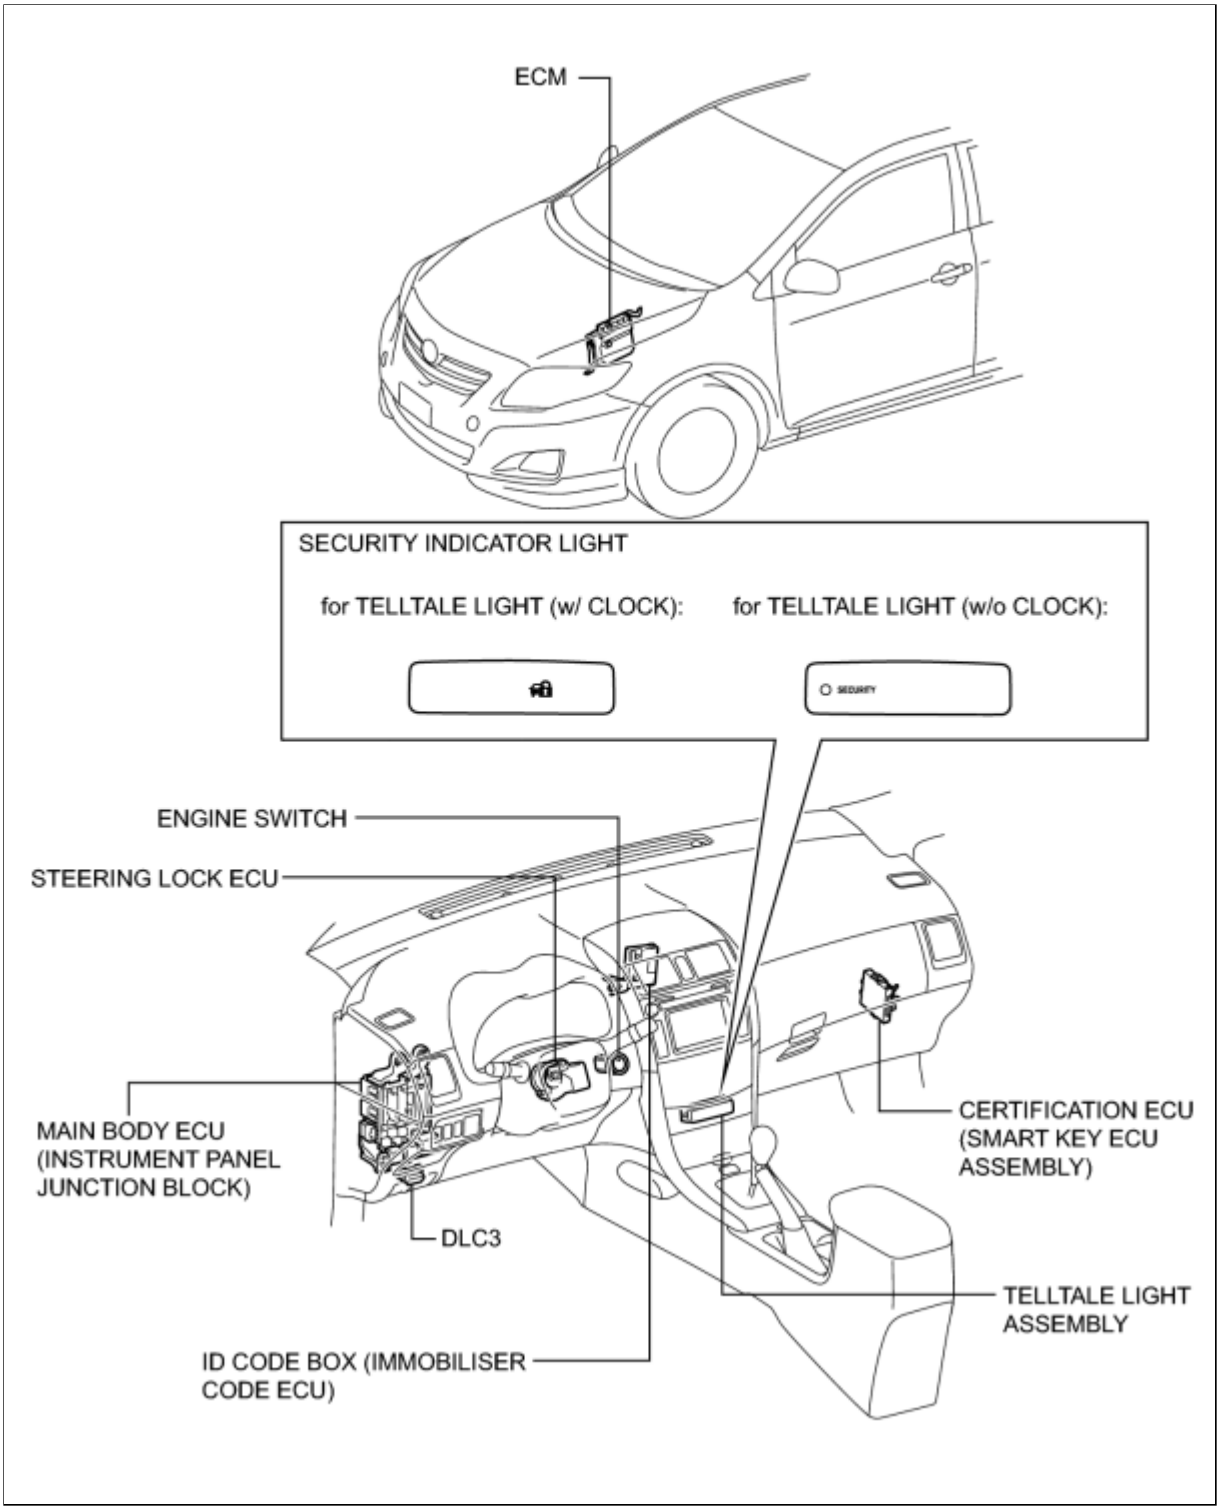
(b) Precautions for the engine start function:

(1) Before starting the engine, firmly depress the brake pedal until the indicator of the engine switch illuminates in green.

(2) Be sure to turn the engine switch off before disconnecting the cable from the negative (-) battery terminal. When the battery terminal is disconnected, the power source mode (off, on (ACC), on (IG)) will remain in memory. When the vehicle battery becomes discharged, be sure to remember the power source mode.

(3) After the battery is removed and reinstalled, be sure to wait 10 seconds or more before starting the engine. The engine may not start immediately after the battery is reinstalled.

(c) Precautions for the battery built into the key and the vehicle battery:



(1) When the doors are locked (locked state), signals are emitted by the vehicle at predetermined intervals. If the vehicle remains parked for a long time, the battery may become discharged. To prevent this, periodically charge the vehicle battery, or disable the smart key system.

(2) When the doors are locked (locked state), and the key remains in the door oscillator detection area, the system will maintain periodic communication with the key. If the vehicle remains parked in this state for a long time, the vehicle and key batteries may become discharged. If the vehicle is not being used, keep the key at least 2 m (6.56 ft.) away from the vehicle.

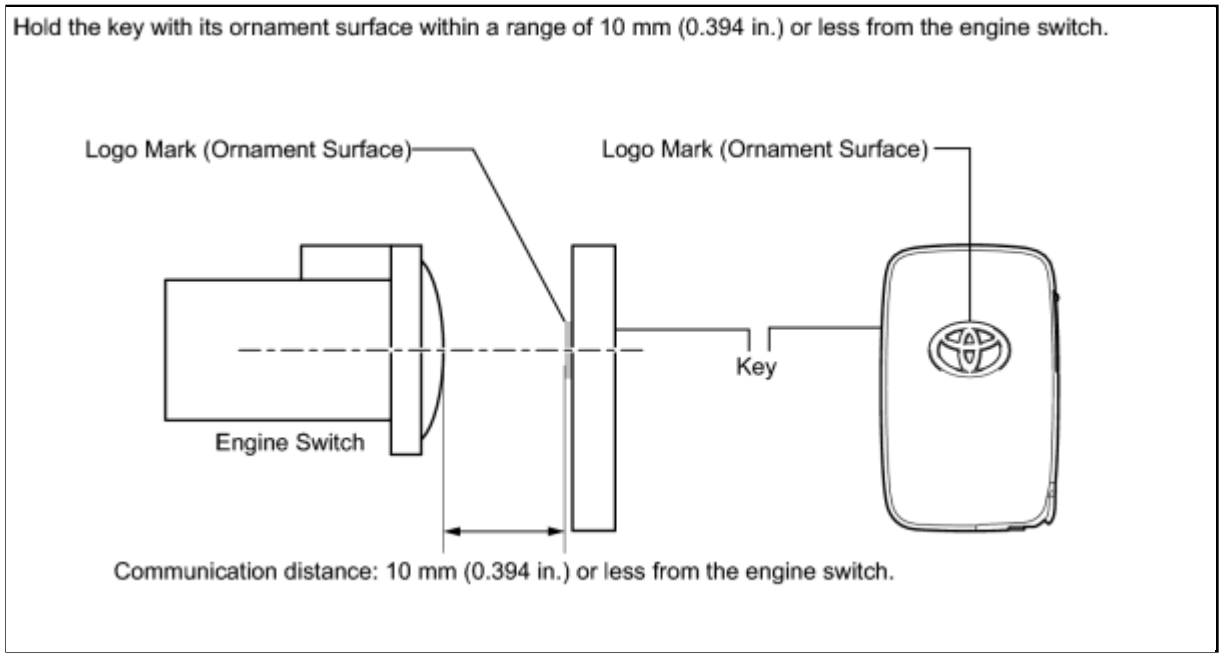
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): REGISTRATION (2010 Corolla)		



REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

- The ID codes are the same as recognition codes for the wireless transmitter and the engine immobiliser function. Registering an ID code enables the smart key system, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is necessary when the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU), steering lock ECU, or key is replaced with a new one.

(a) Vehicles with the smart key system do not have a key slot. Therefore, hold the key close to the engine switch to register the key, as shown in the illustration.

2. PART REPLACEMENT AND KEY REGISTRATION

(a) The following table shows ECU replacement and key registration procedures for cases in which a malfunctioning ECU has been identified through the troubleshooting of the smart key system.

HINT:

- The following procedures can be performed:

  New key ID registration

  Additional key ID registration

  Key ID erasure

All key ID erasure

ECU code registration

- If the customer has not brought all the registered keys, replacement of the ID code box (immobiliser code ECU) is also required.
- A maximum of 4 keys can be registered.

PART TO BE REPLACED	CONDITION		PROCEDURE	REFERENCE
Certification ECU (Smart key ECU assembly)	Customer has brought all keys		1. Replace certification ECU (smart key ECU assembly)	-
			2. Reregister all keys (New key ID registration)	PROCEDURE "B"
	Some keys are lost	Key ID codes can be registered and erased	1. Erase key codes (Key ID erasure)	PROCEDURE "D"
			2. Perform additional key registration procedure (Additional key ID registration)	PROCEDURE "C"
			3. Replace certification ECU (smart key ECU assembly)	-
			4. Reregister all keys (New key ID registration) **HINT:** **If some keys are not registered during the above steps, they will be disabled because they cannot be registered later.**	PROCEDURE "B"
		Key ID codes cannot be either registered or erased	1. Replace certification ECU (smart key ECU assembly)	-
			2. Replace ID code box (immobiliser code ECU)	-
			3. Reregister all keys (New key ID registration) **HINT:** **If key codes cannot be erased or additional keys cannot be registered due to a malfunction in the certification ECU (smart key ECU assembly), replace the ID code box (immobiliser code ECU) and certification ECU (smart key ECU assembly). If some keys are not registered during the above steps, they will be disabled because they cannot be registered later.**	PROCEDURE "A"
			4. Register ECU communication ID	PROCEDURE "G"

PART TO BE REPLACED	CONDITION	PROCEDURE	REFERENCE
Certification ECU (Smart key ECU assembly)	All keys are lost	1. Replace certification ECU (smart key ECU assembly)	-
		2. Replace ID code box (immobiliser code ECU)	-
		3. 		2. Register additional keys as necessary (Additional key ID registration)	PROCEDURE "C"
	All keys are lost	1. Erase all key codes (All key ID erasure)	PROCEDURE "E"
		2. Register all keys (New key ID registration) **HINT:** **If the customer brings lost keys at a later date, they can be registered using the additional key ID registration function.**	PROCEDURE "A"
Key (for addition)	Customer has brought at least 1 key **HINT:** **When adding keys (Additional**	1. Register additional keys as necessary (Additional key ID registration)	PROCEDURE "C"

PART TO BE REPLACED	CONDITION	PROCEDURE	REFERENCE
	registration)		

3. KEY REGISTRATION

(a) PROCEDURE "A"

New key ID registration (when replacing the certification ECU (smart key ECU assembly) and ID code box (immobiliser code ECU), or when replacing the certification ECU (smart key ECU assembly), ID code box (immobiliser code ECU) and steering lock ECU)

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration **HINT:** **The engine switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.**
2. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode).**
3. Verification of unregistered key*1	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on the driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
4. Registration of ID code	• Perform operation according to prompts on the Techstream screen
5. End of registration	• Finish new key ID code registration

- *1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"

New key ID registration (when replacing the certification ECU (smart key ECU assembly))

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration **HINT:** **The engine switch cannot be turned on (IG) more than 10 times. After connecting the Techstream, turn the Techstream on while turning the driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.**
2. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode).**
3. Confirmation of all registered keys*1	1. Hold the registered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that wireless door lock buzzer sounds once (short beep)
4. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
5. Verification of unregistered key*2	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on the driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
5. Registration of ID code	• Perform operation according to prompts on the Techstream screen
6. End of registration	• Finish new key ID code registration

- *1: Repeat this process for each key registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform the registration procedures again from process 1. If the key confirmation procedure for a key is performed, the security indicator light comes on and remains on until all the keys are confirmed.
- *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys is not finished within the specified time, perform the registration procedures again from 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"

Additional key ID registration

PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Registration
2. Confirmation of registered key*1	1. Perform operation according to prompts on the Techstream screen **HINT:** **Mode is automatically selected by the Techstream (new registration mode or add mode)** 2. Hold the registered key close to the engine switch (For details, refer to "Description of Code Registration") 3. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code	• Perform operation according to prompts on the Techstream screen
4. Verification of unregistered key*2	1. Hold the unregistered key close to the engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep) 3. Place the unregistered key on driver's seat 4. Confirm that the wireless door lock buzzer sounds once (short beep)
5. Registration of ID code	• Perform operation according to prompts on the Techstream screen
6. End of registration	• Finish additional key ID code registration

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the registration procedures again from process 1.
- *2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys is not finished within the specified time, perform the registration procedures again from 1. Make sure that only 1 key is in the cabin during the registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"

Key ID erasure

HINT:

Erase all registered key codes except one.

PROCESS	PROCEDURE
1. Start of erasure	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Erasure
2. Confirmation of registered key*1 **HINT:** **Select the key that will not be erased.**	1. Perform operation according to prompts on the Techstream screen 2. Hold the registered key close to engine switch (For details, refer to "Description of Code Registration") 3. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Confirmation of ECU code •	Perform operation according to prompts on the Techstream screen
4. Erasure of ID code •	Perform operation according to prompts on the Techstream screen
5. End of erasure •	Finish key ID code erasure

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedures again from process 1.

(e) PROCEDURE "E"

All key ID erasure

HINT:

All the key codes registered in the vehicle are erased.

PROCESS	PROCEDURE
1. Start of erasure	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Turn the Techstream on while turning driver side door courtesy light switch on and off repeatedly at 1.5-second intervals or less 4. Enter the following menus: Body Electrical / Smart Key / Utility / Smart Code Erasure
2. Confirmation of ECU code •	Perform operation according to prompts on the Techstream screen
3. Erasure of ID code •	Perform operation according to prompts on the Techstream screen
4. End of erasure •	Finish key ID code erasure

(f) PROCEDURE "F"

ECU code registration

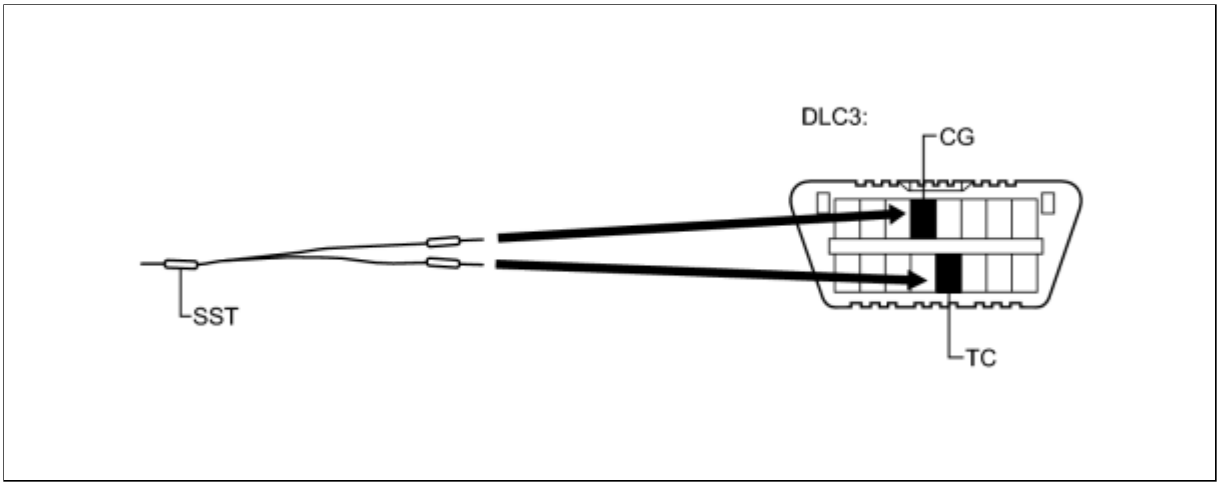
PROCESS	PROCEDURE
1. Start of registration	1. Connect the Techstream to DLC3 2. Turn the engine switch on (IG) 3. Enter the following menus: Body Electrical / Smart Key / Utility / ECU Communication ID Registration
2. Confirmation of registered key*1	1. Hold the registered key close to engine switch (For details, refer to "Description of Code Registration") 2. Confirm that the wireless door lock buzzer sounds once (short beep)
3. Registration of ECU code	• Perform operation according to prompts on the Techstream screen
4. End of registration	• Finish ECU code registration

- *1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform the erasure procedures again from process 1.

(g) PROCEDURE "G"

ECU communication ID registration

NOTICE:



- The ECU communication ID should be registered when the ID code box (immobiliser code ECU) is replaced in order to match these ECU communication IDs.
- The engine cannot be started unless the ECU communication IDs match.
- After the registration, pressing the engine switch may not start the engine on the first try. If so, press the engine switch again.
- Clear DTC B2799 (code for ECM's immobiliser communication error) by either of the following:

  - Use the Techstream.

  - Disconnect the battery for 30 seconds.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the engine switch on (IG) and leave it as is for 30 minutes.

HINT:

Do not start the engine.

(3) Turn the engine switch off and disconnect terminals TC and CG.

(4) Check that the engine starts and stays running for more than 3 seconds.

(h) PROCEDURE "H"

ECU communication ID registration

NOTICE:

The ECU communication ID should be registered when the ECM is replaced in order to match the ECU communication IDs.

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	OFF
2. Hold an already registered key close to the engine switch and turn the engine switch on (IG) with the brake pedal depressed	
3. Check that the engine starts and stays running for more than 3 seconds	
4. Next	
5. End	

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000QYA02UX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

(a) The immobiliser system is a theft deterrent system that determines whether to disable starting of the SFI system based on a comparison of the key ID codes and the vehicle pre-registered code. The immobiliser system compares the vehicle certification ECU (smart key ECU assembly) pre-registered ID code with the ID of the key-embedded transponder chip. If the ID codes do not match, the immobiliser system is activated and the SFI system cannot be started. The certification ECU (smart key ECU assembly) manages communication with the ECM, main body ECU (instrument panel junction block), steering lock ECU and ID code box (immobiliser code ECU). When the ID codes of the transponder chip and certification ECU (smart key ECU assembly) match, the certification ECU (smart key ECU assembly) authorizes the SFI system to start.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	OUTLINE
Transponder key coil/amplifier (built into the engine switch)	Receives a key ID code, amplifies and outputs the code to the certification ECU (smart key ECU assembly).
Indoor electrical key oscillator	Transmits key detection signals within the detection area in the vehicle interior upon receiving a transmission request signal from the certification ECU (smart key ECU assembly). A certification ECU (smart key ECU assembly) request signal is activated when the key is brought into the vehicle interior and the engine switch is pushed.
Door control receiver	Receives an ID code from the key in the actuation area and transmits it to the certification ECU (smart key ECU assembly).
Security indicator	Illuminates or starts flashing. Illumination is controlled by the certification ECU (smart key ECU assembly).

3. SYSTEM FUNCTION

(a) Using the entry function

(1) When the driver (or passenger) is sitting in the vehicle while carrying the key, and the engine switch is pressed while the brake pedal is depressed, the main body ECU (instrument panel junction block) recognizes that the engine start operation has occurred and sends a certification request signal to the certification ECU (smart key ECU assembly). Upon receipt of the certification request signal, the certification ECU (smart key ECU assembly) sends a request signal to the indoor electrical key oscillator. Upon receipt of the request signal, the indoor electrical key oscillator sends a request signal to detect if the key is inside the vehicle. When the key receives this request signal, it answers by sending an ID code containing a

response code through the glass antenna to the door control receiver. Upon receipt of the ID code, the certification ECU (smart key ECU assembly) analyzes the code. If the interior certification passes, then the main body ECU (instrument panel junction block) sends a certification pass response signal. When the main body ECU (instrument panel junction block) receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the engine switch indicator illuminates in green. Then the certification ECU (smart key ECU assembly) checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU (instrument panel junction block). After receiving this signal, the main body ECU (instrument panel junction block) supplies power to the steering lock actuator. Then the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is certified (via the ID code box (immobiliser code ECU)) and drives the steering actuator motor until the steering is unlocked. After unlocking the steering, an unlock completed signal is sent to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) sends an unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) confirms that the certification ECU (smart key ECU assembly) is certified, sends an immobiliser unset command signal to the ECM, and sends a security indicator light off signal to the certification ECU (smart key ECU assembly).

(b) Not using the entry function (when the key battery is depleted)

(1) When the driver is sitting in the vehicle while carrying the key and depressing the brake pedal, the main body ECU (instrument panel junction block) recognizes that the stop light switch is on and sends a key confirmation request signal to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) drives the immobiliser amplifier built in the engine switch. At this time, the engine switch sends an RF wave communication signal to the immobiliser. If the driver holds the key up to the engine switch at this time, the engine switch receives the immobiliser RF wave signal and responds by sending a radio wave signal. When the engine switch receives the radio wave signal from the key, it duplicates the signal and sends an ID code to the certification ECU (smart key ECU assembly). Upon receipt of the ID code, the code is analyzed. If the certification passes, the certification ECU sends a key certification pass response signal to the main body ECU (instrument panel junction block) and a sound buzzer request signal to the meter ECU. When the main body ECU (instrument panel junction block) receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the engine switch indicator illuminates in green. Then the certification ECU (smart key ECU assembly) checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU (instrument panel junction block). After receiving this signal, the main body ECU (instrument panel junction block) supplies power to the steering lock actuator. Then the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is certified (via the ID code box (immobiliser code ECU)) and drives the steering actuator motor until the steering is unlocked. After unlocking the steering, an unlock completed signal is sent to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) sends an unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) confirms that the certification ECU (smart key ECU assembly) is certified, sends an immobiliser unset command signal to the ECM, and sends a security indicator light off signal to the certification ECU (smart key ECU assembly).

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the engine immobiliser system.
- *: Using the Techstream.

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
  - The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	**INSPECT BATTERY VOLTAGE**

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	**CRANK ENGINE FOR MORE THAN 10 SECONDS**

NEXT

5.	**CHECK FOR DTC***

(a) Check for DTCs and note any codes that are output INFO .

(b) Clear the DTCs.

(c) Recheck for DTCs. Based on the DTCs output above, try to duplicate the SFI system DTC, engine immobiliser system DTC, steering lock system DTC or smart key system (for start function) DTC by simulating the symptoms indicated by the DTCs.

Result:

RESULT	PROCEED TO
SFI system DTC output recurs	A
Engine immobiliser system DTC output recurs	B
Steering lock system DTC output recurs	C

RESULT	PROCEED TO
Smart key system (for start function) DTC output recurs	D
DTC output does not recur	E

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK ENGINE SWITCH

(a) Disconnect the E38 engine switch connector.

(b) Measure the resistance according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E38-8 (AGND) - Body ground	BR - Body ground*1 GR - Body ground*2	Ground	Always	Below 1 Ω

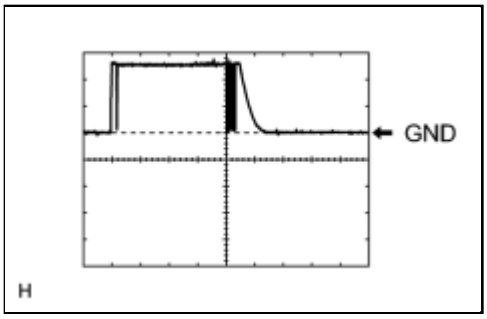
- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E38 engine switch connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E38-8 (AGND) - Body ground	BR - Body ground*1 GR - Body ground*2	Ground	Always	Below 1 Ω
E38-14 (VC5) - E38-8 (AGND)	SB - BR*1 BE - GR*2	Power supply	Key is not in cabin	Below 1 V



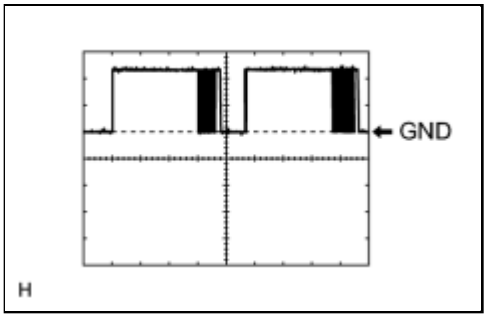
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E38-14 (VC5) - E38-8 (AGND)	SB - BR*1 BE - GR*2	Power supply	Key is in cabin*	4.6 to 5.4 V
E38-10 (CODE) - E38-8 (AGND)	P - BR*1 G - GR*2	Demodulated signal of key code data	Key is not in cabin	Below 1 V
E38-10 (CODE) - E38-8 (AGND)	P - BR*1 G - GR*2	Demodulated signal of key code data	Press engine switch and hold key close to engine switch*	Pulse generation (See waveform 1)
E38-9 (TXCT) - E38-8 (AGND)	L - BR*1 SB - GR*2	Key code output signal	Key is not in cabin	Below 1 V
E38-9 (TXCT) - E38-8 (AGND)	L - BR*1 SB - GR*2	Key code output signal	Press engine switch and hold key close to engine switch*	Pulse generation (See waveform 2)

- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, the engine switch may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)



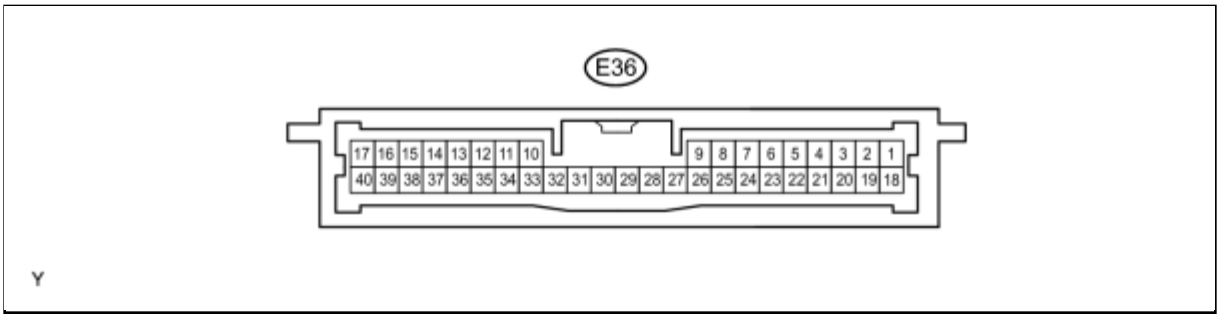
ITEM	CONTENT
Tester Connection	E38-10 (CODE) - E38-8 (AGND)
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:

***: Remove the key battery before performing this inspection.**

(2) Waveform 2 (Reference)

ITEM	CONTENT
Tester Connection	E38-9 (TXCT) - E38-8 (AGND)



Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:

***: Remove the key battery before performing this inspection.**

2. CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

(a) Disconnect the E36 certification ECU (smart key ECU assembly) connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E36-1 (+B) - E36-17 (E)	W - W-B*1 BR - W-B*2	+B power supply	Always	11 to 14 V
E36-18 (IG) - E36-17 (E)	L - W-B*1 B - W-B*2	Ignition power supply	Engine switch off	Below 1 V

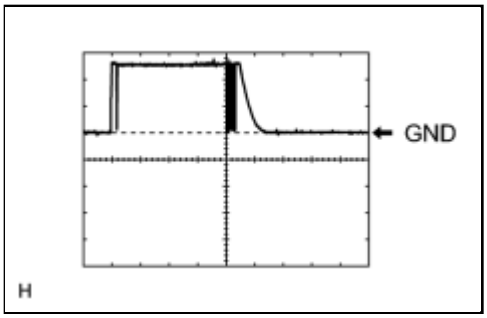
- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E36 certification ECU (smart key ECU assembly) connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E36-40 (AGND) - Body ground	BR - Body ground*1 GR - Body	Engine switch ground	Always	Below 1 Ω



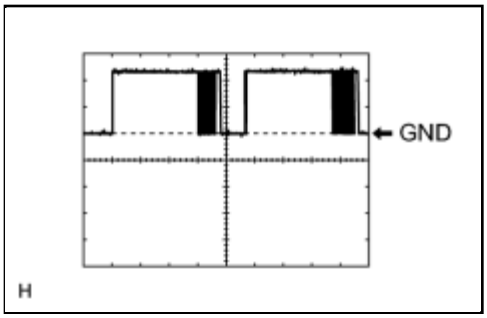
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	ground*2			
E36-30 (VC5) - E36-40 (AGND)	SB - BR*1 BE - GR*2	Engine switch power supply	Key is not in cabin	Below 1 V
E36-30 (VC5) - E36-40 (AGND)	SB - BR*1 BE - GR*2	Engine switch power supply	Key is in cabin*	4.6 to 5.4 V
E36-9 (CODE) - E36-40 (AGND)	P - BR*1 G - GR*2	Engine switch CODE input	Key is not in cabin	Below 1 V
E36-9 (CODE) - E36-40 (AGND)	P - BR*1 G - GR*2	Engine switch CODE input	Press engine switch and hold key close to engine switch*	Pulse generation (See waveform 1)
E36-8 (TXCT) - E36-40 (AGND)	L - BR*1 SB - GR*2	Engine switch TXCT output	Key is not in cabin	Below 1 V
E36-8 (TXCT) - E36-40 (AGND)	L - BR*1 SB - GR*2	Engine switch TXCT output	Press engine switch and hold key close to engine switch*	Pulse generation (See waveform 2)

- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)



ITEM	CONTENT
Tester Connection	E36-9 (CODE) - E36-40 (AGND)
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:

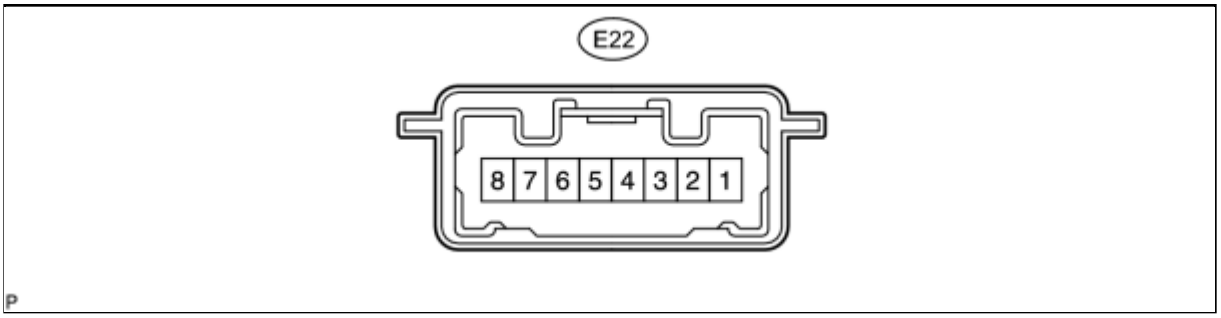
(2) Waveform 2 (Reference)

ITEM	CONTENT



Tester Connection	E36-8 (TXCT) - E36-40 (AGND)
Tool Setting	2 V/DIV., 50 ms./DIV.
Condition	Press engine switch and hold key close to engine switch*

HINT:

***: Remove the key battery before performing this inspection.**

3. CHECK ID CODE BOX (IMMOBILISER CODE ECU)

(a) Disconnect the E22 ID code box (immobiliser code ECU) connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

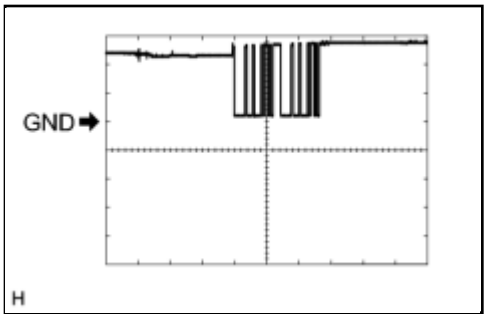
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E22-8 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
E22-1 (+B) - E22-8 (GND)	W - BR*1 BR - BR*2	+B power supply	Always	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, there may be a malfunction on the wire harness side.

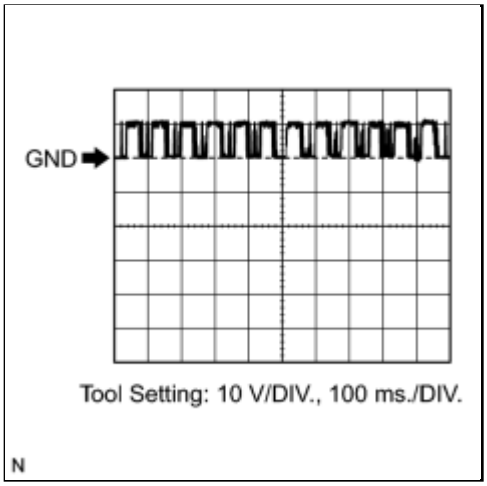
(c) Reconnect the E22 ID code box (immobiliser code ECU) connector.

(d) Measure the voltage according to the value(s) in the table below.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E22-5 (EFII) - E22-8 (GND)	LG - BR	ECM input signal	Engine switch off	10 to 14 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E22-5 (EFII) - E22-8 (GND)	LG - BR	ECM input signal	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after engine switch first turned on (IG) after battery disconnected and connected.	Pulse generation (see waveform 1)
E22-6 (EFIO) - E22-8 (GND)	P - BR	ECM output signal	Engine switch off	Below 1 V
E22-6 (EFIO) - E22-8 (GND)	P - BR	ECM output signal	Engine switch on (IG)	Pulse generation (see waveform 2)

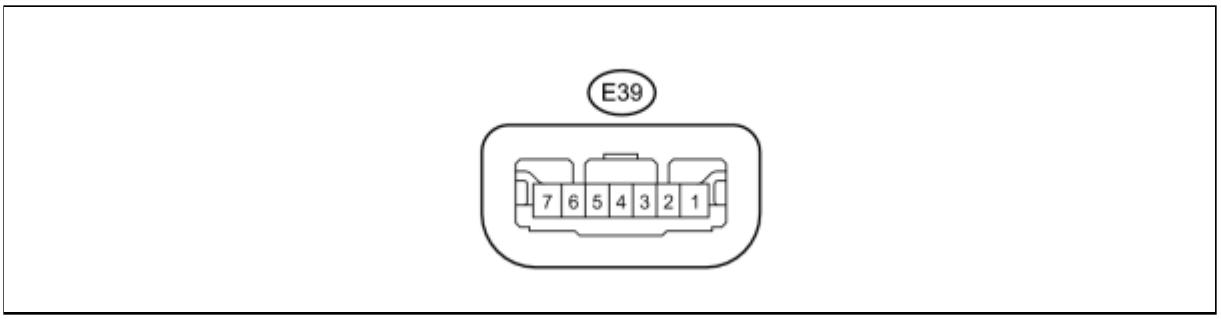


- If the result is not as specified, the ID code box (immobiliser code ECU) may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

ITEM	CONTENT
Tester Connection	E22-5 (EFII) - E22-8 (GND)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after engine switch first turned on (IG) after battery disconnected and connected.

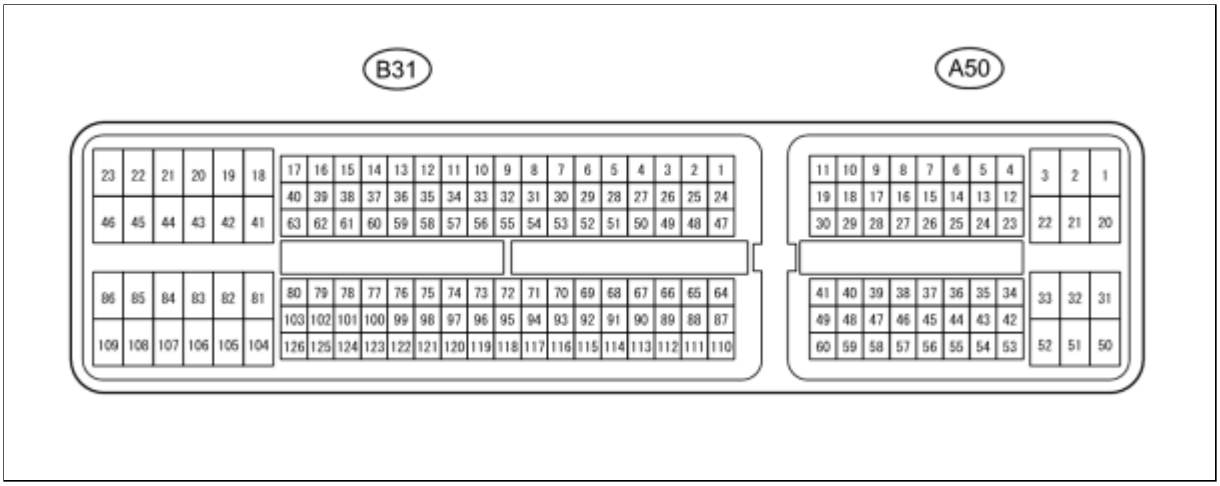


(2) Waveform 2 (Reference)

ITEM	CONTENT
Tester Connection	E22-6 (EFIO) - E22-8 (GND)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)

4. CHECK STEERING LOCK ECU

(a) Disconnect the E39 steering lock ECU connector.



(b) Measure the resistance and voltage according to the value(s) in the table below.

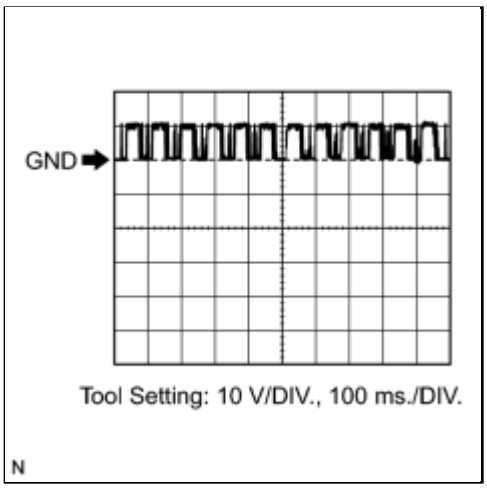
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E39-2 (SGND) - Body ground	BR - Body ground*1 W-B - Body ground*2	Ground	Always	Below 1 Ω
E39-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E39-7 (B) - Body ground	L - Body ground	+B power supply	Always	11 to 14 V
E39-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch off	0 V
			Engine switch on (IG)	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC Made

- If the result is not as specified, there may be a malfunction on the wire harness side.

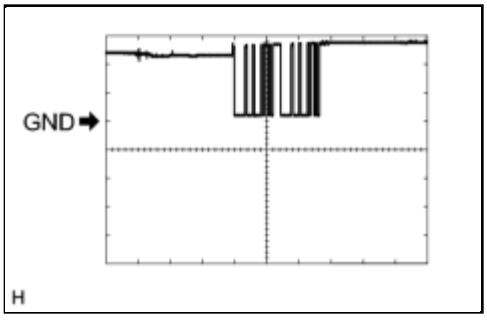
5. CHECK ECM

(a) Measure the resistance and voltage according to the value(s) in the table below.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-11 (IMI) - B31-104 (E1)	P - BR	ID code box (immobiliser code ECU) input signal	Engine switch off	Below 1 V
A50-11 (IMI) - B31-104 (E1)	P - BR	ID code box (immobiliser code ECU) input signal	Engine switch on (IG)	Pulse generation (See waveform 1)
A50-10 (IMO) - B31-104 (E1)	LG-B - BR	ID code box (immobiliser code ECU) output signal	Engine switch off	10 to 14 V
A50-10 (IMO) - B31-104 (E1)	LG-B - BR	ID code box (immobiliser code ECU) output signal	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after engine switch first turned on (IG) after battery disconnected and connected.	Pulse generation (See waveform 2)

If the result is not as specified, the ECM may have a malfunction.

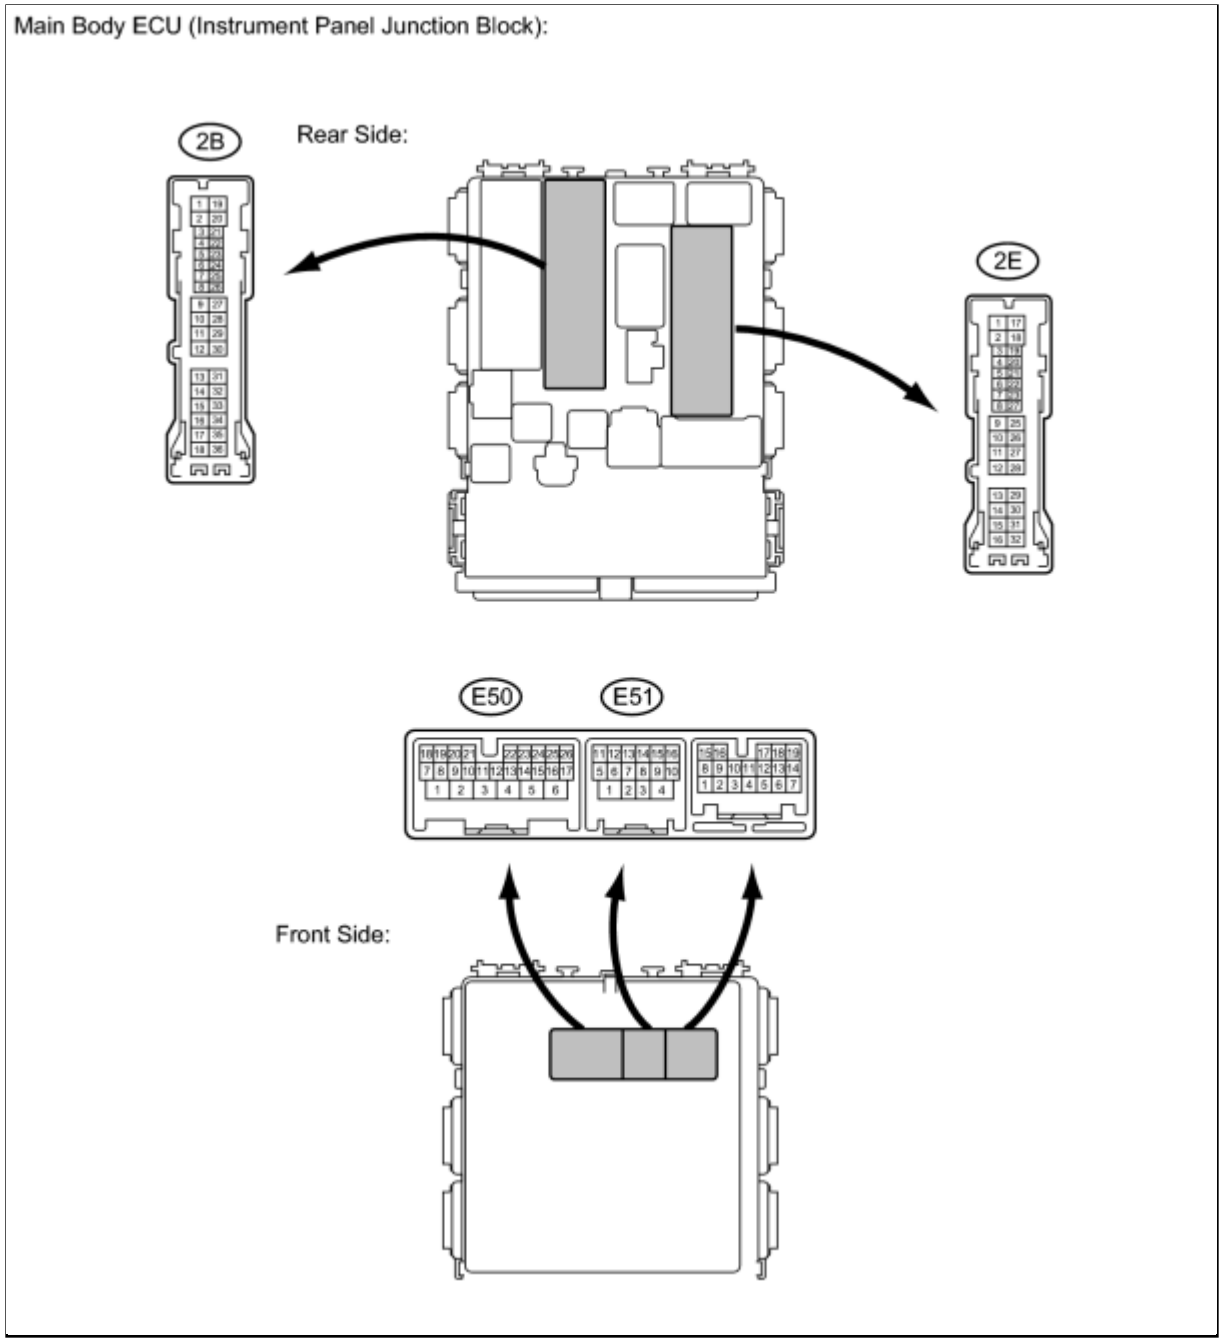


(b) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

ITEM	CONTENT
Tester Connection	A50-11 (IMI) - B31-104 (E1)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Engine switch on (IG)

(2) Waveform 2 (Reference)



ITEM	CONTENT
Tester Connection	A50-10 (IMO) - B31-104 (E1)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after engine switch first turned on (IG) after battery disconnected and connected.

6. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the 2B and 2E instrument panel junction block connectors.

(b) Disconnect the E50 and E51 main body ECU connectors.

(c) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
2E-17 (GND1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E51-4 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E51-1 (AM1) - Body ground	Y - Body ground*1 L - Body	+B power supply	Always	11 to 14 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
	ground*2			
E50-6 (AM2) - Body ground	W - Body ground*1 L - Body ground*2	+B power supply	Always	11 to 14 V
2B-30 (BECU) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V

- *1: for TMC Made
- *2: Except for TMC Made

If the result is not as specified, there may be a malfunction on the wire harness side.

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The certification ECU (smart key ECU assembly) controls the vehicle's engine immobiliser system functions. Engine immobiliser system data and Diagnostic Trouble Code (DTC) can be read through the vehicle's Data Link Connector 3 (DLC3).

In some cases, a malfunction may be occurring in the immobiliser system even though the security indicator light is not illuminated.

When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GV8024X
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

(e) Check the details of the DTC(s) 

.

2. CLEAR DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

(e) Clear the DTCs.

Last Modified: 3-10-2010	6.4 U	**From:** 200901

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Data List.

(e) Read the Data List according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Ignition Switch	Engine switch on (IG) signal / ON or OFF	ON: Engine switch on (ACC, IG) or engine started OFF: Engine switch off	-
ACC Switch	Engine switch on (ACC) signal / ON or OFF	ON: Engine switch on (ACC, IG) or engine started OFF: Engine switch off	-
Immobiliser	Immobiliser system status / SET or UNSET	SET: Key is not in cabin UNSET: Key is in cabin	-
Master Key	Master key code signal / MATCH or NO MATCH	MATCH: Master key code is sent NO MATCH: Unmatched master key code is sent	-
Sub Key	Sub-key (Master key) code signal / MATCH or NO MATCH	MATCH: Sub-key (master key) code is sent NO MATCH: Unmatched sub-key (master key) code is sent	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
BCC Malfunction	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
Abnormal Status	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
Different Encrypt Code	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
Different Serial Number	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
Frame Error	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
Response	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

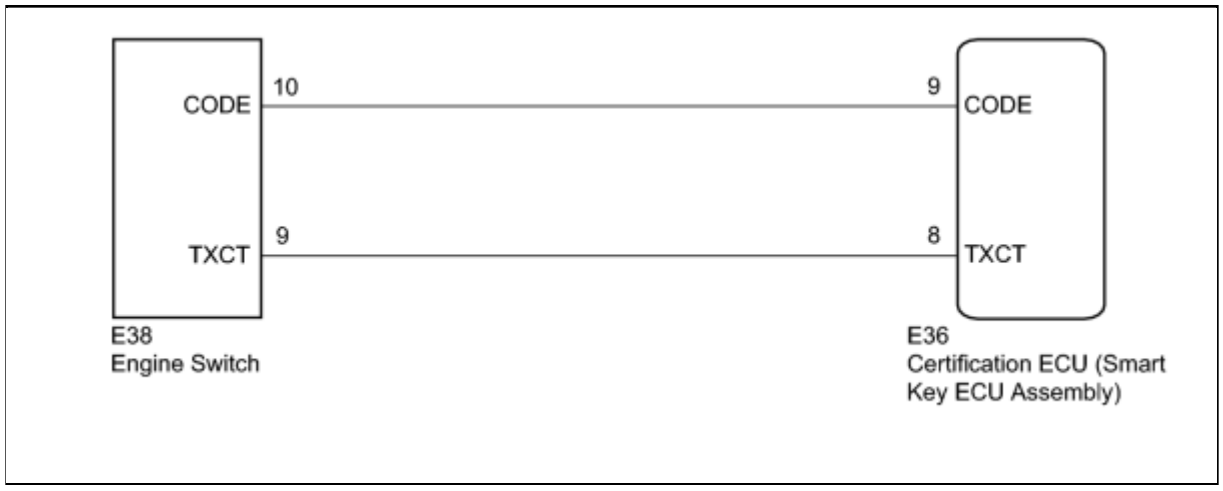
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): B2784: Antenna Coil Open / Short (2010 Corolla)		



DTC	**B2784**	**Antenna Coil Open / Short**

DESCRIPTION

This DTC is output when there is an open or short in the key coil (built into the engine switch).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2784	Antenna coil is open/shorted	• Wire harness or connector • Certification ECU (smart key ECU assembly) • Engine switch

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the certification ECU (smart key ECU assembly) is replaced, register the key and ECU communication ID INFO **.**

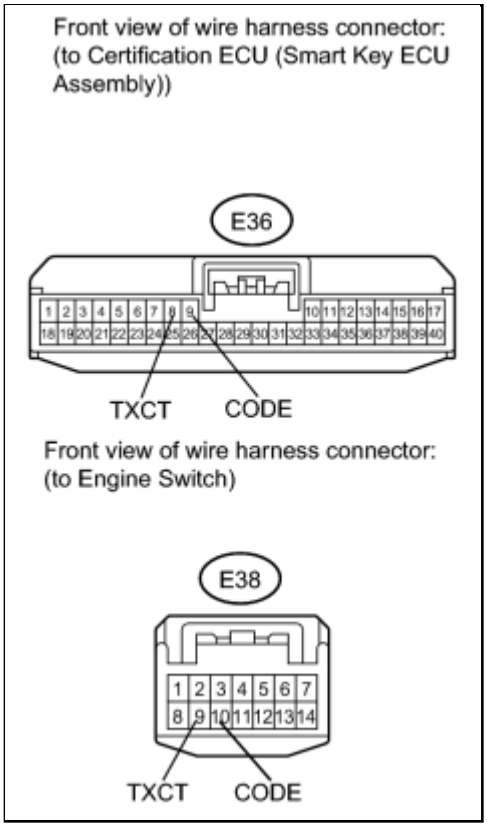
PROCEDURE

1.	**CHECK DTC OUTPUT**

(a) Clear the DTCs INFO .

(b) Recheck for DTCs.

OK:



B2784 is not reoutput.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENGINE SWITCH)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

2.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENGINE SWITCH)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the engine switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-9 (CODE) - E38-10 (CODE)	Always	Below 1 Ω
E36-8 (TXCT) - E38-9 (TXCT)	Always	Below 1 Ω
E36-9 (CODE) - Body ground	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-8 (TXCT) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	REPLACE ENGINE SWITCH

(a) Replace the engine switch INFO.

NEXT ▼

4.	CHECK DTC OUTPUT

(a) Clear the DTCs INFO.

(b) Recheck for DTCs.

OK:
B2784 is not reoutput.

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **END (ENGINE SWITCH IS DEFECTIVE)**

INSPECTION PROCEDURE

NOTICE:

If the certification ECU (smart key ECU assembly) is replaced, register the key and ECU communication ID INFO **.**

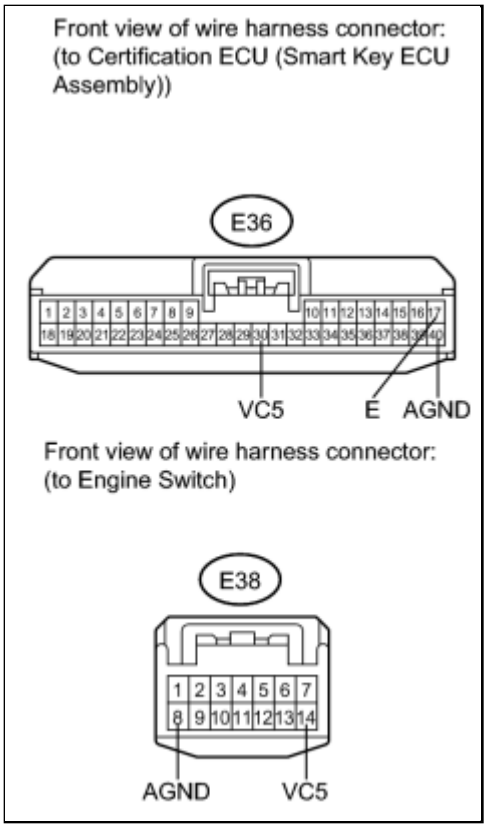
PROCEDURE

1.	**CHECK DTC OUTPUT**

(a) Clear the DTCs INFO.

(b) Recheck for DTCs.

OK:



B278A is not reoutput.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENGINE SWITCH)**

OK ▶ **USE SIMULATION METHOD TO CHECK**

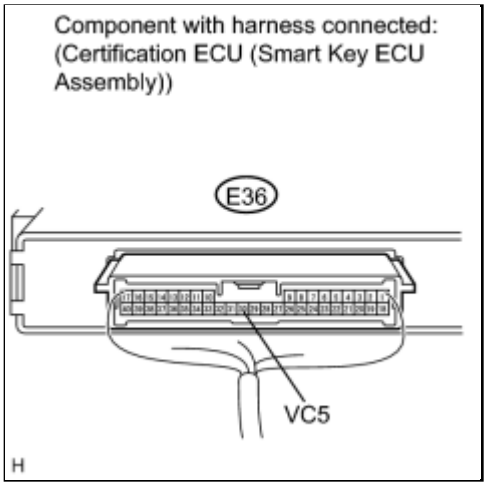
2.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENGINE SWITCH)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Disconnect the engine switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-30 (VC5) - E38-14 (VC5)	Always	Below 1 Ω
E36-40 (AGND) - E38-8 (AGND)	Always	Below 1 Ω
E36-17 (E) - Body ground	Always	Below 1 Ω
E36-30 (VC5) - Body ground	Always	10 kΩ or higher
E36-40 (AGND) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

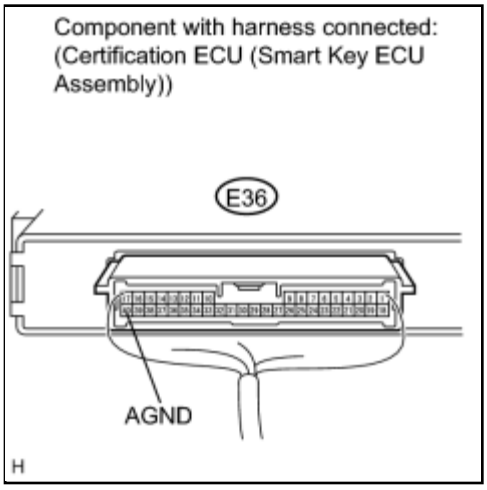
3.	CHECK HARNESS AND CONNECTOR (ENGINE SWITCH POWER SOURCE)

(a) Reconnect the certification ECU (smart key ECU assembly) connector.

(b) Reconnect the engine switch connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-30 (VC5) - Body ground	Key is not in cabin	Below 1 V
E36-30 (VC5) - Body ground	Engine switch pressed	4.6 to 5.4 V

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU**

ASSEMBLY)

OK

4.	CHECK HARNESS AND CONNECTOR (ENGINE SWITCH BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-40 (AGND) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK ▶ **REPLACE ENGINE SWITCH**

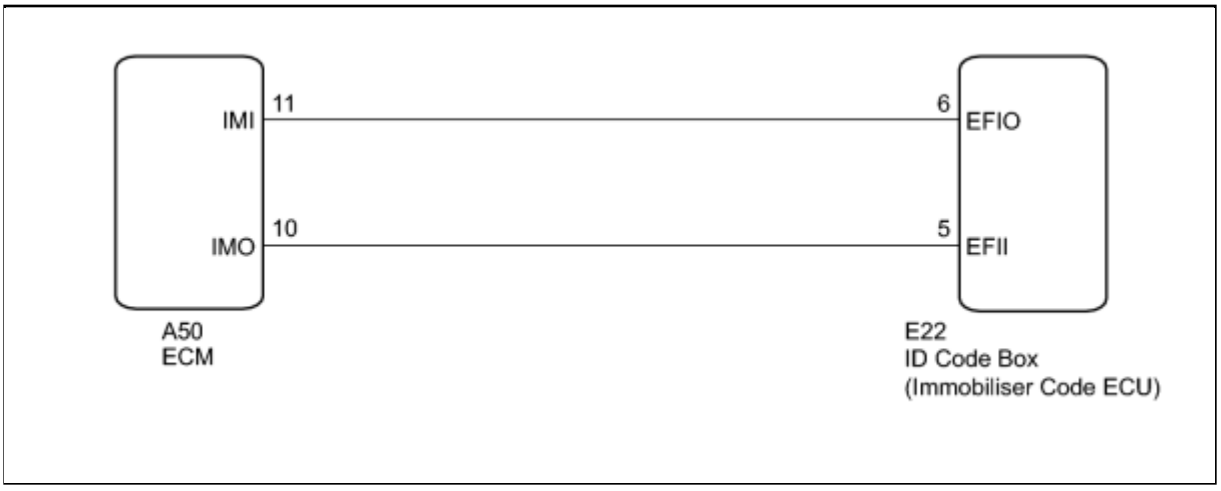
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): B2799: Engine Immobiliser System Malfunction (2010 Corolla)		



DTC	**B2799**	**Engine Immobiliser System Malfunction**

DESCRIPTION

This DTC is output when one of the following occurs: 1) the ECM detects errors in its own communications with the ID code box (immobiliser code ECU); 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the ID code box (immobiliser code ECU) and ECM is different and an engine start is attempted. Before troubleshooting this DTC, make sure that no certification ECU (smart key ECU assembly) DTCs are present. If present, troubleshoot the certification ECU (smart key ECU assembly) DTCs first.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2799	One of the following conditions is met: • Error in communication between ECM and ID code box (immobiliser code ECU) • Error in communication lines • Communication ID is different between ID code box (immobiliser code ECU) and ECM during communication	• Wire harness or connector • ECM • ID code box (immobiliser code ECU)

If the certification ECU (smart key ECU assembly) is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Smart Key / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Smart Key (Certification ECU (Smart Key ECU Assembly))

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Security Indicator	Security indicator light	ON/OFF	-

OK:

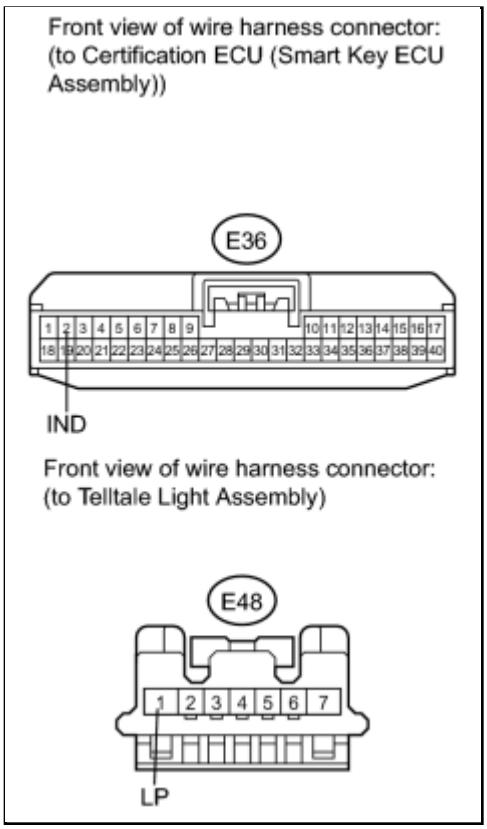
The security indicator light turns on and off according to the Techstream operation.

NG ▶ **CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - TELLTALE LIGHT ASSEMBLY)**

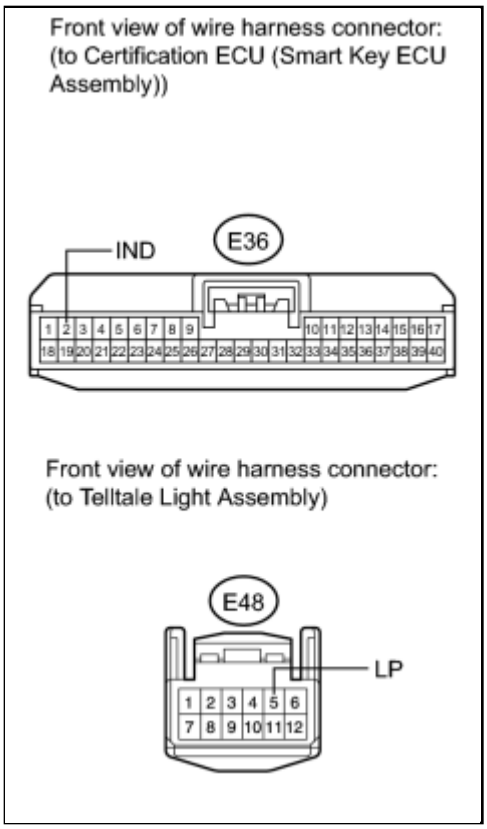
OK ▶ **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

2.	**CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - TELLTALE LIGHT ASSEMBLY)**

(a) Disconnect the certification ECU (smart key ECU assembly) connector.



(b) Disconnect the telltale light assembly connector.



(c) for Telltale Light (w/o Clock):

(1) Measure the resistance according to the value(s) in the table below.

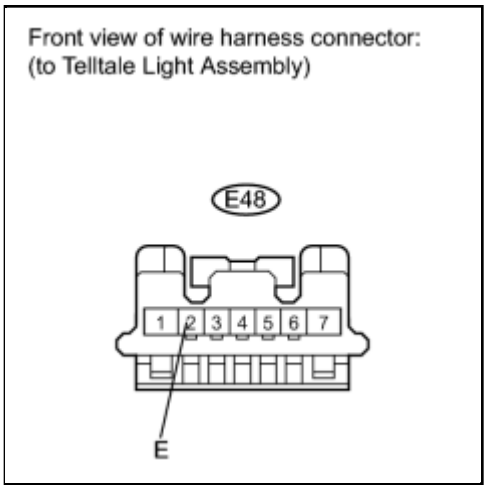
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-2 (IND) - E48-1 (LP)	Always	Below 1 Ω
E36-2 (IND) - Body ground	Always	10 kΩ or higher

(d) for Telltale Light (w/ Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



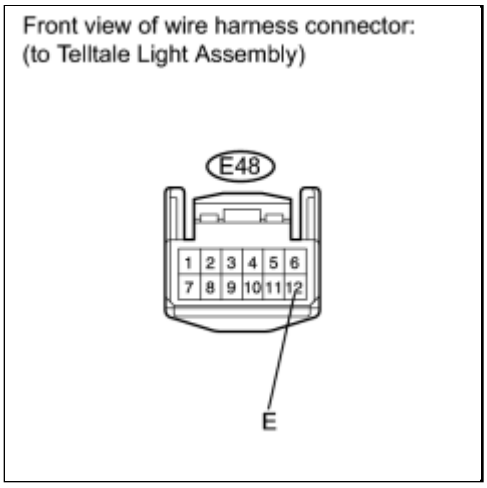
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-2 (IND) - E48-5 (LP)	Always	Below 1 Ω
E36-2 (IND) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	CHECK HARNESS AND CONNECTOR (TELLTALE LIGHT ASSEMBLY - BODY GROUND)

(a) for Telltale Light (w/o Clock):



(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-2 (E) - Body ground	Always	Below 1 Ω

(b) for Telltale Light (w/ Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-12 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TELLTALE LIGHT ASSEMBLY**

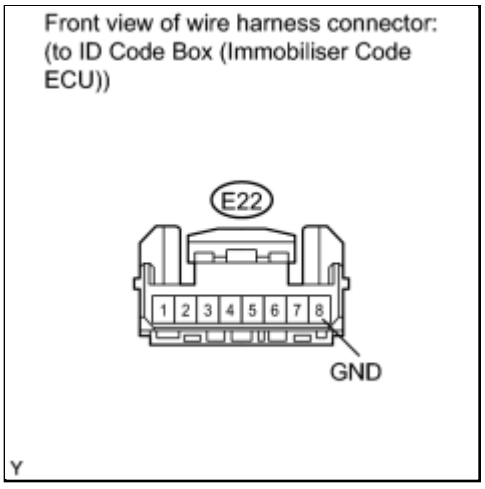
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (ID CODE BOX - BATTERY)**

(a) Disconnect the ID code box (immobiliser code ECU) connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E22-1 (+B) - Body ground	Always	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR REPLACE FUSE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (ID CODE BOX - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

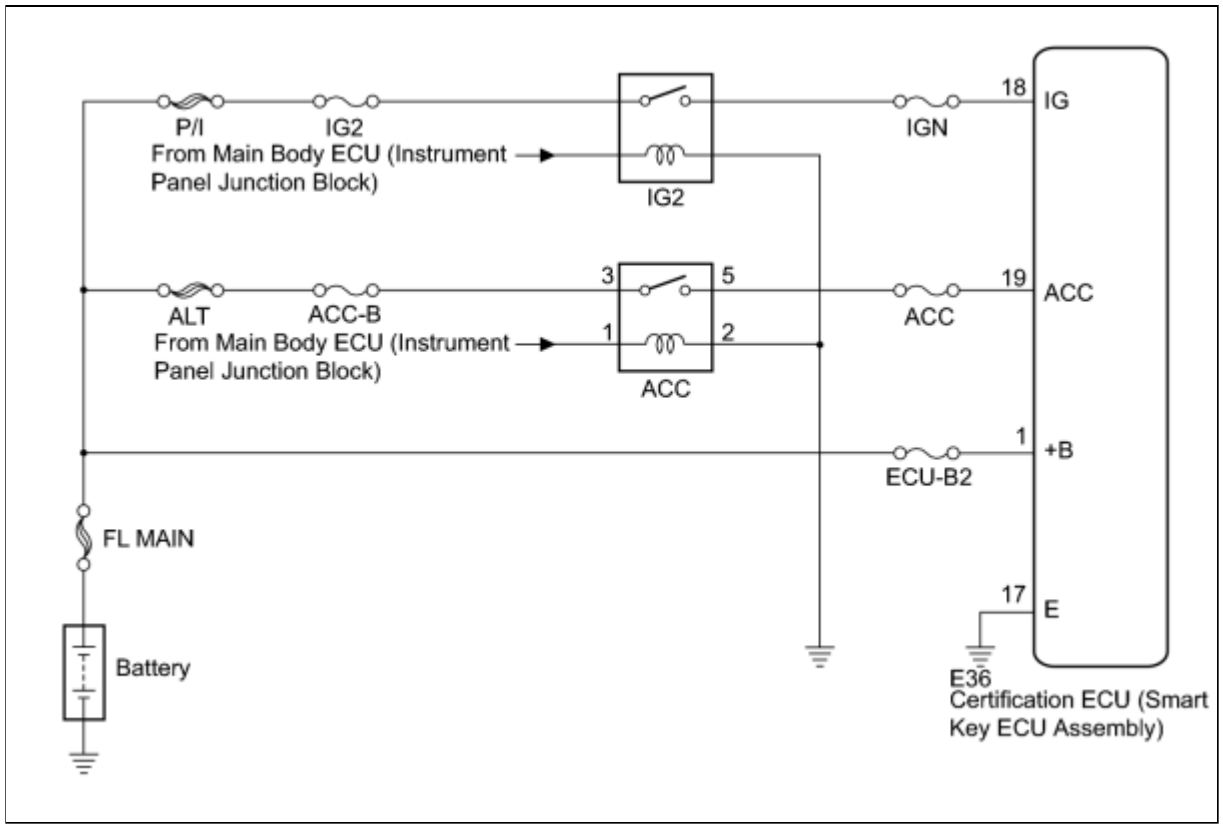
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E22-8 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK	PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001P8X01PX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/ Smart Key System): Certification ECU Power Source Circuit (2010 Corolla)		

Certification ECU Power Source Circuit



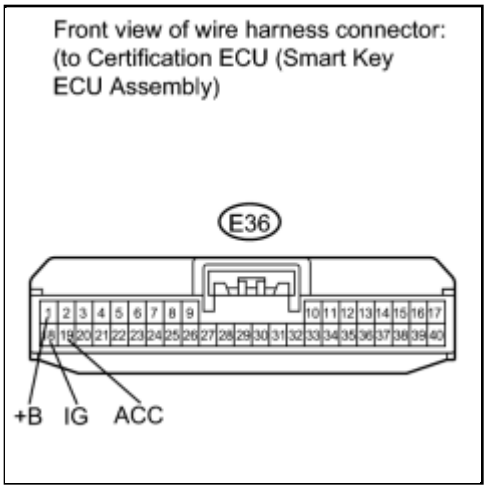
DESCRIPTION

This is the power source circuit of the certification ECU (smart key ECU assembly).

The certification ECU (smart key ECU assembly) controls the following:

- Key verification confirmation
- Electrical key oscillator (door, indoor and outside) control
- Entry door LOCK/UNLOCK request to the main body ECU (instrument panel junction block)
- Steering LOCK/UNLOCK request
- Immobiliser SET/UNSET request to the ID code box (immobiliser code ECU)

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

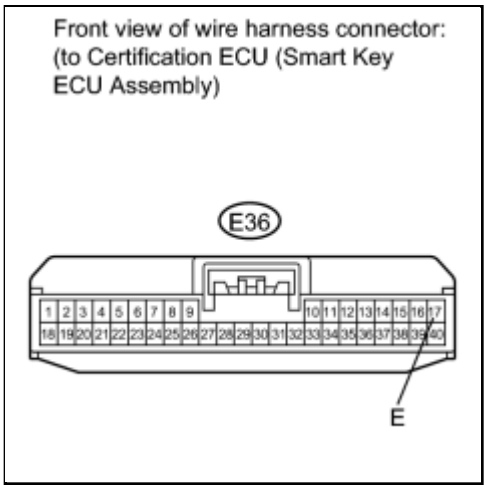
If the certification ECU (smart key ECU assembly) is replaced, register the key and ECU communication ID INFO .

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BATTERY)

(a) Disconnect the certification ECU (smart key ECU assembly) connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-1 (+B) - Body ground	Always	11 to 14 V
E36-18 (IG) - Body ground	Engine switch off	Below 1 V
E36-18 (IG) - Body ground	Engine switch on (IG)	11 to 14 V
E36-19 (ACC) - Body ground	Engine switch off	Below 1 V
E36-19 (ACC) - Body ground	Engine switch on (ACC)	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR REPLACE FUSE**

OK ▼

2.	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E36-17 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): PRECAUTION (2010 Corolla)		

PRECAUTION

1. PRECAUTIONS FOR THE KEY

(a) The key is a precision instrument. Be sure to observe the following:

(1) Do not drop or strike the key.

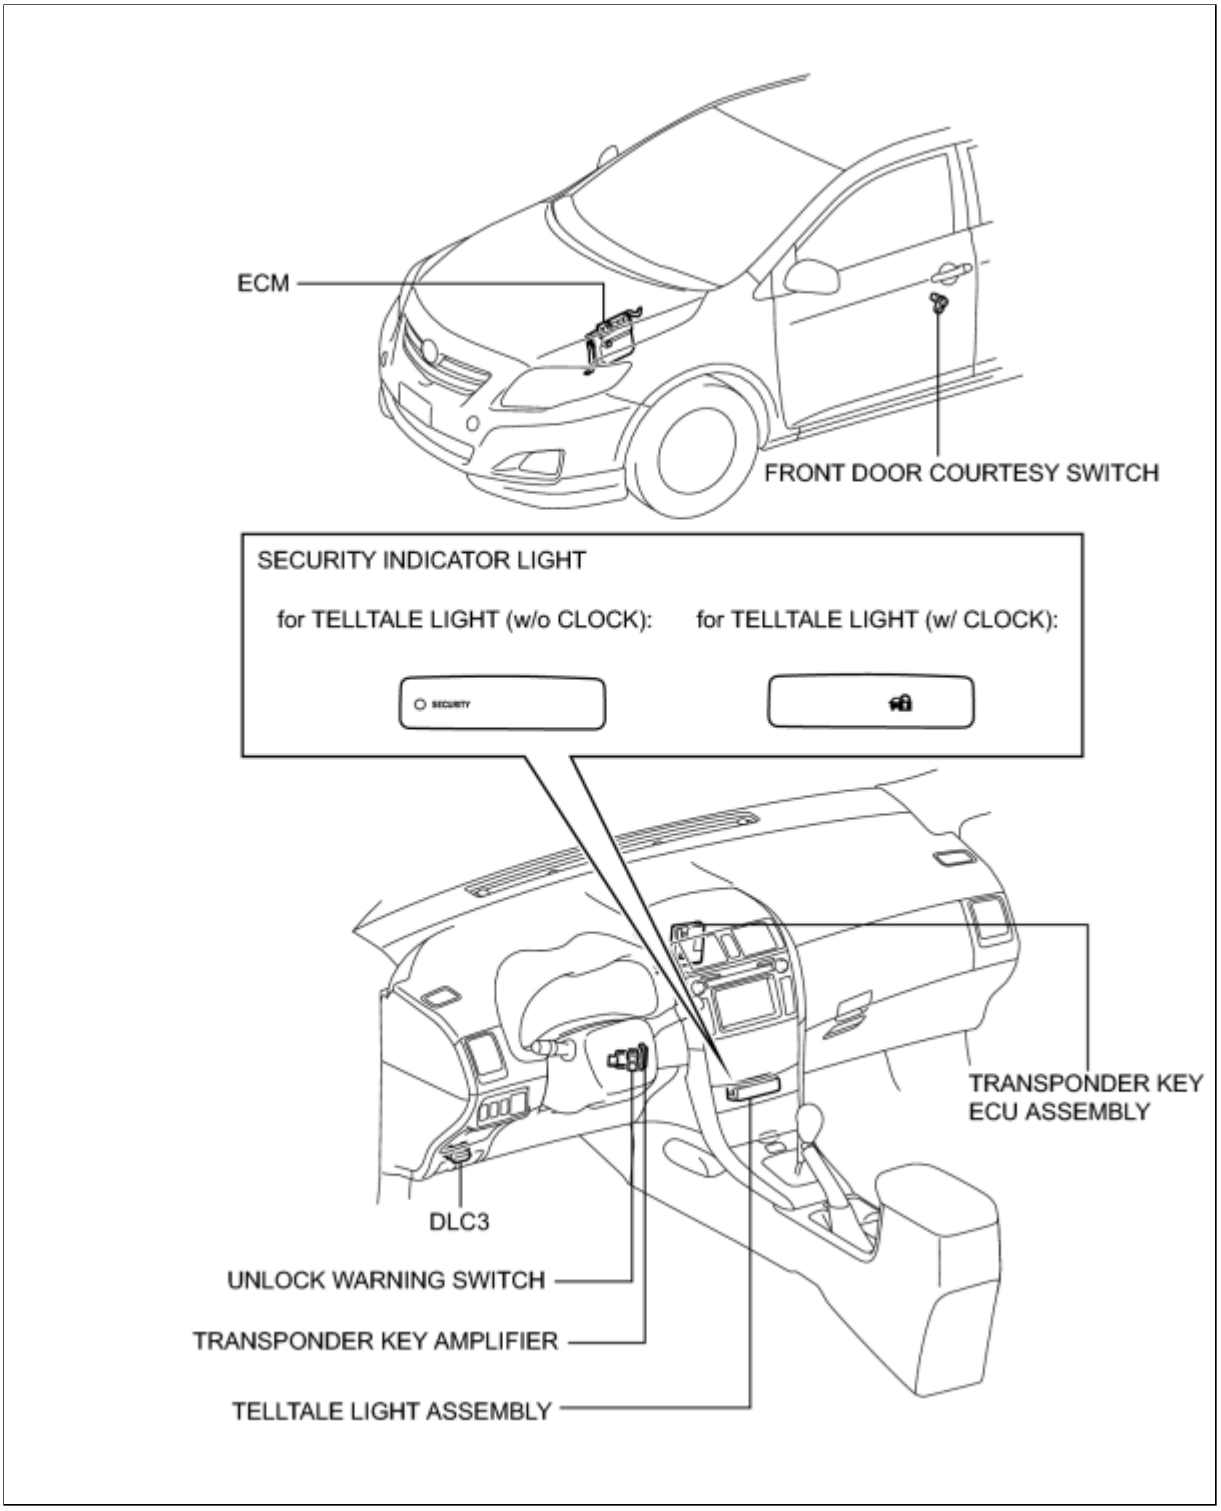
(2) Do not allow the key to be kept in a high temperature place for a long time.

(3) Do not use an ultrasonic washing machine to clean the key.

(4) Keep the key away from magnets or magnetized items during use.

(5) Do not attach any stickers to the key.

2. PRECAUTION FOR RECONNECTING THE BATTERY CABLE



(a) When reconnecting the cable to the negative (-) battery terminal, before starting the engine, wait at least 5 seconds after turning the ignition switch to ON. The engine may start and stall if it is started immediately after reconnecting the battery cable.

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

Use the following procedure to troubleshoot the engine immobiliser system.

***: Using the Techstream.**

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3.	**INSPECT BATTERY VOLTAGE**

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4.	**CRANK ENGINE FOR MORE THAN 10 SECONDS**

NEXT

5.	**CHECK FOR DTC***

(a) Check for DTCs and note any codes that are output.

(b) Clear the DTCs.

(c) Recheck for DTCs. Try to duplicate the DTCs (SFI system or ECD system and engine immobiliser system) by simulating the symptoms indicated by the DTCs.

Result:

RESULT	PROCEED TO
DTC (SFI system) recurs (for 2ZR-FE)	A
DTC (SFI system) recurs (for 2AZ-FE)	B
DTC (engine immobiliser system) recurs	C

RESULT	PROCEED TO
DTC does not recur	D

A ▶ INFO **Go to DIAGNOSTIC TROUBLE CODE CHART**

B ▶ INFO **Go to DIAGNOSTIC TROUBLE CODE CHART**

C ▶ INFO **Go to DIAGNOSTIC TROUBLE CODE CHART**

D
▼

6.	READ VALUE USING TECHSTREAM*

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Data List.

(e) Read the Data List according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-

OK:
On the Techstream screen, the item changes between ON and OFF according to the chart above.

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): REGISTRATION (2010 Corolla)		

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

The key has 2 codes: the key code (immobiliser code) and the wireless code. Both of these codes need to be registered. For the wireless code registration procedures, refer to Wireless Door Lock Control System INFO **.**

(a) When adding master keys or sub keys (Additional registration):

(1) Register the key code (immobiliser code) in the transponder key ECU assembly.

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "B"

(b) When replacing the transponder key ECU assembly (New registration):

(1) Register the key code (immobiliser code) in the transponder key ECU assembly.

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "A"

(2) Register the ECU communication ID between the new transponder key ECU assembly and the ECM.

TARGET ECU	REFER TO
ECM	Procedure "D"

(c) When replacing the ECM:

(1) Register the ECU communication ID between the transponder key ECU assembly and the new ECM.

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "E"

(d) When replacing the transponder key ECU assembly and the ECM:

(1) Register the key codes (immobiliser codes) in the new transponder key ECU assembly.

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "A"

(2) Register the ECU communication ID between the new transponder key ECU assembly and the new ECM.

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "E"

(e) When clearing the key code(s):

(1) Clear the key code(s) of lost key(s).

TARGET ECU	REFER TO
Transponder key ECU assembly	Procedure "C"

2. KEY REGISTRATION

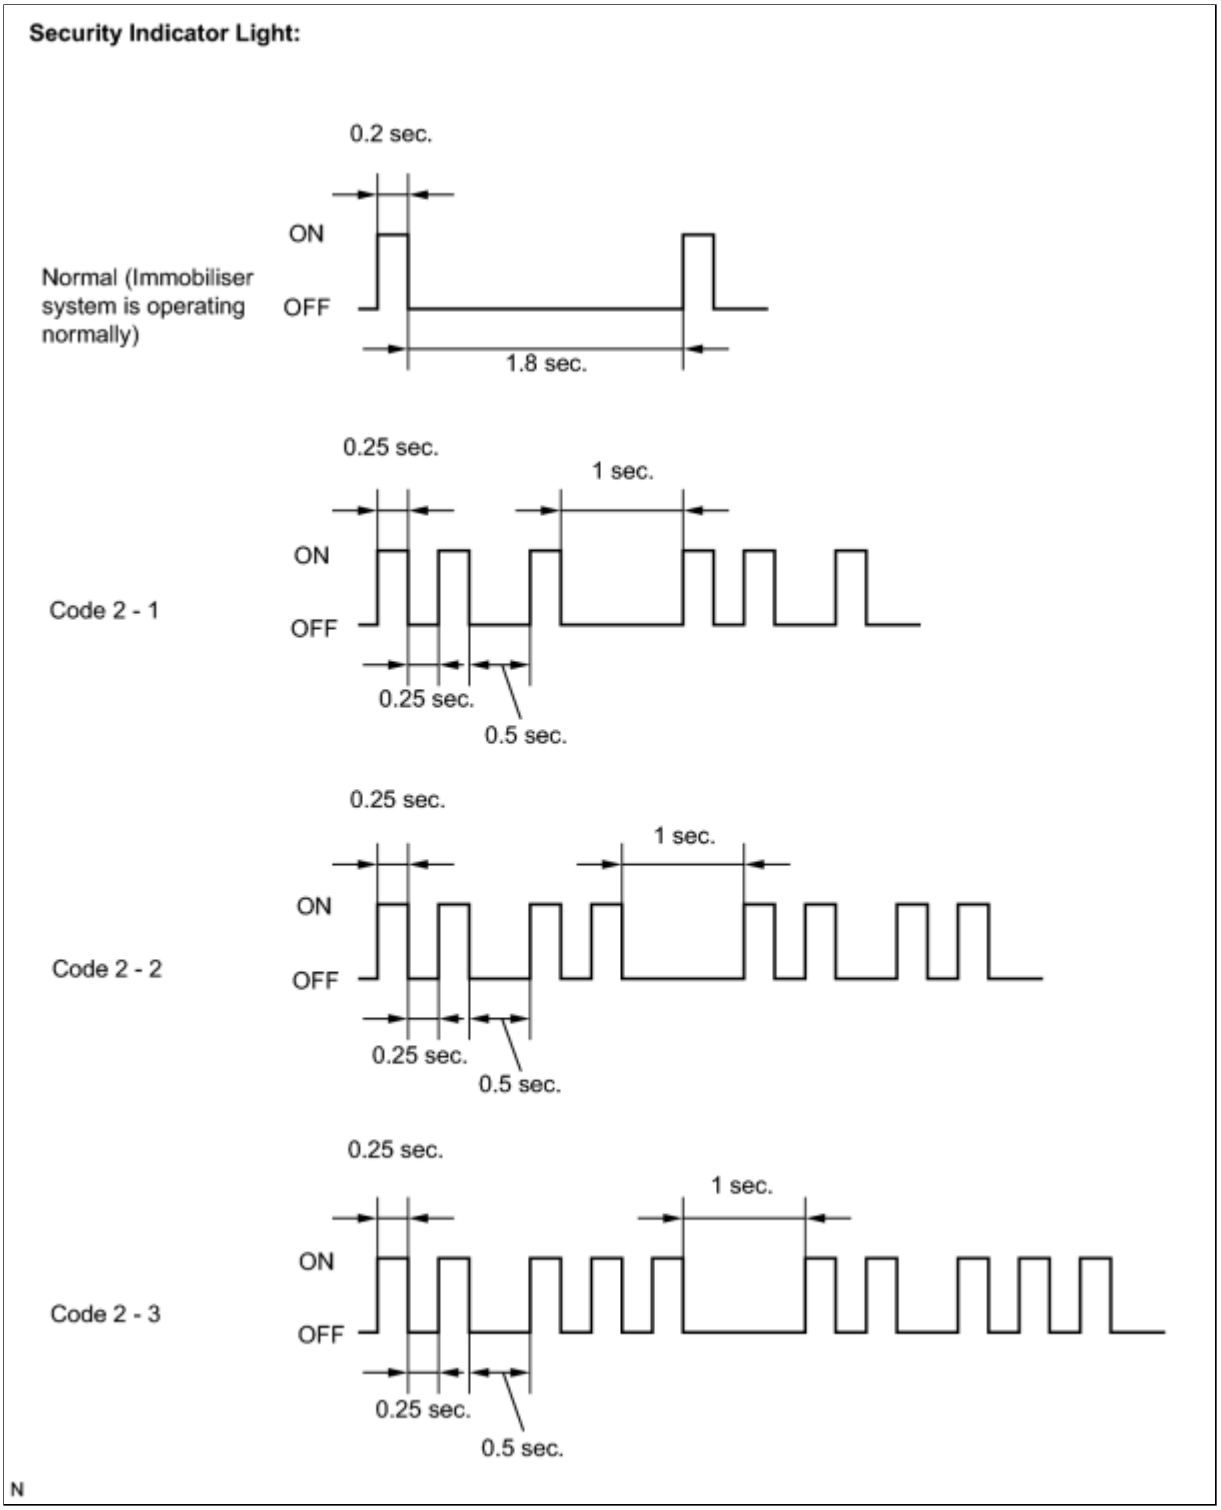
(a) New key code registration (Procedure "A"):

NOTICE:

Make sure that no key codes are registered in the transponder key ECU assembly.

HINT:

- In this mode, a maximum of 3 key codes for 2 master keys and 1 sub-key can be registered. The master keys and sub-key can be registered in any order because the transponder key ECU assembly can distinguish between different types of keys.
- New key codes must be registered with the battery connected. The ignition switch can be either on or off.
- When a new transponder key ECU assembly is installed, key codes must be registered in the transponder key ECU assembly.



Automatic Key Code Registration (New Registration)

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	Blinking **HINT:** **Until first key is inserted**
2. Insert the master key into the ignition key cylinder.	ON
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility	OFF for 1 second and then ON

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
4. Select Key Registration **HINT:** **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**	
4. Remove the key and then select Next on the Techstream.	ON
5. Insert the master key to be registered and then select Next on the Techstream.	OFF for 1 second and then ON
6. Remove the key and then select Next on the Techstream.	ON
7. Insert the sub-key to be registered and then select Next on the Techstream.	OFF for 1 second and then ON for 0.5 seconds and then OFF
8. Remove the key.	Blinking
9. End (Procedure "E")	

HINT:

- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the new key code registration fails, code 2-1 will be output through the security indicator light. Trying to re-register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the maximum limit, code 2-3 will be output through the security indicator light. The output details are shown below.

(b) Finish the automatic key code registration mode. The automatic key code registration mode can be forced to end when at least 1 key code (immobiliser code) for the master key has been registered.

HINT:

Follow the instruction on the Techstream screen to end new key code registration mode.

3. REGISTRATION OF ADDITIONAL KEY

(a) Additional registration (Procedure "B"):

HINT:

- A maximum of 5 key codes and 3 sub-key codes can be registered.
- Registration mode will end if any step is not completed within the specified time.
- When the ignition cylinder or the key cylinder set is replaced, remove the transmitter module from the original master key. Then install this transmitter module to a new key and use the new key as the master key. If necessary, use this master key to register other keys.

NOTICE:

When the ignition key cylinder has been replaced, locking and unlocking doors are possible with the new master key's transmitter module (removed from the original master key). However, the new master key will not be able to lock and unlock doors through the door key cylinder. Keep the original master key. If the battery in the new master key's transmitter module fails, the original master key can be used to lock and unlock doors through the door key cylinder.

Additional Registration

PROCEDURE	TIME TO COMPLETE OPERATION	SECURITY INDICATOR LIGHT CONDITION
1. Start	-	Blinking **HINT:** **Until first key is inserted**
2. Insert the already registered master key into the ignition key cylinder and turn the ignition switch to ON.	-	OFF
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility 4. Select Key Registration **HINT:** **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**	Within 120 sec.	ON
4. Remove the master key.	Within 20 sec. **HINT:** **After the Techstream instruction**	ON
5. Insert the key to be registered in the ignition key cylinder.	Within 10 sec.	Blinking
6. Wait for 60 sec. after the key is registered. **HINT:**	-	OFF

PROCEDURE	TIME TO COMPLETE OPERATION	SECURITY INDICATOR LIGHT CONDITION
The security indicator light goes off.		
7. Remove the key.	-	Blinking
8. End		

HINT:

- A brief outline of key code registration procedures is shown above. For detailed information, refer to the Techstream screen.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.
- If the key code registration has failed in automatic key code registration mode, code 2-1 will be output through the security indicator light. Trying to re-register an already registered key will cause code 2-2 to be output when the key is inserted. If the number of registered key codes exceeds the maximum limit, code 2-3 will be output through the security indicator light. The details are shown in procedure "A".

4. ERASURE OF KEY CODE

(a) Key code erasure (Procedure "C"):

HINT:

- Performing this procedure will erase all key codes except for the master key, which is used for erasing the key codes. In order to use a key whose code has been erased, a new key code must be registered.
- This procedure will be canceled if each step is not completed within the specified time.

Key Code Erasure

PROCEDURE	TIME TO COMPLETE OPERATION	SECURITY INDICATOR LIGHT CONDITION
1. Start	-	Blinking **HINT:** **Until first key is inserted**
2. Insert the already registered master key in the ignition key cylinder and turn the ignition switch to ON.	-	OFF
3. Techstream operation 1. Select Body Electrical 2. Select Immobiliser 3. Select Utility 4. Select Transponder Code Erasure	Within 120 sec.	ON for 1 sec. then OFF

PROCEDURE	TIME TO COMPLETE OPERATION	SECURITY INDICATOR LIGHT CONDITION
HINT: **After completing the above operation, proceed to the next step in accordance with the prompts on the Techstream screen.**		
4. Remove the master key.	Within 10 sec. **HINT:** **After the Techstream instruction**	ON
5. End		

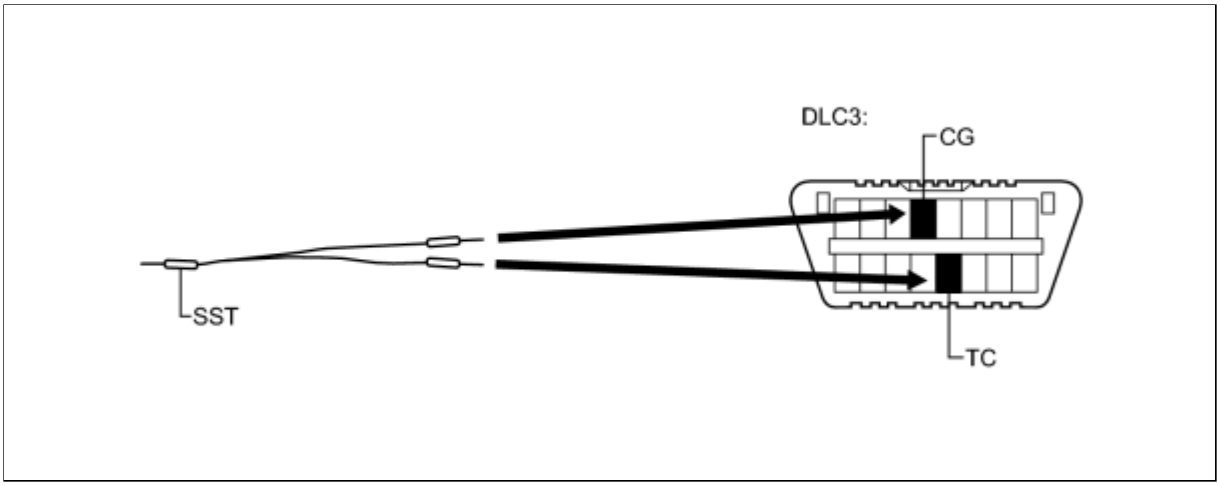
HINT:

- A brief outline of key code registration procedures is shown above. For detailed information, refer to the Techstream screen.
- When the engine immobiliser system is operating normally and the key is pulled out, the security indicator light blinks continuously.

5. ECU COMMUNICATION ID REGISTRATION

(a) ECU communication ID registration (Procedure "D"):

NOTICE:



- When the transponder key ECU assembly is replaced, the ECU communication ID of the ECM must be registered into the transponder key ECU assembly to match their ECU communication IDs.
- The engine cannot be started unless the ECU communication IDs match.
- Do not turn the ignition switch from on to off 20 times or more before registering the ECU communication ID. Turning the ignition switch from on to off 20 times or more will result in the engine not starting unless the transponder key ECU assembly is replaced with a new one.
- After the registration, turning the ignition switch to the START position may not start the engine on the first try. If so, turn the ignition switch to the START position again.
- After the engine is started, clear DTC B2799 (code for ECM's immobiliser communication error) by either of the following:

  - Using the Techstream.

  - Disconnecting the battery for 30 seconds.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST: 09843-18040

(2) Turn the ignition switch to ON and leave the vehicle as is for 30 minutes.

HINT:

Do not start the engine.

(3) Check that the engine starts.

(b) ECU communication ID registration (Procedure "E"):

NOTICE:

The ECU communication ID should be registered when the ECM and transponder key ECU assembly are replaced or when the ECM only is replaced in order to match the ECU communication ID.

ECU Communication ID Registration

PROCEDURE	SECURITY INDICATOR LIGHT CONDITION
1. Start	OFF
2. Insert an already registered key into the ignition key cylinder.	
3. Start the engine.	
4. Check that the engine starts and stays on for more than 3 seconds.	
5. End	

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GV6015X
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

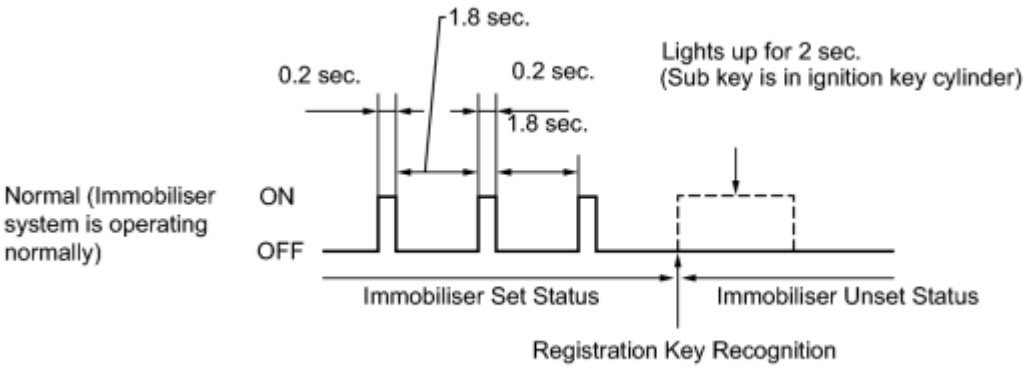
1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

The engine immobiliser system is designed to prevent the vehicle from being stolen. This system uses the transponder key ECU that stores the key codes of authorized ignition keys. If an attempt is made to start the engine using an unauthorized key, the ECU sends a signal to the ECM to prohibit fuel delivery and ignition, effectively disabling the engine.

2. FUNCTION OF MAIN COMPONENTS

COMPONENT	OUTLINE
Transponder key coil/amplifier	When key is inserted in ignition key cylinder, key coil receives key code. Then amplifier amplifies ID code and outputs it to transponder key ECU assembly.
Unlock warning switch assembly	Unlock warning switch assembly detects if key is in ignition key cylinder and outputs results to transponder key ECU assembly.
ECM	ECM receives ID verification results from transponder key ECU assembly. ECM also verifies ECUs. Then judgment of whether to immobiliser engine is made.
Security indicator	Depending on operation of transponder key ECU assembly, security indicator light comes on or starts blinking.

3. SYSTEM FUNCTION

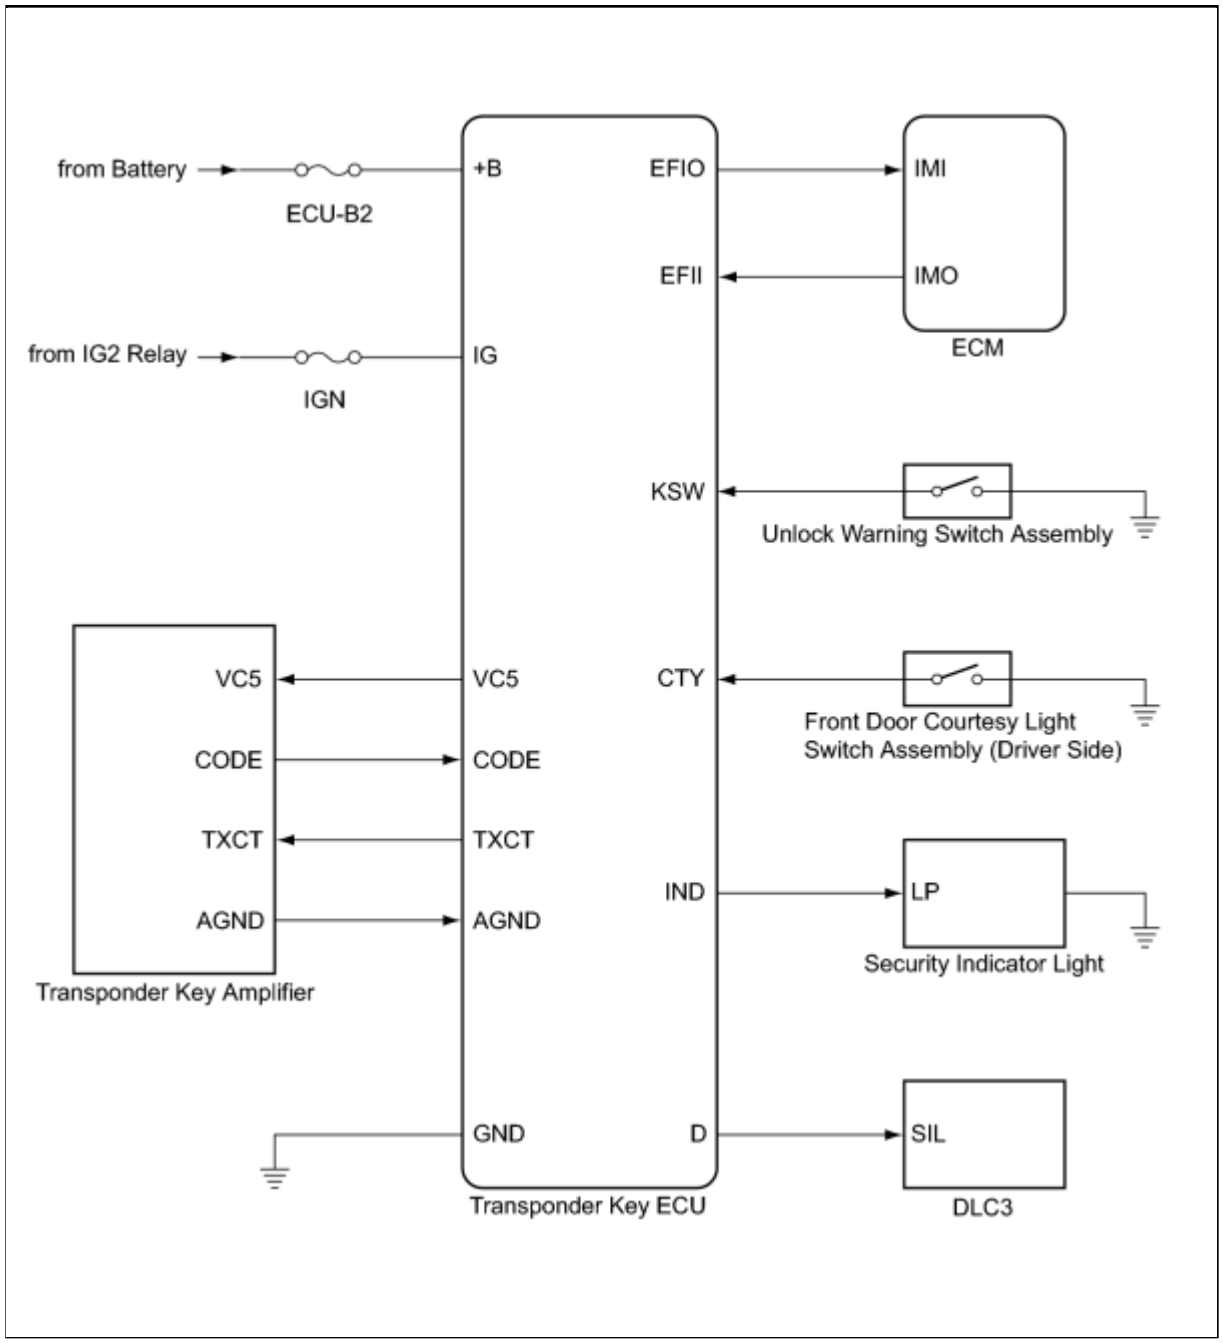


(a) When the transponder key ECU assembly detects that the key unlock warning switch is ON, the ECU provides current to the transponder key coil and produces an electric wave. A transponder chip in the key grip receives the electric wave. Upon receiving the electric wave, the transponder chip outputs a key ID code signal. The transponder key coil receives this signal, which is amplified by the transponder key amplifier, and the signal is transmitted to the ECU.

The ECU matches the key ID code with the vehicle's ID code, which was previously registered in the ECU, and communicates the results to the ECM.

After the identification results show that the key ID code matches the vehicle's ID code and the ECU has confirmed their match: 1) the immobiliser system does not immobilise the engine and the engine starting controls (fuel injection control and ignition control) enter standby mode; and 2) the ECU transmits a security indicator signal that communicates "indicator off" to the clock. Then, the clock turns off the security indicator light.

(b) The security indicator blinking pattern is as shown below (when changing from the immobiliser set status to the unset status):



Security Indicator:

N

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): TERMINALS OF ECU (2010 Corolla)		

TERMINALS OF ECU

1. CHECK TRANSPONDER KEY AMPLIFIER

(a) Disconnect the E29 transponder key amplifier connector.

(b) Measure the resistance according to the value(s) in the table below.

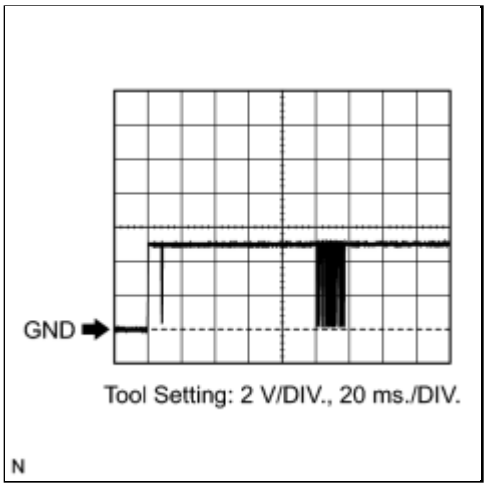
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E29-7 (AGND) - Body ground	R - Body ground*1 V - Body ground*2	Ground	Always	Below 1 Ω

- *1: for TMC Made
- *2: Except for TMC Made

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E29 transponder key amplifier connector.

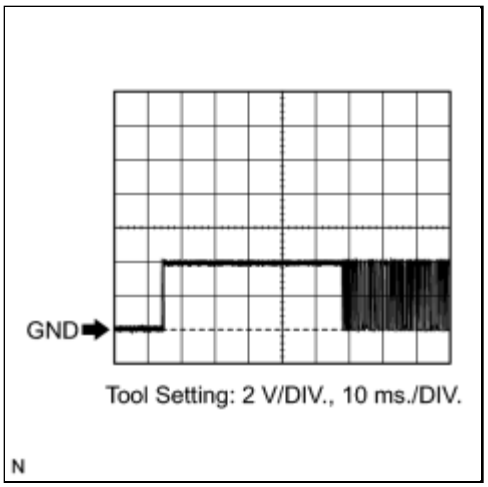
(d) Measure the voltage according to the value(s) in the table below.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E29-1 (VC5) - E29-7 (AGND)	B - R*1 G - V*2	Power source	No key is in ignition key cylinder	Below 1 V
E29-1 (VC5) - E29-7 (AGND)	B - R*1 G - V*2	Power source	Key is in ignition key cylinder	4.6 to 5.4 V
E29-4 (CODE) - E29-7 (AGND)	P - R*1 SB - V*2	Demodulated signal of key code data	No key is in ignition key cylinder	Below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E29-4 (CODE) - E29-7 (AGND)	P - R*1 SB - V*2	Demodulated signal of key code data	Key is in ignition key cylinder	Waveform 1
E29-5 (TXCT) - E29-7 (AGND)	G - R*1 BE - V*2	Key code output signal	No key is in ignition key cylinder	Below 1 V
E29-5 (TXCT) - E29-7 (AGND)	G - R*1 BE - V*2	Key code output signal	Key is in ignition key cylinder	Waveform 2

- *1: for TMC Made
- *2: Except for TMC Made

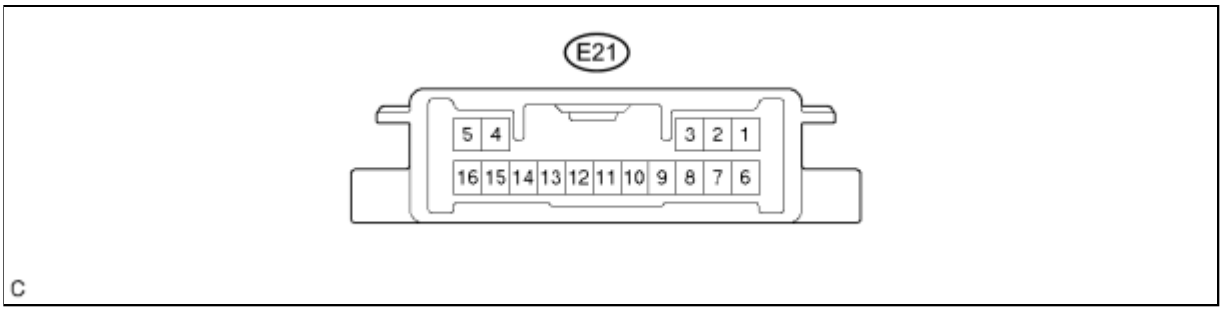


If the result is not as specified, the transponder key amplifier may have a malfunction.

(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

Tester Connection	E29-4 (CODE) - E29-7 (AGND)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Key is in ignition key cylinder



(2) Waveform 2 (Reference)

Tester Connection	E29-5 (TXCT) - E29-7 (AGND)
Tool Setting	2 V/DIV., 10 ms./DIV.
Condition	Key is in ignition key cylinder

2. CHECK TRANSPONDER KEY ECU ASSEMBLY

(a) Disconnect the E21 transponder key ECU assembly connector.

(b) Measure the resistance and voltage according to the value(s) in the table below.

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E21-16 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
E21-1 (+B) - E21-16 (GND)	W - BR*1 BR - BR*2	Battery	Always	11 to 14 V
E21-2 (IG) - E21-16 (GND)	B - BR	Ignition switch signal	Ignition switch off	Below 1 V
E21-2 (IG) - E21-16 (GND)	B - BR	Ignition switch signal	Ignition switch ON	11 to 14 V
E21-3 (KSW) - E21-16 (GND)	L - BR	Unlock warning switch signal	No key is in ignition key cylinder	10 kΩ or higher
E21-3 (KSW) - E21-16 (GND)	L - BR	Unlock warning switch signal	Key is in ignition key cylinder	Below 1 Ω

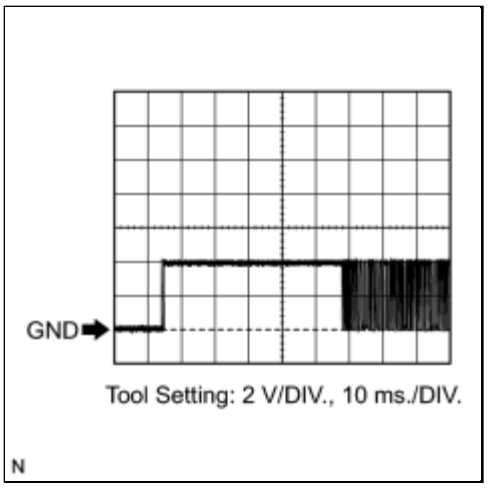
- *1: for TMC Made
- *2: Except for TMC Made

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E21 transponder key ECU assembly connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

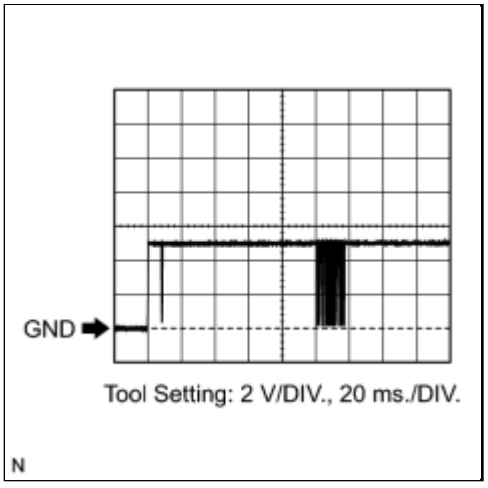
TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E21-5 (AGND) - Body ground	R - Body ground*1 V - Body ground*2	Ground	Always	Below 1 Ω
E21-3 (KSW) - E21-16 (GND)	L - BR	Unlock warning switch signal	No key is in ignition key cylinder	11 to 14 V
E21-3 (KSW) - E21-16 (GND)	L - BR	Unlock warning switch signal	Key is in ignition key cylinder	Below 1 V



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E21-14 (VC5) - E21-5 (AGND)	B - R*1 G - V*2	Power source	No key is in ignition key cylinder	Below 1 V
E21-14 (VC5) - E21-5 (AGND)	B - R*1 G - V*2	Power source	Key is in ignition key cylinder	4.6 to 5.4 V
E21-4 (TXCT) - E21-5 (AGND)	G - R*1 BE - V*2	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
E21-4 (TXCT) - E21-5 (AGND)	G - R*1 BE - V*2	Transponder key amplifier communication signal	Key is in ignition key cylinder	Waveform 1
E21-15 (CODE) - E21-5 (AGND)	P - R*1 SB - V*2	Transponder key amplifier communication signal	No key is in ignition key cylinder	Below 1 V
E21-15 (CODE) - E21-5 (AGND)	P - R*1 SB - V*2	Transponder key amplifier communication signal	Key is in ignition key cylinder	Waveform 2
E21-13 (EFIO) - E21-16 (GND)	P - BR	ECM output signal	Ignition switch off	Below 1 V
E21-13 (EFIO) - E21-16 (GND)	P - BR	ECM output signal	Ignition switch ON	Waveform 3
E21-12 (EFII) - E21-16 (GND)	LG - BR	ECM input signal	Ignition switch off	10 to 14 V
E21-12 (EFII) - E21-16 (GND)	LG - BR	ECM input signal	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after ignition switch first turned on (IG) after battery disconnected and connected.	Waveform 4
E21-9 (D) - E21-16 (GND)	W - BR	Diagnostic tester communication	Without communication	Below 1 V
E21-9 (D) - E21-16 (GND)	W - BR	Diagnostic tester communication	During communication	Pulse generation
E21-7 (CTY) - E21-16 (GND)	BR - BR*1 R - BR*2	Door courtesy signal	Switch pushed	11 to 14 V
E21-7 (CTY) - E21-16 (GND)	BR - BR*1 R - BR*2	Door courtesy signal	Switch free	Below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
E21-8 (IND) - E21-16 (GND)	Y - BR	Security indicator signal	Security indicator light is on	11 to 14 V
E21-8 (IND) - E21-16 (GND)	Y - BR	Security indicator signal	Security indicator light is off	Below 1 V

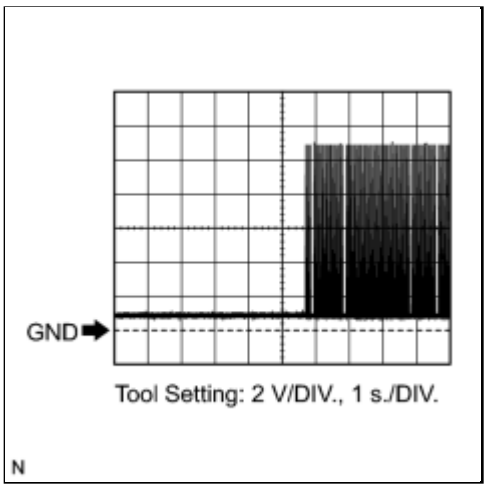
- *1: for TMC Made
- *2: Except for TMC Made



If the result is not as specified, the transponder key ECU assembly may have a malfunction.

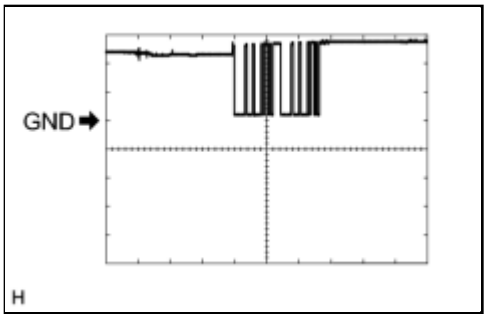
(e) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)



Tester Connection	E21-4 (TXCT) - E21-5 (AGND)
Tool Setting	2 V/DIV., 10 ms./DIV.
Condition	Key is in ignition key cylinder

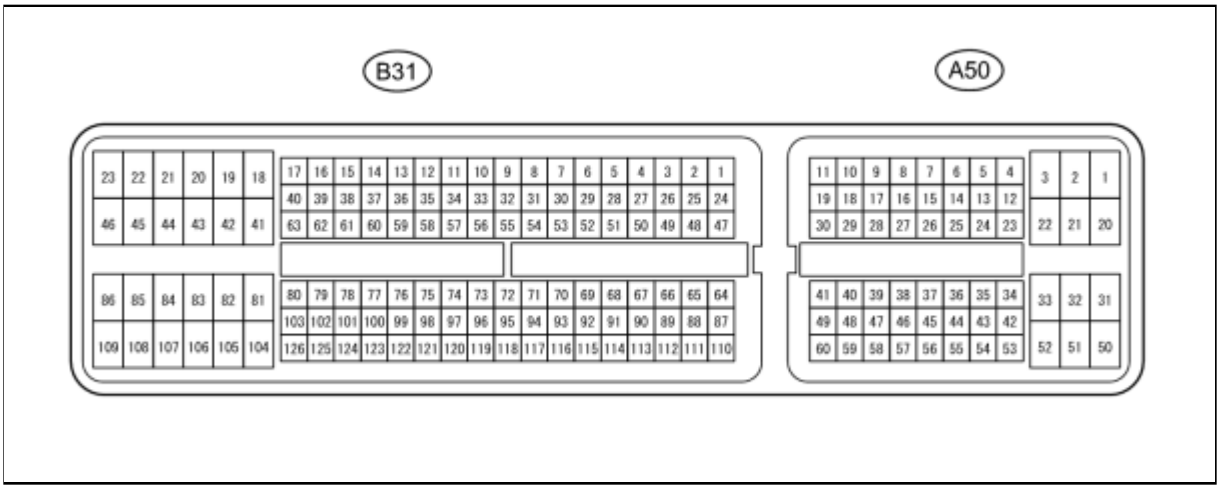
(2) Waveform 2 (Reference)



Tester Connection	E21-15 (CODE) - E21-5 (AGND)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Key is in ignition key cylinder

(3) Waveform 3 (Reference)

Tester Connection	E21-13 (EFIO) - E21-16 (GND)
Tool Setting	2 V/DIV., 1 s./DIV.
Condition	Ignition switch ON

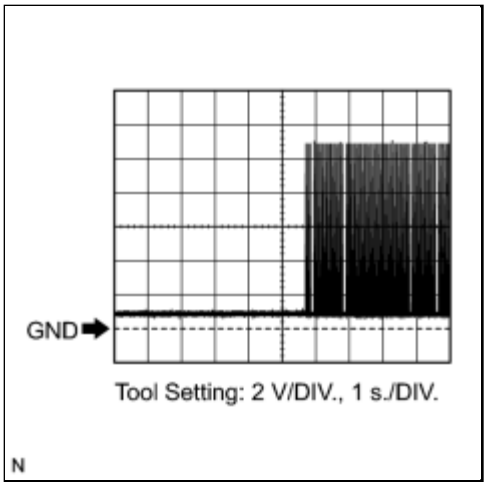


(4) Waveform 4 (Reference)

Tester Connection	E21-12 (EFII) - E21-16 (GND)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after ignition switch first turned on (IG) after battery disconnected and connected.

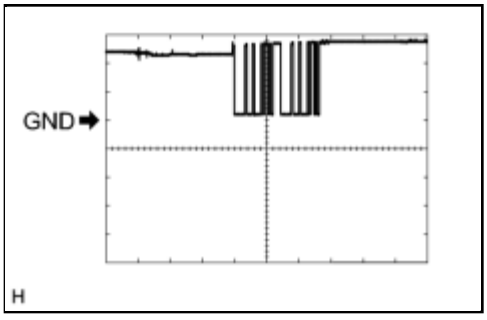
3. CHECK ECM

(a) Measure the voltage according to the value(s) in the table below.



TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-11 (IMI) - B31-104 (E1)	P - BR	Transponder key ECU input signal	Ignition switch off	Below 1 V

TESTER CONNECTION	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-11 (IMI) - B31-104 (E1)	P - BR	Transponder key ECU input signal	Ignition switch ON	Waveform 1
A50-10 (IMO) - B31-104 (E1)	LG-B - BR	Transponder key ECU output signal	Ignition switch off	10 to 14 V
A50-10 (IMO) - B31-104 (E1)	LG-B - BR	Transponder key ECU output signal	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after ignition switch first turned on (IG) after battery disconnected and connected.	Waveform 2



If the result is not as specified, the ECM may have a malfunction.

(b) Inspect using an oscilloscope.

(1) Waveform 1 (Reference)

Tester Connection	A50-11 (IMI) - B31-104 (E1)
Tool Setting	2 V/DIV., 1 s./DIV.
Condition	Ignition switch ON

(2) Waveform 2 (Reference)

Tester Connection	A50-10 (IMO) - B31-104 (E1)
Tool Setting	5 V/DIV., 500 ms./DIV.
Condition	Within 3 seconds after starter operates and initial combustion occurs, or within 3seconds after ignition switch first turned on (IG) after battery disconnected and connected.

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Engine Immobiliser System

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The transponder key ECU controls the vehicle's immobiliser system functions. Immobiliser system data and Diagnostic Trouble Code (DTC) can be read through the vehicle's Data Link Connector 3 (DLC3).

In some cases, a malfunction may be occurring in the immobiliser system even though the security indicator light is not illuminated.

When the system seems to be malfunctioning, use the Techstream to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. INSPECT BATTERY VOLTAGE

(a) Measure the battery voltage.

Standard Voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GVA015X
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Data List.

(e) Read the Data List according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-
IG SW	Ignition switch signal/ON or OFF	ON: Ignition switch ON or START OFF: Ignition switch ACC or OFF	-
Immobiliser	Immobiliser system status/SET or UNSET	UNSET: Ignition switch ON SET: Without key	-
Permit (Start)	Permit (Start) signal/OK or NG	NG: No permission for engine start OK: Engine start permission	-

+B	Power source/BRAKE or Normal	BRAKE: Power source open NORMAL: Power source normal	-
Antenna Coil Status	Transponder key amplifier coil condition/Normal or Fail	NORMAL: Antenna coil is normal FAIL: Antenna coil is malfunctioning	-

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Security Indicator	Security indicator Light	ON/OFF	-

Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

(e) Check the details of the DTC(s) 

.

2. CLEAR DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

(e) Clear the DTCs.

Last Modified: 3-10-2010	6.4 C	**From:** 200901

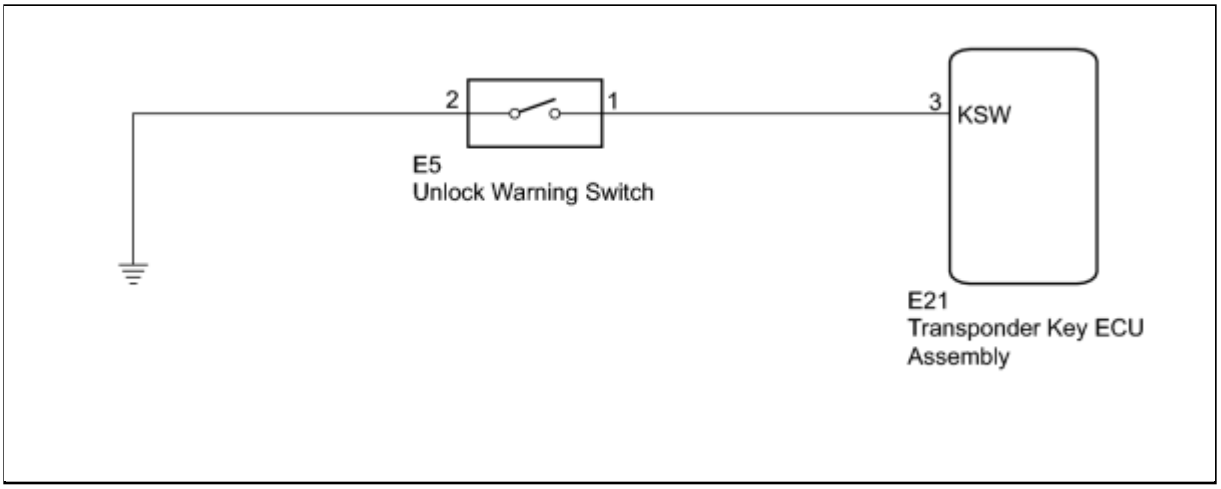
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): B2780: Push Switch / Key Unlock Warning Switch Malfunction (2010 Corolla)		



DTC	**B2780**	**Push Switch / Key Unlock Warning Switch Malfunction**

DESCRIPTION

This DTC will be output if the transponder key ECU assembly does not detect that the unlock warning switch is ON even when the ignition switch is ON. Under normal conditions, the unlock warning switch assembly is ON when the ignition switch is ON.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2780	"Unlock warning switch ON" is not detected when ignition switch is ON	• Wire harness or connector • Unlock warning switch assembly • Transponder key ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

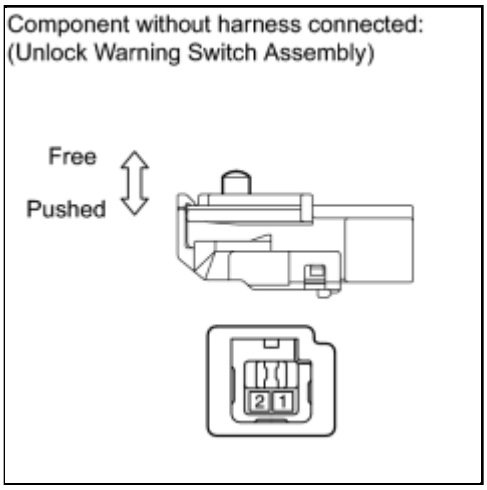
(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Data List.

(e) Read the Data List according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Key SW	Unlock warning switch signal/ON or OFF	ON: Key is in ignition key cylinder OFF: No key is in ignition key cylinder	-



OK:

On the Techstream screen, the item changes between ON and OFF according to the chart above.

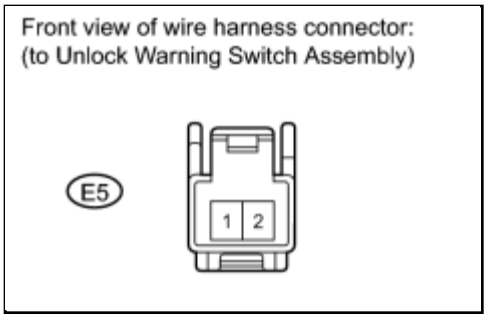
NG ▶ **INSPECT UNLOCK WARNING SWITCH ASSEMBLY**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

2.	INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the unlock warning switch assembly INFO .

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	SWITCH POSITION	SPECIFIED CONDITION
1 - 2	Switch pushed (Key set)	Below 1 Ω
1 - 2	Switch free (Key removed)	10 kΩ or higher

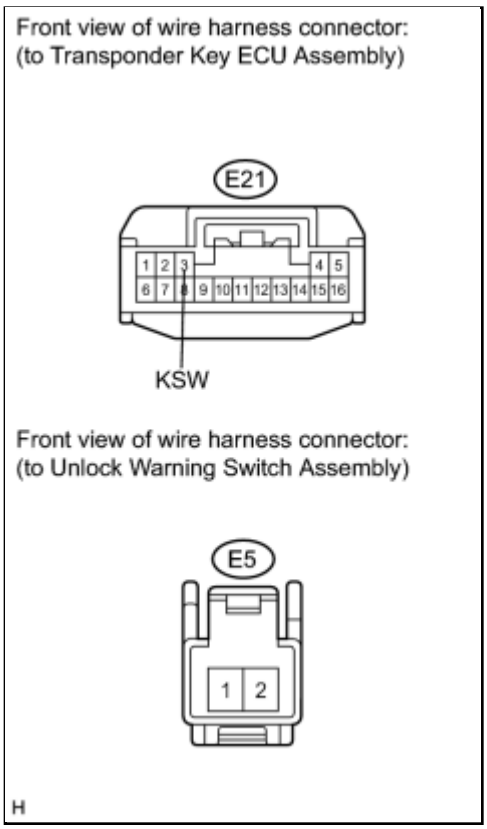
NG ▶ **REPLACE UNLOCK WARNING SWITCH ASSEMBLY**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E5-2 - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - UNLOCK WARNING SWITCH)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-3 (KSW) - E5-1	Always	Below 1 Ω
E5-1 - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

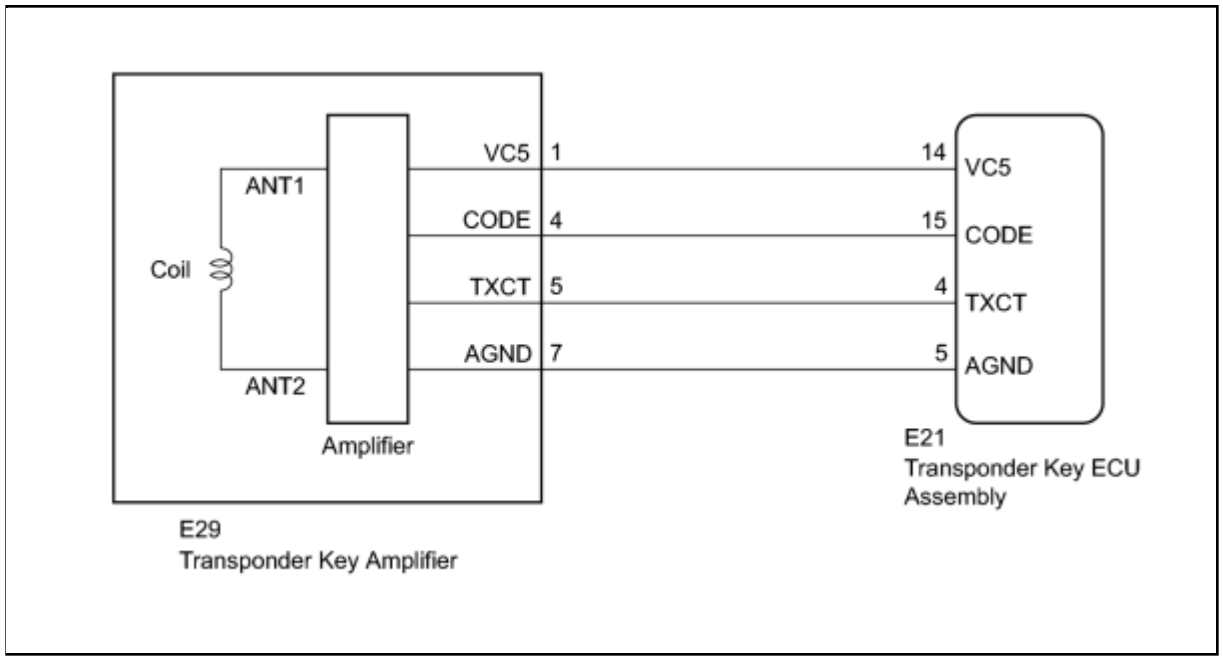
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): B2784: Antenna Coil Open / Short (2010 Corolla)		



DTC	**B2784**	**Antenna Coil Open / Short**

DESCRIPTION

The transponder key coil is built into the transponder key amplifier and receives a key code signal from the transponder chip in the key. This signal is amplified by the amplifier, then it is output to the transponder key ECU assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2784	Antenna coil is open/shorted	• Wire harness or connector • Transponder key amplifier • Transponder key ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Data List.

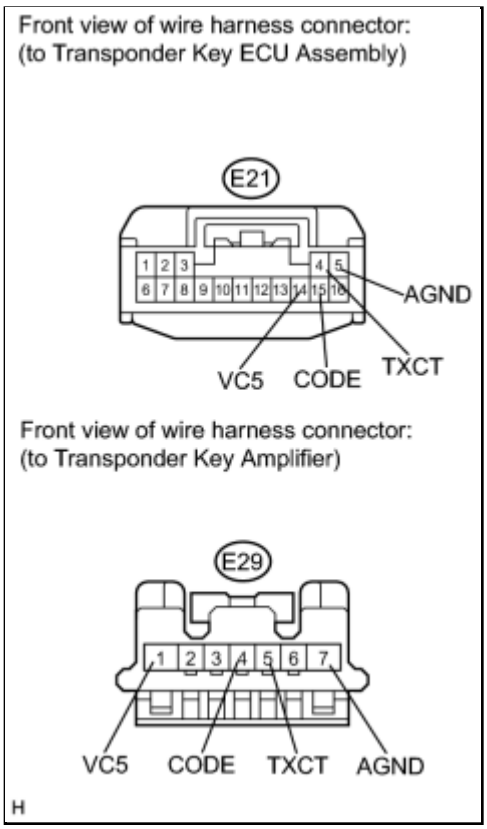
(e) Read the Data List according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Antenna Coil Status	Transponder key amplifier coil condition/Normal or Fail	Normal: Antenna coil is normal Fail: Antenna coil is malfunctioning	-

OK:

On the Techstream screen, the item displays Normal according to the chart above.



NG ▶ **CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

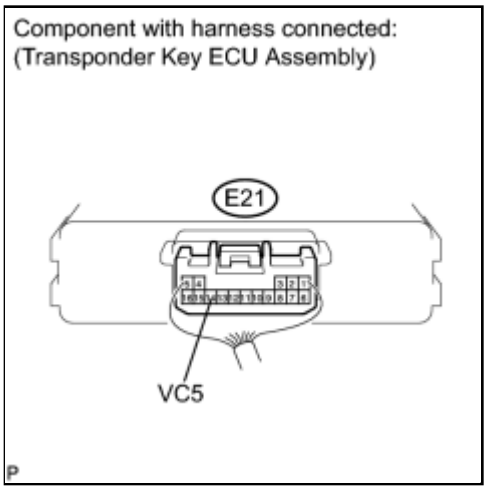
2.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - TRANSPONDER KEY AMPLIFIER)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Disconnect the transponder key amplifier connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-4 (TXCT) - E29-5 (TXCT)	Always	Below 1 Ω
E21-5 (AGND) - E29-7 (AGND)	Always	Below 1 Ω
E21-14 (VC5) - E29-1 (VC5)	Always	Below 1 Ω
E21-15 (CODE) - E29-4 (CODE)	Always	Below 1 Ω
E21-4 (TXCT) - Body ground	Always	10 kΩ or higher
E21-5 (AGND) - Body ground	Always	10 kΩ or higher
E21-14 (VC5) - Body ground	Always	10 kΩ or higher
E21-15 (CODE) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

3.	**INSPECT TRANSPONDER KEY ECU ASSEMBLY (TRANSPONDER KEY AMPLIFIER POWER SOURCE)**

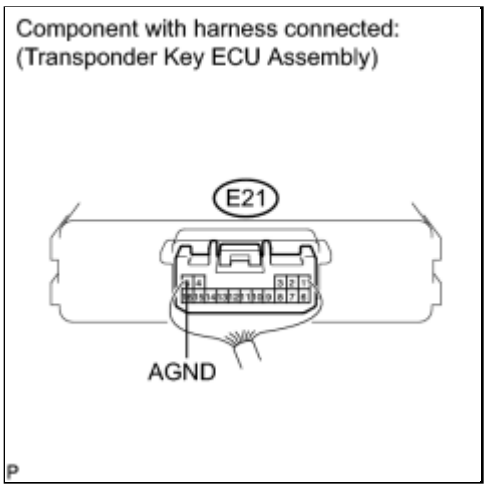
(a) Reconnect the transponder key ECU assembly connector.

(b) Reconnect the transponder key amplifier connector.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-14 (VC5) - Body ground	No key is in ignition key cylinder	Below 1 V
E21-14 (VC5) - Body ground	Key is in ignition key cylinder	4.6 to 5.4 V



NG ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK ▼

4.	**INSPECT TRANSPONDER KEY ECU ASSEMBLY (TRANSPONDER KEY AMPLIFIER GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-5 (AGND) - Body ground	Always	Below 1 Ω

NG ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

OK ▶ **REPLACE TRANSPONDER KEY AMPLIFIER**

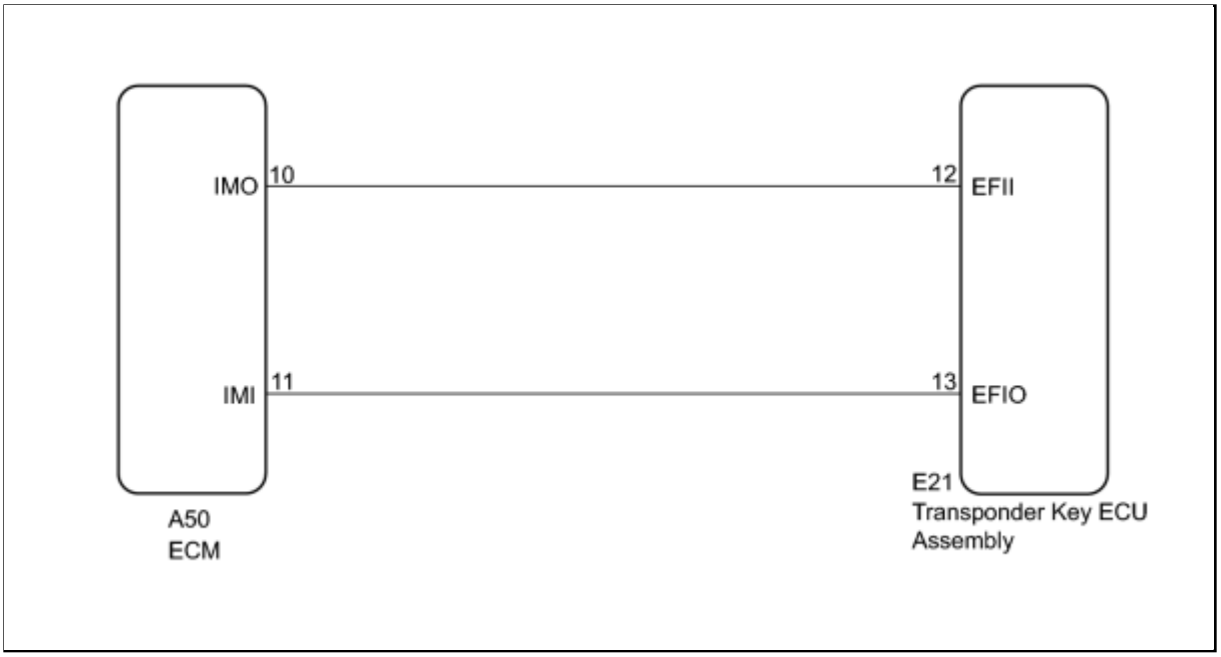
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): B2799: Engine Immobiliser System Malfunction (2010 Corolla)		

DTC	**B2799**	**Engine Immobiliser System Malfunction**



DESCRIPTION

This DTC is output when one of the following occurs: 1) the ECM detects errors in its own communications with the transponder key ECU assembly; 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the transponder key ECU assembly and ECM is different and an engine start is attempted.

Before troubleshooting for this DTC, make sure that no transponder key ECU assembly DTCs are present. If present, troubleshoot the transponder key ECU assembly DTCs first.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B2799	One of following conditions is met: • Error in communication between ECM and transponder key ECU assembly • Error in communication lines • Communication ID is different during communication with transponder key ECU assembly	• Wire harness or connector • ECM • Transponder key ECU assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO .
- If the ECM is replaced, register the ECU communication ID INFO .

PROCEDURE

1.	**CHECK DTC OUTPUT**

(a) Clear the DTCs INFO .

(b) Recheck for DTCs.

OK:

DTC B2799 is not reoutput.

NG ▶ **RE-REGISTER ECU COMMUNICATION ID**

OK ▶ **USE SIMULATION METHOD TO CHECK**

2.	**RE-REGISTER ECU COMMUNICATION ID**

(a) Re-register the ECU communication ID INFO .

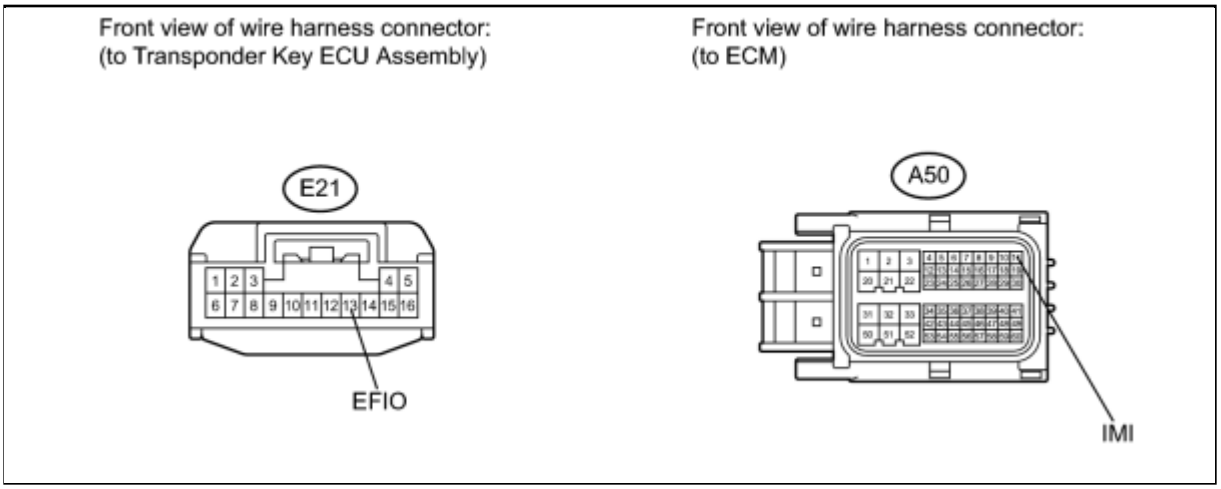
(a) Recheck for DTCs INFO .

HINT:

If any DTCs other than DTC B279A are output, troubleshoot those DTCs first.

Result:

RESULT	PROCEED TO
DTC B279A and other DTCs reoutput	A
DTC B279A reoutput	B



A ▶ **GO TO DTC CHART**

B ▼

2.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - ECM)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance and voltage according to the value(s) in the table below.

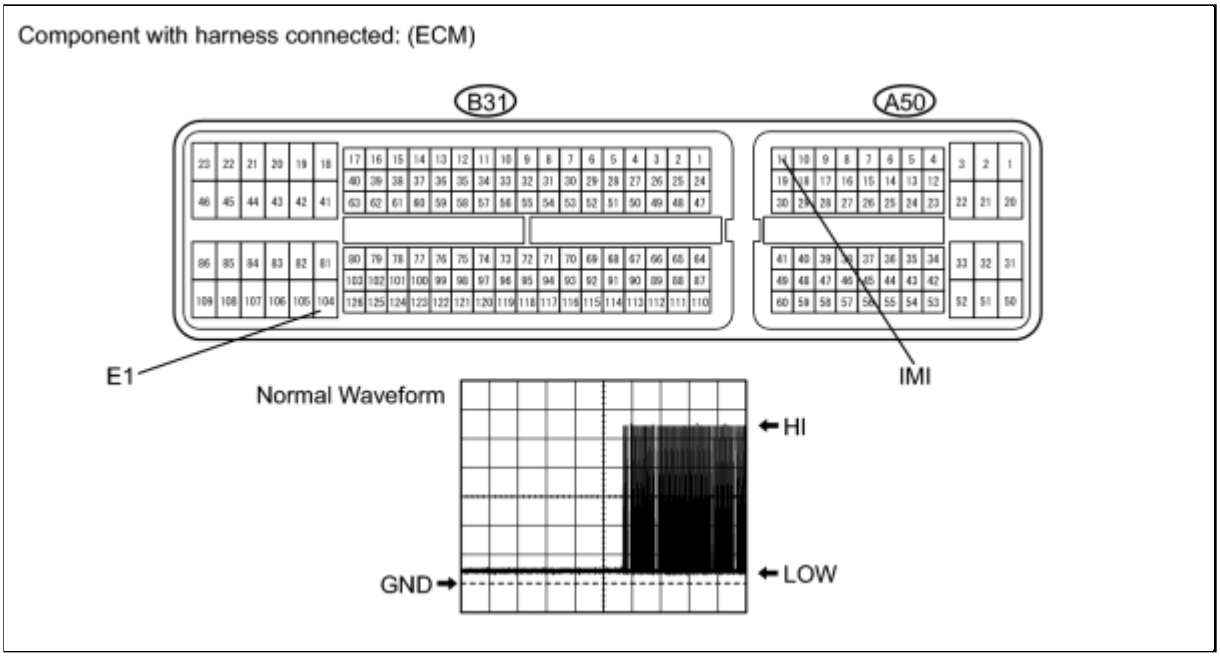
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-13 (EFIO) - A50-11 (IMI)	Always	Below 1 Ω
E21-13 (EFIO) - Body ground	Always	10 kΩ or higher

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-13 (EFIO) - Body ground	Always	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▼

3.	**CHECK ECM (INPUT)**

(a) Reconnect the transponder key ECU assembly connector.

(b) Reconnect the ECM connector.

(c) Measure the waveform.

Waveform 1 (Reference):

ITEM	CONTENT
Terminal No. (Symbols)	A50-11 (IMI) - B31-104 (E1)
Tool Setting	2 V/DIV., 1 s./DIV.
Condition	Ignition switch ON

Result:

RESULT	PROCEED TO
OK (for 2ZR-FE)	A
OK (for 2AZ-FE)	B
NG	C

B ▶ **REPLACE ECM**

A ▶ **REPLACE ECM**

C
▼

4.	**REPLACE TRANSPONDER KEY ECU ASSEMBLY**

(a) Replace the transponder key ECU assembly INFO .

NEXT
▼

5.	**REGISTER KEY**

(a) Register the key INFO .

NEXT

6.	REGISTER ECU COMMUNICATION ID

(a) Register the ECU communication ID INFO .

NEXT

7.	CHECK DTC OUTPUT

(a) Clear the DTCs INFO .

(b) Recheck for DTCs.

OK:

B279A is not reoutput.

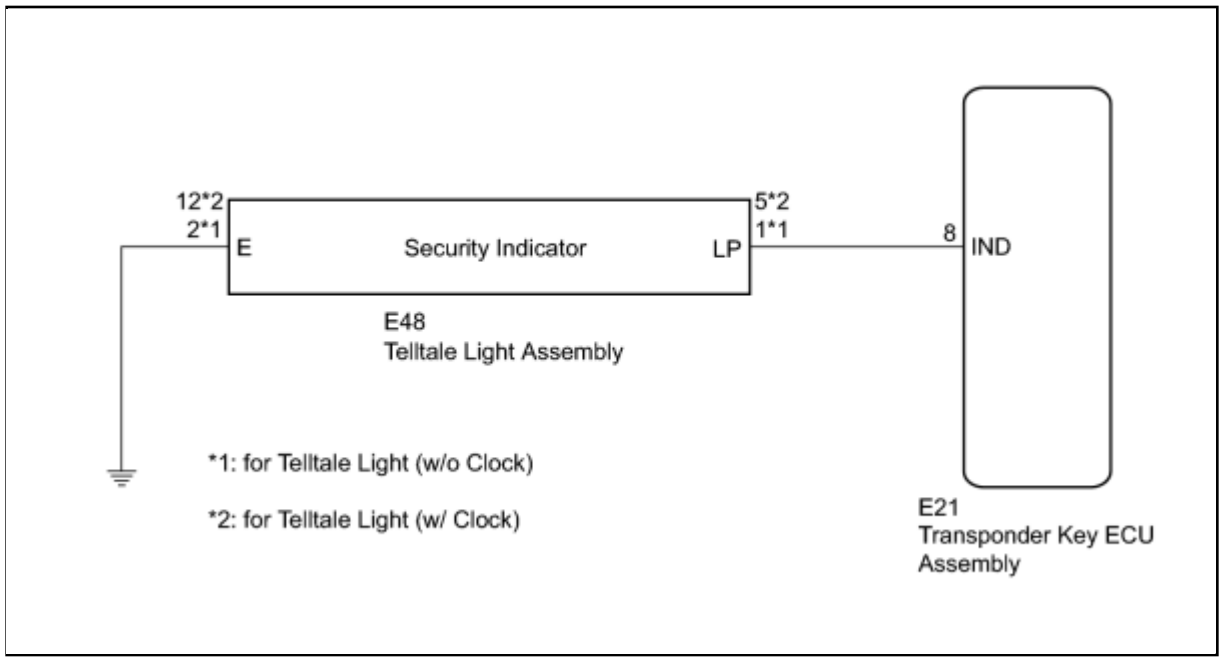
Result:

RESULT	PROCEED TO
NG (for 2ZR-FE)	A
NG (for 2ZA-FE)	B
OK	C

B **REPLACE ECM**

A **REPLACE ECM**

C **END (TRANSPONDER KEY ECU IS DEFECTIVE)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GV401ZX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): Security Indicator Light Circuit (2010 Corolla)		

Security Indicator Light Circuit

DESCRIPTION

The security indicator light blinks continuously due to a continuous signal received from the transponder key ECU assembly while in the armed state.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Immobiliser / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

Immobiliser (Transponder Key ECU Assembly)

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Security Indicator	Security indicator light	ON/OFF	-

OK:

The security indicator turns on and off according to the Techstream operation.

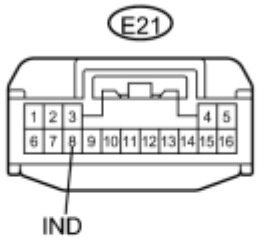
NG ▶ **CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - SECURITY INDICATOR LIGHT)**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

2.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - SECURITY INDICATOR LIGHT)**

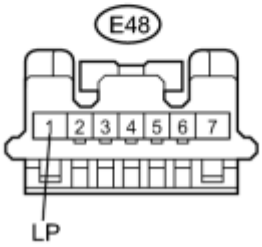
(a) Disconnect the transponder key ECU assembly connector.

(b) Disconnect the telltale light assembly connector.



(c) for Telltale Light (w/o Clock):

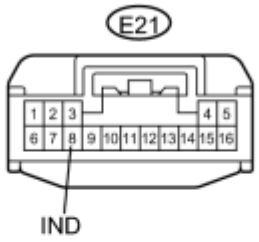
(1) Measure the resistance according to the value(s) in the table below.



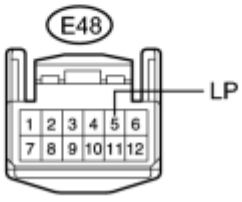
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-8 (IND) - E48-1 (LP)	Always	Below 1 Ω
E21-8 (IND) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Transponder Key ECU Assembly)



Front view of wire harness connector:
(to Telltale Light Assembly)



H

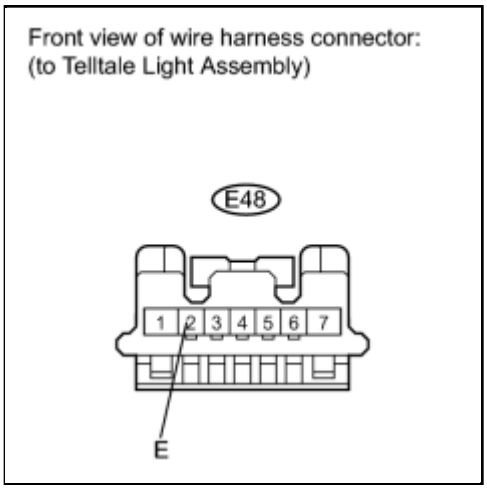
Front view of wire harness connector:
(to Transponder Key ECU Assembly)

Front view of wire harness connector:
(to Telltale Light Assembly)

(d) for Telltale Light (w/ Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



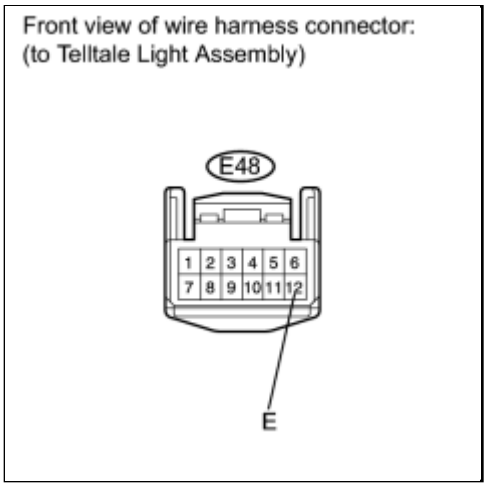
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-8 (IND) - E48-5 (LP)	Always	Below 1 Ω
E21-8 (IND) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3.	CHECK HARNESS AND CONNECTOR (SECURITY INDICATOR LIGHT - BODY GROUND)

(a) for Telltale Light (w/o Clock):



(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-2 (E) - Body ground	Always	Below 1 Ω

(b) for Telltale Light (w/ Clock):

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E48-12 (E) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TELLTALE LIGHT ASSEMBLY**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002UEC00OX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): B279C: Theft Deterrent System Presence Detection (2010 Corolla)		

DTC	**B279C**	**Theft Deterrent System Presence Detection**

DESCRIPTION

If an ECM that is incompatible with the engine immobiliser system is installed, the ECM outputs this DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
B279C	ECM that is incompatible with engine immobiliser system is installed	ECM

INSPECTION PROCEDURE

NOTICE:

If the ECM is replaced, register the ECU communication ID INFO .

PROCEDURE

1.	**CHECK DTC OUTPUT**

(a) Clear the DTCs INFO .

(b) Recheck for DTCs.

OK:

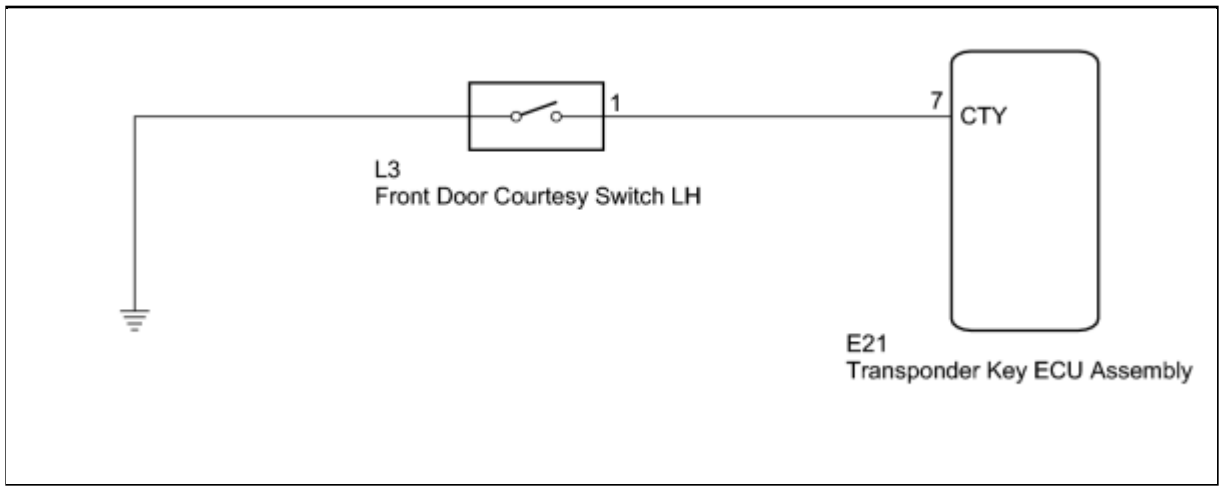
DTC B279C is not reoutput.

Result:

RESULT	PROCEED TO
DTC B279C is reoutput (for 2ZR-FE)	A
DTC B279C is reoutput (for 2AZ-FE)	B
DTC B279C is not reoutput	C

B ▶ REPLACE ECM

A ▶ USE SIMULATION METHOD TO CHECK



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GUZ00SX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): Door Courtesy Switch Circuit (2010 Corolla)		

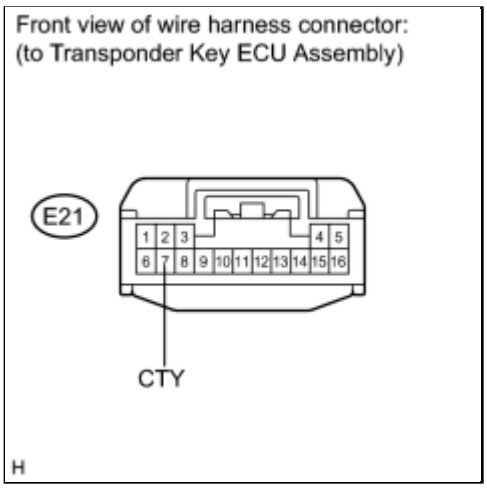
Door Courtesy Switch Circuit

DESCRIPTION

When an additional transponder key is registered, the transponder key ECU assembly detects the front door courtesy light switch open/close condition, and enters the key registration mode.

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

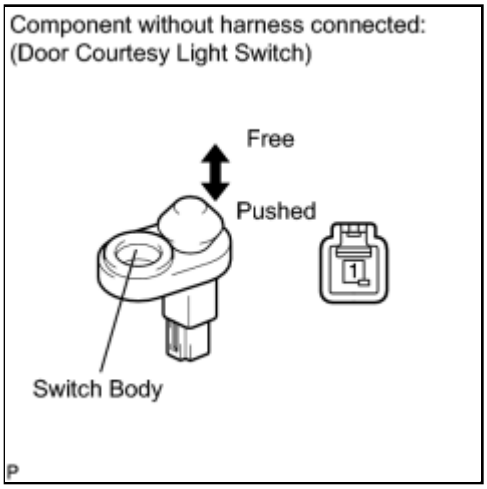
If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY LIGHT SWITCH CIRCUIT)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-7 (CTY) - Body ground	Courtesy switch pushed (Door closed)	10 kΩ or higher
E21-7 (CTY) - Body ground	Courtesy switch free (Door open)	Below 1 Ω

NG ▶ **INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

2.	**INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY**

(a) Remove the driver side front door courtesy light switch INFO .

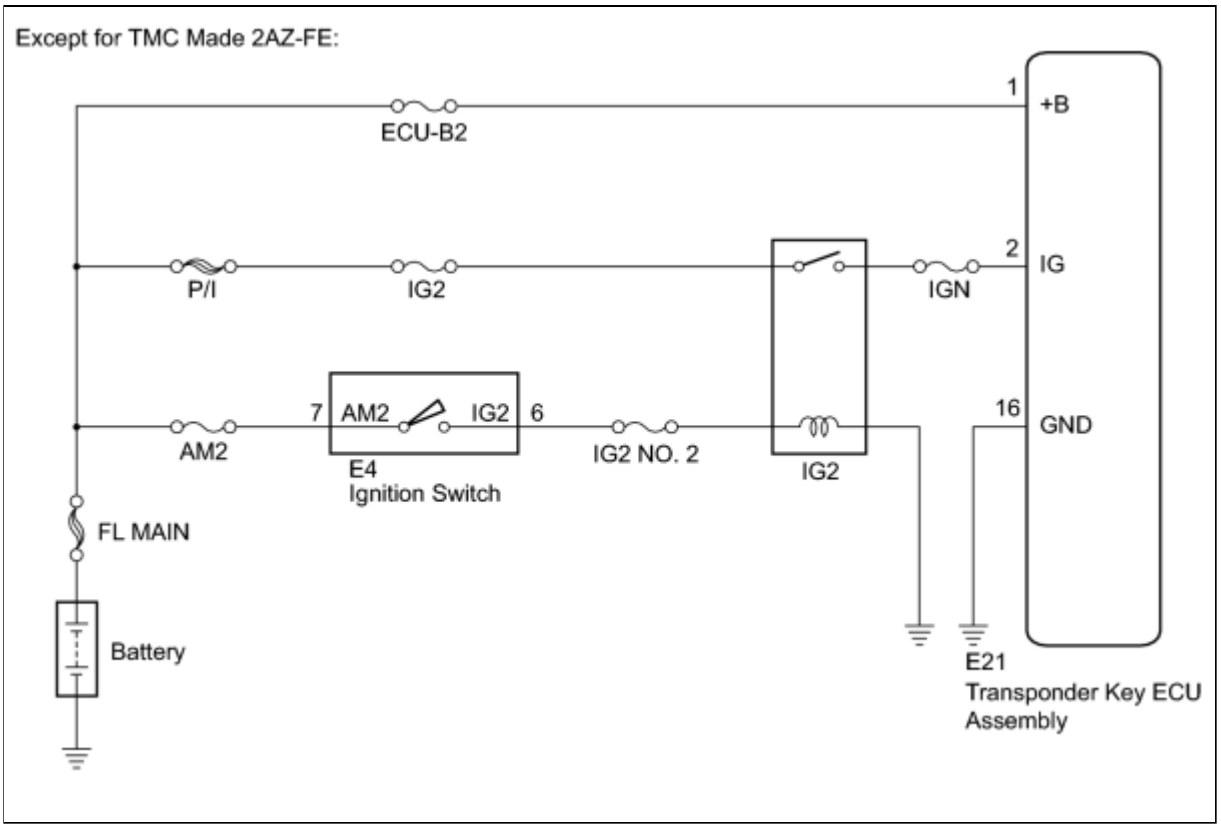
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

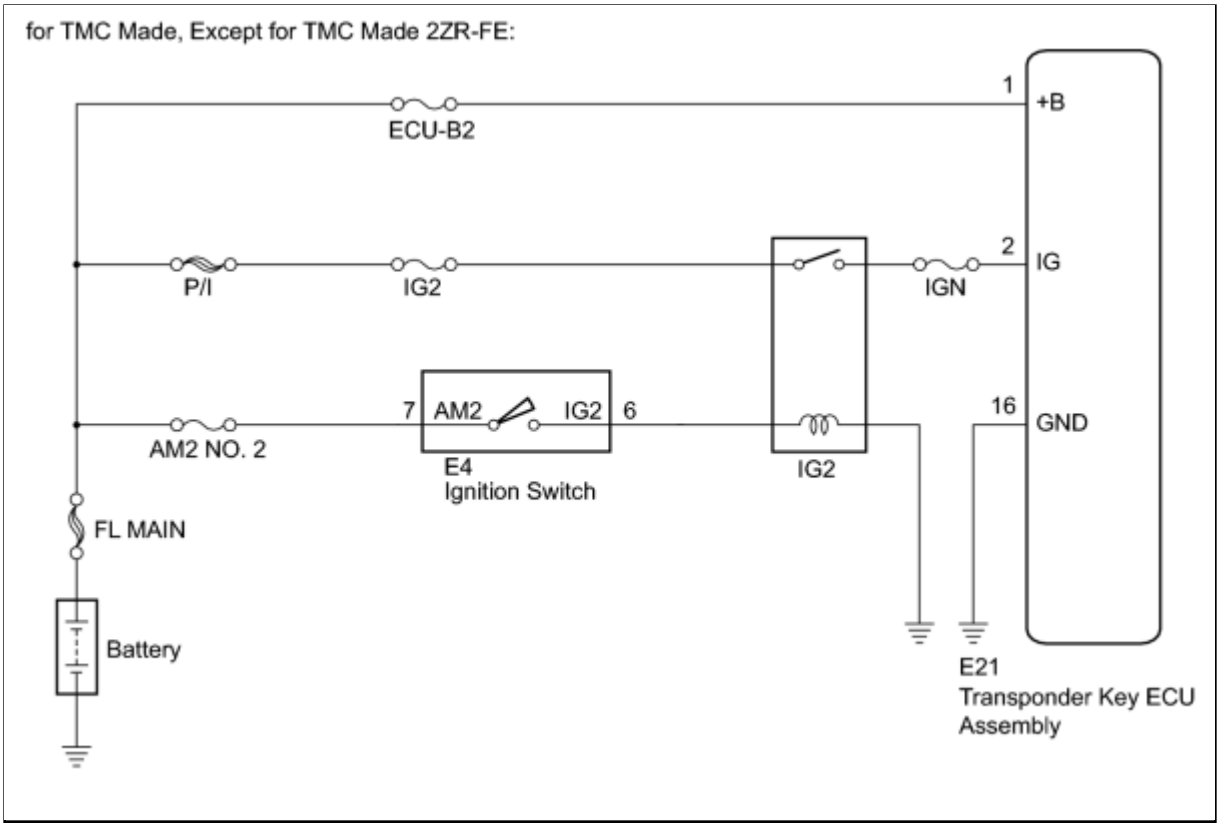
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - Switch body	Courtesy switch pushed (Door closed)	10 kΩ or higher
1 - Switch body	Courtesy switch free (Door open)	Below 1 Ω

NG ▶ **REPLACE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (TRANSPONDER KEY ECU - FRONT DOOR COURTESY LIGHT SWITCH)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GUU017X
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): ECU Power Source Circuit (2010 Corolla)		

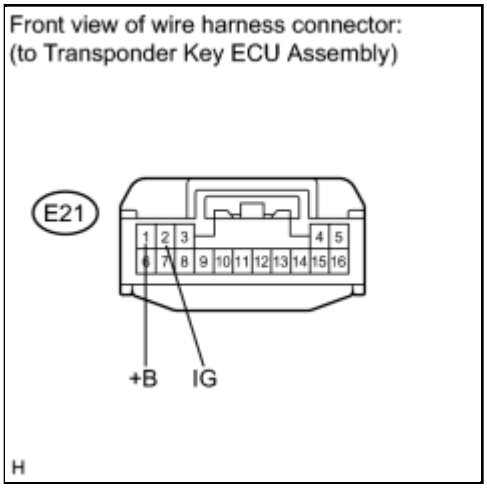


ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the transponder key ECU assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

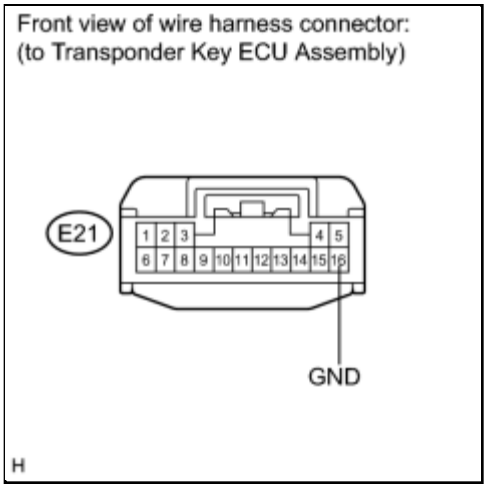
If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - BATTERY)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Measure the voltage according to the value(s) in the table below.



Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-1 (+B) - Body ground	Always	11 to 14 V
E21-2 (IG) - Body ground	Ignition switch off	Below 1 V
E21-2 (IG) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR, OR REPLACE FUSE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (TRANSPONDER KEY ECU - BODY GROUND)**

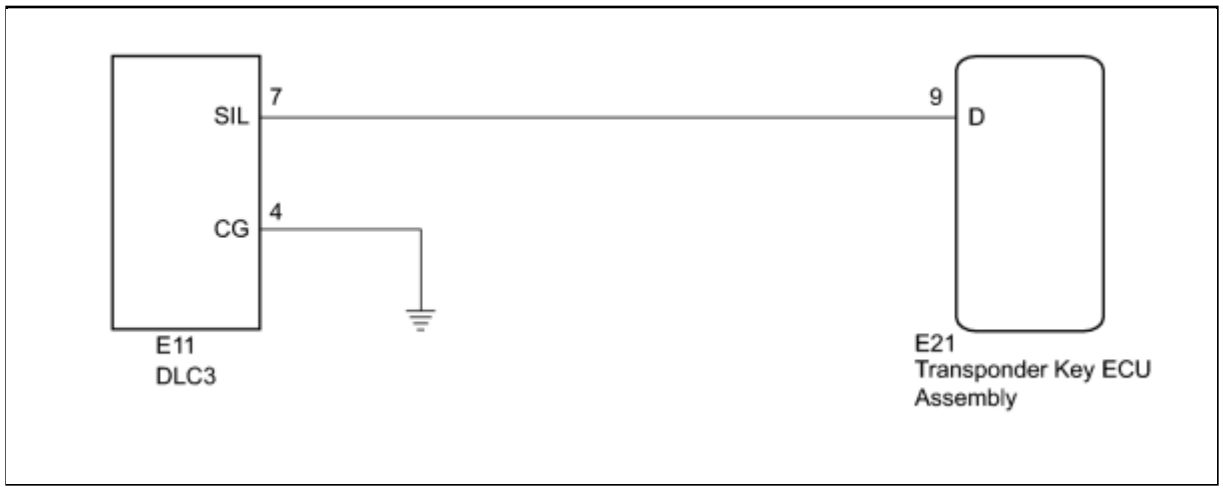
(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-16 (GND) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**



Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001GUV00ZX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENGINE IMMOBILISER SYSTEM (w/o Smart Key System): Diagnosis Circuit (2010 Corolla)		

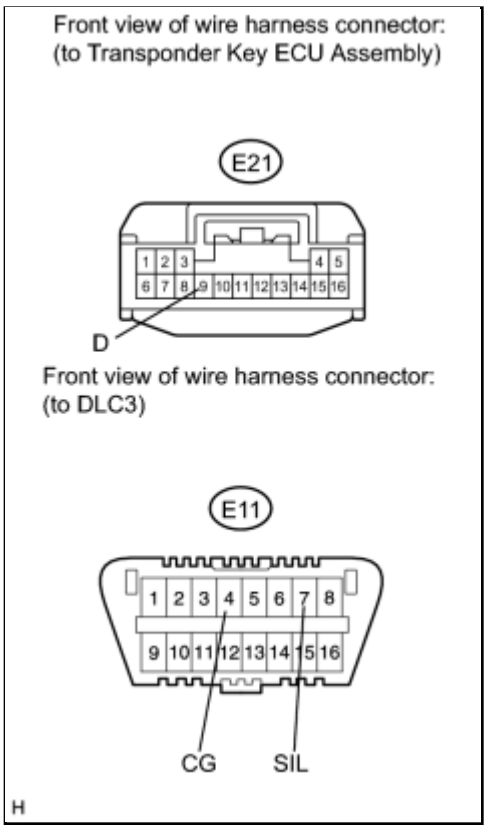
Diagnosis Circuit

DESCRIPTION

This circuit is used to read the DTCs that are output from the transponder key ECU assembly with the Techstream.

WIRING DIAGRAM

INSPECTION PROCEDURE



NOTICE:

If the transponder key ECU assembly is replaced, register the key and ECU communication ID INFO **.**

PROCEDURE

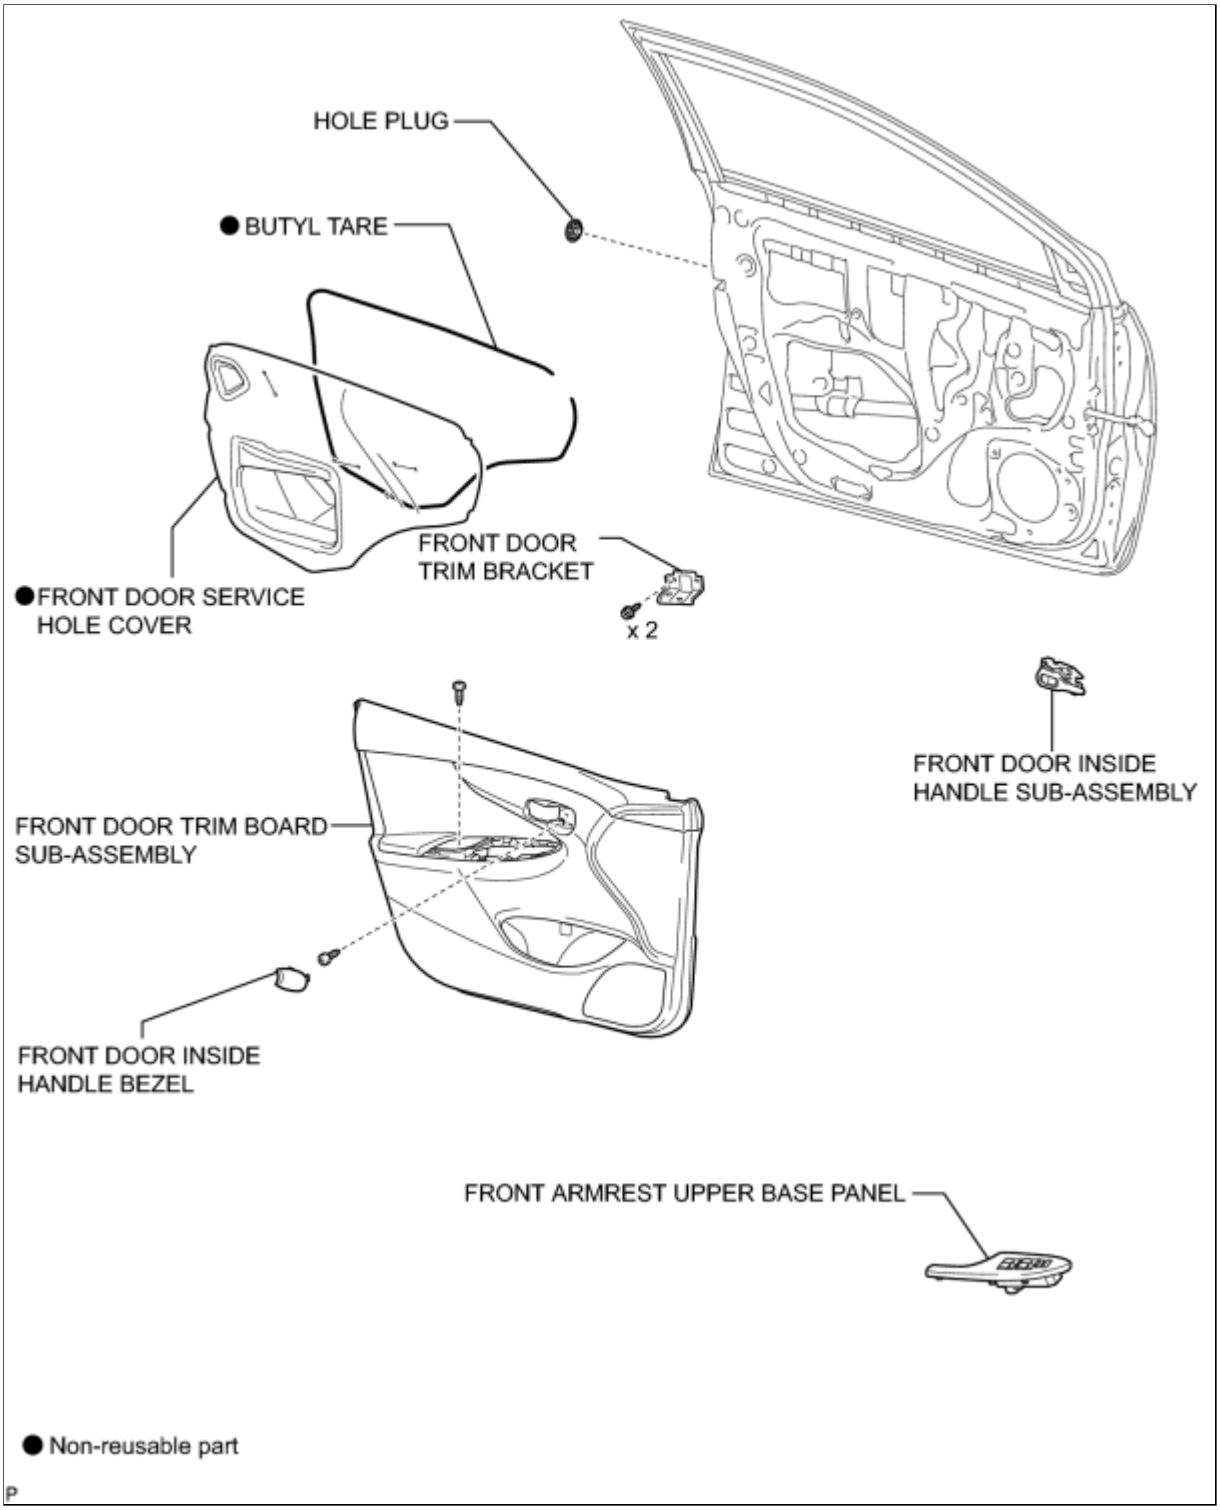
1.	**CHECK HARNESS AND CONNECTOR (DLC3 - TRANSPONDER KEY ECU AND BODY GROUND)**

(a) Disconnect the transponder key ECU assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E21-9 (D) - E11-7 (SIL)	Always	Below 1 Ω
E11-4 (CG) - Body ground	Always	Below 1 Ω
E21-9 (D) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE TRANSPONDER KEY ECU ASSEMBLY**

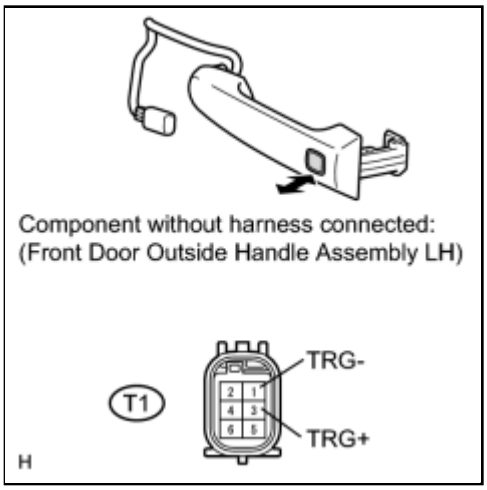
7. REMOVE FRONT DOOR OUTSIDE HANDLE COVER INFO

8. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Disconnect the connector.

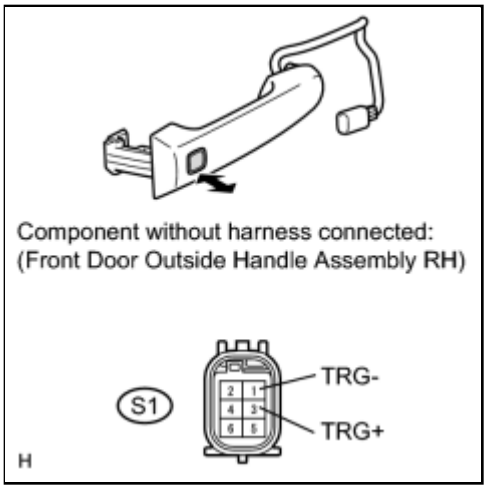


(b) Remove the front door outside handle assembly as shown in the illustration.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Y7Y00HX
Title: THEFT DETERRENT / KEYLESS ENTRY: ENTRY LOCK AND UNLOCK SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT DOOR OUTSIDE HANDLE ASSEMBLY LH



(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

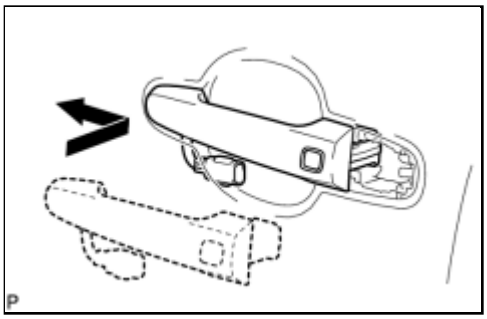
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
T1-1 (TRG-) - T1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
T1-1 (TRG-) - T1-3 (TRG+)	Lock switch pushed	Below 1 Ω

If the result is not specified, replace the front door outside handle assembly LH.

2. INSPECT FRONT DOOR OUTSIDE HANDLE ASSEMBLY RH

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
S1-1 (TRG-) - S1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
S1-1 (TRG-) - S1-3 (TRG+)	Lock switch pushed	Below 1 Ω

If the result is not specified, replace the front door outside handle assembly RH.

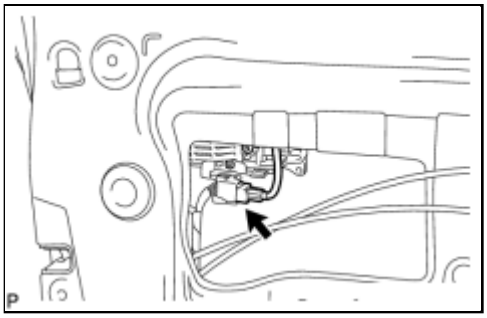
Title: THEFT DETERRENT / KEYLESS ENTRY: ENTRY LOCK AND UNLOCK SWITCH: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

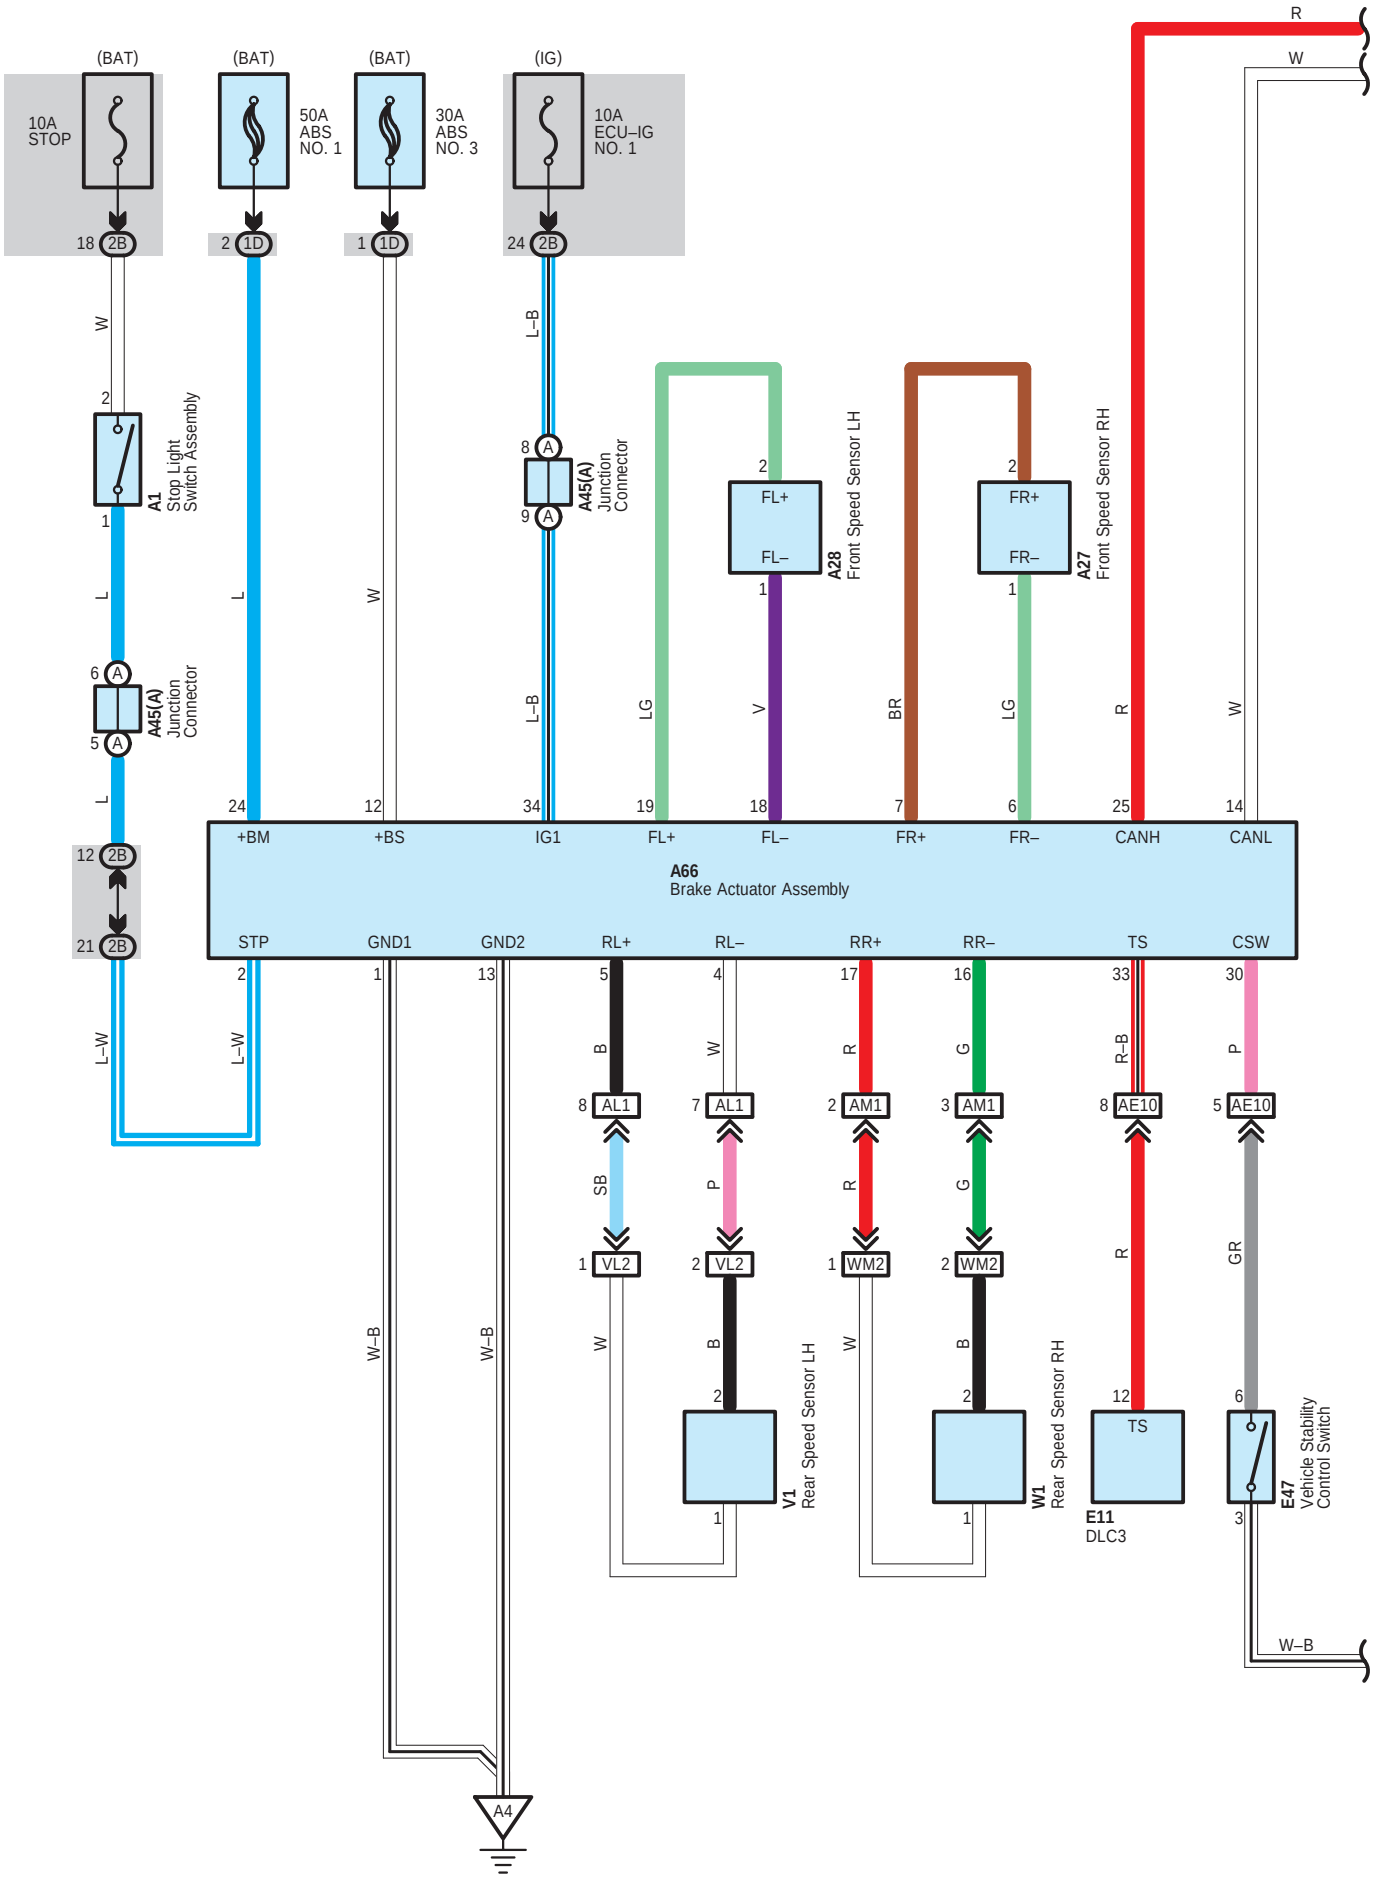
(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.

(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next, slide the front door outside handle assembly toward the front of the vehicle to install it.

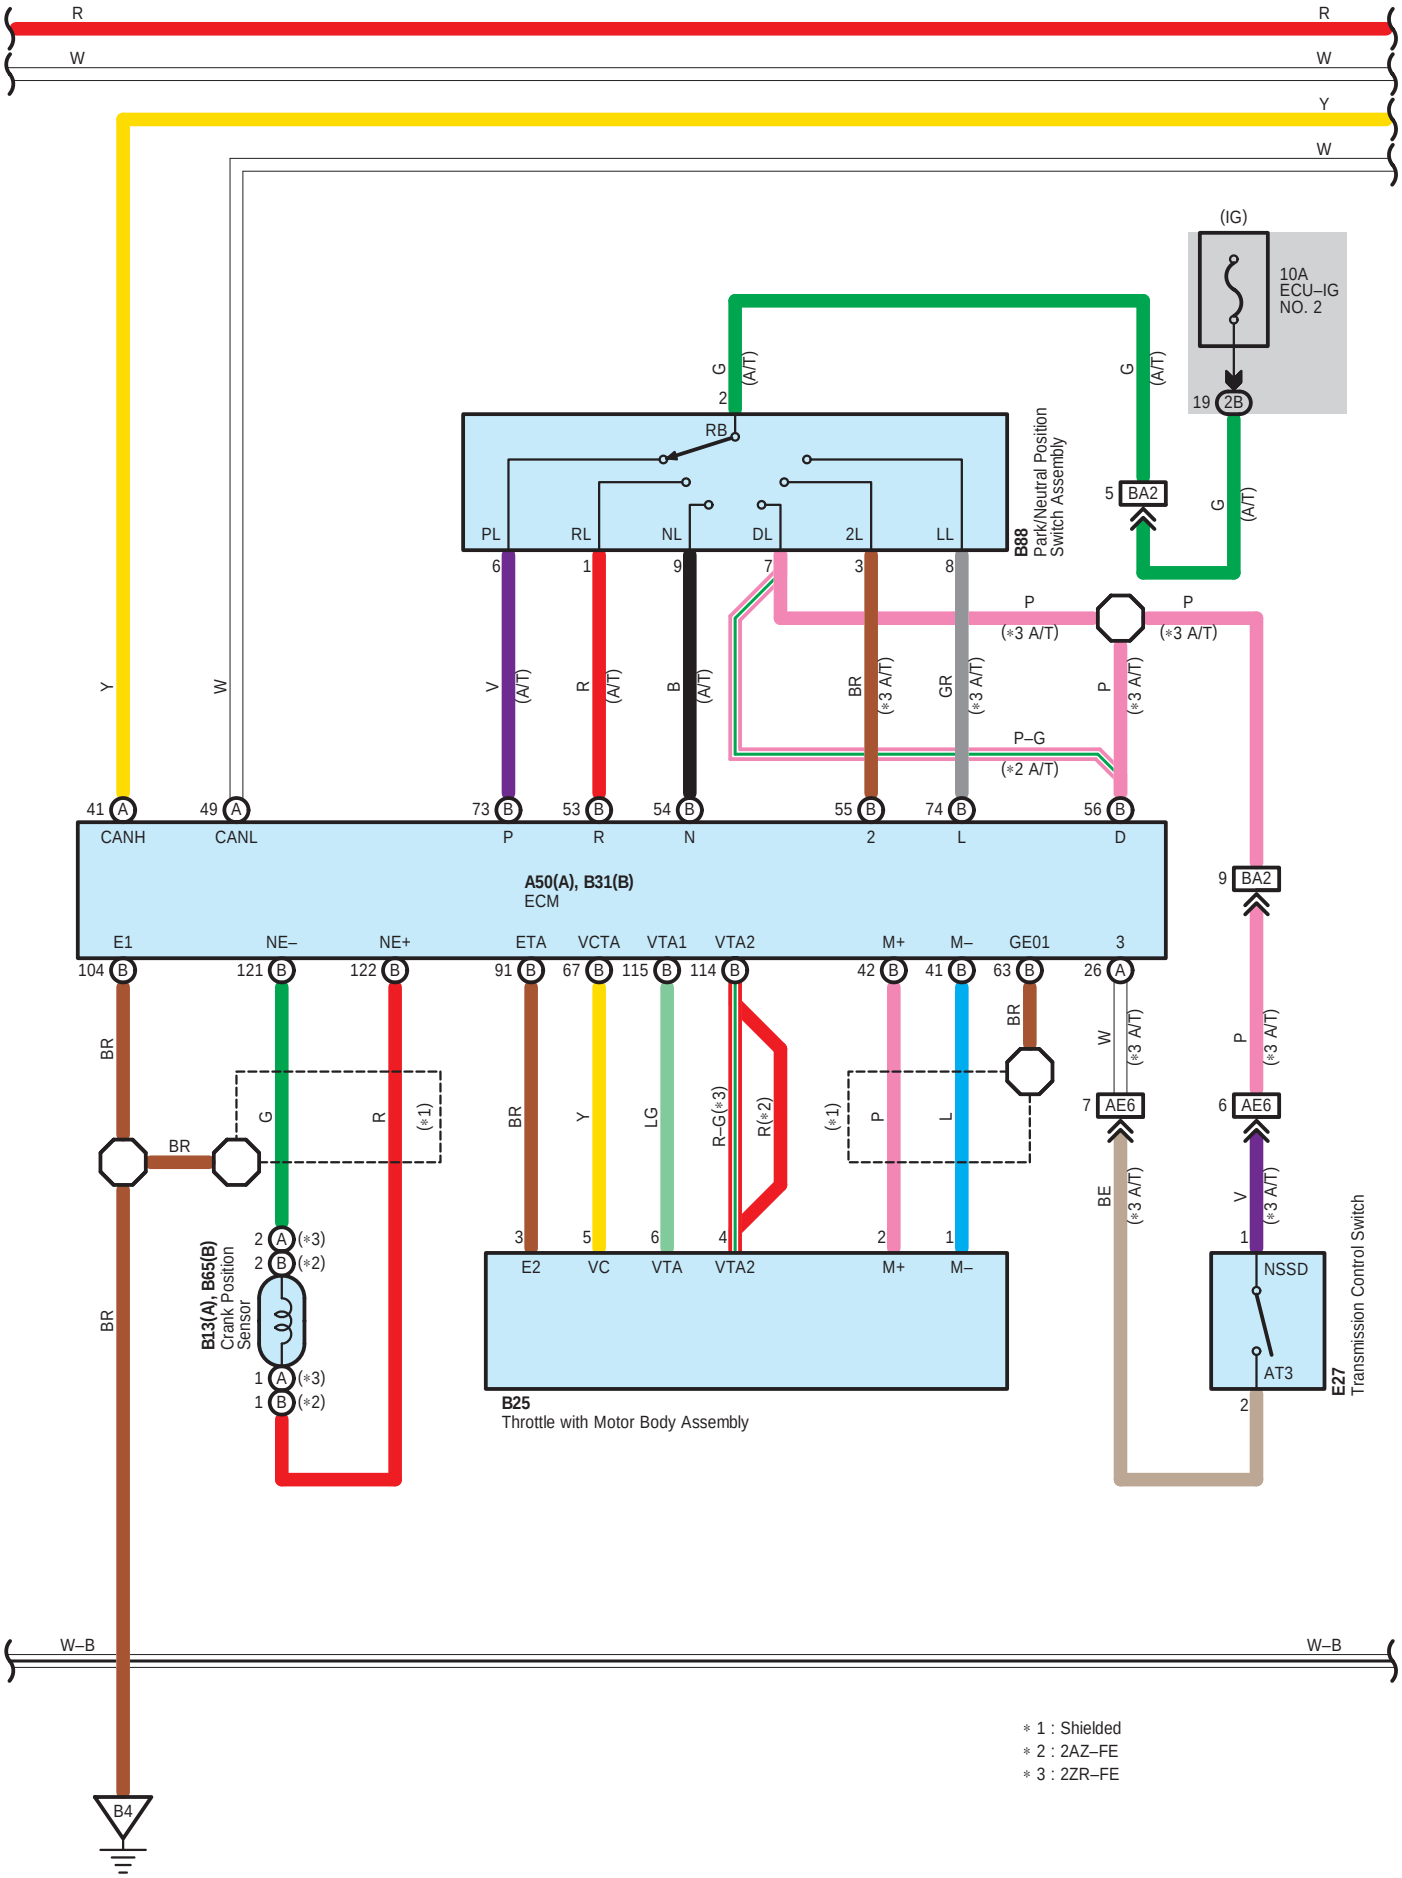
(c) Connect the connector.

2. INSTALL FRONT DOOR OUTSIDE HANDLE COVER INFO

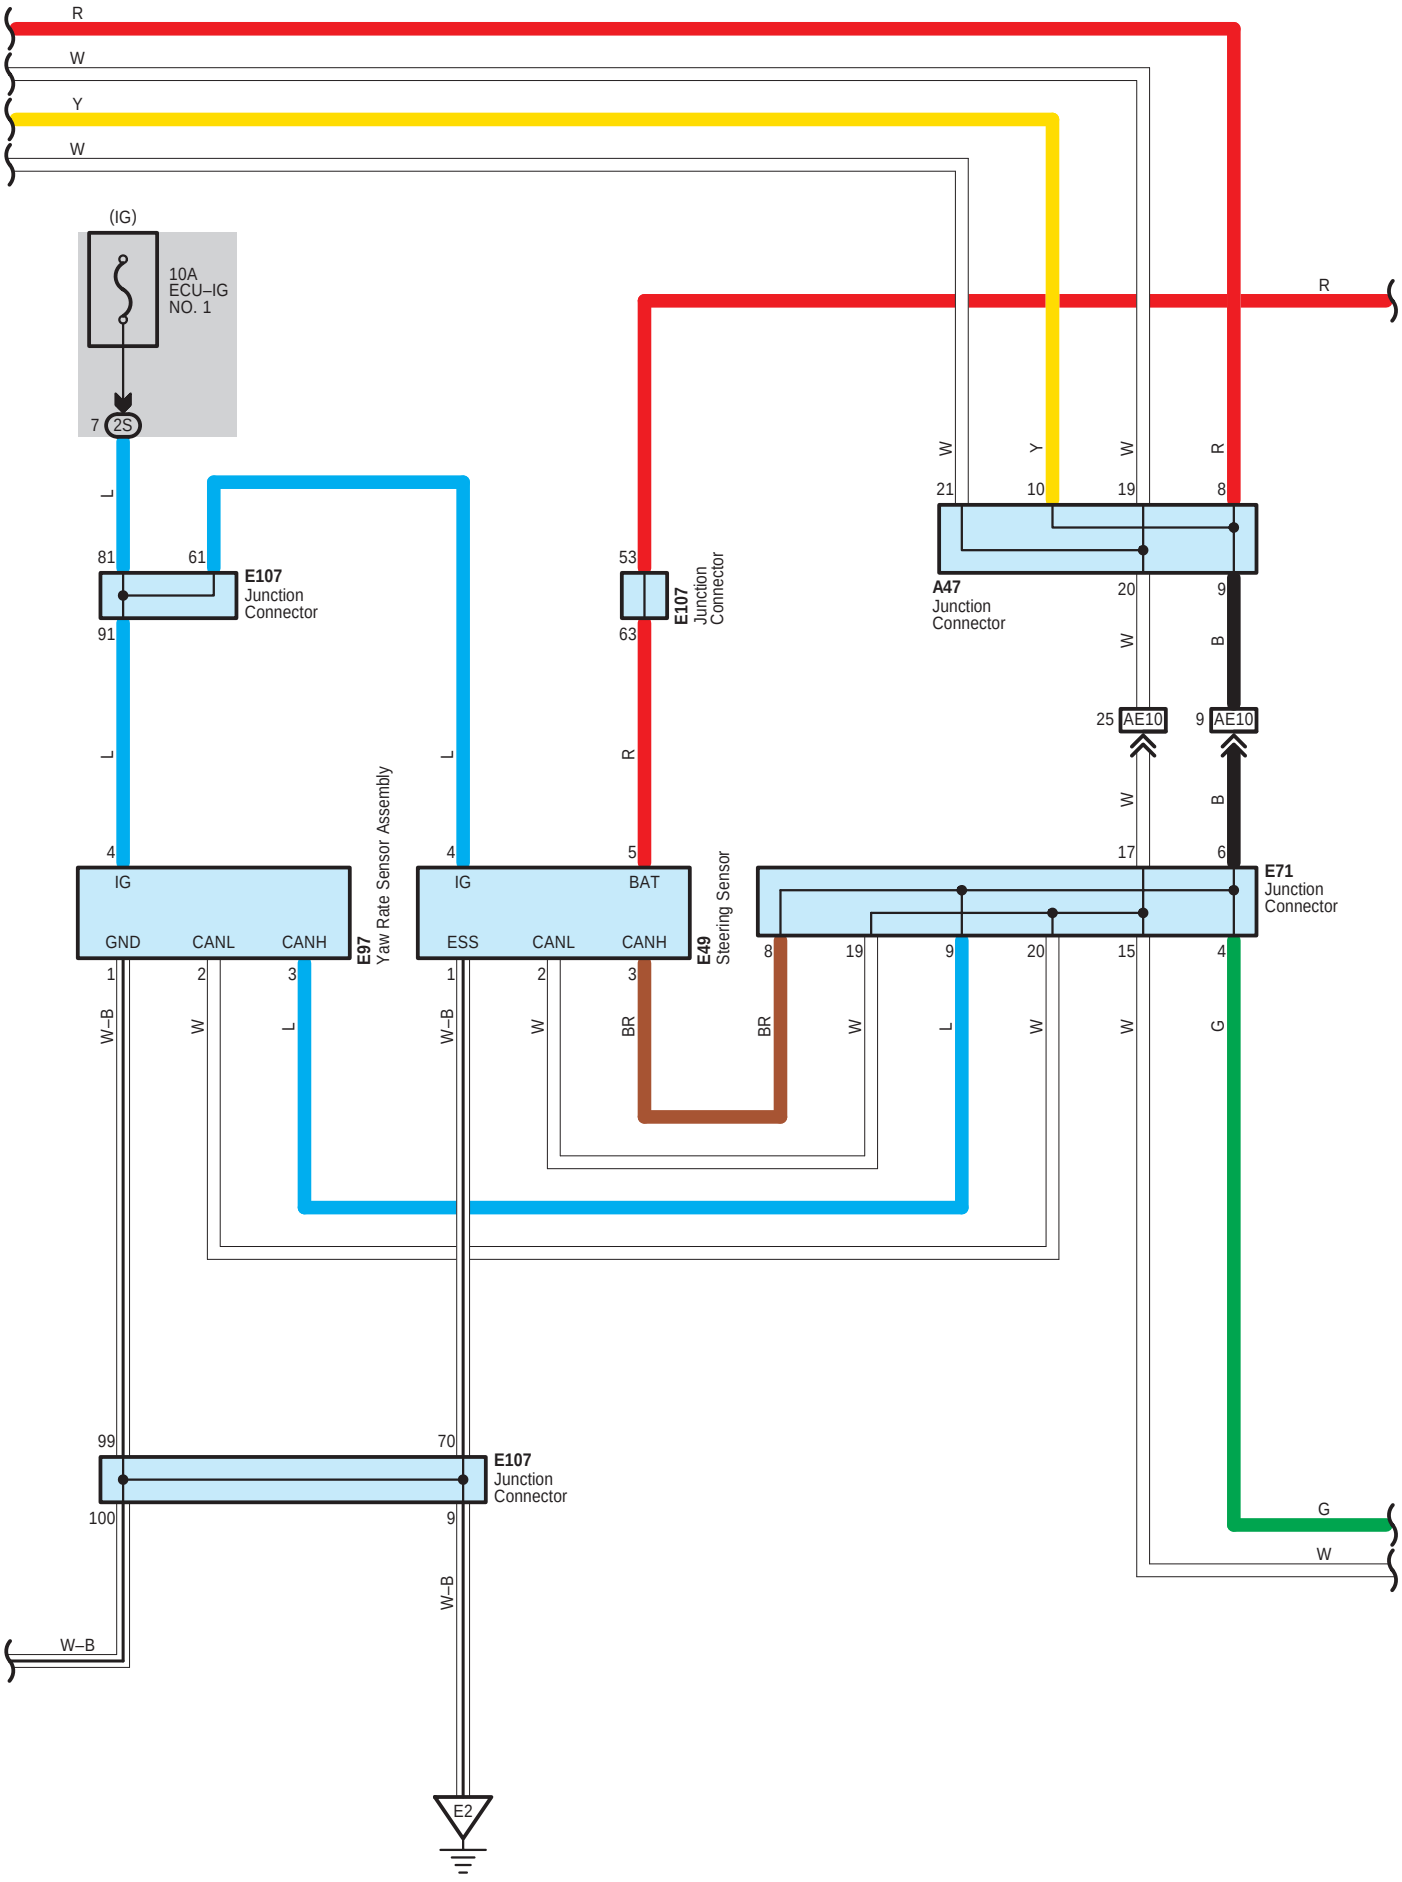
3. INSTALL FRONT DOOR SERVICE HOLE COVER INFO



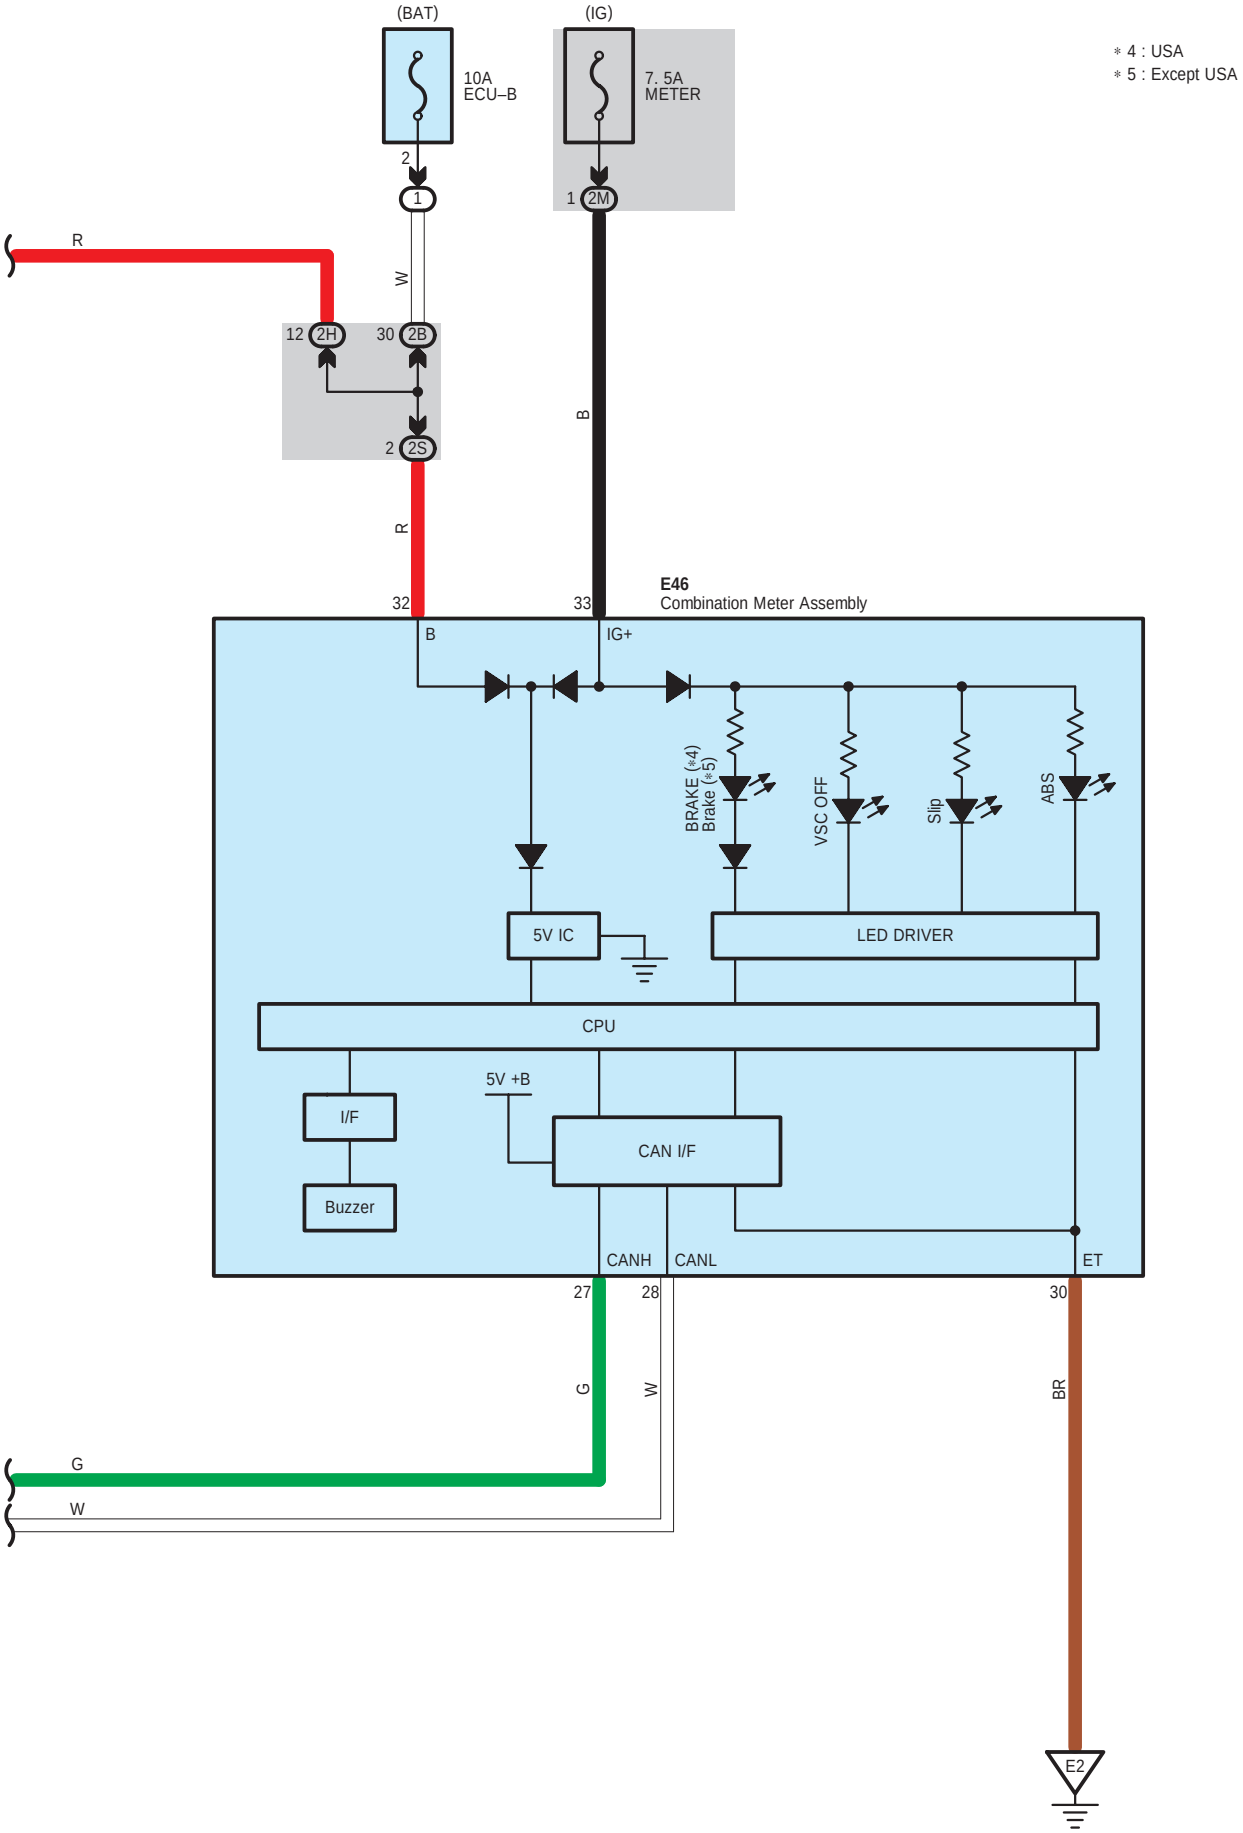
4. INSTALL FRONT DOOR TRIM BRACKET INFO



5. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY INFO



6. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY INFO



7. INSTALL FRONT ARMREST UPPER BASE PANEL (for Driver Side without Power Window) INFO

8. INSTALL FRONT DOOR INSIDE HANDLE BEZEL INFO

NOTICE : When inspecting or repairing the SRS, perform service in accordance with the following precautionary instructions and the procedure, and precautions in the Repair Manual applicable for the model year.

∗ Malfunction symptoms of the SRS are difficult to confirm, so the DTCs become the most important source of information when troubleshooting. When troubleshooting the SRS, always inspect the DTCs before disconnecting the battery.

∗ **Work must be started more than 90 seconds after the ignition or starter switch assembly is turned to the " LOCK" position (Ignition switch type) or the engine switch is pushed to the " OFF" poition (Engine switch type) and the negative (–) terminal cable is disconnected from the battery.**
(The SRS is equipped with a back–up power source so that if work is started within 90 seconds from disconnecting the negative (–) terminal cable of the battery, the SRS may deploy.)

∗ When the negative (–) terminal cable is disconnected from the battery, the memory of the clock and audio system will be cleared. So before starting work, make a record of the contents in the audio memory system. When work is finished, reset the audio systems as they were before and adjust the clock. Some vehicles have power tilt steering, power telescopic steering, power seat and power outside rear view mirror which are all equipped with memory function. However, it is not possible to make a record of these memory contents. So when the work is finished, it will be necessary to explain it to your customer, and ask the customer to adjust the features and reset the memory. To avoid erasing the memory in each system, never use a back–up power supply from outside the vehicle.

∗ Before repair, remove the airbag sensor if shocks are likely to be applied to the sensor during repair.

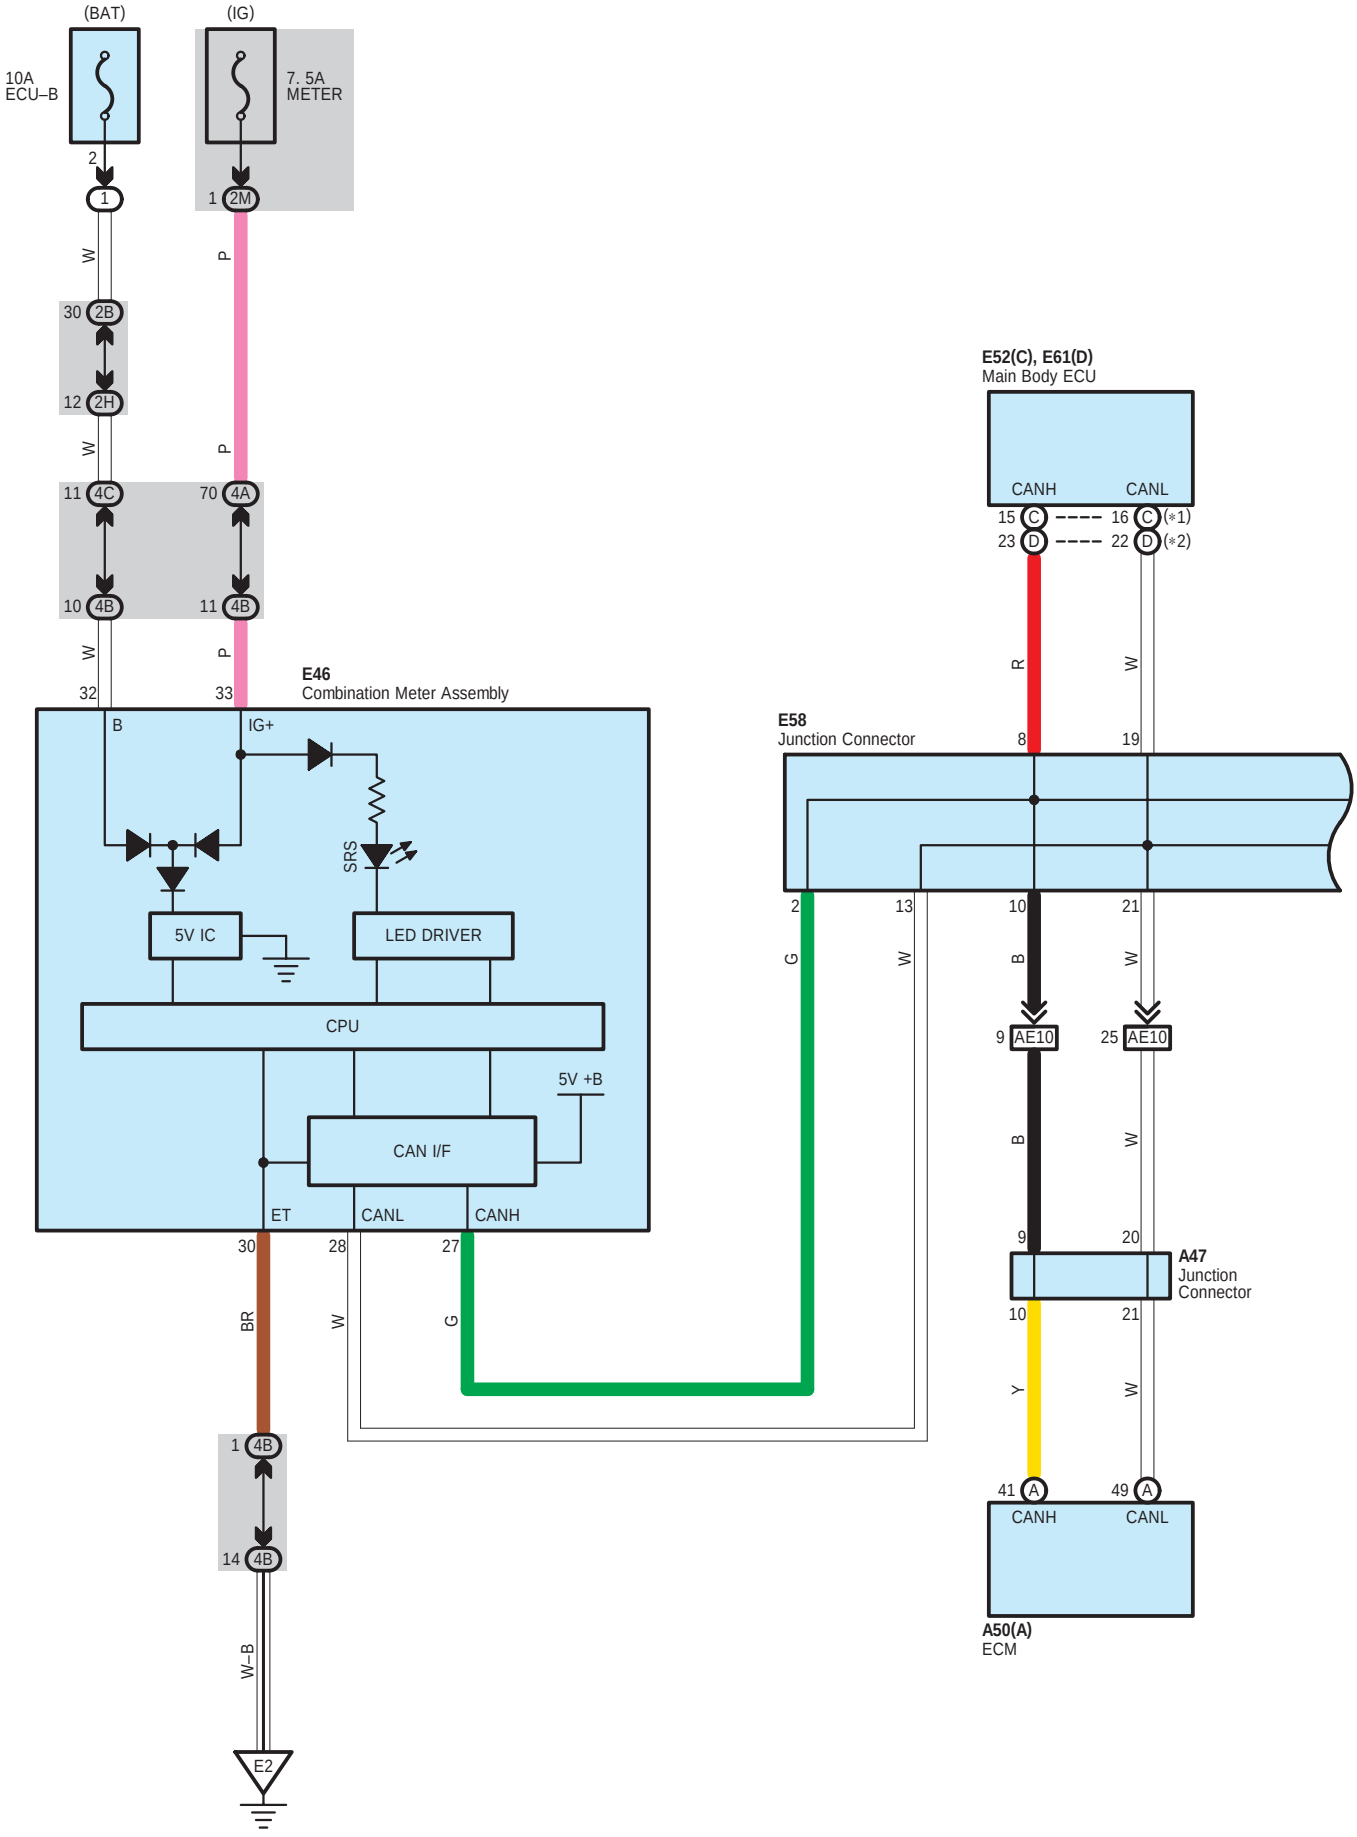
∗ Do not expose the following parts directly to hot air or flame;

∗ Even in cases of a minor collision where the SRS does not deploy, the following parts should be inspected;

∗ Never use SRS parts from another vehicle. When replacing parts, replace with new parts.

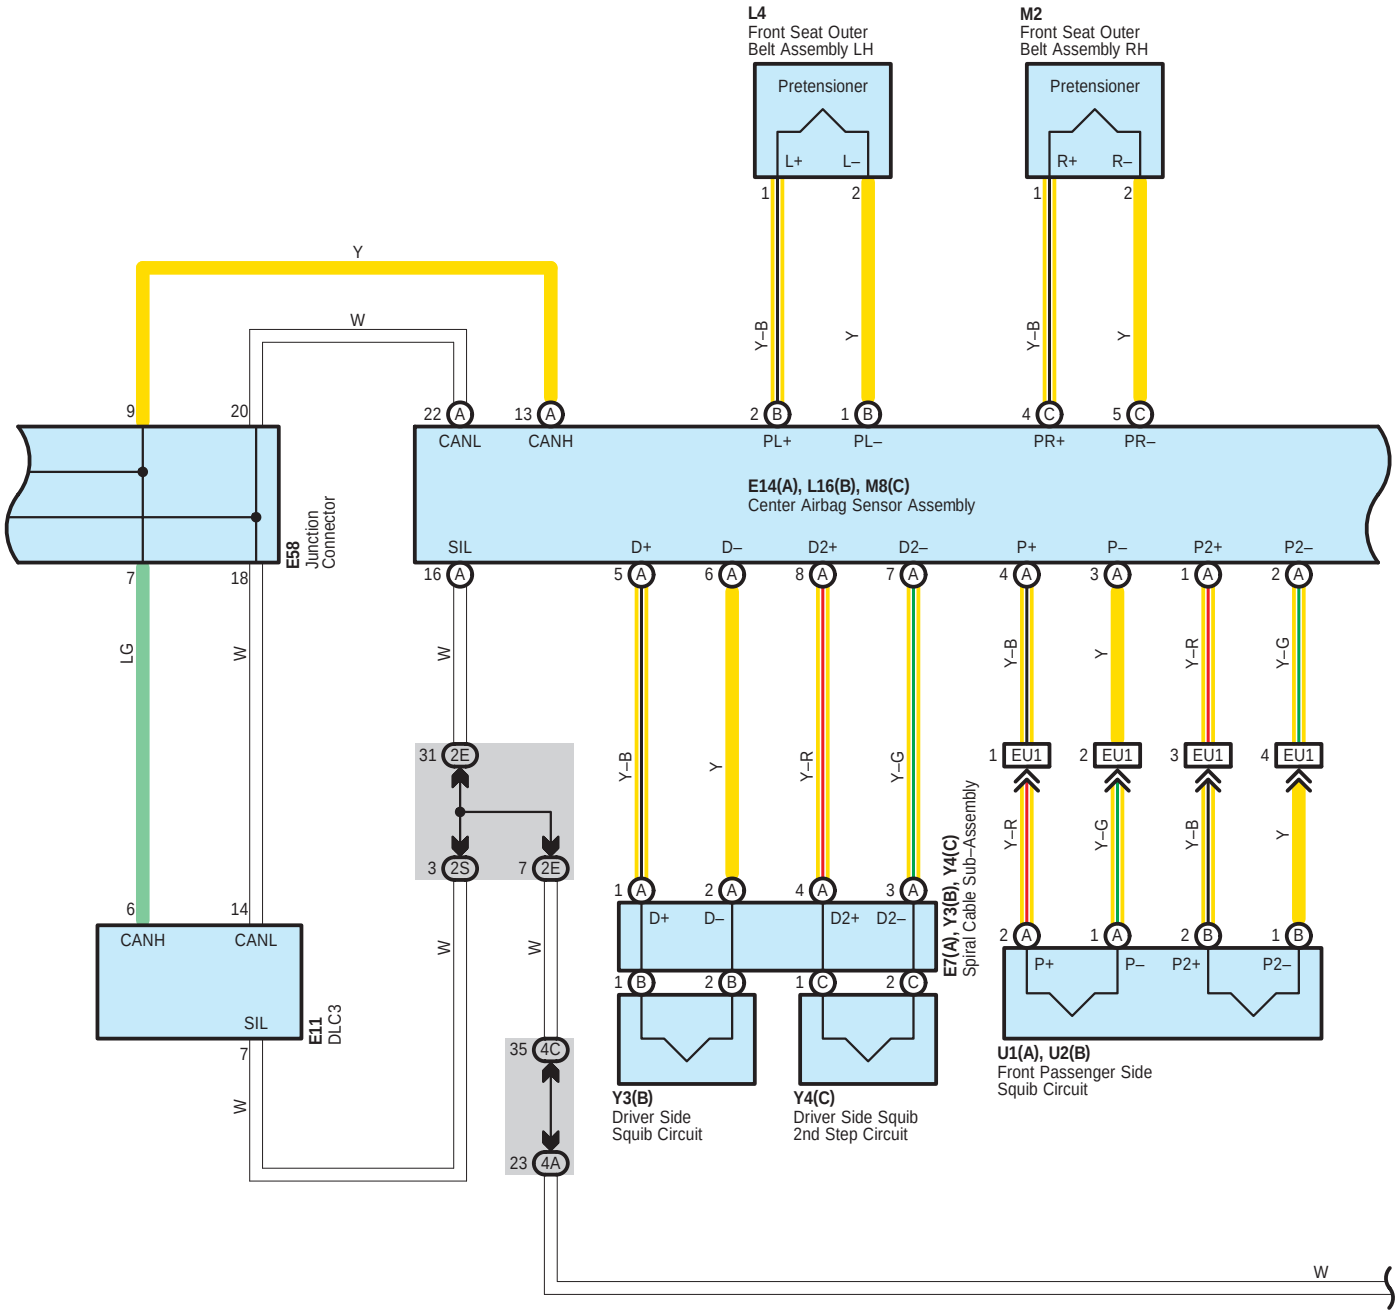
∗ For the purpose of reuse, never disassemble and repair the following parts.

∗ If the following parts have been dropped, or have cracks, dents and other defects in their case, bracket, and connector replace with new one.

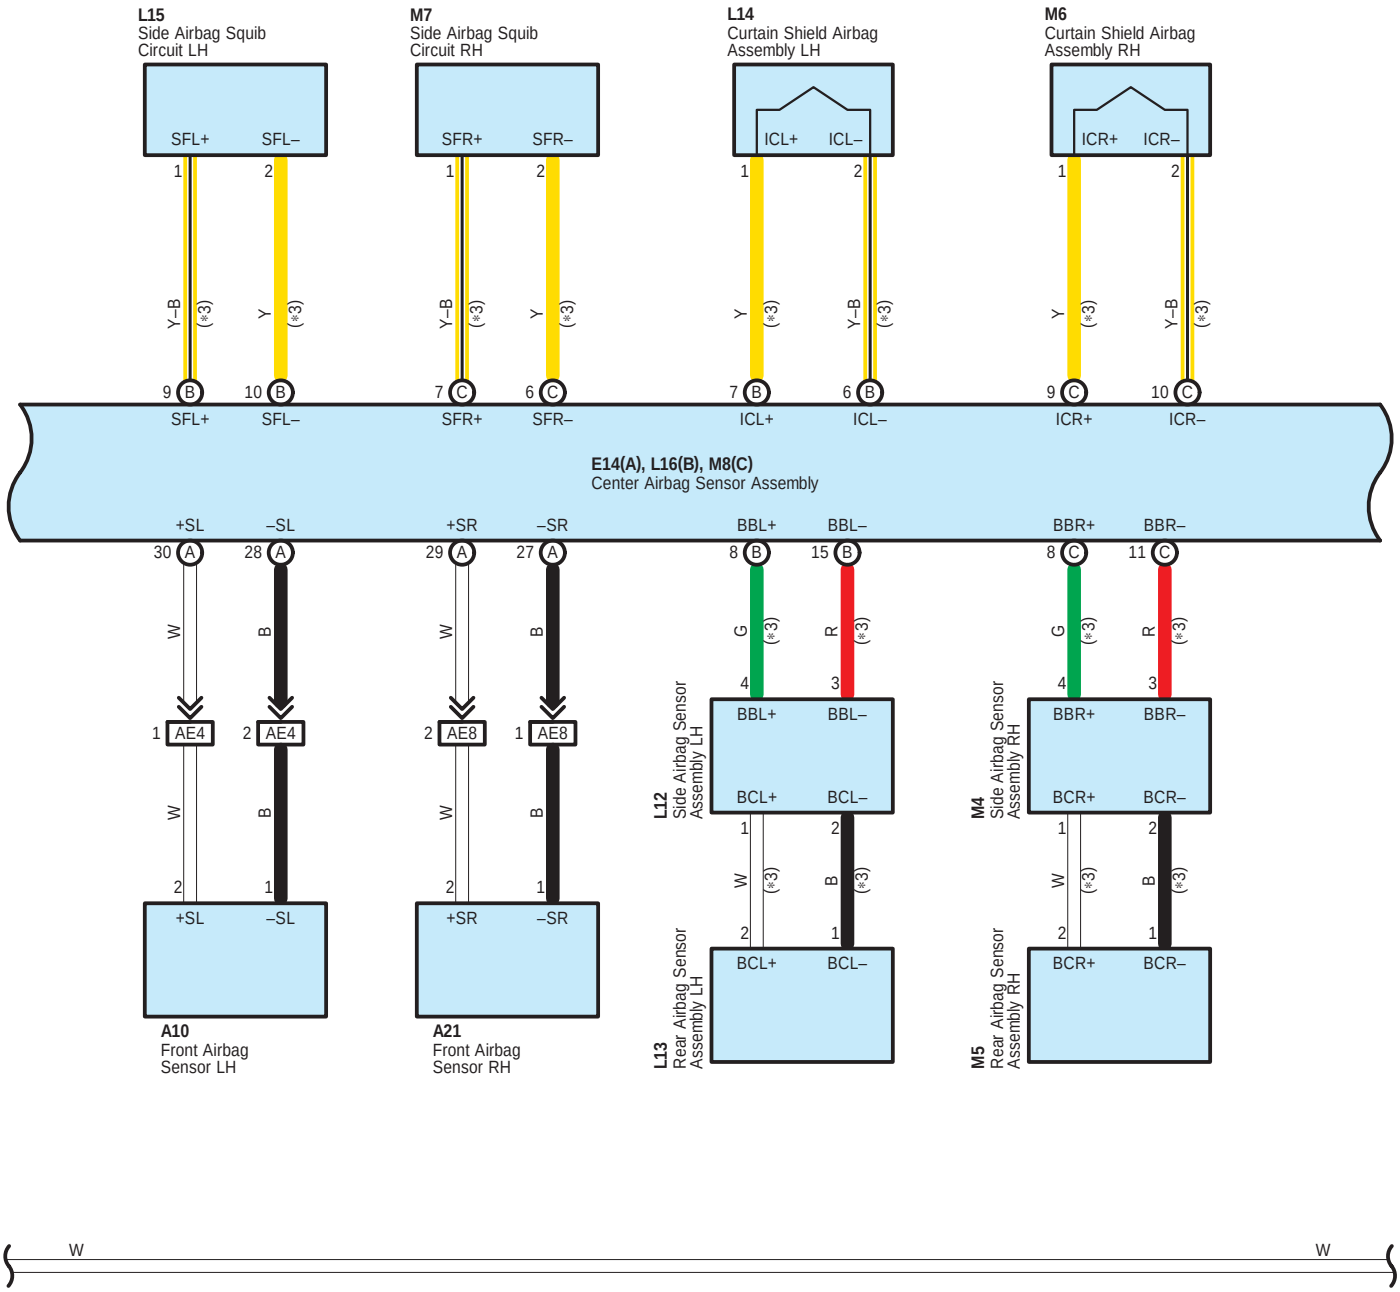


∗ Use a volt/ohmmeter with high impedance (10 k /V minimum) for troubleshooting electrical circuits of the system.

∗ Information labels are attached to the periphery of the SRS components. Follow the instructions of the notice.



∗ After work on the SRS is completed, check the SRS warning light.



∗ If the vehicle is equipped with a mobile communication system, refer to the precaution in the IN section of the Repair Manual.

- ∗ Steering wheel pad
- ∗ Front passenger airbag assembly
- ∗ Side airbag assembly
- ∗ Curtain shield airbag assembly
- ∗ Seat belt pretensioner
- ∗ Center airbag sensor assembly
- ∗ Front airbag sensor assembly
- ∗ Side airbag sensor assembly
- ∗ Rear airbag sensor assembly

FOREWORD

This repair manual has been prepared to provide essential information on body panel repair methods (including cutting and welding operations, but excluding painting) for the TOYOTA COROLLA

Applicable models: AZE141 series
ZRE142 series

This manual consists of body repair methods, exploded diagrams and illustrations of the body components and other information relating to body panel replacement such as handling precautions, etc. However, it should be noted that the front fenders of the TOYOTA model is bolted on and require no welding.

When repairing, don't cut and join areas that are not shown in this manual. Only work on the specified contents to maintain body strength.

Body construction will sometimes differ depending on specifications and country of destination. Therefore, please keep in mind that the information contained herein is based on vehicles for general destinations.

For the repair procedures and specifications other than collision-damaged body components of the TOYOTA COROLLA refer to the repair manuals.

If you require the above manuals, please contact your TOYOTA Dealer.

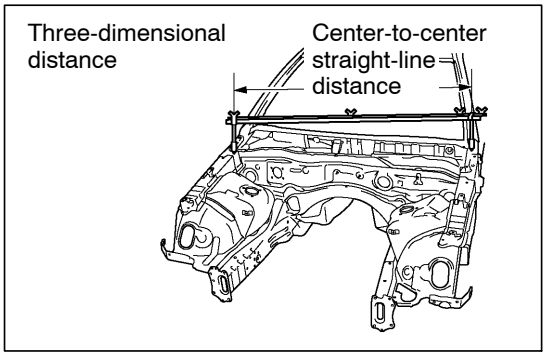
All information contained in this manual is the most up-to-date at the time of publication. However, specifications and procedures are subject to change without prior notice.

TOYOTA MOTOR CORPORATION

ABOUT THIS MANUAL

Scope of the repair work explanation

- This text explains the welding panel replacement instructions from the vehicle's white body condition. We have abbreviated the explanations of the removal and reinstallation of the equipment parts up to the white body condition and of the installation, inspection, adjustment and final inspection of equipment parts after replacing the weld panel.



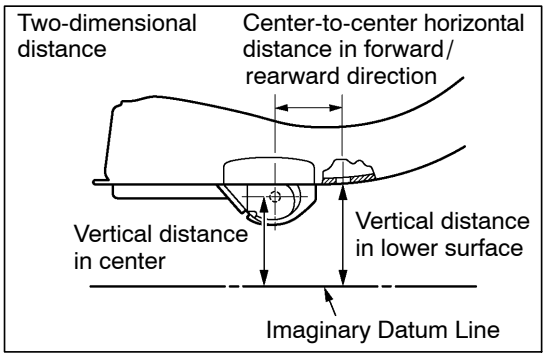
Section categories

- This manual has been divided as shown below.

Section Title	Contents	Examples
INTRODUCTION	Explanation of general body repair. Views of weld panel replacement instructions.	Precaution About this vehicle
BODY PANEL REPLACEMENT	Instructions for replacing the weld panels from the white body condition, from which bolted parts have been removed, with individual supply parts.	Front side member replacement. Quarter panel replacement.
BODY DIMENSIONS	Body aligning measurements.	Dimension diagrams.
PAINT • COATING	Scope and type of anti-rust treatment, etc. together with weld panel replacement.	Body sealer. Under coat.

Contents omitted in this manual

- Make sure to perform the following essential procedures, although they are omitted in this manual.
  (1) Clean and wash removed parts, if necessary.
  (2) Visual inspection



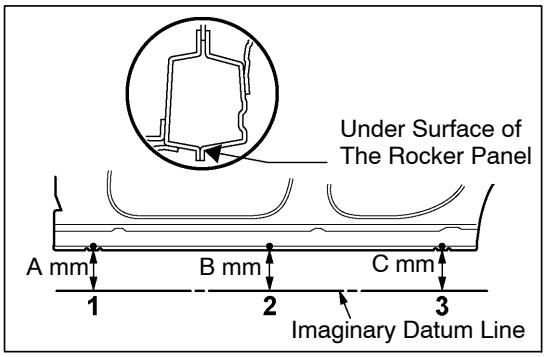
GENERAL INFORMATION

1. BASIC DIMENSIONS

(a) There are two types of dimensions in the diagram.

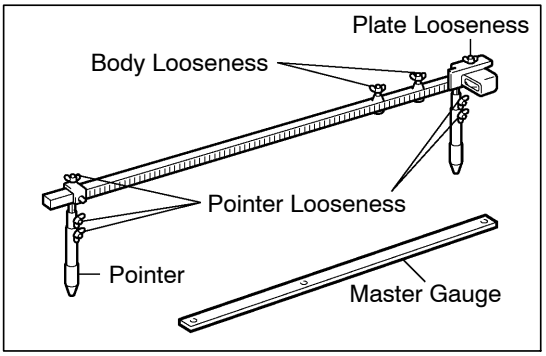
(1) (Three-dimensional distance)

- Straight-line distance between the centers of two measuring points.



(2) (Two-dimensional distance)

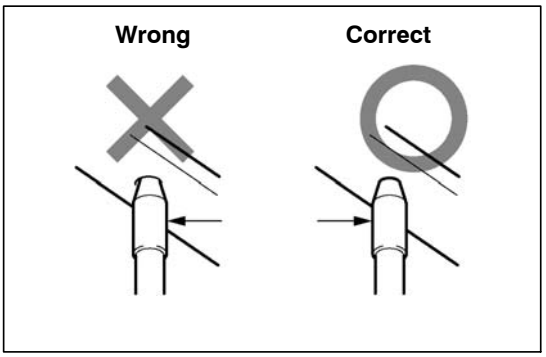
- Horizontal distance in forward/rearward direction between the centers of two measuring points.
- The height from an imaginary datum line.



(b) In cases in which only one dimension is given, left and right are symmetrical.

(c) The dimensions in the following drawing indicate actual distance. Therefore, please use the dimensions as a reference.

(d) The line that connects the places listed below is the imaginary datum line when measuring the height. (The dimensions are printed in the text.)



SYMBOL	Name
1	The place that was lowered A mm from the under surface of the rocker panel centered on the front jack up point.
2	The place that was lowered B mm from the under surface of the rocker panel centered between 1 and 3.
3	The place that was lowered C mm from the under surface of the rocker panel centered on the rear jack up point.

2. MEASURING

(a) Basically, all measurements are to be done with a tracking gauge. For portions where it is not possible to use a tracking gauge, a tape measure should be used.

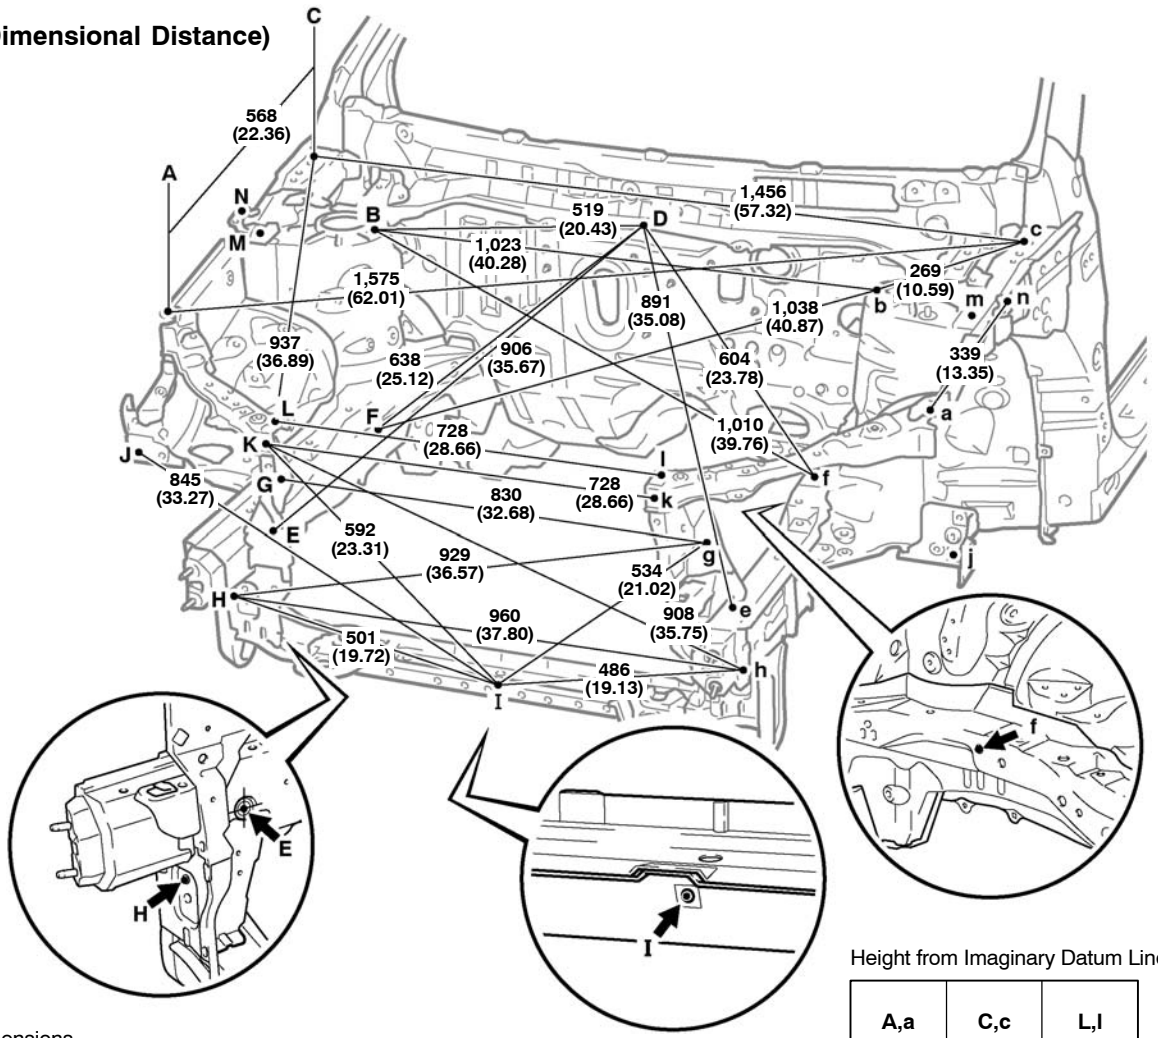
(b) Use only a tracking gauge that has no looseness in the body, measuring plate, or pointers.

HINT:

1) The height of the left and right pointers must be equal.

2) Always calibrate the tracking gauge before measuring or after adjusting the pointer height.

3) Take care not to drop the tracking gauge or otherwise shock it.



4) Confirm that the pointers are securely in the holes.

(c) When using a tape measure, avoid twists and bends in the tape.

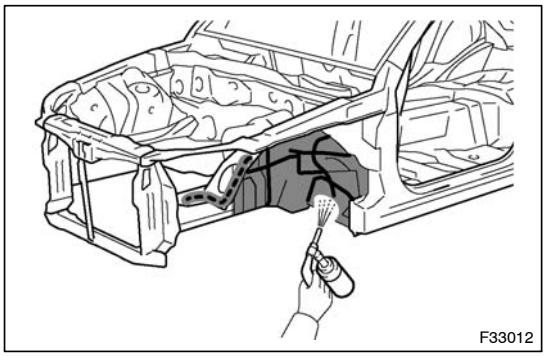
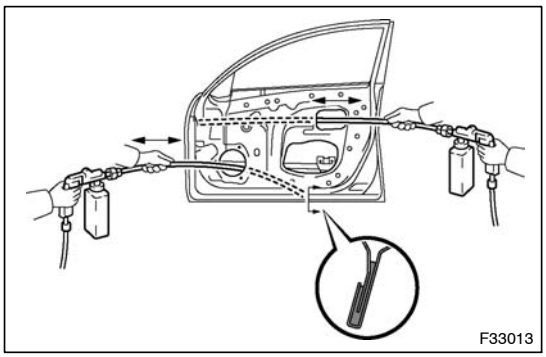
MEMO



4. ANTI-RUST TREATMENT AFTER INSTALLATION

(a) BODY SEALER APPLICATION



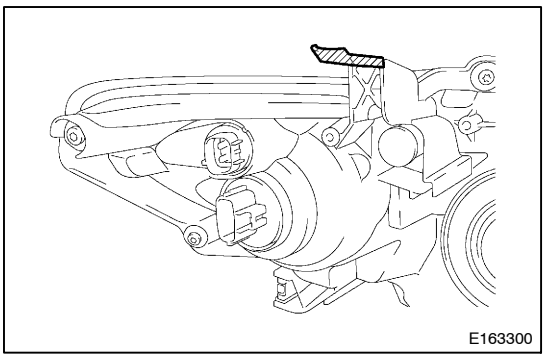
PURPOSE:
For water-proofing and anti-rust measures, always apply the body sealer to the body panel seams and hems of the doors, hood, etc.

NOTICE:
Apply body sealer neatly to parts that require a high quality appearance.

(b) UNDERCORT APPLICATION

PURPOSE:
To prevent corrosion and protect the body from gravel, always apply a sufficient undercoating to the areas indicated.

(c) VEHICLE BODY ANTI-RUST AGENT APPLICATION

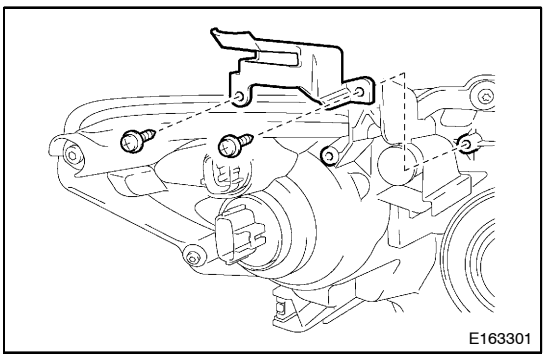


PURPOSE:
The purpose is to protect areas from rust which are difficult to paint such as the backside of the box-shaped cross section frame parts.

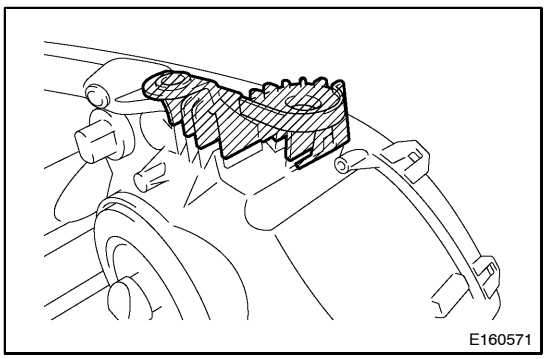
METHOD:
Apply anti-rust agent through the service holes and/or installation holes of the parts.

5. HEADLIGHT BRACKET REPAIR

HINT:



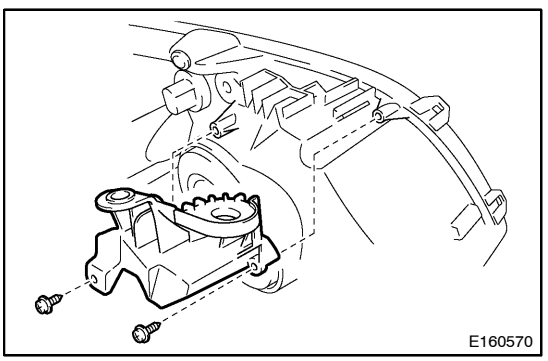
- If the installation area of the headlight assembly is damaged, use the supply retainer for low-cost repair.
- Ensure that the headlight assembly is not damaged.



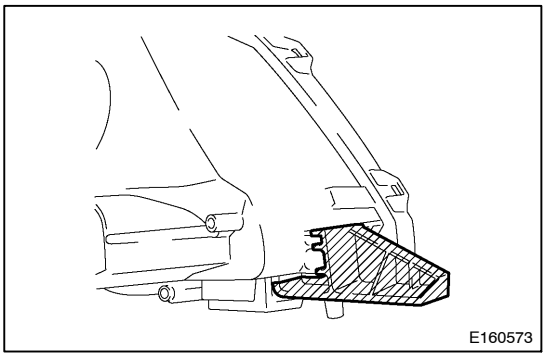
(a) INSTALL UPPER HEADLIGHT PROTECTOR RETAINER

(1) Cut off the part shaded in the illustration and smooth with sandpaper.

NOTICE:
After cutting off the part, place the upper headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.



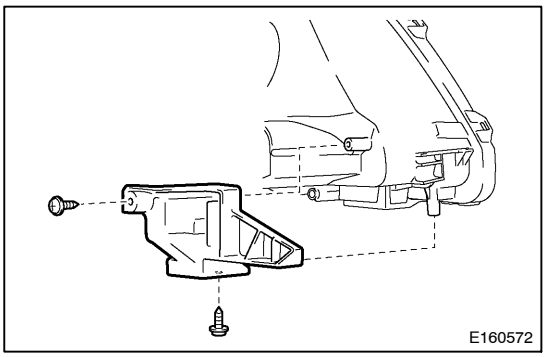
(2) Install the upper headlight protector retainer with the 2 screws.



(b) INSTALL LOWER HEADLIGHT PROTECTOR RETAINER

(1) Cut off the part shaded in the illustration and smooth with sandpaper.

NOTICE:
After cutting off the part, place the lower headlight protector retainer against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.



(2) Install the lower headlight protector retainer with the 2 screws.

(c) INSTALL LOWER HEADLIGHT BRACKET

(1) Cut off the part shaded in the illustration and smooth with sandpaper.

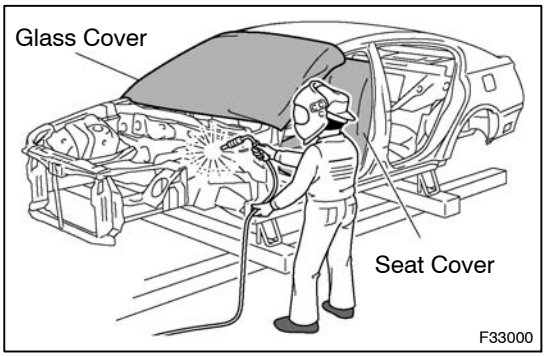
NOTICE:
After cutting off the part, place the lower headlight bracket against the bosses and gradually file away the old bracket if it interferes with the installation of the supply bracket.

(2) Install the lower headlight bracket with the 2 screws.

6. PROCEDURES NECESSARY WHEN ECU OR OTHER PARTS ARE REPLACED

(a) THE WORK LIST

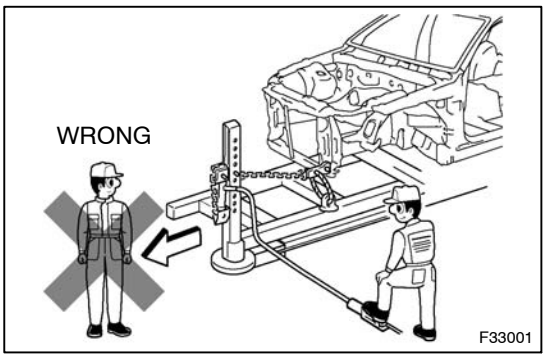
(1) Each inspection procedure refers to the TOYOTA Repair Manual.



Replacement Part	Necessary Procedure	Effect/Inoperative Function When Necessary Procedures are not Performed	Note
ECM	Vehicle Identification Number (VIN) registration	MIL comes on	Using the Techstream.
	ECU commnication ID registration	• Wireless door lock control system (*4) • Smart key system (*4) • Engine start	—
	Reset memory (*1)	• Large shift shock • The deterioration of fuel efficiency	Using the Techstream.
• Automatic transmission assembly (*1) • Engine assembly (*1)	Reset memory	• Large shift shock • The deterioration of fuel efficiency	Using the intelligent tester.
Tire pressure warning ECU	1. Register transmitter IDs 2. Initialize tire pressure warning system	• When DTC detection conditions of “transmitter ID not received” DTC are met, TPWS indicator blinks for 1 minute, and then illuminates • Tire pressure monitoring function	—
Tire pressure warning valve and transmitter	1. Register transmitter IDs 2. Initialize tire pressure warning system	1. When DTC detection conditions of “transmitter ID not received” DTC are met, TPWS indicator blinks for 1 minute, and then illuminates 2. Tire pressure monitoring function of replaced wheel	Even if only one wheel is replaced, IDs for all 4 wheels must be registered.
Brake actuator assembly (Skid control ECU)	Perform yaw rate and acceleration sensor zero point calibration	• VSC OFF indicator light blinks • VSC disabled or malfunctioning	Perform yaw rate and acceleration sensor zero point calibration with the ignition switch on (engine stopped).
• Yaw rate and acceleration sensor • Front wheel alignment adjustment	1. Clear zero point calibration data 2. Perform yaw rate and acceleration sensor zero point calibration	• VSC OFF indicator light blinks • VSC disabled or malfunctioning	Perform yaw rate and acceleration sensor zero point calibration with the ignition switch on (engine stopped).
• Power steering ECU (*2) • Steering column (*2)	Perform rotation angle sensor initialization and torque sensor zero point calibration.	• P/S warning light comes on • EPS control	DTC (C1515/C1525) will be stored when the power steering ECU is replaced.
Power steering ECU (*3)	1. Assist map writing 2. Torque sensor zero point calibration	• P /S warning light comes on • EPS control	DTC (C1515/C1525) will be stored when the power steering ECU is replaced.
Steering column (*3)	Torque sensor zero point calibration	Steering effort is different between turning steering wheel to left and right	—

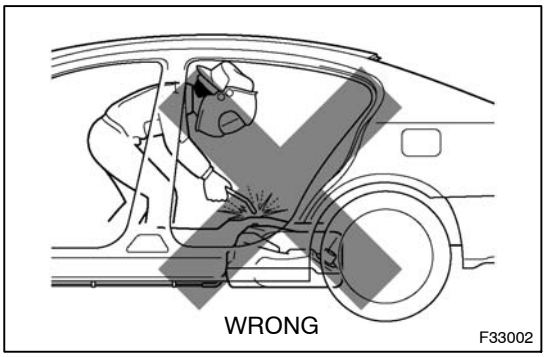
Replacement Part	Necessary Procedure	Effect/Inoperative Function When Necessary Procedures are not Performed	Note
• Door control transmitter (*5) • Door control receiver (*5)	1. Perform identification code registration (key code) 2. Refer to wireless door lock control system "REGISTRATION" procedures	wireless door lock control system	—
Steering lock actuator (Steering lock ECU) (*4)	ECU code registration	Engine start	—
• Certification ECU (*4) • Electrical key transmitter (*4)	Key ID registration	• Wireless door lock control system • Smart key system • Engine start	—
ID code box (*4)	1. ECU code registration 2. ECU communication ID registration	• Wireless door lock control system • Smart key system • Engine start	—
Occupant classification ECU	• Perform zero point calibration • Registration ECU data	• Occupant classification system • Passenger airbag ON/OFF indicator • Airbag system (Front passenger side) • Seat belt warning system (Front passenger side)	—
• Sliding roof drive gear (Sliding roof ECU) • Sliding roof housing • Sliding roof drive cable	Perform sliding roof drive gear reset.	• Automatic open/close function of roof glass • Jam protection function • Operation function after ignition switch off	Necessary when removed and installed (Not necessary when the sliding roof drive gear (sliding roof ECU) is removed and installed together with the sliding roof housing.)

*1: for U341E, U250E Automatic Transaxle
*2: for 2AZ−FE
*3: for 2ZR−FE
*4: w/ Smart Key System
*5: w/o Smart Key System



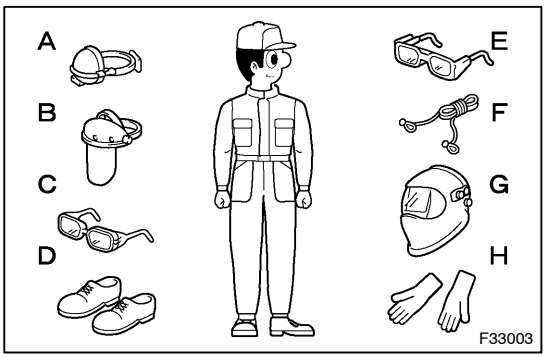
PRECAUTION

1. WORK PRECAUTIONS



(a) VEHICLE PROTECTION

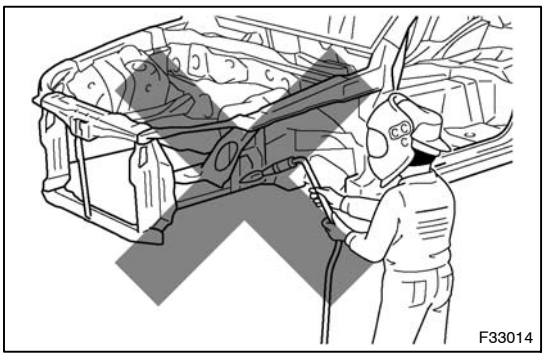
(1) When welding, cover glass, seats, carpets, etc. with heat resistant fireploof covers to protect them.



(b) SAFETY

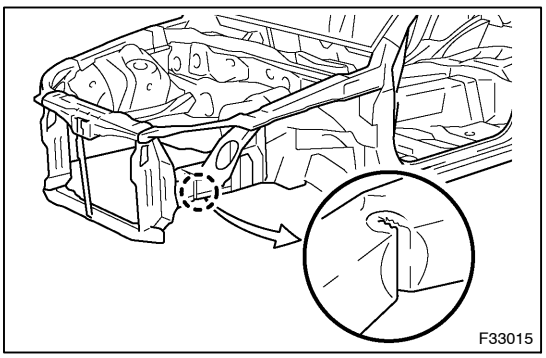
(1) Never stand in the path of the chain when using a puller on the body or frame, and be sure to attach a safety cable.

(2) If it is necessary to use a frame in the area of the fuel tank, first remove the tank and plug the fuel line.



(c) SAFETY WORK CLOTHES

(1) In addition to the usual mechanic's wear, cap and safety shoes, the appropriate gloves, head protector, welder's glasses, ear plugs, face protector, dust mask, etc. should be worn as the situation demands.

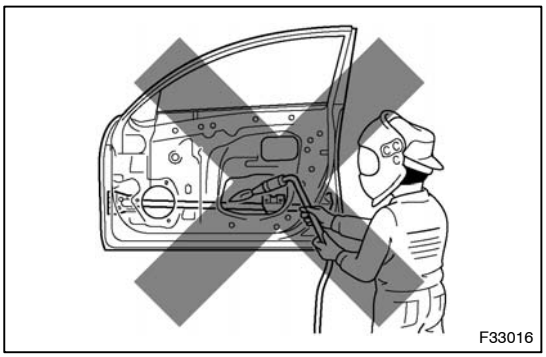


Code	Name
A	Dust mask
B	Face protector
C	Safety glasses
D	Safety shoes
E	Welder's glasses
F	Ear plugs
G	Head protector
H	Welder's gloves

2. PRECAUTIONS WHEN REPAIRING BODY FRAME PARTS (INCLUDING CRUSH BOX)

(a) PROHIBITION OF HEAT REPAIR FOR BODY FRAME PARTS

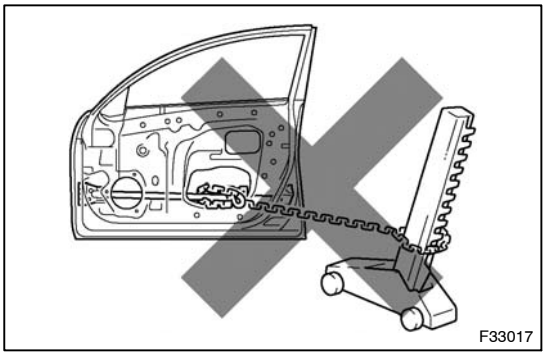
(1) Rustproof high strength steel sheets are used for the body frame. Therefore, if these parts are heat repaired using an acetylene torch or equivalent, the crystalline structure changes, causing the strength of the steel sheets to decrease. Also, the zinc corting which is used to protect the body from rust will be damaged. This causes the surface of the steel sheets to become oxidized, which reduces their ability to resist rust.



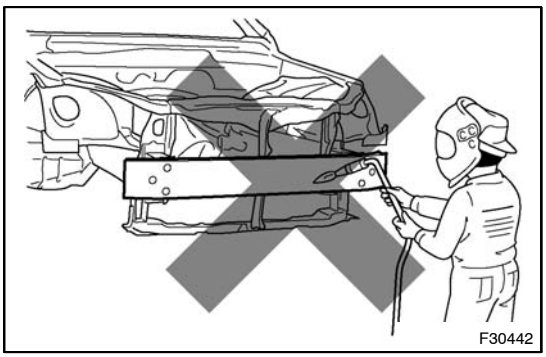
(b) WHEN TO REPLACE FRAME PARTS

NOTICE:
Replace frame parts that have kinks.

HINT:
What is kink?



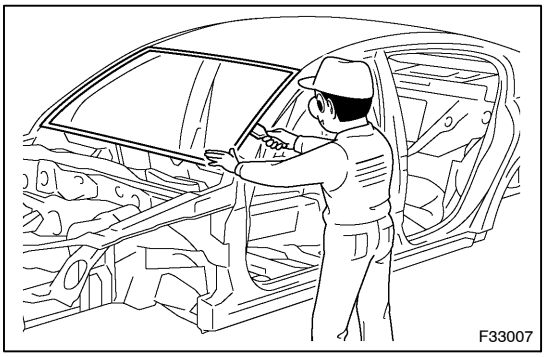
A deformatision bon a steel sheet that cannot be returned to its original shape by pulling or hammering due to the deformation angle being sharp.



(c) REPAIR OF DOOR SIDE IMPACT BEAM IS PROHIBITED

(1) The impact beam is desined so that it performs at 100% in its original shape.
However, if the impact beam is repaired, its performance may not be the same as before the accident.

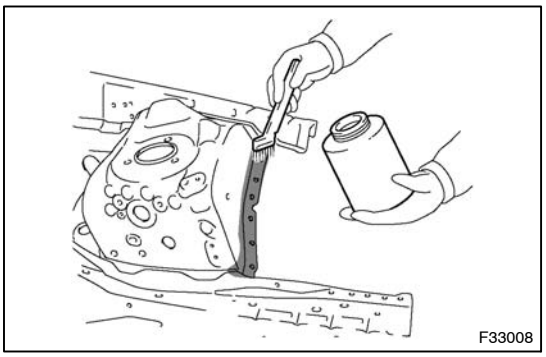
PARTS EHICH ARE PROHIBITED TO BE REPAIRED: Door side impact beam



(d) REPAIR OF BUMPER REINFORCEMENT IS PROHIBITED

(1) The bumper reinforcement is designed so that it parforms at 100% in uts original shape.
However, if the impact beam is repaired, its performance may not be the same as before the accident.

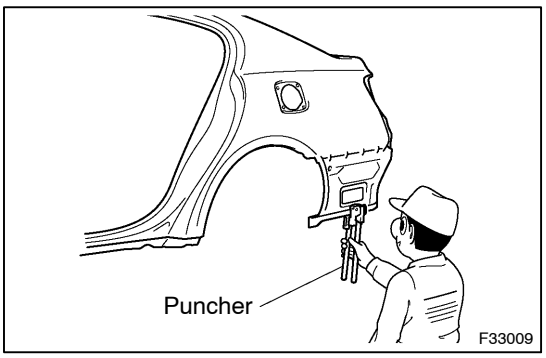
PARTS EHICH ARE PROHIBITED TO BE REPAIRED: Bumper reinforcement



3. PRECAUTIONS FOR CORRECT REPAIR

(a) REMOVAL OF ADJACENT COMPONENTS

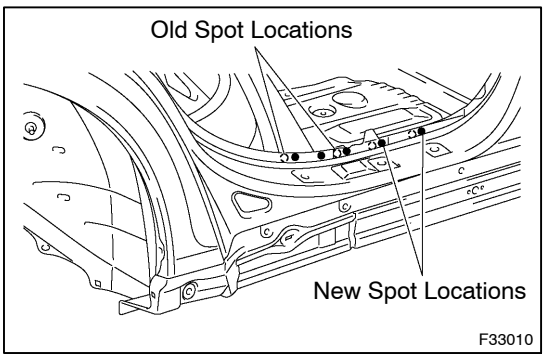
(1) When removing adjacent components, apply protective tape to the surrounding body and your tools to prevent damage.



NOTICE:
If the paint film is damaged, make sure to refinish the paint.

(b) ANTI-RUST TREATMENT BEFORE WELDING

(1) Apply welding primer to the contact surfaces of the welding areas to protect them from rust.



NOTICE:
Do not apply welding primer outside of the contact surfaces.

(c) MAKING HOLES FOR PLUG WELDING

(1) For areas where a spot welder cannot be used, use a puncher or drill to make holes for plug welding.

Thickness of welded portion	Diameter of plug hole
Under 10 mm (0.04 in.)	Over 5 mm (0.20 in.)
1.0 to 1.6 mm (0.04 to 0.06 in.)	Over 6.5 mm (0.26 in.)
1.7 to 2.3 mm (0.07 to 0.09 in.)	Over 8 mm (0.31 in.)
Over 2.4 mm (0.09 in.)	Over 10 mm (0.39 in.)

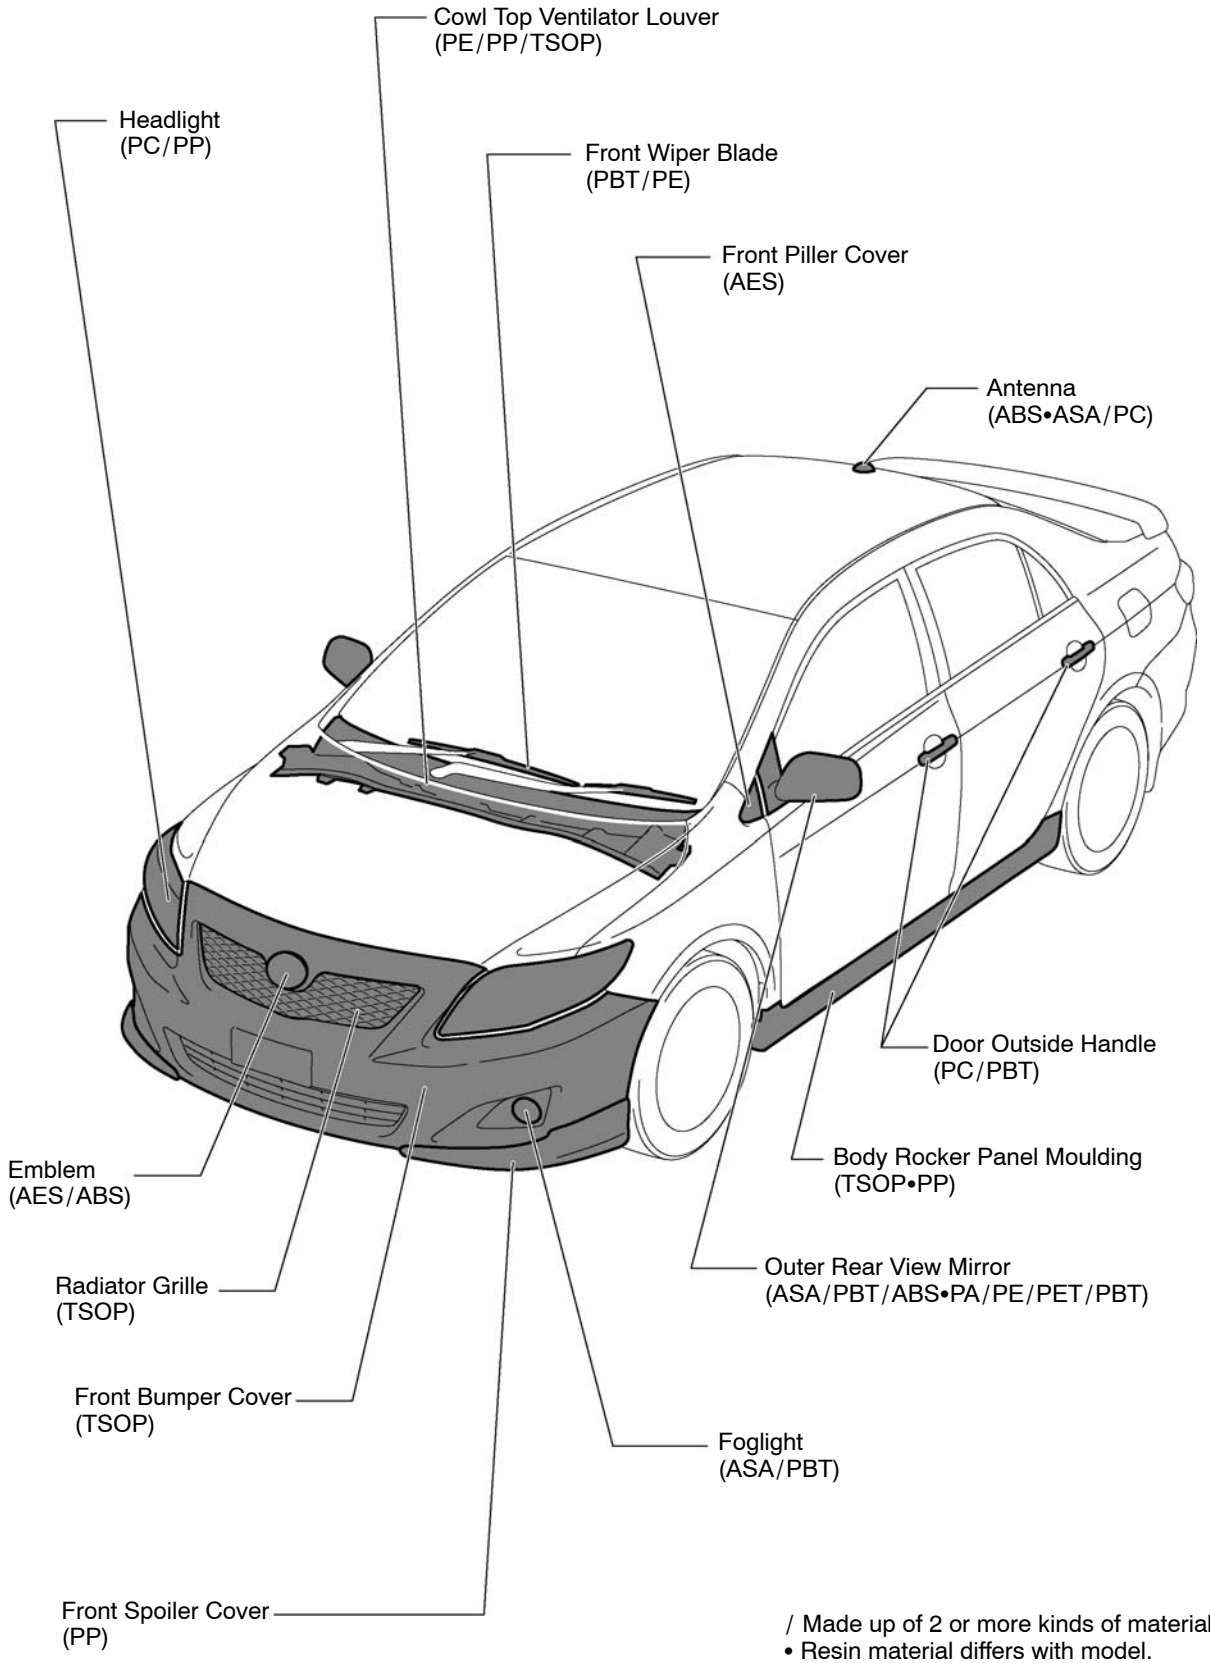
(d) WELDING PRECAUTIONS

(1) The number of welding spots should be as follows.

Spot weld: 1.3 X No. of manufacturer's spots
Plug weld: More than No. of manufacturer's plugs

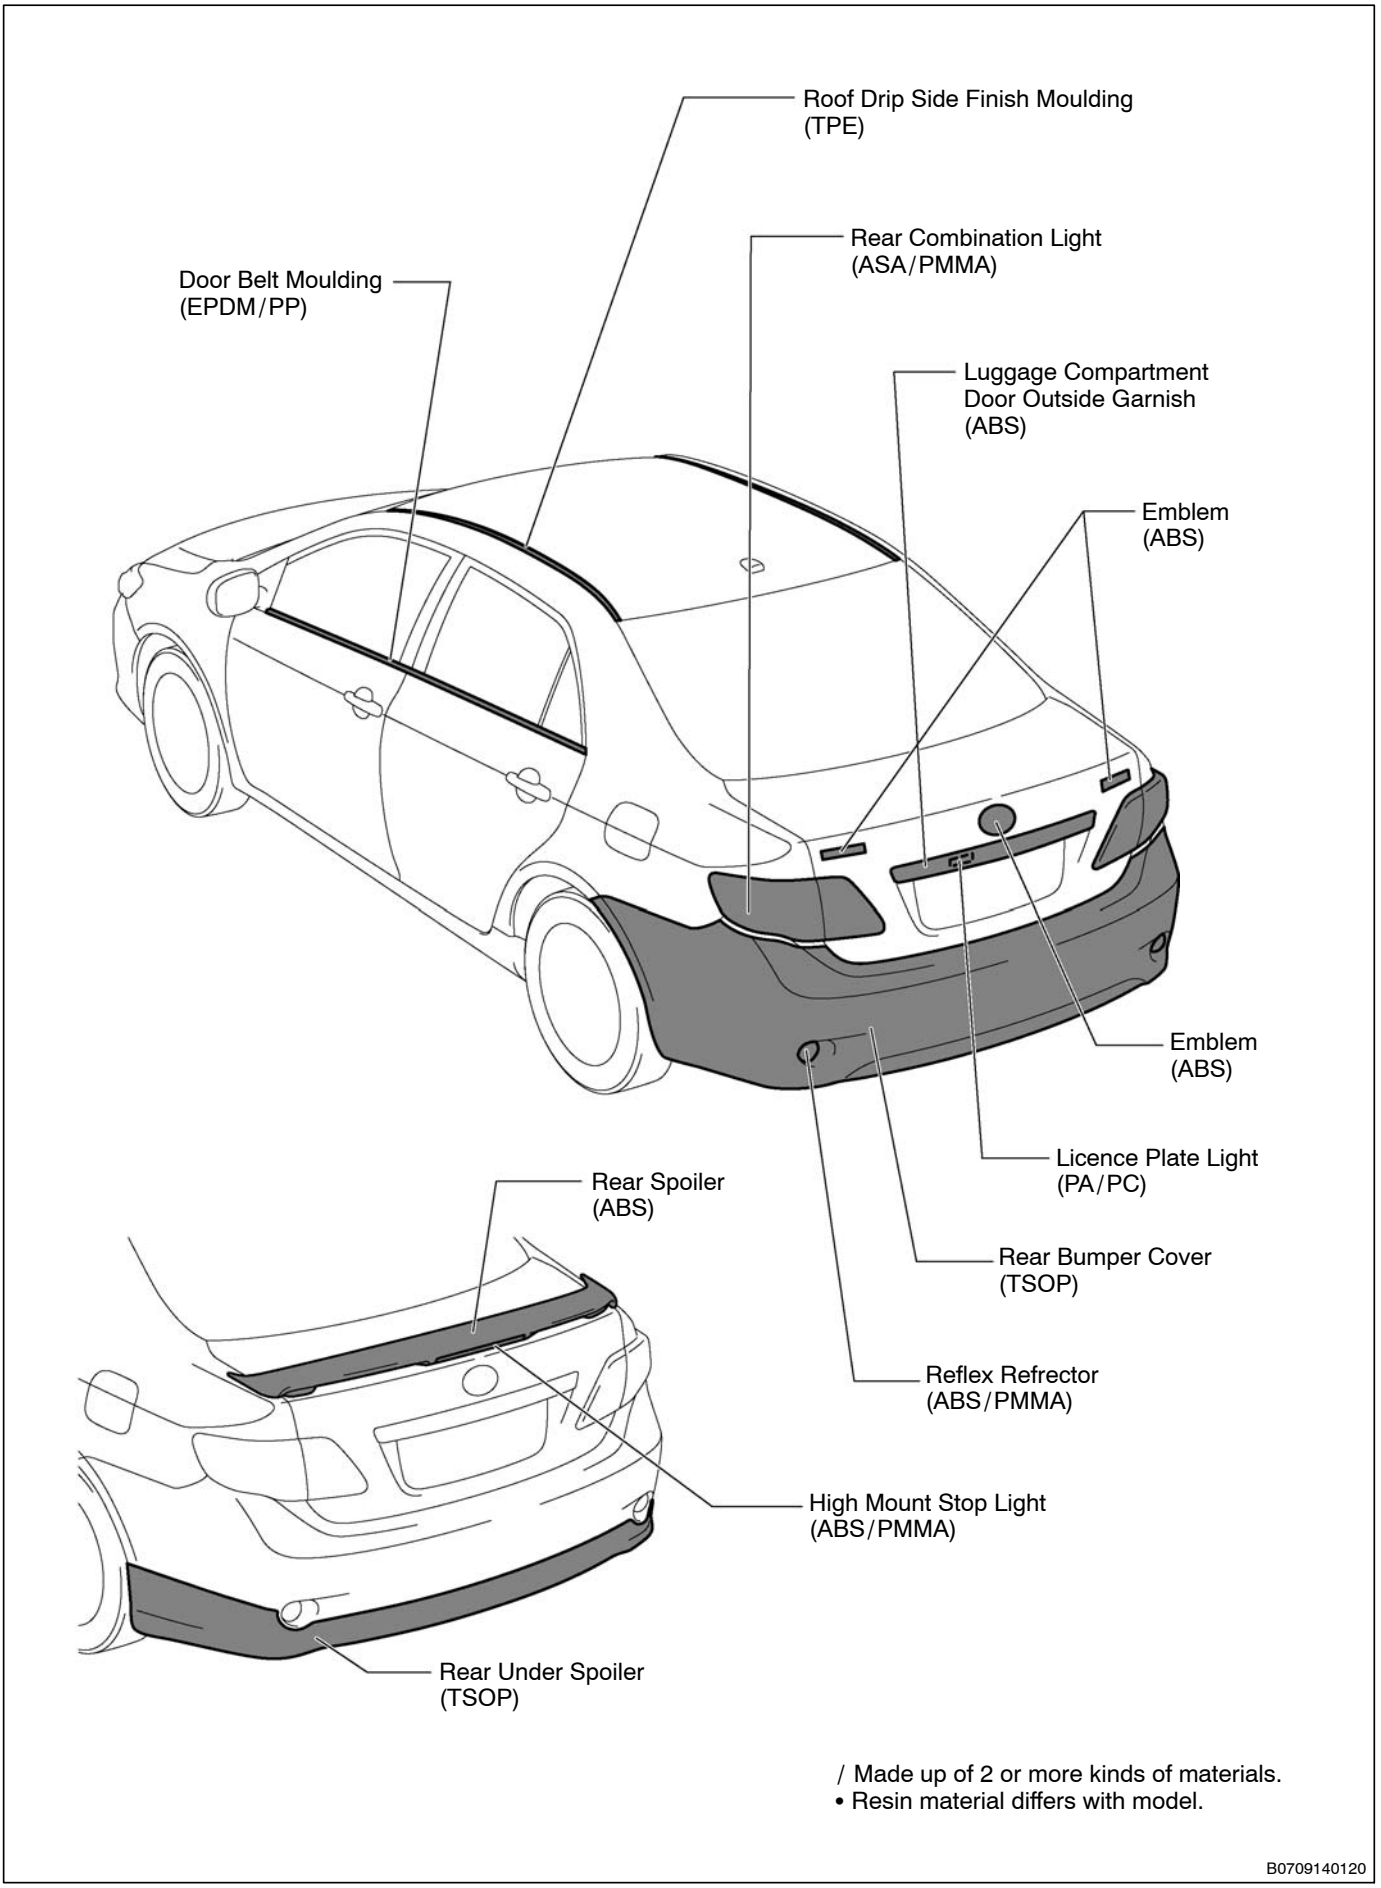
(2) Spot weld locations
Avoid welding over previously welded areas.

8. PRECAUTIONS FOR RESIN PARTS



(a) PLASTIC PROPERTIES CHART

(1) When repairing, some parts may be deformed by the heat. Therefore, confirm the properties of the platic parts, and remove parts beforehand as necessary.

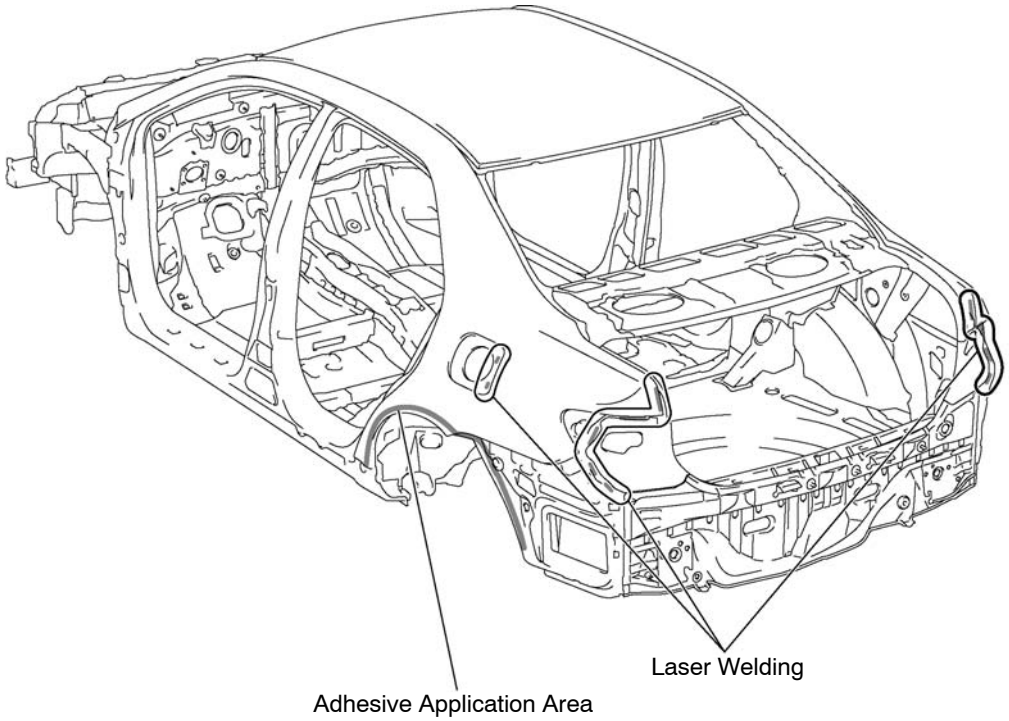


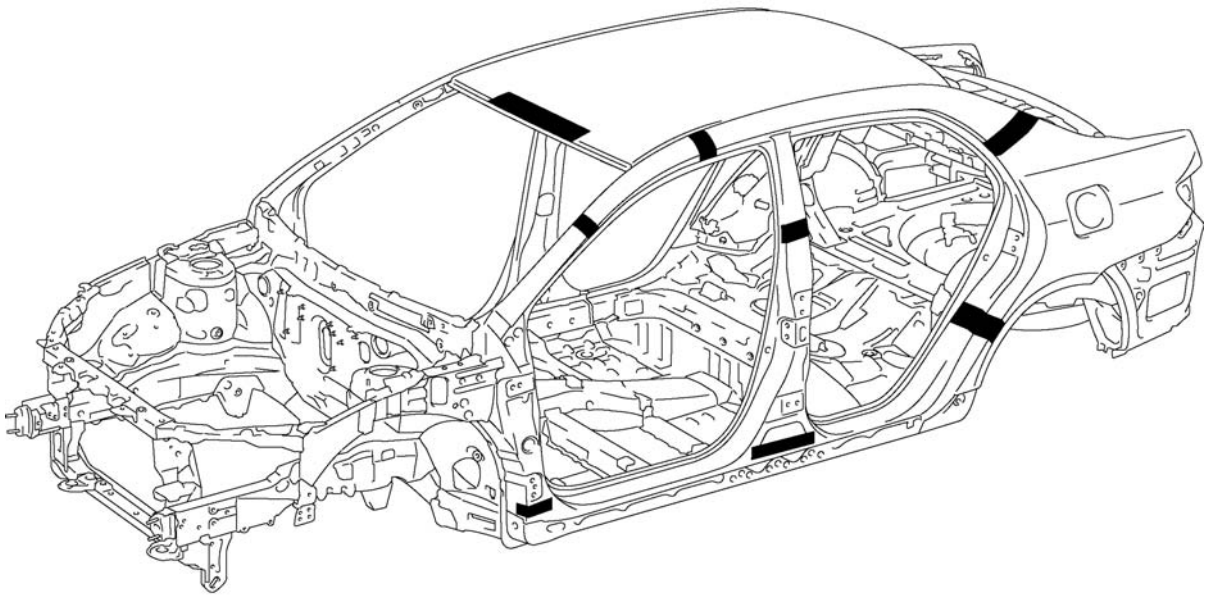
Code	Material name	Heat* resistant temperature limit °C (°F)	Resistance to alcohol or gasoline	Notes
ABS	Acrylonitrile Butadiene Styrene	80 (176)	Alcohol is harmless if applied only for short time in small amounts (e.g., quick wiping to remove grease).	Avoid gasoline and organic or aromatic solvents.
AES	Acrylonitrile Ethylene Styrene	80 (176)	Alcohol is harmless if applied only for short time in small amounts (e.g., quick wiping to remove grease).	Avoid gasoline and organic or aromatic solvents.
ASA	Acrylonitrile Styrene Acrylate	80 (176)	Alcohol is harmless if applied only for short time in small amounts (e.g., quick wiping to remove grease).	Avoid gasoline and organic or aromatic solvents.
EPDM	Ethylene Propylene	100 (212)	Alcohol is harmless. Gasoline is harmless if applied only for short time in small amounts.	Most solvents are harmless but avoid dipping in gasoline,solvents, etc.
PA	Polyamide (Nylon)	80 (176)	Alcohol and gasoline are harmless.	Avoid battery acid.
PBT	Polybutylene Terephthalate	160 (320)	Alcohol and gasoline are harmless.	Most solvents are harmless.
PC	Polycarbonate	120 (248)	Alcohol is harmless.	Avoid gasoline brake fluid, wax, wax removers and organic solvents. Avoid alkali.
PE	Polyethylene	80 (176)	Alcohol and gasoline are harmless.	Most solvents are harmless.
PET	Polyethylene Terephthalate	75 (167)	Alcohol and gasoline are harmless.	Avoid dipping in water.
PMMA	Polymethyl Methacrylate	80 (176)	Alcohol is harmless if applied only for short time in small amounts	Avoid dipping or immersing in alcohol, gasoline, solvents, etc.
PP	Polypropylene	80 (176)	Alcohol and gasoline are harmless.	Most solvents are harmless.
PVC	Polyvinylchloride (Vinyl)	80 (176)	Alcohol and Gasoline are harmless. if applied only for short time in small amounts. (e.g., quick wiping to remove grease).	Avoid dipping or immersing in alcohol, gasoline, solvents, etc.
TPE	Thermoplastic Elastomer	80 (176)	Alcohol and Gasoline are harmless. if applied only for short time in small amounts. (e.g., quick wiping to remove grease).	Most solvents are harmless but avoid dipping in gasoline, solvents, etc.
TPO	Thermoplastic Olefine	80 (176)	Alcohol and Gasoline are harmless. if applied only for short time in small amounts. (e.g., quick wiping to remove grease).	Most solvents are harmless but avoid dipping in gasoline, solvents, etc.TSOP

Code	Material name	Heat* resistant temperature limit °C (°F)	Resistance to alcohol or gasoline	Notes
TSOP	TOYOTA Super Olefine Polymer	80 (176)	Alcohol and gasoline are harmless.	Most solvents are harmless.

* Temperatures higher than those listed here may result in material deformation during repair.

B0709140118B





/ Made up of 2 or more kinds of materials.

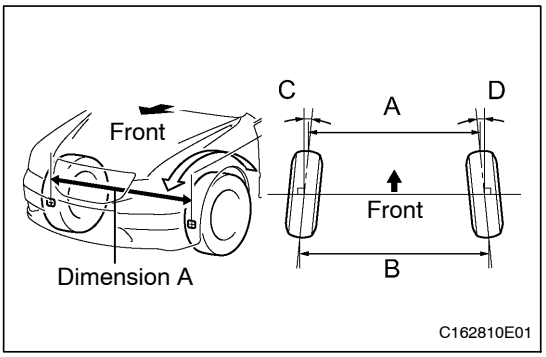
except TMC Made	2ZR-FE	195/65R15	2°50' +/-45' (2.83° +/-0.75°) 2°40' +/-45' (2.67° +/-0.75°)*	
		205/55R16	2°50' +/-45' (2.83° +/-0.75°) 2°41' +/-45' (2.68° +/-0.75°)*	
	2AZ-FE	205/55R16*	2°45' +/-45' (2.75° +/-0.75°)*	
		215/45R17	2°55' +/-45' (2.92° +/-0.75°)	

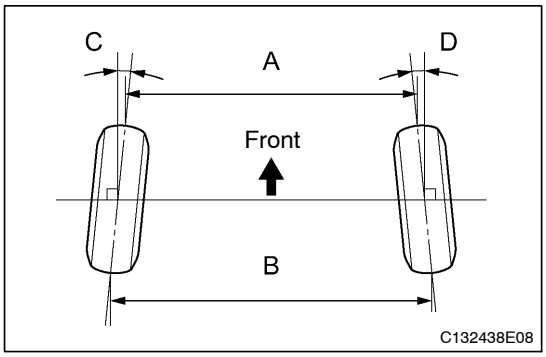


* for vehicle height for Mexico, add 15 mm (0.591 in.)

(5) Steering Axis Inclination (Unloaded Vehicle) except TMC Made:

–	Engine	Tire Size	Steering Axis Inclination
for TMC Made	2ZR-FE	195/65R15	12°32' (12.53°)
		205/55R16	
except TMC Made	2ZR-FE	195/65R15	12°32' (12.53°)
		205/55R16	12°13' (12.22°)*
	2AZ-FE	205/55R16*	12°16' (12.27°)*
		215/45R17	12°37' (12.62°)

* for vehicle height for Mexico, add 15 mm (0.591 in.)



(6) Toe-in

HINT:

- *Measure “B - A” only when “C + D” cannot be measured.*
- *If toe-in is not within the specified range, adjust it at the rack ends.*

Specified Condition
C + D: 0°00’ +/-0°12’ (0° +/-0.2°) B - A: 0 +/-2.0 mm (0 +/-0.08 in.)

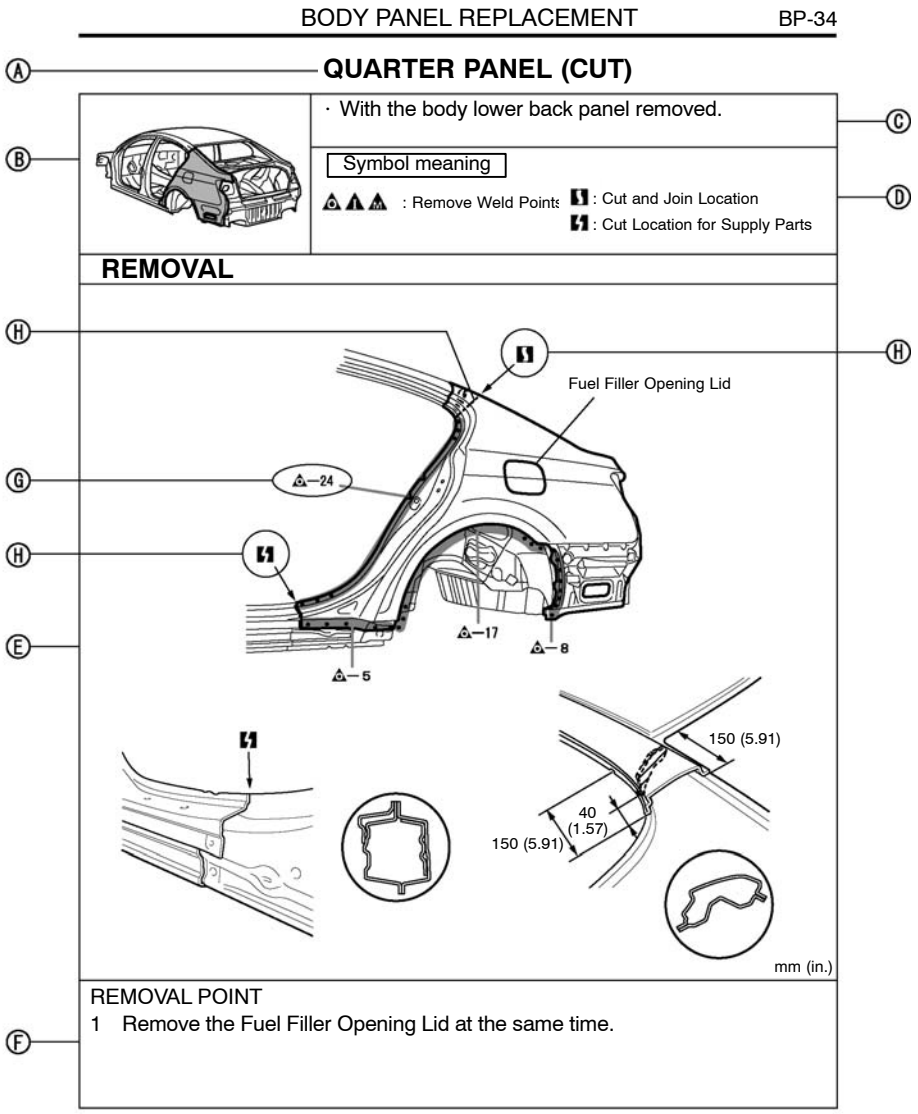
(b) REAR WHEEL ALIGNMENT

(6) Toe-in (Unloaded Vehicle)

- *Measure "B - A" only when "C + D" cannot be measured.*

–	Grade	Specified Condition	Right-Left Difference
for TMC Made	except XRS	C + D: 0°16' +/-0°15' (0.27° +/-0.25°)	45' (0.75°) or less
		B - A: 2.5 +/- 2.5 mm (0.098 +/-0.098 in.)	–
except TMC Made	except XRS	C + D: 0°16' +/-0°15' (0.27° +/-0.25°) C + D: 0°16' +/-0°15' (0.27° +/-0.25°)*	45' (0.75°) or less
		B - A: 2.6 +/-2.5 mm (0.102 +/-0.098 in.) B - A: 2.0 +/-2.5 mm (0.0787 +/-0.098 in.)*	–
	for XRS	C + D: 0°16' +/-0°15' (0.27° +/-0.25°) C + D: 0°16' +/-0°15' (0.27° +/-0.25°)*	45' (0.75°) or less
		B - A: 3.1 +/-2.5 mm (0.102 +/-0.098 in.) B - A: 2.2 +/-2.5 mm (0.0866 +/-0.098 in.)*	–

* for vehicle height for Mexico, add 15 mm (0.591 in.) If the toe-in is not within the specified range, inspect the suspension parts and replace them if necessary.



(2) Camber (Unloaded Vehicle)

HINT:
Camber is not adjustable. If the measurement is not within the specified range, inspect the suspension parts for damage and/or wear, and replace them if necessary.

–	Grade	Specified Condition	Right-Left Difference
for TMC Made	except XRS	-1°28' +/-30' (-1.47° +/-0.50°) 30' (0.50°) or less	30' (0.50°) or less
except TMC Made	except XRS	-1°27' +/-30' (-1.45° +/-0.50°) 30' (0.50°) or less	
	for XRS	-1°28' +/-30' (-1.47° +/-0.50°) 30' (0.50°) or less	

HOW TO USE THIS MANUAL

1. BODY PANEL REPLACEMENT IN THIS MANUAL

Ⓐ REPLACEMENT PART

QUARTER PANEL (CUT)

- Replacement method
  - (ASSY) ...Assembly replacement
  - (CUT) ...Major cutting (less than 1/2 of part used)
  - (CUT-H) ...Half cutting (about 1/2 of part used)
  - (CUT-P) ...Partial cutting (most of part used)
- Replacement part

BP-38 BODY PANEL REPLACEMENT

Symbol meaning

I M : Mig Plug Weld
2 : Body Sealer
: Spot Weld
: Butt Weld

INSTALLATION

INSTALLATION POINT

1 Before temporarily installing the new parts, apply body sealer to the wheel arch.
HINT:
1) Apply body sealer evenly about 5 mm (0.20 in.) from the flange, avoiding any oozing.
2) Apply sealer evenly, about 3 – 4 mm (0.12 – 0.16 in.) in diameter.

2 Temporarily install the new parts and measure each part of the new parts in accordance with the body dimension diagram. (See the body dimension diagram)

3 After welding, apply body sealer and undercoating to the corresponding parts.

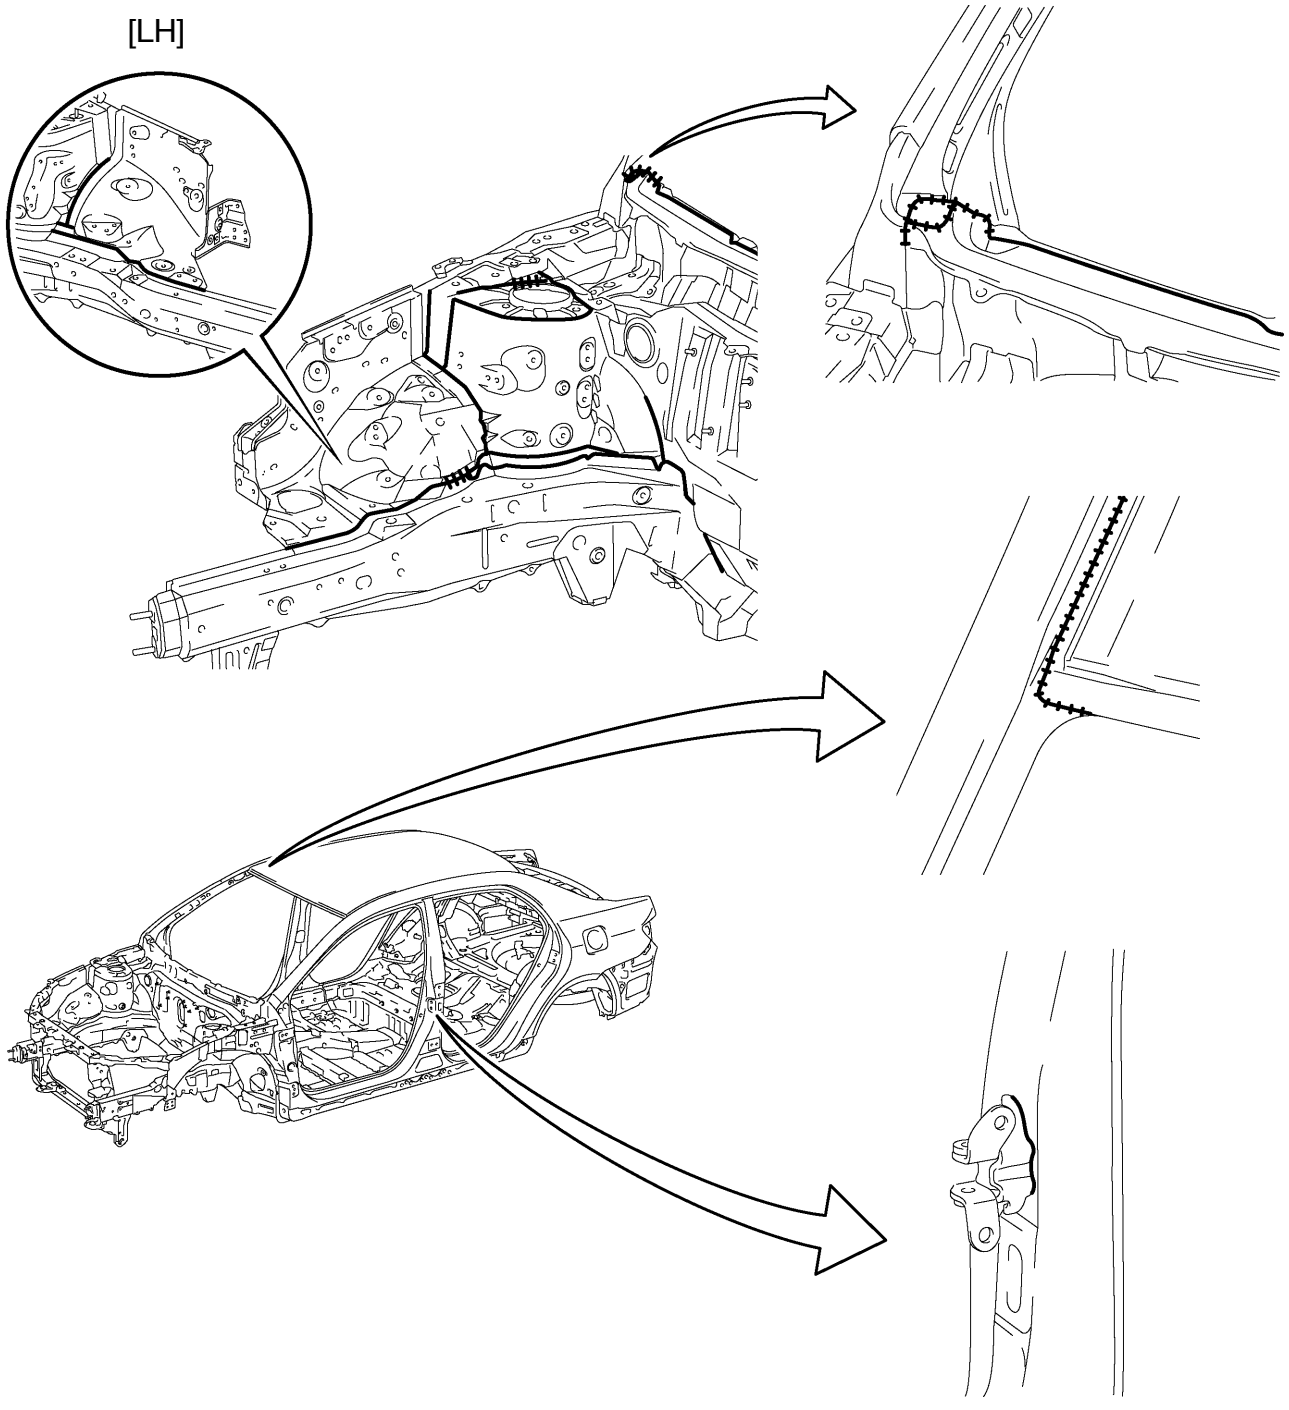
BODY PANEL SEALING AREAS



Be sure to apply body sealer to the body panel joints and door edges (tip of outer panel folded part), etc., to waterproof and rustproof them.

HINT:

1) *Apply degreasing agent to a clean cloth and clean the sealer application areas.*
2) *After removing the applied spot sealer from the sealer application areas using thinner or equivalent, rustproof the areas by applying primer or equivalent. Then apply body sealer.*
3) *If sealer is unnecessarily applied to an area, apply degreasing agent to a clean cloth and clean off the sealer immediately.*

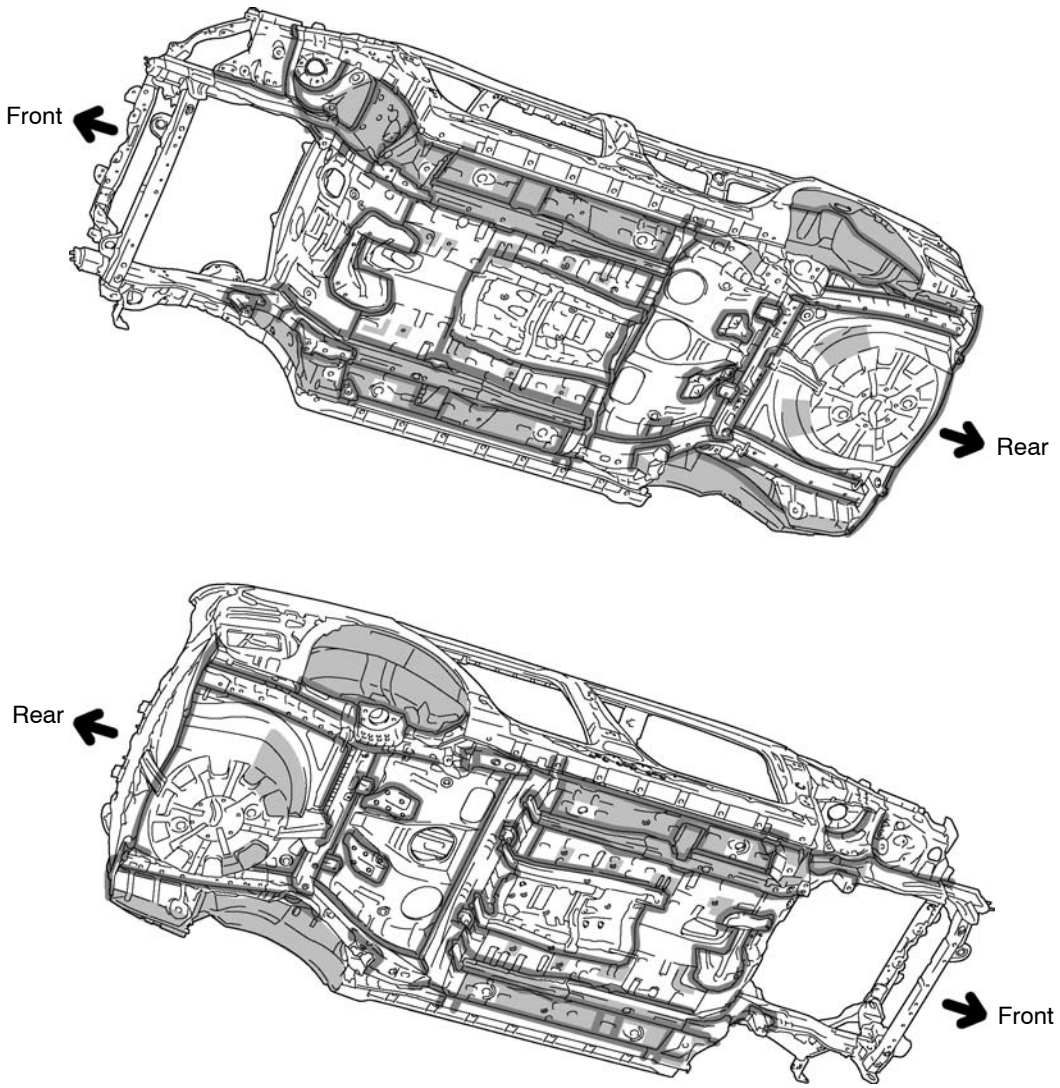
BODY PANEL UNDERCOATING AREAS



Apply PASTAR UWE or PASTAR UC to the chassis, floor underside, sheet metal fitting weld points of the body, and inside of the wheel house to prevent rust and noise, as well as protect the body from flying rocks.

HINT:

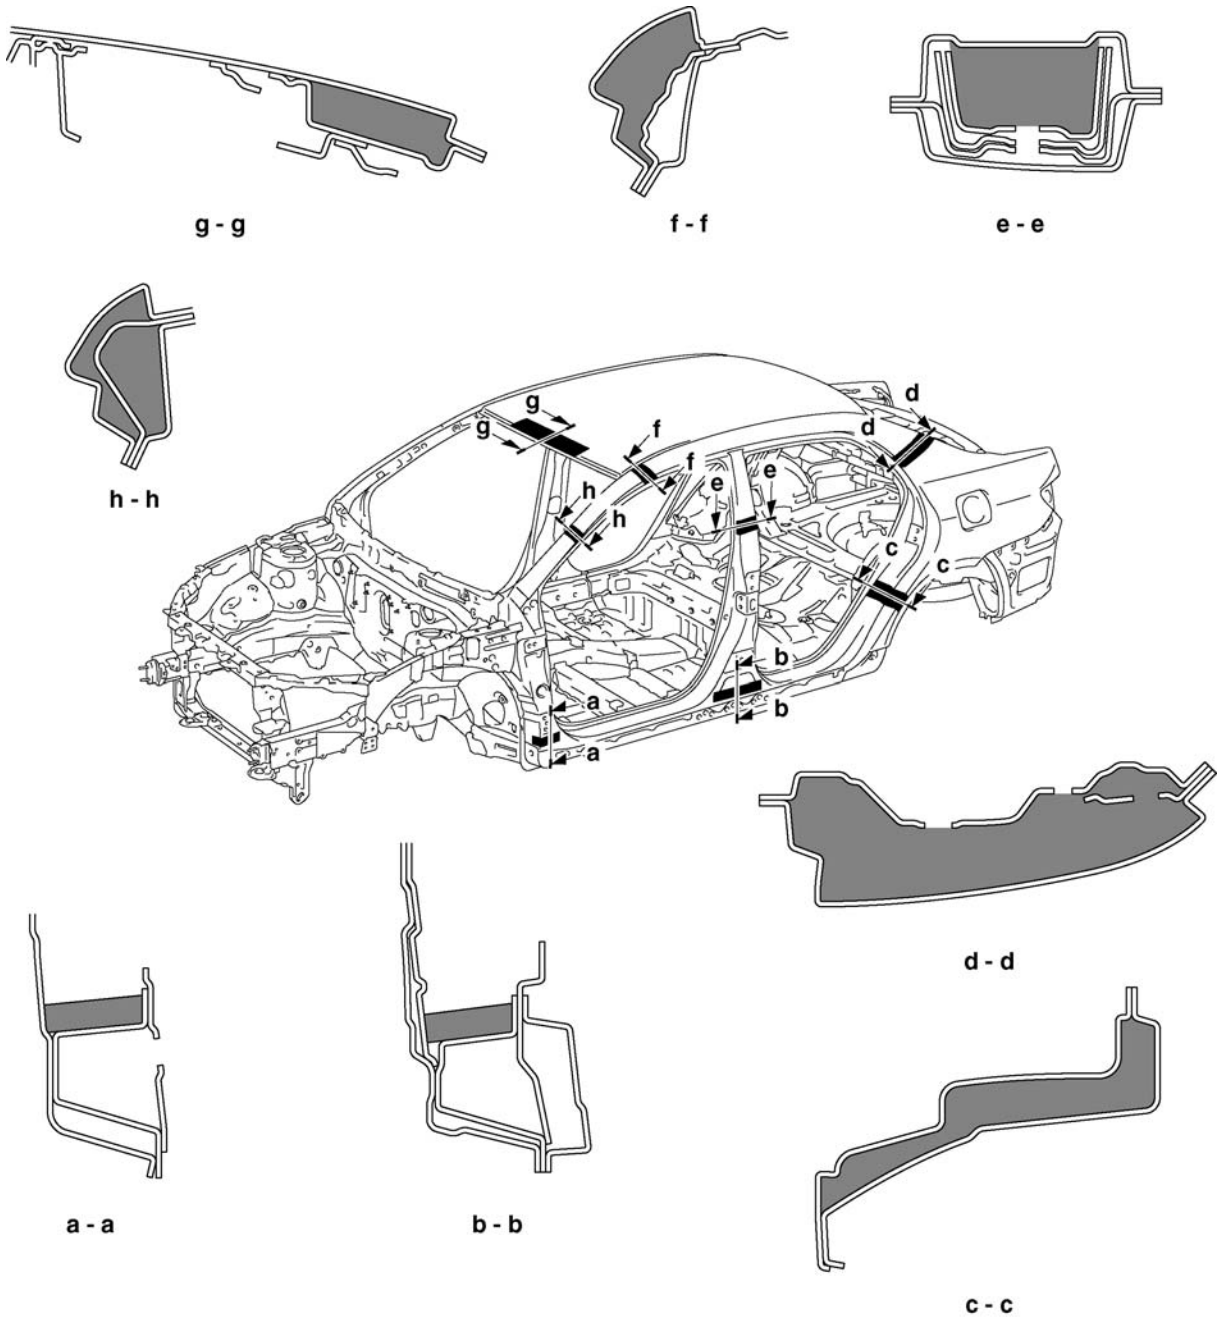
1) Work must be performed while wearing the appropriate protective gear and in a well-ventilated area.
2) Apply degreasing agent to a clean cloth and clean any dirt and oil from the application areas.
3) Cover the surrounding areas of the application areas with masking paper to avoid coating unnecessary areas.
4) Do not coat high temperature areas, such as the tailpipe, or moving parts, such as the driveshaft.
5) Do not leave any gaps between the panel joints.
6) Apply sealer to the panel joints in advance.

HINT:

1) Parts coated using the PASTAR UWE should be left until dry to the touch in a 25°C environment for 60 to 75 minutes. Parts coated using PASTAR UC should be left until dry to the touch in a 25°C environment for 15 to 30 minutes.
2) If using a PASTAR gun, one spray applies a 0.5 mm thick coating.
3) PASTAR UWE: Part number V9240-0025 PASTAR UC: Spray type :Part number V9240-0008
Aerosol type : Part number V9240-0021

B0710040023

REFERENCE



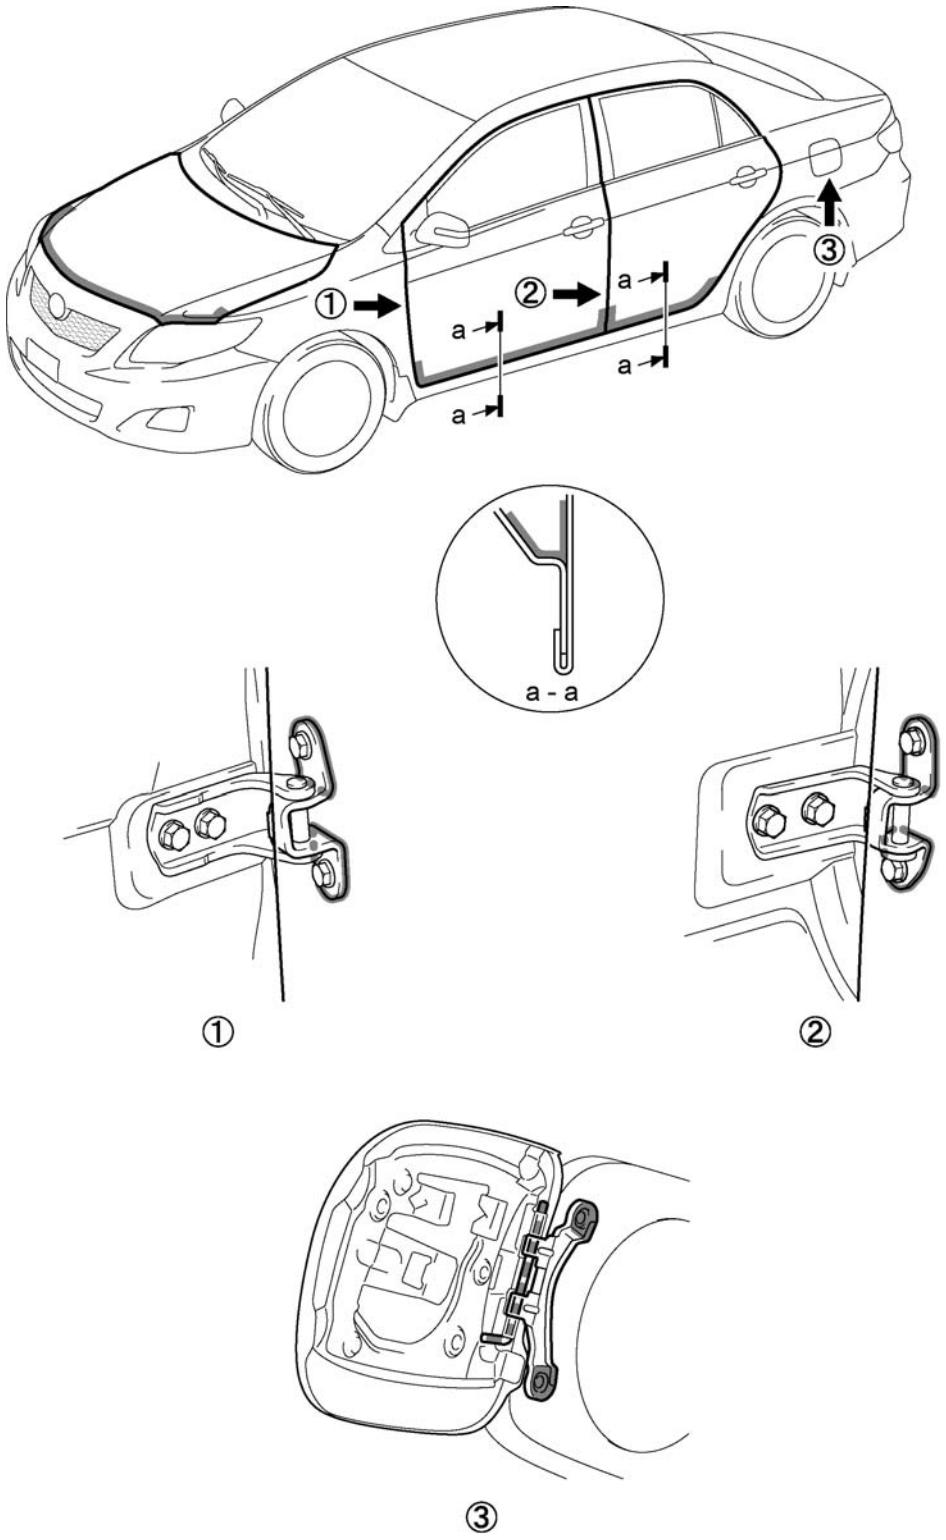
The undercoating should be applied according to the specifications for your country while referring to the notes above.

FOAMED MATERIAL APPLICATION AREAS

If an increase in temperature or other condition damages the foamed material when repairing or replacing the panel, fill in the insufficient areas with urethane foam. The following illustration shows the areas for one side, but the foamed material must be applied equally to both the left and right sides.

HINT:

1) *Work must be performed while wearing the appropriate protective gear and in a will-ventilated area.*
2) *Apply tape or equivalent to any holes, nuts, etc., near the areas to be filled.*



B0709250165

BODY PANEL ANTI-RUST AGENT (WAX) APPLICATION AREAS

Apply RUSTOP W to the doors and hood edges (tips of outer panel folded parts) and undersides, areas around hinges, etc.to prevent rust. Coat the undersides of the edges using a nozzle and air gun, and coat the areas around the hinges using a brush.

HINT:

1) If RUSTOP is unnecessarily applied to an area, apply degreasing agent to a clean cloth and clean off the RUSTOP immediately.

B0709250166A

SILENCER SHEET INSTALLATION AREAS

Substitute silencer sheets for the laminate coat application areas.
