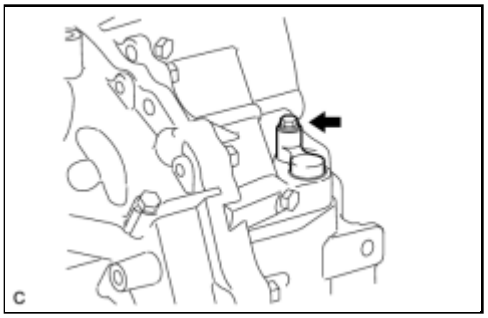
(f) Rotating the converter, align the mark on the case with the one on the converter again and fit the key of the oil pump drive gear into the keyway of the converter.

NOTICE:

Do not push the converter excessively when rotating it.

(g) Using a vernier caliper and a straightedge, measure dimension B shown in the illustration and check that dimension B is greater than dimension A, which was measured in step #1.

Standard:



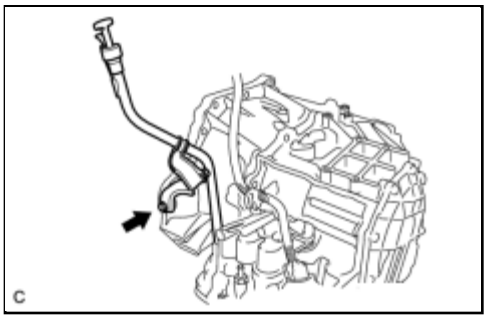
A + 1 mm (0.0394 in.) or more

NOTICE:

Subtract the thickness of the straightedge from the measured value to gain dimension B.

3. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Install the speedometer driven hole cover sub-assembly

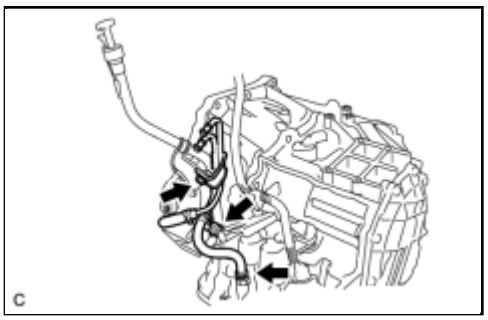


to the automatic transaxle with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

4. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (for TMC Made)

(a) Apply ATF to a new O-ring, and install it to the transmission oil filler tube sub-assembly.



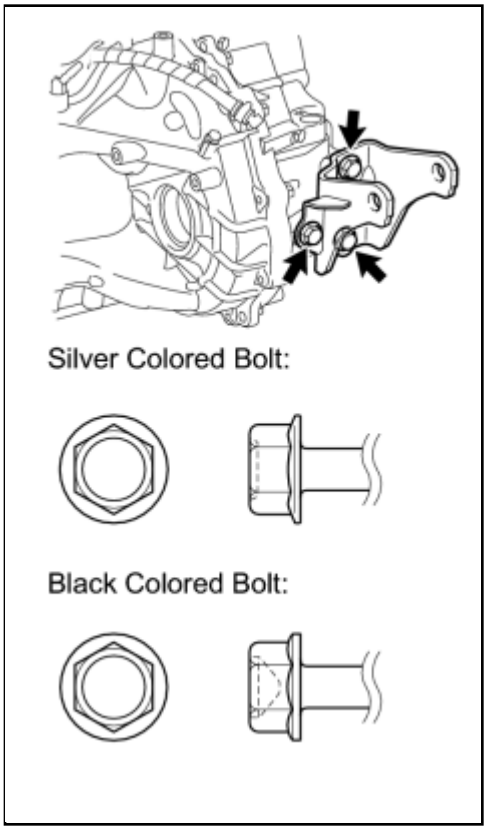
(b) Install the transmission oil filler tube sub-assembly to the automatic transaxle with the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(c) Install the transmission oil level gauge sub-assembly.

5. INSTALL OIL COOLER TUBE SUB-ASSEMBLY (for TMC Made)

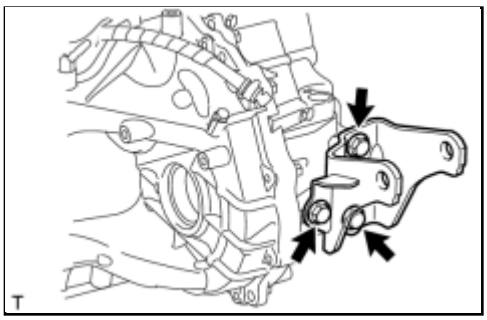
(a) Connect the 2 oil cooler hoses to the 2 unions with the 2 hose clamps.



(b) Install the oil cooler tube sub-assembly to the automatic transaxle with the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

6. INSTALL REAR ENGINE MOUNTING BRACKET (for TMC Made)

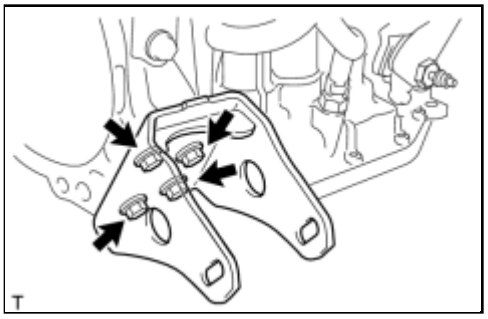


(a) Install the rear engine mounting bracket to the automatic transaxle with the 3 bolts.

Silver Colored Bolt - Torque: 45 N·m (459 kgf·cm, 33ft·lbf)

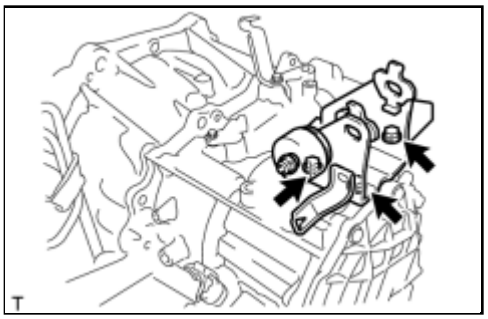
Black Colored Bolt - Torque: 64 N·m (653 kgf·cm, 47ft·lbf)

7. INSTALL REAR ENGINE MOUNTING BRACKET (except TMC Made)



(a) Install the rear engine mounting bracket to the automatic transaxle with the 3 bolts.

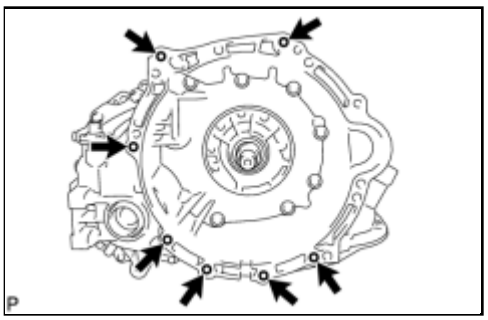
Torque: 45 N·m (459 kgf·cm, 33ft·lbf)



8. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket to the automatic transaxle with the 4 bolts.

Torque: 64 N·m (653 kgf·cm, 47ft·lbf)



9. INSTALL ENGINE MOUNTING BRACKET LH

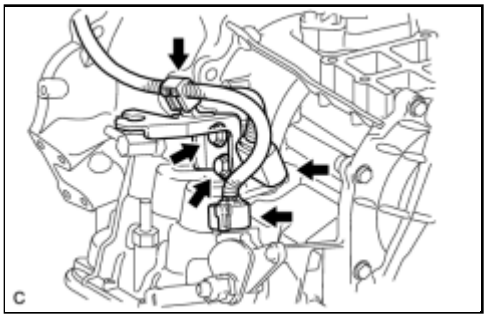
(a) Install the engine mounting bracket LH to the automatic transaxle with the 3 bolts.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)

10. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

(a) Install the automatic transaxle to the engine with the 7 bolts.

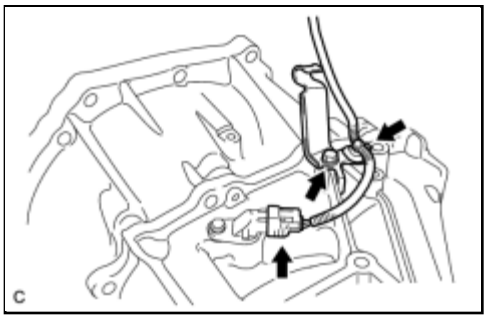
Torque: 30 N·m (301 kgf·cm, 22ft·lbf)



NOTICE:

Make sure the knock pins are fully engaged and the transaxle securely fitted to the engine before tightening the bolts.

11. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET



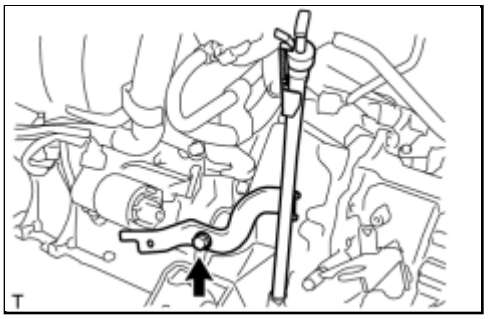
(a) Install the No. 1 transmission control cable bracket to the automatic transaxle with the 2 bolts.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(b) Connect the 2 connectors and wire harness clamp.

12. INSTALL TRANSMISSION CONTROL CABLE SUPPORT

(a) Install the transmission control cable support with the bolt.



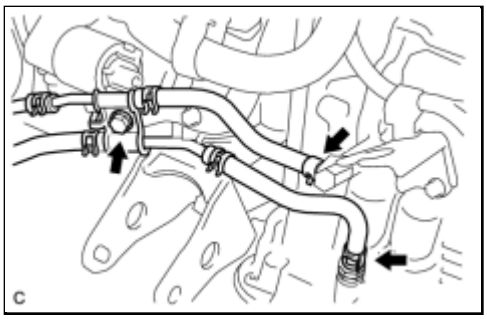
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(b) Connect the wire harness clamp and speed sensor connector.

13. INSTALL STARTER ASSEMBLY INFO

14. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY (except TMC Made)

(a) Apply ATF WS to a new O-ring, and install it to the transmission oil filler tube sub-assembly.



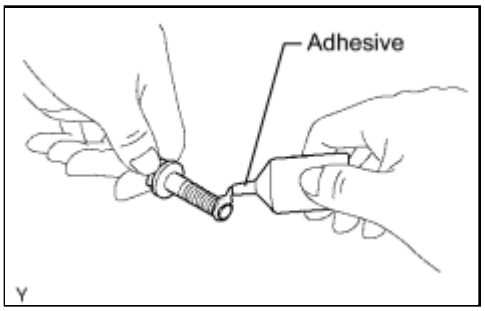
(b) Install the transmission oil filler tube sub-assembly to the automatic transaxle with the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

(c) Install the transmission oil level gauge sub-assembly to the transmission oil filler tube sub-assembly.

15. INSTALL OIL COOLER TUBE SUB-ASSEMBLY (except TMC Made)

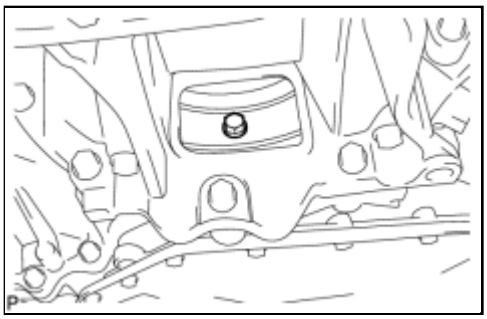
(a) Connect the 2 oil cooler hoses to the 2 unions with the 2 hose clamps.



(b) Install the oil cooler tube to the automatic transaxle with the bolt.

Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

16. INSTALL FRONT ENGINE MOUNTING INSULATOR INFO



17. INSTALL REAR ENGINE MOUNTING INSULATOR INFO

18. INSTALL DRIVE PLATE AND TORQUE CONVERTER CLUTCH SETTING BOLT

(a) Apply a few drops of adhesive to 2 or 3 threads of the 6 torque converter clutch setting bolts tip.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

(b) Install the 6 torque converter clutch setting bolts while holding the crankshaft pulley bolt with a wrench.

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)

NOTICE:

Install the black colored bolt first, and then the silver colored 5 bolts.

19. INSTALL FLYWHEEL HOUSING UNDER COVER

(a) Install the flywheel housing under cover to the automatic transaxle.

20. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT:

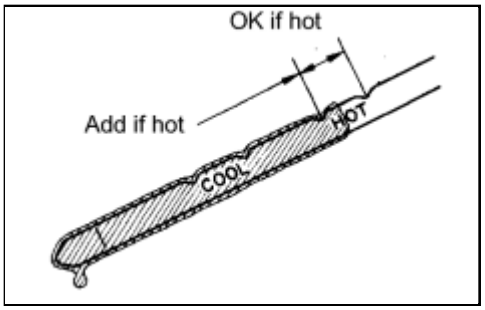
See the steps from "Install Engine Assembly with Transaxle" through "Check ABS Speed Sensor Signal" INFO **.**

21. RESET MEMORY

HINT:

Perform Reset Memory (AT initialization) when replacing the automatic transaxle assembly INFO **.**

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000016SC02SX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE FLUID: ON-VEHICLE INSPECTION (2010 Corolla)		



ON-VEHICLE INSPECTION

1. CHECK TRANSAXLE FLUID LEVEL

HINT:

Drive the vehicle so that the engine and transaxle are at normal operating temperature.

Fluid temperature:
70 to 80°C (158 to 176°F)

(a) Park the vehicle on a level surface and set the parking brake.

(b) With the engine idling and the brake pedal depressed, move the shift lever to all positions from P to S. Then return it to P.

(c) Pull out the dipstick and wipe it clean.

(d) Push the dipstick back fully into the pipe.

(e) Pull the dipstick out again and check that the fluid level is within the HOT range. If the fluid level is below the HOT range, add new fluid and recheck the fluid level. If the fluid level exceeds the HOT range, drain the fluid once, add a proper amount of new fluid and recheck the fluid level.

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM INFO .
- Perform the REGISTRATION (VIN registration) when replacing the ECM INFO .

HINT:

RESET MEMORY can not be completed by only disconnecting the battery cable.

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch ON	ON	On (IG)
	Ignition switch ACC	ACC	On (ACC)
	Engine start	START	Start

2. REMOVAL AND INSTALLATION PROCEDURE PRECAUTIONS

(a) The automatic transaxle is composed of highly precision-finished parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect the performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. Complete the inspection, repair and reassembly before proceeding to the next component group as much as possible. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because some parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups. Recommended: Toyota Genuine ATF WS

(b) All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.

(c) Dry all parts with compressed air. Never use a shop rag or a piece of cloth to dry them.

(d) When using compressed air, always aim away from yourself to prevent accidentally spraying ATF or kerosene in your face.

(e) Only recommended automatic transaxle fluid or kerosene should be used for cleaning.

(f) After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.

(g) New discs for the brakes and clutches that are to be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.

(h) All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.

(i) All gaskets and rubber O-rings should be replaced with new ones.

(j) Do not apply adhesive cements to gaskets and similar parts.

(k) Make sure that the ends of a snap ring are not aligned with one of the cutouts and are installed in the groove correctly.

(l) When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.

(m) Check thrust bearings and races for wear or damage. Replace them as necessary.

(n) When working with FIPG material, you must observe the following:

- Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.
- Thoroughly clean all components to remove any loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

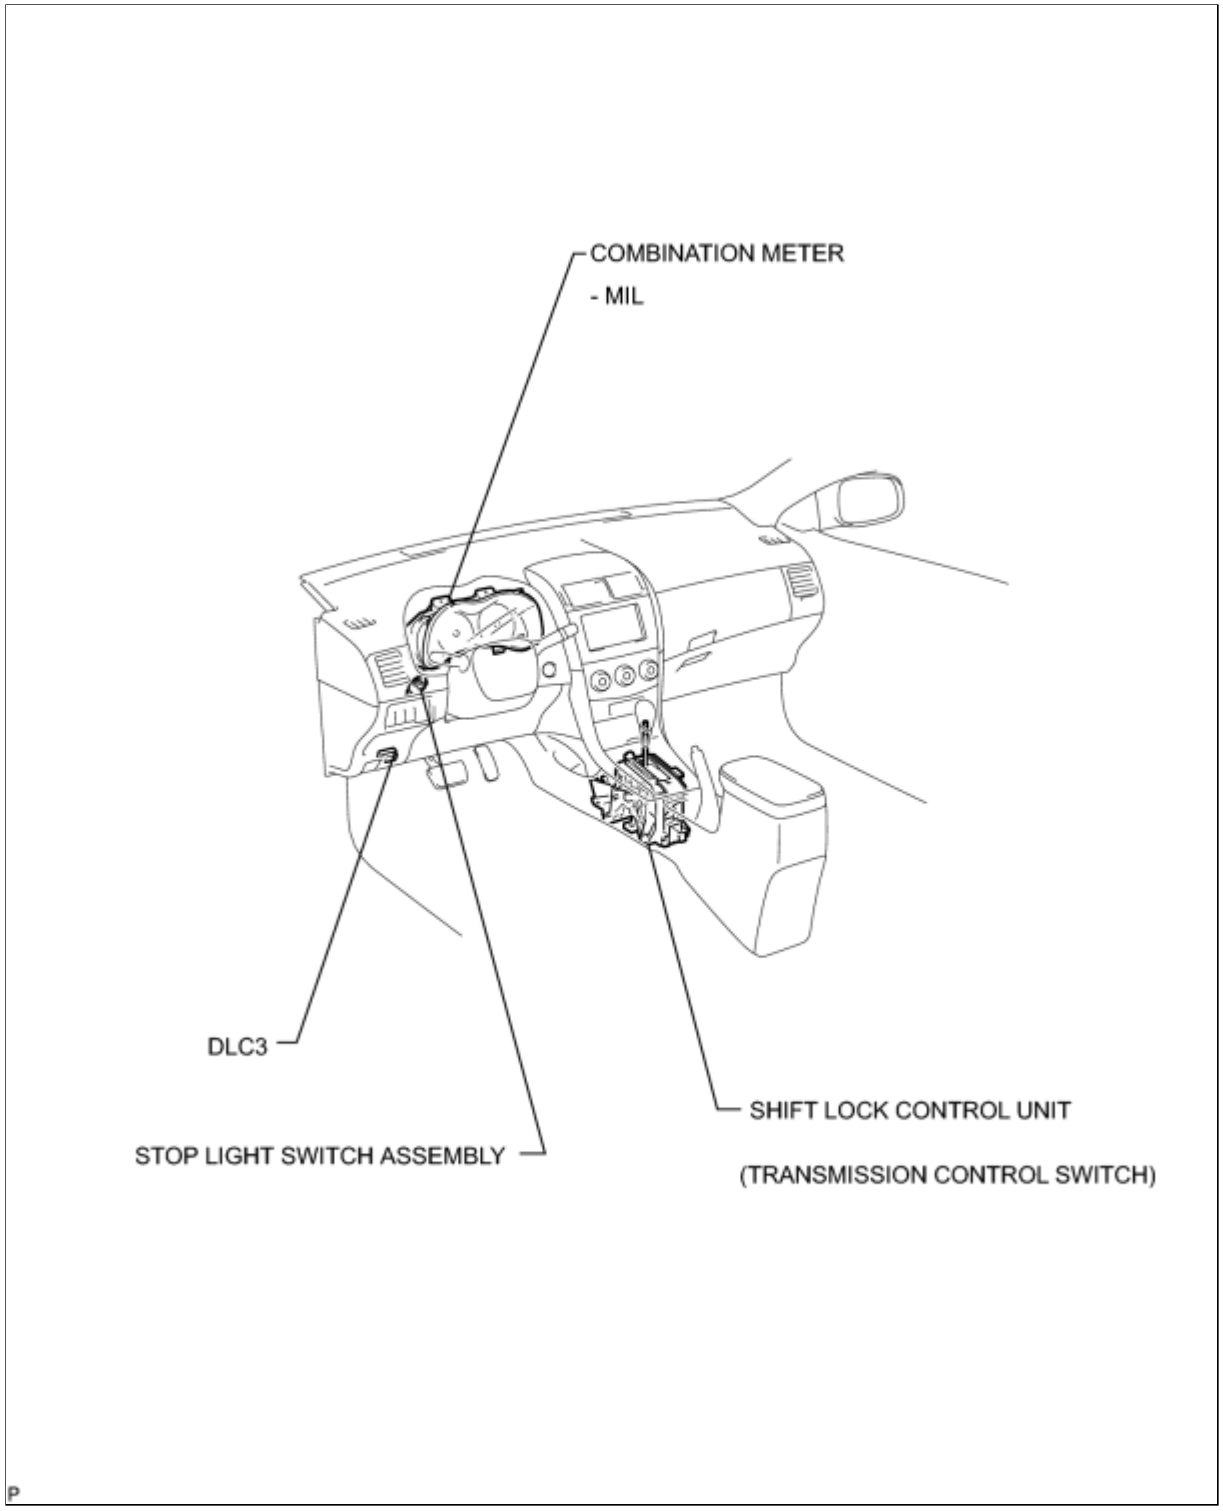
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DEFINITION OF TERMS (2010 Corolla)		



DEFINITION OF TERMS

TERM	DEFINITION
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code
Typical enabling condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has concluded.
Required sensor/components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects malfunction only one time during a single driving cycle. "Continuous" means that the ECM detects malfunction every time when enabling condition is met.
Duration	The minimum time that the ECM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the ECM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediately" means that the ECM illuminates MIL the instant the ECM determines that there is a malfunction. "2 driving cycle" means that the ECM illuminates MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective or not.

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission/transxle) is an automatic transmission/transaxle that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved.

Shift shock has been reduced by controlling the engine and transmission simultaneously.

In addition, the ECT has features such as follows:

- Diagnostic function.
- Fail-safe function when a malfunction occurs.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W790AXX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: ROAD TEST (2010 Corolla)		

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Preform the test at the ATF (Automatic Transmission Fluid) temperature 50 to 80 °C (122 to 176 °F) in the normal operation.

(a) D position test:

Shift into the D position and fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1 → 2, 2 → 3, 3 → 4 and 4 → 5th up-shifts take place, and that the shift points conform to the automatic shift schedule INFO .

HINT:

5th Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is at 70km/h (43 mph) or less.
- ATF temperature is -2°C (28°F) or less.

5th and 4th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 → 2, 2 → 3, 3 → 4, and 4→ 5th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3, 3 → 4, and 4→ 5 while driving with the shift lever in the D position, and also check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.

Check vehicle speeds when the 2nd to 1st, 3rd to 2nd, 4th to 3rd, and 5th to 4th kick-downs

take place while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule INFO .

(5) Check for abnormal shock and slip at kick-down.

(6) Check the lock-up mechanism.

- Drive in the D position (5th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- There is no lock-up function in the 1st, 2nd and 3rd gears.
- If there is a big jump in engine speed, there is no lock-up.

(b) S position test

Shift to the S position, depress the accelerator pedal and check the following points:

(1) Check shift operation.

- While driving in the D position and 5th gear, shift into the S position and back to the D position. Check that the gear change 5 → 4 down-shift and 4 → 5 up-shift can be performed.
- With the shift lever in the S position (while the vehicle is stopped), shift into the "+" position to check that the shift position on the combination meter changes as follows: 1 → 2, 2 → 3, 3 → 4, and 4 → 5.
- While driving in the 4(S) position and 4th gear (at a vehicle speed of approximately 40 to 50 km/h (25 to 31 mph)), shift into the "-" position and check if the 3rd gear down-shift occurs and the engine brake performs properly.
- While driving in the 3(S) position and 3rd gear (at a vehicle speed of approximately 30 to 40 km/h (19 to 25 mph)), shift into the "-" position and check if the 2nd gear down-shift occurs and the engine brake performs properly.
- While driving in the 2(S) position and 2nd gear (at a vehicle speed of approximately 20 to 30 km/h (12 to 19 mph)), shift into the "-" position and check if the 1st gear down-shift occurs and the engine brake performs properly.

HINT:

Manual shift (S position) is prohibited under either of the following conditions:

- Down-shifting may cause engine overrun.
- The driver continuously down-shifts. (Down-shifting to 1st gear may not be performed.)

(c) R position test:

Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.

CAUTION:

Before conducting this test ensure that the test area is free from people and obstruction.

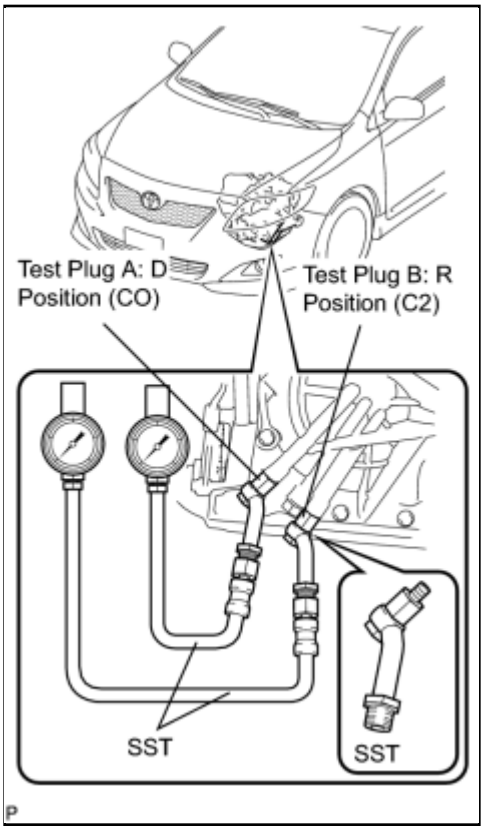
(d) P position test:

Stop the vehicle on a grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

(e) Uphill/downhill control function:

(1) Check that the gear does not up-shift to the 4th or 5th gear while the vehicle is driving uphill.

(2) Check that the gear automatically down-shifts from the 5th to 4th or from the 4th to 3rd gear



when brake is applied while the vehicle is driving downhill.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7B0BXX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: HYDRAULIC TEST (2010 Corolla)		

HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.
- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 10 seconds.

(1) Warm up the ATF (Automatic Transmission Fluid).

(2) Lift the vehicle up.

(3) Remove the engine under cover.

(4) Connect Techstream to the DLC3.

(5) Remove the test plug A on the transaxle case front left side and install the SST.

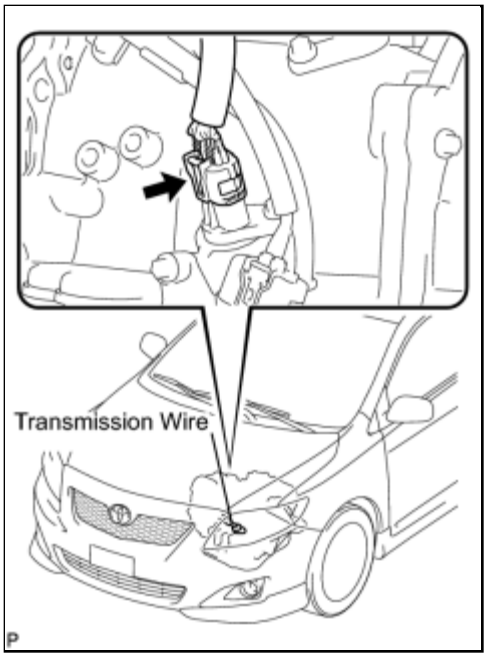
SST: 09992-00095

09992-00231

09992-00271

NOTICE:

There is a difference in installation point between D position and R position.



(6) Start the engine.

(7) Using Techstream, shift to D position and hold 3rd gear by active test, and measure the line pressure in idling.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM^2, PSI)
Idling	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)

(8) Turn the ignition switch off.

(9) Disconnect the connector of the transmission wire.

HINT:

Disconnect the connector only when performing the D position stall test.

(10) Start the engine.

(11) Firmly depress the brake pedal, shift to the D position, depress the accelerator pedal all the way down and check the line pressure while the stall test is performed.

Specified line pressure:

CONDITION	D POSITION KPA (KGF / CM^2, PSI)
Stall test	931 to 1031 kPa (9.5 to 10.5 kgf/cm^2, 135 to 150 psi)

(12) Turn the ignition switch off.

(13) Remove the SST, install the test plug A.

(14) Remove the test plug B, install the SST and start engine.

SST: 09992-00095

09992-00231, 09992-00271

(15) Connect the transmission wire connector, depress the brake pedal firmly, shift to the R position and check that the line pressure while the engine is idling and during the stall test.

Specified line pressure:

CONDITION	R POSITION KPA (KGF / CM^2, PSI)
Idling	672 to 742 kPa (6.9 to 7.6 kgf/cm^2, 97 to 108 psi)
Stall test	1768 to 1968 kPa (18.0 to 20.1 kgf/cm^2, 256 to 285 psi)

(16) Remove the SST, install the test plug B.

(17) Clear the DTC.

Evaluation:

PROBLEM	POSSIBLE CAUSE
Measured values are higher than specified in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective
Measured values are lower than specified in all positions	• Shift solenoid valve (SLT) defective • Regulator valve defective • Oil pump defective • U/D (Underdrive) direct clutch defective
Pressure is low in the D position only	• D position circuit fluid leak • Forward clutch defective
Pressure is low in the R position only	• R position circuit fluid leak • Reverse clutch defective • 1st and reverse brake defective

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7A0C7X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MECHANICAL SYSTEM TESTS (2010 Corolla)		

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.

The object of this test is to check the overall performance of the transaxle and engine by measuring the stall speeds in the D position.

NOTICE:

- Driving test should be done on a paved road (a nonskid road).
- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F).
- Do not continuously run this test for longer than 10 seconds.
- To ensure safety, do this test in a wide, clear level area which provides good traction.
- The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is doing the test.

(1) Chock the 4 wheels.

(2) Connect Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Keep your left foot pressed firmly on the brake pedal.

(5) Start the engine.

(6) Shift into the D position. Press all the way down on the accelerator pedal with your right foot.

(7) Quickly read the stall speed at this time.

Stall speed:
2310 +- 150 rpm

Evaluation:

PROBLEM	POSSIBLE CAUSE
(a) Stall engine speed is low in D position	• Engine power output may be insufficient • Stator one-way clutch not operating properly **HINT:** **If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.**
(b) Stall engine speed is high in D position	• Line pressure is too low • Forward clutch slipping • U/D (Underdrive) brake slipping • U/D (Underdrive) one-way clutch is not operating properly • No.1 one-way clutch not operating properly

PROBLEM	POSSIBLE CAUSE
	• Improper fluid level

(b) Measure the time lag.

(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the clutch and brake.

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).
- Be sure to allow 1 minute interval between tests.
- Perform the test three times, and measure the time lags. Calculate the average value of the three time lags.

(2) Connect Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Start and warm up the engine and check idle speed.

Idle speed:
approx. 700 rpm (In N position and A/C OFF)

(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.

Time lag:
N → D less than 1.2 seconds

(6) In the same way, measure the time lag for N → R.

Time lag:
N → R less than 1.5 seconds

Evaluation (If N → D or N → R time lag is longer than the specified):

PROBLEM	POSSIBLE CAUSE
N → D time lag is longer	• Line pressure is too low • Forward clutch worn • No.1 one-way clutch is not operating properly • U/D (Underdrive) one-way clutch is not operating • U/D (Underdrive) brake worn
N → R time lag is longer	• Line pressure is too low • Reverse clutch worn • 1st and reverse brake worn • U/D (Underdrive) brake worn

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MANUAL SHIFTING TEST (2010 Corolla)		

MANUAL SHIFTING TEST

1. PERFORM MANUAL SHIFTING TEST

HINT:

- With this test, it can be determined whether the trouble occurs in the electrical circuit or is a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.

(a) Disconnect the connector of the transmission wire.

(b) Drive with the transmission wire disconnected.

Shifting the shift lever to the D position to check whether the shifting condition changes the table below.

SHIFT POSITION	SHIFTING CONDITION
D	No Shift (Not Change)

HINT:

When driving with the transmission wire disconnected, the gear position will be as follows:

- When the shift lever is in the D position, the gear is held in the 4th position.
- When the shift lever is in the R or the P position, the gear is also in the R or the P position respectively.

(c) Connect the connector of the transmission wire.

(d) Clear the DTC 

.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7F0B2X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. RESET MEMORY

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.
- The RESET MEMORY can be performed only with Techstream.

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and the Techstream main switch on.

(d) Enter the following menu: Powertrain / Engine and ECT / Utility / Reset Memory. Then, press "Next".

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST INFO **described earlier.**

HINT:

The ECM is learned by performing the ROAD TEST.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7K0BPX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MONITOR DRIVE PATTERN (2010 Corolla)		

MONITOR DRIVE PATTERN

1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due the actual driving conditions. And some codes may not be detected through this drive pattern.)

HINT:

Preparation for driving

- Warm up the engine sufficiently. (Engine coolant temperature is 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F))

Driving note

- Drive the vehicle through all gears.

  Stop → 1st → 2nd → 3rd → 4th → 5th → 5th (lock-up ON).
- Perform engine brake test in the S position.

  While driving in the 5(S) position and 5th gear lock-up, shift into the "-" position and down-shift from 5th to 4th, 4th to 3rd, 3rd to 2nd, 2nd to 1st.

  Check that the engine brake performs properly whenever down-shift takes place.
- Repeat the above driving pattern three times or more.

NOTICE:

- The monitor status can be checked using Techstream. When using Techstream, monitor status can be found in the "Powertrain / Engine and ECT / Data List".
- In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.
- Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.

HINT:

***1: Drive at such a speed in the uppermost gear, to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.**

NOTICE:

If necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- If a normal code is displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
- The Matrix Chart is divided into 2 chapters.
- When the circuit on which mark *1 is attached is a malfunction, DTC could be output.

Chapter 1:

Refer to the table below when the trouble cause is considered to be electrical. If the instruction PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE is given in the flowchart of each circuit, inspect the suspected areas in descending order for each symptom. If the trouble still occurs even though there are no abnormalities in the inspections listed for the symptoms, check and replace the ECM.

Chapter 1: Electronic Circuit Matrix Chart

SYMPTOM	SUSPECTED AREA	SEE PAGE
No down-shift (A particular gear, from 1st to 4th gear, is not down-shifted)	ECM	INFO
No down-shift (5th -> 4th)	Park/neutral position switch circuit *1	INFO

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: TERMINALS OF ECM (2010 Corolla)		

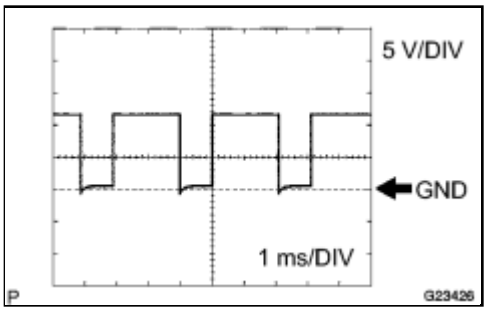
TERMINALS OF ECM

1. ECM

HINT:

Each ECM terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Terminal No. (Symbols)" for the terminals to inspected. The standard voltage between the terminals is shown under "Specific Condition".

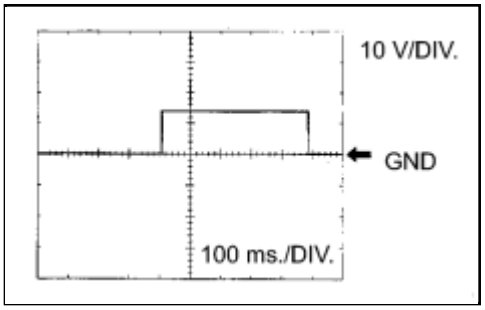


Use the illustration above as a reference for the ECM terminals.

TERMINALS NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
B31-56 (D) - B31-104 (E1)	D shift position switch signal	Ignition switch ON and shift lever D and S position	11 to 14 V
		Ignition switch ON and shift lever except D and S position	Below 1 V
B31-53 (R) - B31-104 (E1)	R shift position switch signal	Ignition switch ON and shift lever R position	11 to 14 V
		Ignition switch ON and shift lever except R position	Below 1 V
A50-8 (SPD) - B31-104 (E1)	Speed signal	Vehicle speed 20 km/h (12mph)	Pulse generation (See waveform 8)
A50-36 (STP) - B31-104 (E1)	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
		Brake pedal is released	Below 1.5 V

TERMINALS NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-51 (SFTD) - B31-104 (E1)	Down shift switch signal	Ignition switch ON and shift lever S position	11 to 14 V
		Ignition switch ON and shift lever "-" position (Down shift)	Below 1 V
A50-16 (SFTU) - B31-104 (E1)	Up shift switch signal	Ignition switch ON and shift lever S position	11 to 14 V
		Ignition switch ON and shift lever "+" position (Up shift)	Below 1 V
B31-74 (S) - B31-104 (E1)	S shift position switch signal	Ignition switch ON and shift lever S position	11 to 14 V
		Ignition switch ON and shift lever except S position	Below 1 V
B31-73 (P) - B31-104 (E1)	Park position switch signal	Ignition switch ON and shift lever P position	11 to 14 V
		Ignition switch ON and shift lever except P position	Below 1 V
B31-54 (N) - B31-104 (E1)	Neutral position switch signal	Ignition switch ON and shift lever N position	11 to 14 V
		Ignition switch ON and shift lever except N position	Below 1 V
B31-52 (NSW) - B31-104 (E1)	Park neutral switch signal	Ignition switch ON and shift lever P and N position	Below 2 V
		Ignition switch ON and shift lever except P and N position	11 to 14 V
B31-79 (DSL) - B31-104 (E1)	DSL solenoid signal	Vehicle speed 65 km/h (40mph), lock-up (ON to OFF)	Pulse generation (See waveform 2)
B31-80 (SR) - B31-104 (E1)	SR solenoid signal	Ignition switch ON	Below 1 V
		3rd, 4th or 5th gear	11 to 14 V
		1st or 2nd gear	Below 1 V
B31-78 (S4) - B31-104 (E1)	S4 solenoid signal	Ignition switch ON	Below 1 V
		5th gear	11 to 14 V
		Except 5th gear	Below 1 V
B31-60 (SL3+) - B31-61 (SL3-)	SL3 solenoid signal	Engine idle speed	Pulse generation (See waveform 3)
B31-58 (SL2+) - B31-59 (SL2-)	SL2 solenoid signal	Engine idle speed	Pulse generation (See waveform 4)

TERMINALS NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
B31-57 (SL1+) - B31-77 (SL1-)	SL1 solenoid signal	Engine idle speed	Pulse generation (See waveform 5)
B31-101 (NC+) - B31-102 (NC-)	Speed sensor (NC) signal	Vehicle speed 30 km/h (19mph): (3rd gear) Engine speed 1,400 rpm	Pulse generation (See waveform 6)
B31-125 (NT+) - B31-124 (NT-)	Speed sensor (NT) signal	Vehicle speed 20 km/h (12mph)	Pulse generation (See waveform 7)
B31-76 (SLT+) - B31-75 (SLT-)	SLT solenoid signal	Engine idle speed	Pulse generation (See waveform 1)
B31-72 (THO1) - B31-95 (ETHO)	ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V

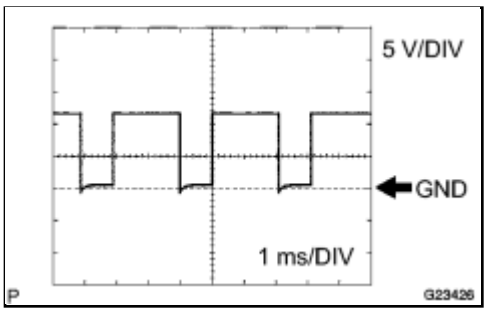


(a) Waveform 1

Reference:

Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed

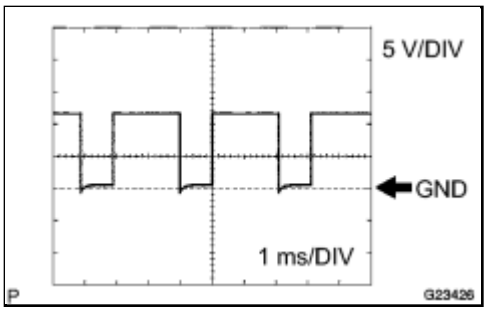
(b) Waveform 2



Reference:

Terminal	DSL - E1
Tool setting	10 V/DIV, 100ms/DIV
Vehicle condition	Vehicle speed 65 km/h (40 mph), lock-up (ON to OFF)

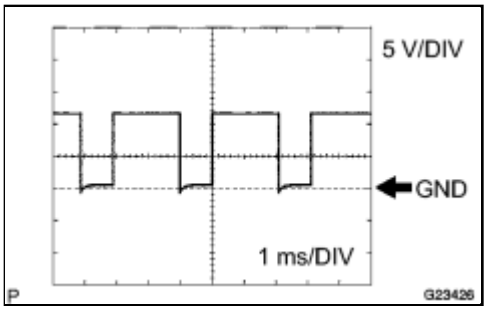
(c) Waveform 3



Reference:

Terminal	SL3+ - SL3-

Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed



(d) Waveform 4

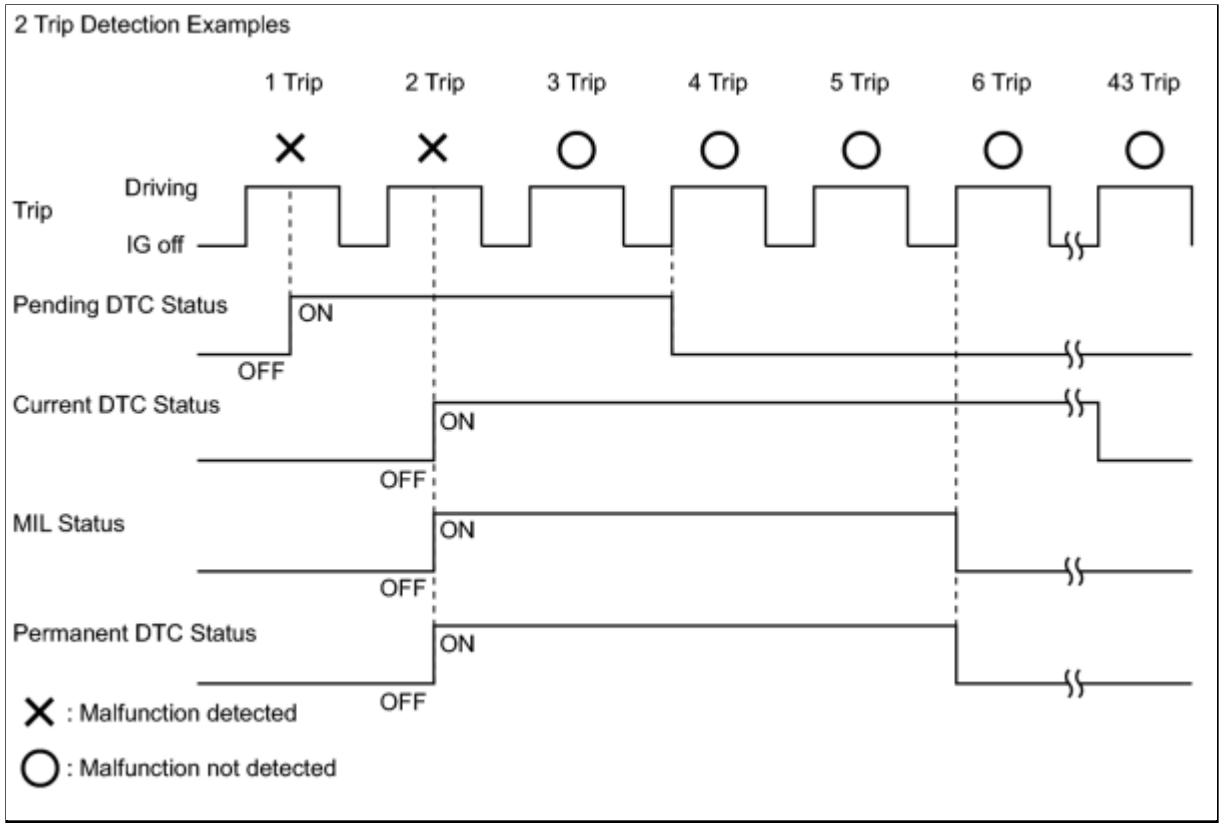
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W770CMX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

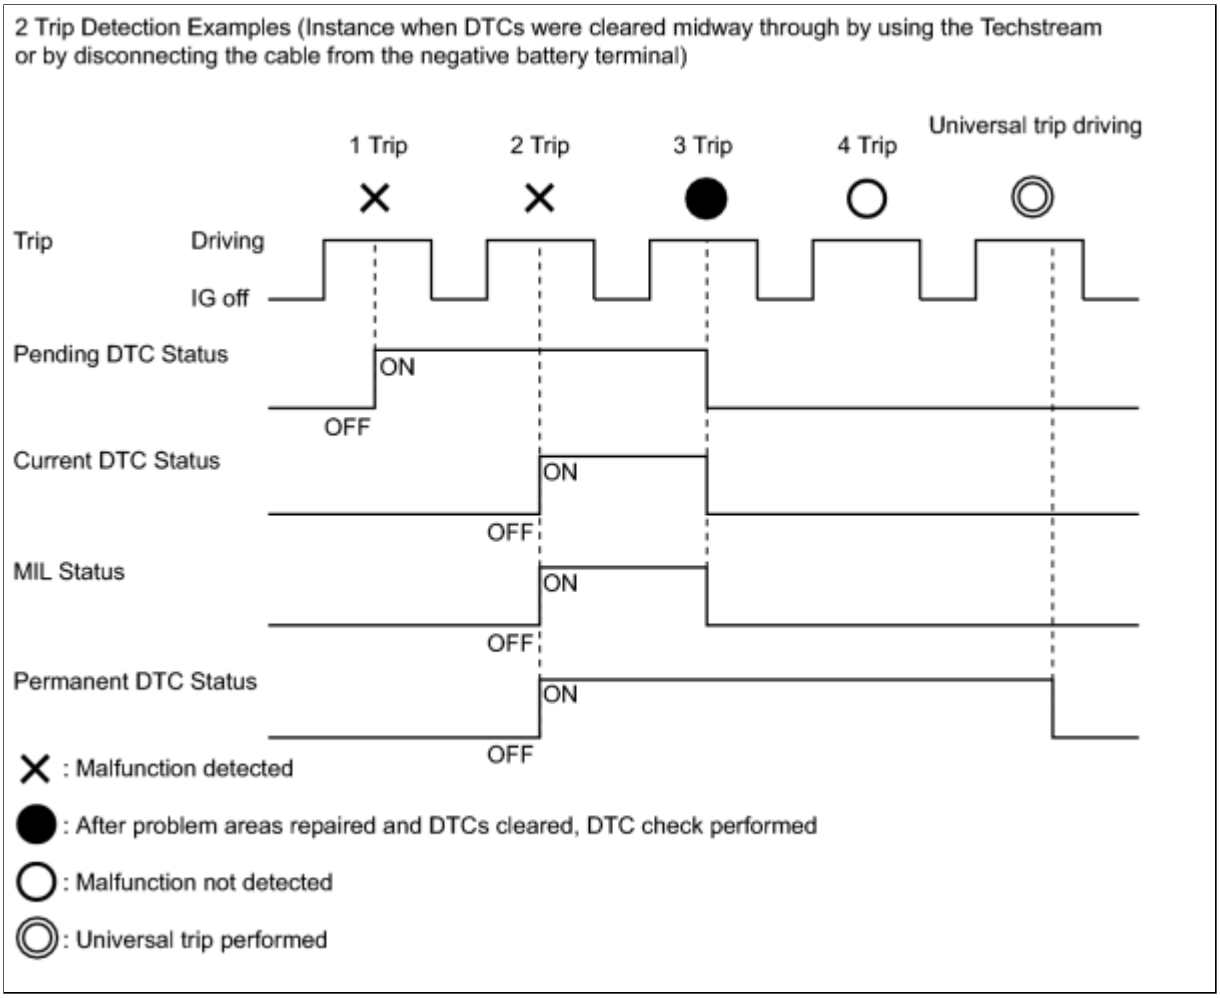
DTC CHECK / CLEAR

NOTICE:

When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are cleared. Before changing modes, always check and make a note of DTCs and freeze frame data.



HINT:



- DTCs which are stored in the ECM can be displayed on the Techstream. The Techstream can display the current, pending and permanent DTCs.
- If a malfunction is detected during the current driving cycle, current and permanent DTCs are stored.
- Some DTCs are not stored if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- Current and pending DTCs can be cleared by using the Techstream or by disconnecting the cable from the negative battery terminal. However, permanent DTCs cannot be cleared using either of these two methods.
- After clearing current DTCs using the Techstream (or by disconnecting the cable from the negative battery terminal), permanent DTCs can be cleared when the system is determined to be normal for the relevant DTCs and then the universal trip is performed.

2 Trip Detection Examples

Pending DTC	Store condition	Malfunction detected
	Clear condition	System determined to be normal or DTCs cleared using Techstream or Cable disconnected from negative battery terminal
Current DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	No malfunctions in 40 driving cycles or DTCs cleared using Techstream or Cable disconnected from negative battery terminal
Permanent DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	Ignition switch turned to ON after no malfunction is detected in 3 consecutive driving cycles or

		After DTCs cleared using Techstream or cable disconnected from negative battery terminal, malfunction not detected when universal trip driving performed
MIL	ON	Malfunction detected (2nd trip)
	OFF	Ignition switch turned to ON after no malfunction is detected in 3 consecutive driving cycles or DTCs cleared using Techstream or Cable disconnected from negative battery terminal

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check the DTC(s) and freeze frame data, and then write them down.

(f) Check the details of the DTC(s) INFO .

2. CLEAR DTC (Pending and Current DTC)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

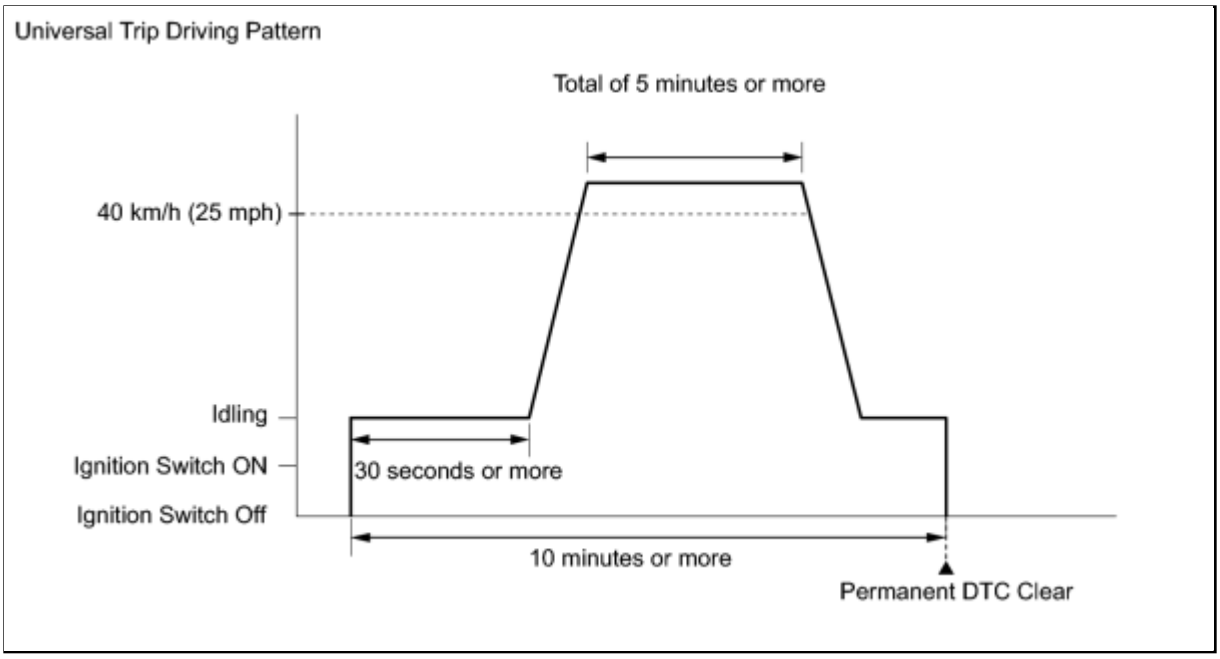
(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Clear the DTCs.

3. CLEAR DTC (Pending and Current DTC without using Techstream)

(a) Perform either of the following operations:

(1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.



(2) Remove the EFI MAIN and ETCS fuses from the engine room relay block located inside the

engine compartment for more than 1 minute.

4. CLEAR PERMANENT DTC

HINT:

Even if the following procedure is not performed, permanent DTCs are cleared if no malfunction are detected during 3 consecutive driving cycles.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check if permanent DTCs are stored.

HINT:

If permanent DTCs are not output, it is not necessary to continue this procedure.

(f) Clear DTCs.

(g) Perform the universal trip.

1. Idle the engine for 30 seconds or more.
2. Drive the vehicle at 40 km/h (25 mph) or more for a total of 5 minutes or more.

   HINT:

   - It is possible to complete the drive pattern even if the vehicle decelerates to less than 40 km/h (25 mph) during the driving cycle provided that the vehicle is driven at 40 km/h (25 mph) or more for a total of 5 minutes.
   - When accelerating through the gears, make sure the vehicle is driven so all gears are used in order and no gears are skipped.

3. Allow 10 minutes or more to elapse from the time the engine is started.

(h) Turn the ignition switch off.

(i) Wait 15 seconds.

(j) Turn the ignition switch to ON.

(k) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(l) Check that the permanent DTCs have been cleared.

HINT:

- If the permanent DTCs have not been cleared, perform the universal trip again.
- The permanent DTCs are cleared when the universal trip is completed.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W760D8X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

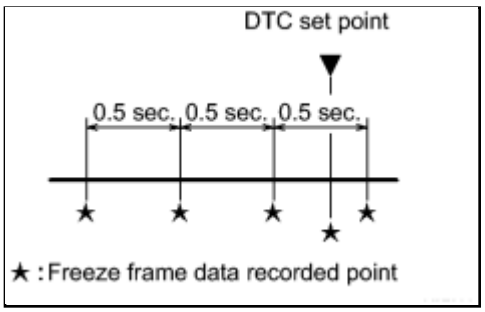
1. DESCRIPTION

(a) When troubleshooting OBD II vehicles, the only difference from the usual troubleshooting procedure is to connect Techstream to the vehicle, and read off various data output from the vehicle's ECM.

(b) OBD II regulations require that the vehicle's on-board computer illuminate the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in the computer itself or in the drive system components which affect the vehicle emissions. In addition to illuminating the MIL when a malfunction is detected, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory INFO .

If the malfunction does not occur in 3 consecutive trips, the MIL goes off but the DTCs remain in the ECM memory.

(c) To check the DTCs, connect the Techstream to the DLC3 of the vehicle. Techstream also enables you to erase the DTCs and check freeze frame data and various forms of engine data (For operating instructions, see the instruction book).



(d) The DTCs include SAE controlled codes and Manufacturer controlled codes. SAE controlled codes must be set as prescribed by the SAE, while Manufacturer controlled codes can be set freely by a manufacturer within the prescribed limits INFO .

(e) The diagnosis system operates in "normal mode" during the normal vehicle use. In normal mode, "2-trip detection logic" is used to ensure accurate detection of malfunction. "Check mode" is also available to technicians as an option. In check mode, "1-trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunction.

(f) *2 trip detection logic: When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). IF the ignition switch is turned off and then turned on (IG) again, and same malfunction is detected again, the MIL will illuminate.

(g) The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

(h) Techstream displays freeze frame data recorded at five different points: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. The data can be used to simulate the vehicle's condition around the time of the malfunction. The data may be helpful

in determining the cause of a malfunction. It may also be helpful in determining whether a DTC is being caused by a temporary malfunction.

2. INSPECT THE DLC3

(a) Check the DLC3 INFO .

3. CHECK BATTERY VOLTAGE

(a) Measure the battery voltage.

Battery voltage:
11 to 14 V

If voltage is below 11 V, replace the battery before proceeding.

4. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch to the ON position.

HINT:

If the MIL does not light up, troubleshoot the combination meter.

(b) When the engine is started, the MIL should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W780BRX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: CHECK MODE PROCEDURE (2010 Corolla)		

CHECK MODE PROCEDURE

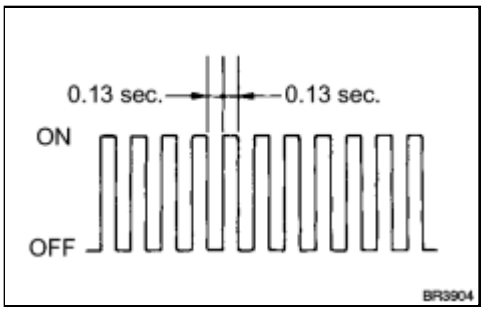
HINT:

Check mode has a higher sensitivity to malfunctions and can detect malfunction that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

1. DTC CHECK (CHECK MODE)

HINT:

Techstream only: Compared to the normal mode, the check mode is more sensitive for detecting malfunctions. Furthermore, the same diagnostic items which are detected in the normal mode can also be detected in the check mode.



(a) Procedure for Check Mode using Techstream.

(1) Check the initial conditions.

- Battery positive voltage 11 V or more
- Throttle valve fully closed
- Transaxle in the P or N position
- A/C switch is off

(2) Turn the ignition switch off.

(3) Connect Techstream to the DLC3.

(4) Turn the ignition switch to the ON position and turn the Techstream main switch ON.

(5) Enter the following menus: Powertrain / Engine and ECT / Utility / Check Mode.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) Techstream is used to change the ECM from normal mode to check mode or vice-versa; or 2) during check mode, the ignition switch is turned from the ON position to ACC position or turned OFF.

(6) Start the engine (the MIL goes off after the engine starts).

(7) Perform "MONITOR DRIVE PATTERN" for the ECT test INFO, or simulate the conditions of the malfunction described by the customer.

NOTICE:

Leave the ignition switch to the ON position until you have checked the DTCs, etc.

(8) After simulating malfunction conditions, use the Techstream diagnosis selector to check the DTCs and freeze frame data, etc.

(9) When you use Techstream: Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(10) After checking the DTC, inspect the applicable circuit.

(11) INFO to confirm the details of the DTCs.

2. DTC CLEAR

(a) Connect Techstream to the DLC3.

(b) Turn the ignition switch to the ON position and turn the Techstream main switch ON.

(c) When you use Techstream: Enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Clear.

HINT:

When operating Techstream to erase the codes, the DTCs and freeze frame data will be erased. (See the Techstream instruction book for operating instructions.)

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. FAIL-SAFE

This function minimizes the loss of the ECT functions when any malfunction occurs in a sensor or solenoid.

(a) ATF (Automatic Transmission Fluid) temperature sensor:

When the ATF temperature sensor has a malfunction, 5th upshift is prohibited.

(b) Counter gear speed sensor NC (Speed sensor NC):

When the counter gear speed sensor has a malfunction, 5th upshift is prohibited.

(c) Shift solenoid valve DSL:

When the solenoid valve DSL has a malfunction, the current to the solenoid valve is stopped.

This stops lock-up control, then fuel economy decreases.

(d) Shift solenoid valve SL1, SL2, SL3 and S4:

Fail safe function:

If either of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.

Manual shifting as shown in the following table must be done (In case of a short circuit, the ECM stops sending the current to the short circuited solenoid).

Even if starting the engine in the fail-safe mode, the gear position remains in the same position.

HINT:

FL: Flex Lock-up

Normal	Solenoid Valve	SL1	ON	OFF	ON	OFF	OFF

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0705: Transmission Range Sensor Circuit Malfunction (PRNDL Input) (2010 Corolla)		

DTC	**P0705**	**Transmission Range Sensor Circuit Malfunction (PRNDL Input)**

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0705	(A) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • P input signal is ON. • N input signal is ON. • R input signal is ON. • D input signal is ON. (B) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • NSW input signal is ON. • R input signal is ON. • D input signal is ON (C) When any of following conditions is met for 2.0 sec. or more in the S position (2-trip detection logic) • NSW input signal is ON. • P input signal is ON. • N input signal is ON. • R input signal is ON. (D) All switches are OFF simultaneously for NSW, P, N, R, D positions (2-trip detection logic). • NSW input signal is OFF. • P input signal is OFF. • N input signal is OFF. • R input signal is OFF. • D input signal is OFF	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM

MONITOR DESCRIPTION

These DTCs indicate a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.

The park/neutral position switch detects the shift lever position and sends a signal to the ECM.

For security, the park/neutral position switch detects the shift lever position so that engine can be started only when the shift lever is in the P or N position.

The park/neutral position switch sends a signal to the ECM according to the shift position (P, R, N, or D). The ECM determines that there is a problem with the switch or related parts if it receives more than 1 position signal simultaneously. The ECM will turn on the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	Condition (A), (B), (C) 2 sec. Condition (D) 60 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

1. One of the following conditions is met: Condition (A), (B), (C) and (D)

Condition (A)

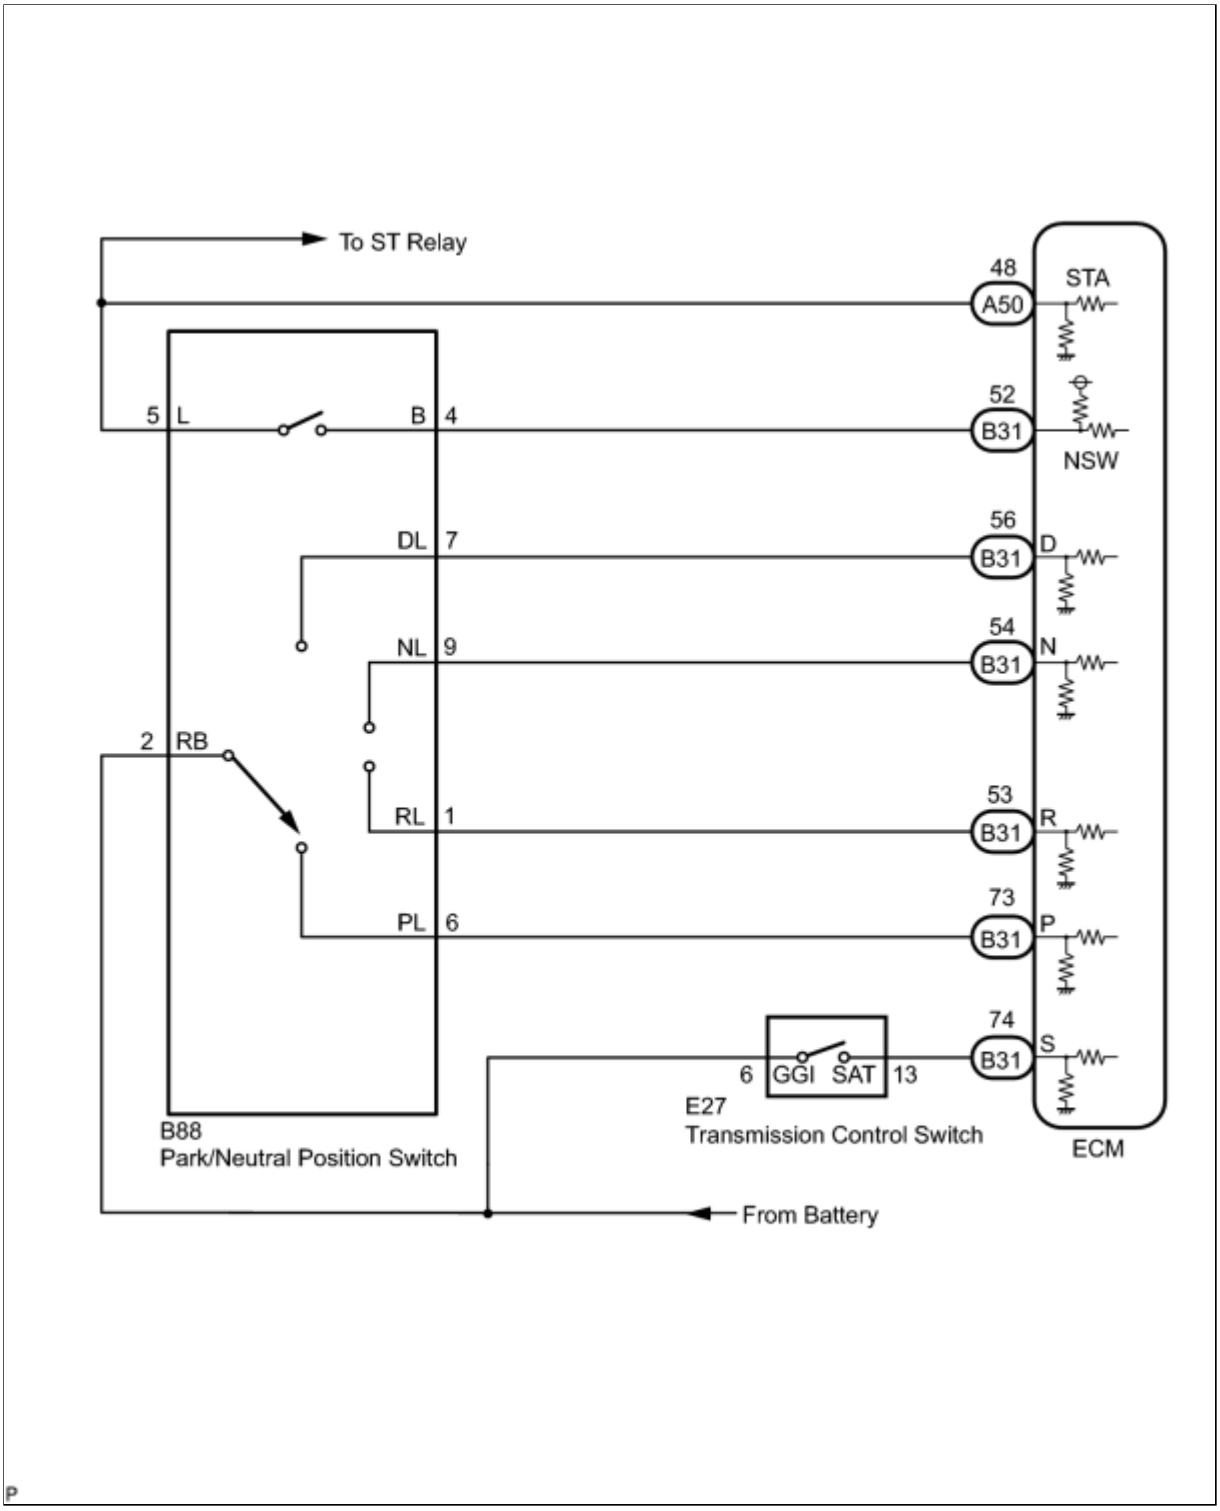
Number of the following signal input at the same time	2 or more
P switch	ON
N switch	ON
R switch	ON
D switch	ON

Condition (B)

Number of the following signal input at the same time	2 or more
NSW switch	ON
R switch	ON
D switch	ON

Condition (C) When shift lever is in the S position, one of the following conditions is met.

NSW switch	ON
P switch	ON
N switch	ON
R switch	ON



Condition (D) All of following conditions are met.

NSW switch	OFF
P switch	OFF
N switch	OFF
R switch	OFF
D switch	OFF

COMPONENT OPERATING RANGE

Park/neutral Position switch	The park/neutral position switch sends only one signal to the ECM.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List

information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

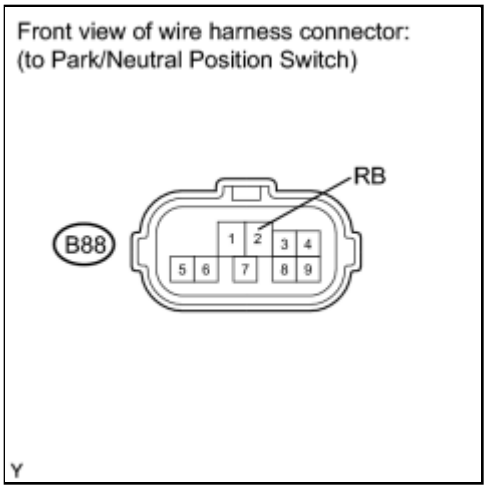
(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.



(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the tester, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Neutral Position SW Signal	PNP Switch Status/ ON or OFF	Shift lever position is: P and N: ON Except P and N: OFF	When the shift lever position displayed on Techstream differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect.
Shift SW Status (R Range)	PNP Switch Status/ ON or OFF	Shift lever position is: R: ON Except R: OFF	↑
Shift SW Status (P Range)	PNP Switch Status/ ON or OFF	Shift lever position is: P: ON Except P: OFF	↑
Shift SW Status (N Range)	PNP Switch Status/ ON or OFF	Shift lever position is: N: ON Except N: OFF	↑
Shift SW Status (D Range)	PNP Switch Status/ ON or OFF	Shift lever position is: D and S: ON Except D and S: OFF	↑
Sports Mode Selection SW	Sport Mode Select Switch Status/ ON or OFF	Shift lever position is: S, "+" and "-": ON Except S, "+" and "-": OFF	-

PROCEDURE

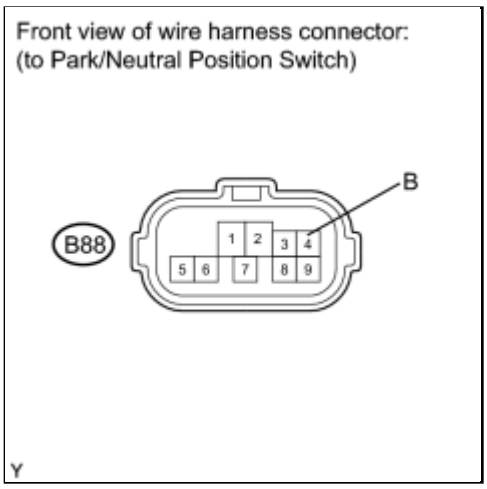
1.	**CHECK HARNESS AND CONNECTOR (BATTERY - PARK/NEUTRAL POSITION SWITCH)**

(a) Disconnect the park/neutral position switch connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B88-2 (RB) - Body ground	Ignition switch ON	11 to 14 V

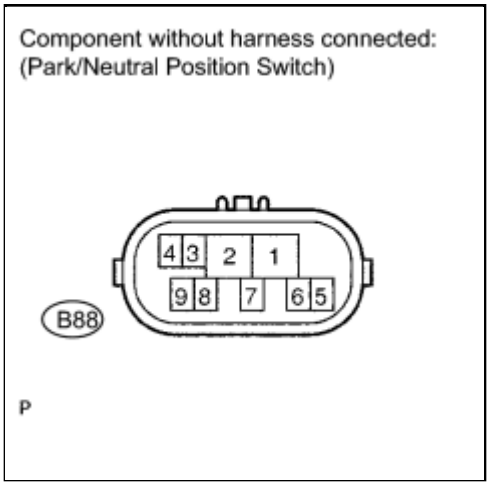
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (OUTPUT SIGNAL)**

(a) Turn the ignition switch to ON.

(b) Measure the voltage according to the value(s) in the table below.



Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B88-4 (B) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

OK ▼

3.	**INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

(a) Disconnect the park/neutral position switch connector.

(b) Measure resistance according to the value(s) in the table below when the shift lever is moved to each position.

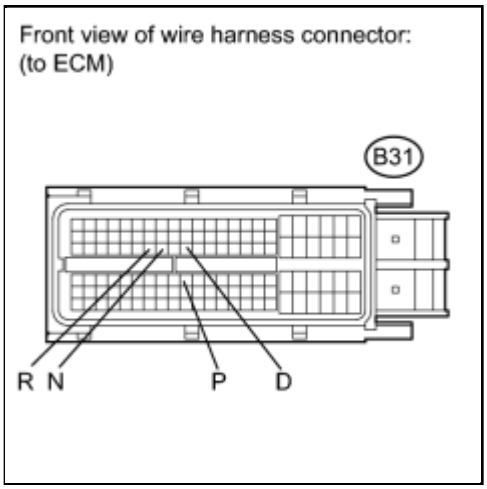
Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
4 - 5	P and N	Below 1 Ω
	Except P and N	10 Ω or higher
2 - 6	P	Below 1 Ω
	Except P	10 Ω or higher
2 - 1	R	Below 1 Ω
	Except R	10 Ω or higher
2 - 9	N	Below 1 Ω
	Except N	10 Ω or higher
2 - 7	D, S, "+" and "-"	Below 1 Ω
	Except D, S, "+" and "-"	10 Ω or higher

NG ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK ▼

4.	**CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**



(a) Connect the park/neutral position switch connector.

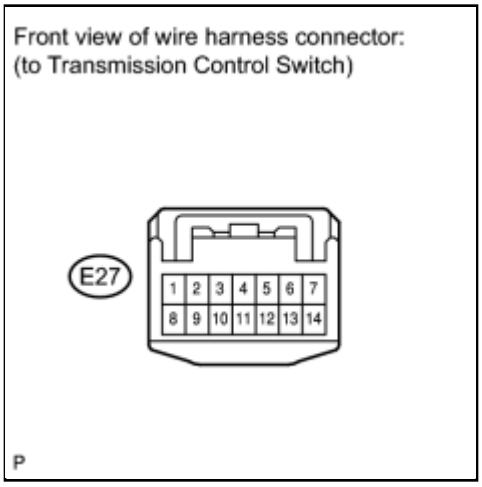
(b) Disconnect the ECM connector.

(c) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
B31-73 (P) - Body	P	11 to 14 V

ground	Except P	Below 1 V
B31-54 (N) - Body ground	N	11 to 14 V
	Except N	Below 1 V
B31-53 (R) - Body ground	R	11 to 14 V *
	Except R	Below 1 V
B31-56 (D) - Body ground	D and S	11 to 14 V
	Except D and S	Below 1 V



HINT:

***: The voltage will drop slightly due to the turning on of the back up light.**

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

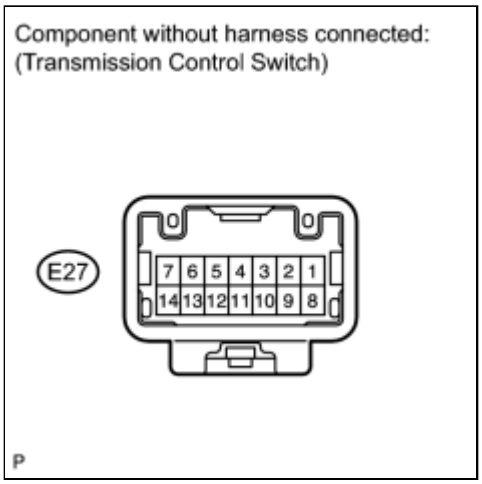
OK ▼

5.	**CHECK HARNESS AND CONNECTOR (BATTERY - TRANSMISSION CONTROL SWITCH)**

(a) Disconnect the transmission control switch connector of shift lock control unit assembly.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.



Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
E27-6 - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

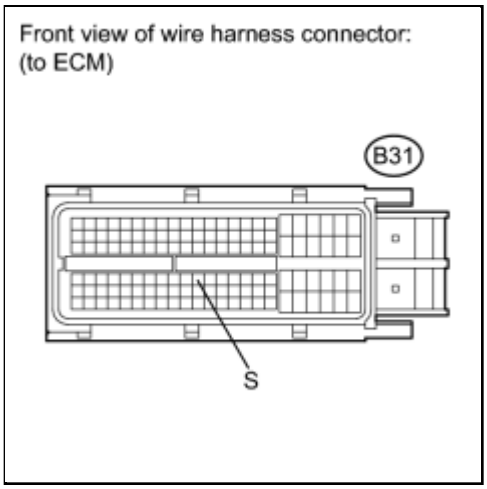
6.	**INSPECT SHIFT LOCK CONTROL UNIT (TRANSMISSION CONTROL SWITCH)**

(a) Disconnect the transmission control switch connector of shift lock control unit assembly.

(b) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
E27-6 - E27-13	S, "+" and "-"	Below 1 Ω
	Except S, "+" and "-"	10 Ω or higher



NG ▶ **REPLACE SHIFT LOCK CONTROL UNIT**

OK ▼

7.	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - ECM)

(a) Connect the park/neutral position switch connector.

(b) Disconnect the ECM connector.

(c) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
B31-74 (S) - Body ground	S, "+" and "-"	11 to 14 V
	Except S, "+" and "-"	Below 1 V

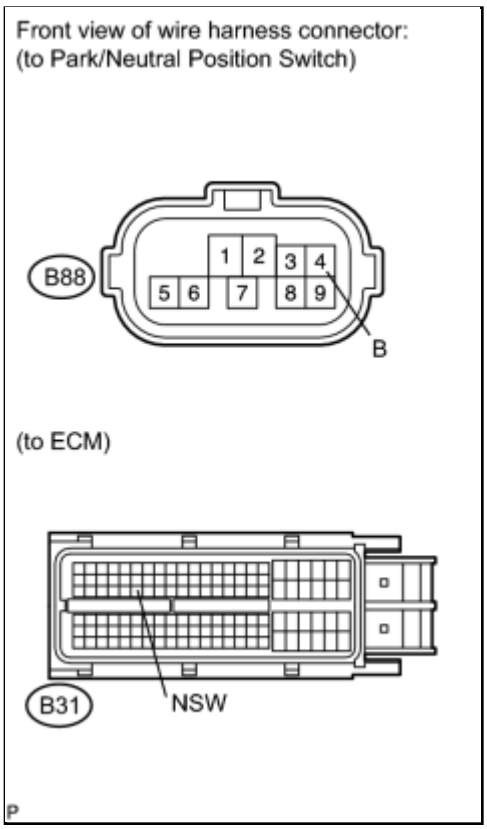
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

8.	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

(a) Turn the ignition switch off.

(b) Disconnect the ECM connector.



(c) Disconnect the park/neutral position switch connector.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-4 (B) - B31-52 (NSW)	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-4 (B) or B31-52 (NSW) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the tester, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light Switch	Stop light switch Status/ ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
Neutral Position SW Signal	PNP switch Status/ ON or OFF	Shift lever position is: P and N: ON Except P and N: OFF	When the shift lever position displayed on the Techstream differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. **HINT:** **When the failure still occurs even after adjusting these parts,** INFO .
Shift SW Status (R Range)	PNP switch Status/ ON or OFF	Shift lever position is: P: ON Except P: OFF	↑
Shift SW		Shift lever position is:	

2. ACTIVE TEST

HINT:

Using Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the ON position.

(e) Push the "ON" button of Techstream.

(f) Select the item "Powertrain / Engine and ECT / Active Test".

(g) According to the display on tester, perform the "Active Test".

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Shift Position	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	1st / 2nd / 3rd / 4th / 5th	Possible to check the operation of the shift solenoid valves.
Activate the Lock Up	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock-up condition. [Vehicle Condition] • Vehicle Speed: 60 km/h (37 mph) or more	ON / OFF	Possible to check the DSL operation.
Activate the Solenoid (SL1)	[Test Details] Operate the shift solenoid SL1 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-
Activate the Solenoid (SL2)	[Test Details] Operate the shift solenoid SL2 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Activate the Solenoid (SL3)	[Test Details] Operate the shift solenoid SL3 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-
Activate the Solenoid (S4))	[Test Details] Operate the shift solenoid S4 [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-
Activate the Solenoid (SR)	[Test Details] Operate the shift solenoid SR [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-
Activate the Solenoid (DSL)	[Test Details] Operate the shift solenoid DSL [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position	ON / OFF	-
Activate the Solenoid (SLT)*	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON **HINT:** **OFF: Line pressure up (When the active test of "Activate the Solenoid (SLT)" is performed, the ECM commands the SLT solenoid to turn off).** ON: No action (normal operation)	ON / OFF	-

*: "Activate the Solenoid (SLT)" in the Active Test is performed to check the line pressure changes by connecting the SST to the automatic transaxle, which is used in the HYDRAULIC TEST INFO as well.

HINT:

The pressure values in Active Test and HYDRAULIC TEST are different from each other.

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0711: Transmission Fluid Temperature Sensor "A" Performance (2010 Corolla)		

DTC	**P0711**	**Transmission Fluid Temperature Sensor "A" Performance**

DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0711	One of the following conditions (A), (B) or (C) is met: (A) (a), (b) and (c) are detected: (2-trip detection logic) • (a) Intake air and engine coolant temperatures are more than 15°C (59°F) at engine start • (b) Soak time is more than 5 hours • (c) After normal driving for over 10 min. and 5 km (3 mile) or more, ATF temperature is less than 20°C (68°F) (B) Both (a) and (b) are detected: (2-trip detection logic) • (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start • (b) After normal driving for over 19 min. and 9 km (6 mile) or more, ATF temperature is less than 20°C (68°F) (C) Both (a) and (b) are detected: (2-trip detection logic) • (a) Engine coolant temperature is less than 35°C (95°F) at engine start • (b) ATF temperature is 110°C (230°F) or more when engine coolant temperature reaches 60°C (140°F)	Transmission wire (ATF temperature sensor)

MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects an open or short in the ATF temperature circuit or a fault in the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF

temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the, MIL and stores the DTC.

When the ATF temperature is 110°C (230°F) or more and engine coolant temperature reaches 60°C (140°F) after cold start, the ECM also determines this as a fault, turns on the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor (TFT sensor)

Condition (A):

Time after engine start	10 min.
Driving distance after engine start	5 km (3 mile) or more
IAT (Intake air temperature) (12 sec. after starting engine)	15°C (59°F) or more
ECT (12 sec. after starting engine)	15°C (59°F) or more
Soak time	5 hours

Condition (B):

Time after engine start	18 min. and 20 sec.
Driving distance after engine start	9 km (6 mile) or more
IAT (Intake air temperature) (12 sec. after starting engine)	-10°C (14°F) or more
ECT (12 sec. after starting engine)	-10°C (14°F) or more

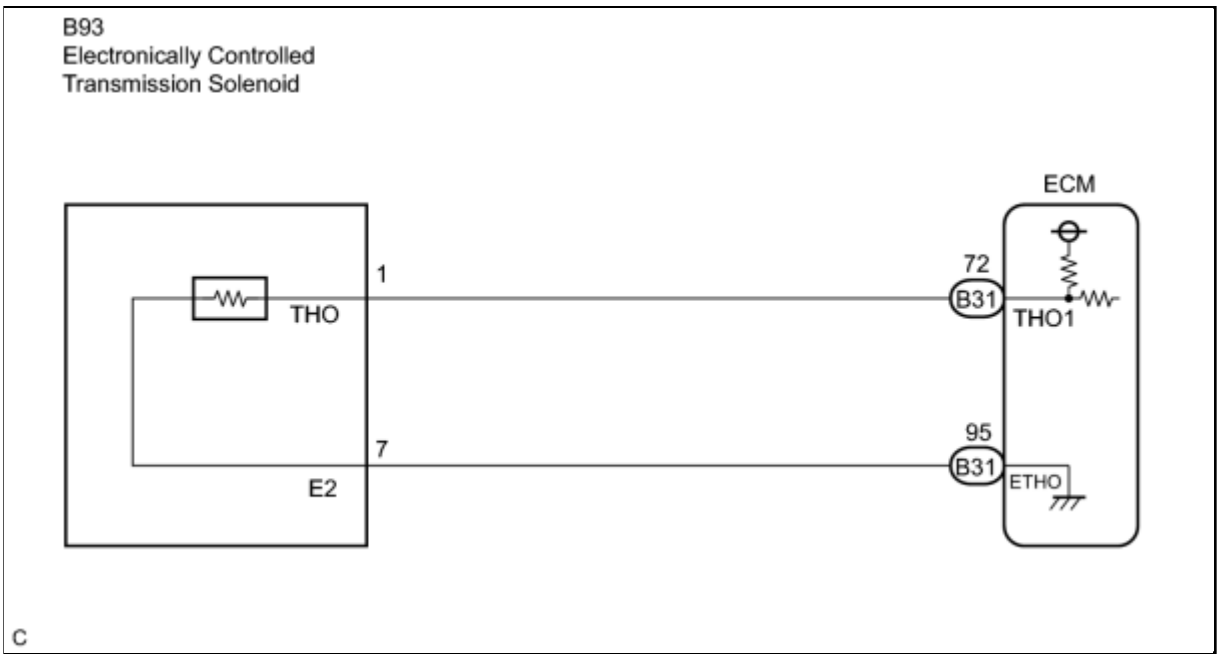
Condition (C):

ECT (Current temperature)	60°C (140°F) or more
ECT (12 sec. after engine start)	Less than 35°C (95°F)

TYPICAL MALFUNCTION THRESHOLDS

Condition (A), (B):

ATF temperature sensor	Less than 20°C (68°F)



Condition (C):

ATF temperature sensor	110°C (230°F) or more

COMPONENT OPERATING RANGE

ATF temperature sensor	Atmospheric temperature to approx. 130°C (266°F)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- Perform the universal trip to clear permanent DTCs INFO .
- If DTCs P0711 and P2610 are output simultaneously, confirm that the ATF temperature is as

specified in "Normal Condition" using the Techstream first. When the ATF temperature is as specified in "Normal Condition", perform troubleshooting for DTC P2610 INFO .

- In the table below, the value listed under "Normal Condition" are reference values.

HINT:

Using Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the tester, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
A/T Oil Temperature 1	ATF Temp. Sensor Value/min.: -40°C (-40°F), max.: 215°C (419°F)	• After Stall Test; Approx. 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor circuit is opened or shorted.

HINT:

When DTC P0712 is output and Techstream output is 150°C (302°F), there is a short circuit.

When DTC P0713 is output and Techstream output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO1 (THO) and body ground.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:

If a circuit related to the ATF temperature sensor become open, P0713 is immediately set (in 0.5 second).

When P0713 is set, P0711 cannot be detected.

It is not necessary to inspect the circuit when P0711 is set.

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)**

(a) Connect Techstream to the DLC3.

(b) Turn the ignition switch to the on position and push the Techstream main switch ON.

(c) When you use Techstream:

Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using Techstream.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0711" is output	A
"P0711" and other DTCs	B

HINT:

If any other codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**CHECK TRANSMISSION FLUID LEVEL**

OK:

Automatic transmission fluid level is correct.

NG ▶ **ADD FLUID**

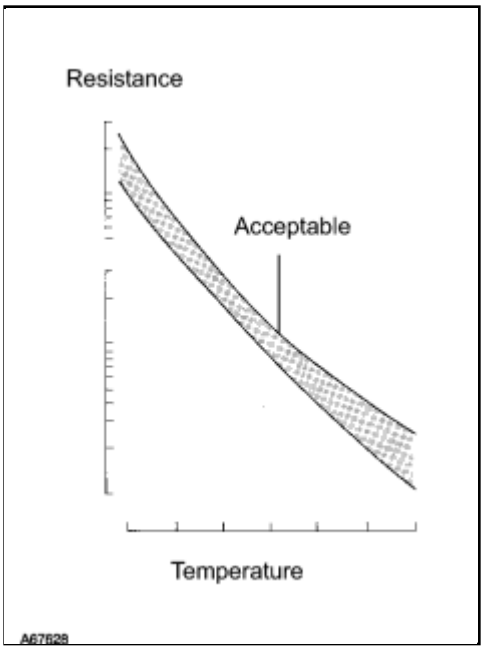
OK ▶ **REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W850B0X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0712,P0713: Transmission Fluid Temperature Sensor "A" Circuit Low Input (2010 Corolla)		

DTC	**P0712**	**Transmission Fluid Temperature Sensor "A" Circuit Low Input**

DTC	**P0713**	**Transmission Fluid Temperature Sensor "A" Circuit High Input**

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

The ECM applies a voltage to the temperature sensor through ECM terminal THO1.

The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.

One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.

The ECM calculates the fluid temperature based on the voltage signal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more (1-trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0713	Either of the following conditions is met (1-trip detection logic) (A) 15 minutes or more after the engine is started, ATF temperature sensor resistance is more than 156 kΩ for 0.5 sec. or more. (B) The condition (A) of "TYPICAL ENABLING CONDITIONS" for DTC P0711 is met and ATF temperature sensor resistance is more than 156 kΩ for 0.5 sec. or more.	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the automatic transmission fluid (ATF) temperature sensor (TFT sensor) circuit. The automatic transmission fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an opens or shorts in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω *1or more than 156 kΩ *2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will turn on the MIL and store the DTC.

*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.

*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.

HINT:

The ATF temperature can be checked on the Techstream display.

MONITOR STRATEGY

Related DTCs	P0712: ATF temperature sensor/Range check (Low resistance) P0713: ATF temperature sensor/Range check (High resistance)

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the tester, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
A/T Oil Temperature 1	ATF Temp. Sensor Value/min.: -40°C (-40°F), max.: 215°C	• After Stall Test; Approx. 80°C (176°F)	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
	(419°F)	• Equal to ambient temperature when cold soak	circuit is opened or shorted.

HINT:

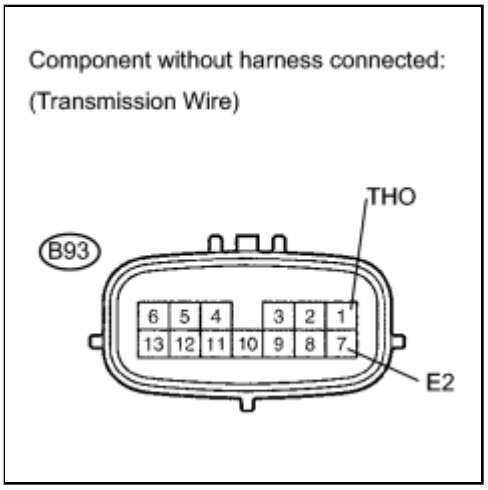
When DTC P0712 is output and Techstream output is 150°C (302°F), there is a short circuit.

When DTC P0713 is output and Techstream output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO1 (THO) and body ground.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:



If a circuit related to the ATF temperature sensor become open, P0713 is immediately set (in 0.5 second).

When P0713 is set, P0711 cannot be detected.

It is not necessary to inspect the circuit when P0711 is set.

PROCEDURE

1.	**INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)**

(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (THO) - 7 (E2)	Always	79 Ω to 156 kΩ
1 (THO) - Body ground	Always	10 kΩ or higher
7 (E2) - Body ground	Always	↑

HINT:

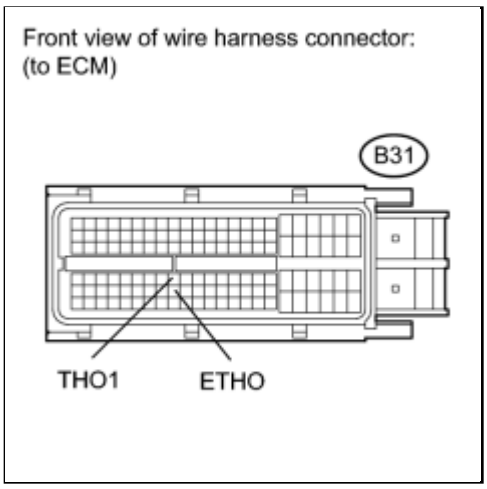
If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF TEMPERATURE	SPECIFIED CONDITION
10 °C (50°F)	5 to 8 kΩ
25 °C (77°F)	2.5 to 4.5 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)**



(a) Connect the transmission wire connector to the transaxle.

(b) Disconnect the ECM connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-72 (THO1) - B31-95 (ETHO)	Always	79 Ω to 156 kΩ

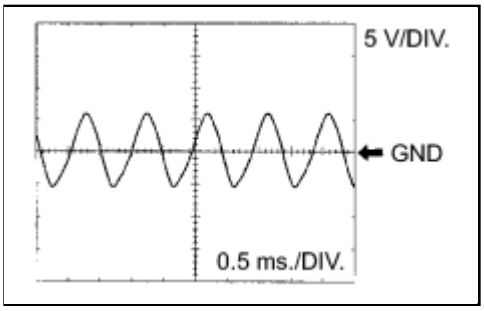
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-72 (THO1) - Body ground	Always	10 kΩ or higher
B31-95 (ETHO) - Body ground	Always	

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**



Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015VR044X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0717: Turbine Speed Sensor Circuit No Signal (2010 Corolla)		

DTC	**P0717**	**Turbine Speed Sensor Circuit No Signal**

DESCRIPTION

This sensor detects the rotation speed of the input turbine. By comparing the input turbine speed signal (NT) with the counter gear speed sensor signal (NC), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (NSW and R) is OFF (c) Speed sensor (NT): less than 300 rpm	• Open or short in transmission revolution sensor NT (speed sensor NT) circuit • Transmission revolution sensor NT (speed sensor NT) • ECM • Automatic transaxle assembly

Reference (Using an oscilloscope):

Check the waveform between terminals NT+ and NT- of the ECM connector.

Standard: Refer to the illustration.

Terminal	NT+ - NT-
Tool setting	5 V/DIV., 0.5 ms./DIV.
Vehicle condition	Vehicle speed 20 km/h (12 mph)

MONITOR DESCRIPTION

The NT terminal of the ECM detects a revolution signal from the speed sensor (NT) (input RPM). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).

While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the input shaft revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

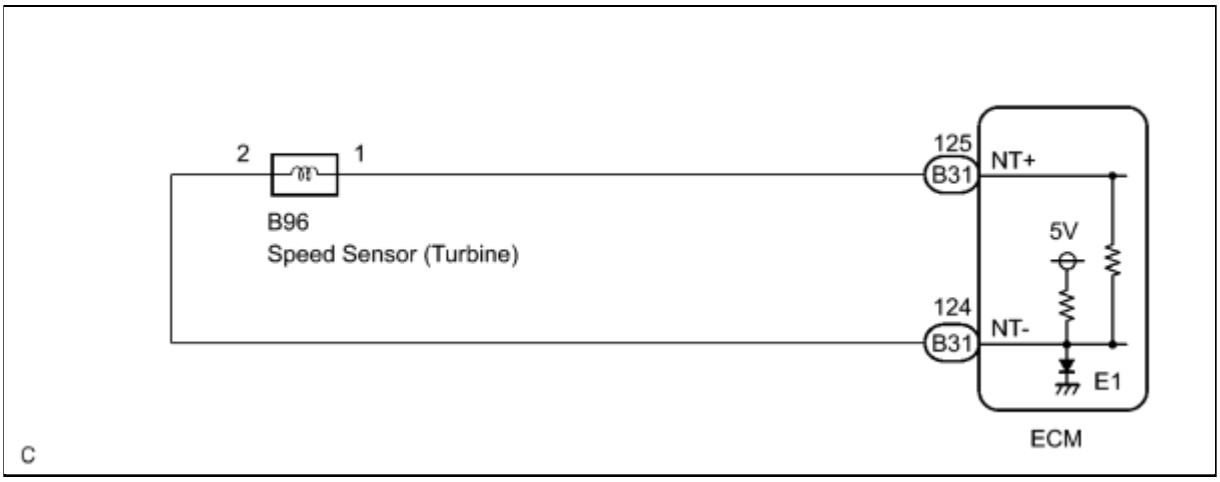
*2: The vehicle speed is 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT)/Verify pulse input
Required sensors/Components	Speed sensor (NT), Speed sensor (NC)
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve (range))
Shift change	Shift change is completed and before starting next shift change operation
ECM selected gear	2nd, 3rd, 4th or 5th
Output shaft rpm	1,000 rpm or more
NSW switch	OFF
R switch	OFF
Engine	Running
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF



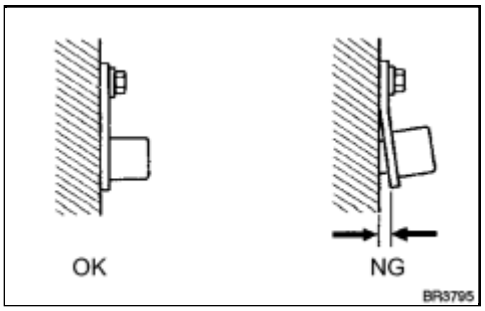
TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Speed sensor (NT)	Turbine speed is equal to engine speed with lock-up ON

WIRING DIAGRAM



INSPECTION PROCEDURE

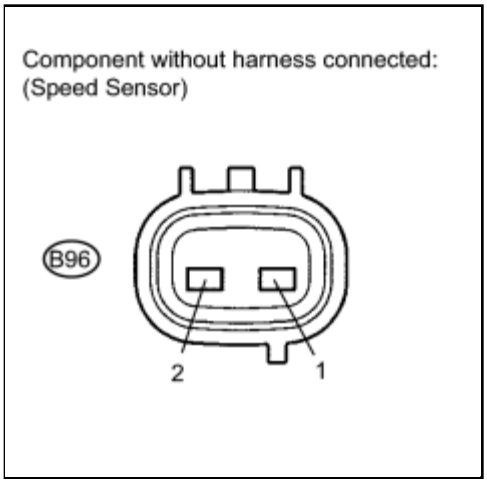
NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

PROCEDURE

1.	**INSPECT SPEED SENSOR INSTALLATION**

(a) Check the speed sensor installation.



OK:

The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG ▶ **REPLACE SPEED SENSOR (NT)**

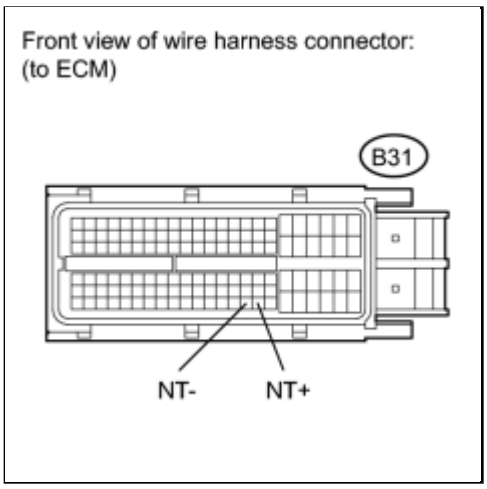
OK

2.	**INSPECT SPEED SENSOR (NT)**

(a) Disconnect the speed sensor connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION 20 °C (68 °F)
1 - 2	20°C (68°F)	560 to 680 Ω

NG ▶ **REPLACE SPEED SENSOR (NT)**

OK

3.	**CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)**

(a) Connect the speed sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-125 (NT+) - B31-124 (NT-)	20°C (68°F)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-125 (NT+) - Body ground	Always	10 kΩ or higher
B31-124 (NT-) - Body ground	Always	

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015W003HX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0724: Brake Switch "B" Circuit High (2010 Corolla)		

DTC	**P0724**	**Brake Switch "B" Circuit High**

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock-up condition when brakes are suddenly applied.

When the brake pedal is depressed, this switch sends a signals to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
P0724	The stop light switch remains ON even when the vehicle is driven in a STOP (less than 3 km/h (2 mph) and GO (30 km/h (19 mph) or more) fashion 5 times. (2-trip detection logic).	• Short in stop light switch circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains on. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 3 km/h (2 mph)) and go (30 km/h (19 mph) or more) 5 times for two driving cycles in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Rationality
Required sensors/Components	Stop light switch, Vehicle speed sensor
Frequency of operation	Continuous
Duration	GO and STOP 5 times

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015VW01WX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0741: Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL) (2010 Corolla)		

DTC	**P0741**	**Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)**

SYSTEM DESCRIPTION

The ECM uses the signals from the throttle position sensor, air-flow meter, turbine (input) speed sensor, intermediate (counter) shaft speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.

Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect a mechanical problems of the shift solenoid valve DSL, valve body and torque converter clutch.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0741	Lock-up does not occur when driving in lock-up range Lock-up remains ON in lock-up OFF range (2-trip detection logic)	• Shift solenoid valve DSL remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the speed sensor (NT), speed sensor (NC), engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid DSL. When the DSL is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.

If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve DSL or lock-up system performance. The ECM will turn on the MIL and store the DTC.

Example:

HINT:

When any of the following is met, the system judges it as a malfunction.

- There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.

  (Engine speed is at least 100 rpm greater than input turbine speed.)
- There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up off.

  (The difference between engine speed and input turbine speed is less than 35 rpm.)

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction or ON malfunction

OFF malfunction:

Engine speed - Input (turbine) speed When condition "OFF" malfunction (A)" of shift solenoid "D" is detected;	75 rpm or more
Engine speed - Input (turbine) speed When condition "OFF" malfunction (A)" of shift solenoid "D" is not detected;	100 rpm or more

ON malfunction:

Difference between engine speed and input (turbine) speed	Less than 35 rpm

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

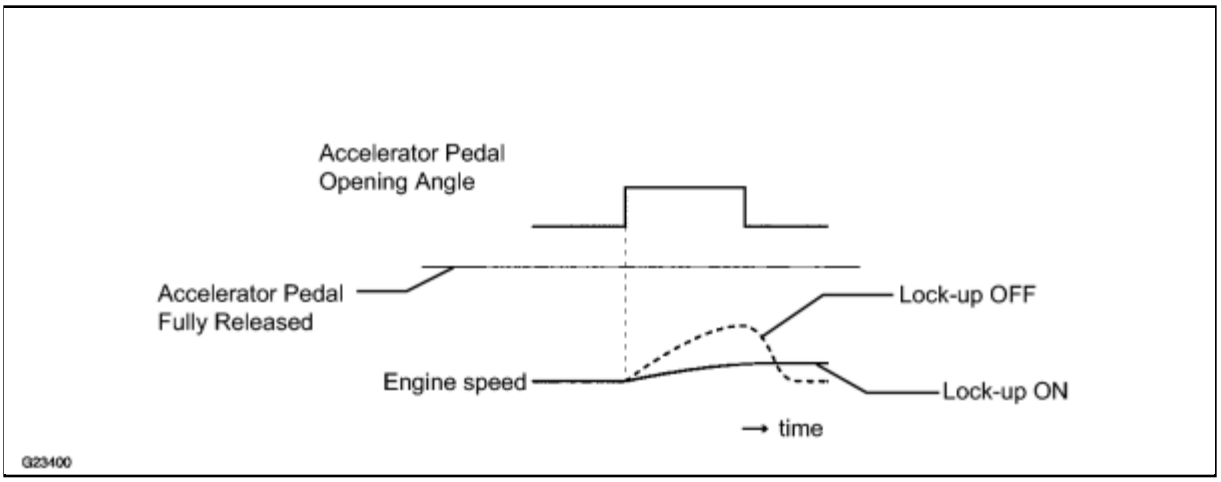
(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Select the item "Powertrain / Engine and ECT / Active Test".

(f) According to the display on the tester, perform the "Active Test".

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Activate the Lock Up	[Test Details] Control the shift solenoid DSL to set the automatic transaxle to the lock-up condition. [Vehicle Condition] • Throttle valve opening angle: Less than 35 % • Vehicle Speed: 60 km/h (37 mph) or more	ON/OFF	Possible to check the DSL operation.



HINT:

- This test can be conducted when the vehicle speed is 60 km/h (37 mph) or more.
- This test can be conducted in the 5th gear.

(g) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off.)

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0741)**

(a) Connect Techstream to the DLC3.

(b) Turn the ignition switch to the on position and turn the Techstream main switch ON.

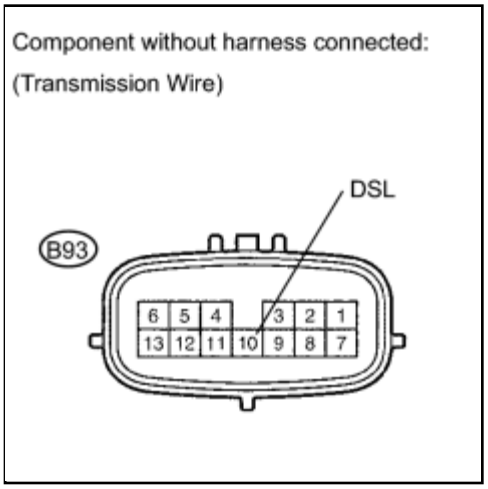
(c) When you use Techstream:

Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using Techstream.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0741" is output	A
"P0741" and other DTCs	B



HINT:

If any other codes besides "P0741" are output, perform the troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A

2.	**INSPECT TRANSMISSION WIRE (DSL)**

(a) Disconnect the transmission wire connector from the transaxle.

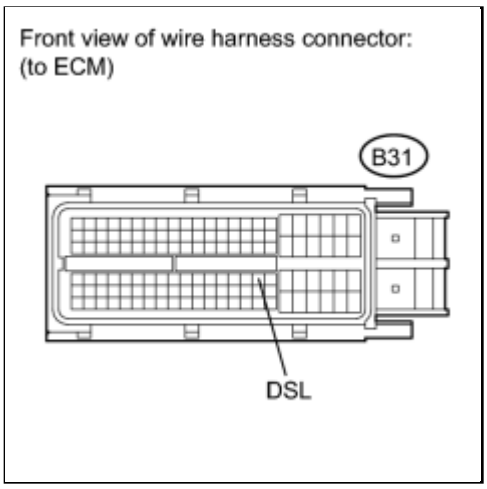
Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (DSL) - Solenoid Body (DSL)	20°C (68°F)	11 to 13 Ω

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid valve makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE DSL**

OK ▼

5.	CHECK TRANSMISSION WIRE

OK:

The connectors and pins are securely installed.

There is no open or short on the wire harness.

NG ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

OK ▼

6.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG ▶ **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

7.	**INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY**

OK:

The torque converter clutch operates normally.

NG ▶ **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK ▶ **REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015VT02JX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0746: Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1) (2010 Corolla)		

DTC	**P0746**	**Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)**

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).

Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake or gear etc.).

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
P0746	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL, and store the DTC.

HINT:

Example:

When either condition (a) or (b) is met, the ECM detects a malfunction.

(a) The ECM commands the 1st gear, but the actual gear is 2nd.

(b) The ECM commands the 2nd gear, but the actual gear is 1st.

MONITOR STRATEGY

ECT (Engine coolant temperature)	10°C (50°F) or more
Transmission range	"D"
TFT (Transmission fluid temperature)	-20°C (-4°F) or more

OFF malfunction:

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (25 mph)
Throttle valve opening angle	4.5% or more at engine speed 1900 rpm (Varies with engine speed)

ON malfunction:

ECM selected gear	2nd
Throttle valve opening angle	4.5% or more at engine speed 1900 rpm (Varies with engine speed)

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction or ON malfunction OFF malfunction:

2 detections are necessary per driving cycle:

1st detection; temporary flag ON

2nd detection; pending fault code ON

Input (turbine) speed/Intermediate shaft speed	1.49 to 1.63

ON malfunction:

Input (turbine) speed/Intermediate shaft speed	2.72 to 2.86

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Active Test / Shift Status".

(g) According to the display on the tester, perform the "Active Test".

HINT:

While driving, the shift position can be forcibly changed with Techstream.

Comparing the shift position commanded by the Active Test with the actual shift position enables you to

confirm the problem INFO **.**

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Shift Position	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	1st/2nd /3rd/4th/5th	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the Data List / Shift Status display on Techstream.

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0746)**

(a) Connect Techstream to the DLC3.

(b) Turn the ignition switch to the on position and turn the Techstream main switch ON.

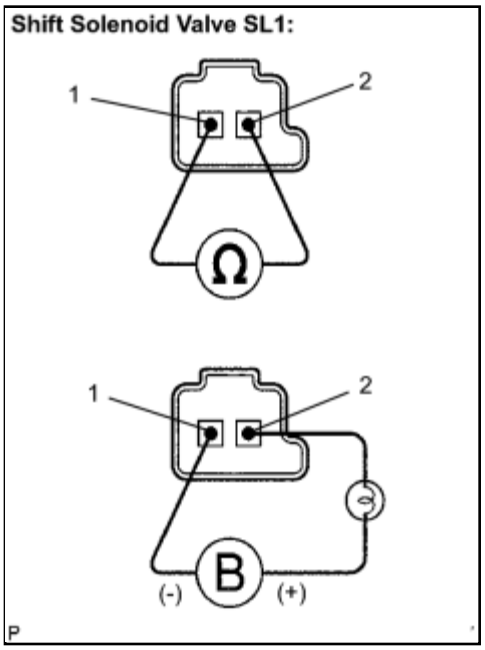
(c) When you use Techstream:

Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using Techstream.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0746" is output	A
"P0746" and other DTCs	B



HINT:

If any other codes besides "P0746" are output, perform the troubleshooting for those DTCs first.

B GO TO DTC CHART

A

2.	INSPECT SHIFT SOLENOID VALVE SL1

(a) Remove the shift solenoid valve SL1.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG REPLACE SHIFT SOLENOID VALVE SL1

OK

3.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:
There are no foreign objects on each valve and they operate smoothly.

NG ▶ REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK ▼

4.	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:
The torque converter clutch operates normally.

NG ▶ REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY

OK ▶ REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015W4028X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0748: Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1) (2010 Corolla)		

DTC	**P0748**	**Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)**

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0748	• The ECM checks for an open or short in the shift solenoid valve SL1 circuit while driving and shift gears. (1-trip detection logic) • Output signal duty equals to 100 %. (NOTE: SL1 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0776: Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2) (2010 Corolla)		

DTC	**P0776**	**Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)**

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd, 4th or 5th gear).

Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake or gear etc.).

DTC NO.	DTC DETECTING CONDITION	TROUBLE AREA
P0776	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve SL2 remains open or closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd, 4th or 5th gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0776: Shift solenoid valve SL2/OFF malfunction Shift solenoid valve SL2/ON malfunction
Required sensors/Components	Shift solenoid valve SL2, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)
Frequency of operation	Continuous

Duration	OFF malfunction (A) 1.8 sec. OFF malfunction (B) and (C) 0.8 sec. ON malfunction (A) and (B) 0.8 sec. ON malfunction (C) 0.4 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All:

The monitor will run whenever this DTC is not present. (Not circuit malfunction)	P0712, P0713 (ATF temperature sensor circuit) P0115, P0117, P0118 (ECT sensor circuit) P0717 (Turbine speed sensor circuit) P0793 (Intermediate shaft speed sensor circuit) P0500 (Vehicle speed sensor circuit) P0748 (Shift solenoid valve SL1 circuit) P0778 (Shift solenoid valve SL2 circuit) P0798 (Shift solenoid valve SL3 circuit) P0982, P0983 (Shift solenoid valve S4 circuit) P0985, P0986 (Shift solenoid valve SR circuit) P2769, P2770 (Shift solenoid valve DSL circuit) P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P060A, P060D, P060E, P0657, P1607, P2102, P2103, P2111, P2112, P2118, P2119, P2135 (Electronic throttle system)
ECT (Engine coolant temperature)	10°C (50°F) or more
Transmission range	"D"
TFT (Transmission fluid temperature)	-20°C (-4°F) or more

OFF malfunction (A):

ECM lock-up command	OFF
Vehicle speed	3rd Less than 60 km/h (37 mph)
	4th, 5th Less than 120 km/h (75 mph)
Throttle valve opening angle	8.5% or more

OFF malfunction (B):

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (25 mph)
Throttle valve opening angle	4.5% or more at engine speed 1900 rpm (Varies with engine speed)

OFF malfunction (C):

ECM selected gear	3rd
Throttle valve opening angle	4.5% or more at engine speed 1900 rpm (Varies with engine speed)

OFF malfunction (D):

Duration time from shift command of ECM	15 sec. or more
ECM selected gear	4th or 5th

ON malfunction (A):

ECM selected gear	1st
Vehicle speed	Less than 40 km/h (25 mph)
Throttle valve opening angle	4.5% or more at engine speed 1900 rpm (Varies with engine speed)

ON malfunction (B):

ECM selected gear	3rd
Throttle valve opening angle	7% or more at output speed 1400 rpm (Varies with engine speed)
Malfunction of pressure control solenoid "B" (SL2) and "C" (SL3)	Not detected

ON malfunction (C):

Throttle valve opening angle	7.0% or more at output speed 1050 rpm (Varies with engine speed)
Malfunction of pressure control solenoid "B" (SL2)	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction (A),

(B), (C) and (D), or ON malfunction (A), (B) and (C)

OFF malfunction (A):

Difference between engine speed and input (turbine) speed	Less than 35 rpm

OFF malfunction (B) and (C):

Input (turbine) speed/Intermediate shaft speed	0.93 to 1.07

OFF malfunction (D):

Input (turbine) speed/Intermediate shaft speed	0.64 to 0.74

ON malfunction (A):

Input (turbine) speed/Intermediate shaft speed	2.72 to 2.86

ON malfunction (B):

Input (turbine) speed - Intermediate shaft speed	700 rpm or more

ON malfunction (C):

Input (turbine) speed - Intermediate shaft speed	Less than -500 rpm or 700 rpm or more

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to perform Active Test allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Test early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Test.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Active Test / Shift Status".

(g) According to the display on the tester, perform the "Active Test".

HINT:

While driving, the shift position can be forcibly changed with Techstream.

Comparing the shift position commanded by the Active Test with the actual shift position enables you to confirm the problem INFO **.**

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Shift Position	[Test Details] Operate the shift solenoid valve and set each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	1st/2nd /3rd/4th/5th	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the Data List / Shift Status display on Techstream.

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0776)**

(a) Connect Techstream to the DLC3.

(b) Turn the ignition switch to the on position and turn the Techstream main switch ON.

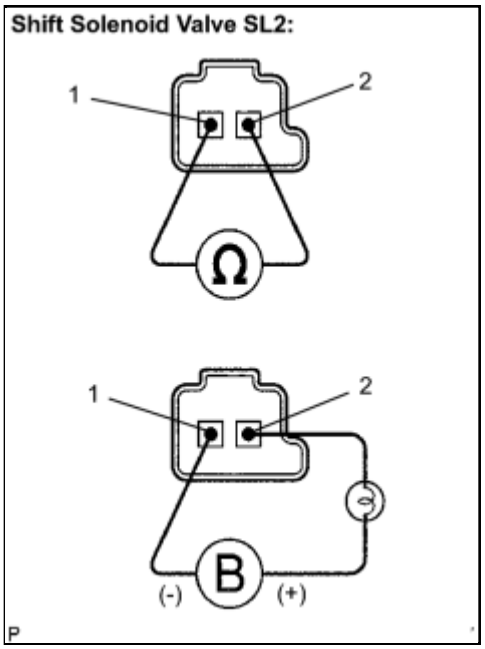
(c) When you use Techstream:

Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using Techstream.

Result:

DISPLAY (DTC OUTPUT)	PROCEED TO
Only "P0776" is output	A
"P0776" and other DTCs	B



HINT:

If any other codes besides "P0776" are output, perform the troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT SHIFT SOLENOID VALVE SL2**

(a) Remove the shift solenoid valve SL2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to

terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG ▶ REPLACE SHIFT SOLENOID VALVE SL2

OK ▼

3.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG ▶ REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK ▼

4.	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

OK:

The torque converter clutch operates normally.

NG ▶ REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY

OK ▶ REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015W5028X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0778: Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2) (2010 Corolla)		

DTC	**P0778**	**Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)**

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0778	ECM checks for an open or short circuit in shift solenoid valves SL2 (1-trip detection logic) Hybrid IC for solenoid indicates fail.	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)

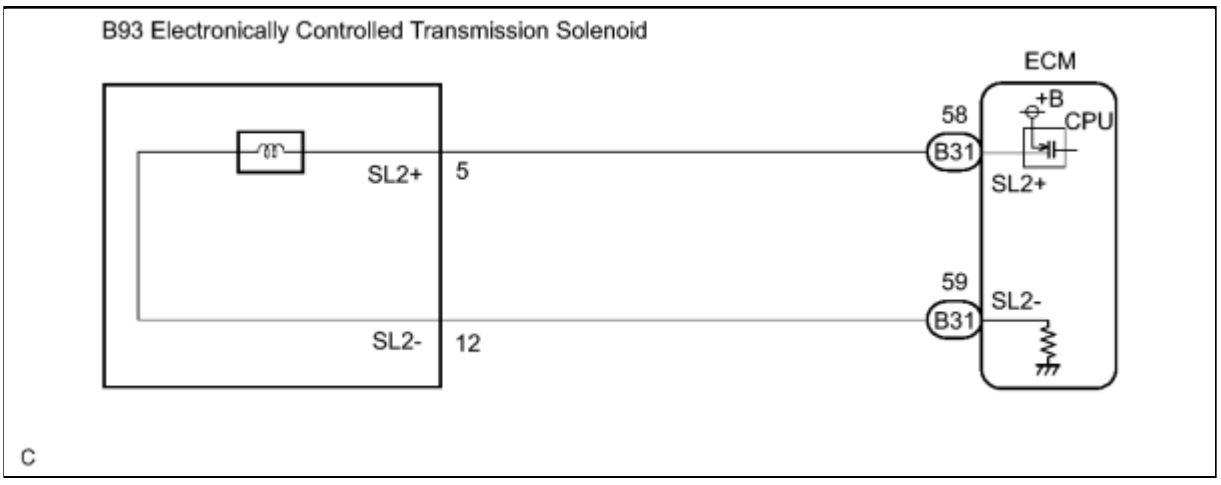
INFO .

MONITOR STRATEGY

Related DTCs	P0778: Shift solenoid valve SL2/Range check
Required sensors/Components	Shift solenoid valve SL2
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Solenoid current cut status	Not cut
Battery voltage	11 V or more
Ignition switch	ON
Starter	OFF
CPU commanded duty ratio to SL2	19% or more



TYPICAL MALFUNCTION THRESHOLDS

Solenoid status from IC	Fail (Open or short)

COMPONENT OPERATING RANGE

Output signal duty	Less than 100%

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

PROCEDURE

1.	**INSPECT TRANSMISSION WIRE (SL2)**

(a) Disconnect the transmission wire connector from the transaxle.

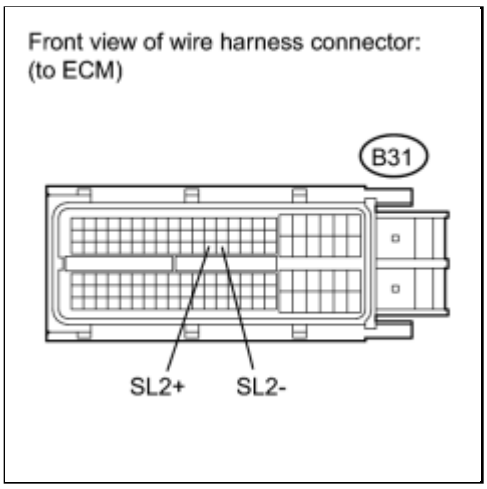
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (SL2+) - 12 (SL2-)	20°C (68°F)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (SL2+) - Body ground	Always	10 kΩ or higher
12 (SL2-) - Body ground	Always	

NG ▶ **INSPECT SHIFT SOLENOID VALVE SL2**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)**

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

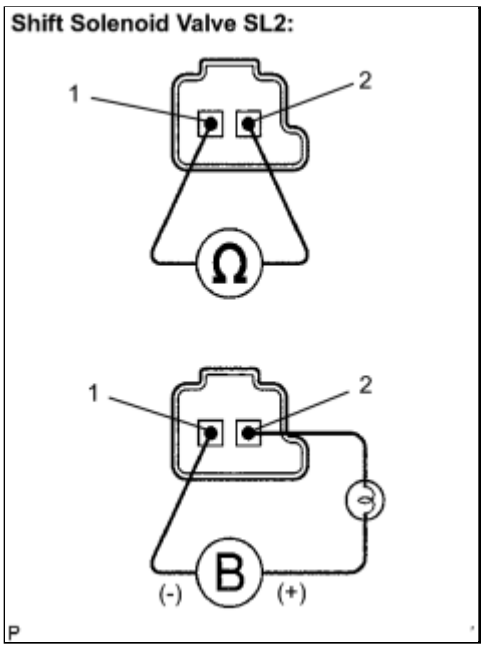
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-58 (SL2+) - B31-59 (SL2-)	20°C (68°F)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-58 (SL2+) - Body ground	Always	10 kΩ or higher
B31-59 (SL2-) - Body ground	Always	

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

3.	**INSPECT SHIFT SOLENOID VALVE SL2**

(a) Remove the shift solenoid valve SL2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

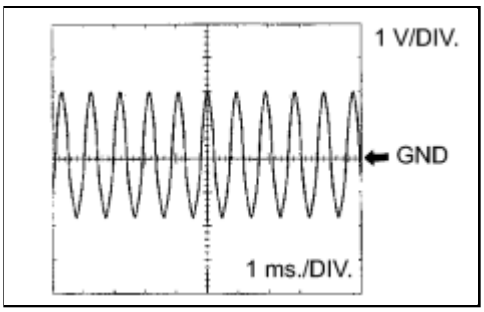
The solenoid makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE SL2**

OK ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015VS028X
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0793: Intermediate Shaft Speed Sensor "A" (2010 Corolla)		

DTC	**P0793**	**Intermediate Shaft Speed Sensor "A"**



DESCRIPTION

This sensor detects the rotation speed of the counter gear. By comparing the counter gear speed signal (NC) with the direct clutch speed sensor signal (NT), the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus smooth gear shifting is performed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0793	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) • (a) Vehicle speed: 50 km/h (31 mph) or more • (b) Park/neutral position switch (NSW) is OFF • (c) Speed sensor (NC): less than 300 rpm	• Open or short in transmission revolution sensor NC (speed sensor NC) circuit • Transmission revolution sensor NC (speed sensor NC) • ECM

Reference (Using an oscilloscope):

Check the waveform between terminals NC+ and NC- of the ECM connector.

Standard: Refer to the illustration.

Terminal	NC+ - NC-
Tool setting	1 V/DIV., 1 ms./DIV.

Vehicle condition	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm

MONITOR DESCRIPTION

The NC terminal of the ECM detects a revolution signal from the speed sensor (NC) (counter gear rpm). The ECM calculates a gearshift comparing the speed sensor (NT) with the speed sensor (NC).

While the vehicle is operating in 2nd, 3rd, 4th or 5th gear in the shift position of D, if the counter gear revolution is less than 300 rpm *1although the output shaft revolution is more than 1,000 rpm *2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

*1: Pulse is not output or is irregularly output.

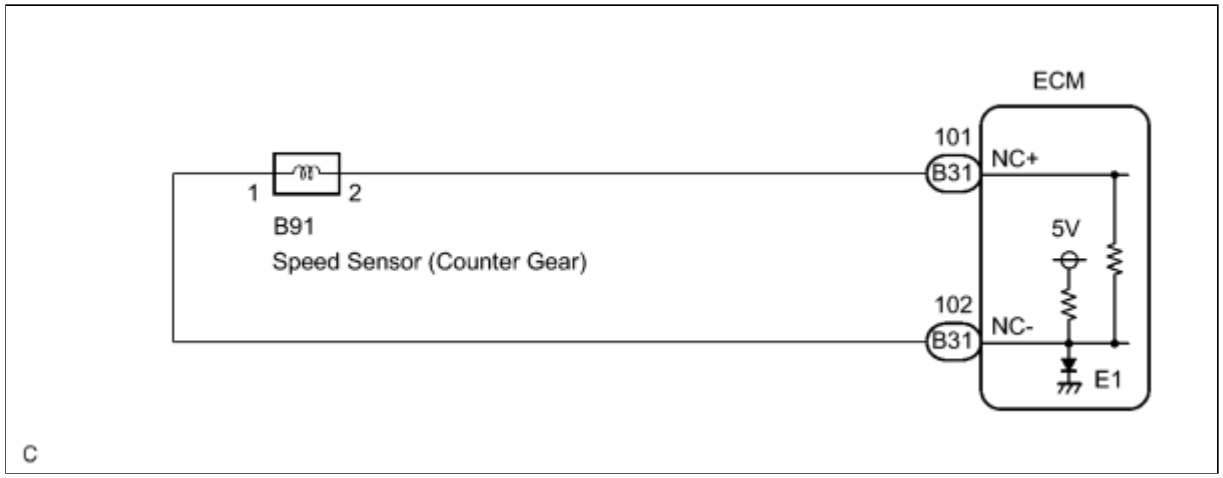
*2: The vehicle speed is 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0793: Speed sensor (NC)/Verify pulse input
Required sensors/Components	Speed sensor (NC), Speed sensor (NT), Park/neutral position switch
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	P0500 (VSS) P0748, P0778, P0798 (Shift solenoid valve(range))
Engine	Running
NSW switch	OFF
Output shaft rpm	1,000 rpm or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF



TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

Counter gear speed sensor (NC)	**HINT:** **3rd when shift lever position is D position (After warming up the engine);** • Intermediate shaft speed (NC) becomes close to the engine speed.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO **.**

HINT:

Using Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect Techstream to the DLC3.

(d) Turn the ignition switch to the on position.

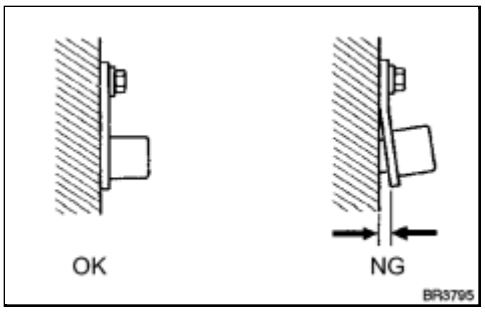
(e) Turn on the tester.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the tester, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
SPD (NC)	Counter Gear Speed/display: 50 r/min	**HINT:** **3rd when shift lever position is D position (After warming up the engine);** • Intermediate shaft speed (NC) becomes close to the engine speed.	-

HINT:



- SPD (NC) is always 0 while driving:

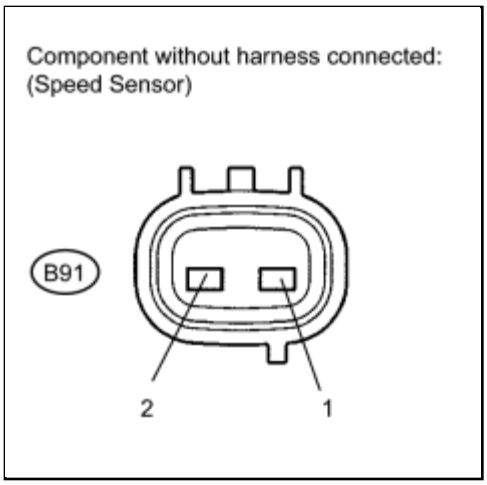
  Open or short in the sensor or circuit.
- SPD (NC) is always more than 0 and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:

  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

PROCEDURE

1.	**INSPECT SPEED SENSOR INSTALLATION**

(a) Check the speed sensor installation.



OK:

The installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG ▶ **REPLACE SPEED SENSOR (NC)**

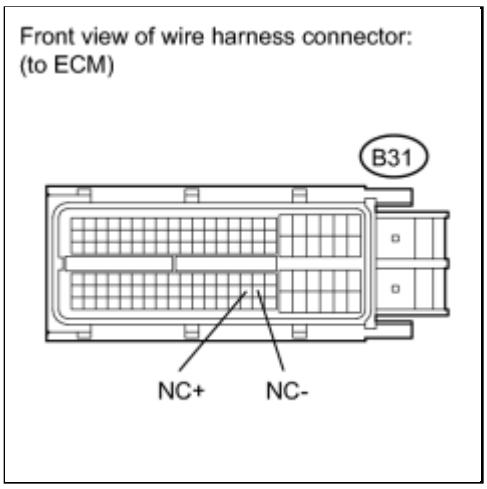
OK

2.	**INSPECT SPEED SENSOR (NC)**

(a) Disconnect the speed sensor connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20 °C (68 °F)	560 to 680 Ω

NG ▶ **REPLACE SPEED SENSOR (NC)**

OK

3.	**CHECK HARNESS AND CONNECTOR (SPEED SENSOR - ECM)**

(a) Connect the speed sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-101 (NC+) - B31-102 (NC-)	20 °C (68 °F)	560 to 680 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-101 (NC+) - Body ground	Always	10 kΩ or higher
B31-102 (NC-) - Body ground	Always	

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015W802NX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0798: Pressure Control Solenoid "C" Electrical (Shift Solenoid Valve SL3) (2010 Corolla)		

DTC	**P0798**	**Pressure Control Solenoid "C" Electrical (Shift Solenoid Valve SL3)**

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0798	• The ECM checks for an open or short in the shift solenoid valve SL3 circuit while driving and shifting gears. (1-trip detection logic) • Output signal duty equals to 100 %. (NOTE: SL3 output signal duty is less than 100 % under normal condition.)	• Open or short in shift solenoid valve SL3 circuit • Shift solenoid valve SL3 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)

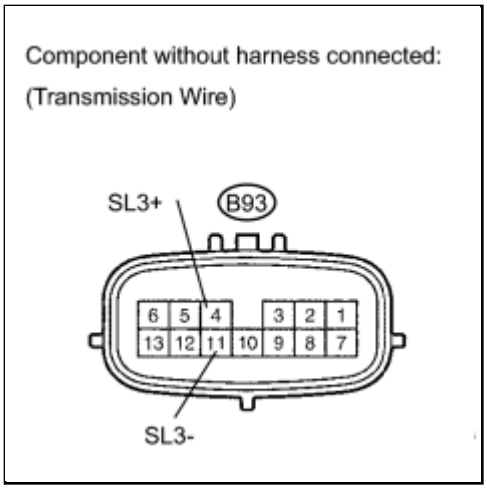
COMPONENT OPERATING RANGE

Output signal duty	Less than 100%

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

Perform the universal trip to clear permanent DTCs INFO .

PROCEDURE

1.	**INSPECT TRANSMISSION WIRE (SL3)**

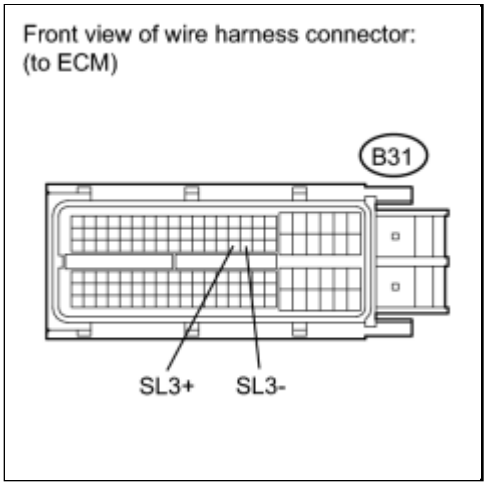
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 (SL3+) - 11 (SL3-)	20°C (68°F)	5.0 to 5.6 Ω

(c) Measure the resistance according to the value(s) in the table below.



Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 (SL3+) - Body ground	Always	10 kΩ or higher
11 (SL3-) - Body ground	Always	

NG ▶ **INSPECT SHIFT SOLENOID VALVE SL3**

OK ▼

2.	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

(a) Connect the transmission connector to the transaxle.

(b) Disconnect the connector from the ECM.

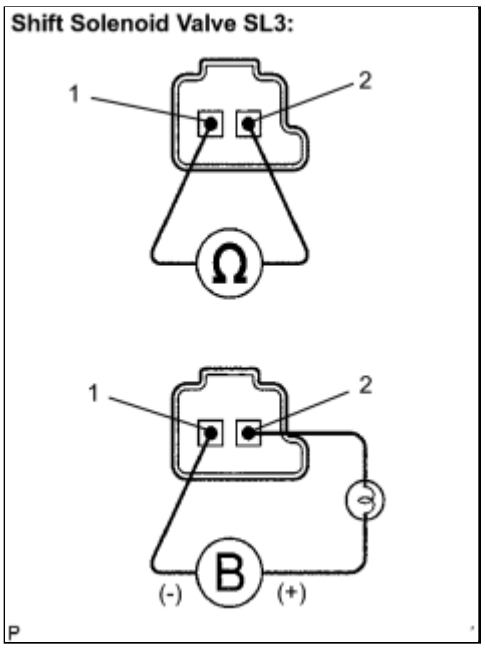
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-60 (SL3+) - B31-61 (SL3-)	20°C (68°F)	5.0 to 5.6 Ω

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-60 (SL3+) - Body ground	Always	10 kΩ or higher
B31-61 (SL3-) - Body ground	Always	

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

3.	INSPECT SHIFT SOLENOID VALVE SL3

(a) Remove the shift solenoid valve SL3.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE SL3**

OK ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015W202HX
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0982,P0983: Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4) (2010 Corolla)		

DTC	**P0982**	**Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)**

DTC	**P0983**	**Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)**

DESCRIPTION

Shifting from 1st to 5th is performed in combination with "ON" and "OFF" operation of the shift solenoid valves SL1, SL2, SL3, S4 and SR which are controlled by the ECM. If an open or short circuit occurs in either of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated smoothly (Fail safe function).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0982	ECM detects short in solenoid valve S4 circuit 2 times when solenoid valve S4 is operated (1-trip detection logic)	• Short in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM
P0983	ECM detects open in solenoid valve S4 circuit 2 times when solenoid valve S4 is not operated (1-trip detection logic)	• Open in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and illuminates the MIL and stores the DTC. And the ECM performs the fail-safe function and turns the other normal shift solenoid valves "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.)

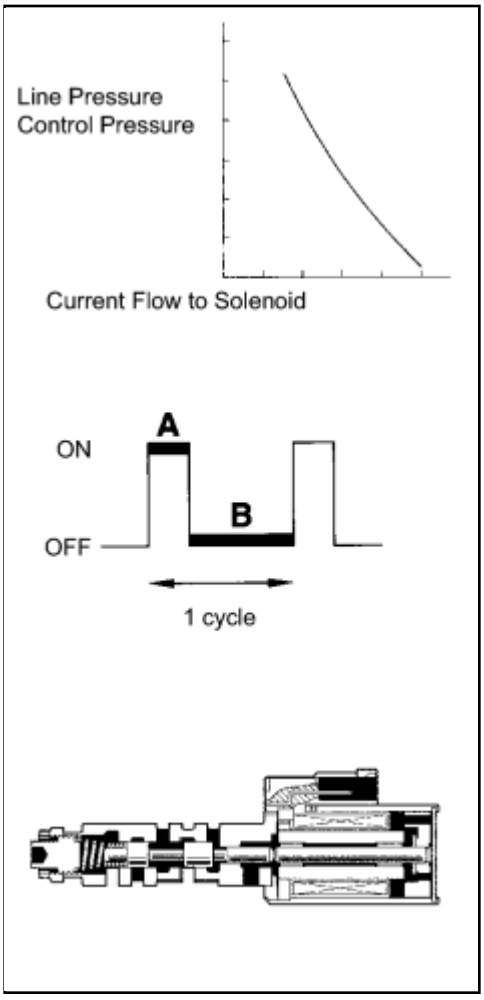
Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P2714: Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT) (2010 Corolla)		

DTC	**P2714**	**Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)**



SYSTEM DESCRIPTION

The linear solenoid valve (SLT) controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty ratio (*) of the SLT solenoid valve to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

Duty Ratio=A/(A+B) x 100(%)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2714	ECM detects a malfunction on SLT (ON side) according to the revolution difference of the turbine, intermediate and the output shaft, and also by the oil pressure. (2-trip detection logic)	• Shift solenoid valve SLT remains closed • Valve body is blocked • Automatic transaxle (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

In any forward position, when the difference in the revolutions of the turbine, Intermediate and output shaft exceeds the specified value (varies with Intermediate and output speed) determined by the ECM, the ECM illuminates the MIL and store the DTC.

When shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.

NOTICE:

If you continue driving under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Title: U250E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P2769,P2770: Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL) (2010 Corolla)		

DTC	**P2769**	**Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL)**

DTC	**P2770**	**Torque Converter Clutch Solenoid Circuit High (Shift Solenoid Valve DSL)**

DESCRIPTION

The shift solenoid valve DSL is turned "ON" and "OFF" by signals from the ECM in order to control the hydraulic pressure operation, the lock-up relay valve, which then controls operation of the lock-up clutch.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2769	ECM detects short in solenoid valve DSL circuit (0.1 sec.) when solenoid valve DSL is operated (2-trip detection logic)	• Short in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM
P2770	ECM detects open in solenoid valve DSL circuit (0.1 sec.) when solenoid valve DSL is not operated (2-trip detection logic)	• Open in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and shift range selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm (NT) to counter gear rpm (NC). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid DSL. When the DSL is opened, it applies pressure to the lock-up relay valve and locks the torque converter clutch. If the ECM detects an open or short in the DSL solenoid circuit, the ECM interprets this as a fault in the DSL solenoid or circuit. The ECM will turn on the MIL

and store the DTC.

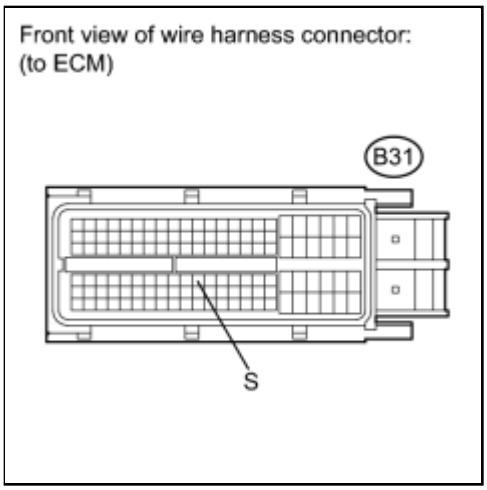
3.	**INSPECT SHIFT LOCK CONTROL UNIT (TRANSMISSION CONTROL SWITCH)**

(a) Measure resistance between each terminal of shift lock control unit assembly when the shift lever is moved to each position.

Standard resistance (Check for short):

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
6 - 13	S, "+" and "-"	Below 1 Ω
	Except S, "+" and "-"	10 kΩ or higher
5 - 11	Press continuously "+" (Up shift)	Below 1 Ω
	S	10 kΩ or higher
4 - 11	Press continuously "-" (Down shift)	Below 1 Ω
	S	10 kΩ or higher



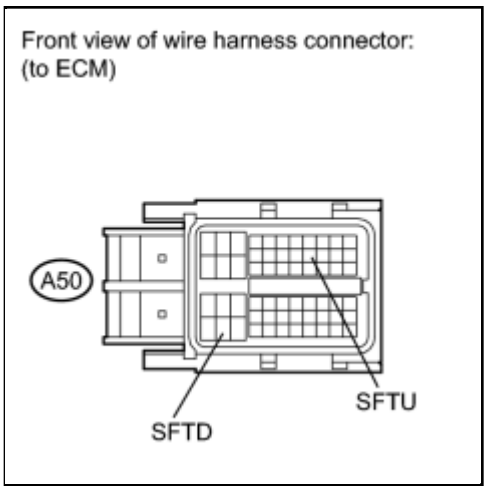
NG ▶ REPLACE SHIFT LOCK CONTROL UNIT (TRANSMISSION CONTROL SWITCH)

OK ▼

4.	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - ECM)

(a) Connect the transmission control switch connector of shift lock control unit assembly.

(b) Disconnect the ECM connector.



(c) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
B31-74 (S) - Body ground	S, "+" and "-"	11 to 14 V
	Except S, "+" and "-"	Below 1 V

(d) Turn the ignition switch off.

(e) Disconnect the ECM connector.

(f) Measure the resistance according to the value(s) in the table below when the shift lever is

moved to each position.

Standard resistance (Check for short):

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A50-16 (SFTU) - Body ground	Press continuously "+" (Up shift)	Below 1 Ω
	S	10 kΩ or higher
A50-51 (SFTD) - Body ground	Press continuously "-" (Down shift)	Below 1 Ω
	S	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 L	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000U9U07WX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM INFO .
- Perform the REGISTRATION (VIN registration) when replacing the ECM INFO

HINT:

RESET MEMORY can not be completed by only disconnecting the battery cable.

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

SWITCH TYPE		IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Expression	Ignition switch off	LOCK	Off
	Ignition switch ON	ON	On (IG)
	Ignition switch ACC	ACC	On (ACC)
	Engine start	START	Start

2. REMOVAL AND INSTALLATION PROCEDURE PRECAUTIONS

(a) The automatic transaxle is composed of highly precision-finished parts which need careful inspection before reassembly. Even a small nick could cause fluid leakage or affect the performance. The instructions here are organized so that you work on only one component group at a time. This will help avoid confusion caused by similar-looking parts of different sub-assemblies being on your workbench at the same time. The component groups are inspected and repaired from the converter housing side. Complete the inspection, repair and reassembly before proceeding to the next component group as much as possible. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because some parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups. Recommended: Toyota Genuine ATF WS

(b) All disassembled parts should be washed clean and any fluid passages and holes should be blown through with compressed air.

(c) Dry all parts with compressed air. Never use a piece of cloth to dry them.

(d) When using compressed air, always aim away from yourself to prevent accidentally spraying ATF or kerosene in your face.

(e) Only recommended automatic transaxle fluid or kerosene should be used for cleaning.

(f) After cleaning, the parts should be arranged in the correct order for efficient inspection, repair, and reassembly.

(g) New discs for the brakes and clutches that are to be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.

(h) All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.

(i) All gaskets and rubber O-rings should be replaced with new ones.

(j) Do not apply adhesive cements to gaskets and similar parts.

(k) Make sure that the ends of a snap ring are not aligned with one of the cutouts and are installed in the groove correctly.

(l) When replacing a worn bushing, the sub-assembly containing the bushing must also be replaced.

(m) Check thrust bearings and races for wear or damage. Replace them as necessary.

(n) When working with FIPG material, you must observe the following:

- Using a razor blade and a gasket scraper, remove all the old packing (FIPG) material from the gasket surface.
- Thoroughly clean all components to remove any loose material.
- Clean both sealing surfaces with a non-residue solvent.
- Parts must be reassembled within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

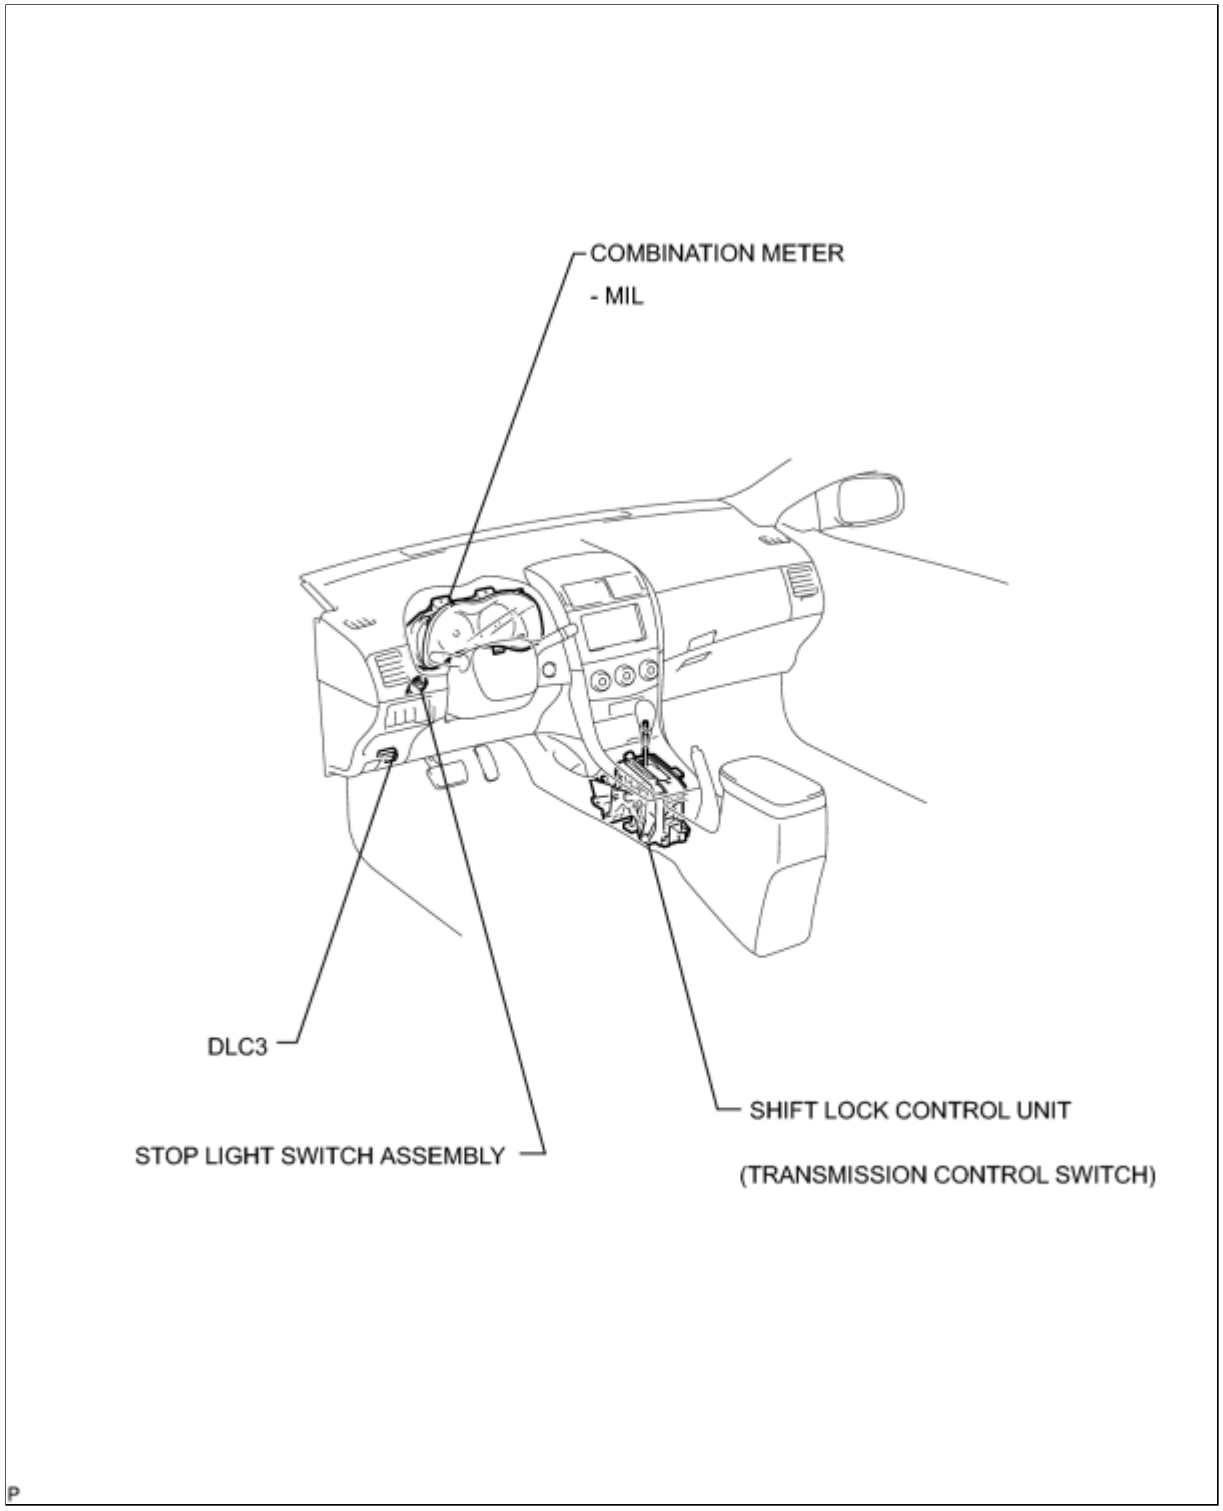
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7I0BNX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DEFINITION OF TERMS (2010 Corolla)		



DEFINITION OF TERMS

TERM	DEFINITION
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code
Typical enabling condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored until the previous monitoring has concluded.
Required sensor/components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects malfunction only one time during a single driving cycle. "Continuous" means that the ECM detects malfunction every time when enabling condition is met.
Duration	The minimum time that the ECM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the ECM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediately" means that the ECM illuminates MIL the instant the ECM determines that there is a malfunction. "2 driving cycle" means that the ECM illuminates MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective or not.

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The ECT (Electronic controlled automatic transmission/transaxle) is an automatic transmission/transaxle that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transaxle performance are improved.

Shift shock has been reduced by controlling the engine and transaxle simultaneously.

In addition, the ECT has features such as follows:

- Diagnostic function
- Fail-safe function when a malfunction occurs

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W790AWX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: ROAD TEST (2010 Corolla)		

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F) in the normal operation.

(a) D position test:

Shift into the D position and fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that 1 → 2, 2 → 3 and 3 → 4th up-shifts take place, and that the shift points conform to the automatic shift schedule INFO.

HINT:

4th Gear Up-shift Prohibition Control

- Engine coolant temperature is 40°C (104°F) or less and vehicle speed is at 70 km/h (43 mph) or less.
- ATF temperature is 0°C (32°F) or less.

4th Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.
- ATF temperature is 10°C (50°F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 → 2, 2 → 3 and 3 → 4th up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3 and 3 → 4th while driving with the shift lever in the D position, and check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.

Check vehicle speeds when the 2nd to 1st, 3rd to 2nd and 4th to 3rd kick-downs take place

while driving with the shift lever in the D position. Confirm that each speed is within the applicable vehicle speed range indicated in the automatic shift schedule INFO .

(5) Check abnormal shock and slip at kick-down.

(6) Check the lock-up mechanism.

- Drive in D position (4th gear), at a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

If there is a big jump in engine speed, there is no lock-up.

(b) 3 position test:

Shift into the 3 position and fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that the 1 → 2 and 2 → 3 up-shift take place and that the shift point conforms to the automatic shift schedule INFO .

HINT:

There is no 4th up-shift in the 3 position.

(2) Check engine braking.

While running in the 3 position and 3rd gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(c) 2 position test:

Shift into the 2 position and fully depress the accelerator pedal and check the following points.

(1) Check up-shift operation.

Check that the 1 → 2 up-shift takes place and that the shift point conforms to the automatic shift schedule INFO .

HINT:

There is no 3rd up-shift and lock-up in the 2 position.

(2) Check engine braking.

While running in the 2 position and 2nd gear, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noise during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) L position test:

Shift into the L position and fully depress the accelerator pedal and check the following points.

(1) Check no up-shift.

While running in the L position, check that there is no up-shift to 2nd gear.

HINT:

There is no lock-up in the L position.

(2) Check engine braking.

While running in the L position, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noise during acceleration and deceleration.

(e) R position test:

Shift into the R position, lightly depress the accelerator pedal, and check that the vehicle moves backward without any abnormal noise or vibration.

CAUTION:

Before conducting this test ensure that the test area is free from people and obstruction.

(f) P position test:

Stop the vehicle on the grade (more than 5°) and after shifting into the P position, release the parking brake. Then, check that the parking lock pawl holds the vehicle in place.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7A0C6X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MECHANICAL SYSTEM TESTS (2010 Corolla)		

MECHANICAL SYSTEM TESTS

1. PERFORM MECHANICAL SYSTEM TESTS

(a) Measure the stall speed.

The object of this test is to check the overall performance of the transaxle and engine by measuring the stall speeds in the D position.

NOTICE:

- Driving test should be done on a paved road (a nonskid road).
- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature 50 to 80°C (122 to 176°F).
- Do not continuously run this test for longer than 5 seconds.
- To ensure safety, do this test in a wide, clear level area which provides good traction.
- The stall test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is doing the test.

(1) Chock the 4 wheels.

(2) Connect the Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Keep your left foot pressed firmly on the brake pedal.

(5) Start the engine.

(6) Shift into the D position. Press all the way down on the accelerator pedal with your right foot.

(7) Quickly read the stall speed at this time.

Stall speed:
2410 +- 300 rpm

Evaluation:

PROBLEM	POSSIBLE CAUSE
(a) Stall engine speed is low in D position	• Engine power output may be insufficient • Stator one-way clutch not operating properly **HINT:** **If the value is less than the specified value by 600 rpm or more, the torque converter could be faulty.**
(b) Stall engine speed is high in D position	• Line pressure is too low • Forward clutch slipping • No. 2 one-way clutch not operating properly • Improper fluid level

(b) Measure the time lag.

(1) When the shift lever is shifted while the engine is idling, there will be a certain time lapse or lag before the shock can be felt. This is used for checking the condition of the clutch and brake.

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).
- Be sure to allow 1 minute interval between tests.
- Perform the test three times, and measure the time lags. Calculate the average value of the three time lags.

(2) Connect the Techstream to the DLC3.

(3) Fully apply the parking brake.

(4) Start and warm up the engine and check idle speed.

Idle speed:

approx. 700 rpm (In N position and A/C OFF)

(5) Shift the lever from N to D position. Using a stop watch, measure the time from when the lever is shifted until the shock is felt.

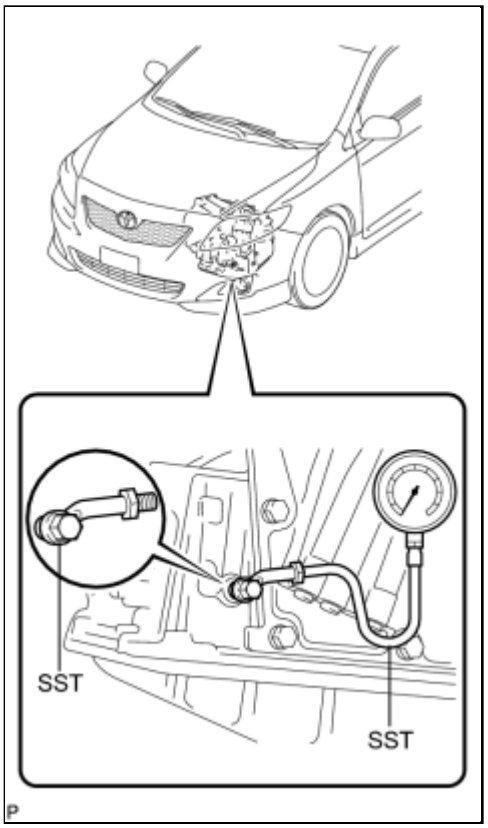
Time lag:

N → D less than 1.2 seconds

(6) In the same way, measure the time lag for N → R.

Time lag:

N → R less than 1.5 seconds



Evaluation (If N → D or N → R time lag is longer than the specified):

PROBLEM	POSSIBLE CAUSE
N → D time lag is longer	• Line pressure is too low • Forward clutch worn • No. 2 one-way clutch is not operating properly
N → R time lag is longer	• Line pressure is too low • Reverse clutch worn • 1st and reverse brake worn

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7B0BWX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: HYDRAULIC TEST (2010 Corolla)		

HYDRAULIC TEST

1. PERFORM HYDRAULIC TEST

(a) Measure the line pressure.

NOTICE:

- Perform the test at the normal operating ATF (Automatic Transmission Fluid) temperature: 50 to 80°C (122 to 176°F).
- The line pressure test should always be carried out in pairs. One technician should observe the conditions of wheels or wheel stoppers outside the vehicle while the other is performing the test.
- Be careful to prevent SST hose from interfering with the exhaust pipe.
- This Check must be conducted after checking and adjusting engine.
- Perform under condition that A/C is OFF.
- When conducting stall test, do not continue more than 5 seconds.

(1) Warm up the ATF.

(2) Remove the test plug on the front left side of the transaxle case and connect SST.

SST: 09992-00095

09992-00231

09992-00271

(3) Fully apply the parking brake and chock the 4 wheels.

(4) Connect the Techstream to the DLC3.

(5) Start the engine and check idling speed.

(6) Keep your left foot pressing firmly on the brake pedal and shift into D position.

(7) Measure the line pressure when the engine is idling.

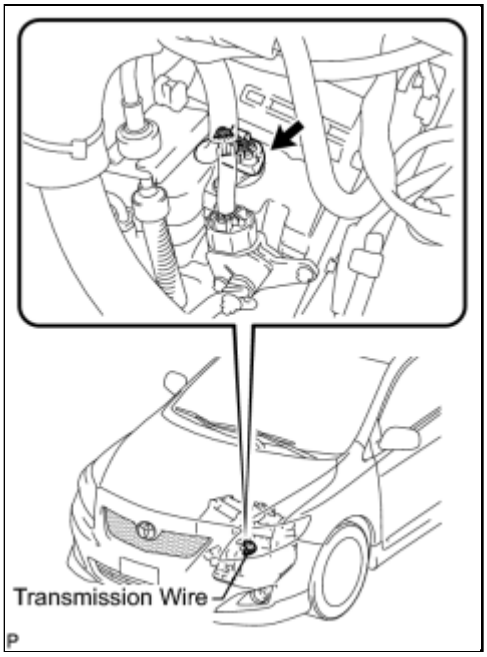
(8) Depress the accelerator pedal all the way down. Quickly read the highest line pressure when engine speed reaches stall speed.

(9) In the same way, do the test in R position.

Specified line pressure:

CONDITION	D POSITION KPA (KGF/CM^2, PSI)	R POSITION KPA (KGF/CM^2, PSI)
Idling	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)	553 to 623 kPa (5.6 to 6.4 kgf/cm^2, 80 to 100 psi)
Stall test	1120 to 1230 kPa (11.4 to 12.5 kgf/cm^2, 162 to 178 psi)	1660 to 1870 kPa (16.9 to 19.1 kgf/cm^2, 241 to 271 psi)

Evaluation:



PROBLEM	POSSIBLE CAUSE
If the measured values at all positions are higher	• Shift solenoid valve SLT defective • Regulator valve detective
If the measured values at all positions are lower	• Shift solenoid valve SLT defective • Regulator valve detective • Oil pump defective
If pressure is low in the D position only	• D position circuit fluid leak • Forward clutch defective
If pressure is low in the R position only	• R position circuit fluid leak • Reverse clutch defective • 1st and reverse brake defective

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7C0CWX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MANUAL SHIFTING TEST (2010 Corolla)		

MANUAL SHIFTING TEST

1. MANUAL SHIFTING TEST

The purpose of this manual shifting test is to determine whether a problem is caused by either mechanical or electrical factors. Disconnecting the transmission wire disables electrically-controlled automatic gear shifting. In this case, operating the shift lever is the only way to shift the transaxle gear. If the gear is not changed by shift lever operation, it is assumed that there is a mechanical problem.

(a) Turn the ignition switch off.

(b) Disconnect the transmission wire connector.

(c) Warm up the engine.

(d) Drive the vehicle.

(e) Check the transaxle operation when the shift lever is moved into L, 2, 3 and D positions.

Standard:

SHIFT LEVER	OPERATION
L to 2	No Shift (Not Change)
2 to 3	No Shift (Not Change)
3 to D	No Shift (Not Change)
D to 3	No Shift (Not Change)

SHIFT LEVER	OPERATION
3 to 2	No Shift (Not Change)
2 to L	No Shift (Not Change)

(f) Turn the ignition switch off.

(g) Connect the transmission wire connector.

(h) Clear DTCs INFO .

HINT:

When the transmission wire is disconnected, the transaxle gear will be set as listed below.

SHIFT LEVER	GEAR
P	Parking
R	Reverse
N	Neutral
D	3rd
3	3rd
2	3rd
L	3rd

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7F0B1X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: INITIALIZATION (2010 Corolla)		

INITIALIZATION

1. RESET MEMORY

NOTICE:

- Perform the RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.
- The RESET MEMORY can be performed only with the Techstream.

HINT:

The ECM memorizes the condition that the ECT controls the automatic transaxle assembly and engine assembly according to those characteristics. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

Reset procedure is as follows.

(a) Turn the ignition switch off.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON and the Techstream main switch on.

(d) Enter the following menus: Powertrain / Engine and ECT / Utility / Reset Memory. Then, press "Next".

CAUTION:

After performing the RESET MEMORY, be sure to perform the ROAD TEST INFO **described earlier.**

HINT:

The ECM is learned by performing the ROAD TEST.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7K0BOX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: MONITOR DRIVE PATTERN (2010 Corolla)		

MONITOR DRIVE PATTERN

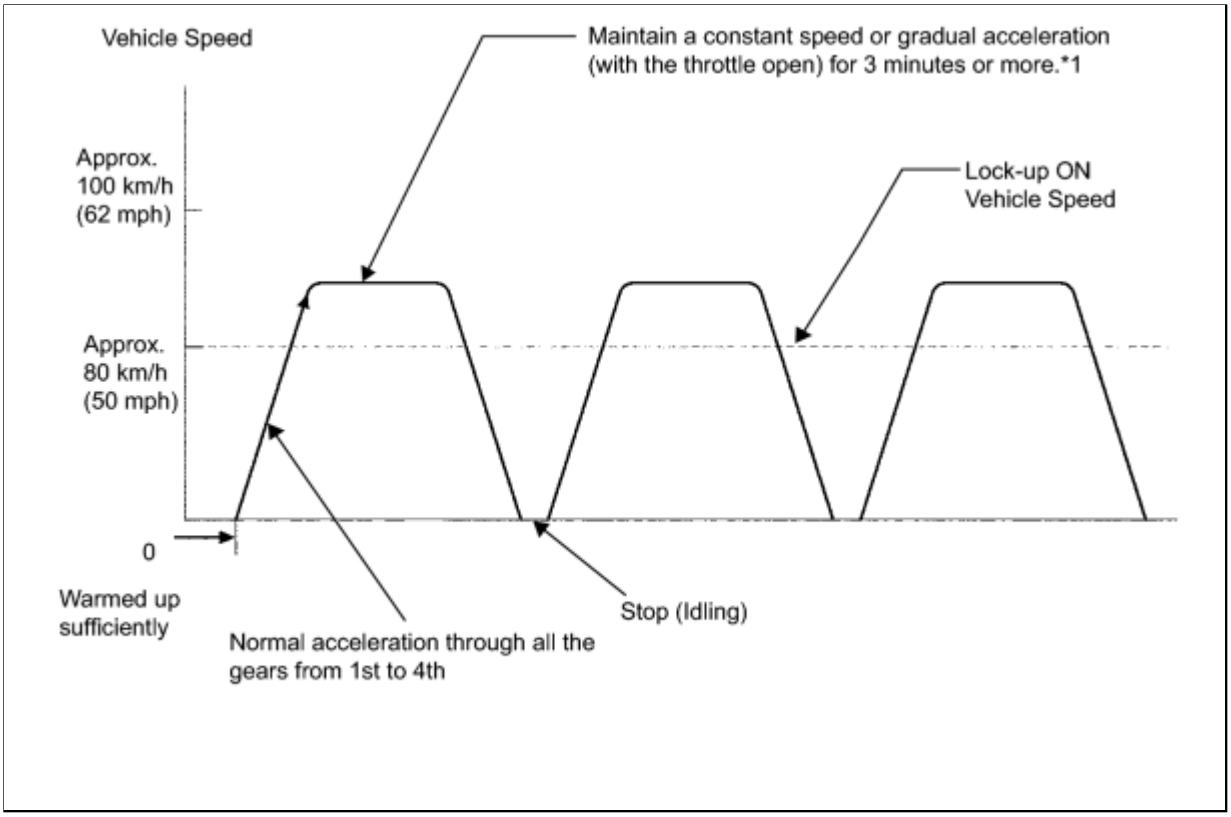
1. MONITOR DRIVE PATTERN FOR ECT TEST

(a) Perform this drive pattern as one method to simulate the detection conditions of the ECT malfunctions. (The DTCs may not be detected due the actual driving conditions. And some codes may not be detected through this drive pattern.)

HINT:

Preparation for driving

- Warm up the engine sufficiently. (Engine coolant temperature is 60°C (140°F) or higher)
- Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. (Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F))



Driving note

- Drive the vehicle through all gears.

  Stop → 1st → 2nd → 3rd → 4th → 4th (lock-up ON).
- Repeat the above driving pattern three times or more.

NOTICE:

- When using the Techstream, monitor status can be found in the "Powertrain / Engine and ECT / Data List".
- In the event that the drive pattern must be interrupted (possibly due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.
- Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.

HINT:

***1: Drive at such a speed in the uppermost gear, to engage lock-up. The vehicle can be driven at a speed lower than that in the above diagram under the lock-up condition.**

NOTICE:

If necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (ATF temperature sensor malfunction).

Last Modified: 3-10-2010	6.4 T	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W730DDX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- If a normal code is displayed during the diagnostic trouble code check although the trouble still occurs, check the electrical circuits for each symptom in the order given in the charts on the following pages and proceed to the page given for troubleshooting.
- The Matrix Chart is divided into 2 chapters.
- When the circuit on which mark *1 is attached is a malfunction, DTC could be output.

Chapter 1:

Refer to the table below when the trouble cause is considered to be electrical. If the instruction PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE is given in the flowchart of each circuit, inspect the suspected areas in descending order for each symptom. If the trouble still occurs even though there are no abnormalities in the inspections listed for the symptoms, check and replace the ECM.

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: TERMINALS OF ECM (2010 Corolla)		

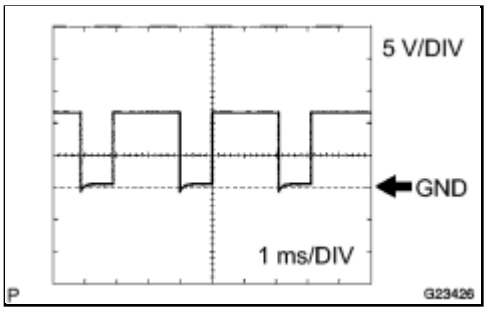
TERMINALS OF ECM

1. ECM

HINT:

Each ECM terminal's standard voltage is shown in the table below.

In the table, first follow the information under "Condition". Look under "Terminal No. (Symbols)" for the terminals to inspected. The standard voltage between the terminals is shown under "Specific Condition".

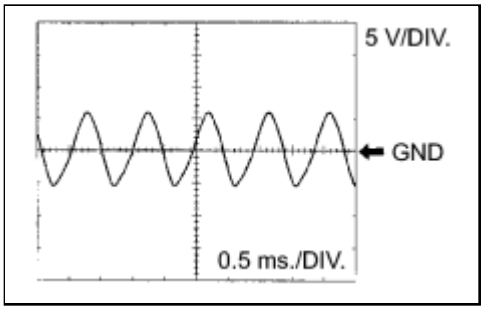


Use the illustration above as a reference for the ECM terminals.

TERMINAL NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-36 (STP) - B31-104 (E1)	Stop light switch signal	Brake pedal is depressed	7.5 to 14 V
		Brake pedal is released	Below 1.5 V
B31-52 (STAR) - B31-104 (E1)	Park neutral switch signal	Ignition switch ON and shift lever P and N position	Below 2 V
		Ignition switch ON and shift lever except P and N position	11 to 14 V
B31-73 (P) - B31-104 (E1)	Park position switch signal	Ignition switch ON and shift lever P position	11 to 14 V
		Ignition switch ON and shift lever except P position	Below 1 V
B31-53 (R) - B31-104 (E1)	R shift position switch signal	Ignition switch ON and shift lever R position	11 to 14 V

TERMINAL NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
		Ignition switch ON and shift lever except R position	Below 1 V
B31-54 (N) - B31-104 (E1)	Neutral position switch signal	Ignition switch ON and shift lever N position	11 to 14 V
		Ignition switch ON and shift lever except N position	Below 1 V
B31-56 (D) - B31-104 (E1)	D shift position switch signal	Ignition switch ON and shift lever D and 3 position	11 to 14 V
		Ignition switch ON and shift lever except D and 3 position	Below 1 V
A50-26 (3) - B31-104 (E1)	3 shift position switch signal	Ignition switch ON and shift lever 3 position	11 to 14 V
		Ignition switch ON and shift lever except 3 position	Below 1 V
B31-55 (2) - B31-104 (E1)	2 shift position switch signal	Ignition switch ON and shift lever 2 position	11 to 14 V
		Ignition switch ON and shift lever except 2 position	Below 1 V
B31-74 (L) - B31-104 (E1)	L shift position switch signal	Ignition switch ON and shift lever L position	11 to 14 V
		Ignition switch ON and shift lever except L position	Below 1 V
B31-79 (S1) - B31-104 (E1)	S1 solenoid signal	Ignition switch ON	11 to 14 V
		1st or 2nd gear	11 to 14 V
		3rd or 4th gear	Below 1 V
B31-78 (S2) - B31-104 (E1)	S2 solenoid signal	Ignition switch ON	11 to 14 V
		1st or 4th gear	11 to 14 V
		2nd or 3rd gear	Below 1 V
B31-57 (SLU+) - B31-77 (SLU-)	SLU solenoid signal	Ignition switch ON	Below 1 V
B31-80 (ST) - B31-104 (E1)	ST solenoid signal	Ignition switch ON	Below 1 V
		Ignition switch ON and R gear	11 to 14 V
B31-40 (SLT+) - B31-39 (SLT-)	SLT solenoid signal	Ignition switch ON	Pulse generation (See waveform 1)
B31-125 (NT+) - B31-124 (NT-)	Speed sensor (NT) signal	Engine is running	Pulse generation (See waveform 2)

TERMINAL NO. (SYMBOLS)	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
B31-72 (THO1) - B31-95 (ETHO)	ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V



(a) Waveform 1

Reference:

Terminal	SLT+ - SLT-
Tool setting	5 V/DIV, 1ms/DIV
Vehicle condition	Engine idle speed

(b) Waveform 2

Reference:

Terminal	NT+ - NT-
Tool setting	5 V/DIV, 0.5ms/DIV
Vehicle condition	Vehicle speed 20 km/h (12 mph)

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, a Techstream (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

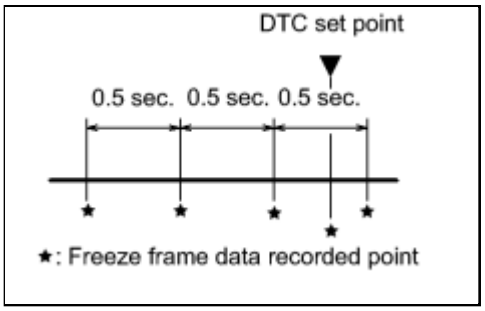
OBD II regulations require that the vehicle's on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

a. The emission control systems and components.
b. The powertrain control components (which affect vehicle emissions).
c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory. If the malfunction does not recur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check the DTCs, connect the Techstream to the DLC3. The Techstream displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the Techstream. In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. NORMAL MODE AND CHECK MODE



The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1-trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions (Techstream only).

3. 2-TRIP DETECTION LOGIC

(a) When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the ignition switch is turned off and then turned to ON again, and the same malfunction is detected again, the MIL will illuminate.

4. FREEZE FRAME DATA

(a) The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

(b) The Techstream displays freeze frame data recorded at five different points: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. The data can be used to simulate the vehicle's condition around the time of the malfunction. The data may be helpful in determining the cause of a malfunction. It may also be helpful in determining whether a DTC is being caused by a temporary malfunction.

5. CHECK DLC3

(a) Check the DLC3 INFO .

6. CHECK BATTERY VOLTAGE

(a) Measure the battery voltage.

Battery voltage:
11 to 14 V

If voltage is below 11 V, replace the battery before proceeding.

7. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch to ON.

HINT:

If the MIL does not light up, troubleshoot the combination meter.

(b) When the engine is started, the MIL should go off. If the lamp remains on, it means that the diagnosis system has detected a malfunction or abnormality in the system.

Last Modified: 3-10-2010	6.4 D	**From:** 200901

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) DTCs which are stored in the ECM can be displayed with the Techstream.

These scan tools can display pending DTCs and current DTCs. Some DTC are not stored if the ECM does not detect a malfunction during consecutive driving. However, the detected malfunction during once driving is stored as pending DTC.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(4) Confirm the DTCs and freeze frame data and then write them down.

(5) Confirm the details of the DTCs INFO.

NOTICE:

When simulating a symptom with the scan tool to check the DTCs, use normal mode. For codes on DIAGNOSTIC TROUBLE CODE CHART which are subject to "2-trip detection logic", perform the following actions.

Turn the ignition switch off after the symptom is simulated once. Then repeat the simulation process again. When the problem has been simulated twice, the MIL illuminates and the DTCs are recorded in the ECM.

2. CLEAR DTC WITH TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W780BQX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: CHECK MODE PROCEDURE (2010 Corolla)		

CHECK MODE PROCEDURE

1. DESCRIPTION

(a) Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1-trip detection logic.

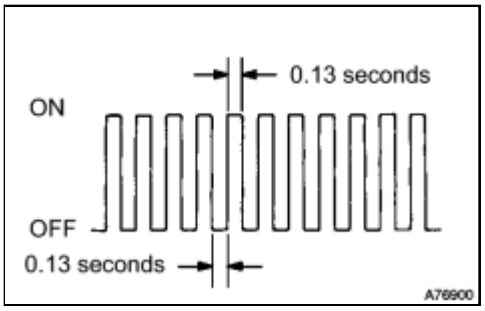
2. CHECK MODE PROCEDURE

(a) Make sure that the items below are true:

(1) Battery positive voltage 11 V or more

(2) Throttle valve fully closed

(3) Transaxle in the P or N position



(4) A/C switched OFF

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Enter the following menus: Powertrain / Engine and ECT / Utility / Check Mode.

(f) Change the ECM to check mode. Make sure the MIL flashes as shown in the illustration.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) the Techstream is used to change the ECM from normal mode to check mode or vice versa; or 2) during check mode, the ignition switch is turned from to ON to to ACC or off.

Before check mode, make notes of the DTCs and freeze frame data.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test INFO .

(Or, simulate the conditions of the malfunction described by the customer).

(i) After simulating the malfunction conditions, use the Techstream diagnosis selector to check the DTC and freeze frame data.

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

1. FAIL-SAFE

This function minimizes the loss of the ECT functions when any malfunction occurs in each sensor or solenoid.

(a) Vehicle speed signal (SPD):

When there are problems with vehicle speed signals, 4th upshift is prohibited.

(b) Input turbine speed sensor NT (Speed sensor NT):

When the input turbine speed sensor has a malfunction, 4th upshift is prohibited.

(c) ATF (Automatic Transmission Fluid) temperature sensor:

When the ATF temperature sensor has a malfunction, 4th upshift is prohibited.

(d) Shift solenoid valve SLU:

If the ECM detects a malfunction in the solenoid valve SLU, it turns the valve off.

(e) Shift solenoid valve SLT:

When the solenoid valve SLT has a malfunction, 4th upshift is prohibited.

(f) Engine coolant temperature sensor:

When the engine coolant temperature sensor has a malfunction, 4th upshift is prohibited.

(g) Knock sensor:

When the knock sensor has a malfunction, 4th upshift is prohibited.

(h) Throttle position sensor:

When the throttle position sensor has a malfunction, 4th upshift is prohibited.

(i) Shift solenoid valve S1 and S2:

Fail safe function:

If either of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.

The ECM also turns the shift solenoid valve ST OFF at the same time. If both solenoids malfunction, hydraulic control cannot be performed electronically and must be done manually.

Manual shifting as shown in the following table must be done (In case of a short circuit, the ECM stops sending current to the short circuit solenoid).

Even if starting the engine in the fail-safe mode, the gear position remains in the same position.

Normal	Solenoid Valve	S1	ON	ON	OFF	OFF
		S2	ON	OFF	OFF	ON
	Gear Position		1st	2nd	3rd	4th (O/D)

S1 Malfunction	Solenoid Valve	S1	X			
		S2	ON → OFF	OFF	OFF	ON
	Gear Position *1		3rd	3rd	3rd	4th (O/D)
S2 Malfunction	Solenoid Valve	S1	ON	ON	OFF	OFF
		S2	X			
	Gear Position *1		2nd	2nd	3rd	3rd
S1 and S2 Malfunction	Solenoid Valve	S1	X			
		S2	X			
	Gear Position *1		3rd	3rd	3rd	3rd

- *1: Actual gear shift (gear position) under fail-safe operation.
- X: OFF (the ECM stops sending current to a malfunctioning solenoid valve)
- →: Condition in the electrical malfunction is shown on the left of "→".

Condition in the fail-safe mode is shown on the right of "→".

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7E0CGX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the Techstream, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light Switch	Stop light switch Status/ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-
Neutral Position SW Signal	PNP switch Status/ON or OFF	Shift lever position is: P and N: ON Except P and N: OFF	When the shift lever position displayed on the Techstream differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. **HINT:** **When the failure still occurs even after adjusting these parts,** INFO .
Shift SW Status (R Range)	PNP switch Status/ON or OFF	Shift lever position is: P: ON Except P: OFF	↑
Shift SW		Shift lever position is:	

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Active Test".

(g) According to the display on Techstream, perform the "Active Test".

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Shift Position	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	1st/2nd /3rd/4th	Possible to check the operation of the shift solenoid valves.
Activate the Lock Up	[Test Details] Control the shift solenoid SLU to set the automatic transaxle to the lock-up condition. [Vehicle Condition] Vehicle Speed: 60 km/h (36 mph) or more, and 4th gear	ON/OFF	Possible to check the SLU operation.
Activate the Solenoid (S1)	[Test Details] Operate the shift solenoid S1. [Vehicle Condition] • Vehicle Stopped. • IDL: ON	ON/OFF	-
Activate the Solenoid (S2)	[Test Details] Operate the shift solenoid S2. [Vehicle Condition] • Vehicle Stopped. • IDL: ON	ON/OFF	-

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Activate the Solenoid (SLU)	[Test Details] Operate the shift solenoid SLU. [Vehicle Condition] • Vehicle Stopped. • Shift lever P or N position.	ON/OFF	-
Activate the Solenoid (ST)	[Test Details] Operate the shift solenoid ST. [Vehicle Condition] • Vehicle Stopped. • IDL: ON	ON/OFF	-
Activate the Solenoid (SLT)*	[Test Details] Operate the shift solenoid SLT and raise the line pressure. [Vehicle Condition] • Vehicle Stopped. • IDL: ON **HINT:** **OFF: Line pressure up (When the active test of "Activate the Solenoid (SLT)" is performed, the ECM commands the SLT solenoid to turn off).** ON: No action (normal operation)	ON/OFF	-

*: "Activate the Solenoid (SLT)" in the Active Test is performed to check the line pressure changes by connecting the SST to the automatic transaxle, which is used in the HYDRAULIC TEST INFO as well.

HINT:

The pressure values in Active Test and HYDRAULIC TEST are different from each other.

Last Modified: 3-10-2010	6.4 S	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W710BCX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the parts listed in the table below and proceed to the page given.

HINT:

- *1: Comes on MIL (Malfunction Indicator Lamp) light up
- *2: "DTC stored" mark means ECM memorizes the malfunction code if the ECM detects the DTC detection condition.
- This DTC may be output when the clutch, brake and gear components etc. inside the automatic transaxle are damaged.

AUTOMATIC TRANSAXLE SYSTEM:

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0705: Transmission Range Sensor Circuit Malfunction (PRNDL Input) (2010 Corolla)		

DTC	**P0705**	**Transmission Range Sensor Circuit Malfunction (PRNDL Input)**

DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0705	(A) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • STAR input signal is ON. • R input signal is ON. • D input signal is ON. • 2 input signal is ON. • L input signal is ON. (B) Any 2 or more signals of the following are ON simultaneously (2-trip detection logic) • P input signal is ON. • R input signal is ON. • N input signal is ON. • D input signal is ON. • 2 input signal is ON. • L input signal is ON. (C) All switches are OFF simultaneously for P, R, N, D, 2 and L positions (2-trip detection logic) (D) Both 1 and 2 are met (2-trip detection logic) 1. One of following is met a. STAR input signal is ON. b. P input signal is ON. c. R input signal is ON. d. N input signal is ON. 2. One of following is ON. a. 3 input signal is ON.	• Open or short in park/neutral position switch circuit • Park/neutral position switch • ECM

MONITOR DESCRIPTION

The park/neutral position switch detects the gearshift position and sends a signal to the ECM.

For security, the park/neutral position switch detects the gearshift position so that engine can be started only when the vehicle is in P or N shift position.

When the park/neutral position switch sends more than one signal at a time from switch positions P, R, N, D, 3, 2 or L the ECM interprets this as a fault in the switch. The ECM will turn on the MIL.

MONITOR STRATEGY

Related DTCs	P0705: Park/neutral position switch/Verify switch input
Required sensors/Components	Park/neutral position switch
Frequency of operation	Continuous
Duration	Condition (a) and (c): 2 seconds Condition (b): 60 seconds
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor runs whenever the following DTCs are not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

One of the following conditions is met: Condition (a), (b), (c) or (d)

Condition (a):

Number of following signals input simultaneously	2 or more
STAR switch	ON
R switch	ON
D switch	ON
2 switch	ON
L switch	ON

Condition (b):

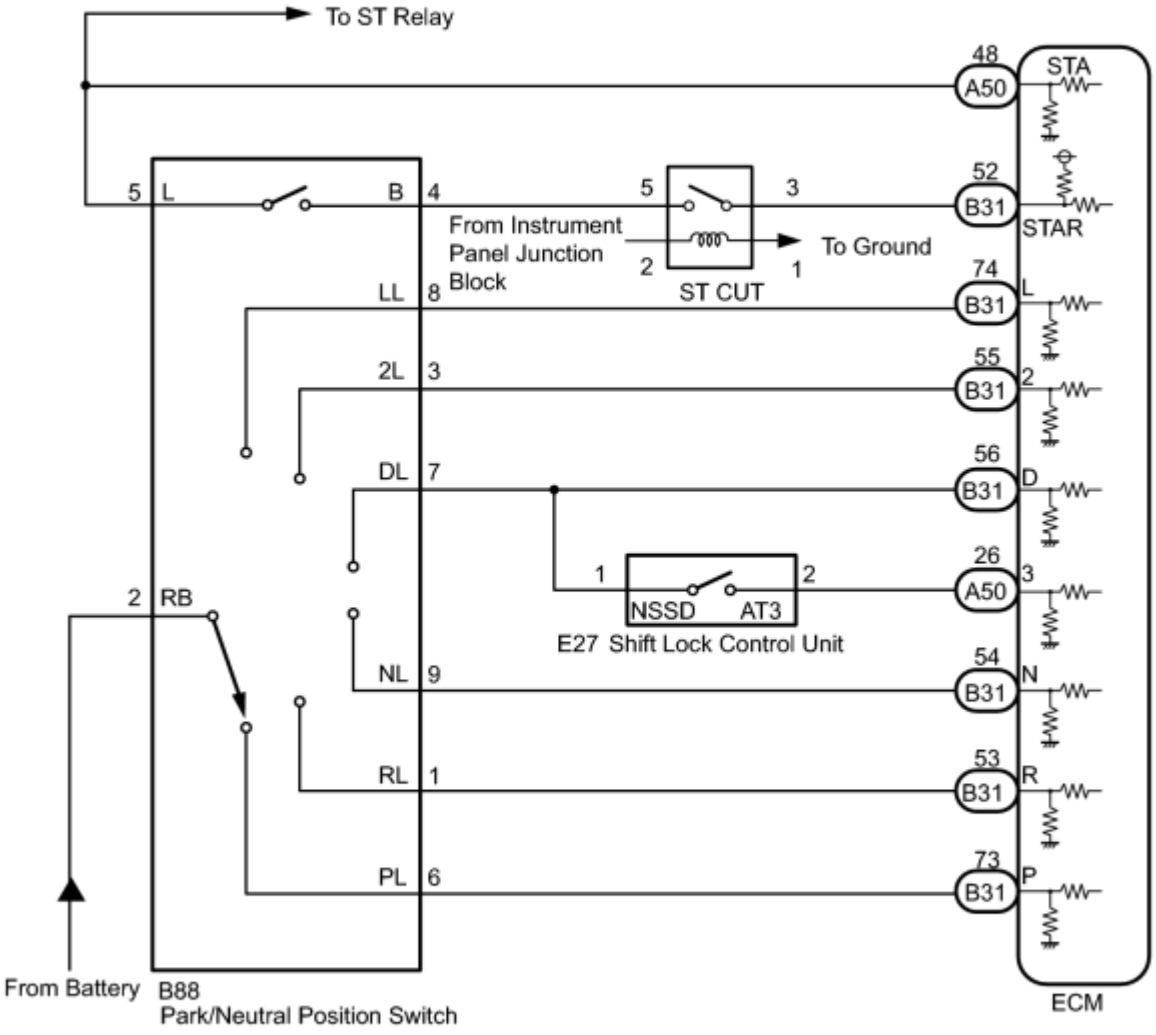
Number of following signals input simultaneously	2 or more
P switch	ON

R switch	ON
N switch	ON
D switch	ON
2 switch	ON
L switch	ON

Condition (c):
All of the following conditions are met.

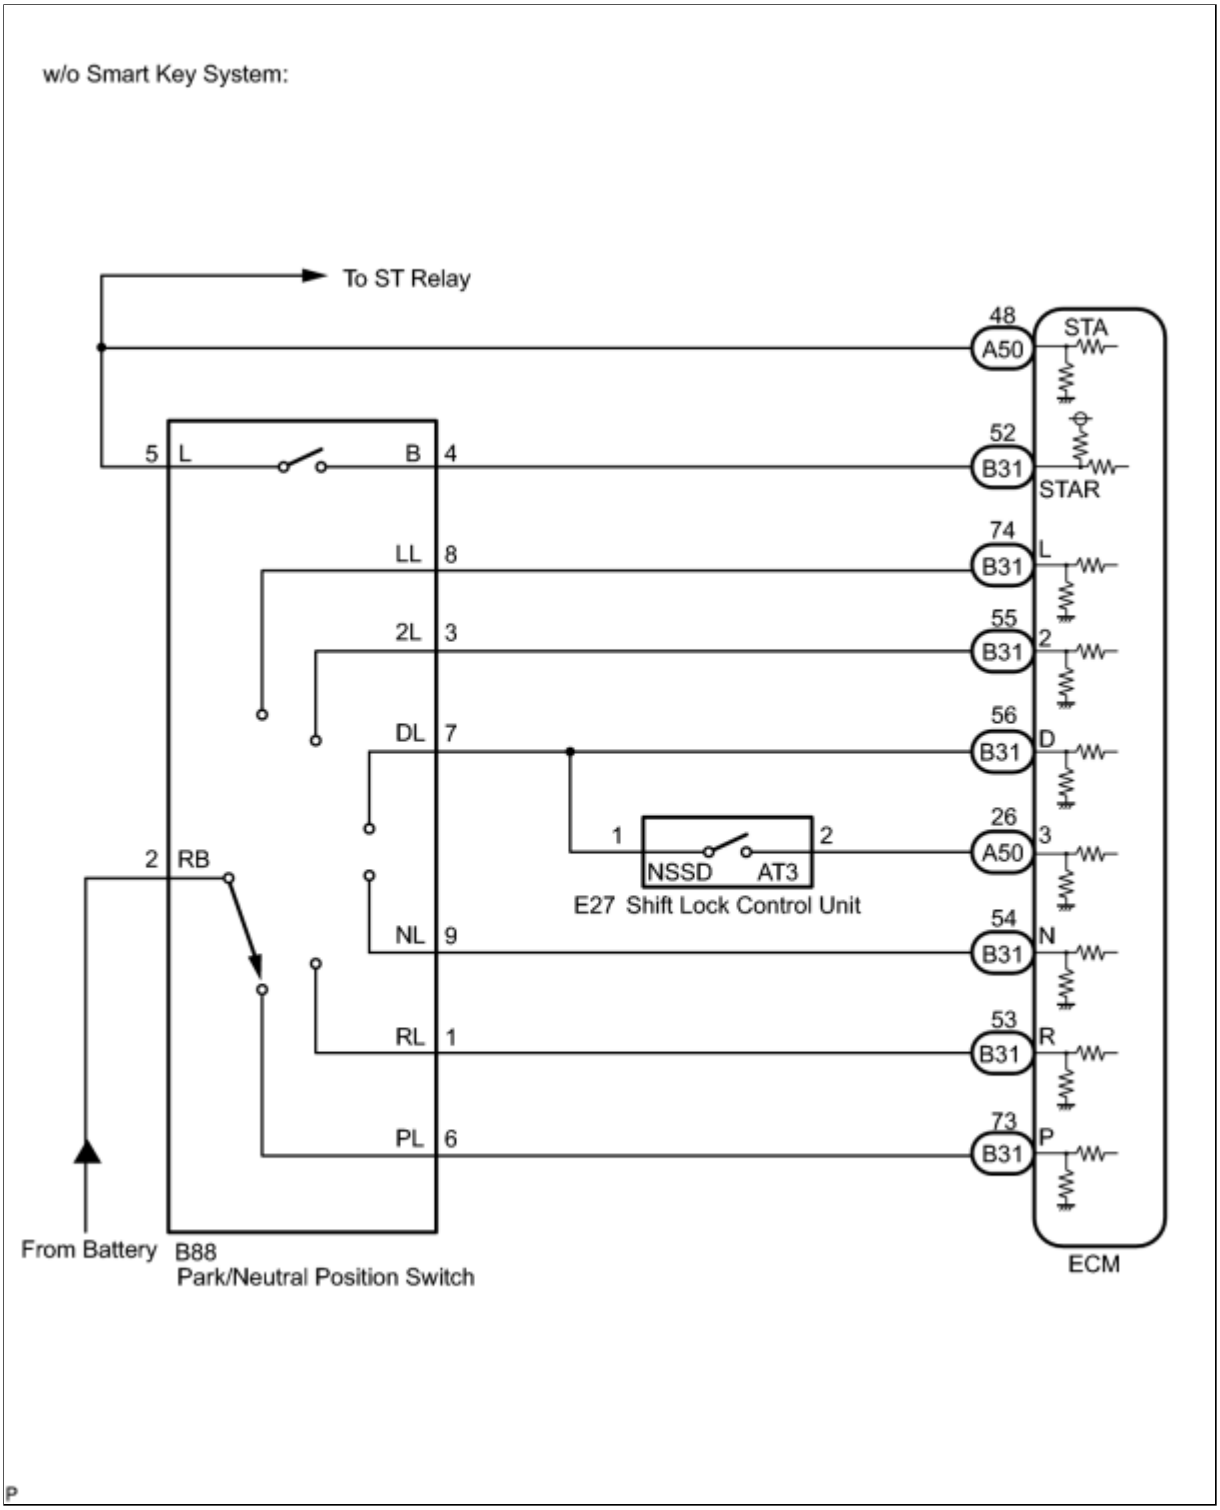
P switch	OFF
R switch	OFF
N switch	OFF
D switch	OFF
2 switch	OFF
L switch	OFF

Condition (d):
When shift lever is in P, R or N position, either of following conditions is met.



3 switch	ON
L switch	ON

COMPONENT OPERATING RANGE



Park/neutral position switch	The park/neutral position switch sends only one signal to the ECM.

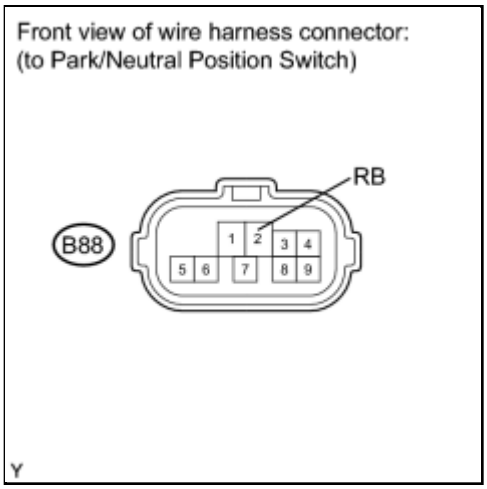
w/ Smart Key System:



P

INSPECTION PROCEDURE

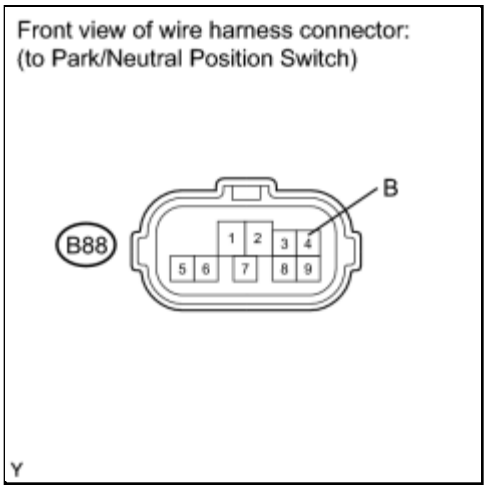
PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (BATTERY - PARK/NEUTRAL POSITION SWITCH)**

(a) Disconnect the park/neutral position switch connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.



Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B88-2 (RB) - Body ground	Ignition switch ON	11 to 14 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (OUTPUT SIGNAL)**

(a) Turn the ignition switch to ON.

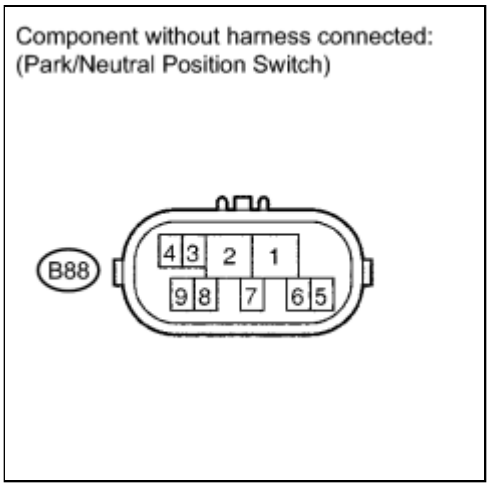
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B88-4 (B) - Body ground	Ignition switch ON	11 to 14 V

Result:

RESULT	PROCEED TO
OK	A
NG	B



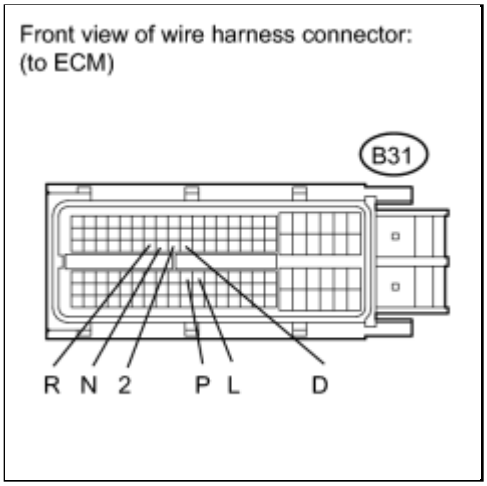
B ▶ **CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

A ▼

3.	**INSPECT PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance:



TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
4 - 5	P and N	Below 1 Ω
	Except P and N	10 kΩ or higher
2 - 6	P	Below 1 Ω
	Except P	10 kΩ or higher
2 - 1	R	Below 1 Ω
	Except R	10 kΩ or higher
2 - 9	N	Below 1 Ω
	Except N	10 kΩ or higher
2 - 7	D and 3	Below 1 Ω

	Except D and 3	10 kΩ or higher
2 - 3	2	Below 1 Ω
	Except 2	10 kΩ or higher
2 - 8	L	Below 1 Ω
	Except L	10 kΩ or higher

NG ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY**

OK ▼

4.	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

(a) Connect the park/neutral position switch connector.

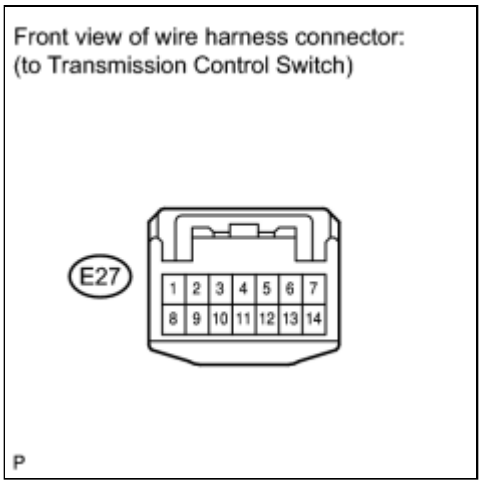
(b) Disconnect the ECM connectors.

(c) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
B31-73 (P) - Body ground	P	11 to 14 V
	Except P	Below 1 V
B31-54 (N) - Body ground	N	11 to 14 V

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
	Except N	Below 1 V
B31-53 (R) - Body ground	R	11 to 14 V*
	Except R	Below 1 V
B31-56 (D) - Body ground	D and 3	11 to 14 V
	Except D and 3	Below 1 V
B31-55 (2) - Body ground	2	11 to 14 V
	Except 2	Below 1 V
B31-74 (L) - Body ground	L	11 to 14 V
	Except L	Below 1 V



HINT:

***: The voltage will drop slightly due to lighting up of the back up light.**

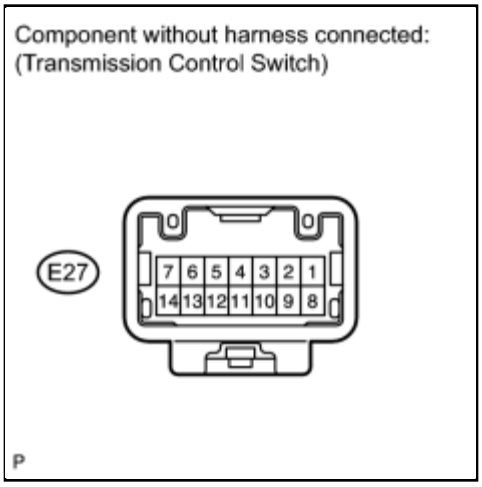
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

5.	**CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - TRANSMISSION CONTROL SWITCH)**

(a) Disconnect the transmission control switch connector of shift lock control unit assembly.

(b) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.



Standard voltage:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
1 - Body ground	D and 3	11 to 14 V
	Except D and 3	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

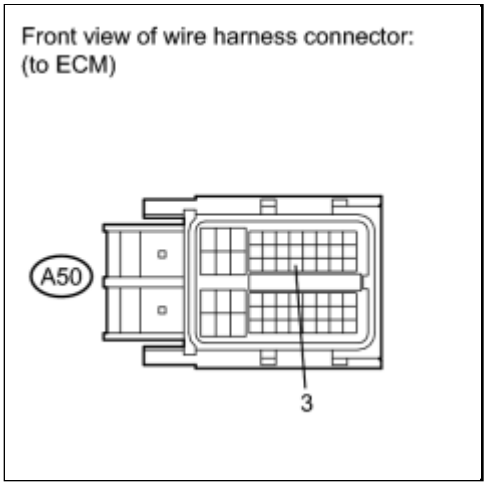
OK ▼

6.	**INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY (TRANSMISSION CONTROL SWITCH)**

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance:

TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
1 - 2	3 and 2	Below 1 Ω
	Except 3 and 2	10 kΩ or higher



Result:

RESULT	PROCEED TO
OK	A
NG	B

B ▶ **REPLACE SHIFT LOCK CONTROL UNIT ASSEMBLY**

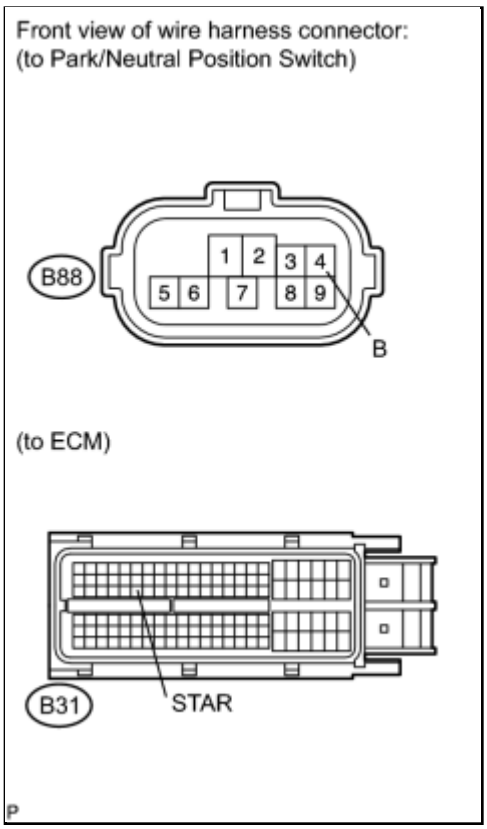
A ▼

7.	CHECK HARNESS AND CONNECTOR (TRANSMISSION CONTROL SWITCH - ECM)

(a) Connect the transmission control switch connector of shift lock control unit assembly.

(b) Turn the ignition switch to ON, and measure the voltage according to the value(s) in the table below when the shift lever is moved to each position.

Standard voltage:



TESTER CONNECTION	SHIFT POSITION	SPECIFIED CONDITION
A50-26 (3) - Body ground	3	11 to 14 V
	Except 3	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM (for 2ZR-FE)**

8.	CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)

(a) Turn the ignition switch off.

(b) Disconnect the ECM connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-4 (B) - B31-52 (STAR)	Always	Below 1 Ω

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-4 (B) or B31-52 (STAR) - Body ground	Always	10 kΩ or higher

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM (for 2ZR-FE)**

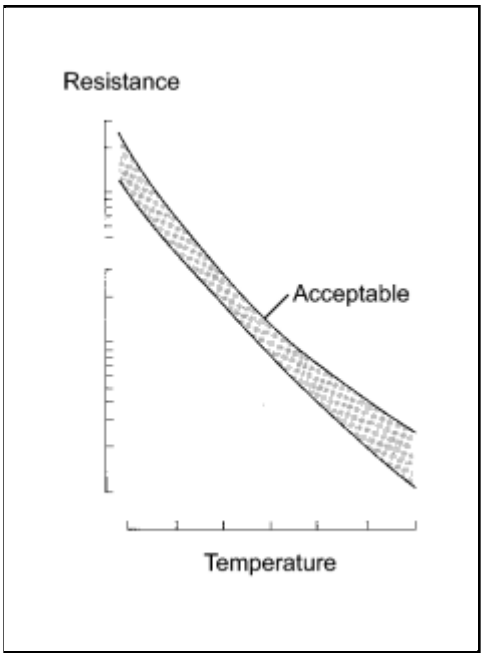
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W850AZX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0710,P0712,P0713: Transmission Fluid Temperature Sensor "A" Circuit (2010 Corolla)		

DTC	**P0710**	**Transmission Fluid Temperature Sensor "A" Circuit**

DTC	**P0712**	**Transmission Fluid Temperature Sensor "A" Circuit Low Input**

DTC	**P0713**	**Transmission Fluid Temperature Sensor "A" Circuit High Input**

DESCRIPTION



The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

The ECM applies a voltage to the temperature sensor through ECM terminal THO1 (THO).

The sensor resistance changes with the transmission fluid temperature. As the temperature becomes higher, the sensor resistance decreases.

One terminal of the sensor is grounded so that the sensor resistance decreases and the voltage goes down as the temperature becomes higher.

The ECM calculates the fluid temperature based on the voltage signal.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0710	(a) and (b) are detected momentarily within 0.5 sec. when neither P0712 nor P0713 is detected (1-trip detection logic) (a) ATF temperature sensor resistance is less than 79 Ω. (b) ATF temperature sensor resistance is more than 156 kΩ. HINT: Within 0.5 sec., the malfunction switches from (a) to (b) or from (b) to (a)	• Open or short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more (1-trip detection logic)	• Short in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM
P0713	ATF temperature sensor resistance is more than 156 kΩ when 15 minutes or more have elapsed after the engine start DTC is detected for 0.5 sec. or more (1-trip detection logic)	• Open in ATF temperature sensor circuit • Transmission wire (ATF temperature sensor) • ECM

MONITOR DESCRIPTION

These DTCs indicate an open or short in the automatic transmission fluid (ATF) temperature sensor (TFT sensor) circuit. The automatic transmission fluid (ATF) temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an opens or shorts in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω *1 or more than 156 kΩ *2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will turn on the MIL and store the DTC.

*1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.

*2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.

HINT:

The ATF temperature can be checked on the Techstream display.

MONITOR STRATEGY

P0712: Range check (Low resistance)

The monitor runs whenever the following DTCs are not present.	None
The typical enabling conditions are not available.	-

P0713: Range check (High resistance)

The monitor runs whenever the following DTCs are not present.	None
Time after engine start	15 minutes or more

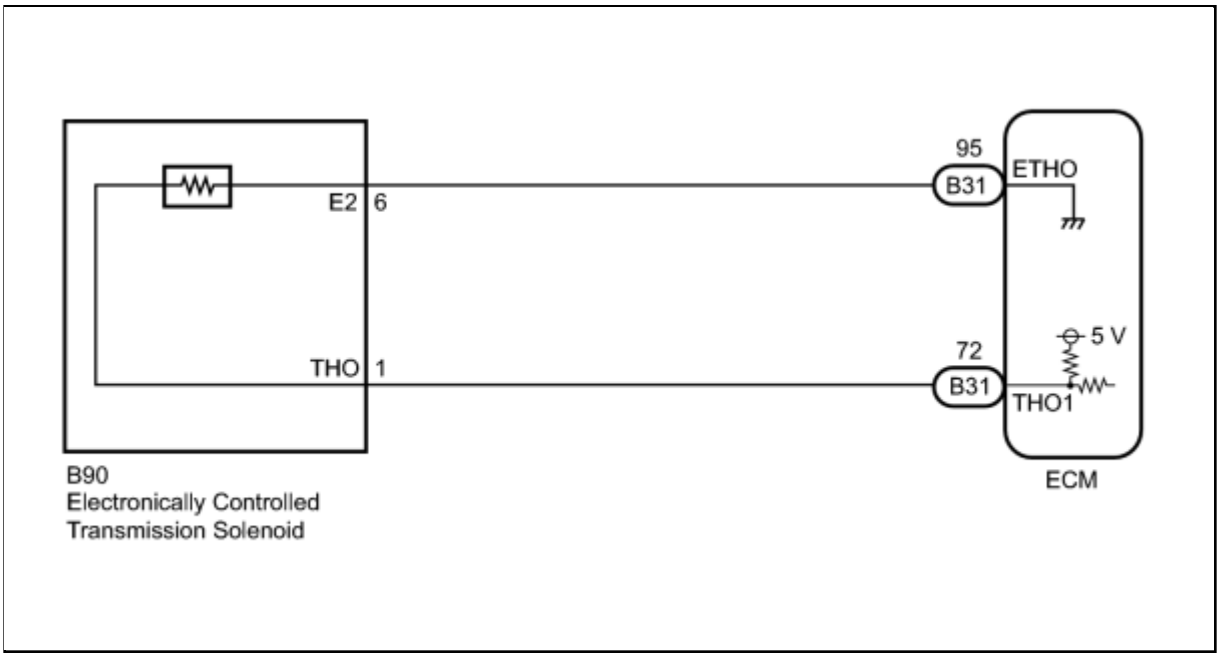
TYPICAL MALFUNCTION THRESHOLDS

P0710: Range check (Fluttering)

ATF temperature sensor (TFT sensor) resistance	Less than 79 Ω or More than 156 kΩ

P0712: Range check (Low resistance)

ATF temperature sensor (TFT sensor) resistance	Less than 79 Ω



P0713: Range check (High resistance)

ATF temperature sensor (TFT sensor) resistance	More than 156 kΩ

COMPONENT OPERATING RANGE

ATF temperature sensor (TFT sensor) resistance	Resistance: 79 Ω to 156 kΩ

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the Techstream, read the "Data List".

TESTER	MEASUREMENT	NORMAL CONDITION	DIAGNOSTIC NOTE

DISPLAY	ITEM/RANGE		
A/T Oil Temperature 1	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approx. 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor circuit is opened or shorted.

HINT:

When DTC P0712 is output and Techstream output is 150°C (302°F), there is a short circuit.

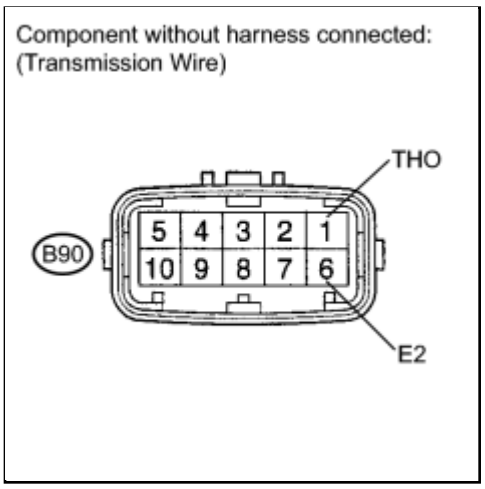
When DTC P0713 is output and Techstream output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO1 (THO) and body ground.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:

If a circuit related to the ATF temperature sensor become open, P0713 is immediately set (in 0.5 second).



When P0713 is set, P0711 cannot be detected.

It is not necessary to inspect the circuit when P0711 is set.

PROCEDURE

1.	**INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)**

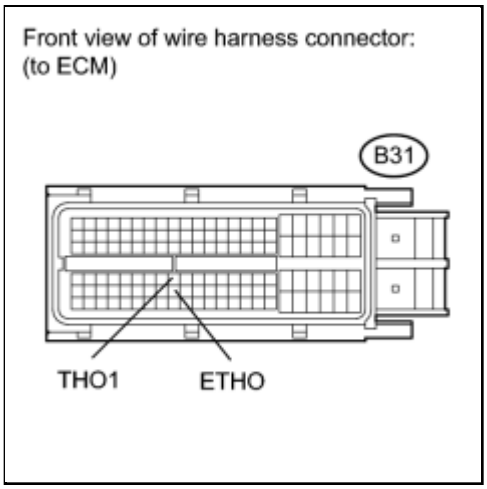
(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (THO) - 6 (E2)	Always	79 Ω to 156 kΩ
1 (THO) - Body ground	Always	10 kΩ or higher
6 (E2) - Body ground	Always	↑

HINT:



If the resistance is out of the specified range with either the ATF temperature shown in the table below, the driveability of the vehicle may decrease.

ATF Temperature	Specified Condition
10°C (50°F)	5 to 8 kΩ
25°C (77°F)	2.5 to 4.5 kΩ
110°C (230°F)	0.22 to 0.28 kΩ

NG ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)**

(a) Connect the transmission wire connector to the transaxle.

(b) Disconnect the ECM connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-72 (THO1) - B31-95 (ETHO)	Always	79 Ω to 156 kΩ

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-72 (THO1) - Body ground	Always	10 kΩ or higher
B31-95 (ETHO) - Body ground	Always	↑

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM (for 2ZR-FE)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W7Z09QX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0711: Transmission Fluid Temperature Sensor "A" Performance (2010 Corolla)		

DTC	**P0711**	**Transmission Fluid Temperature Sensor "A" Performance**

SYSTEM DESCRIPTION

The ATF (Automatic Transmission Fluid) temperature sensor converts the fluid temperature into a resistance value which is input into the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0711	Either of the following Condition (A) or (B) is met: Condition (A): All of (a), (b) and (c) are detected (2-trip detection logic): (a) Intake air and engine coolant temperatures are more than -10°C (14°F) at engine start. (b) After normal driving for over 5 minutes and 5.6 miles (9 km) or more, ATF temperature is less than 20°C (68°F). (c) 19 minutes or more have elapsed after engine start. Condition (B): Both (a) and (b) are detected (2-trip detection logic) (a) Engine coolant temperature is less than 35°C (95°F) at engine start. (b) ATF temperature is 100°C (212°F) or more when engine coolant temperature reaches 60°C (140°F).	Transmission wire (ATF temperature sensor)

MONITOR DESCRIPTION

The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature and detects opens or shorts in the ATF temperature circuit or a fault of the ATF temperature sensor.

After running the vehicle for a certain period, the ATF temperature should increase. If the ATF temperature is below 20°C (68°F) after running the vehicle for a certain period, the ECM interprets this as a fault, and turns on the MIL.

When the ATF temperature is 100°C (212°F) or more and engine coolant temperature reaches 60°C (140°F) after cold start, the ECM also determines this as a fault, turns on the MIL, and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check
Required sensors/Components	ATF temperature sensor (TFT* sensor)
Frequency of operation	Continuous
Duration	Condition (A): 3 seconds Condition (B): 10 seconds

Sequence of operation	None

*: Transmission Fluid Temperature

TYPICAL ENABLING CONDITIONS

The following conditions are common to Condition (A) and (B).

The monitor will run whenever this DTC is not present. (Not circuit malfunction)	P0710, P0712, P0713 (ATF temperature sensor circuit (TFT sensor)) P0115, P0117, P0118 (ECT sensor circuit) P0112, P0113 (IAT sensor circuit) P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P060A, P060D, P060E, P0657, P1607, P2102, P2103, P2111, P2112, P2118, P2119, P2135 (Electronic throttle control system)
ATF temperature sensor (TFT sensor) circuit	No circuit malfunction
ECT (Engine Coolant Temperature) sensor circuit	No circuit malfunction
IAT (Intake Air Temperature) sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction

Condition (A):

Time after engine start	18 minutes and 20 seconds or more
Driving distance after engine start	5.6 mile (9 km) or more
Accumulated driving time	4 minutes and 10 seconds or more
ECT	-15°C (5°F) or more
IAT (12 seconds after engine start)	-10°C (14°F) or more
ECT (12 seconds after engine start)	-10°C (14°F) or more

Condition (B):

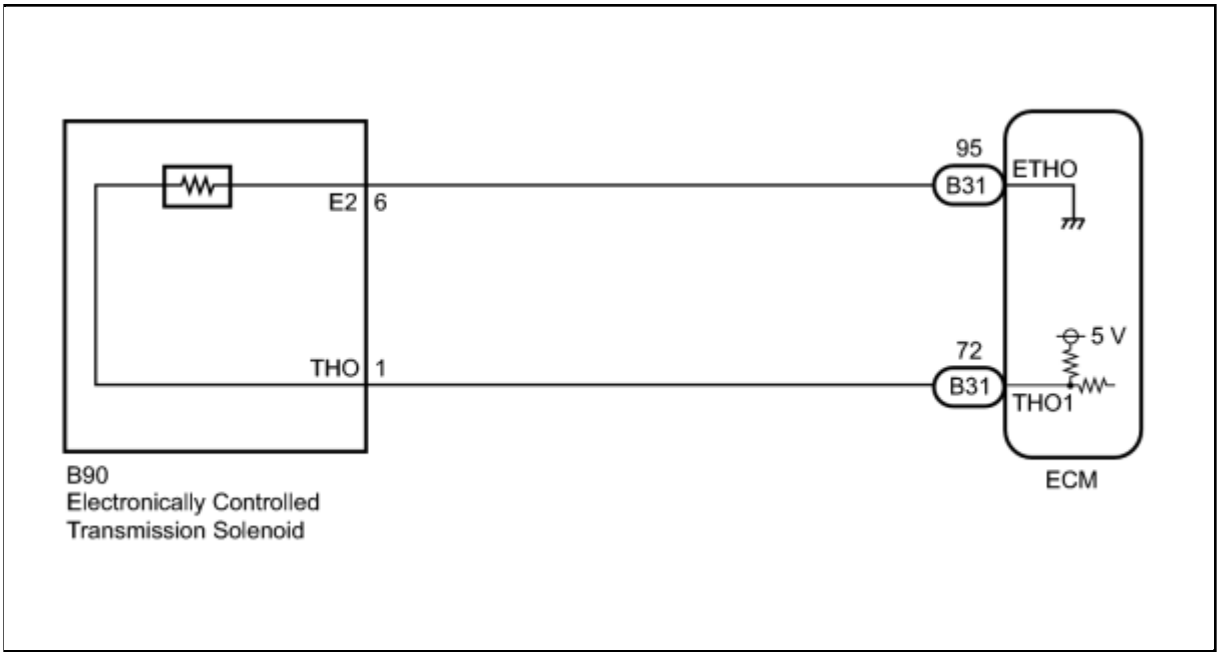
ECT (Current temperature)	60°C (140°F) or more
ECT (12 seconds after engine start)	Less than 35°C (95°F)
ATF temperature (12 seconds after engine start)	100°C (212°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: Condition (A) or (B)

Condition (A):

ATF temperature	Less than 20°C (68°F)



Condition (B):

ATF temperature	100°C (212°F) or more

COMPONENT OPERATING RANGE

ATF temperature	Atmospheric temperature to approx. 130°C (266°F)

INSPECTION PROCEDURE

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether apart is faulty or not.

1. READ DATA LIST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Data List".

(g) According to the display on the Techstream, read the "Data List".

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
A/T Oil Temperature 1	ATF Temp. Sensor Value/ min.: -40°C (-40°F) max.: 215°C (419°F)	• After Stall Test: Approx. 80°C (176°F) • Equal to ambient temperature when cold soak	If the value is "-40°C (-40°F)" or "215°C (419°F)", ATF temp. sensor circuit is opened or shorted.

HINT:

When DTC P0712 is output and the Techstream output is 150°C (302°F), there is a short circuit.

When DTC P0713 is output and the Techstream output is -40°C (-40°F), there is an open circuit.

Measure the resistance between terminal THO (TH01) and body ground.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:

If a circuit related to the ATF temperature sensor becomes open, P0713 is immediately set (in 0.5 second).

When P0713 is set, P0711 cannot be detected.

It is not necessary to inspect the circuit when P0711 is set.

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0711)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and the Techstream main switch on.

(c) When you use Techstream:

Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using the Techstream.

Result:

RESULT	PROCEED TO
P0711	A
P0711 and other DTCs	B

HINT:

If any other codes besides "P0711" are output, perform troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**CHECK TRANSMISSION FLUID LEVEL**

OK:

Automatic transmission fluid level is correct.

NG ▶ **ADD FLUID**

OK ▶ **REPLACE TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000015VR043X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0717: Turbine Speed Sensor Circuit No Signal (2010 Corolla)		

DTC	**P0717**	**Turbine Speed Sensor Circuit No Signal**

DESCRIPTION

This sensor detects the rotation speed of the input turbine. By comparing the input turbine speed signal (NT) with the output shaft speed, the ECM detects the shift timing of the gears and appropriately controls the engine torque and hydraulic pressure according to various conditions. Thus, providing smooth gear shift.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more: (1-trip detection logic) (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/neutral position switch (STAR, R and L) is OFF (c) Speed sensor (NT): less than 300 rpm	• Open or short in transmission revolution sensor NT (speed sensor NT) circuit • Transmission revolution sensor NT (speed sensor NT) • ECM • Automatic transaxle assembly

MONITOR DESCRIPTION

The input speed sensor detects the transmission input shaft speed. The ECM determines the gear shift timing based on a comparison of the input speed sensor (input shaft speed) with the output speed sensor (output shaft speed).

When the output shaft speed is higher than the expected value and the input shaft speed is 300 rpm or less while running with the shift in the D position, the ECM will conclude that there is malfunction of the input turbine speed sensor (NT). The ECM will illuminate the MIL.

MONITOR STRATEGY

Related DTCs	P0717: Turbine speed sensor/Verify pulse input

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0724: Brake Switch "B" Circuit High (2010 Corolla)		

DTC	**P0724**	**Brake Switch "B" Circuit High**

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in lock-up condition when brakes are suddenly applied.

When the brake pedal is depressed, this switch sends a signals to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0724	The stop light switch remains ON even when the vehicle is driven in a STOP (less than 3 km/h (2 mph) and GO (30 km/h (19 mph) or more) fashion 5 times. (2-trip detection logic).	• Short in stop light switch circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains on. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch and the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 3 km/h (2 mph)) and go (30 km/h (19 mph) or more) 5 times for two driving cycles in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Verify switch input
Required sensors/Components	Stop light switch, Vehicle speed sensor

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING DATA LIST**

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and

other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Data List".

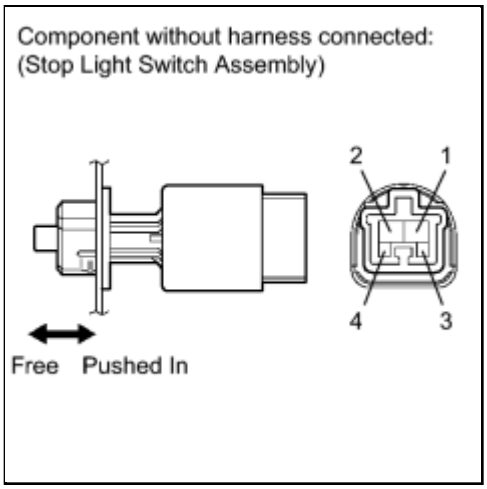
(g) According to the display on the Techstream, read the "Data List".

Standard:

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Stop Light Switch	Stop light switch Status/ON or OFF	• Brake Pedal is depressed: ON • Brake Pedal is released: OFF	-

NOTICE:

In the table above, the value listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.



Result:

RESULT	PROCEED TO
NG	A
OK	B

B ▶ **CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - ECM)**

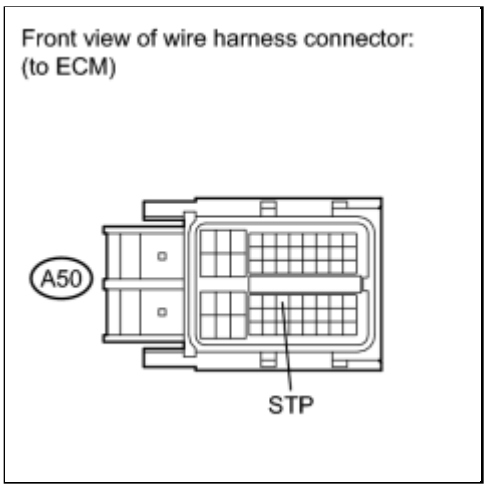
A ▼

2.	**INSPECT STOP LIGHT SWITCH ASSEMBLY**

(a) Remove the stop light switch assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:



TESTER CONNECTION	SWITCH POSITION	SPECIFIED CONDITION
1 - 2	Switch pin free	Below 1 Ω
↑	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin free	10 kΩ or higher
↑	Switch pin pushed in	Below 1 Ω

NG ▶ **REPLACE STOP LIGHT SWITCH ASSEMBLY**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH ASSEMBLY - ECM)**

(a) Install the stop light switch assembly.

(b) Disconnect the ECM connector.

(c) Measure the voltage according to the value(s) in the table below when the brake pedal is depressed and released.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-36 (STP) - Body ground	Brake pedal is depressed	11 to 14 V
	Brake pedal is released	Below 1 V

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM (for 2ZR-FE)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026F7015X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0751: Shift Solenoid "A" Performance (Shift Solenoid Valve S1) (2010 Corolla)		

DTC	**P0751**	**Shift Solenoid "A" Performance (Shift Solenoid Valve S1)**

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor and speed sensor NT to detect the actual gear position (1st, 2nd, 3rd or 4th gear).

Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect the mechanical problems of the shift solenoid valves, the valve body or automatic transaxle (clutch, brake or gear etc.).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0751	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve S1 remains open or closed • Valve body is blocked • Shift solenoid valve S1 • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd or 4th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0751: Shift solenoid valve S1/OFF malfunction Shift solenoid valve S1/ON malfunction
Required sensors/Components	Shift solenoid valve S1, Speed sensor (NT), Speed sensor (SPD), Engine coolant temperature sensor (ECT)
Frequency of operation	Continuous

Duration	OFF malfunction (a): 0.85 seconds OFF malfunction (b): 0.8 seconds ON malfunction (a): 0.8 seconds ON malfunction (b): 0.8 seconds
MIL operation	2 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to all OFF malfunctions and ON malfunctions.

The monitor will run whenever this DTC is not present. Vehicle speed (current)	Less than 52.8 mph (85 km/h)
Throttle valve opening angle (current)	Less than 35 %
Engine speed (current)	3200 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

[OFF malfunction]

Both of the following conditions met: OFF malfunctions (a) and (b)

2 detections are necessary per driving cycle.

1st detection: Temporary flag ON

2nd detection: Pending fault code ON

OFF malfunction (a):

Input speed/Output speed (NT/NO) NT: Input (turbine) speed NO: Internal counter shaft speed	0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

OFF malfunction (b):

Input speed/Output speed (NT/NO)	Changes as follows 0.95 or more and less than 1.09 (Last) (This means actual gear is 3rd) to 0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

[ON malfunction]

Both of the following conditions met: ON malfunctions (a) and (b)

ON malfunction (a):

Input speed/Output speed (NT/NO)	No change as follows 0.95 or more and less than 1.09 (Last) (This means actual gear is 3rd) to 0.64 or more and less than 0.78 (Current) (This means actual gear is 4th)

ON malfunction (b):

NE change **HINT:** **NE current - NE last** NE current: Engine speed at current ECM selected gear NE last: Engine speed at last ECM selected gear	1100 rpm or more

INSPECTION PROCEDURE

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item "Powertrain / Engine and ECT / Active Test".

(g) According to the display on the Techstream, perform the "Active Test".

HINT:

While driving, the shift position can be forcibly changed with the Techstream.

Comparing the shift position commanded by the Active Test with the actual shift position enables you to confirm the problem INFO .

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Shift Position	[Test Details] Operate the shift solenoid valve and set the each shift position by yourself. [Vehicle Condition] • IDL: ON • Less than 50 km/h (31 mph) [Others] • Press "→" button: Shift up • Press "←" button: Shift down	1st/2nd /3rd/4th	Possible to check the operation of the shift solenoid valves.

HINT:

- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the Data List/Shift Status display on the Techstream.

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P0751)**

(a) Connect the Techstream to the DLC3.

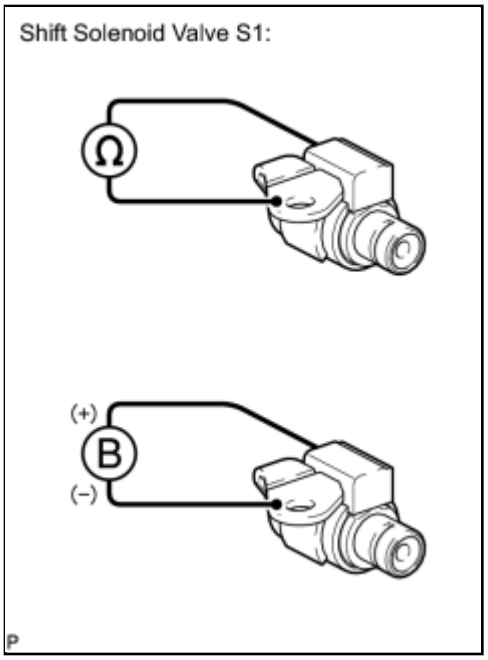
(b) Turn the ignition switch to ON and the Techstream main switch on.

(c) Select the item "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using the Techstream.

Result:

RESULT	PROCEED TO
P0751	A
P0751 and other DTCs	B



HINT:

If any other codes besides "P0751" are output, perform the troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT SHIFT SOLENOID VALVE S1**

(a) Remove the shift solenoid valve S1.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (S1) - Solenoid Body (S1)	20°C (68°F)	11 to 15 Ω

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

The solenoid makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE S1**

OK ▼

3.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

There are no foreign objects on each valve and they operate smoothly.

NG ▶ **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK ▶ **REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026F8015X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0756: Shift Solenoid "B" Performance (Shift Solenoid Valve S2) (2010 Corolla)		

DTC	**P0756**	**Shift Solenoid "B" Performance (Shift Solenoid Valve S2)**

SYSTEM DESCRIPTION

The ECM uses signals from the vehicle speed sensor and speed sensor NT to detect the actual gear position (1st, 2nd, 3rd or 4th gear).

Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect the mechanical problems of the shift solenoid valves, the valve body or automatic transaxle (clutch, brake or gear etc.).

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0756	The gear required by the ECM does not match the actual gear when driving (2-trip detection logic)	• Shift solenoid valve S2 remains open or closed • Valve body is blocked • Shift solenoid valve S2 • Automatic transaxle (clutch, brake or gear etc.)

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves "ON/OFF". According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd or 4th gear position). When the gear position commanded by the ECM and the actual gear position are not same, the ECM illuminates the MIL and stores the DTC.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000026FB013X
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P0787,P0788: Shift / Timing Solenoid Low (Shift Solenoid Valve ST) (2010 Corolla)		

DTC	**P0787**	**Shift / Timing Solenoid Low (Shift Solenoid Valve ST)**

DTC	**P0788**	**Shift / Timing Solenoid High (Shift Solenoid Valve ST)**

DESCRIPTION

Shift solenoid valve ST is switched ON-OFF by a signal from ECM so that let in or out timing of 2nd brake is adjusted by operating orifice control valve. Therefore, shift solenoid valve ST operates when letting in or out reverse clutch.

If the shift solenoid valve ST is broken, the shift shock becomes big.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0787	ECM detects short in solenoid valve ST circuit 2 times when solenoid valve ST is operated (1-trip detection logic)	• Short in shift solenoid valve ST circuit • Shift solenoid valve ST • ECM
P0788	ECM detects open in solenoid valve ST circuit 2 times when solenoid valve ST is not operated (1-trip detection logic)	• Open in shift solenoid valve ST circuit • Shift solenoid valve ST • ECM

MONITOR DESCRIPTION

The ECM commands gearshift by turning the shift solenoid valves "ON/OFF". When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem and the MIL comes on. Illuminating the MIL, the ECM performs the fail-safe and turns the other shift solenoid valves in good condition "ON/OFF" (In case of an open or short circuit, the ECM stops sending current to the circuit.).

MONITOR STRATEGY

Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0976: Range check (Low resistance)

The monitor runs whenever the following DTCs are not present.	None
Solenoid	ON
Time after solenoid OFF to ON	More than 0.008 seconds

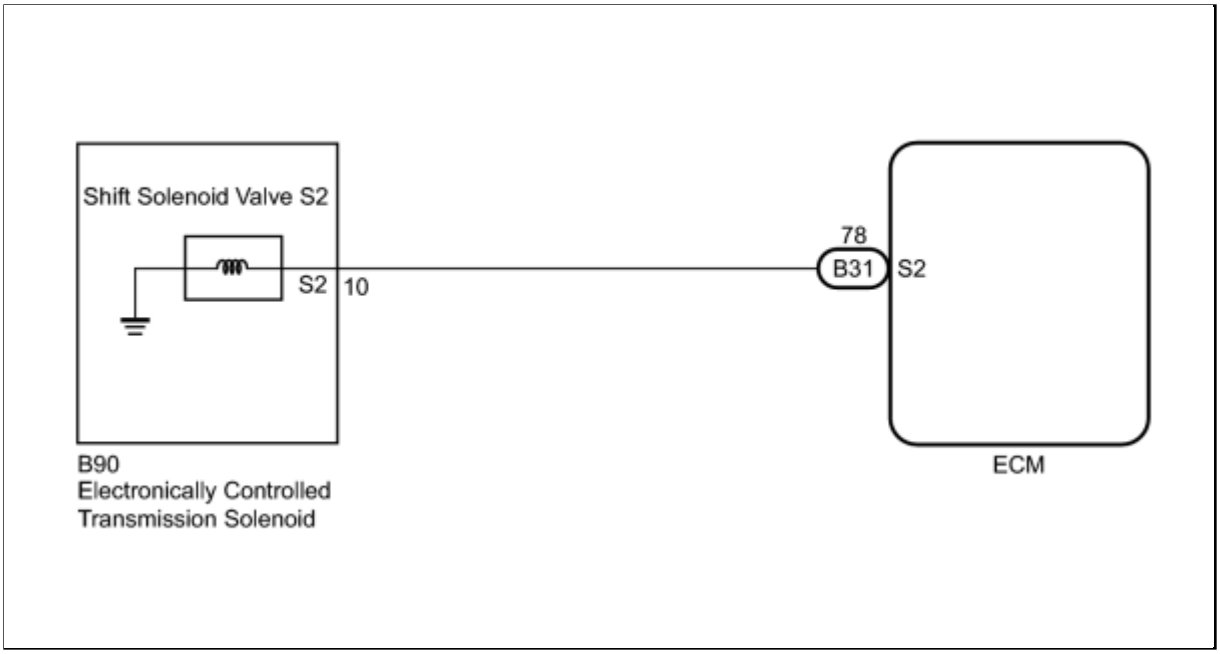
P0977: Range check (High resistance)

The monitor runs whenever the following DTCs are not present.	None
Solenoid	OFF
Time after solenoid ON to OFF	More than 0.008 seconds

TYPICAL MALFUNCTION THRESHOLDS

P0976: Range check (Low resistance)

Shift solenoid valve S2 resistance	8 Ω or less

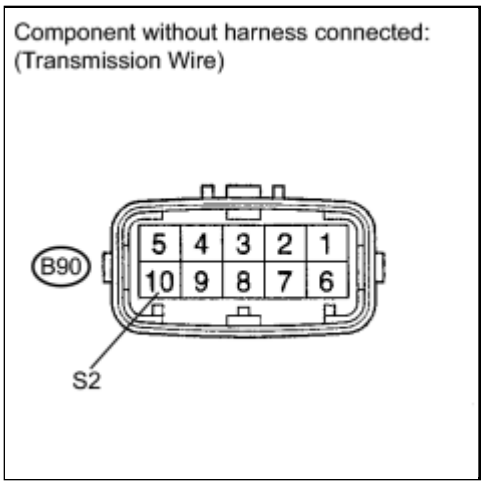


P0977: Range check (High resistance)

Shift solenoid valve S2 resistance	100 kΩ or more

COMPONENT OPERATING RANGE

Shift solenoid valve S2 resistance	11 to 15 Ω at 20°C (68°F)



WIRING DIAGRAM

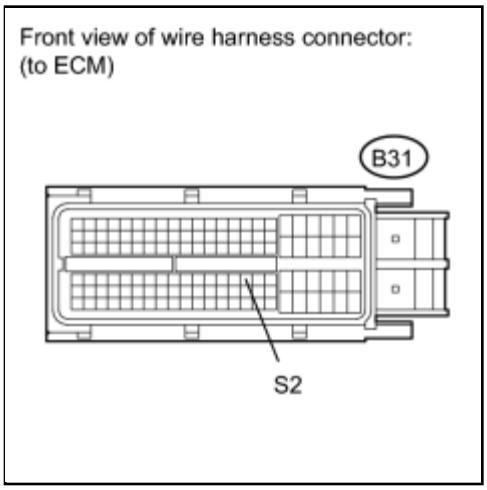
INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT TRANSMISSION WIRE (S2)**

(a) Disconnect the transmission wire connector from the transaxle.

(b) Measure the resistance according to the value(s) in the table below.



Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
10 - Body ground	20°C (68°F)	11 to 15 Ω

NG ▶ INSPECT SHIFT SOLENOID VALVE S2

OK ▼

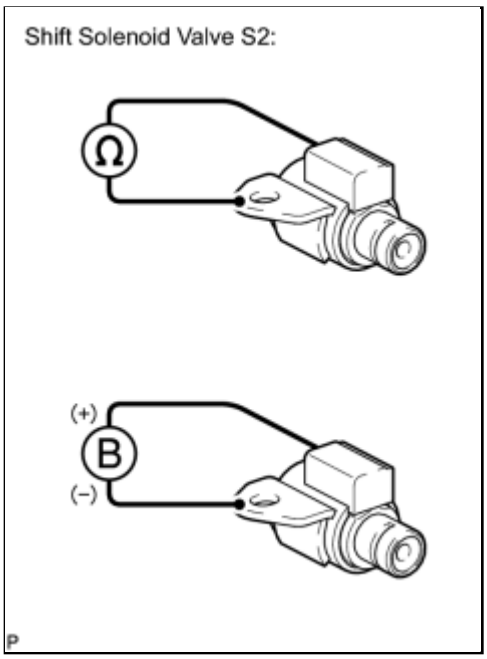
2.	CHECK HARNESS AND CONNECTOR (TRANSMISSION WIRE - ECM)

(a) Connect the transmission wire connector to the transaxle.

(b) Disconnect the ECM connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-78 (S2) - Body ground	20°C (68°F)	11 to 15 Ω

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE ECM (for 2ZR-FE)

3.	INSPECT SHIFT SOLENOID VALVE S2

(a) Remove the shift solenoid valve S2.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Solenoid Connector (S2) - Solenoid Body (S2)	20°C (68°F)	11 to 15 Ω

(c) Connect the positive (+) lead to the terminal of the solenoid connector, and the negative (-) lead to the solenoid body.

OK:

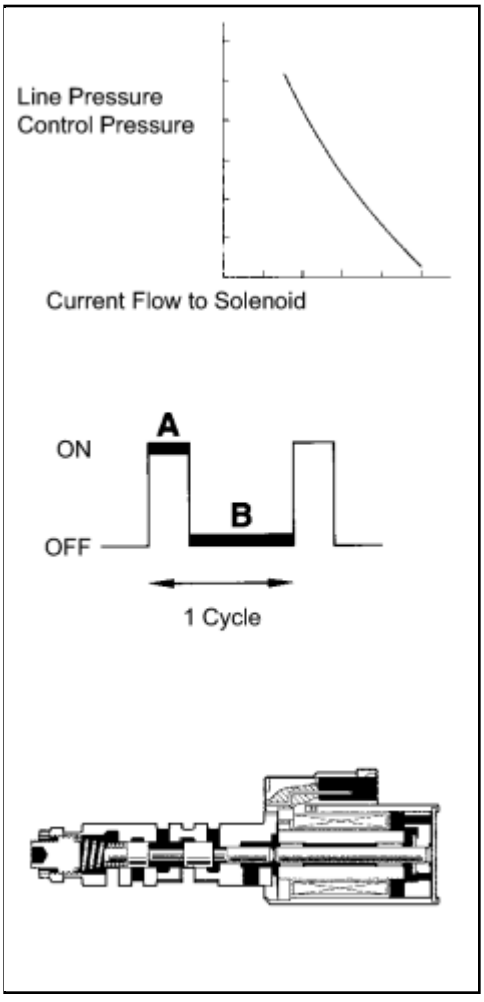
The solenoid makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE S2**

OK ▶ **REPAIR OR REPLACE TRANSMISSION WIRE**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002QVF00YX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P2714: Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT) (2010 Corolla)		

DTC	**P2714**	**Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)**



SYSTEM DESCRIPTION

The shift solenoid valve SLT controls the transmission line pressure for smooth transmission operation based on signals from the throttle position sensor and the vehicle speed sensor. The ECM adjusts the duty ratio (*) of the shift solenoid valve SLT to control hydraulic line pressure coming from the primary regulator valve. Appropriate line pressure assures smooth shifting with varying engine outputs.

(*): Duty Ratio

The duty ratio is the ratio of the period of continuity in one cycle. For example, if A is the period of continuity in one cycle, and B is the period of non-continuity, then

Duty Ratio = A/(A + B) x 100 (%)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2714	ECM detects a malfunction on SLT (ON side) according to the revolution difference of the turbine, intermediate and the output shaft, and also by the oil pressure. (2-trip detection logic)	• Shift solenoid valve SLT remains closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear, etc.)

MONITOR DESCRIPTION

In any forward position, when the difference between the revolutions of the turbine, Intermediate and output shaft exceeds the specified value (varies with Intermediate, output speed) determined by the ECM, the ECM illuminates the MIL and store the DTC.

When shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.

NOTICE:

If you continue driving under these conditions, the clutch will burn out and the vehicle will no longer be drivable.

MONITOR STRATEGY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000W8D05BX
Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P2757: Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU) (2010 Corolla)		

DTC	**P2757**	**Torque Converter Clutch Pressure Control Solenoid Performance (Shift Solenoid Valve SLU)**

SYSTEM DESCRIPTION

The ECM uses the signals from the throttle position sensor, turbine (input) speed sensor, vehicle speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.

Then the ECM compares the engagement condition of the lock-up clutch with the lock-up schedule in the ECM memory to detect mechanical problems of shift solenoid valve SLU, valve body and torque converter clutch.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2757	Lock-up does not occur when driving in lock-up range or lock-up remains ON in lock-up OFF range. (2-trip detection logic)	• Shift solenoid valve SLU remains open or closed • Valve body is blocked • Shift solenoid valve SLU • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • Line pressure is too low

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the speed sensor (NT), engine rpm (NE), engine load, engine coolant temperature, vehicle speed, transmission fluid temperature, and gear selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing

input turbine rpm (NT) to output shaft speed. When conditions are appropriate, the ECM requests lock-up by applying the control voltage to shift solenoid valve SLU. When SLU is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.

If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in shift solenoid valve SLU or lock-up system performance. The ECM turns on the MIL and stores the DTC.

Example:

When either of the following is met, the system judges it as a malfunction.

- There is a difference in the rotations of the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.

  (Engine speed is at least 100 rpm greater than input turbine speed.)
- There is no difference in the rotations of the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up off.

  (The difference between engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P2757: Shift solenoid valve SLU/OFF malfunction Shift solenoid valve SLU/ON malfunction
Required sensors/Components	Shift solenoid valve SLU, Speed sensor (NT), Crankshaft position sensor (NE), Engine coolant temperature sensor (ECT)

Time after shifting N to D	4.5 seconds or more
ECT (Engine Coolant Temperature)	60°C (140°F) or more
Transmission shift position	D
ECM selected gear	3rd or 4th
Vehicle speed	15.5 mph (25 km/h) or more
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction
Shift solenoid valve SLU circuit	No circuit malfunction
ECT sensor circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Speed sensor (NT) circuit	No circuit malfunction
Speed sensor (SPD) circuit	No circuit malfunction

OFF malfunction:

ECM lock-up command	ON
Duration time from lock-up on command	3 seconds or more
Actual gear	3rd or 4th

ON malfunction:

ECM lock-up command	OFF
Throttle valve opening angle	8 % or more
Vehicle speed	Less than 37.3 mph (60 km/h)
Actual gear	3rd
Calculated load value	22 % or more

TYPICAL MALFUNCTION THRESHOLDS

OFF malfunction:

Engine speed - Input (turbine) speed (NE - NT)	100 rpm or more

[ON malfunction]

2 detections are necessary per driving cycle.

1st detection: Temporary flag ON

2nd detection: Pending fault code ON

Vehicle speed must be under 6.2 mph (10 km/h) once before 2nd detection.

ON malfunction:

Difference between engine speed and Input (turbine) speed	Less than 35 rpm

INSPECTION PROCEDURE

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

1. PERFORM ACTIVE TEST

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

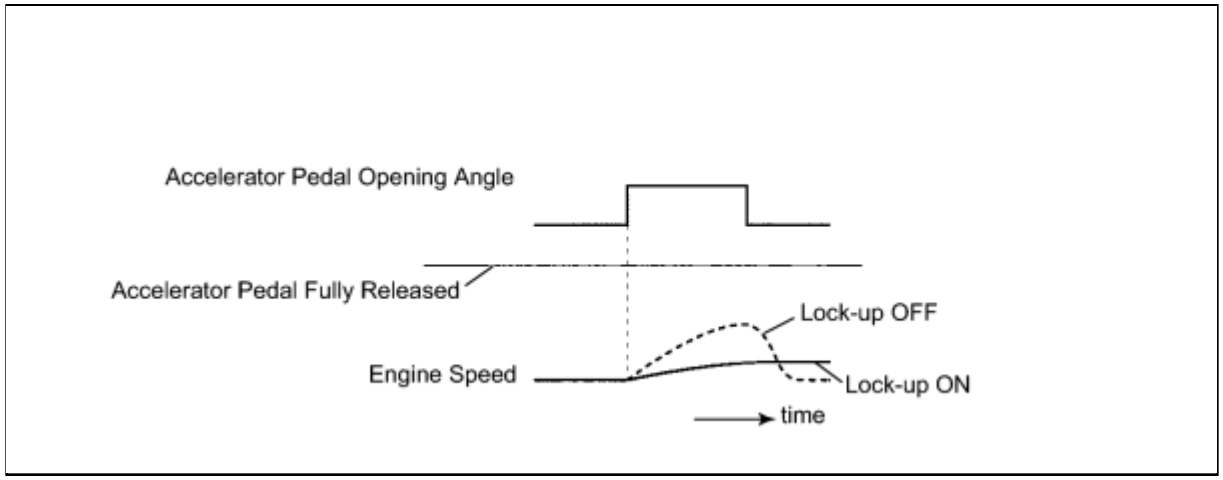
(d) Turn the ignition switch to ON.

(e) Turn on the Techstream.

(f) Select the item: "Powertrain / Engine and ECT / Active Test".

(g) According to the display on the Techstream, perform the Active Test.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Activate the Lock Up	[Test Details] Control the shift solenoid SLU to set the automatic transaxle to the lock-up condition. [Vehicle Condition] Vehicle Speed: 60 km/h (36 mph) or more, and 4th gear	ON/OFF	Possible to check the SLU operation.



HINT:

- This test can be conducted when the vehicle speed is 60 km/h (36 mph) or more.
- This test can be conducted in the 4th gear.

(h) Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:

- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is on.
- Slowly release, but not fully, the accelerator pedal in order to decelerate. (Fully releasing the pedal will close the throttle valve and lock-up may be turned off.)

PROCEDURE

1.	**CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2757)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and the Techstream main switch on.

(c) Select the item: "Powertrain / Engine and ECT / Trouble Codes".

(d) Read the DTCs using the Techstream.

Result:

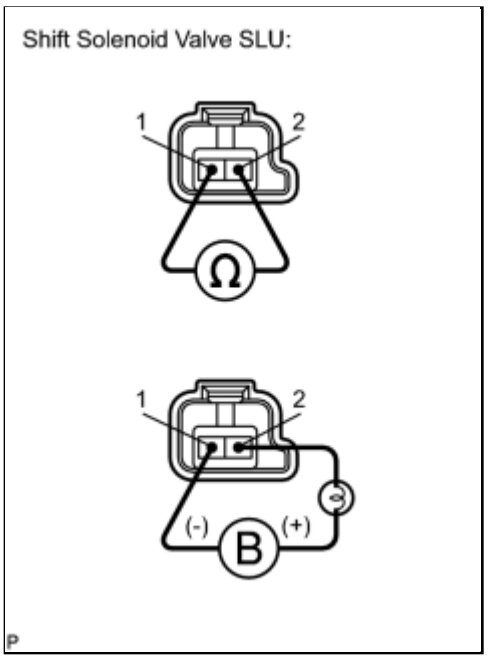
RESULT	PROCEED TO
P2757	A
P2757 and other DTCs	B

HINT:

If any other codes besides "P2757" are output, perform the troubleshooting for those DTCs first.

B ▶ **GO TO DTC CHART**

A



2.	INSPECT SHIFT SOLENOID VALVE SLU

(a) Remove the shift solenoid valve SLU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	5.0 to 5.6 Ω

(c) Connect the positive (+) lead with a 21 W bulb to terminal 2 and negative (-) lead to terminal 1 of the solenoid valve connector, then check the movement of the valve.

OK:

The solenoid makes an operating sound.

NG ▶ **REPLACE SHIFT SOLENOID VALVE SLU**

OK

3.	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

OK:

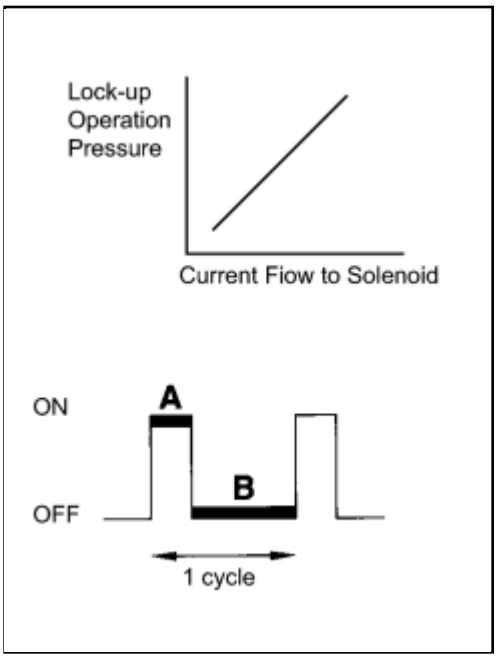
There are no foreign objects on each valve and they operate smoothly.

NG ▶ **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4.	**INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY**

OK:
The torque converter clutch operates normally.



NG ▶ **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK ▶ **REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY**

Title: U341E AUTOMATIC TRANSMISSION / TRANSAXLE: AUTOMATIC TRANSAXLE SYSTEM: P2759: Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU) (2010 Corolla)		

DTC	**P2759**	**Torque Converter Clutch Pressure Control Solenoid Control Circuit Electrical (Shift Solenoid Valve SLU)**

DESCRIPTION

The amount of current flowing to the solenoid is controlled by the duty ratio* of the ECM output signal. The higher the duty ratio* becomes, the higher the lock-up hydraulic pressure becomes during the lock-up operation.

*: The duty ratio is the ratio of the current ON time (A) to the total of the current ON and OFF times (A + B).

Duty Ratio = A / (A + B) x 100 (%)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

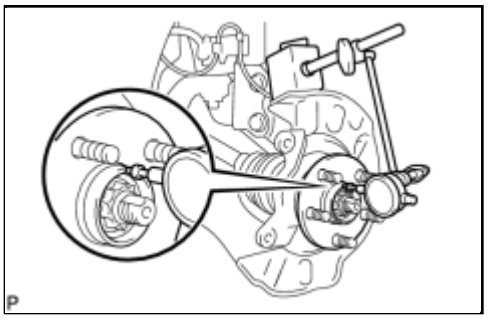
ON-VEHICLE INSPECTION

HINT:



- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

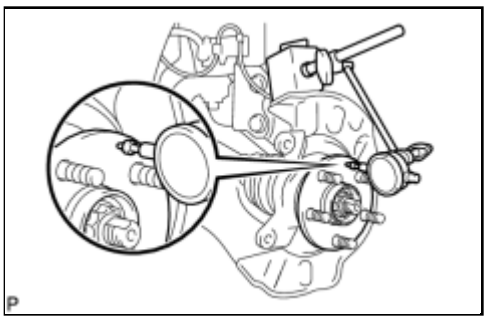
1. REMOVE FRONT WHEEL

2. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

3. REMOVE FRONT DISC INFO

4. INSPECT FRONT AXLE HUB BEARING LOOSENESS

(a) Using a dial indicator, check for looseness near the center of the axle hub.



Maximum looseness:
0.05 mm (0.00196 in.)

NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If looseness exceeds the maximum, replace the front axle hub bearing.

5. INSPECT FRONT AXLE HUB RUNOUT

(a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.

Maximum runout:
0.03 mm (0.00118 in.)

NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If runout exceeds the maximum, replace the front axle hub sub-assembly.

6. INSTALL FRONT DISC INFO

7. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

8. INSTALL FRONT WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IWZ022X
Title: AXLE AND DIFFERENTIAL: FRONT AXLE HUB: REMOVAL (2010 Corolla)		

REMOVAL

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

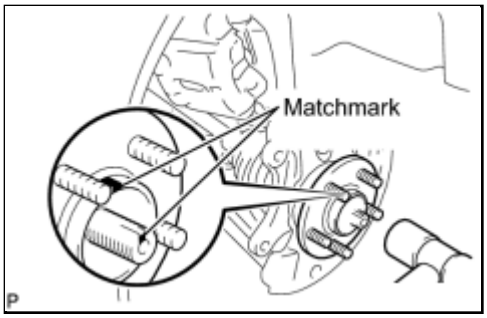
1. REMOVE FRONT WHEEL

2. REMOVE FRONT AXLE HUB NUT (for 2AZ-FE) INFO

3. REMOVE FRONT AXLE HUB NUT (for 2ZR-FE) INFO

4. SEPARATE FRONT SPEED SENSOR (for TMC Made) INFO

5. SEPARATE FRONT SPEED SENSOR (except TMC Made) INFO



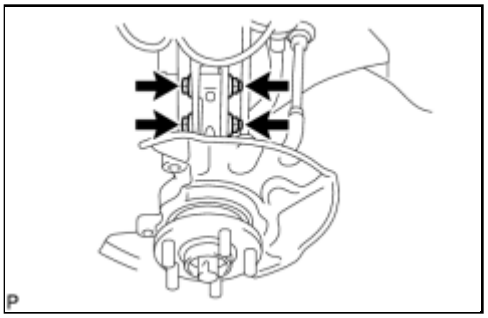
6. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

7. REMOVE FRONT DISC INFO

8. SEPARATE TIE ROD END SUB-ASSEMBLY INFO

9. SEPARATE FRONT LOWER SUSPENSION ARM INFO

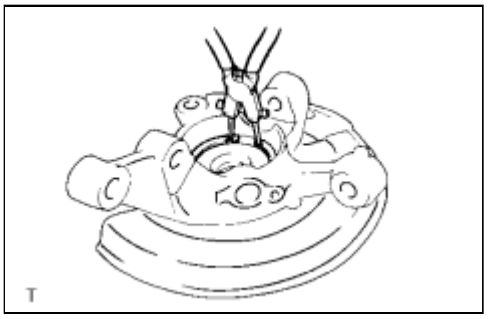
10. REMOVE FRONT AXLE ASSEMBLY



(a) Put matchmarks on the front drive shaft assembly and the front axle hub sub-assembly.

(b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly.

NOTICE:

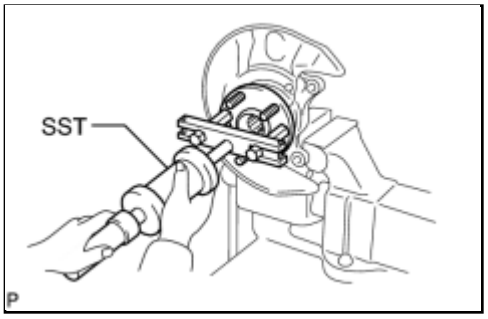


Be careful not to damage the drive shaft boot or speed sensor rotor.

(c) Remove the 2 bolts, 2 nuts, and front axle assembly.

11. REMOVE FRONT LOWER BALL JOINT INFO

12. REMOVE FRONT AXLE HUB HOLE SNAP RING



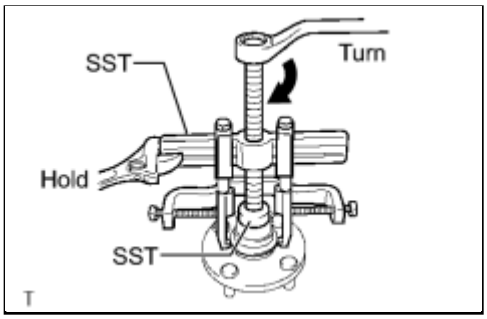
(a) Using snap ring pliers, remove the front axle hub hole snap ring.

13. REMOVE FRONT AXLE HUB SUB-ASSEMBLY

(a) Secure the front axle assembly between aluminium plates in a vise.

NOTICE:

Do not overtighten the vise.



(b) Using SST, remove the front axle hub sub-assembly.

SST: 09520-00031

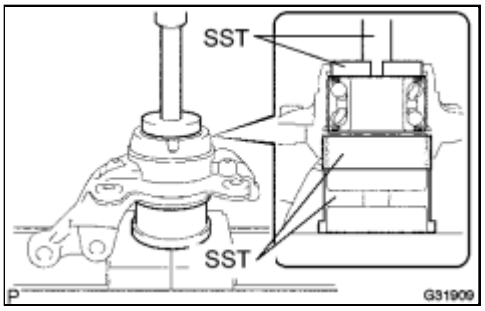
(c) Using SST, remove the bearing inner race (outside) from the front axle hub sub-assembly.

SST: 09950-40011

09951-04020

09952-04010
09953-04030
09954-04010
09955-04061
09957-04010
09958-04011
SST: 09950-60010
09951-00370

NOTICE:



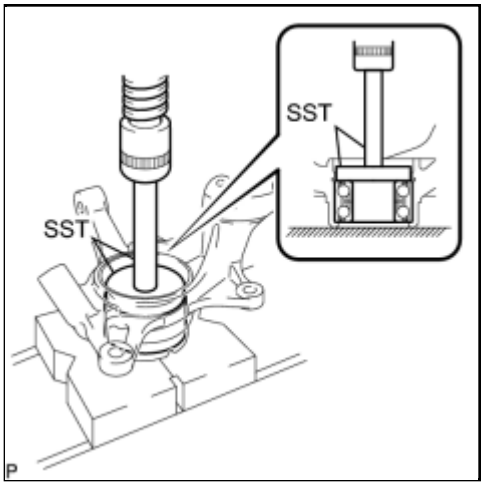
Apply a small amount of grease to the threads and tip of SST (09953-04020) before use.

14. REMOVE FRONT DISC BRAKE DUST COVER

(a) Remove the 3 bolts and the front disc brake dust cover from the steering knuckle.

15. REMOVE FRONT AXLE HUB BEARING

(a) Place the front axle hub bearing inner race (outside) on the front axle hub bearing.



(b) Using SST and a press, remove the front axle hub bearing from the steering knuckle.

SST: 09223-15020
SST: 09387-02010
SST: 09950-60010
09951-00640
SST: 09950-70010

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IWX022X
Title: AXLE AND DIFFERENTIAL: FRONT AXLE HUB: INSTALLATION (2010 Corolla)		

INSTALLATION

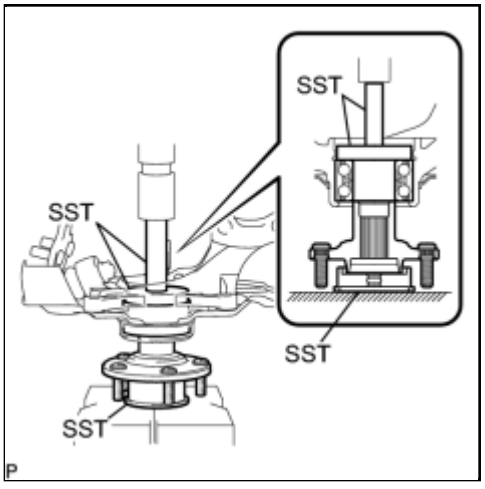
1. INSTALL FRONT AXLE HUB BEARING

(a) Using SST and a press, install a new front axle hub bearing to the steering knuckle.

SST: 09950-60020

09951-00720

SST: 09950-70010



09951-07100

2. INSTALL FRONT DISC BRAKE DUST COVER

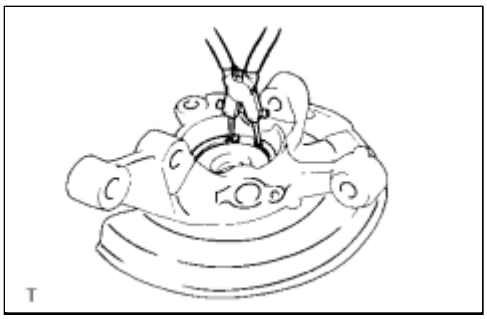
(a) Install the disc brake dust cover to the steering knuckle with the 3 bolts.

Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)

3. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

(a) Using SST and a press, install the front axle hub sub-assembly.

SST: 09608-32010

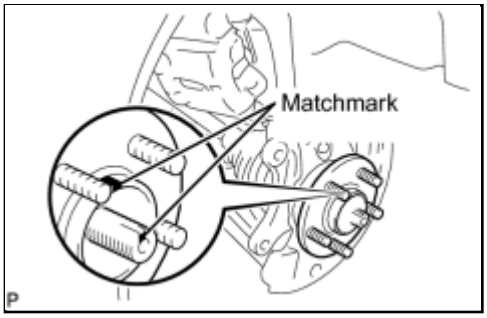


SST: 09950-60010

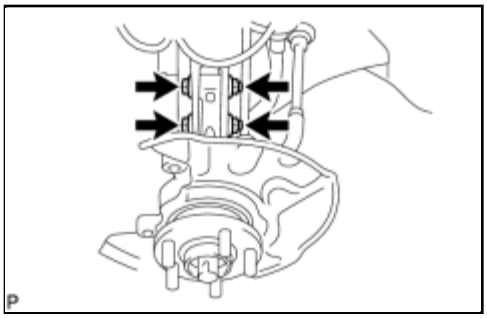
09951-00600

SST: 09950-70010

09951-07100



4. INSTALL FRONT AXLE HUB HOLE SNAP RING



(a) Using snap ring pliers, install a new front axle hub hole snap ring.

5. INSTALL FRONT LOWER BALL JOINT INFO

6. INSTALL FRONT AXLE ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.

(b) Install the front axle assembly to the front shock absorber with the 2 bolts and the 2 nuts.

Torque: 240 N·m (2448 kgf·cm, 176ft·lbf)

NOTICE:

Be careful not to damage the drive shaft boot or speed sensor rotor.

7. INSTALL FRONT LOWER SUSPENSION ARM INFO

8. INSTALL TIE ROD END SUB-ASSEMBLY INFO

9. INSTALL FRONT DISC INFO

10. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

11. TEMPORARILY INSTALL FRONT AXLE HUB NUT

(a) Clean the threaded parts on the drive shaft and axle hub nut using a non-residue solvent.

NOTICE:

- Be sure to perform this work when installing a new drive shaft.
- Keep the threaded parts free of oil and foreign objects.

(b) Using a socket wrench (30 mm), while applying the brakes, temporarily install a new axle hub nut.

Torque: 216 N·m (2203 kgf·cm, 158ft·lbf)

HINT:

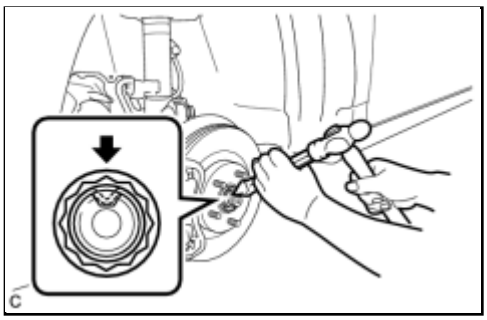
- Stake the axle hub nut after inspecting for looseness and runout in the following steps.
- Tighten the axle hub nut while the brakes are applied to prevent the front axle from rotating.

12. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY INFO

13. REMOVE FRONT DISC INFO

14. INSPECT FRONT AXLE HUB BEARING LOOSENESS INFO

15. INSPECT FRONT AXLE HUB RUNOUT INFO



16. INSTALL FRONT DISC INFO

17. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY INFO

18. CONNECT FRONT SPEED SENSOR (for TMC Made) INFO

19. CONNECT FRONT SPEED SENSOR (except TMC Made) INFO

20. INSTALL FRONT AXLE HUB NUT

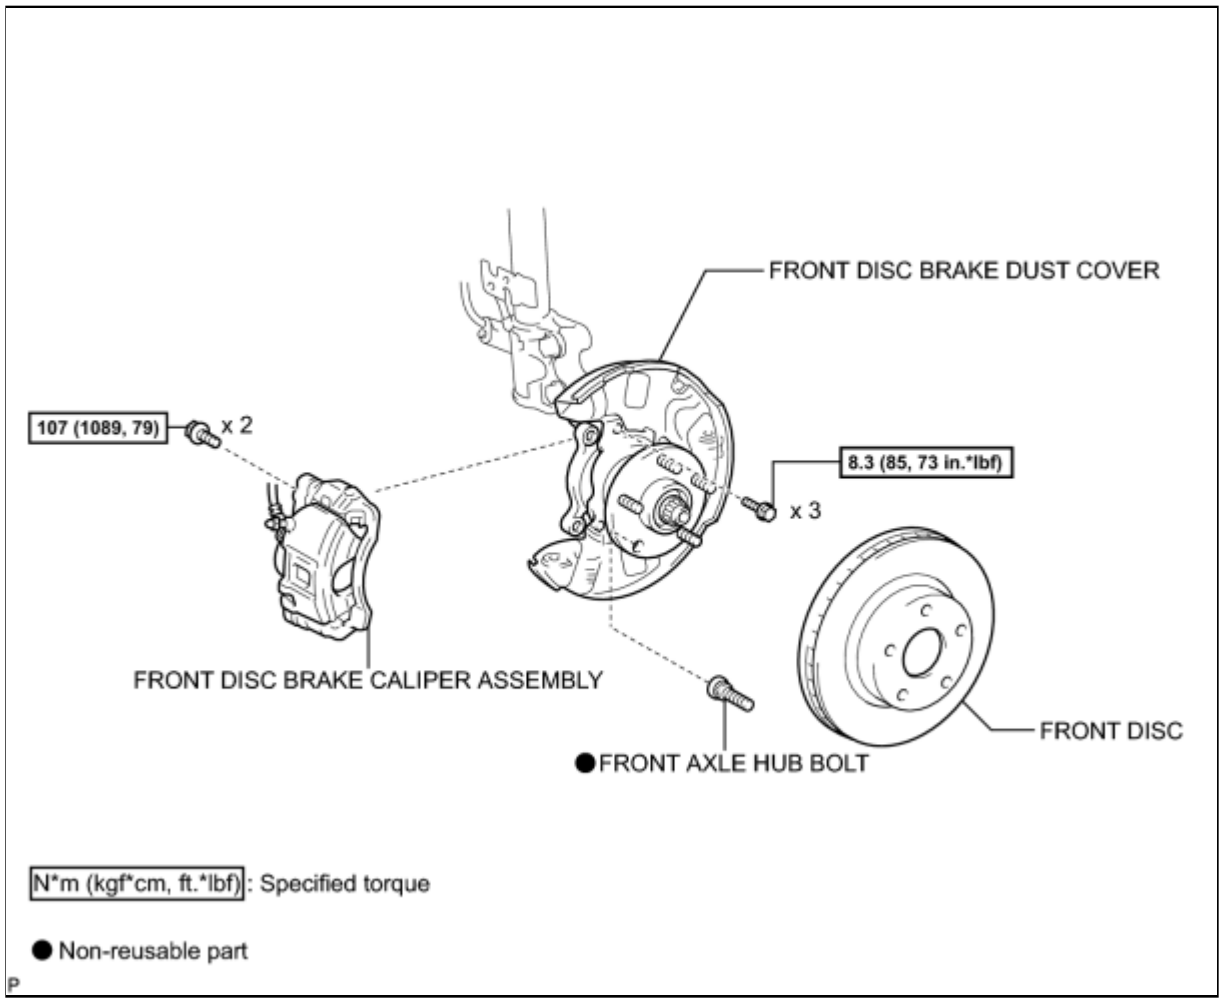
(a) Using a chisel and hammer, stake the axle hub nut.

21. INSTALL FRONT WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

22. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT: INFO



23. CHECK FOR SPEED SENSOR SIGNAL

HINT: INFO

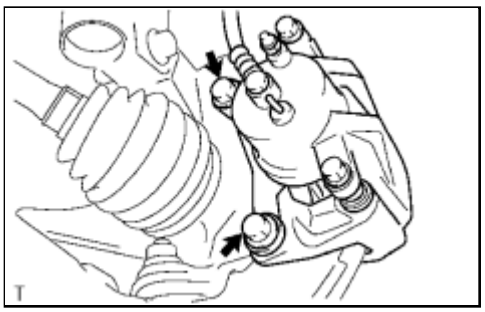
Title: AXLE AND DIFFERENTIAL: FRONT AXLE HUB BOLT: REPLACEMENT (2010 Corolla)		



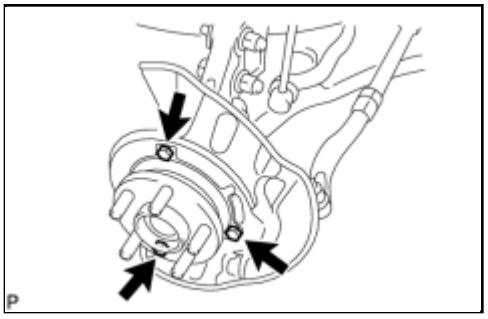
REPLACEMENT

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE FRONT WHEEL

2. SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY



(a) Remove the 2 bolts and separate the front disc brake caliper assembly from the steering knuckle.

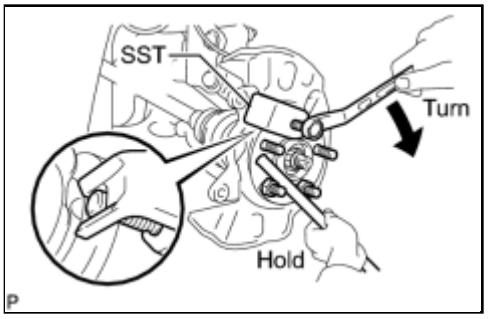
NOTICE:

Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.

3. REMOVE FRONT DISC INFO

4. SEPARATE FRONT DISC BRAKE DUST COVER

(a) Remove the 3 bolts and separate the front disc brake dust cover.



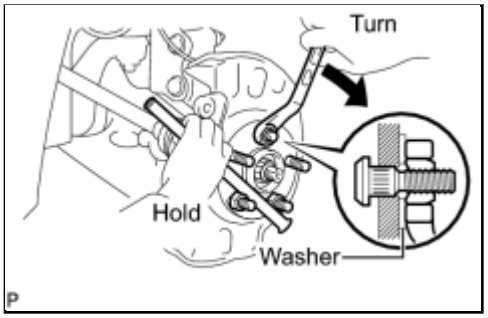
5. REMOVE FRONT AXLE HUB BOLT

(a) Temporarily install the 2 nuts and washers to the front axle hub bolt as shown in the illustration.

Recommended service nut:

Thread diameter

12.0 mm (0.472 in.)



Thread pitch
1.5 mm (0.0591 in.)

(b) Using SST and a brass bar or an equivalent tool to hold the front axle, remove the front axle hub bolt.

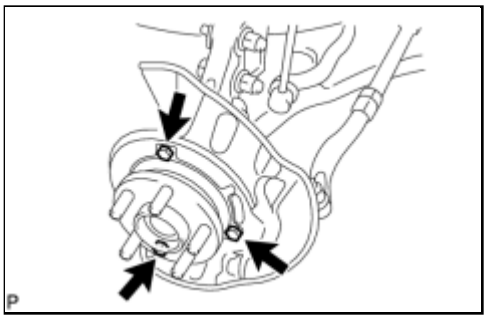
SST: 09611-12010

6. INSTALL FRONT AXLE HUB BOLT

(a) Install a washer and nut to a new front axle hub bolt as shown in the illustration.

Recommended service nut:

Thread diameter
12.0 mm (0.472 in.)



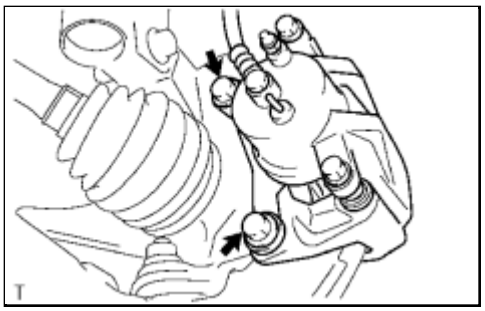
Thread pitch
1.5 mm (0.0591 in.)

HINT:

Recommended thickness of the washer is 5 mm (0.197 in.) or more.

(b) Using a brass bar to hold the front axle, install the hub bolt by tightening the nut.

7. INSTALL FRONT DISC BRAKE DUST COVER



(a) Install the front disc brake dust cover with the 3 bolts.

Torque: 8.3 N·m (85 kgf·cm, 73in·lbf)

8. INSTALL FRONT DISC INFO

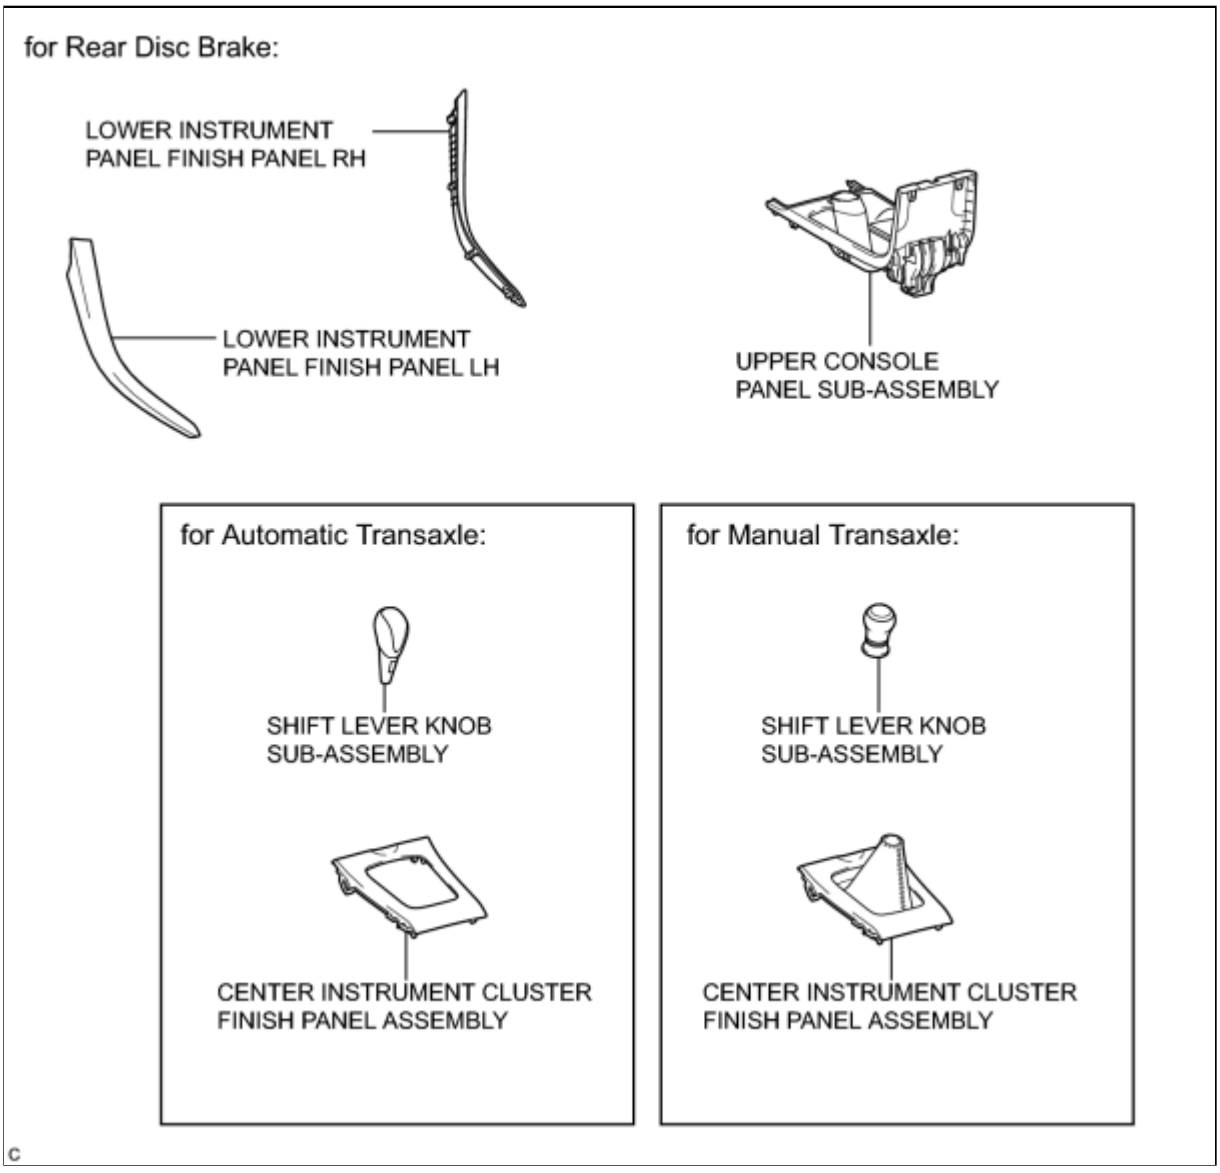
9. INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY

(a) Install the front disc brake caliper assembly to the steering knuckle with the 2 bolts.

Torque: 107 N·m (1089 kgf·cm, 79ft·lbf)

NOTICE:

Do not twist the brake hose when installing the front disc brake caliper assembly.



10. INSTALL FRONT WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

Last Modified: 3-10-2010	6.4 K	**From:** 200901

Title: AXLE AND DIFFERENTIAL: REAR AXLE HUB: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

HINT:

- Use the same procedure for the RH side and LH side.
- The procedure listed below is for the LH side.

1. REMOVE REAR WHEEL

2. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (for Rear Disc Brake) INFO

3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH (for Rear Disc Brake) INFO

4. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO
- for Automatic Transaxle INFO

5. REMOVE CENTER INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO
- for Automatic Transaxle INFO

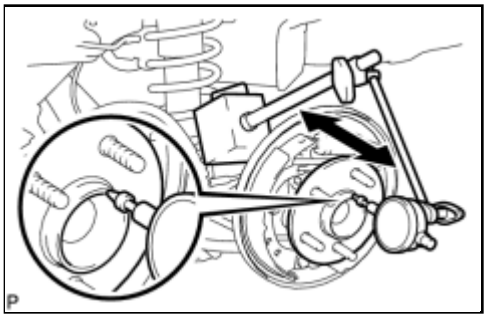
6. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (for Rear Disc Brake) INFO

7. LOOSEN PARKING BRAKE CABLE (for Rear Disc Brake) INFO

8. REMOVE PARKING BRAKE LEVER PROTECTOR (for Rear Disc Brake) INFO

9. SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake) INFO

10. SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY (for Rear Disc Brake) INFO



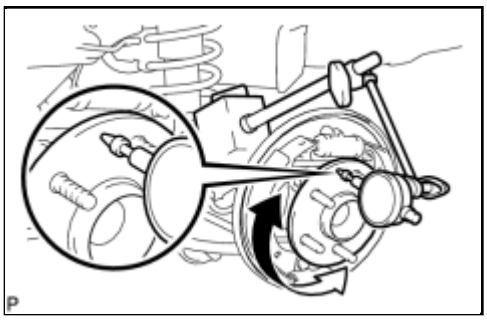
11. REMOVE REAR DISC (for Rear Disc Brake) INFO

12. REMOVE REAR BRAKE DRUM (for Rear Drum Brake) INFO

13. INSPECT REAR AXLE HUB BEARING LOOSENESS (for Rear Drum Brake)

(a) Using a dial indicator, check for looseness near the center of the axle hub.

Maximum looseness:
0.05 mm (0.00196 in.)



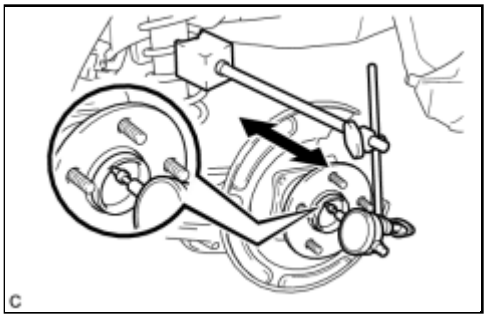
NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If the looseness exceeds the maximum, replace the rear axle hub and bearing assembly.

14. INSPECT REAR AXLE HUB RUNOUT (for Rear Drum Brake)

(a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.



Maximum runout:
0.06 mm (0.00236 in.)

NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If the runout exceeds the maximum, replace the rear axle hub and bearing assembly.

15. INSPECT REAR AXLE HUB BEARING LOOSENESS (for Rear Disc Brake)

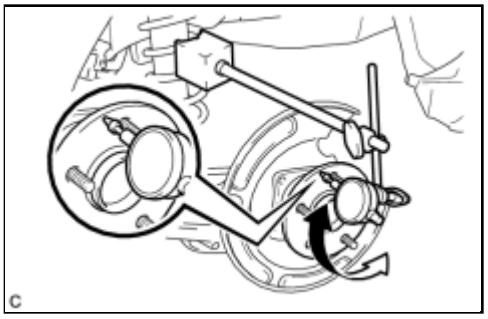
(a) Using a dial indicator, check for looseness near the center of the axle hub.

Maximum looseness:
0.05 mm (0.00196 in.)

NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If the looseness exceeds the maximum, replace the rear axle hub and bearing assembly.



16. INSPECT REAR AXLE HUB RUNOUT (for Rear Disc Brake)

(a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.

Maximum runout:
0.06 mm (0.00236 in.)

NOTICE:

Ensure that the dial indicator is set perpendicular to the measurement surface.

If the runout exceeds the maximum, replace the rear axle hub and bearing assembly.

17. INSTALL REAR BRAKE DRUM (for Rear Drum Brake) INFO

18. ADJUST REAR DRUM BRAKE SHOE CLEARANCE (for Rear Drum Brake) INFO

19. INSTALL REAR DISC (for Rear Disc Brake) INFO

20. INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (for Rear Disc Brake) INFO

21. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY (for Rear Disc Brake) INFO

22. ADJUST PARKING BRAKE LEVER TRAVEL (for Rear Disc Brake) INFO

23. INSTALL PARKING BRAKE LEVER PROTECTOR INFO

24. INSPECT REAR DISC BRAKE CYLINDER OPERATION LEVER AND STOPPER CLEARANCE (for Rear Disc Brake) INFO

25. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (for Rear Disc Brake) INFO

26. INSTALL CENTER INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO
- for Automatic Transaxle INFO

27. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Rear Disc Brake)

HINT:

- for Manual Transaxle INFO
- for Automatic Transaxle INFO

28. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (for Rear Disc Brake) INFO

29. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH (for Rear Disc Brake) INFO

30. INSTALL REAR WHEEL

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

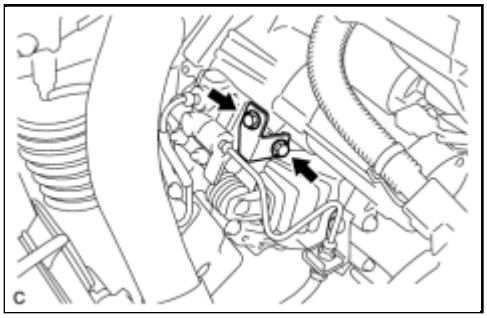
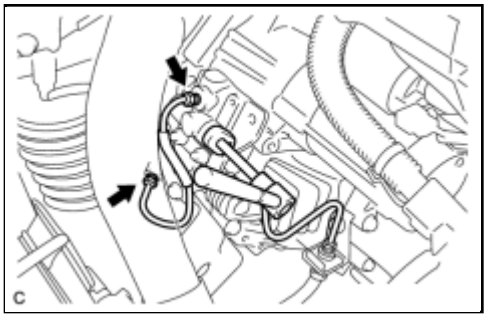
Title: CLUTCH: CLUTCH ACCUMULATOR (for E351): REMOVAL (2010 Corolla)		



REMOVAL

1. REMOVE RELEASE CYLINDER HEAT INSULATOR

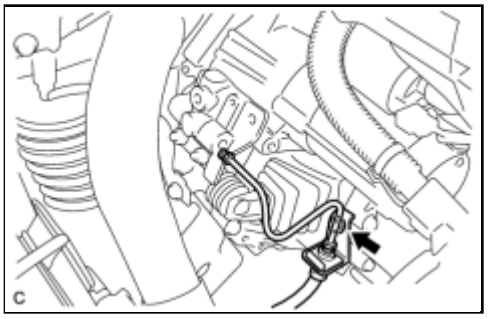


(a) Remove the 2 bolts and release cylinder heat insulator.

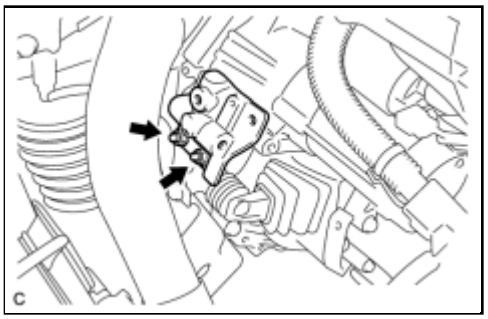
2. REMOVE CLUTCH ACCUMULATOR BRACKET

(a) Remove the 2 bolts and clutch accumulator bracket.

3. DISCONNECT CLUTCH LINE



(a) Using a union nut wrench (10 mm), remove the clutch line.

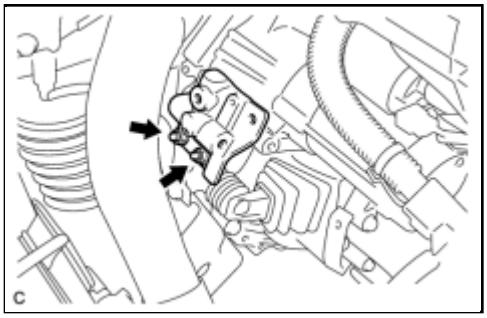


HINT:

Use a container to catch the fluid.

(b) Remove the bolt and disconnect the clutch tube bracket.

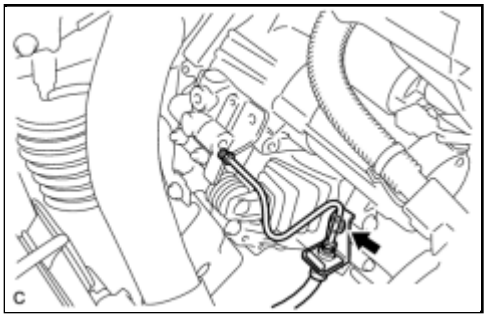
4. REMOVE CLUTCH ACCUMULATOR ASSEMBLY



(a) Remove the 2 nuts and clutch accumulator assembly.

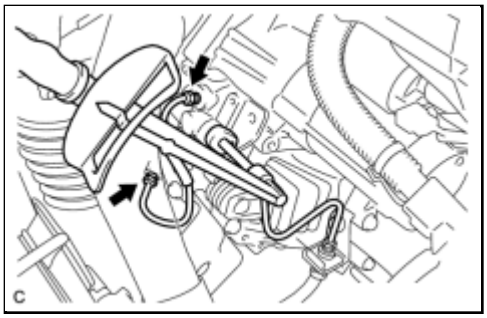
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z1400EX
Title: CLUTCH: CLUTCH ACCUMULATOR (for E351): INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL CLUTCH ACCUMULATOR ASSEMBLY

(a) Install the clutch accumulator assembly with the 2 nuts.



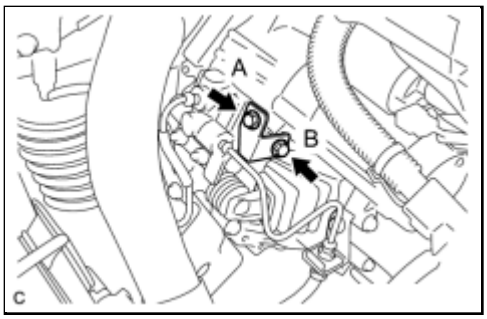
Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

2. CONNECT CLUTCH LINE

(a) Connect the clutch tube bracket with the bolt.

Torque: 8.0 N·m (80 kgf·cm, 69in·lbf)

(b) Using a union nut wrench (10 mm), install the clutch line to the clutch accumulator assembly.

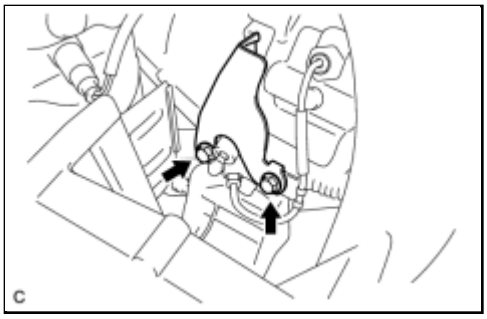


without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when union nut wrench is parallel to the torque wrench.



3. INSTALL CLUTCH ACCUMULATOR BRACKET

(a) Install the clutch accumulator bracket with the 2 bolts.

Bolt A - Torque: 12 N·m (120 kgf·cm, 9ft·lbf)
Bolt B - Torque: 37 N·m (377 kgf·cm, 27ft·lbf)

4. INSTALL RELEASE CYLINDER HEAT INSULATOR

(a) Install the release cylinder heat insulator with the 2 bolts.

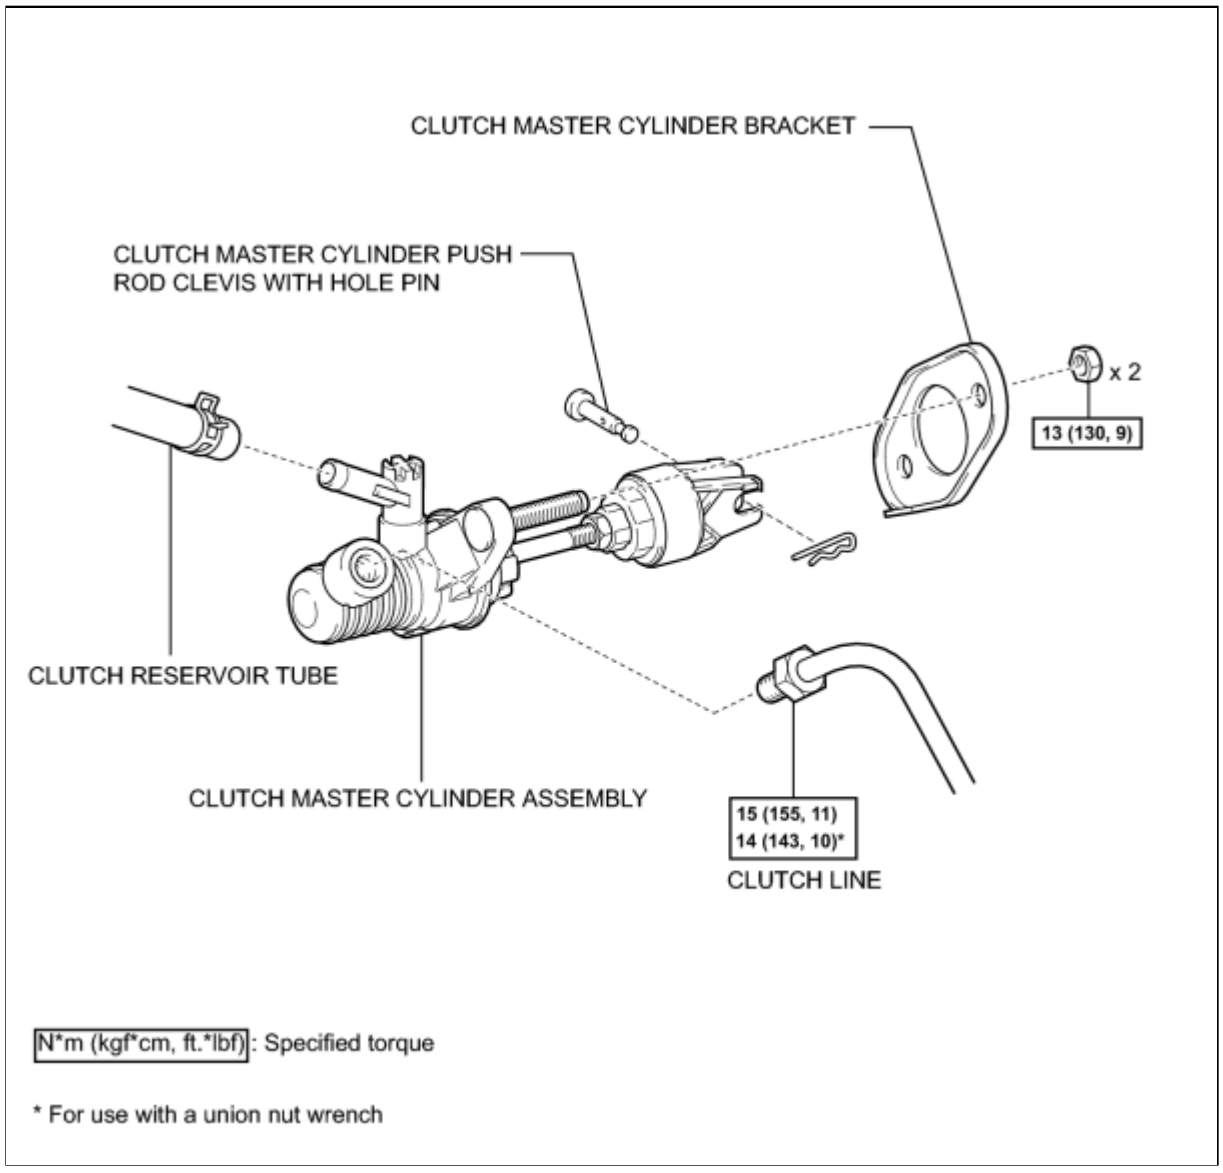
Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

5. FILL BRAKE FLUID RESERVOIR INFO

6. BLEED CLUTCH LINE INFO

7. INSPECT FLUID LEVEL INFO

8. INSPECT FOR FLUID LEAK



HINT:

Check for leaks from the clutch system.

Last Modified: 3-10-2010	6.4 K	**From:** 200901

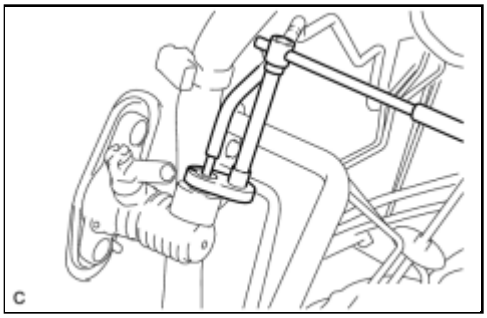
Title: CLUTCH: CLUTCH MASTER CYLINDER: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCONNECT CLUTCH RESERVOIR TUBE



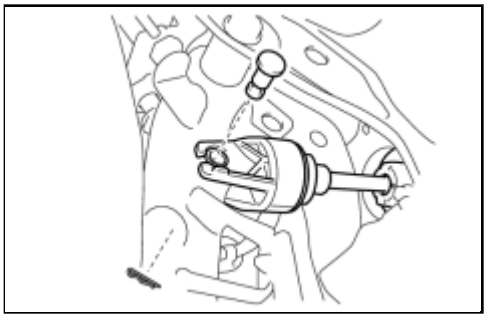
(a) Loosen the clip and disconnect the clutch reservoir tube from the clutch master cylinder assembly.

NOTICE:

Wash off clutch fluid immediately if it comes in contact with any painted surface.

HINT:

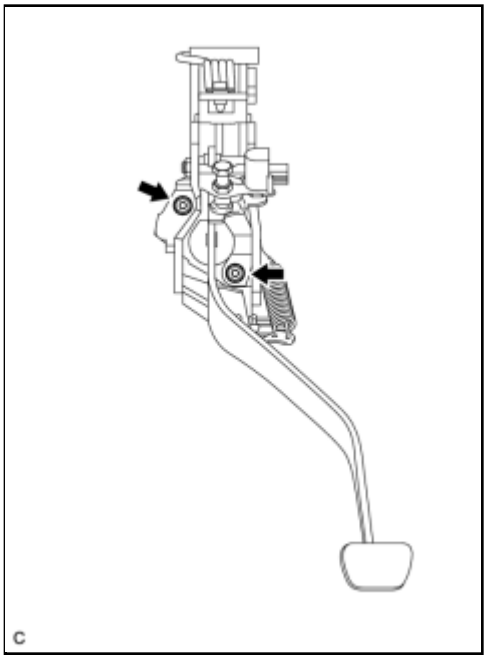
Use a container to catch the fluid.



2. DISCONNECT CLUTCH LINE

(a) Using a union nut wrench (10 mm), disconnect the clutch line.

HINT:

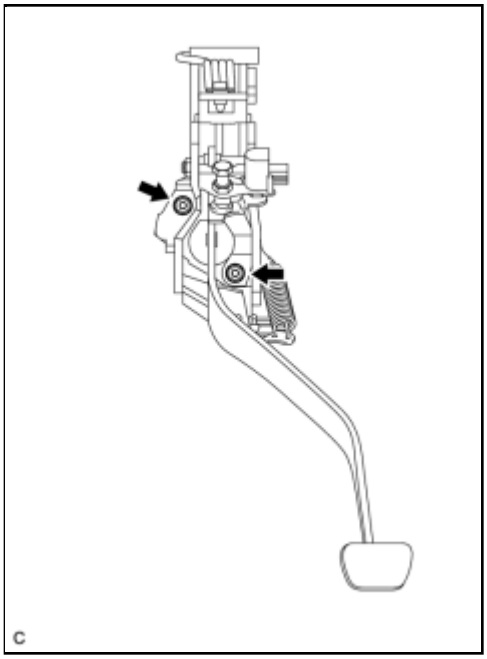


Use a container to catch the fluid.

3. REMOVE CLUTCH MASTER CYLINDER ASSEMBLY

(a) Remove the clip and hole pin.

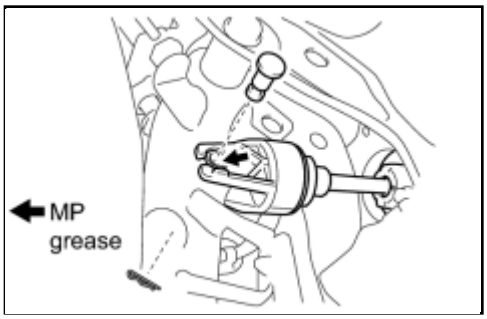
(b) Remove the 2 nuts and clutch master cylinder.



(c) Remove the clutch master cylinder bracket.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B2Y016X
Title: CLUTCH: CLUTCH MASTER CYLINDER: INSTALLATION (2010 Corolla)		

INSTALLATION

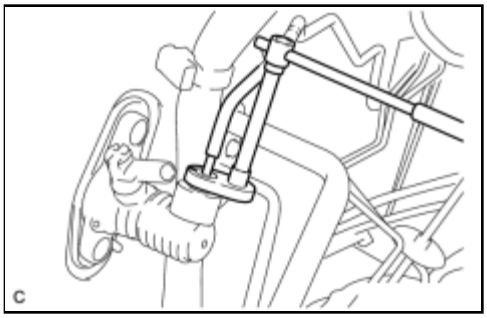


1. INSTALL CLUTCH MASTER CYLINDER ASSEMBLY

(a) Install the clutch master cylinder bracket.

(b) Install the clutch master cylinder with the 2 nuts.

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)



(c) Apply MP grease to the contact surface of the clevis bushing.

(d) Connect the clevis to the clutch pedal sub-assembly with the hole pin.

HINT:

Install the hole pin from the right side of the vehicle.

(e) Install the clip to the hole pin.

2. CONNECT CLUTCH LINE

(a) Using a union nut wrench (10 mm), connect the clutch line.

without a union nut wrench - Torque: 15 N·m (155 kgf·cm, 11ft·lbf)

with a union nut wrench - Torque: 14 N·m (143 kgf·cm, 10ft·lbf)

NOTICE:

- Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).
- This torque value is effective when the union nut wrench is parallel to the torque wrench.

3. INSTALL CLUTCH RESERVOIR TUBE

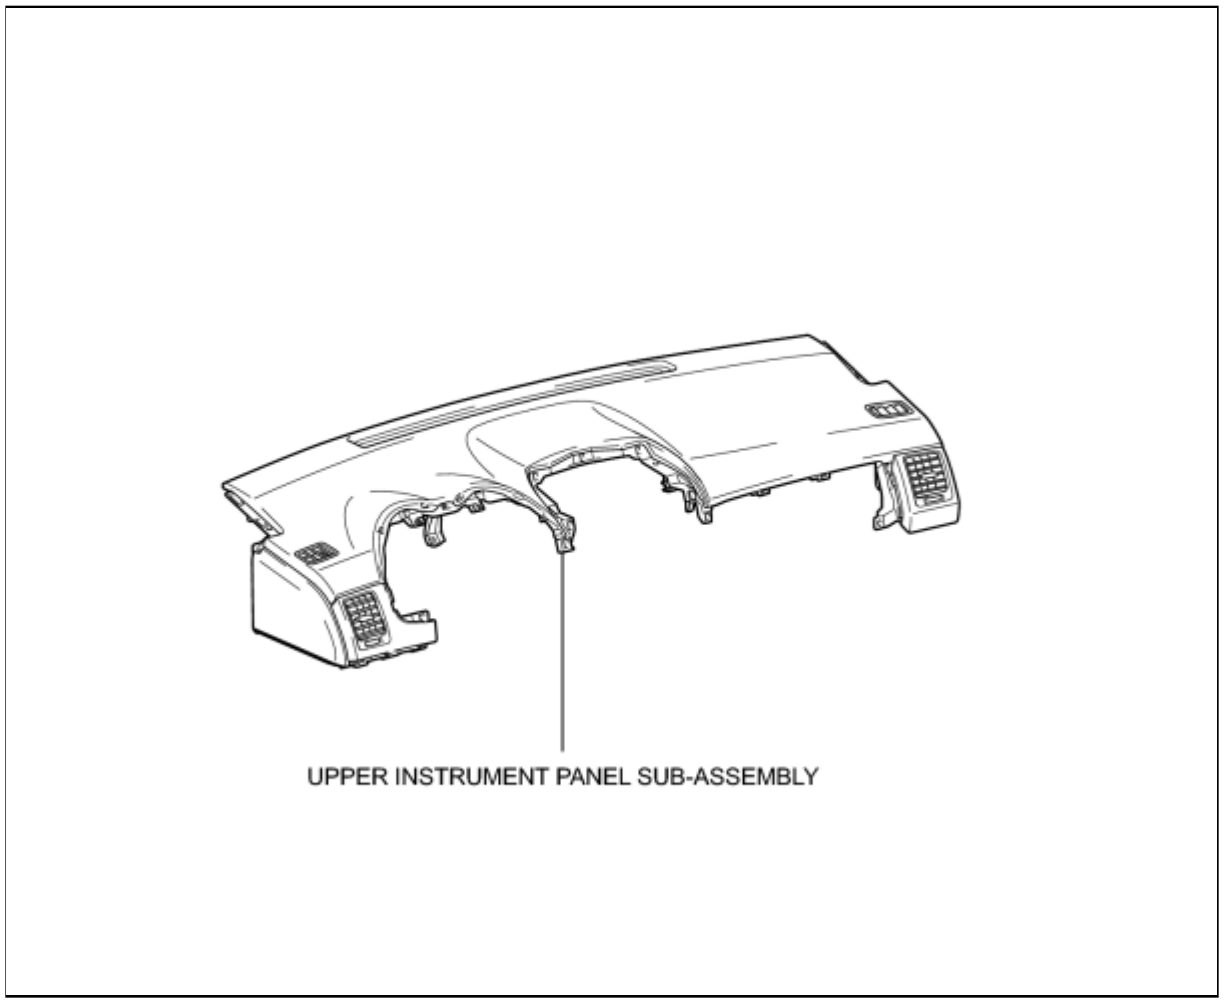
(a) Connect the clutch reservoir tube to the clutch master cylinder assembly with the clip.

4. FILL BRAKE FLUID RESERVOIR INFO

5. BLEED CLUTCH LINE INFO

6. INSPECT FLUID LEVEL INFO

7. INSPECT FOR FLUID LEAK



HINT:

Check for leaks from the clutch system.

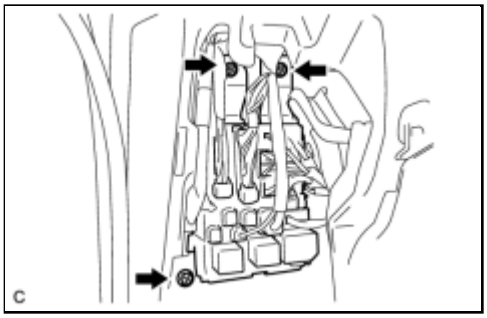
Title: CLUTCH: CLUTCH PEDAL: REMOVAL (2010 Corolla)		

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



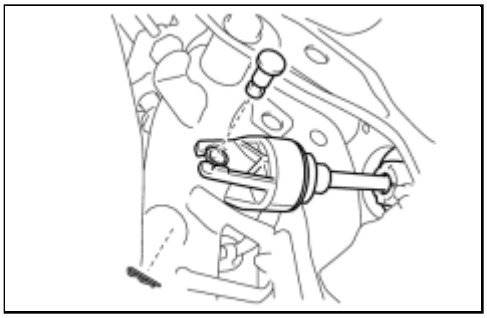
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

2. REMOVE UPPER INSTRUMENT PANEL SUB-ASSEMBLY

INFO

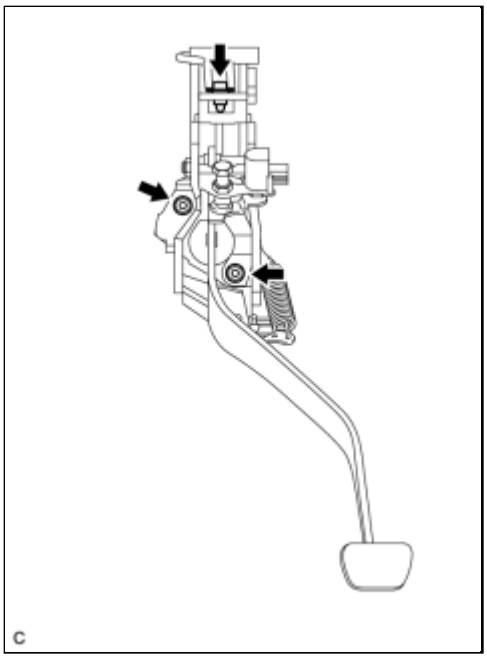
3. SEPARATE MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)



(a) Remove the 3 screws and separate the main body ECU.

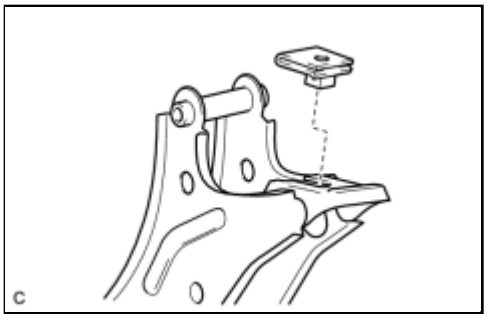
4. DISCONNECT CONNECTORS

(a) Disconnect the clutch pedal switch connector.



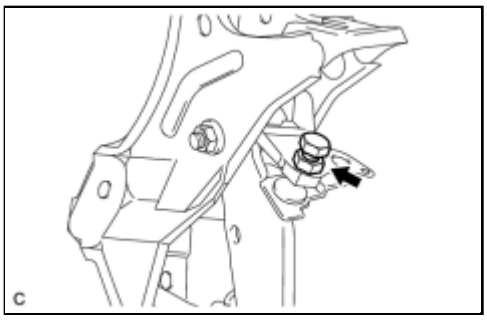
(b) Disconnect the clutch switch connector.

5. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS WITH HOLE PIN

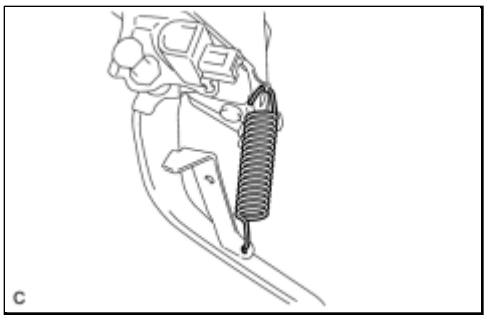


(a) Remove the clip and hole pin.

6. REMOVE CLUTCH PEDAL SUPPORT SUB-ASSEMBLY



(a) Remove the 2 nuts, bolt and clutch pedal support sub-assembly.



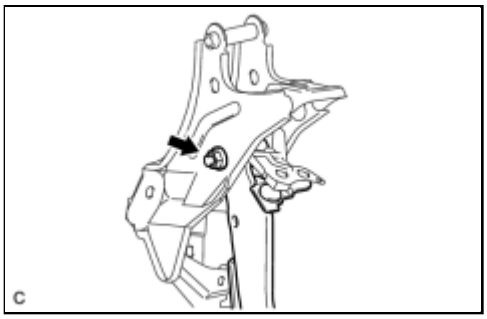
(b) Remove the nut from the clutch pedal support sub-assembly.

7. REMOVE CLUTCH PEDAL STOPPER BOLT

(a) Remove the clutch pedal stopper bolt from the clutch pedal support sub-assembly.

8. REMOVE CLUTCH PEDAL SPRING (for 2AZ-FE)

(a) Remove the clutch pedal spring.



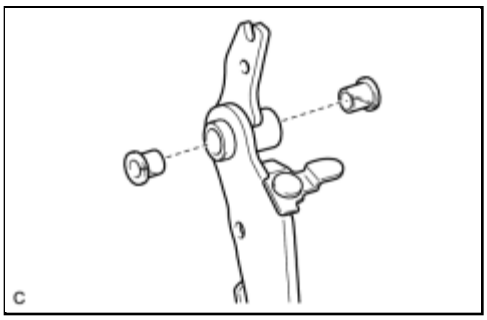
9. REMOVE TURN OVER SPRING SEAT COMPRESSION SPRING

(a) Mount the clutch pedal in a soft jaw vise.

(b) While the clutch pedal is fully depressed, remove the turn over spring.

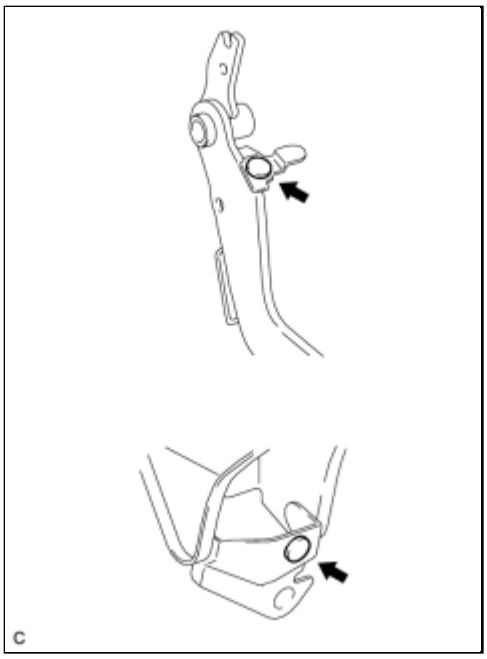
(c) Remove the 2 turn over bushings from the clutch pedal sub-assembly and clutch pedal support sub-assembly.

10. REMOVE CLUTCH PEDAL SUB-ASSEMBLY



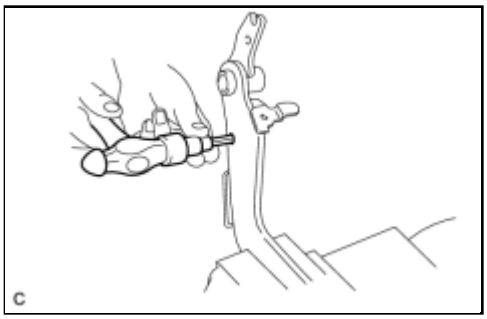
(a) Remove the bolt, nut and clutch pedal sub-assembly from the clutch pedal support sub-assembly.

11. REMOVE CLUTCH PEDAL PAD



(a) Remove the clutch pedal pad from the clutch pedal sub-assembly.

12. REMOVE CLUTCH PEDAL BUSHING



(a) Remove the 2 bushings from the clutch pedal sub-assembly.

13. REMOVE NO. 1 CLUTCH PEDAL CUSHION

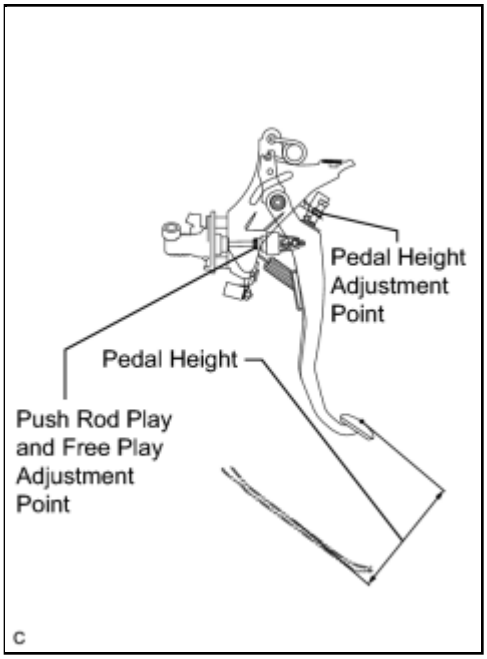
(a) Remove the 2 No. 1 clutch pedal cushions from the clutch pedal sub-assembly and clutch pedal support sub-assembly.

14. REMOVE CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSHING

(a) Using an 8 mm hexagon wrench and a hammer, remove the clevis bushing from the clutch pedal sub-assembly.

15. REMOVE CLUTCH SWITCH ASSEMBLY (w/ Cruise Control System)

(a) Remove the nut and clutch switch assembly from the clutch pedal support sub-assembly.



16. REMOVE CLUTCH PEDAL SWITCH ASSEMBLY

(a) Remove the nut and clutch pedal switch assembly from the clutch pedal support sub-assembly.

Last Modified: 3-10-2010	6.4 N	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ERC01GX
Title: CLUTCH: CLUTCH PEDAL: ADJUSTMENT (2010 Corolla)		

ADJUSTMENT

1. INSPECT AND ADJUST CLUTCH PEDAL HEIGHT

(a) Turn back the floor carpet.

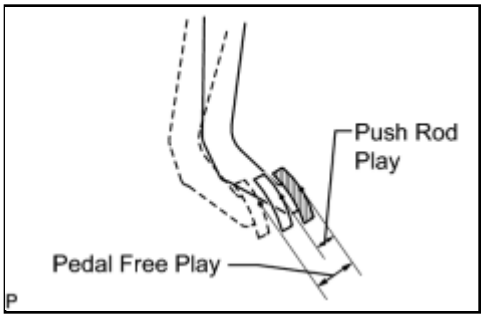
(b) Check that the pedal height is correct.

Pedal Height from Floor:

ENGINE TYPE	PEDAL HEIGHT: MM (IN.)
2AZ-FE	166.4 to 176.4 (6.551 to 6.945)
2ZR-FE	157.7 to 167.7 (6.209 to 6.602)

(c) Loosen the lock nut and turn the stopper bolt until the correct height is obtained.

(d) Tighten the lock nut.



Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

(e) Install the floor carpet.

2. INSPECT CLUTCH PEDAL FREE PLAY AND PUSH ROD PLAY

(a) Check that pedal free play and push rod play are correct.

(1) Depress the pedal until clutch resistance begins to be felt.

Pedal free play:

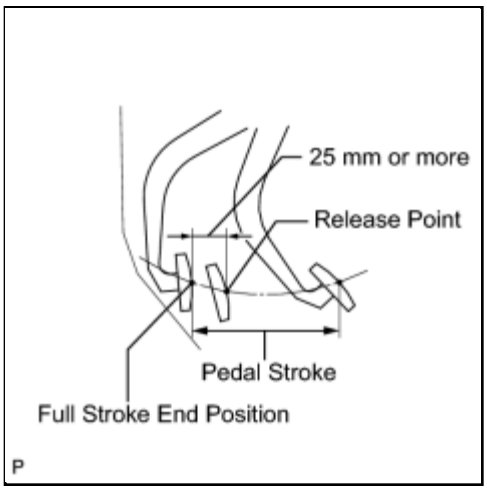
5.0 to 15.0 mm (0.197 to 0.591 in.)

(2) Gently depress the pedal until resistance begins to increase a little.

Push rod play at pedal top:

1.0 to 5.0 mm (0.0394 to 0.197 in.)

(b) If necessary, adjust the pedal free play and push rod play.



(1) Loosen the lock nut and turn the push rod until correct free play and push rod play are obtained.

(2) Tighten the lock nut.

Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

(3) After adjusting the pedal free play, check the pedal height.

3. INSPECT CLUTCH RELEASE POINT

(a) Check the clutch release point.

(1) Pull the parking brake lever and install wheel chocks.

(2) Start the engine and run it at idle.

(3) Without depressing the clutch pedal, slowly move the shift lever into reverse until the gears contact.

(4) Gradually depress the clutch pedal and measure the stroke distance from the point that the gear noise stops (release point) up to the full stroke end position.

Standard distance:

25 mm (0.984 in.) or more (from pedal stroke end position to release point)

If the distance is not as specified, perform the following procedure:

- Check the pedal height.
- Check the push rod play and pedal free play.
- Bleed the clutch line.
- Check the clutch cover and disc.

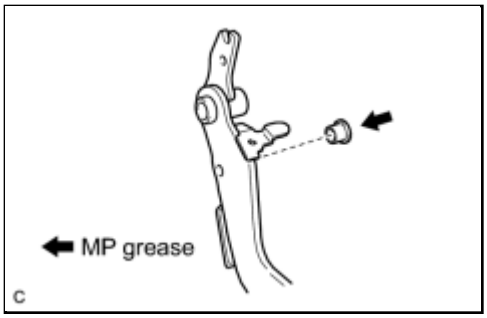
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002413016X
Title: CLUTCH: CLUTCH PEDAL: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CLUTCH PEDAL SWITCH ASSEMBLY

(a) Install the clutch pedal switch assembly to the clutch pedal support sub-assembly with the nut.



Torque: 16 N·m (160 kgf·cm, 12ft·lbf)

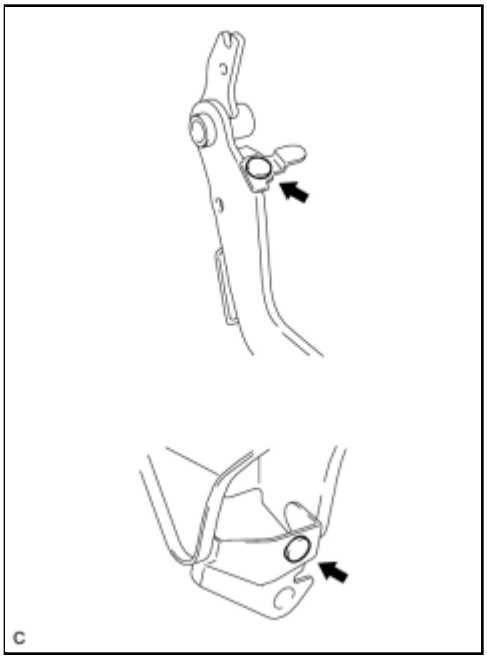
2. INSTALL CLUTCH SWITCH ASSEMBLY (w/ Cruise Control System)

(a) Install the clutch switch assembly to the clutch pedal support sub-assembly with the nut.

Torque: 16 N·m (160 kgf·cm, 12ft·lbf)

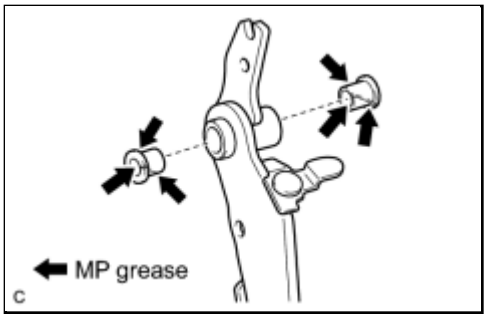
3. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS BUSHING

(a) Apply MP grease to the inside of a new clevis bushing.



(b) Install the clevis bushing to the clutch pedal sub-assembly.

HINT:



Install the clevis bushing from the right side of the vehicle.

4. INSTALL NO. 1 CLUTCH PEDAL CUSHION

(a) Install the 2 No. 1 clutch pedal cushions to the clutch pedal sub-assembly and clutch pedal support sub-assembly.

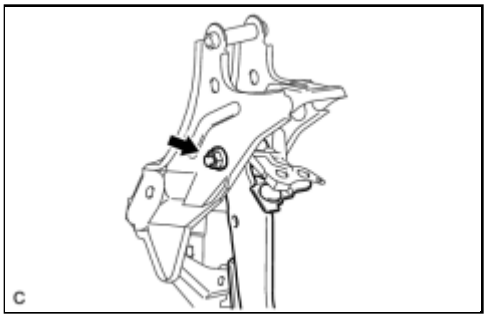
5. INSTALL CLUTCH PEDAL BUSHING

(a) Apply MP grease to both sides and end surface of 2 new bushings.

(b) Install the 2 bushings to the clutch pedal.

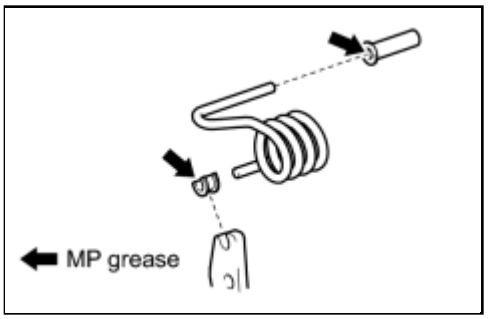
6. INSTALL CLUTCH PEDAL PAD

(a) Install the clutch pedal pad to the clutch pedal sub-assembly.



7. INSTALL CLUTCH PEDAL SUB-ASSEMBLY

(a) Install the clutch pedal sub-assembly to the clutch pedal support sub-assembly with the bolt and nut.

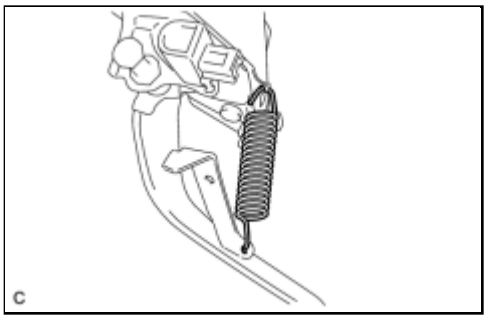


Torque: 37 N·m (375 kgf·cm, 27ft·lbf)

HINT:

Install the bolt from the right side of the vehicle.

8. INSTALL TURN OVER SPRING SEAT COMPRESSION SPRING

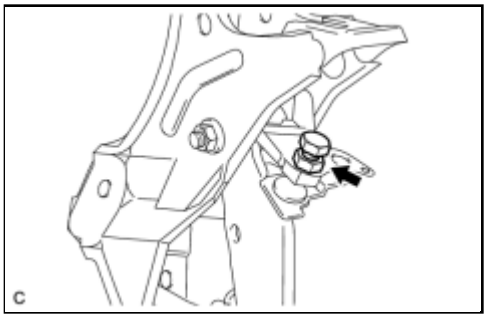


(a) Apply MP grease to the sliding portion of the 2 turn over bushings.

(b) Install a 2 new turn over bushings to the clutch pedal sub-assembly and clutch pedal support sub-assembly.

(c) Install the turn over spring.

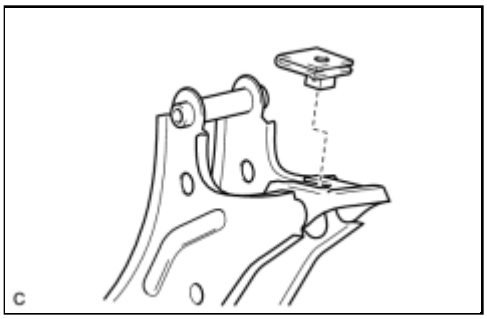
9. INSTALL CLUTCH PEDAL SPRING (for 2AZ-FE)



(a) Install the clutch pedal spring.

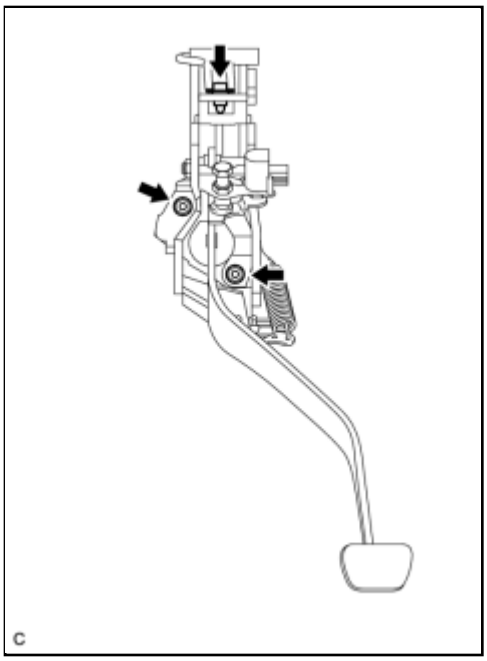
10. INSTALL CLUTCH PEDAL STOPPER BOLT

(a) Install the clutch pedal stopper bolt so that its end touches the clutch pedal cushion.



HINT:

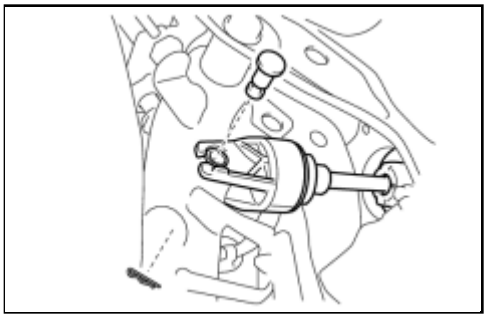
Tighten the lock nut to the specified torque when adjusting the



clutch pedal.

11. INSTALL CLUTCH PEDAL SUPPORT SUB-ASSEMBLY

(a) Install the nut to the clutch pedal support sub-assembly.



(b) Install the clutch pedal support sub-assembly with the 2 nuts and bolt.

Bolt - Torque: 24 N·m (241 kgf·cm, 17ft·lbf)
Nut - Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

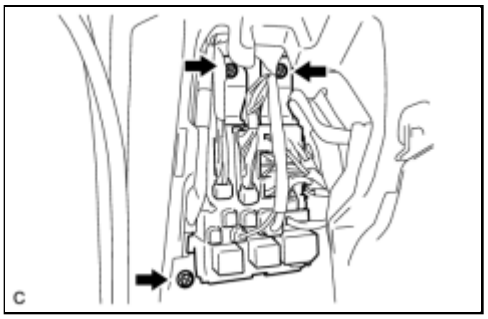
12. INSTALL CLUTCH MASTER CYLINDER PUSH ROD CLEVIS WITH HOLE PIN

(a) Connect the clevis to the clutch pedal sub-assembly with

the hole pin.

HINT:

Install the hole pin from the right side of the vehicle.



(b) Install the clip to the hole pin.

13. CONNECT CONNECTORS

(a) Connect the clutch pedal switch connector.

(b) Connect the clutch switch assembly connector.

14. INSTALL MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Install the main body ECU with the 3 screws.

15. INSPECT CLUTCH PEDAL SWITCH ASSEMBLY INFO

16. INSTALL UPPER INSTRUMENT PANEL SUB-ASSEMBLY

INFO

17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

18. INSPECT SRS WARNING LIGHT

Title: CLUTCH: CLUTCH SYSTEM (for C59): BLEEDING (2010 Corolla)		

BLEEDING

NOTICE:

Wash off clutch fluid immediately if it comes in contact with any painted surface.

HINT:

If any work is performed on the clutch system or if air in the clutch lines is suspected, bleed air from the clutch hydraulic system.

1. FILL BRAKE FLUID RESERVOIR INFO

2. BLEED CLUTCH LINE

(a) Remove the bleeder plug cap.

(b) Connect a vinyl tube to the bleeder plug.

(c) Depress the clutch pedal several times, and then loosen the bleeder plug while the pedal is depressed.

(d) When fluid no longer comes out, tighten the bleeder plug, and then release the clutch pedal.

(e) Repeat the previous 2 steps until all the air in the fluid is completely bled.

(f) Tighten the bleeder plug.

Torque: 8.4 N·m (86 kgf·cm, 74in·lbf)

(g) Install the bleeder plug cap.

(h) Check that all the air has been bled from the clutch line.

3. INSPECT BRAKE FLUID LEVEL IN RESERVOIR INFO

Title: CLUTCH: CLUTCH SYSTEM (for E351): ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT CLUTCH PEDAL SWITCH ASSEMBLY

(a) Check that the engine does not start when the clutch pedal is released.

(b) Check that the engine starts when the clutch pedal is fully depressed.

If necessary, inspect and replace the clutch pedal switch assembly.

Last Modified: 3-10-2010	6.4 N	**From:** 200901

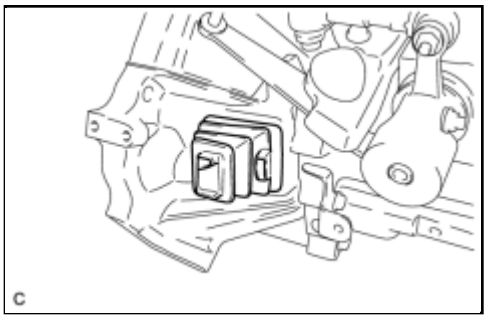
Title: CLUTCH: CLUTCH UNIT (for C59): REMOVAL (2010 Corolla)		

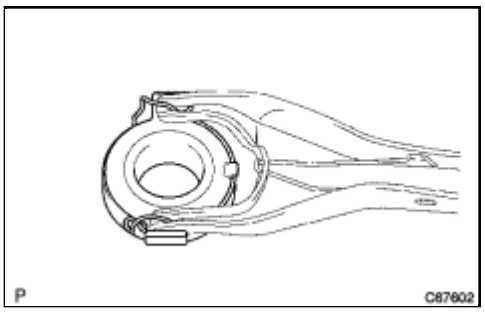
REMOVAL

1. REMOVE MANUAL TRANSAXLE ASSEMBLY



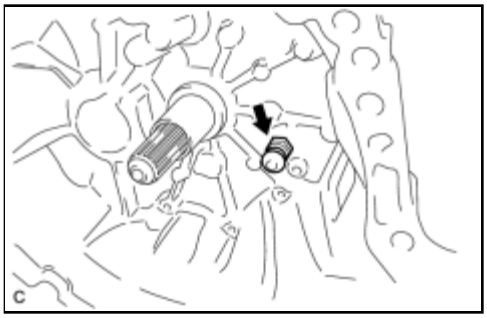
INFO .

2. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY



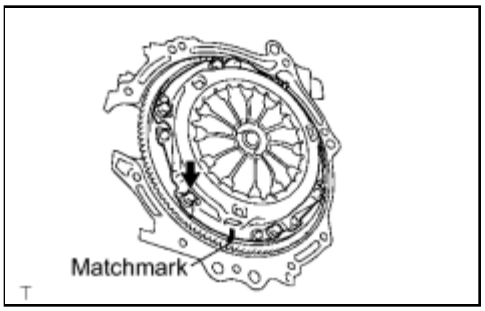
(a) Remove the clutch release fork with the clutch release bearing from the manual transaxle.

3. REMOVE CLUTCH RELEASE FORK BOOT



(a) Remove the clutch release fork boot from the manual transaxle.

4. REMOVE CLUTCH RELEASE BEARING ASSEMBLY



(a) Remove the release bearing and clip from the clutch release fork.

5. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the manual transaxle.

6. REMOVE CLUTCH COVER ASSEMBLY

(a) Put matchmarks on the clutch cover assembly and the flywheel sub-assembly.

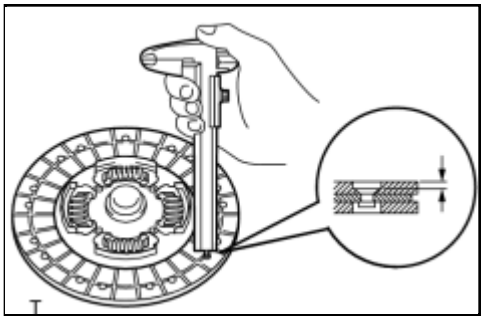
(b) Loosen each set bolt one turn at a time until the spring tension is released.

(c) Remove the set bolts and pull off the clutch cover.

NOTICE:

Do not drop the clutch disc.

7. REMOVE CLUTCH DISC ASSEMBLY



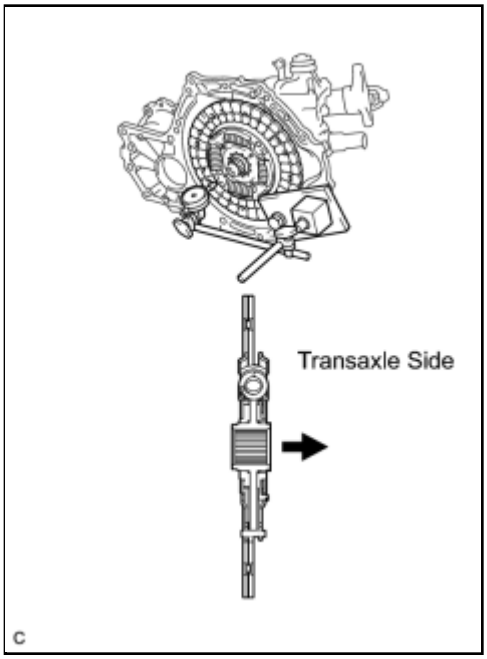
NOTICE:

Keep the parts clutch disc lining, the pressure plate, and the surface of the flywheel sub-assembly free of oil and foreign matter.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B37020X
Title: CLUTCH: CLUTCH UNIT (for C59): INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CLUTCH DISC ASSEMBLY



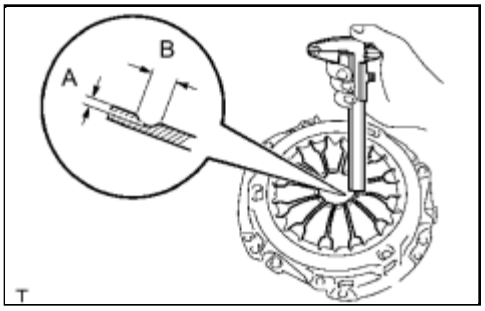
(a) Using a vernier caliper, measure the rivet head depth.

Minimum rivet depth:
0.3 mm (0.0118 in.)

If necessary, replace the clutch disc assembly.

(b) Install the clutch disc assembly onto the transaxle assembly.

NOTICE:
Insert the clutch disc assembly in the correct direction.



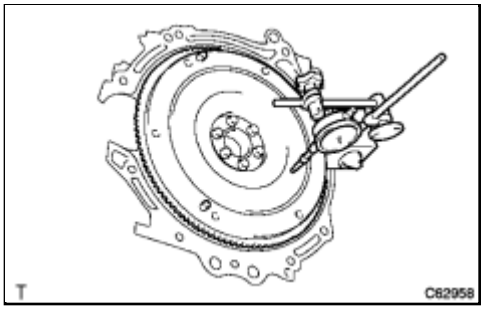
(c) Using a dial indicator, measure the clutch disc assembly runout.

Maximum runout:
0.8 mm (0.0315 in.)

If necessary, replace the clutch disc assembly.

2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using a vernier caliper, measure the depth and width of the



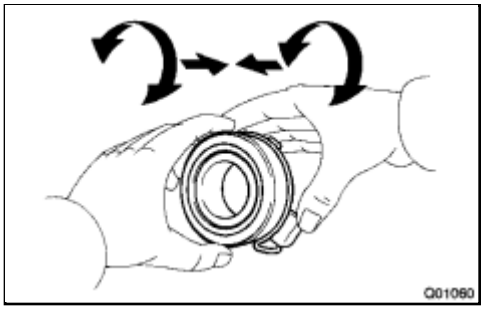
diaphragm spring wear.

Maximum:

A (DEPTH)	B (WIDTH)
0.5 mm (0.0197 in.)	6.0 mm (0.236 in.)

If necessary, replace the clutch cover assembly.

3. INSPECT FLYWHEEL SUB-ASSEMBLY



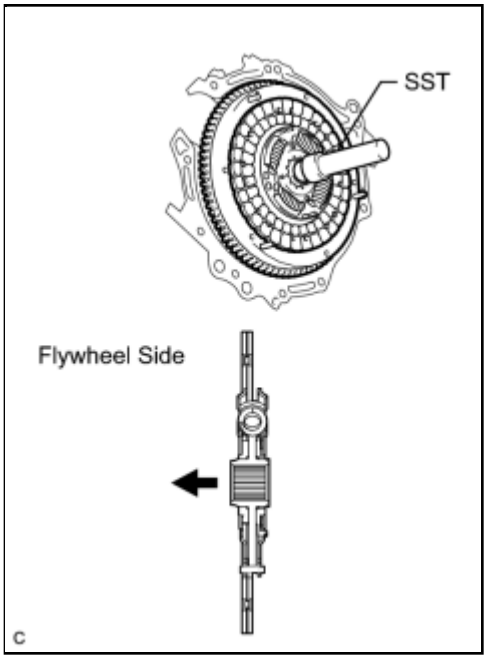
(a) Using a dial indicator, measure the flywheel sub-assembly runout.

Maximum runout:
0.1 mm (0.00394 in.)

If necessary, replace the flywheel sub-assembly.

4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

(a) Check that the clutch release bearing assembly moves smoothly without abnormal resistance by turning the sliding parts of the clutch release bearing assembly (contact surfaces with the clutch cover) while applying force in the axial direction.



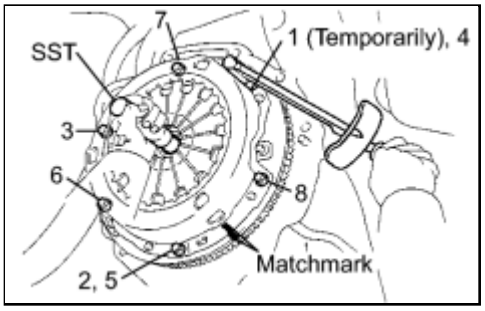
(b) Inspect the clutch release bearing assembly for damage and wear.

If necessary, replace the release bearing assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B3601QX
Title: CLUTCH: CLUTCH UNIT (for C59): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CLUTCH DISC ASSEMBLY



(a) Insert SST into the clutch disc assembly, then insert them both into the flywheel sub-assembly.

SST: 09301-00110

NOTICE:

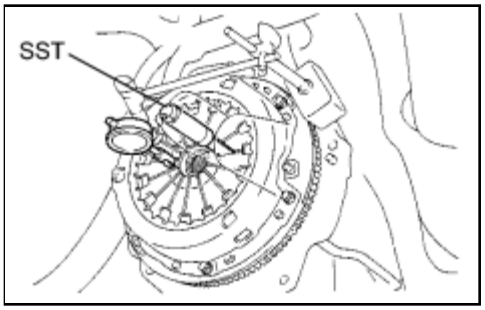
Insert the clutch disc assembly in the correct direction.

2. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmark on the clutch cover assembly with the one on the flywheel sub-assembly.

(b) Following the procedure shown in the illustration, tighten the 6 bolts in order, starting with the bolt located near the knock pin at the top.

Torque: 19 N·m (195 kgf·cm, 14ft·lbf)



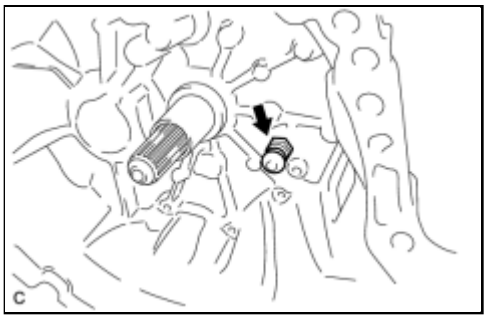
HINT:

- Following the order in the illustration, tighten the bolts evenly one at a time.
- Move SST up and down, right and left lightly after checking that the disc is in the center, and

tighten the bolts.

SST: 09301-00110

3. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

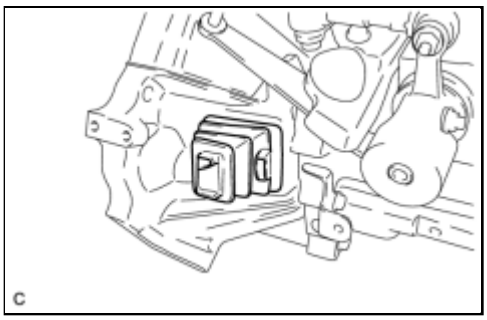


(a) Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.

Maximum non-alignment:
0.9 mm (0.0354 in.)

(b) If the alignment is not as specified, adjust the diaphragm spring tip alignment using SST.

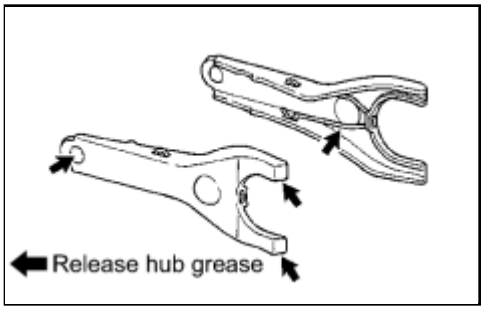
SST: 09333-00013



4. INSTALL RELEASE FORK SUPPORT

(a) Install the release fork support onto the transaxle assembly.

Torque: 37 N·m (375 kgf·cm, 27ft·lbf)

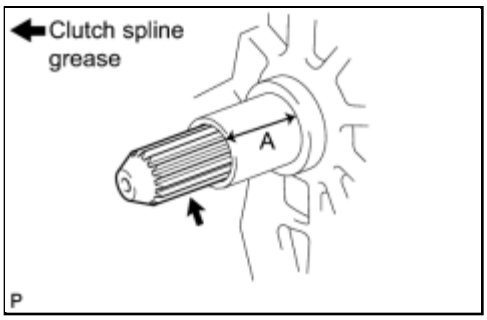


5. INSTALL CLUTCH RELEASE FORK BOOT

(a) Install the clutch release fork boot to the manual transaxle.

6. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

(a) Apply release hub grease to the contact surfaces between



the release fork and release bearing assembly, release fork and push rod, and release fork and fork support.

Grease:
Toyota Genuine Release Hub Grease or equivalent

(b) Install the release fork onto the release bearing assembly with the clip.

7. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

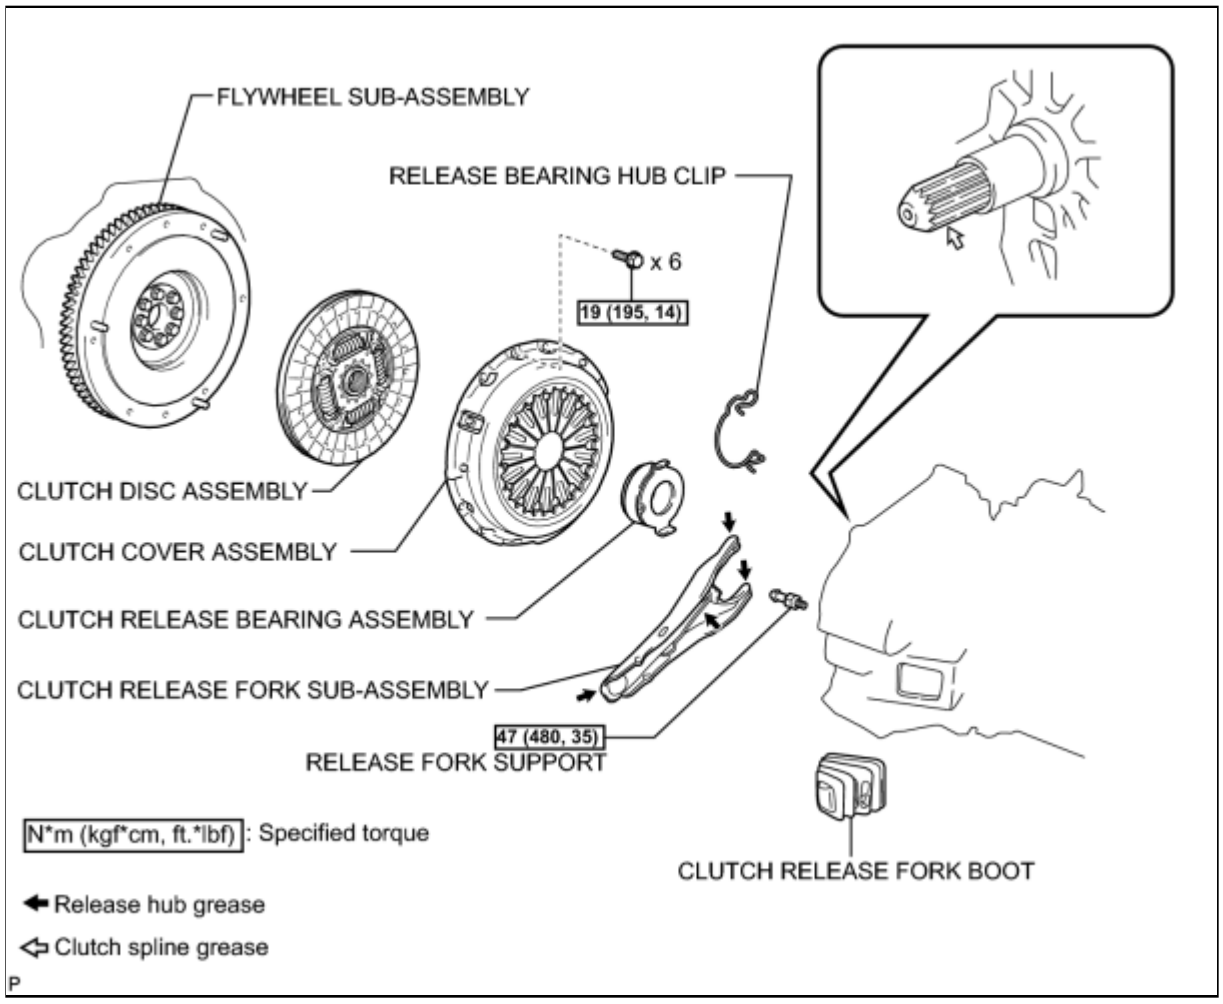
(a) Apply clutch spline grease to the input shaft spline.

Grease:
Toyota Genuine Clutch Spline Grease or equivalent

NOTICE:
Do not apply grease to portion A shown in the illustration.

(b) Install the clutch release bearing with the release fork onto the transaxle assembly.

NOTICE:
After installation, move the fork back and forth to check that the release bearing slides smoothly.



8. INSTALL MANUAL TRANSAXLE ASSEMBLY

INFO .

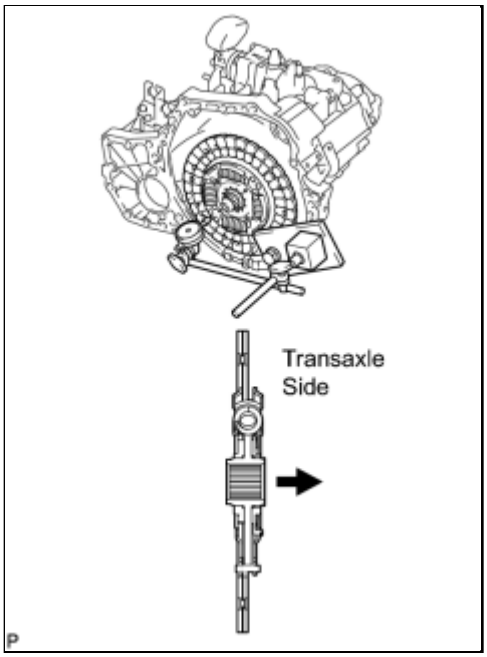
Title: CLUTCH: CLUTCH UNIT (for E351): INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT CLUTCH DISC ASSEMBLY

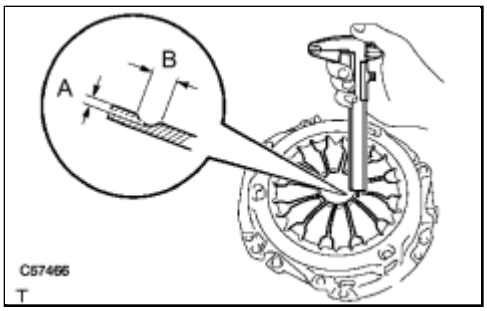
(a) Using a vernier caliper, measure the rivet head depth.

Minimum rivet depth:
0.3 mm (0.0118 in.)

If necessary, replace the clutch disc assembly.

(b) Install the clutch disc assembly to the transaxle assembly.

NOTICE:



Take care not to insert the clutch disc assembly in the wrong direction.

(c) Using a dial indicator with a roller instrument, measure the clutch disc assembly runout.

Maximum runout:
0.8 mm (0.0315 in.)

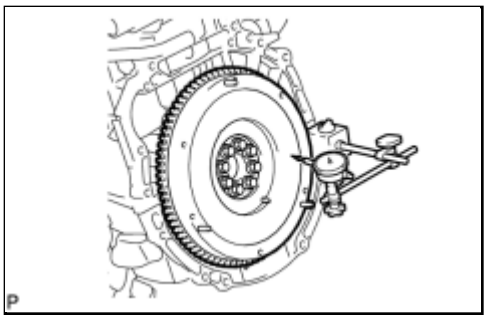
If necessary, replace the clutch disc assembly.

2. INSPECT CLUTCH COVER ASSEMBLY

(a) Using a vernier caliper, inspect the diaphragm spring for depth and width of wear.

Maximum:

A (Depth)



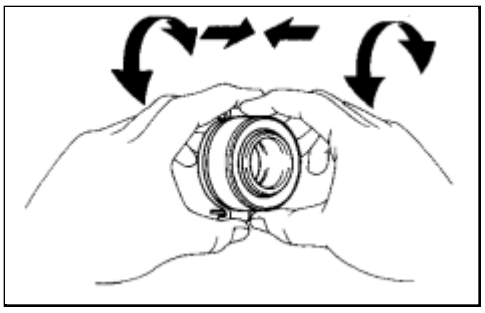
0.5 mm (0.0197 in.)

B (Width)

6.0 mm (0.236 in.)

If necessary, replace the clutch cover assembly.

3. INSPECT FLYWHEEL SUB-ASSEMBLY



(a) Using a dial indicator, measure the flywheel runout.

Maximum runout:

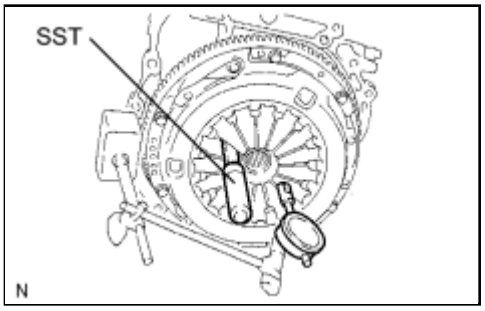
0.1 mm (0.00394 in.)

If necessary, replace the flywheel sub-assembly.

4. INSPECT CLUTCH RELEASE BEARING ASSEMBLY

(a) Check that the bearing moves smoothly without abnormal resistance by turning the sliding parts of the bearing (contact surfaces with the clutch cover) while applying force in the axial direction.

(b) Inspect the bearing for damage or wear. If necessary, replace the release bearing assembly.



5. INSPECT AND ADJUST CLUTCH COVER ASSEMBLY

(a) Using a dial indicator with a roller instrument, check the diaphragm spring tip alignment.

Maximum variation:

0.9 mm (0.0354 in.)

If the alignment is not as specified, adjust the diaphragm spring tip alignment with SST.

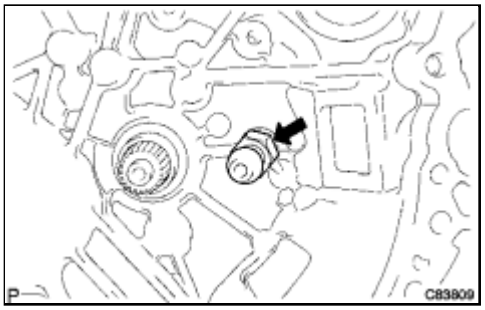
Title: CLUTCH: CLUTCH UNIT (for E351): REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE MANUAL TRANSAXLE ASSEMBLY

INFO .

2. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY

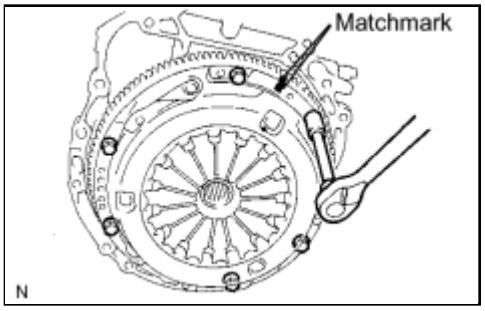


(a) Remove the clutch release fork with the clutch release bearing from the transaxle assembly.

3. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

(a) Remove the release bearing hub clip and clutch release bearing assembly from the clutch release fork.

4. REMOVE RELEASE FORK SUPPORT



(a) Remove the release fork support from the manual transaxle assembly.

5. REMOVE CLUTCH RELEASE FORK BOOT

6. REMOVE CLUTCH COVER ASSEMBLY

(a) Put matchmarks on the clutch cover assembly and flywheel sub-assembly.

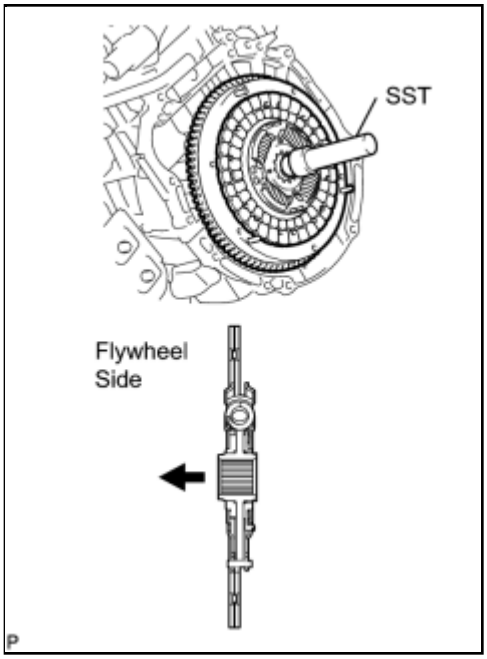
(b) Loosen the 6 bolts one turn at a time until spring tension is released.

(c) Remove the 6 bolts and pull off the clutch cover assembly.

NOTICE:

Do not drop the clutch disc assembly.

7. REMOVE CLUTCH DISC ASSEMBLY



NOTICE:

Keep the parts clutch disc lining, the pressure plate and surface of the flywheel sub-assembly free of oil and foreign matter.

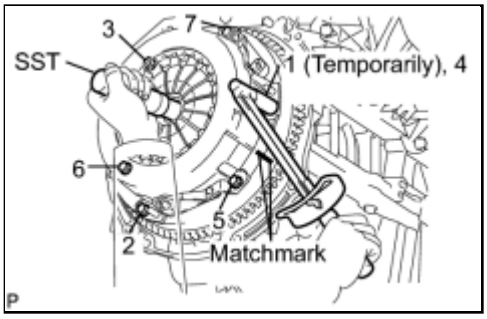
Title: CLUTCH: CLUTCH UNIT (for E351): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CLUTCH DISC ASSEMBLY



(a) Insert SST into the clutch disc assembly, then insert them into the flywheel sub-assembly.

SST: 09301-00220

NOTICE:

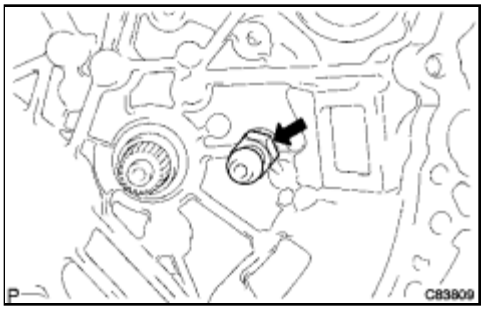
Take care not to insert the clutch disc assembly in the wrong direction.

2. INSTALL CLUTCH COVER ASSEMBLY

(a) Align the matchmarks on the clutch cover assembly with the one on the flywheel sub-assembly.

(b) Following the procedure shown in the illustration, tighten the 6 bolts in order, starting with the bolt located near the knock pin on the top.

Torque: 19 N·m (195 kgf·cm, 14ft·lbf)



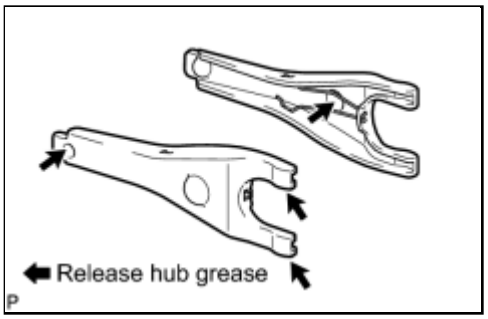
HINT:

- Following the order in the illustration, evenly tighten the bolts one turn at a time.
- Lightly move SST up and down, and right and left after checking that the disc is in the center to

tighten the bolts.

SST: 09301-00210

3. INSTALL RELEASE FORK SUPPORT



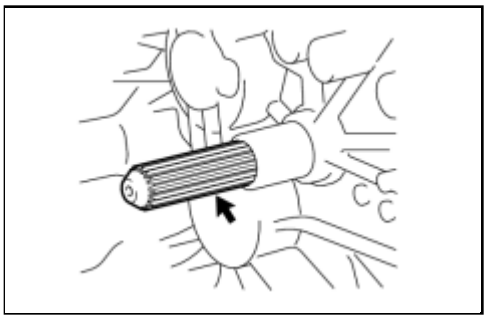
(a) Install the release fork support to the manual transaxle assembly.

Torque: 47 N·m (480 kgf·cm, 35ft·lbf)

4. INSTALL RELEASE BEARING HUB CLIP

(a) Install the release bearing hub clip to the release bearing assembly.

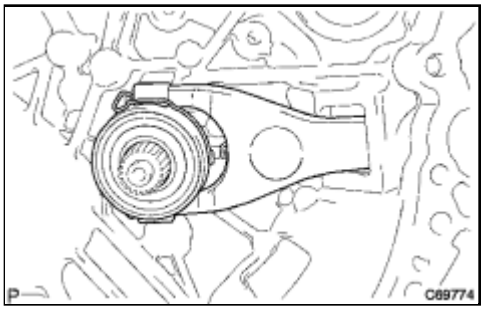
5. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY



(a) Apply release hub grease to the contact surfaces between the release fork and release bearing, fork and push rod, and fork and fork support.

Grease:
Toyota Genuine Release Hub Grease or equivalent

(b) Install the release fork to the release bearing assembly.



6. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

(a) Apply clutch spline grease to the input shaft spline as shown in the illustration.

Grease:
Toyota Genuine Clutch Spline Grease or equivalent

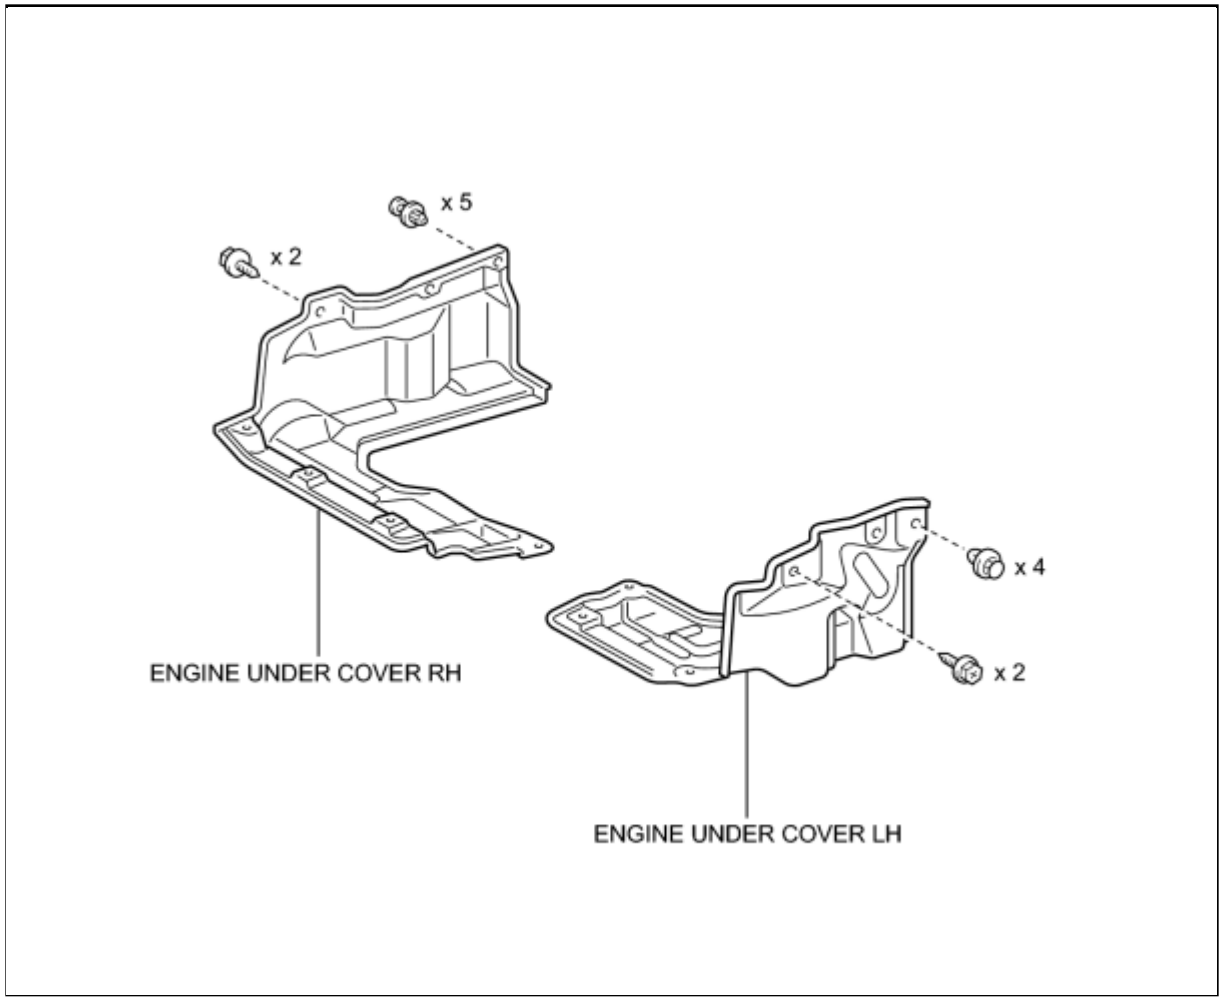
(b) Install the release fork with the release bearing assembly

to the manual transaxle assembly.

NOTICE:

After installation, move the fork back and forth to check that the release bearing slides smoothly.

7. INSTALL CLUTCH RELEASE FORK BOOT



8. INSTALL MANUAL TRANSAXLE ASSEMBLY

INFO .

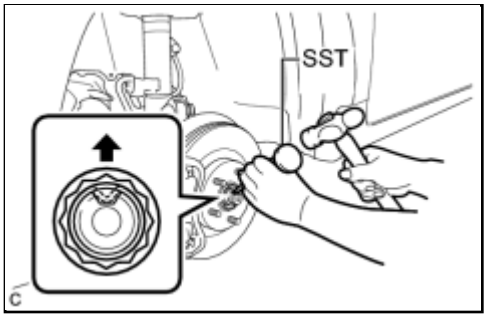
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2AZ-FE): REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE ENGINE UNDER COVER LH



2. REMOVE ENGINE UNDER COVER RH

3. DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) INFO

4. DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) INFO

5. REMOVE FRONT WHEELS

6. REMOVE FRONT AXLE SHAFT NUT LH

(a) Using SST and a hammer, release the staked part of the front axle shaft nut LH.

SST: 09930-00010

NOTICE:

- Insert SST into the groove with the flat surface facing up.
- Do not damage the tip of SST using grinders.
- Completely unstake the staked part before removing the axle hub nut.
- Do not damage the threads of the drive shaft.

(b) Using a socket wrench (30 mm), remove the front axle shaft nut LH.

7. REMOVE FRONT AXLE SHAFT NUT RH

HINT:

Perform the same procedure as for the LH side.

8. SEPARATE FRONT SPEED SENSOR LH (for TMC Made) INFO

9. SEPARATE FRONT SPEED SENSOR RH (for TMC Made)

HINT:

Perform the same procedure as for the LH side.

10. SEPARATE FRONT SPEED SENSOR LH (except TMC Made) INFO

11. SEPARATE FRONT SPEED SENSOR RH (except TMC Made)

HINT:

Perform the same procedure as for the LH side.

12. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

13. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

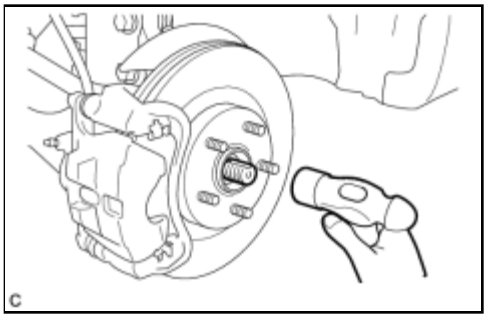
Perform the same procedure as for the LH side.

14. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

15. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.



16. SEPARATE FRONT LOWER SUSPENSION ARM LH INFO

17. SEPARATE FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

18. SEPARATE FRONT AXLE ASSEMBLY LH

(a) Using a plastic hammer, tap the end of the drive shaft and disengage the fitting between the drive shaft and front axle assembly LH.

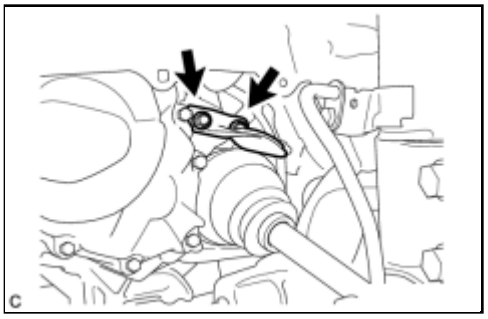
HINT:

If it is difficult to disengage the fitting, tap the end of the drive shaft with a brass bar and hammer.

(b) Push the front axle assembly LH out of the vehicle to remove the drive shaft from the front axle assembly LH.

NOTICE:

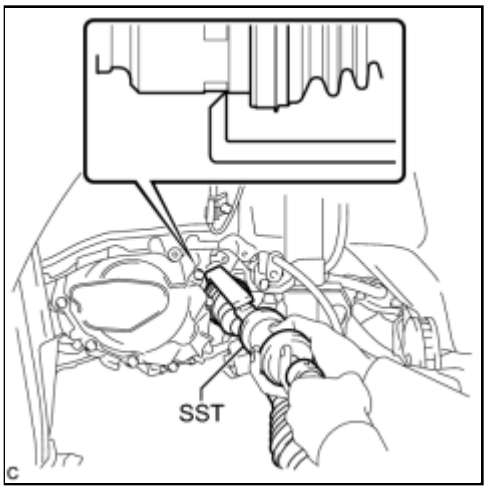
- Do not push out the front axle further than necessary.
- Do not damage the outboard joint boot.
- Do not damage the speed sensor rotor.



19. SEPARATE FRONT AXLE ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.



20. REMOVE MANUAL TRANSMISSION CASE PROTECTOR (for Manual Transaxle)

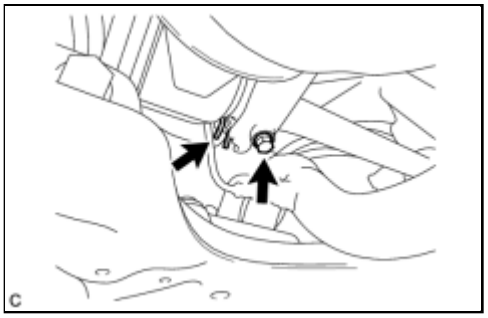
(a) Remove the 2 bolts and the manual transmission case

protector.

21. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

(a) Using SST, remove the front drive shaft assembly LH.

SST: 09520-01010



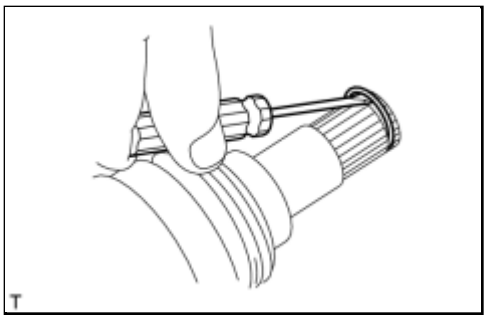
SST: 09520-24010

09520-32040

NOTICE:

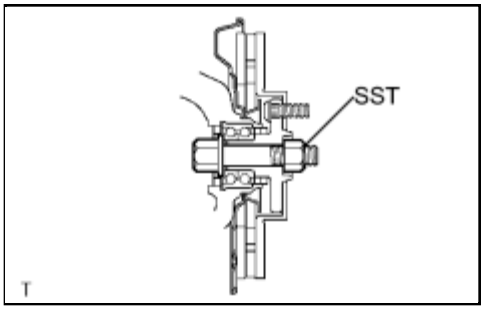
- Do not damage the oil seal.
- Do not damage the inboard joint boot.
- Do not drop the drive shaft.

22. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH



(a) Remove the bearing bracket hole snap ring.

(b) Remove the bolt and front drive shaft assembly RH from the drive shaft bearing bracket.



NOTICE:

Do not damage the boot or oil seal.

23. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH (for LH Side)

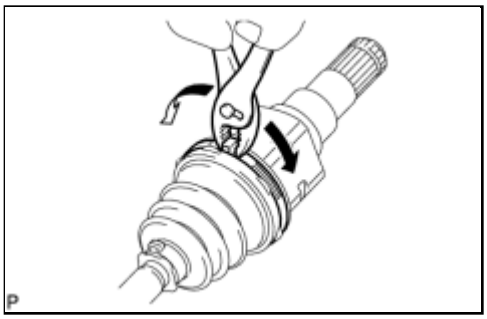
(a) Using a screwdriver, remove the snap ring from the front drive inboard joint assembly.

24. FIX FRONT AXLE ASSEMBLY

SST: 09608-16042

09608-02021

09608-02041



NOTICE:

The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, make sure to support the hub bearing with SST when the vehicle weight is applied.

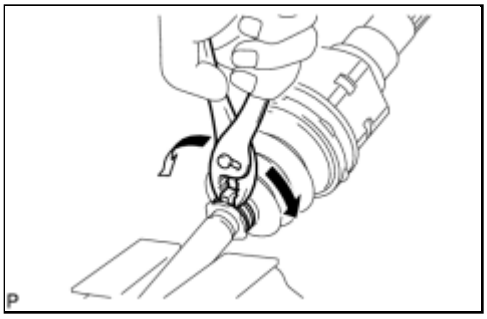
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HAZ01EX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2AZ-FE): DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

1. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP

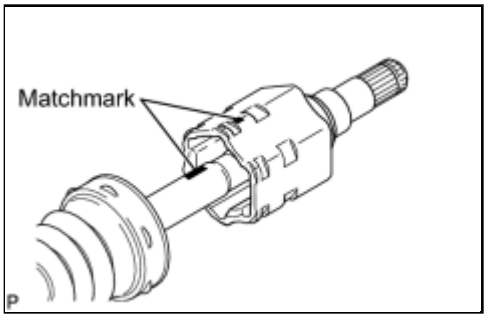
(a) Using pliers, remove the boot clamp as shown in the illustration.

2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the boot clamp as shown in the illustration.

3. SEPARATE INBOARD JOINT BOOT

(a) Separate the inboard joint boot from the inboard joint.



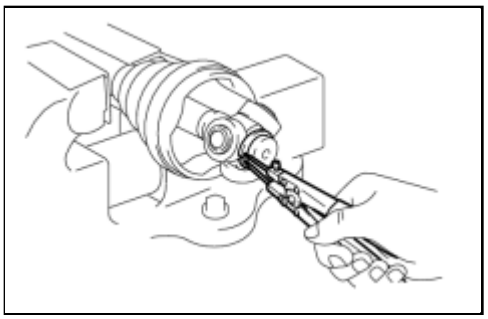
4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Remove the old grease from the inboard joint.

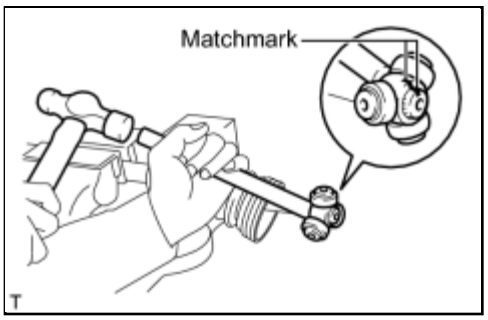
(b) Place matchmarks on the inboard joint and outboard joint shaft.

NOTICE:

Do not damage any part when placing the marks.



(c) Remove the inboard joint from the front axle outboard joint shaft assembly.



(d) Secure the outboard joint shaft in a vise using aluminum plates.

NOTICE:

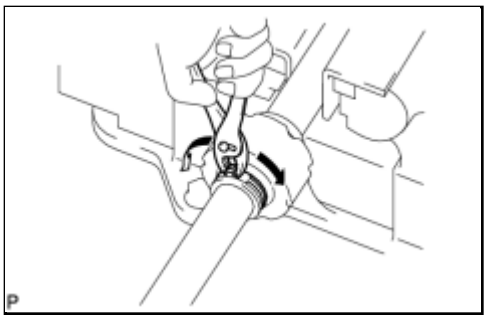
Do not overtighten the vise.

(e) Using a snap ring expander, remove the snap ring from the front axle outboard joint shaft assembly.

(f) Place matchmarks on the tripod joint and outboard joint shaft.

NOTICE:

Do not damage any part when placing the marks.



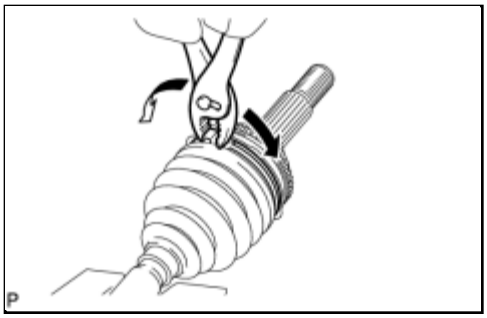
(g) Using a brass bar and hammer, remove the tripod joint from the front axle outboard joint shaft assembly.

NOTICE:

Do not tap the roller.

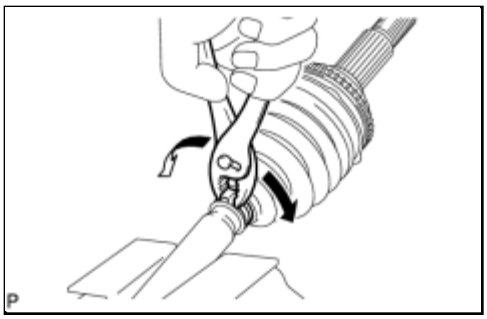
(h) Remove the No. 2 inboard joint boot clamp, the inboard joint boot and the inboard joint boot clamp.

5. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP



(a) Using pliers, remove the damper clamp as shown in the illustration.

6. REMOVE FRONT DRIVE SHAFT DAMPER

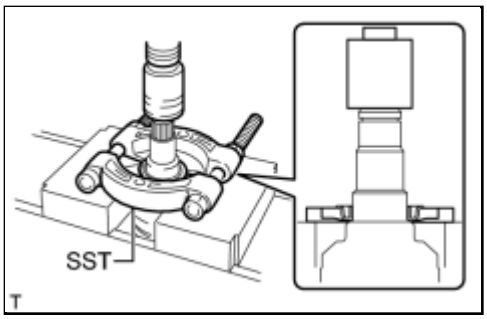


(a) Remove the drive shaft damper from the front axle outboard joint shaft assembly.

7. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the boot clamp as shown in the illustration.

8. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP



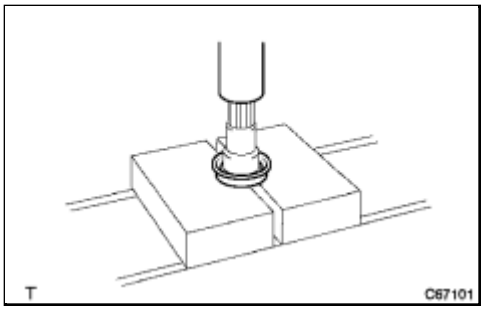
(a) Using pliers, remove the boot clamp as shown in the illustration.

9. REMOVE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the front axle outboard joint shaft assembly.

(b) Remove the old grease from the outboard joint.

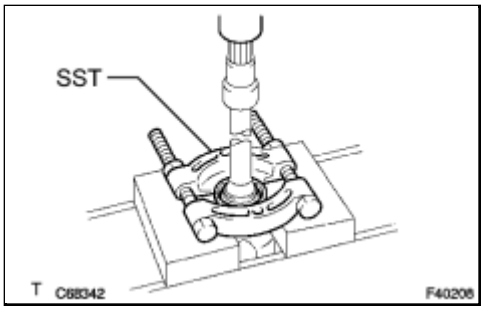
10. REMOVE FRONT DRIVE SHAFT DUST COVER LH



(a) Using SST and a press, remove the dust cover from the front drive inboard joint assembly.

SST: 09950-00020

NOTICE:

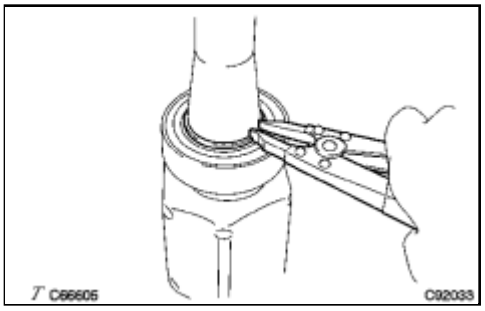


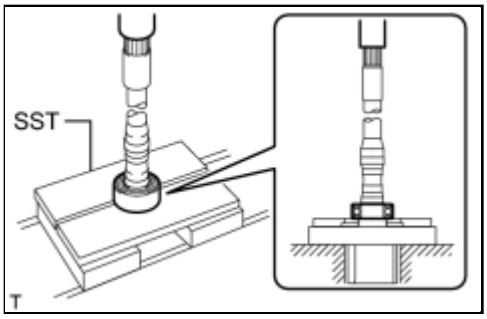
Do not drop the inboard joint.

11. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using a press, remove the drive shaft dust cover RH.

12. REMOVE FRONT DRIVE SHAFT DUST COVER





(a) Using SST and a press, remove the drive shaft dust cover.

SST: 09950-00020

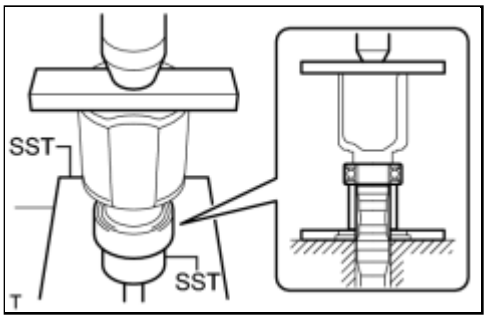
13. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the drive shaft hole snap ring.

(b) Using SST and a press, remove the bearing.

SST: 09527-10011

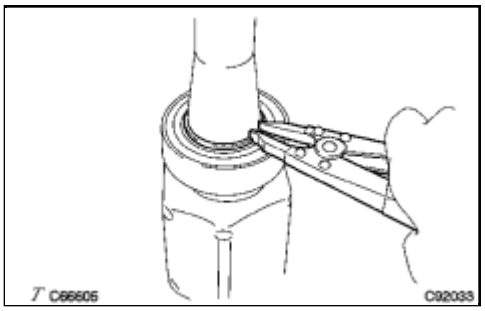
(c) Remove the bearing bracket hole snap ring.



NOTICE:

Be careful not to drop the inboard joint assembly.

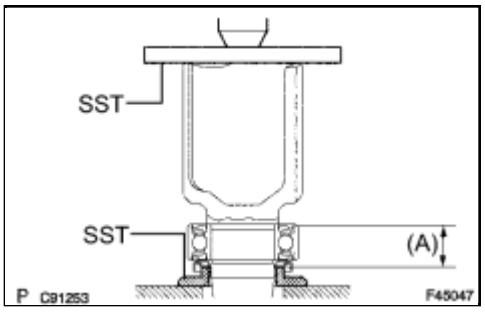
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HB001EX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2AZ-FE): REASSEMBLY (2010 Corolla)		



REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT BEARING

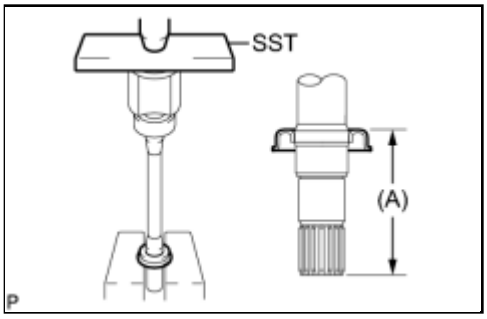
(a) Using SST and a steel plate, install a new front drive shaft bearing.



SST: 09527-30010
SST: 09527-10011
SST: 09630-24014
09620-24051

(b) Install a new bearing bracket hole snap ring to the front driver shaft assembly RH.

NOTICE:
The bearing should be completely installed.



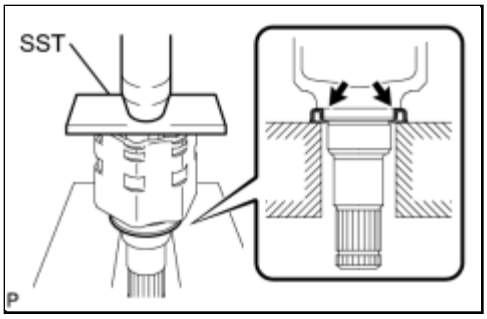
2. INSTALL FRONT DRIVE SHAFT DUST COVER (for 2WD)

(a) Using SST and a press, install a new drive shaft dust cover.

SST: 09527-10011
SST: 09726-40010
Distance (A):
27.1 mm (1.067 in.)

3. INSTALL FRONT DRIVE SHAFT DUST COVER RH (for 2WD)

(a) Using SST and a press, install a new drive shaft dust cover RH until the distance from the tip of the center drive shaft to the drive shaft dust cover RH meets the specification, as shown in the illustration.



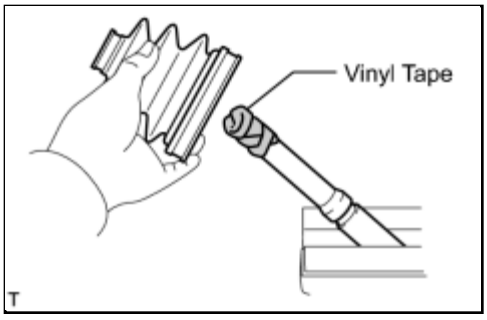
SST: 09527-10011

Distance (A):
90.07 to 90.93 mm (3.5460 to 3.5799 in.)

NOTICE:

- The dust cover should be completely installed.
- Be careful not to damage the dust cover.

4. INSTALL FRONT DRIVE SHAFT DUST COVER LH



(a) Using SST and a press, install a new dust cover into the front drive inboard joint assembly until it is flush with the end.

SST: 09527-10011

NOTICE:

- Install the dust cover in the correct direction.
- Do not deform the dust cover.

5. INSTALL OUTBOARD JOINT BOOT

(a) Wrap the splines of the outboard joint shaft with vinyl tape to prevent the boot from being damaged.

(b) Install new parts onto the outboard joint shaft in the following order.

(1) No. 2 front axle outboard joint boot clamp

(2) Front axle outboard joint boot

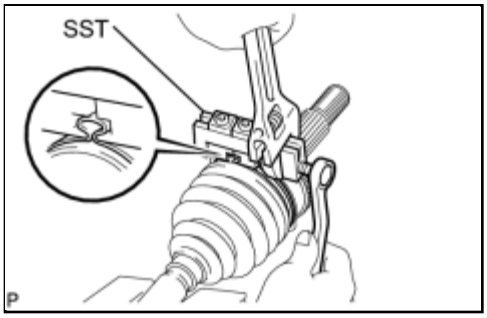
(3) Front axle outboard joint boot clamp

(c) Pack the joint portion of the outboard joint shaft and outboard joint boot with grease.

Standard Quantity:
97 to 107 g (3.4 to 3.8 oz.)

(d) Install the outboard joint boot onto the outboard joint shaft groove.

NOTICE:



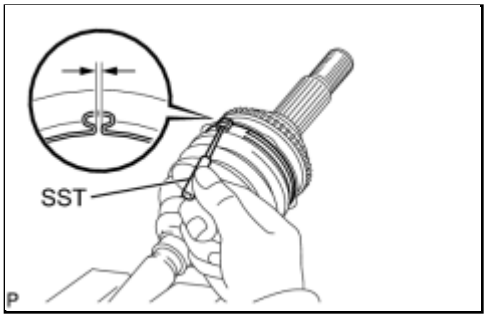
Keep the groove free of grease.

6. INSTALL NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Hold the outboard joint shaft in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.



(b) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.

SST: 09521-24010

(c) Tighten SST so that the clearance comes within the specified range.

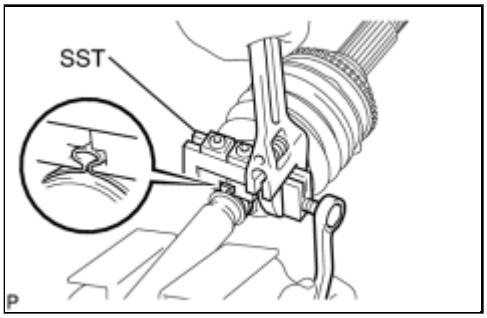
Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

(d) Remove SST.

(e) Using SST, measure the clearance of the boot clamp as shown in the illustration.

SST: 09240-00020

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

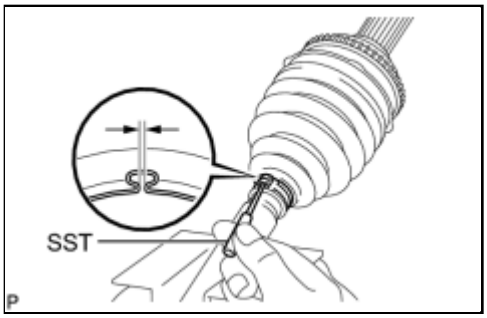


NOTICE:

If the clearance is outside the specified range, retighten SST.

7. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.



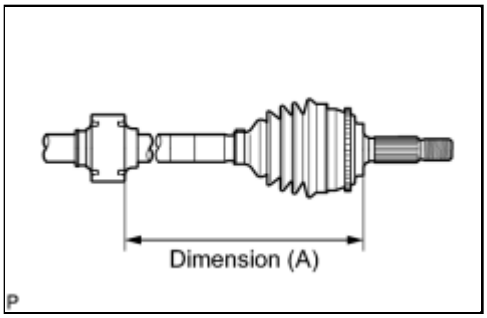
SST: 09521-24010

(b) Tighten SST so that the clearance comes within the specified range.

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

(c) Remove SST.

(d) Using SST, measure the clearance of the boot clamp as shown in the illustration.



SST: 09240-00020

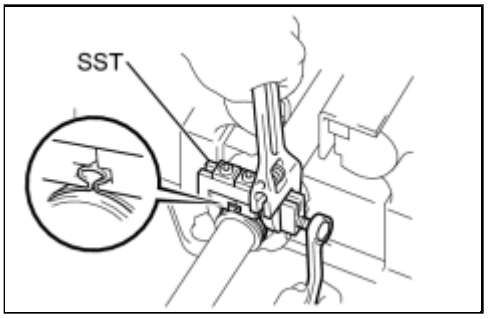
Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

NOTICE:

If the clearance is outside the specified range, retighten SST.

8. INSTALL FRONT DRIVE SHAFT DAMPER

(a) Install the drive shaft damper onto the front axle outboard shaft assembly as shown in the illustration.

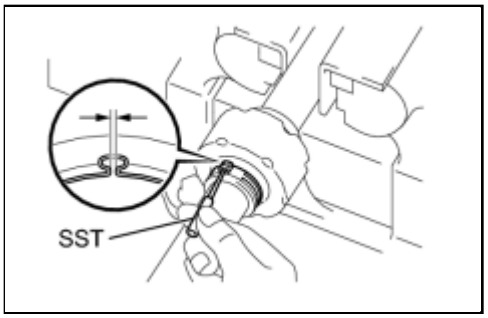


Dimension (A)

LH side	210.0 to 214.0 mm (8.27 to 8.43 in.)
RH side	213.1 to 217.1 mm (8.39 to 8.55 in.)

9. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP

(a) Place SST onto the damper clamp, press it against the boot and slightly tighten SST.



SST: 09521-24010

(b) Hold SST and tighten it so that the clearance comes within the specified range.

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

(c) Remove SST.

(d) Using SST, measure the clearance of the damper clamp as shown in the illustration.

SST: 09240-00020

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

NOTICE:

If the clearance is outside the specified range, retighten SST.

10. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Install new parts onto the outboard joint shaft in the following order.

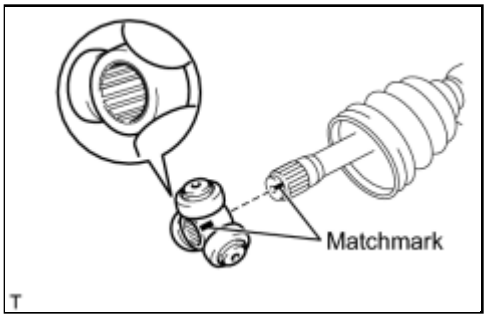
(1) Front axle inboard joint boot clamp

(2) Front axle inboard joint boot

(3) No. 2 front axle inboard joint boot clamp

(b) Secure the outboard joint shaft in a vise using aluminum plates.

NOTICE:

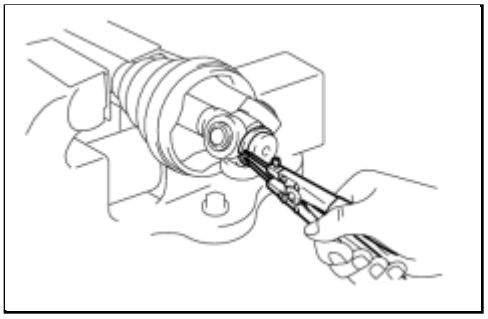


Do not overtighten the vise.

(c) Remove the protective tape.

(d) Align the matchmarks and install the tripod joint onto the front axle outboard joint shaft assembly.

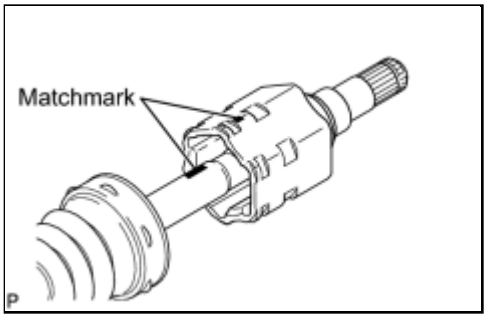
NOTICE:



Face the serrated side of the tripod joint outward and install it onto the outboard joint end.

(e) Using a brass bar and hammer, install the tripod joint to the front axle outboard joint shaft assembly.

NOTICE:



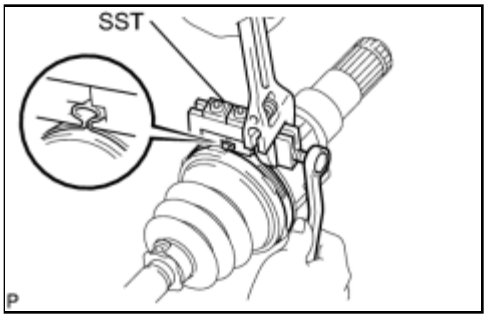
- Do not hit the roller portion.
- Keep the tripod joint free of foreign matter.

(f) Using a snap ring expander, install a new snap ring to the front axle outboard joint shaft assembly.

(g) Pack the inboard joint with grease.

Standard Quantity:
111 to 121 g (3.9 to 4.3 oz.)

(h) Align the matchmarks and install the inboard joint onto the front axle outboard joint shaft assembly.



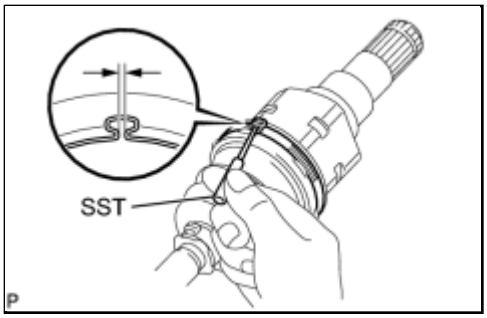
11. INSTALL INBOARD JOINT BOOT

(a) Install the inboard joint boot into the grooves of the inboard joint and outboard joint shaft.

NOTICE:

Keep the grooves free of grease.

12. INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP



(a) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.

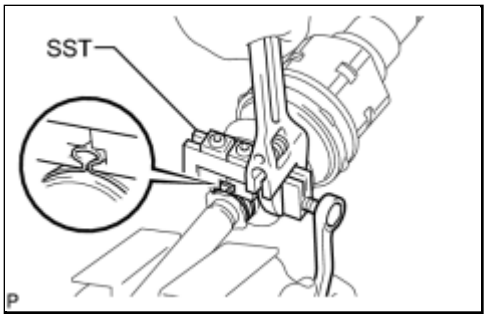
SST: 09521-24010

(b) Tighten SST so that the clearance comes within the specified range.

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

(c) Remove SST.

(d) Using SST, measure the clearance of the boot clamp as shown in the illustration.



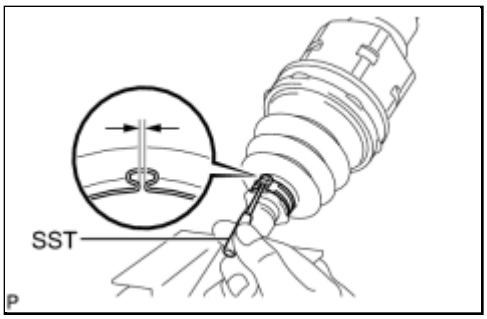
SST: 09240-00020

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

NOTICE:

If the clearance is outside the specified range, retighten SST.

13. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP



(a) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.

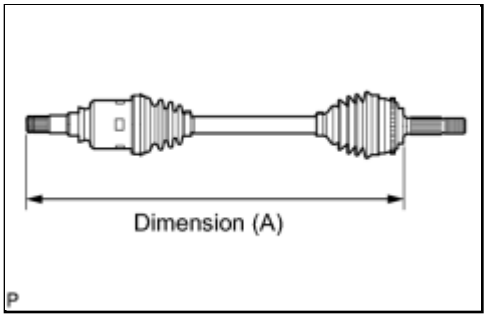
SST: 09521-24010

(b) Tighten SST so that the clearance comes within the specified range.

Standard Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)

(c) Remove SST.

(d) Using SST, measure the clearance of the boot clamp as shown in the illustration.



SST: 09240-00020

Standard Clearance:

0.5 to 1.5 mm (0.0197 to 0.0591 in.)

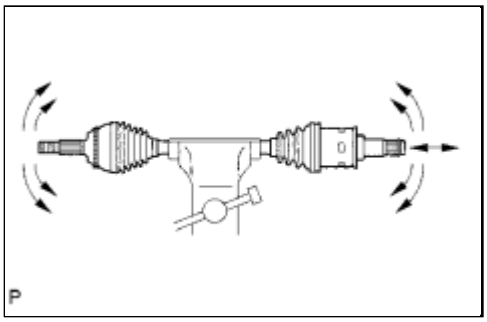
NOTICE:

If the clearance is outside the specified range, retighten SST.

(e) Check whether the drive shaft dimensions are within the following specifications.

Dimension (A)

LH side	557.1 mm (1.83 ft.)
RH side	873.9 mm (2.87 ft.)



14. INSPECT FRONT DRIVE SHAFT

TOYOTA

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IW701GX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2AZ-FE): INSPECTION (2010 Corolla)		

INSPECTION

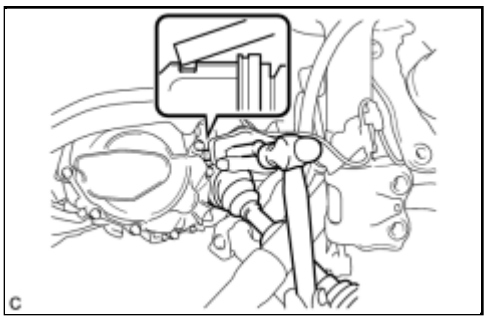
1. INSPECT FRONT DRIVE SHAFT ASSEMBLY

(a) Check that there is no excessive play in the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no excessive play in the radial directions of the inboard joint.

(d) Check the boots for damage.



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HAW01JX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2AZ-FE): INSTALLATION (2010 Corolla)		

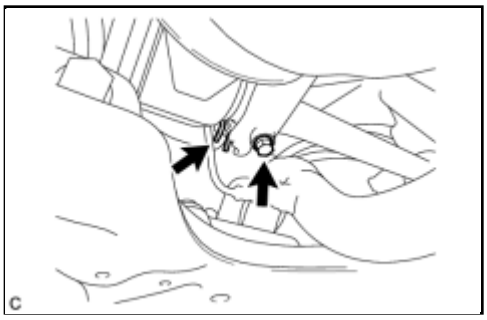
INSTALLATION

1. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH (for LH Side)

(a) Install a new front drive shaft hole snap ring LH to the front drive inboard joint assembly.

2. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH

(a) Align the inboard joint splines, and using a brass bar and a hammer, install the front drive shaft assembly LH.



NOTICE:

- Face the end gap of the front drive inboard joint hole snap ring downward.
- Do not damage the oil seal.
- Do not damage the inboard joint boot.

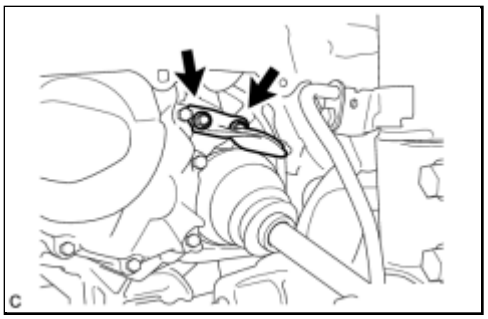
HINT:

Confirm whether the drive shaft is securely driven in by checking the reaction force and sound.

3. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH

(a) Install the front drive shaft assembly RH.

(b) Using a screwdriver, install a new bearing bracket hole snap ring.



NOTICE:

- Do not damage the boot or oil seal.
- Move the drive shaft assembly while keeping it level.

(c) Install a new bolt.

Torque: 32 N·m (330 kgf·cm, 24ft·lbf)

4. INSTALL MANUAL TRANSMISSION CASE PROTECTOR (for Manual Transaxle)

(a) Install the manual transmission case protector with the 2 bolts.

Torque: 18 N·m (184 kgf·cm, 13ft·lbf)

5. INSTALL FRONT AXLE ASSEMBLY LH INFO

6. INSTALL FRONT AXLE ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

7. CONNECT FRONT LOWER SUSPENSION ARM LH INFO

8. CONNECT FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

9. INSTALL TIE ROD END SUB-ASSEMBLY LH INFO

10. INSTALL TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

11. INSTALL FRONT STABILIZER LINK ASSEMBLY LH INFO

12. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

13. CONNECT FRONT SPEED SENSOR LH (for TMC Made) INFO

14. CONNECT FRONT SPEED SENSOR RH (for TMC Made)

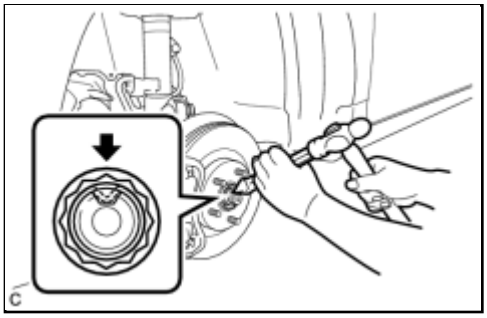
HINT:

Perform the same procedure as for the LH side.

15. CONNECT FRONT SPEED SENSOR LH (except TMC Made) INFO

16. CONNECT FRONT SPEED SENSOR RH (except TMC Made)

HINT:



Perform the same procedure as for the LH side.

17. INSTALL FRONT AXLE SHAFT NUT LH

(a) Clean the threaded parts on the drive shaft and axle shaft nut using a non-residue solvent.

NOTICE:

- Be sure to perform this work for a new drive shaft.
- Keep the threaded parts free of oil and foreign matter.

(b) Using a socket wrench (30 mm), install a new axle shaft nut.

Torque: 216 N·m (2203 kgf·cm, 160ft·lbf)

(c) Using a chisel and hammer, caulk the axle shaft nut.

18. INSTALL FRONT AXLE SHAFT NUT RH

HINT:

Perform the same procedure as for the LH side.

19. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

20. ADD MANUAL TRANSAXLE OIL (for Manual Transaxle) INFO

21. ADD AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle)

22. INSPECT MANUAL TRANSAXLE OIL (for Manual Transaxle) INFO

23. INSPECT AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) INFO

24. INSPECT FOR OIL LEAK (for Manual Transaxle)

25. INSPECT FOR FLUID LEAK (for Automatic Transaxle)

26. INSTALL ENGINE UNDER COVER LH

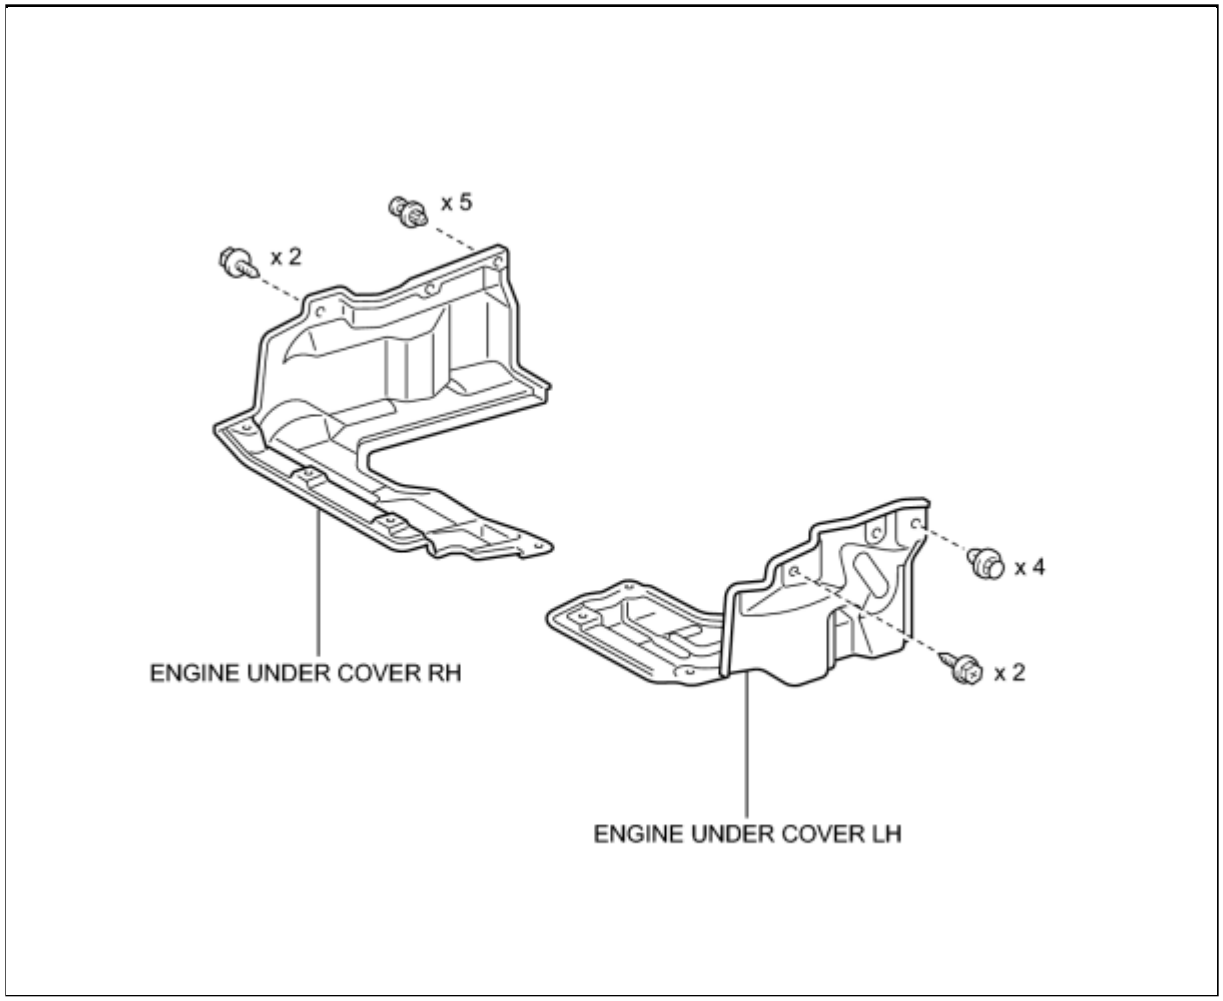
27. INSTALL ENGINE UNDER COVER RH

28. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

HINT: INFO .

29. INSPECT SPEED SENSOR SIGNAL (w/o VSC)

HINT: INFO .



30. INSPECT SPEED SENSOR SIGNAL (w/ VSC)

HINT: INFO .

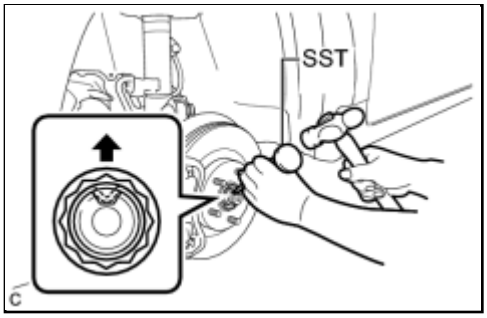
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2ZR-FE): REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE ENGINE UNDER COVER LH



2. REMOVE ENGINE UNDER COVER RH

3. DRAIN MANUAL TRANSAXLE OIL (for Manual Transaxle) INFO

4. DRAIN AUTOMATIC TRANSAXLE FLUID (for Automatic Transaxle) INFO

5. REMOVE FRONT WHEELS

6. REMOVE FRONT AXLE SHAFT NUT LH

(a) Using SST and a hammer, release the staked part of the front axle shaft nut LH.

SST: 09930-00010

NOTICE:

- Insert SST into the groove with the flat surface facing up.
- Do not damage the tip of SST using grinders.
- Completely unstake the staked part before removing the front axle shaft nut.
- Do not damage the threads of the drive shaft.

(b) Using a socket wrench (30 mm), remove the front axle shaft nut LH.

7. REMOVE FRONT AXLE SHAFT NUT RH

HINT:

Perform the same procedure as for the LH side.

8. SEPARATE FRONT SPEED SENSOR LH (for TMC Made) INFO

9. SEPARATE FRONT SPEED SENSOR RH (for TMC Made)

HINT:

Perform the same procedure as for the LH side.

10. SEPARATE FRONT SPEED SENSOR LH (except TMC Made) INFO

11. SEPARATE FRONT SPEED SENSOR RH (except TMC Made)

HINT:

Perform the same procedure as for the LH side.

12. SEPARATE FRONT STABILIZER LINK ASSEMBLY LH INFO

13. SEPARATE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

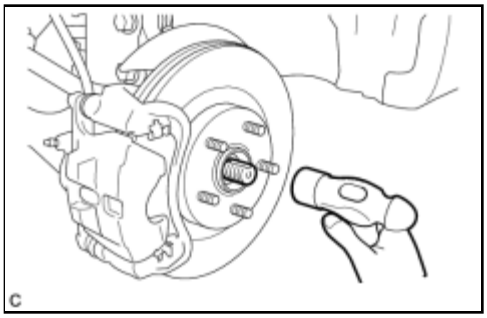
Perform the same procedure as for the LH side.

14. SEPARATE TIE ROD END SUB-ASSEMBLY LH INFO

15. SEPARATE TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.



16. SEPARATE FRONT LOWER SUSPENSION ARM LH INFO

17. SEPARATE FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

18. SEPARATE FRONT AXLE ASSEMBLY LH

(a) Using a plastic hammer, tap the end of the drive shaft and disengage the fitting between the drive shaft and front axle assembly LH.

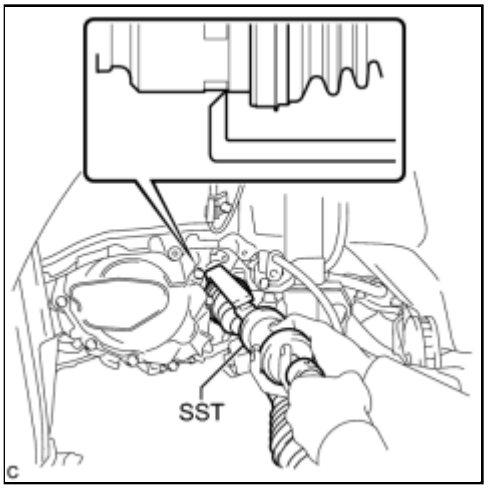
HINT:

If it is difficult to disengage the fitting, tap the end of the drive shaft with a brass bar and hammer.

(b) Push the front axle assembly LH out of the vehicle to remove the drive shaft from the front axle assembly LH.

NOTICE:

- Do not push out the front axle further than necessary.
- Do not damage the outboard joint boot.
- Do not damage the speed sensor rotor.



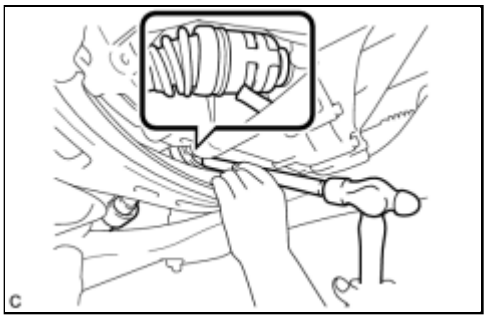
19. SEPARATE FRONT AXLE ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

20. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

(a) Using SST, remove the front drive shaft assembly LH.

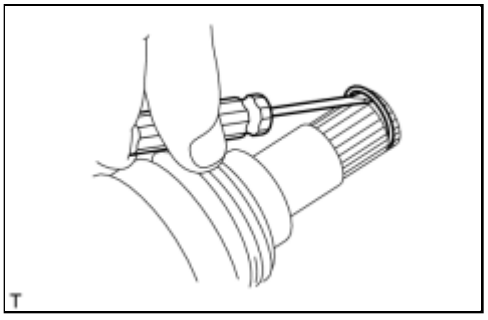


SST: 09520-01010
SST: 09520-24010
09520-32040

NOTICE:

- Do not damage the oil seal.
- Do not damage the inboard joint boot.
- Do not drop the drive shaft.

21. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH

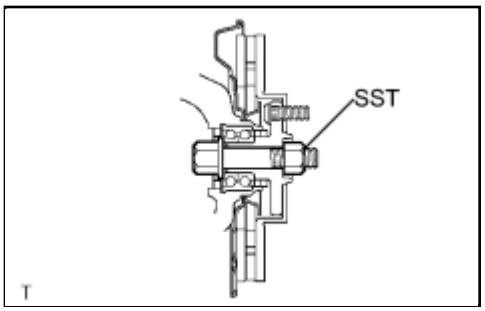


(a) Using a brass bar and hammer, remove the front drive shaft assembly RH.

NOTICE:

- Do not damage the oil seal.
- Do not damage the inboard joint boot.
- Do not drop the drive shaft.

22. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING LH



(a) Using a screwdriver, remove the front drive shaft hole snap ring LH from the front drive inboard joint assembly LH.

23. REMOVE FRONT DRIVE SHAFT HOLE SNAP RING RH

HINT:

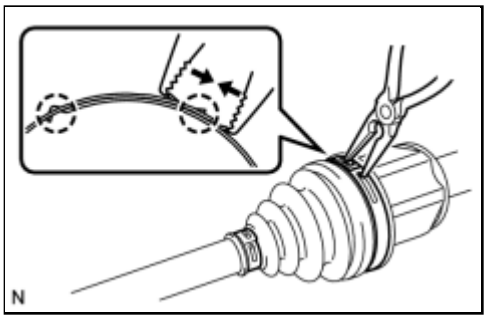
Perform the same procedure as for the LH side.

24. FIX FRONT AXLE ASSEMBLY LH

SST: 09608-16042

09608-02021

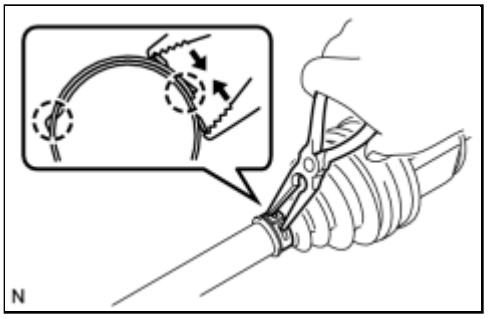
09608-02041



NOTICE:

The hub bearing could be damaged if it is subjected to the vehicle weight, such as when moving the vehicle with the drive shaft removed. Therefore, make sure to support the hub bearing with SST when the vehicle weight is applied.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IWA01DX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2ZR-FE): DISASSEMBLY (2010 Corolla)		



DISASSEMBLY

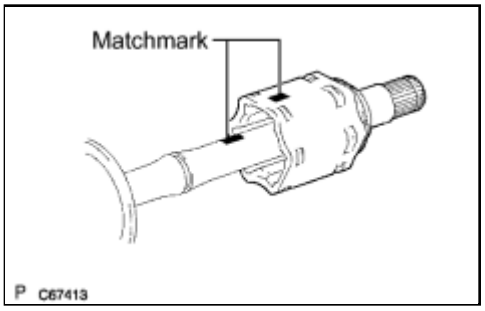
1. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

2. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

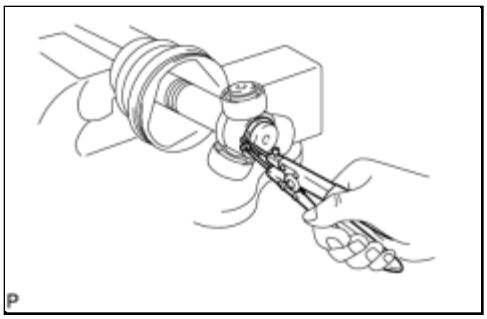
(a) Using pliers, remove the front axle inboard joint boot clamp as shown in the illustration.

3. SEPARATE INBOARD JOINT BOOT



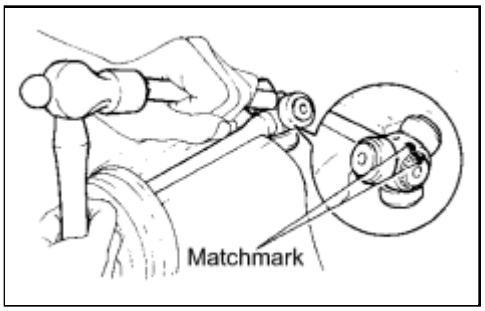
(a) Separate the inboard joint boot from the front axle inboard joint assembly.

4. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY



(a) Put matchmarks on the front axle inboard joint assembly and front axle outboard joint shaft.

NOTICE:



Do not use a punch for the marks.

(b) Remove the front axle inboard joint assembly from the front axle outboard joint shaft.

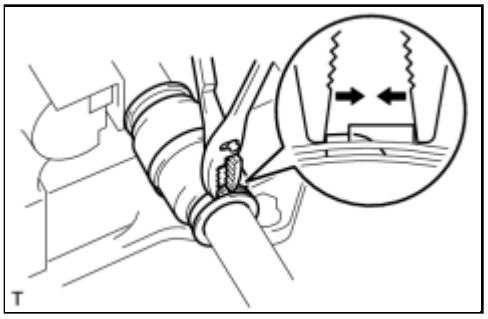
(c) Using a snap ring expander, remove the shaft snap ring.

(d) Put matchmarks on the outboard joint shaft and tripod joint.

NOTICE:

Do not use a punch for the marks.

(e) Using a brass bar and a hammer, remove the tripod joint from the front axle outboard joint shaft.

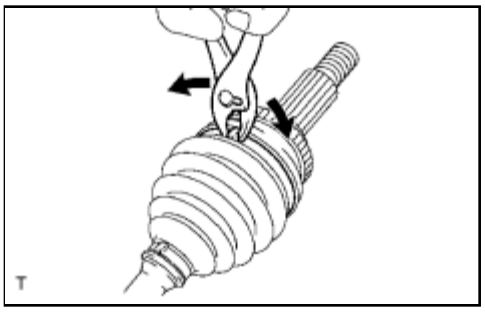


NOTICE:

Do not tap the roller.

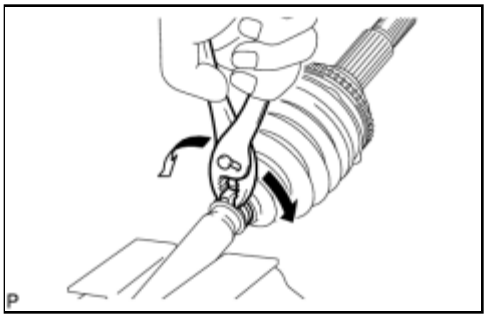
(f) Remove the inboard joint boot from the front axle outboard joint shaft.

5. REMOVE FRONT DRIVE SHAFT DAMPER CLAMP RH (for RH Side)



(a) Using pliers, remove the front drive shaft damper clamp RH, as shown in the illustration.

6. REMOVE FRONT DRIVE SHAFT DAMPER RH (for RH Side)



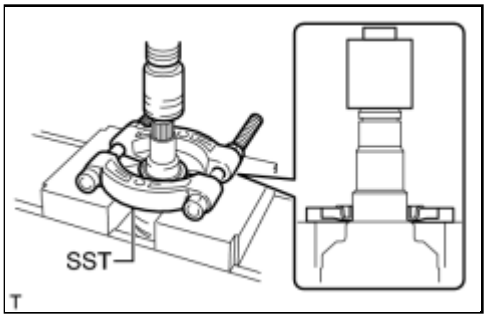
(a) Remove the front drive shaft damper RH from the front axle outboard joint shaft.

7. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

8. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Using pliers, remove the front axle outboard joint boot clamp as shown in the illustration.



9. REMOVE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the front axle outboard joint shaft.

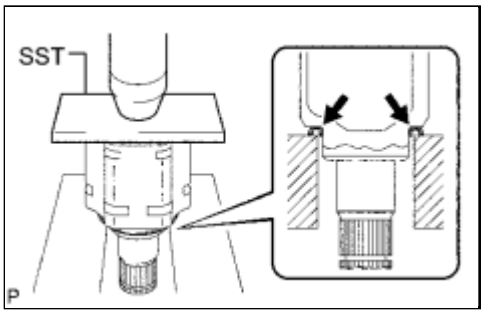
(b) Remove the grease from the outboard joint.

10. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the front drive shaft dust

cover.

SST: 09950-00020



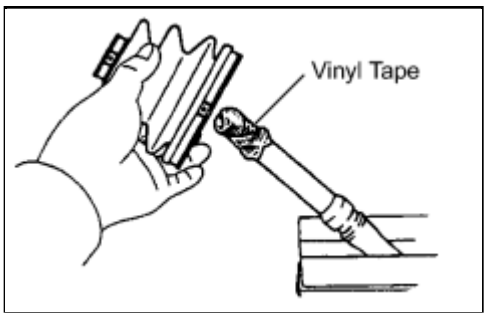
NOTICE:

Be careful not to drop the inboard joint assembly.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001IWB01DX
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2ZR-FE): REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT DUST COVER



(a) Using SST and a press, install a new dust cover into the front drive inboard joint assembly until it is flush with the end.

SST: 09527-10011

NOTICE:

- Install the dust cover in the correct direction.
- Do not deform the dust cover.

2. INSTALL OUTBOARD JOINT BOOT

(a) Wrap the splines of the outboard joint shaft with vinyl tape to prevent the boot from being damaged.

(b) Install new parts onto the outboard joint shaft in the following order.

(1) No. 2 front axle outboard joint boot clamp

(2) Outboard joint boot

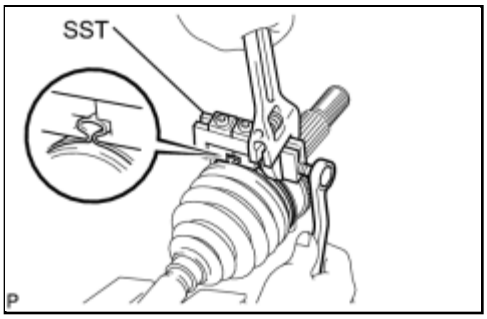
(3) Front axle outboard joint boot clamp

(c) Pack the joint portion of the front axle outboard joint shaft and outboard joint boot with grease.

Grease capacity:
85 to 105 g (3.0 to 3.7 oz.)

(d) Install the outboard joint boot onto the outboard joint shaft groove.

NOTICE:



Keep the groove free of grease.

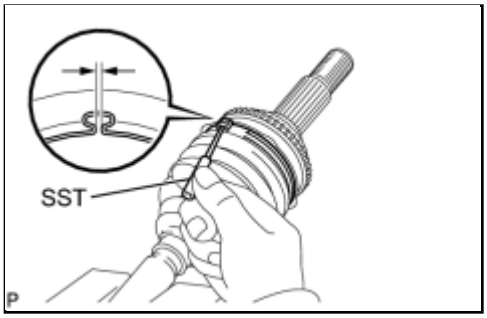
3. INSTALL NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Hold the outboard joint shaft in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.

(b) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.



SST: 09521-24010

(c) Tighten SST so that the clearance comes within the specified range.

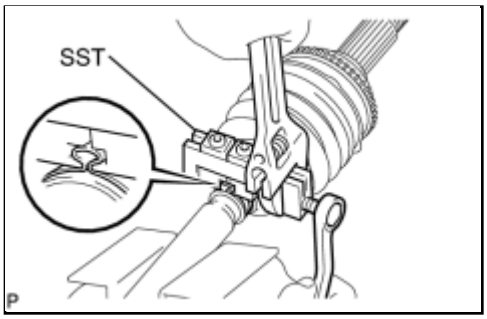
NOTICE:

Do not overtighten SST.

(d) Remove SST.

(e) Using SST, measure the clearance of the boot clamp as shown in the illustration.

SST: 09240-00020



Standard Clearance:

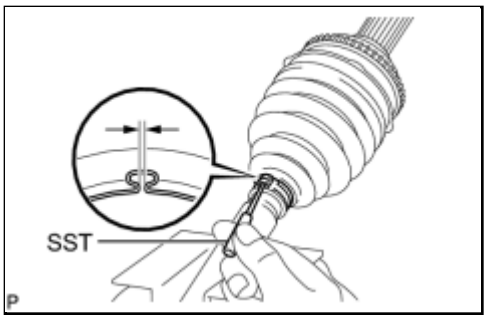
1.2 to 4.0 mm (0.0473 to 0.157 in.)

NOTICE:

If the clearance is outside the specified range, retighten SST.

4. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Place SST onto the boot clamp, press it against the boot and slightly tighten SST.



SST: 09521-24010

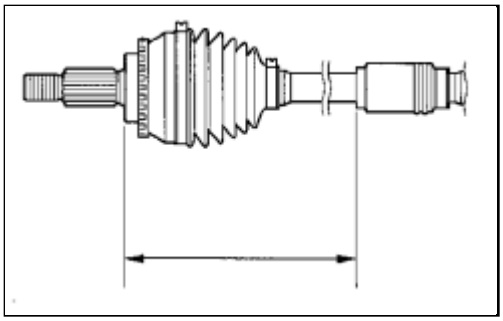
(b) Tighten SST so that the clearance comes within the specified range.

NOTICE:

Do not overtighten SST.

(c) Remove SST.

(d) Using SST, measure the clearance of the boot clamp as shown in the illustration.

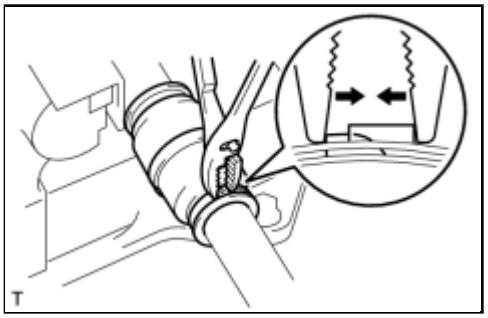


SST: 09240-00020

Standard Clearance:
1.2 to 4.0 mm (0.0473 to 0.157 in.)

NOTICE:

If the clearance is outside the specified range, retighten SST.



5. INSTALL FRONT DRIVE SHAFT DAMPER RH

(a) Install the drive shaft damper onto the front axle outboard shaft assembly as shown in the illustration.

Distance:
412.5 to 416.5 mm (1.3535 to 1.3665 ft.)

6. INSTALL FRONT DRIVE SHAFT DAMPER CLAMP RH (for RH Side)

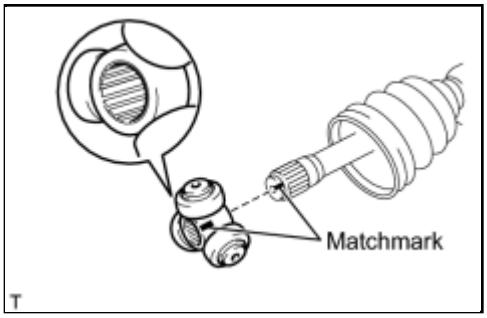
(a) Using pliers, install a new drive shaft damper clamp, as shown in the illustration.

7. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Install new parts onto the outboard joint shaft in the following order.

(1) Front axle inboard joint boot clamp

(2) Inboard joint boot



(3) No. 2 front axle inboard joint boot clamp

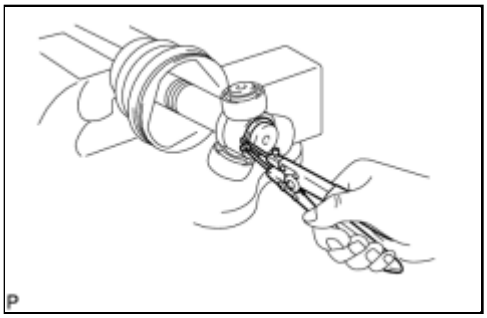
(b) Secure the front axle outboard joint shaft in a vise using aluminum plates.

NOTICE:

Do not overtighten the vise.

(c) Remove the protective tape.

(d) Align the matchmarks and install the tripod joint onto the front axle outboard joint shaft.



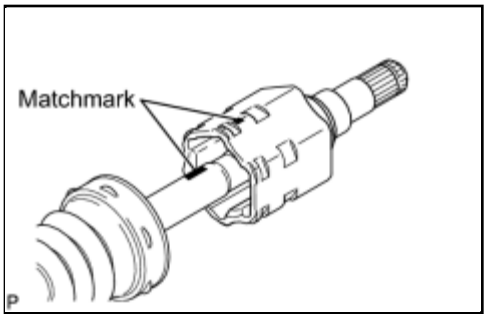
NOTICE:

Face the serrated side of the tripod joint outward and install it onto the outboard joint end.

(e) Using a brass bar and hammer, install the tripod joint to the front axle outboard joint shaft.

NOTICE:

- Do not hit the roller portion.
- Keep the tripod joint free of foreign matter.

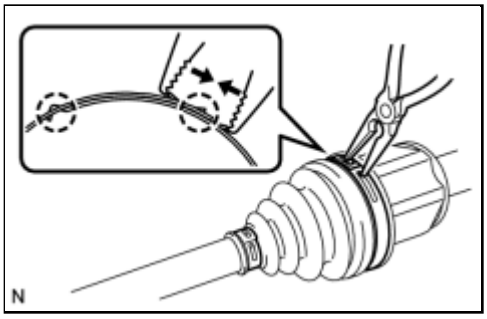


(f) Using a snap ring expander, install a new snap ring to the front axle outboard joint shaft.

(g) Pack the inboard joint with grease.

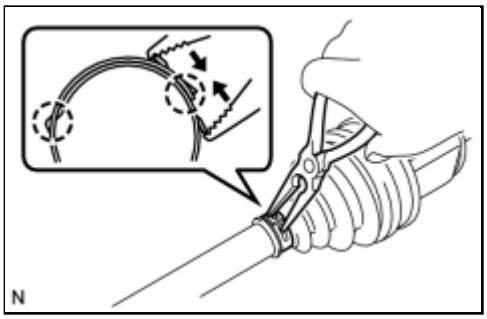
Grease Capacity

for MEXICO LH side	155 to 175 g (5.5 to 6.2 oz.)
except MEXICO LH side	110 to 130 g (3.9 to 4.6 oz.)



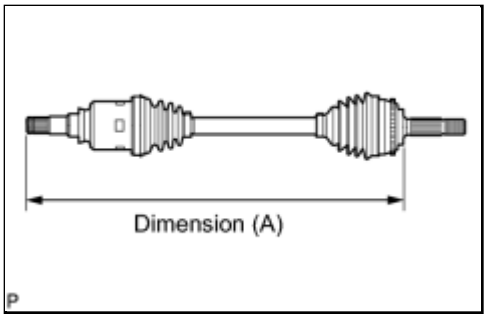
(h) Align the matchmarks and install the inboard joint onto the front axle outboard joint shaft.

8. INSTALL INBOARD JOINT BOOT



(a) Install the inboard joint boot to the inboard joint assembly.

9. INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP



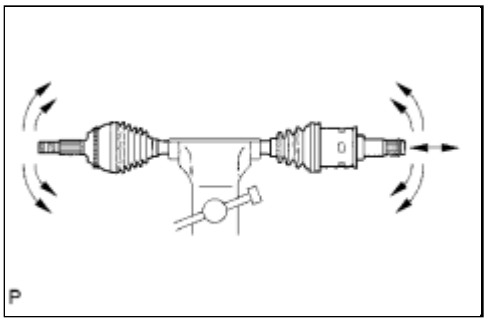
(a) Using pliers, install a new No. 2 front axle inboard joint boot clamp as shown in the illustration.

10. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Using pliers, install the new front axle inboard joint boot clamp as shown in the illustration.

(b) Check whether the drive shaft dimensions are within the following specifications.

Dimension (A)



LH side (for MEXICO)	582.5 mm (1.91 ft.)
LH side (except MEXICO)	580.3 mm (1.90 ft.)
RH side	856.3 mm (2.81 ft.)

11. INSPECT FRONT DRIVE SHAFT INFO

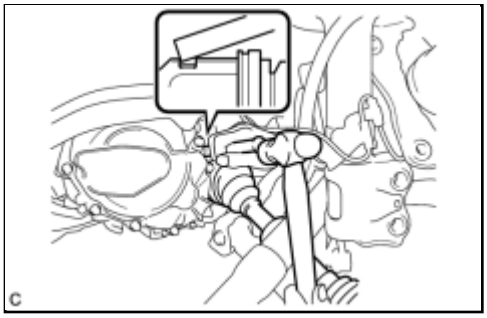
Title: DRIVE SHAFT / PROPELLER SHAFT: FRONT DRIVE SHAFT ASSEMBLY (for 2ZR-FE): INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING LH



(a) Install a new front drive shaft hole snap ring LH to the front drive inboard joint assembly.

2. INSTALL FRONT DRIVE SHAFT HOLE SNAP RING RH

HINT:

Perform the same procedure as for the LH side.

3. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH

(a) Align the inboard joint splines, and using a brass bar and a hammer, install the front drive shaft assembly LH.

NOTICE:

- Face the end gap of the front drive inboard joint hole snap ring downward.
- Do not damage the oil seal.
- Do not damage the inboard joint boot.

HINT:

Confirm whether the drive shaft is securely driven in by checking the reaction force and sound.

4. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

5. INSTALL FRONT AXLE ASSEMBLY LH

(a) Push the front axle assembly LH out of the vehicle to align the spline of the drive shaft with the front axle assembly LH and insert the front axle assembly LH.

NOTICE:

- Do not push out the front axle further than necessary.
- Do not damage the outboard joint boot.
- Check for any foreign matter on the speed sensor rotor and insertion part.
- Do not damage the speed sensor rotor.

6. INSTALL FRONT AXLE ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

7. INSTALL FRONT LOWER SUSPENSION ARM LH INFO

8. INSTALL FRONT LOWER SUSPENSION ARM RH

HINT:

Perform the same procedure as for the LH side.

9. CONNECT TIE ROD END SUB-ASSEMBLY LH INFO

10. CONNECT TIE ROD END SUB-ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

11. INSTALL FRONT STABILIZER LINK ASSEMBLY LH INFO

12. INSTALL FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

14. CONNECT FRONT SPEED SENSOR RH (for TMC Made)

HINT:

Perform the same procedure as for the LH side.

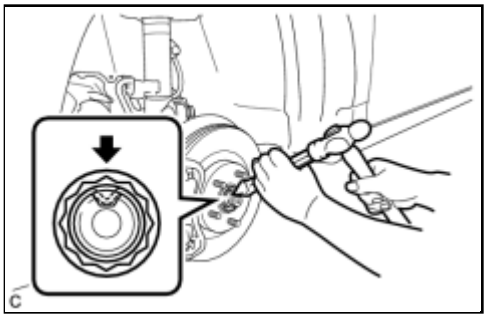
15. CONNECT FRONT SPEED SENSOR LH (except TMC Made) INFO

16. CONNECT FRONT SPEED SENSOR RH (except TMC Made)

HINT:

Perform the same procedure as for the LH side.

17. INSTALL FRONT AXLE SHAFT NUT LH



(a) Clean the threaded parts on the drive shaft and front axle shaft nut using a non-residue solvent.

NOTICE:

- Be sure to perform this work for a new drive shaft.
- Keep the threaded parts free of oil and foreign matter.

(b) Using a socket wrench (30 mm), install a new front axle shaft nut.

Torque: 216 N·m (2203 kgf·cm, 160ft·lbf)

(c) Using a chisel and hammer, caulk the axle hub nut.

18. INSTALL FRONT AXLE SHAFT NUT RH

HINT:

Perform the same procedure as for the LH side.

19. INSTALL FRONT WHEELS

Torque: 103 N·m (1050 kgf·cm, 76ft·lbf)

20. ADD MANUAL TRANSAXLE OIL (for Manual Transaxle) INFO

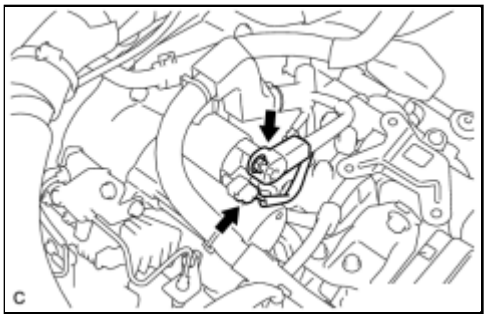
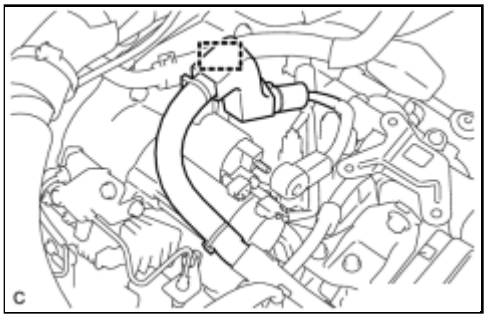
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: BACK-UP LIGHT SWITCH: REMOVAL (2010 Corolla)		



REMOVAL

1. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

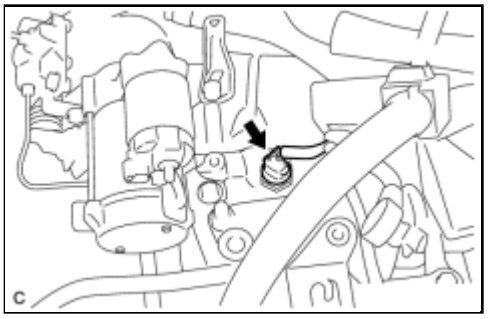
2. REMOVE AIR CLEANER CAP SUB-ASSEMBLY INFO



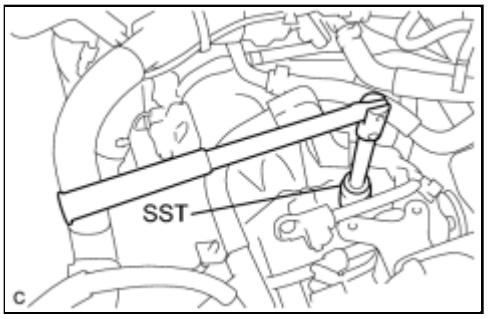
3. REMOVE AIR CLEANER CASE INFO

4. DISCONNECT WIRE HARNESS

(a) Disconnect the terminal 50 connector from the starter assembly.



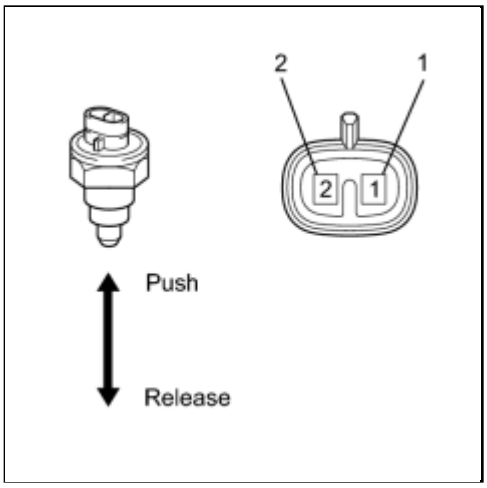
(b) Remove the nut and disconnect the wire harness from terminal 30.



(c) Disconnect the wire harness clamp.

5. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Disconnect the back-up light switch connector.



(b) Using SST, remove the back-up light switch and gasket from the transaxle case.

SST: 09817-16011

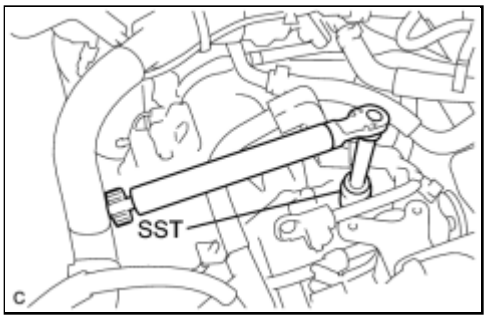
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000017MP01PX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: BACK-UP LIGHT SWITCH: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT BACK-UP LIGHT SWITCH ASSEMBLY

(a) Measure the resistance of the switch.

Standard Resistance:

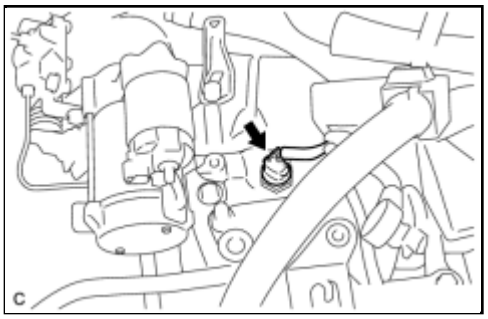


TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Pushed	Below 1 Ω
1 - 2	Released	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

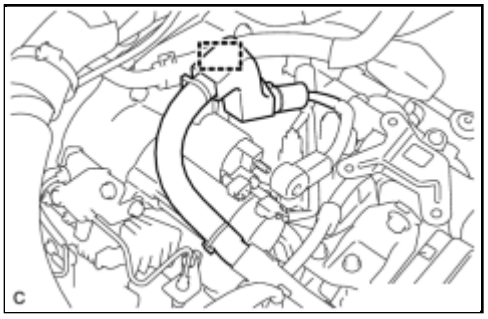
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001YVJ01QX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: BACK-UP LIGHT SWITCH: INSTALLATION (2010 Corolla)		

INSTALLATION



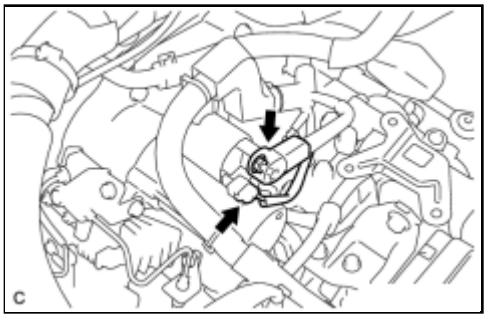
1. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch and a new gasket to the transaxle case.



SST: 09817-16011

Torque: 40 N·m (410 kgf·cm, 30ft·lbf)



(b) Connect the back-up light switch connector.

2. CONNECT WIRE HARNESS

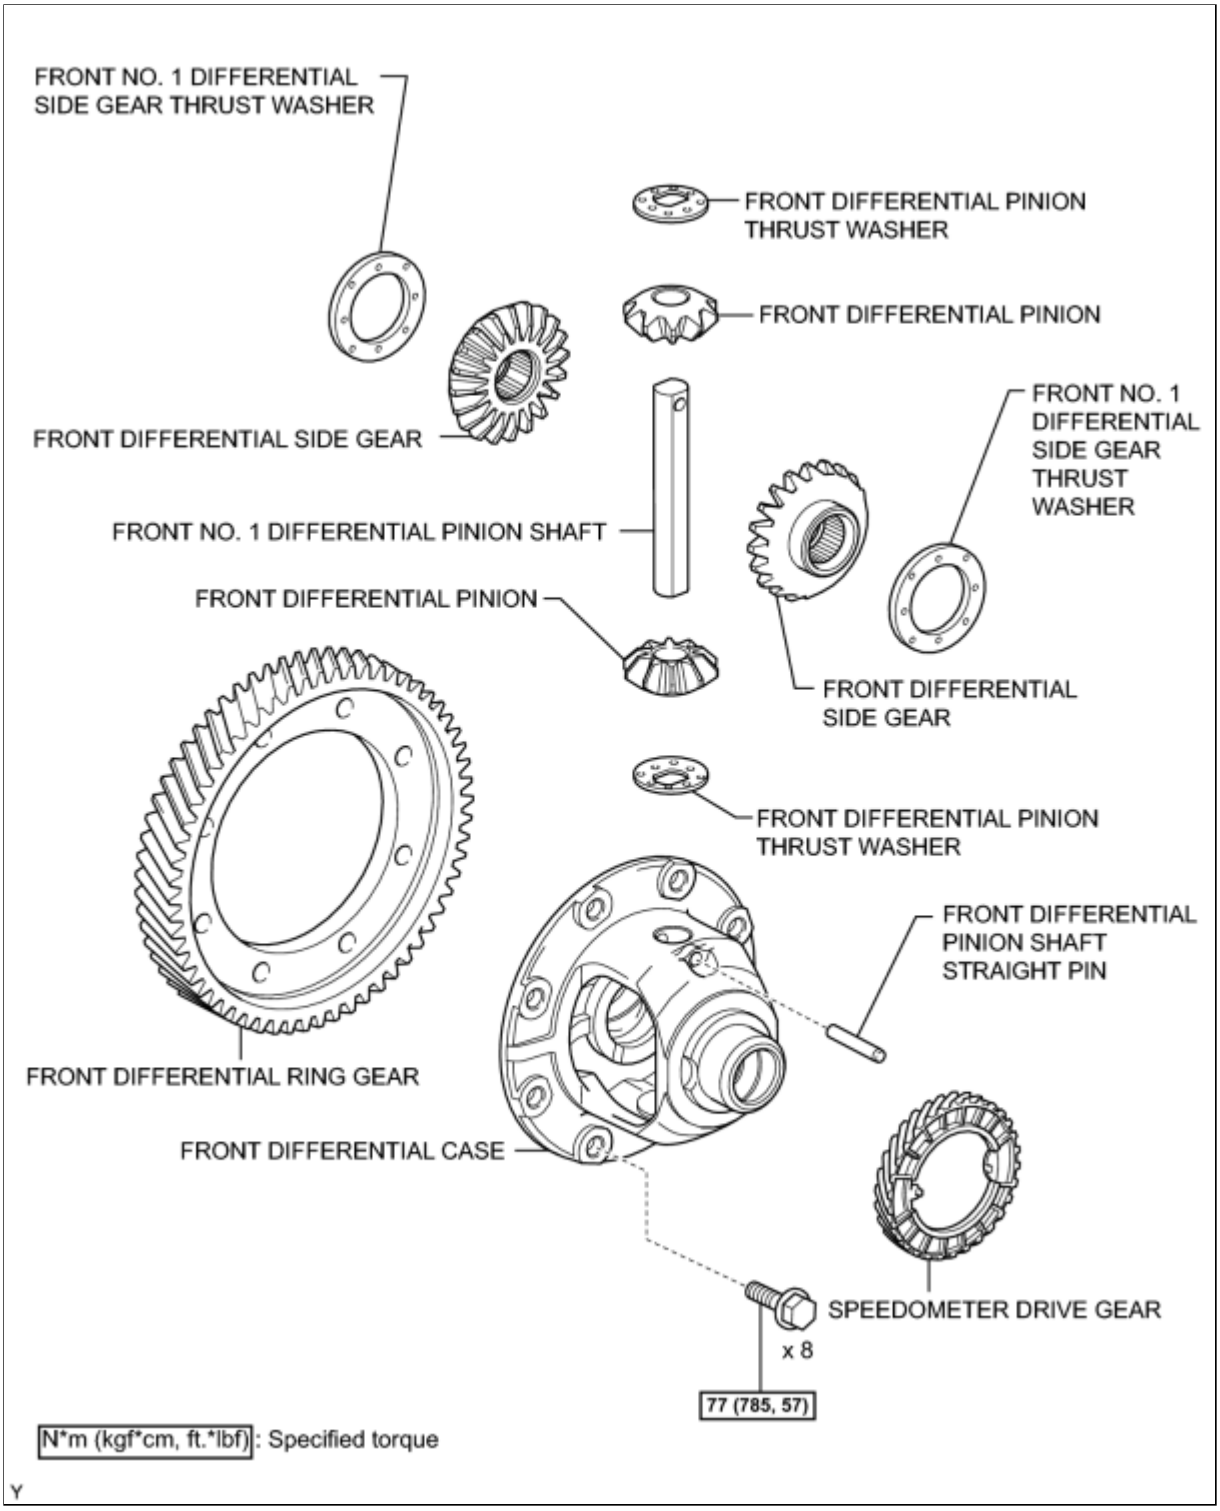
(a) Connect the wire harness to the wire harness clamp.

(b) Connect the terminal 50 connector to the starter assembly.

(c) Connect the wire harness to terminal 30 and install the nut. Then, attach the terminal cap.

Torque: 9.8 N·m (100 kgf·cm, 87in·lbf)

3. INSTALL AIR CLEANER CASE INFO



4. INSTALL AIR CLEANER CAP SUB-ASSEMBLY INFO

5. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

Last Modified: 3-10-2010	6.4 K	**From:** 200901

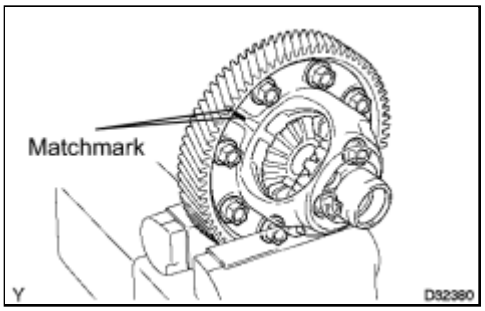
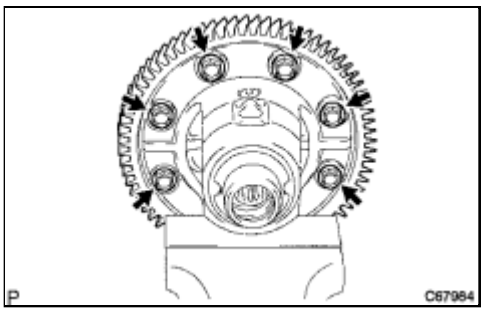
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: DISASSEMBLY (2010 Corolla)		



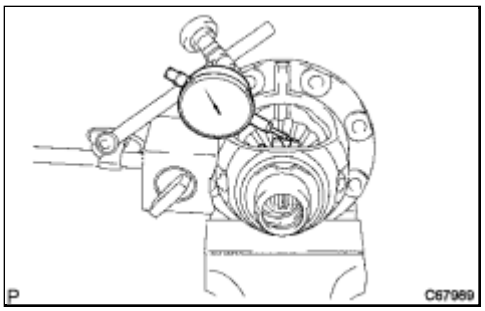
DISASSEMBLY

1. REMOVE SPEEDOMETER DRIVE GEAR



(a) Remove the speedometer drive gear from the front differential case.

2. REMOVE FRONT DIFFERENTIAL RING GEAR

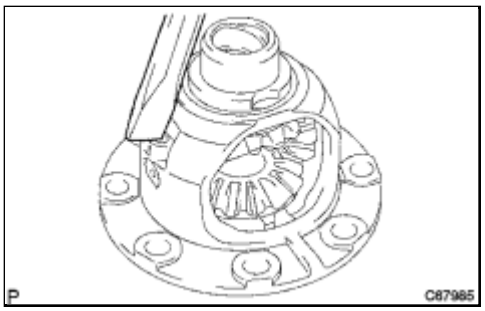


(a) Place matchmarks on the front differential ring gear and the front differential case.

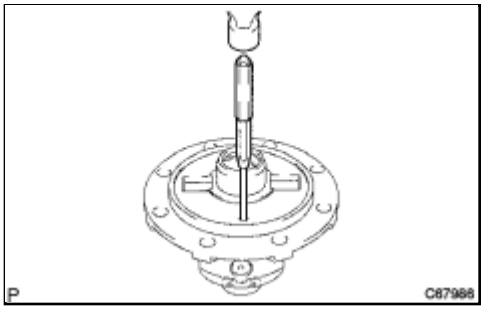
(b) Remove the 8 bolts.

(c) Using a plastic hammer, remove the front differential ring gear from the front differential case.

3. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH



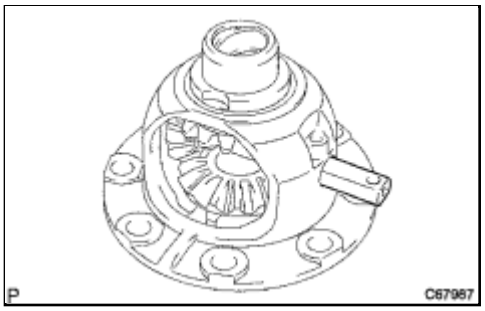
(a) Secure the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.



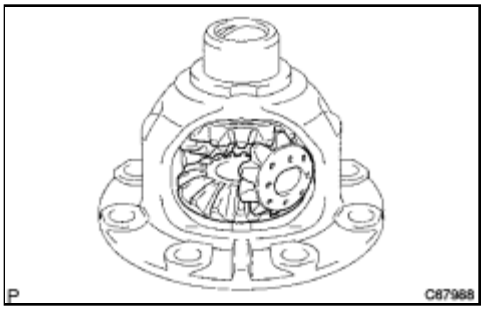
Standard backlash:
0.05 to 0.20 mm (0.00197 to 0.00787 in.)

If the backlash is out of specification, adjust it using new side gear thrust washers INFO .

4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN



(a) Using a chisel and a hammer, loosen the staked part of the front differential case.



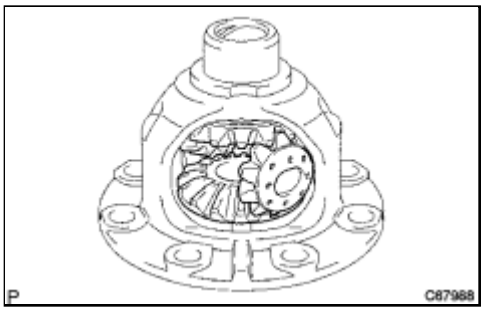
(b) Using a pin punch (φ3 mm) and a hammer, remove the front differential pinion shaft straight pin from the front differential case.

5. REMOVE FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Remove the front No. 1 differential pinion shaft from the front differential case.

6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 front differential pinion thrust washers, 2 No. 1 front differential side gear thrust washers, and 2 front differential side gears from the front differential case.



HINT:

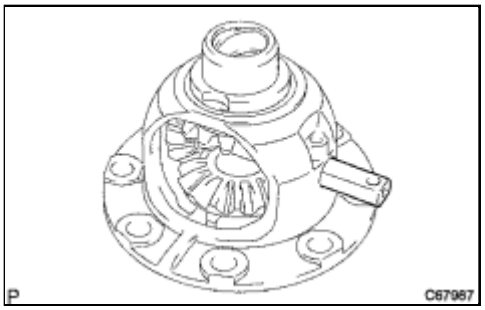
While rotating the front differential pinion, remove the 2 pinions and 2 side gears.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A1101XX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the contact surfaces of the front differential side gears with gear oil.



(b) Install the 2 front No. 1 differential side gear thrust washers onto the 2 front differential side gears.

(c) Install the 2 front differential side gears, 2 front differential pinions, and 2 front differential pinion thrust washers onto the front differential case.

HINT:

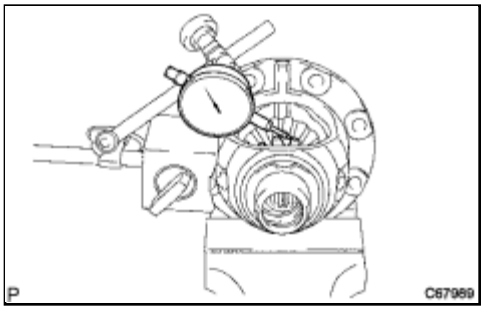
While rotating the front differential side gears, install the 2 front differential pinions and 2 front differential pinion thrust washers.

2. INSTALL FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Coat the front No. 1 differential pinion shaft with MP grease.

(b) Install the front No. 1 differential pinion shaft onto the front differential case so that the hole for the front differential pinion shaft straight pin is aligned with the hole in the front differential case.

3. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH



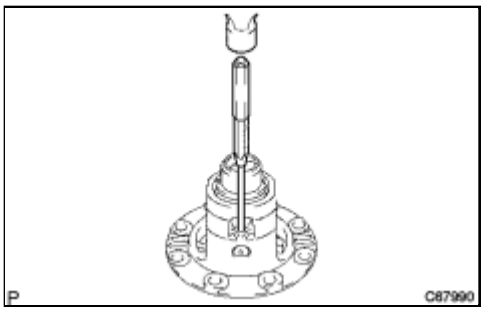
(a) Install the front differential pinion to the front differential

case side. Using a dial indicator, measure the front differential side gear backlash.

Standard backlash:
0.05 to 0.20 mm (0.00197 to 0.00787 in.)

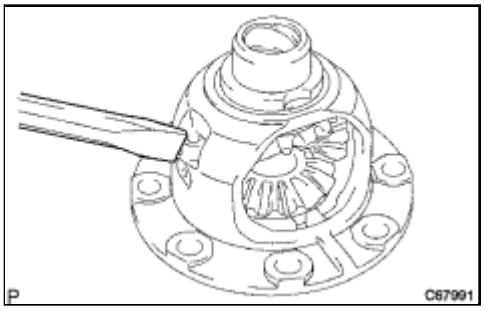
If the backlash is out of specification, replace the side gear thrust washers.

Thrust Washer Thickness:



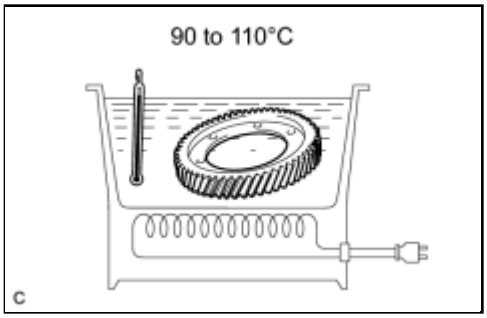
PARTS NO.	THICKNESS MM (IN.)
41361-22140	0.95 (0.0374)
41361-22020	1.00 (0.0394)
41361-22150	1.05 (0.0413)
41361-22030	1.10 (0.0433)
41361-22160	1.15 (0.0452)
41361-22040	1.20 (0.0472)

HINT:



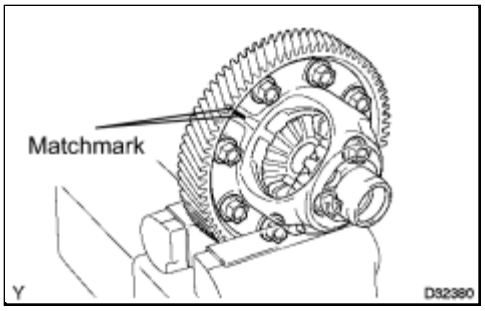
- Measure the thickness with a micrometer to select a proper thrust washer because the thrust washers do not have any distinguishing marks.
- Select washers of the same thickness for both the right and left sides.

4. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN



(a) Using a pin punch (φ3 mm) and a hammer, install the front differential pinion shaft straight pin onto the front differential case.

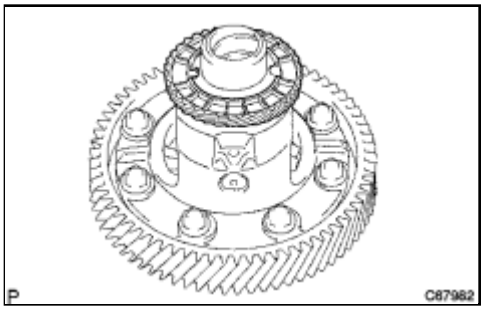
(b) Using a chisel and a hammer, stake the front differential case hole.



5. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Clean the contact surfaces of the front differential case and ring gear.

(b) Using a heater, heat the front differential ring gear to 90 to 110°C (194 to 230°F).

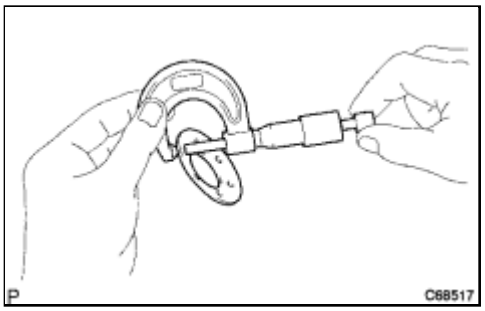


(c) After moisture on the ring gear has completely evaporated, align the matchmarks quickly install the front differential case with quickly install the front differential ring gear

(d) Install the 8 bolts.

Torque: 77 N·m (785 kgf·cm, 57ft·lbf)

6. INSTALL SPEEDOMETER DRIVE GEAR



(a) Install the speedometer drive gear onto the front differential case.

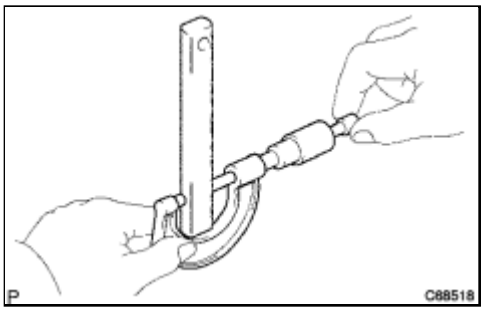
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER



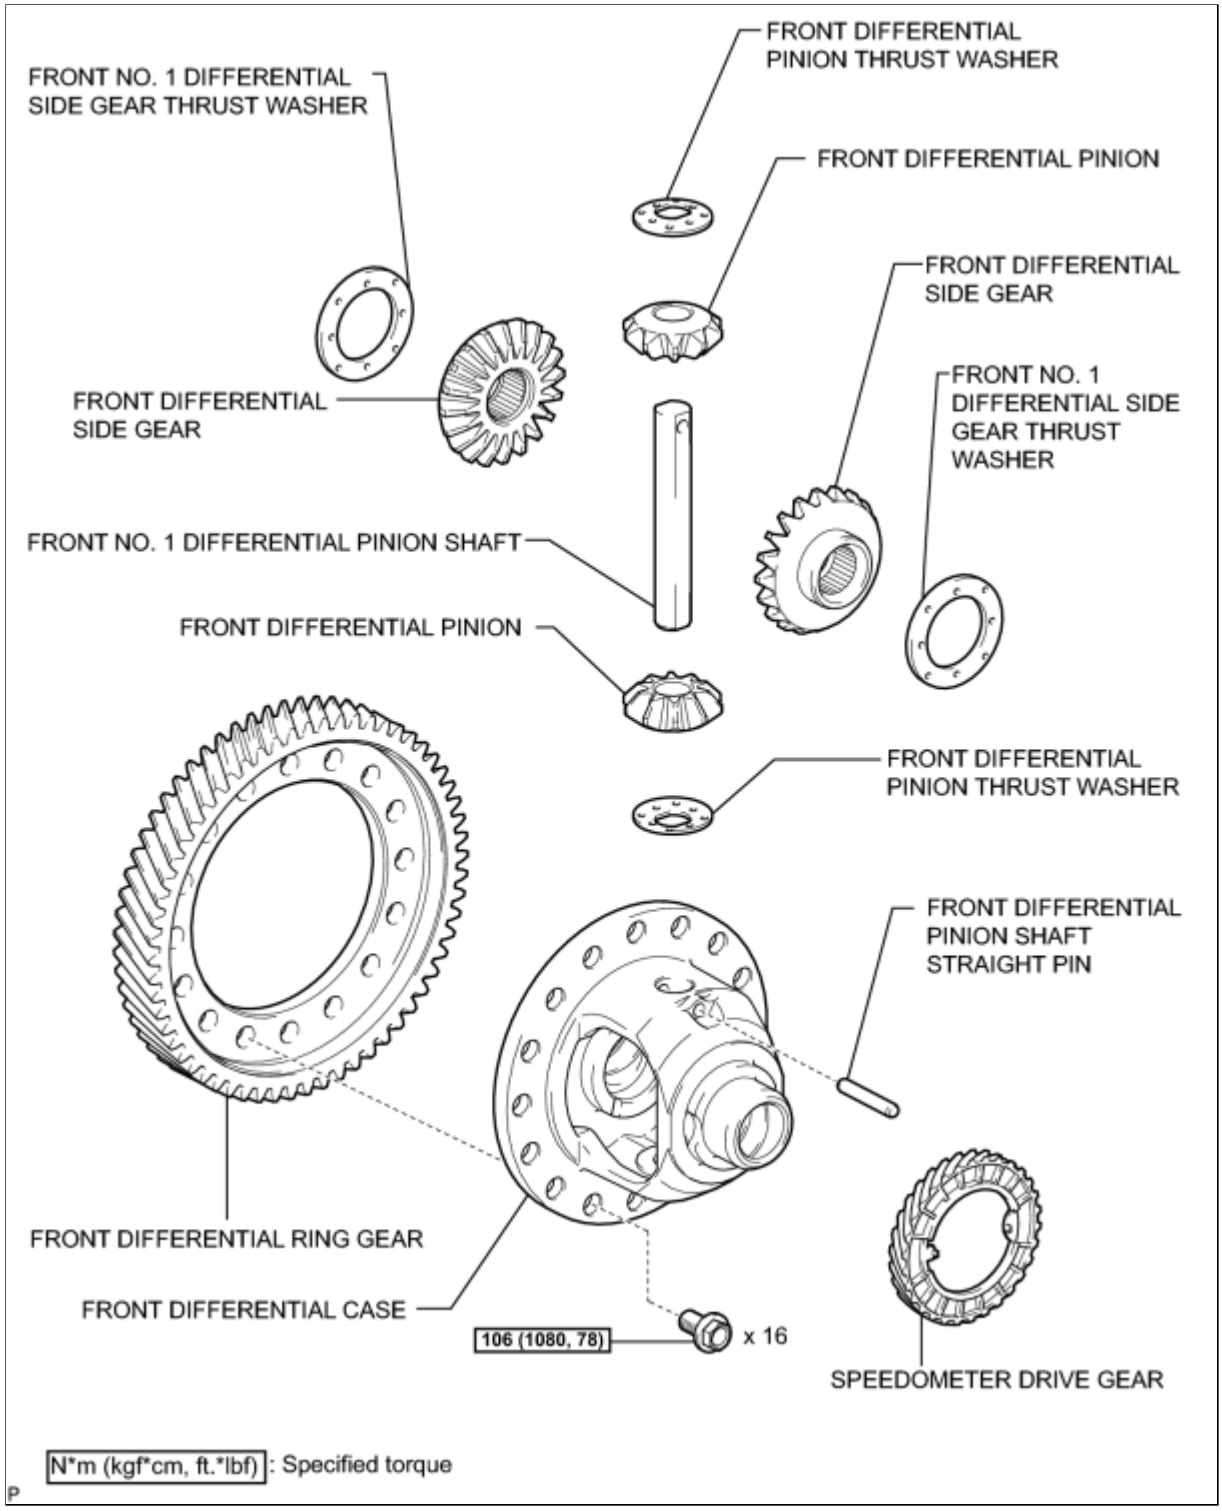
(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.

Minimum thickness:
0.92 mm (0.0362 in.)

If the thickness is less than the minimum, replace the front differential pinion thrust washer.

2. INSPECT FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Using a micrometer, measure the outer diameter of the front No. 1 differential pinion shaft.



Minimum outer diameter:
16.982 mm (0.6685 in.)

If the outer diameter is less than the minimum, replace the front No. 1 differential pinion shaft.

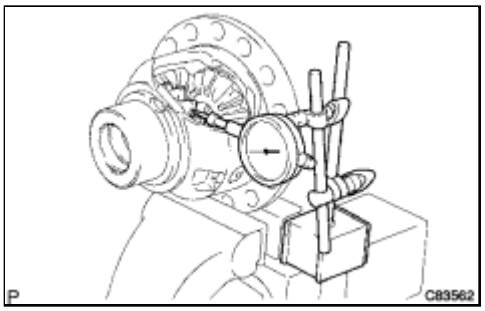
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: DISASSEMBLY (2010 Corolla)		

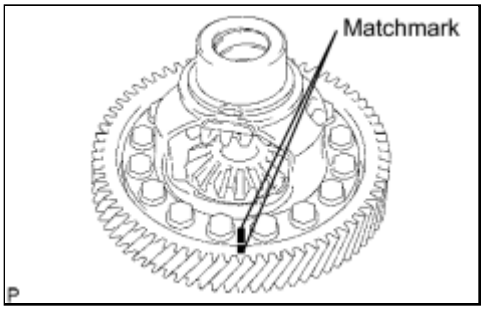


DISASSEMBLY

1. REMOVE SPEEDOMETER DRIVE GEAR

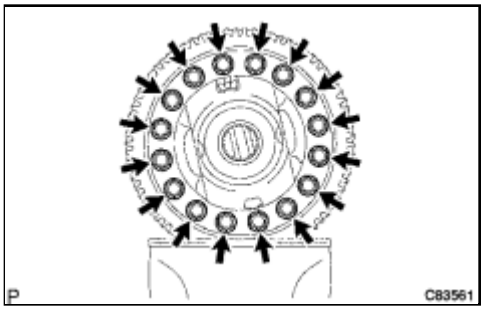
(a) Remove the speedometer drive gear from the front differential case assembly.

2. INSPECT FRONT DIFFERENTIAL SIDE GEAR BACKLASH



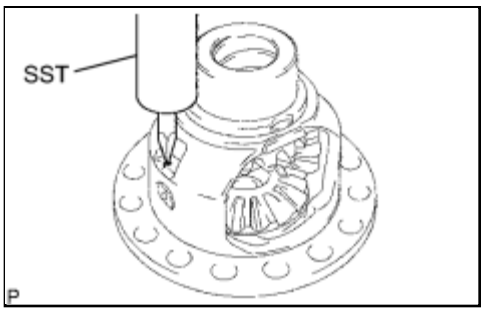
(a) Hold the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.

Standard backlash:
0.05 to 0.20 mm (0.00197 to 0.00787 in.)



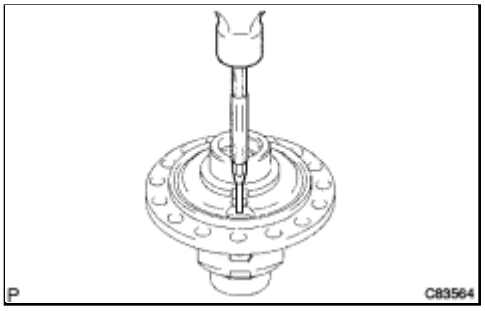
If the backlash is out of specification, adjust it using new side gear thrust washers INFO .

3. REMOVE FRONT DIFFERENTIAL RING GEAR



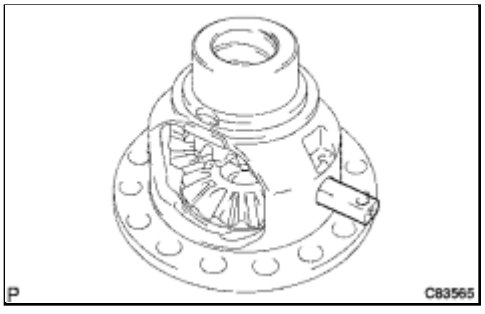
(a) Put matchmarks on the front differential ring gear and the front differential case.

(b) Remove the 16 bolts.



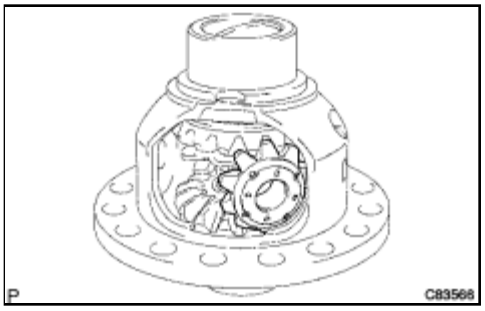
(c) Using a plastic hammer, remove the front differential case.

4. REMOVE FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN



(a) Using SST and a hammer, unstake the staked part of the front differential case.

SST: 09930-00010



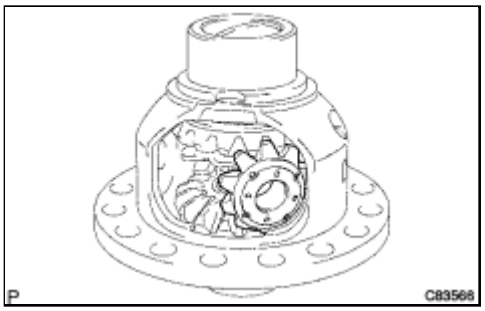
(b) Using a pin punch and a hammer, remove the front differential pinion shaft straight pin from the front differential case.

5. REMOVE FRONT NO. 1 DIFFERENTIAL PINION SHAFT

(a) Remove the front No. 1 differential pinion shaft from the front differential case.

6. REMOVE FRONT DIFFERENTIAL SIDE GEAR

(a) Remove the 2 front differential pinions, 2 front differential pinion thrust washers, 2 front differential side gears, and 2 front differential side gear thrust washers from the front differential case.



HINT:

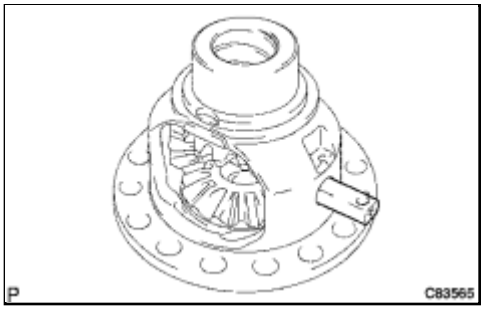
Remove the 2 pinion thrust washers and side gear thrust washers while turning the front differential pinion.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z2800EX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL FRONT DIFFERENTIAL SIDE GEAR

(a) Coat the rotating surface of the front differential side gear with gear oil.



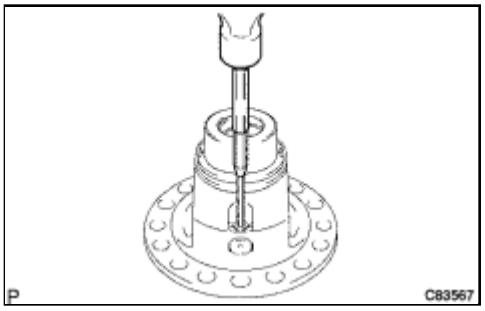
(b) Install the 2 front differential side gear thrust washers to the 2 front differential side gears.

(c) Install the 2 front differential side gears, 2 front differential pinions, and 2 front differential side gear thrust washers to the front differential case.

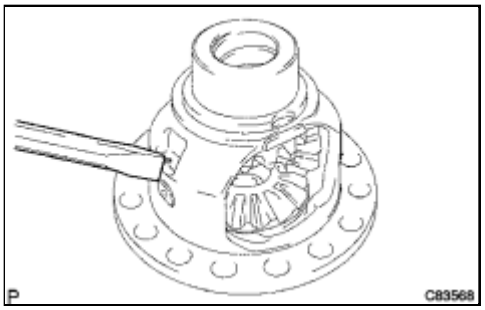
HINT:

Install the 2 front differential pinions with the front differential washers while turning the front differential pinion.

2. INSTALL FRONT NO. 1 DIFFERENTIAL PINION SHAFT



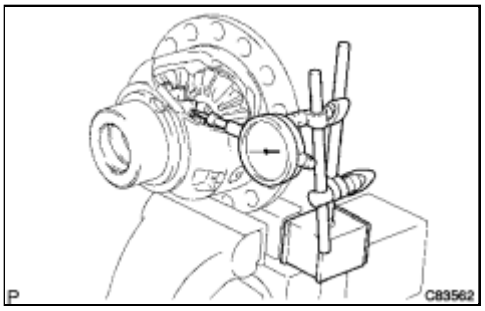
(a) Coat the rotating surface of the front No. 1 differential pinion shaft with gear oil.



(b) Install the front No. 1 differential pinion shaft to the front differential case so that the hole for the front differential pinion shaft straight pin is aligned with the hole in the front differential case.

3. INSTALL FRONT DIFFERENTIAL PINION SHAFT STRAIGHT PIN

(a) Using a pin punch and a hammer, install the front differential pinion shaft straight pin to the front differential



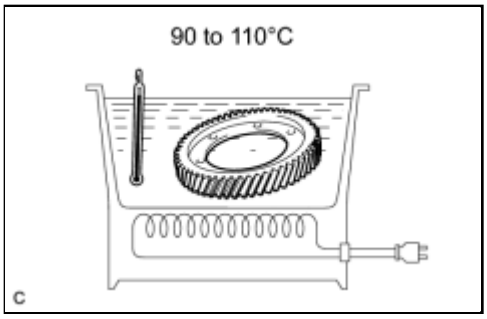
case.

(b) Using a chisel and hammer, stake the front differential case hole.

4. ADJUST FRONT DIFFERENTIAL SIDE GEAR BACKLASH

(a) Hold the front differential pinion to the front differential case side. Using a dial indicator, measure the front differential side gear backlash.

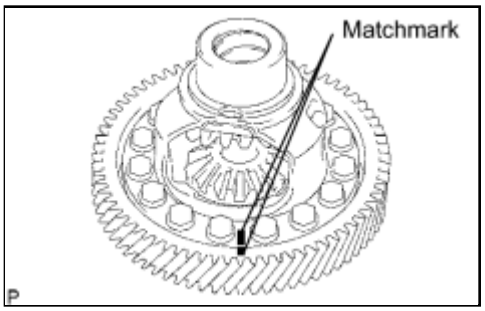
Standard backlash:
0.05 to 0.20 mm (0.00197 to 0.00787 in.)



(b) If backlash is out of specification, select another front differential side gear thrust washer and adjust backlash.

Thrust Washer:

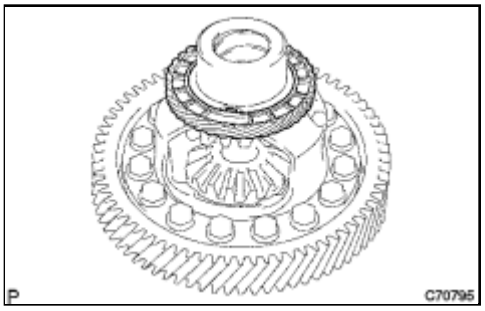
PART NO.	THICKNESS: MM (IN.)	MARK
41361-28230	1.00 (0.0394)	1
41361-28240	1.10 (0.0433)	2
41361-28250	1.20 (0.0472)	3



PART NO.	THICKNESS: MM (IN.)	MARK
41361-28260	1.30 (0.0512)	4

5. INSTALL FRONT DIFFERENTIAL RING GEAR

(a) Clean the surface that contacts the differential case.

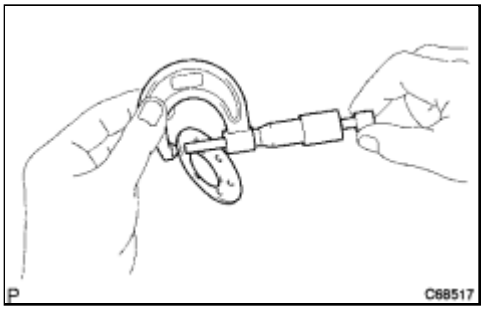


(b) Using a heater, heat the front differential ring gear to 90 to 110°C (194 to 230°F).

(c) After moisture on the ring gear has completely evaporated, align the matchmarks and quickly install the front differential ring gear to the front differential case with the 16 bolts.

Torque: 106 N·m (1081 kgf·cm, 78ft·lbf)

6. INSTALL SPEEDOMETER DRIVE GEAR

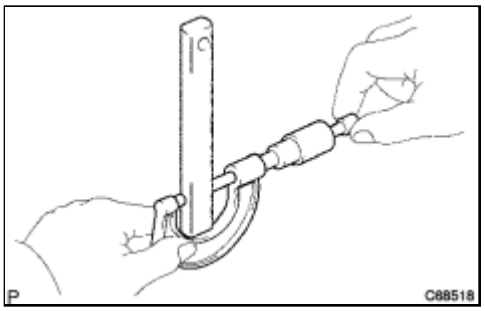


(a) Install the speedometer drive gear to the front differential case.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z2500QX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: DIFFERENTIAL CASE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT FRONT DIFFERENTIAL PINION THRUST WASHER



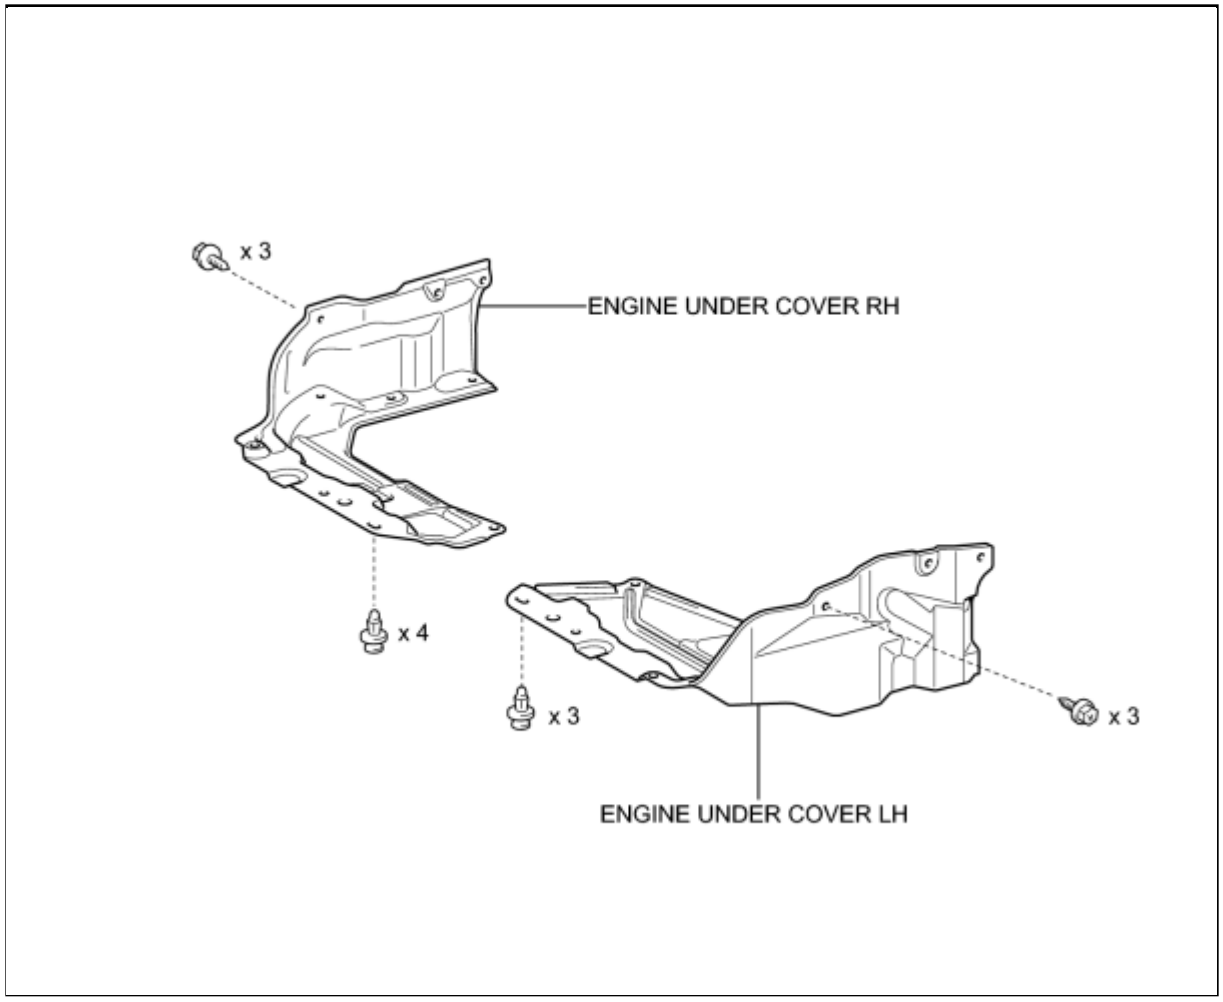
(a) Using a micrometer, measure the thickness of the front differential pinion thrust washer.

Minimum thickness:
0.9 mm (0.0354 in.)

If the thickness is less than the minimum, replace the front differential pinion thrust washer.

2. INSPECT NO. 1 FRONT DIFFERENTIAL PINION SHAFT

(a) Using a micrometer, measure the outside diameter of the No. 1 front differential pinion shaft.



Minimum diameter:
17.975 mm (0.70768 in.)

If the outer diameter is less than the minimum, replace the No. 1 front differential pinion shaft.

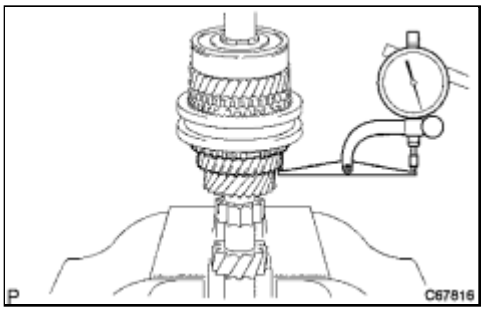
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. INSPECT 4TH GEAR THRUST CLEARANCE

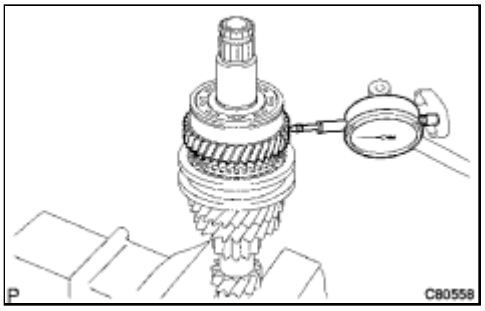


(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.00394 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 2 transmission clutch hub, 4th gear or input shaft rear radial ball bearing.

2. INSPECT 3RD GEAR THRUST CLEARANCE

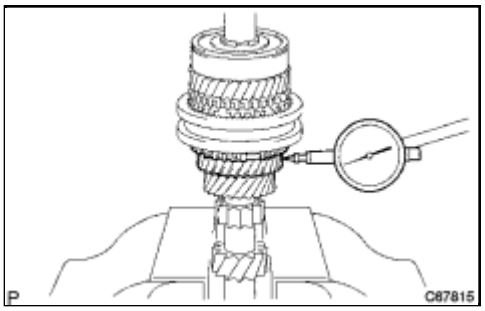


(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:
0.10 to 0.35 mm (0.00394 to 0.0138 in.)
Maximum clearance:
0.35 mm (0.0138 in.)

If the clearance exceeds the maximum, replace the No. 2 transmission clutch hub, 3rd gear or input shaft.

3. INSPECT 4TH GEAR RADIAL CLEARANCE



(a) Using a dial indicator, measure the 4th gear radial clearance between the gear and shaft.

Standard clearance:
NSK made bearing
0.009 to 0.050 mm (0.000354 to 0.00197 in.)
JTEKT made bearing
0.009 to 0.050 mm (0.000354 to 0.00197 in.)
Maximum clearance:
NSK made bearing
0.050 mm (0.00197 in.)
JTEKT made bearing

0.050 mm (0.00197 in.)

If the clearance exceeds the maximum, replace the 4th gear, 4th gear needle roller bearing or input shaft.

4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:

NSK made bearing

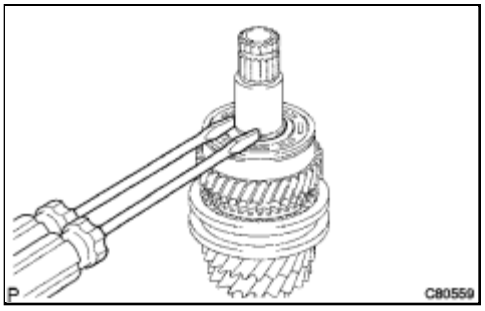
0.015 to 0.056 mm (0.000591 to 0.00220 in.)

JTEKT made bearing

0.015 to 0.058 mm (0.000591 to 0.00228 in.)

Maximum clearance:

NSK made bearing

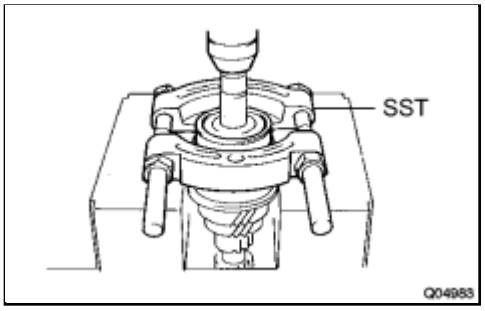


0.056 mm (0.00220 in.)

JTEKT made bearing

0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 3rd gear, 3rd gear needle roller bearing or input shaft.

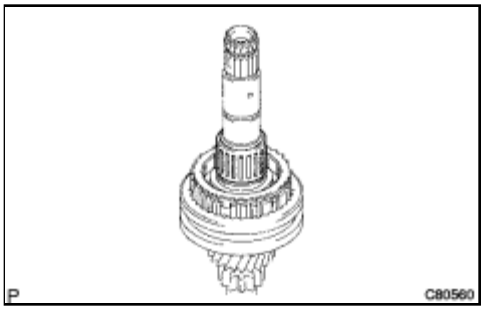


5. REMOVE 4TH GEAR

(a) Using 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from the input shaft.

HINT:

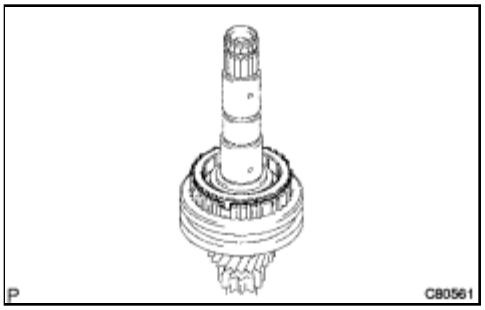
Use a piece of cloth to keep the snap ring from flying off.



(b) Using SST and a press, remove the input shaft rear radial ball bearing and 4th gear from the input shaft.

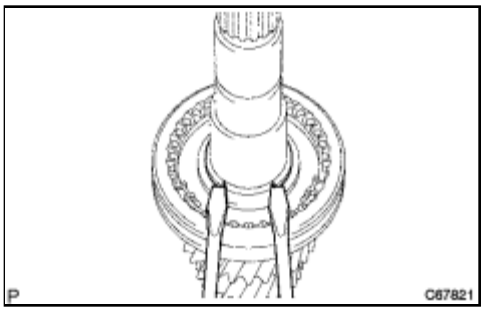
SST: 09950-00020

HINT:



- Do not tighten SST excessively.
- Support the input shaft assembly by hand to prevent it from dropping off.

6. REMOVE 4TH GEAR NEEDLE ROLLER BEARING



(a) Remove the 4th gear needle roller bearing and 4th gear bearing spacer from the input shaft.

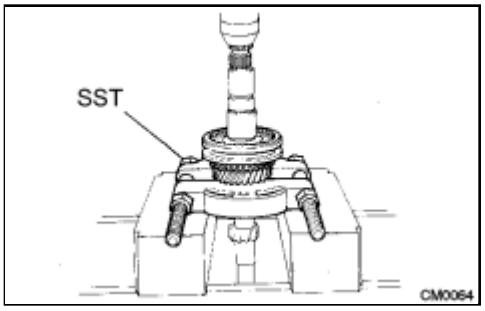
7. REMOVE 4TH GEAR SYNCHRONIZER RING

(a) Remove the 4th gear synchronizer ring from the No. 2 transmission clutch hub.

8. REMOVE 3RD GEAR

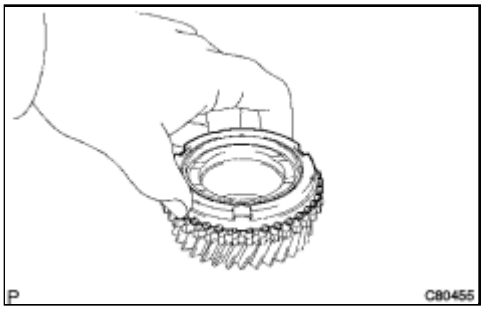
(a) Using 2 screwdrivers and a hammer, remove the No. 2 clutch hub setting shaft snap ring from the input shaft.

HINT:



Use a piece of cloth to keep the snap ring from flying off.

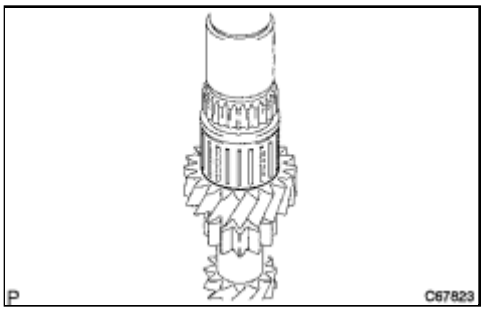
(b) Using SST and a press, remove the No. 2 transmission clutch hub and 3rd gear from the input shaft.



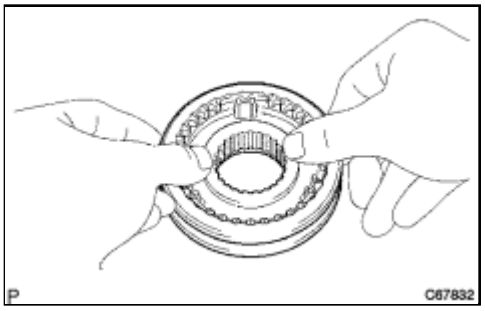
SST: 09950-00020

NOTICE:

- Do not tighten SST excessively.
- Support the input shaft by hand to prevent it from dropping off.



9. REMOVE 3RD GEAR SYNCHRONIZER RING



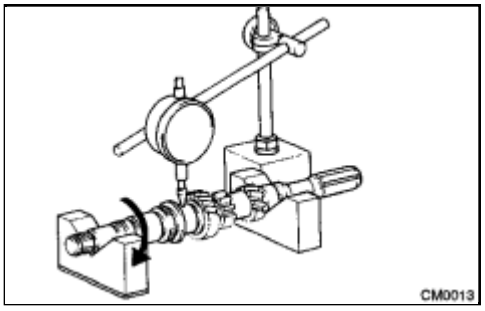
(a) Remove the 3rd gear synchronizer ring from the 3rd gear.

10. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

(a) Remove the 3rd gear needle roller bearing from the input shaft.

11. REMOVE NO. 2 TRANSMISSION HUB SLEEVE

(a) Remove the No. 2 transmission hub sleeve, 3 shifting keys, and 3 shifting key springs from the No. 2 transmission clutch hub.

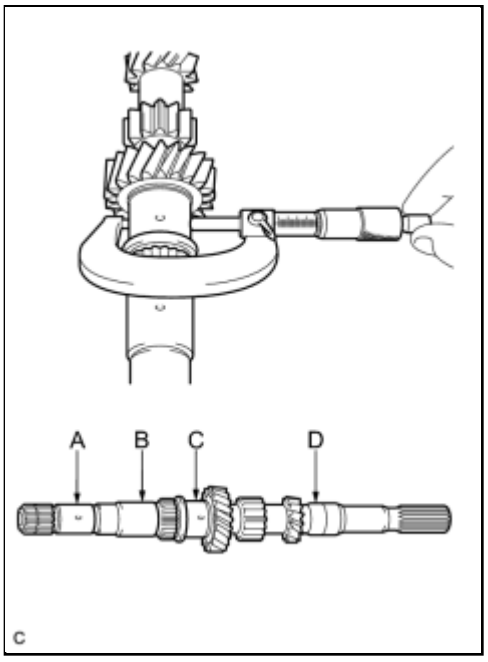


NOTICE:

Use a piece of cloth to keep the shifting keys and shifting key springs from flying off.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A0W01UX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT INPUT SHAFT

(a) Using a dial indicator, check the input shaft runout.

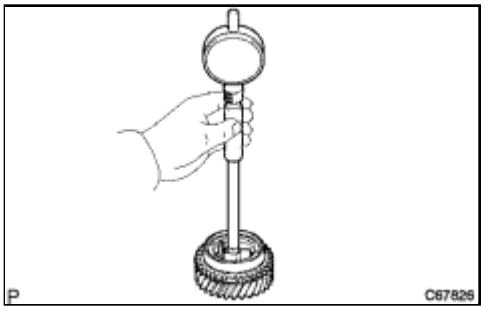
Maximum runout:
0.015 mm (0.000591 in.)

If the runout exceeds the maximum, replace the input shaft.

(b) Using a micrometer, measure the outer diameter of the input shaft journal surface at the locations indicated.

Standard outer diameter:

Part A
24.885 to 24.900 mm (0.9797 to 0.9803 in.)
Part B
28.991 to 29.006 mm (1.1414 to 1.1420 in.)
Part C
30.985 to 31.000 mm (1.2198 to 1.2204 in.)
Part D
24.985 to 25.000 mm (0.9836 to 0.9842 in.)



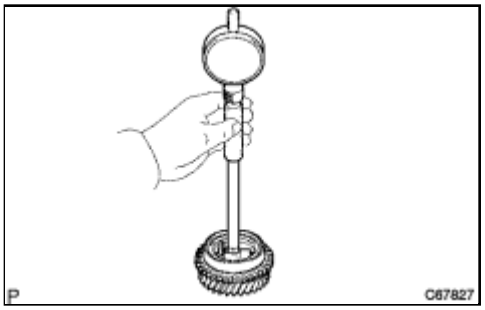
Minimum outer diameter:

Part A
24.885 mm (0.9797 in.)
Part B
28.991 mm (1.1414 in.)
Part C
30.985 mm (1.2198 in.)
Part D
24.985 mm (0.9836 in.)

If any of the outer diameters are less than the minimum, replace the input shaft.

2. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the

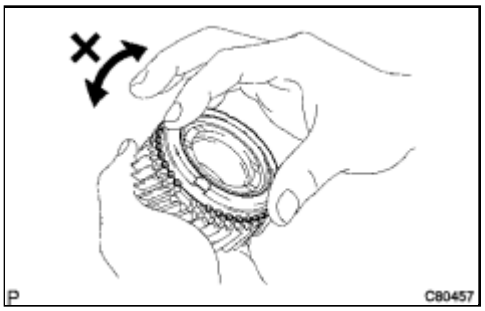


4th gear.

Standard inside diameter:
34.015 to 34.031 mm (1.3391 to 1.3398 in.)
Maximum inside diameter:
34.031 mm (1.3398 in.)

If the inside diameter exceeds the maximum, replace the 4th gear.

3. INSPECT 3RD GEAR



(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.

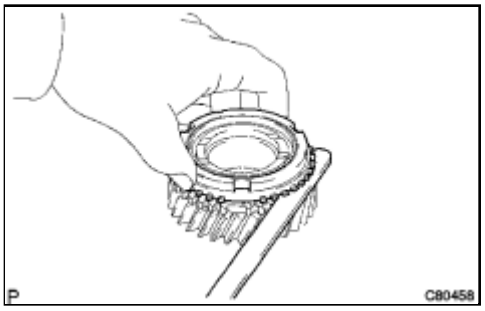
Standard inside diameter:
36.015 to 36.031 mm (1.4179 to 1.4185 in.)
Maximum inside diameter:
36.031 mm (1.4185 in.)

If the inside diameter exceeds the maximum, replace the 3rd gear.

4. INSPECT 4TH GEAR SYNCHRONIZER RING

(a) Check for wear and damage.

(b) Coat the 4th gear cone with gear oil.

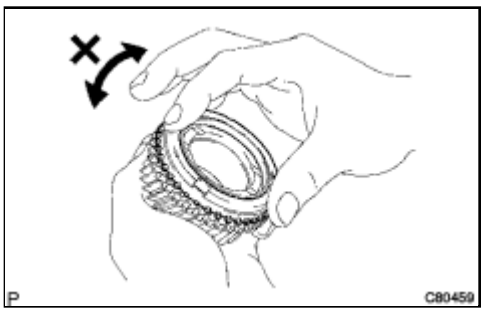


(c) Turn the synchronizer ring in one direction while pushing it against the 4th gear cone.

(d) Check that the ring locks.

If the synchronizer ring does not lock, replace the synchronizer ring.

(e) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

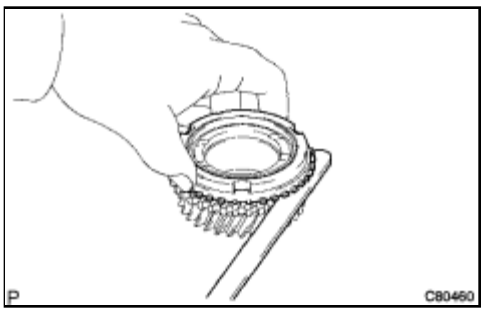


Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0649 in.)
Minimum clearance:

0.75 mm (0.0295 in.)

If the clearance is less than the minimum, replace the synchronizer ring.

5. INSPECT 3RD GEAR SYNCHRONIZER RING



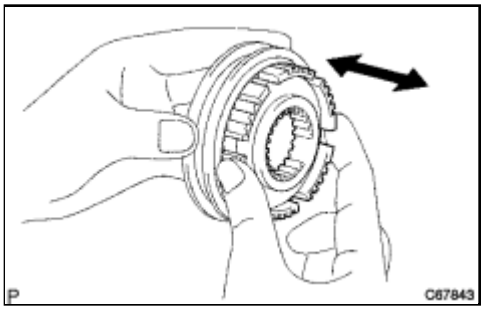
(a) Check for wear and damage.

(b) Coat the 3rd gear cone with gear oil.

(c) Turn the synchronizer ring in one direction while pushing it against the 3rd gear cone.

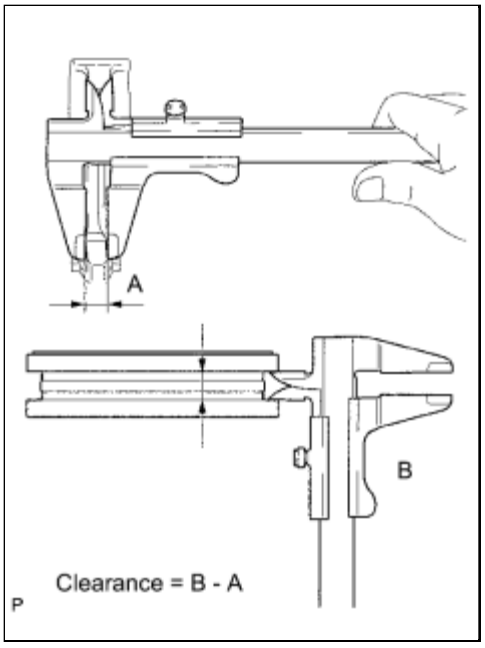
(d) Check that the ring locks.

If the synchronizer ring does not lock, replace the synchronizer ring.



(e) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.65 to 1.75 mm (0.0256 to 0.0689 in.)
Minimum clearance:
0.65 mm (0.0256 in.)



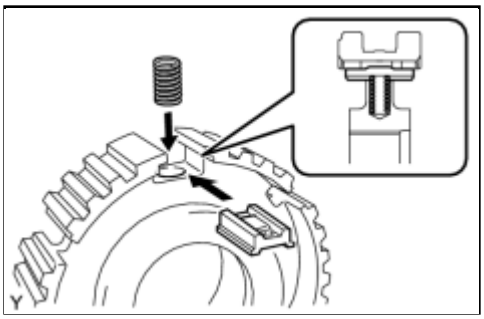
If the clearance is less than the minimum, replace the synchronizer ring.

6. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the No. 2 transmission hub sleeve and the No. 2 transmission clutch hub.

(b) Check that the edges of the No. 2 transmission hub sleeve spline gear are not worn down.

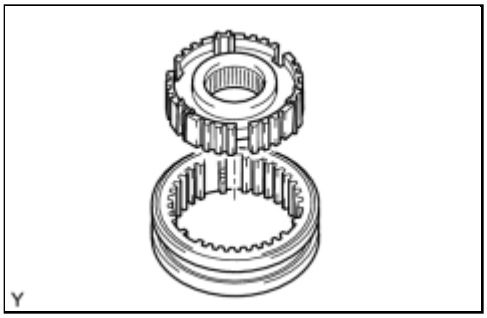
(c) Using a vernier caliper, measure the width of the No. 2 transmission hub sleeve groove (B) and the thickness of the claw part on the No. 2 gear shift fork (A), and calculate the clearance.



Standard clearance (B - A):
0.15 to 0.35 mm (0.00591 to 0.0137 in.)

If the clearance is out of the specification, replace the No. 2 transmission hub sleeve and No. 2 gear shift fork.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A0Y01UX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: REASSEMBLY (2010 Corolla)		

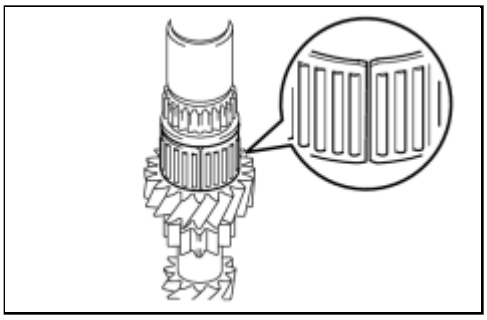


REASSEMBLY

1. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

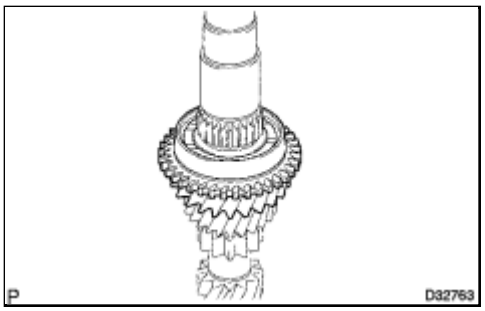
(a) Coat the No. 2 transmission hub sleeve with gear oil.

(b) Install the 3 synchromesh shifting key springs and 3 synchromesh shifting keys to the No. 2 transmission clutch hub.



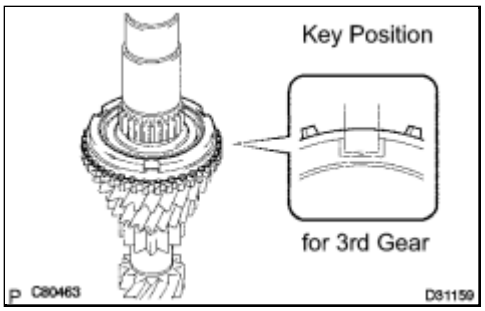
(c) Install the No. 2 transmission clutch hub onto the No. 2 transmission hub sleeve.

NOTICE:



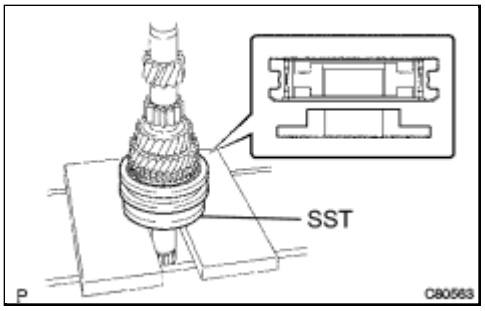
Position the No. 2 transmission hub sleeve and No. 2 transmission clutch hub correctly as shown in the illustration.

2. INSTALL 3RD GEAR NEEDLE ROLLER BEARING



(a) Coat the 3rd gear needle roller bearing with gear oil and install it onto the input shaft.

3. INSTALL 3RD GEAR

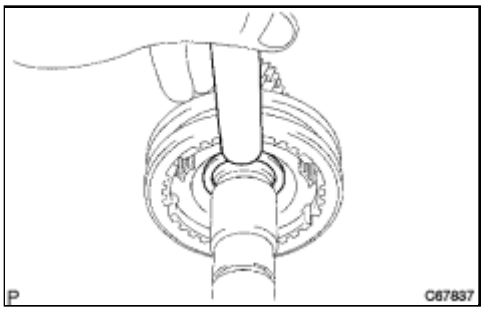


(a) Coat the 3rd gear with gear oil and install it onto the input shaft.

4. INSTALL 3RD GEAR SYNCHRONIZER RING

(a) Coat the 3rd gear synchronizer ring with gear oil and install it onto the 3rd gear.

5. INSTALL NO. 2 TRANSMISSION CLUTCH HUB



(a) Using SST and a press, install the No. 2 transmission clutch hub onto the input shaft.

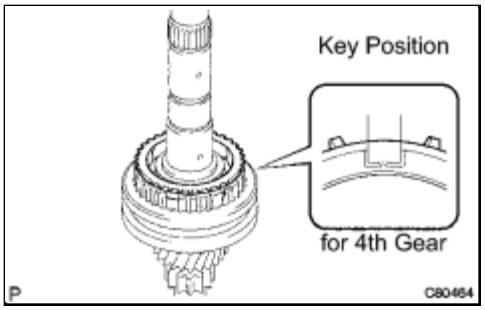
SST: 09316-60011

09316-00021

NOTICE:

Fit the synchromesh shifting keys into the grooves of the synchronizer ring correctly.

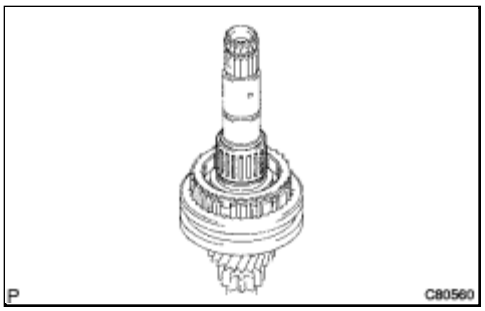
(b) Select a snap ring that will allow minimal axial play.



Standard clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:

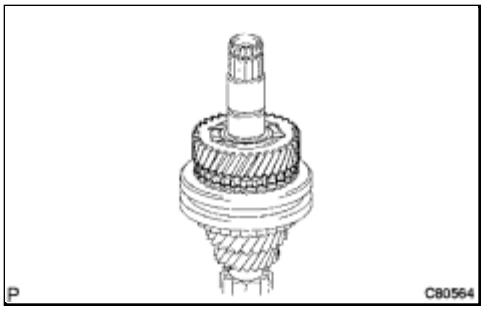
MARK	THICKNESS MM (IN.)	MARK	THICKNESS MM (IN.)
0	2.30 (0.0906)	3	2.48 (0.0976)

1	2.36 (0.0929)	4	2.54 (0.1000)
2	2.42 (0.0953)	5	2.60 (0.1024)



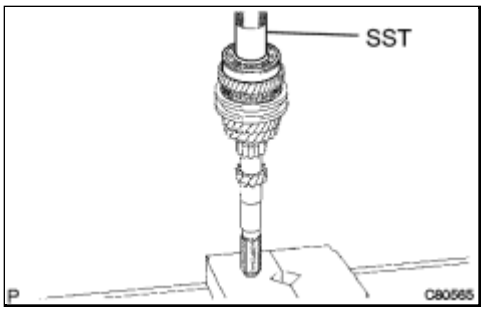
(c) Using a brass bar and a hammer, install the snap ring onto the input shaft.

6. INSTALL 4TH GEAR SYNCHRONIZER RING



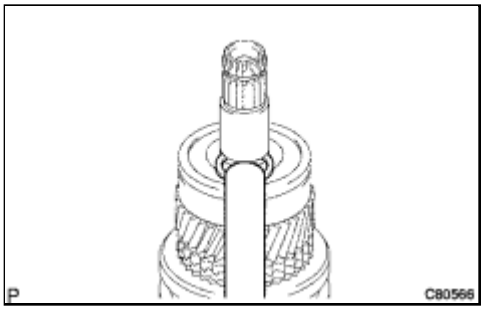
(a) Coat the 4th gear synchronizer ring with gear oil and install it onto the No. 2 transmission clutch hub.

7. INSTALL 4TH GEAR NEEDLE ROLLER BEARING



(a) Coat the 4th gear needle roller bearing and 4th gear bearing spacer with gear oil and install them onto the No. 2 transmission clutch hub.

8. INSTALL 4TH GEAR



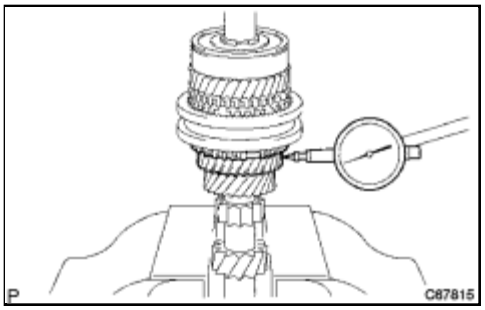
(a) Coat the 4th gear with gear oil and install it onto the input shaft.

9. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing onto the input shaft.

SST: 09608-04031

(b) Select a snap ring that will allow minimum axial play.



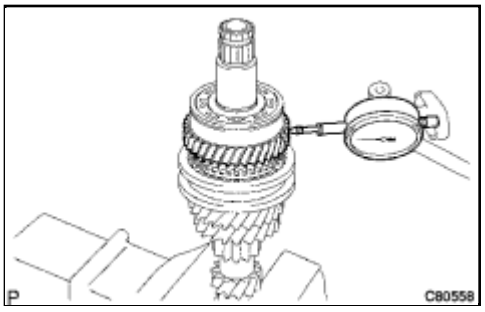
Standard clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:

MARK	THICKNESS MM (IN.)	MARK	THICKNESS MM (IN.)
A	2.29 (0.0901)	D	2.47 (0.0972)
B	2.35 (0.0925)	E	2.53 (0.0996)
C	2.41 (0.0948)	F	2.59 (0.1019)

(c) Using a brass bar and a hammer, install the snap ring onto the input shaft.

NOTICE:
Do not damage the journal surface of the snap ring.

10. INSPECT 3RD GEAR RADIAL CLEARANCE



(a) Using a dial indicator, measure the 3rd gear radial clearance.

Standard clearance:
NSK made bearing
0.015 to 0.056 mm (0.000591 to 0.00220 in.)
JTEKT made bearing
0.015 to 0.058 mm (0.000591 to 0.00228 in.)
Maximum clearance:
NSK made bearing
0.056 mm (0.00220 in.)
JTEKT made bearing
0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 3rd gear, 3rd gear needle roller bearing or input shaft.

11. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance between the gear and shaft.

Standard clearance:

NSK made bearing

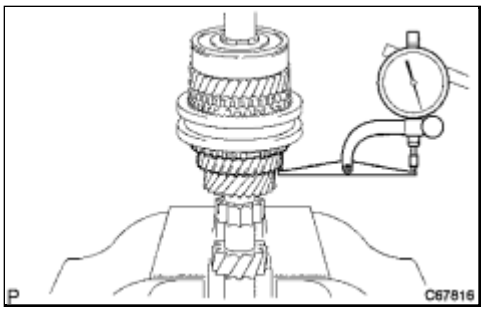
0.009 to 0.050 mm (0.000354 to 0.00197 in.)

JTEKT made bearing

0.009 to 0.050 mm (0.000354 to 0.00197 in.)

Maximum clearance:

NSK made bearing



0.050 mm (0.00197 in.)

JTEKT made bearing

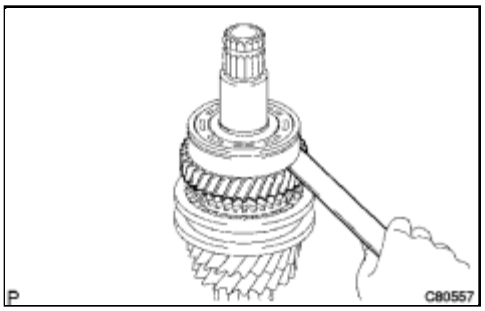
0.050 mm (0.00197 in.)

If the clearance exceeds the maximum, replace the 4th gear, 4th gear needle roller bearing or input shaft.

12. INSPECT 3RD GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 3rd gear thrust clearance.

Standard clearance:



0.10 to 0.35 mm (0.00394 to 0.0138 in.)

Maximum clearance:

0.35 mm (0.0138 in.)

If the clearance exceeds the maximum, replace the No. 2 transmission clutch hub, 3rd gear or input shaft.

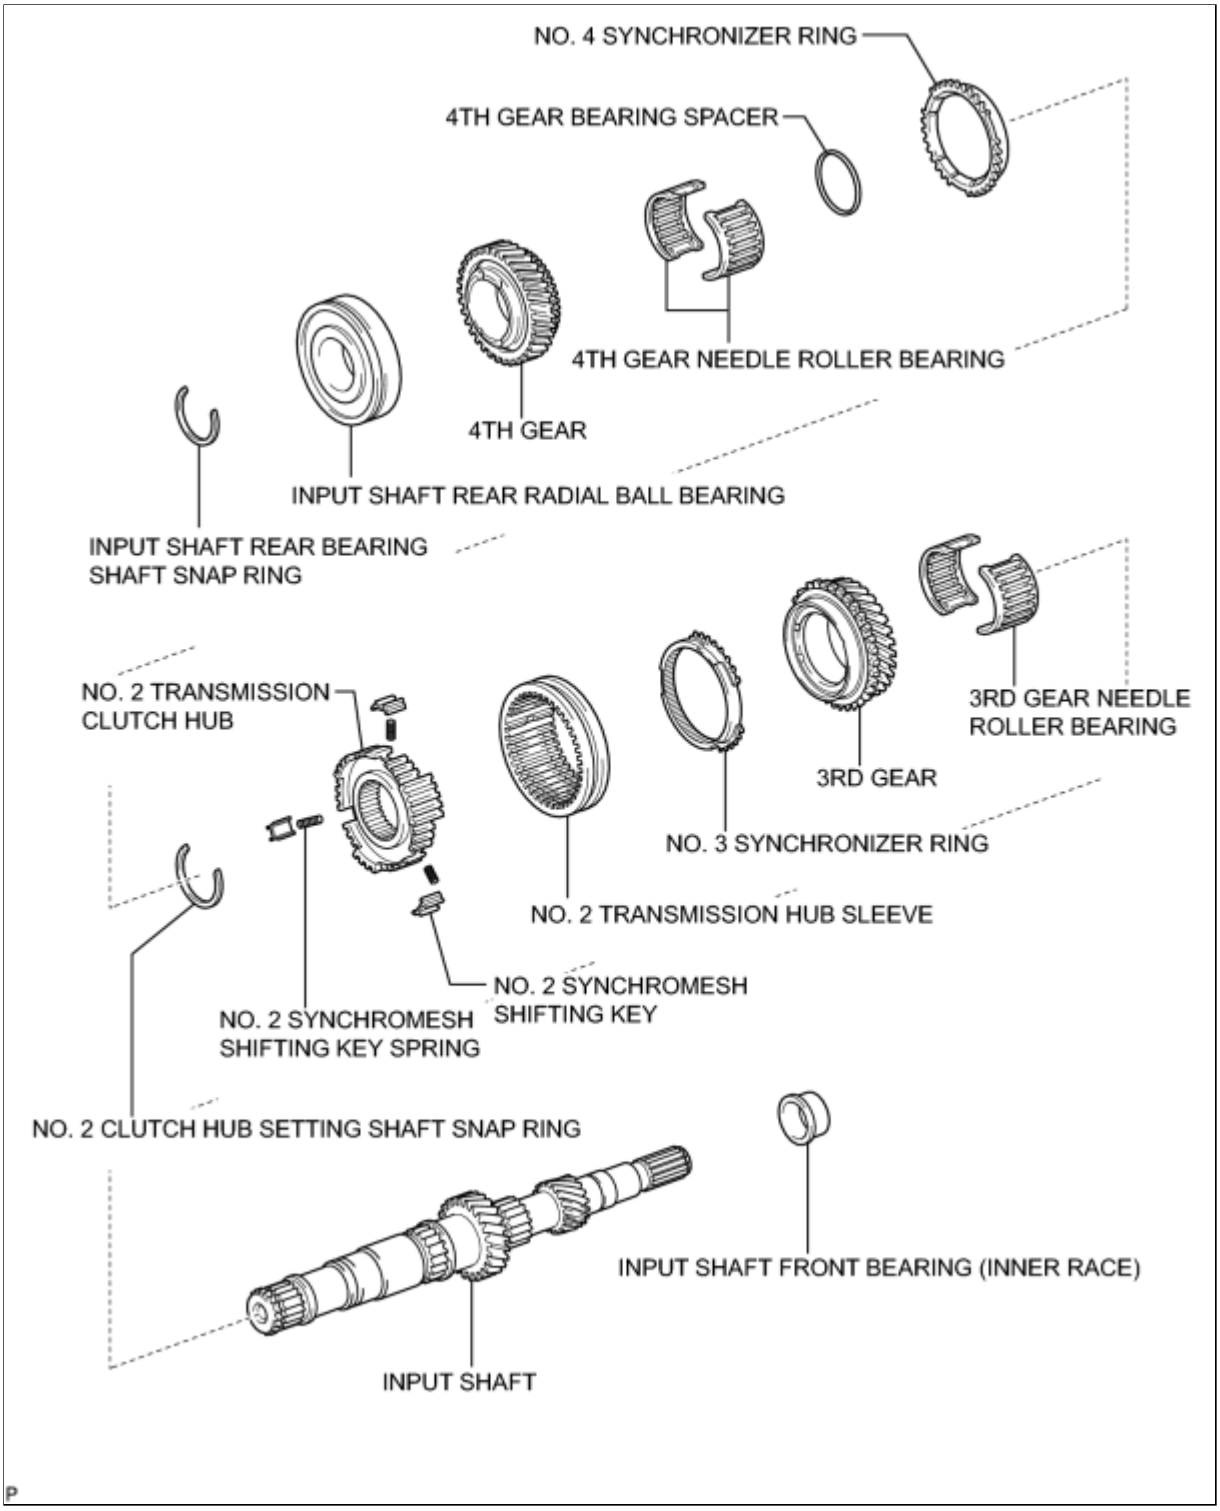
13. INSPECT 4TH GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:

0.10 to 0.55 mm (0.00394 to 0.0217 in.)

Maximum clearance:



0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 2 transmission clutch hub, 4th gear or input shaft rear radial ball bearing.

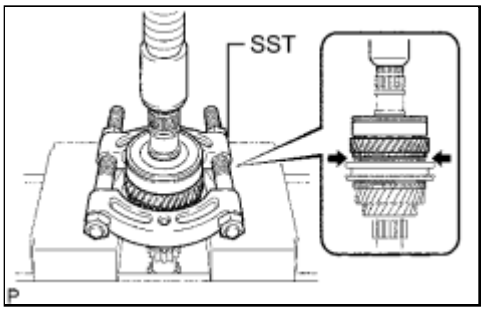
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE 4TH GEAR



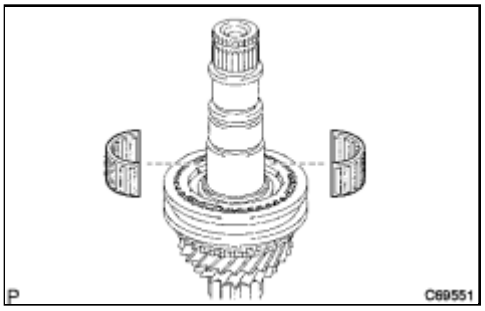
(a) Hold the input shaft assembly in a vise using aluminum plates.

(b) Using 2 screwdrivers and a hammer, remove the input shaft rear bearing shaft snap ring from the input shaft.

HINT:

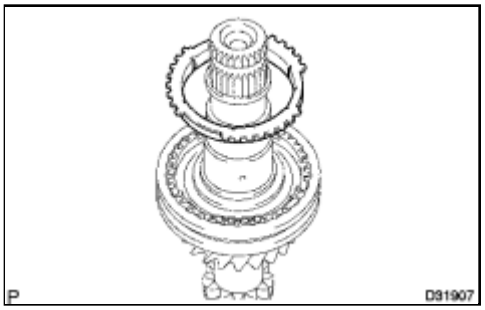
Use a piece of cloth to keep the snap ring from flying.

(c) Using SST and a press, remove the input shaft rear bearing and 4th gear.



SST: 09950-00020

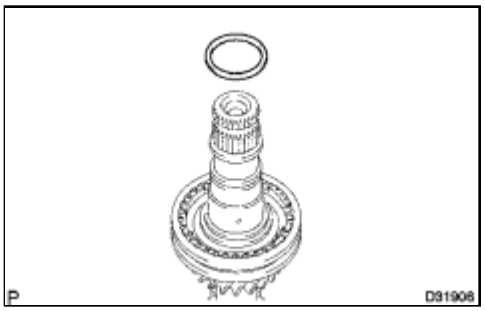
NOTICE:



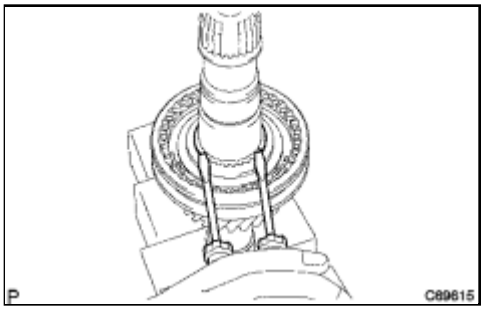
Do not overtighten SST.

2. REMOVE 4TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 4th gear needle roller bearing from the input shaft.



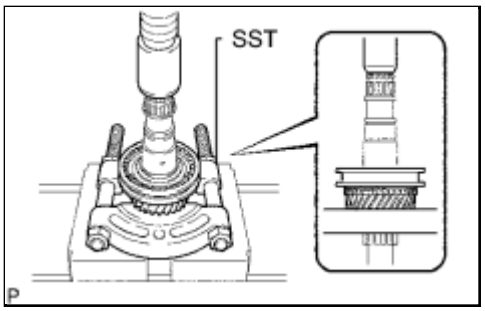
3. REMOVE NO. 4 SYNCHRONIZER RING



(a) Remove the No. 4 synchronizer ring from the No. 2 transmission clutch hub.

4. REMOVE 4TH GEAR BEARING SPACER

(a) Remove the 4th gear bearing spacer from the No. 2 transmission clutch hub.

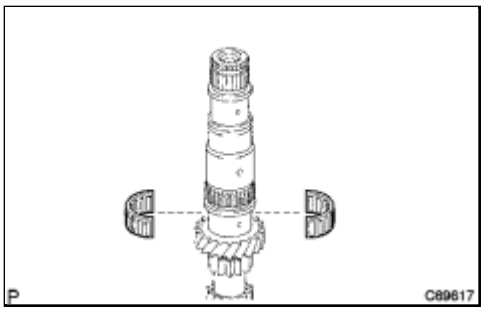


5. REMOVE 3RD GEAR

(a) Using 2 screwdrivers and a hammer, remove the No. 2 clutch hub setting shaft snap ring from the input shaft.

HINT:

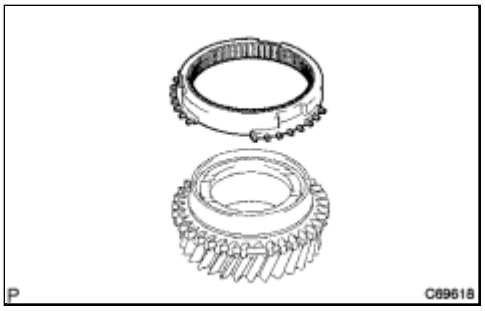
Use a piece of cloth to keep the snap ring from flying.



(b) Using SST and a press, remove the No. 2 transmission clutch hub and 3rd gear from the input shaft.

SST: 09950-00020

NOTICE:

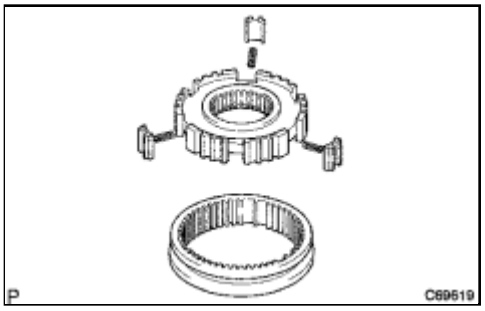


Do not overtighten SST.

6. REMOVE 3RD GEAR NEEDLE ROLLER BEARING

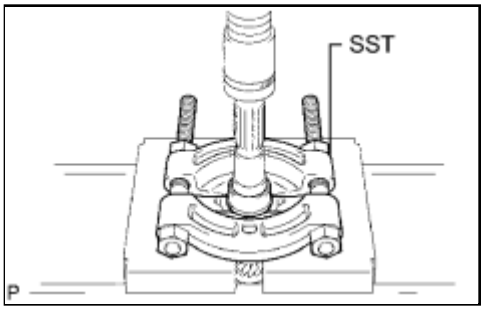
(a) Remove the 3rd gear needle roller bearing from the input shaft.

7. REMOVE NO. 3 SYNCHRONIZER RING



(a) Remove the No. 3 synchronizer ring from the 3rd gear.

8. REMOVE NO. 2 TRANSMISSION HUB SLEEVE



(a) Remove the No. 2 transmission hub sleeve, 3 No. 2 synchromesh shifting keys, and 3 No. 2 synchromesh shifting key springs from the No. 2 transmission clutch hub.

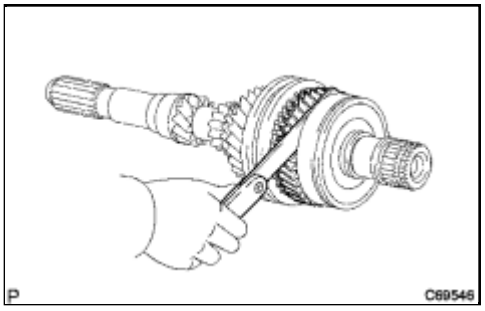
HINT:

Use a cloth to keep the shifting keys and shifting key springs from flying.

9. REMOVE INPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the input shaft front bearing (inner race) from the input shaft.

SST: 09950-00020



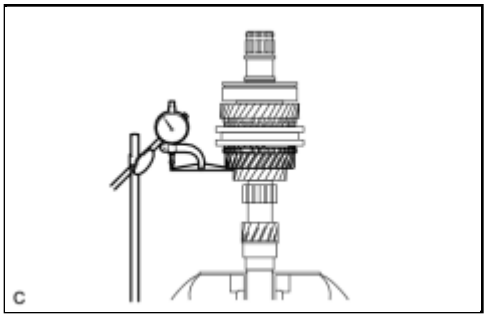
NOTICE:

Do not overtighten SST.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z1U00DX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT 4TH GEAR THRUST CLEARANCE

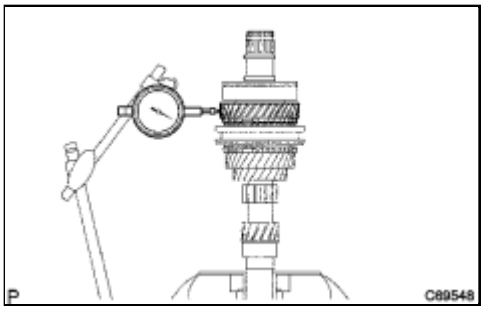


(a) Using a feeler gauge, measure the 4th gear thrust clearance.

Standard clearance:
0.10 to 0.57 mm (0.00393 to 0.0224 in.)

If the clearance is out of specification, replace the No. 2 transmission clutch hub, 4th gear, or input shaft rear radial ball bearing.

2. INSPECT 3RD GEAR THRUST CLEARANCE



(a) Using a dial indicator, measure the 3rd gear thrust clearance.

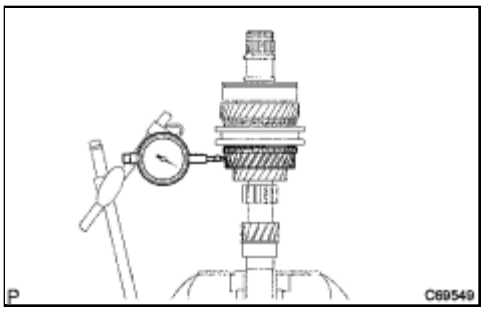
Standard clearance:
0.10 to 0.35 mm (0.00393 to 0.0138 in.)

If the clearance is out of specification, replace the No. 2 transmission clutch hub, 3rd gear, or input shaft.

3. INSPECT 4TH GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 4th gear radial clearance.

Standard Clearance:

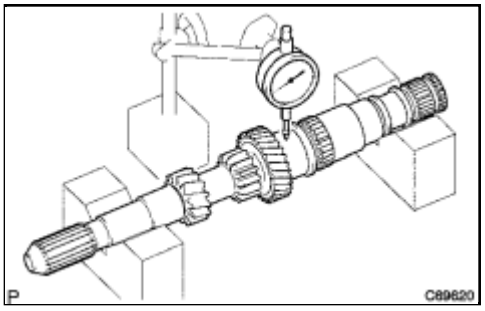


BEARING	STANDARD CLEARANCE MM (IN.)
KOYO made	0.009 to 0.053 (0.000354 to 0.00208)
NSK made	0.009 to 0.051 (0.000354 to 0.00201)

If the clearance is out of specification, replace the 4th gear, needle roller bearing, or input shaft.

4. INSPECT 3RD GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 3rd gear radial clearance.

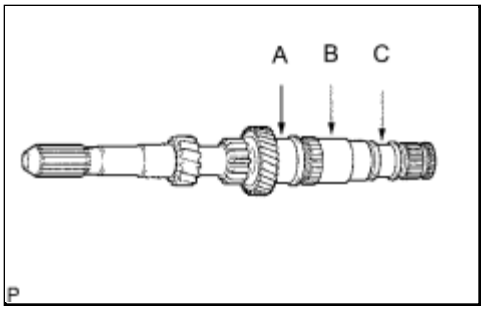


Standard Clearance:

BEARING	STANDARD CLEARANCE MM (IN.)
KOYO made	0.009 to 0.053 (0.000354 to 0.00208)
NSK made	0.009 to 0.051 (0.000354 to 0.00201)

If the clearance is out of specification, replace the 3rd gear, needle roller bearing, or input shaft.

5. INSPECT INPUT SHAFT



(a) Using V-blocks and a dial indicator, inspect the shaft for runout.

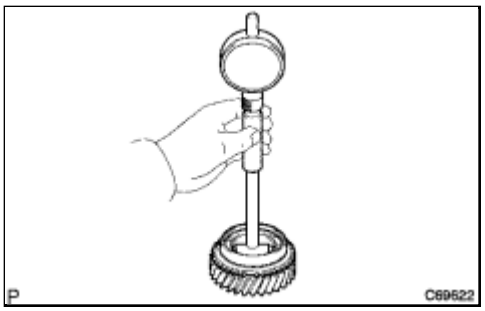
Maximum runout:
0.03 mm (0.00118 in.)

If the runout exceeds the maximum, replace the input shaft.

(b) Using a micrometer, measure the outside diameter of the input shaft journal surface.

Outside Diameter:

PART	STANDARD OUTSIDE DIAMETER MM (IN.)	MINIMUM OUTSIDE DIAMETER MM (IN.)
A	35.984 to 36.000 (1.4167 to 1.4173)	35.984 (1.4167)



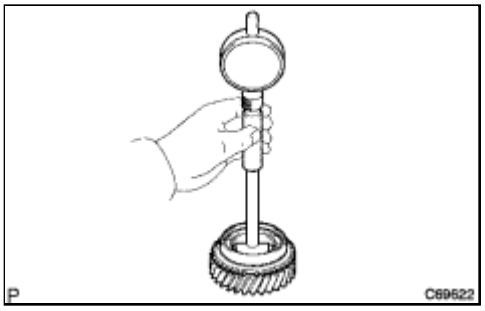
B	35.984 to 36.000 (1.4167 to 1.4173)	35.984 (1.4167)
C	27.957 to 27.972 (1.1007 to 1.1013)	27.957 (1.1007)

If the outside diameter is less than the minimum, replace the input shaft.

6. INSPECT 4TH GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 4th gear.

Inside diameter:

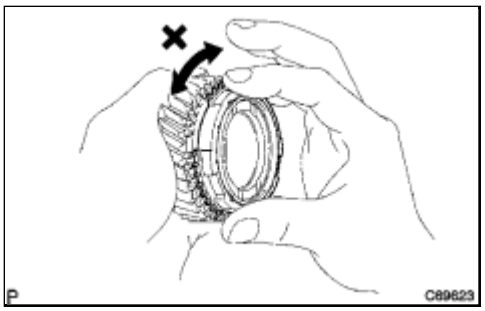


STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
42.009 to 42.025 (1.6539 to 1.6545)	42.025 (1.6545)

If the inside diameter exceeds the maximum, replace the 4th gear.

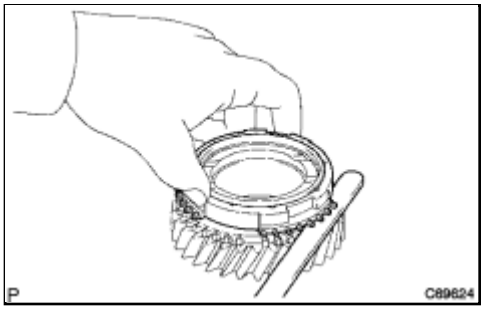
7. INSPECT 3RD GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 3rd gear.



Inside Diameter:

STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
43.009 to 43.025 (1.6933 to 1.6939)	43.025 (1.6939)

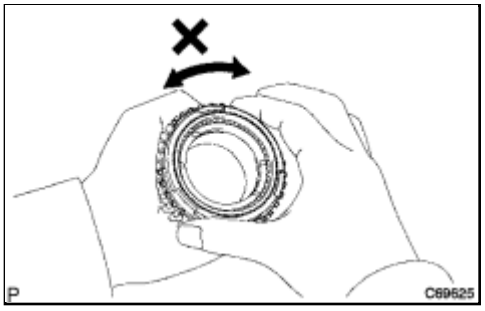


If the inside diameter exceeds the maximum, replace the 3rd gear.

8. INSPECT NO. 4 SYNCHRONIZER RING

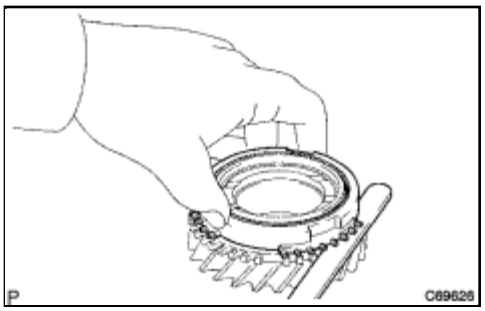
(a) Coat the 4th gear cone with gear oil. Turn the No. 4 synchronizer ring in one direction while pushing it against the 4th gear cone. Check that the ring locks.

If the No. 4 synchronizer ring does not lock, replace the ring or the 4th gear.



(b) Using a feeler gauge, measure the clearance between the No. 4 synchronizer ring back and 4th gear spline end.

Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0650 in.)

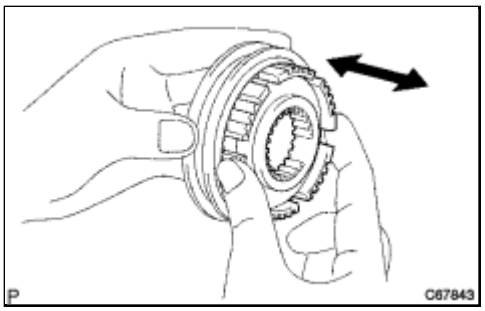


If the clearance is out of specification, replace the synchronizer ring.

9. INSPECT NO. 3 SYNCHRONIZER RING

(a) Coat the 3rd gear cone with gear oil. Turn the synchronizer outer ring in one direction while pushing it against the 3rd gear cone. Check that the ring locks.

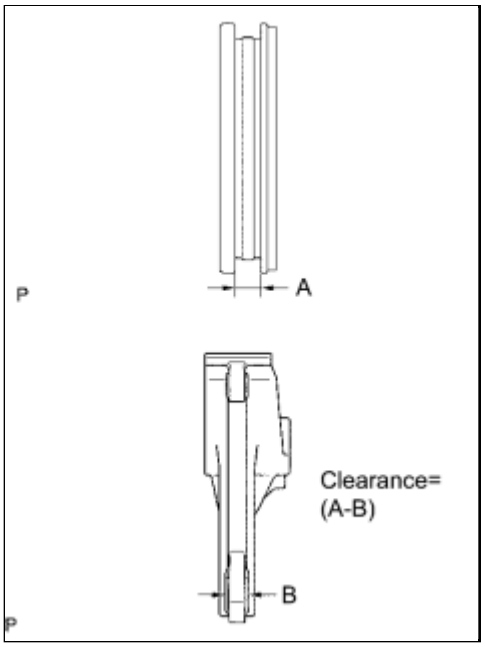
If the synchronizer outer ring does not lock, replace the ring or the 3rd gear.



(b) Using a feeler gauge, measure the clearance between the No. 3 synchronizer ring back and 3rd gear spline end.

Standard clearance:
0.65 to 1.75 mm (0.0256 to 0.0689 in.)

If the clearance is out of specification, replace the No. 3 synchronizer ring.



10. INSPECT NO. 2 TRANSMISSION HUB SLEEVE

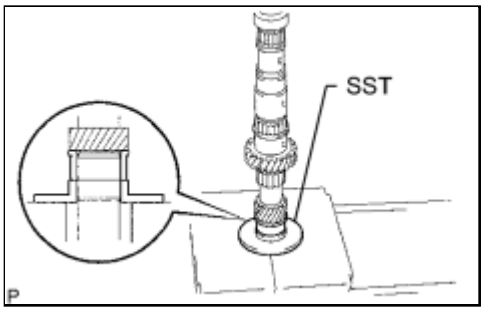
(a) Inspect the sliding condition between the No. 2 transmission hub sleeve and No. 2 transmission clutch hub.

(b) Inspect the tip of the spline gear on the No. 2 transmission hub sleeve for wear.

If any defects are found, replace the transmission hub sleeve or the transmission clutch hub.

(c) Using a vernier caliper, measure the width of the No. 3 transmission hub sleeve groove and the thickness of the claw part on the No. 1 gear shift fork, and calculate the clearance.

Standard clearance:

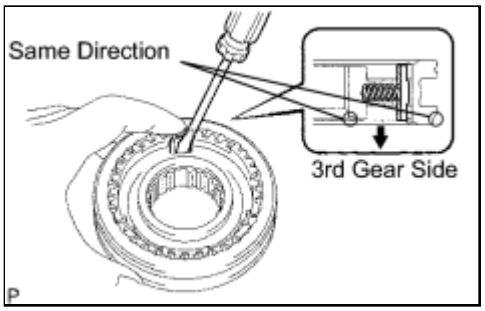


0.11 to 0.69 mm (0.00433 to 0.0272 in.) {A - B}

If the clearance is out of specification, replace the No. 2 transmission hub sleeve and No. 2 gear shift fork with new ones.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z1X00DX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: INPUT SHAFT: REASSEMBLY (2010 Corolla)		

REASSEMBLY



1. INSTALL INPUT SHAFT FRONT BEARING

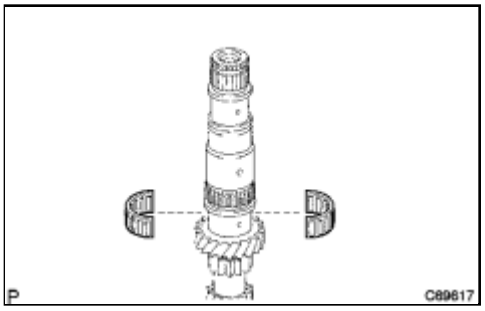
(a) Using SST and a press, install the input shaft front bearing (inner race).

SST: 09608-00071

2. INSTALL NO. 2 TRANSMISSION HUB SLEEVE

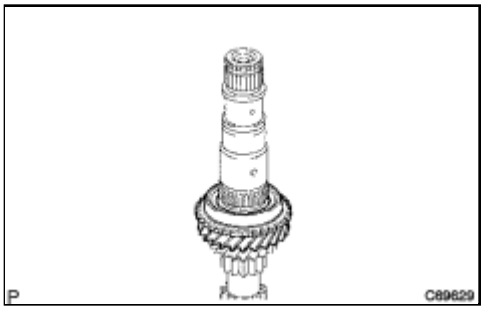
(a) Coat the No. 2 transmission hub sleeve with gear oil.

(b) Install the 3 synchromesh key springs with the No. 2 transmission hub sleeve.



NOTICE:

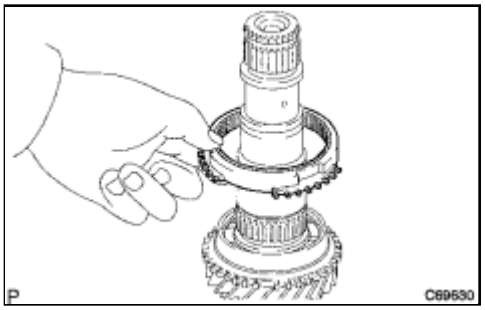
Install the No. 2 transmission clutch hub sleeve and the No. 2 transmission clutch hub in the correct direction.



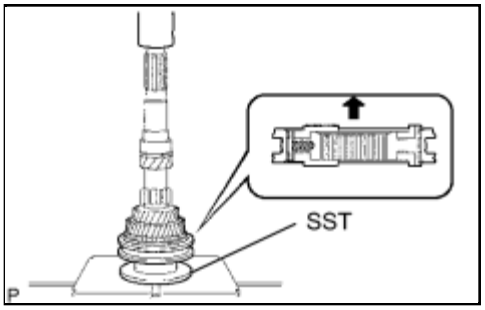
(c) Using a screwdriver, install the synchromesh shifting key to the input shaft.

3. INSTALL 3RD GEAR NEEDLE ROLLER BEARING

(a) Coat the 3rd gear bearing with gear oil and install it to the input shaft.



4. INSTALL 3RD GEAR



(a) Coat the 3rd gear with gear oil and install it to the input shaft.

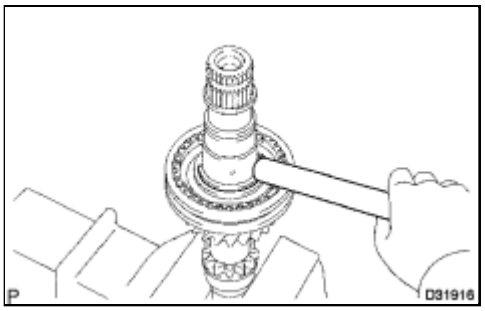
5. INSTALL NO. 3 SYNCHRONIZER RING

(a) Coat the No. 3 synchronizer ring with gear oil and install it to the 3rd gear.

6. INSTALL NO. 2 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install the No. 2 transmission clutch hub to the input shaft.

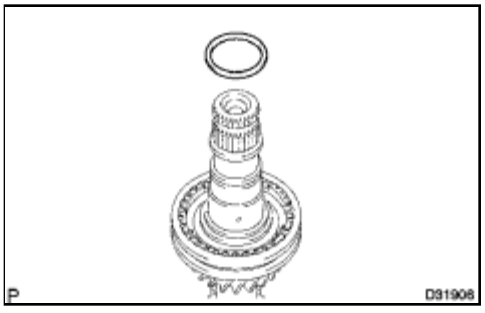
SST: 09316-60011



09316-00041

NOTICE:

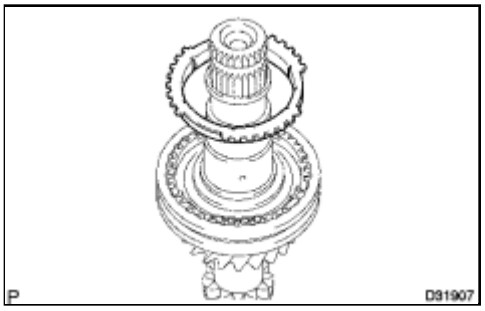
- Align the claw of the clutch hub No. 2 with the notch of the No. 3 synchronizer ring.
- Make sure that the 3rd gear can rotate.



(b) Select a snap ring so that clearance between the No. 2 transmission clutch hub and the No. 2 clutch hub shaft snap ring will be within the specified range. Using a brass bar and a hammer, install the snap ring.

Standard clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:

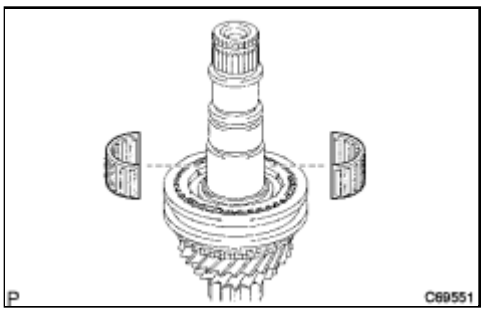
PART NO.	THICKNESS: MM (IN.)	MARK
90520-34003	2.30 to 2.35 (0.0906 to 0.0925)	H
90520-34004	2.35 to 2.40 (0.0925 to 0.0945)	J
90520-34005	2.40 to 2.45 (0.0945 to 0.0965)	K
90520-34006	2.45 to 2.50 (0.0965 to 0.0984)	L
90520-34007	2.50 to 2.55 (0.0984 to 0.1004)	M
90520-34008	2.55 to 2.60 (0.1004 to 0.1024)	N
90520-34009	2.60 to 2.65 (0.1024 to 0.1043)	P



7. INSTALL 4TH GEAR BEARING SPACER

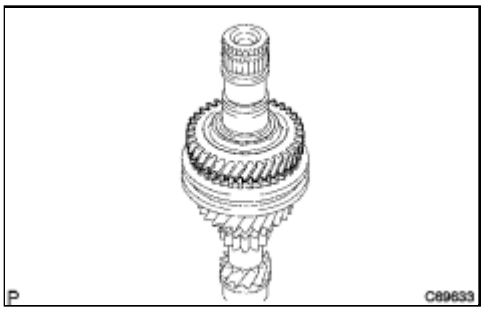
(a) Coat the 4th gear bearing spacer with gear oil and install it to the input shaft.

8. INSTALL NO. 4 SYNCHRONIZER RING



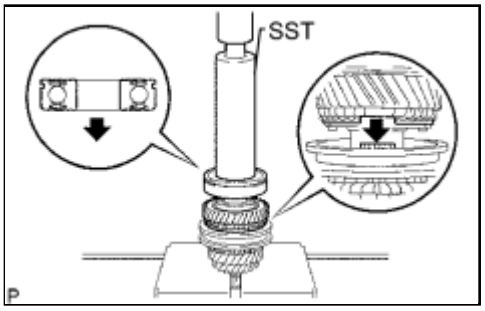
(a) Coat the No. 4 synchronizer ring with gear oil and install it to the No. 2 transmission clutch hub.

NOTICE:



Align the claw of the No. 2 clutch hub with the notch of the No. 4 synchronizer ring.

9. INSTALL 4TH GEAR NEEDLE ROLLER BEARING



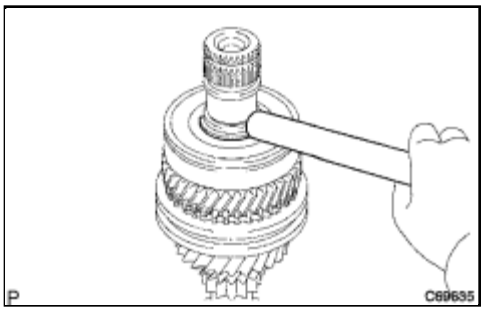
(a) Coat the 4th gear needle roller bearing with gear oil and install it to the input shaft.

10. INSTALL 4TH GEAR

(a) Coat the 4th gear with gear oil and install it to the input shaft.

11. INSTALL INPUT SHAFT REAR RADIAL BALL BEARING

(a) Using SST and a press, install the input shaft rear radial ball bearing to the input shaft.



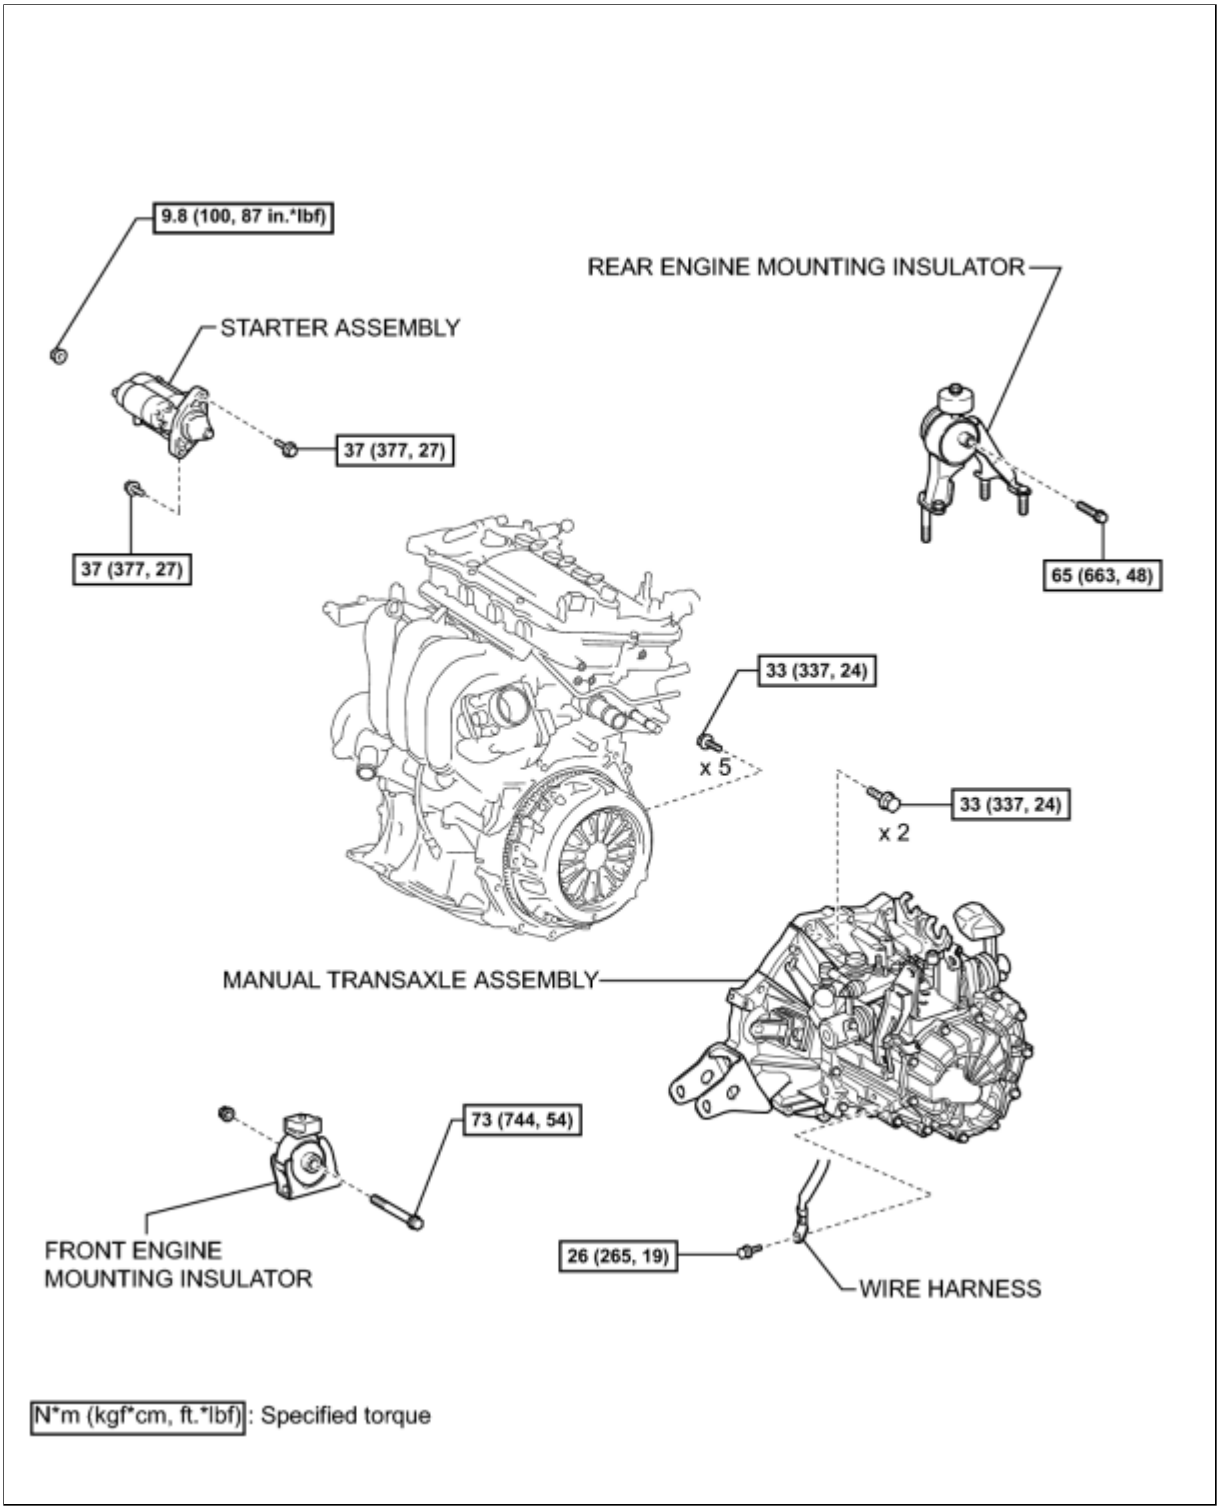
SST: 09608-06041

NOTICE:

- Install the bearing with its groove facing rearward.
- Make sure that the 3rd gear can rotate.

(b) Select a snap ring so that the clearance between the input shaft radial ball rear bearing and the input shaft rear bearing snap ring will be within the specified range. Using a brass bar and a hammer, install the snap ring.

Standard clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:



PART NO.	THICKNESS: MM (IN.)	MARK
90520-30008	2.35 to 2.40 (0.0925 to 0.0945)	1
90520-30009	2.40 to 2.45 (0.0945 to 0.0965)	2
90520-30010	2.45 to 2.50 (0.0965 to 0.0984)	3
90520-30011	2.50 to 2.55 (0.0984 to 0.1004)	4
90520-30012	2.55 to 2.60 (0.1004 to 0.1024)	5
90520-30013	2.60 to 2.65 (0.1024 to 0.1043)	6
90520-30021	2.65 to 2.70 (0.1043 to 0.1063)	7
90520-30022	2.70 to 2.75 (0.1063 to 0.1083)	8

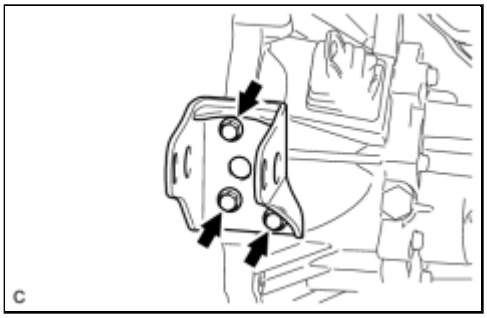
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B3U02OX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE ASSEMBLY: INSTALLATION (2010 Corolla)		

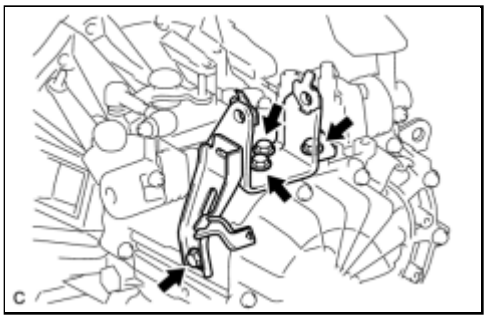
INSTALLATION



1. INSTALL REAR ENGINE MOUNTING BRACKET

(a) Install the rear engine mounting bracket with the 3 bolts.

Torque: 45 N·m (459 kgf·cm, 33ft·lbf)

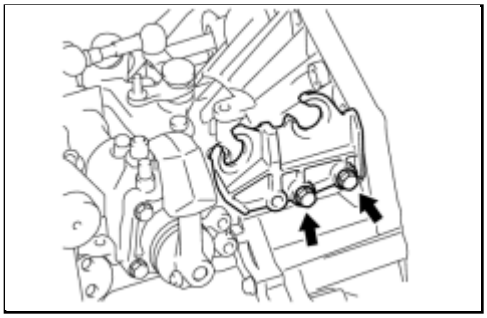


2. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket with the 3 bolts.

Torque: 64 N·m (653 kgf·cm, 47ft·lbf)

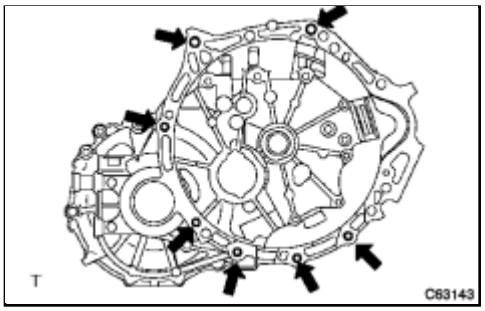
3. INSTALL ENGINE MOUNTING BRACKET LH



(a) Temporarily install the engine mounting bracket LH with the 4 bolts.

(b) Tighten the 4 bolts.

Torque: 52 N·m (531 kgf·cm, 38ft·lbf)



4. INSTALL CONTROL CABLE BRACKET

(a) Install the control cable bracket with the 2 bolts.

Torque: 25 N·m (250 kgf·cm, 18ft·lbf)

5. INSTALL MANUAL TRANSAXLE ASSEMBLY

(a) Align the input shaft with the clutch disc and install the manual transaxle onto the engine.

(b) Install the 7 bolts.

Torque: 33 N·m (337 kgf·cm, 24ft·lbf)

NOTICE:

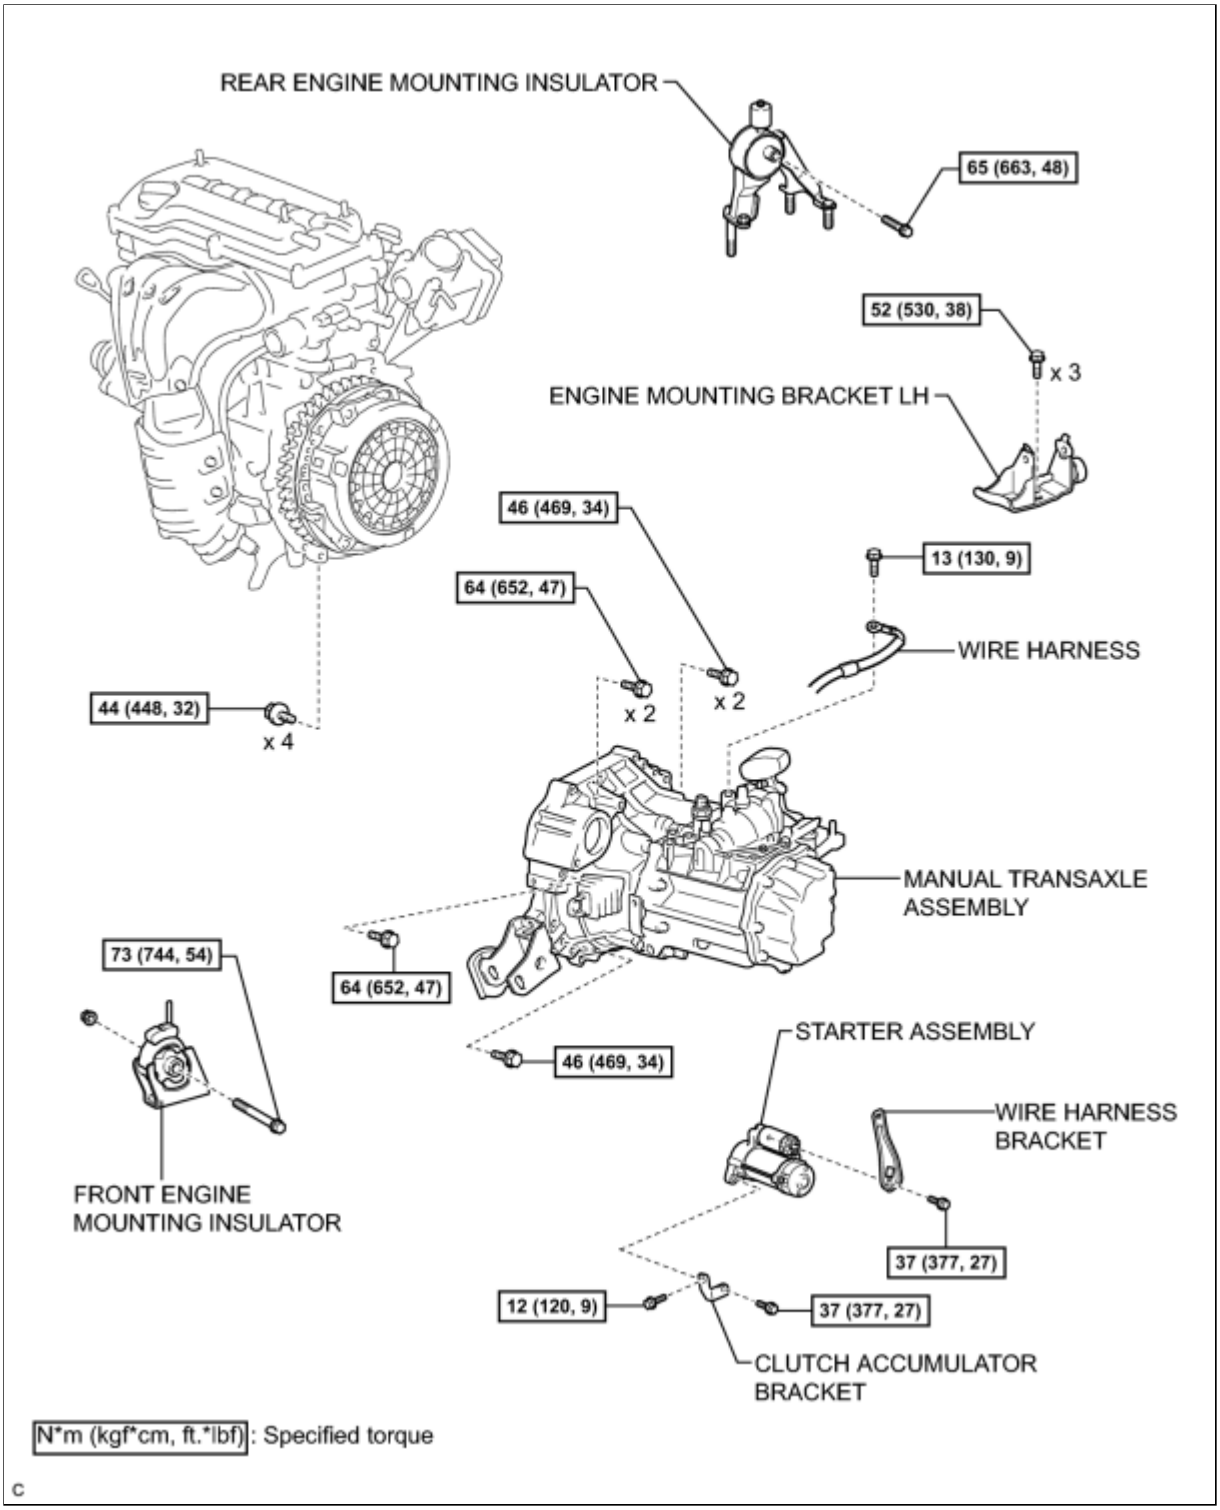
- Insert dowel pins into the dowel holes securely so that the end face of the transaxle assembly fits close against the engine assembly before tightening the bolts.
- Make sure that the dowel pins are not loose, bent, damaged or scratched and then install the transaxle onto the engine with the contact surfaces of the engine and transaxle flat against each other.

6. INSTALL STARTER ASSEMBLY INFO

7. INSTALL REAR ENGINE MOUNTING INSULATOR INFO

8. INSTALL FRONT ENGINE MOUNTING INSULATOR INFO

9. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE



HINT:

See the steps from "Install Engine Assembly With Transaxle" through "Check ABS Speed Sensor Signa" INFO .

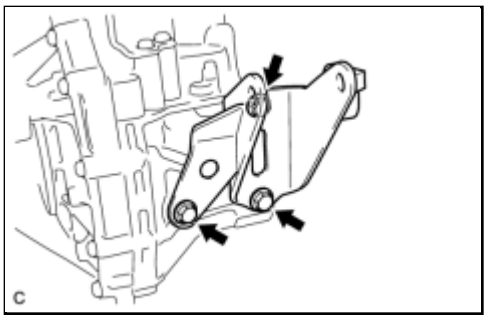
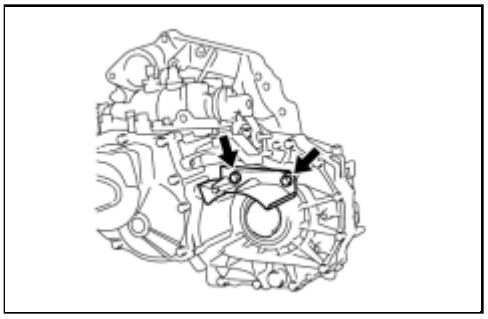
7. REMOVE ENGINE MOUNTING BRACKET LH



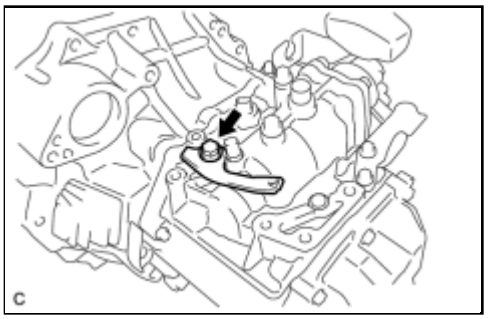
(a) Remove the 3 bolts and the engine mounting bracket LH.

8. REMOVE FRONT ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and the front engine mounting bracket.

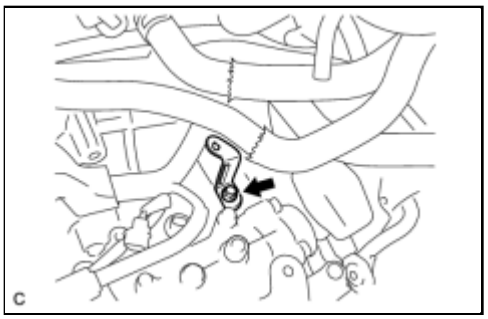


9. REMOVE REAR ENGINE MOUNTING BRACKET



(a) Remove the 3 bolts and the rear engine mounting bracket.

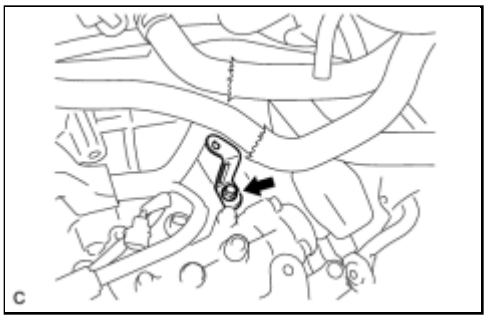
10. REMOVE MANUAL TRANSMISSION CASE PROTECTOR



(a) Remove the 2 bolts and the manual transmission case protector.

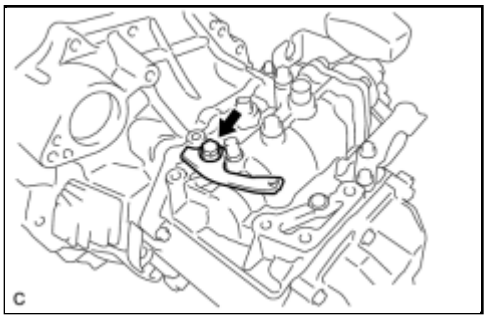
11. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Remove the bolt and wire harness clamp bracket.



(b) Remove the bolt and wire harness clamp bracket.

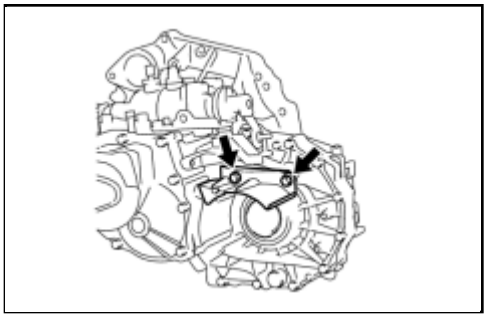
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B3U02PX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE ASSEMBLY: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL WIRE HARNESS CLAMP BRACKET

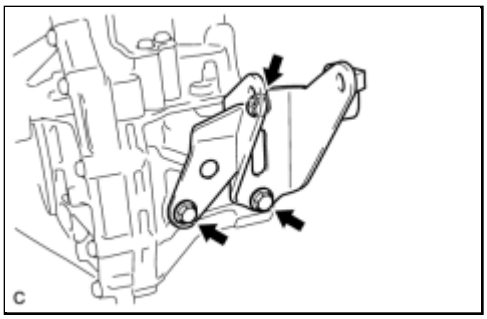
(a) Install the wire harness clamp with the bolt.



Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

(b) Install the wire harness clamp bracket with the bolt.

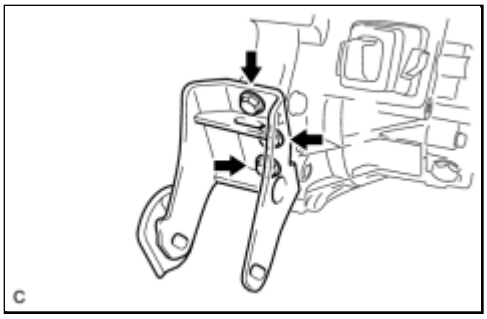
Torque: 26 N·m (260 kgf·cm, 19ft·lbf)



2. INSTALL MANUAL TRANSMISSION CASE PROTECTOR

(a) Install the manual transmission case protector with the 2 bolts.

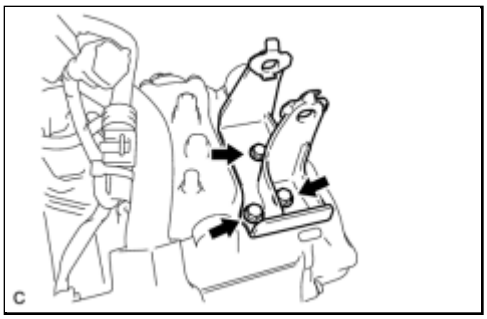
Torque: 18 N·m (183 kgf·cm, 13ft·lbf)



3. INSTALL REAR ENGINE MOUNTING BRACKET

(a) Install the rear engine mounting bracket with the 3 bolts.

Torque: 45 N·m (459 kgf·cm, 33ft·lbf)



4. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket with the 3 bolts.

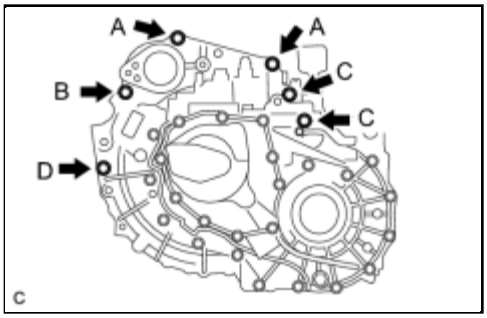
Torque: 64 N·m (653 kgf·cm, 47ft·lbf)

5. INSTALL ENGINE MOUNTING BRACKET LH

(a) Temporarily install the engine mounting bracket LH with the 3 bolts.

(b) Tighten the 3 bolts.

Torque: 52 N·m (530 kgf·cm, 38ft·lbf)



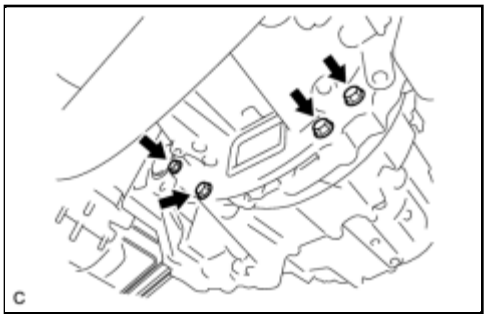
6. INSTALL MANUAL TRANSAXLE ASSEMBLY

(a) Align the input shaft with the clutch disc and install the manual transaxle onto the engine.

(b) Install the 6 bolts.

Bolt A - Torque: 64 N·m (652 kgf·cm, 47ft·lbf)

Bolt B - Torque: 64 N·m (652 kgf·cm, 47ft·lbf)



Bolt C - Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

Bolt D - Torque: 46 N·m (469 kgf·cm, 34ft·lbf)

NOTICE:

- Insert dowel pins into the dowel holes securely so that the end face of the transaxle assembly fits close against the engine assembly before tightening the bolts.
- Make sure that the dowel pins are not loose, bent, damaged or scratched and then install the transaxle onto the engine with the contact surfaces of the engine and transaxle flat against each other.

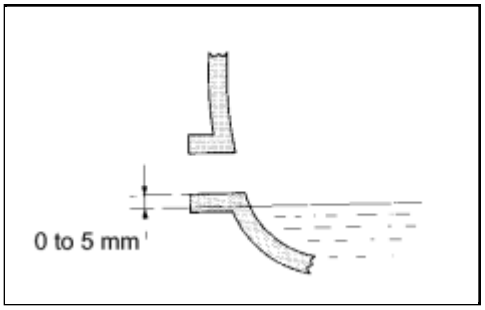
(c) Install the 4 bolts.

Torque: 44 N·m (448 kgf·cm, 32ft·lbf)

7. INSTALL STARTER ASSEMBLY INFO

8. TEMPORARILY TIGHTEN FRONT ENGINE MOUNTING INSULATOR INFO

9. TEMPORARILY TIGHTEN REAR ENGINE MOUNTING INSULATOR INFO



10. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

HINT:

See the steps from "Install Engine Assembly With Transaxle" through "Check ABS Speed Sensor Signal" INFO **.**

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001B3K01NX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE OIL: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT TRANSAXLE OIL

(a) Stop the vehicle in a level place.

(b) Remove the transmission filler plug and the gasket.

(c) Check that the oil surface is within 5 mm (0.197 in.) of the bottom of the transmission filler plug opening.

NOTICE:

- Excessively large or small amounts of oil may cause problems.
- After replacing the oil, drive the vehicle and check the oil level again.

(d) Check for oil leakage when the oil level is low.

(e) Install the transmission filler plug and a new gasket.

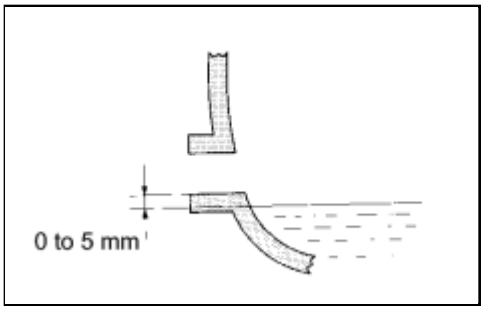
Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Z2L019X
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE OIL: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REMOVE ENGINE UNDER COVER LH

2. DRAIN MANUAL TRANSAXLE OIL



(a) Remove the filler plug and the gasket.

(b) Remove the drain plug and gasket, and then drain the manual transaxle oil.

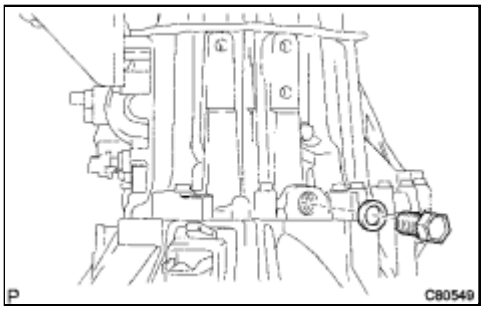
3. ADD MANUAL TRANSAXLE OIL

(a) Install a new gasket and the drain plug.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

(b) Add manual transaxle oil.

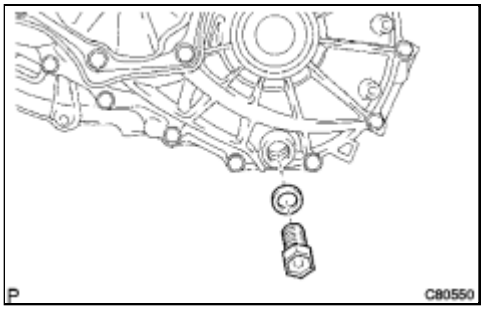
(c) Install the transmission filler plug and a new gasket.



Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

4. INSPECT MANUAL TRANSAXLE OIL INFO

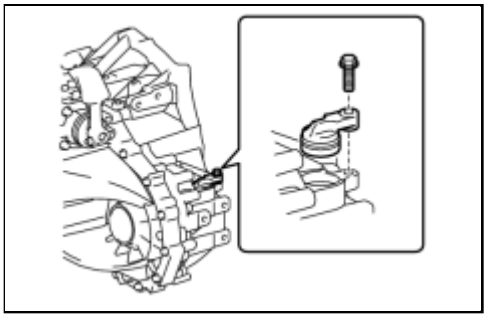
5. INSTALL ENGINE UNDER COVER LH



Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A1501QX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

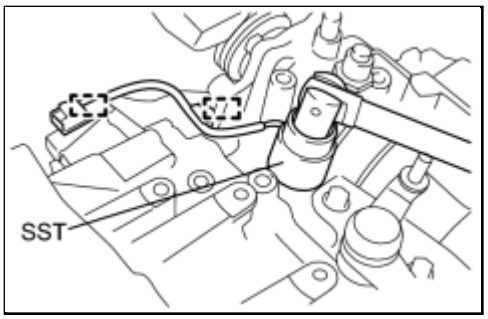
1. REMOVE MANUAL TRANSMISSION FILLER PLUG



(a) Remove the manual transmission filler plug and gasket from the manual transmission case.

2. REMOVE DRAIN PLUG SUB-ASSEMBLY

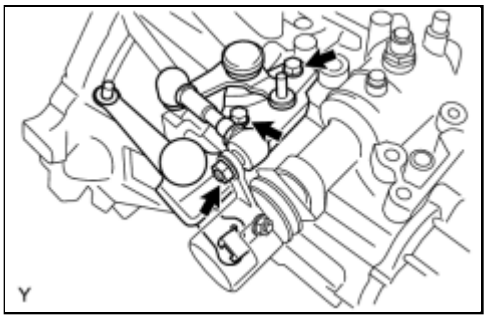
(a) Remove the drain plug sub-assembly and gasket from the manual transmission case.



3. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Remove the bolt and speedometer driven hole cover sub-assembly from the transaxle case.

(b) Remove the O-ring from the speedometer driven hole cover sub-assembly.

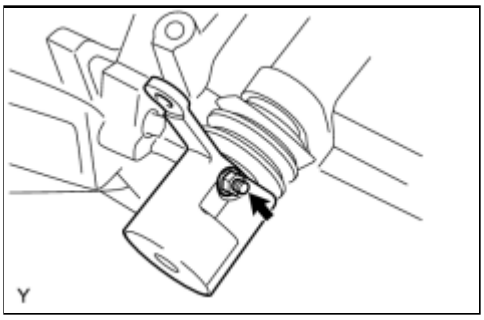


4. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Separate the back-up light switch wire harness from the 2 clamps.

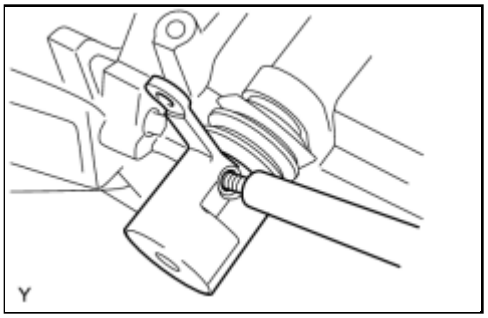
(b) Using SST, remove the back-up light switch assembly and gasket from the manual transmission case.

SST: 09817-16011



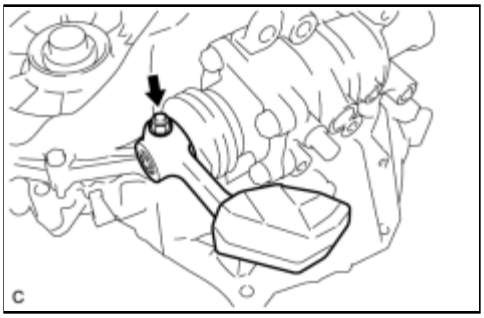
5. REMOVE SELECTING BELLCRANK ASSEMBLY

(a) Remove the 2 bolts, nut and selecting bellcrank assembly from the manual transmission case.



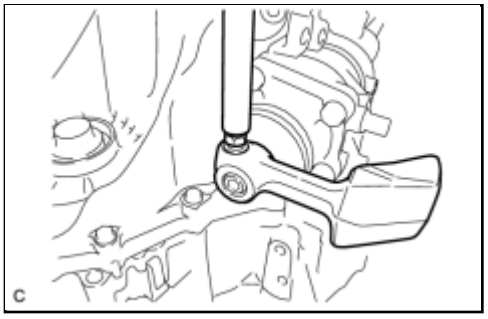
(b) Remove the control bellcrank dust cover.

6. REMOVE FLOOR SHIFT CONTROL SHIFT LEVER



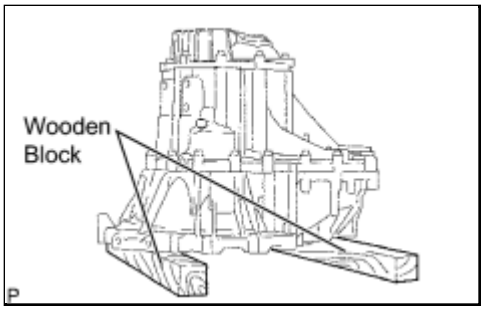
(a) Remove the nut and washer.

(b) Using a brass bar and a hammer, remove the lock pin.

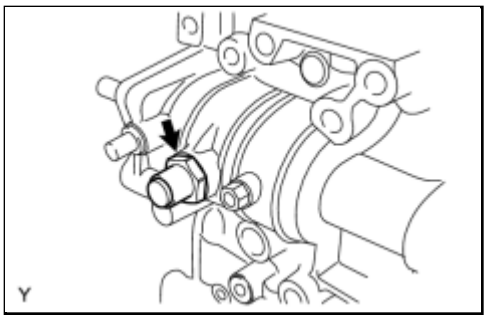


(c) Remove the floor shift control shift lever and dust boot.

7. REMOVE SHIFT LEVER DAMPER

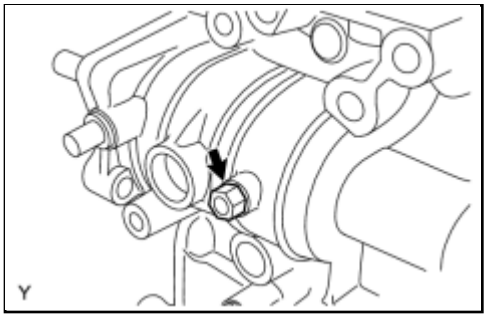


(a) Remove the nut and washer.



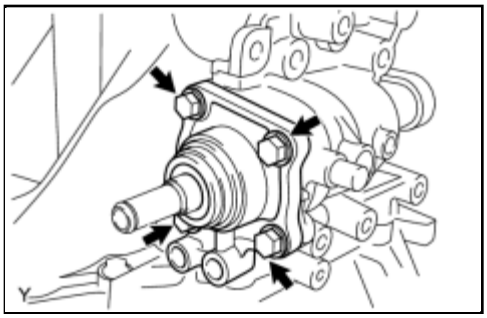
(b) Using a brass bar and a hammer, remove the lock pin.

(c) Remove the shift lever damper and dust boot.



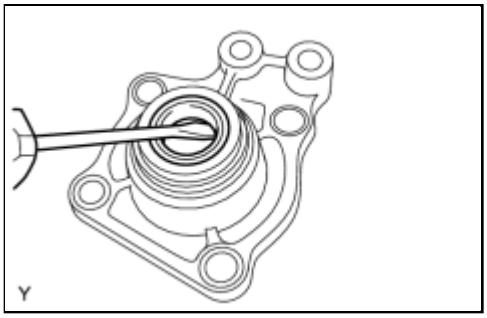
8. PREPARE MANUAL TRANSAXLE ASSEMBLY

(a) Place the manual transaxle assembly on wooden blocks.



9. REMOVE NO. 1 LOCK BALL ASSEMBLY

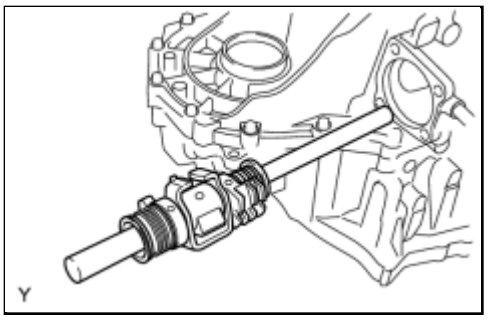
(a) Remove the No. 1 lock ball assembly from the manual transmission case.



10. REMOVE SHIFT GUIDE PIN

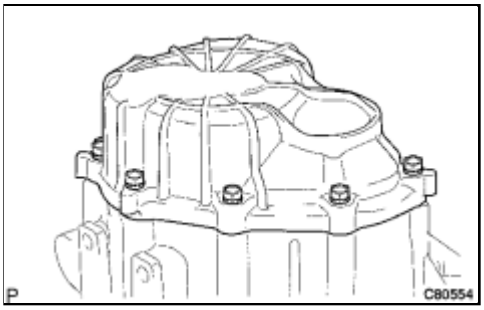
(a) Remove the shift guide pin and washer from the manual transmission case.

11. REMOVE CONTROL SHAFT COVER



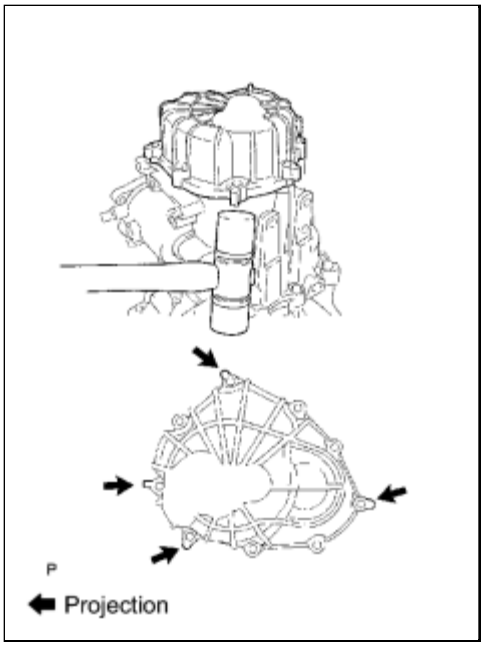
(a) Remove the 4 bolts, control shaft cover and gasket from the manual transmission case.

12. REMOVE CONTROL SHAFT COVER OIL SEAL



(a) Using a screwdriver, remove the control shaft cover oil seal from the control shaft cover.

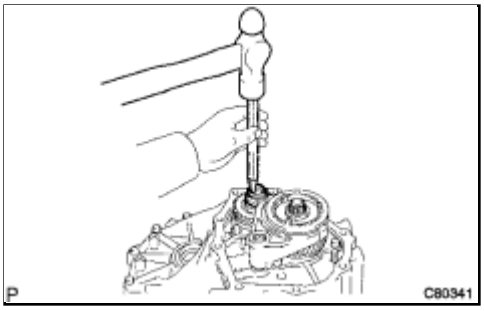
13. REMOVE SHIFT AND SELECT LEVER SHAFT ASSEMBLY



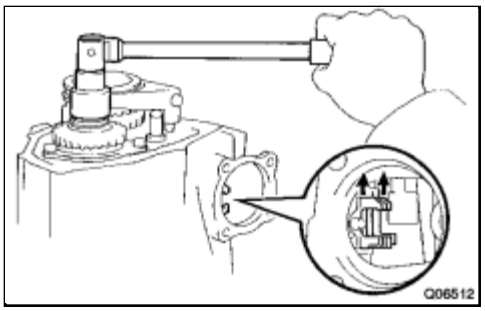
(a) Remove the shift and select lever shaft assembly from the manual transmission case.

14. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

(a) Remove the 9 bolts.



(b) Using a plastic hammer, carefully tap the projections of the manual transmission case cover sub-assembly to remove the manual transmission case cover from the manual transmission case.

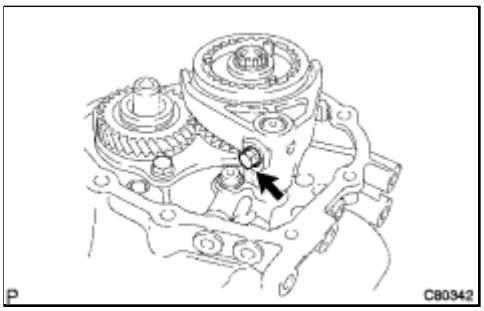


NOTICE:

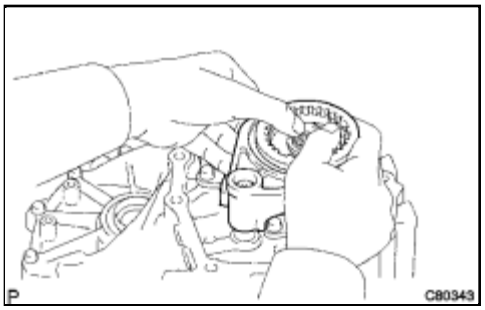
Do not damage the manual transmission case.

15. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Using a chisel and a hammer, loosen the staked part of the manual transmission output shaft rear set nut.



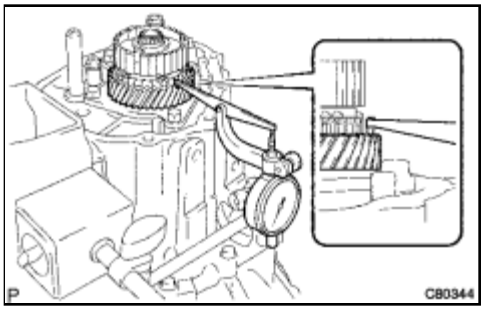
(b) Engage 2 gears simultaneously to lock the transmission.



(c) Remove the manual transmission output shaft rear set nut.

(d) Disengage the 2 gears.

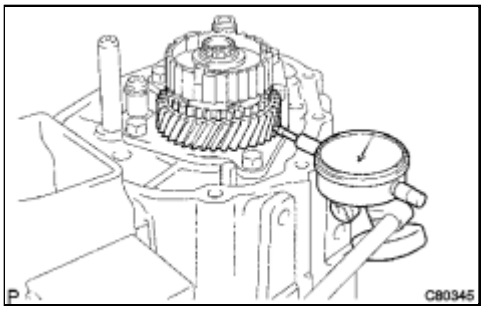
16. REMOVE NO. 3 GEAR SHIFT FORK



(a) Remove the gear shift fork lock bolt from the No. 3 gear shift fork.

(b) Remove the No. 3 transmission hub sleeve with the No. 3 gear shift fork from the No. 3 transmission clutch hub.

17. INSPECT 5TH GEAR THRUST CLEARANCE

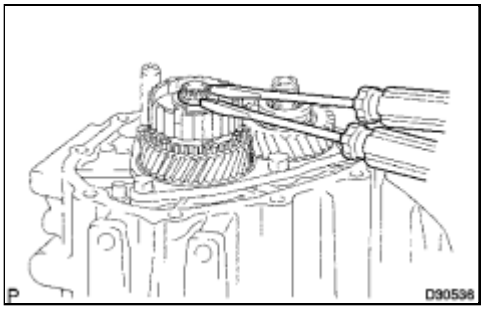


(a) Using a dial indicator, measure the 5th gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.00394 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 3 transmission clutch hub, 5th gear or input shaft rear radial ball bearing.

18. INSPECT 5TH GEAR RADIAL CLEARANCE

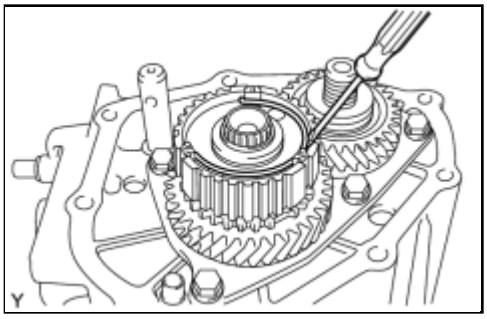


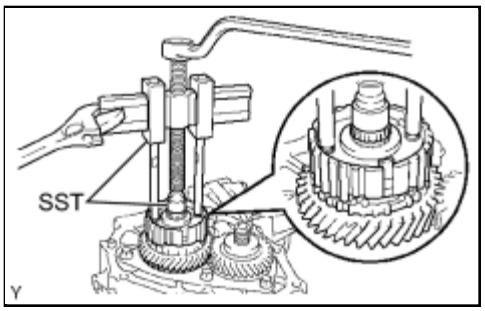
(a) Using a dial indicator, measure the 5th gear radial clearance.

Standard clearance:
NSK made bearing
0.015 to 0.056 mm (0.000591 to 0.00220 in.)
JTEKT made bearing
0.015 to 0.058 mm (0.000591 to 0.00228 in.)
Maximum clearance:
NSK made bearing
0.056 mm (0.00220 in.)
JTEKT made bearing
0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 5th gear, 5th gear needle roller bearing or input shaft.

19. REMOVE NO. 3 TRANSMISSION CLUTCH HUB



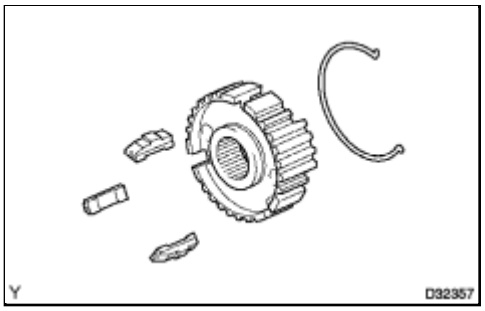


(a) Using 2 screwdrivers and a hammer, tap out the snap ring.

HINT:

Use a piece of cloth to keep the snap ring from flying off.

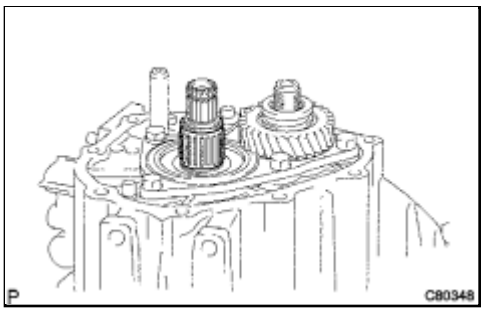
(b) Using a screwdriver, remove the synchromesh shifting key spring from the No. 3 transmission clutch hub.



(c) Using SST, remove the No. 3 transmission clutch hub, 5th gear, and No. 3 synchronizer ring from the input shaft.

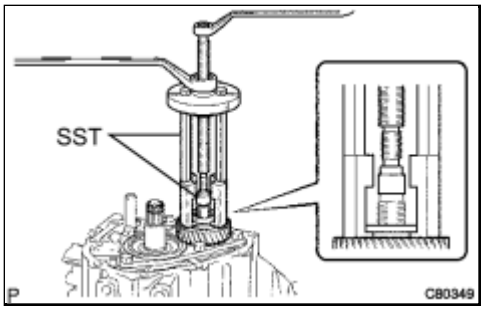
SST: 09950-50013

09951-05010
09952-05010
09953-05020
09954-05031
09957-04010



SST: 09950-60010

09951-00200



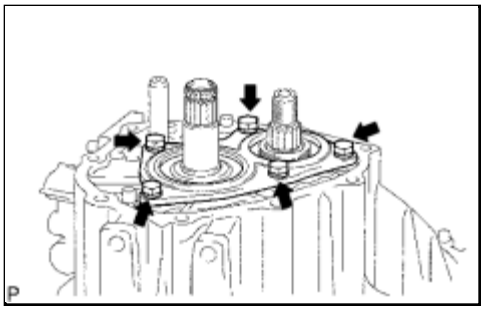
(d) Remove the 3 synchromesh shifting keys and synchromesh shifting key spring from the No. 3 transmission clutch hub.

20. REMOVE 5TH GEAR NEEDLE ROLLER BEARING

(a) Remove the 5th gear needle roller bearing and 5th gear bearing spacer from the input shaft.

21. REMOVE 5TH DRIVEN GEAR

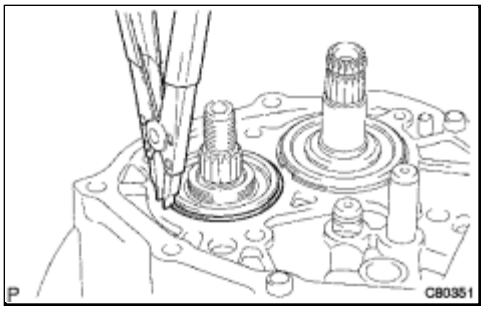
(a) Using SST, remove the 5th driven gear from the output shaft.



SST: 09950-30012

09951-03010
09953-03010
09954-03010
09955-03021

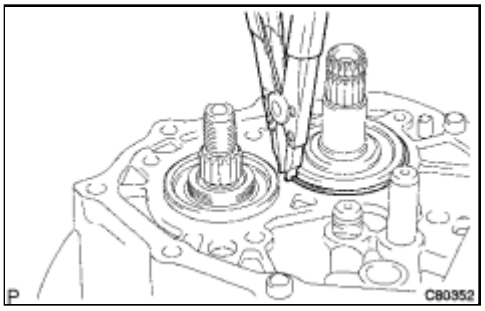
SST: 09950-60010



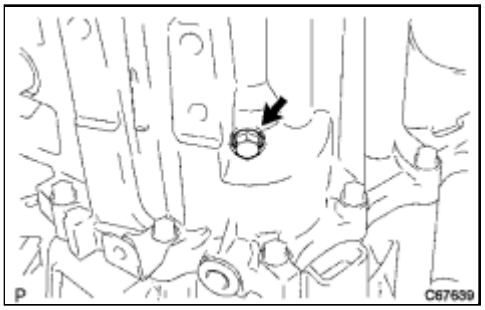
09951-00180
09952-06010

22. REMOVE REAR BEARING RETAINER

(a) Remove the 5 bolts and rear bearing retainer from the manual transmission case.



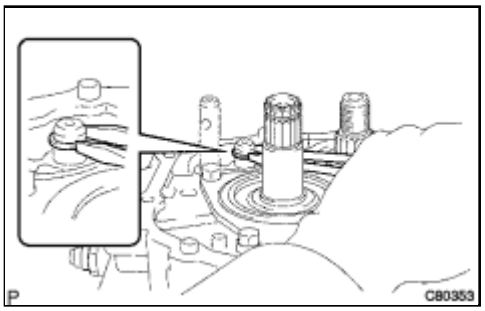
23. REMOVE OUTPUT SHAFT REAR BEARING HOLE SNAP RING



(a) Using a snap ring expander, remove the output shaft rear bearing hole snap ring from the output shaft.

24. REMOVE INPUT SHAFT REAR BEARING HOLE SNAP RING

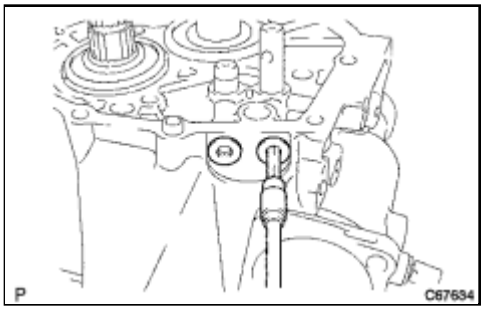
(a) Using a snap ring expander, remove the input shaft rear bearing hole snap ring from the input shaft.



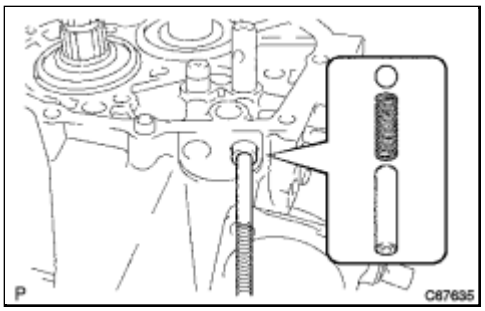
25. REMOVE REVERSE IDLER GEAR SHAFT BOLT

(a) Remove the reverse idler gear shaft bolt and gasket from the manual transmission case.

26. REMOVE SHIFT FORK SHAFT SNAP RING

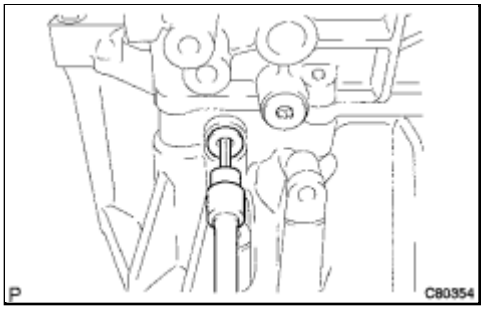


(a) Using 2 screwdrivers and a hammer, tap out the snap ring from the No. 2 gear shift fork shaft.

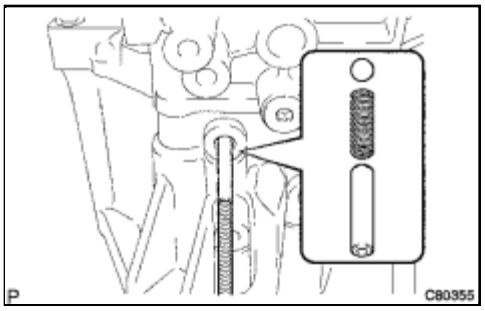


HINT:

Use a piece of cloth to keep the snap ring from flying off.

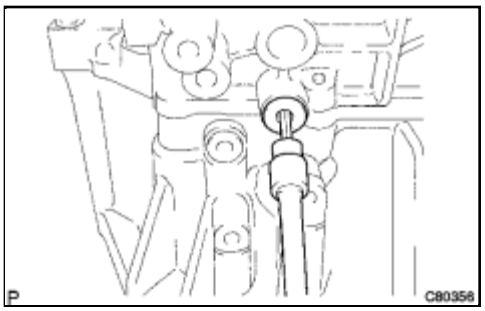


27. REMOVE SHIFT DETENT BALL

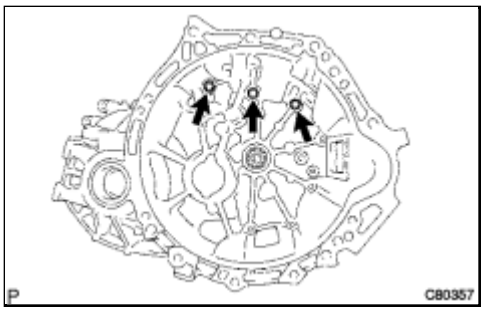


(a) Using a hexagon wrench, remove the 2 shift detent ball plugs from the manual transmission case.

(b) Using a magnetic pick-up tool, remove the 2 shift spring seats, 2 shift detent ball springs, and 2 shift detent balls from the manual transmission case.

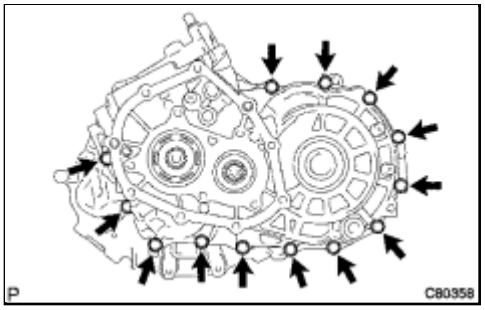


(c) Using a hexagon wrench, remove the shift detent ball plug from the transaxle case.

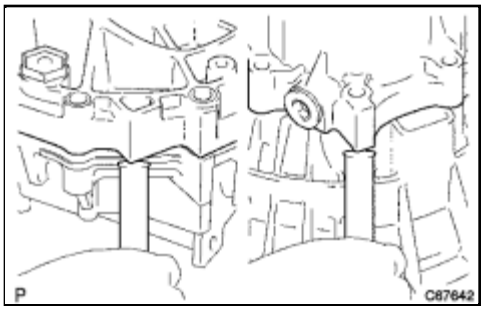


(d) Using a magnetic pick-up tool, remove the seat, spring and ball from the transaxle case.

28. REMOVE NO. 2 LOCK BALL ASSEMBLY



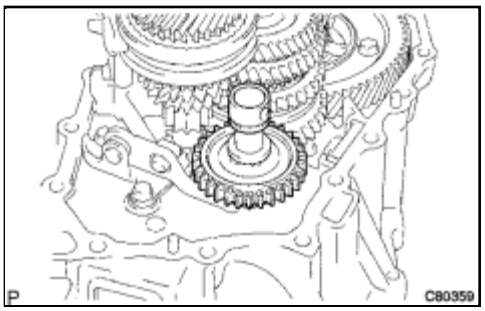
(a) Using a hexagon wrench, remove the No. 2 lock ball assembly from the manual transmission case.



29. REMOVE MANUAL TRANSMISSION CASE

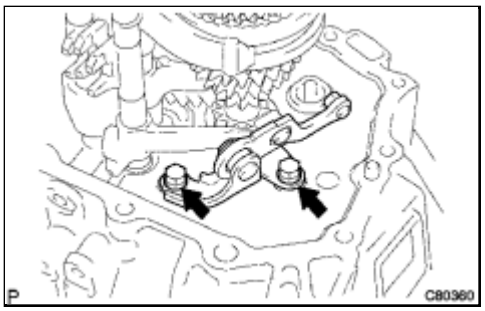
(a) Remove the 3 bolts from the transaxle case.

(b) Remove the 13 bolts from the manual transmission case.



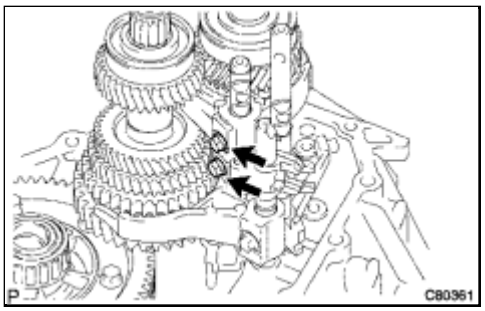
(c) Using a brass bar and a hammer, carefully tap the projections of the manual transmission case to remove the transmission case from the transaxle case.

NOTICE:



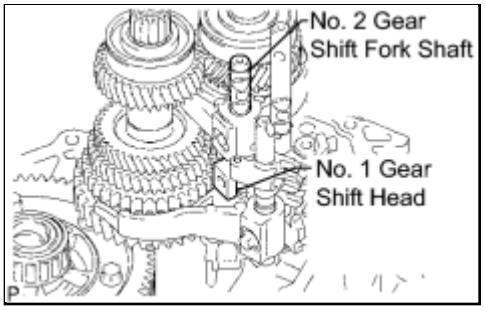
Do not damage the manual transmission case or transaxle case.

30. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY



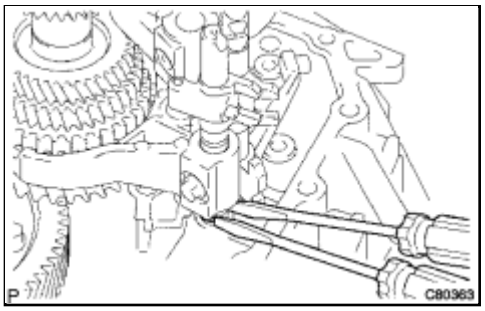
(a) Remove the reverse idler gear sub-assembly, thrust washer, and reverse idler gear shaft from the transaxle case.

31. REMOVE REVERSE SHIFT ARM BRACKET ASSEMBLY



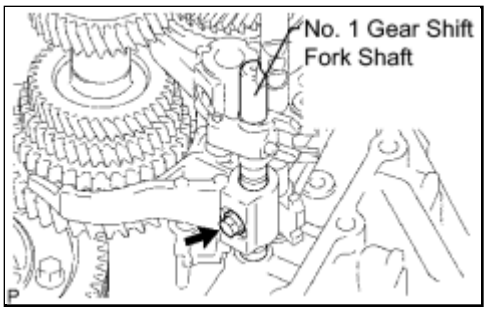
(a) Remove the 2 bolts and reverse shift arm bracket assembly from the transaxle case.

32. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

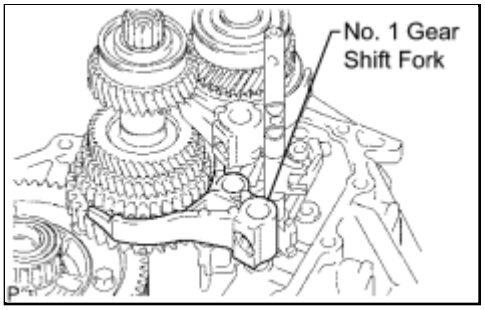


(a) Remove the 2 bolts from the No. 2 gear shift fork and No. 1 gear shift head.

(b) Remove the No. 2 gear shift fork shaft and No. 1 gear shift head from the transaxle case.



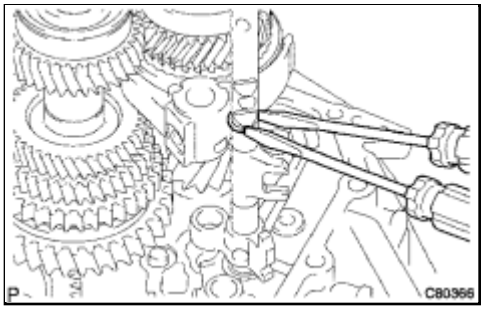
33. REMOVE NO. 1 GEAR SHIFT FORK SHAFT



(a) Using 2 screwdrivers and a hammer, tap out the snap ring.

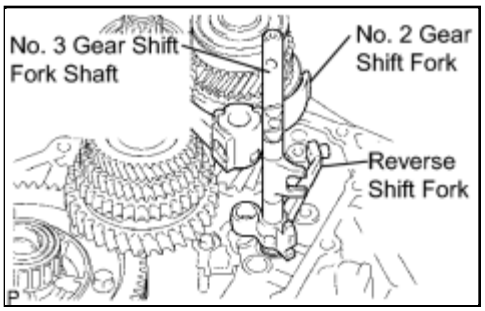
HINT:

Use a piece of cloth to keep the snap ring from flying off.



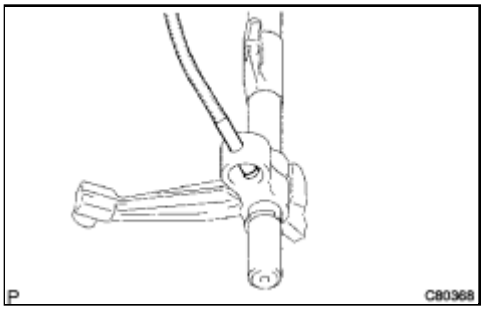
(b) Remove the shift fork set bolt and No. 1 gear shift fork shaft from the No. 1 gear shift fork.

(c) Remove the No. 1 gear shift fork.



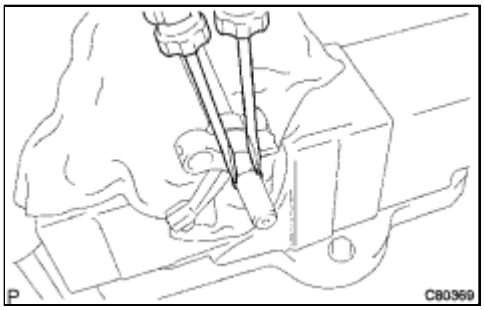
34. REMOVE NO. 3 GEAR SHIFT FORK SHAFT

(a) Using 2 screwdrivers and a hammer, tap out the snap ring from the No. 3 gear shift fork shaft.



HINT:

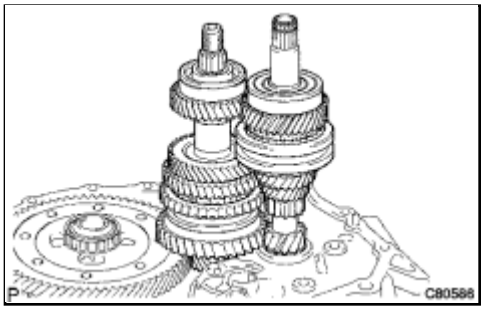
Use a piece of cloth to keep the snap ring from flying off.



(b) Remove the No. 3 gear shift fork shaft together with the reverse shift fork and No. 2 gear shift fork from the manual transaxle case.

(c) Using a magnetic pick-up tool, remove the 2 reverse shift

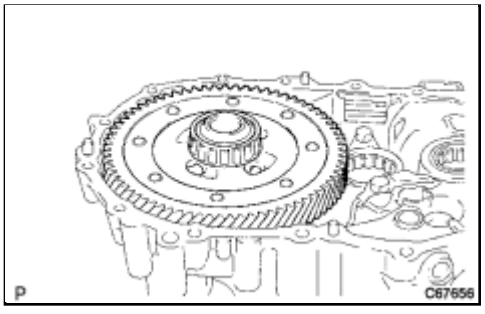
fork balls from the reverse shift fork.



(d) Using 2 screwdrivers and a hammer, tap the snap ring out of the No. 3 shift fork shaft.

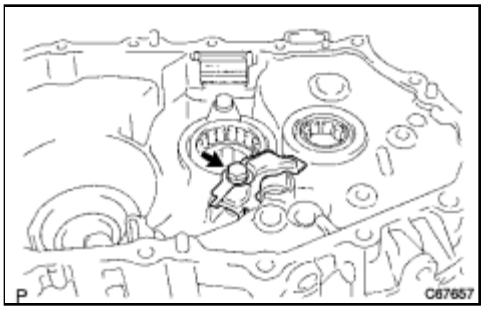
HINT:

Use a piece of cloth to keep the snap ring from flying off.



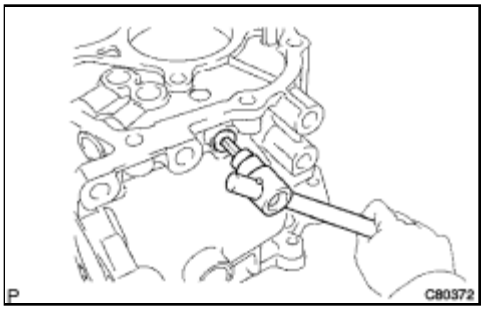
(e) Remove the reverse shift fork from the No. 3 gear shift fork shaft.

35. REMOVE INPUT SHAFT ASSEMBLY



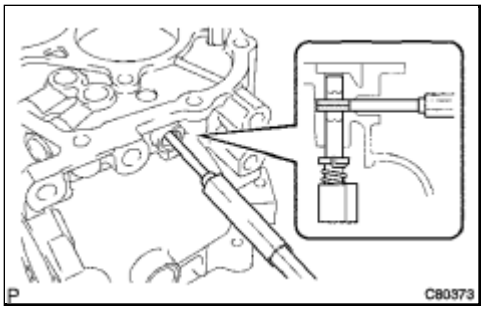
(a) Remove the input shaft assembly and output shaft assembly from the transaxle case.

36. REMOVE DIFFERENTIAL CASE ASSEMBLY



(a) Remove the differential case assembly from the transaxle case.

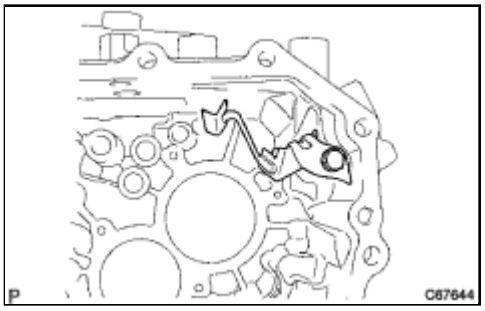
37. REMOVE MANUAL TRANSAXLE CASE RECEIVER



(a) Remove the bolt and manual transaxle case receiver from the transaxle case.

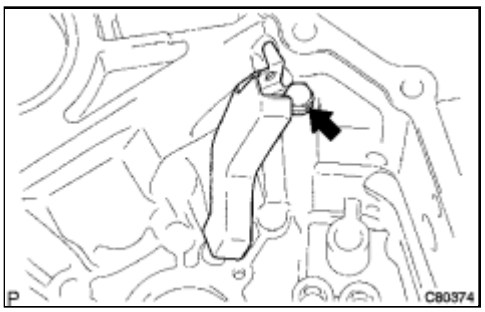
38. REMOVE REVERSE RESTRICT PIN ASSEMBLY

(a) Using a hexagon wrench, remove the reverse restrict pin assembly from the manual transmission case.



(b) Using a pin punch (φ5 mm) and a hammer, drive out the slotted spring pin and remove the reverse restrict pin assembly from the manual transmission case.

39. REMOVE NO. 1 OIL RECEIVER PIPE

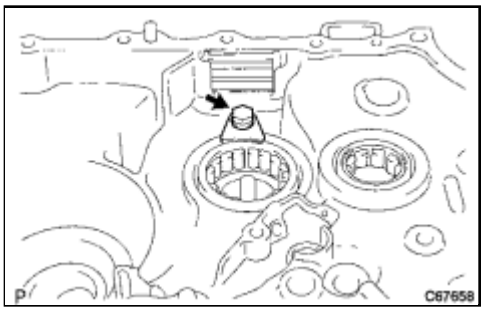


(a) Remove the bolt and No. 1 oil receiver pipe from the manual transmission case.

NOTICE:

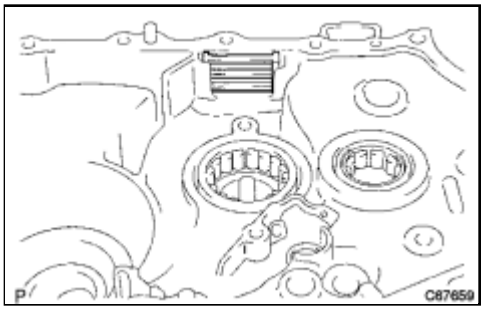
Do not damage the No. 1 oil receiver pipe.

40. REMOVE NO. 2 OIL RECEIVER PIPE



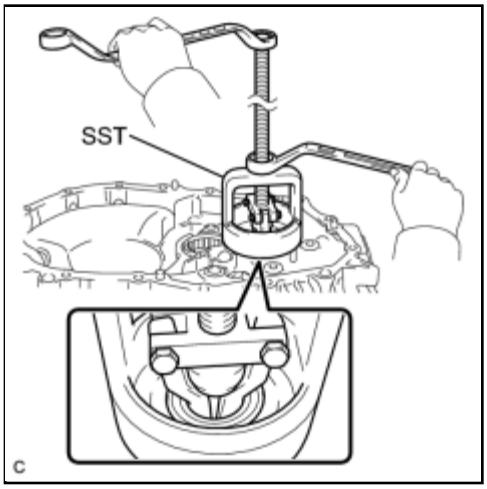
(a) Remove the bolt and No. 2 oil receiver pipe from the manual transmission case.

NOTICE:



Do not damage the No. 2 oil receiver pipe.

41. REMOVE BEARING LOCK PLATE

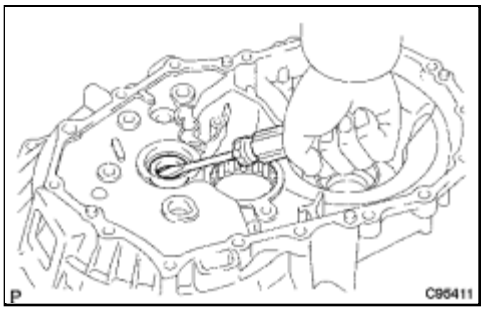


(a) Remove the bolt and bearing lock plate from the transaxle case.

42. REMOVE TRANSMISSION MAGNET

(a) Remove the transmission magnet from the transaxle case.

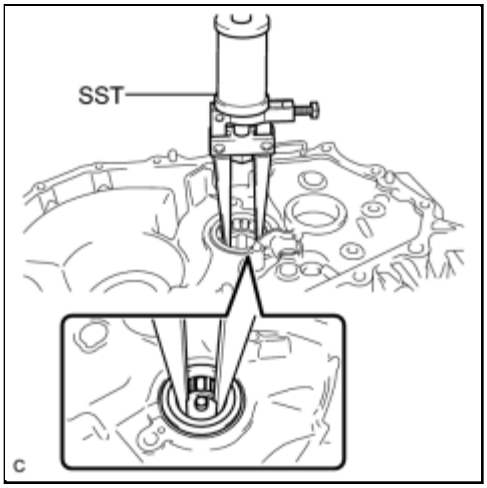
43. REMOVE INPUT SHAFT FRONT BEARING



(a) Using SST, remove the input shaft front bearing from the transaxle case.

SST: 09612-65014

09612-01050

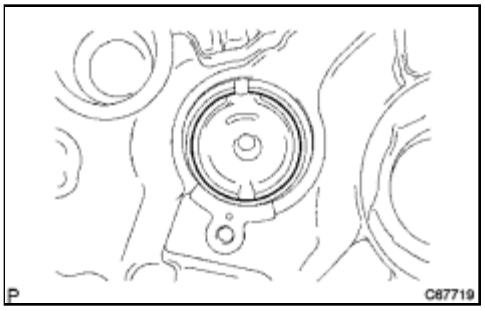


09612-01060

44. REMOVE FRONT TRANSAXLE CASE OIL SEAL

(a) Using a screwdriver, remove the front transaxle case oil seal from the transaxle case.

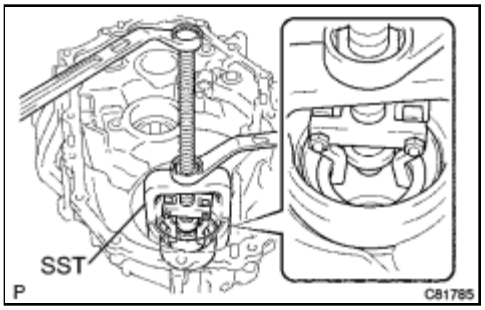
45. REMOVE OUTPUT SHAFT FRONT BEARING



(a) Using SST, remove the output shaft front bearing from the transaxle case.

SST: 09308-00010

NOTICE:

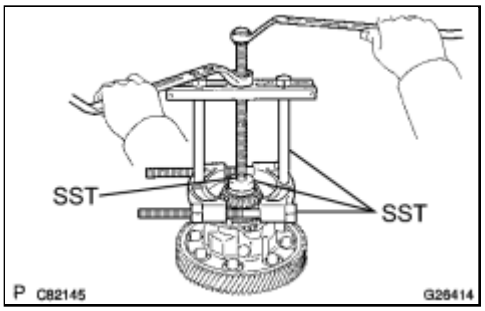


Do not apply excessive force to the front transaxle case when installing SST.

46. REMOVE OUTPUT SHAFT COVER

(a) Remove the output shaft cover from the transaxle case.

47. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using SST, remove the front differential case front tapered roller bearing (outer race) and plate washer from the transaxle case.

SST: 09612-65014

09612-01040

09612-01050

(b) Using SST, remove the front differential case front tapered roller bearing (inner race) from the differential case assembly.

SST: 09950-00020

SST: 09950-00030

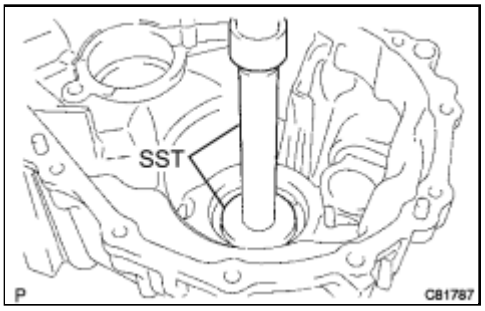
SST: 09950-40011

09957-04010

SST: 09950-60010

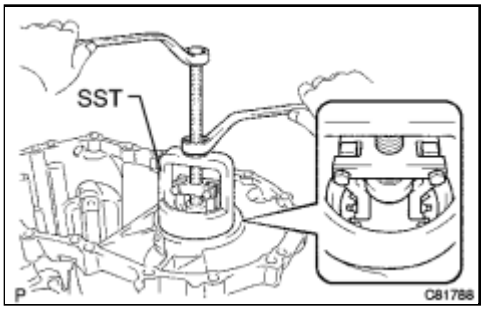
09951-00360

48. REMOVE TRANSAXLE CASE OIL SEAL



(a) Using SST and a hammer, remove the transaxle case oil seal from the transaxle case.

SST: 09950-60010

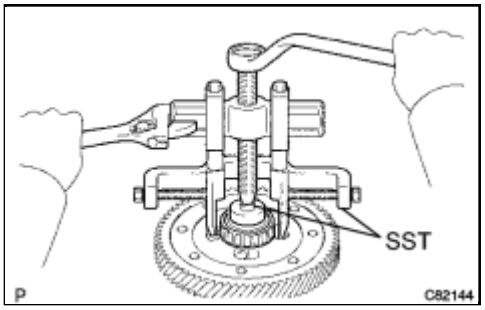


09951-00530

SST: 09950-70010

09951-07150

49. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING



(a) Using SST, remove the front differential case rear tapered roller bearing (outer race) and plate washer from the transmission case.

SST: 09612-65014

09612-01040

09612-01050

(b) Using SST, remove the front differential case rear tapered roller bearing (inner race) from the front differential case.

SST: 09950-40011

Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE OIL: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT TRANSAXLE OIL

(a) Stop the vehicle in a level place.

(b) Remove the transmission filler plug and the gasket.

(c) Check that the oil surface is within 5 mm (0.197 in.) of the bottom of the transmission filler plug opening.

NOTICE:

- Excessively large or small amounts of oil may cause problems.
- After replacing the oil, drive the vehicle and check the oil level again.

(d) Check for oil leakage when the oil level is low.

(e) Install the transmission filler plug and a new gasket.

Torque: 49 N·m (499 kgf·cm, 36ft·lbf)

Last Modified: 3-10-2010	6.4 A	**From:** 200901

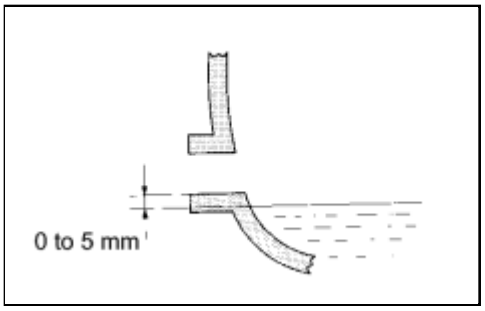
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE OIL: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. REMOVE ENGINE UNDER COVER LH

2. DRAIN MANUAL TRANSAXLE OIL



(a) Remove the filler plug and the gasket.

(b) Remove the drain plug and gasket, and then drain the manual transaxle oil.

3. ADD MANUAL TRANSAXLE OIL

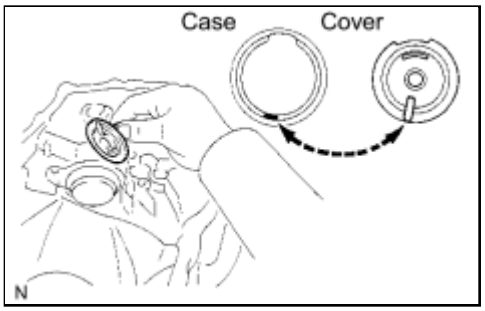
(a) Install a new gasket and the drain plug.

Torque: 49 N·m (499 kgf·cm, 36ft·lbf)

(b) Add manual transaxle oil.

(c) Install the transmission filler plug and a new gasket.

Torque: 49 N·m (499 kgf·cm, 36ft·lbf)



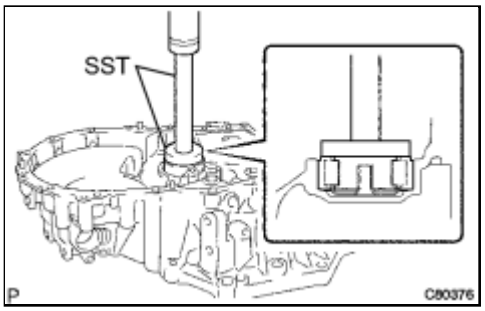
4. INSPECT MANUAL TRANSAXLE OIL INFO

5. INSTALL ENGINE UNDER COVER LH

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A1601QX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL OUTPUT SHAFT COVER



(a) Coat the output shaft cover with MP grease and install it onto the transaxle case.

NOTICE:

Insert the output shaft cover key into the case groove.

2. INSTALL OUTPUT SHAFT FRONT BEARING

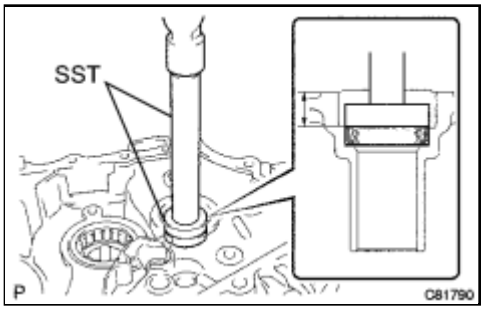
(a) Coat a new output shaft front bearing with gear oil.

(b) Using SST and a press, install it onto the transaxle case.

SST: 09950-60010

09951-00550

SST: 09950-70010

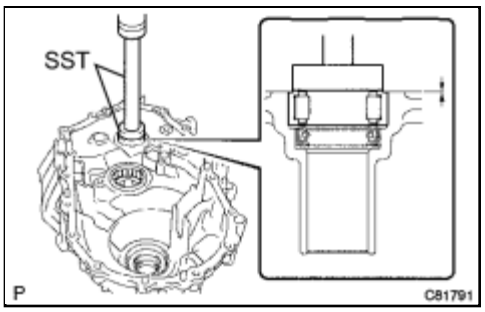


09951-07150

NOTICE:

- Install the new bearing in the correct direction as shown in the illustration.
- When replacing the output shaft front bearing, replace the output shaft front bearing inner race at the same time.

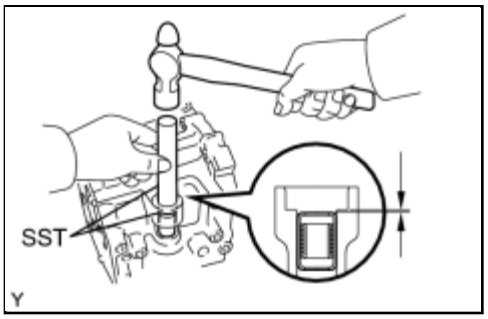
3. INSTALL FRONT TRANSAXLE CASE OIL SEAL



(a) Using SST and a hammer, install a new front transaxle case oil seal onto the transaxle case.

SST: 09950-60010
09951-00370
SST: 09950-70010
09951-07150
Driven in depth:
15.6 to 16.0 mm (0.6141 to 0.6299 in.)

(b) Coat the lip of the front transaxle case oil seal with MP grease.

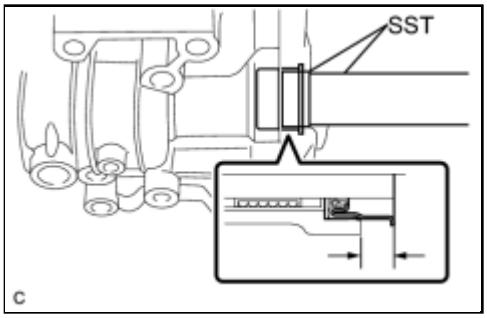


4. INSTALL INPUT SHAFT FRONT BEARING

(a) Coat a new input shaft front bearing with gear oil, and using SST and a press, install it onto the transaxle case.

SST: 09950-60010
09951-00420
SST: 09950-70010
09951-07150
Driven in depth:
0 to 0.3 mm (0 to 0.0118 in.)

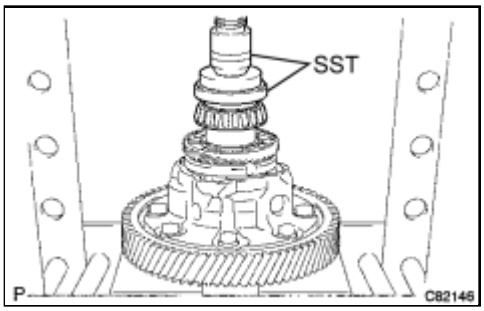
5. INSTALL SHIFT AND SELECT LEVER SHAFT SLIDE BALL BEARING



(a) Using SST and a hammer, install a new shift and select lever shaft slide ball bearing onto the manual transmission case.

SST: 09950-60010
09951-00220
SST: 09950-70010
09951-07100
Driven in depth:
0 to 0.5 mm (0 to 0.0197 in.)

6. INSTALL SHIFT AND SELECT LEVER SHAFT OIL SEAL

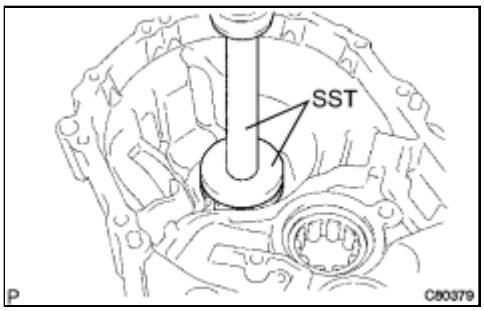


(a) Using SST, install a new shift and select lever shaft oil seal onto the manual transmission case.

SST: 09950-70010
09951-07150
SST: 09950-60010
09951-00240
Driven in depth:

9.7 to 10.3 mm (0.382 to 0.406 in.)

7. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using SST and a press, install a new front differential case front tapered roller bearing (inner race) onto the front differential case.

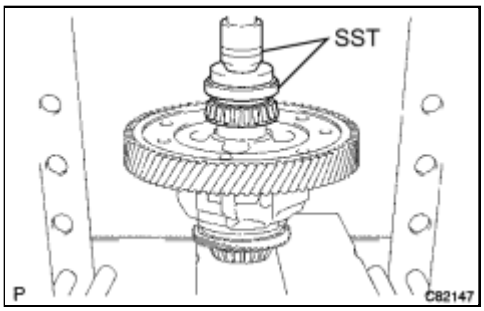
SST: 09350-32014

09351-32120

SST: 09950-60010

09951-00530

(b) Using SST and a press, install the front differential case front tapered roller bearing (outer race) together with the plate washer onto the transaxle case.



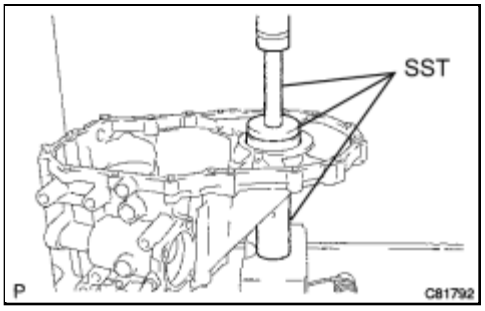
SST: 09950-60020

09951-00680

SST: 09950-70010

09951-07150

8. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING



(a) Using SST and a press, install a new front differential case rear tapered roller bearing (inner race) to the differential case.

SST: 09350-32014

09351-32120

SST: 09950-60010

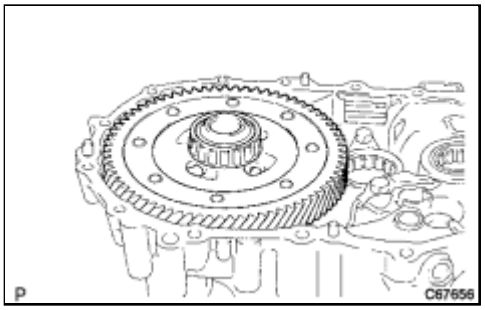
09951-00530

(b) Using SST and a press, install the front differential case rear tapered roller bearing (outer race) with the plate washer onto the manual transmission case.

SST: 09309-36010

SST: 09950-60020

09951-00710

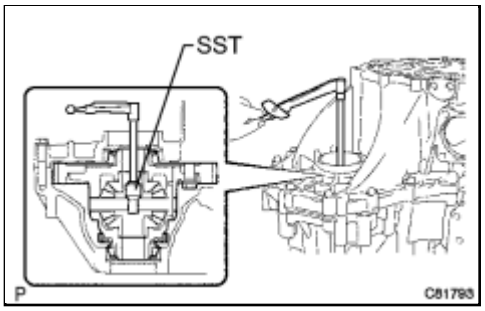


SST: 09950-70010

09951-07150

HINT:

Use a plate washer of the same thickness as the removed one.



9. ADJUST DIFFERENTIAL SIDE BEARING PRELOAD

(a) Coat the differential case assembly with gear oil and install it onto the transaxle case.

(b) Install the manual transmission case with the 16 bolts.

Torque: 29 N·m (300 kgf·cm, 22ft·lbf)

(c) Using SST and a torque wrench, turn the differential case assembly clockwise and counterclockwise 2 or 3 times to allow the bearings to settle.

SST: 09564-32011

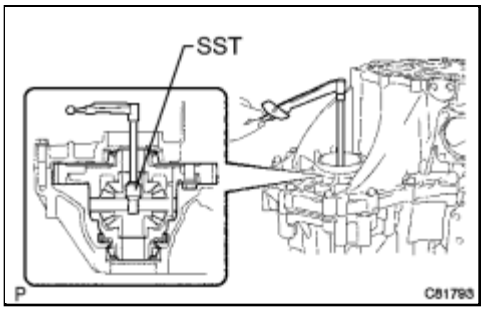
(d) Using SST and a torque wrench, measure the preload.

SST: 09564-32011

Preload (at starting):

New bearing

0.8 to 1.5 N*m (8 to 16 kgf*cm, 7 to 13 in.*lbf)



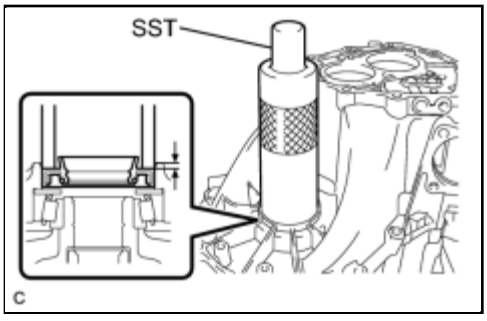
Used bearing

0.5 to 0.9 N*m (5 to 10 kgf*cm, 5 to 8 in.*lbf)

If the preload is out of the specification, select a different plate washer.

Plate Washer Thickness:

MARK	THICKNESS MM (IN.)	MARK	THICKNESS MM (IN.)
AA	2.10 (0.0827)	LL	2.60 (0.102)
BB	2.15 (0.0846)	MM	2.65 (0.104)
CC	2.20 (0.0866)	NN	2.70 (0.106)
DD	2.25 (0.0886)	PP	2.75 (0.108)
EE	2.30 (0.0906)	QQ	2.80 (0.110)
FF	2.35 (0.0925)	RR	2.85 (0.112)
GG	2.40 (0.0945)	SS	2.90 (0.114)
HH	2.45 (0.0965)	TT	2.95 (0.1161)
JJ	2.50 (0.0984)	UU	3.00 (0.118)
KK	2.55 (0.1004)	-	-



HINT:

The preload changes by approximately 0.3 to 0.4 N*m (3 to 4 kgf*cm, 3 to 4 in.*lbf) per each 0.05 mm (0.0020 in.) change in the plate washer thickness.

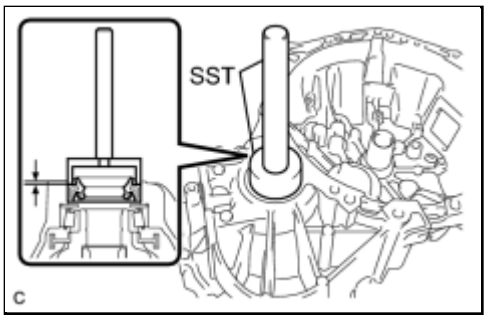
(e) Remove the 16 bolts and the manual transmission case.

(f) Remove the differential case assembly from the transaxle case.

10. INSTALL TRANSMISSION CASE OIL SEAL

(a) Using SST and a hammer, install a new transmission case oil seal onto the manual transmission case.

SST: 09316-60011



09316-00011

Driven in depth:

9.6 to 10.2 mm (0.378 to 0.402 in.)

(b) Coat the lip of the front transmission case oil seal with MP grease.

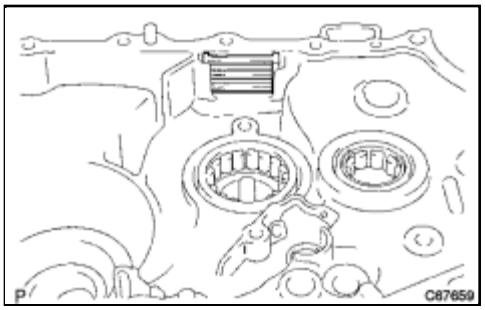
11. INSTALL TRANSAXLE CASE OIL SEAL

(a) Using SST and a hammer, install a new transaxle case oil seal onto the transaxle case.

SST: 09710-20011

09710-06071

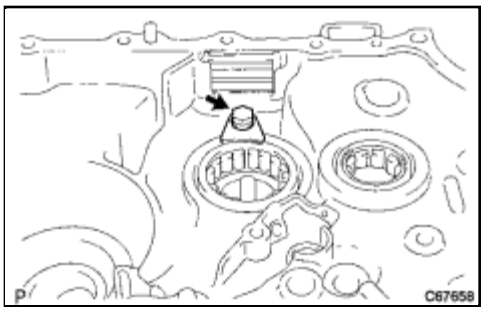
SST: 09950-70010



09951-07150

Driven in depth:

1.6 to 2.2 mm (0.0630 to 0.0866 in.)



(b) Coat the lip of the transaxle case oil seal with MP grease.

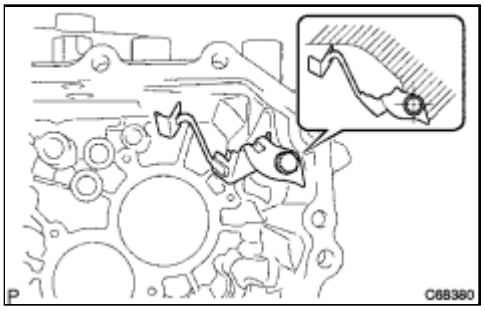
12. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet and install it onto the transaxle case.

13. INSTALL BEARING LOCK PLATE

(a) Install the bearing lock plate onto the transaxle case with the bolt.

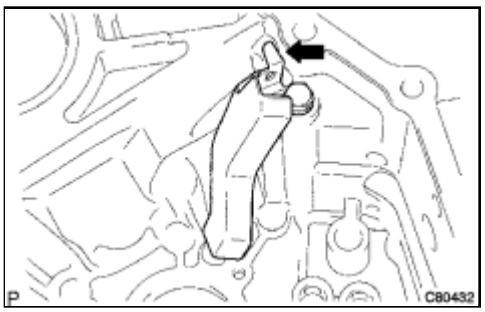
Torque: 11 N·m (115 kgf·cm, 8ft·lbf)



14. INSTALL NO. 1 OIL RECEIVER PIPE

(a) Install the No. 1 oil receiver pipe onto the manual transmission case with the bolt.

Torque: 17 N·m (175 kgf·cm, 13ft·lbf)

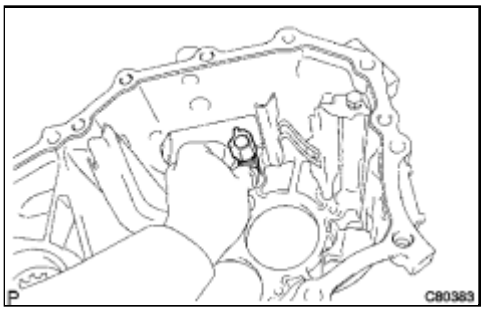


NOTICE:

- Do not deform the No. 1 oil receiver pipe.
- Install the No. 1 oil receiver pipe while holding it against

the manual transmission case as shown in the illustration.

15. INSTALL NO. 2 OIL RECEIVER PIPE

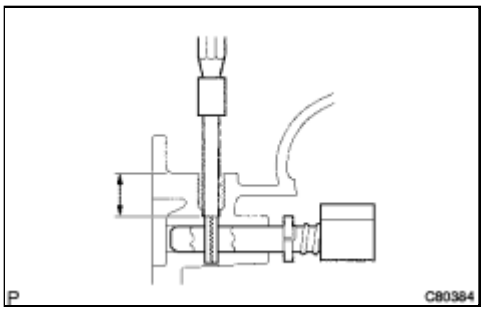


(a) Install the No. 2 oil receiver pipe onto the manual transmission case with the bolt.

Torque: 17 N·m (175 kgf·cm, 13ft·lbf)

NOTICE:

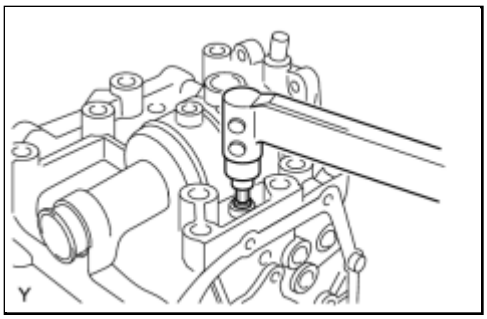
- Do not deform the No. 2 oil receiver pipe.
- Install the No. 2 oil receiver pipe while holding it against the manual transmission case as shown in the illustration.



16. INSTALL REVERSE RESTRICT PIN ASSEMBLY

(a) Install the reverse restrict pin assembly onto the manual transmission case.

NOTICE:

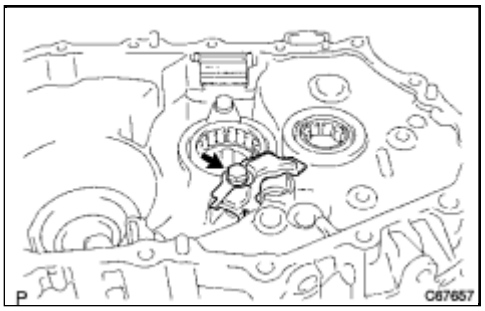


Set the reverse restrict pin assembly in the correct direction.

(b) Using a pin punch (φ5 mm) and a hammer, install the slotted spring pin onto the reverse restrict pin assembly.

Drive in depth:

15.5 to 16.5 mm (0.6102 to 0.6496 in.)

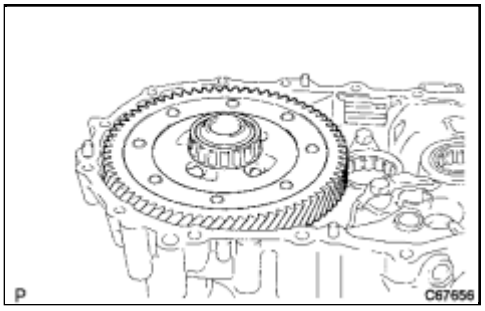


(c) Apply sealant to the reverse restrict pin plug.

Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(d) Using a hexagon wrench and a torque wrench, install the reverse restrict pin plug onto the manual transmission case.

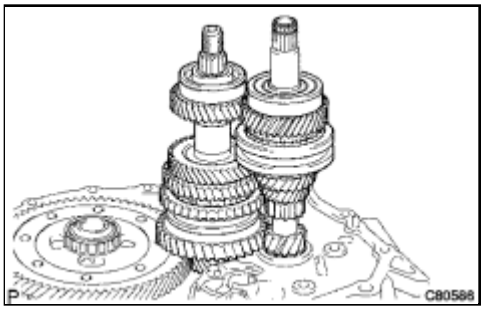
Torque: 13 N·m (130 kgf·cm, 9ft·lbf)



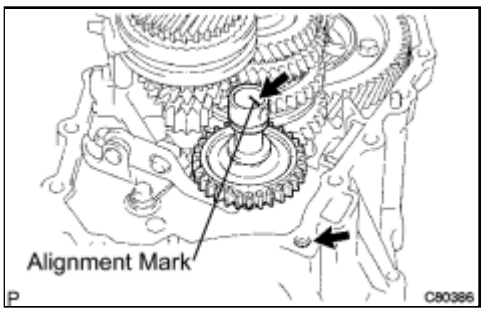
17. INSTALL MANUAL TRANSAXLE CASE RECEIVER

(a) Install the manual transaxle case receiver onto the transaxle case with the bolt.

Torque: 11 N·m (115 kgf·cm, 8ft·lbf)



18. INSTALL DIFFERENTIAL CASE ASSEMBLY

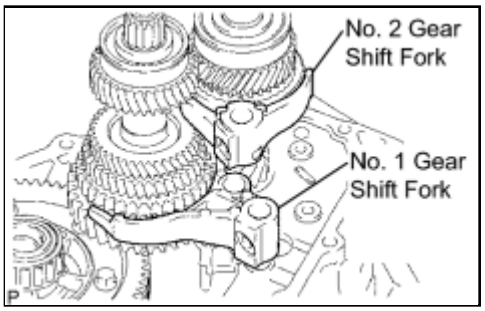


(a) Coat the differential case tapered roller bearing with gear oil and install the differential case assembly onto the transaxle case.

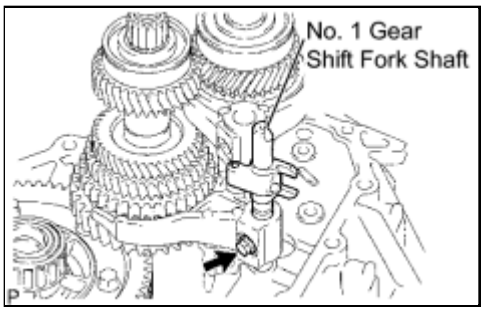
19. INSTALL INPUT SHAFT ASSEMBLY

(a) Coat the sliding and rotating surfaces of the input and output shafts with gear oil and install them onto the transaxle case.

20. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY



(a) Coat the reverse idler gear sub-assembly, thrust washer and reverse idler gear shaft with gear oil, and install them as shown in the illustration.

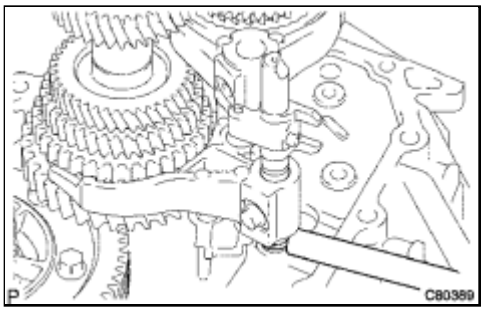


HINT:

Align the mark on the reverse idler gear shaft with the bolt hole as shown in the illustration.

21. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

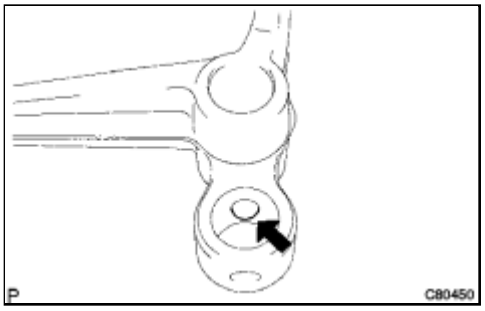
(a) Coat the No. 1 gear shift fork and No. 2 gear shift fork with gear oil and install them.



(b) Coat the No. 1 gear shift fork shaft with gear oil and install it.

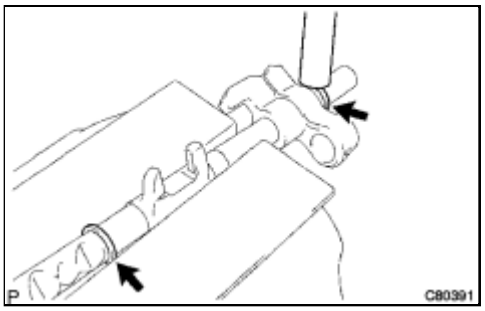
(c) Apply sealant to the shift fork set bolt.

Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



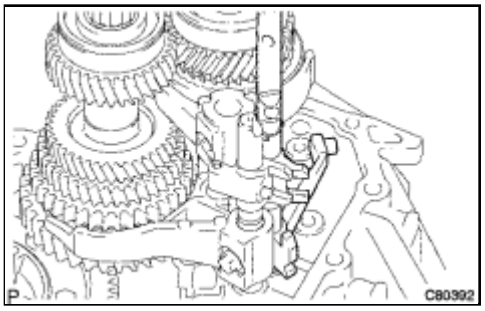
(d) Install the shift fork set bolt.

Torque: 16 N·m (160 kgf·cm, 12ft·lbf)



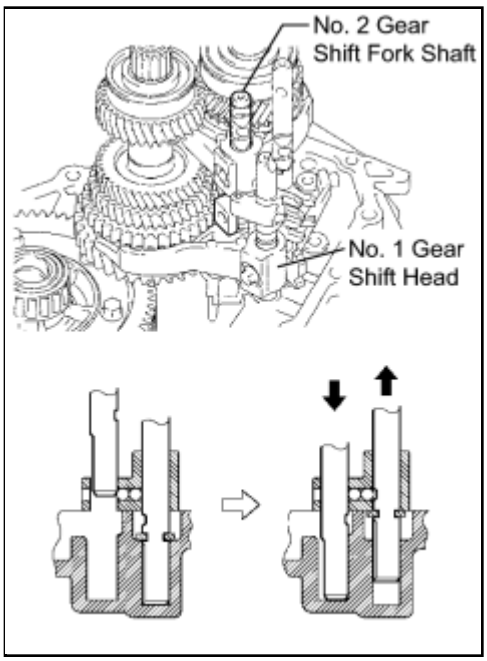
(e) Using a brass bar and a hammer, install a new shaft snap ring onto the No. 1 gear shift fork shaft.

22. INSTALL NO. 3 GEAR SHIFT FORK SHAFT



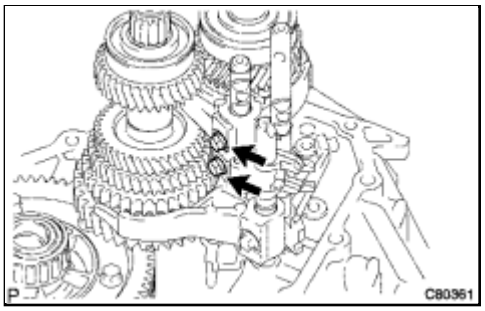
(a) Coat the 2 shift fork balls with MP grease and install them onto the reverse shift fork.

(b) Install the reverse shift fork onto the No. 3 gear shift fork shaft.



(c) Using a brass bar and a hammer, install 2 new shift fork shaft snap rings onto the No. 3 shift fork shaft.

(d) Coat the No. 3 gear shift fork shaft with gear oil and install it.



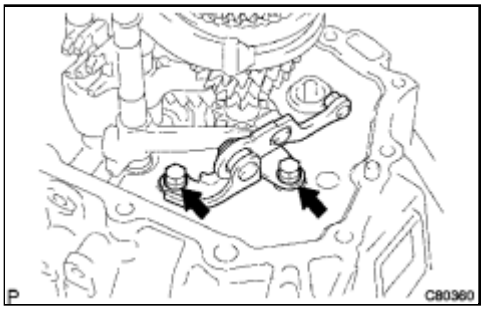
23. INSTALL NO. 2 GEAR SHIFT FORK SHAFT

(a) Coat the No. 1 gear shift head and No. 2 gear shift fork shaft with gear oil and install them.

NOTICE:

To avoid interference from the 2 shift fork balls, lift up the No. 3 gear shift fork shaft to the position shown in the illustration.

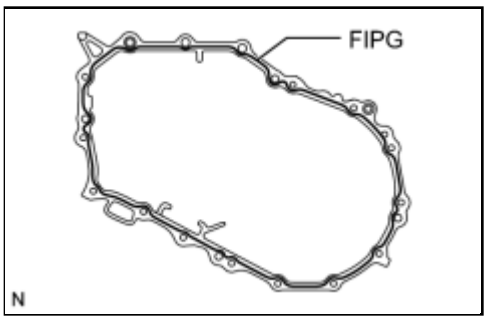
(b) Coat the 2 shift lock bolts with sealant and install them onto the No. 2 gear shift fork and No. 1 shift head.



Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 16 N·m (160 kgf·cm, 12ft·lbf)

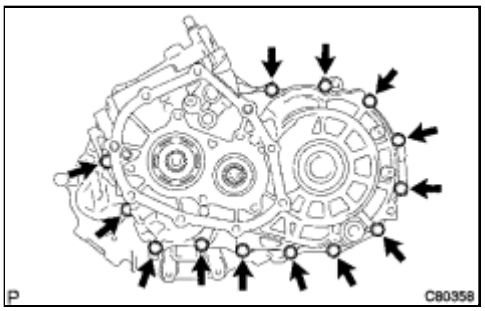


24. INSTALL REVERSE SHIFT ARM BRACKET ASSEMBLY

(a) Install the reverse shift arm bracket assembly onto the front transaxle case with the 2 bolts.

Torque: 17 N·m (175 kgf·cm, 13ft·lbf)

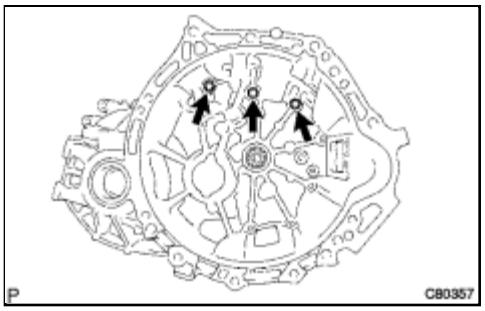
25. INSTALL MANUAL TRANSMISSION CASE



(a) Apply FIPG to the manual transmission case as shown in the illustration.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

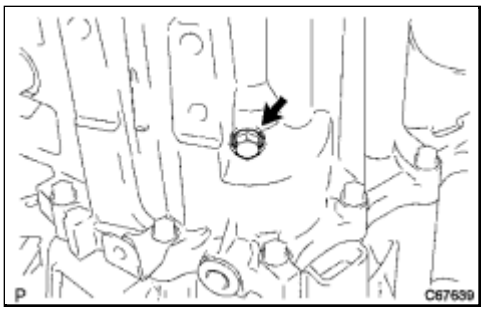


NOTICE:

Assemble the parts within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

(b) Install the 13 bolts onto the manual transmission side.

Torque: 29 N·m (300 kgf·cm, 22ft·lbf)



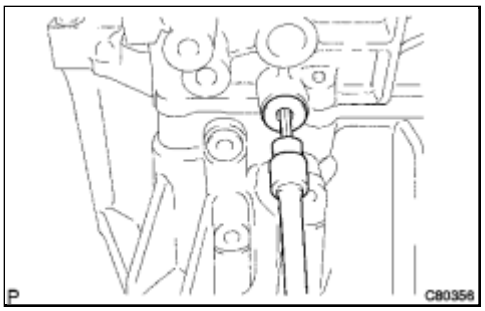
(c) Coat the 3 bolts with sealant and install them onto the manual transaxle side.

Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 29 N·m (300 kgf·cm, 22ft·lbf)

26. INSTALL REVERSE IDLER GEAR SHAFT BOLT



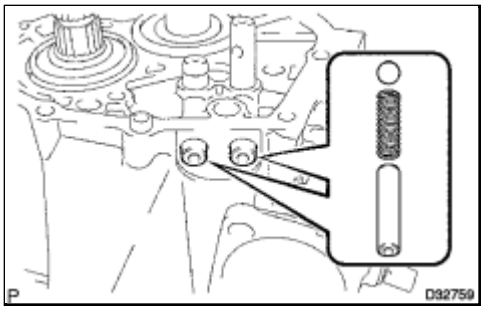
(a) Coat the reverse idler gear shaft bolt with sealant and install it with a new gasket.

Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

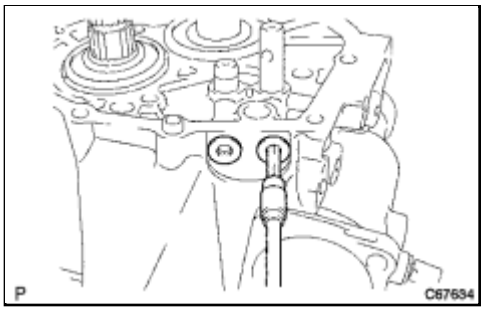
Torque: 29 N·m (300 kgf·cm, 22ft·lbf)

27. INSTALL NO. 2 LOCK BALL ASSEMBLY



(a) Coat the No. 2 lock ball assembly with sealant and install it using a hexagon wrench.

Sealant:

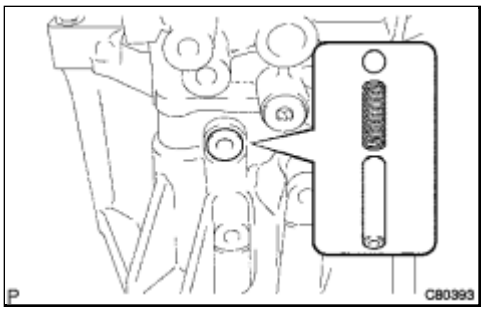


Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

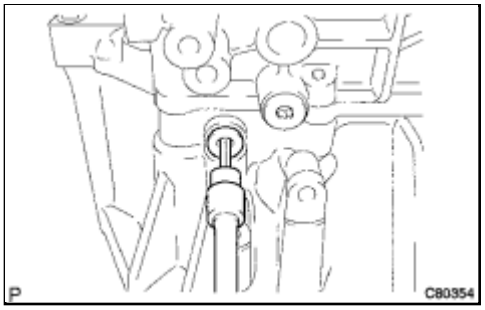
Torque: 29 N·m (300 kgf·cm, 22ft·lbf)

28. INSTALL SHIFT DETENT BALL

(a) Install the 2 shift detent balls, 2 shift detent ball springs, and 2 shift spring seats onto the manual transmission case.



(b) Coat the threads of the 2 shift detent ball plugs with sealant and install them using a hexagon wrench.

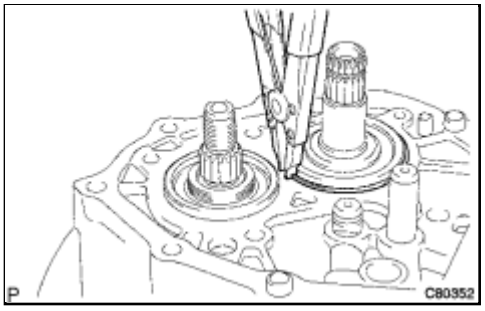


Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 22 N·m (224 kgf·cm, 16ft·lbf)

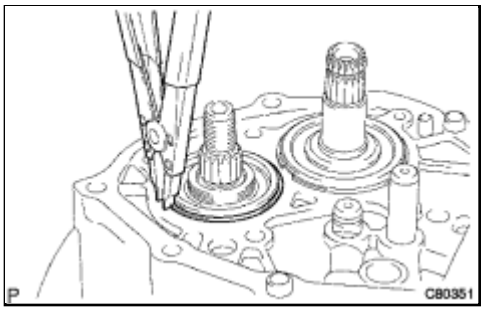
(c) Install the shift detent ball, shift detent ball compression spring, and spring seat onto the transaxle case.



(d) Coat the threads of the shift detent ball plug with sealant and install it using a hexagon wrench.

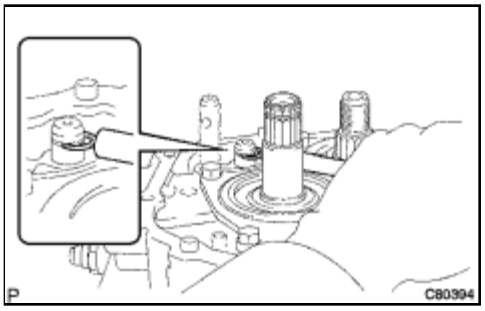
Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent



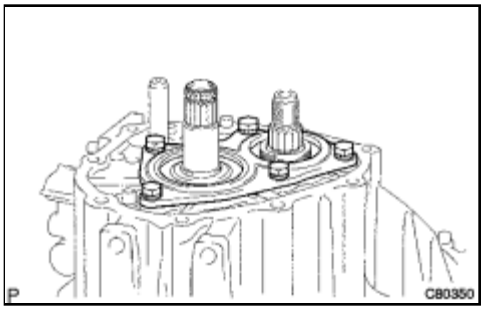
Torque: 22 N·m (224 kgf·cm, 16ft·lbf)

29. INSTALL INPUT SHAFT REAR BEARING HOLE SNAP RING



(a) Using a snap ring expander, install a new input shaft rear bearing hole snap ring onto the input shaft.

30. INSTALL OUTPUT SHAFT REAR BEARING HOLE SNAP RING

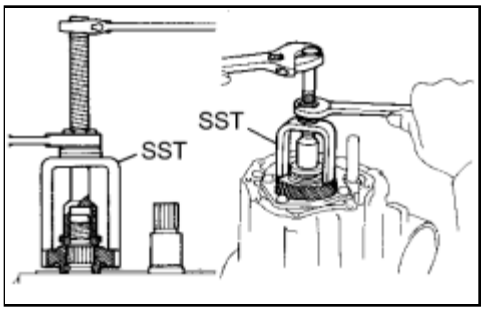


(a) Using a snap ring expander, install a new output shaft rear bearing hole snap ring onto the output shaft.

31. INSTALL SHIFT FORK SHAFT SNAP RING

(a) Using a brass bar and a hammer, install a new shift fork shaft snap ring onto the No. 2 shift fork shaft.

32. INSTALL REAR BEARING RETAINER

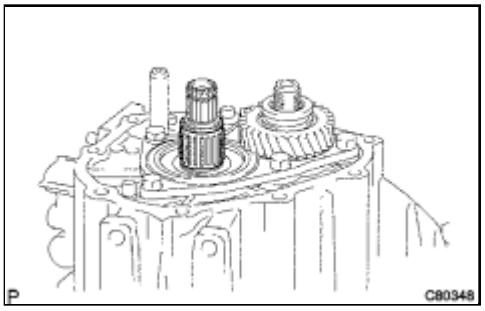


(a) Coat the 5 bolts with sealant and install the rear bearing retainer onto the manual transmission case with the 5 bolts.

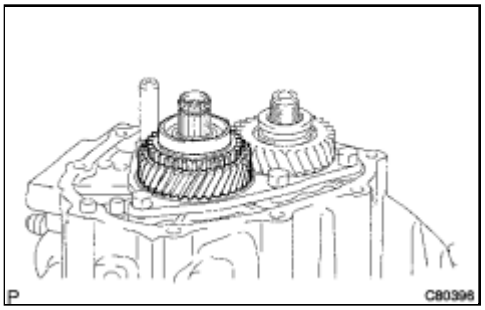
Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 27 N·m (280 kgf·cm, 20ft·lbf)

33. INSTALL 5TH DRIVEN GEAR



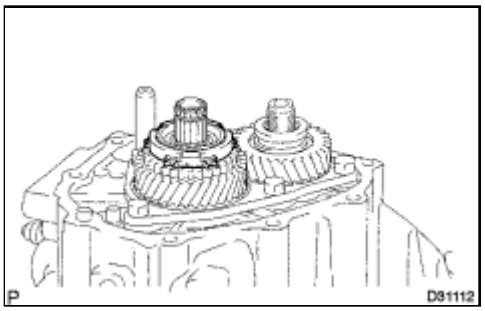
(a) Using SST, install the 5th driven gear onto the output shaft.



SST: 09309-12020

34. INSTALL 5TH GEAR NEEDLE ROLLER BEARING

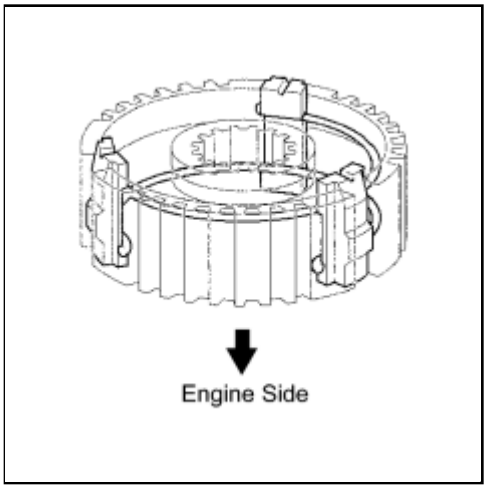
(a) Coat the 5th gear needle roller bearing and 5th gear bearing spacer with gear oil, and install them onto the input shaft.



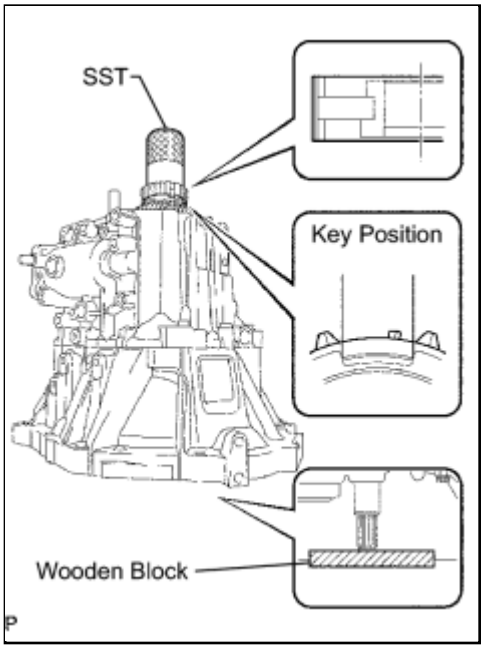
35. INSTALL 5TH GEAR

(a) Coat the 5th gear with gear oil and install it onto the input shaft.

36. INSTALL NO. 3 SYNCHRONIZER RING



(a) Coat the No. 3 synchronizer ring with gear oil and install it onto the 5th gear.



37. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

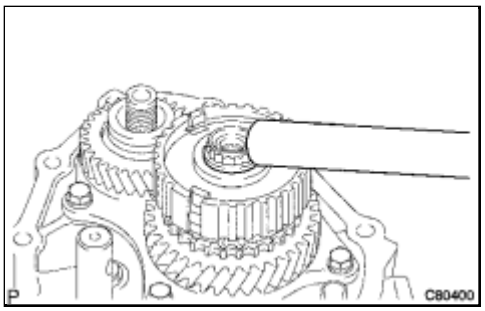
(a) Install the 3 synchromesh shifting keys and 2 synchromesh shifting key springs onto the No. 3 transmission clutch hub as shown in the illustration.

NOTICE:

Do not set the 2 shifting key spring openings in the same position.

(b) Using SST and a hammer, install the No. 3 transmission clutch hub onto the input shaft.

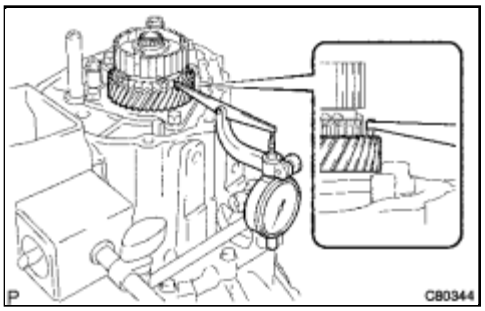
SST: 09636-20010



NOTICE:

- Do not install the No. 3 transmission clutch hub in the wrong direction.
- Install the No. 3 transmission clutch hub with the No. 3 synchronizer ring key groove and the No. 3 synchromesh shifting key aligned.
- Check that the 5th gear can rotate smoothly.
- Place a suitable sized wooden block to support the input shaft.

(c) Select a snap ring that will allow minimum axial play.

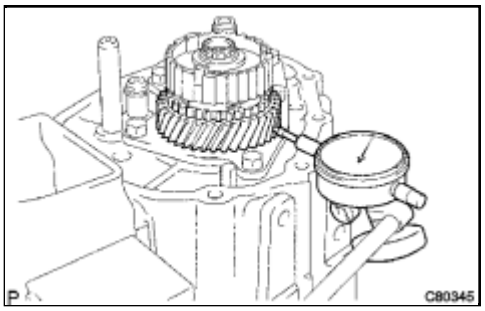


Clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:

MARK	THICKNESS MM (IN.)	MARK	THICKNESS MM (IN.)
A	2.25 (0.0886)	E	2.49 (0.0980)
B	2.31 (0.0909)	F	2.55 (0.1004)
C	2.37 (0.0933)	G	2.61 (0.1028)
D	2.43 (0.0957)	-	-

(d) Using a brass bar and a hammer, install a new snap ring onto the input shaft.

38. INSPECT 5TH GEAR THRUST CLEARANCE

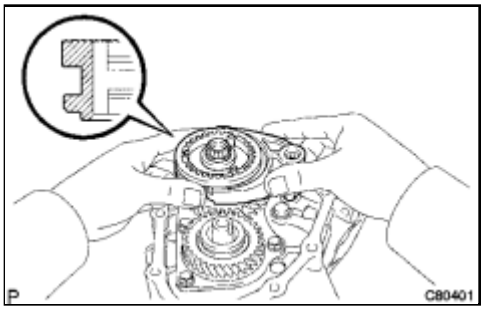


(a) Using a dial indicator, measure the 5th gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.00394 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 3 transmission clutch hub, 5th gear or input shaft rear radial ball bearing.

39. INSPECT 5TH GEAR RADIAL CLEARANCE

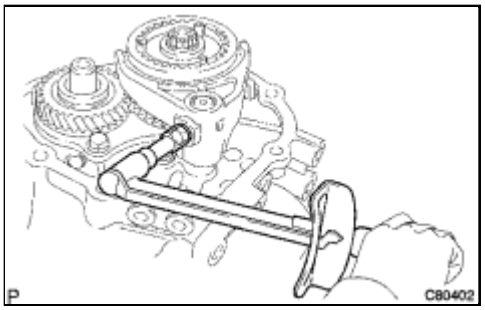


(a) Using a dial indicator, measure the 5th gear radial clearance.

Standard clearance:
NSK made bearing
0.015 to 0.056 mm (0.000591 to 0.00220 in.)
JTEKT made bearing
0.015 to 0.058 mm (0.000591 to 0.00228 in.)
Maximum clearance:
NSK made bearing
0.056 mm (0.00220 in.)
JTEKT made bearing
0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 5th gear, 5th gear needle roller bearing or input shaft.

40. INSTALL NO. 3 GEAR SHIFT FORK

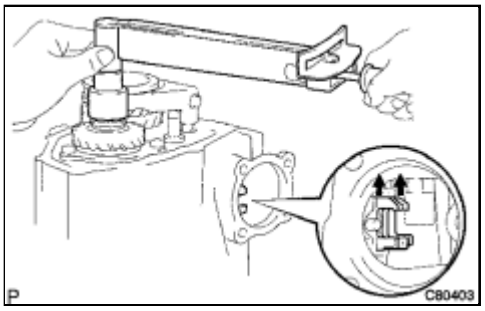


(a) Coat the No. 3 transmission clutch hub sleeve with gear oil and install it together with the No. 3 gear shift fork onto

the No. 3 transmission clutch hub.

HINT:

Set the No. 3 transmission clutch hub in the correct direction.

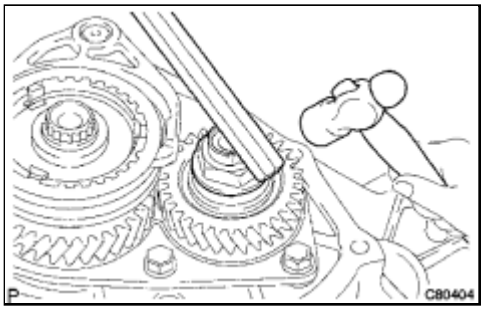


(b) Coat the gear shift fork lock bolt with sealant and install it onto the No. 3 gear shift fork.

Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

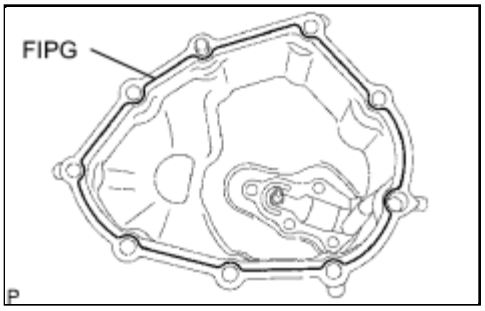
Torque: 16 N·m (160 kgf·cm, 12ft·lbf)



41. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT

(a) Engage 2 gears simultaneously to lock the transmission.

(b) Install a new manual transmission output shaft rear set nut.

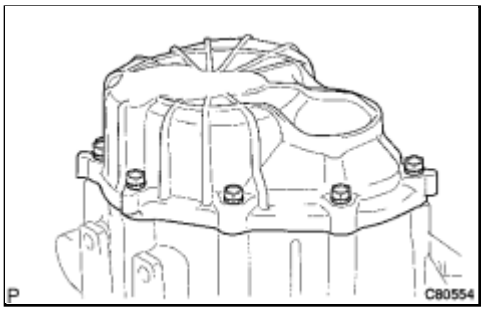


Torque: 118 N·m (1200 kgf·cm, 87ft·lbf)

(c) Using a chisel and a hammer, stake the manual transmission output shaft rear set nut.

(d) Disengage the 2 gears.

42. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

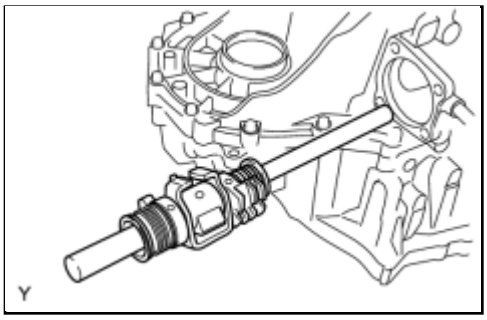


(a) Apply FIPG to the manual transmission case cover sub-assembly as shown in the illustration.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

NOTICE:



Assemble the parts within 10 minutes of application. Otherwise, the packing (FIPG) material must be removed and reapplied.

(b) Install the manual transmission case cover sub-assembly onto the manual transmission case with the 9 bolts.

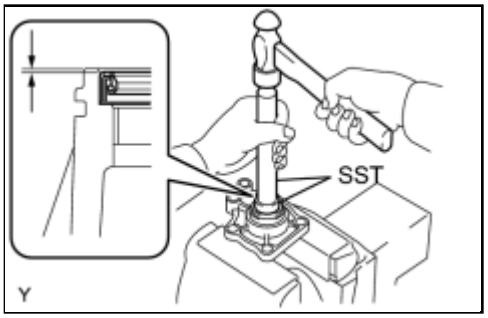
Torque: 21 N·m (214 kgf·cm, 15ft·lbf)

43. INSTALL SHIFT AND SELECT LEVER SHAFT ASSEMBLY

(a) Coat the shift and select lever shaft assembly with gear oil and install it onto the transmission case.

44. INSTALL CONTROL SHAFT COVER OIL SEAL

(a) Using SST and a hammer, install a new control shaft cover oil seal onto the control shaft cover.

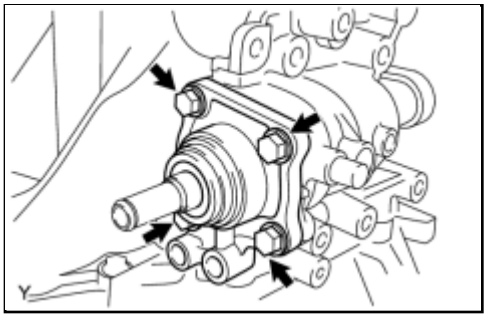


SST: 09950-60010

09951-00280

SST: 09950-70010

09951-07150



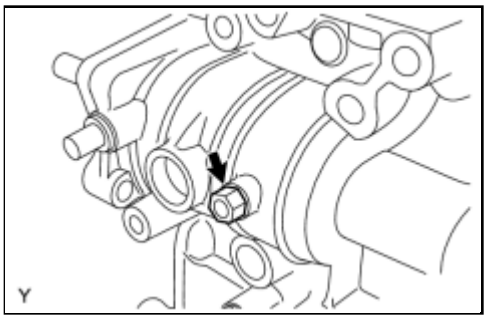
Driven in depth:

0.2 to 1.2 mm (0.00787 to 0.0472 in.)

(b) Coat the control shaft cover oil seal with MP grease.

45. INSTALL CONTROL SHAFT COVER

(a) Coat the threads of the 4 bolts with sealant. Install a new gasket and the control shaft cover onto the manual transmission case with the 4 bolts.



Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 20 N·m (200 kgf·cm, 14ft·lbf)

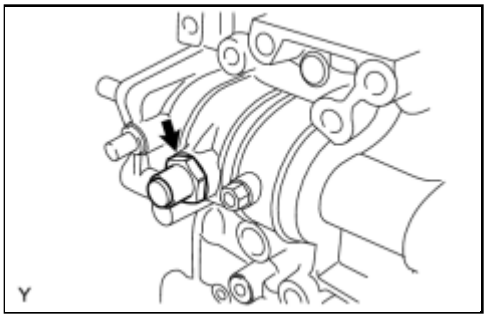
NOTICE:

Set the claws of the shift interlock plate into the shift head part of the gear shift fork shaft securely.

46. INSTALL SHIFT GUIDE PIN

(a) Coat the threads of the shift guide pin with sealant.

Sealant:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

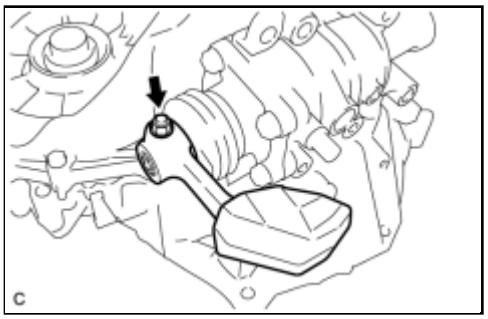


(b) Install the washer and shift guide pin.

Torque: 11 N·m (112 kgf·cm, 8ft·lbf)

47. INSTALL NO. 1 LOCK BALL ASSEMBLY

(a) Coat the threads of the No. 1 lock ball assembly with sealant and install it onto the manual transmission case.

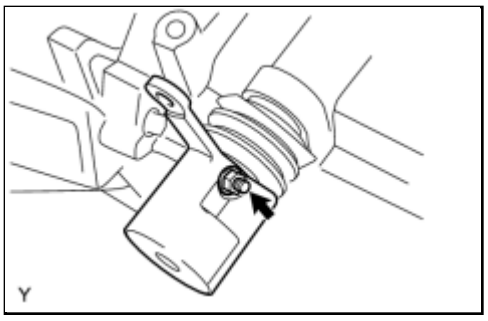


Sealant:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

Torque: 29 N·m (300 kgf·cm, 22ft·lbf)

48. INSTALL SHIFT LEVER DAMPER



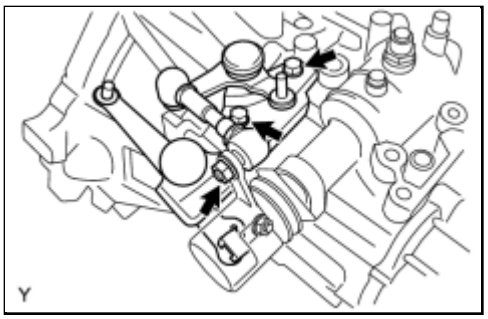
(a) Install the dust boot onto the control shaft cover.

(b) Install the shift lever damper with the lock pin onto the shift and select lever shaft assembly.

(c) Install the washer with the nut.

Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

49. INSTALL FLOOR SHIFT CONTROL SHIFT LEVER



(a) Install the dust boot onto the shift and select lever shaft oil seal.

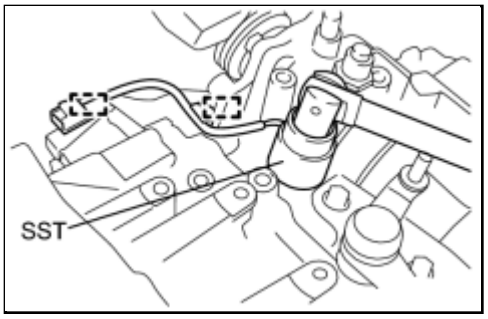
(b) Install the floor shift control shift lever with the lock pin onto the shift and select lever shaft assembly.

(c) Install the washer with the nut.

Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

50. INSTALL SELECTING BELLCRANK ASSEMBLY

(a) Install the selecting bellcrank assembly together with the control bellcrank dust cover onto the manual transmission case with the 2 bolts and nut.



Torque: 25 N·m (250 kgf·cm, 18ft·lbf) for bolt

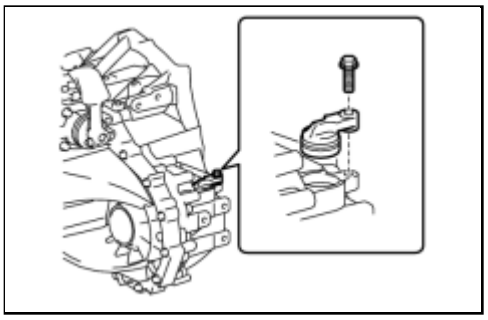
Torque: 12 N·m (120 kgf·cm, 9ft·lbf) for nut

NOTICE:

Apply MP grease to the inside surface of the control shift lever bush.

51. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

(a) Using SST, install the back-up light switch assembly onto the manual transmission case with a new gasket.



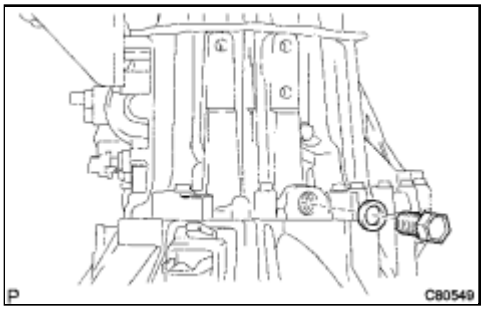
SST: 09817-16011

Torque: 40 N·m (410 kgf·cm, 30ft·lbf)

(b) Install the back-up light switch wire harness into the 2 clamps.

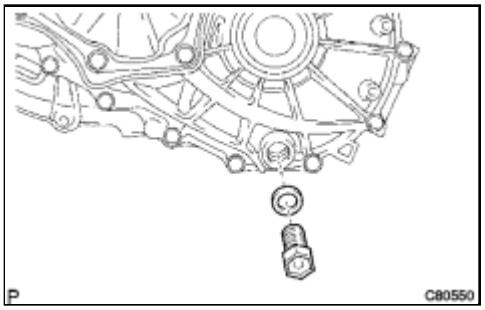
52. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

(a) Install a new O-ring onto the speedometer driven hole cover sub-assembly.



(b) Install the speedometer driven hole cover sub-assembly onto the manual transaxle case with the bolt.

Torque: 11 N·m (115 kgf·cm, 8ft·lbf)



53. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the manual transmission filler plug onto the manual transmission case with a new gasket.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

54. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug onto the manual transmission case with a new gasket.

Torque: 39 N·m (400 kgf·cm, 29ft·lbf)

Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

HINT:

If possible, perform a road test as part of diagnosis. Note any unusual behavior, and conditions that cause the problem to occur. Based on the power flow and configuration of the gears in the transaxle, determine what parts require special attention if inspection and disassembly is necessary.

Manual Transaxle System

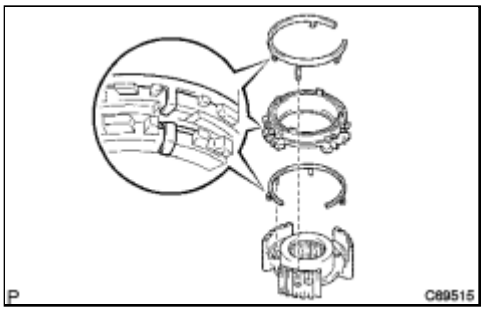
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: REASSEMBLY (2010 Corolla)		



REASSEMBLY

1. INSTALL SYNCHRONIZER PULL RING

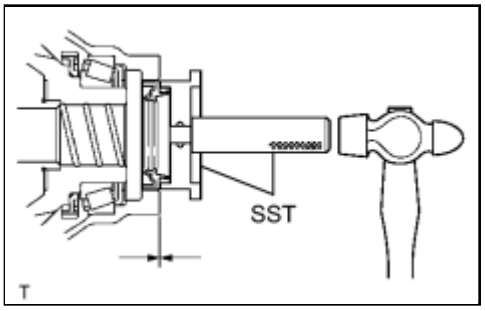
(a) Install the No. 5 synchronizer ring middle, No. 5 synchronizer ring outer, and synchronizer pull ring to the No. 5 synchronizer ring inner. Using a screwdriver, secure them with the snap ring.

2. INSTALL NO. 3 SYNCHROMESH SHIFTING KEY SPRING

(a) Install the No. 3 synchromesh shifting key spring to the No. 3 transmission clutch hub.

NOTICE:

Align the projection of the shifting key spring with the hole of the No. 3 clutch hub.



(b) Install the synchronizer ring set and No. 3 synchromesh shifting key spring to the No. 3 transmission clutch hub.

NOTICE:

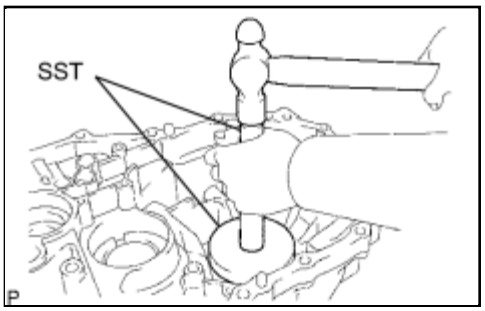
- Engage the shifting key spring claw to the center of the teeth of the synchronizer ring.
- Align the projection of the shifting key spring with the hole of the No. 3 clutch hub.

3. INSTALL TRANSAXLE CASE OIL SEAL

(a) Coat the new transaxle case oil seal lip with MP grease.

(b) Using SST and a hammer, install a transaxle case oil seal.

SST: 09608-10010



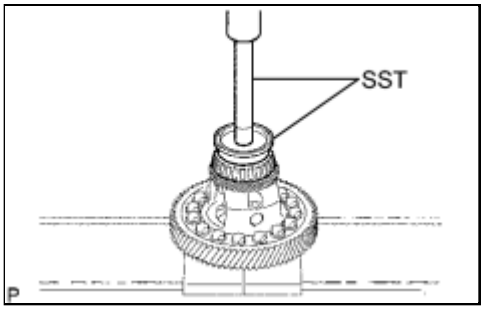
SST: 09950-70010

09951-07200

Oil seal installation depth:

-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

4. INSTALL FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using SST and a hammer, install the front differential case front tapered roller bearing (outer race) to the manual transaxle case.

SST: 09950-60020

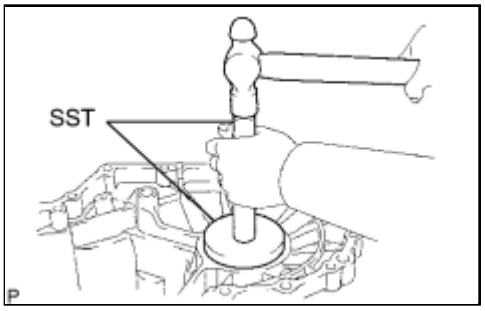
09951-00910

SST: 09950-70010

09951-07100

(b) Using SST and a press, install the front differential case front tapered roller bearing (inner race) to the front differential case.

SST: 09950-70010



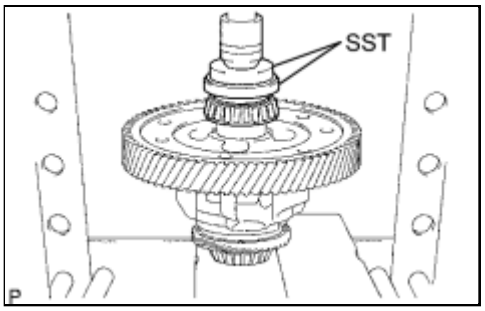
09951-07100

09951-07150

SST: 09608-10010

5. INSTALL FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Install the front differential case rear shim.



(b) Using SST and a hammer, install the front differential case rear tapered roller bearing (outer race).

SST: 09950-60020

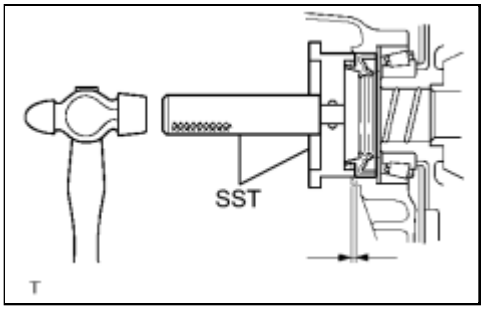
09951-00890

SST: 09950-70010

09951-07100

(c) Using SST and a press, install the front differential case rear tapered roller bearing (inner race).

SST: 09631-12090



SST: 09950-60010

09951-00600

SST: 09950-70010

09951-07100

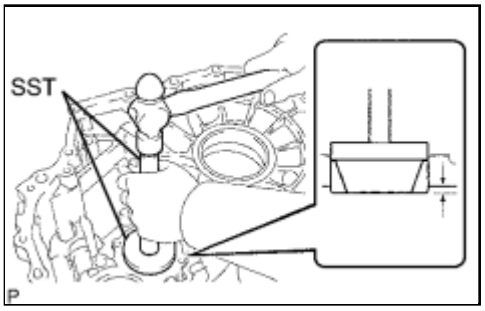
6. INSTALL TRANSMISSION CASE OIL SEAL

(a) Using SST and a hammer, install a new transmission case oil seal to the manual transmission case.

SST: 09608-32010

SST: 09950-70010

09951-07150



Oil seal installation depth:
3.0 to 4.0 mm (0.118 to 0.156 in.)

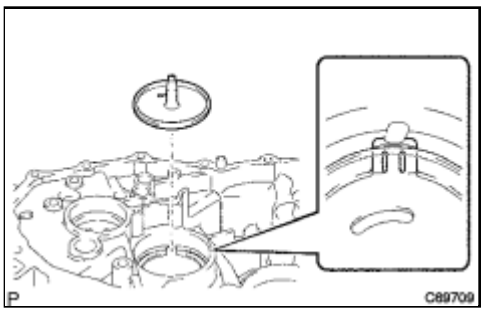
(b) Coat the transmission case oil seal lip with MP grease.

7. INSTALL OUTPUT SHAFT REAR BEARING

(a) Using SST and a hammer, install the output shaft rear bearing (outer race) to the manual transmission case.

SST: 09950-60020

09951-00680



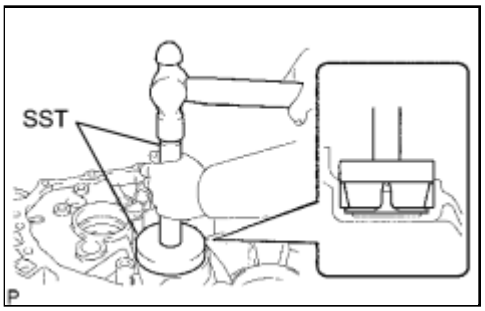
SST: 09950-70010

09951-07100

Clearance:

3.8 to 4.4 mm (0.150 to 0.173 in.)

8. INSTALL OUTPUT SHAFT COVER



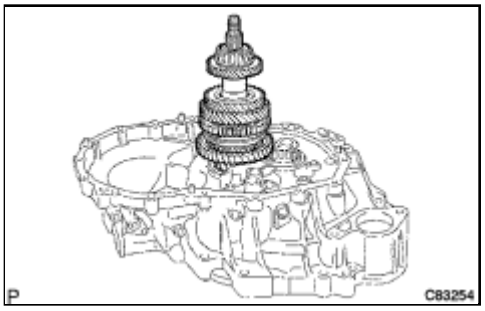
(a) Coat the output shaft cover with MP grease, and install it to the manual transaxle case.

NOTICE:

Align the projection of the output shaft cover with the transmission groove.

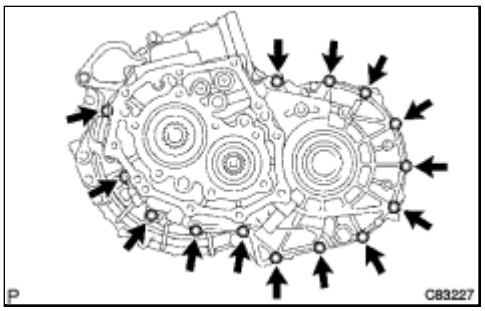
9. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a hammer, install the new output shaft front bearing (outer race).



SST: 09950-60020

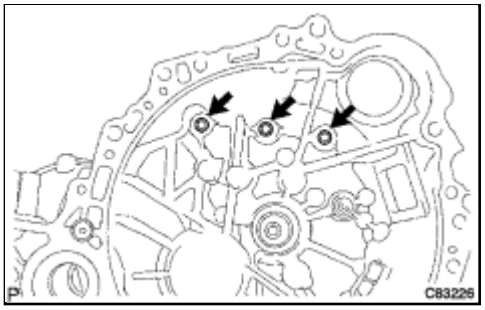
09951-00730



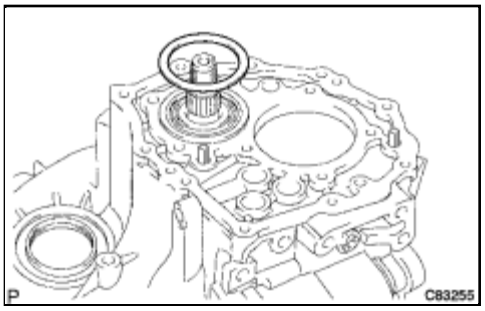
SST: 09950-70010

09951-07100

10. ADJUST OUTPUT SHAFT BEARING PRELOAD

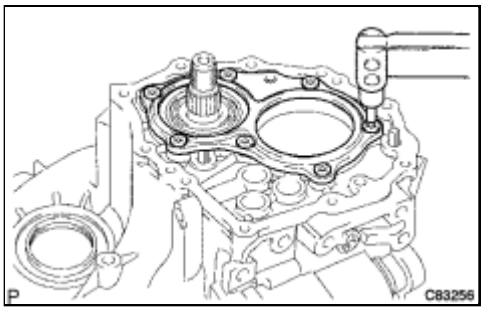


(a) Install the output shaft to the manual transaxle case.



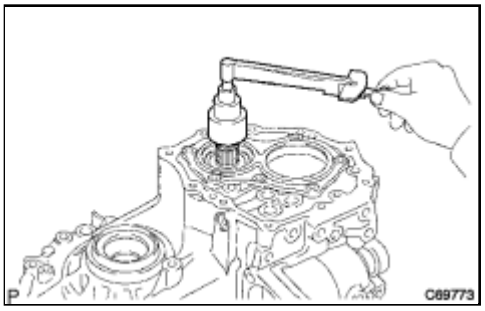
(b) Install the transmission case to the manual transaxle case with the 14 bolts.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



(c) Install the 3 bolts to the manual transaxle case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



(d) Install the output shaft rear bearing case shim to the output shaft.

(e) Using a "TORX" socket wrench (T45), install the rear bearing retainer to the manual transmission case with the 7 screws.

Torque: 43 N·m (438 kgf·cm, 32ft·lbf)

(f) Turn the output shaft in both directions to make sure that it turns smoothly.

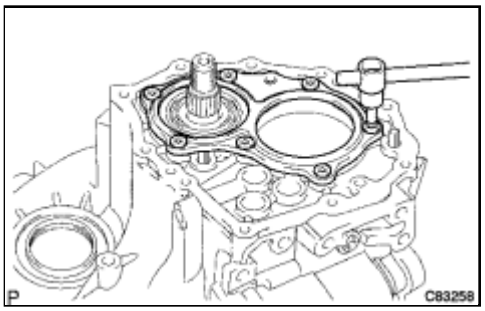
(g) Using a socket wrench and torque wrench, inspect the preload.

Preload:

BEARING	PRELOAD N*M (KGF*CM, IN.*LBF)
New	0.8 to 1.6 (8.16 to 16.32, 7.1 to 14.2)
Used	0.5 to 1.0 (5.10 to 10.20, 4.4 to 8.9)

(h) If preload is not as specified, select a proper output shaft rear bearing shim and adjust it.

HINT:



The preload of all the output shaft rear bearing shim varies in torque from about 0.04 to 0.06 N*m (0.408 to 0.612 kgf*cm, 0.35 to 0.53 in.*lbf).

Shim:

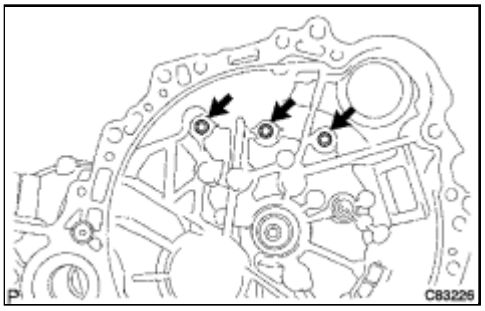
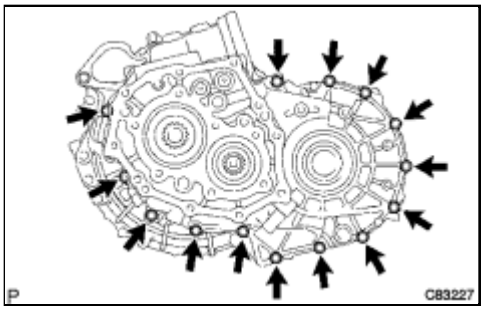
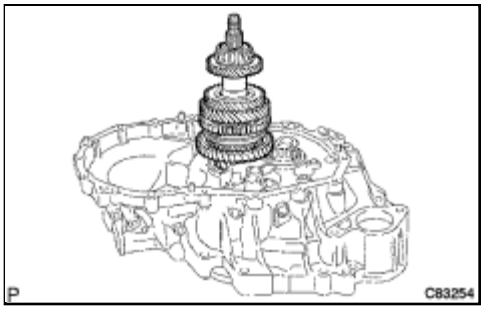
(i) Remove the output shaft rear set nut from the output shaft.



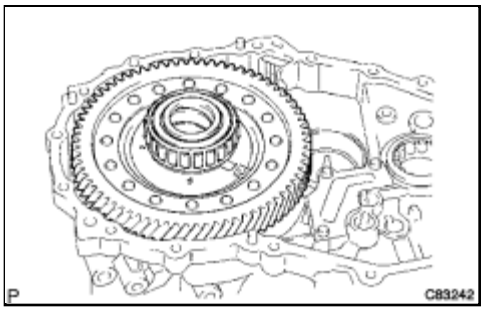


(j) Using a "TORX" socket wrench (T45), remove the 7 screws and rear bearing retainer from the manual transmission case.

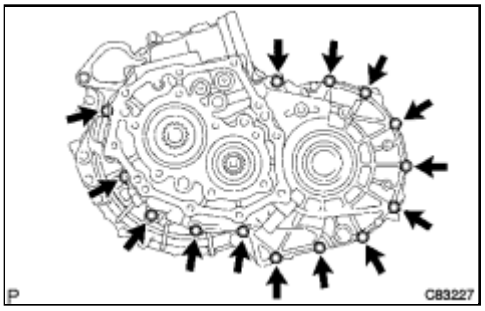


(k) Remove the output shaft rear bearing shim from the output shaft.

(l) Remove the 3 bolts.

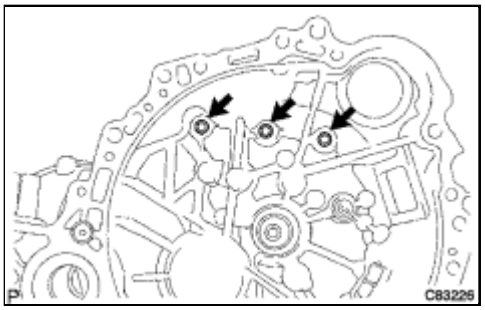


(m) Remove the 14 bolts and manual transmission case from the manual transaxle case.



(n) Remove the output shaft assembly from the front manual transaxle case.

11. ADJUST TAPERED ROLLER BEARING PRELOAD



(a) Install the differential case assembly to the manual transaxle case.

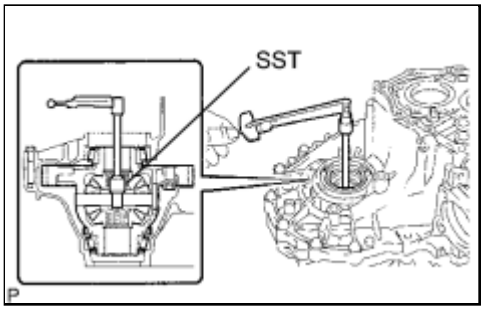
(b) Install the 14 bolts and manual transmission case to the manual transaxle case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(c) Install the 3 bolts to the manual transaxle case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

(d) Using SST, turn the differential in both directions to make sure that it turns smoothly.



SST: 09564-32011

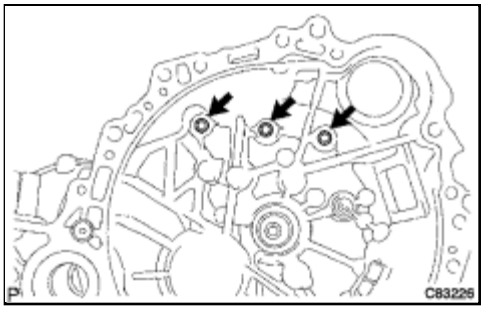
(e) Using SST and a torque wrench, inspect preload.

SST: 09564-32011

Preload:

BEARING	PRELOAD N*M (KGF*CM, IN.*LBF)
New	0.8 to 1.6 (8.16 to 16.32, 7.1 to 14.2)
Used	0.5 to 1.0 (5.10 to 10.2, 4.4 to 8.9)

If preload is not as specified, select a proper front differential case rear shim and adjust it.



HINT:

The preload of all the front differential case rear shims varies in torque from about 0.04 to 0.06 N*m (0.408 to 0.612 kgf*cm, 0.35 to 0.53 in.*lbf).

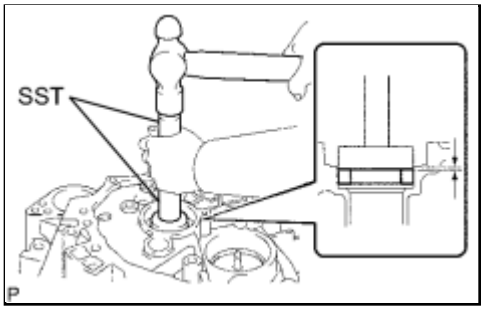
(f) Remove the 3 bolts.

(g) Remove the 14 bolts and manual transmission case from the manual transaxle case.



(h) Remove the differential case assembly from the manual transaxle case.

12. INSTALL FRONT TRANSAXLE CASE COVER OIL SEAL

(a) Coat the lip of a new front transaxle case cover oil seal with MP grease.

(b) Using SST and a hammer, install the new front transaxle case cover oil seal to the manual transaxle case.

SST: 09950-60010

09951-00420

SST: 09950-70010

09951-07150

Clearance:

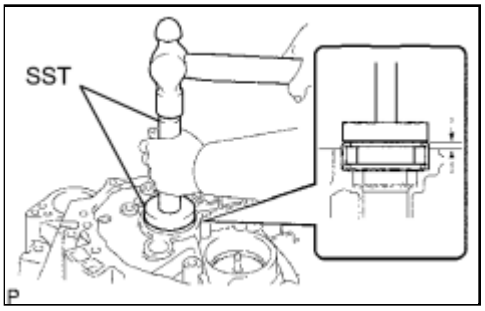
1.0 to 2.0 mm (0.0394 to 0.0787 in.)

13. INSTALL INPUT SHAFT FRONT BEARING

(a) Coat a new input shaft front bearing with gear oil.

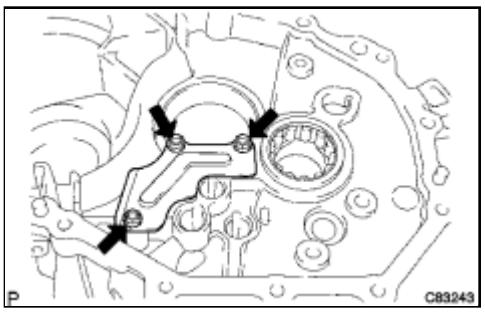
(b) Using SST and a hammer, install the bearing to the manual transaxle case.

SST: 09950-60010



09951-00570

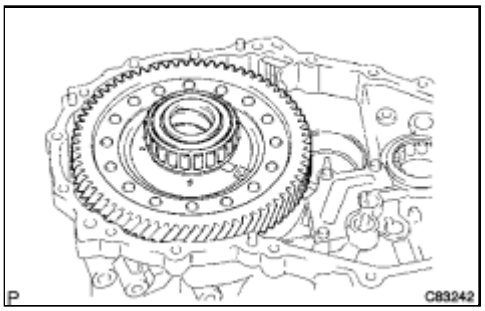
SST: 09950-70010



09951-07150

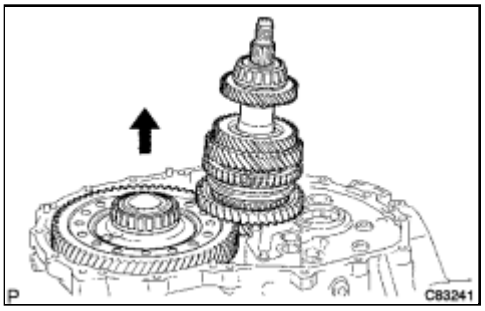
Clearance:

4.28 to 4.6 mm (0.169 to 0.181 in.)



14. INSTALL MANUAL TRANSAXLE CASE RECEIVER

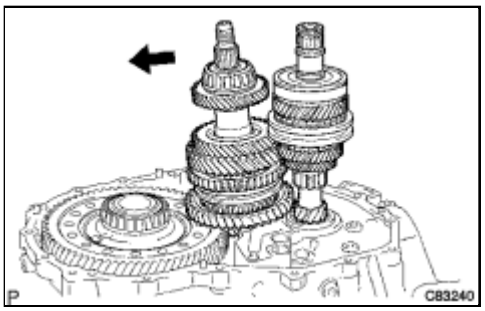
(a) Install the manual transaxle case receiver to the manual transaxle case with the 3 bolts.



Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

15. INSTALL DIFFERENTIAL CASE ASSEMBLY

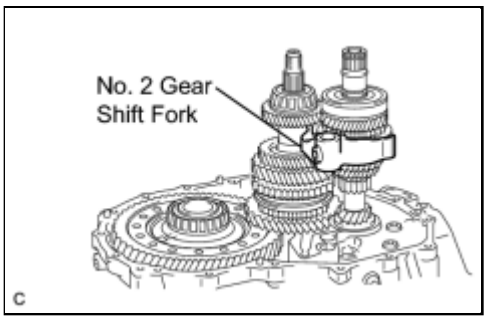
(a) Coat the differential case tapered roller bearing with gear oil, and install the differential case assembly to the manual transaxle case.



16. INSTALL OUTPUT SHAFT ASSEMBLY

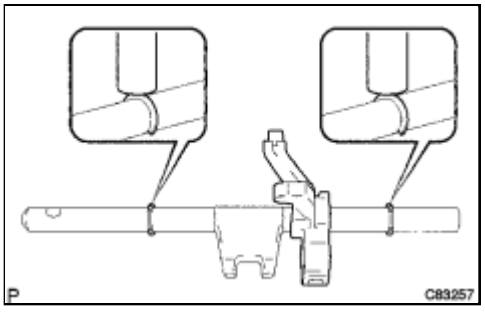
(a) Apply gear oil to each sliding part of the output shaft assembly.

(b) Lift the differential case assembly while tilting output shaft assembly, and install it to the manual transaxle case.



17. INSTALL INPUT SHAFT ASSEMBLY

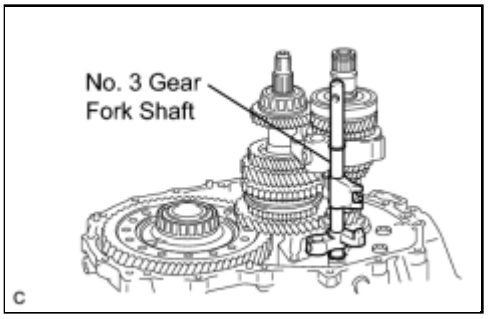
(a) Apply gear oil to each sliding part of the input shaft assembly.



(b) Install the input shaft assembly to the manual transaxle case while tilting the output shaft assembly.

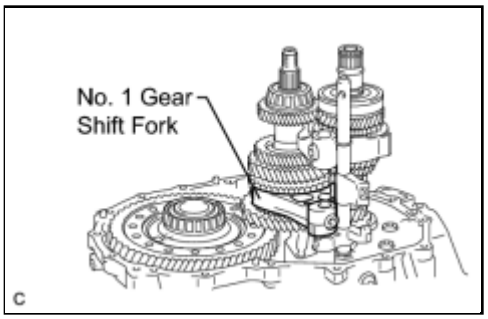
18. INSTALL NO. 2 GEAR SHIFT FORK

(a) Coat the No. 2 gear shift fork with gear oil, and install it to the input shaft assembly.



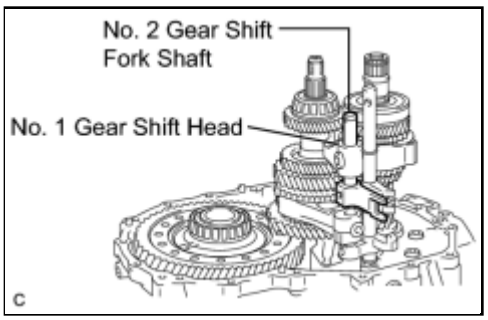
19. INSTALL NO. 3 GEAR SHIFT FORK

(a) Install the No. 3 gear shift fork to the No. 3 gear shift fork shaft.



(b) Using a brass bar and a hammer, install the 2 shift fork shaft snap rings to the gear shift fork shaft.

(c) Apply gear oil to each sliding part of the No. 3 gear shift

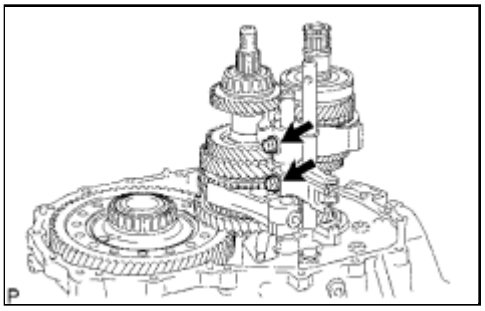


fork shaft, and install it to the manual transaxle case.

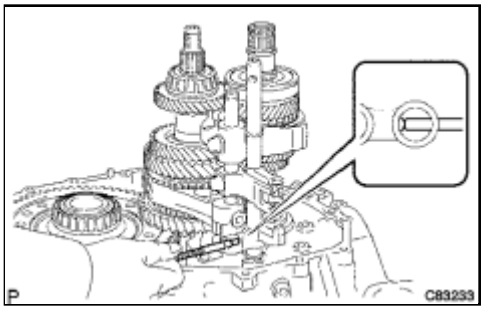
20. INSTALL NO. 1 GEAR SHIFT FORK

(a) Apply gear oil to each sliding part of the No. 1 gear shift fork, and install it to the output shaft assembly.

21. INSTALL NO. 2 GEAR SHIFT FORK SHAFT



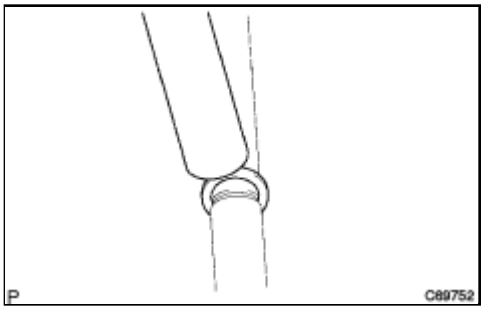
(a) Install the No. 1 gear shift head to the No. 2 gear shift fork shaft.



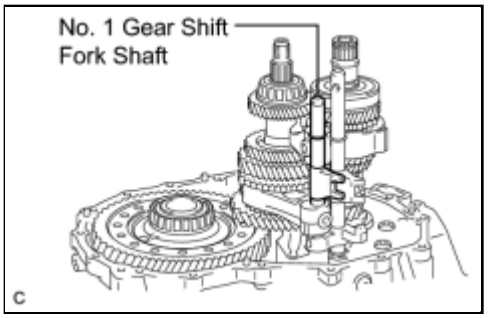
(b) Apply gear oil to each sliding part of the No. 2 gear shift fork shaft, and install it to the manual transaxle case.

(c) Install the shift fork set bolt and shift head set bolt to the No. 1 gear shift head.

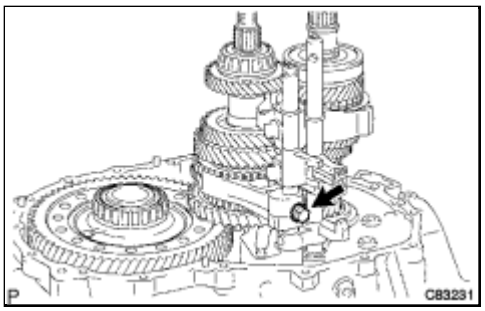
Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



22. INSTALL REVERSE SHIFT FORK ROLLER

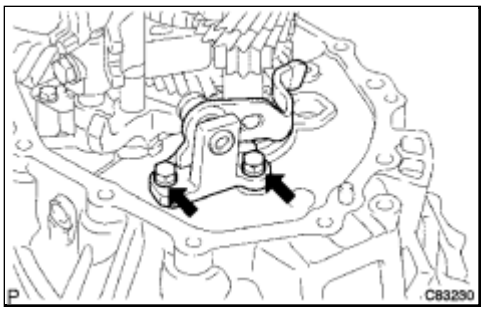


(a) Using a magnetic pick-up tool, install the reverse shift fork roller to the reverse shift fork.



23. INSTALL NO. 1 GEAR SHIFT FORK SHAFT

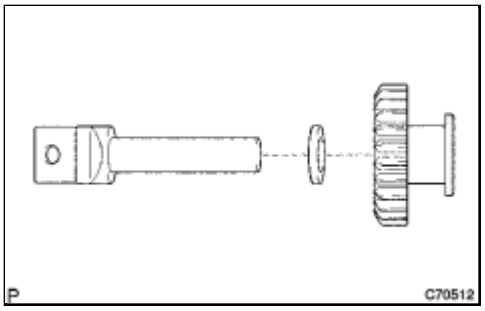
(a) Using a brass bar and a hammer, install the shift fork shaft snap ring to the No. 1 shift fork shaft.



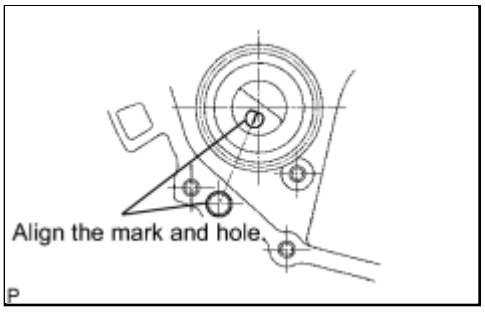
(b) Install the No. 1 gear shift fork shaft to the manual transaxle case.

(c) Install the shift fork set bolt to the No. 1 gear shift fork.

Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



24. INSTALL REVERSE SHIFT ARM BRACKET ASSEMBLY

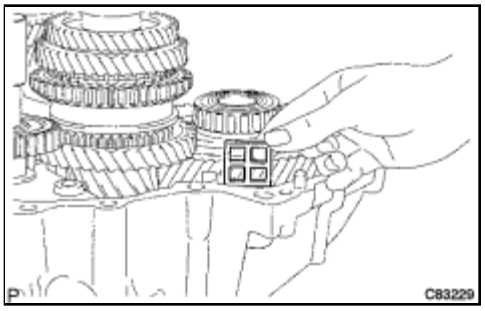


(a) Install the reverse shift arm bracket assembly to the manual transaxle case with the 2 bolts.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

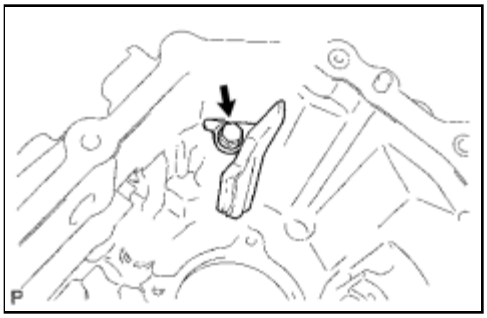
25. INSTALL REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Coat the reverse idler gear and reverse idler thrust washer with MP grease, and install them to the reverse idler gear shaft.



(b) Install the reverse idler gear to the manual transaxle case.

HINT:

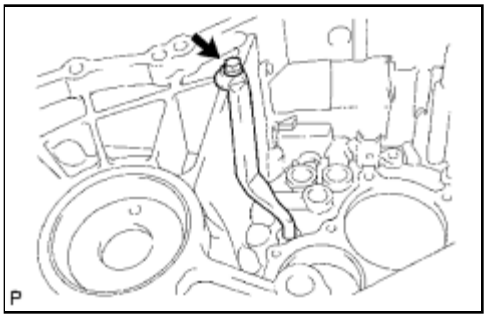


Align the mark of the reverse idler gear shaft with the bolt hole.

26. INSTALL TRANSMISSION MAGNET

(a) Clean the transmission magnet and install it to the manual transaxle case.

27. INSTALL NO. 1 OIL RECEIVER PIPE



(a) Install the No. 1 oil receiver pipe to the manual transmission case with the bolt.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

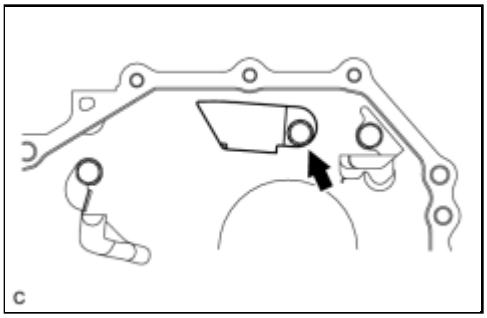
NOTICE:

Do not damage the pipe.

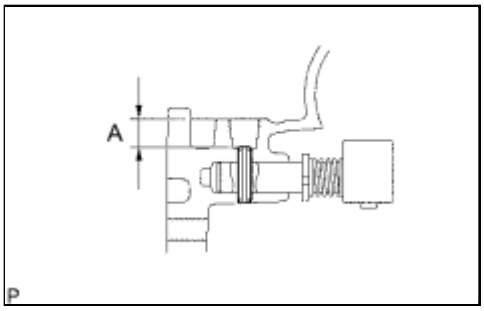
28. INSTALL NO. 2 OIL RECEIVER PIPE

(a) Install the No. 2 oil receiver pipe to the manual transmission case with the bolt.

Torque: 17 N·m (173 kgf·cm, 13ft·lbf)



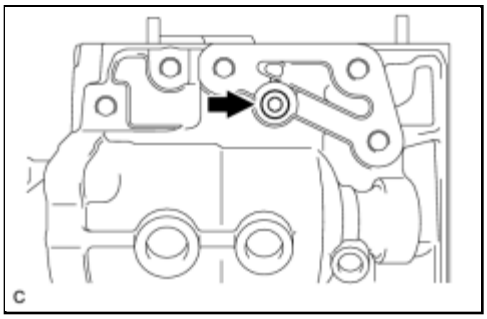
NOTICE:



Do not damage the pipe.

29. INSTALL REVERSE RESTRICT PIN ASSEMBLY

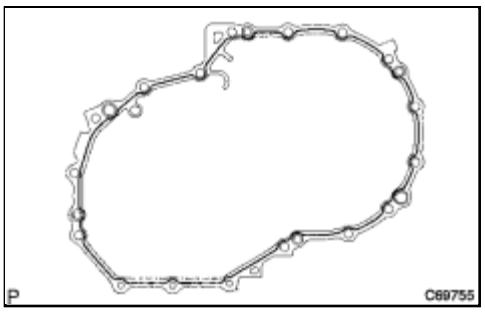
(a) Install the transmission oil baffle and reverse restrict pin with the bolt.



Torque: 17 N·m (173 kgf·cm, 13ft·lbf)

(b) Using a pin punch (φ 5 mm), install the slotted pin to the reverse restrict pin assembly.

Clearance A:
12.5 to 13.5 mm (0.492 to 0.531 in.)

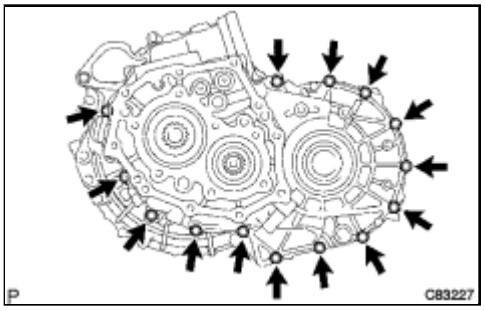


(c) Coat the reverse restrict pin plug with adhesive. Using a hexagon wrench (6 mm), install the manual transmission case.

Torque: 13 N·m (133 kgf·cm, 10ft·lbf)

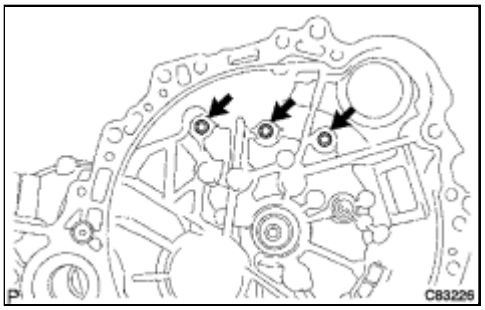
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

30. INSTALL MANUAL TRANSMISSION CASE



(a) Apply a bead of FIPG to the manual transmission case as shown in the illustration.

HINT:

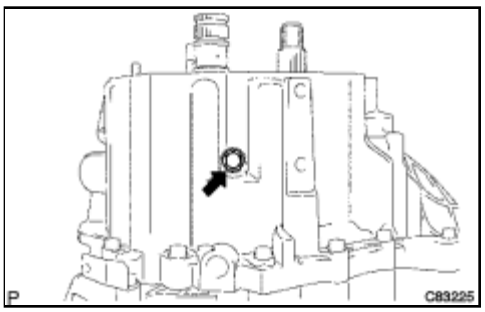


Install the manual transmission case within 10 minutes after applying FIPG.

(b) Install the manual transmission case to the manual

transaxle case with the 14 bolts.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



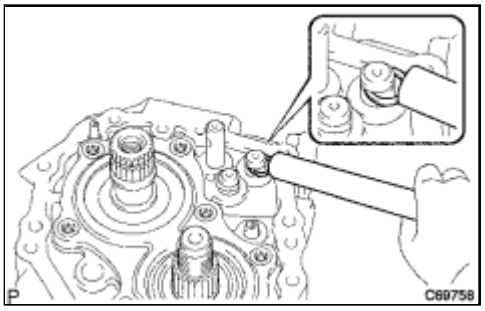
(c) Coat the 3 bolts with adhesive.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

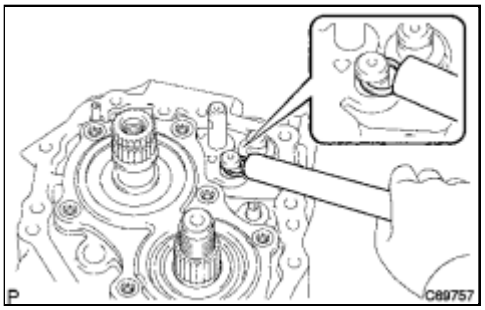
(d) Install the 3 bolts to the manual transaxle case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

31. INSTALL REVERSE IDLER GEAR SHAFT BOLT



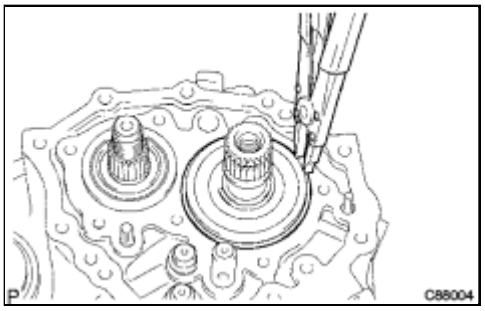
(a) Coat the bolt with adhesive. Install a new gasket to the manual transmission case with the bolt.



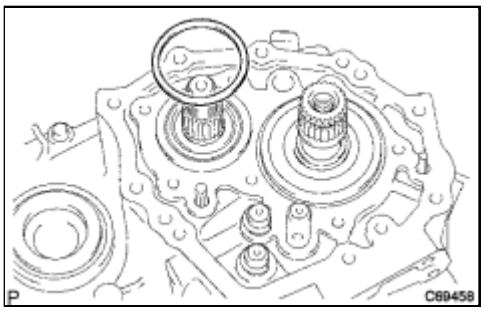
Torque: 30 N·m (306 kgf·cm, 22ft·lbf)

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

32. INSTALL SHIFT FORK SHAFT SNAP RING

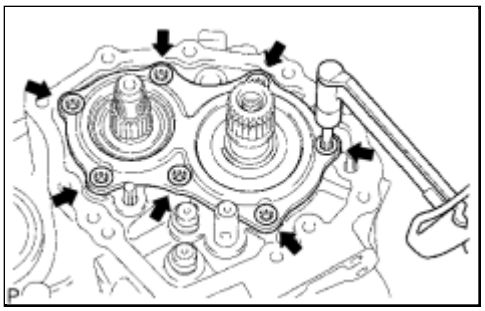


(a) Using a brass bar and a hammer, install the shift fork shaft snap ring to the No. 1 gear shift fork shaft.



(b) Using a brass bar and a hammer, install the shift fork shaft snap ring to the No. 2 gear shift fork shaft.

33. INSTALL INPUT SHAFT REAR BEARING SHAFT SNAP RING

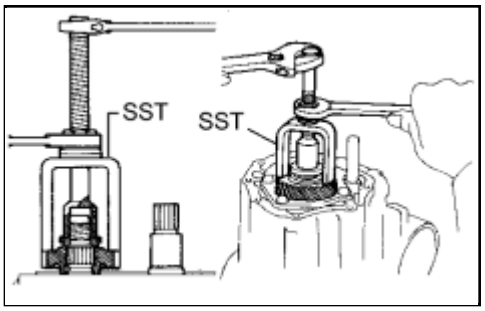


(a) Using a snap ring expander, install the input shaft rear bearing shaft snap ring.

34. INSTALL OUTPUT SHAFT REAR BEARING SHIM

(a) Install the output shaft rear bearing shim to the output shaft.

35. INSTALL REAR BEARING RETAINER

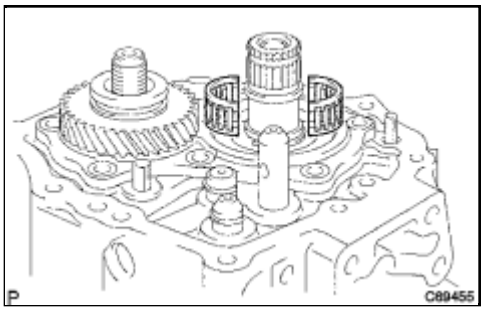


(a) Coat the 7 screws with adhesive.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

(b) Using a "TORX" socket wrench (T45), install the rear bearing retainer to the manual transmission case with the 7 screws.

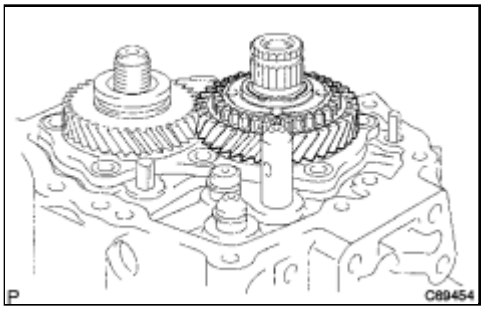
Torque: 43 N·m (438 kgf·cm, 32ft·lbf)



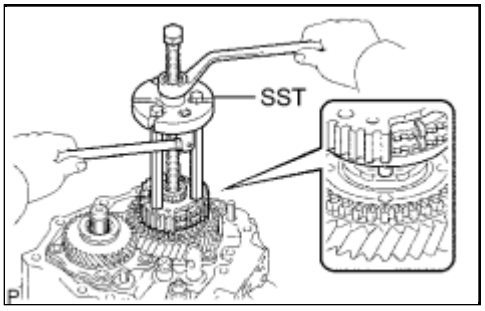
36. INSTALL 5TH DRIVEN GEAR

(a) Using SST, install the 5th driven gear to the output shaft.

SST: 09309-12020



37. INSTALL 5TH GEAR NEEDLE ROLLER BEARING



(a) Coat the 5th gear needle roller bearing with gear oil and install it to the input shaft.

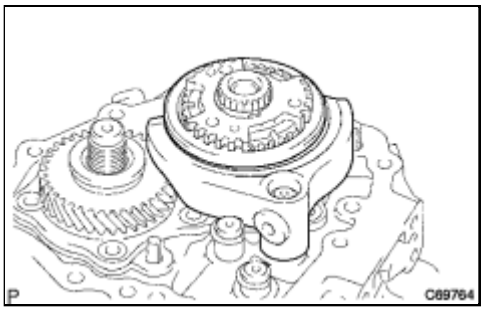
38. INSTALL 5TH GEAR

(a) Coat the 5th gear with gear oil and install it to the input shaft.

39. INSTALL NO. 3 TRANSMISSION CLUTCH HUB

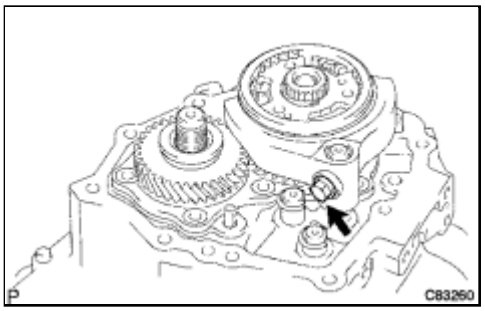
(a) Using SST, install the No. 3 transmission clutch hub to the input shaft.

SST: 09950-30012



09951-03010

09953-03010



09954-03010

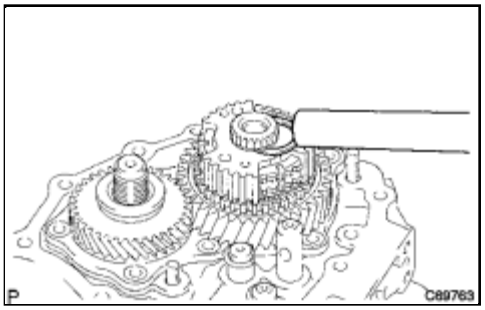
NOTICE:

Align the projection of the synchronizer ring with the hole in the 5th gear.

(b) Install the No. 3 transmission hub sleeve and No. 3 gear shift fork to the No. 3 transmission clutch hub.

(c) Coat the shift fork set bolt with adhesive and install it to the No. 3 gear shift fork.

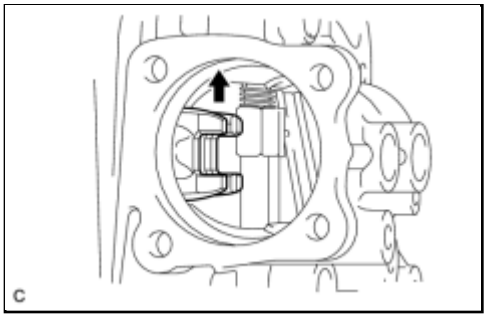
Torque: 24 N·m (245 kgf·cm, 18ft·lbf)



Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

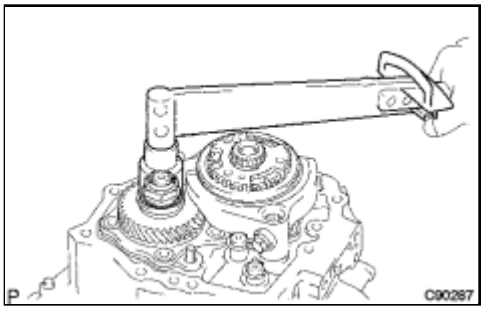
(d) Select a snap ring that will allow minimal axial play. Using



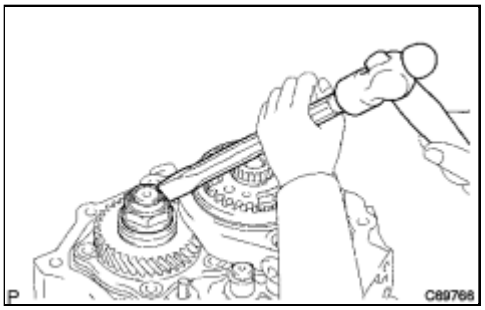
a brass bar and a hammer, install the shaft snap ring.

Clearance:
0.1 mm (0.00394 in.) or less
Snap Ring:

PART NO.	THICKNESS: MM (IN.)	MARK
90520-27061	1.75 to 1.80 (0.0689 to 0.0709)	a
90520-27062	1.80 to 1.85 (0.0709 to 0.0728)	b
90520-27063	1.85 to 1.90 (0.0728 to 0.0748)	c
90520-27064	1.90 to 1.95 (0.0748 to 0.0768)	d
90520-27065	1.95 to 2.00 (0.0768 to 0.0787)	e
90520-27066	2.00 to 2.05 (0.0787 to 0.0807)	f
90520-27067	2.05 to 2.10 (0.0807 to 0.0827)	g
90520-27068	2.10 to 2.15 (0.0827 to 0.0846)	h
90520-27069	2.15 to 2.20 (0.0846 to 0.0866)	j



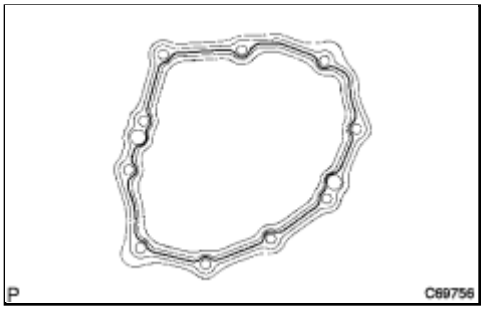
40. INSTALL MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT



(a) Engage the 1st and 2nd gears simultaneously.

(b) Install a new manual transmission output shaft rear set nut.

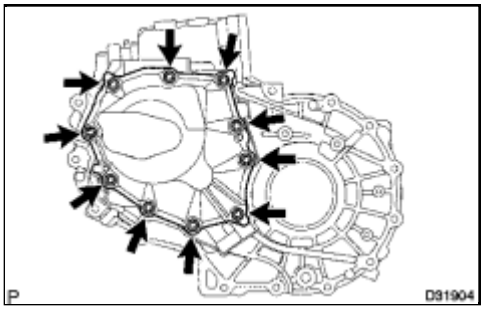
Torque: 123 N·m (1254 kgf·cm, 90ft·lbf)



(c) Using a chisel and a hammer, stake the manual transmission output shaft rear set nut.

(d) Disengage the gears.

41. INSTALL MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY

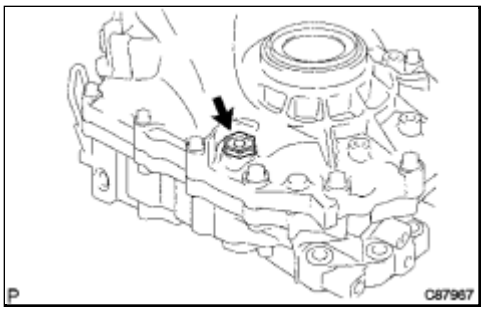


(a) Apply FIPG to the manual transmission case cover sub-assembly as shown in the installation.

FIPG:

Toyota Genuine Seal Packing 1281, Three Bond 1281 or equivalent

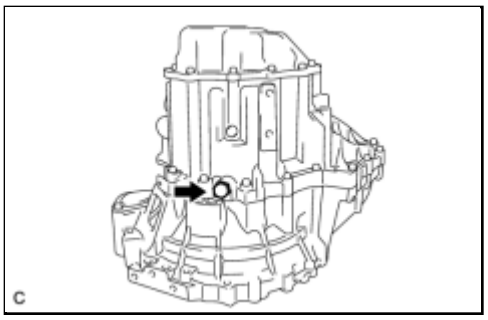
NOTICE:



Install the part within 10 minutes after applying packing material (FIPG).

(b) Install the manual transmission case cover sub-assembly to the manual transaxle case with the 10 bolts.

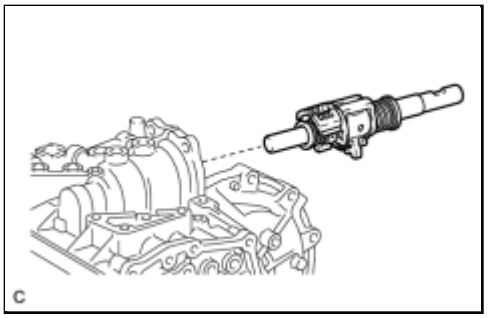
Torque: 29 N·m (296 kgf·cm, 21ft·lbf)



42. INSTALL DRAIN PLUG SUB-ASSEMBLY

(a) Install the drain plug sub-assembly to the manual transmission case with a new gasket.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)



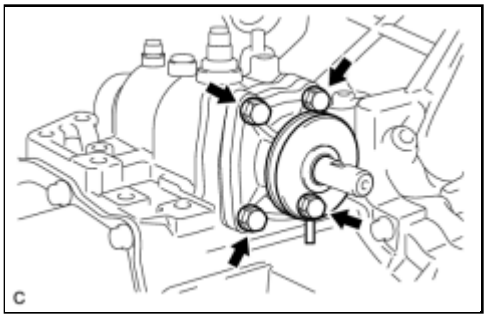
43. INSTALL MANUAL TRANSMISSION FILLER PLUG

(a) Install the manual transmission filler plug to the transaxle case with a new gasket.

Torque: 49 N·m (500 kgf·cm, 36ft·lbf)

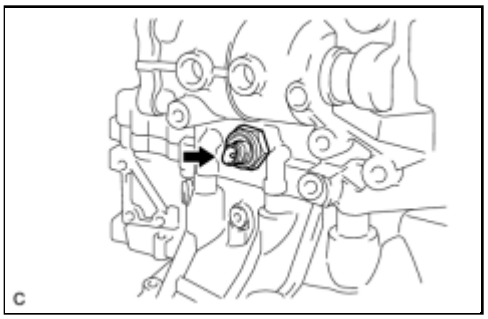
44. INSTALL SHIFT AND SELECT LEVER SHAFT ASSEMBLY

(a) Coat the shift and select lever shaft assembly with gear oil, and install it to the manual transmission case.



45. INSTALL CONTROL SHAFT COVER

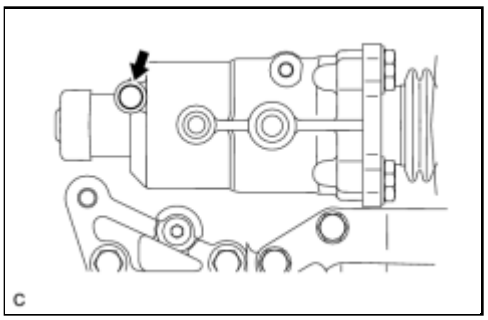
(a) Coat the 4 bolts with adhesive. Install a new gasket and the control shaft cover with the bolts.



Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

Adhesive:

Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

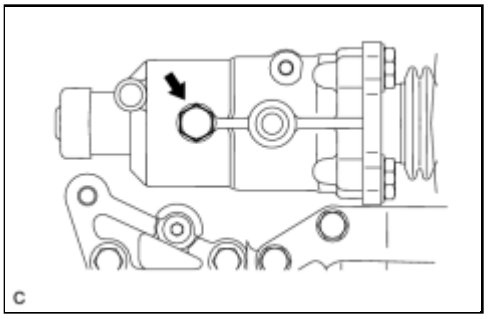


46. INSTALL BACK-UP LIGHT SWITCH ASSEMBLY

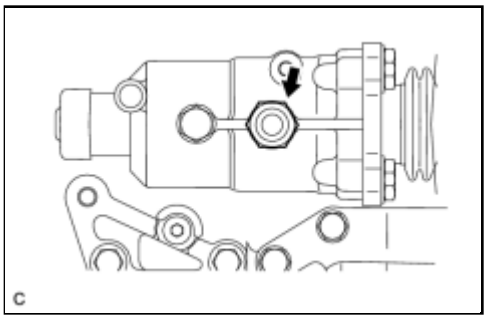
(a) Install the back-up light switch assembly to the manual transmission case with a new gasket.

Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

47. INSTALL MANUAL TRANSMISSION BREATHER PLUG



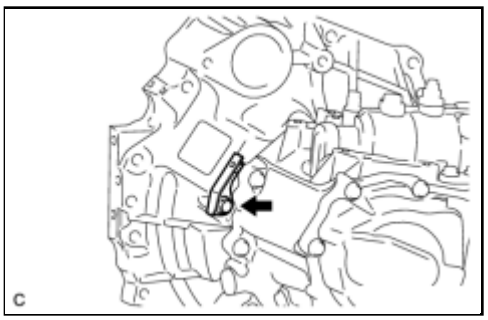
(a) Install the manual transmission breather plug to the manual transmission case.



48. INSTALL SHIFT GATE PIN

(a) Install the shift gate pin to the manual transmission case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

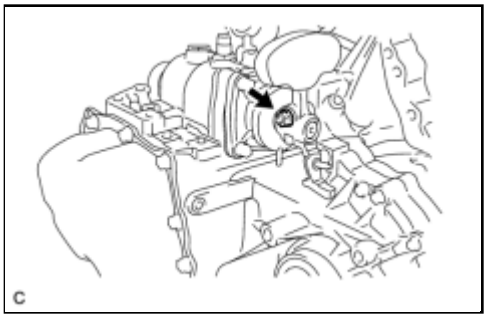


49. INSTALL NO. 1 LOCK BALL ASSEMBLY

(a) Install the No. 1 lock ball assembly to the manual transmission case.

Torque: 29 N·m (296 kgf·cm, 21ft·lbf)

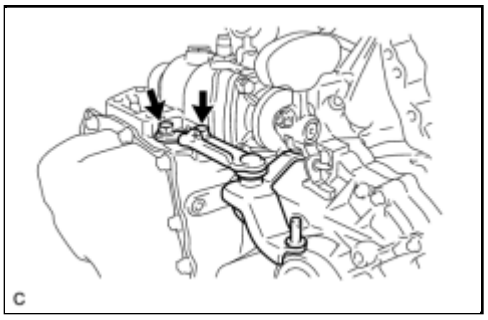
50. INSTALL NO. 2 CLUTCH TUBE BRACKET



(a) Install the No. 2 clutch tube bracket with the bolt.

Torque: 15 N·m (153 kgf·cm, 11ft·lbf)

51. INSTALL CONTROL SHIFT LEVER

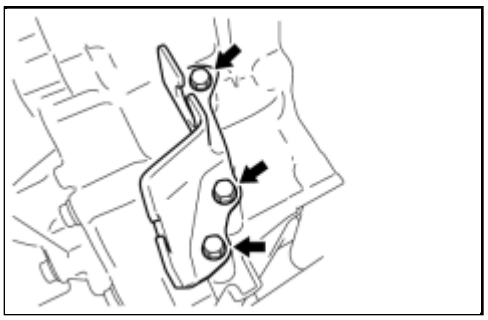


(a) Install the control shift lever with the shift outer lever lock pin to the shift and select lever shaft.

(b) Install the spring washer with the nut.

Torque: 12 N·m (120 kgf·cm, 9ft·lbf)

52. INSTALL SELECTING BELLCRANK ASSEMBLY



(a) Coat the 2 bolts with adhesive. Install the selecting bellcrank assembly to the manual transmission case with the bolts.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

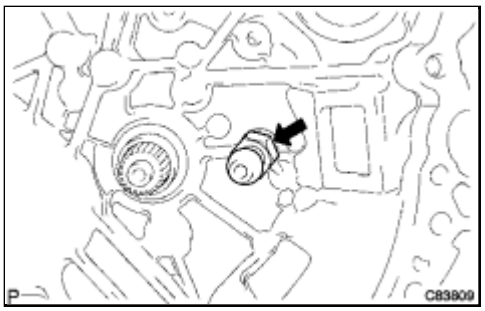
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

53. INSTALL CONTROL CABLE BRACKET

(a) Install the control cable bracket to the manual transaxle case with the 3 bolts.

Torque: 17 N·m (173 kgf·cm, 12ft·lbf)

54. INSTALL SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY



(a) Install a new O-ring and the speedometer driven hole cover sub-assembly to the transmission case with the bolt.

Torque: 5.5 N·m (56 kgf·cm, 48in·lbf)

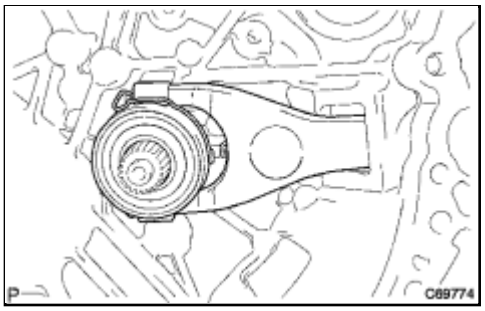
55. INSTALL CLUTCH RELEASE FORK BOOT

(a) Install the clutch release fork boot to the manual transaxle case.

56. INSTALL RELEASE FORK SUPPORT

(a) Using a deep socket wrench, install the release fork support to the manual transaxle case.

Torque: 47 N·m (480 kgf·cm, 36ft·lbf)



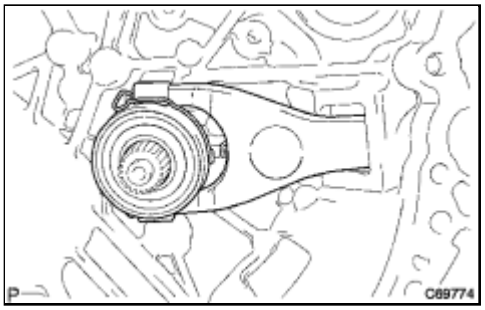
57. INSTALL CLUTCH RELEASE BEARING ASSEMBLY

(a) Coat the clutch release bearing assembly with release hub grease, and install it to the clutch release fork sub-assembly.

Sealant:
Toyota Genuine Release Hub Grease or equivalent

(b) Apply clutch spline grease to the input shaft spline.

58. INSTALL CLUTCH RELEASE FORK SUB-ASSEMBLY

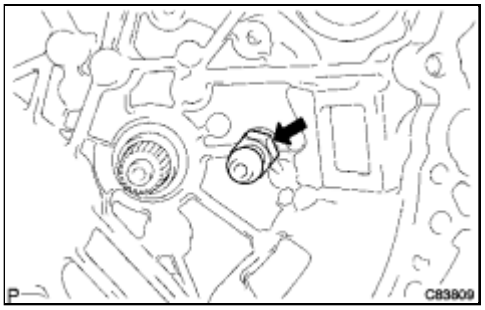


(a) Install the clutch release fork sub-assembly to the input shaft.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z1S00FX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. REMOVE CLUTCH RELEASE FORK SUB-ASSEMBLY



(a) Remove the clutch release fork sub-assembly together with the clutch release bearing assembly from the manual transaxle case.

2. REMOVE CLUTCH RELEASE BEARING ASSEMBLY

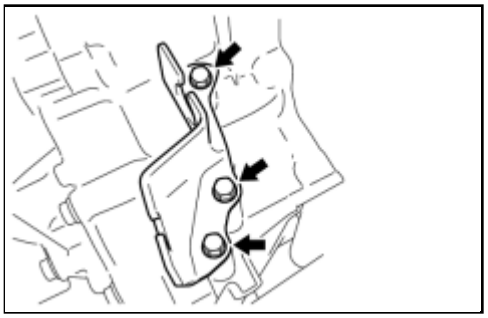
(a) Remove the clutch release bearing assembly and release bearing hub clip from the clutch release fork sub-assembly.

3. REMOVE RELEASE FORK SUPPORT

(a) Remove the release fork support from the manual transaxle case.

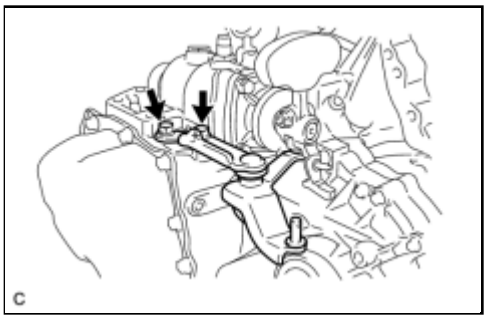
4. REMOVE CLUTCH RELEASE FORK BOOT

(a) Remove the clutch release fork boot from the manual transaxle case.



5. REMOVE SPEEDOMETER DRIVEN HOLE COVER SUB-ASSEMBLY

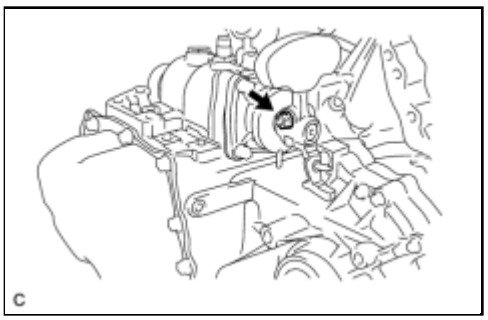
(a) Remove the bolt and speedometer driven hole cover sub-assembly.



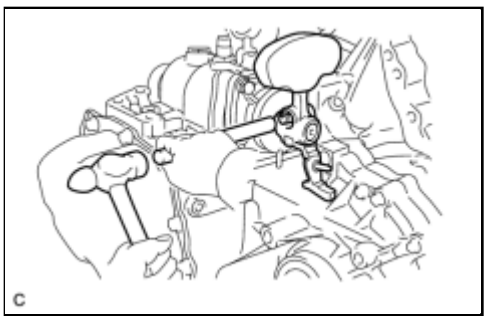
(b) Remove the O-ring.

6. REMOVE CONTROL CABLE BRACKET

(a) Remove the 3 bolts and control cable bracket.

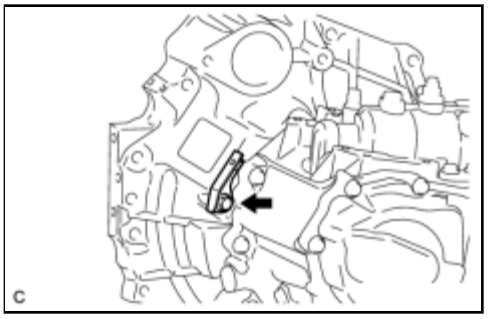


7. REMOVE SELECTING BELLCRANK ASSEMBLY



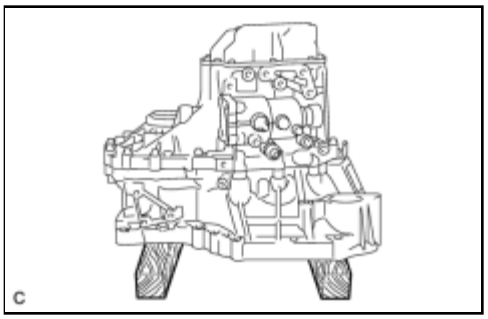
(a) Remove the 2 bolts and selecting bellcrank assembly from the manual transmission case.

8. REMOVE CONTROL SHIFT LEVER



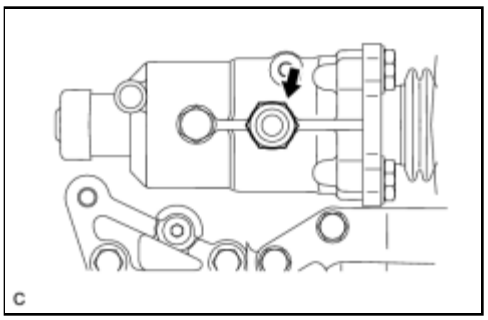
(a) Remove the nut and spring washer.

(b) Using a brass bar and hammer, remove the shift outer lever lock pin.



(c) Remove the control shift lever.

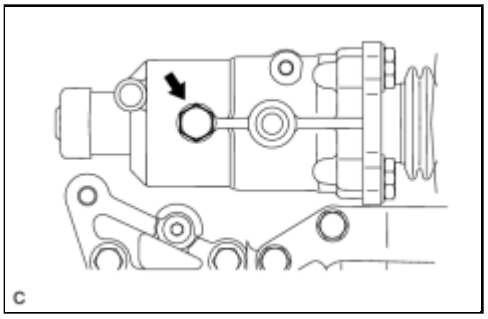
9. REMOVE NO. 2 CLUTCH TUBE BRACKET



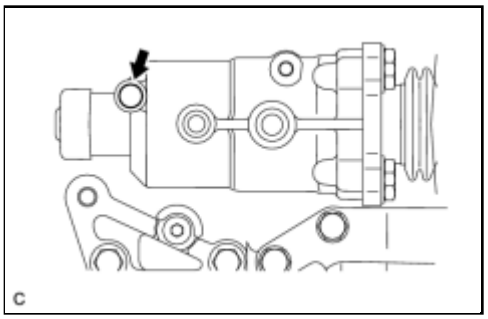
(a) Remove the bolt and No. 2 clutch tube bracket.

10. SECURE MANUAL TRANSAXLE ASSEMBLY

(a) Place the manual transaxle assembly on wooden blocks.



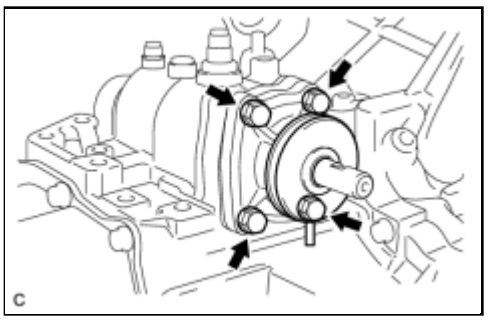
11. REMOVE NO. 1 LOCK BALL ASSEMBLY



(a) Remove the No. 1 lock ball assembly from the manual transmission case.

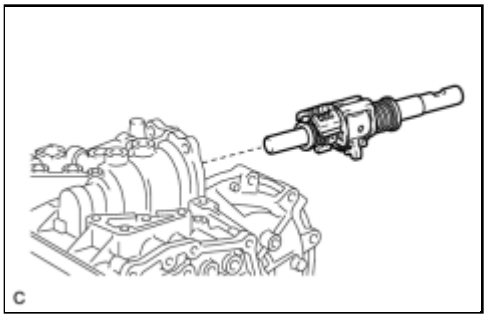
12. REMOVE SHIFT GATE PIN

(a) Remove the shift gate pin from the manual transmission case.

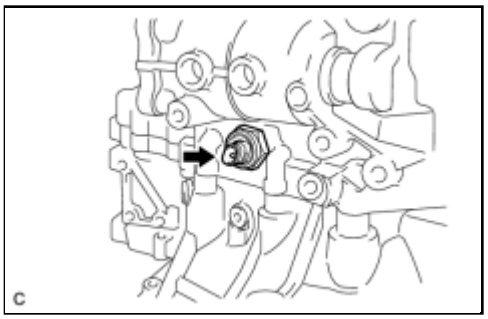


13. REMOVE MANUAL TRANSMISSION BREATHER PLUG

(a) Remove the manual transmission breather plug.



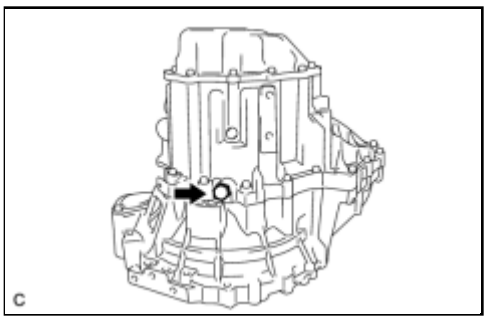
14. REMOVE CONTROL SHAFT COVER



(a) Remove the 4 bolts and control shaft cover from the manual transmission case.

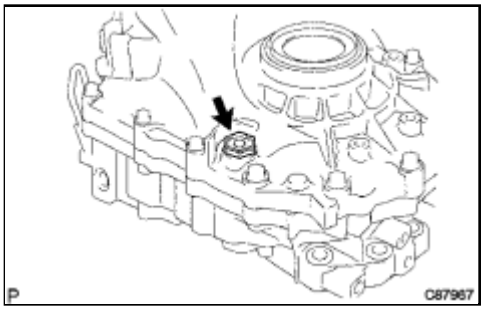
15. REMOVE SHIFT AND SELECT LEVER SHAFT ASSEMBLY

(a) Remove the shift and select lever shaft assembly from the manual transmission case.

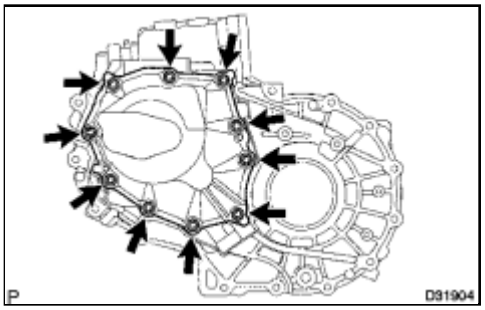


16. REMOVE BACK-UP LIGHT SWITCH ASSEMBLY

(a) Remove the back-up light switch assembly and gasket from the manual transmission case.



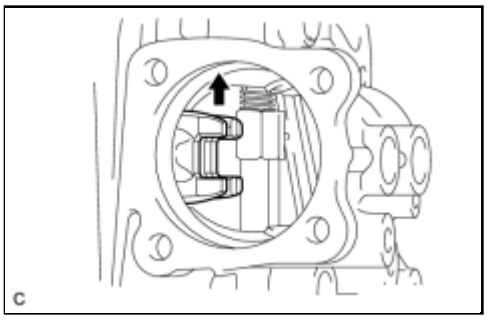
17. REMOVE MANUAL TRANSMISSION FILLER PLUG



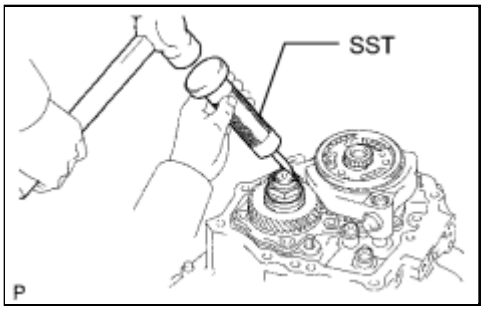
(a) Remove the manual transmission filler plug and gasket from the manual transmission case.

18. REMOVE DRAIN PLUG SUB-ASSEMBLY

(a) Remove the drain plug sub-assembly and gasket from the manual transmission case.

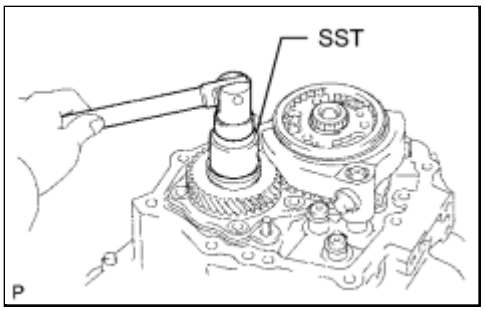


19. REMOVE MANUAL TRANSMISSION CASE COVER SUB-ASSEMBLY



(a) Remove the 10 bolts and manual transmission case cover from the manual transmission case.

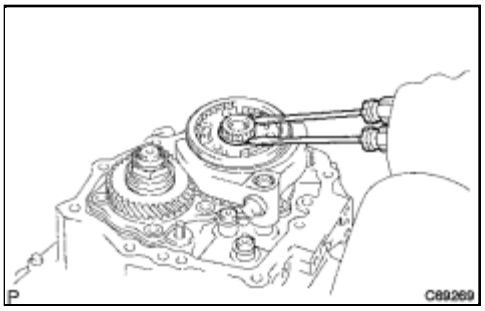
20. REMOVE MANUAL TRANSMISSION OUTPUT SHAFT REAR SET NUT



(a) Engage the 1st and 2nd gears simultaneously.

(b) Using SST and a hammer, unstake the manual transmission output shaft rear set nut.

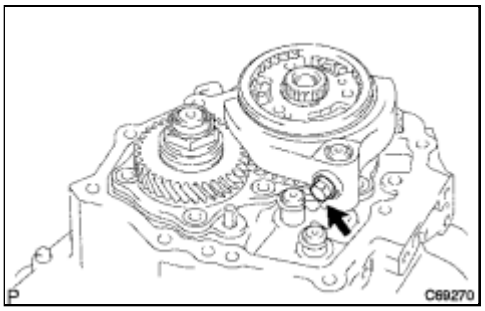
SST: 09930-00010



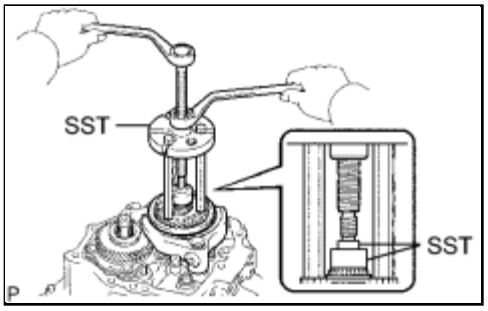
(c) Using SST, remove the manual transmission output shaft rear set nut from the output shaft.

SST: 09229-55010

(d) Disengage the gears.



21. REMOVE NO. 3 TRANSMISSION CLUTCH HUB



(a) Using 2 screwdrivers and a hammer, remove the transmission clutch hub No. 3 shaft snap ring from the input shaft.

HINT:

Use a piece of cloth to keep the snap ring from flying.

(b) Remove the shift fork set bolt from the No. 3 gear shift fork.

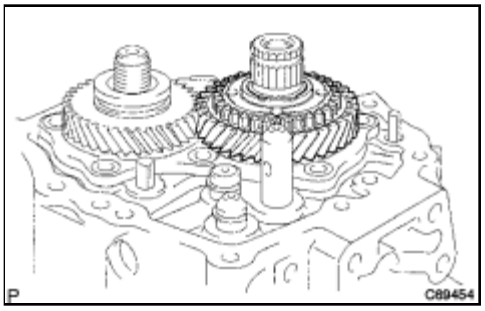
(c) Using SST, remove the No. 3 transmission clutch hub and No. 3 gear shift fork from the input shaft.

SST: 09950-30012

09951-03010

09953-03010

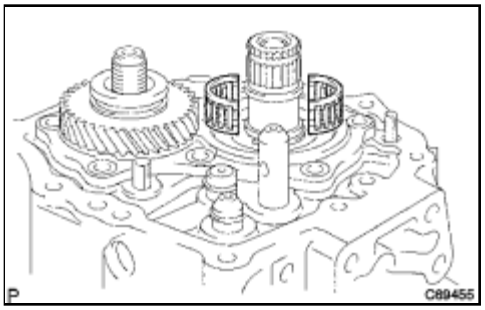
09954-03010



SST: 09950-50013

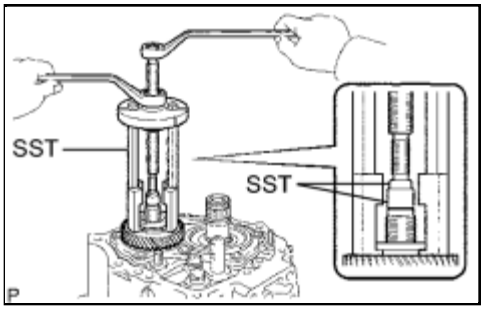
09957-04010

SST: 09950-60010



09951-00280

22. REMOVE 5TH GEAR



(a) Remove the 5th gear from the input shaft.

23. REMOVE 5TH GEAR NEEDLE ROLLER BEARING

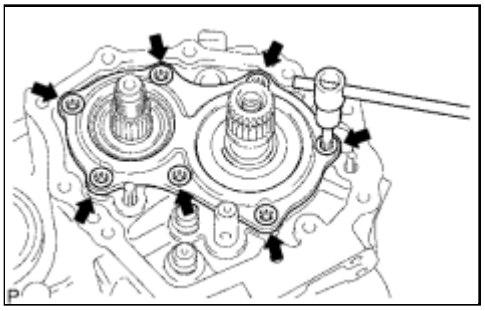
(a) Remove the 5th gear needle roller bearing from the input shaft.

24. REMOVE 5TH DRIVEN GEAR

(a) Using SST, remove the 5th driven gear from the output shaft.

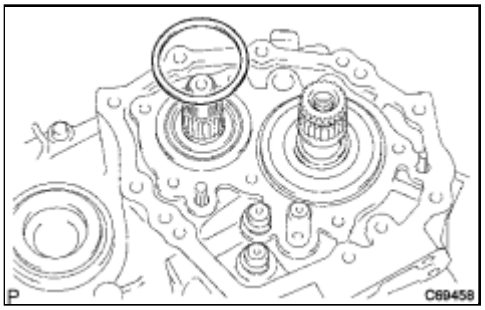
SST: 09950-30012

09951-03010
09953-03010
09954-03010
09957-04010



SST: 09950-60010

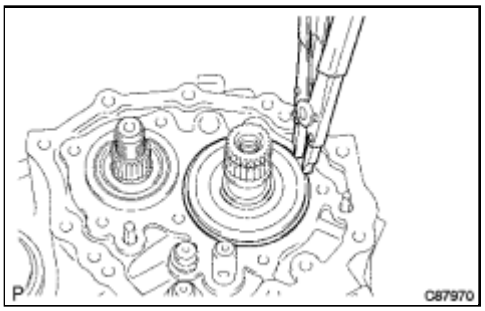
09951-00180
09955-03011



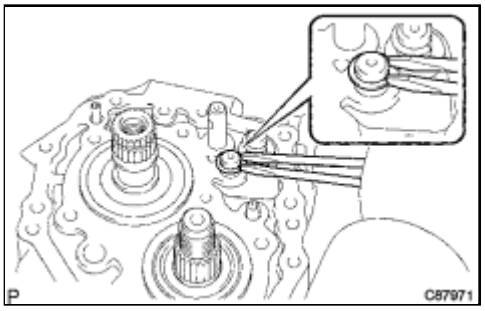
SST: 09950-50013

25. REMOVE REAR BEARING RETAINER

(a) Using a "TORX" socket wrench (T45), remove the 7 "TORX" screws and rear bearing retainer from the manual transmission case.



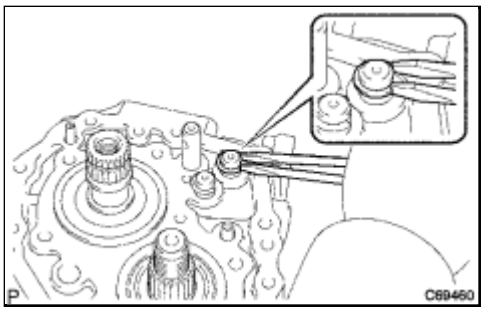
26. REMOVE OUTPUT SHAFT REAR BEARING SHIM



(a) Remove the output shaft rear bearing shim from the output shaft.

27. REMOVE INPUT SHAFT REAR BEARING SHAFT SNAP RING

(a) Using a snap ring expander, remove the input shaft rear bearing shaft snap ring from the input shaft.

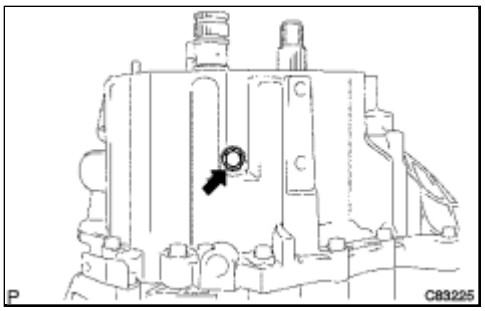


28. REMOVE SHIFT FORK SHAFT SNAP RING

(a) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the No. 1 gear shift fork shaft.

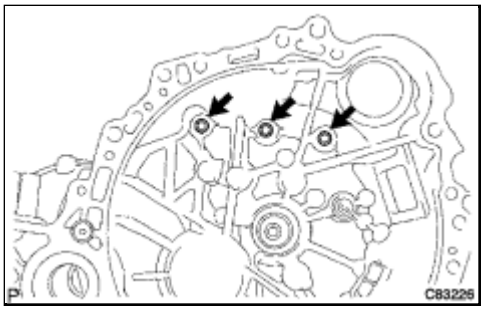
HINT:

Use a piece of cloth to keep the snap ring from flying.



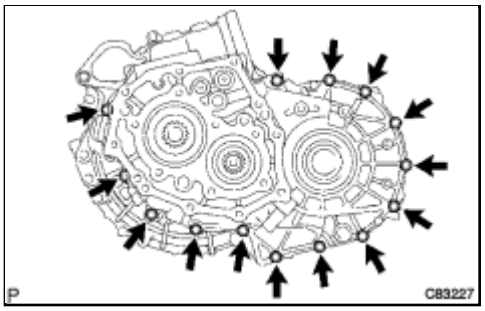
(b) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the No. 2 gear shift fork shaft.

HINT:



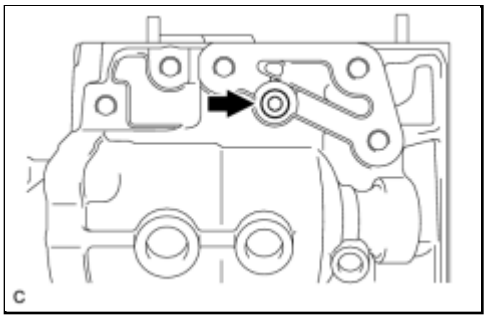
Use a piece of cloth to keep the snap ring from flying.

29. REMOVE REVERSE IDLER GEAR SHAFT BOLT

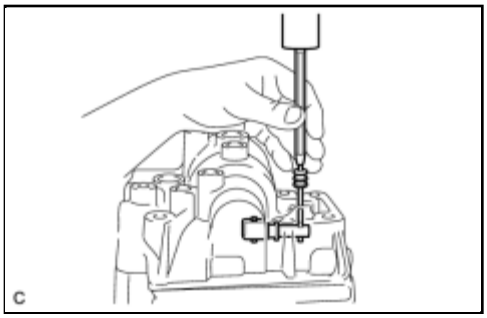


(a) Remove the reverse idler gear shaft bolt and gasket.

30. REMOVE MANUAL TRANSMISSION CASE

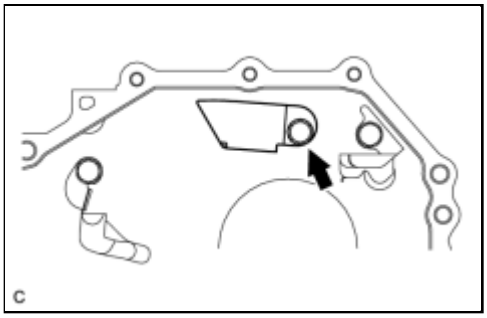


(a) Remove the 3 bolts from the manual transaxle case.



(b) Remove the 14 bolts from the manual transmission case.

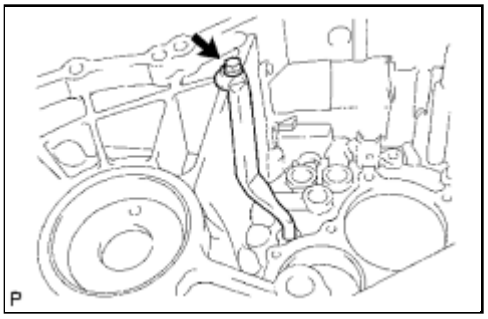
(c) Using a plastic hammer, carefully tap the manual transmission case to remove it.



31. REMOVE REVERSE RESTRICT PIN ASSEMBLY

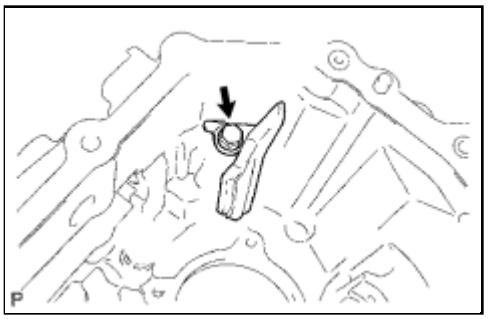
(a) Using a hexagon wrench (6 mm), remove the reverse restrict pin plug from the manual transmission case.

(b) Using a pin punch (φ 5 mm) and hammer, remove the slotted pin.



(c) Remove the bolt, transmission oil baffle and reverse restrict pin assembly.

32. REMOVE NO. 2 OIL RECEIVER PIPE

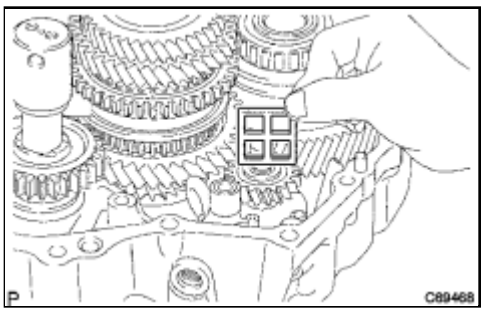


(a) Remove the bolt and No. 2 oil receiver pipe from the manual transmission case.

NOTICE:

Do not damage the pipe.

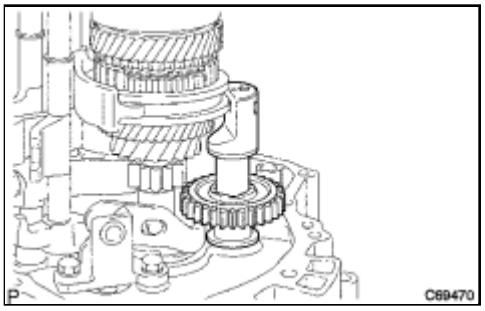
33. REMOVE NO. 1 OIL RECEIVER PIPE



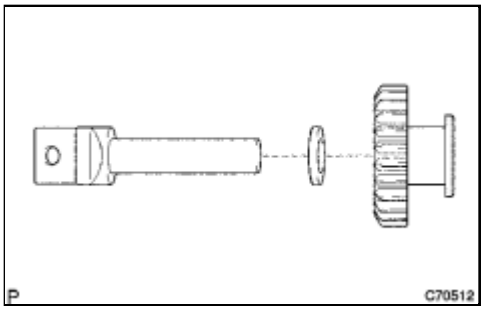
(a) Remove the bolt and No. 1 oil receiver pipe from the manual transmission case.

NOTICE:

Do not damage the pipe.

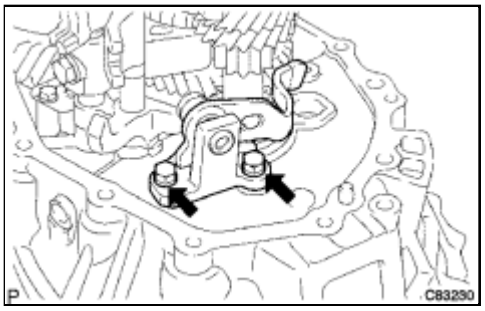


34. REMOVE TRANSMISSION MAGNET

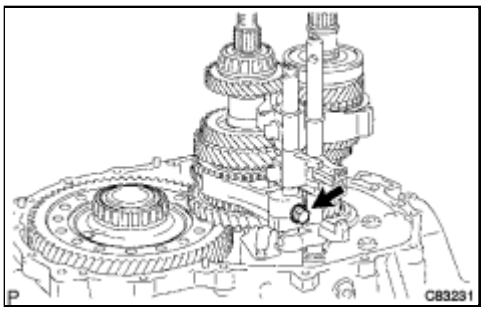


(a) Remove the transmission magnet from the manual transaxle case.

35. REMOVE REVERSE IDLER GEAR SUB-ASSEMBLY

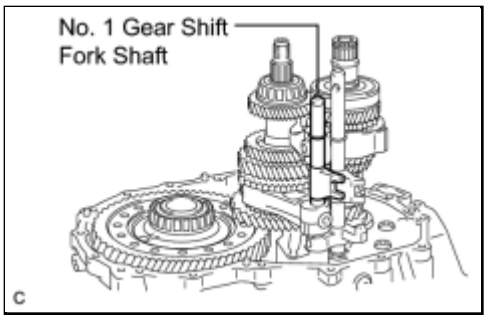


(a) Remove the reverse idler gear sub-assembly from the manual transaxle case.

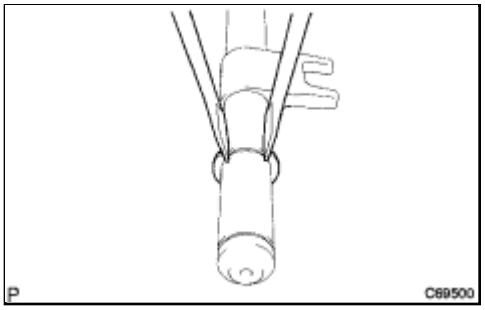


(b) Remove the reverse gear and reverse idler thrust washer from the reverse idler gear shaft.

36. REMOVE REVERSE SHIFT ARM BRACKET ASSEMBLY



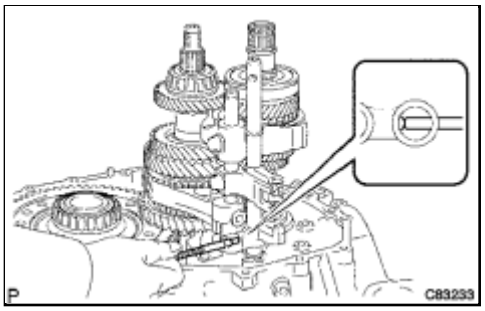
(a) Remove the 2 bolts and reverse shift arm bracket assembly from the manual transaxle case.



37. REMOVE NO. 1 GEAR SHIFT FORK SHAFT

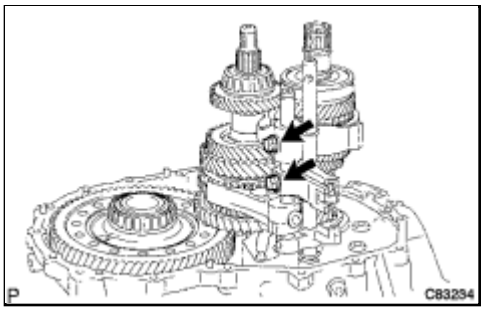
(a) Remove the shift fork set bolt from the No. 1 gear shift fork.

(b) Pull out the No. 1 gear shift fork shaft while pulling up the No. 3 gear shift fork shaft.



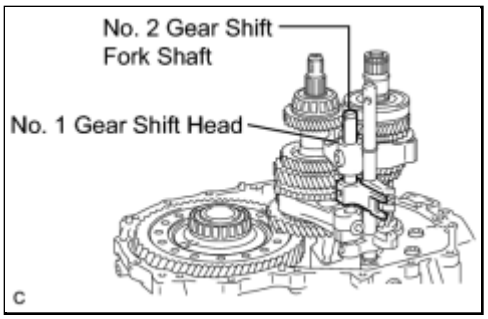
(c) Using 2 screwdrivers and a hammer, remove the shift fork shaft snap ring from the No. 1 gear shift fork shaft.

HINT:



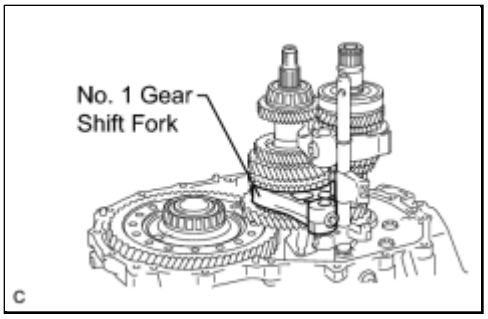
Use a piece of cloth to keep the snap ring from flying.

38. REMOVE REVERSE SHIFT FORK ROLLER

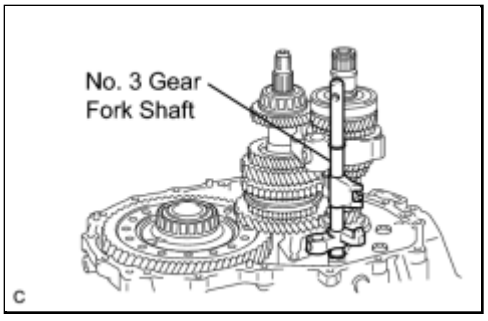


(a) Using a magnetic pick-up tool, remove the reverse shift fork roller from the reverse shift fork.

39. REMOVE NO. 2 GEAR SHIFT FORK SHAFT

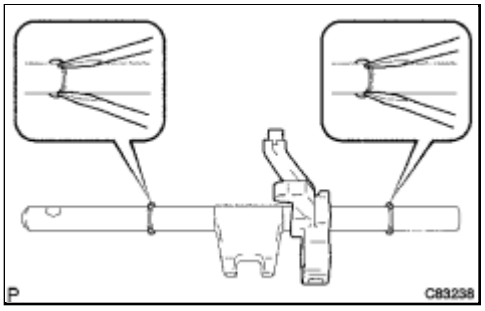


(a) Remove the shift fork set bolt and shift head set bolt from the No. 2 gear shift fork and No. 1 gear shift head.



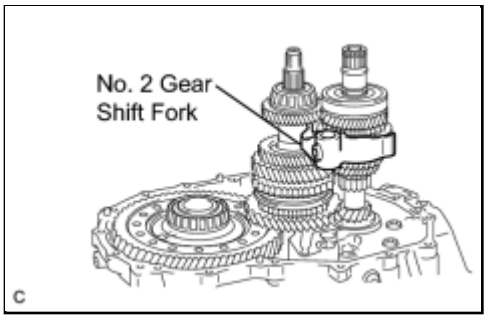
(b) Remove the No. 2 gear shift fork shaft and No. 1 gear shift head from the manual transaxle case.

40. REMOVE NO. 1 GEAR SHIFT FORK



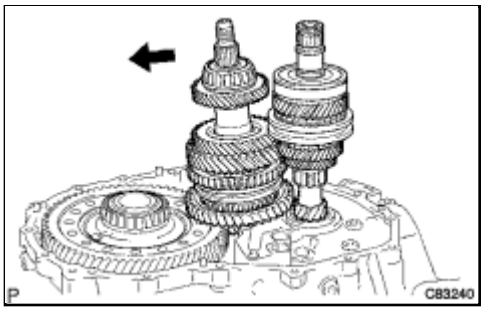
(a) Remove the No. 1 gear shift fork.

41. REMOVE NO. 3 GEAR SHIFT FORK SHAFT



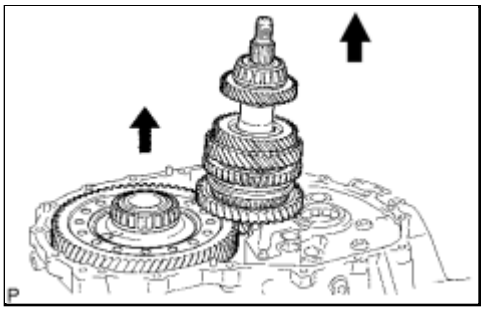
(a) Remove the No. 3 gear shift fork shaft from the manual transaxle case.

(b) Using 2 screwdrivers and a hammer, remove the 2 shift fork shaft snap rings from the No. 3 gear shift fork shaft.



(c) Remove the reverse shift fork from the No. 3 gear shift fork shaft.

42. REMOVE NO. 2 GEAR SHIFT FORK

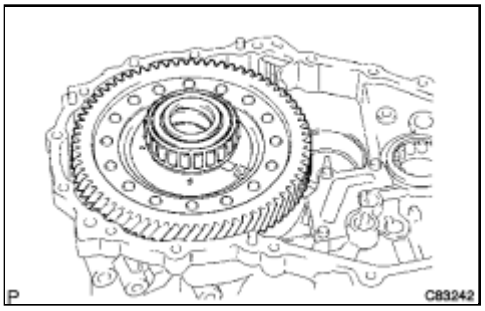


(a) Remove the No. 2 gear shift fork from the input shaft assembly.

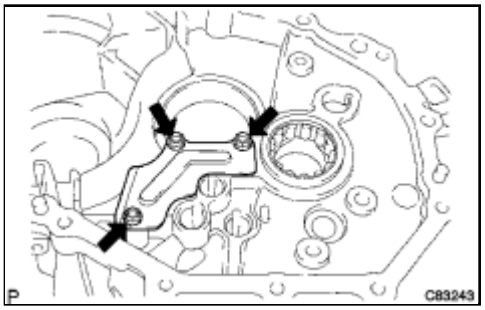
43. REMOVE INPUT SHAFT ASSEMBLY

(a) Tilt the output shaft, and then remove the input shaft from the manual transaxle case.

44. REMOVE OUTPUT SHAFT ASSEMBLY



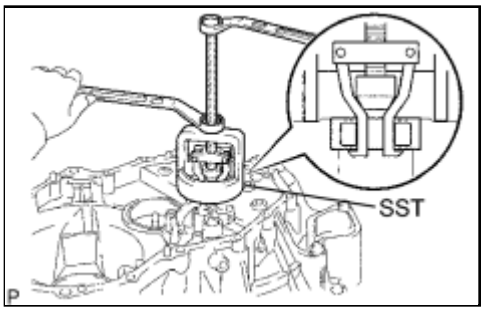
(a) Lift the differential case assembly while tilting the output shaft assembly.



(b) Remove the output shaft assembly from the manual transaxle case.

45. REMOVE DIFFERENTIAL CASE ASSEMBLY

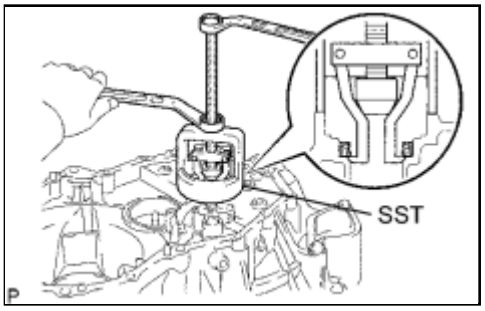
(a) Remove the differential case assembly from the manual transaxle case.



46. REMOVE MANUAL TRANSAXLE CASE RECEIVER

(a) Remove the 3 bolts and manual transaxle case receiver from the manual transaxle case.

47. REMOVE INPUT SHAFT FRONT BEARING



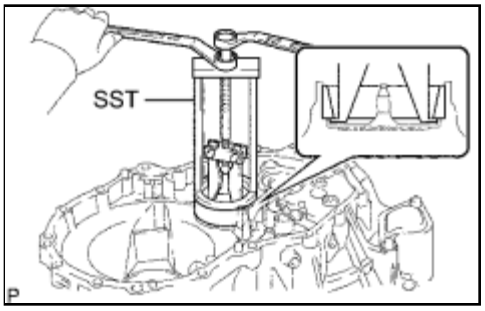
(a) Using SST, remove the input shaft front bearing (outer race) from the manual transaxle case.

SST: 09612-65014

09612-01040

09612-01050

48. REMOVE FRONT TRANSAXLE CASE COVER OIL SEAL



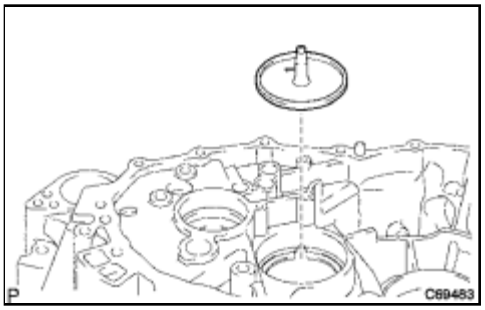
(a) Using SST, remove the front transaxle case cover oil seal from the manual transaxle case.

SST: 09612-65014

09612-01040

09612-01050

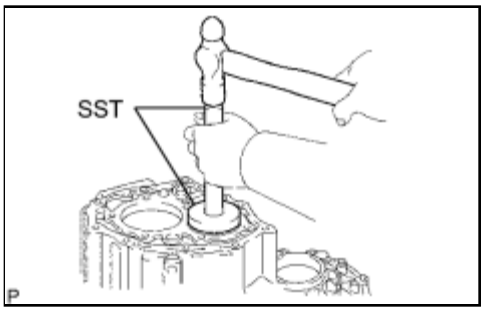
49. REMOVE OUTPUT SHAFT FRONT BEARING



(a) Using SST, remove the output shaft front bearing (outer race) from the manual transaxle case.

SST: 09387-00041

09387-02020



09387-02010

50. REMOVE OUTPUT SHAFT COVER

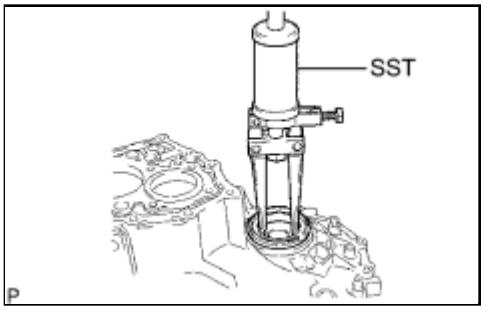
(a) Remove the output shaft cover from the manual transaxle case.

51. REMOVE OUTPUT SHAFT REAR BEARING

(a) Using SST and a hammer, remove the output shaft rear bearing from the manual transmission case (outer race).

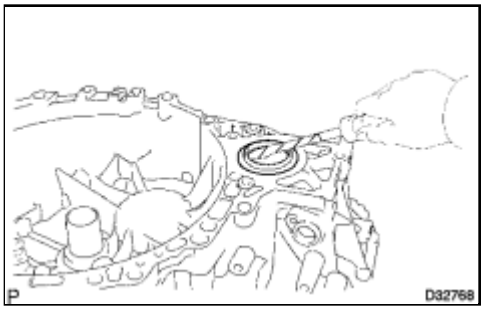
SST: 09950-60010

09951-00680



SST: 09950-70010

09951-07100

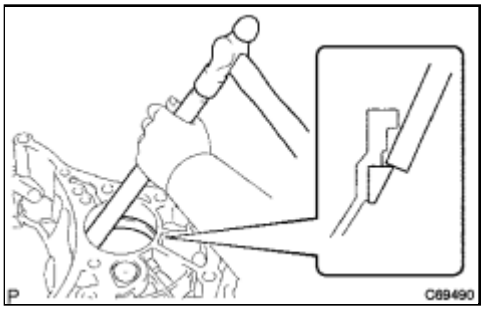


52. REMOVE TRANSMISSION CASE OIL SEAL

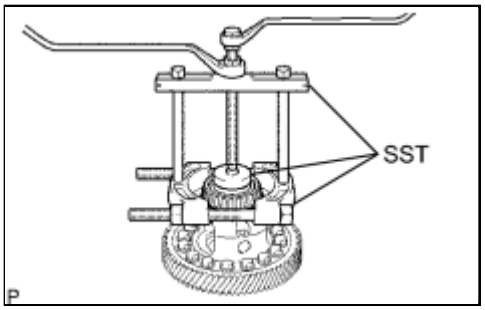
(a) Using SST, remove the transmission case oil seal from the manual transmission case.

SST: 09308-00010

53. REMOVE TRANSAXLE CASE OIL SEAL



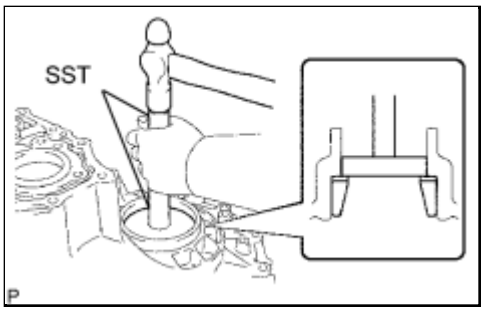
(a) Using a screwdriver, remove the transaxle case oil seal.



HINT:

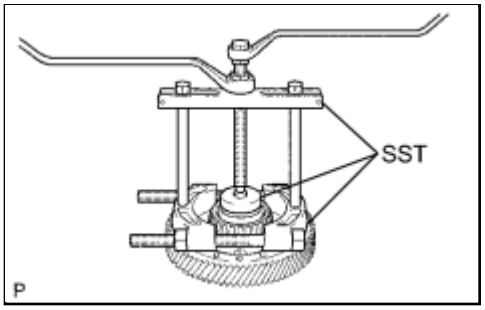
Tape the screwdriver tip before use to avoid damage.

54. REMOVE FRONT DIFFERENTIAL CASE FRONT TAPERED ROLLER BEARING



(a) Using a brass bar and a hammer, remove the front differential case front tapered roller bearing (outer race) from the manual transaxle case.

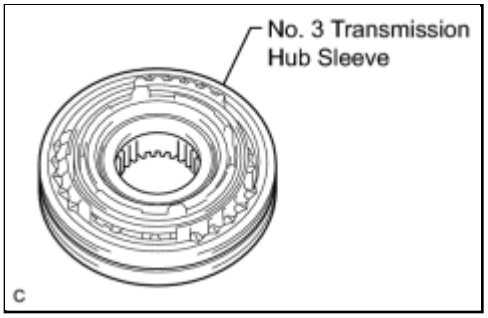
(b) Using SST, remove the front differential case front tapered roller bearing from the front differential case.



SST: 09950-00020
SST: 09950-00030
SST: 09950-40011
09957-04010
SST: 09950-60010
09951-00560

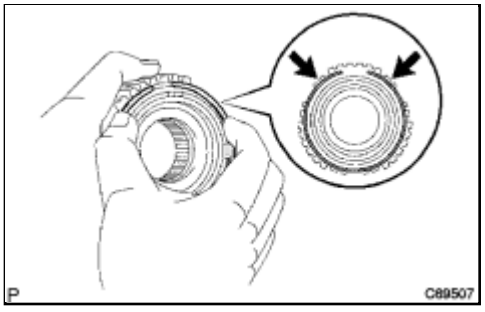
55. REMOVE FRONT DIFFERENTIAL CASE REAR TAPERED ROLLER BEARING

(a) Using SST and a hammer, remove the front differential case rear tapered roller bearing (outer race) and front differential case rear shim from the manual transmission case.



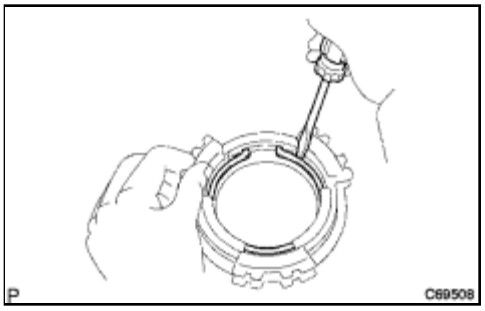
SST: 09950-60020
09951-00790
SST: 09950-70010
09951-07100

(b) Using SST, remove the front differential case rear tapered roller bearing (inner race) from the front differential case.



SST: 09950-60020
SST: 09950-00030
SST: 09950-40011
09957-04010
SST: 09950-60010
09951-00490

56. REMOVE NO. 3 TRANSMISSION HUB SLEEVE

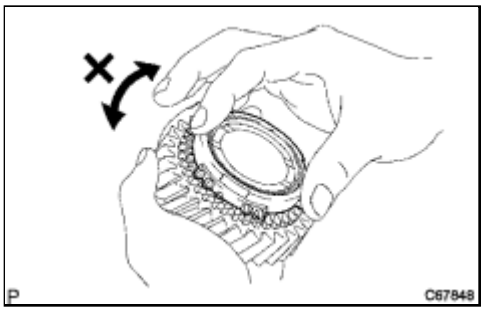


(a) Remove the No. 3 transmission hub sleeve from the No. 3 transmission clutch hub.

57. REMOVE NO. 3 SYNCHROMESH SHIFTING KEY SPRING

(a) Remove the 2 No. 3 synchromesh shifting key springs from the No. 3 transmission clutch hub while pushing on the No. 3 synchromesh shifting key spring.

58. REMOVE SYNCHRONIZER PULL RING



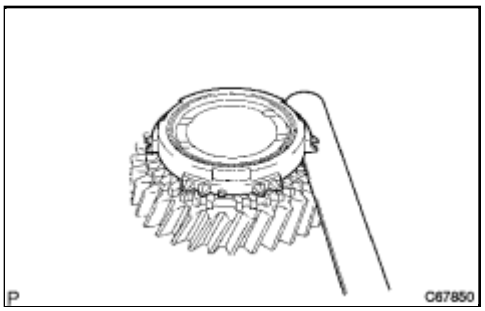
(a) Using a screwdriver, remove the synchronizer pull ring snap ring.

(b) Remove the synchronizer pull ring, No. 5 synchronizer ring outer, No. 5 synchronizer ring inner, and No. 5 synchronizer ring middle from the No. 5 synchronizer ring inner.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A1401QX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT NO. 3 SYNCHRONIZER RING



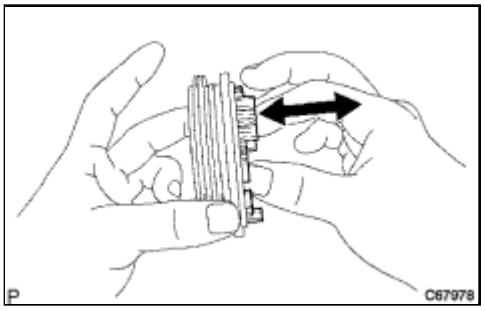
(a) Check for wear and damage.

(b) Coat the 5th gear cone with gear oil.

(c) Turn the synchronizer ring in one direction while pushing it against the 5th gear cone.

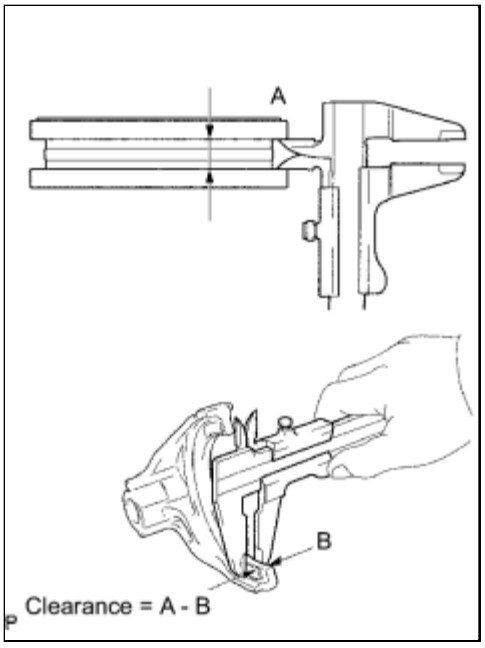
(d) Check that the ring locks.

If the synchronizer ring does not lock, replace the synchronizer ring.



(e) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.75 to 1.65 mm (0.0295 to 0.0649 in.)
Minimum clearance:
0.75 mm (0.0295 in.)

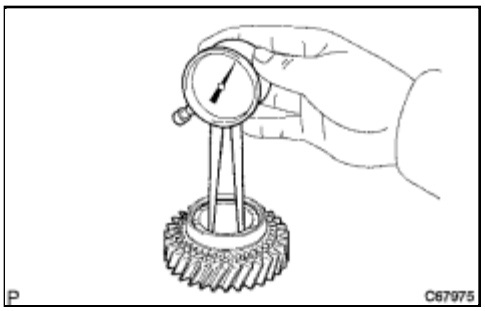


If the clearance is less than the minimum, replace the synchronizer ring.

2. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Check the sliding condition between the No. 3 transmission hub sleeve and the No. 3 transmission clutch hub.

(b) Check that the edges of the No. 3 transmission hub sleeve spline gear are not worn down.

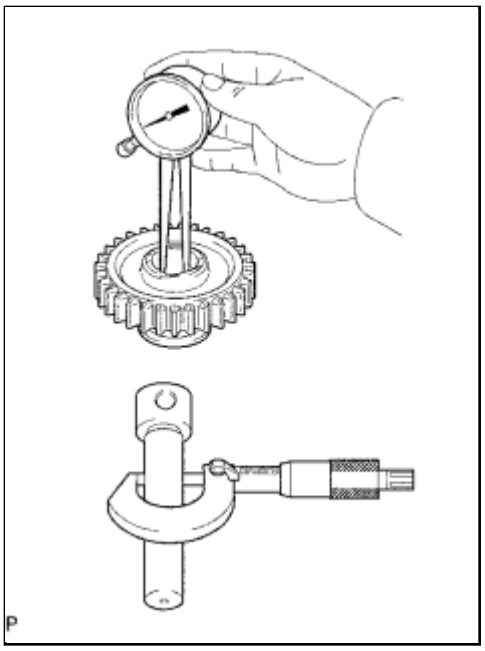


(c) Using a vernier caliper, measure the width of the No. 3 transmission hub sleeve groove (A) and the thickness of the claw part on the No. 3 gear shift fork (B), and calculate the clearance.

Standard clearance (A - B):
0.3 to 0.5 mm (0.0118 to 0.0197 in.)

If the clearance exceeds the standard, replace the No. 3 transmission hub sleeve and No. 3 gear shift fork.

3. INSPECT 5TH GEAR



(a) Using a caliper gauge, measure the inside diameter of the 5th gear.

Standard inside diameter:
29.915 to 29.931 mm (1.1778 to 1.1783 in.)
Maximum inside diameter:
29.931 mm (1.1783 in.)

If the inside diameter exceeds the maximum, replace the 5th gear.

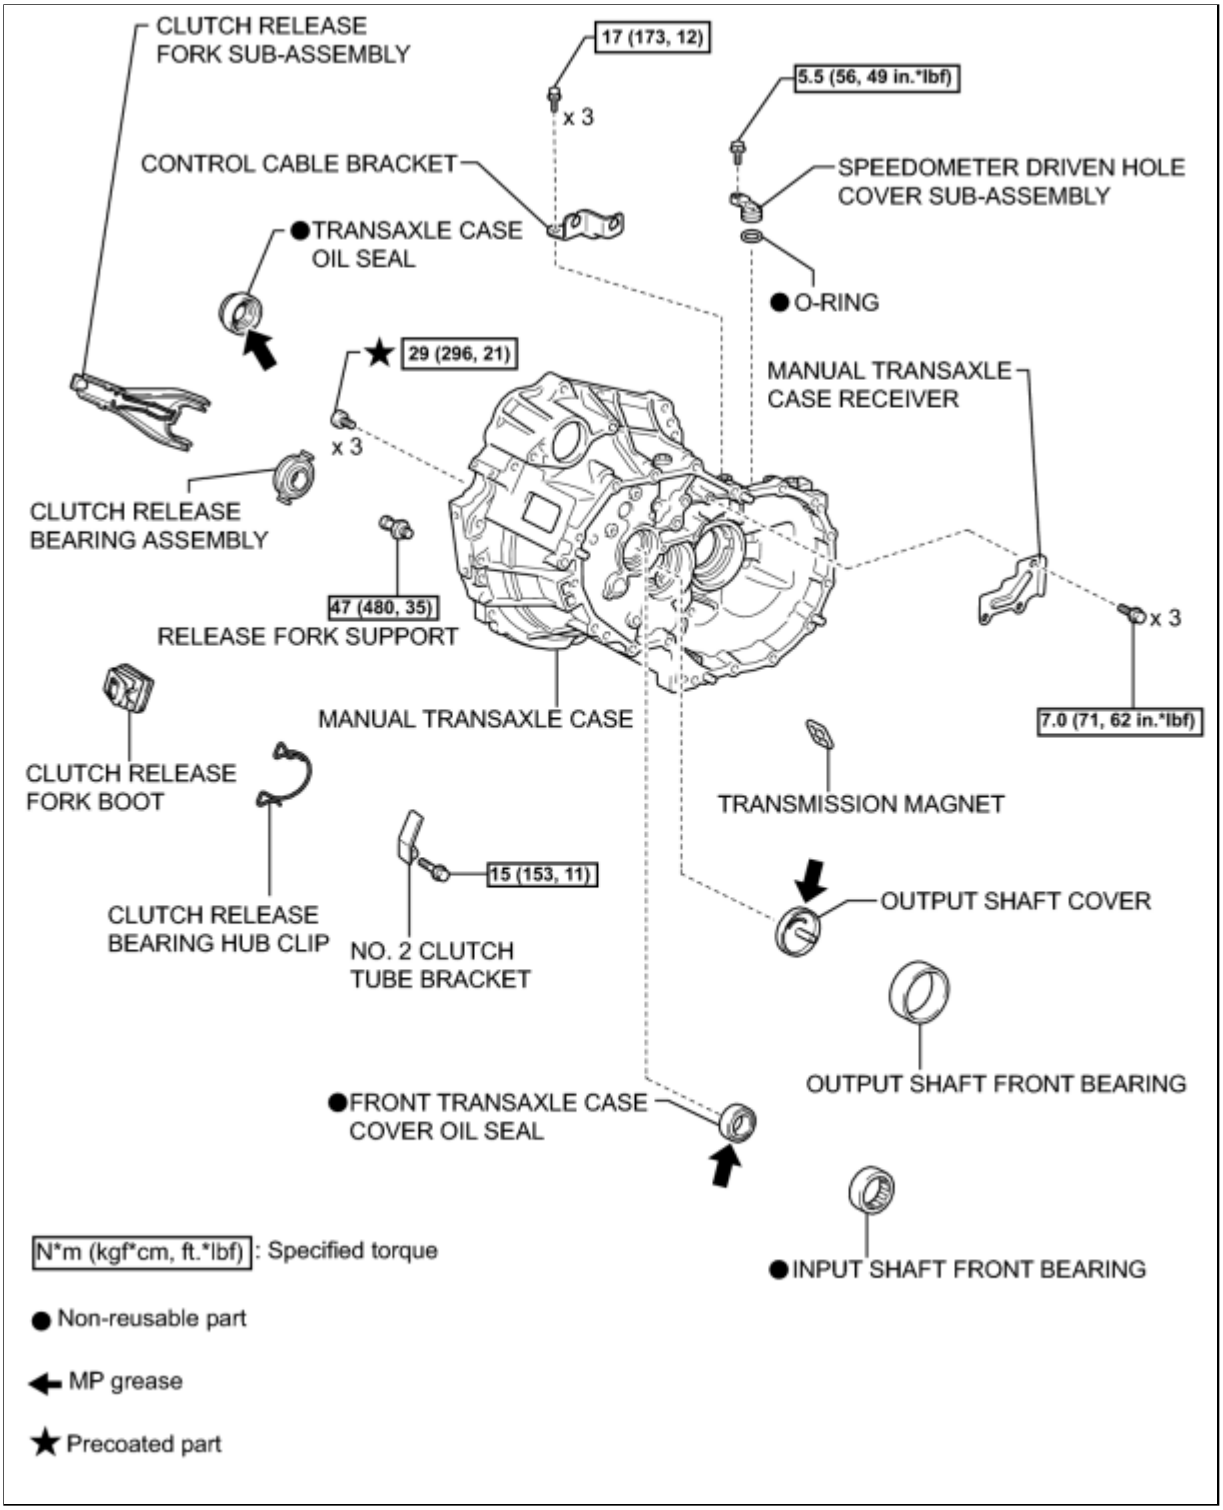
4. INSPECT REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Using a caliper gauge, inspect the reverse idler gear.

Standard inside diameter:
18.040 to 18.058 mm (0.7102 to 0.7109 in.)
Maximum inside diameter:
18.058 mm (0.7109 in.)

If the inside diameter exceeds the maximum, replace the reverse idler gear sub-assembly.

(b) Using a micrometer, inspect the reverse idler gear shaft.



Standard outer diameter:
17.966 to 17.984 mm (0.7073 to 0.7080 in.)
Minimum outer diameter:
17.966 mm (0.7073 in.)

If the outer diameter is less than the minimum, replace the reverse idler gear shaft.

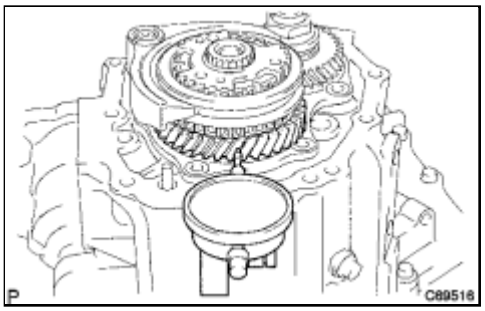
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: MANUAL TRANSAXLE UNIT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT 5TH GEAR THRUST CLEARANCE

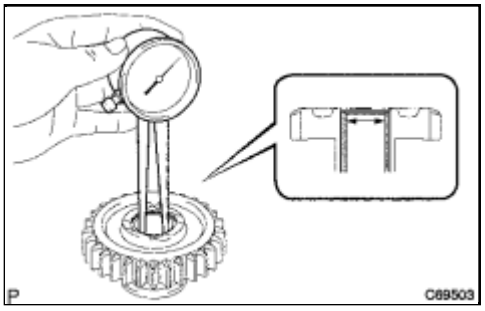


(a) Using a dial indicator, inspect the 5th gear thrust clearance.

Standard clearance:
0.10 to 0.57 mm (0.00394 to 0.0224 in.)

If the clearance is not as specified, replace the No. 3 transmission clutch hub, 5th gear, or input shaft rear radial ball bearing.

2. INSPECT 5TH GEAR RADIAL CLEARANCE



(a) Using a dial indicator, inspect the 5th gear radial clearance.

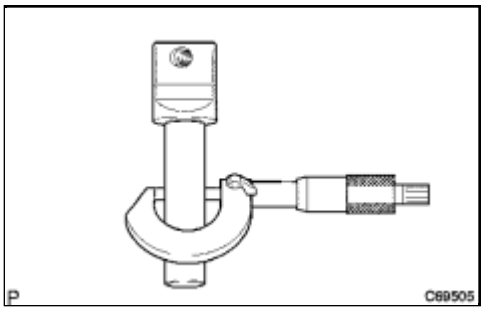
Standard clearance:
0.009 to 0.050 mm (0.000354 to 0.00197 in.)

If the clearance is not as specified, replace the 5th gear, 5th gear needle roller bearing, or input shaft.

3. INSPECT REVERSE IDLER GEAR SUB-ASSEMBLY

(a) Using a caliper gauge, measure the inside diameter of the reverse idler gear.

Inside Diameter:

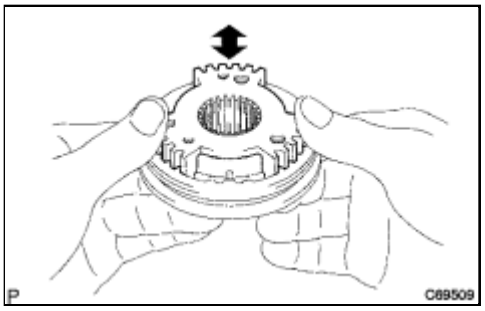


STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
20.056 to 20.074 (0.7896 to 0.7903)	20.074 (0.7903)

If the inside diameter exceeds the maximum, replace the

reverse idler gear.

(b) Using a micrometer, measure the outside diameter of the reverse idler gear shaft.



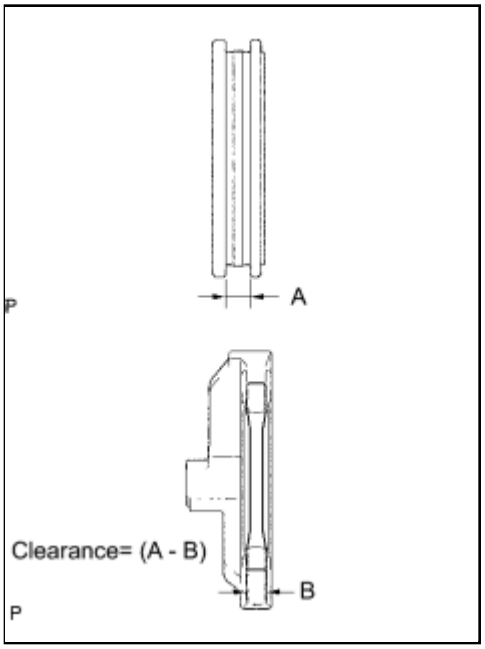
Outside Diameter:

STANDARD OUTSIDE DIAMETER MM (IN.)	MINIMUM OUTSIDE DIAMETER MM (IN.)
19.984 to 20.000 (0.7868 to 0.7874)	19.984 (0.7868)

If the outside diameter is less than the minimum, replace the reverse idler gear shaft.

4. INSPECT NO. 3 TRANSMISSION CLUTCH HUB

(a) Inspect the sliding condition between the No. 3 transmission clutch hub and the No. 3 transmission hub sleeve.

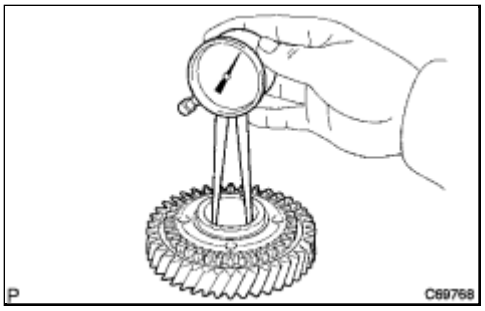


(b) Inspect the tip of the spline gear on the No. 3 transmission hub sleeve for wear.

5. INSPECT NO. 3 TRANSMISSION HUB SLEEVE

(a) Using a vernier caliper, measure the width of the No. 3 transmission hub sleeve groove and the thickness of the claw on the No. 3 gear shift fork, and calculate the clearance.

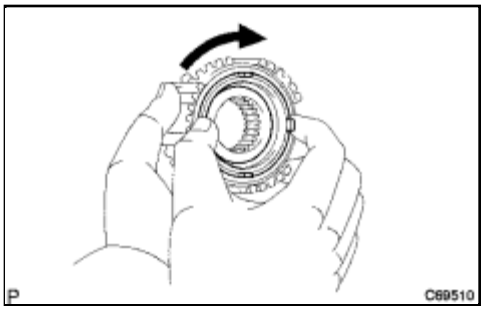
Standard clearance:
0.15 to 0.35 mm (0.00591 to 0.0138 in.) {A - B}



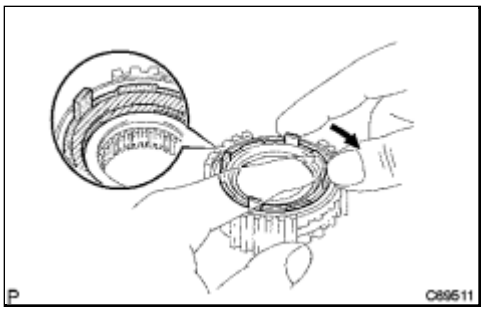
If the clearance is not as specified, replace the No. 3 transmission hub sleeve and No. 3 gear shift fork with new ones.

6. INSPECT 5TH GEAR

(a) Using a caliper gauge, measure the inside diameter of the 5th gear.



Inside Diameter:

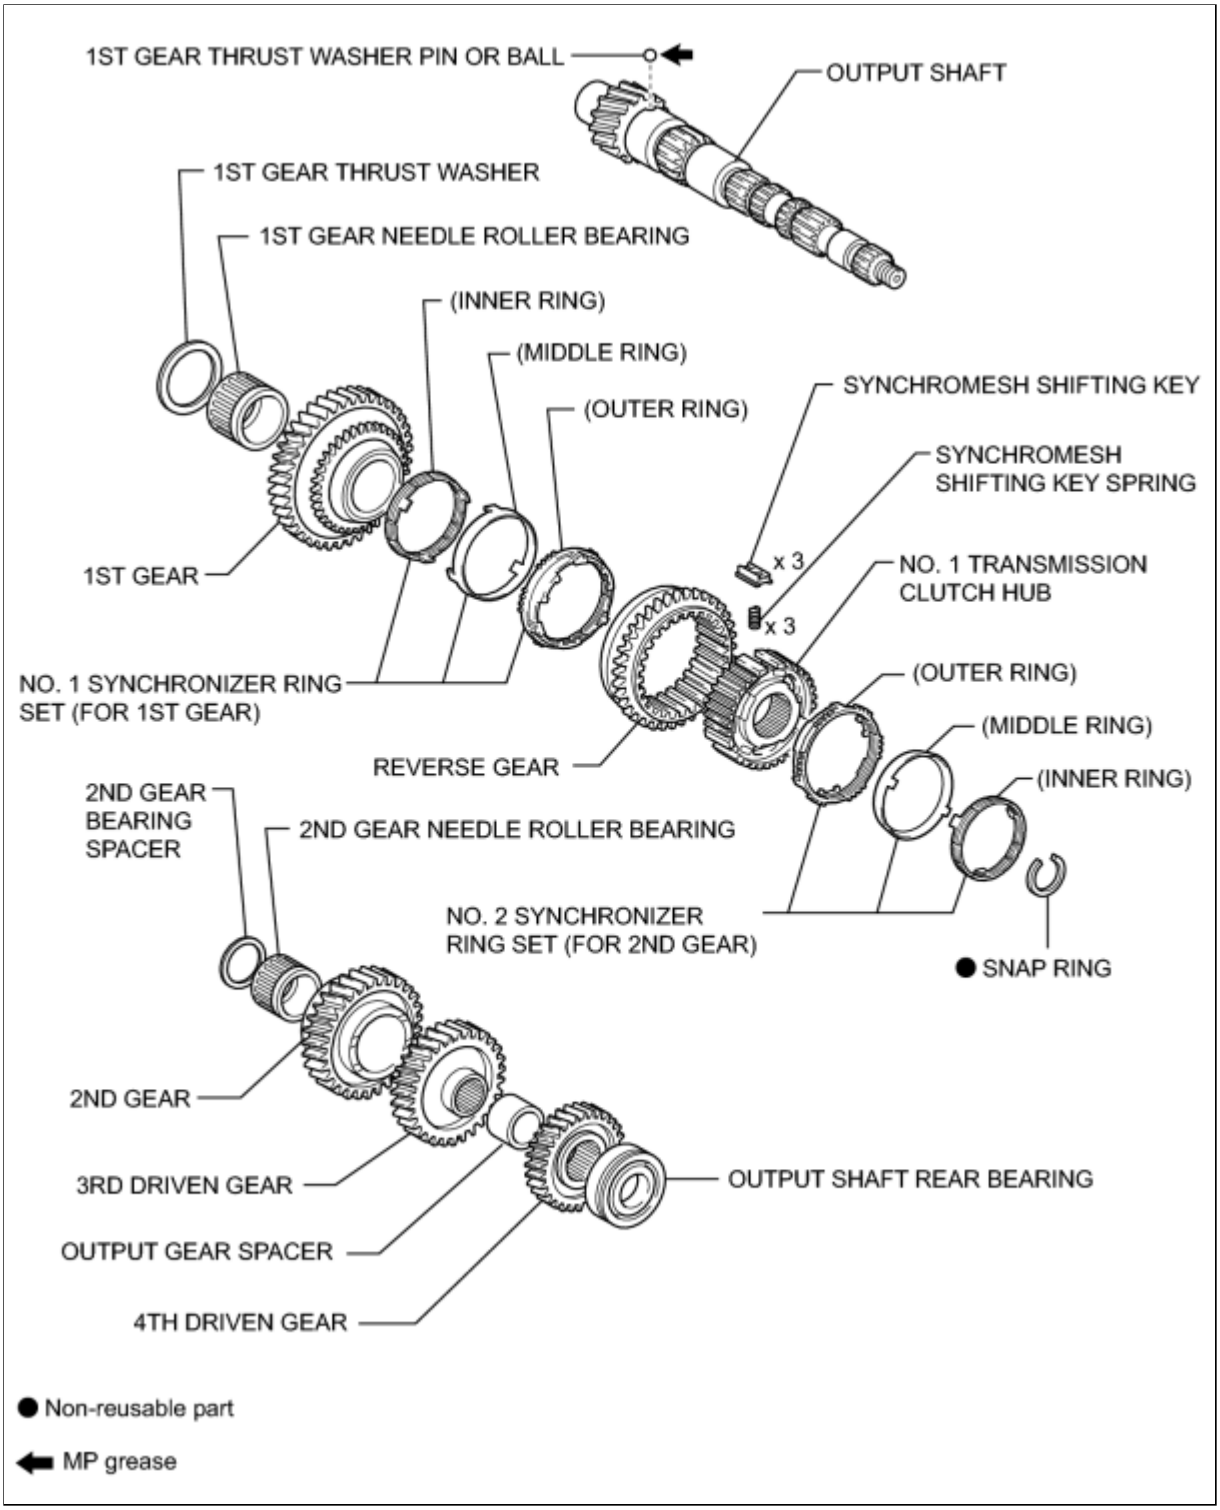


STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
34.981 to 34.997 (1.3772 to 1.3778)	34.997 (1.3778)

If the inside diameter exceeds the maximum, replace the 5th gear.

7. INSPECT NO. 5 SYNCHRONIZER RING MIDDLE

(a) Check that the No. 5 synchronizer ring middle rotates smoothly.



(b) Check that the No. 5 synchronizer ring middle does not rotate while pushing it against the No. 3 clutch hub.

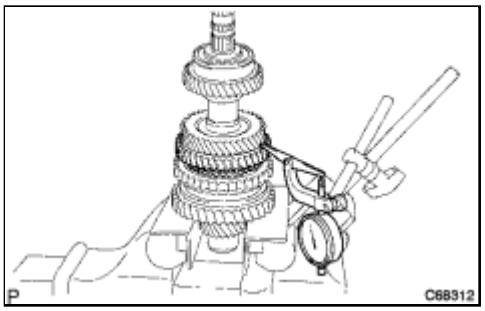
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY

1. INSPECT 1ST GEAR THRUST CLEARANCE

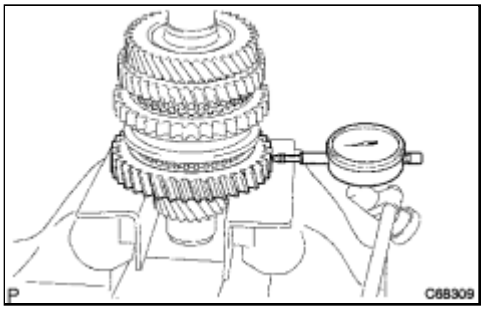


(a) Using a feeler gauge, measure the 1st gear thrust clearance.

Standard clearance:
0.10 to 0.40 mm (0.00394 to 0.0157 in.)
Maximum clearance:
0.40 mm (0.0157 in.)

If the clearance exceeds the maximum, replace the 1st gear thrust washer, 1st gear or No. 1 transmission clutch hub.

2. INSPECT 2ND GEAR THRUST CLEARANCE

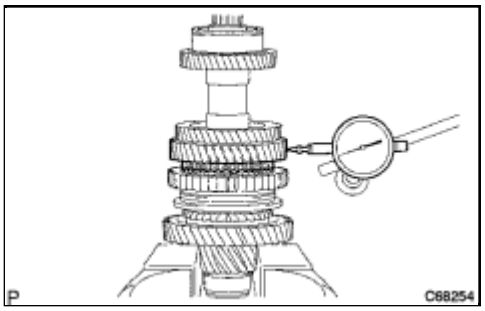


(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:
0.10 to 0.55 mm (0.00394 to 0.0217 in.)
Maximum clearance:
0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 1 transmission clutch hub, 2nd gear or 3rd driven gear.

3. INSPECT 1ST GEAR RADIAL CLEARANCE



(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:
NSK made bearing
0.015 to 0.056 mm (0.000591 to 0.00220 in.)
JTEKT made bearing
0.015 to 0.058 mm (0.000591 to 0.00228 in.)
Maximum clearance:
NSK made bearing
0.056 mm (0.00220 in.)
JTEKT made bearing

0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 1st gear, 1st gear needle roller bearing or output shaft.

4. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:

NSK made bearing

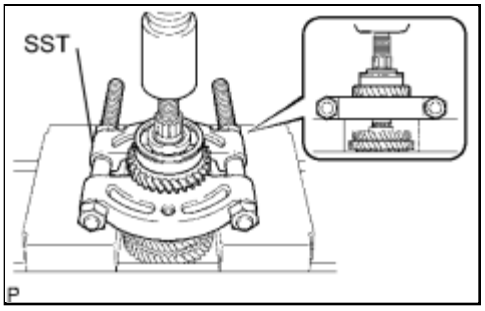
0.015 to 0.056 mm (0.000591 to 0.00220 in.)

JTEKT made bearing

0.015 to 0.058 mm (0.000591 to 0.00228 in.)

Maximum clearance:

NSK made bearing



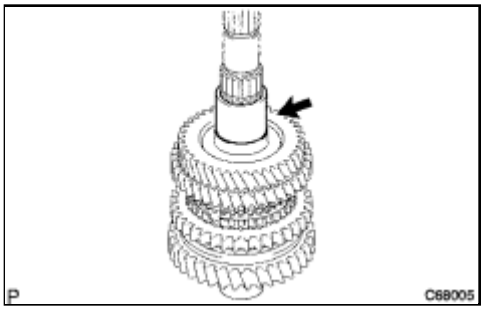
0.056 mm (0.00220 in.)

JTEKT made bearing

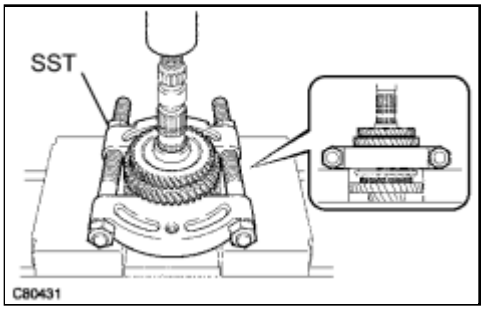
0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 2nd gear, 2nd gear needle roller bearing or input shaft.

5. REMOVE 4TH DRIVEN GEAR



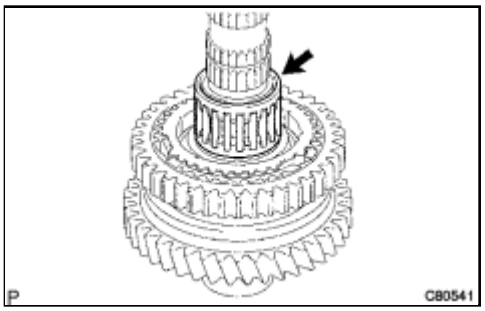
(a) Using SST and a press, remove the output shaft rear bearing and 4th driven gear from the output shaft.



SST: 09950-00020

6. REMOVE OUTPUT GEAR SPACER

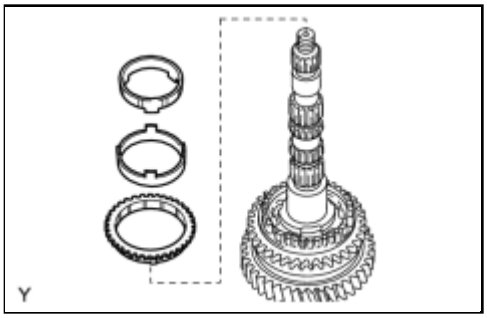
(a) Remove the output gear spacer from the output shaft.



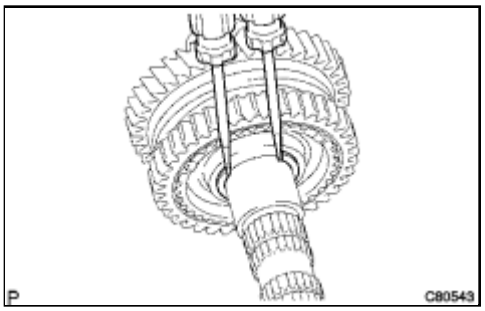
7. REMOVE 2ND GEAR

(a) Using SST and a press, remove the 3rd driven gear with the 2nd gear from the output shaft.

SST: 09950-00020



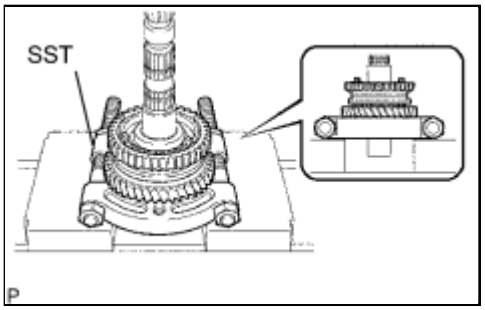
8. REMOVE 2ND GEAR NEEDLE ROLLER BEARING



(a) Remove the 2nd gear needle roller bearing and 2nd gear bearing spacer from the output shaft.

9. REMOVE NO. 2 SYNCHRONIZER RING SET (FOR 2ND GEAR)

(a) Remove the No. 2 synchronizer ring set from the output shaft.

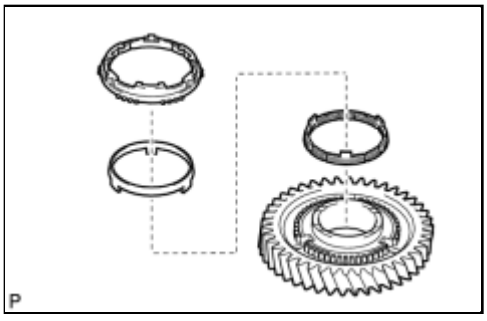


10. REMOVE 1ST GEAR

(a) Using 2 screwdrivers and a hammer, remove the No. 1 clutch hub shaft snap ring from the output shaft.

HINT:

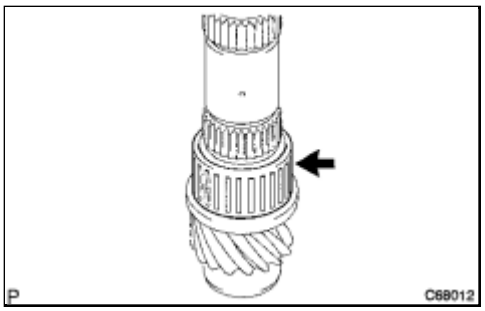
Use a piece of cloth to keep the shaft snap ring from flying off.



(b) Using SST and a press, remove the No. 1 clutch hub assembly and 1st gear from the output shaft.

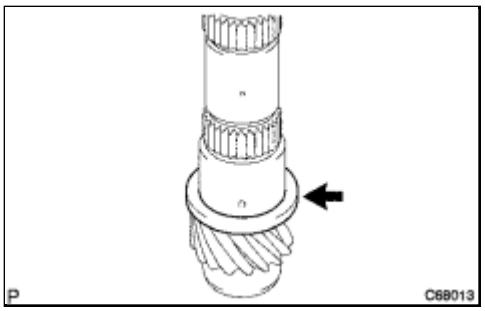
SST: 09950-00020

NOTICE:



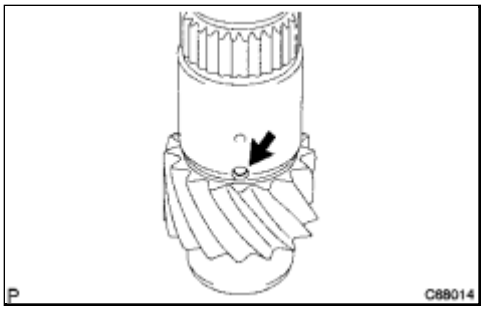
- Do not tighten SST excessively.
- Support the output shaft by hand to prevent it from dropping off.

11. REMOVE NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)



(a) Remove the No. 1 synchronizer ring set from the 1st gear.

12. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

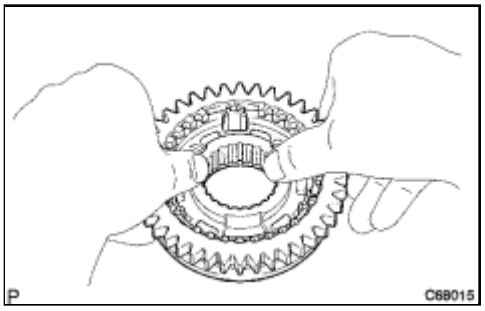


(a) Remove the 1st gear needle roller bearing from the output shaft.

13. REMOVE 1ST GEAR THRUST WASHER

(a) Remove the 1st gear thrust washer from the output shaft.

14. REMOVE 1ST GEAR THRUST WASHER PIN OR BALL

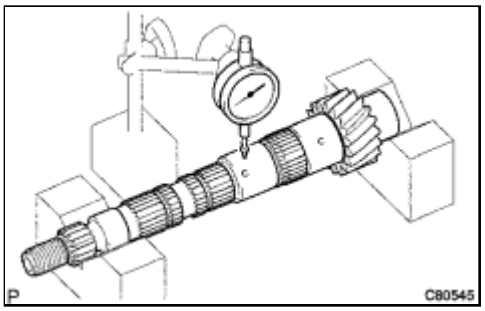


(a) Remove the 1st gear thrust washer pin or ball from the output shaft.

15. REMOVE REVERSE GEAR

(a) Remove the reverse gear, 3 synchromesh shifting keys, and 3 synchromesh shifting key springs from the No. 1 transmission clutch hub.

NOTICE:

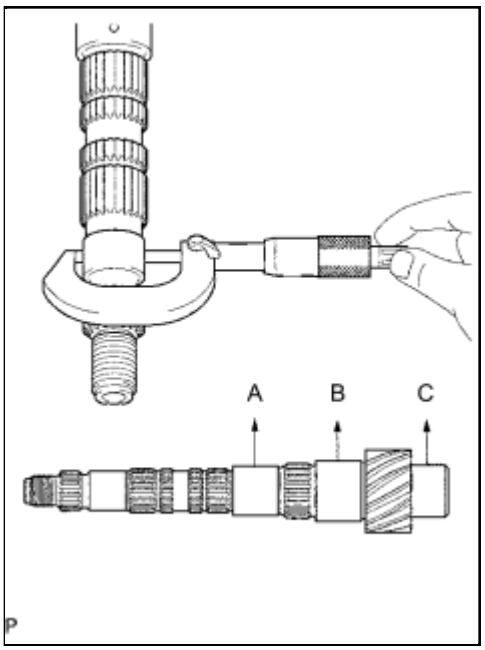


Use a piece of cloth to keep the shifting keys and shifting key springs from flying off.

P
C68015

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A0T01WX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT OUTPUT SHAFT

(a) Using a dial indicator and 2 V-blocks, check the output shaft runout.

Maximum runout:
0.015 mm (0.000591 in.)

If the runout exceeds the maximum, replace the output shaft.

(b) Using a micrometer, measure the outer diameter of the output shaft journal surface at the locations indicated.

Standard outer diameter:

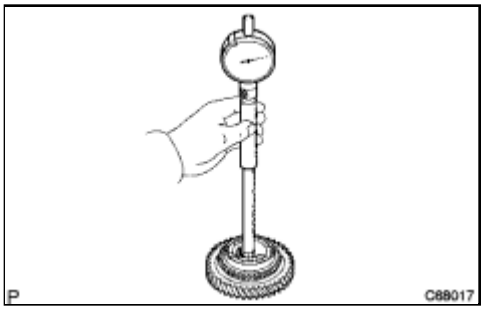
Part A

31.985 to 32.000 mm (1.2592 to 1.2598 in.)

Part B

37.985 to 38.000 mm (1.4955 to 1.4961 in.)

Part C

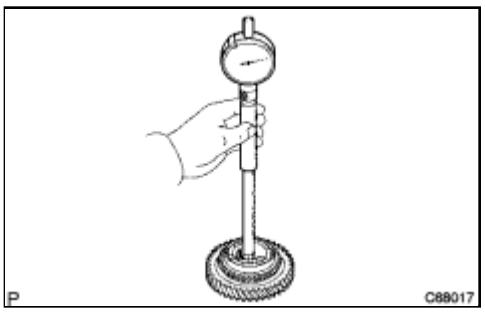


32.985 to 33.000 mm (1.2986 to 1.2992 in.)

If any of the outer diameters are less than the minimum, replace the output shaft.

2. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 2nd gear.

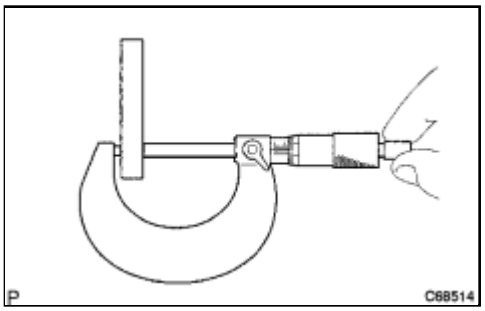


Standard inside diameter:
38.015 to 38.031 mm (1.4967 to 1.4972 in.)
Maximum inside diameter:

38.031 mm (1.4972 in.)

If the inside diameter exceeds the maximum, replace the 1st gear.

3. INSPECT 1ST GEAR

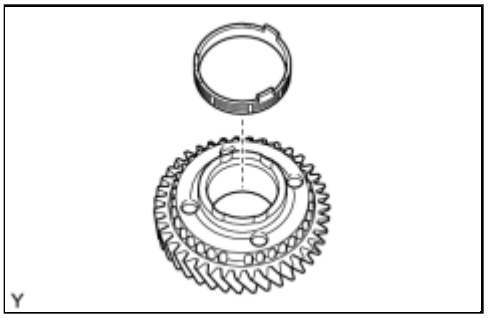


(a) Using a cylinder gauge, measure the inside diameter of the 1st gear.

Standard inside diameter:
44.015 to 44.031 mm (1.7328 to 1.7335 in.)
Maximum inside diameter:
44.031 mm (1.7335 in.)

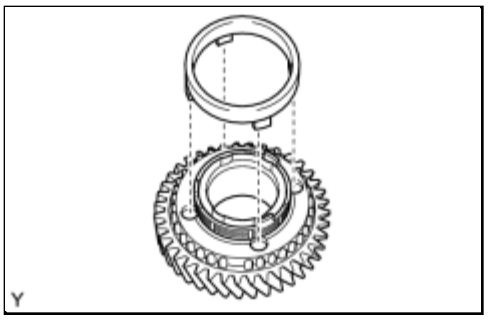
If the inside diameter exceeds the maximum, replace the 1st gear.

4. INSPECT 1ST GEAR THRUST WASHER



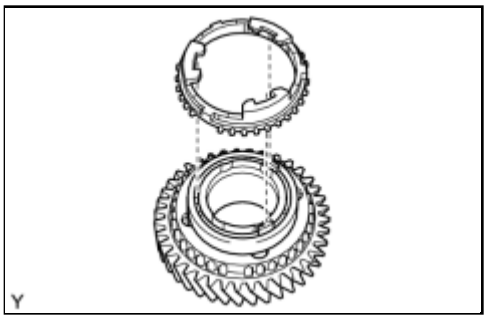
(a) Using a micrometer, measure the 1st gear thrust washer.

Standard thickness:
5.975 to 6.025 mm (0.2352 to 0.2372 in.)
Minimum thickness:
5.975 mm (0.2352 in.)

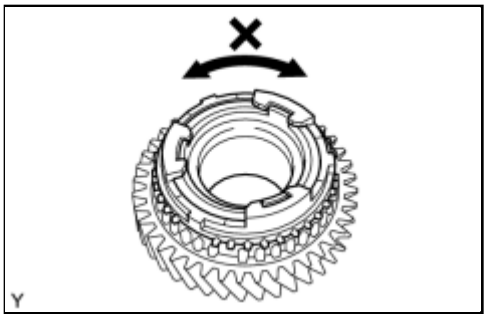


If the thickness is less than the minimum, replace the 1st gear thrust washer.

5. INSPECT NO. 2 SYNCHRONIZER RING SET (FOR 2ND GEAR)



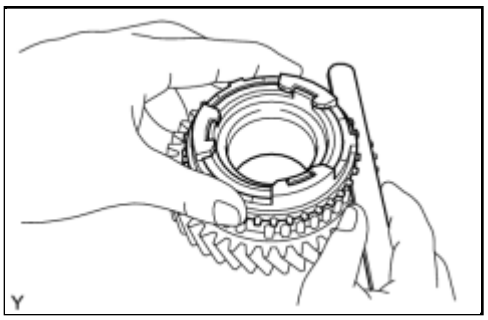
(a) Coat the 2nd gear cone and No. 2 synchronizer ring set (inner ring, middle ring, and outer ring) with gear oil.



(b) Install the inner ring onto the 2nd gear.

(c) Install the middle ring onto the 2nd gear.

(d) Install the outer ring onto the 2nd gear.

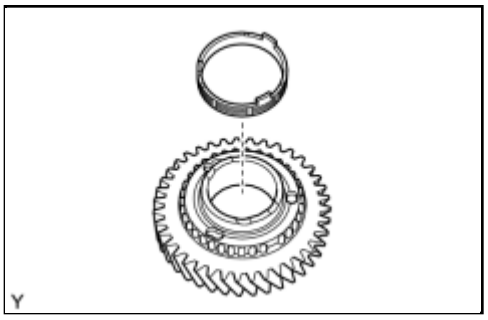


(e) Check for wear and damage.

(f) Turn the synchronizer ring set in one direction while pushing it against the 2nd gear cone.

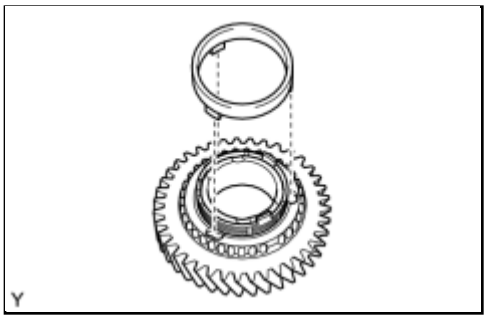
(g) Check that the ring set locks.

If the synchronizer ring set does not lock, replace the synchronizer ring set.



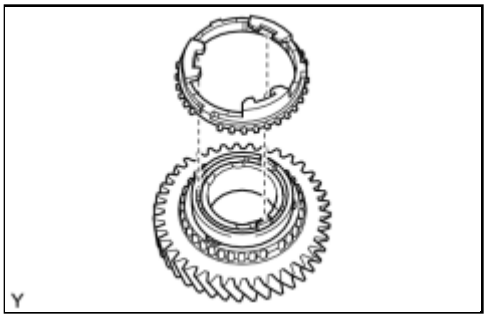
(h) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.60 to 1.40 mm (0.0236 to 0.0551 in.)
Minimum clearance:
0.60 mm (0.0236 in.)

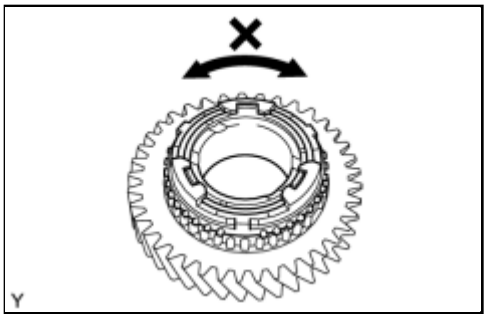


If the clearance is less than the minimum, replace the synchronizer ring set.

6. INSPECT NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)



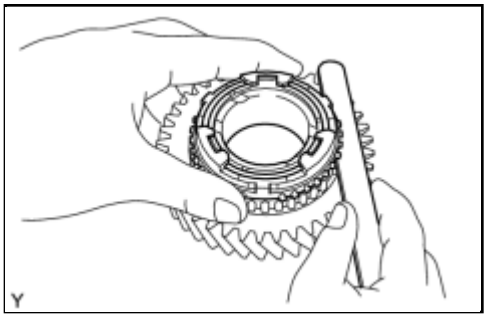
(a) Coat the 1st gear cone and No. 1 synchronizer ring set (inner ring, middle ring, and outer ring) with gear oil.



(b) Install the inner ring onto the 1st gear.

(c) Install the middle ring onto the 1st gear.

(d) Install the outer ring onto the 1st gear.



(e) Check for wear and damage.

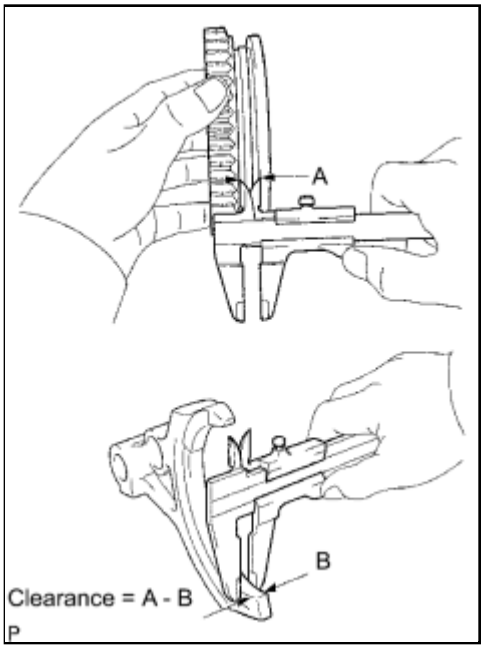
(f) Turn the synchronizer ring set in one direction while pushing it against the 1st gear cone.

(g) Check that the ring set locks.

If the synchronizer ring set does not lock, replace the synchronizer ring set.

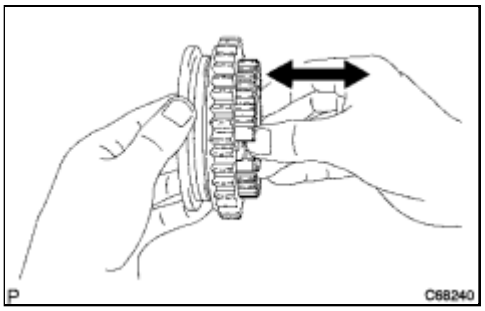
(h) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.60 to 1.40 mm (0.0236 to 0.0551 in.)
Minimum clearance:
0.60 mm (0.0236 in.)



If the clearance is less than the minimum, replace the synchronizer ring set.

7. INSPECT REVERSE GEAR

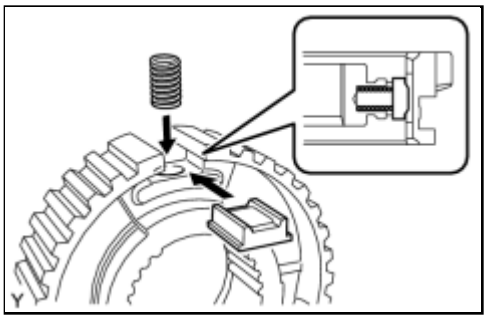


(a) Using a vernier caliper, measure the width of the reverse gear groove (A) and the thickness of the claw part on the reverse shift fork (B), and calculate the clearance.

Standard clearance (A - B):
0.15 to 0.35 mm (0.00591 to 0.0138 in.)

If the clearance is out of specification, replace the reverse gear and reverse shift fork.

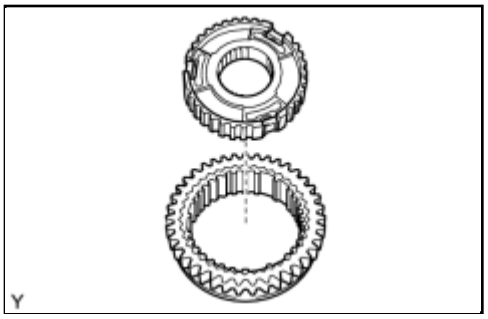
8. INSPECT NO. 1 TRANSMISSION CLUTCH HUB



(a) Check that the No. 1 transmission clutch hub and reverse gear slide smoothly.

(b) Check that the edges of the reverse gear spline gear are not worn down.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A0V01WX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: REASSEMBLY (2010 Corolla)		

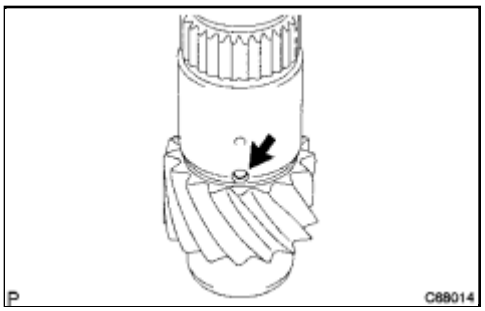


REASSEMBLY

1. INSTALL REVERSE GEAR

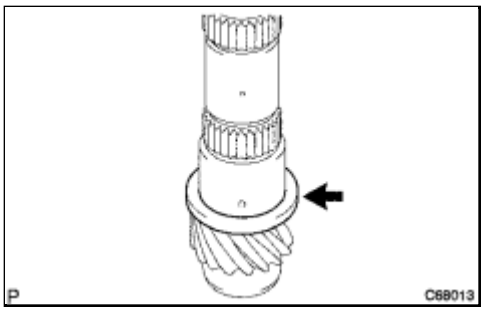
(a) Coat the reverse gear and No. 1 transmission clutch hub with gear oil.

(b) Install the 3 synchromesh shifting key springs and 3 synchromesh keys to the No. 1 transmission clutch hub.



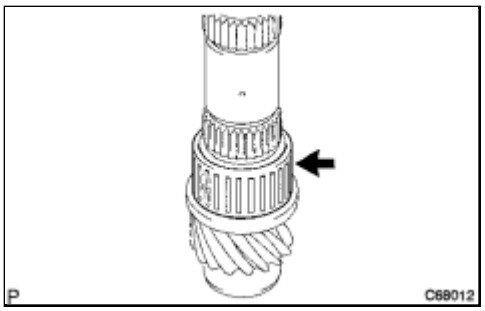
(c) Install the reverse gear onto the No. 1 transmission clutch hub assembly.

NOTICE:



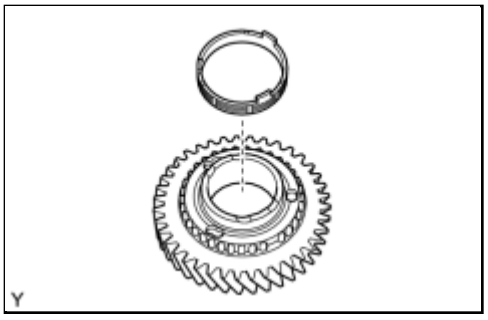
Position the reverse gear and No. 1 transmission clutch hub correctly as shown in the illustration.

2. INSTALL 1ST GEAR THRUST WASHER PIN OR BALL



(a) Coat the 1st gear thrust washer pin or ball with MP grease and install it onto the output shaft.

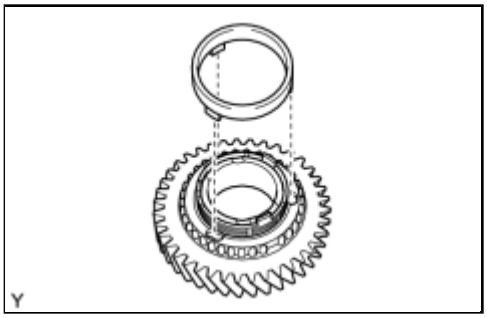
3. INSTALL 1ST GEAR THRUST WASHER



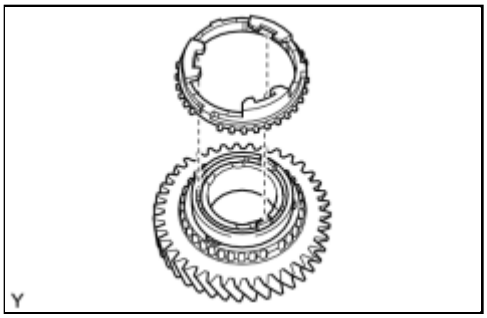
(a) Coat the 1st gear thrust washer with gear oil and install it onto the output shaft.

4. INSTALL 1ST GEAR NEEDLE ROLLER BEARING

(a) Coat the 1st gear needle roller bearing with gear oil and install it onto the output shaft.

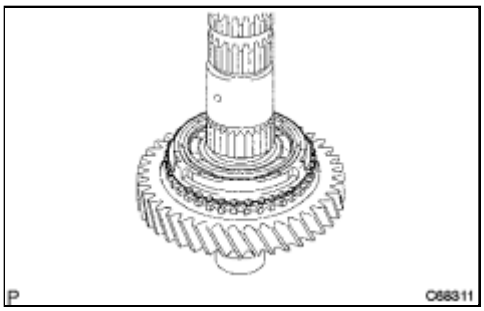


5. INSTALL NO. 1 SYNCHRONIZER RING SET (FOR 1ST GEAR)

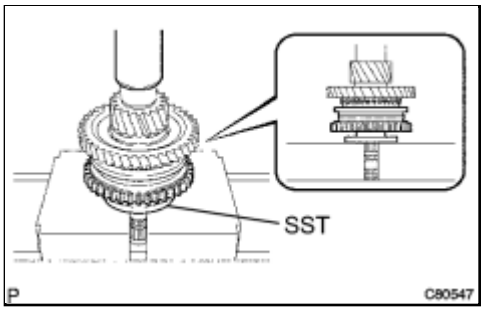


(a) Coat the 1st gear cone and No. 1 synchronizer ring set (inner ring, middle ring, and outer ring) with gear oil.

(b) Install the inner ring onto the 1st gear.



(c) Install the middle ring onto the 1st gear.



(d) Install the outer ring onto the 1st gear.

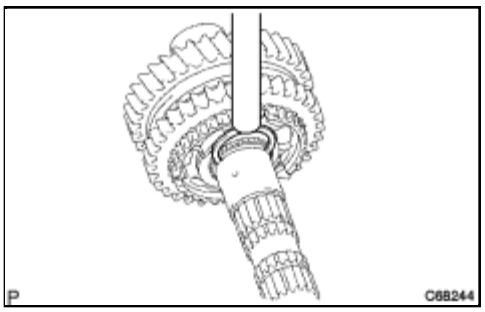
6. INSTALL 1ST GEAR

(a) Coat the 1st gear with gear oil and install it onto the output shaft.

7. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

(a) Using SST and a press, install the No. 1 transmission clutch hub onto the output shaft.

SST: 09316-60011



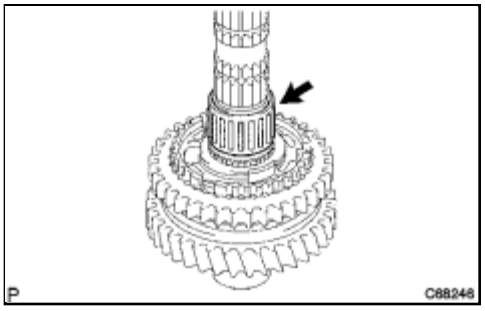
09316-00031

HINT:

- Make sure that the 1st gear can be turned.
- While checking that the 1st gear thrust washer pin or ball is inserted into the groove of the 1st gear thrust washer, press and fit the No. 1 clutch hub.

(b) Select a snap ring that will allow minimum axial play.

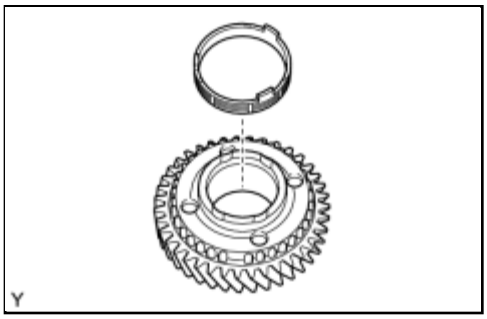
Standard clearance:
0.1 mm (0.00394 in.) or less
Snap Ring Thickness:



MARK	THICKNESS MM (IN.)	MARK	THICKNESS MM (IN.)
A	2.50 (0.0984)	D	2.68 (0.1055)
B	2.56 (0.1008)	E	2.74 (0.1079)
C	2.62 (0.1031)	F	2.80 (0.1102)

(c) Using a brass bar and a hammer, install the snap ring onto the output shaft.

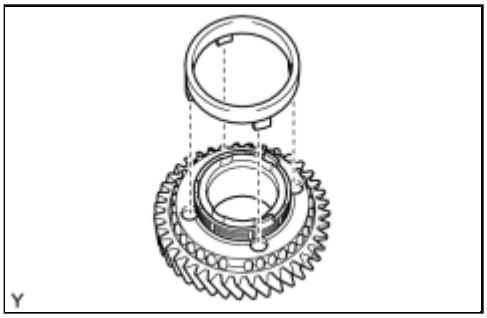
NOTICE:



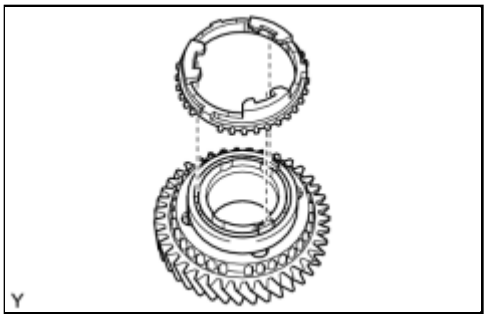
Do not damage the journal surface of the output shaft.

8. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing and 2nd gear bearing spacer with gear oil, and install them onto the output shaft.

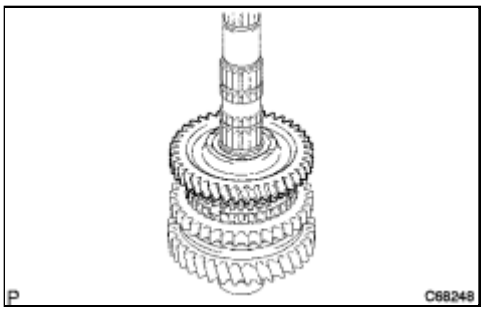


9. INSTALL NO. 2 SYNCHRONIZER RING SET (FOR 2ND GEAR)

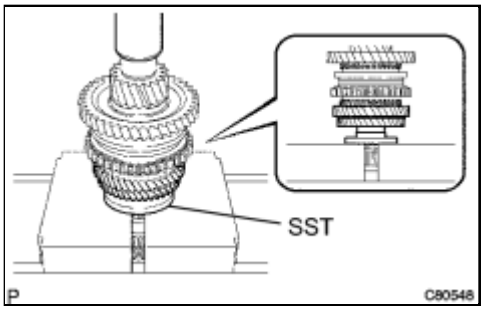


(a) Coat the 2nd gear cone and No. 2 synchronizer ring set (inner ring, middle ring, and outer ring) with gear oil.

(b) Install the inner ring onto the 2nd gear.



(c) Install the middle ring onto the 2nd gear.

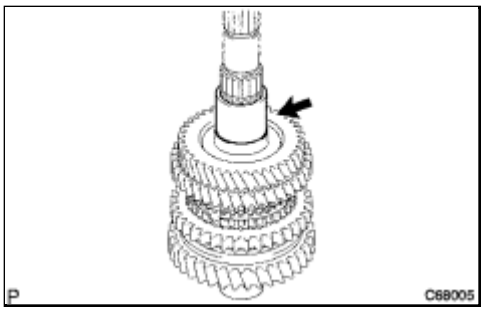


(d) Install the outer ring onto the 2nd gear.

10. INSTALL 2ND GEAR

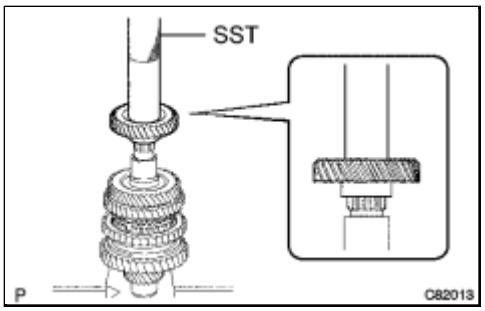
(a) Coat the 2nd gear with gear oil and install it onto the output shaft.

11. INSTALL 3RD DRIVEN GEAR



(a) Using SST and a press, install the 3rd driven gear onto the output shaft.

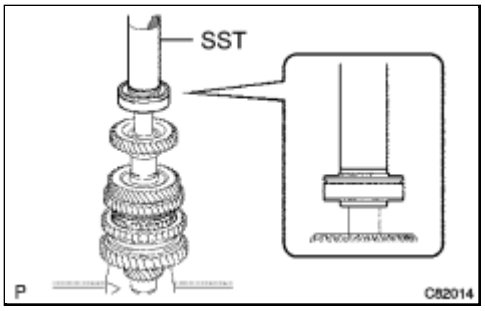
SST: 09316-60011



09316-00031

12. INSTALL OUTPUT GEAR SPACER

(a) Install the output gear spacer onto the output shaft.



13. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, install the 4th driven gear onto the output shaft.

SST: 09612-22011

14. INSTALL OUTPUT SHAFT REAR BEARING

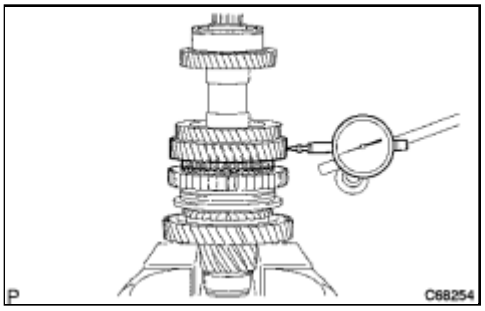
(a) Using SST and a press, install the output shaft rear bearing onto the output shaft.

SST: 09612-22011

15. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.

Standard clearance:



NSK made bearing

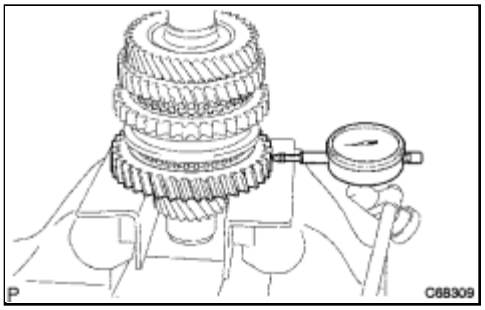
0.015 to 0.056 mm (0.000591 to 0.00220 in.)

JTEKT made bearing

0.015 to 0.058 mm (0.000591 to 0.00228 in.)

Maximum clearance:

NSK made bearing



0.056 mm (0.00220 in.)

JTEKT made bearing

0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 2nd gear, 2nd gear needle roller bearing or output shaft.

16. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard clearance:

NSK made bearing

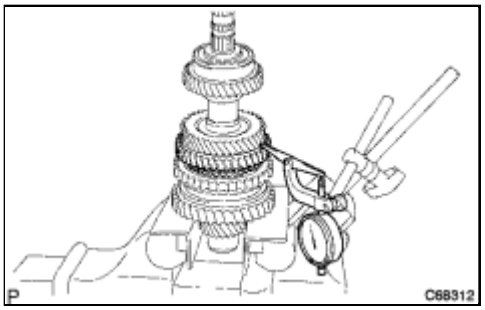
0.015 to 0.056 mm (0.000591 to 0.00220 in.)

JTEKT made bearing

0.015 to 0.058 mm (0.000591 to 0.00228 in.)

Maximum clearance:

NSK made bearing



0.056 mm (0.00220 in.)

JTEKT made bearing

0.058 mm (0.00228 in.)

If the clearance exceeds the maximum, replace the 1st gear, 1st gear needle roller bearing or input shaft.

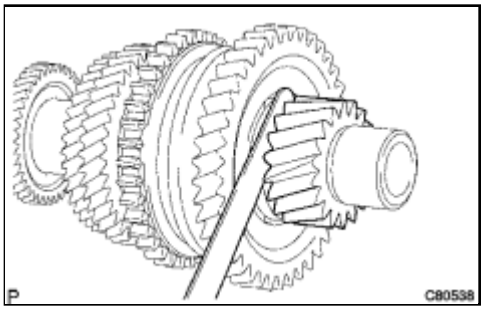
17. INSPECT 2ND GEAR THRUST CLEARANCE

(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:

0.10 to 0.55 mm (0.00394 to 0.0217 in.)

Maximum clearance:



0.55 mm (0.0217 in.)

If the clearance exceeds the maximum, replace the No. 1 transmission clutch hub, 2nd gear or 3rd driven gear.

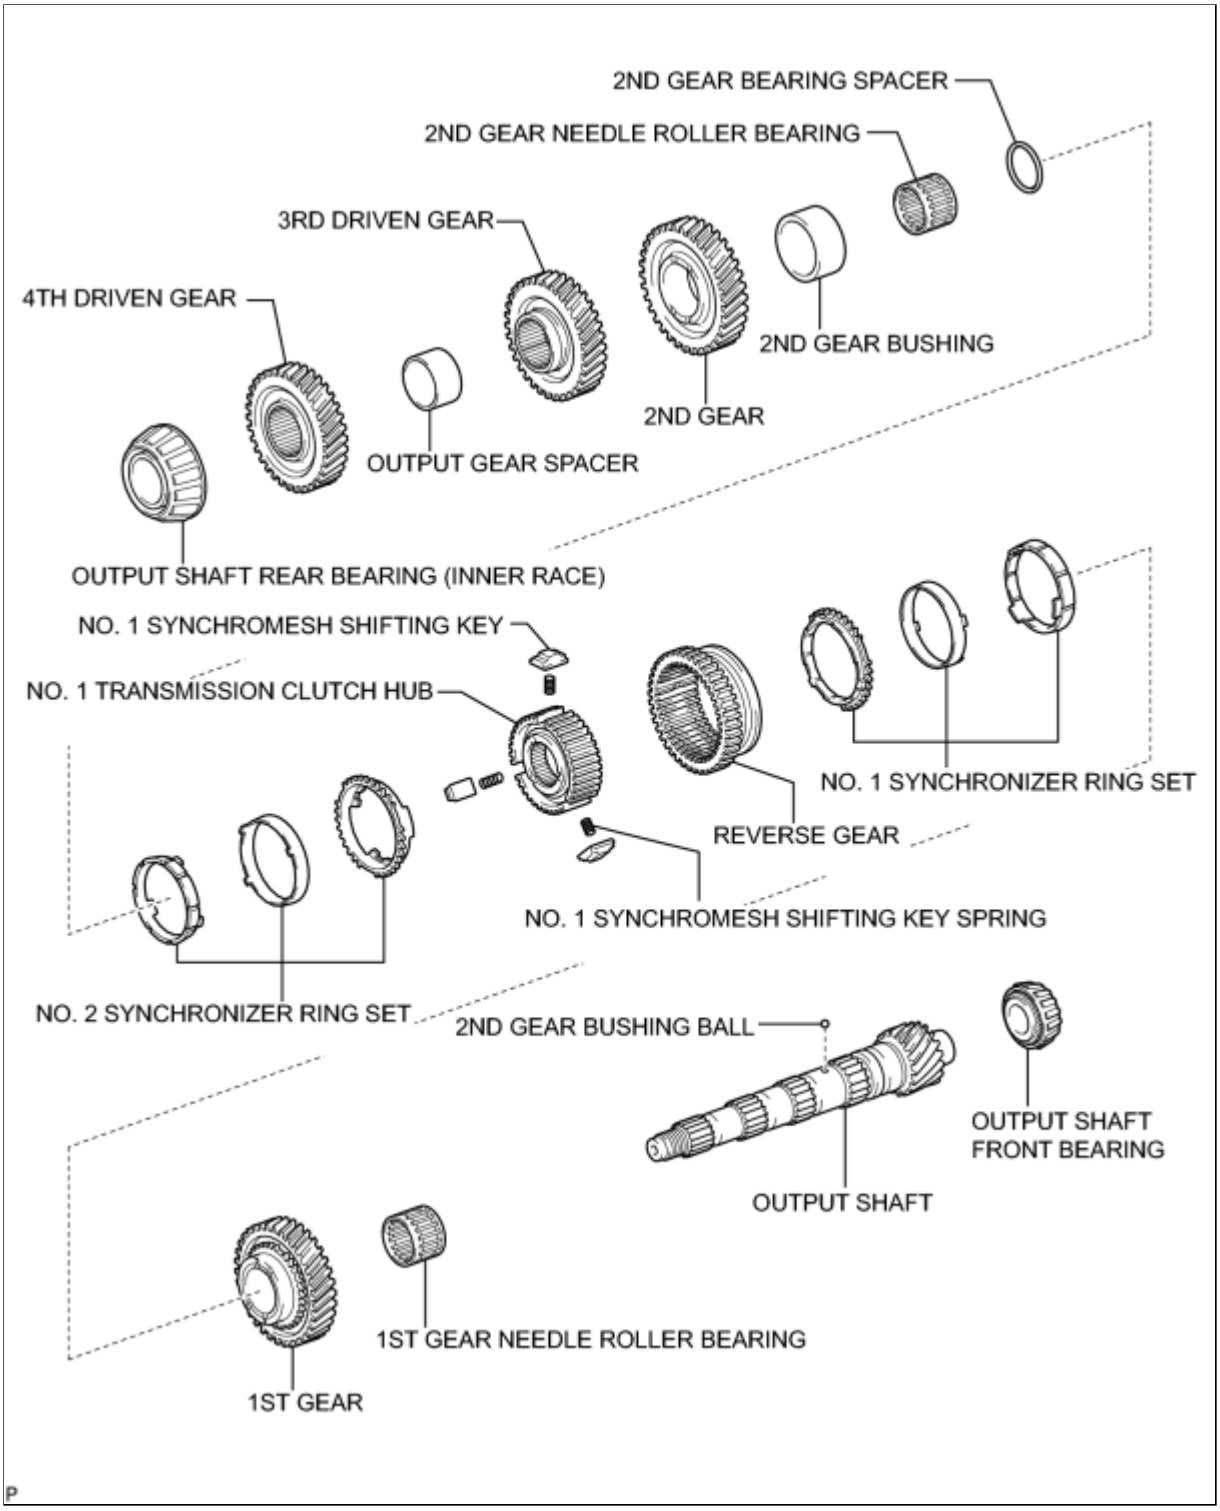
18. INSPECT 1ST GEAR THRUST CLEARANCE

(a) Using a feeler gauge, measure the 1st gear thrust clearance.

Standard clearance:

0.10 to 0.40 mm (0.00394 to 0.0157 in.)

Maximum clearance:



0.40 mm (0.0157 in.)

If the clearance exceeds the maximum, replace the 1st gear thrust washer, 1st gear or No. 1 transmission clutch hub.

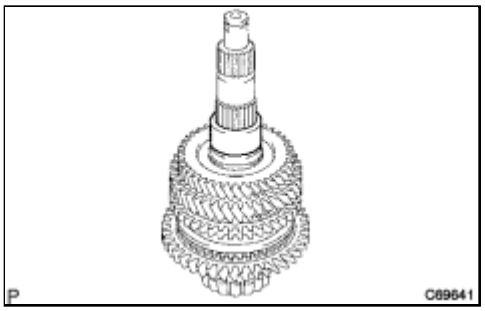
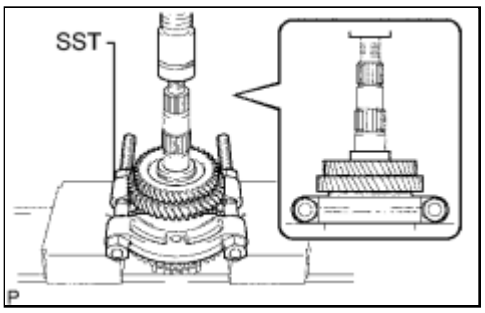
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: DISASSEMBLY (2010 Corolla)		

DISASSEMBLY



1. REMOVE 4TH DRIVEN GEAR

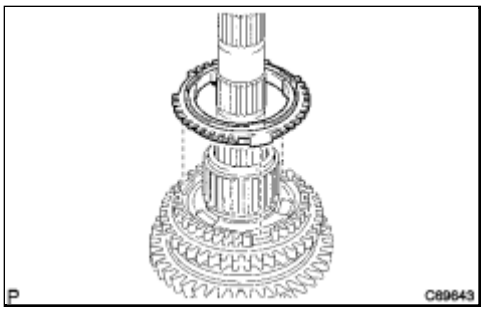
(a) Using SST and a press, remove the output shaft rear bearing (inner race) and 4th driven gear.



SST: 09950-00020

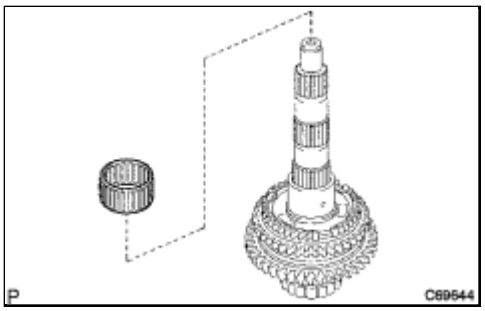
2. REMOVE OUTPUT GEAR SPACER

(a) Remove the output gear spacer from the output shaft.



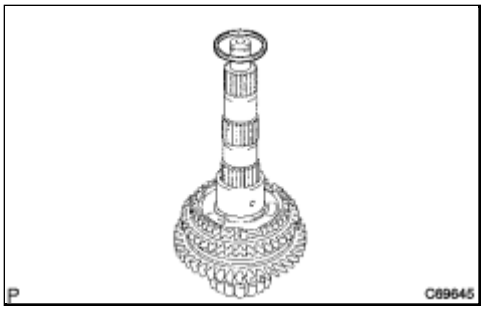
3. REMOVE 2ND GEAR

(a) Using SST and a press, remove the 3rd driven gear and 2nd gear from the output shaft.



SST: 09950-00020

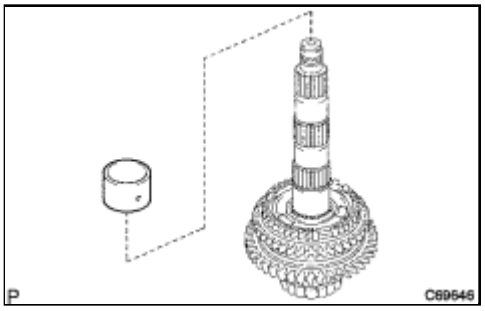
4. REMOVE NO. 2 SYNCHRONIZER RING SET



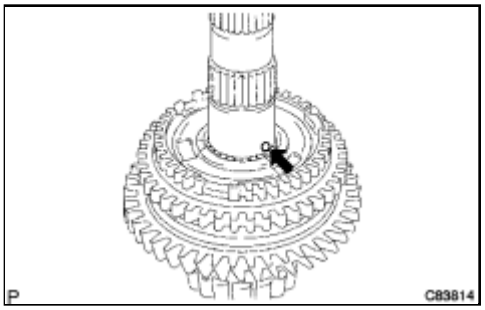
(a) Remove the No. 2 synchronizer ring set from the No. 1 transmission clutch hub.

5. REMOVE 2ND GEAR NEEDLE ROLLER BEARING

(a) Remove the 2nd gear needle roller bearing from the output shaft.



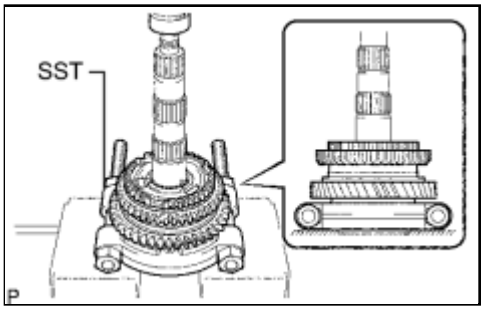
6. REMOVE 2ND GEAR BEARING SPACER



(a) Remove the 2nd gear bearing spacer from the output shaft.

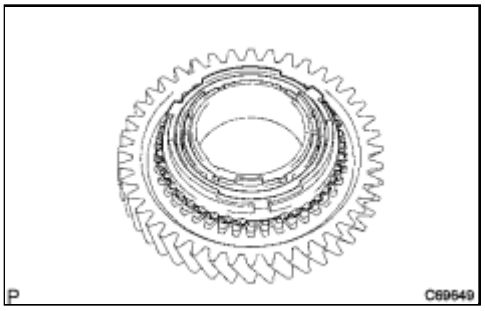
7. REMOVE 2ND GEAR BUSHING

(a) Remove the 2nd gear bushing from the output shaft.



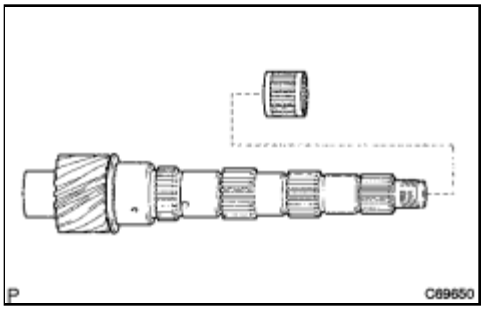
8. REMOVE 2ND GEAR BUSHING BALL

(a) Using a magnetic pick-up tool, remove the 2nd gear bushing ball from the output shaft.



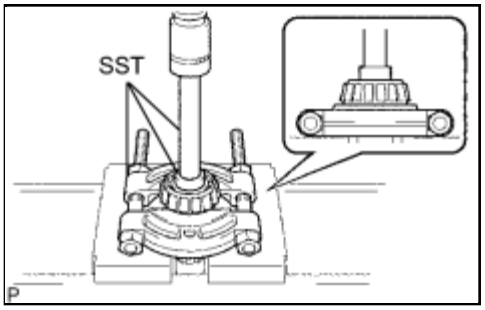
9. REMOVE 1ST GEAR

(a) Using SST and a press, remove the No. 1 transmission clutch hub and 1st gear from the output shaft.



SST: 09950-00020

10. REMOVE NO. 1 SYNCHRONIZER RING SET



(a) Remove the No. 1 synchronizer ring set from the 1st gear.

11. REMOVE 1ST GEAR NEEDLE ROLLER BEARING

(a) Remove the 1st gear needle roller bearing from the output shaft.

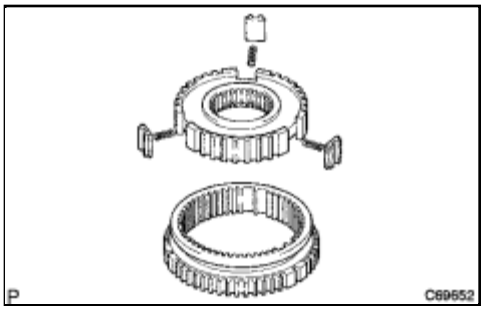
12. REMOVE OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, remove the output shaft front bearing (inner race) from the output shaft.

SST: 09950-00020

SST: 09950-60010

09951-00320



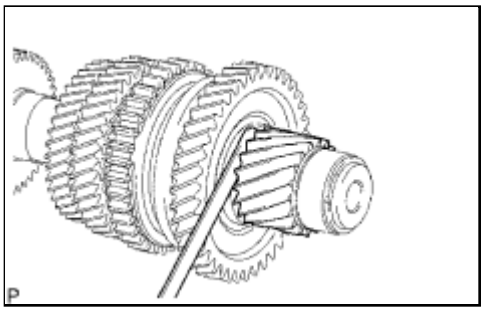
SST: 09950-70010

09951-07150

NOTICE:

Do not overtighten SST.

13. REMOVE REVERSE GEAR

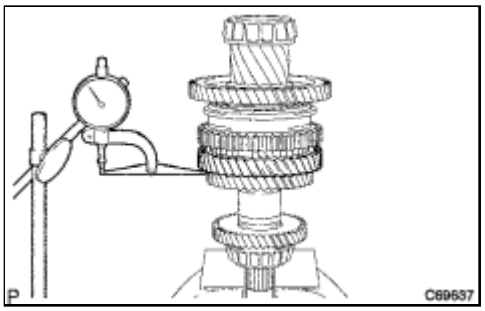


(a) Remove the No. 1 transmission clutch hub, 3 No. 1 synchromesh shifting keys, and 3 No. 1 synchromesh shifting key springs from the reverse gear.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z1Y00DX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT 1ST GEAR THRUST CLEARANCE

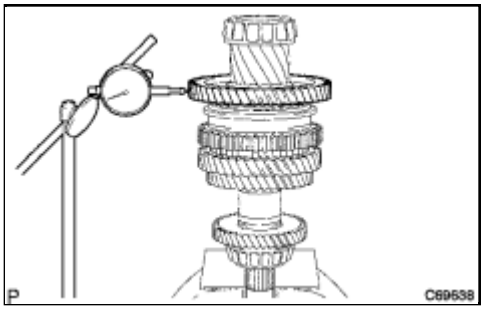


(a) Using a feeler gauge, measure the 1st gear thrust clearance.

Standard clearance:
0.25 to 0.40 mm (0.00984 to 0.0157 in.)

If the clearance is out of specification, replace the 1st gear, or No. 1 transmission clutch hub.

2. INSPECT 2ND GEAR THRUST CLEARANCE



(a) Using a dial indicator, measure the 2nd gear thrust clearance.

Standard clearance:
0.10 to 0.35 mm (0.00394 to 0.0138 in.)

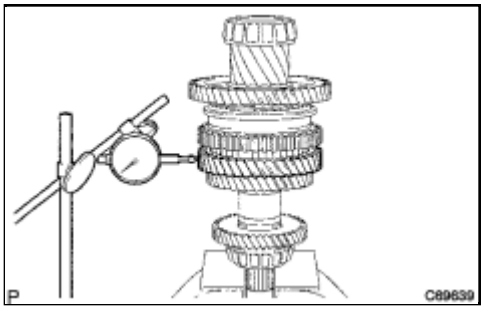
If the clearance is out of specification, replace the No. 1 transmission clutch hub, 2nd gear, or 3rd driven gear.

3. INSPECT 1ST GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 1st gear radial clearance.

Standard Clearance:

BEARING	STANDARD CLEARANCE MM (IN.)
KOYO made	0.009 to 0.053 (0.000354 to 0.00209)

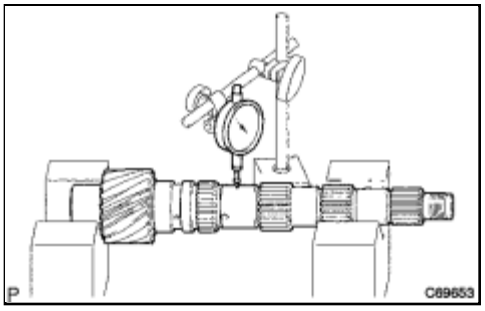


NSK made	0.009 to 0.051 (0.000354 to 0.00201)

If the clearance is out of specification, replace the 1st gear and 1st gear needle roller bearing.

4. INSPECT 2ND GEAR RADIAL CLEARANCE

(a) Using a dial indicator, measure the 2nd gear radial clearance.



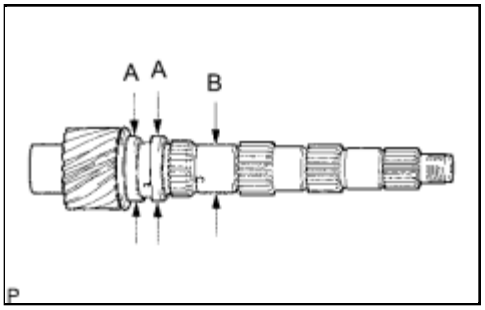
Standard Clearance:

BEARING	STANDARD CLEARANCE MM (IN.)
KOYO made	0.009 to 0.053 (0.000354 to 0.00209)
NSK made	0.009 to 0.051 (0.000354 to 0.00201)

If the clearance is out of specification, replace the 2nd gear and 2nd gear needle roller bearing.

5. INSPECT OUTPUT SHAFT

(a) Using V-blocks and a dial indicator, inspect the shaft for runout.



Maximum runout:
0.03 mm (0.00118 in.)

If runout exceeds the maximum, replace the output shaft.

(b) Using a micrometer, measure the outside diameter of the output shaft journal surface.

Outside Diameter:

PART	STANDARD OUTSIDE	MINIMUM OUTSIDE

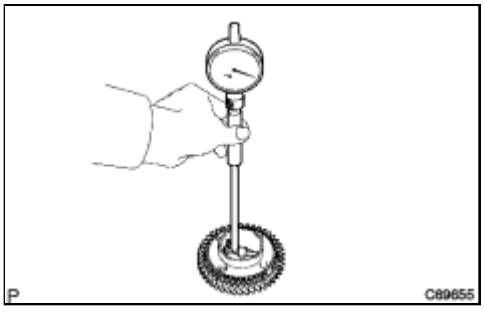
	DIAMETER MM (IN.)	DIAMETER MM (IN.)
A	37.610 to 37.626 (1.4807 to 1.4813)	37.610 (1.4807)
B	34.502 to 34.512 (1.3583 to 1.3587)	34.502 (1.3583)

If the outside diameter is less than the minimum, replace the output shaft.

6. INSPECT 2ND GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 2nd gear.

Inside Diameter:



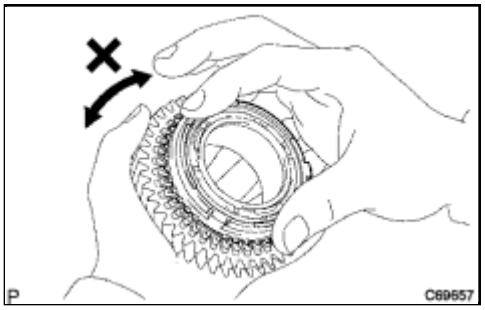
STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
50.009 to 50.025 (1.9689 to 1.9695)	50.025 (1.9695)

If the inside diameter exceeds the maximum, replace the 2nd gear.

7. INSPECT 1ST GEAR

(a) Using a cylinder gauge, measure the inside diameter of the 1st gear.

Inside Diameter:

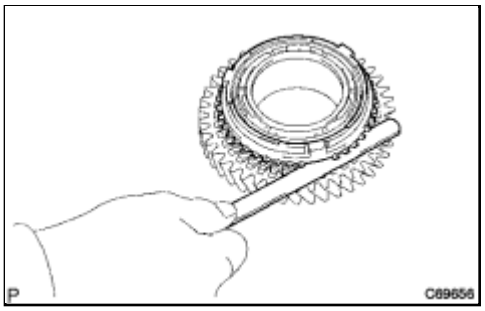


STANDARD INSIDE DIAMETER MM (IN.)	MAXIMUM INSIDE DIAMETER MM (IN.)
51.009 to 51.025 (2.0082 to 2.0089)	51.025 (2.0089)

If the inside diameter exceeds the maximum, replace the 1st gear.

8. INSPECT NO. 2 SYNCHRONIZER RING SET

(a) Coat the 2nd gear cone with gear oil.

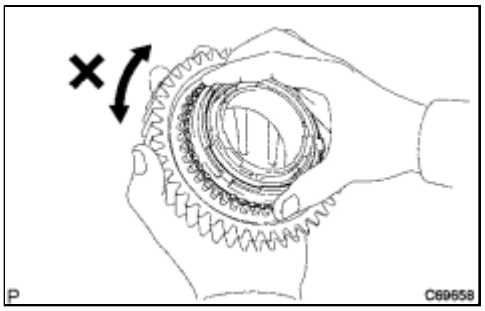


(b) Check for wear and damage.

(c) Turn the synchronizer ring set in one direction while pushing it against the 2nd gear cone.

(d) Check that the ring locks.

If the synchronizer ring set does not lock, replace the synchronizer ring set.



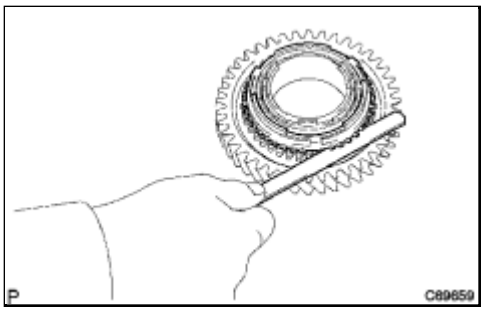
(e) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.70 to 1.45 mm (0.0276 to 0.0571 in.)

If the clearance is less than the minimum, replace the synchronizer ring set.

9. INSPECT NO. 1 SYNCHRONIZER RING SET

(a) Coat the 1st gear cone with gear oil.

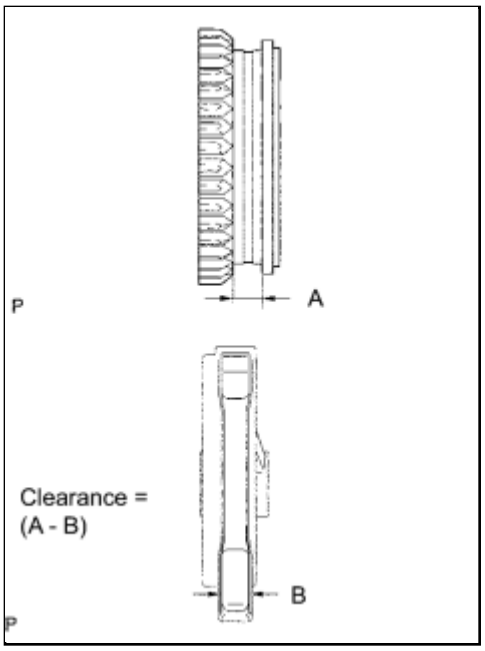


(b) Check for wear and damage.

(c) Turn the synchronizer ring set in one direction while pushing it against the 1st gear cone.

(d) Check that the ring set locks.

If the synchronizer ring set does not lock, replace the synchronizer ring set.

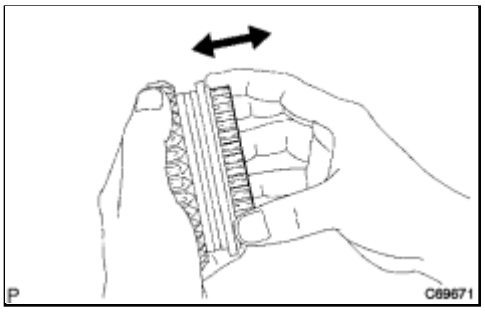


(e) Using a feeler gauge, measure the clearance between the synchronizer ring and the gear spline end.

Standard clearance:
0.70 to 1.45 mm (0.0276 to 0.0571 in.)

If the clearance is less than the minimum, replace the synchronizer ring set.

10. INSPECT REVERSE GEAR



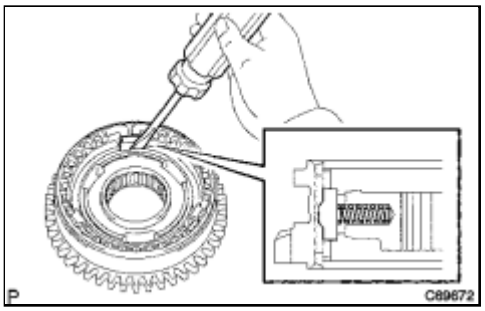
(a) Using a vernier caliper, measure the width of the reverse gear groove and thickness of the claw part on the No. 1 gear shift fork, and calculate the clearance.

Standard clearance:
0.15 to 0.35 mm (0.00591 to 0.0138 in.) {A - B}

If the clearance is out of specification, replace the reverse gear and No. 1 gear shift fork with new ones.

11. INSPECT NO. 1 TRANSMISSION CLUTCH HUB

(a) Check the sliding condition between the No. 1 transmission clutch hub and the reverse gear.



(b) Check the tip of the spline gear on the sleeve of the reverse gear for wear.

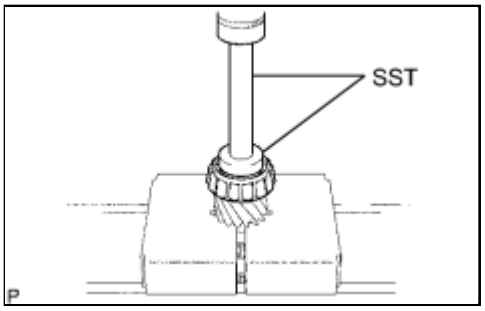
If any defects are found, replace the transmission hub sleeve or the transmission clutch hub.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000Z2100DX
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: OUTPUT SHAFT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL REVERSE GEAR

(a) Coat the reverse gear with gear oil.



(b) Install the 3 No. 1 synchromesh shifting key springs and No. 1 transmission clutch hub to the reverse gear.

NOTICE:

Assemble the reverse gear and the No. 1 transmission clutch hub in the correct direction.

(c) Using a screwdriver, install the 3 No. 1 synchromesh shifting keys to the reverse gear.

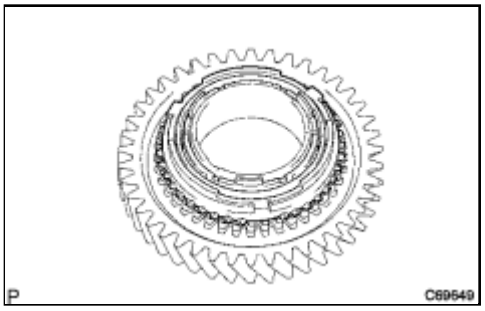
2. INSTALL OUTPUT SHAFT FRONT BEARING

(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.

SST: 09950-60010

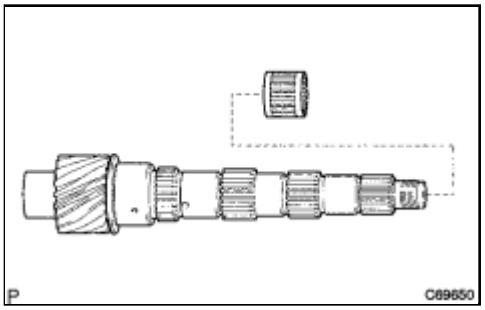
09951-00430

SST: 09950-70010



09951-07150

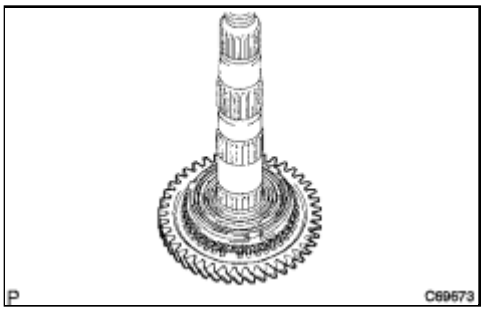
3. INSTALL NO. 1 SYNCHRONIZER RING SET



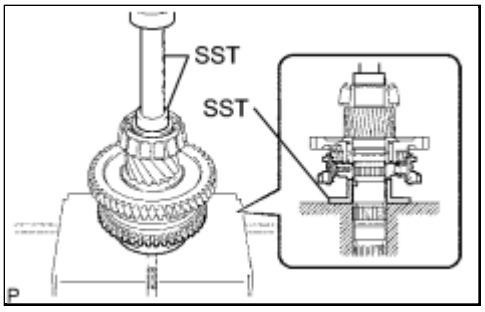
(a) Coat the No. 1 synchronizer ring set with gear oil and install it to the 1st gear.

NOTICE:

Align the No. 1 synchronizer ring set with the hole of the 1st gear.



4. INSTALL 1ST GEAR NEEDLE ROLLER BEARING



(a) Coat the 1st gear needle roller bearing with gear oil and install it to the output shaft.

5. INSTALL 1ST GEAR

(a) Coat the 1st gear with gear oil and install it to the output shaft.

6. INSTALL NO. 1 TRANSMISSION CLUTCH HUB

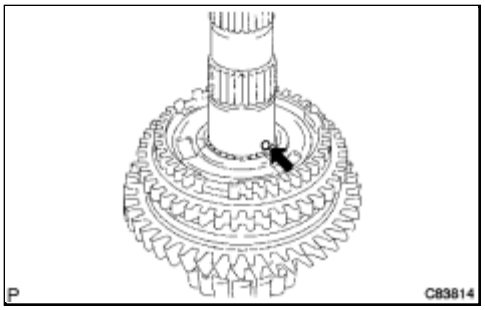
(a) Using SST and a press, install the No. 1 transmission clutch hub to the output shaft.

SST: 09316-60011

09316-00031

SST: 09950-60010

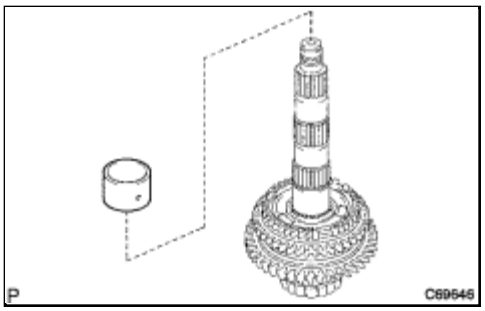
09951-00320



SST: 09950-70010

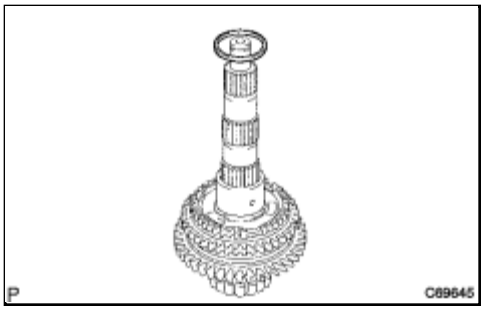
09951-07100

NOTICE:



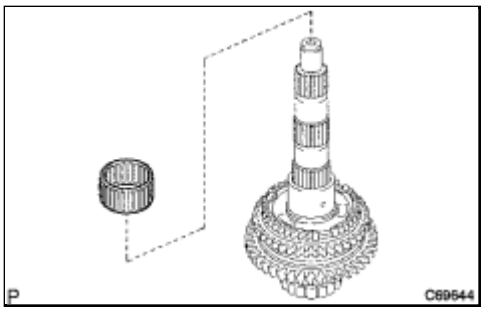
- Align the No. 1 synchronizer ring with the No. 1 synchromesh shifting key.
- Make sure that the 1st gear rotates.

7. INSTALL 2ND GEAR BUSHING BALL



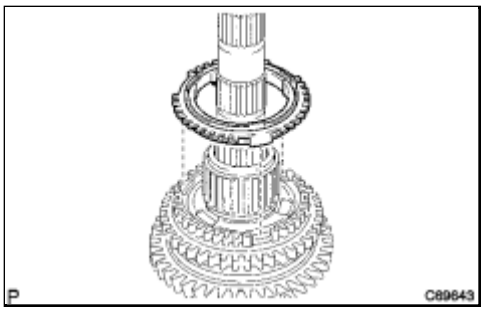
(a) Coat the gear bushing ball with MP grease, and install it to the output shaft.

8. INSTALL 2ND GEAR BUSHING



(a) Coat the 2nd gear bushing with gear oil and install it to the output shaft.

9. INSTALL 2ND GEAR BEARING SPACER

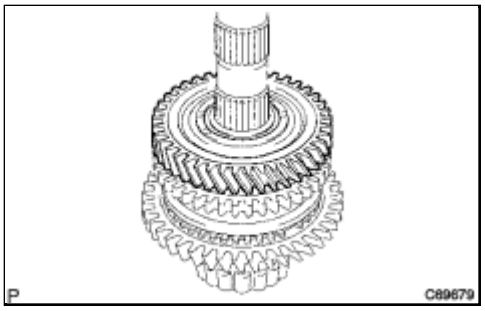


(a) Coat the 2nd gear bearing spacer with gear oil and install it to the output shaft.

10. INSTALL 2ND GEAR NEEDLE ROLLER BEARING

(a) Coat the 2nd gear needle roller bearing with gear oil and install it to the output shaft.

11. INSTALL NO. 2 SYNCHRONIZER RING SET



(a) Coat the No. 2 synchronizer ring set with gear oil and install it to the No. 1 transmission clutch hub.

NOTICE:

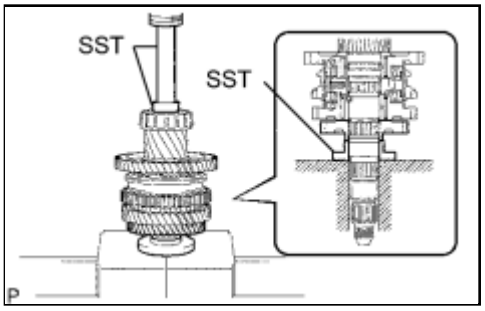
Align the key groove on the No. 2 synchronizer ring set with the No. 1 synchromesh shifting key.

12. INSTALL 2ND GEAR

(a) Coat the 2nd gear with gear oil and install it to the output shaft.

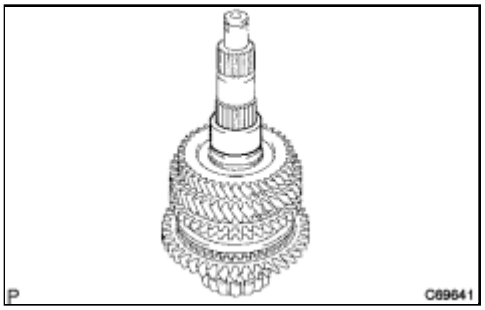
13. INSTALL 3RD DRIVEN GEAR

(a) Using SST and a press, install the 3rd driven gear to the output shaft.



SST: 09608-00071

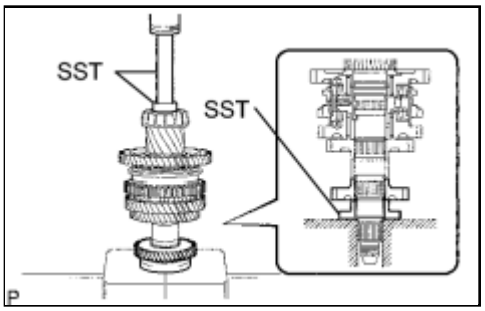
SST: 09950-60010



09951-00320

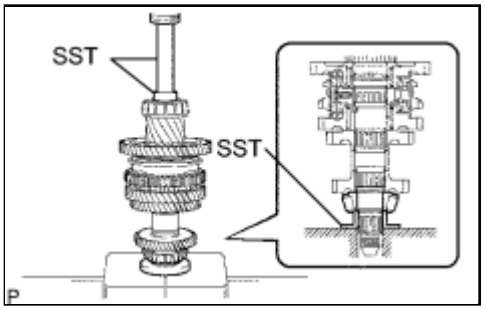
SST: 09950-70010

09951-07100



14. INSTALL OUTPUT GEAR SPACER

(a) Install the output gear spacer to the output shaft.

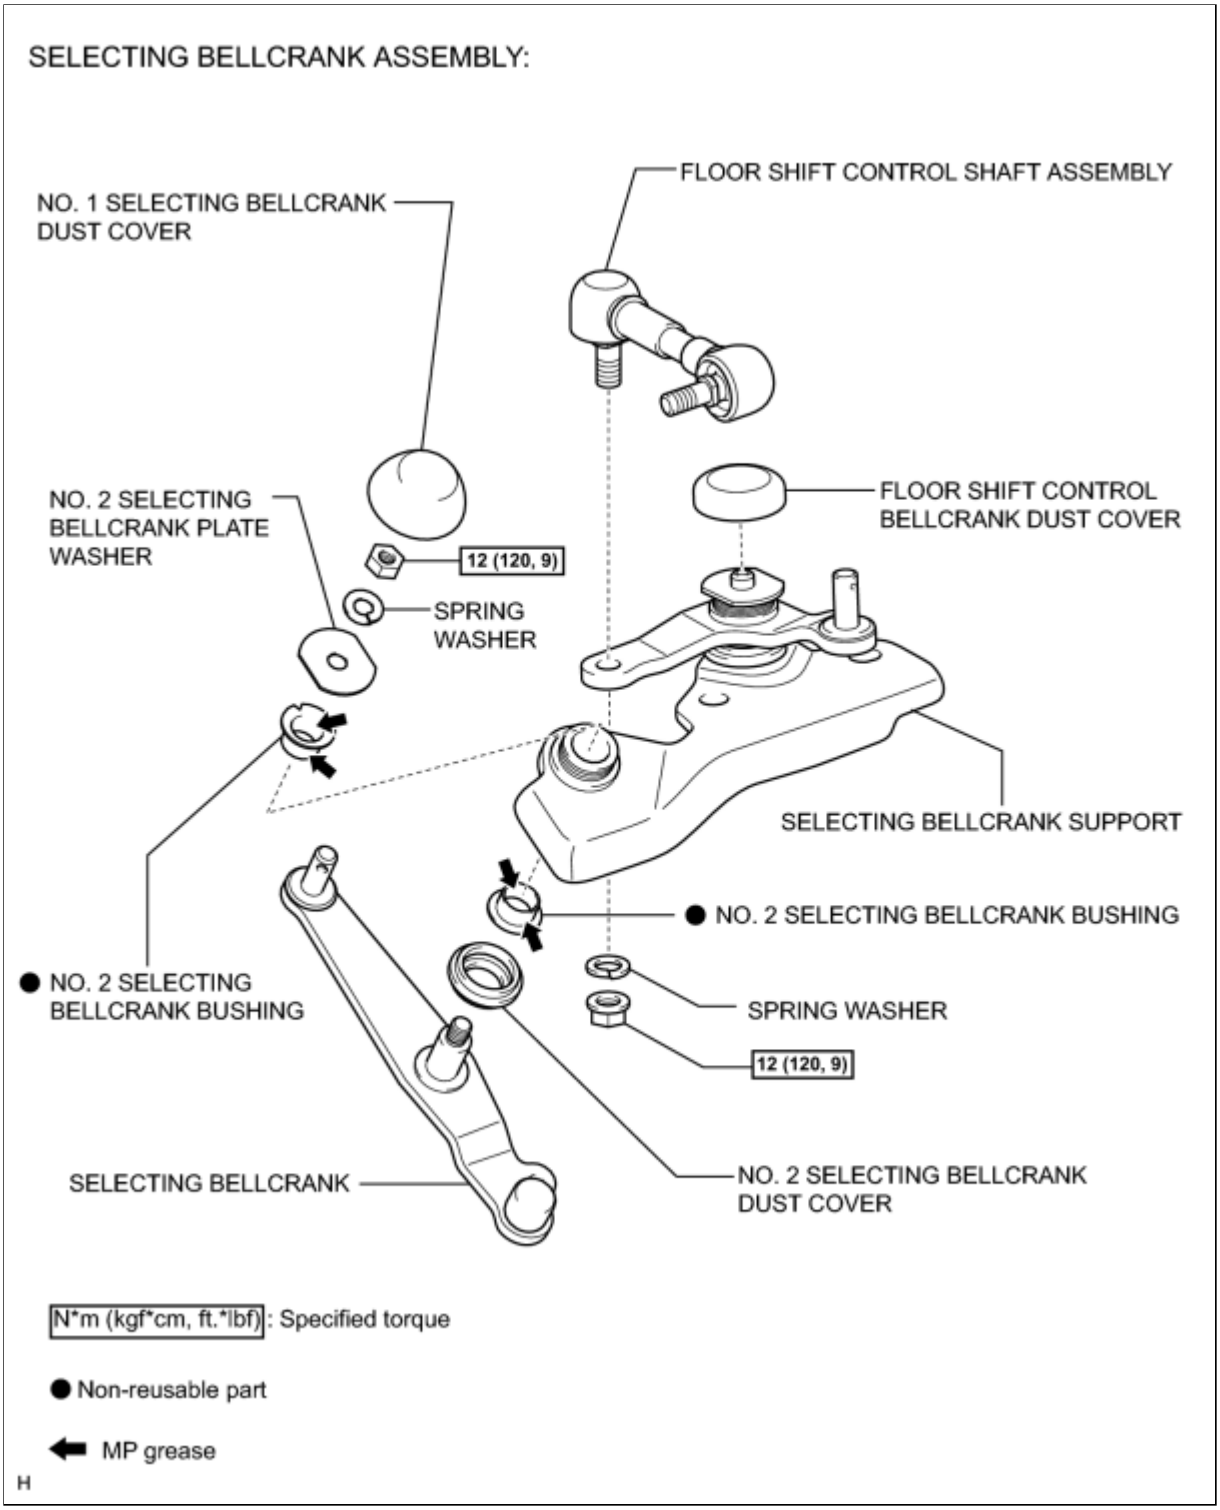


15. INSTALL 4TH DRIVEN GEAR

(a) Using SST and a press, install the 4th driven gear to the output shaft.

SST: 09608-00071
SST: 09950-60010
09951-00320
SST: 09950-70010
09951-07100

16. INSTALL OUTPUT SHAFT FRONT BEARING



(a) Using SST and a press, install the output shaft front bearing (inner race) to the output shaft.

SST: 09506-30012
SST: 09950-60010
09951-00320

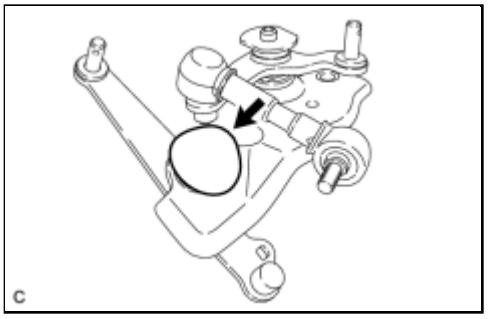
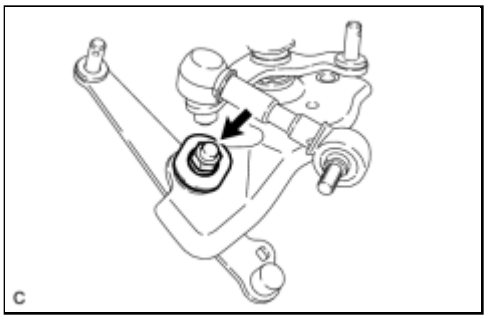
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: SHIFT AND SELECT LEVER SHAFT: DISASSEMBLY (2010 Corolla)		



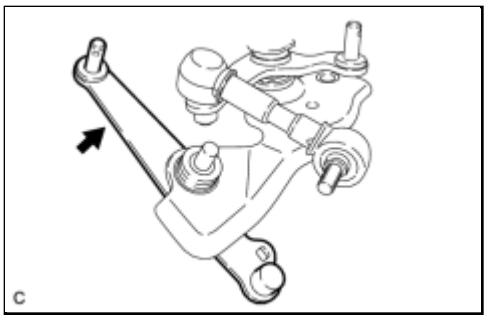
DISASSEMBLY

1. REMOVE FLOOR SHIFT CONTROL BELLCRANK DUST COVER



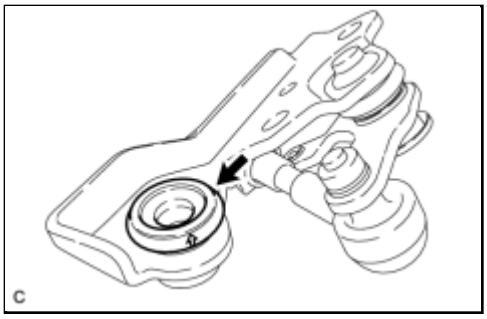
(a) Remove the floor shift control bellcrank dust cover from the selecting bellcrank assembly.

2. REMOVE NO. 1 SELECTING BELLCRANK DUST COVER



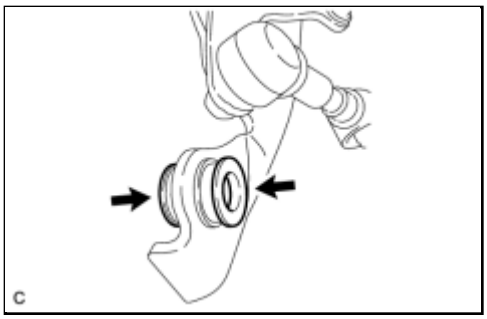
(a) Remove the No. 1 selecting bellcrank dust cover from the selecting bellcrank.

3. REMOVE NO. 2 SELECTING BELLCRANK PLATE WASHER



(a) Remove the nut, spring washer, and selecting bellcrank plate washer from the selecting bellcrank.

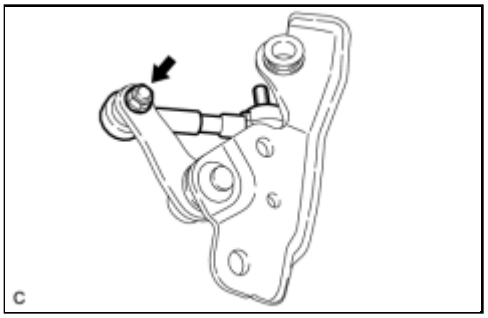
4. REMOVE SELECTING BELLCRANK



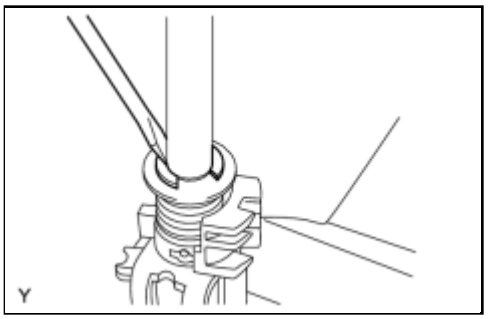
(a) Remove the selecting bellcrank from the selecting bellcrank support.

5. REMOVE NO. 2 SELECTING BELLCRANK DUST COVER

(a) Remove the No. 2 selecting bellcrank dust cover from the selecting bellcrank support.



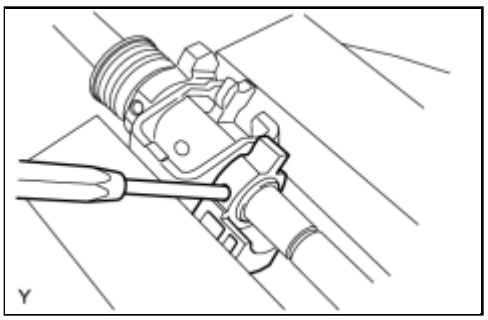
6. REMOVE NO. 2 SELECTING BELLCRANK BUSHING



(a) Remove the 2 No. 2 selecting bellcrank bushings from the selecting bellcrank support.

7. REMOVE FLOOR SHIFT CONTROL SHAFT ASSEMBLY

(a) Remove the nut, spring washer, and floor shift control shaft assembly from the selecting bellcrank support.



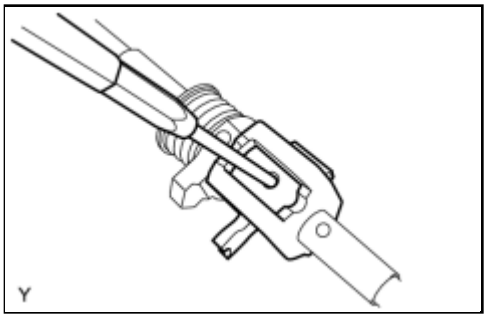
8. REMOVE NO. 2 SELECT SPRING SEAT

(a) Using a screwdriver, remove the E-ring, No. 2 select spring seat and compression spring from the shift and select lever shaft.

9. REMOVE INNER NO. 2 SHIFT LEVER

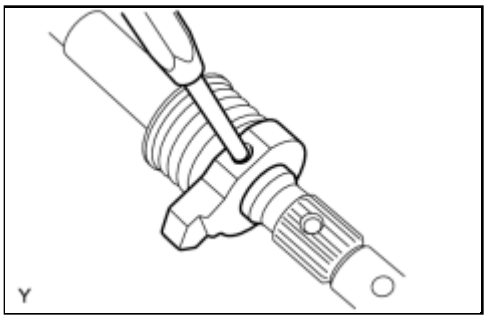
(a) Using a pin punch (φ5 mm) and a hammer, remove the shift inner lever slotted spring pin and inner No. 2 shift lever from the shift and select lever shaft.

HINT:



Check the orientation of the inner No. 2 shift lever.

10. REMOVE INNER NO. 1 SHIFT LEVER

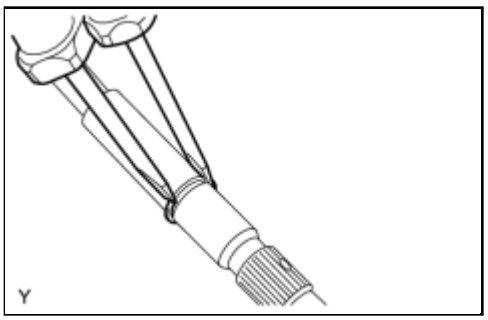


(a) Using a pin punch (φ5 mm) and a hammer, remove the shift inner lever slotted spring pin, inner No. 1 shift lever, and shift inter lock plate from the shift and select lever shaft.

HINT:

Check the orientation of the inner No. 1 shift lever.

11. REMOVE SELECT INNER LEVER

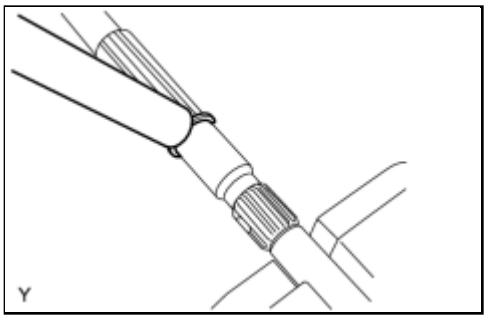


(a) Using a pin punch (φ5 mm) and a hammer, remove the select inner lever slotted spring pin, select inner lever, No. 1 select return compression spring, and No. 1 select spring seat from the shift and select lever shaft.

HINT:

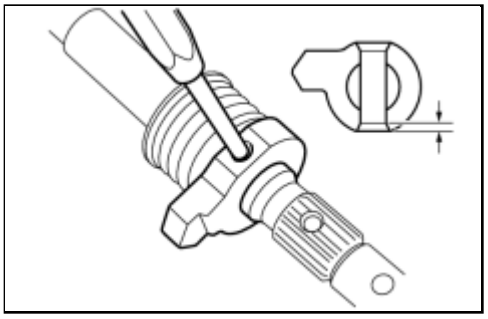
Check the orientation of the select inner lever.

12. REMOVE NO. 1 SELECT SPRING SEAT SHAFT SNAP RING



(a) Using 2 screwdrivers and a hammer, remove the No. 1 select spring seat shaft snap ring.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001A1301RX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: SHIFT AND SELECT LEVER SHAFT: REASSEMBLY (2010 Corolla)		

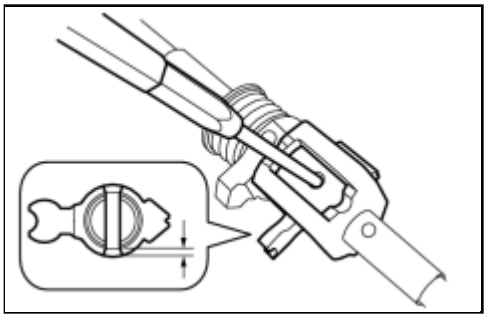


REASSEMBLY

1. INSTALL NO. 1 SELECT SPRING SEAT SHAFT SNAP RING

(a) Coat the shift and select lever shaft with MP grease, and install a new snap ring onto the shift and select lever shaft using a brass bar and a hammer.

2. INSTALL SELECT INNER LEVER

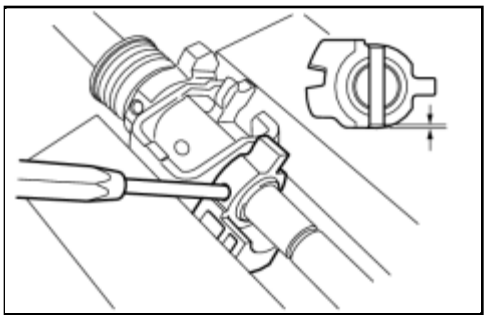


(a) Coat the No. 1 select spring seat with MP grease.

(b) Using a pin punch (φ5 mm) and a hammer, install the No. 1 select spring seat, compression spring, select inner lever, and select inner lever slotted spring pin onto the shift and select lever shaft.

Driven in depth:
3.0 to 4.0 mm (0.1181 to 0.1575 in.)

3. INSTALL INNER NO. 1 SHIFT LEVER

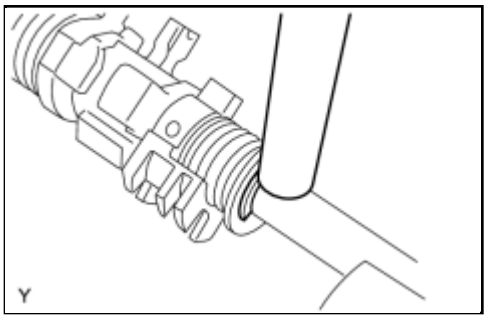


(a) Coat the shift interlock plate and inner No. 1 shift lever with MP grease.

(b) Using a pin punch (φ5 mm) and a hammer, install the shift interlock plate, inner No. 1 shift lever, and shift inner lever slotted spring pin onto the shift and select lever shaft.

Driven in depth:
-0.5 to 0.5 mm (-0.0197 to 0.0197 in.)

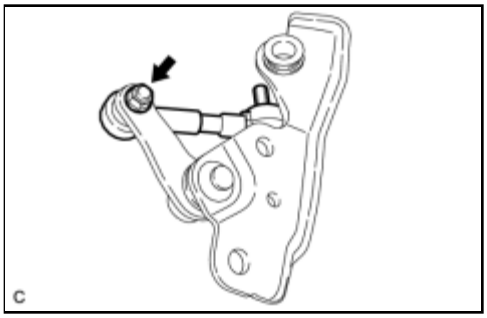
4. INSTALL INNER NO. 2 SHIFT LEVER



(a) Coat the inner No. 2 shift lever with MP grease.

(b) Using a pin punch (φ5 mm) and a hammer, install the inner No. 2 shift lever and shift inner lever slotted spring pin onto the shift and select lever shaft.

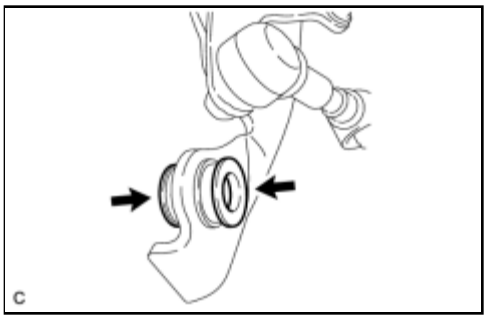
Driven in depth:
1.0 to 2.0 mm (0.0394 to 0.0787 in.)



5. INSTALL NO. 2 SELECT SPRING SEAT

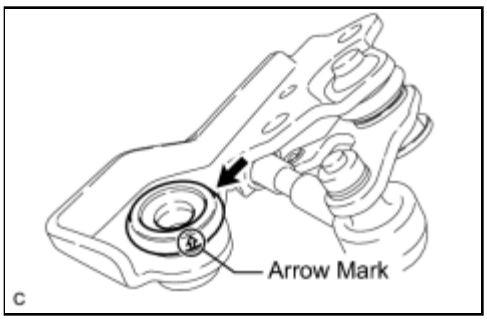
(a) Coat the No. 2 select spring seat with MP grease.

(b) Install the No. 2 select spring seat and compression spring. Using a brass bar and a hammer, install a new E-ring onto the shift and select lever shaft.



6. INSTALL FLOOR SHIFT CONTROL SHAFT ASSEMBLY

(a) Install the floor shift control shaft assembly to the selecting bellcrank support with the spring washer and nut.

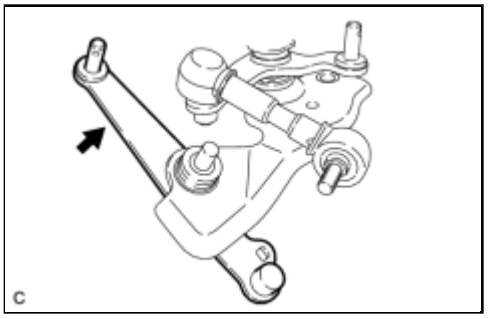


Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

7. INSTALL NO. 2 SELECTING BELLCRANK BUSHING

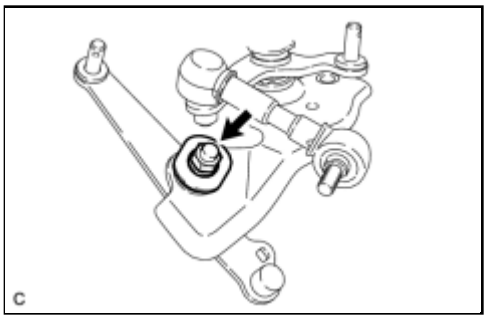
(a) Install 2 new No. 2 selecting bellcrank bushings to the selecting bellcrank support as shown in the illustration.

8. INSTALL NO. 2 SELECTING BELLCRANK DUST COVER



(a) Install the No. 2 selecting bellcrank dust cover to the selecting bellcrank support.

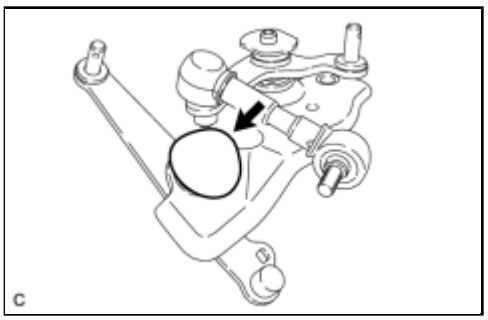
HINT:



Position the arrow mark direction as shown in the illustration.

9. INSTALL SELECTING BELLCRANK

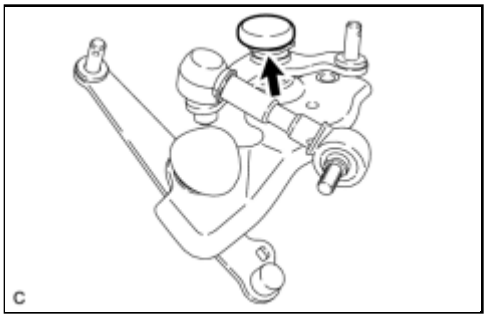
(a) Install the selecting bellcrank to the selecting bellcrank support.



10. INSTALL NO. 2 SELECTING BELLCRANK PLATE WASHER

(a) Install the selecting bellcrank plate washer to the selecting bellcrank with the spring washer and nut.

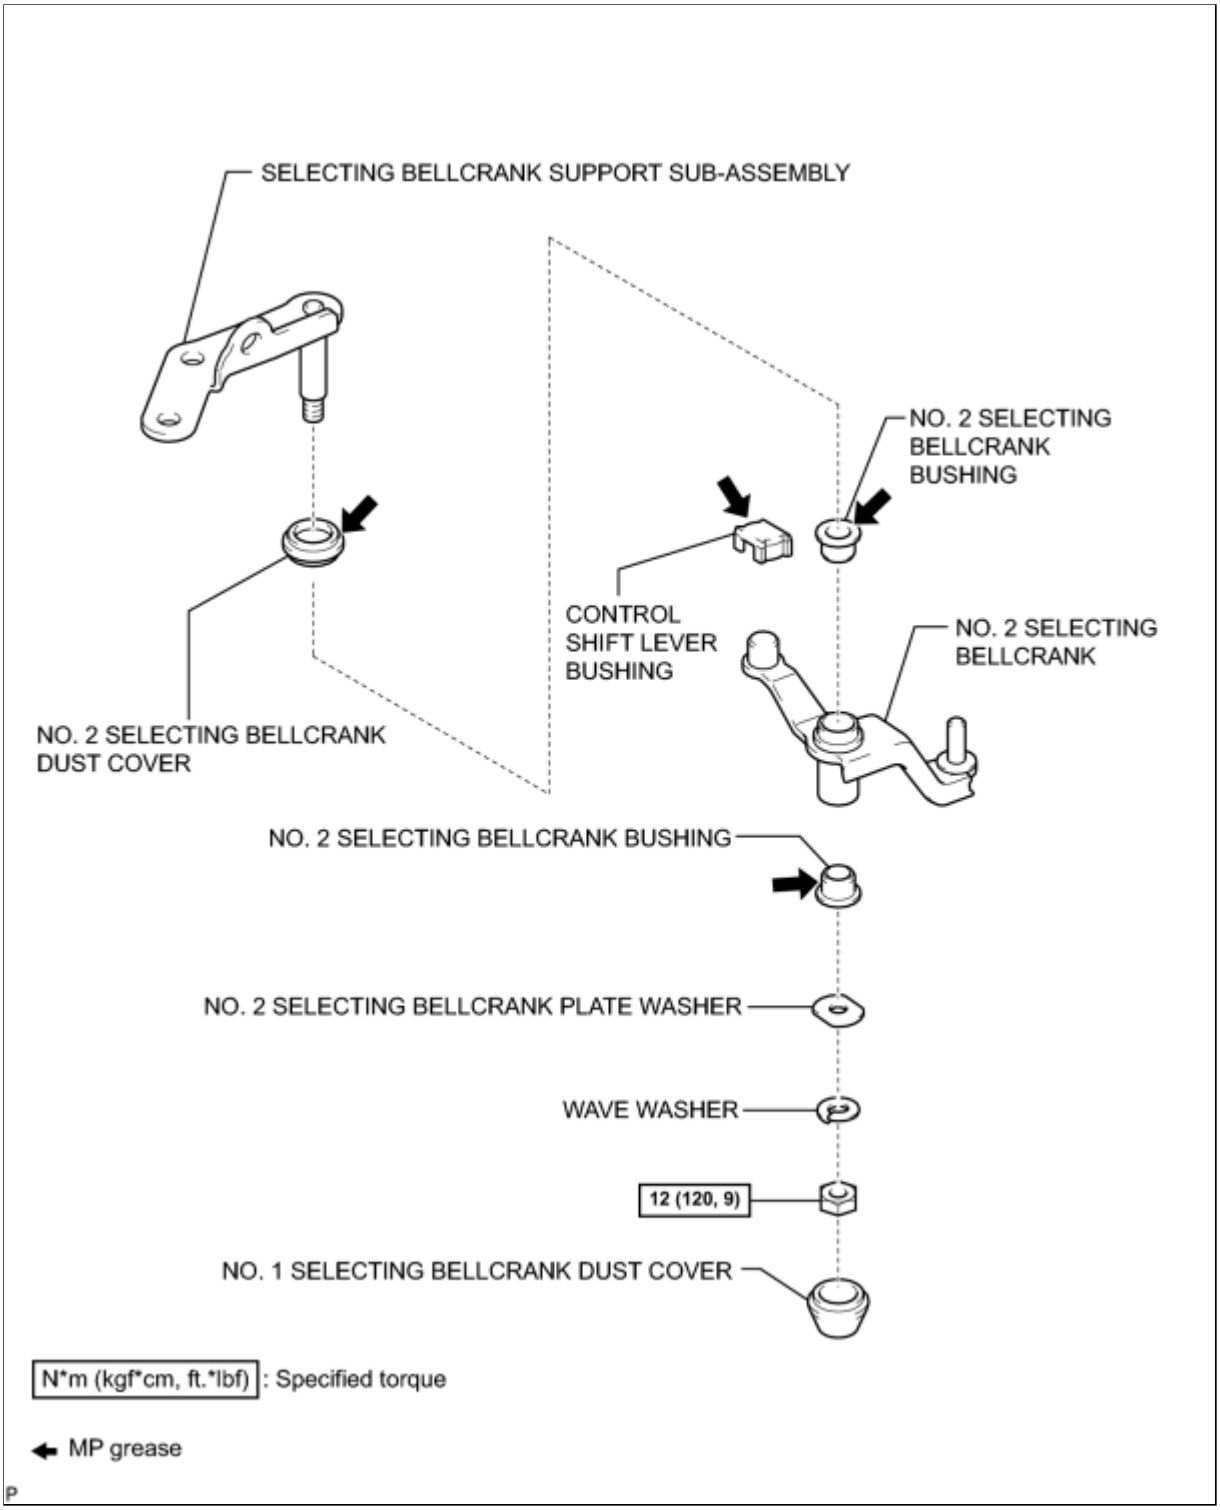
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)



11. INSTALL NO. 1 SELECTING BELLCRANK DUST COVER

(a) Install the No. 1 selecting bellcrank dust cover to the selecting bellcrank.

12. INSTALL FLOOR SHIFT CONTROL BELLCRANK DUST COVER



(a) Install the floor shift control bellcrank dust cover to the selecting bellcrank assembly.

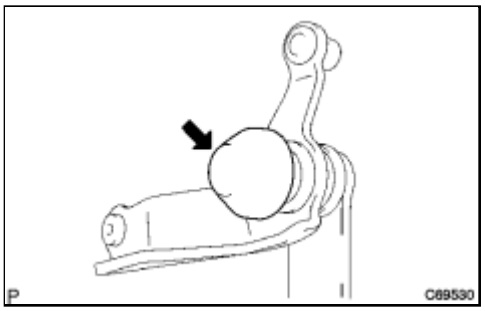
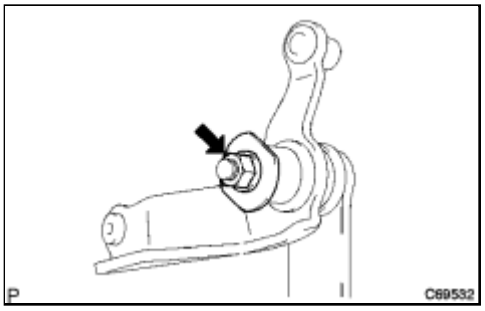
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: SHIFT AND SELECT LEVER SHAFT: DISASSEMBLY (2010 Corolla)		



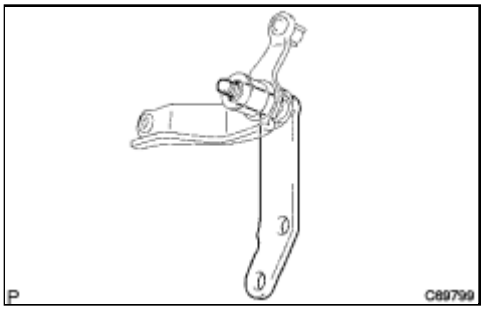
DISASSEMBLY

1. REMOVE CONTROL SHIFT LEVER BUSHING



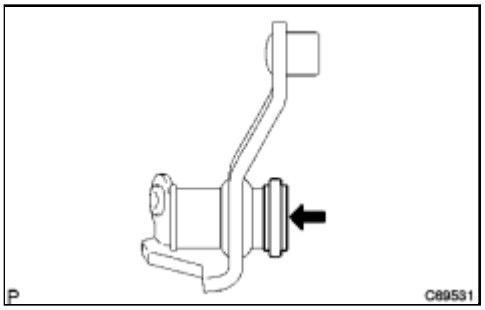
(a) Remove the control shift lever bushing from the No. 2 selecting bellcrank.

2. REMOVE NO. 1 SELECTING BELLCRANK DUST COVER



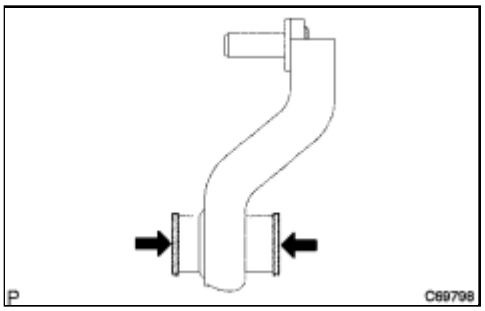
(a) Remove the No. 1 selecting bellcrank dust cover from the No. 2 selecting bellcrank.

3. REMOVE SELECTING BELLCRANK SUPPORT SUB-ASSEMBLY



(a) Remove the nut, wave washer, and No. 2 selecting bellcrank plate washer from the No. 2 selecting bellcrank.

(b) Remove the selecting bellcrank support sub-assembly

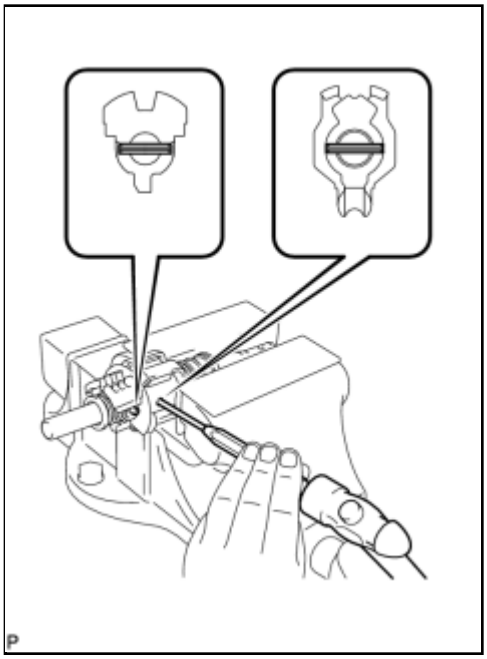


from the No. 2 selecting bellcrank.

4. REMOVE NO. 2 SELECTING BELLCRANK DUST COVER

(a) Remove the No. 2 selecting bellcrank dust cover from the No. 2 selecting bellcrank.

5. REMOVE NO. 2 SELECTING BELLCRANK BUSHING



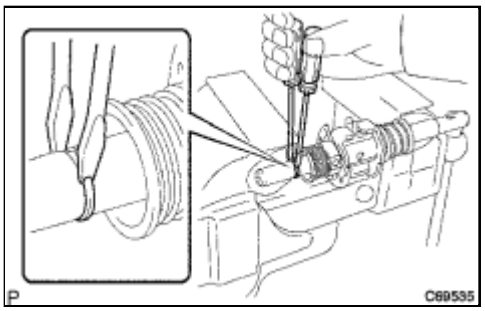
(a) Remove the No. 2 selecting bellcrank bushing from the No. 2 selecting bellcrank.

6. REMOVE NO. 2 SHIFT LEVER INNER

(a) Hold the shift and select lever shaft in a vise using aluminum plates.

NOTICE:

Do not damage the shift and select lever shaft.

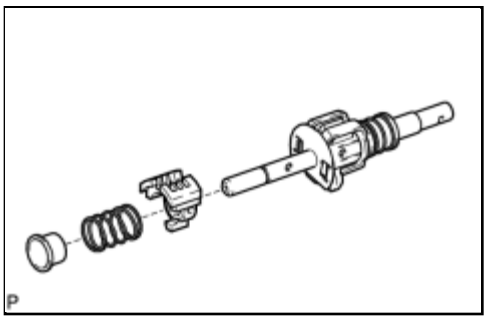


(b) Using a pin punch (φ 5 mm), remove the 2 shift inner lever slotted pins.

NOTICE:

Do not damage the shift and select lever shaft.

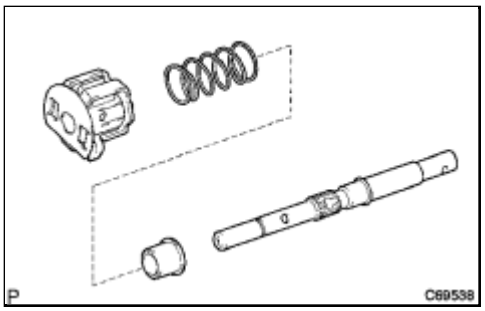
(c) Apply force to the No. 1 select return compression spring and No. 2 select return compression spring, then hold them in a vise using aluminum plates.



(d) Using 2 screwdrivers and a hammer, remove the select spring No. 2 seat snap ring from the shift and select lever shaft.

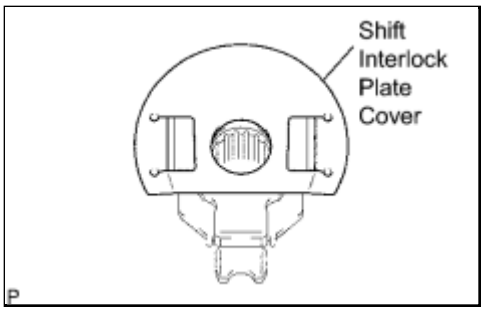
HINT:

Use a piece of cloth to keep the snap ring from flying.



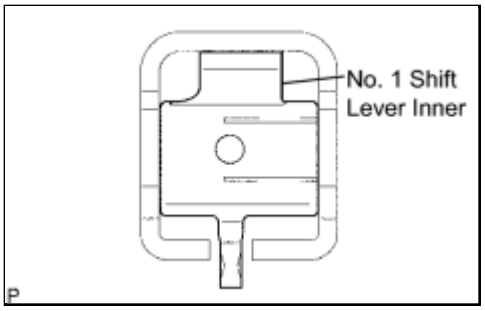
NOTICE:

Do not damage the shift and select lever shaft.



(e) Remove the No. 2 select spring seat, No. 2 select return compression spring, and No. 2 shift lever inner from the shift and select lever shaft.

7. REMOVE NO. 1 SELECT SPRING SEAT



(a) Remove the shift interlock plate, No. 1 select return compression spring and No. 1 select spring seat from the shift and select lever shaft.

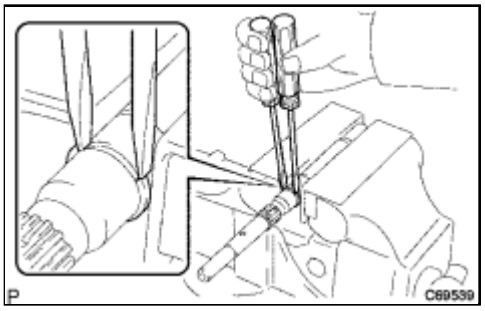
8. REMOVE SHIFT INTERLOCK PLATE COVER

(a) Remove the shift interlock plate cover from the shift interlock plate.

9. REMOVE NO. 1 SHIFT LEVER INNER

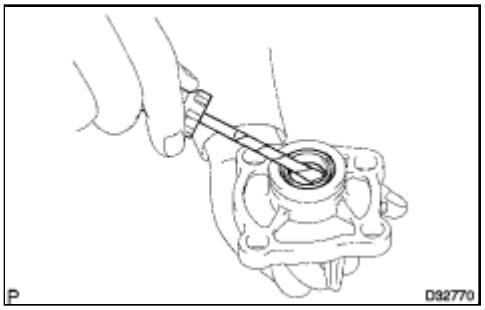
(a) Remove the No. 1 shift lever inner from the shift interlock plate.

10. REMOVE SELECT SPRING NO. 1 SEAT SHAFT SNAP RING



(a) Using 2 screwdrivers and a hammer, remove the select spring No. 1 seat shaft snap ring.

HINT:



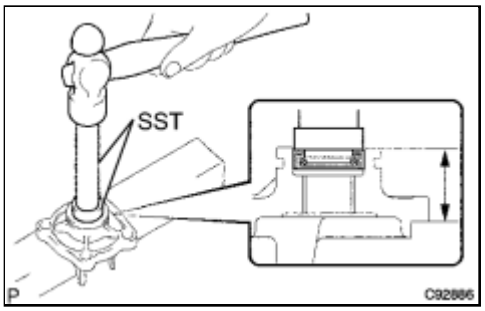
Use a piece of cloth to keep the snap ring from flying.

NOTICE:

Do not damage the shift and select lever shaft.

11. REMOVE CONTROL SHAFT COVER OIL SEAL

(a) Using a screwdriver, remove the control shaft cover oil seal from the control shaft cover.



HINT:

Tape the screwdriver tip before use to avoid damage.

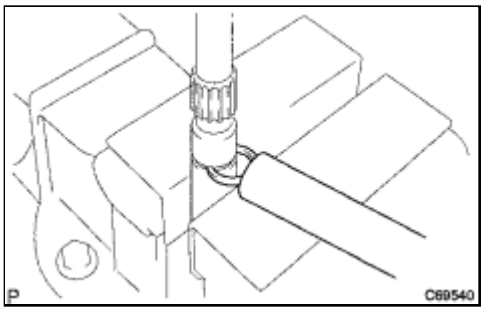
Title: E351 MANUAL TRANSMISSION / TRANSAXLE: SHIFT AND SELECT LEVER SHAFT: REASSEMBLY (2010 Corolla)		

REASSEMBLY

1. INSTALL CONTROL SHAFT COVER OIL SEAL

(a) Using SST and a hammer, install a new control shaft cover oil seal to the control shaft cover.

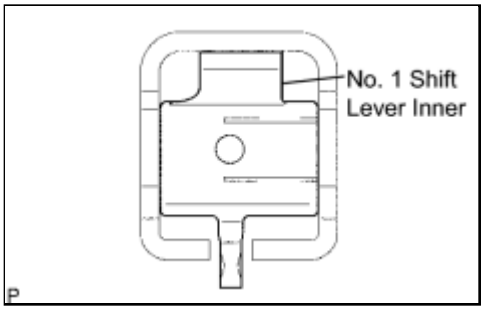
SST: 09950-60010



09951-00280

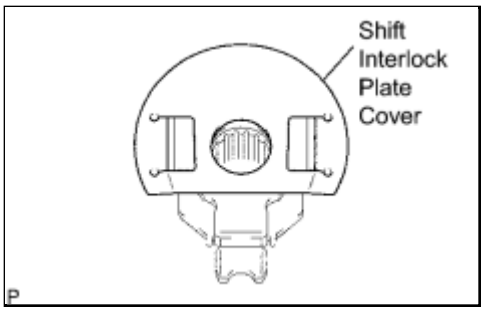
SST: 09950-70010

09951-07100



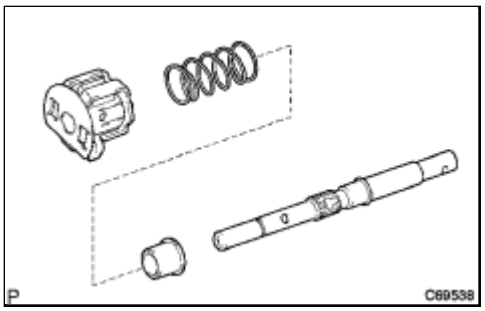
Oil seal installation depth:
28.0 to 29.0 mm (1.1024 to 1.142 in.)

2. INSTALL SELECT SPRING NO. 1 SEAT SHAFT SNAP RING



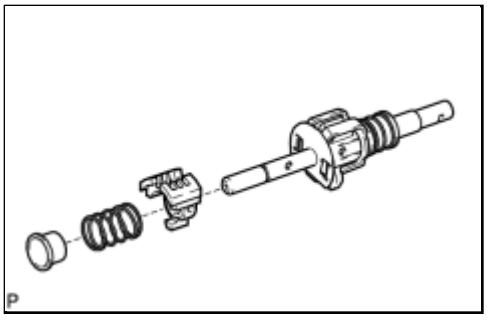
(a) Using a brass bar and a hammer, install the select spring No. 1 seat shaft snap ring.

3. INSTALL NO. 1 SHIFT LEVER INNER



(a) Install the No. 1 shift lever inner to the shift interlock plate.

4. INSTALL SHIFT INTERLOCK PLATE COVER

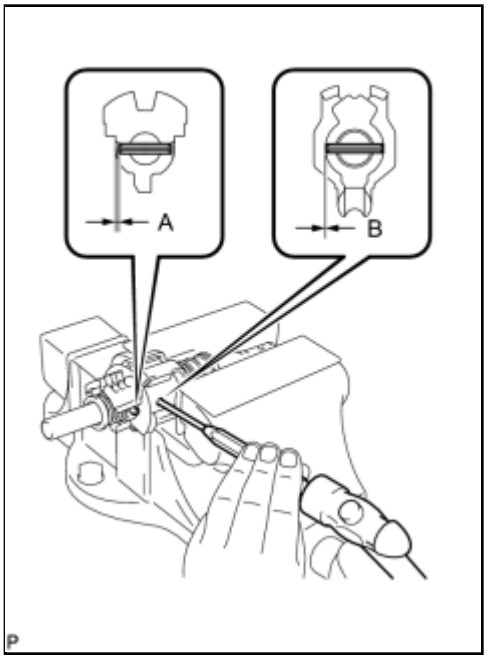


(a) Install the shift interlock plate cover to the shift interlock plate.

5. INSTALL NO. 1 SELECT SPRING SEAT

(a) Install the No. 1 select spring seat, No. 1 select return compression spring, and shift interlock plate to the shift and select lever shaft.

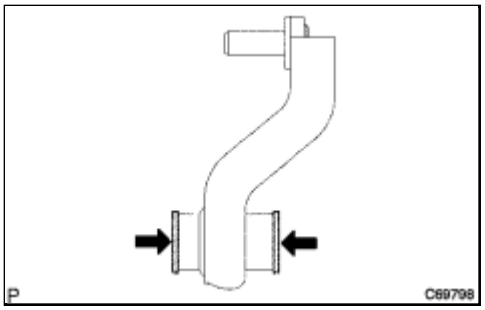
6. INSTALL NO. 2 SHIFT LEVER INNER



(a) Install the No. 2 shift lever inner, No. 2 select return compression spring and No. 2 select return spring seat to the shift and select lever shaft.

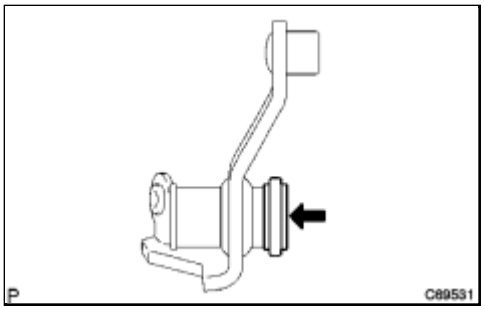
(b) Hold the shift and select lever in a vise using aluminum plates.

(c) Using a brass bar and a hammer, install the select seat snap ring to the shift and select lever shaft.



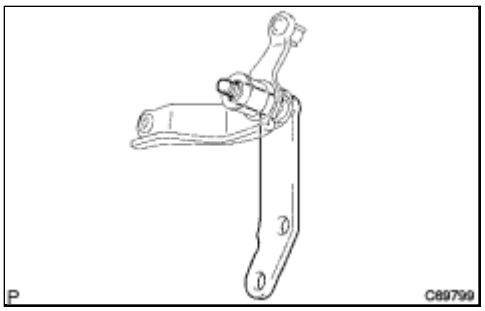
(d) Using a pin punch (φ 5 mm) and a hammer, install the 2 shift inner lever slotted pins to the shift and select lever shaft.

Clearance A:
0.7 to 1.7 mm (0.0276 to 0.0669 in.)
Clearance B:



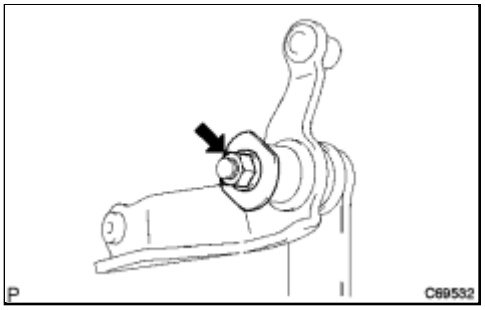
-0.4 to 0.5 mm (-0.0157 to 0.0197 in.)

7. INSTALL NO. 2 SELECTING BELLCRANK BUSHING



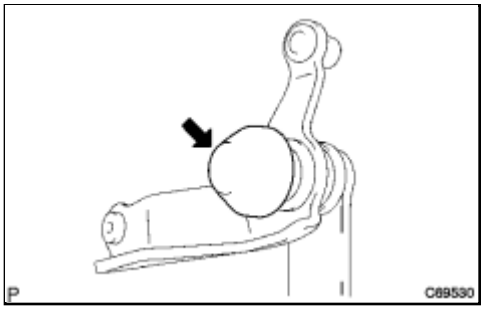
(a) Coat the 2 No. 2 selecting bellcrank bushings with MP grease and install them to the No. 2 selecting bellcrank.

8. INSTALL NO. 2 SELECTING BELLCRANK DUST COVER



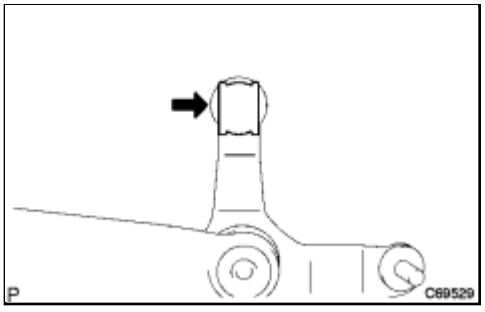
(a) Coat the No. 2 selecting bellcrank dust cover with MP grease and install it to the No. 2 selecting bellcrank.

9. INSTALL SELECTING BELLCRANK SUPPORT SUB-ASSEMBLY



(a) Install the selecting bellcrank support sub-assembly to the No. 2 selecting bellcrank.

(b) Install the No. 2 selecting bellcrank plate washer, wave washer, and nut.

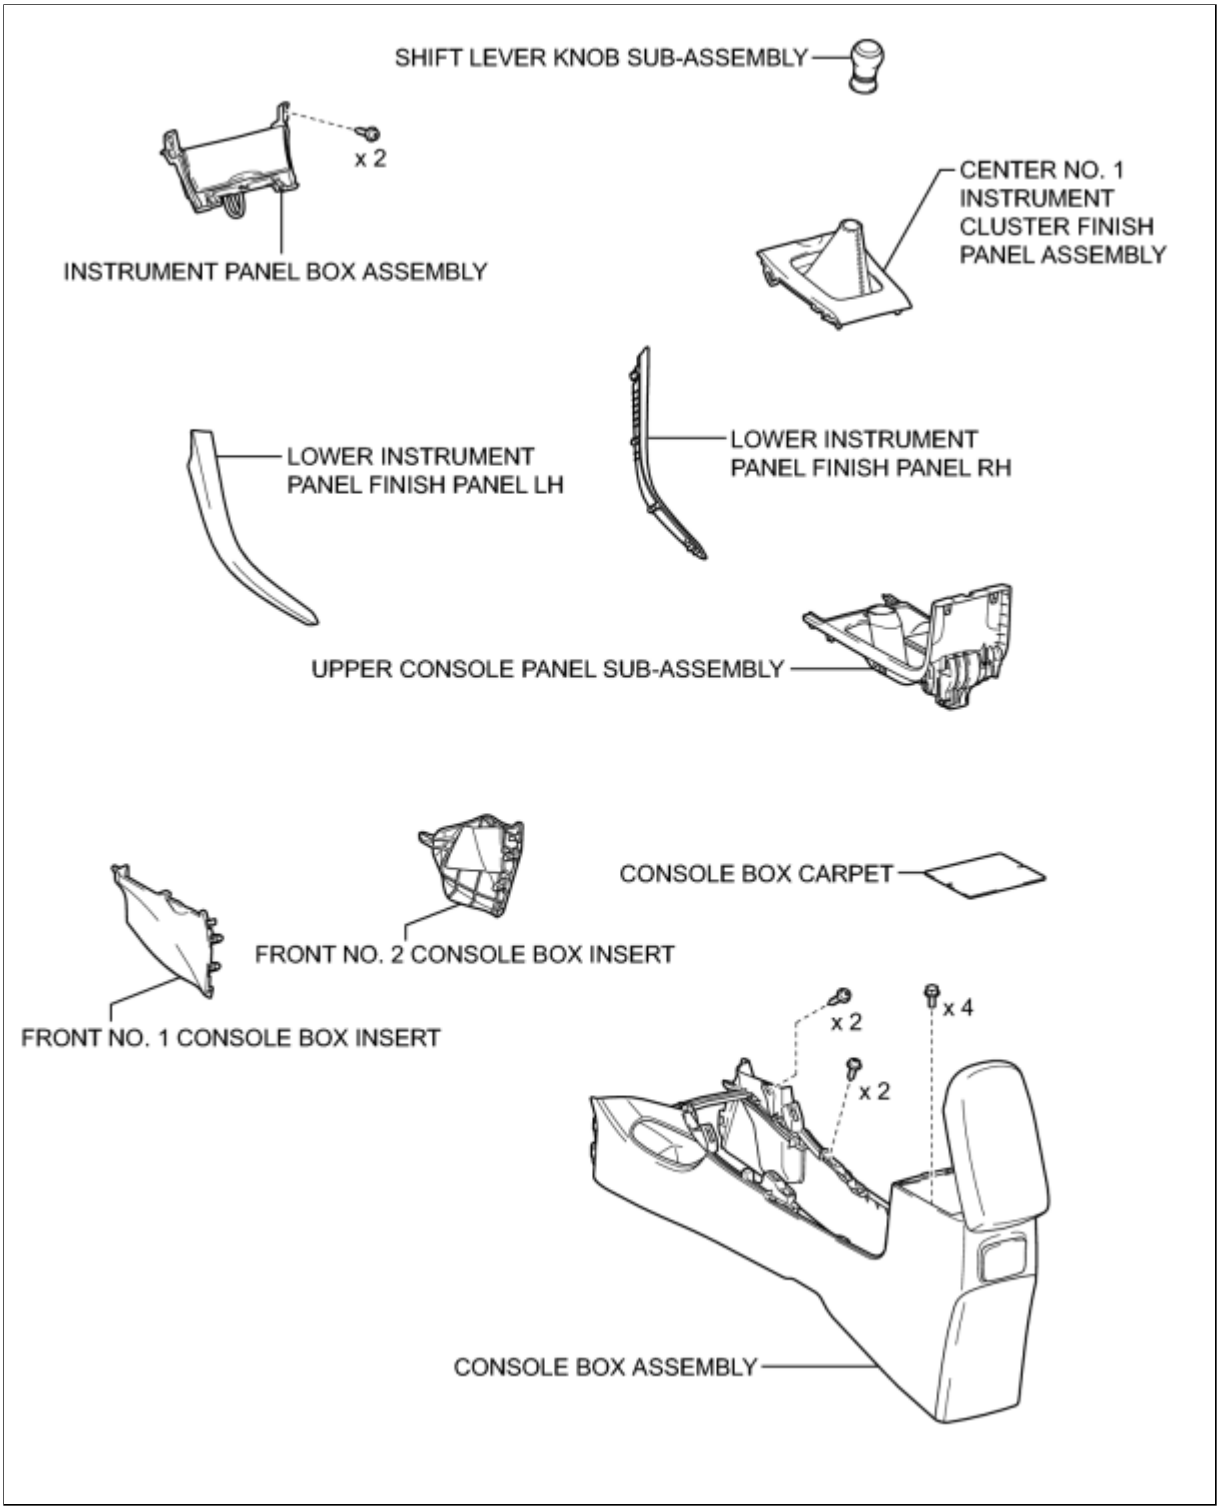


Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

10. INSTALL NO. 1 SELECTING BELLCRANK DUST COVER

(a) Install the No. 1 selecting bellcrank dust cover to the No. 2 selecting bellcrank.

11. INSTALL CONTROL SHIFT LEVER BUSHING



(a) Install the control shift lever bushing to the No. 2 selecting bellcrank.

Title: C59 MANUAL TRANSMISSION / TRANSAXLE: SHIFT LEVER ASSEMBLY: REMOVAL (2010 Corolla)		

REMOVAL

1. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

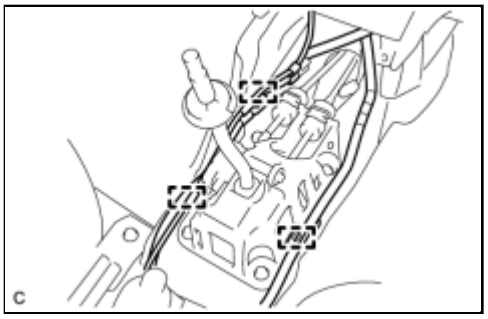
2. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

3. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY INFO

4. REMOVE CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

5. REMOVE INSTRUMENT PANEL BOX ASSEMBLY INFO

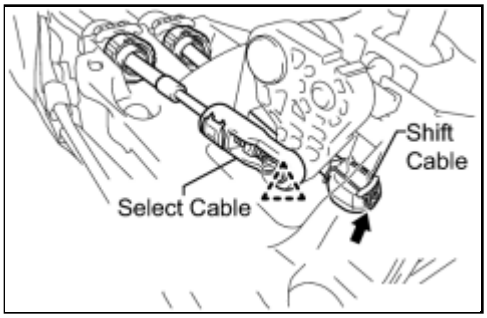
6. REMOVE FRONT NO. 1 CONSOLE BOX INSERT INFO



7. REMOVE FRONT NO. 2 CONSOLE BOX INSERT INFO

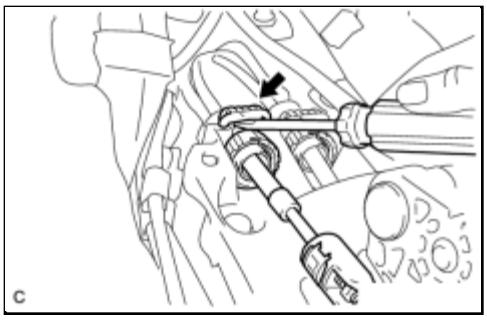
8. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

9. REMOVE CONSOLE BOX CARPET INFO



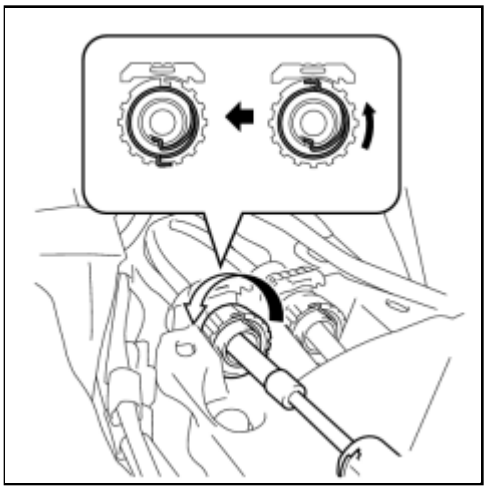
10. REMOVE CONSOLE BOX ASSEMBLY INFO

11. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY



(a) Separate the 3 clamps, and disconnect the wire harness from the shift lever assembly.

(b) Remove the clip and disconnect the control select cable from the shift lever assembly.

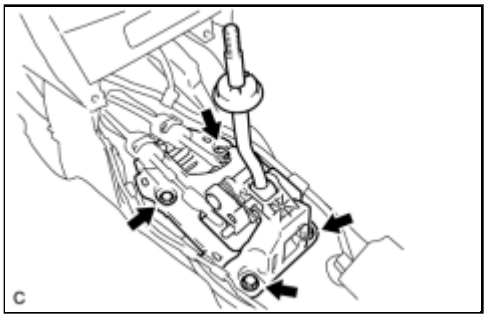


(c) Disconnect the control shift cable from the shift lever assembly.

(d) Using a screwdriver, pull out the transmission control cable.

NOTICE:

Do not remove the stopper. If it is removed, reinstall it to its original position.

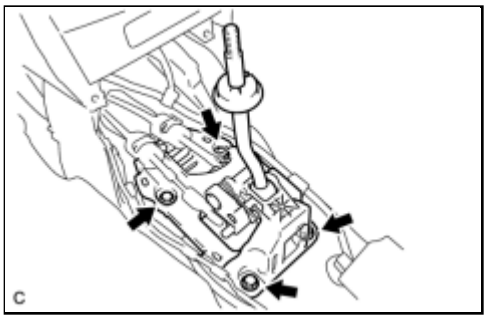


(e) Rotate the nut counterclockwise approximately 180° and, while holding the nut in that position, disconnect the transmission control cable from the shift lever retainer.

NOTICE:

Do not rotate the nut excessively as it may damage the internal spring and the transmission control cable will not be reusable.

12. REMOVE SHIFT LEVER ASSEMBLY

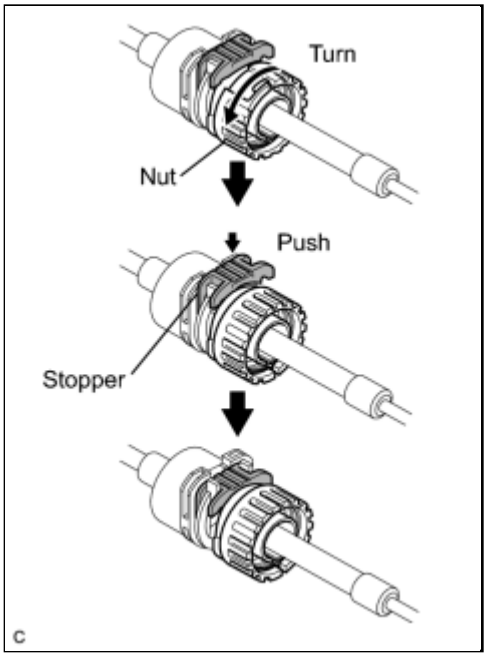


(a) Remove the 4 bolts and the shift lever assembly.

C

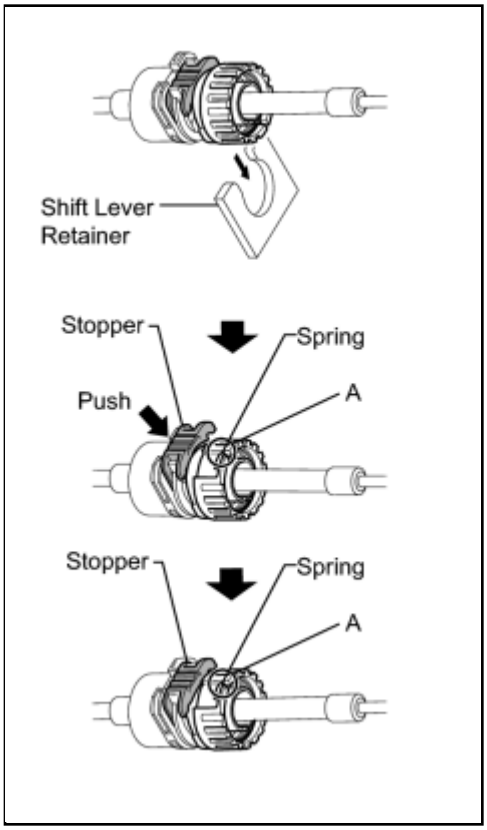
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001VZN01XX
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: SHIFT LEVER ASSEMBLY: INSTALLATION (2010 Corolla)		

INSTALLATION



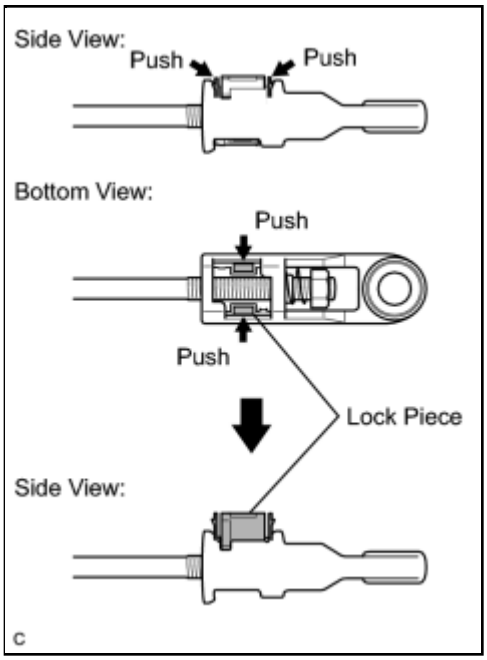
1. INSTALL SHIFT LEVER ASSEMBLY

(a) Install the shift lever assembly with the 4 bolts.



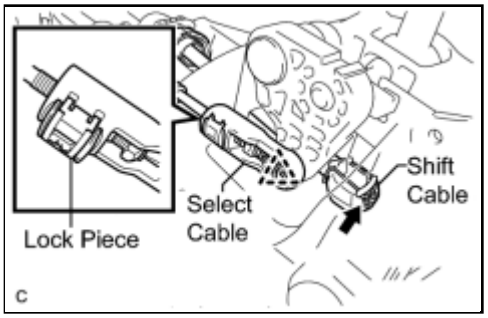
Torque: 12 N·m (122 kgf·cm, 9ft·lbf)

2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY



(a) Rotate the transmission control cable nut counterclockwise approximately 180° and, while holding the nut in that position, push in the stopper until it makes 2 "click" sounds.

(b) Install the outer part of the transmission control cable to the shift lever retainer, check that the position of the spring is the same as A shown in the illustration, and push in the stopper.



HINT:

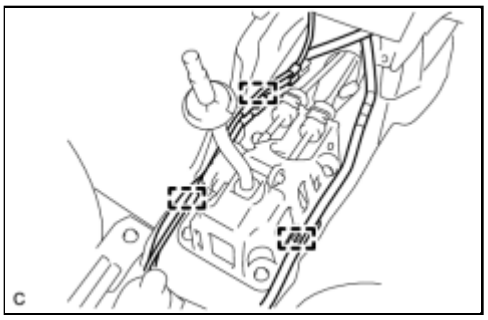
If the stopper cannot be pushed in, slightly rotate the nut clockwise and then push in the stopper.

(c) Push the two claws together at the top of the transmission control cable lock piece. While holding the two claws together, push the two lugs on the bottom of the lock piece toward each other and upward to pull out the lock piece.

(d) Install the transmission control shift cable to the shift lever assembly.

(e) Install the control select cable to the shift lever assembly.

NOTICE:



- Make sure to adjust the length at the neutral shift position.
- Make sure that the lock piece is protruding from the adjuster case.

(f) Install the clip to the shift lever assembly.

(g) Press in and lock the lock piece to the adjuster case.

NOTICE:

Securely press in the lock piece until the lock engages.

(h) Install the wire harness to the shift lever assembly with the 3 clamps.

3. ADJUST TRANSMISSION CONTROL SELECT CABLE INFO

4. INSTALL CONSOLE BOX ASSEMBLY INFO

5. INSTALL CONSOLE BOX CARPET INFO

6. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY INFO

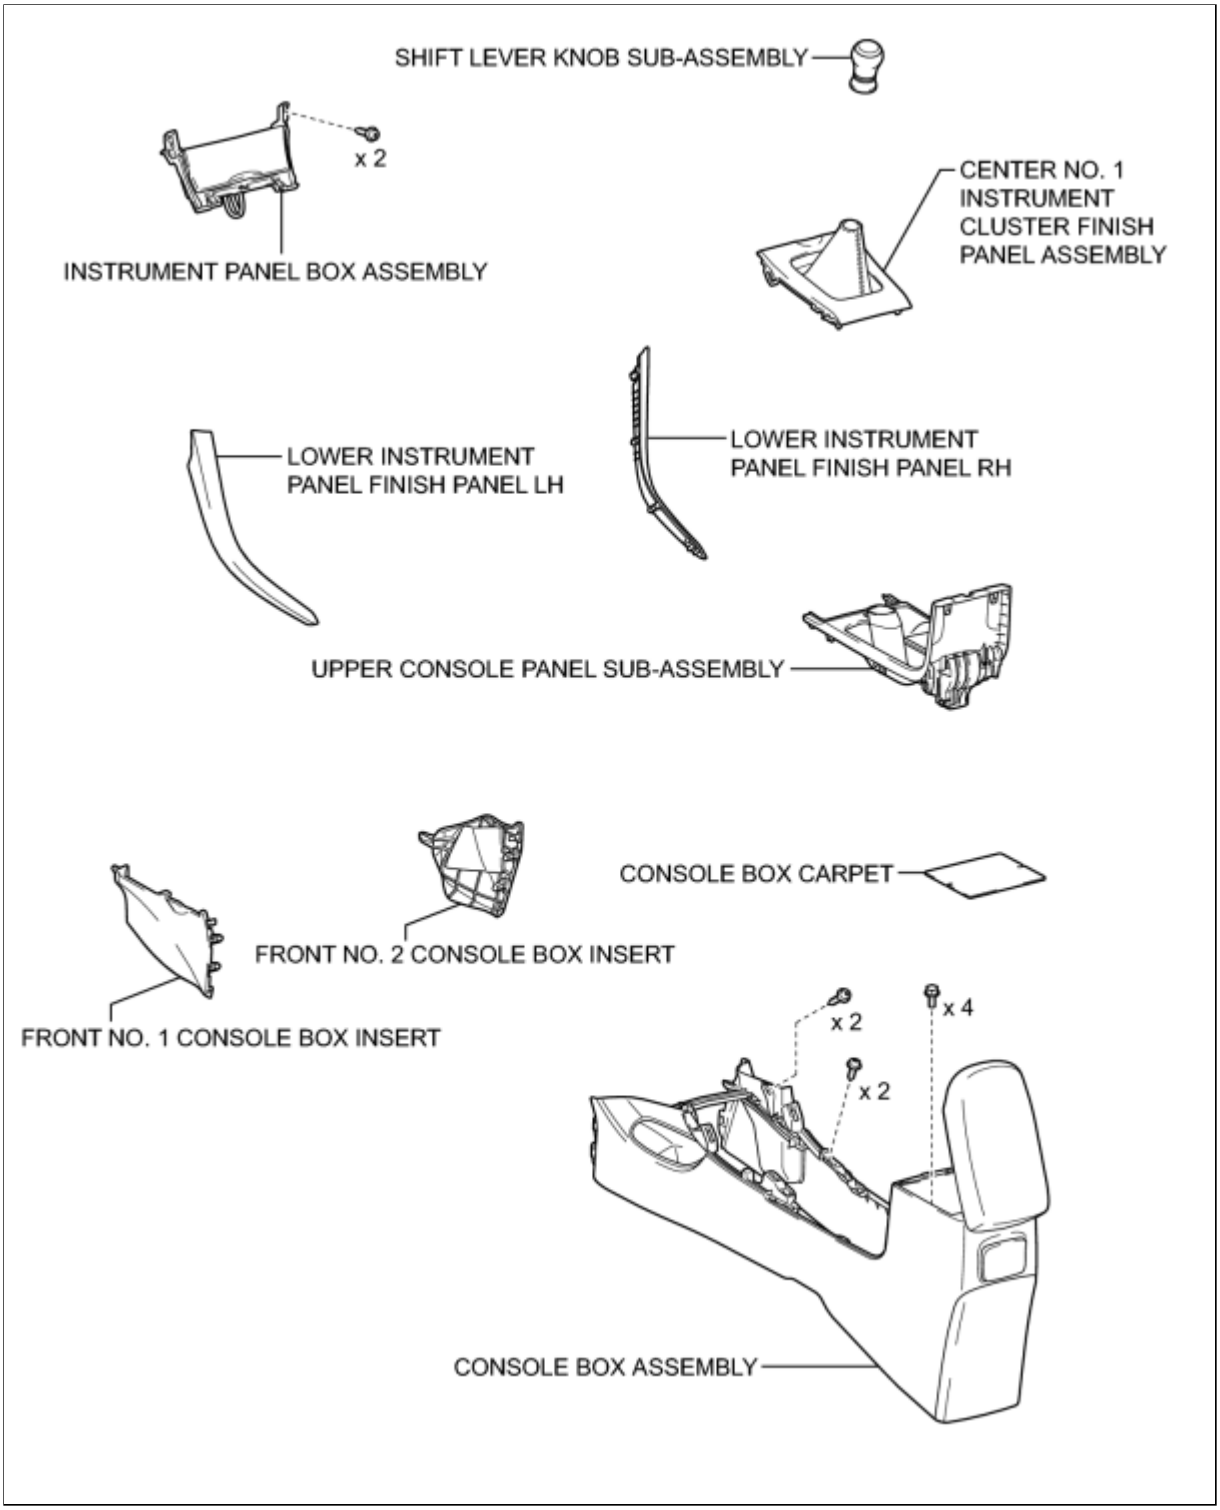
7. INSTALL FRONT NO. 1 CONSOLE BOX INSERT INFO

8. INSTALL FRONT NO. 2 CONSOLE BOX INSERT INFO

9. INSTALL INSTRUMENT PANEL BOX ASSEMBLY INFO

10. INSTALL CENTER NO. 1 INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY INFO

11. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY INFO



12. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH INFO

13. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL RH INFO

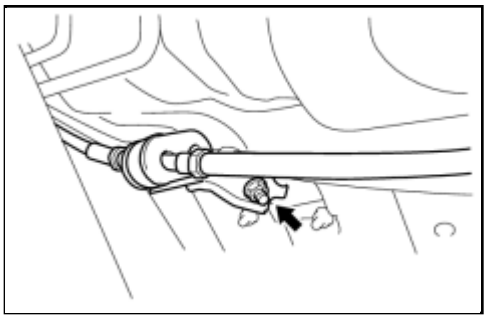
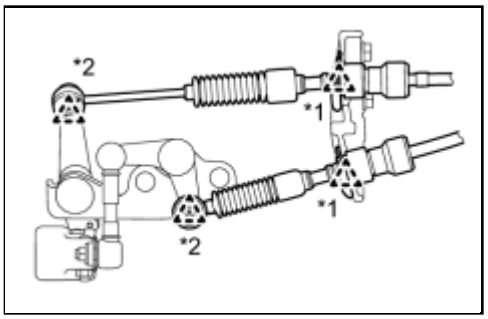
Title: C59 MANUAL TRANSMISSION / TRANSAXLE: TRANSMISSION CONTROL CABLE: INSTALLATION (2010 Corolla)		



INSTALLATION

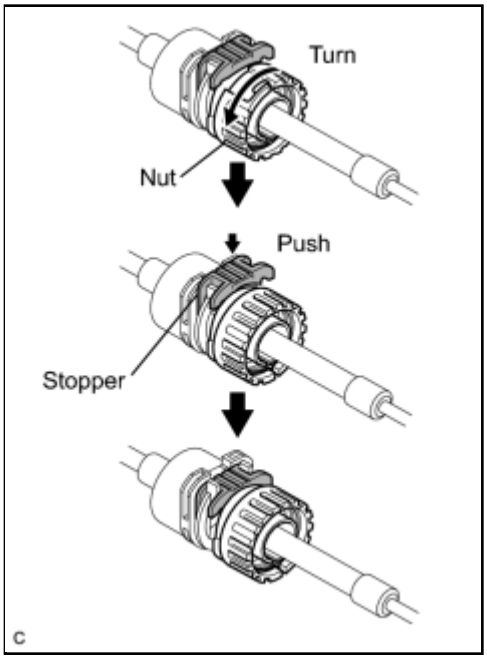
1. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY



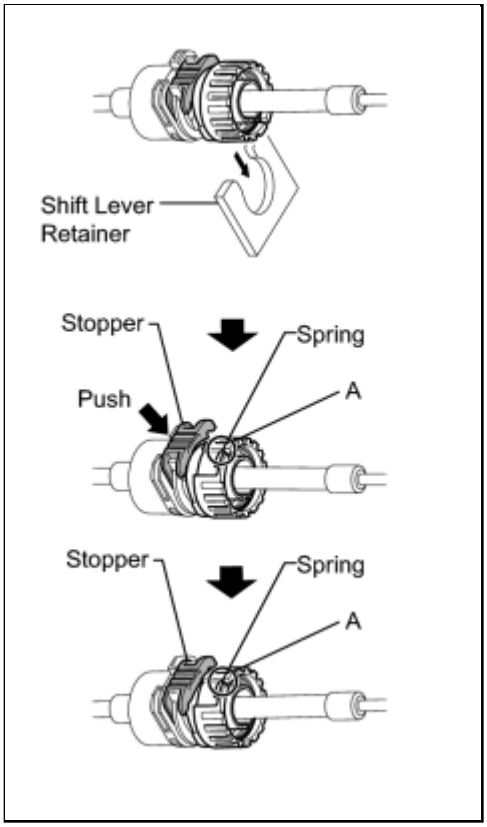
(a) Install the transmission control cable assembly with the 2 nuts.

Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

(b) Install the transmission control cable assembly with the nut.



Torque: 5.0 N·m (51 kgf·cm, 44in·lbf)

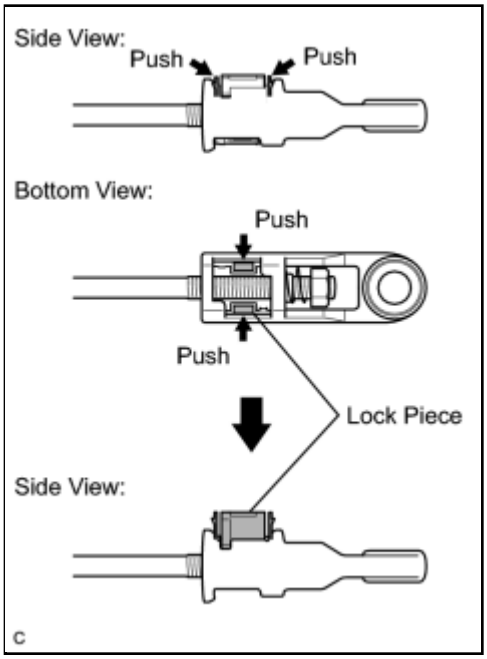


(c) Install the 2 transmission control cables to the control cable bracket with 2 new clips*1.

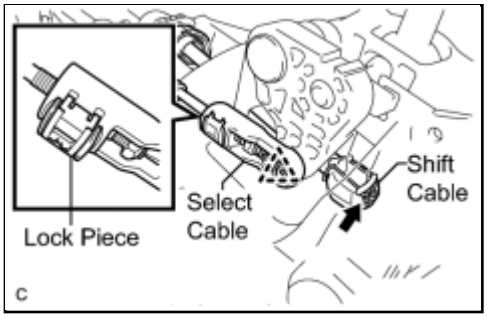
(d) Install the 2 transmission control cables to the transaxle with the 2 clips*2.

(e) Rotate the transmission control cable nut counterclockwise approximately 180° and, while holding

the nut in that position, press in the stopper until it makes 2 "click" sounds.



(f) Install the outer part of the transmission control cable to the shift lever retainer, check that the position of the spring is the same as A shown in the illustration, and push in the stopper.



HINT:

If the stopper cannot be pushed in, slightly rotate the nut clockwise and then push in the stopper.

(g) Push the two claws together at the top of the transmission control cable lock piece. While holding the two claws together, push the two lugs on the bottom of the lock piece

toward each other and upward to pull out the lock piece.

(h) Install the transmission control shift cable to the shift lever assembly.

(i) Install the control select cable to the shift lever assembly.

NOTICE:

- Make sure to adjust the length at the neutral shift position.
- Make sure that the lock piece is protruding from the adjuster case.

(j) Install the clip to the shift lever assembly.

(k) Press in and lock the lock piece to the adjuster case.

NOTICE:

Securely press in the lock piece until the lock engages.

2. ADJUST TRANSMISSION CONTROL SELECT CABLE INFO

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002KK801PX
Title: 2AZ-FE COOLING: COOLANT: REPLACEMENT (2010 Corolla)		

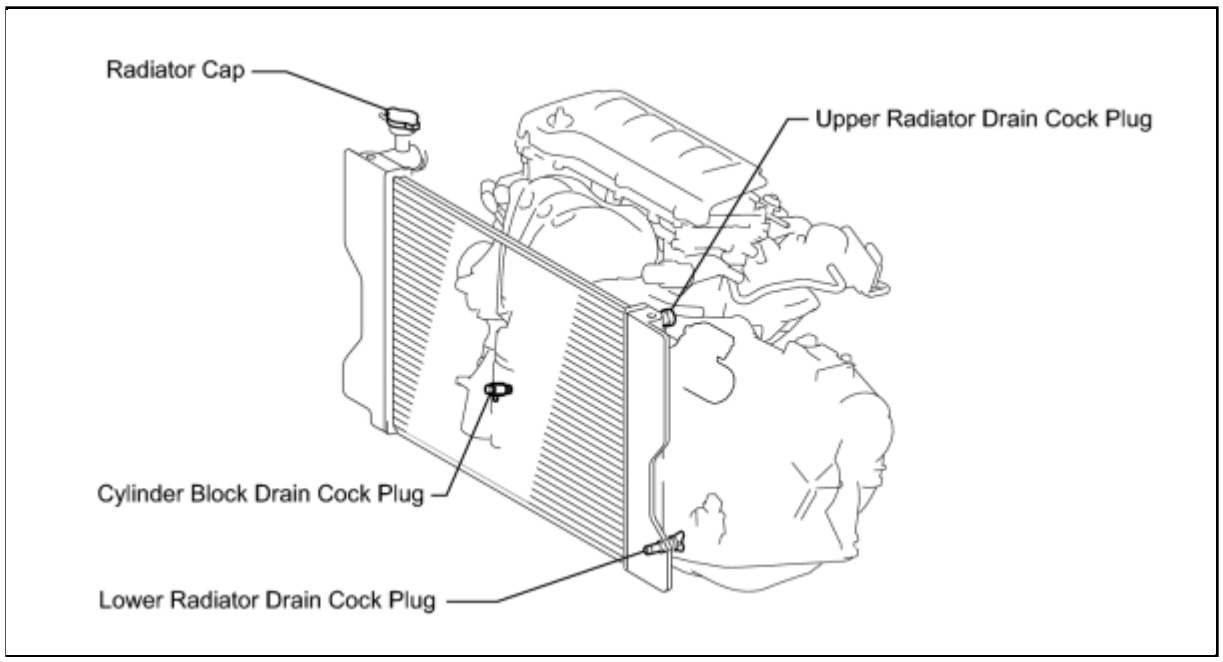
REPLACEMENT

1. DRAIN ENGINE COOLANT

(a) Loosen the lower radiator drain cock plug.

CAUTION:

Do not loosen the lower radiator drain cock plug while the engine and radiator are still hot.



Pressurized, hot engine coolant and steam may be released and cause serious burns.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

(b) Remove the radiator cap.

(c) Loosen the cylinder block drain cock plug.

2. ADD ENGINE COOLANT

(a) Tighten the lower radiator drain cock plug.

(b) Tighten the cylinder block drain cock plug.

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

(c) Loosen the upper radiator drain cock plug.

(d) Slowly fill the radiator with TOYOTA Super Long Life Coolant (SLLC).

Standard Capacity:

ITEM	CAPACITY
Engine coolant	5.7 liters (6.0 US qts, 5.0 lmp. qts)

HINT:

- TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).
- Contact your TOYOTA dealer for further details.

NOTICE:

Never use water as a substitute for engine coolant.

(e) Squeeze the inlet and outlet radiator hoses several times by hand, and then check the level of the coolant.

If the coolant level is low, add coolant.

(f) Tighten the upper radiator drain cock plug.

(g) Slowly pour coolant into the radiator reservoir tank until it reaches the FULL line.

(h) Install the radiator cap sub-assembly and reservoir tank cap.

(i) Start the engine and warm it up.

(j) Bleed air from the cooling system.

NOTICE:

- Before starting the engine, turn the A/C switch off.
- Adjust the air conditioning temperature setting to MAX (HOT).
- Adjust the air conditioning blower setting to LO.

(1) Warm up the engine until the thermostat opens. While the thermostat is open, allow the coolant to circulate for several minutes.

HINT:

Thermostat opening timing can be determined by squeezing the inlet radiator hose, and sensing vibrations when the engine coolant starts to flow inside the hose.

CAUTION:

When squeezing the radiator hoses:

- Wear protective gloves.
- Be careful as the radiator hoses are hot.
- Keep your hands away from the radiator fan.

(k) Stop the engine, and wait until the engine coolant cools down.

(l) Add engine coolant to the FULL line on the radiator reservoir.

3. INSPECT FOR COOLANT LEAK INFO

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002KK801OX
Title: 2ZR-FE COOLING: COOLANT: REPLACEMENT (2010 Corolla)		

REPLACEMENT

1. DRAIN ENGINE COOLANT

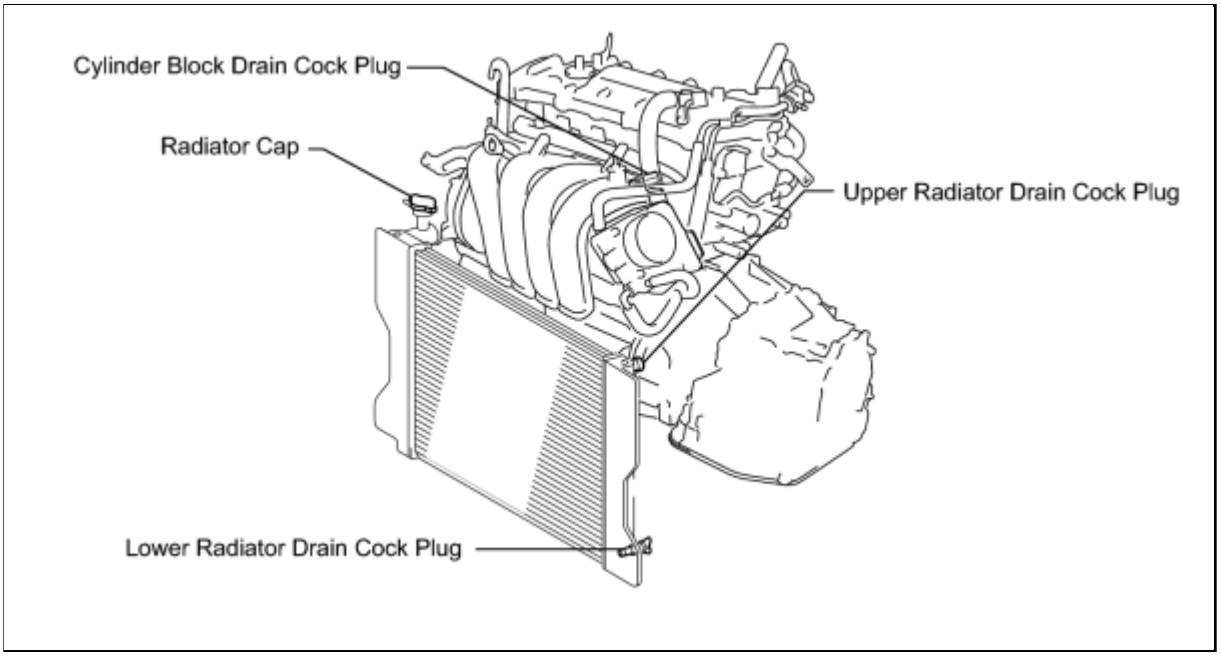
(a) Loosen the lower radiator drain cock plug.

CAUTION:

Do not loosen the lower radiator drain cock plug while the engine and radiator are still hot.

Pressurized, hot engine coolant and steam may be released and cause serious burns.

HINT:



Collect the coolant in a container and dispose of it according to the regulations in your area.

(b) Remove the radiator cap.

(c) Loosen the cylinder block drain cock plug.

HINT:

The plug is on the backside of the generator on the exhaust manifold side.

2. ADD ENGINE COOLANT

(a) Tighten the lower radiator drain cock plug.

(b) Tighten the cylinder block drain cock plug.

Torque: 13 N·m (130 kgf·cm, 9ft·lbf)

(c) Loosen the upper radiator drain cock plug.

(d) Slowly fill the radiator with TOYOTA Super Long Life Coolant (SLLC).

Standard Capacity:

ITEM	CAPACITY
Engine coolant	5.5 liters (5.8 US qts, 4.8 lmp. qts)

HINT:

- TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).
- Contact your TOYOTA dealer for further details.

NOTICE:

Never use water as a substitute for engine coolant.

(e) Squeeze the inlet and outlet radiator hoses several times by hand, and then check the level of the coolant.

If the coolant level is low, add coolant.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002YRG00WX
Title: 2ZR-FE COOLING: COOLING FAN ECU: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK COOLING FAN SYSTEM

(a) Put the vehicle in the following conditions:

(1) The ignition switch is off.

(2) The coolant temperature is less than 95°C (203°F).

(3) The battery voltage is between 11 and 14 V.

(4) The A/C switch is off.

(b) Connect the pickup of a clamp-on ammeter over one of the two wires for the cooling fan motor.

(c) Turn the ignition switch to ON and wait for approximately 10 seconds. Check that the fan stops.

(d) Start the engine. Check that the fan stops with the engine idling.

HINT:

- Make sure that the coolant temperature is less than 95°C (203°F).
- Turn the A/C switch off.

(e) Check that the fan operates when the A/C switch is turned on (MAX COOL and the magnetic clutch is operating).

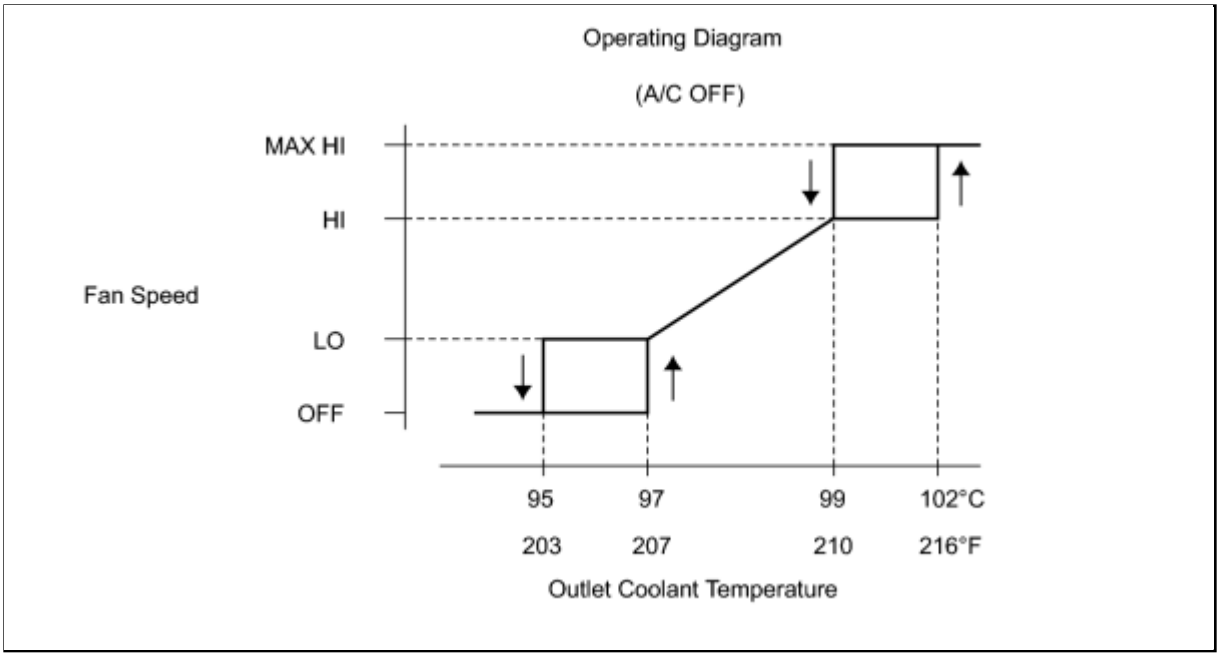
(f) Measure the current while the motor is operating.

Standard Current:

CONNECTION	CONDITION	SPECIFIED CONDITION
Fan wire	20°C (68°F)	2 to 15.2 A

HINT:

The coolant temperature is less than 95°C (203°F).



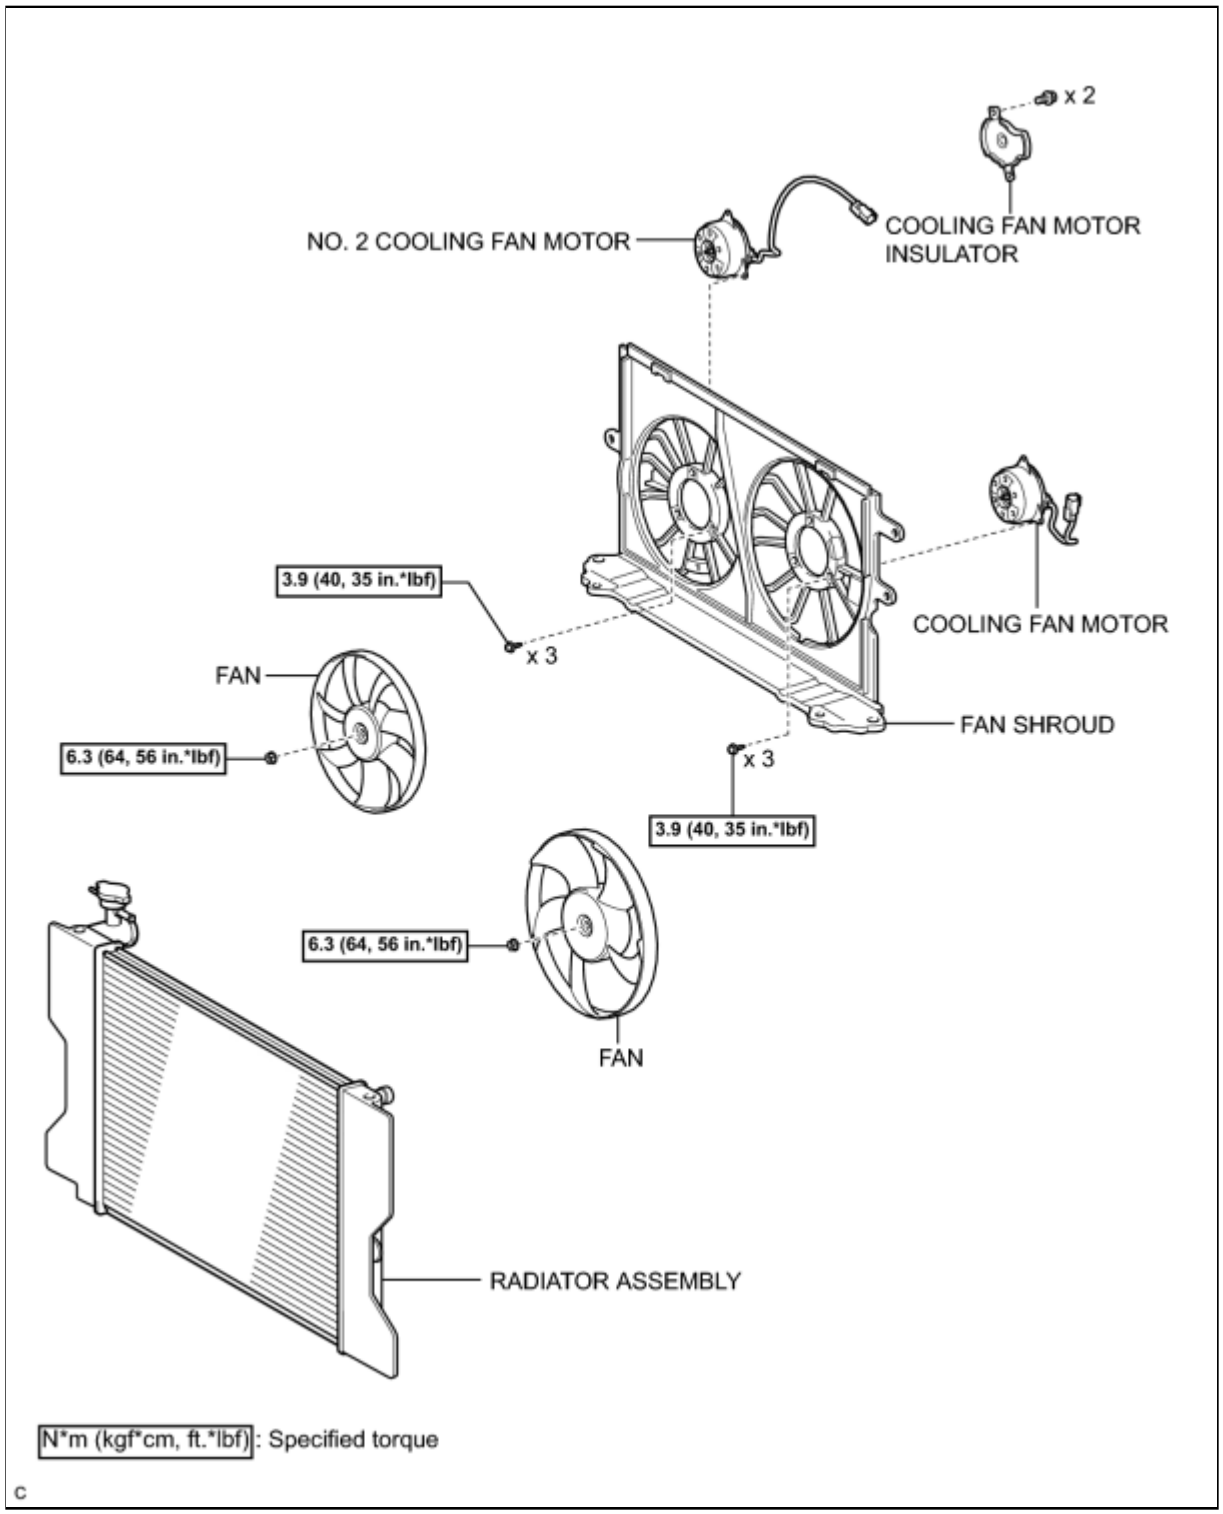
(g) Check that the fan operates when the water temperature sensor connector is disconnected.

(h) Measure the current while the motor is operating.

Standard Current:

CONNECTION	CONDITION	SPECIFIED CONDITION
Fan wire	20°C (68°F)	2 to 15.2 A

(i) After the engine is warmed up, check that the fan operates as shown in the illustration below.



HINT:

- The coolant temperature at which the fan starts operating is approximately 97°C (207°F).
- This system can also be checked using the Techstream.
- Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

Title: 2AZ-FE COOLING: COOLING FAN MOTOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

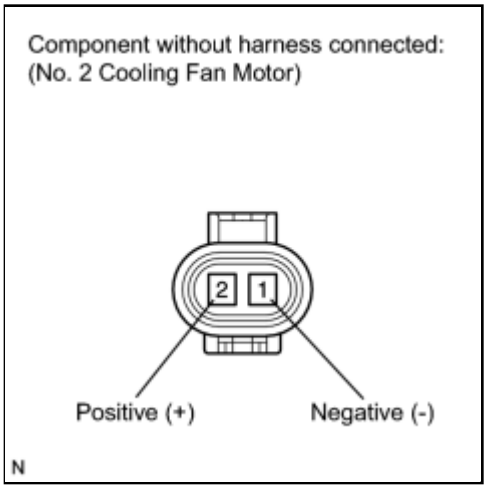
1. INSPECT COOLING FAN MOTOR

(a) Check that the motor operates smoothly when the battery is connected to the fan motor connector.

If the motor does not operate smoothly, replace the cooling fan motor.

(b) Connect the pickup of a clamp-on ammeter over one of the two wires for the cooling fan motor.

(c) Measure the current while the motor is operating.



Standard Current:

CONNECTION	CONDITION	SPECIFIED CONDITION
Fan wire	20°C (68°F)	7.4 to 11.4 A

If the result is not as specified, replace the cooling fan motor.

2. INSPECT NO. 2 COOLING FAN MOTOR

(a) Check that the motor operates smoothly when the battery is connected to the fan motor connector.

(b) Connect the pickup of a clamp-on ammeter over one of the two wires for the cooling fan motor.

(c) Measure the current while the motor is operating.

Standard Current:

CONNECTION	CONDITION	SPECIFIED CONDITION
Fan wire	20°C (68°F)	4.7 to 8.7 A

If the result is not as specified, replace the No. 2 cooling fan motor.

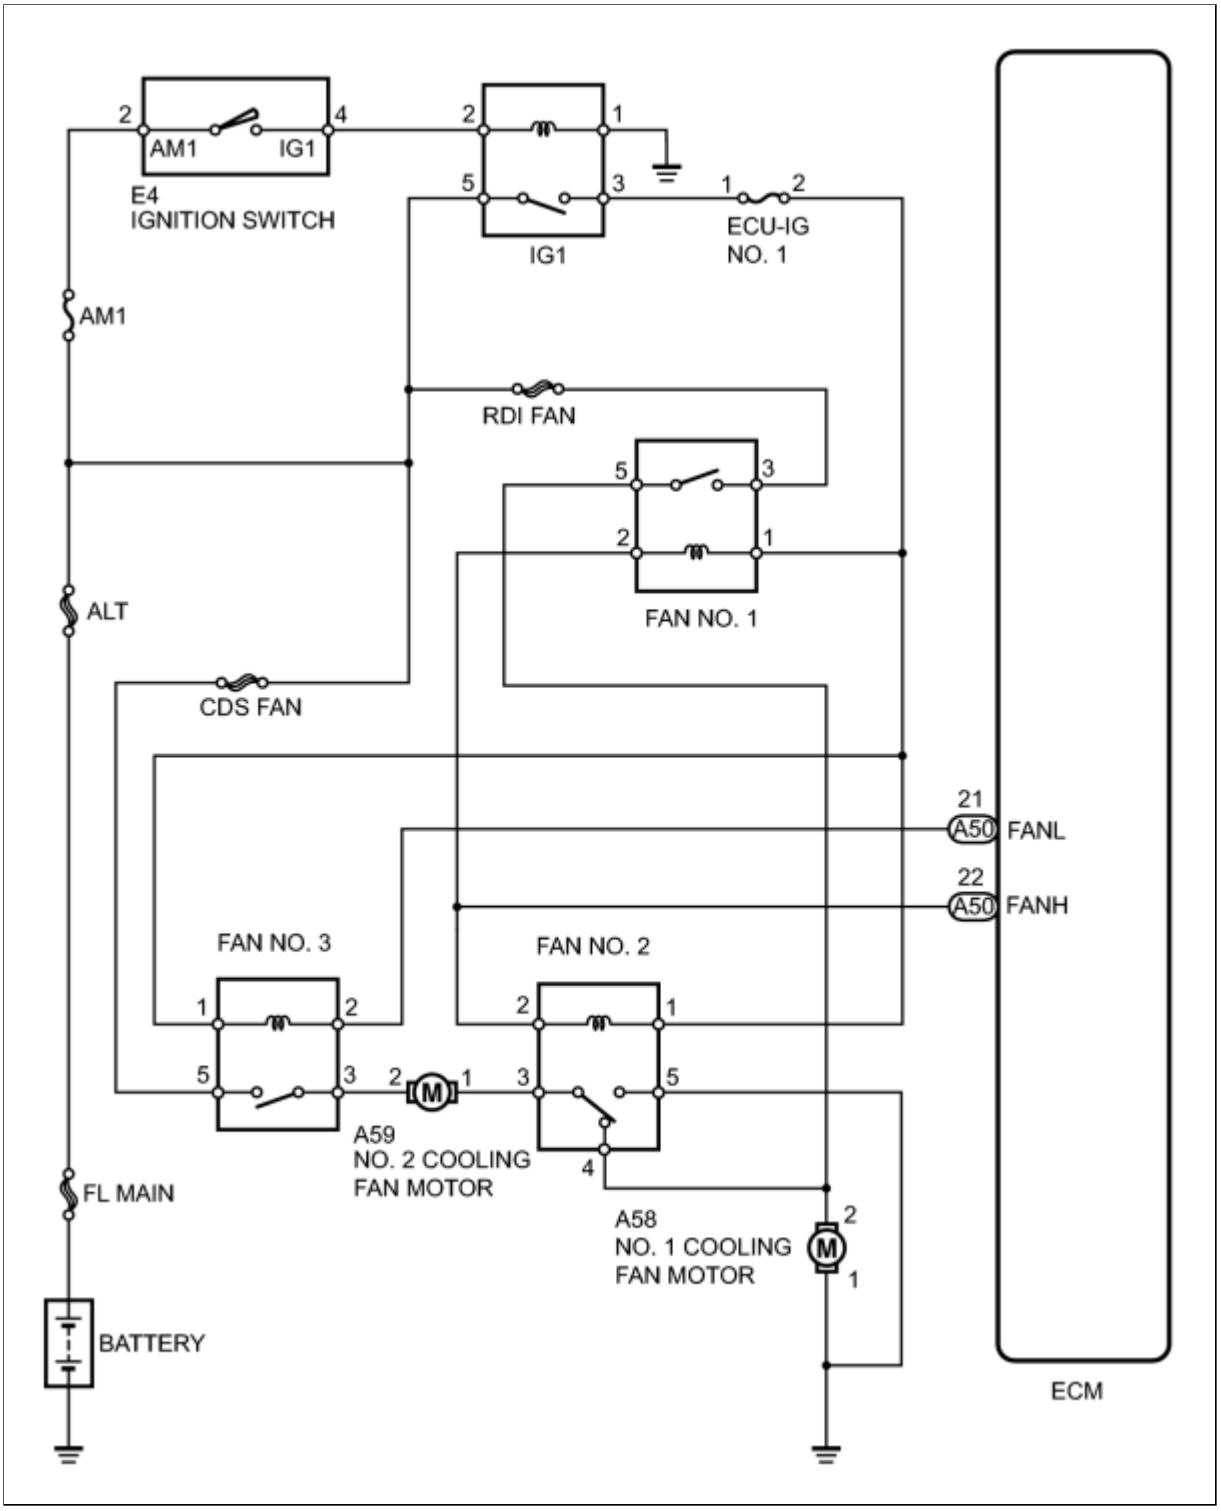
Title: 2AZ-FE COOLING: COOLING FAN SYSTEM: Cooling Fan Circuit (2010 Corolla)		



Cooling Fan Circuit

DESCRIPTION

The ECM turns on or off the fan relays using signals calculated from the engine coolant temperature, air conditioning (ON/OFF), air conditioner refrigerant pressure, engine speed, and vehicle speed signals.

The ECM switches the circuit of the cooling fan motors between series and parallel by turning on or off the fan relays in order to control the speed of the cooling fan motors in two steps.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

After replacing the ECM, the new ECM needs registration INFO **.**

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE ELECTRIC COOLING FAN)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

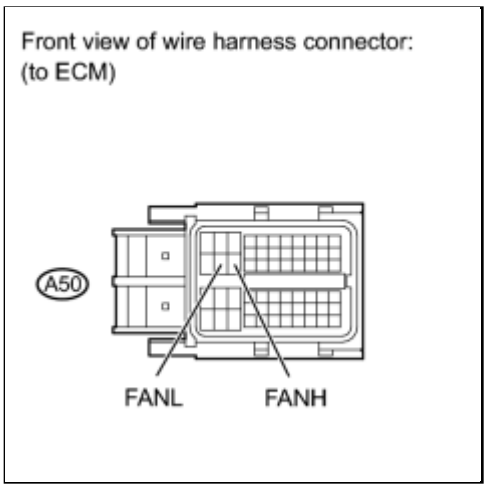
(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Electric Cooling Fan.

OK:

TESTER OPERATION	SPECIFIED CONDITION
ON	Fans operate
OFF	Fans do not operate

Result:

RESULT	PROCEED TO
OK	A
NG (Cooling fans do not operate)	B
NG (Cooling fans do not stop)	C



C ▶ **INSPECT FAN NO. 1 RELAY**

B ▶ **INSPECT ECM (FANL AND FANH VOLTAGE)**

A ▶ **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	INSPECT ECM (FANL AND FANH VOLTAGE)

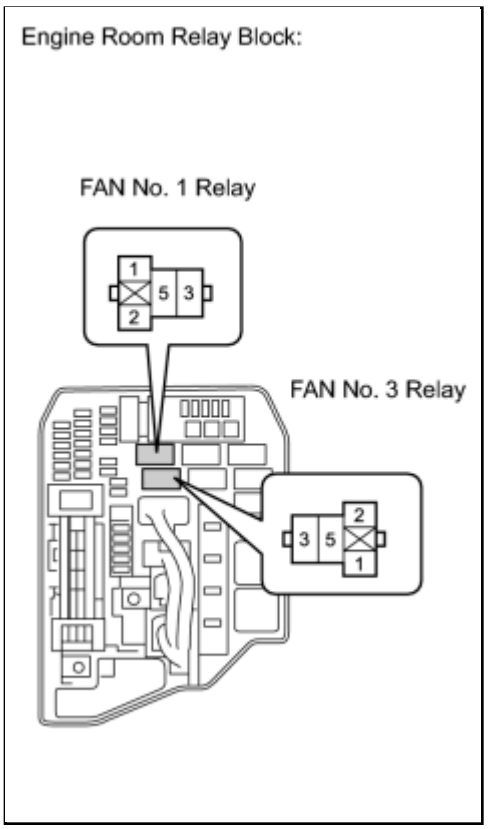
(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A50-21 (FANL) - Body ground	Ignition switch ON	11 to 14 V
A50-22 (FANH) - Body ground	Ignition switch ON	11 to 14 V



(d) Reconnect the ECM connector.

NG ▶ **CHECK FUSE (ECU-IG NO. 1 FUSE)**

OK ▼

3.	**INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY AND FAN NO. 3 RELAY VOLTAGE)**

(a) Remove the FAN No. 1 relay and FAN No. 3 relay from the engine room relay block.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (FAN No. 1 relay) - Body ground	Always	11 to 14 V
5 (FAN No. 3 relay) - Body ground	Always	11 to 14 V

(c) Reinstall the FAN No. 1 relay and FAN No. 3 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - ENGINE ROOM RELAY BLOCK)**

OK ▼

4.	**INSPECT FAN NO. 1 RELAY**

(a) Inspect the FAN No. 1 relay INFO .

NG ▶ **REPLACE FAN NO. 1 RELAY**

OK

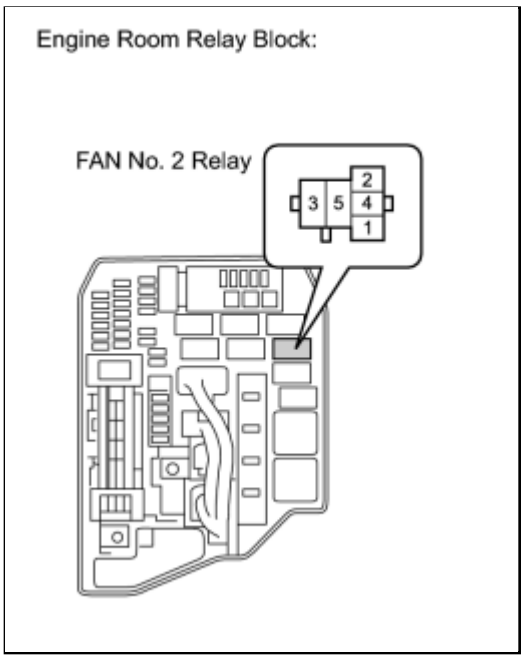
5.	**INSPECT FAN NO. 2 RELAY**

(a) Inspect the FAN No. 2 relay INFO .

NG **REPLACE FAN NO. 2 RELAY**

OK

6.	**INSPECT FAN NO. 3 RELAY**



(a) Inspect the FAN No. 3 relay INFO .

NG **REPLACE FAN NO. 3 RELAY**

OK

7.	**CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - BODY GROUND)**

(a) Remove the FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

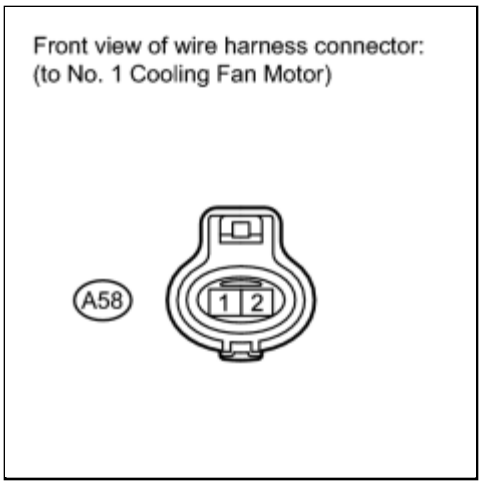
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
5 (FAN No. 2 relay) - Body ground	Always	Below 1 Ω

(c) Reinstall the FAN No. 2 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - BODY GROUND)**

OK ▼



8.	INSPECT NO. 1 COOLING FAN MOTOR (RADIATOR FAN MOTOR)

(a) Inspect the No. 1 cooling fan motor INFO .

NG ▶ **REPLACE NO. 1 COOLING FAN MOTOR (RADIATOR FAN MOTOR)**

OK

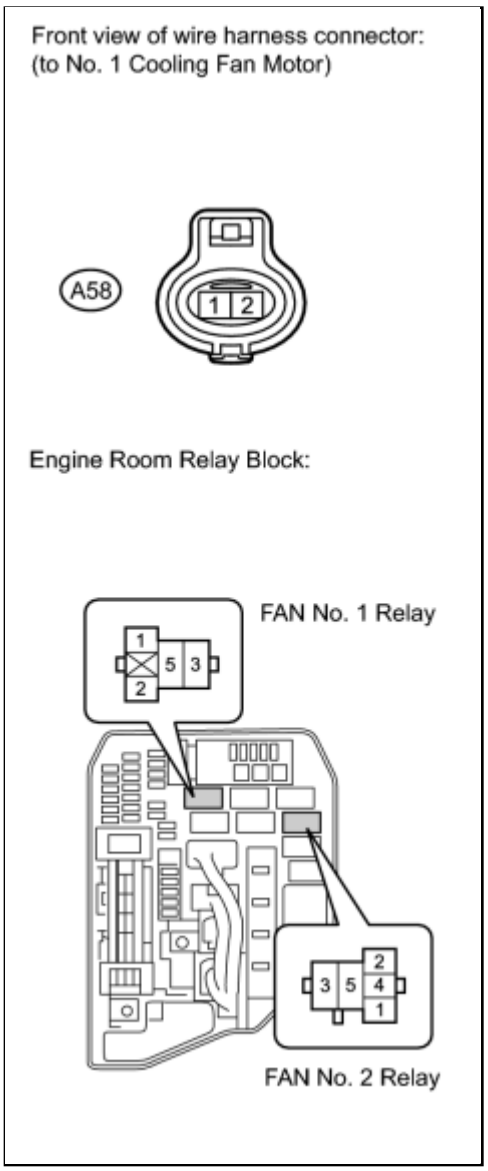
9.	**CHECK HARNESS AND CONNECTOR (NO. 1 COOLING FAN MOTOR - BODY GROUND)**

(a) Disconnect the No. 1 cooling fan motor (radiator fan motor) connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A58-1 - Body ground	Always	Below 1 Ω



(c) Reconnect the No. 1 cooling fan motor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 1 COOLING FAN MOTOR - BODY GROUND)**

OK

10.	**CHECK HARNESS AND CONNECTOR (NO. 1 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

(a) Disconnect the No. 1 cooling fan motor (radiator fan motor) connector.

(b) Remove the FAN No. 1 relay and FAN No. 2 relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A58-2 - 5 (FAN No. 1 relay)	Always	Below 1 Ω
A58-2 - 4 (FAN No. 2 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A58-2 or 5 (FAN No. 1 relay) - Body ground	Always	10 kΩ or higher
A58-2 or 4 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher

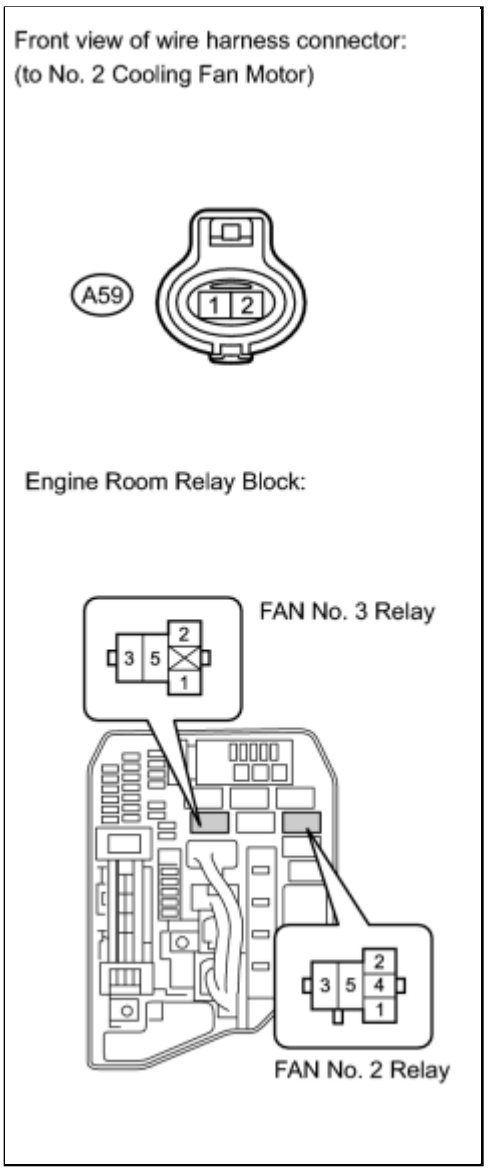
(d) Reconnect the radiator fan motor connector.

(e) Reinstall the FAN No. 1 relay and FAN No. 2 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 1 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

OK ▼

11.	**INSPECT NO. 2 COOLING FAN MOTOR (AIR CONDITIONER CONDENSER FAN MOTOR)**



(a) Inspect the No. 2 cooling fan motor INFO .

NG ▶ **REPLACE NO. 2 COOLING FAN MOTOR (AIR CONDITIONER CONDENSER FAN MOTOR)**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

(a) Disconnect the No. 2 cooling fan motor (air conditioner condenser fan motor) connector.

(b) Remove the FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

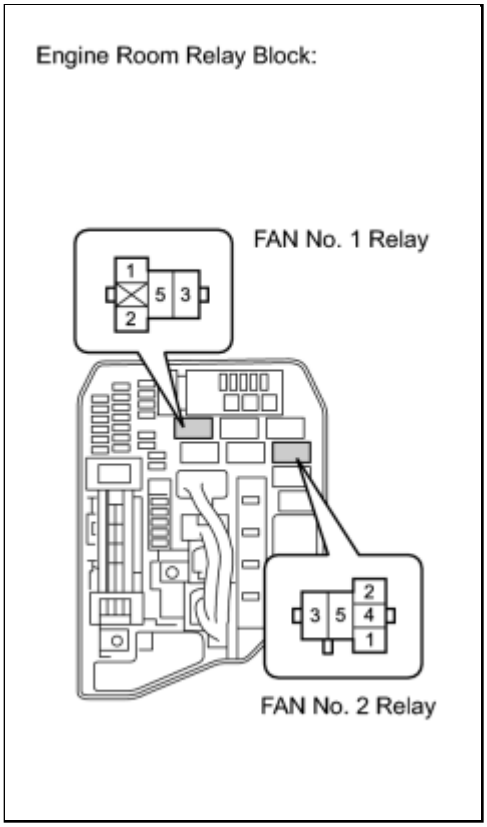
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A59-1 - 3 (FAN No. 2 relay)	Always	Below 1 Ω
A59-2 - 3 (FAN No. 3 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A59-1 or 3 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher
A59-2 or 3 (FAN No. 3 relay) - Body ground	Always	10 kΩ or higher



(d) Reconnect the No. 2 cooling fan motor connector.

(e) Reinstall the FAN No. 2 relay and FAN No. 3 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (NO. 2 COOLING FAN MOTOR - ENGINE ROOM RELAY BLOCK)**

OK ▼

13.	INSPECT ENGINE ROOM RELAY BLOCK (FAN NO. 1 RELAY - FAN NO. 2 RELAY)

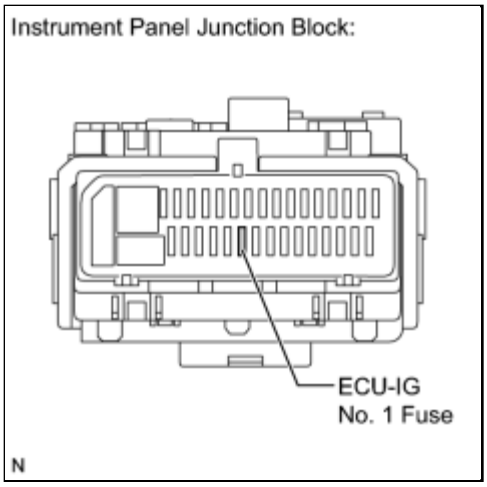
(a) Remove the FAN No. 1 relay and FAN No. 2 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN No. 1 relay) - 1 (FAN No. 2 relay)	Always	Below 1 Ω
2 (FAN No. 1 relay) - 2 (FAN No. 2 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN No. 1 relay) or 1 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher
2 (FAN No. 1 relay) or 2 (FAN No. 2 relay) - Body ground	Always	10 kΩ or higher

(c) Reinstall the FAN No. 1 relay and FAN No. 2 relay.

NG ▶ **REPLACE ENGINE ROOM RELAY BLOCK**

OK ▶ **REPLACE ECM**

14.	**CHECK FUSE (ECU-IG NO. 1 FUSE)**

(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ECU-IG No. 1 fuse	Always	Below 1 Ω

(c) Reinstall the ECU-IG No. 1 fuse.

NG ▶ **REPLACE FUSE (ECU-IG NO. 1 FUSE)**

OK ▼

15.	**INSPECT FAN NO. 1 RELAY**

(a) Inspect the FAN No. 1 relay INFO .

NG ▶ **REPLACE FAN NO. 1 RELAY**

OK ▼

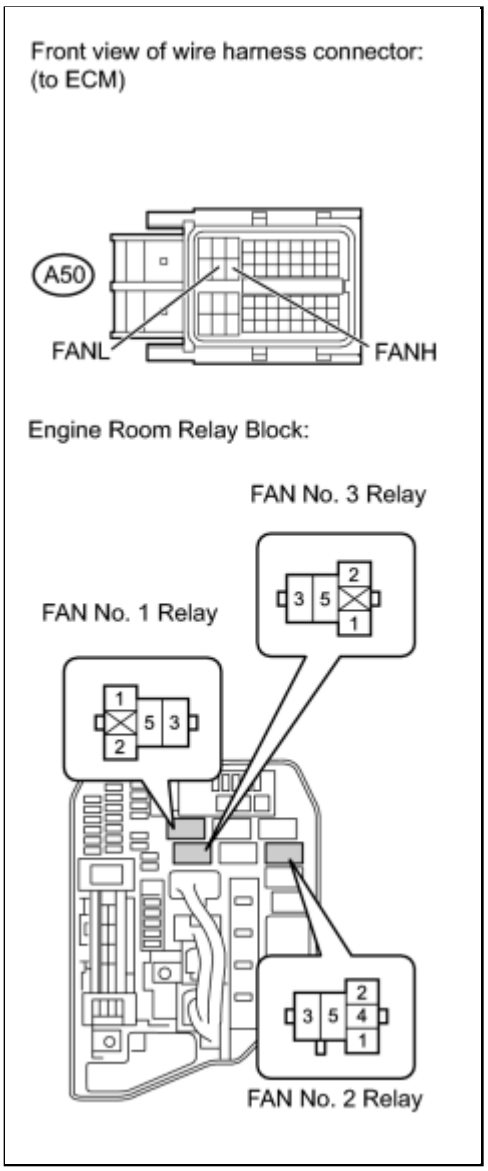
16.	**INSPECT FAN NO. 2 RELAY**

(a) Inspect the FAN No. 2 relay INFO .

NG ▶ **REPLACE FAN NO. 2 RELAY**

OK ▼

17.	**INSPECT FAN NO. 3 RELAY**



(a) Inspect the FAN No. 3 relay INFO .

NG ▶ **REPLACE FAN NO. 3 RELAY**

OK ▼

18.	**CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - ECM)**

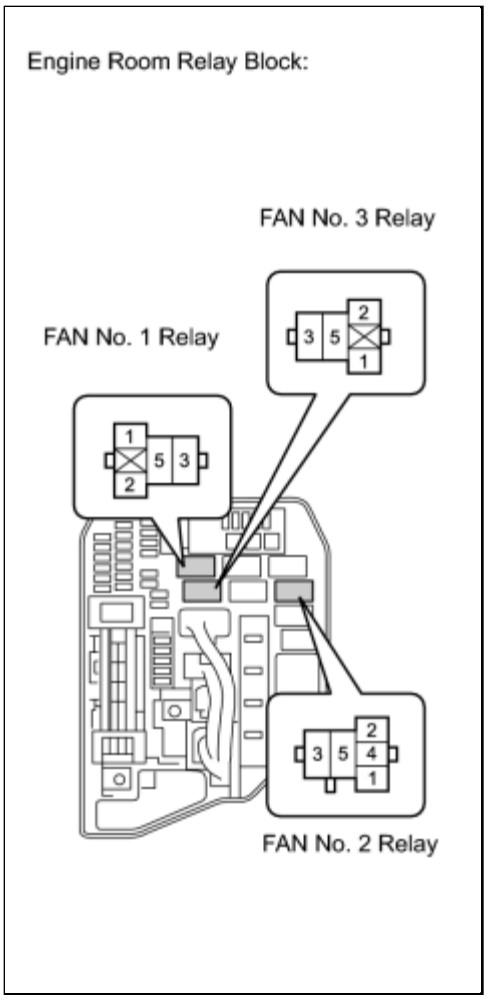
(a) Remove the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

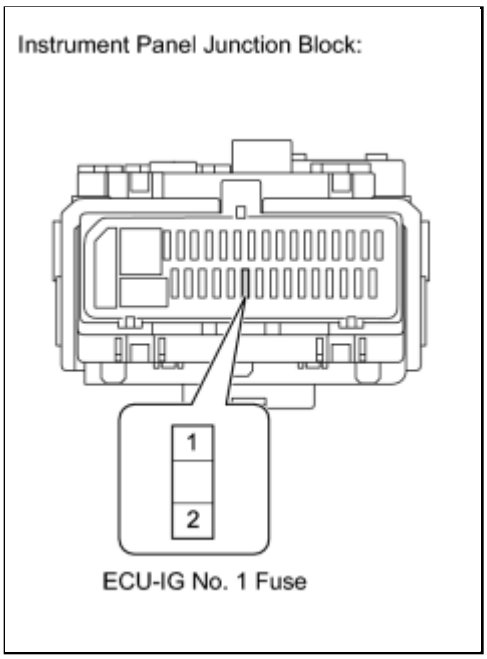
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (FAN No. 1 relay) - A50-22 (FANH)	Always	Below 1 Ω
2 (FAN No. 2 relay) - A50-22 (FANH)	Always	Below 1 Ω
2 (FAN No. 3 relay) - A50-21 (FANL)	Always	Below 1 Ω



(d) Reinstall the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - ECM)**



OK

19.	**CHECK HARNESS AND CONNECTOR (ECU-IG NO. 1 FUSE - ENGINE ROOM RELAY BLOCK)**

(a) Remove the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

(b) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN No. 1 relay) - 2 (ECU-IG No. 1 fuse)	Always	Below 1 Ω
1 (FAN No. 2 relay) - 2 (ECU-IG No. 1 fuse)	Always	Below 1 Ω
1 (FAN No. 3 relay) - 2 (ECU-IG No. 1 fuse)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (FAN No. 1 relay) or 2 (ECU-IG No. 1 fuse) - Body ground	Always	10 kΩ or higher
1 (FAN No. 2 relay) or 2 (ECU-IG No. 1 fuse) - Body ground	Always	10 kΩ or higher
1 (FAN No. 3 relay) or 2 (ECU-IG No. 1 fuse) - Body ground	Always	10 kΩ or higher

(d) Reinstall the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay.

(e) Reinstall the ECU-IG No. 1 fuse.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECU-IG NO. 1 FUSE - ENGINE ROOM RELAY BLOCK)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

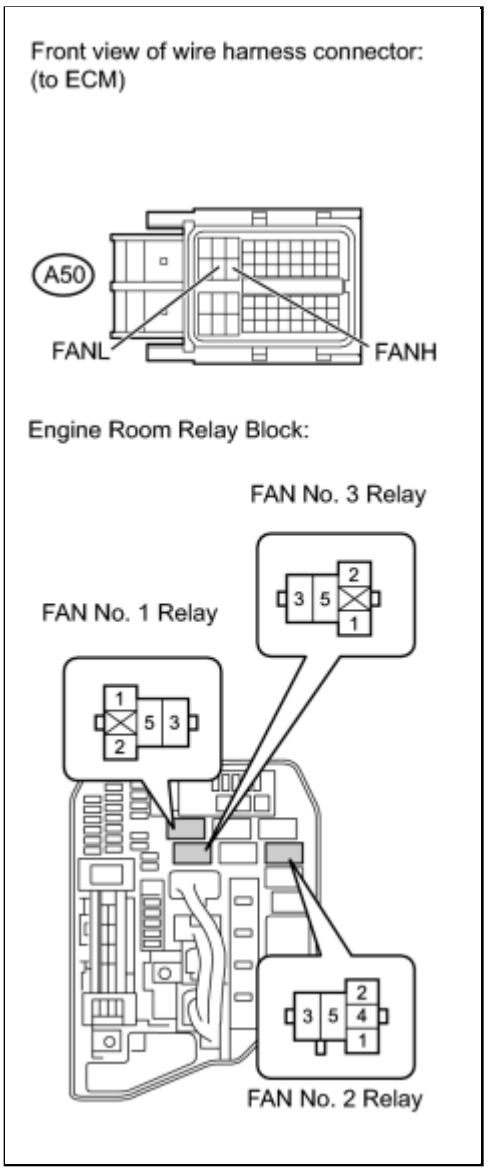
20.	**INSPECT FAN NO. 1 RELAY**

(a) Inspect the FAN No. 1 relay INFO.

NG ▶ **REPLACE FAN NO. 1 RELAY**

OK ▼

21.	**INSPECT FAN NO. 3 RELAY**



(a) Inspect the FAN No. 3 relay INFO.

NG ▶ **REPLACE FAN NO. 3 RELAY**

OK ▼

22.	**CHECK HARNESS AND CONNECTOR**

(a) Remove the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay from the engine room relay block.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

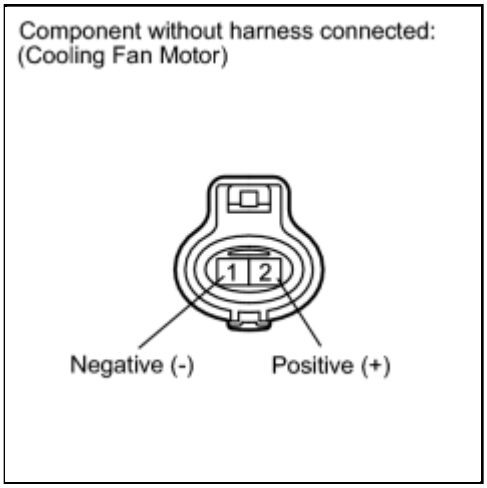
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (FAN No. 1 relay) or A50-22 (FANH) - Body ground	Always	10 kΩ or higher
2 (FAN No. 2 relay) or A50-22 (FANH) - Body ground	Always	10 kΩ or higher
2 (FAN No. 3 relay) or A50-21 (FANL) - Body ground	Always	10 kΩ or higher

(d) Reinstall the FAN No. 1 relay, FAN No. 2 relay and FAN No. 3 relay.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECU-IG NO. 1 FUSE - ENGINE ROOM RELAY**



BLOCK)

OK ▶ REPLACE ECM

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN MOTOR

(a) Check that the motor operates smoothly when the battery is connected to the cooling fan motor connector.

If the motor does not operate smoothly, replace the cooling fan motor.

(b) Connect the pickup of a clamp-on ammeter over one of the two wires for the cooling fan motor.

(c) Measure the current while the motor is operating.

Standard Current:

CONNECTION	CONDITION	SPECIFIED CONDITION
Fan wire	20°C (68°F)	7.4 to 10.9 A

If the result is not as specified, replace the cooling fan motor.

Title: 2AZ-FE COOLING: COOLING FAN SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

HINT:

It is normal for the cooling fans to sometimes operate when the ignition switch is turned from ACC to ON.

1. INSPECT COOLING FAN OPERATION AT LOW TEMPERATURES (Below 94°C (201°F))

(a) Turn the ignition switch to ON with the A/C switch off.

(b) Check that the cooling fans stop.

If either does not, check the cooling fan relays and engine coolant temperature sensor, and then check for disconnection of the connector or a wire break between the cooling fan relay and engine coolant temperature sensor.

(c) Disconnect the engine coolant temperature sensor connector.

(d) Check that the cooling fans operate.

If either does not, check the fuses, cooling fan relays, ECM and cooling fan, and then check for an open circuit in the cooling fan relay.

(e) Reconnect the engine coolant temperature sensor connector.

2. INSPECT COOLING FAN OPERATION AT HIGH TEMPERATURES (Above 96°C (205°F))

(a) Start the engine, and then raise the coolant temperature above 96°C (205°F).

HINT:

Coolant temperature is the value detected by the engine coolant temperature sensor on the cylinder head.

(b) Check that the A/C switch is off.

(c) Check that the cooling fans operate.

If either does not, check the fuses, engine coolant temperature sensor, cooling fan, harness or connector.

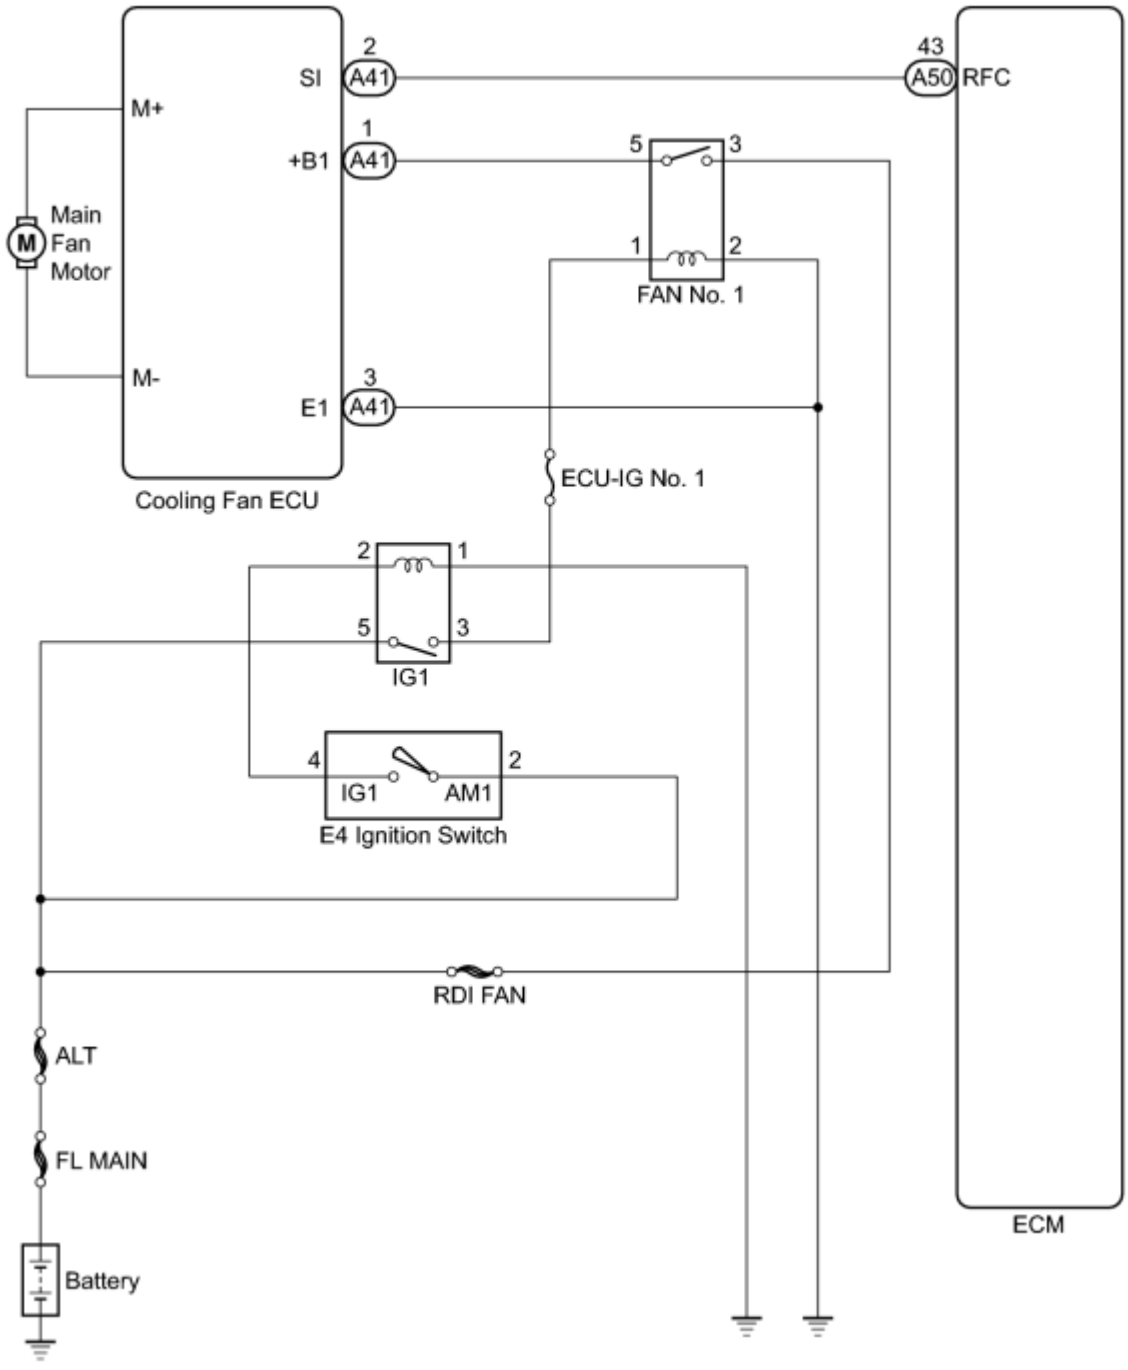
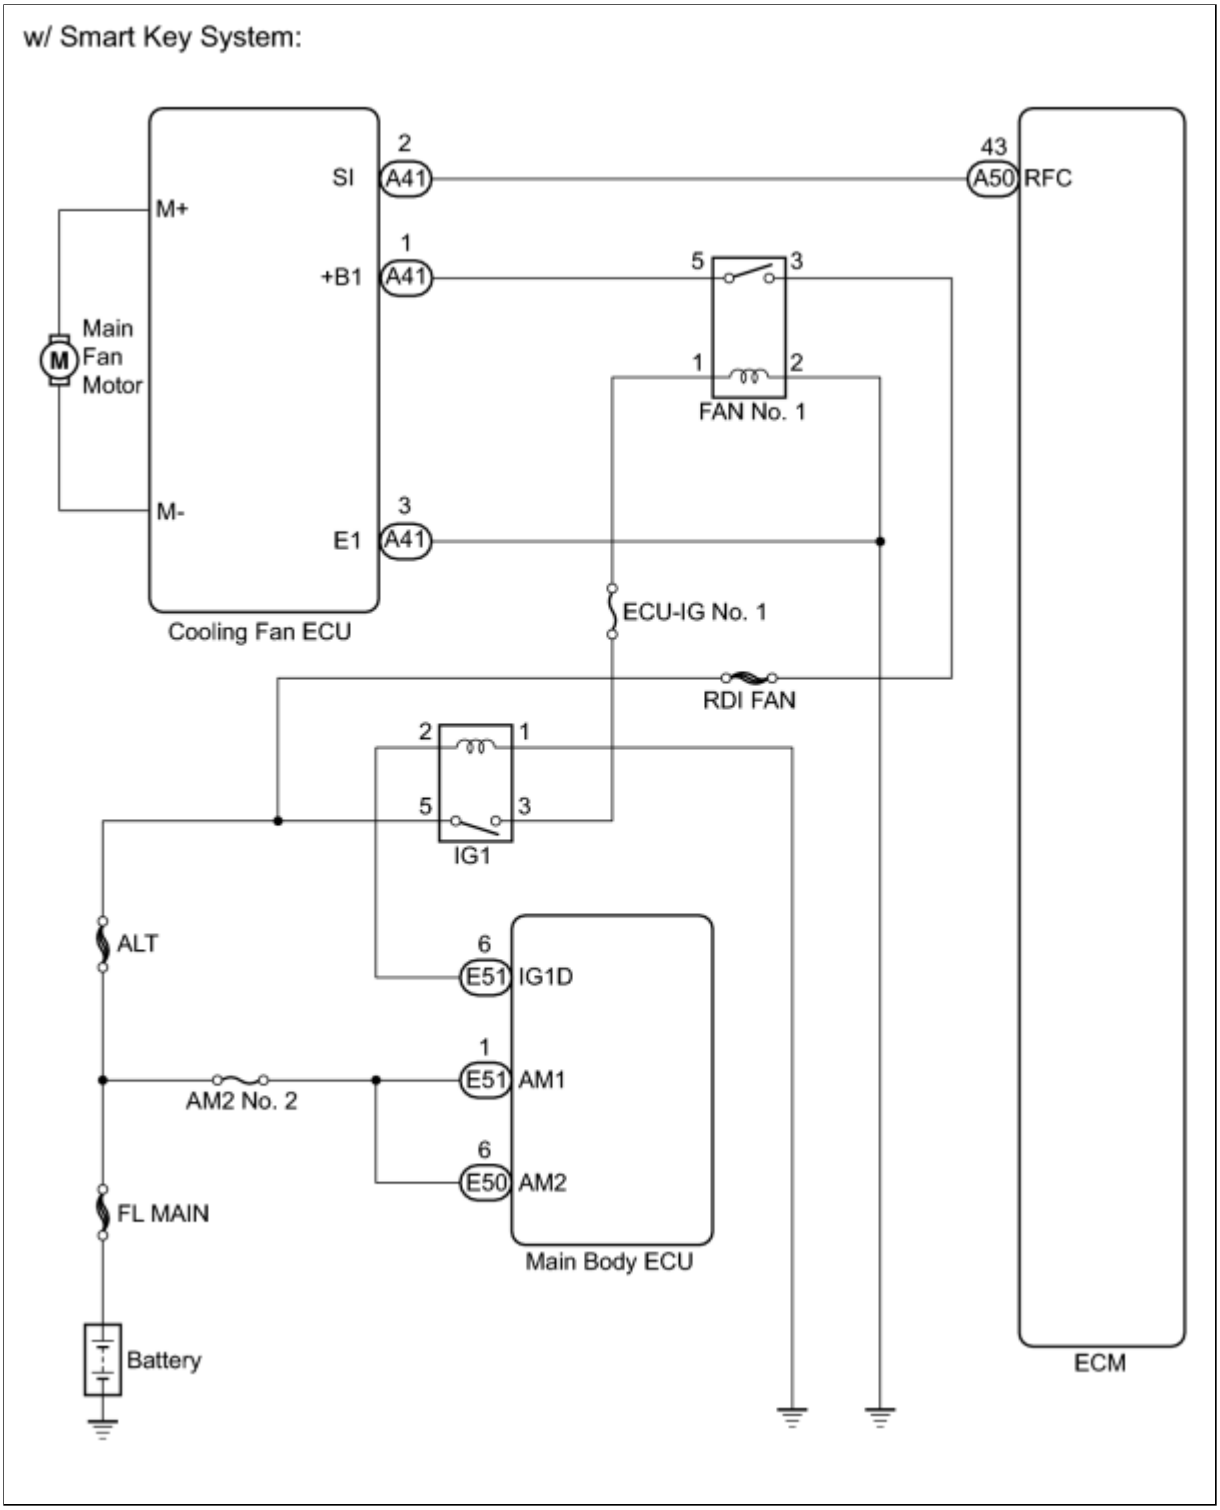
Title: 2ZR-FE COOLING: COOLING FAN SYSTEM: Cooling Fan Circuit (2010 Corolla)		



Cooling Fan Circuit



DESCRIPTION

The ECM calculates an appropriate cooling fan speed based on the engine coolant temperature, air conditioning switch condition, refrigerant pressure, engine speed, and vehicle speed and sends the signals to the cooling fan ECU to regulate the cooling fan. The cooling fan ECU controls the cooling fan speed based on the duty ratio signal sent from the ECM. By basing its control on the operating conditions, the ECM can control the fan speed optimally using the cooling fan ECU, achieving both high cooling performance and quietness. The cooling fan speed is determined based on the engine coolant temperature, air conditioner operating conditions, engine speed, and vehicle speed.

w/o Smart Key System:

INSPECTION PROCEDURE

PROCEDURE

1.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL COOLING FAN)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

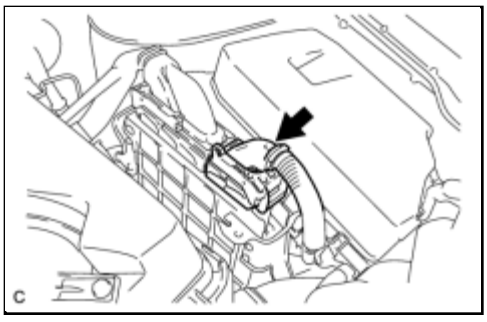
(c) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Electric Cooling Fan.

(d) Check the operation of the cooling fan using the Techstream.

OK:

TESTER OPERATION	FAN OPERATION
ON	Cooling fan operates
OFF	Cooling fan stopped

Result:



RESULT	PROCEED TO
OK	A
NG (Cooling fan does not operate)	B
NG (Cooling fan does not stop)	C

C ▶ **CHECK HARNESS AND CONNECTOR (ECM - COOLING FAN ECU)**

B ▶ **INSPECT COOLING FAN ECU**

A ▶ **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT COOLING FAN ECU**

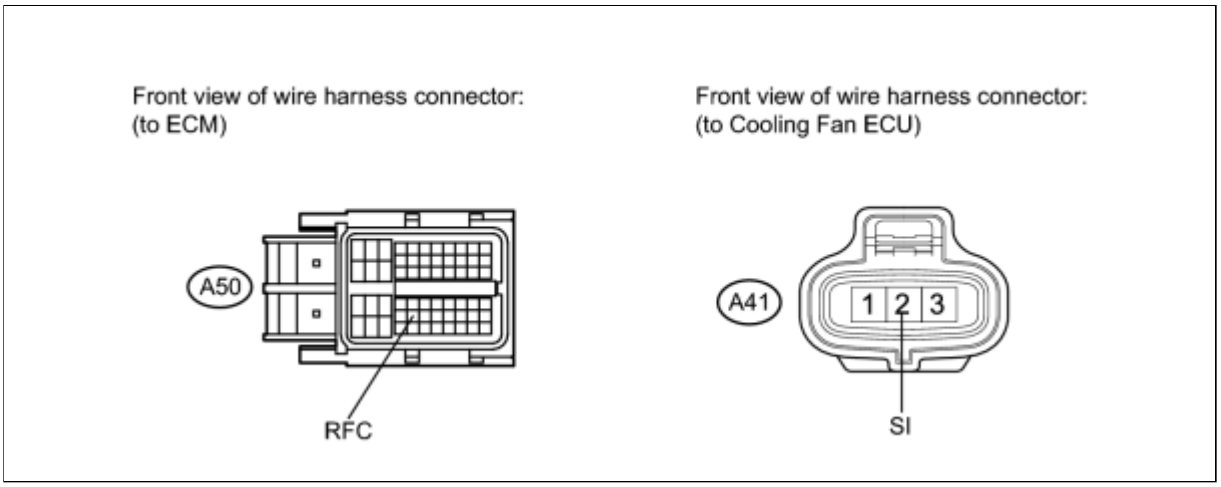
(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Check the operation of the cooling fan.

OK:

The cooling fan operates.



(d) Reconnect the ECM connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - COOLING FAN ECU)**

OK ▶ **REPLACE ECM**

3.	CHECK HARNESS AND CONNECTOR (ECM - COOLING FAN ECU)

(a) Disconnect the cooling fan ECU connector.

(b) Disconnect the ECM connector.

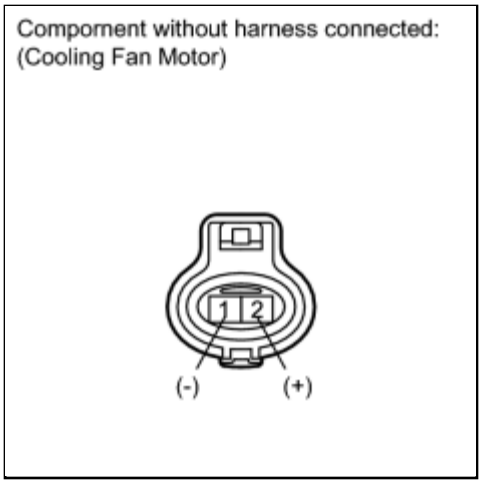
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-43 (RFC) - A41-2 (SI)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-43 (RFC) or A41-2 (SI) - Body ground	Always	10 kΩ or higher



(d) Reconnect the ECM connector.

(e) Reconnect the cooling fan ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - COOLING FAN ECU)**

OK ▼

4.	**INSPECT COOLING FAN MOTOR**

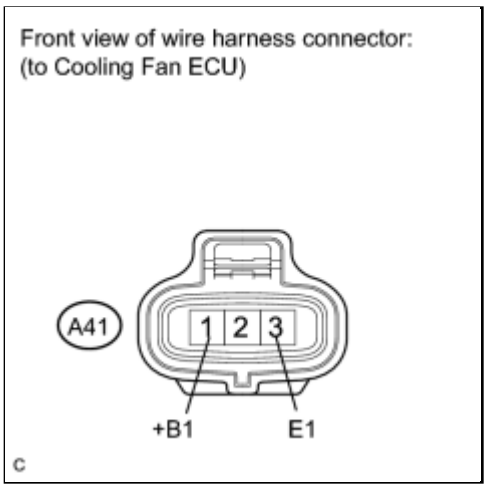
(a) Disconnect the cooling fan ECU connector.

(b) Connect a battery positive (+) lead to terminal 2 of the cooling fan motor connector, and connect a battery negative (-) lead to terminal 1 of the cooling fan motor connector.

(c) Check the cooling fan motor.

OK:

The cooling fan operates.



(d) Reconnect the cooling fan ECU connector.

NG ▶ **REPLACE COOLING FAN MOTOR**

OK ▼

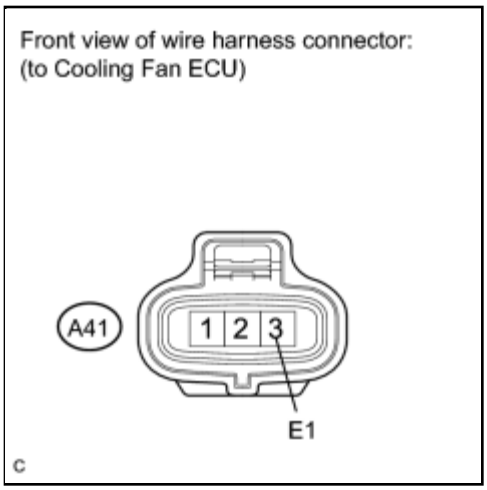
5.	**CHECK COOLING FAN ECU (POWER SOURCE)**

(a) Disconnect the cooling fan ECU connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A41-1 (+B1) - A41-3 (E1)	Ignition switch ON	11 to 14 V

(d) Reconnect the cooling fan ECU connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (COOLING FAN ECU - BODY GROUND)**

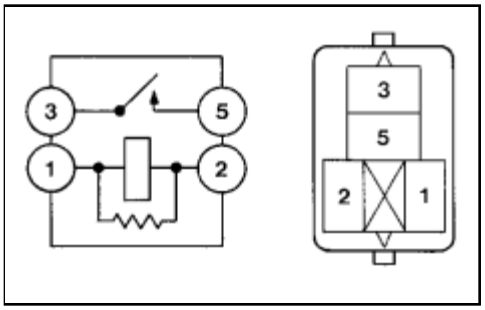
OK ▶ **REPLACE COOLING FAN ECU**

6.	**CHECK HARNESS AND CONNECTOR (COOLING FAN ECU - BODY GROUND)**

(a) Disconnect the cooling fan ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A41-3 (E1) - Body ground	Always	Below 1 Ω

(c) Reconnect the cooling fan ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN ECU - BODY GROUND)**

OK ▼

7.	**INSPECT FAN NO. 1 RELAY**

(a) Remove the FAN No. 1 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

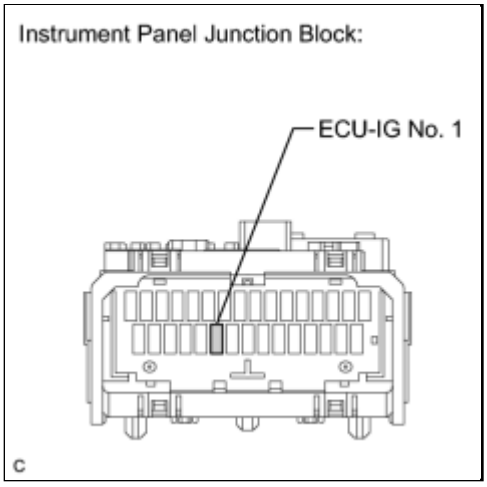
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	Normal	10 kΩ or higher
3 - 5	Apply battery voltage between terminals 1 and 2	Below 1 Ω

(c) Reinstall the FAN No. 1 relay.

NG ▶ **REPLACE FAN NO. 1 RELAY**

OK



8.	**INSPECT FUSIBLE LINK BLOCK (RDI FAN FUSE)**

(a) Check the RDI FAN fuse.

NG **REPLACE FUSIBLE LINK BLOCK**

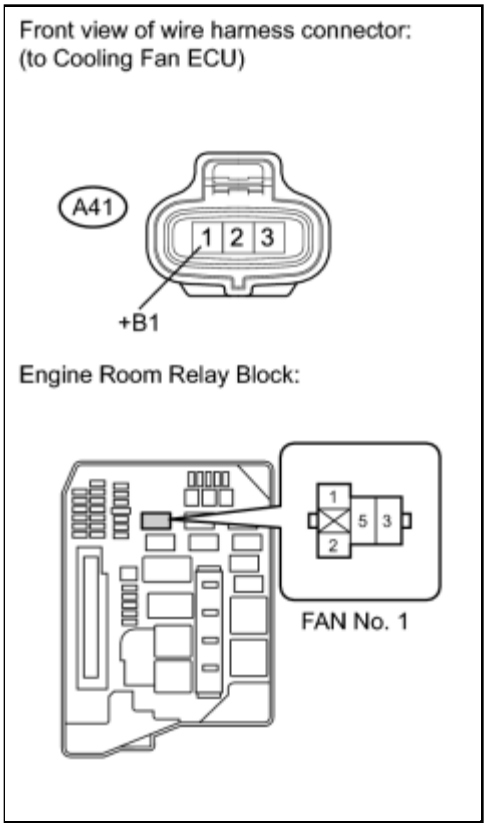
OK

9.	**INSPECT FUSE (ECU-IG NO. 1)**

(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ECU-IG No. 1 fuse	Always	Below 1 Ω

(c) Reinstall the ECU-IG No. 1 fuse.

NG **REPLACE FUSE (ECU-IG NO. 1 FUSE)**

OK

10.	CHECK HARNESS AND CONNECTOR (COOLING FAN ECU - FAN NO. 1 RELAY)

(a) Disconnect the cooling fan ECU connector.

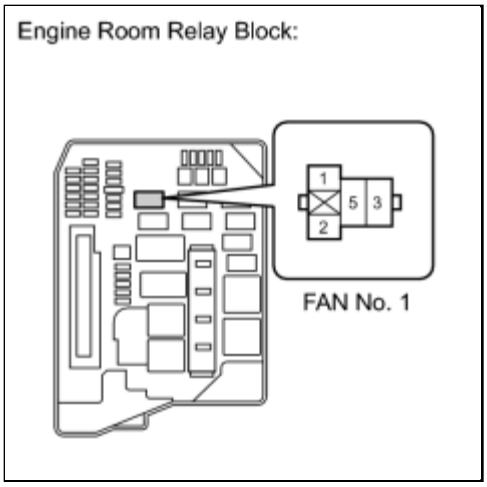
(b) Remove the FAN No. 1 relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A41-1 (+B1) - 5 (FAN No.1 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A41-1 (+B1) or 5 (FAN No.1 relay) - Body ground	Always	10 kΩ or higher

(d) Reconnect the cooling fan ECU connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COOLING FAN ECU - FAN NO. 1 RELAY)**

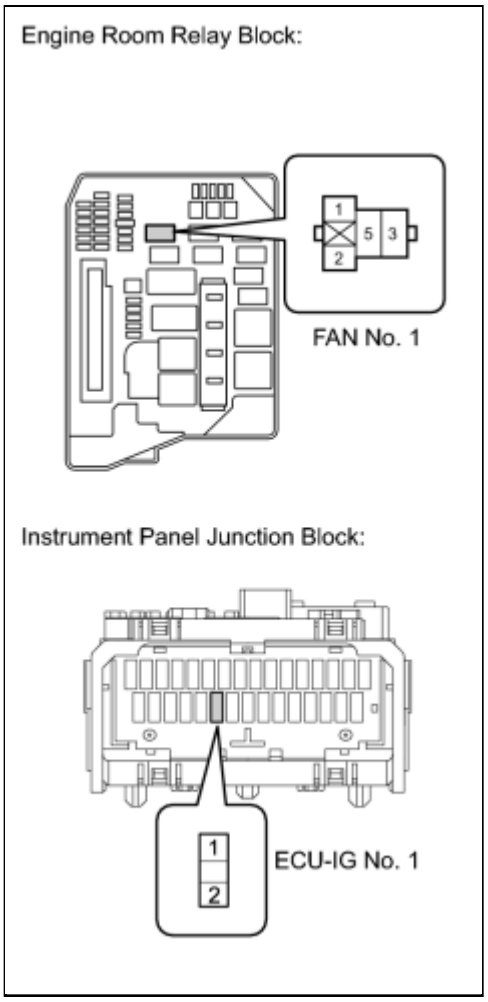
OK ▼

11.	**CHECK HARNESS AND CONNECTOR (FAN NO. 1 RELAY - BODY GROUND)**

(a) Remove the FAN No. 1 relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (FAN No.1 relay) - Body ground	Always	Below 1 Ω

(c) Reinstall the FAN No. 1 relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 1 RELAY - BODY GROUND)**

OK ▼

12.	**CHECK HARNESS AND CONNECTOR (FAN NO. 1 RELAY - ECU-IG NO. 1 FUSE)**

(a) Remove the ECU-IG No. 1 fuse from the instrument panel junction block.

(b) Remove the FAN No. 1 relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

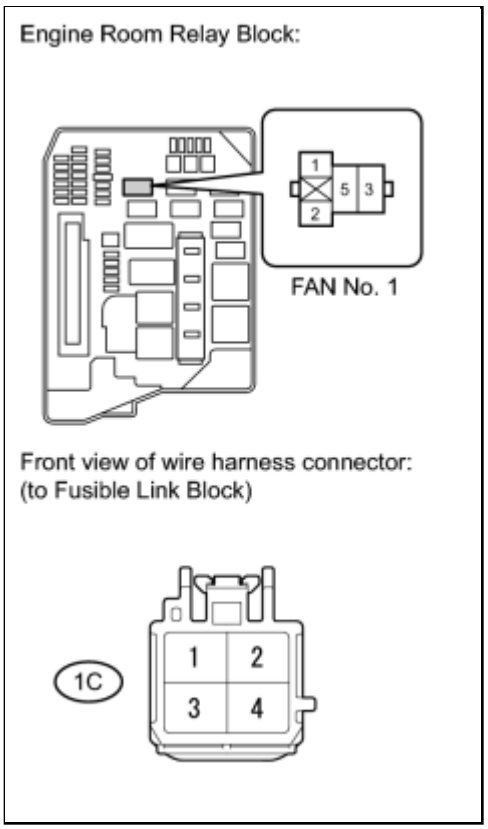
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (ECU-IG No. 1 fuse) - 1 (FAN No.1 relay)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (ECU-IG No. 1 fuse) or 1 (FAN No.1 relay) - Body ground	Always	10 kΩ or higher

(d) Reinstall the ECU-IG No. 1 fuse.

(e) Reinstall the FAN No. 1 relay.



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 1 RELAY - ECU-IG NO. 1 FUSE)**

OK

13.	CHECK HARNESS AND CONNECTOR (FAN NO. 1 RELAY - RDI FAN FUSE)

(a) Remove the fusible link block assembly from the engine room relay block.

(b) Disconnect the fusible link block connector.

(c) Measure the resistance according to the value(s) in the table below.

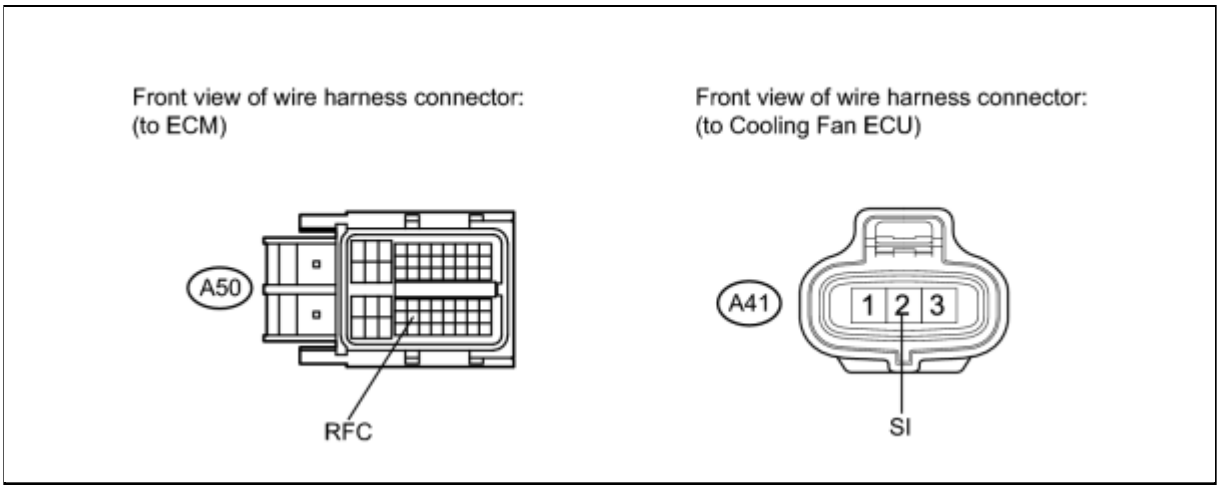
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (FAN No. 1 relay) - 1C-2 (Fusible link block)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 (FAN No. 1 relay) or 1C-2 (Fusible link block) - Body ground	Always	10 kΩ or higher

(d) Reconnect the fusible link block connector.



(e) Reinstall the fusible link block assembly.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FAN NO. 1 RELAY - RDI FAN FUSE)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - RDI FAN FUSE)**

14.	CHECK HARNESS AND CONNECTOR (ECM - COOLING FAN ECU)

(a) Disconnect the cooling fan ECU connector.

(b) Disconnect the ECM connector.

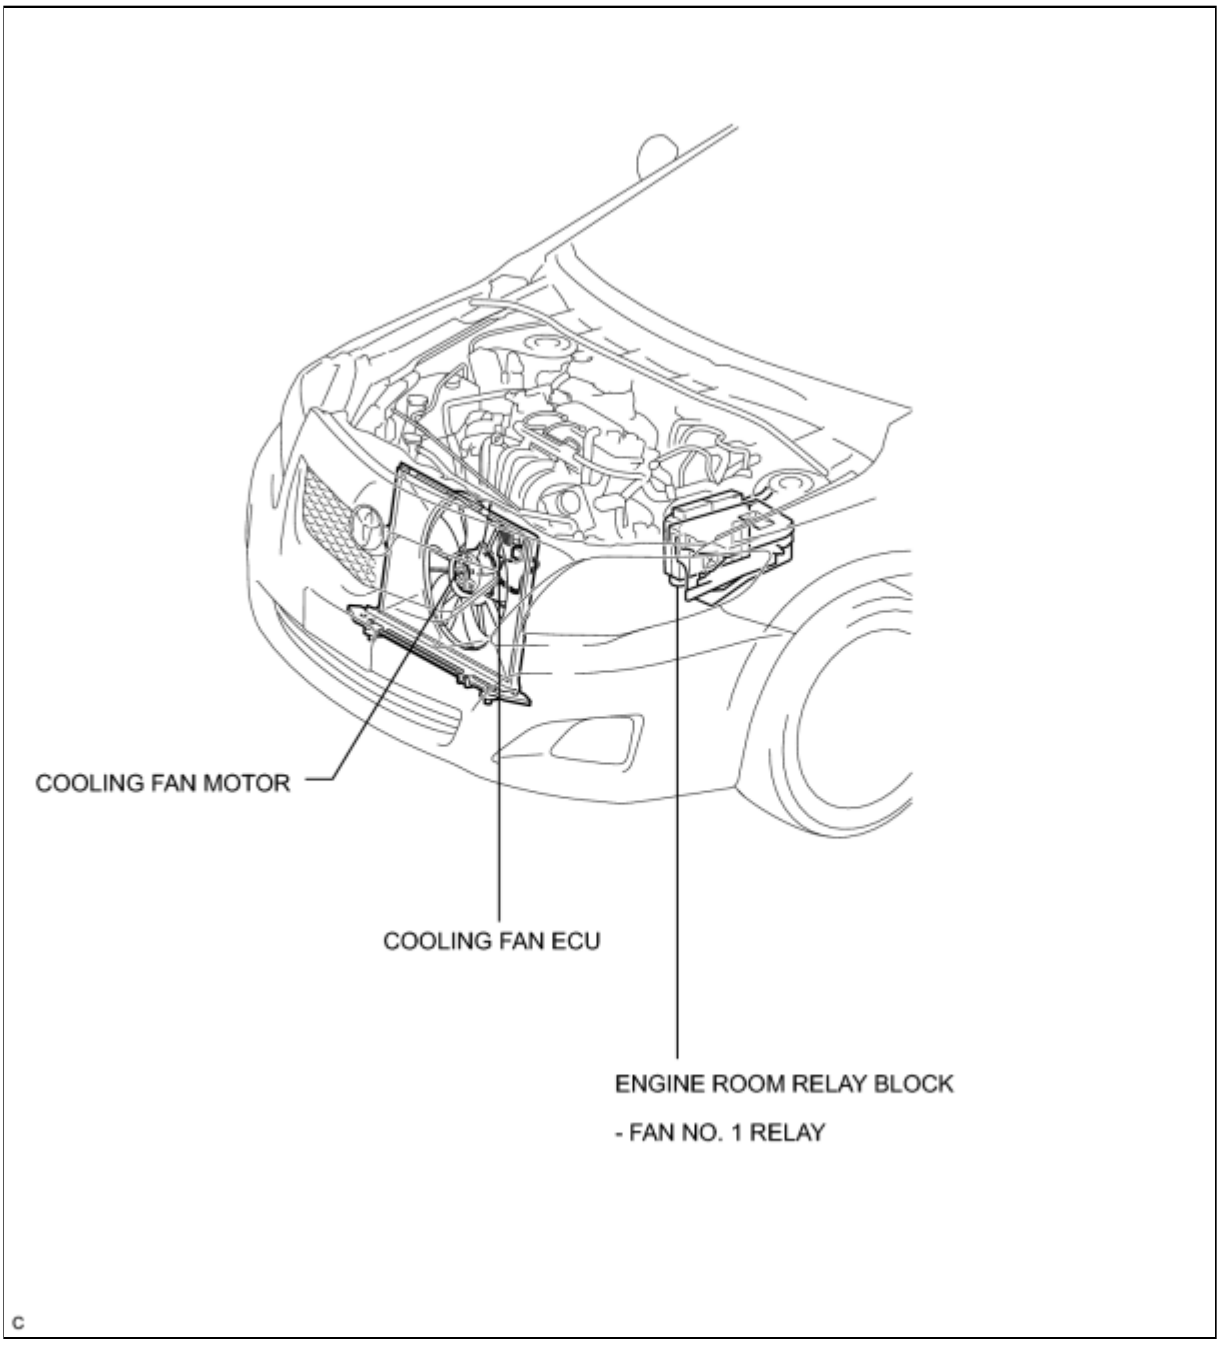
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-43 (RFC) - A41-2 (SI)	Always	Below 1 Ω

(d) Reconnect the ECM connector.

(e) Reconnect the cooling fan ECU connector.



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - COOLING FAN ECU)**

OK ▶ **REPLACE COOLING FAN ECU**

Title: 2ZR-FE COOLING: COOLING FAN SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Title: 2ZR-FE COOLING: COOLING FAN SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

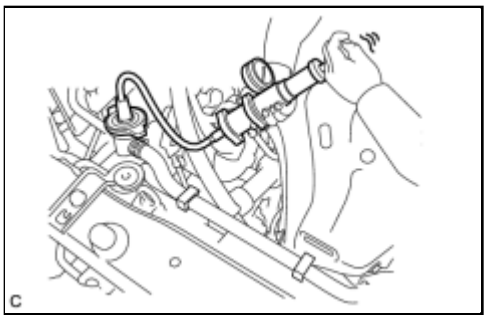
1. INSPECT COOLING FAN MOTOR

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Enter the following menus: Powertrain / Engine / Active Test / Control the Cooling Fan.

(d) Check the operation of the cooling fan while operating it using the Techstream.



If the cooling fan motor does not operate, check the cooling fan circuit. INFO

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000V1Q05PX
Title: 2AZ-FE COOLING: COOLING SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

CAUTION:

Be sure that the ignition switch is off when working near the electric cooling fans or radiator grille. With the ignition switch ON, the electric cooling fans may automatically start to run if the engine coolant temperature becomes high and/or the air conditioning is turned on.

1. INSPECT FOR COOLANT LEAK

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap sub-assembly while the engine and radiator assembly are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator assembly.

(a) Fill the radiator assembly with engine coolant, then attach a radiator cap tester.

(b) Pump the tester to 118 kPa (1.2 kgf/cm2, 17.1 psi), then check that the pressure does not drop.

If the pressure drops, check the hoses, radiator assembly and water pump assembly for leakage. If there are no signs or traces of external engine coolant leakage, check the heater core, cylinder block and head.

2. INSPECT RESERVE TANK ENGINE COOLANT LEVEL

(a) The engine coolant should be between the LOW and FULL lines when the engine is cold.

HINT:

If it is below the LOW line, check for leakage and add Toyota Super Long Life Coolant (SLLC) or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology up to the FULL line.

3. INSPECT ENGINE COOLANT QUALITY

(a) Remove the radiator cap sub-assembly.

CAUTION:

To avoid the danger of being burned, do not remove the radiator cap sub-assembly while the engine and radiator assembly are still hot. Thermal expansion will cause hot engine coolant and steam to blow out from the radiator assembly.

(b) Check for excessive deposits of rust or scale around the radiator cap sub-assembly and radiator filler hole. The engine coolant should be free of oil. If excessively dirty, replace the engine coolant.

If excessively dirty, replace the engine coolant.

(c) Reinstall the radiator cap sub-assembly.

Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001E6D01KX

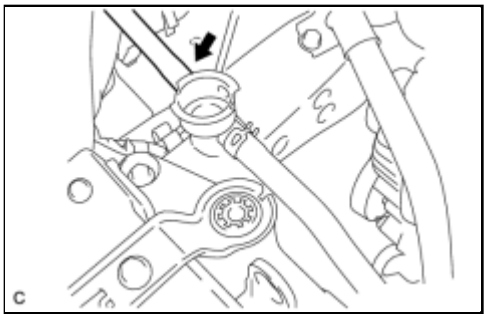
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE ENGINE UNDER COVER LH

3. REMOVE ENGINE UNDER COVER RH

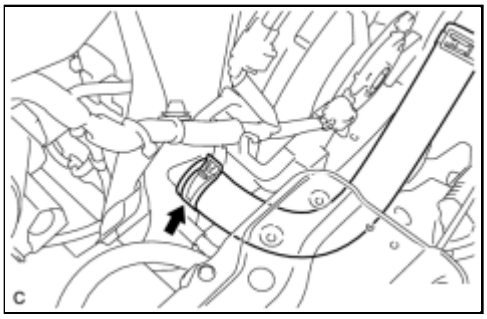
4. DRAIN ENGINE COOLANT INFO



5. REMOVE BATTERY INFO

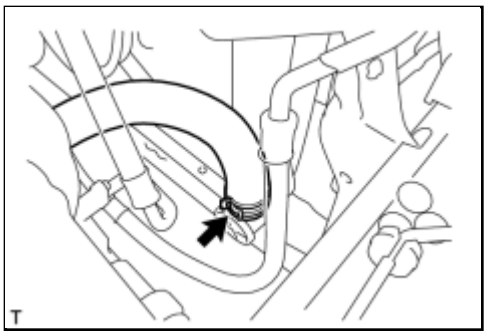
6. REMOVE FRONT BUMPER COVER

HINT: INFO .



7. REMOVE THERMISTOR ASSEMBLY

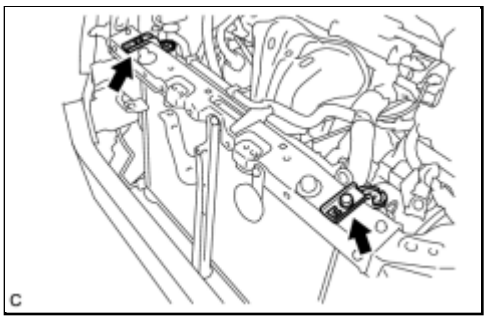
8. DISCONNECT RADIATOR RESERVE TANK HOSE



(a) Disconnect the radiator reserve tank hose from the radiator assembly.

9. DISCONNECT NO. 1 RADIATOR HOSE

(a) Disconnect the No. 1 radiator hose from the radiator assembly.

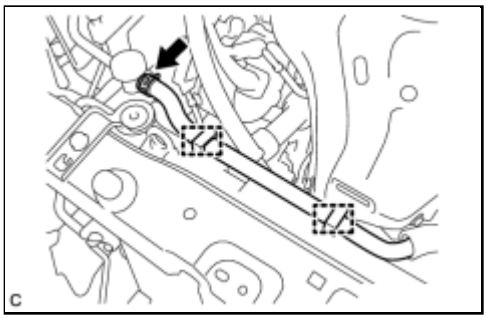


10. DISCONNECT NO. 2 RADIATOR HOSE

(a) Disconnect the No. 2 radiator hose from the radiator assembly.

11. DISCONNECT OIL COOLER HOSE (for Automatic Transaxle) INFO

12. REMOVE UPPER RADIATOR SUPPORT

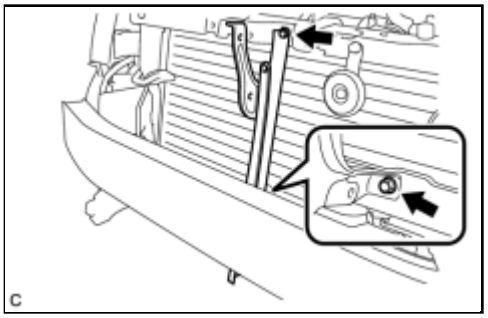


(a) Remove the 2 bolts and 2 upper radiator supports.

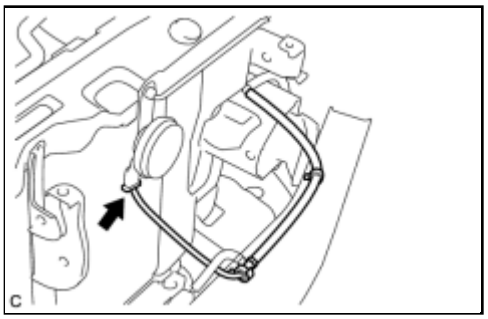
(b) Remove the 2 support cushions from the 2 upper radiator supports.

13. REMOVE HOOD LOCK ASSEMBLY INFO

14. SEPARATE WATER BY-PASS HOSE

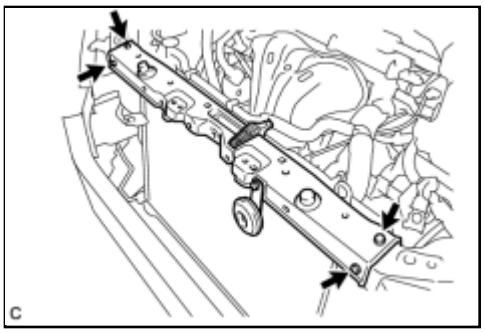


(a) Separate the water by-pass hose from the 2 clamps.



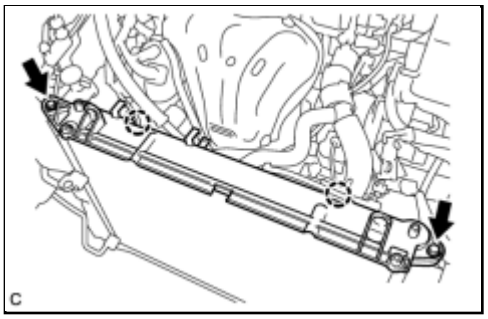
(b) Disconnect the water by-pass hose from the radiator assembly.

15. REMOVE HOOD LOCK SUPPORT SUB-ASSEMBLY

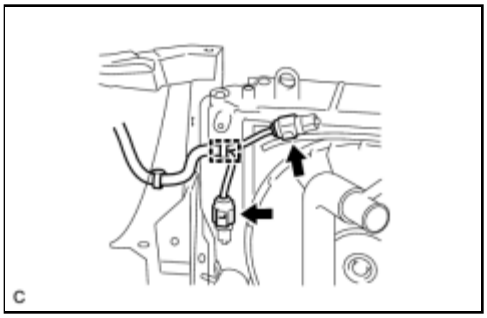


(a) Remove the 2 bolts and hood lock support sub-assembly.

16. REMOVE UPPER RADIATOR SUPPORT SUB-ASSEMBLY



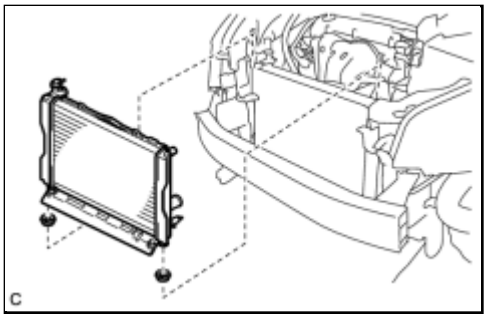
(a) Disconnect the horn connector.



(b) Remove the 4 bolts and upper radiator support sub-assembly.

17. REMOVE NO. 2 FAN SHROUD

(a) Remove the 2 bolts, disengage the 2 claws, and remove the No. 2 fan shroud from the radiator assembly.

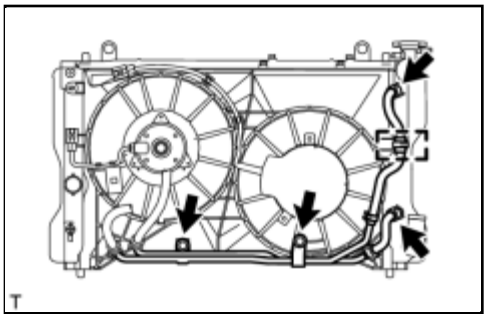


18. REMOVE RADIATOR ASSEMBLY

(a) Disconnect the 2 cooling fan motor connectors and wire harness clamp.

NOTICE:

Be careful not to damage the connector.



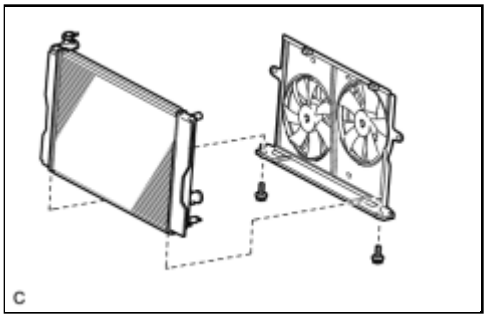
(b) Remove the radiator assembly with the fan shroud.

NOTICE:

Do not apply any excessive force to the cooler condenser assembly or pipe when removing the radiator assembly.

(c) Remove the 2 lower radiator supports.

19. REMOVE OIL COOLER HOSE (for Automatic Transaxle)



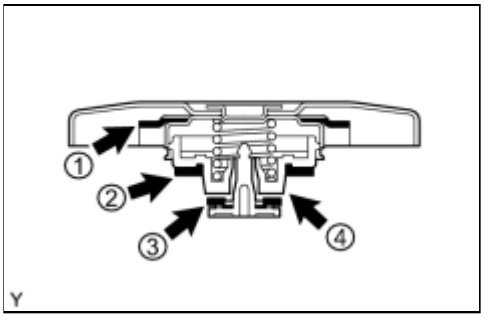
(a) Disconnect the 2 oil cooler hoses from the radiator.

(b) Disconnect the clamp from the fan shroud.

(c) Remove the 2 bolts and oil cooler hose.

20. REMOVE FAN SHROUD

(a) Remove the 2 bolts and fan shroud from the radiator assembly.



C

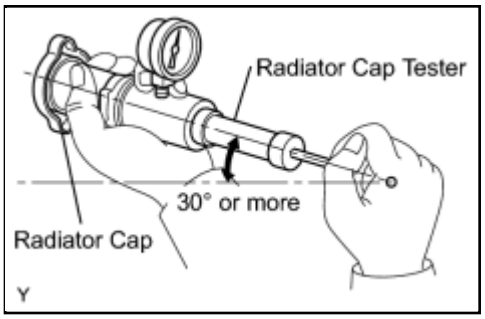
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001HC801GX
Title: 2AZ-FE COOLING: RADIATOR: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. CHECK RADIATOR CAP SUB-ASSEMBLY

(a) Measure the valve opening pressure.



(1) If there are water stains or foreign matter on rubber seal 1, 2 or 3, clean the part(s) with water and finger scouring.

(2) Check that rubber seals 1, 2 and 3 are not deformed, cracked or swollen.

(3) Check that rubber seals 3 and 4 are not stuck together.

(4) Apply engine coolant to rubber seals 2 and 3 before using a radiator cap tester.

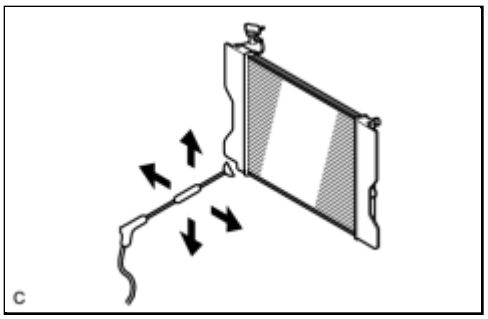
(5) When using the cap tester, tilt it upwards 30° or more.

(6) Pump the cap tester several times, and check the maximum pressure*1.

Pumping speed:
1 pump per second

HINT:

***1: Even if the cap cannot maintain the maximum pressure, it is not defective.**



Judgment Criteria:

ITEM	SPECIFIED CONDITION
Standard value	74 to 103 kPa (0.75 to 1.05 kgf/cm^2, 10.7 to 15 psi)

ITEM	SPECIFIED CONDITION
(for brand-new cap)	
Minimum standard value (for used cap)	59 kPa (0.60 kgf/cm^2, 8.6 psi)

If the maximum pressure is less than the minimum standard value, replace the radiator cap sub-assembly.

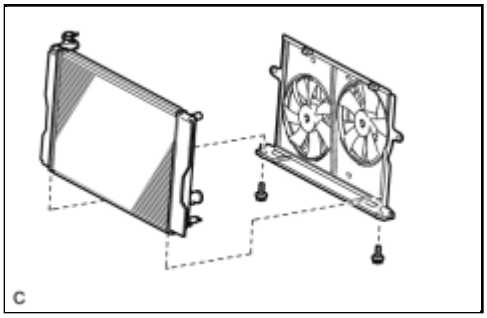
2. INSPECT FINS FOR BLOCKAGE

(a) If the fins are clogged, wash them with water or a steam cleaner and dry them with compressed air.

NOTICE:

- To avoid damaging the fins, the injection direction should be at right angles to the radiator core surface (Please use it for core perpendicularly).
- If the steam cleaner is too close to the radiator core, there is a possibility of damaging the fins, so keep the following injection distances.

Standard Injection Distance:



INJECTION PRESSURE	SPECIFIED CONDITION
2942 to 4903 kPa (30 to 50 kgf/cm^2, 427 to 711 psi)	300 mm (11.811 in.)
4903 to 7845 kPa (50 to 80 kgf/cm^2, 711 to 1138 psi)	500 mm (19.685 in.)

- If the fins are bent, straighten them with a screwdriver or pliers.
- Do not expose electronic components to water.

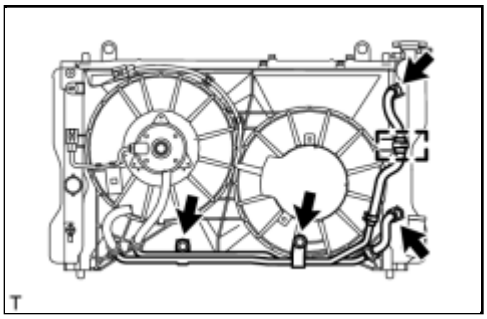
Title: 2AZ-FE COOLING: RADIATOR: INSTALLATION (2010 Corolla)		

INSTALLATION



1. INSTALL FAN SHROUD

(a) Install the fan shroud to the radiator assembly with the 2 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

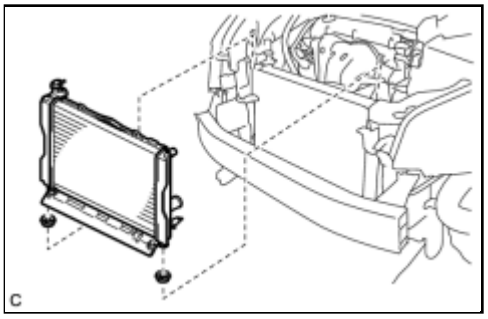
2. INSTALL OIL COOLER HOSE (for Automatic Transaxle)

(a) Install the oil cooler hose with the 2 bolts.

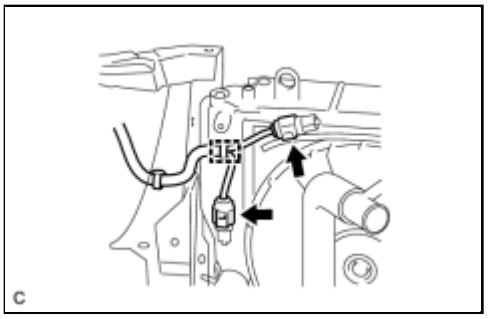
Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

(b) Connect the clamp to the fan shroud.

(c) Connect the 2 oil cooler hoses to the radiator.



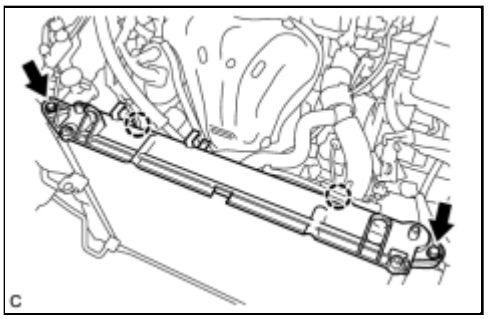
3. INSTALL RADIATOR ASSEMBLY



(a) Install the 2 lower radiator supports.

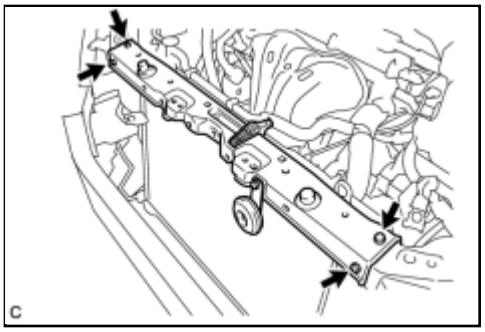
(b) Install the radiator assembly with the fan shroud.

NOTICE:



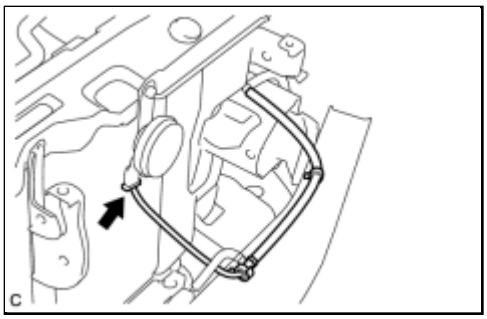
Do not apply any excessive force to the cooler condenser assembly or pipe when installing the radiator assembly.

(c) Connect the 2 cooling fan motor connectors and wire harness clamp.



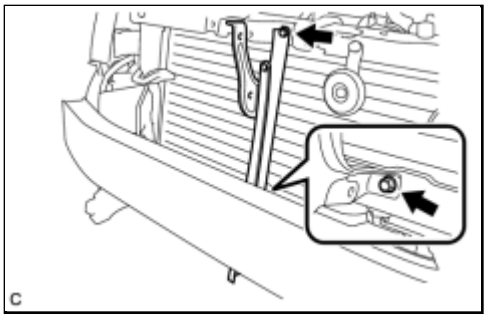
4. INSTALL NO. 2 FAN SHROUD

(a) Engage the 2 claws and install the No. 2 fan shroud to the radiator assembly with the 2 bolts.



Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

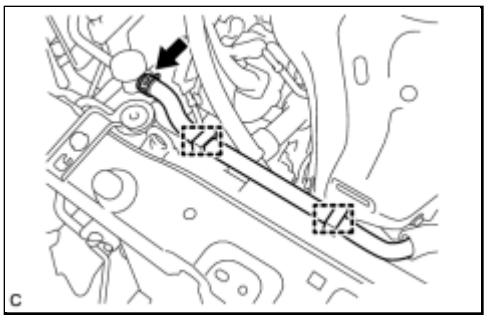
5. INSTALL UPPER RADIATOR SUPPORT SUB-ASSEMBLY



(a) Install the upper radiator support sub-assembly with the 4 bolts.

Torque: 5.5 N·m (56 kgf·cm, 49in·lbf)

(b) Connect the horn connector.



6. INSTALL HOOD LOCK SUPPORT SUB-ASSEMBLY

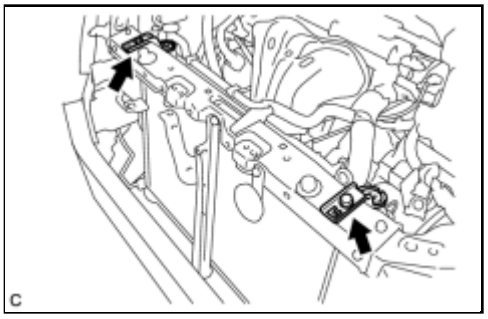
(a) Install the hood lock support sub-assembly with the 2 bolts.

Torque: 7.0 N·m (71 kgf·cm, 62in·lbf)

7. INSTALL WATER BY-PASS HOSE

(a) Install the water by-pass hose with the 2 clamps.

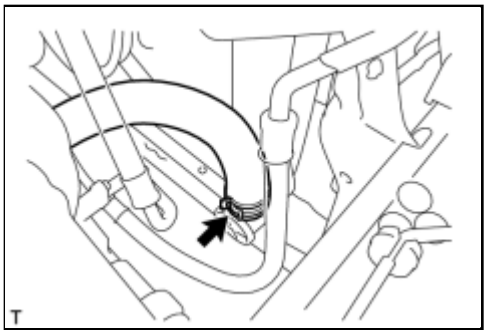
(b) Connect the water by-pass hose to the radiator assembly with the clamp.



8. INSTALL HOOD LOCK ASSEMBLY INFO

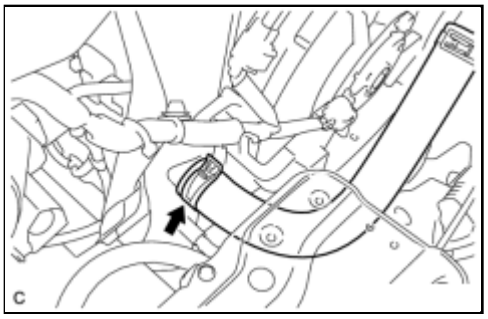
9. INSTALL UPPER RADIATOR SUPPORT

(a) Install the 2 radiator support cushions to the 2 upper radiator supports.



(b) Install the 2 upper radiator supports with the 2 bolts.

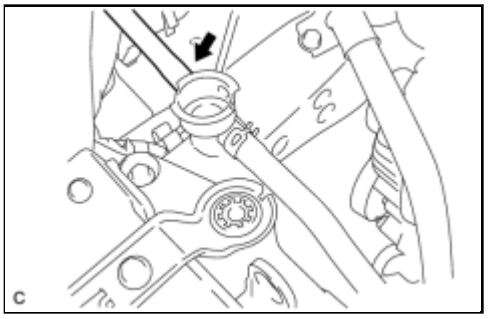
Torque: 19 N·m (194 kgf·cm, 14ft·lbf)



10. CONNECT OIL COOLER HOSE (for Automatic Transaxle) INFO

11. CONNECT NO. 2 RADIATOR HOSE

(a) Connect the No. 2 radiator hose to the radiator assembly with the clamp.



12. CONNECT NO. 1 RADIATOR HOSE

(a) Connect the No. 1 radiator hose to the radiator assembly with the clamp.

13. CONNECT RADIATOR RESERVE TANK HOSE

(a) Connect the radiator reserve tank hose to the radiator assembly with the clamp.

14. INSTALL THERMISTOR ASSEMBLY

15. INSTALL BATTERY INFO

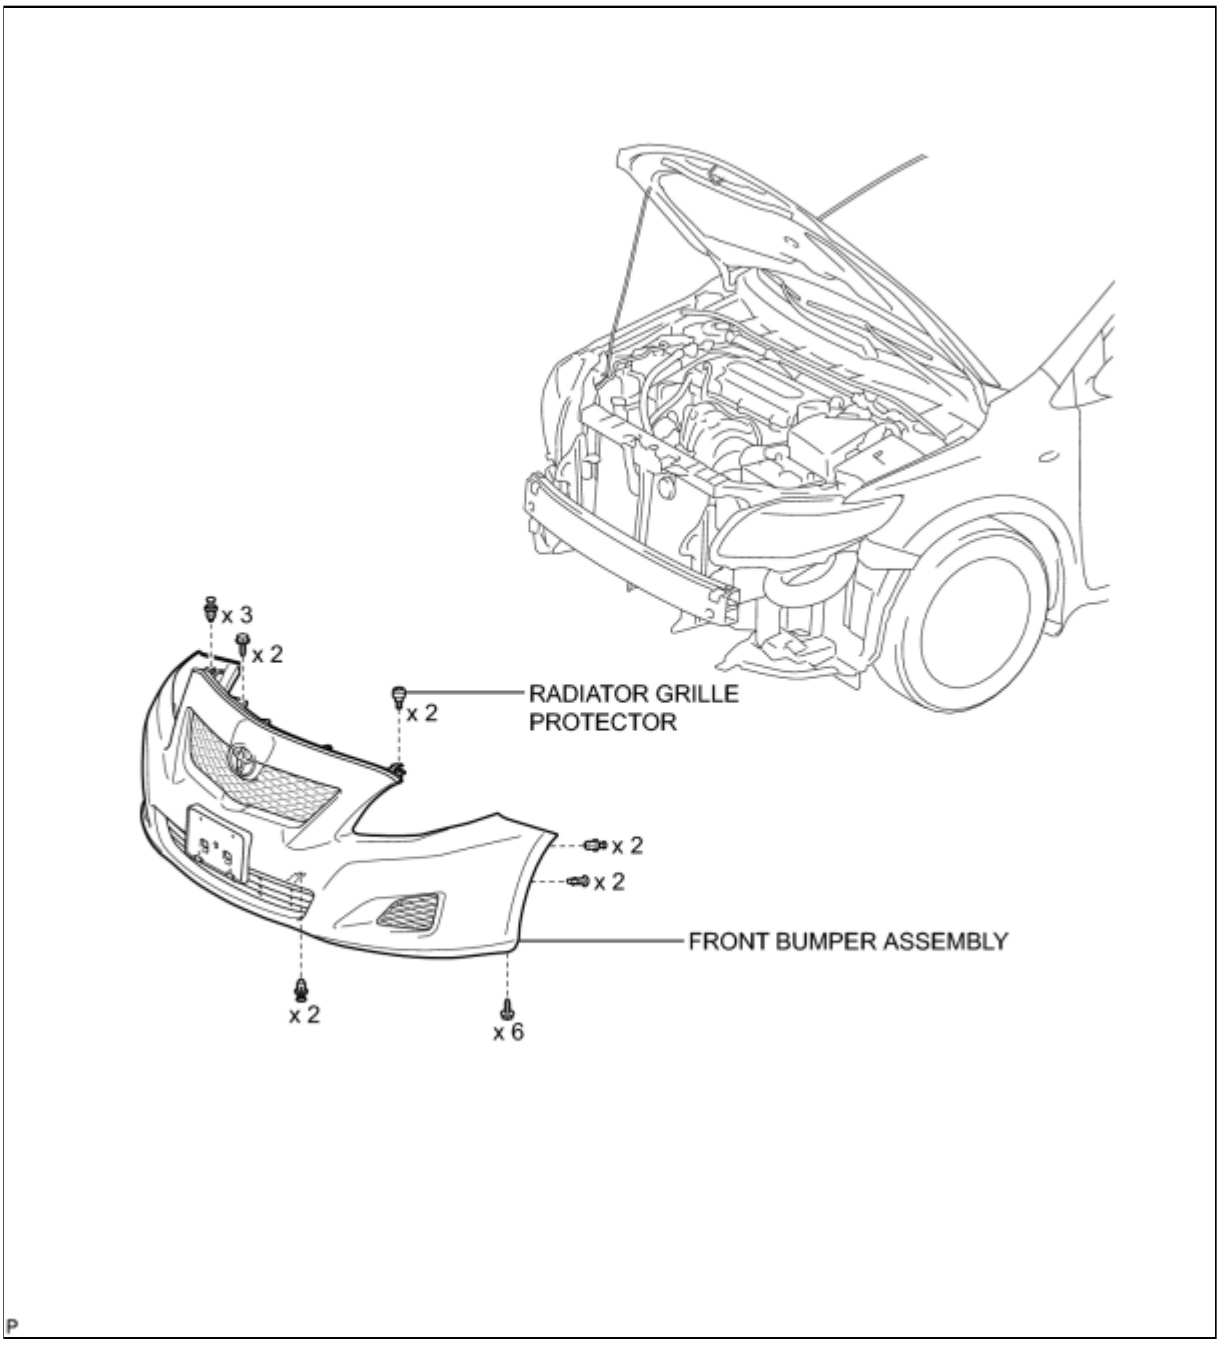
16. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

Torque: 5.4 N·m (55 kgf·cm, 48in·lbf)

17. ADD ENGINE COOLANT INFO

18. INSPECT FOR COOLANT LEAK INFO

19. INSPECT RESERVOIR TANK ENGINE COOLANT LEVEL INFO



20. INSTALL FRONT BUMPER COVER

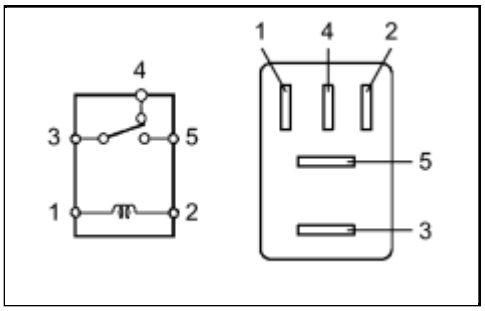
Title: 2AZ-FE COOLING: RELAY: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN RELAY NO. 1

(a) Remove the relay from the engine room relay block.

(b) Measure the resistance of the relay.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	-	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

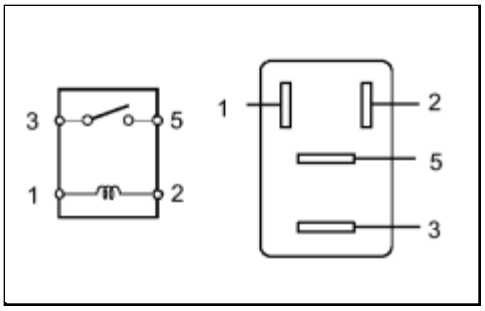
- If the result is not as specified, replace the relay.

(c) Install the relay.

2. INSPECT COOLING FAN RELAY NO. 2

(a) Remove the relay from the engine room relay block.

(b) Measure the resistance of the relay.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 4	-	Below 1 Ω
3 - 4	When battery voltage is applied to terminals 1 and 2	10 kΩ or higher
3 - 5	-	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

- If the result is not as specified, replace the relay.

(c) Install the relay.

3. INSPECT COOLING FAN RELAY NO. 3

(a) Remove the relay from the engine room relay block.

(b) Measure the resistance of the relay.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	-	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

- If the result is not as specified, replace the relay.

(c) Install the relay.

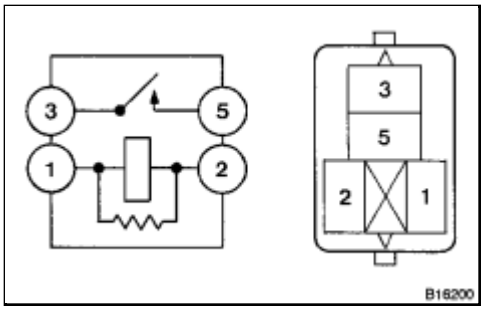
Title: 2ZR-FE COOLING: RELAY: ON-VEHICLE INSPECTION (2010 Corolla)		



ON-VEHICLE INSPECTION

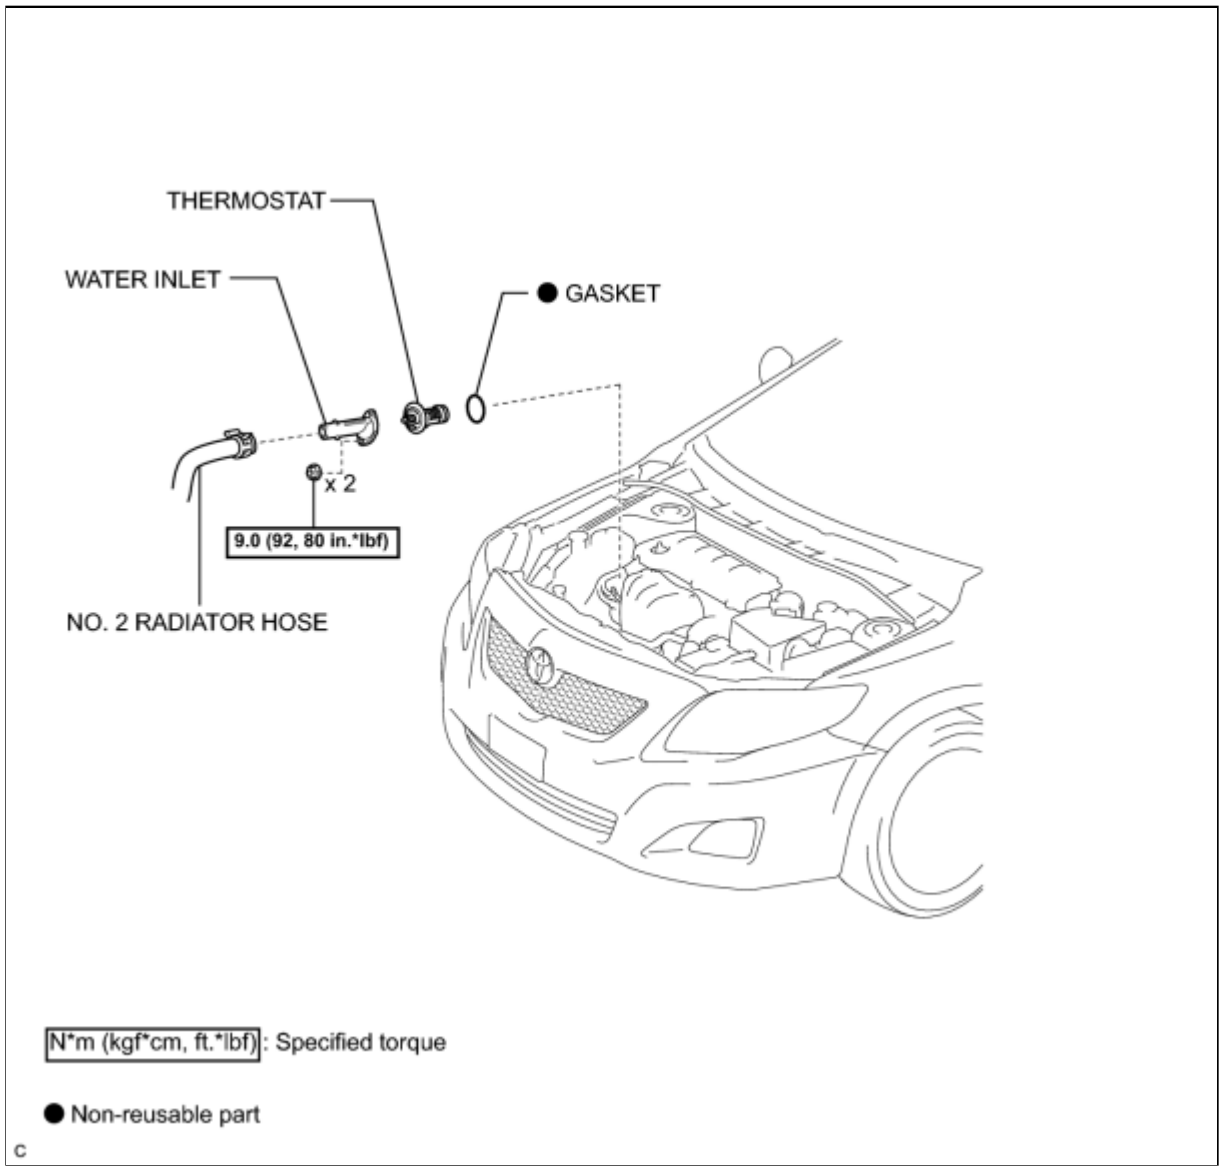
1. INSPECT FAN NO. 1 RELAY

(a) Remove the relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
3 - 5	-	10 MΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω



If the result is not as specified, replace the fan No. 1 relay.

(c) Install the relay to the engine room relay block.

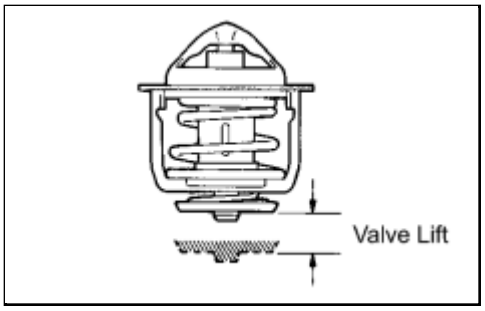
Title: 2AZ-FE COOLING: THERMOSTAT: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT THERMOSTAT

(a) The valve opening temperature is inscribed on the thermostat.



(b) Immerse the thermostat in water, and then gradually heat the water.

(c) Check the valve opening temperature of the thermostat.

Standard valve opening temperature:
80 to 84°C (176 to 183°F)

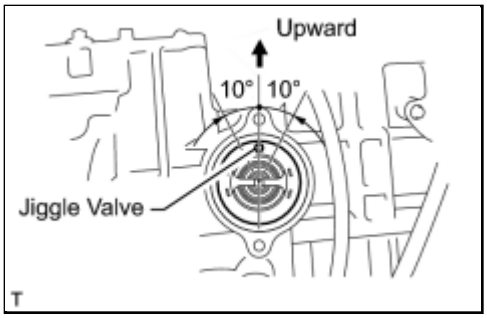
If the valve opening temperature is not as specified, replace the thermostat.

(d) Check the valve lift.

Standard valve lift:
10 mm (0.39 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the thermostat.

(e) Check that the valve is fully closed when the thermostat is at low temperatures (below 77°C (171°F)).



If it is not fully closed, replace the thermostat.

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. EXPRESSIONS OF IGNITION SWITCH

(a) The type of ignition switch used on this model differs according to the specifications of the vehicle.

The expressions listed in the table below are used in this section.

EXPRESSION	SWITCH TYPE	
	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition Switch off	LOCK	Off
Ignition Switch ON	ON	On (IG)
Ignition Switch ACC	ACC	On (ACC)
Engine Start	START	Start

2. HANDLING PRECAUTIONS FOR CRUISE CONTROL SYSTEM

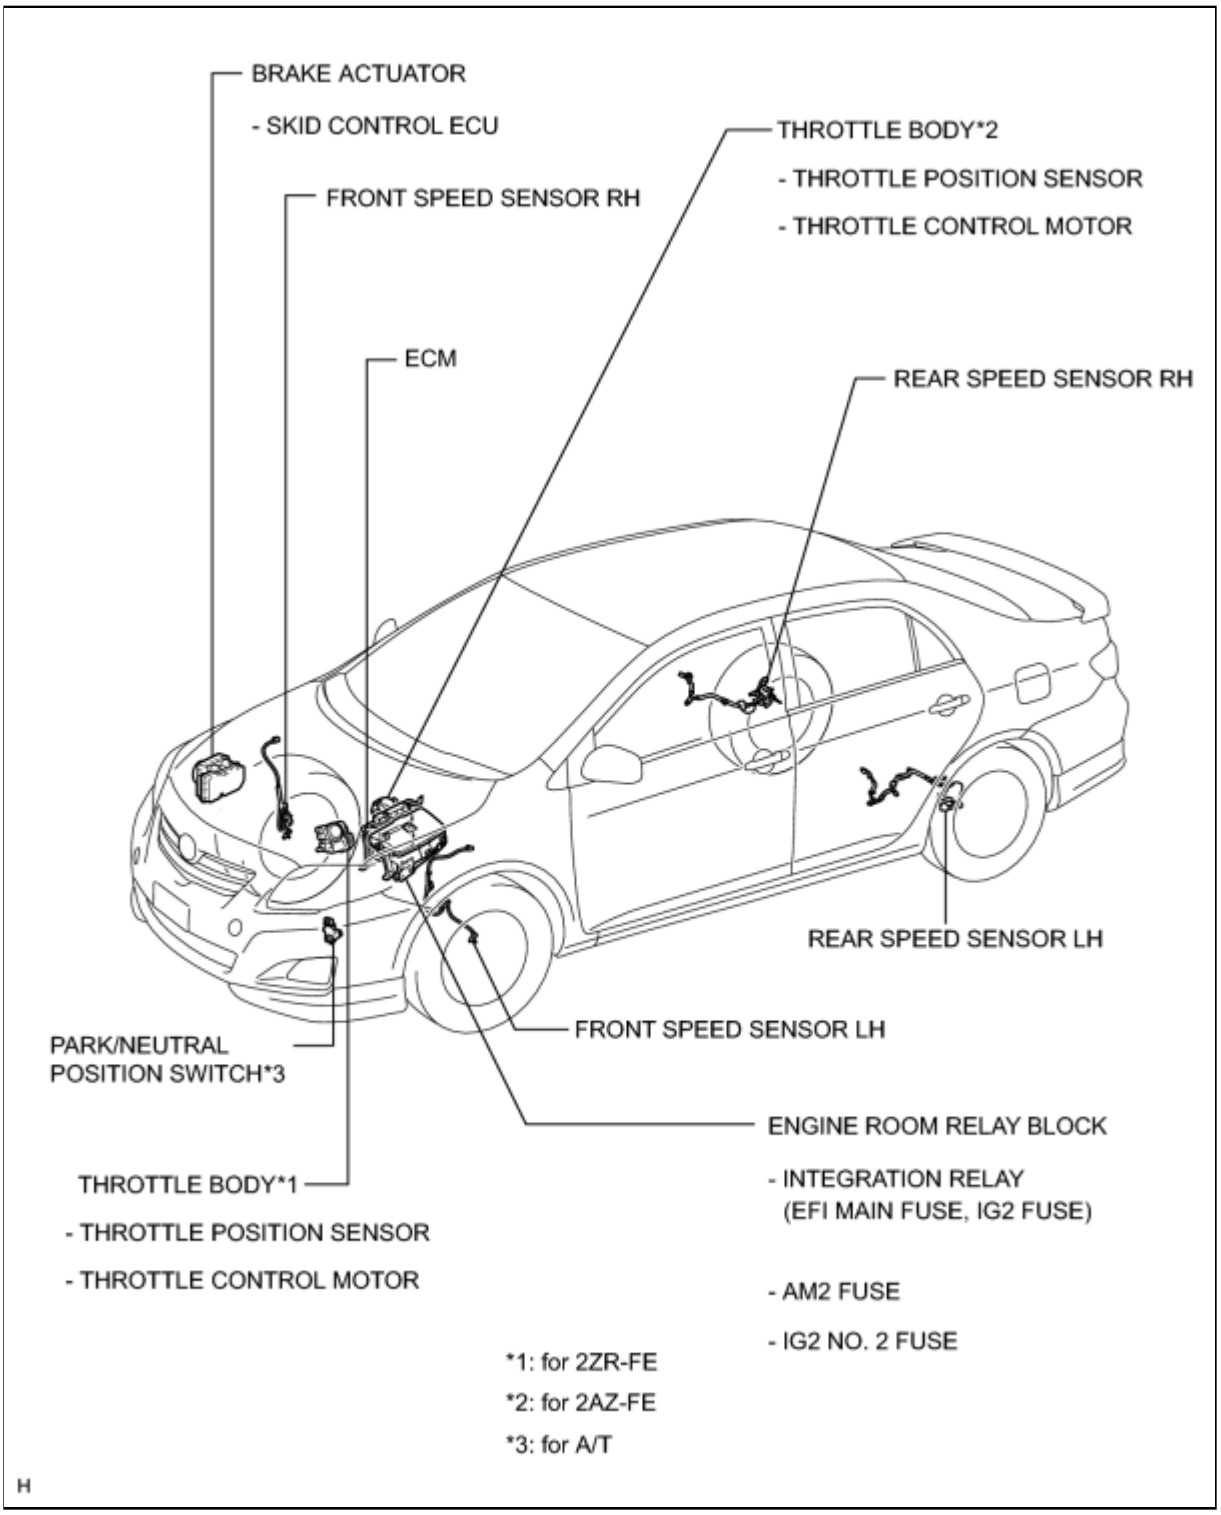
(a) Turn the cruise control main switch off when not using the cruise control system.

(b) Be careful as the vehicle speed increases when driving downhill with the cruise control system on.

(c) The + (ACCEL)/RES (RESUME) operation changes according to the cruise control system status. When the cruise control system is operating, the + (ACCEL) function operates. When the cruise control system is not operating, the RES (RESUME) function operates.

(d) If the CRUISE main indicator light blinks while the cruise control system is operating, turn the cruise control main switch off to reset the cruise control system. After the reset, if the cruise control main switch cannot be turned on, or the cruise control system is canceled immediately after turning the cruise control main switch on, the system may have a malfunction.

(e) Do not use the cruise control system where the road conditions are as follows:



- Heavy traffic
- Steep decline
- Roads with sharp turns
- Icy or snowy roads
- Slippery roads

(f) Do not use the cruise control system while towing.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PLZ04ZX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: SYSTEM DESCRIPTION (2010 Corolla)		

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

This system is controlled by the ECM, and is activated by the throttle position sensor and motor. The ECM controls the following functions: ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), CANCEL, vehicle speed operation, motor output control, and shift down control.

- The ECM compares the driving vehicle speed from the speed sensor with the stored vehicle speed set through the cruise control main switch. The ECM instructs the throttle valve motor of the throttle body assembly to close the valve when the driving speed is greater than the stored speed, and instructs it to open the valve when the driving speed is less than the stored speed.
- The ECM receives signals such as ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), and CANCEL from the cruise control main switch and executes the command.
- The ECM illuminates the combination meter's CRUISE main indicator light when it receives a cruise control main switch ON signal.
- The ECM cancels the cruise control system when the brake pedal is depressed and the ECM receives a stop light switch signal.
- The ECM cancels the cruise control system when the shift lever is moved to except D or S (S5 and S4 range) (for U250E).
- The ECM cancels the cruise control system when the shift lever is moved to except D or 3 (for U341E).
- The ECM cancels the cruise control system when the clutch pedal is depressed and the ECM receives a clutch switch signal (for M/T).

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled but the stored vehicle speed will be retained when the vehicle speed drops below the low speed limit of 40 km/h (25 mph) while the cruise control is in operation.

(b) High speed limit

The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, + (ACCEL)/RES (RESUME) cannot be used to increase speed beyond the high speed limit.

3. OPERATION OF CRUISE CONTROL

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it.

(a) SET CONTROL

The vehicle speed is stored and constant speed control is maintained when pushing the cruise control main switch to - (COAST)/SET while driving with the main switch on (the CRUISE main indicator light is on), and the vehicle speed is within the set speed range between the low and high speed limits.

(b) - (COAST) CONTROL

When the cruise control main switch is set to - (COAST)/SET and held in that position while the cruise control system is operating, the ECM sends a "throttle valve opening angle 0°" demand signal to the cruise control system. Then the vehicle speed, when the cruise control main switch is released, is stored and maintained.

HINT:

An actual throttle valve opening angle of 0° is not possible due to the idle speed control, etc.

(c) TAP-DOWN CONTROL

When tapping down the cruise control main switch to - (COAST)/SET (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1.0 mph). When the cruise control main switch is released from - (COAST)/SET and the difference between the driving and stored vehicle speed is more than 5 km/h (3.1 mph), the driving vehicle speed is stored and constant speed control is maintained.

(d) ACCELERATION CONTROL

The throttle valve motor of the throttle body assembly is instructed by the ECM to open the throttle valve when + (ACCEL)/RES (RESUME) on the cruise control main switch is pressed and held while the cruise control system is in operation. When the cruise control main switch is released from + (ACCEL)/RES (RESUME), the vehicle speed is stored and the vehicle is controlled at a constant speed.

(e) TAP-UP CONTROL

When tapping up the cruise control main switch to + (ACCEL)/RES (RESUME) (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1.0 mph). However, when the difference between the driving speed and the stored vehicle speed is more than 5 km/h (3.1 mph), the stored vehicle speed will not be changed.

(f) RESUME CONTROL

If cruise control operation was canceled with the stop light switch, the CANCEL switch or the low speed limit control, and if driving speed is within the limit range, pushing the cruise control main switch to + (ACCEL)/RES (RESUME) restores vehicle speed memorized at the time of cancellation, and maintains constant speed control.

(g) MANUAL CANCEL CONTROL

Performing any of the following cancels the cruise control system while in operation (the stored vehicle speed in the ECM is maintained).

- Depressing the brake pedal
- Depressing the clutch pedal (for M/T)
- The shift lever is moved to except D or S (S5 and S4 range) (for U250E).
- The shift lever is moved to except D or 3 (for U341E).
- Pulling the cruise control main switch to CANCEL
- Turning the cruise control main switch off (the vehicle speed stored in the ECM is not maintained)

4. AUTO CANCEL (FAIL-SAFE)

This system has an automatic cancellation function (fail-safe) INFO .

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: PROBLEM SYMPTOMS TABLE (2010 Corolla)		

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Cruise Control System

SYMPTOM	SUSPECTED AREA	SEE PAGE
Vehicle speed cannot be set. (The CRUISE main indicator light comes on.)	Cruise control switch circuit	INFO
	Vehicle speed sensor circuit	INFO
	Combination meter	INFO
	Stop light switch circuit	INFO
	Transmission range sensor circuit (for U341E)	INFO
	Transmission range sensor circuit (for U250E)	INFO
	Transmission control switch circuit (for U250E)	INFO
	Clutch switch circuit (for M/T)	INFO
	If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (for 2ZR-FE)	INFO
	If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the ECM. (for 2AZ-FE)	INFO
The cruise control is canceled while it is operating.	Stop light switch circuit	INFO
	Clutch switch circuit (for M/T)	INFO
	Transmission range sensor circuit (for U341E)	INFO
	Transmission range sensor circuit (for U250E)	INFO

SYMPTOM	SUSPECTED AREA	SEE PAGE

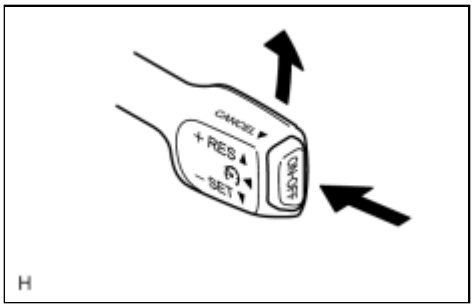
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: ROAD TEST (2010 Corolla)		

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION



(a) Inspect the SET function.

(1) Turn the cruise control main switch on.

(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).

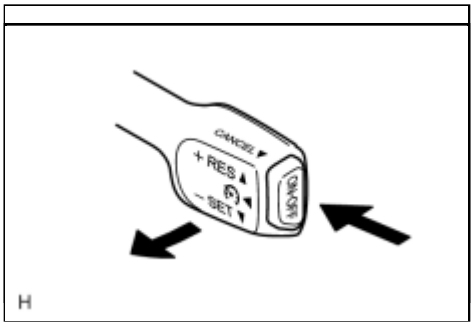
(3) Push the cruise control main switch to - (COAST)/SET.

(4) After releasing the switch, check that the vehicle cruises at the set speed.

(b) Inspect the + (ACCELERATION) function.

(1) Turn the cruise control main switch on.

(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).



(3) Push the cruise control main switch to - (COAST)/SET.

(4) Check that vehicle speed increases while the cruise control main switch is pushed to + (ACCEL)/RES (RESUME), and that the vehicle cruises at the newly set speed when the switch is released.

(5) Push the cruise control main switch to + (ACCEL)/RES (RESUME) and then release it immediately. Check that vehicle speed increases by approximately 1.6 km/h (1.0 mph) (tap-up control).

(c) Inspect the - (COAST) function.

(d) Inspect the CANCEL function.

(1) Turn the cruise control main switch on.

(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).

(3) Push the cruise control main switch to - (COAST)/SET.

(4) Check that vehicle speed decreases while the cruise control main switch is pushed to - (COAST)/SET, and that the vehicle cruises at the newly set speed when the switch is released.

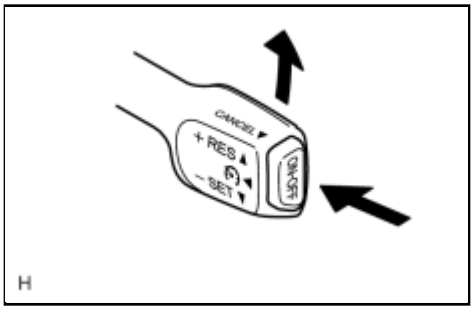
(5) Push the cruise control main switch to - (COAST)/SET, and then release it immediately. Check that vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (tap-down control).

When performing any one of the following, check that the cruise control system is canceled and that the normal driving mode is set.

- Depressing the brake pedal
- Depressing the clutch pedal (for M/T)
- The shift lever is moved to except D or S (S5 and S4) (for U250E).

- The shift lever is moved to except D or 3 (for U341E).
- Turning the cruise control main switch off
- Pulling the cruise control main switch to CANCEL

(e) Inspect the RES (RESUME) function.

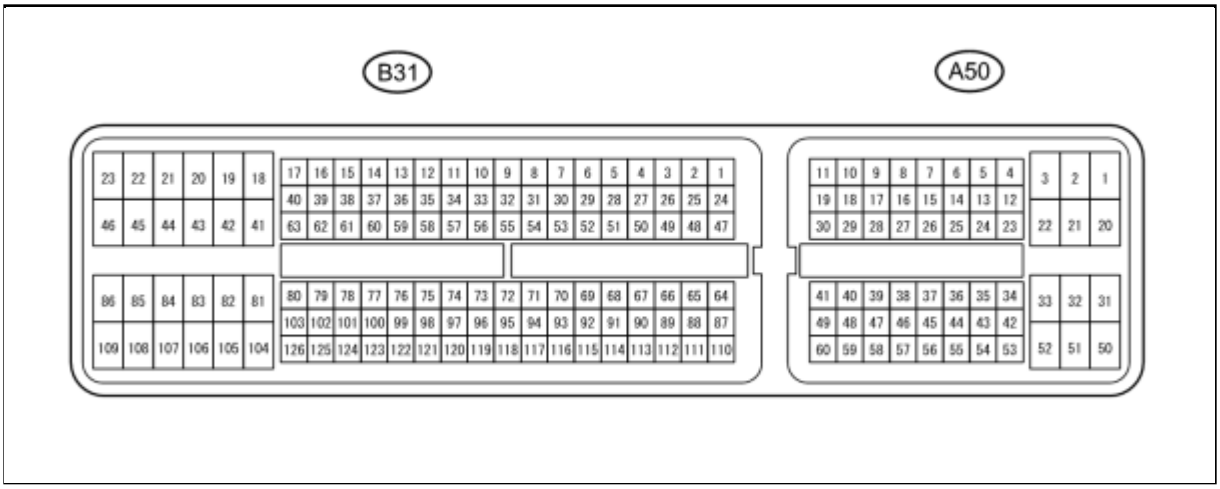


(1) Turn the cruise control main switch on.

(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).

(3) Push the cruise control main switch to - (COAST)/SET.

(4) Cancel the cruise control system by performing any of the above operations (other than turning the main switch off).



(5) After pushing the cruise control main switch to + (ACCEL)/RES (RESUME) at a driving speed of more than 40 km/h (25 mph), check that the vehicle resumes at the speed set prior to the cancellation.

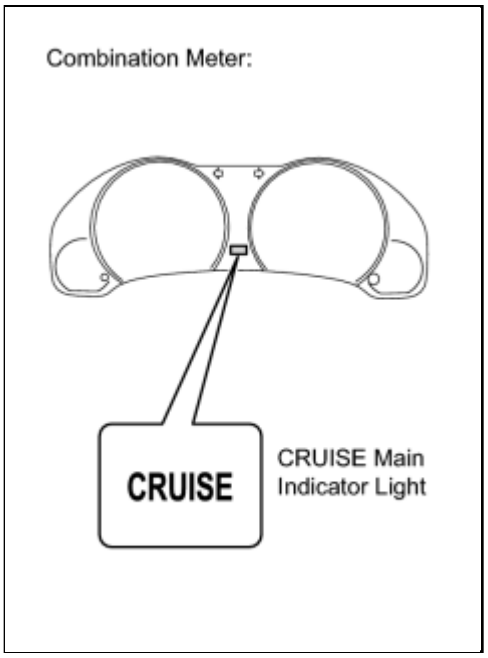
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM



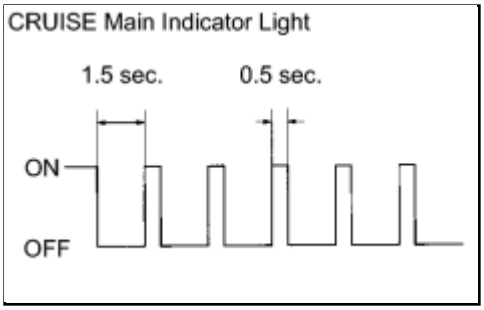
1. DESCRIPTION

The ECM controls the cruise control system of the vehicle. The data and DTCs relating to the cruise control system can be read from the DLC3 of the vehicle. If any DTC is not displayed when checking for DTCs, there may be a problem with either the combination meter or the CAN communication system. Use the Techstream to check and solve the problem.

2. CHECK DLC3

(a) Check the DLC3 INFO .

3. CHECK INDICATOR



(a) Turn the ignition switch to ON.

(b) Check that the CRUISE main indicator light illuminates when the cruise control main switch is turned on, and that the indicator light turns off when the main switch is turned off. If the results are not as specified, inspect the CRUISE main indicator light circuit INFO .

HINT:

While driving with cruise control, the ECM activates AUTO CANCEL of the cruise control system when a malfunction occurs in one of the following: vehicle speed sensors, stop light switch, or other related parts. When AUTO CANCEL is activated, the CRUISE main indicator light outputs the blinking pattern as shown in the illustration. At the same time, data of the malfunction is stored as a DTC.

CRUISE Main Indicator Light
1.5 sec.
0.5 sec.
ON
OFF

Last Modified: 3-10-2010	6.4 D	**From:** 200901

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Cruise Control / Trouble Codes.

(e) Check the details of the DTC(s) INFO .

2. CLEAR DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Cruise Control / Trouble Codes.

(e) Clear the DTCs.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001XO200GX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Cruise Control / Data List.

(e) Read the Data List according to the display on the Techstream.

Cruise Control (ECM)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
CCS Vehicle Spd	Vehicle speed/min.: 0 km/h (0 mph), max.: 255 km/h (158 mph)	Actual vehicle speed	-
CCS Mem Vehicle Spd	Stored vehicle speed/min.: 0 km/h (0 mph), max.: 200 km/h (125 mph)	Actual stored vehicle speed	-
Throttle Opening Angle	Required throttle opening angle/min.: 0°, max.: 125°	Actual required throttle opening angle	-
Cruise Control	Cruise control system active condition/ON or OFF	ON: Cruise control activated OFF: Cruise control deactivated	-
Main SW M-CPU	Main SW signal (Main CPU)/ON or OFF	ON: Cruise control main switch pushed OFF: Cruise control main switch not pushed	3
CCS Ready M-CPU	Cruise control system standby condition (Main CPU)/ON or OFF	ON: Cruise control main switch (Main CPU) is SET OFF: Cruise control main switch (Main CPU) is	1

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
		UNSET	
CCS Indicator M-CPU	Cruise indicator signal (Main CPU)/ON or OFF	ON: "CRUISE" ON OFF: "CRUISE" OFF	2
Cancel Switch	CANCEL SW signal/ON or OFF	ON: CANCEL switch ON OFF: CANCEL switch OFF	-
SET/COAST Switch	- (COAST)/SET SW signal/ON or OFF	ON: - (COAST)/SET switch ON OFF: - (COAST)/SET switch OFF	-
RES/ACC Switch	+ (ACCEL)/RES (RESUME) SW signal/ON or OFF	ON: + (ACCEL)/RES (RESUME) switch ON OFF: + (ACCEL)/RES (RESUME) switch OFF	-
Stop Light SW M-CPU*1	Stop light SW signal (Main CPU)/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Cruise Operation Status	Transmission range sensor signal/ON or OFF	For 2ZR-FE: • ON: Shift lever in D or 3 position • OFF: Shift lever except in D or 3 position For 2AZ-FE: • ON: Shift lever in D or S (5th, 4th) position • OFF: Shift lever except in D or S (5th, 4th) position	-
Brake Cancel Switch*2	Brake Cancel Signal/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

*1: for 2ZR-FE

*2: for 2AZ-FE

HINT:

3 is OK but 1 is NG → ECM failure

1 is OK but 2 is NG → DTC output or ECM failure

3 is OK but cruise indicator does not turn on → CRUISE main indicator light, wire harness, or ECM failure

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent

operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in trouble shooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Perform the Active Test according to the display on the Techstream.

HINT:

The ignition switch must be turned to ON to proceed with the Active Test using the Techstream.

Combination Meter

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Lamp Cruise	CRUISE main indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ST104FX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

FAIL-SAFE CHART

HINT:

If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the ECM and cancels the cruise control operation.

VEHICLE CONDITION	AUTO CANCEL CONDITION	RE-OPERATION CONDITION
CRUISE main indicator light blinks	• There is an open or a short in the stop light switch circuit • There is a problem with the vehicle speed signal	Turn the cruise control main switch on again
CRUISE main indicator light goes off	• There is a problem with the throttle position sensor and motor	Turn the cruise control main switch on again
CRUISE main indicator light blinks	• There is a problem with the input circuit of the stop light switch circuit • There is a problem with the cancel circuit	• Turn the cruise control main switch on again • Turn the ignition switch off then on again
CRUISE main indicator light remains on (Cruise control is canceled)	Under the following conditions, the stored vehicle speed is maintained: • The vehicle speed is lower than the low speed limit (approx. 40 km/h (25 mph)) while running with the cruise control on • The VSC system is operated	Push the cruise control main switch to + (ACCEL)/RES (RESUME)
	• The vehicle speed is lower than the stored speed by approx. 16 km/h (10 mph) or more	Push the cruise control main switch to - (COAST)/SET

Last Modified: 3-10-2010	6.4 S	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PLQ04PX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: DIAGNOSTIC TROUBLE CODE CHART (2010 Corolla)		

DIAGNOSTIC TROUBLE CODE CHART

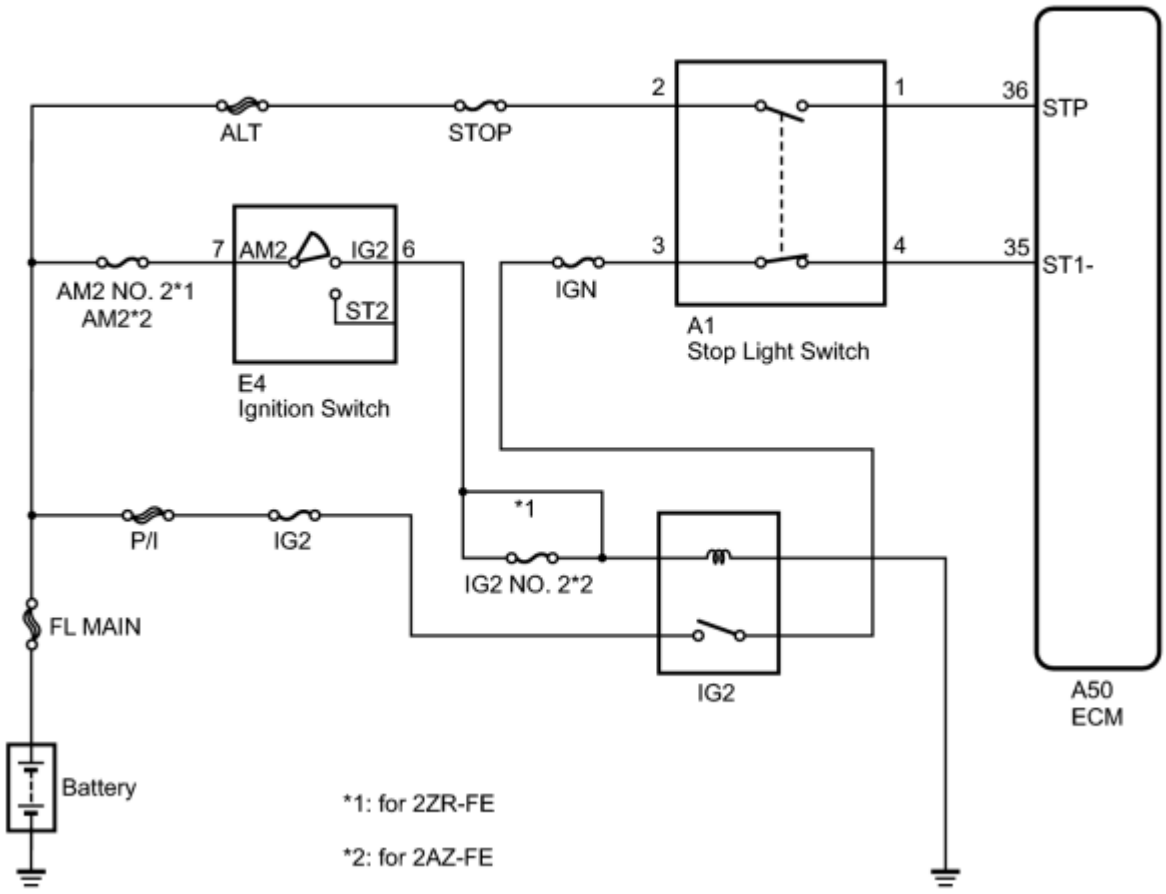
If a trouble code is displayed during the DTC check, check the trouble areas listed for that code in the table below and proceed to the appropriate page.

Cruise Control System

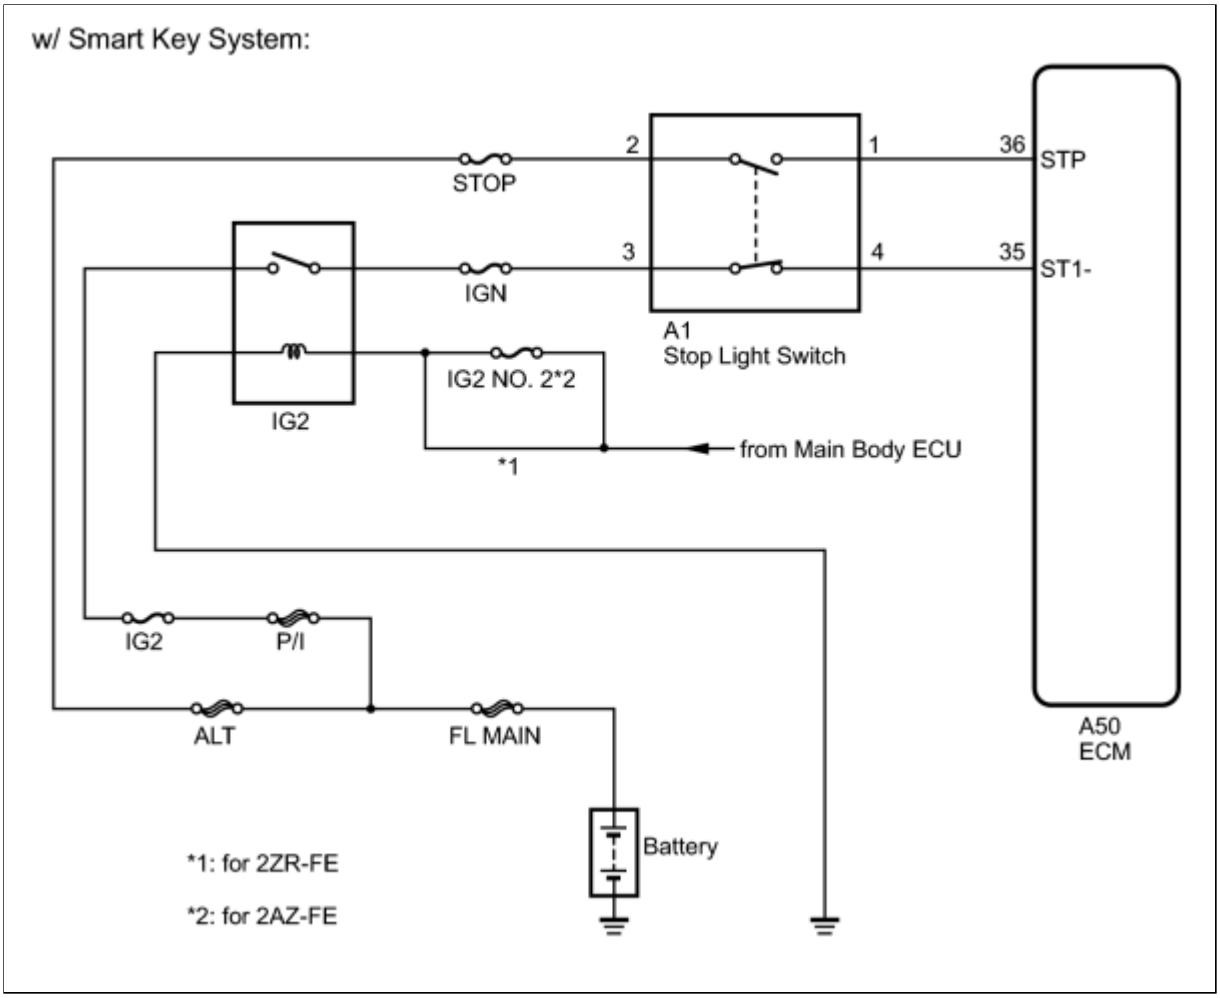
DTC CODE	DETECTION ITEM	TROUBLE AREA	SEE PAGE
P0500	Vehicle Speed Sensor Malfunction	1. Open or short in speed signal circuit 2. Combination meter 3. Vehicle speed sensor 4. ECM	INFO
P0503	Vehicle Speed Sensor "A" Intermittent / Erratic / High	1. Open or short in speed signal circuit 2. Combination meter 3. Vehicle speed sensor 4. ECM	INFO
P0571	Brake Switch "A" Circuit	1. Stop light switch 2. Stop light switch circuit 3. ECM	INFO
P0575	Cruise Control Input Circuit	ECM	INFO

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ZRE04IX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: P0571: Brake Switch "A" Circuit (2010 Corolla)		

DTC	**P0571**	**Brake Switch "A" Circuit**



DESCRIPTION

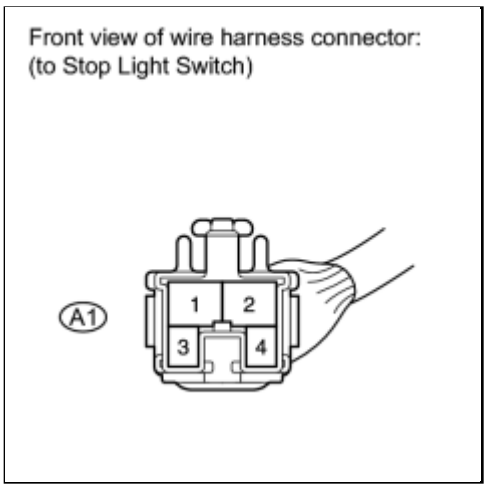


When the brake pedal is depressed, the stop light switch sends a signal to the ECM. When the ECM receives this signal, it cancels the cruise control. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit. The cancellation condition occurs when voltage is applied to terminal STP. When the brake is applied, voltage is normally applied to terminal STP of the ECM through the STOP fuse and the stop light switch, and the ECM turns the cruise control off.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0571	When voltage of STP terminal and that of ST1- terminal of ECM are less than 1 V for 0.5 sec. or more	• Stop light switch • Stop light switch circuit • ECM

WIRING DIAGRAM

w/o Smart Key System:



INSPECTION PROCEDURE

PROCEDURE

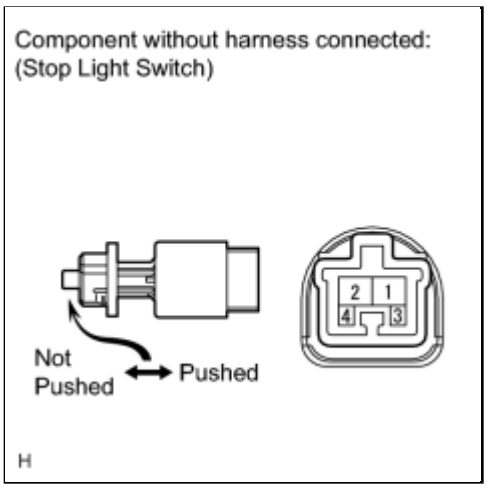
1.	**CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - BATTERY)**

(a) Disconnect the stop light switch connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A1-2 - Body ground	Always	11 to 14 V
A1-3 - Body ground	Ignition switch ON	11 to 14 V



(c) Reconnect the stop light switch connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▼

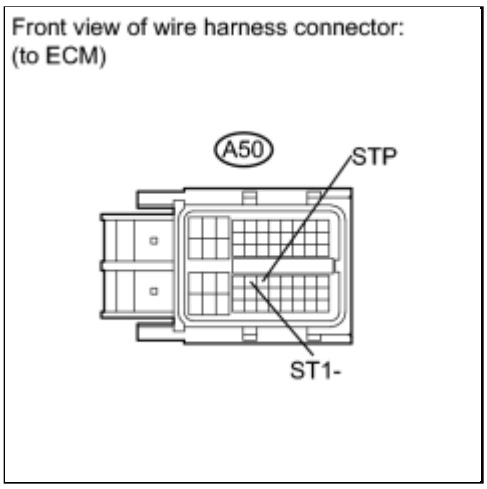
2.	**INSPECT STOP LIGHT SWITCH**

(a) Remove the stop light switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Switch pin not pushed	Below 1 Ω
3 - 4	Switch pin not pushed	10 kΩ or higher
1 - 2	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin pushed	Below 1 Ω



(c) Install the stop light switch INFO .

NG ▶ **REPLACE STOP LIGHT SWITCH**

OK ▼

3.	**CHECK ECM**

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-36 (STP) - Body ground	Brake pedal depressed	11 to 14 V
A50-36 (STP) - Body ground	Brake pedal released	Below 1 V
A50-35 (ST1-) - Body ground	Brake pedal depressed	Below 1 V
A50-35 (ST1-) - Body ground	Brake pedal released	11 to 14 V

Result:

RESULT	PROCEED TO
NG	A
OK (for 2ZR-FE)	B
OK (for 2AZ-FE)	C

(d) Reconnect the ECM connector.

C ▶ **REPLACE ECM (for 2AZ-FE)**

B ▶ **REPLACE ECM (for 2ZR-FE)**

A ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - ECM)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ZRD03IX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: P0500,P0503: Vehicle Speed Sensor Malfunction (2010 Corolla)		

DTC	**P0500**	**Vehicle Speed Sensor Malfunction**

DTC	**P0503**	**Vehicle Speed Sensor "A" Intermittent / Erratic / High**

DESCRIPTION

The cruise control system uses the same vehicle speed signal that is sent to the ECM for the SFI system. If DTC P0500 or P0503 is detected, perform the diagnosis using the inspection procedure for DTC P0500 in the SFI system INFO for 2ZR-FE, or INFO for 2AZ-FE). The speed signal is converted for use by the cruise control system inside the ECM. Both the SFI system and the cruise control system can set DTC P0500, however, the detection conditions of the two systems are different.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0500	The vehicle speed signal from the vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation.	• Open or short in speed signal circuit • Combination meter • Vehicle speed sensor • ECM
P0503	Momentary interruption and noise are detected when a rapid change of vehicle speed occurs while cruise control is in operation.	• Open or short in speed signal circuit • Combination meter • Vehicle speed sensor • ECM

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Cruise Control Switch Circuit (2010 Corolla)		

Cruise Control Switch Circuit

DESCRIPTION

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each direction and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the voltage value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL.

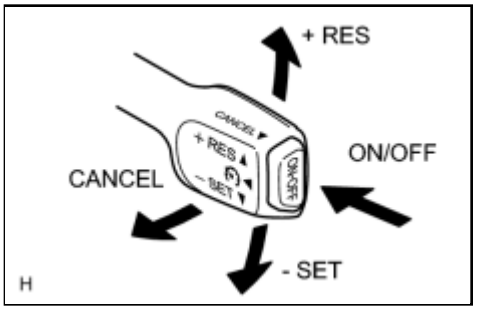
WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**READ VALUE USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.



(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Cruise Control / Data List.

(e) Check the Data List for proper functioning of the cruise control main switch.

Cruise Control (ECM)

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
Main SW M-CPU	Main switch signal (Main CPU)/ON or OFF	ON: Cruise control main switch pushed OFF: Cruise control main switch not pushed	-

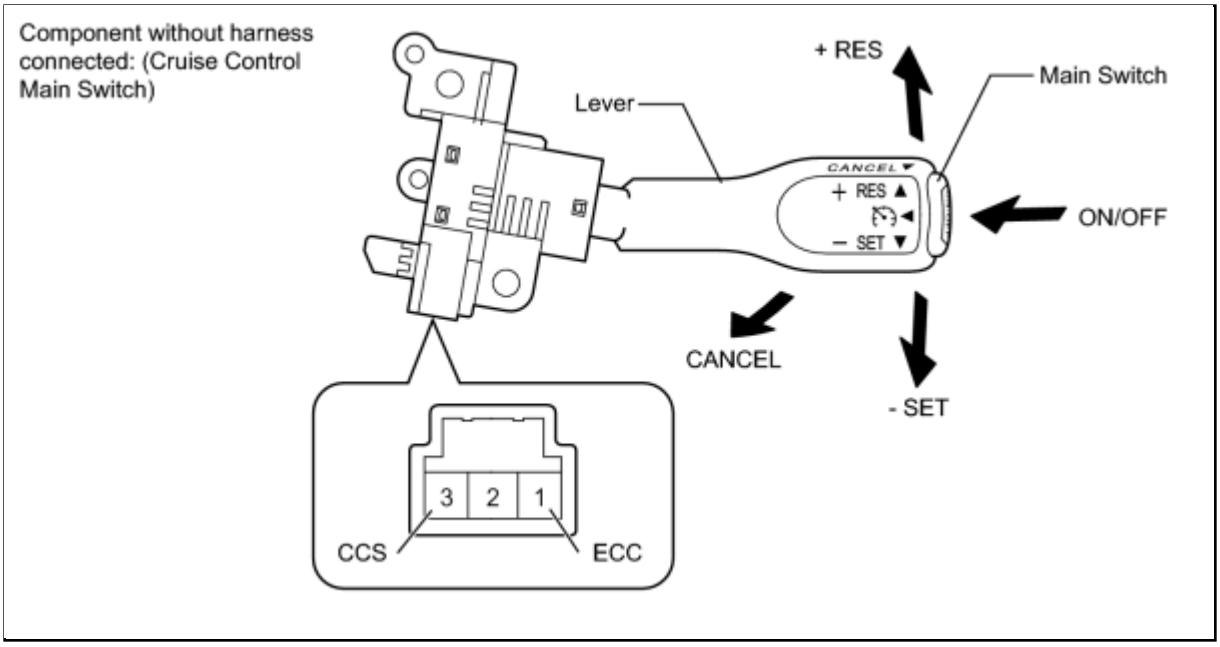
NG (All items are defective)	B
NG (1 to 3 items are defective)	C



C ▶ **REPLACE CRUISE CONTROL MAIN SWITCH**

B ▶ **INSPECT CRUISE CONTROL MAIN SWITCH**

A ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

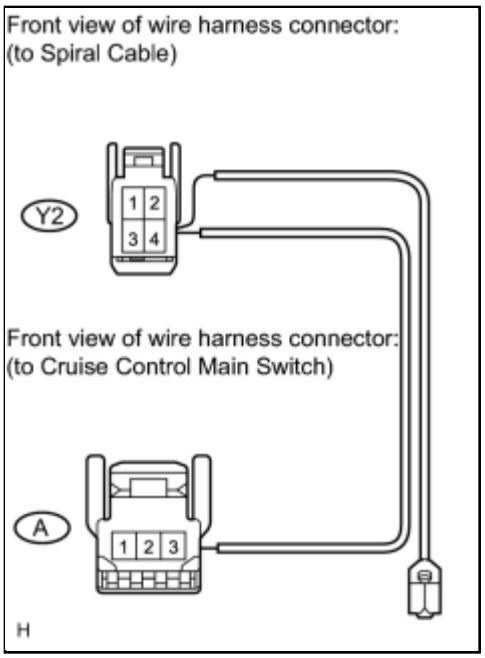
2.	**INSPECT CRUISE CONTROL MAIN SWITCH**

(a) Remove the cruise control main switch INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 (ECC) - 3 (CCS)	Main Switch off*1	1 MΩ or higher
	Main Switch on	Below 2.5 Ω
	+ RES	235 to 245 Ω
	- SET	617 to 643 Ω
	CANCEL	1509 to 1571 Ω



*1: Lever is in neutral position

(c) Install the cruise control main switch INFO.

NG ▶ **REPLACE CRUISE CONTROL MAIN SWITCH**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (CRUISE CONTROL MAIN SWITCH - SPIRAL CABLE)**

(a) Disconnect the Y2 connector from the spiral cable.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A-1 - Y2-4	Always	Below 1 Ω
A-3 - Y2-3	Always	Below 1 Ω

(c) Reconnect the Y2 connector from the spiral cable.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

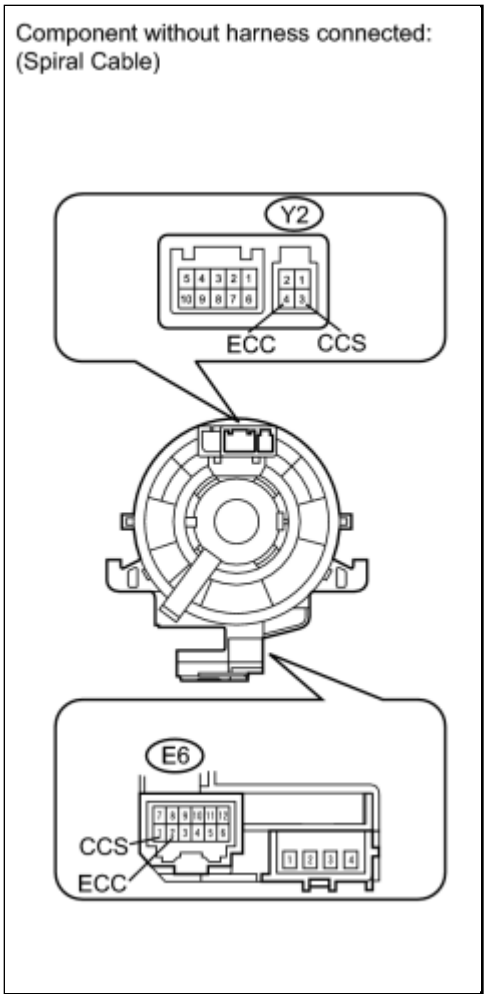
OK ▼

4.	**CHECK SPIRAL CABLE**

NOTICE:

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may cause airbag deployment. Be sure to read the page shown in the brackets.

HINT:



- Removal INFO
- Installation INFO

(a) Remove the spiral cable INFO.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Y2-3 (CCS) - E6-1 (CCS)	The spiral cable position is center	Below 1 Ω
	The spiral cable position is 2.5 rotations to the left	
	The spiral cable position is 2.5 rotations to the right	
Y2-4 (ECC) - E6-2 (ECC)	The spiral cable position is center	Below 1 Ω
	The spiral cable position is 2.5 rotations to the left	
	The spiral cable position is 2.5 rotations to the right	

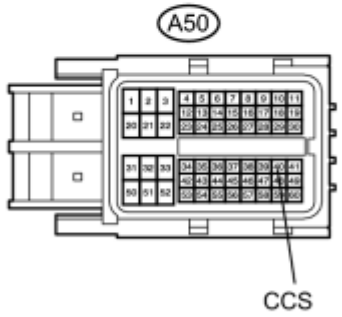
HINT:

The spiral cable makes a maximum of approximately 5 rotations.

(c) Install the spiral cable.

NG ▶ **REPLACE SPIRAL CABLE**

OK ▼



5.	**CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - ECM, BODY GROUND)**

(a) Disconnect the spiral cable connector.

Front view of wire harness connector:
(to Spiral Cable)

Front view of wire harness connector:
(to ECM)

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E6-1 (CCS) - A50-40 (CCS)	Always	Below 1 Ω
A50-40 (CCS) - Body ground	Always	10 kΩ or higher
E6-2 (ECC) - Body ground	Always	Below 1 Ω

Result:

RESULT	PROCEED TO
NG	A
OK (for 2ZR-FE)	B
OK (for 2AZ-FE)	C

(d) Reconnect the ECM connector.

(e) Reconnect the spiral cable connector.

C ▶ **REPLACE ECM (for 2AZ-FE)**

B ▶ **REPLACE ECM (for 2ZR-FE)**

A ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

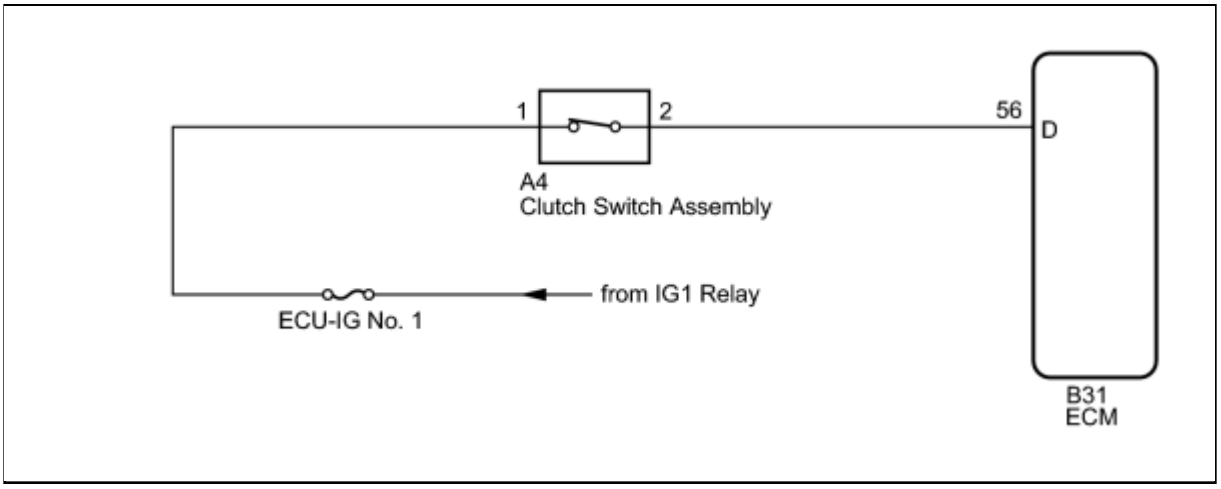
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ZAN01KX
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Clutch Switch Circuit (2010 Corolla)		



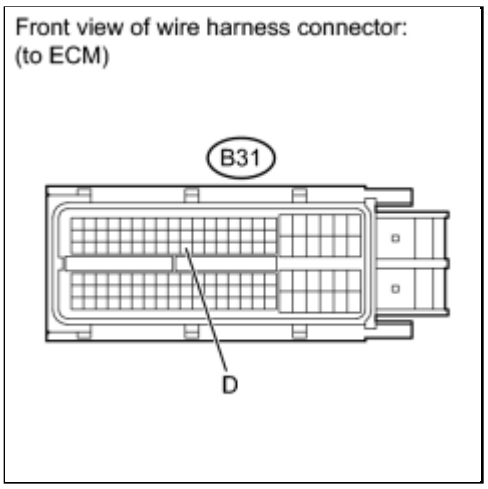
Clutch Switch Circuit

DESCRIPTION

Clutch switch circuit inspection is necessary for M/T vehicles.

When the clutch pedal is released, the ECM receives positive (+) battery voltage through the ECU-IG No. 1 fuse. While depressing the clutch pedal, the clutch switch sends a signal to terminal D of the ECM. The ECM cancels cruise control when terminal D receives the signal.

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT ECM**

(a) Disconnect the ECM connector.

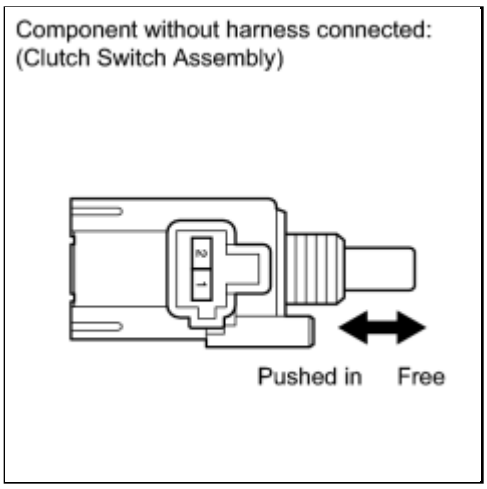
(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-56 (D) - Body ground	Clutch pedal depressed	Below 1 V
	Clutch pedal released	11 to 14 V

(d) Reconnect the ECM connector.



NG ▶ **INSPECT CLUTCH SWITCH ASSEMBLY**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

2.	**INSPECT CLUTCH SWITCH ASSEMBLY**

(a) Turn the ignition switch off.

(b) Remove the clutch switch assembly INFO .

(c) Measure the resistance according to the value(s) in the table below.

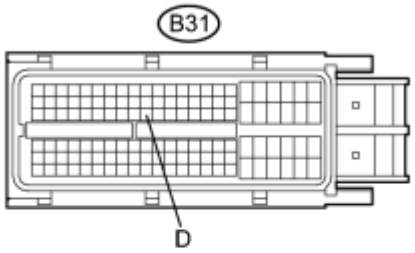
Standard Resistance:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Switch pin free	10 kΩ or higher
	Switch pin pushed in	Below 1 Ω

(d) Install the clutch switch assembly INFO .

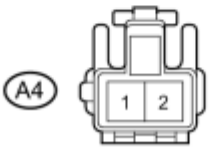
NG ▶ **REPLACE CLUTCH SWITCH ASSEMBLY**

OK ▼



3.	**CHECK HARNESS AND CONNECTOR (ECM - CLUTCH SWITCH ASSEMBLY)**

(a) Measure the resistance according to the value(s) in the table below.



Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-56 (D) - A4-2	Always	Below 1 Ω
B31-56 (D) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to ECM)

Front view of wire harness connector:
(to Clutch Switch Assembly)

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - CLUTCH SWITCH ASSEMBLY)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - CLUTCH SWITCH ASSEMBLY)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901

Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: P0575: Cruise Control Input Circuit (2010 Corolla)		

DTC	**P0575**	**Cruise Control Input Circuit**

DESCRIPTION

This DTC indicates the internal abnormalities of the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0575	When either of the following conditions is met: • STP signals input to the ECM supervisory CPU and control ECU are different for 0.15 seconds or more • 0.4 seconds have passed after cruise cancel input signal (STP input) is input to the ECM	ECM

HINT:

The ECM receives signals from each sensor to control all functions of the cruise control system. When a trouble code is detected, the fail-safe function remains on until the ignition switch is turned off.

INSPECTION PROCEDURE

PROCEDURE

1.	**REPLACE ECM**

(a) Replace the ECM INFO for 2ZR-FE, INFO for 2AZ-FE).

NEXT ▶ **END**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PLV053X
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: Cruise Main Indicator Light Circuit (2010 Corolla)		

Cruise Main Indicator Light Circuit

DESCRIPTION

- The ECM detects a cruise control switch signal and sends it to the combination meter through CAN. Then the CRUISE main indicator light comes on.
- The CRUISE main indicator light circuit uses CAN for communication. If there is a malfunction in this circuit, check for DTCs in the CAN Communication System before troubleshooting this circuit INFO .

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Body Electrical / Combination Meter / Active Test.

(e) Check the CRUISE main indicator light by performing the Active Test.

Combination Meter:

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Indicat. Lamp Cruise	CRUISE main indicator light	OFF or ON	Confirm that the vehicle is stopped, engine idling

OK:

Indicator light blinks/goes off.

NG ▶ **REPLACE COMBINATION METER**

OK

2.	READ VALUE USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Cruise Control / Data List.

(e) Check the Data List for proper functioning of the CRUISE main indicator light.

Cruise Control (ECM):

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION	DIAGNOSTIC NOTE
CCS Indicator M-CPU	Cruise indicator signal (Main CPU)/ON or OFF	ON: "CRUISE" on OFF: "CRUISE" off	-

OK:

When the cruise control main switch is operated, the display changes as shown above.

Result:

RESULT	PROCEED TO
OK	A
NG (for 2ZR-FE)	B
NG (for 2AZ-FE)	C

C ▶ **REPLACE ECM (for 2AZ-FE)**

B ▶ **REPLACE ECM (for 2ZR-FE)**

A ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE**

Last Modified: 3-10-2010	6.4 J	**From:** 200901

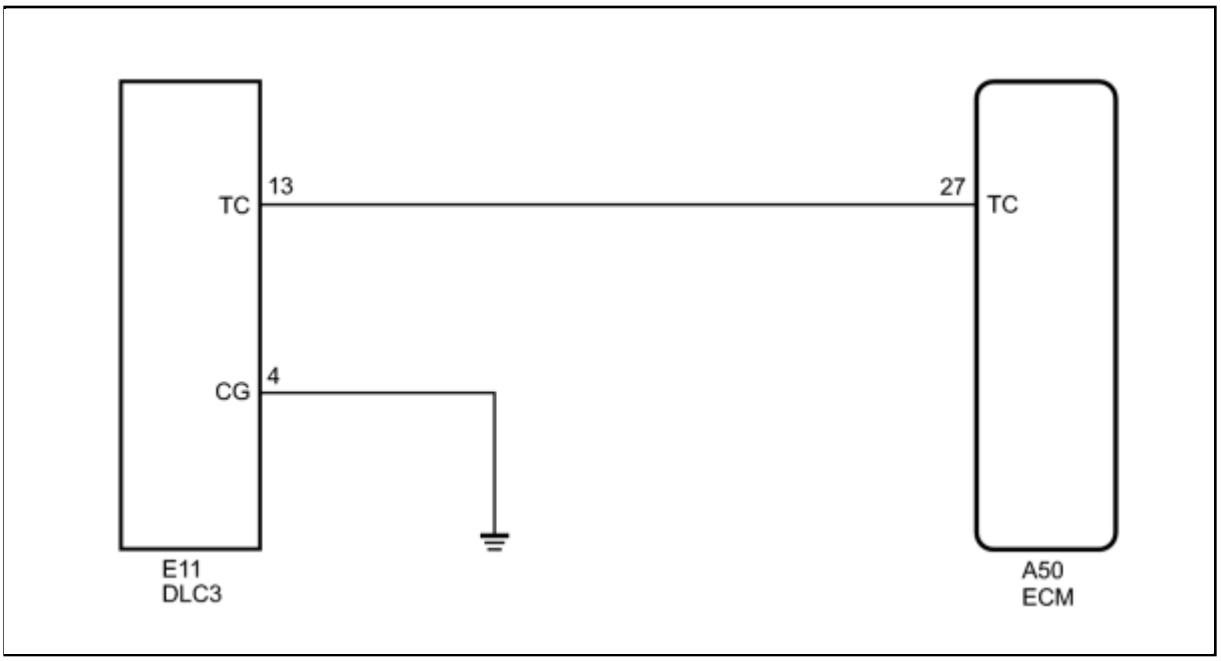
Title: CRUISE CONTROL: CRUISE CONTROL SYSTEM: TC and CG Terminal Circuit (2010 Corolla)		

TC and CG Terminal Circuit



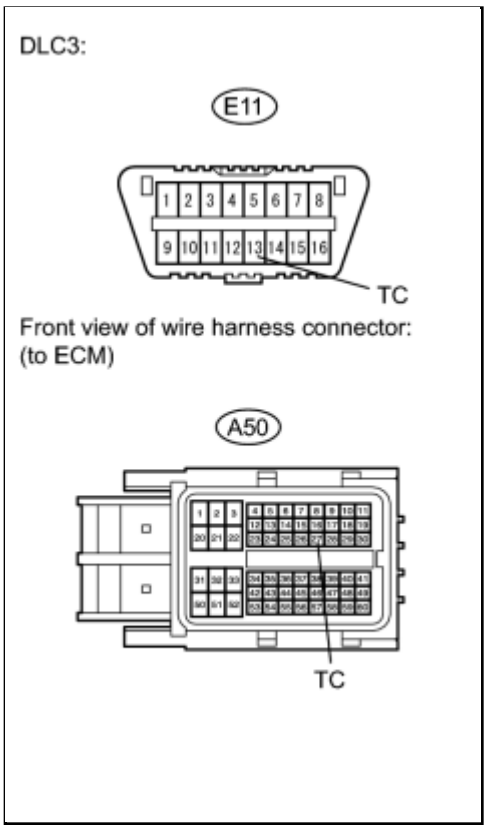
DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the system to enter self-diagnostic mode. If a malfunction is present, the MIL will blink.

HINT:

When a particular warning light remains blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is suspected.

WIRING DIAGRAM



INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK HARNESS AND CONNECTOR (TERMINAL TC of DLC3 - ECM)**

(a) Disconnect the ECM connector.

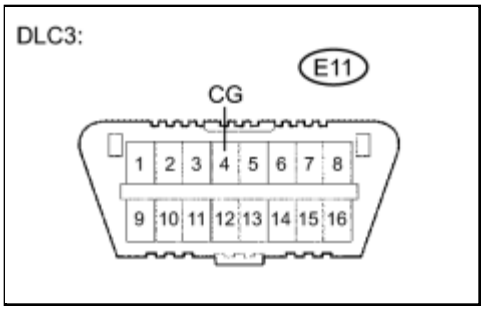
(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-27 (TC) - E11-13 (TC)	Always	Below 1 Ω

(c) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - ECM)**



OK ▼

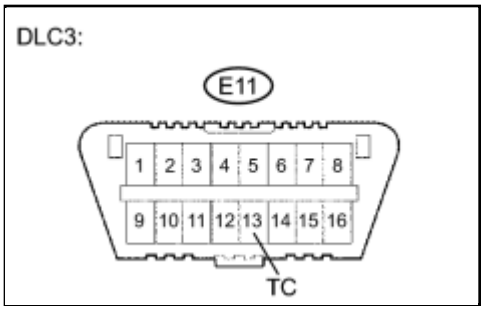
2.	**CHECK HARNESS AND CONNECTOR (TERMINAL CG of DLC3 - BODY GROUND)**

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-4 (CG) - Body ground	Always	Below 1 Ω

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - BODY GROUND)**



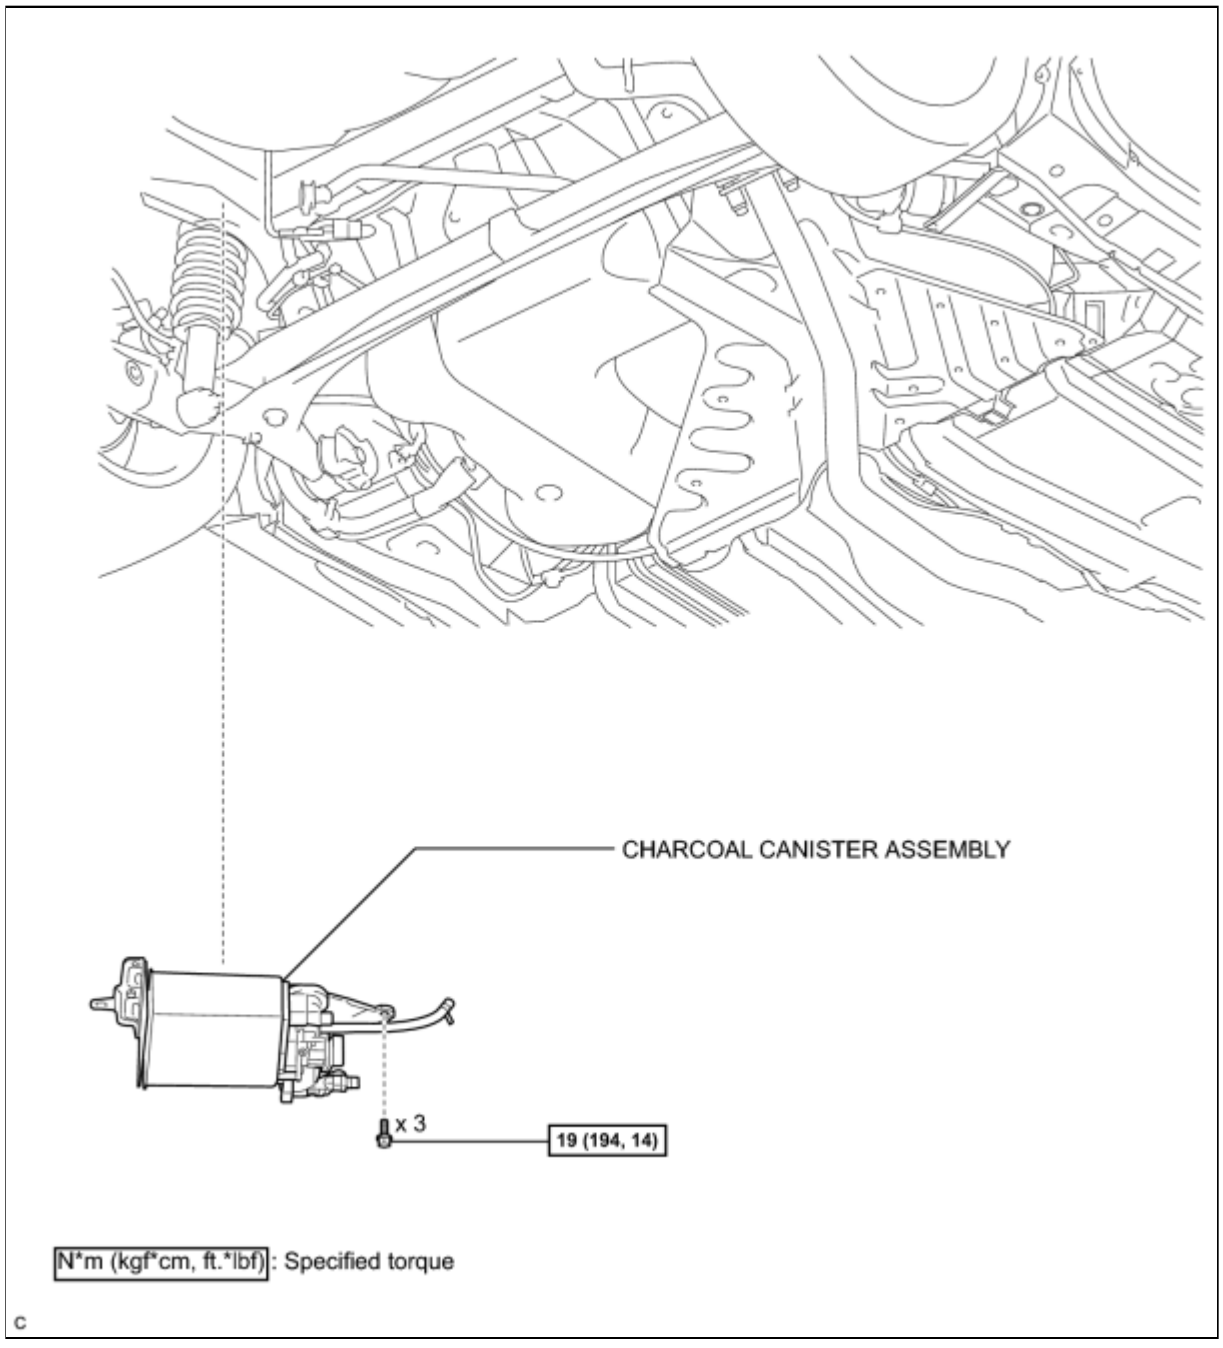
OK ▼

3.	CHECK HARNESS AND CONNECTOR (TERMINAL TC of DLC3 - BODY GROUND)

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E11-13 (TC) - Body ground	Always	10 kΩ or higher



NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR OR EACH ECU**

OK ▶ **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS**

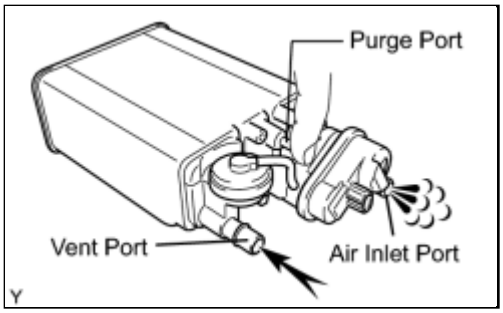
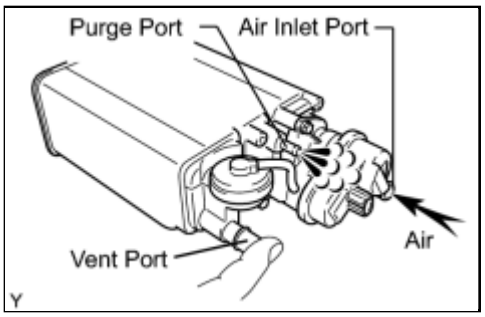
Title: 2AZ-FE EMISSION CONTROL: CANISTER: INSPECTION (2010 Corolla)		

INSPECTION



1. INSPECT CHARCOAL CANISTER ASSEMBLY

(a) Visually check the charcoal canister for cracks or damage.

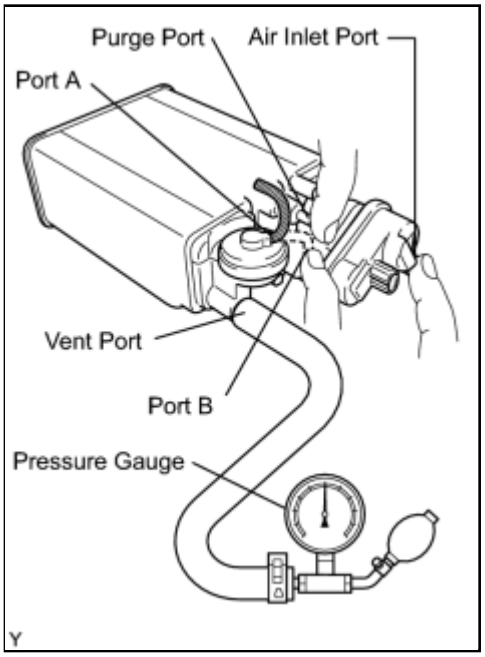


If cracks or damage are found, replace the charcoal canister assembly.

(b) Check charcoal canister operation.

(1) With the purge port closed, blow 1.10 kPa (11.2 gf/cm2, 0.16 psi) of air into the vent port, and check that air flows from the air inlet port.

If the result is not as specified, replace the charcoal canister assembly.

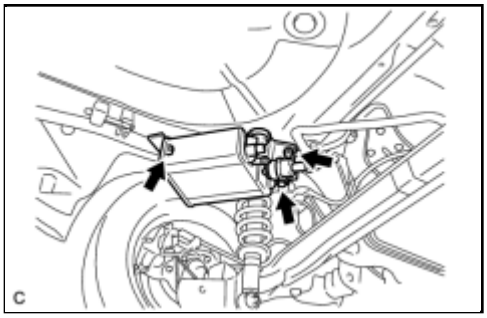


(2) With the vent port closed, blow 1.10 kPa (11.2 gf/cm2, 0.16 psi) of air into the air inlet port, and check that air flows from the purge port.

If the result is not as specified, replace the charcoal canister assembly.

(c) Check for air leakage.

(1) With the purge port and air inlet port closed, apply 19.6 kPa (0.2 kgf/cm2, 2.81 psi) of pressurized air into the



vent port, then confirm that pressure is retained for 1 minute.

If the result is not as specified, replace the charcoal canister assembly.

Title: 2AZ-FE EMISSION CONTROL: EMISSION CONTROL SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. VISUALLY INSPECT HOSE, CONNECTIONS AND GASKETS

(a) Check that there are no cracks, leaks or damage.

HINT:

- Detachment or other problems with the engine oil dipstick, oil filler cap, PCV hose or other components may cause the engine to run improperly.
- Disconnection, looseness or cracks in any part of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or engine malfunctions.

If the result is not as specified, replace the parts as necessary.

2. INSPECT FUEL CUT RPM

(a) Start and warm up the engine.

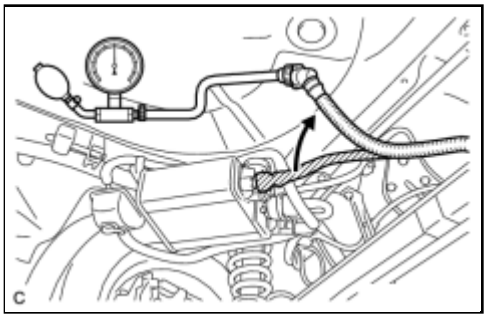
(b) Increase the engine speed to at last 3000 rpm.

(c) Use a sound scope to check for injector operating sounds.

(d) Check that when the accelerator pedal is released, injector operating sounds stop momentarily (at 2500 rpm) and then resume (at 1400 rpm).

Standard

ITEM	SPECIFIED CONDITION
Fuel cut off rpm	2500 rpm
Fuel injection restart rpm	1400 rpm



If the result is not specified, check the injectors, wiring and ECM.

3. INSPECT LINE AND CONNECTORS

(a) Visually check for loose connections, sharp bends or damage.

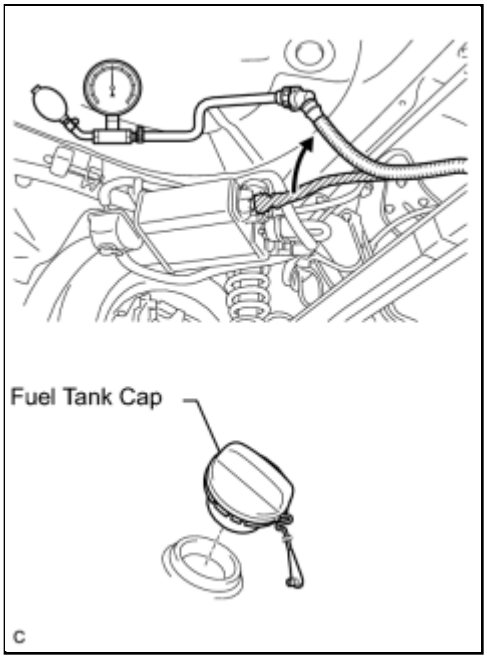
4. INSPECT AIR TIGHTNESS IN FUEL TANK AND FILLER PIPE

(a) Disconnect the vent line hose from the canister.

(b) Connect the pressure gauge to the vent line hose.

(c) Apply pressure to the fuel tank to create an internal pressure of 4 kPa (41 gf/cm^2, 0.58 psi).

(d) Check that the internal pressure of the fuel tank is maintained for 1 minute.



(e) Check the connecting portions of each hose and pipe.

(f) Check the installed parts on the fuel tank.

If any malfunctions, damage or other problems are found, replace the fuel tank and filler pipe.

(g) Reconnect the vent line hose to the fuel tank.

5. INSPECT FUEL TANK ASSEMBLY

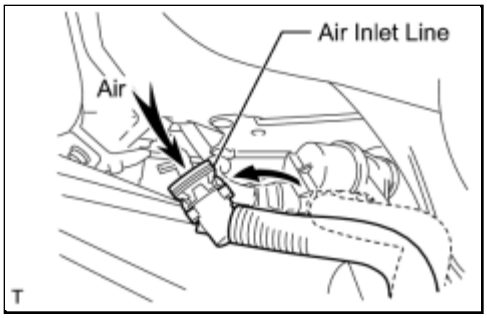
(a) Disconnect the vent line hose from the canister.

(b) Connect the pressure gauge to the fuel tank.

(c) Fill the fuel tank with fuel.

(d) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.

HINT:



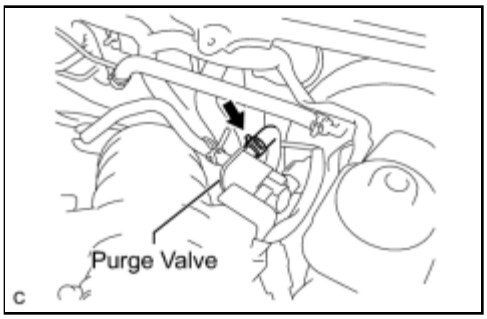
Check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.

(e) Remove the fuel tank cap, and check that the pressure drops.

If the pressure does not drop, replace the fuel tank assembly.

(f) Reconnect the vent line hose to the fuel tank.

6. INSPECT AIR INLET LINE



(a) Disconnect the air inlet line hose from the charcoal canister.

(b) Check that air can flow freely into the air inlet line.

If air cannot flow freely into the air inlet line, repair or replace it.

(c) Reconnect the air inlet line hose to the charcoal canister.

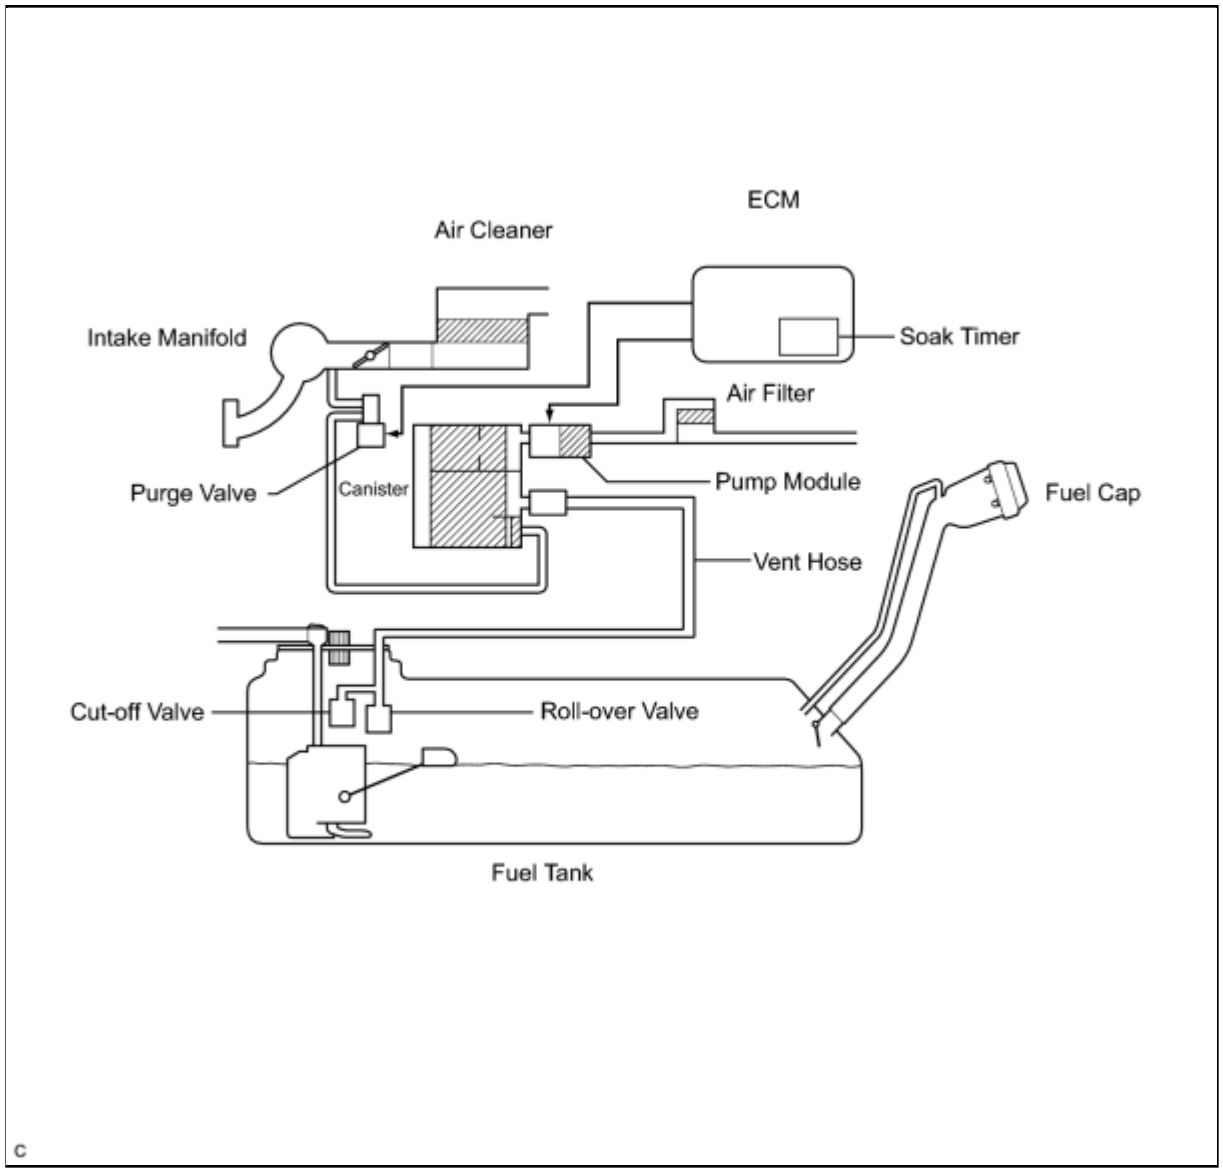
7. INSPECT EVAPORATIVE EMISSION CONTROL SYSTEM

(a) Start the engine.

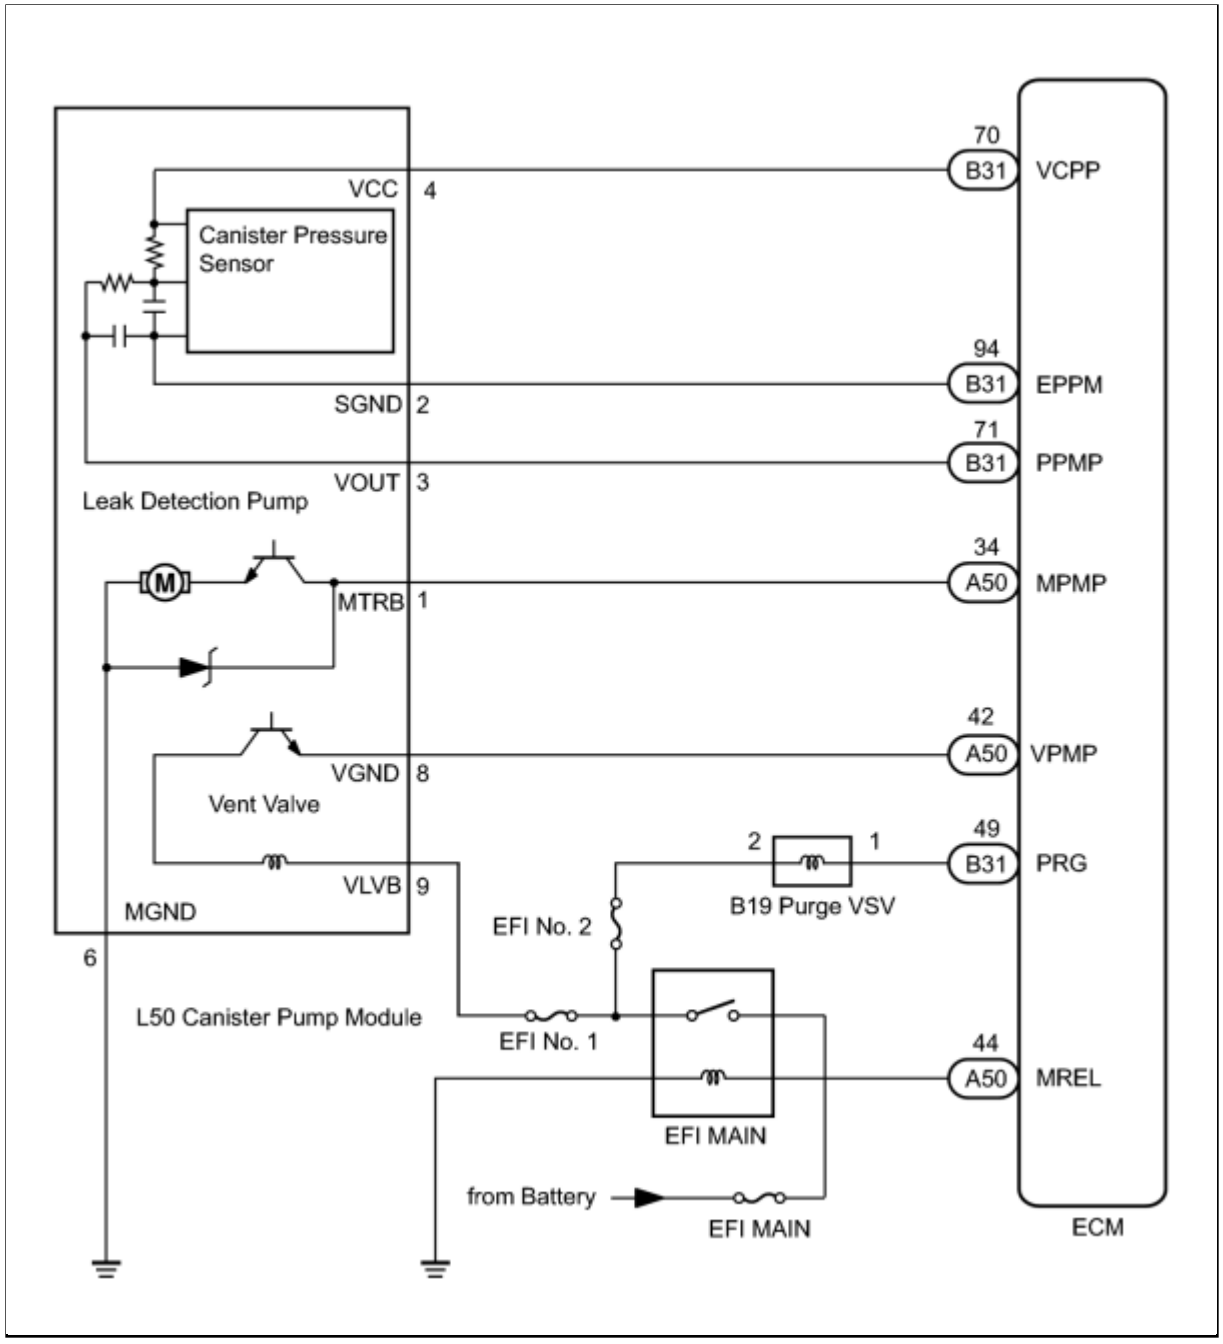
(b) Disconnect the vacuum hose from the purge valve as shown in the illustration.

(c) Connect the Techstream to the DLC3.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for EVAP Control.



(e) Check that a vacuum occurs at the purge valve port.



(f) Exit Active Test mode and reconnect the vacuum hose.

If the result is not as specified, replace the purge valve, wire harness or ECM.

Title: 2ZR-FE EMISSION CONTROL: EMISSION CONTROL SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. VISUALLY INSPECT HOSE, CONNECTIONS AND GASKETS

(a) Check for cracks, leaks or damage.

HINT:

Separation of the engine oil dipstick, oil filler cap, PCV hose, etc. may cause the engine to run improperly. Disconnection, looseness or cracks in any part of the air induction system between the throttle body and cylinder head will allow air suction and cause the engine to run improperly.

2. INSPECT FUEL CUT OFF/RESTART RPM

(a) Increase the engine speed to at least 3500 rpm.

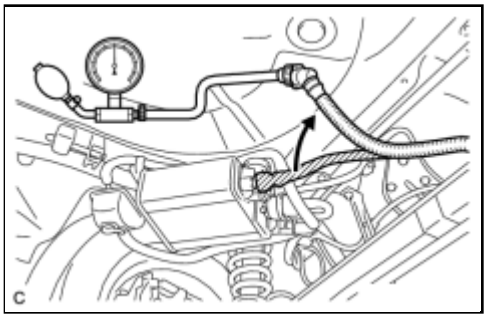
(b) Use a sound scope to check for injector operating sounds.

(c) Check that when the accelerator pedal is released, injector operating sounds stop momentarily and then resume.

Standard engine speed (Manual Transmission):

ITEM	SPECIFIED CONDITION
Fuel cut off rpm	2500 rpm
Fuel injection restart rpm	1500 rpm

Standard engine speed (Automatic Transmission):



ITEM	SPECIFIED CONDITION
Fuel cut off rpm	2500 rpm
Fuel injection restart rpm	1200 rpm

3. INSPECT LINE AND CONNECTORS

(a) Visually check for loose connections, sharp bends or damage.

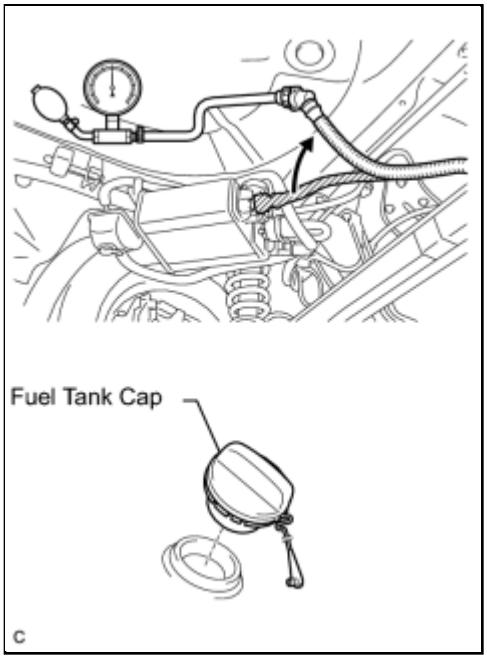
4. INSPECT AIR TIGHTNESS IN FUEL TANK AND FILLER PIPE

(a) Disconnect the vent line hose from the canister.

(b) Connect the pressure gauge to the vent line hose.

(c) Apply pressure to the fuel tank to create an internal pressure of 4 kPa (41 gf/cm^2, 0.58 psi).

(d) Check that the internal pressure of the fuel tank is maintained for 1 minute.



(e) Check the connected portions of each hose and pipe.

(f) Check the installed parts on the fuel tank.

If any malfunctions, damage or other problems are found, replace the fuel tank and filler pipe.

(g) Reconnect the vent line hose to the fuel tank.

5. INSPECT FUEL TANK ASSEMBLY

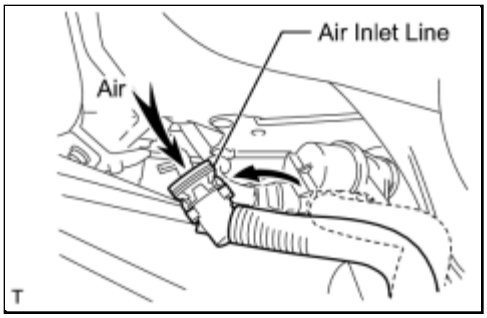
(a) Disconnect the vent line hose from the canister.

(b) Connect the pressure gauge to the vent line hose.

(c) Fill the fuel tank with fuel.

(d) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.

HINT:



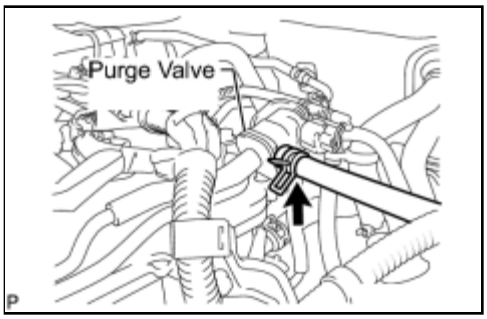
Check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.

(e) Remove the fuel tank cap, and check that the pressure drops.

If the pressure does not drop, replace the fuel tank assembly.

(f) Reconnect the vent line hose to the fuel tank.

6. INSPECT AIR INLET LINE



(a) Disconnect the air inlet line from the charcoal canister.

(b) Check that air can flow freely into the air inlet line.

If air cannot flow freely into the air inlet line, repair or replace it.

(c) Reconnect the air inlet line to the charcoal canister.

7. INSPECT EVAPORATIVE EMISSION CONTROL SYSTEM

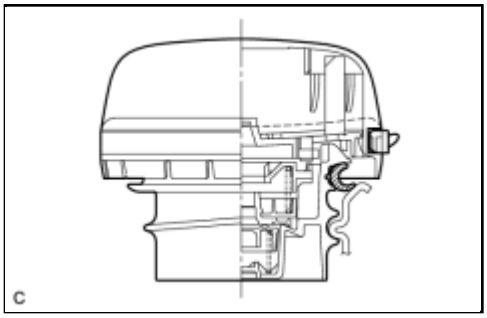
(a) Start the engine.

(b) Disconnect the vacuum hose from the purge valve as shown in the illustration.

(c) Connect the Techstream to the DLC3.

(d) Enter the following menus: Powertrain / Active Test / Activate the VSV for EVAP Control.

(e) Check that a vacuum occurs at the purge valve port.



(f) Exit Active Test mode and reconnect the vacuum hose.

If the result is not as specified, replace the purge valve, wire harness or ECM.

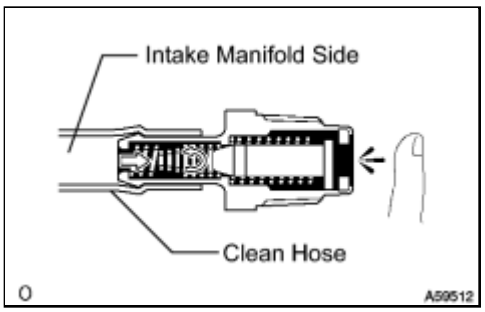
Title: 2AZ-FE EMISSION CONTROL: PCV VALVE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT VENTILATION VALVE SUB-ASSEMBLY



(a) Install a clean hose to the ventilation valve sub-assembly.

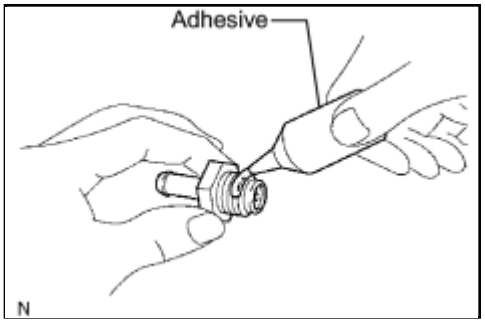
(b) Inspect ventilation valve operation.

(1) Blow air into the cylinder head side, and check that air passes through easily.

CAUTION:

Do not suck air through the valve. Petroleum substances inside the valve are hazardous to your health.

(2) Blow air into the intake manifold side, and check that air passes through with difficulty.



If the result is not as specified, replace the ventilation valve sub-assembly.

(c) Remove the clean hose from the ventilation valve sub-assembly.

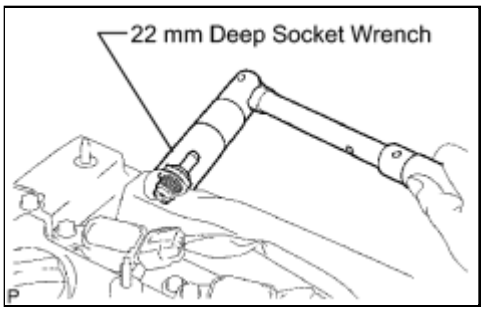
Title: 2AZ-FE EMISSION CONTROL: PCV VALVE: INSTALLATION (2010 Corolla)		



INSTALLATION

1. INSTALL VENTILATION VALVE SUB-ASSEMBLY

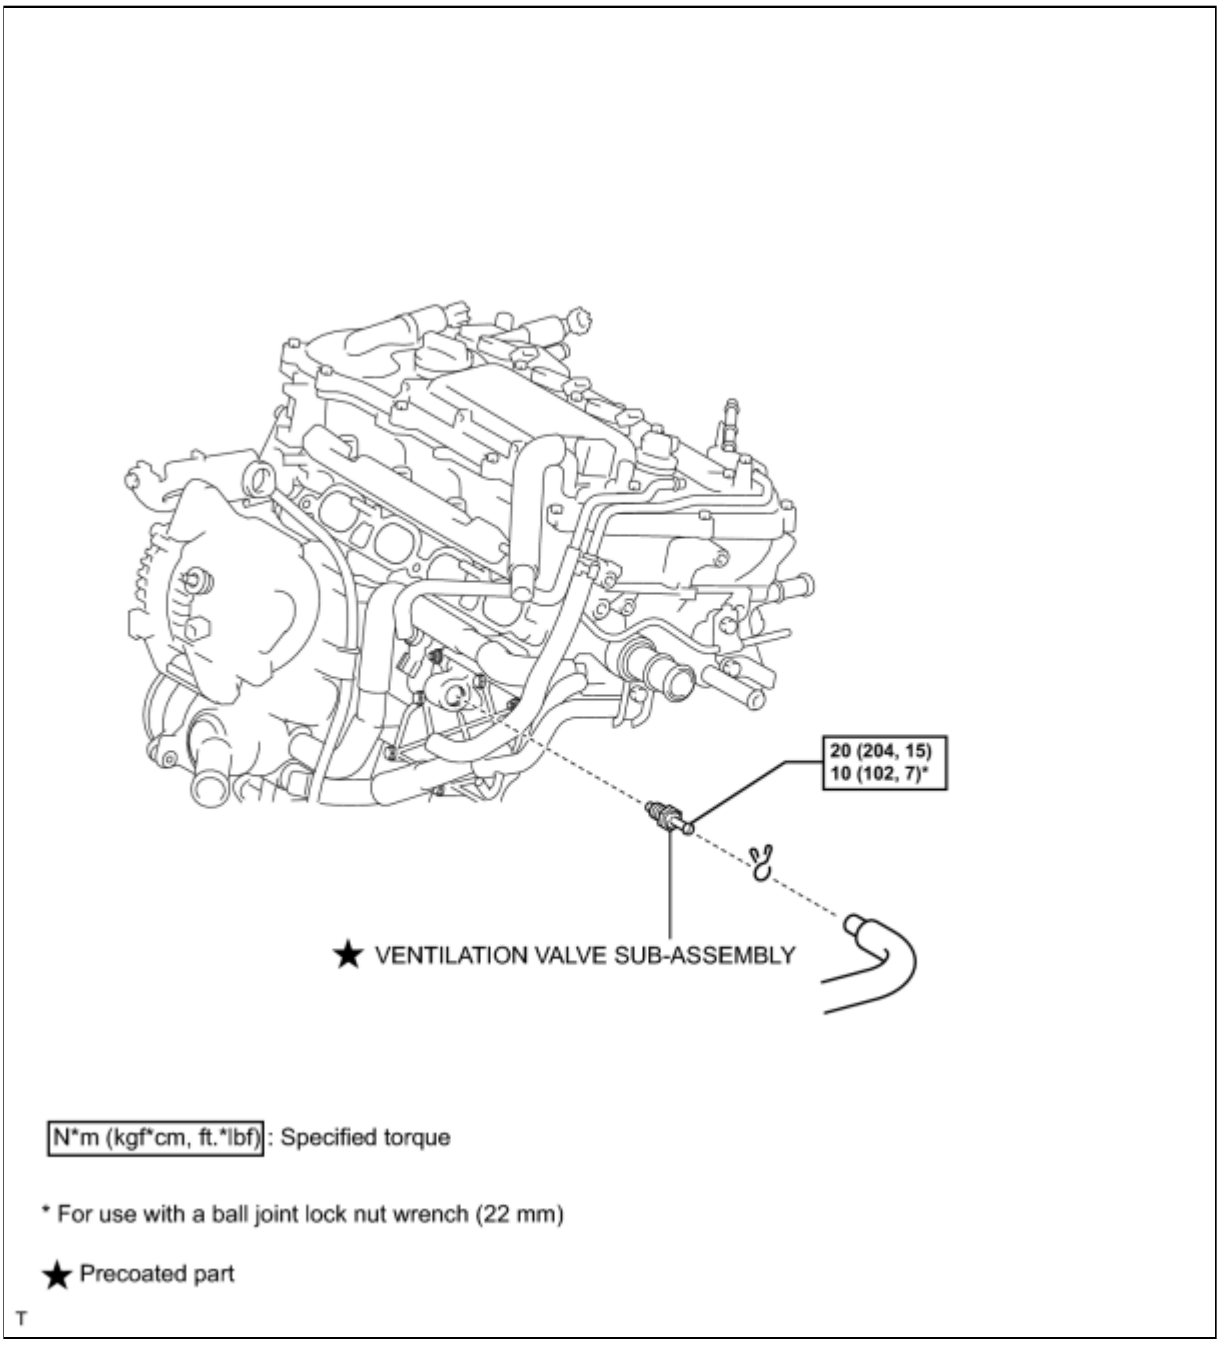
(a) Apply adhesive to 2 or 3 threads of the ventilation valve.

Adhesive:
Toyota genuine adhesive 1324, three bond 1324 or equivalent

(b) Using a 22 mm deep socket wrench, install the ventilation valve.

Torque: 19 N·m (194 kgf·cm, 14ft·lbf)

(c) Connect the ventilation hose.



2. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

3. INSPECT FOR OIL LEAK

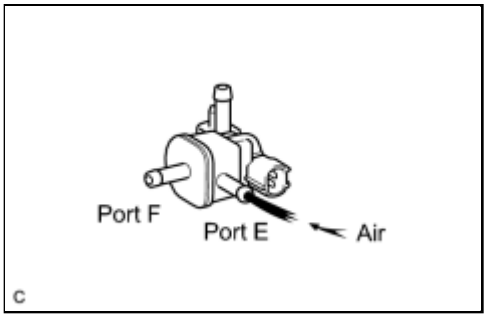
Title: 2AZ-FE EMISSION CONTROL: PURGE VALVE: INSPECTION (2010 Corolla)		

INSPECTION

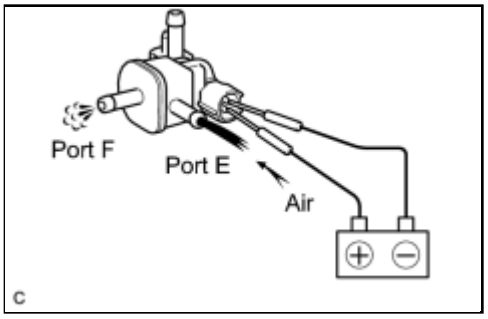
1. INSPECT VACUUM SWITCHING VALVE



(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	SPECIFIED CONDITION
1 - 2	23 to 26 Ω at 20°C (68°F)
1 - Body ground 2 - Body ground	10 MΩ or higher

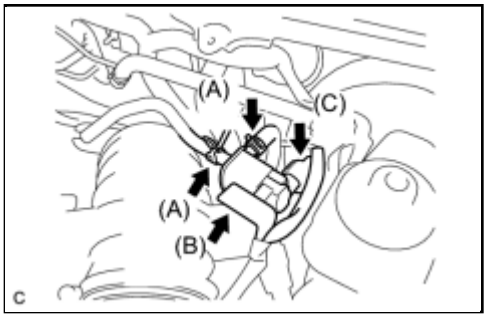


If the result is not as specified, replace the vacuum switching valve.

(b) Check the operation of the vacuum switching valve.

(1) Check that air does not flow from port E to port F.

(2) Apply battery voltage across the terminals.



(3) Check that air flows from port E to port F.

If the result is not as specified, replace the vacuum switching valve.

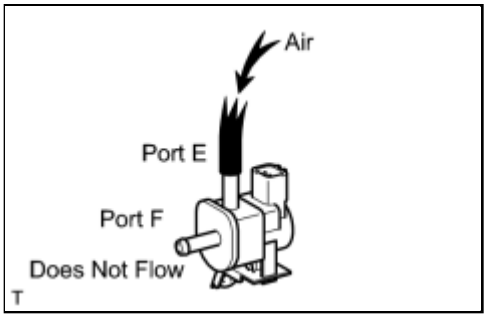
Title: 2ZR-FE EMISSION CONTROL: PURGE VALVE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT DUTY VACUUM SWITCHING VALVE

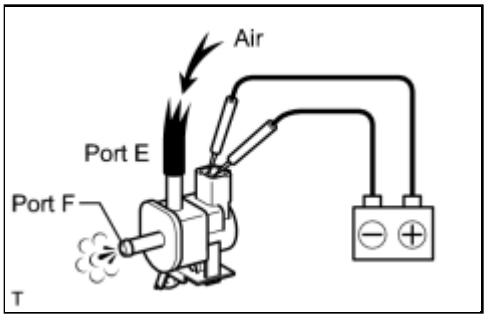


(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	23 to 26 Ω
1 - Body ground	Always	10 MΩ or higher
2 - Body ground	Always	10 MΩ or higher

If the result is not as specified, replace the duty vacuum switching valve.



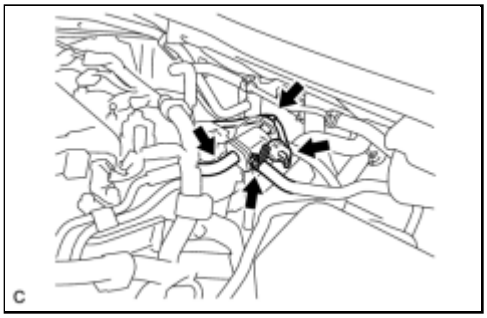
(b) Check operation of the purge VSV.

(1) Check that air does not flow from port E to port F.

If the result is not as specified, replace the duty vacuum switching valve.

(2) Apply battery voltage across terminals 1 and 2.

(3) Check that air flows from port E to port F.



If the result is not as specified, replace the duty vacuum switching valve.

Title: 2AZ-FE ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Inspect the oil control valve (for intake camshaft).

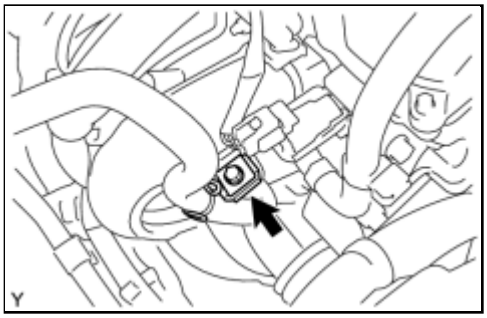
(1) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(2) Check the engine speed when the oil control valve is operated using the Techstream with the engine coolant temperature at 50°C (122°F) or less.

HINT:

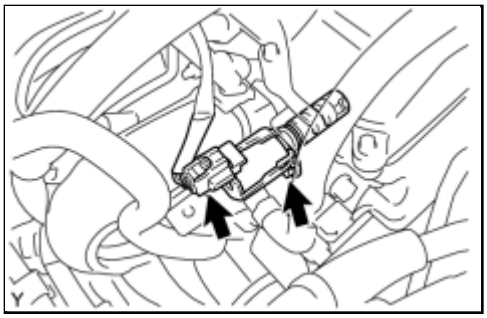
- When performing the active test, the air conditioning should be on.
- Engine coolant temperature when the engine is started should be 30°C (86°F) or less.

Standard:



CONTROL RANGE	SPECIFIED CONDITION
OFF	Normal engine speed
ON	Rough idle or engine stalls (soon after oil control valve switched from OFF to ON)

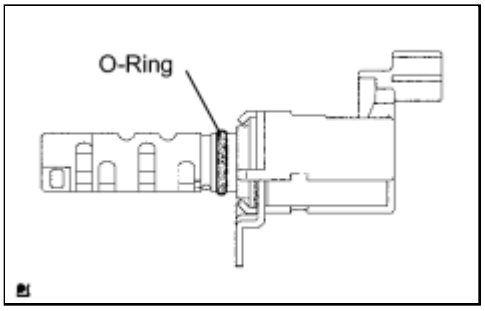
Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003D32003X
Title: 2AZ-FE ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: REMOVAL (2010 Corolla)		



REMOVAL

1. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY INFO

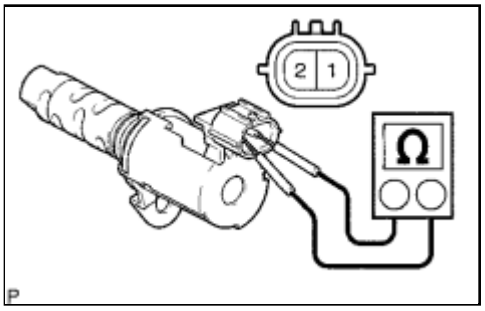
2. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



(a) Remove the bolt and the vacuum hose clamp.

(b) Disconnect the camshaft timing oil control valve connector.

(c) Remove the bolt and the camshaft timing oil control valve assembly.



(d) Remove the O-ring from the camshaft timing oil control valve assembly.

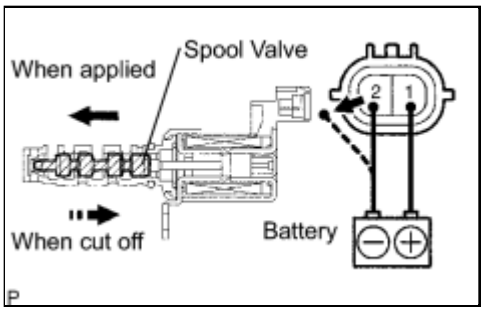
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003D30003X
Title: 2AZ-FE ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



(a) Measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

If the result is not as specified, replace the oil control valve assembly.

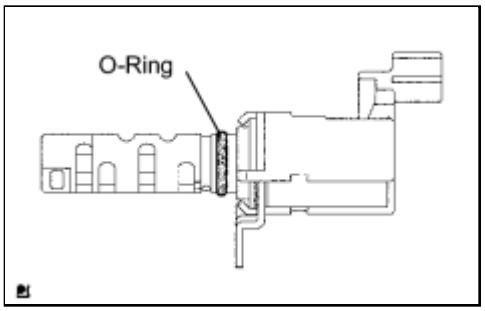
(b) Check the operation.

(1) Connect a positive (+) battery lead to terminal 1 and a negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve moves freely and does not stick in any position.

If necessary, replace the camshaft timing oil control valve assembly.



HINT:

Accumulation of foreign matter can cause minor pressure leaks. Minor pressure leaks will cause the camshaft to advance, and this will cause a DTC to be set.

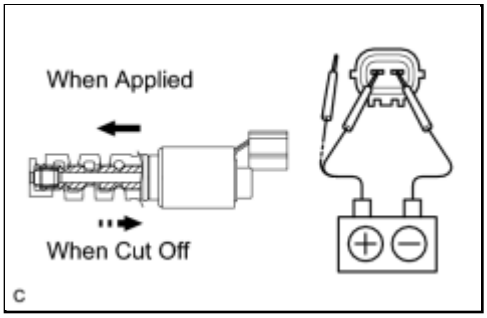
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000003D3C003X
Title: 2ZR-FE ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



(a) Measure the resistance between the terminals.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

If the result is not as specified, replace the oil control valve assembly.

(b) Check the operation.

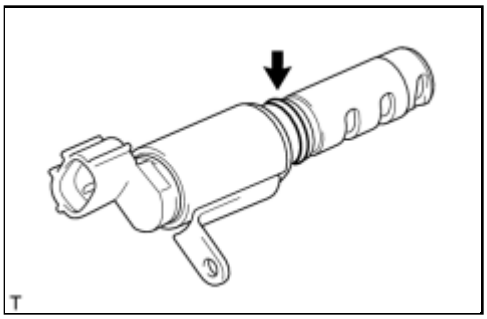
(1) Connect a positive (+) battery lead to terminal 1 and a negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve moves freely and does not stick in any position.

If necessary, replace the camshaft timing oil control valve assembly.

HINT:



Accumulation of foreign matter can cause minor pressure leaks. Minor pressure leaks will cause the camshaft to advance or retard, and this will cause a DTC to be set.

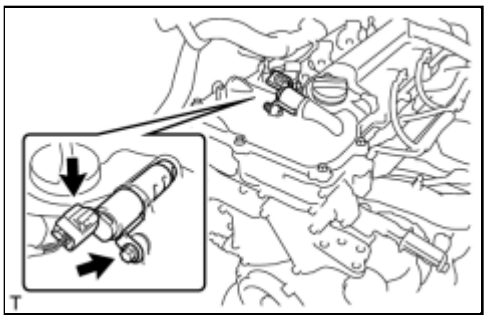
Title: 2ZR-FE ENGINE CONTROL: CAMSHAFT OIL CONTROL VALVE: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

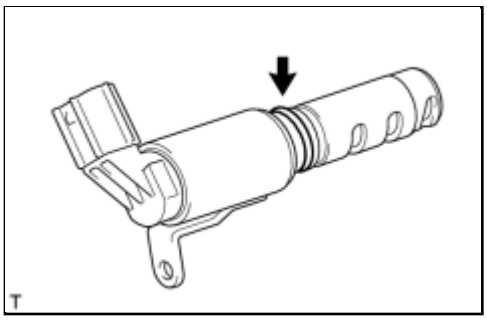


(a) Intake camshaft side:

(1) Apply a light coat of engine oil to a new O-ring and install it onto the camshaft timing oil control valve assembly

NOTICE:

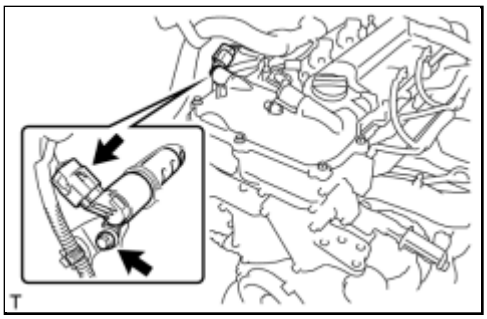
Do not twist the O-ring.



(2) Install the camshaft timing oil control valve assembly and wire harness bracket with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(3) Connect the camshaft timing oil control valve assembly connector.



(b) Exhaust camshaft side:

(1) Apply a light coat of engine oil to a new O-ring and install it onto the camshaft timing oil control valve assembly.

NOTICE:

Do not twist the O-ring.

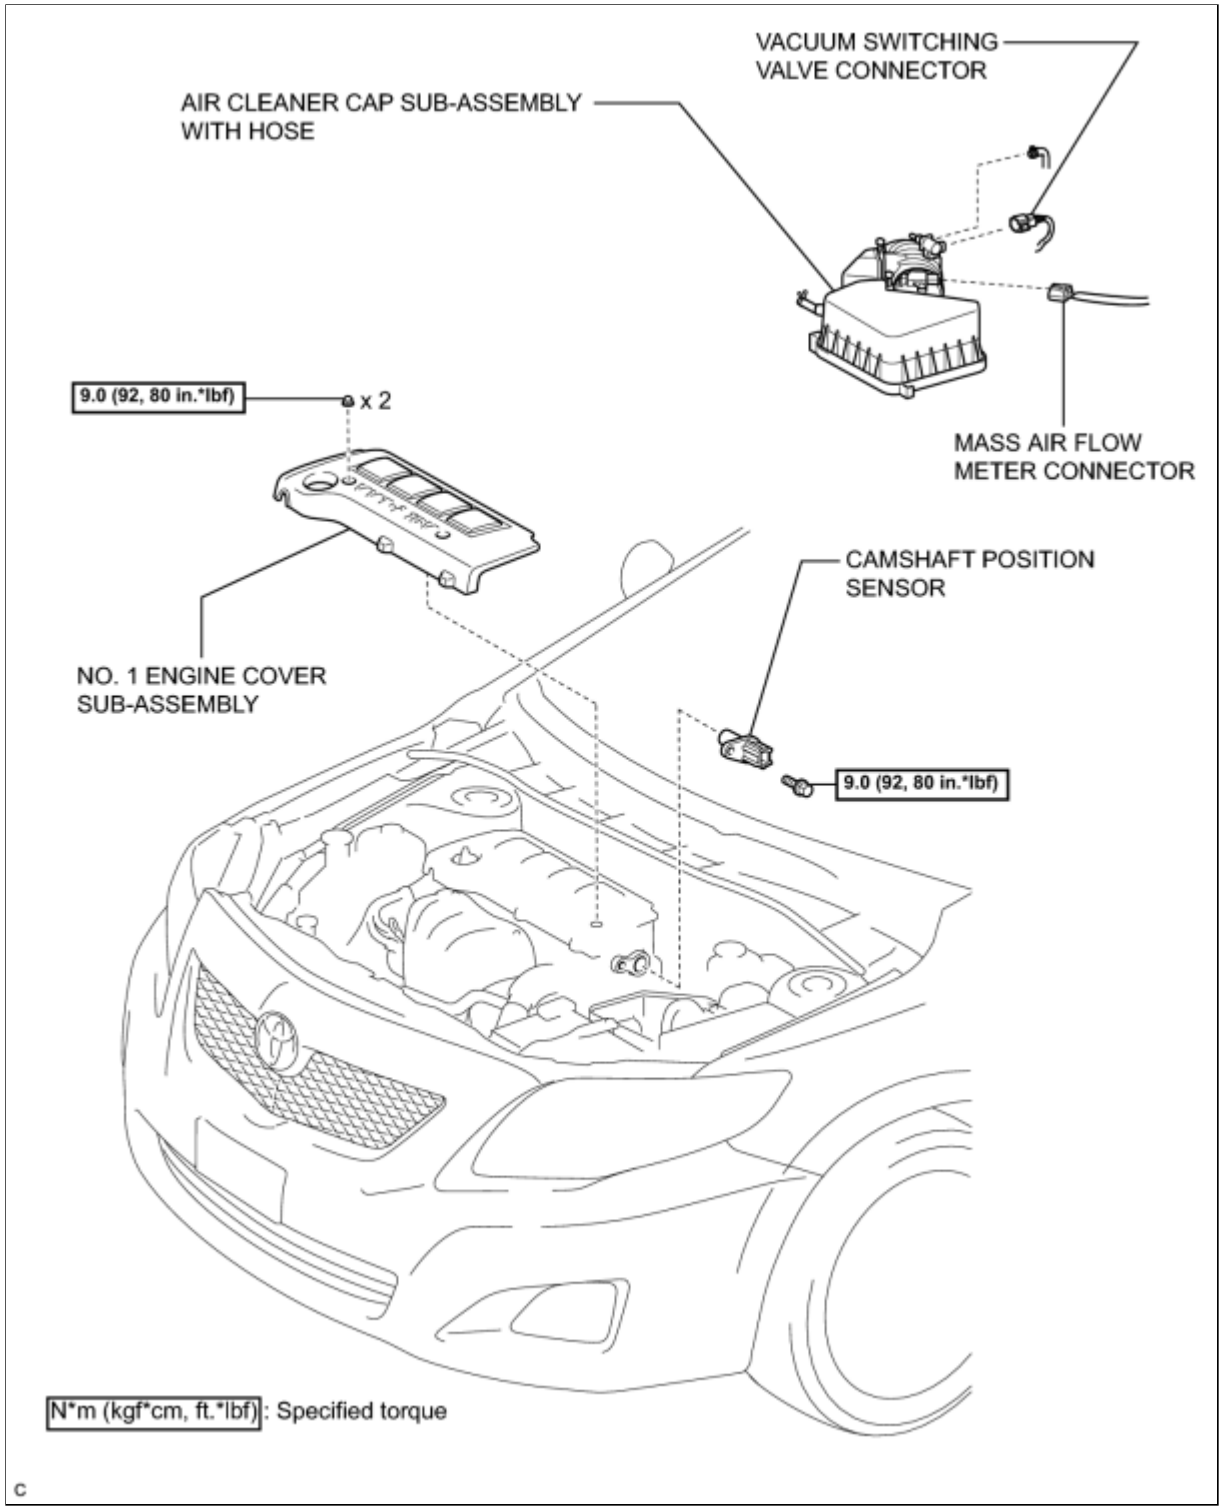
(2) Install the camshaft timing oil control valve assembly and wire harness bracket with the bolt.

Torque: 10 N·m (102 kgf·cm, 7ft·lbf)

(3) Connect the camshaft timing oil control valve assembly connector.

(4) Install the wire harness bracket with the bolt.

Torque: 8.4 N·m (85 kgf·cm, 74in·lbf)



2. INSPECT FOR OIL LEAK

3. INSTALL NO. 2 CYLINDER HEAD COVER INFO

Last Modified: 3-10-2010	6.4 K	**From:** 200901

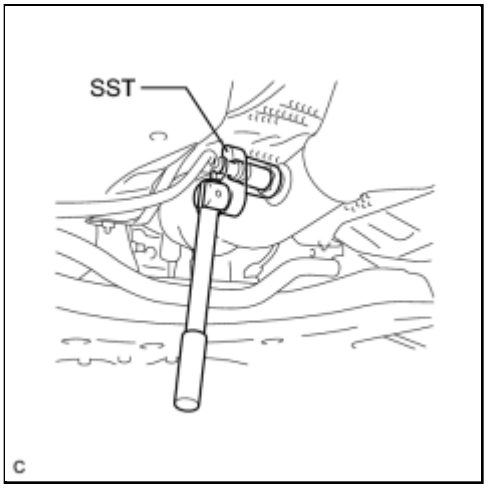
Title: 2ZR-FE ENGINE CONTROL: HEATED OXYGEN SENSOR: REMOVAL (2010 Corolla)		

REMOVAL

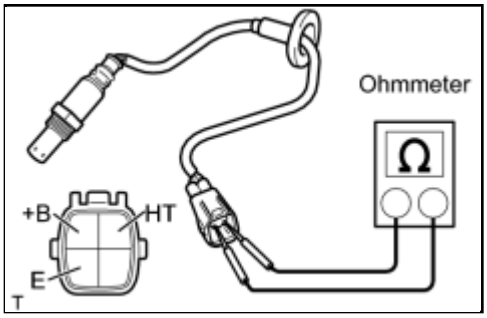


1. REMOVE HEATED OXYGEN SENSOR

(a) Disconnect the heated oxygen sensor connector.

(b) Remove the grommet and pull the sensor connector out of the cabin through the floor panel.

(c) Remove the wire harness clamp bracket and disconnect the wire harness clamp.



(d) Using SST, remove the heated oxygen sensor.

SST: 09224-00010

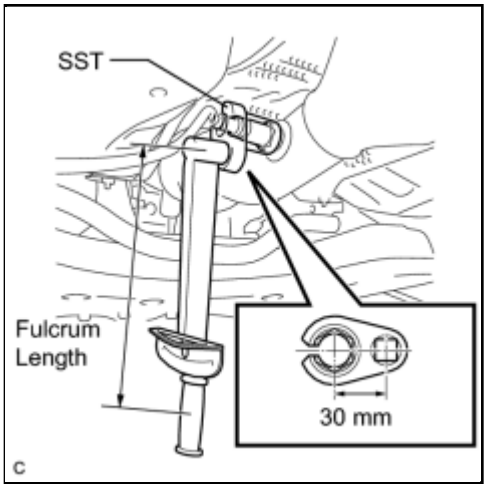
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001CK8028X
Title: 2ZR-FE ENGINE CONTROL: HEATED OXYGEN SENSOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT HEATED OXYGEN SENSOR

(a) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



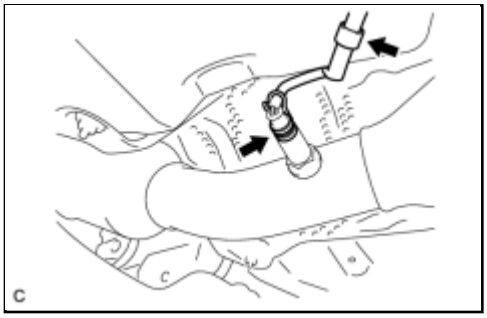
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
(HT) - (+B)	20°C (68°F)	11 to 16 Ω
(HT) - (E)	-	10 kΩ or higher

If the result is not as specified, replace the heated oxygen sensor.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM00000306T00AX
Title: 2ZR-FE ENGINE CONTROL: HEATED OXYGEN SENSOR: INSTALLATION (2010 Corolla)		

INSTALLATION

1. INSTALL HEATED OXYGEN SENSOR



(a) Using SST, install the heated oxygen sensor onto the front exhaust pipe.

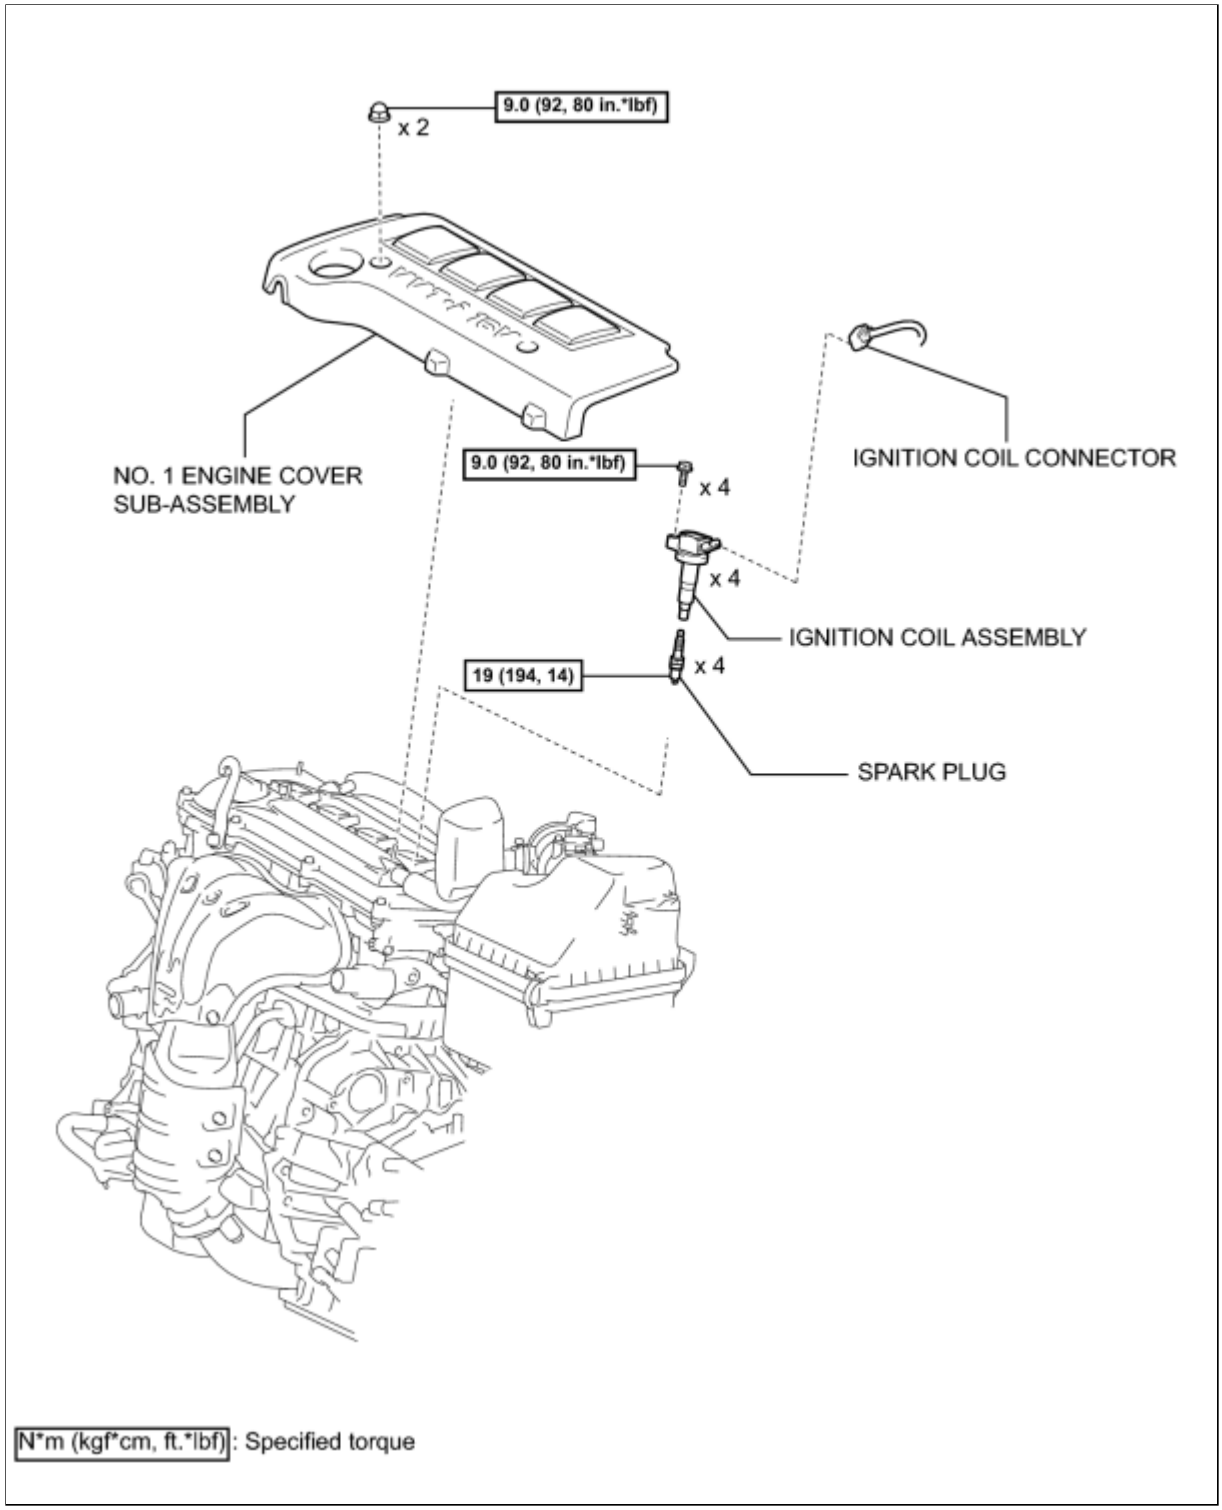
SST: 09224-00010
without SST - Torque: 44 N·m (449 kgf·cm, 32ft·lbf)
with SST - Torque: 40 N·m (408 kgf·cm, 30ft·lbf)

NOTICE:

- This torque value can be obtained by using a torque wrench with a fulcrum length of 300 mm (11.81 in.) and SST a measurement of 30 mm (1.18 in.) INFO .
- This torque value is effective when SST is parallel to the torque wrench.

(b) Install the wire harness clamp bracket and connect the wire harness clamp.

(c) Pass the sensor connector through the floor panel and install the grommet.



(d) Connect the heated oxygen sensor connector.

2. INSPECT FOR EXHAUST GAS LEAK

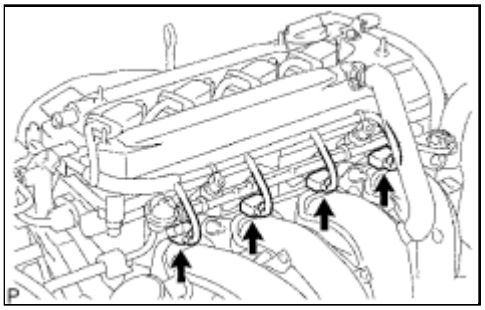
Title: 2AZ-FE ENGINE CONTROL: IGNITION SYSTEM: ON-VEHICLE INSPECTION (2010 Corolla)		

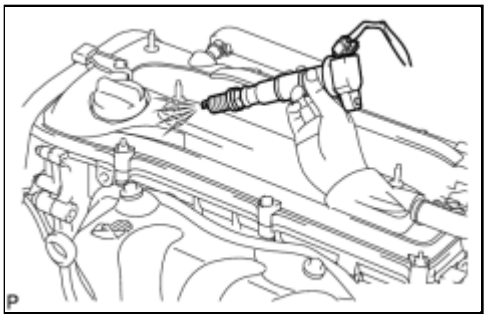
ON-VEHICLE INSPECTION

1. INSPECT IGNITION COIL AND PERFORM SPARK TEST



(a) Check for DTCs INFO .

NOTICE:



If any DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

(b) Check whether spark occurs.

(1) Remove the 4 ignition coils and 4 spark plugs INFO .

(2) Disconnect the 4 fuel injector connectors.

(3) Install the spark plug into the ignition coil and connect the ignition coil connector.

(4) Ground the spark plug.

(5) Check that spark occurs while the engine is being cranked.

NOTICE:

- Ground the spark plug when checking it.
- Replace any ignition coils that have been subjected to any physical impact.
- Do not crank the engine for more than 2 seconds.

If spark does not occur, perform the following procedure.

(c) Perform the following spark test procedure.

(1) Check that the wire harness side connector of the ignition coil with igniter is securely

connected.

Result:

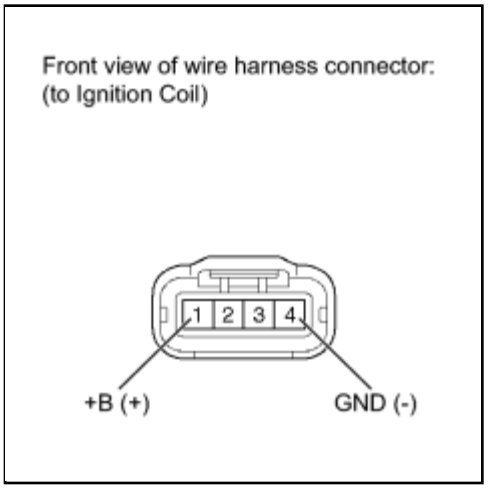
RESULT	ACTION
NG	Connect securely
OK	Go to next step

(2) Perform the spark test on each ignition coil with igniter.

1. Replace the ignition coil with igniter with a known good one.
2. Perform the spark test again.

Result:

RESULT	ACTION
OK	Replace ignition coil with igniter
NG	Go to next step



(3) Check the spark plug.

1. Replace the spark plug with a known good one.
2. Perform the spark test again.

Result:

RESULT	ACTION
OK	Replace spark plug
NG	Go to next step

(4) Check that power is supplied to each ignition coil with igniter.

1. Disconnect each ignition coil connector.
2. Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 (GND) - Body ground	Always	Below 1 Ω

HINT:

Perform the same procedure for each ignition coil.

3. Turn the ignition switch to ON.

4. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (+B) - 4 (GND)	Ignition switch ON	11 to 14 V

HINT:

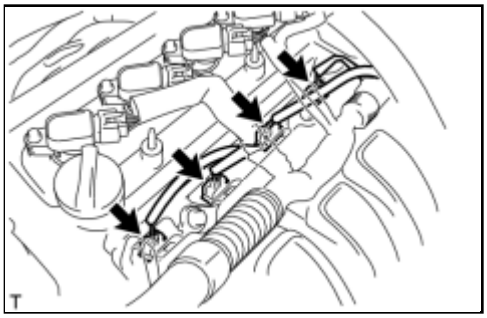
Perform the same procedure for each ignition coil.

Result:

RESULT	ACTION
NG	Check wiring between ignition switch and ignition coil with igniter
OK	Go to next step

(5) Check the resistance of the crankshaft position sensor INFO .

Result:



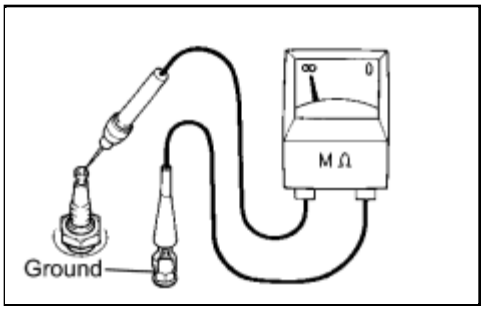
RESULT	ACTION
NG	Replace crankshaft position sensor
OK	Go to next step

(6) Check the IGT signals from the ECM INFO .

Result:

RESULT	ACTION
NG	Check ECM
OK	Repair wiring between ignition coil and ECM

(d) Connect the 4 injector connectors.



(e) Install the 4 ignition coils and 4 spark plugs INFO .

2. INSPECT SPARK PLUG

NOTICE:

- Do not use a wire brush for cleaning.
- Do not attempt to adjust the electrode gap of a used spark plug.

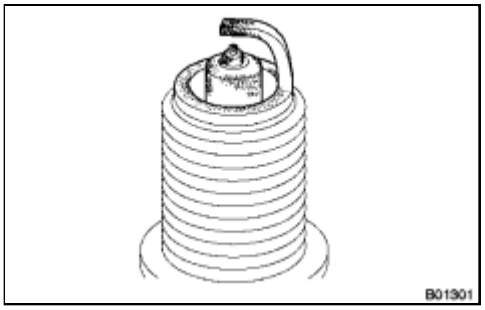
(a) Check the electrode.

(1) Using a megohmmeter, measure the insulation resistance.

Standard Resistance:

10 MΩ or more

If a megohmmeter is not available, perform the following simple inspection instead.



HINT:

If the result is not as specified, clean the spark plug with a spark plug cleaner and measure the resistance again.

(b) Alternative inspection method:

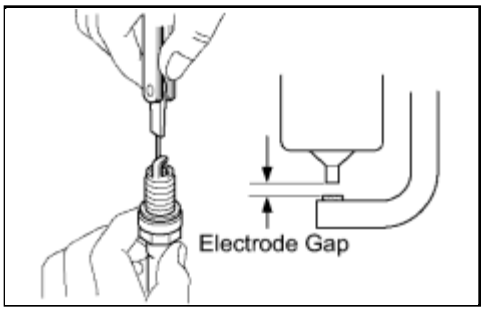
(1) Quickly accelerate the engine to 4000 rpm 5 times.

(2) Remove the spark plug.

(3) Visually check the spark plug.

If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.

(c) Check the spark plug for any damage to its threads and insulator.



If there is any damage, replace the spark plug.

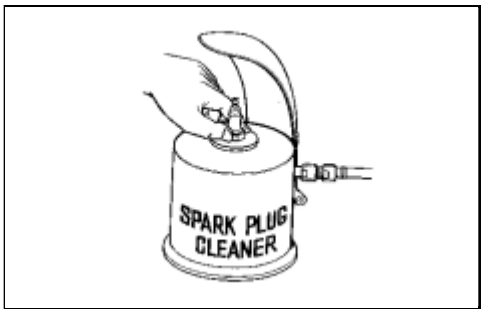
Recommended Spark Plug:

MANUFACTURER	PRODUCT
DENSO	SK20R11
NGK	IFR6A11

(d) Reference:

Maximum Electrode Gap for Used Spark Plug:

ELECTRODE GAP
1.3 mm (0.0512 in.)



If the gap is greater than the maximum, replace the spark plug.

Electrode Gap for New Spark Plug:

ELECTRODE GAP
1.0 to 1.1 mm (0.0394 to 0.0433 in.)

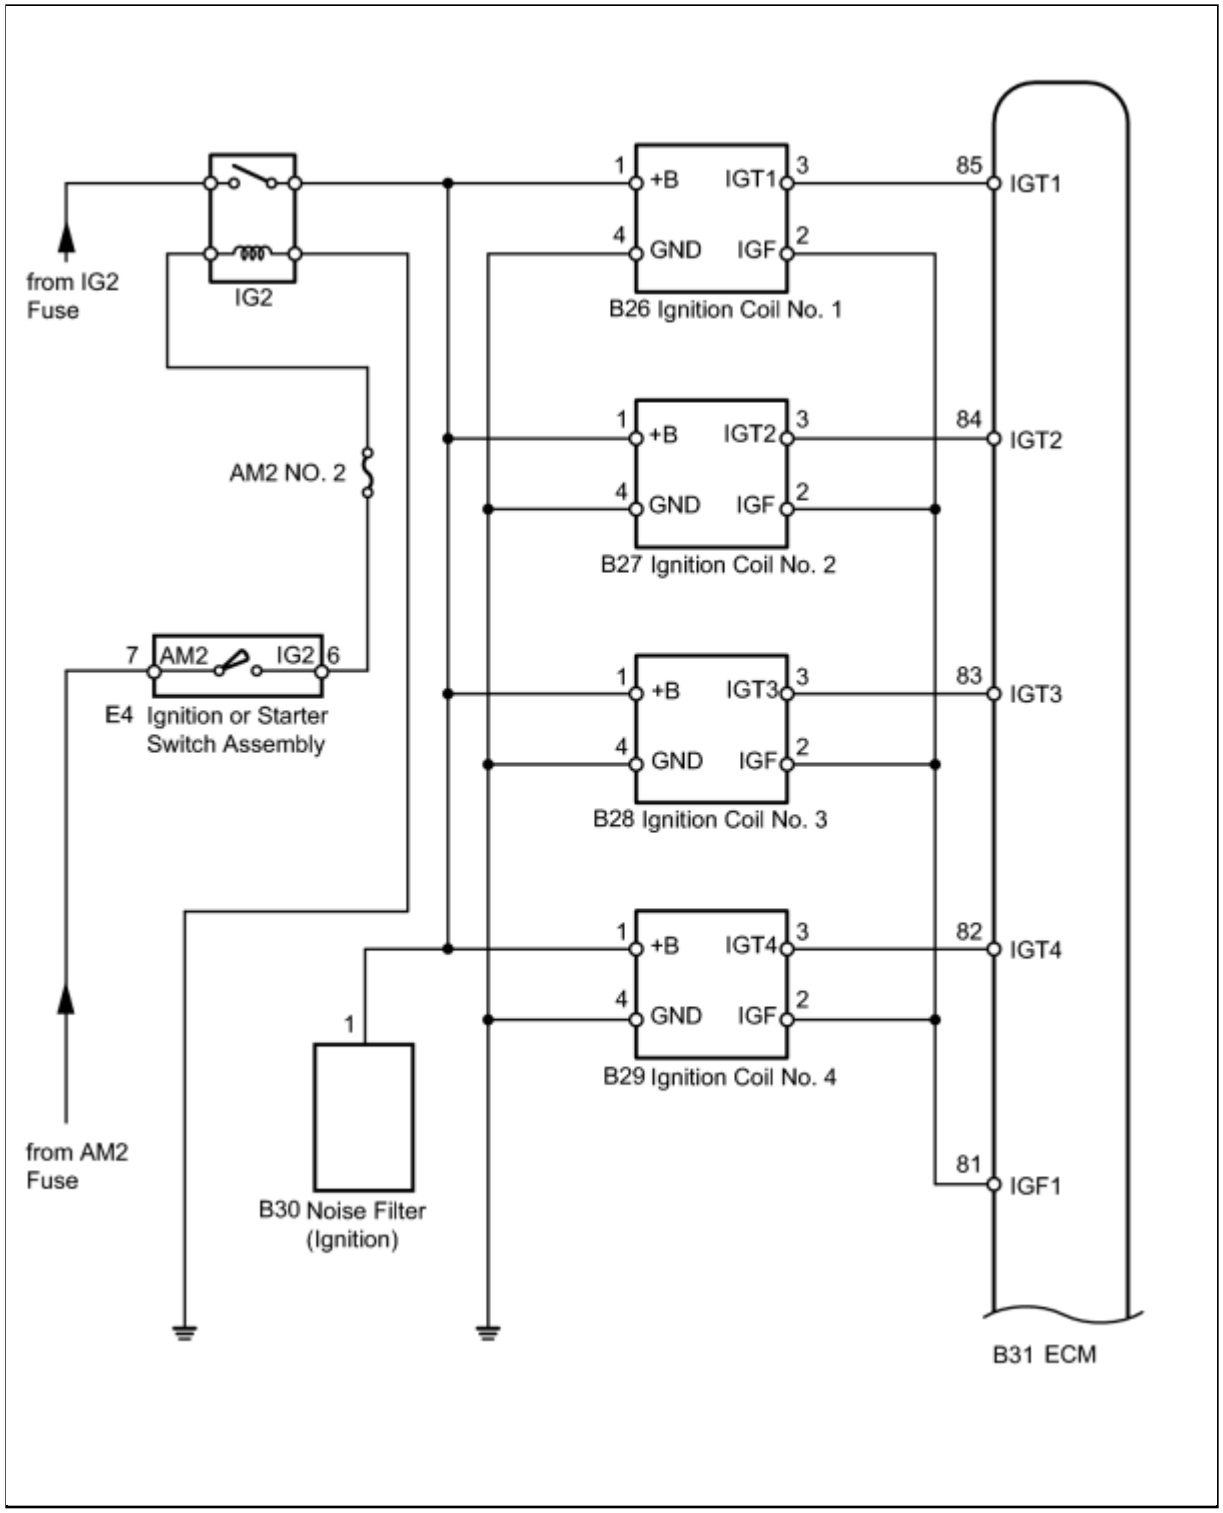
(e) Clean the spark plug.

If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.

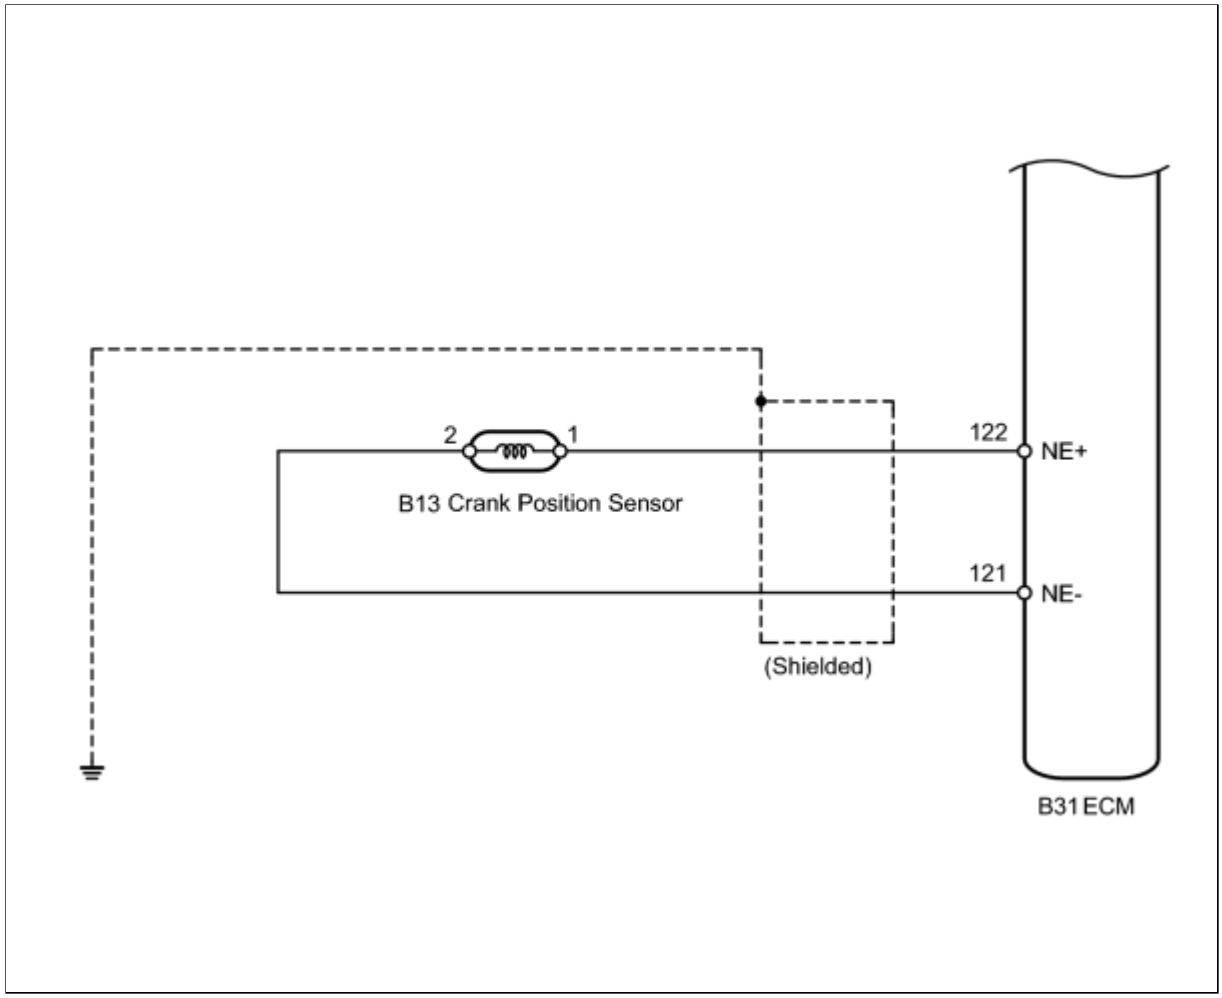
Air pressure:

588 kPa (6 kgf/cm^2, 85 psi)

Duration:



20 seconds or less



HINT:

Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

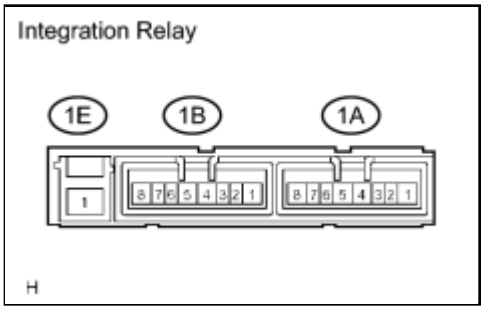
Title: 2AZ-FE ENGINE CONTROL: INTEGRATION RELAY: INSPECTION (2010 Corolla)		

INSPECTION

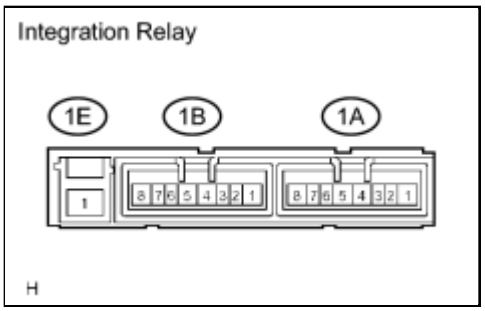


1. INSPECT INTEGRATION NO.1 RELAY

(a) EFI MAIN RELAY:

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



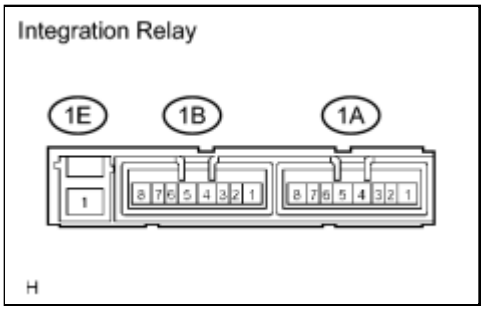
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Integration relay (1E-1) - Integration relay (1B-4)	Battery voltage is not applied between terminals 1B-3 and 1B-2	10 kΩ or higher
Integration relay (1E-1) - Integration relay (1B-4)	Battery voltage is applied between terminals 1B-3 and 1B-2	Below 1 Ω

If the resistance is not as specified, replace the integration relay.

(b) IG2 RELAY:

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



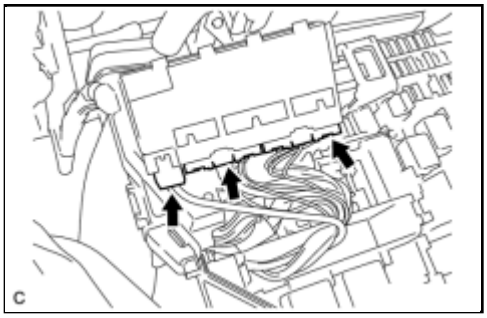
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Integration relay (1E-1) - Integration relay (1A-4)	Battery voltage is not applied between terminals 1A-2 and 1A-3	10 kΩ or higher
Integration relay (1E-1) - Integration relay (1A-4)	Battery voltage is applied between terminals 1A-2 and 1A-3	Below 1 Ω

If the resistance is not as specified, replace the integration relay.

(c) HORN RELAY:

(1) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
Integration relay (1E-1) - Integration relay (1A-8)	Battery voltage is not applied between terminals 1A-6 and 1A-7	10 kΩ or higher
Integration relay (1E-1) - Integration relay (1A-8)	Battery voltage is applied between terminals 1A-6 and 1A-7	Below 1 Ω

If the resistance is not as specified, replace the integration relay.

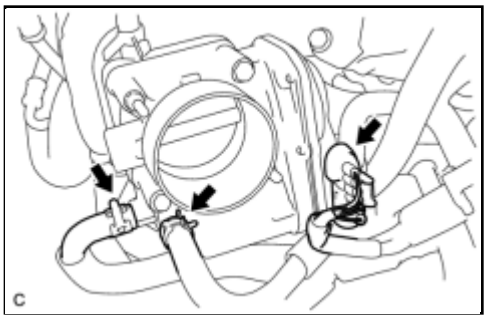
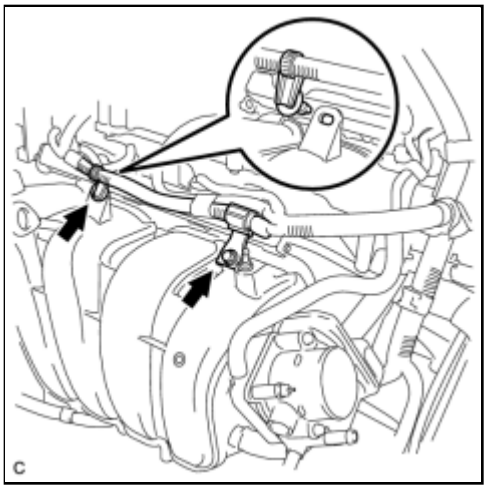
Title: 2ZR-FE ENGINE CONTROL: KNOCK SENSOR: REMOVAL (2010 Corolla)		



REMOVAL

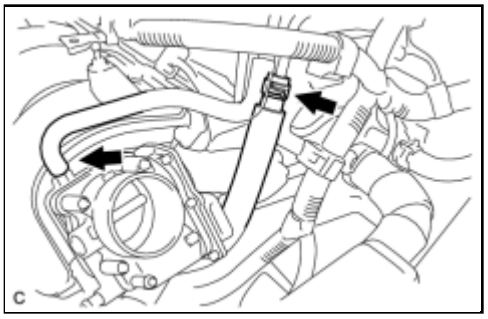
1. DRAIN ENGINE COOLANT INFO

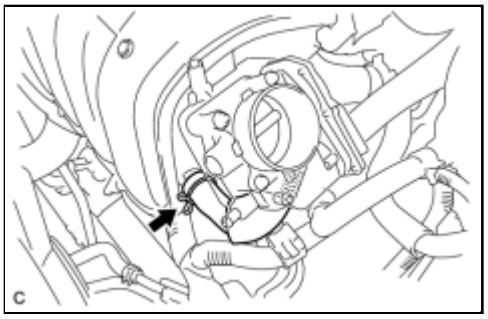


2. REMOVE NO. 2 CYLINDER HEAD COVER INFO

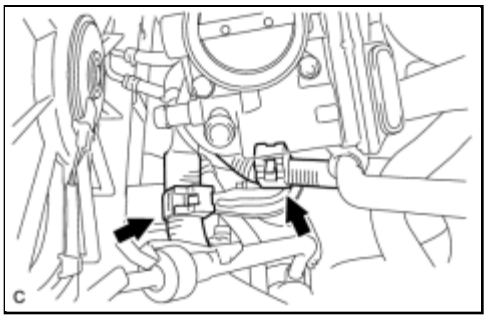
3. REMOVE AIR CLEANER CAP SUB-ASSEMBLY INFO

4. REMOVE INTAKE MANIFOLD



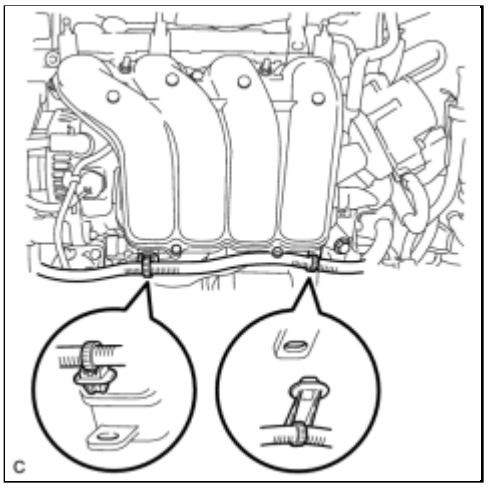


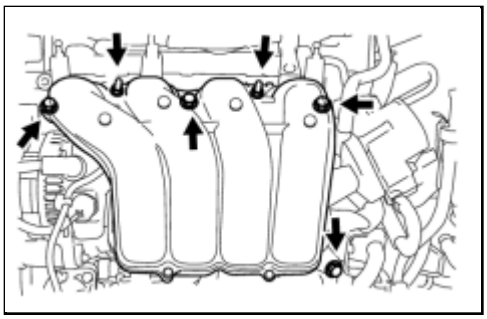
(a) Disconnect the throttle body connector and the 2 water by-pass hoses.



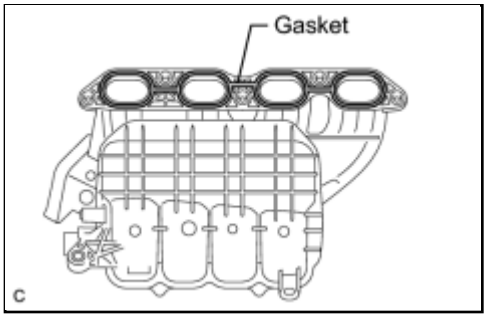
(b) Separate the wire harness clamp and remove the bolt and wire harness bracket.

(c) Separate the 2 hoses.



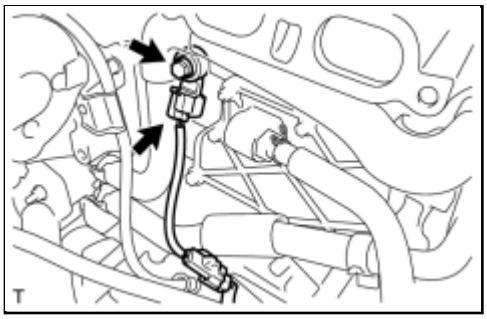


(d) Separate the ventilation hose.



(e) Separate the 2 wire harness clamps.

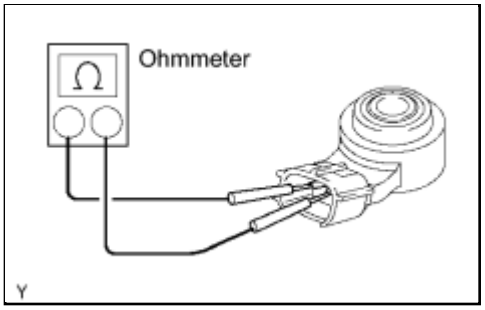
(f) Separate the 2 wire harness clamps.



(g) Remove the 4 bolts and 2 nuts and remove the intake manifold stay and intake manifold with throttle body.

(h) Remove the gasket from the intake manifold.

5. REMOVE KNOCK SENSOR



(a) Disconnect the knock sensor connector.

(b) Remove the bolt and remove the knock sensor.

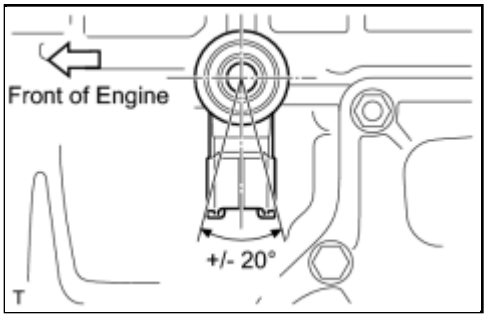
Last Modified: 3-10-2010	6.4 G	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001CZI014X
Title: 2ZR-FE ENGINE CONTROL: KNOCK SENSOR: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT KNOCK SENSOR

(a) Measure the resistance according to the value(s) in the table below.

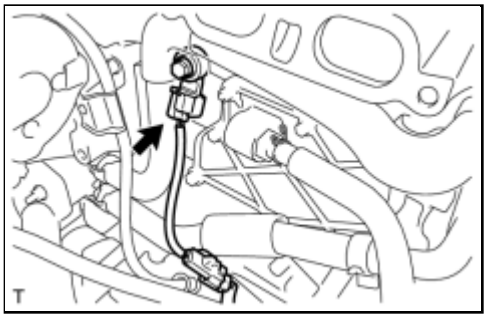
Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	120 to 280 kΩ

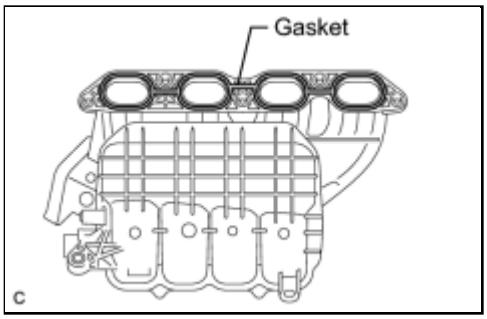
If the result is not as specified, replace the knock sensor.

Last Modified: 3-10-2010	6.4 A	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000030MB00PX
Title: 2ZR-FE ENGINE CONTROL: KNOCK SENSOR: INSTALLATION (2010 Corolla)		



INSTALLATION

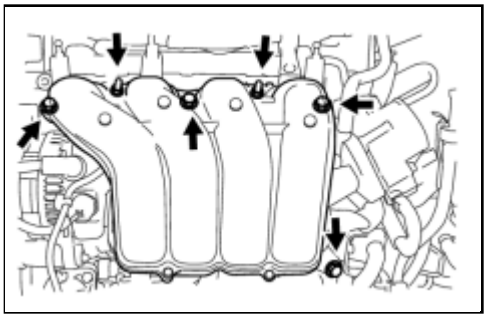
1. INSTALL KNOCK SENSOR



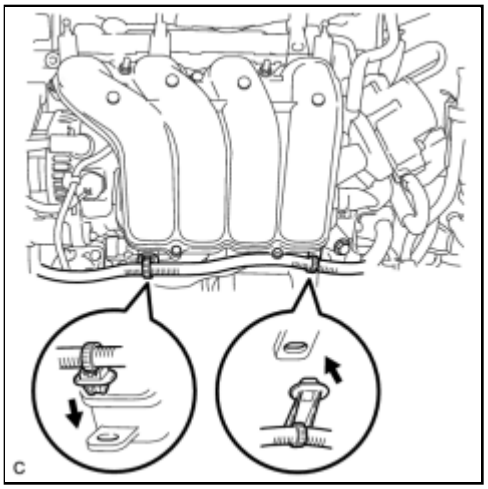
(a) Install the knock sensor with the bolt as shown in the illustration.

Torque: 20 N·m (204 kgf·cm, 15ft·lbf)

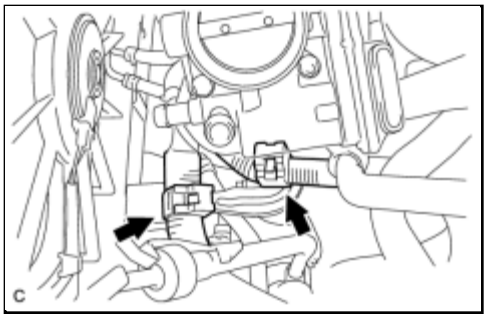
(b) Connect the knock sensor connector.



2. INSTALL INTAKE MANIFOLD

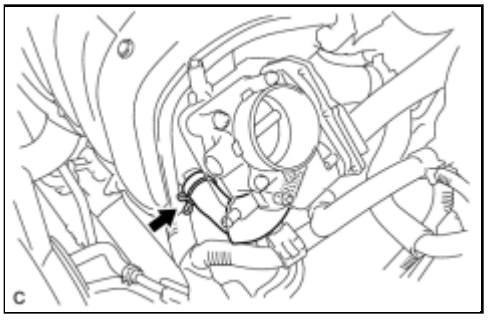


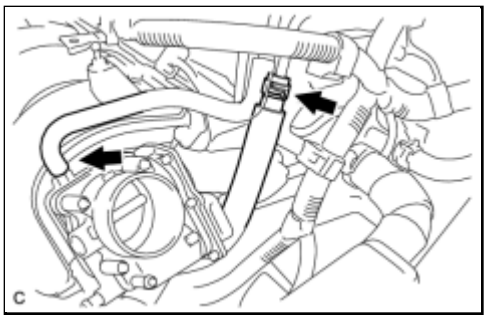
(a) Install a new gasket onto the intake manifold.



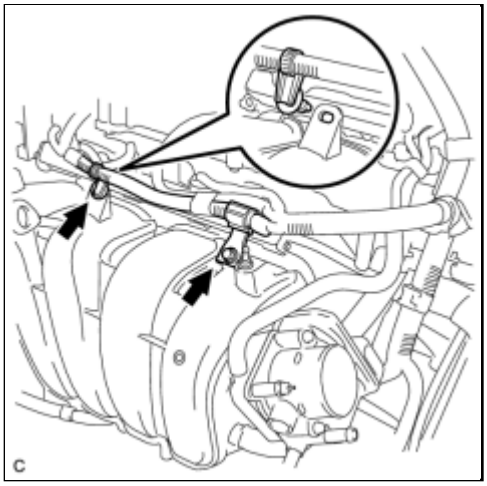
(b) Install the intake manifold and intake manifold stay with the 4 bolts and 2 nuts.

Torque: 28 N·m (286 kgf·cm, 21ft·lbf)



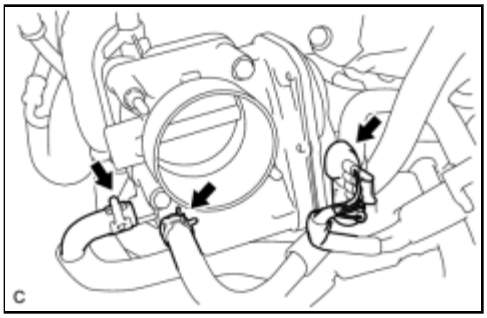


(c) Connect the 2 wire harness clamps.



(d) Connect the 2 wire harness clamps.

(e) Connect the ventilation hose.



(f) Connect the 2 hoses.

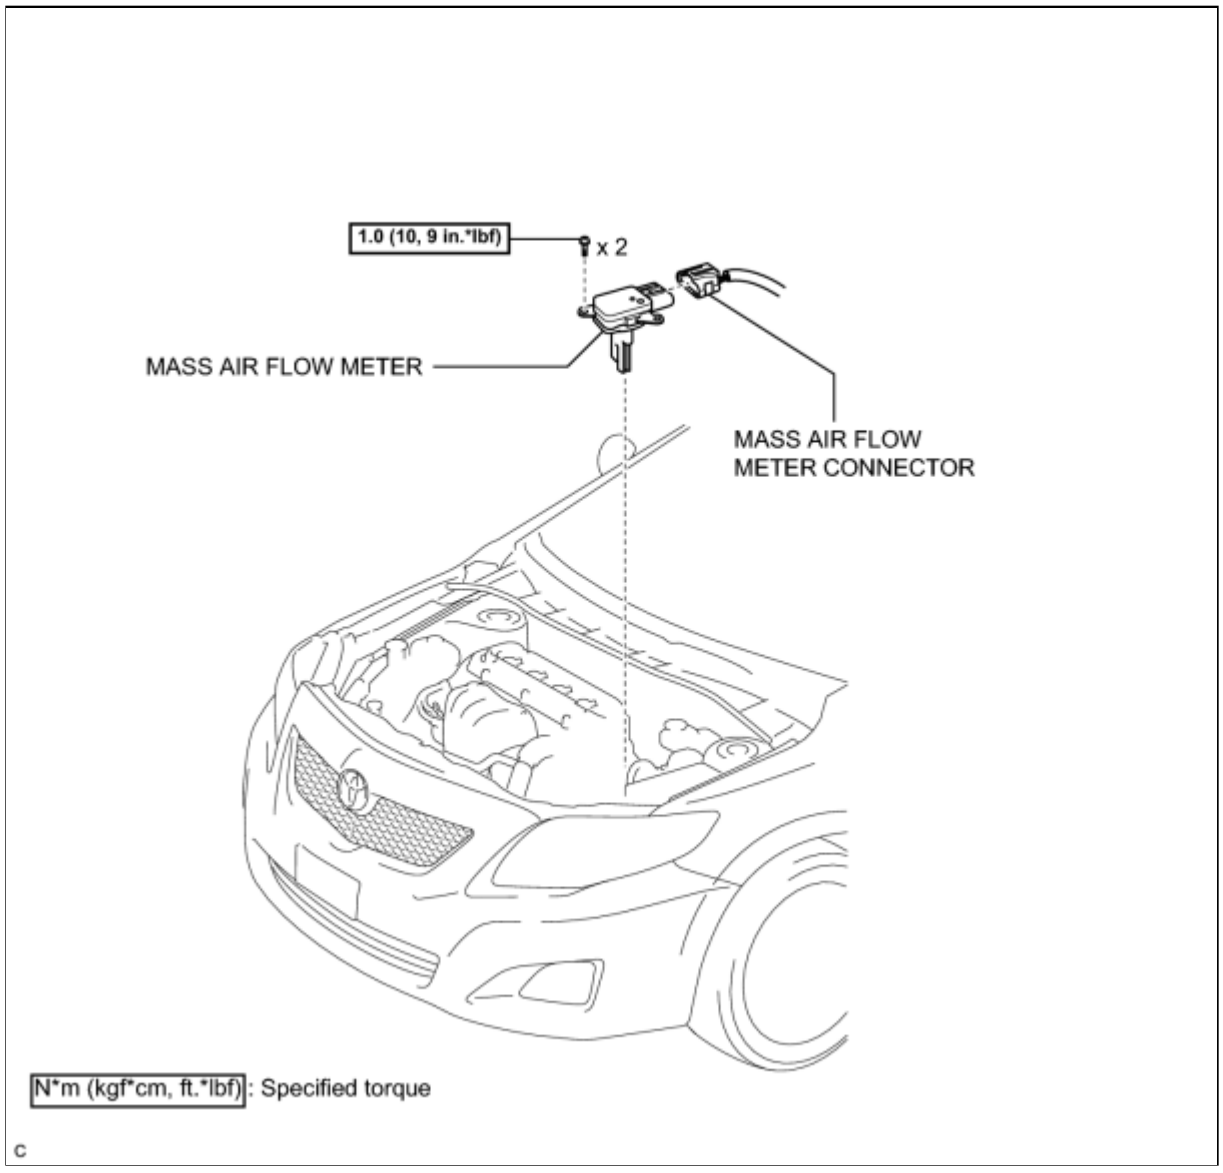
(g) Connect the wire harness clamp and install the wire harness bracket with the bolt.

Torque: 10 N·m (102 kgf·cm, 8ft·lbf)

(h) Connect the 2 water by-pass hoses and the throttle body connector.

3. INSTALL AIR CLEANER CAP SUB-ASSEMBLY INFO

4. ADD ENGINE COOLANT INFO



5. INSPECT FOR COOLANT LEAK INFO

6. INSTALL NO. 2 CYLINDER HEAD COVER INFO

Title: 2AZ-FE ENGINE CONTROL: MASS AIR FLOW METER: ON-VEHICLE INSPECTION (2010 Corolla)		

ON-VEHICLE INSPECTION

NOTICE:

- Perform the mass air flow meter inspection in accordance with the procedure below.
- Only replace the mass air flow meter when any foreign matter adheres to the sensor and both MAF values in the Data List (with the engine stopped) are not within the normal operating range.

1. INSPECT MASS AIR FLOW METER

(a) Read the values using the Techstream (MAF).

NOTICE:

- Perform the inspection with the vehicle indoors and on a level surface.
- Perform the inspection of the mass air flow meter while it is installed into the air cleaner case (installed on the vehicle).
- During the test, do not use an exhaust air duct on the exhaust pipe.

(1) Connect the Techstream to the DLC3.

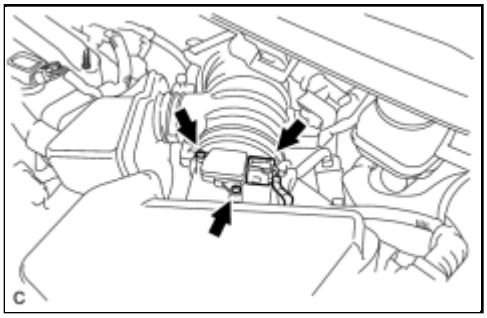
(2) Turn the ignition switch to ON (do not run the engine).

(3) Turn the Techstream on.

(4) Enter the following menus: Powertrain / Engine and ECT / Data List / MAF.

(5) Wait 30 seconds, and read the values on the Techstream.

Standard Condition:



TESTER DISPLAY	CONDITION	STANDARD CONDITION
MAF	• Engine not running • 30 seconds after ignition switch is turned to ON	Less than 0.48 g/sec

- If the result is not as specified, replace the mass air flow meter.
- If the result is within the specified range, remove and inspect the mass air flow meter INFO .

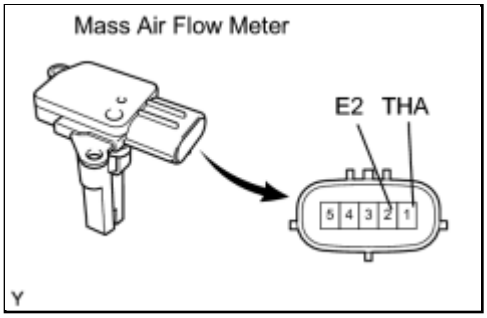
Title: 2AZ-FE ENGINE CONTROL: MASS AIR FLOW METER: INSPECTION (2010 Corolla)		

INSPECTION

1. INSPECT MASS AIR FLOW METER

(a) Perform a visual check for any foreign matter on the platinum hot wire (heater) of the mass air flow meter shown in the illustration.



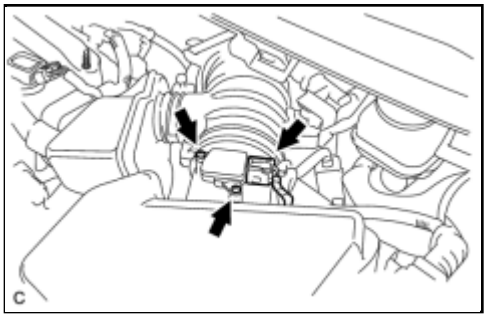
OK:

No foreign matter attached.

If the result is not as specified, replace the mass air flow meter.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (THA) - 2 (E2)	-20°C (-4°F)	13.6 to 18.4 kΩ
1 (THA) - 2 (E2)	20°C (68°F)	2.21 to 2.69 kΩ
1 (THA) - 2 (E2)	60°C (140°F)	0.493 to 0.667 kΩ

If the result is not as specified, replace the mass air flow meter.

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. INITIALIZATION

NOTICE:

- Perform RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM INFO .
- Perform REGISTRATION (VIN registration) when replacing the ECM INFO .

HINT:

Reset memory cannot be completed by only disconnecting the battery.

2. EXPRESSION OF IGNITION SWITCH

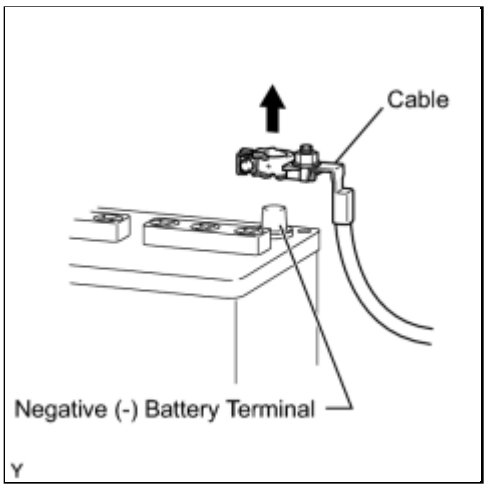
HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition switch off	LOCK	Off
Ignition switch ON	ON	On (IG)
Ignition switch ACC	ACC	On (ACC)
Engine Start	START	Start

3. FOR USING TECHSTREAM

CAUTION:



Observe the following items for safety reasons:

- Before using the Techstream, read the instruction manual.
- Prevent the Techstream cable from being caught on the pedals, shift lever or steering wheel when driving with the Techstream connected to the vehicle.
- When driving the vehicle for testing purposes using the Techstream, two persons are required. One person drives the vehicle, and the other operates the Techstream.

4. DISCONNECTING AND RECONNECTING NEGATIVE BATTERY CABLE

(a) Before performing work on electronic components, disconnect the cable from the negative (-) battery terminal in order to prevent damage to the electrical system or components.

(b) Before disconnecting and reconnecting the battery cable,

turn the ignition switch off and the headlight switch off. Then loosen the terminal nut completely. Do not damage the cable or terminal.

(c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are cleared. Therefore, before disconnecting the battery cable, make a note of the settings.

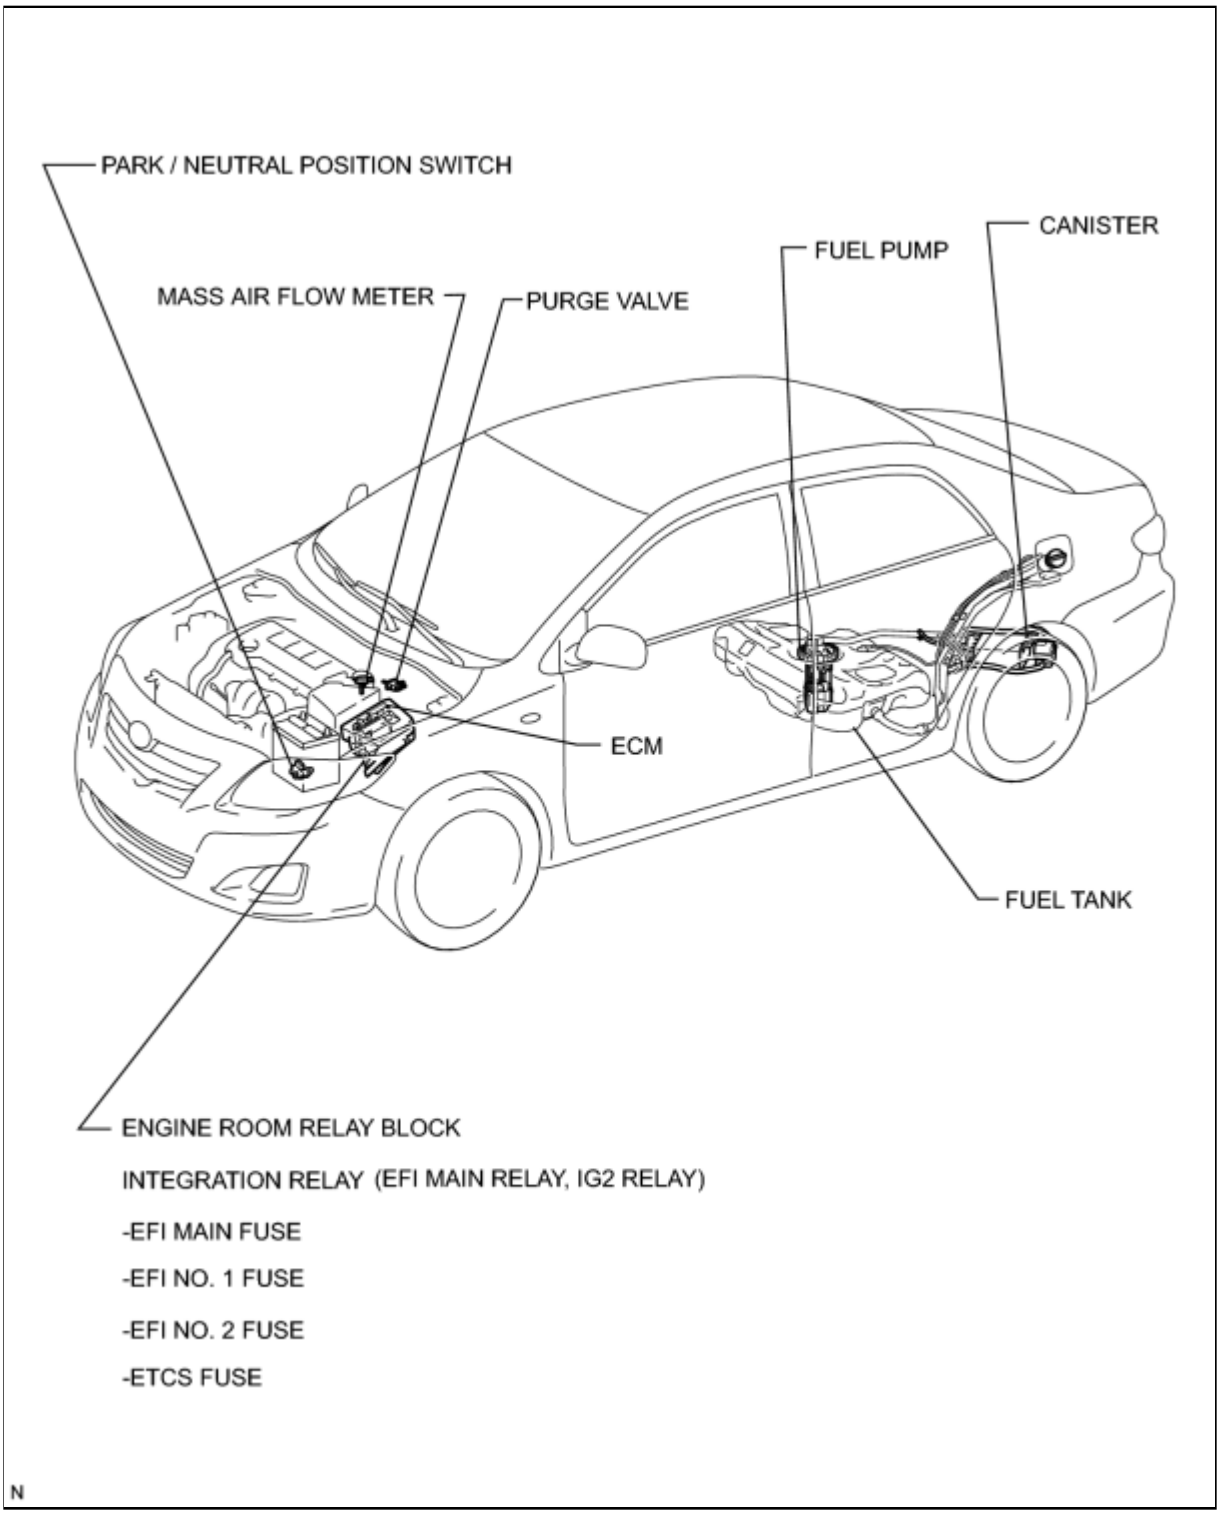
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: DEFINITION OF TERMS (2010 Corolla)		



DEFINITION OF TERMS

TERMS	DEFINITION
Monitor Description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by the ECM based on the same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets DTCs when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components are involved in a single malfunction detection process. Each sensor and component is monitored in turn, when the previous detection operation has completed.
Required Sensor/Components	The sensors and components used by the ECM to detect each malfunction.
Frequency of Operation	The number of times the ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means the ECM only performs checks for that malfunction once during a single driving cycle. "Continuous" means the ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	The minimum time for which the ECM must detect a continuous deviation in monitored value(s) in order to set a DTC. Timing begins when Typical Enabling Conditions met.
Malfunction Thresholds	The value beyond which the ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after a malfunction is detected. "Immediate" means the ECM illuminates the MIL as soon as a malfunction is detected. "2 driving cycle" means the ECM illuminates the MIL if the same malfunction is detected a second time during the next sequential driving cycle.

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: BASIC INSPECTION (2010 Corolla)		

BASIC INSPECTION

When a malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

1.	**CHECK BATTERY VOLTAGE**

NOTICE:

Carry out this check with the engine stopped and the ignition switch off.

Result:

RESULT	PROCEED TO
11 V or more	OK
Below 11 V	NG

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDQ0BLX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: CHECK FOR INTERMITTENT PROBLEMS (2010 Corolla)		

CHECK FOR INTERMITTENT PROBLEMS

HINT:

Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with the Techstream when the ECM is in check mode. In check mode, the ECM uses 1 trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2 trip detection logic.

1. Clear the DTCs INFO .
2. Switch the ECM from normal mode to check mode using the Techstream INFO .
3. Perform a simulation test INFO .
4. Check and wiggle the harness(es), connector(s) and terminal(s) INFO .

Last Modified: 3-10-2010	6.4 M	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDT057X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: REGISTRATION (2010 Corolla)		

REGISTRATION

NOTICE:

The Vehicle Identification Number (VIN) must be input into a replacement ECM.

HINT:

The VIN is a 17-digit alphanumeric vehicle identification number. The Techstream is required to register the VIN.

1. DESCRIPTION

HINT:

This registration section consists of two parts: Read VIN and Write VIN.

(a) Read VIN: This process allows the VIN stored in the ECM to be read in order to confirm that the two VINs, provided with the vehicle and stored in the vehicle's ECM, are the same.

(b) Write VIN: This process allows the VIN to be input into the ECM. If the ECM is changed, or the ECM VIN and vehicle VIN do not match, the VIN can be registered, or overwritten in the ECM by following procedure.

2. READ VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Read.

3. WRITE VIN

(a) Confirm the vehicle VIN.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Utility / VIN / VIN Write.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDR05WX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: CHECKING MONITOR STATUS (2010 Corolla)		

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are the catalyst, evaporative emissions (EVAP) and thermostat.

The monitor result allows an OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (PCM) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component may malfunction in the near future.

Perform the following instruction to view the monitor status. Although this instruction refers the Techstream, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON and the Techstream on.

(c) Clear the DTCs INFO .

(d) Run the vehicle in accordance with the applicable drive pattern described in Readiness Monitor Drive Pattern INFO . Do not turn the ignition switch off.

NOTICE:

The test results will be lost if the ignition switch is turned off.

2. ACCESS MONITOR RESULT

(a) Enter the following menus: Powertrain / Engine and ECT / Monitor / Result.

The monitor status appears after the component name.

- Pass: The component is functioning normally.
- Fail: The component is malfunctioning.

(b) Confirm that the component is either Pass or Fail.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either Pass or Fail.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limit. If the test value is on the borderline of the test limit, the component may malfunction in the near future.

HINT:

The monitor result might show a pass on rare occasions even if the malfunction indicator lamp (MIL) is illuminated. This indicates the system malfunctioned on a previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the value by the scaling value listed below.

Air Fuel Ratio Sensor (Sensor 1)

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$01	$8E	Multiply by 0.001	V	Air fuel ratio sensor deterioration level
$01	$91	Multiply by 0.004	mA	Air fuel ratio sensor current

Heated Oxygen Sensor (Sensor 2)

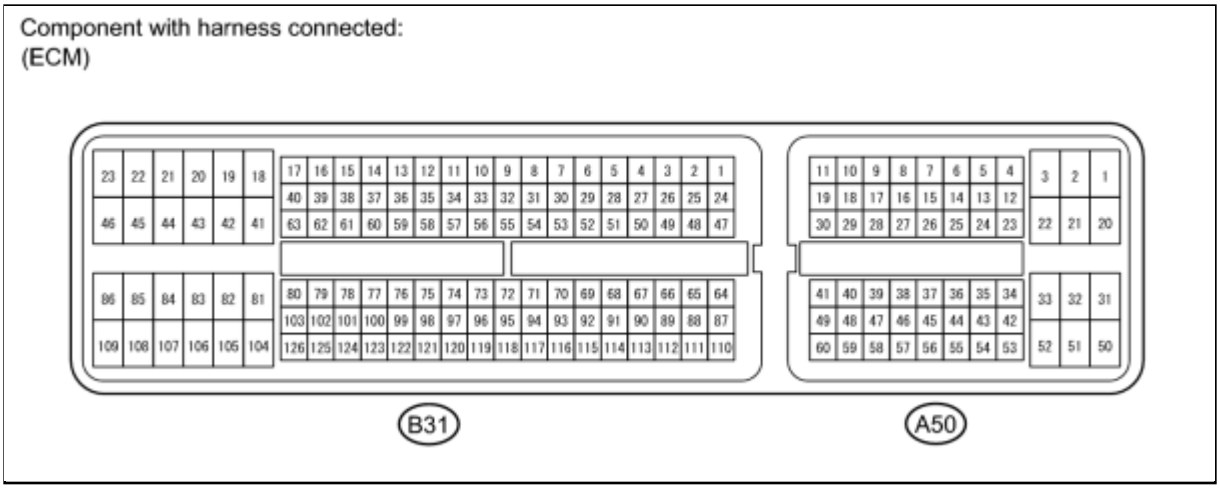
MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8B	Multiply by 0.001	Seconds	0.35 - 0.2 V sensor switch time
$02	$8D	Multiply by 0.001	Seconds	Duration that sensor voltage drops to 0.2 V during fuel cut
$02	$8F	Multiply by 0.0003	g	Maximum oxygen storage capacity

Catalyst

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst

EVAP

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$3D	$C9	Multiply by 0.001	kPa	Test value for small leak (P0456)
$3D	$CA	Multiply by 0.001	kPa	Test value for gross leak (P0455)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve stuck OFF (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve stuck ON (P2419)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV stuck closed (P0441)



MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV stuck open (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)

Misfire

MONITOR ID	TEST ID	SCALING	UNIT	DESCRIPTION
$A1	$0B	Multiply by 1	Time	Total EWMA misfire count of all cylinders in last ten driving cycles EWMA: Exponential Weighted Moving Average
$A1	$0C	Multiply by 1	Time	• When engine switch is on (IG), total misfire count of all cylinders in last driving cycle is displayed. • While engine is running, total misfire count of all cylinders in current driving cycle is displayed.
$A2	$0B	Multiply by 1	Time	Total EWMA misfire count of cylinder 1 in last ten driving cycles
$A2	$0C	Multiply by 1	Time	• When engine switch is on (IG), total misfire count of cylinder 1 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 1 in current driving cycle is displayed.
$A3	$0B	Multiply by 1	Time	Total EWMA misfire count of cylinder 2 in last ten driving cycles
$A3	$0C	Multiply by 1	Time	• When engine switch is on (IG), total misfire count of cylinder 2 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 2 in current driving cycle is displayed.
$A4	$0B	Multiply by 1	Time	Total EWMA misfire count of cylinder 3 in last ten driving cycles
$A4	$0C	Multiply by 1	Time	• When engine switch is on (IG), total misfire count of cylinder 3 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 3 in current driving cycle is displayed.
$A5	$0B	Multiply by 1	Time	Total EWMA misfire count of cylinder 4 in last ten driving cycles
$A5	$0C	Multiply by 1	Time	• When engine switch is on (IG), total misfire count of cylinder 4 in last driving cycle is displayed. • While engine is running, total misfire count of cylinder 4 in current driving cycle is displayed.

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: TERMINALS OF ECM (2010 Corolla)		

TERMINALS OF ECM

HINT:

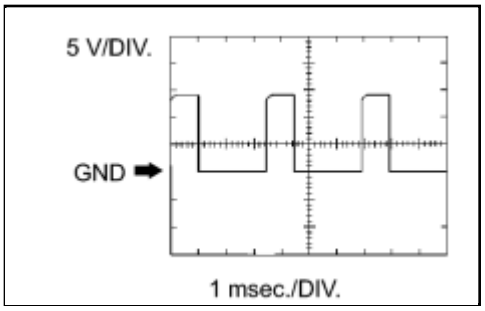
The standard normal voltage between each pair of ECM terminals is shown in the table below. The appropriate conditions for checking each pair of terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of terminals, displayed in the Specified Condition column. The illustration above can be used as a reference to identify the ECM terminal locations.

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-20 (BATT) - B31-104 (E1)	P - BR	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
A50-3 (+BM) - B31-104 (E1)	B - BR	Power source of throttle actuator	Always	11 to 14 V
A50-28 (IGSW) - B31-104 (E1)	B - BR	Ignition switch	Ignition switch to ON	11 to 14 V
A50-2 (+B) - B31-104 (E1)	B - BR	Power source of ECM	Ignition switch to ON	11 to 14 V
A50-1 (+B2) - B31-104 (E1)	B - BR	Power source of ECM	Ignition switch to ON	11 to 14 V
B31-100 (OC1+) - B31-123 (OC1-)	B - V	Camshaft timing oil control valve	Idling	Pulse generation (see waveform 1)

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-44 (MREL) - B31-104 (E1)	L - BR	EFI relay	Ignition switch to ON	11 to 14 V
B31-118 (VG) - B31-116 (E2G)	V - B	Mass air flow meter	Idling, Shift lever position P or N, A/C switch OFF	0.5 to 3.0 V
B31-65 (THA) - B31-88 (ETHA)	P - BR-W	Intake air temperature sensor (built into mass air flow meter)	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
B31-97 (THW) - B31-96 (ETHW)	B - BR	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
B31-67 (VCTA) - B31-91 (ETA)	Y - BR	Power source of throttle position sensor (specific voltage)	Ignition switch to ON	4.5 to 5.5 V
B31-115 (VTA1) - B31-91 (ETA)	LG - BR	Throttle position sensor (for engine control)	Ignition switch to ON, Throttle valve fully closed	0.5 to 1.1 V
			Ignition switch to ON, Throttle valve fully open	3.2 to 4.8 V
B31-114 (VTA2) - B31-91 (ETA)	R - BR	Throttle position sensor (for sensor malfunction detection)	Ignition switch to ON, Throttle valve fully closed	2.1 to 3.1 V
			Ignition switch to ON, Throttle valve fully open	4.6 to 5.0 V
A50-55 (VPA) - A50-59 (EPA)	L - R	Accelerator pedal position sensor (for engine control)	Ignition switch to ON, Accelerator pedal released	0.5 to 1.1 V
			Ignition switch to ON, Accelerator pedal fully depressed	2.5 to 4.5 V
A50-56 (VPA2) - A50-60 (EPA2)	Y - O	Accelerator pedal position sensor (for sensor malfunctioning detection)	Ignition switch to ON, Accelerator pedal released	1.2 to 2.0 V
			Ignition switch to ON, Accelerator pedal fully depressed	3.4 to 5.5 V
A50-57 (VCPA) - A50-59 (EPA)	P - R	Power source of accelerator pedal position sensor (for VPA)	Ignition switch to ON	4.5 to 5.5 V

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-58 (VCP2) - A50-60 (EPA2)	B - O	Power source of accelerator pedal position sensor (for VPA2)	Ignition switch to ON	4.5 to 5.5 V
B31-109 (HA1A) - B31-46 (E04)	R - W-B	Air fuel ratio sensor heater	Idling with warm engine	Pulse generation (see waveform 2)
			Ignition switch to ON	11 to 14 V
B31-112 (A1A+) - B31-104 (E1)	Y -BR	Air fuel ratio sensor	Ignition switch to ON	3.3 V*1
B31-113 (A1A-) - B31-104 (E1)	L - BR	Air fuel ratio sensor	Ignition switch to ON	3.0 V*1
B31-47 (HT1B) - B31-86 (E03)	P - W-B	Heated oxygen sensor heater	Ignition switch to ON	11 to 14 V
B31-64 (OX1B) - B31-87 (EX1B)	B - LG-B	Heated oxygen sensor	Engine speed maintained at 2500 rpm for 2 minutes after warming up sensor	Pulse generation (see waveform 3)
B31-108 (#10) - B31-45 (E01) B31-107 (#20) - B31-45 (E01) B31-106 (#30) - B31-45 (E01) B31-105 (#40) - B31-45 (E01)	V - W-B R - W-B G - W-B LG - W-B	Fuel injector	Ignition switch to ON	11 to 14 V
			Idling	Pulse generation (see waveform 4)
B31-110 (KNK1) - B31-111 (EKNK)	B - W	Knock sensor	Engine speed maintained at 4000 rpm after warming up engine	Pulse generation (see waveform 5)
B31-99 (G2+) - B31-98 (G2-)	R - W	Camshaft position sensor	Idling	Pulse generation (see waveform 6)
B31-122 (NE+) - B31-121 (NE-)	R - G	Crankshaft position sensor	Idling	Pulse generation (see waveform 6)
B31-85 (IGT1) - B31-104 (E1) B31-84 (IGT2) - B31-104 (E1) B31-83 (IGT3) - B31-104 (E1) B31-82 (IGT4)	W-L - BR B - BR L-B - BR B - BR	Ignition coil (ignition signal)	Idling	Pulse generation (see waveform 7)

TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
- B31-104 (E1)				
B31-81 (IGF1) - B31-104 (E1)	Y - BR	Ignition coil (ignition confirmation signal)	Ignition switch to ON	4.5 to 5.5 V
			Idling	Pulse generation (see waveform 7)
B31-49 (PRG) - B31-104 (E1)	L-B - BR	Purge VSV	Ignition switch to ON	11 to 14 V
			Idling	Pulse generation (see waveform 8)
A50-8 (SPD) - B31-104 (E1)	V - BR	Speed signal from combination meter	Driving at 12 mph (20 km/h)	Pulse generation (see waveform 9)
A50-48 (STA) - B31-104 (E1)	LG - BR	Starter signal	Cranking	5.5 V or more
B31-52 (NSW)*2 - B31-104 (E1)	W - BR	Park/neutral position switch signal	Ignition switch to ON, transmission gear position in P or N	Below 1.5 V
			Ignition switch to ON, transmission gear position in except P or N	6.0 V or more
A50-36 (STP) - B31-104 (E1)	L - BR	Stop light switch	Brake pedal depressed	7.5 to 14 V
			Brake pedal released	Below 1.5 V
A50-35 (ST1-) - B31-104 (E1)	R - BR	Stop light switch (opposite to STP terminal)	Ignition switch to ON, Brake pedal depressed	Below 1.5 V
			Ignition switch to ON, Brake pedal released	7.5 to 14 V
B31-42 (M+) - B31-43 (ME01)	P - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 10)
B31-41 (M-) - B31-43 (ME01)	L - W-B	Throttle actuator	Idling with warm engine	Pulse generation (see waveform 11)
A50-7 (FC) - B31-104 (E1)	O - BR	Fuel pump control	Ignition switch to ON	11 to 14 V
			Idling	Below 1.5 V
A50-24 (W) - B31-104 (E1)	R - BR	MIL	Ignition switch to ON (MIL goes on)	Below 1.5 V
			Idling	11 to 14 V
A50-27 (TC) - B31-104 (E1)	P - BR	Terminal TC of DLC3	Ignition switch to ON	11 to 14 V

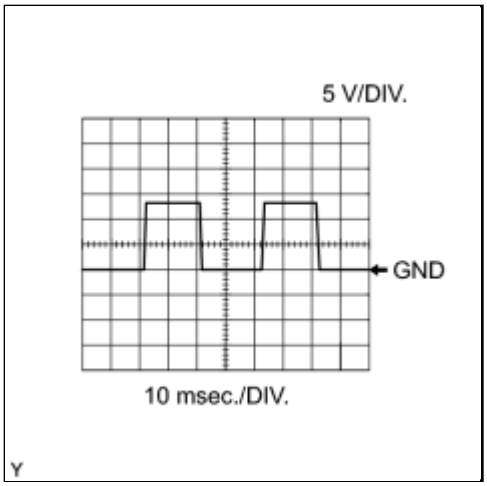


TERMINAL NO. (SYMBOL)	WIRING COLOR	TERMINAL DESCRIPTION	CONDITION	SPECIFIED CONDITION
A50-15 (TACH) - B31-104 (E1)	GR - BR	Engine speed	Idling	Pulse generation (see waveform 12)
A50-42 (VPMP) - B31-104 (E1)	W - BR	Vent valve (built into canister pump module)	Ignition switch to ON	11 to 14 V
A50-34 (MPMP) - B31-104 (E1)	R - BR	Leak detection pump (built into canister pump module)	Leak detection pump OFF	Below 3 V
			Leak detection pump ON	11 to 14 V
B31-70 (VCPP) - B31-94 (EPPM)	V - G	Power source for canister pressure sensor (specific voltage)	Ignition switch to ON	4.5 to 5.5 V
B31-71 (PPMP) - B31-94 (EPPM)	Y - G	Canister pressure sensor (built into canister pump module)	Ignition switch to ON	3 to 3.6 V
A50-31 (ELS1) - B31-104 (E1)	B - BR	Electric load	Taillight switch ON	7.5 to 14 V
			Taillight switch OFF	Below 1.5 V
A50-33 (ELS3) - B31-104 (E1)	G - BR	Electric load	Defogger switch ON	7.5 to 14 V
			Defogger switch OFF	Below 1.5 V
A50-21 (FANL) - B31-104 (E1)	R - BR	No. 3 fan relay	Ignition switch to ON	11 to 14 V
			Idling with A/C ON, or high engine coolant temperature	Below 1.5 V
A50-22 (FANH) - B31-104 (E1)	W - BR	No. 1 and No. 2 fan relay	Idling with high engine coolant temperature	Below 1.5 V
B31-50 (ALT) - B31-104 (E1)	L - BR	Generator	Ignition switch to ON	11 to 14 V
A50-41 (CANH) - B31-104 (E1)	Y - BR	CAN communication line	Ignition switch to ON	Pulse generation (see waveform 13)
A50-49 (CANL) - B31-104 (E1)	W - BR	CAN communication line	Ignition switch to ON	Pulse generation (see waveform 14)

HINT:

***1: The ECM terminal voltage is constant regardless of the output voltage from the sensor.**

***2: Automatic Transaxle**



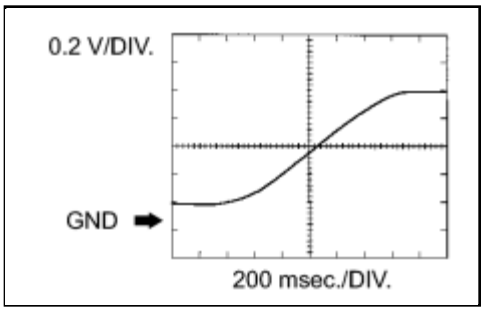
1. WAVEFORM 1

Camshaft Timing Oil Control Valve

ECM Terminal Name	Between OC1+ and OC1-
Tester Range	5 V/DIV., 1 msec/DIV.
Condition	Idling

2. WAVEFORM 2

Air Fuel Ratio Sensor (Sensor 1) Heater



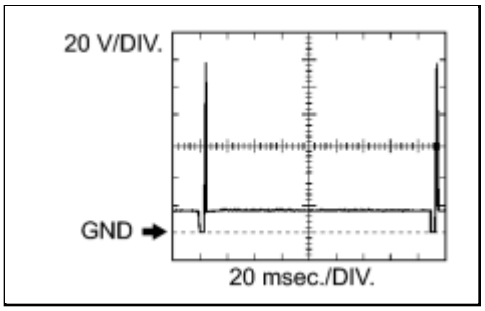
ECM Terminal Name	Between HA1A and E04
Tester Range	5 V/DIV., 10 msec/DIV.
Condition	Idling with warm engine

HINT:

The wavelength varies in accordance with the engine operating condition.

3. WAVEFORM 3

Heated Oxygen Sensor (Sensor 2)



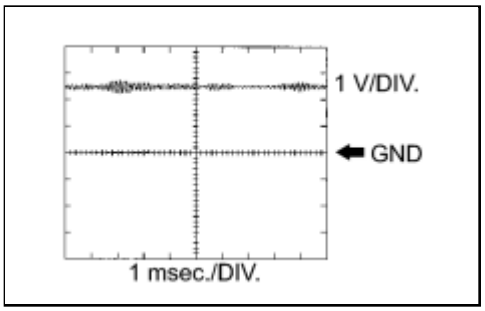
ECM Terminal Name	Between OX1B and EX1B
Tester Range	0.2 V/DIV., 200 msec/DIV.
Condition	Engine speed maintained at 2500 rpm for 2 minutes after warming up sensor

HINT:

In Data List, item O2S B1 S2 shows the ECM input values from the heated oxygen sensor.

4. WAVEFORM 4

Injector No. 1 (to No. 4) Injection Signal



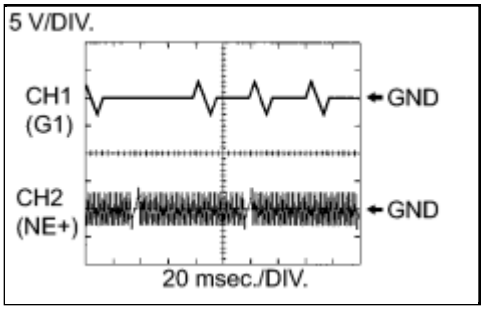
ECM Terminal Name	Between #10 (to #40) and E01
Tester Range	20 V/DIV., 20 msec/DIV.
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

5. WAVEFORM 5

Knock Sensor



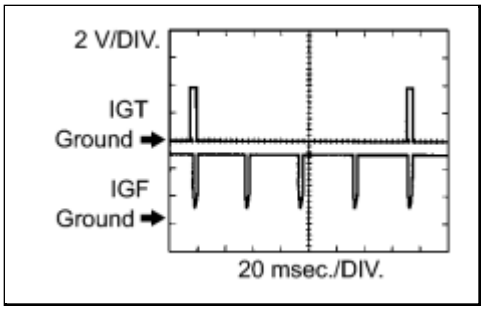
ECM Terminal Name	Between KNK1 and EKNK
Tester Range	1 V/DIV., 1 msec/DIV.
Condition	Engine speed maintained at 4000 rpm after warming up engine

HINT:

- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.

6. WAVEFORM 6

Crankshaft Position Sensor and Camshaft Position Sensor



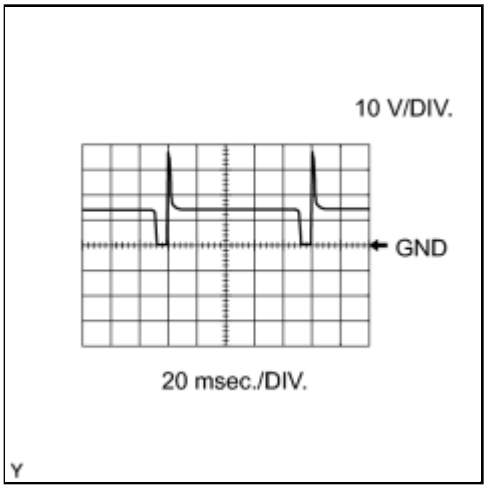
ECM Terminal Name	CH1: Between G2+ and G2- CH2: Between NE+ and NE-
Tester Range	5 V/DIV., 20 msec/DIV.
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

7. WAVEFORM 7

Igniter IGT Signal (from ECM to igniter) and Igniter IGF Signal (from igniter to ECM)



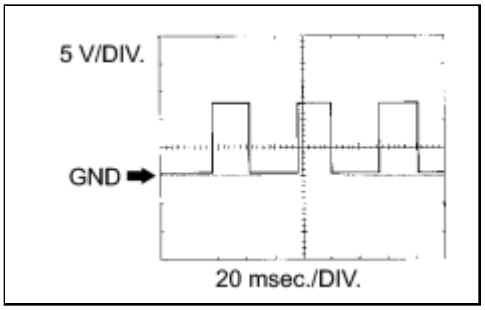
ECM Terminal Name	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Range	2 V/DIV., 20 msec/DIV.
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

8. WAVEFORM 8

Purge VSV



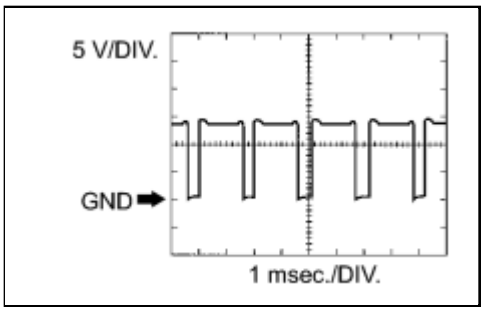
ECM Terminal Name	Between PRG and E1
Tester Range	10 V/DIV., 20 msec/DIV.
Condition	Idling

HINT:

If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.

9. WAVEFORM 9

Vehicle Speed Signal



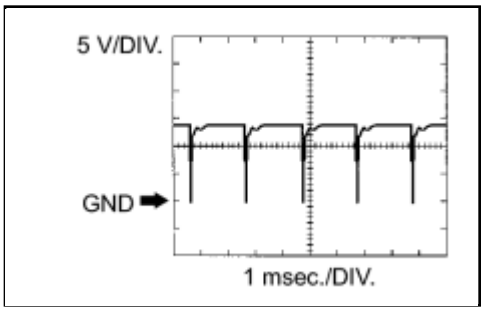
ECM Terminal Name	Between SPD and E1
Tester Range	2 V/DIV., 20 msec/DIV.
Condition	Driving at 12 mph (20 km/h)

HINT:

The wavelength becomes shorter as the vehicle speed increases.

10. WAVEFORM 10

Throttle Actuator Positive Terminal



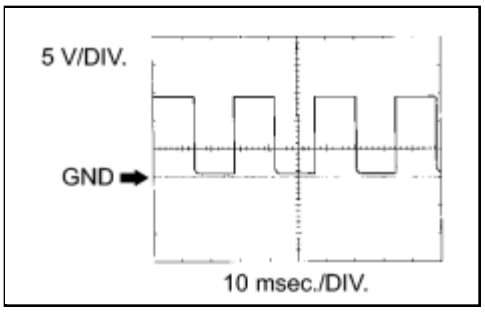
ECM Terminal Name	Between M+ and ME01
Tester Range	5 V/DIV., 1 msec/DIV.
Condition	Idling with warm engine

HINT:

The duty ratio varies depending on the throttle actuator operation.

11. WAVEFORM 11

Throttle Actuator Negative Terminal



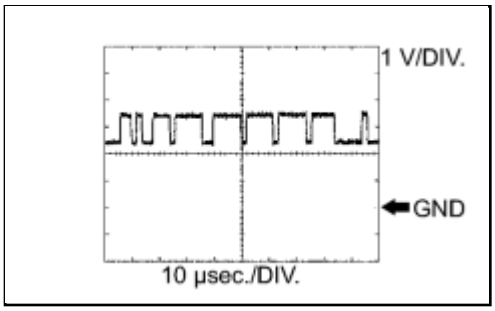
ECM Terminal Name	Between M- and ME01
Tester Range	5 V/DIV., 1 msec/DIV.
Condition	Idling with warm engine

HINT:

The duty ratio varies depending on the throttle actuator operation.

12. WAVEFORM 12

Engine Speed Signal



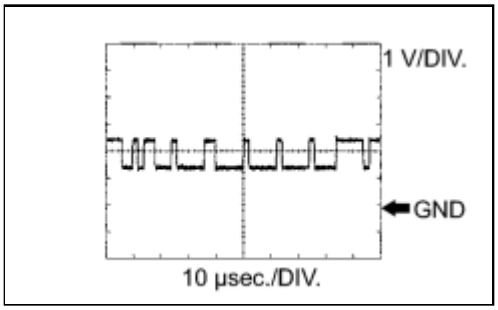
ECM Terminal Name	Between TACH and E1
Tester Range	5 V/DIV., 10 msec/DIV.
Condition	Idling

HINT:

The wavelength becomes shorter as the engine rpm increases.

13. WAVEFORM 13

CAN Communication Signal (Reference)



ECM Terminal Name	Between CANH and E1
Tester Range	1 V/DIV., 10 µsec/DIV.
Condition	Ignition switch to ON

HINT:

The waveform varies depending on the CAN communication signal.

14. WAVEFORM 14

CAN Communication Signal (Reference)

ECM Terminal Name	Between CANL and E1
Tester Range	1 V/DIV., 10 µsec/DIV.
Condition	Ignition switch to ON

HINT:

The waveform varies depending on the CAN communication signal.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000SXQ03AX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: READINESS MONITOR DRIVE PATTERN (2010 Corolla)		

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTCs (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- To view the status, enter the following menus: Powertrain / Engine and ECT / Monitor / Status2.
- When the Readiness Monitor status reads Complete, the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:

Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show Complete before beginning emission tests.

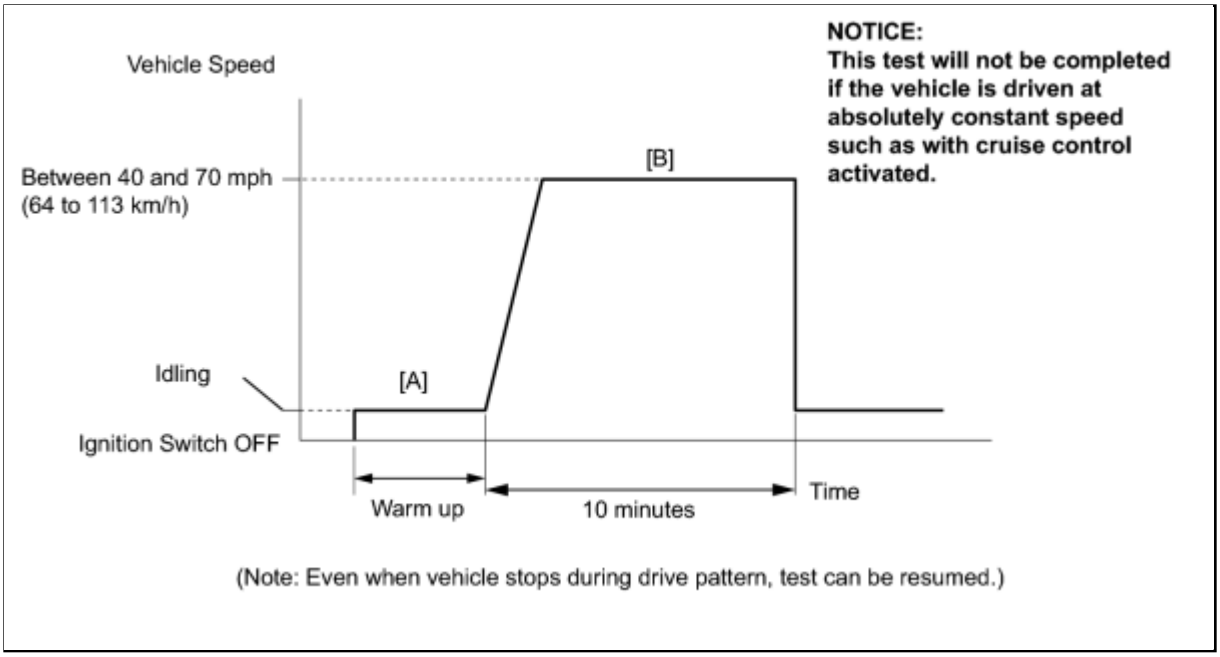
The Readiness Monitor will be reset to Incomplete if:

- The ECM has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows Incomplete, follow the appropriate Readiness Monitor Drive Pattern to change the status to Complete.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.



NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

(a) Preconditions

- The monitor will not run unless:
    - The MIL is OFF.

(b) Drive Pattern

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear the DTCs (if set) INFO .

(5) Start the engine and warm it up [A].

(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes [B].

(c) Monitor Status

Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, extend the driving time.

3. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Preconditions

- The monitor will not run unless:
    - The fuel tank is less than 90% full.
    - The altitude is less than 8000 ft. (2438 m).
    - The vehicle is stationary.
    - The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F).
    - The intake air temperature is between 4.4°C and 35°C (40°F and 95°F).
    - The vehicle was driven in a city area (or on a free-way) for 10 minutes or more.

(b) Monitor Conditions

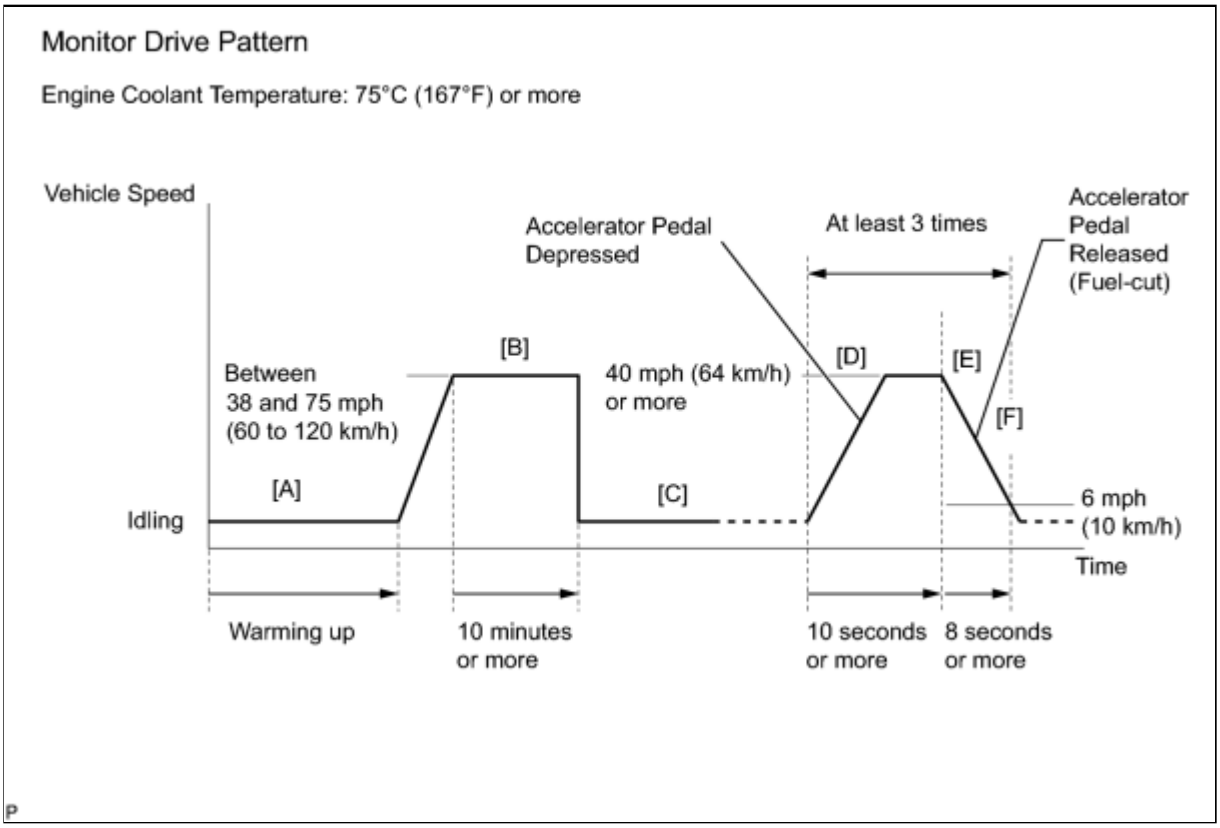
(1) Turn the ignition switch off and wait for 5 to 10 hours.

HINT:

Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status

(1) Connect the Techstream to the DLC3.



(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

4. AIR-FUEL RATIO AND HEATED OXYGEN SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

(a) Preconditions

- The monitor will not run unless:
    - 2 minutes or more have elapsed since the engine was started.
    - The engine coolant temperature is 75°C (167°F) or more.
    - Cumulative driving time at a vehicle speed of 30 mph (48 km/h) or more exceeds 6 minutes.
    - Air-fuel ratio feedback control is performed.

(b) Drive Pattern for front air fuel ratio sensor and heated oxygen sensor

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear the DTCs INFO .

(5) Start the engine, and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [A].

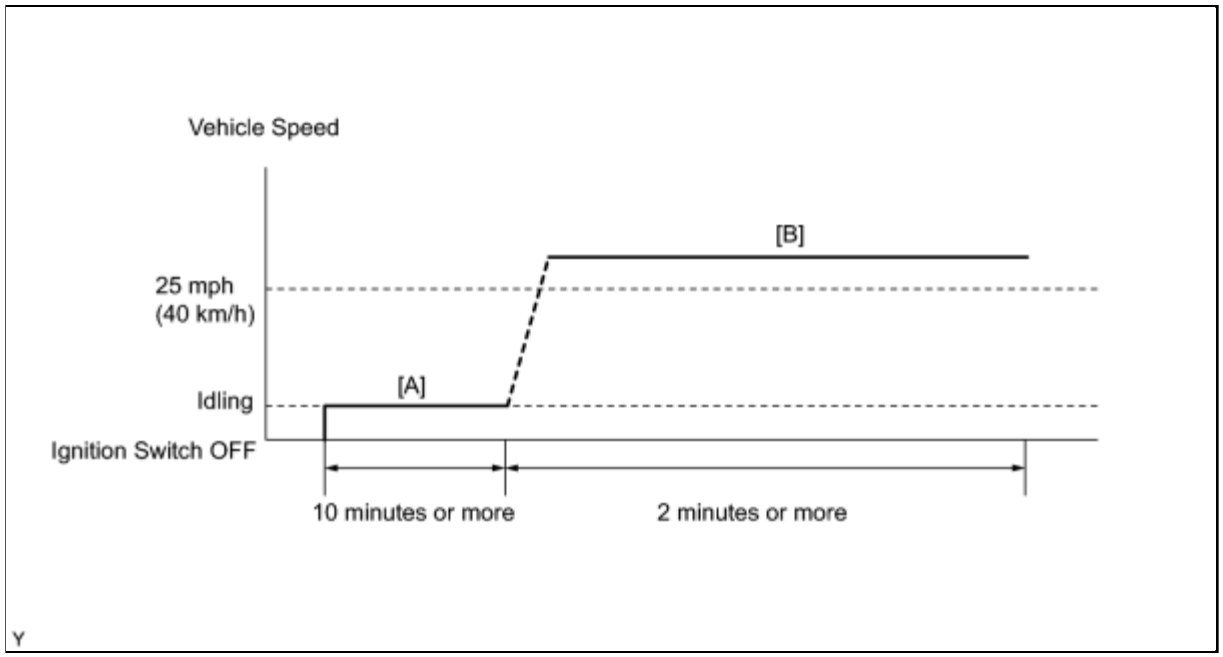
(6) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes [B].

(7) Change the transmission to 2nd gear [C].

(8) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds [D].

(9) Soon after performing step (8) above, release the accelerator pedal for at least 8 seconds without depressing the brake pedal, in order to execute fuel-cut control [E].

(10) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h) [F].



(11) Repeat steps from (8) through (10) above at least 3 times in one driving cycle.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the Techstream.

(2) If the status does not switch to Complete, make sure that the preconditions have been met, and then perform steps from (5) through (11) in Drive Pattern above.

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)

(a) Preconditions

- The monitor will not run unless:
    - The MIL is OFF.

(b) Drive Pattern

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON.

(3) Turn the Techstream on.

(4) Clear DTCs (if set) 

.

(5) Start the engine.

(6) Allow the engine to idle for 10 minutes or more.

(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.

(c) Monitor Status

(1) Check the Readiness Monitor status displayed on the Techstream.

If the status does not switch to Complete, make sure that the preconditions have been met, and repeat steps (5) to (7) described in the Drive Pattern above.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDN0AEX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: DATA LIST / ACTIVE TEST (2010 Corolla)		

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the Techstream to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time

NOTICE:

In the table below, the values listed under Normal Condition are reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Data List.

(g) According to the display on the Techstream, read the Data List.

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed: Min.: 0 mph (0 km/h), Max.: 158.4 mph (255 km/h)	Actual vehicle speed	Speed indicated on speedometer
Engine Speed	Engine speed: Min.: 0 rpm, Max.: 16383.75 rpm	650 to 750 rpm: Idling	-
Calculate Load	Calculated load by ECM: Min.: 0%, Max.: 100%	• 20 to 40%: Idling • 10 to 30%: Running without load (2500 rpm)	-
Vehicle Load	Vehicle load: Min.: 0%, Max.: 25700%	Actual vehicle load	Load percentage in terms of maximum intake air flow amount

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
MAF	Air flow rate from Mass Air Flow (MAF) meter: Min.: 0 g/sec, Max.: 655.35 g/sec	1 to 3 g/sec: Idling 2 to 7 g/sec: Running without load (2500 rpm)	If value approximately 0.0 g/sec: • Mass air flow meter power source circuit open • VG circuit open or shorted If value 271.0 g/sec or more: • E2G circuit open
Atmosphere Pressure	Atmospheric pressure: Min.: 0 kPa, Max.: 255 kPa	Equivalent to atmospheric pressure	-
Intake Air	Intake air temperature: Min.: -40°C (-40°F), Max.: 140°C (284°F)	Equivalent to ambient air temperature	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
Coolant Temp	Engine coolant temperature: Min.: -40°C (-40°F), Max.: 215°C (419°F)	80 to 100°C (176 to 212°F): After warming up	• If value -40°C (-40°F): sensor circuit open • If value 215°C (419°F): sensor circuit shorted
Engine Run Time	Engine run time: Min.: 0 s, Max.: 65535 s	Time since engine started	-
Initial Engine Coolant Temp	Initial engine coolant temperature: Min.: -40°C (-40°F), Max.: 120°C (248°F)	Coolant temperature when engine started	Service data
Initial Intake Air Temp	Initial intake air temperature: Min.: -40°C (-40°F), Max.: 120°C (248°F)	Intake air temperature when engine started	Service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Battery Voltage	Battery voltage: Min.: 0 V, Max.: 65.535 V	11 to 14 V: Idling	-
Accelerator Position	Accelerator pedal position: Min.: 0 %, Max.: 399.9 %	Actual accelerator pedal position	-
Accel Sens. No. 1 Volt %	Accelerator pedal position No. 1: Min.: 0%, Max.: 100%	10 to 22%: Accelerator pedal released 52 to 90%: Accelerator pedal fully depressed	-
Accel Sens. No. 2 Volt %	Accelerator pedal position No. 2: Min.: 0%, Max.: 100%	24 to 40%: Accelerator pedal released 68 to 100%: Accelerator pedal fully depressed	-
Accel Sensor Out No. 1	Accelerator pedal position sensor No. 1 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS service data
Accel Sensor Out No. 2	Accelerator pedal position sensor No. 2 voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS service data
Accel Sensor Out No. 1	Accelerator pedal position sensor No. 1 voltage: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Accelerator pedal released 2.6 to 4.5 V: Accelerator pedal fully depressed	-
Accel Sensor Out No. 2	Accelerator pedal position sensor No. 2 voltage: Min.: 0 V, Max.: 5 V	1.2 to 2.0 V: Accelerator pedal released 3.4 to 5.0 V: Accelerator pedal fully depressed	-
Accelerator Idle Position	Whether or not accelerator pedal position sensor detecting idle: ON or OFF	ON: Idling	-
Accel Fully Close Learn #1	Accelerator fully closed learning value No. 1: Min.: 0 deg, Max.:	-	ETCS service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	124.512 deg		
Accel Fully Close Learn #2	Accelerator fully closed learning value No. 2: Min.: 0 deg., Max.: 124.512 deg.	-	ETCS service data
Throttle Sensor Volt %	Throttle valve opening percentage according to throttle position sensor/ Min.: 0%, Max.: 100%	• 10 to 22%: Accelerator pedal released • 64 to 96%: Accelerator pedal fully depressed	Value calculated based on the voltage at terminal VTA1.
Throttle Sensor #2 Volt %	Throttle valve opening percentage according to throttle position sensor No. 2/ Min.: 0%, Max.: 100%	• 42 to 62%: Accelerator pedal released • 92 to 100%: Accelerator pedal fully depressed	Value calculated based on the voltage at terminal VTA2.
ST1	Brake pedal signal: ON or OFF	ON: Brake pedal depressed	-
System Guard	System guard: ON or OFF	-	ETCS service data
Open Side Malfunction	Open side malfunction: ON or OFF	-	ETCS service data
Throttle Idle Position	Whether or not throttle position sensor detecting idle: ON or OFF	• ON: Accelerator pedal released • OFF: Accelerator pedal fully depressed	-
Throttle Require Position	Throttle requirement position: Min.: 0 V, Max.: 5 V	0.5 to 1.1 V: Idling	-
Throttle Sensor Position*3	Throttle sensor positioning: Min.: 0%, Max.: 100%	• 0%: Accelerator pedal released • 50 to 80%: Accelerator pedal fully	Recognition value for throttle opening angle on ECM

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
		depressed	
Throttle Position No.1	Throttle position sensor No. 1 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS service data
Throttle Position No.2	Throttle position sensor No. 2 output voltage: Min.: 0 V, Max.: 4.98 V	-	ETCS service data
Throttle Position No.1	Throttle position No. 1 output voltage: Min.: 0 V, Max.: 5 V	• 0.5 to 1.1 V: Accelerator pedal released • 3.2 to 4.8 V: Accelerator pedal fully depressed • 0.6 to 1.4 V: Fail-safe operating	-
Throttle Position No.2	Throttle position No. 2 output voltage: Min.: 0 V, Max.: 5 V	• 2.1 to 3.1 V: Accelerator pedal released • 4.6 to 5.0 V: Accelerator pedal fully depressed • 2.1 to 3.1 V: Fail-safe operating	-
Throttle Position Command	Throttle position command value: Min.: 0 V, Max.: 4.9804 V	0.5 to 4.8 V	-
Throttle Sens Open Pos #1	Throttle sensor opener position No. 1: Min.: 0 V, Max.: 4.9804 V	0.6 to 1.4 V	ETCS service data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Throttle Sens Open Pos #2	Throttle sensor opener position No. 2: Min.: 0 V, Max.: 4.9804 V	1.7 to 2.5 V	ETCS service data
Throttle Motor Current	Throttle actuator current: Min.: 0 A, Max.: 20 A	0 to 3.0 A: Idling	ETCS service data
Throttle Motor DUTY	Throttle motor: Min.: 0%, Max.: 100%	10 to 22%: Idling after engine warmed up	ETCS service data
Throttle Motor Current	Throttle actuator current: Min.: 0 A, Max.: 19.92 A	0 to 3.0 A: Idling	-
Throttle Motor Open Duty	Throttle actuator opening duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	When accelerator pedal depressed, duty ratio increased
Throttle Motor Close Duty	Throttle actuator closed duty ratio: Min.: 0%, Max.: 100%	0 to 40%: Idling	When accelerator pedal released quickly, duty ratio increased
Throttle Motor Duty (Open)	Throttle actuator duty ratio (open): Min.: 0%, Max.: 100%	0 to 40%: Idling	ETCS service data
Throttle Motor Duty (Close)	Throttle actuator duty ratio (close): Min.: 0%, Max.: 100%	0 to 40%: Idling	ETCS service data
Throttle Fully Close Learn	Throttle valve fully closed (learned value): Min.: 0 V, Max.: 5 V	0.4 to 1.0 V: Accelerator pedal released	-
+BM Voltage	+BM voltage: Min.: 0, Max.: 19.92 V	11 to 14 V: Ignition switch ON and system normal	ETCS service data
Actuator Power Supply	Actuator power supply ON or OFF	ON: Idling	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Injector (Port)	Injection period of No. 1 cylinder: Min.: 0 ms, Max.: 32.64 ms	1.0 to 3.0 ms: Idling	-
Injection Volum (Cylinder1)	Injection volume (Cylinder 1): Min.: 0 ml, Max.: 2.048 ml	0.05 to 0.15 ml: Idling	Quantity of fuel injection volume for 10 times
Fuel Pump/Speed Status	Fuel pump/status: ON or OFF	-	Active Test support data
Vacuum Pump	Key-off EVAP system leak detection pump status: ON or OFF	-	Active Test support data
EVAP (Purge) VSV	EVAP (Purge) VSV control duty: Min.: 0%, Max.: 100%	10 to 50%: Idling, under purge control	Order signal from ECM
Evap Purge Flow	Ratio of evaporative purge flow to intake air volume:: Min.: 0%, Max.: 102.4%	0 to 10%: Idling	Service data
Purge Density Learn Value	Learning value of purge density: Min.: -50, Max.: 350	-40 to 10: Idling	Service data
Vapor Pressure Pump	Vapor pressure: Min.: 33.853 kPa (253.897 mmHg), Max.: 125.596 kPa (941.97 mmHg)	Approximately 100 kPa (absolute): Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
Vapor pressure (calculated)	Vapor pressure (calculated): Min.: -5.632 kPa (-42.24 mmHg), Max.: 715.264 kPa (5364.3 mmHg)	Approximately 100 kPa (absolute): Ignition switch ON	EVAP system pressure monitored by canister pressure sensor
EVAP System Vent Valve	key-off EVAP system vent valve status:	-	Active Test support data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
	ON or OFF		
EVAP Purge VSV	VSV status for EVAP control: ON or OFF	-	Active Test support data
Target Air-Fuel Ratio	Ratio compared to stoichiometric level: Min.: 0, Max.: 1.999	0.8 to 1.2: Idling	-
AF Lambda B1 S1	Short-term fuel trim associated with bank 2 sensor 1: Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) = RICH • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = LEAN	-
AFS Voltage B1 S1	A/F sensor output voltage for bank 1 sensor 1: Min.: 0 V, Max.: 7.999 V	2.6 to 3.8 V: Idling, engine warmed up	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensor
AFS Current B1 S1	Air fuel ratio sensor output current for bank 1 sensor 1: Min.: -128 mA, Max.: 127.99 mA	-0.5 to 0.5 mA: Idling, engine warmed up	Value becomes higher when fuel-cut executed under high engine speed
A/F Heater Duty #1	Air fuel ratio heater duty ratio for bank 1: Min.: 0 %, Max.: 399.9 %	0 to 100 %	-
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2: Min.: 0 V, Max.: 1.275 V	0.0 to 0.9 V: Driving at 44 mph (70 km/h)	Performing Control the Injection Volume or Control the Injection Volume for A/F Sensor function of Active Test enables technician to check output voltage of sensor
O2S Impedance B1S2	Sub heated oxygen sensor impedance (bank 1 sensor 2): Min.: 0 Ω, Max.: 21247.68 Ω	5 to 15000 Ω: After driving for 10 minutes or more in urban area	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
O2 Heater B1S2	Heated oxygen sensor heater for bank 1 sensor 2: Active or Not Act	-	-
O2 Heater Curr Val B1S2	Heated oxygen sensor current for bank 1 sensor 2: Min.: 0 A, Max.: 4.9 A	-	-
Short FT #1	Short-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
Long FT #1	Long-term fuel trim of bank 1: Min.: -100%, Max.: 99.2%	-20 to 20%	Overall fuel compensation carried out long-term to compensate continual deviation of short-term fuel trim from central value
Total FT #1	Total fuel trim of bank 1 Average value for fuel trim system of bank 1: Min.: -0.5, Max.: 0.496	-0.28 to 0.2: Idling	-
Fuel System Status #1	Fuel system status (bank 1): OL or CL or OLDrive or OLFault or CLFault	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but heated oxygen

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
			sensor, which used for fuel control malfunctioning
Fuel System Status #2	Fuel system status (bank 2): OL or CL or OLDrive or OLFault or CLFault	CL: Idling after warming up	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using air fuel ratio sensor as feedback for fuel control • OLDrive: Open loop due to driving conditions (fuel enrichment) • OLFault: Open loop due to detected system fault • CLFault: Closed loop but air fuel ratio sensor, which used for fuel control malfunctioning
IGN Advance	Ignition timing advance for No. 1 cylinder: Min.: -64 deg., Max.: 63.5 deg.	BTDC 0 to 15 deg: Idling	-
Knock Feedback Value	Feedback value of knocking: Min.: -64°CA, Max.: 1984°CA	-20 to 0°CA: Driving at 44 mph (70 km/h)	Service data
Knock Correct Learn Value	Correction learning value of knocking: Min.: -64°CA, Max.: 1984°CA	0 to 20°CA: Driving at 44 mph (70 km/h)	Service data
VVT Control Status #1	VVT control (bank 1) status: ON or OFF	-	Active Test support data

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
VVT Aim Angle #1*2	VVT aim angle (bank 1): Min.: 0%, Max.: 100%	0 to 100%	VVT duty signal value during intrusive operation
VVT Change Angle #1*2	VVT change angle (bank 1): Min.: 0°FR, Max.: 60°FR	0 to 56°FR: Idling	Displacement angle during intrusive operation
VVT OCV Duty #1*2	VVT OCV operation duty: Min.: 0%, Max.: 100%	0 to 100%	Requested duty value for intrusive operation
Catalyst Temp B1 S1	Catalyst temperature (associated sensor 1): Min.: -40°C (-40°F), Max.: 6513.5°C (11756°F)	Close to catalyst inlet temperature	-
Catalyst Temp B1 S2	Catalyst temperature (associated sensor 2): Min.: -40°C (-40°F), Max.: 6513.5°C (11756°F)	Close to catalyst outlet temperature	-
Starter Signal	Starter signal (STA terminal input status): ON or OFF	ON: Cranking	-
Neutral Position SW Signal*4	Park/neutral position switch status for automatic transmission: ON or OFF	ON: Shift lever in P or N position	-
Clutch Switch	Clutch pedal switch assembly status: ON or OFF	OFF: Clutch pedal released ON: Clutch pedal fully depressed	-
Stop Light Switch	Stop light switch status: ON or OFF	ON: Brake pedal depressed	-
A/C Signal	A/C switch status: ON or OFF	ON: A/C ON	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Closed Throttle Position SW	Closed throttle position switch: ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-
Fuel Cut Condition	Fuel-cut condition: ON or OFF	ON: Any fuel-cut operation executed	-
Immobiliser Communication	Immobiliser communication: ON or OFF	-	OFF: Communication malfunctioning, or engine immobiliser system set ON: Communication normal
Check Mode	Check mode: ON or OFF	ON: Check mode ON	INFO
SPD Test Result	Check mode result for vehicle speed sensor: Compl or Incmpl	-	-
Misfire Test Result	Check mode result for misfire monitor: Compl or Incmpl	-	-
OXS1 Test Result	Check mode result for heated oxygen sensor (bank 1): Compl or Incmpl	-	-
A/F Test Results #1	Check mode result for air fuel ratio sensor (bank 1): Compl or Incmpl	-	-
Complete Parts Monitor	Comprehensive component monitor: Not Avl or Avail	-	-
Fuel System Monitor	Fuel system monitor: Not Avl or Avail	-	-
Misfire Monitor	Misfire monitor: Not Avl or Avail	-	-
EGR/VVT Monitor	EGR/VVT monitor: Not Avl or Avail	-	-
EGR/VVT Monitor	EGR/VVT monitor: Compl or Incmpl	-	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE

Catalyst Monitor ENA	Catalyst monitor: Unable or Enable	-	-
Catalyst Monitor CMPL	Catalyst monitor: Compl or Incmpl	-	-
TC Terminal	TC terminal status: ON or OFF	-	-
# Codes (Include History)	Number of emission related DTCs	0: No emission related DTC detected	-
MIL	MIL status: ON or OFF	ON: MIL ON	-
MIL ON Run Distance	Distance traveled since MIL turned ON: Min.: 0 km (0 mile), Max.: 65535 km (40721 mile)	Distance since DTC detected	-
Running Time from MIL ON	Running time since MIL turned ON: Min.: 0 min, Max.: 65535 min	Equivalent to running time since MIL turned ON	-
Time after DTC Cleared	Time since DTCs cleared: Min.: 0 min., Max.: 65535 min.	Equivalent to time since DTCs erased	-
Distance from DTC Cleared	Distance traveled since DTCs cleared: Min.: 0 km (0 mile), Max.: 65535 km (40721 mile)	Equivalent to distance driven since DTCs erased	-
Warmup Cycle Cleard DTC	Warm-up cycles since DTCs cleared: Min.: 0, Max.: 255	-	Number of warm-up cycles since DTCs cleared
Dist Batt Cable Disconnect	Distance from battery cable disconnected: Min.: 0 km, Max.: 65535 km	-	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
IG OFF Elapsed Time	Time after ignition switch off: Min.: 0 min, Max.: 655350 min	-	-
OBD Requirements	OBD requirement	OBD2	-
Number of Emission DTC	Emission related DTCs	-	Number of emission related DTCs
TC and TE1	TC and CG (TE1) terminals of DLC3: ON or OFF	-	Active Test support data
Ignition Trig. Count	Ignition counter to calculated misfire rate: Min.: 0, Max.: 800	0 to 400	-
Cylinder #1 Misfire Count	Misfire ratio of cylinder 1: Min.: 0, Max.: 255	0	-
Cylinder #2 Misfire Count	Misfire ratio of cylinder 2: Min.: 0, Max.: 255	0	-
Cylinder #3 Misfire Count	Misfire ratio of cylinder 3: Min.: 0, Max.: 255	0	-
Cylinder #4 Misfire Count	Misfire ratio of cylinder 4: Min.: 0, Max.: 255	0	-
All Cylinders Misfire Count	All cylinders misfire rate: Min.: 0, Max.: 255	0	-
Misfire RPM	Average of engine speed when misfire occurs: Min.: 0 rpm, Max.: 6375 rpm	0 rpm: Misfire 0	-
Misfire Load	Average of engine load when misfire occurred: Min.: 0 g/rev, Max.: 3.98 g/rev	0 g/rev: Misfire 0	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Misfire Margin	Margin to detect engine misfire: Min.: -100%, Max.: 99.22%	-100 to 99.22%	Misfire detection margin
Catalyst OT MF F/C	Catalyst overheat misfire prevention fuel cut function availability: Not Avl or Avail	Avail: Catalyst overheat misfire prevention fuel cut function available Not Avl: Catalyst overheat misfire prevention fuel cut function not available	Service data
Cat OT MF F/C History	Catalyst overheat misfire prevention fuel cut function history: ON or OFF	ON: Fuel cut operation history exists	Service data
Cat OT MF F/C Cylinder#1	Display of fuel cut operation in No. 1 cylinder (if certain level of misfire malfunction is detected): ON or OFF	ON: Fuel cut is operating	-
Cat OT MF F/C Cylinder#2	Display of fuel cut operation in No. 2 cylinder (if certain level of misfire malfunction is detected): ON or OFF	ON: Fuel cut is operating	-
Cat OT MF F/C Cylinder#3	Display of fuel cut operation in No. 3 cylinder (if certain level of misfire malfunction is detected): ON or OFF	ON: Fuel cut is operating	-
Cat OT MF F/C Cylinder#4	Display of fuel cut operation in No. 4 cylinder (if certain level of misfire malfunction is detected): ON or OFF	ON: Fuel cut is operating	-

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Electric Fan Motor	Electric cooling fan motor: ON or OFF	ON: Electric cooling fan motor operating	Active Test support data
Idle Fuel Cut Prohibit	Idle fuel cut prohibit: ON or OFF	-	-
Idle Fuel Cut	Fuel cut idle: ON or OFF	ON: Fuel cut operating	Idle Fuel Cut = "ON" when throttle valve fully closed and engine speed over 2800 rpm
FC TAU	Fuel cut TAU (Fuel cut during very light load): ON or OFF	ON: Fuel cut operating	Fuel cut being performed under very light load to prevent engine combustion from becoming incomplete
Electrical Load Signal 1	Electrical load signal 1: ON or OFF	ON: Headlights or defogger turned ON	-
Electrical Load Signal 3	Electrical load signal 3: ON or OFF	ON: Headlights or defogger turned ON	-
Model Code	Model code	-	Identifying model code: AZE15#
Engine Type	Engine type	-	Identifying engine type: 2AZFE
Cylinder Number	Cylinder number: Min.: 0, Max.: 255	-	Identifying cylinder number: 4
Transmission Type	Transmission type	-	Identifying transmission type: 4AT or MT
Destination	Destination	-	Identifying destination: A (America)
Model Year	Model year: Min.: 1900, Max.: 2155	-	Identifying model year: 200#
System Identification	System identification	-	Identifying engine system: GASOLINE (gasoline engine)
Engine Speed of Cyl #1	Engine RPM for cylinder 1: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Not performed Active Test

TESTER DISPLAY	MEASUREMENT ITEM/RANGE	NORMAL CONDITION*1	DIAGNOSTIC NOTE
Engine Speed of Cyl #2	Engine RPM for cylinder 2: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Not performed Active Test
Engine Speed of Cyl #3	Engine RPM for cylinder 3: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Not performed Active Test
Engine Speed of Cyl #4	Engine RPM for cylinder 4: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Not performed Active Test
Av Engine Speed of All Cyl	Engine RPM for all cylinders: Min.: 0 rpm, Max.: 25600 rpm	-	Output only when Check the Cylinder Compression performed using Active Test 51199 rpm: Not performed Active Test

HINT:

- *1: If no idling conditions are specified, the shift lever should be in N or P, and the A/C switch and all accessory switches should be OFF.
- *2: Values are only displayed when performing the Active Tests: Control the VVT Linear (Bank1). For other Active Tests, the value will be 0.
- *3: Excluding throttle valve operating percentage due to Idle Speed Control (ISC).
- *4: Automatic Transaxle only

2. ACTIVE TEST

HINT:

Using the Techstream to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

(a) Warm up the engine.

(b) Turn the ignition switch off.

(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Active Test.

(g) According to the display on the Techstream, perform the Active Test.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Control the Injection Volume	Change injection volume	-12.5 to 24.8%	• All injectors tested at the same time • Perform test at less than 3000 rpm • Injection volume can be changed in 1% graduations within control range
Control the Injection Volume for A/F Sensor	Change injection volume	Lower by 12.5% or increase by 24.8%	• Perform test at less than 3000 rpm • Control the Injection Volume for A/F Sensor enables checking and graphing of A/F (Air Fuel Ratio) sensor and Heated Oxygen (HO2) sensor voltage outputs • To conduct test, enter the following menus: Active Test / Control the Injection Volume for A/F Sensor / Data List / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2
Activate the VSV for EVAP Control	Activate purge VSV control	ON/OFF	-
Control the Fuel Pump / Speed	Activate fuel pump (C/OPN Relay)	ON/OFF	Test possible when following conditions met: • Ignition switch ON • Engine is stopped
Connect the TC and TE1	Turn on and off TC and CG (TE1) connection	ON/OFF	• ON: TC and TE1 connected • OFF: TC and TE1 disconnected
Control the Idle Fuel Cut Prohibit	Prohibit idling fuel cut control	ON/OFF	Idling fuel-cut turned ON when throttle valve fully closed and engine speed over 2800 rpm
Prohibit the Catalyst OT Misfire prevent F/C	Prohibit catalyst overheat malfunction prevention fuel cut operation during	ON/OFF ON: Fuel cut prohibited	Confirm that vehicle stopped and engine speed 3000 rpm or less

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
	misfire		
Control the Electric Cooling Fan	Control electric cooling fan motor	ON/OFF	-
Control the ETCS Open/Close Slow Speed	Throttle actuator	Close/Open	Test possible when following conditions met: • Ignition switch ON • Engine is stopped • Fully depressing accelerator pedal (APP: 58 degrees or more)
Control the ETCS Open/Close Fast Speed	Throttle actuator	Close/Open	
Control the VVT Linear (Bank1)	Control VVT (bank 1)	Between -128 and 127%	• Engine stall or rough idle when VVT actuator operated by 100%. • Test possible during idle.
Control the VVT System (Bank1)	Turn on and off OCV (Camshaft Timing Oil Control Valve)	ON/OFF	• Engine stalls or idles roughly when OCV turned ON • Normal engine running or idling when OCV OFF • Test possible during idle.
Activate the Vacuum Pump	Leak detection pump	ON/OFF	-
Activate the VSV for Vent Valve	Vent valve	ON/OFF	-
Control the Cylinder #1 Fuel Cut	Cylinder #1 injector fuel cut	ON/OFF	Test possible while vehicle stopped and engine idling *1
Control the Cylinder #2 Fuel Cut	Cylinder #2 injector fuel cut	ON/OFF	
Control the Cylinder #3 Fuel Cut	Cylinder #3 injector fuel cut	ON/OFF	
Control the Cylinder #4 Fuel Cut	Cylinder #4 injector fuel cut	ON/OFF	
Control the All Cylinder Fuel Cut	All cylinder fuel cut	ON/OFF	

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Check the Cylinder Compression *2	Check the cylinder compression pressure (measuring engine speed for each cylinder)	ON/OFF	Fuel injection and ignition stop in all cylinders

NOTICE:

***1: If the display of the Data List's Catalyst OT MF F/C item is Not Avl, perform this Active Test with the vehicle stopped and the engine idling. If the display of the Data List's Catalyst OT MF F/C item is Avail, perform this Active Test as described below.**

1. Stop the engine and turn the ignition switch to ON to turn Control the Cylinder #1 Fuel Cut (to #4 Fuel Cut) ON.
2. Start the engine.

HINT:

***2: When performing the Active Test item "Check the Cylinder Compression" and then cranking the engine, the ECM stops the fuel injection and ignition, and measures the engine speed for each cylinder.**

If one cylinder's speed is higher than the others, that cylinder's compression pressure can be concluded to be lower than the others.

1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the Techstream to the DLC3.
4. Turn the ignition switch to ON.
5. Turn the Techstream on.
6. Enter the following menus: Powertrain / Engine and ECT / Active Test / Check the Cylinder Compression.
7. Enter the following menus: Compression / Engine Speed of Cyl #1 to #4, Av Engine Speed of All Cyl
8. Press the RIGHT or LEFT button to change the Check the Cylinder Compression to ON.

   HINT:

   Fuel injection and ignition for all cylinders are prohibited at this time, and each cylinder's engine speed measurement will enter standby mode.

9. Crank the engine until the monitor item values "Engine speed of Cyl #1 to #4" and "Av Engine Speed of All Cyl" change.
10. Monitor the engine speed (Engine Speed of Cyl #1 to #4, Av Engine Speed of All Cyl) displayed on the Techstream.

    HINT:

    The Techstream displays the values to be extremely high before cranking the engine. Each cylinder's engine speed is measured while cranking the engine and then the Techstream displays the actual engine speed values.

    NOTICE:

    - The Active Test item "Check the Cylinder Compression" will automatically turn off 255

seconds after the Active Test is turned on.

- When the "Check the Cylinder Compression" is OFF and the engine is cranked, the engine will start.
- If the "Check the Cylinder Compression" test needs to be performed again after the speed measurements have been performed once, press EXIT to return to the Active Test menu screen. Then perform the Check the Cylinder Compression test again.
- Use a fully-charged battery.

3. SYSTEM CHECK

HINT:

Performing a System Check in the Utility menu enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Utility.

(e) Perform the System Check by referring to the table below.

TESTER DISPLAY	TEST PART	CONTROL RANGE	DIAGNOSTIC NOTE
Evaporative System Check (Automatic Mode)	Perform 5 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs in Pending after performing this test, system functioning normally • Refer to EVAP system INFO
Evaporative System Check (Manual Mode)	Perform 5 steps in order to operate EVAP key-off monitor manually	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP system INFO

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDJ0D4X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: DIAGNOSIS SYSTEM (2010 Corolla)		

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, the Techstream (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Engine Control Module) can be then read.

OBD II regulations require that the vehicle's on-board computer illuminate the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

a. The emission control system and components.
b. The powertrain control components (which affect vehicle emissions).
c. The computer itself.

In addition, the applicable DTCs prescribed by SAE J2012 are recorded in the ECM memory. If the malfunction does not recur in 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM memory.

To check the DTCs, connect the Techstream to the DLC3. The Techstream displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the Techstream. In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, Controller Area Network (CAN) communication is used in this system. CAN is a network which uses a pair of data transmission lines spanning multiple computers and sensors. It allows for high speed communications between the systems and simplification of the wire harness connections.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2 trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1 trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (the Techstream only).

3. 2 TRIP DETECTION LOGIC

When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminated (2nd trip).

4. DLC3 (Data Link Connector 3)

(a) Check DLC3 INFO .

5. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

6. BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If voltage is below 11 V, replace or recharge the battery before proceeding.

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the ignition switch is first turned to ON (the engine is not running).

(b) The MIL should turn OFF when the engine is started. If the MIL remains illuminated, the diagnosis system has detected a malfunction or abnormality in the system.

HINT:

If the MIL does not illuminate when the ignition switch is first turned to ON, check the MIL circuit INFO .

8. ALL READINESS

HINT:

- With "ALL READINESS" you can check whether or not the DTC judgment has been completed by using the Techstream.
- You should check "ALL READINESS" after simulating malfunction symptoms or for validation after finishing repairs.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Turn the ignition switch off.

(e) Turn the ignition switch to ON and turn the Techstream on.

(f) Clear the DTCs INFO .

(g) Perform the DTC judgment driving pattern to run the DTC judgment.

(h) Enter the following menus: Powertrain / Engine / Utility / All Readiness.

(i) Input the DTCs to be confirmed.

(j) Check the DTC judgment result.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	• DTC judgment completed • System normal

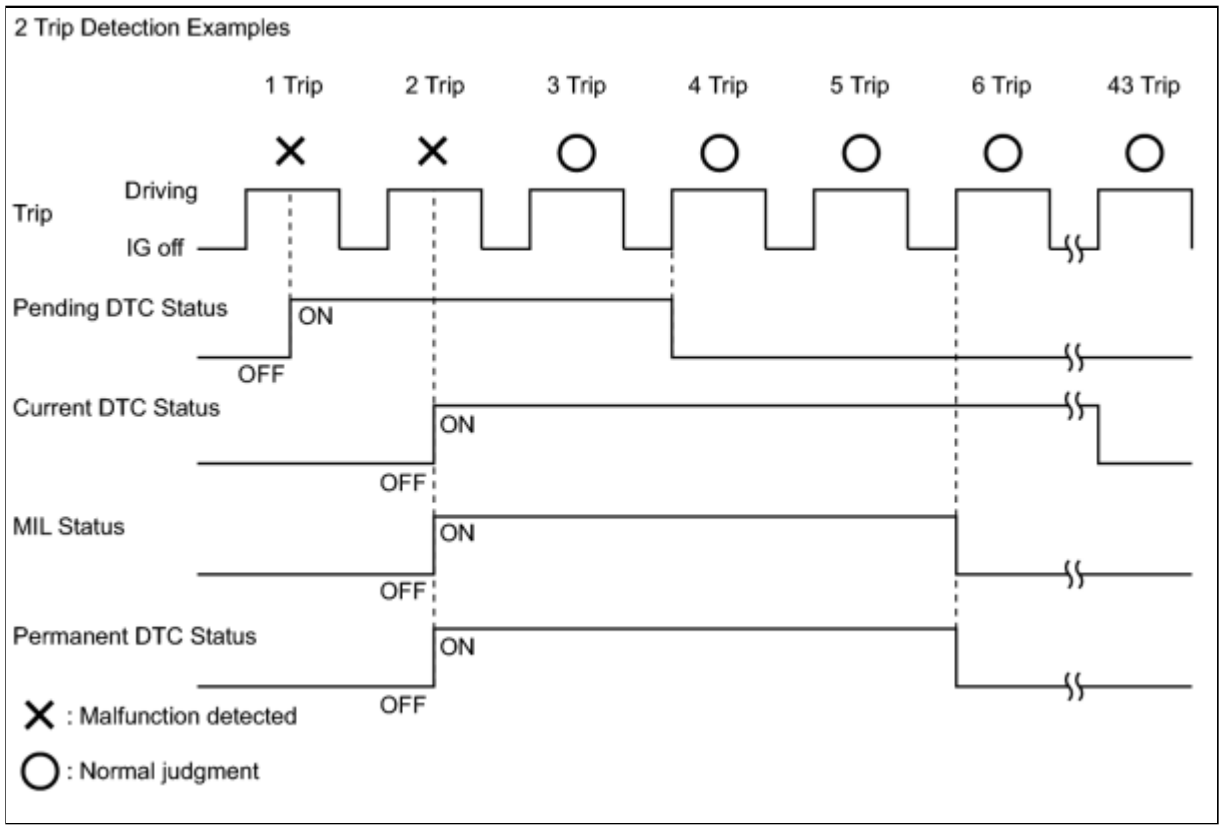
TECHSTREAM DISPLAY	DESCRIPTION
ABNORMAL	• DTC judgment completed • System abnormal
INCOMPLETE	• DTC judgment not completed • You should perform driving pattern after confirming DTC enabling conditions
UNKNOWN	• Unable to perform DTC judgment • Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDK0BZX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: DTC CHECK / CLEAR (2010 Corolla)		

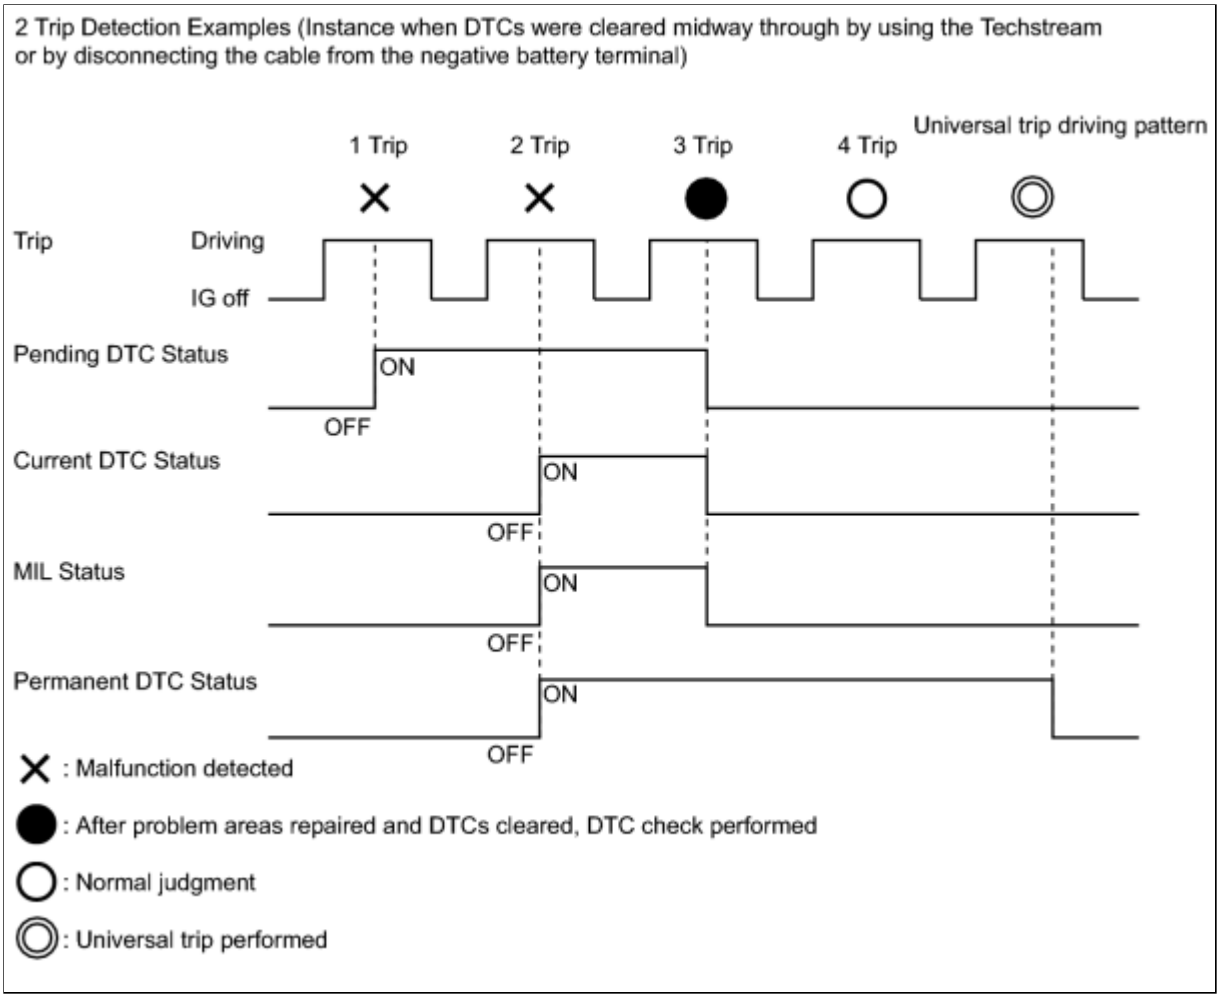
DTC CHECK / CLEAR

NOTICE:

When the diagnosis system is changed from normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of DTCs and freeze frame data.



HINT:



- DTCs which are stored in the ECM can be displayed on the Techstream. The Techstream can display current, pending and permanent DTCs.
- If a malfunction is detected during the current driving cycle, current and permanent DTCs are stored.
- Some DTCs are not stored if the ECM does not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.
- Current and pending DTCs can be cleared by using the Techstream or by disconnecting the cable from the negative battery terminal. However, permanent DTCs cannot be cleared using either of these two methods.
- After clearing current DTCs using the Techstream (or by disconnecting the cable from the negative battery terminal), permanent DTCs can be cleared when the system is determined to be normal for the relevant DTCs and then the universal trip is performed. The driving pattern to obtain a normal judgment is described under the "CONFIRMATION DRIVING PATTERN" for the respective DTC.

2 Trip Detection Examples

Pending DTC	Store condition	Malfunction detected
	Clear condition	System determined to be normal or DTCs cleared using Techstream or Cable disconnected from negative battery terminal
Current DTC	Store condition	Malfunction detected (2nd trip)
	Clear condition	No malfunctions in 40 driving cycles or DTCs cleared using Techstream or Cable disconnected from negative battery terminal
Permanent DTC	Store condition	Malfunction detected (2nd trip)

	Clear condition	Ignition switch turned to ON after normal judgment obtained in 3 consecutive driving cycles or After DTCs cleared using Techstream or cable disconnected from negative battery terminal, normal judgment obtained and universal trip performed (not for misfire and fuel system DTCs) or After DTCs cleared using Techstream or cable disconnected from negative battery terminal, malfunction not detected when universal trip driving performed (misfire and fuel system DTCs)
MIL	ON	Malfunction detected (2nd trip)
	OFF	Ignition switch turned to ON after normal judgment obtained in 3 consecutive driving cycles or DTCs cleared using Techstream or Cable disconnected from negative battery terminal

HINT:

- Obtaining a normal judgment and performing a universal trip driving pattern can be done in the same driving cycle or in different driving cycles.
- It is unnecessary to obtain a normal judgment if the DTCs are misfire or fuel system DTCs.

1. CHECK DTC

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check the DTC(s) and freeze frame data, and then save or write them down.

(f) Check the details of the DTC(s) INFO .

2. CLEAR DTC (Pending and Current DTC)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

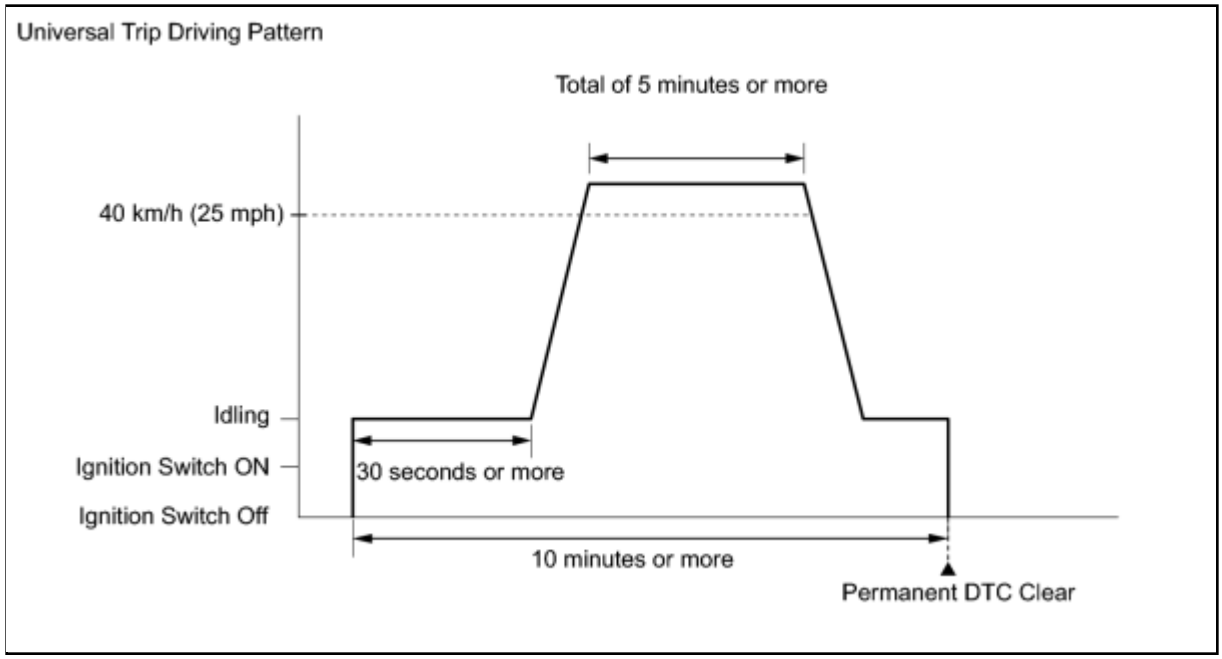
(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Clear the DTCs.

3. CLEAR DTC (Pending and Current DTC without using Techstream)

(a) Perform either of the following operations:



(1) Disconnect the cable from the negative (-) battery terminal for more than 1 minute.

(2) Remove the EFI MAIN and ETCS fuses from the engine room relay block located inside the engine compartment for more than 1 minute.

4. CLEAR PERMANENT DTC

HINT:

Even if the following procedure is not performed, permanent DTCs are cleared by obtaining a normal judgment during 3 consecutive driving cycles.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check if permanent DTCs are stored.

HINT:

If permanent DTCs are not output, it is not necessary to continue this procedure.

(f) Clear the DTCs.

(g) Perform the respective confirmation driving patterns in order to obtain a normal judgment for the output DTCs.

HINT:

- Confirmation driving patterns do not need to be performed for misfire and fuel system DTCs.
- For the confirmation driving pattern, refer to the procedures for the relevant DTC INFO .

(h) Perform the universal trip.

HINT:

The driving pattern to obtain a normal judgment and the universal trip driving can be performed consecutively in the same driving cycle.

1. Idle the engine for 30 seconds or more.
2. Drive the vehicle at 40 km/h (25 mph) or more for a total of 5 minutes or more.

   HINT:

   It is possible to complete the drive pattern even if the vehicle decelerates to less than 40 km/h (25 mph) during the driving cycle provided that the vehicle is driven at 40 km/h (25 mph) or more for a total of 5 minutes.

3. Allow 10 minutes or more to elapse from the time the engine is started.

(i) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

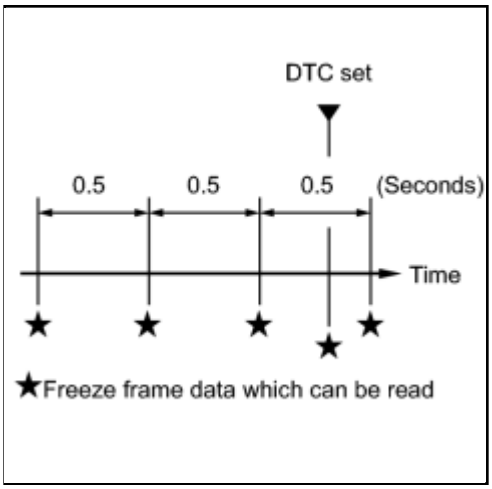
(j) Check that the permanent DTCs have been cleared.

HINT:

The permanent DTCs are cleared when the universal trip is completed.

Last Modified: 3-10-2010	6.4 D	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDS0B0X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: FREEZE FRAME DATA (2010 Corolla)		

FREEZE FRAME DATA



1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was moving or stationary, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

HINT:

If it is impossible to replicate the problem even though a DTC is detected, confirm the freeze frame data.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the Techstream, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.

- 3 sets of data from before the DTC was set.
- 1 sets of data from when the DTC was set.
- 1 sets of data from after the DTC was set.

2. LIST OF FREEZE FRAME DATA

TECHSTREAM DISPLAY	MEASUREMENT ITEM	DIAGNOSTIC NOTE
Vehicle Speed	Vehicle speed	Speed indicated on speedometer
Engine Speed	Engine speed	-
Calculate Load	Calculated load by ECM	-
Vehicle Load	Vehicle load	Load percentage in terms of maximum intake air flow amount

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: CHECK MODE PROCEDURE (2010 Corolla)		

CHECK MODE PROCEDURE

HINT:

Techstream:

Compared to normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected in normal mode.

NOTICE:

All the stored DTCs and freeze frame data are cleared if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the ignition switch is turned from ON to ACC or off while in check mode. Before changing modes, always check and note any DTCs and freeze frame data.

1. CHECK MODE PROCEDURE

(a) Check and ensure the following conditions:

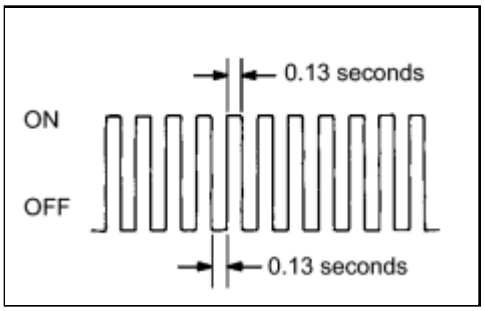
(1) Battery voltage 11 V or more.

(2) Throttle valve fully closed.

(3) Transmission in the P or N (neutral) position.

(4) A/C switch OFF.

(b) Turn the ignition switch off.



(c) Connect the Techstream to the DLC3.

(d) Turn the ignition switch to ON.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Utility / Check Mode.

(g) Switch the ECM from normal mode to check mode.

(h) Make sure the MIL flashes as shown in the illustration.

(i) Start the engine.

(j) Make sure the MIL turns OFF.

(k) Simulate the conditions of the malfunction described by the customer.

(l) Check DTCs and freeze frame data using the Techstream.

Last Modified: 3-10-2010	6.4 U	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDO08EX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: FAIL-SAFE CHART (2010 Corolla)		

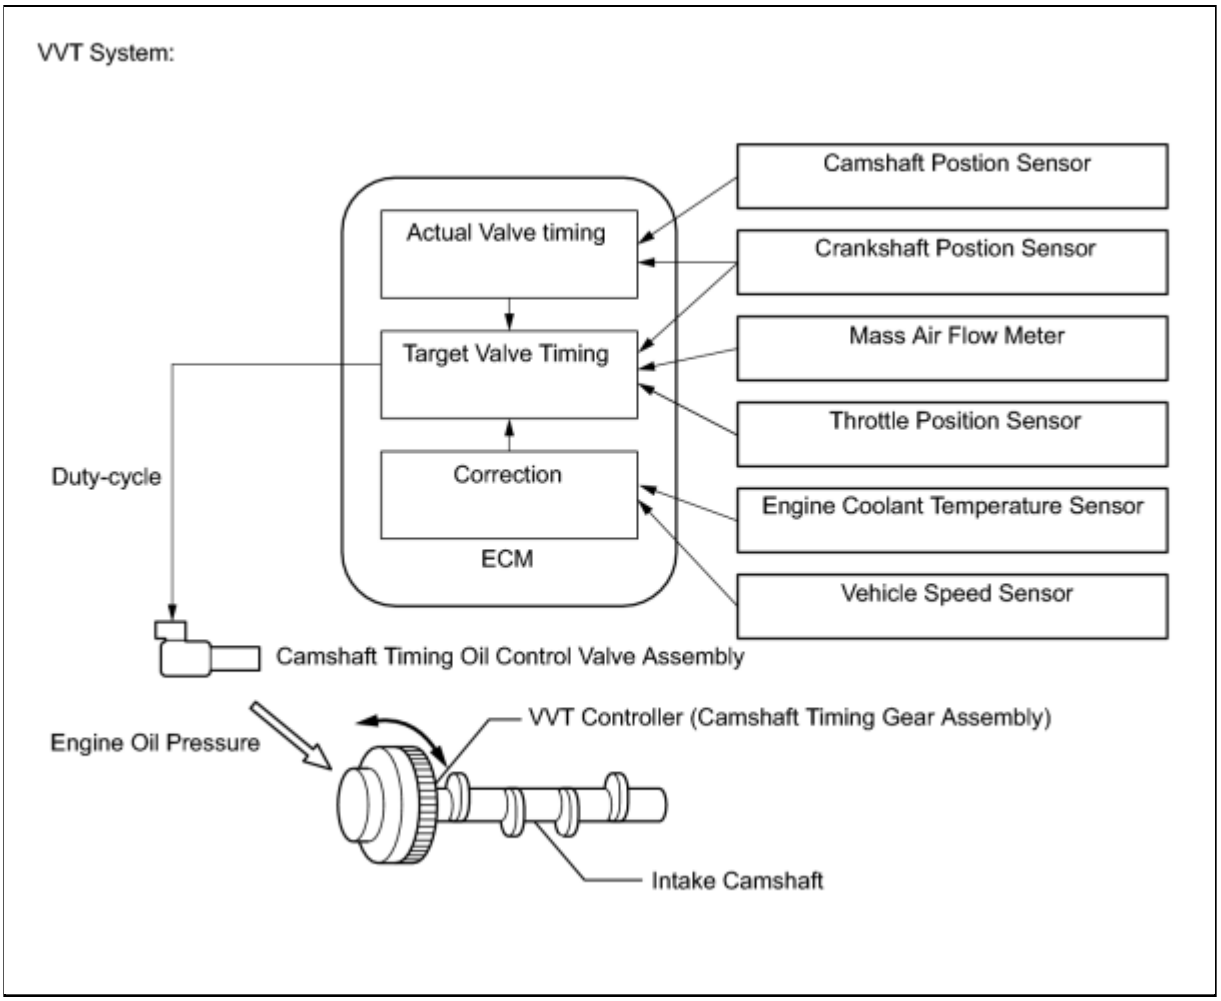
FAIL-SAFE CHART

If any of the following DTCs are set, the ECM enters fail-safe mode to allow the vehicle to be driven temporarily or stops fuel injection.

DTC	COMPONENT	FAIL-SAFE OPERATION	FAIL-SAFE DEACTIVATION CONDITION
P0031 P0032	Air fuel ratio sensor heater	ECM turns off air fuel ratio sensor heater	Ignition switch off
P0037 P0038	Heated oxygen sensor heater	ECM turns off heated oxygen sensor heater	Ignition switch off
P0102 P0103	Mass air flow meter	ECM calculates ignition timing according to engine speed and throttle valve position	Pass condition detected
P0112 P0113	Intake air temperature sensor	ECM estimates intake air temperature to be 20°C (68°F)	Pass condition detected
P0115 P0117 P0118	Engine coolant temperature sensor	ECM estimates engine coolant temperature to be 80°C (176°F)	Pass condition detected
P0120 P0121 P0122 P0123 P0220 P0222 P0223 P0604 P0606 P060A P060D P060E P0657 P1607 P2102 P2103 P2111 P2112 P2118 P2119 P2135	Electronic Throttle Control System (ETCS)	ECM cuts off throttle actuator current and the throttle valve returns to the 6.5° throttle position by return spring ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle, to allow vehicle to continue at minimal speed *1	Pass condition detected and then ignition switch turned off

DTC	COMPONENT	FAIL-SAFE OPERATION	FAIL-SAFE DEACTIVATION CONDITION
P0300 P0301 P0302 P0303 P0304 *2	• Fuel injector • Electronic throttle control system	When a catalyst damaging misfire occurs (MIL blinking), following fail-safe operation performed for catalyst overheat malfunction prevention 1. Under low load and low engine speed - Fuel cut performed on malfunctioning cylinder 2. Under high load and high engine speed - Throttle valve opening angle control is performed - All cylinder fuel cut or malfunctioning cylinder fuel cut is performed	Pass condition detected and then ignition switch turned off
P0327 P0328	Knock sensor	ECM sets ignition timing to maximum retard	Ignition switch off
P0351 to P0354	Igniter	ECM cuts fuel	Pass condition detected
P2120 P2121 P2122 P2123 P2125 P2127 P2128 P2138	Accelerator pedal position sensor	Accelerator pedal position sensor has 2 sensor circuits: Main and Sub. If either circuit malfunctions, the ECM controls the engine using the other circuit. If both circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.	Pass condition detected and then ignition switch turned off

HINT:



- *1: The vehicle can be driven slowly when the accelerator pedal is depressed firmly and slowly. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.
- *2: Misfire related fail-safe operations occur when catalyst overheat malfunctions occur.

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0010: Camshaft Position "A" Actuator Circuit (Bank 1) (2010 Corolla)		

DTC	**P0010**	**Camshaft Position "A" Actuator Circuit (Bank 1)**

DESCRIPTION

The VVT (variable valve timing) system adjusts the intake valve timing to improve driveability. The engine oil pressure turns the VVT controller to adjust the valve timing. The camshaft timing oil control valve is a solenoid valve and switches the engine oil line. The valve moves when the ECM applies 12 V to the solenoid. The ECM changes the energizing time to the solenoid (duty-cycle) in accordance with the camshaft position, crankshaft position, throttle position, etc.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0010	Open or short in camshaft timing oil control valve assembly circuit (1 trip detection logic)	• Open or short in camshaft timing oil control valve assembly circuit • Camshaft timing oil control valve assembly • ECM

MONITOR DESCRIPTION

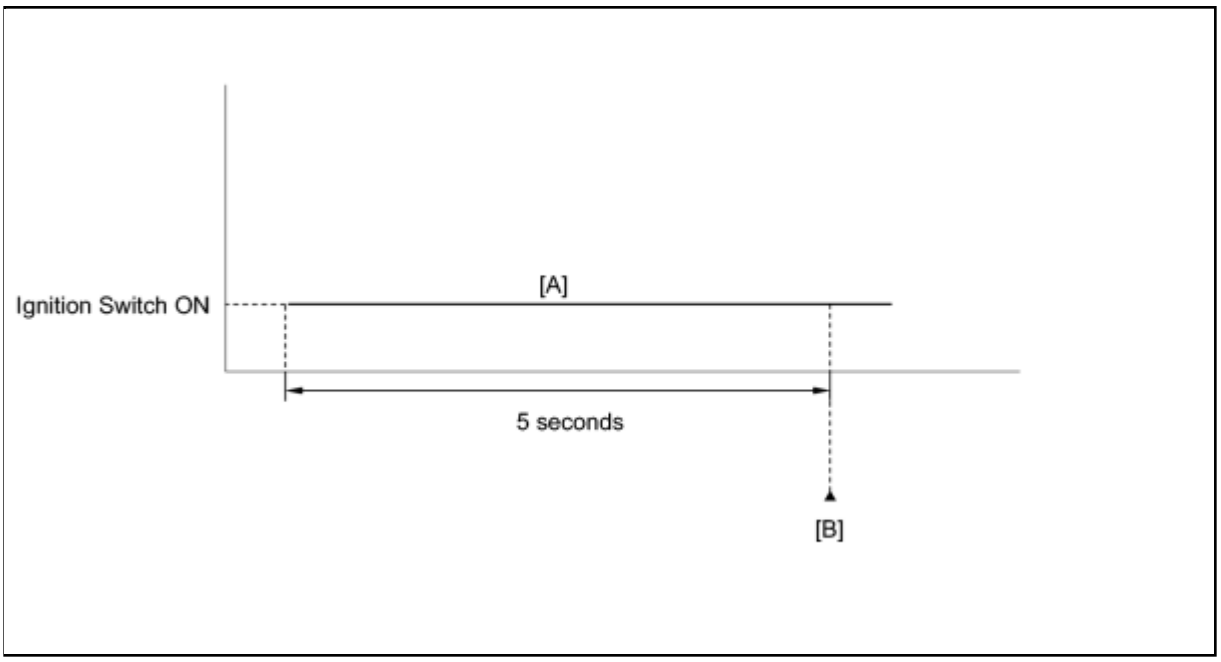
This DTC is designed to detect an open or short in the camshaft timing oil control valve circuit. If the camshaft timing oil control valve assembly duty-cycle is excessively high or low while the engine is running, the ECM will illuminate the MIL and set the DTC.

MONITOR STRATEGY

Related DTCs	P0010: VVT camshaft timing oil control valve assembly range check (bank 1)
Required Sensors/Components (Main)	VVT camshaft timing oil control valve assembly
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
All of following conditions met	-
Starter	OFF
Ignition switch	ON
Time after ignition switch OFF to ON	0.5 seconds or more



TYPICAL MALFUNCTION THRESHOLDS

One of following conditions met	-
A. All of following conditions met	-
Battery voltage	11 to 13 V
Target duty ratio	Less than 70%
Output signal duty ratio	100%
B. All of following conditions met	-
Battery voltage	13 V or more
Target duty ratio	Less than 80%
Output signal duty ratio	100%
C. Both of following conditions met	-
Current cut status	Not cut
Output signal duty ratio	3% or less

COMPONENT OPERATING RANGE

VVT camshaft timing oil control valve assembly duty ratio	3 to 100%

CONFIRMATION DRIVING PATTERN

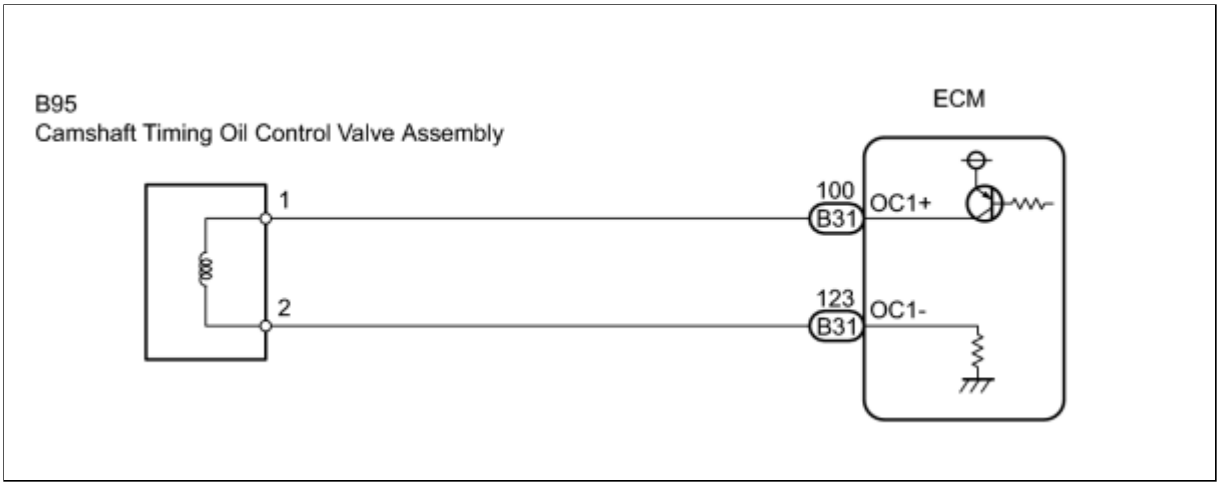
1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .

4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Wait 5 seconds [A].
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0010.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ DTC OUTPUT**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs after recording the freeze frame data and DTC INFO .

(e) Turn the ignition switch off.

(f) Start the engine and allow the engine to idle.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read DTCs.

Result:

RESULT	PROCEED TO
P0010	A
No output	B

B ▶ CHECK FOR INTERMITTENT PROBLEMS

A ▼

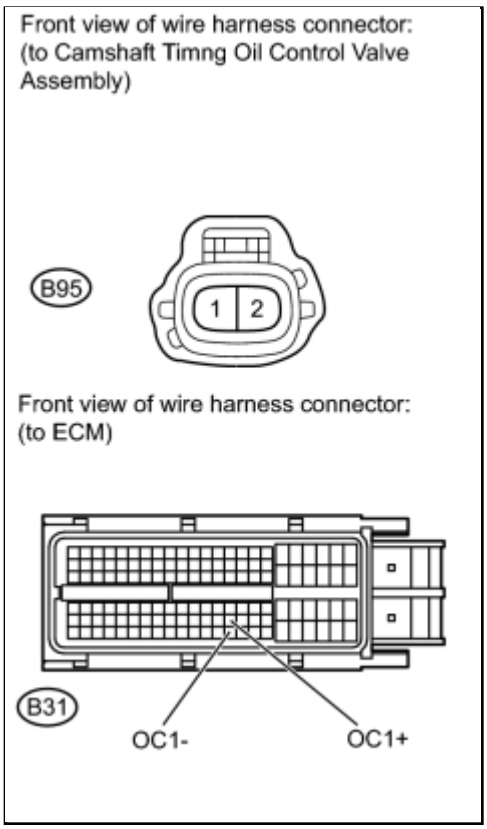
2.	**INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

Component without harness connected:
(Camshaft Timing Oil Control Valve Assembly)

(a) Disconnect the camshaft timing oil control valve assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

(c) Reconnect the camshaft timing oil control valve assembly connector.

NG ▶ REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**	(a) Disconnect the camshaft timing oil control valve assembly connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B95-1 - B31-100 (OC1+)	Always	Below 1 Ω
B95-2 - B31-123 (OC1-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B95-1 or B31-100 (OC1+) - Body ground	Always	10 kΩ or higher
B95-2 or B31-123 (OC1-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the camshaft timing oil control valve assembly connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY - ECM)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0011,P0012: Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1) (2010 Corolla)		

DTC	**P0011**	**Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)**

DTC	**P0012**	**Camshaft Position "A" - Timing Over-Retarded (Bank 1)**

DESCRIPTION

Refer to DTC P0010 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0011	Valve timing is not adjusted in valve timing advance range (1 trip detection logic)	• Valve timing • Camshaft timing oil control valve assembly • Oil control valve filter • Camshaft timing gear assembly • ECM
P0012	Valve timing is not adjusted in valve timing retard range (2 trip detection logic)	

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the camshaft timing oil control valve assembly and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve assembly. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft. If the difference between the target and actual intake valve timing is large, and changes in the actual intake valve timing are small, the ECM interprets this as a VVT controller stuck malfunction and sets a DTC.

Example:
A DTC is set when the following conditions "A" and "B" are met:

a. It takes 5 seconds or more to change the valve timing by 5°CA (Condition "A").
b. After above condition is met, the camshaft timing oil control valve is forcibly activated during 10 seconds (Condition "B").

DTC P0011 (Advanced Cam Timing) is subject to 1 trip detection logic.
DTC P0012 (Retarded Cam Timing) is subject to 2 trip detection logic.
These DTCs indicate that the VVT controller cannot operate properly due to camshaft timing oil control valve assembly malfunctions or the presence of foreign objects in the camshaft timing oil control valve.

The monitor will run if all of the following conditions are met:

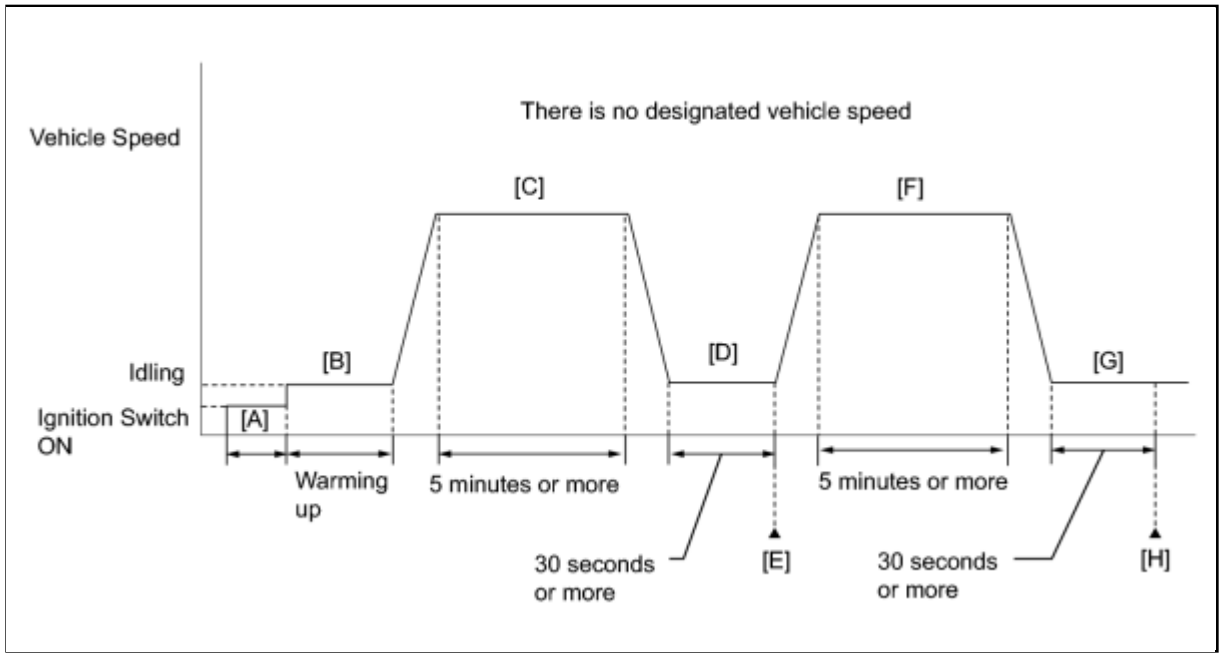
- The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
- The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
- The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing P0012: Retarded camshaft timing
Required Sensors/Components (Main)	VVT camshaft timing oil control valve assembly and VVT controller
Required Sensors/Components (Related)	Crankshaft position sensor Camshaft position sensor Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds
MIL Operation	Advanced camshaft timing: Immediate Retarded camshaft timing: 2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0010 (VVT Oil Control Valve Bank 1) P0016 (VVT System Bank 1 - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor)
Battery voltage	11 V or more
Engine RPM	550 to 4000 rpm
Engine coolant temperature	75 to 100°C (167 to 212°F)



TYPICAL MALFUNCTION THRESHOLDS

All of following conditions are met	-

Deviation of actual valve timing and target valve timing	More than 5°CA (crankshaft angle)
Valve timing	No change at advanced (retarded) valve timing

If the difference between the target and actual camshaft timing is greater than the specified value, the ECM operates the VVT actuator.
Then, the ECM monitors the camshaft timing change for 5 seconds.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
7. Drive the vehicle for 5 minutes or more [C].
8. Idle the engine for 30 seconds or more [D].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0011 or P0012.
11. Check the DTC judgment result [E].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal

CAUTION:
When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [F] through [H].

12. Drive the vehicle for 5 minutes or more [F].
13. Idle the engine for 30 seconds or more [G].
14. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
15. Input the DTC: P0011 or P0012.
16. Check the DTC judgment result again [H].
17. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
18. Read Pending DTCs [H].

HINT:

If a pending DTC is output, the system is malfunctioning.

19. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0010 INFO .

INSPECTION PROCEDURE

HINT:

- DTC P0011 or P0012 may be set when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain set even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011 OR P0012)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0011 or P0012	A
P0011 or P0012 and other DTCs	B

HINT:

If any DTCs other than P0011 or P0012 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE CAMSHAFT TIMING OIL CONTROL VALVE)**

(a) Connect the Techstream to the DLC3

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(f) Check the engine speed while operating the camshaft timing oil control valve using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
Camshaft timing oil control valve OFF	Normal engine speed
Camshaft timing oil control valve ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve switched from OFF to ON)

NG ▶ CHECK VALVE TIMING (CHECK FOR LOOSE OR JUMPED TEETH ON TIMING CHAIN)

OK ▼

3.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0011 OR P0012)

(a) Connect the Techstream to the DLC3

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

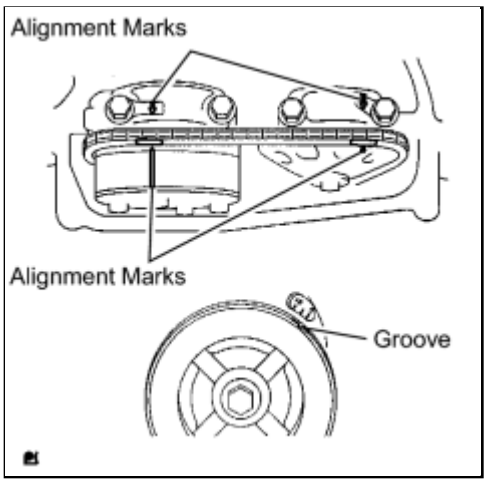
(e) Start the engine and warm it up.

(f) Drive the vehicle for more than 10 minutes.

(g) Select the following menu items: Powertrain / Engine and ECT / Trouble Codes / Pending.

(h) Read DTCs.

Result:



RESULT	PROCEED TO
No output	A
P0011 or P0012	B

B ▶ CHECK VALVE TIMING (CHECK FOR LOOSE OR JUMPED TEETH ON TIMING CHAIN)

A ▶ CHECK FOR INTERMITTENT PROBLEMS

4.	CHECK VALVE TIMING (CHECK FOR LOOSE OR JUMPED TEETH ON TIMING CHAIN)

(a) Remove the cylinder head cover INFO .

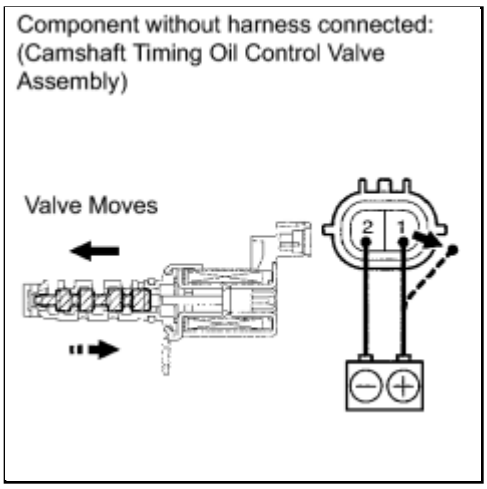
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" of the timing chain cover.

(c) Check that the alignment marks of the camshaft timing gears are aligned with the alignment marks of the bearing cap as shown in the illustration.

If not, turn the crankshaft 1 revolution (360°), then align the marks as above.

OK:

Alignment marks on camshaft timing gears are aligned as shown in the illustration.



(d) Reinstall the cylinder head cover INFO .

NG ▶ **ADJUST VALVE TIMING**

OK ▼

5.	**INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

(a) Remove the camshaft timing oil control valve assembly INFO .

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	6.9 to 7.9 Ω

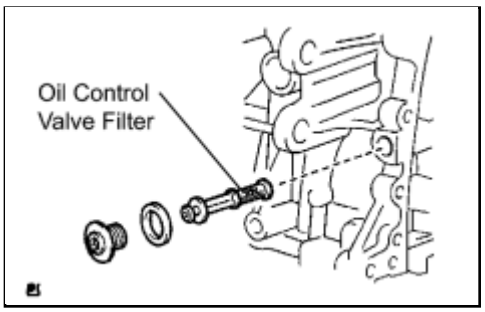
(c) Apply positive battery voltage to terminal 1 and connect the negative battery terminal to terminal 2. Check the valve operation.

OK:

Valve moves quickly.

(d) Reinstall the camshaft timing oil control valve assembly INFO .

NG ▶ **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**



OK ▼

6.	**INSPECT OIL CONTROL VALVE FILTER**

(a) Remove the oil control valve filter INFO .

OK:

Filter is not clogged.

(b) Reinstall the oil control valve filter INFO .

NG ▶ **REPLACE OIL CONTROL VALVE FILTER**

OK
▼

7.	**REPLACE CAMSHAFT TIMING GEAR ASSEMBLY**

(a) Replace the camshaft timing gear assembly INFO .

NEXT
▼

8.	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect the Techstream to the DLC3

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Start the engine and warm it up.

(f) Drive the vehicle for more than 10 minutes.

(g) Select the following menu items: Powertrain / Engine and ECT / Trouble Codes / Pending.

(h) Read DTCs.

Result:

RESULT	PROCEED TO
No output	A
P0011 or P0012	B

HINT:

DTC P0011 or P0012 is output when foreign objects in engine oil are caught in some parts of the system. These codes will remain set for a short time even after the system returns to normal. These foreign objects may then be captured by the oil filter, thus eliminating the source of the problem.

B ▶ **REPLACE ECM**

A ▶ **END**

TOYOTA

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDV094X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0016: Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A) (2010 Corolla)		

DTC	**P0016**	**Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)**

DESCRIPTION

The ECM optimizes the valve timing by using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the camshaft timing oil control valve assembly and the VVT controller (camshaft timing gear assembly). The ECM sends a target duty-cycle control signal to the camshaft timing oil control valve assembly. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0016	Deviations in crankshaft and camshaft position sensor signals (2 trip detection logic)	• Mechanical system (Timing chain has jumped a tooth or chain stretched) • Camshaft timing oil control valve assembly • Camshaft timing gear assembly • ECM

MONITOR DESCRIPTION

To monitor the correlation of the intake camshaft position and crankshaft position, the ECM checks the VVT learning value while the engine is idling. The VVT learning value is calibrated based on the camshaft position and crankshaft position. The intake valve timing is set to the most retarded angle while the engine is idling. If the VVT learning value is out of the specified range in consecutive driving cycles, the ECM illuminates the MIL and sets the DTC.

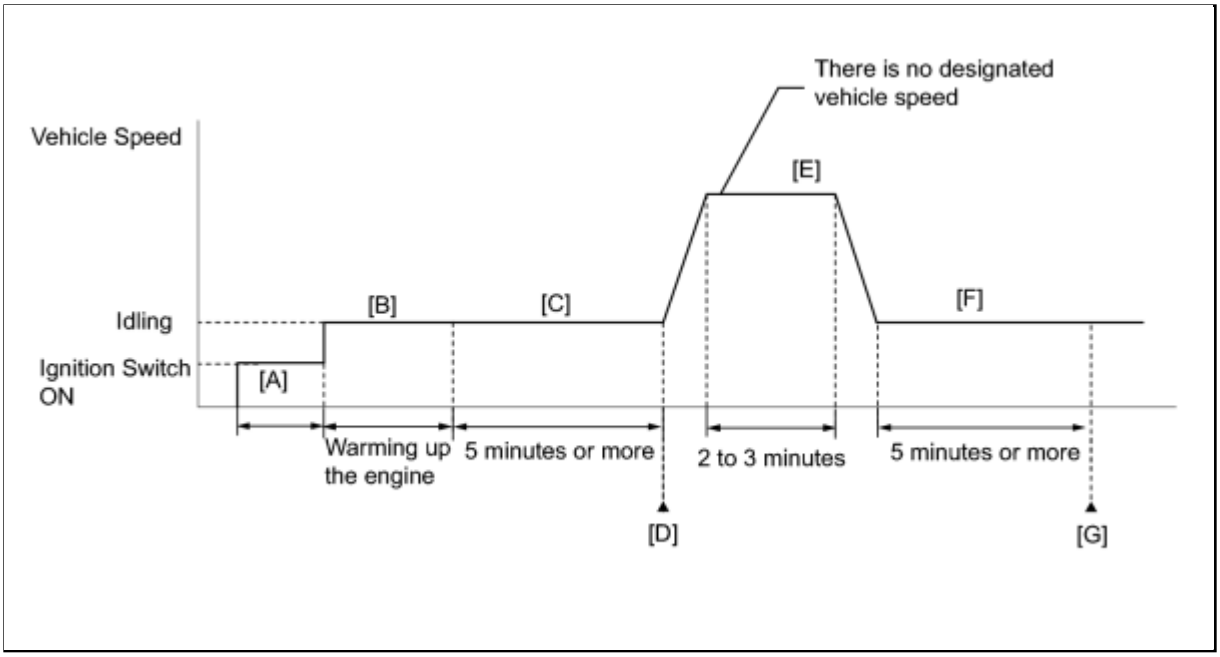
This DTC indicates that the intake camshaft has been installed toward the crankshaft at an incorrect angle, caused by factors such as the timing chain having jumped a tooth.

This monitor begins to run after the engine has idled for 5 minutes.

MONITOR STRATEGY

Related DTCs	P0016: Camshaft Timing Misalignment at idling
Required Sensors/Components (Main)	VVT controller (camshaft timing gear assembly)

Required Sensors/Components (Related)	Camshaft position sensor Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	Less than 1 minute
MIL Operation	2 driving cycles
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0010 (VVT Oil Control Valve Bank 1) P0016 (VVT System Bank 1 - Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor)
Engine RPM	550 to 1000 rpm

TYPICAL MALFUNCTION THRESHOLDS

One of following conditions is met	-
VVT learning value at maximum retarded valve timing	Less than 27°CA (crankshaft angle)
VVT learning value at maximum retarded valve timing	More than 49°CA (crankshaft angle)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
7. Idle the engine for 5 minutes or more [C].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P0016 or P0017.
10. Check the DTC judgment result [D].

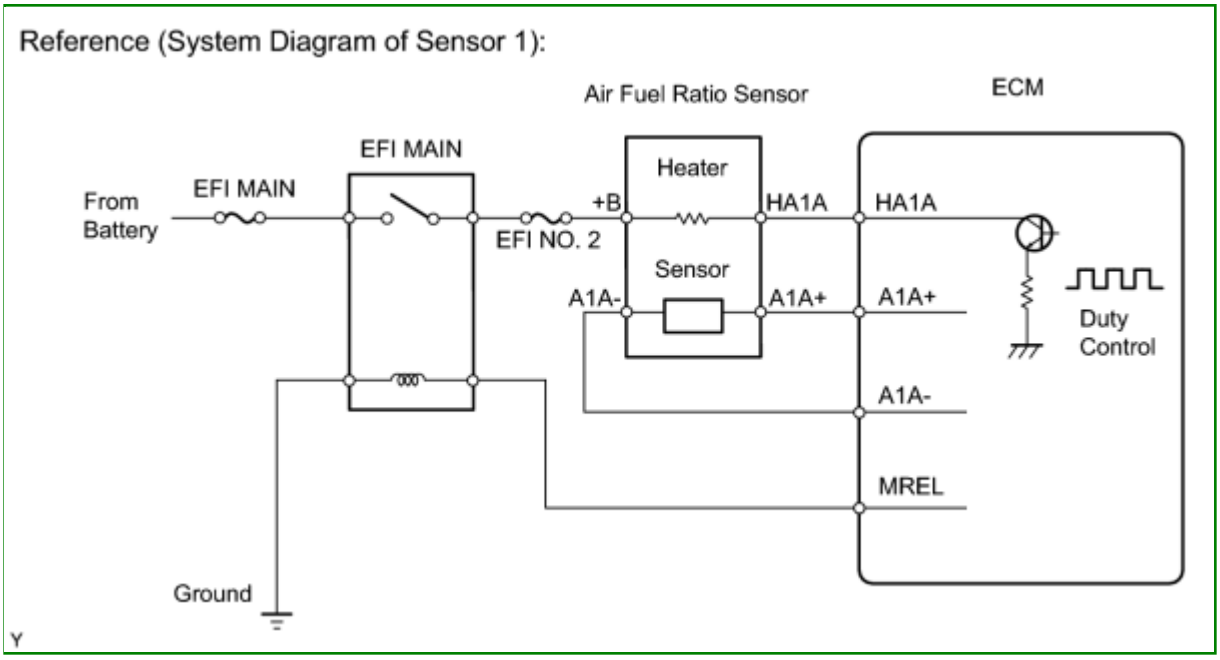
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0031,P0032: Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P0031**	**Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)**

DTC	**P0032**	**Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)**



DESCRIPTION

Refer to DTC P2195 INFO .

HINT:

- When either of these DTCs is set, the ECM enters fail-safe mode. The ECM turns off the air fuel ratio sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- Although the DTC titles say the oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-way catalytic converter and located near the engine assembly.
- The ECM uses pulse width modulation to adjust the current through the heater. The air fuel ratio sensor heater circuit uses a relay on the +B side of the circuit.

Reference (System Diagram of Sensor 1):

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0031	Air fuel ratio sensor heater current less than 0.8 A (1 trip detection logic)	• Open in air fuel ratio sensor heater circuit • Air fuel ratio sensor heater (sensor 1) • ECM
P0032	Air fuel ratio sensor heater current fail (1 trip detection logic)	• Short in air fuel ratio sensor heater circuit • Air fuel ratio sensor heater (sensor 1) • ECM

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The ECM uses information from the air fuel ratio sensor to regulate the air fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the three-way catalytic converter to purify the exhaust gases.

The air fuel ratio sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The air fuel ratio sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the air fuel ratio sensor becomes inaccurate, as a result, the ECM is unable to regulate air-fuel ratio properly.

When the current in the air fuel ratio sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0031: Air fuel ratio sensor heater open/short (Low electrical current) P0032: Air fuel ratio sensor heater open/short (High

	electrical current)
Required Sensors/Components (Main)	Air fuel ratio sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	10 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All

Monitor runs whenever following DTCs are not present	None

P0031

Battery voltage	10.5 V or more
Air fuel ratio sensor heater duty-cycle ratio	50% or more
Time after engine start	10 seconds or more

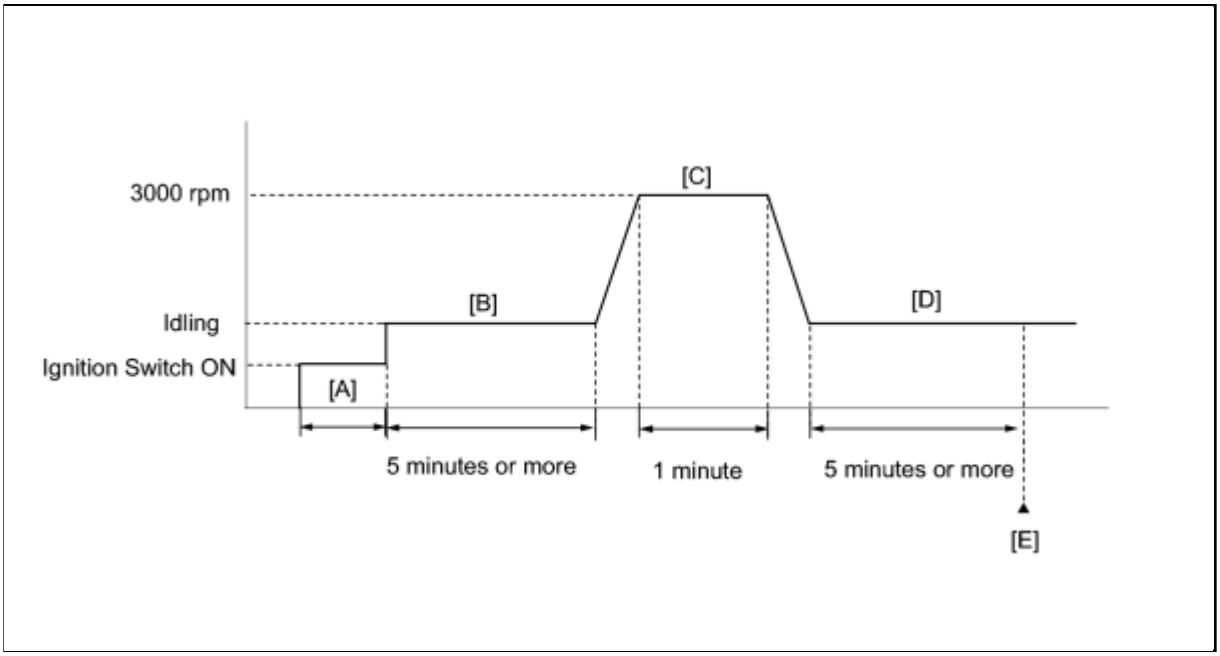
P0032

Battery voltage	Less than 20 V
Time after engine start	10 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0031

Air fuel ratio sensor heater current	Less than 0.8 A



P0032

Hybrid IC high current limiter port	Fail

COMPONENT OPERATING RANGE

Air fuel ratio sensor heater resistance	1.8 to 3.4 Ω at 20°C (68°F)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and idle it for 5 minutes or more [B].
7. With the vehicle stationary, depress the accelerator pedal and maintain an engine speed of 3000 rpm for 1 minute [C].
8. Idle the engine for 5 minutes or more [D].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0031 or P0032.
11. Check the DTC judgment result [E].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions

TECHSTREAM DISPLAY	DESCRIPTION
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

12. If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] through [E] again.
13. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
14. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

15. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

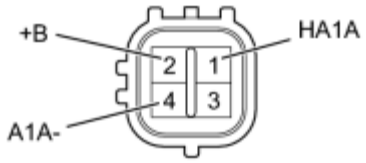
Refer to DTC P2195 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE



1.	**INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)**

(a) Disconnect the air fuel ratio sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Component without harness connected:
(Air Fuel Ratio Sensor)

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 (HA1A) - 2 (+B)	20°C (68°F)	1.8 to 3.4 Ω
1 (HA1A) - 4 (A1A-)	Always	10 kΩ or higher

(c) Reconnect the air fuel ratio sensor connector.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▼

2.	**CHECK TERMINAL VOLTAGE (POWER SOURCE)**

(a) Disconnect the air fuel ratio sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Front view of wire harness connector:
(to Air Fuel Ratio Sensor)

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B92-2 (+B) - Body ground	Ignition switch ON	11 to 14 V

(d) Reconnect the air fuel ratio sensor connector.

NG ▶ **INSPECT FUSE (EFI NO. 2 FUSE)**

OK

3.	**CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**

(a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the ECM connector.

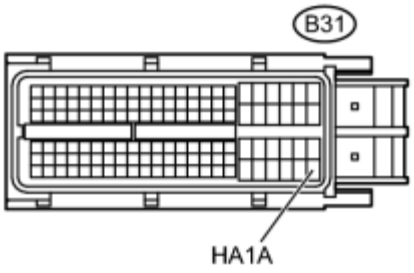
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B92-1 (HA1A) - B31-109 (HA1A)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B92-1 (HA1A) or B31-109 (HA1A) - Body ground	Always	10 kΩ or higher



(d) Reconnect the air fuel ratio sensor connector.

(e) Reconnect the ECM connector.

Front view of wire harness connector:
(to Air Fuel Ratio Sensor)

Front view of wire harness connector:
(to ECM)

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**

OK ▼

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0031 OR P0032)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

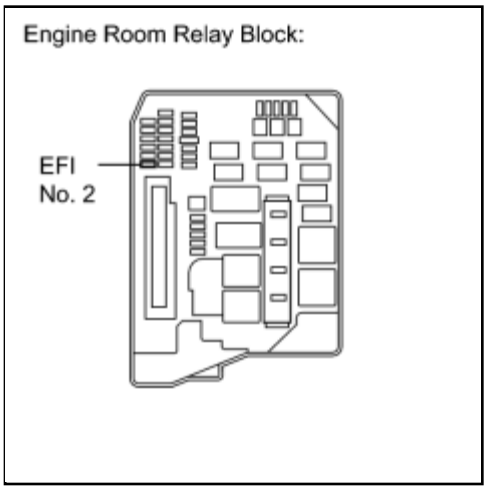
(d) Clear the DTCs INFO .

(e) Start the engine.

(f) Allow the engine to idle for 1 minute or more.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read DTCs.



Result:

RESULT	PROCEED TO
No output	A
P0031 or P0032	B

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

5.	INSPECT FUSE (EFI NO. 2 FUSE)

(a) Remove the EFI No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 2 fuse.

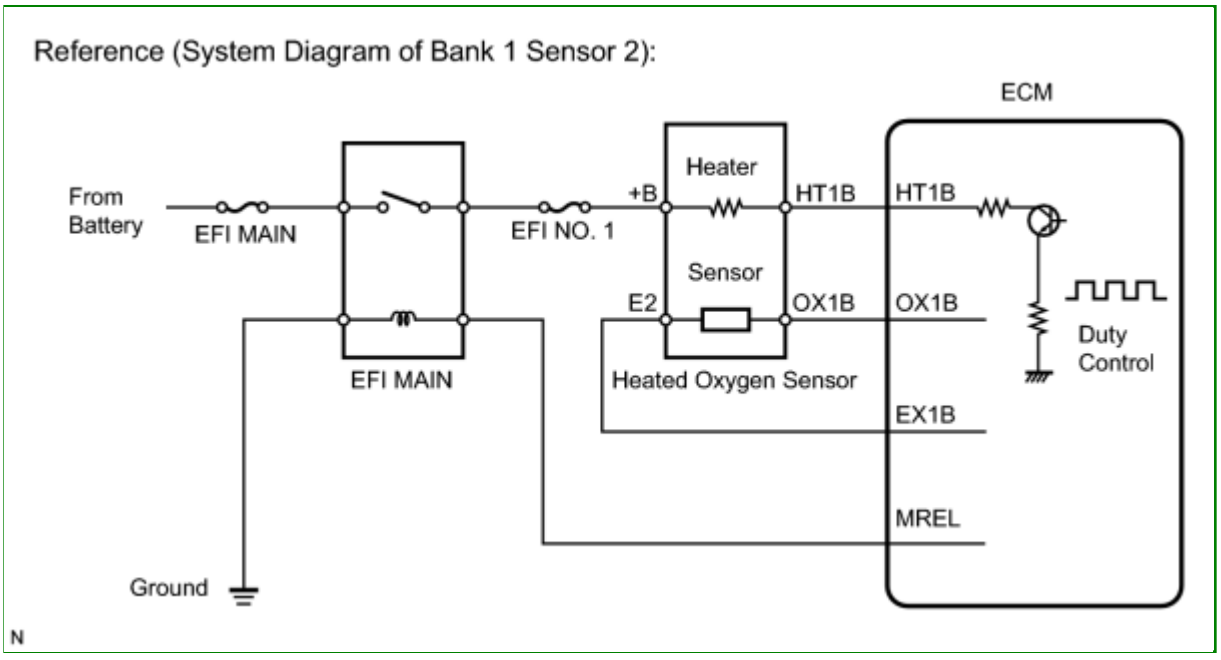
NG → REPLACE FUSE (EFI NO. 2 FUSE)

OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ENGINE ROOM RELAY BLOCK)

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFA09XX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0037,P0038,P0141: Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2) (2010 Corolla)		

DTC	**P0037**	**Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)**

DTC	**P0038**	**Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)**



DTC	**P0141**	**Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)**

DESCRIPTION

Refer to DTC P0136 INFO .

HINT:

- Sensor 2 refers to the sensor mounted behind the three-way catalytic converter and located far from the engine assembly.
- When any of these DTCs are set, the ECM enters fail-safe mode. The ECM turns off the heated oxygen sensor heater in fail-safe mode. Fail-safe mode continues until the ignition switch is turned off.
- The ECM uses pulse width modulation to adjust the current through the heater. The heated oxygen sensor heater circuit uses a relay on the +B side of the circuit.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0037	Heated oxygen sensor (sensor 2) heater current less than 0.3 A (1 trip detection logic)	• Open in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM
P0038	Heated oxygen sensor (sensor 2) heater current more than 2 A (1 trip detection logic)	• Short in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM
P0141	Cumulative heater resistance correction value exceeds the acceptable threshold (2 trip detection logic)	• Open or short in heated oxygen sensor (sensor 2) heater circuit • Heated oxygen sensor (sensor 2) heater • ECM

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

MONITOR DESCRIPTION

The sensing portion of the heated oxygen sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

Heated oxygen sensor heater range check (P0037 and P0038):

The ECM monitors the current applied to the heated oxygen sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM will determine that there is an open circuit in the heater. If the current is above the threshold value, the ECM will determine that there is a short circuit in the heater.

Example:

The ECM sets DTC P0038 when the current in the heated oxygen sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 is set.

Heated oxygen sensor heater performance (P0141):

After the accumulated heater ON time exceeds 100 seconds, the ECM calculates the heater resistance using the battery voltage and the current applied to the heater. If the resistance is above the threshold

value, the ECM will determine that there is a malfunction in the heated oxygen sensor heater and set DTC P0141.

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PF404MX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0101: Mass Air Flow Circuit Range / Performance Problem (2010 Corolla)		

DTC	**P0101**	**Mass Air Flow Circuit Range / Performance Problem**

DESCRIPTION

Refer to DTC P0102 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0101	Conditions (a), (b), (c), (d) and (e) continue for more than 10 seconds (2 trip detection logic): (a) Engine running (b) Engine coolant temperature 70°C (158°F) or higher (c) Throttle position sensor voltage 0.24 to 2 V (d) Average engine load value ratio less than 0.85, or more than 1.18 (varies with estimated engine load) Average engine load value ratio = Average engine load based on mass air flow meter output / Average engine load estimated from driving conditions (e) Average air-fuel ratio less than -20%, or more than 20%	• Mass air flow meter • Intake system • PCV hose connections

MONITOR DESCRIPTION

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM uses this information to determine the fuel injection time and to provide an appropriate air-fuel ratio. Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to the mass air flow meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The ECM monitors the average engine load value ratio to check the mass air flow meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the mass air flow meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.

If this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000U5B09CX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0102,P0103: Mass or Volume Air Flow Circuit Low Input (2010 Corolla)		

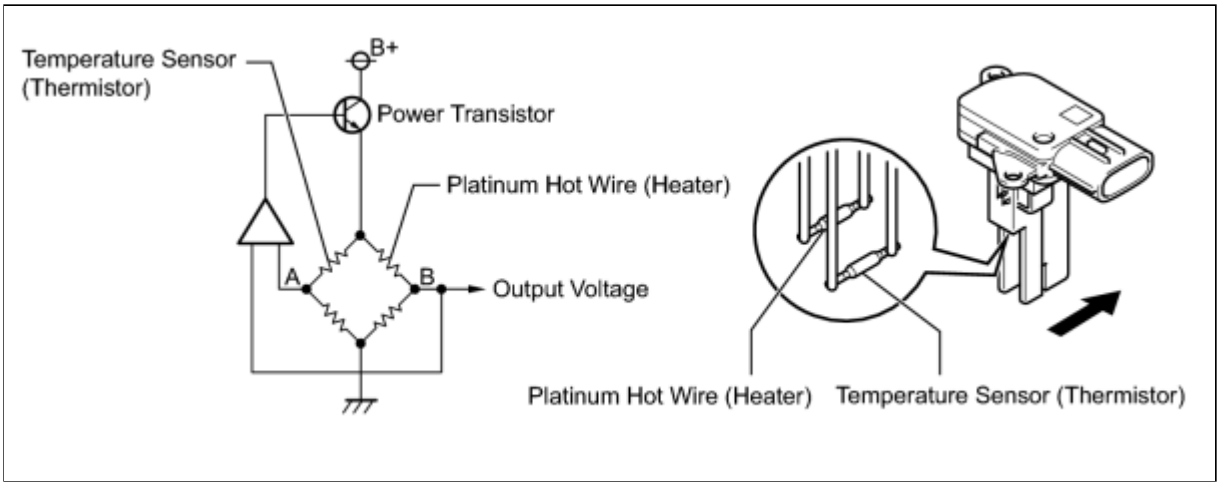
DTC	**P0102**	**Mass or Volume Air Flow Circuit Low Input**

DTC	**P0103**	**Mass or Volume Air Flow Circuit High Input**

DESCRIPTION

The mass air flow meter is a sensor that measures the amount of air flowing through the throttle valve.

The ECM uses this information to determine the fuel injection time and to provide the appropriate air fuel ratio.



Inside the mass air flow meter, there is a heated platinum wire which is exposed to the flow of intake air.

By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the mass air flow meter. The voltage level is proportional to the air flow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0102	Mass air flow meter voltage less than 0.2 V for 3 seconds (1 trip detection logic)	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM
P0103	Mass air flow meter voltage more than 4.9 V for 3 seconds (1 trip detection logic)	• Open or short in mass air flow meter circuit • Mass air flow meter • ECM

HINT:

When any of these DTCs are set, check the air-flow rate by entering the following menus: Powertrain / Engine and ECT / Data List / All Data / MAF.

MASS AIR FLOW RATE (GM/SEC)	CONDITION	MALFUNCTION
Approximately 0.0	• Engine not running • 30 seconds after ignition switch tuned to ON	• Open in mass air flow meter power source circuit • Open or short in VG circuit
0.48 or more		• Open in E2G circuit

NOTICE:

- Perform the inspection with the vehicle indoors and on a level surface.
- Perform the inspection of the mass air flow meter while it is installed to the air cleaner case (installed to the vehicle).
- During the test, do not use an exhaust air duct on the exhaust tail pipe assembly.

MONITOR DESCRIPTION

If there is a defect in the mass air flow meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the mass air flow meter circuit and sets a DTC.

Example:

When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

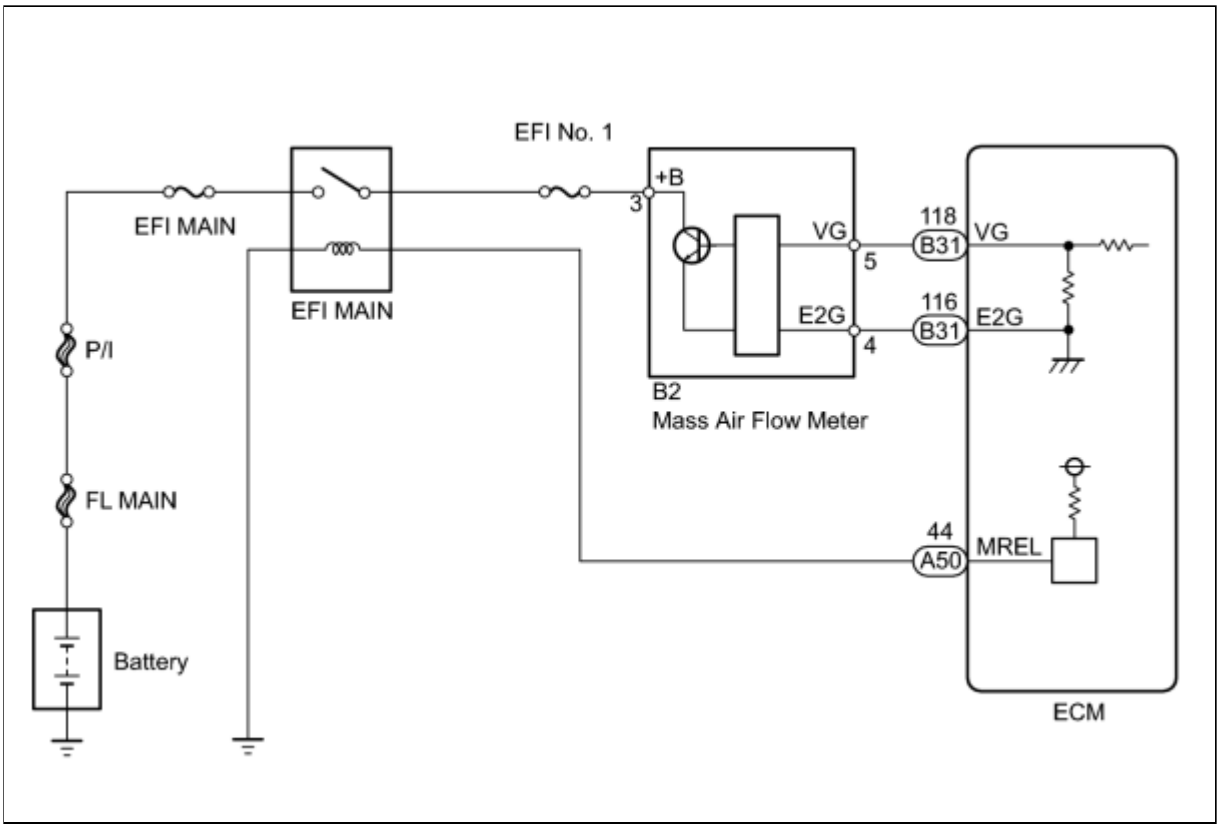
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air fuel ratio was lean or rich, as well as other data from the time the malfunction.

PROCEDURE

1.	**READ DTC OUTPUT**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / DTC.

(e) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC P0102 is output	A
DTC P0103 is output	B

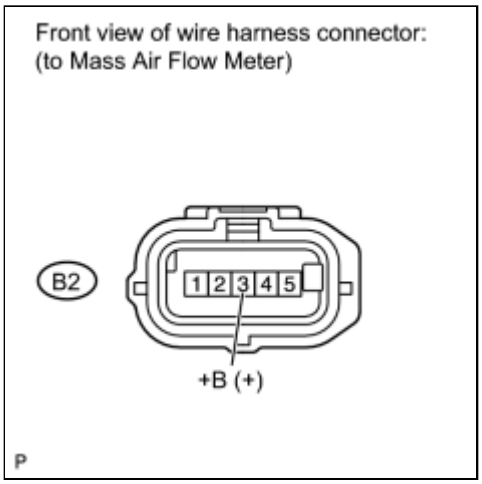
HINT:

***: The value must change when the throttle valve is open or closed with the engine running.**

B ▶ **CHECK HARNESS AND CONNECTOR (SENSOR GROUND)**

A ▼

2.	**INSPECT MASS AIR FLOW METER (POWER SOURCE VOLTAGE)**



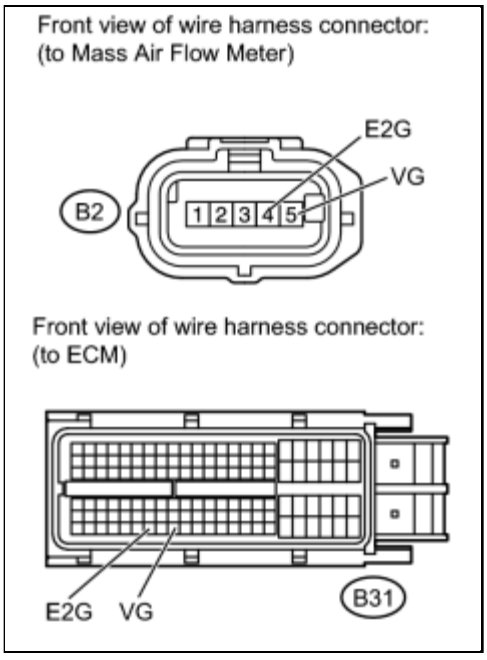
(a) Disconnect the mass air flow meter connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B2-3 (+B) - Body ground	Ignition switch ON	11 to 14 V



(d) Reconnect the mass air flow meter connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY (EFI MAIN RELAY - MASS AIR FLOW METER))**

OK ▼

3.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

(a) Disconnect the mass air flow meter connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

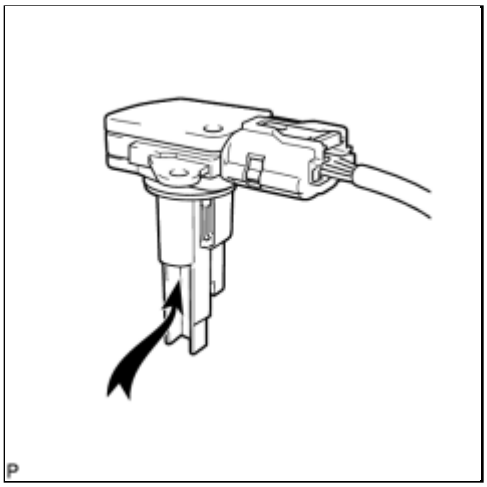
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B2-5 (VG) - B31-118 (VG)	Always	Below 1 Ω
B2-4 (E2G) - B31-116 (E2G)		

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED

		CONDITION
B2-5 (VG) or B31-118 (VG) - Body ground	Always	10 kΩ or higher



(d) Reconnect the mass air flow meter connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MASS AIR FLOW METER - ECM)**

OK ▼

4.	INSPECT MASS AIR FLOW METER

(a) Perform On-vehicle Inspection INFO .

(b) Perform Inspection INFO .

(c) Inspect the function of the mass air flow meter.

(1) Remove the mass air flow meter with the connector connected.

(2) Connect the Techstream to the DLC3.

(3) Turn the engine switch to ON.

(4) Turn the Techstream on.

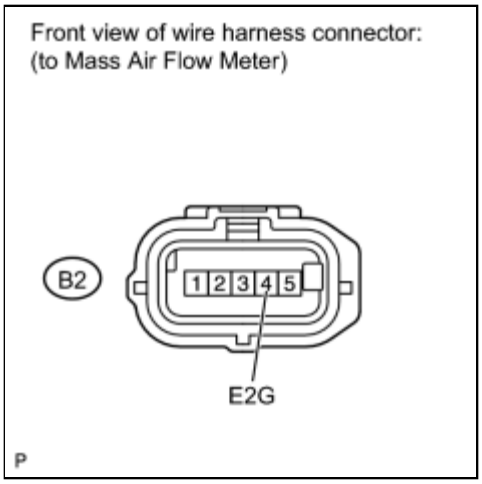
(5) Enter the following menus: Powertrain / Engine / Data List / MAF.

(6) Blow air to the mass air flow meter and check that the intake air amount reading changes.

OK:

The reading changes.

NG ▶ REPLACE MASS AIR FLOW METER



OK ▶ REPLACE ECM

5.	CHECK HARNESS AND CONNECTOR (SENSOR GROUND)

(a) Disconnect the mass air flow meter connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B2-4 (E2G) - Body ground	Always	Below 1 Ω

(c) Reconnect the mass air flow meter connector.

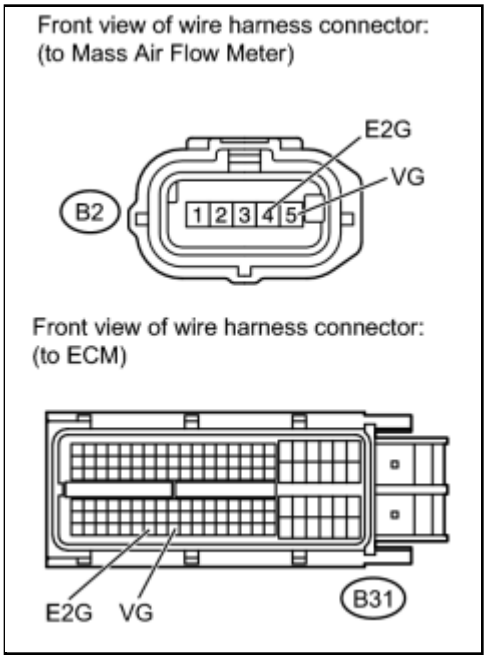
NG ▶ CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

OK ▶ REPLACE MASS AIR FLOW METER

6.	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - ECM)

(a) Disconnect the mass air flow meter connector.

(b) Disconnect the ECM connector.



(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B2-5 (VG) - B31-118 (VG)	Always	Below 1 Ω
B2-4 (E2G) - B31-116 (E2G)		

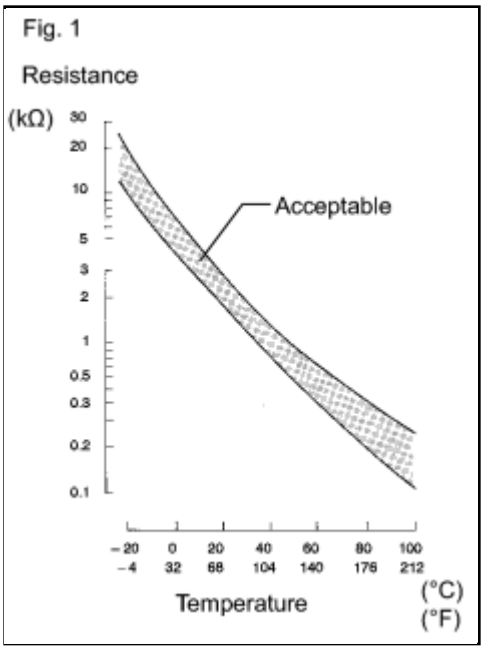
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B2-5 (VG) or B31-118 (VG) - Body ground	Always	10 kΩ or higher

(d) Reconnect the mass air flow meter connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (MASS AIR FLOW METER - ECM)**



OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PF3094X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0112,P0113: Intake Air Temperature Circuit Low Input (2010 Corolla)		

DTC	**P0112**	**Intake Air Temperature Circuit Low Input**

DTC	**P0113**	**Intake Air Temperature Circuit High Input**

DESCRIPTION

The intake air temperature sensor, mounted on the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (see Fig. 1).
The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R which is located inside the ECM.
Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

HINT:

When any of DTCs P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the intake air temperature is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is

detected.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0112	Short in intake air temperature sensor circuit for 0.5 seconds (1 trip detection logic)	• Short in intake air temperature sensor circuit • Intake air temperature sensor (built into mass air flow meter) • ECM
P0113	Open in intake air temperature sensor circuit for 0.5 seconds (1 trip detection logic)	• Open in intake air temperature sensor circuit • Intake air temperature sensor (built into mass air flow meter) • ECM

HINT:

When any of these DTCs are set, check the intake air temperature by entering the following menus: Powertrain / Engine and ECT / All Data / Intake Air.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the intake air temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the intake air temperature sensor and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the intake air temperature sensor circuit, and sets DTC P0113. Conversely, if the output voltage is less than 0.18 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001WPH02PX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0111: Intake Air Temperature Sensor Gradient Too High (2010 Corolla)		

DTC	**P0111**	**Intake Air Temperature Sensor Gradient Too High**

DESCRIPTION

The intake air temperature sensor, part of the mass air flow meter, monitors the intake air temperature. The intake air temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the intake air temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are transmitted to the ECM as voltage changes (See Fig. 1).

The intake air temperature sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R which is located inside the ECM.

Resistor R and the intake air temperature sensor are connected in series. When the resistance value of the intake air temperature sensor changes, according to changes in the intake air temperature, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve driveability.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0111	When either of following conditions is met (2 trip detection logic): • In duration between engine warmed up and next engine starts, change in intake air temperature sensor output bellow threshold	Mass air flow meter

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
	• During engine warming up after cold engine starts, change in intake air temperature sensor output bellow threshold	

MONITOR DESCRIPTION

After a warm engine is stopped

The ECM monitors the intake air temperature variation in the period from when the engine was warmed up on the previous trip until the next engine start. If the change in engine coolant temperature sensor output is less than the threshold, it is determined that a malfunction has occurred in the intake air temperature sensor. When this is detected, the MIL is illuminated and the DTC is set.

After a cold engine is started

The monitor runs when the engine is started cold after 5 hours or more have elapsed since the engine stopped. If the intake air temperature sensor output variation until the engine has warmed up completely is less than the threshold, it is determined that a malfunction has occurred in the intake air temperature sensor. When this is detected in 2 consecutive driving cycles, the MIL is illuminated and the DTC is set.

MONITOR STRATEGY

Related DTCs	P0111: Intake air temperature sensor rationality (After engine stop) P0111: Intake air temperature sensor rationality (After cold engine start)
Required Sensors/Components (Main)	Intake air temperature sensor

		• Engine coolant temperature sensor • ECM

HINT:

When any of these DTCs are set, check the engine coolant temperature by entering the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

TEMPERATURE DISPLAYED	MALFUNCTION
-40°C (-40°F)	Open circuit
140°C (284°F)	Short circuit

MONITOR DESCRIPTION

The engine coolant temperature sensor is used to monitor the engine coolant temperature. The engine coolant temperature sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature becomes low, the resistance in the thermistor increases. When the temperature becomes high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the engine coolant temperature. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the engine coolant temperature sensor circuit and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the engine coolant temperature sensor circuit, and sets DTC P0118. Conversely, if the voltage output is less than 0.14 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

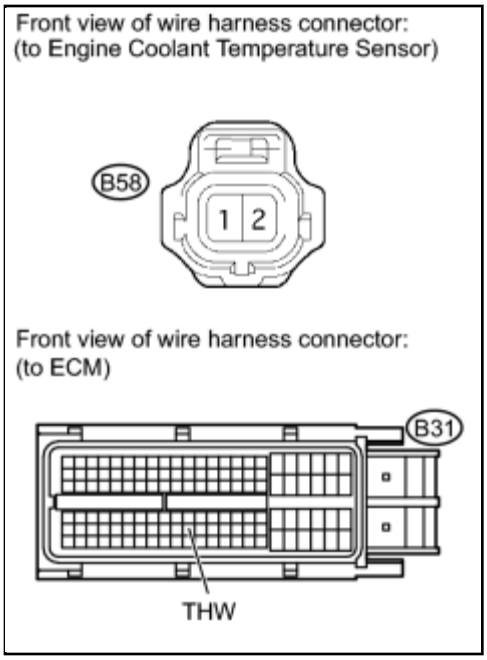
(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Coolant Temp.

(f) Read the value displayed on the Techstream.



Standard Value:
-40°C (-40°F)

(g) Reconnect the engine coolant temperature sensor connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

OK ▶ **REPLACE ENGINE**

5.	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)

(a) Disconnect the engine coolant temperature sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B58-2 or B31-97 (THW) - Body ground	Always	10 kΩ or higher

(d) Reconnect the engine coolant temperature sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - ECM)**

OK ▶ **REPLACE ECM**

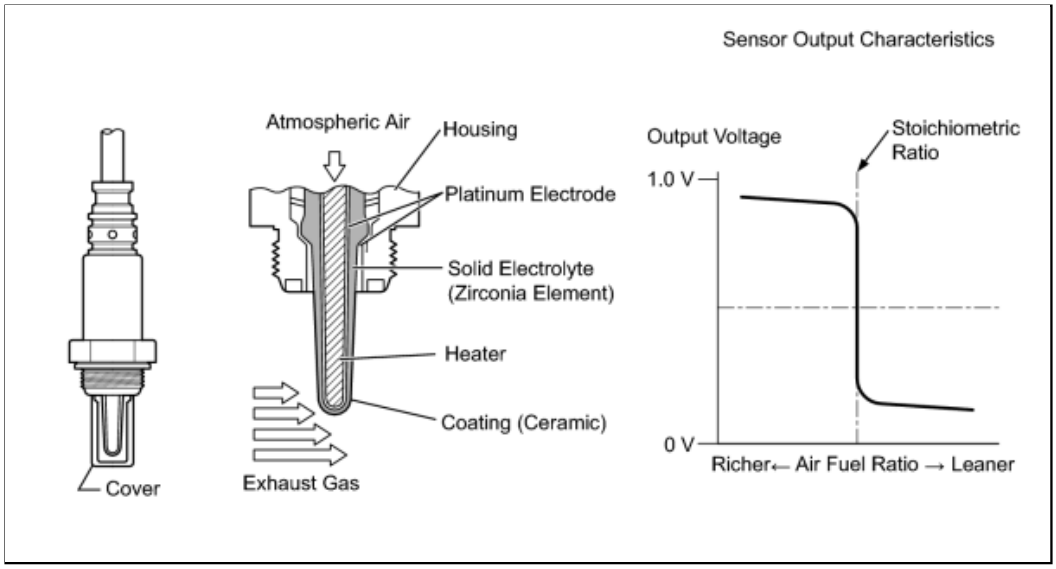
DESCRIPTION



A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the three-way catalytic converter to function effectively, it is necessary to keep the air fuel ratio of the engine near the stoichiometric air fuel ratio. For the purpose of helping the ECM to deliver accurate air fuel ratio control, the heated oxygen sensor is used.

The heated oxygen sensor is located behind the three-way catalytic converter, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).

When the air fuel ratio becomes lean, the oxygen concentration in the exhaust gas is great. The heated oxygen sensor informs the ECM that the post three-way catalytic converter air fuel ratio is lean (low voltage, i.e. less than 0.45 V).

Conversely, when the air fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes small. The heated oxygen sensor informs the ECM that the post-TWC air fuel ratio is rich (high voltage, i.e. more than 0.45 V). The heated oxygen sensor has the property of changing its output voltage drastically when the air fuel ratio is close to the stoichiometric level.

The ECM uses the supplementary information from the HO2 sensor to determine whether the air fuel ratio after the three-way catalytic converter is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the heated oxygen sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air fuel ratio control.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0136	• Abnormal voltage output: During active air fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic) (a) Heated oxygen sensor voltage does not decrease to less than 0.21 V (b) Heated oxygen sensor voltage does not increase to more than 0.59 V • Low impedance: Sensor impedance less than 5 Ω for more than 30 seconds when ECM presumes sensor to being warmed up and operating normally (2 trip detection logic)	• Open or short in heated oxygen sensor (bank 1 sensor 2) circuit • Heated oxygen sensor (bank 1 sensor 2) • Heated oxygen sensor heater (bank 1 sensor 2) • Air fuel ratio sensor (bank 1 sensor 1) • Gas leaks from exhaust system
P0137	• Low voltage (open): During active air fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic) (a) Heated oxygen sensor voltage output less than 0.21 V (b) Target air fuel ratio rich • High impedance: Sensor impedance 15 kΩ or more for more than 90 seconds when ECM presumes sensor to be warmed up and operating normally (2 trip detection logic)	• Open in heated oxygen sensor (bank 1 sensor 2) circuit • Heated oxygen sensor (bank 1 sensor 2) • Heated oxygen sensor heater (bank 1 sensor 2) • Air fuel ratio sensor (bank 1 sensor 1) • Gas leaks from exhaust system
P0138	• High voltage (short): During active air fuel ratio control, following conditions (a) and (b) met for certain period of time (2 trip detection logic) (a) Heated oxygen sensor voltage output 0.59 V or more (b) Target air fuel ratio lean	• Short in heated oxygen sensor (bank 1 sensor 2) circuit • Heated oxygen sensor (bank 1 sensor 2) • ECM

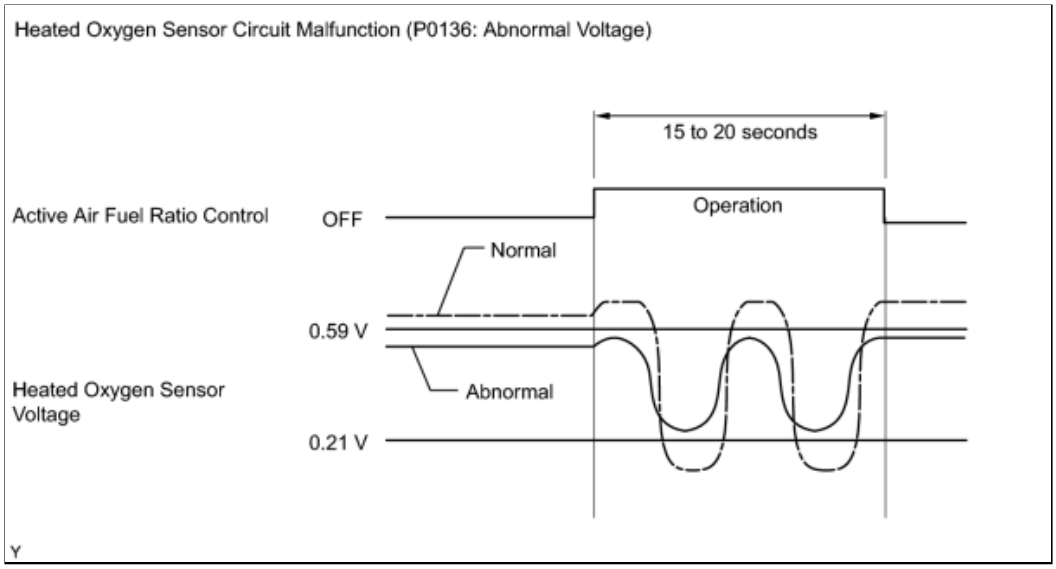
P0139	Not applicable	None

MONITOR DESCRIPTION



1. Active Air Fuel Ratio Control

The ECM usually performs air fuel ratio feedback control so that the air fuel ratio sensor output indicates a near stoichiometric air fuel ratio. This vehicle includes active air fuel ratio control in addition to regular air fuel ratio control. The ECM performs active air fuel ratio control to detect any deterioration in the three-way catalytic converter and heated oxygen sensor malfunctions (refer to the diagram below).

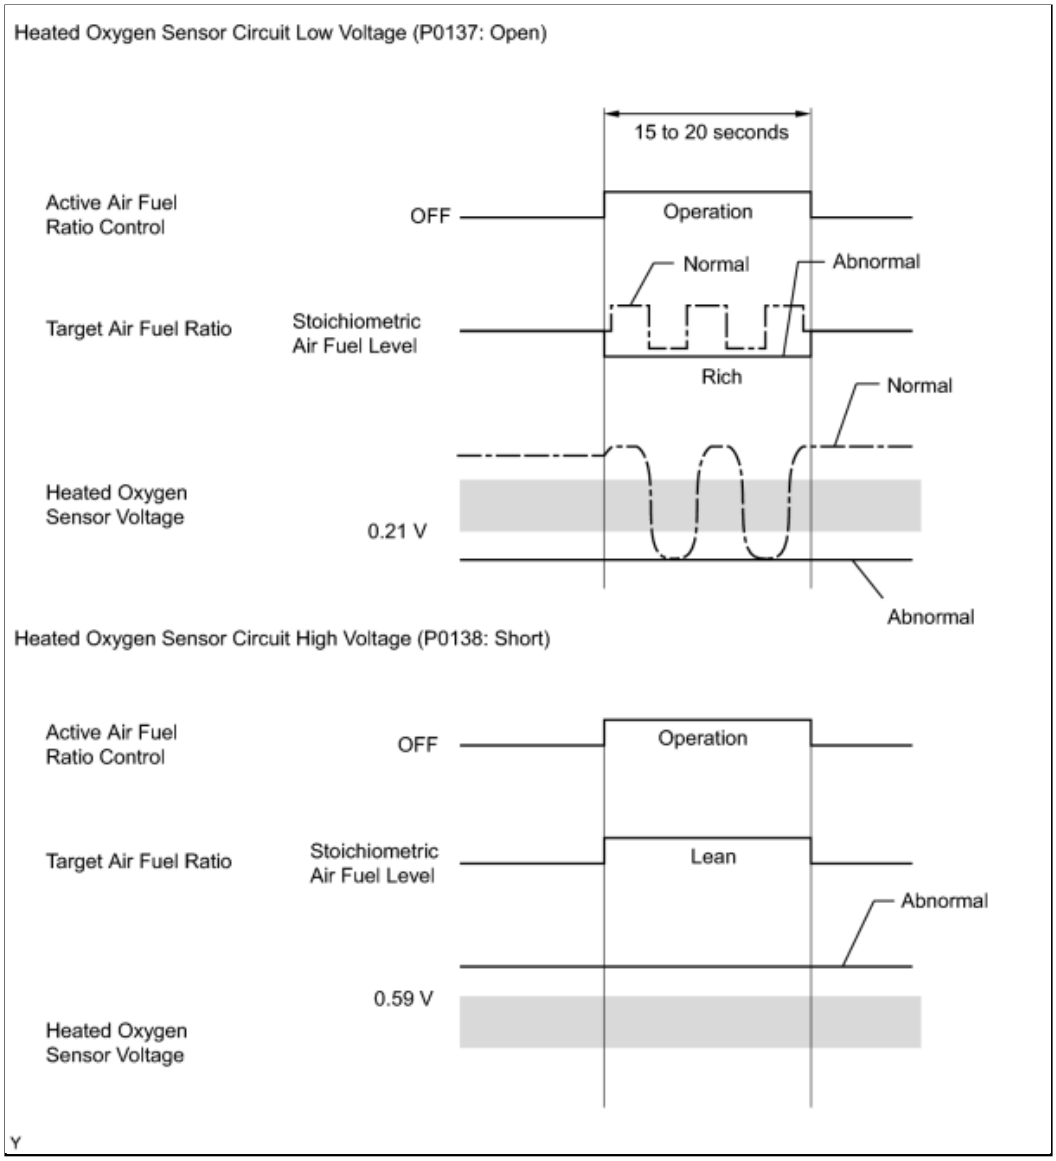
Active air fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air fuel ratio control, the air fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, a DTC is set.

2. Abnormal Voltage Output of Heated Oxygen (HO2) Sensor (DTC P0136)

While the ECM is performing active air fuel ratio control, the air fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the heated oxygen sensor voltage does not decrease to less than 0.21 V or does not increase to more than 0.59 V during active air fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTCs P0136.

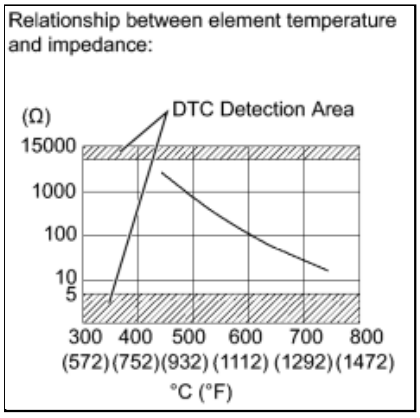
3. Open or Short in Heated Oxygen Sensor Circuit (DTCs P0137 or P0138)

During active air fuel ratio control, the ECM calculates the oxygen storage capacity* of the three-way catalytic converter by forcibly regulating the air fuel ratio to become rich or lean.



If the heated oxygen sensor has an open or short, or the voltage output of the sensor noticeably decreases, the oxygen storage capacity indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air fuel ratio to become rich or lean, the heated oxygen sensor output does not change.

While performing active air fuel ratio control, when the target air fuel ratio is rich and the heated oxygen sensor voltage output is 0.21 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137. When the target air fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138.



HINT:

DTC P0138 is also set if the heated oxygen sensor voltage output is more than 1.2 V for 10 seconds or more.

***: The three-way catalytic converter has the capability to store oxygen. The oxygen storage capacity and the emission purification capacity of the three-way catalytic converter are mutually related. The ECM determines whether the catalyst has deteriorated, based on the calculated oxygen storage capacity value** INFO **.**

4. High or Low Impedance of Heated Oxygen Sensor (DTCs P0136 or P0137)

During normal air fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variation of the heated oxygen sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.

*: The effective resistance in an alternating current electrical circuit.

HINT:

- The impedance cannot be measured using an ohmmeter.
- DTC P0136 indicates the deterioration of the heated oxygen sensor. The ECM sets the DTCs by calculating the impedance of the sensor when the typical enabling conditions are satisfied (2 driving cycles).
- DTC P0137 indicates an open or short circuit in the heated oxygen sensor (2 driving cycles). The ECM sets the DTCs when the impedance of the sensor exceeds the threshold of 15 kΩ.

5. Abnormal Voltage Output of Heated Oxygen Sensor During Fuel-cut (DTC P0139)

The sensor output voltage drops to below 0.2 V (extremely Lean status) immediately when the vehicle decelerates and fuel cut is operating. If the voltage does not drop to below 0.2 V for 7 seconds or more, or voltage does not drop from 0.35 V to 0.2 V for 1 seconds, the ECM determines that the sensor response has deteriorated, illuminates the MIL and sets a DTC.

Heated Oxygen Sensor Output Voltage (Output Voltage, High Voltage and Low Voltage):

Active air fuel ratio control	Executing
Active air fuel ratio control begins when all of following conditions are met:	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	OFF
Engine RPM	Less than 4000 rpm
Air fuel ratio sensor status	Activated
Fuel system status	Closed loop
Fuel cut	OFF
Engine load	10 to 80%
Shift position	A/T models: 4th or more M/T models: 3th or more

Heated Oxygen Sensor Impedance (Low):

Battery voltage	11 V or more
Estimated sensor temperature	Less than 700°C (1292°F)
ECM monitor	Completed
DTC P0607	Not set

Heated Oxygen Sensor Impedance (High):

Battery voltage	11 V or more
Estimated sensor temperature	450°C (842°F) or more, less than 750°C (1382°F)
DTC P0607	Not set

Heated Oxygen Sensor Output Voltage (Extremely High):

Battery voltage	11 V or more
Time after engine start	2 seconds or more

Heated oxygen sensor voltage during fuel cut:

Engine coolant temperature	75°C (167°F) or more
Catalyst temperature	400°C (752°F) or more
Fuel cut	Executing

TYPICAL MALFUNCTION THRESHOLDS

Heated Oxygen Sensor Output Voltage (Output voltage):

Either of following conditions are met:	1 or 2
1. All of following conditions (a), (b) and (c) are met	-
(a) Commanded air fuel ratio	14.3 or less
(b) Rear heated oxygen sensor voltage	0.21 to 0.59 V
(c) Oxygen storage capacity of catalyst	2.0 g or more
2. All of following conditions (d), (e) and (f) are met	-
(d) Commanded air fuel ratio	14.9 or more
(e) Rear heated oxygen sensor voltage	0.21 to 0.59 V
(f) Oxygen storage capacity of catalyst	2.0 g or more

Heated Oxygen Sensor Output Voltage (Low output voltage):

All of following conditions (a), (b) and (c) are met	-
(a) Commanded air fuel ratio	14.3 or less
(b) Rear heated oxygen sensor voltage	Less than 0.21 V
(c) Oxygen Storage Capacity of Catalyst	2.0 g or more

Heated Oxygen Sensor Output Voltage (High output voltage):

All of following conditions (a), (b) and (c) are met	-
(a) Commanded air fuel ratio	14.9 or more
(b) Rear heated oxygen sensor voltage	More than 0.59 V
(c) Oxygen Storage Capacity of Catalyst	2.0 g or more

Heated Oxygen Sensor Impedance (Low):

Duration of following condition	30 seconds or more
Heated oxygen sensor impedance	Less than 5 Ω

Heated Oxygen Sensor Impedance (High):

Duration of following condition	90 seconds or more
Heated oxygen sensor impedance	15 kΩ or more

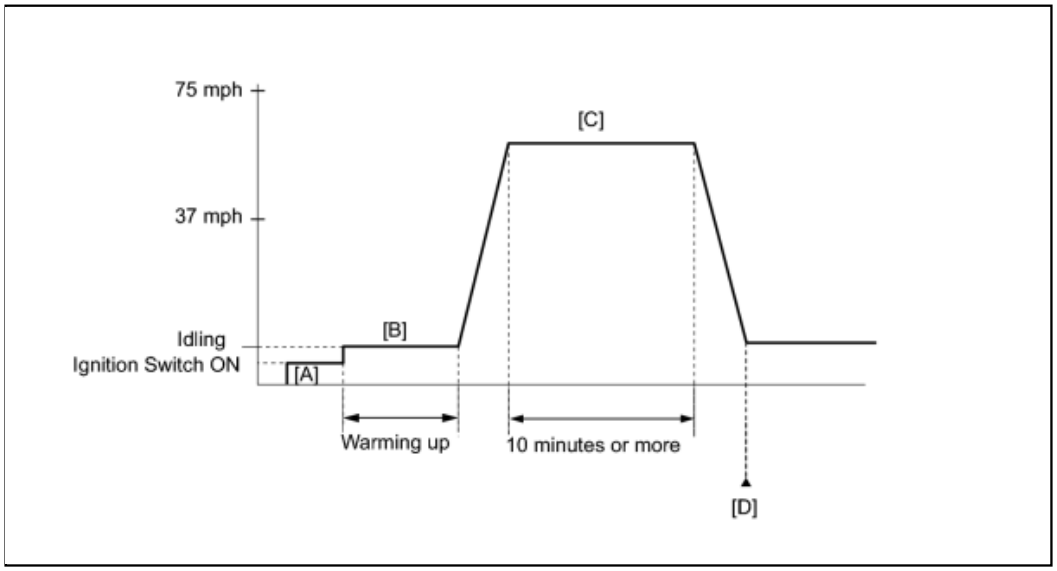
Heated Oxygen Sensor Output Voltage (Extremely High):

Duration of following condition	10 seconds or more
Heated oxygen sensor voltage	1.2 V or more

Heated Oxygen Sensor Voltage During Fuel-cut:

Duration until rear heated oxygen sensor voltage drops to 0.2 V after fuel cut	7 seconds or more
Duration that rear oxygen sensor voltage drops from 0.35 V to 0.2 V during fuel cut	1 seconds or more

COMPONENT OPERATING RANGE



Duration of following condition	30 seconds or more
Heated oxygen sensor voltage	Less than 1.2 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS INFO .

CONFIRMATION DRIVING PATTERN

P0136, P0137 and P0138

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
7. With the transmission in 4th gear or higher, drive the vehicle at 37 to 75 mph (60 to 120 km/h) for 10 minutes or more [C].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P0136, P0137 or P0138.
10. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions

TECHSTREAM DISPLAY	DESCRIPTION
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

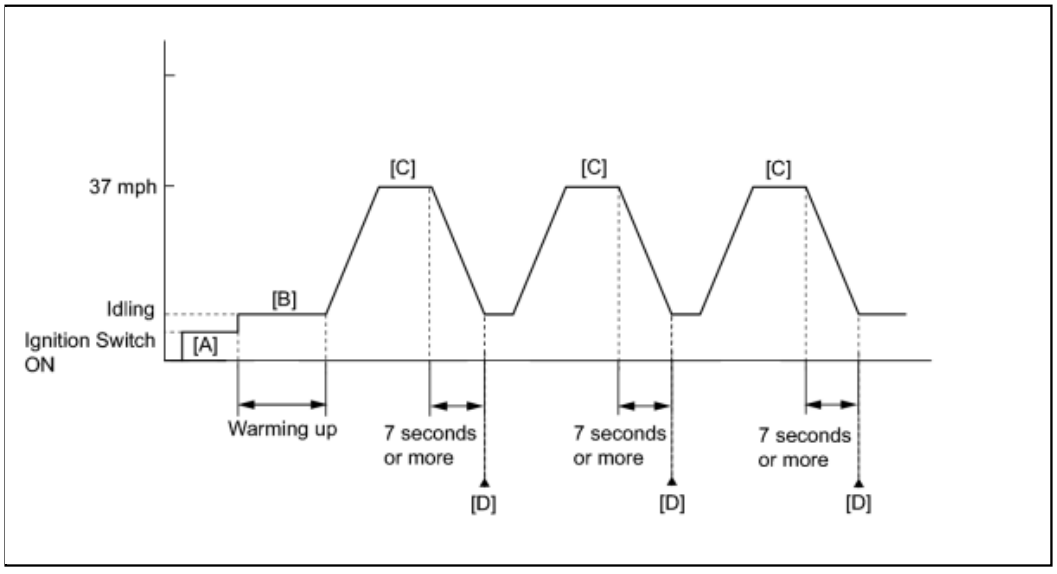
When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [C] and [D].

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

P0139

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up until the engine coolant temperature reaches 75°C (167°F) or higher [B].
7. Drive the vehicle at 37 mph (60 km/h), and then decelerate the vehicle by releasing the accelerator pedal for 7 seconds or more to perform the fuel cut [C].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P0139.

10. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

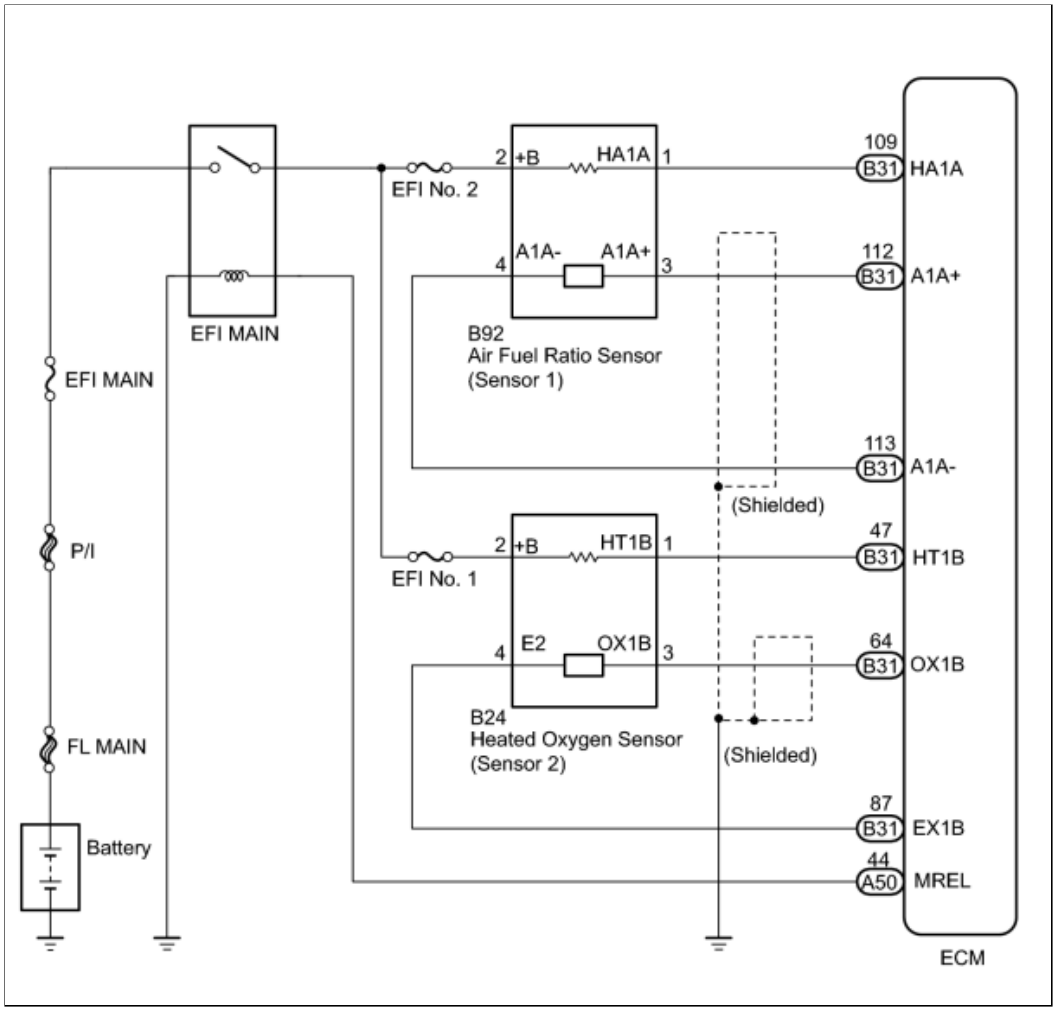
When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, move the shift lever to 2 and then perform steps [C] through [D] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

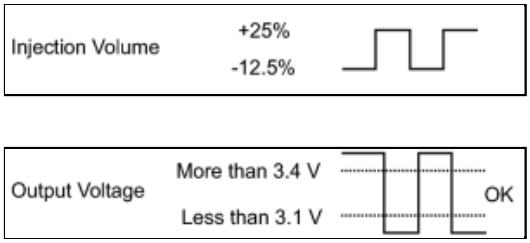
INSPECTION PROCEDURE

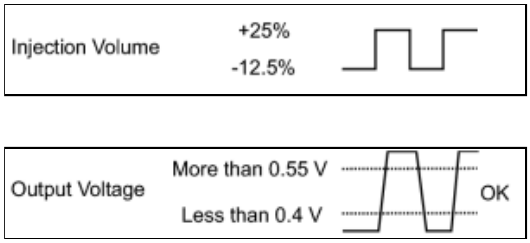
HINT:

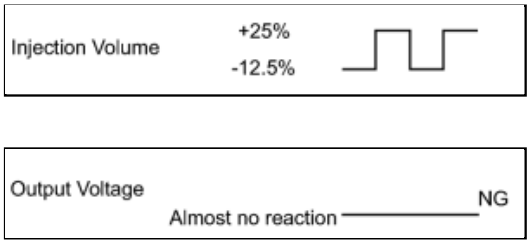
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

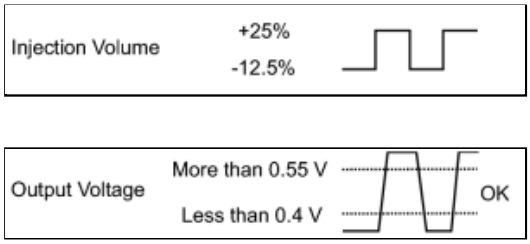
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

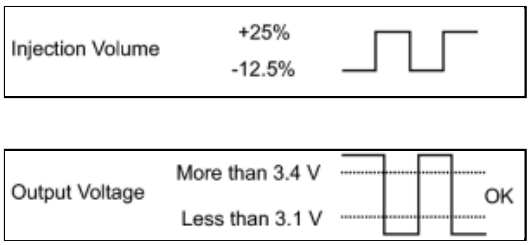
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

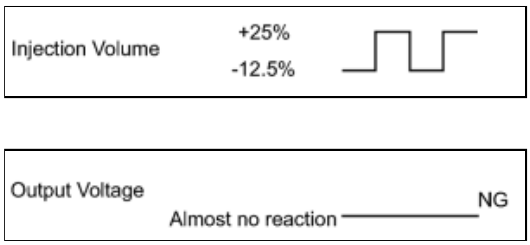


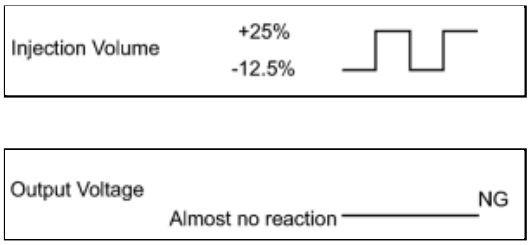


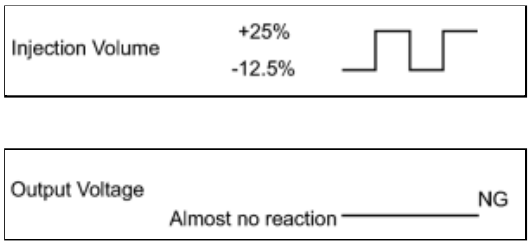












HINT:

- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATE	VOLTAGE
AFS Voltage B1 S1 (Air fuel ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• A/F sensor • A/F sensor heater • A/F sensor circuit
3			• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2; then press the

graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ DTC OUTPUT (DTC P0136, P0137, P0138 OR P0139)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0138	A
P0137	B
P0136	C
P0139	D

D ▶ **READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)**

C ▶ **READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)**

B ▶ **CHECK FOR EXHAUST GAS LEAK**

A ▼

2.	**READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Select the following menu items: Powertrain / Engine and ECT / Data List / A/F Control System / O2S B1

S2.

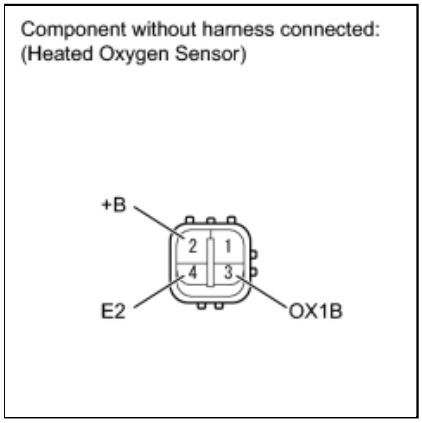
(e) Allow the engine to idle.

(f) Read the heated oxygen sensor output voltage while idling.

Result:

RESULT	PROCEED TO
1.0 V or more	A
Less than 1.0 V	B

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM**



A ▼

3.	**INSPECT HEATED OXYGEN SENSOR (CHECK FOR SHORT)**

(a) Disconnect the heated oxygen sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

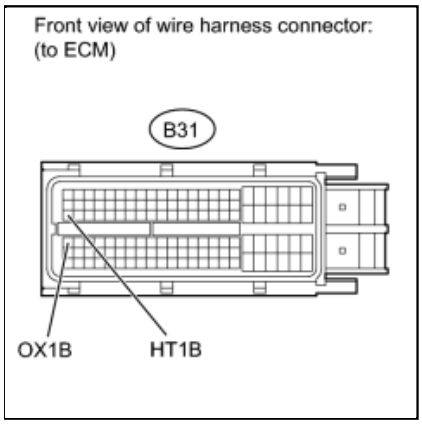
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (+B) - 4 (E2)	Always	10 kΩ or higher
2 (+B) - 3 (OX1B)		

(c) Reconnect the heated oxygen sensor connector.

NG ▶ **REPLACE HEATED OXYGEN SENSOR**

OK ▼



4.	**CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT)**

(a) Turn the ignition switch to off and wait for 5 minutes or more.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-47 (HT1B) - B31-64 (OX1B)	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

5.	PERFORM ACTIVE TEST USING TECHSTREAM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

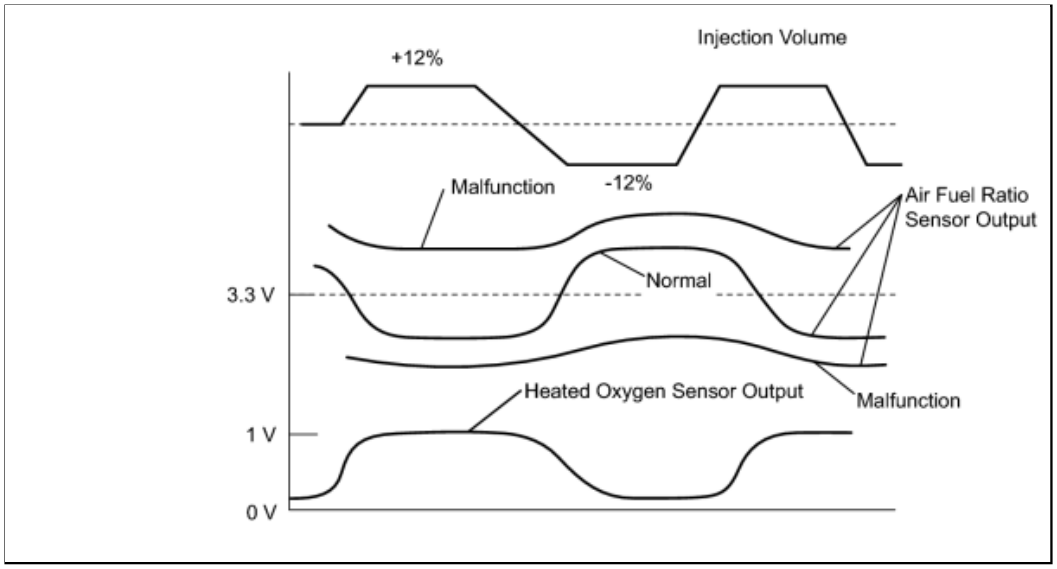
(c) Turn the Techstream on.

(d) Start the engine and warm it up.

(e) Select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume.

(f) Change the fuel injection volume using the Techstream, and monitor the voltage output of air fuel ratio and heated oxygen sensors displayed on the Techstream.

HINT:



- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in 1% graduations within the range.
- The A/F sensor is displayed as AFS Voltage B1 S1, and the HO2 sensor is displayed as O2S B1 S2 on the Techstream.

Result:

TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
AFS Voltage B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:

A normal heated oxygen sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the air fuel ratio sensor voltage remains at either less or more than 3.3 V despite the heated oxygen sensor indicating a normal reaction, the air fuel ratio sensor is malfunctioning.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▼

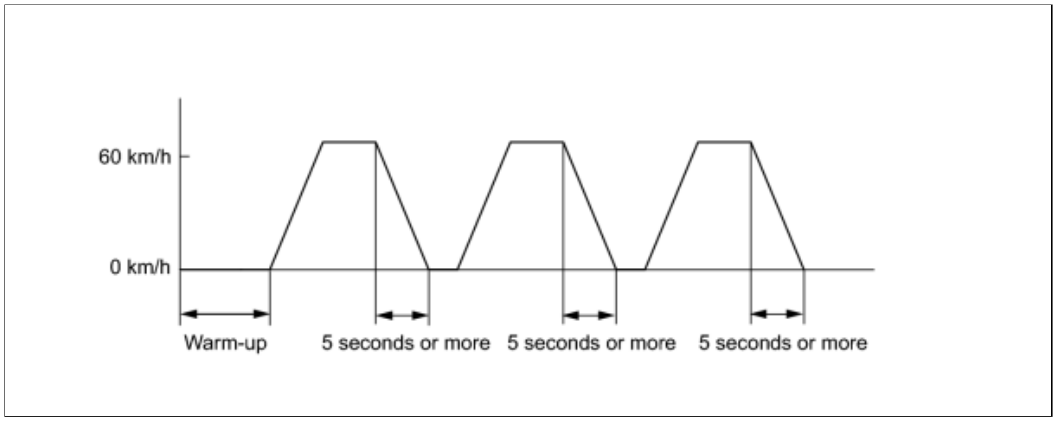
6.	**INSPECT AIR FUEL RATIO SENSOR**

HINT:

This air fuel ratio sensor test is to check the air fuel ratio sensor current during the fuel-cut. When the sensor is normal, the sensor current will indicate below 3.0 mA in this test.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.



(c) Turn the Techstream on.

(d) Drive the vehicle according to the drive pattern listed below:

(1) Warm up the engine until the engine coolant temperature reaches 75°C (167°F) or more.

(2) Drive the vehicle at 60 km/h (40 mph) or more and decelerate the vehicle for 5 seconds or more.

(3) Repeat the deceleration above at least 3 times.

(e) Select the following menu items: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details.

(f) Confirm that RANGE B1S1 is either Pass or Fail. If the Techstream shows Incomplete, re-check RANGE B1S1 after performing the drive pattern.

(g) Select the RANGE B1S1.

(h) Read the Test Value.

Standard current:
Less than 3.0 mA

HINT:

If the Techstream shows Incomplete again, increase the vehicle speed and use second gear to decelerate the vehicle. Refer to the CONFIRMATION DRIVING PATTERN.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▶ **REPLACE HEATED OXYGEN SENSOR**

7.	READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Start the engine.

(e) Select the following menu items: Powertrain / Engine and ECT / Data List / A/F Control System / O2S B1 S2.

(f) After warming up the engine, run the engine at an engine speed of 2500 rpm for 3 minutes.

(g) Read the output voltage of the heated oxygen sensor when the engine rpm is suddenly increased.

HINT:

Quickly accelerate the engine to 4000 rpm 3 times using the accelerator pedal.

Standard:
Fluctuates between 0.4 V or less and 0.5 V or more.

NG ▶ **CHECK FOR EXHAUST GAS LEAK**

OK

8.	PERFORM ACTIVE TEST USING TECHSTREAM (INJECTION VOLUME)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

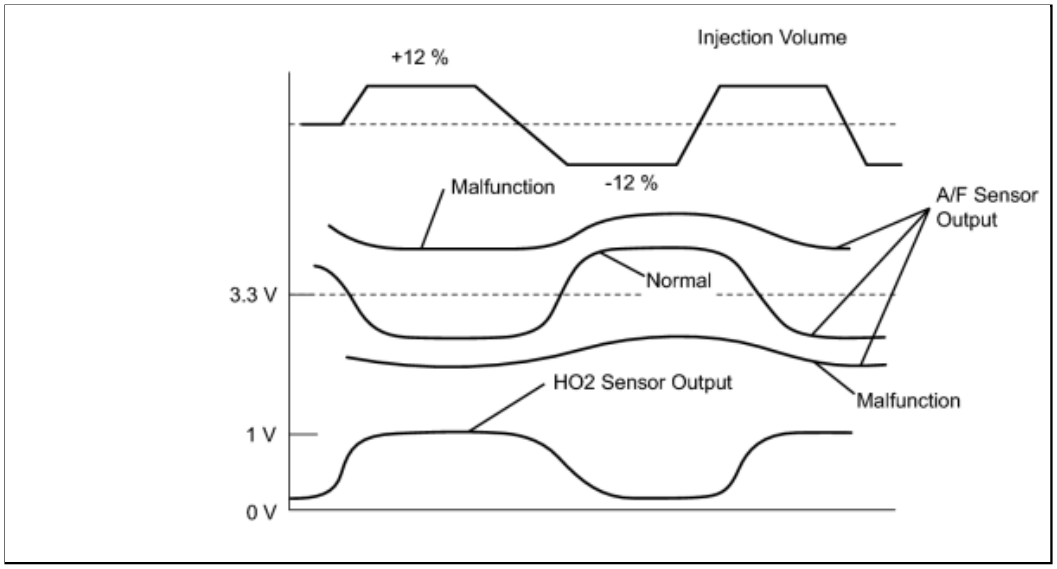
(c) Turn the Techstream on.

(d) Start the engine and warm it up.

(e) Select the following menu items: Powertrain / Engine and ECT / Active Test / Control the Injection Volume.

(f) Change the fuel injection volume using the Techstream, and monitor the voltage output of air fuel ratio and heated oxygen sensors displayed on the Techstream.

HINT:



- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in 1% graduations within the range.
- The A/F sensor is displayed as AFS Voltage B1 S1, and the HO2 sensor is displayed as O2S B1 S2 on the Techstream.

Result:

TECHSTREAM DISPLAY (SENSOR)	VOLTAGE VARIATION	PROCEED TO
AFS Voltage B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:

A normal heated oxygen sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the air fuel ratio sensor voltage remains at either less or more than 3.3 V despite the heated oxygen sensor indicating a normal reaction, the air fuel ratio sensor is malfunctioning.

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▶ **CHECK ENGINE TO DETERMINE CAUSE OF EXTREMELY RICH OR LEAN ACTUAL AIR FUEL RATIO**

9.	**CHECK FOR EXHAUST GAS LEAK**

OK:
No gas leaks.

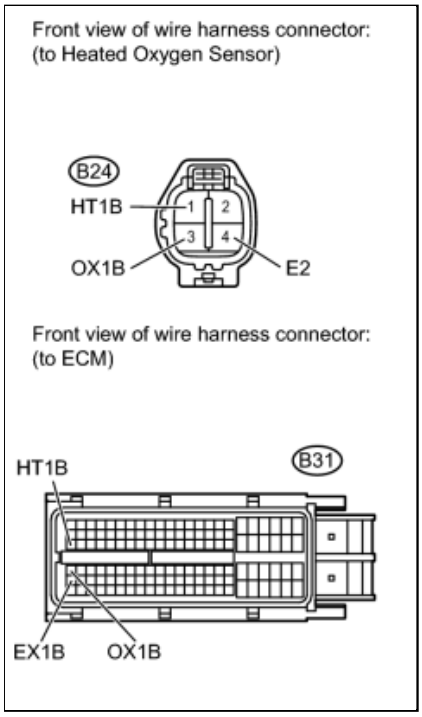
NG ▶ **REPAIR OR REPLACE EXHAUST GAS LEAK POINT**

OK ▼

10.	**INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)** INFO

NG ▶ **REPLACE HEATED OXYGEN SENSOR**

OK ▼



11.	**CHECK HARNESS AND CONNECTOR (HEATED OXYGEN SENSOR - ECM)**

(a) Disconnect the heated oxygen sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B24-1 (HT1B) - B31-47 (HT1B)	Always	Below 1 Ω
B24-3 (OX1B) - B31-64 (OX1B)		
B24-4 (E2) - B31-87 (EX1B)		

Standard resistance (Check for short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B24-1 (HT1B) or B31-47 (HT1B) - Body ground	Always	10 kΩ or higher
B24-3 (OX1B) or B31-64 (OX1B) - Body ground		

(d) Reconnect the heated oxygen sensor connector.

(e) Reconnect the ECM connector.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFB0A7X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0116: Engine Coolant Temperature Circuit Range / Performance Problem (2010 Corolla)		

DTC	**P0116**	**Engine Coolant Temperature Circuit Range / Performance Problem**

DESCRIPTION

Refer to DTC P0115 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0116	When either of following conditions met (2 trip detection logic) • During engine warming up after cold engine starts, change in Engine Coolant Temperature (ECT) sensor output bellow threshold • In duration between warmed engine stopped and next cold engine starts, change in ECT sensor output bellow threshold	• Thermostat • Engine coolant temperature sensor
	For Mexico Models: Case 1: Engine Coolant Temperature (ECT) between 35°C and 60°C (95°F and 140°F) when engine started, and conditions (a) and (b) met (2 trip detection logic) • (a) Vehicle driven at varying speeds (accelerated and decelerated) • (b) ECT remains within 3°C (37.4°F) of initial ECT Case 2: ECT more than 60°C (140°F) when engine started, and conditions (a) and (b) met (6 trip detection logic) • (a) Vehicle driven at varying speeds (accelerated and decelerated) • (b) ECT measurements remain within 1°C (33.8°F) of initial ECT on 6 successive occasions	

MONITOR DESCRIPTION

The engine coolant temperature sensor is used to monitor the engine coolant temperature. The engine coolant temperature sensor has a built-in thermistor with a resistance that varies according to the temperature of the engine coolant. When the engine coolant temperature becomes low, the resistance of the thermistor increases. When the temperature becomes high, the resistance drops. These variations in the resistance are reflected in the voltage output from the engine coolant temperature sensor.

The ECM monitors the sensor voltage and uses this value to calculate the engine coolant temperature. If the sensor voltage output deviates from the normal operating range, the ECM interprets this deviation as a malfunction in the engine coolant temperature sensor and sets the DTC.

Examples:

- Upon starting the engine, the engine coolant temperature is between 35°C and 60°C (95°F and 140°F). If the engine coolant temperature remains within 3°C (37°F) of the stating temperature after driving for 250 seconds, the DTC is set (2 trip detection logic).
- Upon starting the engine, the engine coolant temperature is over 60°C (140°F). If the engine coolant temperature remains within 1°C (34°F) of the starting temperature after driving for 250 seconds, the DTC is set (6 trip detection logic).

ECT sensor high side stuck monitor (only for Mexico models)

The ECM monitors the sensor voltage and uses this value to calculate the ECT. If the sensor voltage output deviates from the normal operating range, the ECM interprets this deviation as a malfunction in the ECT sensor and sets the DTC.

Examples:

- Upon starting the engine, the ECT is between 35°C and 60°C (95°F and 140°F). If after driving for 250 seconds, the ECT remains within 3°C (37.4°F) of the starting temperature, the DTC is set (2 trip detection logic).
- Upon starting the engine, the ECT is over 60°C (140°F). If after driving for 250 seconds, the ECM remains within 1°C (33.8°F) of the starting temperature, the DTC is set (6 trip detection logic).

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature sensor cold start monitor P0116: Engine coolant temperature sensor soak monitor
Required Sensors/Components (Main)	Engine coolant temperature sensor
Required Sensors/Components (Related)	None
Frequency of Operation	Once per driving cycle
Duration	5 hours or more
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Engine Coolant Temperature Sensor Cold Start Monitor

Monitor runs whenever following DTCs are not present	None

Battery voltage	10.5 V or more
Time after engine start	1 second or more
Engine coolant temperature at engine start	Less than 60°C (140°F)
Intake air temperature sensor circuit	OK
Soak time	0 or more
Accumulated mass air flow	490 g or more
Engine	Running
Fuel cut	OFF
Difference between engine coolant temperature at engine start and intake air temperature	Less than 40°C (104°F)

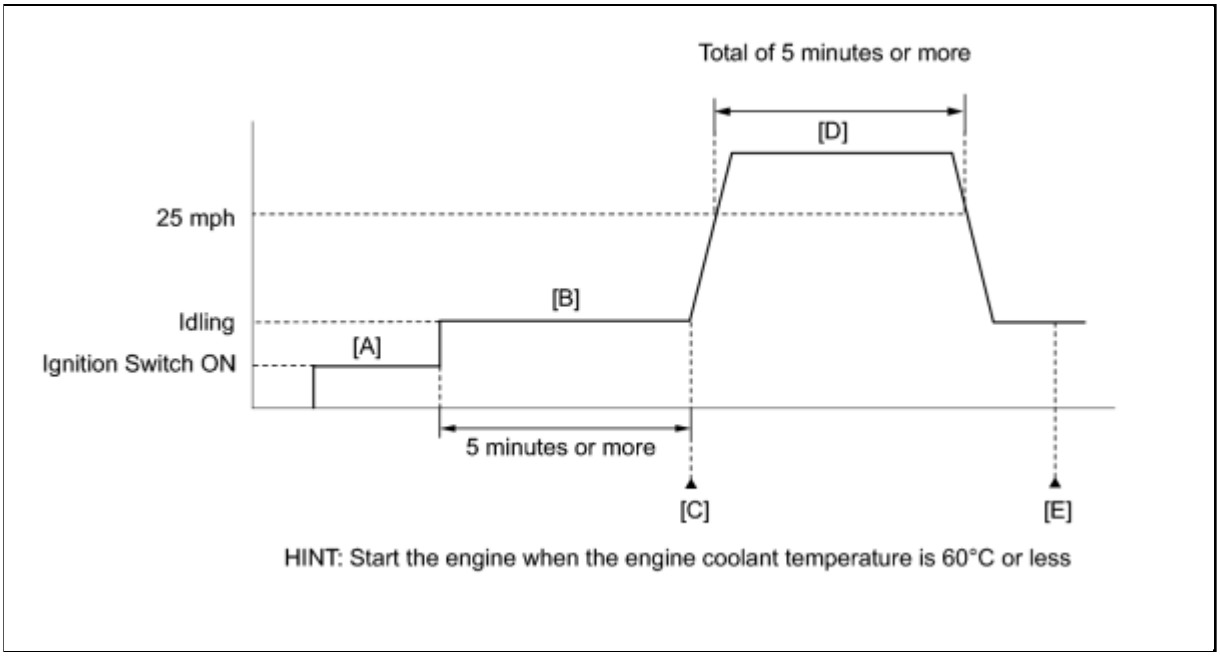
Engine Coolant Temperature Sensor Soak Monitor

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Engine	Running
Soak time	5 hours or more
Either (a) or (b) condition met	-
(a) Engine coolant temperature	60°C (140°F) or more
(b) Accumulated MAF	846 g or more

TYPICAL MALFUNCTION THRESHOLDS

Engine Coolant Temperature Sensor Cold Start Monitor

Engine coolant temperature sensor value change	Less than 5°C (41°F)



Engine Coolant Temperature Sensor Soak Monitor

Difference between current engine coolant temperature sensor value and previous engine coolant temperature sensor value when engine stopped	Less than 5°C (41°F)

COMPONENT OPERATING RANGE

Engine coolant temperature	Engine coolant temperature sensor value changes in accordance with actual engine coolant temperature

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Enter the following menu items: Powertrain / Engine / Data List / Coolant Temp.
4. Check that the coolant temperature is 60°C (140°F) or less.
5. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
6. Turn the ignition switch off.
7. Turn the ignition switch to ON and turn the Techstream on [A].
8. Start the engine and idle it for 5 minutes or more [B].

HINT:

If the engine coolant temperature does not change by 5°C (9°F) or higher, the engine coolant temperature sensor is malfunctioning. It is not necessary to continue this procedure.

9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0116.
11. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

TECHSTREAM DISPLAY	DESCRIPTION
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [D] and [E].

12. Drive the vehicle at 25 mph (40 km/h) or more for a total of 5 minutes or more [D].

HINT:

In the event of the drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed.

13. Check the DTC judgment result again [E].

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [D] and [E] again.

14. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
15. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

16. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the engine coolant temperature sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition

information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0116	A
P0116 and other DTCs	B

B ▶ **GO TO DTC CHART**

A ▼

2.	**INSPECT THERMOSTAT**

(a) Remove the thermostat INFO .

(b) Measure the valve opening temperature of the thermostat.

Standard Value:
80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat INFO .

NG → REPLACE THERMOSTAT

OK → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

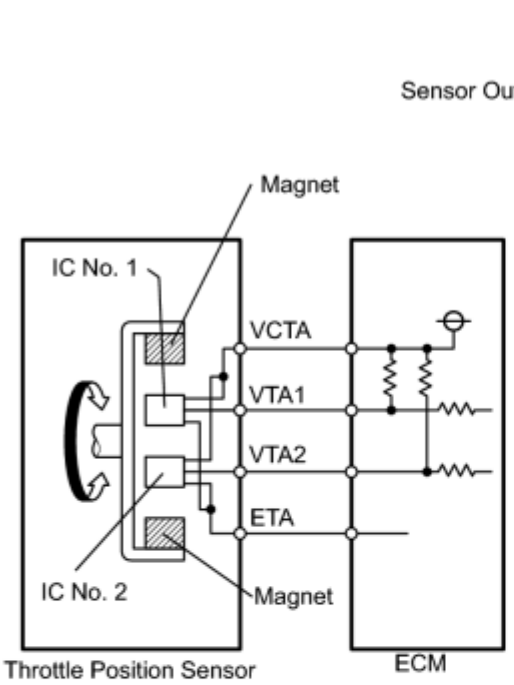
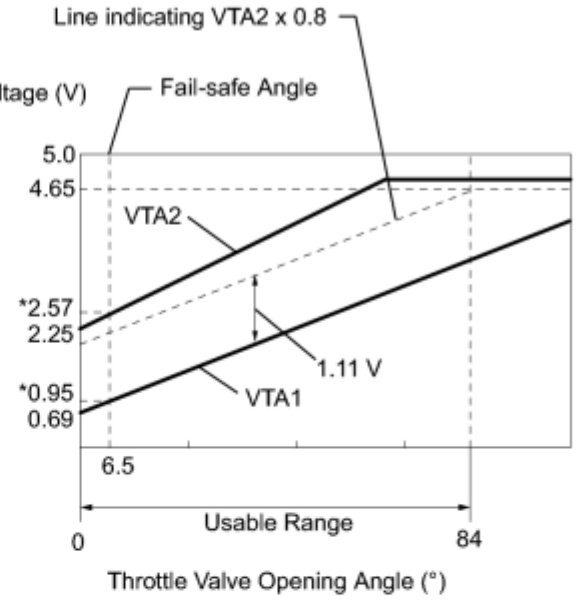
DTC	**P2135**	**Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation**

DESCRIPTION



HINT:



- These DTCs relate to the throttle position sensor.

The throttle position sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type. It uses Hall-effect elements in order to yield accurate signals even in extreme conditions.

The throttle position sensor has 2 sensor circuits, each of which transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM.

As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power enrichment correction and fuel-cut control.

*: During fail-safe control

Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as a percentage.

Between 10% and 22%: Throttle valve fully closed

Between 64% and 96%: Throttle valve fully open

Approximately 19%: Fail safe angle (6.5°)

Features of sensor output:

The difference in voltage between VTA1 and VTA2 x 0.8 is approximately 1.11 V.

(VTA2 × 0.8 is approximately equal to VTA1 + 1.11 V)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
		• ECM
P0121	Difference between VTA1 and VTA2 voltages less than 0.8 V, or more than 1.6 V for 2 seconds (1 trip detection logic)	• Throttle position sensor (built into throttle body) • Throttle position sensor circuit • ECM
P0122	Output voltage of VTA1 0.2 V or less for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body) • Short in VTA1 circuit • Open in VC circuit • ECM
P0123	Output voltage of VTA1 4.54 V or more for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body) • Open in VTA1 circuit • Open in E2 circuit • Short between VC and VTA1 circuits • ECM
P0220	Output voltage of VTA2 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body) • ECM
P0222	Output voltage of VTA2 1.75 V or less for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body) • Short in VTA2 circuit • Open in VC circuit • ECM

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0223	Output voltage of VTA2 4.8 V or more, and VTA1 between 0.2 V and 2.02 V, for 2 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Throttle position sensor (built into throttle body) • Open in VTA2 circuit • Open in E2 circuit • Short between VC and VTA2 circuits • ECM
P2135	Either condition (a) or (b) met (1 trip detection logic): (a) Difference between output voltages of VTA1 and VTA2 0.02 V or less for 0.5 seconds or more (b) Output voltage of VTA1 0.2 V or less, and VTA2 1.75 V or less, for 0.4 seconds or more	• Short between VTA1 and VTA2 circuits • Throttle position sensor (built into throttle body) • ECM

HINT:

- When any of these DTCs are set, check the throttle valve opening angle by entering the following menus: Powertrain / Engine and ECT / Data List / ETCS / Throttle Position No. 1 and Throttle Position No. 2.
- Throttle Position No. 1 denotes the VTA1 signal, and Throttle Position No. 2 denotes the VTA2 signal.

  Reference (Normal Condition):

TECHSTREAM DISPLAY	ACCELERATOR PEDAL FULLY RELEASED	ACCELERATOR PEDAL FULLY DEPRESSED
Throttle Position No. 1	0.5 to 1.1 V	3.3 to 4.9 V
Throttle Position No. 2	2.1 to 3.1 V	4.6 to 5.0 V

MONITOR DESCRIPTION

P0120, P0122, P0123, P0220, P0223, P2135

The ECM uses the throttle position sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm the proper operation of the throttle position sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the

ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.

- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor circuit, and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

P0121

This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM performs several checks to confirm the proper operation of the TP sensor and VTA1.

For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal operating range, the ECM interprets this as a malfunction in the TP sensor. The ECM illuminates the MIL and stores the DTC.

If the malfunction is not repaired successfully, the DTC is stored 2 seconds after the engine is next started.

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. With the vehicle stationary, fully depress and release the accelerator pedal [B].
8. Idle the engine for 2 seconds or more [C].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0120, P0121, P0122, P0123, P0220, P0222, P0223 or P2135.
11. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [D] again.

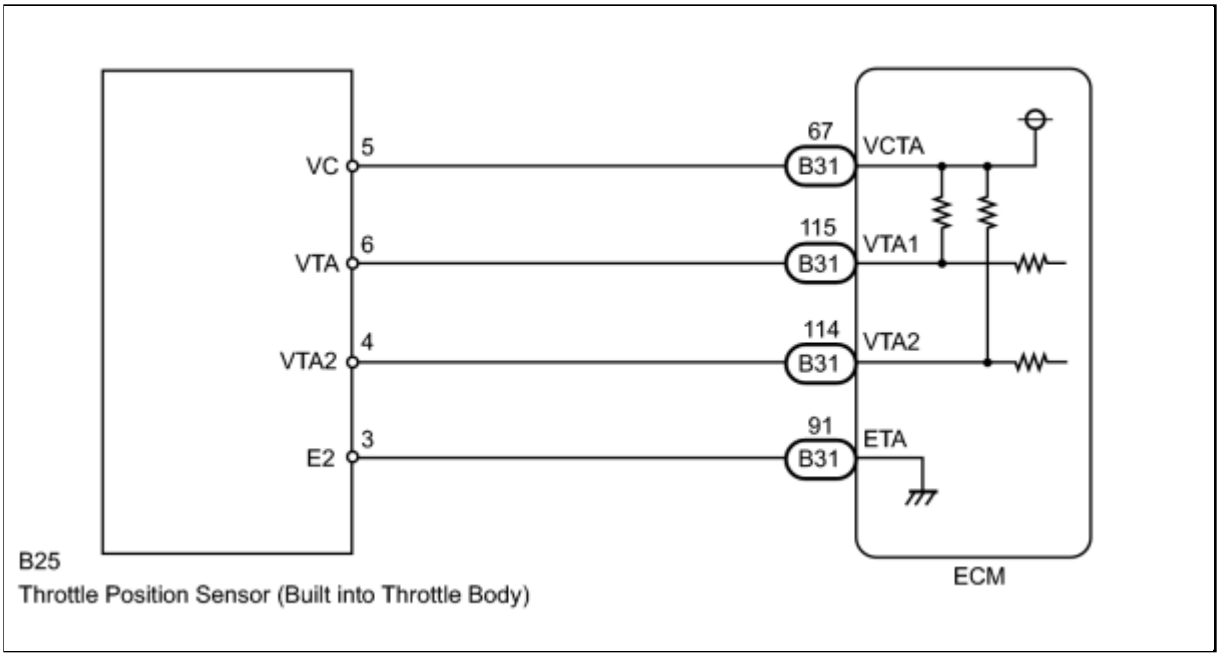
12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to Electronic Throttle Control System malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6.5° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed firmly and gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to off.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (THROTTLE POSITION SENSOR)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / ETCS / Throttle Position No. 1 and Throttle Position No. 2.

(e) Read the values displayed on the Techstream.

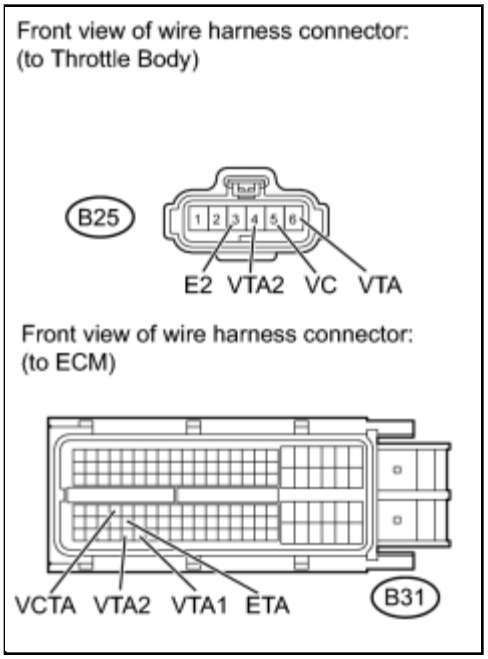
Result:

WHEN ACCELERATOR PEDAL RELEASED		WHEN ACCELERATOR PEDAL DEPRESSED		TROUBLE AREA	PROCEED TO
THROTTLE POSITION NO. 1	THROTTLE POSITION NO. 2	THROTTLE POSITION NO. 1	THROTTLE POSITION NO. 2		
0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	VC circuit open	A
4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	E2 circuit open	
0 to 0.2 V, or 4.5 to 5.0 V	2.1 V to 3.1 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	2.1 V to 3.1 V (Fail-safe)	VTA1 circuit open or ground short	
0.6 V to 1.4 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	0.6 V to 1.4 V (Fail-safe)	0 to 0.2 V, or 4.5 to 5.0 V	VTA2 circuit open or ground short	
0.5 to 1.1 V	2.1 to 3.1 V	3.2 to 4.8 V (Not fail-safe)	4.6 to 5.0 V (Not fail-safe)	Throttle position sensor circuit normal	B

HINT:

- DTC P0121 is stored when the voltages output from VTA1 and VTA2 are not consistent with the characteristics of the sensors. Therefore, check the Freeze Frame Data when this DTC is output. Use the following formula to confirm relative fluctuations in voltage.

  Features of sensor output:



VTA2 x 0.8 is approximately equal to VTA1 + 1.11 V
VTA1: Throttle Position No. 1
VTA2: Throttle Position No. 2

- If DTC P0121 is output, proceed to the "CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)".

B ▶ **CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)**

A

2.	**CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - ECM)**

(a) Disconnect the throttle body connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) - B31-67 (VCTA)	Always	Below 1 Ω
B25-6 (VTA) - B31-115 (VTA1)	Always	Below 1 Ω
B25-4 (VTA2) - B31-114 (VTA2)	Always	Below 1 Ω

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-3 (E2) - B31-91 (ETA)	Always	Below 1 Ω

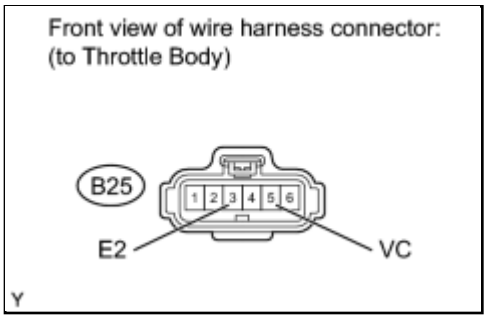
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) or B31-67 (VCTA) - Body ground	Always	10 kΩ or higher
B25-6 (VTA) or B31-115 (VTA1) - Body ground	Always	10 kΩ or higher
B25-4 (VTA2) or B31-114 (VTA2) - Body ground	Always	10 kΩ or higher

(d) Reconnect the throttle body connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (THROTTLE POSITION SENSOR - ECM)**



OK ▼

3.	**INSPECT ECM (VC VOLTAGE)**

(a) Disconnect the throttle body connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-5 (VC) - B25-3 (E2)	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the throttle body connector.

NG ▶ **REPLACE ECM**

OK

4.	REPLACE THROTTLE BODY

(a) Replace throttle body INFO .

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000010BK05BX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P011B: Engine Coolant Temperature / Intake Air Temperature Correlation (2010 Corolla)		

DTC	**P011B**	**Engine Coolant Temperature / Intake Air Temperature Correlation**

DESCRIPTION

The engine has two temperature sensors, an engine coolant temperature sensor and an intake air temperature sensor, to detect the temperature while the engine is operating. A thermistor, whose resistance value varies according to the temperature, is built into each sensor. When the temperature is low, the resistance of the thermistor is high. When the temperature is high, the resistance is low. These variations in resistance are transmitted to the ECM as voltage changes. Based on these temperature signals output from the sensors, the ECM determines the fuel injection duration and the ignition timing to control the engine.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P011B	• All of following conditions are met: (2 trip detection logic) a. Battery voltage 10.5 V or more b. 7 hours or more elapsed from engine stops on previous trip c. 35.2 seconds after cold engine starts d. Minimum intake air temperature after engine starts more than -10°C (14°F) e. Average engine coolant temperature before engine starts more than -10°C (14°F) f. Difference between readings of engine coolant temperature and intake air temperature greater than 20°C (68°F)	• Intake air temperature sensor (built into mass air flow meter) • Engine coolant temperature sensor • ECM

HINT:

- Waiting is required to prevent the temperature of the engine from affecting the readings. If the engine has been operated recently, it will not be possible to accurately compare the readings.
- For diagnosis, in order to duplicate the detection conditions of the DTC, it is necessary to park the vehicle for 7 hours. Parking the vehicle for 7 hours ensures that the actual temperature of the engine coolant temperature sensor and intake air temperature sensor are very similar. When the vehicle has been parked for less than 7 hours, differences in the readings may exist, this does not necessarily indicate a fault.

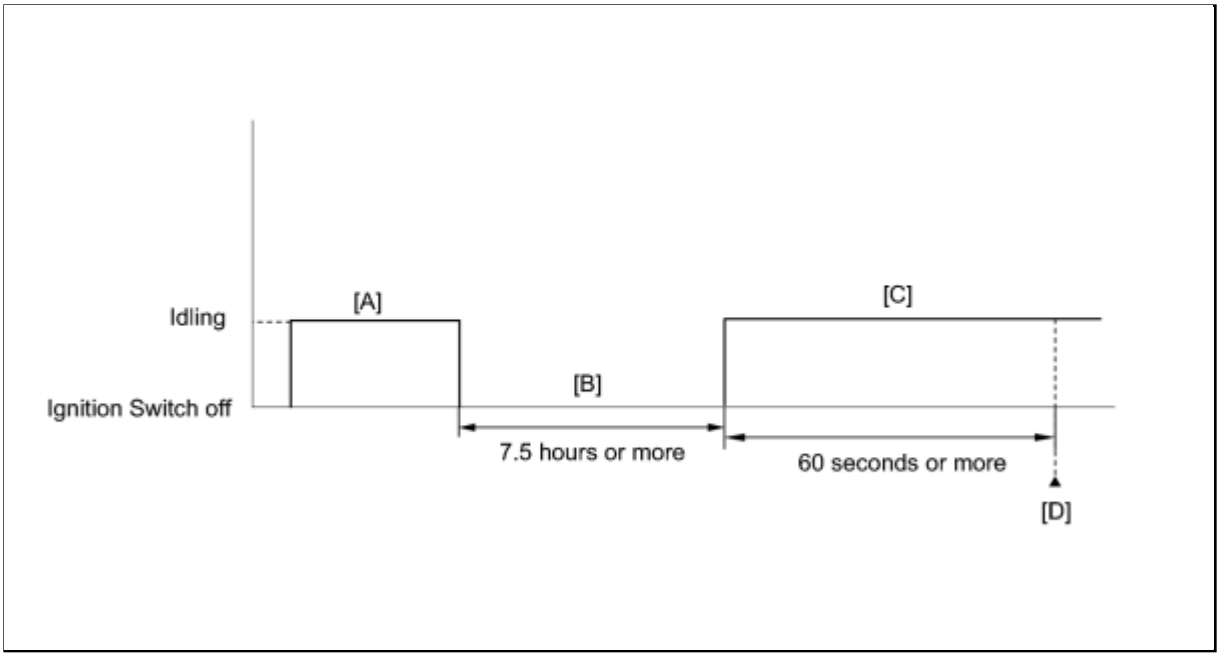
MONITOR DESCRIPTION

The ECM monitors the difference between the engine coolant temperature and the intake air temperature when the engine is started cold to detect the engine temperature conditions accurately. The monitor runs when the engine started cold after 7 hours or more has elapsed since the engine was stopped (ignition switch turned to OFF) on the previous trip. If the difference between the engine coolant temperature and the intake air temperature on a cold start exceeds 20°C (36°F), the ECM interprets this as a malfunction in the engine coolant temperature sensor circuit and intake air temperature sensor circuit, and sets the DTC.

MONITOR STRATEGY

Related DTCs	P011B: Engine coolant temperature / Intake air temperature sensor correlation
Required Sensors / Components (Main)	Engine coolant temperature / Intake air temperature sensor

Required Sensors / Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	7 hours or more
MIL Operation	2 driving cycles
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	None
All of following conditions met	Conditions 1 and 2
1. All of following conditions met	Conditions (a), (b), (c) and (d)
(a) After ignition switch ON and engine not running time	Less than 20 seconds
(b) Soak Time	7 hours or more
(c) Battery voltage	10.5 V or more
(d) Time after engine start	35.2 seconds or more
2. Either of the following conditions are met	Condition (a) and (b)
(a) Minimum intake air temperature after engine start	-10°C (14°F) or more
(b) Engine coolant temperature before engine start	-10°C (14°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Engine coolant temperature and intake air temperature deviate	Less than -20°C (-36°F) or more than 20°C (36°F)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO [A].
4. Turn the ignition switch off.
5. With the engine stopped, leave the vehicle as is for 7.5 hours or more [B].
6. Start the engine and wait 60 seconds or more [C].
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P011B.
9. Check the DTC judgment result [D].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [A] through [D] again.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P011B)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P011B	A
P011B and other DTCs	B

HINT:

If any DTCs other than P011B are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	READ VALUE USING TECHSTREAM (INTAKE AIR TEMPERATURE)

(a) Leave the vehicle for 7 hours or more.

HINT:

It is necessary leave the vehicle for 7 hours or more to allow conditions similar to the DTC detection conditions.

(b) Connect the Techstream to the DLC3.

(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Intake Air.

(f) Read the value displayed on the Techstream.

OK:
Difference between the intake air temperature and the actual outside air temperature is within 10°C (50°F).

HINT:

Temperature readings on the vehicle's outside temperature gauge (if equipped) are not suitable for comparing to the intake air temperature reading. The outside temperature gauge has a significant delay built in to prevent temperature swings from being displayed on its display. Use an accurate thermometer to determine the outside air temperature.

NG ▶ **REPLACE MASS AIR FLOW METER**

OK ▼

3.	READ VALUE USING TECHSTREAM (COOLANT TEMPERATURE)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / All Data / Coolant Temp.

(e) Read the value displayed on the Techstream.

OK:

The difference between the coolant temperature and the actual outside air temperature is within 10°C (50°F).

HINT:

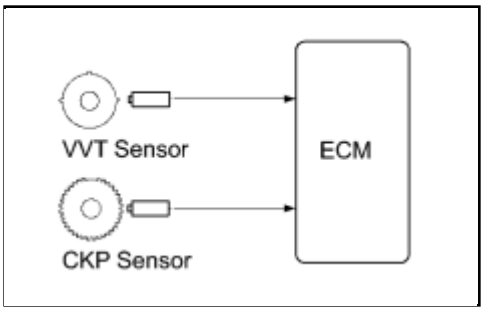
If the result is not as specified, check if there are heat sources such as a block heater in the engine compartment.

NG ▶ **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XH30AGX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0300-P0304: Random / Multiple Cylinder Misfire Detected (2010 Corolla)		

DTC	**P0300**	**Random / Multiple Cylinder Misfire Detected**



DTC	**P0301**	**Cylinder 1 Misfire Detected**

DTC	**P0302**	**Cylinder 2 Misfire Detected**

DTC	**P0303**	**Cylinder 3 Misfire Detected**

DTC	**P0304**	**Cylinder 4 Misfire Detected**

DESCRIPTION

When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. High HC concentration levels can cause an increase in exhaust emission levels. Extremely high concentrations of HC can also cause increases in the three-way catalytic converter temperature, which may cause damage to the three-way catalytic converter. To prevent this increase in emissions and to limit the possibility of thermal damage, the ECM monitors the misfire rate. When the temperature of the three-way catalytic converter reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the camshaft position sensor and the crankshaft position sensor. The camshaft position sensor is used to identify any misfiring cylinders and the crankshaft position sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted when the crankshaft rotation speed variations exceed predetermined thresholds. If the misfire count exceeds the threshold levels, and could cause emission control system performance deterioration, the ECM

illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0300	When one of following conditions below is detected (2 trip detection logic): • High temperature misfire occurs in three-way catalytic converter (MIL blinks) • Emission deterioration misfire occurs (MIL illuminates) • Simultaneous misfiring of several cylinders occurs	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Fuel injector • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Intake system • ECM
P0301 P0302 P0303 P0304	When one of following conditions below is detected (2 trip detection logic): • High temperature misfire occurs in three-way catalytic converter (MIL blinks) • Emission deterioration misfire occurs (MIL illuminates) • Misfiring of specific cylinder occurs	

When DTCs for misfiring cylinders are randomly set, but DTC P0300 is not set, it indicates that misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and sets a DTC when either one of the following conditions, which could cause emission control system performance deterioration, is detected (2 trip detection logic).

- Within the first 1000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs once.
- An excessive misfiring rate (approximately 20 to 50 misfires per 1000 crankshaft revolutions) occurs a total of 4 times.

The ECM flashes the MIL and sets a DTC when either one of the following conditions, which could cause the three-way catalytic converter damage, is detected (2 trip detection logic).

HINT:

If a catalyst damage misfire occurs, the monitor informs the driver by blinking the MIL (1 trip).

Misfire Monitor for Mexico Models

The ECM illuminates the MIL and sets a DTC when either one of the following conditions, which could cause emission deterioration, is detected (2 trip detection logic).

- Within the first 1000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 1000 misfires per 1000 crankshaft revolutions) occurs once.

- An excessive misfiring rate (approximately 500 misfires per 1000 crankshaft revolutions) occurs a total of 4 times.

The ECM flashes the MIL and sets a DTC when the following condition, which could cause the Three-Way Catalytic Converter (TWC) damage, is detected (2 trip detection logic).

- A catalyst damage misfire, which is monitored every 200 crankshaft revolutions, occurs 3 times.

MONITOR STRATEGY

MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Record the DTC(s) and freeze frame data.
5. Clear the DTCs (even if no DTCs are stored, perform the Clear DTC procedure) INFO .
6. Using the Techstream, switch the ECM from normal mode to check mode INFO .
7. Read the misfire counts of each cylinder, Cylinder #1 Misfire Count to Cylinder #4 Misfire Count, with the engine idling. If any misfire count is displayed, skip the following confirmation driving pattern.
8. Drive the vehicle so that the vehicle conditions displayed in Misfire RPM and Misfire Load of the Data List are the same as the freeze frame data. Perform this step several times.

   HINT:

   In order to store misfire DTCs, it is necessary to operate the vehicle for the period of time shown in the table below, confirm the Misfire RPM and Misfire Load in the Data List.

ENGINE SPEED	DURATION
Idling	8 minutes or more
1000	4.5 minutes or more
2000	2.5 minutes or more
3000	1.5 minutes or more

9. Check whether misfires have occurred by checking DTCs and freeze frame data.

   HINT:

   Do not turn the ignition switch off until the output DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data are cleared.

10. Record the DTC(s), freeze frame data and misfire counts.
11. Turn the ignition switch off and wait for at least 15 seconds.
12. Clear the DTCs (even if no DTCs are stored, perform the Clear DTC procedure) INFO .

WIRING DIAGRAM

Ignition System Circuit:

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the ECM as freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the ECM as freeze frame data have been reproduced, one of the following factors is considered to be a possible

cause of the problem:

a. There was insufficient fuel in the tank.
b. Improper fuel is used.
c. The spark plugs have been contaminated.
d. The problem requires further diagnosis.

- After finishing repairs, check the misfire counts of the cylinders (Cylinder #1 Misfire Count to Cylinder #4 Misfire Count).
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern after finishing repairs.
- When one of Short FT #1, Long FT #1, Short FT #2 or Long FT #2 in the freeze frame data is outside the range of +/- 20%, the air-fuel ratio may be Rich (-20% or less) or Lean (+20% or more).
- When the Coolant Temp in the freeze frame data is less than 75°C (167°F), the misfire occurred while warming up the engine.
- An extremely imbalanced drive wheel which causes body vibration may cause misfire DTCs to be detected.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

HINT:

Write down indicated DTCs.

Result:

RESULT	PROCEED TO
P0300, P0301, P0302, P0303 and/or P0304	A
P0300, P0301, P0302, P0303 and/or P0304 and other DTCs	B

HINT:

If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B ▶ GO TO DTC CHART

A

2.	**READ VALUE USING TECHSTREAM (MISFIRE RPM AND MISFIRE LOAD)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Misfire / Misfire RPM and Misfire Load.

(e) Read and note the Misfire RPM and Misfire Load values.

HINT:

The Misfire RPM and Misfire Load values indicate the vehicle conditions under which the misfire occurs.

NEXT

3.	**CHECK PCV HOSE CONNECTIONS**

(a) Check PCV hose.

OK:

PCV hose is correctly connected and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

4.	**READ VALUE USING TECHSTREAM (CATALYST OT MF F/C)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Catalyst OT MF F/C.

(e) Read the value displayed on the Techstream.

Result:

DATA LIST	TECHSTREAM DISPLAY	PROCEED TO
Catalyst OT MF F/C	Avail	A
	Not Avl	B

B ▶ **READ VALUE USING TECHSTREAM (CYLINDER #1, #2, #3 AND #4)**

A

▼

5.	**PERFORM ACTIVE TEST USING TECHSTREAM (PROHIBIT CATALYST OT MISFIRE PREVENT F/C)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Prohibit the Catalyst OT Misfire prevent F/C.

(e) Perform the Active Test.

NOTICE:

When performing the Active Test, make sure the vehicle is stopped and either idling or at 3000 rpm or less.

NEXT

▼

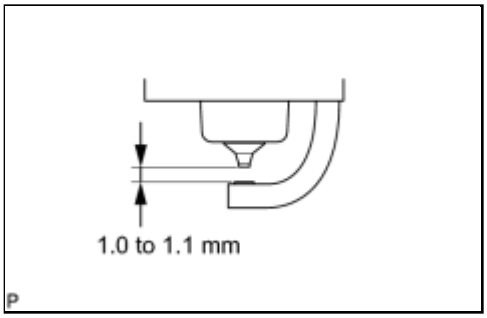
6.	**READ VALUE USING TECHSTREAM (CYLINDER #1, #2, #3 AND #4)**

(a) Enter the following menus: Powertrain / Engine and ECT / Data List / Misfire / Cylinder #1 Misfire Count, #2, #3 and #4.

(b) Start the engine and allow the engine to idle.
(c) Read each value for Cylinder #1 Misfire Count to #4 displayed on the Techstream. If no misfire counts occur in any cylinders, perform steps (d) and (e) and then check the misfire counts again.

(d) Drive the vehicle with the Misfire RPM and Misfire Load noted in the "READ VALUE USING TECHSTREAM (Misfire RPM and Misfire Load)" procedures above.
(e) Read the Cylinder #1 Misfire Count to #4 or DTCs displayed on the Techstream.
Result:

RESULT (MISFIRE COUNT)	PROCEED TO
Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	B



HINT:

- If it is difficult to reproduce misfires for each cylinder, check the Data List item called Misfire Margin. Try to find vehicle driving conditions that lower the Misfire Margin value. Values above 30% are considered normal.
- If the freeze frame data record of the engine coolant temperature is below 75°C (167°F), it may only be possible to detect the misfire when the engine is cold.
- If the freeze frame data record of the Engine Run Time is below 120 seconds, the misfire may be detected immediately after the engine is started.

B ▶ **CHECK INTAKE SYSTEM**

A ▼

7.	**INSPECT SPARK PLUG**

(a) Remove the ignition coil and the spark plug from the misfiring cylinder.

(b) Measure the spark plug electrode gap.

Standard Gap:
1.0 to 1.1 mm (0.0394 to 0.0433 in.)

(c) Check the electrode for carbon deposits.

Recommended Spark Plug:

MANUFACTURER	PRODUCT

MANUFACTURER	PRODUCT
DENSO	SK20R11
NGK	IFR6A11

NOTICE:

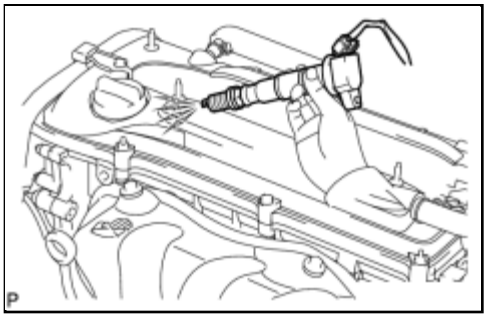
If the electrode gap is not as specified, replace the spark plug. Do not adjust the electrode gap.

(d) Reinstall the ignition coil.

NG ▶ **REPLACE SPARK PLUG**

OK ▼

8.	CHECK FOR SPARK AND IGNITION



(a) Disconnect the injector connectors to prevent the engine from starting.

CAUTION:

Always disconnect all injector connectors.

(b) Remove the ignition coil from the cylinder head.

(c) Install the spark plug onto the ignition coil.

(d) Touch the spark plug assembly to the cylinder head.

(e) Crank the engine for less than 2 seconds and check for spark.

NOTICE:

Do not crank the engine for more than 2 seconds.

OK:

Sparks jump across electrode gap.

(f) Install the ignition coil.

(g) Reconnect the injector connectors.

NG ▶ **CHANGE TO**

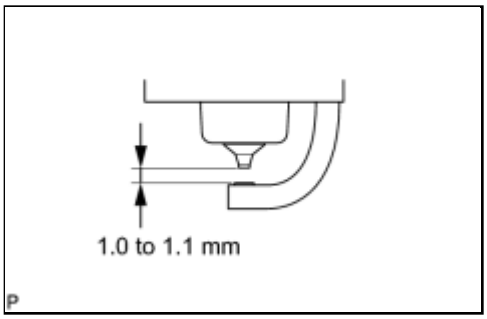
22.	INSPECT MASS AIR FLOW METER INFO

NG ▶ REPLACE MASS AIR FLOW METER

OK
▼

23.	INSPECT SPARK PLUG

(a) Remove the ignition coil and the spark plug of the misfiring cylinder.



(b) Measure the spark plug electrode gap.

Standard Gap:

1.0 to 1.1 mm (0.0394 to 0.0433 in.)

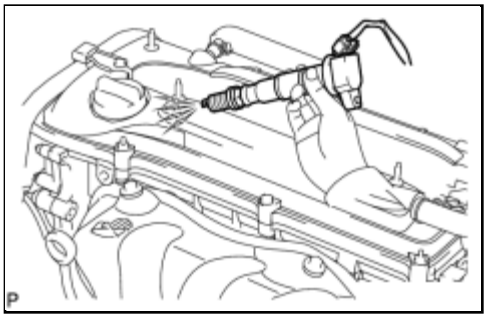
(c) Check the electrode for carbon deposits.

Recommended Spark Plug:

MANUFACTURER	PRODUCT
DENSO	SK20R11
NGK	IFR6A11

NOTICE:

If the electrode gap is not as specified, replace the spark plug. Do not adjust the electrode gap.



(d) Reinstall the ignition coil.

NG ▶ **REPLACE SPARK PLUG**

OK ▼

24.	CHECK FOR SPARK AND IGNITION

(a) Disconnect the injector connectors to prevent the engine from starting.

CAUTION:

Always disconnect all injector connectors.

(b) Remove the ignition coil from the cylinder head.

(c) Install the spark plug onto the ignition coil.

(d) Touch the spark plug tip to the cylinder head.

(e) Crank the engine for less than 2 seconds and check for spark.

NOTICE:

Do not crank the engine for more than 2 seconds.

OK:

Sparks jump across electrode gap.

(f) Install the ignition coil.

(g) Reconnect the injector connectors.

NG ▶ **CHANGE TO KNOWN GOOD SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER**

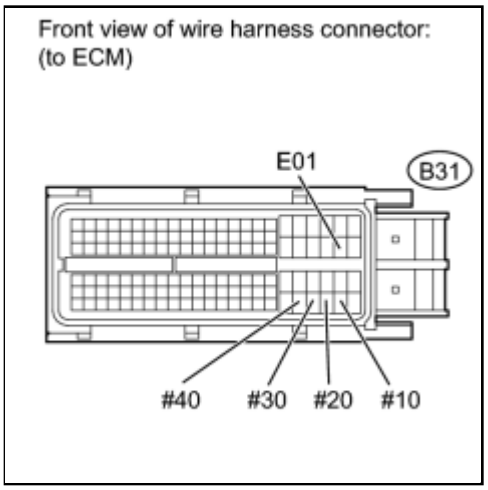
OK ▼

25.	**CHECK CYLINDER COMPRESSION PRESSURE**

(a) Measure the compression pressure of the misfiring cylinder INFO .

NG ▶ **CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION**

OK ▼



26.	**INSPECT ECM TERMINAL OF MISFIRING CYLINDER (#10, #20, #30 AND/OR #40 VOLTAGE)**

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B31-108 (#10) - B31-45 (E01)	Ignition switch ON	11 to 14 V
B31-107 (#20) - B31-45 (E01)	Ignition switch ON	11 to 14 V
B31-106 (#30) - B31-45 (E01)	Ignition switch ON	11 to 14 V
B31-105 (#40) - B31-45 (E01)	Ignition switch ON	11 to 14 V

(d) Reconnect the ECM connector.

NG ▶ **GO TO FUEL INJECTOR CIRCUIT**

OK ▼

27.	CHECK FUEL INJECTOR OF MISFIRING CYLINDER

(a) Check the injector injection (whether fuel volume is high or low, and whether injection pattern is poor) INFO .

NG ▶ **REPLACE FUEL INJECTOR**

OK ▼

28.	CHECK VALVE CLEARANCE OF MISFIRING CYLINDER

(a) Check the valve clearance INFO .

NG ▶ ADJUST VALVE CLEARANCE

OK ▶ REPLACE ECM

29.	CHANGE TO KNOWN GOOD SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER

(a) Change the installed spark plug to a known good spark plug.

(b) Perform a spark test.

CAUTION:

Always disconnect all injector connectors.

NOTICE:

Do not crank the engine for more than 2 seconds.

(1) Install the spark plug into the ignition coil and connect the ignition coil connector.

(2) Disconnect the injector connectors.

(3) Ground the spark plug.

(4) Check if spark occurs while the engine is being cranked.

OK:

Sparks jump across electrode gap.

NG ▶ CHANGE TO KNOWN GOOD IGNITION COIL AND CHECK SPARK OF MISFIRING CYLINDER

OK ▶ REPLACE SPARK PLUG

30.	CHANGE TO KNOWN GOOD IGNITION COIL AND CHECK SPARK OF MISFIRING CYLINDER

(a) Change the ignition coil to a known good ignition coil.

(b) Perform a spark test.

CAUTION:

Always disconnect all injector connectors.

NOTICE:

Do not crank the engine for more than 2 seconds.

(1) Install the spark plug into the ignition coil and connect the ignition coil connector.

(2) Disconnect the injector connector.

(3) Ground the spark plug.

(4) Check if sparks occur while the engine is being cranked.

OK:

Sparks jump across electrode gap.

NG ▶ **REPLACE ECM**

OK ▶ **REPLACE IGNITION COIL**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T9P05JX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0125: Insufficient Coolant Temperature for Closed Loop Fuel Control (2010 Corolla)		

DTC	**P0125**	**Insufficient Coolant Temperature for Closed Loop Fuel Control**

DESCRIPTION

Refer to DTC P0115 INFO .

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0125	Engine coolant temperature does not reach closed-loop enabling temperature for 20 minutes (this period varies with engine start engine coolant temperature) (2 trip detection logic)	• Cooling system • Engine coolant temperature sensor • Thermostat

MONITOR DESCRIPTION

The resistance of the engine coolant temperature sensor varies in proportion to the actual engine coolant temperature. The ECM supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal output voltage varies according to the changing resistance of the sensor. After the engine is started, the engine coolant temperature is monitored through this signal. If the engine coolant temperature sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

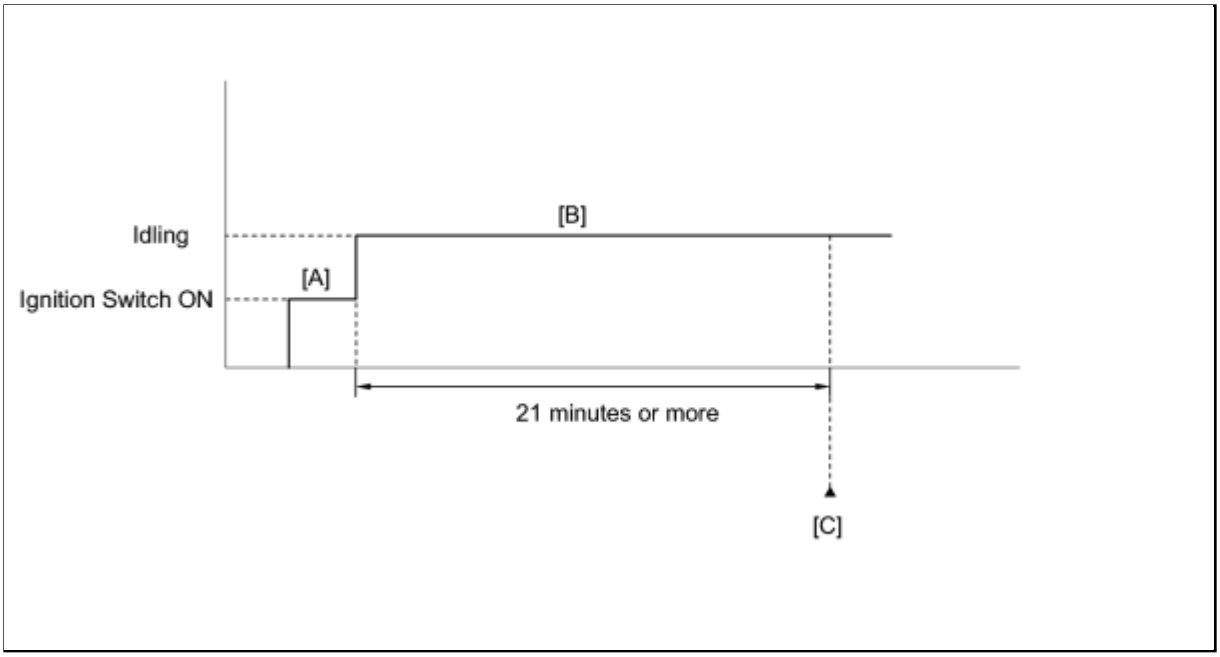
Example:

The engine coolant temperature is 5°C (41°F) at engine start. After about 1 minute running time, the engine coolant temperature sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air-fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Engine coolant temperature sensor Thermostat Cooling system

Required Sensors/Components (Related)	-
Frequency of Operation	Once per driving cycle
Duration	52 seconds: Engine coolant temperature at engine start 1.67°C (35°F) or more 111 seconds: Engine coolant temperature at engine start 1.67 to -9.44°C (35 to 15°F) 1200 seconds: Engine coolant temperature at engine start less than -9.44°C (15°F)
MIL Operation	2 driving cycles
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Thermostat fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	52 seconds: Engine coolant temperature at engine start 1.67°C (35°F) or more 111 seconds: Engine coolant temperature at engine start 1.67 to -9.44°C (35 to 15°F) 1200 seconds: Engine coolant temperature at engine start less than -9.44°C (15°F)

CONFIRMATION DRIVING PATTERN

1. Leave the vehicle outside overnight.
2. Connect the Techstream to the DLC3.
3. Turn the ignition switch to ON and turn the Techstream on.
4. Enter the following menu items: Powertrain / Engine / Data List / Coolant Temp.
5. Check that the engine coolant temperature is 10°C (50°F) or less.
6. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
7. Turn the ignition switch off.
8. Turn the ignition switch to ON and turn the Techstream on [A].
9. Start the engine.
10. After starting the engine, wait 21 minutes or more [B].
11. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
12. Input the DTC: P0125.
13. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

14. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Code / Pending.
15. Read Pending DTCs.

    HINT:

    If a pending DTC is output, the system is malfunctioning.

16. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

    HINT:

    - If a permanent DTC is output, the system is malfunctioning.
    - If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0115 INFO .

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the engine coolant temperature sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0125	A

RESULT	PROCEED TO
P0125 and other DTCs	B

HINT:

If any DTCs other than P0125 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A
▼

2.	INSPECT THERMOSTAT

(a) Remove the thermostat INFO .

(b) Check the valve opening temperature of the thermostat.

Standard Value:
80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat INFO .

NG ▶ **REPLACE THERMOSTAT**

OK
▼

3.	CHECK COOLING SYSTEM

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG ▶ **REPAIR OR REPLACE COOLING SYSTEM**

OK	▶	REPLACE ENGINE COOLANT TEMPERATURE SENSOR

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC3091X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0171,P0172: System Too Lean (Bank 1) (2010 Corolla)		

DTC	**P0171**	**System Too Lean (Bank 1)**

DTC	**P0172**	**System Too Rich (Bank 1)**

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection duration. The fuel trim consists of both the short-term and long-term fuel trim.

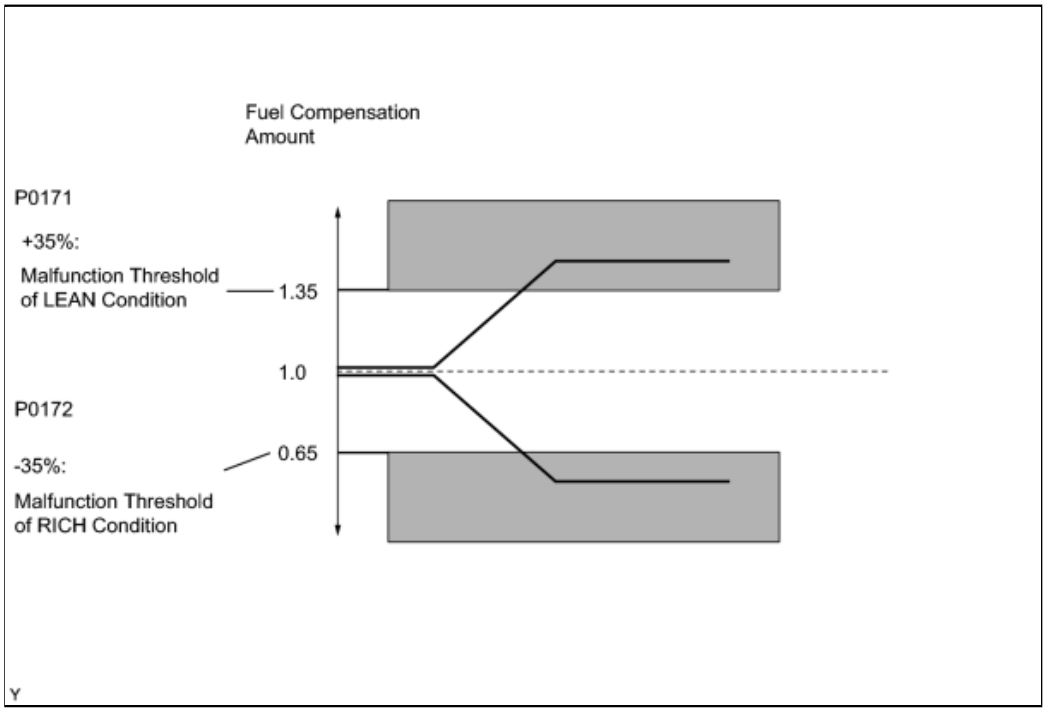
The short-term fuel trim is fuel compensation that is used to constantly maintain the air fuel ratio at stoichiometric levels. The signal from the air fuel ratio sensor indicates whether the air fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short- term fuel trim compensation.

If both the short-term and long-term fuel trim are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM illuminates the MIL and sets a DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0171	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to lean side (2 trip detection logic)	• Intake system • Injector blockage • Mass air flow meter • Engine coolant temperature sensor • Fuel pressure • Gas leak from exhaust system • Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • EFI No. 2 fuse • PCV valve and hose • PCV hose connections • ECM
P0172	With warm engine and stable air fuel ratio feedback, fuel trim considerably in error to rich side (2 trip detection logic)	• Injector leak or blockage • Mass air flow meter • Engine coolant temperature sensor • Ignition system • Fuel pressure • Gas leak from exhaust system • Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • EFI No. 2 fuse • ECM

HINT:



- When DTC P0171 is set, the actual air fuel ratio is on the lean side. When DTC P0172 is set, the actual air fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When the total of the short-term and long-term fuel trim values is within the malfunction threshold (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, a fuel injection volume that deviates from that estimated by the ECM causes changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim value. Deviations from the ECM's estimated fuel injection volume also affects the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air- fuel ratio). If the average fuel trim learning value exceeds a malfunction threshold, the ECM interpret this a fault in the fuel system and sets a DTC.

Example:

If the average fuel trim learning value is more than +35% or less than -35%, the ECM interprets this as a fuel system malfunction.

2. Average between short-term fuel trim and long-term fuel trim	-35% or less (varies with engine coolant temperature)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up (until the engine coolant temperature is 75°C (167°F) or higher) with all the accessories switched off [B].
7. With the engine warmed up, idle the engine for 2 minutes or more [C].
8. Drive the vehicle at between 37 and 75 mph (60 and 120 km/h) and at an engine speed of between 1400 and 3200 rpm for 5 minutes or more [D].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0171 or P0172.
11. Check the DTC judgment result [E].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [C] through [E] again.

12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P2195 INFO .

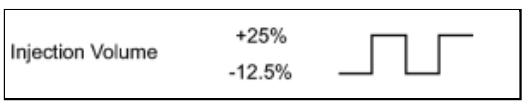
INSPECTION PROCEDURE

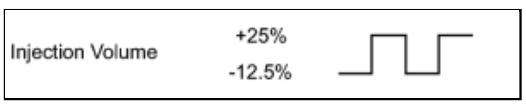
HINT:

Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

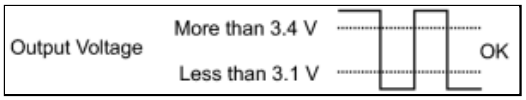
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

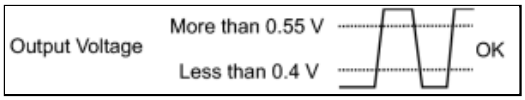
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

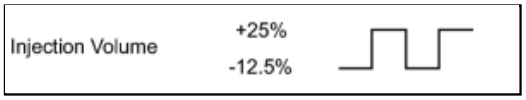


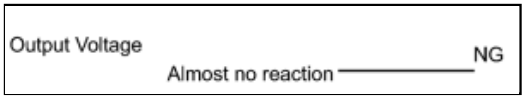


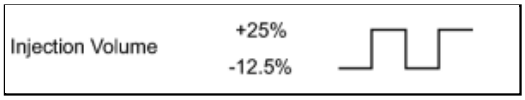
HINT:

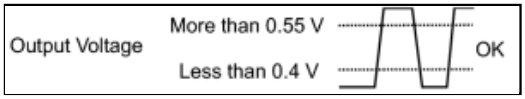


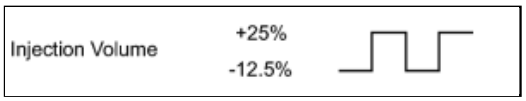


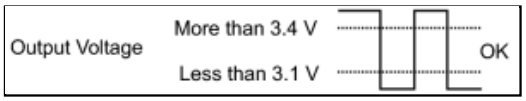


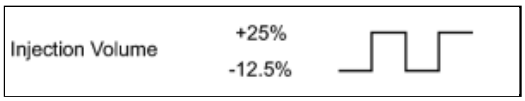


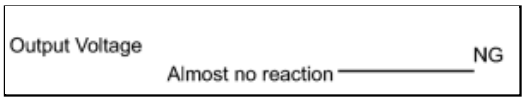


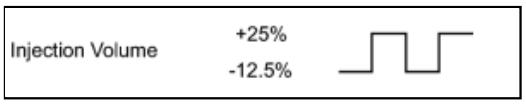


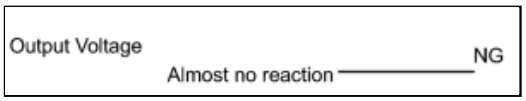


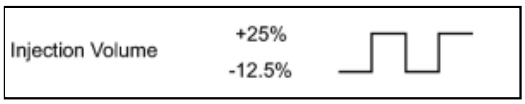


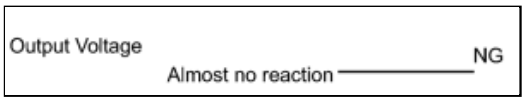












- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATE	VOLTAGE
AFS Voltage B1 S1 (Air fuel ratio sensor)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated oxygen sensor)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			
2	 	 	• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3	 	 	• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4	 	 	• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.

- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171 OR P0172)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0171 or P0172	A
P0171 or P0172 and other DTCs	B

HINT:

If any DTCs other than P0171 or P0172 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**CHECK PCV HOSE CONNECTIONS**

(a) Check PCV hose.

OK:

PCV hose is connected correctly and is not damaged.

NG ▶ **REPAIR OR REPLACE PCV HOSE**

OK ▼

3.	**CHECK INTAKE SYSTEM**

(a) Check the intake system for vacuum leaks INFO .

OK:
No leaks in air induction system.

NG ▶ **REPAIR OR REPLACE INTAKE SYSTEM**

OK ▼

4.	PERFORM ACTIVE TEST USING TECHSTREAM (AIR FUEL RATIO CONTROL)

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor.

(f) Perform the Control the Injection Volume for A/F Sensor operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).

(g) Monitor the voltage outputs of the air fuel ratio sensor and the heated oxygen sensor (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- The Control the Injection Volume for A/F Sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard:

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATE	VOLTAGE
AFS Voltage B1S1 Air Fuel Ratio	+25%	Rich	Less than 3.1
	-12.5%	Lean	More than 3.4
O2S B1S2 Heated Oxygen	+25%	Rich	More than 0.55
	-12.5%	Lean	Less than 0.4

Result

STATE AFS VOLTAGE B1S1	STATE O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO SENSOR CONDITION	MISFIRE	SUSPECTED TROUBLE AREA	PROCEED TO
Lean/Rich	Lean/Rich	Normal	-	-	C
Lean	Lean	Actual air fuel ratio lean	May occur	• PCV valve and hose • PCV hose connections • Injector blockage • Gas leak from exhaust system	A

STATE AFS VOLTAGE B1S1	STATE O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO SENSOR CONDITION	MISFIRE	SUSPECTED TROUBLE AREA	PROCEED TO
				• Air induction system • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor	
Rich	Rich	Actual air fuel ratio rich	-	• Injector leak or blockage • Gas leak from exhaust system • Ignition system • Fuel pressure • Mass air flow meter • Engine coolant temperature sensor	
Lean	Lean/Rich	Air fuel ratio sensor malfunction	-	• Air fuel ratio sensor	B
Rich	Lean/Rich	Air fuel ratio sensor malfunction	-	• Air fuel ratio sensor	

Lean: During Control the Injection Volume for A/F Sensor, the air fuel sensor output voltage (AFS Voltage) is consistently more than 3.4 V, and the heated oxygen sensor output voltage (O2S) is consistently less than 0.4 V.

Rich: During Control the Injection Volume for A/F Sensor, the AFS Voltage is consistently less than 3.1 V, and the O2S is consistently more than 0.55 V.

Lean/Rich: During Control the Injection Volume for A/F Sensor of the Active Test, the output voltage of the heated oxygen sensor alternates correctly.

C ▶ **PERFORM CONFIRMATION DRIVING PATTERN**

B ▶ **INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)**

A ▼

5.	**READ VALUE USING TECHSTREAM (COOLANT TEMP)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Coolant Temp.

(e) Read the Data List twice, when the engine is both cold and warmed up.

Standard Value:
With cold engine: Same as ambient air temperature.

With warm engine: 80 to 100°C (176 to 212°F).

NG ▶ **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK ▼

6.	INSPECT MASS AIR FLOW METER

(a) Read the values using the Techstream (MAF).

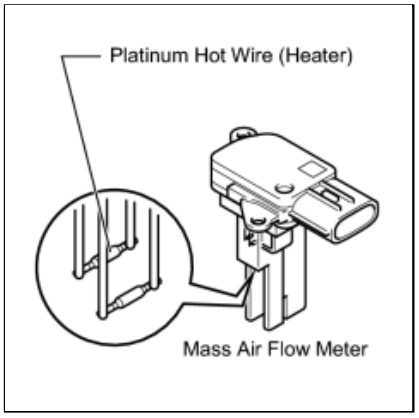
NOTICE:

- Turn the ignition switch off.
- Perform the inspection with the vehicle indoors and on a level surface.
- Perform the inspection of the mass air flow meter while it is installed in the air cleaner case (installed on the vehicle).
- During the test, make sure that an exhaust air duct is not drawing air through the exhaust pipe.

(1) Connect the Techstream to the DLC3.

(2) Turn the ignition switch to ON (do not start the engine).

(3) Turn the Techstream on.



(4) Enter the following menus: Powertrain / Engine and ECT / Data List / MAF.

(5) Wait for 30 seconds, and read the values on the Techstream.

Standard Value:
Less than 0.48 g/sec

(b) Inspect the mass air flow meter.

(1) Remove the mass air flow meter INFO.

(2) Using a work light, check that the platinum filament (heater portion) in the mass air flow meter has no foreign matter attached.

OK:
No foreign matter attached.

(3) Reinstall the mass air flow meter INFO.

NG ▶ **REPLACE MASS AIR FLOW METER**

OK

7.	CHECK FUEL PRESSURE

(a) Check the fuel pressure INFO .

NG ▶ REPAIR OR REPLACE FUEL SYSTEM

OK ▼

8.	CHECK FOR EXHAUST GAS LEAK

OK:
No gas leaks.

NG ▶ REPAIR OR REPLACE EXHAUST SYSTEM

OK ▼

9.	CHECK SPARK AND IGNITION

HINT:

- Refer to the ignition system inspection procedure INFO .
- If the spark plugs or ignition system malfunctions, engine misfires may occur. The misfire count can be read using the Techstream. Enter the following menus: Powertrain / Engine and ECT / Data List / Cylinder #1 Misfire Rate (to Cylinder #4 Misfire Rate)

NG ▶ REPAIR OR REPLACE IGNITION SYSTEM

OK ▼

10.	INSPECT FUEL INJECTOR ASSEMBLY (INJECTION AND VOLUME)

HINT:

- Refer to the fuel injector inspection procedure INFO .
- If the injectors malfunction, engine misfires may occur. The misfire count can be read using the Techstream. Enter the

following menus: Powertrain / Engine and ECT / Data List / Cylinder #1 Misfire Count (to Cylinder #4 Misfire Count).

NG ▶ **REPLACE FUEL INJECTOR ASSEMBLY**

OK ▼

11.	**INSPECT AIR FUEL RATIO SENSOR (HEATER RESISTANCE)** INFO

NG ▶ **REPLACE AIR FUEL RATIO SENSOR**

OK ▼

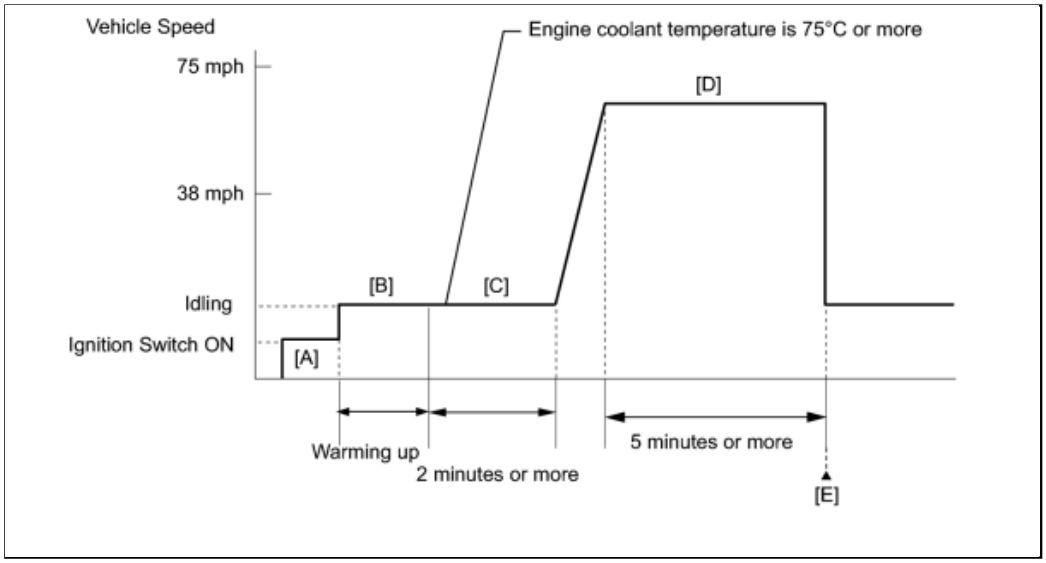
12.	**CHECK TERMINAL VOLTAGE (POWER SOURCE OF AIR FUEL RATIO SENSOR)** INFO

NG ▶ **INSPECT FUSE (EFI NO. 2 FUSE)**

OK ▼

13.	**CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)** INFO

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (AIR FUEL RATIO SENSOR - ECM)**



OK ▼

14.	**REPLACE AIR FUEL RATIO SENSOR**

(a) Replace the air fuel ratio sensor INFO.

NEXT ▼

15.	PERFORM CONFIRMATION DRIVING PATTERN

(a) Connect the Techstream to the DLC3.
(b) Turn the ignition switch to ON.
(c) Turn the Techstream on.
(d) Clear DTCs INFO .
(e) Switch the ECM from normal mode to check mode using the Techstream INFO .
(f) Start the engine and warm it up with all the accessories switched OFF.
(g) Drive the vehicle at between 40 mph and 75 mph (60 km/h and 120 km/h) and at an engine speed of between 1400 rpm and 3200 rpm for 3 to 5 minutes.

HINT:

If the system is still malfunctioning, the MIL will be illuminated during step (g).

NOTICE:
If the conditions in this test are not strictly followed, no malfunction will be detected.

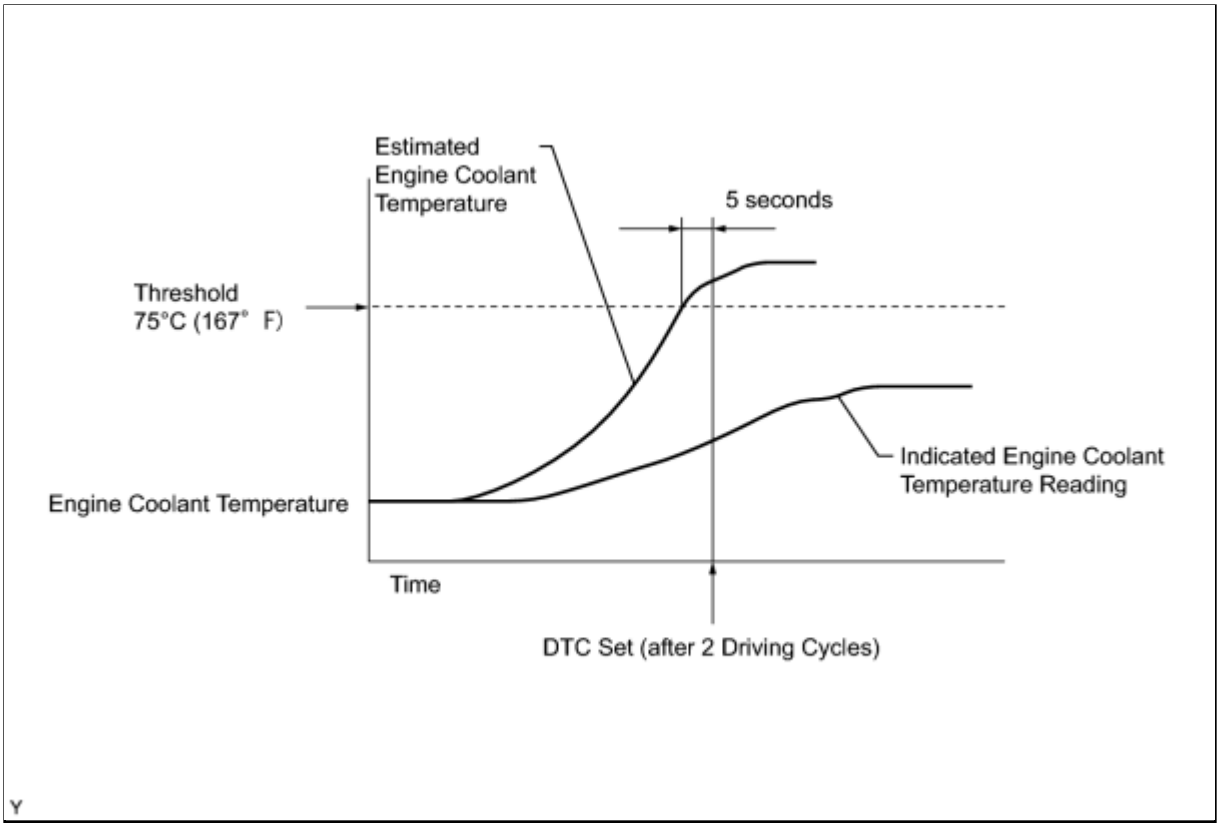
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TB304AX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0128: Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) (2010 Corolla)		

DTC	**P0128**	**Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)**

DESCRIPTION



HINT:

This DTC relates to the thermostat.

This DTC is set when the engine coolant temperature does not reach 75°C (167°F) despite sufficient engine warm-up time having elapsed.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0128	• Conditions (a), (b) and (c) are met for 5 seconds (2 trip detection logic): • (a) Cold start • (b) Engine warmed up • (c) Engine coolant temperature less than 75°C (167°F)	• Thermostat • Cooling system • Engine coolant temperature sensor • ECM

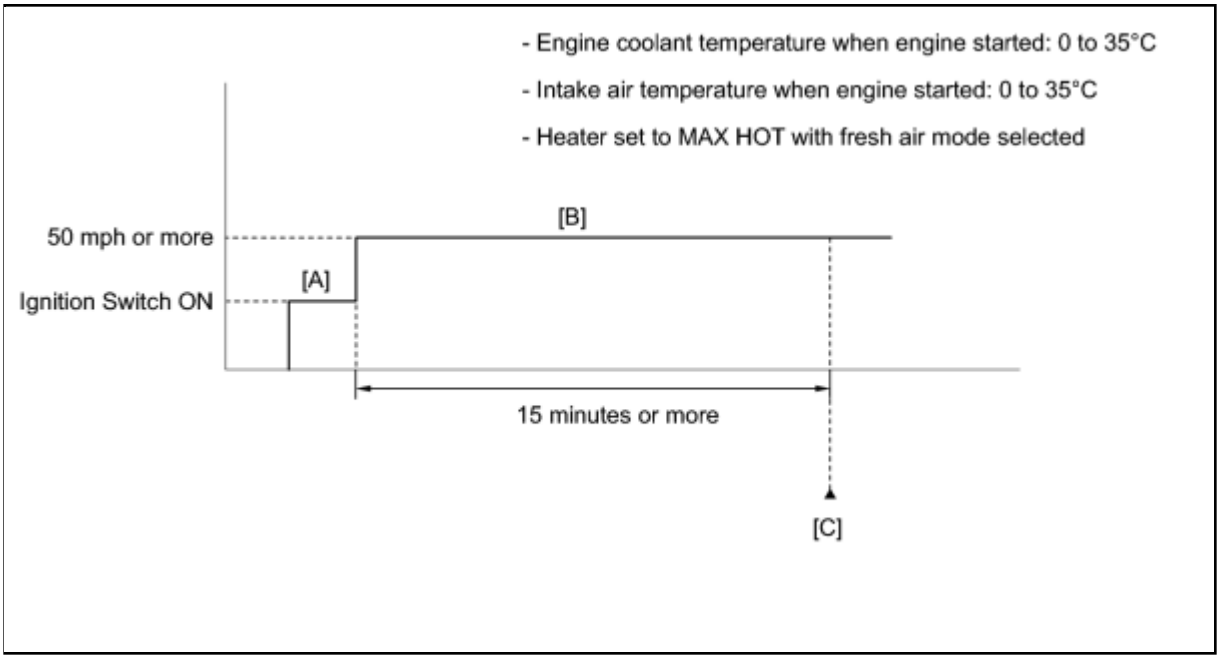
MONITOR DESCRIPTION

The ECM estimates the engine coolant temperature based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual engine coolant temperature. When the estimated engine coolant temperature reaches 75°C (167°F), the ECM checks the actual engine coolant temperature. If the actual engine coolant temperature is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat
Required Sensors/Components (Main)	Thermostat Engine coolant temperature sensor
Required Sensors/Components (Related)	Intake air temperature sensor Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	900 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS



Monitor runs whenever following DTCs are not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System bank 1- Advance) P0012 (VVT System bank 1- Retard) P0016 (VVT System bank 1- Misalignment) P0031, P0032 (Air Fuel Ratio Snesor Heater - Sensor 1) P0102, P0103 (Mass Air Flow Meter) P0112, P0113 (Intake Air Temperature Sensor) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0500 (Vehicle Speed Sensor) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Battery voltage	11 V or more
Either of following conditions 1 or 2 is met:	-
1. All of following conditions met:	-
• Engine coolant temperature at engine start - Intake air temperature at engine start	-15 to 7°C (5 to 45°F)
• Engine coolant temperature at engine start	-10 to 56°C (14 to 133°F)
• Intake air temperature at engine start	-10 to 56°C (14 to 133°F)
2. All of following conditions met:	-
• Engine coolant temperature at engine start - Intake air temperature at engine start	More than 7°C (45°F)
• Engine coolant temperature at engine start	56°C (133°F) or less
• Intake air temperature at engine start	-10°C (14°F) or more

Accumulated time at 80 mph (128 km/h) or more of vehicle speed	Less than 20 seconds

TYPICAL MALFUNCTION THRESHOLDS

Duration that both of following conditions (a) and (b) met	5 seconds or more
(a) Estimated engine coolant temperature	75°C (167°F) or more
(b) Engine coolant temperature sensor output	Below 75°C (167°F)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off for 30 seconds.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Enter the following menus: Powertrain / Engine / Data List / All Data / Coolant Temp and Intake Air.
7. Check that "Coolant Temp" and "Intake Air" in the Data List are within the range of 0 to 35°C (32 to 95°F).
8. Heater set to MAX HOT with fresh air mode selected.
9. Start the engine and wait 15 minutes or more [B].
10. Enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
11. Read Pending DTCs [C].

HINT:

If a pending DTC is output, the system is malfunctioning.

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU's memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C].

12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0128)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0128	A
P0128 and other DTCs	B

HINT:

If any DTCs other than P0128 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	**CHECK COOLING SYSTEM**

(a) Check for defects in the cooling system that might cause the system to be too cold, such as abnormal radiator fan operation or any modifications.

NG ▶ **REPAIR OR REPLACE COOLING SYSTEM**

OK ▼

3.	**INSPECT THERMOSTAT**

(a) Remove the thermostat INFO .

(b) Measure the valve opening temperature of the thermostat.

Standard Value:
80 to 84°C (176 to 183°F)

HINT:

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat INFO .

NG ▶ **REPLACE THERMOSTAT**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000SVT098X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0327,P0328: Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor) (2010 Corolla)		

DTC	**P0327**	**Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)**

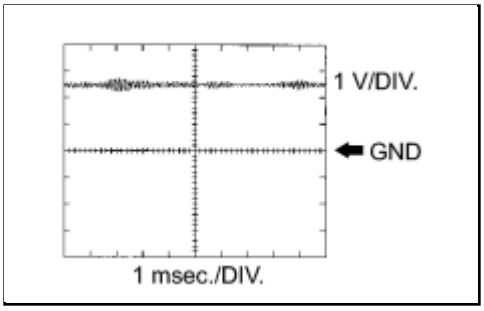
DTC	**P0328**	**Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)**

DESCRIPTION

A flat type knock sensor is used. Flat type knock sensors (non-resonant type) have a structure that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.

Knock sensors are fitted onto the engine block to detect engine knocking.

The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed.



The voltage is generated when the engine block vibrates due to knocking. Occurrence of engine knocking can be suppressed by delaying the ignition timing.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0327	Output voltage of knock sensor less than 0.5 V for 1 second or more (1 trip detection logic)	• Short in knock sensor circuit • Knock sensor • ECM
P0328	Output voltage of knock sensor more than 4.5 V for 1 second or more (1 trip detection logic)	• Open in knock sensor circuit • Knock sensor • ECM

HINT:

When any of DTCs P0327 and P0328 are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the ignition switch is turned off.

Reference: Inspection using an oscilloscope

The correct waveform is as shown.

ECM Terminal Name	Between KNK1 and EKNK
Tester Range	1 V/DIV., 1 msec/DIV.
Condition	Engine speed maintained at 4000 rpm after warming up engine

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM interprets this as a malfunction in the sensor circuit, and sets a DTC.

The monitor for DTCs P0327 and P0328 begins to run when 5 seconds have elapsed since the engine was started.

If the malfunction is not repaired successfully, DTC P0327 or P0328 is set 5 seconds after the engine is next started.

MONITOR STRATEGY

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (KNOCK FEEDBACK VALUE)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the engine.

(e) Enter the following menus: Powertrain / Engine and ECT / All Data / Knock Feedback Value.

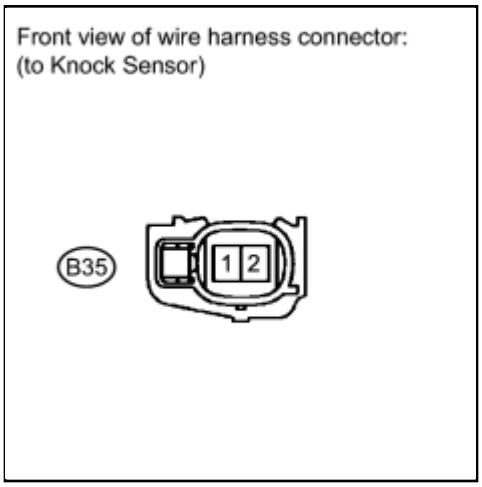
(f) Read the value while driving the vehicle.

OK:

The value changes.

Malfunction does not occur	Knock Feedback Value changes

Malfunction occurs	Knock Feedback Value does not change



HINT:

The knock feedback value change can be confirmed by running the engine with a high load, for example, by activating the air conditioning system and racing the engine.

NG ▶ **INSPECT ECM (KNK1 VOLTAGE)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

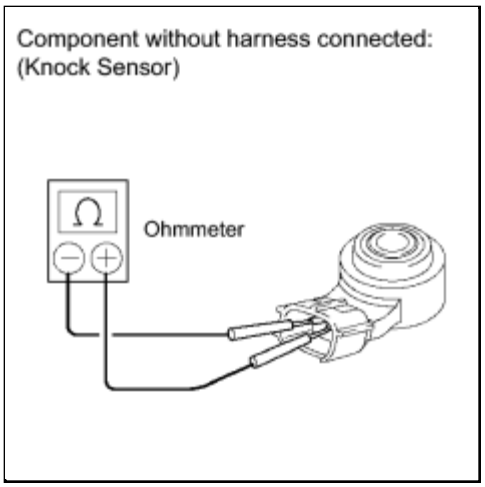
2.	**INSPECT ECM (KNK1 VOLTAGE)**

(a) Disconnect the knock sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B35-2 - B35-1	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the knock sensor connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)**

OK

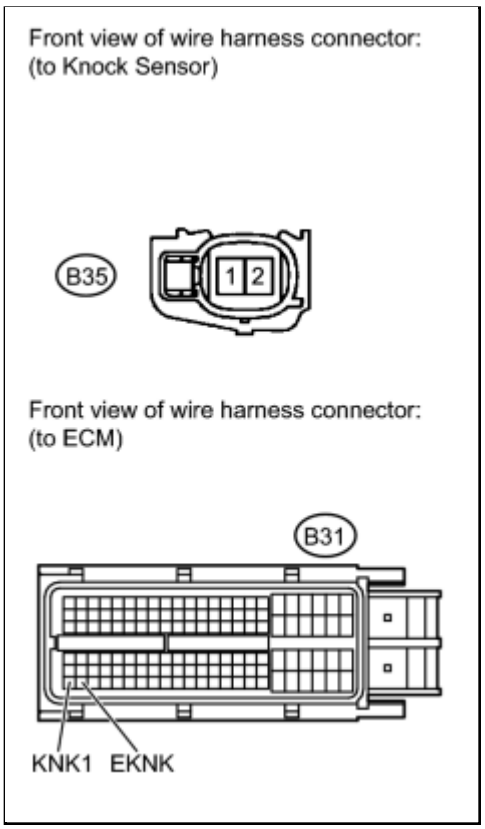
3.	**INSPECT KNOCK SENSOR**

(a) Remove the knock sensor.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	120 to 280 kΩ



(c) Reinstall the knock sensor.

NG ▶ **REPLACE KNOCK SENSOR**

OK ▶ **REPLACE ECM**

4.	**CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)**

(a) Disconnect the knock sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B35-2 - B31-110 (KNK1)	Always	Below 1 Ω
B35-1 - B31-111 (EKNK)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B35-2 or B31-110 (KNK1) - Body ground	Always	10 kΩ or higher
B35-1 or B31-111 (EKNK) - Body ground	Always	10 kΩ or higher

(d) Reconnect the knock sensor connector.

(e) Reconnect the ECM connector.

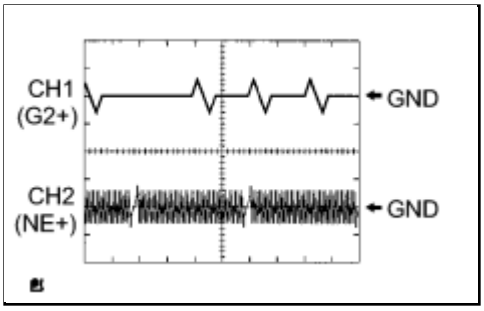
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - KNOCK SENSOR)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TCW0BFX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0335,P0339: Crankshaft Position Sensor "A" Circuit (2010 Corolla)		

DTC	**P0335**	**Crankshaft Position Sensor "A" Circuit**

DTC	**P0339**	**Crankshaft Position Sensor "A" Circuit Intermittent**



DESCRIPTION

The crankshaft position sensor system consists of a crankshaft position sensor plate and a pickup coil.

The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of wound copper wire, an iron core and magnet. The sensor plate rotates and, as each tooth passes by the pickup coil, a pulse signal is created. The pickup coil generates 34 signals per engine revolution. Based on these signals, the ECM calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0335	When either of following conditions is met: (1 trip detection logic) • Missing crankshaft position sensor signal despite camshaft position sensor signal inputs normal after engine cranked • No crankshaft position sensor signal to ECM at engine speed of 600 rpm or more	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crankshaft position sensor plate • ECM
P0339	Following conditions (a), (b) and (c) are met: (1 trip detection logic) (a) Engine speed 1500 rpm or more (b) No crankshaft position sensor signal for 0.05 seconds or more (c) 3 seconds or more have elapsed since starter signal switched from ON to OFF	• Open or short in crankshaft position sensor circuit • Crankshaft position sensor • Crankshaft position sensor plate • ECM

Reference: Inspection using an oscilloscope.

HINT:

- The correct waveform is as shown.
- G2+ stand for the camshaft position sensor signal, and NE+ stands for the crankshaft position sensor signal.
- A failure of the ground for the shielding of the wiring may result in noisy waveforms.

ECM Terminal Name	CH1: Between G2+ and G2- CH2: Between NE+ and NE-
Tester Range	5 V/DIV., 20 msec/DIV.
Condition	Idling

MONITOR DESCRIPTION

If there is no signal from the crankshaft position sensor despite the engine rotating, the ECM interprets this as a malfunction of the sensor.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: Crankshaft position sensor range check or rationality

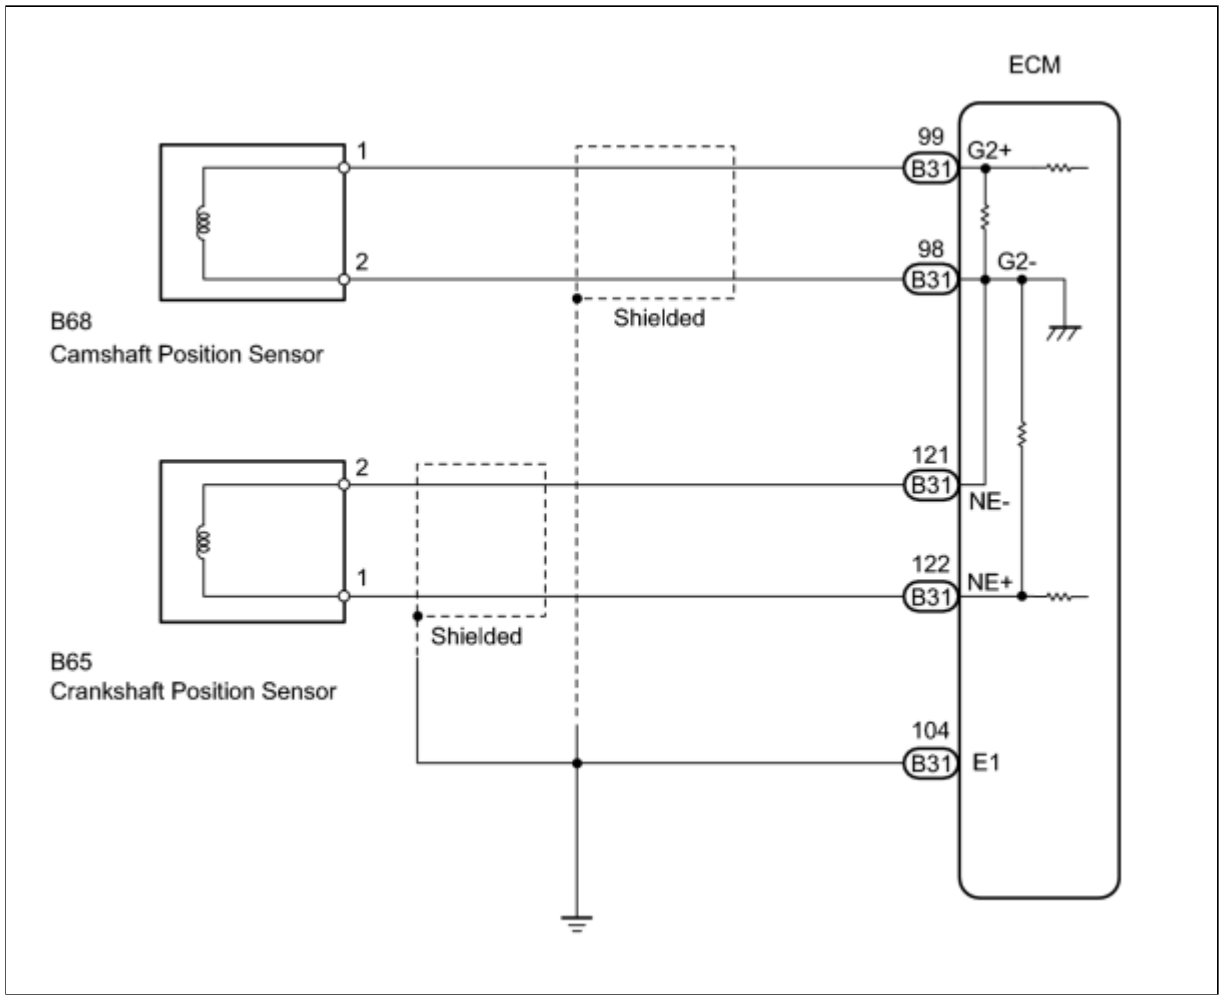
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

- If no problem is found through this diagnostic troubleshooting procedure, troubleshoot the engine mechanical systems.
- Check the engine speed. The engine speed can be checked using the Techstream. To check, follow

the operation below:

a. Connect the Techstream to the DLC3.
b. Start the engine.
c. Turn the Techstream on.
d. Enter the following menus: Powertrain / Engine and ECT / Data List / Engine Speed.

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (ENGINE SPEED)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Engine Speed.

(e) Start the engine.

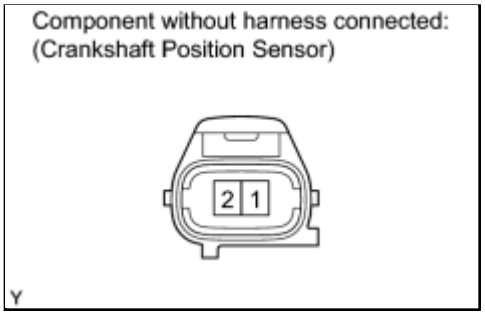
(f) Read the values displayed on the Techstream while the engine is running.

OK:
Correct values are displayed.

HINT:

- To check the engine speed change, display the graph on the Techstream.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the Techstream remains at zero (0), there may be an open or short in the crankshaft position sensor circuit.

NG ▶ **INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)**



OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)**

(a) Disconnect the crankshaft position sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	1150 to 1450 Ω

(c) Reconnect the crankshaft position sensor connector.

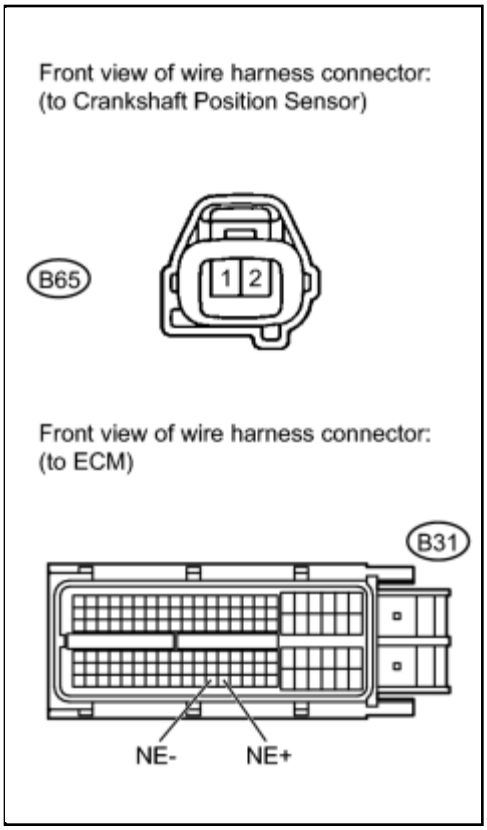
NG ▶ **REPLACE CRANKSHAFT POSITION SENSOR**

OK ▼

3.	**CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)**

(a) Disconnect the crankshaft position sensor connector.

(b) Disconnect the ECM connector.



(c) Measure the resistance according to the value(s) in the table below.

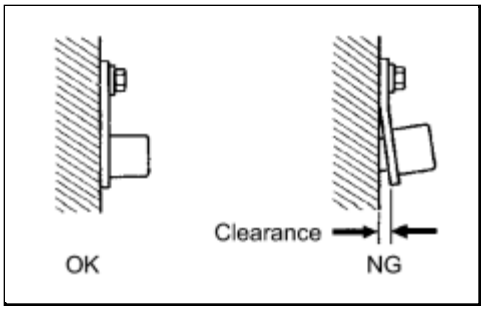
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B65-1 - B31-122 (NE+)	Always	Below 1 Ω
B65-2 - B31-121 (NE-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B65-1 or B31-122 (NE+) - Body ground	Always	10 kΩ or higher
B65-2 or B31-121 (NE-) - Body ground	Always	10 kΩ or higher



(d) Reconnect the crankshaft position sensor connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CRANKSHAFT POSITION SENSOR - ECM)**

OK ▼

4.	CHECK SENSOR INSTALLATION (CRANKSHAFT POSITION SENSOR)

(a) Check the crankshaft position sensor installation.

OK:

Sensor is installed correctly.

NG ▶ **SECURELY REINSTALL SENSOR**

OK ▼

5.	INSPECT CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate.

OK:

Sensor plate does not have any cracks or deformation.

NG ▶ **REPLACE CRANKSHAFT POSITION SENSOR PLATE**

OK
▼

6.	**REPLACE CRANKSHAFT POSITION SENSOR**

(a) Replace crankshaft position sensor INFO .

NEXT
▼

7.	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Start the engine.

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read DTCs.

Result:

RESULT	PROCEED TO
No output	A
P0335 or P0339	B

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XH40A8X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0351-P0354: Ignition Coil "A" Primary / Secondary Circuit (2010 Corolla)		

DTC	**P0351**	**Ignition Coil "A" Primary / Secondary Circuit**

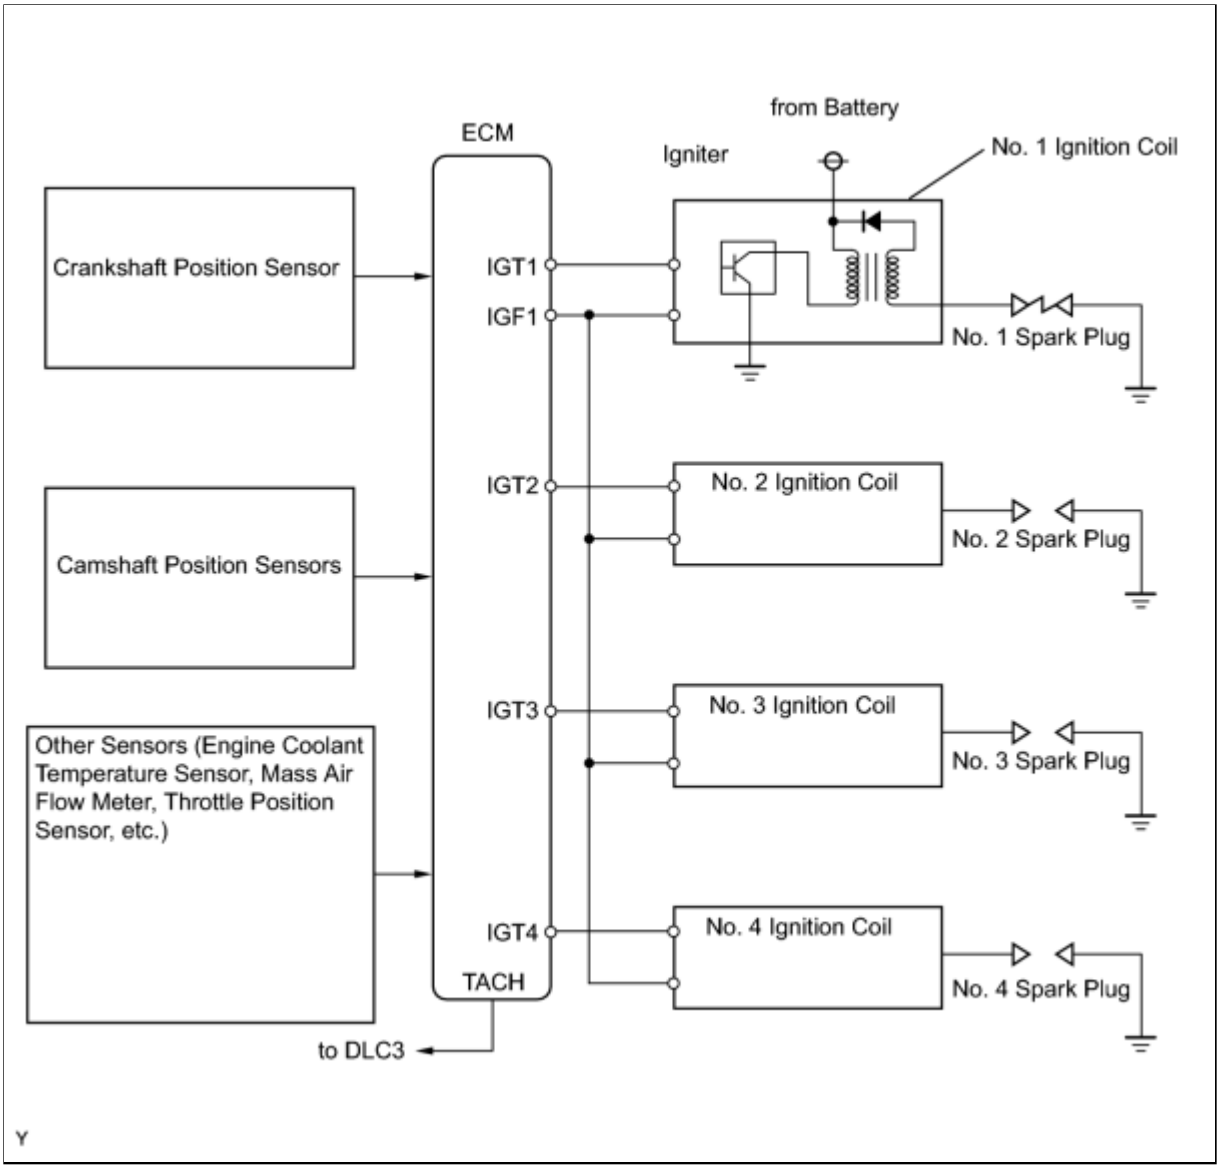
DTC	**P0352**	**Ignition Coil "B" Primary / Secondary Circuit**

DTC	**P0353**	**Ignition Coil "C" Primary / Secondary Circuit**

DTC	**P0354**	**Ignition Coil "D" Primary / Secondary Circuit**

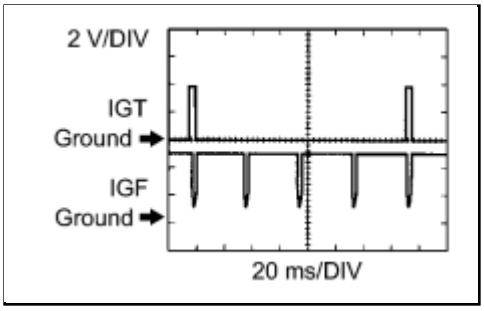
DESCRIPTION

HINT:



- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check the No. 1 ignition coil circuit.
- If DTC P0352 is set, check the No. 2 ignition coil circuit.
- If DTC P0353 is set, check the No. 3 ignition coil circuit.
- If DTC P0354 is set, check the No. 4 ignition coil circuit.

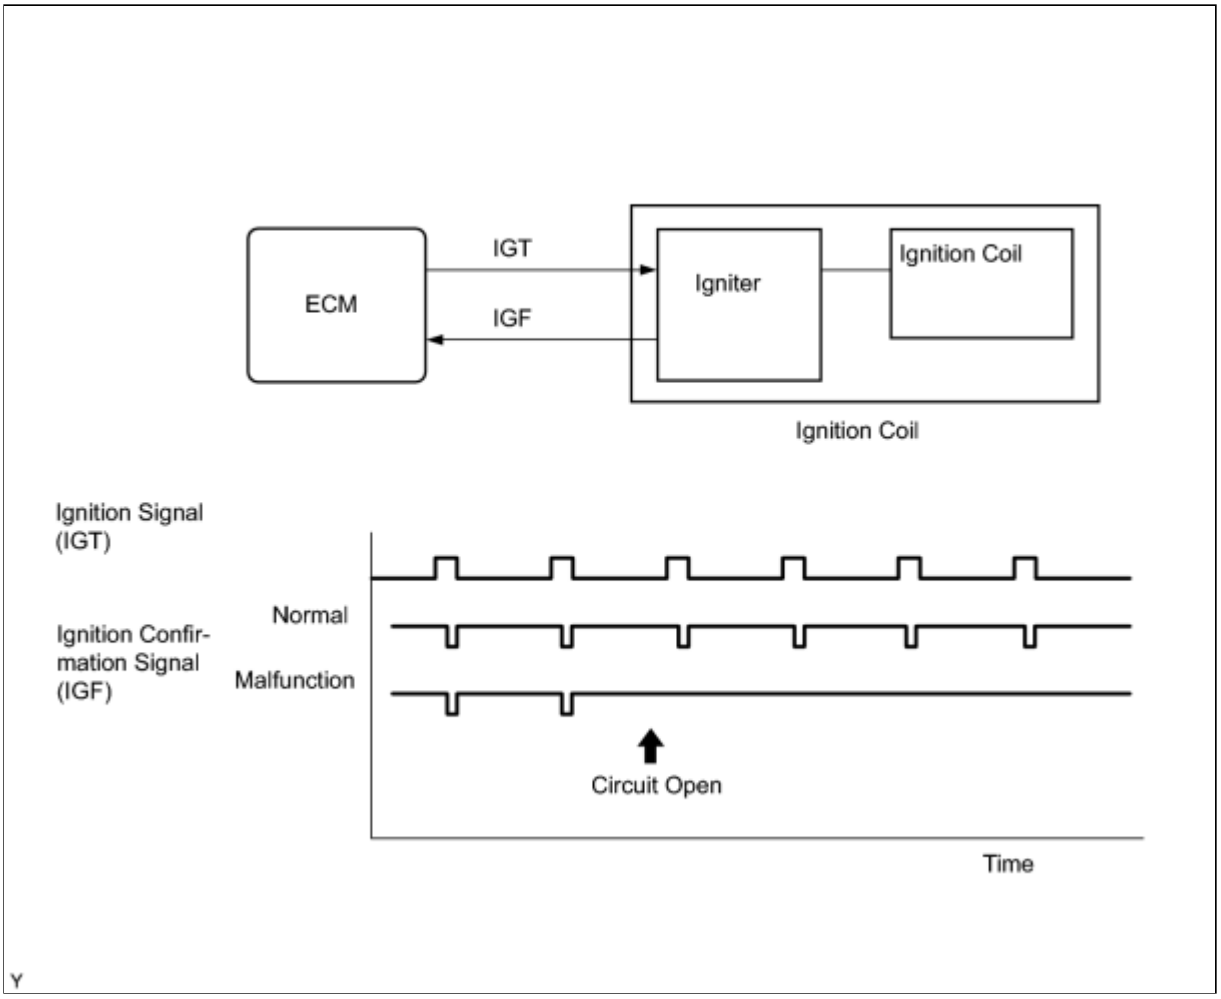
A direct ignition system is used on this vehicle.



The direct ignition system is an ignition system in which each cylinder is ignited by its own ignition coil and spark plug. The secondary wiring of each ignition coil generates a powerful voltage which is applied directly to each spark plug. The spark passes from the center electrode of the spark plug to the ground electrode.

The ignition coils of this system each have a built-in igniter.

The ECM determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil, the igniter sends back an ignition confirmation (IGF) signal to the ECM, for each cylinder ignition.



DTC NO.	DTC DETECTION CONDITIONS	TROUBLE AREAS
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine running (1 trip detection logic)	• Ignition system • Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil and ECM • No. 1 to No. 4 ignition coils • ECM

Reference: Inspection using an oscilloscope.
While cranking or idling the engine, check the waveform between terminals IGT (1 to 4) and E1, and IGF1 and E1 of the ECM connector.

ECM Terminal Name	Between IGT (1 to 4) and E1 Between IGF1 and E1
Tester Range	2 V/DIV, 20 ms/DIV
Condition	Idling

MONITOR DESCRIPTION

If the ECM does not receive any IGF signals despite transmitting the IGT signal, it interprets this as a fault in the igniter and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 1 second after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0351: Igniter (cylinder 1) malfunction P0352: Igniter (cylinder 2) malfunction P0353: Igniter (cylinder 3) malfunction P0354: Igniter (cylinder 4) malfunction

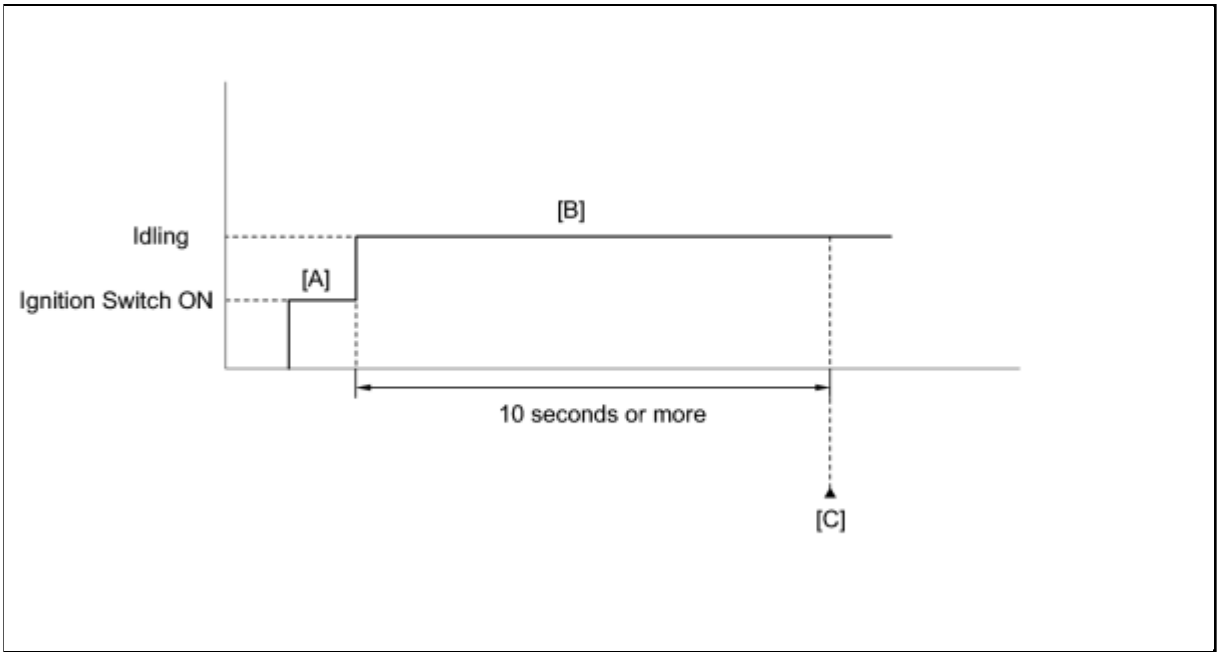
Required Sensors/Components (Related)	Crankshaft position sensor
Frequency of Operation	Continuous
Duration	0.512 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of following conditions A or B is met	-
A. Engine RPM	1500 rpm or less
B. Starter	OFF
Either of following conditions C or D met	-
C. Both of following conditions (a) and (b) are met	-
(a) Engine speed	500 rpm or less
(b) Battery voltage	6 V or more
D. All of following conditions (a), (b) and (c) are met	-
(a) Engine speed	More than 500 rpm
(b) Battery voltage	10 V or more
(c) Number of sparks after CPU reset	5 sparks or more



TYPICAL MALFUNCTION THRESHOLDS

IGF signal	ECM does not receive any IGF signal despite ECM sending IGT signal to igniter

COMPONENT OPERATING RANGE

IGF signal	Igniter transmits IGF signal when it receives IGT signal from ECM

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Idle the engine for 10 seconds or more [B].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P0351, P0352, P0353 or P0354.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

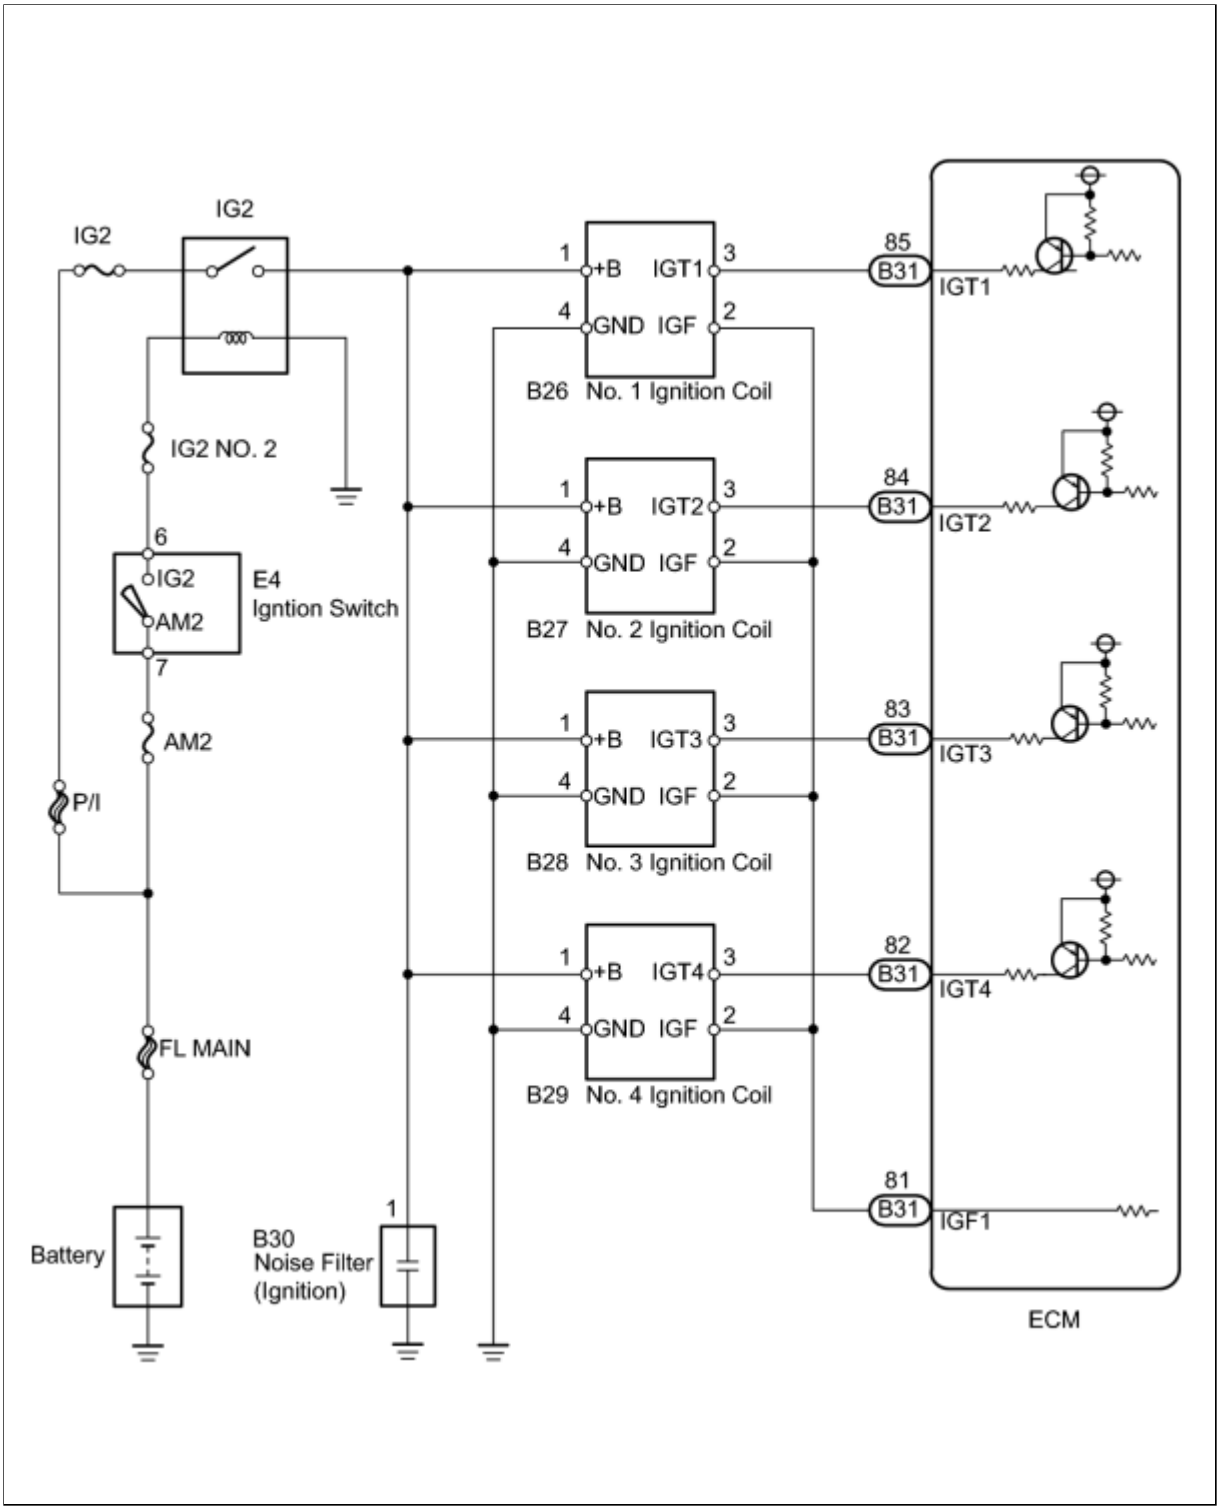
TECHSTREAM DISPLAY	DESCRIPTION
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



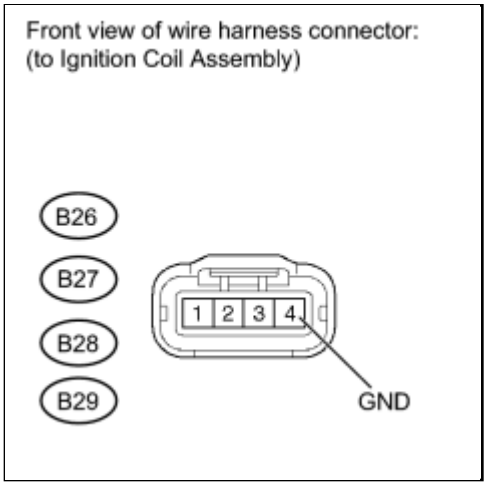
If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO.

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

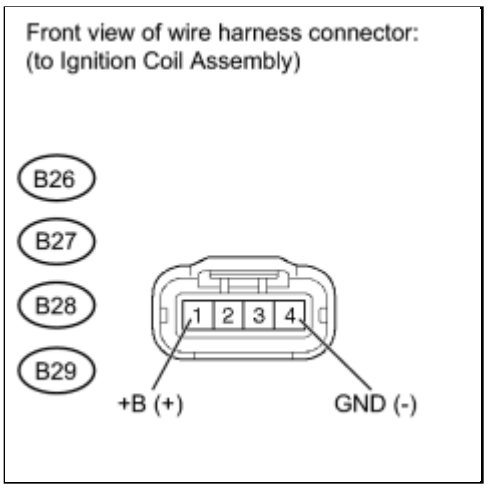
1.	**INSPECT IGNITION COIL ASSEMBLY (GROUND CIRCUIT)**

(a) Disconnect the ignition coil assembly connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-4 (GND) - Body ground	Always	Below 1 Ω
B27-4 (GND) - Body ground	Always	Below 1 Ω
B28-4 (GND) - Body ground	Always	Below 1 Ω
B29-4 (GND) - Body ground	Always	Below 1 Ω



(c) Reconnect the ignition switch assembly connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)**

OK ▼

2.	**INSPECT IGNITION COIL ASSEMBLY (POWER SOURCE)**

(a) Disconnect the ignition coil assembly connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) - B26-4 (GND)	Ignition switch ON	11 to 14 V
B27-1 (+B) - B27-4 (GND)	Ignition switch ON	11 to 14 V
B28-1 (+B) - B28-4 (GND)	Ignition switch ON	11 to 14 V
B29-1 (+B) - B29-4 (GND)	Ignition switch ON	11 to 14 V

(d) Reconnect the ignition coil assembly connectors.

NG ▶ **CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

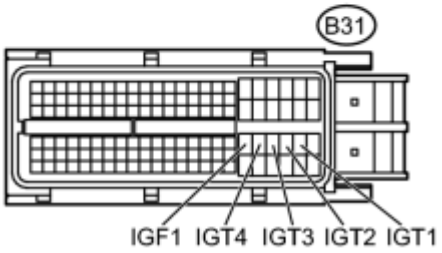
OK ▼

3.	**CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - ECM)**

(a) Disconnect the ignition coil assembly connectors.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.



Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B27-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B28-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω
B29-2 (IGF) - B31-81 (IGF1)	Always	Below 1 Ω

Front view of wire harness connector:
(to Ignition Coil Assembly)

Front view of wire harness connector:
(to ECM)

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-3 (IGT1) - B31-85 (IGT1)	Always	Below 1 Ω
B27-3 (IGT2) - B31-84 (IGT2)	Always	Below 1 Ω
B28-3 (IGT3) - B31-83 (IGT3)	Always	Below 1 Ω
B29-3 (IGT4) - B31-82 (IGT4)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B27-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B28-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher
B29-2 (IGF) or B31-81 (IGF1) - Body ground	Always	10 kΩ or higher

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED

		CONDITION
B26-3 (IGT1) or B31-85 (IGT1) - Body ground	Always	10 kΩ or higher
B27-3 (IGT2) or B31-84 (IGT2) - Body ground	Always	10 kΩ or higher
B28-3 (IGT3) or B31-83 (IGT3) - Body ground	Always	10 kΩ or higher
B29-3 (IGT4) or B31-82 (IGT4) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

(e) Reconnect the ignition coil assembly connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION COIL ASSEMBLY - ECM)**

OK ▼

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P0351, P0352, P0353 OR P0354)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Shuffle arrangement of the ignition coil with igniters (among No. 1 to No. 4 cylinders).

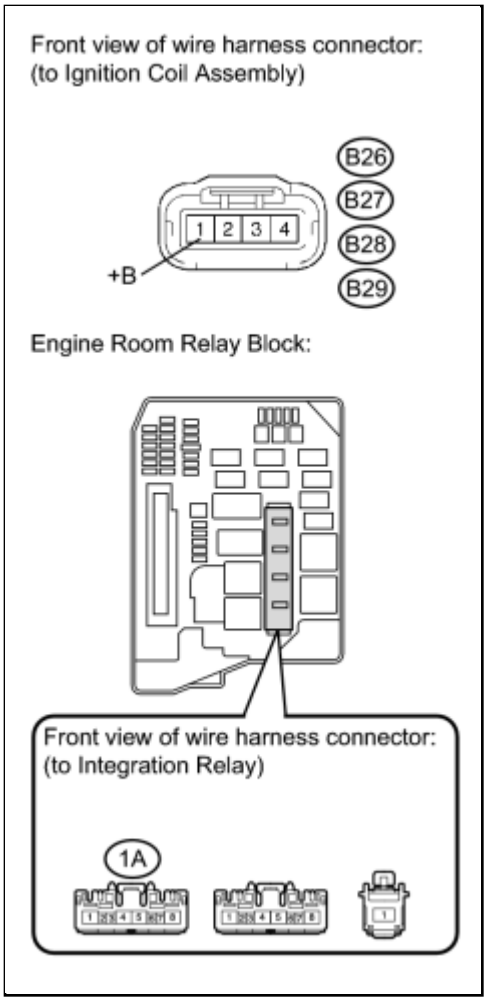
NOTICE:

Do not shuffle the connectors.

(f) Perform a simulation test.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read DTCs.



Result:

RESULT	PROCEED TO
Same DTC is output	A
Different ignition coil DTC is output	B

B ▶ **REPLACE IGNITION COIL ASSEMBLY**

A ▶ **REPLACE ECM**

5.	**CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

(a) Disconnect the ignition coil assembly connectors.

(b) Remove the integration relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) - 1A-4	Always	Below 1 Ω
B27-1 (+B) - 1A-4	Always	Below 1 Ω
B28-1 (+B) - 1A-4	Always	Below 1 Ω
B29-1 (+B) - 1A-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B26-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B27-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B28-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher
B29-1 (+B) or 1A-4 - Body ground	Always	10 kΩ or higher

(d) Reinstall the integration relay.

(e) Reconnect the ignition coil assembly connectors.

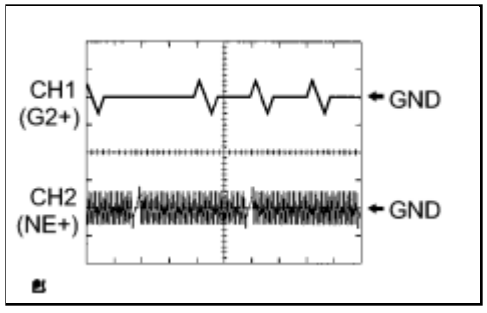
NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION COIL ASSEMBLY - INTEGRATION RELAY)**

OK ▶ **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000012JE03TX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0340: Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor) (2010 Corolla)		

DTC	**P0340**	**Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)**

DESCRIPTION



The camshaft position sensor consists of a magnet and an iron core which is wrapped with copper wire, and is installed onto the cylinder head. When the camshaft rotates, each of 3 teeth on the camshaft passes through the camshaft position sensor. This activates the internal magnet in the sensor, generating a voltage in the copper wire. The camshaft rotation is synchronized with the crankshaft rotation. When the crankshaft turns twice, the voltage is generated 3 times in the camshaft position sensor. The generated voltage in the sensor acts as a signal, allowing the ECM to locate the camshaft position. This signal is then used to control ignition timing, fuel injection timing, and the VVT system.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0340	When either of following conditions is met: • No camshaft position sensor signal to ECM while cranking (2 trip detection logic) • Missing camshaft position sensor signal despite crankshaft position sensor signal inputs normal at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in camshaft position sensor circuit • Camshaft position sensor • Camshaft • Timing chain jumped a tooth • ECM

HINT:

DTC P0340 indicates a malfunction relating to the camshaft position sensor circuit (the wire harness between the ECM and camshaft position sensor, and the camshaft position sensor itself).

Reference: Inspection using an oscilloscope

HINT:

- The correct waveform is as shown in the illustration.
- G2+ stands for the camshaft position sensor signal, and NE+ stands for the crankshaft position sensor signal.
- A failure of the ground for the shielding of the wiring may result in noisy waveforms.

ECM Terminal Name	CH1: Between G2+ and G2- CH2: Between NE+ and NE-
Tester Range	5 V/DIV., 20 msec/DIV.
Condition	Idling

MONITOR DESCRIPTION

If no signal is transmitted by the camshaft position sensor despite the engine revolving, or the rotation of the camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.

If the malfunction is not repaired successfully, the DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0340: Camshaft position sensor range check P0340: Camshaft position/crankshaft position misalignment

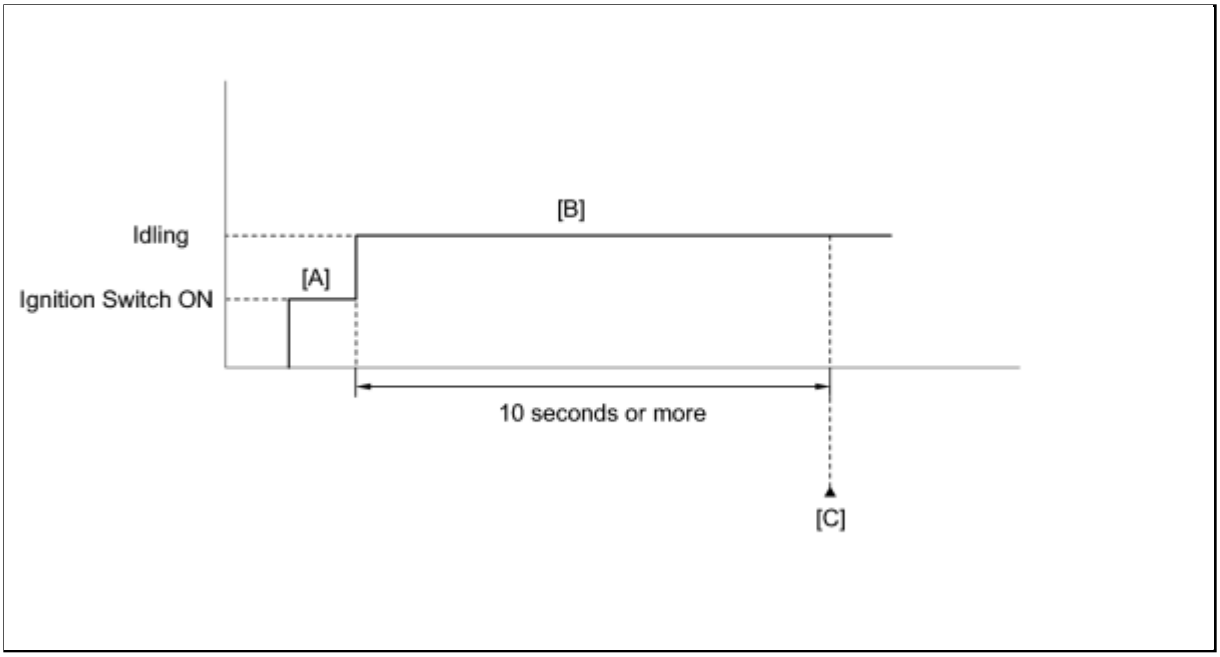
Camshaft position sensor signal	No signal



Camshaft Position/Crankshaft Position Misalignment

Camshaft position and crankshaft position phase	Misaligned

COMPONENT OPERATING RANGE

Camshaft position sensor	• Camshaft position sensor output voltage fluctuates while camshaft rotating • 3 camshaft position sensor signals per 2 crankshaft revolutions

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Idle the engine for 10 seconds or more [B].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P0340, P0342 or P0343.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

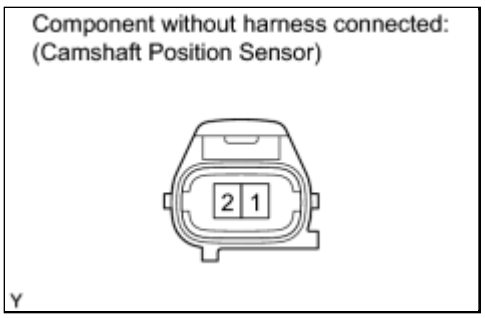
13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0335 INFO .



INSPECTION PROCEDURE

HINT:

Read freeze frame data using Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**INSPECT CAMSHAFT POSITION SENSOR (RESISTANCE)**

(a) Disconnect the camshaft position sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

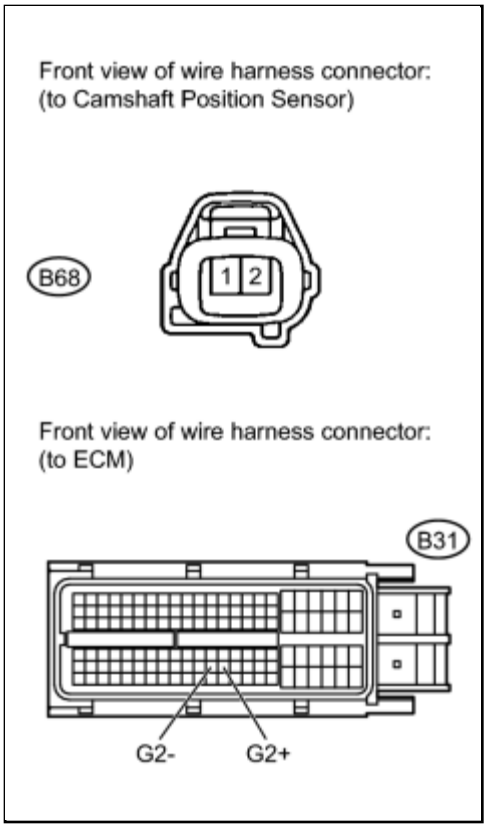
Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	950 to 1250 Ω

(c) Reconnect the camshaft position sensor connector.

NG ▶ **REPLACE CAMSHAFT POSITION**

OK



2.	**CHECK HARNESS AND CONNECTOR (CAMSHAFT POSITION SENSOR - ECM)**

(a) Disconnect the camshaft position sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B68-1 - B31-99 (G2+)	Always	Below 1 Ω
B68-2 - B31-98 (G2-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B68-1 or B31-99 (G2+) - Body ground	Always	10 kΩ or higher
B68-2 or B31-98 (G2-) - Body ground	Always	10 kΩ or higher

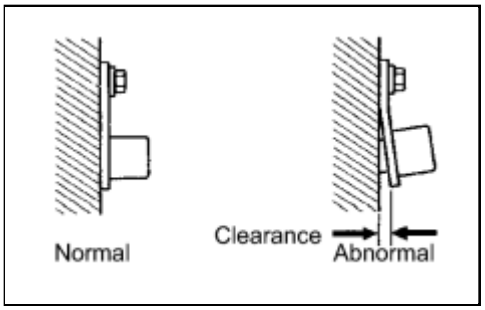
(d) Reconnect the ECM connector.

(e) Reconnect the camshaft position sensor connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CAMSHAFT**

POSITION SENSOR - ECM)

OK



3.	CHECK SENSOR INSTALLATION (CAMSHAFT POSITION SENSOR)

(a) Check the camshaft position sensor installation.

OK:

Sensor is installed correctly.

NG ▶ SECURELY REINSTALL SENSOR

OK

4.	CHECK VALVE TIMING INFO

NG ▶ ADJUST VALVE TIMING

OK

5.	INSPECT CAMSHAFT

(a) Check the teeth of the camshaft.

OK:

Camshaft teeth do not have any cracks or deformation.

NG ▶ REPLACE CAMSHAFT

OK

6.	REPLACE CAMSHAFT POSITION SENSOR

(a) Replace camshaft position sensor INFO .

NEXT

7.	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTCs INFO .

(e) Start the engine.

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read DTCs.

Result:

RESULT	PROCEED TO
No output	A
P0340	B

HINT:

If the engine does not start, replace the ECM.

B ▶ **REPLACE ECM**

A ▶ **END**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC0058X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0420: Catalyst System Efficiency Below Threshold (Bank 1) (2010 Corolla)		

DTC	**P0420**	**Catalyst System Efficiency Below Threshold (Bank 1)**

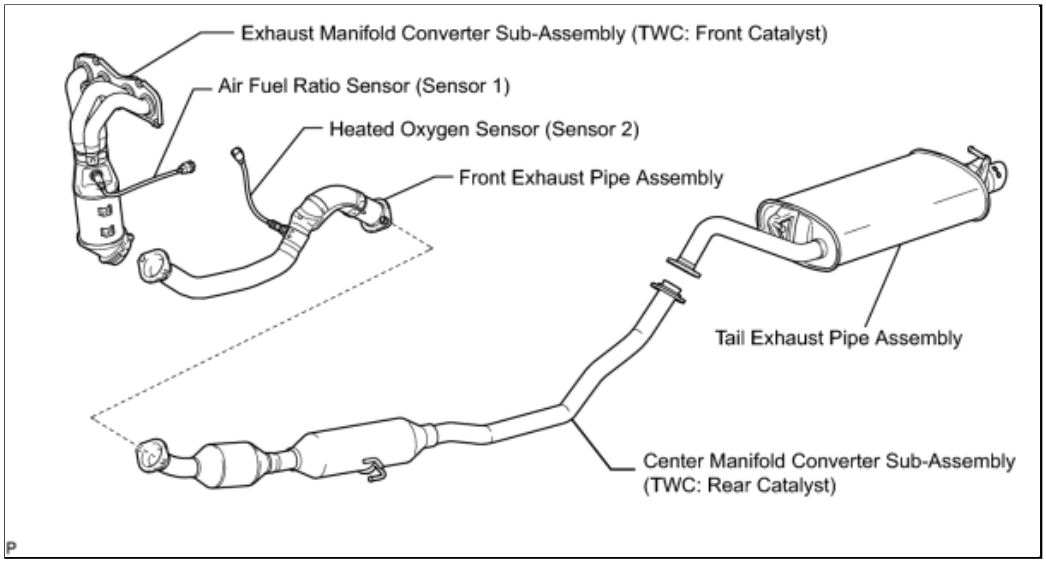
MONITOR DESCRIPTION

The ECM uses sensors mounted in front of and behind the three-way catalytic converter to monitor its efficiency.

The first sensor, the air fuel ratio sensor, sends pre-catalyst information to the ECM. The second sensor, the heated oxygen sensor, sends post-catalyst information to the ECM.

In order to detect any deterioration in the three-way catalytic converter, the ECM calculates the oxygen storage capacity of the three-way catalytic converter. This calculation is based on the voltage output of the heated oxygen sensor while performing active air-fuel ratio control.

The oxygen storage capacity value is an indication of the oxygen storage capacity of the three-way catalytic converter. When the vehicle is being driven with a warm engine, active air-fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air-fuel ratio to lean or rich. If the cycle of the waveform for the heated oxygen sensor is long, the oxygen storage capacity is great. There is a direct correlation between the heated oxygen sensor and the oxygen storage capacity of the three-way catalytic converter.



The ECM uses the oxygen storage capacity value to determine the state of the three-way catalytic converter. If any deterioration has occurred, it illuminates the MIL and sets the DTC.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0420	Oxygen Storage Capacity value smaller than standard value under active air fuel ratio control (2 trip detection logic)	• Gas leak from exhaust system • Air fuel ratio sensor (sensor 1) • Heated oxygen sensor (sensor 2) • Exhaust manifold converter sub-assembly (TWC: Front catalyst) • Center manifold converter sub-assembly (TWC: Rear catalyst)

HINT:

- Sensor 1 refers to the sensor closest to the engine assembly.
- Sensor 2 refers to the sensor farthest away from the engine assembly.

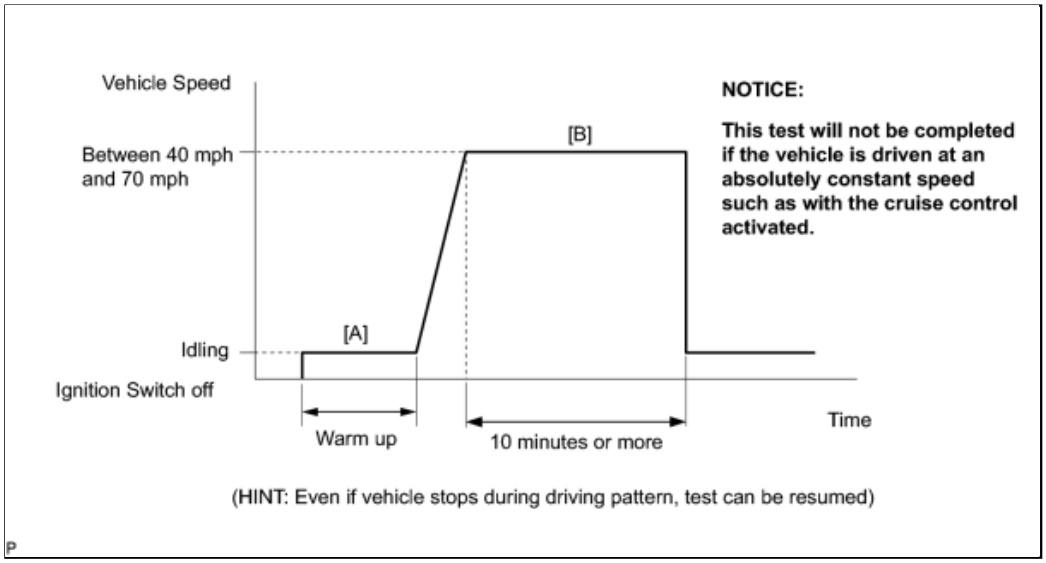
All of the following conditions are met	Condition 1, 2 and 3
1. Mass air flow rate	2.5 to 50 g/sec
2. Front catalyst temperature (estimated)	620 to 840°C (1148 to 1544°F)
3. Rear catalyst temperature (estimated)	400 to 770°C (752 to 1418°F)
Shift position	A/T models: 4th or higher M/T models: 3rd or higher

TYPICAL MALFUNCTION THRESHOLDS

Oxygen storage capacity of three-way catalytic converter	Less than 0.07 g



MONITOR RESULT

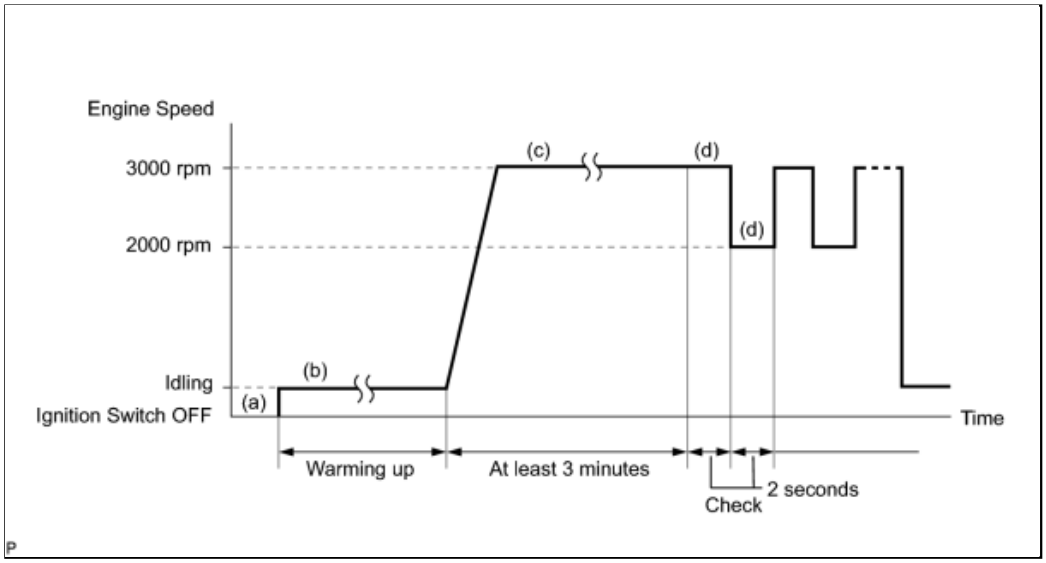
Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the catalyst monitor. This is very useful for verifying the completion of a repair.

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on [A].
7. Enter the following menus: Powertrain / Engine / Monitor.
8. Check that Catalyst / Status2 is Incomplete.
9. Start the engine and warm it up (until the engine coolant temperature is 75°C (167°F) or higher) [A].
10. Drive the vehicle at between 40 and 70 mph (64 and 113 km/h) for at least 10 minutes or more [B].
11. The monitor items will change to Complete as Catalyst monitor operates.
12. Enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Check if any DTCs (pending DTCs) are set.

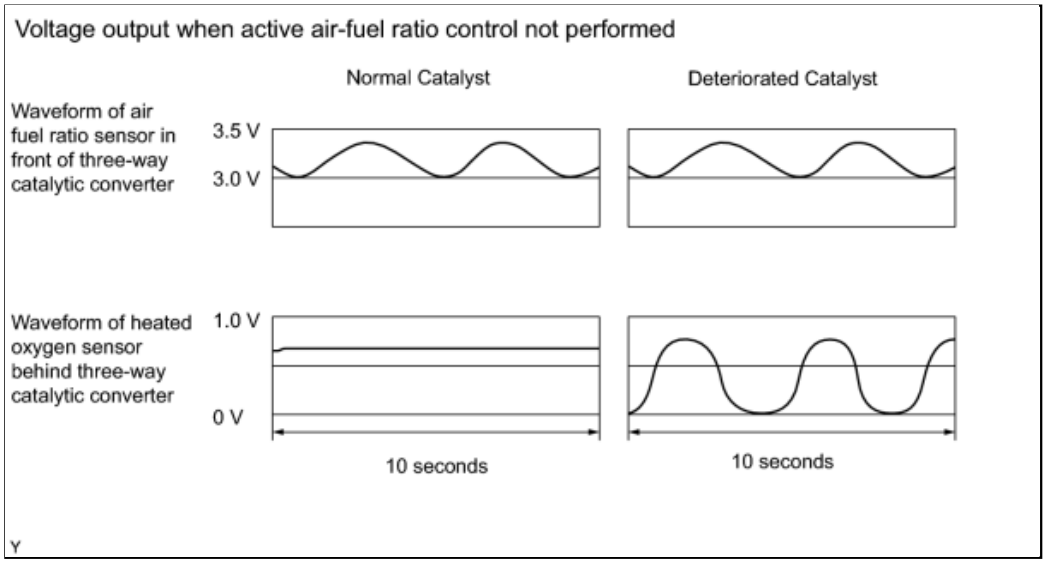


HINT:

If Catalyst does not change to Complete, and no pending DTCs are stored, extend the driving time.

CONDITIONING FOR SENSOR TESTING

HINT:



Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the air fuel ratio sensor and heated oxygen sensor. This is in order to activate the sensors sufficiently to obtain the appropriate inspection results.

(a) Connect the Techstream to the DLC3.
(b) Start the engine and warm it up with all the accessories switched OFF until the engine coolant temperature stabilizes.
(c) Run the engine at an engine speed of between 2500 rpm and 3000 rpm for at least 3 minutes.
(d) While running the engine at 3000 rpm for 2 seconds and 2000 rpm for 2 seconds, check the waveforms of the air fuel ratio and heated oxygen sensors using the Techstream.

HINT:

- If either of the voltage outputs of the air fuel ratio or heated oxygen sensor does not fluctuate, or there is noise in the waveform of either sensor, the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air fuel ratio may be extremely lean or rich. In such cases, perform the following active test: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
- If the three-way catalytic converter has deteriorated, the heated oxygen sensor (located behind the three-way catalytic converter) voltage output fluctuates up and down frequently, even under normal driving conditions (active air-fuel ratio control is not performed).

INSPECTION PROCEDURE

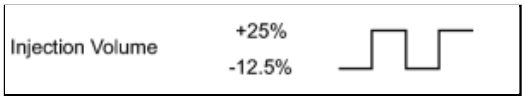
HINT:

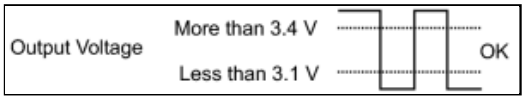
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other

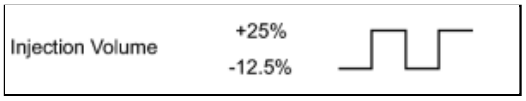
potential trouble areas are malfunctioning.

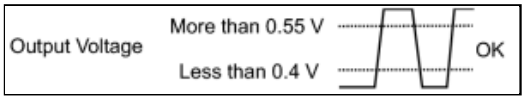
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using Techstream.

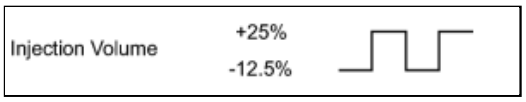
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

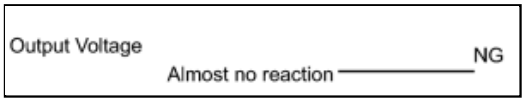


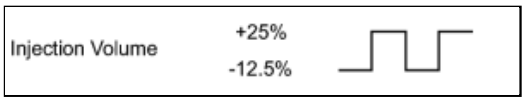


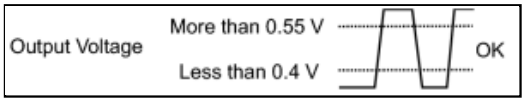




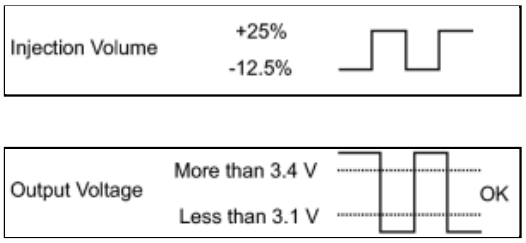


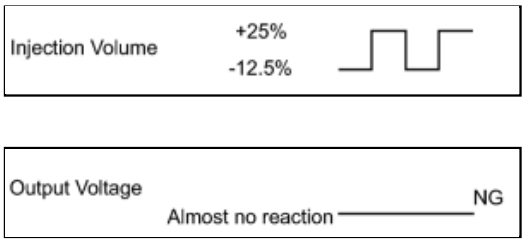


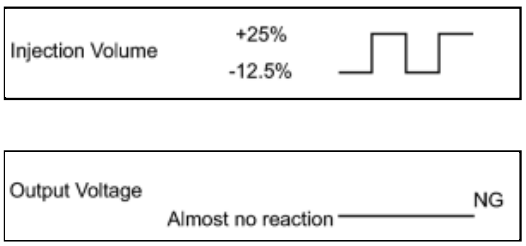


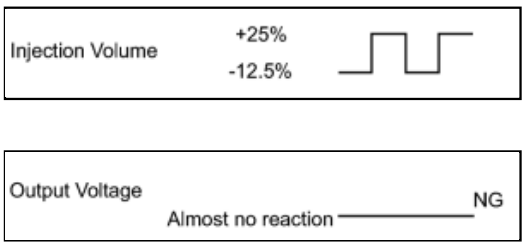


HINT:









- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (Air fuel ratio sensor)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated oxygen sensor)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1	 	 	-
2	 	 	• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0420	A

RESULT	PROCEED TO
P0420 and other DTCs	B

HINT:

If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼

2.	PERFORM ACTIVE TEST USING TECHSTREAM (CONTROL INJECTION VOLUME FOR A/F SENSOR)

(a) Connect the Techstream to the DLC3.

(b) Start the engine and warm it up.

(c) Turn the Techstream on.

(d) Run the engine at an engine speed of 2500 rpm for approximately 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.

(f) Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).

(g) Monitor the voltage outputs of the air fuel ratio sensor and heated oxygen sensor (AFS Voltage B1S1 and O2S B1S2) displayed on the Techstream.

HINT:

- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

Standard:

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1S1 (Air Fuel Ratio)	+25%	Rich	Less than 3.1
	-12.5%	Lean	More than 3.4
O2S B1S2 (Heated Oxygen)	+25%	Rich	More than 0.55
	-12.5%	Lean	Less than 0.4

Result:

STATUS AFS VOLTAGE B1S1	STATUS O2S B1S2	AIR FUEL RATIO CONDITION AND AIR FUEL RATIO AND HEATED OXYGEN SENSORS CONDITION	MISFIRE	MAIN SUSPECTED TROUBLE AREA	PROCEED TO
Lean	Rich	Normal	-	• Three-way catalytic converter (O2S) is consistently less than 0.4 V.	A
		Air fuel ratio sensor			

Lean: During Control the Injection Volume for A/F sensor, the air fuel ratio sensor output voltage (AFS Voltage) is consistently more than 3.4 V, and the heated oxygen sensor output voltage (O2S B1S2) is consistently less than

Rich: During Control the Injection Volume for A/F sensor, the AFS Voltage is consistently less than 3.1 V, and the O2S is consistently more than 0.55 V.

Lean/Rich: During Control the Injection Volume for A/F sensor of the Active Test, the output voltage of the heated oxygen sensor alternates correctly.

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P043E	Reference orifice clogged	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • Reference orifice clogged • Reference orifice high-flow • Leak	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe	While ignition switch OFF	2 trip
P043F	Reference orifice high-flow				
P2401	Leak detection pump stuck OFF				

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
		detection pump OFF malfunction • Leak detection pump ON malfunction • Vent valve ON (close) malfunction	from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM		
P2402	Leak detection pump stuck ON				
P2419	Vent valve stuck closed				

HINT:

The reference orifice is located inside the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

HINT:

Unit expressions

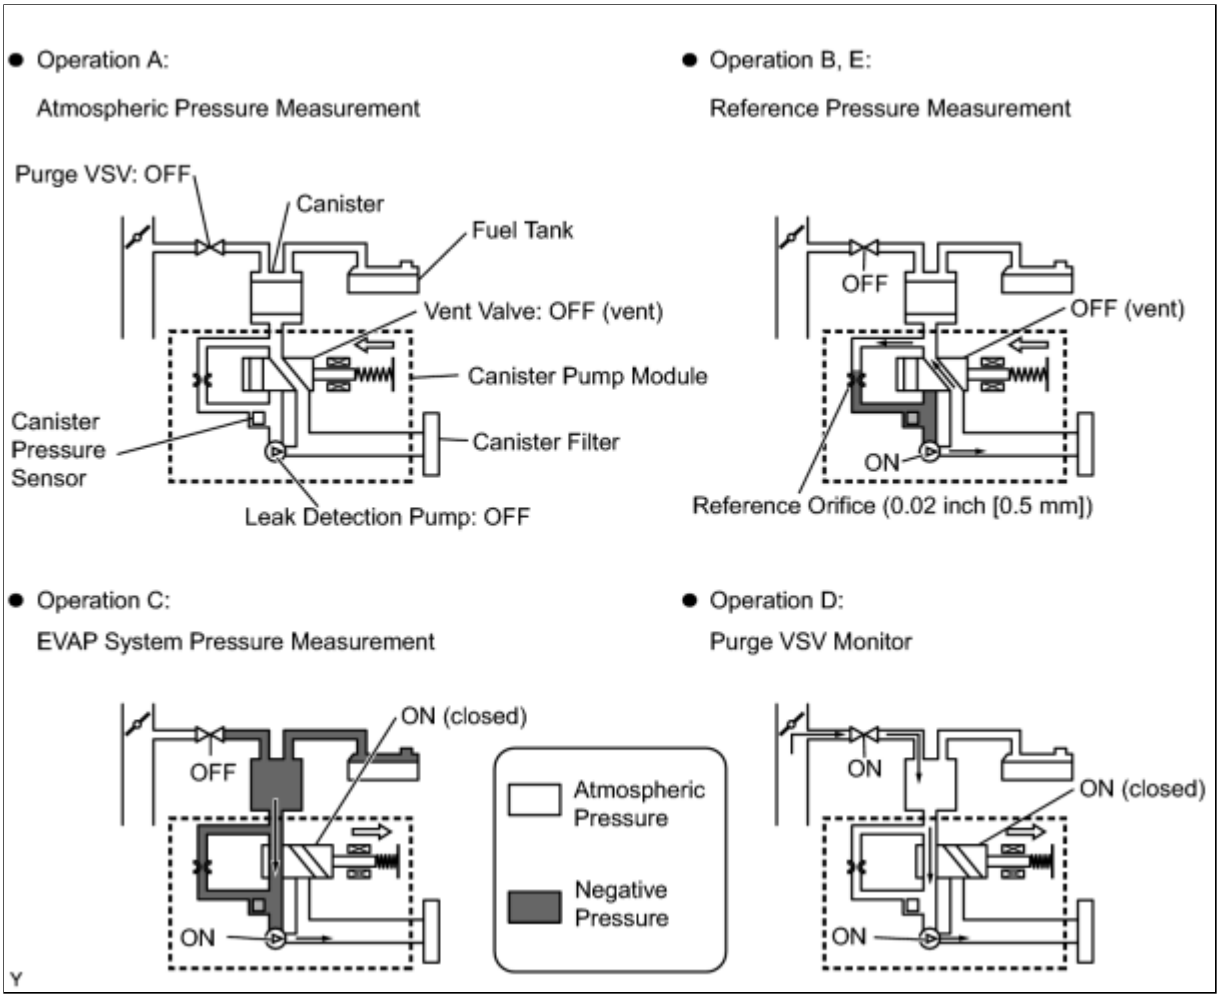
- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.



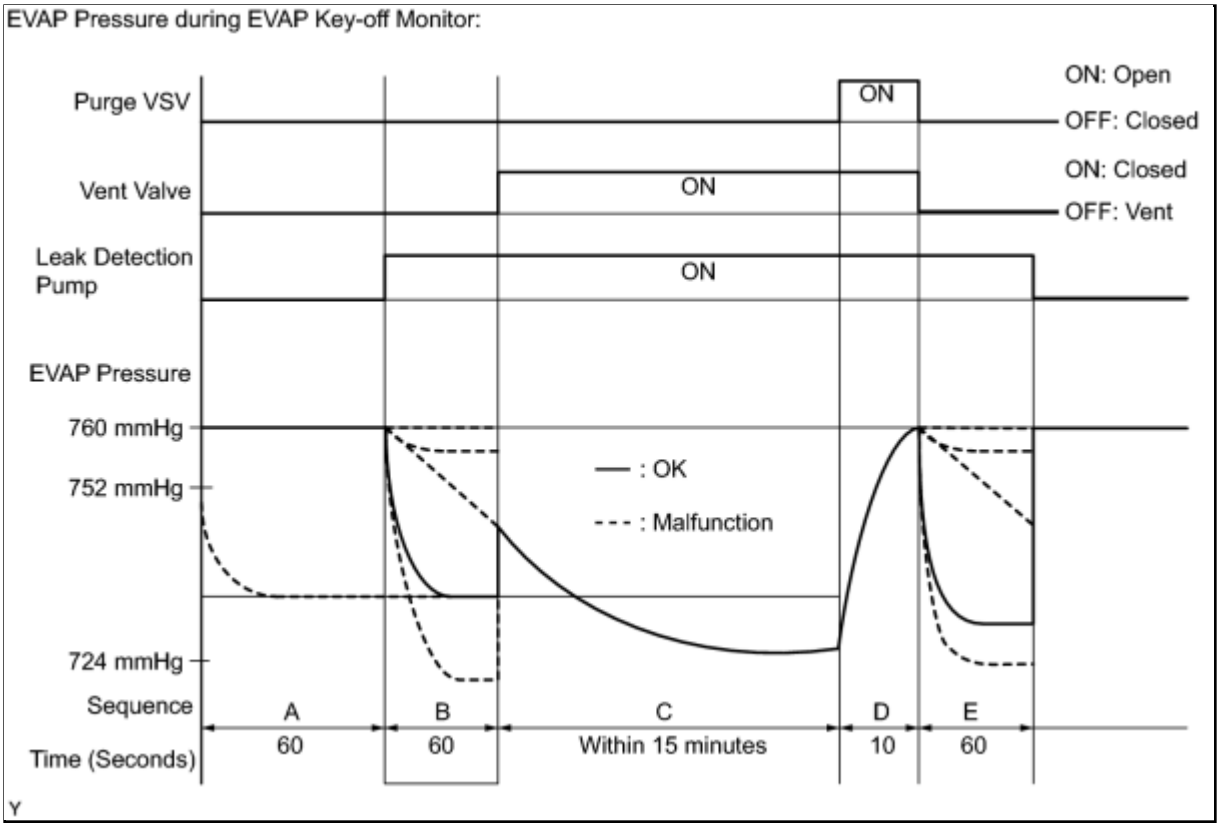
HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned off.	-

SEQUENCE	OPERATION	DESCRIPTION	DURATION
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine reference pressure, the leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than second the reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



The leak detection pump creates negative pressure through the reference orifice (in operation B and E). When the system is normal, the EVAP pressure is between 724 to 752 mmHg* and saturated within a minute. If not, the ECM interprets this as a malfunction. The ECM will illuminate the MIL and set DTC if this malfunction is detected in consecutive drive cycles.

*: Typical value.

HINT:

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg) in 60 seconds.

MONITOR STRATEGY

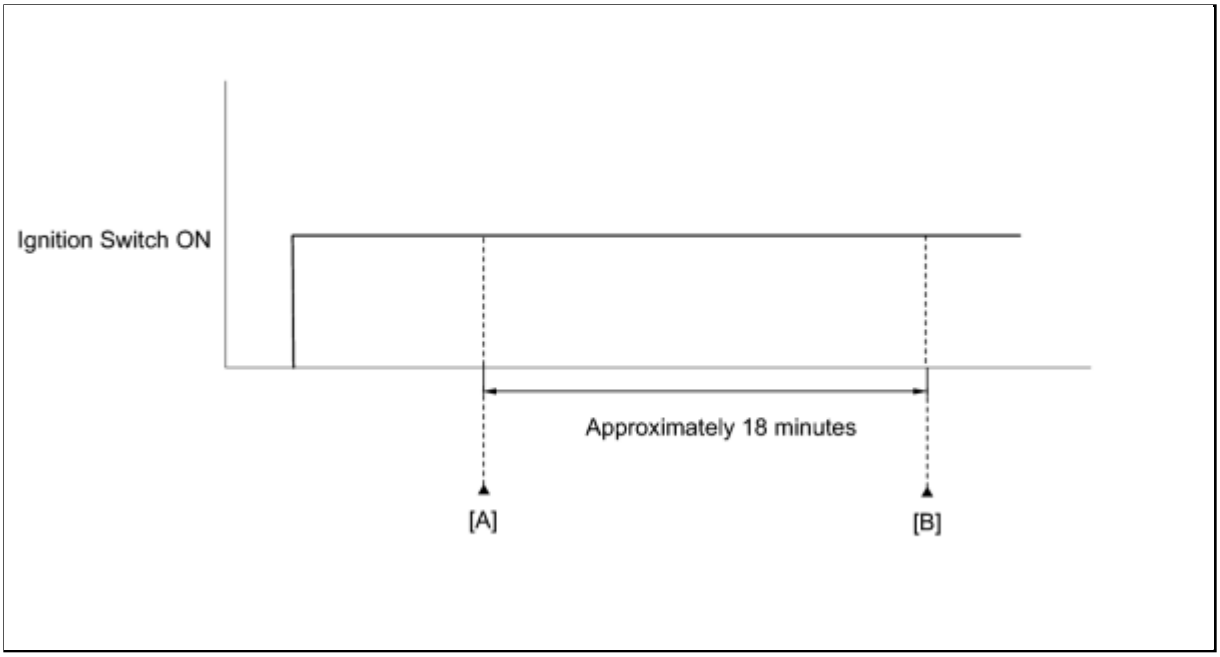
Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5, 7 or 9.5 hours
Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected

Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

TYPICAL MALFUNCTION THRESHOLDS



"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa-g (2.14 mmHg-g) in 60 seconds.

One of following conditions is met	-
EVAP pressure just after reference pressure measurement started	More than -1 kPa-g (-7.5 mmHg-g)
Reference pressure	Less than -4.85 kPa-g (-36.4 mmHg-g)
Reference pressure	-1.057 kPa-g (-7.93 mmHg-g) or more
Reference pressure	Not saturated within 60 seconds
Reference pressure difference between first and second	0.7 kPa-g (5.25 mmHg-g) or more

MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode [A].
7. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All readiness.
8. Input the DTC: P043E, P043F, P2401, P2402 or P2419.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

TECHSTREAM DISPLAY	DESCRIPTION
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0441: Evaporative Emission Control System Incorrect Purge Flow (2010 Corolla)		

DTC	**P0441**	**Evaporative Emission Control System Incorrect Purge Flow**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0441	Purge VSV (Vacuum Switching Valve) stuck open	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.35], ECM determines that purge VSV stuck open.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leak from EVAP system	While ignition switch off	2 trip
	Purge VSV stuck closed	After EVAP leak check performed, purge VSV turned ON (open), and atmospheric air introduced into EVAP system. Reference pressure measured at start and at end of check. If pressure does not return to near atmospheric pressure, ECM determines that purge VSV stuck closed.	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • ECM • Canister pump module • Leak from EVAP system	While ignition switch off	2 trip
	Purge flow	While engine running, following conditions successively met: • Negative pressure not created in EVAP system when purge VSV	• Purge VSV • Connector/wire harness (Purge VSV - ECM) • Leak from EVAP line (Purge VSV - Intake	While engine running	2 trip

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
		turned ON (open) • EVAP system pressure change less than 0.4 kPa-g (3.0 mmHg-g) when vent valve turned ON (closed) • Atmospheric pressure change before and after purge flow monitor less than 0.1 kPa-g (0.75 mmHg-g)	manifold) • ECM		

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

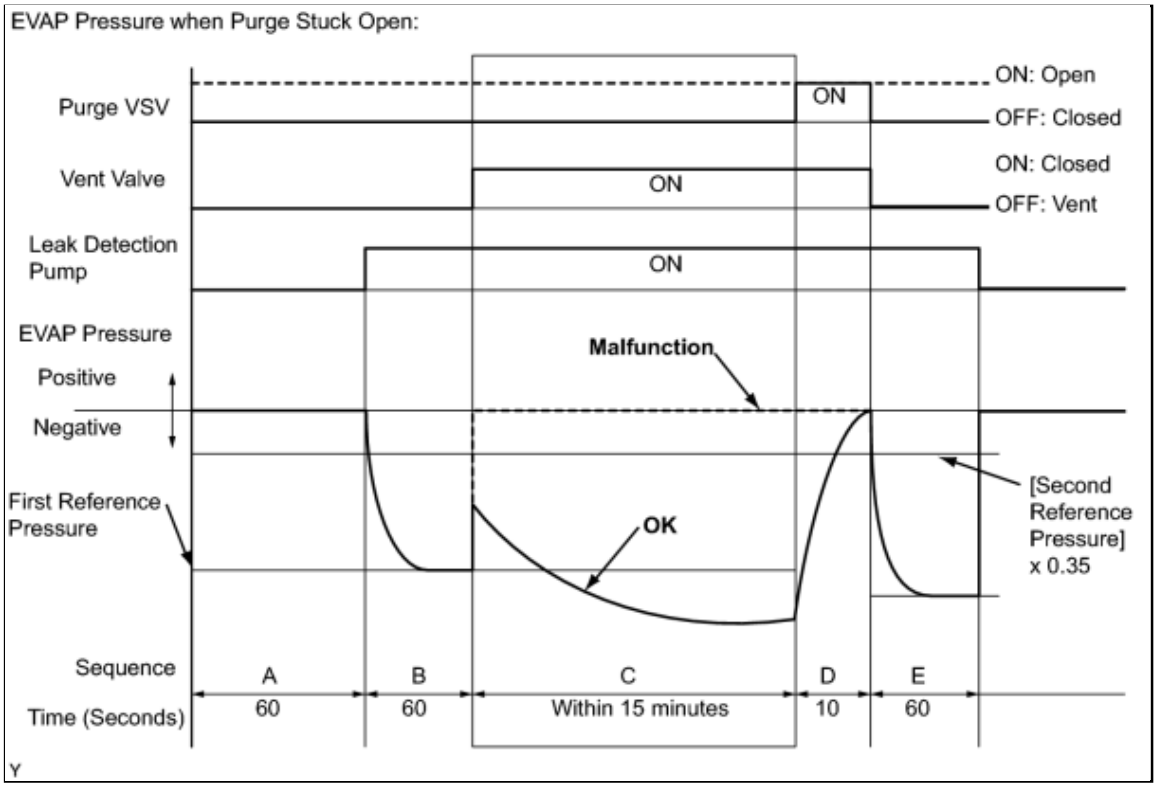
The two monitors, Key-Off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The Key-Off monitor is initiated by the ECM internal timer, known as the soak timer, 5 hours* after the ignition switch is turned to off. The purge flow monitor runs while the engine is running.

1. KEY-OFF MONITOR

   5 hours* after the ignition switch is turned to off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

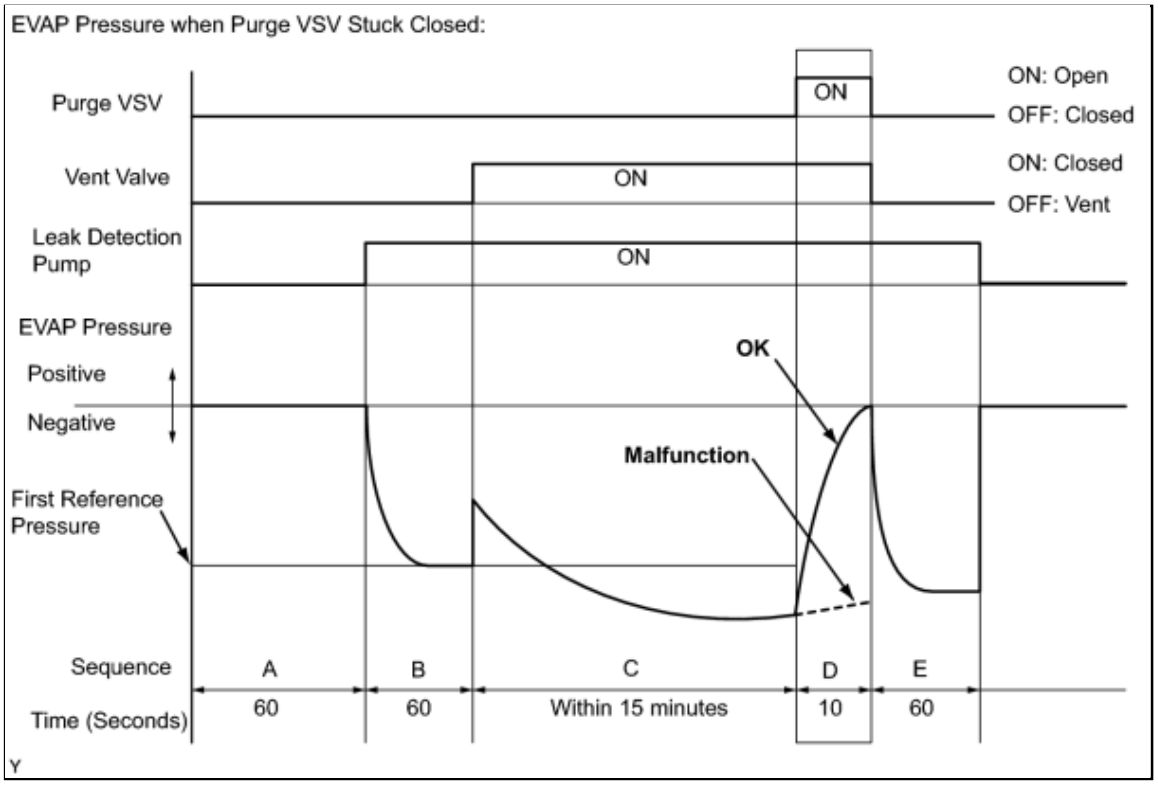
HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to off, the monitor check starts 2.5 hours later.**



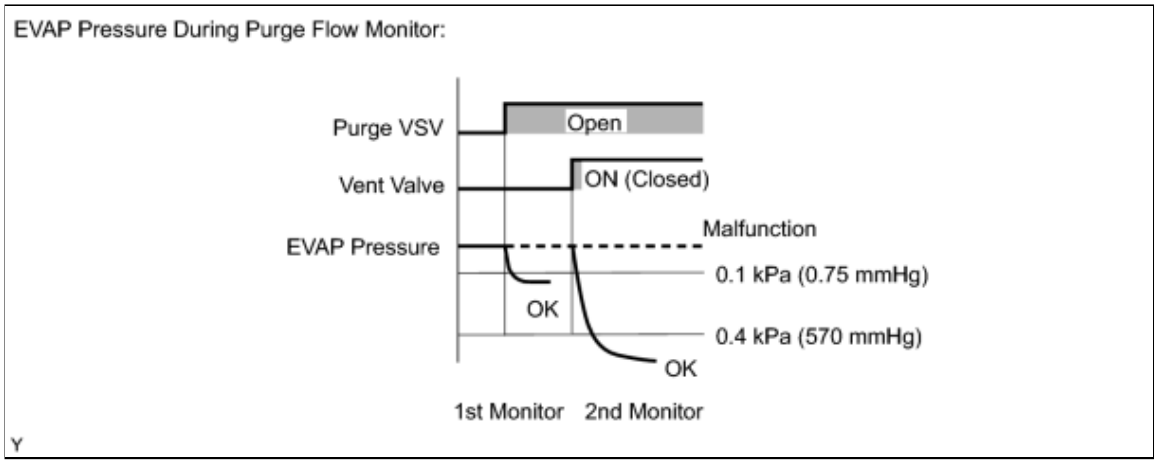
SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned OFF.	-
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by the ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine the reference pressure, the leak detection pump creates negative pressure (vacuum) through the reference orifice and then the ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and the EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels the EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



a. Purge VSV stuck open

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The EVAP system pressure is then measured by the ECM using the canister pressure sensor. If the stabilized system pressure is higher than [second reference pressure x 0.35], the ECM interprets this as the purge VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).



b. Purge VSV stuck closed

In operation D, the canister pressure sensor measures the EVAP system pressure. The pressure measurement for the purge VSV monitor is begun when the purge VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa-g (2.25 mmHg-g) or more, the purge VSV is functioning normally. If the pressure does not increase, the ECM interprets this as the purge VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2 trip detection logic).

2. PURGE FLOW MONITOR

The purge flow monitor consists of two monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor

  While the engine is running and the purge VSV is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.

- The 2nd monitor

  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.4 kPa-g (3.0 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after the purge flow monitor is performed, is measured by the ECM.

OBD II MONITOR SPECIFICATIONS

1. Key-off Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

EVAP key-off monitor runs when all of following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours
Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

Typical Malfunction Thresholds

Purge VSV stuck open:	-
EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.35

Purge VSV stuck closed:	-
EVAP pressure change after purge VSV ON (open)	Less than 0.3 kPa-g (2.25 mmHg-g)

OBD II MONITOR SPECIFICATIONS

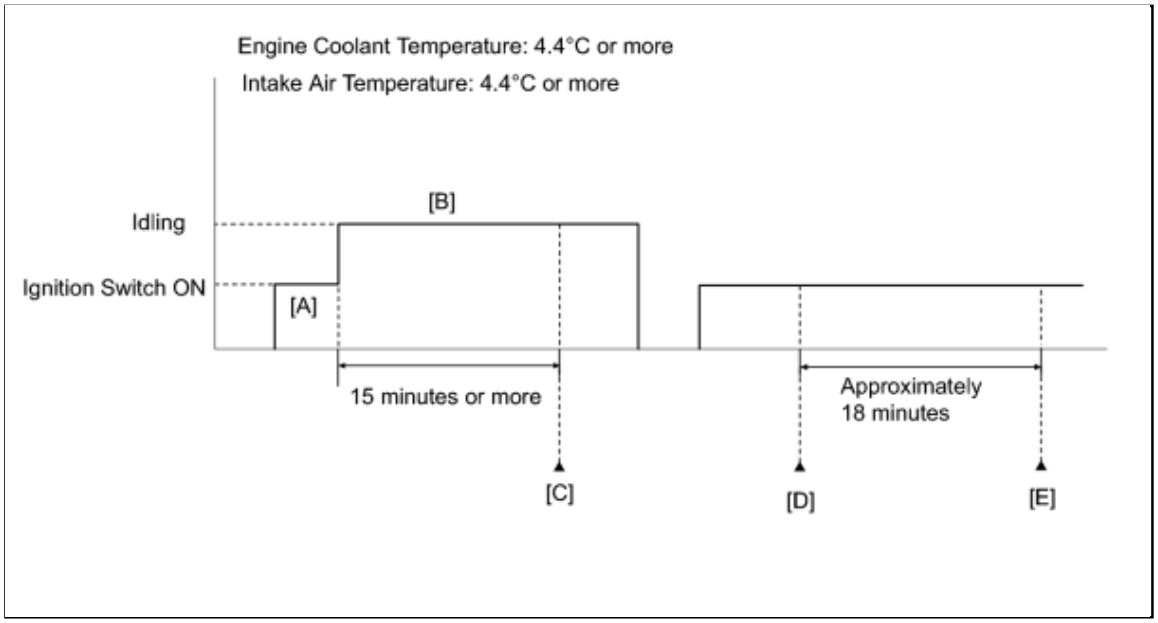
1. Purge Flow Monitor

Monitor Strategy

Required Sensors/Components	Purge VSV Canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

Typical Enabling Conditions

Monitor runs whenever following DTCs are not present	None
Engine	Running
Engine coolant temperature	4.4°C (40°F) or more
Intake air temperature	4.4°C (40°F) or more
Canister pressure sensor malfunction	Not detected
Purge VSV	Not operated by scan tool
EVAP system check	Not operated by scan tool
Battery voltage	10 V or more
Purge duty cycle	8% or more



Typical Malfunction Thresholds

Both of following conditions are met	Conditions 1 and 2
1. EVAP pressure change when purge operation started	Less than 0.1 kPa-g (0.75 mmHg-g)
2. EVAP pressure change during purge operation when vent valve closed	Less than 0.4 kPa-g (3.0 mmHg-g)

MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and wait 15 minutes or more [B].
7. Enter the following menus: Powertrain / Engine / Utility / All readiness.
8. Input the DTC: P0441.
9. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ You should perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.

- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

10. Turn the ignition switch to ON and turn the Techstream on.
11. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
12. Turn the ignition switch off.
13. Turn the ignition switch to ON and turn the Techstream on.
14. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode [D].
15. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All Readiness.
16. Input the DTC: P0441.
17. Check the DTC judgment result [E].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	- DTC judgment completed - System normal
ABNORMAL	- DTC judgment completed - System abnormal
INCOMPLETE	- DTC judgment not completed - Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	- Unable to perform DTC judgment - Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

18. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
19. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

20. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0451	Canister pressure sensor noise	Sensor output voltage fluctuates frequently within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition switch off) • Engine running	2 trip
	Canister pressure sensor signal becomes fixed/flat	Sensor output voltage does not vary within certain time period.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• EVAP monitoring (ignition switch off)	2 trip
P0452	Canister pressure sensor low input	EVAP pressure less than 42.1 kPa for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition switch ON • EVAP monitoring (ignition switch off)	1 trip

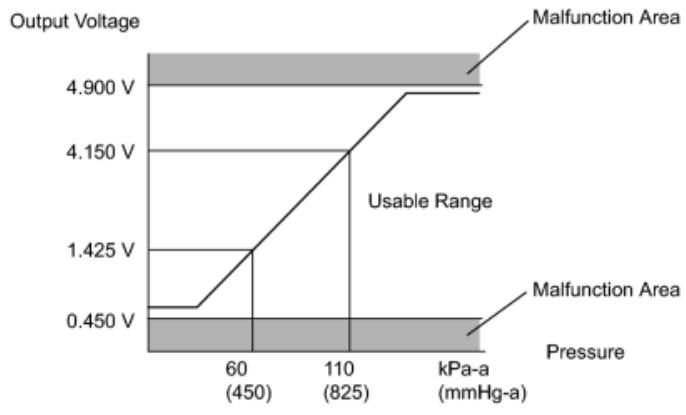
DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0453	Canister pressure sensor high input	EVAP pressure more than 123.8 kPa for 0.5 seconds.	• Canister pump module • Connector/wire harness (Canister pump module - ECM) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • ECM	• Ignition switch ON • EVAP monitoring (ignition switch off)	1 trip

HINT:

The canister pressure sensor is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .



HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

Canister Pressure Sensor Specification:

HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

1. DTC P0451: Canister pressure sensor noise or fixed/flat

If the canister pressure sensor voltage output fluctuates rapidly for 10 seconds, the ECM stops the EVAP system monitor. The ECM interprets this as noise from the canister pressure sensor, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.

Alternatively, if the sensor voltage output does not change for 10 seconds, the ECM interprets this as the sensor being fixed/flat, and stops the monitor. The ECM then illuminates the MIL and sets the DTC.

(Both malfunctions are detected by 2 trip detection logic.)

2. DTC P0452: Canister pressure sensor voltage low

If the canister pressure sensor voltage output [pressure] is below 0.45 V [42.1 kPa-a (315.7 mmHg-a)], the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

3. DTC P0453: Canister pressure sensor voltage high

If the canister pressure sensor voltage output [pressure] is 4.9 V [123.8 kPa-a (928.5 mmHg-a)] or more, the ECM interprets this as an open or short circuit malfunction in the canister pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Canister pump module
Frequency of Operation	Once per driving cycle: P0451 sensor fixed/flat Continuous: P0451 sensor noise, P0452 and P0453
Duration	0.5 seconds: P0452 and P0453 Less than 15 seconds: P0451 (Noise Monitor) Less than 2 minutes: P0451 (Fixed/flat monitor)
MIL Operation	Immediate: P0452 and P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0451 (Noise monitor)

Monitor runs whenever following DTCs not present	None
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
Canister pressure sensor malfunction (P0452, 0453)	Not detected
Either of following conditions met	A or B
A. Engine condition	Running
B. Time after key off	5 or 7 or 9.5 hours

P0451 (Fixed/flat monitor)

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
Canister pressure sensor malfunction (P0452, 0453)	Not detected
Atmospheric pressure (absolute pressure)	70 to 110 kPa-a (525 to 825 mmHg-a)
Time after key off	5 or 7 or 9.5 hours

P0452 and P0453

Monitor runs whenever following DTCs are not present	None
Either of following conditions is met	(a) or (b)
(a) Ignition switch	ON
(b) Soak timer	ON

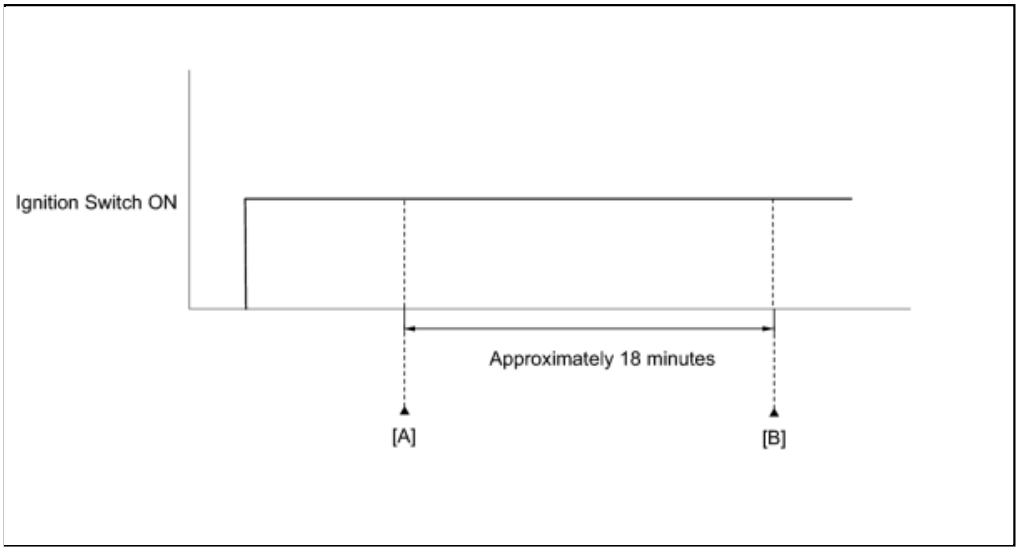
TYPICAL MALFUNCTION THRESHOLDS

P0451: Canister Pressure Sensor Noise

Frequency that EVAP pressure change 0.3 kPa-g (2.25 mmHg-g) or more	10 times or more in 10 seconds

P0451: Canister Pressure Sensor Fixed/Flat

EVAP pressure change during reference pressure	Less than 0.65 kPa-g (4.87 mmHg-g)



P0452: Canister Pressure Sensor Low Voltage

EVAP pressure	Less than 42.1 kPa-a (315.7 mmHg-a)

P0453: Canister Pressure Sensor High Voltage

EVAP pressure	More than 123.8 kPa-a (928.5 mmHg-a)

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Enter the following menus: Powertrain / Engine / Data List / Intake Air.

4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode [A].
8. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All readiness.
9. Input the DTC: P0451, P0452 or P0453.
10. Check the DTC judgment result [B].

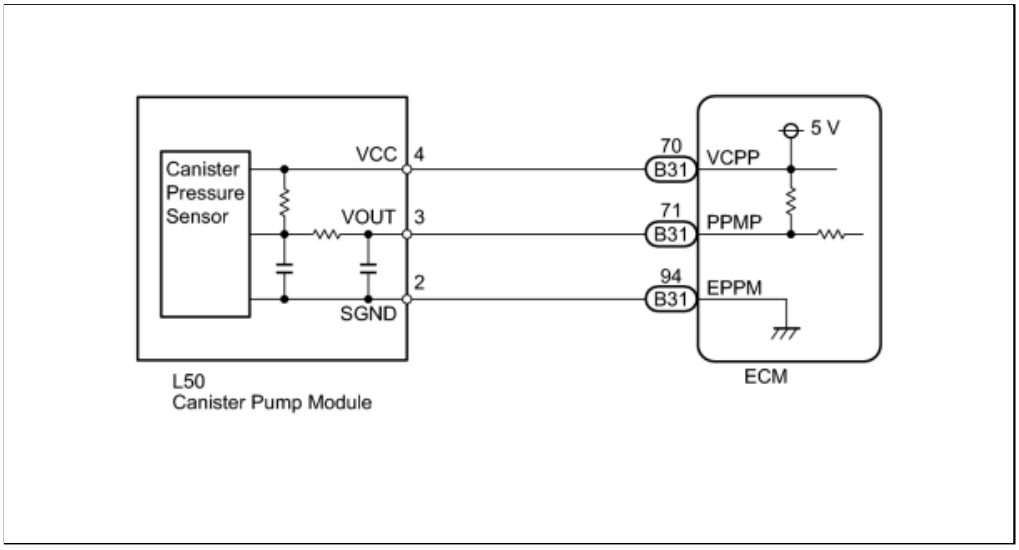
TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel cap.
- Do not disassemble the canister pump module.
- The Techstream is required to conduct the following diagnostic troubleshooting procedure.

PROCEDURE

1.	**CONFIRM DTC AND EVAP PRESSURE**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON (do not start the engine).

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

(f) Enter the following menus: Powertrain / Engine and ECT / Data List / EVAP / Vapor Pressure Pump.

(g) Read the EVAP (Evaporative Emission) pressure displayed on the Techstream.

Result:

DISPLAY (DTC OUTPUT)	TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P0451	-	Canister pressure sensor	C
P0452	Less than 45 kPa-a (430 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor • ECM	A
P0453	More than 120 kPa-a (900 mmHg-a)	• Wire harness/connector (ECM - Canister pressure sensor) • Canister pressure sensor	B

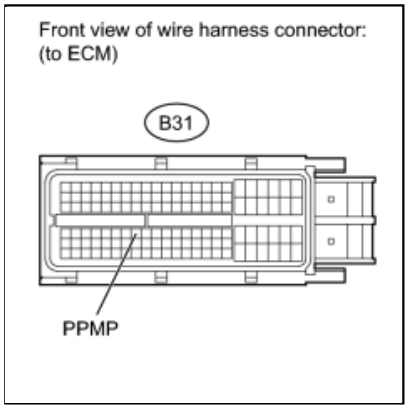
		• ECM	

C ▶ GO TO EVAP SYSTEM

B ▶ CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)

A ▼



2.	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)

(a) Turn the ignition switch to off.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

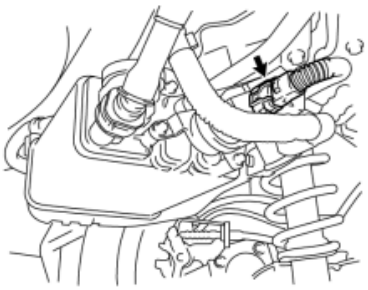
Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B31-71 (PPMP) - Body ground	Always	10 Ω or less	• Wire harness/connector (ECM - Canister pressure sensor) • Short in canister pressure sensor circuit	A
		10 kΩ or more	• Wire harness/connector (ECM - Canister pressure sensor) • Short in ECM circuit	B

(d) Reconnect the ECM connector.

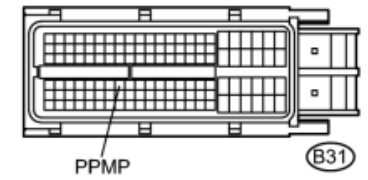
B ▶ REPLACE ECM

A ▼



3.	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)

(a) Disconnect the canister pump module connector.



(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Result:

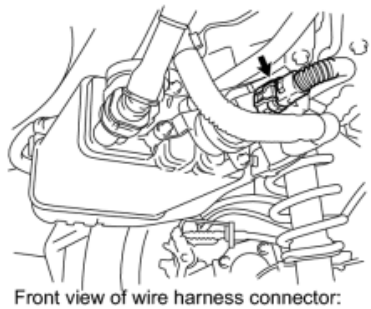
Front view of wire harness connector: (to ECM)

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B31-71 (PPMP) - Body ground	Always	10 kΩ or more	Short in canister pressure sensor circuit	A
		10 Ω or less	Short in wire harness/connector (ECM - Canister pressure sensor)	B

(d) Reconnect the canister pump module connector.

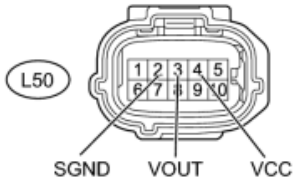
(e) Reconnect the ECM connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER - ECM)**



A ▶ **REPLACE CANISTER**

4.	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - ECM)



(a) Disconnect the canister pump module connector.

(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Front view of wire harness connector: (to Canister Pump Module)

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
L50-4 (VCC) - Body ground	Ignition switch ON	4.5 to 5.5 V
L50-3 (VOUT) - Body ground	Ignition switch ON	4.5 to 5.5 V

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
L50-2 (SGND) - Body ground	Always	100 Ω or less

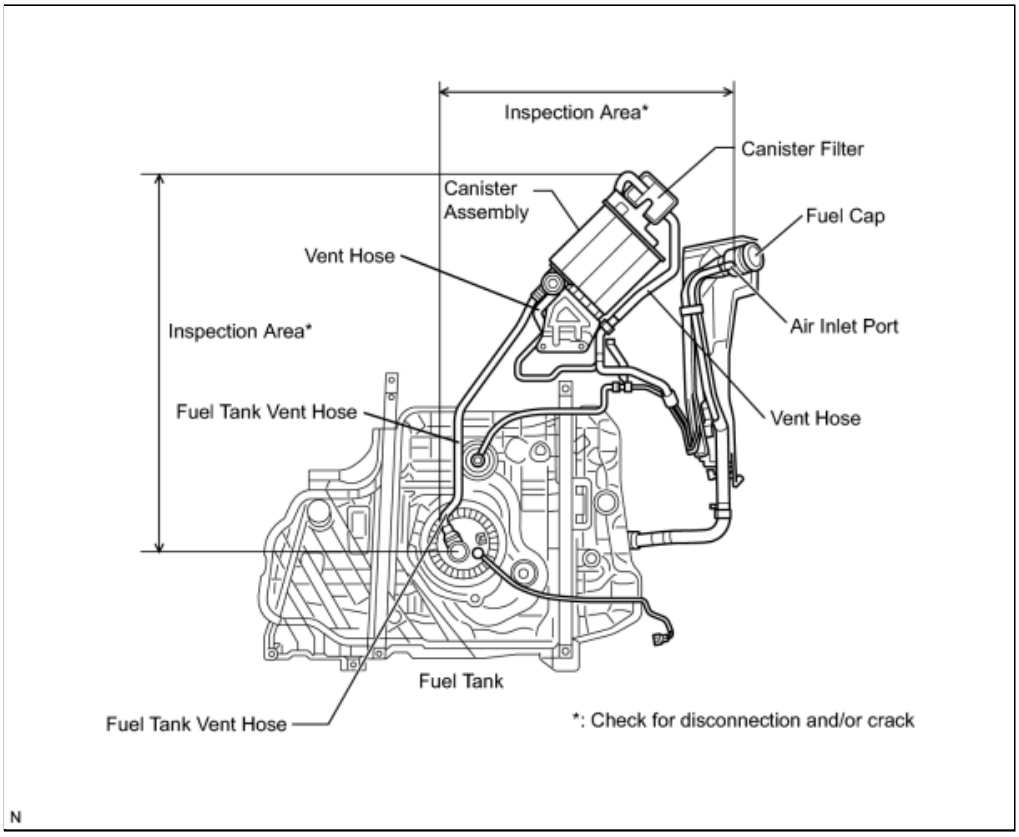
Result:

TEST RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Voltage and resistance within standard ranges	Open in canister pressure sensor circuit	A

Voltage and resistance outside standard ranges	Open in wire harness/connector (ECM - Canister pressure sensor)	B

(c) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER - ECM)**



A

5.	**REPLACE CANISTER**

(a) Replace the canister INFO.

NOTICE:

When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)**

6.	**REPAIR OR REPLACE HARNESS OR CONNECTOR (CANISTER - ECM)**

HINT:

If the exhaust tailpipe has been removed, go to the next step before reinstalling it.

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)**

7.	**REPLACE ECM**

(a) Replace the ECM INFO .

NEXT ▶ **CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)**

8.	**CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Wait for at least 60 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.

HINT:

If no pending DTCs are displayed on the Techstream, the repair has been successfully completed.

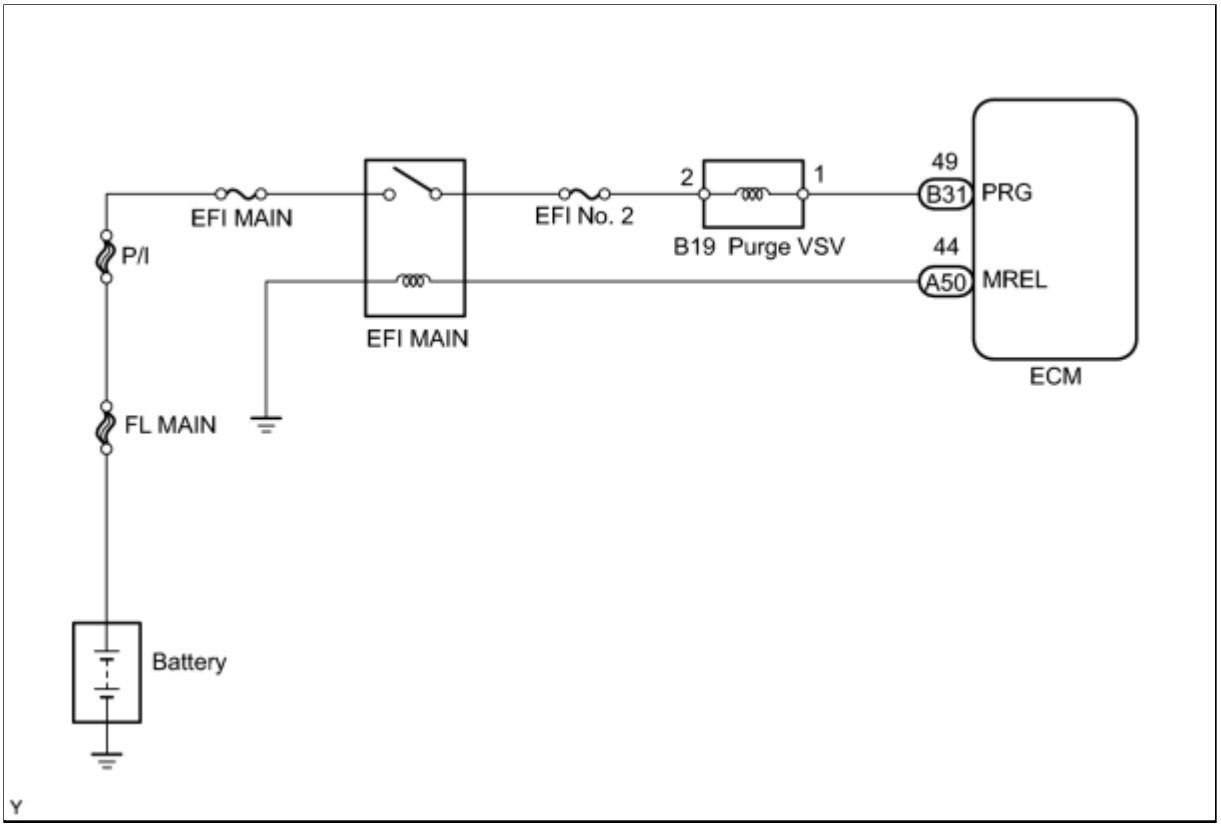
NEXT ▶ **END**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000VSO04VX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0443: Evaporative Emission Control System Purge Control Valve Circuit (2010 Corolla)		

DTC	**P0443**	**Evaporative Emission Control System Purge Control Valve Circuit**

DESCRIPTION

HINT:



This DTC P0443 is applicable to Mexico models only.

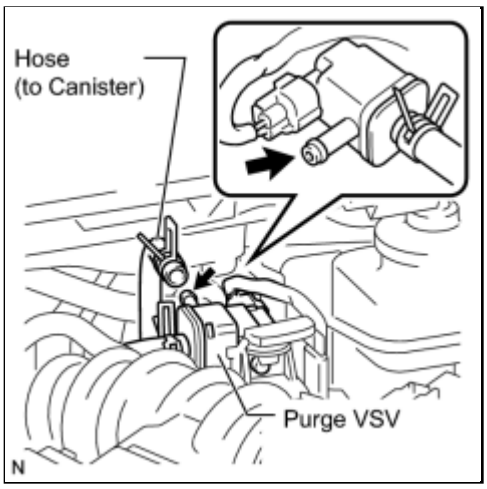
To reduce hydrocarbon emissions, evaporated fuel from the fuel tank is routed through a charcoal canister to the intake manifold for combustion in the cylinders.

The ECM changes the duty signals to the purge VSV so that the intake amount of hydrocarbon emissions is appropriate for the driving conditions (engine load, engine speed, vehicle speed, etc.) after the engine is warmed up.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0443	Terminal voltage of ECM output circuit does not correspond with drive signals from ECM to purge VSV (1-trip detection logic)	• Open or short in purge VSV circuit • Purge VSV • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

Read freeze frame data using the Techstream tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM (ACTIVATE PURGE VSV CONTROL)**

(a) Connect the Techstream to the DLC3.

(b) Disconnect the vacuum hose from the purge VSV.

(c) Start the engine.

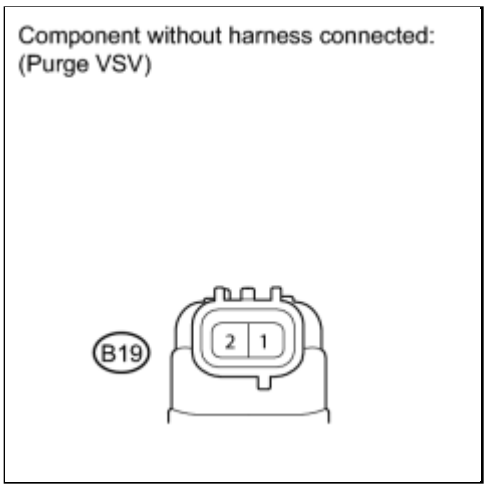
(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for Evap Control.

(f) When the purge VSV is operated using the Techstream, check whether the VSV applies suction to your finger.

OK:

TESTER OPERATION	SPECIFIED CONDITION
VSV is ON	VSV applies suction to finger
VSV is OFF	VSV applies no suction to finger



(g) Reconnect the vacuum hose to the purge VSV.

NG ▶ **INSPECT PURGE VSV**

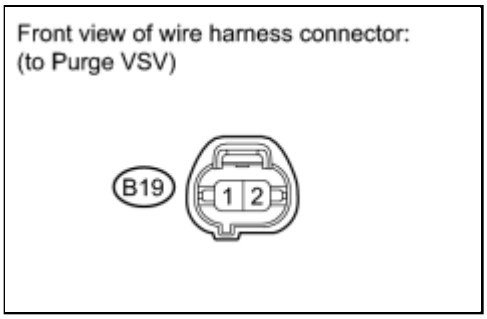
OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**INSPECT PURGE VSV**

(a) Disconnect the purge VSV connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B19-1 - B19-2	20°C (68°F)	23 to 26 Ω

(c) Reconnect the purge VSV connector.

NG ▶ **REPLACE PURGE VSV**

OK ▼

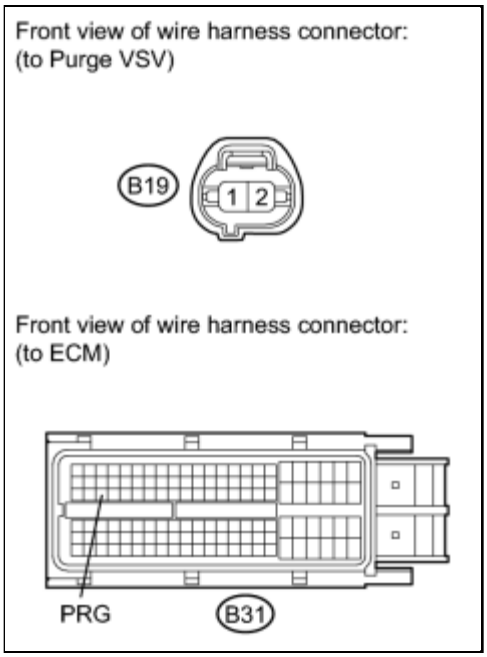
3.	**INSPECT PURGE VSV (POWER SOURCE VOLTAGE)**

(a) Disconnect the purge VSV connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B19-2 - Body ground	Ignition switch to ON	9 to 14 V

(d) Reconnect the purge VSV connector.

NG ▶ **INSPECT FUSE (EFI NO. 2 FUSE)**

OK ▼

4.	CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)

(a) Disconnect the purge VSV connector.

(b) Disconnect the ECM connector.

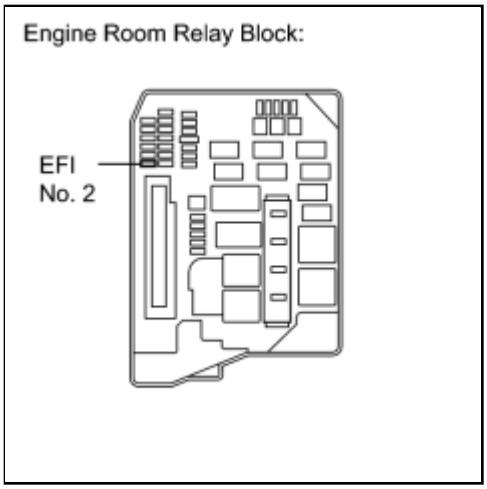
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B19-1 - B31-49 (PRG)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B19-1 or B31-49 (PRG) - Body ground	Always	10 kΩ or higher



(d) Reconnect the purge VSV connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PURGE VSV - ECM)**

OK ▶ **REPLACE ECM**

5.	**INSPECT FUSE (EFI NO. 2 FUSE)**

(a) Remove the EFI No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the EFI No. 2 fuse.

NG ▶ **REPLACE FUSE (EFI NO. 2 FUSE)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PURGE VSV - ENGINE ROOM JUNCTION BLOCK (EFI MAIN RELAY))**

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0455,P0456: Evaporative Emission Control System Leak Detected (Gross Leak) (2010 Corolla)		

DTC	**P0455**	**Evaporative Emission Control System Leak Detected (Gross Leak)**

DTC	**P0456**	**Evaporative Emission Control System Leak Detected (Very Small Leak)**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P0455	EVAP gross leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak check. If stabilized pressure higher than [second reference pressure x 0.35], ECM determines that EVAP system has large leak.	• Fuel tank cap (loose) • Leak from EVAP line (Canister - Fuel tank) • Leak from EVAP line (Purge VSV - Canister) • Canister pump module • Leak from fuel tank • Leak from canister	While ignition switch OFF	2 trip
P0456	EVAP small leak	Leak detection pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure measured. Reference pressure measured at start and at end of leak	• Fuel tank cap (loose) • Leak from EVAP line (Canister - Fuel	While ignition switch OFF	2 trip

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
		check. If stabilized pressure higher than second reference pressure, ECM determines that EVAP system has small leak.	tank) • Leak from EVAP line (Purge VSV - Canister) • Canister pump module • Leak from fuel tank • Leak from canister		

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

Refer to the EVAP System INFO .

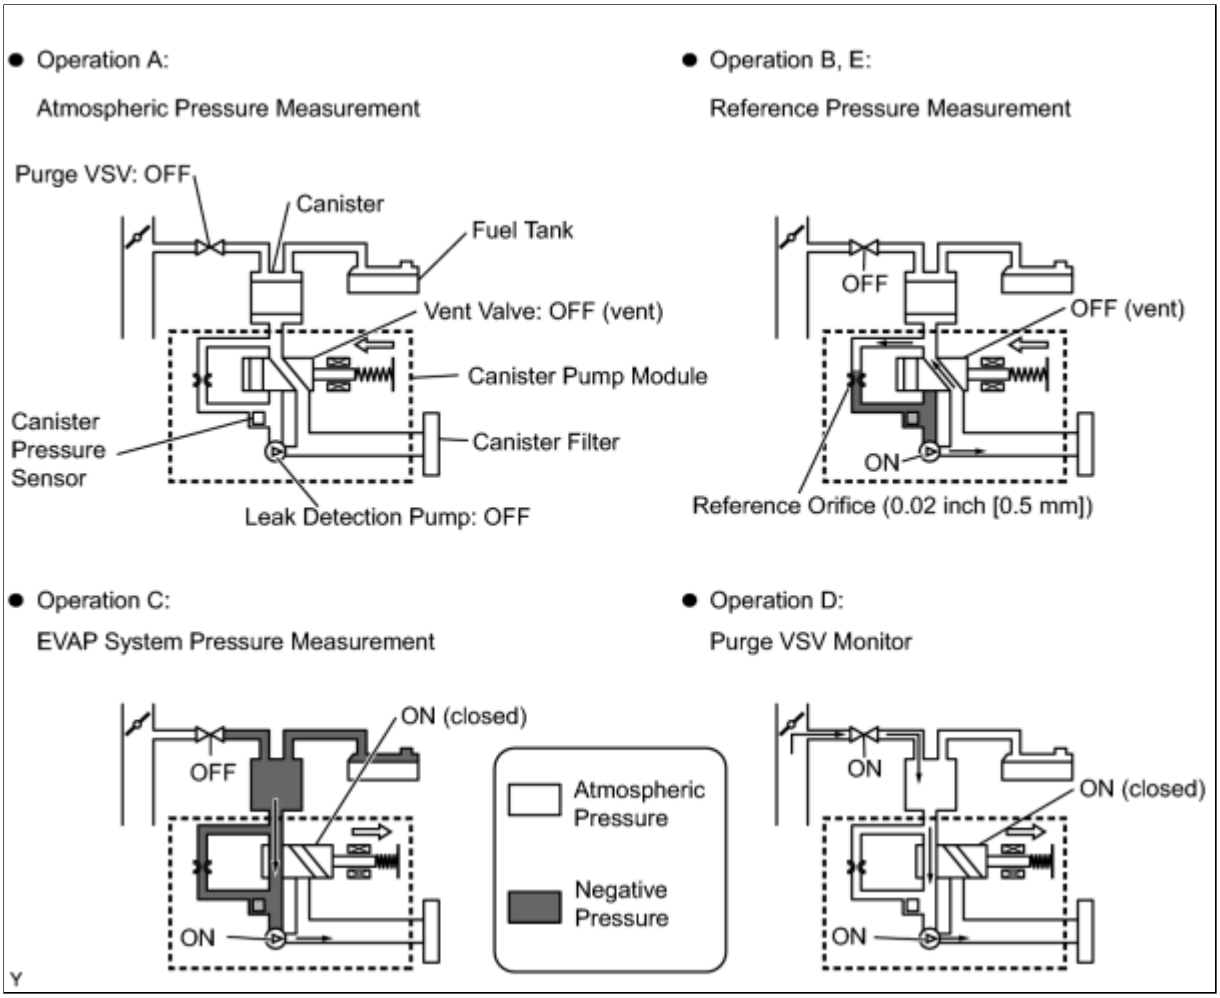
HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

MONITOR DESCRIPTION

5 hours* after the ignition switch is turned to off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.



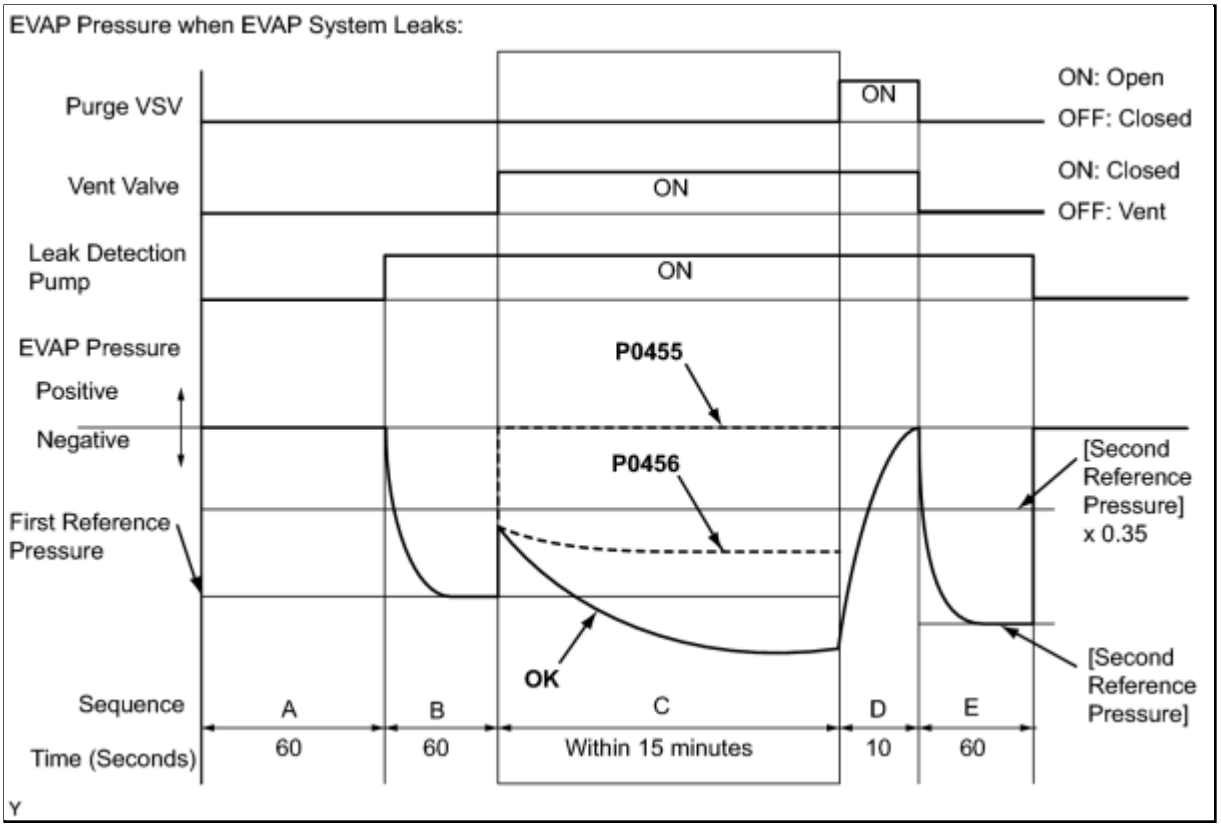
HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned OFF, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned OFF.	-

SEQUENCE	OPERATION	DESCRIPTION	DURATION
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by the ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine the reference pressure, the leak detection pump creates negative pressure (vacuum) through the reference orifice and then the ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and the EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels the EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.



(a) P0455: EVAP gross leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than [second reference pressure x 0.35] (near atmospheric pressure), the ECM determines that the EVAP system has a large leak, illuminates the MIL and sets the DTC (2 trip detection logic).

(b) P0456: EVAP very small leak

In operation C, the leak detection pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system has a small leak, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0455 (pattern A), P0456

Monitor runs whenever following DTCs are not present	None
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours

Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle is driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

P0455 (pattern B)

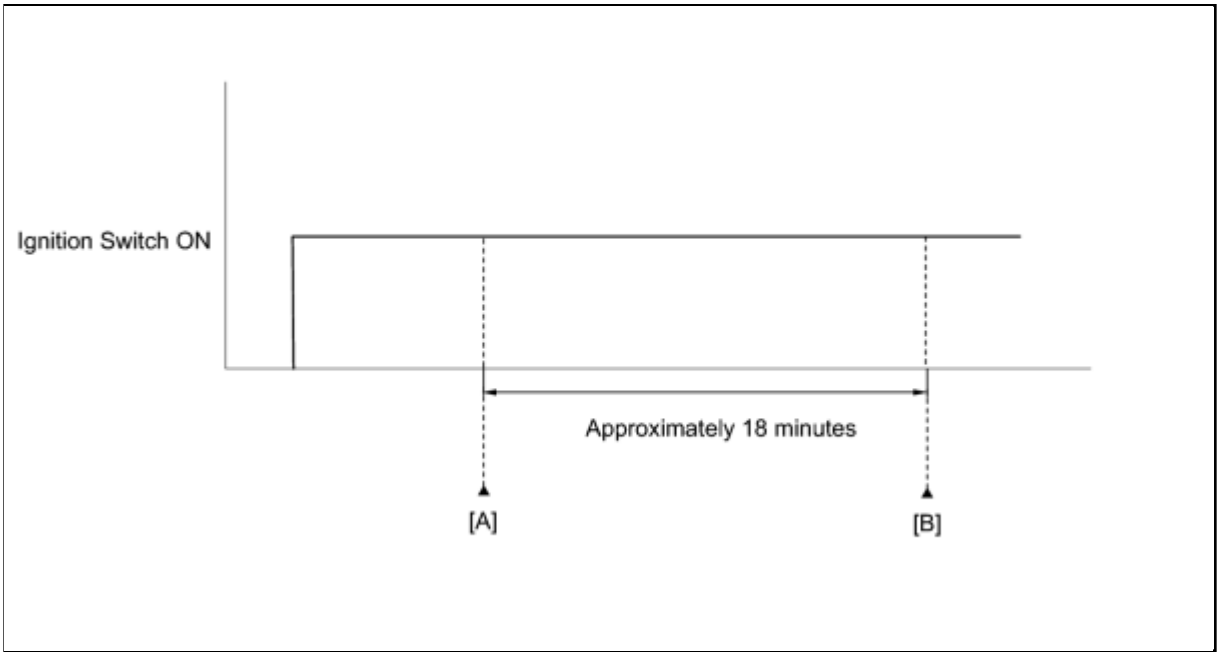
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 45°C (40 to 113°F)
Intake air temperature	4.4 to 45°C (40 to 113°F)

TYPICAL MALFUNCTION THRESHOLDS

P0455: EVAP Gross Leak

EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.35

P0456: EVAP Small Leak



EVAP pressure when vacuum introduction	Between reference pressure and reference pressure

complete	x 0.35

MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on.
6. Enter the following menus: Powertrain / Engine / Utility / Evaporative System Check / Automatic Mode [A].
7. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0455 or P0456.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

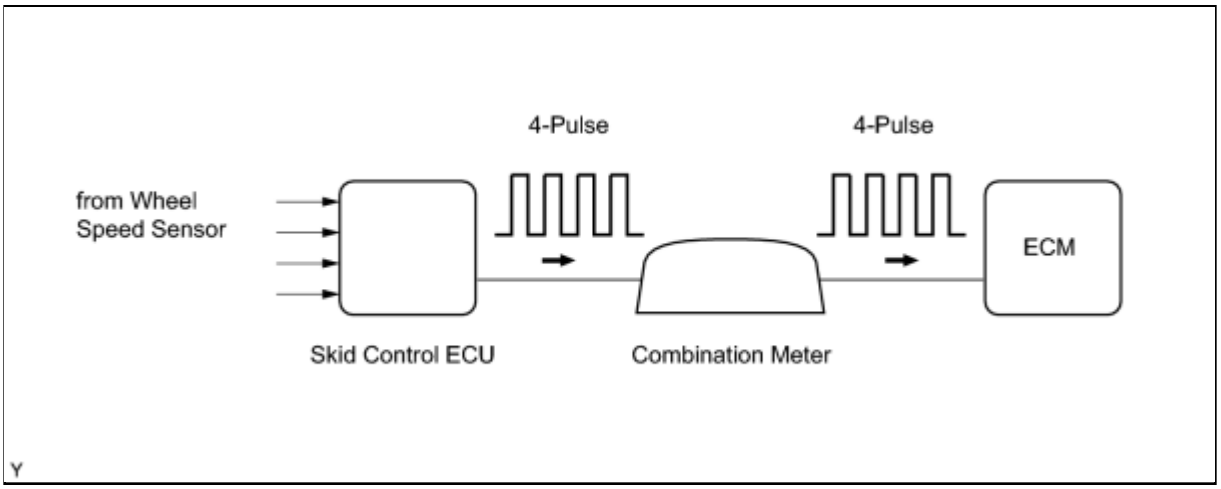
10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM0000012ME04HX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0500: Vehicle Speed Sensor "A" (2010 Corolla)		

DTC	**P0500**	**Vehicle Speed Sensor "A"**

DESCRIPTION

The speed sensors detect the wheel speed and send the appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0500	While vehicle being driven, no vehicle speed sensor signal transmitted to ECM (2 trip detection logic: M/T models) (1 trip detection logic: A/T models)	• Open or short in speed signal circuit • Speed meter circuit (wheel speed sensor, skid control ECU) • Combination meter • ECM

MONITOR DESCRIPTION

Automatic Transaxle Models:

The ECM assumes that the vehicle is being driven when the vehicle speed sensor signal is being transmitted by the combination meter. If there is no signal from the combination meter, despite the ECM detecting the speed signal from the speed sensor NC, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

Manual Transaxle Models:

The ECM assumes that the vehicle is being driven when the indicated engine speed is more than 2,000 rpm and the engine load calculated by the ECM is more than a certain level or the idle fuel-cut operation* is being executed. If there is no signal from the vehicle speed sensor, despite these conditions being met, the ECM interprets this as a malfunction in the speed signal circuit. The ECM then illuminates the MIL and sets the DTC.

*: Idle fuel-cut is executed when the throttle valve is fully closed and engine speed is over 2800 rpm.

MONITOR STRATEGY

Related DTCs	P0500: Vehicle speed sensor "A" pulse input error
Required Sensors/Components (Main)	Vehicle speed sensor Combination meter Skid control ECU
Required Sensors/Components (Related)	Park/neutral position switch Engine coolant temperature sensor Crankshaft position sensor Throttle position sensor Mass air flow meter
Frequency of Operation	Continuous
Duration	2 seconds: A/T models 8 seconds: M/T models, Case 1 4.7 seconds: M/T models, Case 2
MIL Operation	Immediate: A/T models 2 driving cycles: M/T models
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

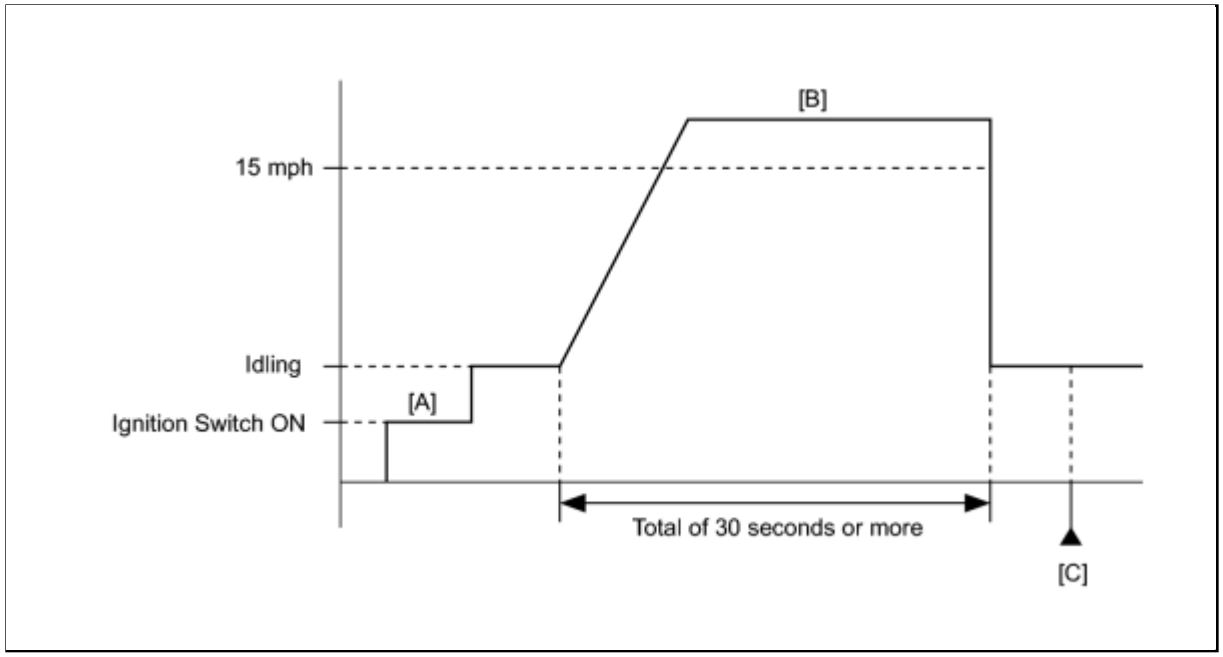
M/T Models, Case 1

Monitor runs whenever following DTCs are not present	None
Engine coolant temperature	70°C (158°F) or more
Engine speed	2000 to 5000 rpm
Engine load	31.9 % or more
Fuel-cut at high engine speed	Not executing

M/T Models, Case 2

Monitor runs whenever following DTCs are not present	None

Ignition switch	ON
Starter	OFF
Battery voltage	8 V or more



A/T Models

Monitor runs whenever following DTCs are not present	None
Time after ignition switch OFF to ON	3 seconds or more
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF
Engine	Running
Transmission counter gear revolution	300 rpm or more
When either condition below is met	Condition A or B
A. When both conditions below are met	-
Engine coolant temperature	20°C (68°F) or higher
Time after park/neutral position switch turned from on to off	2 seconds or more
B. When both conditions below are met	-
Engine coolant temperature	Below 20°C (68°F)
Time after park/neutral position switch turned from on to off	30 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Vehicle speed sensor signal	No pulse input

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Drive the vehicle at 15 mph (24 km/h) or more for a total of 30 seconds or more [B].
8. Stop the vehicle.
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0500.
11. Check the DTC judgment result [C].

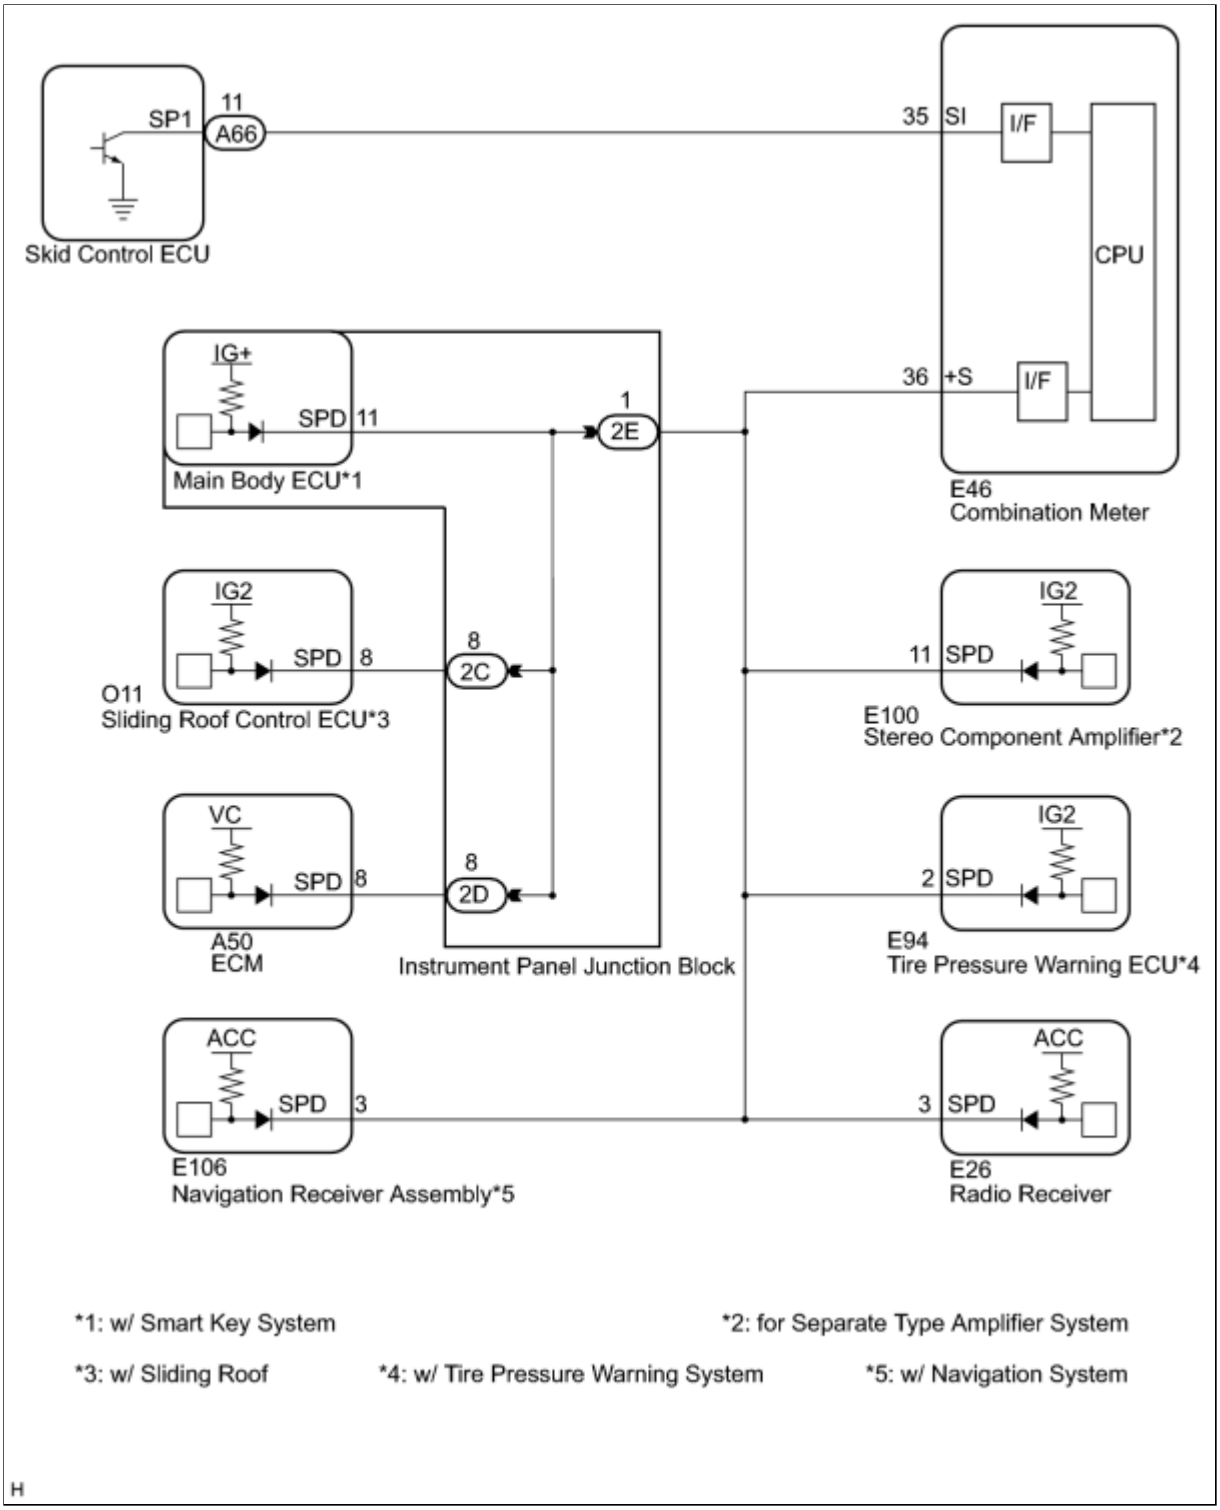
TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	READ VALUE USING TECHSTREAM (VEHICLE SPEED)

(a) Connect the Techstream to the DLC3.

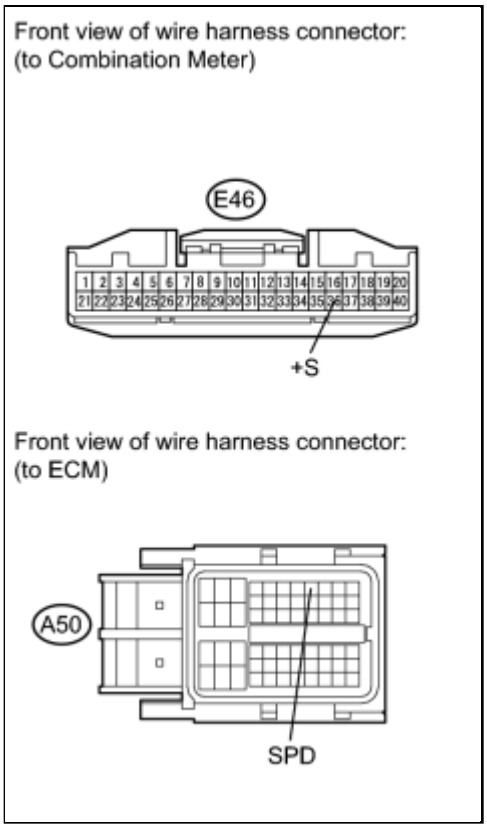
(b) Turn the ignition switch to the ON position.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Vehicle Speed.

(e) Drive the vehicle.

(f) Read the value displayed on the Techstream.



OK:

Vehicle speeds displayed on the tester and speedometer display are equal.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - COMBINATION METER)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	CHECK HARNESS AND CONNECTOR (ECM - COMBINATION METER)

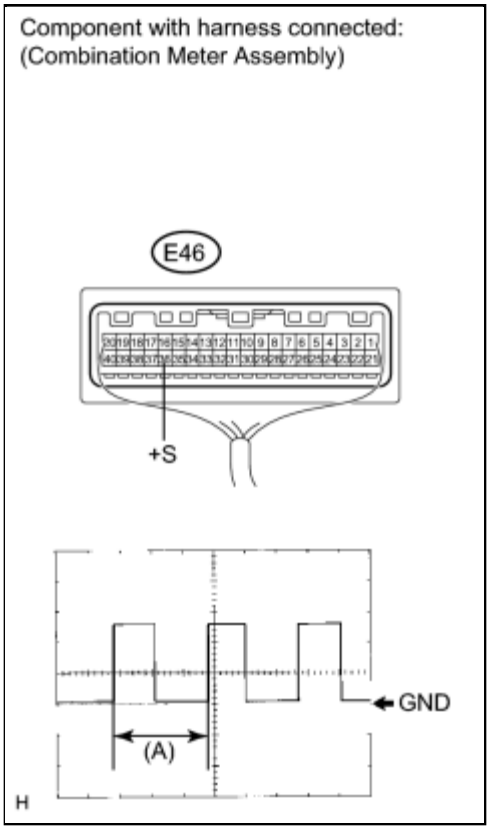
(a) Disconnect the ECM connector.

(b) Disconnect the combination meter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E46-36 (+S) - A50-8 (SPD)	Always	Below 1 Ω



(d) Reconnect the ECM connector.

(e) Reconnect the combination meter connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - INSTRUMENT PANEL JUNCTION BLOCK)**

OK ▼

3.	CHECK COMBINATION METER ASSEMBLY (SPD SIGNAL WAVEFORM)

(a) Check the output waveform.

(1) Remove the combination meter assembly with the connector(s) still connected.

(2) Connect an oscilloscope to terminals E46-36 (+S) and body ground.

(3) Turn the ignition switch to ON.

(4) Turn the wheel slowly.

(5) Check the signal waveform according to the condition(s) in the table below.

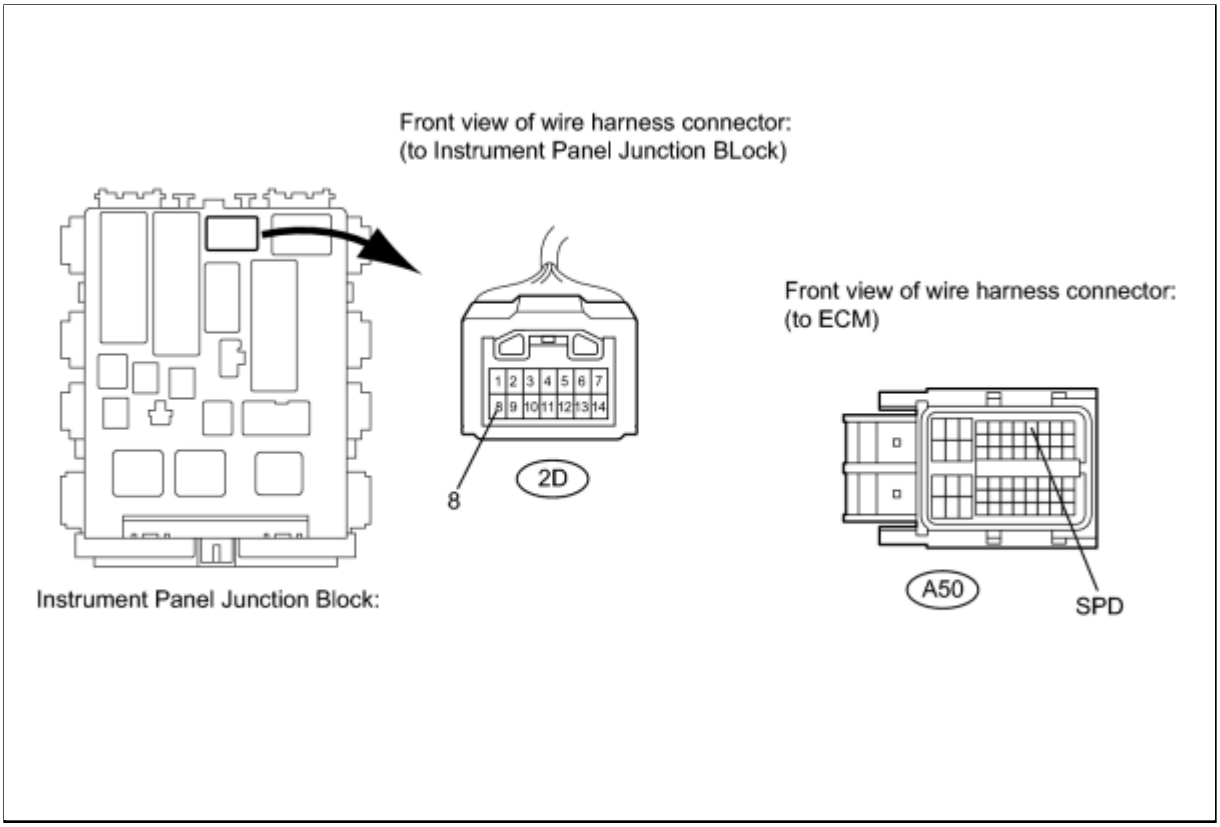
ITEM	CONDITION
Tool setting	5 V/DIV., 20 ms/DIV.

OK:

The waveform is displayed as shown in the illustration.

HINT:

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width



indicated by (A) in the illustration narrows.

NG ▶ **GO TO METER / GAUGE SYSTEM**

OK ▶ **REPLACE ECM**

4.	CHECK HARNESS AND CONNECTOR (ECM - INSTRUMENT PANEL JUNCTION BLOCK)

(a) Disconnect the ECM connector.

(b) Disconnect the instrument panel junction block connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2D-8 - A50-8 (SPD)	Always	Below 1 Ω

(d) Reconnect the ECM connector.

(e) Reconnect the instrument panel junction block connector.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - INSTRUMENT PANEL JUNCTION BLOCK)

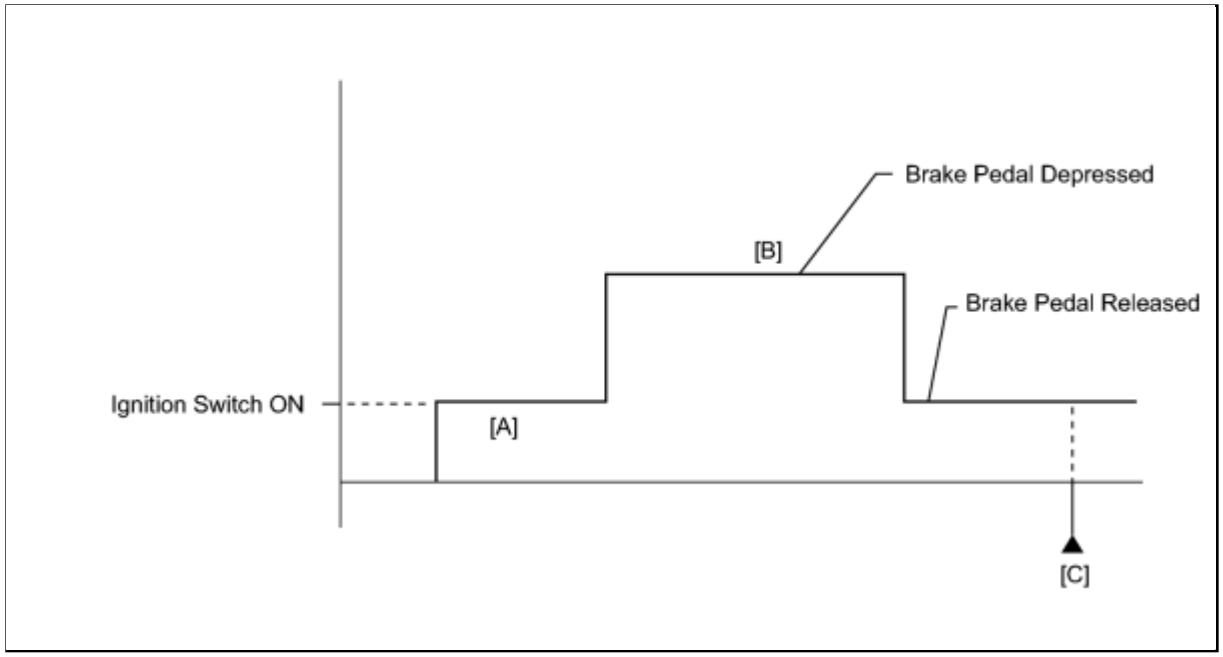
OK ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK)

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000XCT08OX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0504: Brake Switch "A" / "B" Correlation (2010 Corolla)		

DTC	**P0504**	**Brake Switch "A" / "B" Correlation**

DESCRIPTION

The stop light switch is a duplex system that transmits two signals: STP and ST1-. These two signals are used by the ECM to monitor whether or not the brake system is working properly. If the signals, which indicate the brake pedal is being depressed and released, are detected simultaneously, the ECM interprets this as a malfunction in the stop light switch and sets the DTC.



HINT:

The normal conditions are as shown in the table below. The signals can be read using the Techstream.

SIGNAL	BRAKE PEDAL RELEASED	IN TRANSITION	BRAKE PEDAL DEPRESSED
STP	OFF	ON	ON
ST1-	ON	ON	OFF

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0504	Conditions (a), (b) and (c) continue for 0.5 seconds or more (1 trip detection logic): (a) Ignition switch ON (b) Brake pedal released (c) STP signal OFF when ST1- signal OFF	• Short in stop light switch signal circuit • STOP fuse • IGN fuse • Stop light switch • ECM

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Depress and release the brake pedal [B].
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0504.
9. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

    HINT:

    If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

    HINT:

    - If a permanent DTC is output, the system is malfunctioning.
    - If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

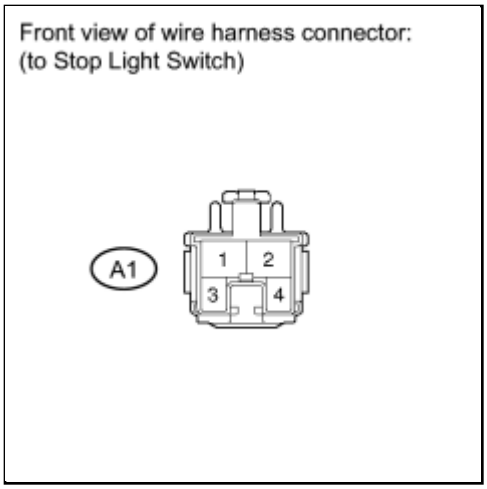
HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- STP signal conditions can be checked using the Techstream.

    a. Connect the Techstream to the DLC3.
    b. Turn the ignition switch to ON.
    c. Turn the Techstream on.
    d. Enter the following menus: Powertrain / Engine and ECT / Stop Light Switch.

e. Check the STP signal when the brake pedal is depressed and released.

BRAKE PEDAL OPERATION	SPECIFIED CONDITION
Depressed	STP signal ON
Released	STP signal OFF



PROCEDURE

1.	**INSPECT STOP LIGHT SWITCH (TERMINAL VOLTAGE)**

(a) Disconnect the stop light switch connector.

(b) Measure the voltage according to the value(s) in the table below.

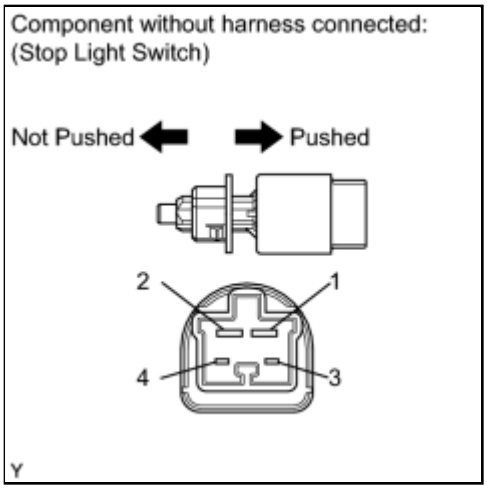
Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A1-2 - Body ground	Always	11 to 14 V
A1-3 - Body ground	Ignition switch ON	11 to 14 V

(c) Reconnect the stop light switch connector.

NG ▶ **INSPECT FUSES (STOP AND IGN FUSES)**

OK ▼



2.	**INSPECT STOP LIGHT SWITCH**

(a) Remove the stop light switch.

(b) Measure the resistance according to the value(s) in

the table below.

Standard Resistance:

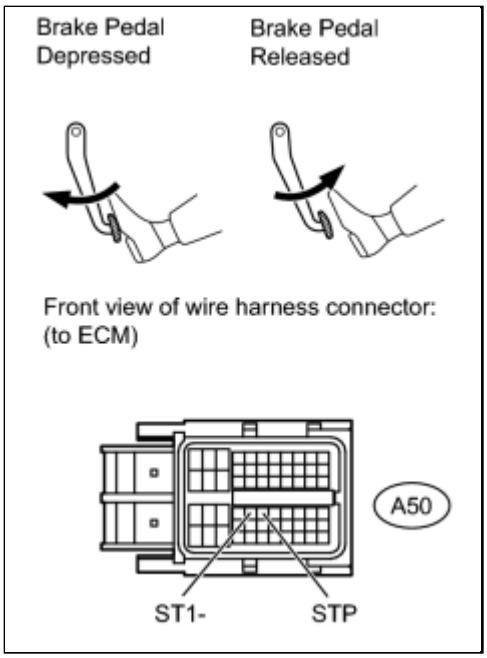
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	Switch pin not pushed	Below 1 Ω
	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin not pushed	10 kΩ or higher
	Switch pin pushed	Below 1 Ω

(c) Reinstall the stop light switch.

NG ▶ **REPLACE STOP LIGHT SWITCH**

OK ▼

3.	**INSPECT ECM (STP AND ST1- VOLTAGE)**



(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

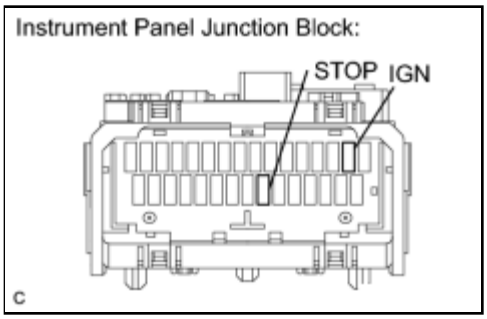
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-35 (ST1-) - Body ground	Brake pedal released	11 to 14 V
	Brake pedal depressed	0 to 3 V

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-36 (STP) - Body ground	Brake pedal released	0 to 3 V
	Brake pedal depressed	11 to 14 V

(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**



OK ▶ **REPLACE ECM**

4.	**INSPECT FUSES (STOP AND IGN FUSES)**

(a) Remove the STOP and IGN fuses from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
STOP fuse	Always	Below 1 Ω
IGN fuse		

(c) Reinstall the STOP and IGN fuses.

NG ▶ **REPLACE FUSE (STOP AND/OR IGN FUSE)**

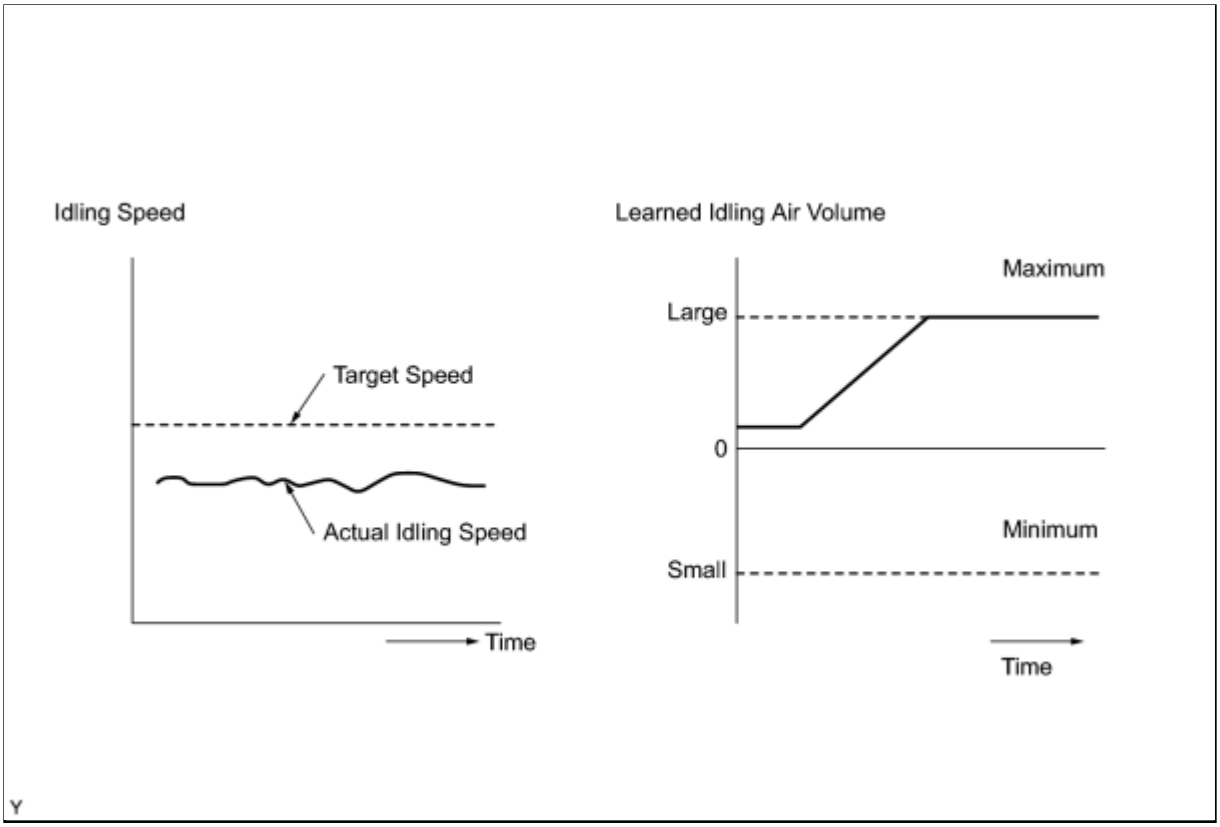
OK ▶ **REPAIR OR REPLACE**

HARNESS OR CONNECTOR (BATTERY - STOP LIGHT SWITCH)

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T8M09PX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0505: Idle Control System Malfunction (2010 Corolla)		

DTC	**P0505**	**Idle Control System Malfunction**

DESCRIPTION



The idle speed is controlled by the electronic throttle control system. The electronic throttle control system is comprised of: 1) a one valve type throttle body; 2) a throttle actuator, which operates the throttle valve; 3) a throttle position sensor, which detects the opening angle of the throttle valve; 4) an accelerator pedal position sensor, which detects the accelerator pedal position; and 5) the ECM, which controls the electronic throttle control system. Based on the target idle speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0505	idle speed continues to vary greatly from target idle speed (2 trip detection logic)	• Electronic throttle control system • Intake system • PCV hose connections • ECM

MONITOR DESCRIPTION

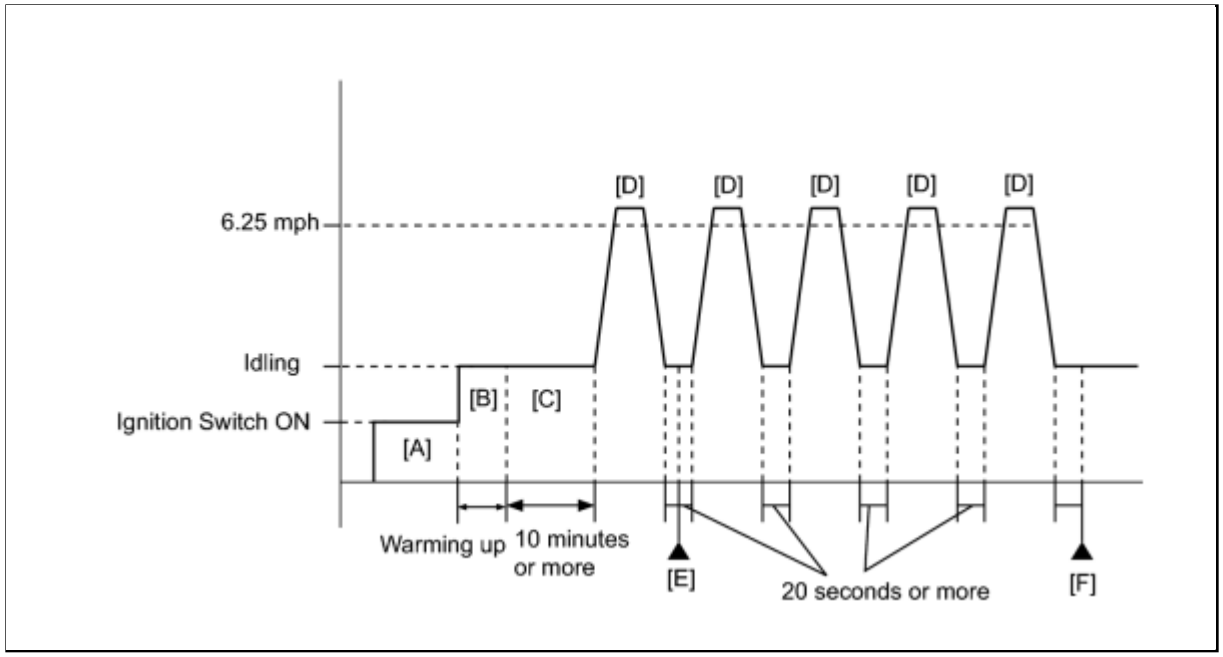
The ECM monitors the idle speed and idle air flow volume to conduct idle speed control. The ECM determines that the idle speed control system is malfunctioning if the following conditions apply:

- The learned idle air flow volume remains at the maximum or minimum volume 5 times or more during a drive cycle.
- After driving at a vehicle speed of 6.25 mph (10 km/h) or more, the actual engine idle speed varies from the target idle speed by less than -100 rpm or 150 rpm or more when the A/C and NSW are off, or less than -100 rpm or 200 rpm or more when the A/C or NSW are on, 5 times or more during a driving cycle, the ECM illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0505: Idle speed control function
Required Sensors/Components (Main)	Electronic throttle control system
Required Sensors/Components (Related)	Crankshaft position sensor Engine coolant temperature sensor Vehicle speed sensor
Frequency of Operation	Once per driving cycle
Duration	10 minutes (Idling after warming up)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS



Monitor runs whenever following DTCs are not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System bank 1- Advance) P0012 (VVT System bank 1- Retard) P0016 (VVT System bank 1- Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1) P0102, P0103 (Mass Air Flow Meter)

	P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0451, P0452, P0453 (EVAP System) P0500 (Vehicle Speed Sensor) P0606, P0607 (Heated Oxygen Sensor - Sensor 2) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Engine	Running

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met:	Condition 1 or 2
1. Frequency that both of the following conditions (a) and (b) are met	5 times or more
(a) Either of the following conditions is met:	Condition A or B
A. Engine speed - target engine speed	Less than -100 rpm, or 150 rpm or more (A/C off and NSW off)
B. Engine speed - target engine speed	Less than -100 rpm, or 200 rpm or more (A/C on or NSW on)
(b) Vehicle condition	Stop after vehicle was driven by 6.25 mph (10 km/h) or more
2. Frequency that both of the following conditions (a) and (b) are met	Once
(a) Either of the following conditions is met:	Condition A or B
A. Engine speed - target engine speed	Less than -100 rpm, or 150 rpm or more (A/C off and NSW off)
B. Engine speed - target engine speed	Less than -100 rpm, or 200 rpm or more (A/C on or NSW on)
(b) Idle air control flow rate learning valve	1.1 L/sec or less, or 6.0 L/sec or more

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and warm it up (until the engine coolant temperature is 75°C (167°F) or more) with all the accessories switched off [B].
7. Idle the engine for 10 minutes or more [C].
8. Accelerate the vehicle to 6.25 mph (10 km/h) or more, and then idle the engine [D].
9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P0505.
11. Check the DTC judgment result [E].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, repeat step [D] 4 times, allowing 20 seconds or more between each repetition, and then check the DTC judgment result [F].

12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
  a. The floor carpet overlapping slightly onto the accelerator pedal, causing the accelerator pedal to be slightly depressed and therefore the throttle valve position to be slightly open.
  b. The accelerator pedal being not fully released.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P0505	A
P0505 and other DTCs	B

HINT:

If any DTCs other than P0505 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A
▼

2.	CHECK PCV HOSE CONNECTIONS

(a) Check PCV hose.

OK:
PCV hose is connected correctly and is not damaged.

NG ▶ **REPAIR OR REPLACE PCV HOSE**

OK
▼

3.	CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks INFO .

OK:
No leak in intake system.

NG ▶ **REPAIR OR REPLACE INTAKE SYSTEM**

OK
▼

4.	**INSPECT THROTTLE BODY (THROTTLE VALVE)**

(a) Check the throttle valve condition.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ **REPLACE THROTTLE BODY**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001BFY042X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P050A: Cold Start Idle Air Control System Performance (2010 Corolla)		

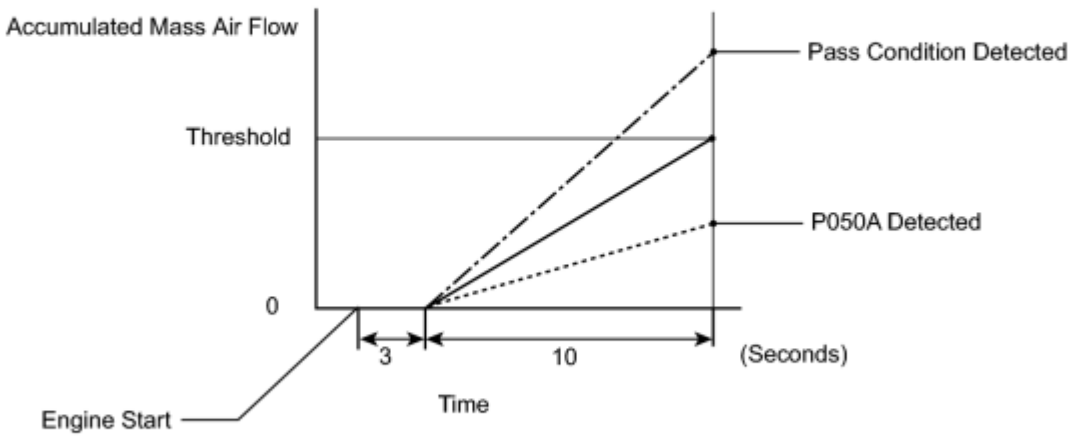
DTC	**P050A**	**Cold Start Idle Air Control System Performance**

MONITOR DESCRIPTION

This monitor will run when the engine is started at an engine coolant temperature of -10 to 50°C (14 to 122°F). The DTC can be set after the engine idles for 13 seconds (2 trip detection logic).

The DTC is designed to monitor the idle air control at cold start. When the engine is started at an engine coolant temperature of lower than 50°C (122°F), the ECM measures the accumulated mass air flow at idle. If it does not reach the specified level within 10 seconds, the ECM interprets this as a malfunction. The MIL is illuminated and a DTC is set when the malfunction is detected in consecutive driving cycles (2 trip detection logic).

The Electronic throttle control system controls the idle speed. The electronic throttle control system operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idle speed.



NOTICE:

When the negative battery terminal is disconnected during inspections or repairs, the idle speed control learning values are cleared. This DTC cannot be set with the idle speed control learning values cleared.

HINT:

The Idle speed control learning is performed when the engine is warmed up and has been idling for 5 minutes.

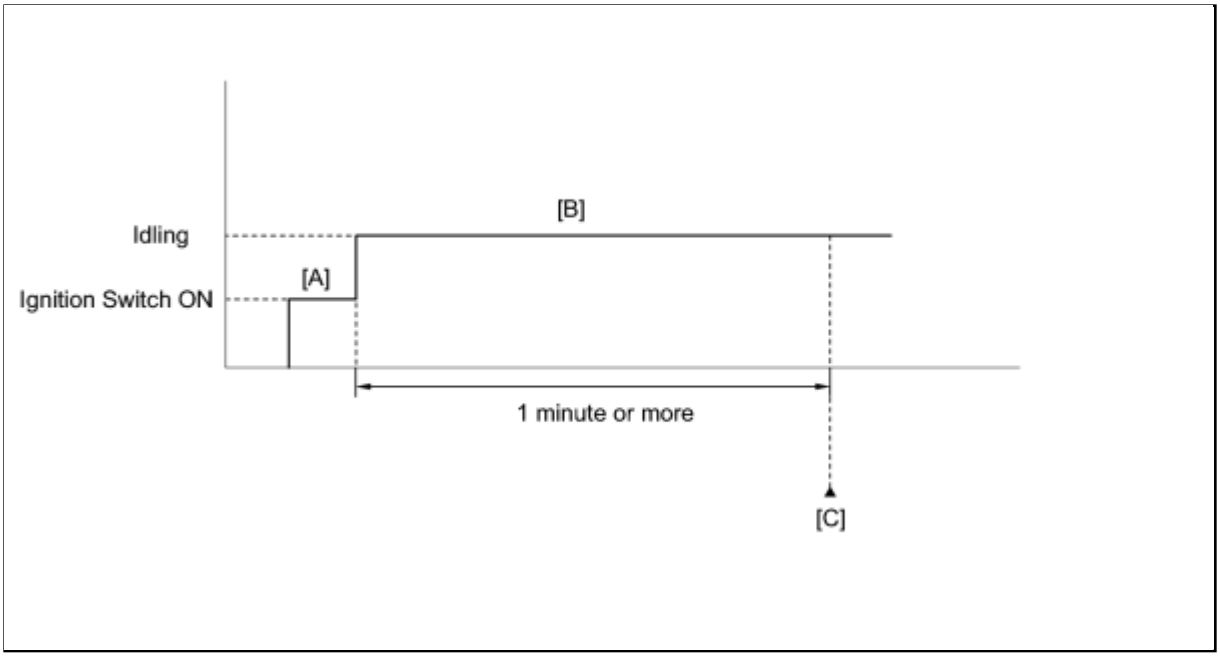
P050A Detection Logic:

Engine Coolant Temperature: -10 to 50°C (14 to 122°F)

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P050A	Insufficient mass air flow at cold start (2 trip detection logic)	• Throttle body • Mass air flow meter • PCV system • Air cleaner filter element • Intake system • VVT system • ECM

MONITOR STRATEGY

Related DTCs	P050A: Cold start idle air speed control system
Required Sensors / Components (Main)	Throttle body
Required Sensors / Components (Related)	Mass air flow meter Engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0010 (VVT Oil Control Valve Bank 1) P0011 (VVT System bank 1- Advance) P0012 (VVT System bank 1- Retard) P0016 (VVT System bank 1- Misalignment) P0102, P0103 (Mass Air Flow Meter) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121 P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop Fuel Control) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0351, P0352, P0353, P0354 (Igniter) P0500 (Vehicle Speed Sensor) P0606, P0607 (Heated Oxygen Sensor - Sensor 2) P2195, P2196, P2237, P2238, P2239, P2252, P2253, P2A00 (Air Fuel Ratio Sensor - Sensor 1)
Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
Engine coolant temperature at engine start	-10°C (14°F) or more
Engine coolant temperature	-10 to 50°C (14 to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)
Atmospheric pressure	76 kPa (570 mmHg) or more

TYPICAL MALFUNCTION THRESHOLDS

Accumulated mass air flow	Varies with engine coolant temperature (Example: Less than 27.5 g)

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Enter the following menus: Powertrain / Engine / Data List / All Data / Coolant Temp.
7. Check that "Coolant Temp" in the Data List are within the range of -10 to 50°C (14 to 122°F).
8. Start the engine and warm it up until the coolant temperature is the same as the coolant temperature in the freeze frame data.
9. Idle the engine for 1 minute or more [B].
10. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
11. Input the DTC: P050A.
12. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, idle the engine for 3 minutes, let the engine cool down, and then perform steps [A] through [C].

13. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
14. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

15. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P050A	A
P050A and other DTCs	B

HINT:

If any DTCs other than P050A are output, troubleshoot those DTCs first.

B ▶ GO TO DTC CHART

A ▼

2.	READ VALUE USING TECHSTREAM (FUEL TRIM)

HINT:

Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / A/F Control System / Short FT #1 and Long FT #1.

(e) Read the values displayed on the Techstream.

(f) Add together the Short FT #1 and Long FT #1 values to obtain the total Fuel Trim.

OK:

Total of Short FT #1 and Long FT #1 values is between -20% and 20%.

NG ▶ PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE OIL CONTROL VALVE)

OK ▼

3.	INSPECT THROTTLE BODY

(a) Check that there are no deposits around the throttle valve.

OK:

No deposits around the throttle valve.

NG ▶ REPAIR OR REPLACE THROTTLE BODY

OK

4.	**REPLACE ECM**

(a) Replace ECM INFO .

NEXT **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

5.	**PERFORM ACTIVE TEST USING TECHSTREAM (OPERATE OIL CONTROL VALVE)**

(a) Connect the Techstream to the DLC3.

(b) Start the engine.

(c) Turn the Techstream ON.

(d) Warm up the engine.

(e) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the VVT System (Bank 1).

(f) Check the engine speed while operating the oil control valve using the Techstream.

OK:

TESTER OPERATION	SPECIFIED CONDITION
Oil Control Valve OFF	Normal engine speed
Oil Control Valve ON	Engine idles roughly or stalls (soon after camshaft timing oil control valve assembly switched from OFF to ON)

NG **CHECK AND REPAIR VVT SYSTEM**

OK

6.	CHECK PCV SYSTEM

(a) Start the engine.

(b) Pinch the positive crankcase ventilation (PCV) hose.

(c) Check the engine rpm.

OK:

The engine rpm changes when the PCV hose is pinched.

NG ▶ **REPAIR OR REPLACE PCV SYSTEM**

OK ▼

7.	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element sub-assembly is not excessively contaminated with dirt or oil.

OK:

The air cleaner filter element sub-assembly is not excessively contaminated with dirt or oil.

NG ▶ **REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**

OK ▼

8.	CHECK INTAKE SYSTEM

(a) Check the intake system for vacuum leaks INFO .

OK:

No leaks in the intake system.

NG ▶ **REPAIR OR REPLACE INTAKE SYSTEM**

OK

9.	**REPLACE MASS AIR FLOW METER**

(a) Replace mass air flow meter INFO .

NEXT **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

10.	**REPAIR OR REPLACE THROTTLE BODY**

(a) Clean or replace throttle body INFO .

NEXT **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

11.	**CHECK AND REPAIR VVT SYSTEM**

HINT:

Refer to DTC P0011 Inspection Procedure INFO

NEXT **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

12.	**REPAIR OR REPLACE PCV SYSTEM**

NEXT **CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)**

13.	**REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY**

NEXT ▶ CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

14.	REPAIR OR REPLACE INTAKE SYSTEM

NEXT ▶ CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

15.	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A)

NOTICE:

For this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Switch the ECM from normal mode to check mode using the Techstream INFO .

(f) Start the engine and idle it for one minute.

OK:

Stable fast idle

(g) Read DTCs.

OK:

No DTC is output.

NEXT ▶ END

Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T8P0D4X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0560: System Voltage (2010 Corolla)		

DTC	**P0560**	**System Voltage**

MONITOR DESCRIPTION

The battery supplies electricity to the ECM even when the ignition switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, the memory is cleared and the ECM determines that there is a malfunction in the power supply circuit. The next time the engine is started, the ECM illuminates the MIL and sets the DTC.

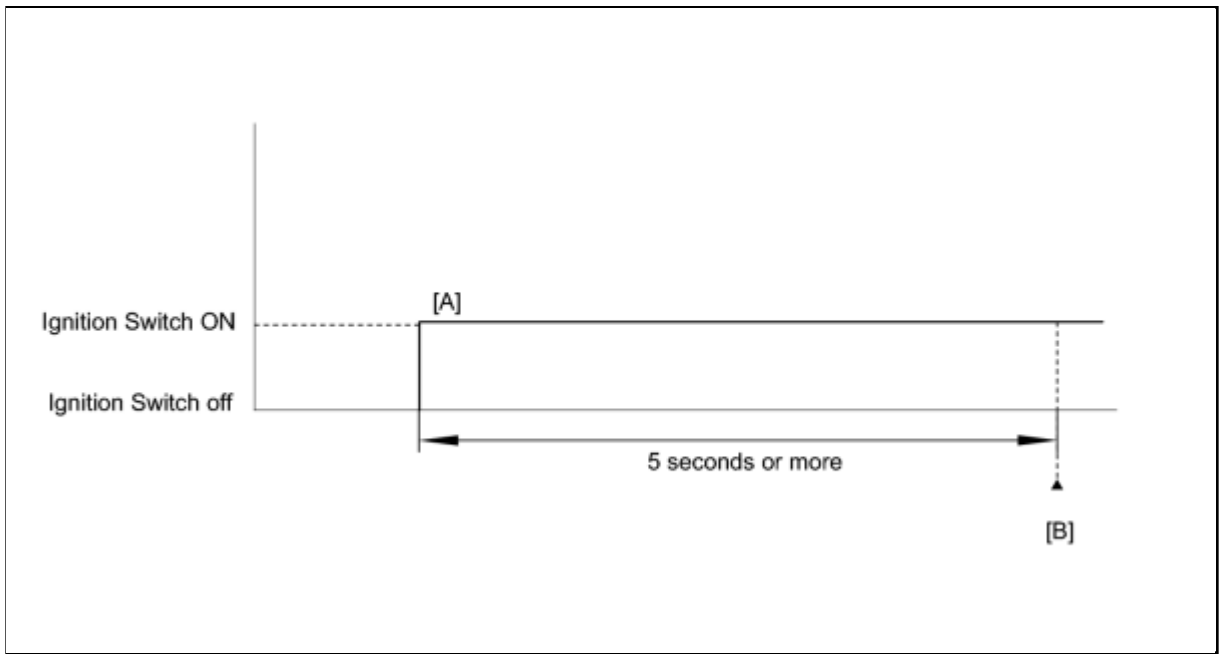
DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0560	Open in ECM back up power source circuit (1 trip detection logic)	• Open in back up power source circuit • Battery • Battery terminals • EFI MAIN fuse • ECM

HINT:

If DTC P0560 is set, the ECM does not store other DTCs or the data stored in the ECM may be partly erased.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 5 seconds or more.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0560.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling

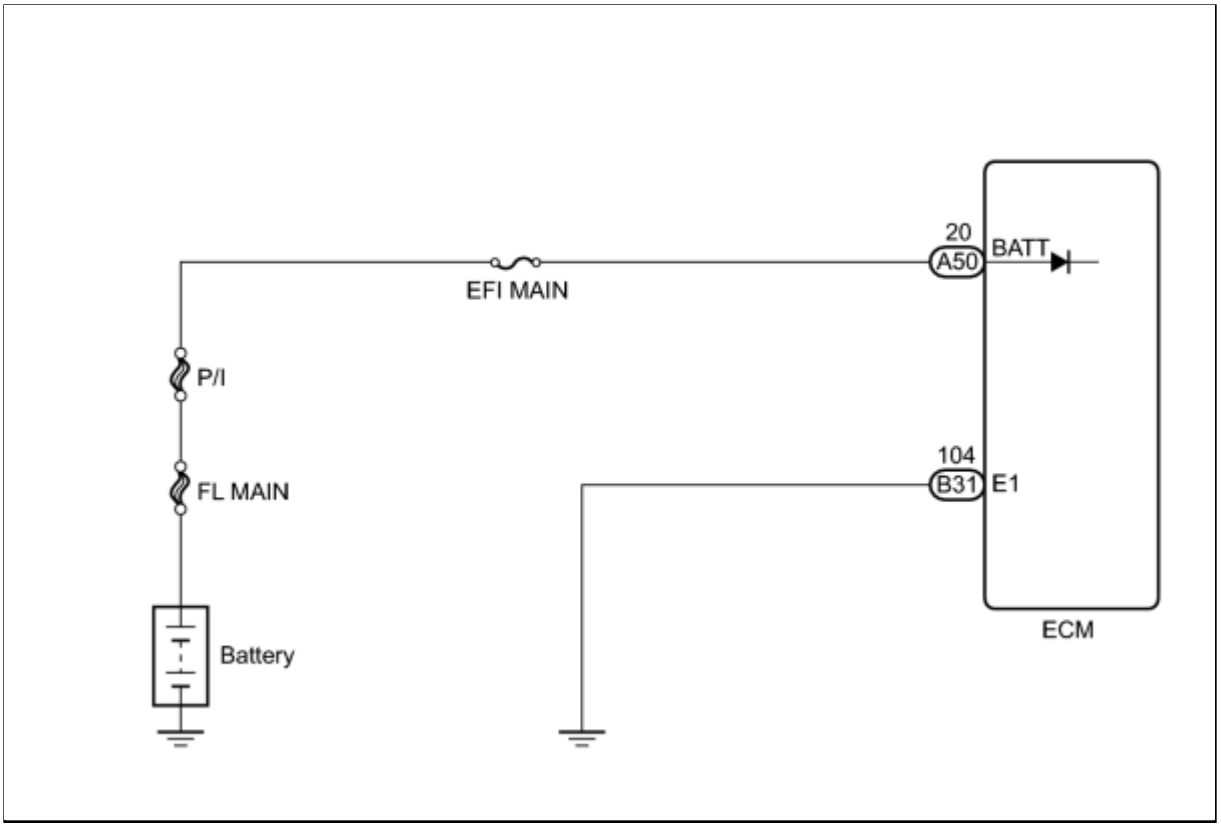
TECHSTREAM DISPLAY	DESCRIPTION
	conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:



If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

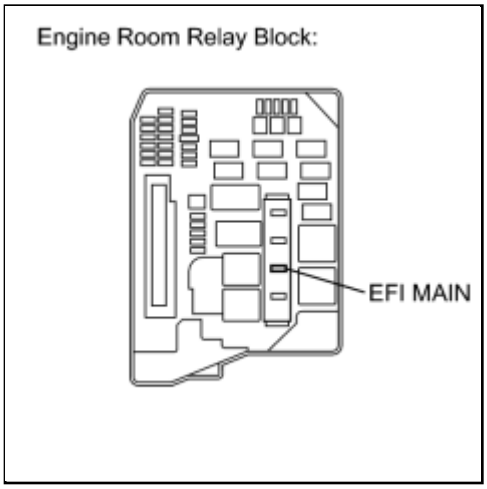
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE



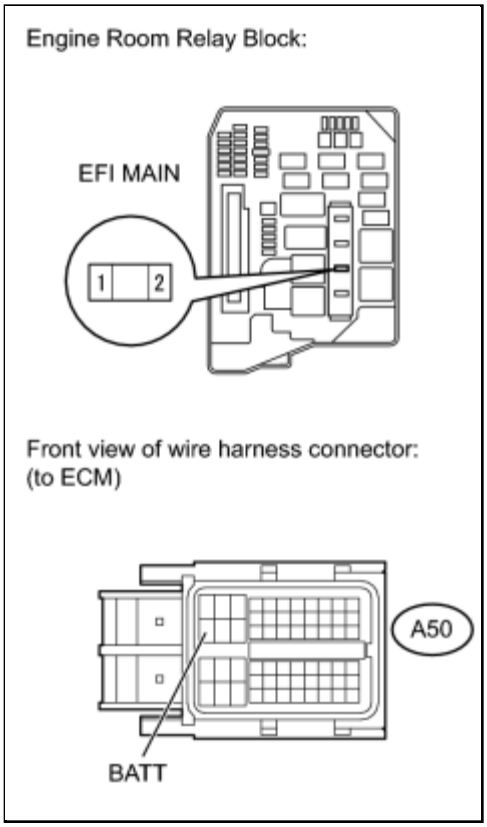
1.	**INSPECT FUSE (EFI MAIN)**

(a) Remove the EFI MAIN fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN Fuse	Always	Below 1 Ω

(c) Reinstall the EFI MAIN fuse.

NG ▶ **REPLACE FUSE (EFI MAIN)**

OK ▼

2.	CHECK HARNESS AND CONNECTOR (ECM - EFI MAIN FUSE - BATTERY)

(a) Disconnect the negative battery terminal.

(b) Disconnect the positive battery terminal.

(c) Remove the EFI MAIN fuse from the engine room relay block.

(d) Disconnect the ECM connector.

(e) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse (2) - A50-20 (BATT)	Always	Below 1 Ω
Battery positive terminal - EFI MAIN fuse (1)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse (2) or	Always	10 kΩ or higher

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-20 (BATT) - Body ground		
Battery positive terminal or EFI MAIN fuse (1) - Body ground	Always	10 kΩ or higher

(f) Reinstall the EFI MAIN fuse.

(g) Reconnect the ECM connector.

(h) Reconnect the positive battery terminal.

(i) Reconnect the negative battery terminal.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - EFI MAIN FUSE - BATTERY)**

OK ▼

3.	INSPECT BATTERY

(a) Check that the battery is not discharged or weak.

OK:

Battery is not discharged or weak

NG ▶ **CHARGE OR REPLACE BATTERY**

OK ▼

4.	CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.

OK:

Battery terminals are not loose or corroded

NG ▶ **REPAIR OR REPLACE BATTERY TERMINAL**

OK ▼

5.	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs [INFO].

(e) Turn the ignition switch to OFF and turn the Techstream OFF.

(f) Start the engine and turn the Techstream ON.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read DTCs.

Result:

RESULT	PROCEED TO
P0560	A
No output	B

B ▶ **CHECK FOR INTERMITTENT PROBLEMS**

A ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002KQO02ZX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0604: Random Access Memory (RAM) (2010 Corolla)		

DTC	**P0604**	**Random Access Memory (RAM)**

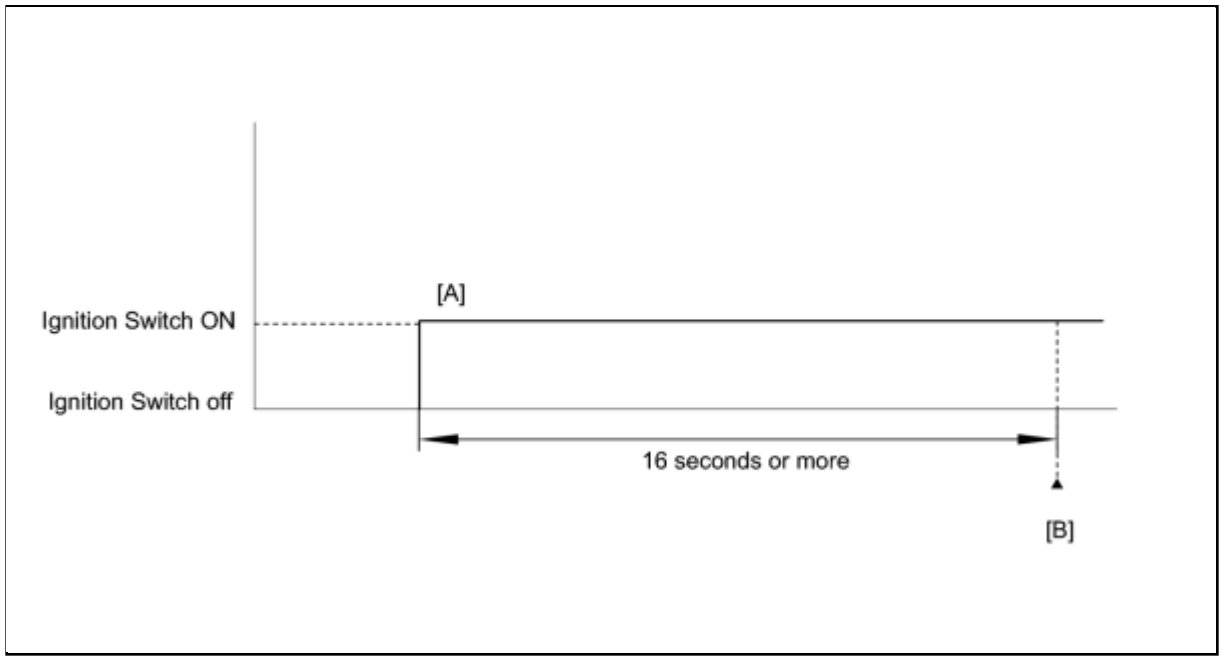
MONITOR DESCRIPTION

The ECM continuously monitors its internal memory status. This self-check ensures that the ECM is functioning properly. It is diagnosed by internal "mirroring" of the main CPU and sub CPU to detect the Random Access Memory (RAM) errors. If outputs from these CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set the DTC immediately.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0604	ECM RAM errors	ECM

MONITOR STRATEGY

Related DTCs	P0606: ECM RAM error
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	None
Frequency of operation	Continuous
Duration	6 times
MIL operation	Immediate
Sequence of operation	None



TYPICAL ENABLING CONDITIONS

None	-

TYPICAL MALFUNCTION THRESHOLDS

Main CPU and sub CPU mirroring	Fail

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 16 seconds or more.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0604.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ OUTPUT DTC (DTC P0604)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTC INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Disconnect the Techstream.

(g) Disconnect the cable from the battery negative (-) terminal and wait for 1 minute.

(h) Connect the cable to the battery negative (-) terminal.

(i) Connect the Techstream to the DLC3.

(j) Turn the ignition switch to ON.

(k) Turn the Techstream on.

(l) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(m) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0604 is output	B

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

Last Modified: 3-10-2010	6.4 C	**From:** 200901

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0606: ECM / PCM Processor (2010 Corolla)		

DTC	**P0606**	**ECM / PCM Processor**

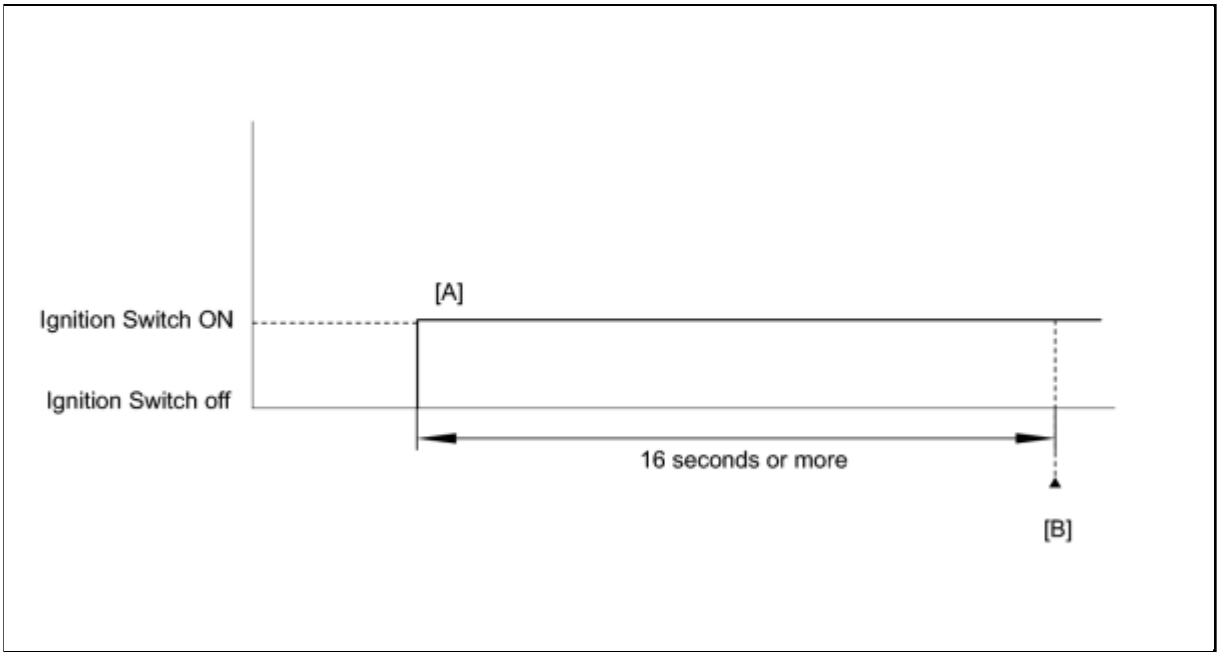
MONITOR DESCRIPTION

The ECM continuously monitors its main and sub CPUs. This self-check ensures that the ECM is functioning properly. If outputs from the CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set the DTC immediately.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0606	• ECM main CPU error • ECM sub CPU error • Cruise control cancel circuit malfunction	ECM

MONITOR STRATEGY

Related DTC	P0606: ECM range check
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	16 seconds
MIL Operation	Immediate
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever the following DTCs are not present	None

TYPICAL MALFUNCTION THRESHOLDS

CPU reset	Occurred

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 16 seconds or more.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0606.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	**READ OUTPUT DTC (DTC P0606)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear DTC INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Disconnect the Techstream.

(g) Disconnect the cable from the battery negative (-) terminal and wait for 1 minute.

(h) Connect the cable to the battery negative (-) terminal.

(i) Connect the Techstream to the DLC3.

(j) Turn the ignition switch to ON.

(k) Turn the Techstream on.

(l) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(m) Read the DTCs.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0606 is output	B

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0607: Control Module Performance (2010 Corolla)		

DTC	**P0607**	**Control Module Performance**

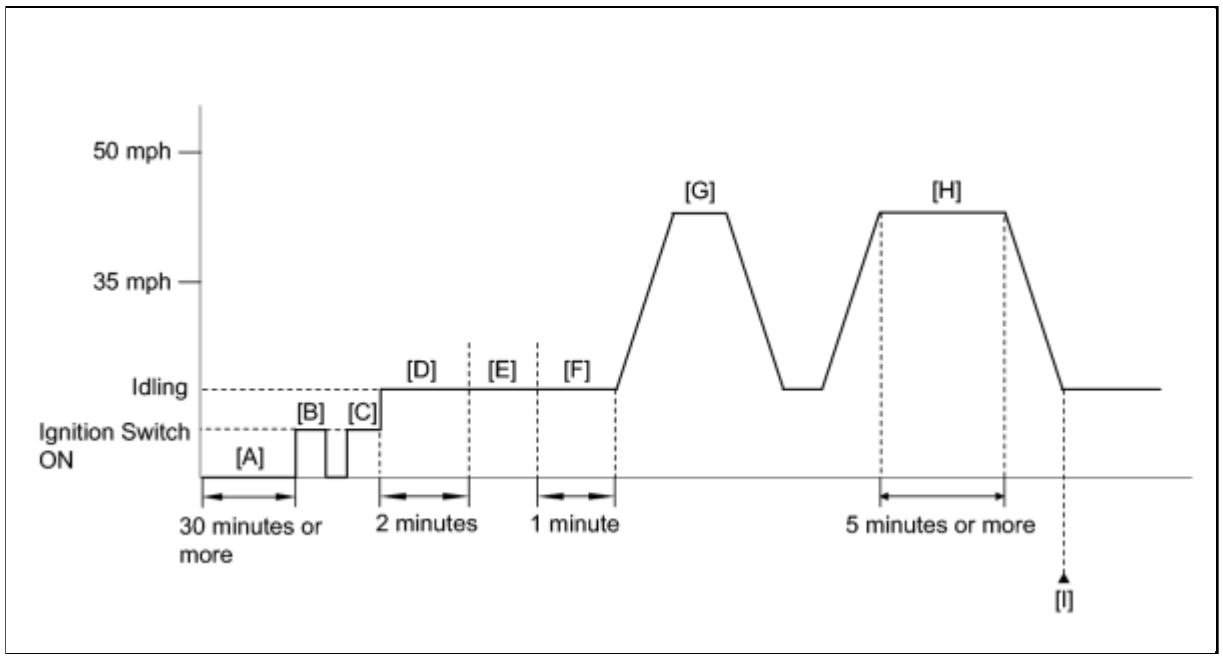
MONITOR DESCRIPTION

The ECM continuously monitors its internal processors (CPUs) and Heated Oxygen (HO2) sensor transistors. This self-check ensures that the ECM is functioning properly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0607	• ECM CPUs malfunction • Heated Oxygen (HO2) sensor transistors (built into ECM) malfunction	• ECM • Heated oxygen sensor • Exhaust gas leak
	For Mexico models: ECM CPU error	• ECM

MONITOR STRATEGY

Related DTCs	None
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	Heated oxygen sensor
Frequency of operation	Continuous
Duration	60 seconds
MIL operation	Immediate
Sequence of operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Engine	Running
Estimated HO2 sensor temperature	450 to 800°C (842 to 1472°F)

TYPICAL MALFUNCTION THRESHOLDS

HO2 sensor transistors	Fail

CONFIRMATION DRIVING PATTERN

1. Stop the engine for 30 minutes or more [A].
2. Connect the Techstream to the DLC3.
3. Turn the ignition switch to ON and turn the Techstream on.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO [B].
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on [C].
7. Start the engine, and wait 2 minutes [D].
8. Warm up the engine until the engine coolant temperature is 75°C (167°F) or higher [E].
9. Idle the engine for 1 minute [F].
10. Accelerate the vehicle to 50 mph (80 km/h) and stop the vehicle [G].
11. Drive the vehicle at 35 to 50 mph (56 to 80 km/h) for 5 minutes or more [H].
12. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
13. Input the DTC: P0607, P0136, P0137 or P0138.
14. Check the DTC judgment result [I].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal

TECHSTREAM DISPLAY	DESCRIPTION
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [D] through [H].

15. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
16. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

17. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT**

(a) Connect the Techstream to the DLC3.

(b) Turn the engine switch on (IG).

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read the DTCs INFO.

Result:

RESULT	PROCEED TO
DTC P0607 and P0136, P0137 or P0138 are output	A
DTC P0607 is output	B

B ▶ **CHECK FOR EXHAUST GAS LEAK**

A ▼

2.	**INSPECT DTC (P0136, P0137 OR P0138)**

(a) Inspect the P0136, P0137 or P0138 flowchart.

HINT:

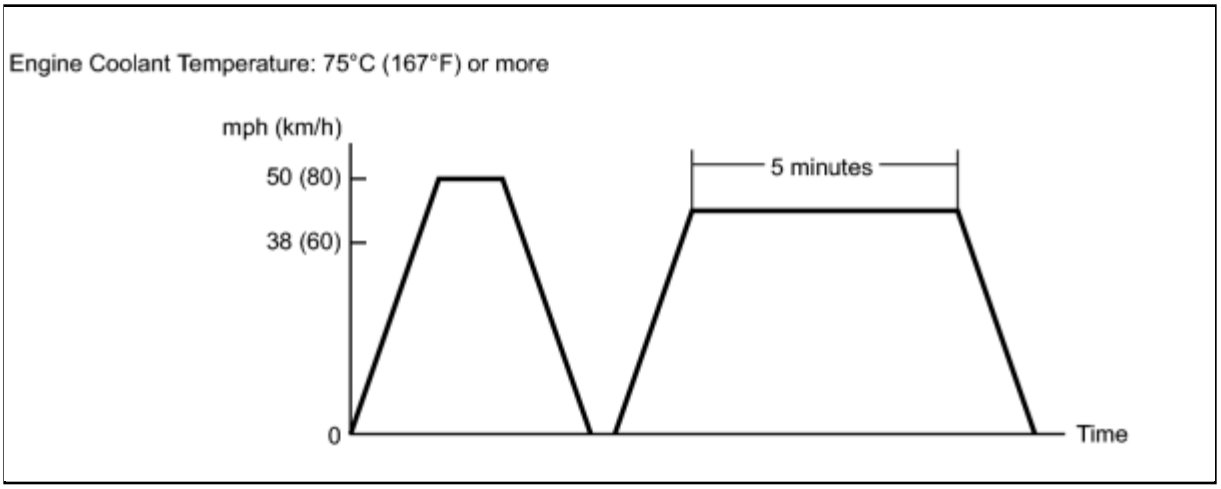
- If P0136 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0137 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0138 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If DTC P0607 and P0136, P0137 or P0138 are output, the output voltage of the heated oxygen sensor may remain close to 0 V or become high (around 1 V or more).

NEXT ▶ **INSPECT ECM**

3.	**CHECK FOR EXHAUST GAS LEAK**

(a) Allow the engine to idle and rev the engine.

(b) Check for exhaust gas leaks around the heated oxygen sensor.



If any exhaust gas leaks are present, repair it and proceed to "PERFORM CONFIRMATION DRIVING PATTERN". If no exhaust gas leaks are present, proceed to "PERFORM CONFIRMATION DRIVING PATTERN".

HINT:

- If no exhaust gas leaks are present, a malfunction in the heated oxygen sensor circuit is suspected.
- If any exhaust gas leaks are present around the heated oxygen sensor, noise appears in the output voltage of the heated oxygen sensor.

NEXT

4.	**PERFORM CONFIRMATION DRIVING PATTERN**

(a) Clear the DTC INFO .

(b) Connect the Techstream to the DLC3.

(c) Start the engine.

(d) Turn the Techstream on.

(e) Warm up the engine until the engine coolant temperature becomes 75° (167°F) or more.

(f) Perform the driving pattern.

(1) Accelerate the vehicle until 50 mph (80 km/h) and stop the vehicle.

(2) Drive the vehicle by 38 to 50 mph (60 to 80 km/h) for 5 minutes or more.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read the DTCs.

Result:

RESULT	PROCEED TO

RESULT	PROCEED TO
DTC P0607 and P0136, P0137 or P0138 are output	A
DTC P0607 is output	B
DTC is not output	C

C ▶ **INSPECT ECM**

B ▶ **REPLACE ECM**

A
▼

5.	INSPECT DTC (P0136, P0137 OR P0138)

(a) Inspect the P0136, P0137 or P0138 flowchart.

HINT:

- If P0136 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0137 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If P0138 is output, troubleshoot for that DTC first INFO. Then proceed to "INSPECT ECM".
- If DTC P0607 and P0136, P0137 or P0138 are output, the output voltage of the heated oxygen sensor may remain close to 0 V or become high (around 1 V or more).

NEXT
▼

6.	INSPECT ECM

(a) Clear the DTC INFO.

(b) Stop the engine and wait for 30 minutes.

(c) Connect the Techstream to the DLC3.

(d) Start the engine and allow it to idle for 2 minutes.

(e) Turn the Techstream on.

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read the DTCs INFO.

Result:

RESULT	PROCEED TO
DTC is not output	A
DTC P0607 is output	B

B ▶ **REPLACE ECM**

A ▶ **END**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000TA00E2X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0617: Starter Relay Circuit High (2010 Corolla)		

DTC	**P0617**	**Starter Relay Circuit High**

MONITOR DESCRIPTION

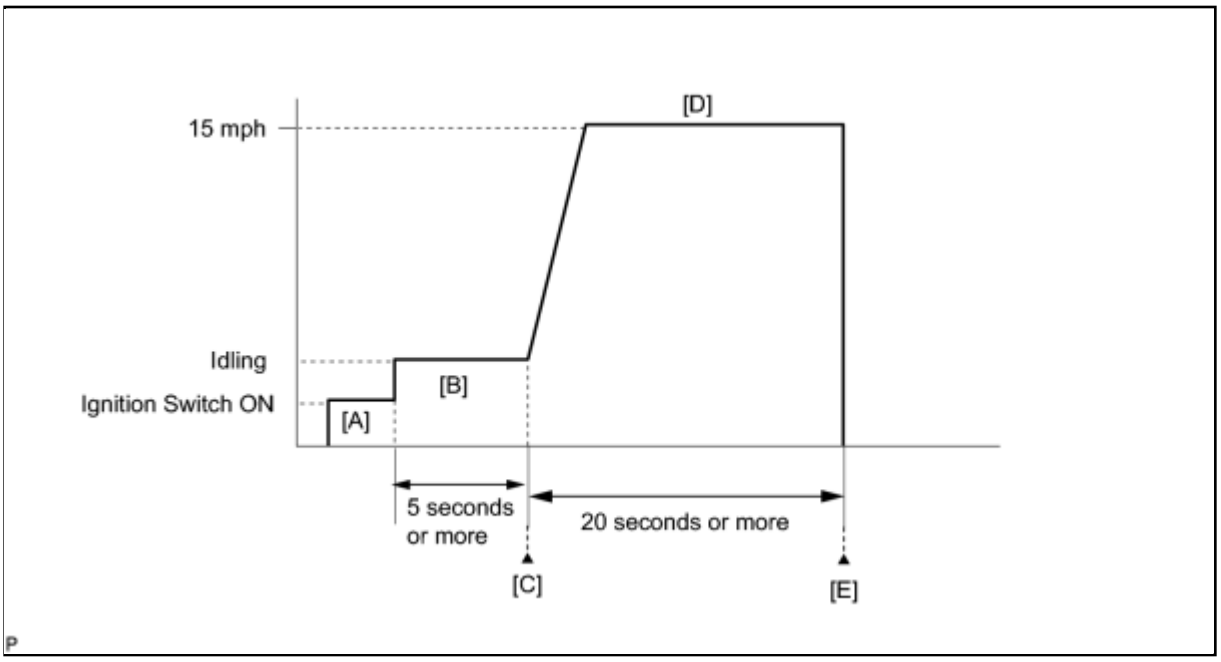
While the engine is being cranked, battery voltage is applied to terminal STA of the ECM. If the ECM detects the starter (STA) signal while the vehicle is being driven, it determines that there is a malfunction in the STA circuit. The ECM then illuminates the MIL and sets the DTC.

This monitor runs when the vehicle is driven at 12.4 mph (20 km/h) for over 20 seconds.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0617	When conditions (a), (b) and (c) are met, positive (+B) battery voltage 10.5 V or more applied to ECM for 20 seconds (1 trip detection logic) • (a) Vehicle speed 12.4 mph (20 km/h) or more • (b) Engine speed 1000 rpm or more • (c) STA signal ON	• Park/neutral position switch or clutch pedal switch • ST relay circuit • Ignition switch • ECM

MONITOR STRATEGY

Related DTCs	P0617: Starter signal
Required Sensors/Components (Main)	ST relay Park/neutral position switch Ignition switch
Required Sensors/Components (Related)	Vehicle Speed Sensor Crankshaft position sensor
Frequency of Operation	Continuous
Duration	20 seconds
MIL Operation	Immediate
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Vehicle speed	12.4 mph (20 km/h) or more
Engine speed	1000 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

Starter signal	ON

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Idle the engine for 5 minutes or more [B].
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0617.
9. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed

TECHSTREAM DISPLAY	DESCRIPTION
	○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

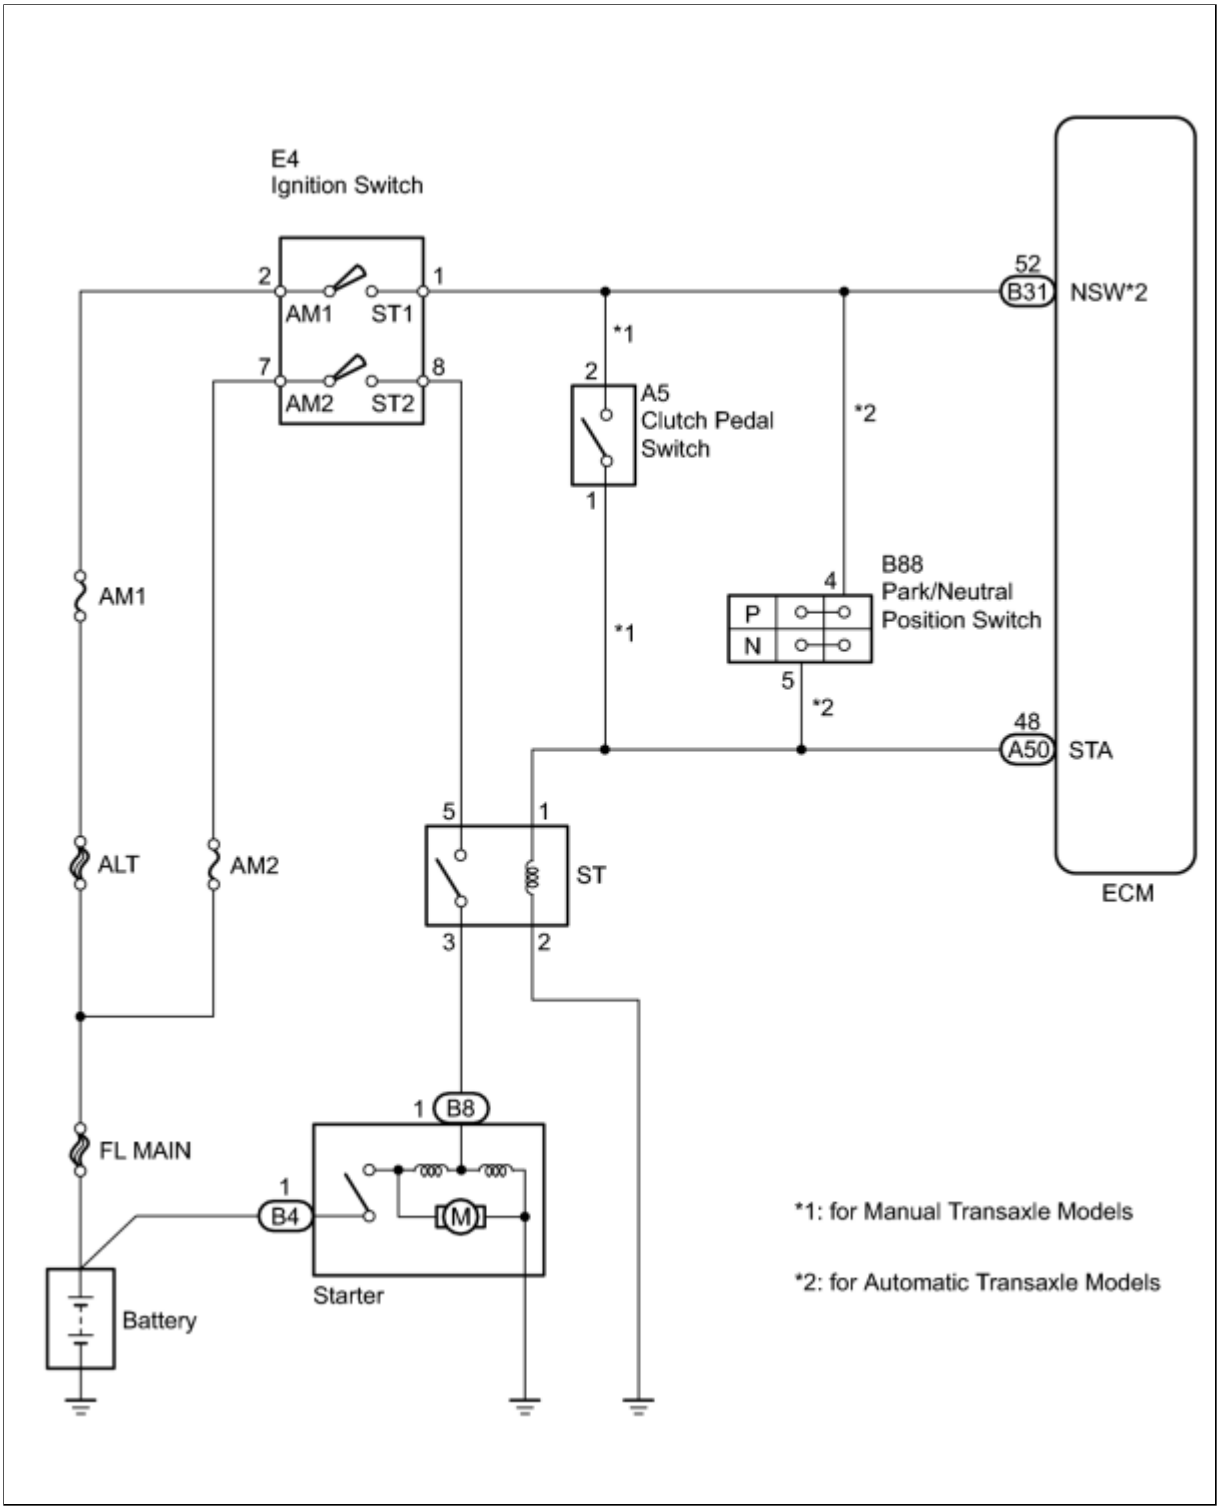
HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [D] and [E].

10. Drive the vehicle at 15 mph (24 km/h) or more for 20 seconds or more [D].
11. Check the DTC judgment result [E].
12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.



14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

For the detail of the park/neutral position switch circuit, refer to the DTC P0705 INFO .

INSPECTION PROCEDURE

HINT:

- The following troubleshooting flowchart is based on the premise that the engine cranks normally.

  If the engine will not crank, proceed to the problem symptoms table INFO .
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine

was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (STARTER SIGNAL)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Starter Signal.

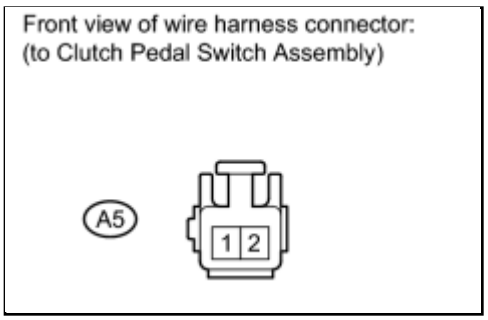
(e) Check the value displayed on the Techstream when the ignition switch is turned to the ON and START positions.

OK:

IGNITION SWITCH POSITION	STARTER SIGNAL
ON	OFF
START	ON

Result:

RESULT	PROCEED TO
OK	A
NG (Manual transaxle Model)	B
NG (Automatic transaxle Model)	C



C ▶ **READ VALUE USING TECHSTREAM (STARTER SIGNAL)**

B ▶ **READ VALUE USING TECHSTREAM (STARTER SIGNAL)**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**READ VALUE USING TECHSTREAM (STARTER SIGNAL)**

(a) Disconnect the clutch pedal switch connector.

(b) Connect Techstream to the DLC3.

(c) Turn the ignition switch to ON.

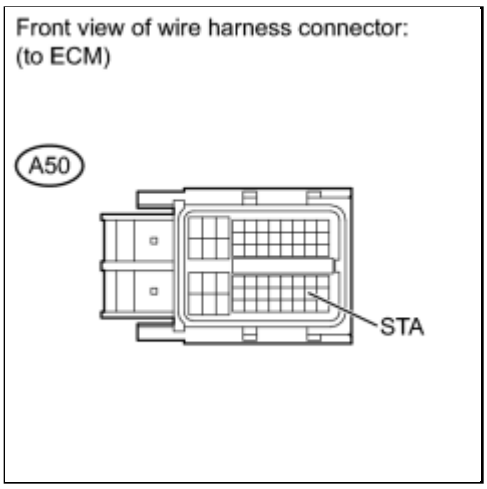
(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / Starter Signal.

(f) Check the value displayed on the Techstream when the ignition switch is turned to ON.

Result:

STARTER SIGNAL	PROCEED TO
Remains ON	A
OFF	B



(g) Reconnect the clutch pedal switch connector.

B ▶ **INSPECT CLUTCH PEDAL SWITCH**

A ▼

3.	**INSPECT ECM (STA TERMINAL VOLTAGE)**

(a) Disconnect the clutch pedal switch or the park/neutral position switch connector.

(b) Disconnect the ECM connector.

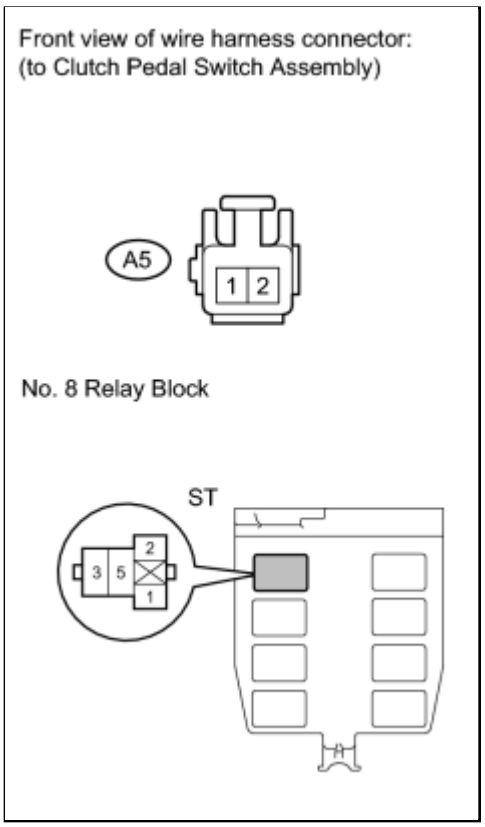
(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	PROCEED TO
STA (A50-48) - Body ground	Ignition switch ON	11 to 14 V	A
		Below 1.5 V	B

(e) Reconnect the clutch pedal switch or the park/neutral position switch connector.



(f) Reconnect the ECM connector.

B ▶ **REPLACE ECM**

A ▼

4.	**CHECK HARNESS AND CONNECTOR (CLUTCH PEDAL SWITCH - ST RELAY)**

(a) Disconnect the clutch pedal switch connector.

(b) Remove the ST relay from the No. 8 relay block.

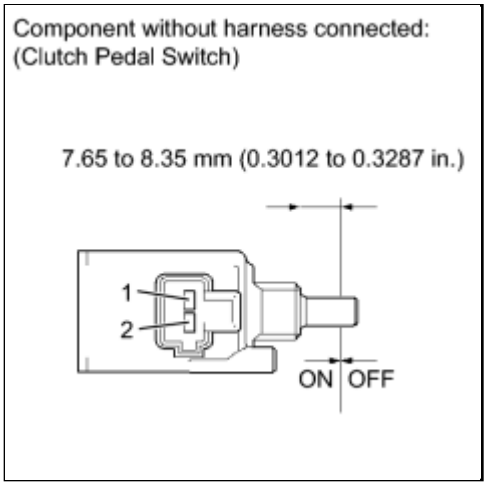
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST Relay terminal 1 - A5-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
ST Relay terminal 1 or A5-1 - Body ground	Always	10 kΩ or higher



(d) Reconnect the clutch pedal switch connector.

(e) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CLUTCH PEDAL SWITCH - ST RELAY)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - CLUTCH PEDAL SWITCH)**

5.	INSPECT CLUTCH PEDAL SWITCH

(a) Disconnect the clutch pedal switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

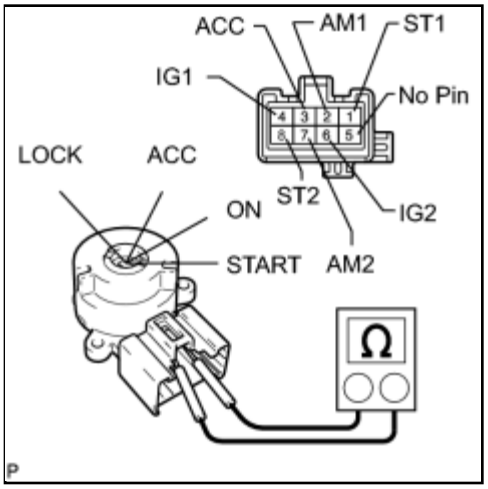
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
1 - 2	OFF (free)	10 kΩ or higher

Result:

RESULT	PROCEED TO
Outside standard range	A
Within standard range	B

(c) Reconnect the clutch pedal switch connector.

B ▶ **INSPECT IGNITION SWITCH**



A ▼

6.	REPLACE CLUTCH PEDAL SWITCH

(a) Replace the clutch pedal switch INFO .

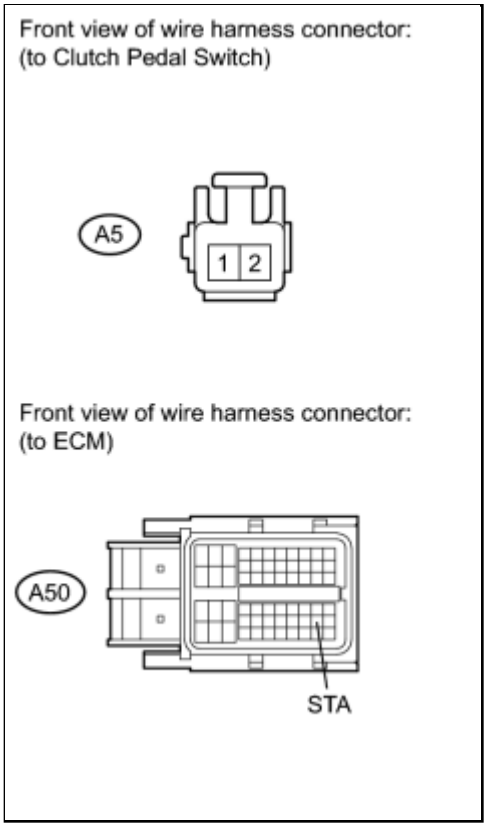
NEXT

7.	INSPECT IGNITION SWITCH

(a) Remove the ignition switch.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
All Terminals	LOCK	10 kΩ or higher
2 (AM1) - 3 (ACC)	ACC	Below 1 Ω
2 (AM1) - 3 (ACC) - 4 (IG1)	ON	
7 (AM2) - 6 (IG2)		
2 (AM1) - 4 (IG1) - 1 (ST1)	START	
7 (AM2) - 6 (IG2) - 8 (ST2)		

(c) Reinstall the ignition switch.

NG ▶ **REPLACE IGNITION SWITCH**

OK

8.	CHECK HARNESS AND CONNECTOR (CLUTCH PEDAL SWITCH - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the clutch pedal switch connector.

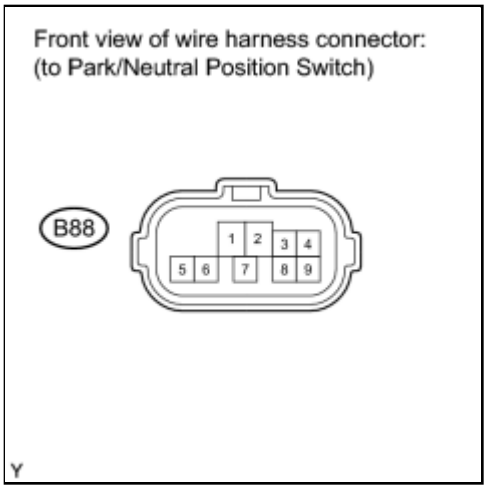
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-1 - A50-48 (STA)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A5-1 or A50-48 (STA) - Body ground	Always	10 kΩ or higher



(d) Reconnect the ECM connector.

(e) Reconnect the clutch pedal switch connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (CLUTCH PEDAL SWITCH - ECM)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH - CLUTCH PEDAL SWITCH)**

9.	READ VALUE USING TECHSTREAM (STARTER SIGNAL)

(a) Disconnect the park/neutral position switch connector.

(b) Connect Techstream to the DLC3.

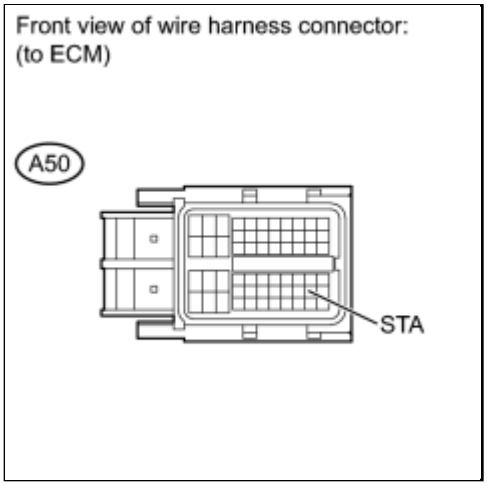
(c) Turn the ignition switch to ON.

(d) Turn the Techstream on.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / Starter Signal.

(f) Check the value displayed on the Techstream when the ignition switch is turned to ON.

Result:



STARTER SIGNAL	PROCEED TO
Remains ON	A
OFF	B

(g) Reconnect the park/neutral position switch connector.

B ▶ **INSPECT PARK/NEUTRAL POSITION SWITCH**

A ▼

10.	**INSPECT ECM (STA TERMINAL VOLTAGE)**

(a) Disconnect the clutch pedal switch or the park/neutral position switch connector.

(b) Disconnect the ECM connector.

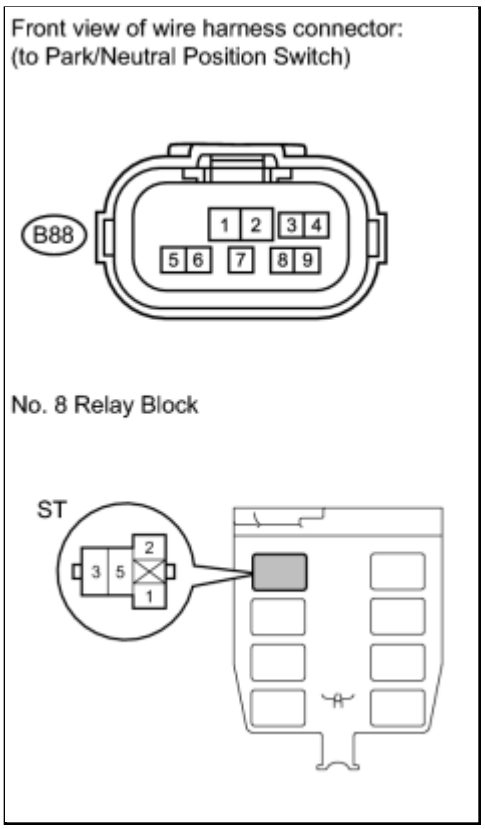
(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	PROCEED TO
STA (A50-48) - Body ground	Ignition switch ON	11 to 14 V	A
		Below 1.5 V	B

(e) Reconnect the clutch pedal switch or the park/neutral position switch connector.



(f) Reconnect the ECM connector.

B ▶ **REPLACE ECM**

A ▼

11.	**CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ST RELAY)**

(a) Disconnect the park/neutral position switch connector.

(b) Remove the ST relay from the No. 8 relay block.

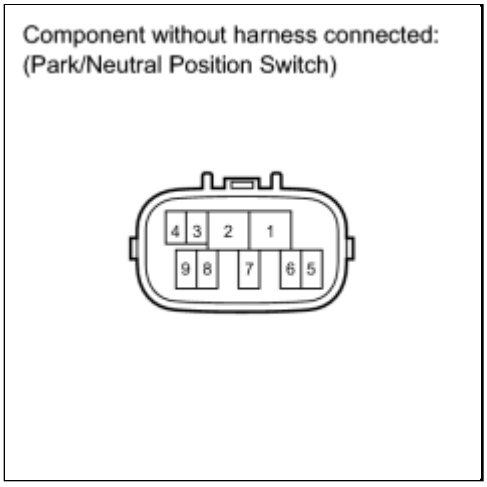
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-5 - ST Relay terminal 1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-5 or ST Relay terminal 1 - Body ground	Always	10 kΩ or higher



(d) Reconnect the park/neutral position switch connector.

(e) Reinstall the ST relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ST RELAY)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - PARK/NEUTRAL POSITION SWITCH)**

12.	**INSPECT PARK/NEUTRAL POSITION SWITCH**

(a) Disconnect the park/neutral position switch connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Short):

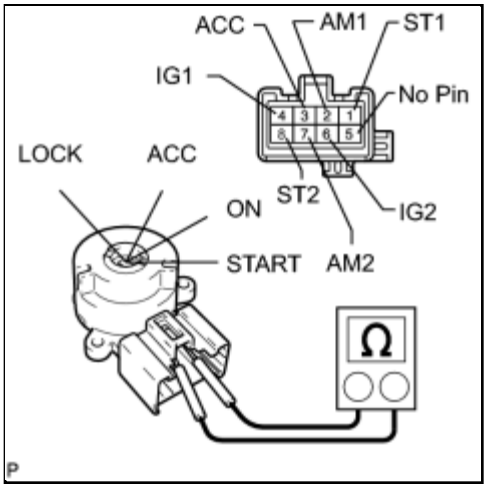
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
4 - 5	Shift lever position except P and N	10 kΩ or higher
2 - 5	All shift lever positions (P, R, N, D and S)	10 kΩ or higher

Result:

RESULT	PROCEED TO
Outside standard range	A
Within standard range	B

(c) Reconnect the park/neutral position switch connector.

B ▶ **REPLACE PARK/NEUTRAL POSITION SWITCH**



A ▼

13.	**REPLACE PARK/NEUTRAL POSITION SWITCH**

(a) Replace the park/neutral position switch INFO .

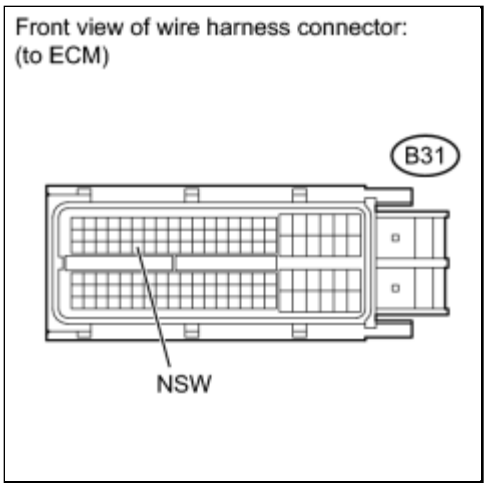
NEXT

14.	INSPECT IGNITION SWITCH

(a) Remove the ignition switch.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
All Terminals	LOCK	10 kΩ or higher
2 (AM1) - 3 (ACC)	ACC	Below 1 Ω
2 (AM1) - 3 (ACC) - 4 (IG1)	ON	
7 (AM2) - 6 (IG2)		
2 (AM1) - 4 (IG1) - 1 (ST1)	START	
7 (AM2) - 6 (IG2) - 8 (ST2)		

(c) Reinstall the ignition switch.

NG ▶ **REPLACE IGNITION SWITCH**

OK

15.	**INSPECT ECM (NSW TERMINAL VOLTAGE)**

(a) Disconnect the park/neutral position switch connector.

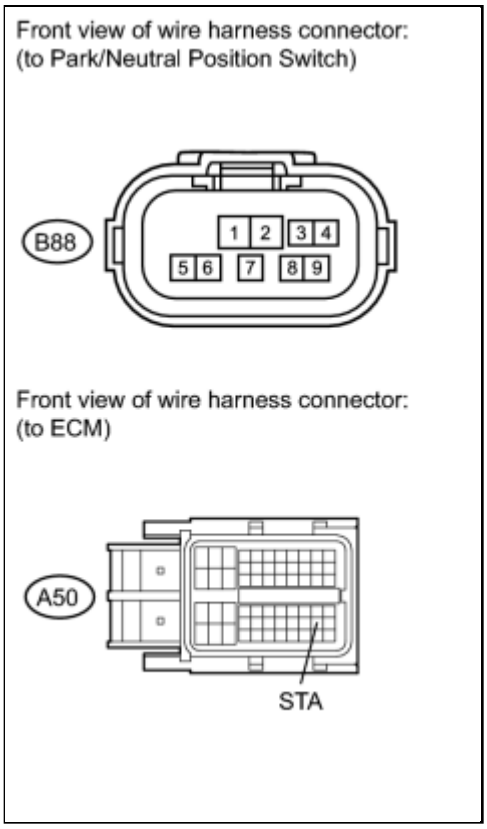
(b) Disconnect the ECM connector.

(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	PROCEED TO
NSW (B31-52) - Body ground	Ignition switch ON	11 to 14 V	A
		Below 1.5 V	B



(e) Reconnect the park/neutral position switch connector.

(f) Reconnect the ECM connector.

B **REPLACE ECM**

A

16.	**CHECK HARNESS AND CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

(a) Disconnect the park/neutral position switch connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B88-5 or A50-48 (STA) - Body ground	Always	10 kΩ or higher

(d) Reconnect the park/neutral position switch connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (PARK/NEUTRAL POSITION SWITCH - ECM)**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH - PARK/NEUTRAL POSITION SWITCH)**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002Z1R020X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P060A: Internal Control Module Monitoring Processor Performance (2010 Corolla)		

DTC	**P060A**	**Internal Control Module Monitoring Processor Performance**

MONITOR DESCRIPTION

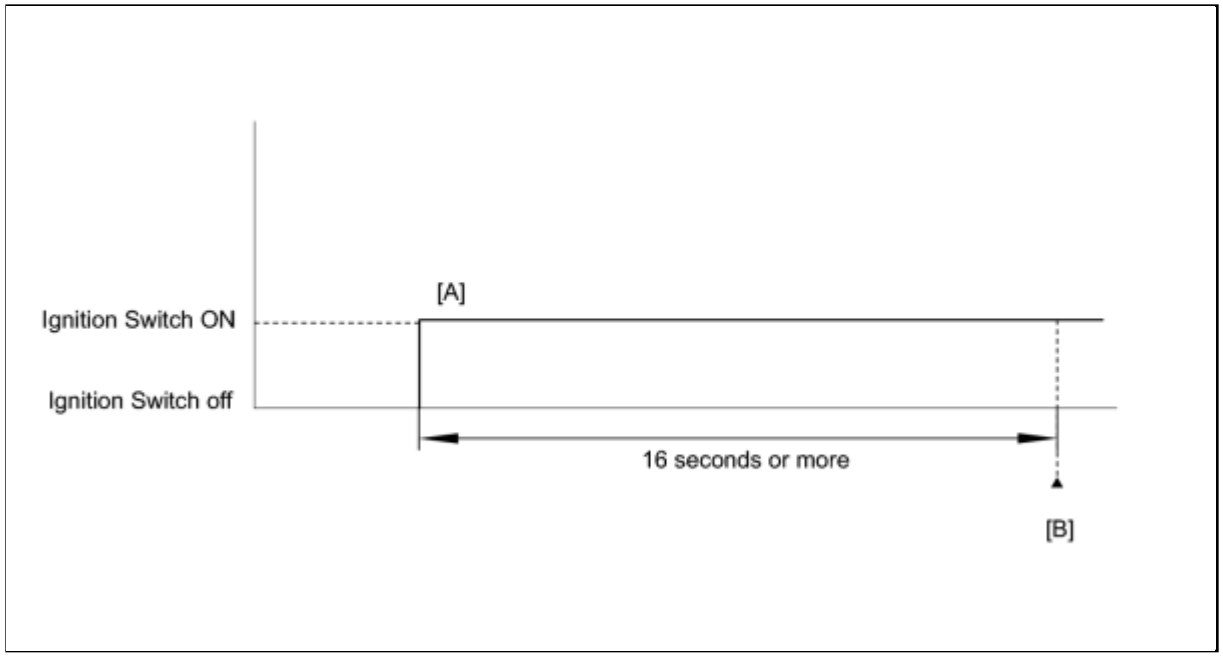
The main CPU and sub CPU of the ECM communicate with each other. The main CPU monitors the communications and WDC pulses from the sub CPU. When the signal malfunctions below are detected, the DTC is stored.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P060A	ECM sub CPU error	ECM

MONITOR STRATEGY

Related DTCs	P060A: ECM CPU error
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	-
Frequency of operation	Continuous
Duration	16 seconds
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS



None	-

TYPICAL MALFUNCTION THRESHOLDS

When either condition below is met:	Condition 1 or 2
1. When all conditions below are met:	-
- CPU reset	1 time or more

- Learned throttle position - Learned accelerator pedal position	0.4 V or more
- Electronic throttle actuator	OFF
2. CPU reset	2 times or more

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 16 seconds or more.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P060A.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling

TECHSTREAM DISPLAY	DESCRIPTION
	conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

PROCEDURE

1.	**READ OUTPUT DTC (DTC P060A)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTC INFO .

(e) Turn the ignition switch off and turn the Techstream off.

(f) Disconnect the Techstream.

(g) Disconnect the cable from the battery negative (-) terminal and wait for 1 minute.

(h) Connect the cable to the battery negative (-) terminal.

(i) Connect the Techstream to the DLC3.

(j) Turn the ignition switch to ON.

(k) Turn the Techstream on.

(l) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(m) Read DTCs.

Result:

RESULT	PROCEED TO
No output	A
P060A	B

B ▶ **REPLACE ECM**

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0657: Actuator Supply Voltage Circuit / Open (2010 Corolla)		

DTC	**P0657**	**Actuator Supply Voltage Circuit / Open**

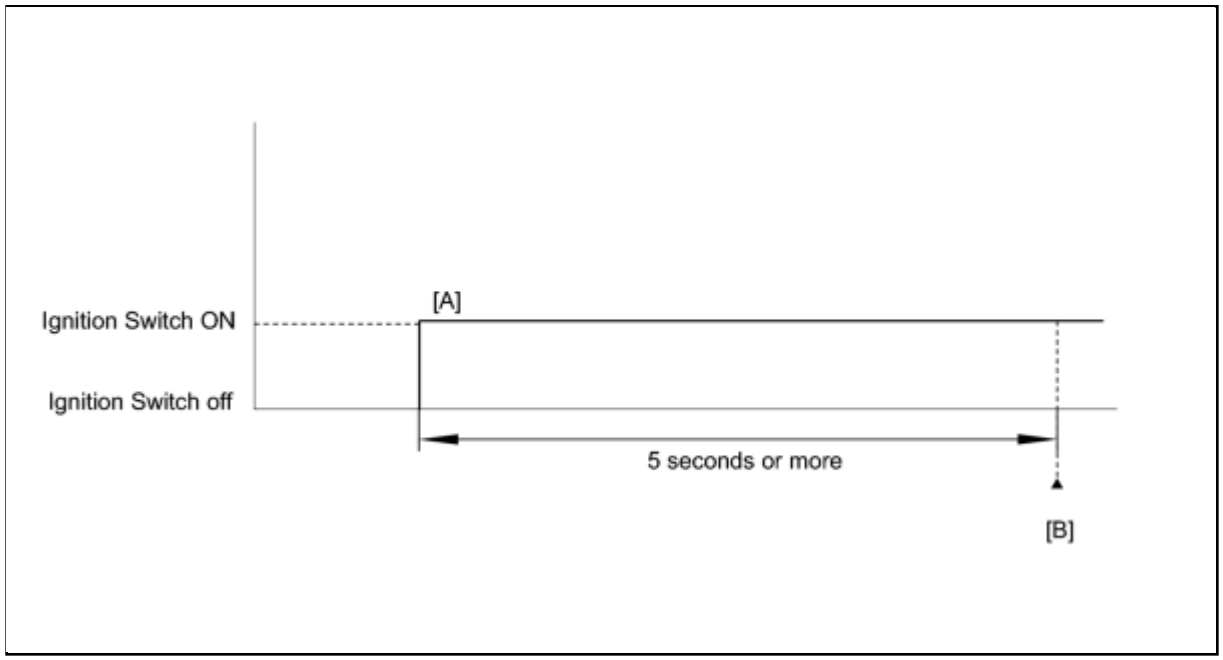
MONITOR DESCRIPTION

The ECM monitors the output voltage to the throttle actuator. This self-check ensures that the ECM is functioning properly. The output voltage is usually 0 V when the ignition switch is turned off. If the output voltage is higher than 7 volts when the ignition switch is turned off, the ECM will illuminate the MIL and set the DTC the next time the ignition switch is turned to ON.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0657	Throttle actuator power supply error	ECM

MONITOR STRATEGY

Related DTCs	P0657: Electronic throttle control system power supply
Required sensors/Components (Main)	ECM
Required sensors/Components (Related)	Throttle actuator
Frequency of operation	Once per driving cycle
Duration	Within 1 second
MIL operation	Immediate
Sequence of operation	None



TYPICAL ENABLING CONDITIONS

Ignition switch	ON to OFF

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply	7 V or more

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off and turn the Techstream off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 5 seconds or more.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0657.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ OUTPUT DTC (DTC P0657)**

(a) Clear the DTC INFO .

(b) Turn the ignition switch OFF.

(c) Disconnect the cable from the negative battery terminal and wait for 1 minute.

(d) Connect the cable to the negative battery terminal.

(e) Turn the ignition switch to ON for 10 seconds.

(f) Turn the ignition switch off.

(g) Turn the ignition switch to ON.

(h) Check DTC.

OK:
P0657 is not present.

B ▶ **REPLACE ECM**

A ▶ **CHECK FOR INTERMITTENT PROBLEMS**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001DN902WX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P0724: Brake Switch "B" Circuit High (2010 Corolla)		

DTC	**P0724**	**Brake Switch "B" Circuit High**

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling when brakes are suddenly applied while driving with the lock-up torque converter clutch on.

When the brake pedal is depressed, this switch sends a signal to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P0724	Stop light switch remains ON even when vehicle repeats 5 cycles of STOP (less than 1.86 mph [3 km/h]) and GO (18.65 mph [30 km/h] or more) (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

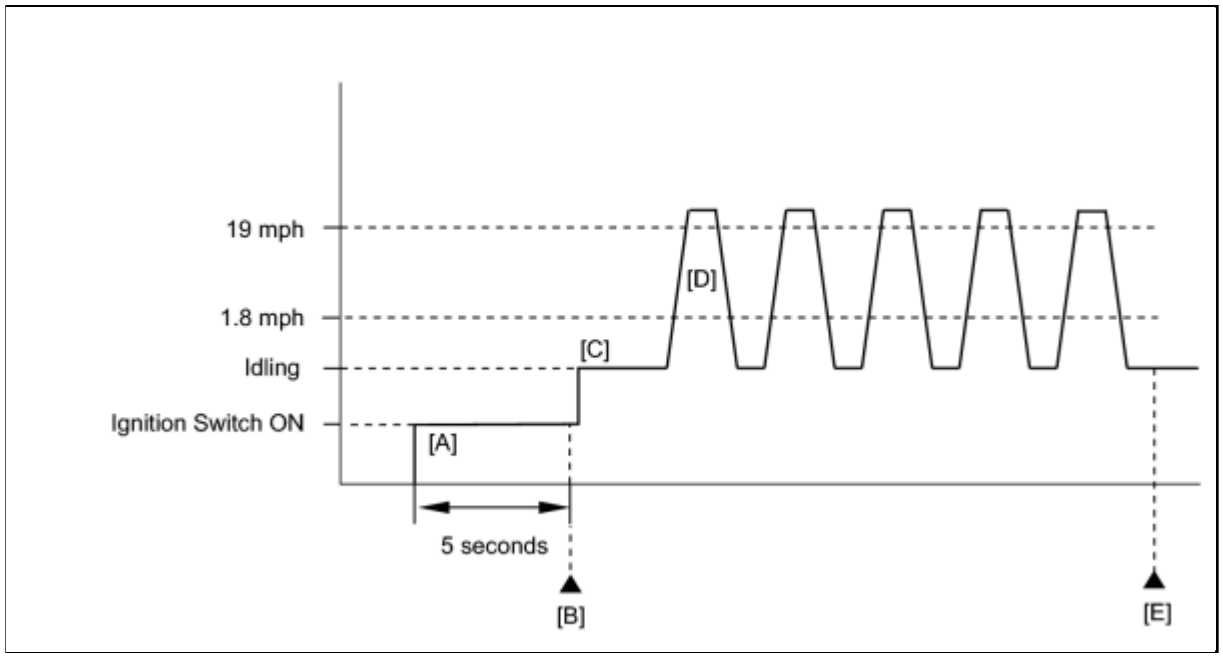
This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during "stop and go" driving, the ECM interprets this as a fault in the stop light switch, the MIL comes on and the ECM stores the DTC. The vehicle must stop (less than 1.86 mph [3 km/h]) and go (18.65 mph [30 km/h] or more) 5 times during 2 driving cycles, in order to detect a malfunction.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components (Main)	Stop light switch
Required sensors/Components (Related)	Speed sensor
Frequency of Operation	Continuous
Duration	5 times
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The stop light switch remains ON during GO and STOP 5 times.



GO and STOP are Defined as Follows;

Monitor runs whenever following DTCs are not present	None
GO: Vehicle speed	18.65 mph (30 km/h) or more
STOP: Vehicle speed	Less than 1.86 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

Stop light switch status	Stuck ON

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Wait 5 seconds after clear DTCs.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P0724.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [C] through [E].

10. Start the engine [C].
11. Accelerate the vehicle to 19 mph (30 km/h) or more, depress the brake pedal and decelerate the vehicle to 1.8 mph (3 km/h) or less [D]. Repeat step [D] 5 times.
12. Check the DTC judgment result [E].
13. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
14. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

15. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P0504 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (STOP LIGHT SWITCH)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / Stop Light Switch.

(e) Read the values displayed on the Techstream.

Result:

ITEM	MEASUREMENT ITEM: RANGE (DISPLAY)	NORMAL CONDITION
Stop Light Switch	Stop light switch status: ON or OFF	• ON: Brake pedal is depressed • OFF: Brake pedal is released

NG ▶ **INSPECT STOP LIGHT SWITCH**

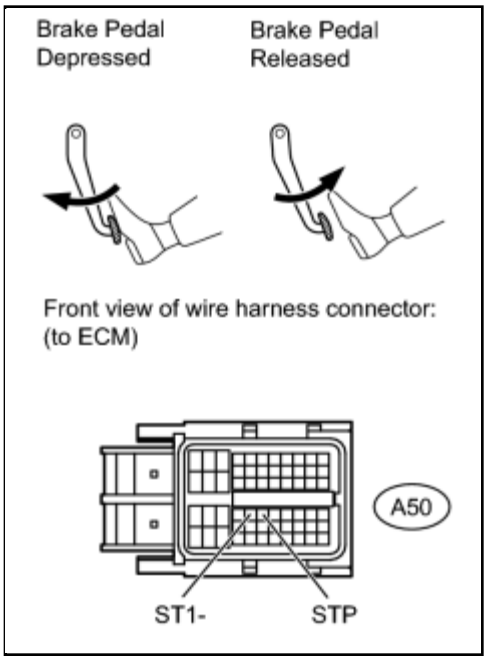
OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

2.	**INSPECT STOP LIGHT SWITCH** INFO

NG ▶ **REPLACE STOP LIGHT SWITCH**

OK ▼

3.	CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - ECM)



(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-35 (ST1-) - Body ground	Brake pedal released	11 to 14 V
	Brake pedal depressed	0 to 3 V
A50-36 (STP) - Body ground	Brake pedal released	0 to 3 V
	Brake pedal depressed	11 to 14 V

(d) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - ECM)**

OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFU0ADX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2102,P2103: Throttle Actuator Control Motor Circuit Low (2010 Corolla)		

DTC	**P2102**	**Throttle Actuator Control Motor Circuit Low**

DTC	**P2103**	**Throttle Actuator Control Motor Circuit High**

DESCRIPTION

The throttle actuator is operated by the ECM and opens and closes the throttle valve using an electric motor and gears.

The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This electronic throttle control system does not use a throttle cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2102	Conditions (a) and (b) continue for 2 seconds (1 trip detection logic): (a) Throttle actuator duty ratio 80% or more (b) Throttle actuator current less than 0.5 A	• Open in throttle actuator circuit • Throttle actuator • ECM
P2103	Either of following conditions is met (1 trip detection logic): • Hybrid IC diagnosis signal fail • Hybrid IC current limiter port fail	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body • ECM

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and

open circuits in the throttle actuator based on the current value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.

Example:

When the electrical current is less than 0.5 A and the throttle actuator duty ratio exceeds 80%, the ECM interprets this as the current being outside the standard range, and illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, the DTC can be set when the engine is quickly revved to a high rpm several times after the engine has idled for 5 seconds after starting the engine.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	P2102: 2 seconds P2103: 0.6 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None

P2102:

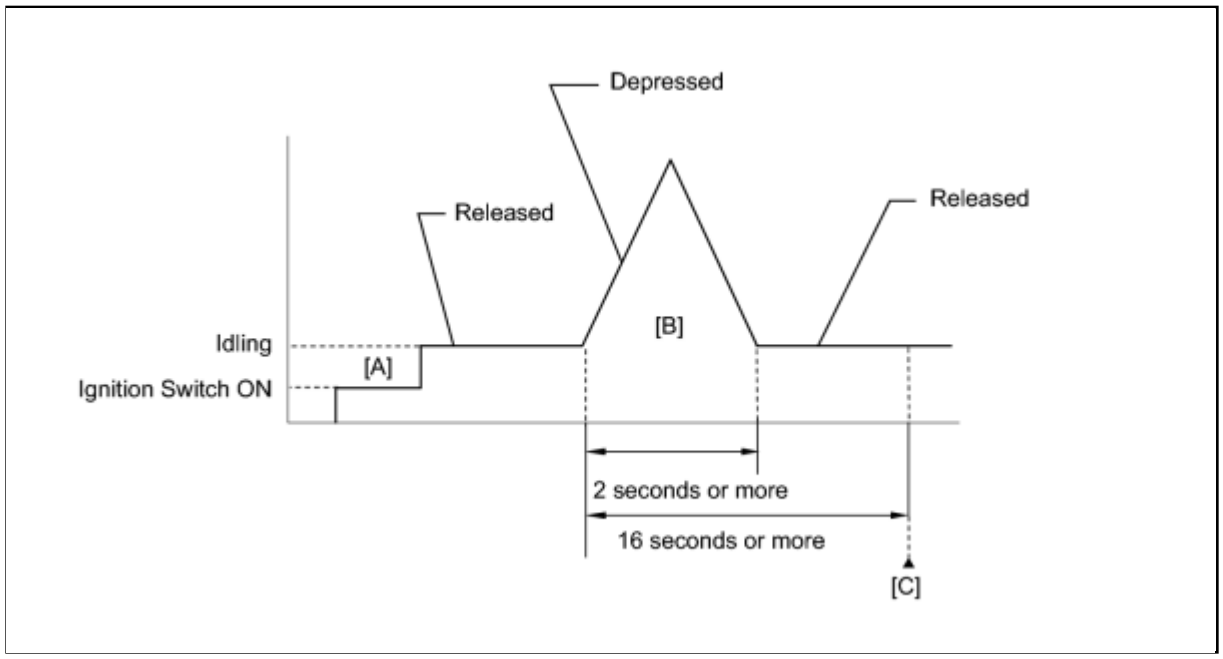
Throttle actuator	ON
Duty-cycle to open throttle actuator	80% or more
Throttle actuator power supply	8 V or more
Motor current change during latest 0.016 seconds	Less than 0.2 A

P2103:

Throttle actuator	ON
Either of the following conditions 1 or 2 is met:	-
1. Throttle actuator power supply	8 V or more

2. Throttle actuator power	ON
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS



P2102:

Throttle actuator current	Less than 0.5 A

P2103:

Either of following conditions is met:	A or B
A. Hybrid IC diagnosis signal	Fail
B. Hybrid IC current limiter port	Fail

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. With the vehicle stationary, fully depress the accelerator pedal and quickly release it [B].
8. Check that 16 seconds or more have elapsed from the instant when the accelerator pedal is

first depressed.

9. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
10. Input the DTC: P2102 or P2103.
11. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] through [C] again.

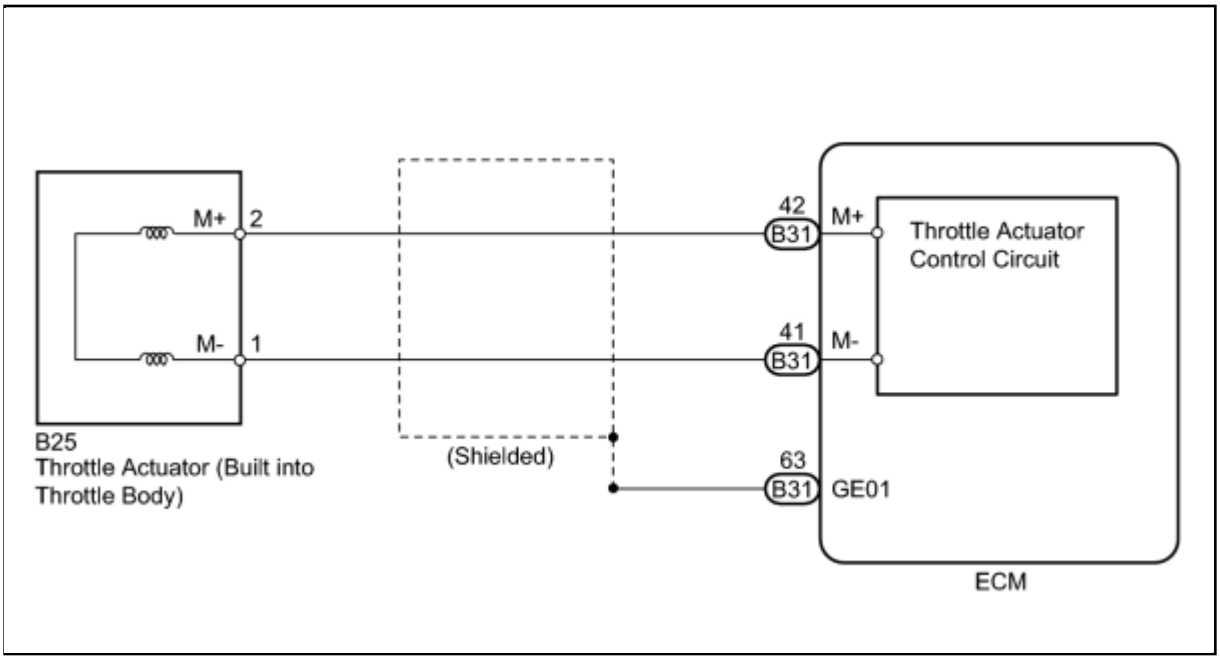
12. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
13. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

14. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

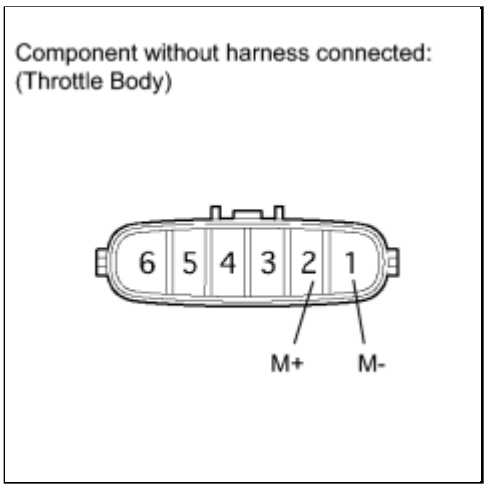
FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6.5° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- The throttle actuator current (Throttle Motor Current) and the throttle actuator duty ratio (Throttle Motor Open Duty / Throttle Motor Close Duty) can be read using Techstream. However, the ECM shuts off the throttle actuator current when the electronic throttle control system malfunctions.

PROCEDURE

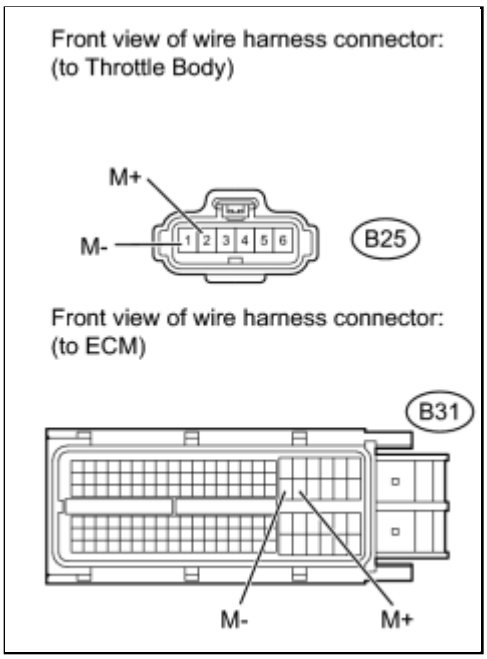
1.	**INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)**

(a) Disconnect the throttle body connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2 (M+) - 1 (M-)	20°C (68°F)	0.3 to 100 Ω



(c) Reconnect the throttle body connector.

NG ▶ **REPLACE THROTTLE BODY**

OK ▼

2.	**CHECK HARNESS AND CONNECTOR (THROTTLE BODY - ECM)**

(a) Disconnect the throttle body connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-2 (M+) - B31-42 (M+)	Always	Below 1 Ω
B25-1 (M-) - B31-41 (M-)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B25-2 (M+) or B31-42 (M+) - Body ground	Always	10 kΩ or higher
B25-1 (M-) or B31-41 (M-) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

(e) Reconnect the throttle body connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (THROTTLE BODY - ECM)**

OK ▼

3.	INSPECT THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for foreign objects between the throttle valve and the housing.

OK:

No foreign objects between throttle valve and housing.

NG ▶ **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK ▼

4.	INSPECT THROTTLE BODY (THROTTLE VALVE)

(a) Check if the throttle valve opens and closes smoothly.

OK:

Throttle valve opens and closes smoothly.

NG ▶ **REPLACE THROTTLE BODY**

OK ▶ **REPLACE ECM**

Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2111,P2112: Throttle Actuator Control System - Stuck Open (2010 Corolla)		

DTC	**P2111**	**Throttle Actuator Control System - Stuck Open**

DTC	**P2112**	**Throttle Actuator Control System - Stuck Closed**

DESCRIPTION

The throttle actuator is operated by the ECM, and opens and closes the throttle valve using an electric motor and gears. The opening angle of the throttle valve is detected by the throttle position sensor, which is mounted on the throttle body. The throttle position sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:

This electronic throttle control system does not use a throttle cable.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2111	ECM signals throttle actuator to close, but stuck open (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve • ECM
P2112	ECM signals throttle actuator to open, but stuck closed (1 trip detection logic)	• Throttle actuator • Throttle body • Throttle valve • ECM

MONITOR DESCRIPTION

The ECM determines that there is a malfunction in the electronic throttle control system when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, the DTC can be set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the engine is next started.

MONITOR STRATEGY

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6.5° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to off.

WIRING DIAGRAM

Refer to DTC P2102 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**INSPECT THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)**

(a) Check for contamination such as carbon between the throttle valve and the housing. If necessary, clean the throttle body. After cleaning, check that the throttle valve moves smoothly.

OK:

Throttle valve is not contaminated with foreign objects and moves smoothly.

NG ▶ **REPLACE THROTTLE BODY**

OK ▼

2.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P2111 OR P2112)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs [INFO].

(e) Start the engine, and fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(g) Read DTCs.

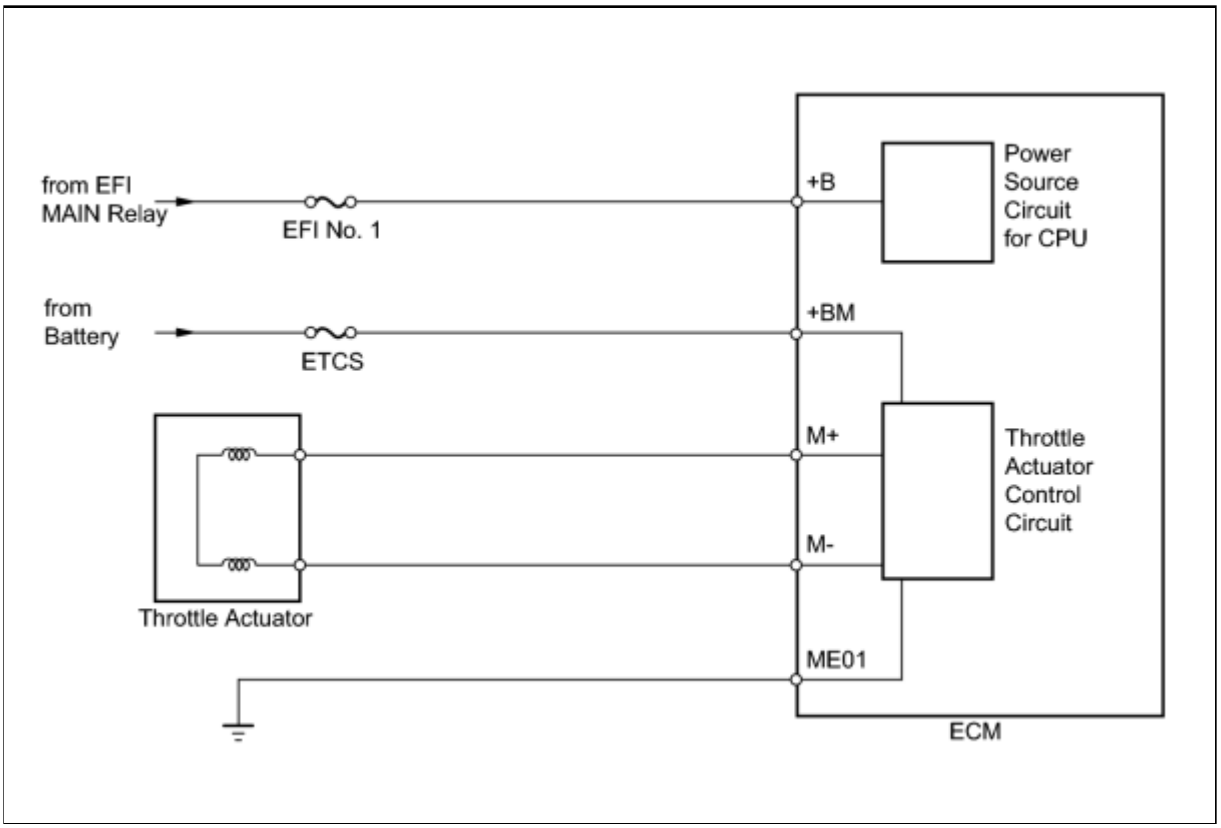
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFW0AFX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2118: Throttle Actuator Control Motor Current Range / Performance (2010 Corolla)		

DTC	**P2118**	**Throttle Actuator Control Motor Current Range / Performance**



DESCRIPTION

The electronic throttle control system has a dedicated power supply circuit. The voltage (+BM) is monitored and when it is low (less than 4 V), the ECM determines that there is a malfunction in the electronic throttle control system and cuts off the current to the throttle actuator.

When the voltage becomes unstable, the electronic throttle control system itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the ignition switch off. On the next restart, the ECM will allow the current to flow to the throttle actuator.

HINT:

The electronic throttle control system does not use a throttle cable.

DTC	DTC DETECTION CONDITION	TROUBLE AREA

NO.		
P2118	Open in electronic throttle control system power source (+BM) circuit (1 trip detection logic)	• Open in electronic throttle control system power source circuit • Battery • Battery terminals • ETCS fuse • ECM

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.

When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.

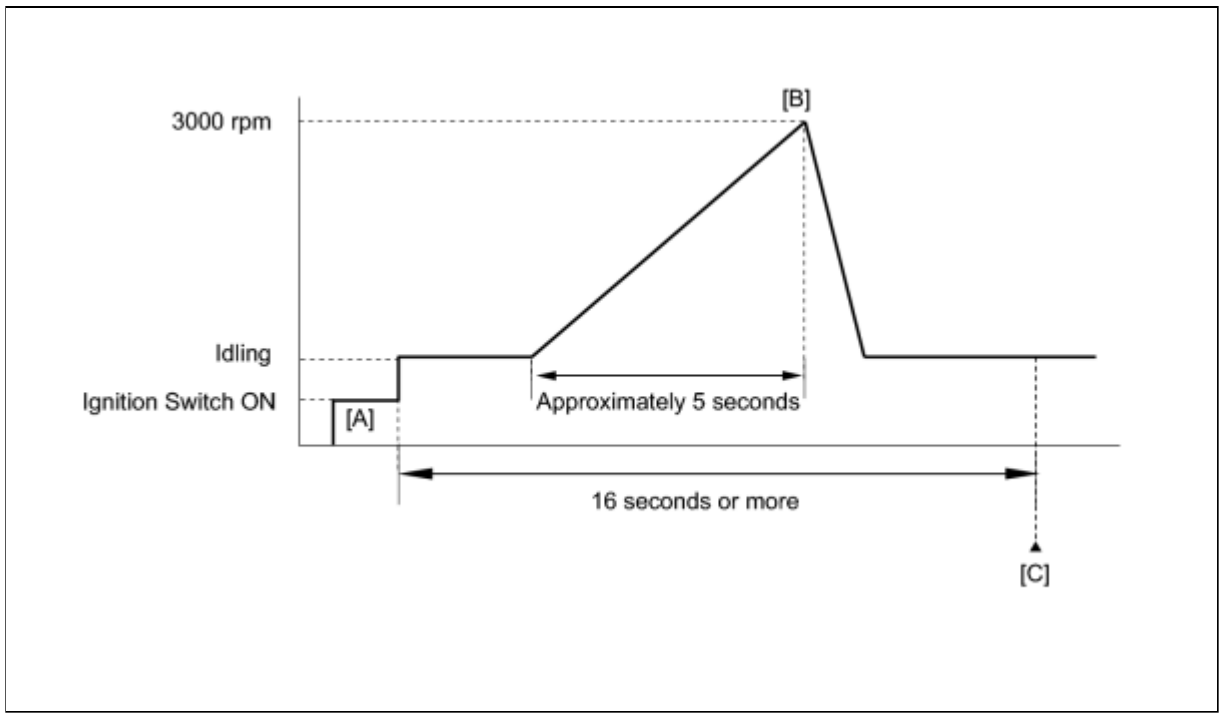
If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve (throttle body) ETCS fuse
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	0.8 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	8 V or more
Electronic throttle actuator power	ON



TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

COMPONENT OPERATING RANGE

Throttle actuator power supply voltage (+BM)	11 to 14 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Slowly depress the accelerator pedal, raise the engine speed to approximately 3000 rpm for approximately 5 seconds, and then idle the engine [B].
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P2118.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal

HINT:

○ If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

    HINT:

    If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

    HINT:

    - If a permanent DTC is output, the system is malfunctioning.
    - If no permanent DTC is output, the system is normal.

FAIL-SAFE

When this DTC, or other DTCs relating to electronic throttle control system malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6.5° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to off.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (+BM VOLTAGE)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

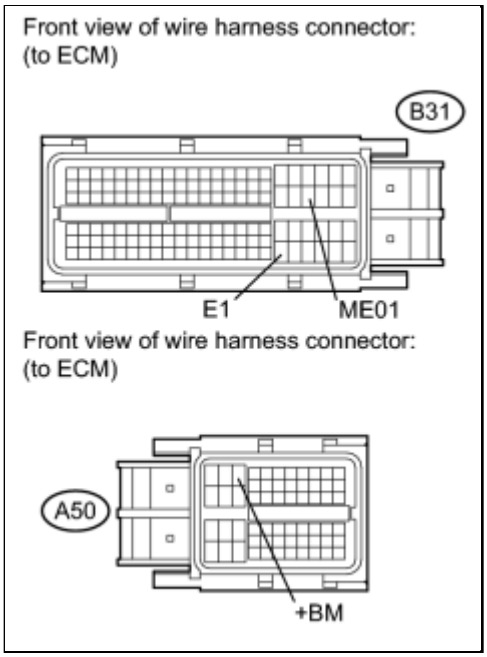
(d) Enter the following menus: Powertrain / Engine and ECT / Data List / +BM Voltage.

(e) Read the value displayed on the Techstream.

Standard Voltage:
11 to 14 V

NG ▶ **CHECK HARNESS AND CONNECTOR (ECM - BATTERY, BODY GROUND)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**



2.	**CHECK HARNESS AND CONNECTOR (ECM - BATTERY, BODY GROUND)**

(a) Disconnect the ECM connectors.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-3 (+BM) - Body ground	Always	11 to 14 V

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-43 (ME01) - Body ground	Always	Below 1 Ω
B31-104 (E1) - Body ground		

(d) Reconnect the ECM connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (TERMINALS E1 AND ME01 - BODY**

GROUND)

OK ▶ REPLACE ECM

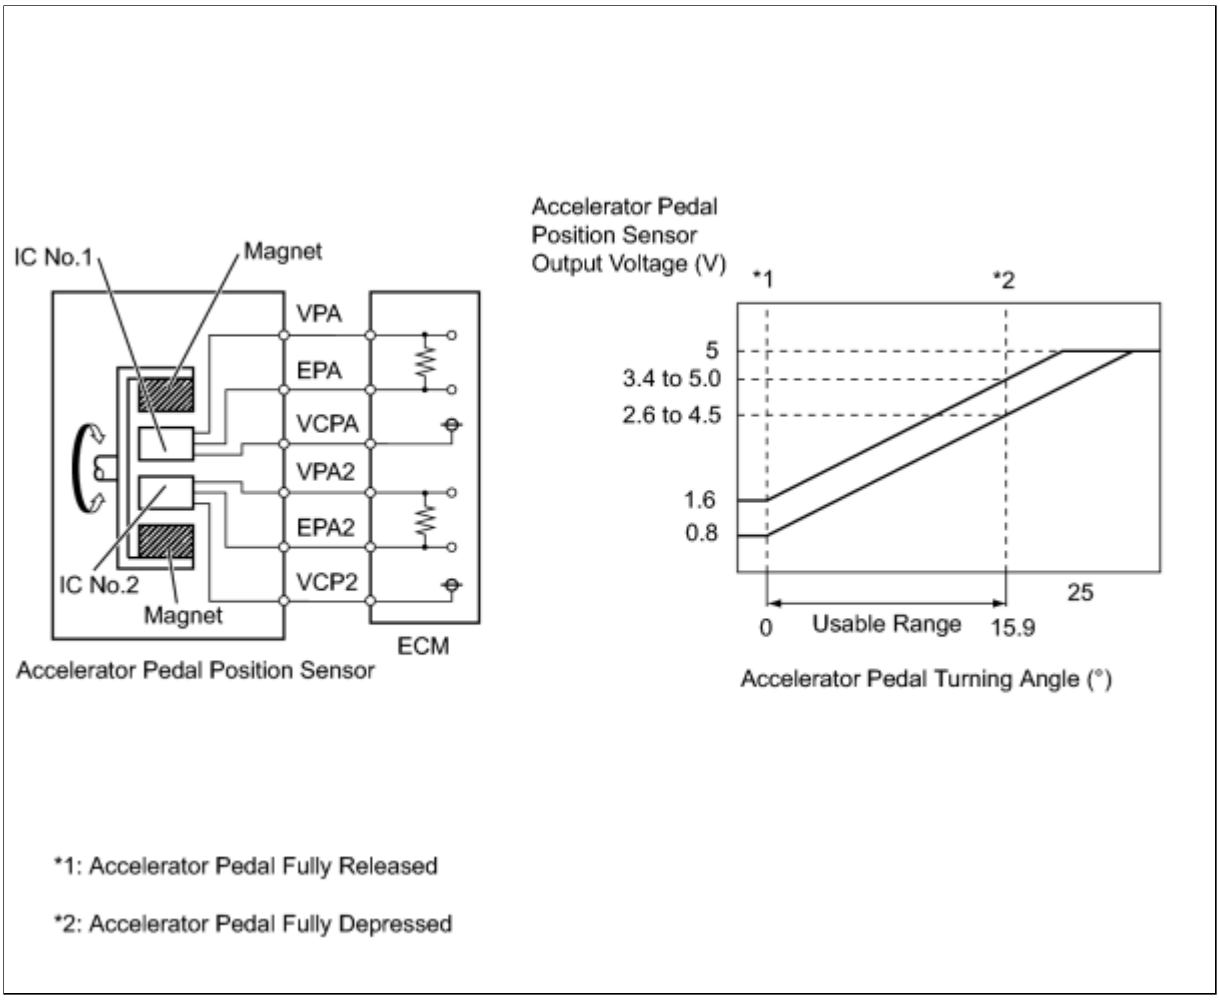
DTC	**P2127**	**Throttle / Pedal Position Sensor / Switch "E" Circuit Low Input**

DTC	**P2128**	**Throttle / Pedal Position Sensor / Switch "E" Circuit High Input**

DTC	**P2138**	**Throttle / Pedal Position Sensor / Switch "D" / "E" Voltage Correlation**

DESCRIPTION



HINT:

- This electronic throttle control system does not use a throttle cable.
- These DTCs relate to the accelerator pedal position sensor.

The accelerator pedal position sensor is mounted on the accelerator pedal bracket and has 2 sensor circuits: VPA (main) and VPA2 (sub). This sensor is a non-contact type and uses Hall-effect elements in order to yield accurate signals even in extreme conditions. The voltage from this sensor, which is applied to terminals VPA and VPA2 of the ECM, varies between 0.5 V and 4.5 V in proportion to the operating angle of the accelerator pedal (throttle valve). A signal from VPA indicates the actual accelerator pedal opening angle (throttle valve opening angle) and is used for engine control. A signal from VPA2 conveys the status of the VPA circuit and is used to check the APP sensor itself.

The ECM monitors the actual accelerator pedal opening angle (throttle valve opening angle) through the

signals from VPA and VPA2, and controls the throttle actuator according to these signals.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2120	VPA fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor • ECM
P2122	VPA 0.4 V or less for 0.5 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Accelerator pedal position sensor • Open in VCP1 circuit • Open or ground short in VPA circuit • ECM
P2123	VPA 4.8 V or more for 2.0 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
		• Open in EPA circuit • ECM
P2125	VPA2 fluctuates rapidly beyond upper and lower malfunction thresholds for 0.5 seconds or more (1 trip detection logic)	• Accelerator pedal position sensor • ECM
P2127	VPA2 1.2 V or less for 0.5 seconds or more when accelerator pedal depressed (1 trip detection logic)	• Accelerator pedal position sensor • Open in VCP2 circuit • Open or ground short in VPA2 circuit • ECM
P2128	Conditions (a) and (b) continue for 2.0 seconds or more (1 trip detection logic): (a) VPA2 4.8 V or more (b) VPA between 0.4 V and 3.45 V	• Accelerator pedal position sensor • Open in EPA2 circuit • ECM
P2138	Condition (a) or (b) continues for 2.0 seconds or more (1 trip detection logic): (a) Difference between VPA and VPA2 0.02 V or less (b) VPA 0.4 V or less and VPA2 1.2 V or less	• Short between VPA and VPA2 circuits • Accelerator pedal position sensor • ECM

HINT:

When any of these DTCs are set, check the APP sensor voltage by entering the following menus: Powertrain / Engine and ECT / Data List / ETCS / Accel Sensor Out No. 1 and Accel Sensor Out No. 2.

TROUBLE AREA	ACCEL SENSOR OUT NO. 1 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO. 2 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO. 1 WHEN ACCELERATOR PEDAL DEPRESSED	ACCEL SENSOR OUT NO. 2 WHEN ACCELERATOR PEDAL DEPRESSED
VCP circuit open	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V	0 to 0.2 V

TROUBLE AREA	ACCEL SENSOR OUT NO. 1 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO. 2 WHEN ACCELERATOR PEDAL RELEASED	ACCEL SENSOR OUT NO. 1 WHEN ACCELERATOR PEDAL DEPRESSED	ACCEL SENSOR OUT NO. 2 WHEN ACCELERATOR PEDAL DEPRESSED
Open or ground short in VPA circuit	0 to 0.2 V	1.2 to 2.0 V	0 to 0.2 V	3.4 to 5.0 V
Open or ground short in VPA2 circuit	0.5 to 1.1 V	0 to 0.2 V	2.6 to 4.5 V	0 to 0.2 V
EPA circuit open	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V	4.5 to 5.0 V
Normal condition	0.5 to 1.1 V	1.2 to 2.0 V	2.6 to 4.5 V	3.4 to 5.0 V

HINT:

Accelerator pedal positions are expressed as voltages.

MONITOR DESCRIPTION

When either the output voltage of VPA or VPA2 deviates from the standard range, or the difference between the output voltages of the 2 sensor circuits is less than the threshold, the ECM determines that there is a malfunction in the APP sensor. The ECM then illuminates the MIL and sets a DTC.

Example:

When the output voltage of VPA drops below 0.4 V for more than 0.5 seconds when the accelerator pedal is fully depressed, DTC P2122 is set.

If the malfunction is not repaired successfully, a DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2120: Accelerator pedal position sensor 1 range check (fluctuating) P2122: Accelerator pedal position sensor 1 range check (low voltage) P2123: Accelerator pedal position sensor 1 range check (high voltage) P2125: Accelerator pedal position sensor 2 range check (fluctuating) P2127: Accelerator pedal position sensor 2 range check (low voltage) P2128: Accelerator pedal position sensor 2 range check (high

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Fully depress and release the accelerator pedal [B].
7. Check that 5 seconds or more have elapsed since the DTCs were cleared.
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P2120, P2122, P2123, P2125, P2127, P2128 or P2138.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

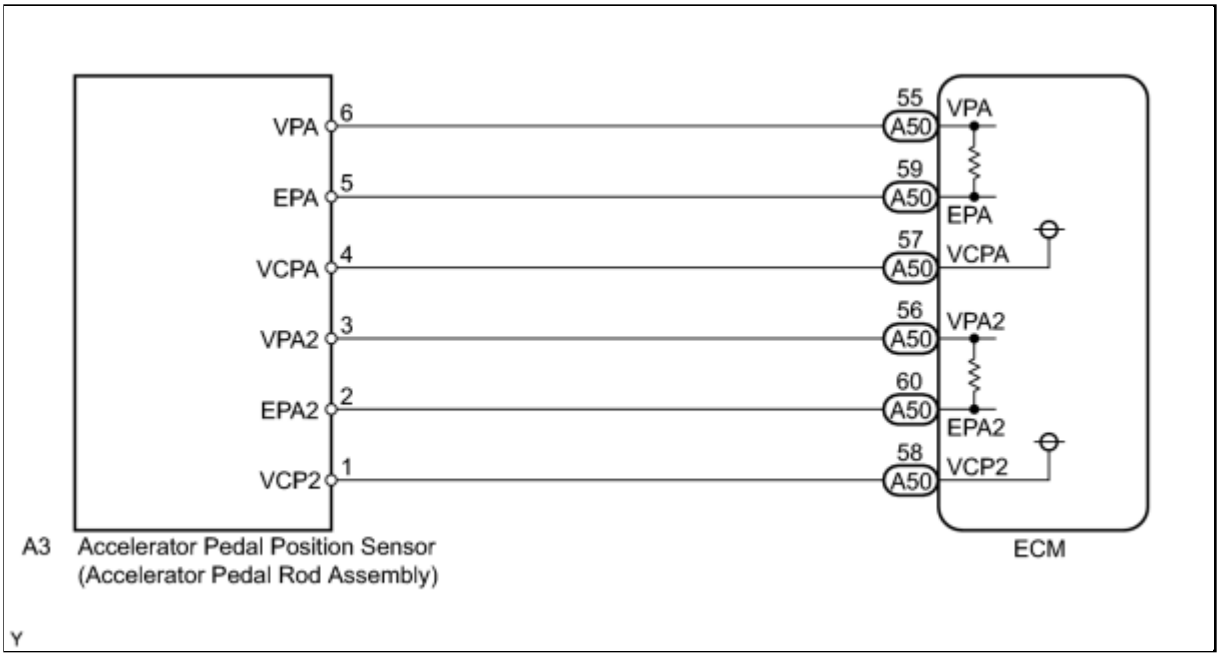
11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:



- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When any of DTCs P2120, P2121, P2122, P2123, P2125, P2127, P2128 and P2138 are set, the ECM enters fail-safe mode. If either of the 2 sensor circuits malfunctions, the ECM uses the remaining circuit to calculate the accelerator pedal position to allow the vehicle to continue driving. If both of the circuits malfunction, the ECM regards the accelerator pedal as being released. As a result, the throttle valve is closed and the engine idles.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is turned off.

WIRING DIAGRAM

INSPECTION PROCEDURE

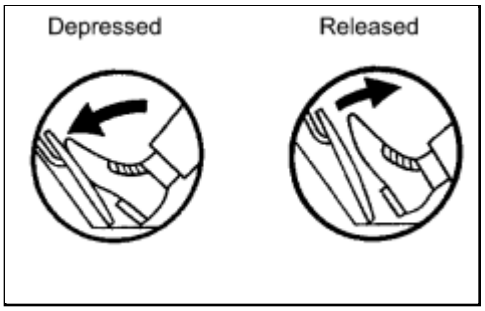
HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**READ VALUE USING TECHSTREAM (ACCELERATOR POSITION SENSOR)**

(a) Connect Techstream to the DLC3.



(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / ETCS / Accel Sensor Out No. 1 and Accel Sensor Out No. 2.

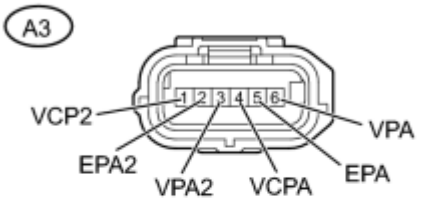
(e) Read the value displayed on the Techstream.

Standard Voltage:

ACCELERATOR PEDAL OPERATION	ACCEL SENSOR OUT NO. 1	ACCEL SENSOR OUT NO. 2
Released	0.5 to 1.1 V	1.2 to 2.0 V
Depressed	2.6 to 4.5 V	3.4 to 5.0 V

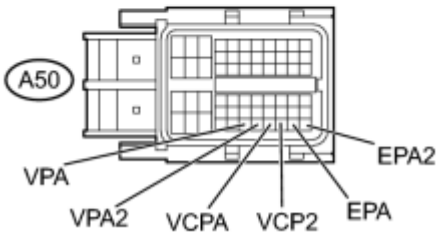
NG ▶ **CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**



2.	**CHECK HARNESS AND CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**

(a) Disconnect the accelerator pedal position sensor connector.



(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Accelerator Pedal Position Sensor)

Front view of wire harness connector:
(to ECM)

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A3-6 (VPA) - A50-55 (VPA)	Always	Below 1 Ω
A3-5 (EPA) - A50-59 (EPA)	Always	Below 1 Ω
A3-4 (VCPA) - A50-57 (VCPA)	Always	Below 1 Ω
A3-3 (VPA2) - A50-56 (VPA2)	Always	Below 1 Ω
A3-2 (EPA2) - A50-60 (EPA2)	Always	Below 1 Ω
A3-1 (VCP2) - A50-58 (VCP2)	Always	Below 1 Ω

Standard Resistance (Check for Short):

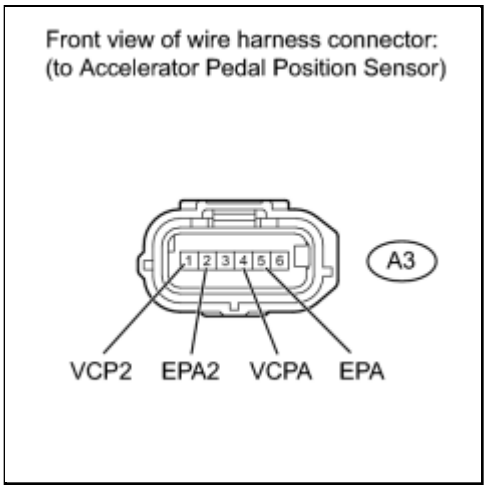
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A3-6 (VPA) or A50-55 (VPA) - Body ground	Always	10 kΩ or higher
A3-5 (EPA) or A50-59 (EPA) - Body ground	Always	10 kΩ or higher
A3-4 (VCPA) or A50-57 (VCPA) - Body ground	Always	10 kΩ or higher
A3-3 (VPA2) or A50-56 (VPA2) - Body ground	Always	10 kΩ or higher
A3-2 (EPA2) or A50-60 (EPA2) - Body ground	Always	10 kΩ or higher
A3-1 (VCP2) or A50-58 (VCP2) - Body ground	Always	10 kΩ or higher

(d) Reconnect the accelerator pedal position sensor

connector.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ACCELERATOR PEDAL POSITION SENSOR - ECM)**



OK ▼

3.	**CHECK ECM (VCPA AND VCP2 VOLTAGE)**

(a) Disconnect the accelerator pedal position sensor connector.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
A3-4 (VCPA) - A3-5 (EPA)	Ignition switch ON	4.5 to 5.5 V
A3-1 (VCP2) - A3-2 (EPA2)	Ignition switch ON	4.5 to 5.5 V

(d) Reconnect the accelerator pedal position sensor connector.

NG ▶ **REPLACE ECM**

OK ▼

4.	**REPLACE ACCELERATOR PEDAL ROD ASSEMBLY**

(a) Replace the accelerator pedal rod assembly INFO .

NEXT

5.	**CHECK WHETHER DTC OUTPUT RECURS (ACCELERATOR PEDAL POSITION SENSOR DTCS)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Start the engine.

(f) Allow the engine to idle for 15 seconds or more.

(g) Fully depress and release the accelerator pedal several times quickly.

(h) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(i) Read DTCs.

Result:

RESULT	PROCEED TO
P2120, P2122, P2123, P2125, P2127, P2128, and/or P2138	A
No output	B

B ▶ **END**

A ▶ **REPLACE ECM**

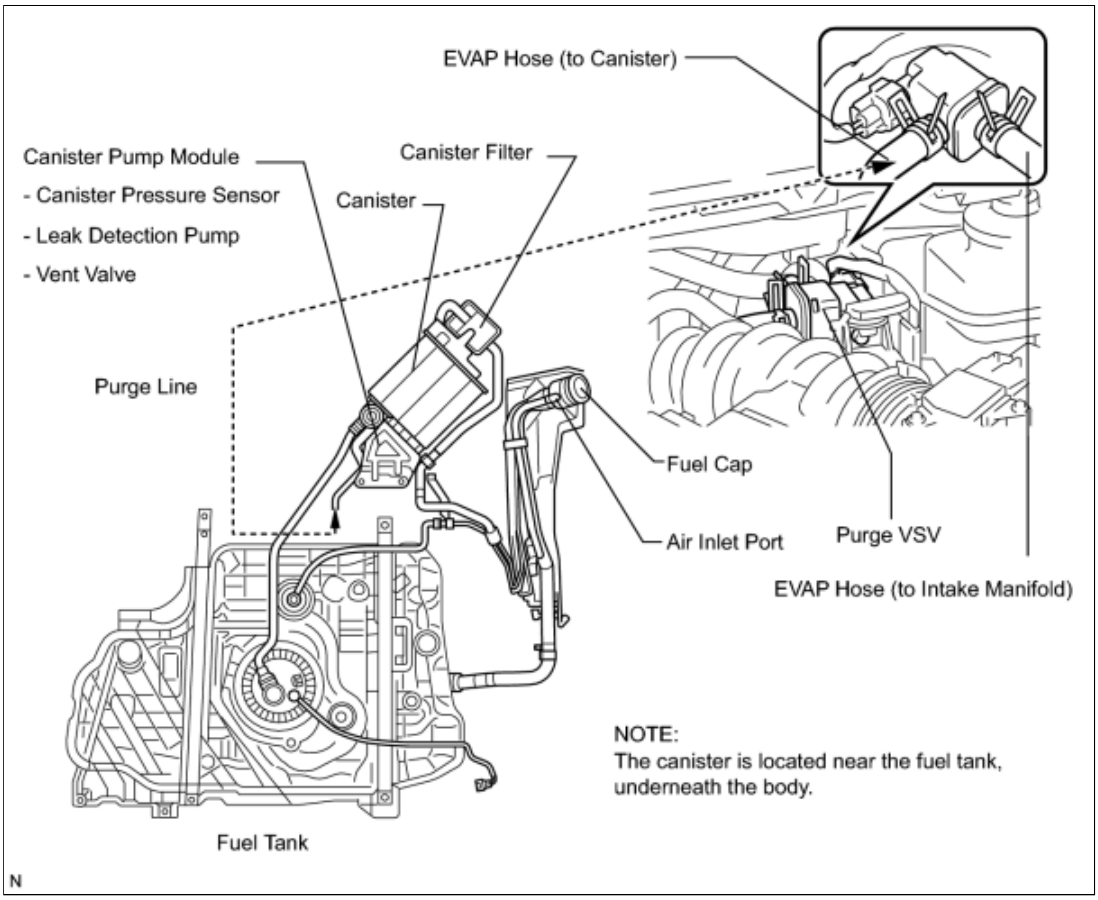
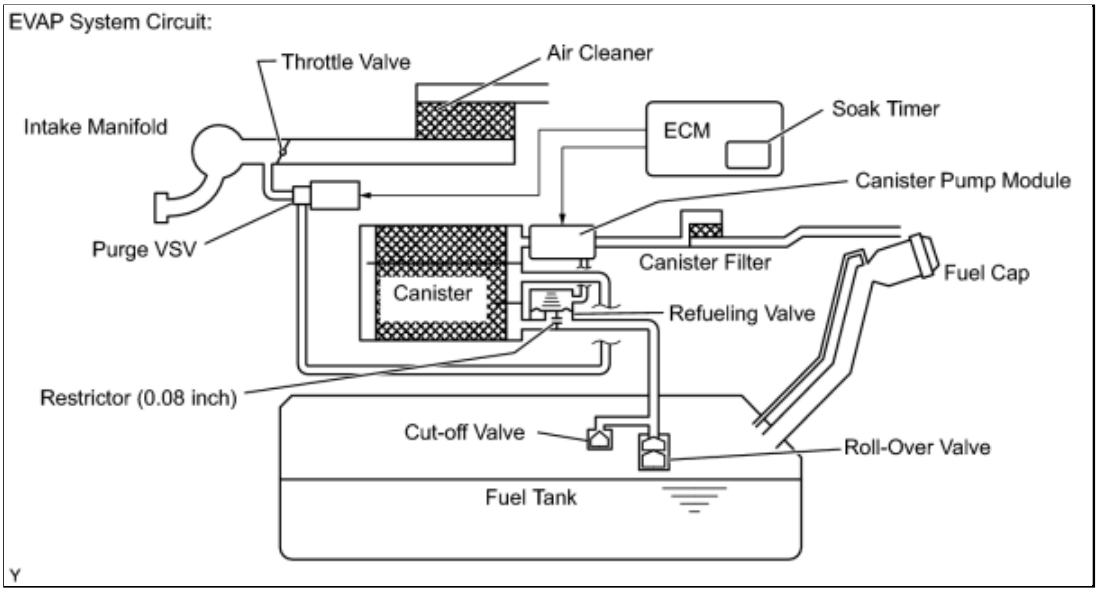
Y

NOTICE:



If the reference pressure difference between the first and second checks is greater than the specification, all the DTCs relating to the reference pressure (P043E, P043F, P2401, P2402 and P2419) are stored.



DESCRIPTION

HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

NOTICE:

To check for leaks in the EVAP system, disconnect the air inlet vent hose and apply pressure from the atmospheric side of the canister.

While the engine is running, if a predetermined condition (closed-loop, etc.) is met, the purge VSV is opened by the ECM and stored fuel vapors in the canister are purged into the intake manifold. The ECM changes the duty cycle ratio of the purge VSV to control purge flow volume.

The purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that the purge flow is maintained when the negative pressure (vacuum) is applied to the canister.

The following two monitors run to confirm the appropriate EVAP system operation.

1. Key-off monitor

This monitor checks for EVAP (evaporative emission) system leaks and canister pump module malfunctions. The monitor starts 5 hours* after the ignition switch is turned off. At least 5 hours are required for the fuel to cool down to stabilize the EVAP pressure, thus making the EVAP system monitor more accurate.

The leak detection pump creates negative pressure (vacuum) in the EVAP system and the pressure is measured. Finally, the ECM monitors for leaks from the EVAP system, and malfunctions in both the canister pump module and purge VSV, based on the EVAP pressure.

HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned off, the monitor check starts 2.5 hours later.**

2. Purge flow monitor

The purge flow monitor consists of 2 monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor

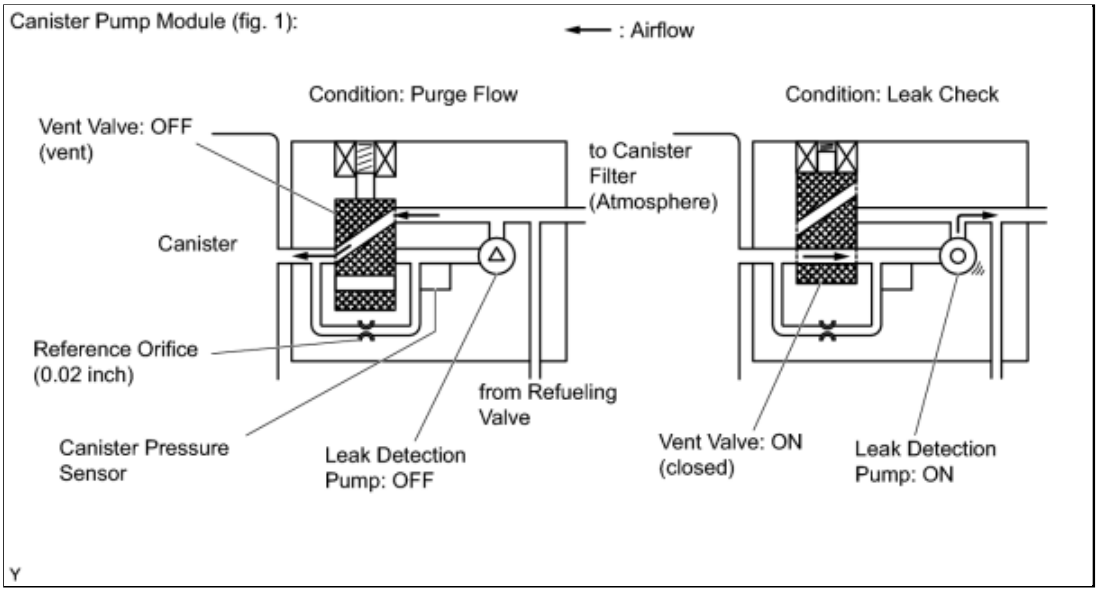
  While the engine is running and the purge VSV (Vacuum Switching Valve) is ON (open), the ECM monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor

  The vent valve is turned ON (closed) and the EVAP pressure is measured. If the variation in the pressure is less than 0.4 kPa-g (3.0 mmHg-g), the ECM interprets this as the purge VSV being stuck closed, and illuminates the MIL and sets DTC P0441 (2 trip detection logic).

Atmospheric pressure check:

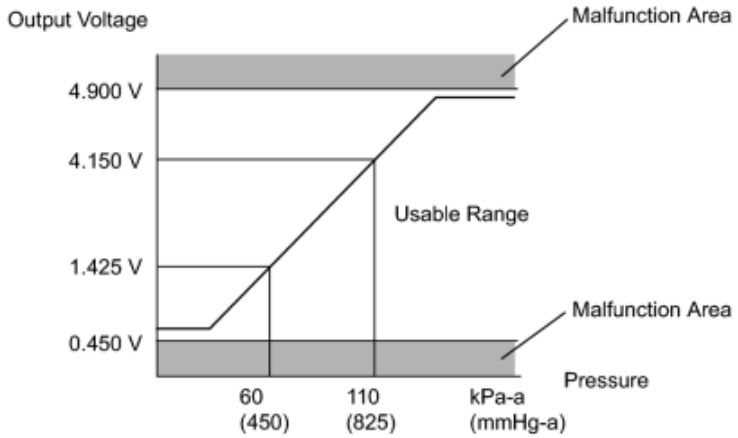
In order to ensure reliable malfunction detection, the variation between the atmospheric pressures, before and after the purge flow monitor is performed, is measured by the ECM.

EVAP Purge Flow:



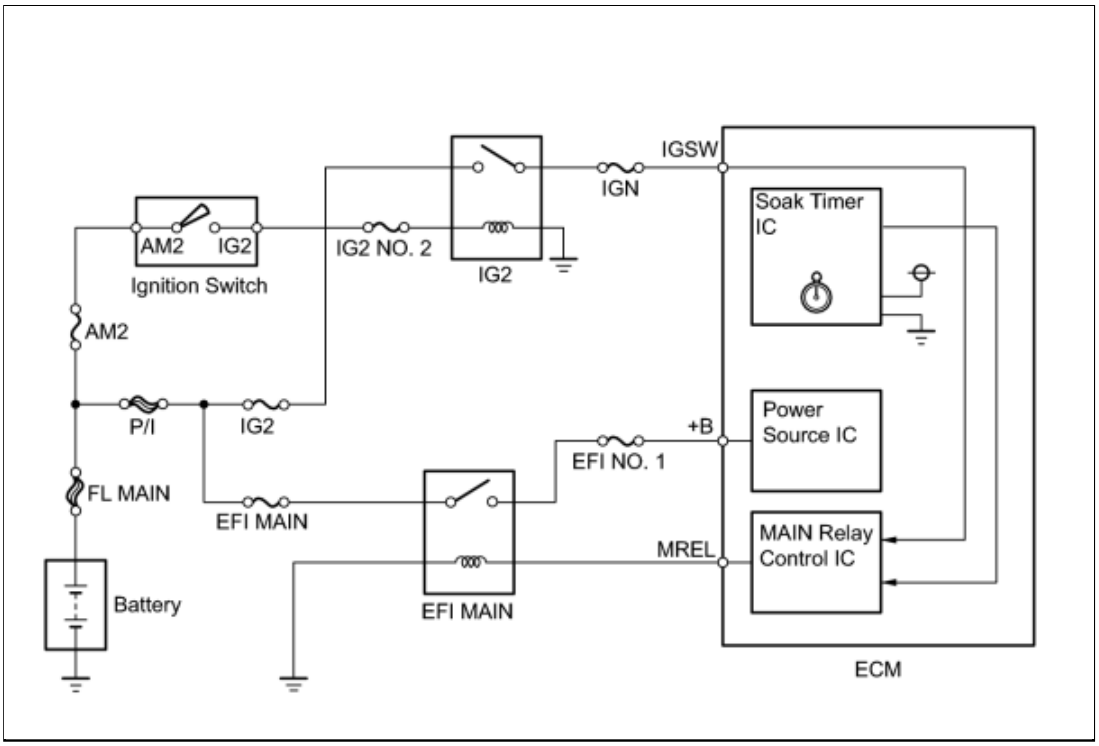
Y

COMPONENT	OPERATION
Canister	Contains activated charcoal to absorb evaporative emissions generated in fuel tank.
Cut-off valve	Located in fuel tank. Valve floats and closes when fuel tank 100% full.
Purge VSV (Vacuum Switching Valve)	Opens or closes line between canister and intake manifold. ECM uses purge VSV to control EVAP purge flow. In order to discharge EVAP absorbed by canister to intake manifold, ECM opens purge VSV. EVAP discharge volume to intake manifold controlled by purge VSV duty cycle ratio (current-carrying time) (Open: ON; Closed: OFF).
Refueling valve	Controls EVAP pressure from fuel tank to canister. Valve consists of diaphragm, spring and restrictor (diameter: 0.08 inch). When fuel vapor and pressure inside fuel tank increase, valve opens. While EVAP purged, valve closes and restrictor prevents large amount of vacuum from affecting pressure in fuel tank. Valve opened while refueling.
Roll-over valve	Located in fuel tank. Valve closed by its own weight when vehicle overturns to prevent fuel from spilling out.
Soak timer	Built into ECM. To ensure accurate EVAP monitor, measures 5 hours (+/-15 min.) after ignition switch turned to OFF. This allows fuel to cool down, stabilizing EVAP pressure. When approximately 5 hours elapsed, ECM activates (refer to fig. 3).
Canister pump module	Consists of (a) to (d) below. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system closed. When ECM turns valve OFF, EVAP system vented. Negative pressure (vacuum) created in EVAP system to check for EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating leak detection pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates pressure as voltages. ECM supplies regulated 5 V to canister pressure sensor, and uses feedback from sensor to monitor EVAP system pressure (refer to fig. 2).
(c) Leak detection pump	Creates negative pressure (vacuum) in EVAP system for leak check.



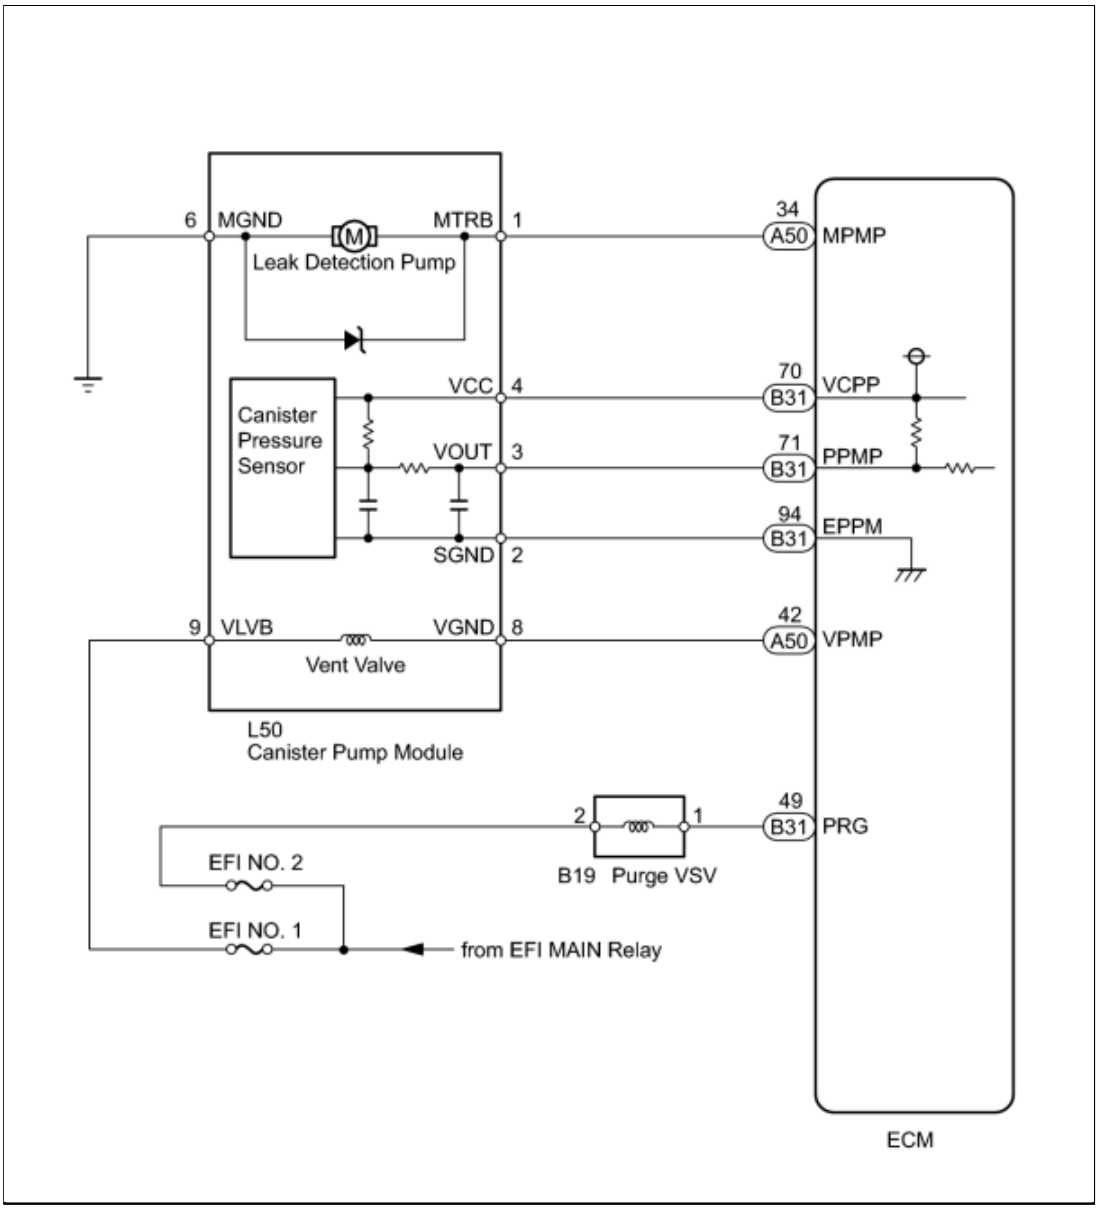
COMPONENT	OPERATION
(d) Reference orifice	Has opening with 0.02 inch diameter. Vacuum produced through orifice by closing purge VSV, turning off vent valve and operating leak detection pump, to monitor reference pressure. Reference pressure indicates small leak of EVAP.

Canister Pump Module (fig. 1):



Y

Canister Pressure Sensor Specification (fig. 2):



HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

The Techstream is required to conduct the following diagnostic troubleshooting procedure.

HINT:

- Using the Techstream to monitor results enables the EVAP (evaporative emission) system to be confirmed.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CONFIRM DTC**

(a) Turn the ignition switch off and wait for 10 seconds.

(b) Turn the ignition switch to ON.

(c) Turn the ignition switch off and wait for 10 seconds.

(d) Connect the Techstream to the DLC3.

(e) Turn the ignition switch to ON.

(f) Turn the Techstream on.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Confirm DTCs and freeze frame data.

If any EVAP system DTCs are set, the malfunctioning area can be determined using the table below.

DTC / Malfunctioning Area	P043E P043F	P0441	P0451	P0452	P0453	P0455	P0456	P2401 P2402	P2419	P2420

2.	**PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

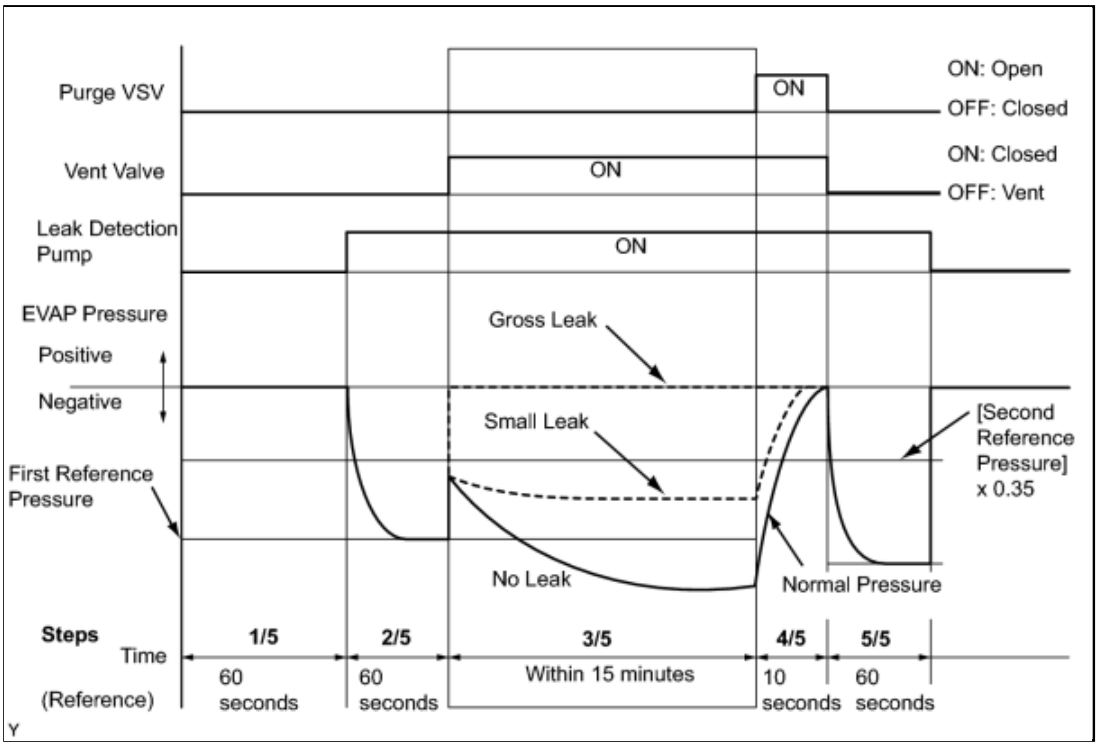
NOTICE:

- The Evaporative System Check (Automatic Mode) consists of five steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off

valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Clear DTCs INFO .

(b) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Automatic Mode.



(c) After the Evaporative System Check is completed, check for pending DTCs by entering the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.

HINT:

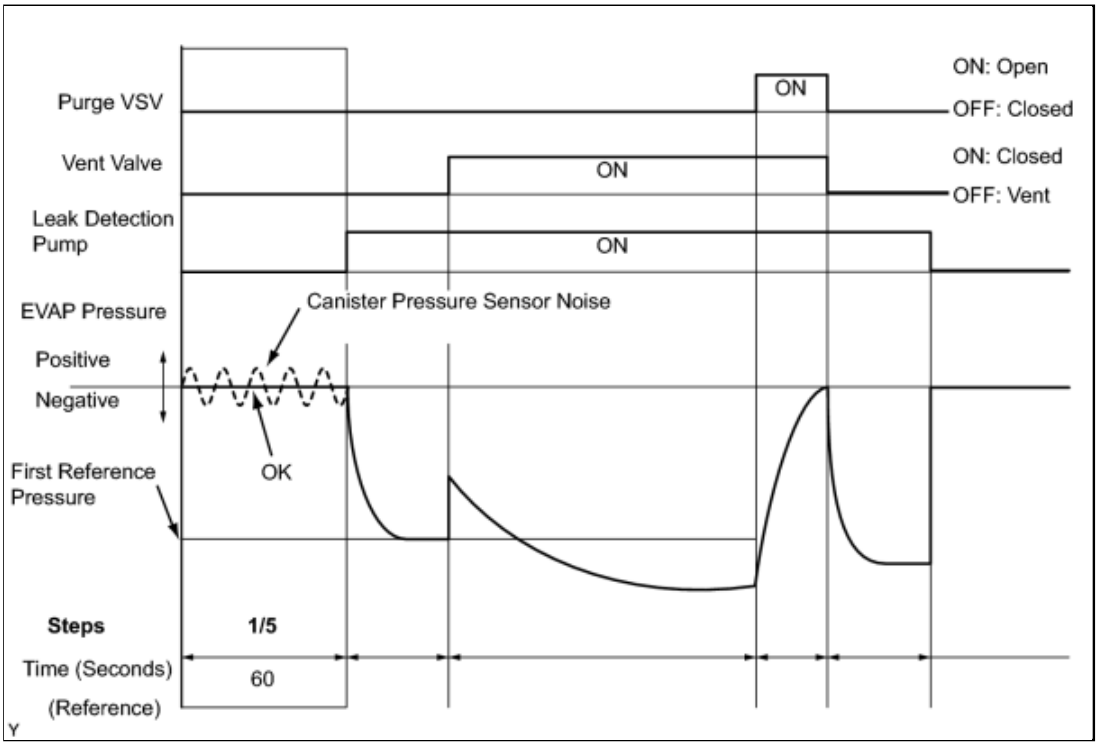
If no pending DTCs are displayed, perform the MONITOR CONFIRMATION (see "Diagnostic Help" menu). After this confirmation, check for pending DTCs. If no DTCs are displayed, the EVAP system is normal.

NEXT

3.	**PERFORM EVAPORATIVE SYSTEM CHECK (MANUAL MODE)**

NOTICE:

- In the Evaporative System Check (Manual Mode), perform the series of 5 Evaporative System Check steps manually using the Techstream.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results



become inaccurate. When performing the Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Clear the DTCs INFO.

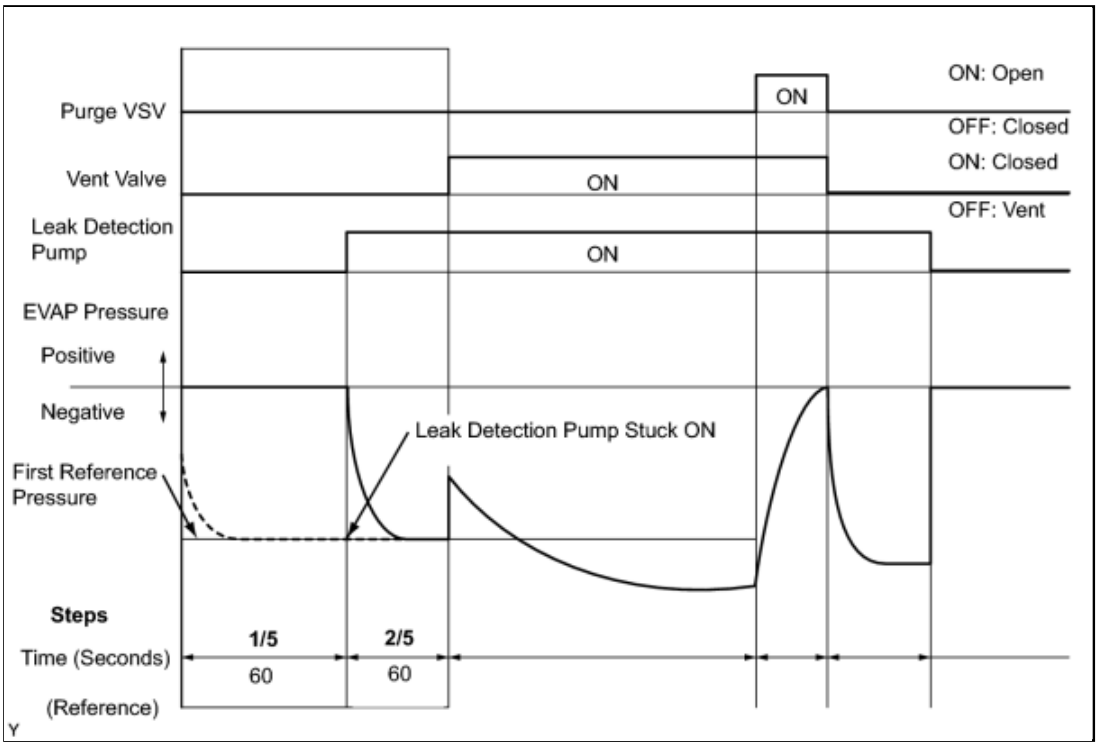
(b) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Manual Mode.

NEXT

4.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 1/5)**

(a) Check the EVAP pressure in step 1/5.

Result:



DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure	Not yet determined	A
P0451	EVAP pressure fluctuates by +/- 0.3 kPa-g (+/- 2.25 mmHg-g) or more	Canister pressure sensor noise	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B ▶ **REPLACE CANISTER ASSEMBLY**

A

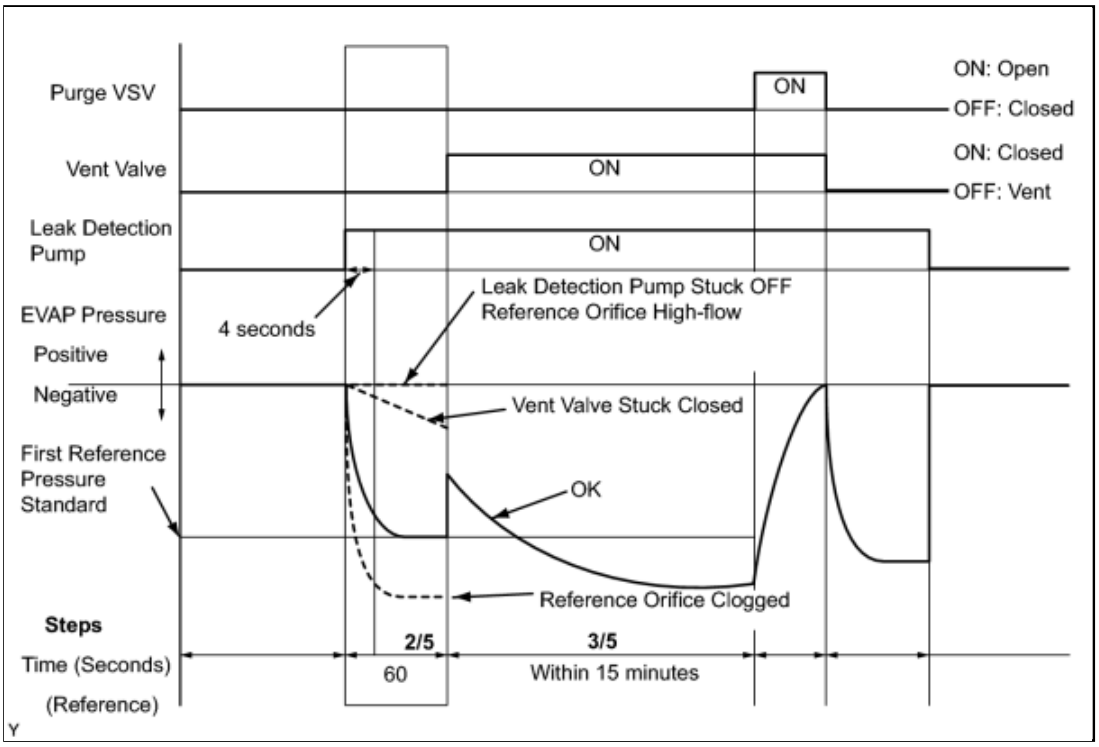
5.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 1/5 TO 2/5)**

(a) Check the EVAP pressure in steps 1/5 and 2/5.

Result:

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	Virtually no variation in EVAP pressure during step 1/5. Then decreases to reference pressure	Not yet determined	A
P2402	Small difference between EVAP pressures during steps 1/5 and 2/5	Leak detection pump stuck ON	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.



HINT:

The first reference pressure is the value determined in step 2/5.

B **PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)**

A

6.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 2/5)

HINT:

Make a note of the pressures checked in steps (a) and (b) below.

(a) Check the EVAP pressure 4 seconds after the leak detection pump is activated*.

*: The leak detection pump begins to operate as step 1/5 finishes and step 2/5 starts.

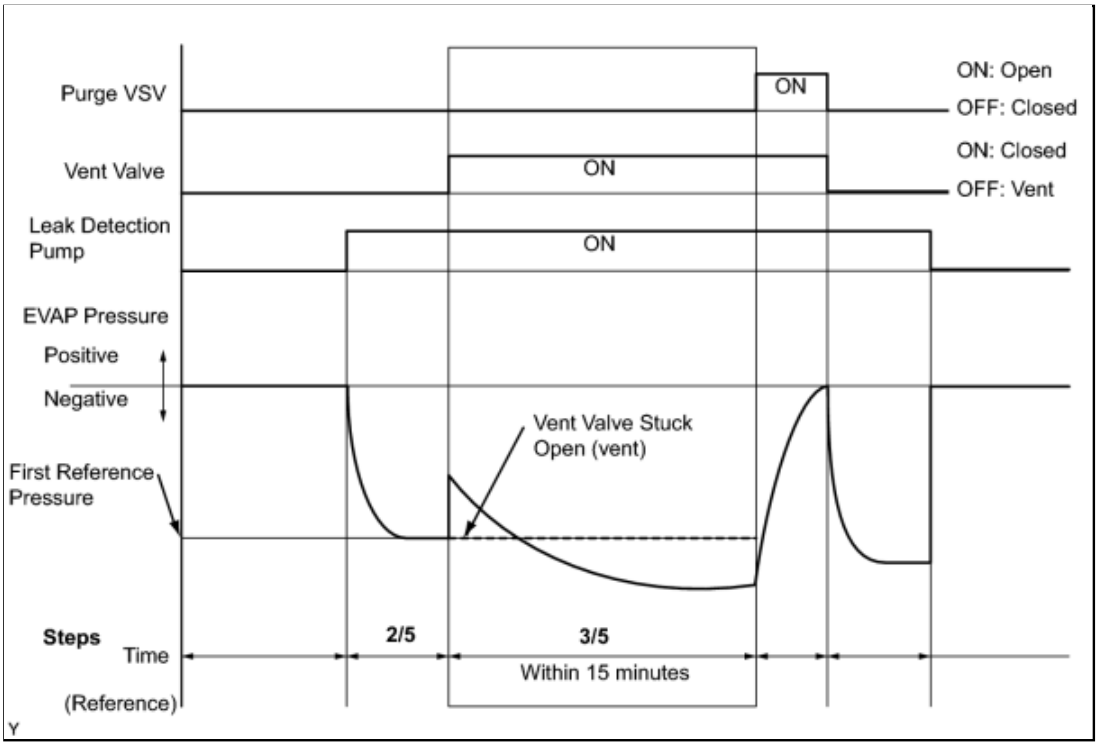
(b) Check the EVAP pressure again when it has stabilized. This pressure is the reference pressure.

Result:

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure in step (b) between -4.85 kPa-g and -1.057 kPa-g (-36.4 mmHg-g and -7.93 mmHg-g)	Not yet determined	A
P043F and P2401	EVAP pressure in step (b) -1.057 kPa-g (-7.93 mmHg-g) or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B
P043E	EVAP pressure in step (b) below -4.85 kPa-g (-36.4 mmHg-g)	Reference orifice clogged	C

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P2419	EVAP pressure in step (a) more than -1.057 kPa-g (-7.93 mmHg-g)	Vent valve stuck closed	D

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.



D ▶ **INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)**

C ▶ **REPLACE CANISTER ASSEMBLY**

B ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)**

A ▼

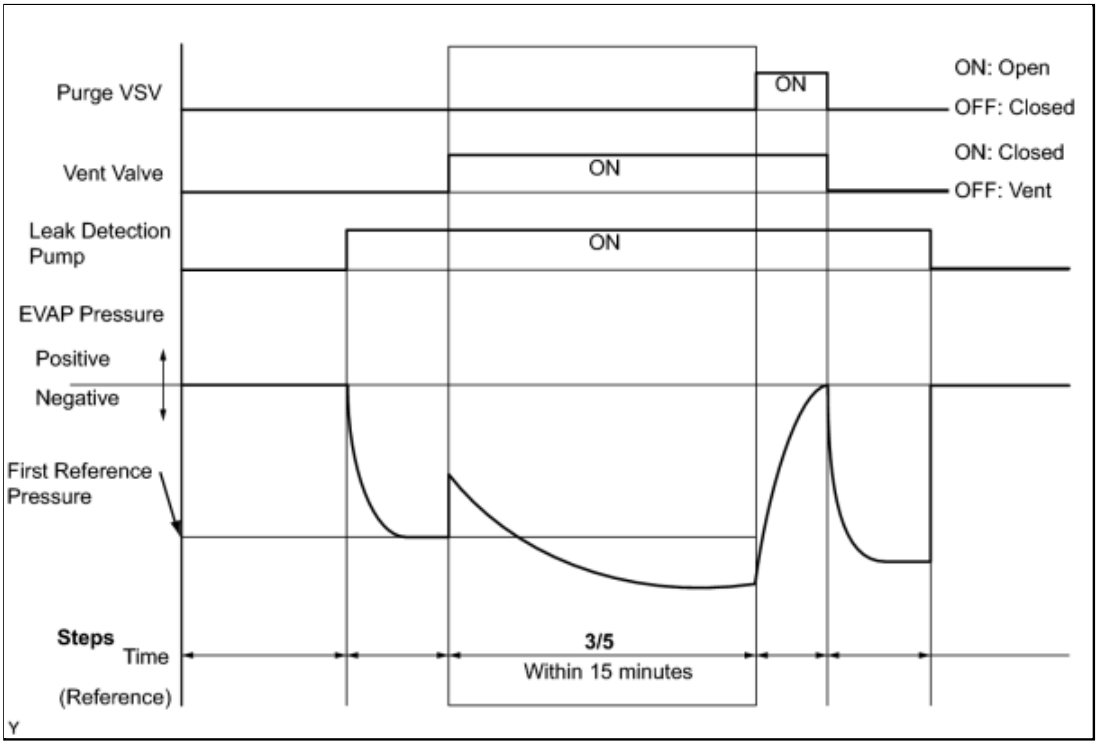
7.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 2/5 TO 3/5)

(a) Check the EVAP pressure increase in step 3/5.

Result:

DTCS*	RESULT	SUSPECTED TROUBLE	PROCEED

		AREA	TO
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 2/5 to step 3/5	Not yet determined	A
P2420	No variation in EVAP pressure despite proceeding from step 2/5 to step 3/5	Vent valve stuck open (vent)	B
P0451	No variation in EVAP pressure during steps 1/5 through 3/5	Canister pressure sensor output value stuck	C



*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

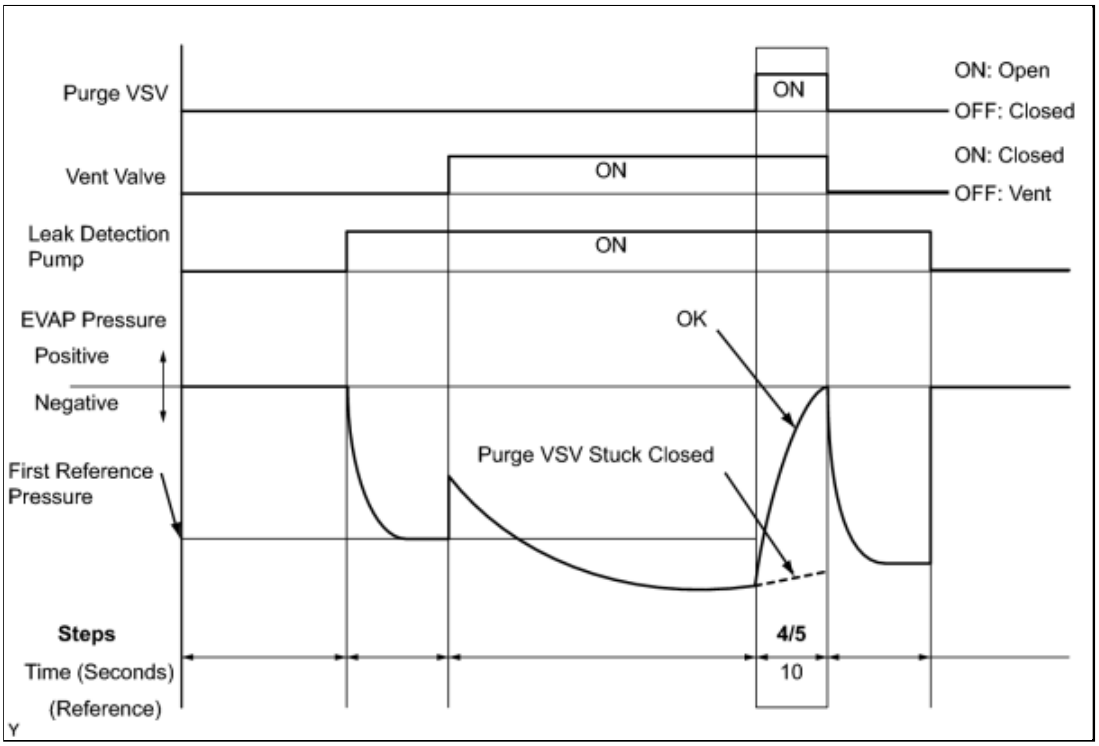
C ▶ **REPLACE CANISTER ASSEMBLY**

B ▶ **INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)**

A ▼

8.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)

(a) Wait until the EVAP pressure change is less than 0.1 kPa-g (0.75 mmHg-g) for 30 seconds.



(b) Measure the EVAP pressure and record it.

HINT:

A few minutes are required for the EVAP pressure to become saturated. When there is little fuel in the fuel tank, it takes up to 15 minutes.

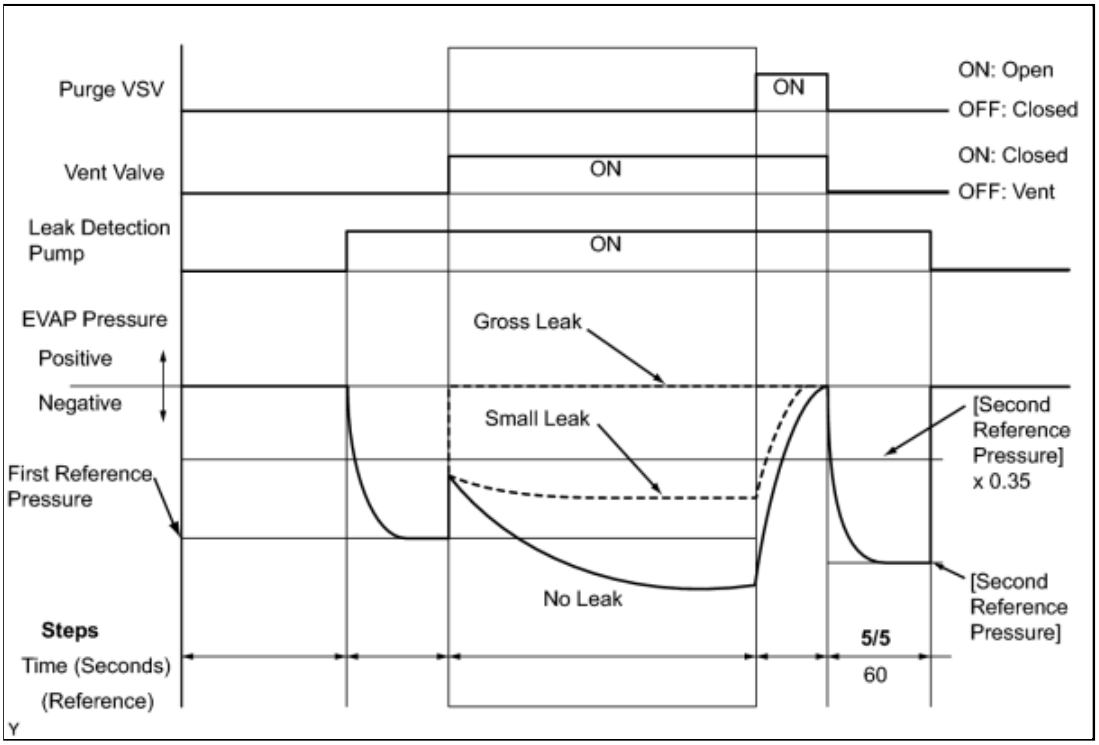
NEXT

9.	**PERFORM EVAPORATIVE SYSTEM CHECK (STEP 4/5)**

(a) Check the EVAP pressure in step 4/5.

Result:

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Not yet determined	A
P0441	EVAP pressure increases by 0.3 kPa-g (2.25 mmHg-g) or more within 10 seconds of proceeding from step 3/5 to step 4/5	Problems in EVAP hose between purge VSV and intake manifold	B
P0441	Variation in EVAP pressure less than 0.3 kPa-g (2.25 mmHg-g) for 10 seconds, after proceeding from step 3/5 to step 4/5	Purge VSV stuck closed	C



*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

C ▶ PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)

B ▶ CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)

A ▼

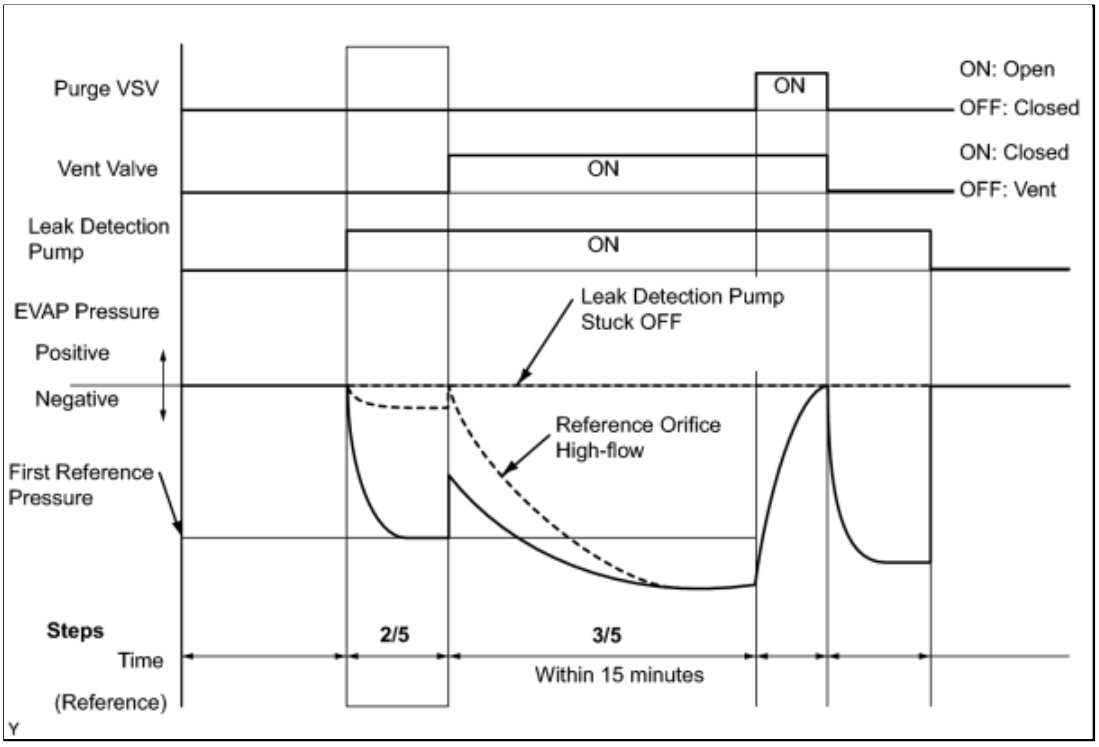
10.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 5/5)

(a) Check the EVAP pressure in step 5/5.

(b) Compare the EVAP pressure in step 3/5 and the second reference pressure (step 5/5).

Result:

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
-	EVAP pressure (step 3/5) lower than second reference pressure (step 5/5)	Not yet determined (no leak from EVAP system)	A
P0441 and P0455	EVAP pressure (step 3/5) higher than [second reference pressure (step 5/5) x 0.35]	• Purge VSV stuck open • EVAP gross leak	B



DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P0456	EVAP pressure (step 3/5) higher than second reference pressure (step 5/5)	EVAP small leak	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC" procedures above.

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)**

A ▶ **REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS**

11.	PERFORM EVAPORATIVE SYSTEM CHECK (STEP 3/5)

(a) Check the EVAP pressure in step 3/5.

Result:

DTCS*	RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
P043F	EVAP pressure less than [reference pressure] measured at 2/5	Reference orifice high-flow	A
P2401	EVAP pressure almost same as [reference pressure] measured at 2/5	Leak detection pump stuck OFF	B

*: These DTCs are already present in the ECM when the vehicle arrives and are confirmed in the "CONFIRM DTC"

procedures above.

HINT:

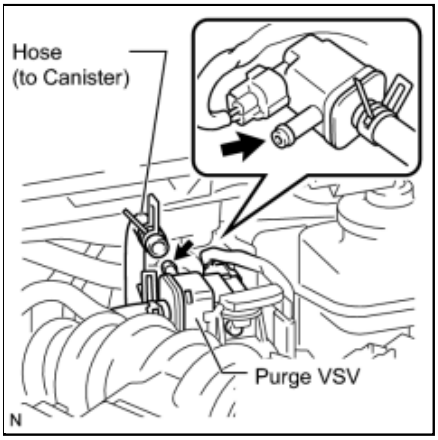
The first reference pressure is the value determined in step 2/5.

B ▶ **PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)**

A ▶ **REPLACE CANISTER ASSEMBLY**

12.	PERFORM ACTIVE TEST USING TECHSTREAM (PURGE VSV)

(a) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for EVAP Control.



(b) Disconnect the hose (connected to the canister) from the purge VSV.

(c) Start the engine.

(d) Using the Techstream, turn off the purge VSV (Activate the VSV for EVAP Control: OFF).

(e) Use your finger to confirm that the purge VSV has no suction.

(f) Using the Techstream, turn on the purge VSV (Activate the VSV for EVAP Control: ON).

(g) Use your finger to confirm that the purge VSV has suction.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
No suction when purge VSV turned OFF, and suction applied when turned ON	Purge VSV normal	A
Suction applied when purge VSV turned OFF	Purge VSV stuck open	B
No suction when purge VSV turned ON	• Purge VSV stuck closed • Problems with EVAP hose between purge VSV and intake manifold	C

(h) Reconnect the hose.

C ▶ **CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)**

B ▶ **INSPECT PURGE VSV**

A

13.	CHECK FUEL CAP ASSEMBLY

(a) Check that the fuel cap is correctly installed and confirm the fuel cap meets OEM specifications.

(b) Tighten the fuel cap until a few click sounds are heard.

HINT:

If an EVAP tester is available, check the fuel cap using the Techstream.

1. Remove the fuel cap and install it onto a fuel cap adapter.
2. Connect an EVAP tester pump hose to the adapter, and pressurize the cap to 3.2 to 3.7 kPa (24 to 28 mmHg) using an EVAP tester pump.
3. Seal the adapter and wait for 2 minutes.
4. Check the pressure. If the pressure is 2 kPa (15 mmHg) or more, the fuel cap is normal.

Result:

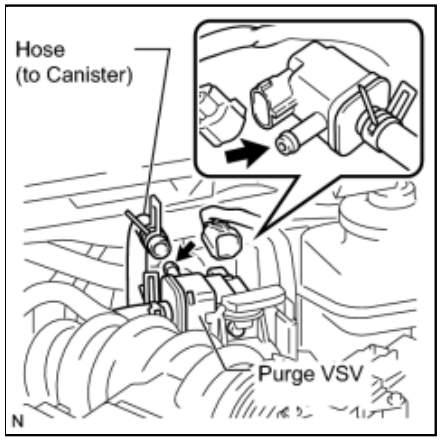
RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Fuel cap correctly installed	-	A
Fuel cap loose	• Fuel cap improperly installed • Defective fuel cap • Fuel cap does not meet OEM specifications	B
Defective fuel cap	-	B
No fuel cap	-	C

C ▶ **REPLACE FUEL TANK CAP**

B ▶ **CORRECTLY REINSTALL OR REPLACE FUEL TANK CAP**

A ▶ **LOCATE EVAP LEAK PART**

14.	INSPECT PURGE VSV



(a) Turn the ignition switch off.

(b) Disconnect the purge VSV connector.

(c) Disconnect the hose (connected to the canister) from the purge VSV.

(d) Start the engine.

(e) Use your finger to confirm that the purge VSV has no suction.

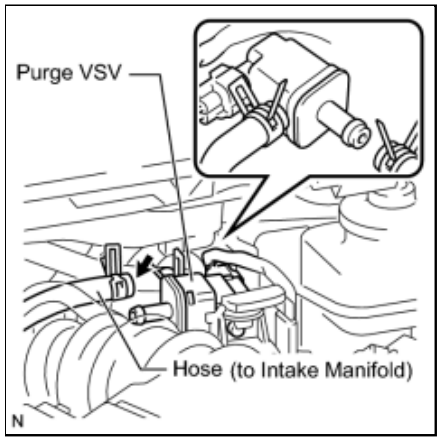
Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
No suction	ECM	A
Suction applied	Purge VSV	B

(f) Reconnect the purge VSV connector.

(g) Reconnect the hose.

B ▶ **REPLACE PURGE VSV**



A ▶ **REPLACE ECM**

15.	CHECK EVAP HOSE (PURGE VSV - INTAKE MANIFOLD)

(a) Disconnect the hose (connected to the intake manifold) from the purge VSV.

(b) Start the engine.

(c) Use your finger to confirm that the hose has suction.

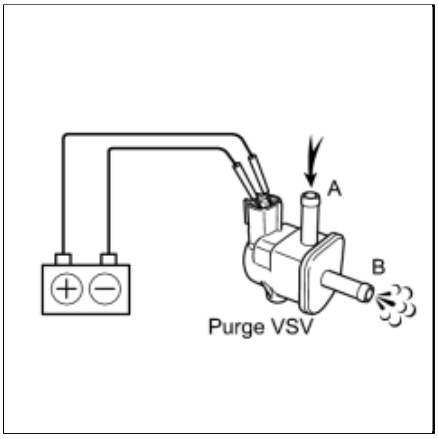
Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Suction applied	EVAP hose between purge VSV and intake manifold normal	A
No suction	• Intake manifold port • EVAP hose between purge VSV and intake manifold	B

(d) Reconnect the hose.

B ▶ **INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)**

A ▼



16.	INSPECT PURGE VSV

(a) Remove the purge VSV.

(b) Apply battery voltage across the terminals of the purge VSV.

(c) Confirm that air flows from port A to port B.

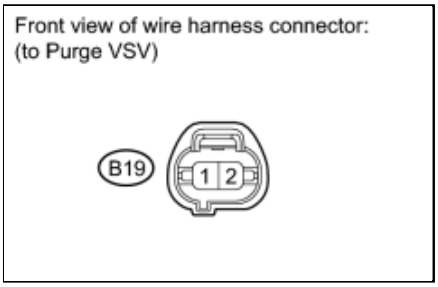
Result:

RESULT	CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
Air flows	Battery voltage applied across purge VSV terminals	-	A
No air flow	Battery voltage applied across purge VSV terminals	Purge VSV	B

(d) Reinstall the purge VSV.

B ▶ REPLACE PURGE VSV

A ▼



17.	CHECK HARNESS AND CONNECTOR (POWER SOURCE OF PURGE VSV)

(a) Disconnect the purge VSV connector.

(b) Turn the ignition switch to ON.

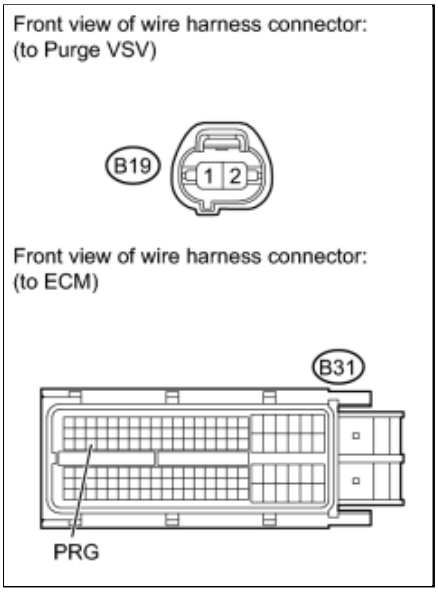
(c) Measure the voltage according to the value(s) in the table below.

Result:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
B19-2 - Body ground	Ignition switch ON	11 to 14 V	Normal	A
		Other than result above	Wire harness or connectors between purge VSV and battery	B

(d) Reconnect the purge VSV connector.

B ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR



A ▼

18.	CHECK HARNESS AND CONNECTOR (PURGE VSV - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the purge VSV connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-49 (PRG) - B19-1	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-49 (PRG) or B19-1 - Body ground	Always	10 kΩ or higher

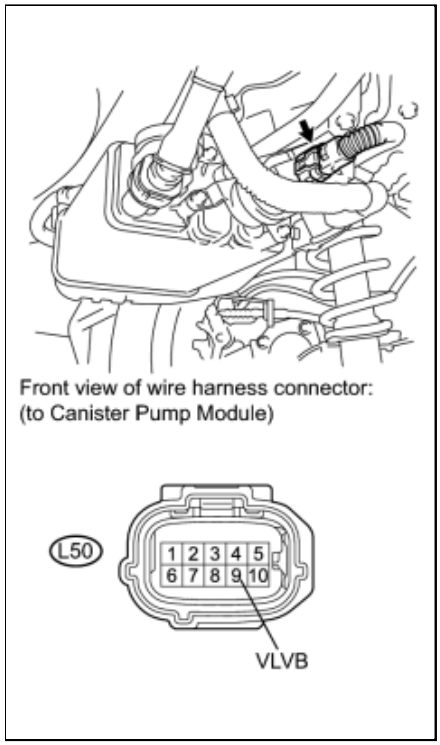
(d) Reconnect the ECM connector.

(e) Reconnect the purge VSV connector.

NG ▶ REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ▶ REPLACE ECM

19.	INSPECT CANISTER PUMP MODULE (POWER SOURCE FOR VENT VALVE)



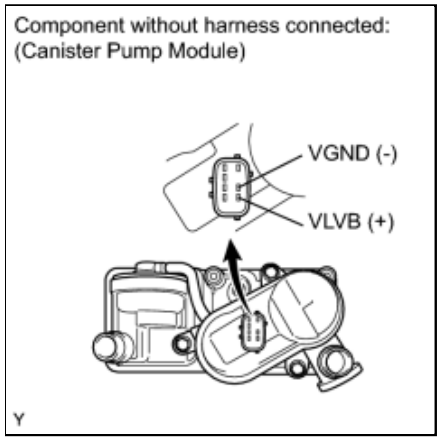
(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

(c) Turn the ignition switch to ON.

(d) Measure the voltage according to the value(s) in the table below.

Result:



TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-9 (VLVB) - Body ground	Ignition switch ON	11 to 14 V	1. Wire harness between vent valve and ECM 2. Vent valve 3. ECM	A
		Below 3 V	Power source wire harness of vent valve	B

(e) Reconnect the canister pump module connector.

B → REPAIR OR REPLACE HARNESS OR CONNECTOR

A

20.	INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)

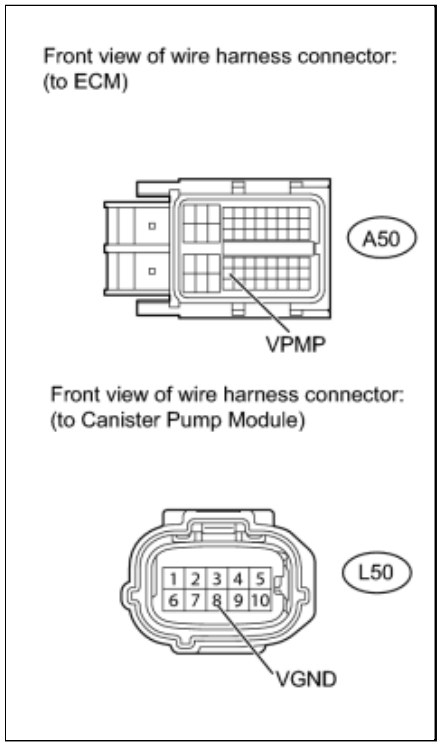
(a) Turn the ignition switch off.

(b) Disconnect the canister pump module connector.

(c) Apply the battery voltage to VLVB and VGND terminals of the canister pump module.

(d) Touch the canister pump module to confirm the vent valve operation.

Result:



RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Operating	1. Wire harness between vent valve and ECM 2. ECM	A
Not operating	Vent valve	B

(e) Reconnect the canister pump module connector.

B → REPLACE CANISTER ASSEMBLY

A

21.	CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

(a) Disconnect the ECM connector.

(b) Disconnect the canister pump module connector.

(c) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
A50-42 (VPMP) - L50-8 (VGND)	Always	Below 1 Ω	ECM	A
		10 kΩ or higher	Wire harness between ECM and canister pump module	B

(d) Reconnect the ECM connector.

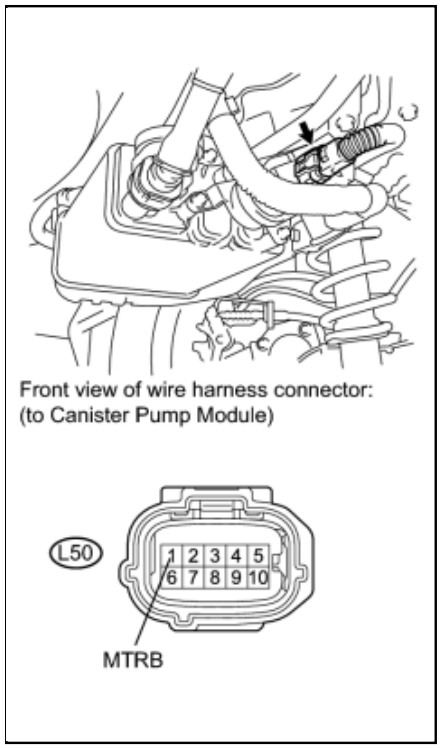
(e) Reconnect the canister pump module connector.

B → REPAIR OR REPLACE HARNESS OR CONNECTOR

A → REPLACE ECM

22.	PERFORM ACTIVE TEST USING TECHSTREAM (FOR LEAK DETECTION PUMP)

(a) Turn the ignition switch off.



(b) Disconnect the canister pump module connector.

(c) Turn the ignition switch to ON.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the Vacuum Pump.

(e) Measure the voltage according to the value(s) in the table below.

Result:

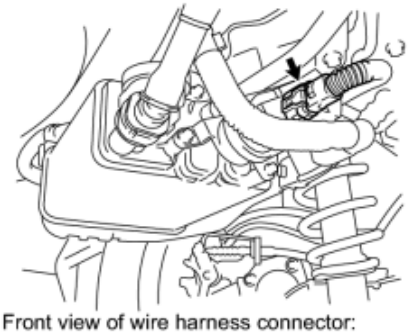
Front view of wire harness connector:
(to Canister Pump Module)

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-1 (MTRB) - Body ground	Leak detection pump ON and OFF (Active Test ON and OFF)	Below 3 V when OFF 11 to 14 V when ON	1. Wire harness between leak detection pump and body ground 2. Leak detection pump	A
		Below 3 V when OFF and ON	1. Wire harness between leak detection pump and ECM 2. ECM	B

(f) Reconnect the canister pump module connector.

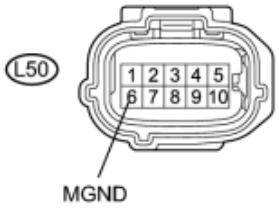
B → CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

A



23.	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)

(a) Turn the ignition switch off.



(b) Disconnect the canister pump module connector.

(c) Measure the resistance according to the value(s) in the table below.

Result:

Front view of wire harness connector:
(to Canister Pump Module)

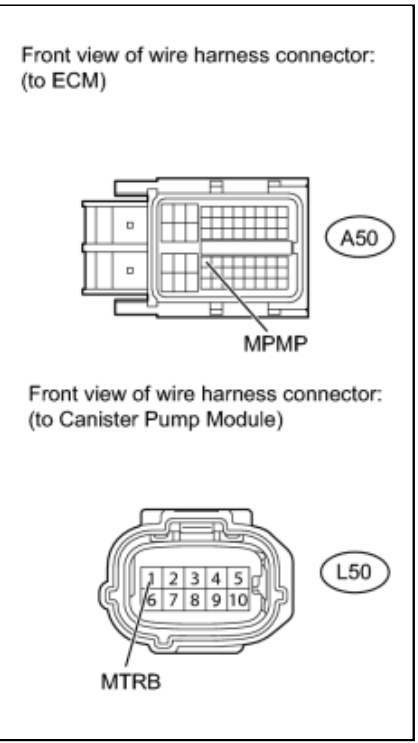
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
L50-6 (MGND) - Body ground	Always	Below 1 Ω	Leak detection pump	A
		10 kΩ or higher	Wire harness between canister pump module and body ground	B

(d) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

A ▶ **REPLACE CANISTER ASSEMBLY**

24.	CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)



(a) Turn the ignition switch off.

(b) Disconnect the ECM connector.

(c) Disconnect the canister pump module connector.

(d) Measure the resistance according to the value(s) in the table below.

Result:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION	SUSPECTED TROUBLE AREA	PROCEED TO
A50-34 (MPMP) - L50-1 (MTRB)	Always	Below 1 Ω	ECM	A
		10 kΩ or higher	Wire harness between ECM and canister pump module	B

(e) Reconnect the ECM connector.

(f) Reconnect the canister pump module connector.

B ▶ **REPAIR OR REPLACE**

HARNESS OR CONNECTOR

A ▶ REPLACE ECM

25.	INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Stop the engine.

(b) Disconnect the EVAP hose from the intake manifold.

(c) Start the engine.

(d) Use your finger to confirm that the port of the intake manifold has suction.

Result:

RESULT	SUSPECTED TROUBLE AREA	PROCEED TO
Suction applied	EVAP hose between intake manifold and purge VSV	A
No suction	Intake manifold	B

(e) Reconnect the EVAP hose.

B ▶ INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

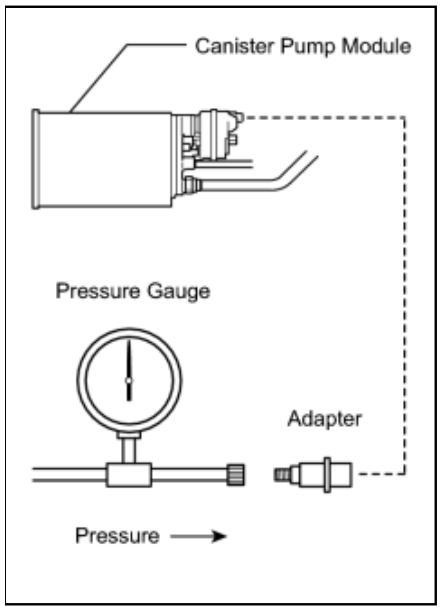
A ▶ REPLACE PURGE LINE HOSE (INTAKE MANIFOLD - PURGE VSV)

26.	CORRECTLY REINSTALL OR REPLACE FUEL TANK CAP

HINT:

- When reinstalling the fuel tank cap, tighten it until a few click sounds are heard.
- When replacing the fuel tank cap, use a fuel tank cap that meets OEM specifications, and install it until a few click sounds are heard.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)



27.	REPLACE FUEL TANK CAP

HINT:

When replacing the fuel cap, use a fuel cap that meets OEM specifications, and install it until a few click sounds are heard.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

28.	LOCATE EVAP LEAK PART

(a) Disconnect the vent hose.

(b) Connect an EVAP tester to the canister pump module with the adapter.

(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).

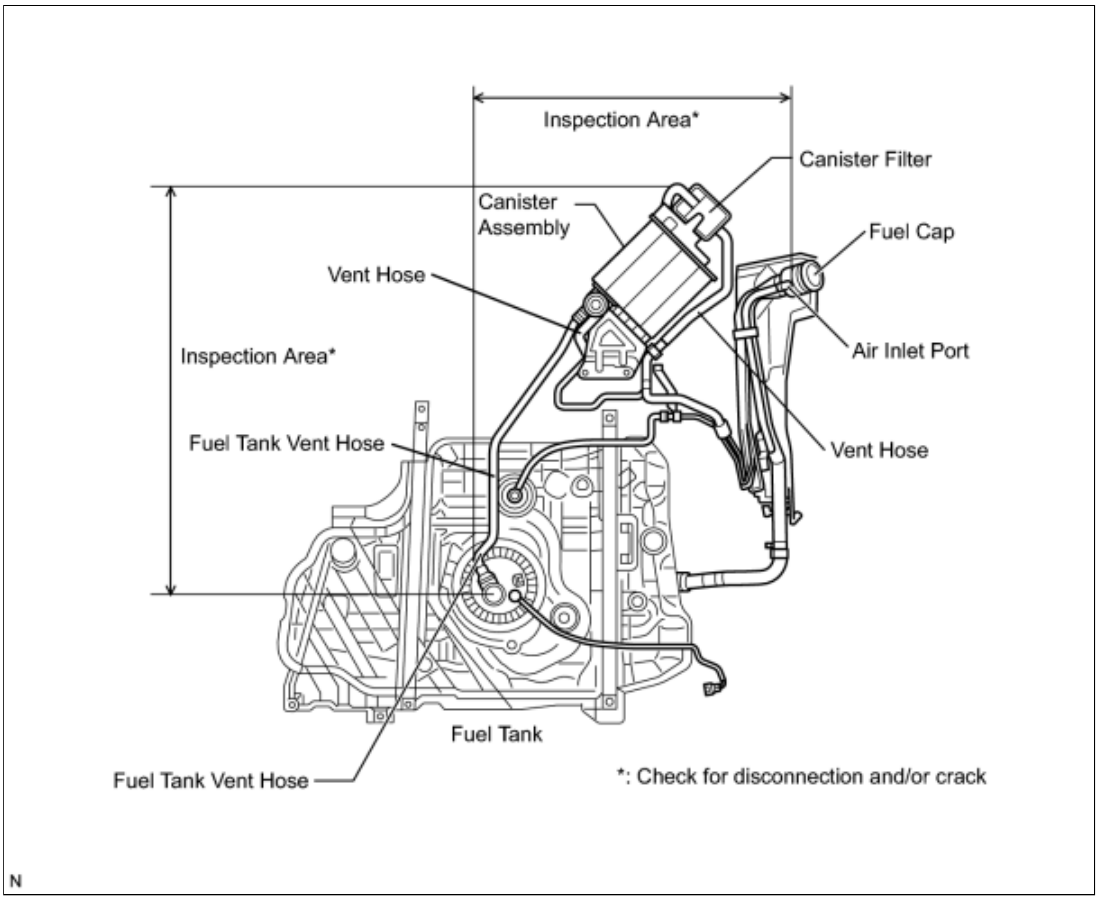
(d) Apply soapy water to the piping and connecting parts of the EVAP system.

(e) Look for areas where bubbles appear. This indicates the leak point.

(f) Repair or replace the leak point.

HINT:

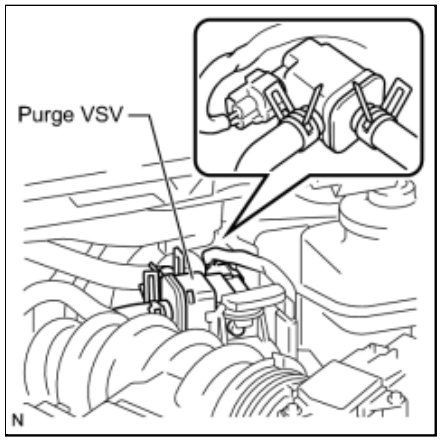
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.



NEXT ▶ **PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)**

29.	REPLACE CANISTER ASSEMBLY

(a) Replace the canister assembly INFO .



NOTICE:

When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the fuel tank vent hose.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

30.	REPLACE PURGE VSV

(a) Disconnect the connector and the hoses from the purge VSV.

(b) Remove the purge VSV.

(c) Install a new purge VSV.

(d) Reconnect the connector and hoses.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

31.	REPAIR OR REPLACE HARNESS OR CONNECTOR

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

32.	REPLACE PURGE LINE HOSE (INTAKE MANIFOLD - PURGE VSV)

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

33.	INSPECT INTAKE MANIFOLD (EVAP PURGE PORT)

(a) Check that the EVAP purge port of the intake manifold is not clogged. If necessary, replace the intake manifold.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

34.	REPLACE ECM

(a) Replace the ECM INFO .

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

35.	REPAIR OR REPLACE PARTS AND COMPONENTS INDICATED BY OUTPUT DTCS

(a) Repair the malfunctioning areas indicated by the DTCs that had been confirmed when the vehicle was brought in.

NEXT ▶ PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

36.	PERFORM EVAPORATIVE SYSTEM CHECK (AUTOMATIC MODE)

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of five steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed. If the cut-off valve is closed, the fuel tank leak check is not possible.
- Do not run the engine during this operation.
- When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an Evaporative System Check, keep the temperature below 35°C (95°F).

(a) Clear the DTCs INFO .

(b) Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Automatic Mode.

(c) After the Evaporative System Check is completed, check for pending DTCs by entering the following menus: Powertrain / Engine and ECT / Trouble Codes.

HINT:

If no pending DTCs are found, the repair has been successfully completed.

NEXT END

CONFIRMATION DRIVING PATTERN

HINT:

After a repair, check Monitor Status by performing the Key-Off Monitor Confirmation and Purge Flow Monitor Confirmation described below.

1. Key-off monitor confirmation

(a) Preconditions

The monitor will not run unless:

- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The fuel tank is less than 90% full
- The altitude is less than 8000 ft. (2432 m)
- The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F)
- The intake air temperature is between 4.4°C and 35°C (40°F and 95°F)
- The vehicle remains stationary (the vehicle speed is 0 mph [0 km/h])

(b) Monitor Conditions

1. Allow the engine to idle for at least 5 minutes.
2. Turn the ignition switch off and wait for 5 hours (or 7 or 9.5 hours).

HINT:

Do not start the engine until checking Monitor Status. If the engine is started, the steps described above must be repeated.

(c) Monitor Status

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Enter the following menus: Powertrain / Engine and ECT / Monitor / Evaporative System.
4. Check the Monitor Status displayed on the Techstream.

HINT:

If Incomplete is displayed, the monitor did not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

2. Purge flow monitor confirmation (P0441)

HINT:

Perform this monitor confirmation after the Key-Off Monitor Confirmation shows Complete.

(a) Preconditions

The monitor will not run unless:

- The vehicle has been driven for 10 minutes or more (in a city area or on a freeway)
- The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F)
- The intake air temperature is between 4.4°C and 35°C (40°F and 95°F)

(b) Monitor Conditions

1. Release the pressure from the fuel tank by removing and reinstalling the fuel cap.
2. Warm the engine up until the engine coolant temperature reaches more than 75°C (167°F).

3. Increase the engine speed to 3000 rpm once.
4. Allow the engine to idle and turn A/C on for 1 minute.

(c) Monitor Status

1. Turn the ignition switch off (if ON or the engine is running).
2. Connect the Techstream to the DLC3.
3. Turn the ignition switch to ON.
4. Turn the Techstream on.
5. Enter the following menus: Powertrain / Engine and ECT / Monitor.
6. Check the Monitor Status displayed on the Techstream.

HINT:

If Incomplete is displayed, the monitor did not complete. Make sure that the preconditions have been met, and perform the Monitor Conditions again.

MONITOR RESULT

Refer to Checking Monitor Status INFO .

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFX0B9X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2119: Throttle Actuator Control Throttle Body Range / Performance (2010 Corolla)		

DTC	**P2119**	**Throttle Actuator Control Throttle Body Range / Performance**

DESCRIPTION

The electronic throttle control system is composed of the throttle actuator, throttle position sensor, accelerator pedal position sensor, and ECM. The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The throttle position sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1 trip detection logic)	• Electronic throttle control system • ECM

MONITOR DESCRIPTION

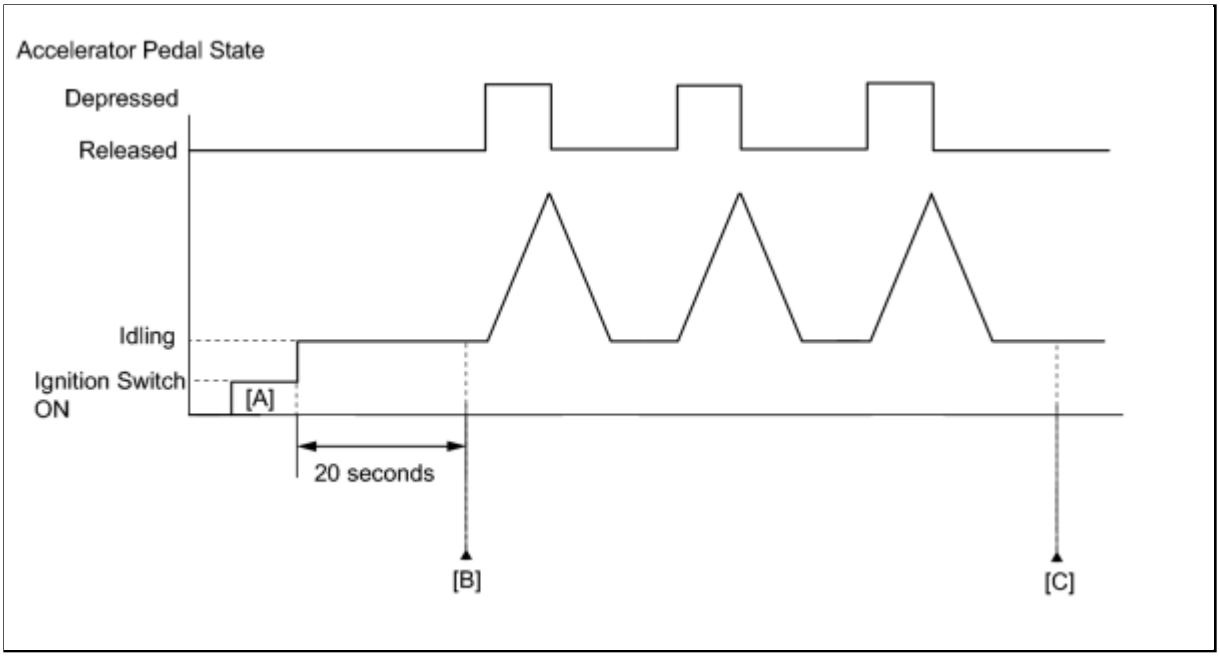
The ECM determines the actual opening angle of the throttle valve from the throttle position sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the electronic throttle control system. The ECM then illuminates the MIL and sets the DTC.

If the malfunction is not repaired successfully, the DTC can be set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5000 rpm by fully depressing the accelerator pedal (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: Electronic throttle control system malfunction
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate

Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
System guard* judge condition	ON
*System guard set when following conditions are met:	-
Throttle actuator	ON
Throttle actuator duty calculation	Executing
Throttle position sensor fail	Not detected
Throttle actuator current-cut operation	Not executing
Throttle actuator power supply	4 V or more
Throttle actuator fail	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions A or B is met	-
A. Commanded closed throttle position - current closed throttle position	0.3 V or more for 1 second
B. Commanded open throttle position - current open throttle position	0.3 V or more for 0.6 seconds

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC operation) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine.
7. Idle the engine for 20 seconds.
8. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
9. Input the DTC: P2119.
10. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.

- If the judgment result shows INCOMPLETE or UNKNOWN, fully depress and release the accelerator pedal 3 times, and then check the DTC judgment result at step [C].

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

When this DTC, as well as other DTCs relating to electronic throttle control system malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator, and the throttle valve is returned to a 6.5° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue running at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the ignition switch is then turned to off.

WIRING DIAGRAM

Refer to DTC P2102 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

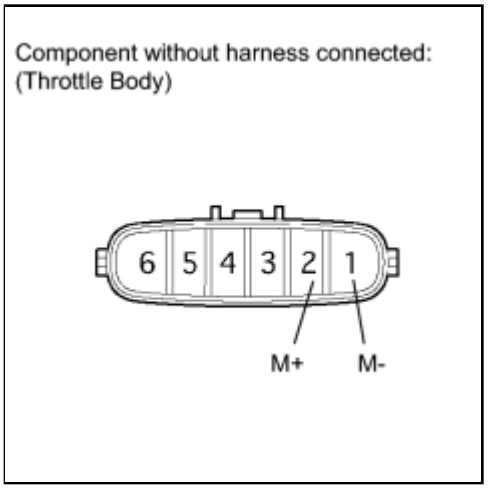
RESULT	PROCEED TO
P2119	A
P2119 and other DTCs	B

HINT:

If any DTCs other than P2119 are output, troubleshoot those DTCs first.

B ▶ **GO TO DTC CHART**

A ▼



2.	**INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)**

(a) Disconnect the throttle body connector.

(b) Measure the resistance according to the value(s) in the table below

Standard Resistance:

TESTER CONDITION	CONDITION	SPECIFIED CONDITION
2 (M+) - 1 (M-)	20°C (68°F)	0.3 to 100 Ω

(c) Reconnect the throttle body connector.

NG ▶ **REPLACE THROTTLE BODY**

OK ▼

3.	REPLACE ECM

NEXT

4.	CHECK WHETHER DTC OUTPUT RECURS (DTC P2119)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO.

(e) Allow the engine to idle for 15 seconds or more.

(f) Fully depress and release the accelerator pedal several times quickly.

(g) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(h) Read DTCs.

OK:

No DTC output.

HINT:

The output voltage of the throttle position sensor can be checked using the Techstream. Variations in the output voltage indicate that the throttle actuator is operating. To check the output voltage using the Techstream, enter the following menus: Powertrain / Engine and ECT / ETCS / Throttle Position No. 1.

NG ▶ **REPLACE THROTTLE BODY**

OK ▶ **CHECK FOR INTERMITTENT PROBLEMS**

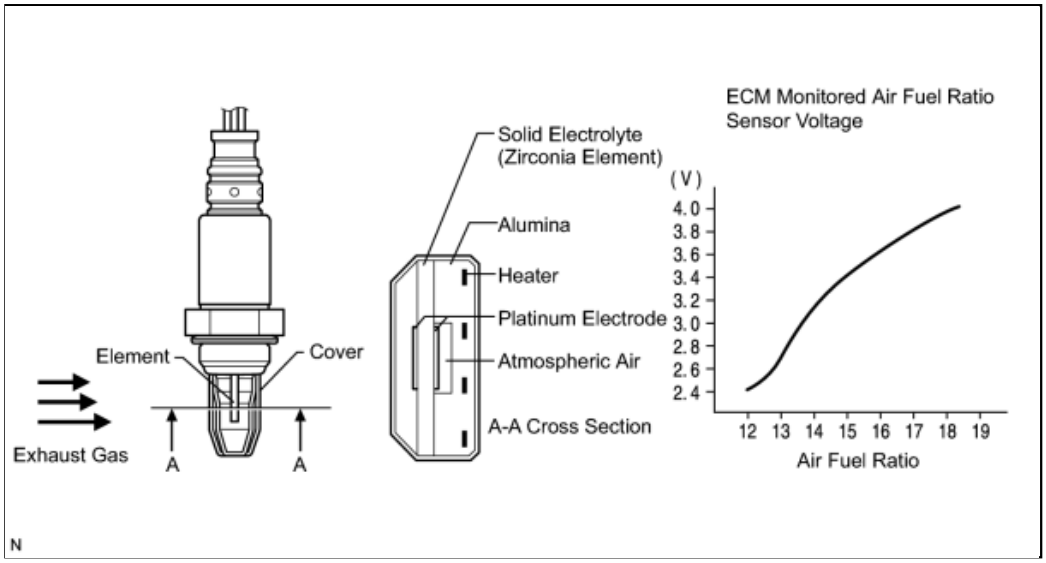
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC409EX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2195,P2196: Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P2195**	**Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)**

DTC	**P2196**	**Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)**

DESCRIPTION

HINT:



- Although the DTC titles say oxygen sensor, these DTCs relate to the air-fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

The air fuel ratio sensor generates a voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection duration. If the air fuel ratio sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The air fuel ratio sensor is a planar type with an integrated heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), current flows to the heater to heat the sensor, in order to facilitate accurate oxygen concentration detection. In addition, the sensor and heater portions are the narrow type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

In order to obtain a high purification rate of the carbon monoxide (CO), hydrocarbon (HC) and nitrogen oxide (NOx) components in the exhaust gas, a three-way catalytic converter is used. For the most efficient use of the three-way catalytic converter, the air-fuel ratio must be precisely controlled so that it is always close to the stoichiometric level.

*: Value changes inside the ECM. Since the air fuel ratio sensor uses a current output element, the current is converted into a voltage inside the ECM. Any measurements taken at the air fuel ratio sensor or ECM connectors will show a constant voltage.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2195	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic) • (a) Air fuel ratio sensor voltage more than 3.8 V • (b) Heated oxygen sensor voltage 0.15 V or more	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • Air fuel ratio sensor (sensor 1) heater • Air fuel ratio sensor heater circuit • Intake system • Fuel pressure • Fuel injector • ECM
	While fuel-cut operation performed (during vehicle deceleration), Air fuel ratio sensor current 3.6 mA or more for 3 seconds (2 trip detection logic)	• Air fuel ratio sensor • ECM
P2196	Conditions (a) and (b) continue for 10 seconds or more (2 trip detection logic) • (a) Air fuel ratio sensor voltage less than 2.8 V • (b) Heated oxygen sensor voltage less than 0.6 V	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • Air fuel ratio sensor (sensor 1) heater • Air fuel ratio sensor heater circuit • Intake system • Fuel pressure • Fuel injector • ECM
	While fuel-cut operation performed (during vehicle deceleration), Air fuel ratio sensor current less than 1.0 mA for 3 seconds (2 trip detection logic)	• Air fuel ratio sensor • ECM

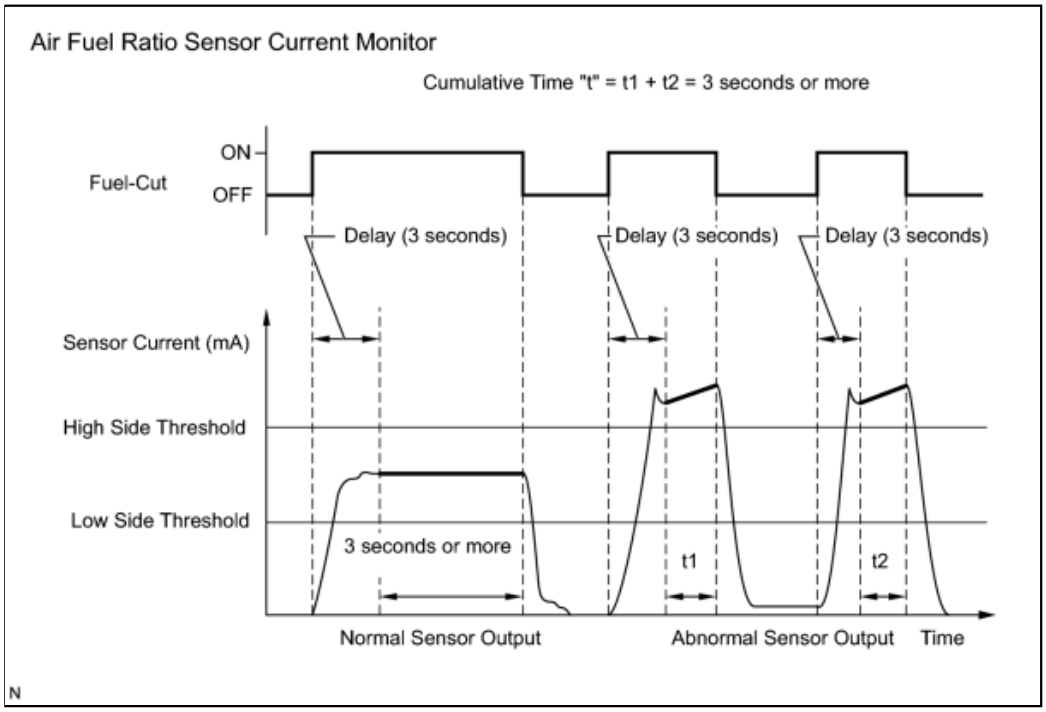
HINT:

- When any of these DTCs are set, check the air fuel ratio sensor voltage output by entering the following menus: Powertrain / Engine and ECT / Data List / A/F Control System / AFS Voltage B1 S1.
- Short-term fuel trim values can also be read using the Techstream.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the air fuel ratio sensor voltage output cannot be confirmed without using the Techstream.
- If a air fuel ratio sensor malfunction is detected, the ECM sets a DTC.

MONITOR DESCRIPTION

Sensor voltage detection monitor

Under the air-fuel ratio feedback control, if the air fuel ratio sensor voltage output indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the air fuel ratio sensor. The ECM illuminates the MIL and sets a DTC.



Example:

If the air fuel ratio sensor voltage output is less than 2.8 V (very rich condition) for 10 seconds, despite the heated oxygen sensor voltage output being less than 0.6 V, the ECM sets DTC P2196. Alternatively, if the air fuel ratio sensor voltage output is more than 3.8 V (very lean condition) for 10 seconds, despite the heated oxygen sensor voltage output being 0.15 V or more, DTC P2195 is set.

Sensor current detection monitor

A rich air-fuel mixture causes a low air fuel ratio sensor current, and a lean air-fuel mixture causes a high air fuel ratio sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the air fuel ratio sensor current during fuel-cut and detects any abnormal current values.

If the air fuel ratio sensor output is 3.6 mA or more for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the air fuel ratio sensor and sets DTC P2195 (high-side stuck). If the air fuel ratio sensor output is less than 1.0 mA for more than 3 seconds of cumulative time, the ECM sets DTC P2196 (low-side stuck).

MONITOR STRATEGY

Related DTCs	P2195: Air fuel ratio sensor (Bank 1) signal stuck lean P2196: Air fuel ratio sensor (Bank 1) signal stuck rich
Required Sensors/Components (Main)	Air fuel ratio sensor
Required Sensors/Components (Related)	Heated oxygen sensor
Frequency of Operation	Continuous
Duration	10 seconds: Sensor voltage detection monitor 3 seconds: Sensor current detection monitor
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

ALL

Monitor runs whenever following DTCs are not present	P0016 (VVT System Bank 1 - Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1)

	P0102, P0103 (Mass Air Flow Meter) P0112, P0113 (Intake Air Temperature Sensor) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121, P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop) P0128 (Thermostat) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0451, P0452, P0453 (EVAP System) P0500 (Vehicle Speed Sensor) P0505 (IAC Valve)

Sensor Voltage Detection Monitor (Lean Side Malfunction P2195)

Time while all of following conditions met	2 seconds or more
Rear heated oxygen sensor voltage	0.15 V or more
Time after engine start	30 seconds or more
Air fuel ratio sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor Voltage Detection Monitor (Rich Side Malfunction P2196)

Time while all of following conditions met	2 seconds or more
Rear heated oxygen sensor voltage	Below 0.6 V
Time after engine start	30 seconds or more
Air fuel ratio sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor Current Detection Monitor (P2195, P2196)

Battery voltage	11 V or more
Atmospheric pressure	76 kPa (570 mmHg) or higher
Air-fuel ratio sensor status	Activated
Engine coolant temperature	75°C (167°F) or more
Continuous time of fuel cut	3 to 10 seconds

TYPICAL MALFUNCTION THRESHOLDS

Sensor Voltage Detection Monitor (Lean Side Malfunction P2195)

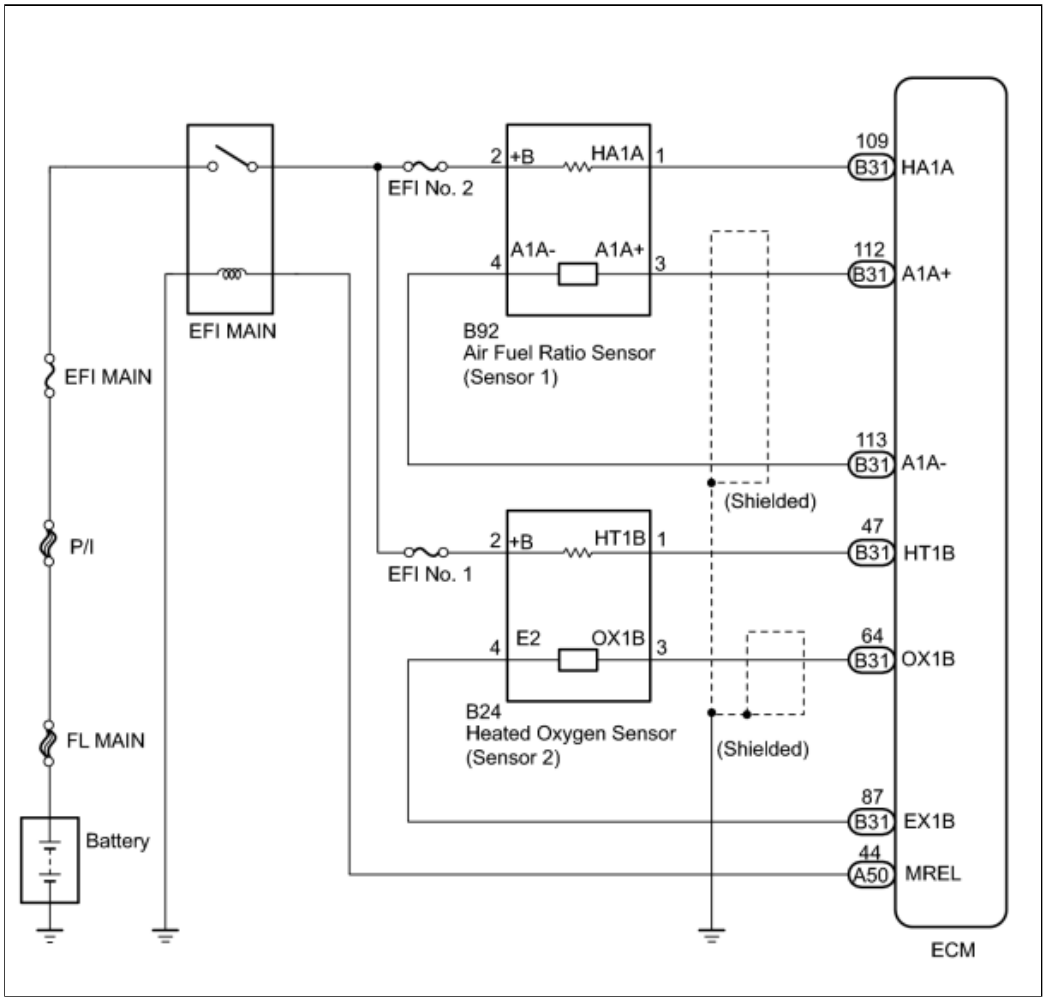
Air-fuel ratio sensor voltage	More than 3.8 V for 10 seconds

Sensor Voltage Detection Monitor (Rich Side Malfunction P2196)

Air-fuel ratio sensor voltage	Less than 2.8 V for 10 seconds

Sensor Current Detection Monitor (High Side Malfunction P2195)

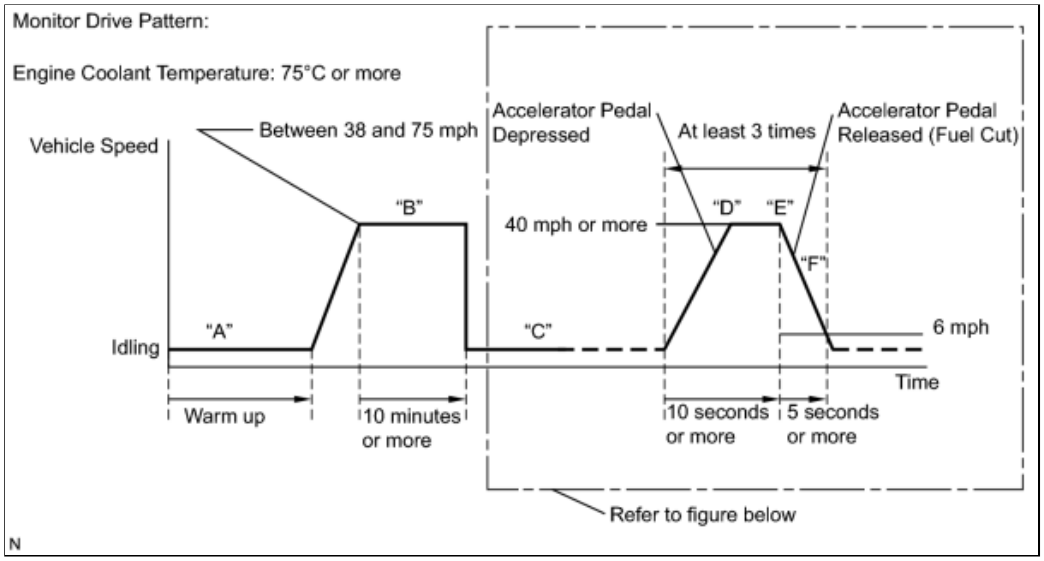
Air-fuel ratio sensor current during fuel cut	3.6 mA or more



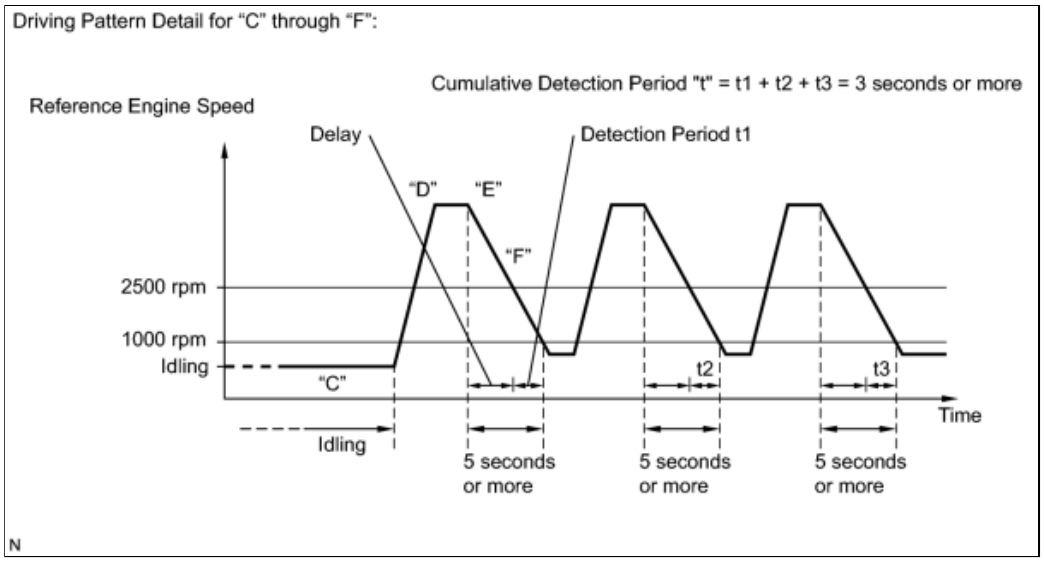
Sensor Current Detection Monitor (Low Side Malfunction P2196)

Air-fuel ratio sensor current during fuel cut	Less than 1.0 mA

MONITOR RESULT



Refer to Checking Monitor Status INFO .



WIRING DIAGRAM

CONFIRMATION DRIVING PATTERN

This confirmation driving pattern is used in the "Perform Confirmation Driving Pattern" procedure of the following diagnostic troubleshooting procedure.

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on.
7. Start the engine, and warm it up until the ECT reaches 75°C (167°F) or more (Step "A").
8. On Techstream, enter the following menus to check the fuel-cut status: Powertrain / Engine and ECT / Data List / Idle Fuel Cut.
9. Drive the vehicle at between 38 and 75 mph (60 and 120 km/h) for at least 10 minutes (Step "B").

CAUTION:

When performing the confirmation driving pattern, obey all speed limits and traffic laws.

10. Shift the transmission to 2nd gear (Step "C").
11. Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds (Step "D").
12. Soon after performing step "D" above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal in order to execute fuel-cut control (Step "E").

HINT:

Fuel-cut is performed when the following conditions are met:

- Accelerator pedal is fully released.

- Engine speed is 2500 rpm or more (fuel injection returns at 1000 rpm).

13. Allow the vehicle to decelerate until the vehicle speed decreases to less than 6 mph (10 km/h).
14. Repeat steps "C" through "E" above at least 3 times in one driving cycle.
15. Enter the following menus: Powertrain / Engine and ECT / Utility / All Readiness.
16. Input the DTC: P2195 or P2196.
17. Check the DTC judgment result [F].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	• DTC judgment completed • System normal
ABNORMAL	• DTC judgment completed • System abnormal
INCOMPLETE	• DTC judgment not completed • Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	• Unable to perform DTC judgment • Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps "B" through "F".

18. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
19. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

20. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

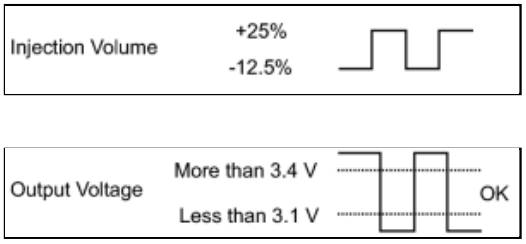
HINT:

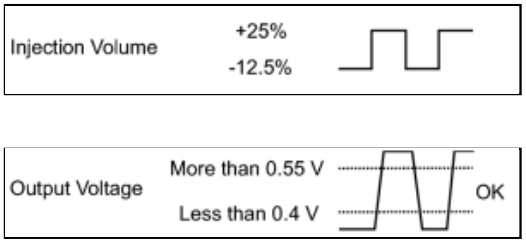
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the Air Fuel Ratio sensor, Heated Oxygen sensor and other potential trouble areas are malfunctioning.

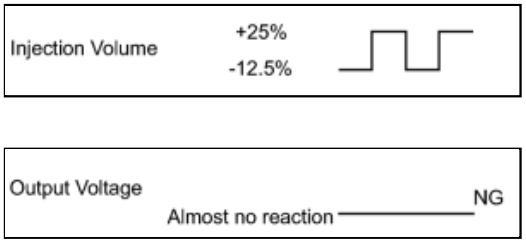
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

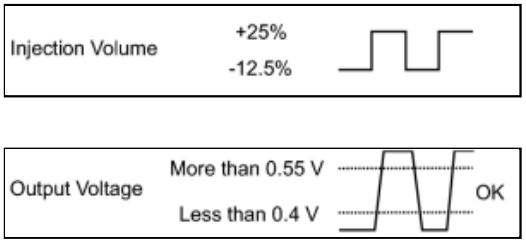
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2)

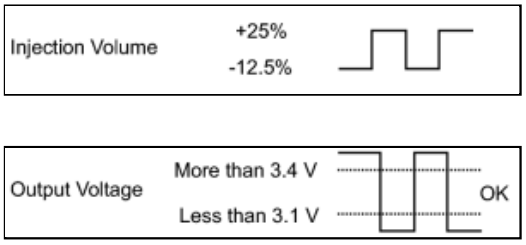
displayed on the Techstream.

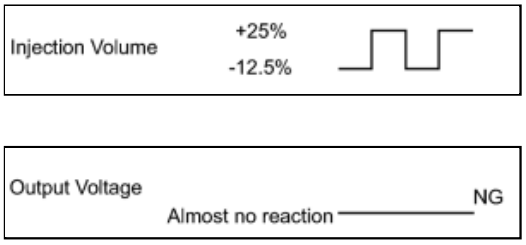




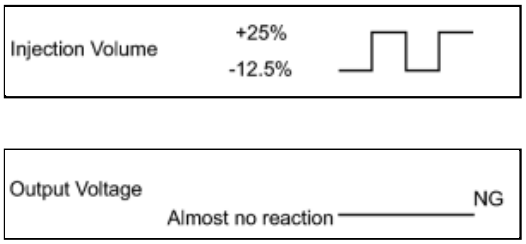


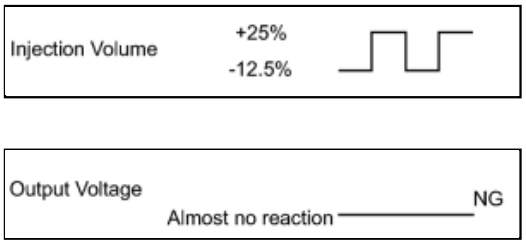






HINT:





- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (Air fuel ratio sensor)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated oxygen sensor)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

- Following the Control the Injection Volume for air fuel ratio sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.
- A low air fuel ratio sensor voltage could be caused by a rich air fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air fuel mixture. Check for conditions that would cause the engine to run lean.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P2195 or P2196	A
P2195 or P2196 and other DTCs	B

HINT:

If any DTCs other than P2195 and P2196 are output, troubleshoot those DTCs first.

B GO TO DTC CHART

A

2.	READ VALUE USING TECHSTREAM (TEST VALUE OF AIR FUEL RATIO SENSOR)

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO.

(e) Allow the vehicle to drive in accordance with the drive pattern described in the Confirmation Driving Pattern.

(f) Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor.

(g) Check that the status of O2 Sensor is Complete.

If the status is still Incomplete, perform the drive pattern increasing the vehicle speed and using the second gear to decelerate the vehicle.

(h) Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details / RANGE B1 S1.

(i) Check the test value of the air fuel ratio sensor output current during fuel-cut.

Result:

RESULT	PROCEED TO
Within normal range (1.0 mA or more, and less than 3.6 mA)	A
Outside normal range (Less than 1.0 mA, or 3.6 mA or more)	B

B REPLACE AIR FUEL RATIO SENSOR

A

3.	READ VALUE USING TECHSTREAM (OUTPUT VOLTAGE OF AIR FUEL RATIO SENSOR)

(a) Connect the Techstream to the DLC3.

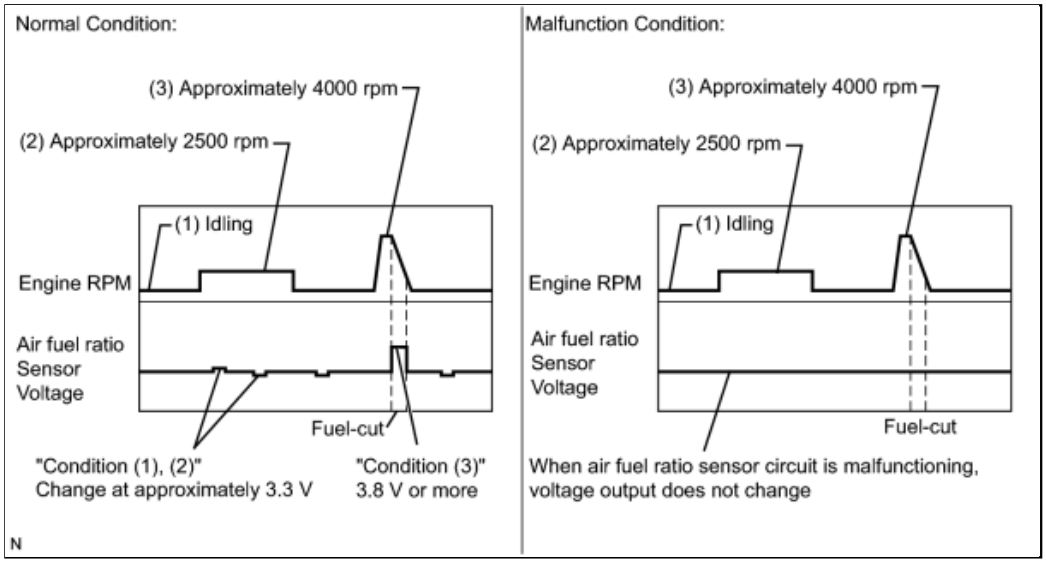
(b) Start the engine.

(c) Turn the Techstream on.

(d) Warm up the air-fuel ratio sensor at an engine speed of 2500 rpm for 90 seconds.

(e) Enter the following menus: Powertrain / Engine and ECT / Data List / A/F Control System / AFS Voltage B1 S1 and Engine Speed, then press the Record button.

(f) Check the air fuel ratio sensor voltage three times, when the engine is in each of the following conditions:



(1) While idling (check for at least 30 seconds)
(2) At an engine speed of approximately 2500 rpm (without any sudden changes in engine speed)
(3) Raise the engine speed to 4000 rpm and then quickly release the accelerator pedal so that the throttle valve is fully closed.

Standard:

CONDITION	AIR FUEL RATIO SENSOR VOLTAGE VARIATION	REFERENCE
(1) and (2)	Changes at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or more	This occurs during engine deceleration (when fuel-cut performed)

HINT:

For more information, see the diagrams below.

HINT:

- If the output voltage of the air fuel ratio sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the air fuel ratio sensor may have an open circuit. (This will also happen if the air fuel ratio sensor heater has an open circuit.)
- If the output voltage of the air fuel ratio sensor remains at either approximately 3.8 V or more, or 2.8 V or less (see Malfunction Condition diagram) under any conditions, including those above, the air fuel ratio sensor may have a short circuit.
- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and results in a momentary increase in the air fuel ratio sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:

  The output voltage of the air fuel ratio sensor may be below 2.8 V during fuel enrichment. For the vehicle, this translates to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The air fuel ratio sensor is functioning normally.
- The air fuel ratio sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the air fuel ratio sensor or ECM will show a constant voltage result.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PFZ0ALX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2121: Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance (2010 Corolla)		

DTC	**P2121**	**Throttle / Pedal Position Sensor / Switch "D" Circuit Range / Performance**

DESCRIPTION

HINT:

- This DTC relates to the Accelerator Pedal Position (APP) sensor.

Refer to DTC P2120 INFO .

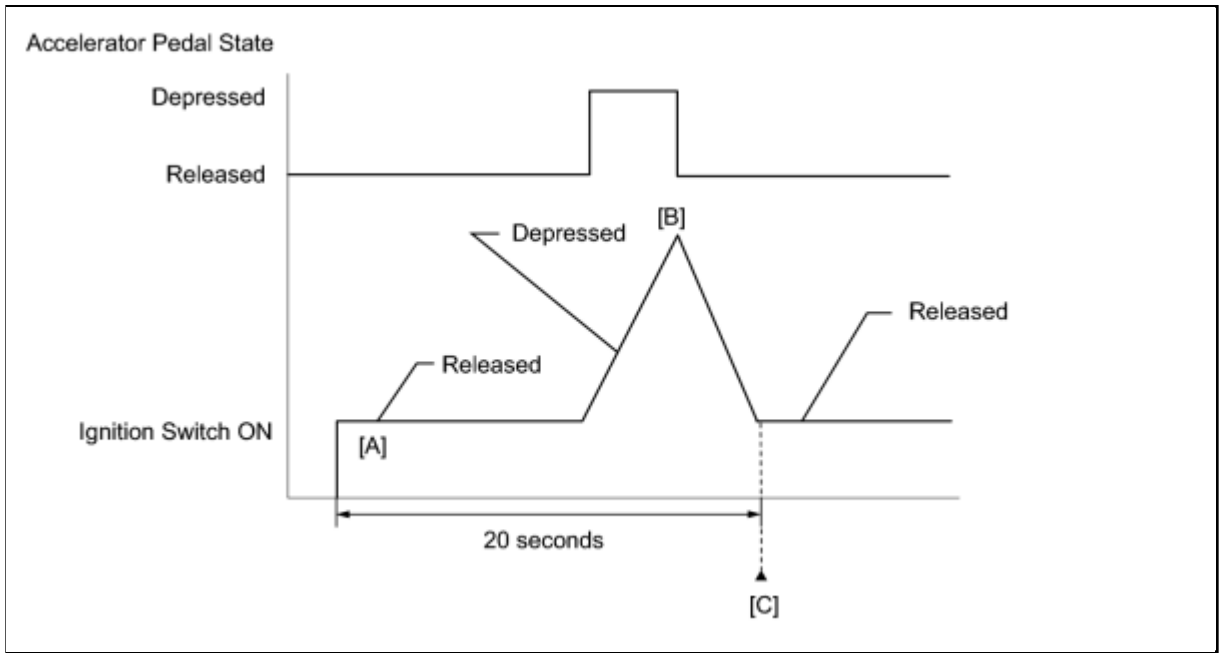
DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2121	Difference between VPA and VPA2 less than 0.4 V, or more than 1.2 V for 0.5 seconds (1 trip detection logic)	• Accelerator pedal position sensor • ECM

MONITOR DESCRIPTION

The accelerator pedal position sensor is mounted on the accelerator pedal bracket. The accelerator pedal position sensor has 2 sensor elements and 2 signal outputs: VPA and VPA2. VPA is used to detect the actual accelerator pedal angle (used for engine control) and VPA2 is used to detect malfunctions in VPA. When the difference between the output voltages of VPA and VPA2 deviates from the standard, the ECM determines that the accelerator pedal position sensor is malfunctioning. The ECM turns on the MIL and the DTC is set.

MONITOR STRATEGY

Related DTCs	P2121: Accelerator pedal position sensor rationality
Required Sensors/Components (Main)	Accelerator pedal position sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Either of following conditions 1 or 2 met:	-
1. Time after Ignition switch OFF to ON	0.012 seconds or more
2. Electronic throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference between VPA voltage (learned value) and VPA2 voltage (learned value)	Less than 0.4 V, or more than 1.2 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream ON.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Fully depress and release the accelerator pedal [B].
7. Check that 20 seconds or more have elapsed since the DTCs were cleared.
8. Enter the following menus: Powertrain / Engine and ECT / Utility / All Readiness.
9. Input the DTC: P2121.
10. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, perform steps [B] and [C] again.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
12. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

FAIL-SAFE

The accelerator pedal position sensor has two (main and sub) sensor circuits. If a malfunction occurs in either of the sensor circuits, the ECM detects the abnormal signal voltage difference between the two sensor circuits and switches to limp mode. In limp mode, the functioning circuit is used to calculate the accelerator pedal opening angle to allow the vehicle to continue driving. If both circuits malfunction, the ECM regards the opening angle of the accelerator pedal as being fully closed. In this case, the throttle valve remains closed as if the engine is idling.

If a pass condition is detected and then the ignition switch is turned to off, the fail-safe operation stops and the system returns to a normal condition.

WIRING DIAGRAM

Refer to DTC P2120 INFO .

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2121)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P2121	A
P2121 and other DTCs	B

HINT:

If any DTCs other than P2121 are output, troubleshoot those DTCs first.

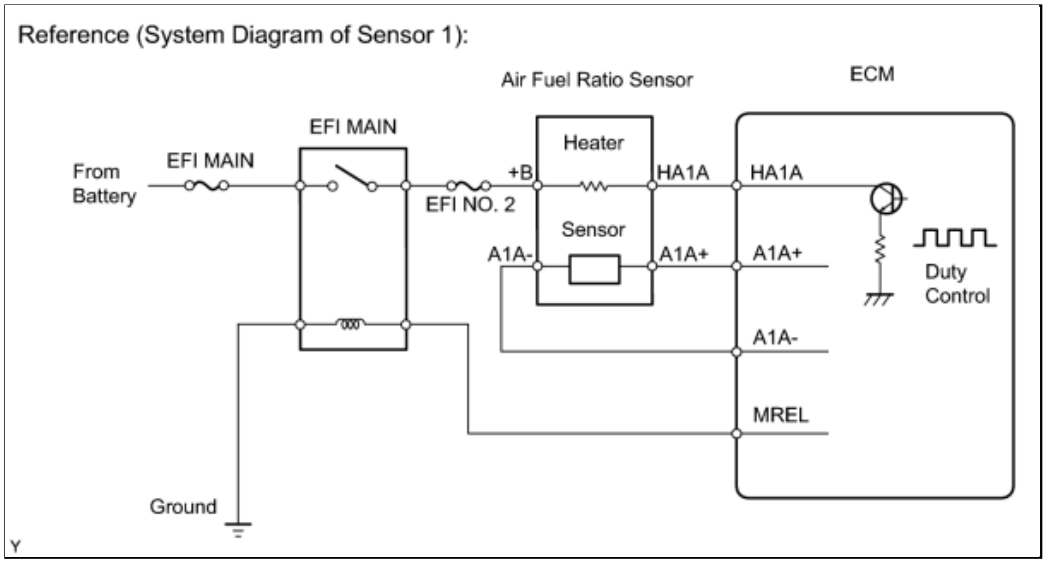
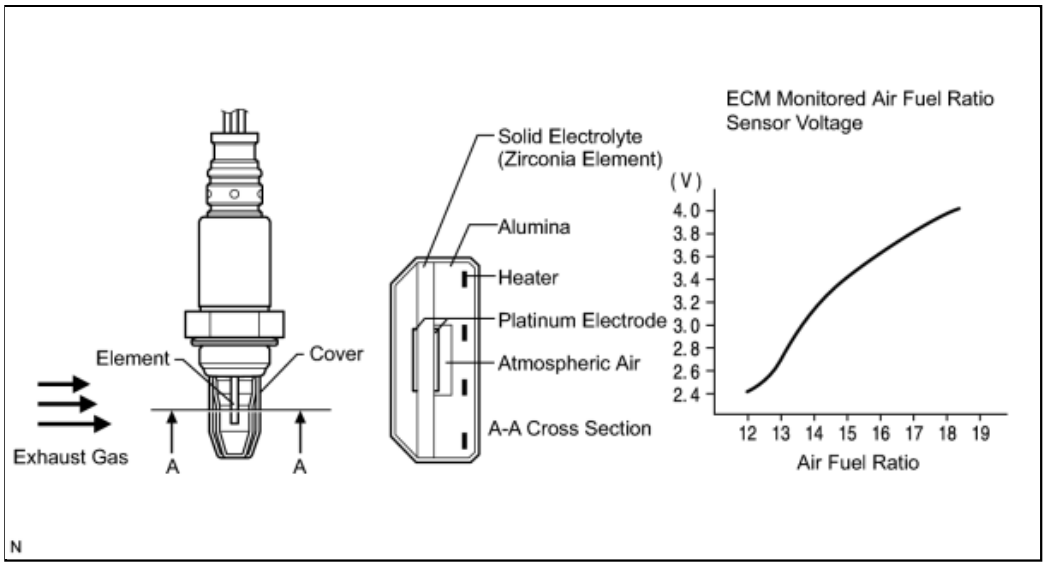
DTC	**P2253**	**Oxygen (A/F) Sensor Reference Ground Circuit High (Bank 1 Sensor 1)**

DESCRIPTION



HINT:



- Although the DTC titles say oxygen sensor, these DTCs relate to the air fuel ratio sensor.
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

The air fuel ratio sensor, which is located between the exhaust manifold and catalyst, consists of alloyed metal elements and a heater.

Depending on the engine operating conditions, the heater heats the sensor elements to activate them. Battery voltage is applied to the heater, the sensor ground is controlled by the ECM using a duty ratio.

The sensor elements convert the oxygen concentration in the exhaust gas into voltage values to output. Based on the voltage, the ECM determines the air-fuel ratio and regulates the fuel injection volume depending on the air-fuel ratio and engine operating conditions. The voltage changes between 0.6 V and 4.5 V while the engine is running. If the air-fuel ratio is lean, which means the oxygen concentration in the exhaust gas is high, the voltage is high. If the air-fuel ratio is rich, which means the oxygen concentration in the exhaust gas is low, the voltage is low.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2237	Open in the circuit between terminals A1A+ and A1A- of the air fuel ratio sensor while engine is running (2 trip detection logic)	• Open in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM
P2238	Any of the following conditions are met (2 trip detection logic) • Air fuel ratio sensor output drops while engine is running. • Voltage at terminal A1A+ is 0.5 V or less. • Voltage difference between terminals A1A+ and A1A- is 0.1 V or less.	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM
P2251	A1A+ voltage more than 4.5 V (2 trip detection logic)	• Open or short in air fuel ratio sensor (sensor 1) circuit • Air fuel ratio sensor (sensor 1) • ECM

MONITOR DESCRIPTION

These DTCs are output when there is an open or short in the air fuel ratio sensor circuit, or the air fuel ratio sensor output drops. To detect these problems, the voltage of the air fuel ratio sensor is monitored when turning the ignition switch to the

ON position, and the admittance (admittance is an electrical term that indicates the ease of flow of current) is checked while driving. If the voltage of the air fuel ratio sensor is between 0.6 V and 4.5 V, it is considered normal. If the voltage is out of the specified range, or the admittance is less than the standard value, the ECM will determine that there is a malfunction in the air fuel ratio sensor. If the same malfunction is detected in next driving cycle, the MIL will be illuminated and a DTC will be stored.

MONITOR STRATEGY

Related DTCs	P2237: Air fuel ratio sensor open circuit between A1A+ and A1A- P2238: Air fuel ratio sensor short circuit between A1A+ and A1A- P2238: Air fuel ratio sensor short circuit between A1A+ and GND P2238: Air fuel ratio sensor low impedance P2239: Air fuel ratio sensor short circuit between A1A+ and +B P2252: Air fuel ratio sensor short circuit between A1A- and GND P2253: Air fuel ratio sensor short circuit between A1A- and +B

Battery voltage	11 V or more
Ignition switch	ON
Time after ignition switch is OFF to ON	5 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P2237 (Air Fuel Ratio Sensor Open Circuit Between A1A+ and A1A-)

Air fuel ratio sensor admittance	Below 0.002 1/Ω

P2238 (Air Fuel Ratio Sensor Low Impedance)

Air fuel ratio sensor admittance	Below 0.022 1/Ω

P2238 (Air Fuel Ratio Sensor Short Circuit Between A1A+ and GND)

A/F+ terminal voltage	0.5 V or less

P2239 (Air Fuel Ratio Sensor Short Circuit Between A1A+ and +B)

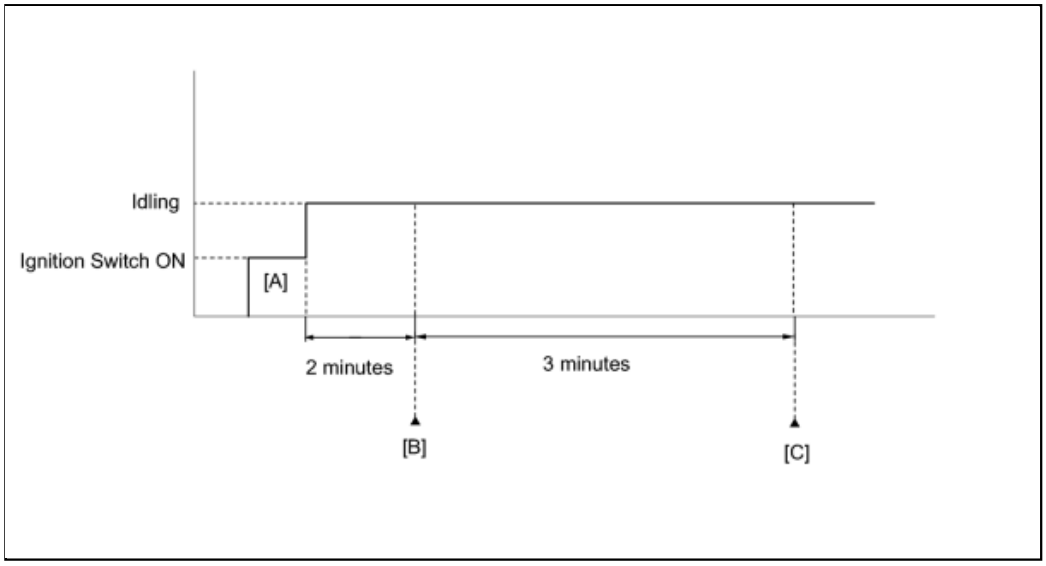
A/F+ terminal voltage	More than 4.5 V

P2252 (Air Fuel Ratio Sensor Short Circuit Between A1A- and GND)

A/F- terminal voltage	0.5 V or less

P2253 (Air Fuel Ratio Sensor Short Circuit Between A1A- and +B)

A/F- terminal voltage	More than 4.5 V



P2238 (Air Fuel Ratio Sensor Short Circuit Between A1A+ and A1A-)

Difference between A/F+ terminal and A/F- terminal voltage	0.1 V or less

COMPONENT OPERATING RANGE

Air fuel ratio sensor admittance	0.002 1/Ω or more
A1A+ terminal voltage	0.5 to 4.5 V
A1A- terminal voltage	0.5 to 4.5 V
Difference between A1A+ and A1A- terminal voltages	0.1 to 0.8 V

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Start the engine and wait 2 minutes.
7. Enter the following menus: Powertrain / Engine / Utility / All Readiness.
8. Input the DTC: P2237, P2238, P2239, P2252 or P2253.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

- If the judgment result shows ABNORMAL, the system has a malfunction.
- If the judgment result shows INCOMPLETE or UNKNOWN, idle the engine for 3 minutes and check the DTC judgment result again [C].

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check

for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P2195 INFO .

INSPECTION PROCEDURE

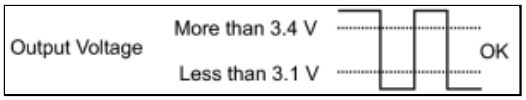
HINT:

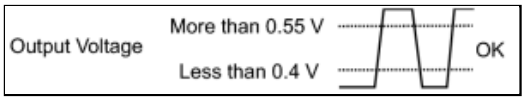
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the air fuel ratio sensor, heated oxygen sensor and other potential trouble areas are malfunctioning.

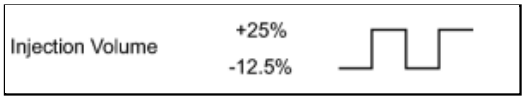
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

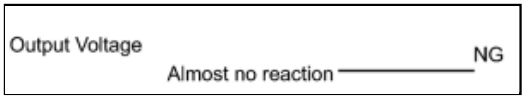
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

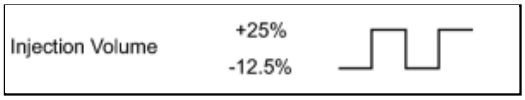
HINT:

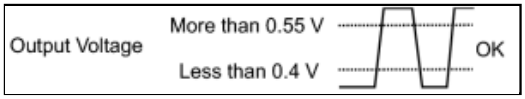


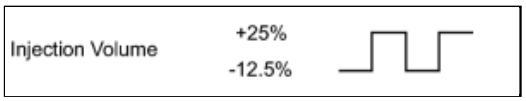


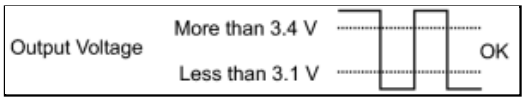


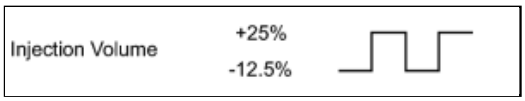


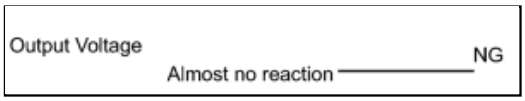


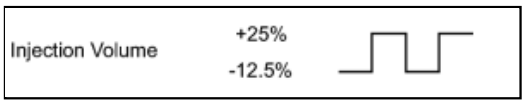


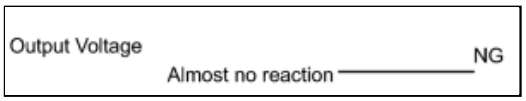


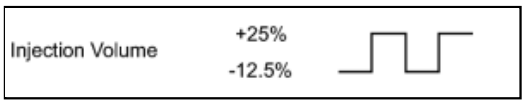


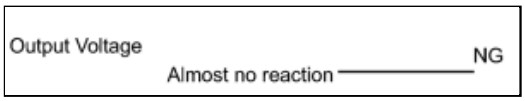












- The Control the Injection Volume for A/F sensor active test lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (Air Fuel Ratio)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated Oxygen)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			
2	 	 	• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3	 	 	• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4	 	 	• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel ratio extremely rich or lean)

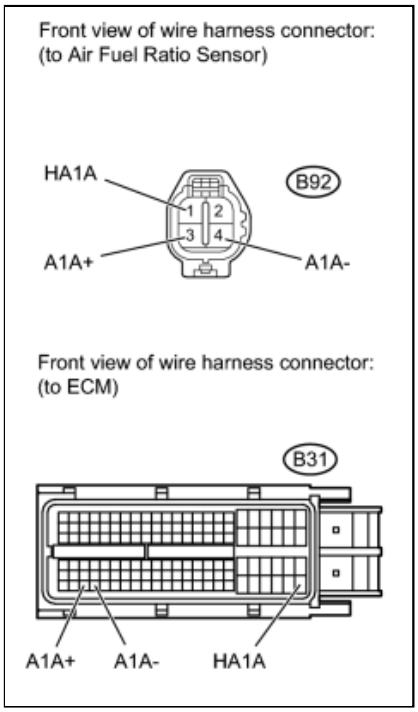
- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	CHECK HARNESS AND CONNECTOR (AIR FUEL RATIO SENSOR - ECM)



(a) Disconnect the air fuel ratio sensor connector.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B92-1 (HA1A) - B31-109 (HA1A)	Always	Below 1 Ω
B92-3 (A1A+) - B31-112 (A1A+)		
B92-4 (A1A-) - B31-113 (A1A-)		

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B92-1 (HA1A) or B31-109 (HA1A) - Body ground	Always	10 kΩ or higher
B92-3 (A1A+) or B31-112 (A1A+) - Body ground		
B92-4 (A1A-) or B31-113 (A1A-) - Body ground		

(d) Reconnect the air fuel ratio sensor connector.

(e) Reconnect the ECM connector.

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000002BHC020X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2420: Evaporative Emission System Switching Valve Control Circuit High (2010 Corolla)		

DTC	**P2420**	**Evaporative Emission System Switching Valve Control Circuit High**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P2420	Vent valve stuck open (vent)	Following condition met during key-off EVAP monitor: • EVAP pressure change when vent valve closed (ON) less than 0.3 kPa-g (2.25 mmHg-g)	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector/wire harness (Canister pump module - ECM) • ECM	While ignition switch OFF	2 trip

HINT:

The vent valve is built into the canister pump module.

DESCRIPTION

The description can be found in the EVAP (Evaporative Emission) System INFO .

INSPECTION PROCEDURE

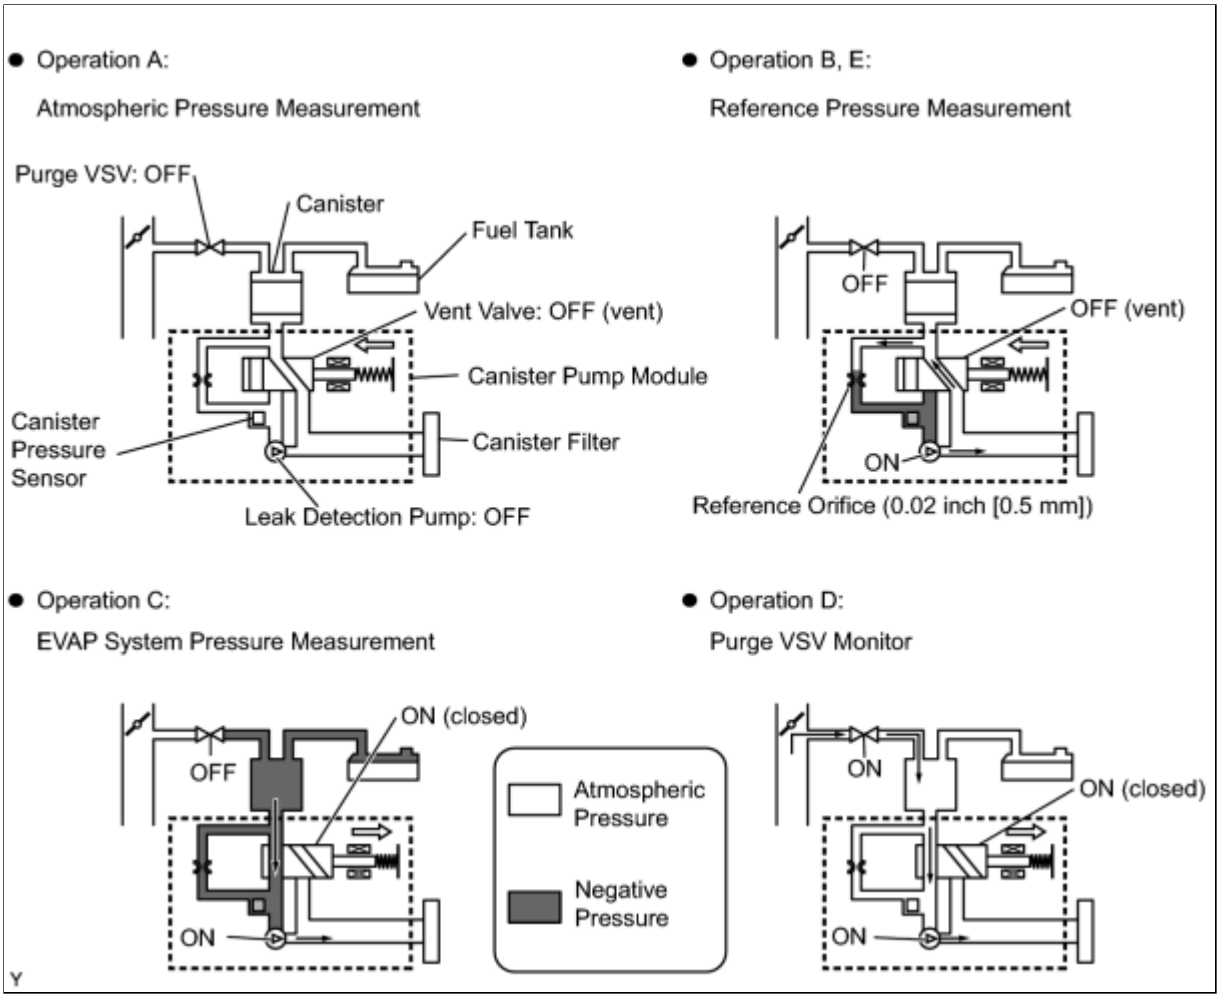
Refer to the EVAP System INFO .

HINT:

Unit expressions

- [kPa-a (mmHg-a)] denotes absolute pressure.
- [kPa-g (mmHg-g)] denotes gauge pressure (relative pressure).
- On the Techstream, choose the unit of measurement according to the inspection procedure.

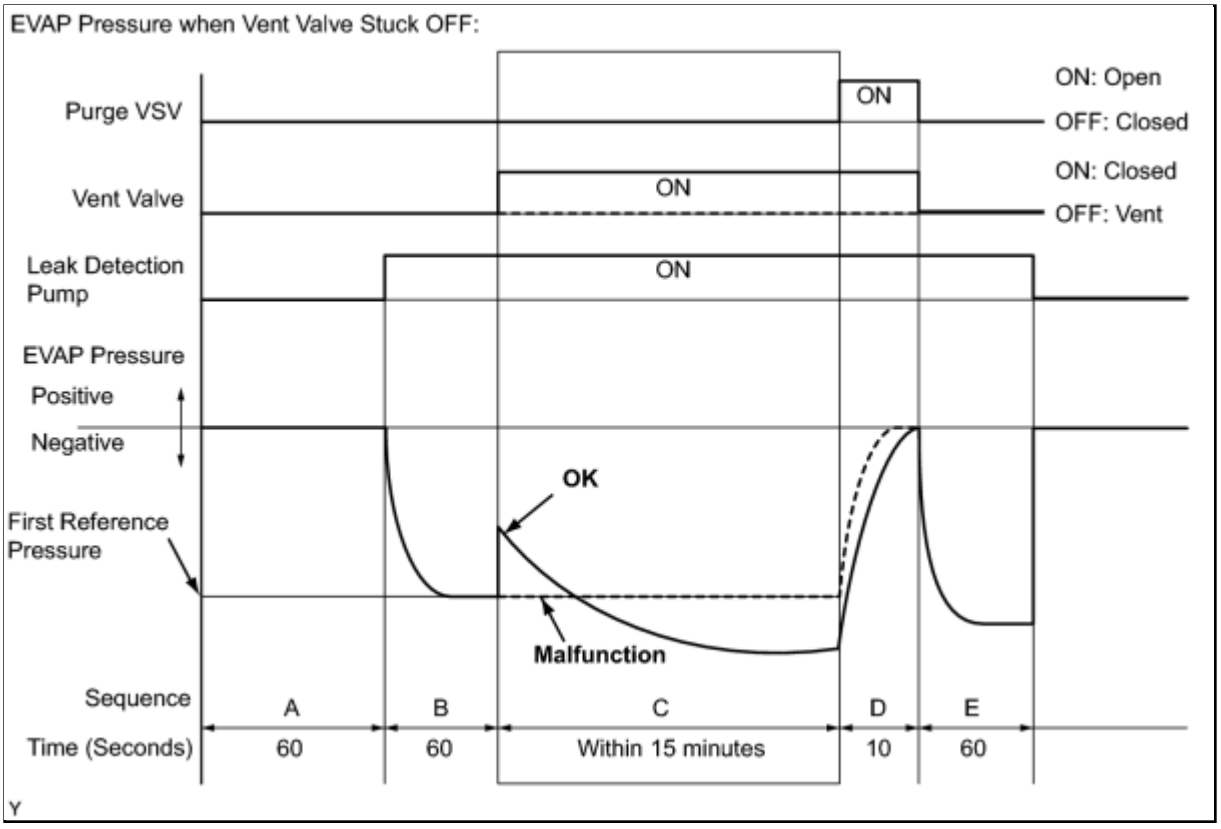
MONITOR DESCRIPTION



5 hours* after the ignition switch is turned off, the leak detection pump creates negative pressure (vacuum) in the EVAP system. The ECM monitors for leaks and actuator malfunctions based on the EVAP pressure.

HINT:

***: If the engine coolant temperature is not below 35°C (95°F) 5 hours after the ignition switch is turned to off, the monitor check starts 2 hours later. If it is still not below 35°C (95°F) 7 hours after the ignition switch is turned to off, the monitor check starts 2.5 hours later.**



SEQUENCE	OPERATION	DESCRIPTION	DURATION
-	ECM activation	The key-off monitor is activated by soak timer 5, 7 or 9.5 hours after ignition switch turned OFF.	-
A	Atmospheric pressure measurement	Vent valve is turned OFF (vent) and the EVAP system pressure is measured by the ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa-a and 110 kPa-a (525 mmHg-a and 825 mmHg-a), the ECM cancels EVAP system monitor.	60 seconds
B	First reference pressure measurement	In order to determine the reference pressure, the leak detection pump creates negative pressure (vacuum) through the reference orifice and then the ECM checks if the leak detection pump and vent valve operate normally.	60 seconds
C	EVAP system pressure measurement	Vent valve turned ON (closed) to shut the EVAP system. Negative pressure (vacuum) created in the EVAP system, and the EVAP system pressure then measured. The measured value is memorized as it will be used in the leak check. If the EVAP pressure does not stabilize within 15 minutes, the ECM cancels the EVAP system monitor.	15 minutes*
D	Purge VSV monitor	Purge VSV is opened and then the EVAP system pressure is measured by the ECM. A large increase indicates normality.	10 seconds
E	Second reference pressure measurement	After a second reference pressure measurement, the leak check is performed by comparing the first and second reference pressure. If stabilized system pressure is higher than the second reference pressure, the ECM determines that the EVAP system is leaking.	60 seconds
-	Final check	Atmospheric pressure is measured and then the monitor result is recorded by the ECM.	-

*: If only a small amount of fuel is in the fuel tank, it takes longer for the EVAP pressure to stabilize.

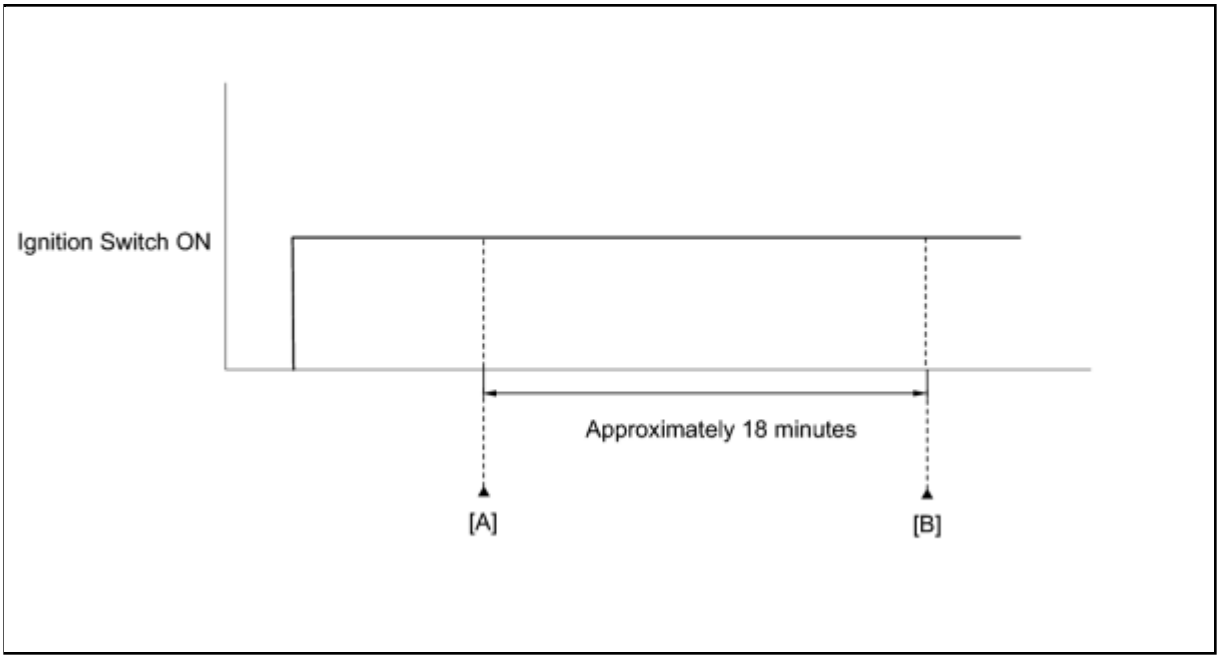
P2420: Vent valve stuck open (vent)

In operation C, the vent valve turns ON (closes) and the EVAP system pressure is then measured by the ECM using the canister pressure sensor to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes (varies with amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS



Monitor runs whenever following DTCs are not present	None
EVAP key-off monitor runs when all of following conditions are met	-
Atmospheric pressure	70 to 110 kPa-a (525 to 825 mmHg-a)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Ignition switch	OFF
Time after key off	5 or 7 or 9.5 hours

Canister pressure sensor malfunction (P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of following conditions are met before key off	Conditions 1 and 2
1. Duration that vehicle driven	5 minutes or more
2. EVAP purge operation	Performed
Engine coolant temperature	4.4 to 35°C (40 to 95°F)
Intake air temperature	4.4 to 35°C (40 to 95°F)

TYPICAL MALFUNCTION THRESHOLDS

EVAP pressure change after EVAP canister vent valve ON	Less than 0.3 kPa-g (2.25 mmHg-g)

CONFIRMATION DRIVING PATTERN

NOTICE:

- The Evaporative System Check (Automatic Mode) consists of 5 steps performed automatically by the Techstream. It takes a maximum of approximately 18 minutes.
- Do not perform the Evaporative System Check when the fuel tank is more than 90% full because the cut-off valve may be closed, making the fuel tank leak check unavailable.
- Do not run the engine during this operation.

- When the temperature of the fuel is 35°C (95°F) or higher, a large amount of vapor forms and any check results become inaccurate. When performing the Evaporative System Check, keep the fuel temperature below 35°C (95°F).

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
4. Turn the ignition switch off.
5. Turn the ignition switch to ON and turn the Techstream on [A].
6. Enter the following menus: Powertrain / Engine and ECT / Utility / Evaporative System Check / Automatic Mode.
7. After the "Evaporative System Check" is completed, check for All Readiness by entering the following menus: Powertrain / Engine and ECT / Utility / All Readiness.
8. Input the DTC: P2420.
9. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

10. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
11. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

12. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- ○ If a permanent DTC is output, the system is malfunctioning.
- ○ If no permanent DTC is output, the system is normal.

MONITOR RESULT

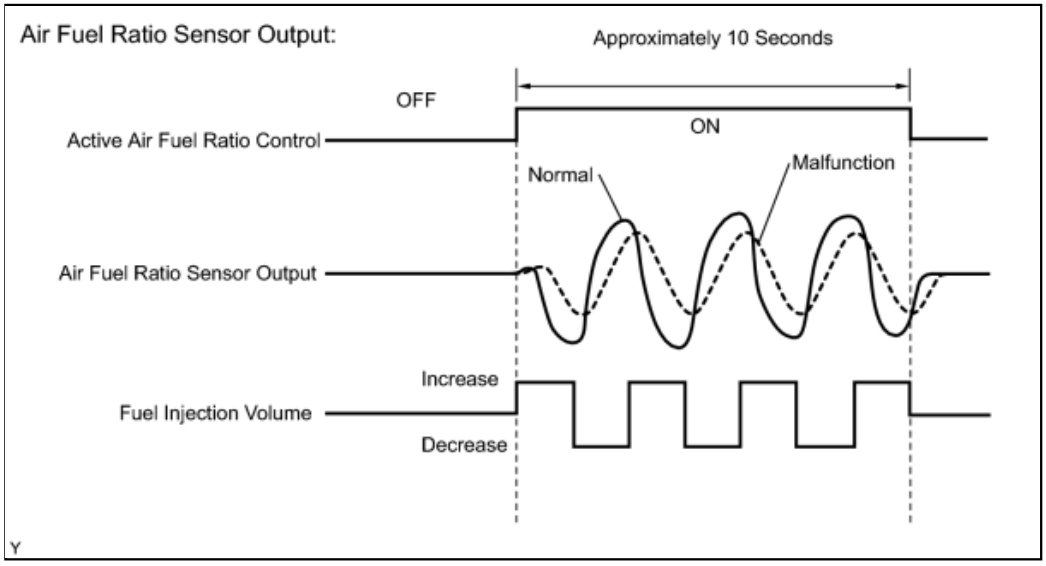
Refer to Checking Monitor Status INFO .

Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000WC205SX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2A00: A/F Sensor Circuit Slow Response (Bank 1 Sensor 1) (2010 Corolla)		

DTC	**P2A00**	**A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)**

DESCRIPTION

HINT:



- Refer to DTC P2195 INFO .
- Sensor 1 refers to the sensor mounted in front of the three-way catalytic converter and located near the engine assembly.

DTC NO.	DTC DETECTION CONDITION	TROUBLE AREA
P2A00	Calculated value for Air Fuel Ratio (A/F) sensor response rate deterioration level is less than threshold	• Air fuel ratio sensor (bank 1 sensor 1) • Air fuel ratio sensor heater (bank 1 sensor 1) • ECM

MONITOR DESCRIPTION

After engine is warmed up, the ECM performs air-fuel ratio feedback control to maintain the air-fuel ratio at the stoichiometric level. In addition, active air fuel ratio control is performed for approximately 10 seconds after preconditions are met in order to measure the air fuel ratio sensor response rate. During active air fuel ratio control, the ECM forcibly increases and decreases the injection volume a certain amount, based on the stoichiometric air-fuel ratio learned during normal air-fuel ratio control, and measures the air fuel ratio sensor response rate. The ECM receives a signal from the air fuel ratio sensor while performing active air fuel ratio control and uses it to calculate the air fuel ratio sensor response rate deterioration level.

If the value for air fuel ratio sensor response rate deterioration level is beyond the threshold, the ECM interprets this as a malfunction and sets the DTC.

MONITOR STRATEGY

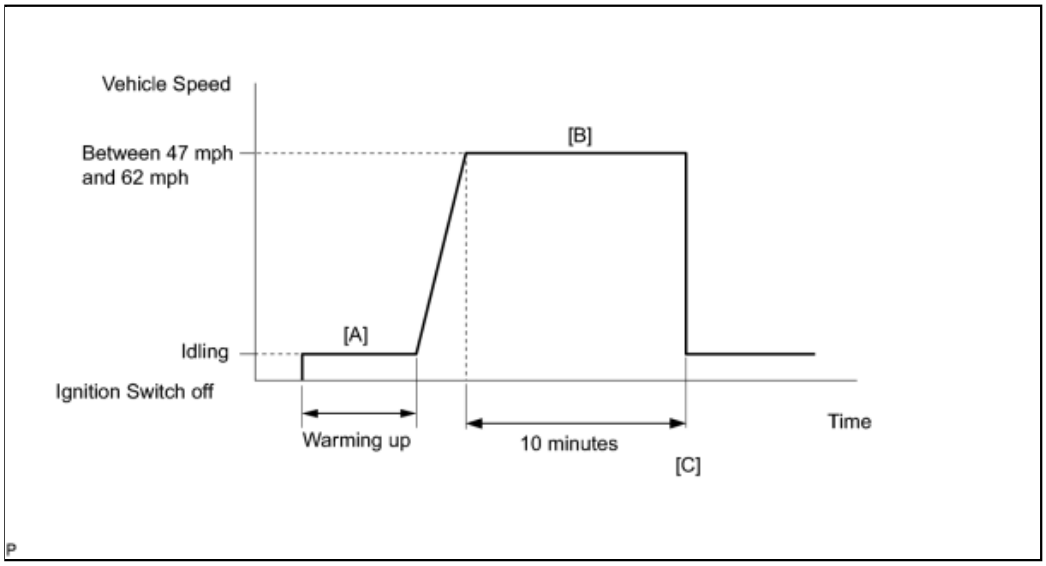
Related DTCs	P2A00: Air fuel ratio sensor (bank 1) slow response
Required Sensors/Components (Main)	Air fuel sensor
Required Sensors/Components (Related)	Vehicle speed sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	10 to 15 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	P0016 (VVT System Bank 1 - Misalignment) P0031, P0032 (Air Fuel Ratio Sensor Heater - Sensor 1) P0102, P0103 (Mass Air Flow Meter) P0112, P0113 (Intake Air Temperature Sensor) P0115, P0117, P0118 (Engine Coolant Temperature Sensor) P0120, P0121, P0122, P0123, P0220, P0222, P0223, P2135 (Throttle Position Sensor) P0125 (Insufficient Engine Coolant Temperature for Closed Loop) P0128 (Thermostat) P0171, P0172 (Fuel System) P0301, P0302, P0303, P0304 (Misfire) P0335 (Crankshaft Position Sensor) P0340 (Camshaft Position Sensor) P0451, P0452, P0453 (EVAP System) P0500 (Vehicle Speed Sensor) P0505 (IAC Valve)
Active A/F control	Performing
Active A/F control performed when following conditions are met	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	OFF
Engine RPM	Less than 4000 rpm
Air fuel ratio sensor status	Activated
Fuel-cut	OFF
Engine load	10 to 70%
Shift position	2 or more
Catalyst monitor	Not yet
Intake air amount	4 to 16 g/sec

TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.12 V



MONITOR RESULT

Refer to Checking Monitor Status INFO .

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the air fuel ratio sensor response monitor.

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON.
3. Turn the Techstream on.
4. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
5. Turn the ignition switch off.
6. Turn the ignition switch to ON and turn the Techstream on [A].
7. Enter the following menus: Powertrain / Engine and ECT / Monitor / O2 Sensor / Details.
8. Check that RES RATE B1S1 and RES RATE B2S1 are Incomplete.
9. Start the engine and warm it up (until the engine coolant temperature is 75°C (167°F) or more) [A].
10. Drive the vehicle at a constant speed of between 47 and 62 mph (75 and 100 km/h) for 10 minutes [B].
11. Check the monitor result values on the Techstream by entering the following menus: Powertrain / Engine / Monitor / O2 Sensor / Details / RES RATE B1S1 and B2S1.
12. If the values indicated on the Techstream do not change, perform Readiness Monitor Drive Pattern for the air fuel ratio sensor and heated oxygen sensor INFO .
13. Note the value of the Monitor Result.
14. Enter the following menus: Powertrain / Engine and ECT / Utility / All Readiness.
15. Input the DTC: P2A00.
16. Check the DTC judgment result [C].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal

TECHSTREAM DISPLAY	DESCRIPTION
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

17. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
18. Read Pending DTCs.

HINT:

If a pending DTC is output, the system is malfunctioning.

19. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

HINT:

- If a permanent DTC is output, the system is malfunctioning.
- If no permanent DTC is output, the system is normal.

WIRING DIAGRAM

Refer to DTC P2195 INFO .

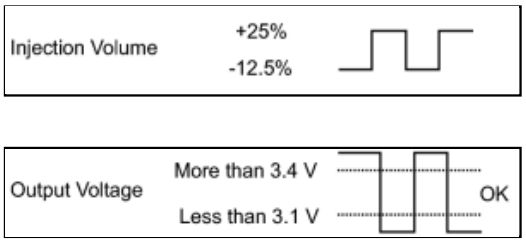
INSPECTION PROCEDURE

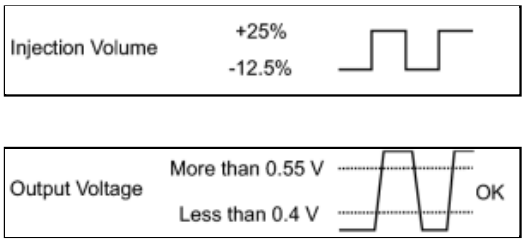
HINT:

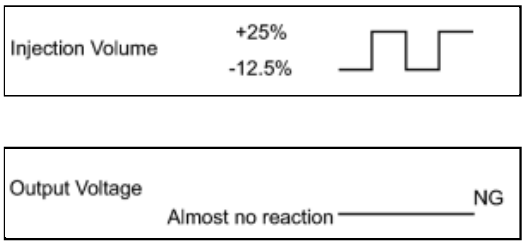
Malfunctioning areas can be identified by performing the Control the Injection Volume for A/F sensor function provided in the Active Test. The Control the Injection Volume for A/F sensor function can help to determine whether the Air Fuel Ratio sensor, Heated Oxygen sensor and other potential trouble areas are malfunctioning.

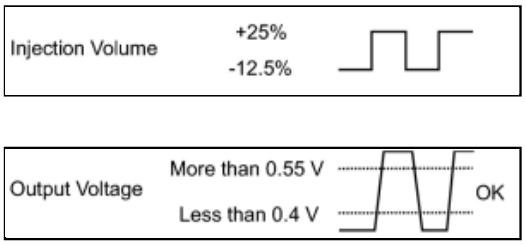
The following instructions describe how to conduct the Control the Injection Volume for A/F sensor operation using the Techstream.

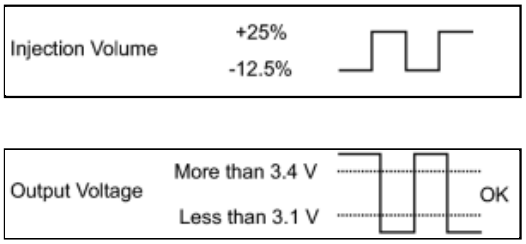
1. Connect the Techstream to the DLC3.
2. Start the engine.
3. Turn the Techstream on.
4. Warm up the engine at an engine speed of 2500 rpm for approximately 90 seconds.
5. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F sensor.
6. Perform the Active Test operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume.)
7. Monitor the output voltages of the air fuel ratio and heated oxygen sensors (AFS Voltage B1 S1 and O2S B1 S2) displayed on the Techstream.

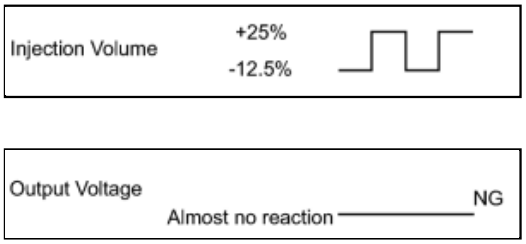


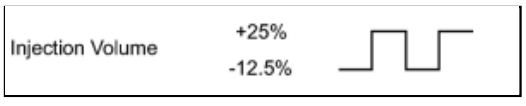


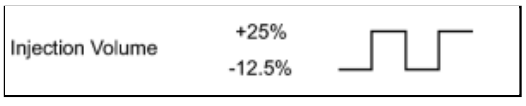




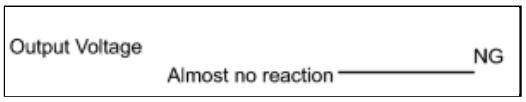


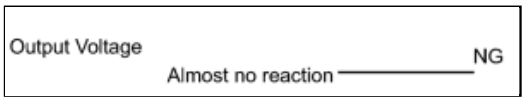






HINT:





- The Control the Injection Volume for A/F sensor operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases and decreases in the fuel injection volume.

TECHSTREAM DISPLAY (SENSOR)	INJECTION VOLUME	STATUS	VOLTAGE
AFS Voltage B1 S1 (Air fuel ratio sensor)	+25%	Rich	Less than 3.1 V
	-12.5%	Lean	More than 3.4 V
O2S B1 S2 (Heated oxygen sensor)	+25%	Rich	More than 0.55 V
	-12.5%	Lean	Less than 0.4 V

NOTICE:

The air fuel ratio sensor has an output delay of a few seconds and the heated oxygen sensor has a maximum output delay of approximately 20 seconds.

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
1			-
2			• Air fuel ratio sensor • Air fuel ratio sensor heater • Air fuel ratio sensor circuit
3			• Heated oxygen sensor • Heated oxygen sensor heater • Heated oxygen sensor circuit
4			• Injector • Fuel pressure • Gas leak from exhaust system (Air fuel

CASE	AIR FUEL RATIO SENSOR (SENSOR 1) OUTPUT VOLTAGE	HEATED OXYGEN SENSOR (SENSOR 2) OUTPUT VOLTAGE	MAIN SUSPECTED TROUBLE AREA
			ratio extremely rich or lean)

- Following the Control the Injection Volume for A/F sensor procedure enables technicians to check and graph the voltage outputs of both the air fuel ratio and heated oxygen sensors.
- To display the graph, enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Injection Volume for A/F Sensor / A/F Control System / AFS Voltage B1 S1 and O2S B1 S2; then press the graph button on the Data List view.

HINT:

- DTC P2A00 may be also set when the air-fuel ratio is stuck rich or lean.
- A low air fuel ratio sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high air fuel ratio sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Read DTCs.

Result:

RESULT	PROCEED TO
P2A00	A
P2A00 and other DTCs	B

HINT:

If any DTCs other than P2A00 are output, troubleshoot those DTCs first.

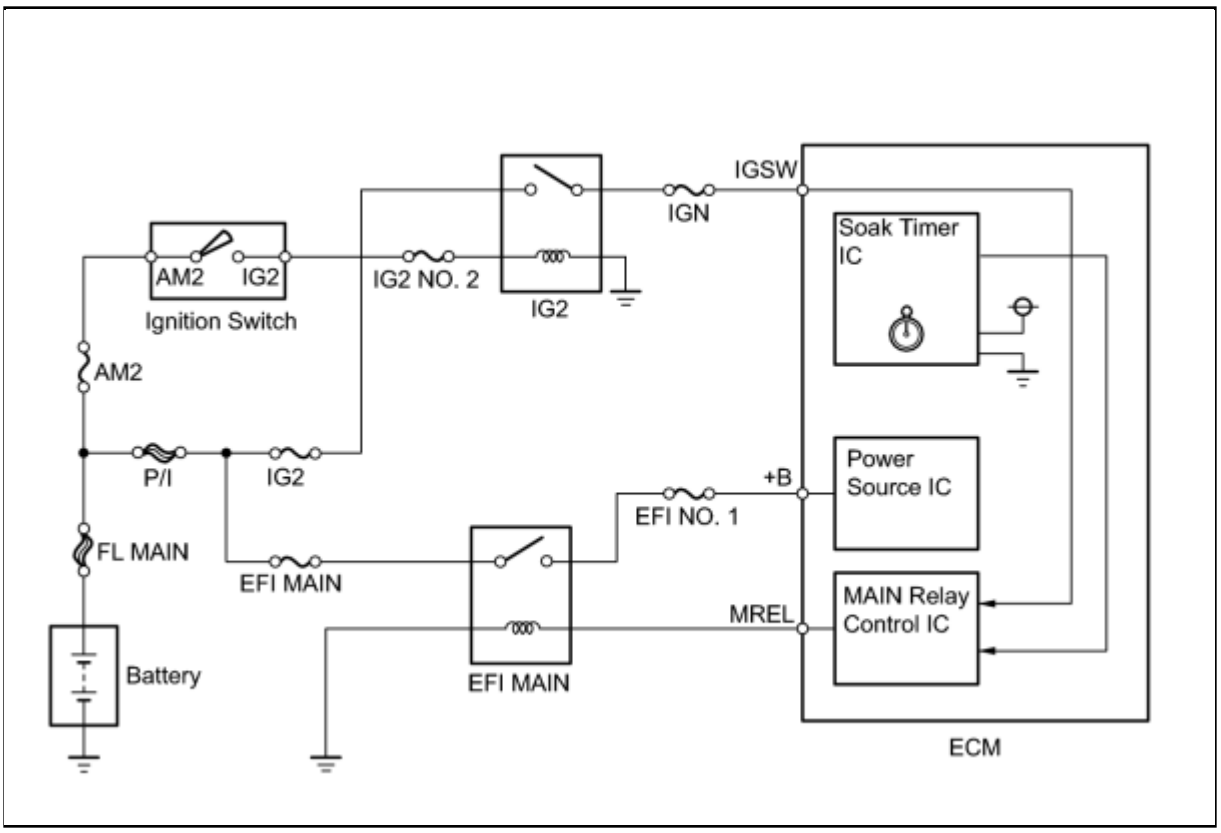
Last Modified: 3-10-2010	6.4 C	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000T6X054X
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: P2610: ECM / PCM Internal Engine Off Timer Performance (2010 Corolla)		



DTC	**P2610**	**ECM / PCM Internal Engine Off Timer Performance**

DTC SUMMARY

DTC NO.	MONITORING ITEM	MALFUNCTION DETECTION CONDITION	TROUBLE AREA	DETECTION TIMING	DETECTION LOGIC
P2610	Soak timer (built into ECM)	ECM internal malfunction	ECM	Engine running	2 trip

DESCRIPTION

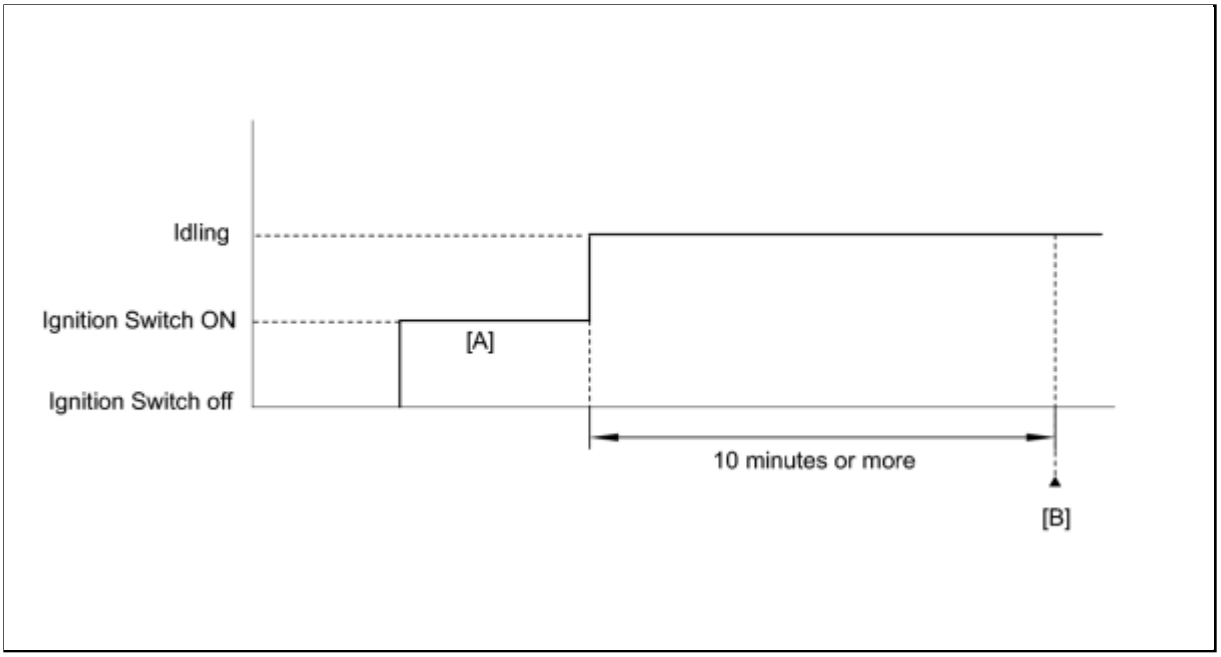
To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM, measures 5 hours (+/-15 minutes) from when the ignition switch is turned off, before the monitor is run. This allows the fuel to cool down, which stabilizes the EVAP pressure. When 5 hours have elapsed, the ECM turns on the EVAP system monitor.

MONITOR DESCRIPTION

5 hours after the ignition switch is turned off, the soak timer activates the ECM to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction, illuminates the MIL and sets the DTC (2 trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	ECM
Frequency of Operation	Once per driving cycle
Duration	10 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None



TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTC are not present	None
Ignition switch	ON
Engine	Running
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Soak timer measurement when ECM CPU clock counts 10 minutes	Less than 7 minutes, or more than 13 minutes

CONFIRMATION DRIVING PATTERN

1. Connect the Techstream to the DLC3.
2. Turn the ignition switch to ON and turn the Techstream on.
3. Turn the ignition switch off.
4. Turn the ignition switch to ON and turn the Techstream on [A].
5. Clear the DTCs (even if no DTCs are stored, perform the clear DTC procedure) INFO .
6. Start the engine.
7. Idle the engine for 10 minutes or more.
8. Enter the following menus: Powertrain / Engine and ECT / Utility / All Readiness.
9. Input the DTC: P2610.
10. Check the DTC judgment result [B].

TECHSTREAM DISPLAY	DESCRIPTION
NORMAL	○ DTC judgment completed ○ System normal
ABNORMAL	○ DTC judgment completed ○ System abnormal
INCOMPLETE	○ DTC judgment not completed ○ Perform driving pattern after confirming DTC enabling conditions
UNKNOWN	○ Unable to perform DTC judgment ○ Number of DTCs which do not fulfill DTC preconditions has reached ECU memory limit

HINT:

If the judgment result shows ABNORMAL, the system has a malfunction.

11. If the test result is UNKNOWN, enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.
12. Read Pending DTCs.

    HINT:

    If a pending DTC is output, the system is malfunctioning.

13. If the test result is INCOMPLETE or UNKNOWN and no pending DTC is output, perform a universal trip and check for permanent DTCs INFO .

    HINT:

    - If a permanent DTC is output, the system is malfunctioning.
    - If no permanent DTC is output, the system is normal.

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM problem is detected. Diagnostic procedures are not required. ECM replacement is necessary.
- Read freeze frame data using the Techstream. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

PROCEDURE

1.	**REPLACE ECM**

(a) Replace the ECM INFO .

NEXT

2.	**CHECK WHETHER DTC OUTPUT RECURS (DTC P2610)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Clear the DTCs INFO .

(e) Start the engine and wait for 10 minutes or more.

(f) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes / Pending.

(g) If no pending DTC is displayed, the repair has been successfully completed.

NEXT END

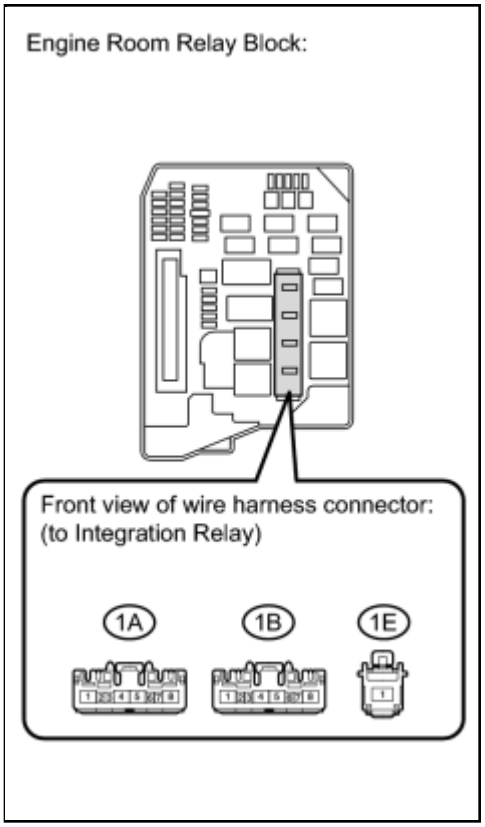
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: ECM Power Source Circuit (2010 Corolla)		

ECM Power Source Circuit

DESCRIPTION

When the ignition switch is turned to ON, the battery voltage is applied to the IGSW terminal of the ECM. The output signal from the MREL terminal of the ECM causes a current to flow to the EFI MAIN relay coil, closing the EFI relay contacts and supplying power to terminal +B of the ECM.



WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	INSPECT INTEGRATION NO.1 RELAY (POWER SOURCE)

(a) Remove the integration relay from the engine room relay block.

(b) Measure the voltage according to the value(s) in the table below.

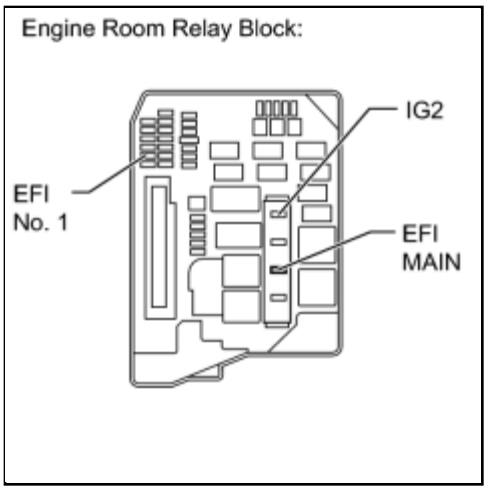
Standard Voltage:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - Body ground	Always	11 to 14 V

(c) Reinstall the integration relay.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY - BATTERY)**

OK ▼



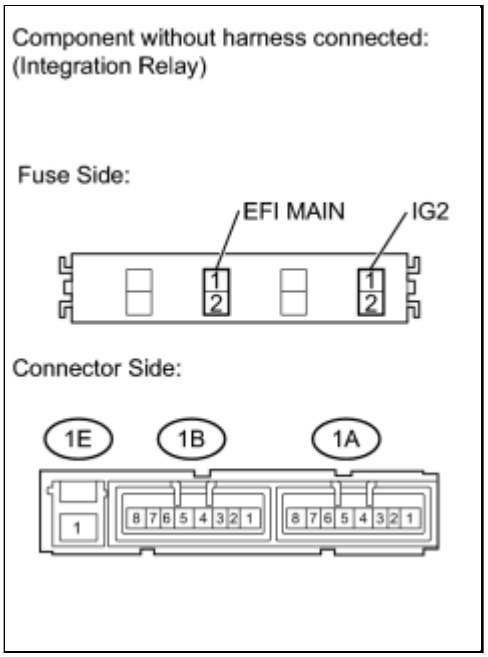
2.	INSPECT FUSES (EFI MAIN, IG2, AND EFI NO. 1 FUSES)

(a) Remove the EFI MAIN fuse, IG2 fuse and EFI No. 1 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
EFI MAIN fuse	Always	Below 1 Ω



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 fuse		
EFI No. 1 fuse		

(c) Reinstall the fuses.

NG ▶ **REPLACE FUSE (EFI MAIN, IG2 OR EFI NO. 1 FUSE)**

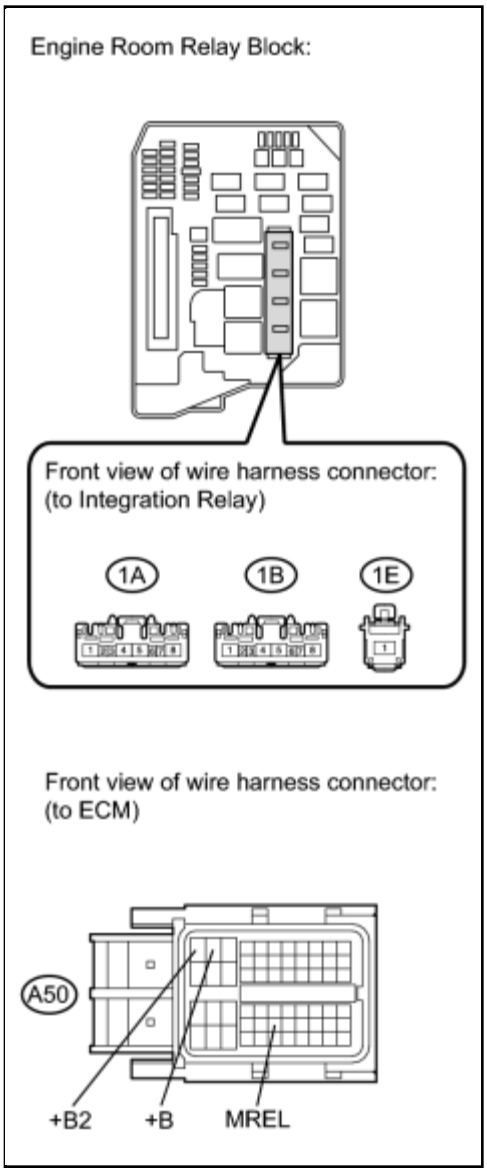
OK ▼

3.	INSPECT INTEGRATION NO.1 RELAY (EFI MAIN RELAY AND IG2 RELAY)

(a) Remove the integration relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1E-1 - 1B-4	When battery voltage absent	10 kΩ or higher
	When battery voltage applied to terminals 1B-2 and 1B-3	Below 1 Ω
1E-1 - 1A-4	When battery voltage absent	10 kΩ or higher
	When battery voltage applied to terminals 1A-2 and 1A-3	Below 1 Ω

(c) Reinstall the integration relay.

NG ▶ **REPLACE INTEGRATION NO.1 RELAY**

OK ▼

4.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - ECM)

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-44 (MREL) - 1B-2	Always	Below 1 Ω
A50-2 (+B) - 1B-4	Always	Below 1 Ω
A50-1 (+B2) - 1B-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

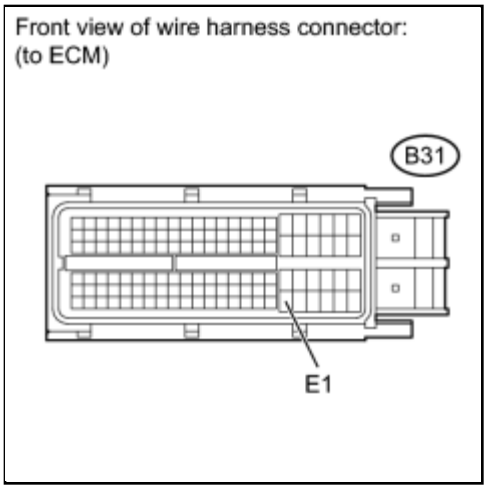
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-44 (MREL) - Body ground	Always	10 kΩ or higher
A50-2 (+B) - Body ground	Always	10 kΩ or higher
A50-1 (+B2) - Body ground	Always	10 kΩ or higher

(d) Reinstall the integration relay.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR**

REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY - ECM)



OK

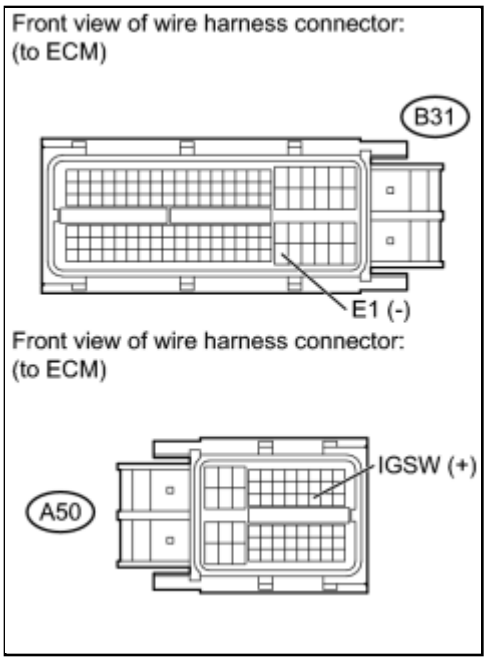
5.	**CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)**

(a) Disconnect the ECM connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-104 (E1) - Body ground	Always	Below 1 Ω



(c) Reconnect the ECM connector.

NG **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BODY GROUND)**

OK

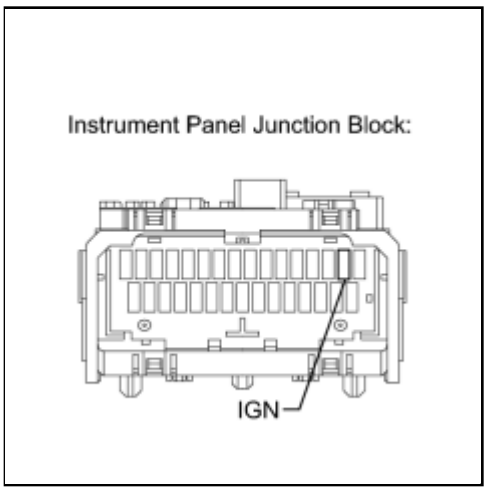
6.	**INSPECT ECM (IGSW TERMINAL VOLTAGE)**

(a) Disconnect the ECM connectors.

(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-28 (IGSW) - B31-104 (E1)	Ignition switch ON	11 to 14 V

(d) Reconnect the ECM connectors.

NG ▶ **INSPECT FUSE (IGN FUSE)**

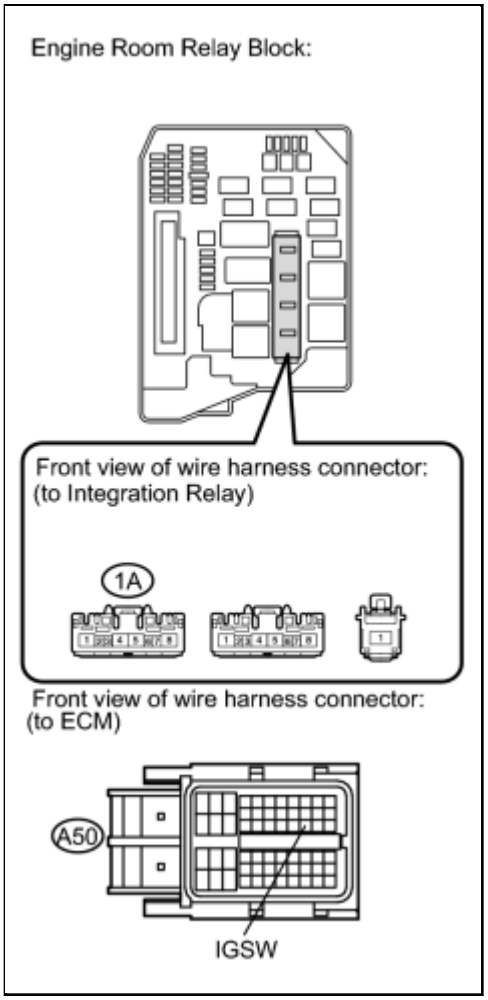
OK ▶ **REPLACE ECM**

7.	**INSPECT FUSE (IGN FUSE)**

(a) Remove the IGN fuse from the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:



TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IGN fuse	Always	Below 1 Ω

(c) Reinstall the IGN fuse.

NG ▶ **REPLACE FUSE (IGN FUSE)**

OK ▼

8.	**CHECK HARNESS AND CONNECTOR (ECM - INTEGRATION RELAY)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-28 (IGSW) - 1A-4	Always	Below 1 Ω

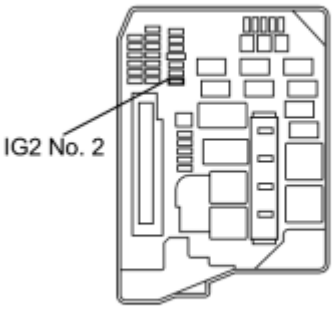
Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-28 (IGSW) - Body ground	Always	10 kΩ or higher

(d) Reinstall the integration relay.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - INTEGRATION RELAY)**



OK ▼

9.	**INSPECT FUSE (IG2 NO. 2 FUSE)**

(a) Remove the IG2 No. 2 fuse from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Engine Room Relay Block:

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
IG2 No. 2 fuse	Always	Below 1 Ω

(c) Reinstall the fuse.

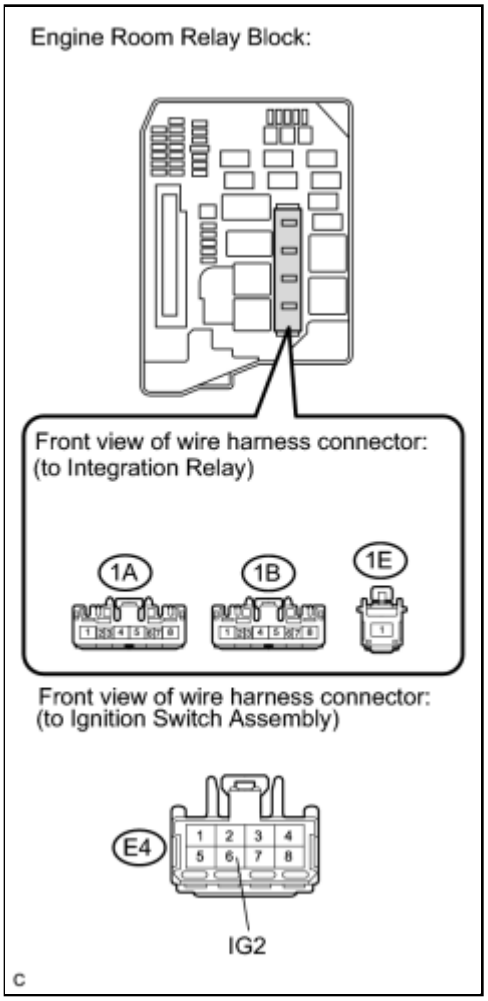
NG ▶ **REPLACE FUSE (IG2 NO. 2 FUSE)**

OK ▼

10.	CHECK HARNESS AND CONNECTOR (INTEGRATION RELAY - IGNITION SWITCH)

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the ignition switch connector.



(c) Measure the resistance according to the value(s) in the table below.

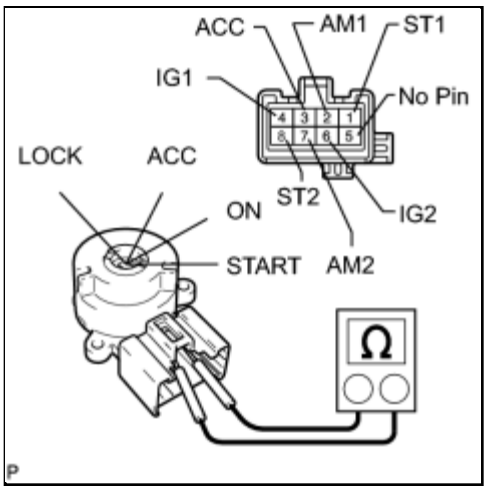
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-2 - E4-6 (IG2)	Always	Below 1 Ω
1A-3 - Body ground	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
E4-6 (IG2) - Body ground	Always	10 kΩ or higher



(d) Reinstall the integration relay.

(e) Reconnect the ignition switch connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INTEGRATION RELAY - ECM)**

OK ▼

11.	INSPECT IGNITION SWITCH

(a) Remove the ignition switch.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

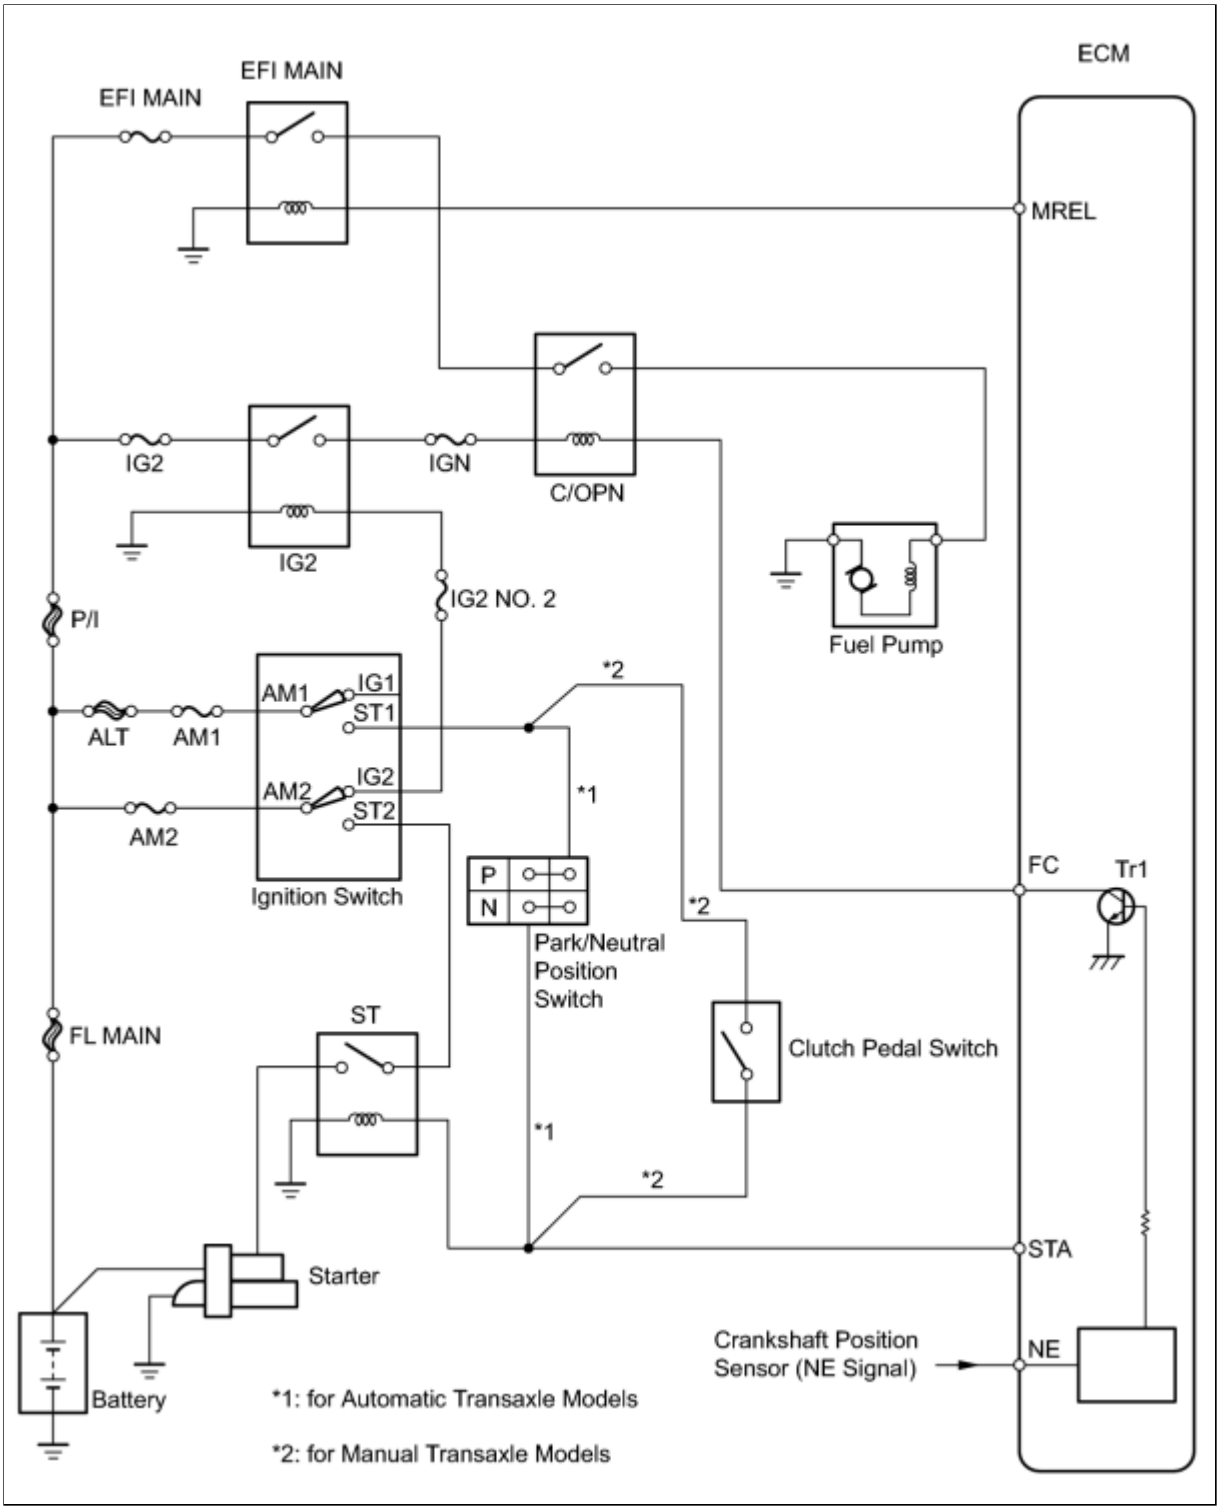
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
All Terminals	LOCK	10 kΩ or higher
2 (AM1) - 3 (ACC)	ACC	Below 1 Ω
2 (AM1) - 3 (ACC) - 4 (IG1)	ON	

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
7 (AM2) - 6 (IG2)	START	
2 (AM1) - 4 (IG1) - 1 (ST1)		
7 (AM2) - 6 (IG2) - 8 (ST2)		

(c) Reinstall the ignition switch.

NG ▶ **REPLACE IGNITION SWITCH**

OK ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (IGNITION SWITCH - BATTERY)**



Last Modified: 3-10-2010	6.4 J	**From:** 200901

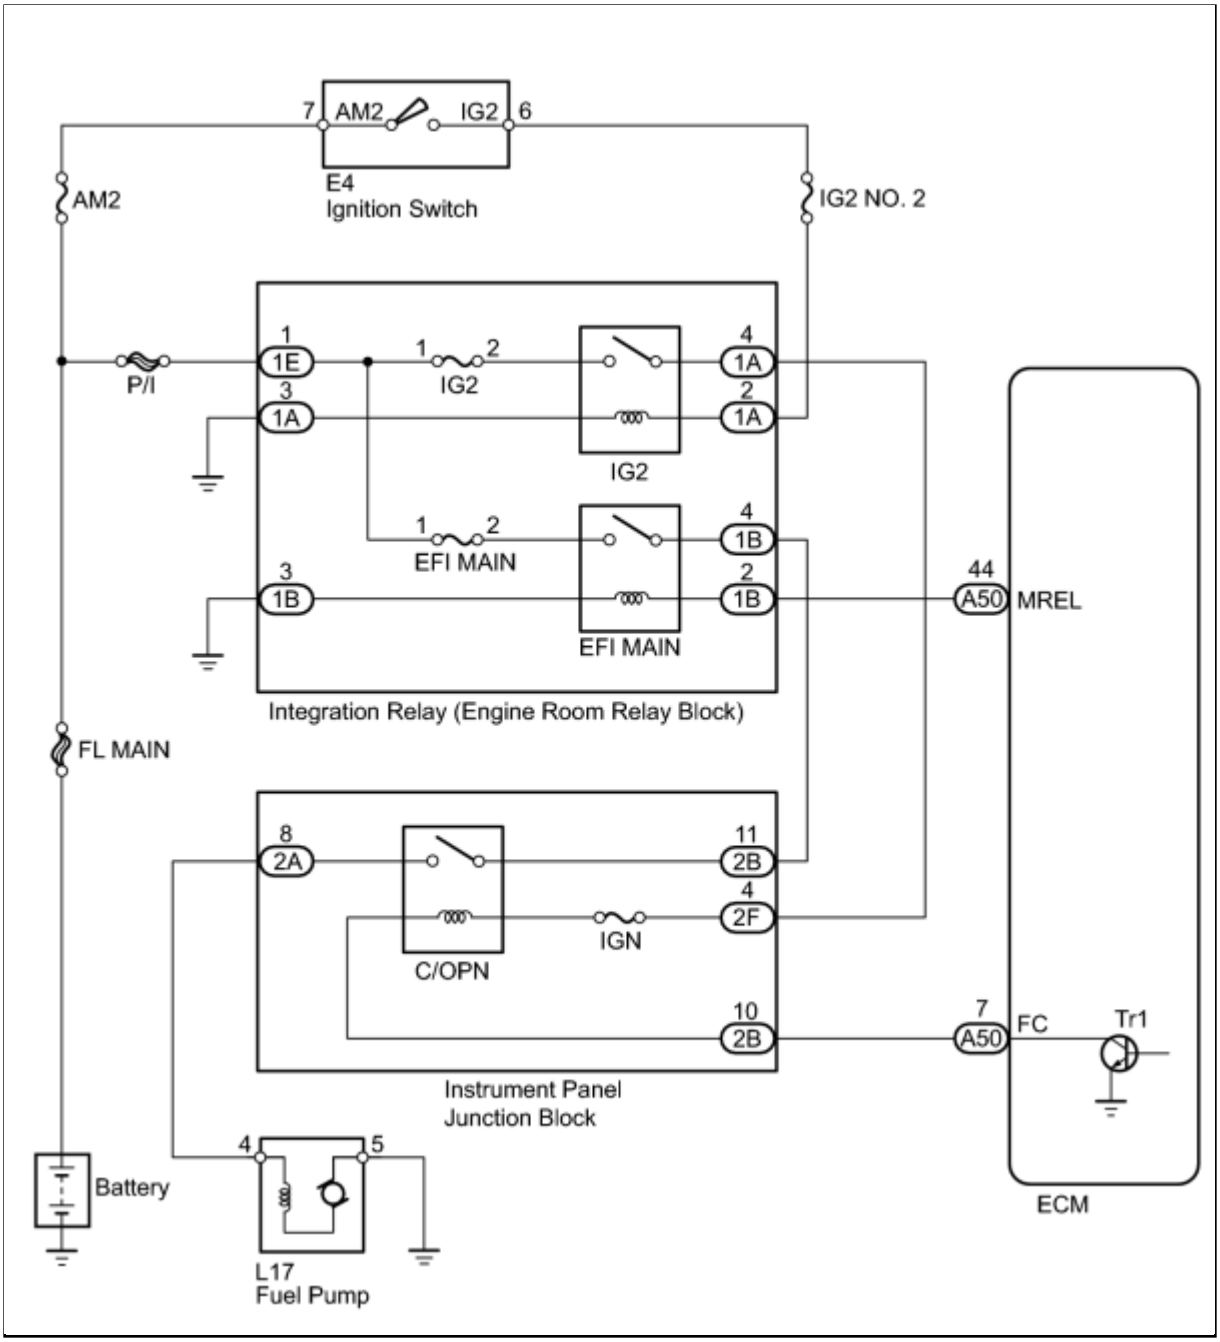
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: Fuel Pump Control Circuit (2010 Corolla)		

Fuel Pump Control Circuit



DESCRIPTION

When the engine is cranked, the starter relay drive signal from the ignition switch is input into the STA terminal of the ECM, and the NE signal generated by the crankshaft position sensor is also input into the NE+ terminal. Thus, the ECM interprets that the engine is being cranked, and turns transistor Tr1 in the ECM internal circuit ON. The current flows to the C/OPN (Circuit Opening) relay by turning Tr1 ON. Then, the fuel pump operates.

While the NE signal is input into the ECM, and the engine is running, the ECM turns Tr1 on continuously.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**PERFORM ACTIVE TEST USING TECHSTREAM (FUEL PUMP/SPD)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump/Speed.

(e) Check whether the fuel pump operating sound occurs when performing the Active Test using the Techstream.

Result:

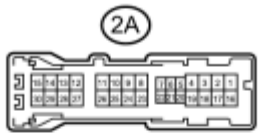
RESULT	PROCEED TO
Fuel pump operating sound does not occur	A
Fuel pump operating sound occurs	B

B ▶ **READ VALUE USING TECHSTREAM (STARTER SIG)**

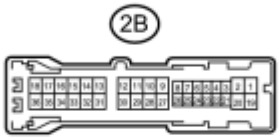
A ▼

2.	**INSPECT MAIN BODY ECU (C/OPN RELAY INPUT VOLTAGE)**

(a) Measure the voltage between the terminal of the instrument panel junction block and the body ground when the ignition switch is turned to ON and OFF.

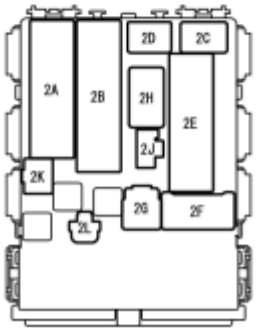


Standard Voltage:



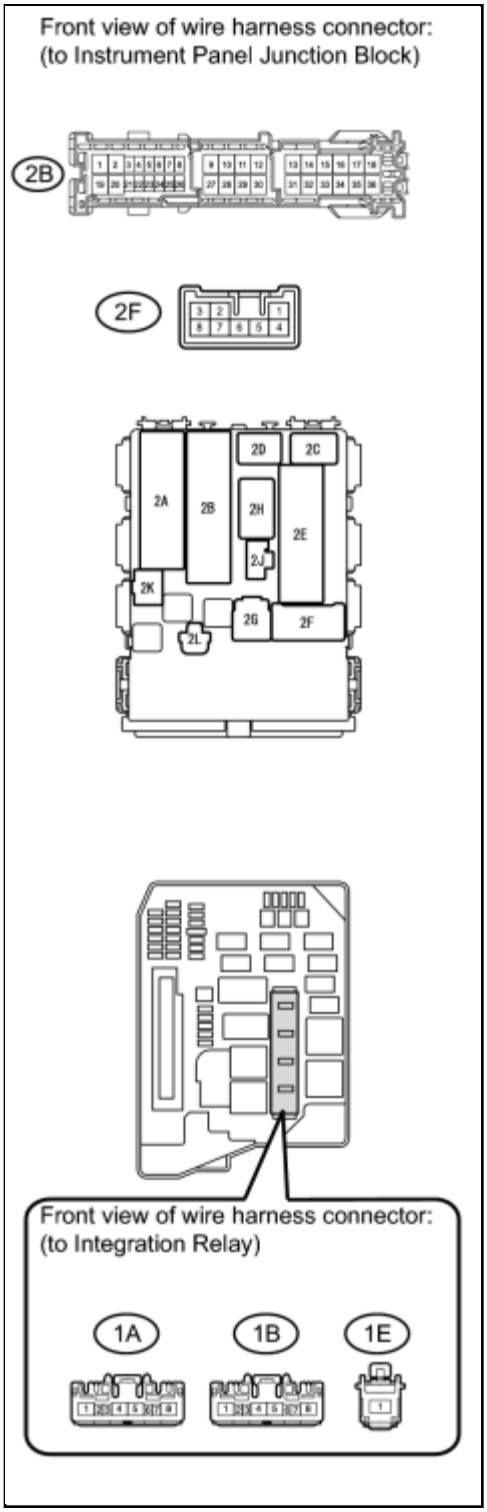
TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
2B-11 - Body ground	Ignition switch OFF	Below 1 V
2F-4 - Body ground		
2B-11 - Body ground	Ignition switch ON	11 to 14 V
2F-4 - Body ground		

Result:



RESULT	PROCEED TO
Outside standard range	A
Within standard range	B

Component without harness connected:
(Instrument Panel Junction Block)



B ▶ **INSPECT INSTRUMENT PANEL JUNCTION BLOCK (C/OPN RELAY)**

A ▼

3.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - INTEGRATION RELAY)**

(a) Remove the integration relay from the engine room relay block.

(b) Disconnect the instrument panel junction block connectors.

(c) Measure the resistance according to the value(s) in the table below.

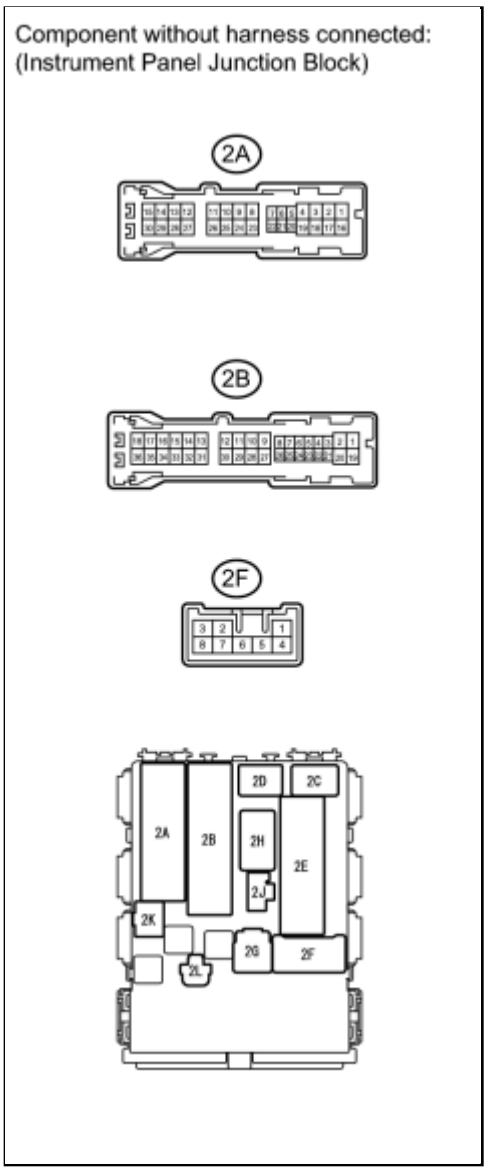
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1A-4 - 2F-4	Always	Below 1 Ω
1B-4 - 2B-11	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2F-4 - Body ground	Always	10 kΩ or higher
2B-11 - Body ground	Always	10 kΩ or higher

(d) Reinstall the integration relay.



(e) Reconnect the instrument panel junction block connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - INTEGRATION RELAY)**

OK ▶ **GO TO ECM POWER SOURCE CIRCUIT**

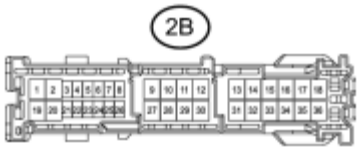
4.	**INSPECT INSTRUMENT PANEL JUNCTION BLOCK (C/OPN RELAY)**

(a) Remove the instrument panel junction block.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

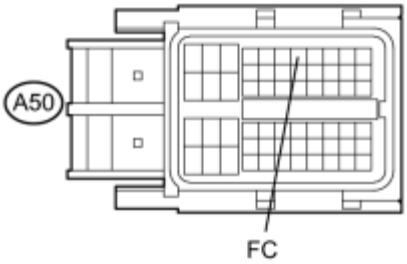
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-11 - 2A-8	When battery voltage absent	10 kΩ or higher
	When battery voltage applied to terminals 2F-4 and 2B-10	Below 1 Ω



(c) Reinstall the instrument panel junction block.

NG ▶ **REPLACE INSTRUMENT PANEL JUNCTION BLOCK**

OK



5.	**CHECK HARNESS AND CONNECTOR (C/OPN RELAY - ECM)**

Front view of wire harness connector:
(to Instrument Panel Junction Block)

Front view of wire harness connector:
(to ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the instrument panel junction block connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

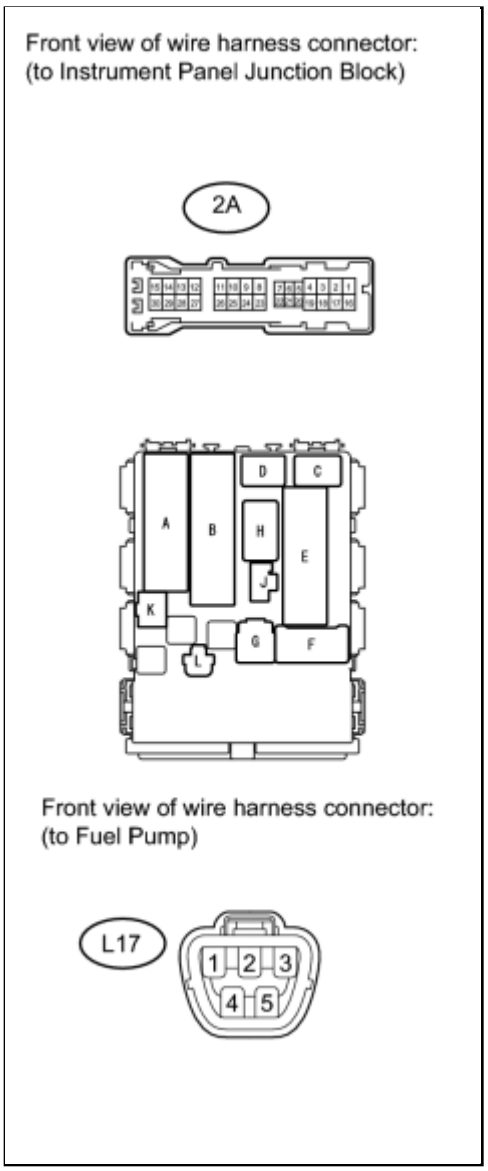
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-10 - A50-7 (FC)	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
2B-10 or A50-7 (FC) - Body ground	Always	10 kΩ or higher

(d) Reconnect the instrument panel junction block connector.



(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (C/OPN RELAY - ECM)**

OK ▼

6.	**CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - FUEL PUMP)**

(a) Disconnect the instrument panel junction block connector.

(b) Disconnect the fuel pump connector.

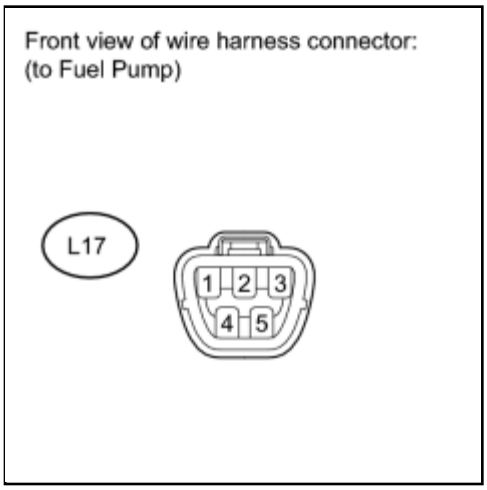
(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTIONS	CONDITION	SPECIFIED CONDITIONS
2A-8 - L17-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTIONS	CONDITION	SPECIFIED CONDITIONS
2A-8 or L17-4 - Body ground	Always	10 kΩ or higher



(d) Reconnect the fuel pump connector.

(e) Reconnect the instrument panel junction block connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK - FUEL PUMP)**

OK ▼

7.	**CHECK HARNESS AND CONNECTOR (FUEL PUMP GROUND CIRCUIT)**

(a) Disconnect the fuel pump connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTIONS	CONDITION	SPECIFIED CONDITIONS
L17-5 - Body ground	Always	Below 1 Ω

(c) Reconnect the fuel pump connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUEL PUMP GROUND CIRCUIT)**

OK ▼

8.	**READ VALUE USING TECHSTREAM (STARTER SIG)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Starter Signal.

(e) Check the result when the ignition switch is turned to ON and START.

Result:

IGNITION SWITCH POSITION	STARTER SIGNAL
ON	OFF
START	ON

NG ▶ **REPAIR OR REPLACE STARTING SYSTEM**

OK ▼

9.	**READ VALUE USING TECHSTREAM (ENGINE SPD)**

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

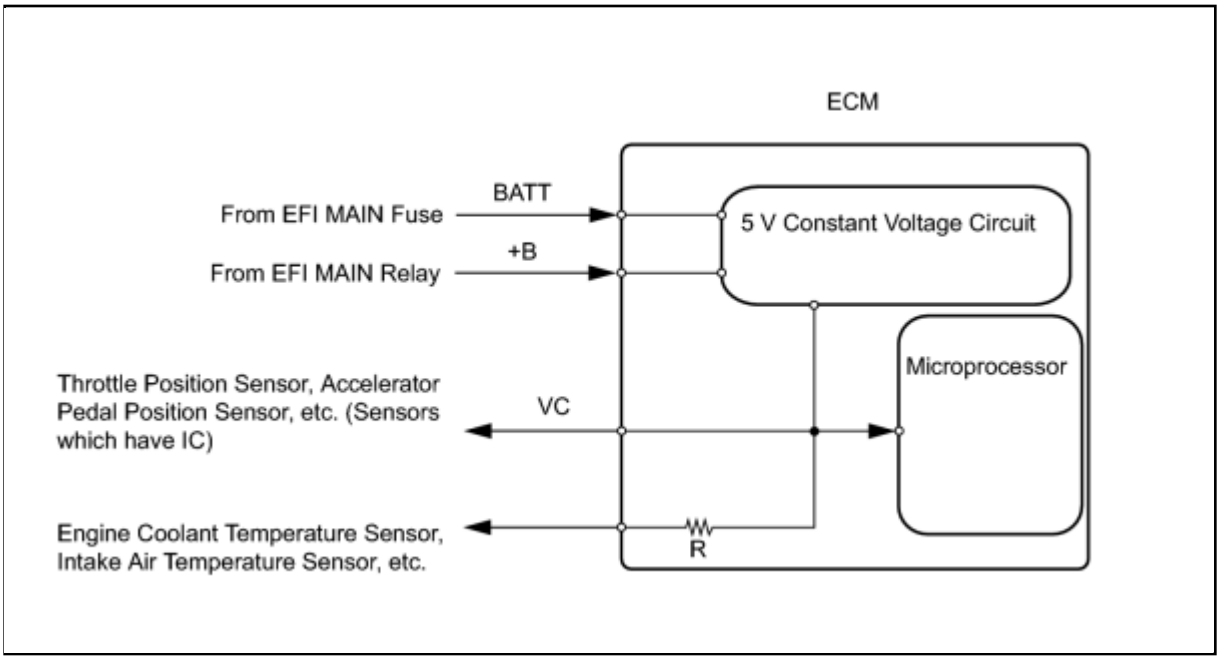
(d) Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Engine Speed.

(e) Read the values displayed on the Techstream while cranking.

OK:

Values are displayed continuously.

NG ▶ **REPAIR OR REPLACE CRANKSHAFT POSITION SENSOR CIRCUIT**



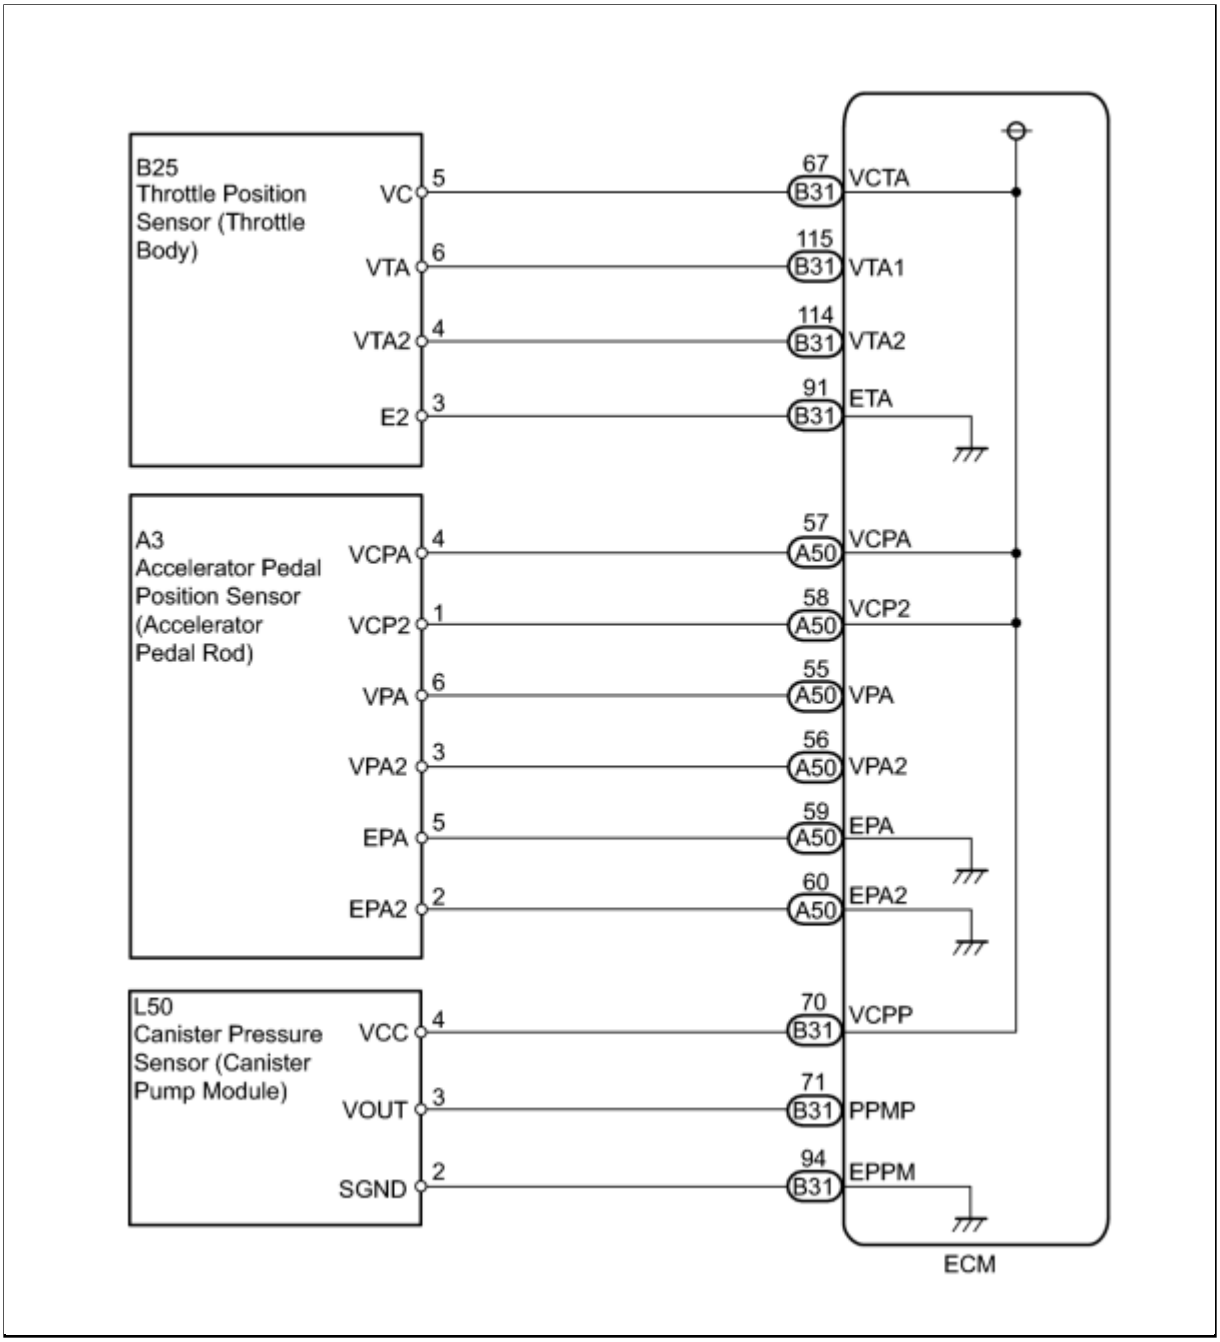
OK ▶ **REPLACE ECM**

Last Modified: 3-10-2010	6.4 J	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000001D6V08HX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: VC Output Circuit (2010 Corolla)		

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltage supplied to the +B (BATT) terminal to operate the microprocessor. The ECM also provides this power to the sensors through the VC output circuit.



When the VC circuit is short-circuited, the microprocessor in the ECM and sensors that are supplied with power through the VC circuit are inactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated for several seconds when the ignition switch is first turned ON. The MIL goes off when the engine is started.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK MIL**

(a) Check that the Malfunction Indicator Lamp (MIL) lights up when turning the ignition switch to ON.

OK:

MIL lights up

NG ▶ CHECK COMMUNICATION BETWEEN TECHSTREAM AND ECM

OK ▶ SYSTEM OK

2.	CHECK COMMUNICATION BETWEEN TECHSTREAM AND ECM

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Check the communication between the Techstream and ECM.

Result:

RESULT	PROCEED TO
Communication is possible	A
Communication is not possible	B

A ▶ GO TO MIL CIRCUIT

B ▼

3.	CHECK MIL (THROTTLE POSITION SENSOR)

(a) Disconnect the throttle body connector.

(b) Turn the ignition switch to ON.

(c) Check the MIL.

Result:

RESULT	PROCEED TO
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the throttle body connector.

A ▶ REPLACE THROTTLE BODY

B ▼

4.	CHECK MIL (ACCELERATOR PEDAL POSITION SENSOR)

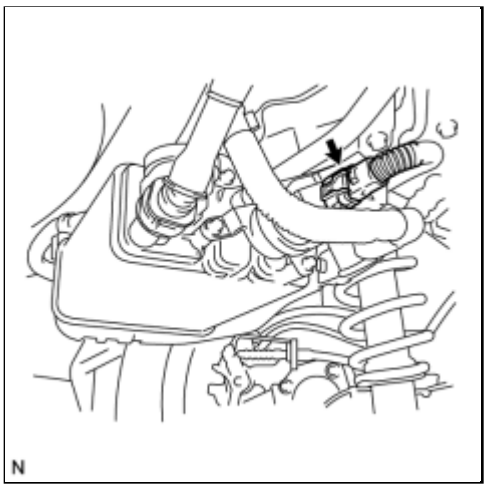
(a) Disconnect the accelerator pedal position sensor connector.

(b) Turn the ignition switch to ON.

(c) Check the MIL.

Result:

RESULT	PROCEED TO
MIL illuminates	A
MIL does not illuminate	B



(d) Reconnect the accelerator pedal position sensor connector.

A ▶ REPLACE ACCELERATOR PEDAL ROD ASSEMBLY

B ▼

5.	CHECK MIL (CANISTER PUMP MODULE)

(a) Disconnect the canister pump module connector.

(b) Turn the ignition switch to ON.

(c) Check the MIL.

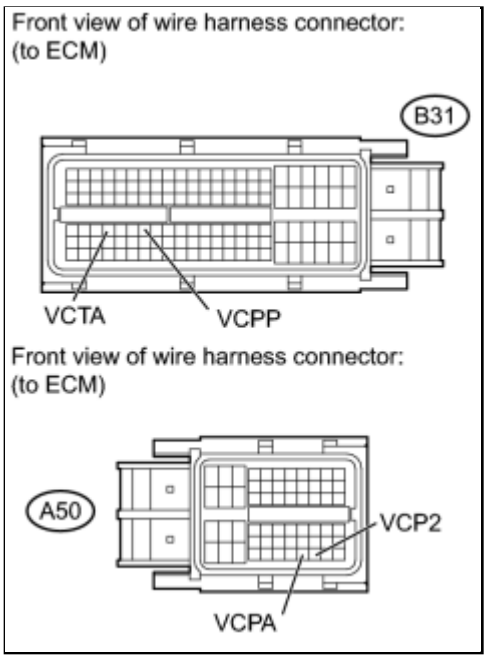
Result:

RESULT	PROCEED TO
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the canister pump module connector.

A ▶ **REPLACE CANISTER**

B ▼



6.	**CHECK HARNESS AND CONNECTOR (VC CIRCUIT)**

(a) Disconnect the throttle body connector.

(b) Disconnect the accelerator pedal position sensor connector.

(c) Disconnect the canister pump module connector.

(d) Disconnect the ECM connectors.

(e) Measure the resistance.

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-67 (VCTA) - Body ground	Always	10 kΩ or higher
A50-57 (VCPA) - Body ground	Always	10 kΩ or higher
A50-58 (VCP2) - Body ground	Always	10 kΩ or higher
B31-70 (VCPP) - Body ground	Always	10 kΩ or higher

(f) Reconnect the throttle body connector.

(g) Reconnect the accelerator pedal position sensor connector.

(h) Reconnect the canister pump module connector.

(i) Reconnect the ECM connectors.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK ▶ **REPLACE ECM**

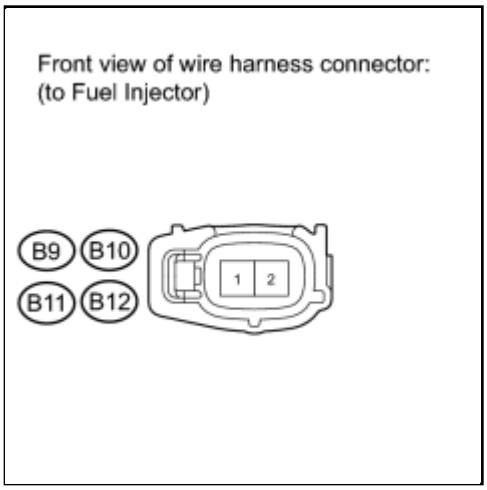
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000ZRM04AX
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: Fuel Injector Circuit (2010 Corolla)		

Fuel Injector Circuit

DESCRIPTION

The fuel injectors are located on the intake manifold. They inject fuel into the cylinders based on the signals from the ECM.



WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**INSPECT FUEL INJECTOR (POWER SOURCE)**

(a) Disconnect the fuel injector connectors.

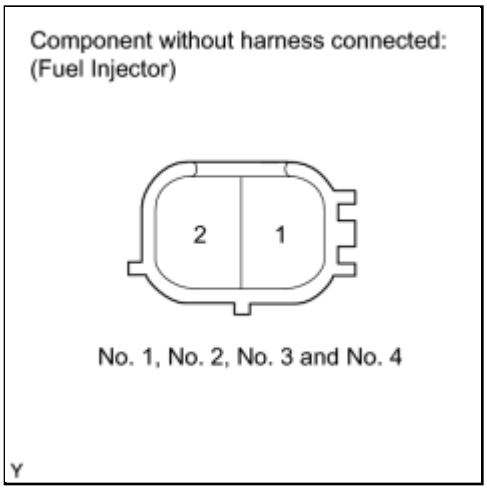
(b) Turn the ignition switch to ON.

(c) Measure the voltage according to the value(s) in the table below.

Standard Voltage:

TESTER CONNECTION	SWITCH CONDITION	SPECIFIED CONDITION
B9-1 - Body ground	Ignition switch ON	11 to 14 V
B10-1 - Body ground	Ignition switch ON	11 to 14 V
B11-1 - Body ground	Ignition switch ON	11 to 14 V
B12-1 - Body ground	Ignition switch ON	11 to 14 V

(d) Reconnect the fuel injector connectors.



NG ▶ **CHECK HARNESS AND CONNECTOR (FUEL INJECTOR - INTEGRATION RELAY)**

OK ▼

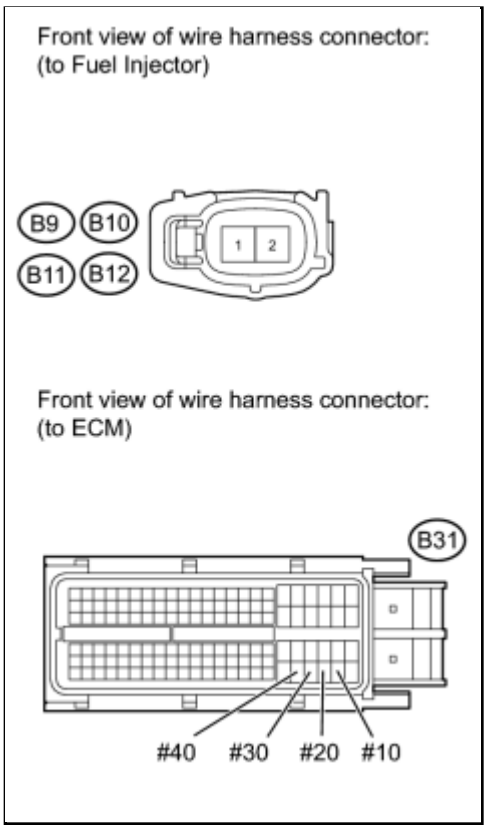
2.	**INSPECT FUEL INJECTOR (INJECTOR RESISTANCE)**

(a) Disconnect the fuel injector connectors.

(b) Measure the resistance according to the value(s) in the table below.

Standard Resistance:

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
1 - 2	20°C (68°F)	11.6 to 12.4 Ω



(c) Reconnect the fuel injector connectors.

NG ▶ **REPLACE FUEL INJECTOR**

OK ▼

3.	CHECK HARNESS AND CONNECTOR (FUEL INJECTOR - ECM)

(a) Disconnect the ECM connector.

(b) Disconnect the fuel injector connectors.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-2 - B31-108 (#10)	Always	Below 1 Ω
B10-2 - B31-107 (#20)	Always	Below 1 Ω
B11-2 - B31-106 (#30)	Always	Below 1 Ω
B12-2 - B31-105 (#40)	Always	Below 1 Ω

Standard Resistance (Check for Short):

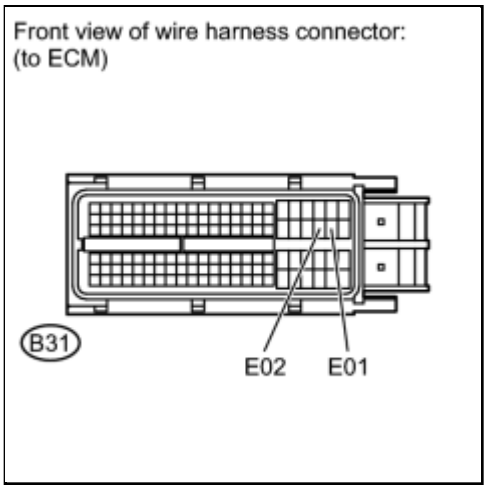
TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-2 or B31-108 (#10) - Body ground	Always	10 kΩ or higher
B10-2 or B31-107 (#20) - Body ground	Always	10 kΩ or higher
B11-2 or B31-106 (#30) - Body ground	Always	10 kΩ or higher
B12-2 or B31-105 (#40) - Body ground	Always	10 kΩ or higher

(d) Reconnect the fuel injector connectors.

(e) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (FUEL INJECTOR - ECM)**

OK ▼



4.	**CHECK HARNESS AND CONNECTOR (ECM - BODY GROUND)**

(a) Disconnect the ECM connector.

(b) Measure the resistance according to the value(s) in the table below.

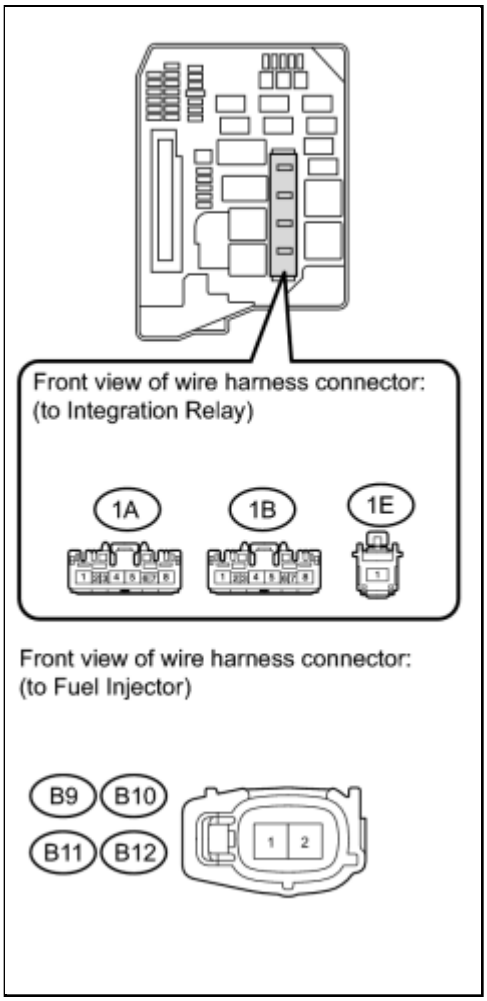
Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B31-45 (E01) - Body ground	Always	Below 1 Ω
B31-44 (E02) - Body ground	Always	Below 1 Ω

(c) Reconnect the ECM connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BODY GROUND)**

OK ▼



5.	**INSPECT FUEL INJECTOR (INJECTION AND VOLUME)**

(a) Check the fuel injector injection and volume INFO .

NG ▶ **REPLACE FUEL INJECTOR**

OK ▶ PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

6.	CHECK HARNESS AND CONNECTOR (FUEL INJECTOR - INTEGRATION RELAY)

(a) Disconnect the fuel injector connectors.

(b) Remove the integration relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-1 - 1A-4	Always	Below 1 Ω
B10-1 - 1A-4	Always	Below 1 Ω
B11-1 - 1A-4	Always	Below 1 Ω
B12-1 - 1A-4	Always	Below 1 Ω

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
B9-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B10-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B11-1 or 1A-4 - Body ground	Always	10 kΩ or higher
B12-1 or 1A-4 - Body ground	Always	10 kΩ or higher

(d) Reconnect the fuel injector connectors.

(e) Reinstall the integration relay.

NG ▶ REPAIR OR REPLACE HARNESS OR

CONNECTOR (FUEL INJECTOR - INTEGRATION RELAY)

OK ▶ REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT

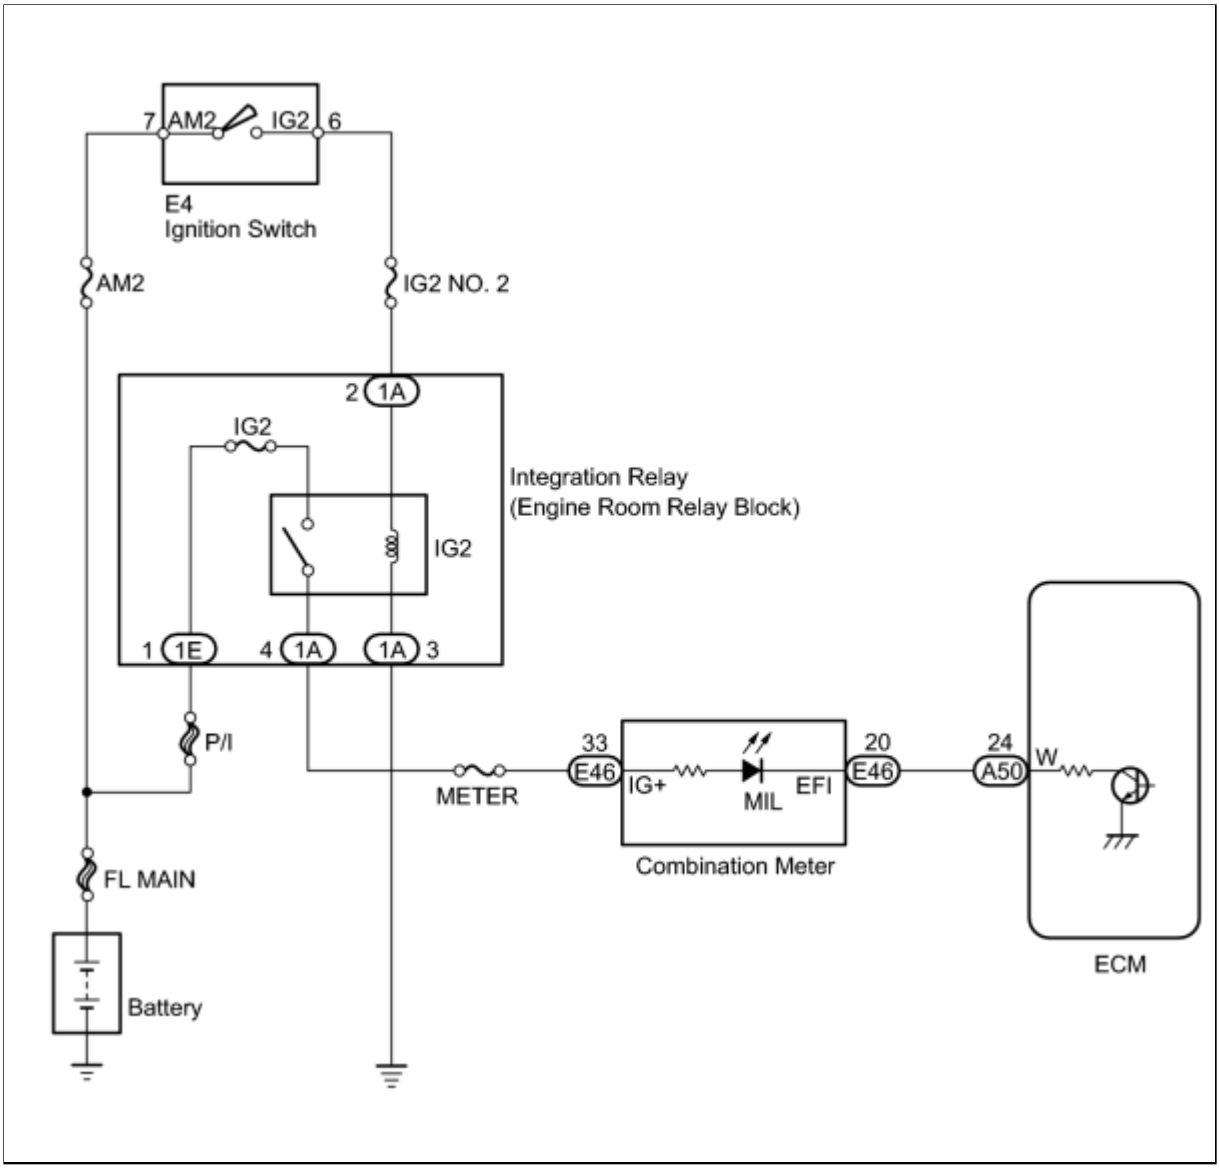
Title: 2AZ-FE ENGINE CONTROL: SFI SYSTEM: MIL Circuit (2010 Corolla)		



MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunction detections by the ECM. When the ignition switch is turned to ON, power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.

The MIL operation can be checked visually: When the ignition switch is first turned to ON, the MIL should illuminate and should then turn off. If the MIL remains illuminated or does not illuminate, conduct the following troubleshooting procedure using the Techstream.

WIRING DIAGRAM

INSPECTION PROCEDURE

PROCEDURE

1.	**CHECK THAT MIL ILLUMINATES**

(a) Perform troubleshooting in accordance with the table below.

Result:

MIL CONDITION	PROCEED TO
MIL remains ON	A
MIL does not illuminate	B

B ▶ CHECK THAT MIL IS ILLUMINATED

A ▼

2.	CHECK WHETHER MIL TURNS OFF

(a) Connect the Techstream to the DLC3.

(b) Turn the ignition switch to ON.

(c) Turn the Techstream on.

(d) Enter the following menus: Powertrain / Engine and ECT / Trouble Codes.

(e) Check if any DTCs have been detected. Write down any DTCs.

Result:

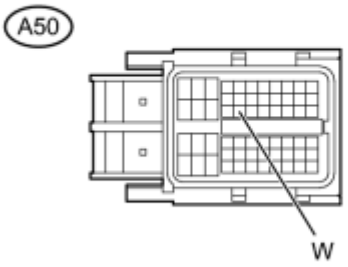
RESULT	PROCEED TO
No DTC detected	A
DTCs are detected	B

HINT:

Check for detected DTCs output from other ECUs which relate to the MIL.

B ▶ REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A ▼



3.	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

(a) Disconnect the ECM connector.

(b) Turn the ignition switch to ON.

(c) Check that the MIL does not illuminate.

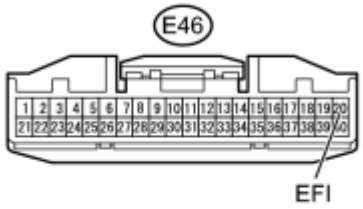
Front view of wire harness connector:
(to ECM)

OK:

MIL not illuminated.

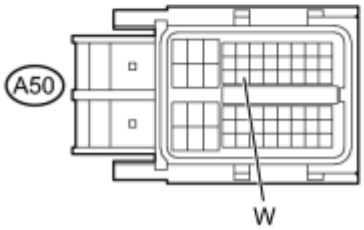
(d) Reconnect the ECM connector.

NG ▶ **CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)**



OK ▶ **REPLACE ECM**

4.	CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)



(a) Disconnect the ECM connector.

(b) Disconnect the combination meter connector.

Front view of wire harness connector:
(to Combination Meter)

Front view of wire harness connector:
(to ECM)

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Short):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-24 (W) or E46-20 (EFI) - Body ground	Always	10 kΩ or higher

(d) Reconnect the ECM connector.

(e) Reconnect the combination meter connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE COMBINATION METER**

5.	**CHECK THAT MIL IS ILLUMINATED**

(a) Check if the MIL is illuminated when the ignition switch is turned to ON.

OK:

MIL should be illuminated.

NG ▶ **CHECK THAT ENGINE STARTS**

OK ▶ **SYSTEM OK**

6.	**CHECK THAT ENGINE STARTS**

(a) Turn the ignition switch to ON.

(b) Start the engine.

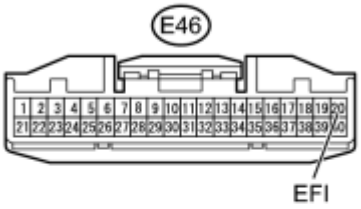
Result:

RESULT	PROCEED TO
Engine starts	A
Engine does not start*	B

HINT:

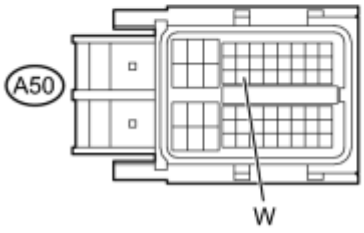
***: The Techstream cannot communicate with the ECM.**

B ▶ **GO TO VC OUTPUT CIRCUIT**



A ▼

7.	**CHECK HARNESS AND CONNECTOR (COMBINATION METER - ECM)**



(a) Disconnect the ECM connector.

(b) Disconnect the combination meter connector.

Front view of wire harness connector:
(to Combination Meter)

Front view of wire harness connector:
(to ECM)

(c) Measure the resistance according to the value(s) in the table below.

Standard Resistance (Check for Open):

TESTER CONNECTION	CONDITION	SPECIFIED CONDITION
A50-24 (W) - E46-20 (EFI)	Always	Below 1 Ω

(d) Reconnect the ECM connector.

(e) Reconnect the combination meter connector.

NG ▶ **REPAIR OR REPLACE HARNESS OR CONNECTOR (COMBINATION METER - ECM)**

OK ▶ **REPLACE COMBINATION METER**

Last Modified: 3-10-2010	6.4 L	**From:** 200901
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PD804HX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: PRECAUTION (2010 Corolla)		

PRECAUTION

1. INITIALIZATION

NOTICE:

- Perform RESET MEMORY (AT initialization) when replacing the automatic transaxle assembly, engine assembly or ECM INFO .
- Perform REGISTRATION (VIN registration) when replacing the ECM INFO .

HINT:

Reset memory or initial initialization cannot be completed by only disconnecting and reconnecting the cable to the negative (-) battery terminal.

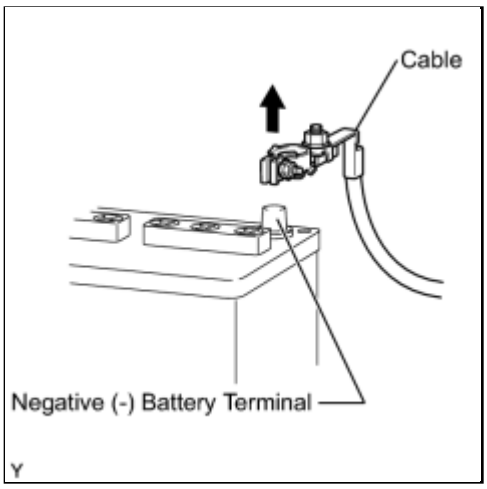
2. EXPRESSION OF IGNITION SWITCH

HINT:

The type of ignition switch used on this model differs according to the specifications of the vehicle. The expressions listed in the table below are used in this section.

EXPRESSION	IGNITION SWITCH (POSITION)	ENGINE SWITCH (CONDITION)
Ignition switch off	LOCK	Off
Ignition switch ON	ON	On (IG)
Ignition switch ACC	ACC	On (ACC)
Engine Start	START	Start

3. FOR USING TECHSTREAM



CAUTION:

Observe the following items for safety reasons:

- Read its instruction books before using the Techstream.
- Prevent the Techstream cable from being caught on the pedals, shift lever or steering wheel when driving with the Techstream connected to the vehicle.
- When driving the vehicle for testing purposes using the Techstream, two persons are required. One person drives the vehicle, and the other operates the Techstream.

4. DISCONNECTING AND RECONNECTING OF NEGATIVE BATTERY TERMINAL CABLE

(a) Before performing work on electric components, disconnect the cable from the negative (-) battery terminal in order to prevent damage to the electrical system or components.

(b) Before disconnecting and reconnecting the battery cable, turn the ignition switch off and the headlight switch OFF. Then loosen the terminal nut completely. Do not damage the cable or terminal.

(c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are cleared. Therefore, before disconnecting the battery cable, make a note of the settings.

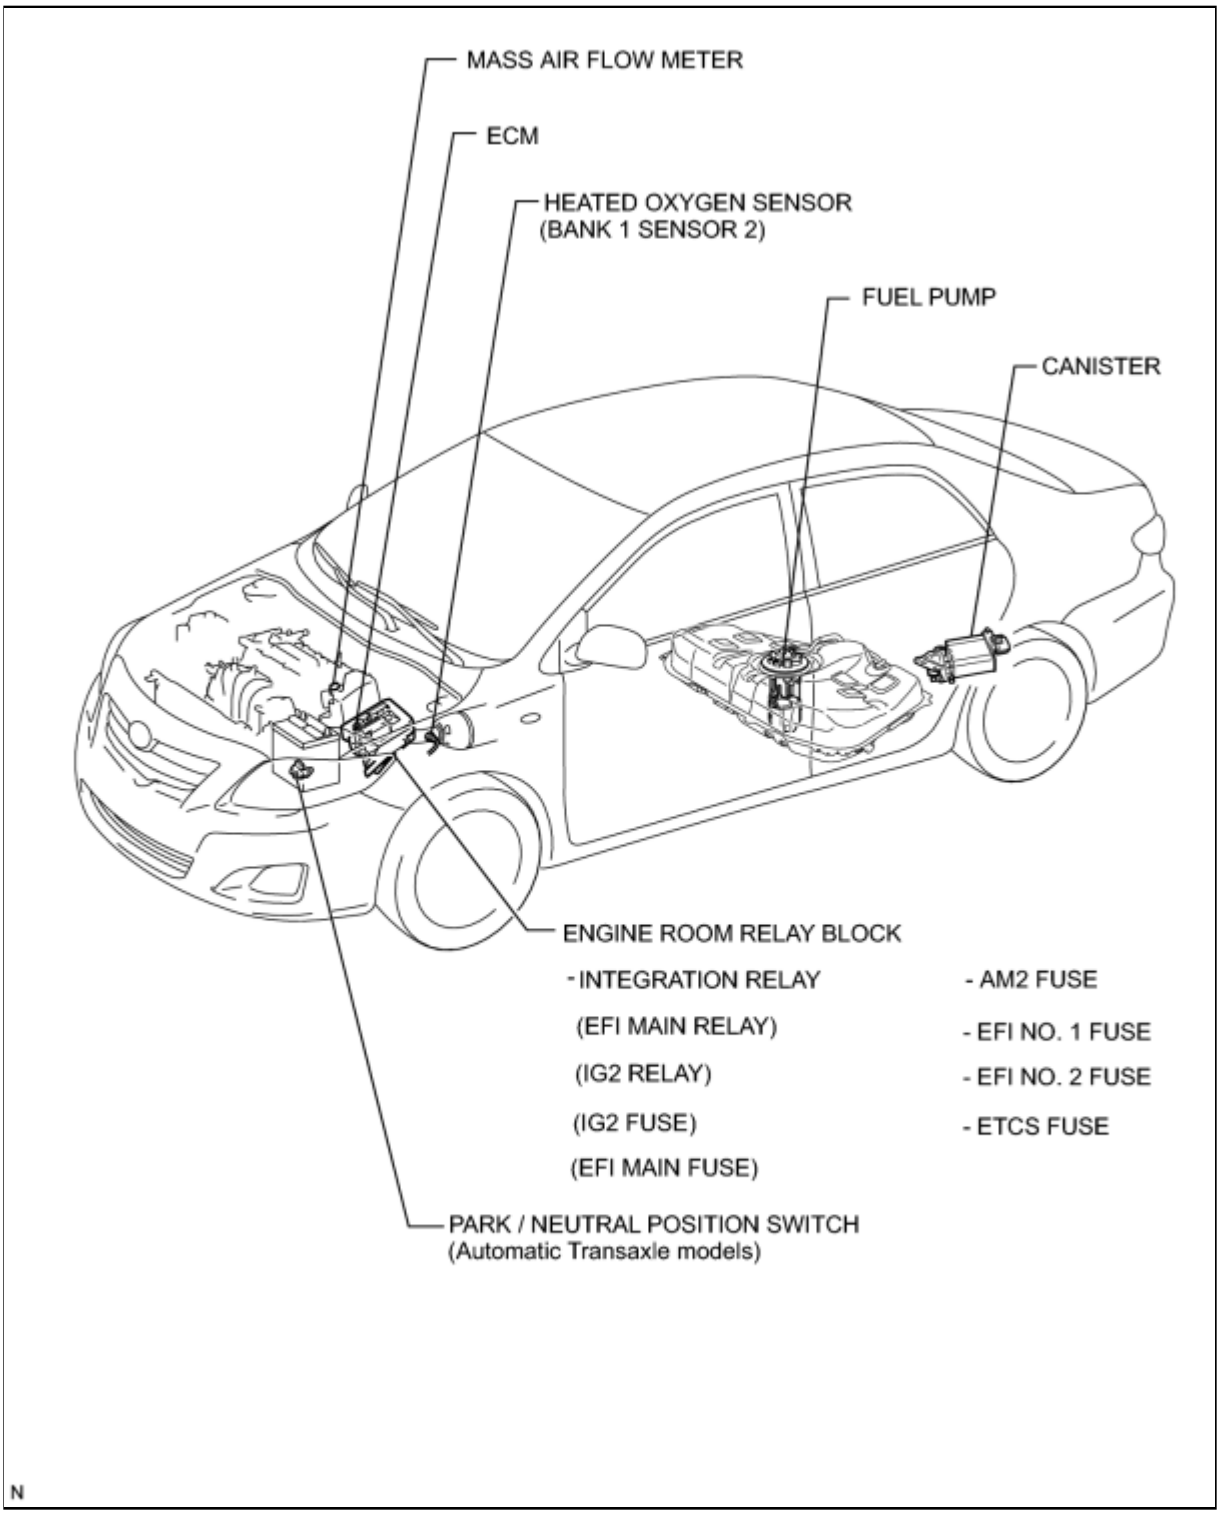
Model Year: 2010	**Model:** Corolla	**Doc ID:** RM000000PDC07TX
Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: DEFINITION OF TERMS (2010 Corolla)		



DEFINITION OF TERMS

TERMS	DEFINITION
Monitor Description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by the ECM based on the same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets DTCs when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components are involved in a single malfunction detection process. Each sensor and component is monitored in turn, when previous detection operation has completed.
Required Sensor/Components	The sensors and components used by the ECM to detect each malfunction.
Frequency of Operation	The number of times the ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during a single driving cycle. "Continuous" means the ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	Minimum time for which the ECM must detect a continuous deviation in monitored value(s) in order to set a DTC. Timing begins when Typical Enabling Conditions met.
Malfunction Thresholds	The value beyond which the ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after a malfunction is detected. "Immediate" means the ECM illuminates the MIL as soon as a malfunction is detected. "2 driving cycle" means the ECM illuminates the MIL if the same malfunction is detected a second time during the next sequential driving cycle.

Title: 2ZR-FE ENGINE CONTROL: SFI SYSTEM: HOW TO PROCEED WITH TROUBLESHOOTING (2010 Corolla)		

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

***: Use the Techstream.**

1.	**VEHICLE BROUGHT TO WORKSHOP**

NEXT

2.	**CUSTOMER PROBLEM ANALYSIS**

NEXT

3.	**CONNECT TECHSTREAM TO DLC3**

HINT:

If the display indicates a communication fault in the Techstream, inspect the DLC3.

NEXT

4.	**CHECK DTC AND FREEZE FRAME DATA***

HINT:

Record or print DTCs and freeze frame data, if necessary.
