BODY ELECTRICAL

LIGHTING

■FRONT LIGHT

- Large halogen headlights with two differently shaped bulbs were adopted for improved visibility and appearance.
- An integral clearance light unit was adopted. The unit is mounted into the headlight, giving the headlight an integrated look and providing superior visibility at night.
- The front & side turn signal light is incorporated inside the same lens as the front turn signal light, and the unit is installed on the side of the head light for improved visibility.
- Fog lights are provided on the sides of the front bumper. (OPT: Except for Australia model.)
- To adjust the headlight beam level, turn the headlight beam level control switch. (OPT for G.C.C. Countries)
