SEAT BELT REMINDER SYSTEM

■ DESCRIPTION

If the seat belt is not buckled, this system flashes the seat belt reminder light and sounds the multi buzzer as a reminder.

- The seat belt reminder system is provided for the driver seat as standard equipment on the G.C.C. countries models.
- When the ignition switch is turned ON, this system detects the condition of the driver's seat belts based on the signals from the seat belt buckle switch.
- The multi buzzer sounds when the vehicle speed exceeds 20 km/h (12.4 mph) to emphasize the fact that the seat belt is unbuckled. After 30 seconds, this sound changed to emphasize. This sound sounds during 90 seconds. Once a buzzer begins to sound, it will continue until the seat belt is buckled or the ignition switch is turned OFF.
