INTRODUCTION

OUTLINE OF NEW FEATURES

The following changes have been made to the new FJ Cruiser.

1. 1GR-FE Engine

A fuel sub tank sub-assembly to be installed under the rear floor has been available as optional equipment.* For details, see page 3.

*: Except models for China

2. Suspension

- In models with fuel sub tank sub-assembly, the rear suspension characteristics have been optimized due to the increase of rear axle load.
- The rear coil springs whose spring constant and installation load are optimized are adopted. The rear shock absorbers whose damping force is optimized are provided.

3. Combination Meter

On the models with fuel sub tank sub-assembly, the meter ECU has added the fuel gauge control for fuel sub tank sub-assemblies.
