WIRELESS DOOR LOCK REMOTE CONTROL SYSTEM

■ DESCRIPTION

The wireless door lock remote control system is adopted as optional equipment.
This system is a convenient system for locking and unlocking all the doors, from a distance.

- In this system, the wireless door control receiver performs the code identification process and the Main Body ECU effects the door lock control. A serial data link is provided for communication between the wireless door control receiver and the Main Body ECU.
- A key-holder type transmitter is used, and it contains the following three switches: the door lock switch, door unlock switch and panic switch.
- A rolling code system, in which the signal configuration changes each time a signal is transmitted by the transmitter, has been adopted.

Service Tip

When replacing the transmitter, the Main Body ECU, or the wireless door lock receiver or making a new ignition key, and the key's recognition code must be registered.

- The total number of keys that can be registered is four.
