## ■LOW VIBRATION AND LOW NOISE BODY

### 1. Sound Absorbing and Vibration Damping Materials

By optimally positioning silencers, transmitted noise from the engine, tires, etc., and engine noise outside the vehicle are reduced.

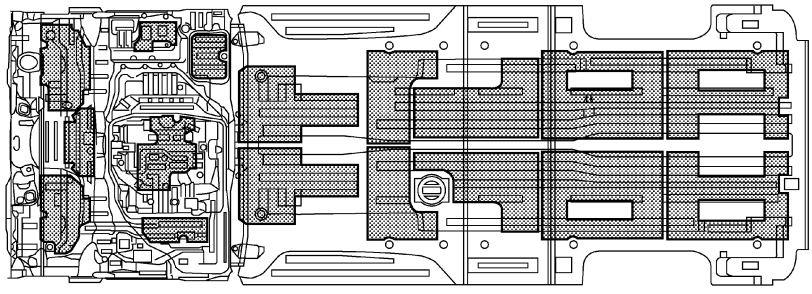

- Silencers are placed on the bottom side of the front floor on all models to reduce noise transmission from the engine.
- On 2TR-FE engine models with R351 manual transmission for Australia and Hong Kong, a silencer is placed at the engine under No. 2 cover to reduce external noise of the vehicle.
