■ FUEL SYSTEM

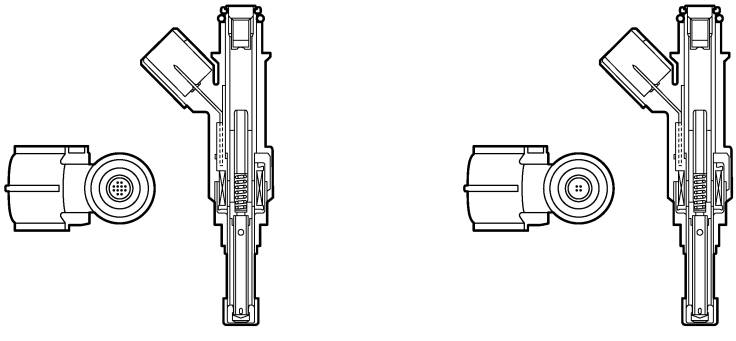

General

- On the unleaded gasoline models, a charcoal canister is used.
- The injector is shaped to form a long nozzle. This shortens the distance from the injector to the intake valve, which prevents the fuel from adhering to the intake port walls and reduces exhaust emissions. Depending on the type of fuel that is used, a 4-hole type (for leaded gasoline) or a 12-hole type (for unleaded gasoline) injector is provided.
- A compact and lightweight module fuel pump with a fuel sender gauge is used.
- A quick connector is used to connect the fuel pipe with the fuel hose for excellent serviceability.
