Toyota Parking Assist System

Clearance and Back Sonar

- The clearance and back sonar system is available on some commuter models for the General Countries as optional equipment.
- This system uses ultrasonic sensor equipped with an indicator and beeping alarm to detect obstacles at the corners in front of the vehicle and obstacles at the rear of the vehicle, and provided information to driver regarding the distance between the sensors and the obstacles and the position of the obstacle.

Wireless Door Lock Remote Control System

- A wireless door lock remote control system, which has an answer-back function that blinks the hazard warning light during locking and unlocking, is provided. The provision of the wireless door lock remote control system varies by destination. For details, see page MO-40 in Equipment List.
- This system has a function to lock and unlock the doors.
