SEAT BELT REMINDER SYSTEM

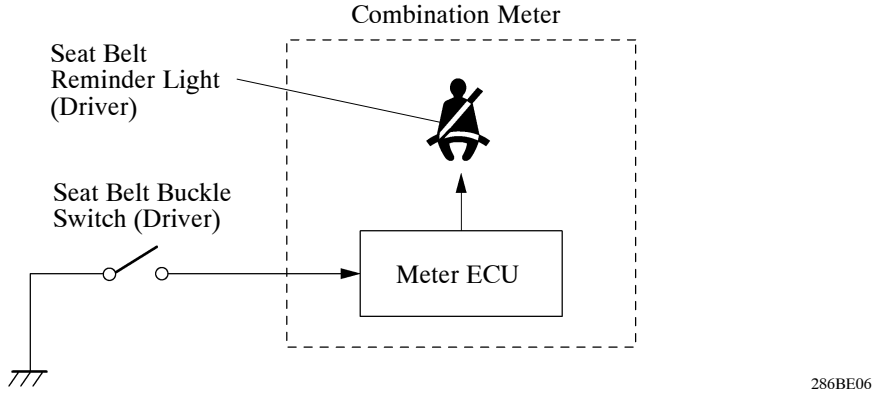

■ DESCRIPTION

- A seat belt reminder system is used. If the seat belt is not buckled, the reminder light flashes.
- When the ignition switch is turned ON, this system determines whether or not the seat belt is buckled depending on whether the signal from the switch in the seat belt buckle is ON or OFF.
- The occupant detection sensor provided in the seat cushion of the front passenger seat determines whether or not an occupant is seated in the front passenger seat.
- The specifications of this system vary by destination as indicated in the table below.

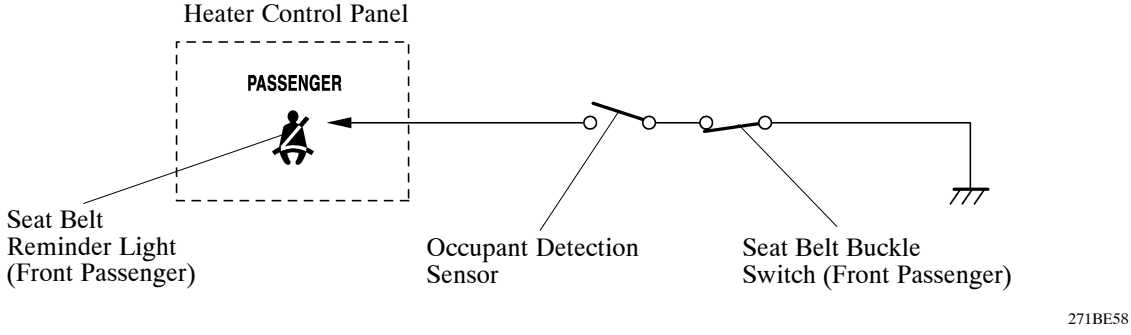

Item		Australia	G.C.C. Countries	General Countries*
