NEW FEATURES

■SEAT

1. Seat Layout

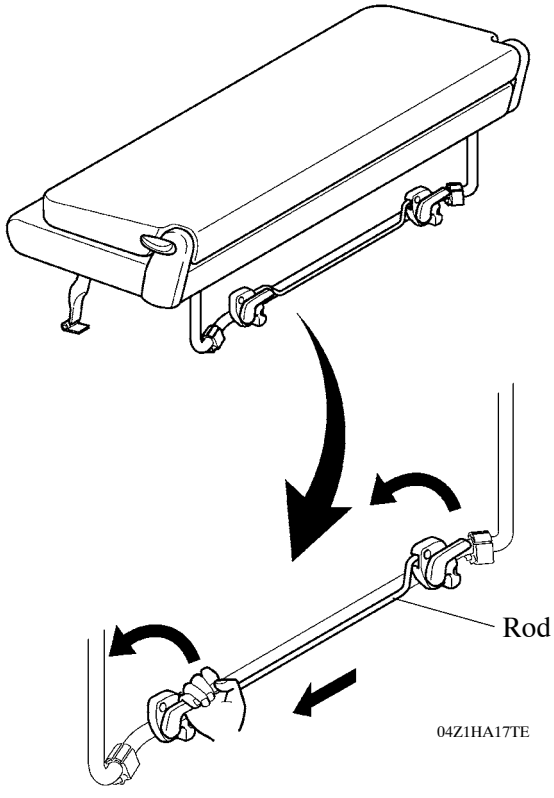

A 13 (3+3+3+4) seat layout is available on the standard wheelbase GL grade model for some general countries (Mexico and Venezuela).

2. Rear Seat

- On van models, the rear seat lock can be released by independently operating the left and right levers in a conventional manner. However, on new models, the levers are coupled through the rod, thereby allowing the rear seat lock to be released by operating either lever.

Previous

- The hard wire previously used for retaining the rear seat pad has been replaced with a flexible spring one in order to absorb any impact energy applied to the knees of an occupant seated in the rear seat when the rear seat pad comes into contact with them, thus protecting the knees of the occupant.
