NEW FEATURES

■ EXTERIOR

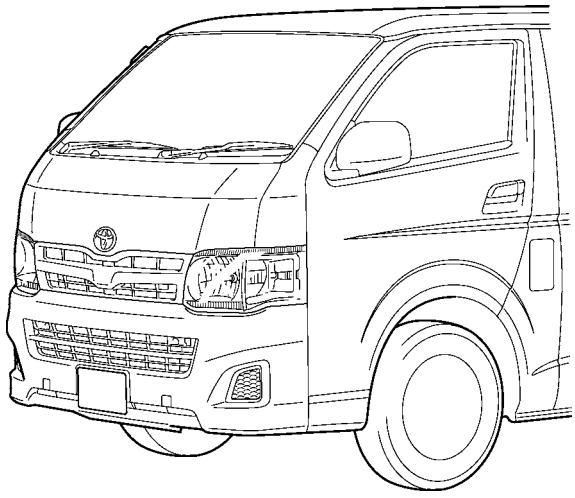

1. Front Design

- The designs of the radiator grille, front bumper, and headlights have been changed, resulting in a brand new appearance.
- Large sized headlights with lenses which appear transparent have been adopted for all models to create an expensive look.
- A new radiator grille is available as standard equipment for all models except the automatic transmission models for Thailand and the Philippines package automatic transmission models. A design whereby the new radiator grilles are integrated with the headlights has been adopted, and they have been provided in accordance with the grade and destination, as with the previous models, and as shown in the table below.

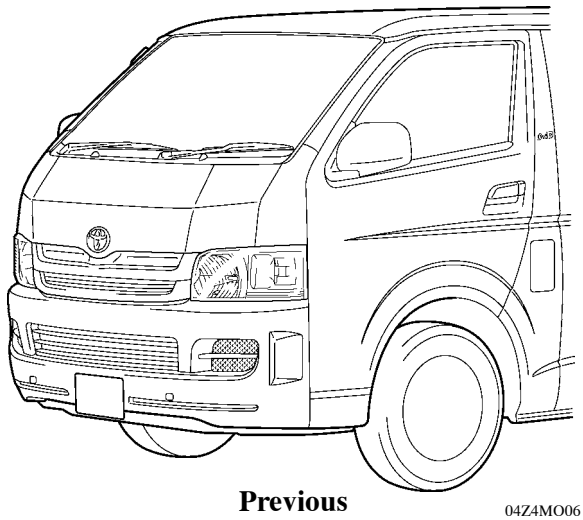

Painting and plating for new radiator grilles	Destination
Silver paintwork	● DX grade models excluding Commuter models for Thailand
Plating	● DX grade Commuter models for Thailand ● GL grade models excluding models for Russia
Smoke plating	● Russia

- Highly-recyclable, lightweight TSOP (Toyota Super Olefin Polymer) has been used for the front bumpers of all models to reduce the vehicle weight. In addition, a design whereby the front bumpers of the wide body models protrude in the front has been adopted to realize a dynamic feeling and a sensation of extra width. For the front bumpers of both the standard and wide body models, the original material color is used for the DX grade models (excluding the Commuter models for Thailand), and the same color as that used for the external panel has been used for the GL grade models and the DX grade Commuter models for Thailand.
- The designs of the fog light covers (fog lights not installed) and the fog light bezels (fog lights installed) of all models have been changed to realize a feeling of novelty. The design of the fog lights has not changed.
