SEAT

■ FRONT SEAT

A seat sliding structure (120 mm) has been provided as the standard equipment for the front passenger seat of the models shown below. Also, a semi-reclining structure has been adopted for the front passenger seat of those models, to which a full-reclining structure had been adopted previously. Therefore, for all the models for Australia and the New Zealand package models, the seat sliding structure (120 mm) and the semi-reclining structure have been provided as the standard specification for the front passenger seat.
