

This wiring diagram illustrates the electrical system for the lighting and blower components of a 1987-1990 Ford Bronco. The system is powered by a battery (H1) and a fuse block (6F). The components and their connections are as follows:

- H69 Rear Blower SW (Main):** Connected to the battery via a 6F fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 2F fuse.
- H67 Room Lamp SW:** Connected to the battery via a 6F fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 4F fuse.
- H72 Transmission Control Switch and A/T Shift Lever Illumination (Shift Lock Control Unit Assembly):** Connected to the battery via a 6D fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 17D fuse.
- H82 Idle-Up SW:** Connected to the battery via a 6D fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 20D fuse.
- H91 Heater Switch Assembly:** Connected to the battery via a 6D fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 13D fuse.
- I24 Idle-Up SW:** Connected to the battery via a 6D fuse. The main power line (G) goes to the 13P terminal. The switch is controlled by the 10F fuse.

The diagram also shows the ground connections for each component, which are all connected to a common ground rail (G). The wire colors are indicated by codes like W-B (White-Black) and G (Green).
