LIGHTING

■ HEADLIGHT AND TAILLIGHT

- A large headlight in which the high beam, low beam, clearance light and turn signal light are integrated has been adopted on the new Kluger.
- The wave-reflector type headlights and taillights are used as standard equipment.
  With the wave-reflector type headlights and taillights, the light from the bulbs is dispersed and distributed through wave parabolic shaped reflectors. As a result, the lens cut pattern is no longer provided in the center of the lens, thus realizing a clear look.
