SEAT BELT REMINDER SYSTEM

■DESCRIPTION

- A seat belt reminder system is used. If the seat belt is not buckled, the reminder light flashes.
- When the ignition switch is turned ON, this system determines whether or not the seat belt is buckled depending on whether the signal from the switch in the seat belt buckle is ON or OFF. For this function, the new Kluger has adopted a switch that uses a Hall IC. For details, see page BE-65.
- An occupant detection sensor to detect the presence of an occupant in the front passenger seat has been adopted with the seat belt buckle switch. The adopted front passenger occupant detection sensor is used to determine the presence of an occupant in the front passenger seat.
