■ FRONT WIPER DEICER SYSTEM

1. General

The front wiper deicer system uses a heater element in the front windshield glass to help reduce the formation of ice where the front wipers park.

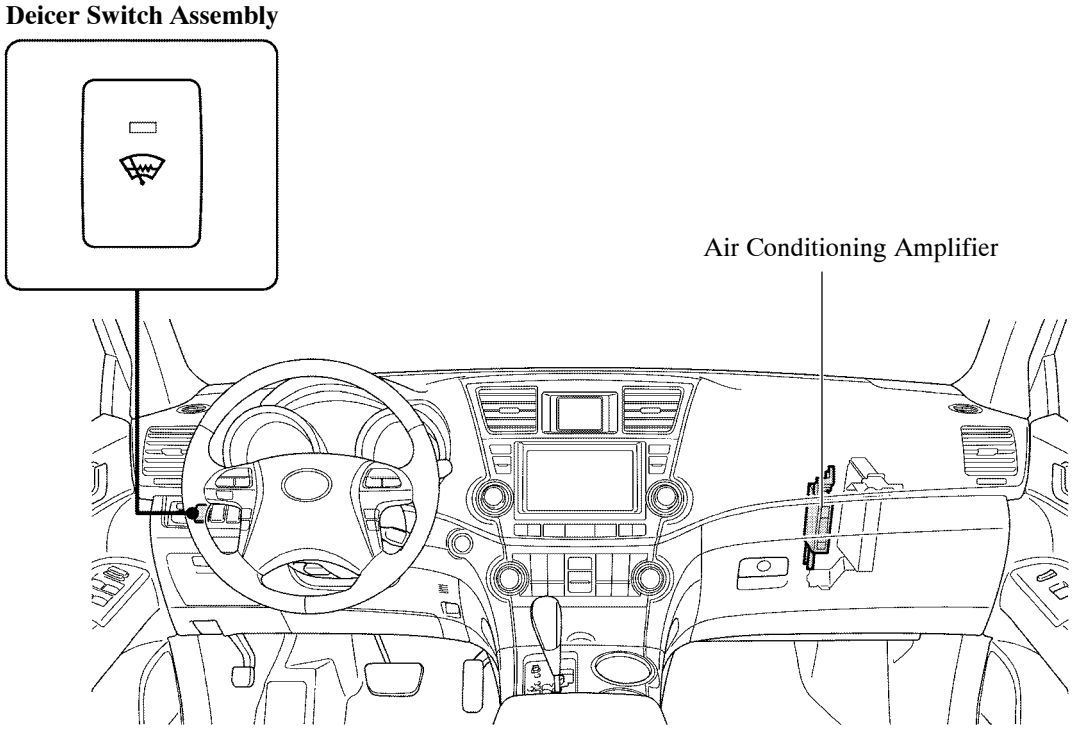

- This system is controlled by the air conditioning amplifier.
- This system is activated when the ignition switch is on (IG), and the front wiper deicer switch is pushed. The air conditioning amplifier activates to keep the mirror heaters and the front wiper deicer on for approximately 15 minutes.
