POWER BACK DOOR SYSTEM

■ DESCRIPTION

The power back door system enables the back door to be opened and closed automatically by a motor in accordance with signals from the power back door opener/closer switch or the power back door button on the door control transmitter or key.

In addition, a power back door closer switch has been provided on the back door for convenience.

- This system is controlled by the Power Back Door ECU. The Power Back Door ECU has been built into the power back door drive unit.
- This system activates when the following conditions are all met:
  - Power back door OFF switch is OFF (the power back door opener has not been disabled using the switch).
  - Shift lever is in the “P” position.
  - Vehicle speed is 3 mph (5 km/h) or less.
- This system has a one-motion opener function to secure usability. This function allows the power back door to be opened from a locked state without the need to unlock it first.
- The power back door system has the following equipment:

OP: Option –: Not Equipped
