REAR DEFOGGER SYSTEM

■DESCRIPTION

The rear defogger system uses the heater wire on the back door glass to defog the back door glass.

- This system is standard equipment on all models.
- This system is controlled by the Air Conditioning Amplifier.
- The rear defogger system of the models with the outside rear view mirror operates at the same time as the mirror heater function.
- When the power source is turned IG-ON, and the rear defogger switch or rear defogger & mirror heater switch is pushed, this system is activated to keep the defogger heater and mirror heaters on for approx. 15 minutes. However, the operating time of the rear defogger can be extended up to approx. 60 minutes when the following requirements are met. The operating time of the mirror heaters will not be extended.
  - Ambient Temperature: 0°C or less
  - Vehicle Speed: 40 mph (65 km/h) or more
