BODY ELECTRICAL

LIGHTING

■ DESCRIPTION

The new Hilux has the following systems:

System	Outline
Daytime Running Light System	This system is designed to automatically activate the headlights and taillight during the daytime to keep the car highly visible to other vehicles. The basic construction and operation are the same as in the previous model.
Headlight Beam Level Control System	This system keeps the beam of the headlights adjusted to the appropriate level in accordance with the number (weight) of passengers and volume of luggage. The headlight beam level can be adjusted in 5 steps by operating the headlight beam level control switch. The basic construction and operation are the same as in the previous model.
Rear Fog Light	The rear fog light makes the car highly visible in the rain or fog to other drivers driving bihind. On the new model, the operating condition of the rear fog light has been revised to prevent it from being left on unintentionally. For details, see the next page.
Light Reminder System	When the ignition key is turned from the ON or ACC to LOCK position while the driver door is open with the taillights and headlights turned on, this system warns the driver that the lights remain on by sounding the buzzer. The basic construction and operation are the same as in the previous model.
Illuminated Entry System	This system is useful when inserting the key into the ignition key cylinder in the dark. When a front door is opened, this system turns on the ignition key cylinder illumination light. The light turns off about 5 seconds after both front doors are closed. The basic construction and operation are the same as in the previous model.
