

1996 to 1998 MY Turbo Pressure Sensor Range/Performance Monitor (P1406)

To return to monitor description, see page [Tu-3](#).

MONITOR STRATEGY

Required sensors/Components	Main	Turbo pressure sensor
	Sub	MAF sensor
Frequency of operation	Continuous	
Duration	Within 10 sec.	
MIL operation	2 driving cycles	
Sequence of operation	None	

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	See page In-39
--	--------------------------------

TYPICAL MALFUNCTION THRESHOLDS

Detection Criteria	Threshold	Typical Enabling Condition
Turbo pressure sensor voltage	More than 4.2 V	Intake air amount is 0.45 g/rev.
	Less than 1.2 V	Intake air amount is 1.30 g/rev.
