SEAT BELT REMINDER SYSTEM

■ DESCRIPTION

- The seat belt reminder system is standard equipment on all models.
- If a seat belt is not fastened, this system flashes the seat belt reminder light or sounds the buzzer in the combination meter assembly as a reminder.
- When the engine switch is turned on (IG), this system detects the condition of the seat belts based on the signals from the front seat buckle switches (for the driver and front passenger) and the occupant detection sensor.
