BODY STRUCTURE

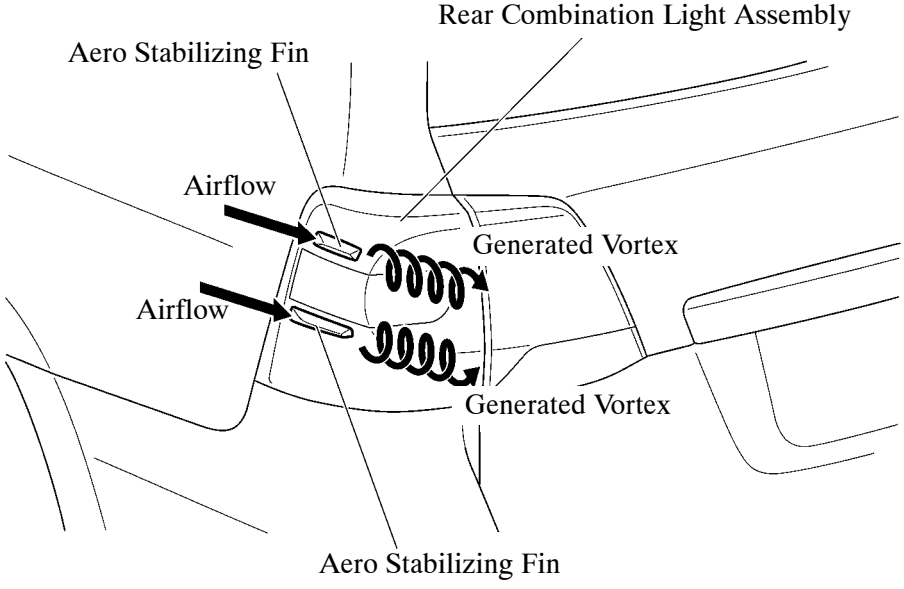

■ BODY STRUCTURE

1. Aerodynamics

Aero stabilizing fins (vortex generators) are used for the outer rear view mirror base and rear combination light assembly. As air flows over the surfaces of a moving vehicle, friction can cause that air to tumble over and under itself, increasing drag and creating erratic air pressure forces around the vehicle. Aero stabilizing fins alter the airflow before it becomes turbulent, creating a series of controlled spins, or vortices, and helping to equalize air pressure forces, reduce drag and improve vehicle stability.
