TAIL GATE CLOSER SYSTEM

■ DESCRIPTION

- A tail gate closer system is optional equipment for the models with the power back door system. This system sounds the power back door buzzer for 0.8 seconds and operates the tail gate opener & closer motor to fully close the tail gate automatically when the tail gate becomes ajar.
- The tail gate closer system uses 2 single motors to perform its close control and release control, thus simplifying the system.
- This system is controlled by the No. 2 main body ECU.
