ELECTRICAL BACK DOOR OUTSIDE HANDLE SYSTEM

■DESCRIPTION

- This system is provided on new Prius with a switch on the back door outside handle to open the back door electrically.
  Along with the adoption of this system, the key cylinder and the opener for the back door have been discontinued.
- When this system dose not operate due to a discharged battery or other malfunctions, the back door can be opened by directly operating the emergency lever in the back door lock assembly.
- This system is controlled by the body ECU.
- This system activates when the following two conditions are met:
  1) Vehicle speed is less than 5 km/h (3 mph).
  2) An unlock signal is input into the body ECU from the respective doors in accordance with the wireless door lock remote control, key, door lock control or smart entry & start system.
  3) The body ECU receives a back door unlock request signal from the smart ECU. (Only on models with the smart entry & start system.) For details, see page BE-34.
