■IGNITION SYSTEM

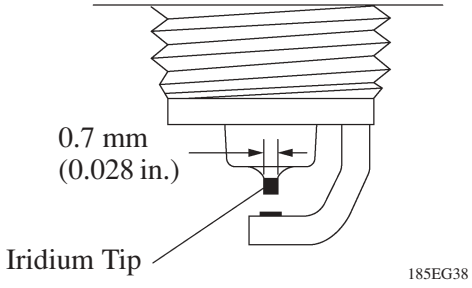

1. General

- A DIS (Direct Ignition System) is used. The DIS improves the ignition timing accuracy, reduces high-voltage loss, and enhances the overall reliability of the ignition system by eliminating the distributor.
- The DIS in this engine is an independent ignition system which has one ignition coil (with igniter) for each cylinder.
- Iridium-tipped spark plugs are used.

2. Spark Plug

Iridium-tipped spark plugs are used to improve ignition performance while maintaining the same durability of the platinum-tipped spark plugs.
