WIPER AND WASHER

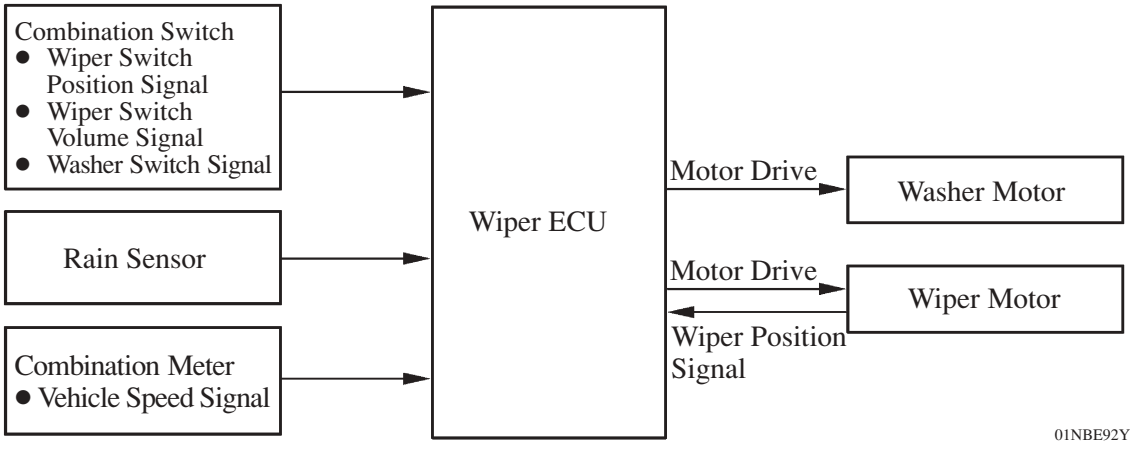

■ DESCRIPTION

- A wiper system with a raindrop sensing function is available as optional equipment on the high grade for Europe.
- This system has the following functions.

Function		Outline
Normal		This function controls the wiper in accordance with the wiper control switch position.
Intermittent	Raindrop Sensing Function	This function controls the wiping timing in accordance with the amount of raindrops when the wiper control switch is in the AUTO position.
Washer-linked Wiper with Drop-preventive Function		To prevent the fluid from dripping after the washer has been operated, this function operates the wiper once after they have operated in unison with the washer.
Forced Wiping During Start-off Function		This function forces the wipers to operate once, provided that the wiper control switch is in the AUTO position and the vehicle speed is a minimum of 6 km/h.

- This system consists of the combination meter, combination switch, wiper ECU, rain sensor, wiper motor and washer motor. The wiper ECU controls this system.
