WIRELESS DOOR LOCK REMOTE CONTROL SYSTEM

■ DESCRIPTION

The wireless door lock remote control system, which is convenient for locking and unlocking all doors at a distance, is standard equipment on all models. On the new model, this system provides the following features:

- In this system, the wireless door lock receiver performs the code identification process and sends the lock/unlock signal to the main body ECU, then the main body ECU effects the door lock control.
- A key-integrated, two-button (lock, unlock) type transmitter is used.
- The hazard warning light blinks when the door lock/unlock operation is performed by the wireless door lock remote control system.
