■SERPENTINE BELT DRIVE SYSTEM

1. General

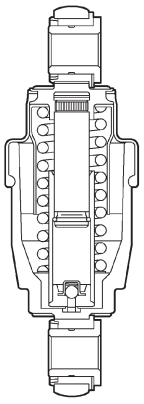

- Accessory components are driven by a serpentine belt consisting of a single V-ribbed belt. It reduces the overall engine length, weight and the number of engine parts.
- An automatic tensioner eliminates the need for tension adjustment.

*: Models with Air Conditioner System

2. Automatic Tensioner

The automatic tensioner consists of an idler pulley and a tensioner. The idler pulley maintains belt tension by the force of the spring that is located in the tensioner.
