Multi-information Display

- A multi-information display that uses a dot LCD (Liquid Crystal Display) is standard equipment on the models for Europe.
- The multi-information display provides odometer, tripmeter, outside temperature, trip information, various warnings, and DTC (Diagnostic Trouble Code) readings.
  In addition to the above, this display provides the following functions: a customize function to enable the display selection of six languages and the unit selection for trip information, odometer, and tripmeter readings; and a function to enable the user to reset the average fuel consumption and the average vehicle speed and to cancel certain warning indications through the operation of a switch.
