Navigation with AV System

- Through the use of the GPS (Global Positioning System) and the map data in a DVD (Digital Versatile Disc), this navigation system analyzes the position of the vehicle and indicates that position on the map that is displayed on screen. Additionally, it provides instructions to guide the driver through the route to reach the destination that has been selected.
- The navigation system is available as optional equipment on the high grade for Europe.

Rear View Monitor

- A set consisting of the rear view monitor and the navigation with AV system is available as optional equipment on the 2AD-FHV engine models with the run-flat tire (without spare tire) for Europe.
- When the driver moves the shift lever to reverse, this system automatically displays the rear view on the monitor. A television camera is mounted on the back door.

Bluetooth® Hands-free System

- The Bluetooth® is a high-speed wireless data communication system that uses the 2.4 GHz frequency band prescribed by the Bluetooth SIG (Special Interest Group), with communication at a speed of 1 Mbps. By merely bringing a cellular telephone that has been pre-registered on the multi display into the vehicle, the user can talk hands-free. Thus, it is no longer necessary to connect the telephone to a hands-free connection device as in the past.
- The Bluetooth® hands-free system, which enables the user to make and receive calls and talk hands-free by operating the switches on the screen display, is available on the navigation with AV system as optional equipment on the high grade for Europe.
- The Bluetooth hands-free system consists of the navigation with AV system, microphone in the overhead console and switches on the steering pad.
