Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Transfer system

Symptom	Suspected Area	See page
Noise	1. Oil (level low)	TF-45
	2. Oil (wrong)	TF-45
	3. Transfer (faulty)	TF-60
Oil leakage	1. Oil (level too high)	TF-45
	2. Gasket (damaged)	TF-55
	3. Oil seal (worn or damaged)	TF-55
	4. O-ring (worn or damaged)	TF-55

TRANSFER SYSTEM

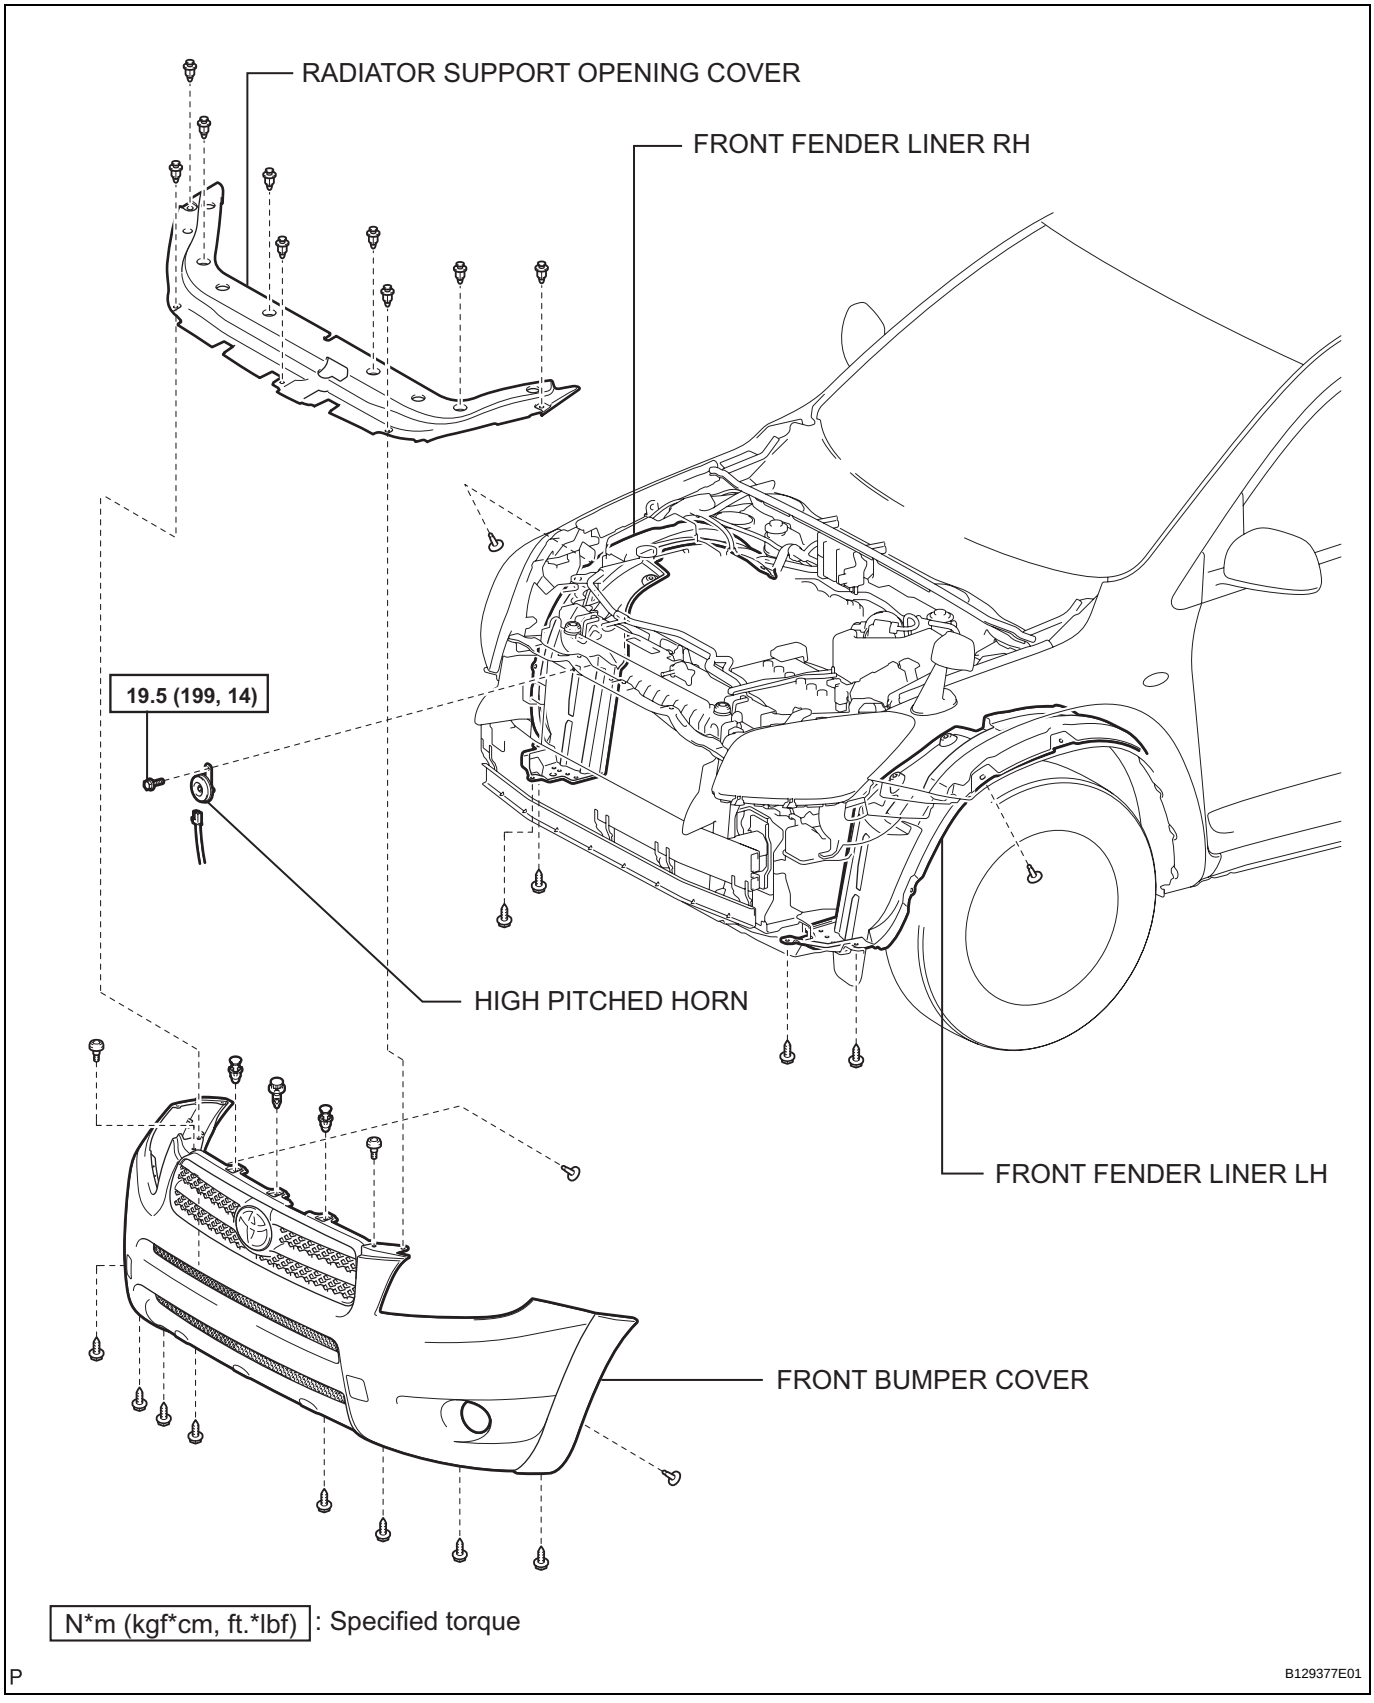
PRECAUTION

1. **Before disassembling the transfer assembly, thoroughly clean it by removing any foreign matter. This will help prevent contamination during disassembly and reassembly.**
2. **When removing the transfer cover or any other light alloy parts, do not pry them off with a screwdriver or other tool that may cause damage. Instead, tap the parts with a plastic-faced hammer.**
3. **Always arrange removed parts in the order they were removed and protect them from foreign matter.**
4. **Before installation of each part, thoroughly clean and dry it. Then apply hypoid gear oil to it. Do not use alkaline chemicals to clean aluminum parts, rubber parts or ring gear set bolts. Also, do not use white gasoline or other cleaning oils to clean O-rings, oil seals or rubber parts.**
5. **Coat any sliding surface or rotating parts with hypoid gear oil.**
6. **Do not directly fix a part in a vise. Place aluminum plates between the part and vise.**
7. **Replace any damaged or deformed snap rings with new ones.**
8. **Do not allow the case's mating surface to be scratched. Scratches may lead to oil leakage.**
9. **Using a razor blade and gasket scraper, remove old Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent from the seal surface.**
10. **Clean all parts to remove excess Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent completely.**
11. **Clean the sealing surface with solvent so that no residue remains on the seal surface.**
12. **Apply Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent in a continuous line of approximately 1.2 mm (0.047 in.) in diameter along the sealing surface.**
13. **Be sure to assemble parts within 10 minutes of Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent application. Otherwise, the Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent must be removed and reapplied.**
14. **After sealing parts, do not allow oil to contact the seal for at least 1 hour.**
15. **Do not allow scratches on a part's contact surface with an oil seal or gasket. Scratches may lead to oil leakage.**
16. **When press-fitting an oil seal, be careful not to damage the lip of the oil seal and its periphery.**

PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)

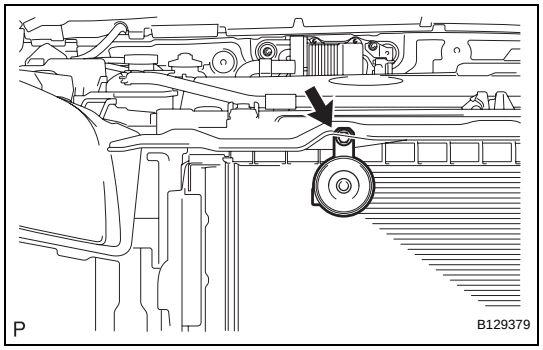
HINT:



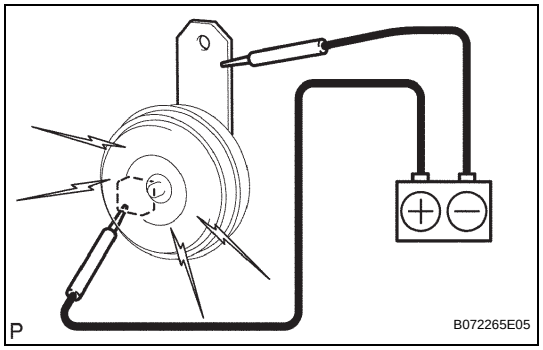
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Transfer system

Symptom	Suspected Area	See page
Noise	1. Oil (level low)	TF-45
	2. Oil (wrong)	TF-45
	3. Transfer (faulty)	TF-60
Oil leakage	1. Oil (level too high)	TF-45
	2. Gasket (damaged)	TF-52
	3. Oil seal (worn or damaged)	TF-52
	4. O-ring (worn or damaged)	TF-52



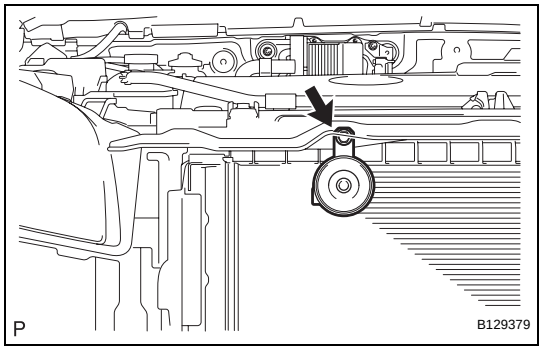
HIGH PITCHED HORN



COMPONENTS

REMOVAL

1. **REMOVE RADIATOR SUPPORT OPENING COVER (See page ET-4)**
2. **REMOVE FRONT FENDER LINER LH (See page ET-4)**
3. **REMOVE FRONT FENDER LINER RH (See page ET-4)**
4. **REMOVE FRONT BUMPER COVER (See page ET-5)**
5. **REMOVE HIGH PITCHED HORN**
   (a) Disconnect the horn connector.
   (b) Remove the bolt and horn.



INSPECTION

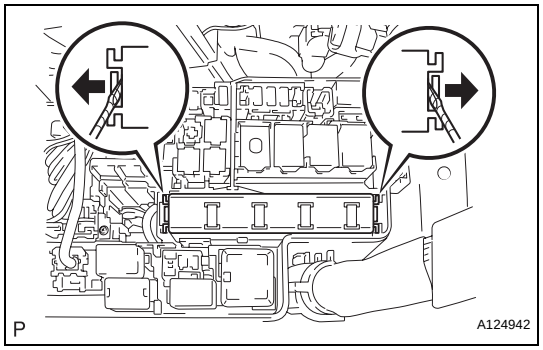
1. **INSPECT HIGH PITCHED HORN**
   (a) Apply battery voltage to the horn and check the operation of the horn.
   OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1	Horn sounds
Battery negative (-) → Horn bracket	

If the result is not as specified, replace the horn.

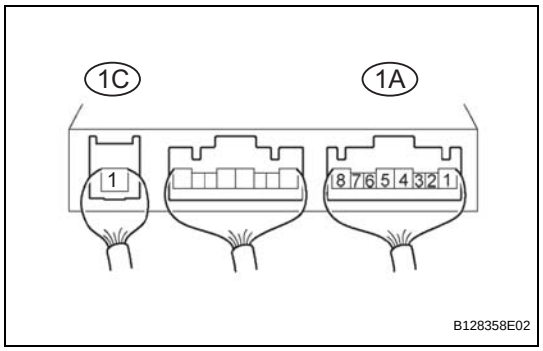
INSTALLATION

1. **INSTALL HIGH PITCHED HORN**
   (a) Place the stay onto the baffle part of the radiator support upper, and then install the horn with the bolt.
   Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)
   (b) Connect the horn connector.
2. **INSTALL FRONT BUMPER COVER (See page ET-11)**
3. **INSTALL FRONT FENDER LINER RH (See page ET-12)**
4. **REMOVE FRONT FENDER LINER LH (See page ET-12)**
5. **REMOVE RADIATOR SUPPORT OPENING COVER (See page ET-12)**



HORN RELAY

ON-VEHICLE INSPECTION

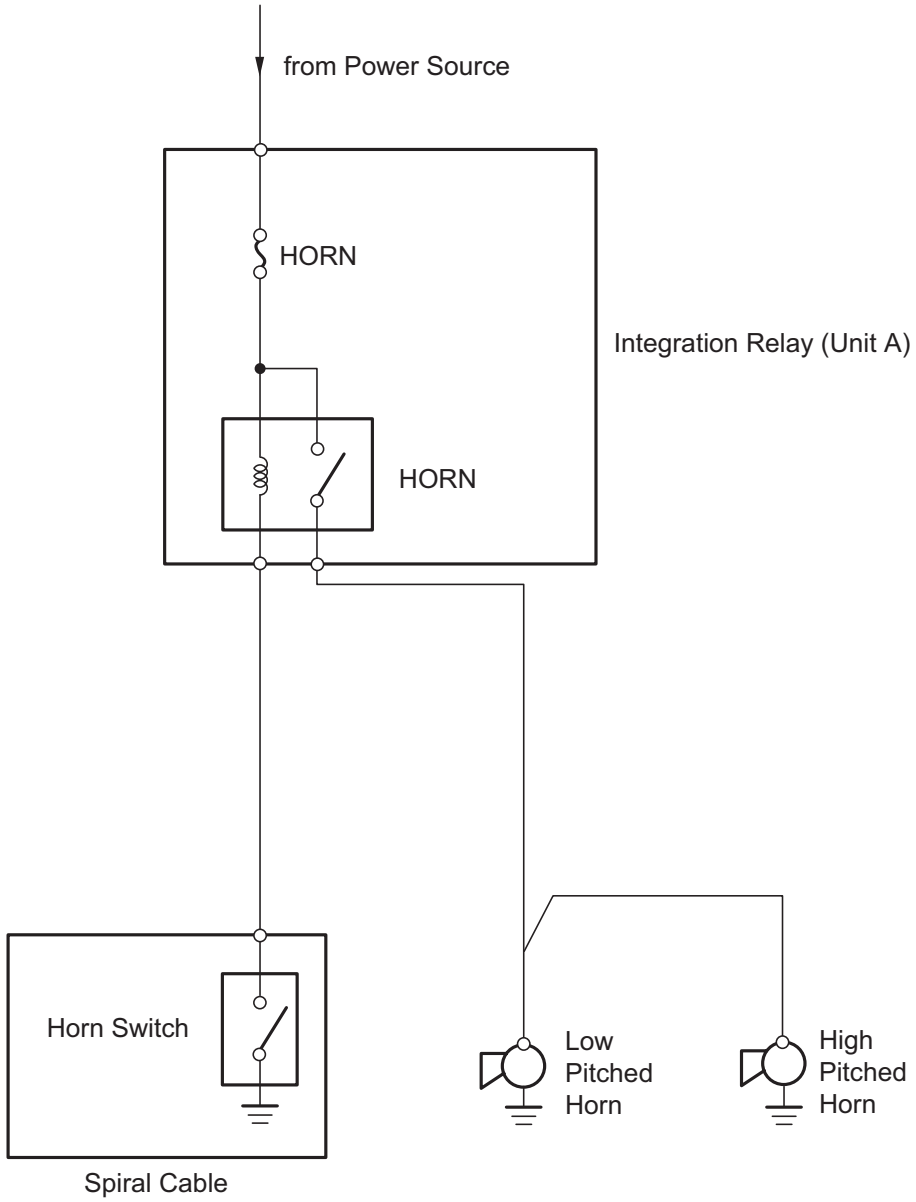


1. REMOVE ENGINE ROOM NO. 1 RELAY BLOCK COVER

2. INSPECT INTEGRATION RELAY (UNIT A: HORN RELAY)

(a) Using a screwdriver, detach the 2 claws and disconnect the integration relay from the engine room junction block.
HINT:
Tape the screwdriver tip before use.

(b) Measure the resistance of the integration relay.
Standard voltage



Tester Connection	Specified Condition
1A-8 - 1C-1	10 kΩ or higher
1A-8 - 1A-5	
1A-8 - 1C-1	Below 1 Ω (when battery voltage is applied to terminals 1A-7 and 1A-6)
1A-8 - 1A-5	

If the result is not as specified, replace the integration relay.

3. INSTALL ENGINE ROOM NO. 1 RELAY BLOCK COVER

SYSTEM DIAGRAM

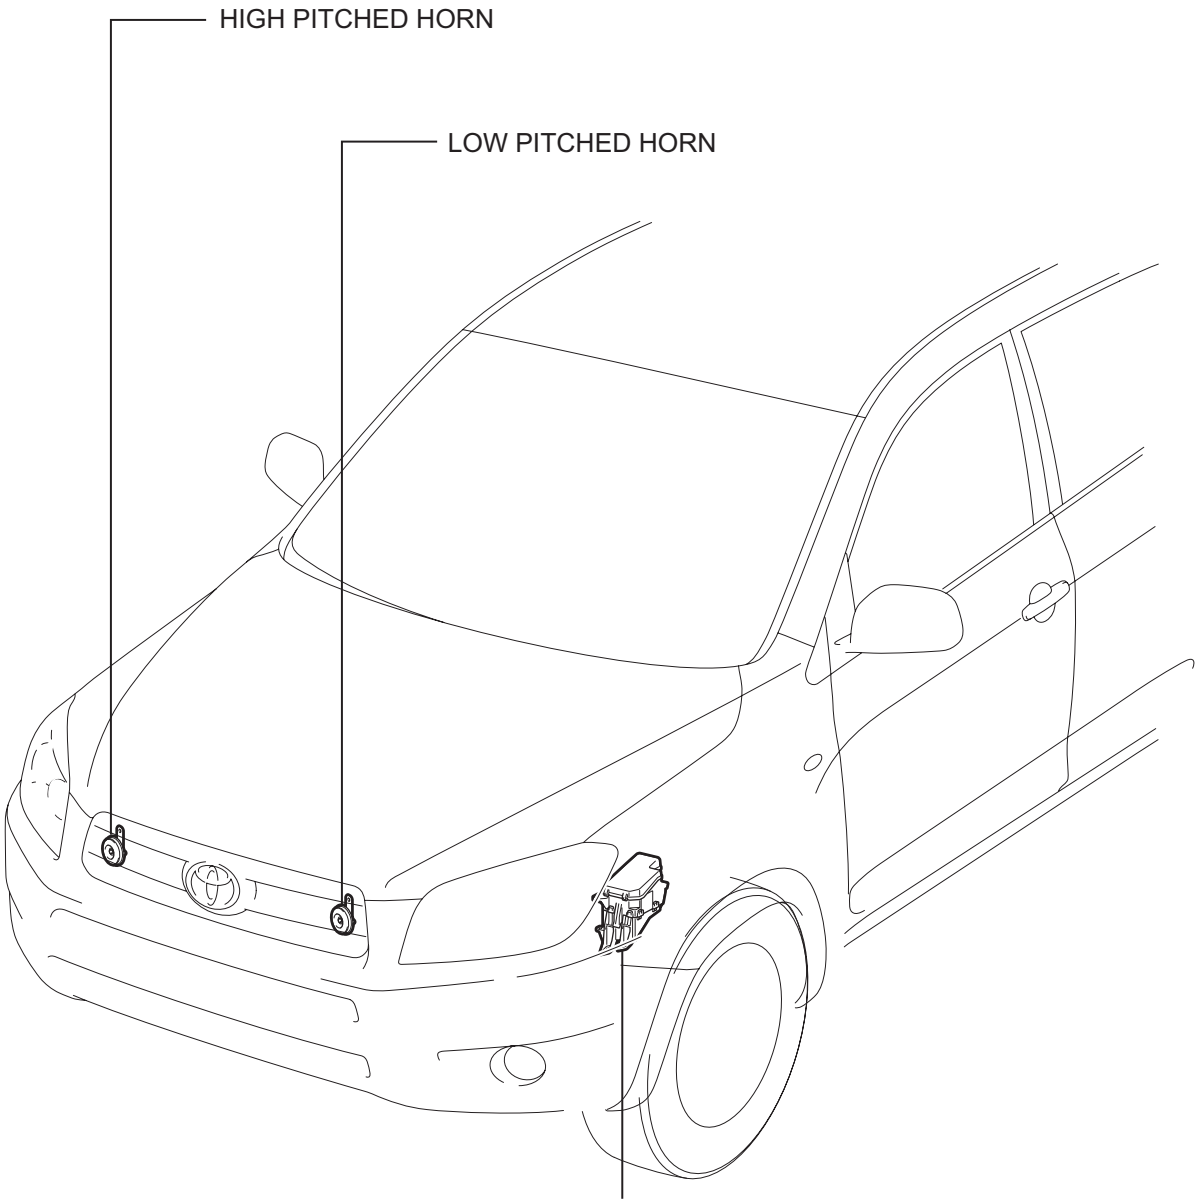
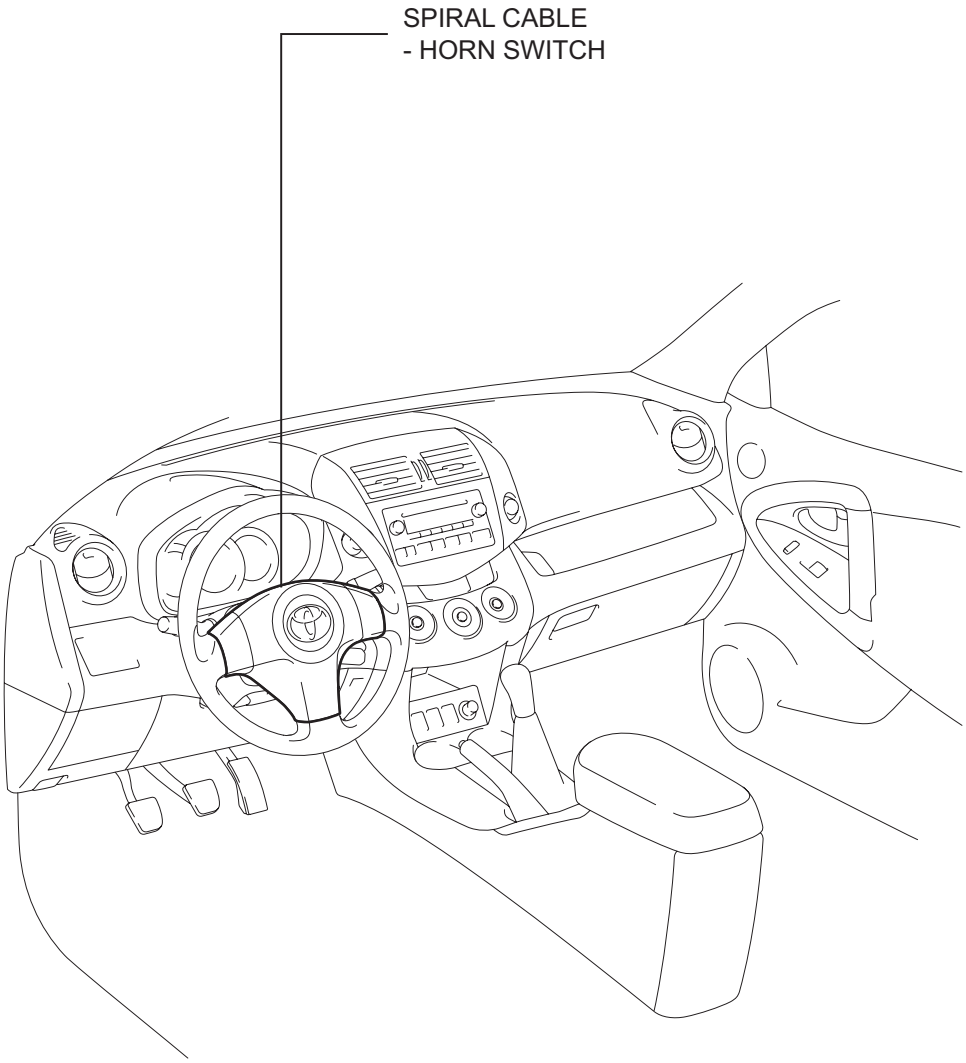
B129383E03

PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

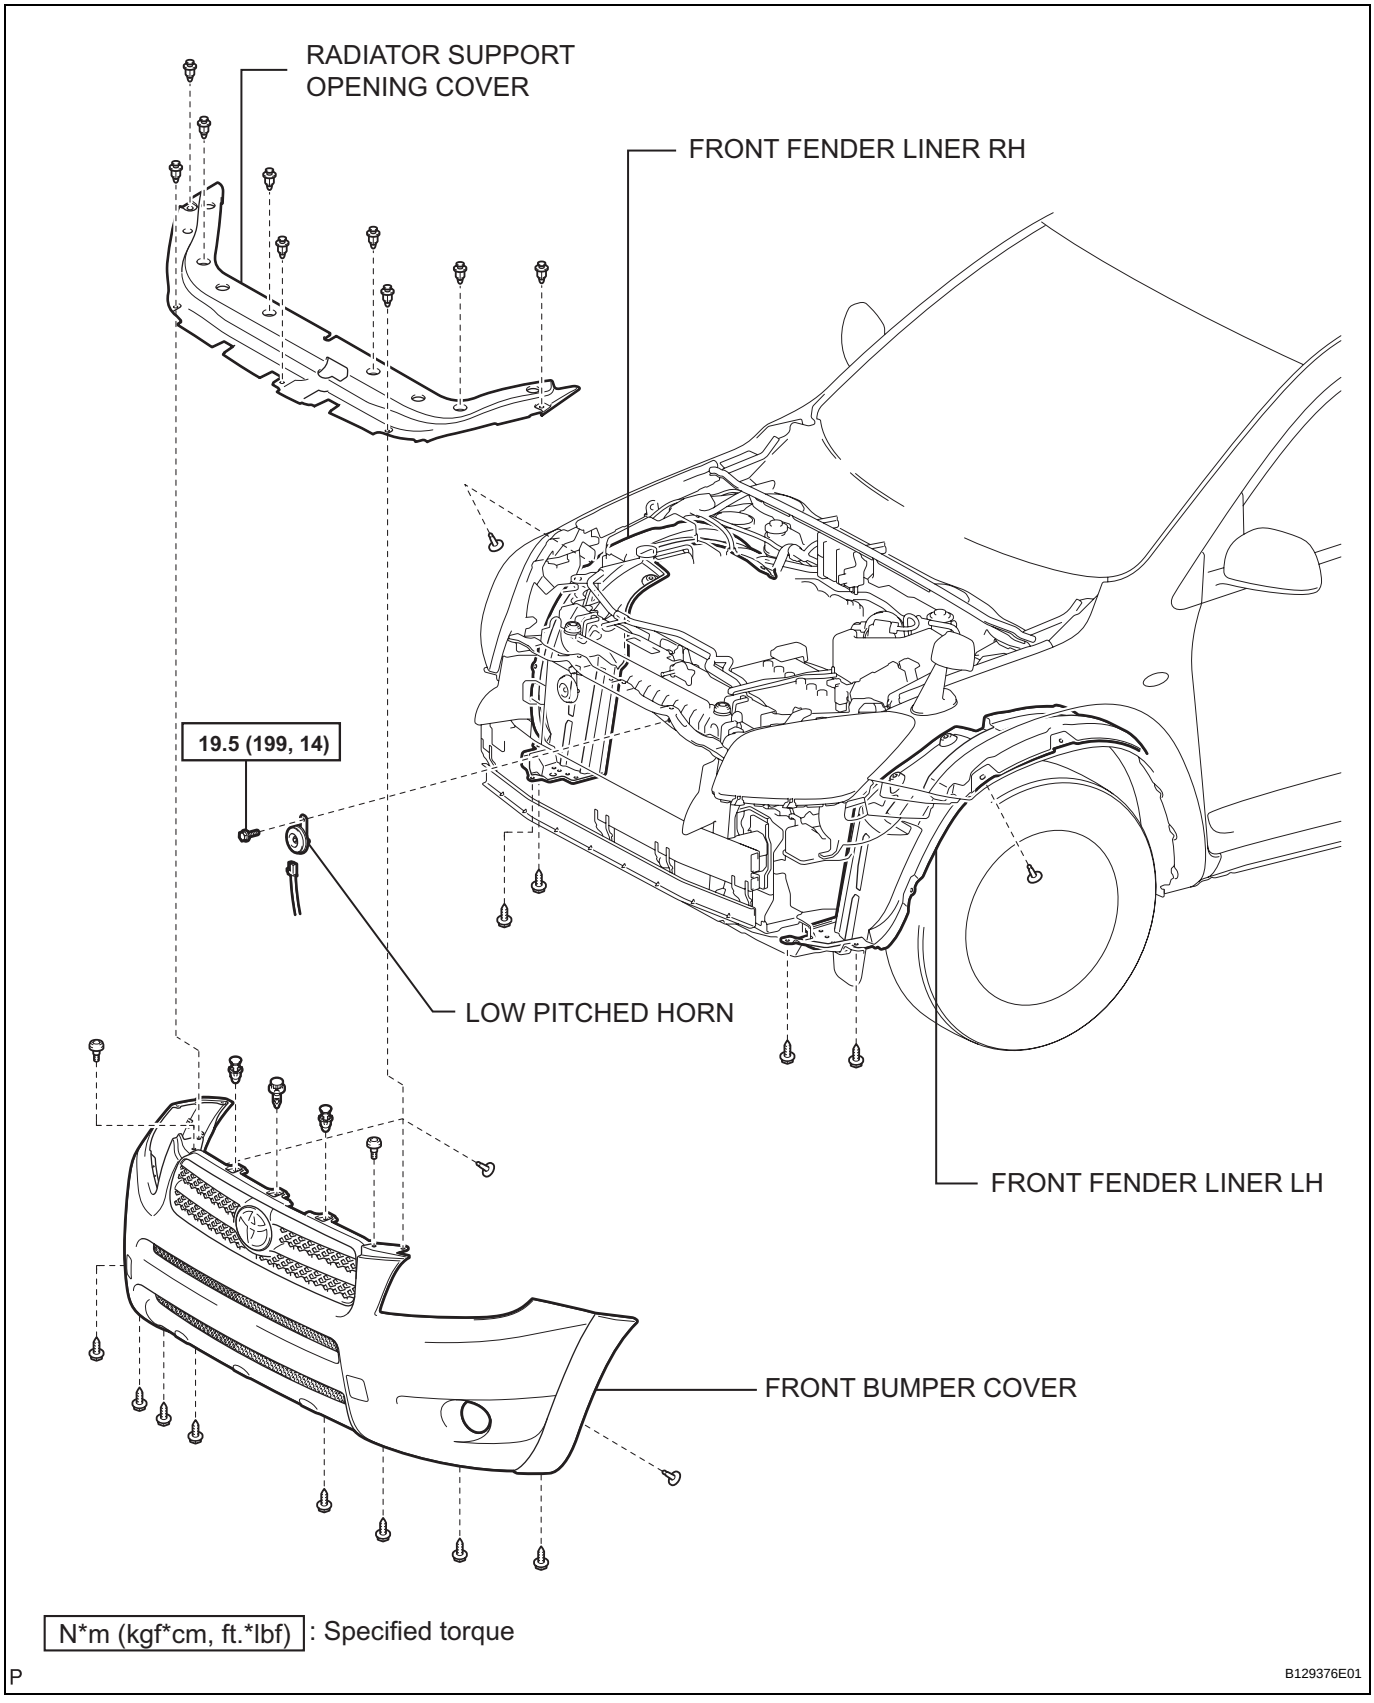


Horn system

Symptom	Suspected area	See page
Horn does not sound	1. HORN fuse	HO-1
	2. Integration relay (HORN relay)	HO-5
	3. High pitched horn	HO-9
	4. Low pitched horn	HO-7
	5. Spiral cable (horn switch)	-
	6. Wire harness	-

HORN SYSTEM

PARTS LOCATION



P

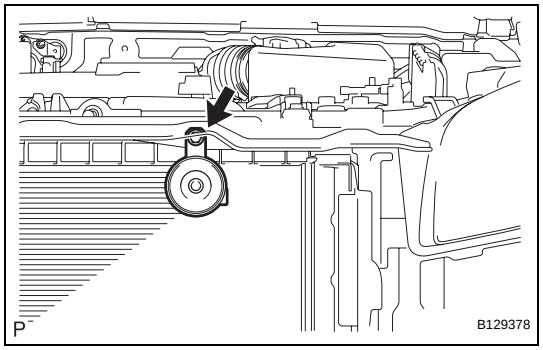
LOW PITCHED HORN

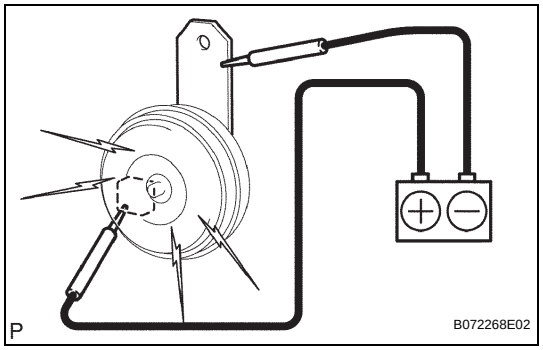
COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

P

B129376E01

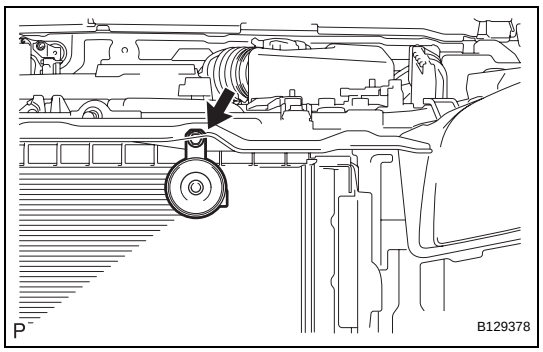


REMOVAL

1. **REMOVE RADIATOR SUPPORT OPENING COVER (See page ET-4)**
2. **REMOVE FRONT FENDER LINER LH (See page ET-4)**
3. **REMOVE FRONT FENDER LINER RH (See page ET-4)**
4. **REMOVE FRONT BUMPER COVER (See page ET-5)**
5. **REMOVE LOW PITCHED HORN**
   (a) Disconnect the horn connector.
   (b) Remove the bolt and horn.

INSPECTION

1. **INSPECT LOW PITCHED HORN**
   (a) Apply battery voltage to the horn and check the operation of the horn.
   OK

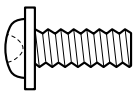


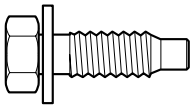
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1	Horn sounds
Battery negative (-) → Horn bracket	

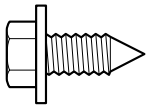
If the result is not as specified, replace the horn.

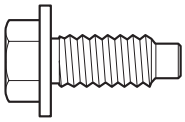
INSTALLATION

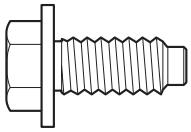
1. **INSTALL LOW PITCHED HORN**
   (a) Place the stay onto the baffle part of the radiator support upper, and then install the horn with the bolt.
   Torque: 19.5 N*m (199 kgf*cm, 14 ft.*lbf)
   (b) Connect the horn connector.
2. **INSTALL FRONT BUMPER COVER (See page ET-11)**
3. **INSTALL FRONT FENDER LINER RH (See page ET-12)**
4. **INSTALL FRONT FENDER LINER LH (See page ET-12)**
5. **INSTALL RADIATOR SUPPORT OPENING COVER (See page ET-12)**

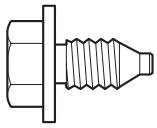












REMOVAL

1. TABLE OF BOLT, SCREW AND NUT

HINT:

All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabet codes in the table below.

mm (in.) (L=Length)

Code	Shape	Code	Shape	Code	Shape
A	 φ=5 (0.20) L=14 (0.55)	B	 φ=6 (0.24) L=14 (0.55)	C	 φ=5 (0.20) L=16 (0.63)
D	 φ=6 (0.24) L=20 (0.79)	E	 φ=7 (0.28) L=20 (0.79)	F	 φ=6 (0.24) L=22 (0.87)

G

B129999E01

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

3. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

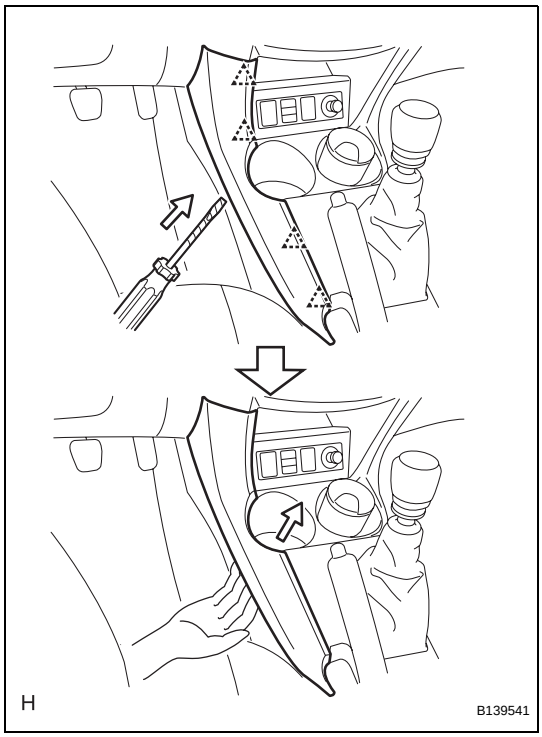
(a) Remove the instrument panel (see page IP-4).

4. REMOVE STEERING PAD ASSEMBLY (See page RS-336)

5. REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)

6. REMOVE STEERING COLUMN COVER (See page SR-12)

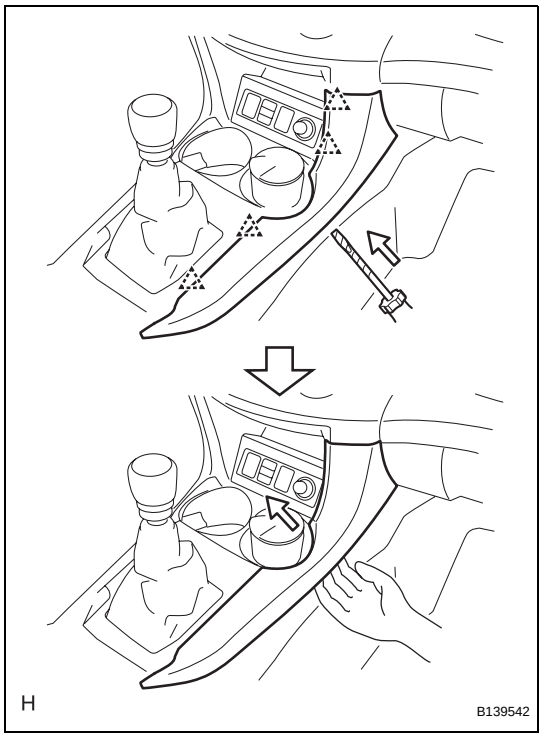
7. REMOVE SPIRAL CABLE SUB-ASSEMBLY (See page RS-346)



8. REMOVE HEADLIGHT DIMMER SWITCH ASSEMBLY

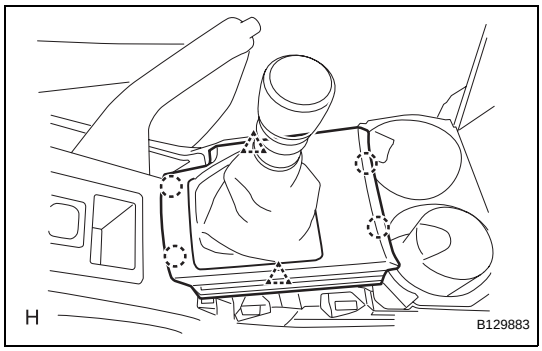
9. REMOVE WINDSHIELD WIPER SWITCH ASSEMBLY

10. REMOVE HEATER CONTROL SUB-ASSEMBLY (for Automatic Air Conditioning System) (See page AC-241)



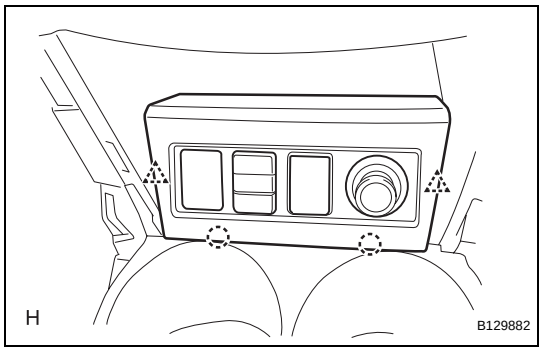
11. REMOVE HEATER CONTROL SUB-ASSEMBLY (for Manual Air Conditioning System) (See page AC-243)

IP



12. REMOVE NO. 1 CONSOLE UPPER PANEL GARNISH

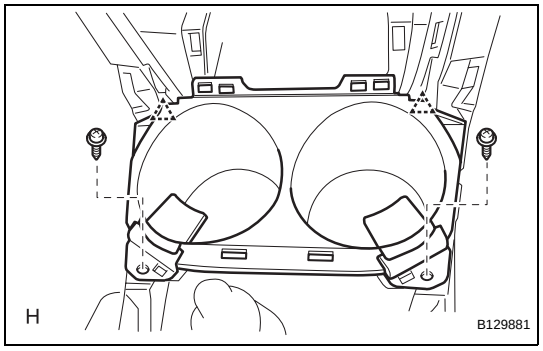
(a) Using a screwdriver, detach the 4 clips and upper panel garnish.
HINT:
Tape the screwdriver tip before use.



13. REMOVE NO. 2 CONSOLE UPPER PANEL GARNISH

(a) Using a screwdriver, detach the 4 clips and upper panel garnish.
HINT:
Tape the screwdriver tip before use.

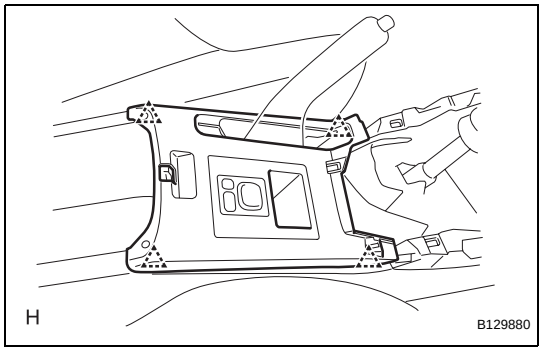
14. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY



(a) Remove the shift lever knob.
(b) Using a screwdriver, detach the 2 clips, 4 claws and remove the upper console panel then disconnect the connector.
HINT:
Tape the screwdriver tip before use.

15. REMOVE SWITCH BASE

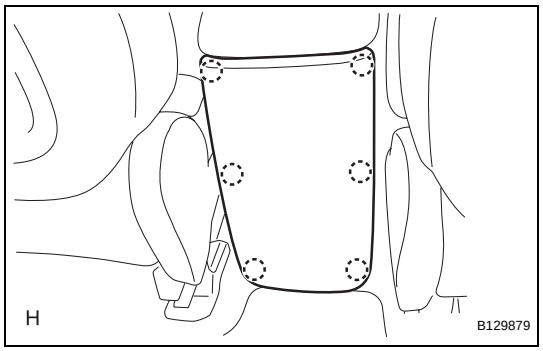
(a) Detach the 2 clips and 2 claws.



(b) Disconnect the connectors and remove the switch base.

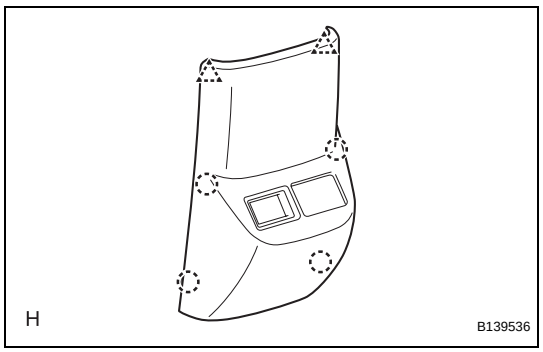
16. REMOVE CONSOLE CUP HOLDER BOX

(a) Remove the 2 screws.



(b) Detach the 2 clips and remove the cup holder box.

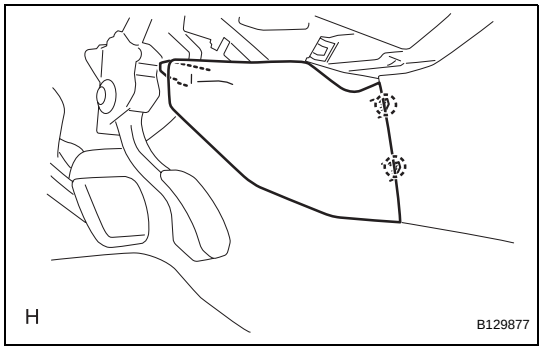
17. REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY



(a) Using a screwdriver, detach the 4 claws and 2 clips.
HINT:
Tape the screwdriver tip before use.

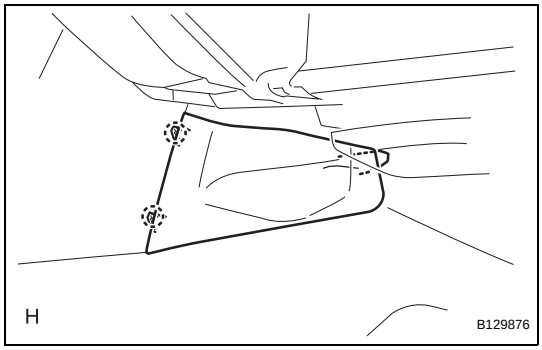
(b) Disconnect the connector and remove the upper rear console panel.

18. REMOVE CONSOLE REAR END PANEL



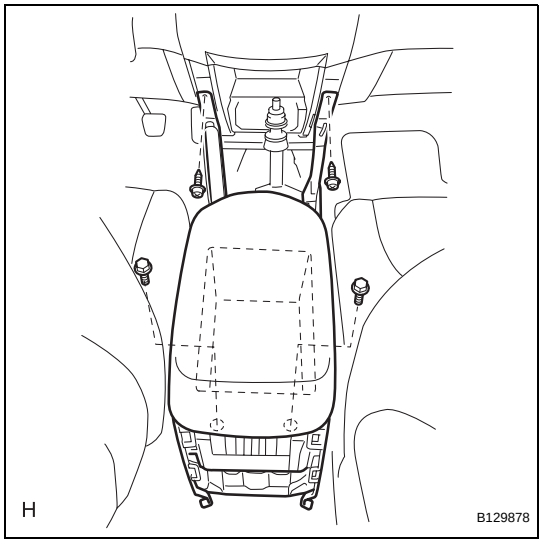
(a) Using a screwdriver, detach the 6 claws and remove the console rear end panel.
HINT:
Tape the screwdriver tip before use.

19. REMOVE CONSOLE REAR END PANEL (RSE Type)



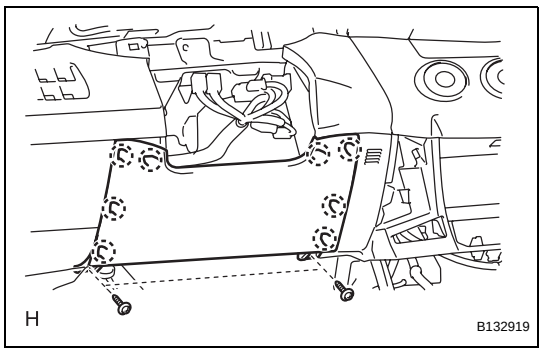
(a) Using a screwdriver, detach the 4claws, 2 clips and remove the console rear end panel then disconnect the connectors.
HINT:
Tape the screwdriver tip before use.

IP



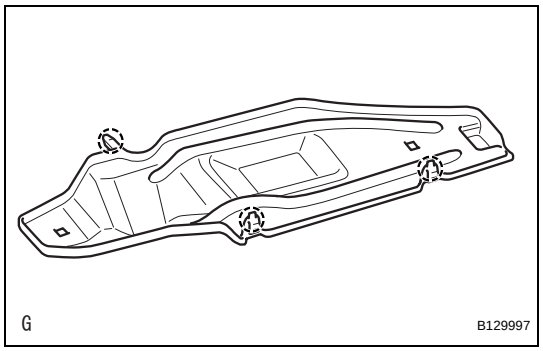
20. REMOVE NO. 1 INSTRUMENT PANEL BRACKET COVER INNER LH

(a) Detach the 2 claws and remove the instrument panel bracket cover.



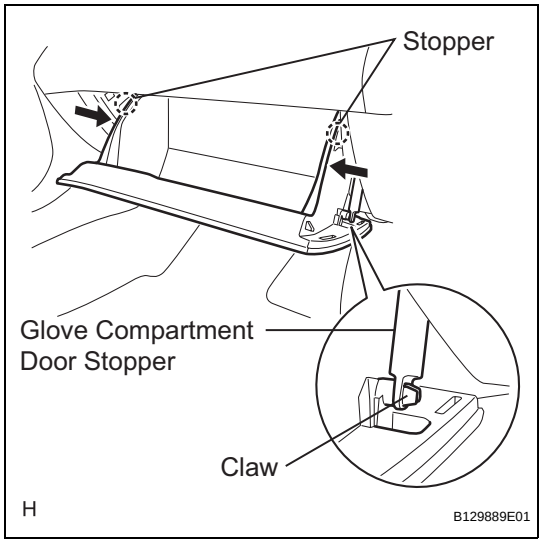
21. REMOVE NO. 1 INSTRUMENT PANEL BRACKET COVER INNER RH

(a) Detach the 2 claws and remove the instrument panel bracket cover.



22. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY

(a) Remove the console box carpet.
(b) Remove the 2 bolts and 2 screws.
(c) Disconnect the connector and remove the rear console box.

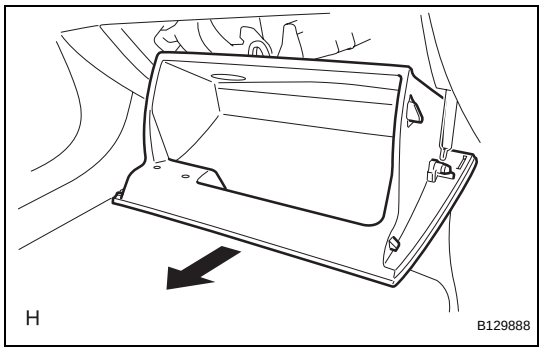


23. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL

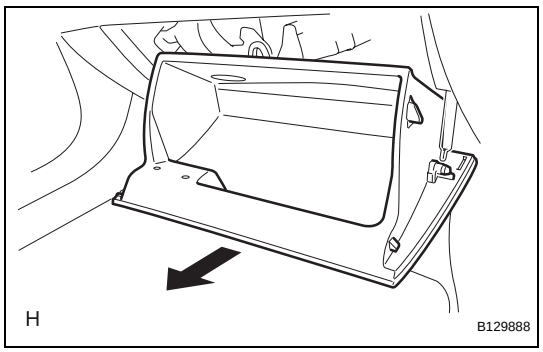
(a) Remove the 2 screws.
(b) Using a screwdriver detach the 8 claws and remove the lower instrument panel finish panel.
HINT:
Tape the screwdriver tip before use.

24. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Detach the 2 claws and remove the instrument panel under cover.

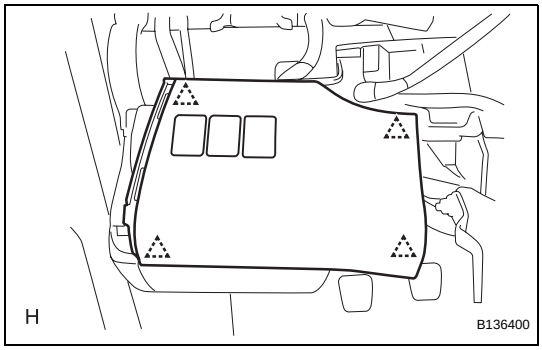


25. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY



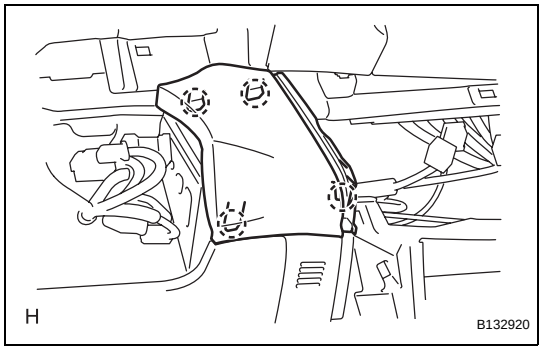
(a) Open the glove compartment door.

(b) Detach the claw from the glove compartment door stopper.

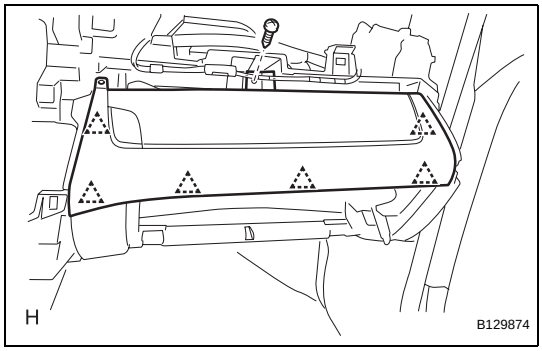


(c) While pushing in the sides of the glove compartment door as indicated by the arrows in the illustration, open the door to release it from the 2 stoppers.

(d) Open the door until it is horizontal.

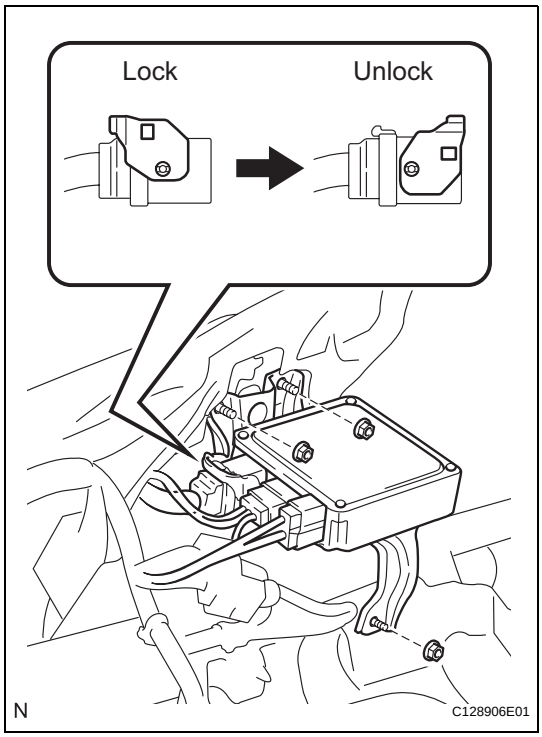


(e) Pull the glove compartment door toward the rear of the vehicle to detach the 2 hinges and remove the glove compartment door.



26. REMOVE NO. 1 SWITCH HOLE BASE

(a) Using a screwdriver, detach the 4 clips.
(b) Disconnect the connectors and remove the switch hole base.

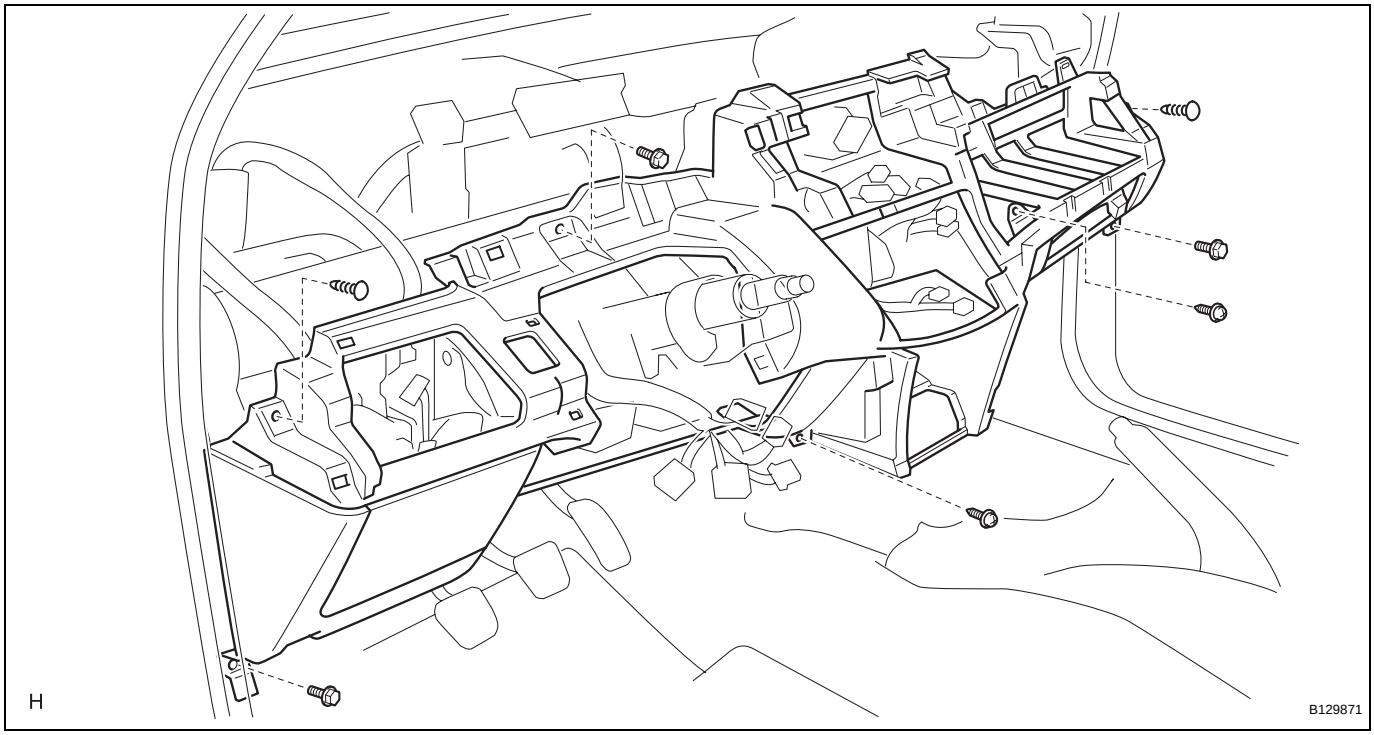


27. REMOVE INSTRUMENT PANEL SAFETY PAD COVER

(a) Using a screwdriver, detach the 4 claws and remove the instrument panel safety pad cover.
HINT:
Tape the screwdriver tip before use.

28. REMOVE INSTRUMENT PANEL BOX

(a) Remove the screw.
(b) Using a screwdriver, detach the 6 clips and remove the instrument panel box.
HINT:
Tape the screwdriver tip before use.



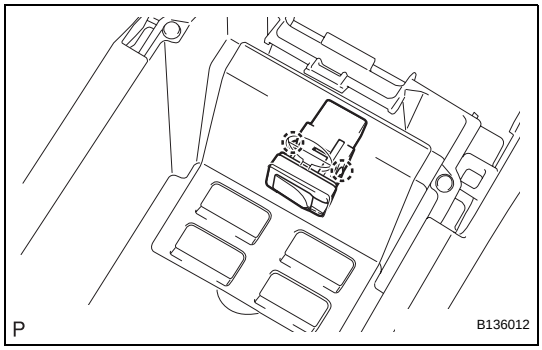
29. REMOVE POWER STEERING ECU ASSEMBLY

(a) Disconnect the connectors.
(b) Remove the 3 nuts and ECU.

30. REMOVE LOWER INSTRUMENT PANEL

(a) Remove the 2 bolts, 3 screws and 2 clips.
(b) Disconnect the connectors and clamps and remove the lower instrument panel.

H
B129871



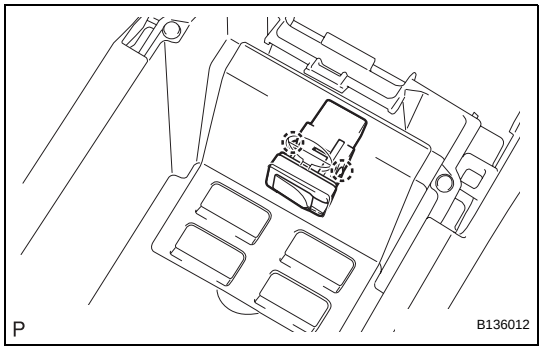
IP

DISASSEMBLY

1. REMOVE GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY

2. REMOVE STEREO JACK ADAPTER ASSEMBLY

(a) Detach the 2 claws and remove the stereo jack adapter.

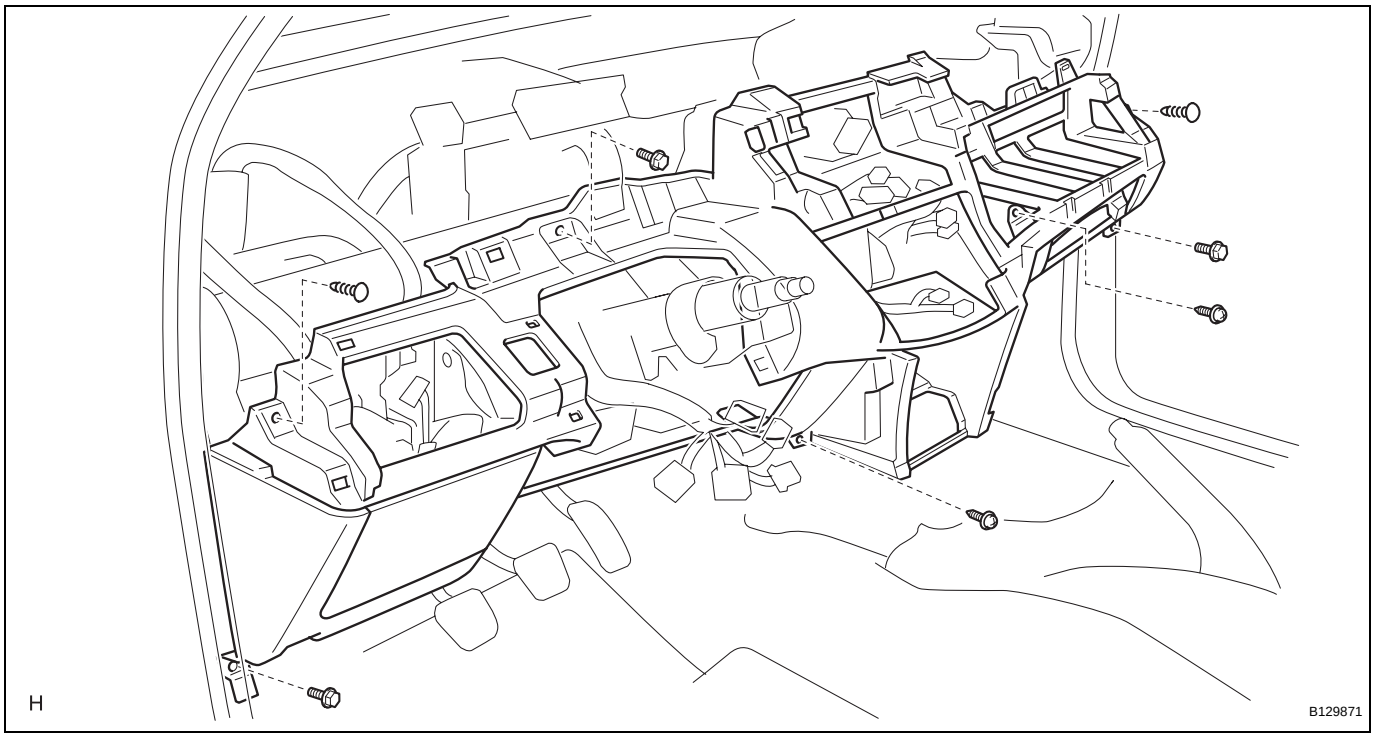


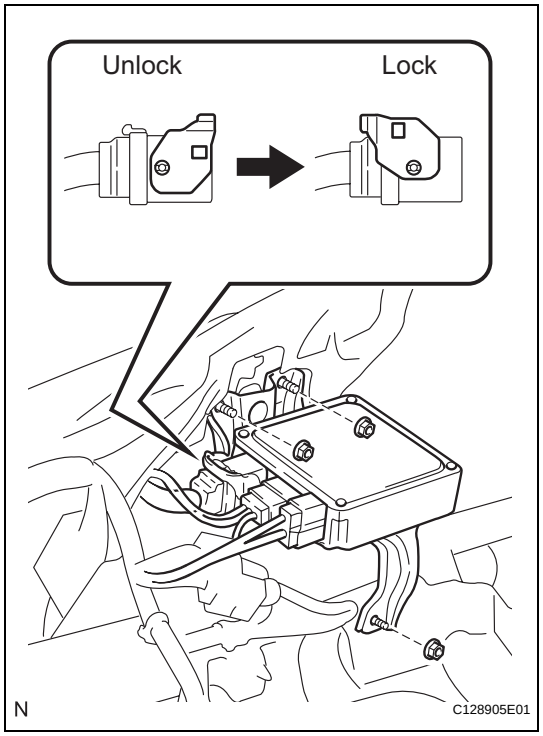
REASSEMBLY

1. INSTALL STEREO JACK ADAPTER ASSEMBLY

(a) Attach the 2 claws to install the stereo jack adapter.

2. INSTALL GLOVE COMPARTMENT DOOR STOPPER SUB-ASSEMBLY



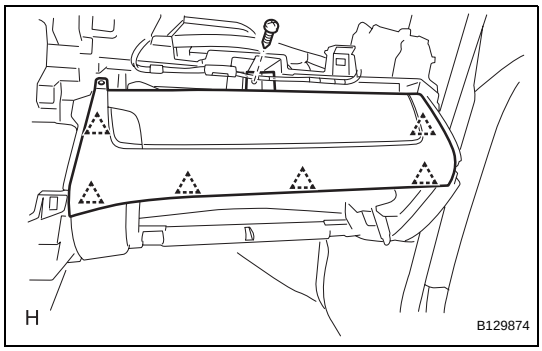


INSTALLATION

1. INSTALL LOWER INSTRUMENT PANEL

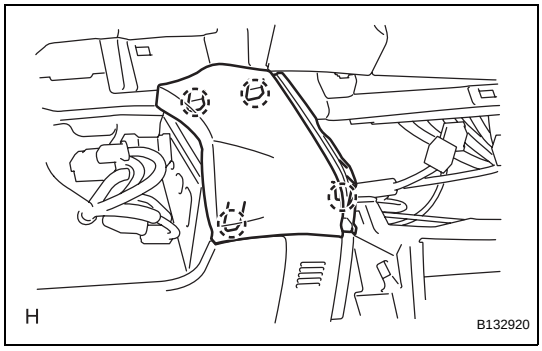
(a) Connect the connectors and clamps and install the lower instrument panel.

(b) Install the 2 bolts, 3 screws and 2 clips.



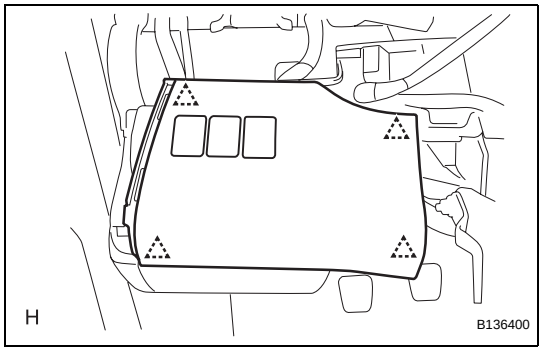
2. INSTALL POWER STEERING ECU ASSEMBLY

(a) Install the ECU with the 3 nuts.



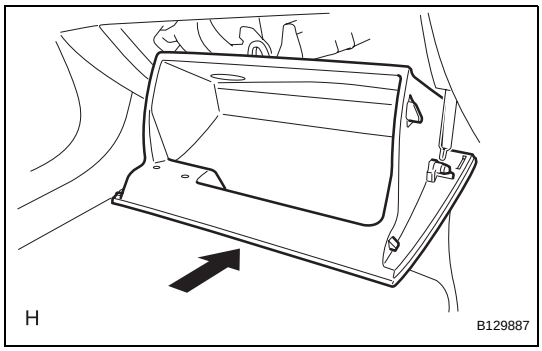
(b) Connect the connectors.

IP



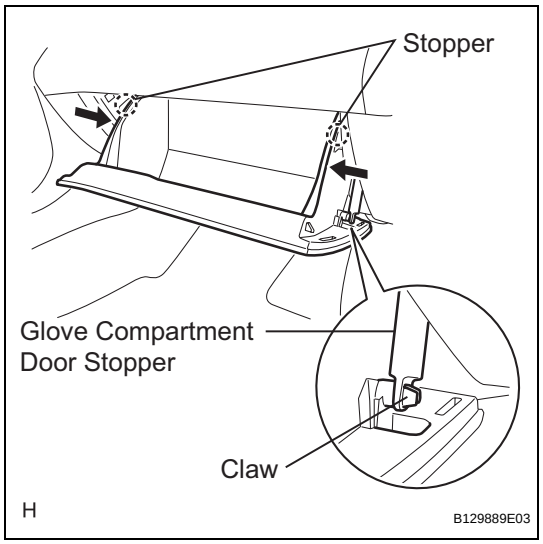
3. INSTALL INSTRUMENT PANEL BOX

(a) Attach the 6 clips to install the instrument panel box.
(b) Install the screw.



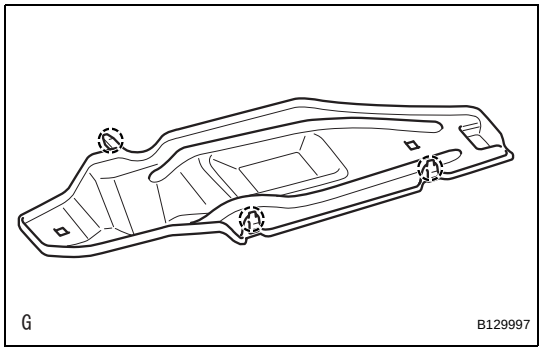
4. INSTALL INSTRUMENT PANEL SAFETY PAD COVER

(a) Attach the 4 claws to install the instrument panel safety pad cover.



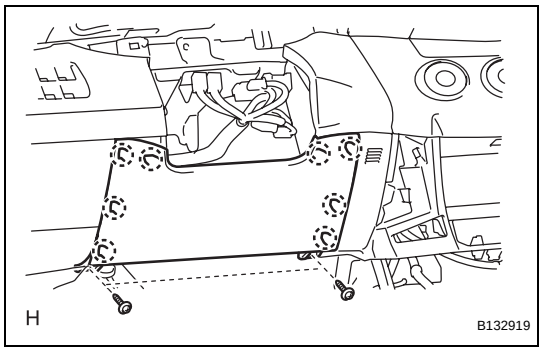
5. INSTALL NO. 1 SWITCH HOLE BASE

(a) Connect the connectors.
(b) Attach the 4 clips to install the switch hole base.

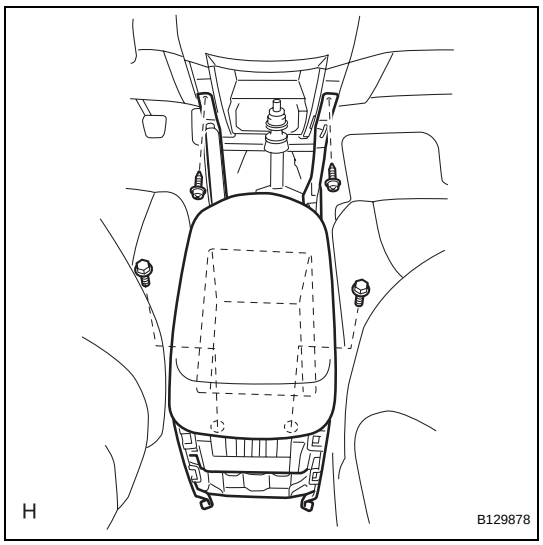


6. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY

(a) Attach the 2 hinges to install the door.

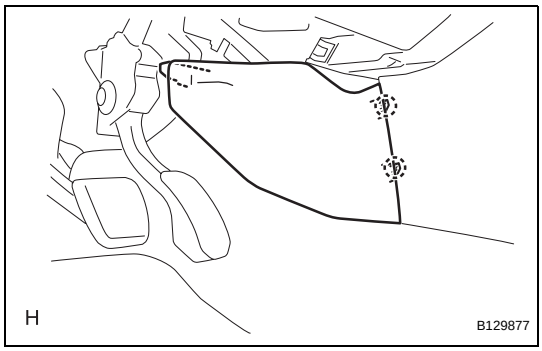


(b) Attach the claw to the glove compartment door stopper.
(c) While pushing in the sides of the glove compartment door as indicated by the arrows in the illustration, close the door to engage it to the 2 stoppers.



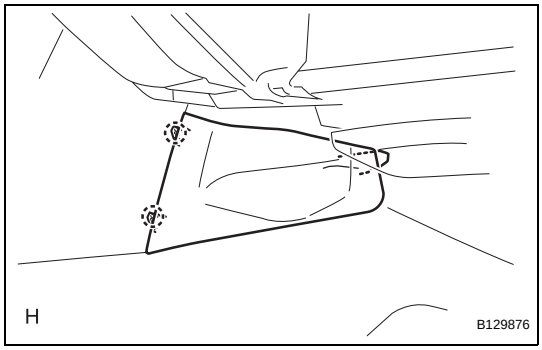
7. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

(a) Attach the 2 claws to install the instrument panel under cover.



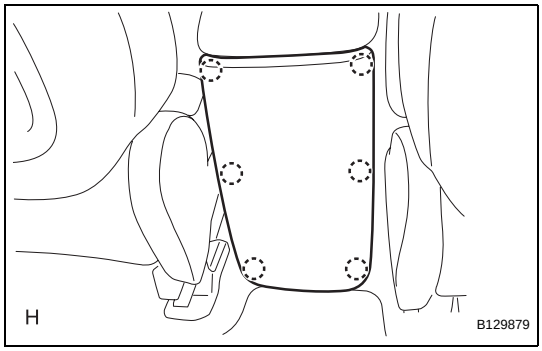
8. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL

(a) Attach the 8 claws to install the lower instrument panel finish panel.
(b) Install the 2 screws.



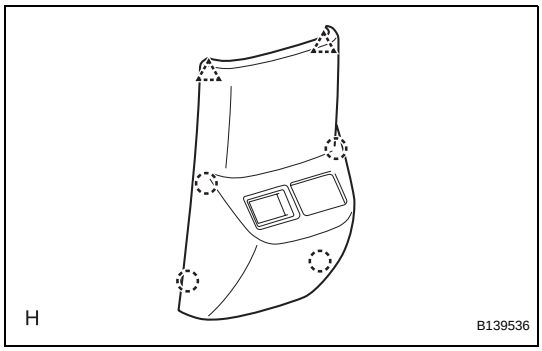
9. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY

(a) Connect the connector.
(b) Install the rear console box with the 2 bolts and 2 screws.
(c) Install the console box carpet.



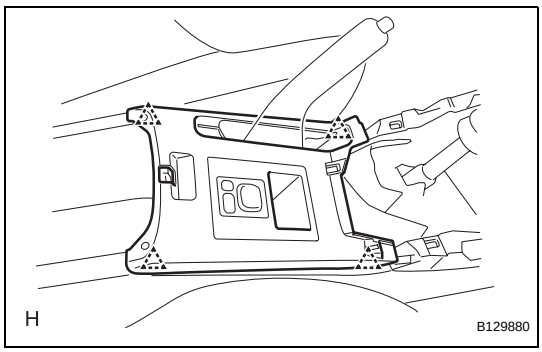
10. INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER LH

(a) Attach the 2 claws to install the instrument panel bracket cover.



11. INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER RH

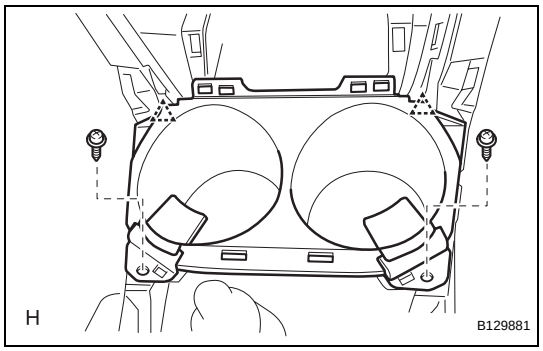
(a) Attach the 2 claws to install the instrument panel bracket cover.



12. INSTALL CONSOLE REAR END PANEL

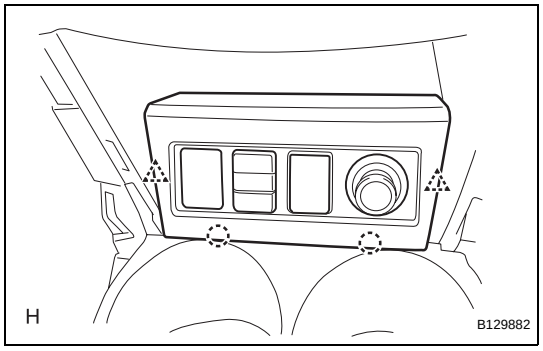
(a) Attach the 6 claws to install the console rear end panel.

13. INSTALL CONSOLE REAR END PANEL (RSE Type)



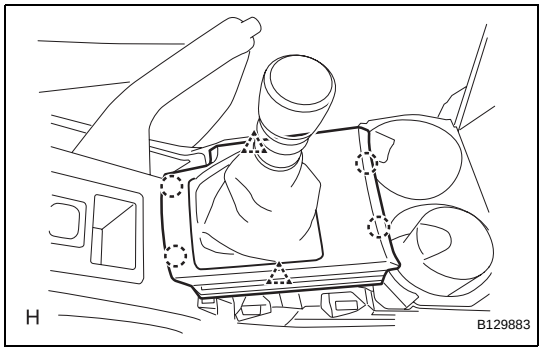
(a) Attach the 2 clips and 4 claws to install the console rear end panel.

14. INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY



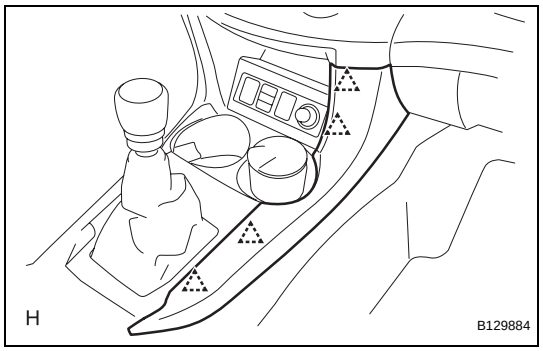
(a) Connect the connector.

(b) Attach the 4 clips to install the upper rear console panel.



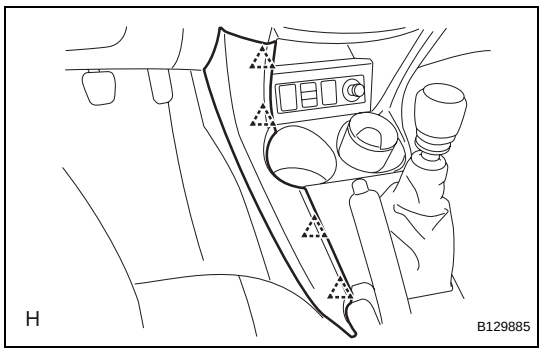
15. INSTALL CONSOLE CUP HOLDER BOX

(a) Attach the 2 clips to install the cup holder box.
(b) Install the 2 screws.



16. INSTALL SWITCH BASE

(a) Connect the connectors.
(b) Attach the 2 clips and 2 claws to install the switch base.



17. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY

(a) Connect the connector.
(b) Attach the 2 clips and 4 claws to install the upper console panel.
(c) Install the shift lever knob.

18. INSTALL NO. 2 CONSOLE UPPER PANEL GARNISH

(a) Attach the 4 clips to install the upper panel garnish.

19. INSTALL NO. 1 CONSOLE UPPER PANEL GARNISH

(a) Attach the 4 clips to install the upper panel garnish.

20. INSTALL HEATER CONTROL SUB-ASSEMBLY (for Automatic Air Conditioning System) (See page AC-241)

21. INSTALL HEATER CONTROL SUB-ASSEMBLY (for Manual Air Conditioning System) (See page AC-244)

22. INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY

23. INSTALL HEADLIGHT DIMMER SWITCH ASSEMBLY

24. **INSTALL SPIRAL CABLE SUB-ASSEMBLY (See page RS-347)**

25. **INSTALL STEERING COLUMN COVER (See page SR-20)**

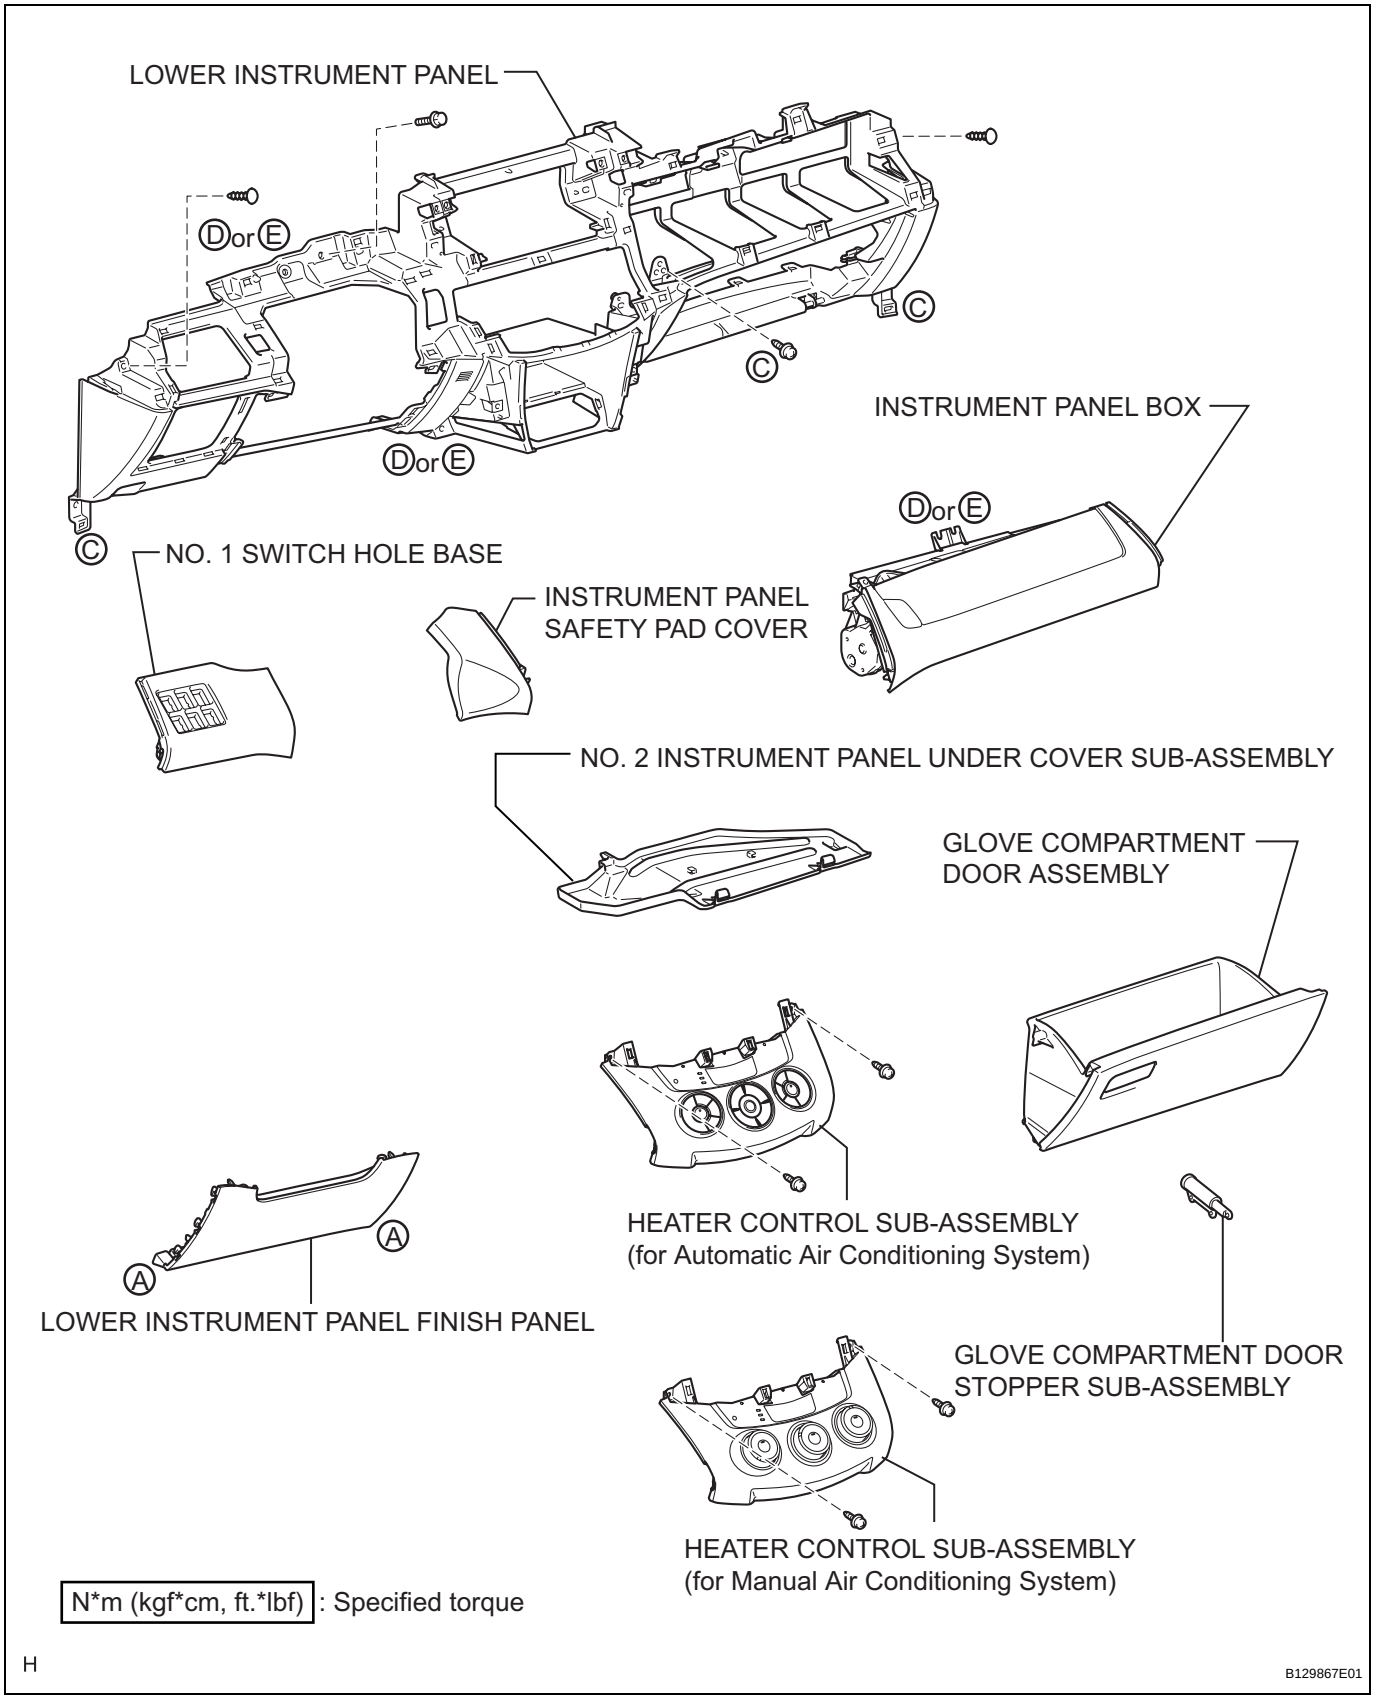
26. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-21)**

27. **INSTALL STEERING PAD ASSEMBLY (See page RS-336)**

28. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY**
    (a) Install the instrument panel (see page IP-9).

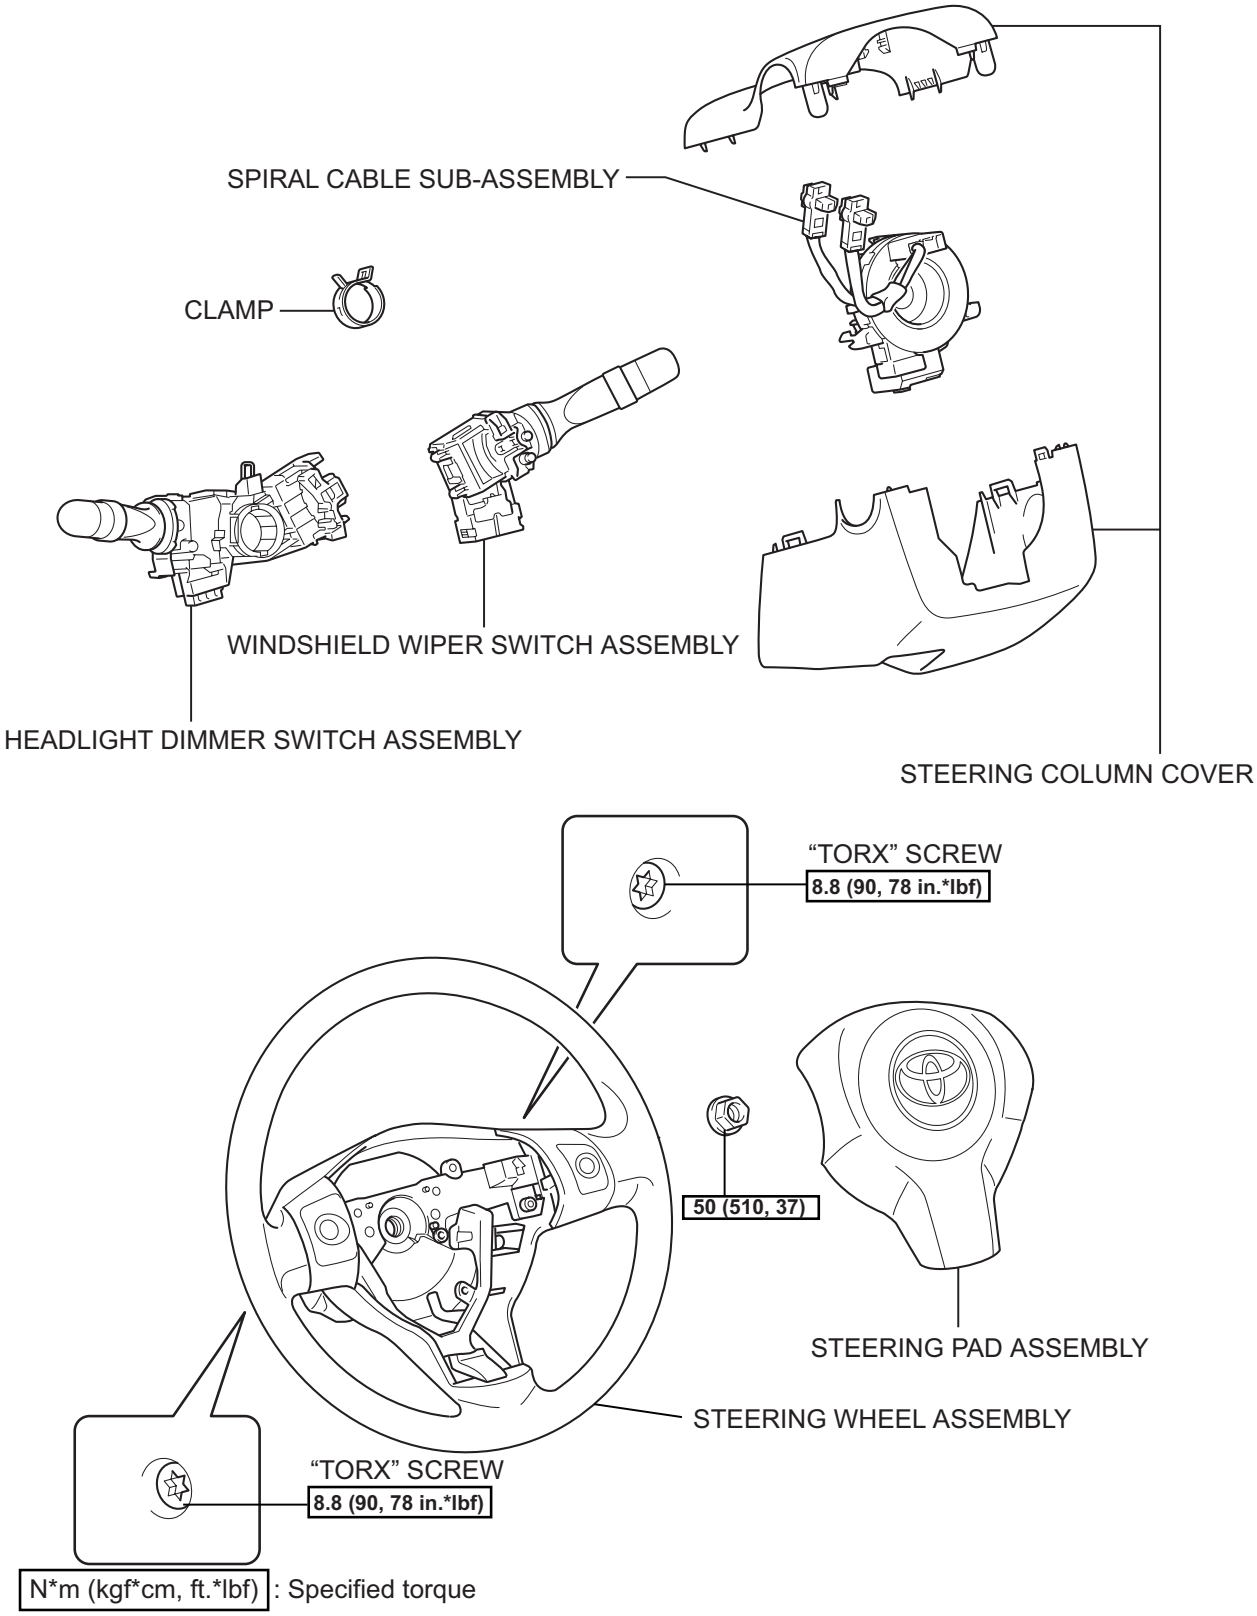
29. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

30. **CHECK SRS WARNING LIGHT**
    (a) Check the SRS warning light (see page RS-37).



LOWER INSTRUMENT PANEL

PRECAUTION



1. PRECAUTION FOR VEHICLE WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

(a) Some operations in this section may affect the SRS airbags and seat belt pretensioner. Prior to performing the corresponding operations, read the SRS airbag NOTICE (see page RS-1).

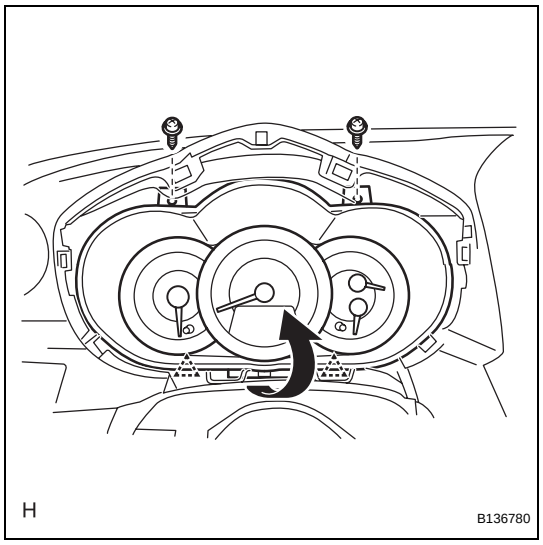
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

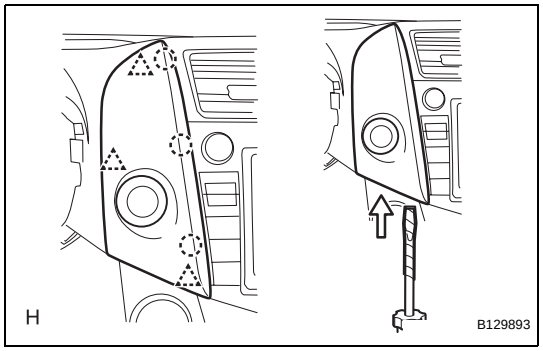


3. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Using a screwdriver, detach the 4 clips, 6 claws and remove the instrument cluster finish panel.

HINT:

Tape the screwdriver tip before use.

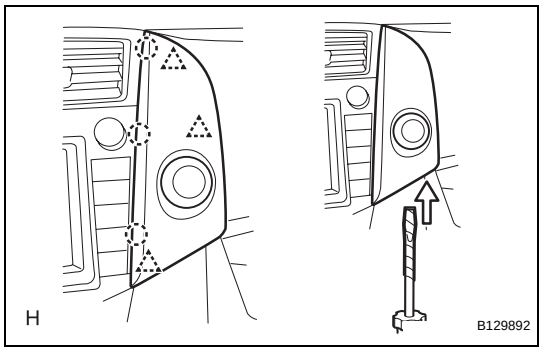


4. REMOVE COMBINATION METER ASSEMBLY

(a) Remove the 2 screws.

(b) Pull the combination meter as indicated by the arrow in the illustration to detach the 2 clips.

(c) Disconnect the connector and remove the combination meter.

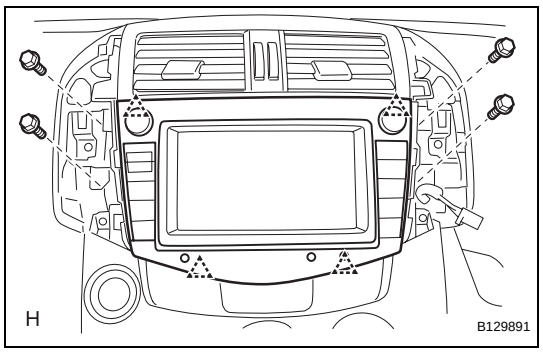


5. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER

(a) Using a screwdriver, detach the 3 clips, 3claws and remove the cluster finish panel, then disconnect the connector.

HINT:

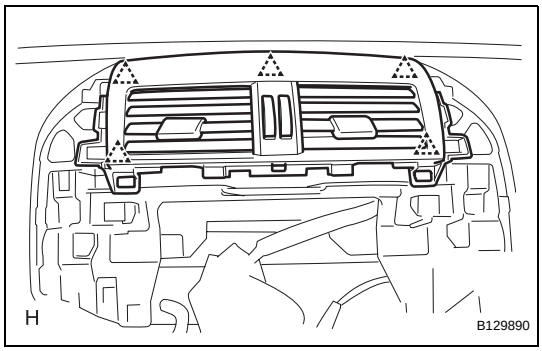
Tape the screwdriver tip before use.



6. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER

(a) Using a screwdriver, detach the 3 clips, 3claws and remove the cluster finish panel, then disconnect the connector.

HINT:

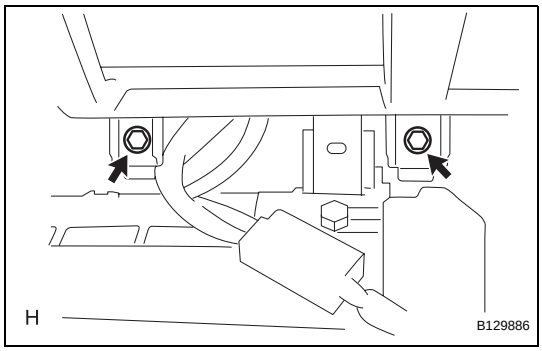


Tape the screwdriver tip before use.

7. REMOVE RADIO RECEIVER

(a) Remove the 4 bolts.

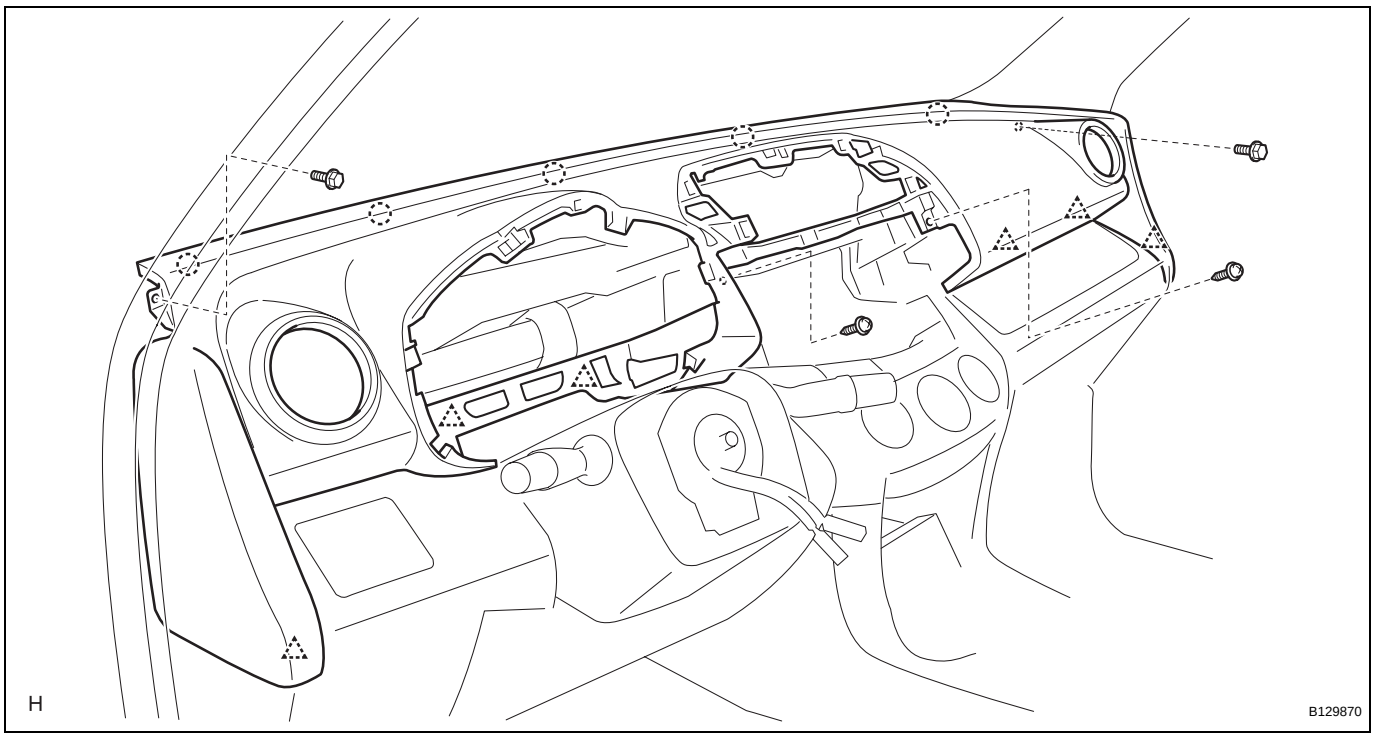
(b) Detach the 4 clips, remove the radio receiver and then disconnect the connectors.



8. REMOVE INSTRUMENT PANEL REGISTER ASSEMBLY CENTER

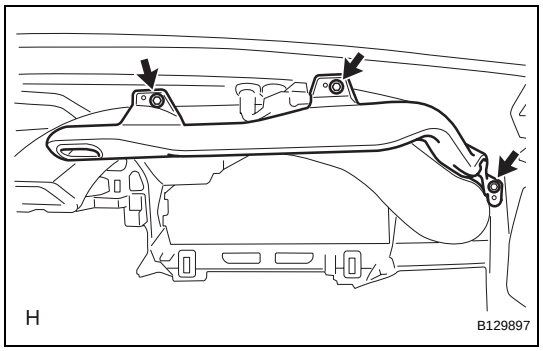
(a) Using a screwdriver, detach the 5 clips and remove the instrument panel register.
HINT:
Tape the screwdriver tip before use.

9. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)

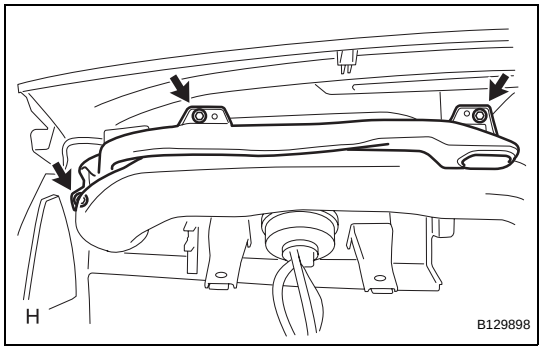


10. REMOVE FRONT PILLAR GARNISH LH (See page IR-27)

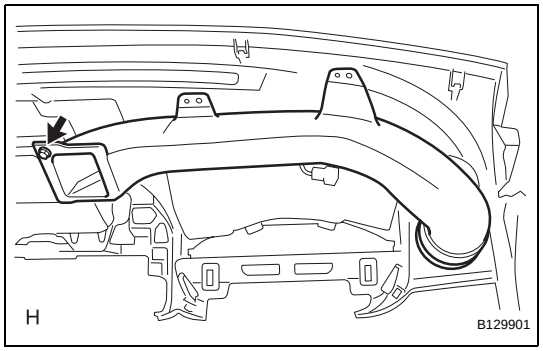
11. REMOVE FRONT PILLAR GARNISH RH (See page IR-28)



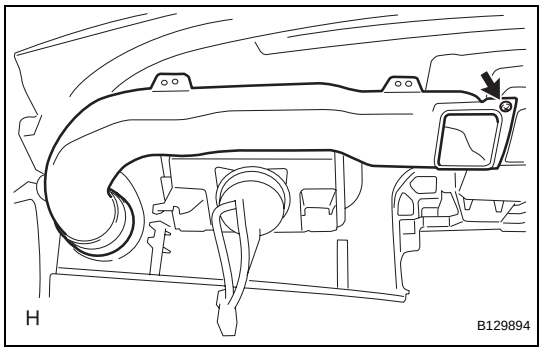
12. REMOVE UPPER INSTRUMENT PANEL



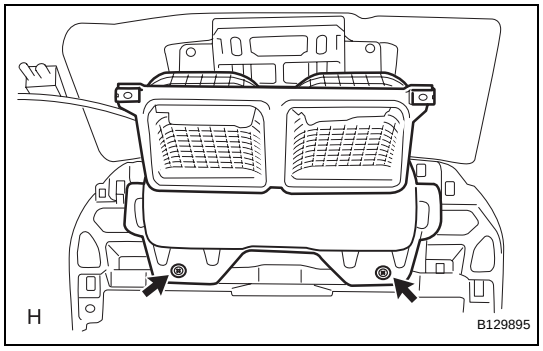
(a) Remove the 2 bolts from the passenger airbag.
(b) Disconnect the passenger airbag connector.
(c) Remove the 2 bolts and 2 screws.
(d) Disconnect the connectors and clamps.
(e) Detach the 6 clips and 5 claws and remove the instrument panel.



DISASSEMBLY



1. REMOVE NO. 1 SIDE DEFROSTER NOZZLE DUCT
(a) Remove the 3 screws and duct.



2. REMOVE NO. 2 SIDE DEFROSTER NOZZLE DUCT
(a) Remove the 3 screws and duct.

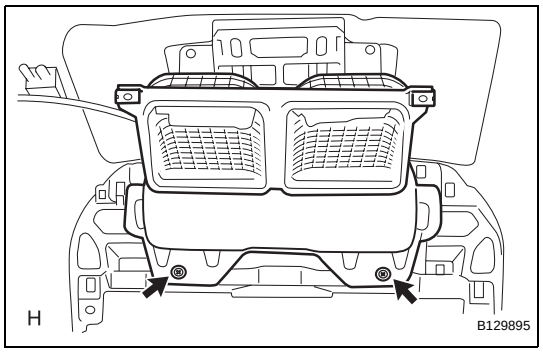
3. REMOVE NO. 1 HEATER TO REGISTER DUCT
(a) Remove the screw and duct.

4. REMOVE NO. 2 HEATER TO REGISTER DUCT
(a) Remove the screw and duct.

5. REMOVE NO. 3 HEATER TO REGISTER DUCT
(a) Remove the 2 screws and duct.

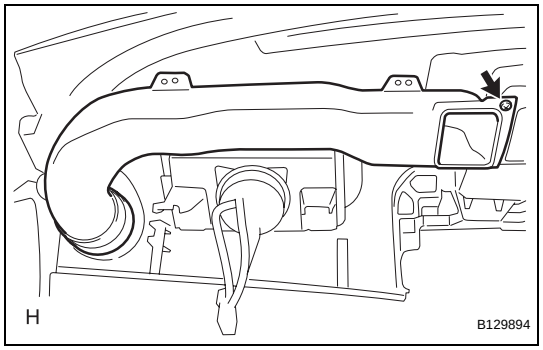
6. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

7. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY



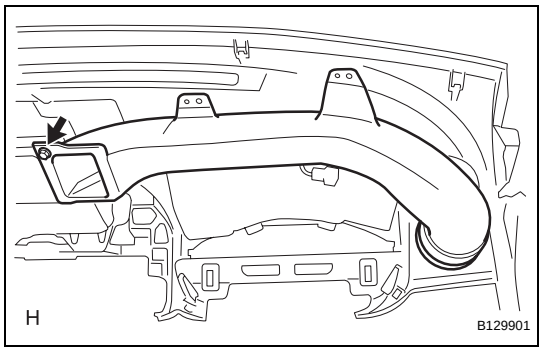
8. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY
(See page RS-350)

9. REMOVE AUTOMATIC LIGHT CONTROL SENSOR (for Automatic Light Control System)

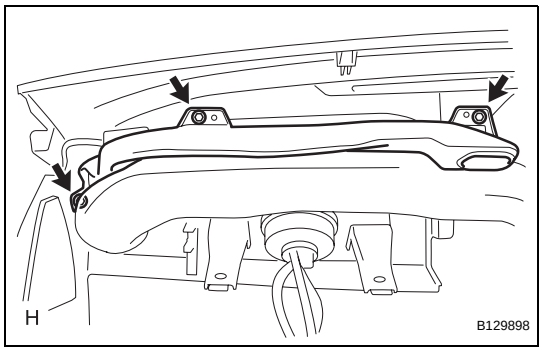


10. REMOVE COOLER (SOLAR SENSOR) THERMISTOR (for Automatic Air Conditioning System)

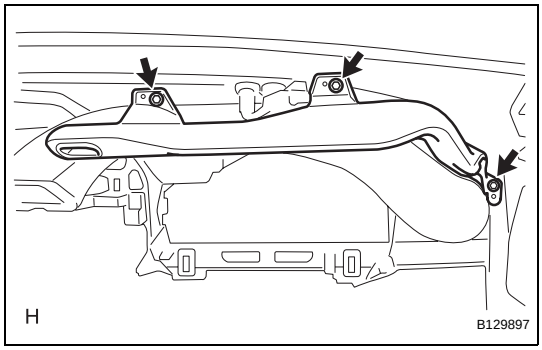
REASSEMBLY



1. **INSTALL COOLER (SOLAR SENSOR) THERMISTOR (for Automatic Air Conditioning System)**
2. **INSTALL AUTOMATIC LIGHT CONTROL SENSOR (for Automatic Light Control System)**
3. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-351)**
4. **INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY**
5. **INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY**
6. **INSTALL NO. 3 HEATER TO REGISTER DUCT**
   (a) Install the duct with the 2 screws.



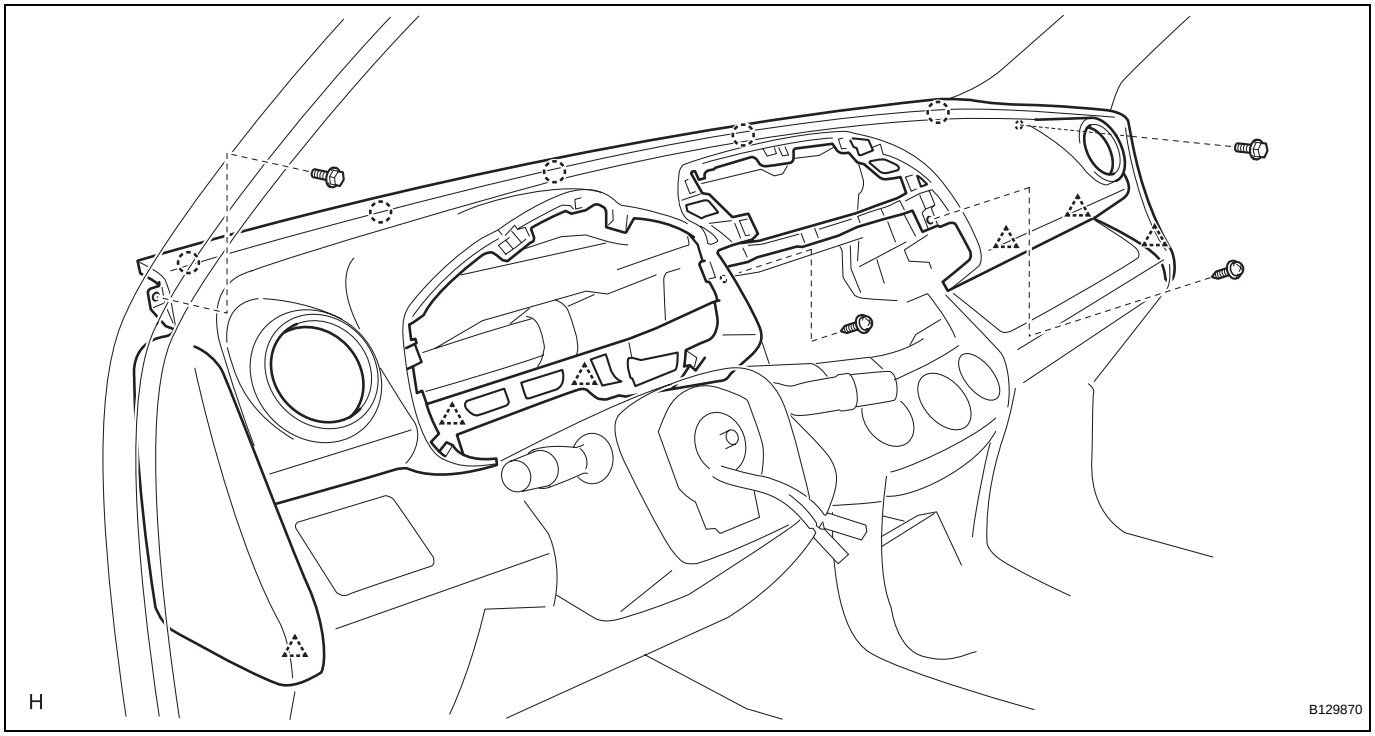
7. **INSTALL NO. 2 HEATER TO REGISTER DUCT**
   (a) Install the duct with the screw.

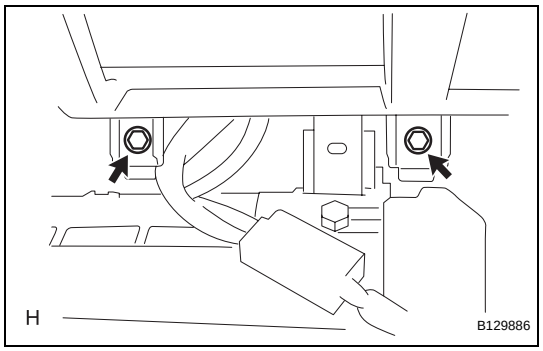


8. **INSTALL NO. 1 HEATER TO REGISTER DUCT**
   (a) Install the duct with the screw.

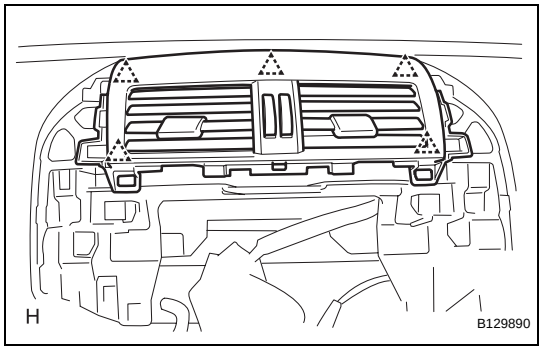
9. INSTALL NO. 2 SIDE DEFROSTER NOZZLE DUCT

(a) Install the duct with the 3 screws.





10. INSTALL NO. 1 SIDE DEFROSTER NOZZLE DUCT



(a) Install the duct with the 3 screws.

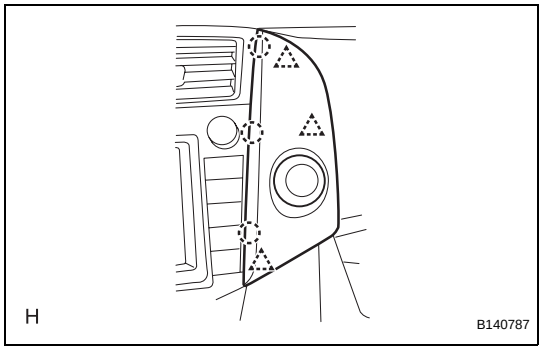
INSTALLATION

1. **INSTALL UPPER INSTRUMENT PANEL**
   (a) Attach the 6 clips and 5 claws to install the instrument panel.
   (b) Connect the connectors and clamps.
   (c) Install the 2 bolts and 2 screws.

   (d) Connect the passenger airbag connector.
   (e) Install the 2 bolts to the passenger airbag.
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

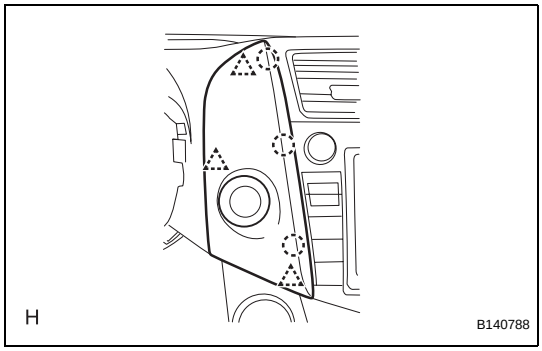
2. **INSTALL FRONT PILLAR GARNISH LH (See page IR-57)**

3. **INSTALL FRONT PILLAR GARNISH RH (See page IR-58)**



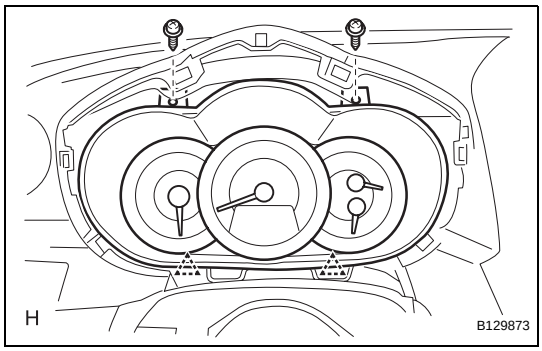
4. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-25)**

5. **INSTALL INSTRUMENT PANEL REGISTER ASSEMBLY CENTER**
   (a) Attach the 5 clips to install the instrument panel register.



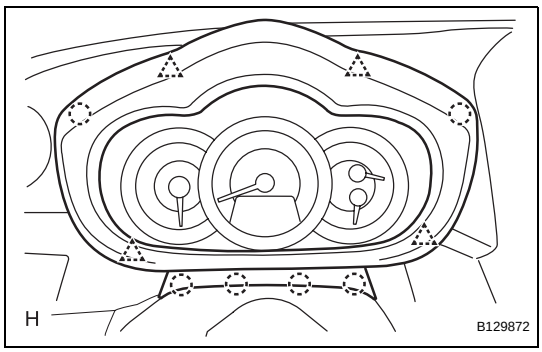
6. INSTALL RADIO RECEIVER

(a) Connect the connectors.
(b) Attach the 4 clips to install the radio receiver.
(c) Install the 4 bolts.



7. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER

(a) Connect the connector.
(b) Attach the 3 clips and 3 claws to install the cluster finish panel.



8. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER

(a) Connect the connector.
(b) Attach the 3 clips and 3 claws to install the cluster finish panel.

9. INSTALL COMBINATION METER ASSEMBLY

(a) Connect the connector.
(b) Attach the 2 clips to install the combination meter.
(c) Install the 2 screws.

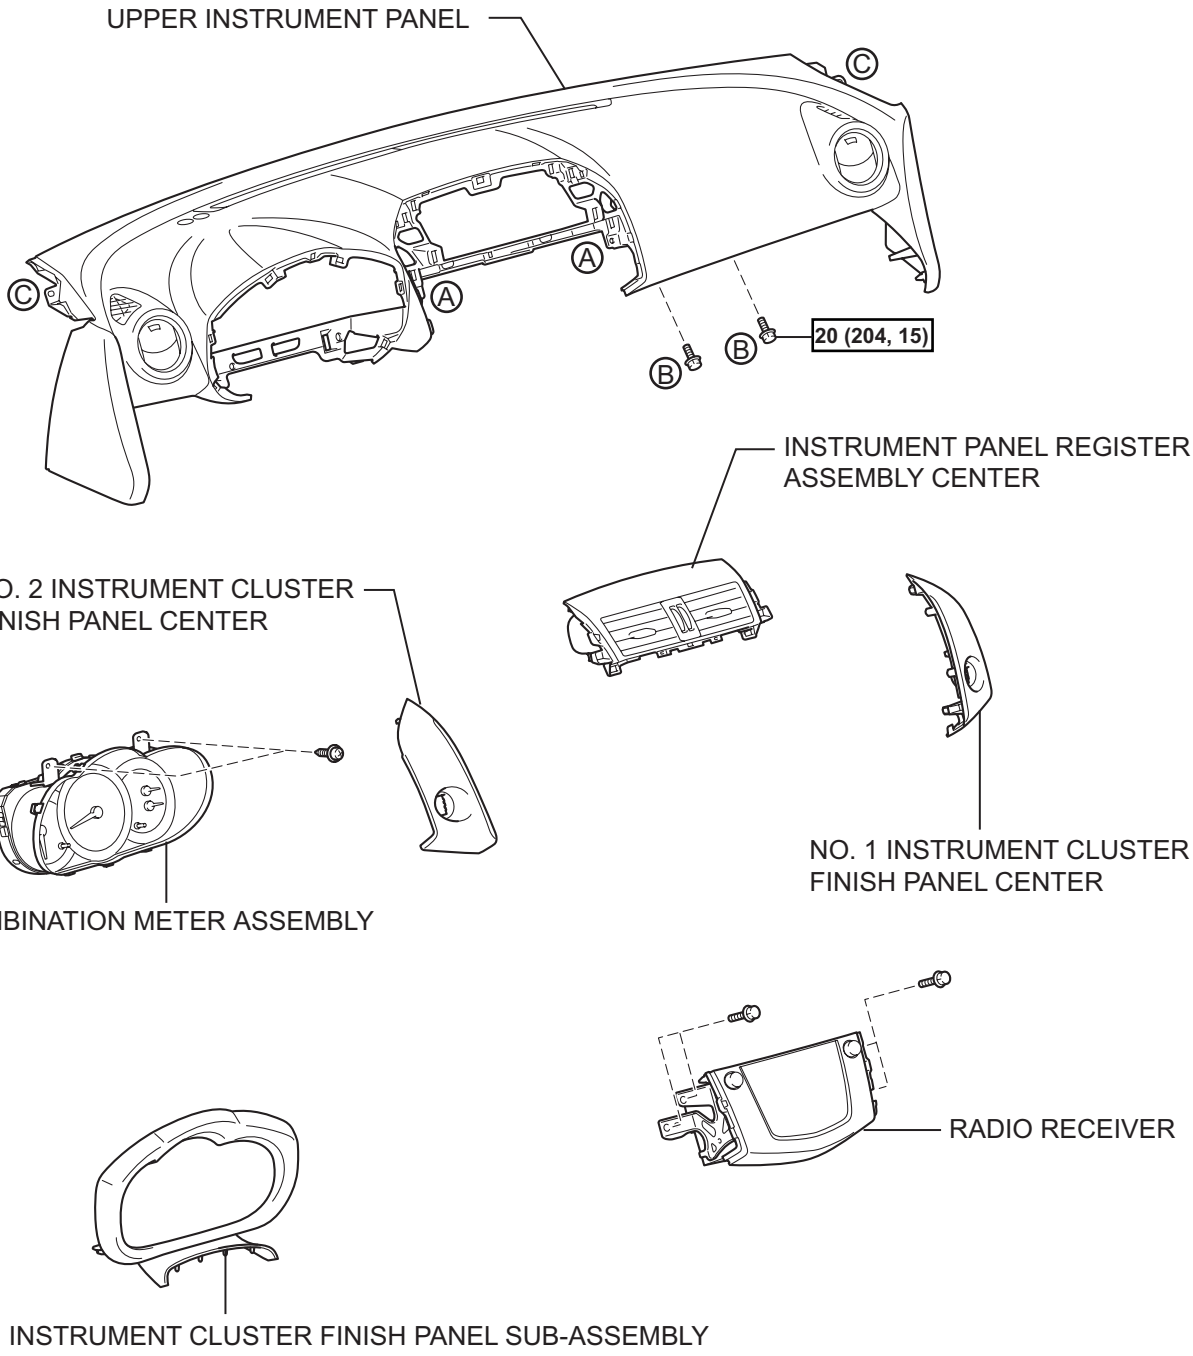
10. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

(a) Attach the 4 clips and 6 claws to install the instrument cluster finish panel.

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

12. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).



UPPER INSTRUMENT PANEL

PRECAUTION

25. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
26. **REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-29)**
27. **REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-30)**
28. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
29. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
30. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
31. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
32. **REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat)**
    (a) Remove the rear No. 2 seat (see page SE-109).
33. **REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)**
    (a) Remove the rear No. 2 seat (see page SE-109).
34. **REMOVE REAR FLOOR NO. 3 BOARD**
35. **REMOVE REAR FLOOR NO. 2 BOARD**
36. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-31)**
37. **REMOVE BACK DOOR WEATHERSTRIP**
38. **REMOVE REAR FLOOR FINISH PLATE (See page IR-31)**
39. **REMOVE REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat) (See page IR-31)**
40. **REMOVE REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat) (See page IR-31)**
41. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-45)**

42. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-80)

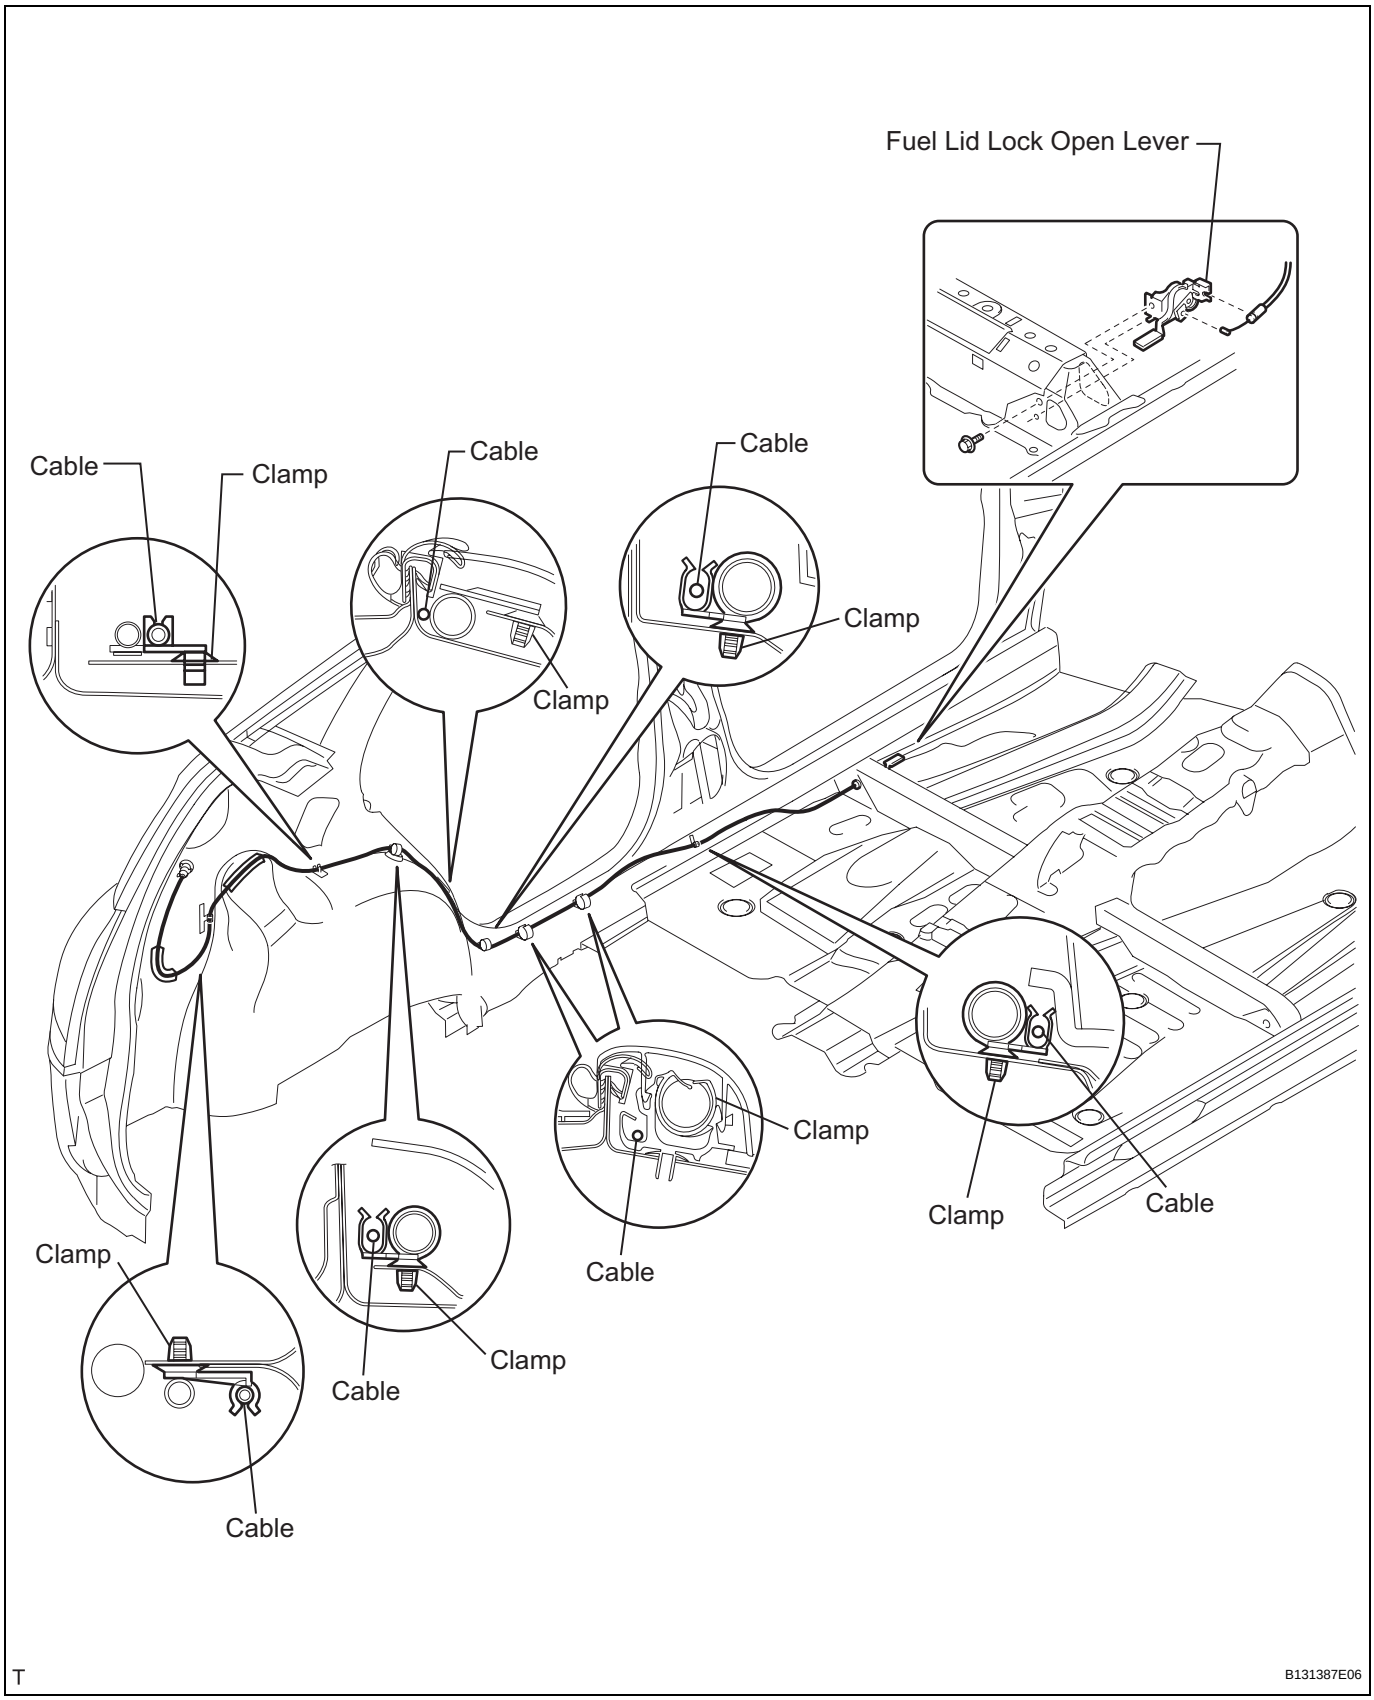
43. REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-32)

44. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-32)

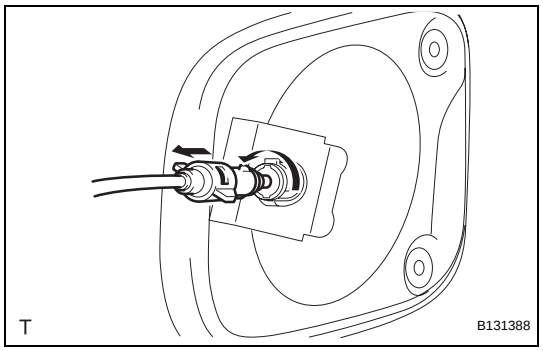
45. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-32)

46. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-33)

47. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-34)

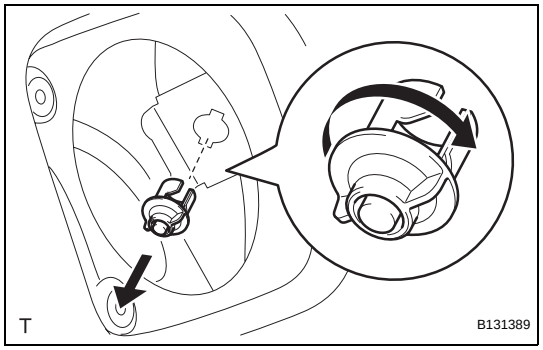


48. REMOVE FRONT FLOOR CARPET ASSEMBLY



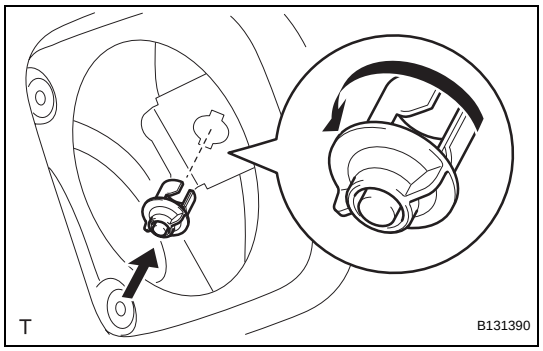
(a) Partially remove the floor carpet.
HINT:
It is not necessary to fully remove the floor carpet. Partially remove it so that the lock control cable can be removed in a later step.

49. REMOVE FUEL LID LOCK CONTROL CABLE SUB-ASSEMBLY



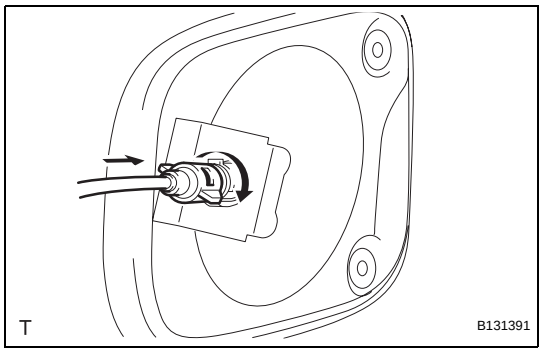
(a) Remove the bolt and fuel lid lock open lever.

(b) Remove the tape and cable from the clamps as shown in the illustration.



(c) Turn the lock retainer counterclockwise and remove the cable from the retainer.

50. REMOVE FUEL FILLER OPENING LID LOCK RETAINER

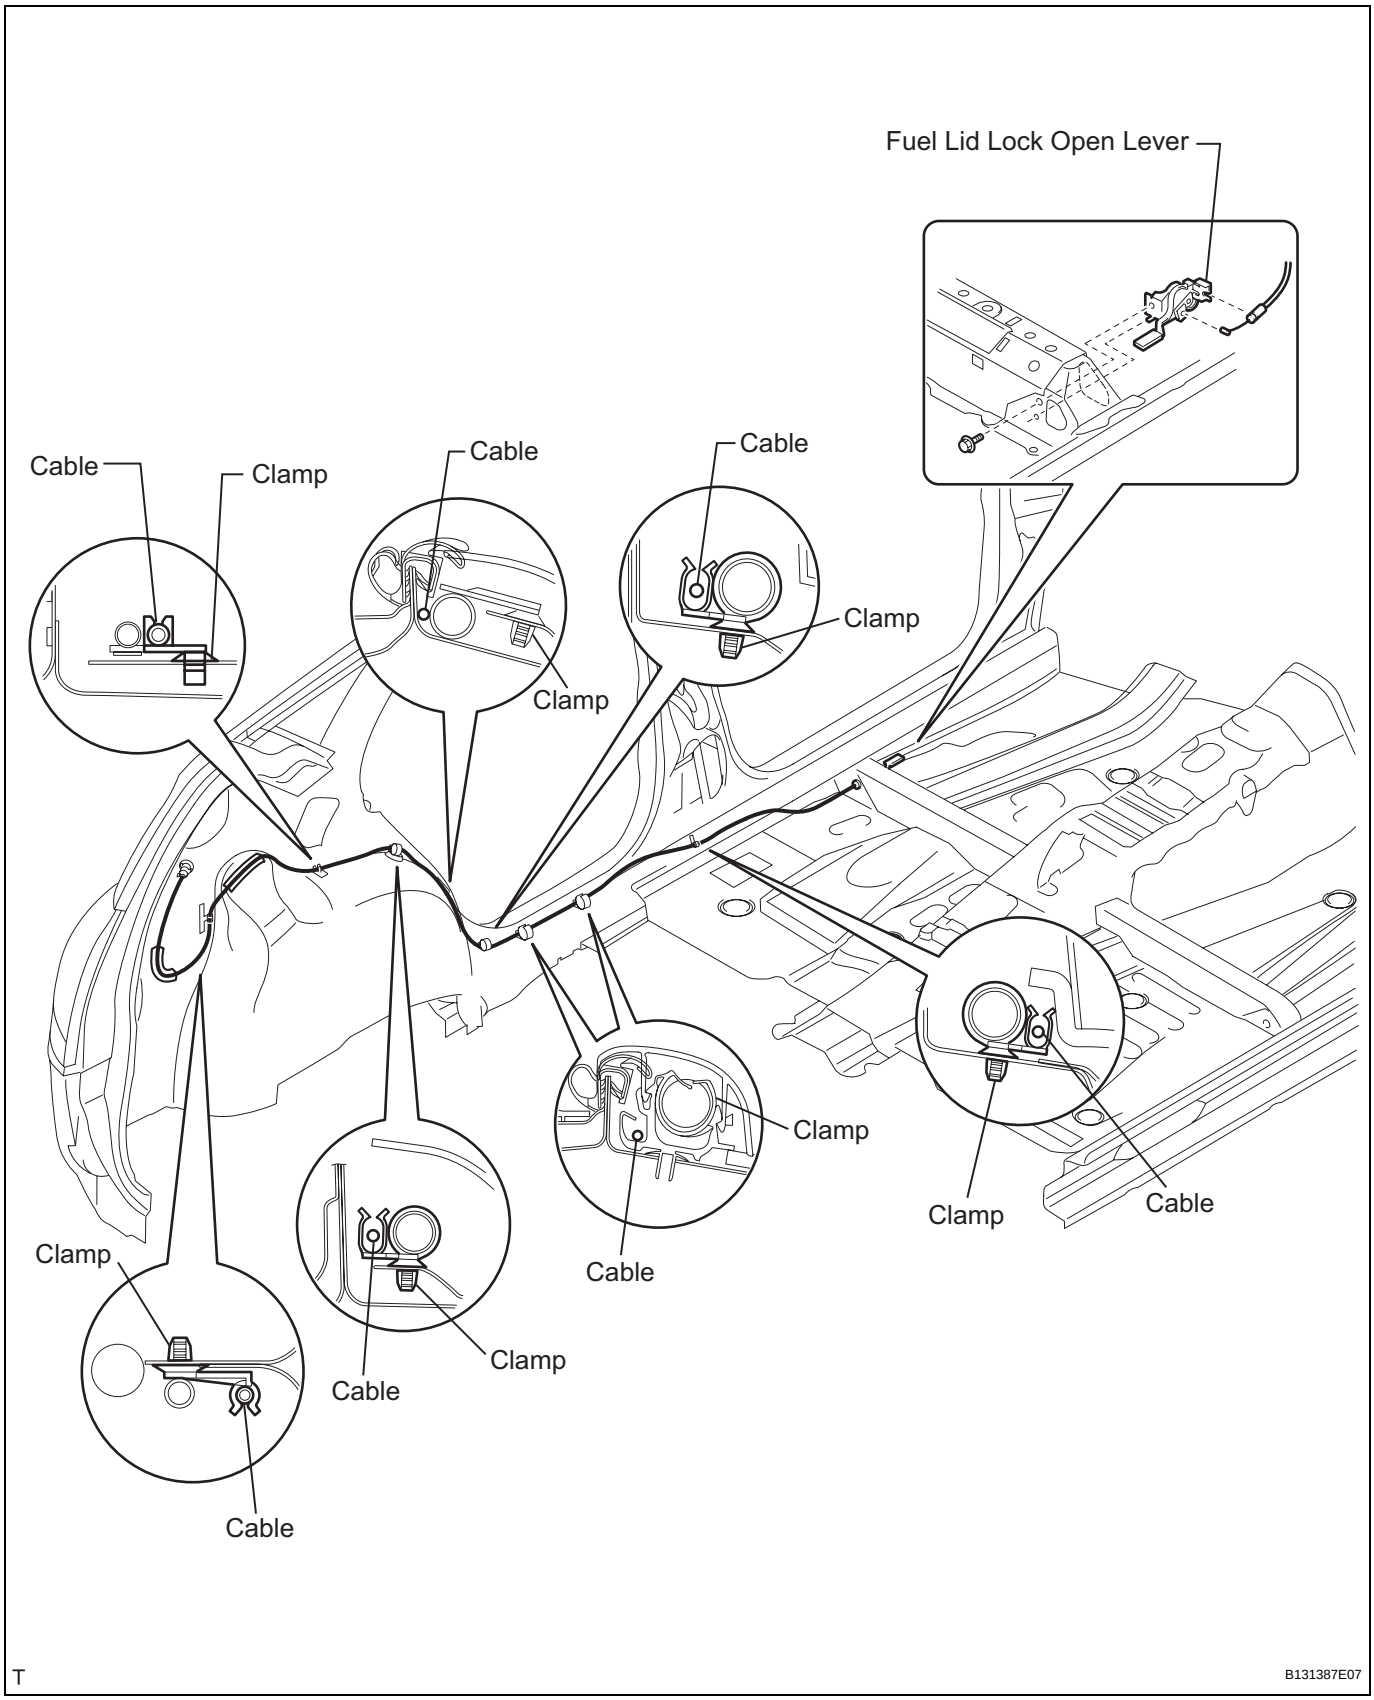


(a) Turn the lock retainer clockwise and remove the lock retainer as shown in the illustration.

INSTALLATION

1. INSTALL FUEL FILLER OPENING LID LOCK RETAINER

(a) Install the lock retainer and turn it counterclockwise as shown in the illustration.



2. INSTALL FUEL LID LOCK CONTROL CABLE SUB-ASSEMBLY

(a) Install the cable and turn it clockwise as shown in the illustration.

(b) Install the fuel lid lock open lever with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(c) Install the cable to the clamps as shown in the illustration.

3. INSTALL FRONT FLOOR CARPET ASSEMBLY

4. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-34)**
5. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-53)**
6. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-32)**
7. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat) (See page IR-52)**
8. **INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-54)**
9. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-105)**
10. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-73)**
11. **INSTALL REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat) (See page IR-55)**
12. **INSTALL REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat) (See page IR-55)**
13. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**
14. **INSTALL BACK DOOR WEATHERSTRIP**
15. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-55)**
16. **INSTALL REAR FLOOR NO. 2 BOARD**
17. **INSTALL REAR FLOOR NO. 3 BOARD**
18. **INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)**
    (a) Install the rear No. 2 seat (see page SE-121).
19. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat)**
    (a) Install the rear No. 2 seat (see page SE-121).
20. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
21. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
22. **INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
23. **INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
24. **INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-56)**
25. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-56)**

26. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
27. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
28. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-57)**
29. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-57)**
30. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
31. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
32. **INSTALL COWL SIDE TRIM BOARD RH (See page IR-59)**
33. **INSTALL COWL SIDE TRIM BOARD LH (See page IR-59)**
34. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-59)**
35. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-59)**
36. **INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (See page IP-26)**
37. **INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER RH (See page IP-26)**
38. **INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER LH (See page IP-26)**
39. **INSTALL CONSOLE REAR END PANEL (See page IP-26)**
40. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
41. **INSTALL CONSOLE CUP HOLDER BOX (See page IP-27)**
42. **INSTALL SWITCH BASE (See page IP-27)**
43. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
44. **INSTALL NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
45. **INSTALL NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
46. **INSTALL REAR NO. 1 SEAT ASSEMBLY LH**
    (a) Install the rear No. 1 seat (see page SE-64).
47. **INSTALL REAR NO. 1 SEAT ASSEMBLY RH**
    (a) Install the rear No. 1 seat (see page SE-97).

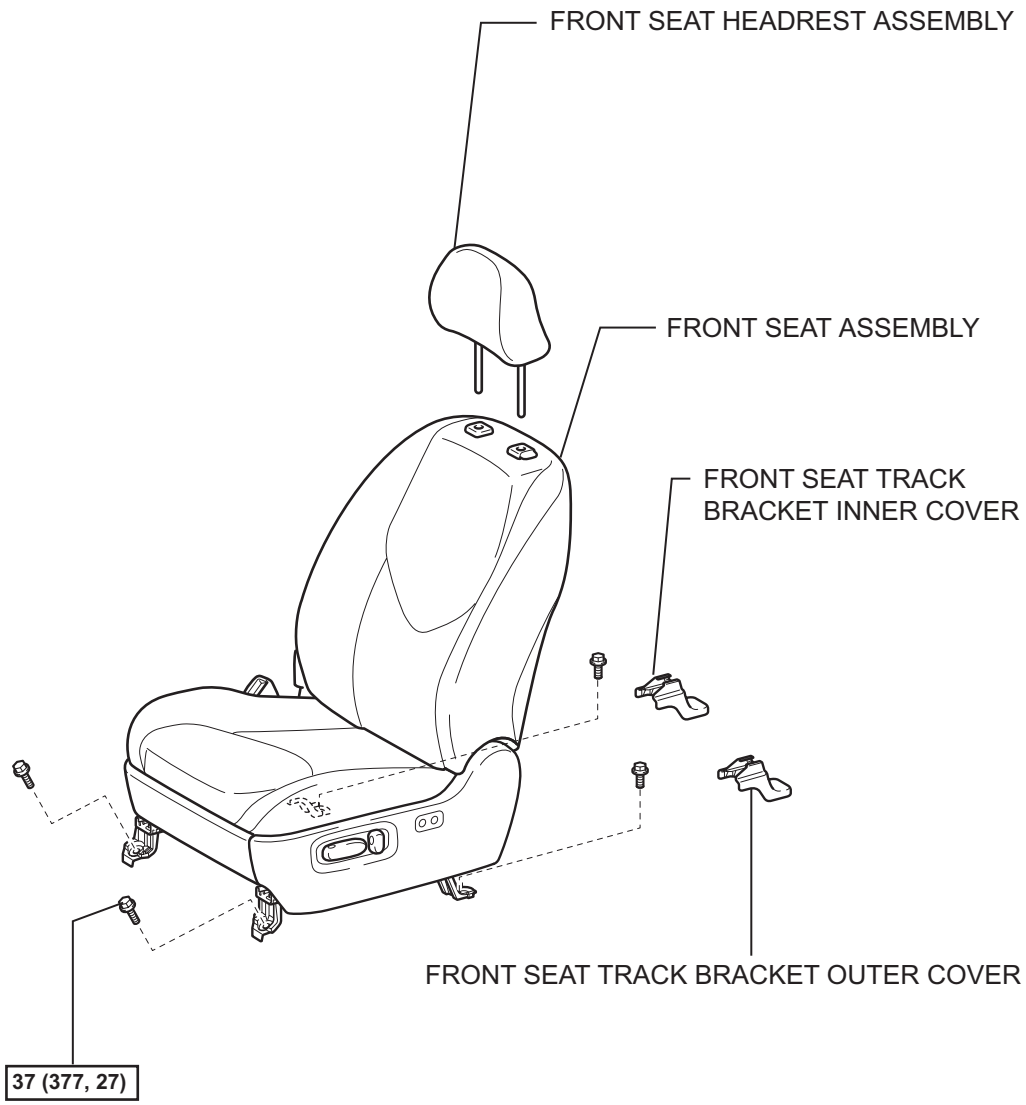
48. INSTALL FRONT SEAT ASSEMBLY LH

(a) Install the front seat.
for Manual Seat (see page SE-22)
for Power Seat (see page SE-37).

49. INSTALL FRONT SEAT ASSEMBLY RH

(a) Install the front seat.
for Manual Seat (see page SE-22)
for Power Seat (see page SE-37)

50. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



51. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).

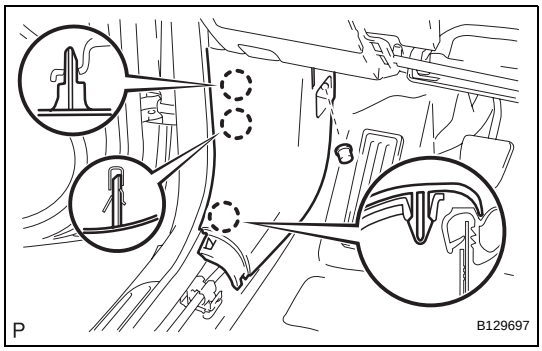
REMOVAL



(2005/11-2006/01)

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. **REMOVE FRONT DOOR SCUFF PLATE LH**
   (a) Using a screwdriver, detach the 10 claws and remove the scuff plate.
   HINT:
   Tape the screwdriver tip before use.

3. **REMOVE FRONT DOOR SCUFF PLATE RH**
   HINT:
   Use the same procedures described for the LH side.

4. **REMOVE COWL SIDE TRIM BOARD LH**
   (a) Remove the cap nut.
   (b) Using a screwdriver, detach the 3 claws and remove the trim board.
   HINT:
   Tape the screwdriver tip before use.

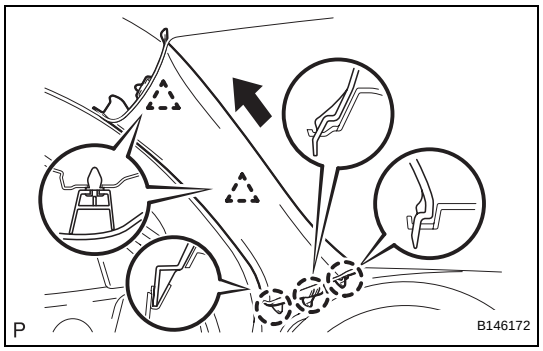
5. **REMOVE COWL SIDE TRIM BOARD RH**
   HINT:
   Use the same procedures described for the LH side.

6. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**

7. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**

8. **REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (See page IP-4)**

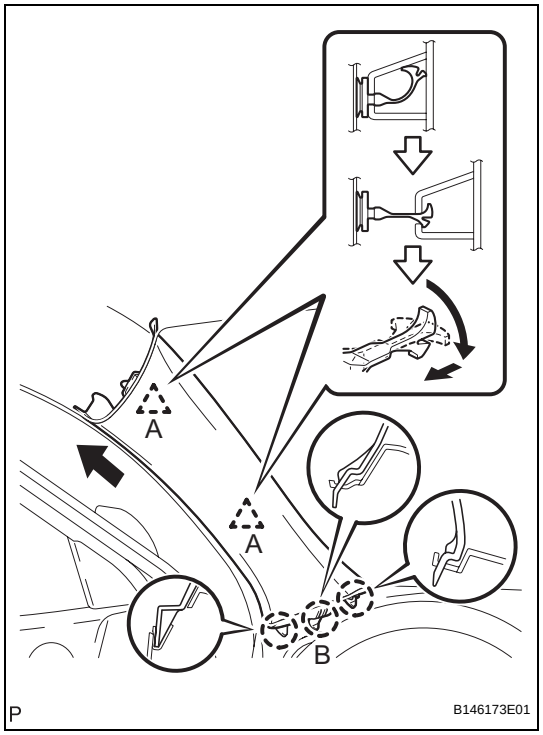
9. **REMOVE COMBINATION METER ASSEMBLY (See page IP-5)**



10. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**

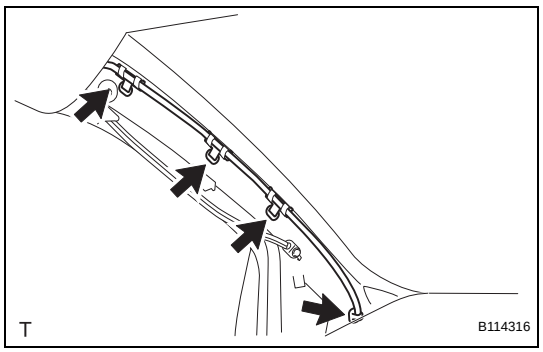
11. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**

12. **REMOVE RADIO RECEIVER (See page IP-5)**

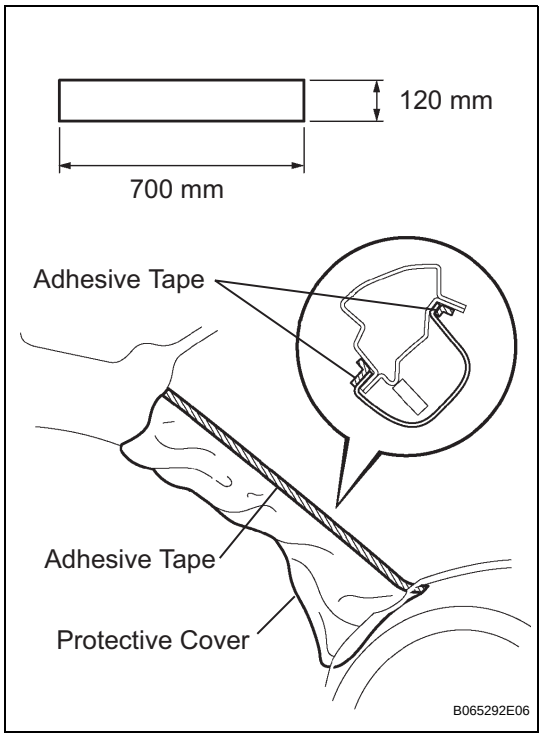


13. **REMOVE INSTRUMENT PANEL REGISTER ASSEMBLY CENTER (See page IP-6)**

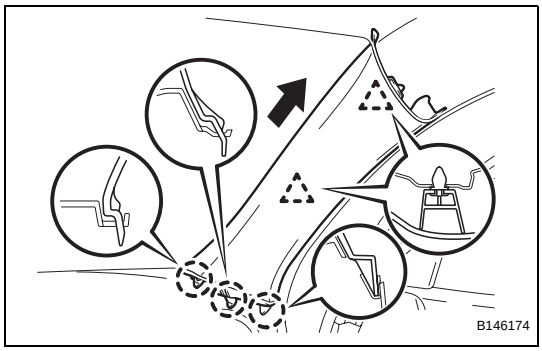
14. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**



15. REMOVE FRONT PILLAR GARNISH LH

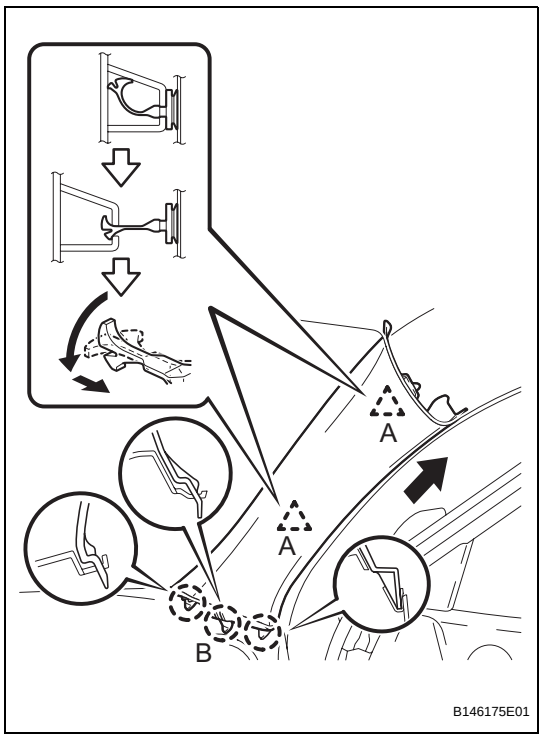


(a) w/o Curtain Shield Airbag:
  (1) Using a clip remover, detach the 2 clips.
  (2) Pull the garnish in the direction indicated by the arrow in the illustration to detach the 3 claws. Then remove the garnish.

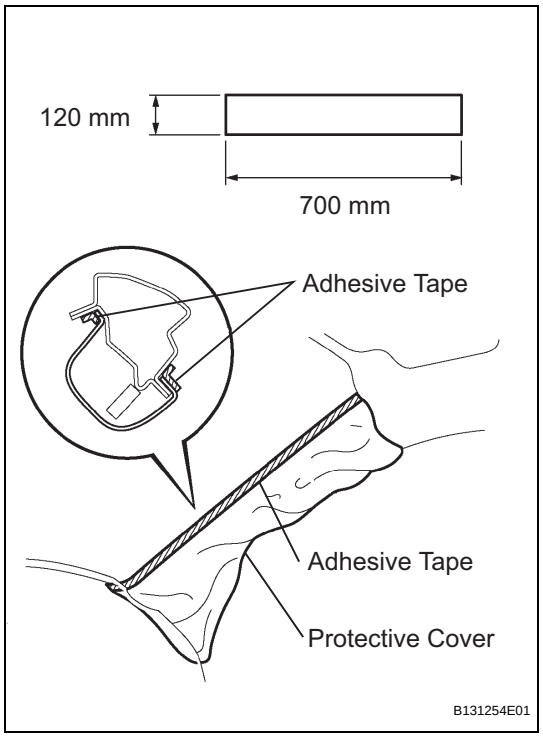


(b) w/ Curtain Shield Airbag:
  (1) Pull the pillar garnish so that the base of the 2 clips labeled A detach. Then pull until the tips of the 2 clips labeled A lock in the pillar garnish's holes.
  (2) Using needle-nose pliers, rotate the 2 clips labeled A 90°. Then pull the pillar garnish to release the tips of the 2 clips labeled A from the pillar garnish.
  (3) Pull the pillar garnish in the direction indicated by the arrow in the illustration to detach the 3 claws labeled B.
  (4) Remove the 2 clips labeled A from the vehicle body.

(c) Using a clip remover, remove the 4 wiring harness clamps.

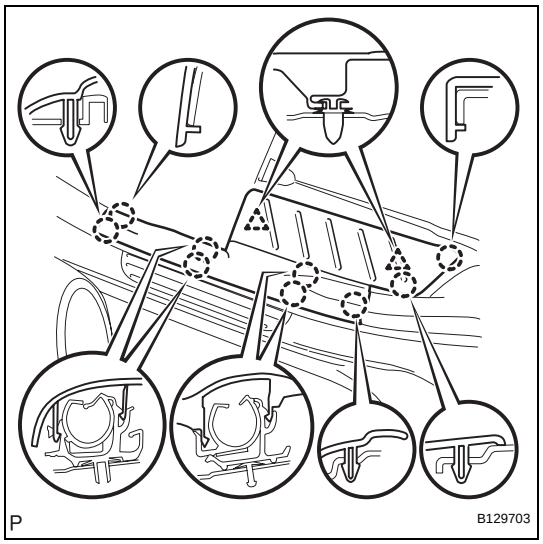


(d) w/ Curtain Shield Airbag:
(1) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.



16. REMOVE FRONT PILLAR GARNISH RH

(a) w/o Curtain Shield Airbag:
(1) Using a clip remover, detach the 2 clips.
(2) Pull the garnish in the direction indicated by the arrow in the illustration to detach the 3 claws. Then remove the garnish.



(b) w/ Curtain Shield Airbag:
(1) Pull the pillar garnish so that the base of the 2 clips labeled A detach. Then pull until the tips of the 2 clips labeled A lock in the pillar garnish's holes.
(2) Using needle-nose pliers, rotate the 2 clips labeled A 90°. Then pull the pillar garnish to release the tips of the 2 clips labeled A from the pillar garnish.
(3) Pull the pillar garnish in the direction indicated by the arrow in the illustration to detach the 3 claws labeled B.
(4) Remove the 2 clips labeled A from the vehicle body.

(5) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

17. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)

18. REMOVE REAR DOOR SCUFF PLATE LH

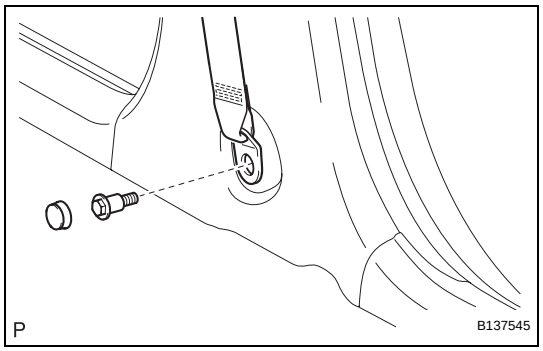
(a) Using a screwdriver, detach the 9 claws.
HINT:
Tape the screwdriver tip before use.

(b) Using a clip remover, detach the 2 clips and remove the garnish.

19. REMOVE REAR DOOR SCUFF PLATE RH

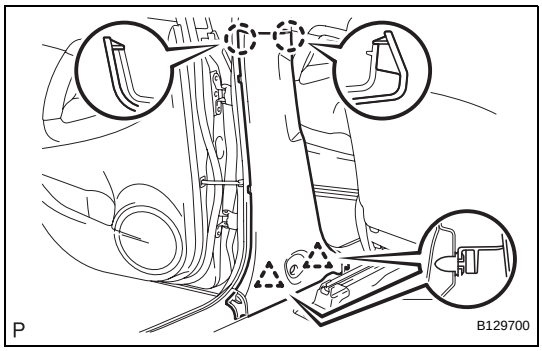
HINT:
Use the same procedures described for the LH side.

20. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

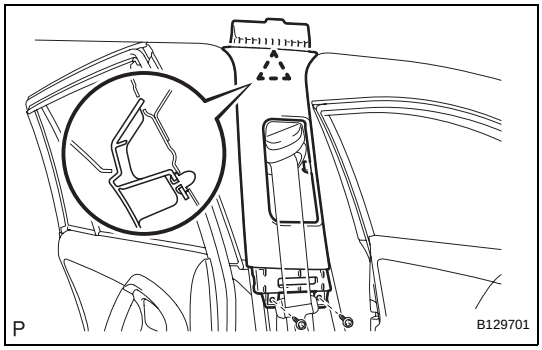


21. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

22. REMOVE LOWER CENTER PILLAR GARNISH LH



(a) Disconnect the front seat outer belt's floor anchor.



(1) Remove the anchor cover.

(2) Remove the bolt and disconnect the floor anchor.

IR

(b) Using a screwdriver, detach the 2 claws.
HINT:
Tape the screwdriver tip before use.
(c) Using a clip remover, detach the 2 clips and remove the garnish.

23. REMOVE LOWER CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

24. REMOVE CENTER PILLAR GARNISH LH
(a) Remove the 2 screws.
(b) Using a clip remover, detach the clip and remove the garnish.

25. REMOVE CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

26. REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

27. REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)

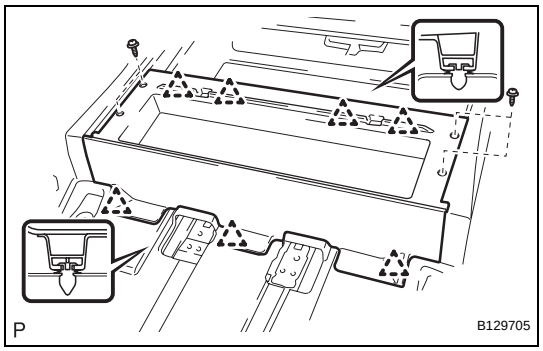
28. REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)

29. REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)

30. REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)

31. REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

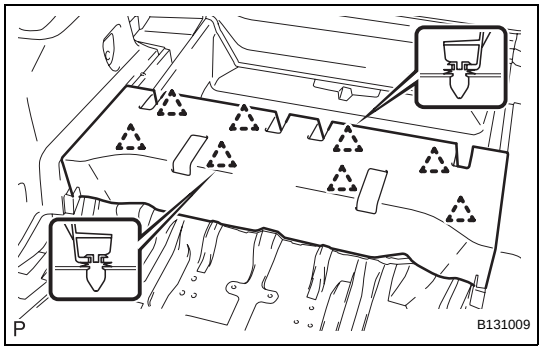
32. REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)



33. REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

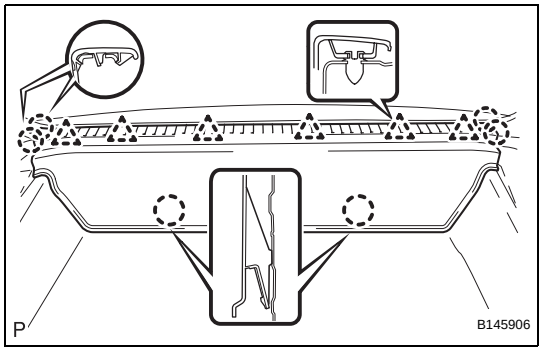
34. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)

35. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.



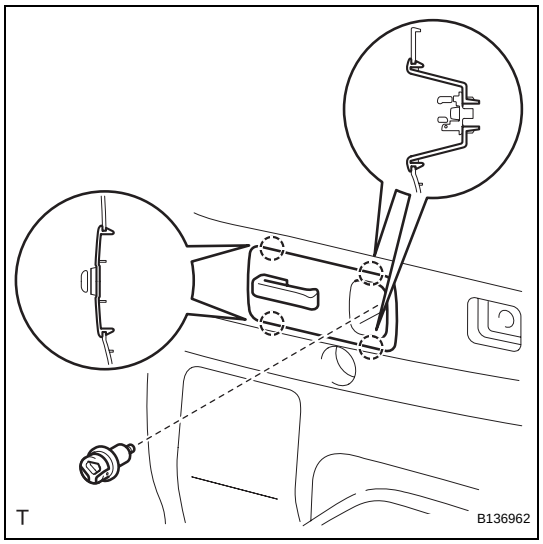
36. REMOVE REAR FLOOR NO. 3 BOARD

37. REMOVE REAR FLOOR NO. 2 BOARD



38. REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE

(a) w/o Rear No. 2 Seat:
  (1) Remove the 4 screws.
  (2) Using a clip remover, detach the 7 clips and remove the plate.



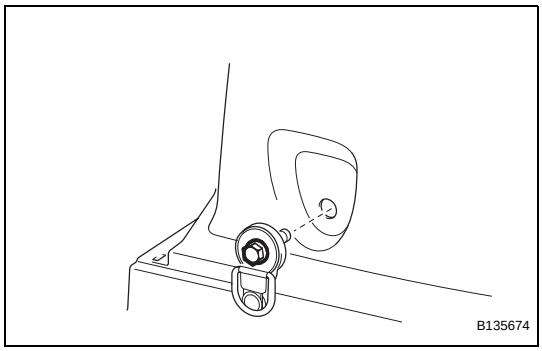
(b) w/ Rear No. 2 Seat:
  (1) Using a clip remover, detach the 8 clips and remove the plate.

39. REMOVE BACK DOOR WEATHERSTRIP

40. REMOVE REAR FLOOR FINISH PLATE

(a) Using a clip remover, detach the 6 clips.
(b) Detach the 6 claws and remove the finish plate.

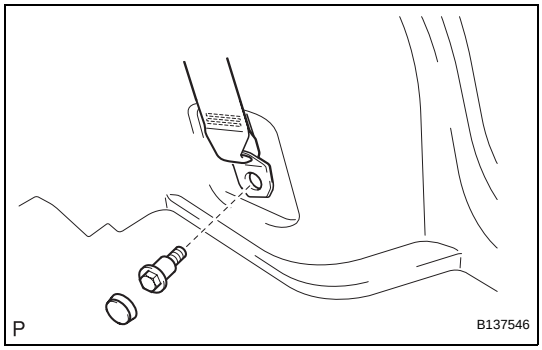
41. REMOVE REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat)



(a) Remove the bolt.
(b) Using a screwdriver, detach the 4 claws and remove the trim cover.
  HINT:
  Tape the screwdriver tip before use.

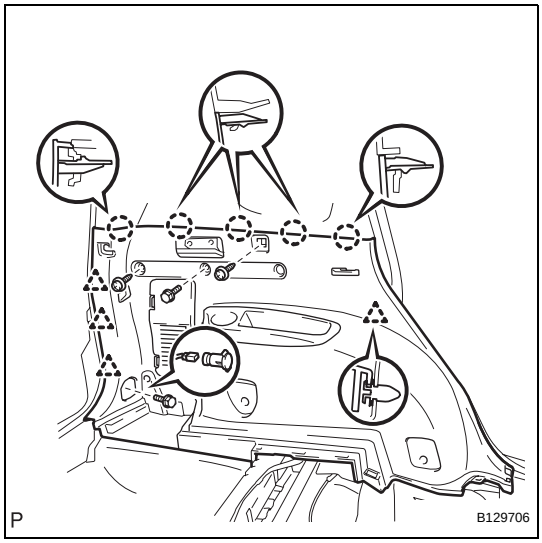
42. REMOVE REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)

HINT:
Use the same procedures described for the LH side.



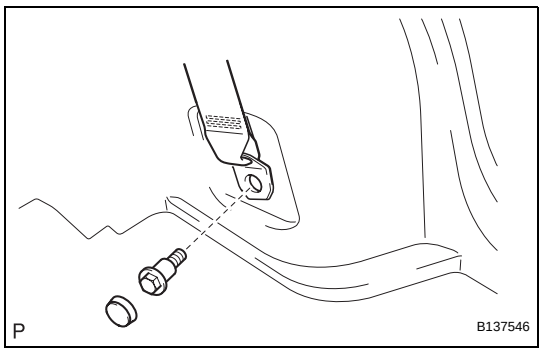
43. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-45)

44. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-80)



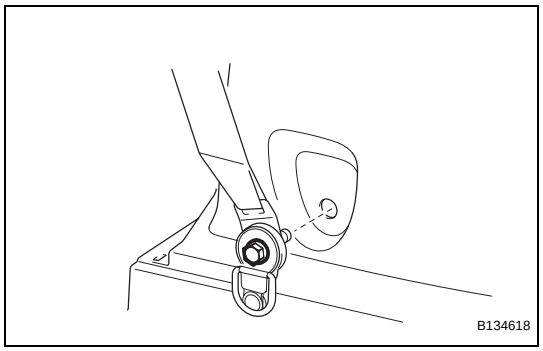
45. REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

(a) Remove the bolt and tether anchor bracket.

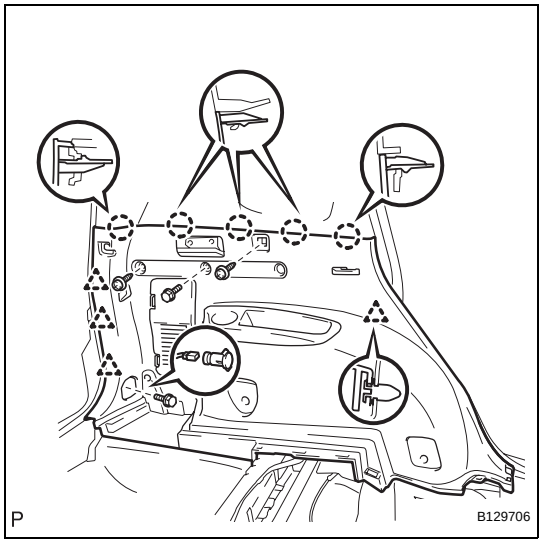


46. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat)

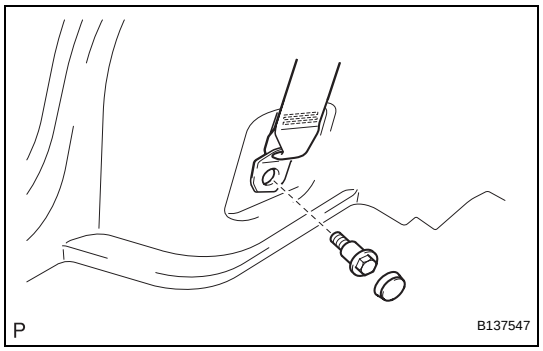
(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.



(b) Remove the 2 screws and 2 bolts.
(c) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(d) Using a clip remover, detach the 4 clips and remove the trim board.
(e) Disconnect the power outlet socket connector.
(f) Remove the belt hanger.

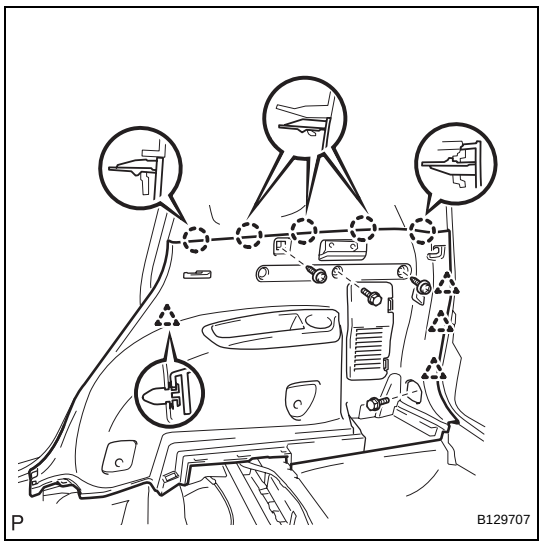


47. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat)

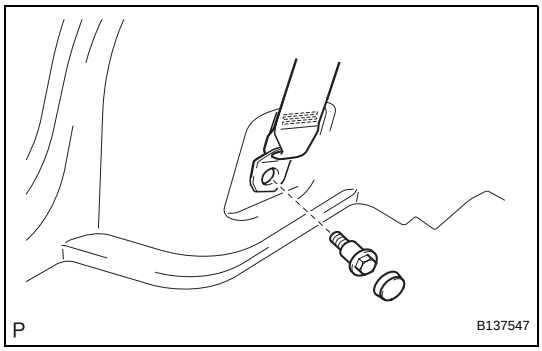


(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.

(b) Disconnect the rear No. 2 seat outer belt's floor anchor.
  (1) Remove the bolt and disconnect the floor anchor.

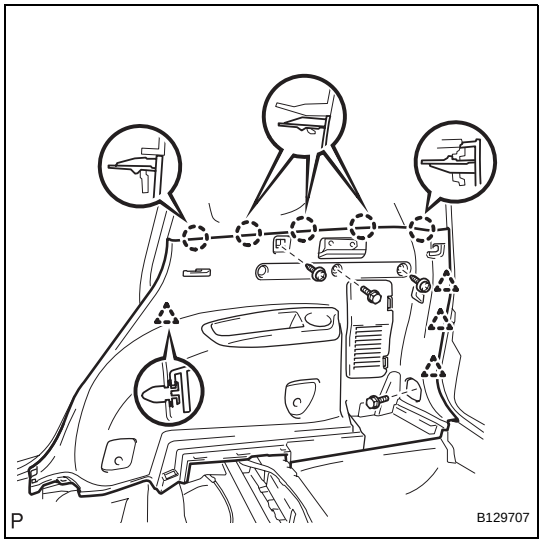


(c) Remove the 2 screws and 2 bolts.
(d) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(e) Using a clip remover, detach the 4 clips and remove the trim board.
(f) Disconnect the power outlet socket connector.
(g) Remove the belt hanger.



48. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.

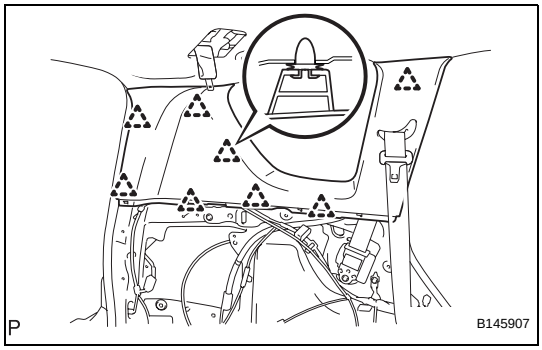


(b) Remove the 2 screws and 2 bolts.
(c) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(d) Using a clip remover, detach the 4 clips and remove the trim board.
(e) Remove the belt hanger.

49. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat)

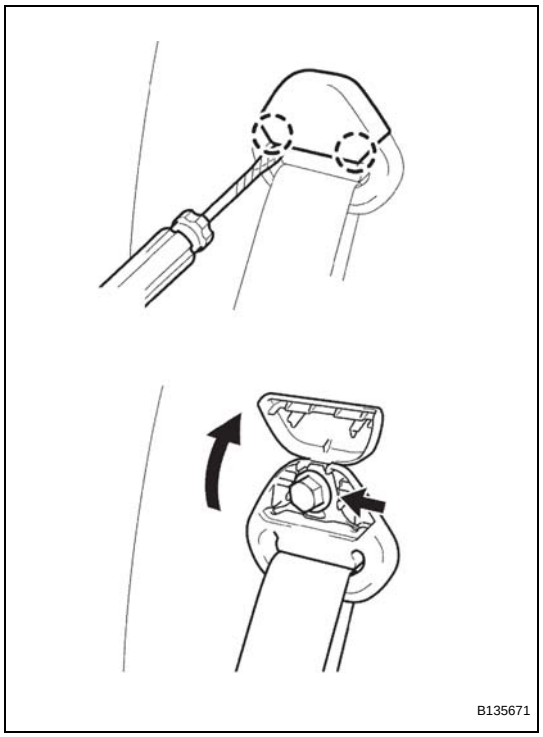
(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.

(b) Disconnect the rear No. 2 seat outer belt's floor anchor.
  (1) Remove the bolt and disconnect the floor anchor.



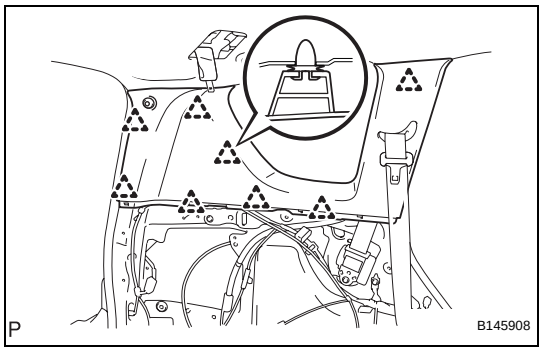
(c) Remove the 2 screws and 2 bolts.

(d) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.



(e) Using a clip remover, detach the 4 clips and remove the trim board.

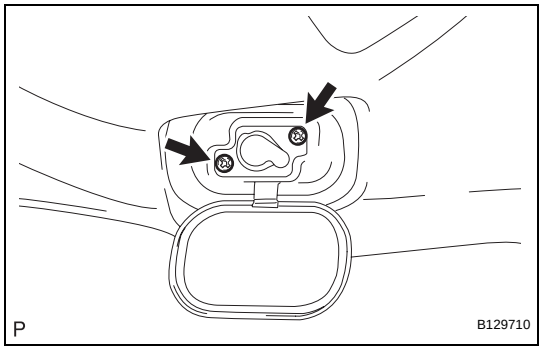
(f) Remove the belt hanger.



50. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat)

(a) Using a clip remover, detach the 8 clips and remove the garnish.

51. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat)

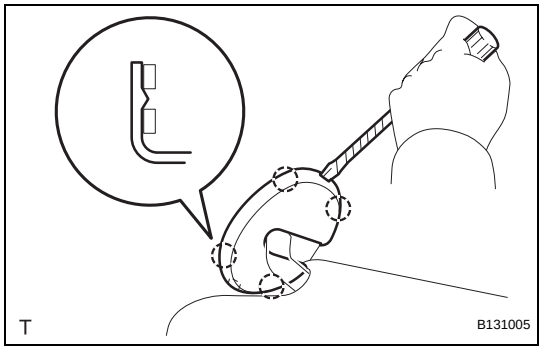


(a) Disconnect the rear No. 2 seat outer belt's shoulder anchor.
  (1) Using a screwdriver, detach the 2 claws and open the seat belt anchor cover.
  HINT:
  Tape the screwdriver tip before use.
  (2) Remove the bolt and disconnect the shoulder anchor.

(b) Using a clip remover, detach the 8 clips and remove the garnish.

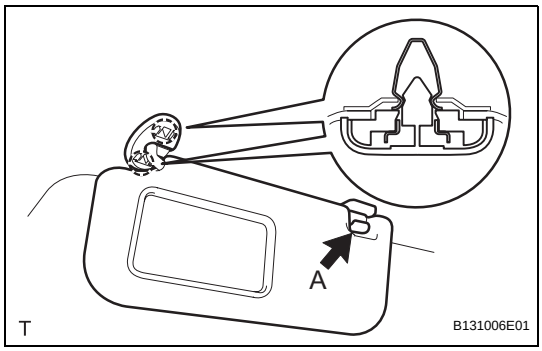
52. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.



53. REMOVE REAR ROOM PARTITION NET HOOK LH

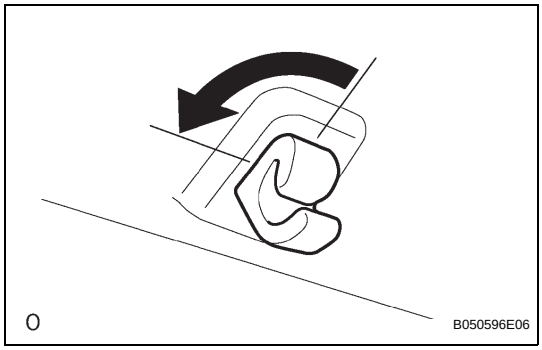
(a) Remove the 2 screws and net hook.



54. REMOVE REAR ROOM PARTITION NET HOOK RH

HINT:
Use the same procedures described for the LH side.

55. REMOVE VISOR ASSEMBLY LH

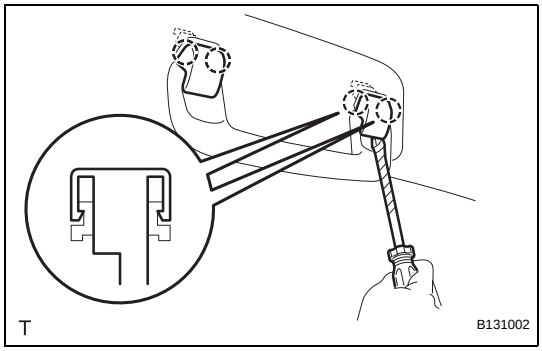


(a) Using a screwdriver, detach the 4 claws and remove the visor bracket cover.
  HINT:
  Tape the screwdriver tip before use.

(b) Remove portion A from the visor holder.
(c) Detach the 2 claws and remove the visor.

56. REMOVE VISOR ASSEMBLY RH

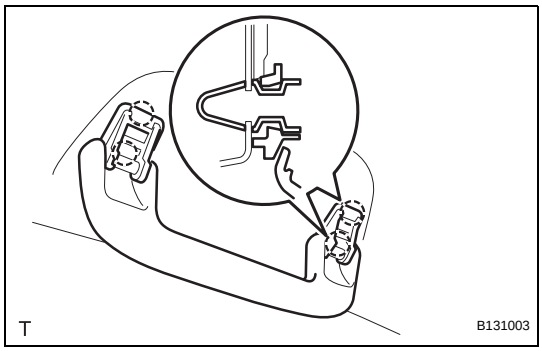
HINT:
Use the same procedures described for the LH side.



57. REMOVE VISOR HOLDER

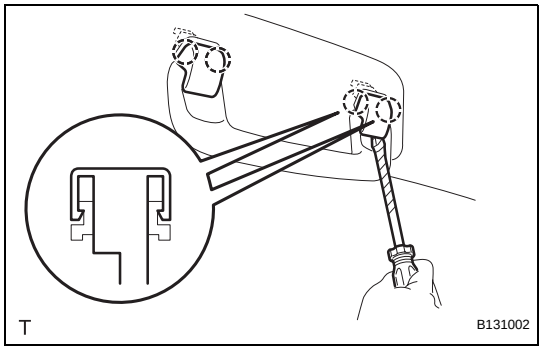
(a) Remove the visor holder by turning it counterclockwise.

58. REMOVE VANITY LIGHT ASSEMBLY (See page LI-128)



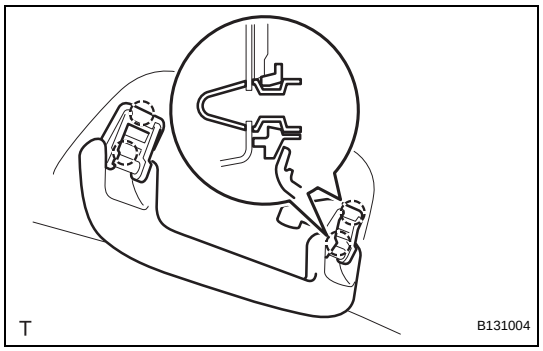
59. REMOVE MAP LIGHT ASSEMBLY (See page LI-115)

60. REMOVE ROOM LIGHT ASSEMBLY (See page LI-118)



61. REMOVE ASSIST GRIP COVER (for Front Grip)

(a) Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.

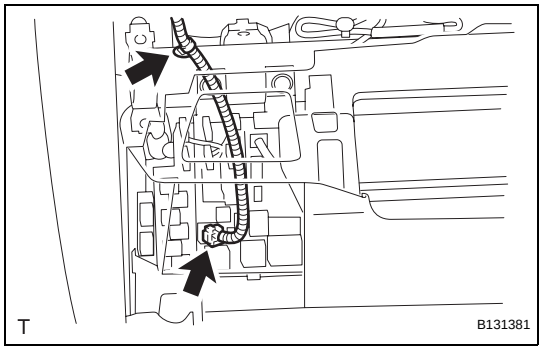


62. REMOVE ASSIST GRIP SUB-ASSEMBLY

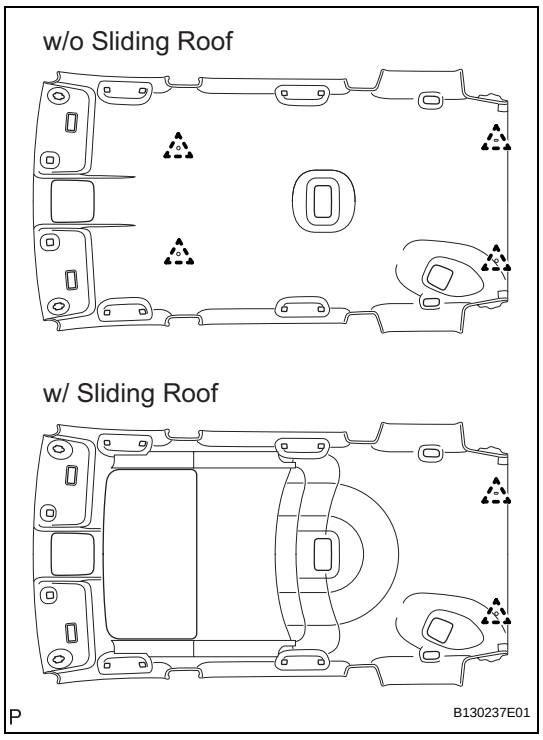
(a) Detach the 4 claws and remove the assist grip.

63. REMOVE ASSIST GRIP COVER (for Rear Grip)

(a) Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.



64. REMOVE REAR ASSIST GRIP ASSEMBLY
(a) Detach the 4 claws and remove the assist grip.



65. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR COVER (See page SB-77)

66. REMOVE SHOULDER BELT ANCHOR COVER RH (See page SB-64)

67. REMOVE SUN ROOF OPENING TRIM MOULDING

68. REMOVE ROOF HEADLINING ASSEMBLY
(a) Using a screwdriver, remove the wire harness clamp.
(b) Disconnect the roof wire connector.

(c) w/o Sliding Roof:
(1) Using a clip remover, remove the 4 clips and headlining.
(d) w/ Sliding Roof:
(1) Disconnect the connector from the drive gear.
(2) Using a clip remover, remove the 2 clips and headlining.

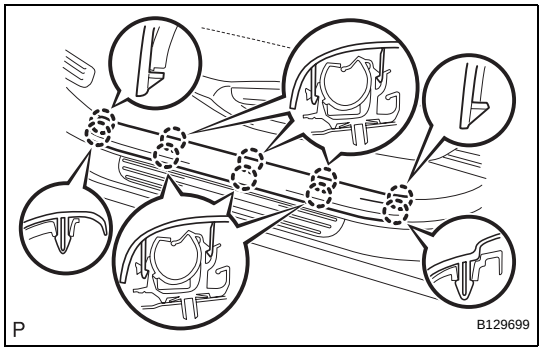
69. REMOVE NO. 1 ROOF HEADLINING SUPPORT

70. REMOVE NO. 2 ROOF HEADLINING SUPPORT

71. REMOVE NO. 3 ROOF HEADLINING SUPPORT

72. REMOVE NO. 4 ROOF HEADLINING SUPPORT

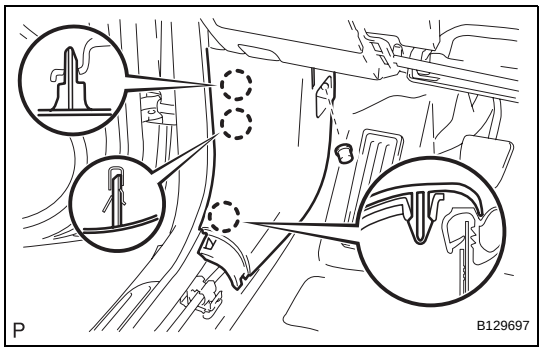
73. REMOVE NO. 1 ROOF WIRE
(a) Only when replacing the roof headlining:
(1) Remove the double-sided tape and roof wire.



74. REMOVE NO. 1 ROOF SILENCER PAD
(a) w/o Sliding Roof:
(1) Remove the 5 silencer pads.
(b) w/ Sliding Roof:
(1) Remove the 2 silencer pads.

75. REMOVE NO. 3 ROOF SILENCER PAD

REMOVAL



(2006/01-)

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. **REMOVE FRONT DOOR SCUFF PLATE LH**
   (a) Using a screwdriver, detach the 10 claws and remove the scuff plate.
   HINT:
   Tape the screwdriver tip before use.

3. **REMOVE FRONT DOOR SCUFF PLATE RH**
   HINT:
   Use the same procedures described for the LH side.

4. **REMOVE COWL SIDE TRIM BOARD LH**
   (a) Remove the cap nut.
   (b) Using a screwdriver, detach the 3 claws and remove the trim board.
   HINT:
   Tape the screwdriver tip before use.

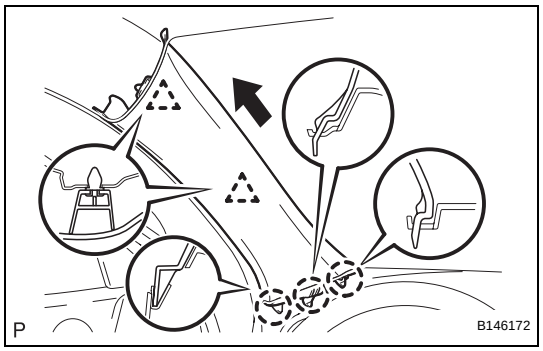
5. **REMOVE COWL SIDE TRIM BOARD RH**
   HINT:
   Use the same procedures described for the LH side.

6. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**

7. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**

8. **REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (See page IP-4)**

9. **REMOVE COMBINATION METER ASSEMBLY (See page IP-5)**



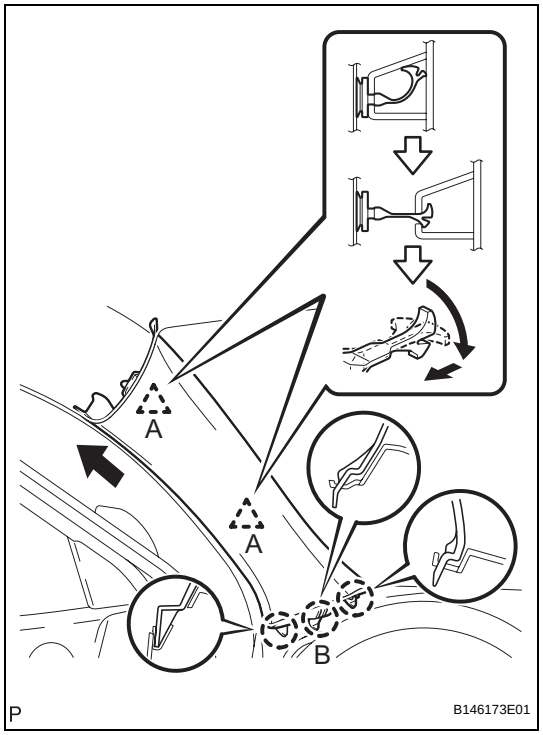
10. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**

11. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**

12. **REMOVE RADIO RECEIVER (See page IP-5)**

13. **REMOVE INSTRUMENT PANEL REGISTER ASSEMBLY CENTER (See page IP-6)**

14. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**

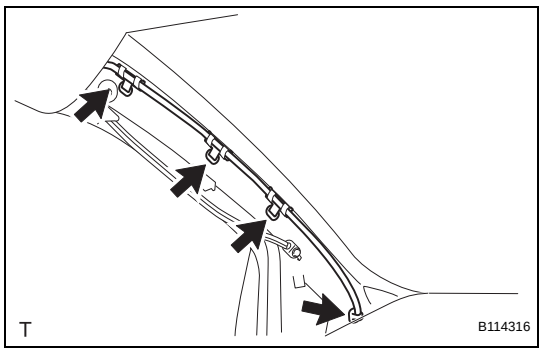


15. REMOVE FRONT PILLAR GARNISH LH

(a) w/o Curtain Shield Airbag:

(1) Using a clip remover, detach the 2 clips.

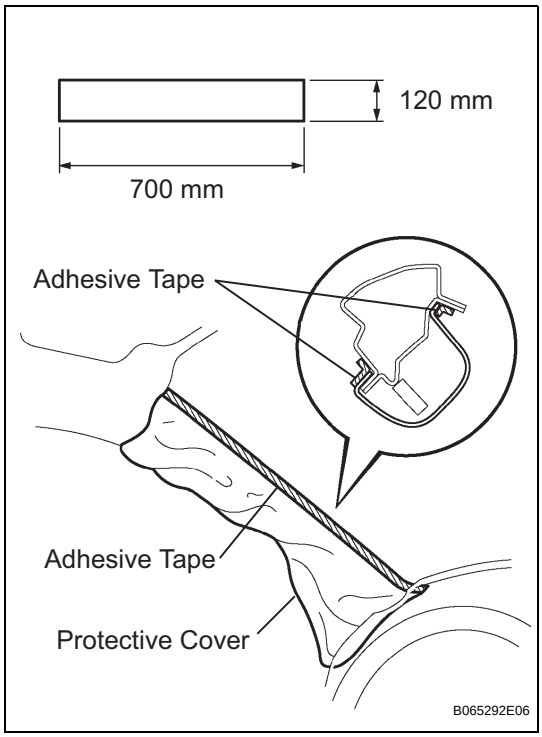
(2) Pull the garnish in the direction indicated by the arrow in the illustration to detach the 3 claws. Then remove the garnish.



(b) w/ Curtain Shield Airbag:

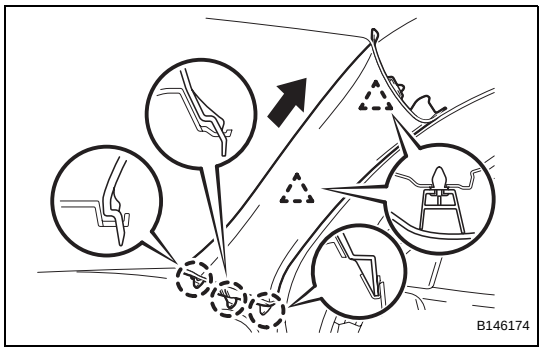
(1) Pull the pillar garnish so that the base of the 2 clips labeled A detach. Then pull until the tips of the 2 clips labeled A lock in the pillar garnish's holes.

(2) Using needle-nose pliers, rotate the 2 clips labeled A 90°. Then pull the pillar garnish to release the tips of the 2 clips labeled A from the pillar garnish.

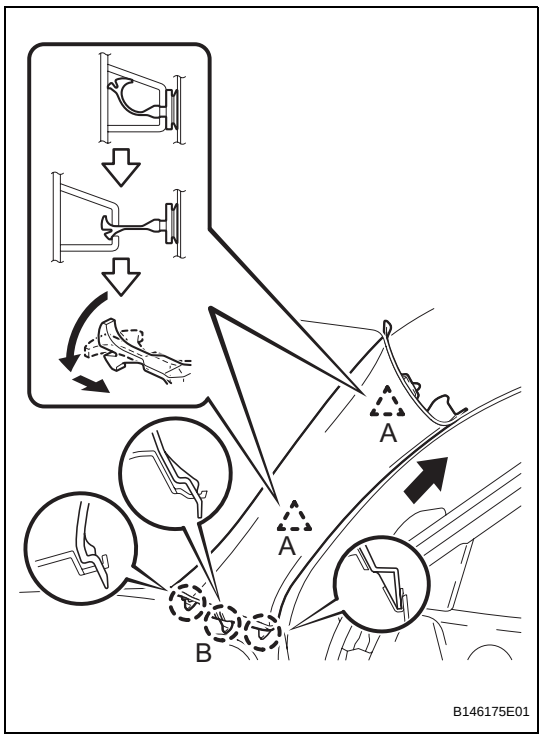


(3) Pull the pillar garnish in the direction indicated by the arrow in the illustration to detach the 3 claws labeled B.

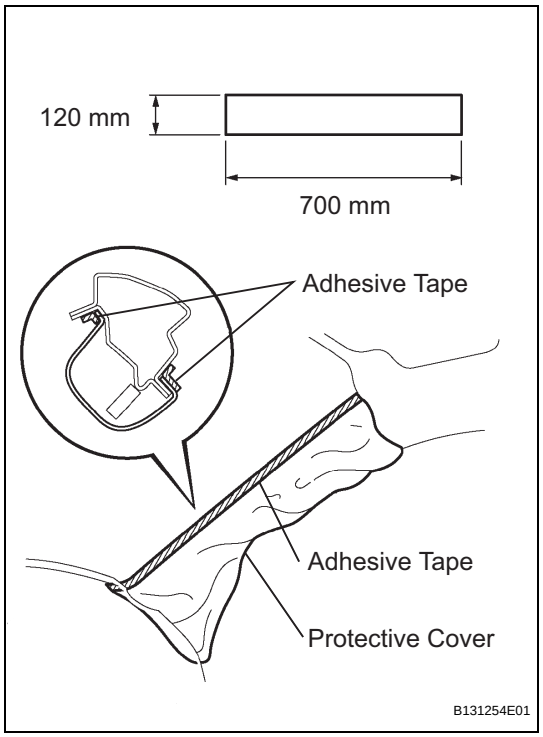
(4) Remove the 2 clips labeled A from the vehicle body.



(c) Using a clip remover, remove the 4 wiring harness clamps.

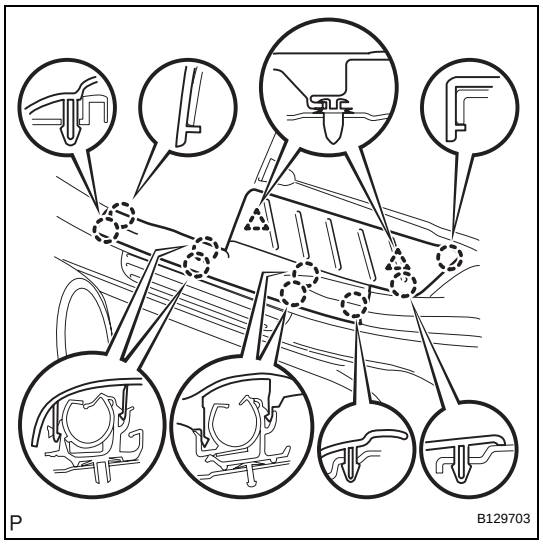


IR



(d) w/ Curtain Shield Airbag:
(1) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

16. REMOVE FRONT PILLAR GARNISH RH
(a) w/o Curtain Shield Airbag:
(1) Using a clip remover, detach the 2 clips.
(2) Pull the garnish in the direction indicated by the arrow in the illustration to detach the 3 claws. Then remove the garnish.



(b) w/ Curtain Shield Airbag:
(1) Pull the pillar garnish so that the base of the 2 clips labeled A detach. Then pull until the tips of the 2 clips labeled A lock in the pillar garnish's holes.
(2) Using needle-nose pliers, rotate the 2 clips labeled A 90°. Then pull the pillar garnish to release the tips of the 2 clips labeled A from the pillar garnish.
(3) Pull the pillar garnish in the direction indicated by the arrow in the illustration to detach the 3 claws labeled B.
(4) Remove the 2 clips labeled A from the vehicle body.

(5) Thoroughly cover the airbag with cloth or nylon of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

17. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-6)

18. REMOVE REAR DOOR SCUFF PLATE LH

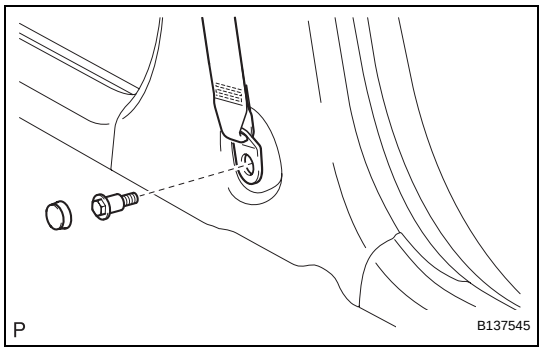
(a) Using a screwdriver, detach the 9 claws.
HINT:
Tape the screwdriver tip before use.

(b) Using a clip remover, detach the 2 clips and remove the garnish.

19. REMOVE REAR DOOR SCUFF PLATE RH

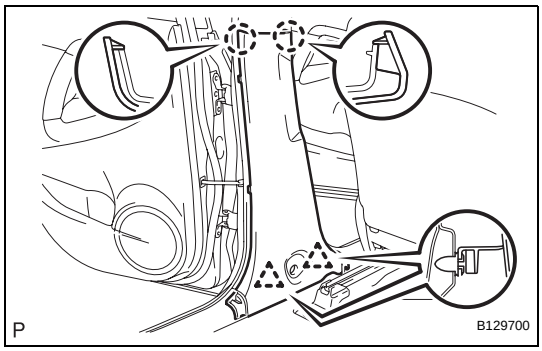
HINT:
Use the same procedures described for the LH side.

20. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

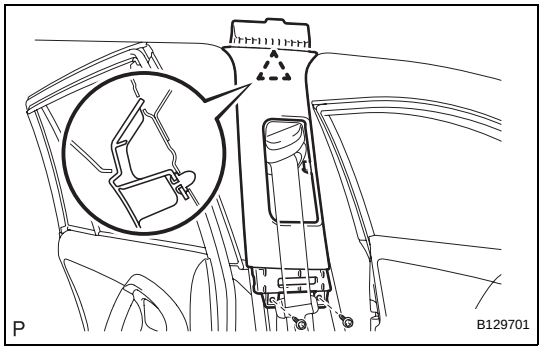


21. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

22. REMOVE LOWER CENTER PILLAR GARNISH LH



(a) Disconnect the front seat outer belt's floor anchor.



(1) Remove the anchor cover.

(2) Remove the bolt and disconnect the floor anchor.

IR

(b) Using a screwdriver, detach the 2 claws.
HINT:
Tape the screwdriver tip before use.
(c) Using a clip remover, detach the 2 clips and remove the garnish.

23. REMOVE LOWER CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

24. REMOVE CENTER PILLAR GARNISH LH
(a) Remove the 2 screws.
(b) Using a clip remover, detach the clip and remove the garnish.

25. REMOVE CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

26. REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

27. REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)

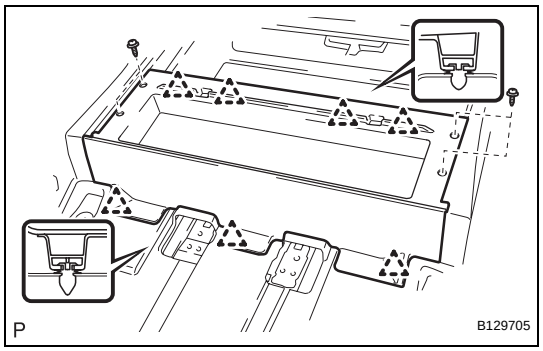
28. REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)

29. REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)

30. REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)

31. REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

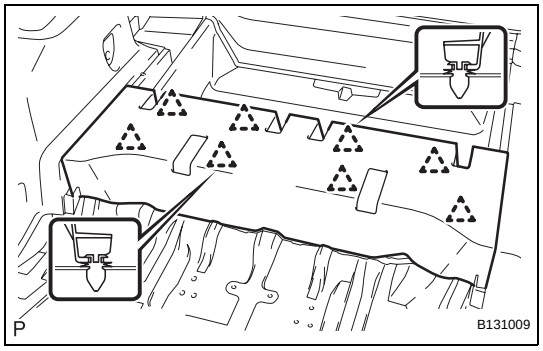
32. REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)



33. REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

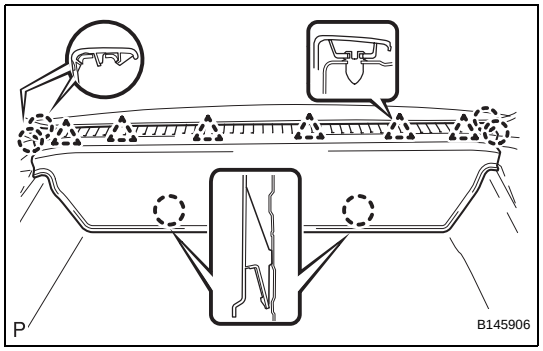
34. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)

35. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.



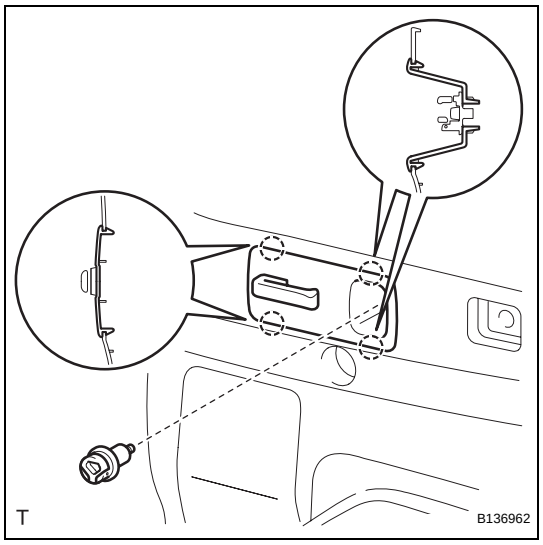
36. REMOVE REAR FLOOR NO. 3 BOARD

37. REMOVE REAR FLOOR NO. 2 BOARD



38. REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE

(a) w/o Rear No. 2 Seat:
  (1) Remove the 4 screws.
  (2) Using a clip remover, detach the 7 clips and remove the plate.



(b) w/ Rear No. 2 Seat:
  (1) Using a clip remover, detach the 8 clips and remove the plate.

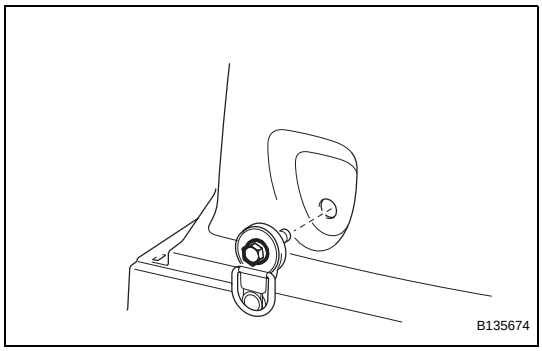
39. REMOVE BACK DOOR WEATHERSTRIP

40. REMOVE REAR FLOOR FINISH PLATE

(a) Using a clip remover, detach the 6 clips.
(b) Detach the 6 claws and remove the finish plate.

41. REMOVE REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat)

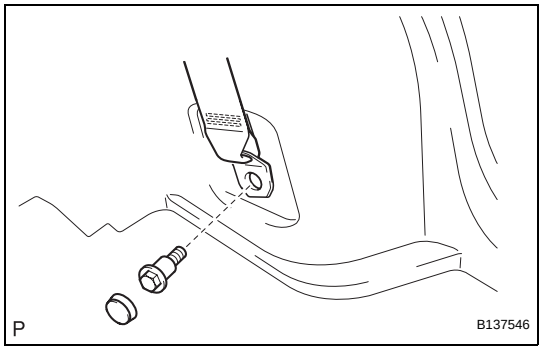
(a) Remove the bolt.
(b) Using a screwdriver, detach the 4 claws and remove the trim cover.
  HINT:
  Tape the screwdriver tip before use.



42. REMOVE REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)

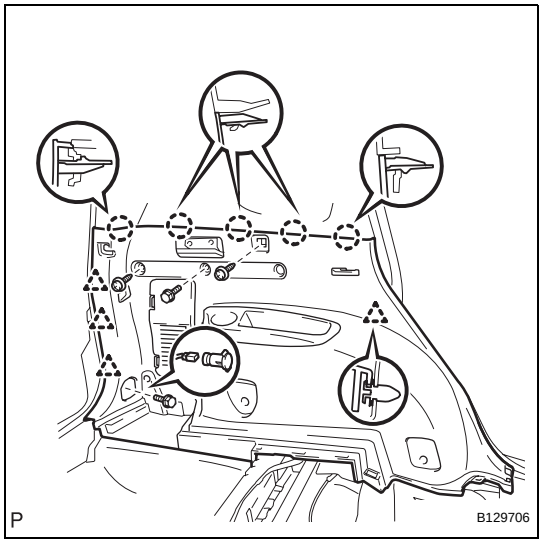
HINT:
Use the same procedures described for the LH side.

43. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-45)



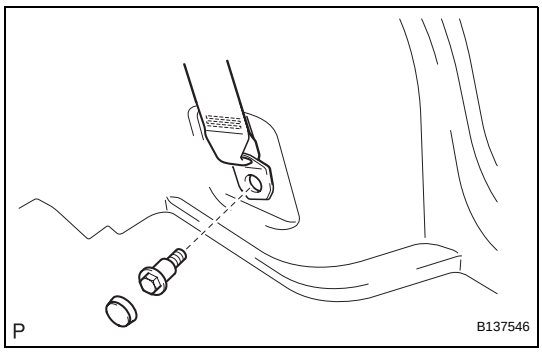
44. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-80)

IR



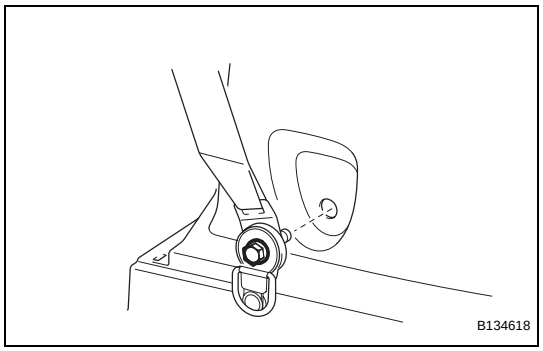
45. REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

(a) Remove the bolt and tether anchor bracket.

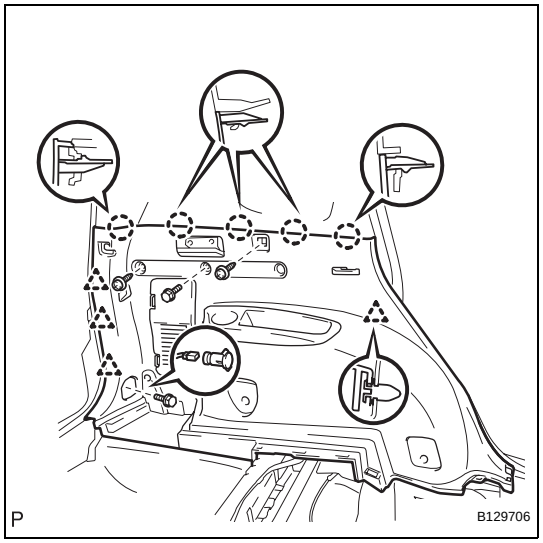


46. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat)

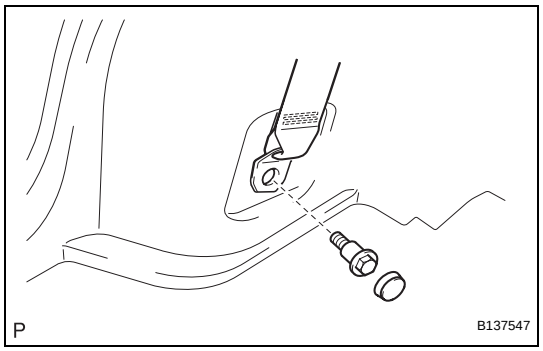
(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.



(b) Remove the 2 screws and 2 bolts.
(c) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(d) Using a clip remover, detach the 4 clips and remove the trim board.
(e) Disconnect the power outlet socket connector.
(f) Remove the belt hanger.

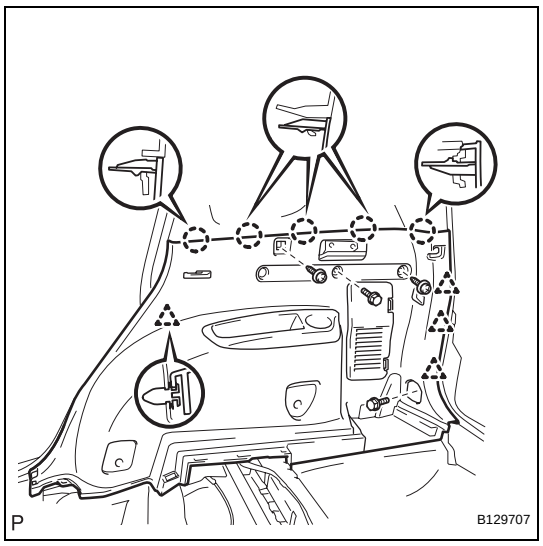


47. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat)

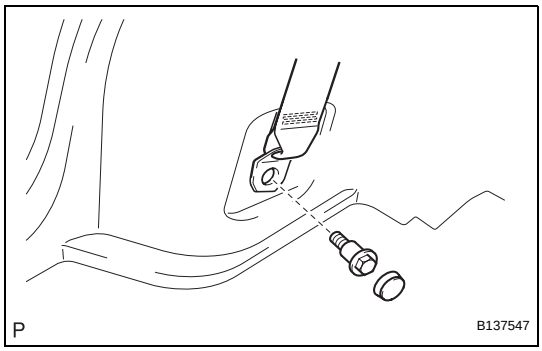


(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.

(b) Disconnect the rear No. 2 seat outer belt's floor anchor.
  (1) Remove the bolt and disconnect the floor anchor.



(c) Remove the 2 screws and 2 bolts.
(d) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(e) Using a clip remover, detach the 4 clips and remove the trim board.
(f) Disconnect the power outlet socket connector.
(g) Remove the belt hanger.



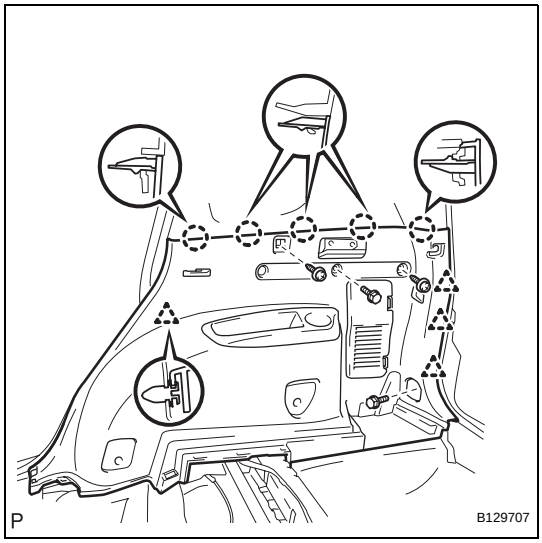
48. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.

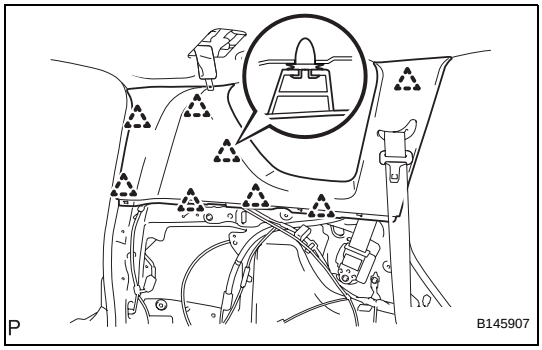
(b) Remove the 2 screws and 2 bolts.
(c) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.
(d) Using a clip remover, detach the 4 clips and remove the trim board.
(e) Remove the belt hanger.

49. REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat)

(a) Disconnect the rear No. 1 seat outer belt's floor anchor.
  (1) Remove the anchor cover.
  (2) Remove the bolt and disconnect the floor anchor.



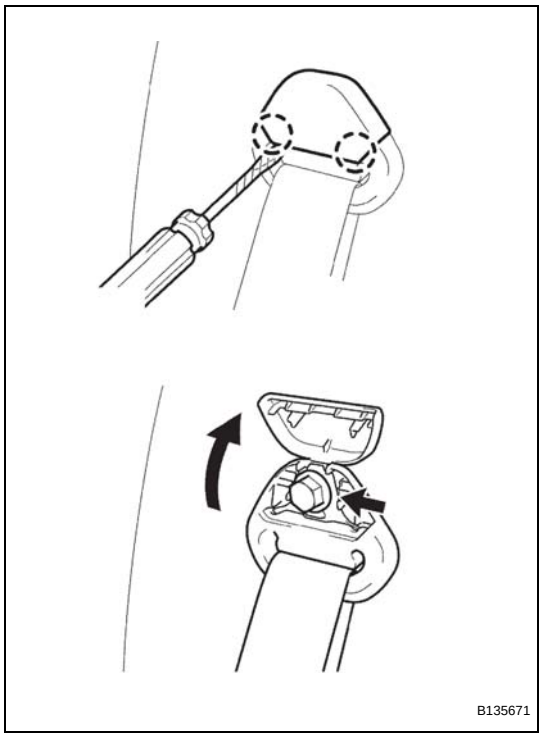
(b) Disconnect the rear No. 2 seat outer belt's floor anchor.
  (1) Remove the bolt and disconnect the floor anchor.



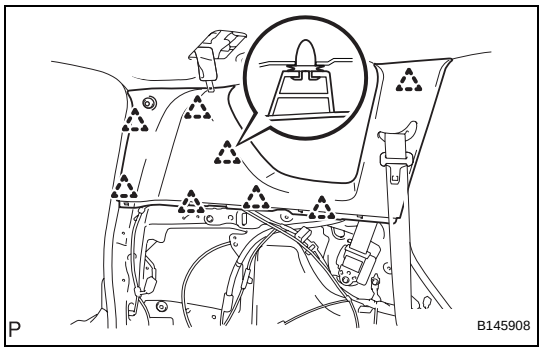
(c) Remove the 2 screws and 2 bolts.

(d) Using a screwdriver, detach the 5 claws.
HINT:
Tape the screwdriver tip before use.

(e) Using a clip remover, detach the 4 clips and remove the trim board.



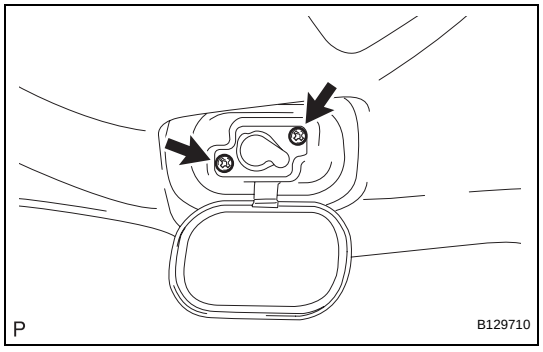
(f) Remove the belt hanger.



50. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat)

(a) Using a clip remover, detach the 8 clips and remove the garnish.

51. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat)

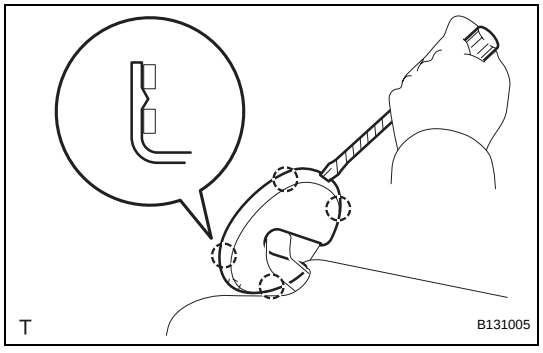


(a) Disconnect the rear No. 2 seat outer belt's shoulder anchor.
   (1) Using a screwdriver, detach the 2 claws and open the seat belt anchor cover.
   HINT:
   Tape the screwdriver tip before use.
   (2) Remove the bolt and disconnect the shoulder anchor.

(b) Using a clip remover, detach the 8 clips and remove the garnish.

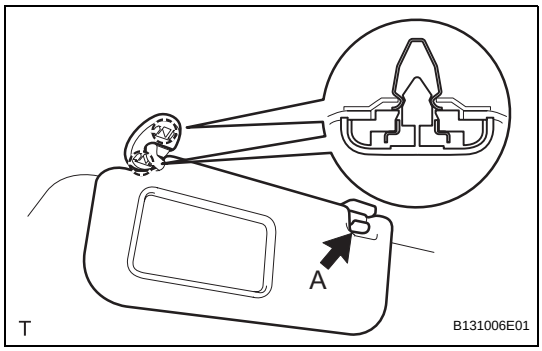
52. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.



53. REMOVE REAR ROOM PARTITION NET HOOK LH

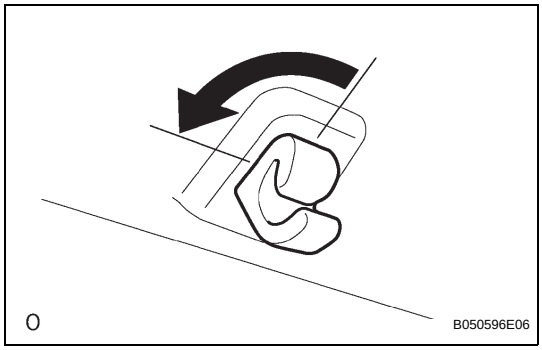
(a) Remove the 2 screws and net hook.



54. REMOVE REAR ROOM PARTITION NET HOOK RH

HINT:
Use the same procedures described for the LH side.

55. REMOVE VISOR ASSEMBLY LH



(a) Using a screwdriver, detach the 4 claws and remove the visor bracket cover.
   HINT:
   Tape the screwdriver tip before use.

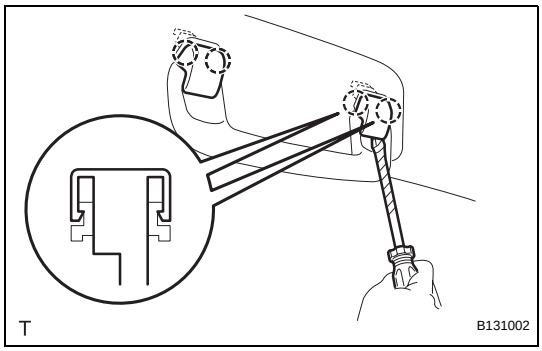
(b) Remove portion A from the visor holder.
(c) Detach the 2 claws and remove the visor.

56. REMOVE VISOR ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

57. REMOVE VISOR HOLDER

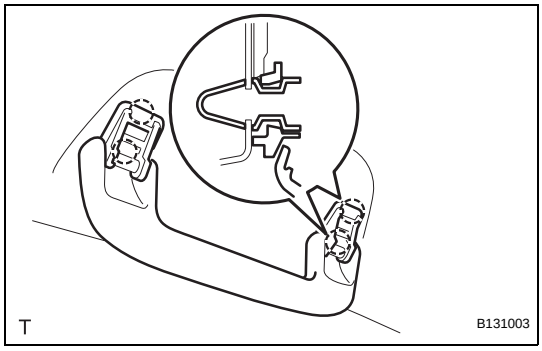
(a) Remove the visor holder by turning it counterclockwise.



58. REMOVE VANITY LIGHT ASSEMBLY (See page LI-128)

59. REMOVE MAP LIGHT ASSEMBLY (See page LI-115)

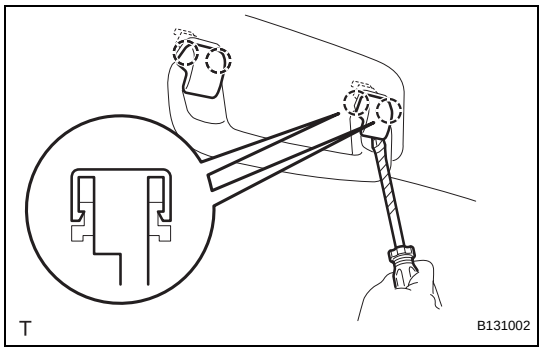
60. REMOVE ROOM LIGHT ASSEMBLY (See page LI-118)



61. REMOVE TELEVISION GARNISH (w/ Television Display) (See page AV-165)

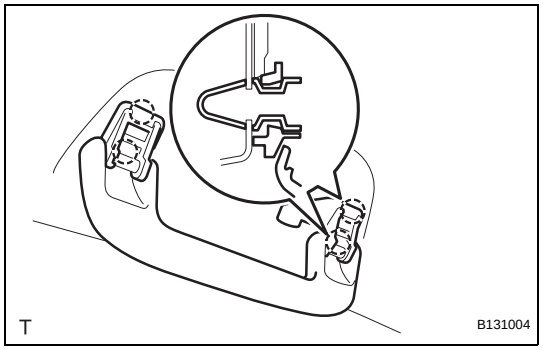
62. REMOVE TELEVISION DISPLAY ASSEMBLY (w/ Television Display) (See page AV-165)

63. REMOVE ASSIST GRIP COVER (for Front Grip)



(a) Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.

64. REMOVE ASSIST GRIP SUB-ASSEMBLY

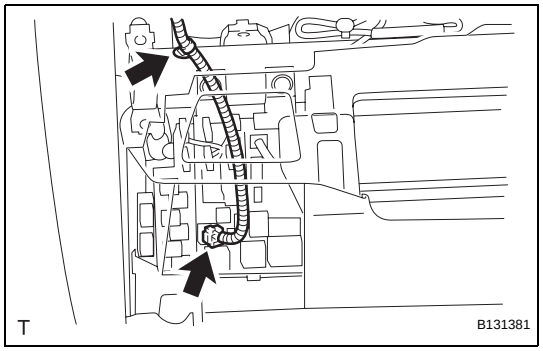


(a) Detach the 4 claws and remove the assist grip.

IR

65. REMOVE ASSIST GRIP COVER (for Rear Grip)

(a) Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.

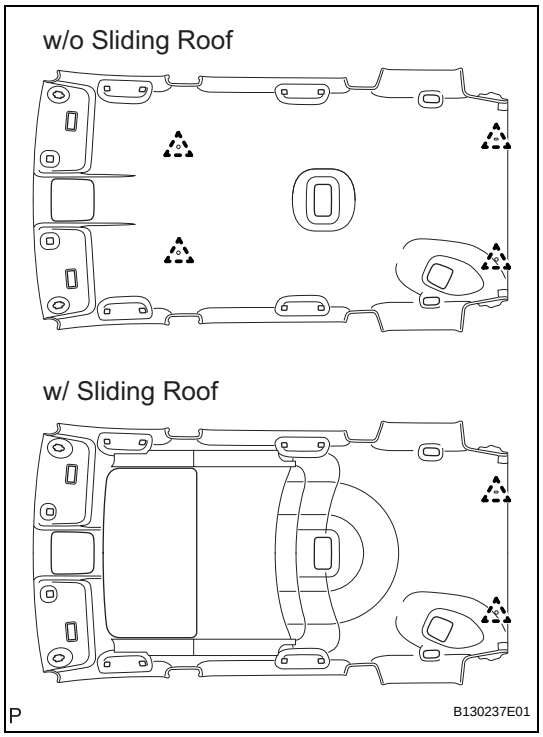


66. REMOVE REAR ASSIST GRIP ASSEMBLY

(a) Detach the 4 claws and remove the assist grip.

67. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR COVER (See page SB-77)

68. REMOVE SHOULDER BELT ANCHOR COVER RH (See page SB-64)



69. REMOVE SUN ROOF OPENING TRIM MOULDING

70. REMOVE ROOF HEADLINING ASSEMBLY

(a) Using a screwdriver, remove the wire harness clamp.

(b) Disconnect the roof wire connector.

(c) w/o Sliding Roof:
(1) Using a clip remover, remove the 4 clips and headlining.

(d) w/ Sliding Roof:
(1) Disconnect the connector from the drive gear.
(2) Using a clip remover, remove the 2 clips and headlining.

71. REMOVE NO. 1 ROOF HEADLINING SUPPORT

72. REMOVE NO. 2 ROOF HEADLINING SUPPORT

73. REMOVE NO. 3 ROOF HEADLINING SUPPORT

74. REMOVE NO. 4 ROOF HEADLINING SUPPORT

75. REMOVE NO. 1 ROOF WIRE

(a) Only when replacing the roof headlining:
(1) Remove the double-sided tape and roof wire.

76. REMOVE NO. 1 ROOF SILENCER PAD

(a) w/o Sliding Roof:
(1) Remove the 5 silencer pads.

(b) w/ Sliding Roof:
(1) Remove the 2 silencer pads.

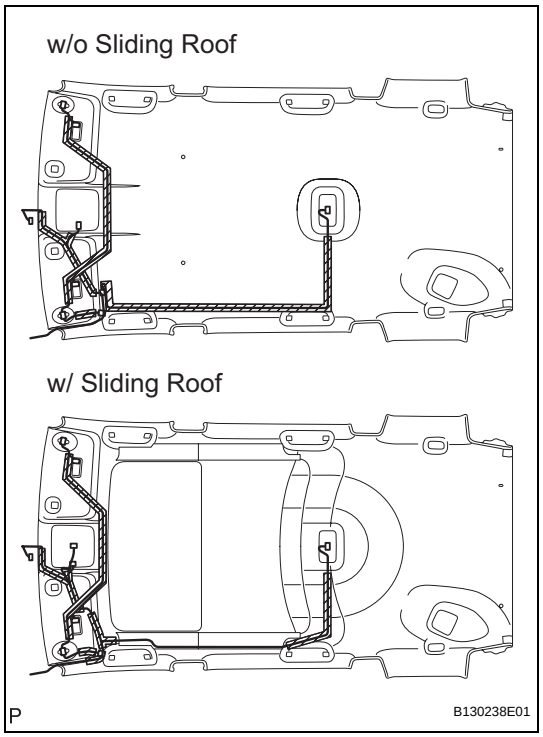
IR

77. REMOVE NO. 3 ROOF SILENCER PAD

INSTALLATION

(2005/11-2006/01)

1. INSTALL NO. 1 ROOF SILENCER PAD



(a) w/o Sliding Roof:
(1) Install the 5 silencer pads.

(b) w/ Sliding Roof:
(1) Install the 2 silencer pads.

2. INSTALL NO. 3 ROOF SILENCER PAD

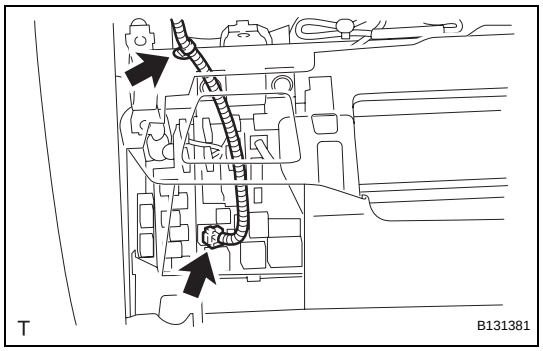
3. INSTALL NO. 1 ROOF WIRE

(a) Only when replacing the roof headlining:
(1) Align the marking, and then install the wire harness with tape.
HINT:
Be careful that dirt or foreign objects do not stick to the adhesive part when peeling off the double-sided tape.
(2) Attach the roof wire harness along the adhesive part.
NOTICE:
The roof wire harness should be attached securely.

4. INSTALL NO. 1 ROOF HEADLINING SUPPORT

5. INSTALL NO. 2 ROOF HEADLINING SUPPORT

6. INSTALL NO. 3 ROOF HEADLINING SUPPORT



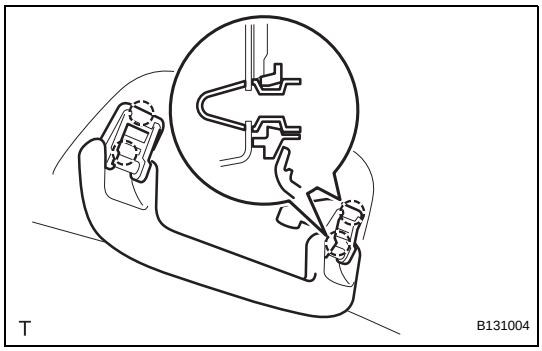
7. INSTALL NO. 4 ROOF HEADLINING SUPPORT

8. INSTALL ROOF HEADLINING ASSEMBLY

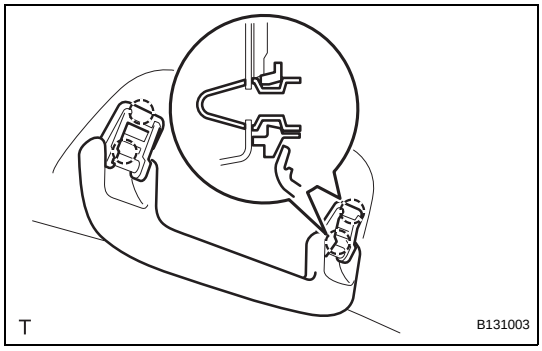
(a) w/o Sliding Roof:
(1) Install the headlining with the 4 clips.

(b) w/ Sliding Roof:
(1) Install the headlining with the 2 clips.
(2) Connect the connector to the sliding roof drive gear.

(c) Connect the connector to the roof wire.
(d) Attach the clamp of the roof wire.

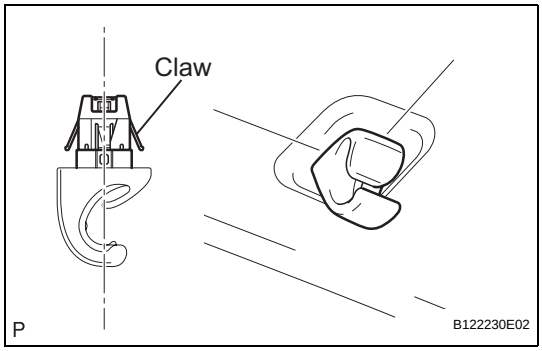


9. INSTALL SUN ROOF OPENING TRIM MOULDING

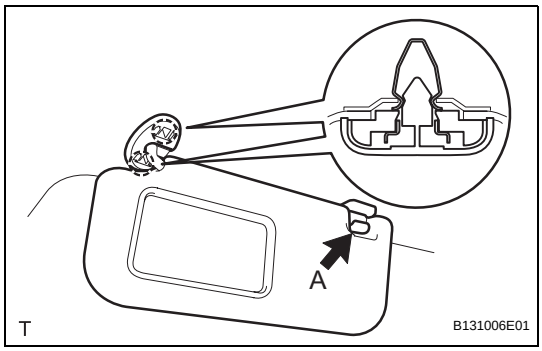


10. INSTALL SHOULDER BELT ANCHOR COVER RH (See page SB-65)

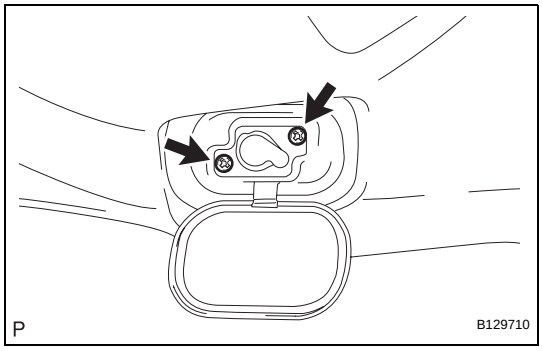
11. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR COVER (See page SB-77)



IR

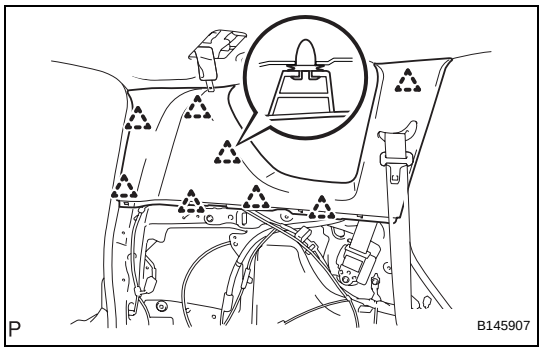


12. **INSTALL REAR ASSIST GRIP ASSEMBLY**
    (a) Attach the 4 claws to install the assist grip.
13. **INSTALL ASSIST GRIP COVER (for Rear Grip)**
    (a) Attach the 4 claws to install the 2 assist grip covers.

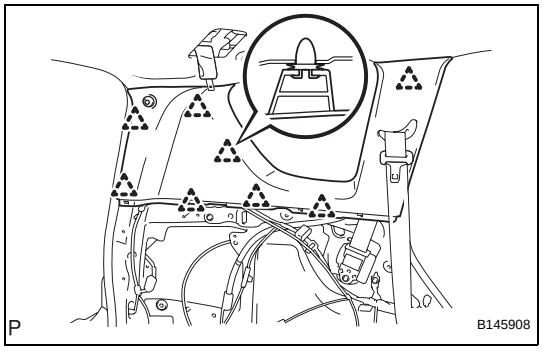


14. **INSTALL ASSIST GRIP SUB-ASSEMBLY**
    (a) Attach the 4 claws to install the assist grip.
15. **INSTALL ASSIST GRIP COVER (for Front Grip)**
    (a) Attach the 4 claws to install the 2 assist grip covers.
16. **INSTALL ROOM LIGHT ASSEMBLY (See page LI-119)**
17. **INSTALL MAP LIGHT ASSEMBLY (See page LI-116)**
18. **INSTALL VANITY LIGHT ASSEMBLY (See page LI-129)**

19. **INSTALL VISOR HOLDER**
    (a) Set the claws of the visor holder as shown in the illustration.
    (b) Insert the visor holder to install it.

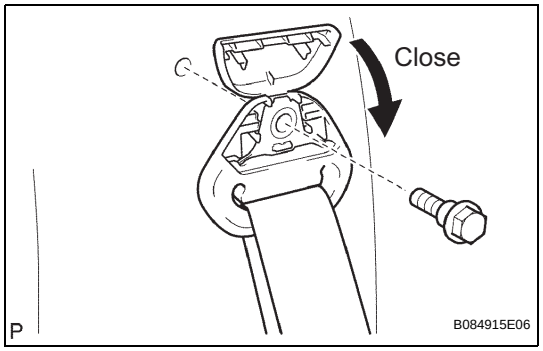


20. **INSTALL VISOR ASSEMBLY LH**
    (a) Attach the 2 claws to install the visor.
    (b) Install portion A of the visor onto the visor holder.
    (c) Attach the 4 claws to install the visor bracket cover.
21. **INSTALL VISOR ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.



22. **INSTALL REAR ROOM PARTITION NET HOOK LH**
    (a) Install the net hook with the 2 screws.
23. **INSTALL REAR ROOM PARTITION NET HOOK RH**
    HINT:
    Use the same procedures described for the LH side.

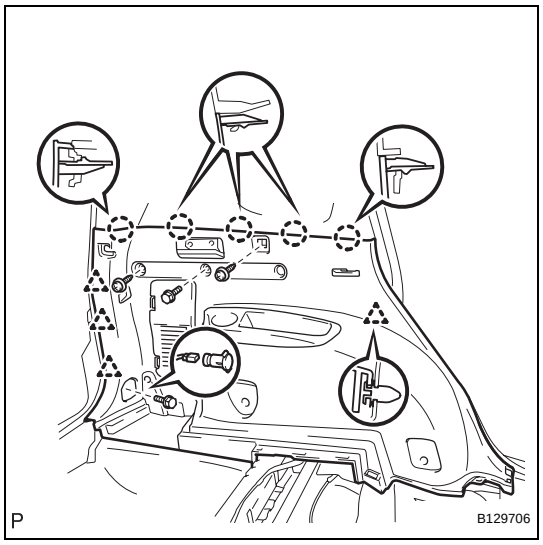
IR



24. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat)

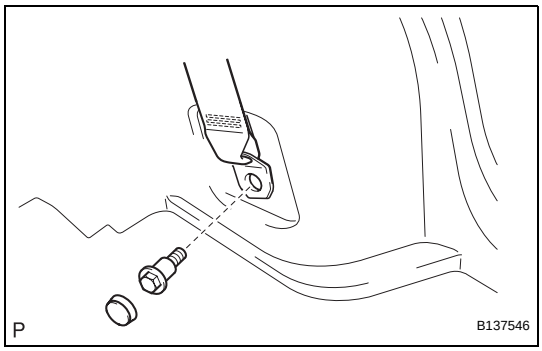
(a) Attach the 8 clips to install the garnish.

25. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat)



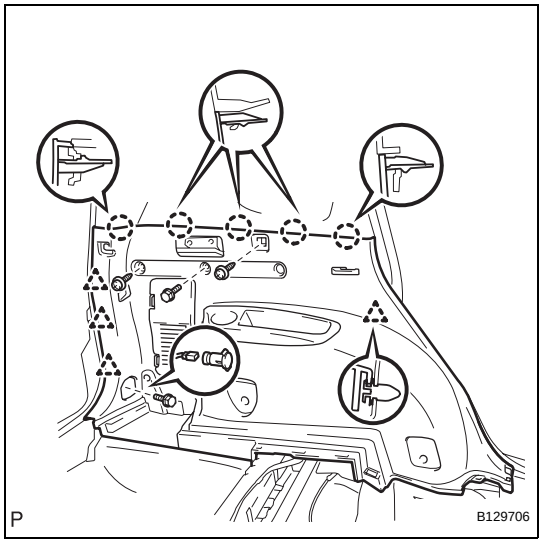
(a) Attach the 8 clips to install the garnish.

(b) Connect the rear No. 2 seat belt's shoulder anchor.
  (1) Connect the shoulder anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Attach the 2 claws to close the seat belt anchor cover.



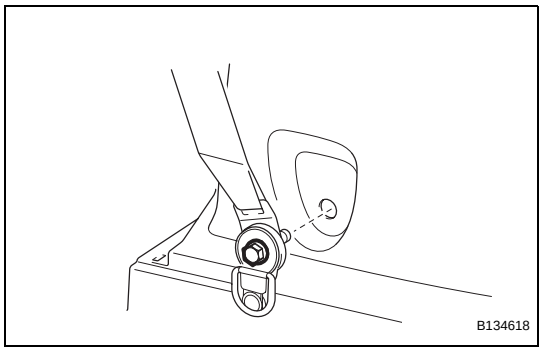
26. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

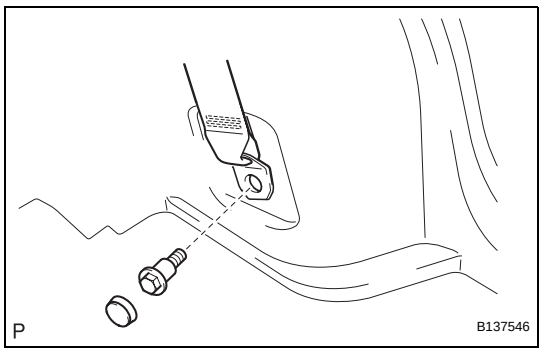


27. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat)

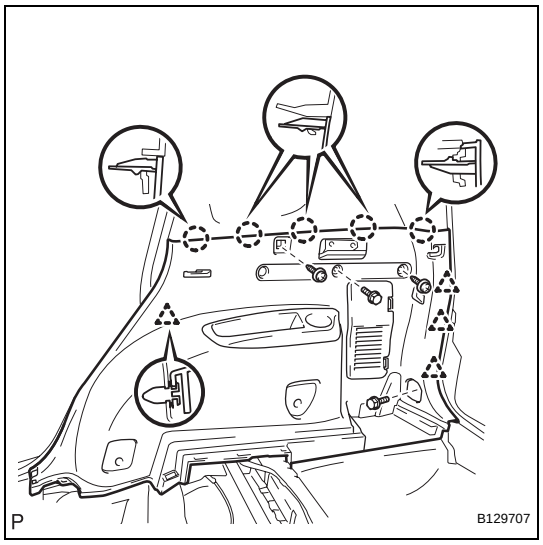
(a) Install the belt hanger to the trim board.
(b) Connect the power outlet socket connector.
(c) Attach the 4 clips and 5 claws to install the trim board.
(d) Install the 2 screws and 2 bolts.



(e) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.

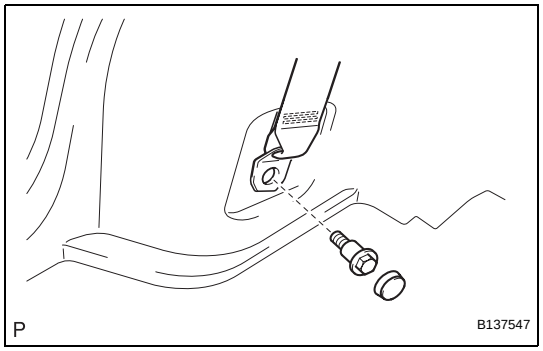


28. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat)

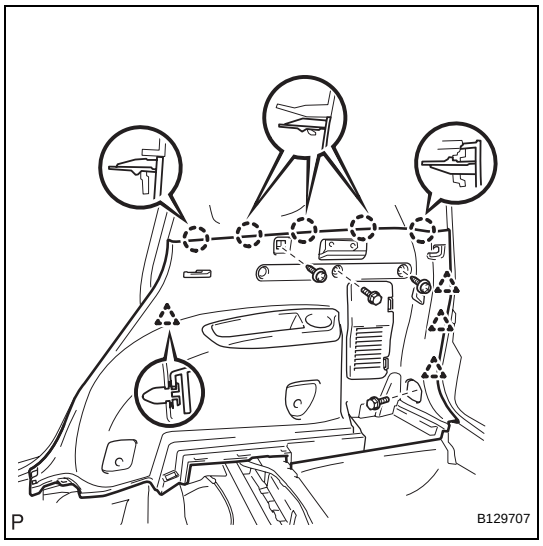


(a) Install the belt hanger to the trim board.
(b) Connect the power outlet socket connector.
(c) Attach the 4 clips and 5 claws to install the trim board.
(d) Install the 2 screws and 2 bolts.

(e) Connect the rear No. 2 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

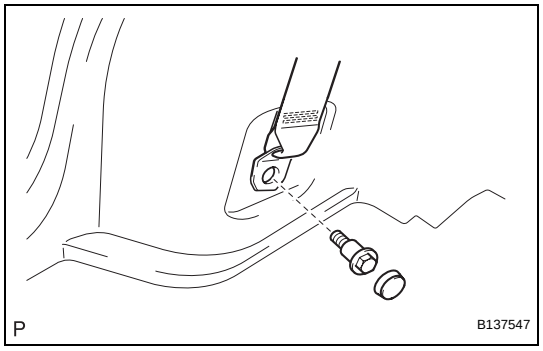


(f) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.

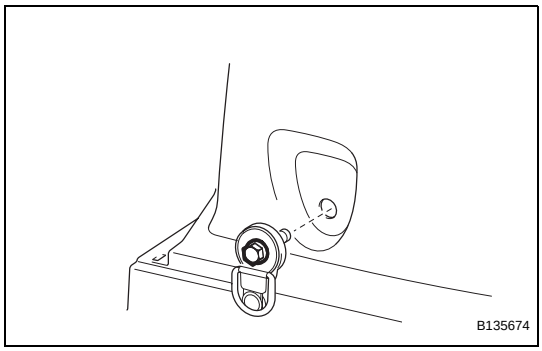


29. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Install the belt hanger to the trim board.
(b) Attach the 4 clips and 5 claws to install the trim board.
(c) Install the 2 screws and 2 bolts.



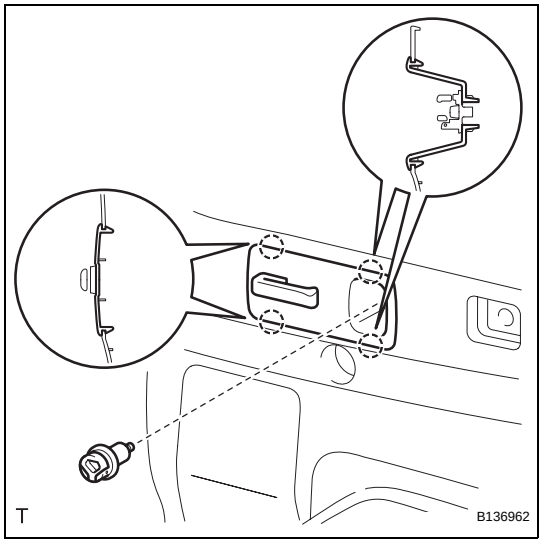
(d) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.



30. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat)

(a) Install the belt hanger to the trim board.
(b) Attach the 4 clips and 5 claws to install the trim board.
(c) Install the 2 screws and 2 bolts.
(d) Connect the rear No. 2 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

(e) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.

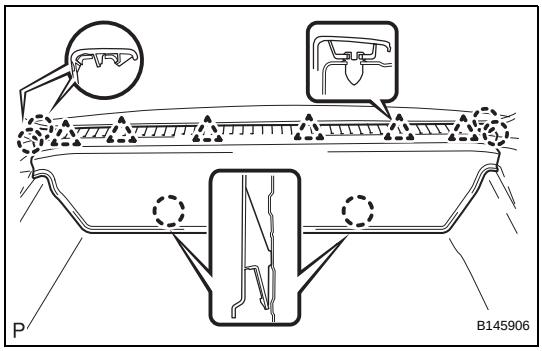


31. INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

(a) Install the tether anchor bracket with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

32. INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-73)

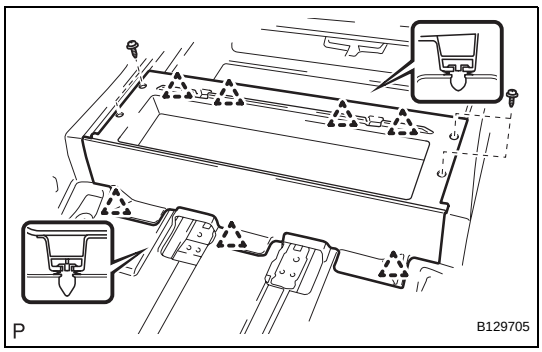
33. INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-105)



34. INSTALL REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat)

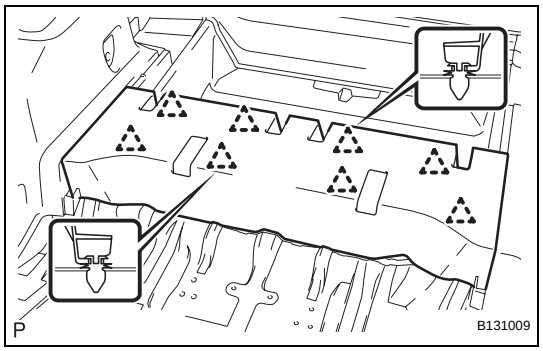
(a) Attach the 4 claws to install the trim cover.
(b) Install the bolt.

35. INSTALL REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)



HINT:
Use the same procedures described for the LH side.

36. INSTALL REAR FLOOR FINISH PLATE



(a) Attach the 6 claws and 6 clips to install the finish plate.

37. INSTALL BACK DOOR WEATHERSTRIP

38. INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE

(a) w/o Rear No. 2 Seat:
(1) Attach the 7 clips to install the side plate.
(2) Install the 4 screws.

(b) w/ Rear No. 2 Seat:
(1) Attach the 8 clips to install the side plate.

39. INSTALL REAR FLOOR NO. 3 BOARD

40. INSTALL REAR FLOOR NO. 2 BOARD

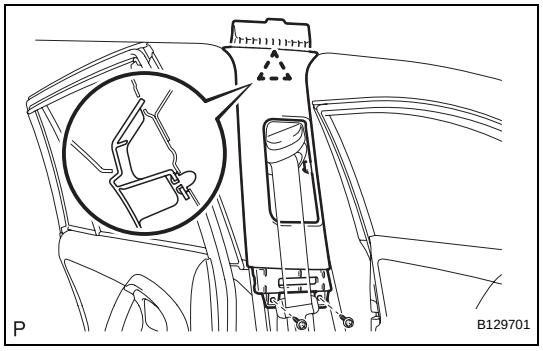
41. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)

42. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

43. INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)

44. INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

45. INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)

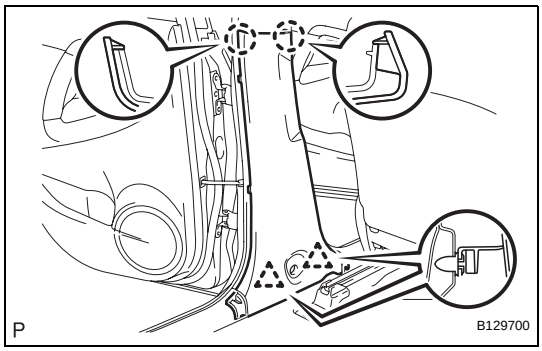


46. INSTALL NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

47. INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)

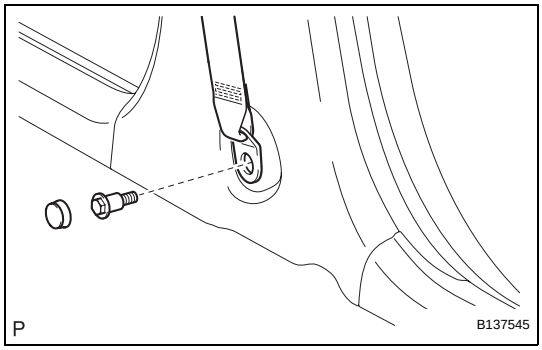
48. INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)

49. INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)



50. INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)

51. INSTALL CENTER PILLAR GARNISH LH
(a) Attach the clip to install the garnish.
(b) Install the 2 screws.

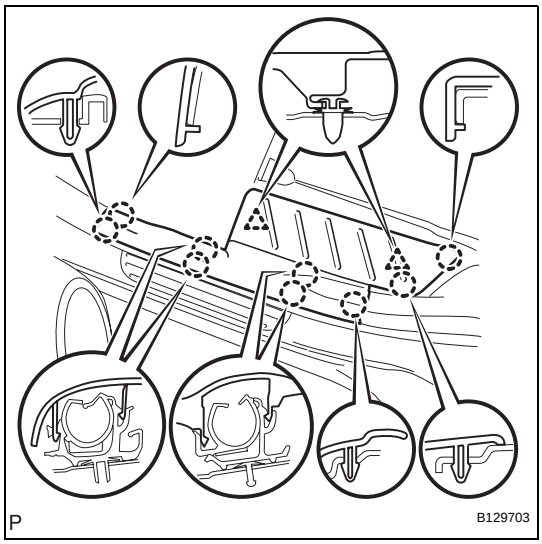


52. INSTALL CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

IR

53. INSTALL LOWER CENTER PILLAR GARNISH LH

(a) Attach the 2 claws and 2 clips to install the garnish.



(b) Connect the front seat outer belt's floor anchor.
   (1) Connect the floor anchor with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   (2) Install the anchor cover.

54. INSTALL LOWER CENTER PILLAR GARNISH RH

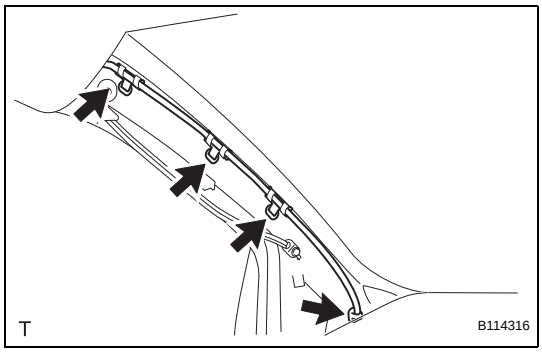
HINT:
Use the same procedures described for the LH side.

55. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

56. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

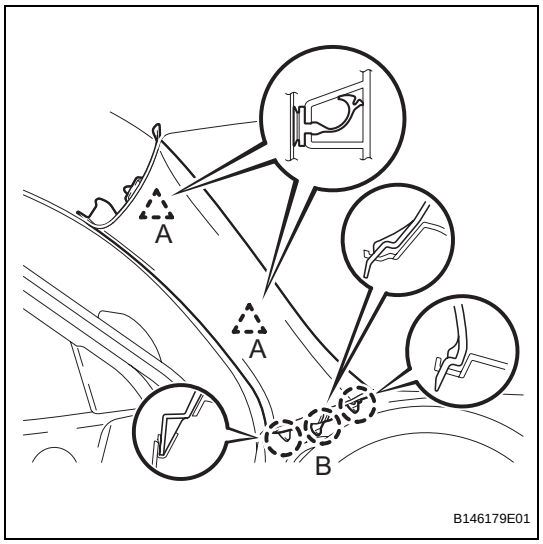
57. INSTALL REAR DOOR SCUFF PLATE LH

(a) Attach the 9 claws and 2 clips to install the scuff plate.



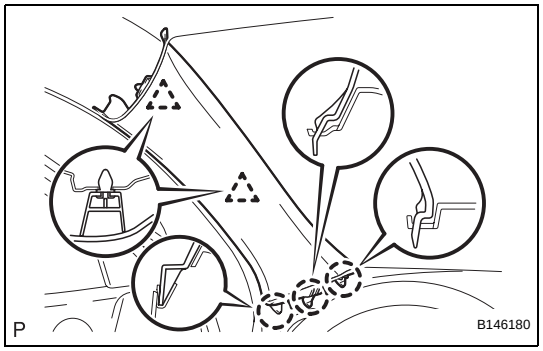
58. INSTALL REAR DOOR SCUFF PLATE RH

HINT:
Use the same procedures described for the LH side.



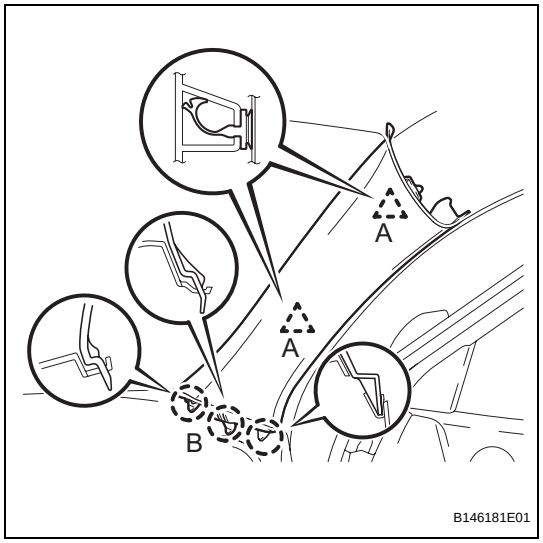
59. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-9)

60. INSTALL FRONT PILLAR GARNISH LH

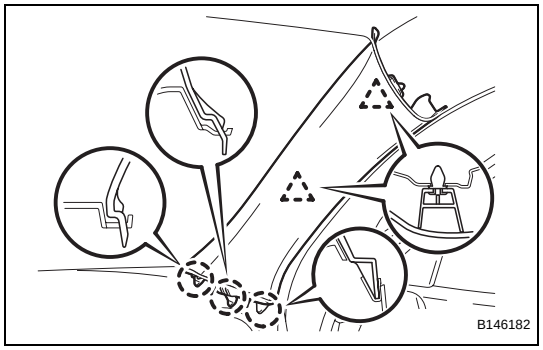


(a) w/ Curtain Shield Airbag:
   (1) Remove the piece of cloth or nylon.

(b) Install the 4 wire harness clamps.



(c) w/ Curtain Shield Airbag:
(1) Install 2 new clips labeled A to the vehicle body.
(2) Set the 3 claws of the pillar garnish to the area labeled B.
(3) Insert the tips of the clips labeled A into the pillar garnish's holes.
(4) Using needle-nose pliers, rotate the tips of clips labeled A 90°. Then push the pillar garnish toward the vehicle body to attach the base of the 2 clips labeled A.



(d) w/o Curtain Shield Airbag:
(1) Attach the 2 clips and 3 claws to install the garnish.

61. INSTALL FRONT PILLAR GARNISH RH

(a) w/ Curtain Shield Airbag:
(1) Remove the piece of cloth or nylon.

(b) w/ Curtain Shield Airbag:
(1) Install 2 new clips labeled A to the vehicle body.
(2) Set the 3 claws of the pillar garnish to the area labeled B.
(3) Insert the tips of the clips labeled A into the pillar garnish's holes.
(4) Using needle-nose pliers, rotate the tips of clips labeled A 90°. Then push the pillar garnish toward the vehicle body to attach the base of the 2 clips labeled A.

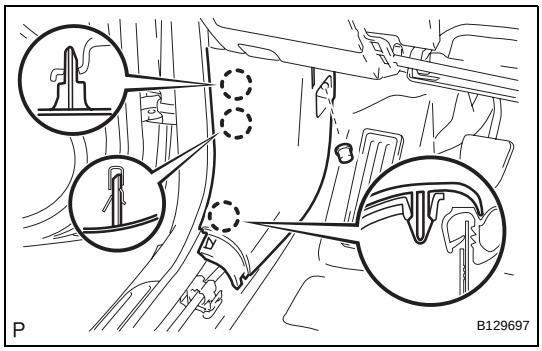
(c) w/o Curtain Shield Airbag:
(1) Attach the 2 clips and 3 claws to install the garnish.

62. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-25)

63. INSTALL INSTRUMENT PANEL REGISTER ASSEMBLY CENTER (See page IP-10)

64. INSTALL RADIO RECEIVER (See page IP-10)

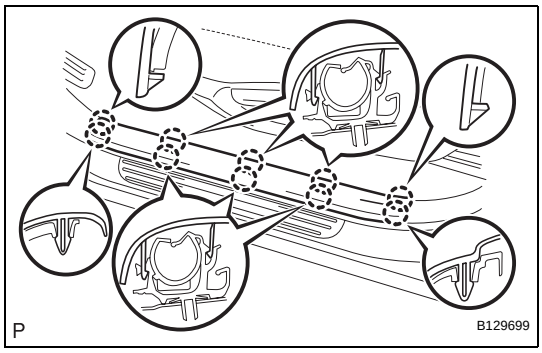
65. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**



66. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**

67. **INSTALL COMBINATION METER ASSEMBLY (See page IP-11)**

68. **INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (See page IP-11)**



69. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH**

70. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**

71. **INSTALL COWL SIDE TRIM BOARD LH**
    (a) Attach the 3 claws to install the trim board.
    (b) Install the cap nut.

72. **INSTALL COWL SIDE TRIM BOARD RH**
    HINT:
    Use the same procedures described for the LH side.

73. **INSTALL FRONT DOOR SCUFF PLATE LH**
    (a) Attach the 10 claws to install the scuff plate.

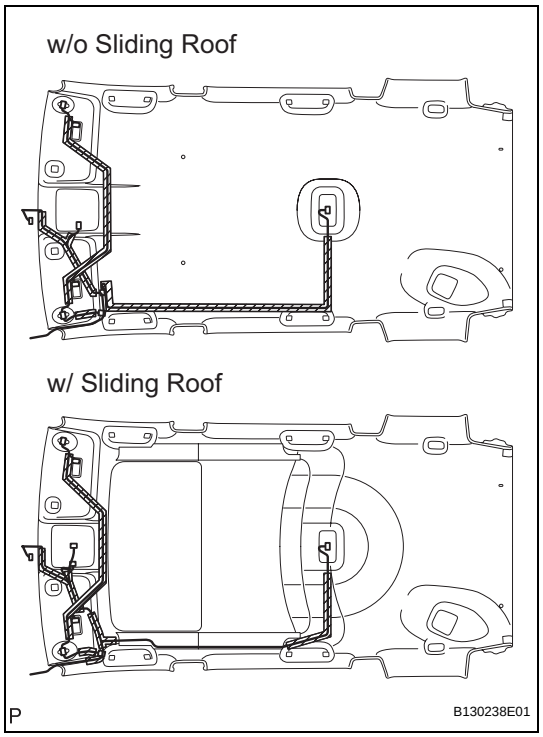
74. **INSTALL FRONT DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedures described for the LH side.

75. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

INSTALLATION

(2006/01-)

1. INSTALL NO. 1 ROOF SILENCER PAD



(a) w/o Sliding Roof:
(1) Install the 5 silencer pads.

(b) w/ Sliding Roof:
(1) Install the 2 silencer pads.

2. INSTALL NO. 3 ROOF SILENCER PAD

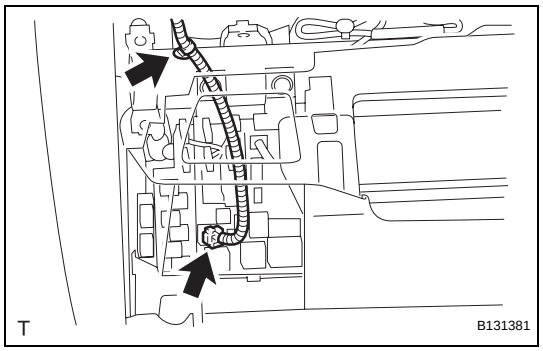
3. INSTALL NO. 1 ROOF WIRE

(a) Only when replacing the roof headlining:
(1) Align the marking, and then install the wire harness with tape.
HINT:
Be careful that dirt or foreign objects do not stick to the adhesive part when peeling off the double-sided tape.
(2) Attach the roof wire harness along the adhesive part.
NOTICE:
The roof wire harness should be attached securely.

4. INSTALL NO. 1 ROOF HEADLINING SUPPORT

5. INSTALL NO. 2 ROOF HEADLINING SUPPORT

6. INSTALL NO. 3 ROOF HEADLINING SUPPORT



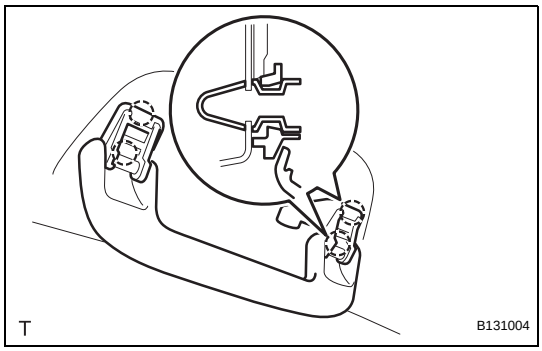
7. INSTALL NO. 4 ROOF HEADLINING SUPPORT

8. INSTALL ROOF HEADLINING ASSEMBLY

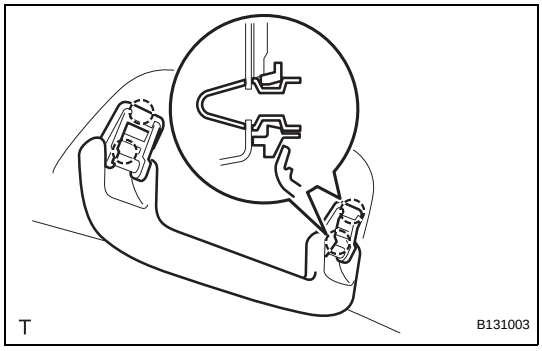
(a) w/o Sliding Roof:
(1) Install the headlining with the 4 clips.

(b) w/ Sliding Roof:
(1) Install the headlining with the 2 clips.
(2) Connect the connector to the sliding roof drive gear.

(c) Connect the connector to the roof wire.
(d) Attach the clamp of the roof wire.

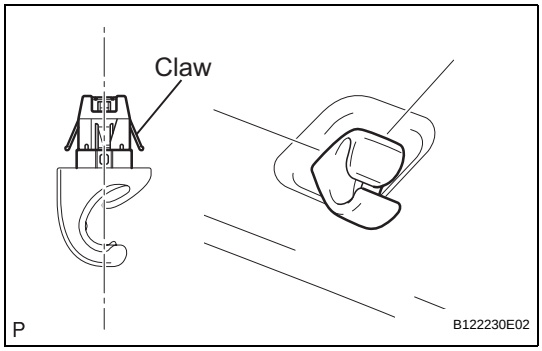


9. INSTALL SUN ROOF OPENING TRIM MOULDING

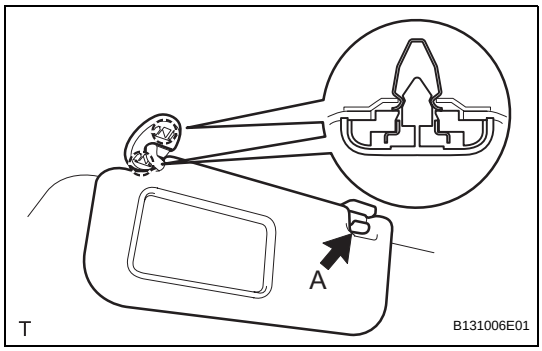


10. INSTALL SHOULDER BELT ANCHOR COVER RH (See page SB-65)

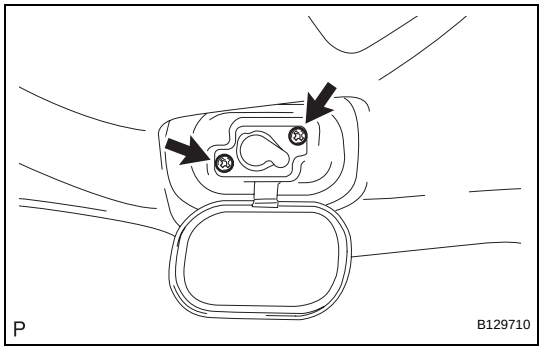
11. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR COVER (See page SB-77)



IR



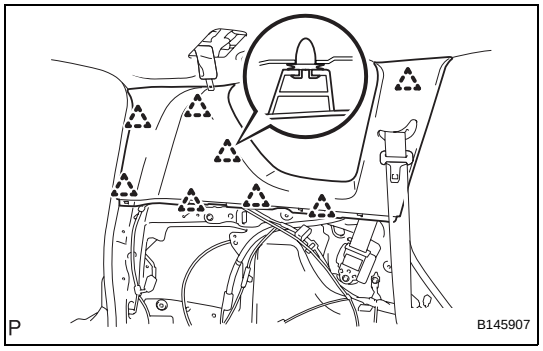
12. **INSTALL REAR ASSIST GRIP ASSEMBLY**
    (a) Attach the 4 claws to install the assist grip.
13. **INSTALL ASSIST GRIP COVER (for Rear Grip)**
    (a) Attach the 4 claws to install the 2 assist grip covers.



14. **INSTALL ASSIST GRIP SUB-ASSEMBLY**
    (a) Attach the 4 claws to install the assist grip.
15. **INSTALL ASSIST GRIP COVER (for Front Grip)**
    (a) Attach the 4 claws to install the 2 assist grip covers.
16. **INSTALL TELEVISION DISPLAY ASSEMBLY (w/ Television Display) (See page AV-166)**
17. **INSTALL TELEVISION GARNISH (w/ Television Display) (See page AV-166)**
18. **INSTALL ROOM LIGHT ASSEMBLY (See page LI-119)**
19. **INSTALL MAP LIGHT ASSEMBLY (See page LI-116)**
20. **INSTALL VANITY LIGHT ASSEMBLY (See page LI-129)**

21. **INSTALL VISOR HOLDER**
    (a) Set the claws of the visor holder as shown in the illustration.
    (b) Insert the visor holder to install it.

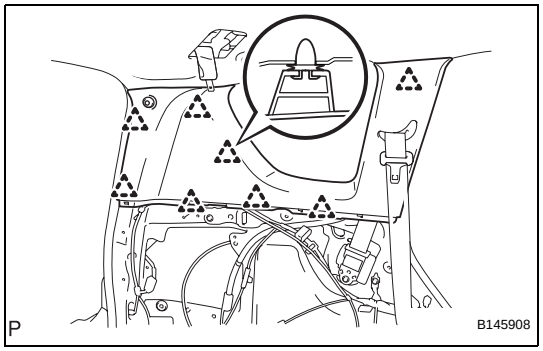
22. **INSTALL VISOR ASSEMBLY LH**
    (a) Attach the 2 claws to install the visor.
    (b) Install portion A of the visor onto the visor holder.
    (c) Attach the 4 claws to install the visor bracket cover.
23. **INSTALL VISOR ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.



24. INSTALL REAR ROOM PARTITION NET HOOK LH

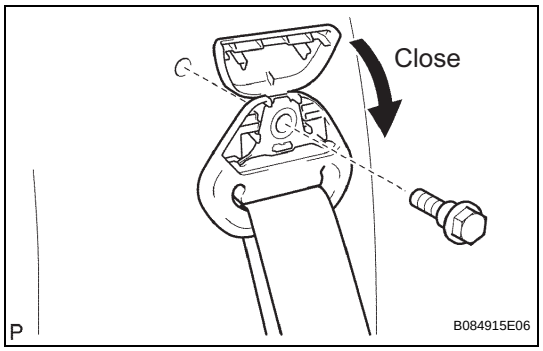
(a) Install the net hook with the 2 screws.

25. INSTALL REAR ROOM PARTITION NET HOOK RH



HINT:

Use the same procedures described for the LH side.



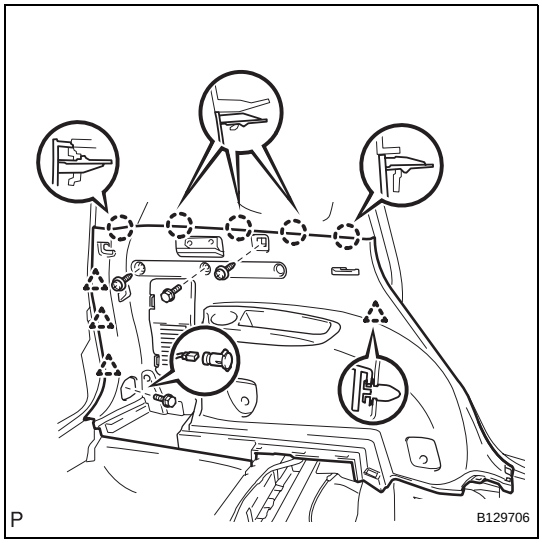
26. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat)

(a) Attach the 8 clips to install the garnish.

27. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat)

(a) Attach the 8 clips to install the garnish.

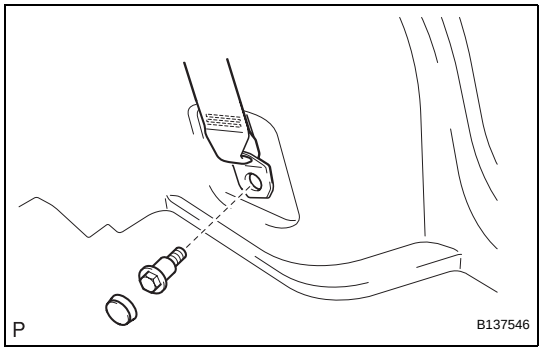
(b) Connect the rear No. 2 seat belt's shoulder anchor.



(1) Connect the shoulder anchor with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

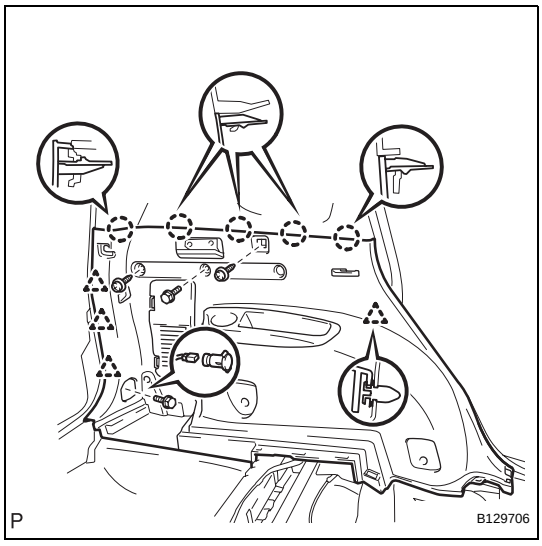
(2) Attach the 2 claws to close the seat belt anchor cover.

28. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY RH



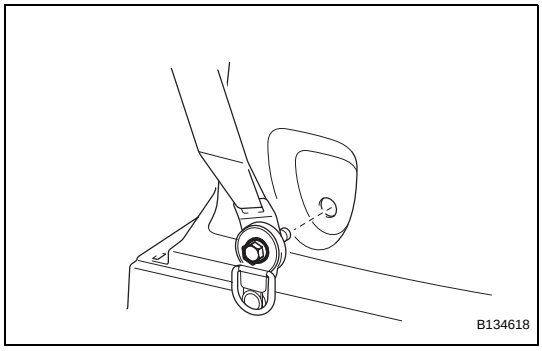
HINT:

Use the same procedures described for the LH side.

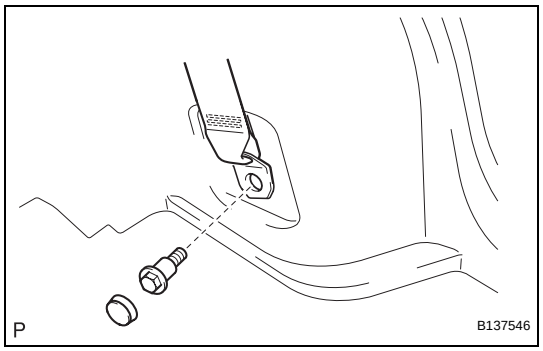


29. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat)

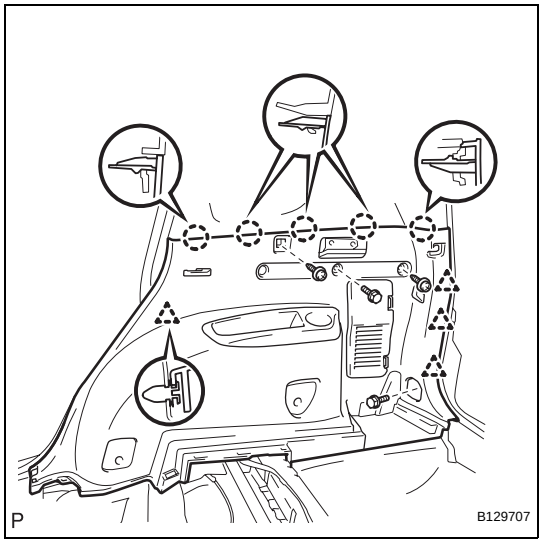
(a) Install the belt hanger to the trim board.
(b) Connect the power outlet socket connector.
(c) Attach the 4 clips and 5 claws to install the trim board.
(d) Install the 2 screws and 2 bolts.



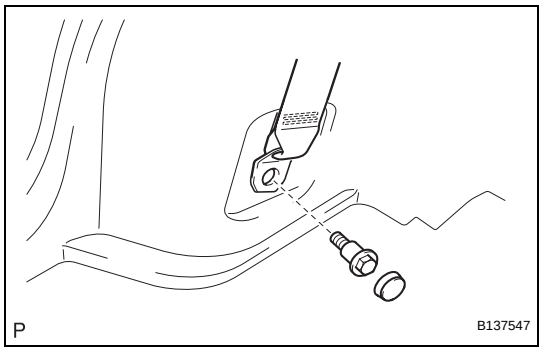
(e) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.



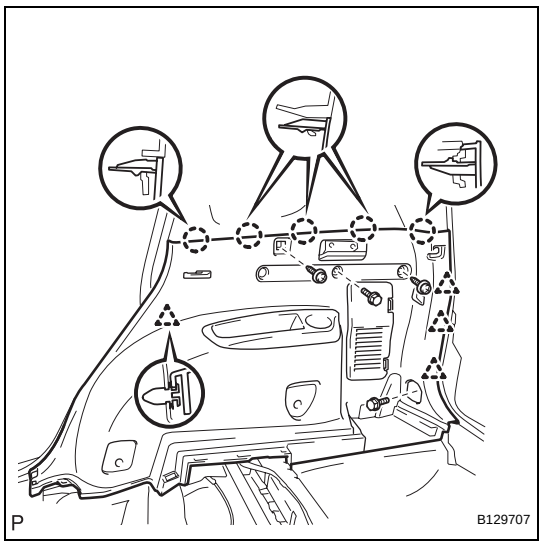
30. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat)



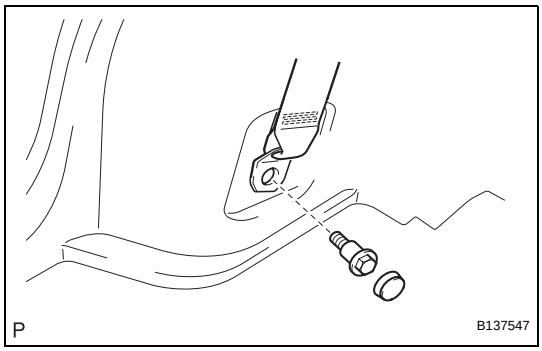
(a) Install the belt hanger to the trim board.
(b) Connect the power outlet socket connector.
(c) Attach the 4 clips and 5 claws to install the trim board.
(d) Install the 2 screws and 2 bolts.



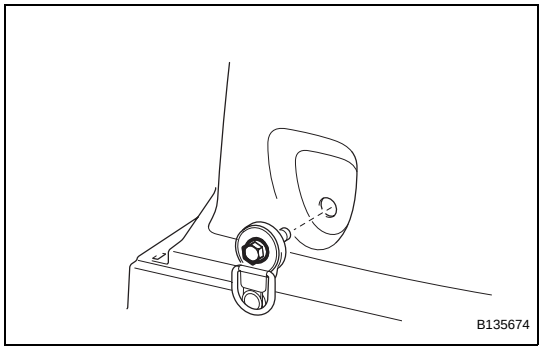
(e) Connect the rear No. 2 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



(f) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.

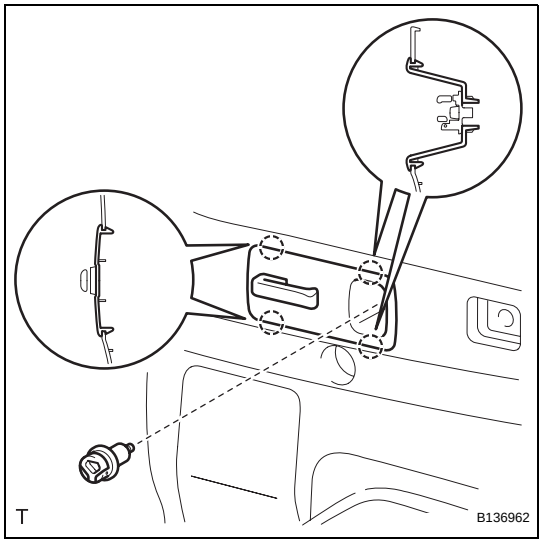


31. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat)
(a) Install the belt hanger to the trim board.
(b) Attach the 4 clips and 5 claws to install the trim board.
(c) Install the 2 screws and 2 bolts.



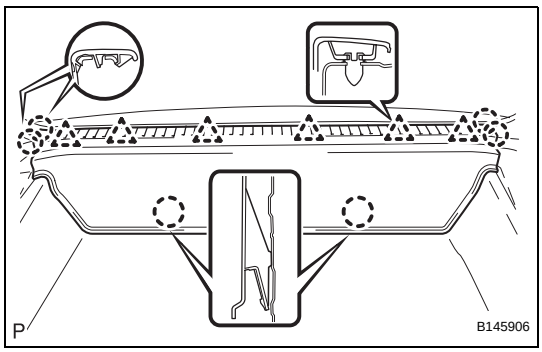
(d) Connect the rear No. 1 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
  (2) Install the anchor cover.

32. INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat)
(a) Install the belt hanger to the trim board.
(b) Attach the 4 clips and 5 claws to install the trim board.
(c) Install the 2 screws and 2 bolts.
(d) Connect the rear No. 2 seat belt's floor anchor.
  (1) Connect the floor anchor with the bolt.
  Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



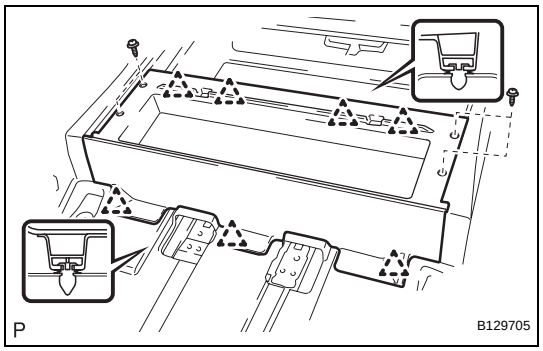
(e) Connect the rear No. 1 seat belt's floor anchor.
(1) Connect the floor anchor with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
(2) Install the anchor cover.

33. INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)
(a) Install the tether anchor bracket with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

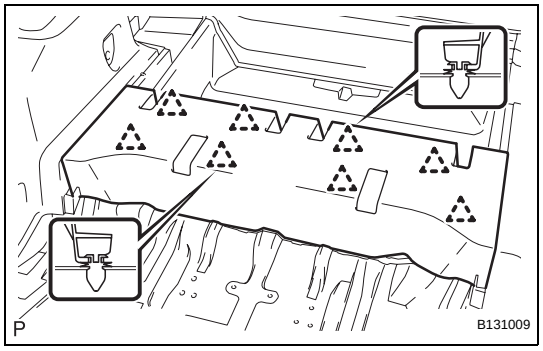


34. INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat) (See page SE-73)

35. INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-105)



36. INSTALL REAR DECK TRIM COVER LH (w/ Rear No. 2 Seat)
(a) Attach the 4 claws to install the trim cover.
(b) Install the bolt.



37. INSTALL REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat)
HINT:
Use the same procedures described for the LH side.

38. INSTALL REAR FLOOR FINISH PLATE
(a) Attach the 6 claws and 6 clips to install the finish plate.

39. INSTALL BACK DOOR WEATHERSTRIP

40. INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE

(a) w/o Rear No. 2 Seat:
  (1) Attach the 7 clips to install the side plate.
  (2) Install the 4 screws.

(b) w/ Rear No. 2 Seat:
  (1) Attach the 8 clips to install the side plate.

41. INSTALL REAR FLOOR NO. 3 BOARD

42. INSTALL REAR FLOOR NO. 2 BOARD

43. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)

44. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)

HINT:
Use the same procedures described for the LH side.

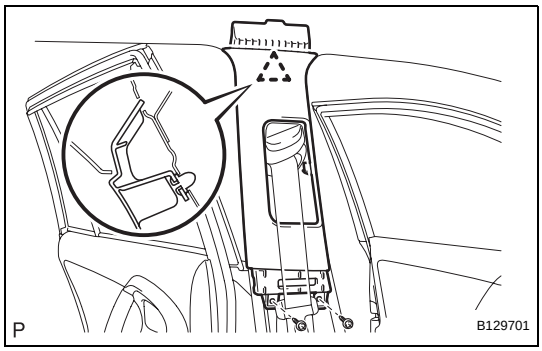
45. INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)

46. INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat)

HINT:
Use the same procedures described for the LH side.

47. INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)

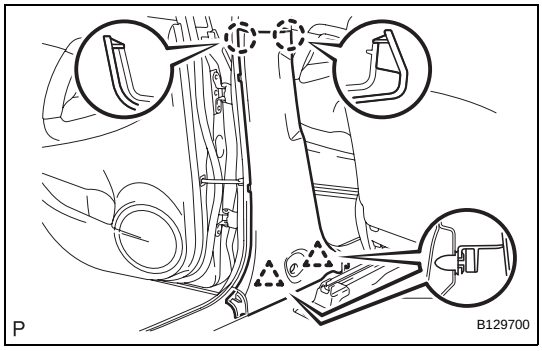
48. INSTALL NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat)



HINT:
Use the same procedures described for the LH side.

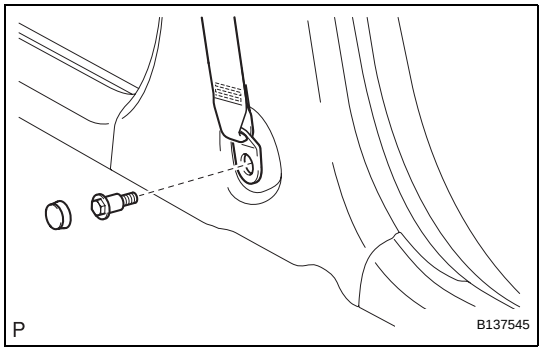
49. INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)

50. INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)



51. INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)

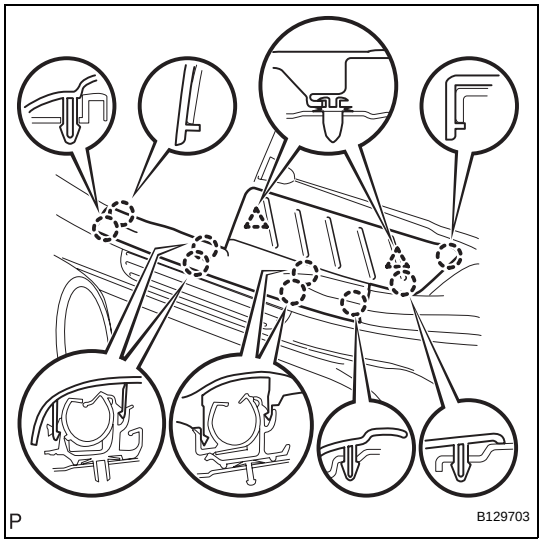
52. INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)



53. INSTALL CENTER PILLAR GARNISH LH
(a) Attach the clip to install the garnish.
(b) Install the 2 screws.

54. INSTALL CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

55. INSTALL LOWER CENTER PILLAR GARNISH LH
(a) Attach the 2 claws and 2 clips to install the garnish.

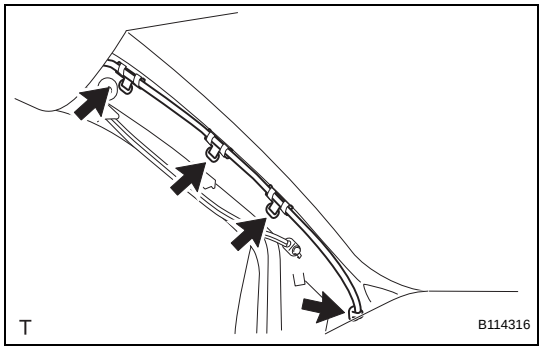


(b) Connect the front seat outer belt's floor anchor.
(1) Connect the floor anchor with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
(2) Install the anchor cover.

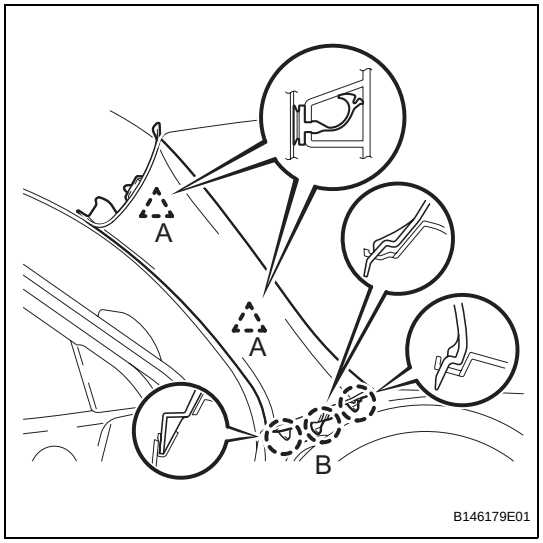
56. INSTALL LOWER CENTER PILLAR GARNISH RH
HINT:
Use the same procedures described for the LH side.

57. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

58. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

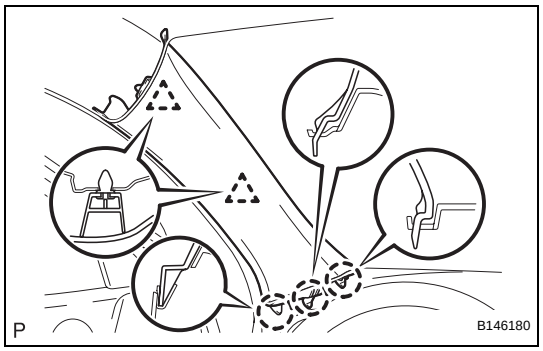


59. INSTALL REAR DOOR SCUFF PLATE LH
(a) Attach the 9 claws and 2 clips to install the scuff plate.



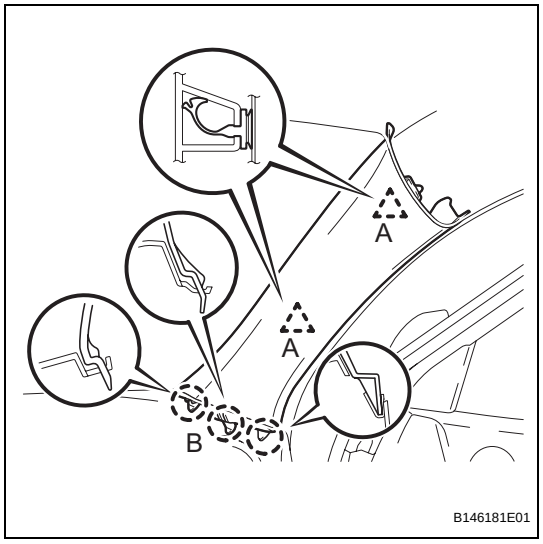
60. INSTALL REAR DOOR SCUFF PLATE RH
HINT:
Use the same procedures described for the LH side.

61. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-9)

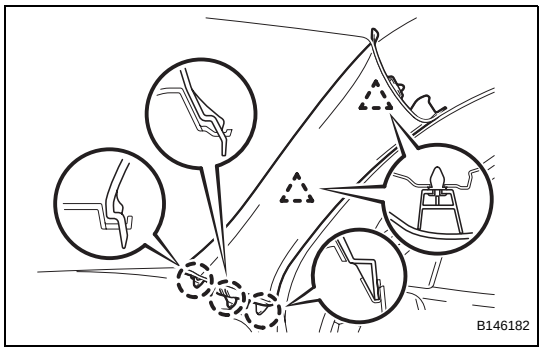


62. INSTALL FRONT PILLAR GARNISH LH
(a) w/ Curtain Shield Airbag:
(1) Remove the piece of cloth or nylon.

(b) Install the 4 wire harness clamps.



(c) w/ Curtain Shield Airbag:
(1) Install 2 new clips labeled A to the vehicle body.
(2) Set the 3 claws of the pillar garnish to the area labeled B.
(3) Insert the tips of the clips labeled A into the pillar garnish's holes.
(4) Using needle-nose pliers, rotate the tips of clips labeled A 90°. Then push the pillar garnish toward the vehicle body to attach the base of the 2 clips labeled A.



(d) w/o Curtain Shield Airbag:
(1) Attach the 2 clips and 3 claws to install the garnish.

63. INSTALL FRONT PILLAR GARNISH RH

(a) w/ Curtain Shield Airbag:
(1) Remove the piece of cloth or nylon.

(b) w/ Curtain Shield Airbag:
(1) Install 2 new clips labeled A to the vehicle body.
(2) Set the 3 claws of the pillar garnish to the area labeled B.
(3) Insert the tips of the clips labeled A into the pillar garnish's holes.
(4) Using needle-nose pliers, rotate the tips of clips labeled A 90°. Then push the pillar garnish toward the vehicle body to attach the base of the 2 clips labeled A.

(c) w/o Curtain Shield Airbag:
(1) Attach the 2 clips and 3 claws to install the garnish.

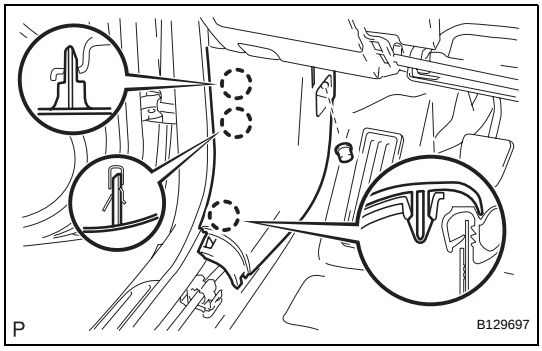
64. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-25)

65. INSTALL INSTRUMENT PANEL REGISTER ASSEMBLY CENTER (See page IP-10)

66. INSTALL RADIO RECEIVER (See page IP-10)

67. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)

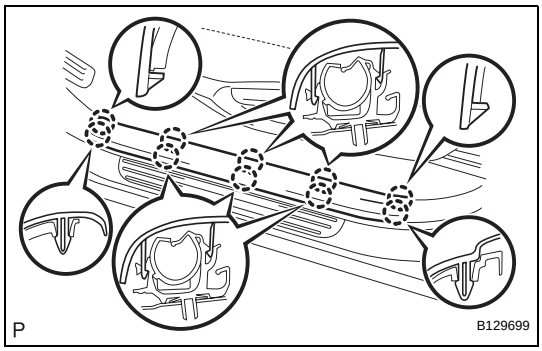
68. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)



IR

69. INSTALL COMBINATION METER ASSEMBLY (See page IP-11)

70. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY (See page IP-11)



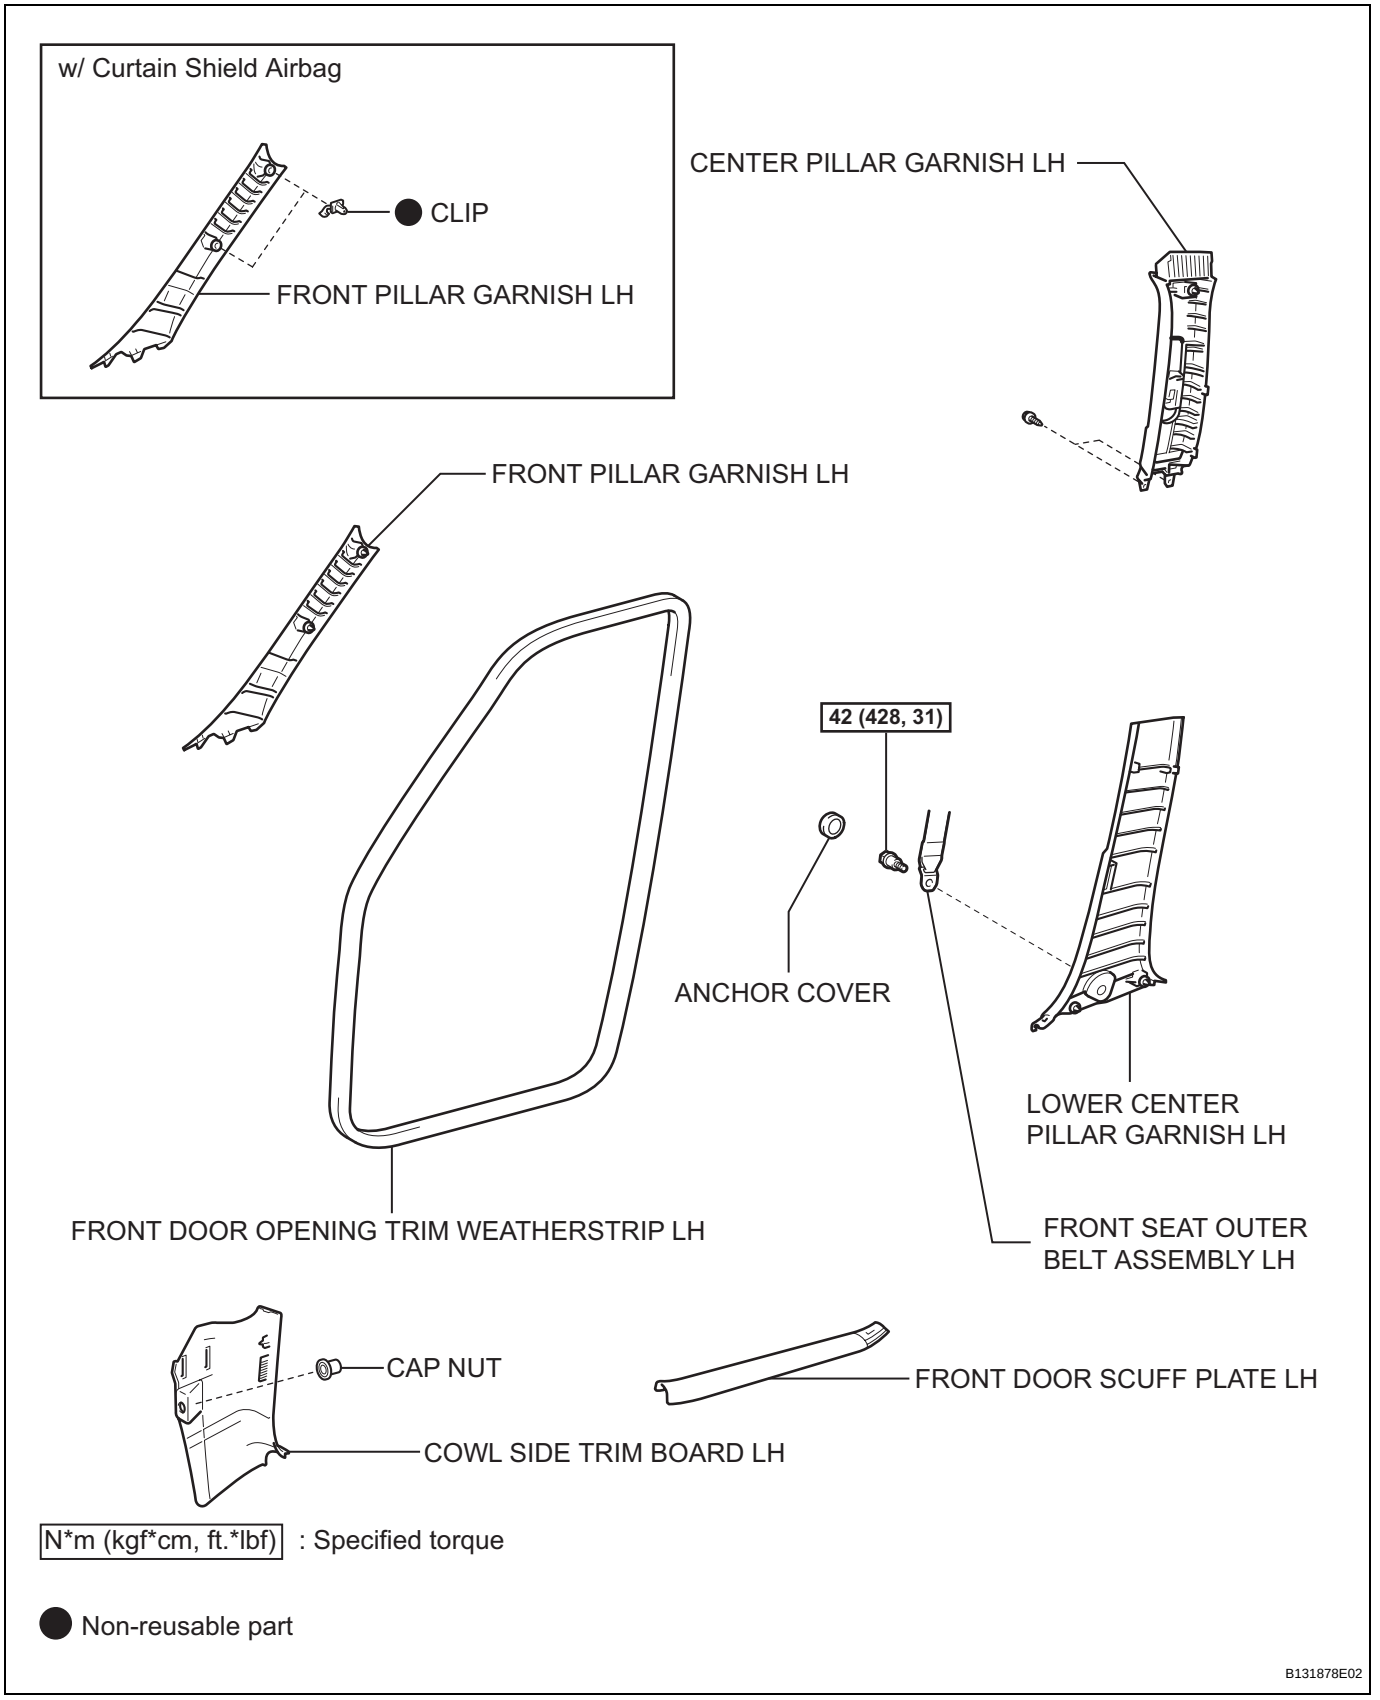
71. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

72. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

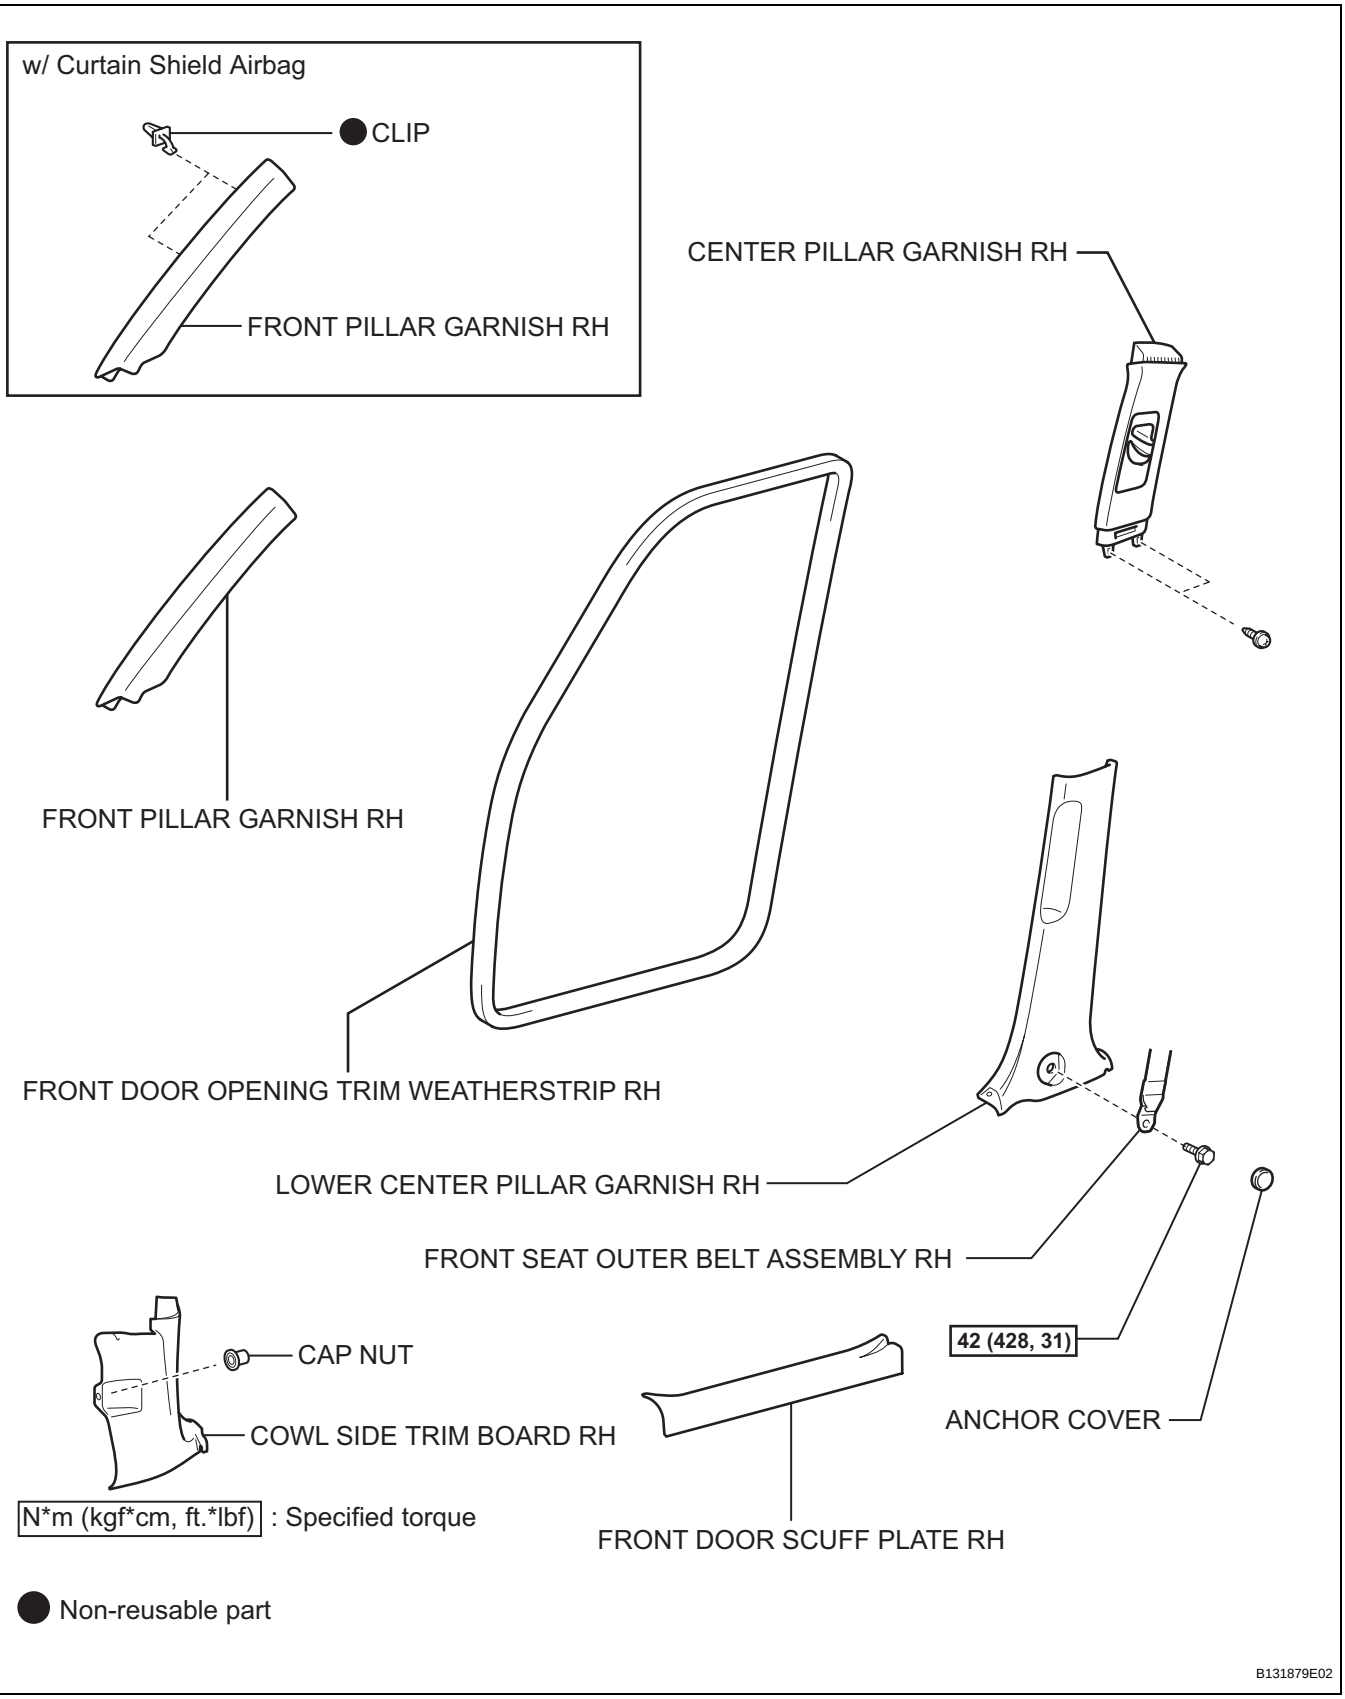
73. INSTALL COWL SIDE TRIM BOARD LH
(a) Attach the 3 claws to install the trim board.
(b) Install the cap nut.

74. INSTALL COWL SIDE TRIM BOARD RH
HINT:
Use the same procedures described for the LH side.

75. INSTALL FRONT DOOR SCUFF PLATE LH
(a) Attach the 10 claws to install the scuff plate.



76. INSTALL FRONT DOOR SCUFF PLATE RH
HINT:
Use the same procedures described for the LH side.



77. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

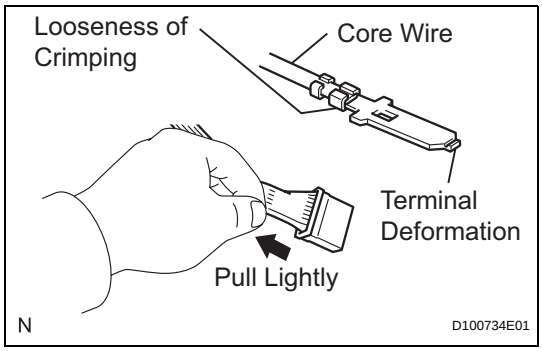
ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements should be made at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the vehicle has been running. Measurements should be made after the engine has cooled down.

(b) HANDLING CONNECTORS

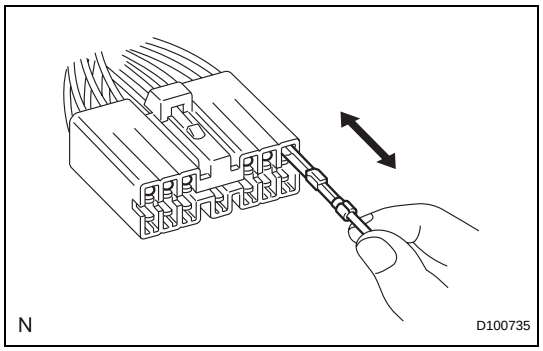


(1) When disconnecting a connector, first squeeze the mating halves tightly together to release the lock, and then press the lock claw and separate the connector.

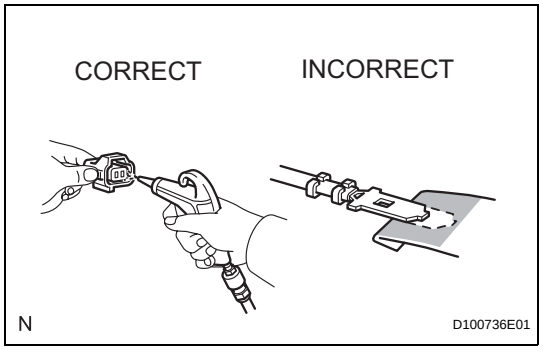
(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

(3) Before connecting a connector, check that there are no deformed, damaged, loose or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

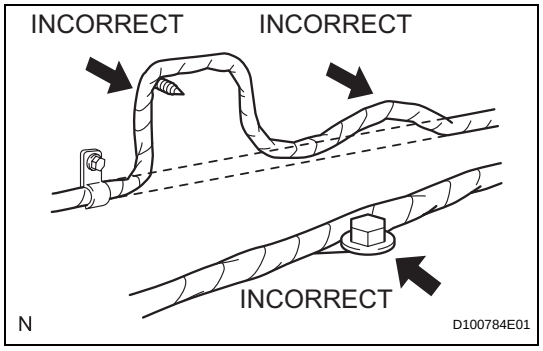


(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.
NOTICE:
- **As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.**
- **Do not damage the terminals by moving the inserted tester needle.**

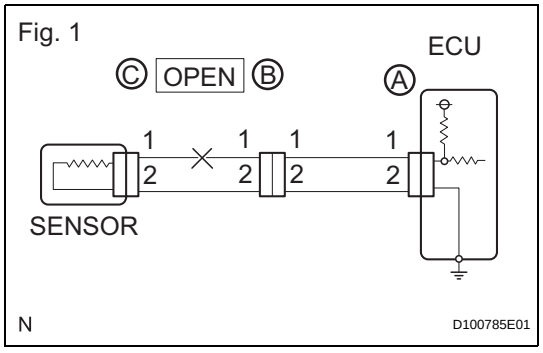


(c) CHECKING CONNECTORS

(1) Checking when a connector is connected: Squeeze the connector together to confirm that they are fully connected and locked.

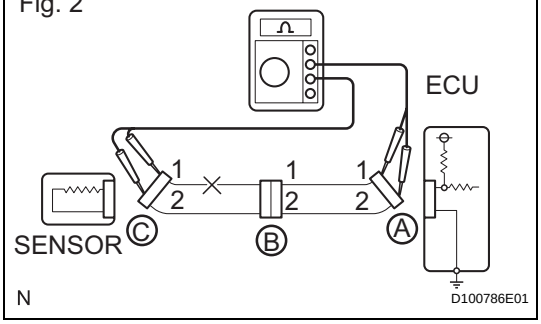


(2) Checking when a connector is disconnected: Pull the wire harness lightly from the backside of the connector. Visually check for the following: 1) unlatched terminals, missing terminals, loose crimps and broken conductor wires; 2) corrosion, metallic matter, foreign matter and water; and 3) bent, rusted, overheated, contaminated and deformed terminals.



(3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.
NOTICE:
When testing a gold-plated female terminal, always use a gold-plated male terminal.

(d) REPAIR METHOD OF CONNECTOR TERMINAL
(1) If there is any foreign matter on the terminal, clean the contact point using an air gun or cloth. Never rub the contact point using sandpaper as the plating may come off.
(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.
(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.



(e) HANDLING OF WIRE HARNESS
(1) If removing a wire harness, check the wiring and clamping before proceeding so that it can be restored in the same way.
(2) Never twist, pull or slacken the wire harness more than necessary.
(3) The wire harness should never come into contact with a high temperature part, or rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
(4) When installing parts, never pinch the wire harness.
(5) Never cut or break the cover of the wire harness. If it is cut or broken, repair the cover with vinyl tape or replace the wire harness.

2. CHECK FOR OPEN CIRCUIT

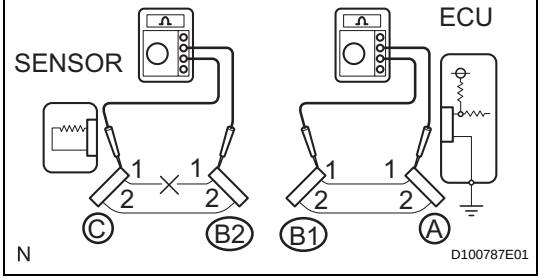
(a) For an open circuit in the wire harness in Fig. 1, check the resistance or voltage, as described below.

Fig. 2

(b) Check the resistance.

(1) Disconnect connectors A and C, and measure the resistance between them.

Standard resistance (Fig. 2)



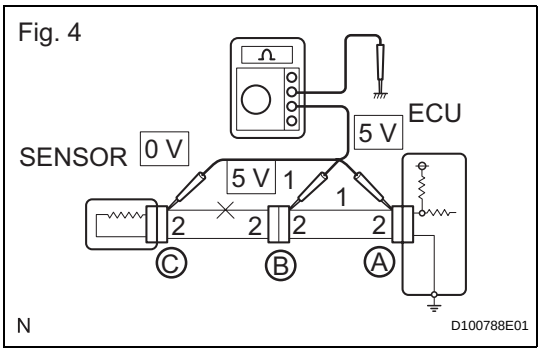
Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

If the results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3



(2) Disconnect connector B and measure the resistance between the connectors.

Standard resistance (Fig. 3)

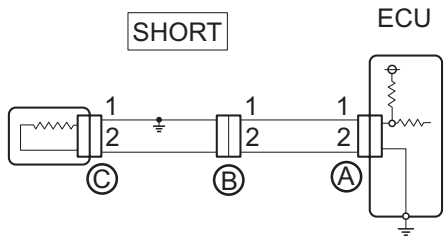
Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 1 - Connector C terminal 1	10 kΩ or higher

If the results match the examples above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

Fig. 4

(c) Check the voltage.

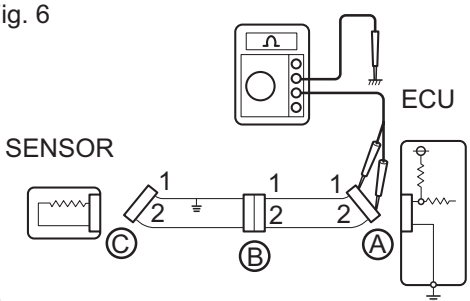
(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.



With each connector still connected, measure the voltage between the body ground and these terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

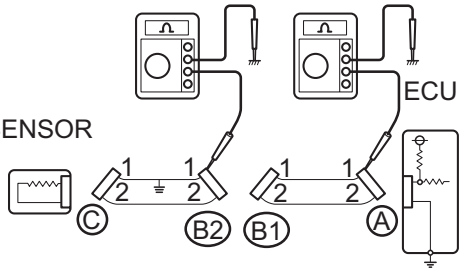
Standard voltage (Fig. 4)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V



If the results match the examples above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

Fig. 5



N D100789E01

Fig. 6

N D100790E01

Fig. 7

N D100800E01

3. CHECK FOR SHORT CIRCUIT

(a) If the wire harness is ground shorted (Fig. 5), locate the section by conducting a resistance check with the body ground (below).

(b) Check the resistance with the body ground.

(1) Disconnect connectors A and C, and measure the resistance.

Standard resistance (Fig. 6)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

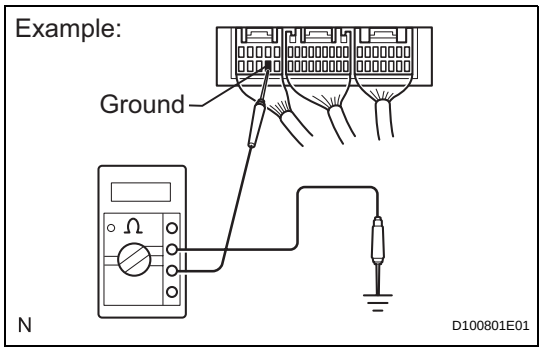
HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally.

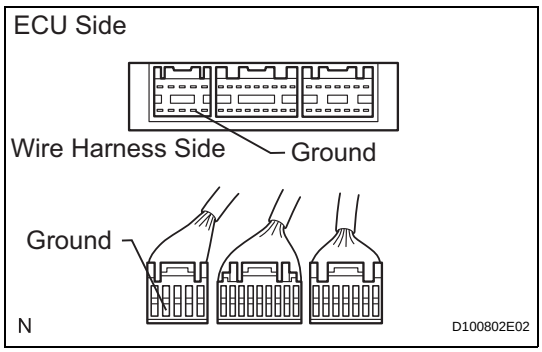
If the results match the examples above, a short circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard resistance (Fig. 7)



Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 1 - Body ground	Below 1 Ω



If the results match the examples above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- **The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.**
- **When no measuring condition is specified, perform the inspection with the engine stopped and the ignition switch ON.**
- **Check that the connectors are fully seated. Check for loose, corroded or broken wires.**

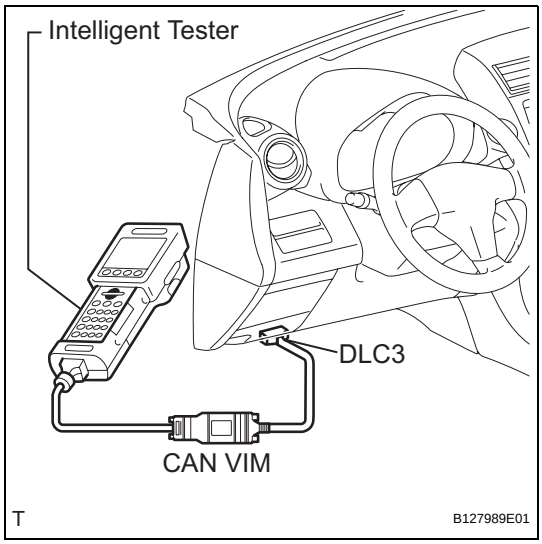
(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the problem symptoms occur. If the problem symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.
Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bending, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

IN

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS



GENERAL INFORMATION

A large number of ECU controlled systems are used in the RAV4. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system's circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnoses and necessary repairs.

FOR USING INTELLIGENT TESTER

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

* If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
* If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:
Perform troubleshooting in accordance with the procedures below. The following is an outline of basic troubleshooting procedures. Confirm the troubleshooting procedures for the circuit you are working on before beginning troubleshooting.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4 SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.
(b) Warm up the engine to the normal operating temperature.
(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **Go to step 6**

A

5	DTC CHART

(a) Check the results obtained in the DTC check. Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT → **Go to step 7**

6	PROBLEM SYMPTOMS TABLE

(a) Check the results obtained in the symptom confirmation. Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and / or parts.

NEXT

7	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Confirm the malfunctioning circuit or part.

NEXT

8	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction occurred the first time.

NEXT

END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in the RAV4 has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

  By using these functions, the problem areas can be narrowed down and troubleshooting is more effective. Diagnostic functions are incorporated in the following system in the RAV4.

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze Frame Data	Sensor Check / Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
SFI System (2AZ-FE)	○	○	○		○	○	
SFI System (2GR-FE)	○	○	○		○	○	
Automatic Transaxle System (U241E)	○	○	○		○	○	
Automatic Transaxle System (U140F)	○	○	○		○	○	
Automatic Transaxle System (U151E)	○	○	○		○	○	

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze Frame Data	Sensor Check / Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
Automatic Transaxle System (U151F)	○	○	○		○	○	
Active Torque Control 4WD System	○			○	○	○	
Electronic Power Steering System	○			○			
Vehicle Stability Control System	○		○	○	○	○	
Tire Pressure Warning System	○				○	○	
Meter/ Gauge System	○				○	○	○
Air Conditioning (for Automatic Air Conditioning System)	○				○	○	○
Air Conditioning (for Manual Air Conditioning System)	○				○	○	
Airbag System	○	○		○			
Occupant Classification System	○			○			
Seat Belt Warning System					○	○	
Engine Immobiliser System	○				○	○	
Cruise Control System	○				○	○	
Wiper and Washer System					○	○	
Power Door Lock Control System	○				○	○	○
Wireless Door Lock Control System	○				○	○	○
Key Reminder Warning System					○		
Power Window Control System	○				○	○	
Lighting System					○	○	○
Sliding Roof System					○	○	

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Freeze Frame Data	Sensor Check / Test Mode (Input Signal Check)	Data List	Active Test	Customize Parameter
Audio and Visual System	○						
CAN Communication System	○	○			○		

- In the DTC check, it is very important to determine whether the problem indicated by the DTC is either: 1) still occurring, or 2) occurred in the past but has since returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedures listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1 **DTC CHECK**

NEXT

2 **MAKE A NOTE OF DTCS DISPLAYED AND THEN CLEAR MEMORY**

NEXT

3 **SYMPTOM CONFIRMATION**

Result

Result	Proceed to
No symptoms exist	A
Symptoms exist	B

B → **Go to step 5**

A

4	SIMULATION TEST USING SYMPTOM SIMULATION METHODS

NEXT

IN

5	DTC CHECK

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **TROUBLESHOOTING OF PROBLEM INDICATED BY DTC**

A

6	SYMPTOM CONFIRMATION

Result

Result	Proceed to
Symptoms exist	A
No symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B → **SYSTEM NORMAL**

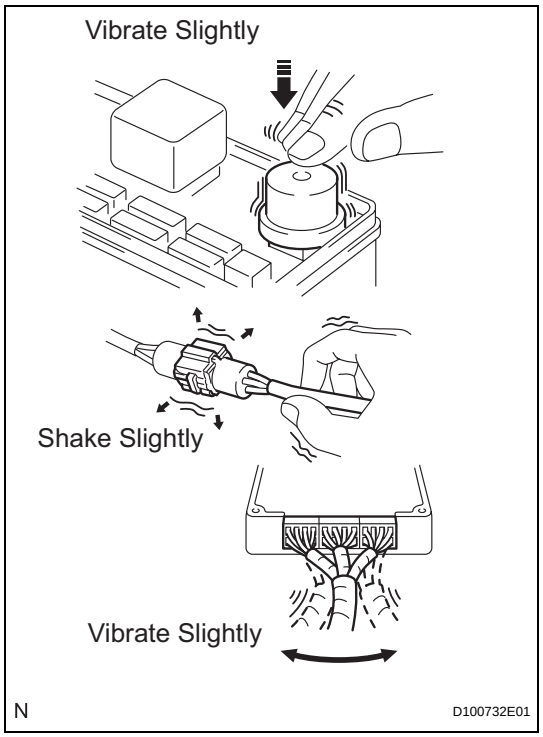
A

TROUBLESHOOTING OF EACH PROBLEM SYMPTOM

The problem is still occurring in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION

HINT:



The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or on a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) is difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied on a stationary vehicle.

Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.

(a) VIBRATION METHOD:

When a malfunction seems to occur as a result of vibration.

(1) PART AND SENSOR

Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether or not the malfunction occurs.

NOTICE:

Applying strong vibration to relays may open them.

(2) CONNECTORS

Slightly shake the connector vertically and horizontally.

(3) WIRE HARNESS

Slightly shake the wire harness vertically and horizontally.

HINT:

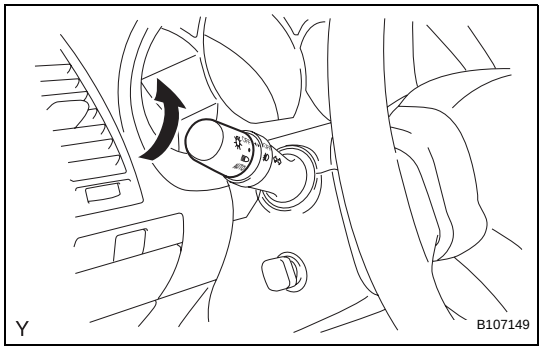
The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

(b) HEAT METHOD:

When a malfunction seems to occur when the area in question is heated.

(1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.

NOTICE:



- **Do not heat to more than 60°C (140°F). Exceeding this temperature may damage components.**

- **Do not apply heat directly to the parts in the ECU.**

(c) WATER SPRINKLING METHOD:
When a malfunction seems to occur on a rainy day or in high-humidity.
(1) Sprinkle water onto the vehicle and check if the malfunction occurs.
NOTICE:
- **Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
- **Never apply water directly onto the electronic components.**

HINT:
If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.

(d) HIGH ELECTRICAL LOAD METHOD:
When a malfunction seems to occur when the electrical load is excessive.
(1) Turn on the heater blower, headlight, rear window defogger and all other electrical loads. Check if the malfunction reoccurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns are below.

Item	Description
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspected areas of the problem
See Page	Indicates the page where the inspection procedures for each circuit are to be found, or gives instruction for checking and repairs

6. PROBLEM SYMPTOMS TABLE

When a "Normal" code is output during a DTC check but the problem is still occurring, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptom are in the table. The suspected areas are listed in order of probability. A description of each of the chart's columns is below.

HINT:
In some cases, the problem is not detected by the diagnostic system even though a problem symptom is present. It is possible that the problem is occurring outside the detection range of the diagnostic system, or that the problem is occurring in a completely different system.

Item	Description
Symptom	-
Suspected Area	Indicates the circuit or part which needs to be checked.
See Page	Indicates the page where the flowchart for each circuit is located.

7. CIRCUIT INSPECTION

A description of the main areas of each circuit inspection is below.

Item	Description
Description	The major role, operation of the circuit and its component parts are explained.
DTC No., DTC Detection Condition, Trouble Area	Indicates the diagnostic trouble codes, diagnostic trouble code detection conditions, and trouble areas of a problem.
Wiring Diagram	This shows a wiring diagram of the circuit. Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit.
Inspection Procedures	Use the inspection procedures to determine if the circuit is normal or abnormal. If abnormal, use the inspection procedures to determine whether the problem is located in the sensors, actuators, wire harnesses or ECU.
Inspection Procedure Connector Illustrations	• Connector being checked is connected: Connections of tester are indicated by (+) or (-) after the terminal name. • Connector being checked is disconnected: For illustrations of inspections between a connector and body ground, information about the body ground is not shown in the illustration.

HOW TO USE THIS MANUAL

GENERAL INFORMATION

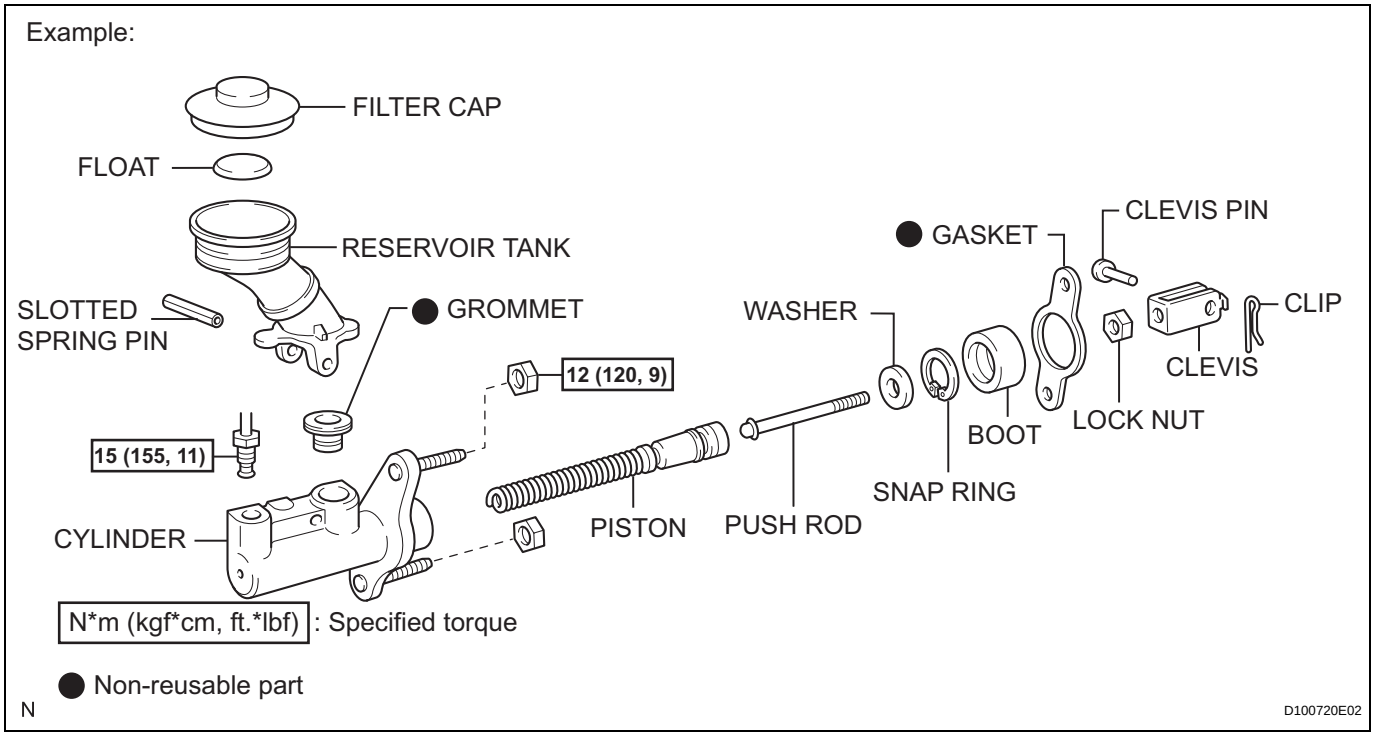
1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.
  (1) Diagnosis
  (2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting
  (3) Final Inspection

(b) The following procedures are omitted from this manual. However, these procedures must be performed.
  (1) Use a jack or lift to perform operations.
  (2) Clean all removed parts.
  (3) Perform a visual check.

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help you find the item to be repaired.



3. PREPARATION

(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the working procedures properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
The following illustration is an example.

(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.
HINT:
There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	• How to perform the task • Information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

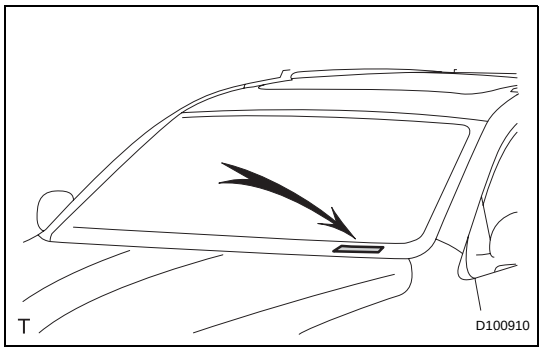
(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.



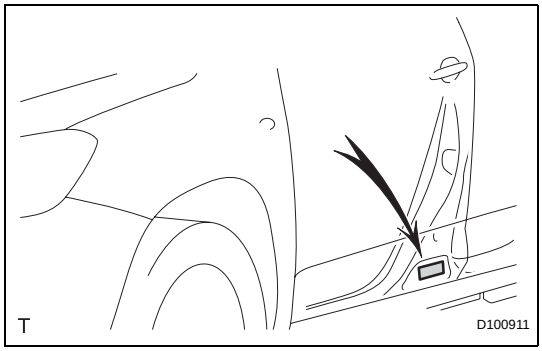
7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI) standard. Units from the metric system and English system are also provided.
Example:
Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)

IN

IDENTIFICATION INFORMATION

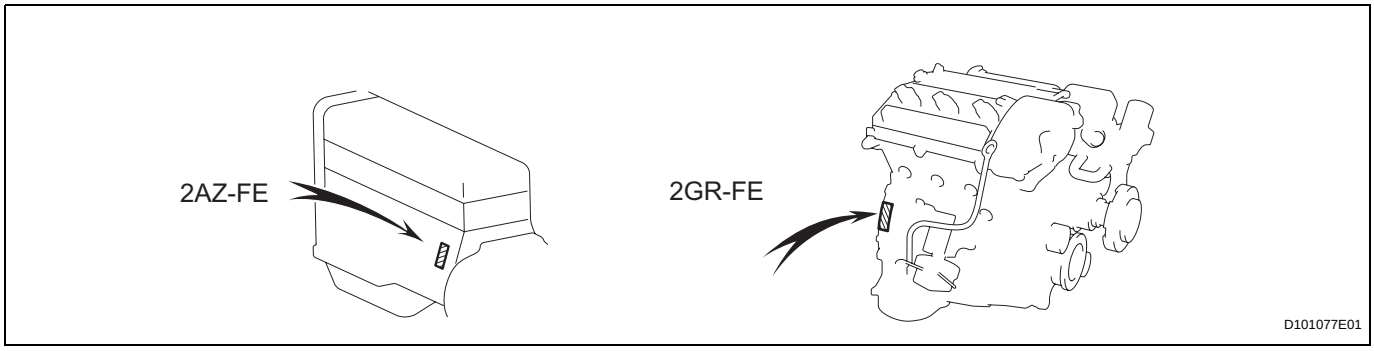
VEHICLE IDENTIFICATION AND SERIAL NUMBERS



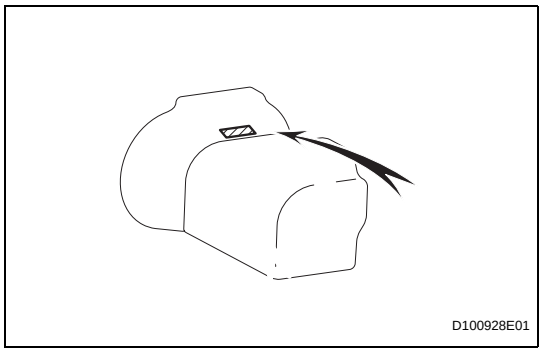
1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle identification number plate and on the certification label, as shown in the illustrations.

(1) Vehicle Identification Number Plate



(2) Certification Label



2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine and the transaxle serial number is stamped on the housing as shown in the illustrations.

(1) Engine Serial Number

(2) Transaxle Serial Number

IN

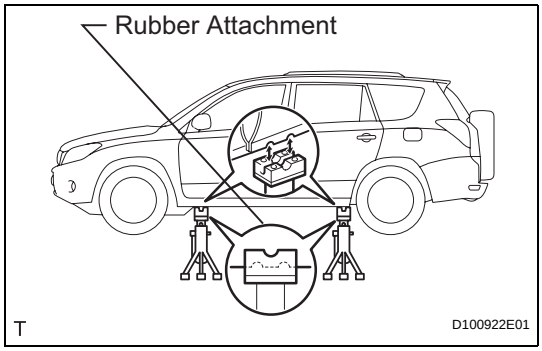
VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP VEHICLE

(a) The vehicle must be unloaded before jacking up / lifting up the vehicle. Never jack up / lift up a heavily loaded vehicle.

(b) When removing heavy parts such as the engine and transmission, the center of gravity of the vehicle may shift. To stabilize the vehicle, place a balance weight in a location where it will not roll or shift, or use a mission jack to hold the jacking support.

2. NOTICE FOR USING 4 POST LIFT



(a) Follow the safety procedures outlined in the lift instruction manual.

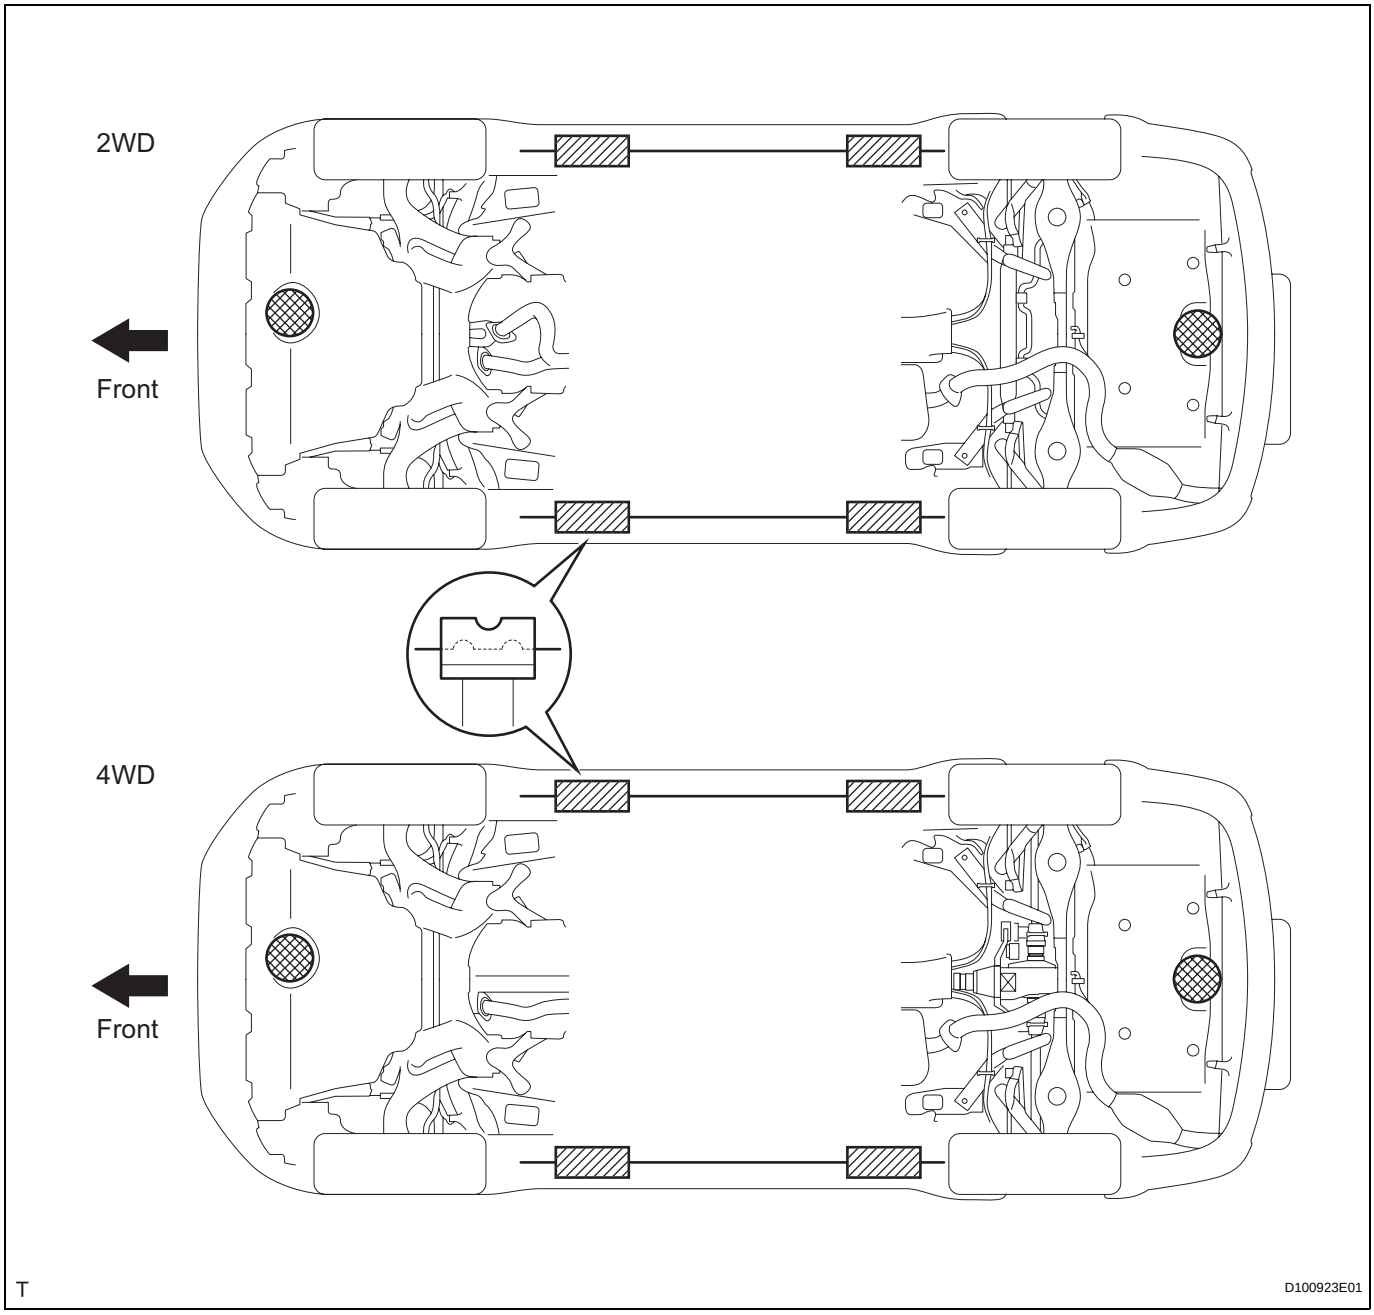
(b) Use precautionary measures to prevent the free wheel beam from damaging tires or wheels.

(c) Use wheel chocks to secure the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work on a level surface. Use wheel chocks at all times.

(b) Use safety stands with rubber attachments as shown in the illustration.



(c) Set the jack and safety stands to the specified locations of the vehicle accurately.

(d) When jacking up the vehicle, first release the parking brake and move the shift lever to N.

(e) When jacking up the entire vehicle:
- When jacking up the front wheels first, make sure wheel chocks are behind the rear wheels.
- When jacking up the rear wheels first, make sure wheel chocks are in front of the front wheels.

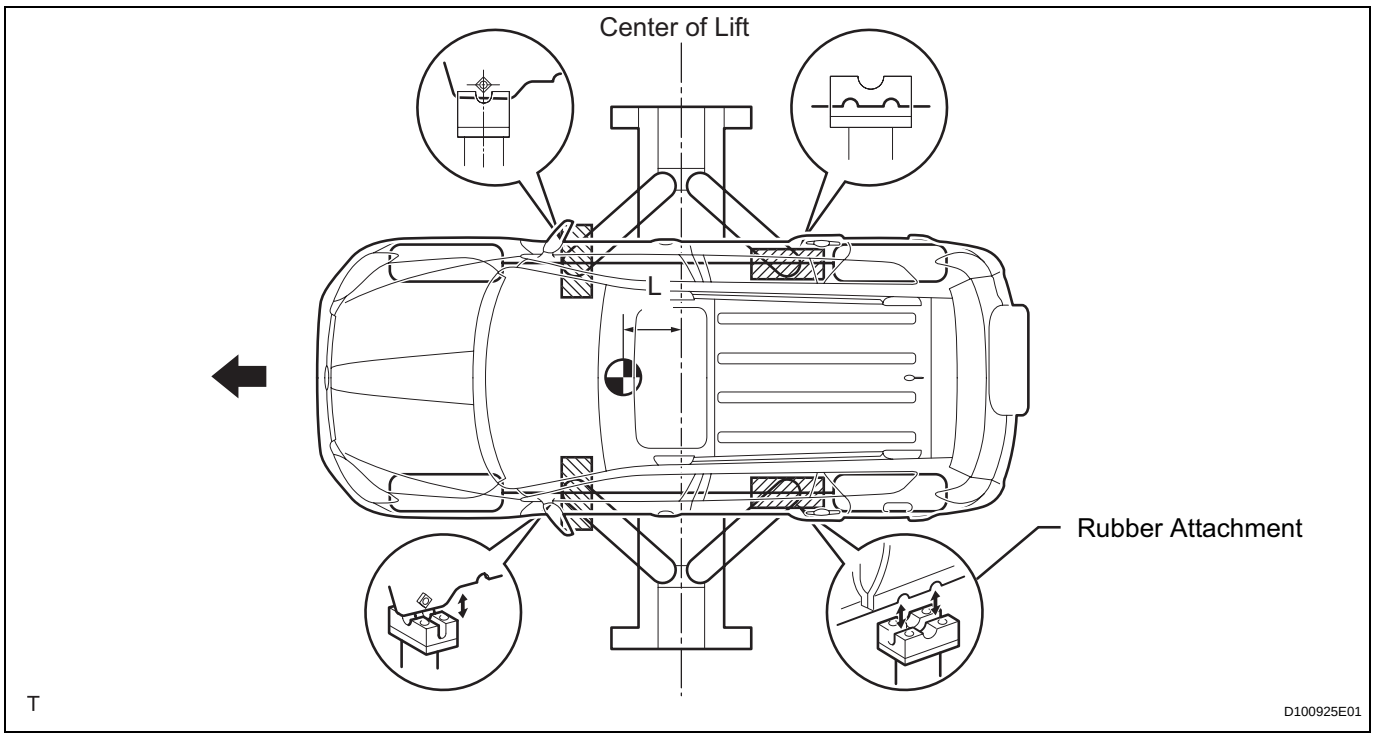
(f) When jacking up only the front or rear wheels of the vehicle:
- Before jacking up the front wheels, place wheel chocks on both sides of the rear wheels.
- Before jacking up the rear wheels, place wheel chocks on both sides of the front wheels.

(g) When lowering a vehicle that only has its front or rear wheels jacked up:
- Before lowering the front wheels, make sure wheel chocks are in front of the rear wheels.
- Before lowering the rear wheels, make sure wheel chocks are behind the front wheels.

	JACK POSITION Front: Engine under cover Rear: Body lower back panel	**CAUTION:** **When jacking-up the vehicle, make sure the vehicle is not carrying any extra weight.**
	SUPPORT POSITION Safety stand and swing arm type lift	-

(h) It is extremely dangerous to perform any work on a vehicle raised on a jack alone, even for work that can be finished quickly. Safety stands must be used to support it.

IN



4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow safety procedures outlined in its instruction manual.

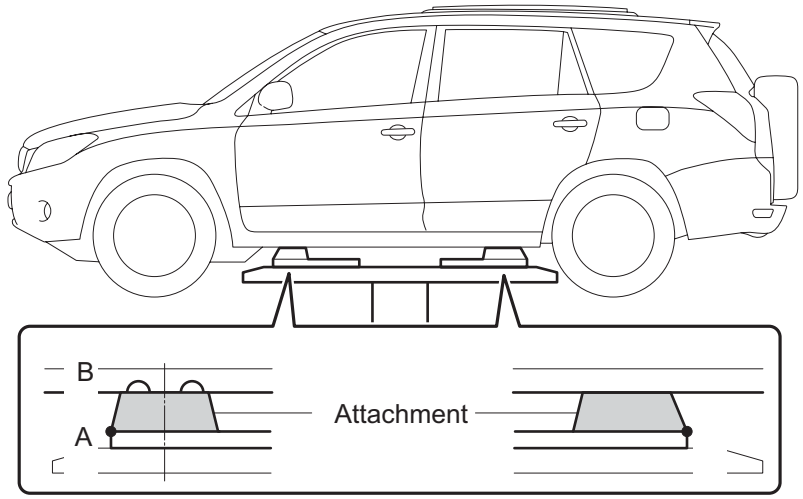
(b) Use a swing arm equipped with a rubber attachment, as shown in the illustration.

(c) When using the lift, make sure that the vehicle is stabilized so that it will not tilt while work is being performed. Stabilize the vehicle by adjusting the lift arm's length and vehicle's position.

(d) When using the lift, its center should be as close to the vehicle's center of gravity as possible (length of "L" in the illustration should be as short as possible).

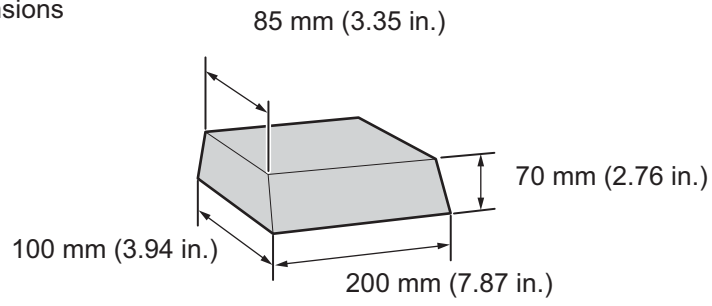
(e) Set the vehicle on the lift as level as possible. Then match the groove of the cradle to the rigid rack support location.

(f) Be sure to lock the swing arms before lifting and during work (if equipped with arm locks).



(g) Lift the vehicle up off the ground. Stand at a safe distance and shake the vehicle to check its stability.

5. NOTICE FOR USING PLATE TYPE LIFT



(a) Follow safety procedures outlined in its instruction manual.

(b) Use plate lift attachments (rubber lifting blocks) on top of the plate surface.

(c) Refer to the illustration below to determine how to properly set the vehicle.

Attachment Dimensions

T

D100924E01

HINT:

Right and left set position	Place the vehicle over the center of the lift.
Front and rear set position	Place the attachments at the ends of the rubber plate surface, under the vehicle lift pad (A and C in the illustration). Raise the plate slightly and reposition the vehicle so the top of the attachment (B in the illustration) is aligned with the front side notch in the vehicle rocker flange.

(d) Use the lift to raise the vehicle up off the ground, and shake it to make sure that it is stable.

IN

CUSTOMIZE PARAMETERS

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

1. Combination meter

Display (Item)	Default	Function	Setting
SEAT BELT WARN	D/P ON	Seat belt warning buzzer ON / OFF setting	D/P ON: Driver and passenger buzzer ON D ON: Driver buzzer ON P ON: Passenger buzzer ON D/P OFF: Driver and passenger buzzer OFF

2. Air conditioning system

Display (Item)	Default	Contents	Setting
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To control with shifted temperature against display temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
AIR INLET MODE (Air Inlet Mode)	AUTO	In case of turning A/C ON when you desire to make compartment cool down quickly, this is function to change mode automatically to RECIRCULATION mode	MANUAL / AUTO
COMPRESSOR MODE (Compressor Mode)	AUTO	Function to turn A/C ON automatically by pressing AUTO button when blower is ON and A/C is OFF	MANUAL / AUTO
COMPRS / DEF OPER (Compressor / Air Inlet DEF Operation)	LINK	Function to turn A/C ON automatically linked with FRONT DEF button when A/C is OFF	NORMAL / LINK
EVAP CTRL (Evaporator Control)	AUTO	Function to set evaporator control to AUTOMATIC position (AUTO) to save power, or to coldest position (MANUAL) to dehumidify air and to prevent windows from fogging up	MANUAL / AUTO
FOOT / DEF MODE (Foot / DEF auto mode)	ON	Function to turn airflow from FOOT / DEF ON automatically when AUTO MODE is ON	OFF / ON
AUTO BLOW UP (Foot / DEF automatic blower up function)	ON	Function to change blower level automatically when defroster is ON	OFF / ON

3. Power Door Lock Control System

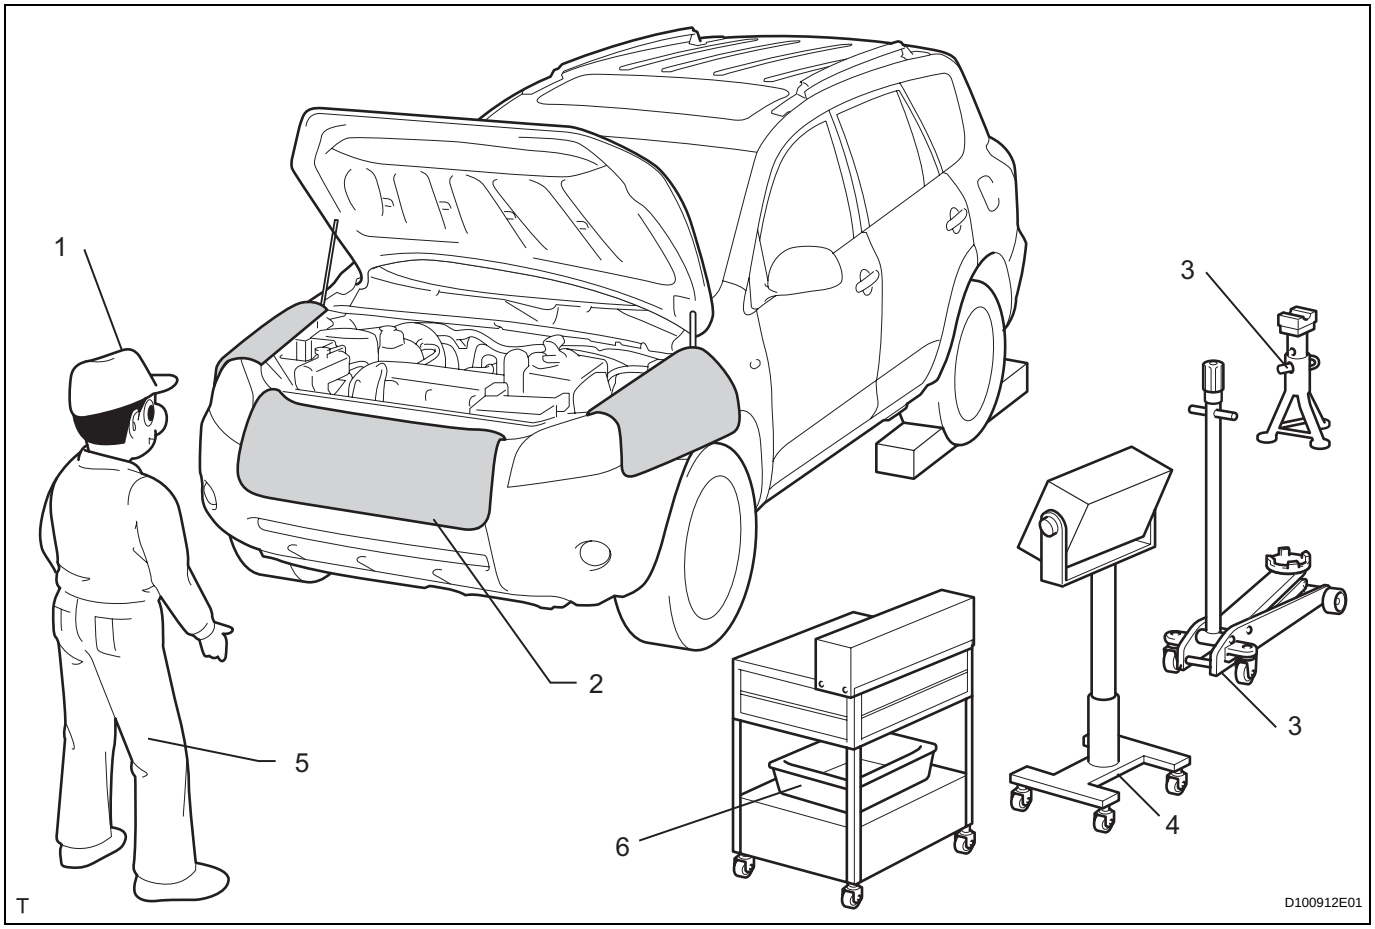
Display (Item)	Default	Function	Setting
UNLK/KEY TWICE	ON	Unlocks only driver side door when driver side door key cylinder turned to unlock once, and unlocks all doors when turned to unlock twice. For OFF setting, turning it once unlocks all doors.	ON / OFF

4. Wireless Door Lock Control System

Display (Item)	Default	Contents	Setting
HAZARD ANS BACK	ON	When LOCK switch on transmitter pressed, all hazard warning lights illuminate once. When UNLOCK switch pressed, all hazard warning lights illuminate twice	ON / OFF

Display (Item)	Default	Contents	Setting
WIRLS BUZZ OPER	ON	Function that makes wireless buzzer sound for answer-back when transmitter LOCK / UNLOCK switch pressed	ON / OFF
OPEN DOOR WARN	ON	If door is not completely closed and transmitter LOCK switch is pressed, this function sounds a buzzer for 10 seconds	ON / OFF
WIRELESS OPER	ON	ON / OFF of wireless door lock function	ON / OFF
ALARM FUNCTION	ON	Operates security alarm when PANIC switch on transmitter continuously pressed for 1 second	ON / OFF
UNLOCK / 2 OPER	ON	Function that unlocks driver side door when unlock switch on transmitter is pressed once, and unlocks all doors when pressed twice. If setting is OFF, pressing unlock switch once makes all doors unlock.	ON / OFF
AUTO LOCK DELAY	30s	This function controls amount of time from unlocking doors to automatic re-locking function	30s / 60s

5. Lighting System

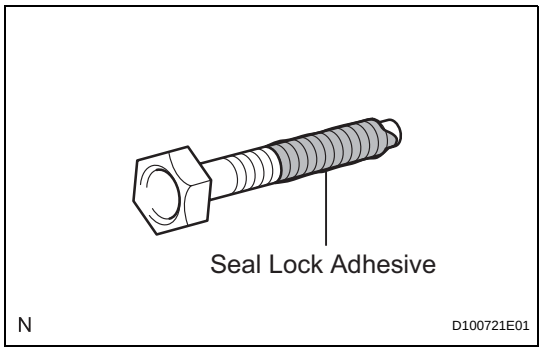


Display (Item)	Default	Contents	Setting
LIGHTING TIME (Lighting Time)	15 seconds	Changes illumination duration after door closure. (It will quickly fade out in case of turning ignition switch ON.)	7.5/15/30 (seconds)
I/L ON /ACC OFF (Room light illuminates when ignition switch turned OFF)	ON	Illuminates light when ignition switch turned to ACC. (Room light illuminated when interior light switch in DOOR position)	ON / OFF
I/L ON / UNLOCK (Room light illuminates when door key unlocked.)	ON	Function to light up room light when unlocking with door key cylinder. (Room light illuminated when interior light switch in DOOR position)	ON / OFF
LIGHT CONTROL	ON	Function to light up foot light when ignition switch is ON and shift position is not P.	ON / OFF

REPAIR INSTRUCTION

PRECAUTION

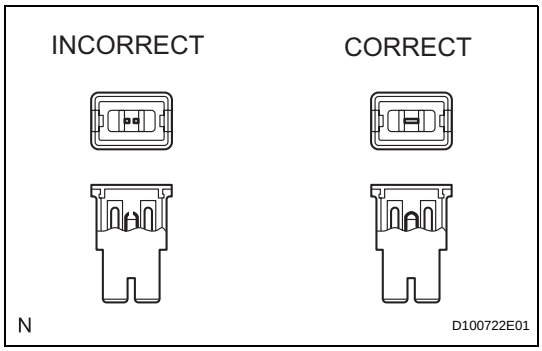
1. BASIC REPAIR HINT



(a) HINTS ON OPERATIONS

1	Attire	• Always wear a clean uniform. • A hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting the operation.
3	Safe operation	• When working with 2 or more persons, be sure to check safety for one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring gauge	Before starting the operation, prepare a tool stand, SST, gauge, oil and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing parts, check the general condition of the assembly and for deformation and damage. • When the assembly is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to ensure reassembly of components to their original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.

6	Removed parts	• Place removed parts in a separate box to avoid mixing them up with new parts or contaminating new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection, if requested.



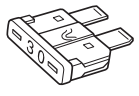
(b) JACKING UP AND SUPPORTING VEHICLE
(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.

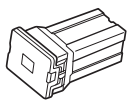
(c) PRECOATED PARTS
(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.
(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriate to that part.
(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

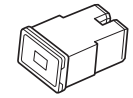
(d) GASKETS
(1) When necessary, use a sealer on gaskets to prevent leaks.

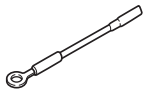
(e) BOLTS, NUTS AND SCREWS
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.

(f) FUSES
(1) When inspecting a fuse, check that the wire of the fuse is not broken.
(2) When replacing fuses, be sure that the new fuse has the correct amperage rating. Do not exceed the rating or use one with a lower rating.









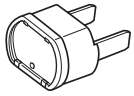


Illustration	Symbol	Part Name	Abbreviation
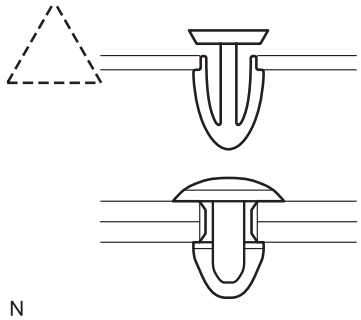
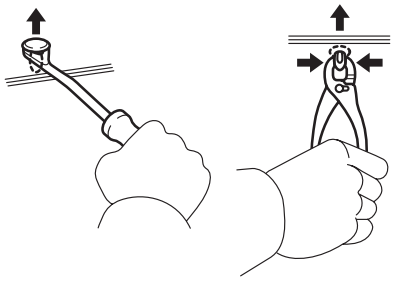
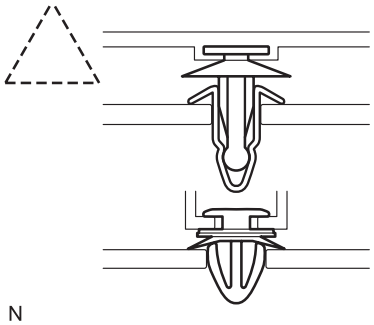
 N	N	FUSE	FUSE
 N	 N	MEDIUM CURRENT FUSE	M-FUSE







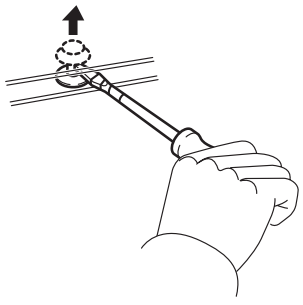


Illustration	Symbol	Part Name	Abbreviation
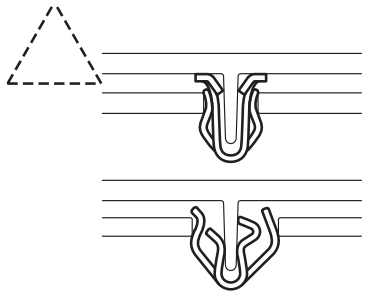
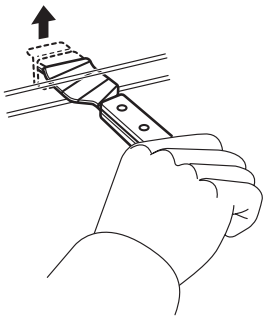
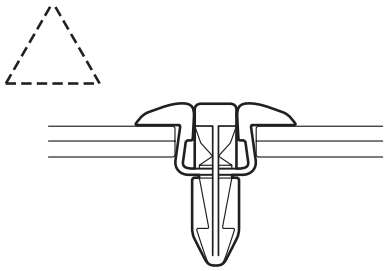
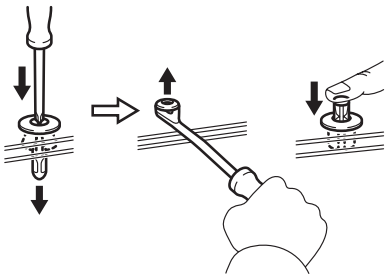
 N	 N	HIGH CURRENT FUSE	H-FUSE
 N	 N	FUSIBLE LINK	FL
 N	 N	CIRCUIT BREAKER	CB

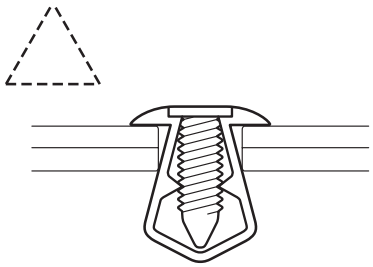
(g) CLIPS

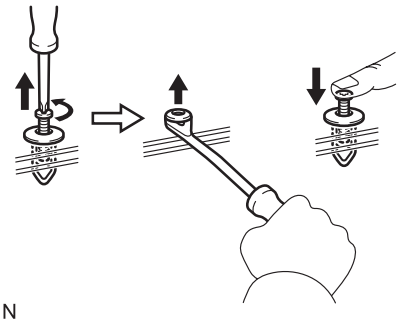


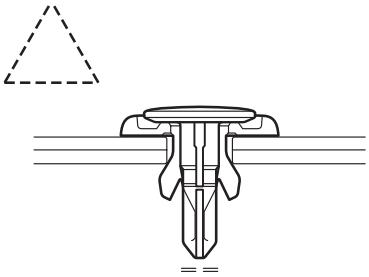


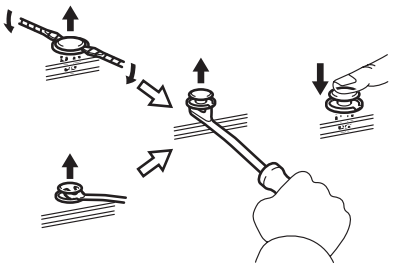












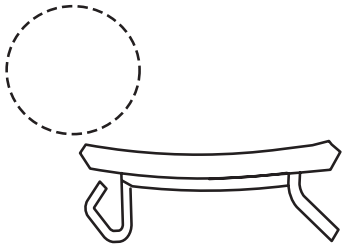
(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

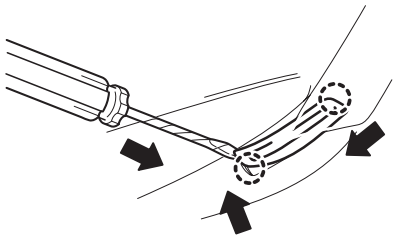
HINT:

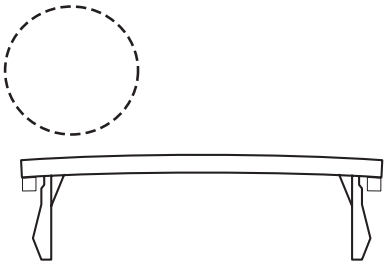
If clips are damaged during a procedure, always replace the clips with new clips.

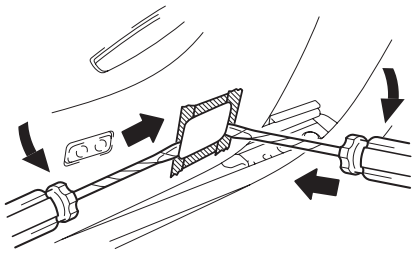
Shape (Example)	Illustration	Procedures
 N	 N	1. Remove clips with a clip remover or pliers.
 N	 N	1. Remove clips with a clip remover or screwdriver.

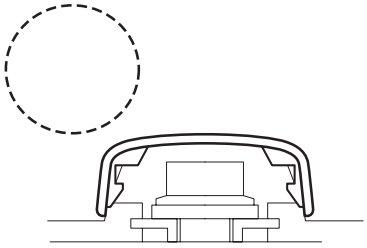
IN

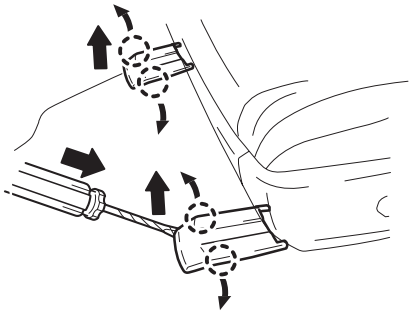




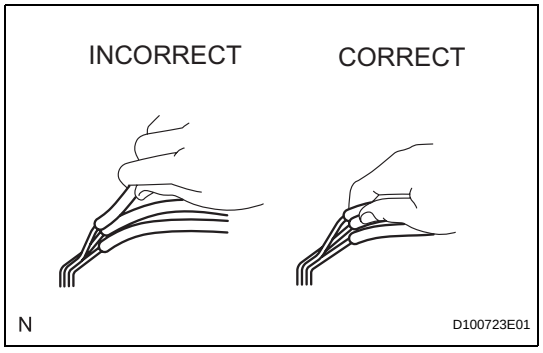








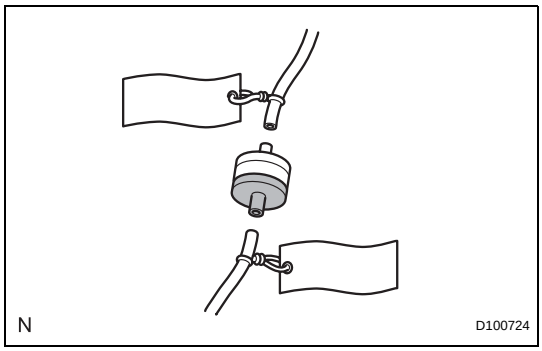
Shape (Example)	Illustration	Procedures
 N	 N	1. Remove clips with a wide scraper to prevent panel damage.
 N	 N	1. Remove clips by pushing the center pin through and prying out the shell.
 N	 N	1. Remove clips by unscrewing the center pin and prying out the shell.
 N	 N	1. Remove the clip by prying out the pin and then prying out the shell.



(h) CLAWS

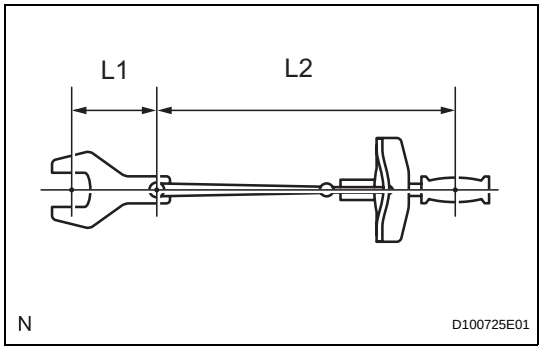
(1) The removal and installation methods of typical claws used for vehicle body parts are shown in the table below.

HINT:

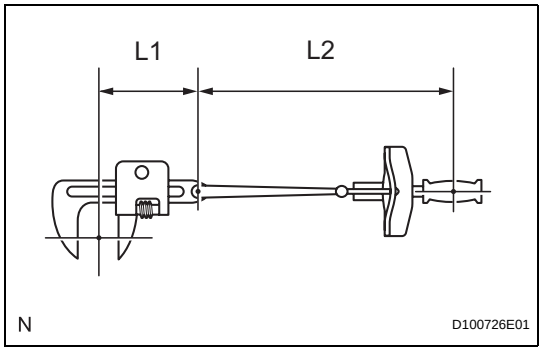


If claws of caps or covers are damaged during a procedure, always replace the caps or covers with new ones.

Shape (Example)	Illustration	Procedures
		1. Using a screwdriver, detach the claws and remove the caps or cover.
		1. Using a screwdriver, detach the claws and remove the caps or cover.
		1. Using a screwdriver, detach the claws and remove the caps or cover.



(i) REMOVAL AND INSTALLATION OF VACUUM HOSES



(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may cause damage.

(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.
(3) After completing any hose related repairs, double-check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.
(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, it may leak air. Use a step-down adapter if necessary.

(j) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with a torque wrench.
Formula:
T' = L2 / (L1 + L2) * T

T'	**Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}**
T	**Torque {N*m (kgf*cm, ft.*lbf)}**
L1	**Length of SST or extension tool {cm (in.)}**
L2	**Length of torque wrench {cm (in.)}**

NOTICE:
If an extension tool or SST is combined with a torque wrench and the wrench is used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. FOR VEHICLES WITH SUPPLEMENTAL RESTRAINT SYSTEM

The RAV4 is equipped with a Supplemental Restraint System (SRS). The SRS of this vehicle consists of the following:

1. Steering pad
2. Front passenger airbag assembly
3. Front seat side airbag assembly
4. Front seat outer belt assembly with pretensioner
5. Curtain shield
6. Center airbag sensor
7. Front airbag sensor
8. Side airbag sensor
9. Rear airbag sensor
10. Occupant Classification ECU

CAUTION:

- **Failure to carry out service procedures in the correct sequence could cause SRS parts to unexpectedly deploy and possibly lead to serious injuries. Furthermore, if a mistake is made when servicing SRS parts, they may fail to operate when required. Before performing servicing (including installation/removal, inspection and replacement of parts), be sure to read the following precautions.**
- **Before starting work, wait at least 90 seconds after the ignition switch is turned OFF and after the cable of the negative (-) battery terminal is disconnected. (SRS parts are equipped with a backup power source. If work is started within 90 seconds of turning the ignition switch OFF and disconnecting the cable from the negative (-) battery terminal, SRS parts may deploy.)**
- **Do not expose SRS parts directly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of SRS parts are difficult to confirm. DTCs are the most important source of information when troubleshooting. During troubleshooting, always confirm DTCs before disconnecting the cable from the negative (-) battery terminal.**
- **For minor collisions where SRS parts do not deploy, always inspect the SRS parts.**
- **Before performing repairs, remove airbag sensors as necessary if any kind of impact is likely to occur to an airbag sensor during repairs.**
- **Never use SRS parts from another vehicle. When replacing SRS parts, replace them with new ones.**
- **Never disassemble or attempt to repair SRS parts.**
- **If an SRS part has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace the SRS part with a new one.**
- **Use an ohmmeter/voltmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached to the periphery of SRS parts. Follow the cautions and instructions on the labels.**
- **After work on SRS parts is completed, perform the SRS warning light check.**

- **When the cable is disconnected from the negative (-) battery terminal, the memory settings of each system will be cleared. Because of this, be sure to write down the settings of each system before starting work. When work is finished, reset the settings of each system as before. Never use a backup power supply from outside the vehicle to avoid erasing the memory in a system.**

(a) SPIRAL CABLE

(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel.

(b) AIRBAG ASSEMBLY

(1) Airbag assembly with pad:
Always place a removed or new airbag assembly with the pad surface facing upward. Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag inflates. Also, do not place anything on top of the airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause a serious injury.

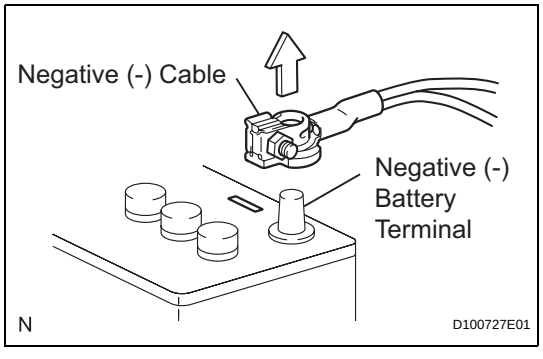
(3) Grease or detergents of any kind should not be applied to the airbag assembly.

(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors. These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to currents entering the squib wiring.

(6) When disposing of the vehicle or the airbag assembly by itself, the airbag should be deployed using SST before disposal. Activate the airbag in a safe place away from electrical noise.

(c) SEAT OUTER BELT ASSEMBLY WITH PRETENSIONER



(1) Never measure the resistance of the seat outer belt. This may cause the pretensioner of the seat outer belt to activate, which could cause a serious injury.

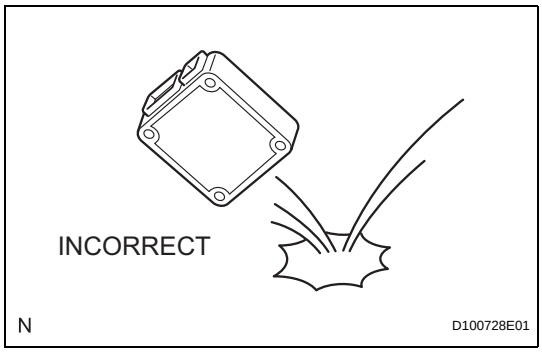
(2) Never install the seat outer belt on another vehicle.

(3) Store the seat outer belt in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.
(4) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the pretensioner deploying due to currents entering the squib wiring.
(5) When disposing of a vehicle or the seat outer belt by itself, the pretensioner should be activated before disposal. Activate the pretensioner in a safe place away from electrical noise.
(6) As the seat outer belt is hot after the pretensioner is activated, allow some time for it to cool down sufficiently before disposal. Never apply water to try to cool down the seat outer belt.
(7) Grease, detergents, oil or water should not be applied to the seat outer belt.

(d) AIRBAG SENSOR ASSEMBLY
(1) Never reuse an airbag sensor assembly that has been involved in a collision where the SRS has deployed.
(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor placed on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not placed on the floor, the SRS may activate.
(3) Work must be started at least 90 seconds after the ignition switch is turned OFF and the cable is disconnected from the negative (-) battery terminal, even if only loosening the set bolts of the airbag sensor assembly.

(e) WIRE HARNESS AND CONNECTOR
(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are yellow. If the SRS wire harness becomes disconnected or the connector becomes broken, repair or replace it.

3. ELECTRONIC CONTROL



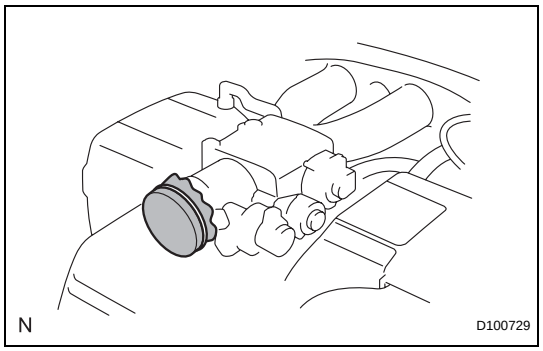
(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

NOTICE:

Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.

(1) Before performing electronic work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.

(2) When disconnecting the cable, turn the ignition switch OFF and headlight dimmer switch OFF and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.
(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.



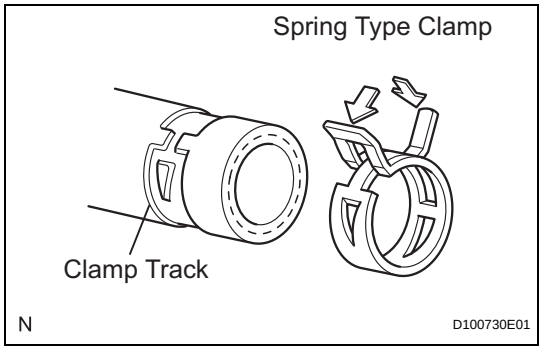
(b) HANDLING OF ELECTRONIC PARTS
(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.
(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector.
(3) Be careful not to drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.
(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.
(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
(6) When measuring the resistance of a wire connector, insert the tester probe carefully to prevent terminals from bending.

4. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other ignition sources.
(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Prepare a fire extinguisher before starting the operation.
(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, and do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.
(3) Avoid using electric motors, working lights and other electric equipment that can cause sparks or high temperatures.
(4) Avoid using iron hammers as they may create sparks.

(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.

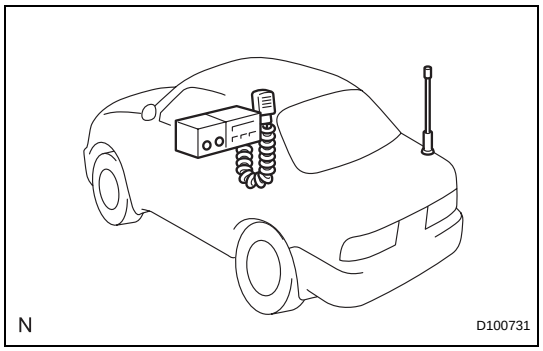


5. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

(a) If any metal particles enter inlet system parts, they may damage the engine.

(b) When removing and installing inlet system parts, cover the openings of the removed parts and engine openings. Use gummed tape or other suitable materials.

(c) When installing inlet system parts, check that no metal particles have entered the engine or the installed parts.



6. HANDLING OF HOSE CLAMPS

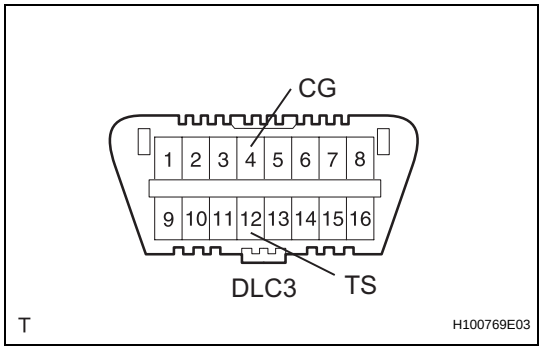
(a) Before removing the hose, check the clamp position so that it can be reinslalled in the same position.

(b) Replace any deformed or dented clamps with new ones.

(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.

(d) For a spring type clamp, you may want to spread the tabs slightly after installation by pushing in the direction of the arrows as shown in the illustration.

7. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS



(a) Install the antenna as far away from the ECU and sensors of the vehicle electronic systems as possible.

(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensor locations, refer to the section of the applicable components.

(c) Keep the antenna and feeder separate from other wiring as much as possible. This will prevent signals of the communication equipment from affecting vehicle equipment and vice versa.

(d) Check that the antenna and feeder are correctly adjusted.

(e) Do not install a high-powered mobile communication system.

8. FOR VEHICLES EQUIPPED WITH VEHICLE STABILITY (VSC) SYSTEM

(a) NOTICES WHEN USING DRUM TESTER

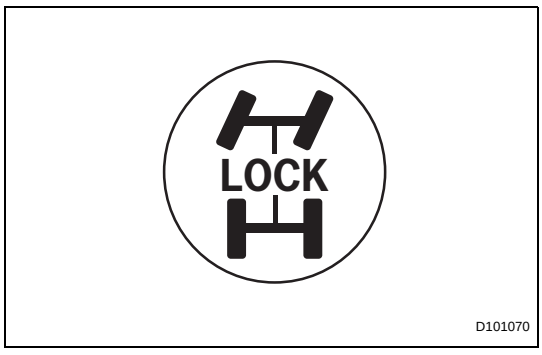
(1) Before beginning testing, disable the VSC. To disable the VSC, turn the ignition switch OFF and connect SST to terminals 12 (TS) and 4 (CG) of the DLC3.

SST 09843-18040

NOTICE:

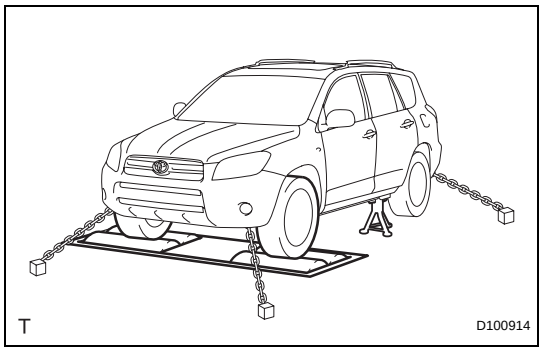
- **Confirm that the VSC warning light blinks.**

- **VSC system will be reset when the engine is started.**
- **For safety, secure the vehicle with restraint chains while using a wheel dynamometer.**



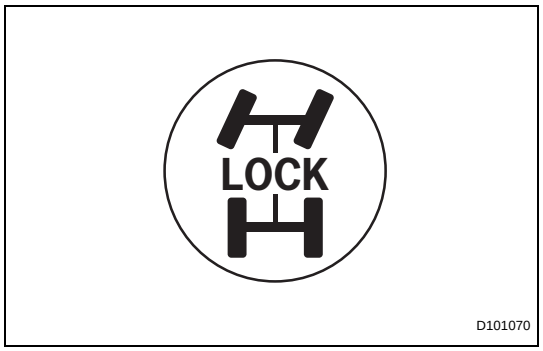
(b) NOTICES OF RELATED OPERATIONS TO VSC
(1) Do not carry out unnecessary installation and removal as it might affect the adjustment of VSC related parts.
(2) Be sure to follow the instructions for work preparation and final confirmation of proper operation of the VSC system.

9. WHEN SERVICING ACTIVE TORQUE CONTROL 4WD VEHICLES

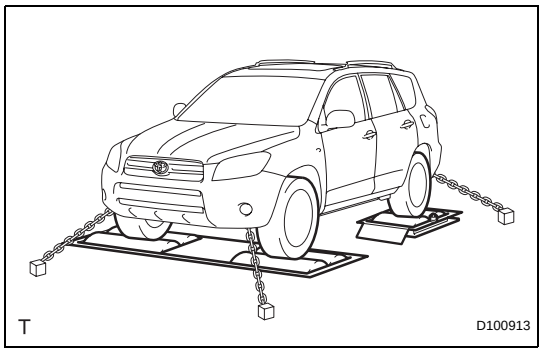


(a) The active torque control 4WD RAV4 is equipped with the 4 wheel drive control system.
If incorrect preparations or test procedures are used, the test will not only be unsuccessful, but may be dangerous as well.
CAUTION:
- **Never accelerate or decelerate the vehicle suddenly.**
- **Observe the other cautions given for each individual test.**

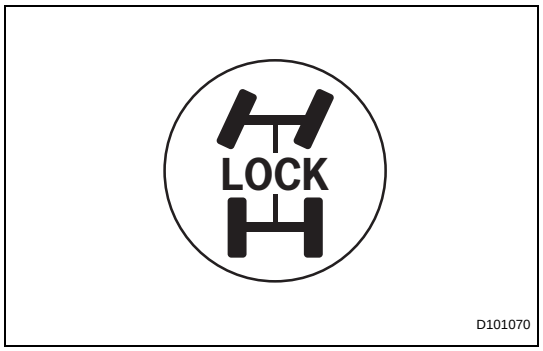
NOTICE:
- **Sudden shifting, braking, acceleration or deceleration is not allowed.**
- **Do not use the parking brake while the vehicle's wheels are rotating.**
- **Do not perform the measurements continuously for a long period of time.**
- **Make sure to activate the Vehicle Stability Control (VSC) & Traction Control (TRAC) system to an operational condition after the test. Check that the VSC warning indicator light goes off when restarting the engine.**



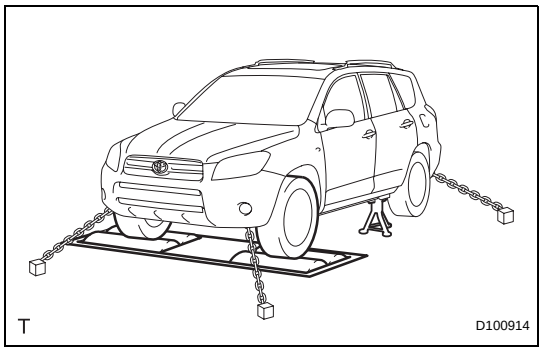
Therefore, before beginning any such servicing or test, be sure to check the following items:
(1) Whether the tires are touching the ground or jacked up
(2) Transmission gear position
(3) Maximum testing vehicle speed
(4) Maximum testing time



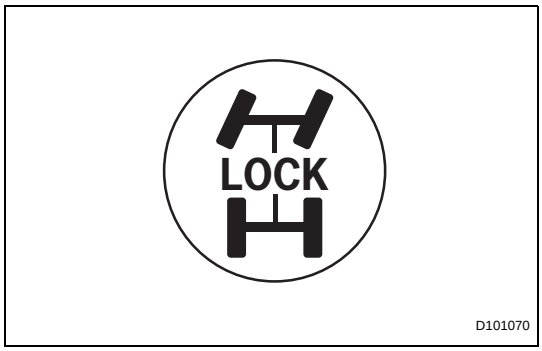
(b) When using a braking force tester (not free roller type):
When performing measurements using a low-speed type (Vehicle Speed: Below 0.5 km/h or 0.3 mph) brake tester, observe the following instructions.
(1) Press the 4WD LOCK-MODE SWITCH to OFF to disable the 4WD system.
(2) If the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, prohibit the system from activating.



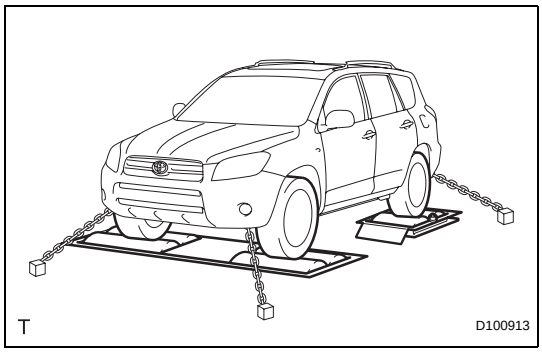
(3) Position the front wheels to be tested on the tester.
(4) Jack up the rear wheels.
(5) Ensure that the vehicle does not move using wires.
(6) Shift the transmission shift lever to the "N" position.
(7) Idle the engine, operate the brake booster and perform the test.
CAUTION:
The maximum driving time should be 1 minute.



(c) When using a braking force tester (free roller type): When performing measurements using a low-speed type (Vehicle Speed: Below 0.5 km/h or 0.3 mph) brake tester, observe the following instructions.
(1) Press the 4WD LOCK-MODE SWITCH to turn it OFF and disable the 4WD system.
(2) If the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, prohibit the system from activating.

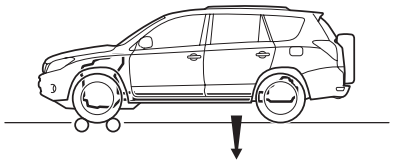


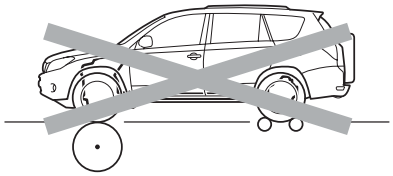
(3) Position the front wheels on the tester roller.
(4) Position the rear wheels on the free roller.
(5) Ensure that the vehicle does not move using wires.
(6) Shift the transmission shift lever to the "N" position.
(7) Idle the engine, operate the brake booster and perform the test.
CAUTION:
The maximum driving time should be 1 minute.

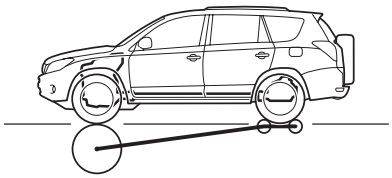


(d) When using a speedometer (not free roller type): Observe the following instructions and then measure with the rear wheels.
(1) Press the 4WD LOCK-MODE SWITCH to turn it OFF and disable the 4WD system.
(2) If the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, prohibit the system from activating.

(3) Position the front wheels on the tester.
(4) Jack up the rear wheels.
(5) Ensure that the vehicle does not move using wires.
(6) Shift the transmission shift lever to the "D" position.
CAUTION:
- **The maximum speed should be less than 50 km/h (31 mph).**
- **If the measurement is required with over 50 km/h (31 mph), remove the propeller shaft.**

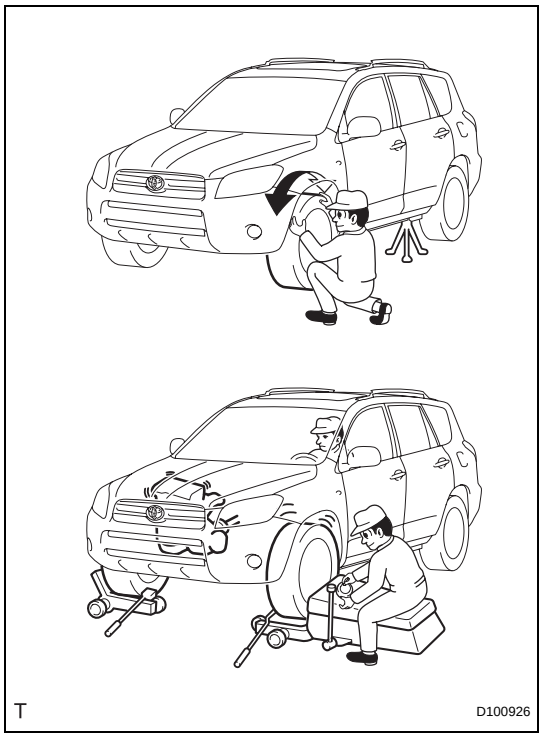






(e) When using a speedometer (free roller type):
Observe the following instructions and then measure with the rear wheels.
(1) Press the 4WD LOCK-MODE SWITCH to turn it OFF and disable the 4WD system.
(2) If the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, prohibit the system from activating.

(3) Position the front wheels on the tester roller.
(4) Position the rear wheels on the free roller.
(5) Ensure that the vehicle does not move using wires.
(6) Shift the transmission shift lever to the "D" position.
CAUTION:
- **The maximum speed should be less than 50 km/h (31 mph).**
- **If the measurement is required with over 50 km/h (31 mph), remove the propeller shaft.**



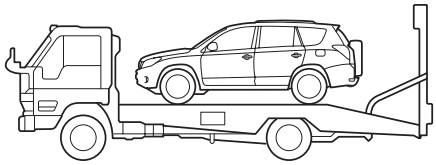
(f) Using chassis dynamometer

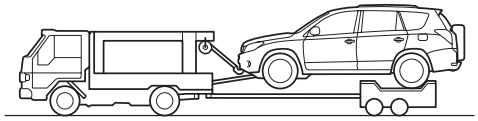
Vehicle Condition	Chassis dynamometer Type	Note
 T	2-Wheel Chassis Dynamometer	• Remove the propeller shaft. • Remove the 4WD fuse from fuse box during the test. **NOTICE:** **After the test, reinstall the fuse, and then delete DTC C1298.**
 T	4 -Wheel Free Chassis Dynamometer	**CAUTION:** **Do not use a 4 wheel chassis dynamometer.**

Vehicle Condition	Chassis dynamometer Type	Note
 T	4-Wheel Driven Chassis Dynamometer	-

When performing high speed, high load measurements on a chassis dynamometer, observe the following instructions and then measure with the front wheels.

(1) If the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, prohibit the system from activating.
(2) Ensure that the vehicle is securely fixed in place.
HINT:
- Sudden shifting, braking, acceleration or deceleration is not allowed.
- Make sure to activate the Vehicle Stability Control (VSC) & Traction Control (TRAC) system after the test. Check that the VSC warning indicator light goes off when restarting the engine.

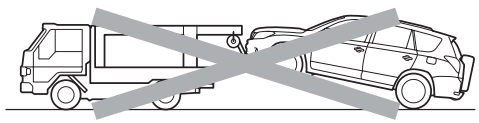


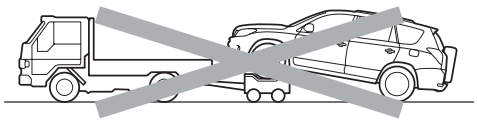


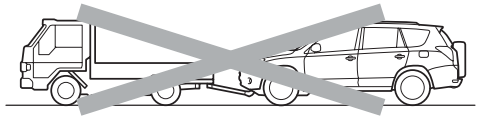
(g) On-Vehicle Wheel Balancing:
When performing on-vehicle wheel balancing on an active torque control 4WD vehicle, to prevent each wheel from being rotated at a different speed and in different directions, always be sure to observe the following precautions.

(1) All 4 wheels should be jacked up and lifted off of the ground completely.
(2) Press the 4WD LOCK-MODE SWITCH to turn it OFF and disable the 4WD system.
CAUTION:
Propeller shaft should be removed.
(3) If the vehicle is equipped with a Vehicle Stability Control (VSC) system, prohibit the system from activating (see previous step).
(4) The parking brake lever should be fully released.
(5) None of the brakes should be applied.
(6) The wheels should be driven on the wheel balancer with the engine running.
(7) Carry out the wheel balancing with the transmission in the D position.
HINT:
- When performing the wheel balancing, pay attention to the other wheels rotating at the same time.
- Sudden acceleration, deceleration or braking is not allowed.

- Do not forget to change the Vehicle Stability Control (VSC) system to an operational condition after the test. Check that the VSC warning indicator light goes off when restarting the engine.







10. WHEN TOWING ACTIVE TORQUE CONTROL 4WD VEHICLES

- Use one of the methods shown below to tow the vehicle.
- If the vehicle has trouble in the chassis and drivetrain, use method 1 (flat bed truck).

Towing Method	Parking Brake Condition
1. Flat Type Truck 	Applied
2. Wheel Lift Type Truck From Front  T	Applied

NOTICE:
Do not use any towing method other than those shown above.

- For example, the towing methods shown below are dangerous or damage the vehicle, so do not use them.

 T	• Never tow the vehicle using a method where the lifted-up wheel cannot rotate. • If this towing method is used, either from the front or rear: (a) There is a danger of the drivetrain heating up and causing a breakdown, or of the wheels flying off the dolly. (b) In addition, if the vehicle is equipped with the Vehicle Stability Control (VSC) & Traction Control (TRAC) system, the system will apply the rotating wheel brake only when the engine is running.
 T	**CAUTION:** **Do not use the sling type method, either from the front or rear, as this method causes damage to the body.**
 T	**CAUTION:** **Do not tow the vehicle with all of its wheels contacting the ground, as this causes damage to the transaxle.**

11. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

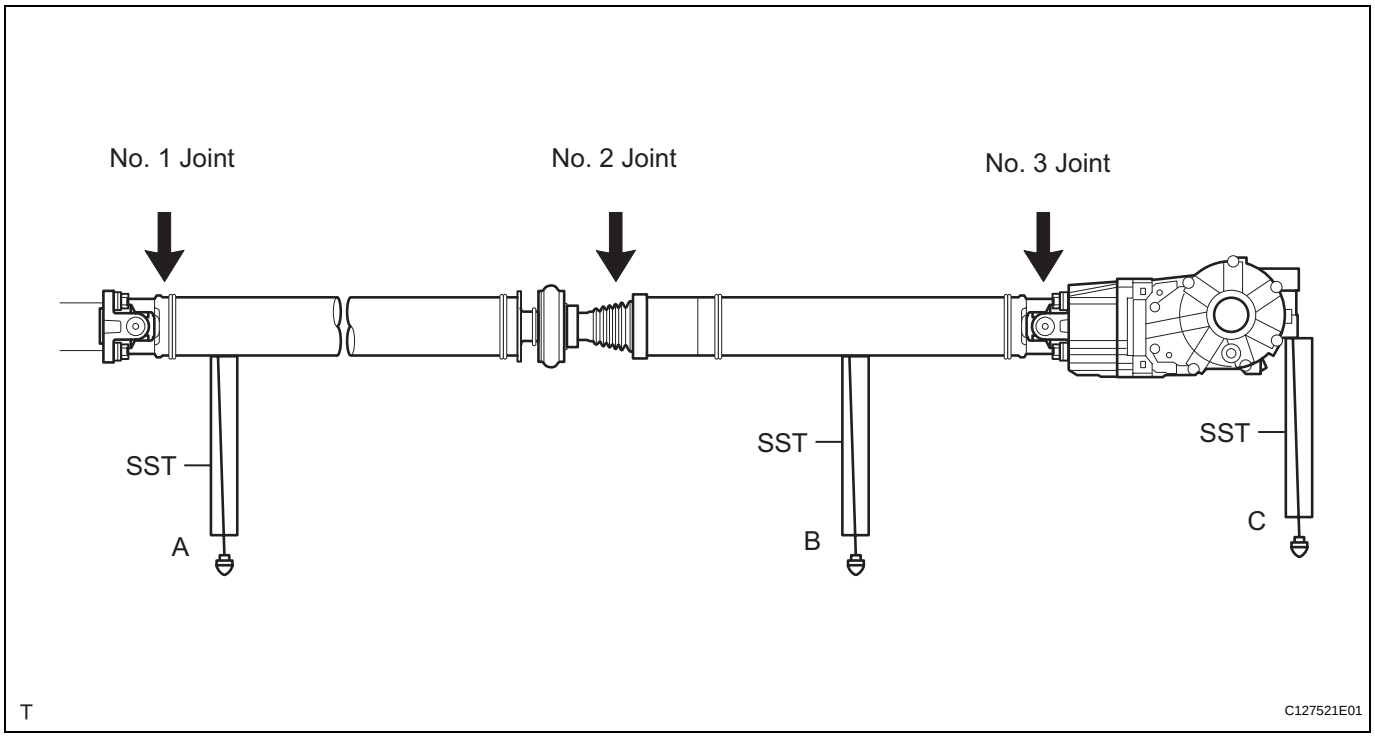
If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause overheating and create a fire hazard. To prevent this, observe the following precautions.

(a) Use only unleaded gasoline.

(b) Avoid idling the engine for more than 20 minutes.

(c) Avoid performing unnecessary spark jump tests.

(1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.



(2) While testing, never race the engine.

(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

12. INSPECTION AND ADJUSTMENT OF JOINT ANGLE DURING REMOVAL AND INSTALLATION OF PROPELLER SHAFT (4WD)

(a) When performing operations which involve the removal and installation of the propeller shaft, always check the joint angle. Make adjustments if necessary (see page PR-4).

IN

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
3GR	Third Gear	-
4GR	Fourth Gear	-
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI/INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO2S)
IAC	Idle Air Control	Idle Speed Control (ISC)

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Lamp	Check Engine Lamp
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O2 Sensor (O2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalyst Converter (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CCRO
TWC+OC	Three-Way + Oxidation Catalytic Converter	CCR + CCo
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-

TERMS

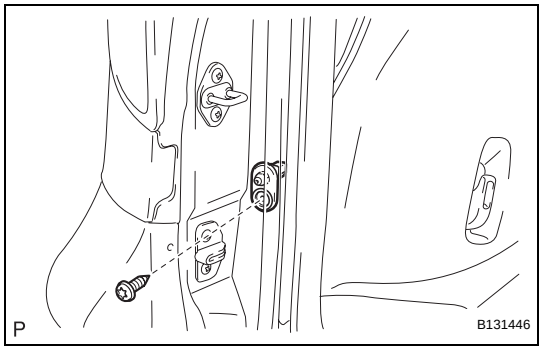
ABBREVIATIONS USED IN MANUAL

ABBREVIATIONS	MEANING
1st	First
2nd	Second
2WD	Two Wheel Drive Vehicle (4 x 2)
3rd	Third
4th	Fourth
4WD	Four Wheel Drive Vehicle (4 x 4)
4WS	Four Wheel Steering System
5th	Fifth
A.D.D.	Automatic Disconnecting Differential
A/C	Air Conditioner
A/F	Air-Fuel Ratio
A/T, ATM	Automatic Transmission (Transaxle)
ABS	Anti-Lock Brake System
AC	Alternating Current
ACC	Accessory
ACIS	Acoustic Control Induction System
ACM	Active Control Engine Mount
ACSD	Automatic Cold Start Device
AFS	Adaptive Front-Lighting System
AHC	Active Height Control Suspension
AID	Air Injection Control Driver
ALR	Automatic Locking Retractor
ALT	Alternator
AMP	Amplifier
ANT	Antenna
APPROX.	Approximately
ASSB	Assembly Services Sdn. Bhd.
ASSY	Assembly
ATF	Automatic Transmission Fluid
AUTO	Automatic
AUX	Auxiliary
AVG	Average
AVS	Adaptive Variable Suspension
B/L	Bi-Level
B/S	Bore-Stroke Ratio
B+	Battery Voltage
BA	Brake Assist
BACS	Boost Altitude Compensation System
BAT	Battery
BDC	Bottom Dead Center
BTDC	Before Top Dead Center
BVSV	Bimetallic Vacuum Switching Valve
C/V	Check Valve
Calif.	California
CAN	Controller Area Network
CB	Circuit Breaker

ABBREVIATIONS	MEANING
CCo	Catalytic Converter For Oxidation
CCV	Canister Closed Valve
CD	Compact Disc
CF	Cornering Force
CG	Center Of Gravity
CH	Channel
CKD	Complete Knock Down
COMB.	Combination
CPE	Coupe
CPS	Combustion Pressure Sensor
CPU	Central Processing Unit
CRS	Child Restraint System
CTR	Center
CV	Control Valve
CW	Curb Weight
D/INJ	Direct Injection
DC	Direct Current
DEF	Defogger
DFL	Deflector
DIFF.	Differential
DIFF. LOCK	Differential Lock
DLC	Data Link Connector
DLI	Distributorless Ignition
DOHC	Double Overhead Camshaft
DP	Dash Pot
DS	Dead Soak
DSP	Digital Signal Processor
DTC	Diagnostic Trouble Code
DVD	Digital Versatile Disc
E/G	Engine
EBD	Electronic Brake Force Distribution
EC	Electrochromic
ECAM	Engine Control And Measurement System
ECD	Electronically Controlled Diesel
ECDY	Eddy Current Dynamometer
ECT	Electronic Controlled Automatic Transmission/Transaxle
ECU	Electronic Control Unit
ED	Electro-Deposited Coating
EDIC	Electronic Diesel Injection Control
EDU	Electronic Driving Unit
EFI	Electronic Fuel Injection
EGR	Exhaust Gas Recirculation
EGR-VM	EGR-Vacuum Modulator
ELR	Emergency Locking Retractor
EMPS	Electric Motor Power Steering
ENG	Engine
ES	Easy & Smooth
ESA	Electronic Spark Advance
ETCS-i	Electronic Throttle Control System-intelligent

ABBREVIATIONS	MEANING
EVAP	Evaporative Emission Control
EVP	Evaporator
E-VRV	Electric Vacuum Regulating Valve
EX	Exhaust
F/G	Fuel Gauge
F/P	Fuel Pump
F/W	Flywheel
FE	Fuel Economy
FF	Front-Engine Front-Wheel-Drive
FIPG	Formed In Place Gasket
FL	Fusible Link
FPU	Fuel Pressure Up
FR / Fr	Front
FW/D	Flywheel Damper
FWD	Front-Wheel-Drive
GAS	Gasoline
GND	Ground
GPS	Global Positioning System
GSA	Gear Shift Actuator
H/B	Hatchback
H-FUSE	High Current Fuse
HI	High
HID	High Intensity Discharge (Headlight)
HPU	Hydraulic Power Unit
HSG	Housing
HT	Hard Top
HV	Hybrid Vehicle
HWS	Heated Windshield System
I/P	Instrument Panel
IC	Integrated Circuit
IDI	Indirect Diesel Injection
IFS	Independent Front Suspension
IG	Ignition
IIA	Integrated Ignition Assembly
IN	Intake (Manifold, Valve)
INT	Intermittent
IRS	Independent Rear Suspension
ISC	Idle Speed Control
J/B	Junction Block
J/C	Junction Connector
KD	Kick-Down
L/H/W	Length, Height, Width
LAN	Local Area Network
LB	Liftback
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	Left-Hand
LHD	Left-Hand Drive
LIN	Local Interconnect Network

ABBREVIATIONS	MEANING
LLC	Long-Life Coolant
LNG	Liquefied Natural Gas
LO	Low
LPG	Liquefied Petroleum Gas
LSD	Limited Slip Differential
LSP & BV	Load Sensing Proportioning and Bypass Valve
LSPV	Load Sensing Proportioning Valve
M/T, MTM	Manual Transmission (Transaxle)
MAP	Manifold Absolute Pressure
MAX.	Maximum
MG1	Motor Generator No. 1
MG2	Motor Generator No. 2
MIC	Microphone
MIL	Malfunction Indicator Lamp
MIN.	Minimum
MMT	Multi-mode Manual Transmission
MP	Multipurpose
MPI	Multipoint Electronic Injection
MPX	Multiplex Communication System
MT	Mount
MTG	Mounting
N	Neutral
NA	Natural Aspiration
NO. / No.	Number
O/D	Overdrive
O/S	Oversize
O2S	Oxygen Sensor
OC	Oxidation Catalyst
OCV	Oil Control Valve
OEM	Original Equipment Manufacturing
OHC	Overhead Camshaft
OHV	Overhead Valve
OPT	Option
ORVR	On-board Refueling Vapor Recovery
P & BV	Proportioning And Bypass Valve
P/W	Power Window
PBD	Power Back Door
PCS	Power Control System
PCV	Positive Crankcase Ventilation
PKB	Parking Brake
PPS	Progressive Power Steering
PROM	Programmable Read Only Memory
PS	Power Steering
PSD	Power Slide Door
PTC	Positive Temperature Coefficient
PTO	Power Take-Off
PZEV	Partial Zero Emission Vehicle
R & P	Rack and Pinion
R/B	Relay Block



ABBREVIATIONS	MEANING
R/F	Reinforcement
RAM	Random Access Memory
RBS	Recirculating Ball Type Steering
RFS	Rigid Front Suspension
RH	Right-Hand
RHD	Right-Hand Drive
RLY	Relay
ROM	Read Only Memory
RR / Rr	Rear
RRS	Rigid Rear Suspension
RSE	Rear Seat Entertainment
RWD	Rear-Wheel Drive
SC	Supercharger
SCV	Swirl Control Valve
SDN	Sedan
SEN	Sensor
SICS	Starting Injection Control System
SOC	State Of Charge
SOHC	Single Overhead Camshaft
SPEC	Specification
SPI	Single Point Injection
SRS	Supplemental Restraint System
SSM	Special Service Materials
SST	Special Service Tools
STD	Standard
STJ	Cold-Start Fuel Injection
SW	Switch
SYS	System
T/A	Transaxle
T/M	Transmission
TACH	Tachometer
TAM	P.T. TOYOTA-Astra Motor
TASA	TOYOTA Argentina S.A.
TAT	TOYOTA Motor Thailand Co. Ltd.
TAW	TOYOTA Auto Works Co. Ltd.
TBI	Throttle Body Electronic Fuel Injection
TC	Turbocharger
TCCS	TOYOTA Computer-Controlled System
TCV	Timing Control Valve
TDC	Top Dead Center
TDV	TOYOTA de Venezuela C.A.
TEMP.	Temperature
TEMS	TOYOTA Electronic Modulated Suspension
TFT	TOYOTA Free-Tronic
TIS	Total Information System For Vehicle Development
TKM	TOYOTA Kirloskar Motor Ltd.
TMC	TOYOTA Motor Corporation
TMMIN	P.T. TOYOTA Motor Manufacturing Indonesia
TMMK	TOYOTA Motor Manufacturing Kentucky, Inc.

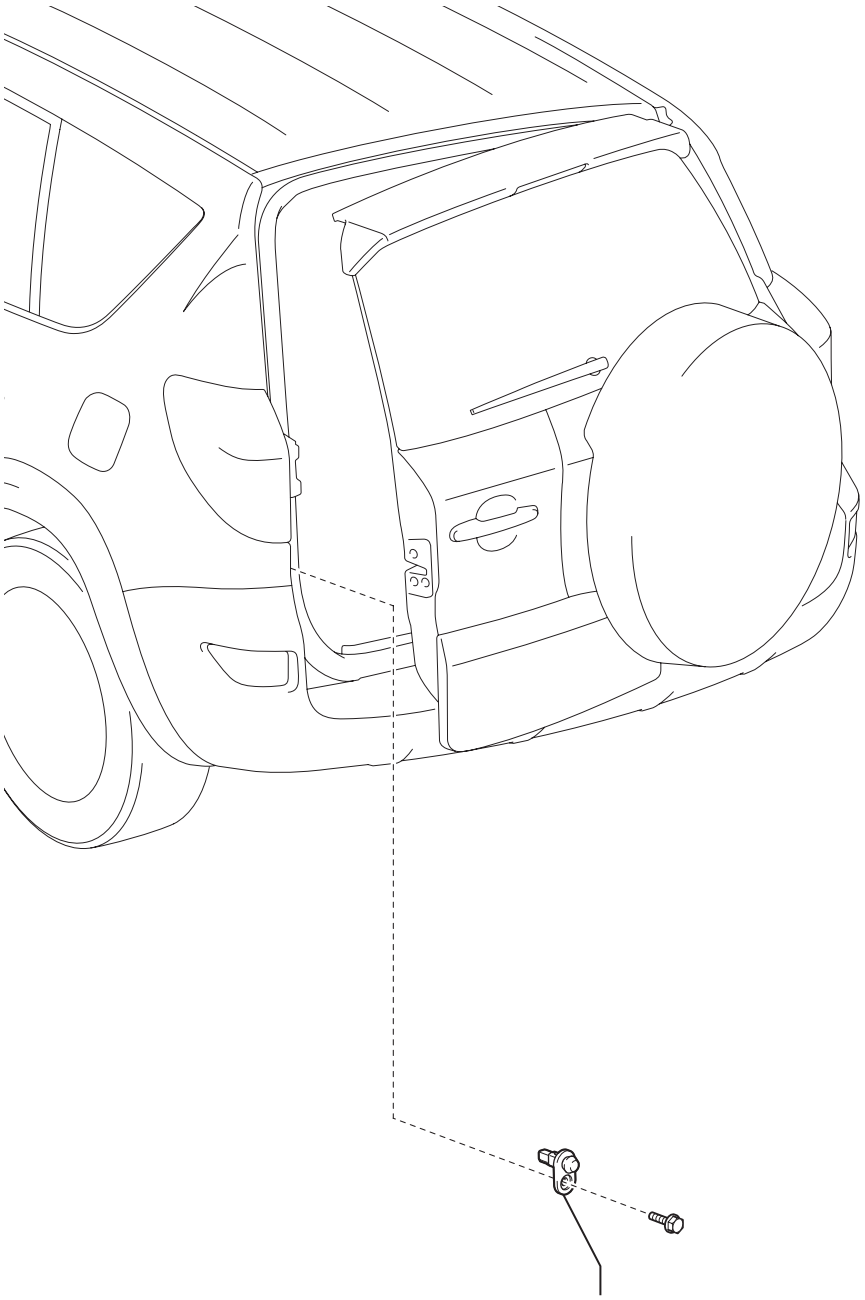
ABBREVIATIONS	MEANING
TMP	TOYOTA Motor Philippines Corp.
TMT	TOYOTA Motor Thailand Co. Ltd.
TRAC	Traction Control System
TRC	Traction Control System
TSAM	TOYOTA South Africa Motors (Pty) Ltd.
TURBO	Turbocharge
TWC	Three-Way Catalyst
U/D	Underdrive
U/S	Undersize
VCV	Vacuum Control Valve
VDIM	Vehicle Dynamics Integrated Management
VENT	Ventilator
VGRS	Variable Gear Ratio Steering
VIM	Vehicle Interface Module
VIN	Vehicle Identification Number
VPS	Variable Power Steering
VSC	Vehicle Stability Control
VSV	Vacuum Switching Valve
VTV	Vacuum Transmitting Valve
VVT-i	Variable Valve Timing-intelligent
W/ / w/	With
W/H	Wire Harness
W/O / w/o	Without
WGN	Wagon

INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.
- A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL BACK DOOR COURTESY LIGHT SWITCH ASSEMBLY



(a) Connect the connector.

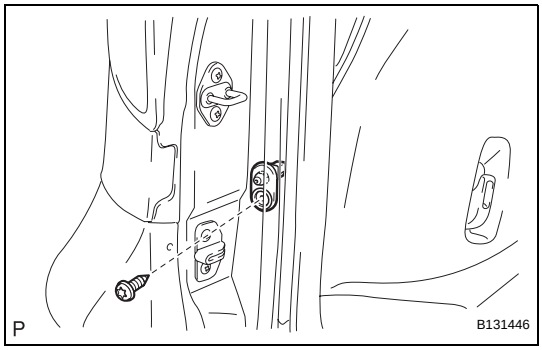
(b) Install the switch with the bolt.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

BACK DOOR COURTESY SWITCH

COMPONENTS

P



B136296E02

REMOVAL

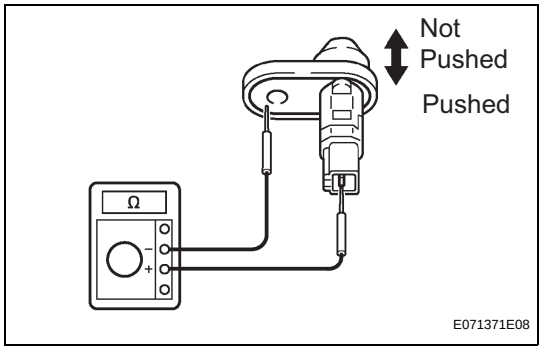
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE BACK DOOR COURTESY LIGHT SWITCH ASSEMBLY

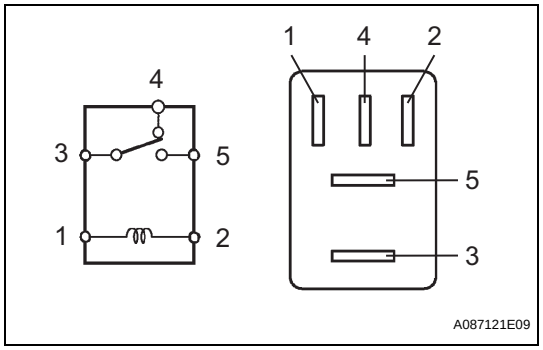
(a) Remove the bolt and switch.



(b) Disconnect the connector.

INSPECTION

1. INSPECT BACK DOOR COURTESY LIGHT SWITCH ASSEMBLY



(a) Measure the resistance of the switch.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	Pushed	10 kΩ or higher
1 - Switch body	Not pushed	Below 1 Ω

If the result is not as specified, replace the switch assembly.

BRK RELAY

ON-VEHICLE INSPECTION

1. INSPECT BRK RELAY

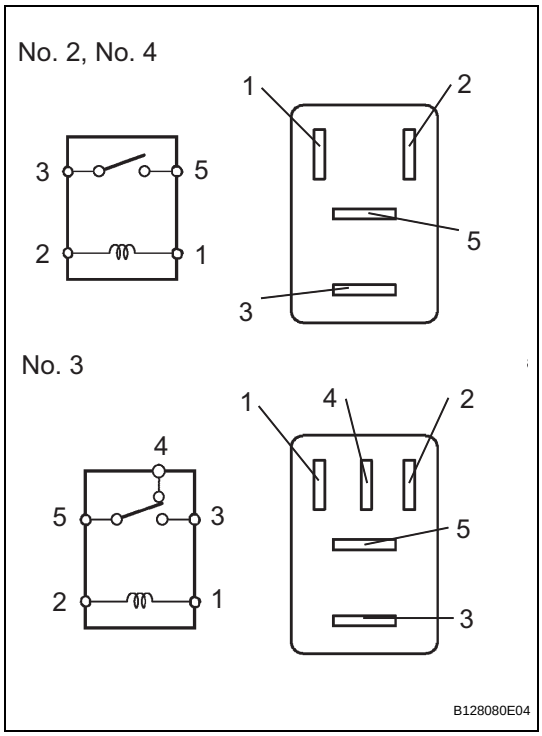
(a) Remove the BRK relay from the engine room No. 1 relay block.

(b) Measure the resistance of the relay.

Standard resistance

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the relay.



DAYTIME RUNNING LIGHT RELAY

ON-VEHICLE INSPECTION

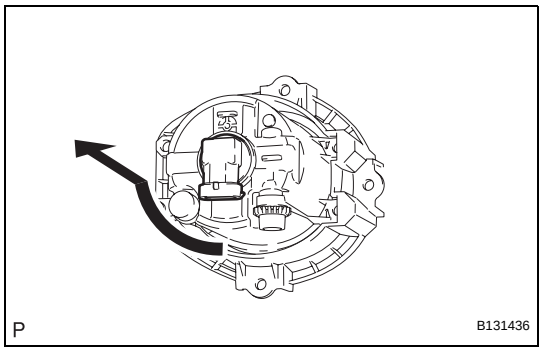
1. INSPECT DAY TIME RUNNING LIGHT RELAY

(a) Remove the No. 2 relay, No. 3 relay and No. 4 relay from the engine room No. 2 relay block.

(b) Measure the resistance of the relays.
Standard resistance:
No. 2, No. 4

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

No. 3



Tester Connection	Specified Condition
4 - 5	Below 1 Ω
4 - 5	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)
3 - 5	Below 1 Ω
3 - 5	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

DISASSEMBLY

HINT:

- Use the same procedures for the RH side and LH sides.
- The procedures listed below are for the LH side.

1. REMOVE FOG LIGHT BULB

(a) Turn the bulb in the direction indicated by the arrow and pull to remove it.

ADJUSTMENT

1. VEHICLE PREPARATION FOR FOG LIGHT AIM ADJUSTMENT

(a) Prepare the vehicle:
- Ensure that the vehicle has no damage or deformation around the fog lights.
- Fill up the fuel tank.
- Make sure that all of the different types of oil in the vehicle (engine oil, etc.) are filled to the specified levels.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Place the spare tire, tools, and jack in their original positions.
- Unload the vehicle.
- Have a person that weighs approximately 55 kg (121 lb) sit in the driver seat.

2. PREPARATION FOR FOG LIGHT AIMING (Using Screen)

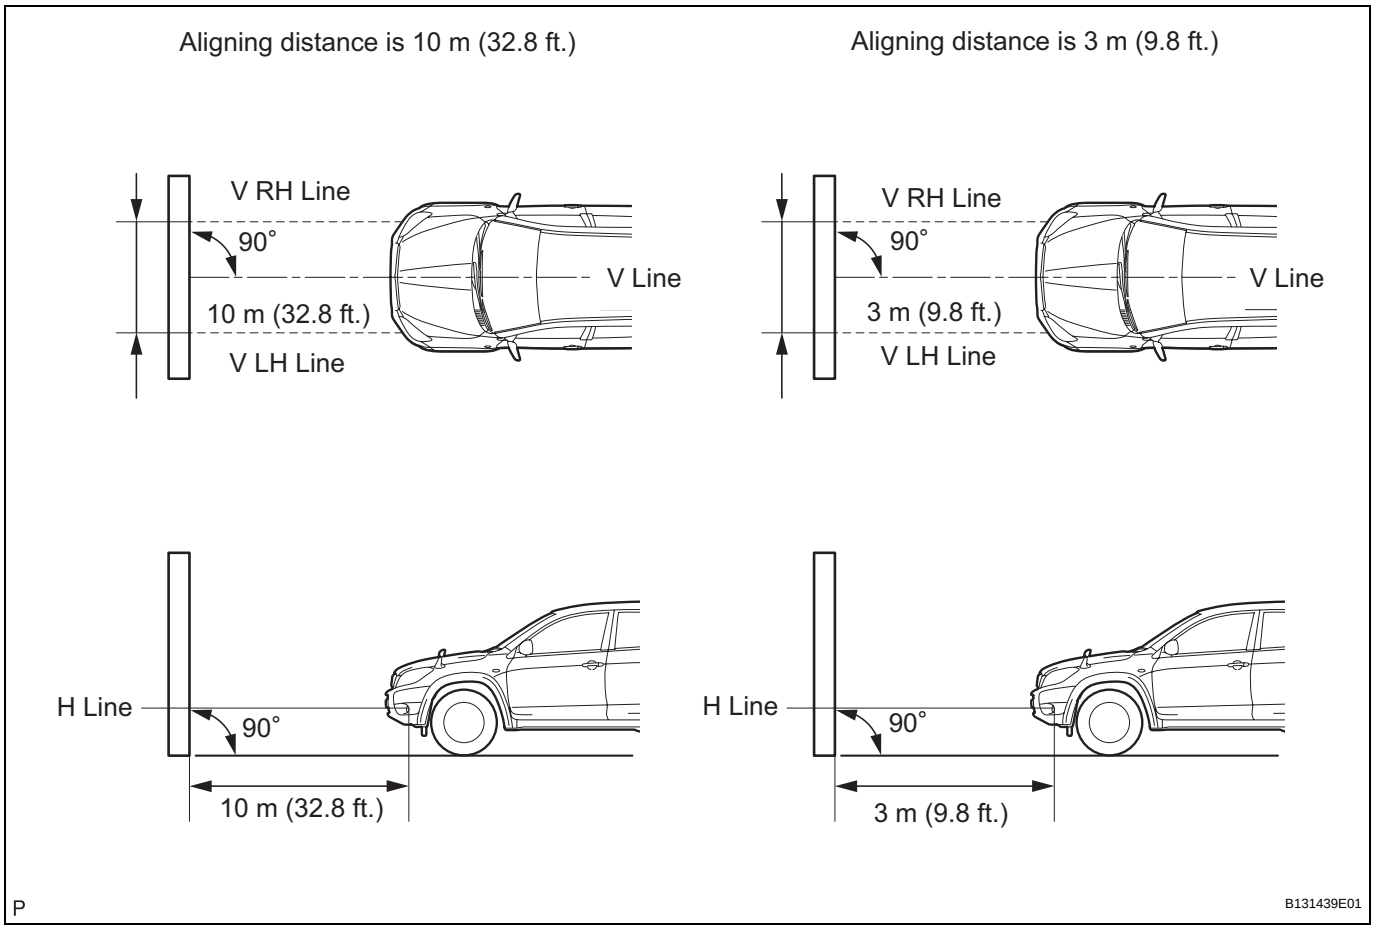
(a) Prepare the vehicle according to the following conditions:
- Move the vehicle to a location that is sufficiently dark so that the fog light cutoff line can be visually checked. The cutoff line is an imaginary plane below which fog light light is projected and above which light is not projected.
- Move the vehicle to a level surface.
- Point the front of the vehicle at a wall. The wall must be perpendicular to the surface that the vehicle is on.
- Position the vehicle 10 m (32.8 ft.) from the wall.
- Push down on the vehicle several times to settle the suspension.

  HINT:

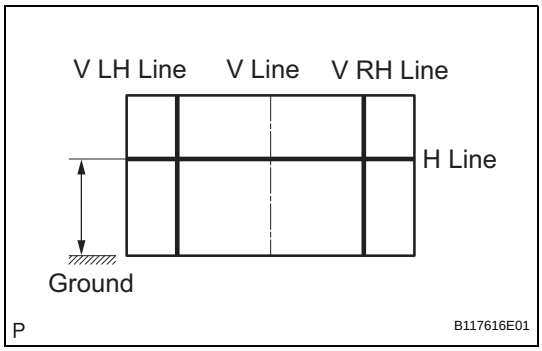
  A distance of 10 m (32.8 ft.) between the vehicle and the wall is necessary for proper aim adjustment. If unavailable, secure a distance of exactly 3 m (9.8 ft.). In the illustrations below, view the part of the illustration applicable to the distance from the vehicle to the wall.

  NOTICE:

  Be careful not to damage the suspension.



(b) Prepare a piece of thick white paper that is approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width) to use as a screen.



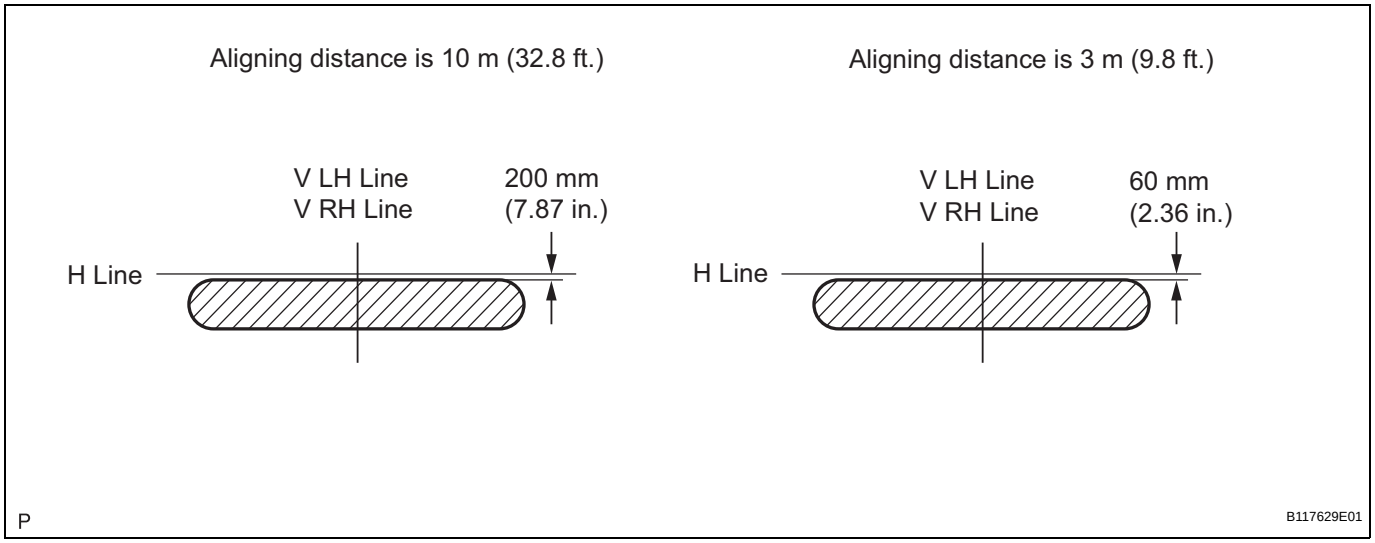
(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.

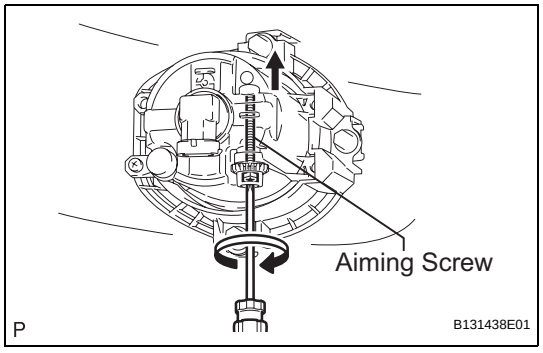
HINT:
- Stand the screen perpendicular to the ground.

- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H line, V LH and V RH lines) on the screen as shown in the illustration.
   (1) H Line (fog light height):
   Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the bulb center marks of the fog lights.
   (2) V LH Line, V RH Line (center mark position of LH and RH fog lights):
   Draw 2 vertical lines so that they intersect the H line at each center mark.



3. INSPECT FOG LIGHT AIMING



(a) Choose a fog light to inspect first. Cover or disconnect the connector of the other fog light to prevent light from that fog light from affecting the fog light aiming inspection.

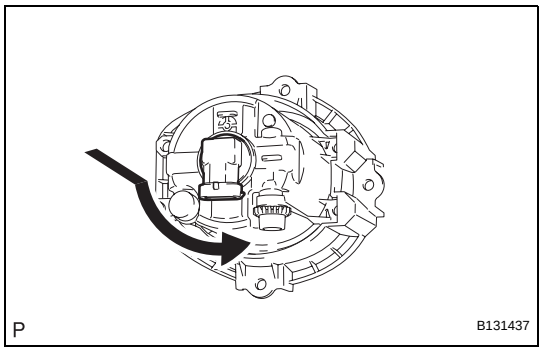
(b) Start the engine.
NOTICE:
Engine rpm must be 1,500 or more.

LI

(c) Turn on the fog lights and make sure that the cutoff line is within the specified area shown in the illustration.

4. ADJUST FOG LIGHT AIMING

(a) Adjust the fog light aim into the specified range by turning the aiming screw with a screwdriver.



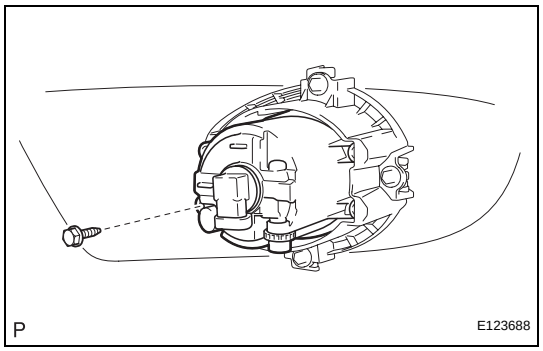
NOTICE:

If the screw is tightened too much, loosen it and then retighten it so that the final turn of the screw is in the clockwise direction.

REASSEMBLY

HINT:

- Use the same procedures for the RH side and LH sides.
- The procedures listed below are for the LH side.

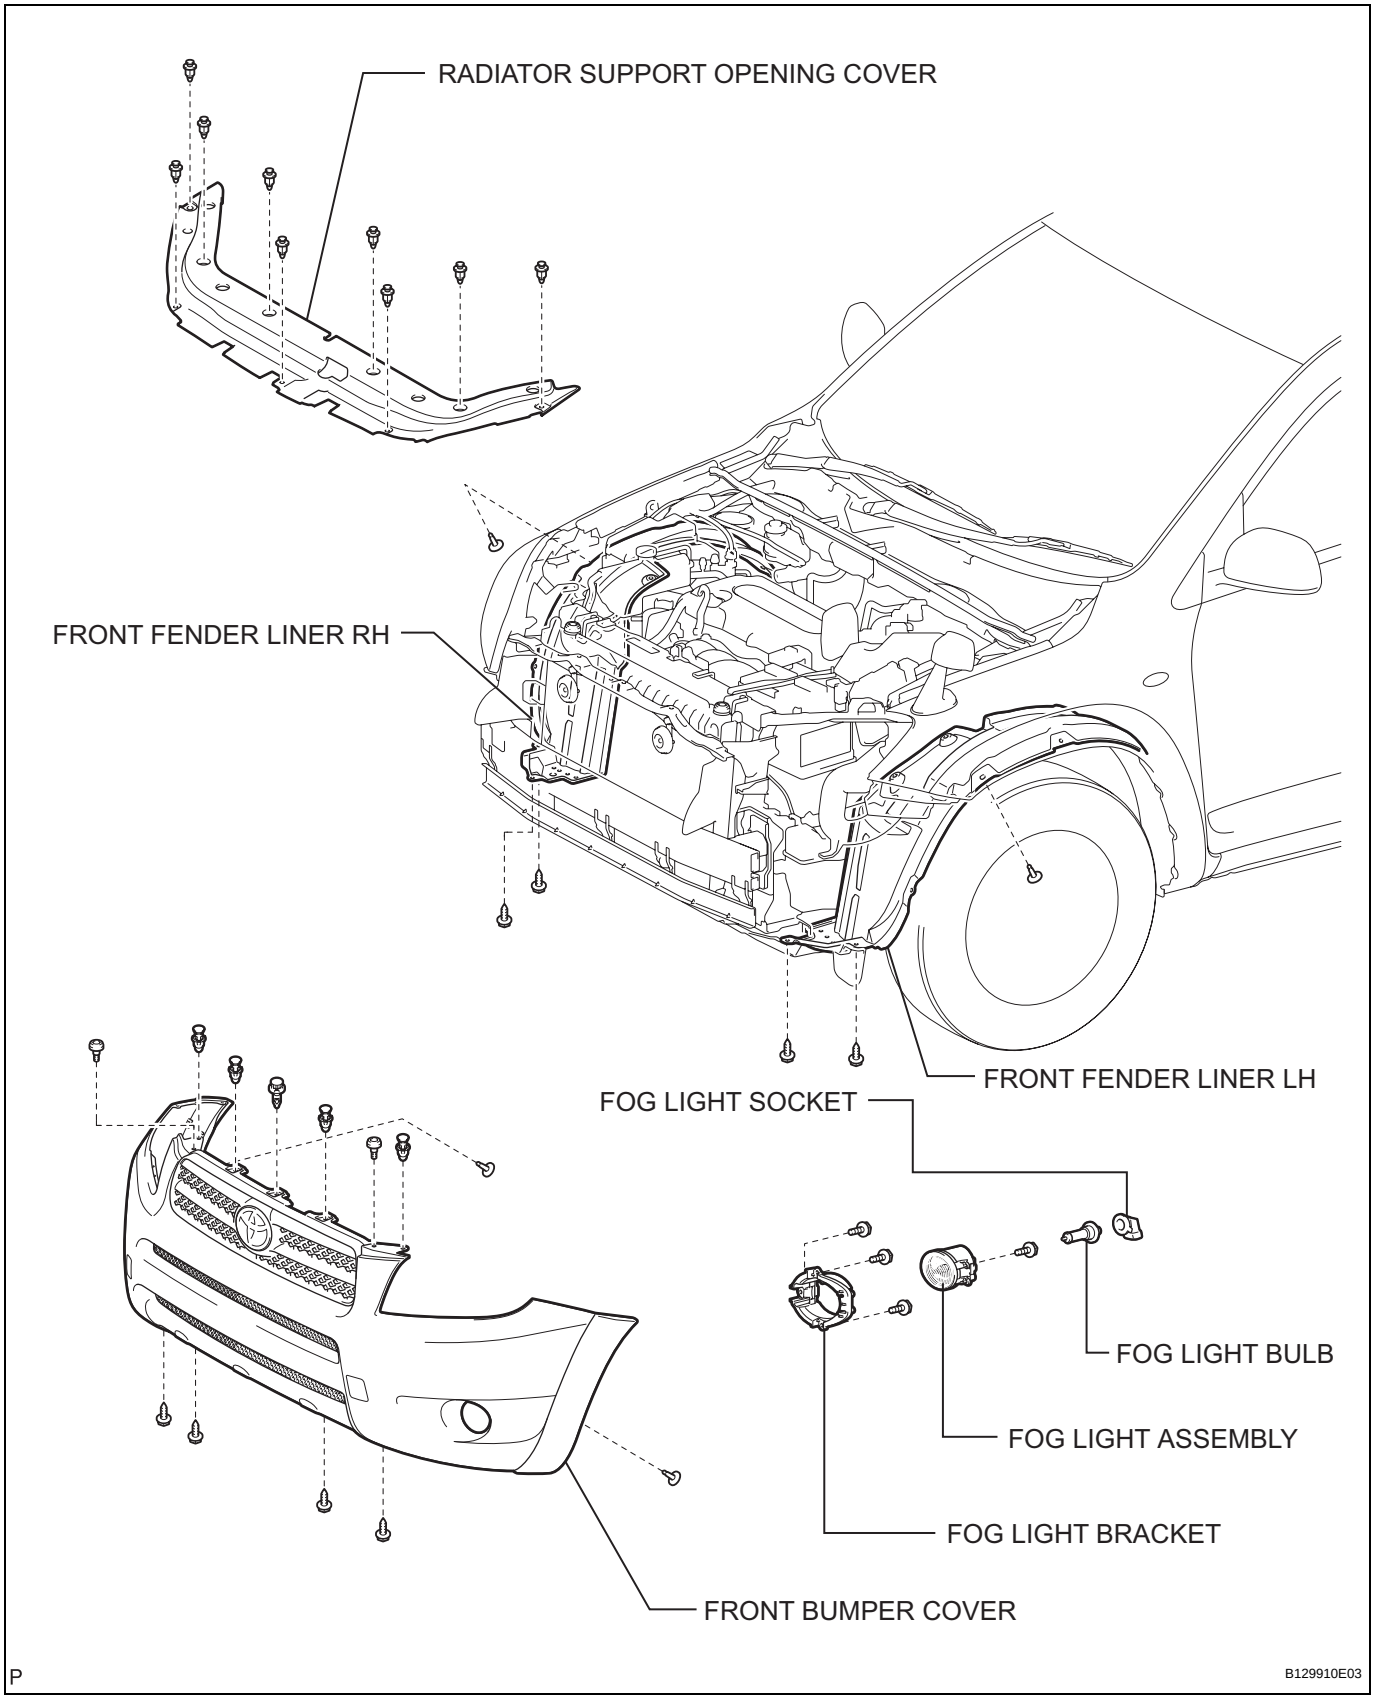


1. INSTALL FOG LIGHT BULB

(a) Turn the bulb in the direction indicated by the arrow to install it.

INSTALLATION

HINT:

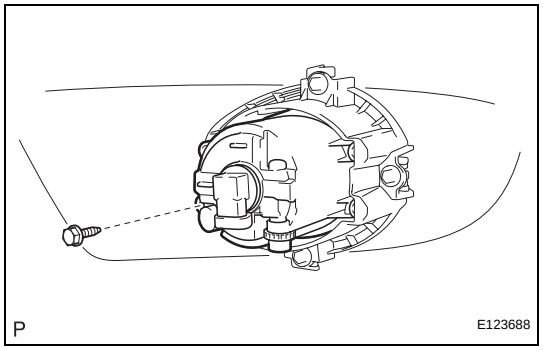


- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

1. **INSTALL FOG LIGHT ASSEMBLY**
   (a) Install the fog light with the bolt.
   (b) Connect the connector.
2. **INSTALL FRONT BUMPER COVER (See page ET-11)**
3. **INSTALL RADIATOR SUPPORT OPENING COVER (See page ET-12)**
4. **INSTALL FRONT FENDER LINER RH (See page ET-12)**
5. **INSTALL FRONT FENDER LINER LH (See page ET-12)**
6. **INSTALL CABLE TO NEGATIVE BATTERY TERMINAL**

FOG LIGHT ASSEMBLY

COMPONENTS

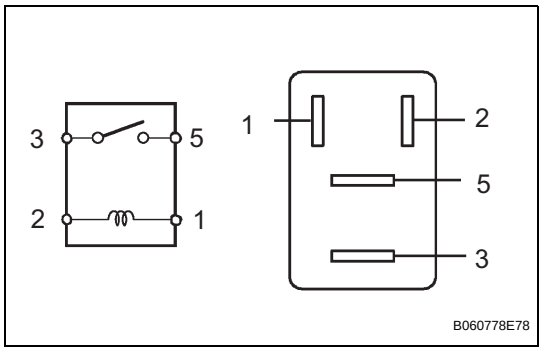


REMOVAL

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

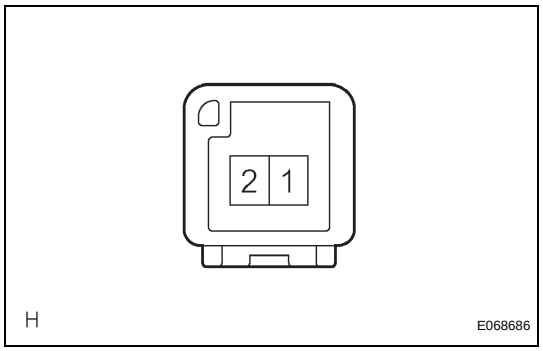
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT FENDER LINER LH (See page ET-6)**
3. **REMOVE FRONT FENDER LINER RH (See page ET-4)**
4. **REMOVE RADIATOR SUPPORT OPENING COVER (See page ET-4)**
5. **REMOVE FRONT BUMPER COVER (See page ET-5)**
6. **REMOVE FOG LIGHT ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the bolt and fog light.



FOG LIGHT RELAY

ON-VEHICLE INSPECTION

1. INSPECT FRONT FOG LIGHT RELAY



(a) Remove the front fog relay from the No. 6 relay block.

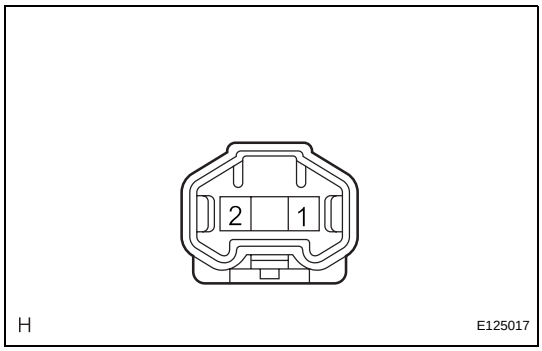
(b) Measure the resistance of the relay.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If the result is not as specified, replace the relay.

FOOTWELL LIGHT

ON-VEHICLE INSPECTION



1. INSPECT FOOTWELL LIGHT

(a) Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1, then check that the light comes on.

OK:

Light comes on.

If the result is not as specified, replace the light.

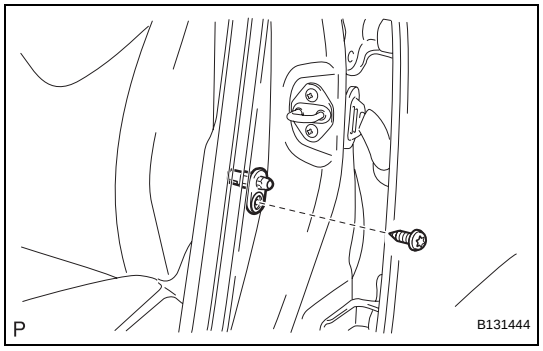
FRONT CONSOLE ILLUMINATION

ON-VEHICLE INSPECTION

1. INSPECT FRONT CONSOLE ILLUMINATION

(a) Connect the battery's positive (+) lead to terminal 1 and the negative (-) lead to terminal 2, then check that the light comes on.

OK:



Light comes on.

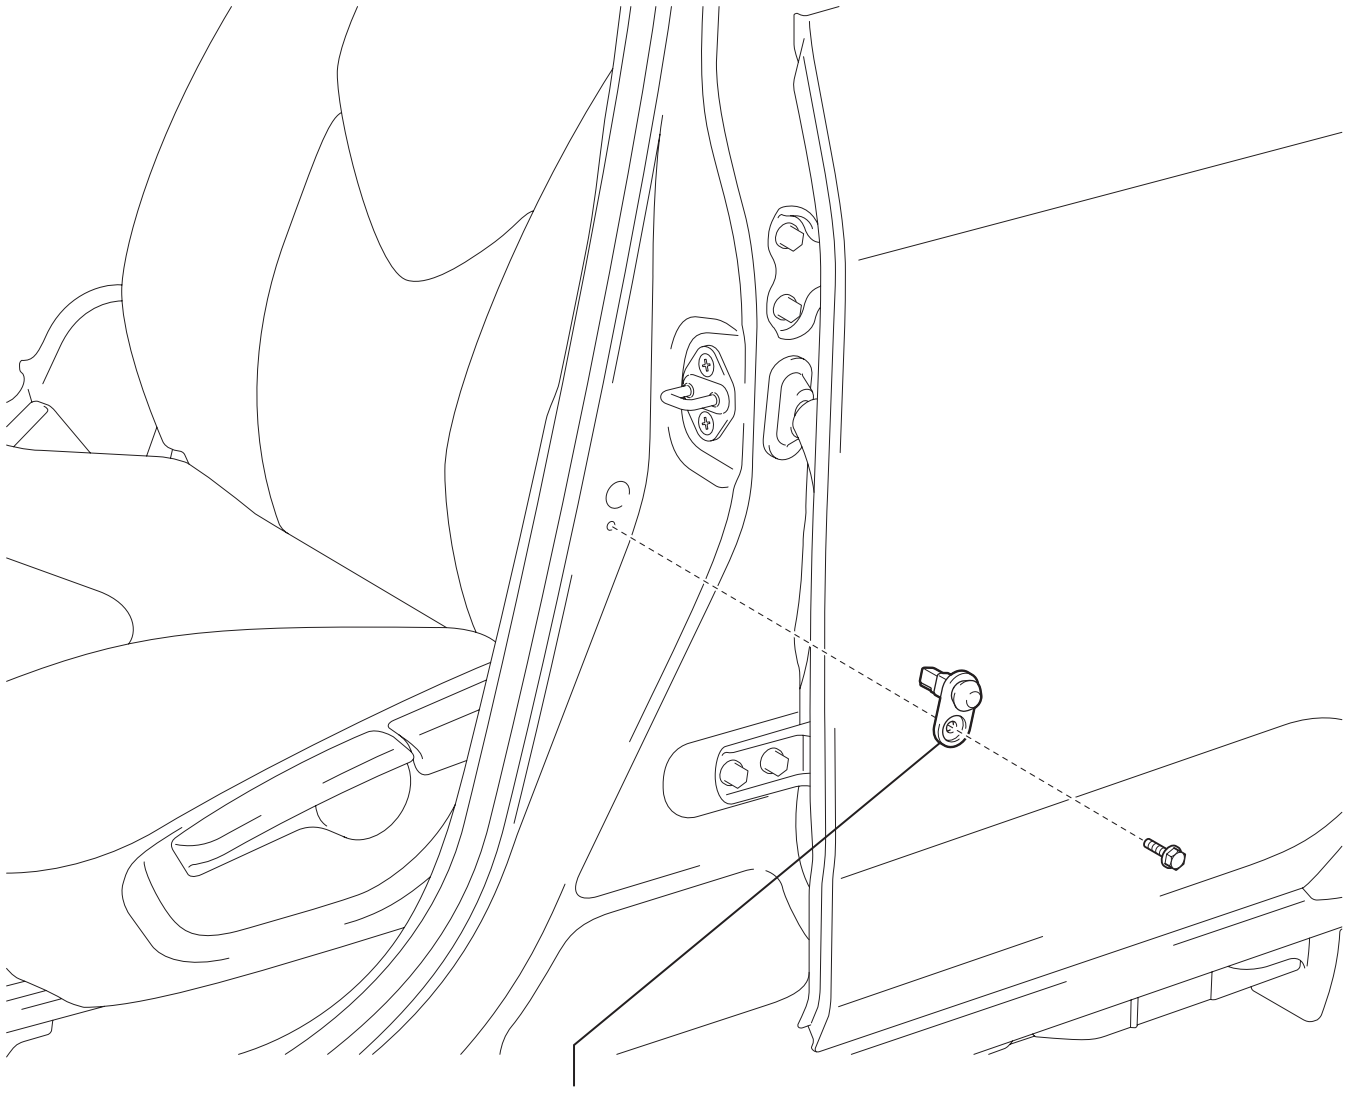
If the result is not as specified, replace the front console illumination.

INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.
- A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY



(a) Connect the connector.

(b) Install the switch with the bolt.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

FRONT DOOR COURTESY SWITCH

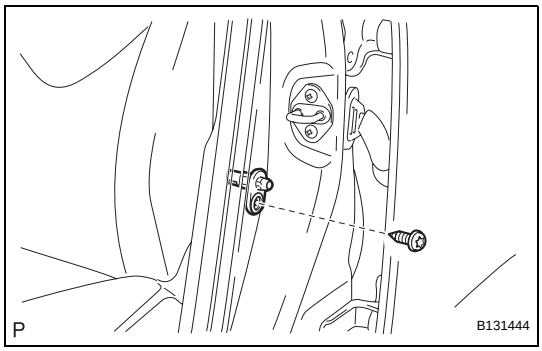
COMPONENTS

FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

P

B129917E02

REMOVAL



HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

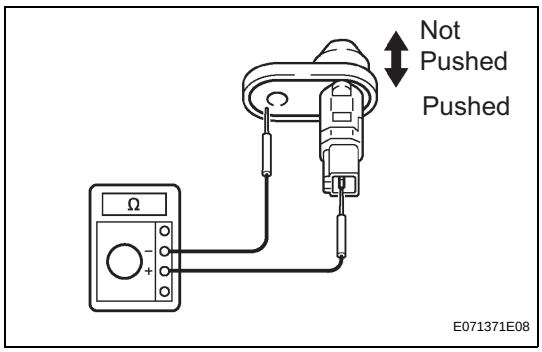
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

(a) Remove the bolt and switch.



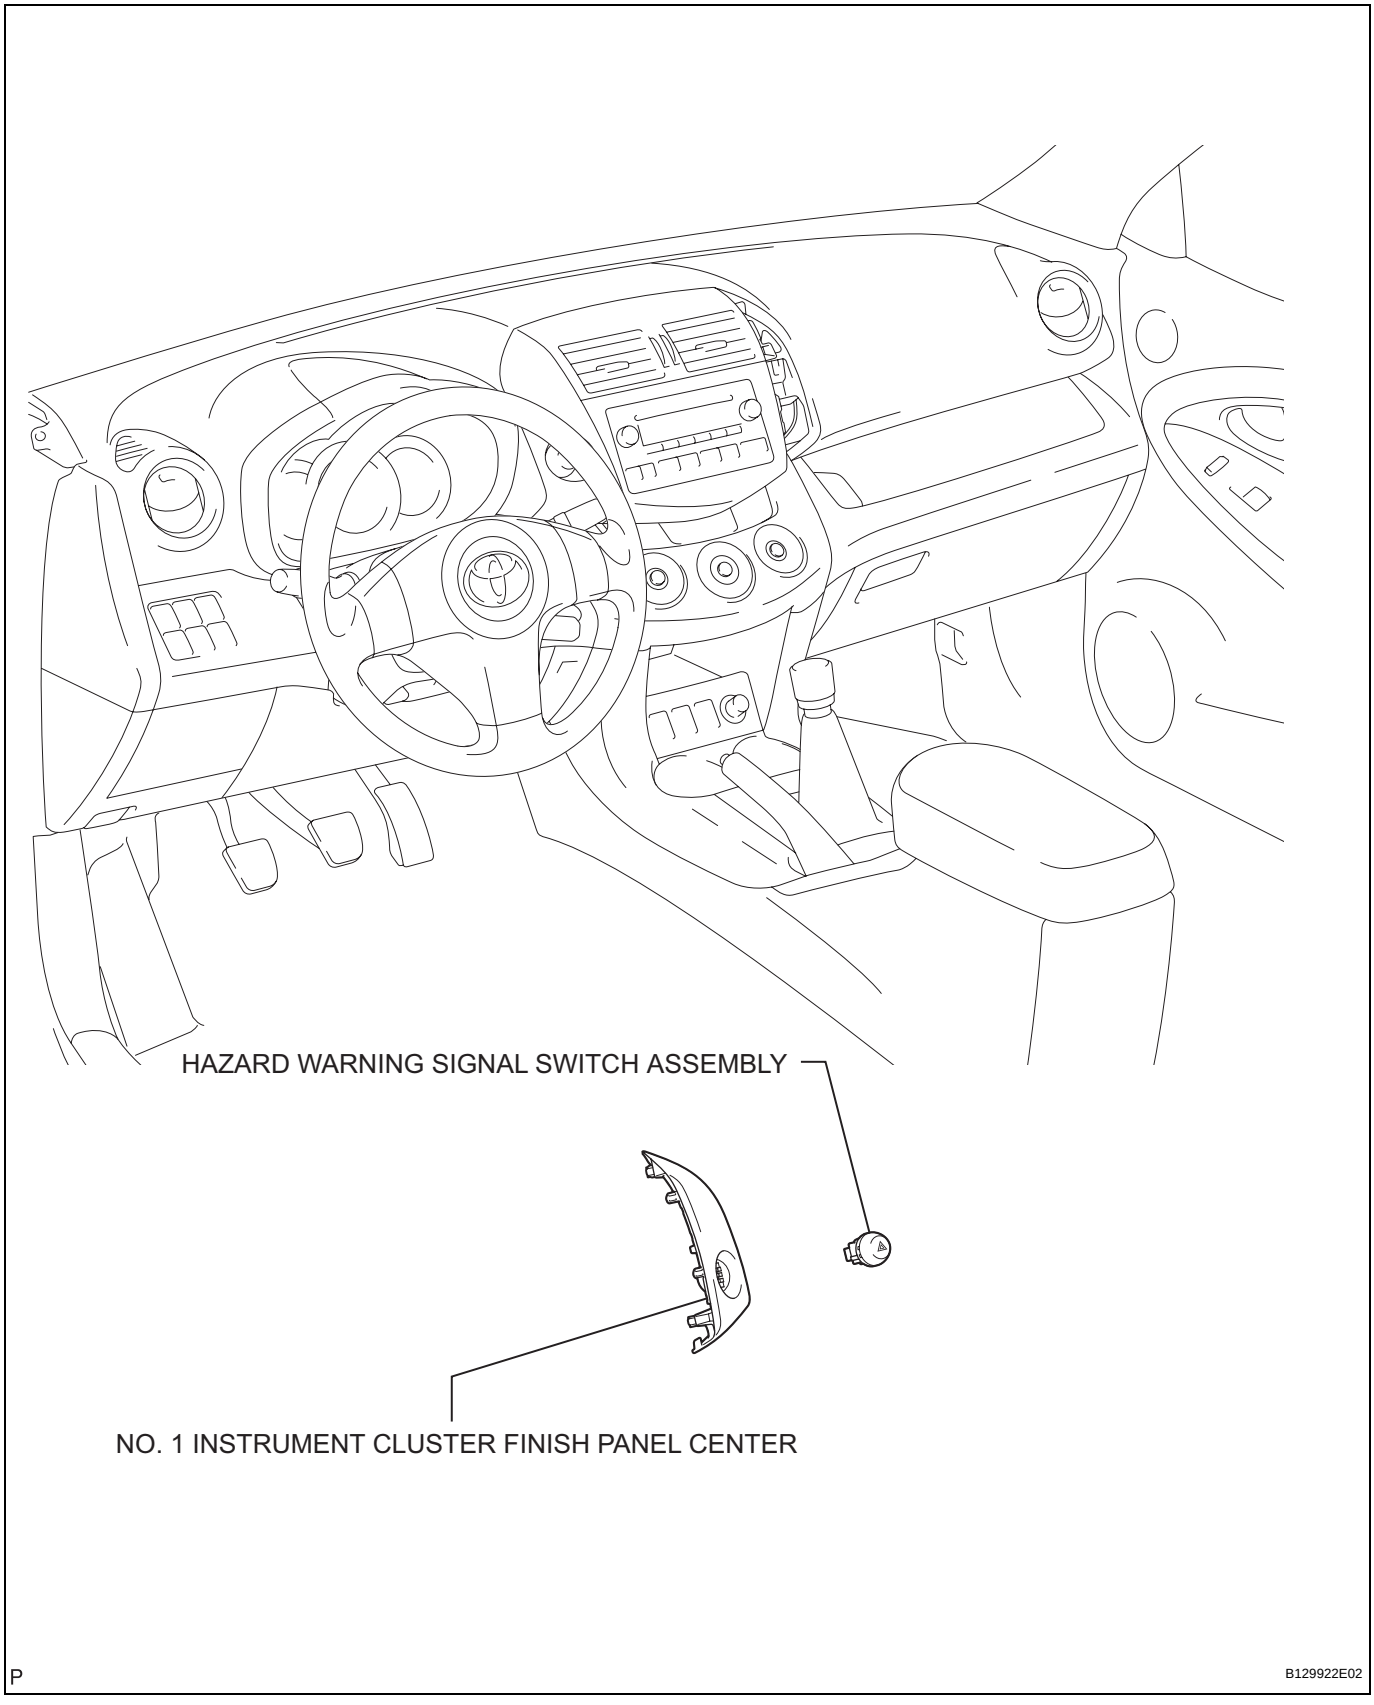
(b) Disconnect the connector.

INSPECTION

1. INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

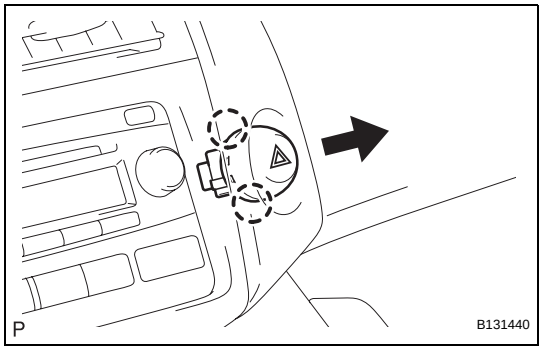
(a) Measure the resistance of the switch.

Standard resistance



Tester Connection	Switch Condition	Specified Condition
1 - Switch body	Pushed	10 kΩ or higher
1 - Switch body	Not pushed	Below 1 Ω

If the result is not as specified, replace the switch assembly.

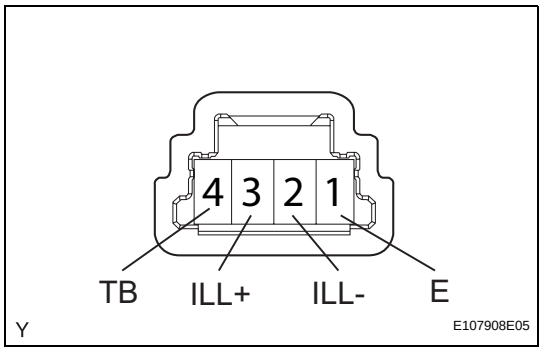


HAZARD WARNING SWITCH

COMPONENTS

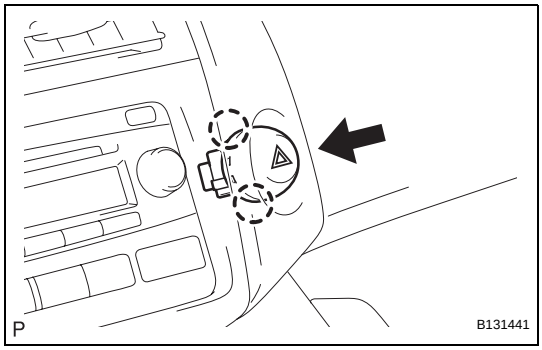
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-5)**
3. **REMOVE HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Detach the 2 claws and remove the switch.



INSPECTION

1. **INSPECT HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Measure the resistance of the switch.
   Standard resistance

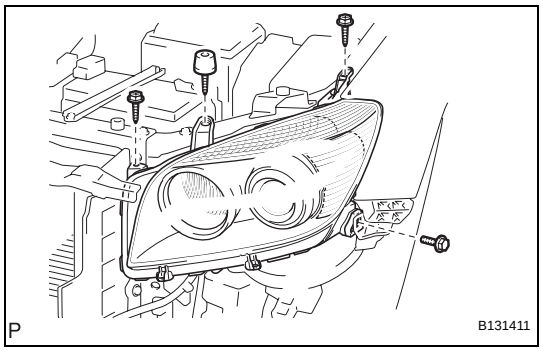


Tester Connection	Switch Condition	Specified Condition
4 (TB) - 1 (E)	OFF (Not pushed)	10 kΩ or higher
4 (TB) - 1 (E)	ON (Pushed)	Below 1 Ω

   If the result is not as specified, replace the switch assembly.
   (b) Inspect the switch illumination.
   (1) Connect the battery positive (+) lead to terminal 3 (ILL+) and the negative (-) lead to terminal 2 (ILL-), then check that the light comes on.
   OK:
   LED comes on.
   If the result is not as specified, replace the light.

INSTALLATION

1. **INSTALL HAZARD WARNING SIGNAL SWITCH ASSEMBLY**
   (a) Attach the 2 claws to install the switch.
2. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL CENTER (See page IP-10)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

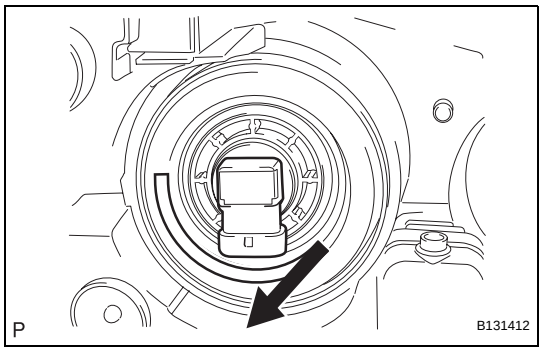


LI

REMOVAL

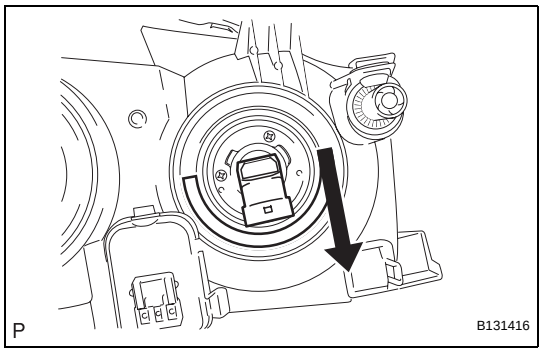
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



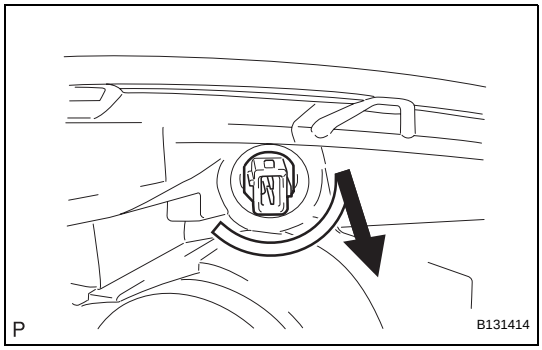
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE FRONT FENDER LINER LH (See page ET-4)**
3. **REMOVE FRONT FENDER LINER RH (See page ET-4)**
4. **REMOVE RADIATOR SUPPORT OPENING COVER (See page ET-4)**
5. **REMOVE FRONT BUMPER COVER (See page ET-5)**
6. **REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY UPPER**
   (a) Disconnect the 2 horn connectors.
   (b) Remove the 2 bolts and reinforcement.
7. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the 3 screws and bolt.
   (b) Disconnect the connectors and remove the headlight.

DISASSEMBLY



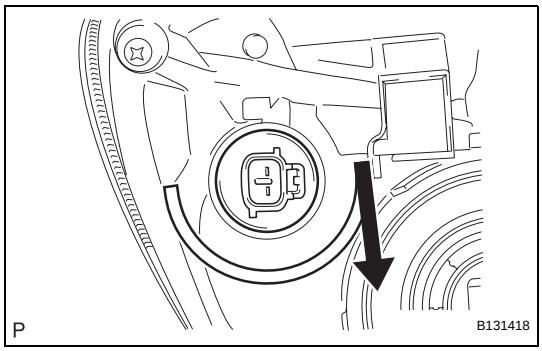
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. REMOVE NO. 1 HEADLIGHT BULB

(a) Turn the bulb in the direction indicated by the arrow and pull to remove it.



2. REMOVE NO. 2 HEADLIGHT BULB

(a) Turn the bulb in the direction indicated by the arrow and pull to remove it.

3. REMOVE CLEARANCE LIGHT BULB

(a) Turn the bulb in the direction indicated by the arrow and pull to remove it.

4. REMOVE FRONT TURN SIGNAL LIGHT BULB

(a) Turn the bulb/socket unit in the direction indicated by the arrow and pull to remove it.

(b) Remove the bulb from the socket.

ADJUSTMENT

1. VEHICLE PREPARATION FOR HEADLIGHT AIM ADJUSTMENT

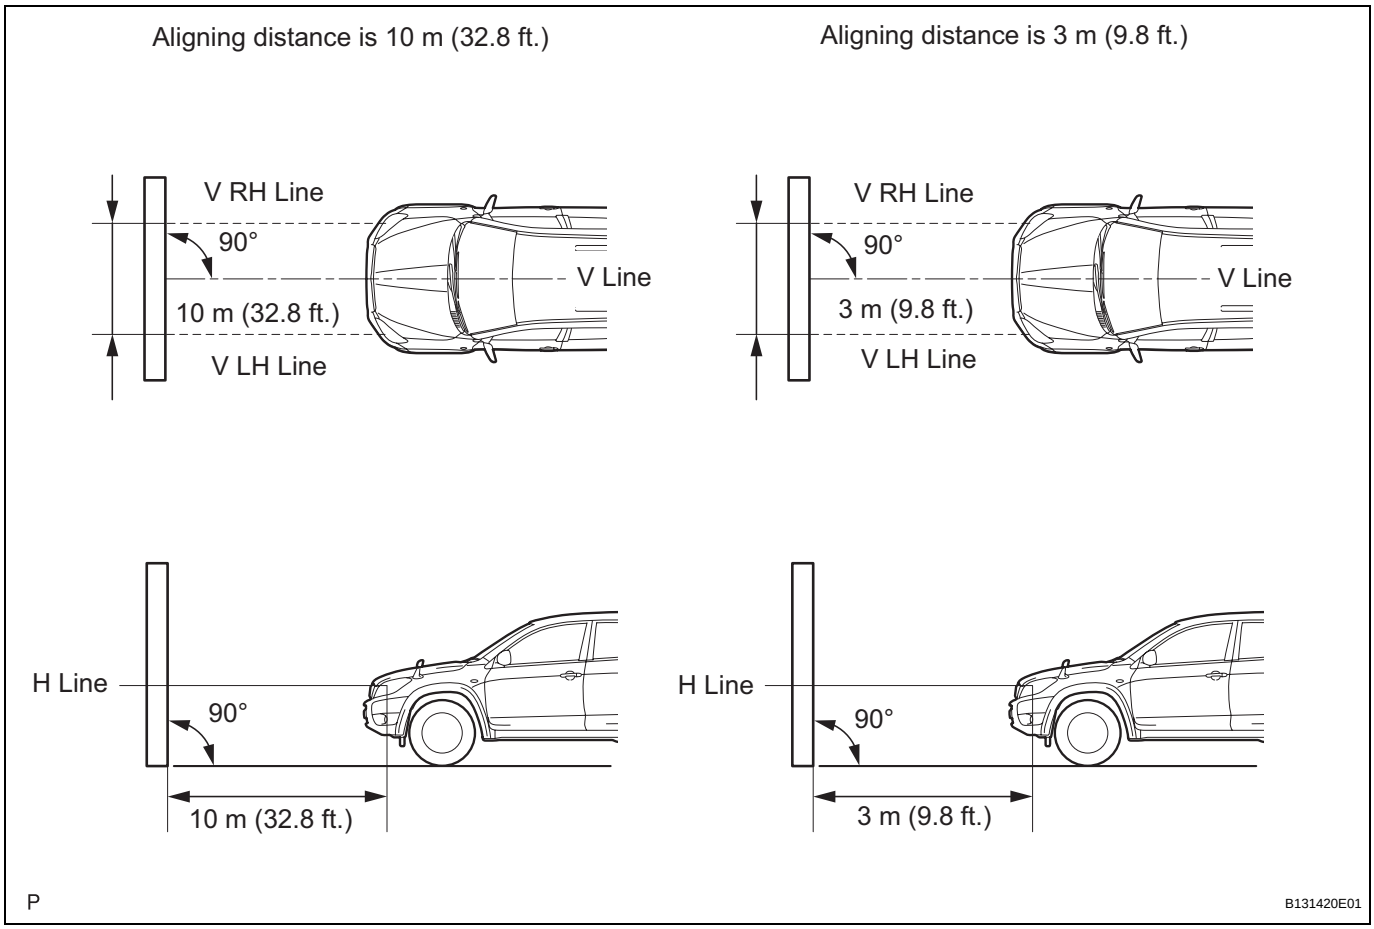
(a) Prepare the vehicle:
- Ensure that the vehicle has no damage or deformation around the headlights.
- Fill up the fuel tank.
- Make sure that all of the different types of oil in the vehicle (engine oil, etc.) are filled to the specified levels.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Place the spare tire, tools, and jack in their original positions.
- Unload the vehicle.
- Have a person that weighs approximately 55 kg (121 lb) sit in the driver seat.

2. PREPARATION FOR HEADLIGHT AIMING (Using a Screen)

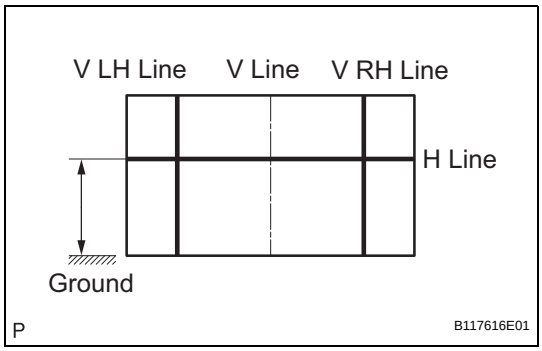
(a) Prepare the vehicle according to the following conditions:
- Move the vehicle to a location that is sufficiently dark so that the headlight cutoff line can be visually checked. The cutoff line is an imaginary plane below which headlight light is projected and above which light is not projected.
- Move the vehicle to a level surface.
- Point the front of the vehicle at a wall. The wall must be perpendicular to the surface that the vehicle is on.
- Position the vehicle 10 m (32.8 ft.) from the wall.
- Push down on the vehicle several times to settle the suspension. Do not damage the suspension.

HINT:
A distance of 10 m (32.8 ft.) between the vehicle and the wall is necessary for proper aim adjustment. If unavailable, secure a distance of exactly 3 m (9.8 ft.). In the illustrations below, view the part of the illustration applicable to the distance from the vehicle to the wall.

NOTICE:
Be careful not to damage the suspension.



(b) Prepare a piece of thick white paper that is approximately 2 m (6.6 ft.) (height) x 4 m (13.1 ft.) (width) to use as a screen.



(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.
HINT:
- Stand the screen perpendicular to the ground.

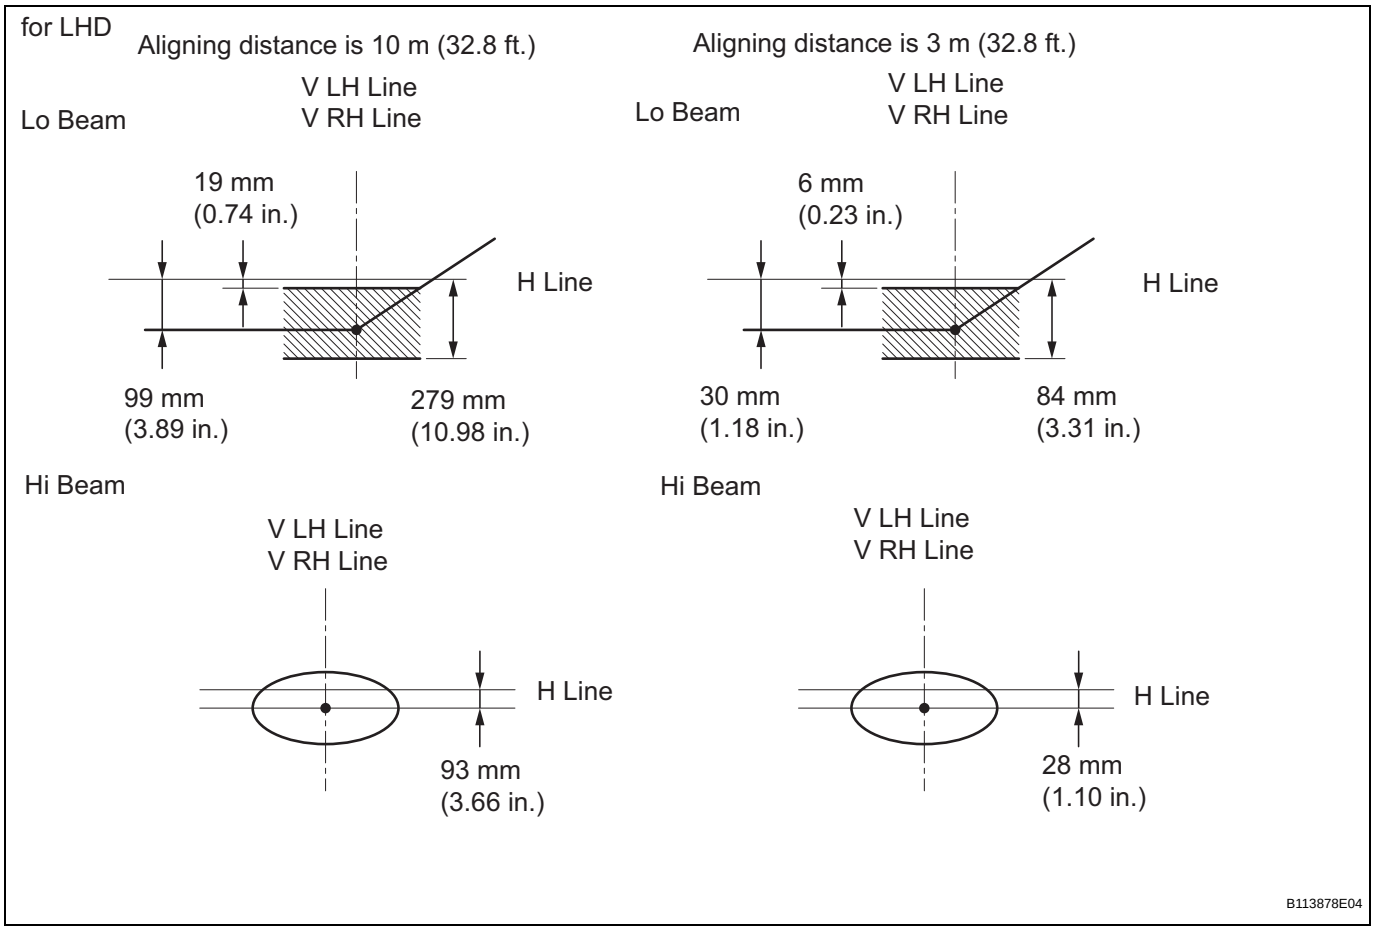
LI

- Align the V line on the screen with the center of the vehicle.

(e) Draw base lines (H line and V LH, V RH lines) on the screen as shown in the illustration.
HINT:
- The base lines differ for "lo beam inspection" and "hi beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

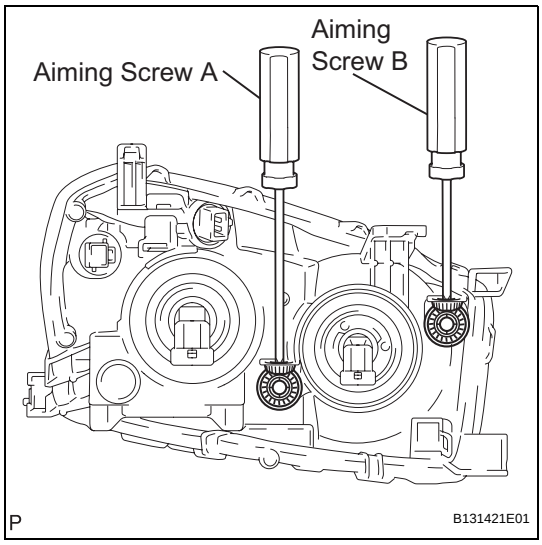
(1) H line (headlight height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the lo beam headlights.

(2) V LH line, V RH line (center mark position of LH and RH headlights):
Draw 2 vertical lines so that they intersect the H line at each center mark.



LI

3. INSPECT HEADLIGHT AIMING



(a) Choose a headlight to inspect first. Cover or disconnect the connector of the other headlight to prevent light from that headlight from affecting the headlight aiming inspection.
HINT:
When checking the aim of the hi beam bulb, cover the lo beam bulb or disconnect the connector.
NOTICE:
Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, and may easily melt or be damaged due to heat.

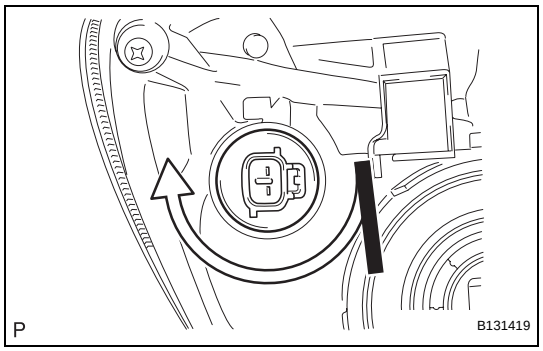
(b) Start the engine.
NOTICE:
Engine speed must be 1,500 rpm or more.

(c) Turn on the headlights and make sure that the cutoff line is within the specified area shown in the illustration.

LI

4. ADJUST HEADLIGHT AIMING

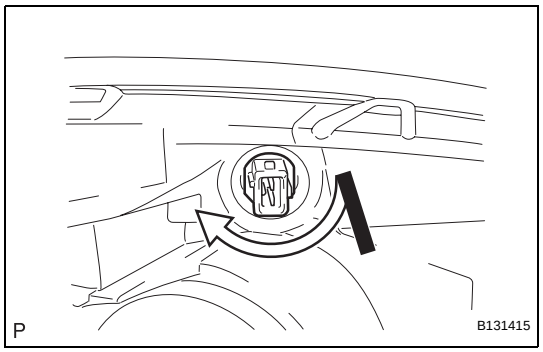
(a) Adjust the vertical headlight aim into the specified range by turning aiming screw A with a screwdriver.
HINT:
- Perform lo beam aim adjustment.
- The headlight aim moves down when turning the aiming screw clockwise, and moves up when turning the aiming screw counterclockwise.
- Adjust the aim vertically by turning the vertical aiming screw and the horizontal aiming screw at a 5:4 ratio (5 turns of the vertical aiming screw for 4 turns of the horizontal aiming screw).



NOTICE:
If the screw is tightened too much, loosen it and then retighten it so that the final turn of the screw is in the clockwise direction.

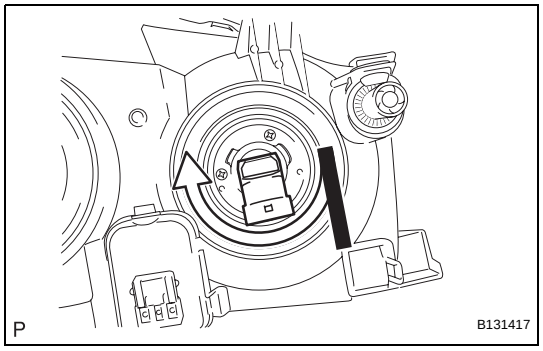
(b) Adjust the horizontal headlight aim into the specified range by turning aiming screw B with a screwdriver.
HINT:
Perform lo beam aim adjustment.
NOTICE:
If the screw is tightened too much, loosen it and then retighten it so that the final turn of the screw is in the clockwise direction.

REASSEMBLY



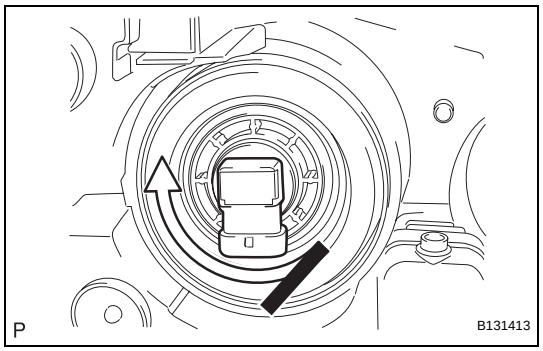
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. INSTALL FRONT TURN SIGNAL LIGHT BULB

(a) Install the bulb to the socket.
(b) Insert the bulb/socket unit into the headlight.
(c) Turn the bulb/socket unit in the direction indicated by the arrow to install it.

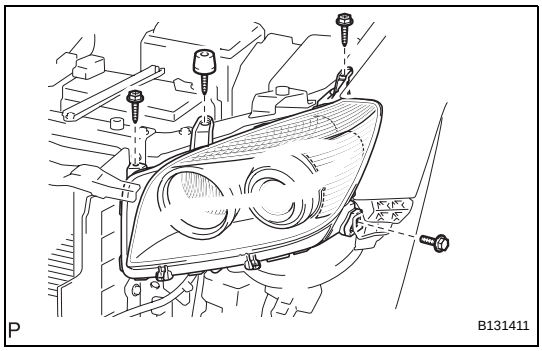


2. INSTALL CLEARANCE LIGHT BULB

(a) Insert the bulb into the headlight.
(b) Turn the bulb in the direction indicated by the arrow to install it.

3. INSTALL NO. 2 HEADLIGHT BULB

(a) Insert the bulb into the headlight.
(b) Turn the bulb in the direction indicated by the arrow to install it.

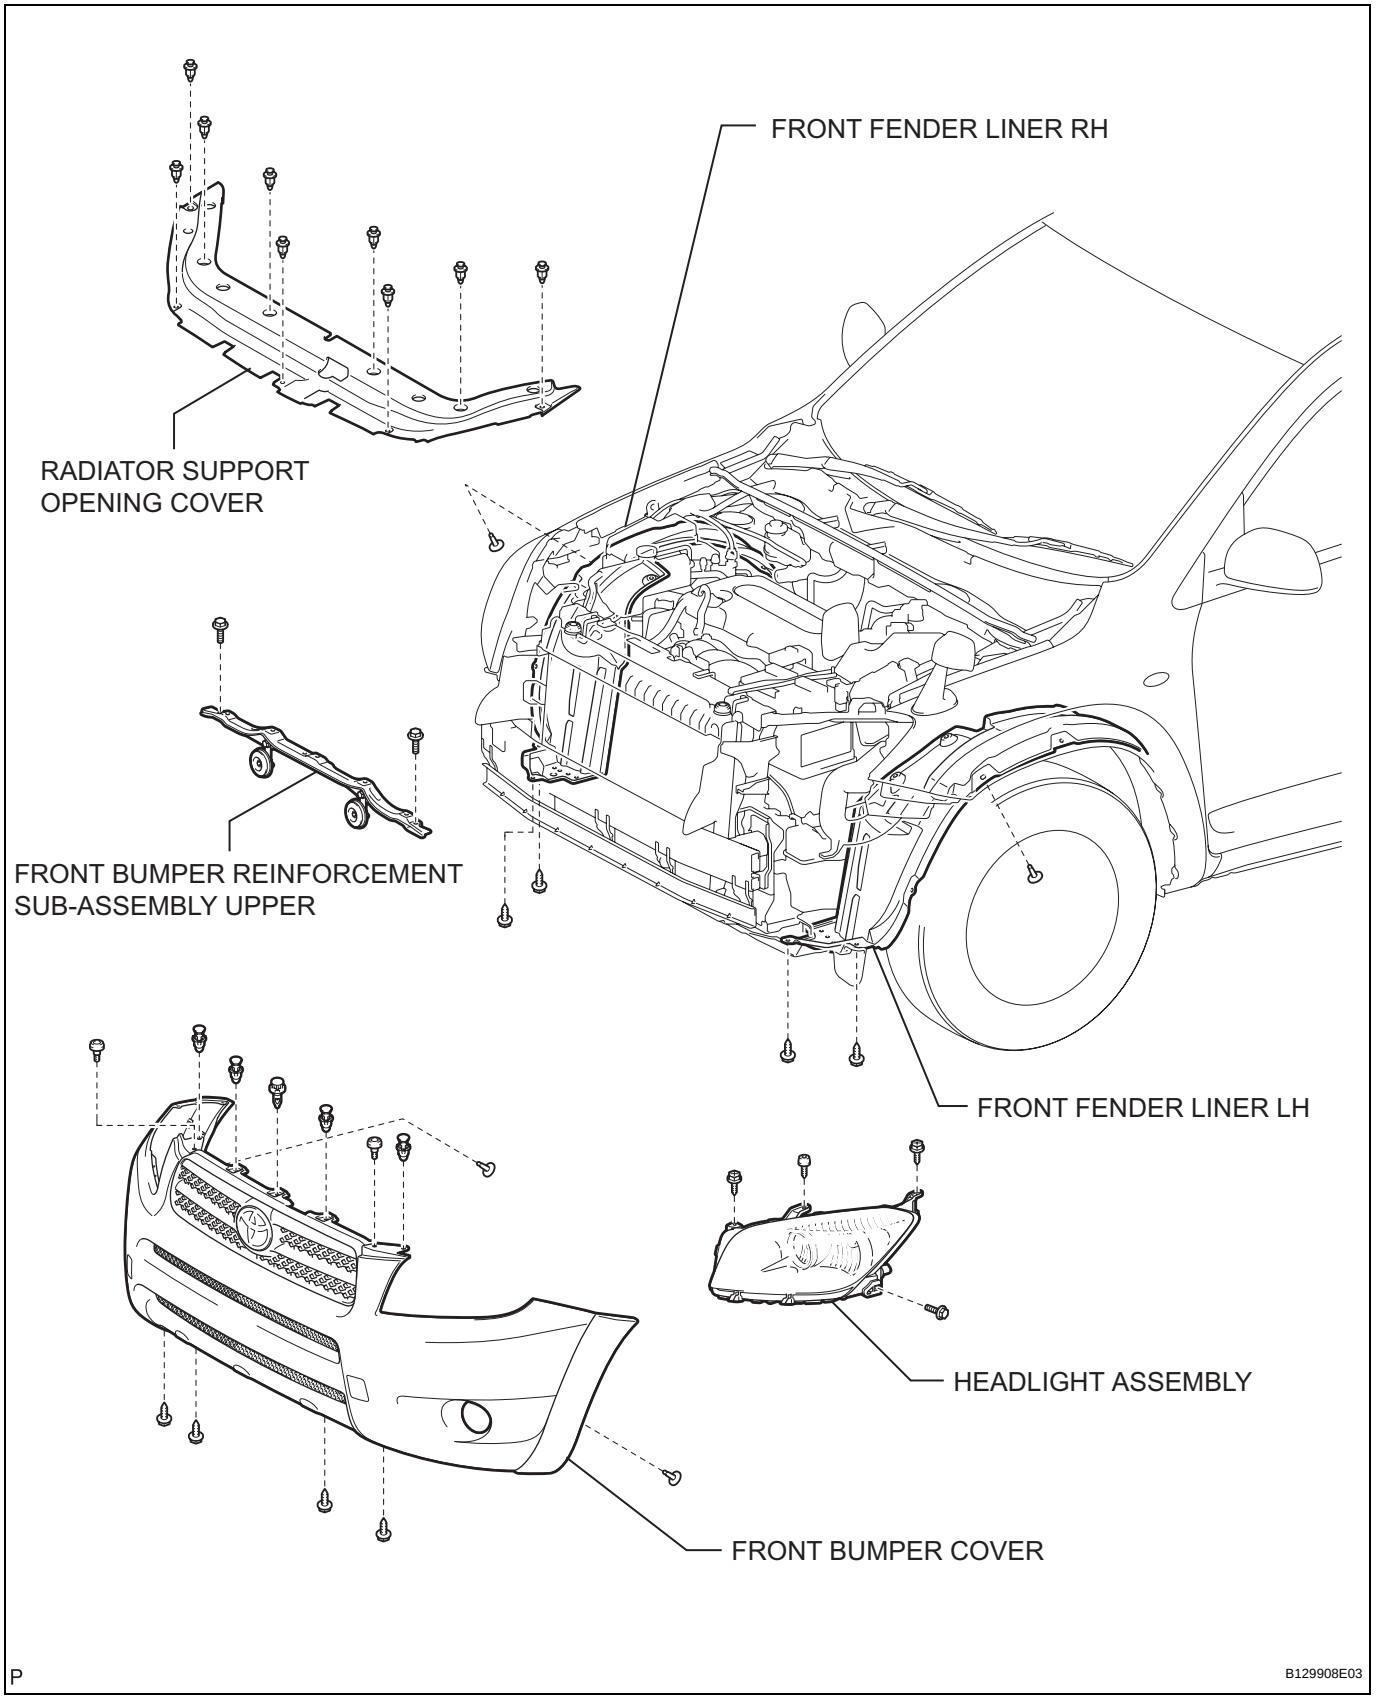


4. INSTALL NO. 1 HEADLIGHT BULB

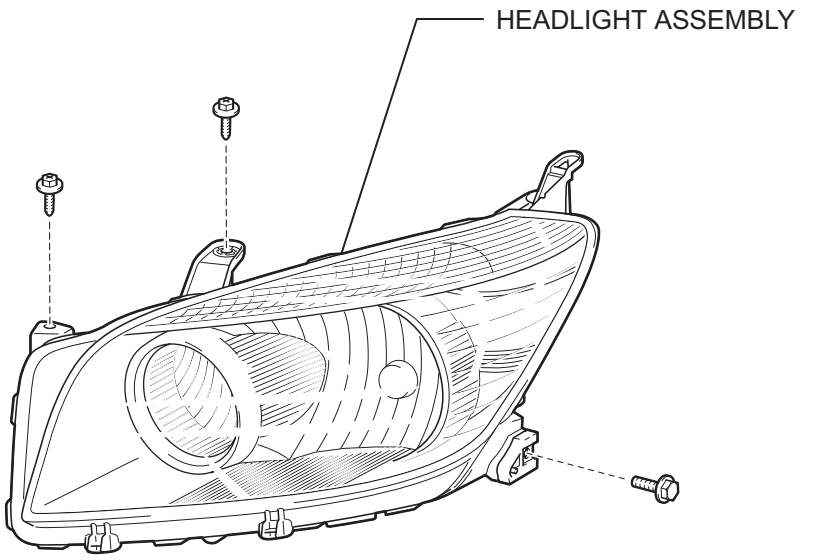
(a) Insert the bulb into the headlight.
(b) Turn the bulb in the direction indicated by the arrow to install it.

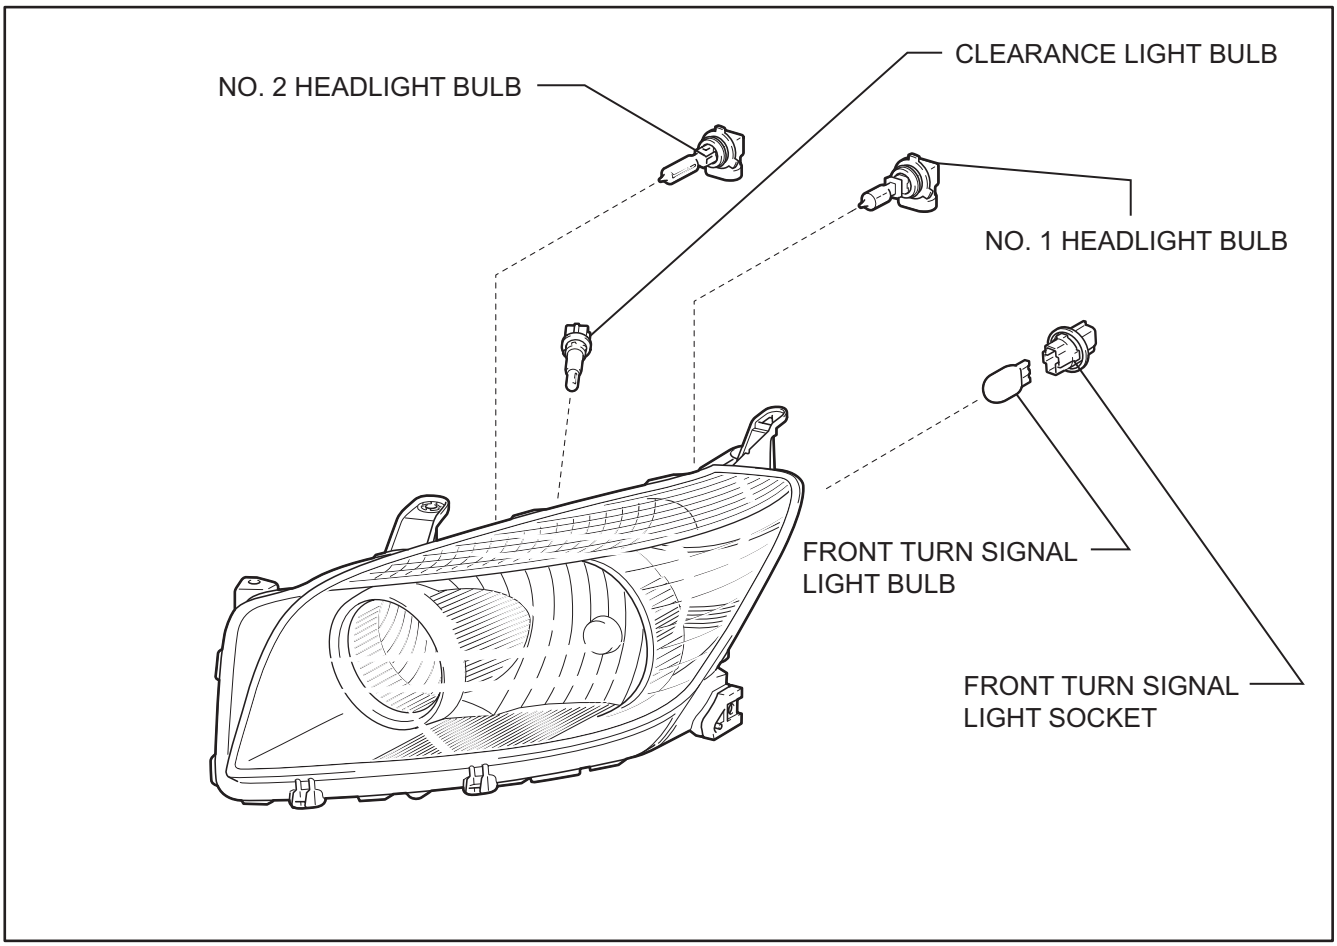
INSTALLATION

HINT:



- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

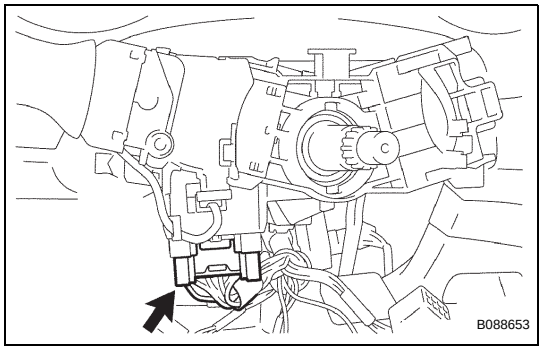




1. **INSTALL HEADLIGHT ASSEMBLY LH**
   (a) Connect the connectors with the headlight.
   (b) Install the 3 screws and bolt.
2. **INSTALL FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY UPPER**
   (a) Install the reinforcement with the 2 bolts.
   (b) Connect the 2 horns connectors.
3. **INSTALL FRONT BUMPER COVER (See page ET-11)**
4. **INSTALL RADIATOR SUPPORT OPENING COVER (See page ET-12)**
5. **INSTALL FRONT FENDER LINER RH (See page ET-10)**
6. **INSTALL FRONT FENDER LINER LH (See page ET-12)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **ADJUST HEADLIGHT AIMING**
   (a) Adjust the headlight aiming (see page LI-94).

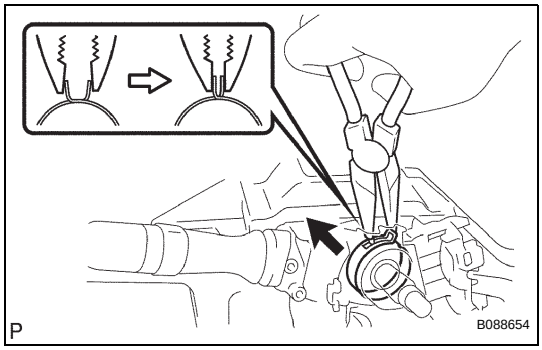
HEADLIGHT ASSEMBLY

COMPONENTS



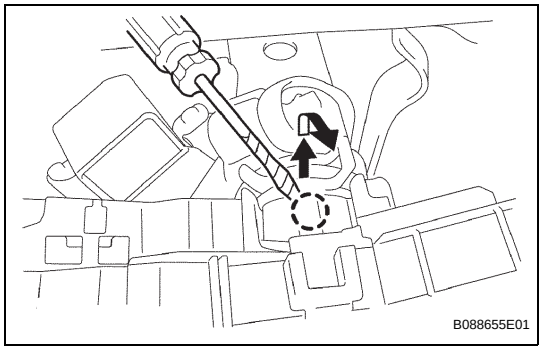
P

B136394E02

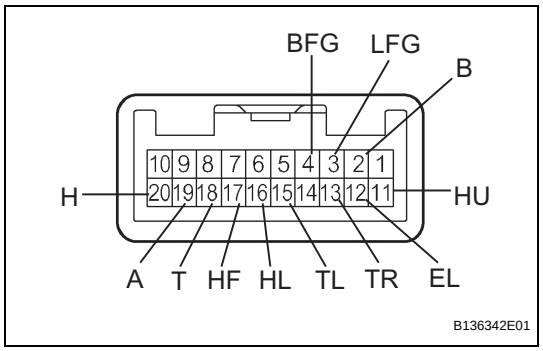


LI

REMOVAL



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE STEERING PAD ASSEMBLY (See page RS-336)**
4. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)**
5. **REMOVE STEERING COLUMN COVER (See page SR-12)**
6. **REMOVE SPIRAL CABLE SUB-ASSEMBLY (See page RS-346)**
7. **REMOVE WIPER AND WASHER SWITCH (See page WW-27)**
8. **REMOVE HEADLIGHT DIMMER SWITCH ASSEMBLY**
   (a) Disconnect the connector.



(b) Using needle-nose pliers, remove the band clamp as shown in the illustration.

(c) Using a screwdriver, detach the claws and remove the switch.
HINT:
Tape the screwdriver tip before use.

INSPECTION

1. INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Measure the resistance of the switch.

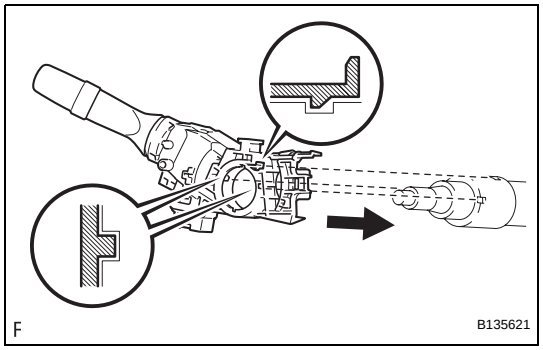
Standard resistance:

Light control switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 18 (T)	OFF	10 kΩ or higher
12 (EL) - 19 (A)	OFF	10 kΩ or higher
12 (EL) - 20 (H)	OFF	10 kΩ or higher
12 (EL) - 18 (T)	TAIL	Below 1 Ω
12 (EL) - 20 (H)	HEAD	Below 1 Ω
12 (EL) - 18 (T)	HEAD	Below 1 Ω
12 (EL) - 19 (A)	AUTO	Below 1 Ω

Headlight dimmer switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 11 (HU)	FLASH	Below 1 Ω
12 (EL) - 16 (HL)	FLASH	Below 1 Ω
12 (EL) - 16 (HL)	LO BEAM	Below 1 Ω
12 (EL) - 11 (HU)	HI BEAM	Below 1 Ω



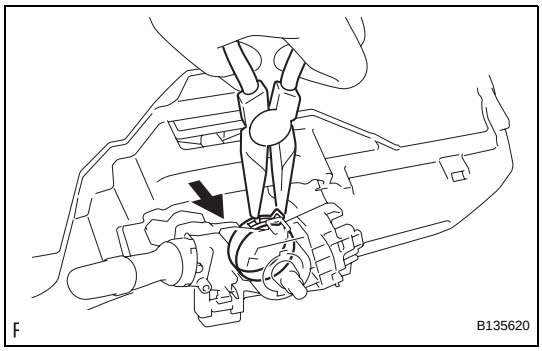
Turn signal switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 13 (TR)	Right turn	Below 1 Ω
12 (EL) - 15 (TL)	Neutral	10 kΩ or higher
12 (EL) - 13 (TR)	Neutral	10 kΩ or higher
12 (EL) - 15 (TL)	Left turn	Below 1 Ω

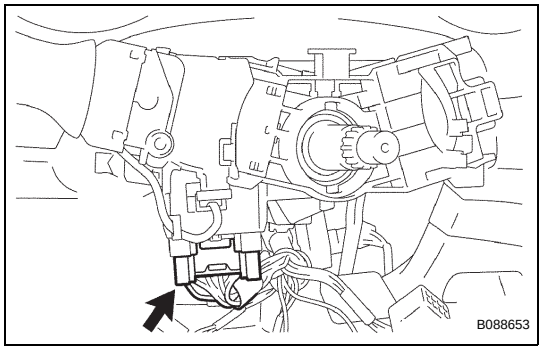
Fog light switch

Tester Connection	Switch Condition	Specified Condition
3 (LFG) - 4 (BFG)	OFF	10 kΩ or higher
3 (LFG) - 4 (BFG)	ON	Below 1 Ω

If the result is not as specified, replace the dimmer switch assembly.



INSTALLATION



1. INSTALL HEADLIGHT DIMMER SWITCH ASSEMBLY

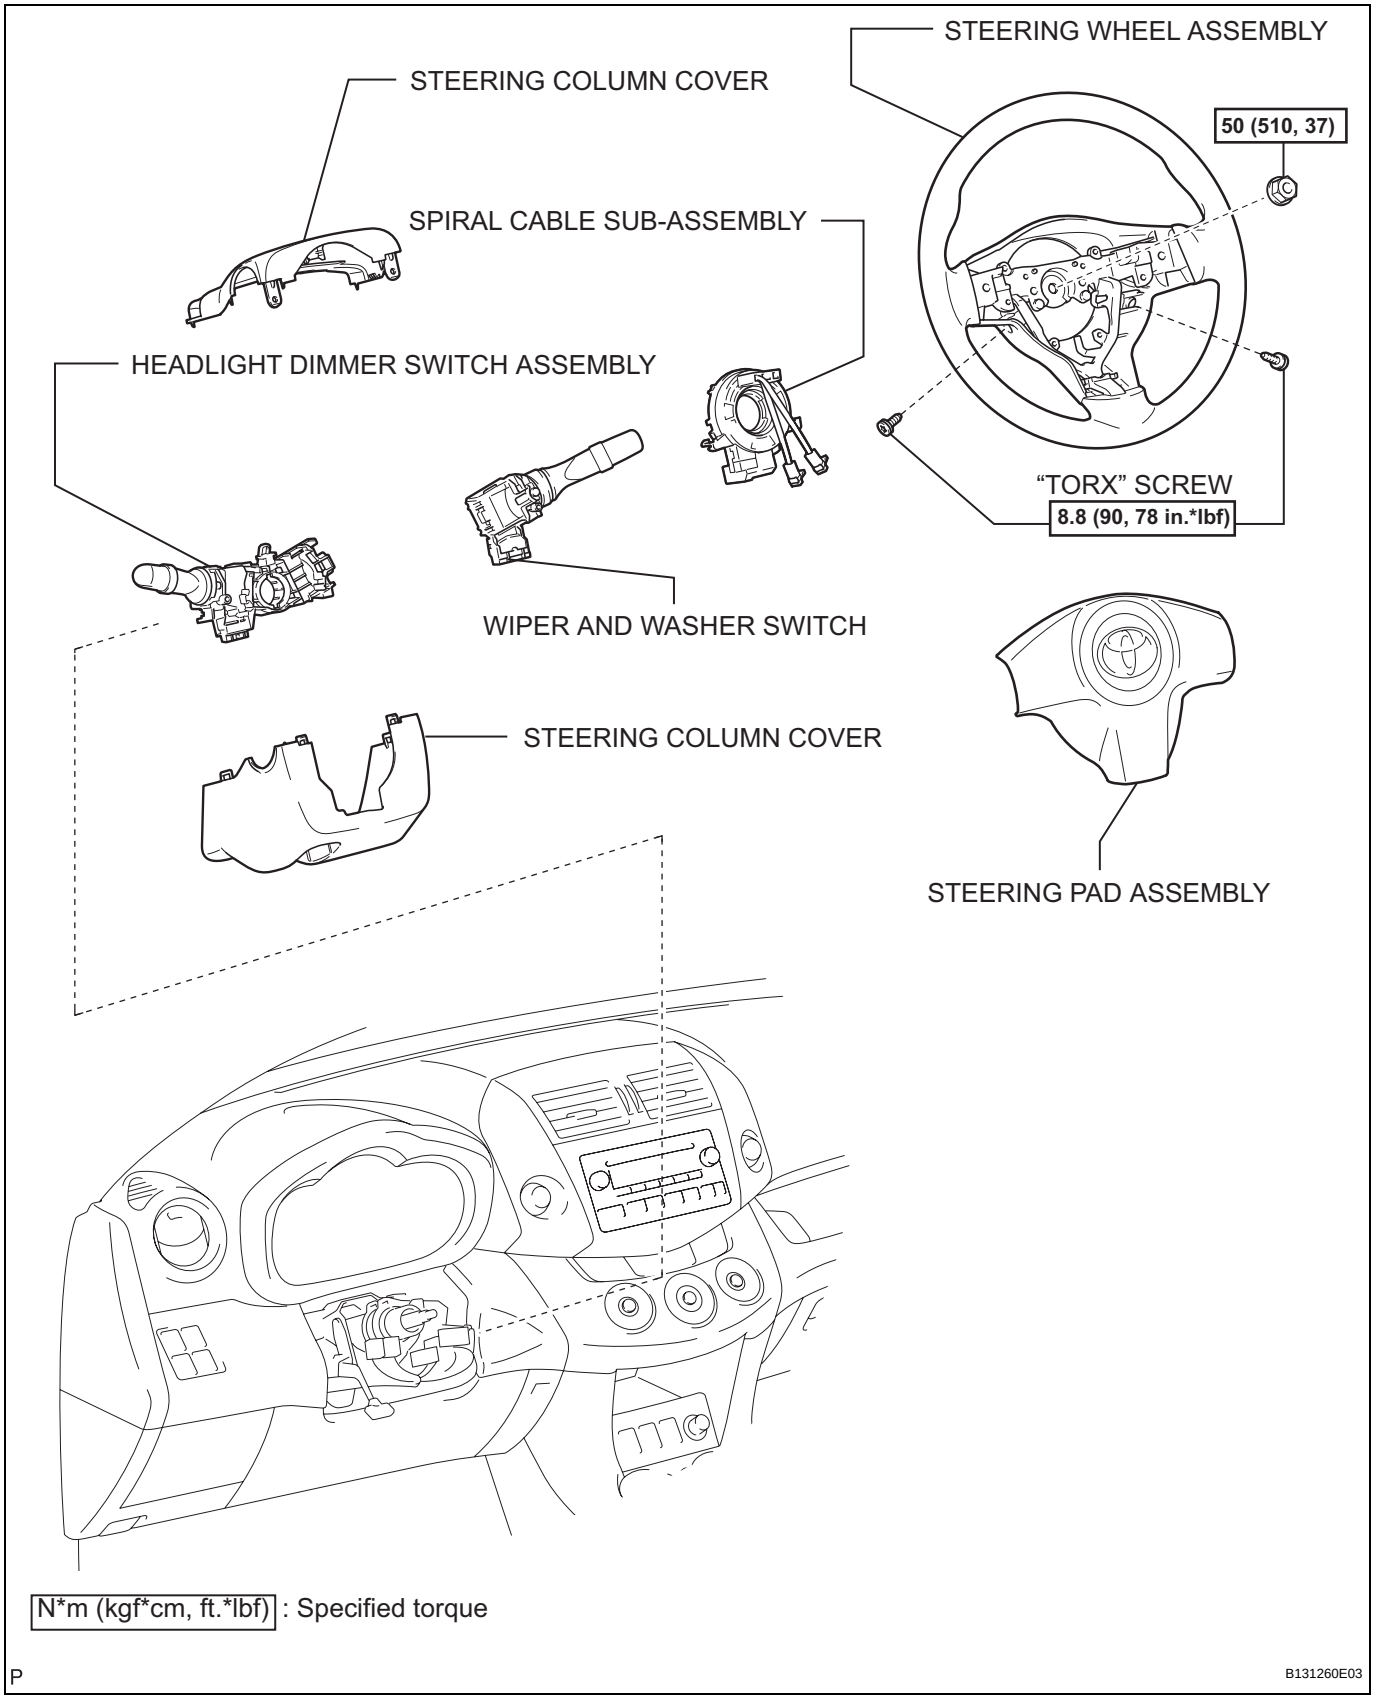
(a) Attach the claw to install the headlight dimmer switch with the claw as shown in the illustration.

LI

(b) Install the headlight dimmer switch with the clamp.

(c) Connect the connector.

2. **INSTALL WIPER AND WASHER SWITCH ASSEMBLY (See page WW-29)**
3. **INSTALL SPIRAL CABLE SUB-ASSEMBLY (See page RS-347)**
4. **INSTALL STEERING COLUMN COVER (See page SR-20)**
5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-21)**
6. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
7. **INSPECT STEERING WHEEL CENTER POINT**
8. **INSTALL STEERING PAD ASSEMBLY (See page RS-336)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
10. **INSPECT STEERING PAD ASSEMBLY (See page RS-337)**
11. **CHECK SRS WARNING LIGHT**
    (a) Check the SRS warning light (see page RS-337).



HEADLIGHT DIMMER SWITCH

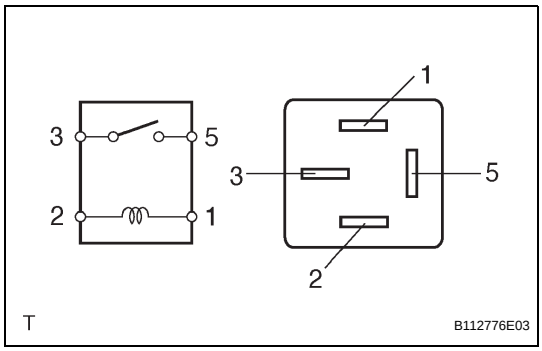
PRECAUTION

1. PRECAUTION FOR VEHICLE WITH SRS

(a) Some procedures in this section may affect the Supplemental Restraint System (SRS). Prior to performing the procedures, read the SRS section's "Precaution" (see page RS-1).

COMPONENTS

STEERING WHEEL ASSEMBLY
STEERING COLUMN COVER
50 (510, 37)
SPIRAL CABLE SUB-ASSEMBLY
HEADLIGHT DIMMER SWITCH ASSEMBLY
"TORX" SCREW
8.8 (90, 78 in.*lbf)
WIPER AND WASHER SWITCH
STEERING COLUMN COVER
STEERING PAD ASSEMBLY
N*m (kgf*cm, ft.*lbf) : Specified torque
P
B131260E03



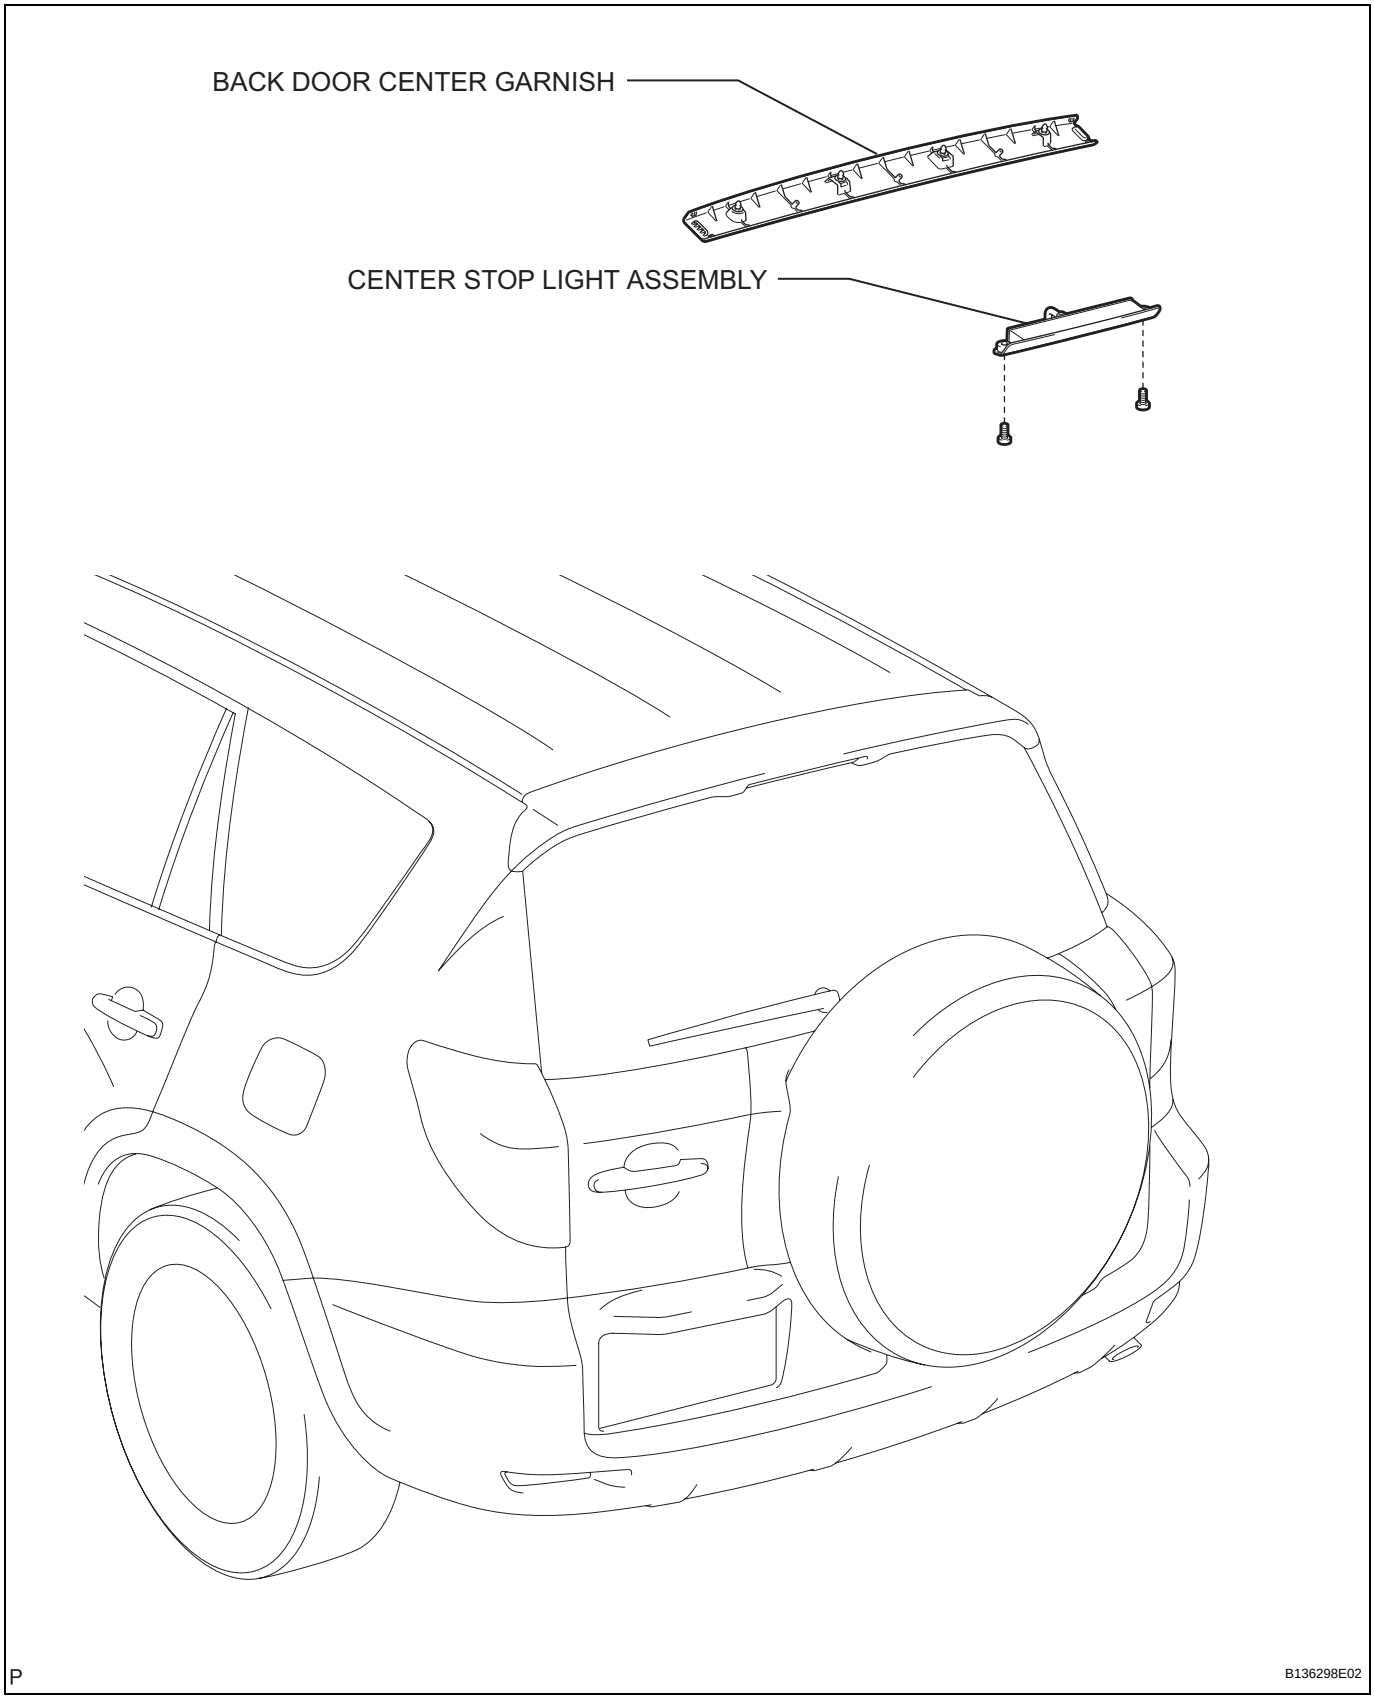
HEADLIGHT RELAY

ON-VEHICLE INSPECTION

1. REMOVE HEADLIGHT RELAY

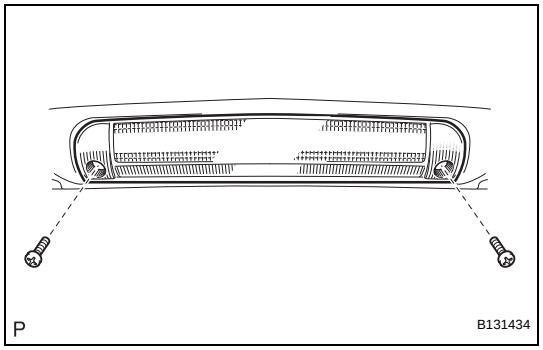
(a) Remove the headlight relay from the engine room No. 2 relay block.

(b) Measure the resistance of the relay.
Standard resistance



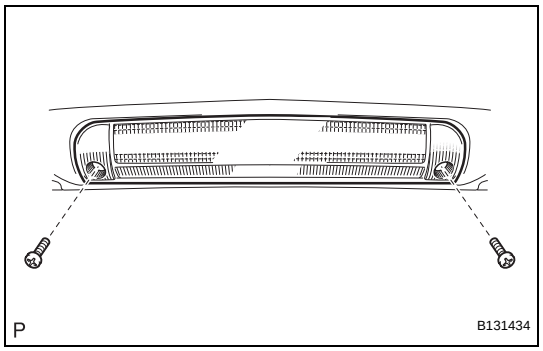
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

If result is not as specified, replace the relay.



HIGH MOUNTED STOP LIGHT ASSEMBLY

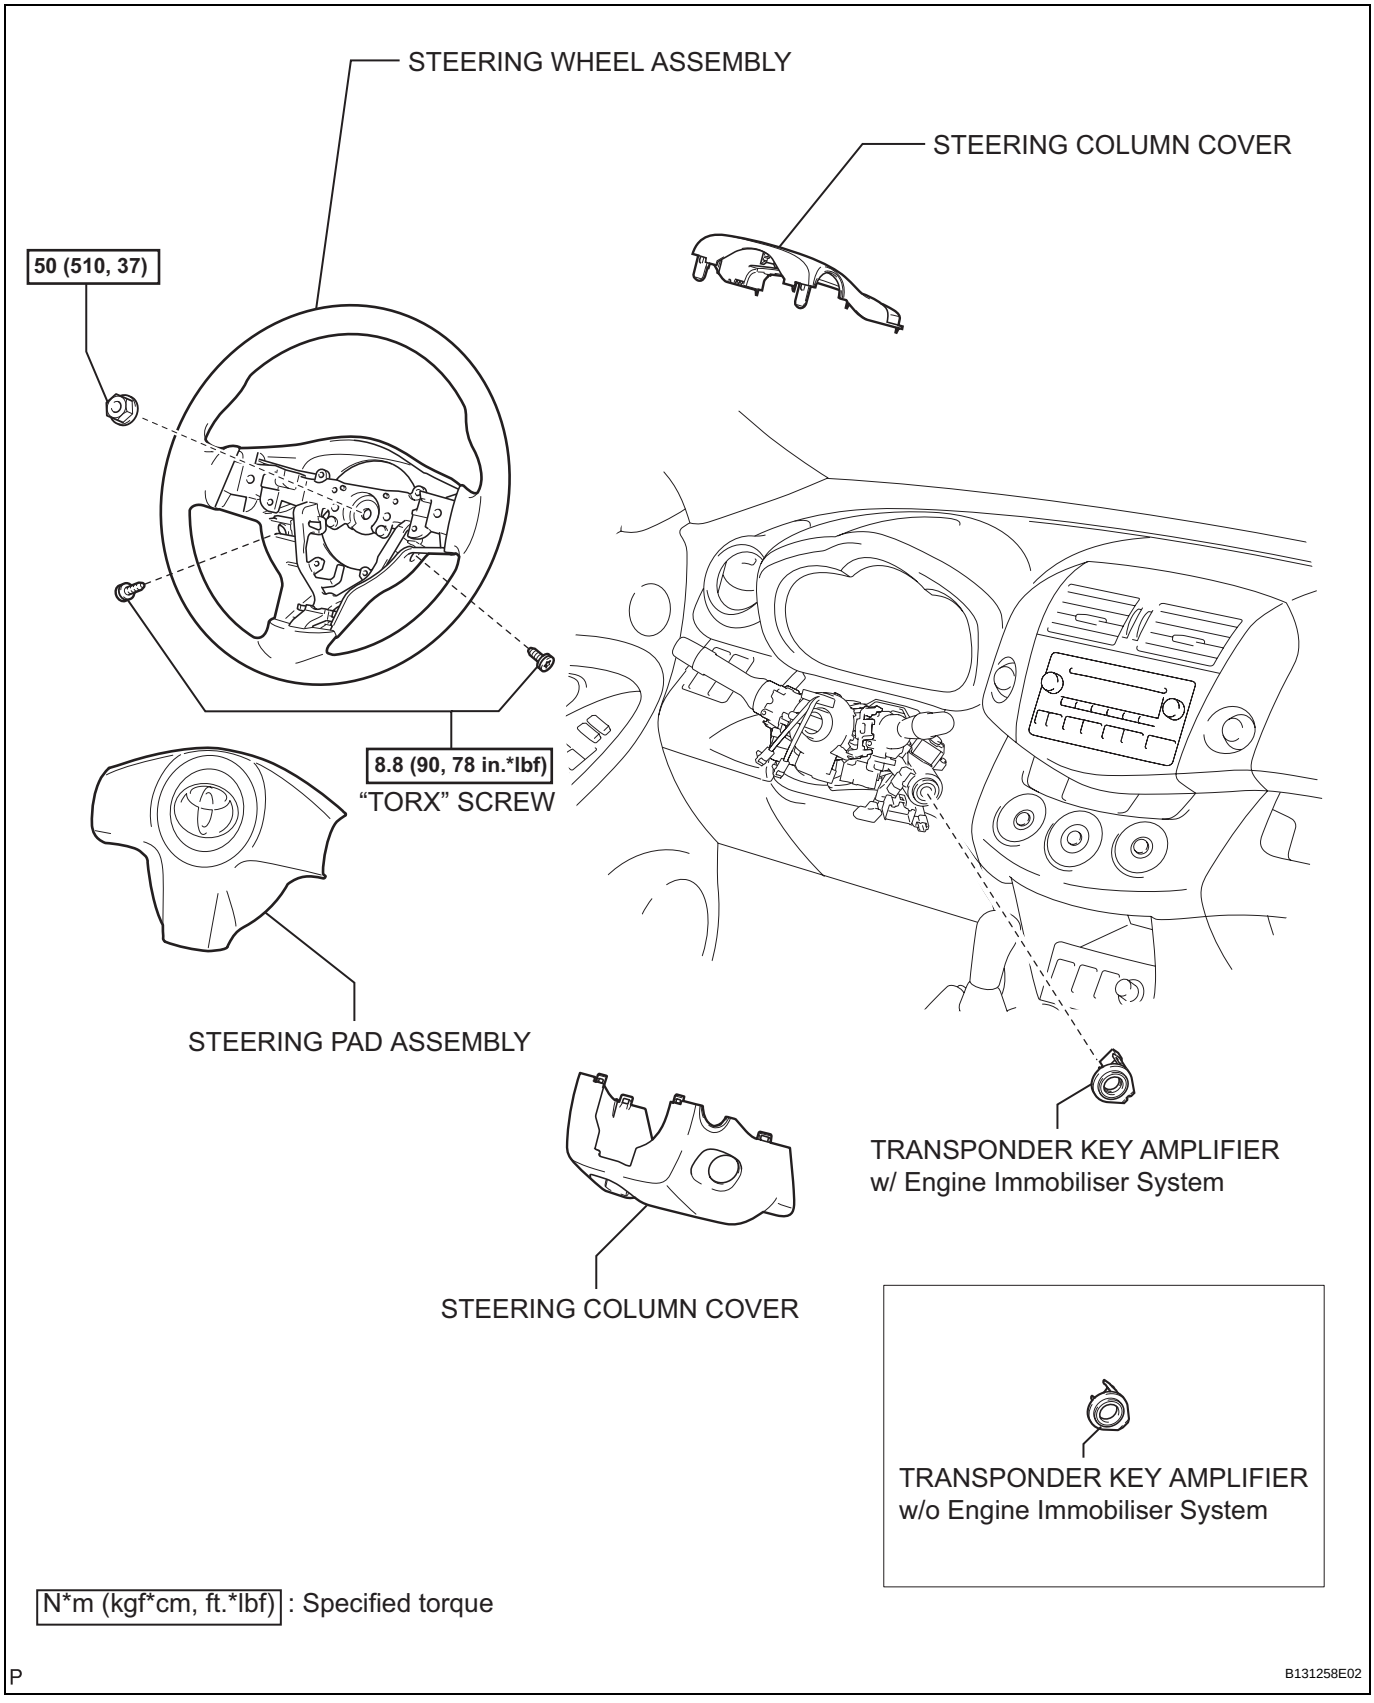
COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BACK DOOR CENTER GARNISH (See page ED-59)**
3. **REMOVE CENTER STOP LIGHT ASSEMBLY**
   (a) Disconnect the connector.
   (b) Remove the 2 screws and center stop light.

INSTALLATION



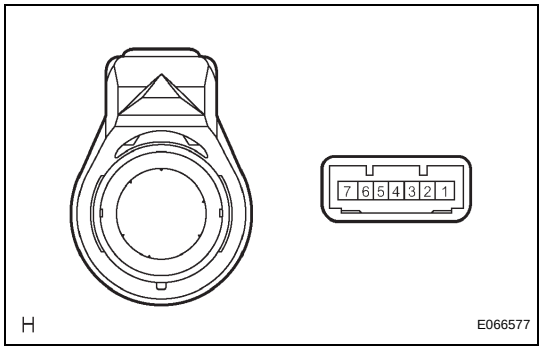
1. **INSTALL CENTER STOP LIGHT ASSEMBLY**
   (a) Install the center stop light with the 2 screws.
   (b) Connect the connector.
2. **INSTALL BACK DOOR CENTER GARNISH (See page ED-67)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

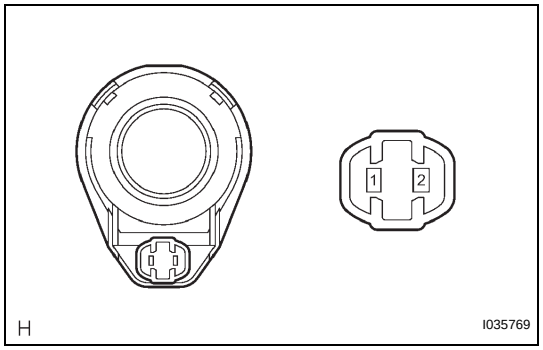
INSTALLATION

1. **INSTALL TRANSPONDER KEY AMPLIFIER (See page SR-18)**
2. **INSTALL STEERING COLUMN COVER (See page SR-20)**
3. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-21)**
4. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
5. **INSPECT STEERING WHEEL CENTER POINT**
6. **INSTALL STEERING PAD ASSEMBLY (See page RS-336)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **INSPECT STEERING PAD ASSEMBLY (See page RS-337)**
9. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-337).

IGNITION KEY CYLINDER LIGHT

COMPONENTS

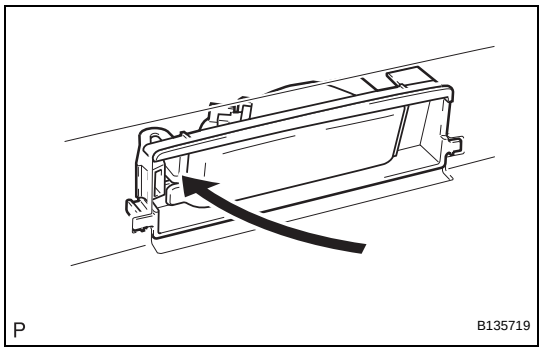




LI

REMOVAL

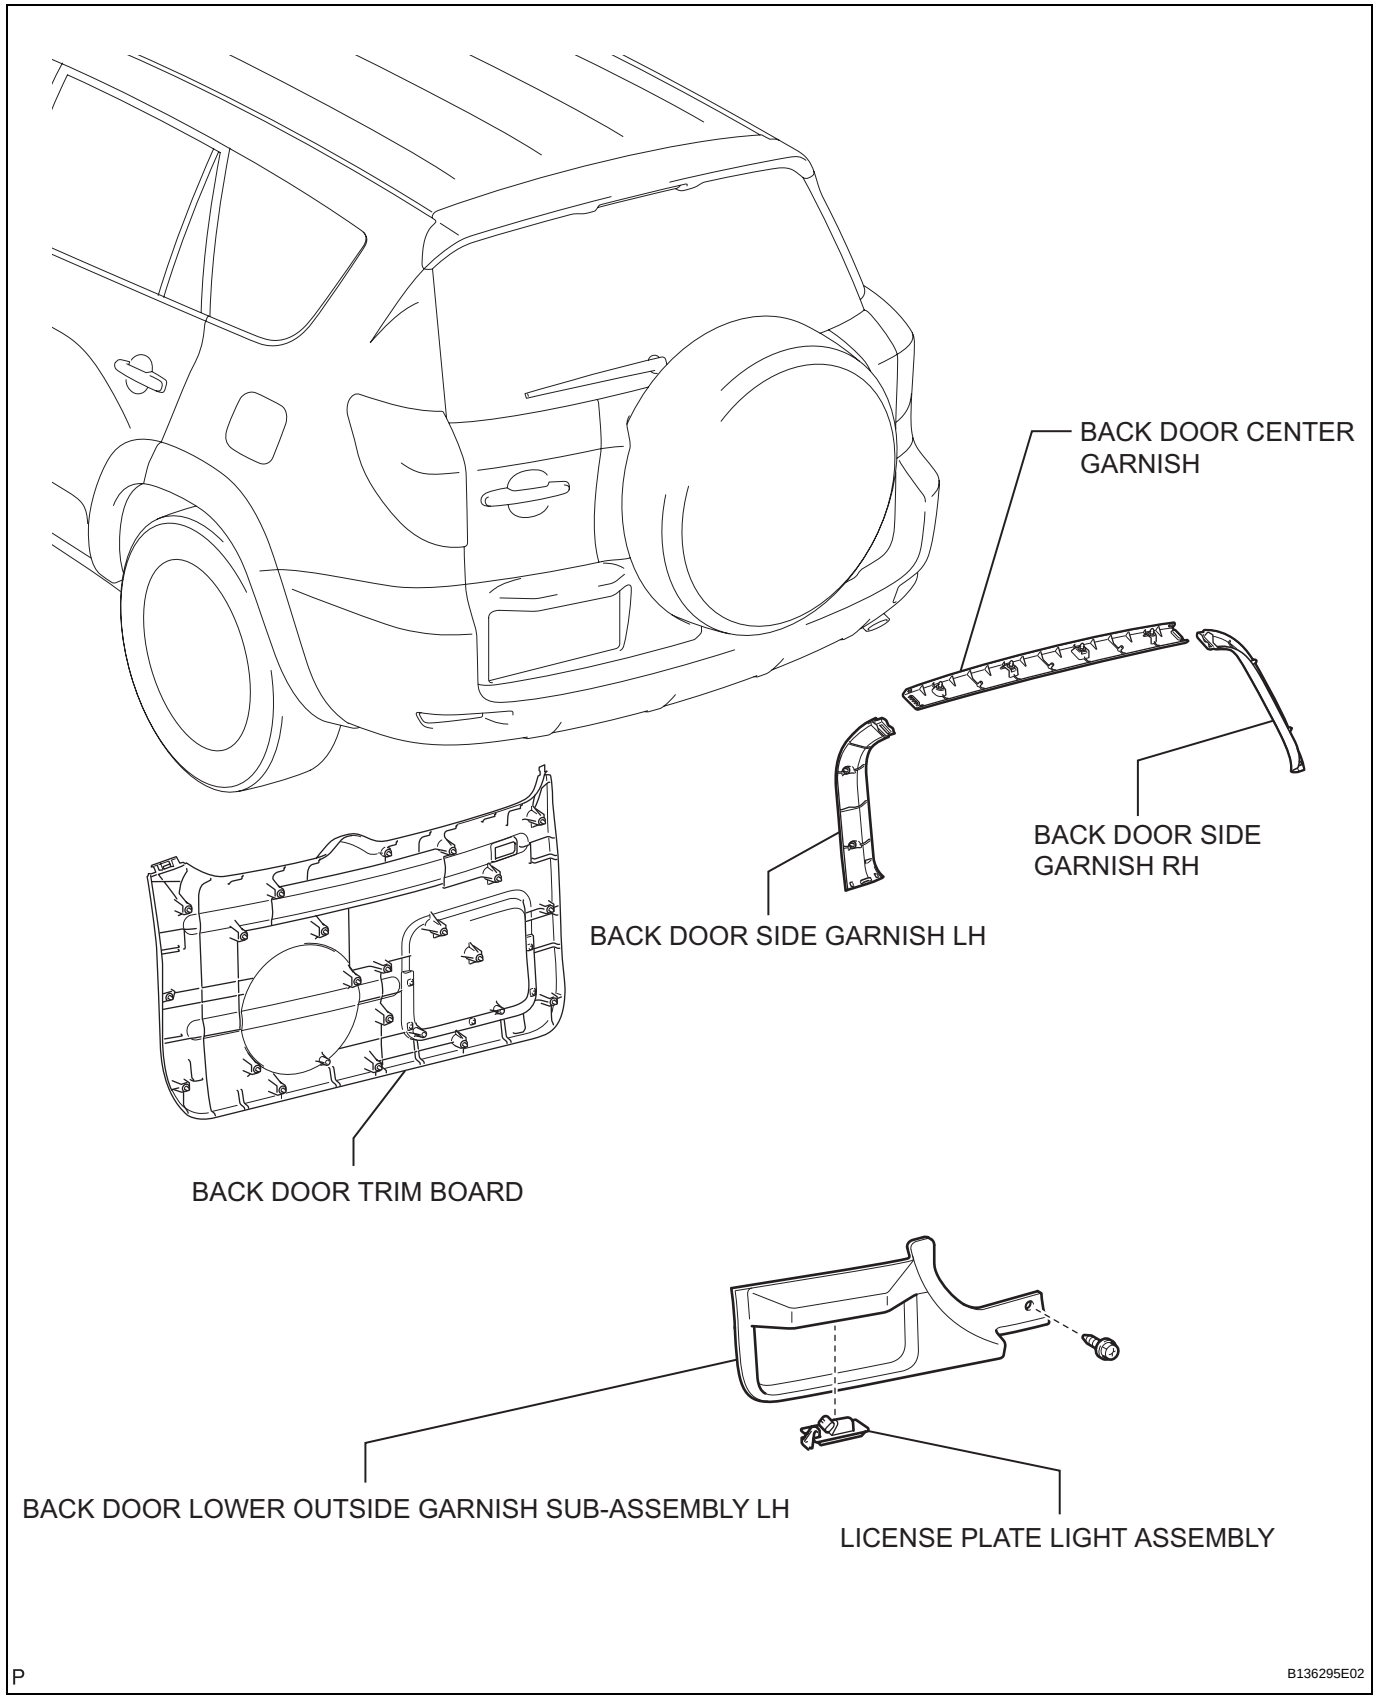
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **REMOVE STEERING PAD ASSEMBLY (See page RS-336)**
4. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)**
5. **REMOVE STEERING COLUMN COVER (See page SR-12)**
6. **REMOVE TRANSPONDER KEY AMPLIFIER (See page SR-14)**



INSPECTION

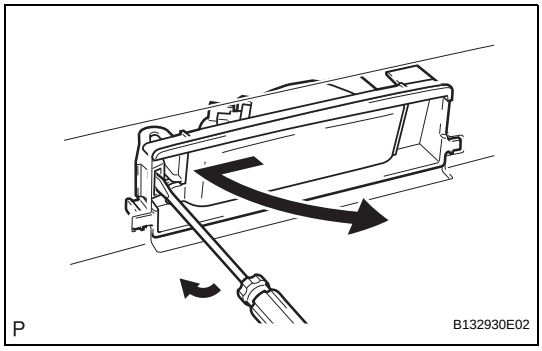
1. **INSPECT TRANSPONDER KEY AMPLIFIER**
   (a) w/ Engine immobiliser system:
      (1) Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 6, and then check that the light comes on.
      OK:
      LED illuminates.
      If the result is not as specified, replace the transponder key amplifier.

   (b) w/o Engine immobiliser system:
      (1) Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1, and then check that the light comes on.
      OK:
      LED illuminates.
      If the result is not as specified, replace the transponder key amplifier.



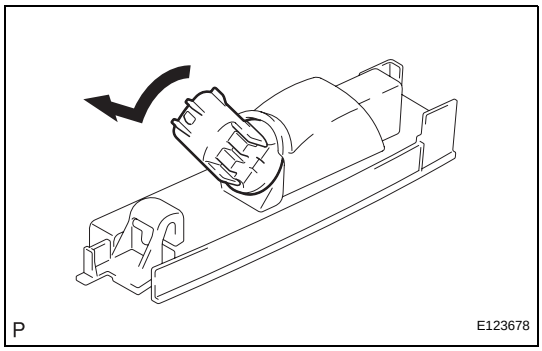
INSTALLATION

1. **INSTALL LICENSE PLATE LIGHT ASSEMBLY**
   (a) Install the light as shown in the illustration.
2. **INSTALL BACK DOOR LOWER OUTSIDE GARNISH SUB-ASSEMBLY (See page ET-61)**
3. **INSTALL BACK DOOR TRIM BOARD (See page ED-66)**
4. **INSTALL BACK DOOR SIDE GARNISH RH (See page ED-67)**
5. **INSTALL BACK DOOR SIDE GARNISH LH (See page ED-67)**
6. **INSTALL BACK DOOR CENTER GARNISH (See page ED-67)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



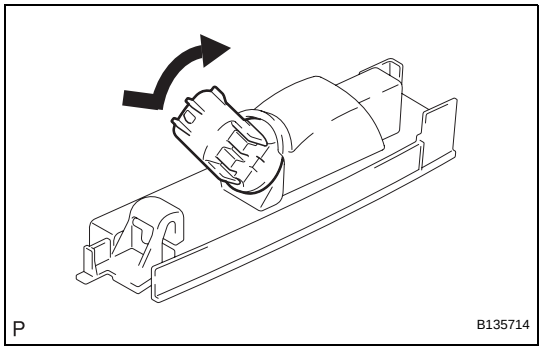
LICENSE PLATE LIGHT ASSEMBLY

COMPONENTS



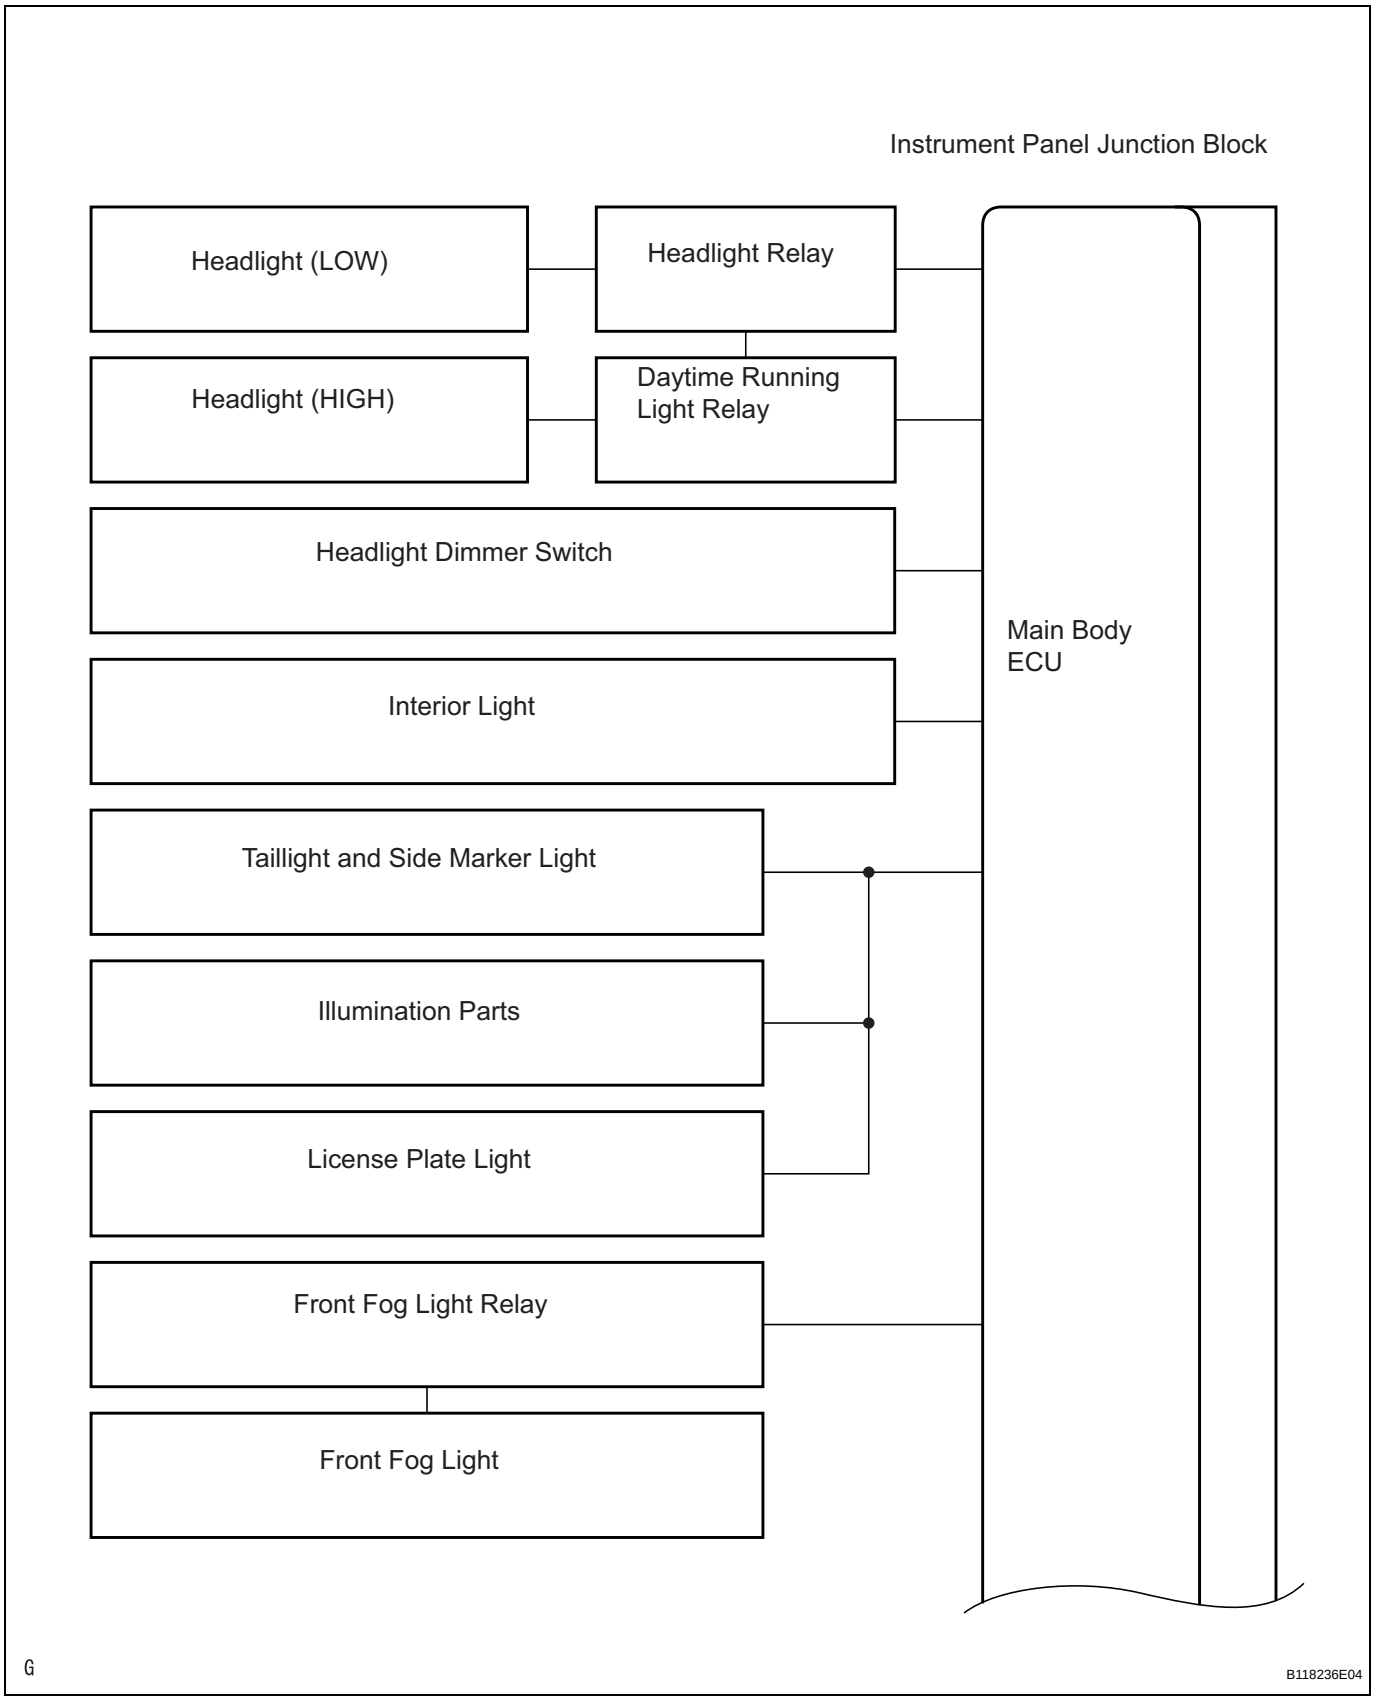
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BACK DOOR CENTER GARNISH (See page ED-59)**
3. **REMOVE BACK DOOR SIDE GARNISH LH (See page ED-59)**
4. **REMOVE BACK DOOR SIDE GARNISH RH (See page ED-59)**
5. **REMOVE BACK DOOR TRIM BOARD (See page ED-59)**
6. **REMOVE BACK DOOR LOWER OUTSIDE GARNISH SUB-ASSEMBLY LH (See page ET-60)**
7. **REMOVE LICENSE PLATE LIGHT ASSEMBLY**
   (a) Disconnect the connector.
   (b) Using a screwdriver, remove the light as shown in the illustration.



DISASSEMBLY

1. **REMOVE LICENSE PLATE LIGHT BULB**
   (a) Turn the bulb/socket unit in the direction indicated by the arrow and pull to remove it.
   (b) Remove the bulb from the socket.



REASSEMBLY

1. **INSTALL LICENSE PLATE LIGHT BULB**
   (a) Install the bulb to the socket.
   (b) Insert the bulb/socket unit into the headlight.
   (c) Turn the bulb/socket unit in the direction indicated by the arrow to install it.

SYSTEM DESCRIPTION

1. LIGHTING SYSTEM

(a) Illumination control system (Illuminated entry system):

When the doors are unlocked by a key or transmitter operation, or when a door is opened or closed, the illuminated entry system turns on the room light, map light, foot light and ignition key cylinder light*1 or transponder key amplifier*2.

(1) The main body ECU receives the following signals (A).
- Door courtesy switch signal
- Door detection switch signal
- Ignition switch signal

(2) The main body ECU controls the following signal based on the signals listed in A.
- Illumination operation signal

(3) The main body ECU controls the on/off and fade-in/fade-out operation of the following parts.
- Room light
- Map light
- Foot light
- Ignition key cylinder light*1 or transponder key amplifier*2

HINT:
*1: w/o Engine immobiliser system
*2: w/ Engine immobiliser system

(b) Battery saver system:

When the ignition switch is turned off and any of the doors is open continuously for 20 minutes, the main body ECU turns the illumination operation signal off. As a result, the room light, map light, foot light and ignition key cylinder lights*1 or transponder key amplifier*2 turn off.

HINT:
*1: w/o Engine immobiliser system
*2: w/ Engine immobiliser system

(1) The main body ECU receives the following signals (B).
- Door courtesy switch signal
- Ignition switch signal

(2) The main body ECU controls the following signal based on the signals listed in B (C).
- Illumination operation signal

(3) The main body ECU controls the illumination period of the following parts based on the signals listed in C.
- Room light
- Map light
- Foot light
- Ignition key cylinder light*1 or transponder key amplifier*2

HINT:
*1: w/o Engine immobiliser system

*2: w/ Engine immobiliser system

(c) Manual light control system:
This system functions when lights such as the headlights and taillights are illuminated by manual operation of the light control switch.
(1) The main body ECU receives the following signals (D).
- Light control switch signal
- Headlight dimmer switch signal
- Front fog light switch signal

(2) The main body ECU controls the following signals based on the signals listed in D (E).
- Headlight relay operation signal
- Taillight relay operation signal
- Daytime running light No. 2 relay operation signal
- Daytime running light No. 3 relay operation signal
- Daytime running light No. 4 relay operation signal
- Front fog light relay operation signal

(3) The main body ECU controls the on/off operation of the following parts based on the signals listed in E.
- Headlight (LOW)
- Headlight (HIGH)
- Side marker light (front and rear)
- Front fog light

(d) Light auto turn off system:
When the headlights and taillights are illuminated by the operation of the light control switch, if the ignition switch is turned OFF, this system continues illuminating the headlights and taillights for approximately 30 seconds, and then turns off the lights. However, when all the doors are locked manually, using the door lock button, using the key or pressing LOCK on the transmitter turns the headlights and taillights off immediately.
(1) The main body ECU receives the following signals (F).
- Door courtesy switch signal
- Ignition switch signal

(2) The main body ECU controls the following signals based on the signals listed in F (G).
- Headlight relay operation signal
- Taillight relay operation signal
- Daytime running light No. 2 relay operation signal
- Daytime running light No. 3 relay operation signal
- Daytime running light No. 4 relay operation signal
- Front fog light relay operation signal

(3) The main body ECU controls the illumination period of the following parts based on the signals listed in G.
- Headlight (LOW)
- Headlight (HIGH)
- Side marker light (front and rear)
- Front fog light

(e) Daytime running light system:
This system is directly connected to the high-beam headlights and is designed to automatically activate the daytime running lights in order to increase the visibility of the vehicle.

(1) The main body ECU receives the following (H).
- Ignition switch signal
- Engine speed
- Parking brake switch signal
- Light control switch signal

(2) The main body ECU controls the following signal based on the signals listed in H (I).
- Daytime running light No. 2 relay operation signal

(3) The main body ECU controls the on/off operation of the following part based on the signal listed in I.
- Headlight (HIGH)

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the lighting system.
- *: Use the intelligent tester.

1 **VEHICLE BROUGHT TO WORKSHOP**

NEXT

2 **INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 **REFER TO PROBLEM SYMPTOMS TABLE**

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **Go to step 5**

A

4 **OVERALL ANALYSIS AND TROUBLESHOOTING***

(a) DATA LIST / ACTIVE TEST (See page LI-22)
(b) Terminals of ECU (See page LI-19)

NEXT

5 **ADJUST, REPAIR OR REPLACE**

NEXT

6 **CONFIRMATION TEST**

END

OPERATION CHECK

1. ILLUMINATED ENTRY SYSTEM OPERATION CHECK

(a) The illuminated entry system controls the following lights:
- Ignition key cylinder light*1 or transponder key amplifier*2
- Foot light
- Map light and room light

HINT:
*1: w/o Engine immobiliser system
*2: w/ Engine immobiliser system

(b) Check that the lights come on when unlocking any of the doors that are closed and locked with the ignition switch OFF. Then check that the lights fade out under the following conditions:
(1) Leave the doors unlocked for 15 seconds.
(2) Turn the ignition switch ACC or ON.
(3) Lock all the doors.

(c) Check that the lights stay on for at least 15 seconds after opening any of the doors before fading out. Then check that the lights fade out 15 seconds after closing all the doors.

(d) Check that the lights stay lit after turning the ignition switch OFF with all the doors closed and the ignition switch in the ACC or ON position. Then check that the lights fade out under the following conditions:
(1) Leave the doors unlocked for 15 seconds.
(2) Turn the ignition switch ACC or ON.
(3) Lock all the doors.

(e) Check that the lights stay on for at least 15 seconds after opening any of the doors. Then check that the lights fade out 15 seconds after closing all the doors.

(f) Check that the lights come on when opening any of the doors and fade out when closing and locking all the doors or turning the ignition switch to the ACC or ON position.

2. FOOT LIGHT OPERATION CHECK

(a) Check that the lights come on when unlocking any of the doors that are closed and locked with the ignition switch OFF. Then check that the lights fade out under the following conditions:
(1) Leave the doors unlocked for 15 seconds.
(2) Lock all the closed doors and turn the ignition switch OFF.

(b) Check that the lights stay on for at least 15 seconds under the following conditions before going off.
(1) Turn the ignition switch to the ON position, and move the shift lever to the P position.
(2) Open any of the doors.

(c) Check that the lights dim before going off when turning the ignition switch ON and shifting the shift lever into any position other than P.

(d) Check the conditions below before the lights go off.
(1) The lights dim when shifting the shift lever into a position other than P and closing all the doors with the ignition switch ON.
(2) The lights come on for 15 seconds and fade out when shifting the shift lever into the P position and closing all the doors with the ignition switch OFF.
(e) Check that the lights come on after opening any of the doors.
(f) Check that the lights fade out 15 seconds after closing all the doors, or locking all the doors.
(g) Check that the lights come on gradually with the ignition switch ON and the shift lever in the P position.
(h) Check that the lights dim when shifting the shift lever from P into another position with all the doors closed.
(i) Check that the lights stay dimmed with the ignition switch ON and the shift lever in a position other than P.

3. BATTERY SAVER OPERATION CHECK

(a) Turn the ignition switch OFF and close all the doors.
(b) Open any door to turn the room light on, and leave it open. Check that the light goes off after about 20 minutes.
(c) After the room light goes off, close the driver's door.
(d) Open any door to turn the room light on, and then open another door. Check that the room light goes off within 20 minutes after opening the doors.
(e) Close all the doors. Open any door to turn the room light on. Check that the room light goes off within 20 minutes.

4. LIGHT AUTO TURN OFF OPERATION CHECK

(a) Turn the ignition switch ON, and turn the light control switch to the TAIL or HEAD position.
(b) Turn the ignition switch OFF and open the driver's door, and check that the headlights go off after about 30 seconds.
(c) Turn the ignition switch to the ON position, and turn the light control switch to the TAIL or HEAD position.
(d) Turn the ignition switch OFF and open the driver's door. Before the headlight goes off after about 30 seconds, lock all the doors and press the LOCK switch on the wireless transmitter. Check that the headlights go off immediately.

5. DAYTIME RUNNING LIGHT OPERATION CHECK

(a) Check that the headlights come on when the light control switch is off with the engine running and the parking brake released. Then check that the lights go off under the following conditions:
(1) Turn the light control switch to the TAIL or HEAD position.

(2) Turn the ignition switch OFF. Check that the headlights go off immediately.

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Illuminated entry

Display (Item)	Default	Contents	Setting
LIGHTING TIME (Lighting Time)	15 seconds	Changes illumination duration after door closure. (It will quickly fade out in case of turning ignition switch ON.)	7.5/15/30 (seconds)
I/L ON /ACC OFF (Room light illuminates when ignition switch turned OFF)	ON	Illuminates light when ignition switch turned to ACC. (Room light illuminated when interior light switch in DOOR position)	ON/OFF
I/L ON / UNLOCK (Room light illuminates when door key unlocked.)	ON	Function to light up room light when unlocking with door key cylinder. (Room light illuminated when interior light switch in DOOR position)	ON/OFF
LIGHT CONTROL	ON	Function to light up foot light when ignition switch is ON and shift position is not P.	ON/OFF

Light control (USA)

Display (Item)	Default	Contents	Setting
DRL FUNCTION	ON	Daytime running light function ON or OFF.	ON/OFF

HINT:
Sensitivity adjustments are difficult to confirm. Check by driving the customer's vehicle.

PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Headlight and taillight system

Symptom	Suspected area	See page
"Low beam" does not comes on (One side).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. Bulb	LI-31
	3. Light control switch circuit	LI-62
	4. Headlight relay circuit	LI-28
	5. Instrument panel junction block	LI-19
"Low beam" does not come on (Both sides).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. Bulb	LI-31
	3. Light control switch circuit	LI-62
	4. Headlight relay circuit	LI-28
	5. Instrument panel junction block	LI-19
"High beam" does not come on (One side).	1. HEAD LH fuse, HEAD RH fuse	LI-41
	2. HEAD RL fuse	LI-31
	3. Bulb	LI-42
	4. Light control switch circuit	LI-62
	5. Headlight (Hi-beam) circuit	LI-37
	6. Instrument panel junction block	LI-19
"High beam" does not come on (Both sides).	1. HEAD LH fuse, HEAD RH fuse	LI-41
	2. HEAD RL fuse	LI-31
	3. Bulb	LI-42
	4. Light control switch circuit	LI-62
	5. Headlight (Hi-beam) circuit	LI-37
	6. Instrument panel junction block	LI-19
"Low beam" and "High beam" do not come on (One side).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. HEAD LH fuse, HEAD RH fuse	LI-41
	3. Bulb (high)	LI-42
	4. Bulb (low)	LI-31
	5. Light control switch circuit	LI-62
	6. Headlight relay circuit	LI-28
	7. Headlight (Hi-beam) circuit	LI-37
	8. Instrument panel junction block	LI-19
"Low beam" and "High beam" do not come on (Both sides).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. HEAD LH fuse, HEAD RH fuse	LI-41
	3. Bulb (high)	LI-42
	4. Bulb (low)	LI-31
	5. Light control switch circuit	LI-62
	6. Headlight relay circuit	LI-28
	7. Headlight (Hi-beam) circuit	LI-37
	8. Instrument panel junction block	LI-19
"Flash" does not come on (Low beam and Hi-beam are normal).	1. Light control switch circuit	LI-62
	2. Instrument panel junction block	LI-19

Symptom	Suspected area	See page
Headlight is dark.	1. Bulb	-
	2. Wire harness	-
Taillight does not come on (All).	1. TAIL fuse	LI-87
	2. Light control switch circuit	LI-62
	3. Taillight relay circuit	LI-83
	4. Instrument panel junction block	LI-19
Only one front side marker light comes on.	1. Bulb	LI-90
	2. Wire harness	LI-90
Only one taillight comes on.	1. Rear combination light	LI-107
	2. Wire harness	LI-91
Only one rear side marker light comes on.	1. Bulb	LI-92
	2. Wire harness	LI-92
Daytime running light system does not operate.	1. Light control switch circuit	LI-62
	2. CAN communication line	CA-58
	3. Parking brake switch circuit	PB-14
	4. Daytime running light relay circuit	LI-33
	5. Instrument panel junction block	LI-19

Light auto turn off system

Symptom	Suspected area	See page
Light auto turn off system does not operate.	1. Light control switch circuit	LI-62
	2. Ignition switch	ST-18
	3. Door courtesy switch circuit	LI-66
	4. Instrument panel junction block	LI-19

Fog light system

Symptom	Suspected area	See page
Front fog light does not come on with light control switch in TAIL or HEAD position.	1. FF FOG fuse	LI-48
	2. Front fog light relay	LI-49
	3. Light control switch circuit	LI-62
	4. Front fog light circuit	LI-45
	5. Instrument panel junction block	LI-19
Only one front fog light does not come on.	1. Bulb	LI-48
	2. Wire harness	LI-45

Turn signal and hazard warning system

Symptom	Suspected area	See page
"Hazard" and "Turn" do not come on.	1. HAZ fuse	LI-59
	2. ECU-IG2 fuse	LI-53
	3. Ignition switch	ST-18
	4. Turn signal flasher relay	LI-145
	5. Wire harness	-
Hazard warning light does not come on (Turn is normal).	1. Hazard warning switch	LI-60
	2. Wire harness	LI-56
Turn signal does not come on (Hazard is normal).	1. Headlight dimmer switch (turn signal switch)	LI-54
	2. Wire harness	LI-50
Turn signal does not come on in one direction.	1. Headlight dimmer switch (turn signal switch)	LI-54
	2. Wire harness	LI-50
Only one bulb does not come on.	1. Bulb	LI-56
	2. Wire harness	LI-50

Stop light system

Symptom	Suspected area	See page
Stop light does not operate (All).	1. STOP fuse	LI-26
	2. BRK relay	LI-151
	3. Stop light switch	BR-13
	4. Wire harness	LI-24
Only one stop light does not operate.	1. Rear combination light	LI-107
	2. Wire harness	LI-24

Illuminated entry system

Symptom	Suspected area	See page
Illuminated entry of multiplex network body ECU control does not operate (All).	1. Ignition switch	ST-18
	2. Door lock position circuit	LI-70
	3. Door courtesy switch circuit	LI-66
	4. Illumination circuit	LI-75
	5. Instrument panel junction block	LI-19

Foot light system

Symptom	Suspected area	See page
Step light of body ECU control does not operate.	1. Ignition switch	ST-18
	2. Door lock position switch	LI-70
	3. Door courtesy switch circuit	LI-66
	4. Footwell light circuit	LI-73
	5. Instrument panel junction block	LI-19

Others

Symptom	Suspected area	See page
Vanity light does not operate.	1. Bulb	LI-127
	2. Vanity light switch	LI-128
	3. Wire harness	-
Back-up light does not come on (All).	1. GAUGE1 fuse	LI-61
	2. Park / neutral position switch	AX-108
	3. Wire harness	LI-59
Back door courtesy light does not come on.	1. Bulb	LI-122
	2. DOME fuse	-
	3. Back door courtesy switch	LI-143
	4. Wire harness	-
Center console illumination does not come on.	1. Center console light	LI-130
	2. Wire harness	-

PROBLEM SYMPTOMS TABLE

(2006/01-)

HINT:

Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Headlight and taillight system

Symptom	Suspected Area	See page
"Low beam" does not comes on (One side).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. Bulb	LI-31
	3. Light control switch circuit	LI-62
	4. Headlight relay circuit	LI-28
	5. Instrument panel junction block	LI-19
"Low beam" does not come on (Both sides).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. Bulb	LI-31
	3. Light control switch circuit	LI-62
	4. Headlight relay circuit	LI-28
	5. Instrument panel junction block	LI-19
"High beam" does not come on (One side).	1. HEAD LH fuse, HEAD RH fuse	LI-41
	2. HEAD RL fuse	LI-31
	3. Bulb	LI-42
	4. Light control switch circuit	LI-62
	5. Headlight (Hi-beam) circuit	LI-37
	6. Instrument panel junction block	LI-19
"High beam" does not come on (Both sides).	1. HEAD LH fuse, HEAD RH fuse	LI-41
	2. HEAD RL fuse	LI-31
	3. Bulb	LI-42
	4. Light control switch circuit	LI-62
	5. Headlight (Hi-beam) circuit	LI-37
	6. Instrument panel junction block	LI-19
"Low beam" and "High beam" do not come on (One side).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. HEAD LH fuse, HEAD RH fuse	LI-41
	3. Bulb (high)	LI-42
	4. Bulb (low)	LI-31
	5. Light control switch circuit	LI-62
	6. Headlight relay circuit	LI-28
	7. Headlight (Hi-beam) circuit	LI-37
	8. Instrument panel junction block	LI-19
"Low beam" and "High beam" do not come on (Both sides).	1. HEAD LL fuse, HEAD RL fuse	LI-31
	2. HEAD LH fuse, HEAD RH fuse	LI-41
	3. Bulb (high)	LI-42
	4. Bulb (low)	LI-31
	5. Light control switch circuit	LI-62
	6. Headlight relay circuit	LI-28
	7. Headlight (Hi-beam) circuit	LI-37
	8. Instrument panel junction block	LI-19
"Flash" does not come on (Low beam and Hi-beam are normal).	1. Light control switch circuit	LI-62
	2. Instrument panel junction block	LI-19

Symptom	Suspected Area	See page
Headlight is dark.	1. Bulb	-
	2. Wire harness	-
Taillight does not come on (All).	1. TAIL fuse	LI-87
	2. Light control switch circuit	LI-62
	3. Taillight relay circuit	LI-83
	4. Instrument panel junction block	LI-19
Only one front side marker light comes on.	1. Bulb	LI-90
	2. Wire harness	LI-90
Only one taillight comes on.	1. Rear combination light	LI-107
	2. Wire harness	LI-91
Only one rear side marker light comes on.	1. Bulb	LI-92
	2. Wire harness	LI-92
Daytime running light system does not operate.	1. Light control switch circuit	LI-62
	2. CAN communication line	CA-60
	3. Parking brake switch circuit	PB-14
	4. Daytime running light relay circuit	LI-33
	5. Instrument panel junction block	LI-19

Light auto turn off system

Symptom	Suspected Area	See page
Light auto turn off system does not operate.	1. Light control switch circuit	LI-62
	2. Ignition switch	ST-18
	3. Door courtesy switch circuit	LI-66
	4. Instrument panel junction block	LI-19

Fog light system

Symptom	Suspected Area	See page
Front fog light does not come on with light control switch in TAIL or HEAD position.	1. FF FOG fuse	LI-48
	2. Front fog light relay	LI-49
	3. Light control switch circuit	LI-62
	4. Front fog light circuit	LI-45
	5. Instrument panel junction block	LI-19
Only one front fog light does not come on.	1. Bulb	LI-48
	2. Wire harness	LI-45

Turn signal and hazard warning system

Symptom	Suspected Area	See page
"Hazard" and "Turn" do not come on.	1. HAZ fuse	LI-59
	2. ECU-IG2 fuse	LI-53
	3. Ignition switch	ST-18
	4. Turn signal flasher relay	LI-145
	5. Wire harness	-
Hazard warning light does not come on (Turn is normal).	1. Hazard warning switch	LI-60
	2. Wire harness	LI-56
Turn signal does not come on (Hazard is normal).	1. Headlight dimmer switch (turn signal switch)	LI-54
	2. Wire harness	LI-50
Turn signal does not come on in one direction.	1. Headlight dimmer switch (turn signal switch)	LI-54
	2. Wire harness	LI-50
Only one bulb does not come on.	1. Bulb	LI-56
	2. Wire harness	LI-50

Stop light system

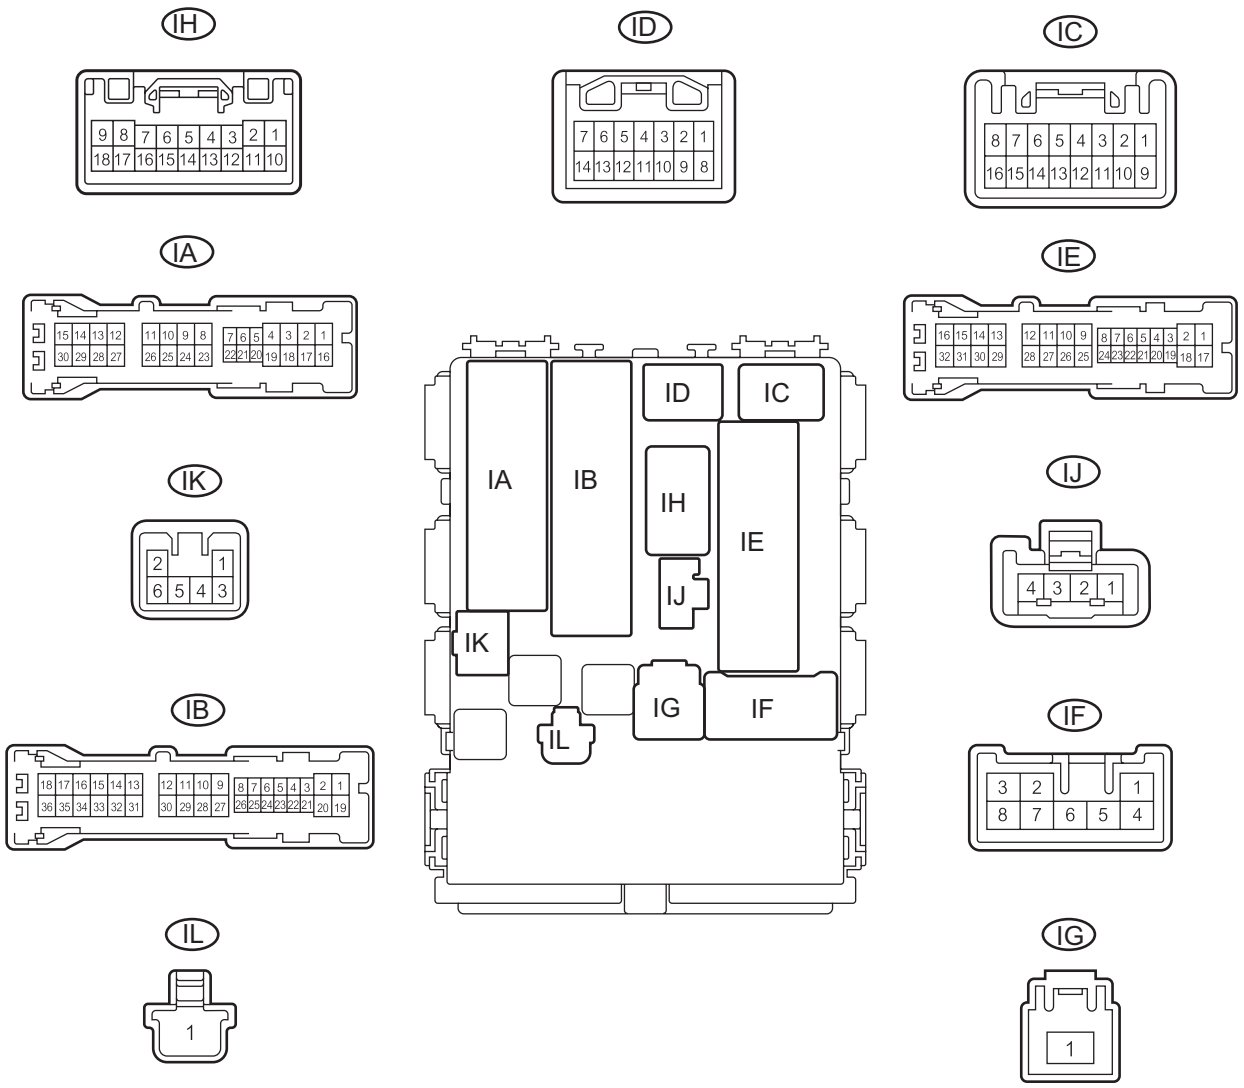
Symptom	Suspected Area	See page
Stop light does not operate (All).	1. STOP fuse	LI-26
	2. BRK relay	LI-151
	3. Stop light switch	BR-13
	4. Wire harness	LI-24
Only one stop light does not operate.	1. Rear combination light	LI-107
	2. Wire harness	LI-24

Illuminated entry system

Symptom	Suspected Area	See page
Illuminated entry of multiplex network body ECU control does not operate (All).	1. Ignition switch	ST-18
	2. Door lock position circuit	LI-70
	3. Door courtesy switch circuit	LI-66
	4. Illumination circuit	LI-75
	5. Instrument panel junction block	LI-19

Foot light system

Symptom	Suspected Area	See page
Step light of body ECU control does not operate.	1. Ignition switch	ST-18
	2. Door lock position switch	LI-70
	3. Door courtesy switch circuit	LI-66
	4. Footwell light circuit	LI-73
	5. Instrument panel junction block	LI-19



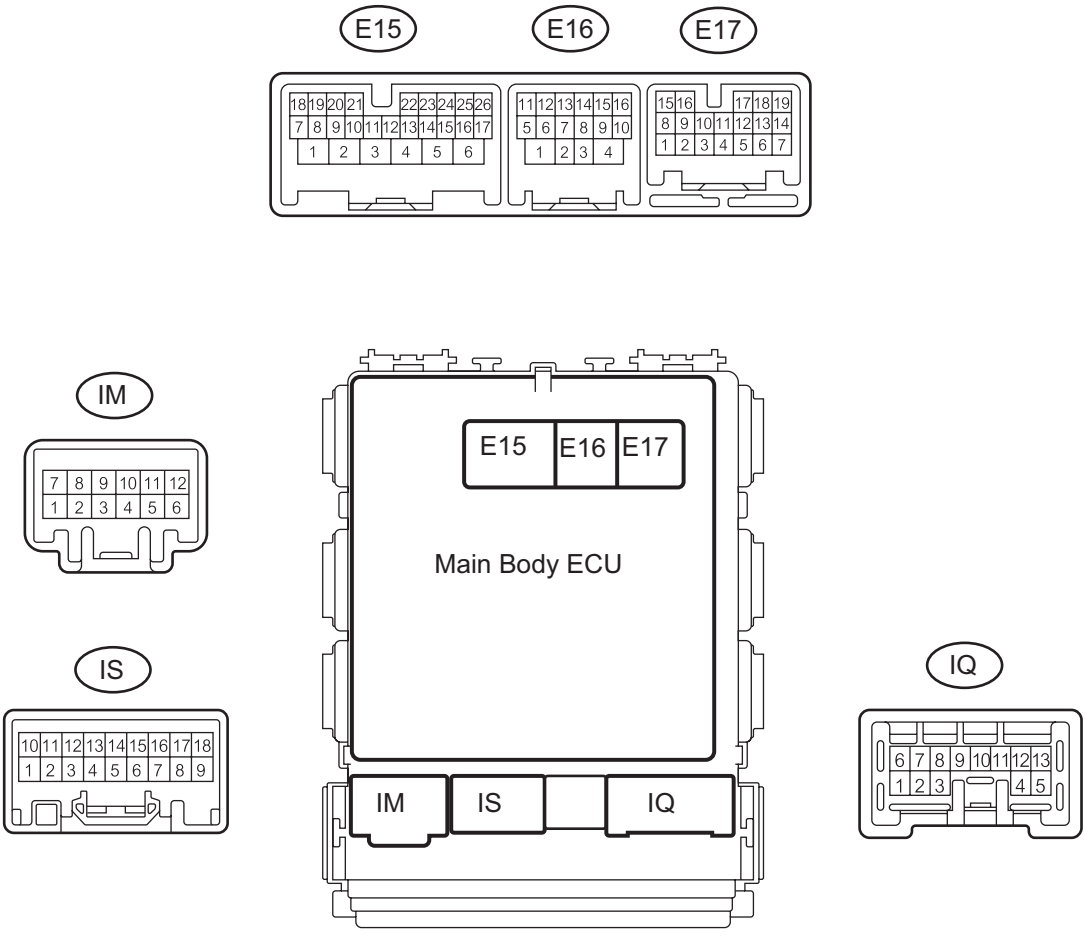
Others

Symptom	Suspected Area	See page
Vanity light does not operate.	1. Bulb	LI-127
	2. Vanity light switch	LI-128
	3. Wire harness	-
Back-up light does not come on (All).	1. GAUGE1 fuse	LI-61
	2. Park / neutral position switch	AX-108
	3. Wire harness	LI-59
Back door courtesy light does not come on.	1. Bulb	LI-122
	2. DOME fuse	-
	3. Back door courtesy switch	LI-143
	4. Wire harness	-
Center console illumination does not come on.	1. Center console light	LI-130
	2. Wire harness	-

TERMINALS OF ECU

1. CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Instrument Panel Junction Block (Front View)

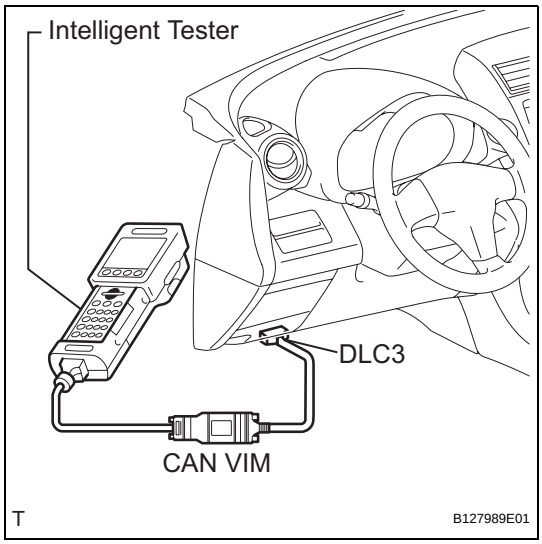


H

E114510E26

LI

Instrument Panel Junction Block (Rear View)



(a) Measure the voltage of the connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
HRLY (E15-20) - GND1 (IE-17)	BR - W-B	Headlight Relay (HEAD signal)	Light control switch is OFF or TAIL	10 to 14 V
HRLY (E15-20) - GND1 (IE-17)	BR - W-B	Headlight Relay (HEAD signal)	Light control switch is HEAD	Below 1 V
DIM (E16-3) - GND1 (IE-17)	LG - W-B	Daytime running light Relay (High beam signal)	Light control switch is HEAD	Below 1 V
DIM (E16-3) - GND1 (IE-17)	LG - W-B	Daytime running light Relay (High beam signal)	Light control switch is HEAD	10 to 14 V
TAIL (E15-21) - GND1 (IE-17)	W - W-B	Taillight relay (TAIL signal)	Light control switch is OFF	Below 1 V
TAIL (E15-21) - GND1 (IE-17)	W - W-B	Taillight relay (TAIL signal)	Light control switch is TAIL	10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ILE (IK-2) - GND1 (IE-17)	W - W-B	Illumination signal	• Room light switch position is DOOR • Door closed	10 to 14 V
ILE (IK-2) - GND1 (IE-17)	W - W-B	Illumination signal	• Room light switch position is DOOR • Door open	Below 1 V
FSPT (E15-2) - GND1 (IE-17)	V - W-B	Foot light illumination (Illumination signal)	Foot light illumination OFF	10 to 14 V
FSPT (E15-2) - GND1 (IE-17)	V - W-B	Foot light illumination (Illumination signal)	Foot light illumination ON	Below 1 V
HU (IJ-4) - GND1 (IE-17)	O - W-B	Headlight dimmer switch (HIGH signal)	Light control switch is HEAD Headlight dimmer switch is LOW	10 to 14 V
HU (IJ-4) - GND1 (IE-17)	O - W-B	Headlight dimmer switch (HIGH signal)	Light control switch is HEAD Headlight dimmer switch is HIGH	Below 1 V
LCTY (E15-8) - GND1 (IE-17)	SB - W-B	Courtesy switch (Rear left door circuit)	Rear left door is closed	Below 1 V
LCTY (E15-8) - GND1 (IE-17)	SB - W-B	Courtesy switch (Rear left door circuit)	Rear left door is open	10 to 14 V
FFGO (E17-17) - GND1 (IE-17)	G - W-B	Front fog relay (Front fog circuit)	Front fog light is OFF	10 to 14 V
FFGO (E17-17) - GND1 (IE-17)	G - W-B	Front fog relay (Front fog circuit)	Front fog light is ON	Below 1 V
DCTY (IA-21) - GND1 (IE-17)	W - W-B	Courtesy switch (Front left door circuit)	Front left door is open	Below 1 V
DCTY (IA-21) - GND1 (IE-17)	W - W-B	Courtesy switch (Front left door circuit)	Front left door is closed	10 to 14 V
RRCY (ID-7) - GND1 (IE-17)	LG - W-B	Courtesy switch (Rear right door circuit)	Rear right door is open	Below 1 V
RRCY (ID-7) - GND1 (IE-17)	LG - W-B	Courtesy switch (Rear right door circuit)	Rear right door is closed	10 to 14 V
HF (E15-22) - GND1 (IE-17)	R - W-B	Headlight dimmer switch (FLASH signal)	Headlight dimmer switch is OFF	10 to 14 V
HF (E15-22) - GND1 (IE-17)	R - W-B	Headlight dimmer switch (FLASH signal)	Headlight dimmer switch is FLASH	Below 1 V
FFOG (E17-13) - GND1 (IE-17)	GR - W-B	Front fog light switch (Front fog light signal)	Light control switch is TAIL Fog light switch is OFF	10 to 14 V
FFOG (E17-13) - GND1 (IE-17)	GR - W-B	Front fog light switch (Front fog light signal)	Light control switch is TAIL Fog light switch is ON	Below 1 V
PCTY (IC-14) - GND1 (IE-17)	BR - W-B	Courtesy switch (Front right door circuit)	Front right door is open	Below 1 V
PCTY (IC-14) - GND1 (IE-17)	BR - W-B	Courtesy switch (Front right door circuit)	Front right door is closed	10 to 14 V
BCTY (IA-7) - GND1 (IE-17)	LG - W-B	Courtesy switch (Back door)	Back door is open	Below 1 V
BCTY (IA-7) - GND1 (IE-17)	LG - W-B	Courtesy switch (Back door)	Back door is closed	10 to 14 V
LSWP (E15-10) - GND1 (IE-17)	Y - W-B	Door lock position switch (Front right door)	Front right door is in unlock position	10 to 14 V
LSWP (E15-10) - GND1 (IE-17)	Y - W-B	Door lock position switch (Front right door)	Front right door is in lock position	Below 1 V
LSWD (E15-25) - GND1 (IE-17)	Y - W-B	Door lock position switch (Front left door)	Front left door is in unlock position	10 to 14 V
LSWD (E15-25) - GND1 (IE-17)	Y - W-B	Door lock position switch (Front left door)	Front left door is in lock position	Below 1 V

If the result is not as specified, the junction block (main body ECU) may have a malfunction.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST according to the display on the tester.

Main body ECU

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
ACC SW	ACC switch signal / ON or OFF	ON: Ignition switch is in ACC, ON or START position OFF: Ignition switch is in OFF position	-
IG SW	IG switch signal / ON or OFF	ON: Ignition switch is in ON or START position OFF: Ignition switch is in OFF or ACC position	-
D DOR CTY SW	Driver's door courtesy switch signal / ON or OFF	ON: Driver's door is open OFF: Driver's door is closed	-
D LOCK POS SW	Driver's door lock position switch signal / ON or OFF	ON: Door lock is in unlock position OFF: Door lock is in lock position	-
P DOR CYT SW	Passenger's door courtesy switch signal / ON or OFF	ON: Front passenger's door is open OFF: Front passenger's door is closed	-
P LOCK POS SW	Front passenger's door lock position switch signal / ON or OFF	ON: Front passenger's door lock is in unlock position OFF: Front passenger's door lock is in lock position	-
RR DOR CTY SW	Rear door RH courtesy switch signal / ON or OFF	ON: Right rear door is open OFF: Right rear door is closed	-
DIMMER SW	Headlight dimmer switch signal / ON or OFF	ON: Headlight dimmer switch is in HI or FLASH position OFF: Headlight dimmer switch is in LO position	-
HIGH FLASHER SW	Headlight dimmer switch signal / ON or OFF	ON: Headlight dimmer switch is in FLASH position OFF: Headlight dimmer switch is in except FLASH position	-
F FOG LIGHT SW	Front fog light switch signal / ON or OFF	ON: Front fog light switch is ON position OFF: Front fog light switch is OFF position	-
HEAD LIGHT SW	Headlight control switch signal / ON or OFF	ON: Light control switch is in HEAD position OFF: Light control switch is in except HEAD position	-

Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
TAIL LIGHT SW	Taillight switch signal / ON or OFF	ON: Light control switch is in TAIL or HEAD position OFF: Light control switch is in OFF position	-
RL DOR CTY SW	Rear door LH courtesy switch signal / ON or OFF	ON: Left rear door is open OFF Left rear door is closed	-
BK DOR CTY SW	Back door courtesy switch signal / ON or OFF	ON: Back door is open OFF: Back door is closed	-

2. PERFORM ACTIVE TEST

HINT:

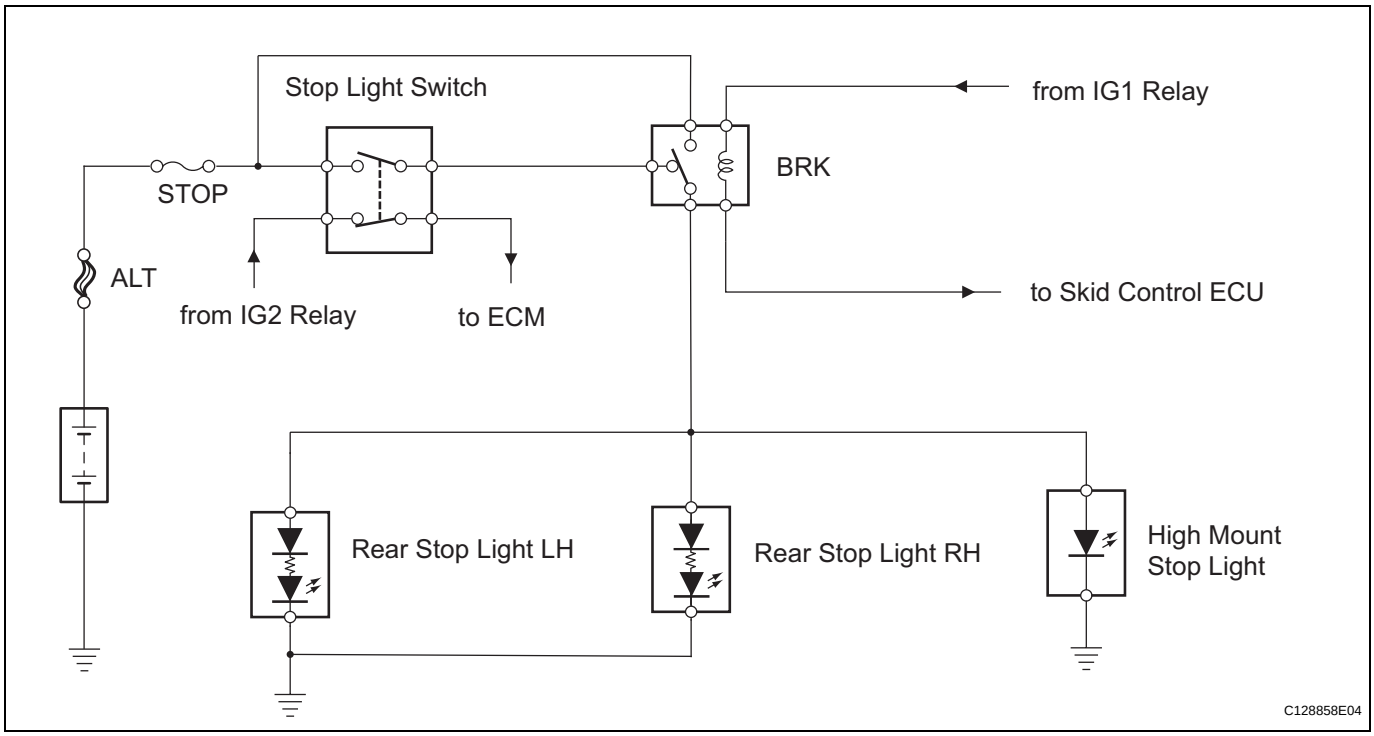
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Perform the ACTIVE TEST by following the directions on the tester screen.

Main body ECU



Item	Test Details	Diagnostic Note
HAZARD	Turn hazard light flasher relay ON / OFF	-
F FOG LIGHT RLY	Turn front fog light relay ON / OFF	-
HEAD LIGHT	Turn headlight relay ON / OFF	-
HEAD LIGHT (HI)	Turn headlight dimmer relay (Headlight dimmer switch HI position) ON / OFF	-
TAIL LIGHT	Turn taillight relay ON / OFF	-
ILLUMI OUTPUT	Test Details: Turn interior light and key illumination ON / OFF Vehicle Condition: Interior light switch is in DOOR position and all doors are closed	-
STEP LIGHT	Foot light illumination ON / OFF	-

Stop Light Switch Circuit

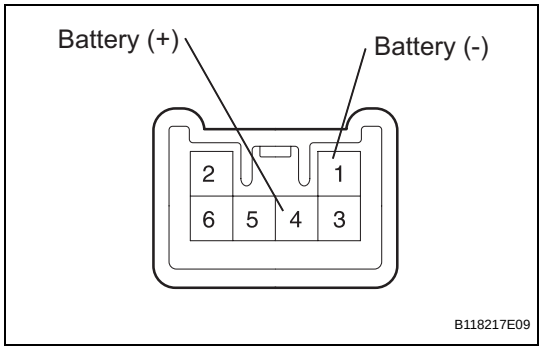
DESCRIPTION

When the stop light switch is turned on, current flows to the stop lights to illuminate them.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (STOP)



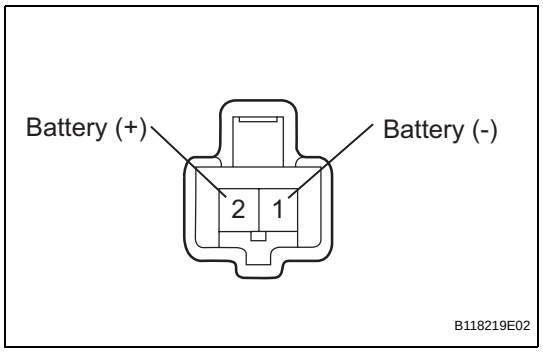
(a) Remove the STOP fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

LI

2 INSPECT STOP LIGHT (REAR COMBINATION LIGHT)

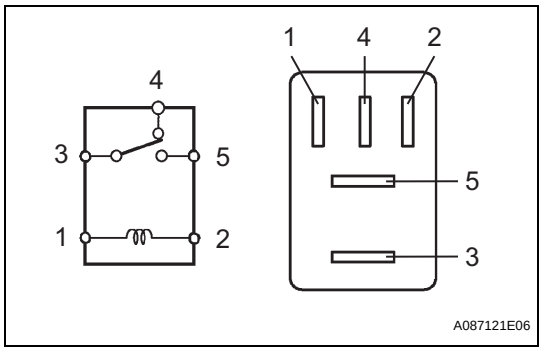


(a) Remove the rear combination light.
(b) Connect the positive (+) lead from the battery to terminal 4 and the negative (-) lead to terminal 1, then check that the light comes on.
OK:
Light comes on.

NG → **REPLACE REAR COMBINATION LIGHT**

OK

3 INSPECT REAR STOP LIGHT (HIGH MOUNT STOP LIGHT)



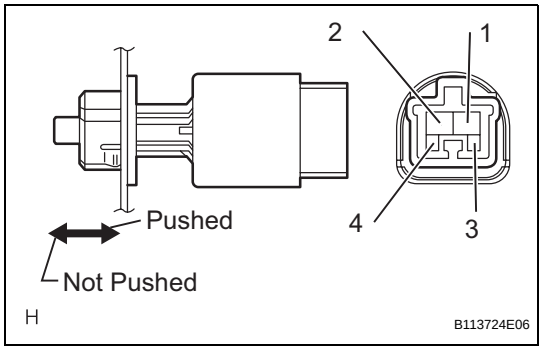
(a) Remove the high mount stop light assembly.
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the light comes on.
OK:
Light comes on

NG → **REPLACE HIGH MOUNT STOP LIGHT ASSEMBLY**

OK

4 INSPECT BRK RELAY

(a) Remove the BRK relay from the engine room No. 1 relay block.
(b) Measure the resistance of the relay.
Standard resistance



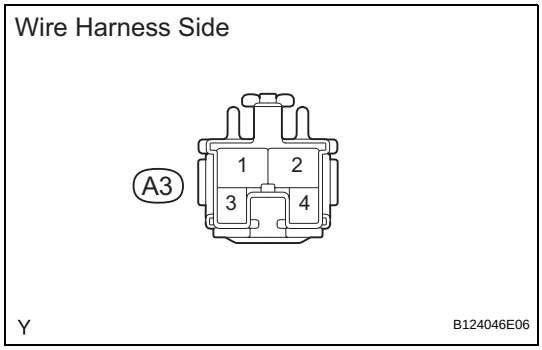
Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 4	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

NG → **REPLACE BRK RELAY**

OK

LI

5 INSPECT STOP LIGHT SWITCH



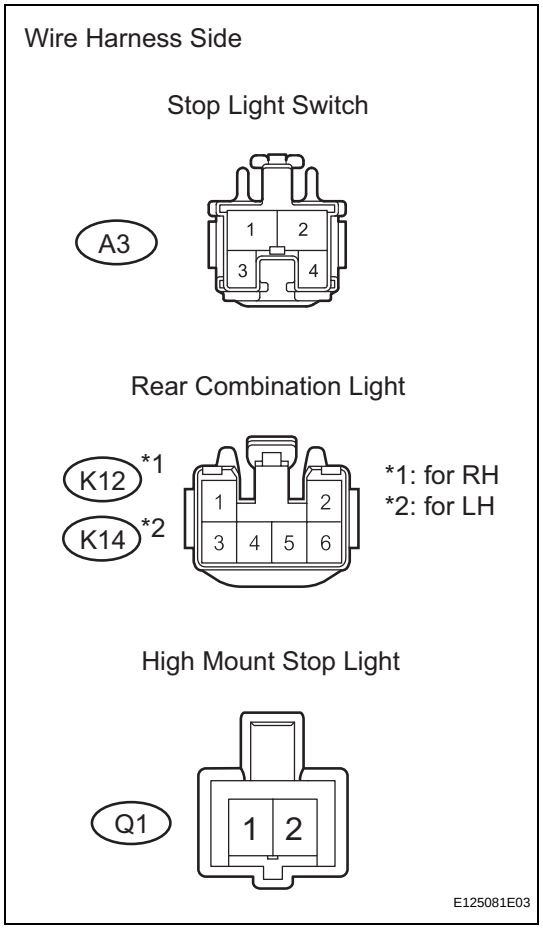
(a) Remove the stop light switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
3 - 4	Switch pin pushed	10 kΩ or higher
1 - 2	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin not pushed	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH**

OK

6 CHECK WIRE HARNESS (STOP LIGHT SWITCH - BATTERY)



(a) Disconnect the A3 stop light switch connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
A3-2 - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7	CHECK WIRE HARNESS (STOP LIGHT SWITCH - REAR STOP LIGHT)

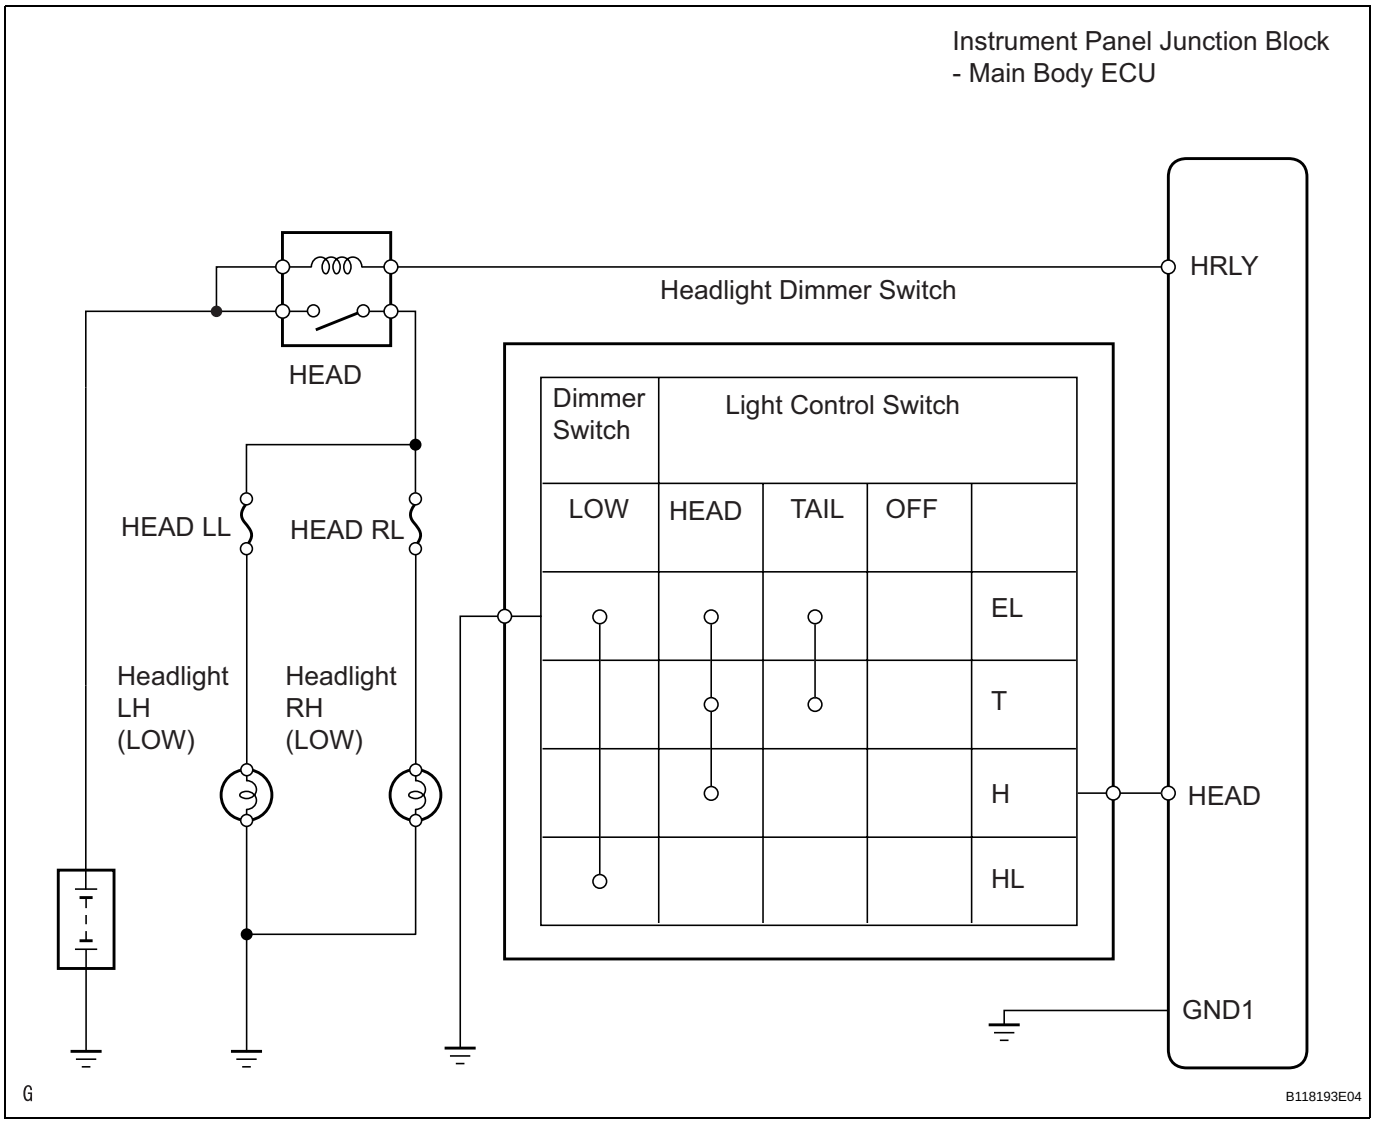
(a) Disconnect the A3 stop light switch connector.
(b) Disconnect the K12 and K14 rear combination light connectors.
(c) Disconnect the Q1 high mount stop light connector.
(d) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
A3-1 - K12-4	Below 1 Ω
A3-1 or K12-4 - Body ground	10 kΩ or higher
A3-1 - K14-4	Below 1 Ω
A3-1 or K14-4 - Body ground	10 kΩ or higher
A3-1 - Q1-2	Below 1 Ω
A3-1 or Q1-2 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (REAR STOP LIGHT - BODY GROUND)

Headlight Relay Circuit

DESCRIPTION

When the light control switch, located on the headlight dimmer switch, is turned to the HEAD position, the HEAD relay illuminates the headlights.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (HEADLIGHT)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

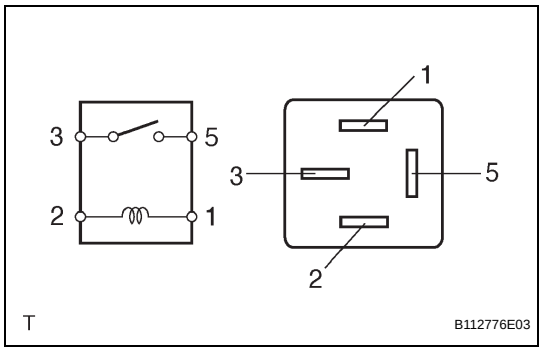
Main body ECU

Item	Test Details: Display (Range)	Diagnostic Note
HEAD LIGHT	Headlight Relay ON/OFF	-

OK:
Headlight comes on

OK → **Go to step 7**

NG



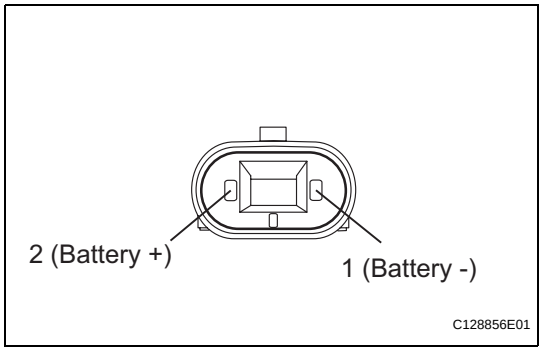
2 INSPECT FUSE (HEAD LL, HEAD RL)

(a) Remove the HEAD LL fuse and HEAD RL fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 INSPECT HEADLIGHT RELAY (Marking: HEAD)



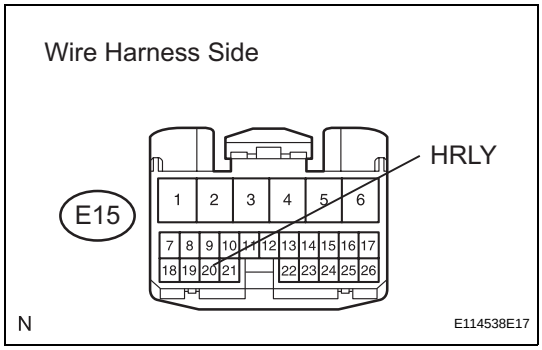
(a) Remove the headlight relay from the engine room No. 2 relay block.
(b) Measure the resistance of the relay.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

NG → **REPLACE HEADLIGHT RELAY**

OK

4 INSPECT BULB (HEADLIGHT BULB)



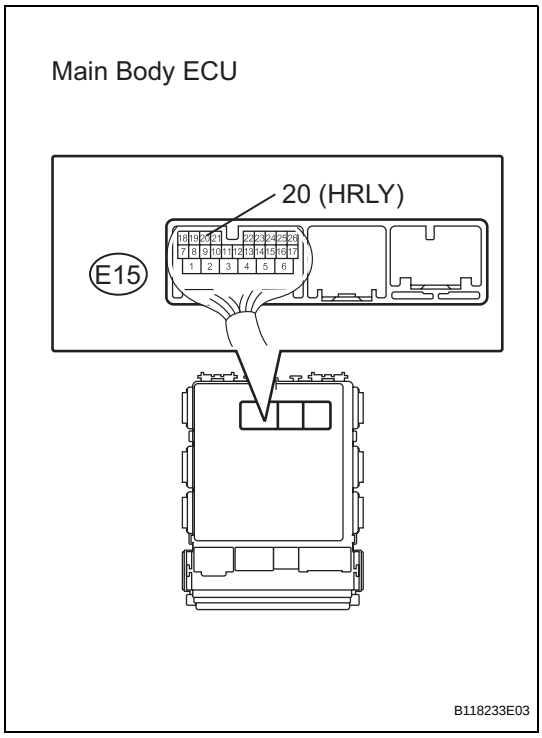
(a) Remove the headlight bulbs (LOW).
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the bulb illuminates.
OK:
Bulb illuminates.

NG → **REPLACE BULB**

LI

OK

5 CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E15 main body ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

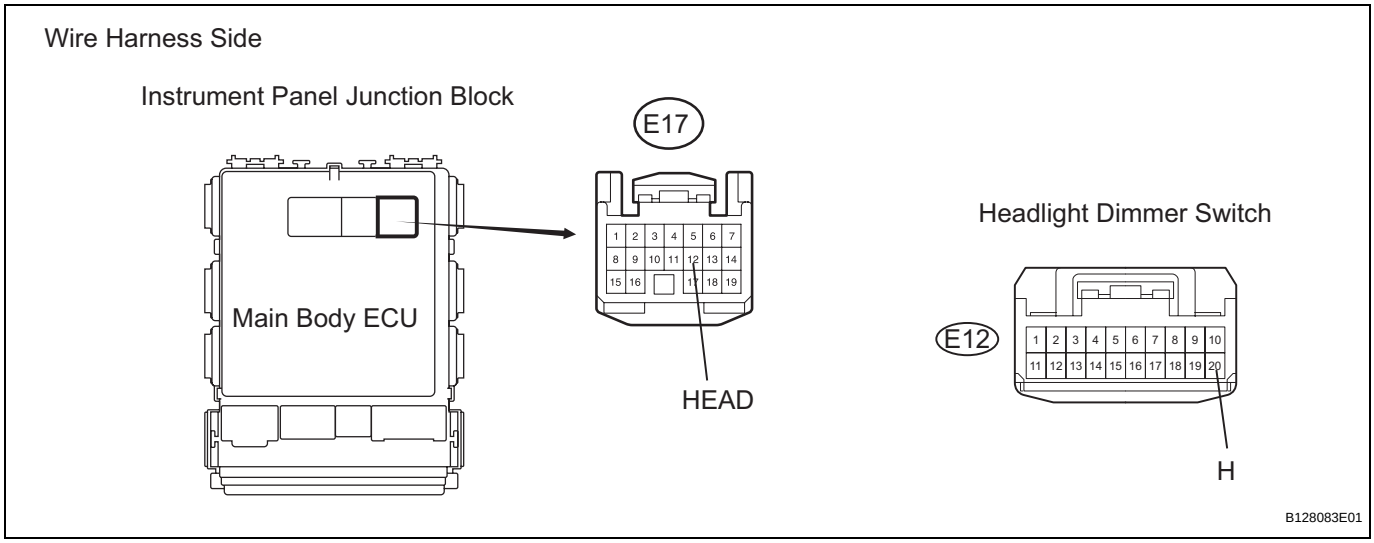
Tester Connection	Specified Condition
E15-20 (HRLY) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

6 CHECK INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

(a) Measure the voltage of the main body ECU.
Standard voltage



Tester Connection	Condition	Specified Condition
E15-20 (HRLY) - Body ground	Light control switch OFF	10 to 14 V
E15-20 (HRLY) - Body ground	Light control switch HEAD	Below 1 V

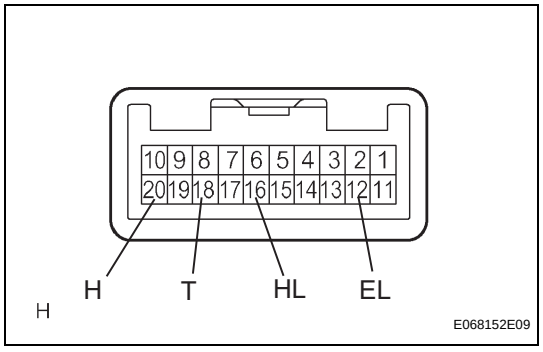
NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)**

OK

REPAIR OR REPLACE HARNESS AND CONNECTOR (HEAD RELAY - HEADLIGHT BULB AND BODY GROUND)

7 CHECK WIRE HARNESS (HEADLIGHT DIMMER SWITCH - MAIN BODY ECU)

(a) Disconnect the E17 main body ECU connector.
(b) Disconnect the E12 headlight dimmer switch connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E17-12 (HEAD) - E12-20 (H)	Below 1 Ω
E17-12 (HEAD) or E12-20 (H) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

8 INSPECT HEADLIGHT DIMMER SWITCH

(a) Disconnect the E12 headlight dimmer switch.
(b) Measure the resistance of the switch.

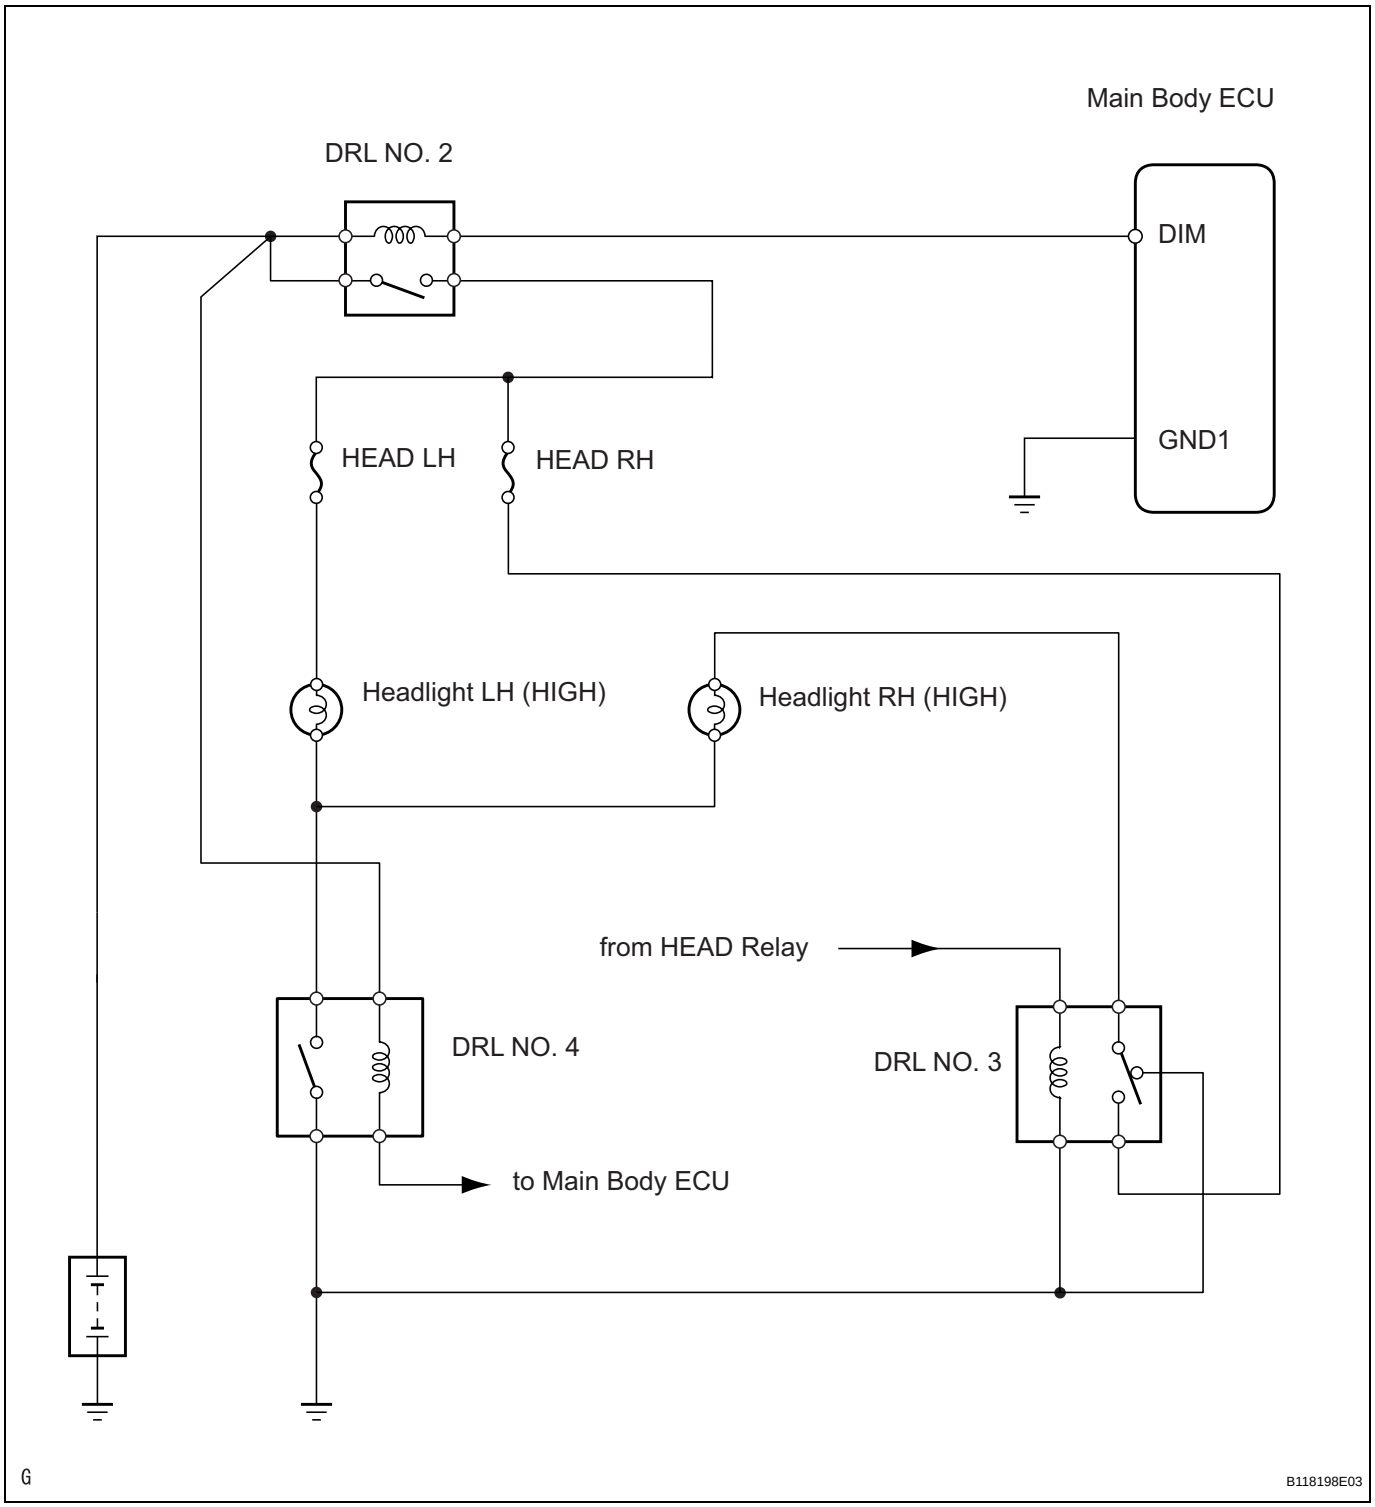
Standard resistance

Tester Connection	Switch Condition	Specified Condition
18 (T) - 12 (EL)	TAIL	Below 1 Ω
18 (T) - 12 (EL)	OFF	10 kΩ or higher
20 (H) - 12 (EL)	HEAD	Below 1 Ω
20 (H) - 12 (EL)	OFF	10 kΩ or higher
16 (HL) - 12 (EL)	LOW	Below 1 Ω
16 (HL) - 12 (EL)	HIGH	10 kΩ or higher

NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

LI

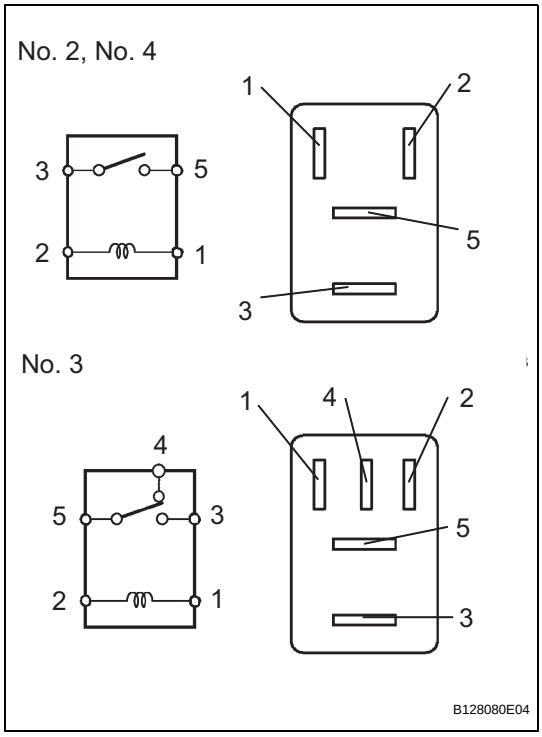
OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

DRL Relay Circuit

DESCRIPTION



The main body ECU controls the daytime running light No. 2 relay (Marking: DRL NO.2).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT DAYTIME RUNNING LIGHT RELAY (Marking: DRL NO. 2, DRL NO. 3, DRL NO. 4)

(a) Remove the No. 2 relay, No. 3 relay and No. 4 relay from the engine room No. 2 relay block.
(b) Measure the resistance of the relays.
Standard resistance:
No. 2, No. 4

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

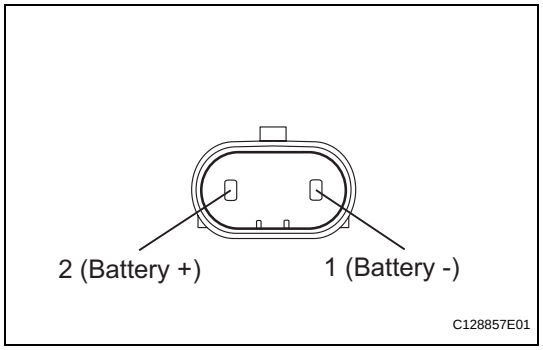
No. 3

Tester Connection	Specified Condition
4 - 5	Below 1 Ω
4 - 5	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

NG → **REPLACE DAYTIME RUNNING LIGHT RELAY**

OK

2	INSPECT FUSE (HEAD LH)



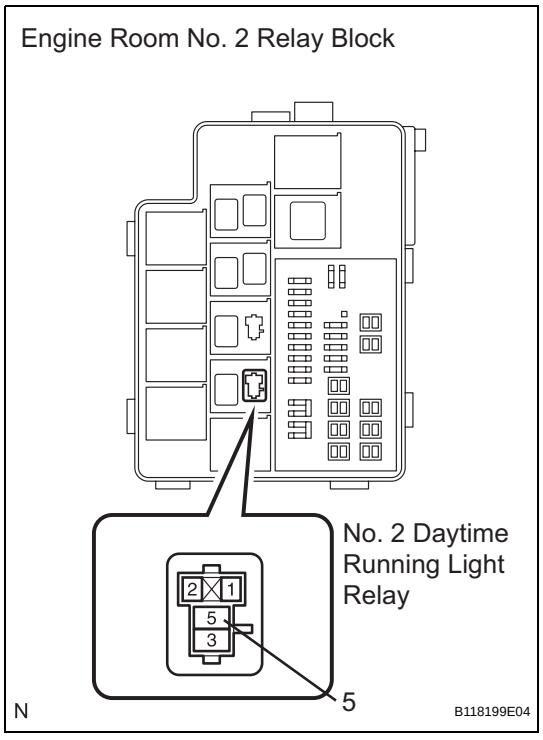
(a) Remove the HEAD LH fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

LI

3 INSPECT HEADLIGHT BULB (HIGH)



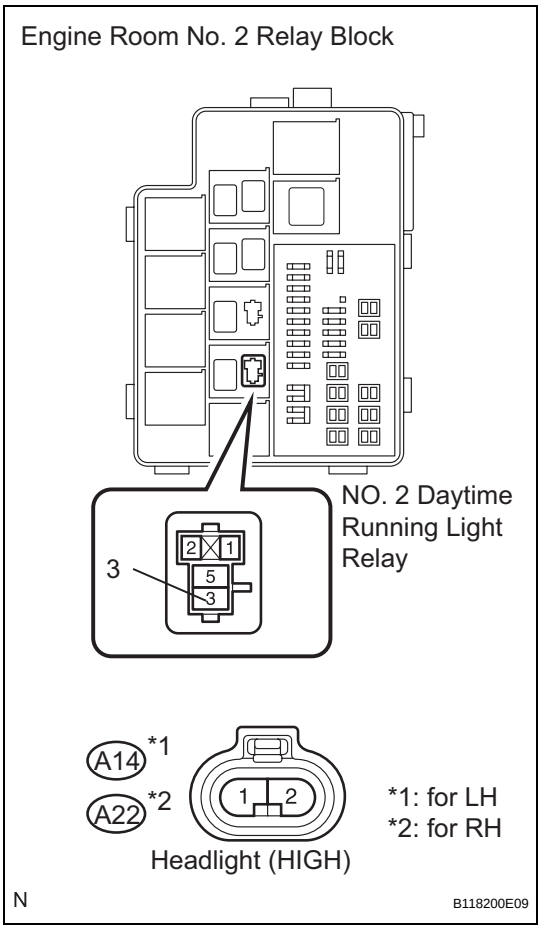
(a) Remove the headlight bulb (high).
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the bulb illuminates.

NG → **REPLACE HEADLIGHT BULB (HIGH)**

OK

4 CHECK WIRE HARNESS (BATTERY - NO. 2 DAYTIME RUNNING LIGHT RELAY)

(a) Remove the No. 2 daytime running light relay from the engine room No. 2 relay block.
(b) Measure the voltage of the relay block.
Standard voltage



Tester Connection	Specified Condition
Relay block daytime running light No. 2 relay terminal 5 - Body ground	10 to 14 V

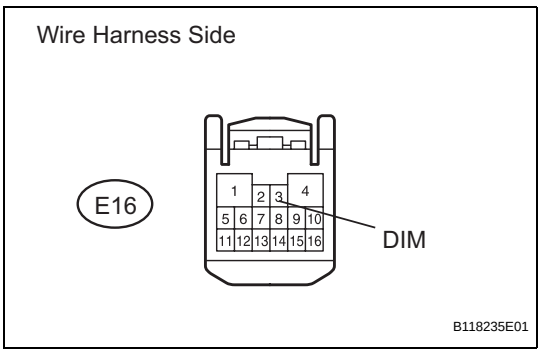
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

LI

5	CHECK WIRE HARNESS (NO. 2 DAYTIME RUNNING LIGHT RELAY - HEADLIGHT BULB AND BODY GROUND)

(a) Remove the No. 2 daytime running light relay from the engine room No. 2 relay block.
(b) Disconnect the A14 and A22 headlight (HIGH) connectors.
(c) Measure the resistance of the wire harness side connectors and relay block.



Standard resistance

Tester Connection	Specified Condition
Relay block daytime running light No. 2 relay terminal 3 - A14-2	Below 1 Ω
A14-2 - Body ground	10 kΩ or higher
A14-1 - A22-1	Below 1 Ω
A14-1 - Body ground	10 kΩ or higher
A22-2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

6	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)

(a) Disconnect the E16 main body ECU connector.
(b) Measure the voltage of the wire harness side connector.

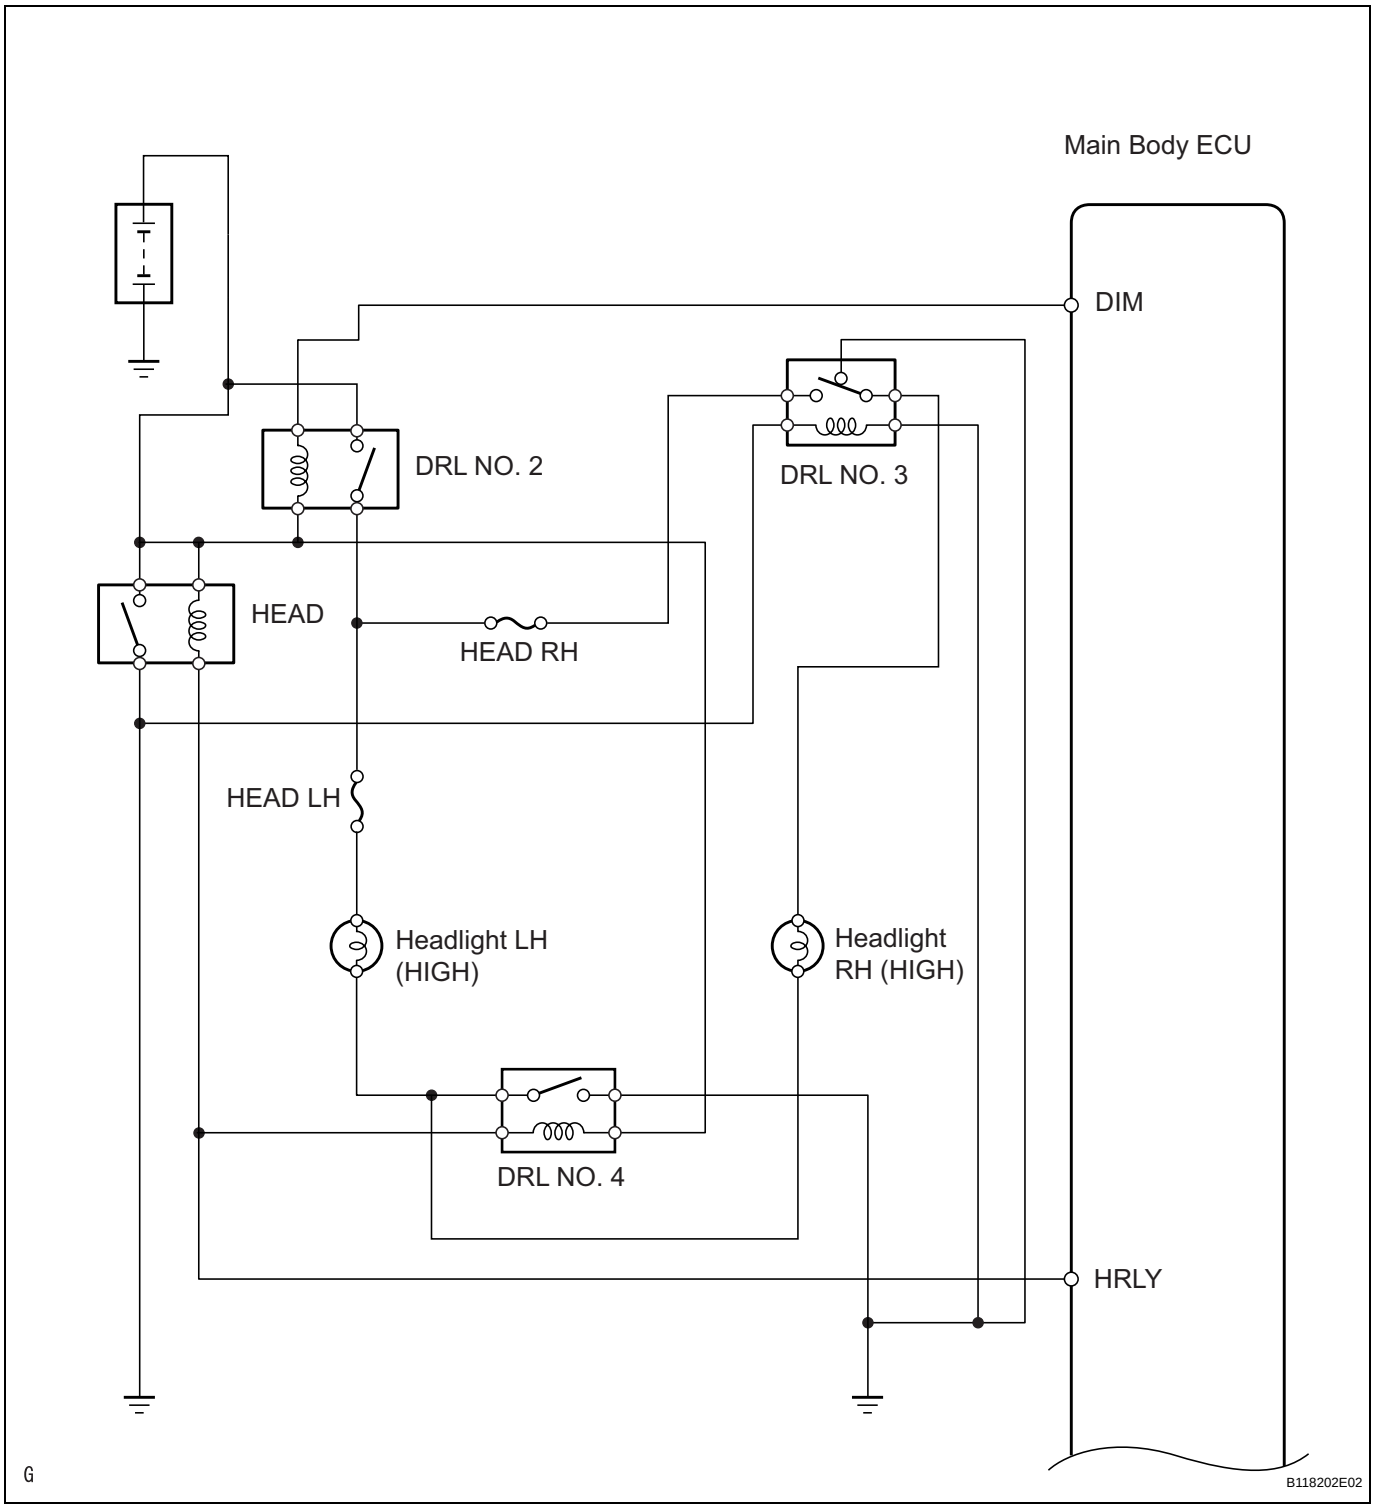
Standard voltage

Tester Connection	Specified Condition
E16-3 (DIM) - Body ground	10 to 14 V

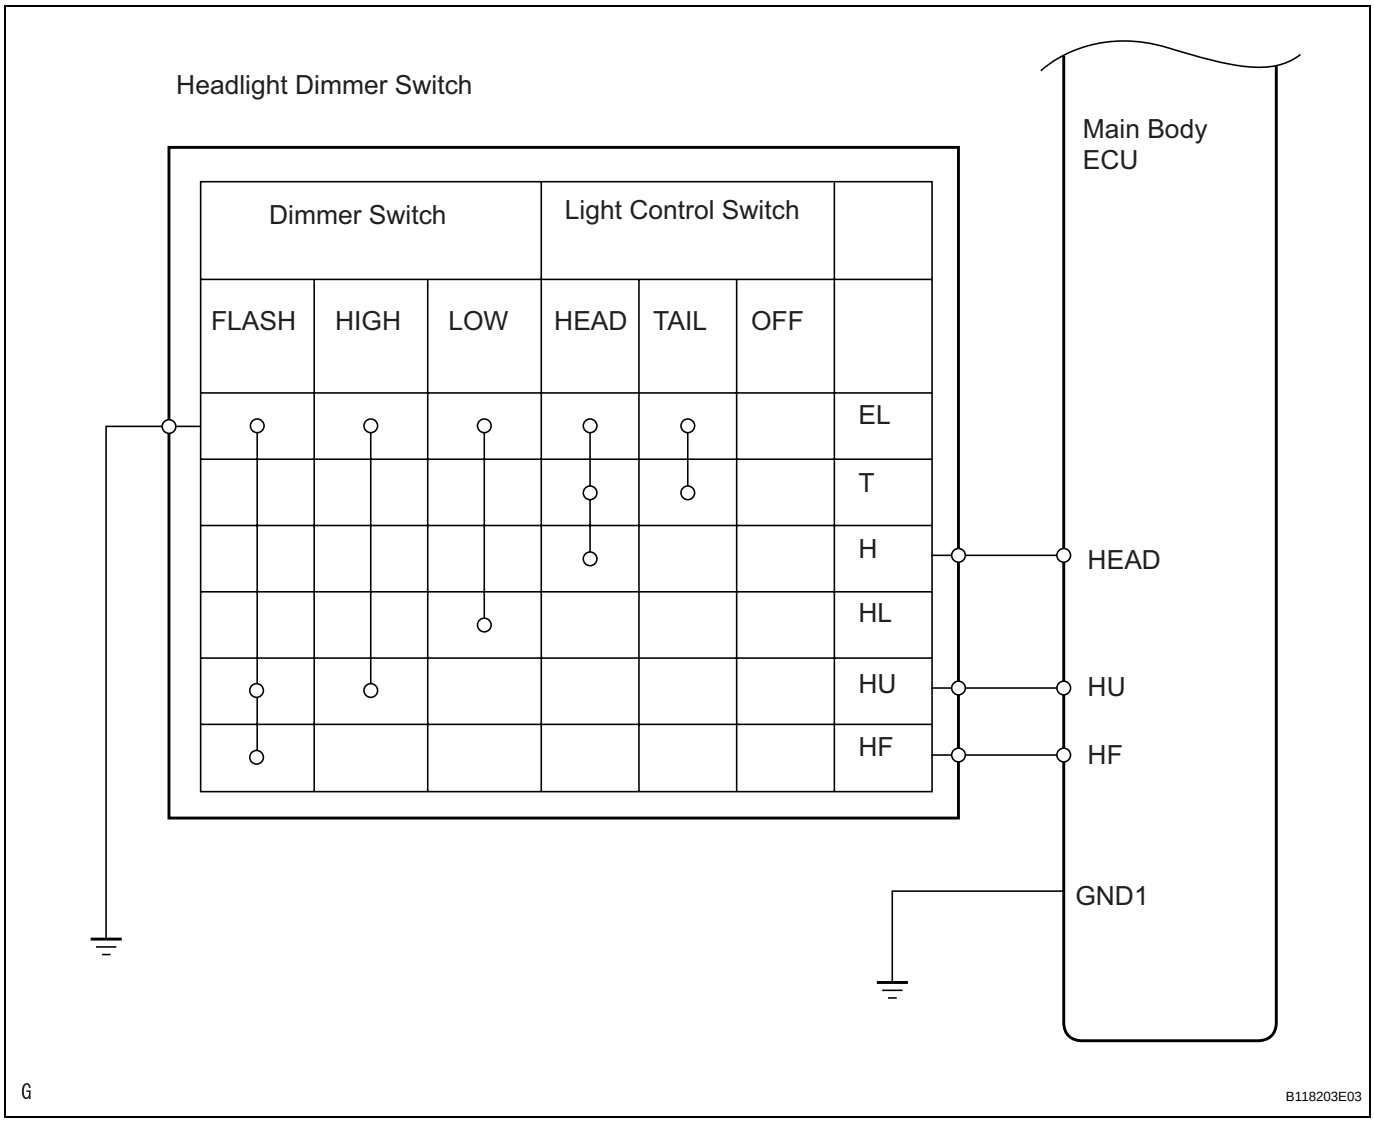
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)



LI



Headlight (HI-BEAM) Circuit

DESCRIPTION

The body ECU controls the headlight relay, No. 2 daytime running light relay (Marking: DRL NO. 2) and No. 4 daytime running light relay (Marking: DRL NO. 4).

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

Main body ECU

Item	Test Details	Diagnostic Note
HEADLIGHT HI	Turn headlight dimmer relay (Headlight dimmer switch HI position): ON / OFF	-

OK:
Headlight (HIGH) comes on.

OK	Go to step 10

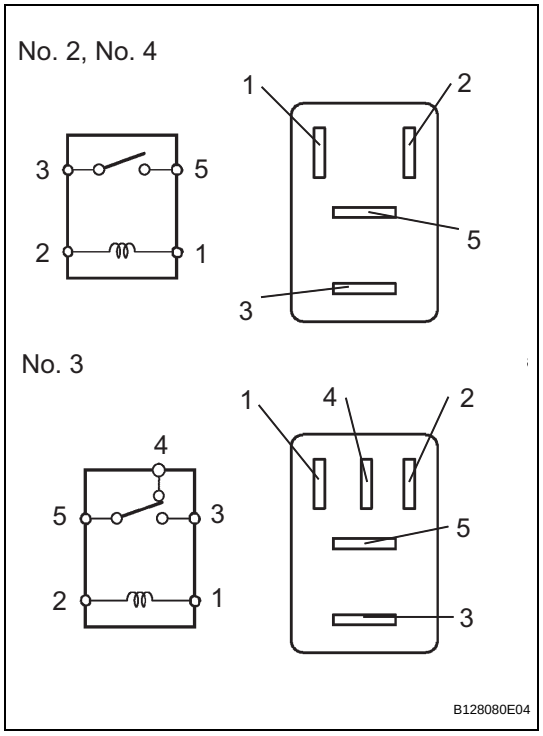
NG

2	CHECK HEADLIGHT (LOW)

(a) Check that the headlight (LOW) comes on when the light control switch is on (HEAD).
OK:
Headlight (LOW) comes on.

NG → **GO TO HEADLIGHT RELAY CIRCUIT**

OK



3	INSPECT FUSE (HEAD LH, HEAD RH)

(a) Remove the HEAD LH fuse and HEAD RH fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

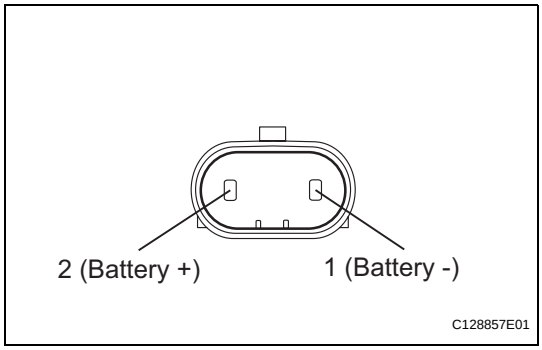
OK

4	INSPECT DAYTIME RUNNING LIGHT RELAY (Marking: DRL NO. 2, DRL NO. 3, DRL NO. 4)

(a) Remove the No. 2 relay, No. 3 relay and No. 4 relay from the engine room No. 2 relay block.
(b) Measure the resistance of the relays.
Standard resistance:
No. 2, No. 4

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

No. 3



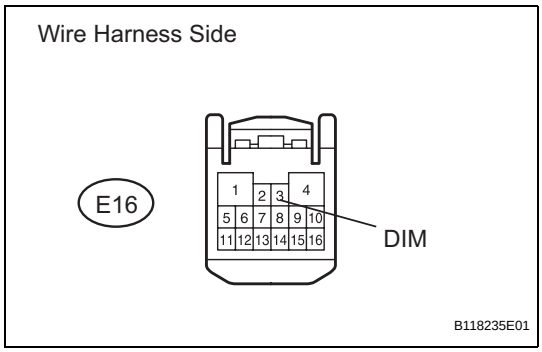
Tester Connection	Specified Condition
4 - 5	Below 1 Ω
4 - 5	10 kΩ or higher (Battery voltage applied to terminals 1 and 2)
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

NG → **REPLACE DAYTIME RUNNING LIGHT RELAY**

OK

LI

5	INSPECT HEADLIGHT BULB (HIGH)

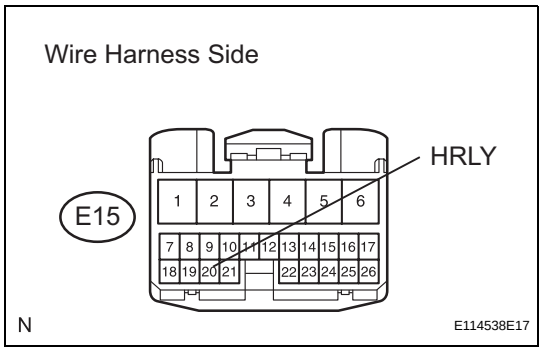


(a) Remove the headlight bulb (HIGH).
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the bulb illuminates.

NG → **REPLACE HEADLIGHT BULB (HIGH)**

OK

6	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E16 main body ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

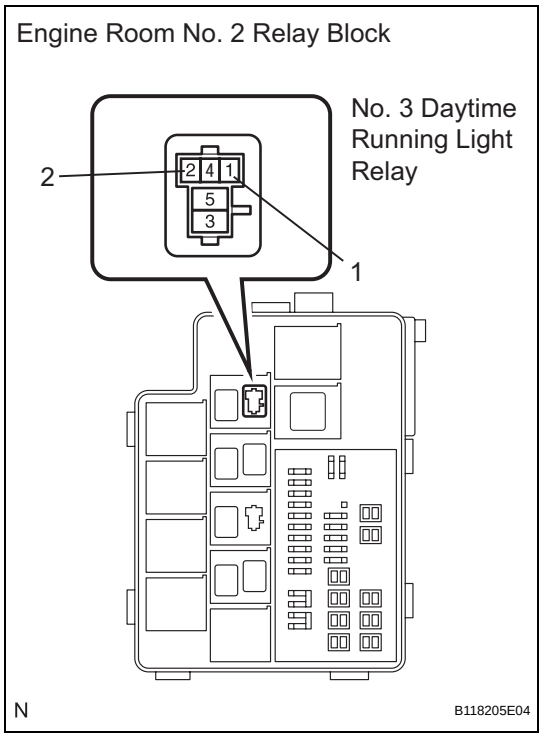
Tester Connection	Specified Condition
E16-3 (DIM) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7	CHECK WIRE HARNESS (MAIN BODY ECU)

(a) Remove the headlight relay from the engine room No. 2 relay block.
(b) Disconnect the E15 main body ECU connector.
(c) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Specified Condition
E15-20 (HRLY) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

LI

8	**CHECK WIRE HARNESS (HEADLIGHT RELAY - NO. 3 DAYTIME RUNNING LIGHT RELAY AND BODY GROUND)**

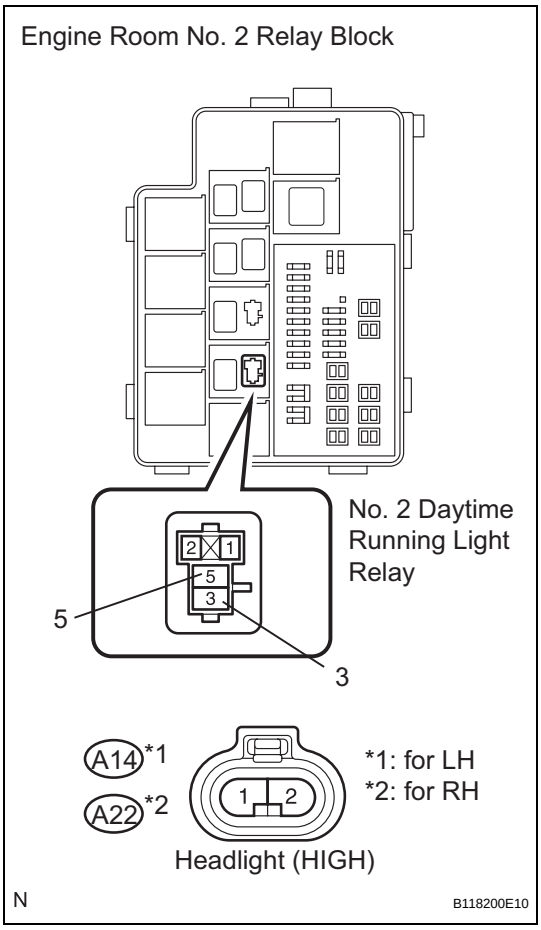
(a) Remove the No. 3 daytime running light relay from the engine room No. 2 relay block.

(b) Measure the voltage and resistance of the relay block.

Standard voltage

Tester Connection	Condition	Specified Condition
Relay block No. 3 daytime running light relay terminal 1 - Body ground	Light control switch ON (HEAD) Dimmer switch position LOW	10 to 14 V

Standard resistance



Tester Connection	Specified Condition
Relay block No. 3 daytime running light relay terminal 2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

LI

9	CHECK WIRE HARNESS (BATTERY - NO. 2 DAYTIME RUNNING LIGHT RELAY, BULB AND BODY GROUND)

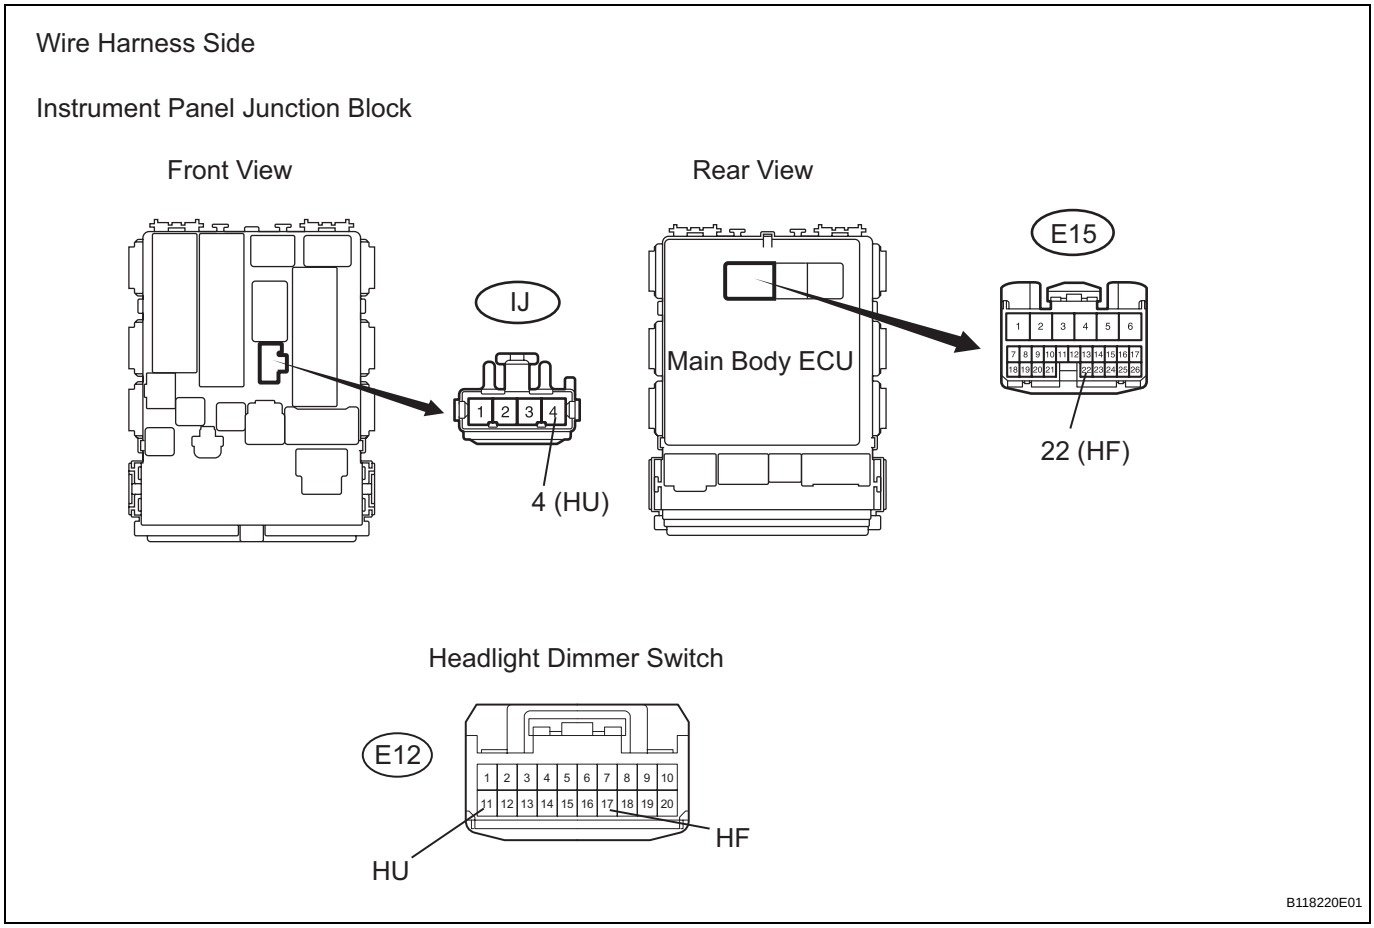
(a) Remove the No. 2 daytime running light relay from the engine room No. 2 relay block.
(b) Remove the A14 and A22 headlight bulb connectors.
(c) Measure the voltage and resistance of the relay block.

Standard voltage

Tester Connection	Specified Condition
Relay block No. 2 daytime running light relay terminal 5 - Body ground	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
Relay block No. 2 daytime running light relay terminal 3 - A14-2	Always	Below 1 Ω
Relay block No. 2 daytime running light relay terminal 3 - Body ground	Always	10 kΩ or higher
A14-1 - A22-1	Always	Below 1 Ω
A14-1 or A22-1 - Body ground	Always	10 kΩ or higher
A22-2 - Body ground	Always	Below 1 Ω
Relay block No. 2 daytime running light relay terminal 3 - A22-2	Light control switch ON (HEAD) Dimmer switch position LOW	Below 1 Ω
Relay block No. 2 daytime running light relay terminal 3 - Body ground	Light control switch ON (HEAD) Dimmer switch position LOW	10 kΩ or higher
A22-1 - Body ground	Light control switch ON (HEAD) Dimmer switch position LOW	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

LI

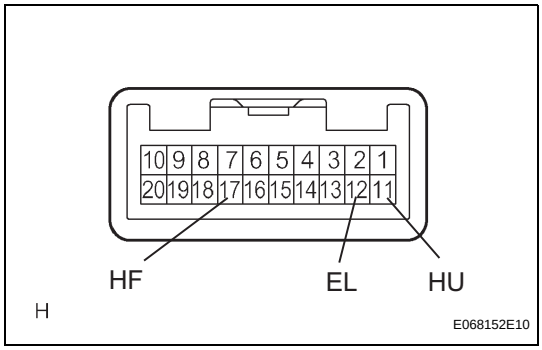
OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

10	CHECK WIRE HARNESS (MAIN BODY ECU - DIMMER SWITCH)

(a) Disconnect the E15 main body ECU connector.
(b) Disconnect the E12 headlight dimmer switch connector.
(c) Disconnect the IJ instrument panel junction block connector.
(d) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
E15-22 (HF) - E12-17 (HF)	Below 1 Ω
E15-22 (HF) or E12-17 (HF) - Body ground	10 kΩ or higher
IJ-4 (HU) - E12-11 (HU)	Below 1 Ω
IJ-4 (HU) or E12-11 (HU) - Body ground	10 kΩ or higher

LI

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

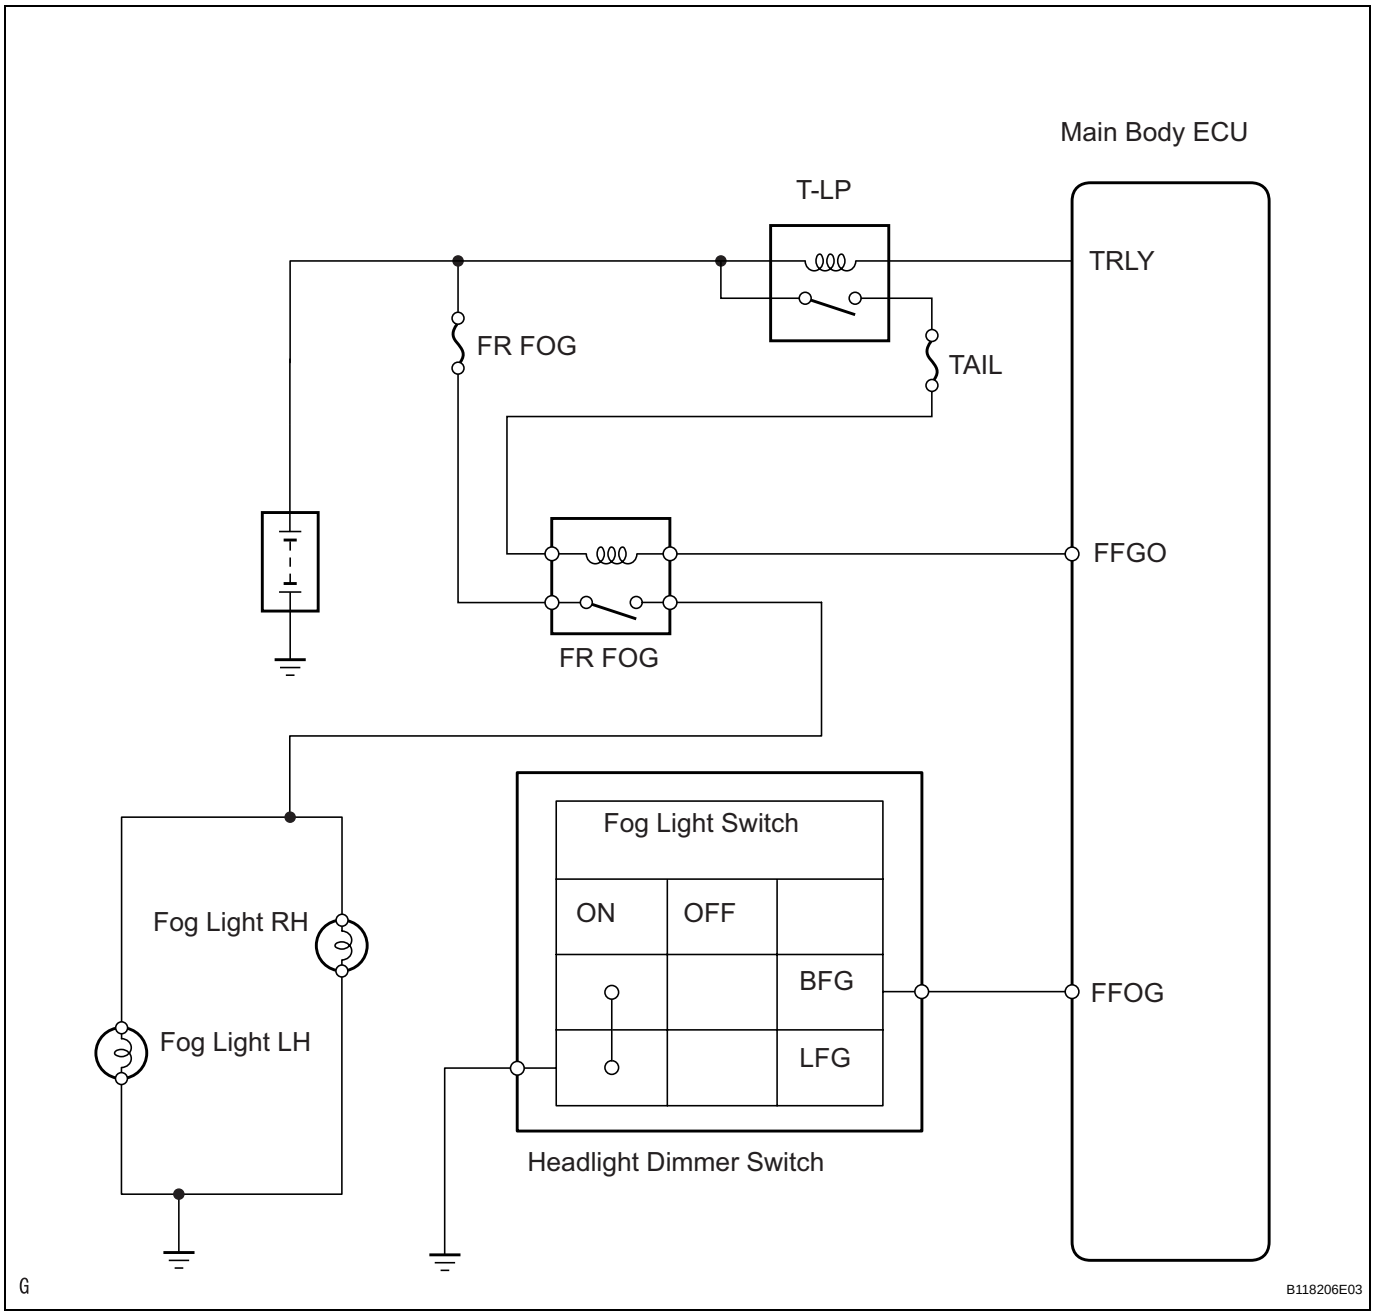
11	INSPECT HEADLIGHT DIMMER SWITCH

(a) Remove the headlight dimmer switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
11 (HU) - 12 (EL)	Dimmer switch HIGH	Below 1 Ω
17 (HF) - 12 (EL)	Dimmer switch FLASH	Below 1 Ω

NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

Front Fog Light Circuit

DESCRIPTION

The main body ECU controls the front fog light relay (Marking: FR FOG) when a signal is received from the headlight dimmer switch.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

LI

(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

Main body ECU

Item	Test Details	Diagnostic Note
F FOG LIGHT RLY	Turn front fog light relay: ON / OFF	-

OK:
Front fog light comes on.

OK → **Go to step 9**

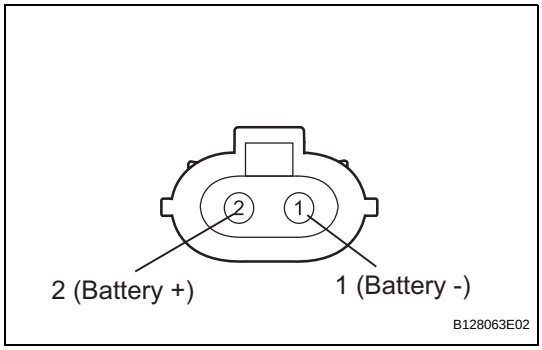
NG

2 CHECK TAILLIGHT

(a) Check that the taillight comes on when the light control switch is on (TAIL).
OK:
Taillight comes on.

NG → **GO TO TAILLIGHT RELAY CIRCUIT**

OK



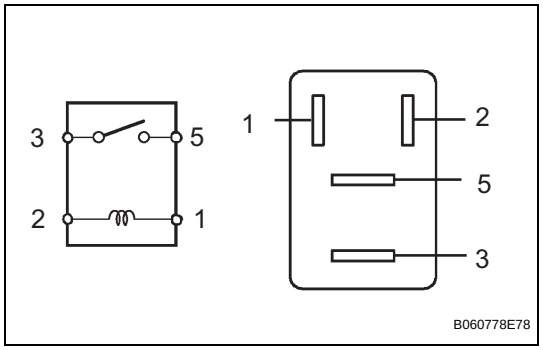
3 INSPECT FUSE (FR FOG)

(a) Remove the FR FOG fuse from the instrument panel junction block.
(b) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

4 INSPECT FOG LIGHT BULB



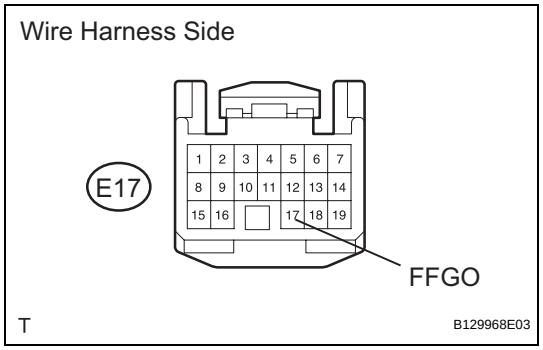
(a) Remove the fog light bulb.
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the bulb illuminates.
OK:
Bulb illuminates.

NG → **REPLACE FOG LIGHT BULB**

OK

LI

5 INSPECT FRONT FOG LIGHT RELAY (Marking: FR FOG)



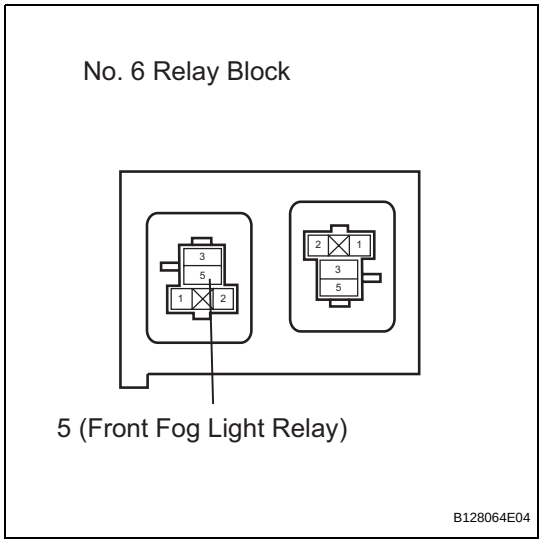
(a) Remove the front fog light relay from the No. 6 relay block.
(b) Measure the resistance of the relay.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Battery voltage applied to terminals 1 and 2)

NG → REPLACE FRONT FOG LIGHT RELAY

OK

6 CHECK WIRE HARNESS (BATTERY - MAIN BODY ECU)



(a) Disconnect the E17 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

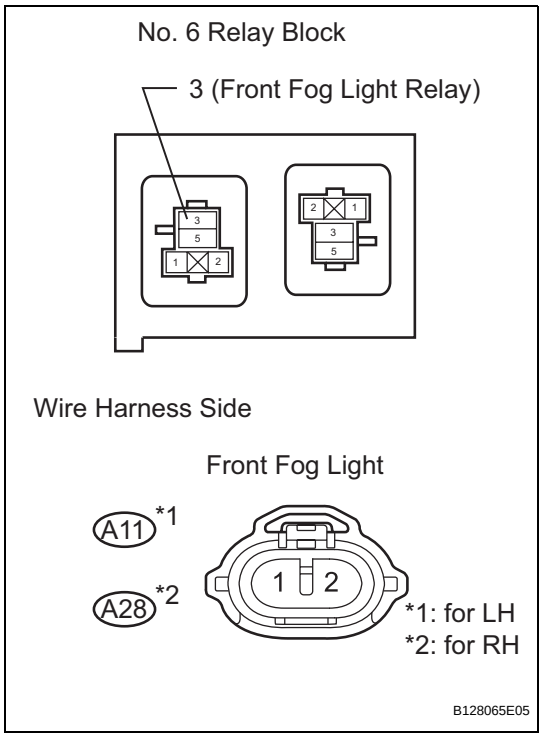
Tester Connection	Condition	Specified Condition
E17-17 (FFGO) - Body ground	Light control switch on (TAIL)	10 to 14 V

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

7 CHECK WIRE HARNESS (FRONT FOG LIGHT RELAY - BATTERY)

(a) Remove the front fog light relay from the No. 6 relay block.
(b) Measure the voltage of the relay block.
standard voltage



Tester Connection	Specified Condition
No. 6 relay block front fog light relay terminal 5 - Body ground	10 to 14 V

NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

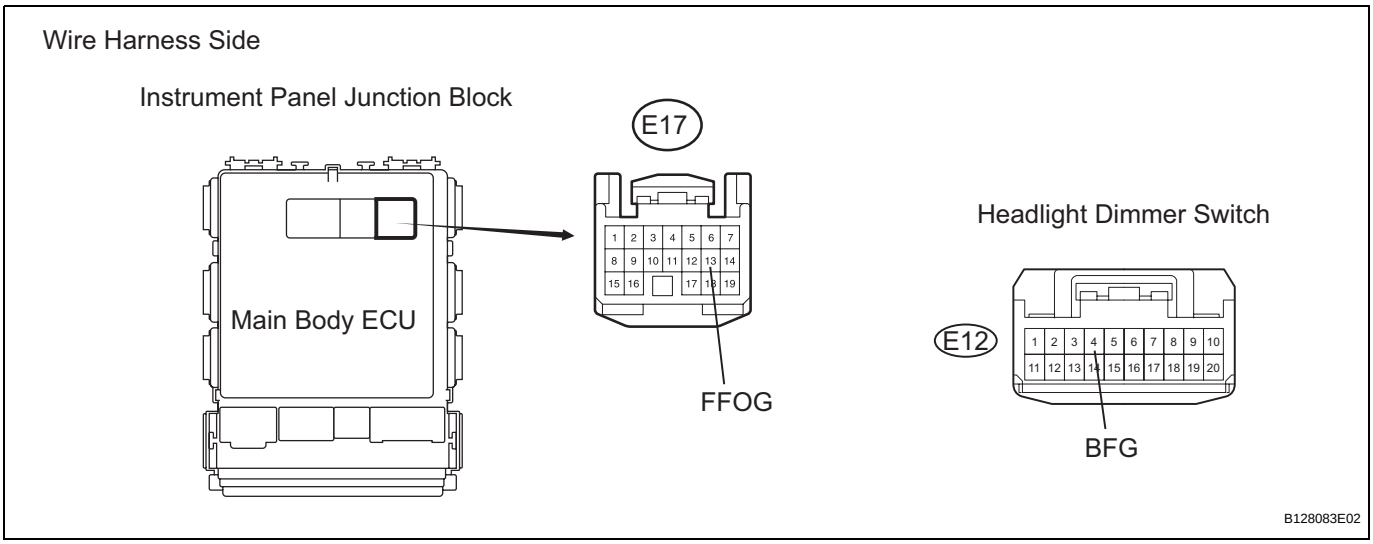
OK

LI

8	CHECK WIRE HARNESS (FRONT FOG LIGHT RELAY - FRONT FOG LIGHT AND BODY GROUND)

(a) Remove the front fog light relay from the No. 6 relay block.
(b) Disconnect the A11 and A28 front fog light connectors.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
No. 6 relay block front fog light relay terminal 3 - A11-2	Below 1 Ω
No. 6 relay block front fog light relay terminal 3 or A11-2 - Body ground	10 kΩ or higher
No. 6 relay block front fog light relay terminal 3 - A28-2	Below 1 Ω
No. 6 relay block front fog light relay terminal 3 or A28-2 - Body ground	10 kΩ or higher
A11-1 - Body ground	Below 1 Ω
A28-1 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

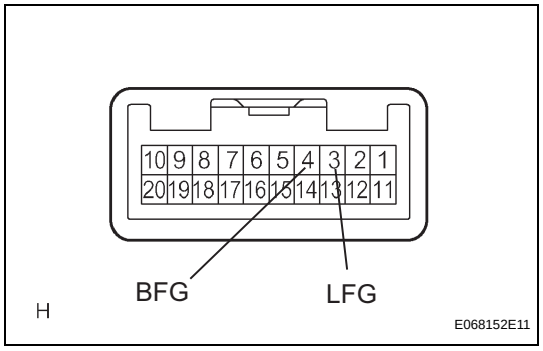
REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

9	CHECK WIRE HARNESS (DIMMER SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E12 headlight dimmer switch connector.
(b) Disconnect the E17 main body ECU connector.

LI

(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E17-13 (FFOG) - E12-4 (BFG)	Below 1 Ω
E17-13 (FFOG) or E12-4 (BFG) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

10 INSPECT FOG LIGHT SWITCH

(a) Remove the headlight dimmer switch.

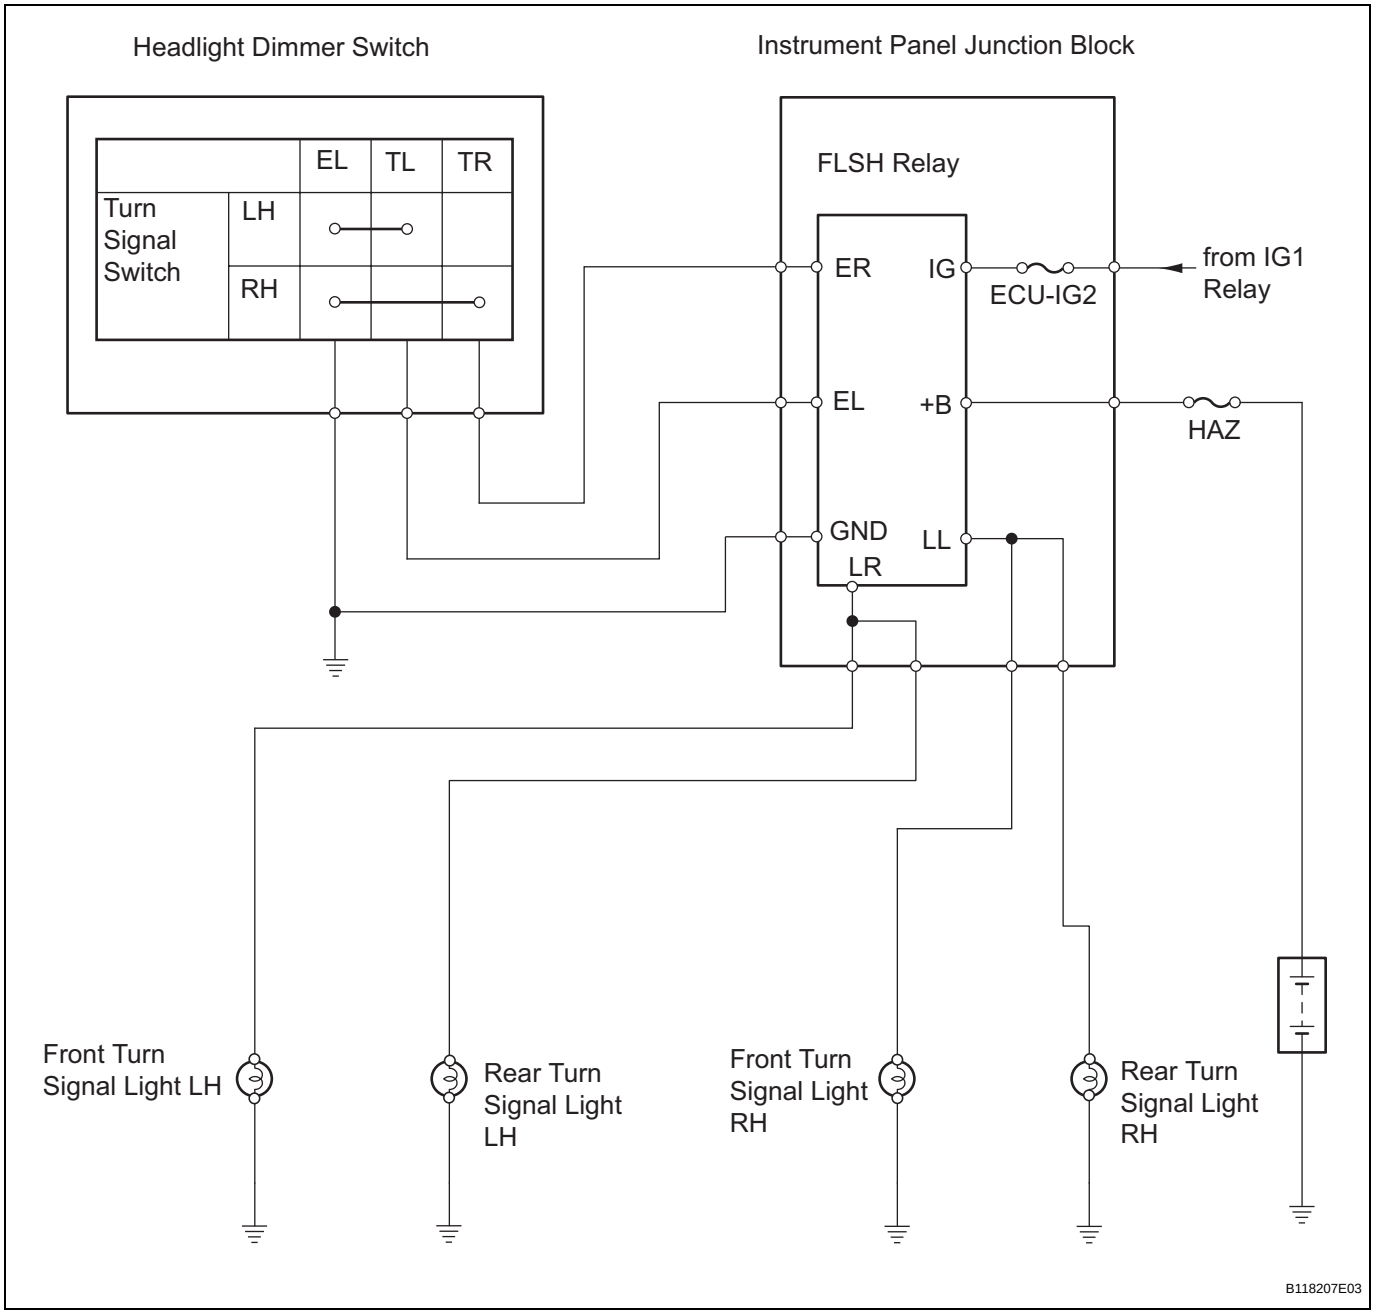
(b) Measure the resistance of the switch.

Standard resistance

Tester Connection	Condition	Specified Condition
4 (BFG) - 3 (LFG)	Fog light switch OFF	10 kΩ or higher
4 (BFG) - 3 (LFG)	Fog light switch ON	Below 1 Ω

NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (HEADLIGHT DIMMER SWITCH - BODY GROUND)

Turn Signal Light Circuit

DESCRIPTION

The turn signal flasher relay (Marking: FLSH) in the main body ECU turns on when it receives signals from the headlight dimmer switch integrated with the turn signal switch, causing the turn signal lights to flash.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK OPERATION OF TURN SIGNAL LIGHT

(a) When the turn signal light switch is operated, check that the appropriate turn signal light flashes.

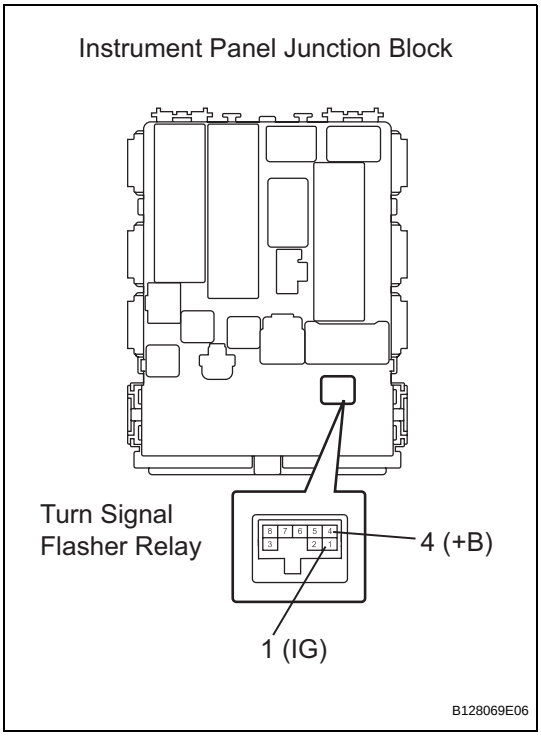
Result

Condition	Proceed to
All lights do not flash	A
Front turn signal light (LH or RH) does not flash	B
Rear turn signal light (LH or RH) does not flash	C

B → **Go to step 6**

C → **Go to step 8**

A



2	INSPECT FUSE (ECU-IG2, HAZ)

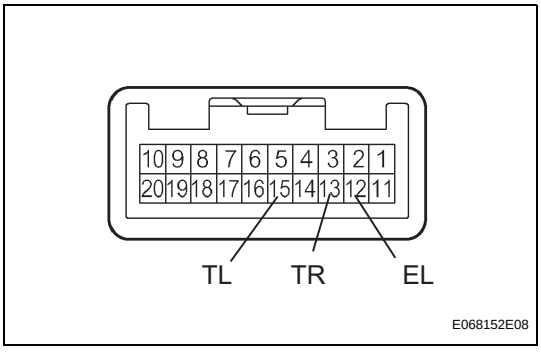
(a) Remove the ECU-IG2 fuse from the instrument panel junction block.
(b) Remove the HAZ fuse from the engine room No. 1 relay block.
(c) Measure the resistance of the fuses.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 CHECK WIRE HARNESS (BATTERY - TURN SIGNAL FLASHER RELAY)

(a) Disconnect the IB instrument panel junction block connector.
(b) Remove the turn signal flasher relay from the instrument panel junction block.
(c) Measure the voltage of the wire harness side connectors.



Standard voltage

Tester Connection	Condition	Specified Condition
Junction block turn signal flasher relay terminal 4 (+B) - Body ground	Always	10 to 14 V
Junction block turn signal flasher relay terminal 1 (IG) - Body ground	Ignition Switch ON	10 to 14 V

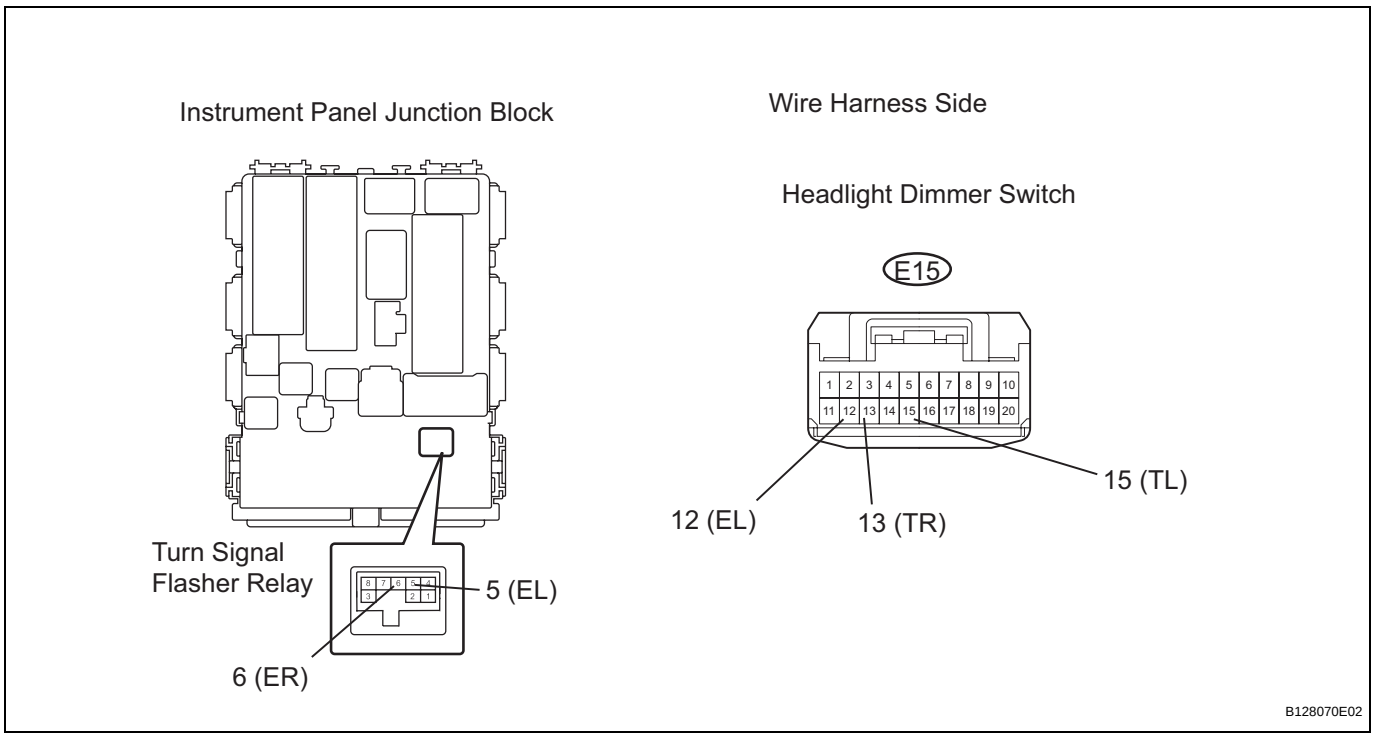
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 INSPECT HEADLIGHT DIMMER SWITCH

(a) Remove the headlight dimmer switch.
(b) Inspect the turn signal switch.
(c) Measure the resistance of the switch.

Standard resistance



Tester Connection	Condition	Specified Condition
13 (TR) - 12 (EL)	Right	Below 1 Ω
13 (TR) - 12 (EL)	Neutral	10 kΩ or higher
15 (TL) - 12 (EL)	Left	Below 1 Ω
15 (TL) - 12 (EL)	Neutral	10 kΩ or higher

NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

LI

5	CHECK WIRE HARNESS (HEADLIGHT DIMMER SWITCH - INSTRUMENT PANEL JUNCTION BLOCK)

(a) Remove the turn signal flasher relay.
(b) Disconnect the E15 headlight dimmer switch connector.
(c) Measure the resistance of the wire harness side connectors and junction block.

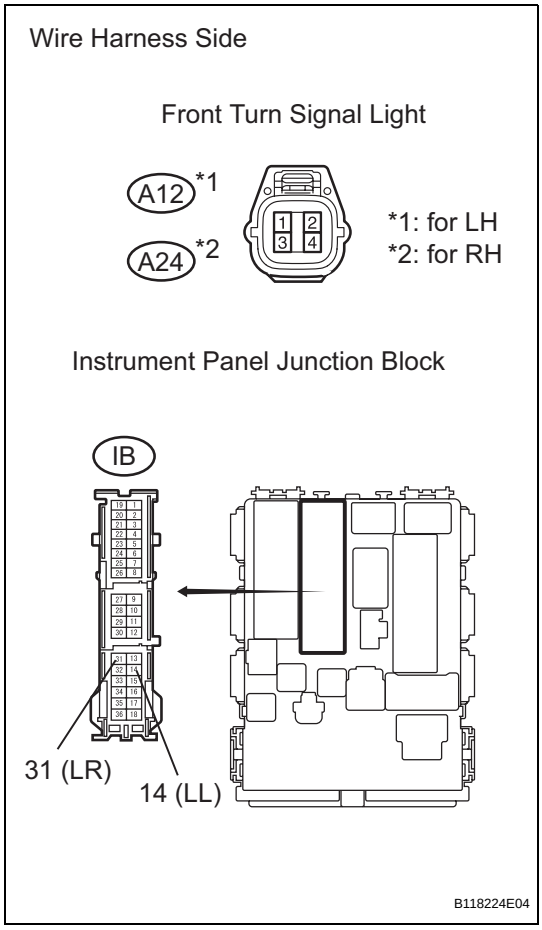
Standard resistance

Tester Connection	Specified Condition
Junction block turn signal flasher relay terminal 5 (EL) - E15-15 (TL)	Below 1 Ω
Junction block turn signal flasher relay terminal 5 (EL) or E15-15 (TL) - Body ground	10 kΩ or higher
Junction block turn signal flasher relay terminal 6 (ER) - E15-13 (TR)	Below 1 Ω
Junction block turn signal flasher relay terminal 6 (ER) or E15-13 (TR) - Body ground	10 kΩ or higher
E15-12 (EL) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE TURN SIGNAL FLASHER RELAY



6	INSPECT FRONT TURN SIGNAL LIGHT

(a) Remove the front turn signal light.
(b) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, then check that the light comes on.
OK:
Light comes on.

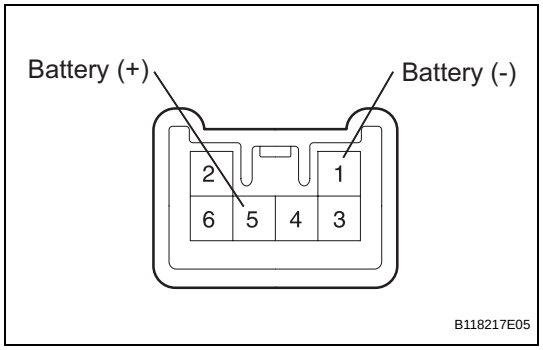
NG → **REPLACE BULB**

OK

7	CHECK WIRE HARNESS (INSTRUMENT PANEL JUNCTION BLOCK - FRONT TURN SIGNAL LIGHT)

(a) Disconnect the A12 and A24 front turn signal light connectors.
(b) Disconnect the IB instrument panel junction block connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
IB-31 (LR) - A24-1	Below 1 Ω
IB-31 (LR) or A24-1 - Body ground	10 kΩ or higher
IB-14 (LL) - A12-1	Below 1 Ω
IB-14 (LL) or A12-1 - Body ground	10 kΩ or higher



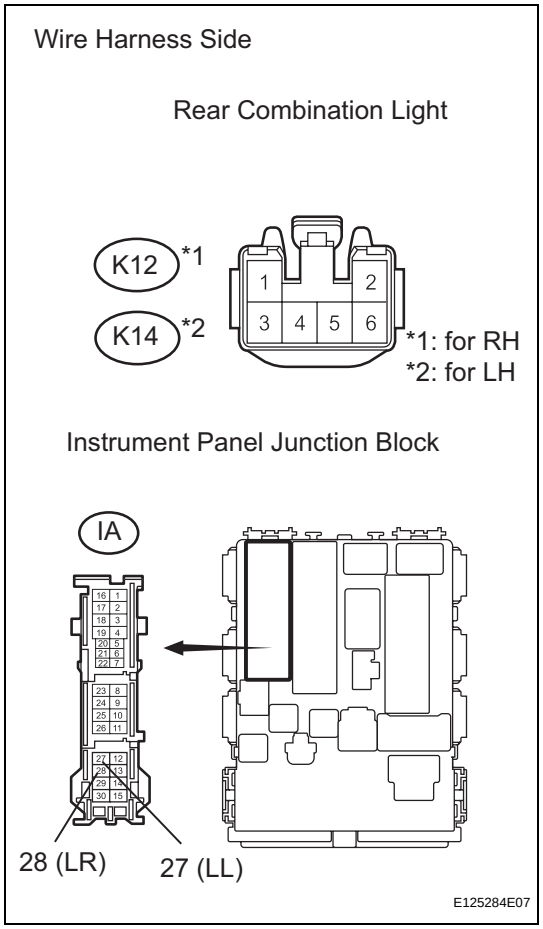
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPAIR OR REPLACE HARNESS AND CONNECTOR (FRONT TURN SIGNAL LIGHT - BODY GROUND)

LI

8	INSPECT REAR TURN SIGNAL LIGHT



(a) Remove the rear combinationl light.
(b) Connect the positive (+) lead from the battery to terminal 5 and the negative (-) lead to terminal 1, then check that the light comes on.
OK:
Light comes on.

NG → **REPLACE BULB**

OK

9	CHECK WIRE HARNESS (INSTRUMENT PANEL JUNCTION BLOCK - REAR TURN SIGNAL LIGHT)

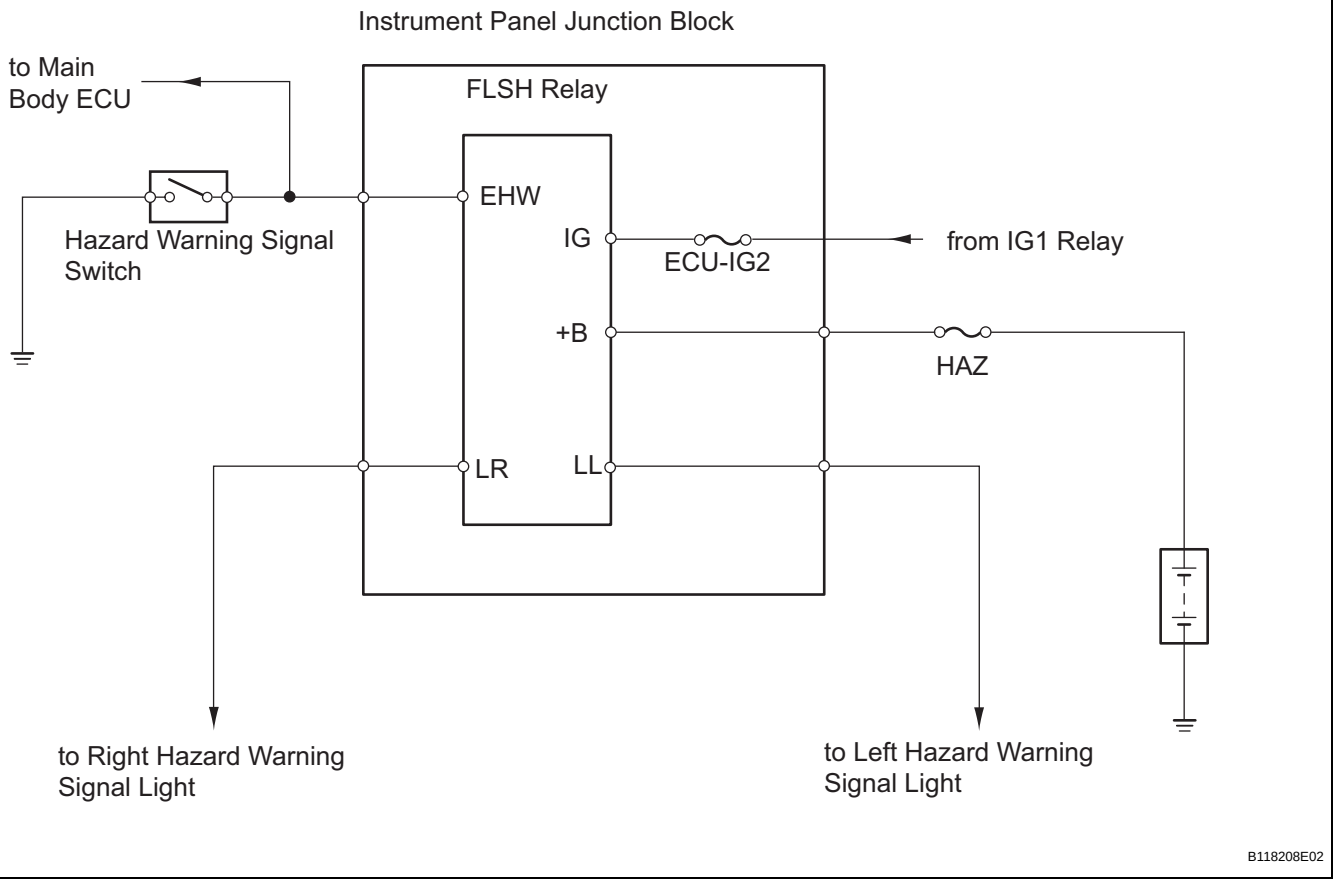
(a) Disconnect the K12 and K14 rear combination light connectors.
(b) Disconnect the IA instrument panel junction block connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
IA-28 (LR) - K12-5	Below 1 Ω
IA-28 (LR) or K12-5 - Body ground	10 kΩ or higher
IA-27 (LL) - K14-5	Below 1 Ω
IA-27 (LL) or K14-5 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPAIR OR REPLACE HARNESS AND CONNECTOR (REAR TURN SIGNAL LIGHT - BODY GROUND)



LI

Hazard Warning Switch Circuit

DESCRIPTION

When the hazard warning signal switch is turned on, the turn signal flasher relay (Marking: FLSH) in the main body ECU turns on to flash the hazard warning signal lights.

WIRING DIAGRAM

INSPECTION PROCEDURE

LI

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Select the item below in the ACTIVE TEST and then check the relay operation.

Main body ECU

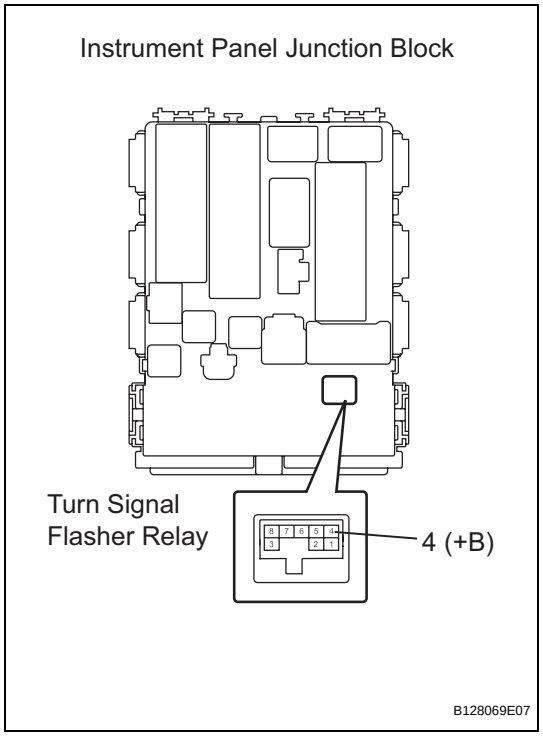
Item	Test Details/Display (Range)	Diagnostic Note
HAZARD	HAZARD ON/OFF	-

OK:

All hazard warning signal lights flash.

OK → Go to step 5

NG



2 INSPECT FUSE (HAZ)

(a) Remove the HAZ fuse from the engine room No. 1 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 CHECK WIRE HARNESS (TURN SIGNAL FLASHER RELAY - BATTERY)

(a) Remove the turn signal flasher relay from the instrument panel junction block.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
Junction Block turn signal flasher Relay terminal 4 (+B) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

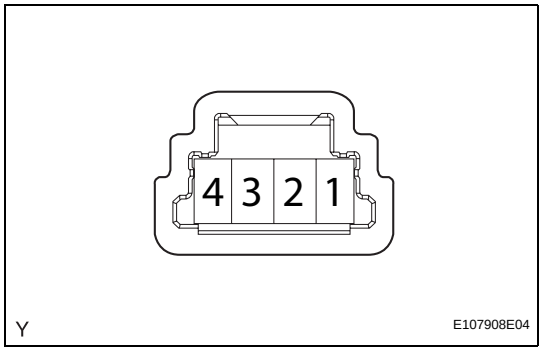
4 CHECK OPERATION OF TURN SIGNAL FLASHER RELAY (Marking: FLSH)

(a) Replace the turn signal flasher relay with a normally functioning one or a new one.
(b) Check that the appropriate turn signal light flashes.
(c) Connect the intelligent tester (with CAN VIM) to the DLC3.
(d) Turn the ignition switch ON and press the intelligent tester main switch ON.

(e) Select the item below in the ACTIVE TEST and then check the relay operation.

Main body ECU

Item	Test Details / Display (Range)	Diagnostic Note
HAZARD	HAZARD ON / OFF	-



OK:
All hazard warning signal lights flash.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR (JUNCTION BLOCK - HAZARD WARNING SIGNAL SWITCH)**

OK

REPLACE TURN SIGNAL FLASHER RELAY

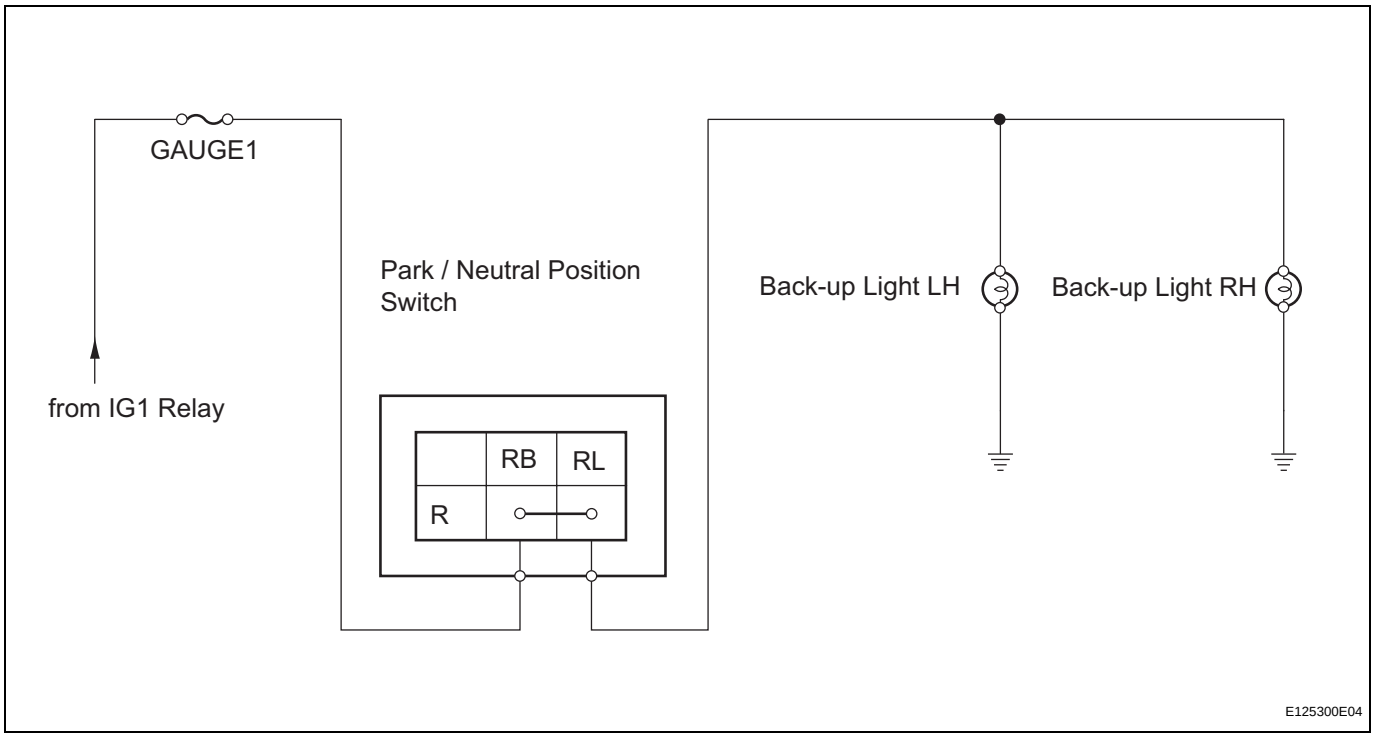
5 INSPECT HAZARD WARNING SIGNAL SWITCH

(a) Remove the hazard warning signal switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 4	OFF	10 kΩ or higher
1 - 4	ON	Below 23.4 Ω

NG → **REPLACE HAZARD WARNING SIGNAL SWITCH**

OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (HAZARD WARNING SIGNAL SWITCH - BODY GROUND)

Back-up Light Circuit

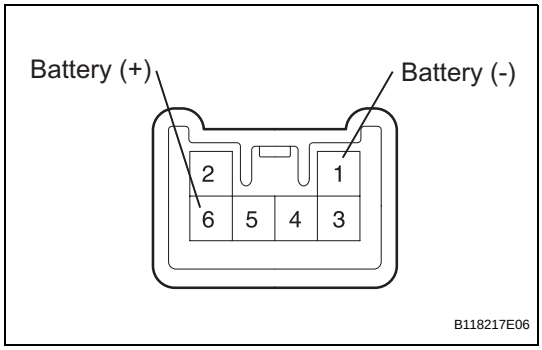
DESCRIPTION

The park / neutral position switch turns on when the shift lever is moved into the R position, causing the back-up lights to illuminate.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT FUSE (GAUGE1)



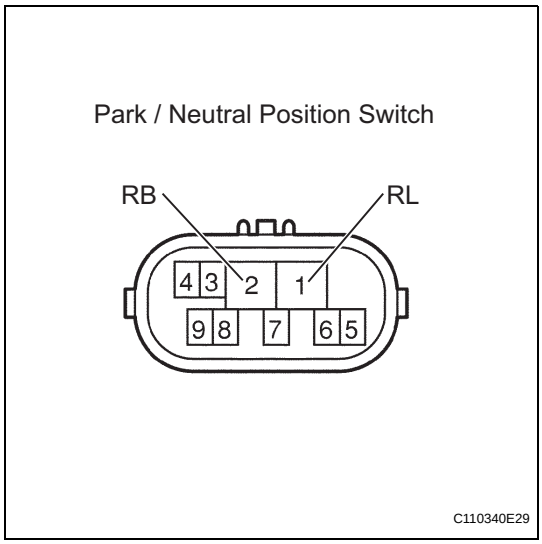
(a) Remove the GAUGE1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

LI

2 INSPECT BACK-UP LIGHT



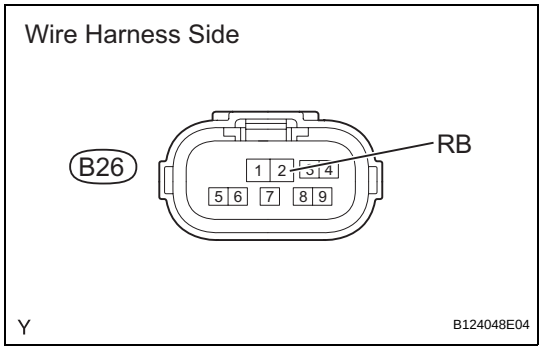
(a) Remove the rear combination light.
(b) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 1, then check that the light comes on.
OK:
Light comes on.

NG → **REPLACE BULB**

OK

3 INSPECT PARK / NEUTRAL POSITION SWITCH

(a) Disconnect the B26 park / neutral position switch connector.
(b) Measure the resistance of the switch.
Standard resistance



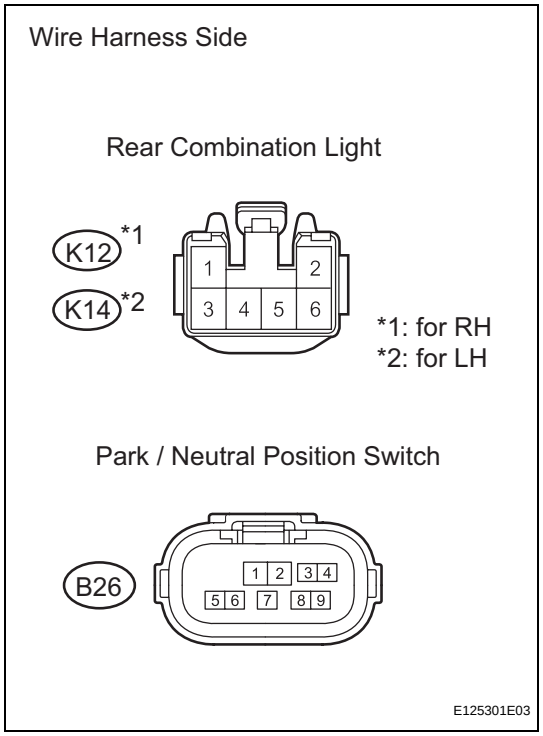
Tester Connection	Shift Position	Specified Connection
2 (RB) - 1 (RL)	R	Below 1 Ω
2 (RB) - 1 (RL)	Except R	10 kΩ or higher

NG → **REPLACE PARK / NEUTRAL POSITION SWITCH**

OK

LI

4 CHECK WIRE HARNESS (PARK / NEUTRAL POSITION SWITCH - BATTERY)



(a) Disconnect the B26 park / neutral position switch connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
B26-2 (RB) - Body ground	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	CHECK WIRE HARNESS (PARK / NEUTRAL POSITION SWITCH - BACK-UP LIGHT)

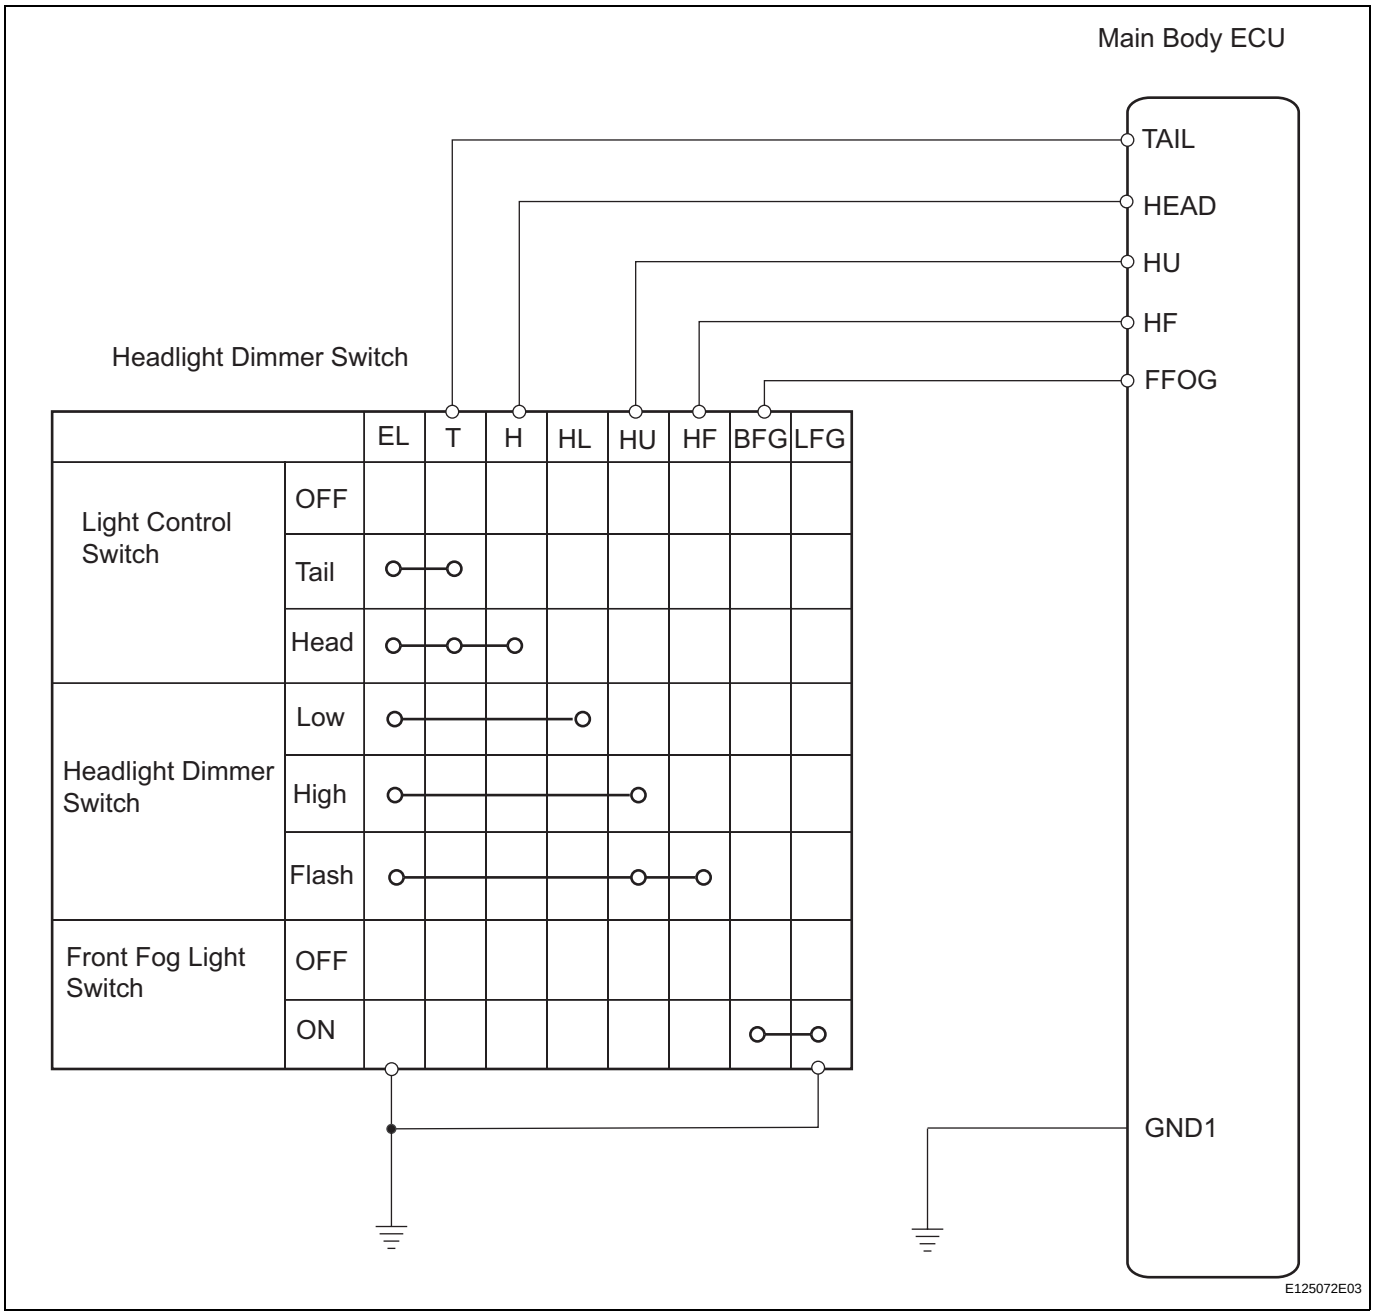
(a) Disconnect the B26 park / neutral position switch connector.
(b) Disconnect the K12 and K14 rear combination light assembly connectors.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
B26-1 - K12-6	Below 1 Ω
B26-1 or K12-6 - Body ground	10 kΩ or higher
B26-1 - K24-6	Below 1 Ω
B26-1 or K24-6 - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPAIR OR REPLACE HARNESS AND CONNECTOR (BACK-UP LIGHT - BODY GROUND)

Light Control Switch Circuit

DESCRIPTION

This circuit detects the state of the headlight dimmer switch.

WIRING DIAGRAM

INSPECTION PROCEDURE

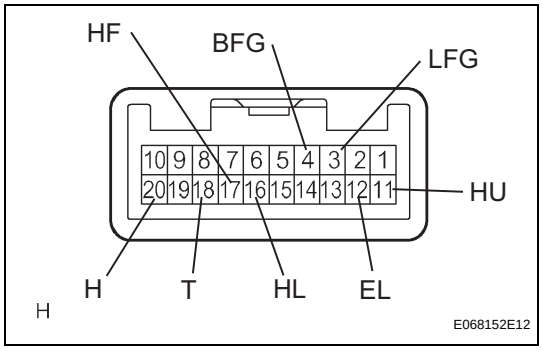
1	READ VALUE OF INTELLIGENT TESTER (MAIN BODY ECU)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.

LI

(c) Select the items below in the DATA LIST, and read the displays on the intelligent tester.

Main body ECU



Item	Measurement / Display (Range)	Normal Condition	Diagnostic Note
DIMMER SW	Headlight dimmer switch signal / ON or OFF	ON: Headlight dimmer switch is in HI or FLASH position OFF: Headlight dimmer switch is in LO position	-
PASSING LIGHT SW	Passing light switch signal / ON or OFF	ON: Headlight dimmer switch is in FLASH position OFF: Headlight dimmer switch is in except FLASH position	-
FRONT FOG LIGHT SW	Front fog light switch signal / ON or OFF	ON: Front fog light switch is in ON position OFF: Front fog light switch is in OFF position	-
HEADLIGHT SW	Headlight control switch signal (HEAD) / ON or OFF	ON: Light control switch is in HEAD position OFF: Light control switch is in except HEAD position	-
HEADLIGHT SW (Tail)	Headlight control switch signal (TAIL) / ON or OFF	ON: Light control switch is in TAIL or HEAD position OFF: Light control switch is in except OFF position	-

OK:
ON is displayed on the intelligent tester screen.

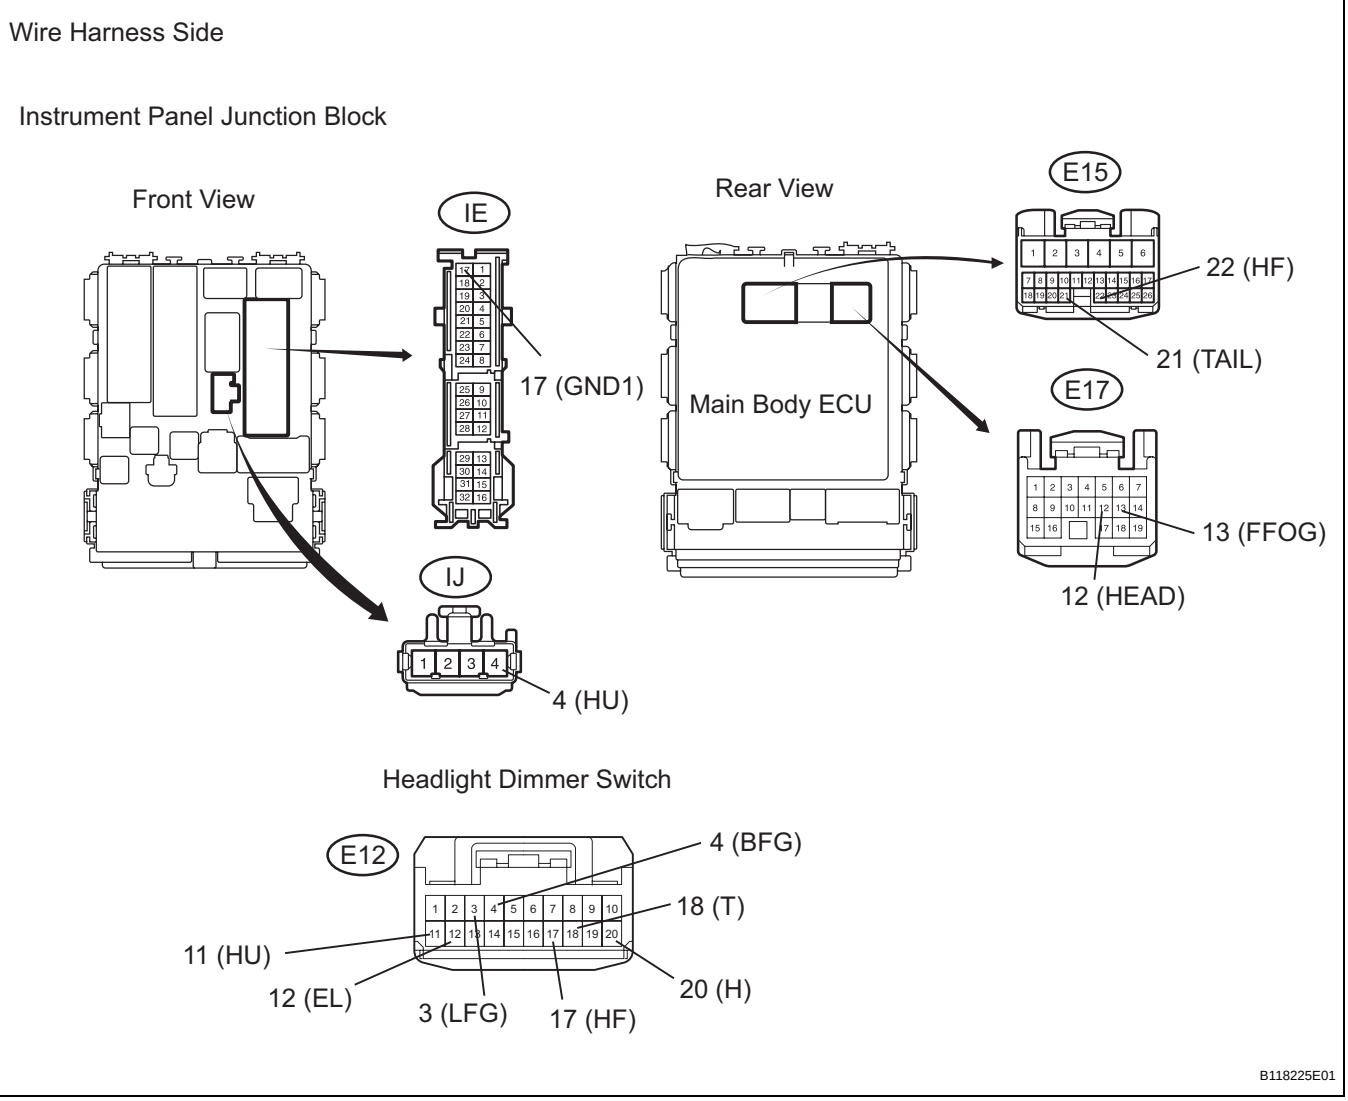
OK → **PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT HEADLIGHT DIMMER SWITCH

(a) Remove the headlight dimmer switch.
(b) Measure the resistance of the switch.

Standard resistance



Tester Connection	Condition	Specified Condition
18 (T) - 12 (EL)	OFF	10 kΩ or higher
18 (T) - 12 (EL)	TAIL	Below 1 Ω
20 (H) - 12 (EL)	OFF	10 kΩ or higher
20 (H) - 12 (EL)	HEAD	Below 1 Ω
16 (HL) - 12 (EL)	HIGH or FLASH	10 kΩ or higher
16 (HL) - 12 (EL)	LOW	Below 1 Ω
11 (HU) - 12 (EL)	LOW or FLASH	10 kΩ or higher
11 (HU) - 12 (EL)	HIGH	Below 1 Ω
17 (HF) - 12 (EL)	LOW or HIGH	10 kΩ or higher
17 (HF) - 12 (EL)	FLASH	Below 1 Ω
4 (BFG) - 3 (LFG)	Fog light switch OFF	10 kΩ or higher
4 (BFG) - 3 (LFG)	Fog light switch ON	Below 1 Ω

NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

LI

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - DIMMER SWITCH AND BODY GROUND)

(a) Disconnect the E12 headlight dimmer switch connector.
(b) Disconnect the IE and IJ instrument panel junction block connectors.
(c) Disconnect the E15 and E17 main body ECU connectors.
(d) Measure the resistance of the wire harness side connectors.

Standard resistance

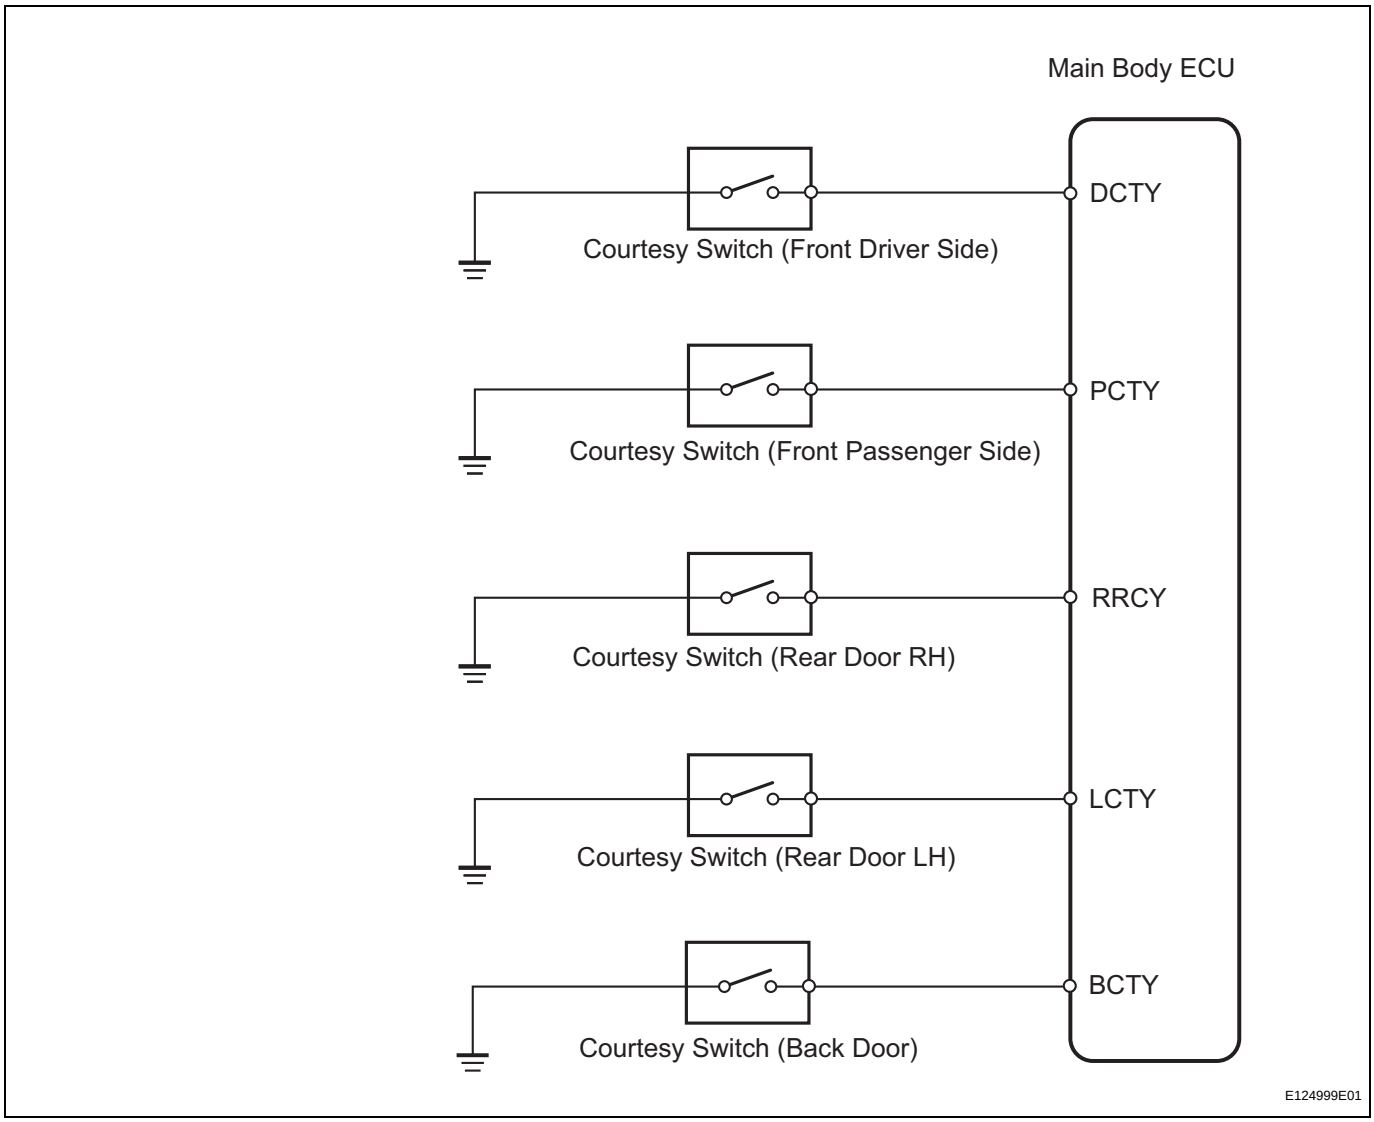
Tester Connection	Specified Condition
E15-22 (HF) - E12-17 (HF)	Below 1 Ω
E15-22 (HF) or E12-17 (HF) - Body ground	10 kΩ or higher
E15-21 (TAIL) - E12-18 (T)	Below 1 Ω
E15-21 (TAIL) or E12-18 (T) - Body ground	10 kΩ or higher
E17-12 (HEAD) - E12-20 (H)	Below 1 Ω

LI

Tester Connection	Specified Condition
E17-12 (HEAD) or E12-20 (H) - Body ground	10 kΩ or higher
E17-13 (FFOG) - E12-4 (BFG)	Below 1 Ω
E17-13 (FFOG) or E12-4 (BFG) - Body ground	10 kΩ or higher
IJ-4 (HU) - E12-11 (HU)	Below 1 Ω
IJ-4 (HU) or E12-11 (HU) - Body ground	10 kΩ or higher
E12-12 (EL) - Body ground	Below 1 Ω
E12-3 (LFG) - Body ground	Below 1 Ω
IE-17 (GND1) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Door Courtesy Switch Circuit

DESCRIPTION

The main body ECU detects the condition of the door courtesy switch.

WIRING DIAGRAM

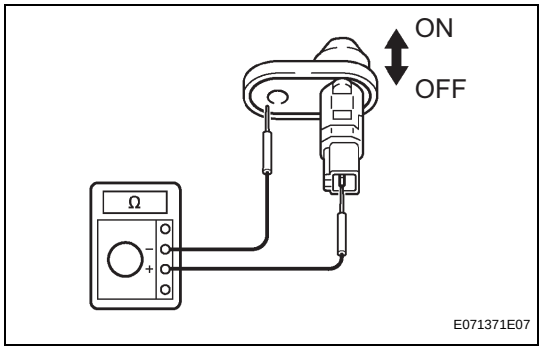
LI

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (DOOR COURTESY LIGHT SWITCH)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the items below in the DATA LIST, and read the displays on the intelligent tester.

Main body ECU



Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver's door courtesy switch signal/ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P DOR CYT SW	Passenger's door courtesy switch signal/ON or OFF	ON: Front passenger side door is open OFF: Front passenger door is closed	-
RR DOR CTY SW	Rear door courtesy switch signal/ON or OFF	ON: Rear right passenger side door is open OFF: Rear right passenger side door is closed	-
RL DOR CTY SW	Rear door courtesy switch signal/ON or OFF	ON: Rear left passenger side door is open OFF: Rear left passenger side door is closed	-
BK DOR CTY SW	Back door courtesy switch signal/ON or OFF	ON: Back door is open OFF: Back door is closed	-

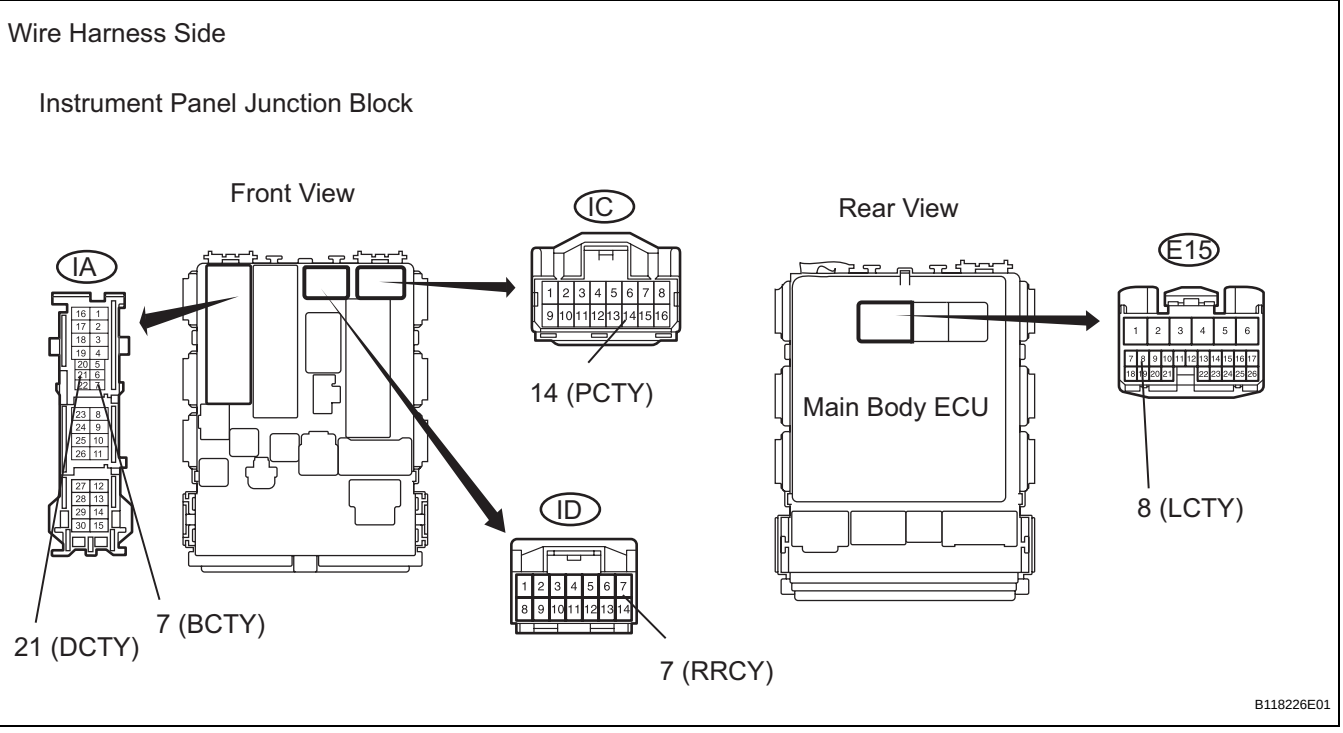
OK:
Condition sign can be displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT COURTESY LIGHT SWITCH

(a) Remove the door courtesy light switch.
(b) Measure the resistance of the switch.
Standard resistance:
Front LH, Front RH, Rear LH, Rear RH, Back Door



Tester Connection	Condition	Specified Condition
1 - Body ground	OFF	10 kΩ or higher
	ON	Below 1 Ω

NG → **REPLACE DOOR COURTESY LIGHT SWITCH**

OK

LI

3	CHECK WIRE HARNESS (MAIN BODY ECU - COURTESY LIGHT SWITCH)

(a) Connect the courtesy light switch.
(b) Disconnect the IA, IC and ID instrument panel junction block connectors.
(c) Disconnect the E15 main body ECU connector.
(d) Measure the resistance of the wire harness side connectors.

Standard resistance:

Front door LH

Tester Connection	Condition	Specified Condition
IA-21 (DCTY) - Body ground	Front LH door is opened	Below 1 Ω
	Front LH door is closed	10 kΩ or higher

Front door RH

Tester Connection	Condition	Specified Condition
IC-14 (PCTY) - Body ground	Front RH door is opened	Below 1 Ω
	Front RH door is closed	10 kΩ or higher

Rear door RH

Tester Connection	Condition	Specified Condition
ID-7 (RRCY) - Body ground	Rear RH door is opened	Below 1 Ω
	Rear RH door is closed	10 kΩ or higher

Rear door LH

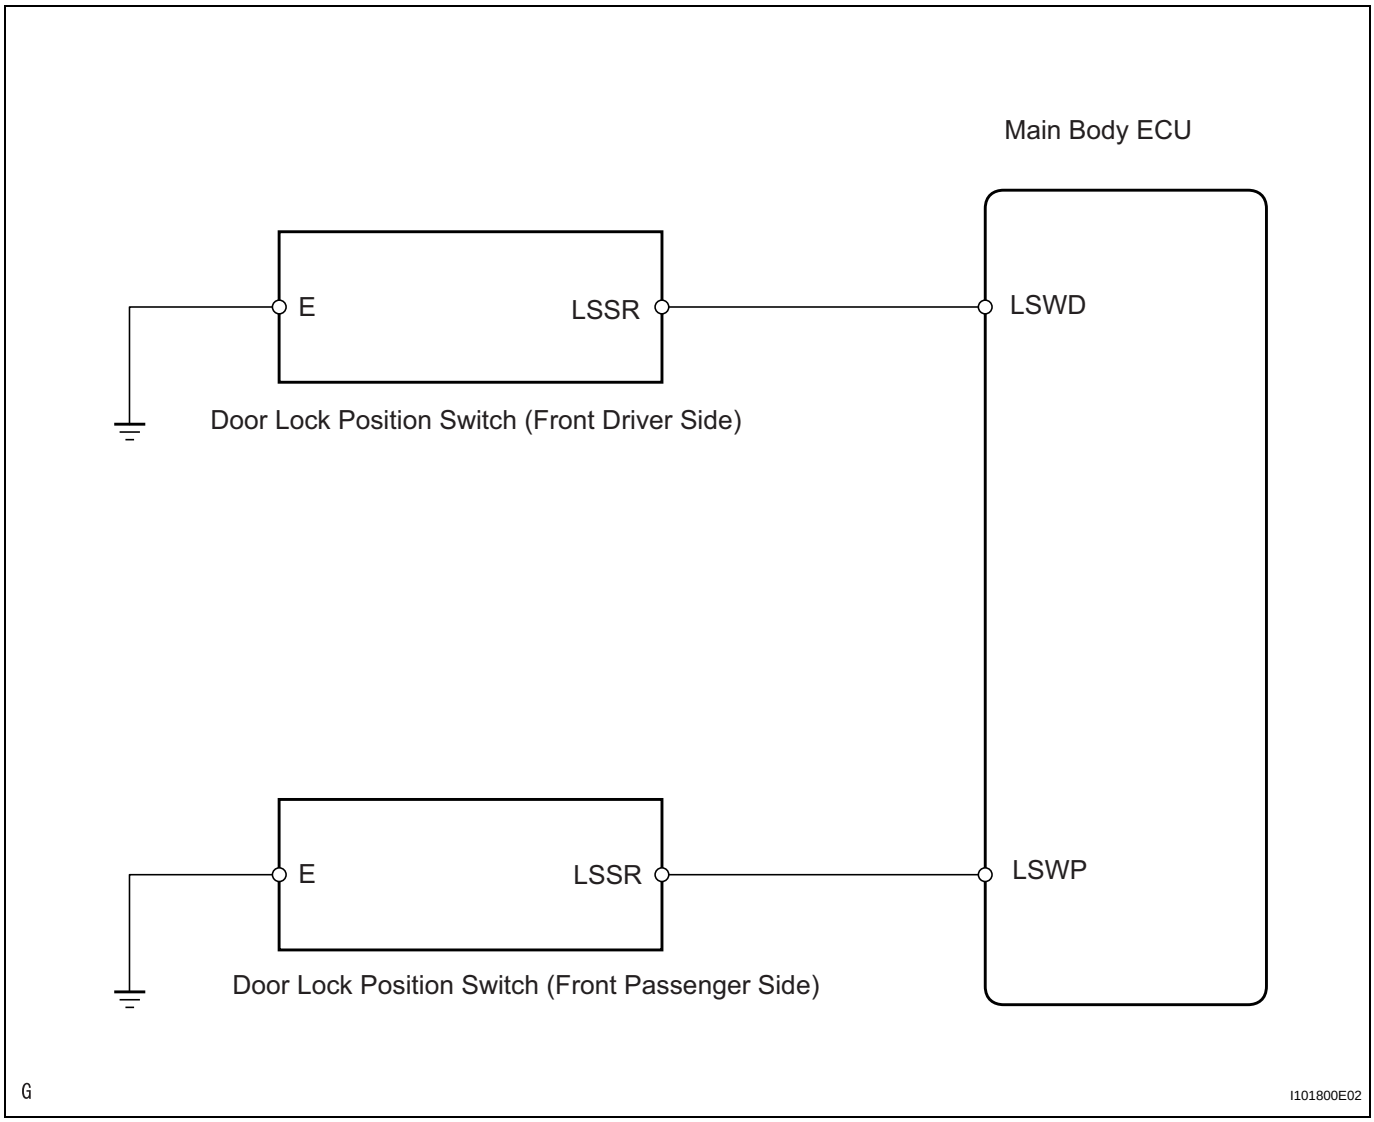
Tester Connection	Condition	Specified Condition
E15-8 (LCTY) - Body ground	Rear LH door is opened	Below 1 Ω
	Rear LH door is closed	10 kΩ or higher

Back door

Tester Connection	Condition	Specified Condition
IA-7 (BCTY) - Body ground	Back door is opened	Below 1 Ω
	Back door is closed	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Door LOCK Position Circuit

DESCRIPTION

This circuit detects the state of the door lock detection sensor and sends it to the main body ECU.

WIRING DIAGRAM

LI

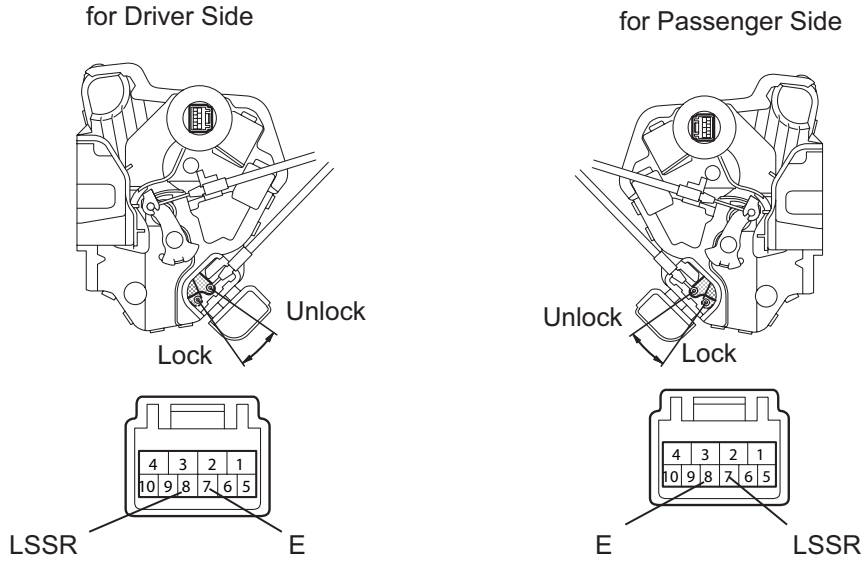
INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (DOOR LOCK POSITION)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the items below in the DATA LIST, and read the displays on the intelligent tester.

Main body ECU

Item	Measurement item/Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver's door lock position switch signal/ON or OFF	ON: Door lock is in unlock position OFF: Door lock is in lock position	-
P LOCK POS SW	Front passenger's door lock position switch signal/ON or OFF	ON: Front passenger's door lock is in unlock position OFF: Front passenger's door lock is in lock position	-



OK:
Condition sign can be displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT FRONT DOOR LOCK

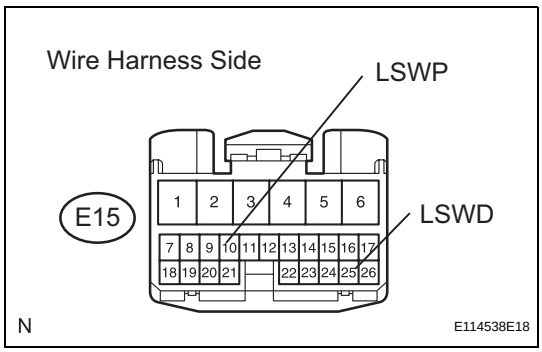
Door Lock

B128041E01

(a) Remove the front door lock (driver side or passenger side).
(b) Measure the resistance of the door lock.
Standard resistance:
Front door lock (for Driver Side)

Tester Connection	Condition	Specified Condition
8 (LSSR) - 7 (E)	LOCK	Below 1 Ω
	UNLOCK	10 kΩ or higher

Front door lock (for Passenger Side)



LI

Tester Connection	Condition	Specified Condition
7 (LSSR) - 8 (E)	LOCK	Below 1 Ω
	UNLOCK	10 kΩ or higher

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

3 CHECK WIRE HARNESS (MAIN BODY ECU - DOOR LOCK AND BODY GROUND)

(a) Disconnect the E15 main body ECU connector.
(b) Measure the resistance of the wire harness side connector.

Standard resistance:

Front door lock (for Driver Side)

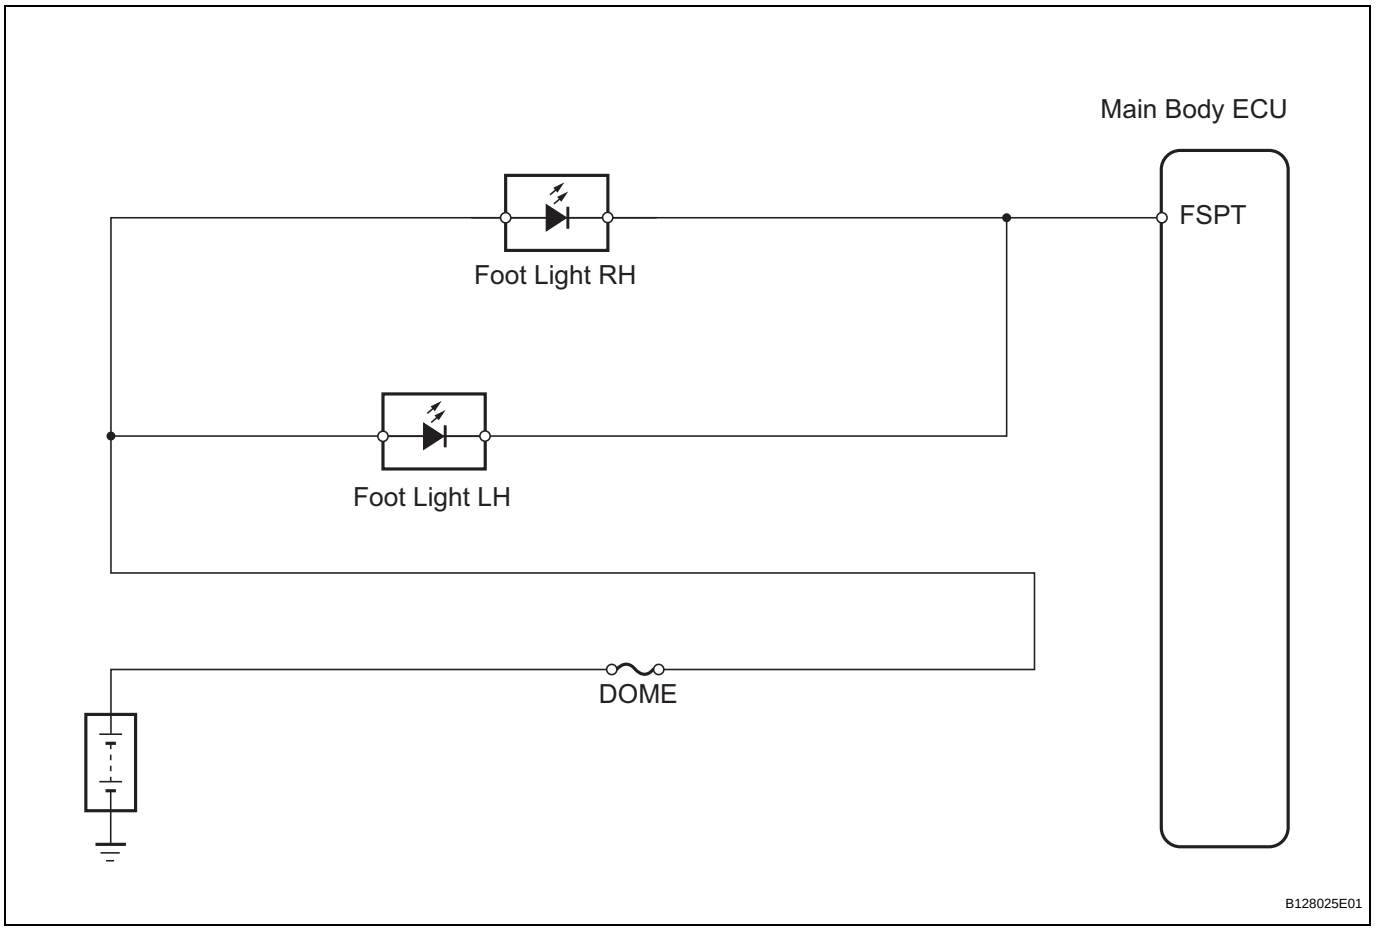
Tester Connection	Condition	Specified Condition
E15-25 (LSWD) - Body ground	LOCK	Below 1 Ω
	UNLOCK	10 kΩ or higher

Front door lock (for Passenger Side)

Tester Connection	Condition	Specified Condition
E15-10 (LSWP) - Body ground	LOCK	Below 1 Ω
	UNLOCK	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)

Footwell Light Circuit

DESCRIPTION

The main body ECU receives information regarding the door lock position switch and ignition switch, and turns on each foot light.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (MAIN BODY ECU)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the items below in the ACTIVE TEST and then check the relay operation.

Main body ECU

Item	Test Details	Diagnostic Note
STEP LIGHT	Foot light ON/OFF	-

OK:
Light comes on.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

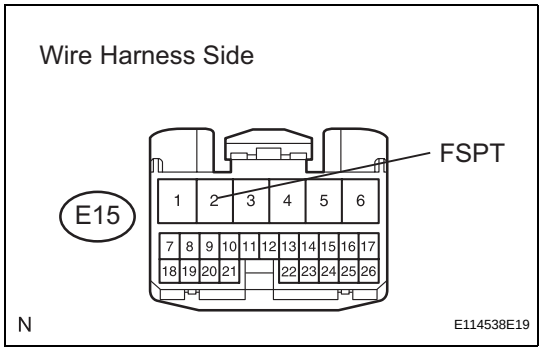
NG

2	INSPECT FUSE (DOME)

(a) Remove the DOME fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK



3	INSPECT FOOT LIGHT

(a) Remove the foot light.
(b) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the light comes on.
OK:
Light comes on.

NG → **REPLACE FOOT LIGHT ASSEMBLY**

OK

4	CHECK WIRE HARNESS (BATTERY - MAIN BODY ECU)

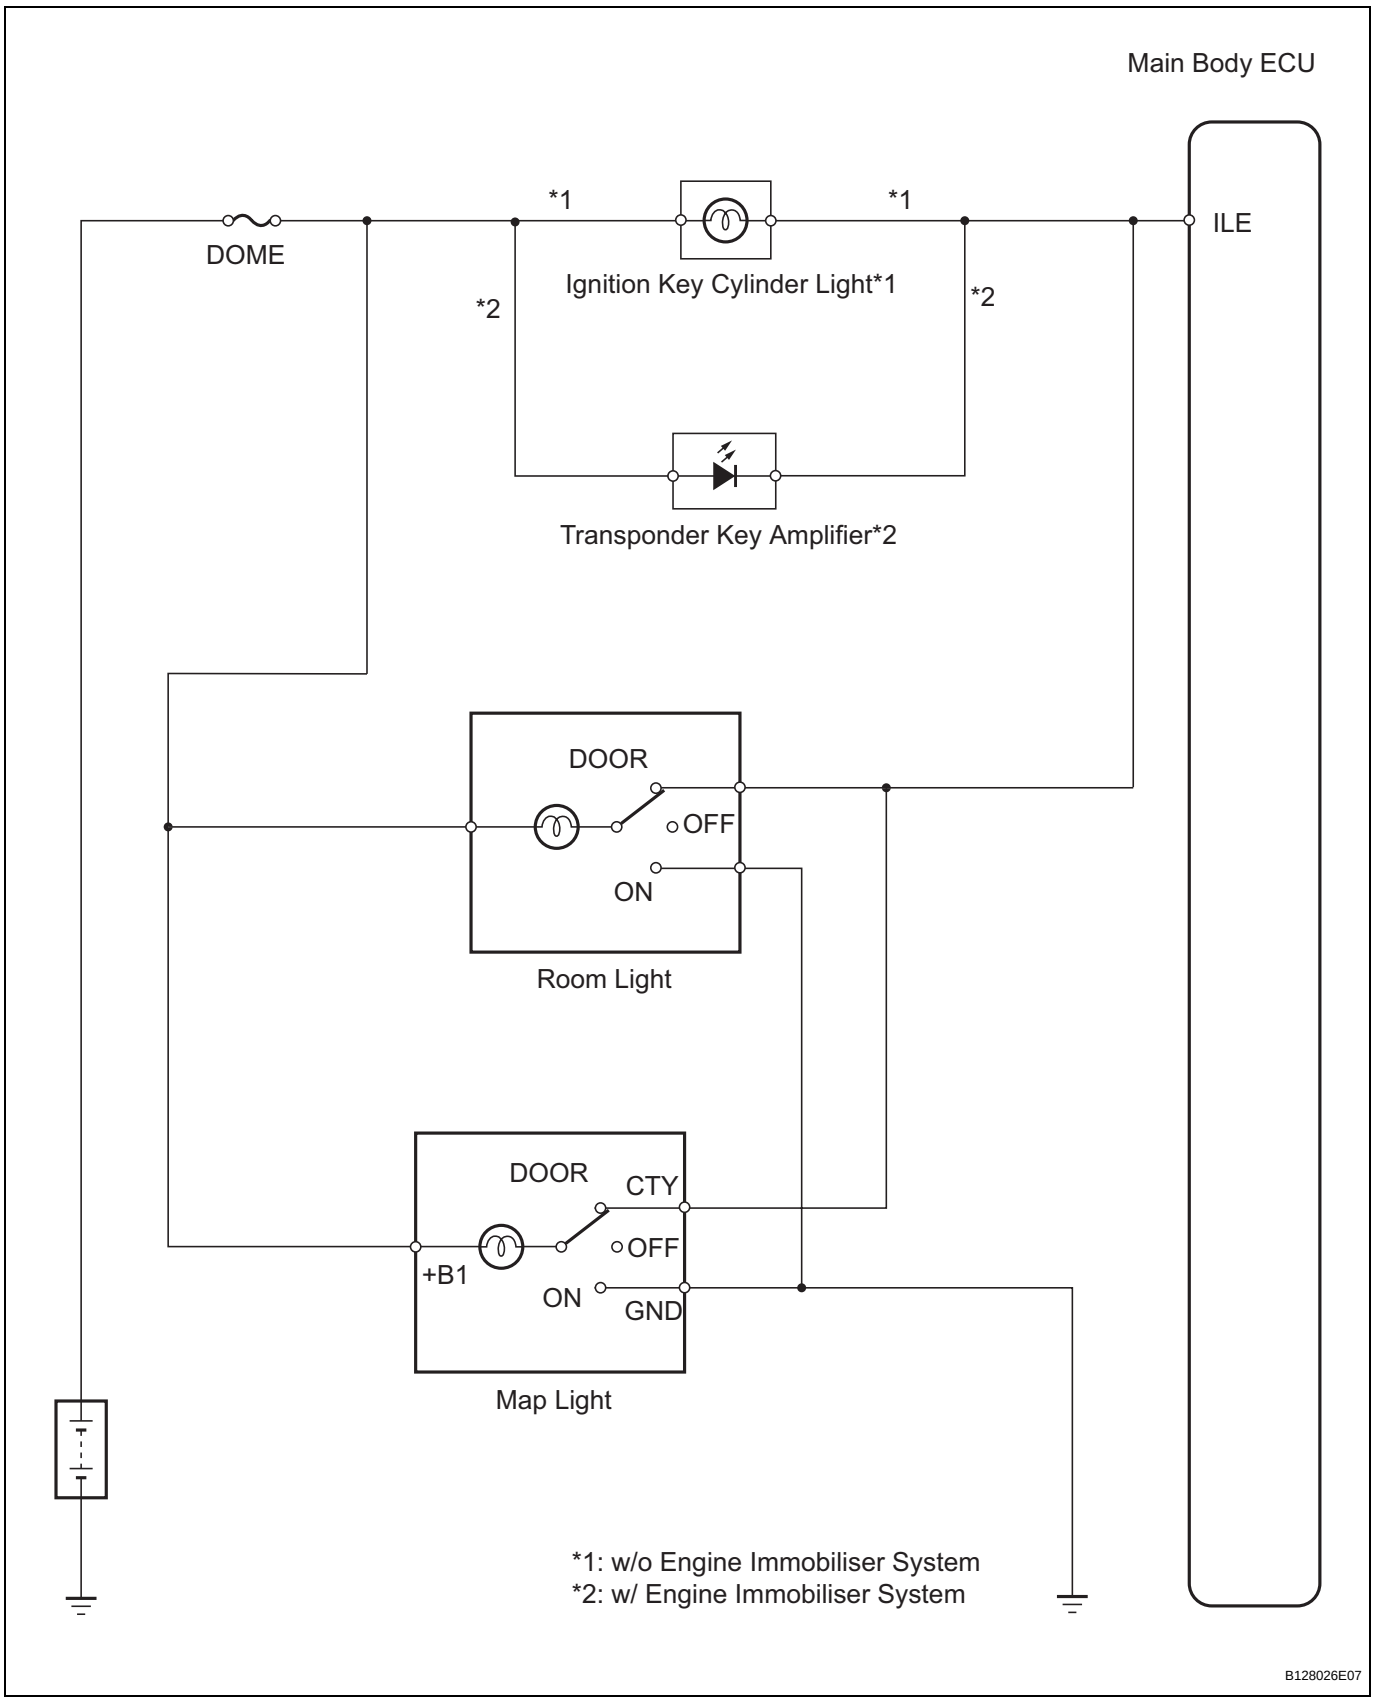
(a) Install the foot light.
(b) Disconnect the E15 main body ECU connector.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
E15-2 (FSPT) - Body ground	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK (MAIN BODY ECU)



LI

Illumination Circuit

DESCRIPTION

The main body ECU receives information regarding the door courtesy switch and door lock position switch, and turns on the room light.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (MAIN BODY ECU)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch to the ON position and press the intelligent tester main switch ON.
(c) Select the items below in the ACTIVE TEST and then check the main body ECU operation.

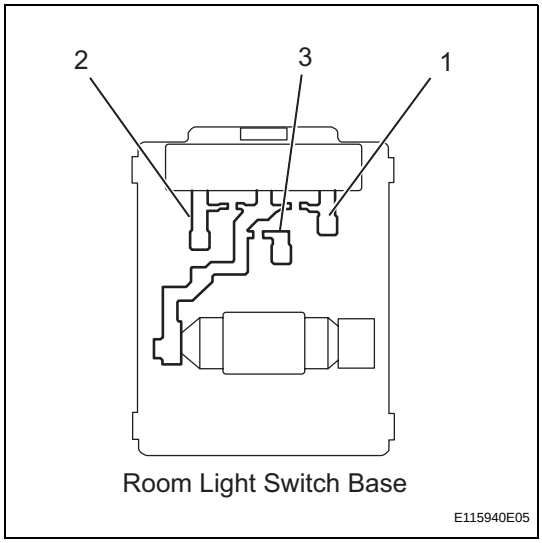
Main body ECU

Item	Test Details	Diagnostic Note
ILLUMI OUTPUT	Test Details: Turn interior light and key illumination ON/OFF Vehicle Condition: Interior light SW is in DOOR position and all doors are closed	-

OK:
Light comes on.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG



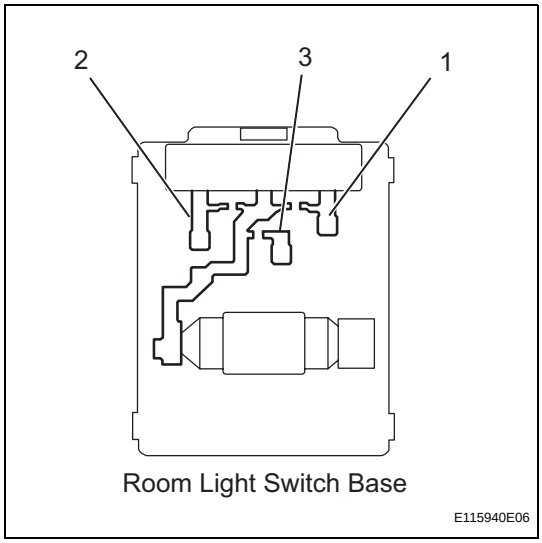
2	INSPECT FUSE (DOME)

(a) Remove the DOME fuse from the engine room No. 2 relay block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 INSPECT ROOM LIGHT ASSEMBLY



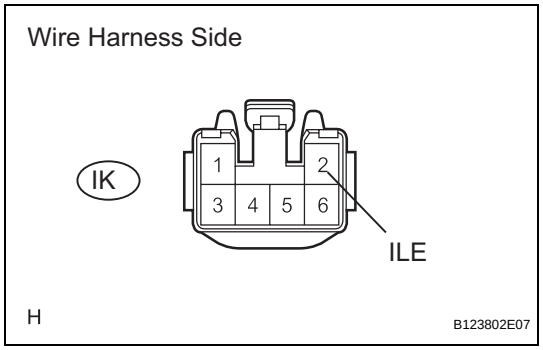
(a) Remove the room light assembly.
(b) Measure the resistance of the room light switch base.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
1 - 2 1 - 3	OFF	10 kΩ or higher
1 - 2	DOOR	Below 1 Ω
1 - 3	ON	Below 1 Ω

NG → **REPLACE ROOM LIGHT ASSEMBLY**

OK

4 INSPECT ROOM LIGHT BULB

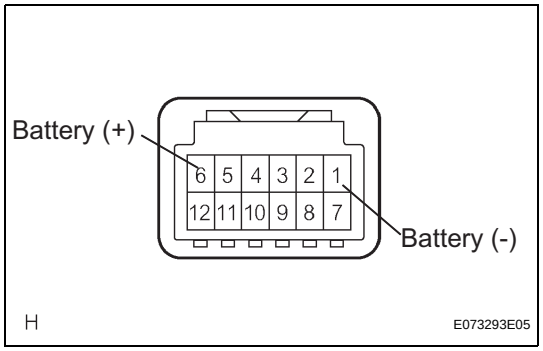


(a) Remove the room light assembly.
(b) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, then check that the light comes on when the switch is in the DOOR position.
OK:
Light comes on.
(c) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 3, then check that the light comes on when the switch is in the ON position.
OK:
Light comes on.

NG → **REPLACE BULB**

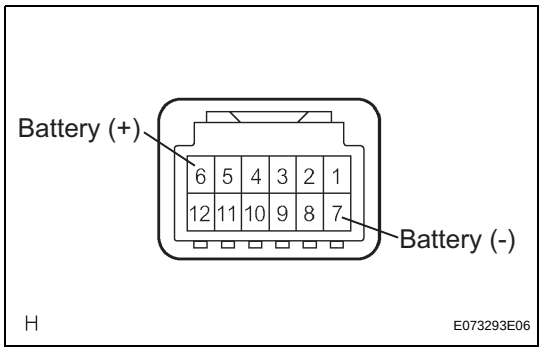
OK

5 CHECK HARNESS AND CONNECTOR (BATTERY - ROOM LIGHT AND MAIN BODY ECU)



(a) Disconnect the IK instrument panel junction block connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
IK-2 (ILE) - Body ground	Room light switch in DOOR position	10 to 14 V

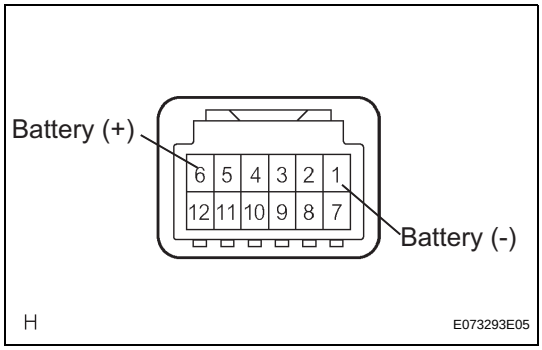


NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

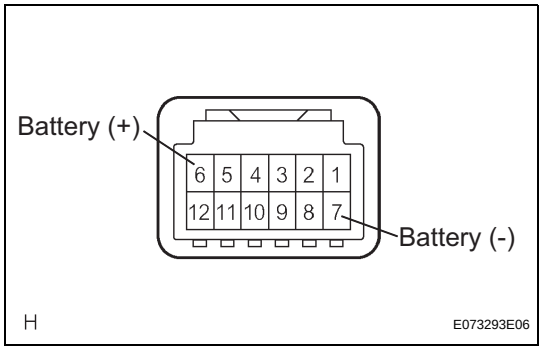
6 INSPECT MAP LIGHT BULB

(a) Remove the map light assembly.
(b) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 1, then check that the light comes on when the switch is in the DOOR position.
OK:
Light comes on.



(c) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 7, then check that the light comes on when the switch is in the ON position.
OK:
Light comes on.

OK → **Go to step 8**

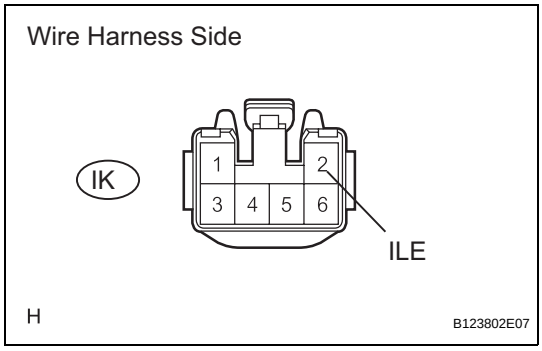


NG

LI

7 INSPECT MAP LIGHT

(a) Replace the map light bulb with a normally functioning one or a new one.
(b) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 1, then check that the light comes on when the switch is in the DOOR position.
OK:
Light comes on.



(c) Connect the positive (+) lead from the battery to terminal 6 and the negative (-) lead to terminal 7, then check that the light comes on when the switch is in the ON position.
OK:
Light comes on.

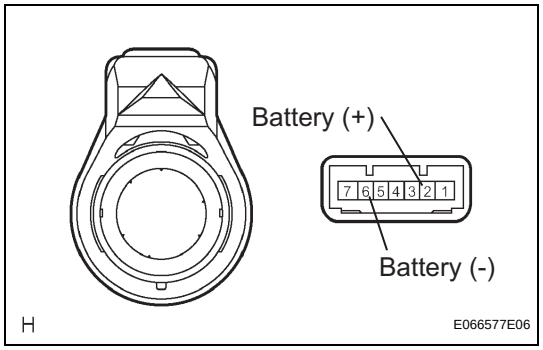
NG → **REPLACE MAP LIGHT ASSEMBLY**

OK

REPLACE MAP LIGHT BULB

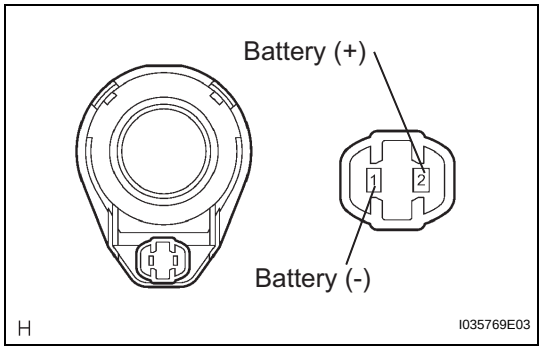
8 CHECK WIRE HARNESS (BATTERY - MAP LIGHT AND MAIN BODY ECU)

(a) Disconnect the IK instrument panel junction block connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Condition	Specified Condition
IK-2 (ILE) - Body ground	Room light switch in DOOR position	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

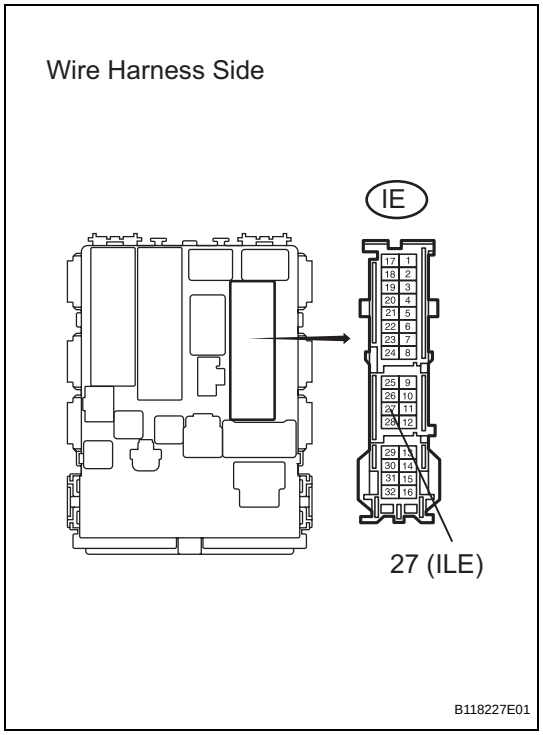


OK

LI

9 INSPECT IGNITION KEY CYLINDER LIGHT

(a) w/ Engine Immobiliser System
  (1) Remove the transponder key amplifier (ignition key cylinder light).
  (2) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 6, then check that the light comes on.
  OK:
  Light comes on.



(b) w/o Engine Immobiliser System
  (1) Remove the ignition key cylinder light.
  (2) Connect the positive (+) lead from the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the light comes on.
  OK:
  Light comes on.

NG → **REPLACE IGNITION KEY CYLINDER LIGHT**

OK

10 CHECK WIRE HARNESS (BATTERY - MAIN BODY ECU)

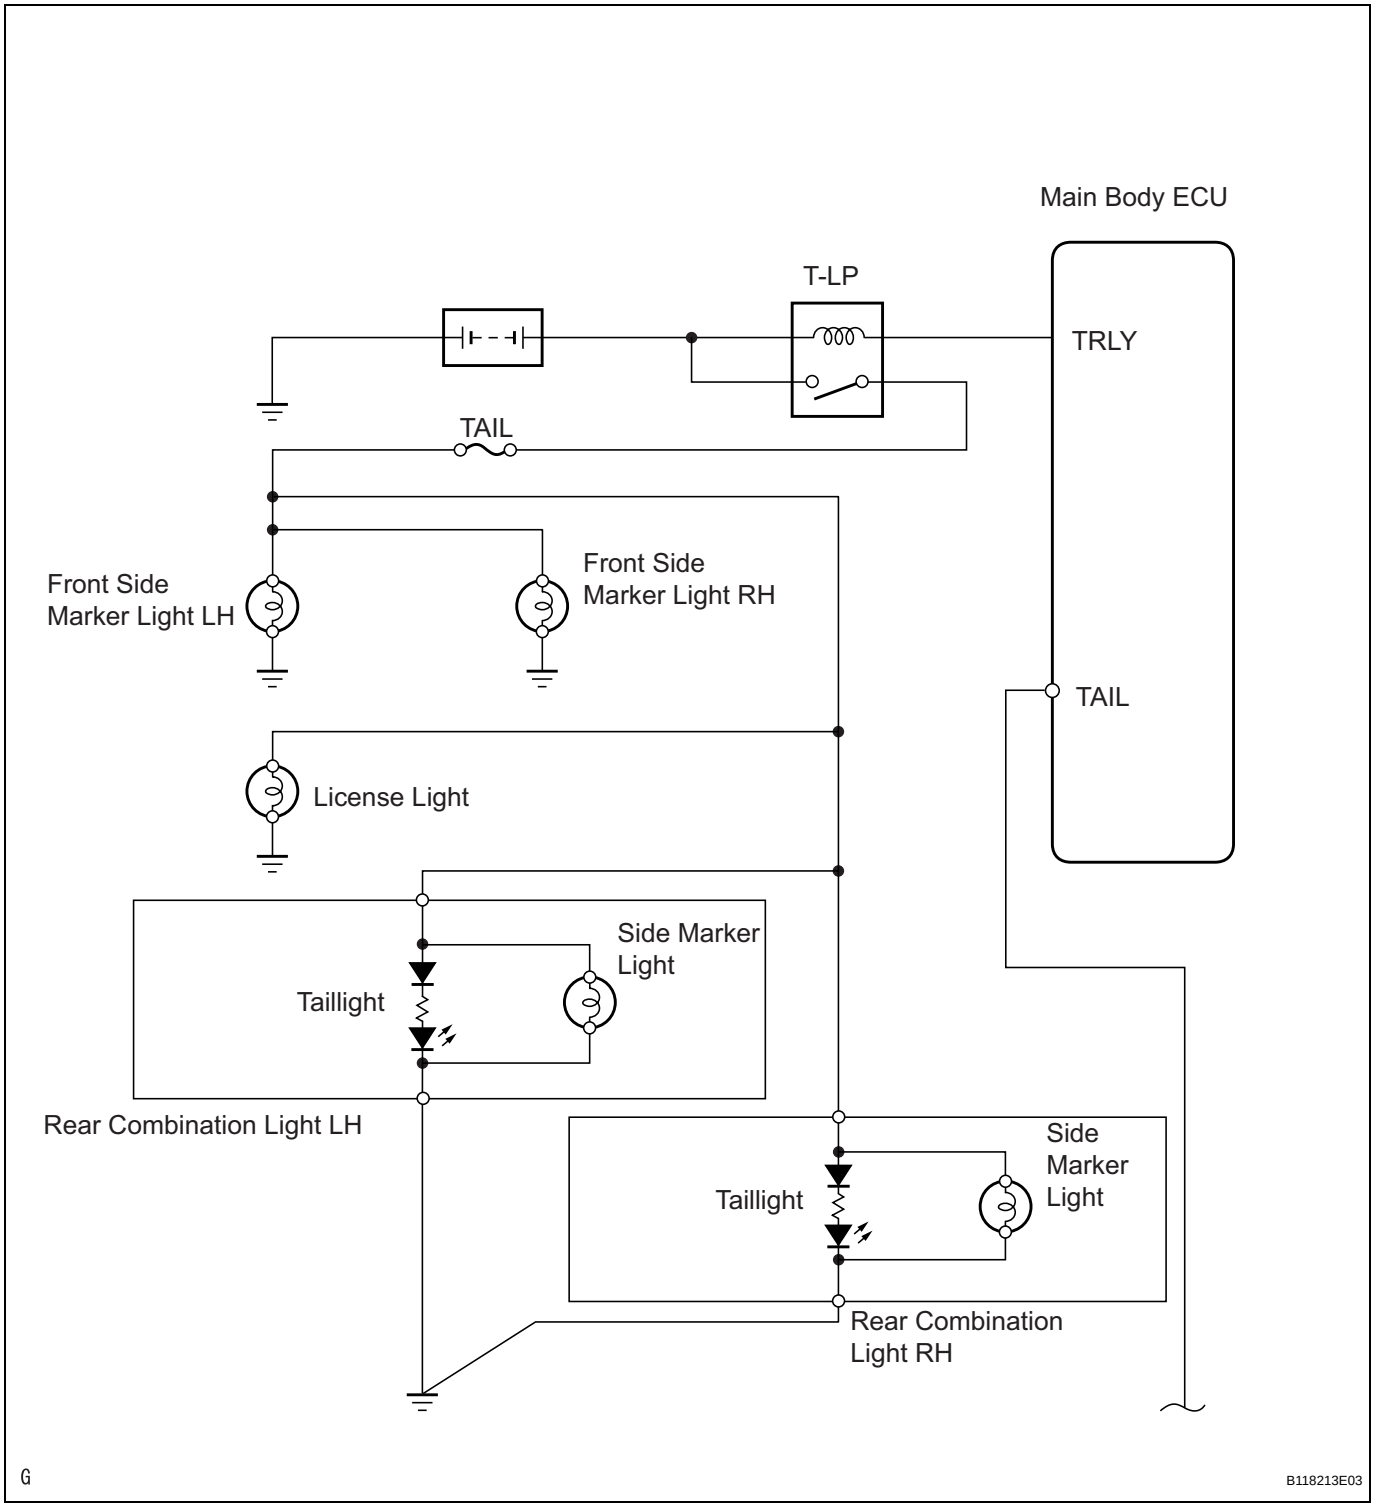
(a) Disconnect the IE instrument panel junction block connector.
(b) Measure the voltage of the wire harness side connector.

Tester Connection	Specified Condition
IE-27 (ILE) - Body ground	10 to 14 V

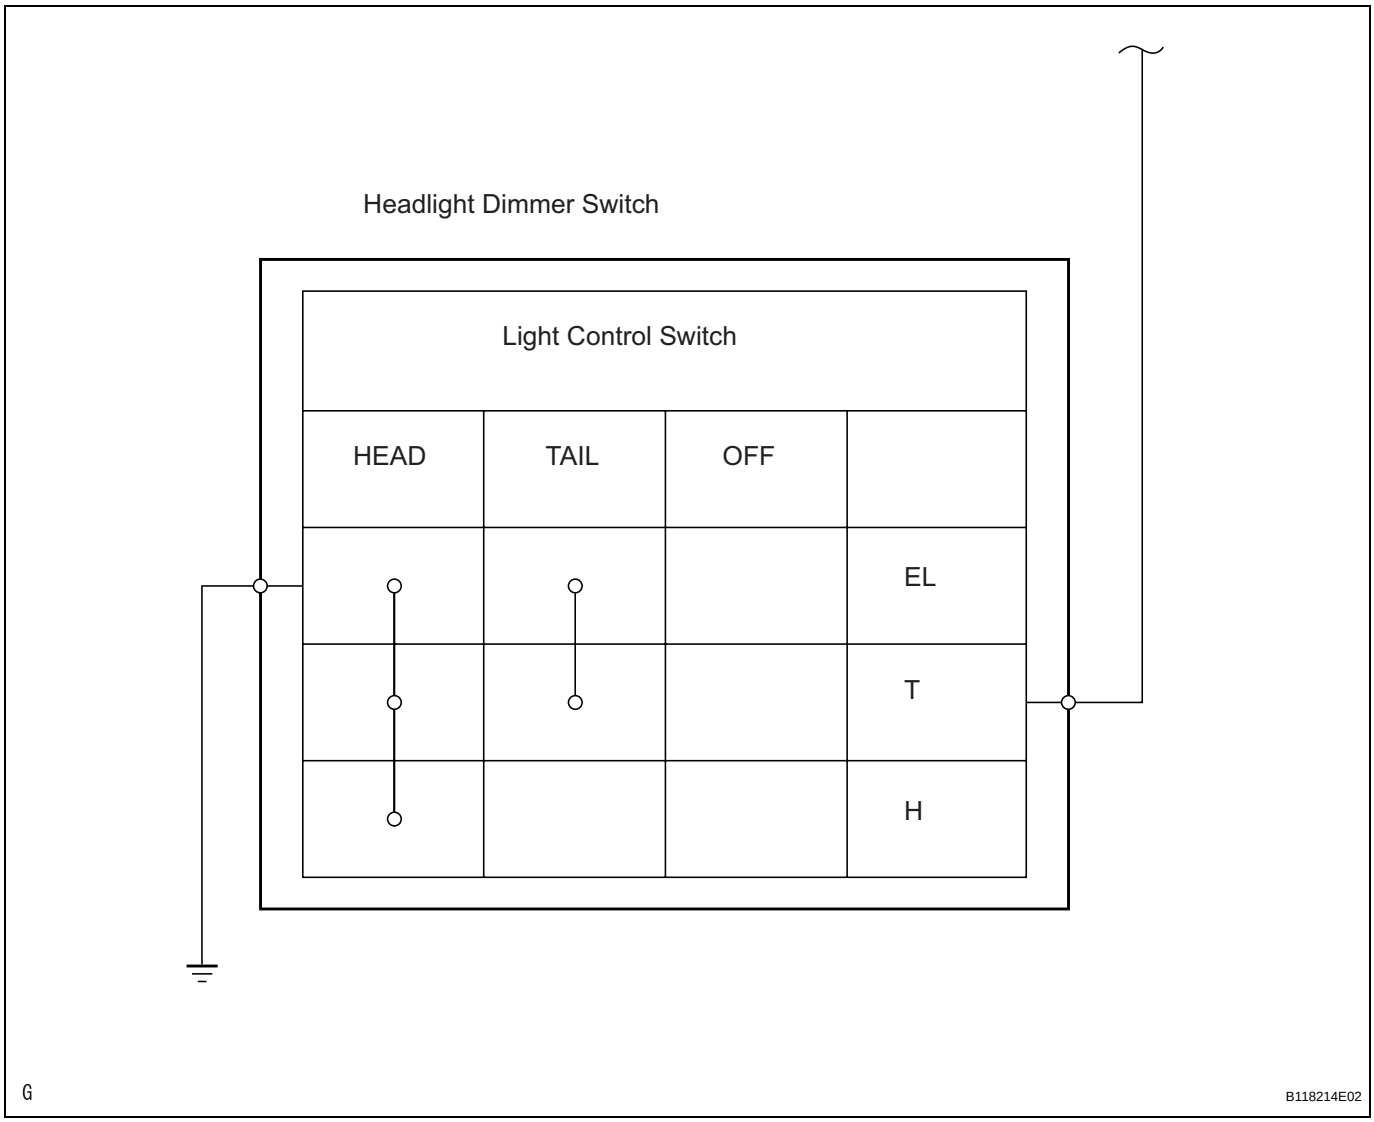
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

LI

OK



REPLACE INSTRUMENT PANEL JUNCTION BLOCK



Taillight Relay Circuit

DESCRIPTION

When the light control switch, located on the headlight dimmer switch, is turned to the TAIL position, the taillight relay (Marking: T-LP) turns on to illuminate the front side marker lights, rear taillights, side marker lights and license plate light.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK WHETHER LIGHTS ILLUMINATE

LI

(a) Check whether the following lights illuminate: front side marker lights, rear taillights, side marker lights and license plate light.

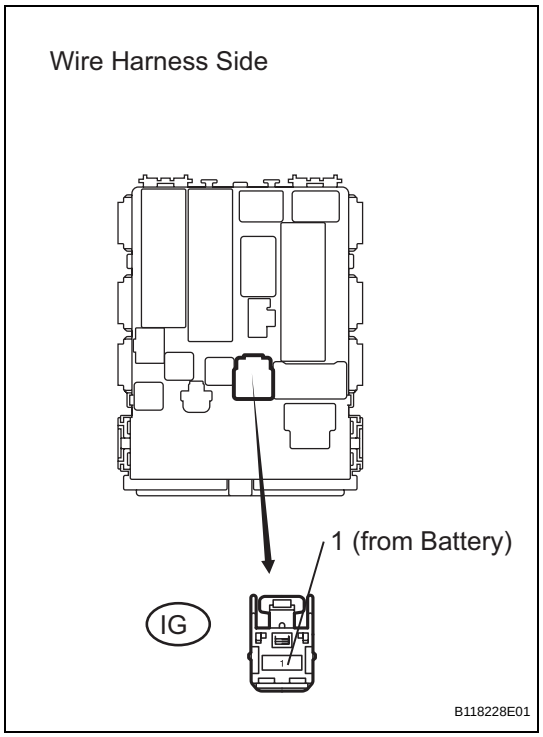
Result

Result	Proceed to
All lights do not illuminate	A
Front side marker lights do not illuminate	B
Rear taillights do not illuminate	C
License plate light does not illuminate	D
Rear side marker light do not illuminate.	E

B	Go to step 8
C	Go to step 10

D	Go to step 11
E	Go to step 12

A



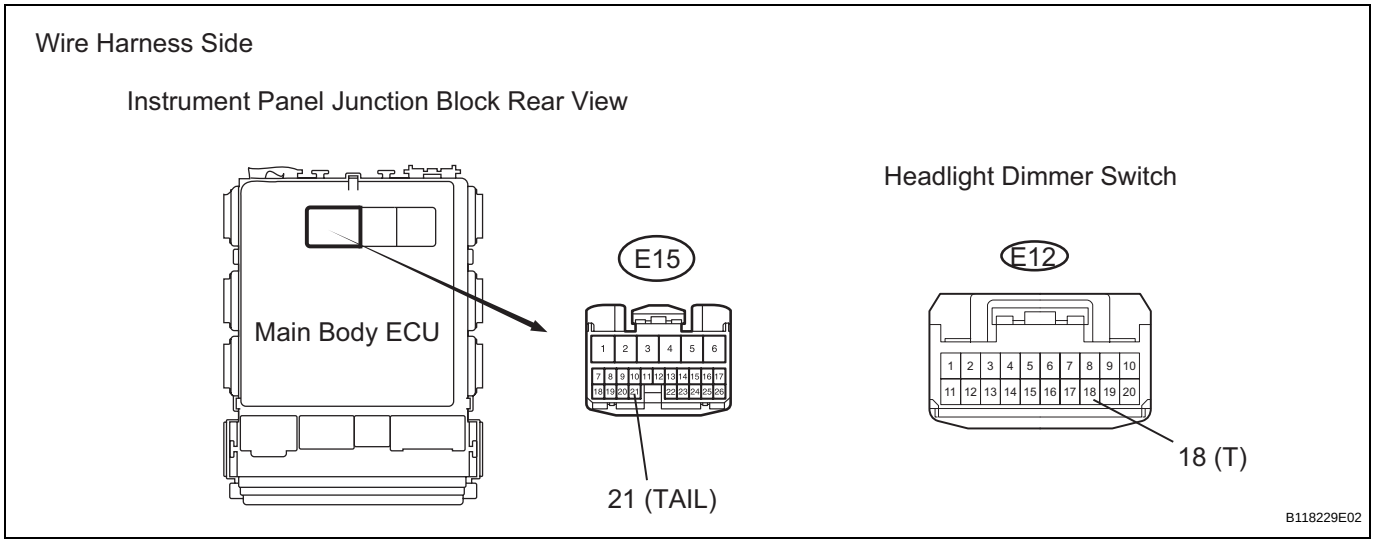
2	INSPECT FUSE (TAIL)

(a) Remove the TAIL fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG	REPLACE FUSE

OK

3	CHECK WIRE HARNESS (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK)



(a) Disconnect the IG instrument panel junction block connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

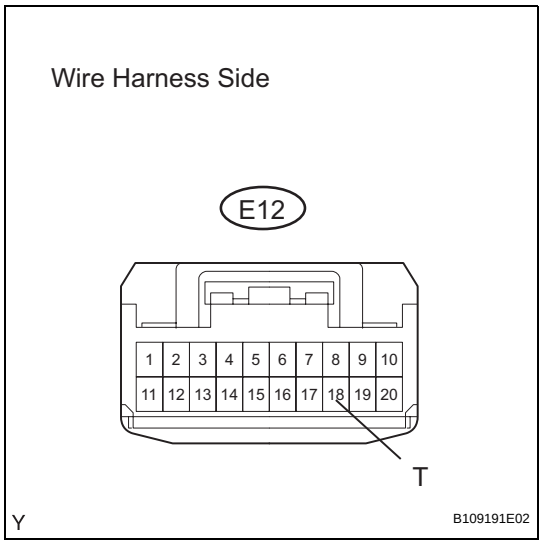
Tester Connection	Specified Condition
IG-1 - Body ground	10 to 14 V

NG	REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

4	CHECK WIRE HARNESS (MAIN BODY ECU - HEADLIGHT DIMMER SWITCH)

(a) Disconnect the E15 main body ECU connector.
(b) Disconnect the E12 headlight dimmer switch connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E15-21 (TAIL) - E12-18 (T)	Below 1 Ω

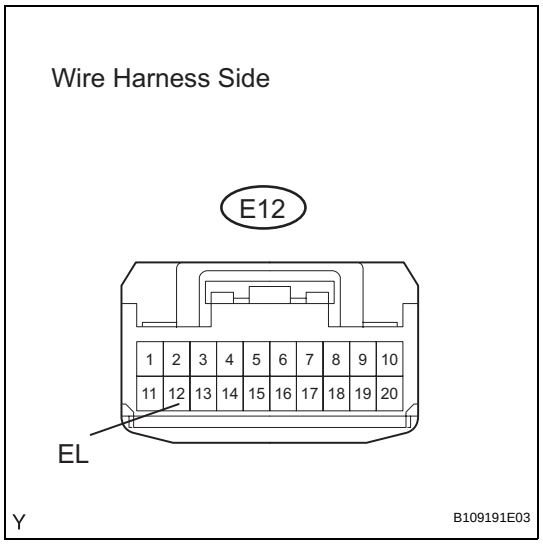
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	CHECK WIRE HARNESS (BATTERY - HEADLIGHT DIMMER SWITCH)

(a) Connect the E15 main body ECU connector.
(b) Disconnect the E12 headlight dimmer switch connector.
(c) Measure the voltage of the wire harness side connector.

Standard voltage



Tester Connection	Specified Condition
E12-18 (T) - Body ground	10 to 14 V

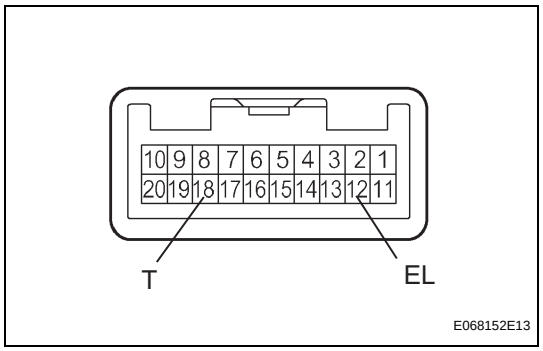
NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK**

LI

OK

6 CHECK WIRE HARNESS (HEADLIGHT DIMMER SWITCH - BODY GROUND)

(a) Disconnect the E12 headlight dimmer switch connector.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
E12-12 (EL) - Body ground	Below 1 Ω

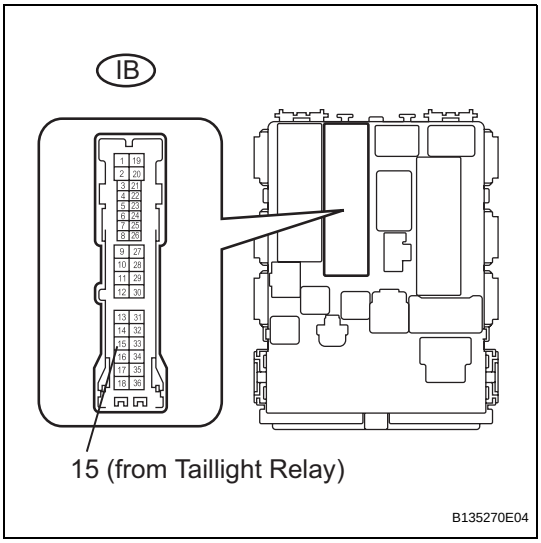
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7 INSPECT HEADLIGHT DIMMER SWITCH

(a) Remove the headlight dimmer switch.
(b) Measure the resistance of the switch.

Standard resistance



Tester Connection	Condition	Specified Condition
18 (T) - 12 (EL)	OFF	10 kΩ or higher
18 (T) - 12 (EL)	TAIL	Below 1 Ω

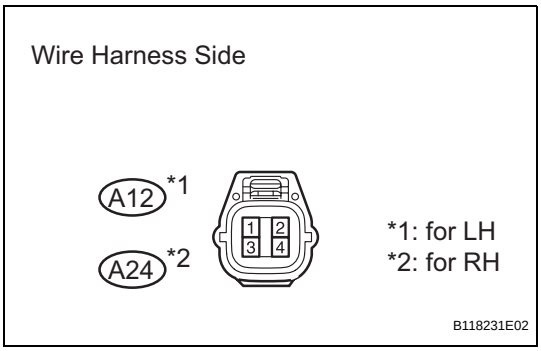
NG → **REPLACE HEADLIGHT DIMMER SWITCH**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK

8	CHECK INSTRUMENT PANEL JUNCTION BLOCK (TAILLIGHT RELAY)

(a) Disconnect the IB instrument panel junction block connector.
(b) Measure the voltage of the junction block.



Standard voltage

Tester Connection	Condition	Specified Condition
Junction block IB terminal 15 - Body ground	Light control switch TAIL	10 to 14 V

NG → **REPLACE INSTRUMENT PANEL JUNCTION BLOCK**

OK

9	CHECK WIRE HARNESS (TAILLIGHT RELAY - FRONT SIDE MARKER LIGHT AND BODY GROUND)

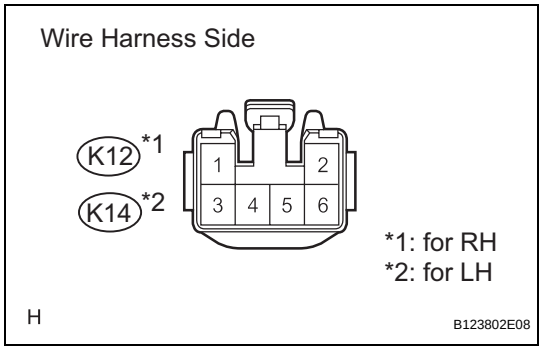
(a) Disconnect the A12 and A24 front side marker light connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Condition	Specified Condition
A12-4 - Body ground	Light control switch on (TAIL)	10 to 14 V
A24-4 - Body ground	Light control switch on (TAIL)	10 to 14 V

Standard resistance

Tester Connection	Specified Condition
A12-1 - Body ground	Below 1 Ω
A24-1 - Body ground	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE BULB

LI

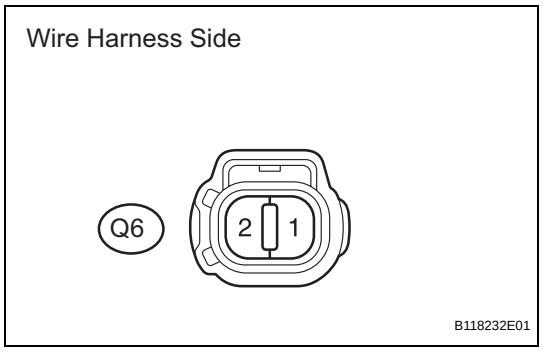
10 CHECK WIRE HARNESS (MAIN BODY ECU - REAR COMBINATION LIGHT)

(a) Disconnect the K12 and K14 rear combination light connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Standard voltage

Tester Connection	Condition	Specified Condition
K14-2 - Body ground	Light control switch on (TAIL)	10 to 14 V
K12-2 - Body ground	Light control switch on (TAIL)	10 to 14 V

Standard resistance



Tester Connection	Specified Condition
K14-1 - Body ground	Below 1 Ω
K12-1 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE REAR COMBINATION LIGHT

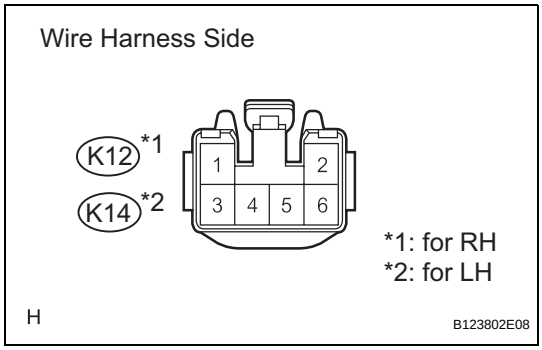
11 CHECK WIRE HARNESS (MAIN BODY ECU - LICENSE PLATE LIGHT AND BODY GROUND)

(a) Disconnect the Q6 license plate light connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
Q6-2 - Body ground	Light control switch on (TAIL)	10 to 14 V

Standard resistance



Tester Connection	Specified Condition
Q6-1 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE BULB

12	CHECK WIRE HARNESS (MAIN BODY ECU - REAR COMBINATION LIGHT)

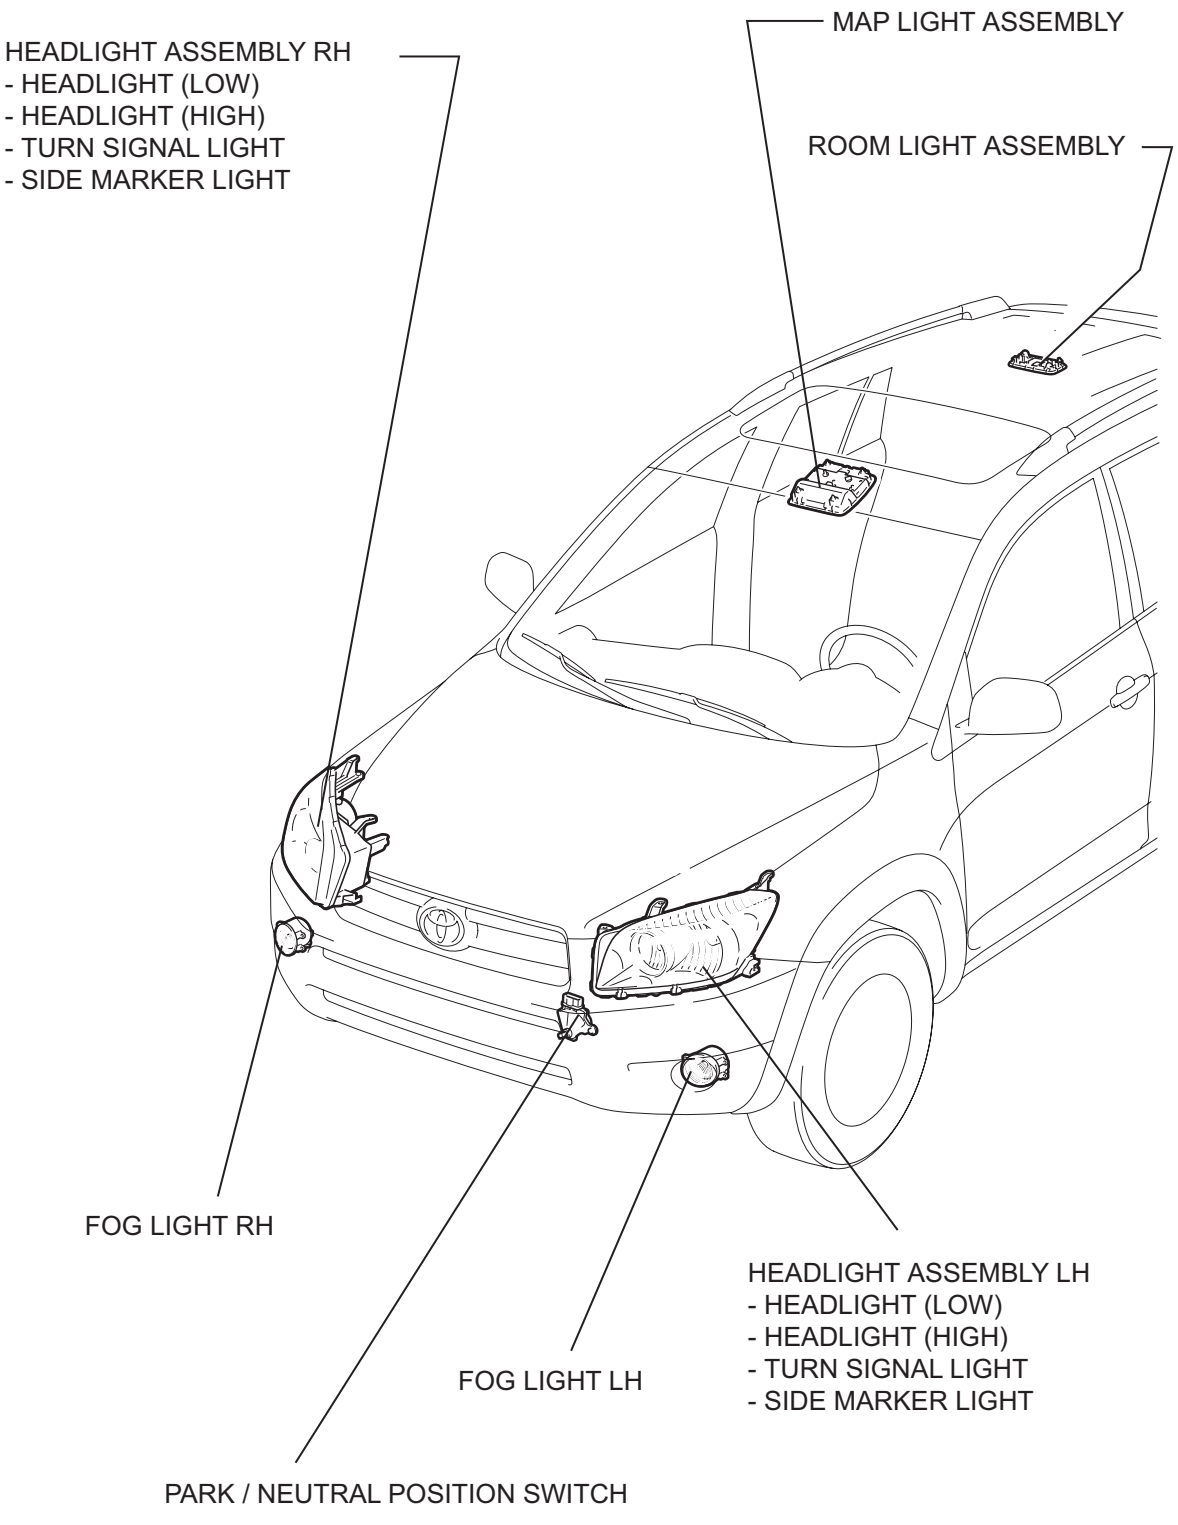
(a) Disconnect the K12 and K14 rear combination light connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Standard voltage

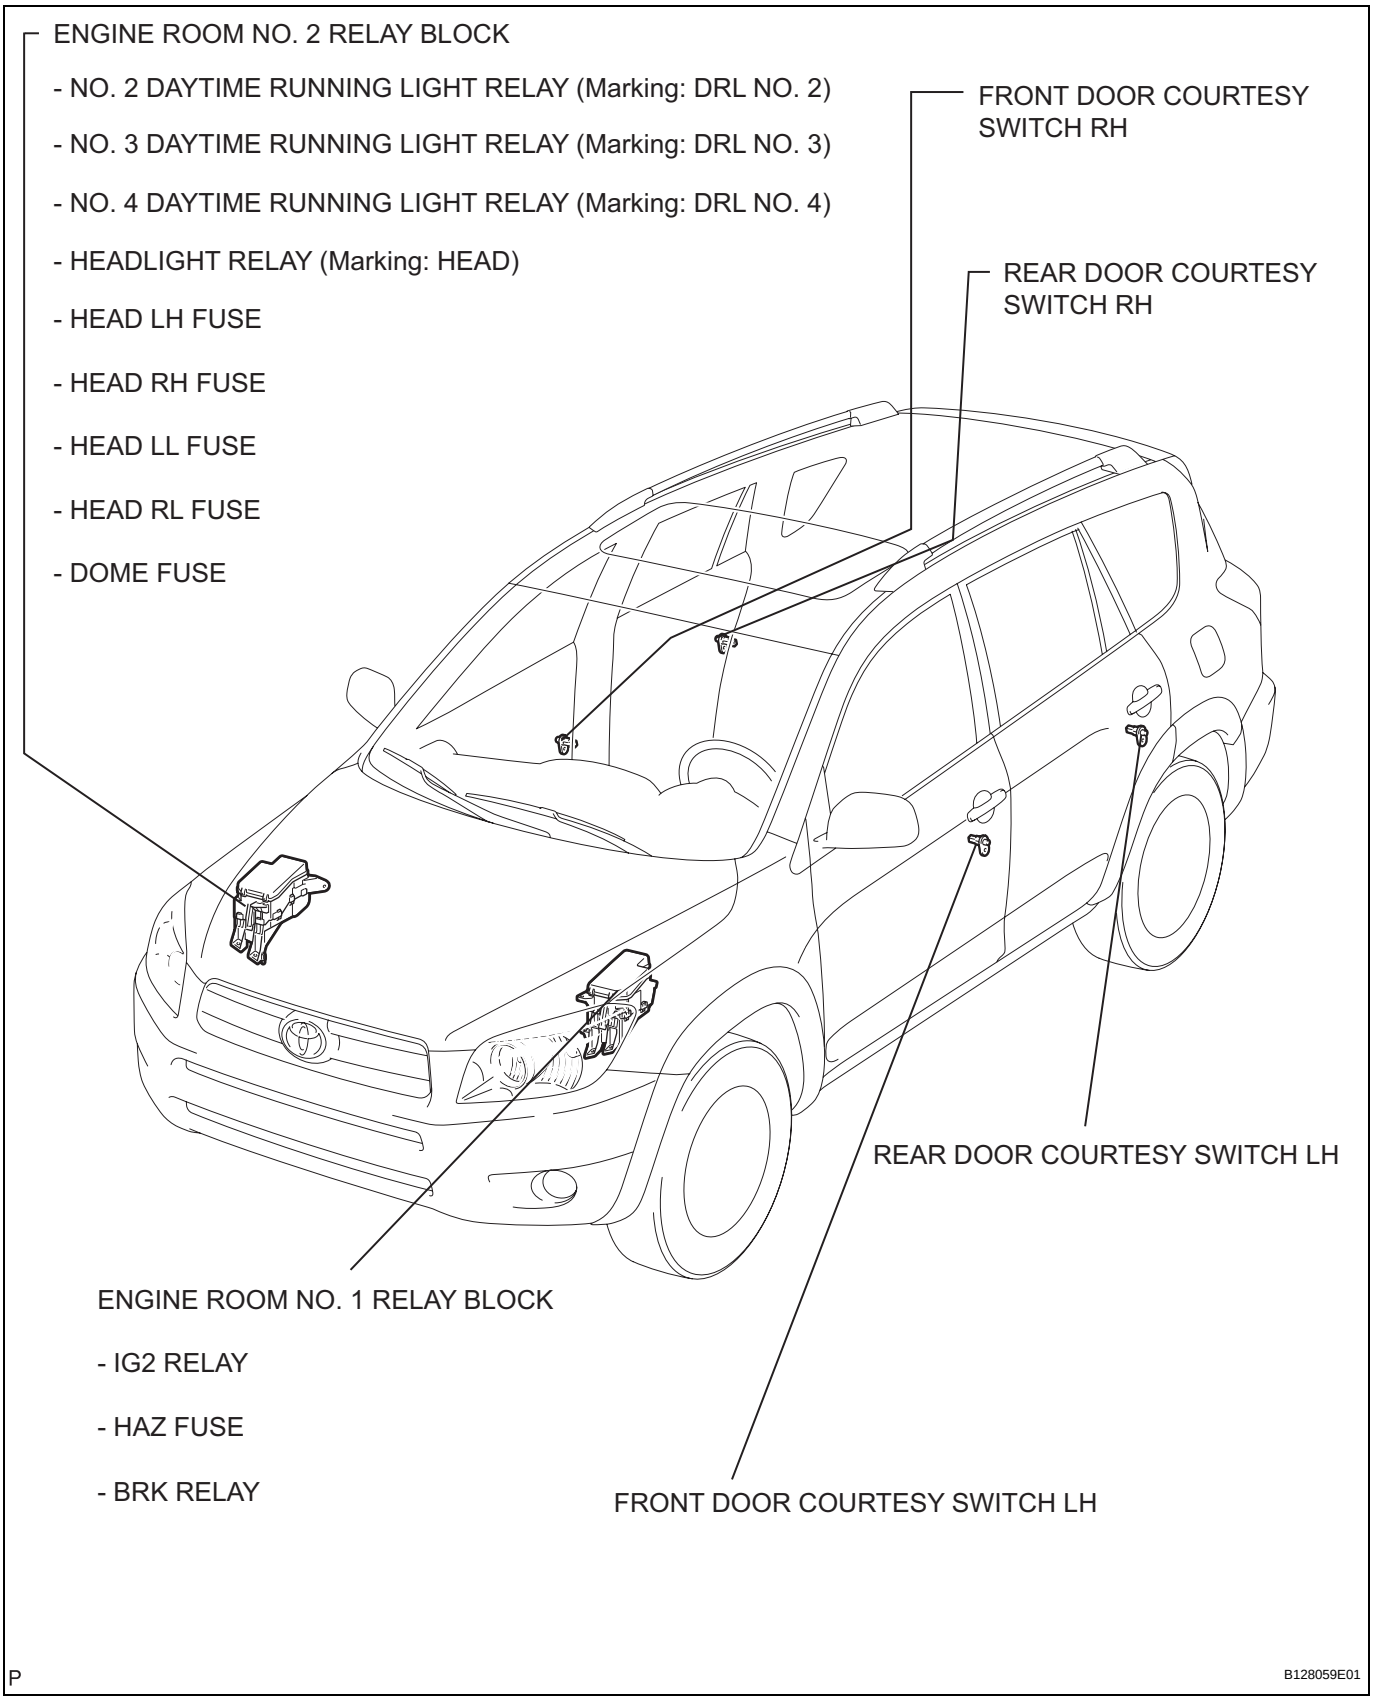
Tester Connection	Condition	Specified Condition
K14-2 - Body ground	Light control switch on (TAIL)	10 to 14 V
K12-2 - Body ground	Light control switch on (TAIL)	10 to 14 V

Standard resistance

Tester Connection	Specified Condition
K14-1 - Body ground	Below 1 Ω
K12-1 - Body ground	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**



OK

REPLACE BULB

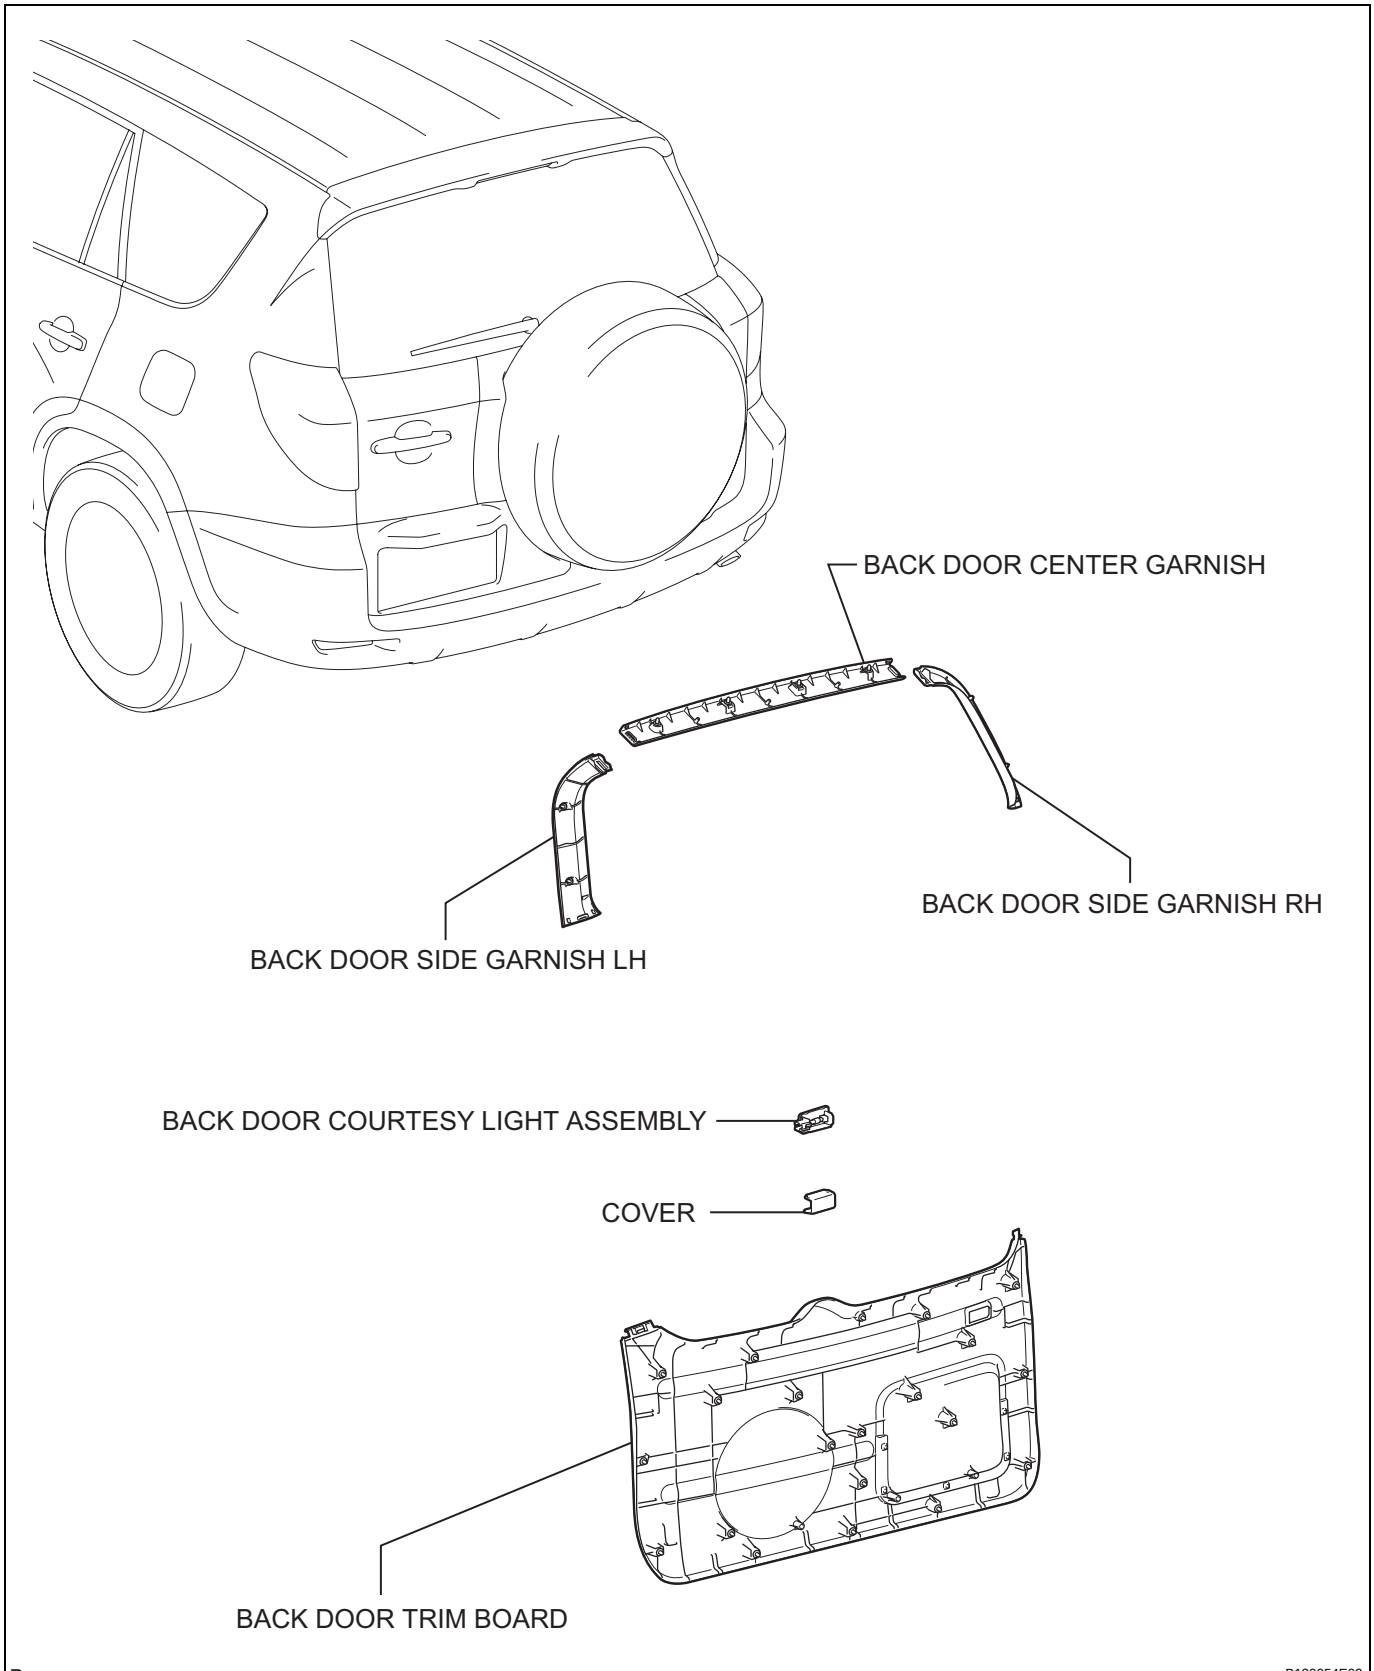
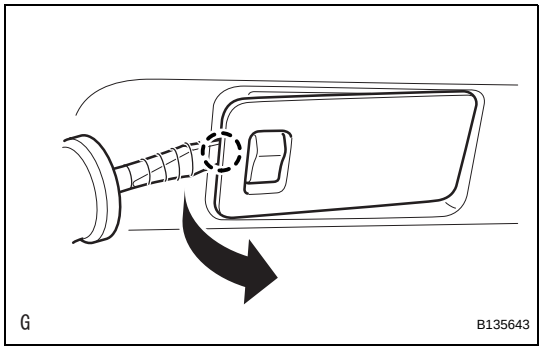
INSTALLATION



1. **INSTALL BACK DOOR COURTESY LIGHT ASSEMBLY**
   (a) Install the bulb to the light.

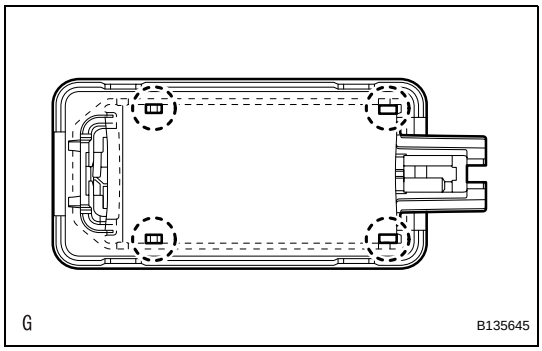
   (b) Attach the 4 claws to install the light shade.

   (c) Install the light as shown in the illustration.
2. **INSTALL BACK DOOR TRIM BOARD (See page ED-66)**
3. **INSTALL BACK DOOR SIDE GARNISH RH (See page ED-67)**
4. **INSTALL BACK DOOR SIDE GARNISH LH (See page ED-67)**
5. **INSTALL BACK DOOR CENTER GARNISH (See page ED-67)**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

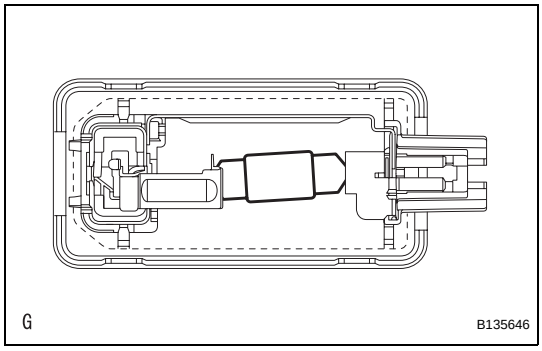


LUGGAGE ROOM LIGHT

COMPONENTS



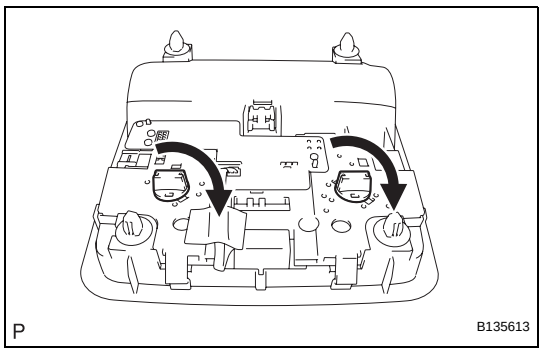
REMOVAL



1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE BACK DOOR CENTER GARNISH (See page ED-59)**
3. **REMOVE BACK DOOR SIDE GARNISH LH (See page ED-59)**
4. **REMOVE BACK DOOR SIDE GARNISH RH (See page ED-59)**
5. **REMOVE BACK DOOR TRIM BOARD (See page ED-59)**
6. **REMOVE BACK DOOR COURTESY LIGHT ASSEMBLY**
   (a) Using a screwdriver, pry out the light as shown in the illustration.
   HINT:
   Tape the screwdriver tip before use.

(b) Detach the 4 claws and remove the light shade.

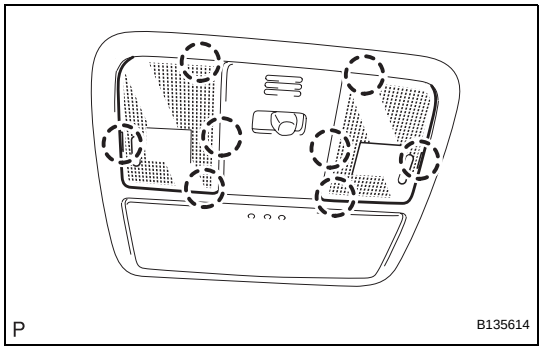
(c) Remove the light bulb from the light.



(b) Connect the battery's positive (+) lead to terminal 6 and the negative (-) lead to terminal 7, and then check that the light comes on when the switch is in the ON position.

OK:

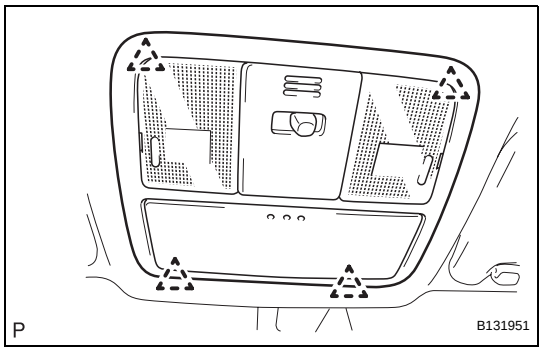
Light comes on.



If the result is not as specified, replace the light assembly.

REASSEMBLY

1. INSTALL MAP LIGHT BULB



(a) Install the 2 bulbs to the light.

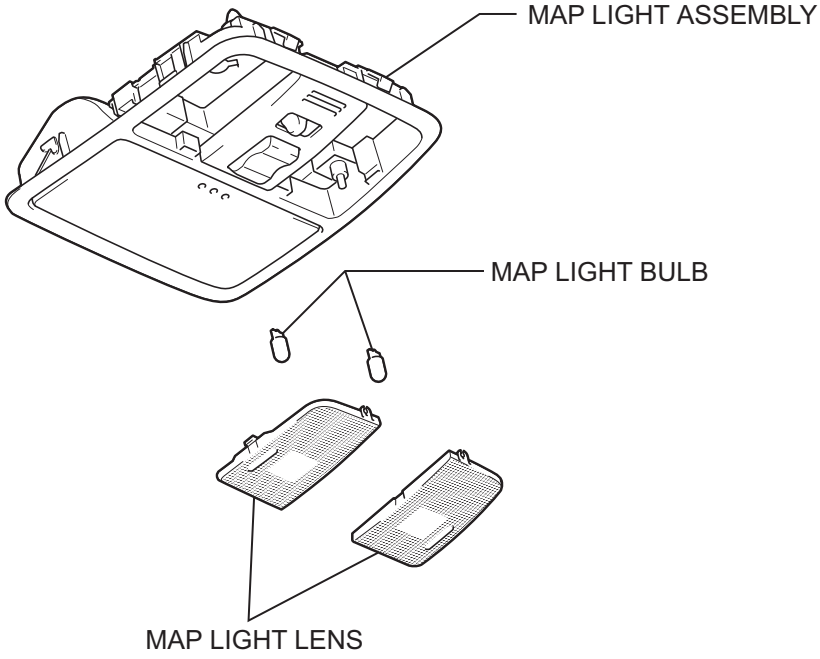
INSTALLATION

1. INSTALL MAP LIGHT LENS

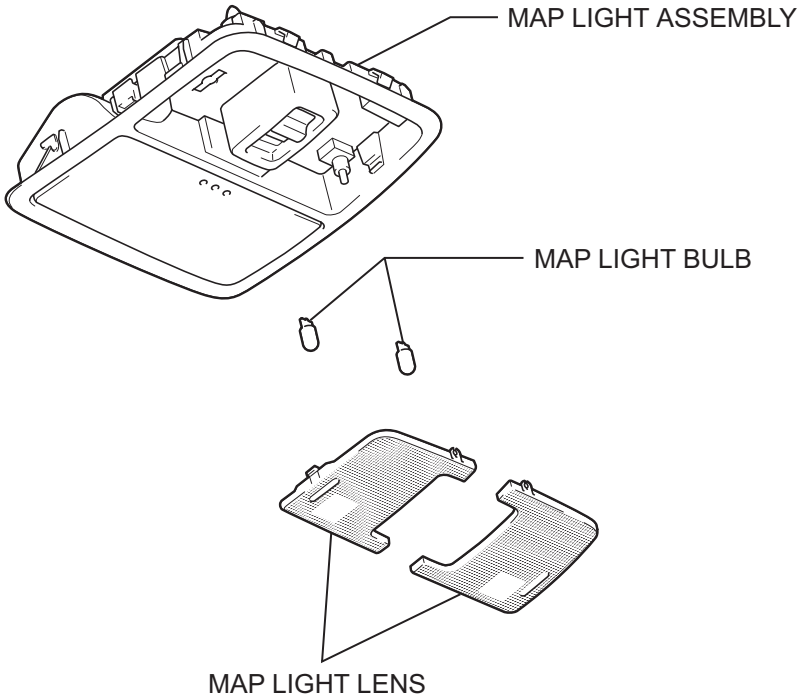
(a) Attach the 8 claws to install the map light lens.

2. INSTALL MAP LIGHT ASSEMBLY

(a) Connect the light connector.



(b) Attach the 4 clips to install the map light.



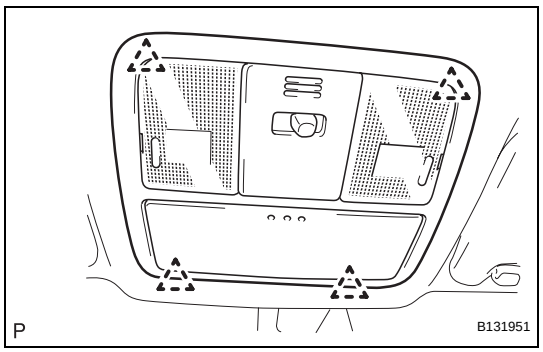
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

MAP LIGHT ASSEMBLY

COMPONENTS

w/ Sliding Roof

P

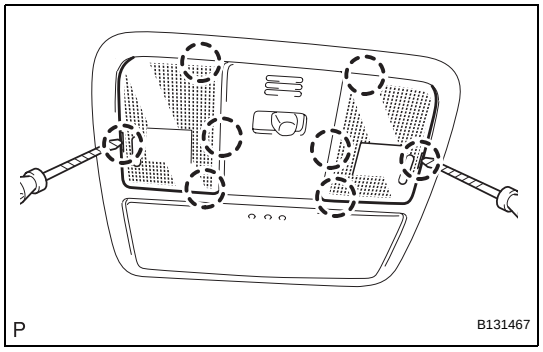


B129920E02

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

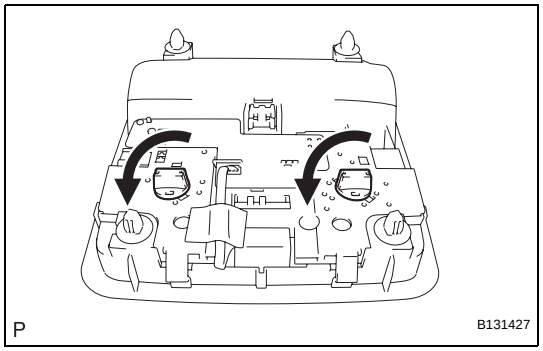
2. REMOVE MAP LIGHT ASSEMBLY

(a) Detach the 4 clips and remove the map light.

(b) Disconnect the light connector.

3. REMOVE MAP LIGHT LENS

(a) Using a screwdriver, pry out the 8 claws and remove the map light lens.



HINT:

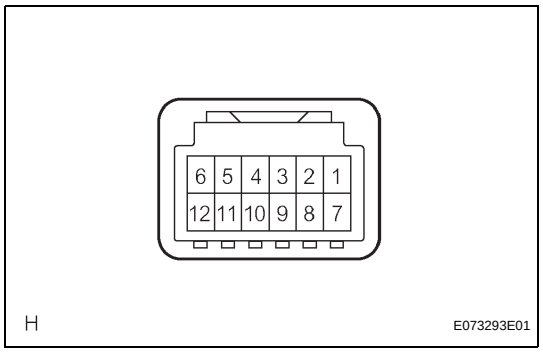
Tape the screwdriver tip before use.

DISASSEMBLY

1. REMOVE MAP LIGHT BULB

(a) Remove the 2 bulbs from the light.

INSPECTION



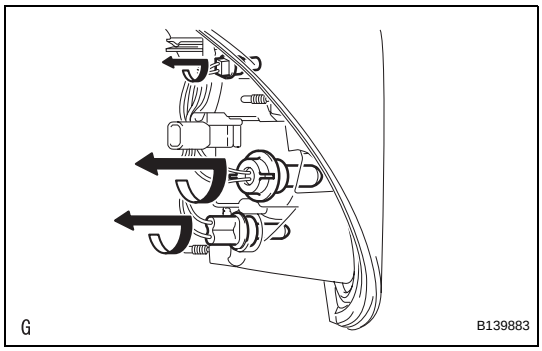
1. INSPECT MAP LIGHT ASSEMBLY

(a) Connect the battery's positive (+) lead to terminal 6 and the negative (-) lead to terminal 1, and then check that the light comes on when the switch is in the DOOR position.

OK:

Light comes on.

If the result is not as specified, replace the light assembly.

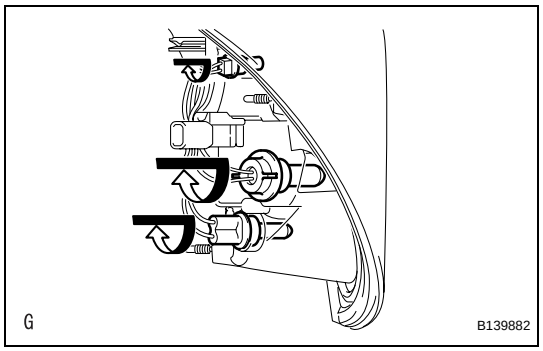


LI

DISASSEMBLY

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



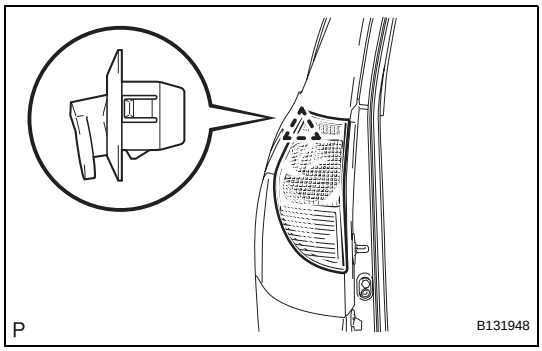
1. REMOVE REAR COMBINATION LIGHT BULB

(a) Turn the 3 bulbs in the direction indicated by the arrows and pull to remove them.

REASSEMBLY

HINT:

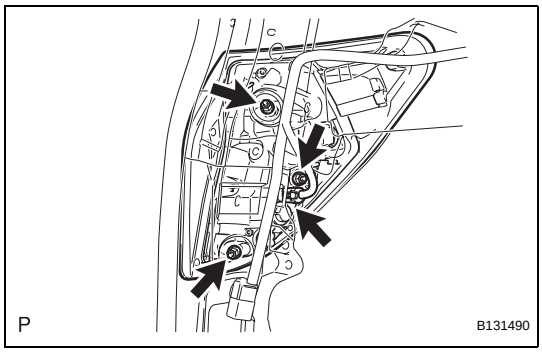
- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. INSTALL REAR COMBINATION LIGHT BULB

(a) Turn the 3 bulbs in the direction indicated by the arrows to install them.

INSTALLATION

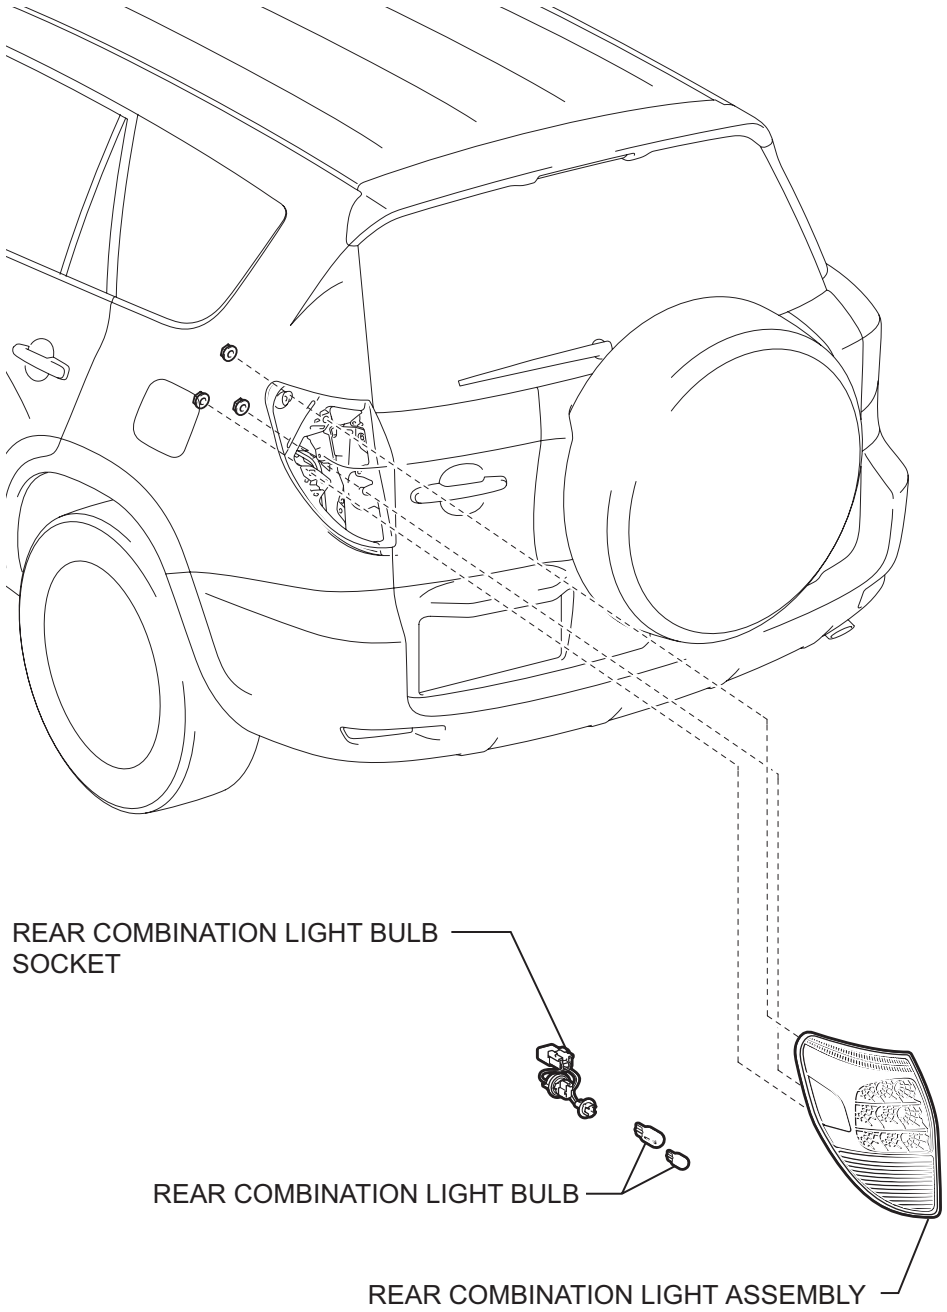


HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

1. INSTALL REAR COMBINATION LIGHT ASSEMBLY

(a) Attach the clip to install the light.



(b) Install the 3 nuts and connect the connector.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

REAR COMBINATION LIGHT ASSEMBLY

COMPONENTS

LI

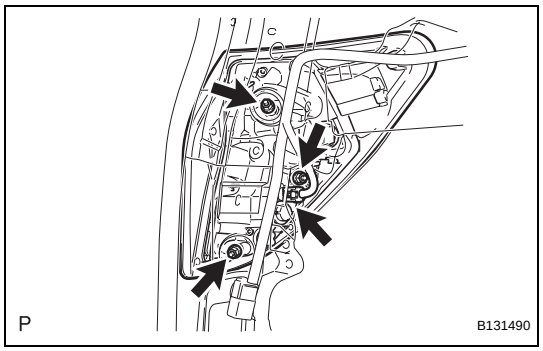
P

B136297E02

REMOVAL

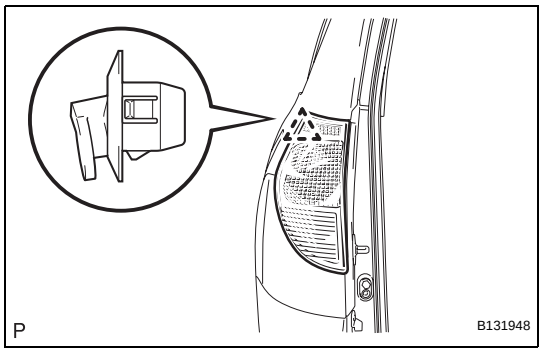
HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.



1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

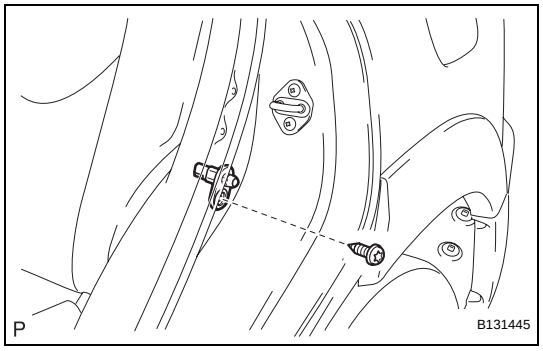


Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE REAR COMBINATION LIGHT ASSEMBLY

(a) Remove the 3 nuts and disconnect the connector.

(b) Detach the clip and remove the light.



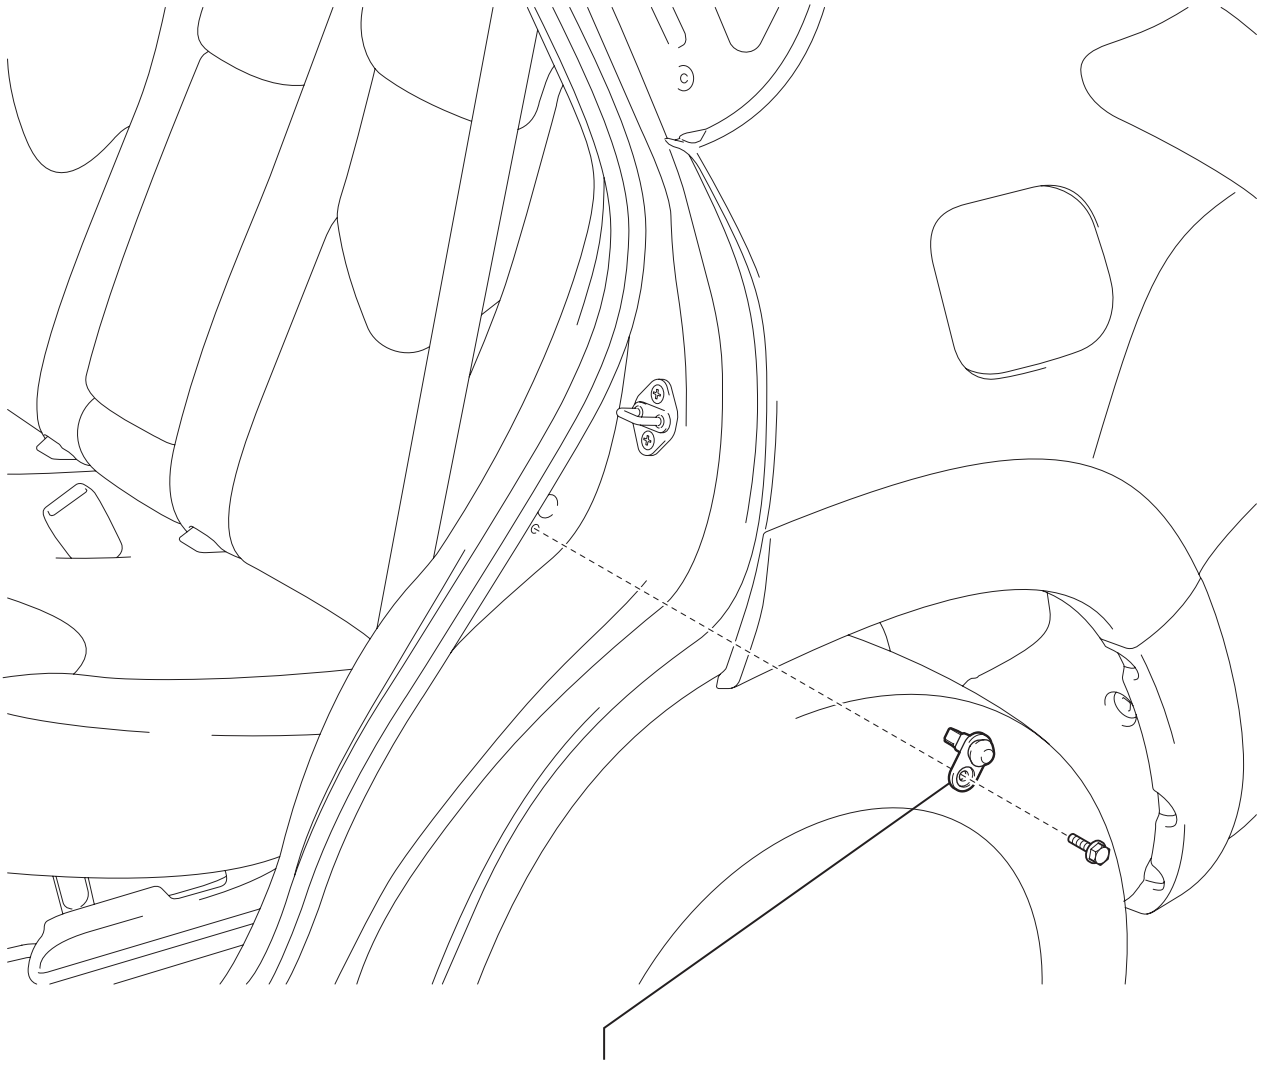
LI

INSTALLATION

HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.
- A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY



(a) Connect the connector.

(b) Install the switch with the bolt.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

REAR DOOR COURTESY SWITCH

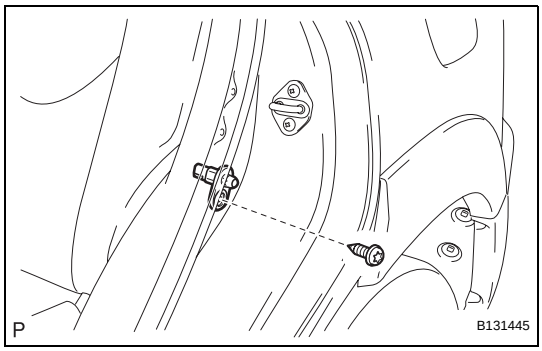
COMPONENTS

REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY

P

B129916E02

REMOVAL



HINT:

- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

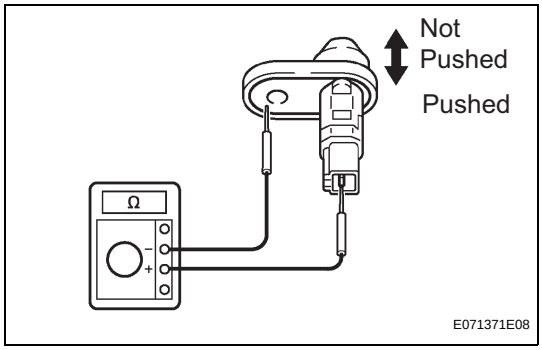
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY

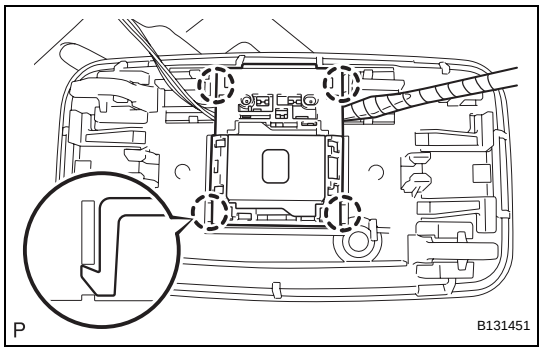
(a) Remove the bolt and switch.



(b) Disconnect the connector.

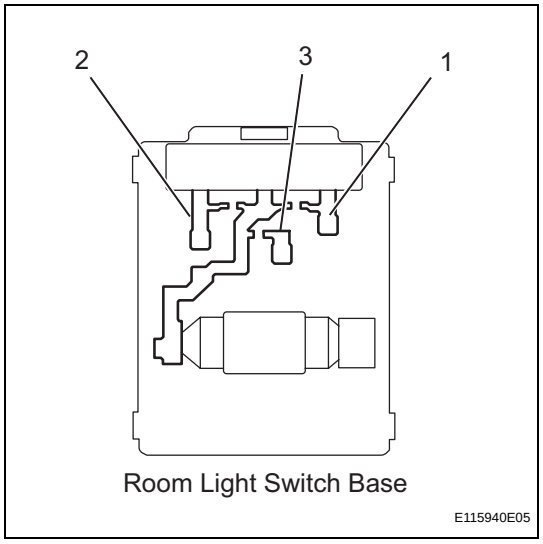
INSPECTION

1. INSPECT REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY



(a) Measure the resistance of the switch.

Standard resistance



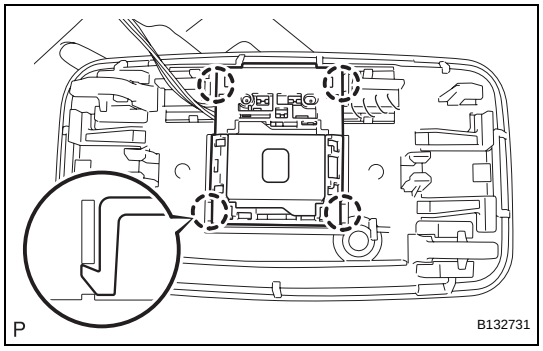
Tester Connection	Switch Condition	Specified Condition
1 - Switch body	Pushed	10 kΩ or higher
1 - Switch body	Not pushed	Below 1 Ω

If the result is not as specified, replace the switch assembly.

(d) Using a screwdriver, detach the 4 claws and remove the room light switch base.
HINT:
Tape the screwdriver tip before use.

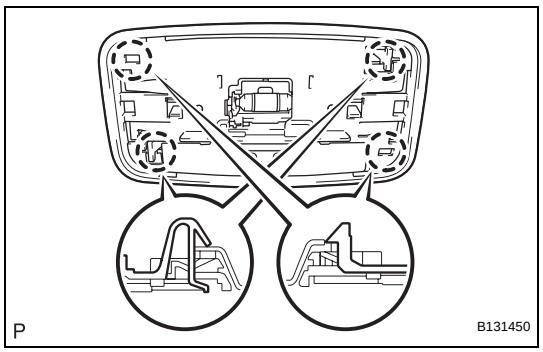
INSPECTION

1. INSPECT ROOM LIGHT

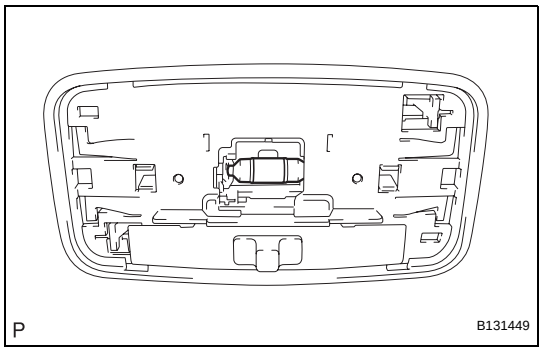


(a) Connect the battery's positive (+) lead to terminal 1 and the negative (-) lead to terminal 2, and then check that the light comes on when the switch is in the DOOR position.
OK:
Light comes on.
If the result is not as specified, replace the light assembly.

(b) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 3, then check that the light comes on when the switch is in the ON position.
OK:
Light comes on.
If the result is not as specified, replace the light assembly.

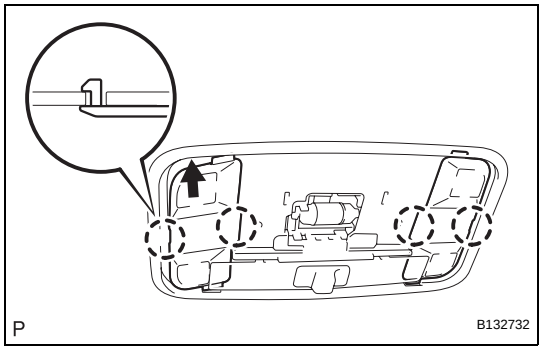


INSTALLATION

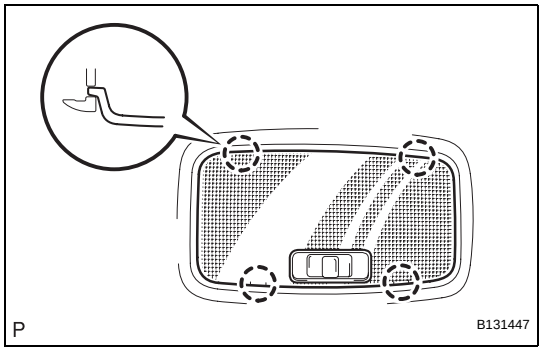


1. INSTALL ROOM LIGHT ASSEMBLY

(a) Attach the 4 claws to install the room light switch base.

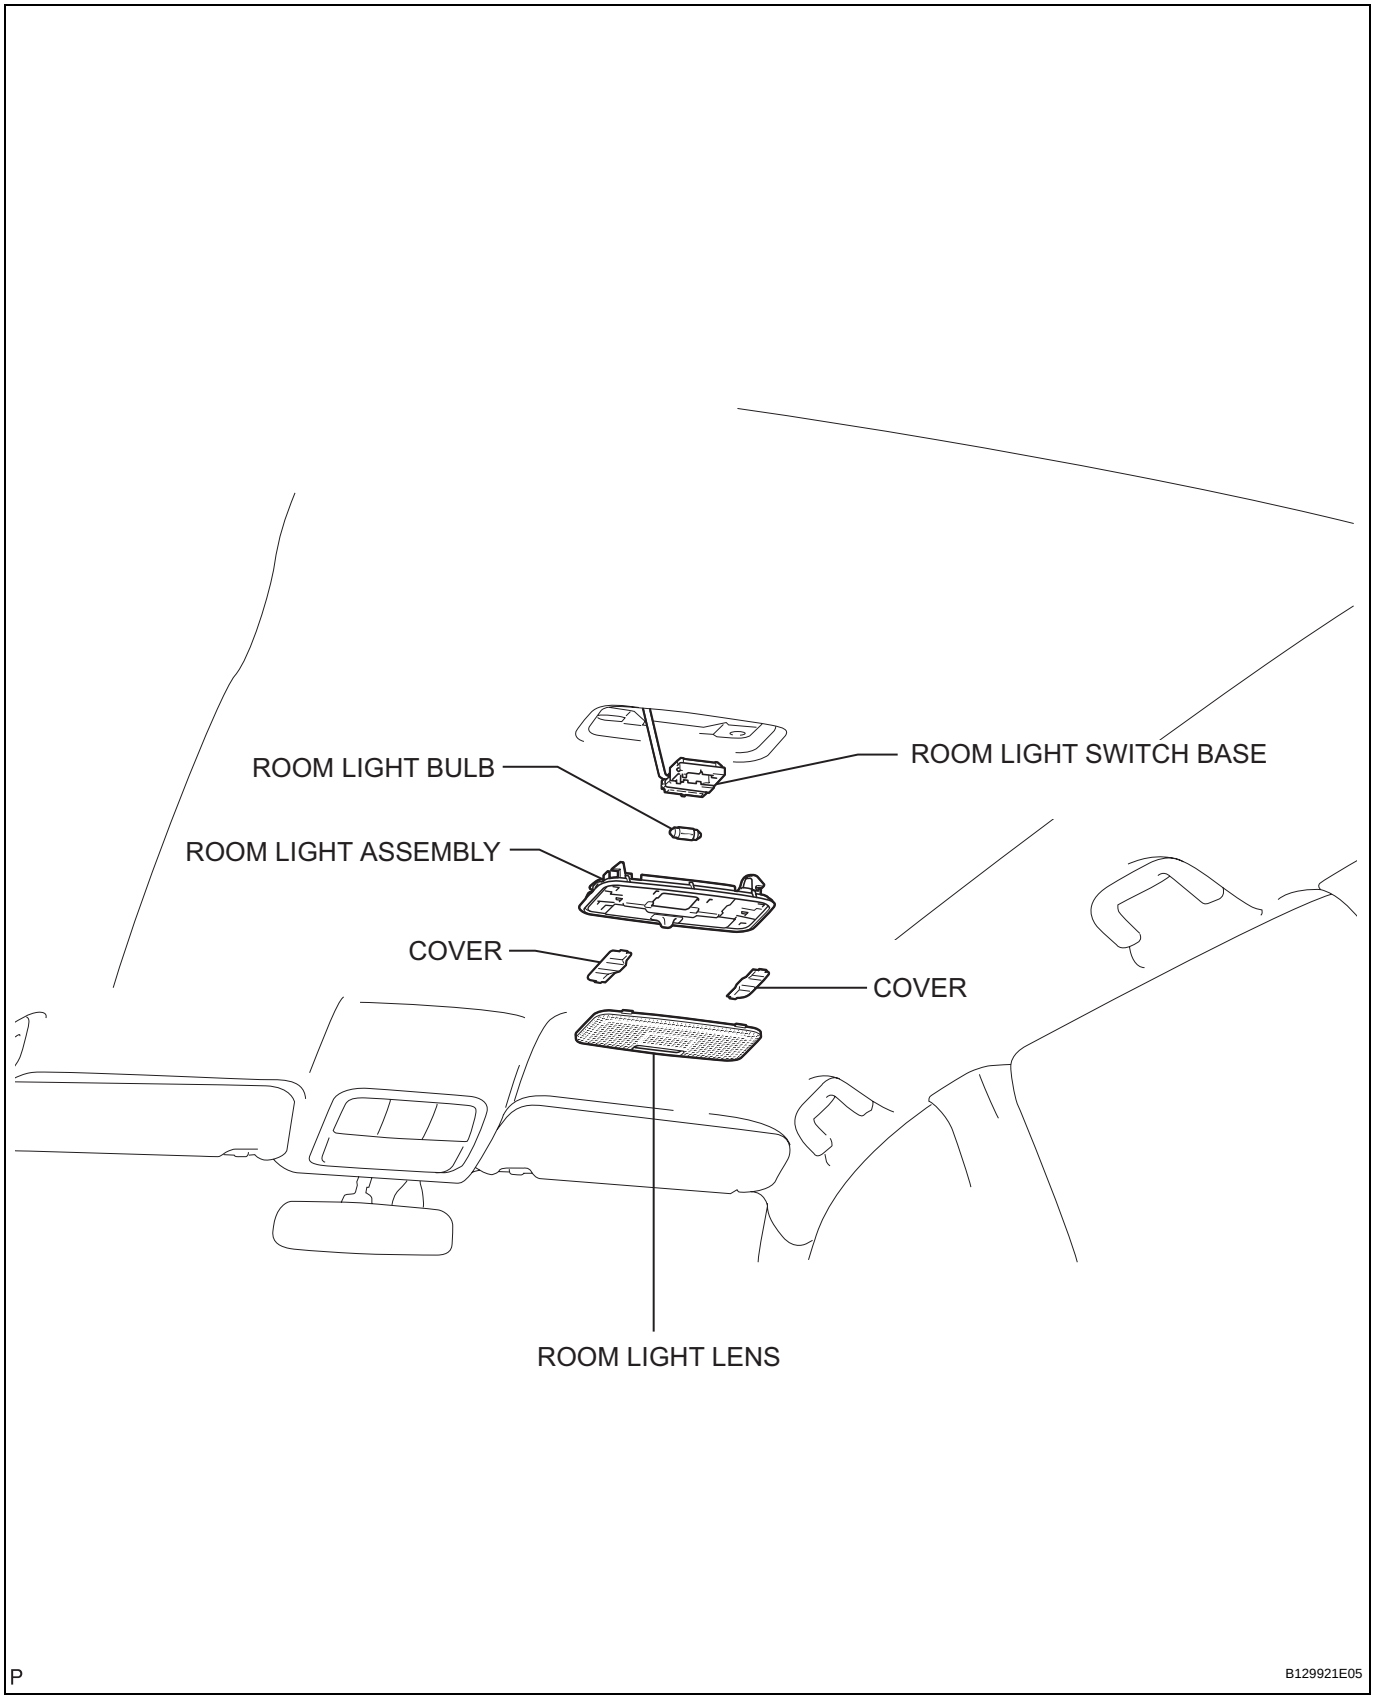


(b) Attach the 4 claws to install the room light.



(c) Install the bulb to the room light switch base.

(d) Attach the 4 claws to install the 2 covers.



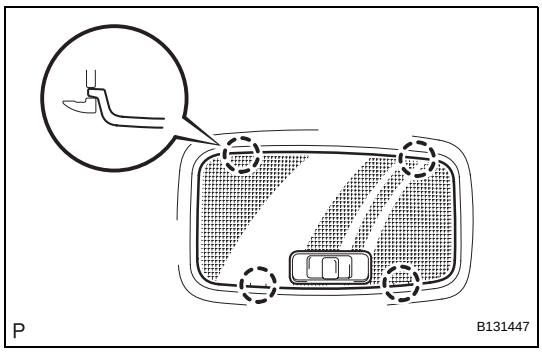
2. INSTALL ROOM LIGHT LENS

(a) Attach the 4 claws to install the lens.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

ROOM LIGHT ASSEMBLY

COMPONENTS

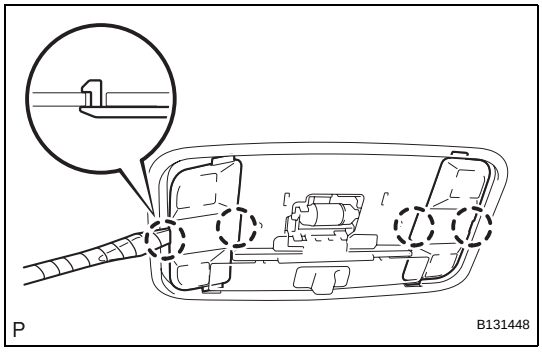


REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

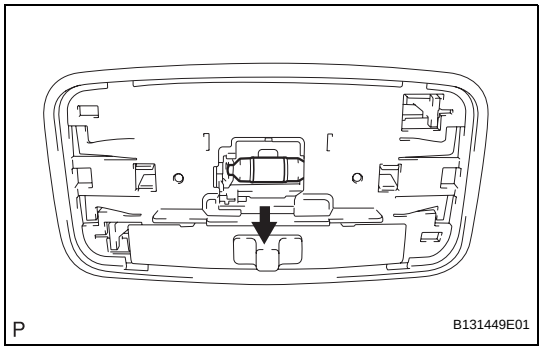


2. REMOVE ROOM LIGHT LENS

(a) Using a screwdriver, detach the 4 claws and remove the lens.

HINT:

Tape the screwdriver tip before use.



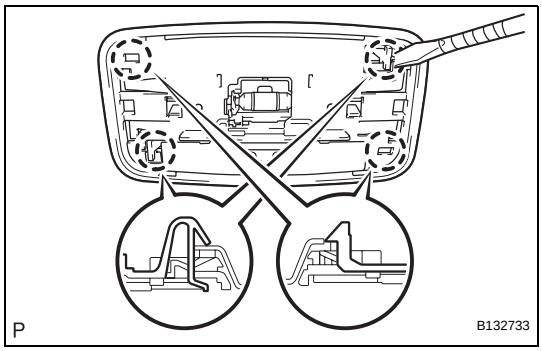
3. REMOVE ROOM LIGHT ASSEMBLY

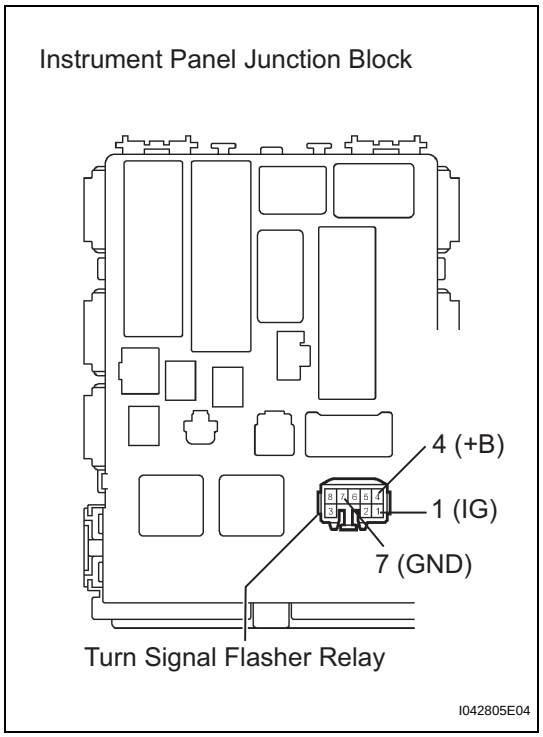
(a) Using a screwdriver, detach the 4 claws and remove the 2 covers.

HINT:

Tape the screwdriver tip before use.

(b) Remove the bulb from the room light switch base.





LI

(c) Using a screwdriver, detach the 4 claws and remove the light.

HINT:

Tape the screwdriver tip before use.

TURN SIGNAL FLASHER ASSEMBLY

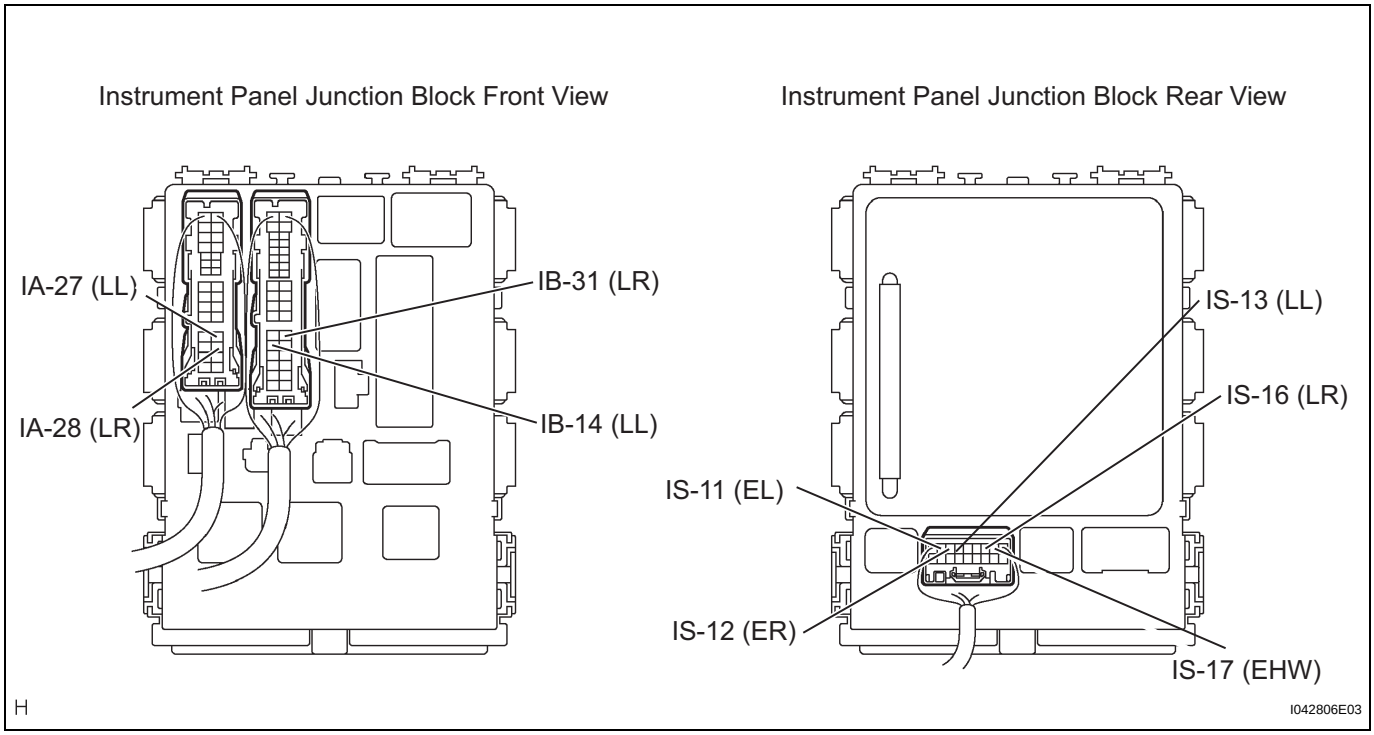
ON-VEHICLE INSPECTION

1. INSPECT TURN SIGNAL FLASHER CIRCUIT

(a) Check the power source circuit and ground circuit.

(1) Remove the turn signal flasher relay from the instrument panel junction block.

(2) Measure the voltage and resistance of the instrument panel junction block.



Standard voltage

Tester Connection	Condition	Specified Condition
Instrument panel junction block turn signal flasher relay terminal 1 (IG) - Body ground	Ignition switch OFF	Below 1 V
Instrument panel junction block turn signal flasher relay terminal 1 (IG) - Body ground	Ignition switch ON	10 to 14 V
Instrument panel junction block turn signal flasher relay terminal 4 (+B) - Body ground	Always	10 to 14 V

Standard resistance

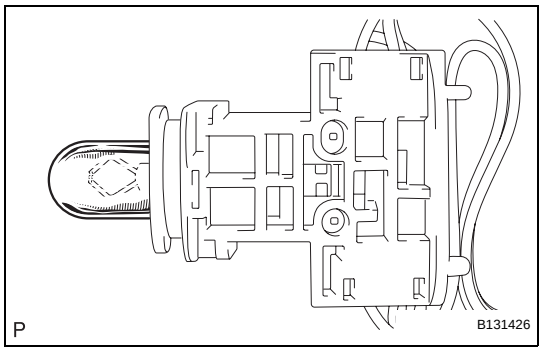
Tester Connection	Specified Condition
Instrument panel junction block turn signal flasher relay terminal 7 (GND) - Body ground	Below 1 Ω

(b) Check the output operation signal.
(1) Install the turn signal flasher relay onto the instrument panel junction block.

(2) Measure the voltage of the instrument panel junction block.

Standard voltage

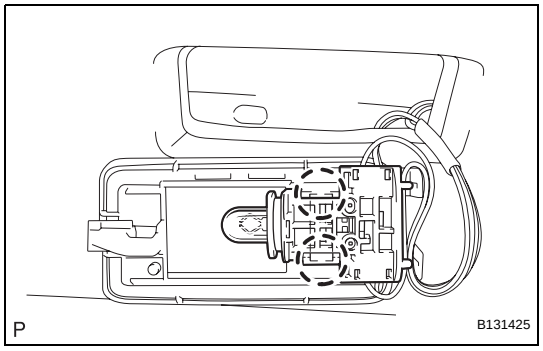
Tester Connection	Condition	Specified Condition
IA-27 (LL) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IA-27 (LL) - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IA-28 (LR) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IA-28 (LR) - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IB-14 (LL) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IB-14 (LL) - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IB-31 (LR) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IB-31 (LR) - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IS-11 (EL) - Body ground	Turn signal switch (left turn) OFF → ON	10 to 14 V → 0 V
IS-12 (ER) - Body ground	Turn signal switch (right turn) OFF → ON	10 to 14 V → 0 V
IS-13 (LL) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IS-13 (LL) - Body ground	Turn signal switch (left turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IS-16 (LR) - Body ground	Hazard warning switch OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IS-16 (LR) - Body ground	Turn signal switch (right turn) OFF → ON	0 V → 10 to 14 V (60 to 120 times per minute)
IS-17 (EHW) - Body ground	Hazard warning switch OFF → ON	10 to 14 V → 0 V



If the result is not as specified, replace the turn signal flasher relay.

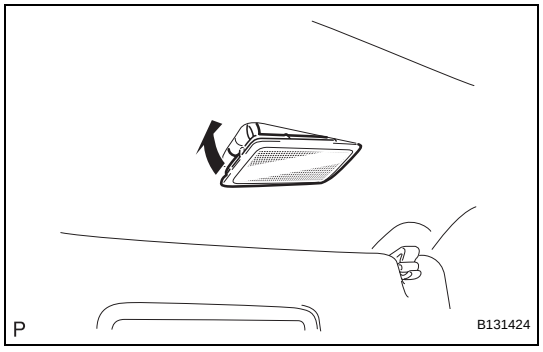
(b) Inspect vanity light switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 (L) - 2 (B)	Visor raise	10 kΩ or higher
	Visor lower and mirror cover open	Below 1 Ω
	Visor lower and mirror cover close	10 kΩ or higher



If the result is not as specified, replace the visor assembly.

INSTALLATION

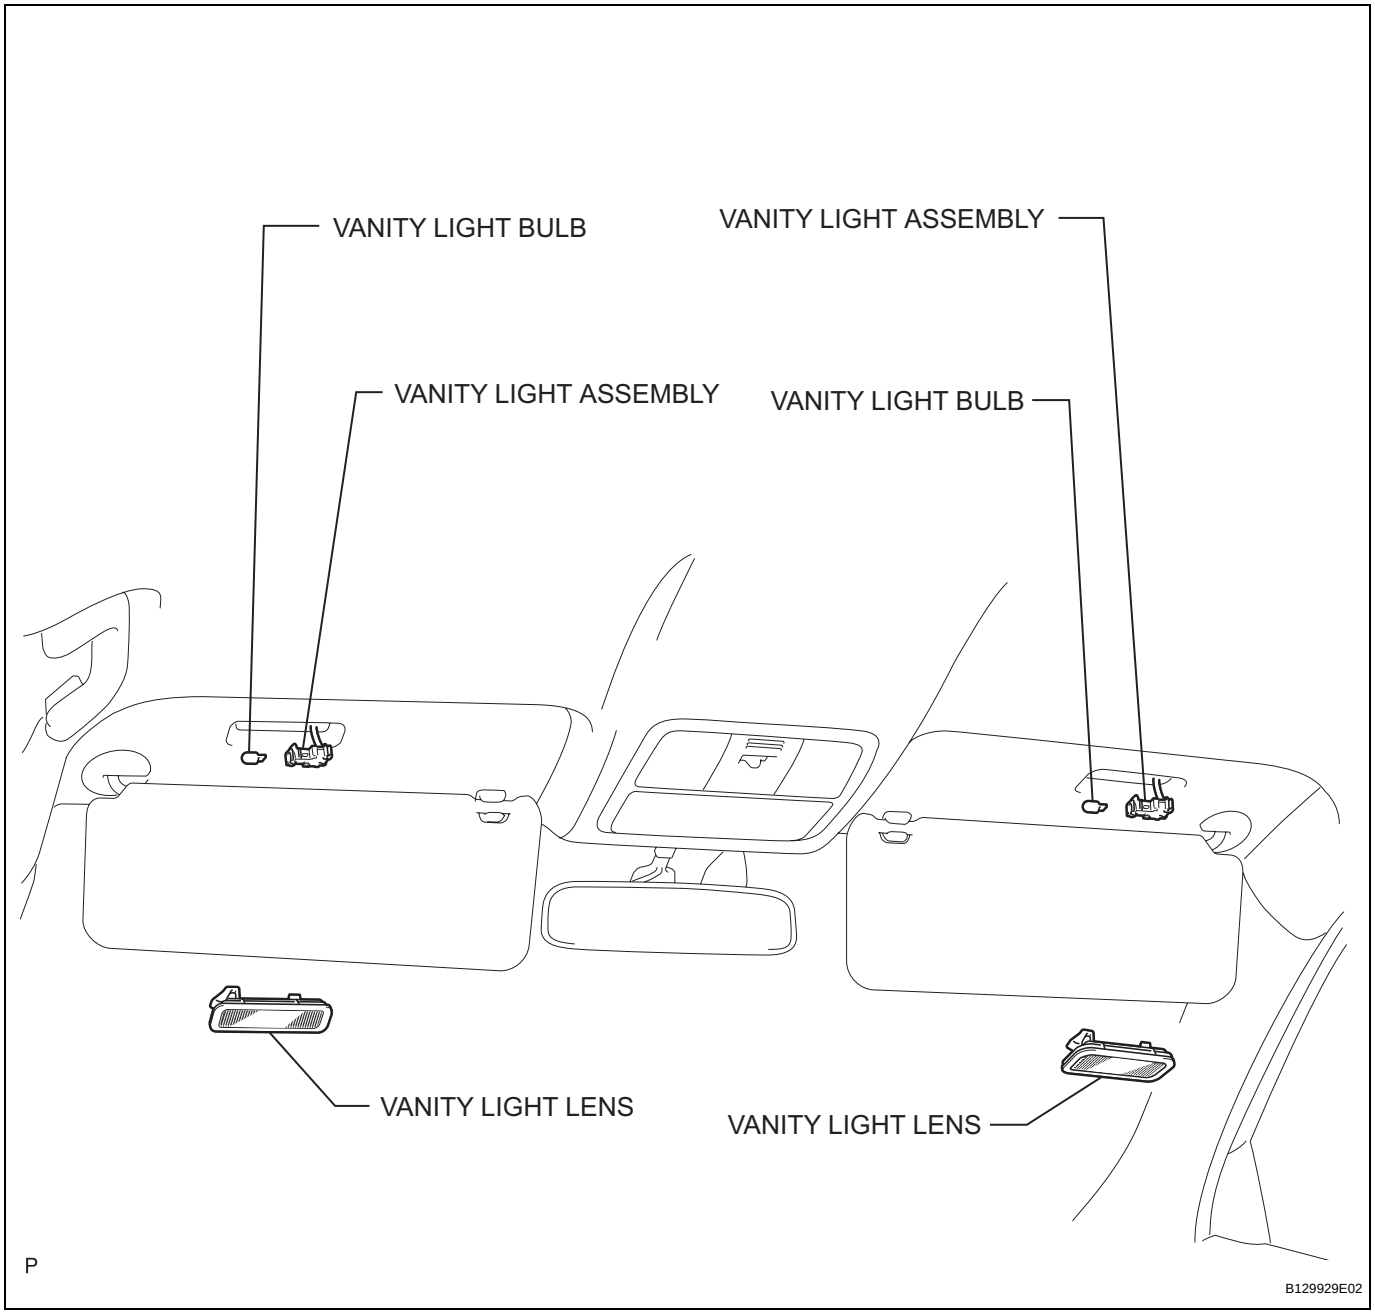


1. INSTALL VANITY LIGHT BULB

(a) Install the light bulb to the vanity light.

2. INSTALL VANITY LIGHT ASSEMBLY

(a) Attach the 2 claws and install the vanity light lens to the vanity light.

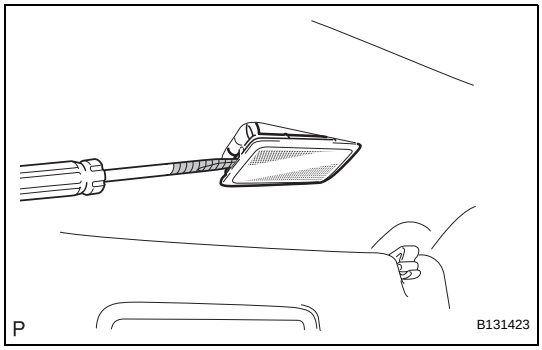


(b) Install the vanity light.

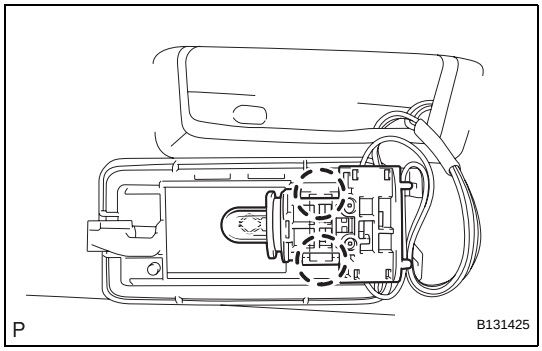
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

VANITY LIGHT

COMPONENTS



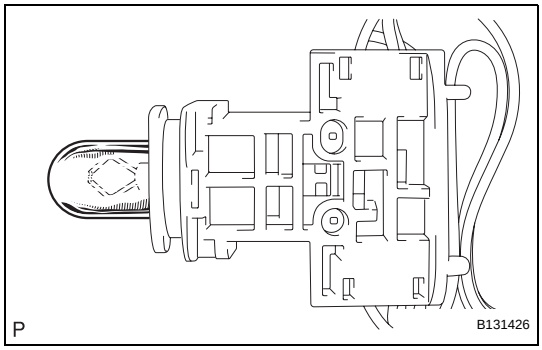
REMOVAL



HINT:
- Use the same procedures for the RH and LH sides.
- The procedures listed below are for the LH side.

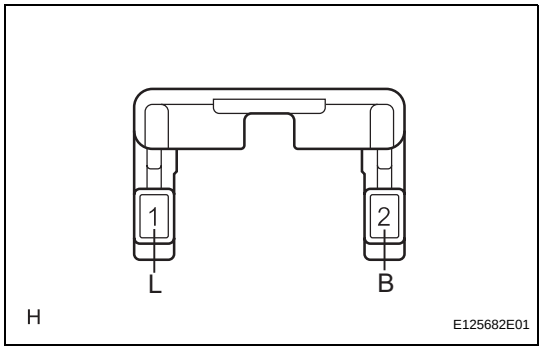
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE VANITY LIGHT ASSEMBLY



(a) Using a screwdriver, pry out the vanity light.
HINT:
Tape the screwdriver tip before use.

(b) Detach the 2 claws and vanity light.



3. REMOVE VANITY LIGHT BULB

(a) Remove the light bulb from the vanity light.

INSPECTION

1. INSPECT VISOR ASSEMBLY

(a) Remove the visor assembly.

LI

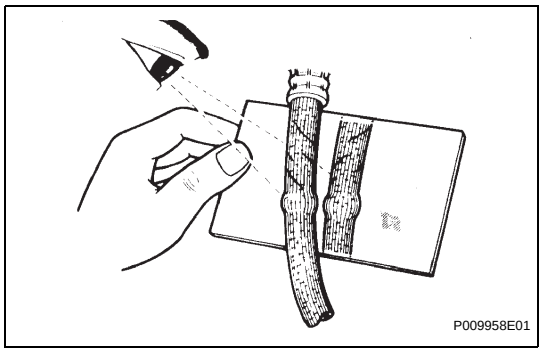
BODY

GENERAL MAINTENANCE

1. TIGHTEN BOLTS AND NUTS

(a) Tighten the bolts and nuts on the chassis parts listed below, if necessary.
- Front axle and suspension
- Drivetrain
- Rear axle and suspension
- Brake system
- Engine mounting
- Other chassis parts

(b) Tighten the bolts and nuts on the body parts listed below, if necessary.
- Seat belt system
- Seats
- Doors and hood
- Body mountings
- Fuel tank
- Exhaust pipe system
- Other body parts



2. CLEAN AIR CONDITIONING FILTER

(a) Visually inspect the surface of the filter.

(b) If the filter is contaminated with foreign matter, clean or replace the filter.

BRAKE

GENERAL MAINTENANCE

1. INSPECT BRAKE LINES AND HOSES

HINT:

Work in a well-lighted area. Turn the front wheels fully to the right or left before beginning the inspection.

(a) Using a mirror, check the entire circumference and length of the brake lines and hoses for:
- Damage
- Wear
- Deformation
- Cracks
- Corrosion
- Leaks
- Bends
- Twists

(b) Check all the clamps for tightness and the connections for leakage.

(c) Check that the hoses and lines are not near sharp edges, moving parts or the exhaust system.

(d) Check that the lines are installed properly and pass through the center of the grommets.

2. INSPECT FRONT BRAKE

(a) Check the front brake pads and discs (see page BR-42).

3. INSPECT BRAKE LININGS AND DRUMS

(a) Check the brake linings and drums. Also check the brake linings of the parking brake.

GENERAL MAINTENANCE

(2006/01-)

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

(a) Check the steering wheel free play.

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

(4) Check that the steering gear housing is not damaged.

(5) Check that the connectors are properly connected to the steering gear housing.

2. INSPECT BALL JOINTS AND DUST COVERS

(a) Inspect the ball joints for excessive looseness.

(1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.

(2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.

(3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.

(4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

(b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

(a) Check the drive shaft boots for loose clamps, grease leakage, kinks or damage.

4. INSPECT AUTOMATIC TRANSAXLE FLUID LEVEL

(a) Visually check the transmission for fluid leakage. If oil is leaking, find the cause and repair it.

Type	See procedures
U151E	See page AX-126
U151F	See page AX-126

5. INSPECT TRANSFER OIL (for 4WD)

(a) Visually check the transfer for oil leakage. If oil is leaking, find the cause and repair it.

Type	See procedures
Front Oil	See page TF-45
Rear Oil	See page TF-45

6. INSPECT REAR DIFFERENTIAL OIL (for 4WD)

(a) For the rear differential oil inspection, refer to the following procedures (see page DF-3).

7. **ROTATE TIRES (See page TW-1)**

CHASSIS

GENERAL MAINTENANCE

(2005/11-2006/01)

1. INSPECT STEERING LINKAGE AND GEAR HOUSING

(a) Check the steering wheel free play.

(b) Check the steering linkage for looseness or damage.

(1) Check that the tie rod ends do not have excessive play.

(2) Check that the dust seals and boots are not damaged.

(3) Check that the boot clamps are not loose.

(4) Check that the steering gear housing is not damaged.

(5) Check that the connectors are properly connected to the steering gear housing.

2. INSPECT BALL JOINTS AND DUST COVERS

(a) Inspect the ball joints for excessive looseness.

(1) Jack up the front of the vehicle and place wooden blocks with a height of 180 to 200 mm (7.09 to 7.87 in.) under the front tires.

(2) Lower the vehicle until the front coil spring has about half its ordinary load. Place stands under the vehicle for safety.

(3) Check that the front wheels are pointing straight ahead. Use wheel chocks on all 4 wheels.

(4) Using a lever, pry up the end of the lower arm. Check the amount of play.

Maximum ball joint vertical play:
0 mm (0 in.)

If there is any play, replace the ball joint.

(b) Check the dust cover for damage.

3. INSPECT DRIVE SHAFT BOOTS

(a) Check the drive shaft boots for loose clamps, grease leakage, kinks or damage.

4. INSPECT AUTOMATIC TRANSAXLE FLUID LEVEL

(a) Visually check the transmission for fluid leakage. If oil is leaking, find the cause and repair it.

Type	See procedures
U140F	See page AX-102
U241E	See page AX-102

5. INSPECT TRANSFER OIL (for 4WD)

(a) Visually check the transfer for oil leakage. If oil is leaking, find the cause and repair it.

Type	See procedures
Front Oil	See page TF-45
Rear Oil	See page TF-45

6. **INSPECT REAR DIFFERENTIAL OIL (for 4WD)**
   (a) For the rear differential oil inspection, refer to the following procedures (see page DF-3).

7. **ROTATE TIRES (See page TW-1)**

ENGINE

GENERAL MAINTENANCE

(2005/11-2006/01)

1. **INSPECT DRIVE BELT (See page EM-6)**
2. **REPLACE SPARK PLUGS (See page IG-7)**
3. **REPLACE AIR CLEANER FILTER**
   (a) Remove the air filter.
   (b) Visually check that the air filter is not excessively damaged or oily.
   (c) Replace the air filter with a new one, if necessary.
4. **REPLACE ENGINE OIL AND OIL FILTER (See page LU-1)**
5. **REPLACE ENGINE COOLANT (See page CO-1)**
6. **INSPECT GASKET IN FUEL TANK CAP (See page EC-25)**
7. **INSPECT FUEL LINES AND CONNECTIONS, FUEL TANK VAPOR VENT SYSTEM HOSES**
   (a) Visually check the fuel lines for cracks, leakage, loose connections, deformation.
8. **INSPECT EXHAUST PIPES AND MOUNTINGS**
   (a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.
9. **INSPECT VALVE CLEARANCE (See page EM-8)**

GENERAL MAINTENANCE

(2006/01-)

1. **INSPECT DRIVE BELT (See page EM-7)**
2. **REPLACE SPARK PLUGS (See page IG-7)**
3. **REPLACE AIR CLEANER FILTER**
   (a) Remove the air filter.
   (b) Visually check that the air filter is not excessively damaged or oily.
   (c) Replace the air filter with a new one, if necessary.
4. **REPLACE ENGINE OIL AND OIL FILTER (See page LU-1)**
5. **REPLACE ENGINE COOLANT (See page CO-1)**
6. **INSPECT GASKET IN FUEL TANK CAP (See page EC-28)**
7. **INSPECT FUEL LINES AND CONNECTIONS, FUEL TANK VAPOR VENT SYSTEM HOSES**
   (a) Visually check the fuel lines for cracks, leakage, loose connections, deformation.
8. **INSPECT EXHAUST PIPES AND MOUNTINGS**
   (a) Visually check the pipes, hangers and connections for severe corrosion, leaks or damage.

INSIDE VEHICLE

GENERAL MAINTENANCE

Performing the following maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center. Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner perform these checks. The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or months elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. LIGHTS

(a) Check that the headlights, stop lights, taillights, turn signal lights, and other lights illuminate or blink properly. Also, check if they have enough brightness.

(b) Check that the headlights are aimed properly.

3. WARNING LIGHTS AND BUZZERS

(a) Check that all the warning lights and buzzers are working.

4. HORNS

(a) Check that the horn is working.

5. WINDSHIELD GLASS

(a) Check for scratches, pits or abrasions.

6. WINDSHIELD WIPERS AND WASHER

(a) Check that the windshield washers are aimed properly. Also, check that the center stream of washer fluid sprays on the windshield within the operating range of the wipers.

(b) Check if the wipers streak or not.

7. WINDSHIELD DEFROSTER

(a) When the heater or air conditioning is on the defroster setting, check if air comes out of the defroster outlet.

8. REAR VIEW MIRROR

(a) Check that the rear view mirror is securely mounted.

9. SUN VISORS

(a) Check that the sun visors move freely and are securely mounted.

10. STEERING WHEEL

(a) Check that the steering wheel has the proper amount of free play. Also check for steering difficulty and unusual noises.

11. SEATS

(a) Check that the seat adjusters, seatback recliner and other front seat controls operate smoothly.
(b) Check that all the latches lock securely in all positions.
(c) Check that the locks hold securely in all latched positions.
(d) Check that the headrests move up and down smoothly and that the locks hold securely in all latched positions.
(e) When the rear seatbacks are folded down, check that the latches lock securely.

12. SEAT BELTS

(a) Check that the seat belt system such as the buckles, retractors and anchors operate properly and smoothly.
(b) Check that the belt webbing is not cut, frayed, worn or damaged. Replace if necessary.

13. ACCELERATOR PEDAL

(a) Check that the accelerator pedal operates smoothly. In other words, check that the pedal does not have uneven pedal resistance or become stuck in certain positions.

14. CLUTCH PEDAL

(a) Check that the clutch pedal operates smoothly.
(b) Check that the pedal has the proper free play.

15. BRAKE PEDAL

(a) Check that the brake pedal operates smoothly.
(b) Check that the pedal has the proper reserve distance and free play.
(c) Start the engine and check the brake booster function.

16. BRAKES

(a) In a safe place, check that the vehicle remains straight when applying the brakes.

17. PARKING BRAKE

(a) Check that the parking brake lever has the proper amount of travel (see page PB-4).
(b) On a safe incline, check that the vehicle is held securely with only the parking brake applied.

18. AUTOMATIC TRANSAXLE "PARK" MECHANISM

(a) Check the lock release button of the shift lever for proper and smooth operation.

(b) When the shift lever is in the P position and all brakes are released on a low incline, check that the vehicle is stable.

OUTSIDE VEHICLE

GENERAL MAINTENANCE

Performing the following maintenance checks on the vehicle is the owner's responsibility. The owner may perform the maintenance or take the vehicle to a service center. Check the parts of the vehicle described below on a daily basis. In most cases, special tools are not required. It is recommended that the owner perform these checks. The procedures for general maintenance are as follows.

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or months elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. TIRES

(a) Check the tire inflation pressure with a gauge. Make adjustments if necessary.

(b) Check the surfaces of the tires for cuts, damage or excessive wear.

3. WHEEL NUTS

(a) Check for nuts that are loose or missing. Tighten them if necessary.

4. TIRE ROTATION (See page TW-1)

5. WINDSHIELD WIPER BLADES

(a) Check the blades for wear or cracks whenever they are unable to wipe the windshield clean. Replace them if necessary.

6. FLUID LEAKS

(a) Check under the vehicle for leaking fuel, oil, water and other fluids.

NOTICE:

If you smell gasoline fumes or notice any leaks, locate the cause and correct it.

7. DOORS AND ENGINE HOOD

(a) Check that all of the doors and the hood operate smoothly and that all the latches lock securely.

(b) When the primary latch is released, check that the engine hood secondary latch prevents the hood from opening.

GENERAL MAINTENANCE

(2006/01-)

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check that the front of the radiator is clean and not blocked by leaves, dirt or bugs.

(b) Check the hoses for cracks, kinks, rot or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check that the electrolyte level of all the battery cells is between the upper and lower level lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

(a) Check that the brake fluid levels are near the upper level lines on the see-through reservoirs.

7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oiliness.

8. ENGINE OIL LEVEL

(a) Check the level on the dipstick with the engine stopped.

9. AUTOMATIC TRANSAXLE FLUID LEVEL

Type	See procedures
U151E	See page AX-126
U151F	See page AX-126

10. EXHAUST SYSTEM

(a) Check for unusual exhaust sounds or abnormal exhaust fumes. Inspect the cause and repair it.

UNDER HOOD

GENERAL MAINTENANCE

(2005/11-2006/01)

1. GENERAL NOTES

- Maintenance requirements vary depending on the country.
- Check the maintenance schedule in the owner's manual supplement.
- Following the maintenance schedule is mandatory.
- Determine the appropriate time to service the vehicle using either miles driven or time elapsed, whichever reaches the specification first.
- Maintain similar intervals between periodic maintenance, unless otherwise noted.
- Failing to check each vehicle part could lead to poor engine performance and increase exhaust emissions.

2. WINDSHIELD WASHER FLUID

(a) Check that there is sufficient fluid in the tank.

3. ENGINE COOLANT LEVEL

(a) Check that the coolant level is between the "FULL" and "LOW" lines on the see-through reservoir.

4. RADIATOR AND HOSES

(a) Check that the front of the radiator is clean and not blocked by leaves, dirt or bugs.

(b) Check the hoses for cracks, kinks, rot or loose connections.

5. BATTERY ELECTROLYTE LEVEL

(a) Check that the electrolyte level of all the battery cells is between the upper and lower level lines on the case.

HINT:

If the electrolyte level is difficult to see, lightly shake the vehicle.

6. BRAKE FLUID LEVEL

(a) Check that the brake fluid levels are near the upper level lines on the see-through reservoirs.

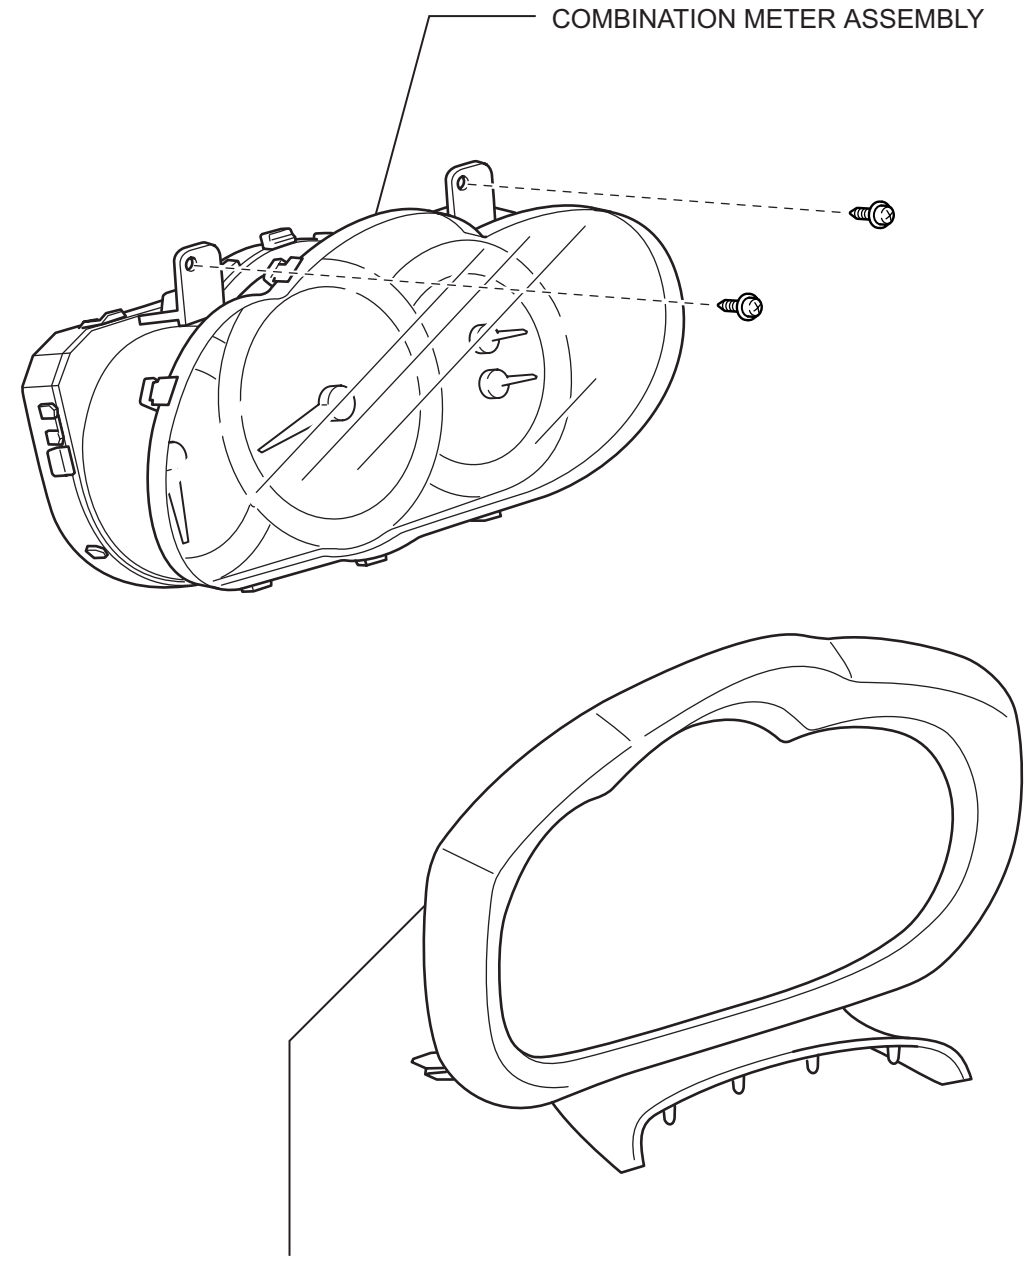
7. ENGINE DRIVE BELT

(a) Check the drive belt for fraying, cracks, wear or oiliness.

8. ENGINE OIL LEVEL

(a) Check the level on the dipstick with the engine stopped.

9. AUTOMATIC TRANSAXLE FLUID LEVEL



Type	See procedures
U140F	See page AX-102
U241E	See page AX-102

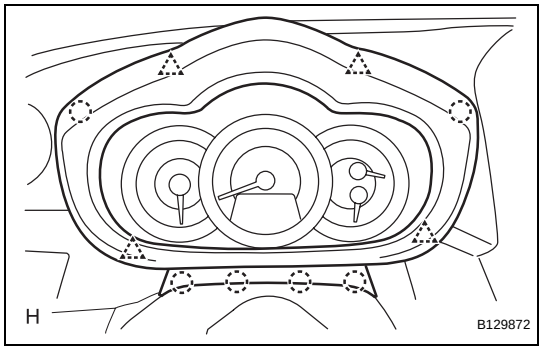
10. EXHAUST SYSTEM

(a) Check for unusual exhaust sounds or abnormal exhaust fumes. Inspect the cause and repair it.

COMBINATION METER

COMPONENTS

H



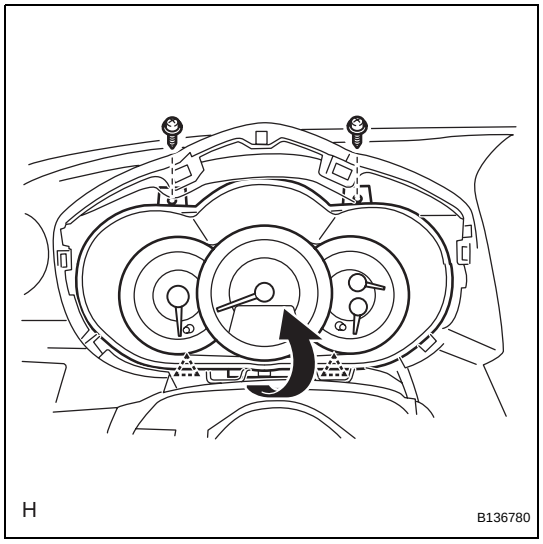
B127238E01

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

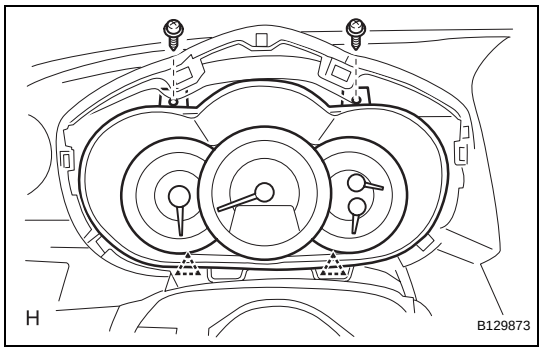


2. REMOVE INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY

(a) Using a screwdriver, detach the 4 clips, 6 claws and remove the instrument cluster finish panel.

HINT:

Tape the screwdriver tip before use.



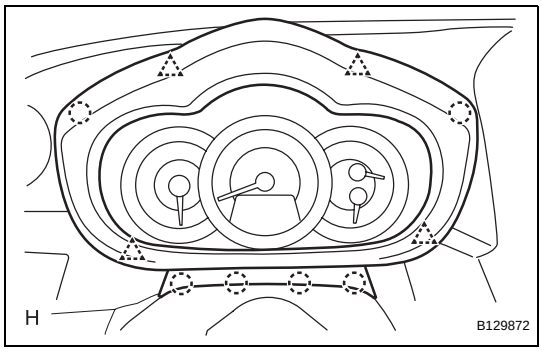
3. REMOVE COMBINATION METER ASSEMBLY

(a) Remove the 2 screws.

(b) Pull the combination meter as indicated by the arrow in the illustration to detach the 2 clips.

(c) Disconnect the connector and remove the combination meter.

INSTALLATION



1. INSTALL COMBINATION METER ASSEMBLY

(a) Connect the connector.

(b) Attach the 2 clips to install the combination meter.

(c) Install the 2 screws.

2. INSTALL INSTRUMENT CLUSTER FINISH PANEL ASSEMBLY

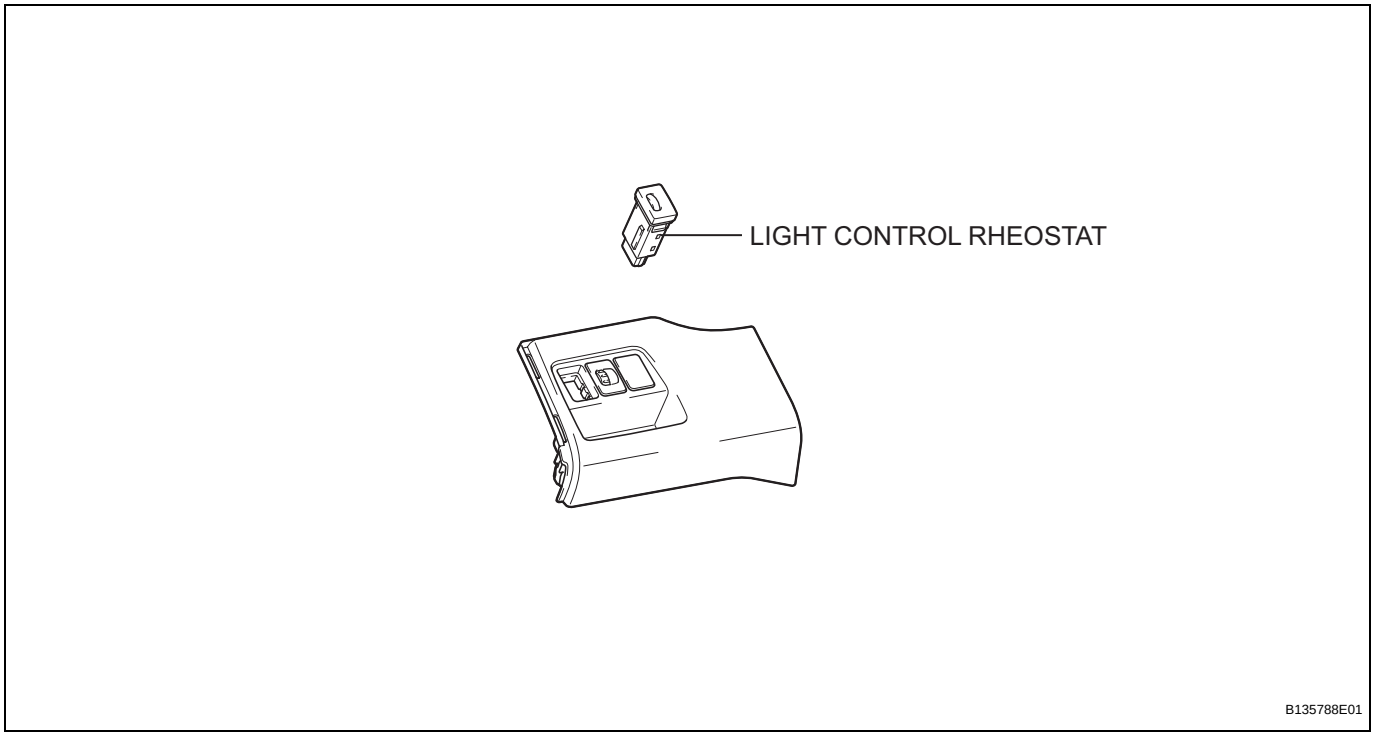
(a) Attach the 4 clips and 6 claws to install the instrument cluster finish panel.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

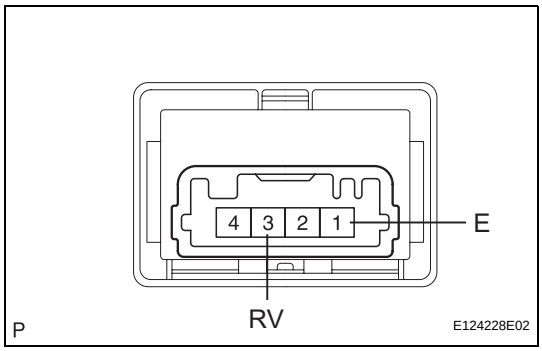
4. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-37).

INSTALLATION



1. INSTALL LIGHT CONTROL RHEOSTAT



(a) Connect the connector.

(b) Attach the 2 claws to install the switch.

LIGHT CONTROL RHEOSTAT

COMPONENTS

REMOVAL

1. REMOVE LIGHT CONTROL RHEOSTAT

(a) Detach the 2 claws.

(b) Disconnect the connector and remove the switch.

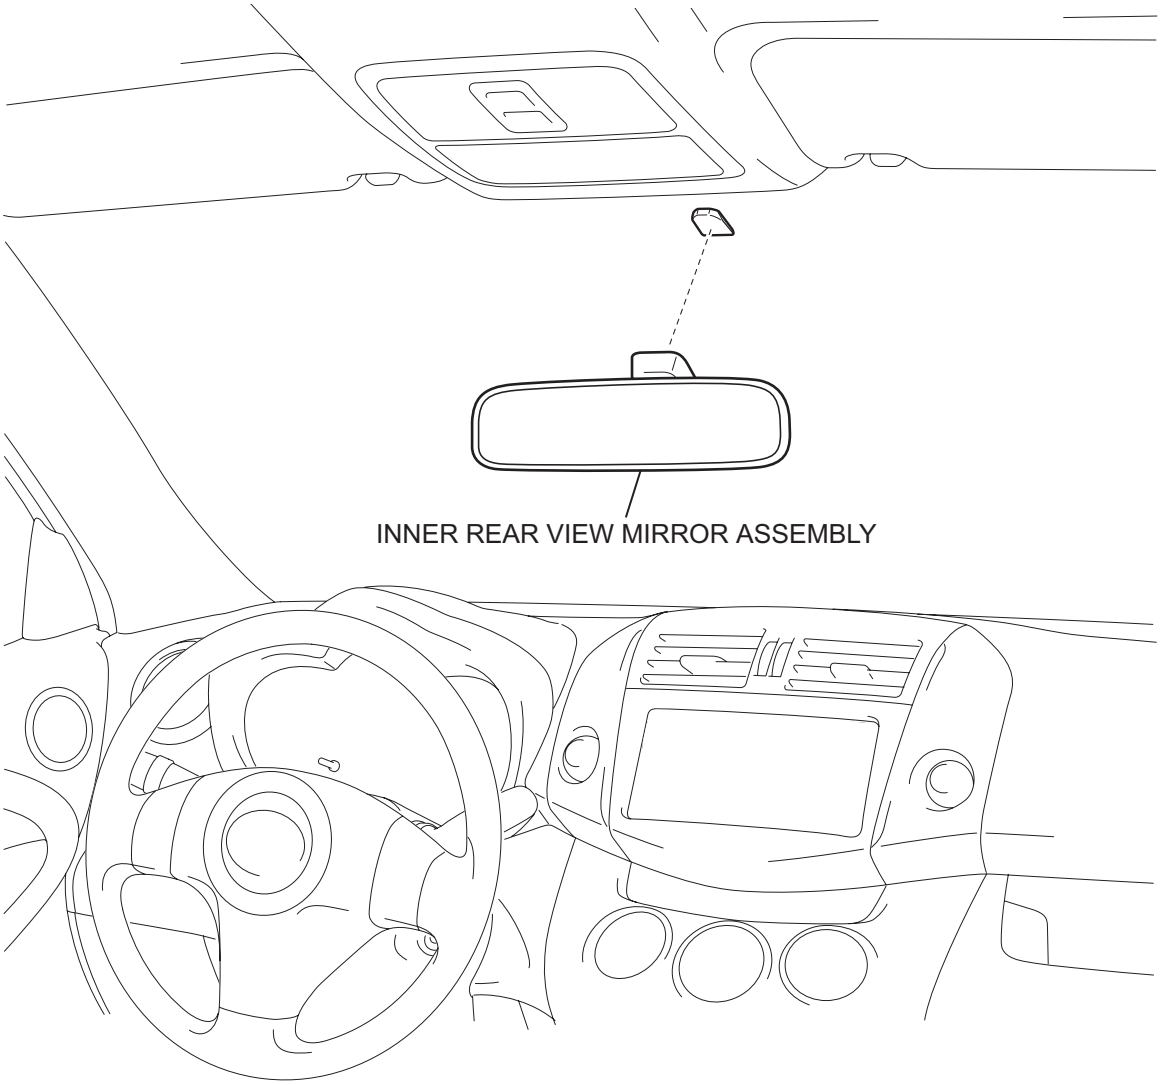
INSPECTION

1. INSPECT LIGHT CONTROL RHEOSTAT

(a) Remove the light control rheostat.

(b) Measure the resistance of the rheostat.

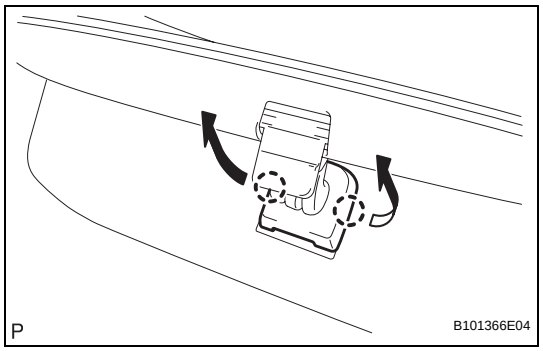
Standard resistance



Tester Connection	Rheostat Position	Specified Connection
1 (E) - 3 (RV)	Max	8 to 12 Ω
1 (E) - 3 (RV)	Mid	4.7 kΩ
1 (E) - 3 (RV)	Min	0 to 50 Ω

If result is not as specified, replace the rheostat.

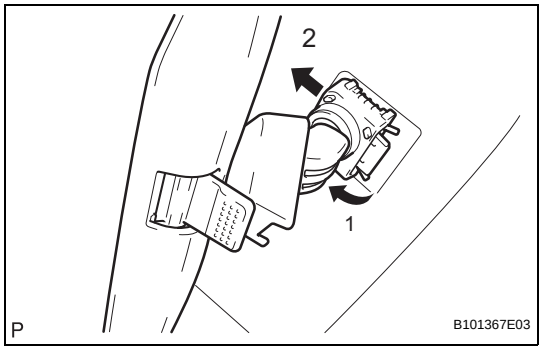
INNER REAR VIEW MIRROR



COMPONENTS

MI

P

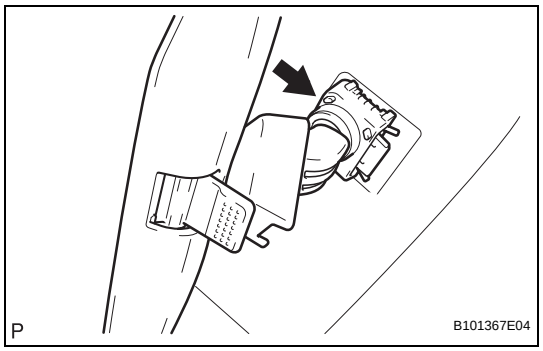


B129402E04

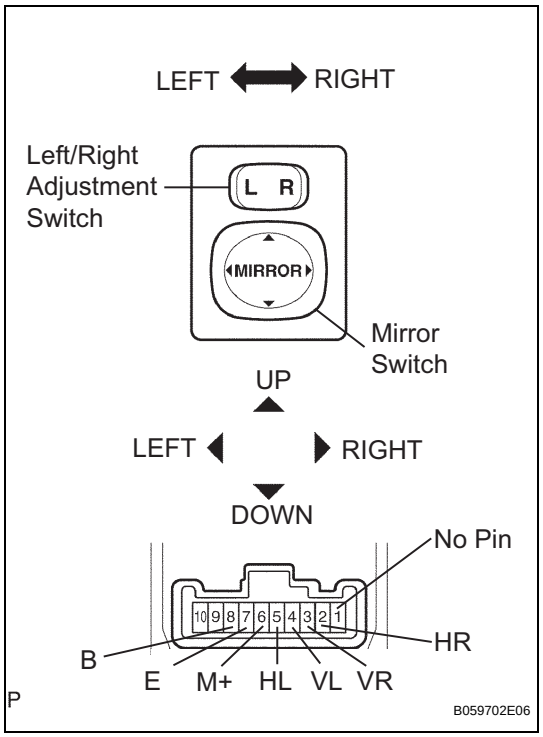
REMOVAL

1. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) Disengage the 2 claws and separate the inner rear view mirror cover as shown in the illustration.



(b) Remove the inner rear view mirror as shown in the illustration.



INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

(a) Install the inner rear view mirror as shown in the illustration.

(b) Install the cover.

OUTER MIRROR SWITCH

INSPECTION

1. INSPECT OUTER MIRROR SWITCH ASSEMBLY

(a) The L position of the left/right adjustment switch: Measure the resistance of the mirror switch.

Standard resistance (for left side)

Tester Connection	Switch Condition	Specified Condition
4 (VL) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
	OFF	10 kΩ or higher
4 (VL) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
	OFF	10 kΩ or higher
5 (HL) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
	OFF	10 kΩ or higher
5 (HL) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω
	OFF	10 kΩ or higher

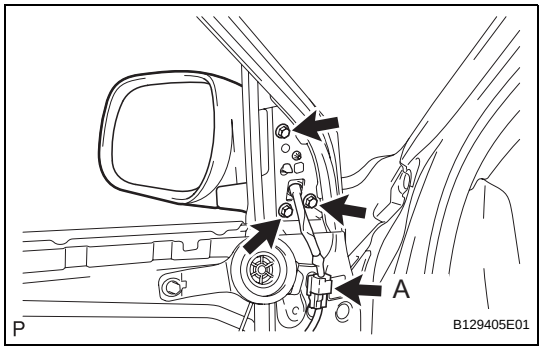
If the result is not as specified, replace the switch assembly.

(b) The R position of the left/right adjustment switch: Measure the resistance of the mirror switch.

Standard resistance (for right side)

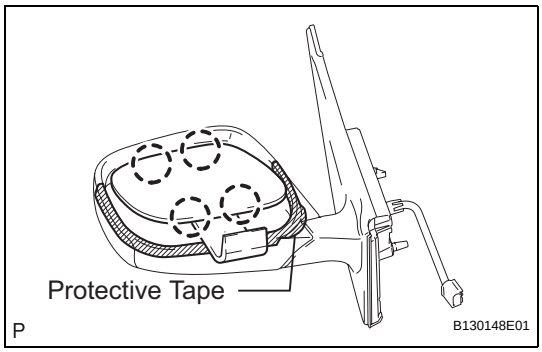
Tester Connection	Switch Condition	Specified Condition
3 (VR) - 8 (B) 6 (M+) - 7 (E)	UP	Below 1 Ω
	OFF	10 kΩ or higher
3 (VR) - 7 (E) 6 (M+) - 8 (B)	DOWN	Below 1 Ω
	OFF	10 kΩ or higher
2 (HR) - 8 (B) 6 (M+) - 7 (E)	LEFT	Below 1 Ω
	OFF	10 kΩ or higher
2 (HR) - 7 (E) 6 (M+) - 8 (B)	RIGHT	Below 1 Ω
	OFF	10 kΩ or higher

If the result is not as specified, replace the switch assembly.



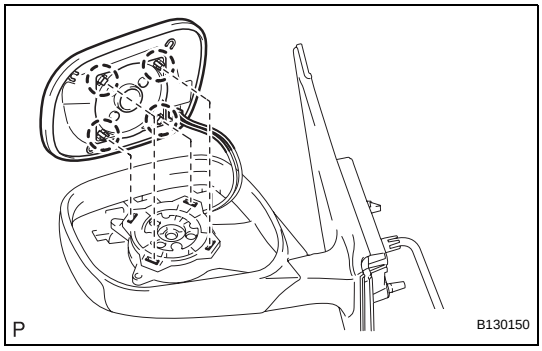
MI

REMOVAL

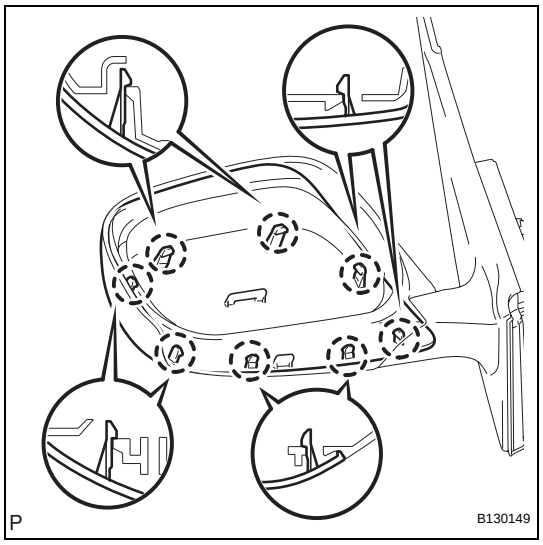


HINT:

- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

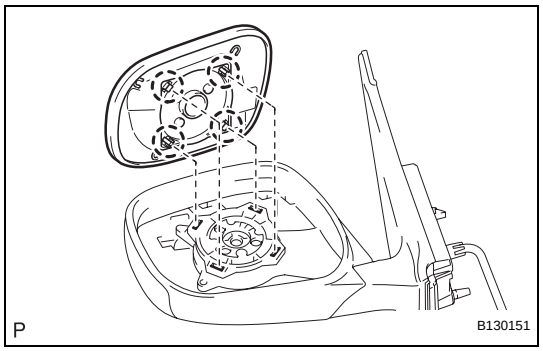


1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-19)**
2. **REMOVE FRONT ARMREST UPPER BASE PANEL LH (See page ED-19)**
3. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-20)**
4. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY LH**
   (a) Disconnect the mirror connector labeled A.
   (b) Remove the 3 screws.
   (c) Remove the outer rear view mirror.

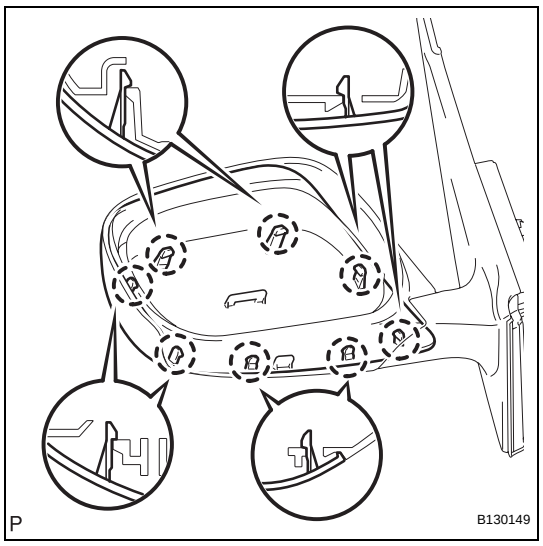


5. **REMOVE OUTER MIRROR COVER LH (w/ Mirror Heater)**
   (a) Using a moulding remover, detach the 4 claws.
   HINT:
   Apply protective tape to the mirror body.

   (b) Remove the 2 connectors and disconnect the mirror.

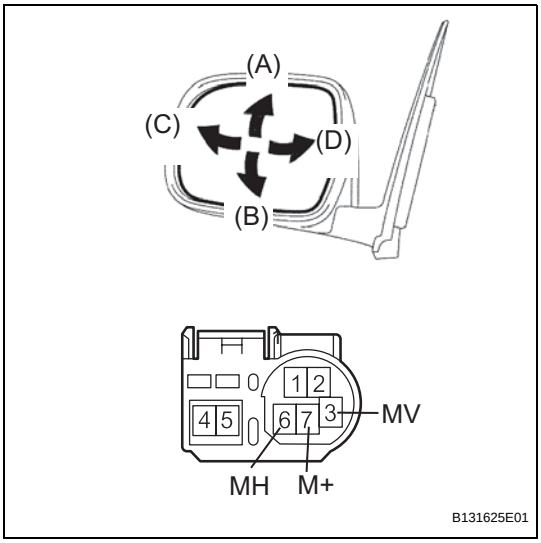


(c) Using a screwdriver, detach the 8 claws and remove the mirror cover.
HINT:
Tape the screwdriver tip before use.



6. REMOVE OUTER MIRROR COVER LH (w/o Mirror Heater)

(a) Using a moulding remover, detach the 4 claws.
HINT:
Apply protective tape to the mirror body.



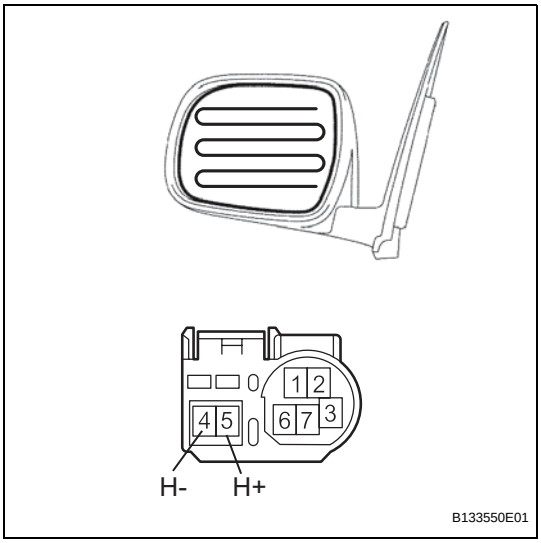
(b) Disconnect the mirror.

(c) Using a screwdriver, detach the 8 claws and remove the mirror cover.
HINT:
Tape the screwdriver tip before use.

MI

INSPECTION

1. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY LH



(a) Disconnect the mirror connector.

(b) Apply battery voltage and check the operation of the mirror.

OK

Measurement Condition	Specified Condition
Battery positive (+) →Terminal 3 (MV) Battery negative (-) → Terminal 7 (M+)	Turns upward (A)
Battery positive (+) → Terminal 7 (M+) Battery negative (-) → Terminal 3 (MV)	Turns downward (B)
Battery positive (+) → Terminal 6 (MH) Battery negative (-) → Terminal 7 (M+)	Turns left (C)
Battery positive (+) → Terminal 7 (M+) Battery negative (-) → Terminal 6 (MH)	Turns right (D)

If the result is not as specified, replace the mirror assembly.

(c) w/ Mirror Heater:

Check the resistance.

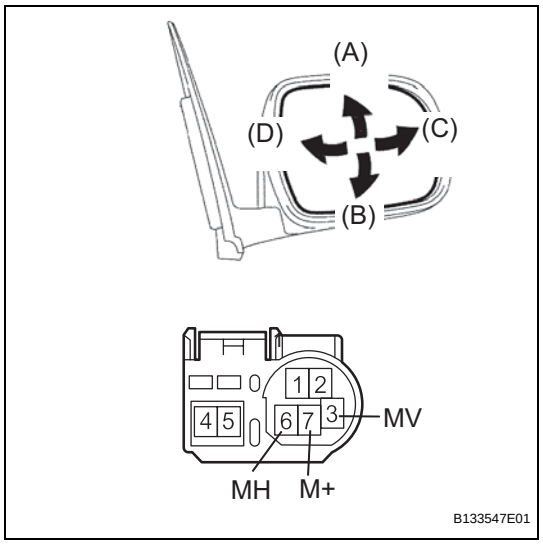
(1) Measure the resistance between the terminals.

Standard resistance

Tester connection	Condition	Specified Condition
4 (H-) - 5 (H+)	65°C (149°F)	4 to 12 Ω

If the result is not as specified, replace the outer rear view mirror.

(2) Connect the cable from the negative battery (-) terminal to terminal 5 and the positive battery (+) terminal to terminal 4, then check that the mirror becomes warm.



OK:

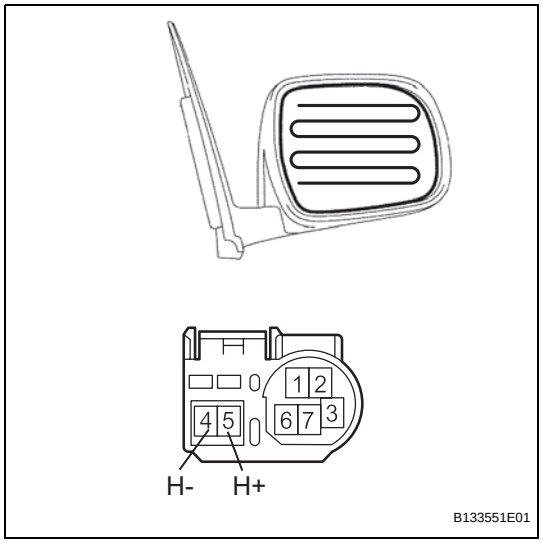
Mirror becomes warm.

HINT:

It takes a short time for the mirror to become warm.

If the result is not as specified, replace the outer rear view mirror.

2. INSPECT OUTER REAR VIEW MIRROR ASSEMBLY RH



(a) Disconnect the mirror connector.

(b) Apply battery voltage and check the operation of the mirror.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 (MV) Battery negative (-) → Terminal 7 (M+)	Turns upward (A)
Battery positive (+) → Terminal 7 (M+) Battery negative (-) → Terminal 3 (MV)	Turns downward (B)
Battery positive (+) → Terminal 6 (MH) Battery negative (-) → Terminal 7 (M+)	Turns left (D)
Battery positive (+) → Terminal 7 (M+) Battery negative (-) → Terminal 6 (MH)	Turns right (C)

If the result is not as specified, replace the mirror assembly.

(c) w/ Mirror Heater:

Check the resistance.

(1) Measure the resistance between the terminals.

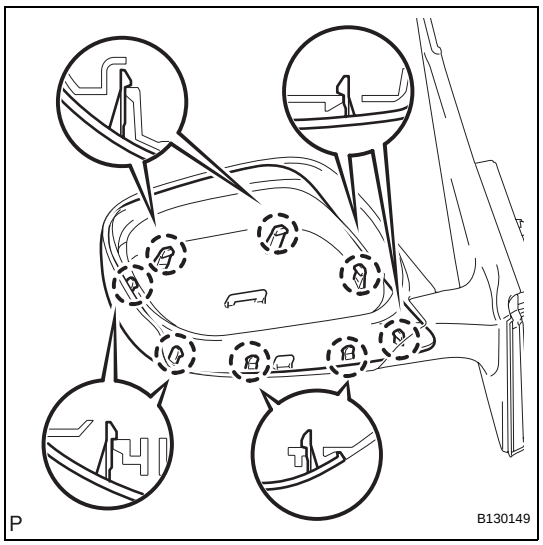
Standard resistance

Tester connection	Condition	Specified Condition
4 (H-) - 5 (H+)	65°C (149°F)	4 to 12 Ω

If the result is not as specified, replace the outer rear view mirror.

(2) Connect the cable from the negative battery (-) terminal to terminal 5 and the positive battery (+) terminal to terminal 4, then check that the mirror becomes warm.

OK:



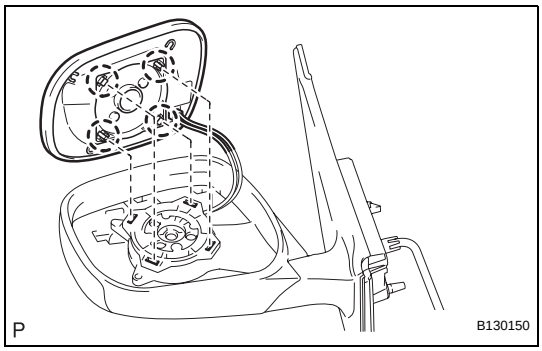
Mirror becomes warm.

HINT:

It takes a short time for the mirror to become warm.

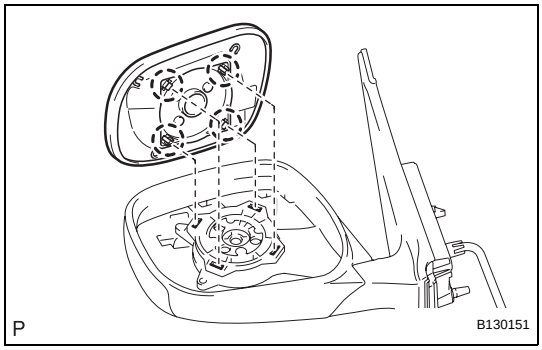
If the result is not as specified, replace the outer rear view mirror.

INSTALLATION



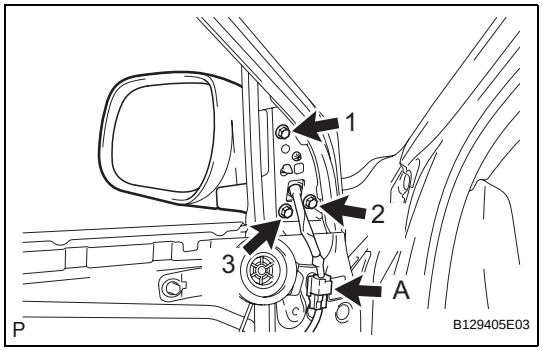
1. INSTALL OUTER MIRROR COVER LH

(a) Attach the 8 claws and install the mirror cover.



(b) After installing the outer mirror cover, check that there is no gap between the cover and mirror body.

HINT:



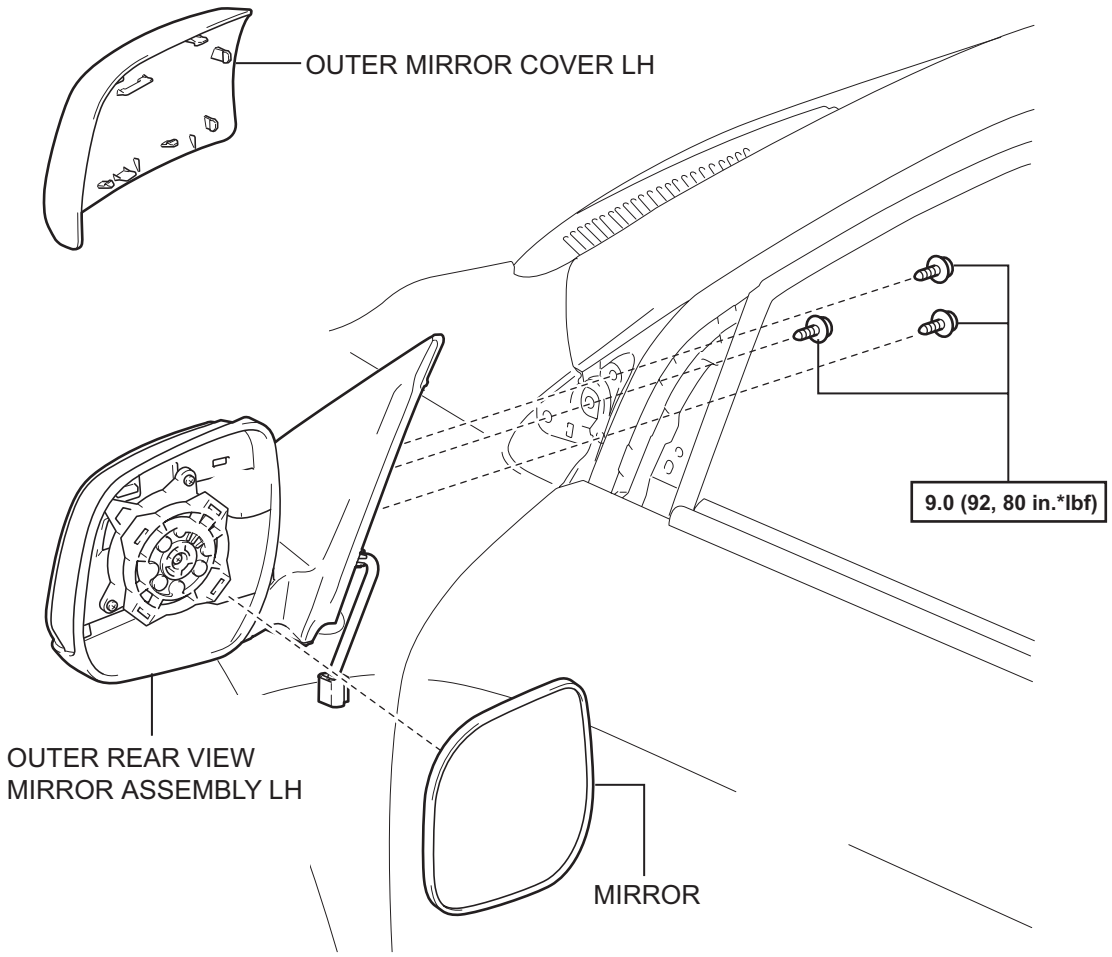
If there is a gap between the cover and body, noise will occur during driving.

(c) w/ Mirror Heater:
Connect the 2 connectors. Attach the 4 claws to install the mirror.

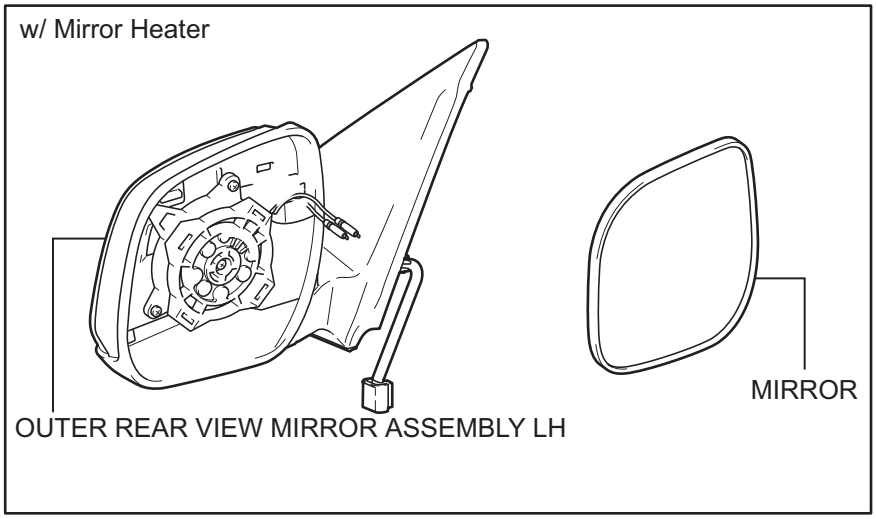
(d) w/o Mirror Heater:
Attach the 4 claws to install the mirror.

2. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY LH

(a) Pass the connector labeled A and wire harness of the mirror through the wire harness hole.
(b) Temporarily install the mirror by inserting the bosses on the mirror into the holes on the vehicle.
(c) Tighten the 3 screws in the sequence shown in the illustration and Install the mirror.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(d) Connect the connector labeled A.



3. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-33)



4. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH LH (See page ED-35)

OUTER REAR VIEW MIRROR

COMPONENTS

MI

T

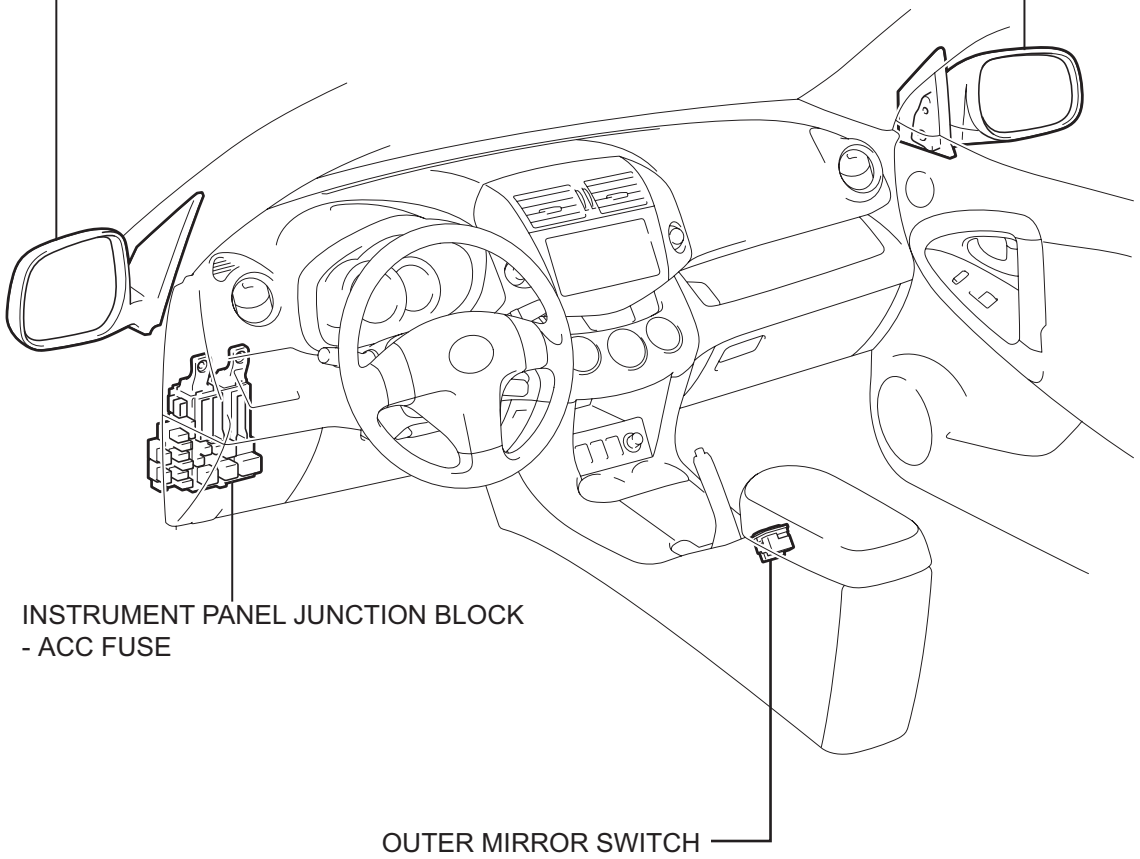
B131624E03

SYSTEM DESCRIPTION

The outer mirror switch controls the outer rear view mirror LH and RH.

MI

PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Power mirror control system

Symptom	Suspected area	See page
Mirror does not operate	1. ACC fuse	MI-1
	2. Outer mirror switch	MI-13
	3. Outer rear view mirror	MI-10
	4. Wire harness	-
Mirror operates abnormally	1. Outer mirror switch	MI-13
	2. Outer rear view mirror	MI-10
	3. Wire harness	-

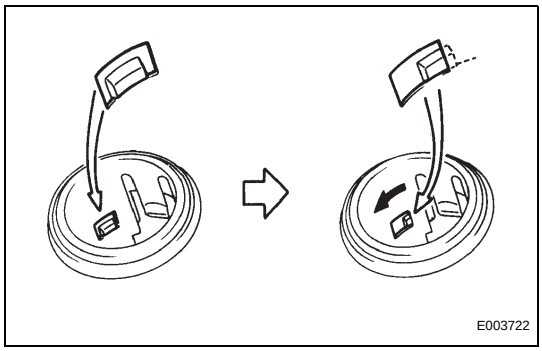
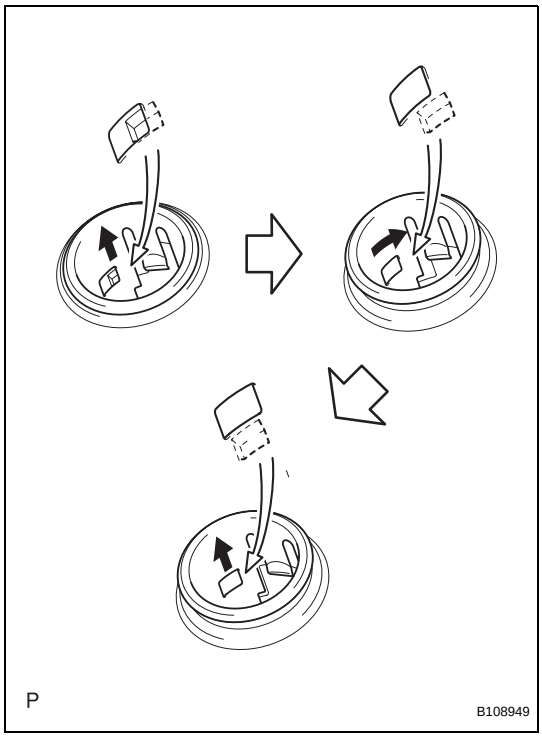
INSTALLATION

1. **INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Align the protrusion on the backside of the socket with the groove of the cover. Then push the socket into the cover.
2. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
3. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
4. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **INSTALL NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
6. **INSTALL NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

CENTER POWER OUTLET SOCKET



COMPONENTS

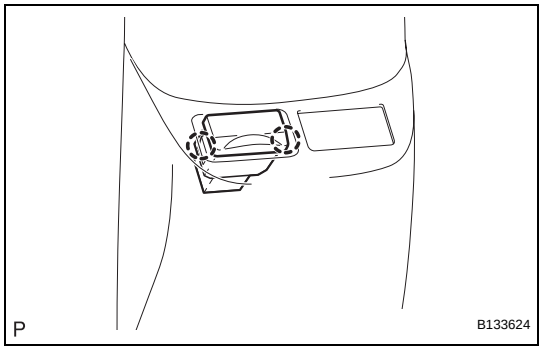


OT

REMOVAL

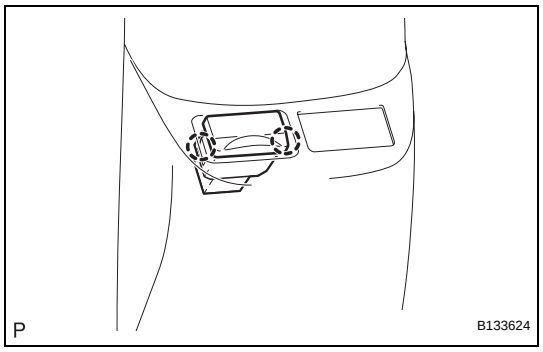
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-17)**
3. **REMOVE NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-18)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-18)**
6. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-19)**
7. **REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Rotate the socket to disengage the notch.

   (b) Pull out the socket halfway and rotate the socket until its protrusion is aligned with the groove of the cover.
   (c) Remove the socket from the cover.



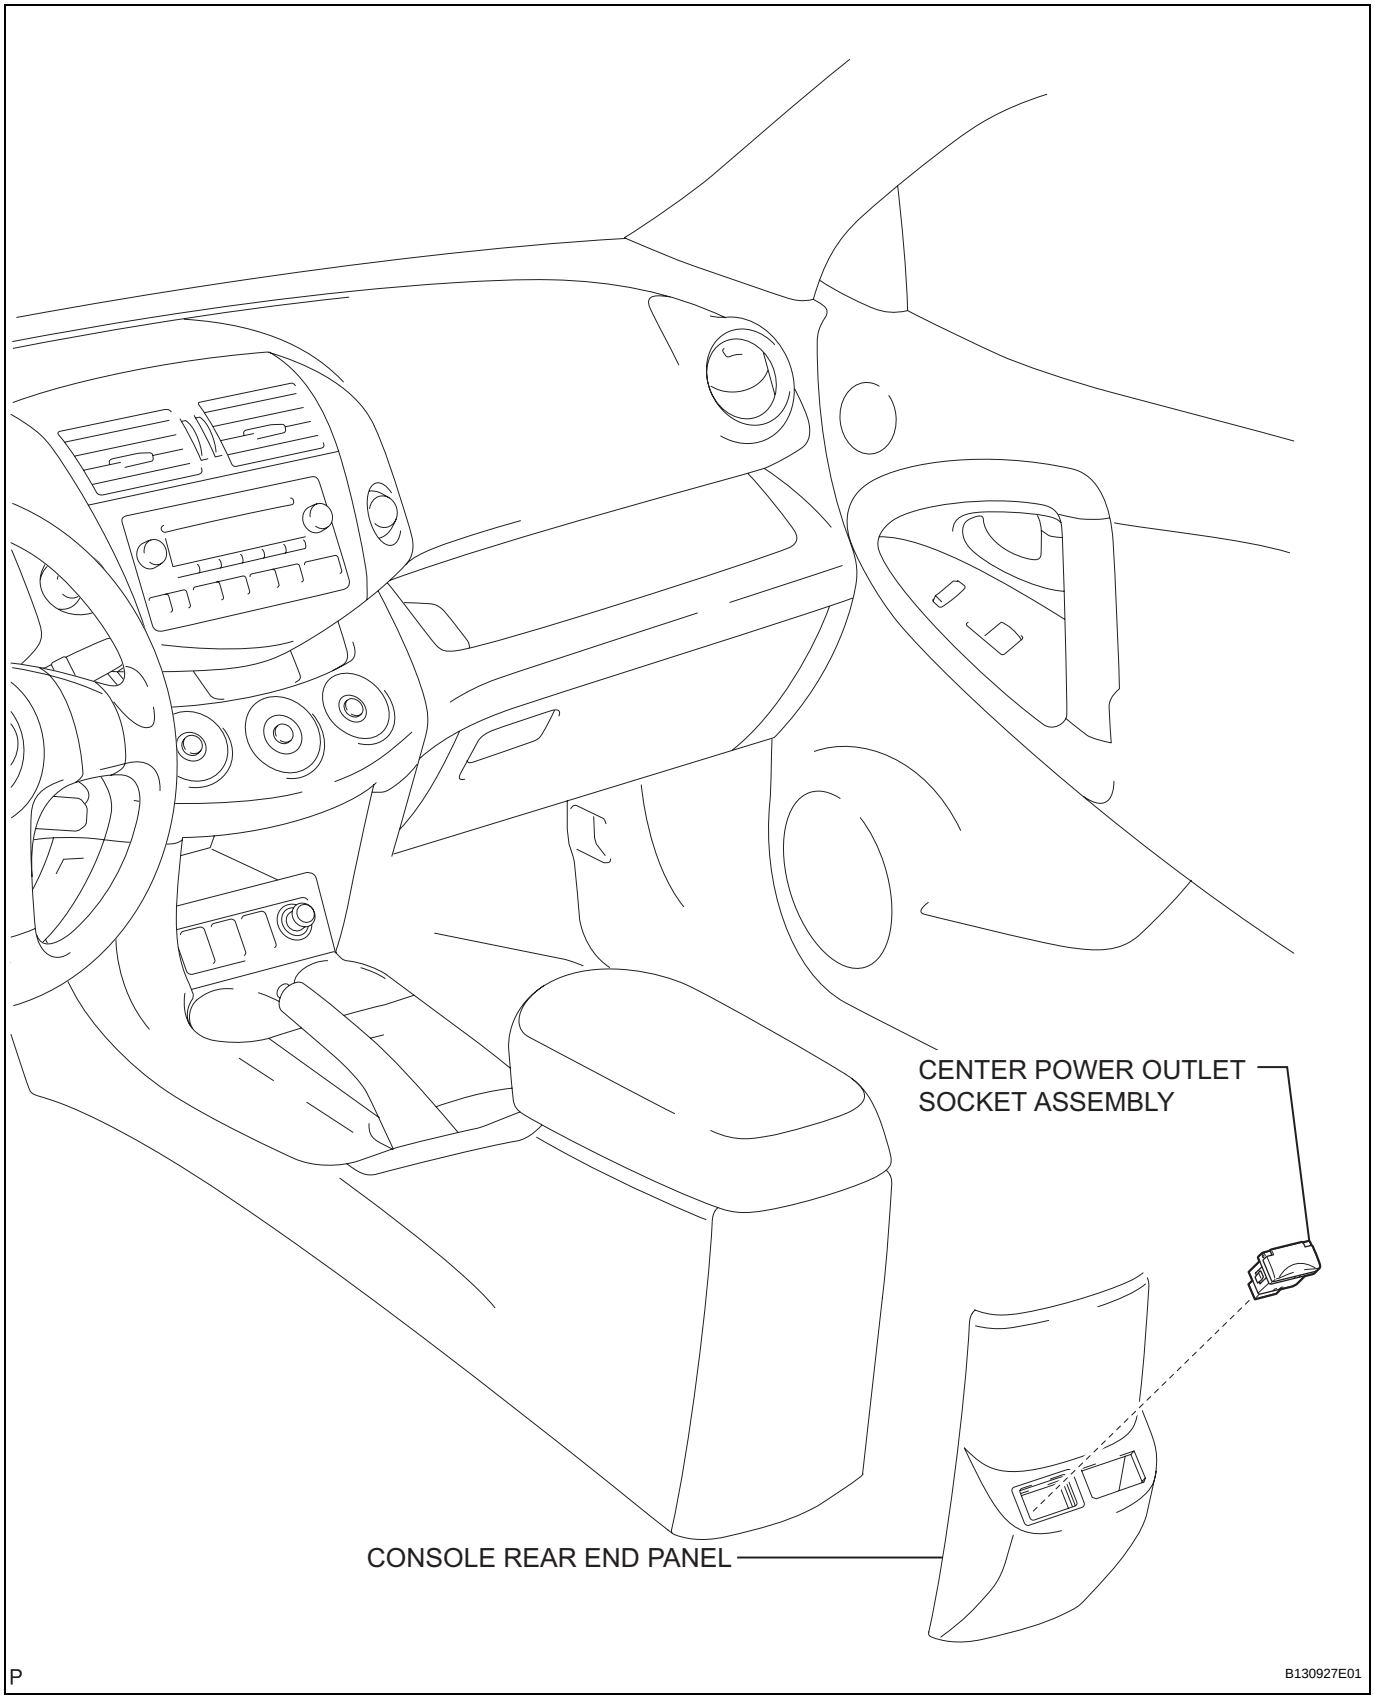
CENTER POWER OUTLET SOCKET (for AC Power Supply)

COMPONENTS



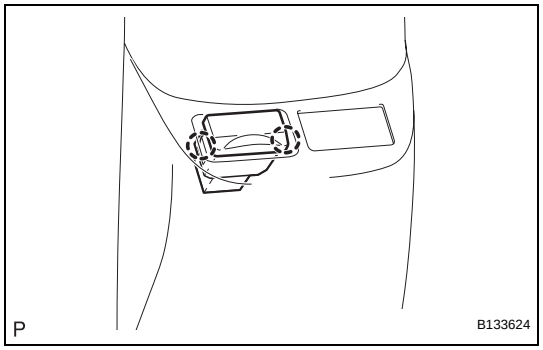
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE CONSOLE REAR END PANEL (See page IP-19)**
3. **REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Disconnect the connector.
   (b) Detach the 2 claws and remove the power outlet.



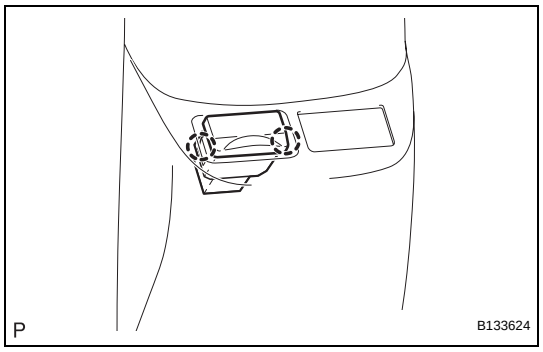
INSTALLATION

1. **INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Attach the 2 claws to install the voltage inverter.
   (b) Connect the connector.
2. **INSTALL CONSOLE REAR END PANEL (See page IP-27)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

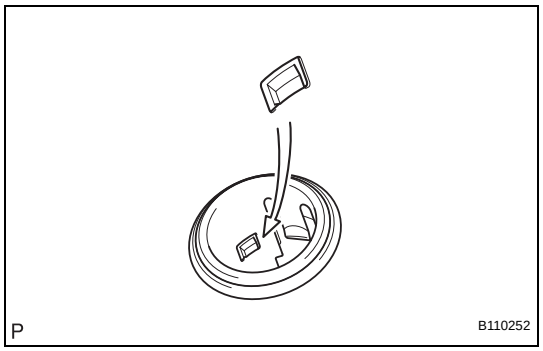


CENTER POWER OUTLET SOCKET (for AC Power Supply)

COMPONENTS



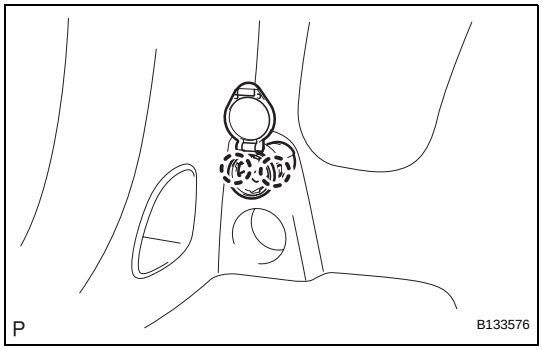
REMOVAL

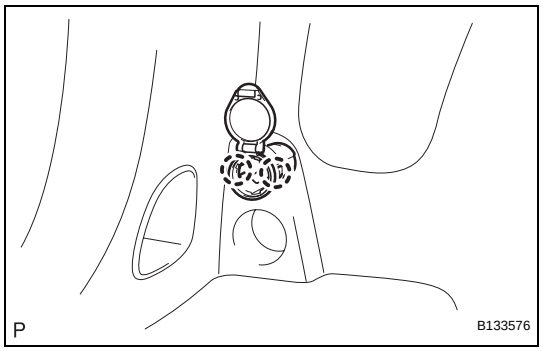


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE CONSOLE REAR END PANEL (See page IP-19)**
3. **REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Disconnect the connector.
   (b) Detach the 2 claws and remove the power outlet.

INSTALLATION

1. **INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Attach the 2 claws to install the voltage inverter.
   (b) Connect the connector.
2. **INSTALL CONSOLE REAR END PANEL (See page IP-27)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



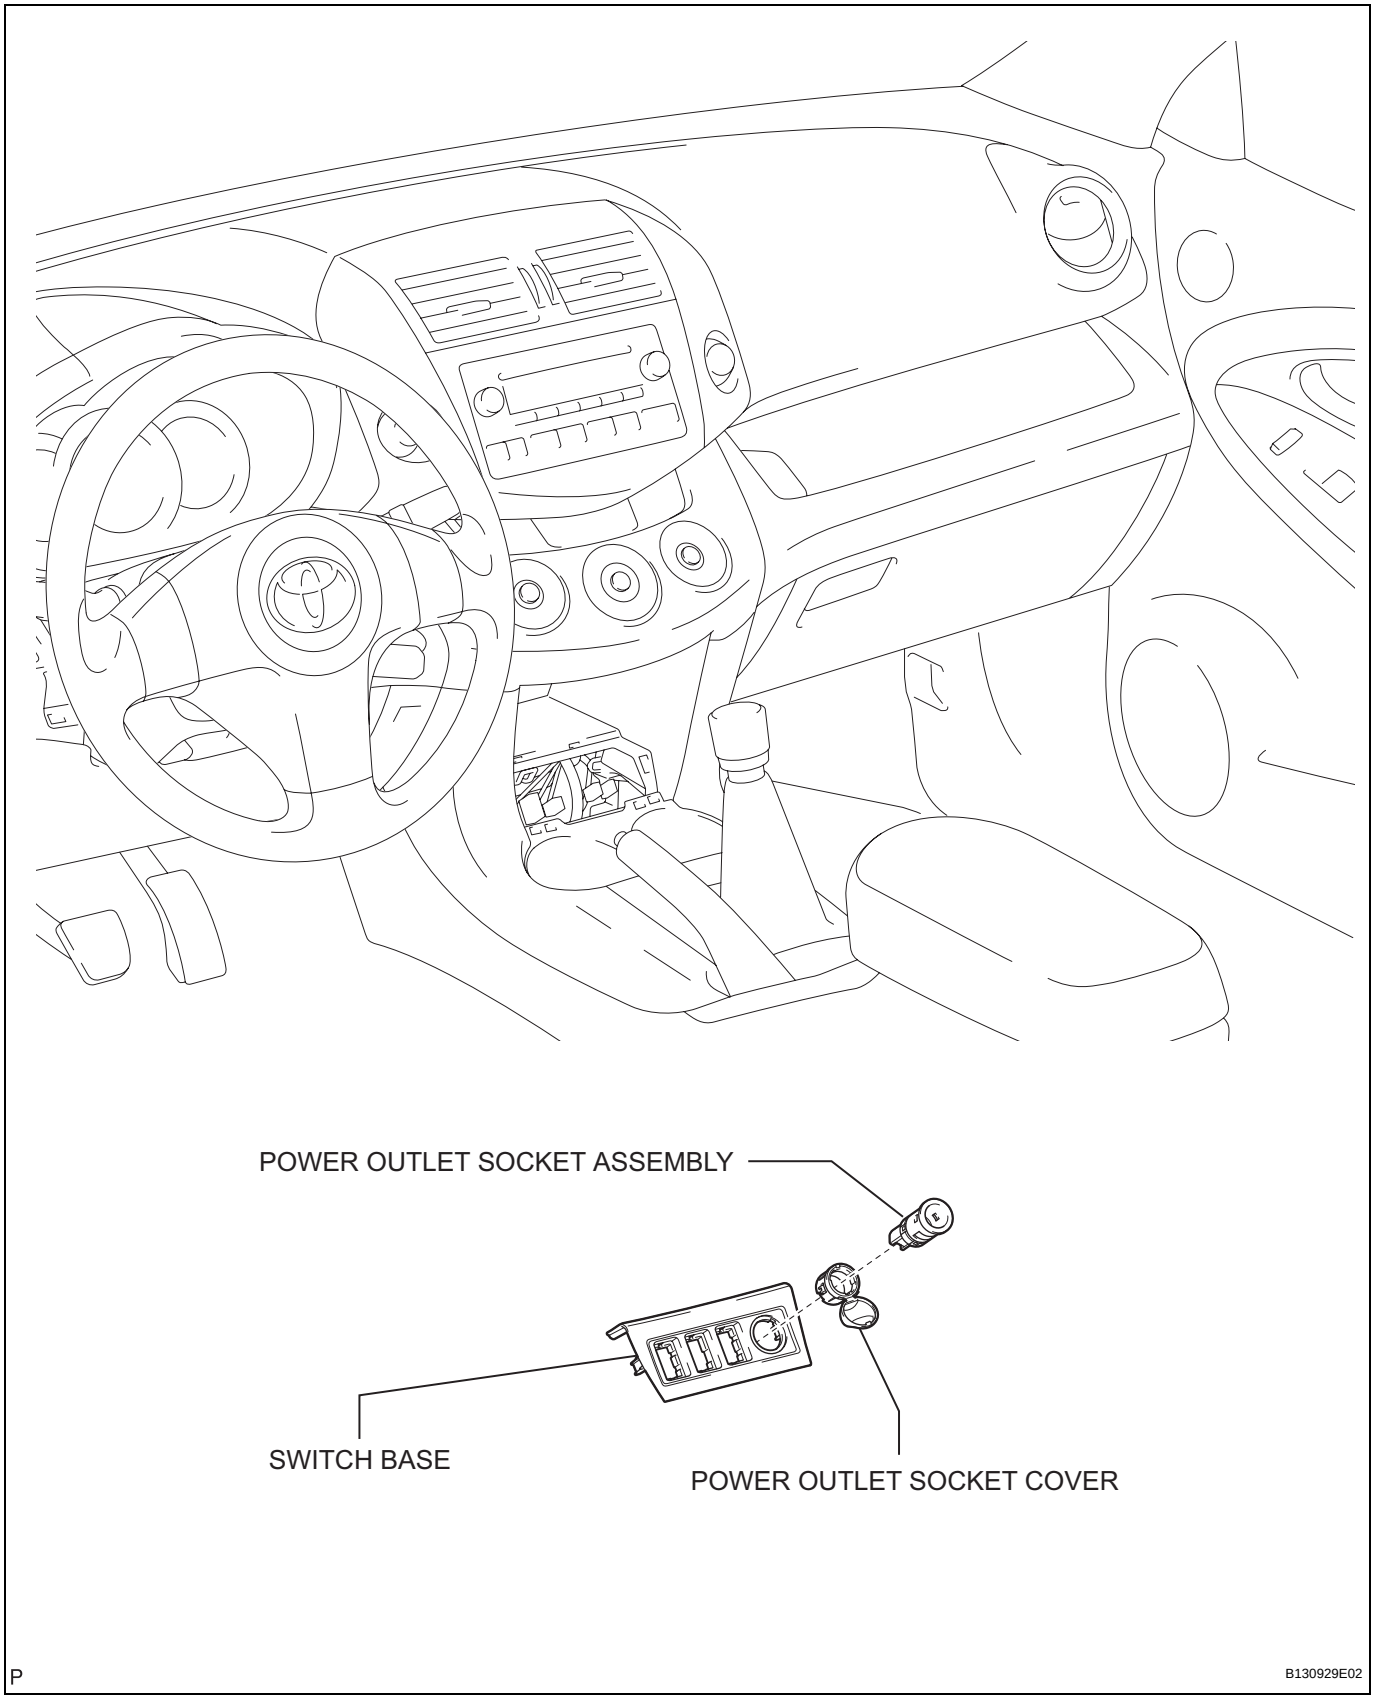


INSTALLATION

1. **INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Align the protrusion on the backside of the socket with the groove of the cover. Then push the socket into the cover.
2. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
3. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
4. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **INSTALL NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
6. **INSTALL NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

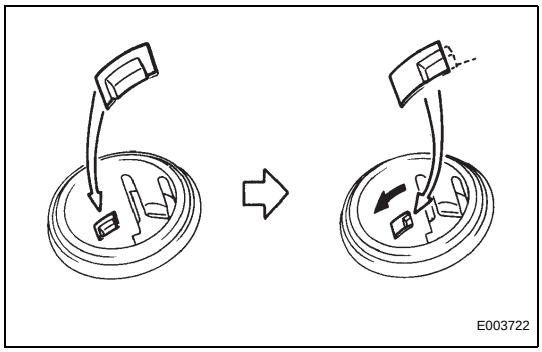
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-26)**
3. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
4. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY**
5. **REMOVE TONNEAU COVER ASSEMBLY**
6. **REMOVE REAR FLOOR NO. 1 BOARD**
7. **REMOVE DECK BOARD ASSEMBLY**
8. **REMOVE REAR FLOOR NO. 3 BOARD**
9. **REMOVE REAR FLOOR NO. 2 BOARD**
10. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-31)**
11. **REMOVE BACK DOOR WEATHERSTRIP**
12. **REMOVE REAR FLOOR FINISH PLATE (See page IR-31)**
13. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH**
14. **REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY**
15. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-32)**
16. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-32)**
17. **REMOVE REAR POWER OUTLET SOCKET ASSEMBLY**
    (a) Detach the 2 claws fittings and remove the socket.

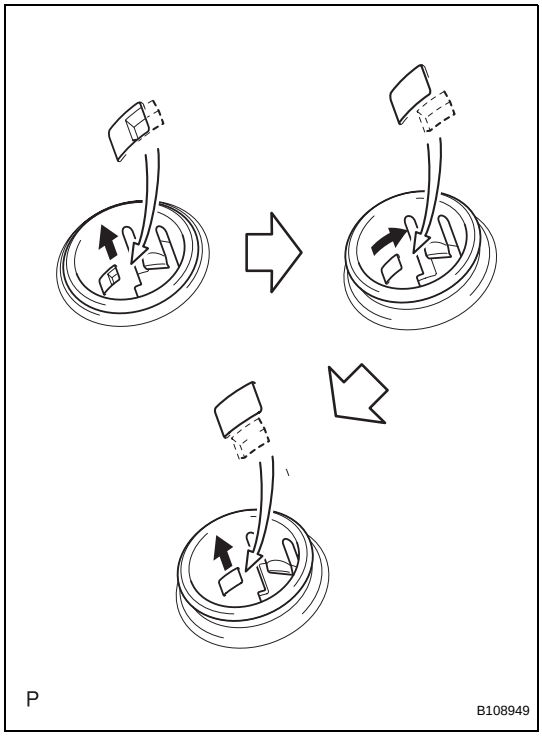


INSTALLATION

1. **INSTALL REAR POWER OUTLET SOCKET ASSEMBLY**
   (a) Attach the 2 claw fittings to install the socket.
2. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat) (See page IR-52)**
3. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-53)**
4. **INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY**
5. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH**
6. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**
7. **INSTALL BACK DOOR WEATHERSTRIP**
8. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-55)**
9. **INSTALL REAR FLOOR NO. 2 BOARD**
10. **INSTALL REAR FLOOR NO. 3 BOARD**
11. **INSTALL DECK BOARD ASSEMBLY**
12. **INSTALL REAR FLOOR NO. 1 BOARD**
13. **INSTALL TONNEAU COVER ASSEMBLY**
14. **INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY**
15. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-59)**
17. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



POWER OUTLET SOCKET

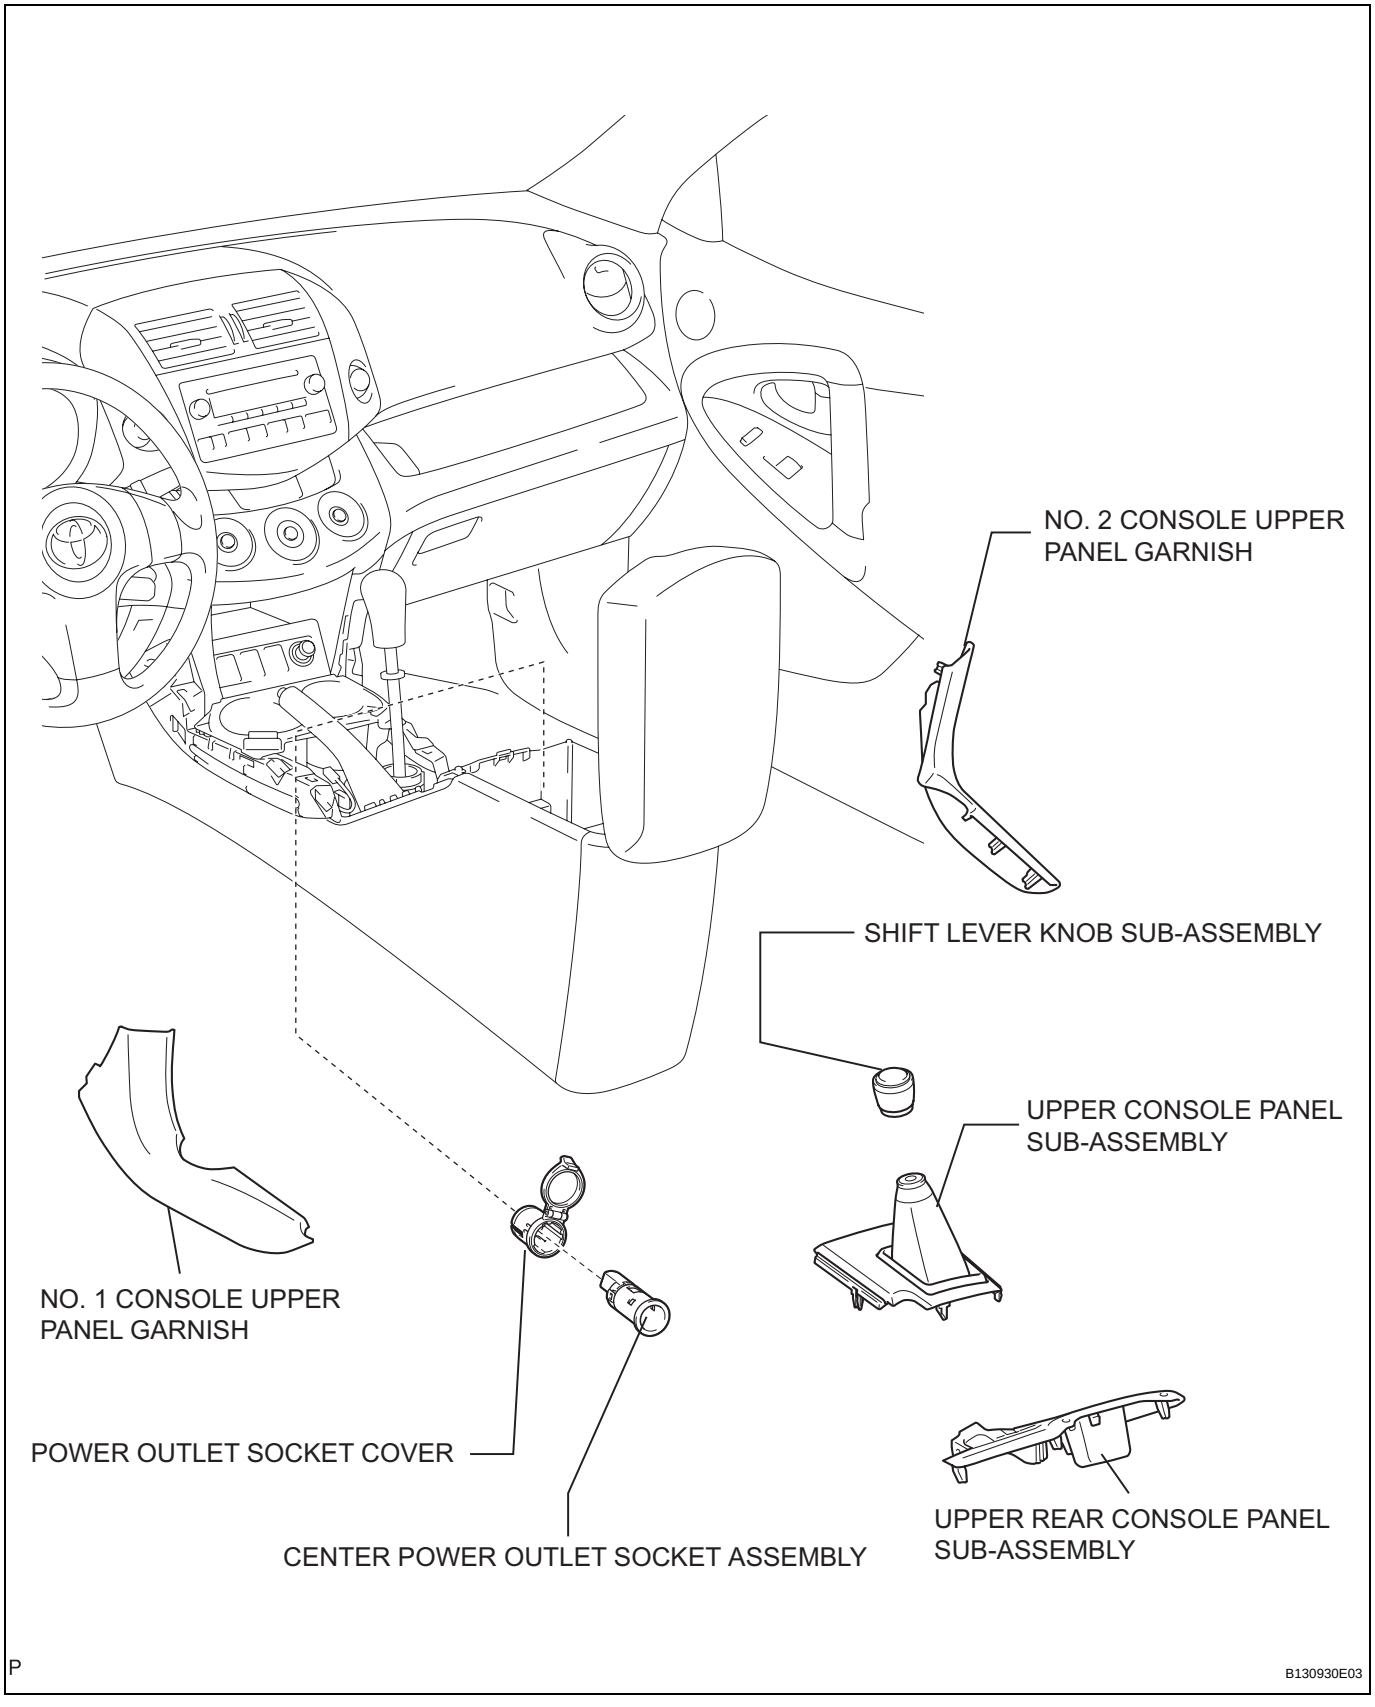


COMPONENTS

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE SWITCH BASE (See page IP-21)**
3. **REMOVE POWER OUTLET SOCKET ASSEMBLY**
   (a) Rotate the socket to disengage the notch.

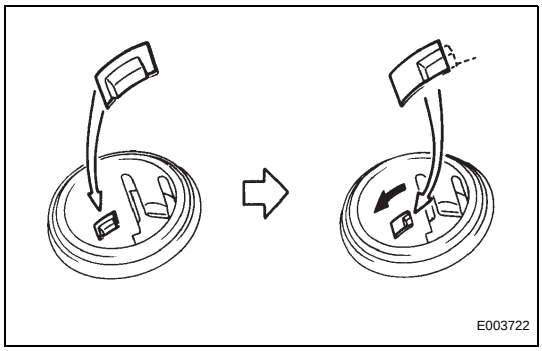
   (b) Pull out the socket halfway and rotate the socket until its protrusion is aligned with the groove of the cover.
   (c) Remove the socket from the cover.



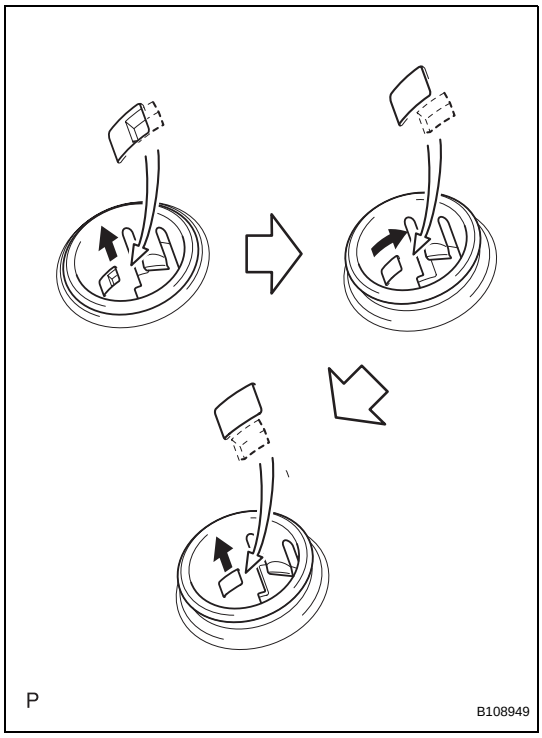
INSTALLATION

1. **INSTALL POWER OUTLET SOCKET ASSEMBLY**
   (a) Align the protrusion on the backside of the socket with the groove of the cover. Then push the socket into the cover.
2. **INSTALL SWITCH BASE (See page IP-24)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

CENTER POWER OUTLET SOCKET



COMPONENTS

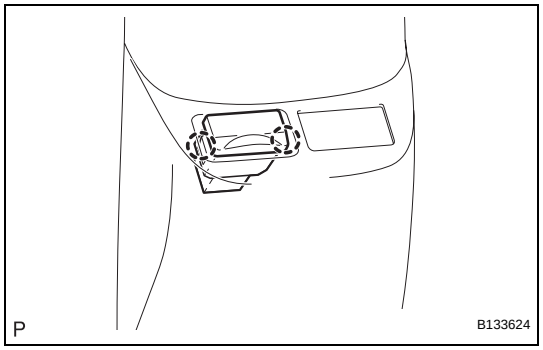


OT

REMOVAL

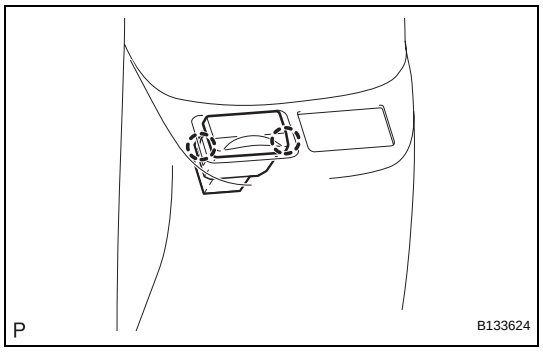
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-17)**
3. **REMOVE NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-18)**
4. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
5. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-18)**
6. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-19)**
7. **REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Rotate the socket to disengage the notch.

   (b) Pull out the socket halfway and rotate the socket until its protrusion is aligned with the groove of the cover.
   (c) Remove the socket from the cover.



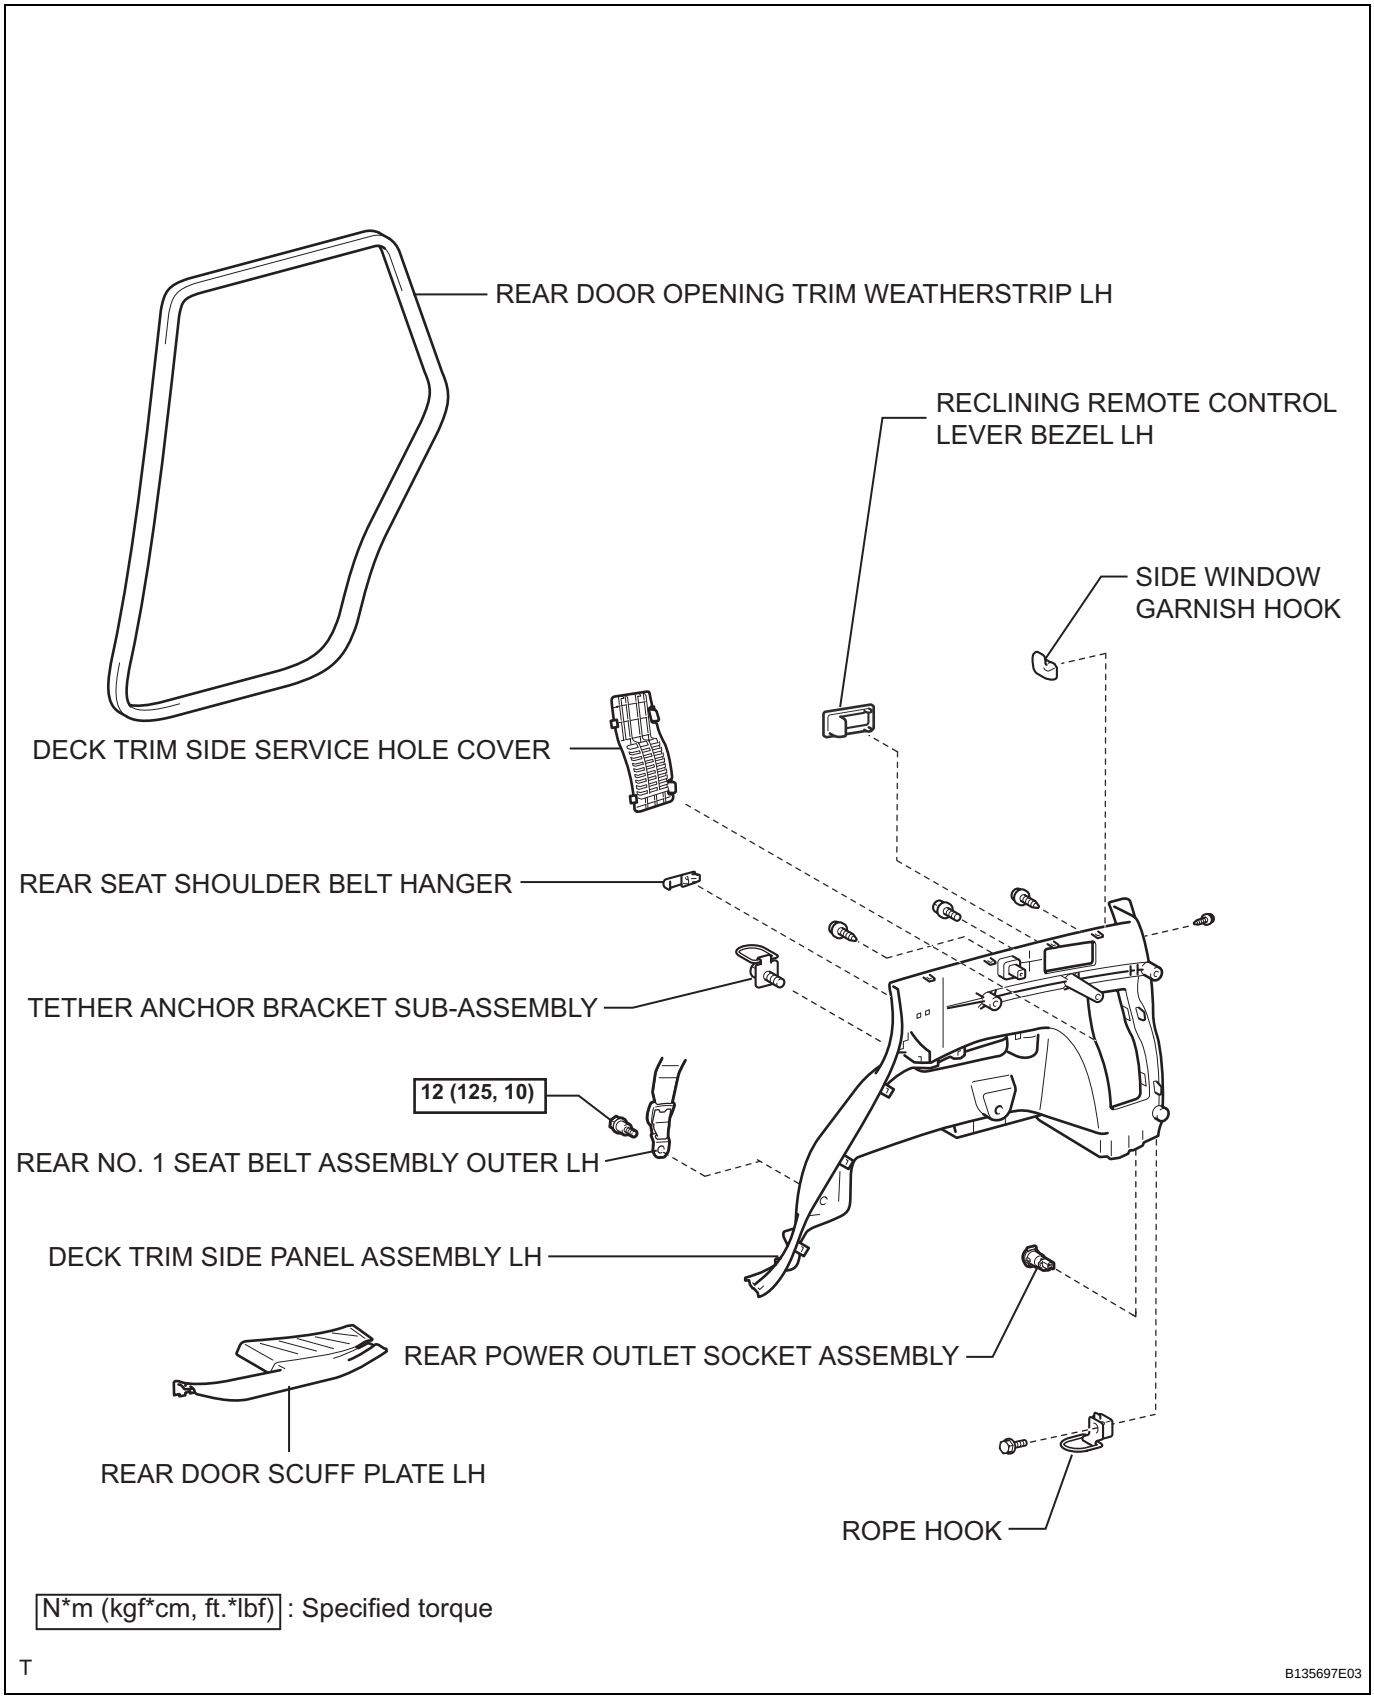
CENTER POWER OUTLET SOCKET (for AC Power Supply)

COMPONENTS



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE CONSOLE REAR END PANEL (See page IP-19)**
3. **REMOVE CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Disconnect the connector.
   (b) Detach the 2 claws and remove the power outlet.



INSTALLATION

1. **INSTALL CENTER POWER OUTLET SOCKET ASSEMBLY**
   (a) Attach the 2 claws to install the voltage inverter.
   (b) Connect the connector.
2. **INSTALL CONSOLE REAR END PANEL (See page IP-27)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

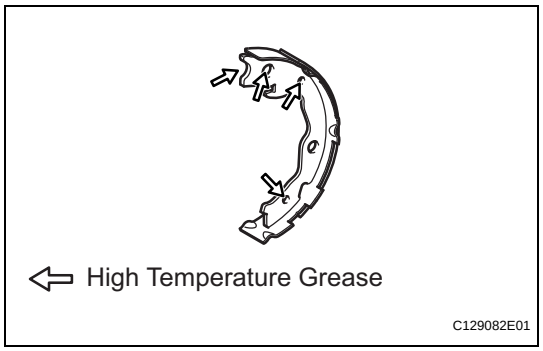
REASSEMBLY

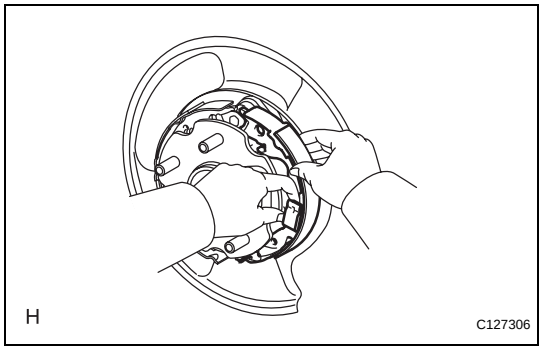
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. APPLY HIGH TEMPERATURE GREASE



(a) Apply high temperature grease to the contact surface of the shoe and backing plate.

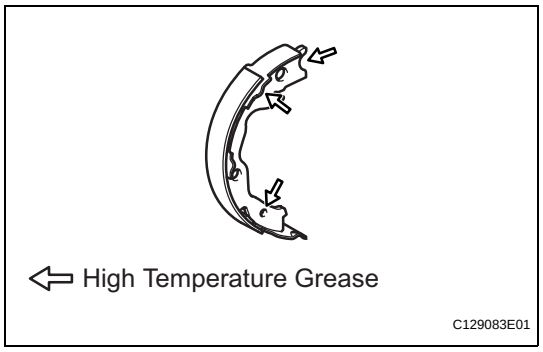
2. INSTALL PARKING BRAKE SHOE LEVER LH



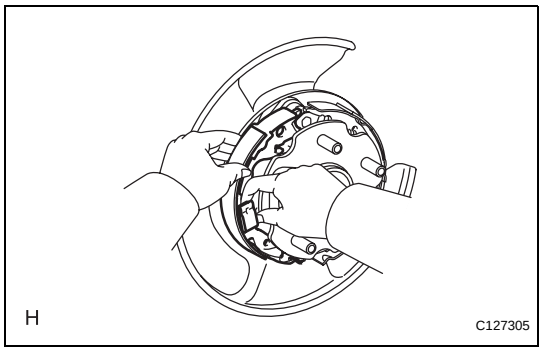
3. INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY LH

(a) Connect the parking brake cable to the parking brake shoe lever.

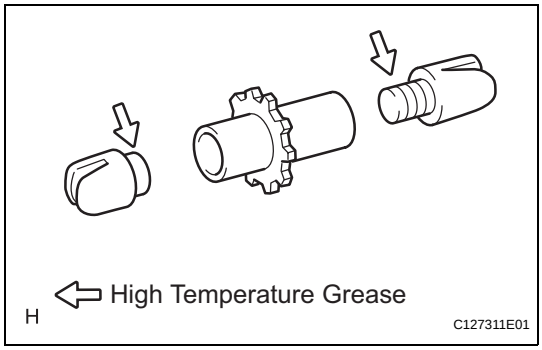
(b) Apply high temperature grease to the following contact surfaces of the shoe.
- Shoe to anchor pin
- Shoe to parking brake lever pin
- Shoe to spring



(c) Install the shoe with the shoe hold-down spring and pin.



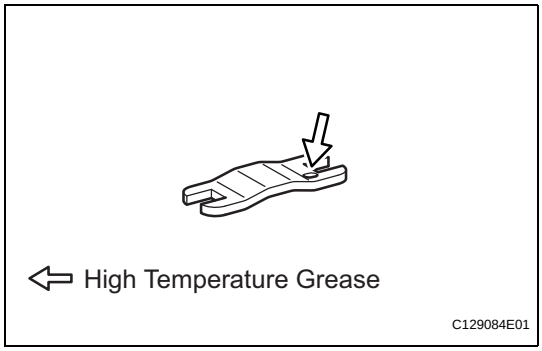
4. INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY LH



(a) Apply high temperature grease to the following contact surfaces of the shoe.
- Shoe to anchor pin
- Shoe to spring

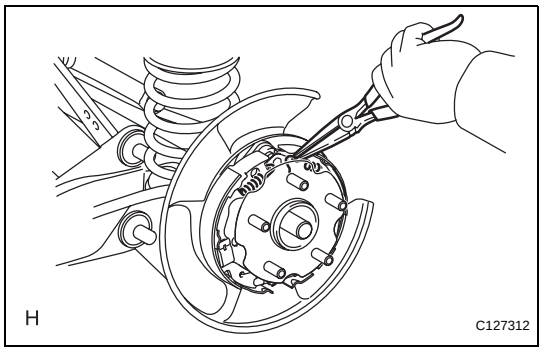
PB

(b) Install the shoe with the shoe hold-down spring and pin.



5. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Apply high temperature grease to the adjusting bolt.
(b) Install the screw set.

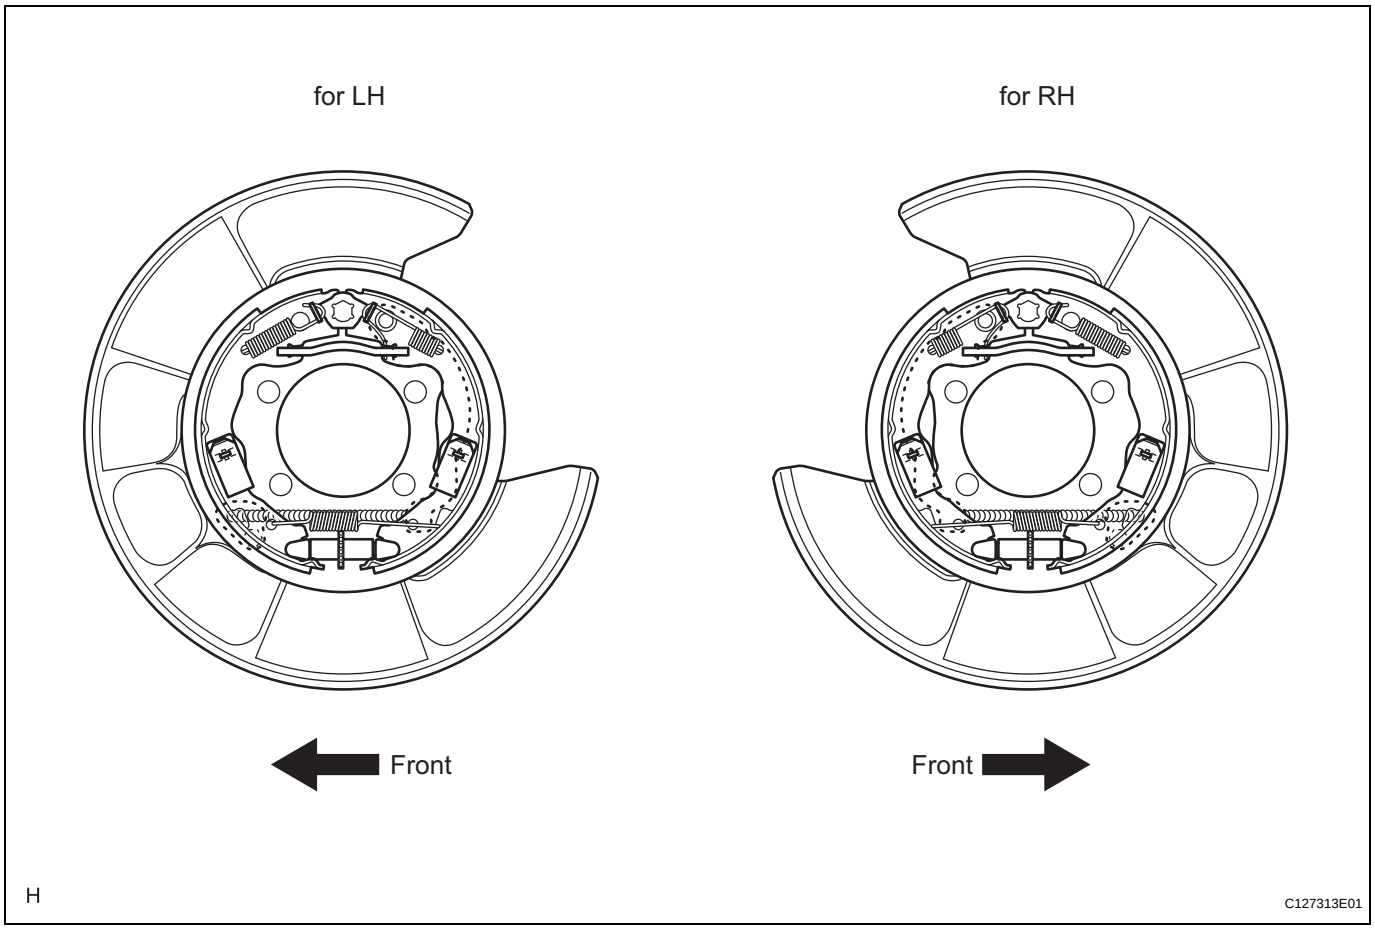


6. INSTALL PARKING BRAKE SHOE RETURN TENSION SPRING (for Lower Side)

(a) Using needle-nose pliers, install the tension spring.

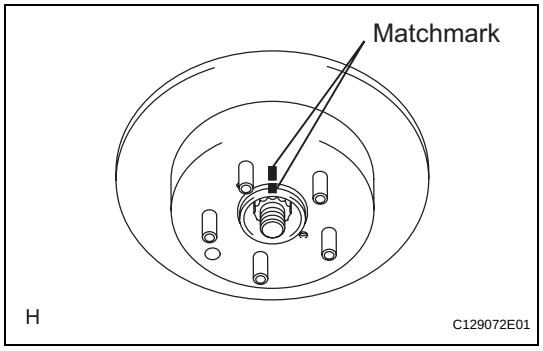
7. INSTALL PARKING BRAKE SHOE STRUT LH

(a) Apply high temperature grease to the contact surface of the strut and shoe return tension spring.
(b) Install the strut.



8. INSTALL PARKING BRAKE SHOE RETURN TENSION SPRING (for Upper Side)

(a) Using needle-nose pliers, install the 2 shoe return tension springs.

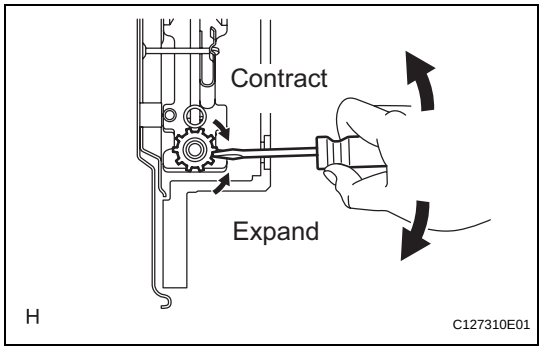


PB

9. CHECK PARKING BRAKE INSTALLATION

(a) Check that each part is installed properly.

NOTICE:
There should be no oil or grease adhering to the friction surface of the shoe lining and disc.



10. INSTALL REAR DISC

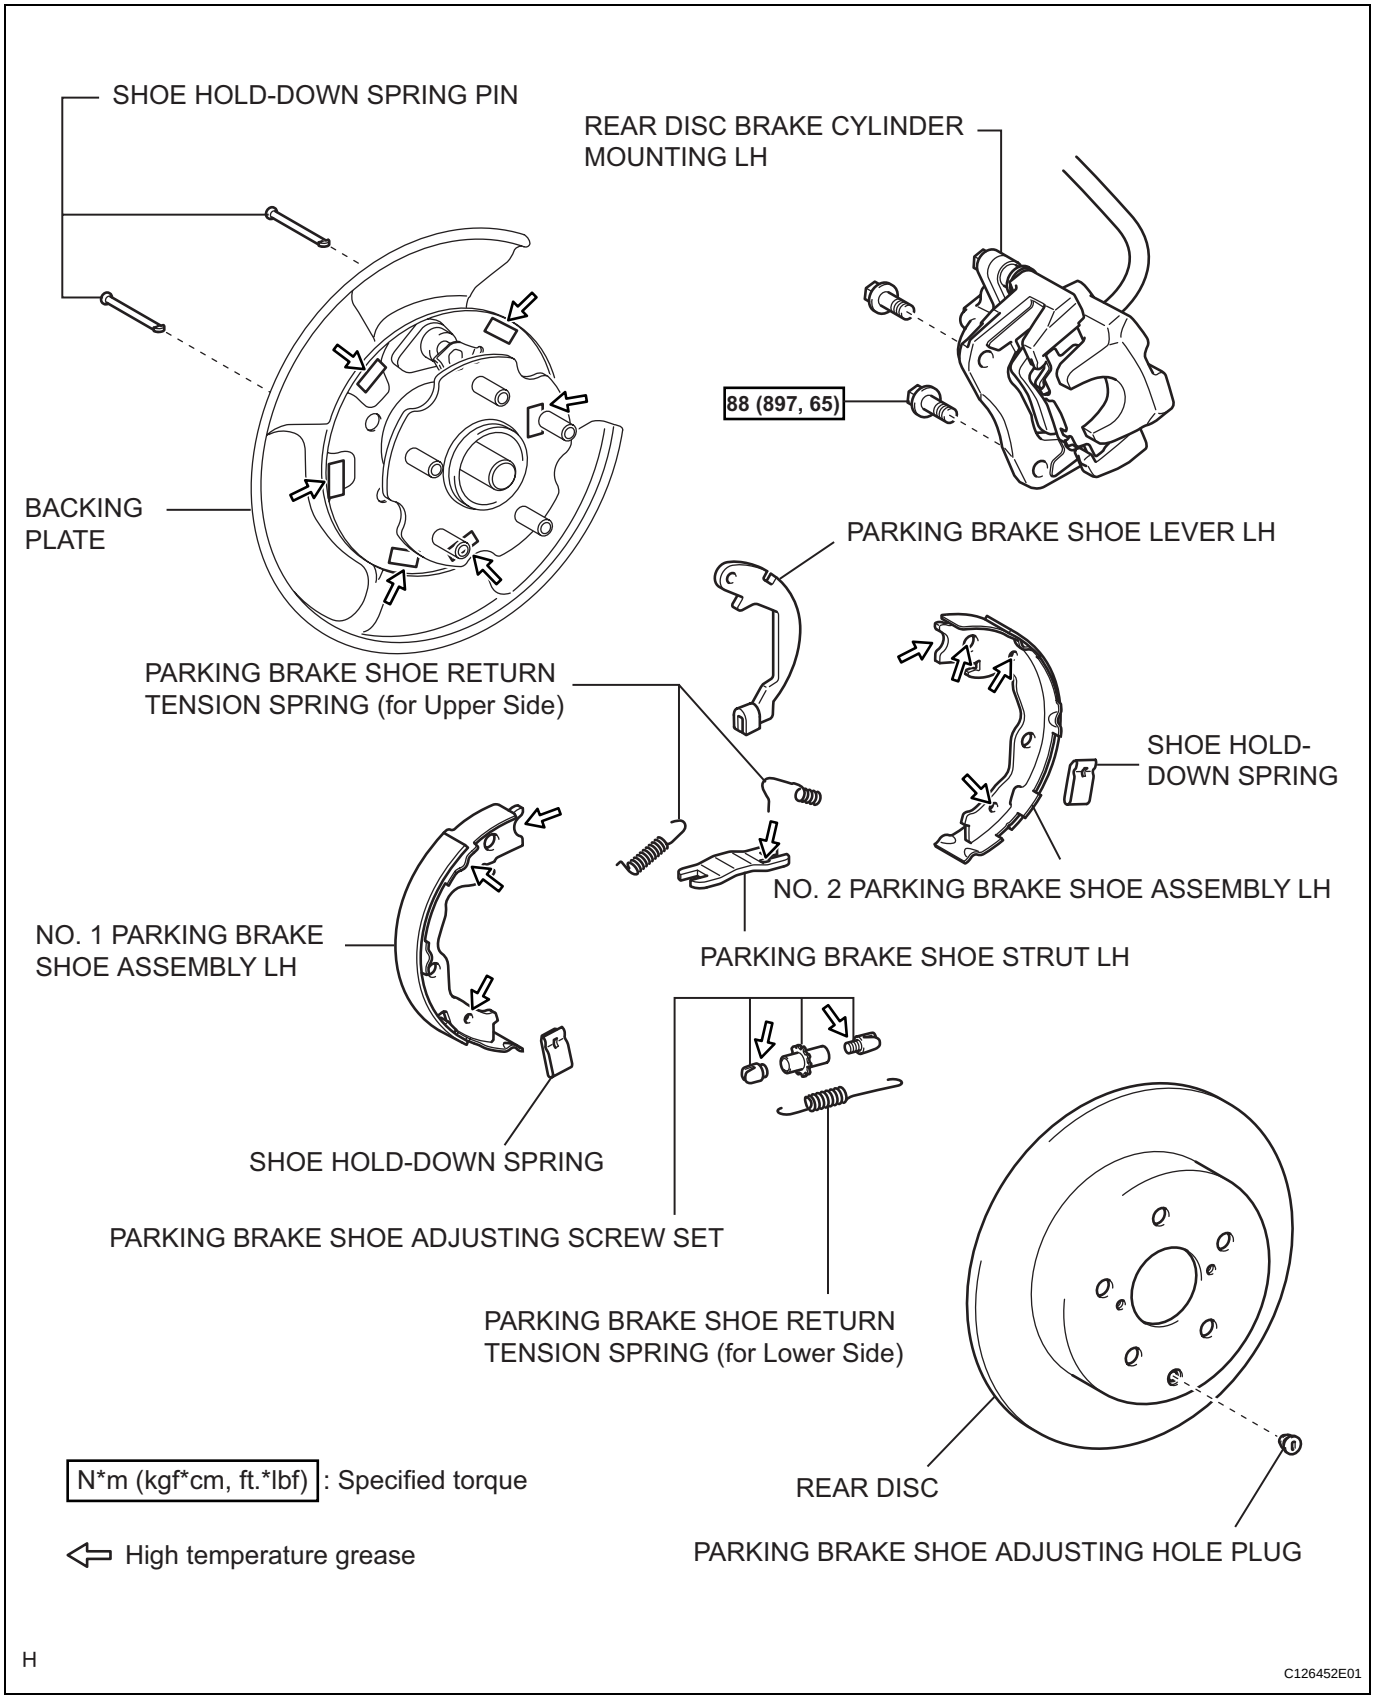
(a) Align the matchmarks and install the disc.
HINT:
When replacing the disc with new one, select the installation position where the disc has the minimum runout.

11. ADJUST PARKING BRAKE SHOE CLEARANCE

(a) Temporarily install the hub nuts.

(b) Remove the shoe adjusting hole plug, and then turn the adjuster to expand the shoe adjuster until the disc locks.

(c) Turn and contact the shoe adjuster until the disc can rotate smoothly.
Standard return notch:
8 notches



(d) Check that the shoe has no brake drag.

PB

12. **INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG**
    (a) Install the shoe adjusting hole plug to the rear disc.
13. **CONNECT REAR DISC BRAKE CYLINDER MOUNTING LH (See page BR-60)**
14. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
15. **DRIVE VEHICLE**
    (a) Pull the parking brake lever with a force of 147 N (15 kgf, 33 lbf).
    (b) Drive the vehicle at approximately 50 km/h (31 mph) for approximately 400 m (0.25 miles).
    NOTICE:
    Drive the vehicle on a safe, level and dry road.
    (c) Repeat the above steps 2 or 3 times.
16. **CHECK PARKING BRAKE LEVER TRAVEL (See page PB-1)**
17. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**

PARKING BRAKE ASSEMBLY

COMPONENTS

PB

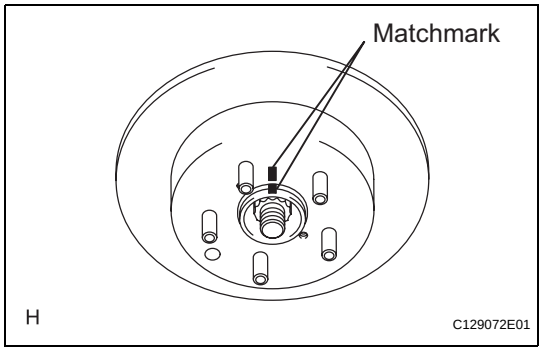
DISASSEMBLY

HINT:

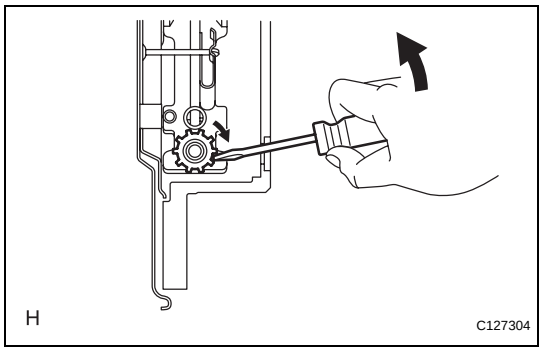
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

2. DISCONNECT REAR DISC BRAKE CYLINDER MOUNTING LH (See page BR-55)



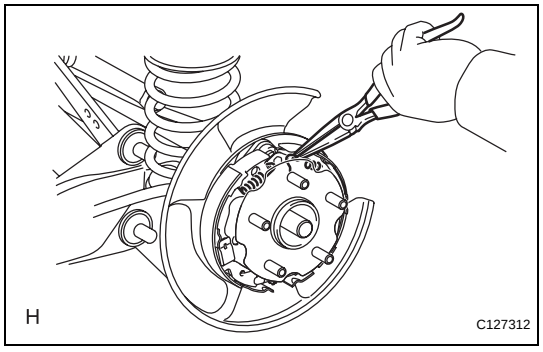
3. REMOVE PARKING BRAKE SHOE ADJUSTING HOLE PLUG



(a) Remove the shoe adjusting hole plug from the rear disc.

4. REMOVE REAR DISC

(a) Put matchmarks on the disc and axle hub.



(b) Release the parking brake.

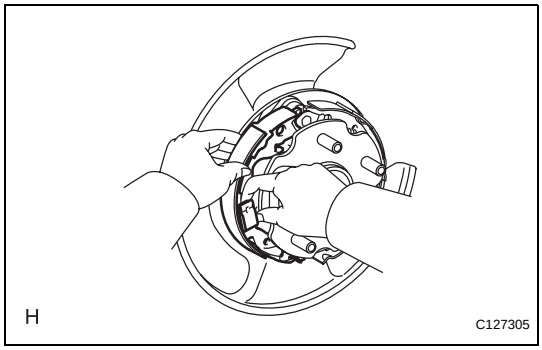
(c) Turn the shoe adjuster until the disc turns freely, and then remove the disc.

(d) Install the shoe adjusting hole plug to the disc.

5. REMOVE PARKING BRAKE SHOE RETURN TENSION SPRING (for Upper Side)

(a) Using needle-nose pliers, remove the 2 shoe return tension springs.

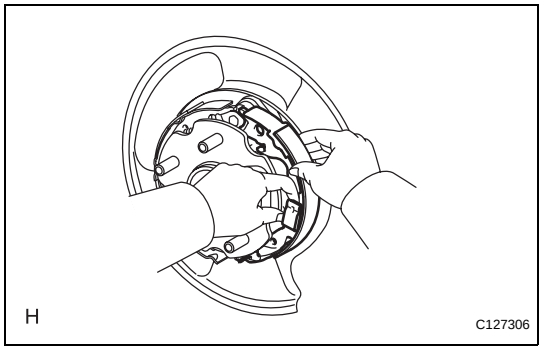
6. REMOVE PARKING BRAKE SHOE STRUT LH



7. REMOVE PARKING BRAKE SHOE RETURN TENSION SPRING (for Lower Side)

(a) Using needle-nose pliers, remove the tension spring.

8. REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET

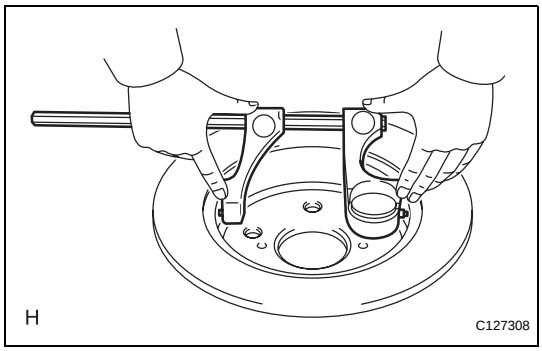


(a) Remove the screw set.

PB

9. REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY LH

(a) Press the shoe hold-down spring to remove the pin, shoe hold-down spring and shoe.



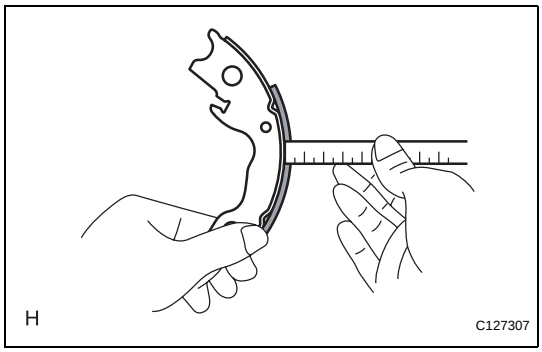
10. REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY LH

(a) Slide the shoe to remove the shoe hold-down spring, pin and shoe.

(b) Disconnect the parking brake cable from the parking brake shoe lever.

11. REMOVE PARKING BRAKE SHOE LEVER LH

INSPECTION

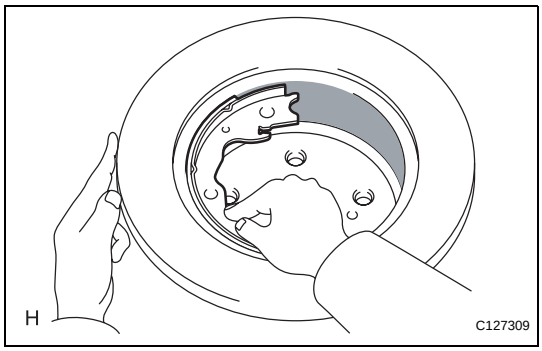


1. CHECK BRAKE DISC INSIDE DIAMETER

(a) Using a drum gauge or equivalent, measure the inside diameter of the disc.

Standard inside diameter:
172 mm (6.77 in.)
Maximum inside diameter:
173 mm (6.81 in.)

If the inside diameter is greater than the maximum, replace the disc.



2. CHECK PARKING BRAKE SHOE LINING THICKNESS

(a) Using a ruler, measure the shoe lining thickness.

Standard thickness:
3.5 mm (0.138 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the shoe lining thickness is equal to or less than the minimum, replace the brake shoe assembly.

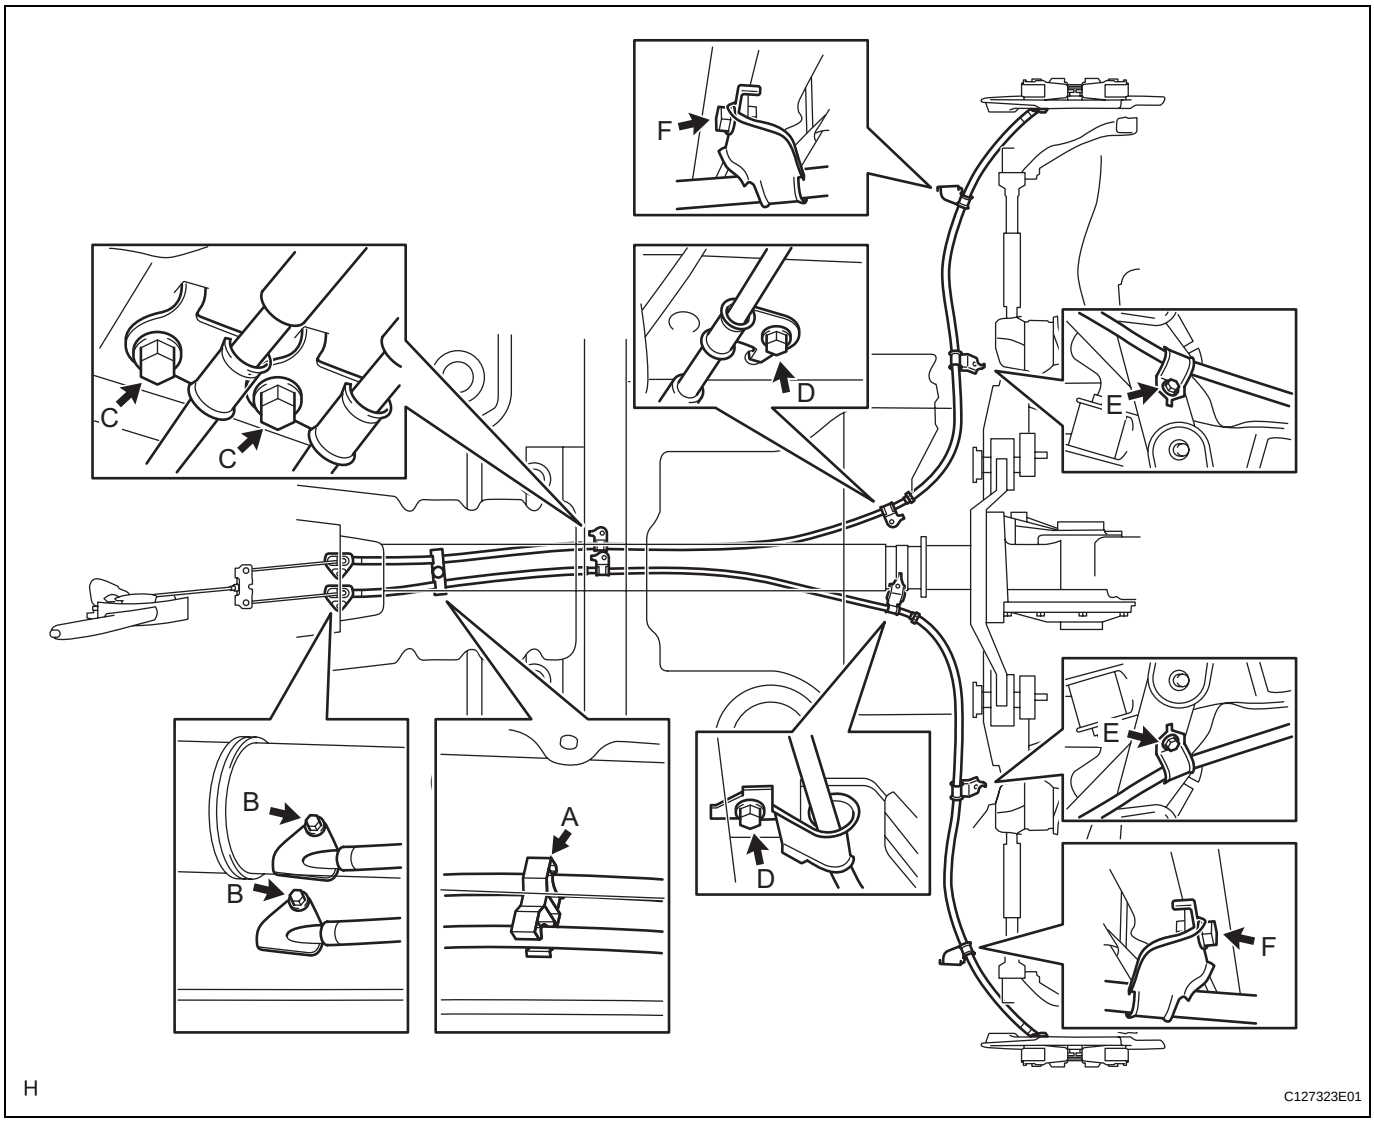
3. CHECK BRAKE DISC AND PARKING BRAKE SHOE LINING FOR PROPER CONTACT

(a) Apply chalk to the inside surface of the disc. Touch the brake shoe to the disc and check that there is full contact between the brake shoe and disc (white chalk is transferred to the entire brake shoe).

If the contact is not as specified, use a shoe grinder to repair the brake shoe, or replace the brake shoe assembly.

PB

INSTALLATION



1. INSTALL PARKING BRAKE CABLE

(a) Connect the cable to the backing plate and parking brake shoe lever.

(1) Pass the cable through the backing plate, and then connect the cable to the lever.

(2) Install the cable to the backing plate with the bolt.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(b) Install the clamp and clamp bolt (labeled F) to the trailing arm.

Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

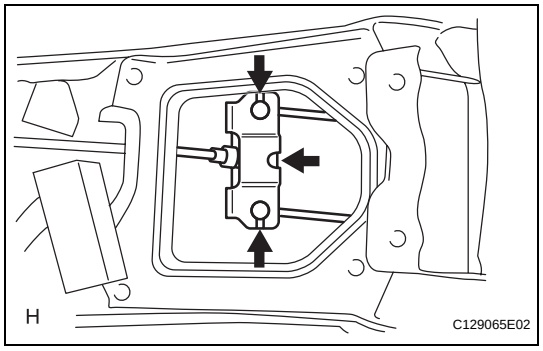
NOTICE:

Securely install the clamp.

(c) Install the clamp and clamp bolt (labeled E) to the rear suspension crossmember.

Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)

NOTICE:



Securely install the clamp.

(d) Install the clamp and clamp bolt (labeled D) to the crossmember.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
NOTICE:
Securely install the clamp.

(e) Install the clamp and clamp bolt (labeled C) to the body.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
NOTICE:
Securely install the clamp.

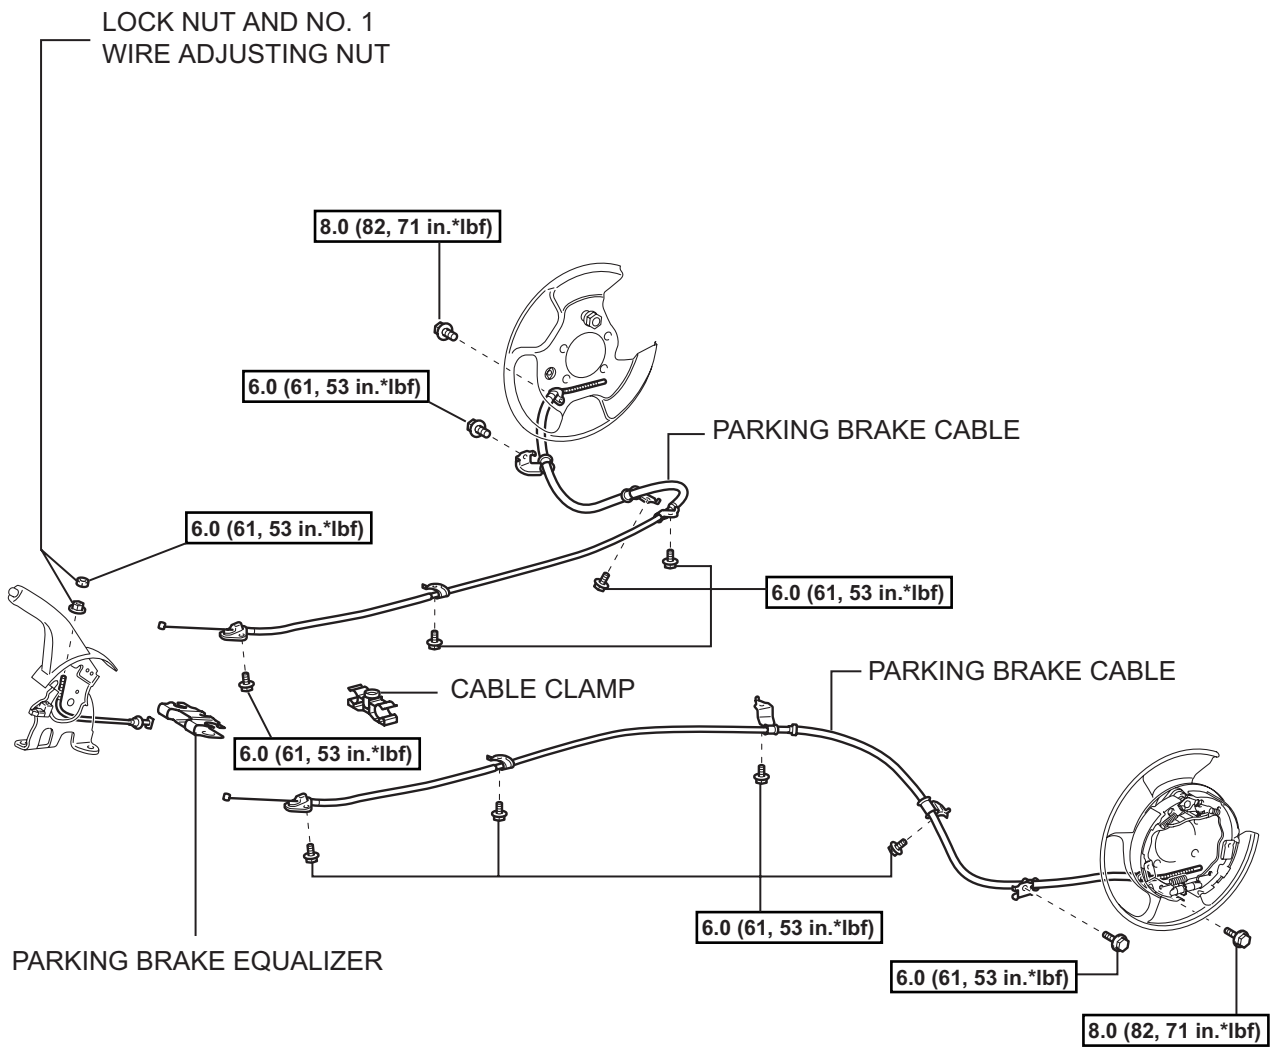
(f) Install the casing cap and casing cap bolt (labeled B) to the body.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
NOTICE:
Securely install the casing cap.

(g) Install the cable clamp (labeled A) to the body.
NOTICE:
Securely install the clamp.

2. INSTALL PARKING BRAKE EQUALIZER

(a) Connect the 3 cable ends to the equalizer.

3. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



4. ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)

5. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY

(a) Install the rear console box (see page IP-23).
HINT:
Refer to the procedures from the installation of the rear console box sub-assembly up until the installation of the No. 1 console upper panel garnish.

PARKING BRAKE CABLE

COMPONENTS

REMOVAL

1. **REMOVE REAR CONSOLE BOX SUB-ASSEMBLY**
   (a) Remove the rear console box (see page IP-16).
   HINT:
   Refer to the procedures from the removal of the No. 1 console upper panel garnish up until the removal of the rear console box sub-assembly.
2. **LOOSEN LOCK NUT AND NO. 1 WIRE ADJUSTING NUT (See page PB-1)**
3. **REMOVE PARKING BRAKE EQUALIZER**
   (a) Disconnect the 3 cable ends and then remove the equalizer.
4. **REMOVE REAR WHEEL**
5. **REMOVE PARKING BRAKE CABLE**

(a) Remove the cable clamp (labeled A) from the body.

(b) Remove the casing cap bolt (labeled B) from the body.
(c) Remove the clamp bolt (labeled C) from the body.
(d) Remove the clamp bolt (labeled D) from the crossmember.
(e) Remove the clamp bolt (labeled E) from the rear suspension crossmember.
(f) Remove the clamp bolt (labeled F) from the trailing arm.
(g) Disconnect the cable from the parking brake shoe lever and backing plate.
    (1) Disconnect the cable from the lever (see page PB-13).
    (2) Remove the bolt and disconnect the cable from the backing plate.

REMOVAL

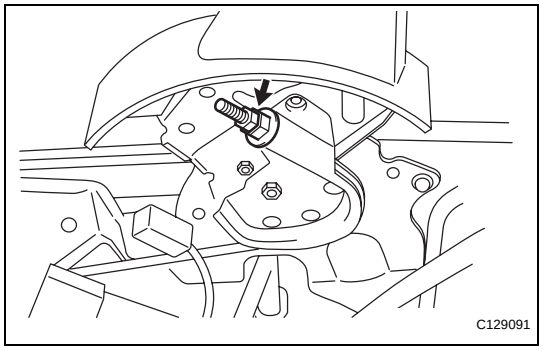
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

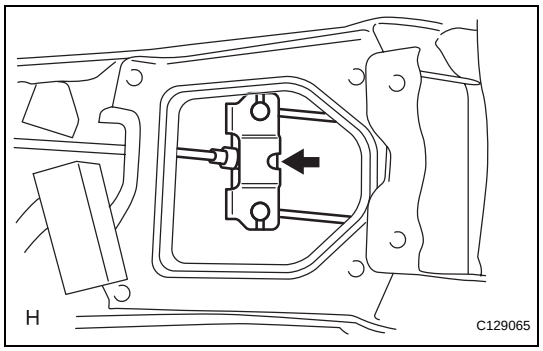
2. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY

(a) Remove the rear console box (see page IP-16).



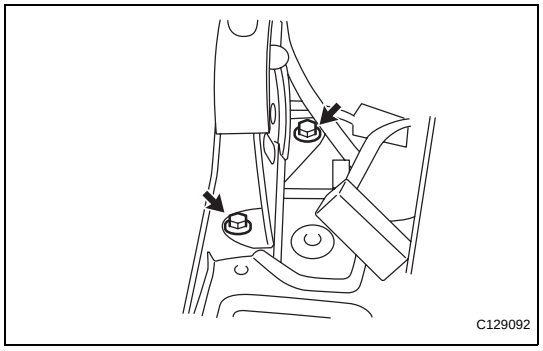
HINT:

Refer to the procedures from the removal of the No. 1 console upper panel garnish up until the removal of the rear console box sub-assembly.



3. REMOVE PARKING BRAKE LEVER SUB-ASSEMBLY

(a) Disconnect the parking brake switch connector.



(b) Remove the lock nut and wire adjusting nut.

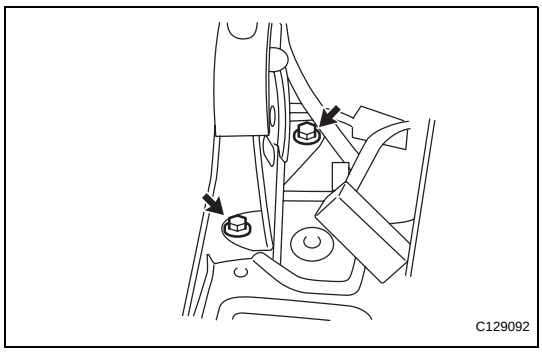
(c) Disconnect the No. 1 parking brake cable from the parking brake equalizer.

(d) Remove the 2 bolts and parking brake lever (with the No. 1 parking brake cable).

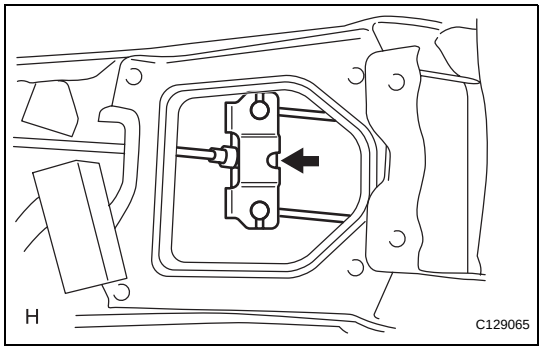
4. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Disconnect the cable from the lever.

5. REMOVE PARKING BRAKE SWITCH ASSEMBLY

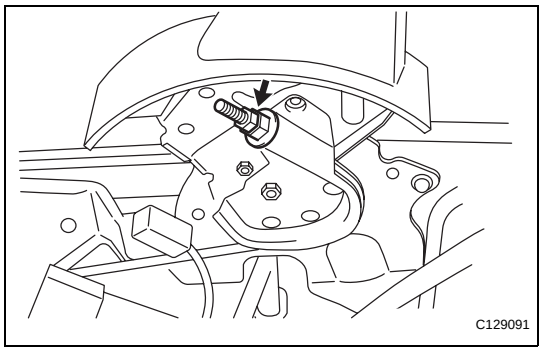


(a) Remove the screw and switch from the lever.



INSTALLATION

1. **INSTALL PARKING BRAKE SWITCH ASSEMBLY**
   (a) Install the parking brake switch with the screw.
   Torque: 0.88 N*m (9.0 kgf*cm, 7.8 in.*lbf)



2. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY**
   (a) Connect the cable to the lever.

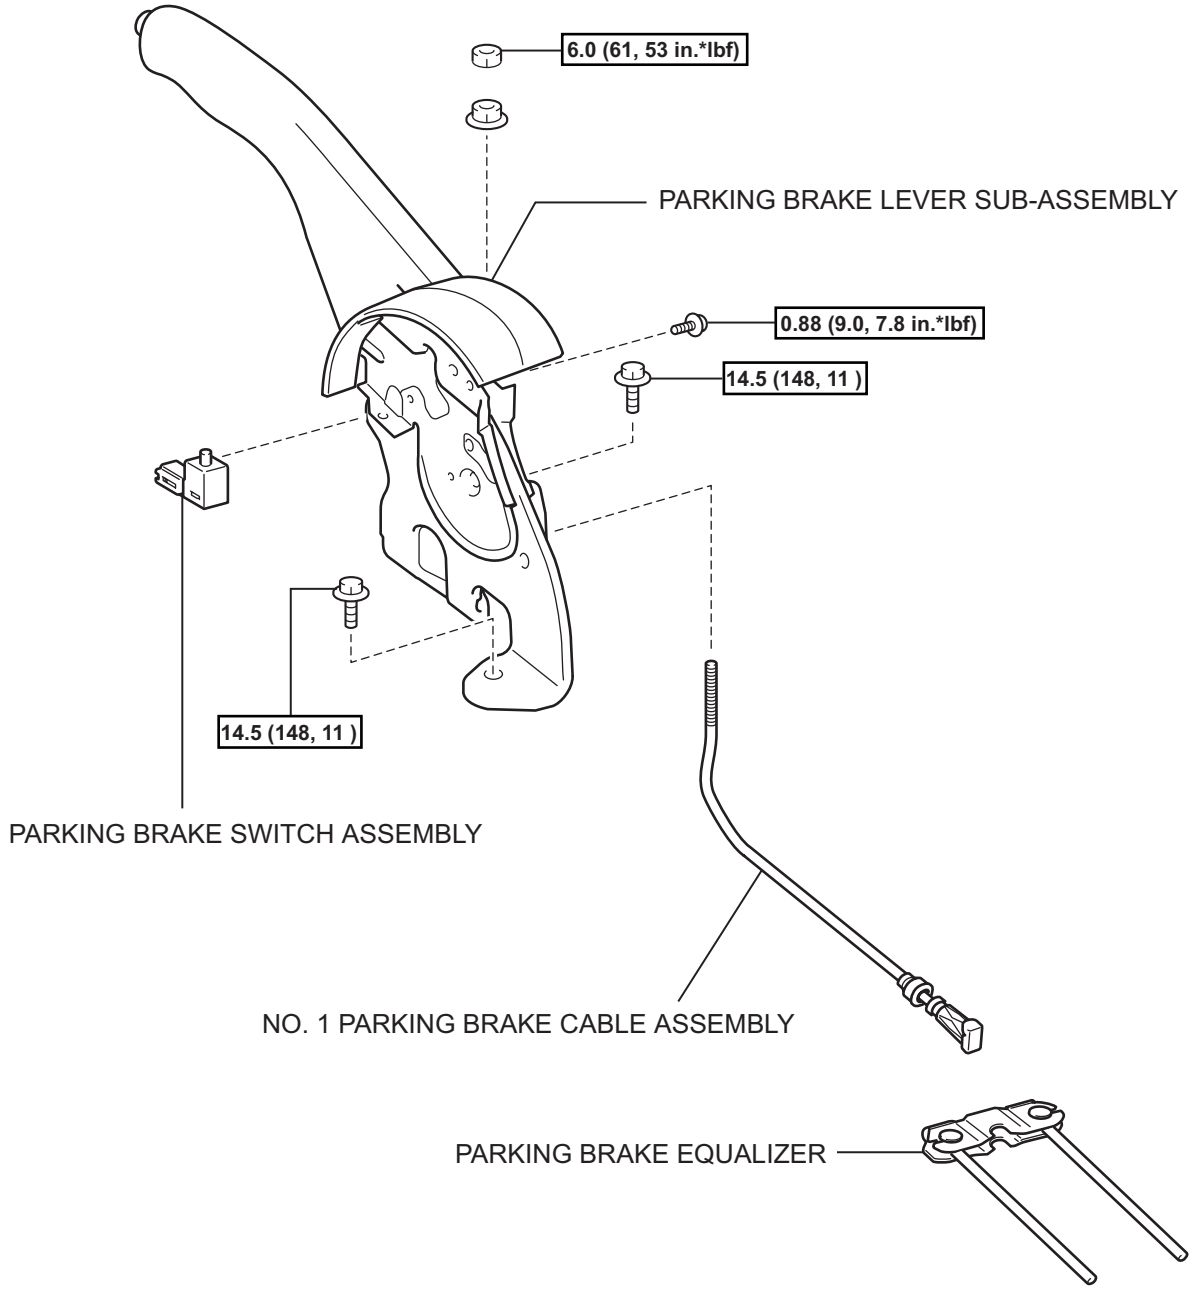
3. **INSTALL PARKING BRAKE LEVER SUB-ASSEMBLY**
   (a) Install the parking brake lever (with the No. 1 parking brake cable) with the 2 bolts.
   Torque: 14.5 N*m (148 kgf*cm, 11 ft.*lbf)

   (b) Connect the No. 1 parking brake cable to the parking brake equalizer.

   (c) Temporarily install the wire adjusting nut and lock nut.
   (d) Connect the parking brake switch connector.

4. **CHECK PARKING BRAKE LEVER TRAVEL (See page PB-1)**

5. **ADJUST PARKING BRAKE LEVER TRAVEL (See page PB-2)**



6. **INSTALL REAR CONSOLE BOX SUB-ASSEMBLY**
   (a) Install the rear console box (see page IP-23).
   HINT:
   Refer to the procedures from the installation of the rear console box sub-assembly up until the installation of the No. 1 console upper panel garnish.

7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

PB

ON-VEHICLE INSPECTION

1. CHECK PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the rear console box (see page IP-16).
HINT:
Refer to the procedures from the removal of the No. 1 console upper panel garnish up until the removal of the rear console box sub-assembly.

(b) Disconnect the parking brake switch connector.

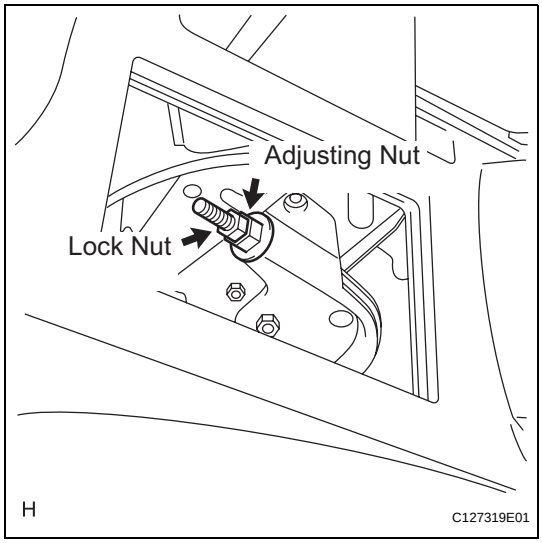
(c) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin released)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

If the result is not as specified, replace the switch assembly.

PARKING BRAKE SYSTEM

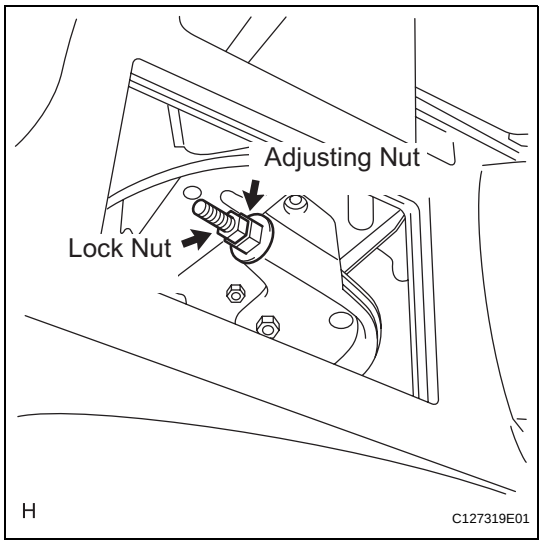
PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

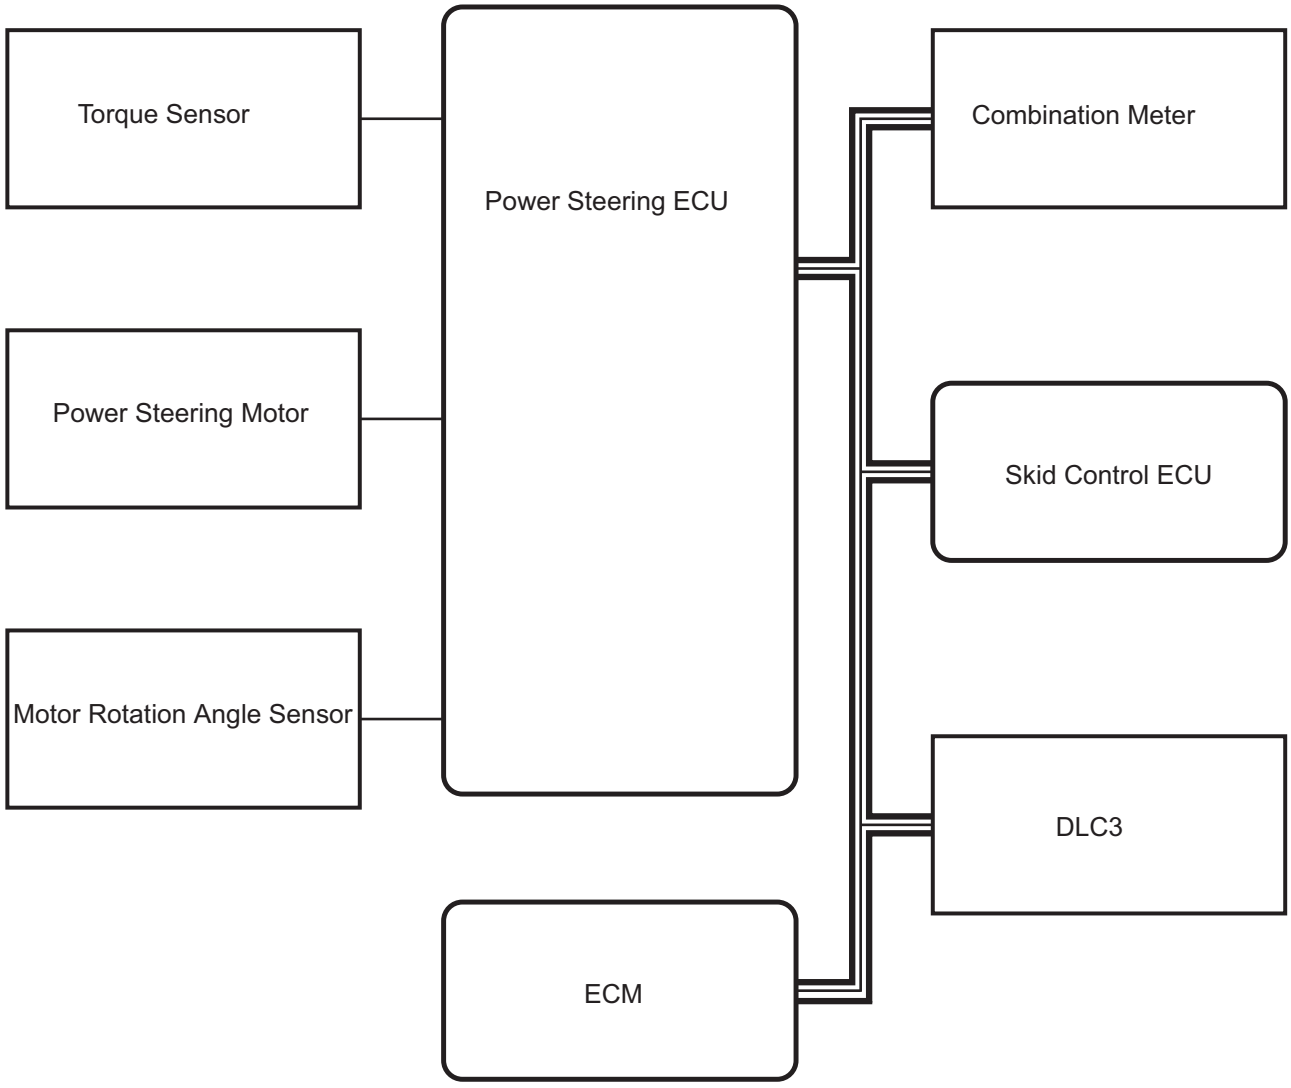
Parking brake system

Symptom	Suspected area	See page
Parking brake drags	1. Parking brake lever travel (adjustment necessary)	PB-1
	2. No. 1 parking brake cable (sticking)	PB-4
	3. No. 2 parking brake cable (sticking)	PB-8
	4. No. 3 parking brake cable (sticking)	PB-8
	5. Parking brake shoe clearance (adjustment necessary)	PB-15
	6. Shoe return tension spring (damaged)	PB-13



ADJUSTMENT

1. **CHECK PARKING BRAKE LEVER TRAVEL**
   (a) Pull the lever upward with a force of approximately 200 N (20 kgf, 44 lbf) and count the number of clicks.
   OK:
   7 to 9 clicks (without rear brake dragging)
2. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-19)**
3. **LOOSEN LOCK NUT AND NO. 1 WIRE ADJUSTING NUT**



4. **REMOVE REAR WHEEL**
5. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-17)**
6. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

PB

7. **ADJUST PARKING BRAKE LEVER TRAVEL**
   (a) Turn the No. 1 wire adjusting nut until the lever travel is correct.
   OK:
   7 to 9 clicks (without rear brake dragging)
   <Lever pulling force: approximately 200 N (20 kgf, 44 lbf)>
   (b) Tighten the lock nut.
   Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
   (c) Operate the parking brake lever 3 to 4 times, and check the parking brake lever travel.
   OK:
   7 to 9 clicks (without rear brake dragging)
   <Lever pulling force: approximately 200 N (20 kgf, 44 lbf)>
   (d) When operating the parking brake lever, check that the brake warning light illuminates at the first click.
   Standard condition:
   Brake warning light always illuminates at the first click.

SYSTEM DIAGRAM

PS

SYSTEM DESCRIPTION

1. DESCRIPTION

The EPS (Electronic Power Steering) system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort.

The power steering ECU determines directions and the amount of assisting power in accordance with vehicle speed signals and signals from the torque sensor built into the steering column assembly. As a result, the power steering adjusts the steering effort so that it is lighter during low speed driving and heavier during high speed driving.

(a) Power steering ECU:
The power steering ECU calculates assisting power based on steering torque signals from the torque sensor and vehicle speed signals from the skid control ECU.

(b) Torque sensor:
The torque sensor detects the steering effort generated when the steering wheel is turned and converts it to an electrical signal.

(c) EPS motor:
The EPS motor is activated by the current from the power steering ECU and generates torque to assist the steering effort.

(d) Motor rotation angle sensor:
The motor rotation angle sensor consists of the resolver sensor, which excels in reliability and durability. The rotation angle sensor detects the rotation angle of the motor and outputs it to the power steering ECU. As a result, it ensures efficient EPS control.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
Perform troubleshooting in accordance with the following flowchart.
*: Use the intelligent tester.

1 **VEHICLE BROUGHT TO WORKSHOP**

NEXT

2 **INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 **PROBLEM SYMPTOM CONFIRMATION**

NEXT

PS

4 **CHECK CAN COMMUNICATION SYSTEM***

(a) Check for DTC (see page PS-11).
Result

Result	Proceed to
CAN system DTC is not output	A
CAN system DTC is output	B

HINT:
- When any CAN communication system DTCs are output, perform troubleshooting on the CAN communication system first.
- When communication to the power steering ECU is not established through the intelligent tester, inspect terminals SIL of the DLC3 and the power steering ECU, and the IG circuit of the power steering ECU.

B → **PROCEED TO CAN COMMUNICATION SYSTEM**

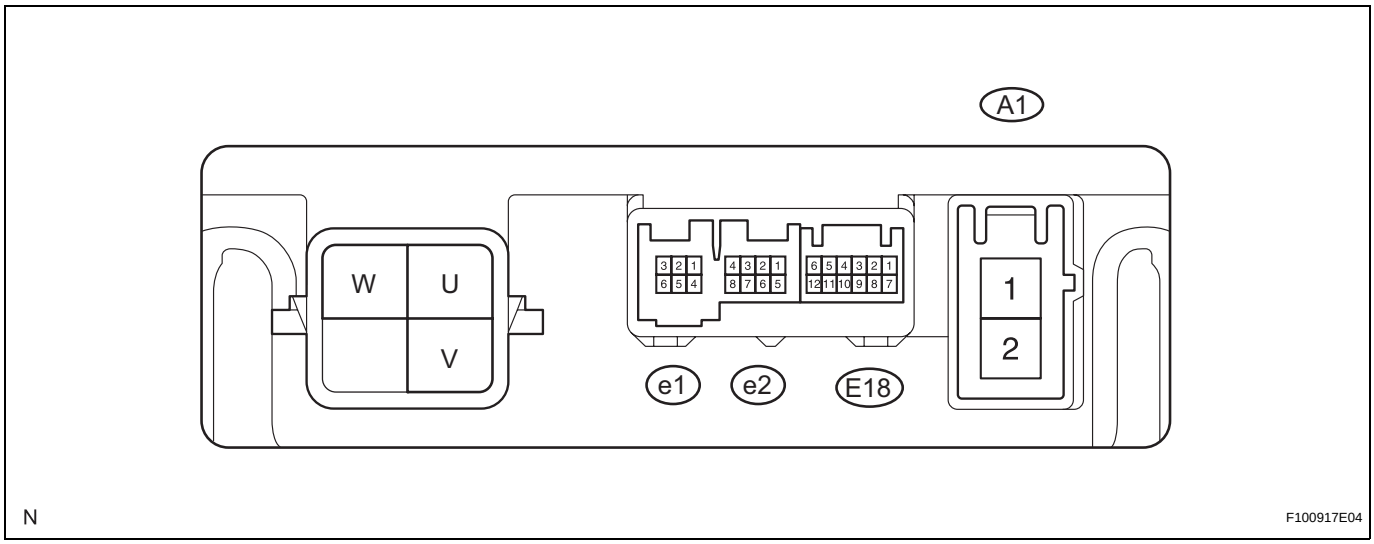
PROBLEM SYMPTOMS TABLE



HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Electronic power steering system

Symptom	Suspected area	See page
Heavy steering	1. Front tires (improperly inflated, unevenly worn)	TW-1
	2. Front wheel alignment (incorrect)	SP-3
	3. Front suspension (lower ball joint)	SP-27
	4. Steering gear assembly	PS-42
	5. Power steering motor	PS-25
	6. Power source voltage of power steering ECU	PS-37
	7. Power steering ECU	PS-46
Steering effort differs between turning right and left, or steering effort uneven	1. Front tires (improperly inflated, unevenly worn)	TW-1
	2. Front wheel alignment (incorrect)	SP-3
	3. Front suspension (lower ball joint)	SP-27
	4. Steering gear assembly	PS-42
	5. Torque sensor (built into steering column)	PS-22
	6. Steering column assembly	SR-11
	7. Power steering motor	PS-25
	8. Power steering ECU	PS-46
While driving, steering effort does not change in accordance with vehicle speed or steering wheel does not return properly	1. Front suspension (lower ball joint)	SP-27
	2. Speed sensor	BC-28
	3. Skid control ECU	BC-41
	4. Torque sensor (built into steering column)	PS-22
	5. Power steering motor	PS-25
	6. Power steering ECU	PS-46
	7. Controlling CAN communication system	CA-8
Friction occurs when turning steering wheel during low speed driving	1. Power steering motor	PS-25
	2. Steering column assembly	SR-11
High-pitched sound (squeaking) occurs when turning steering wheel slowly with vehicle stopped	1. Power steering motor	PS-25
Steering wheel vibrates and noise occurs when turning steering wheel with vehicle stopped	1. Power steering motor	PS-25
	2. Steering column assembly	SR-11
P/S warning always indicated on combination meter	1. Power source voltage of power steering ECU	PS-37
	2. Combination meter	ME-53
	3. Power steering ECU	PS-46

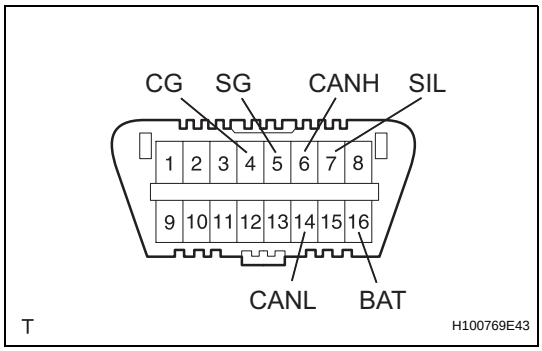
TERMINALS OF ECU

1. CHECK POWER STEERING ECU

HINT:
Measurements cannot be performed on the C connector side of the power steering ECU.

Symbols	Wiring Color	Terminal Description
U	W	U phase motor output
V	B	V phase motor output
W	W-R	W phase motor output

(a) Measure the voltage and resistance of the connectors.



PS

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PIG (A1-1) - PGND (A1-2)	W-B - W-B	Power source	Always	10 to 14 V
IG (E18-5) - PGND (A1-2)	L - W-B	IG power source	Ignition switch ON	10 to 14 V
TRQ1 (e1-6) - TRQG (e1-1)	G - B	Torque sensor signal	Ignition switch ON Steering wheel not turned (without load)	2.3 to 2.7 V
			Ignition switch ON Steering wheel turned to right with vehicle stopped	2.5 to 4.04 V
			Ignition switch ON Steering wheel turned to left with vehicle stopped	0.95 to 2.5 V
TRQ2 (e1-2) - TRQG (e1-1)	Y - B	Torque sensor signal	Ignition switch ON Steering wheel not turned (without load)	2.3 to 2.7 V
			Ignition switch ON Steering wheel turned to right with vehicle stopped	0.95 to 2.5 V
			Ignition switch ON Steering wheel turned to left with vehicle stopped	2.5 to 4.04 V
TRQF (e1-4) - TRQG (e1-1)	W - B	Torque sensor reference voltage	Ignition switch ON	3.35 to 3.37 V
TRQV (e1-3) - TRQG (e1-1)	R - B	Torque sensor voltage source	Ignition switch ON	8.5 to 10.5 V
TRQG (e1-1) - Body ground	B - Body ground	Torque sensor ground	Always	Below 1 Ω

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PGND (A1-2) - Body ground	W-B - Body ground	Power ground	Always	Below 1 Ω
C1 (e2-1) - PGND (A1-2)	R - W-B	Resolver signal	Ignition switch ON Steering wheel is turned	0.68 to 4.42 V
C2 (e2-5) - PGND (A1-2)	L - W-B	Resolver signal	Ignition switch ON Steering wheel is turned	0.68 to 4.42 V
S1 (e2-2) - PGND (A1-2)	B - W-B	Resolver signal	Ignition switch ON Steering wheel is turned	0.68 to 4.42 V
S2 (e2-6) - PGND (A1-2)	Y - W-B	Resolver signal	Ignition switch ON Steering wheel is turned	0.68 to 4.42 V
R1 (e2-4) - PGND (A1-2)	W - W-B	Resolver excitation signal	Ignition switch ON Steering wheel is turned	2.9 to 5.1 V
R2 (e2-8) - PGND (A1-2)	G - W-B	Resolver excitation signal	Ignition switch ON Steering wheel is turned	2.9 to 5.1 V
CANH (E18-2) - CANL (E18-8)	Y - W	CAN communication line	Ignition switch OFF	54 to 67 Ω

If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. CHECK DLC3

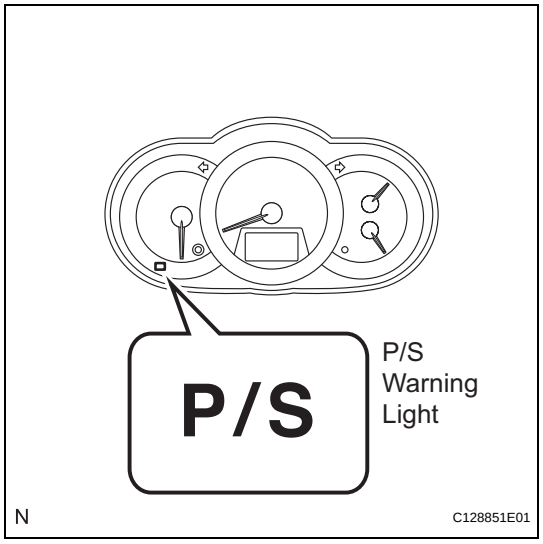
(a) Check the DLC3:

The power steering ECU uses CAN (ISO11898-1) and ISO9141-2 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO9141-2 format.

PS

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus [+] line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) -Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 67 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

NOTICE:



***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

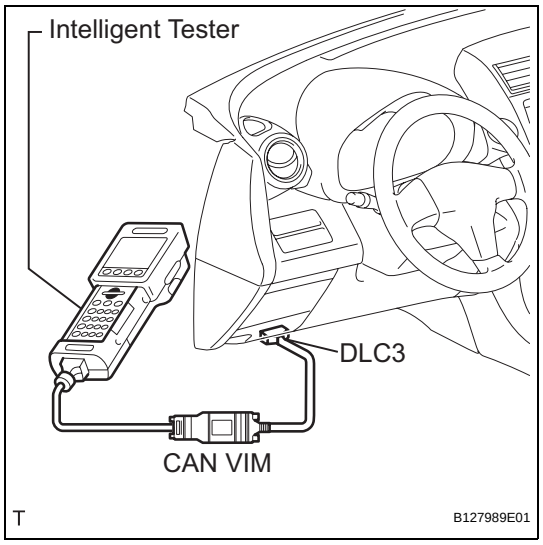
2. WARNING LIGHT

(a) When a problem occurs in the electronic power steering system, the P/S warning light on the combination meter comes on to inform the driver of the problem.

DTC CHECK / CLEAR

1. CHECK DTC

(a) When using intelligent tester:



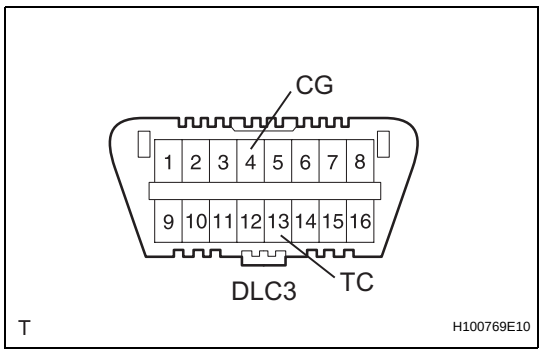
(1) Connect the intelligent tester (with CAN VIM) to the DLC3.

(2) Turn the ignition switch ON and press the intelligent tester main switch ON.

(3) Read the DTCs by following the prompts on the intelligent tester.

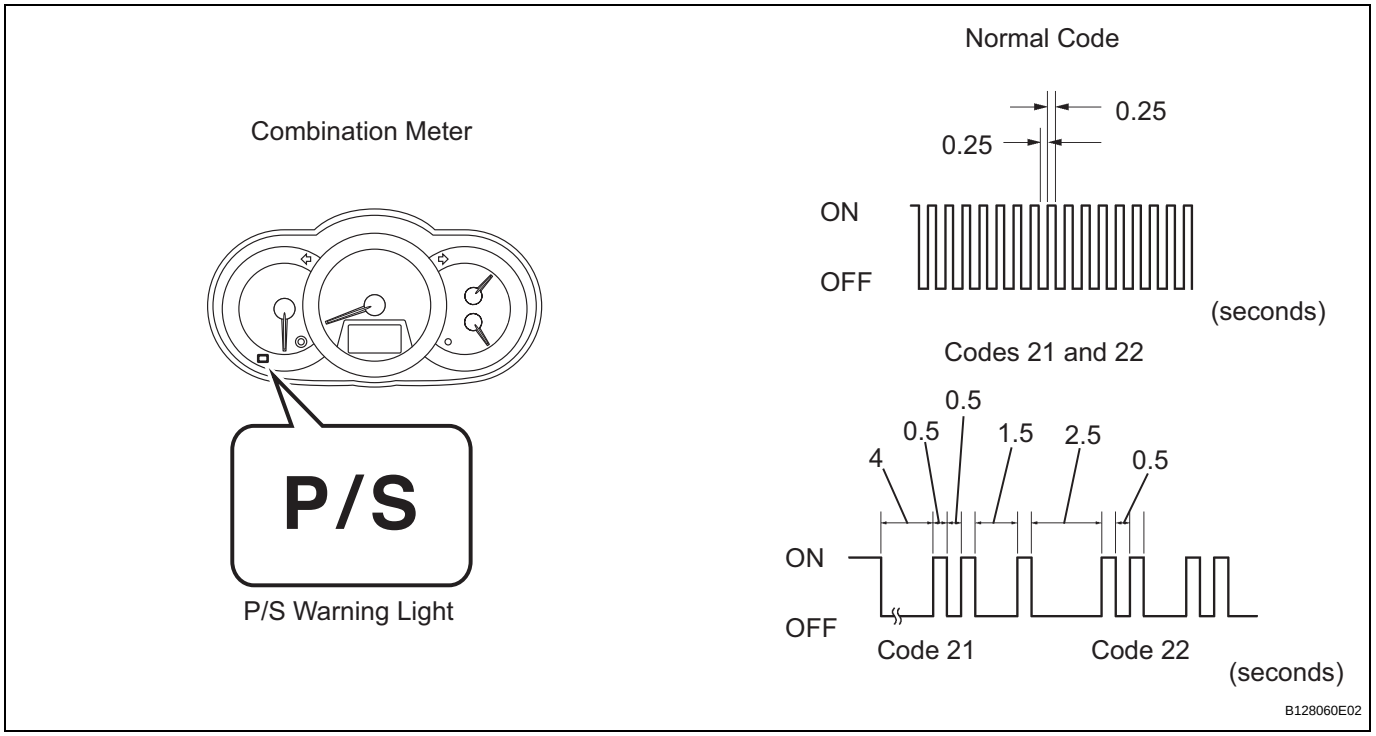
HINT:

Refer to the intelligent tester operator's manual for further details.



(b) When not using intelligent tester:

(1) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST 09843-18040

(2) Turn the ignition switch ON.

PS

(3) Read and write down any DTCs indicated by the P/S warning light on the combination meter. Refer to the chart below for examples of a normal code and DTCs 21 and 22.

HINT:

- If the P/S warning light does not blink to display any DTCs set or the normal code, inspect the circuit shown in the table below.

Trouble Area	See Page
EPS warning light circuit	PS-37

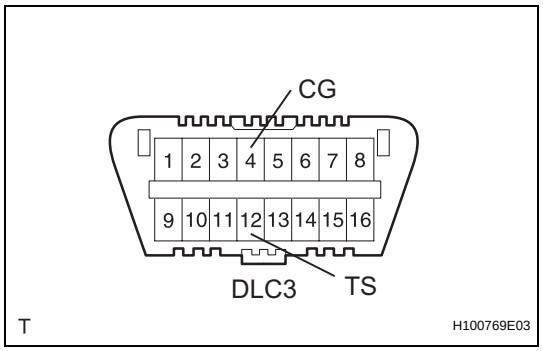
- If two or more malfunctions are detected simultaneously, DTCs will be displayed in ascending numerical order.

(4) Refer to the Diagnostic Trouble Code Chart (See page PS-16) for DTC information.

2. CLEAR DTC

(a) When using intelligent tester:

(1) Connect the intelligent tester (with CAN VIM) to the DLC3.



(2) Turn the ignition switch ON and press the intelligent tester main switch ON.

(3) Clear the DTCs by following the prompts on the intelligent tester.

(4) Turn the ignition switch OFF.

(5) Disconnect the intelligent tester from the DLC3.

PS

(b) When not using intelligent tester:
(1) Using SST, connect terminals 12 (TS) and 4 (CG) of the DLC3.
SST 09843-18040
(2) Turn the ignition switch ON.
(3) Disconnect the SST check wire from terminal 4 (CG) and reconnect it, and repeat this procedure 4 times or more within 8 seconds.
(4) Check that the P/S warning light blinking pattern is the normal code.
(5) Turn the ignition switch OFF.
(6) Remove SST from the DLC3.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

NOTICE:

- **It is difficult to show the specified values (judgment values) clearly because freeze frame data values change significantly due to differences in measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even when the values are within specifications.**
- **Turn the ignition switch ON and park the vehicle on level ground. Check the freeze frame data by using intelligent tester.**

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and check the freeze frame data by following the prompts on the intelligent tester display.

Power steering ECU

Item	Item Description: Range (Display)	Inspection Condition	Reference Value
BATTERY VOLTAGE	Battery voltage: Min.: 0 V Max.: 25.5 V	-	10 to 14 V
SPD	Vehicle speed from meter: Min.: 0 km/h (0 mph) Max.: 300 km/h (187.5 mph)	Vehicle stopped	0 km/h (mph)
		Vehicle driven at constant speed	No significant fluctuation
ENGINE REV	Show the engine revolution: Min.: 0 rpm Max.: 12800 rpm	Engine is running at a constant speed	No significant fluctuation
MOTOR ACTUAL	Amount of current to motor: Min.: -327.68 A Max.: 327.67 A	Power steering is in operation	Value changes in proportion to steering effort
COMMAND VALUE	Demanded amount of current to motor: Min.: -327.68 A Max.: 327.68 A	Power steering is in operation	Value changes in proportion to steering effort
STR ANGL VEL	Steering angle speed: Min.: -32768°/sec. Max.: 32767°/sec.	Steering wheel is turned	Value changes in proportion to steering effort
STEERING TORQUE	Steering wheel torque: Min.: -7 Nm Max.: 7 Nm	-	-
THERMISTOR TEMP	ECU substrate temperature: Min.: -40°C Max.: 150°C	Ignition switch ON	-
PIG SUPPLY	Power source voltage to activate motor: Min.: 0 V Max.: 20.1531 V	Power steering in operation	10 to 14 V
IG SUPPLY	ECU power source voltage: Min.: 0 V Max.: 20.1531 V	Ignition switch ON	10 to 14 V
MOTOR ROTATE	Motor rotation angle: Min.: 0° Max.: 360°	Power steering in operation	During steering operation, motor rotation angle value changes from 0 to 360°
MOTOR VOLTAGE	Motor power supply voltage: 0 V Max.: 45.955 V	Power steering in operation	-

Item	Item Description: Range (Display)	Inspection Condition	Reference Value
MTR TERMINAL(U)	Motor terminal voltage (U phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
MTR TERMINAL(V)	Motor terminal voltage (V phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
MTR TERMINAL(W)	Motor Terminal voltage (W phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
PS ASSIST SIG	Power steering assist signal: ON or OFF	-	-

FAIL-SAFE CHART

If a problem occurs in the electric power steering system, the P/S warning light will come on in the combination meter and steering power assist will be stopped, fixed at a particular point, or decreased simultaneously to protect the system.

Electronic power steering system

DTC No.	Detection Condition	Fail-safe
C1511/11	Torque sensor malfunction	Power assist stops
C1512/11		
C1513/11		
C1514/11		
C1521/25	Motor malfunction	
C1524/24		
C1528/12	Motor rotation angle sensor malfunction	
C1531/25	ECU malfunction	
C1532/25		
C1534/25		
C1551/25	IG power source voltage error	
C1552/22	PIG power source voltage error	
C1554/23	Power source relay malfunction	
C1555/25	Motor relay malfunction	
C1533/25	ECU malfunction	Assist force restricted
U0073/49	CAN bus malfunction	Amount of power assist is locked at 140 km/h (87.5 mph) level of power assist
U0121/42	Skid control ECU communication error	
U0105/41	ECM communication error	Power assist stops

PS

HINT:

The amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In such cases, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and press the intelligent tester main switch ON.

(c) Read the DATA LIST by following the directions on the tester screen.

Tester Display	Measurement Item/Range	Normal Condition	Reference Value
BATTERY VOLTAGE	Battery voltage: Min.: 0 V Max.: 25.5 V	-	10 to 14 V
SPD	Vehicle speed from meter: Min.: 0 km/h (0 mph) Max.: 300 km/h (187.5 mph)	Vehicle stopped	0 km/h (0 mph)
		Vehicle driven at constant speed	No significant fluctuation
SPD SIG INVALID	Record of vehicle speed signal invalid: REC or UNREC	-	UNREC
ENGINE REV	Show the engine revolution: Min.: 0 rpm Max.: 12800 rpm	Engine is running at a constant speed	No significant fluctuation
ENG REV INTER	Record of engine revolution signal interruption REC or UNREC	-	UNREC
MOTOR ACTUAL	Amount of current to motor: Min.: -327.68 A Max.: 327.67 A	Power steering is in operation	Value changes in proportion to steering effort
COMMAND VALUE	Demanded amount of current to motor: Min.: -327.68 A Max.: 327.68 A	Power steering is in operation	Value changes in proportion to steering effort
STR ANGL VEL	Steering angle speed: Min.: -32768°/sec. Max.: 32767°/sec.	Steering wheel is turned	Value changes in proportion to steering effort
STEERING TORQUE	Steering wheel torque: Min.: -7 Nm Max.: 7 Nm	-	-
THERMISTOR TEMP	ECU substrate temperature: Min.: -40°C Max.: 150°C	Ignition switch ON	-
PIG SUPPLY	Power source voltage to activate motor: Min.: 0 V Max.: 20.1531 V	Power steering in operation	10 to 14 V
IG SUPPLY	ECU power source voltage: Min.: 0 V Max.: 20.1531 V	Ignition switch ON	10 to 14 V
MTR OVERHEAT	Continuous overheat prevention control record: REC or UNREC	-	UNREC
MTR LOW POWER	PIG power source voltage drop record: REC or UNREC	-	UNREC

Tester Display	Measurement Item/Range	Normal Condition	Reference Value
MOTOR ROTATE	Motor rotation angle: Min.: 0° Max.: 360°	Power steering in operation	During steering operation, motor rotation angle value changes from 0 to 360°
MOTOR VOLTAGE	Motor power supply voltage: 0 V Max.: 45.955 V	Power steering in operation	-
MTR TERMINAL(U)	Motor terminal voltage (U phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
MTR TERMINAL(V)	Motor terminal voltage (V phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
MTR TERMINAL(W)	Motor Terminal voltage (W phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
IG ON/OFF TIMES	Ignition switch ON/OFF number of times after fail detection: Min.: 0 times Max.: 65535 times	-	-
# CODES	Number of detected DTCs when freeze frame data stored: Min.: 0 Max.: 255	-	-
PS ASSIST SIG	Power steering assist signal: ON or OFF	-	-

PS

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, the VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed in the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON and turn the intelligent tester ON.

(c) Perform the ACTIVE TEST by following the prompts on the tester.

Combination meter

Tester Display	Test Part	Control Range
EPS INDIC	P/S indicator ON/OFF	Confirm that vehicle is stopped, engine idling

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If any DTCs are displayed during the DTC check, inspect the circuit listed for these DTCs. For details of each DTC, refer to the page indicated in the DTC chart.

Electric Power Steering System

DTC No.	Detection Item	Trouble Area	Normal Function Return Condition	P/S Warning Light	See page
C1511/11	Torque Sensor 1 Malfunction	- Steering column assembly (Torque sensor) - Power steering ECU	Ignition switch ON again	O	PS-18

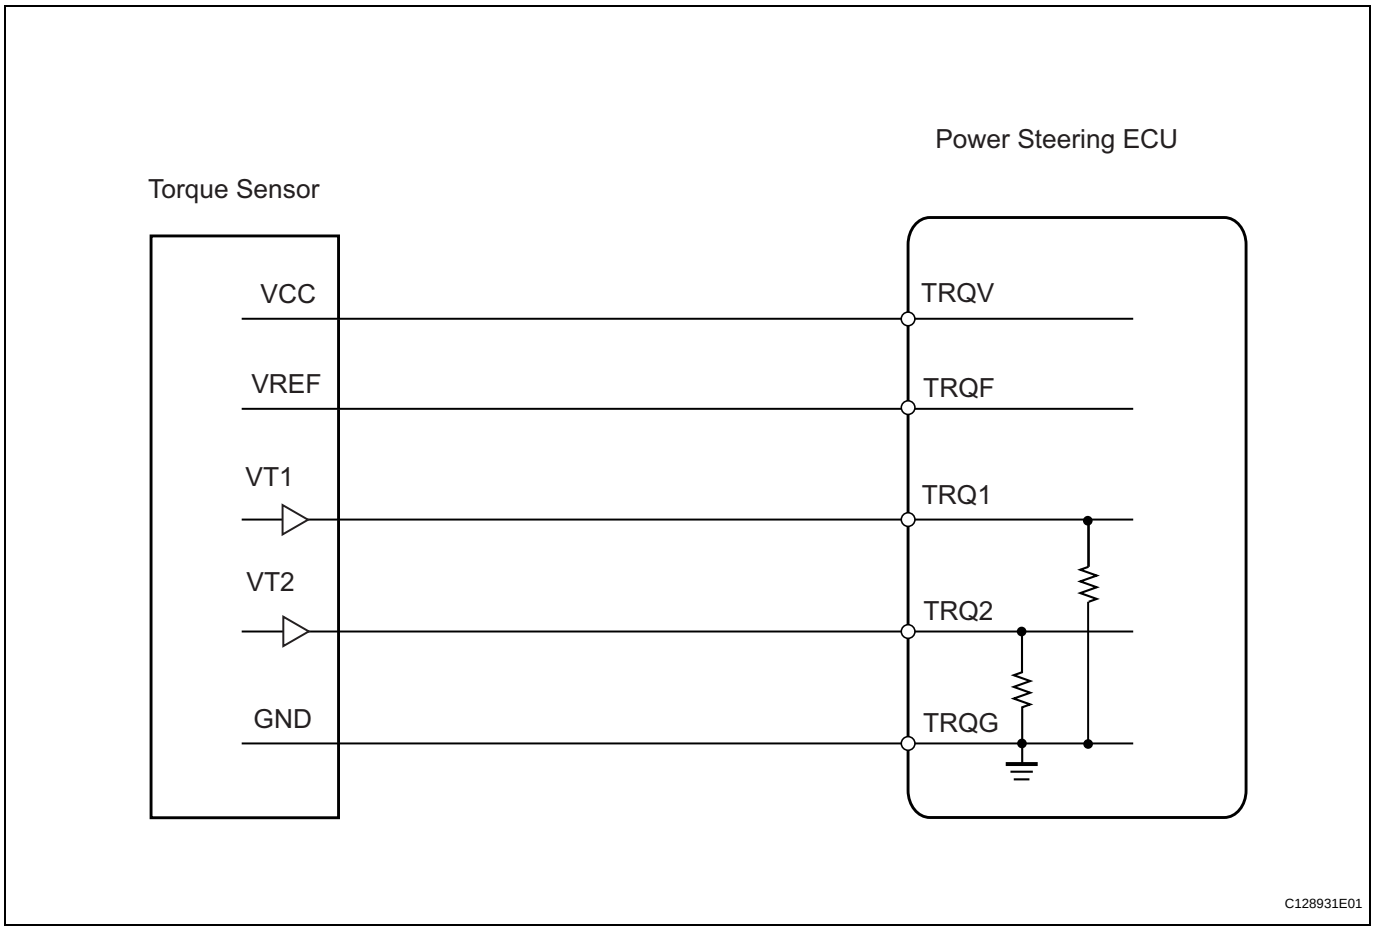
HINT:
O: Warning light comes on
X: Warning light turns off (normal reset)

DTC	C1511/11	Torque Sensor 1 Malfunction

DTC	C1512/11	Torque Sensor 2 Malfunction

DTC	C1513/11	Torque Sensor Deviation Excessive



DTC	C1514/11	Torque Sensor Power Supply Voltage Malfunction

DESCRIPTION

The torque sensor converts the rotation torque input from the steering wheel into electric signals and sends them to the power steering ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1511/11	Torque sensor malfunction	• Torque sensor (built into steering column assembly) • Power steering ECU • Connector
C1512/11		
C1513/11		
C1514/11		

WIRING DIAGRAM

PS

INSPECTION PROCEDURE

1	CHECK CONNECTOR CONNECTION CONDITION (TORQUE SENSOR - ECU)

(a) Check the installation condition of the torque sensor connector.

OK:

Torque sensor connector is securely installed to the power steering ECU.

Result

Result	Proceed to
NG	A
OK	B

B → **Go to step 3**

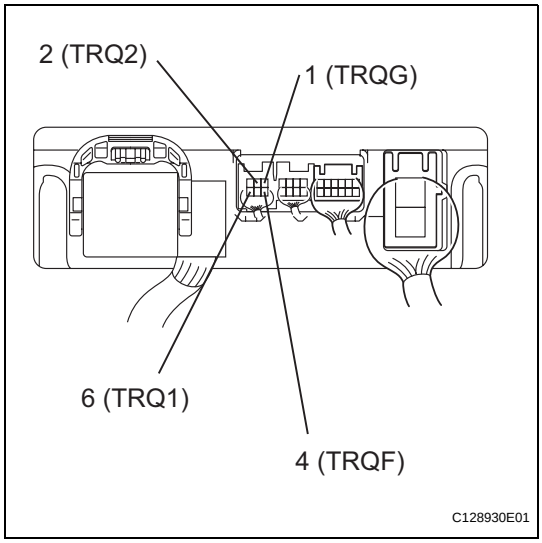
A

2	RECONFIRM DTC

(a) Reinstall the torque sensor connector.

(b) Check for DTCs.

OK:



DTC is not output.

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **END**

A

3	INSPECT TORQUE SENSOR

(a) Turn the ignition switch ON.

(b) Measure the voltage of the ECU.

Standard voltage

Tester Connection	Condition	Specified Condition
6 (TRQ1) - 1 (TRQG)	Steering wheel not turned (without load)	2.3 to 2.7 V
	Steering wheel turned to right with vehicle stopped	2.5 to 4.04 V
	Steering wheel turned to left with vehicle stopped	0.95 to 2.5 V

PS

Tester Connection	Condition	Specified Condition
2 (TRQ2) - 1 (TRQG)	Steering wheel not turned (without load)	2.3 to 2.7 V
	Steering wheel turned to right with vehicle stopped	0.95 to 2.5 V
	Steering wheel turned to left with vehicle stopped	2.5 to 4.04 V
4 (TRQF) - 1 (TRQG)	Always	3.35 to 3.37 V
3 (TRQV) - 1 (TRQG)	Always	8.5 to 10.5 V

NG → **REPLACE STEERING COLUMN ASSEMBLY**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

DTC	C1521/25	Short in Motor Circuit

DESCRIPTION

The power steering ECU supplies current to the power steering motor through this circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1521/25	Motor over current	Power steering ECU

INSPECTION PROCEDURE

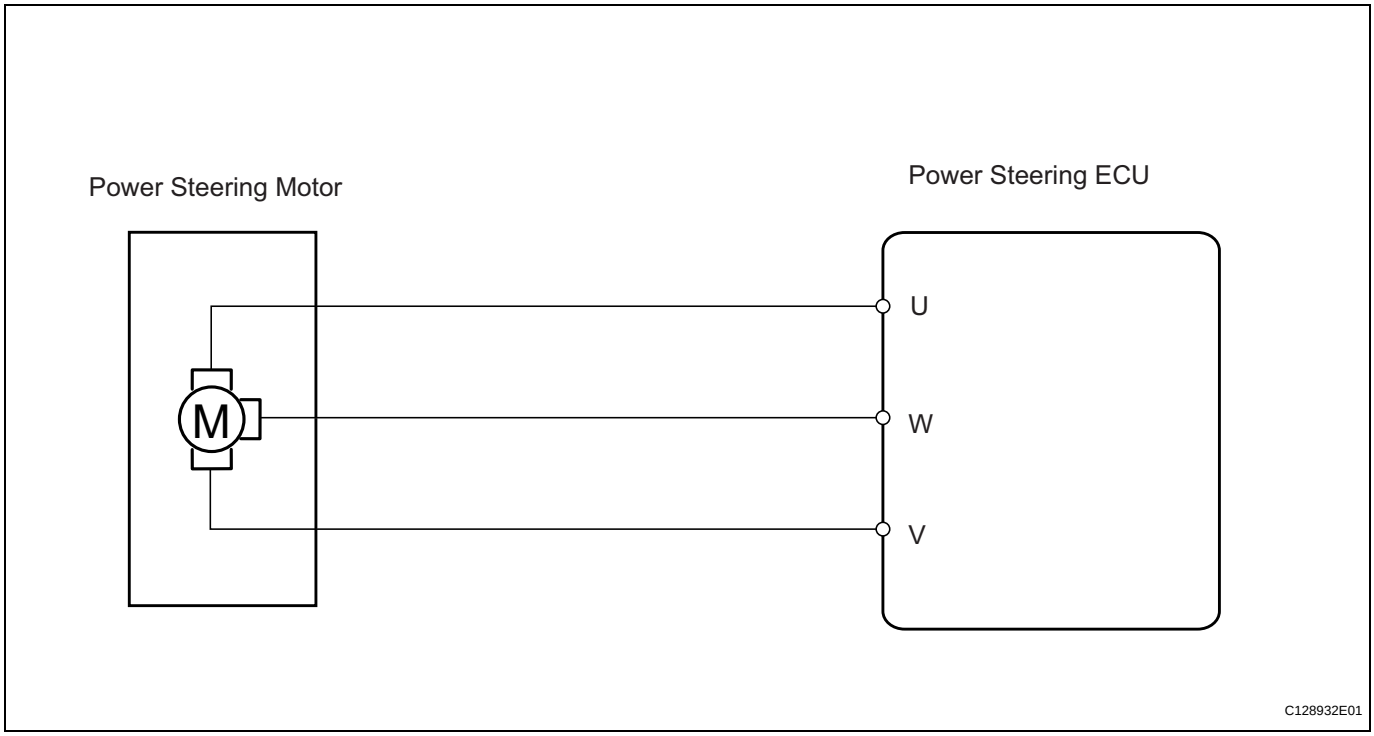
1	RECONFIRM DTC

(a) Check for DTC.
OK:
DTC is not output.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

REPLACE POWER STEERING ECU



DTC	C1524/24	Motor Terminal Voltage Malfunction

DESCRIPTION

The power steering ECU supplies the current to the power steering motor through the motor circuit.

DTC No.	DTC Detection Condition	Trouble Area
C1524/24	Short (or open) in motor circuit or abnormal voltage or current in motor circuit	• Steering column assembly • Power steering ECU

WIRING DIAGRAM

PS

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (MOTOR VOLTAGE)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Select the items "MTR TERMINAL(U)", "MTR TERMINAL(V)", "MTR TERMINAL(W)" in the DATA LIST and read the value displayed on the intelligent tester.

Power steering ECU

Item	Item Description: Range (Display)	Inspection Condition	Reference Value
MTR TERMINAL(U)	Motor terminal voltage (U phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)

Item	Item Description: Range (Display)	Inspection Condition	Reference Value
MTR TERMINAL(V)	Motor terminal voltage (V phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)
MTR TERMINAL(W)	Motor terminal voltage (W phase): Min.: 0 V Max.: 46.667 V	Steering wheel is turned	While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (The value changes according to the steering load.)

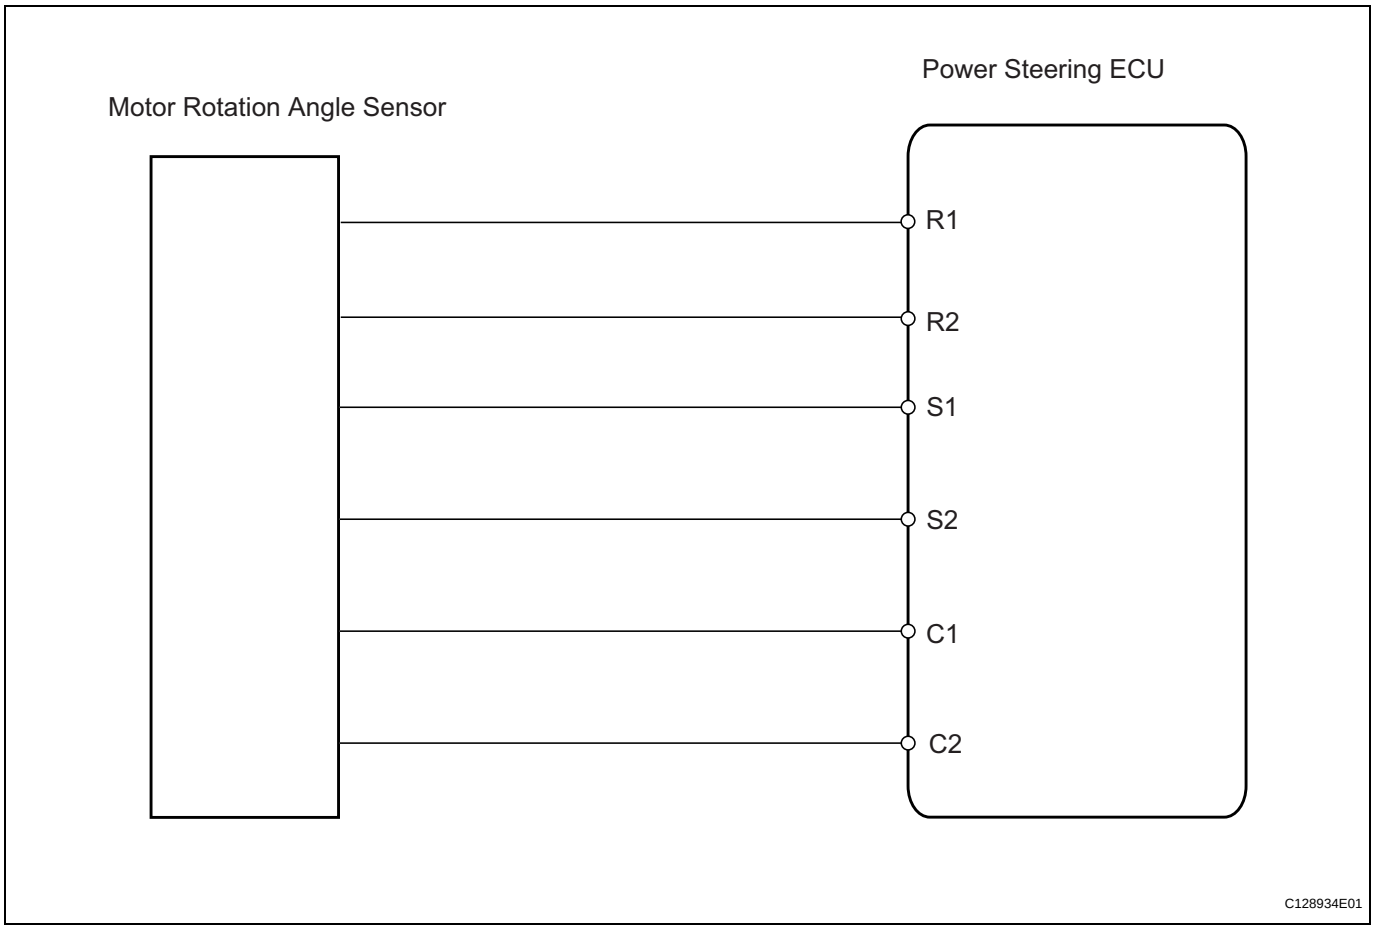
Result

Result	Proceed to
While turning the steering wheel, a value within the range of 1 V to approximately 0.7 V less than the battery voltage is displayed. (Power assist is operating.)	A
While turning the steering wheel, 0 V or a value equal to the battery voltage is displayed. (Power assist is not operating.)	B

B → **REPLACE STEERING COLUMN ASSEMBLY**

A

REPLACE POWER STEERING ECU



DTC	C1528/12	Motor Rotation Angle Sensor Malfunction

DESCRIPTION

The motor rotation angle sensor detects the motor rotation angle and sends this information to the power steering ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1528/12	Motor rotation angle sensor malfunction	• Steering column assembly • Power steering ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK CONNECTOR CONNECTION CONDITION

(a) Check the installation condition of the motor rotation angle sensor connector.

OK:

Motor rotation angle sensor connector is securely connected to the power steering ECU.

Result

Result	Proceed to
NG	A
OK	B

PS

B → Go to step 3

A

2 RECONFIRM DTC

(a) Reinstall motor rotation angle sensor connector.
(b) Check for DTC.

OK:

DTC is not output.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → END

A

3 READ VALUE OF INTELLIGENT TESTER (MOTOR ROTATION ANGLE SENSOR)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Select the items "MOTOR ROTATE" in the DATA LIST and read the value displayed on the intelligent tester.

PS

Item	Item Description: Range (Display)	Inspection Condition	Reference Value
MOTOR ROTATE	Motor Rotation Angle: Min.: 0° Max.: 360°	Steering wheel is turned	During steering operation, motor rotation angle value changes from 0 to 360°

OK:

During steering operation, motor rotation angle value changes from 0 to 360°

NG → REPLACE STEERING COLUMN ASSEMBLY

OK

REPLACE POWER STEERING ECU

DTC	C1531/25	ECU Malfunction

DTC	C1532/25	ECU Malfunction

DTC	C1533/25	Temperature Sensor Circuit is Low or High

DTC	C1534/25	EEPROM Malfunction

DESCRIPTION

INSPECTION PROCEDURE

If the power steering ECU detects these DTCs, it will shut off the motor relay circuit (built into the power steering ECU) and stop power assist. However, power assist continues if DTC C1533 is output.

DTC No.	DTC Detection Condition	Trouble Area
C1531/25	ECU internal malfunction (CPU malfunction)	Power steering ECU
C1532/25	ECU internal malfunction (Peripheral circuit malfunction)	Power steering ECU
C1533/25	ECU internal malfunction (Substrate temperature sensor malfunction)	Power steering ECU
C1534/25	ECU internal malfunction (EEPROM error)	Power steering ECU

1	RECONFIRM DTC

(a) Check for DTC.
OK:
DTC is not output.

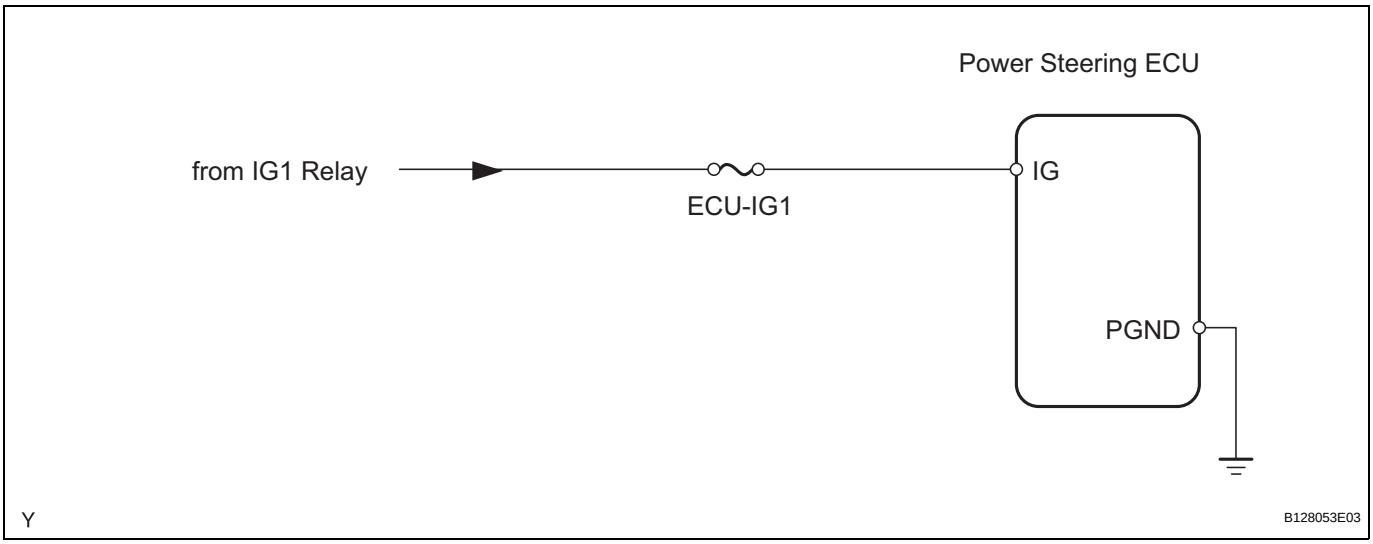
REPLACE POWER STEERING ECU

PS



DTC	C1551/25	IG Power Supply Voltage Malfunction

DESCRIPTION

The power steering ECU distinguishes the ignition switch status as ON or OFF through the IG power source circuit.

DTC No.	Detection Condition	Trouble Area
C1551/25	IG power source circuit malfunction inside ECU	• ECU-IG1 fuse • IG power source circuit • Power steering ECU

WIRING DIAGRAM

PS

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (IG POWER SUPPLY)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the item "IG SUPPLY" in the DATA LIST and read the value displayed on the intelligent tester.

Power steering ECU

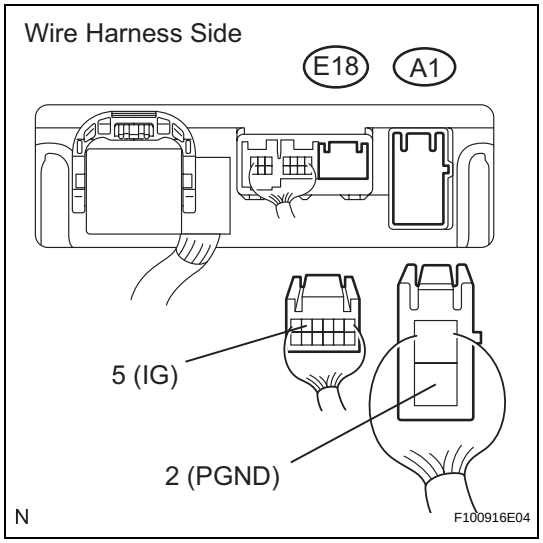
Item	Item Description: Range (Display)	Inspection Condition	Specified Condition
IG SUPPLY	IG power supply: Min.: 0 V Max.: 20.1531 V	Ignition switch ON	10 to 14 V

OK → CHECK INTERMITTENT PROBLEMS

NG

2	INSPECT FUSE (ECU-IG1)

(a) Remove the ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.



OK:

Below 1 Ω

NG → **REPLACE FUSE**

OK

3	CHECK HARNESS AND CONNECTOR (BATTERY - POWER STEERING ECU)

(a) Disconnect the E18 and A1 power steering ECU connectors.
(b) Measure the voltage of the wire harness side connectors.

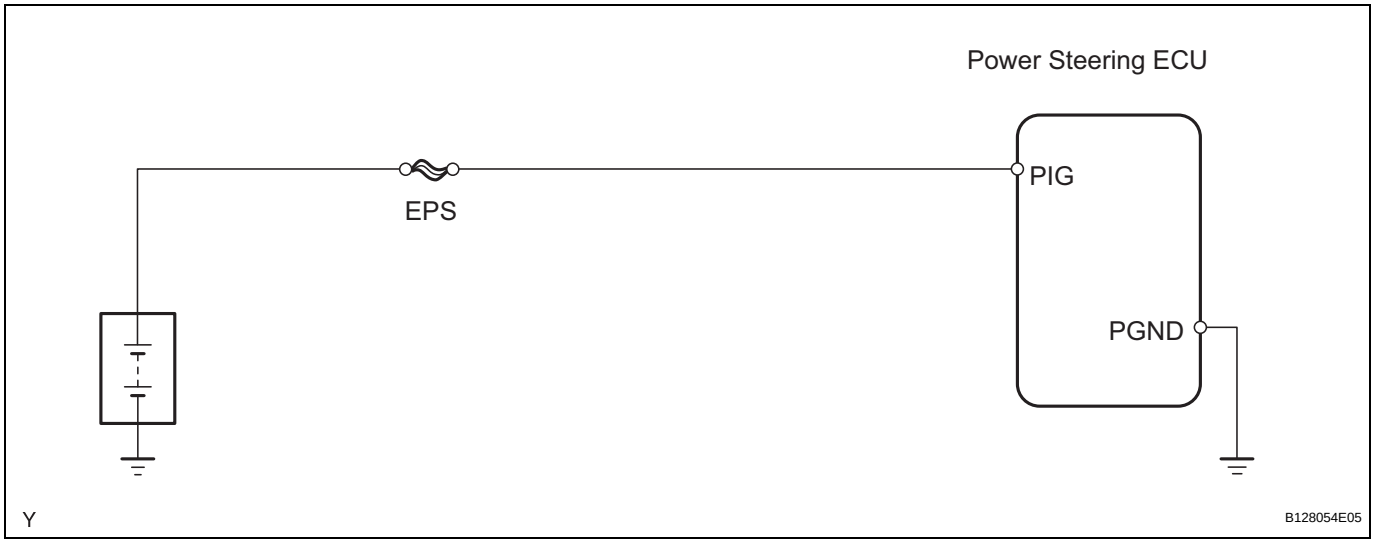
Standard voltage

Tester Connection	Condition	Specified Condition
E18 -5 (IG) - A1-2 (PGND)	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE POWER STEERING ECU



DTC	C1552/22	PIG Power Supply Voltage Malfunction

DESCRIPTION

When a problem occurs in the system, the power source relay circuit is shut off to stop the power assist.

DTC No.	DTC Detection Condition	Trouble Area
C1552/22	PIG power source circuit malfunction inside ECU	• PIG power source circuit • Power steering ECU

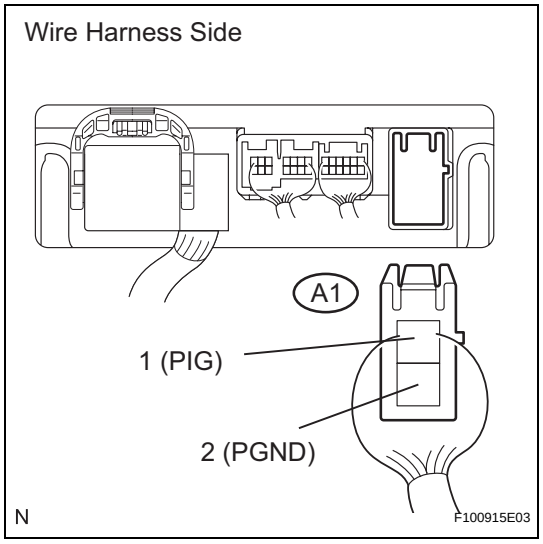
WIRING DIAGRAM

PS

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER (PIG POWER SUPPLY)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the item "PIG SUPPLY" in the DATA LIST and read the value displayed on the intelligent tester.



Power steering ECU

Item	Item Description: Range (Display)	Inspection Condition	Specified Condition
PIG SUPPLY	PIG power supply: Min.: 0 V Max.: 20.1531 V	Power steering in operation	10 to 14 V

OK → CHECK INTERMITTENT PROBLEMS

NG

2	CHECK WIRE HARNESS (BATTERY - POWER STEERING ECU)

(a) Disconnect the A1 power steering ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
A1 -1 (PIG) - A1-2 (PGND)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE POWER STEERING ECU

DTC	C1554/23	Power Supply Relay Failure

DTC	C1555/25	Motor Relay Welding Failure

DESCRIPTION

If the power steering ECU detects these DTCs, it shuts off the motor relay circuit (built into the power steering ECU) and stops power assist.

DTC No.	DTC Detection Condition	Trouble Area
C1554/23	Power source relay circuit malfunction	Power steering ECU
C1555/25	Motor relay circuit malfunction	Power Steering ECU

INSPECTION PROCEDURE

1	RECONFIRM DTC

(a) Check for DTC.
OK:
DTC is not output.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

REPLACE POWER STEERING ECU

DTC	C1581/26	Assist Map Number Un-Writing

DESCRIPTION

The power steering ECU outputs this DTC when it determines that the assist map is not written in the ECU.
HINT:
The assist map data is written in the power steering ECU to control assisting power.
The assist map has 3 types. Select an assist map according to the vehicle country information that is recorded in the ECU.

DTC No.	DTC Detection Condition	Trouble Area
C1581/26	Assist map not written in power steering ECU	Power steering ECU

INSPECTION PROCEDURE

1 PERFORM ASSIST MAP WRITING

(a) Turn the ignition switch ON.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
HINT:
At this time, check that the P/S warning light is illuminated.
(1) Select signal check, and change to test mode.
(c) Wait for 3 seconds.

NEXT

PS

2 CHECK P/S WARNING LIGHT

(a) Check the P/S warning light.

Result

Result	Proceed to
P/S warning light illuminates	A
P/S warning light blinks at 0.25 second intervals	B

HINT:
If the P/S warning light blinks at 0.25 second intervals, the assist map adjustment has completed normally.

B → END

A

3 CHECK DTC

(a) Check for DTC.

Result

Result	Proceed to
C1581/26 output Assist map write adjustment operation not completed 3 times or more	A

Result	Proceed to
Code other than C1581/26 is output	B
C1581/26 output Assist map write adjustment operation not completed less than 3 times	C

HINT:
If DTC C1581/26 is output, turn the ignition switch OFF. Enter test mode again. If the DTC is output 3 times in a row, replace the power steering ECU.

B → REFER TO DTC

C → Go to step 1

A

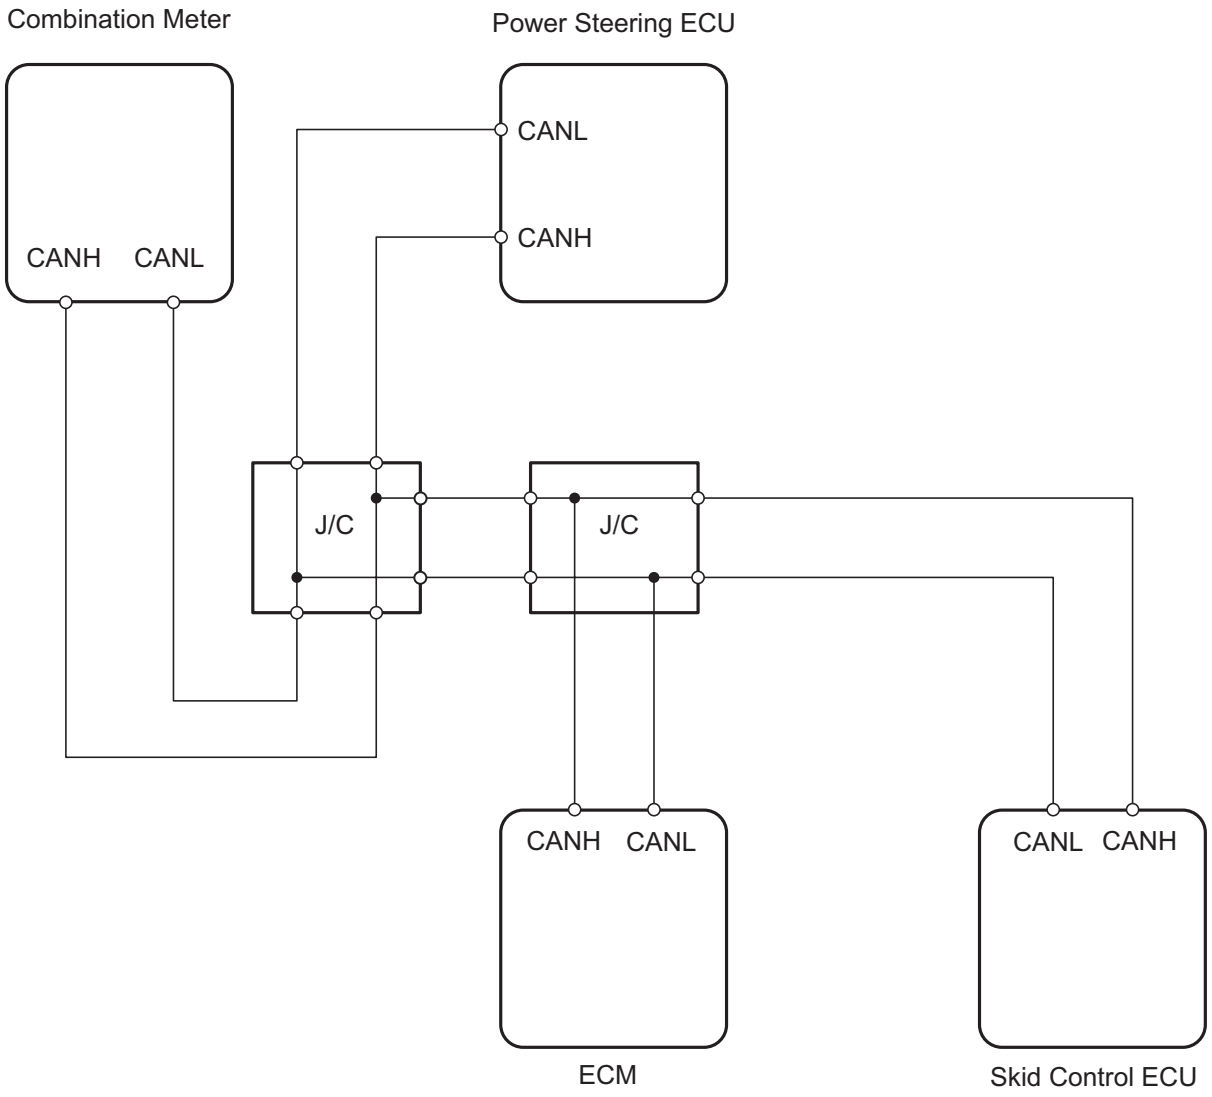
REPLACE POWER STEERING ECU

DTC	U0073/49	Control Module Communication Bus Off

DTC	U0105/41	Lost Communication with Fuel Injector Control Module

DTC	U0121/42	Lost Communication with Anti-Lock Brake System (ABS) Control Module

DESCRIPTION



The power steering ECU receives signals from the ECM and the skid control ECU via the CAN communication system.

DTC No.	DTC Detection Condition	Trouble Area
U0073/49	Control Module Communication Bus Off	CAN communication system
U0105/41	Lost Communication with Fuel Injector Control Module	• CAN communication system • ECM
U0121/42	Lost Communication with Anti-Lock Brake System (ABS) Control Module	• CAN communication system • Skid control ECU

HINT:

- When 2 or more DTCs starting with [U] are output simultaneously, inspect the connectors and wire harness of each ECU.
- If DTC U0105/41 is output, first erase the DTCs. Then turn the ignition switch from OFF to ON. If DTC U0105/41 is not output again, there is no malfunction.

WIRING DIAGRAM

PS

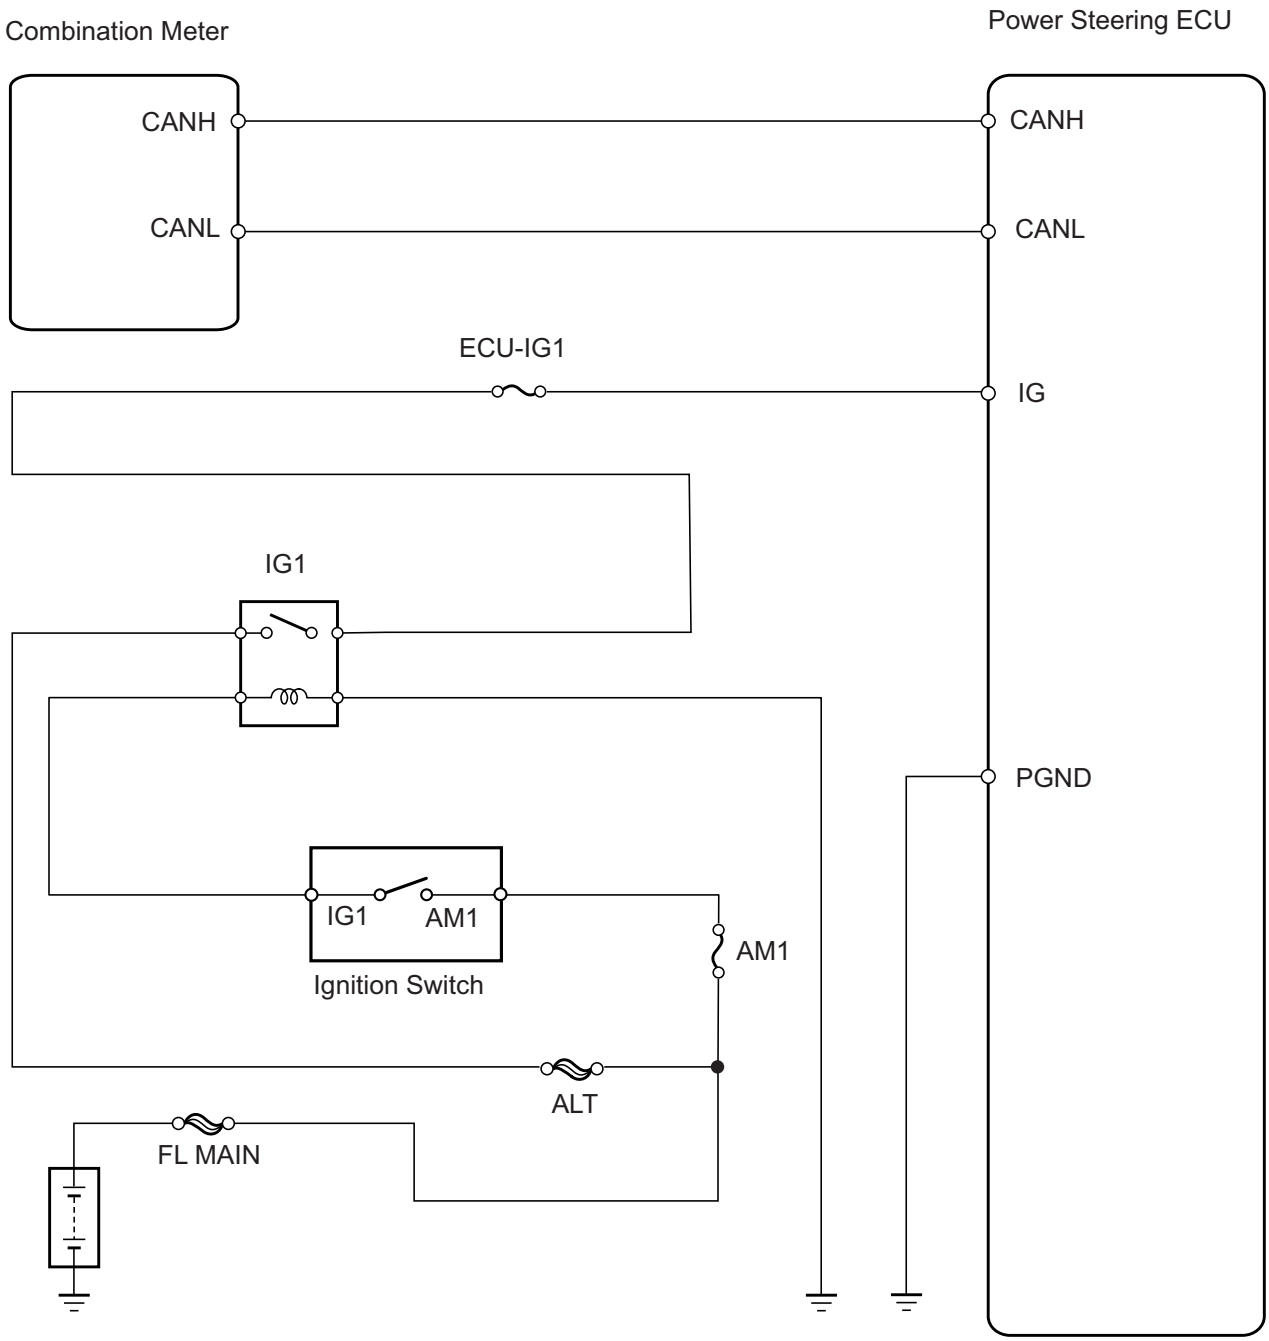
INSPECTION PROCEDURE

1	RECONFIRM DTC

(a) Check for DTC.
OK:
DTC is not output.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG



GO TO CAN COMMUNICATION SYSTEM

EPS Warning Light Circuit

DESCRIPTION

If the power steering ECU detects a malfunction, the P/S warning light comes on. At this time, the power steering ECU stores a DTC in its memory.

WIRING DIAGRAM

PS

INSPECTION PROCEDURE

1	CHECK FOR DTC

(a) Using the intelligent tester (with CAN VIM), check for DTCs and confirm that there are no problems in the CAN communication system.
OK:
CAN DTCs are not output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

2	READ VALUE OF INTELLIGENT TESTER (IG POWER SUPPLY)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Select the item "IG SUPPLY" in the DATA LIST and read the value displayed on the intelligent tester.

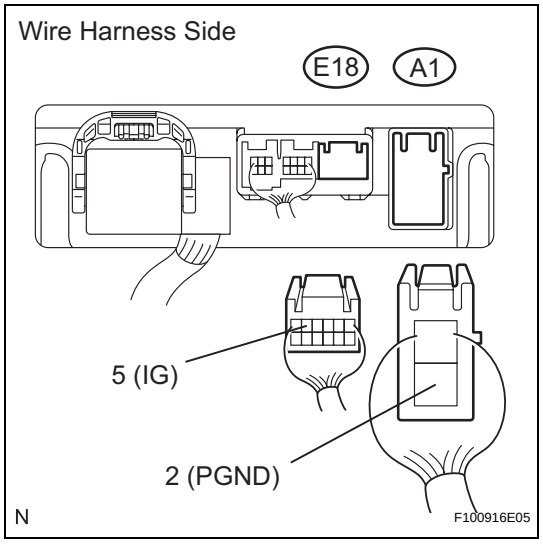
Main body ECU

Item	Item Description: Range (Display)	Inspection Condition	Specified Condition
IG SUPPLY	ECU power source voltage: Min.: 0 V Max.: 20.1531 V	Ignition switch ON	10 to 14 V

OK → **Go to step 5**

NG

3	INSPECT FUSE (ECU-IG1)



(a) Remove the ECU-IG1 fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
OK:
Below 1 Ω

NG → **INSPECT SHORT CIRCUIT IN COMPONENTS AND WIRES CONNECTED TO FUSE**

OK

PS

4	CHECK WIRE HARNESS (BATTERY - POWER STEERING ECU AND BODY GROUND)

(a) Disconnect the A1 and E18 power steering ECU connector.
(b) Measure the voltage of the wire harness side connectors.

Standard voltage

Tester Connection	Condition	Specified Condition
E18-5 (IG) - A1-2 (PGND)	Ignition switch ON	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON and press the intelligent tester main switch ON.
(c) Operate the intelligent tester according to the steps on the display and select the ACTIVE TEST.

Combination meter

Item	Test Details	Diagnostic Note
EPS INDIC	P/S indicator (ON/OFF)	Confirm that the vehicle is stopped, engine idling

OK:
Indicator comes on.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE POWER STEERING ECU

PS

ELECTRONIC POWER STEERING SYSTEM

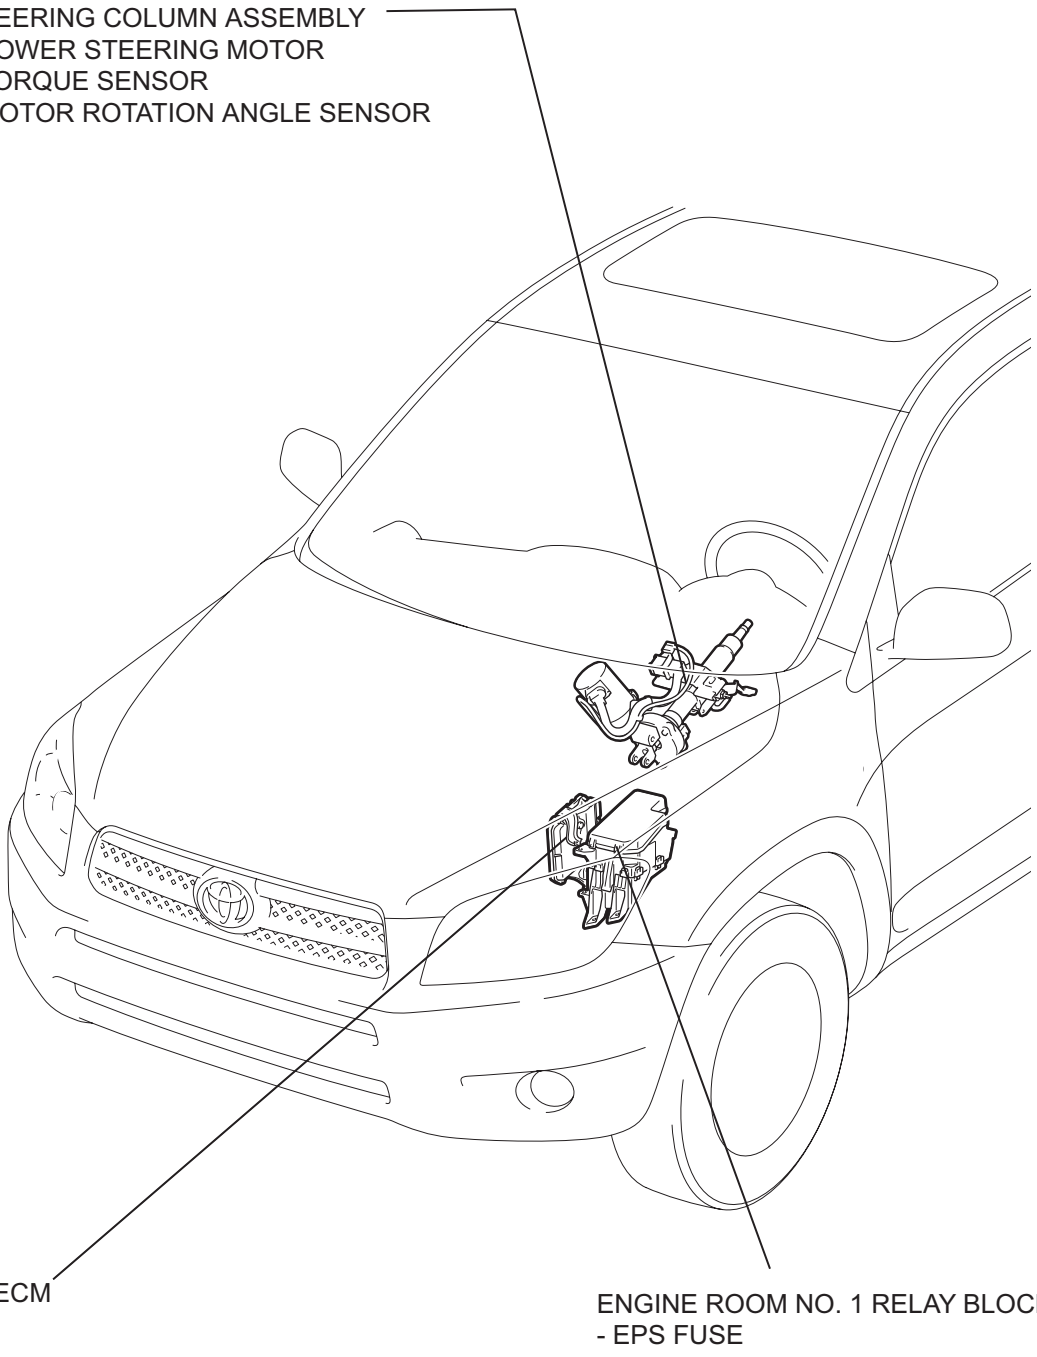
PRECAUTION

1. HANDLING PRECAUTION

(a) When handling the electronic parts:
- Avoid any impact to electronic parts such as ECUs and relays. Replace with new ones if dropped or subjected to a severe blow.
- Do not expose any electronic parts to high temperatures and humidity.
- Do not touch the connector terminals in order to prevent deformation or malfunctions due to static electricity.

(b) When handling the steering column assembly:
- Avoid any impact to the steering column assembly, especially to the motor and torque sensor. Replace with new ones if dropped or subjected to a severe blow.
- Do not pull the wire harness when moving the steering column assembly.

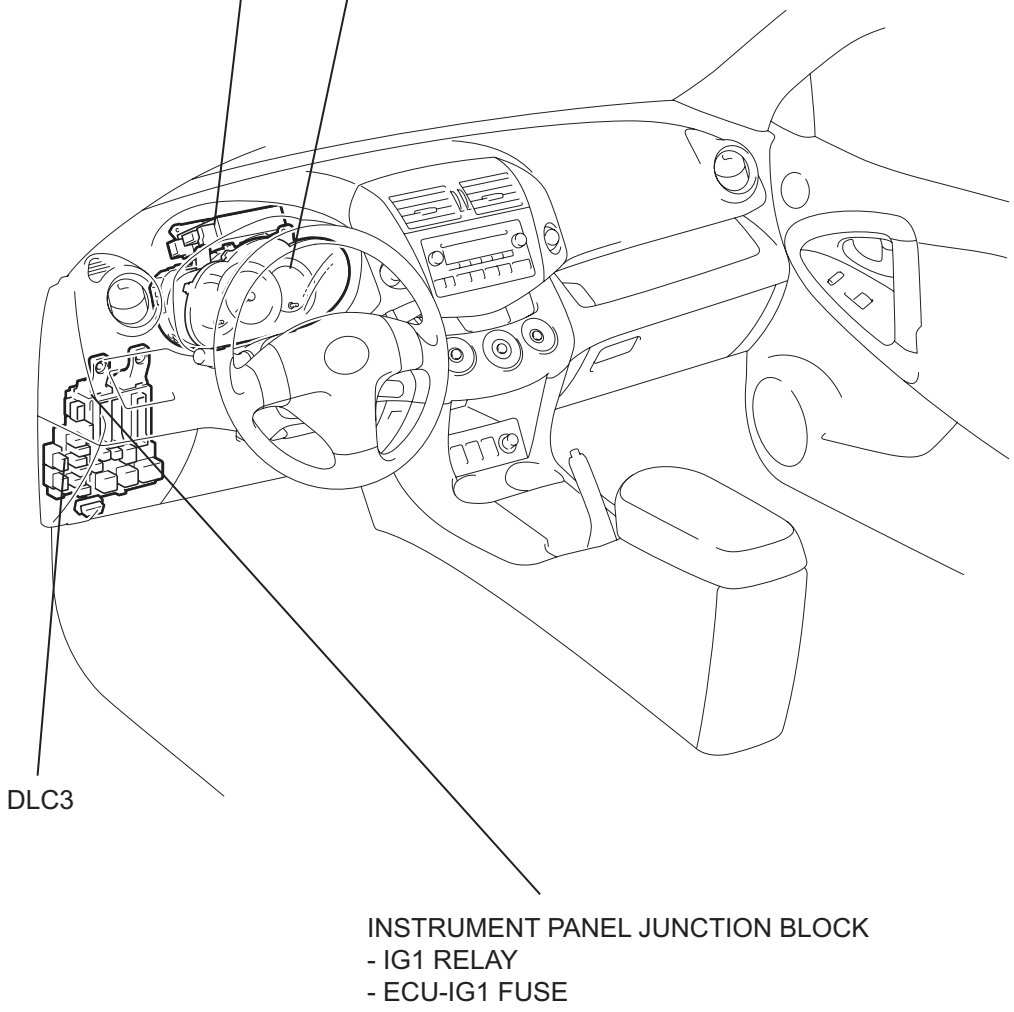
(c) When disconnecting and reconnecting the connectors:
When disconnecting the connectors related to the electronic power steering system, turn the ignition switch ON, center the steering wheel, turn the ignition switch off, and then disconnect the connectors.



2. PRECAUTIONS FOR CAN COMMUNICATION

(a) CAN communication lines are used to receive information from the skid control ECU and the ECM, and to transmit warnings to the combination meter. When there are any problems in the CAN communication lines, DTCs of the CAN communication line are output.

(b) Perform troubleshooting for the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the electronic power steering system after confirming that the CAN communication system is normal.



(c) Since the CAN communication line has its own length and route, it cannot be repaired temporarily with a bypass wire, etc.

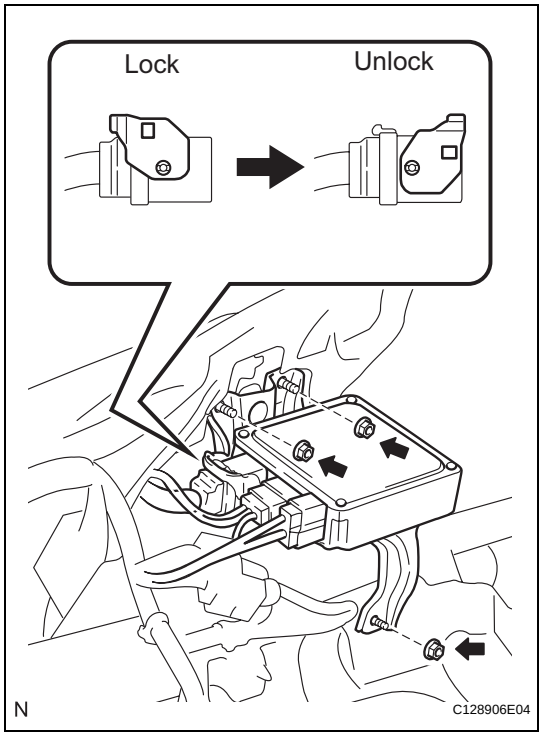
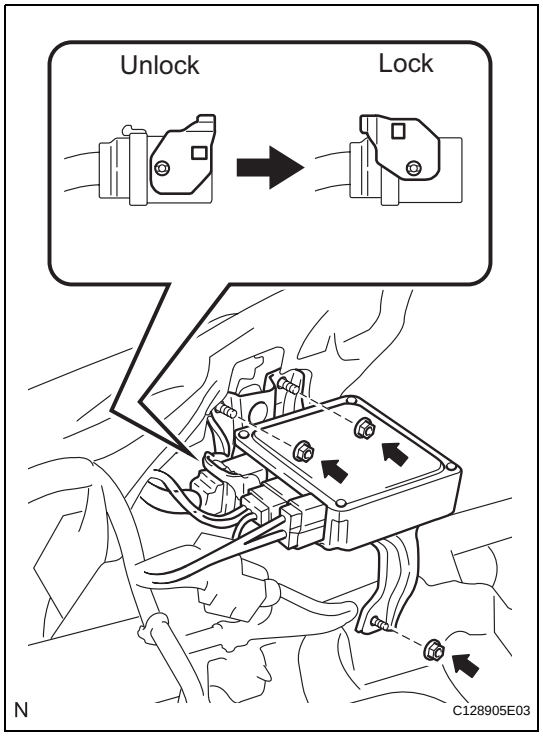
PS



POWER STEERING ECU



COMPONENTS

REMOVAL

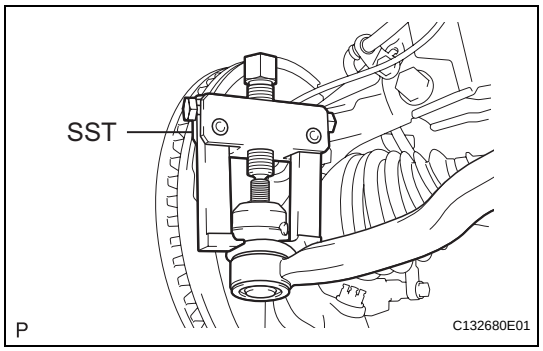
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY UPPER**
   (a) Remove the instrument panel (see page IP-4).
3. **REMOVE POWER STEERING ECU**
   (a) Disconnect the 4 connectors.
   (b) Remove the 3 nuts and remove the power steering ECU.

INSTALLATION

1. **INSTALL POWER STEERING ECU**
   (a) Install the power steering ECU with the 3 nuts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Connect the 4 connectors.
2. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY UPPER**
   (a) Install the instrument panel (see page IP-9).
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

PS

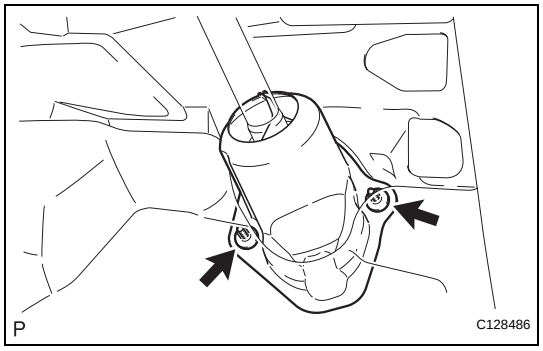
REMOVAL



1. POSITION FRONT WHEELS FACING STRAIGHT AHEAD

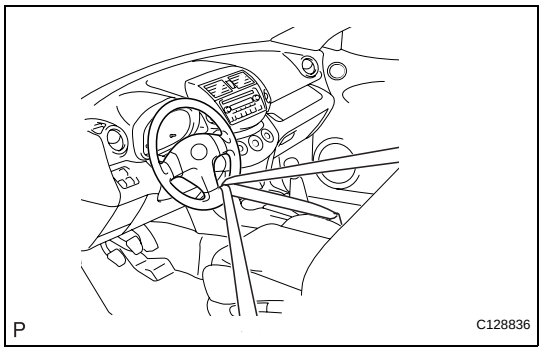
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

3. REMOVE FRONT WHEEL

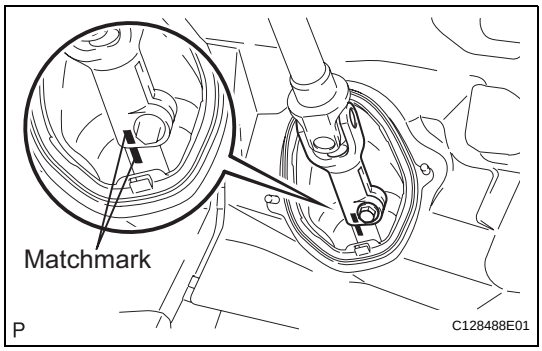


4. DISCONNECT TIE ROD END SUB-ASSEMBLY LH
(a) Remove the cotter pin and castle nut.

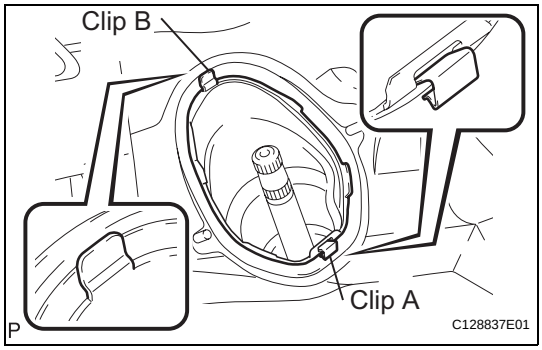
(b) Using SST, disconnect the tie rod end from the steering knuckle.
SST 09628-62011
NOTICE:
Do not damage the tie rod end dust cover.



5. DISCONNECT TIE ROD END SUB-ASSEMBLY RH
HINT:
Use the same procedure for the RH side as for the LH side.



6. REMOVE COLUMN HOLE COVER SILENCER SHEET
(a) Remove the floor carpet, 2 clips and column hole cover silencer.

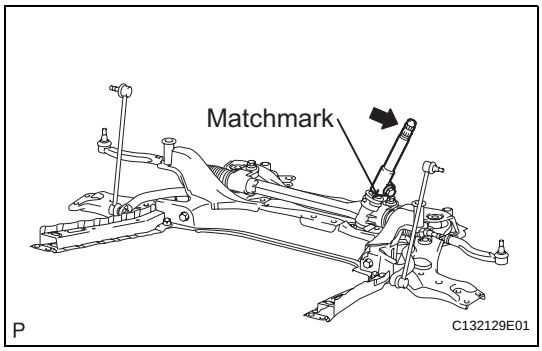


7. DISCONNECT STEERING SLIDING YOKE SUB-ASSEMBLY
(a) Use a seat belt to fix the steering wheel in place to avoid breakage of the spiral cable.

PS

(b) Place matchmarks on the sliding yoke of the steering intermediate shaft.
(c) Remove the bolt and disconnect the sliding yoke.

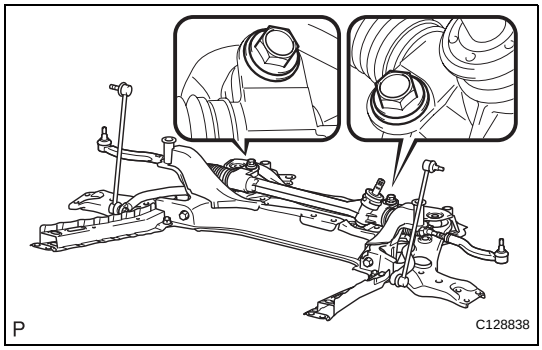
8. DISCONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY



(a) Remove clip A, detach clip B from the body and disconnect the No. 1 steering column hole cover.
NOTICE:
Do not damage clips A and B.

9. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

(a) Remove the engine with transaxle (see page EM-98).

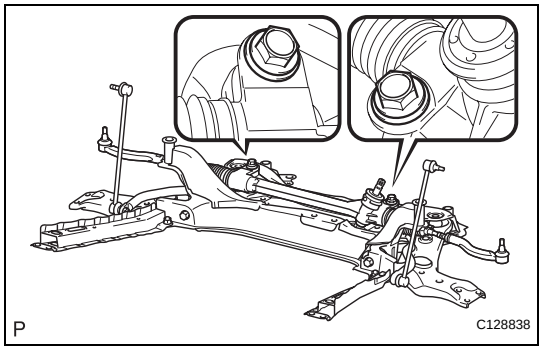


10. REMOVE NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Remove the clamp and disconnect the column hole cover from the steering gear.

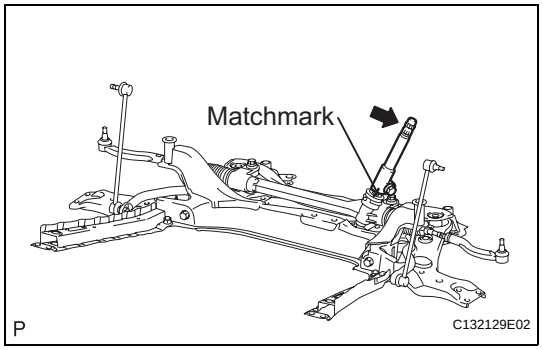
11. REMOVE INTERMEDIATE SHAFT

(a) Place matchmarks on the intermediate shaft of the steering gear.
(b) Remove the bolt and disconnect the steering intermediate shaft from the steering gear.



12. REMOVE STEERING GEAR ASSEMBLY

(a) Remove the 2 bolts, 2 nuts and steering gear from the suspension crossmember.
NOTICE:
Keep the nut from rotating while turning the bolt.



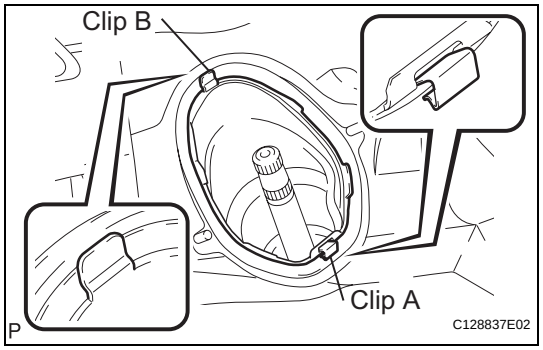
PS

INSTALLATION

1. INSTALL STEERING GEAR ASSEMBLY

(a) Install the steering gear onto the front suspension crossmember with the 2 bolts and 2 nuts.
Torque: 138 N*m (1407 kgf*cm, 102 ft.*lbf)
NOTICE:
Keep the nut from rotating while turning the bolt.

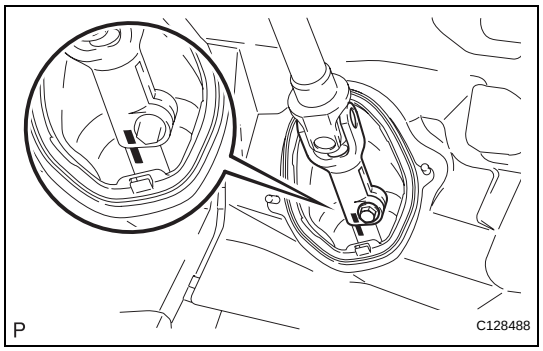
2. INSTALL INTERMEDIATE SHAFT



(a) Align the matchmarks and install the intermediate shaft onto the steering gear.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

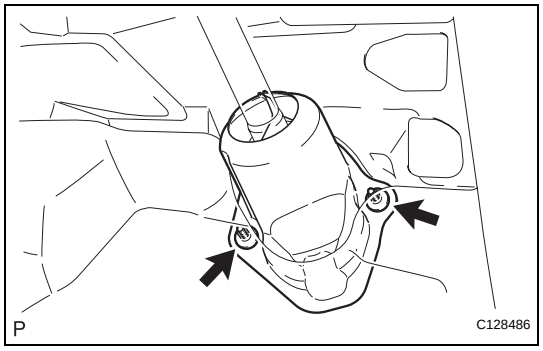
3. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Install the column hole cover onto the steering gear with a new clamp.



4. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

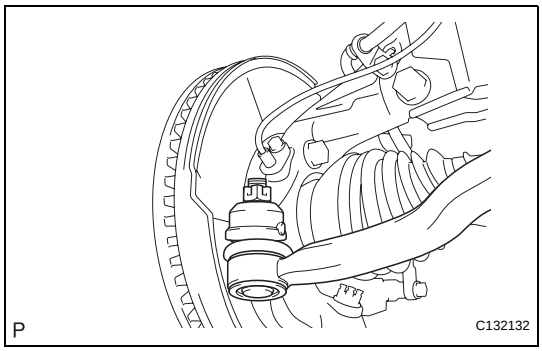
(a) Install the engine with transaxle (see page EM-105).



5. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY

(a) Attach clip B onto the body portion and install the No. 1 hole cover onto the body portion with clip A.
NOTICE:
Make sure that the lip portion of the No. 1 hole cover is not damaged.

6. CONNECT STEERING SLIDING YOKE SUB-ASSEMBLY



(a) Align the matchmarks and install the sliding yoke onto the intermediate shaft.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

7. INSTALL COLUMN HOLE COVER SILENCER SHEET

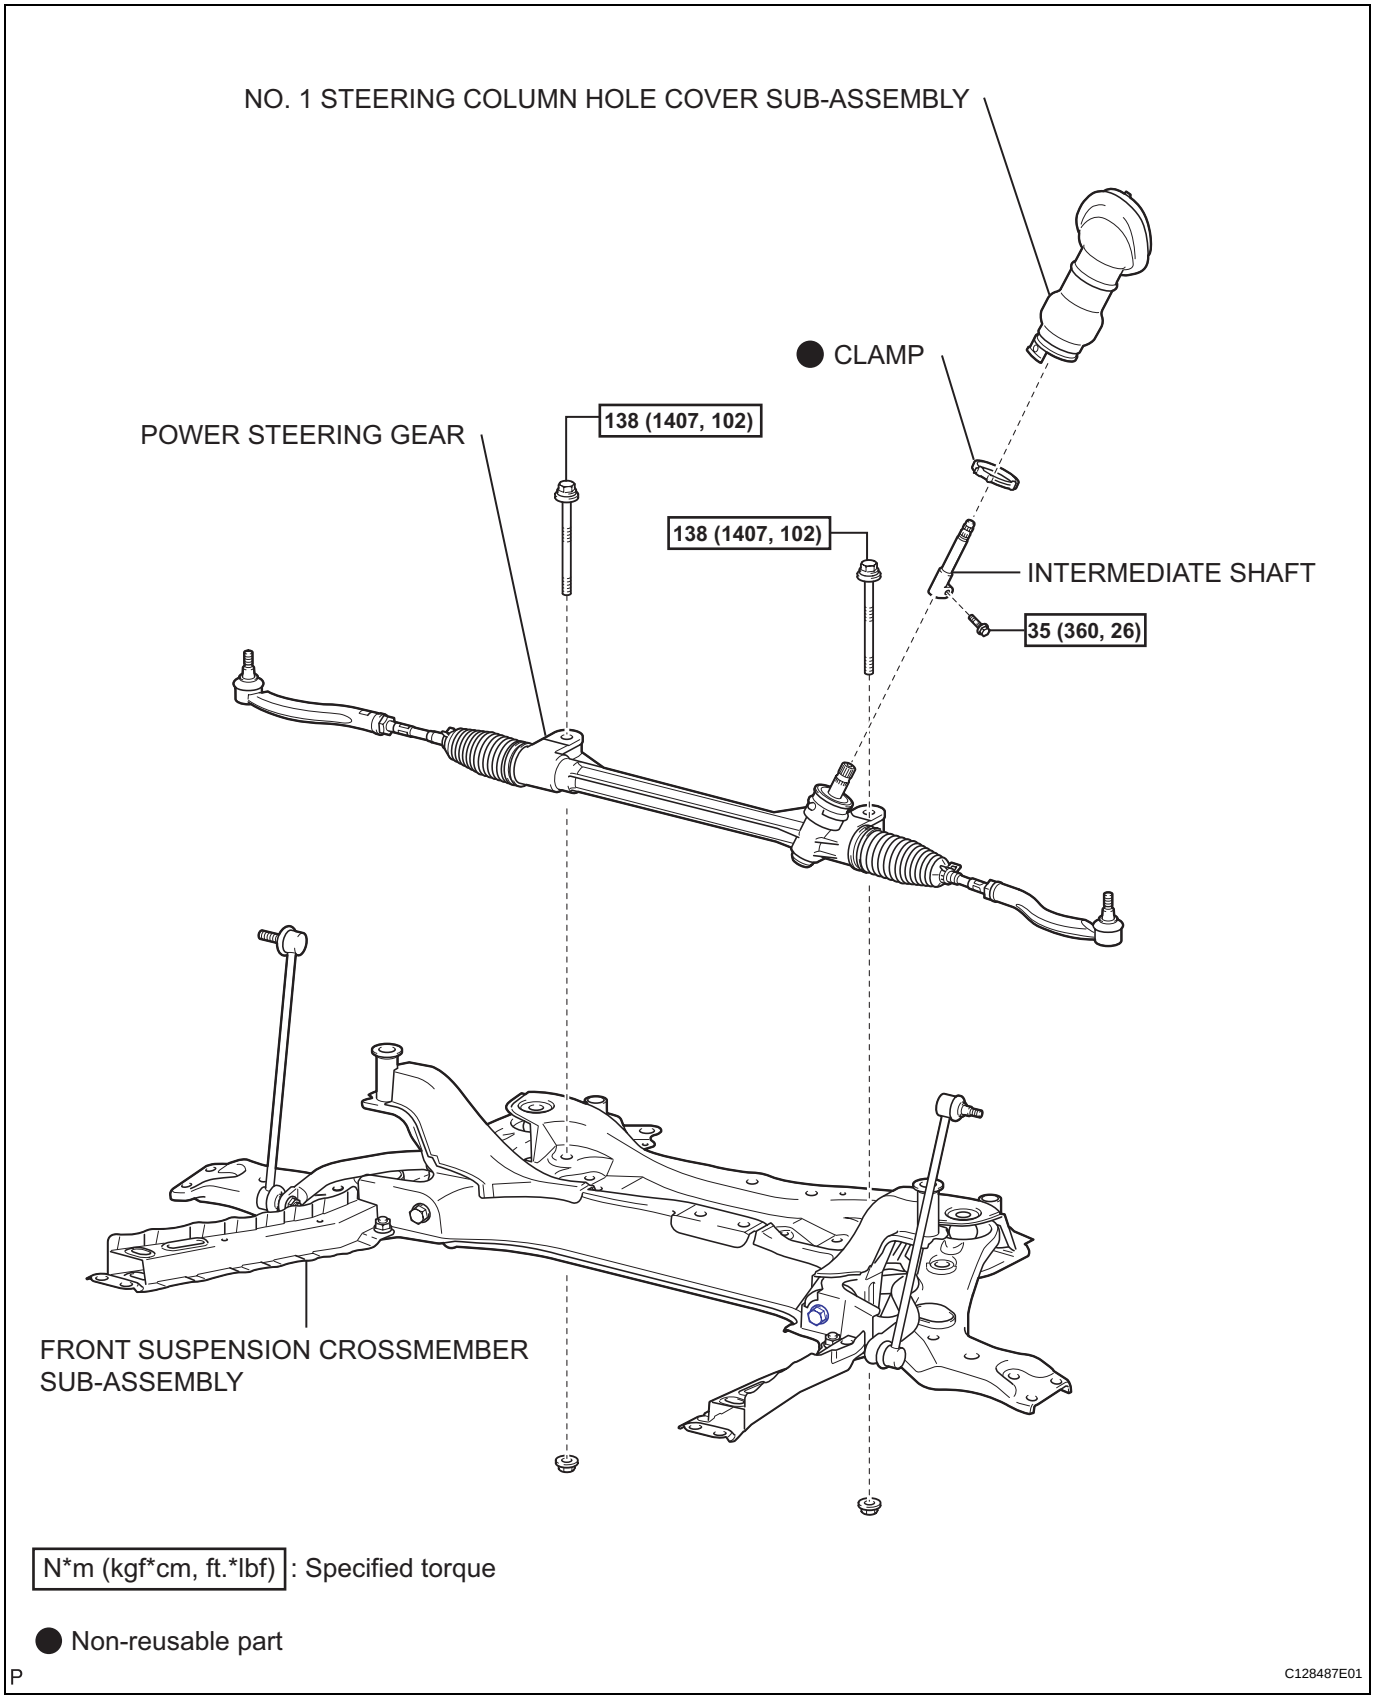
(a) Install the column hole cover silencer sheet with the 2 clips.
(b) Install the floor carpet.

PS

8. **CONNECT TIE ROD END SUB-ASSEMBLY LH**
   (a) Connect the tie rod end onto the steering knuckle with the castle nut.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
   NOTICE:
   If the holes for the clip are not aligned, tighten the nut up to 60° further.
   (b) Install a new cotter pin.

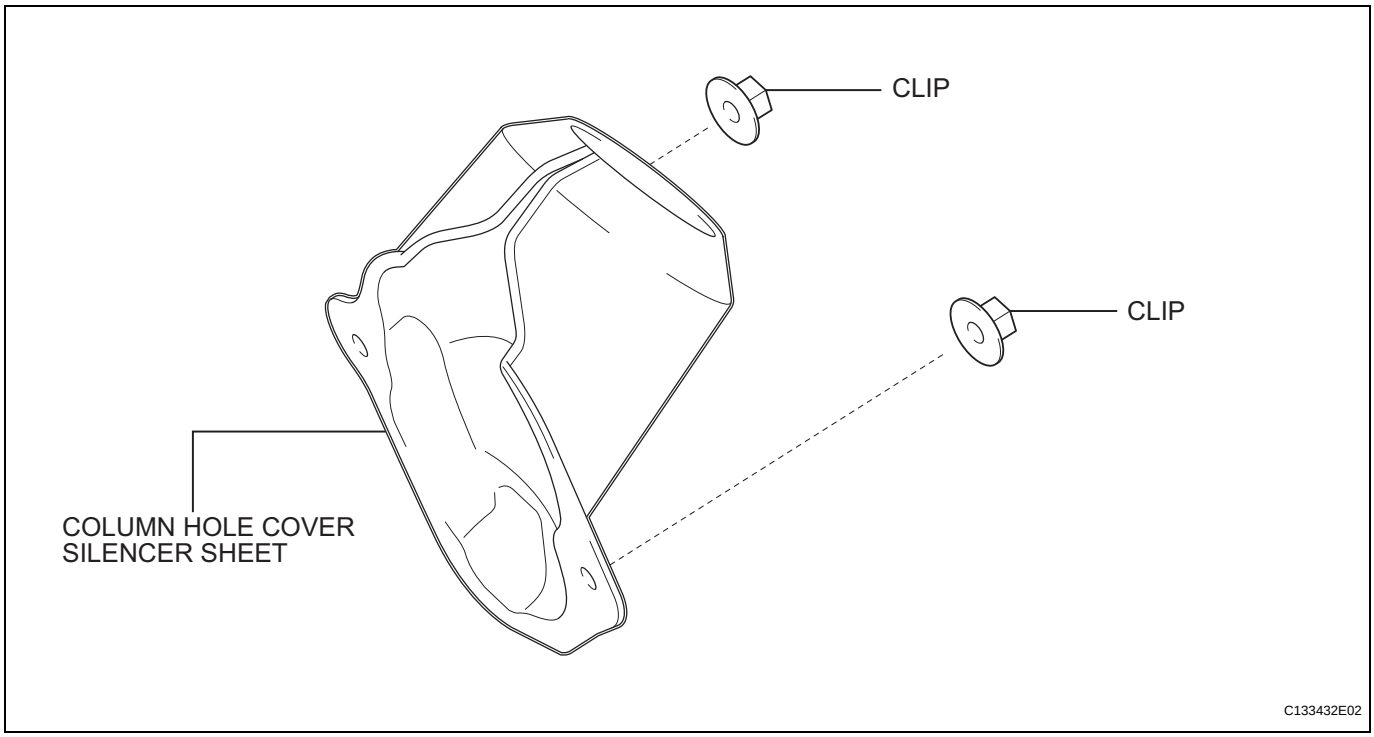
9. **CONNECT TIE ROD END SUB-ASSEMBLY RH**
   HINT:
   Use the same procedure for the RH side as for the LH side.

10. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



11. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

12. **POSITION FRONT WHEELS FACING STRAIGHT AHEAD**



13. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (a) Inspect and adjust the wheel alignment (see page SP-3).

LUBRICANT

Item		Capacity	Classification
Oil grade		-	ILSAC multigrade engine oil is recommended. SAE 5W-30 is the best choice for good fuel economy and good starting in cold weather.
Drain and refill	With oil filter change	6.1 liters (6.4 US qts, 5.4 Imp. qts)	-
	Without oil filter change	5.7 liters (6.0 US qts, 5.0 Imp. qts)	-
Dry fill		6.5 liters (6.9 US qts, 5.7 Imp. qts)	-

EQUIPMENT

Torque wrench	
Tape	To avoid surface damage

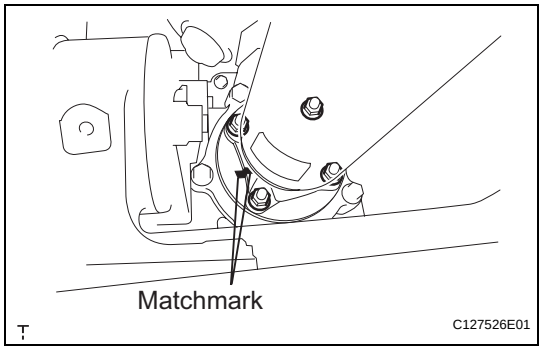
(e) If the result is not as specified, replace the center support bearing adjusting washer with a more appropriate one.

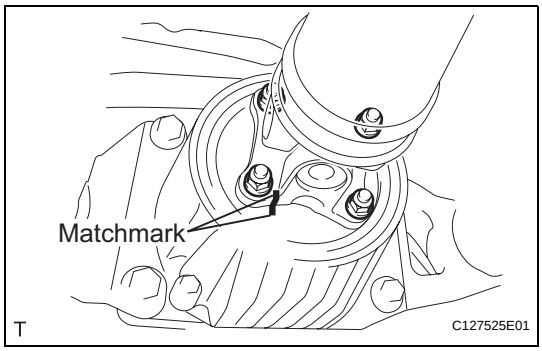


NOTICE:

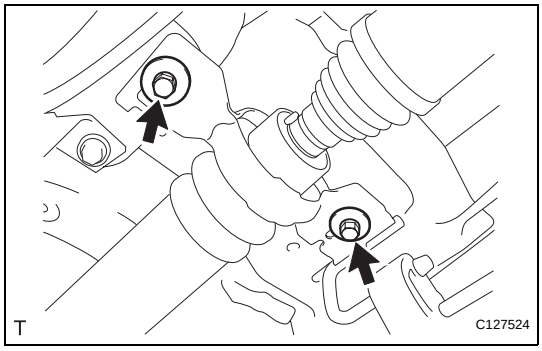
- **Use washers of the same thickness on the left and right sides.**
- **Do not use 2 or more washers stacked together.**

Standard adjusting washer

Part No.	Thickness
90201-10123	2.0 mm (0.08 in.)
90201-10081	4.5 mm (0.18 in.)
90201-10083	6.5 mm (0.26 in.)
90201-10084	9.0 mm (0.35 in.)
90201-10085	11.0 mm (0.43 in.)



INSTALLATION



1. TEMPORARILY INSTALL PROPELLER SHAFT WITH CENTER BEARING SHAFT ASSEMBLY

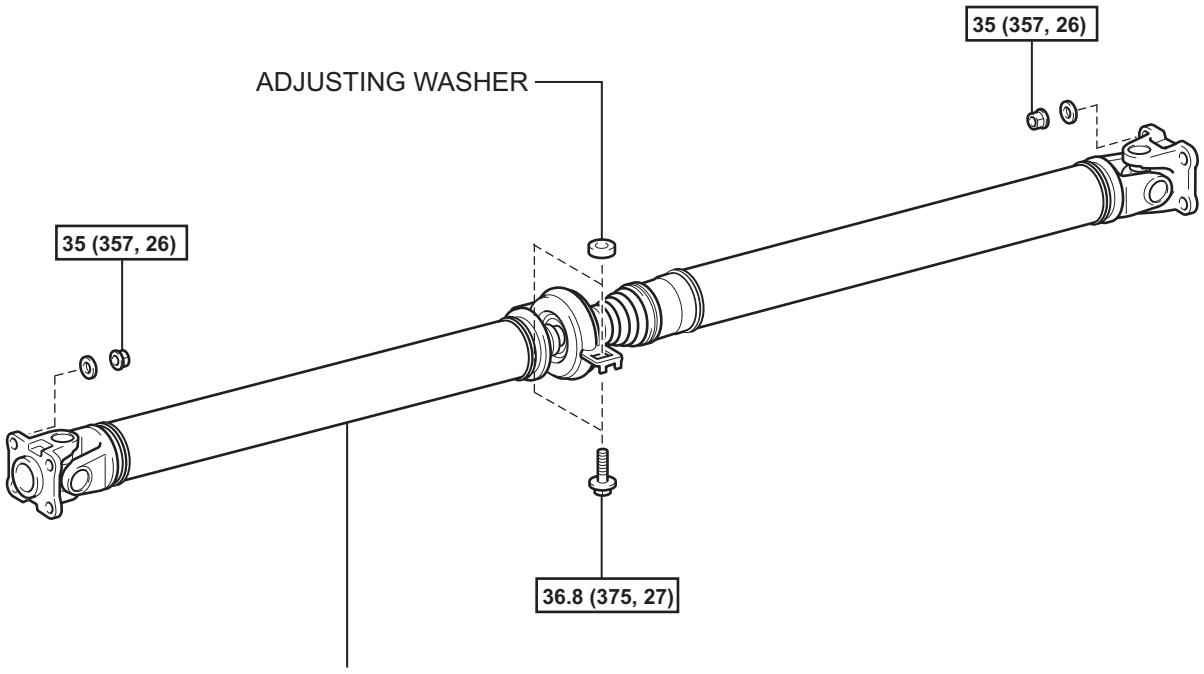
(a) Align the matchmarks of the transfer and propeller shaft.

(b) Temporarily install the propeller shaft with center bearing with the 4 nuts and 4 washers.

(c) Align the matchmarks of the differential carrier and propeller shaft.
(d) Temporarily install the propeller shaft with center bearing with the 4 bolts and 4 washers.

(e) Temporarily install the center support bearing and center support bearing washer with the 2 bolts.

2. TIGHTEN PROPELLER SHAFT WITH CENTER BEARING SHAFT ASSEMBLY

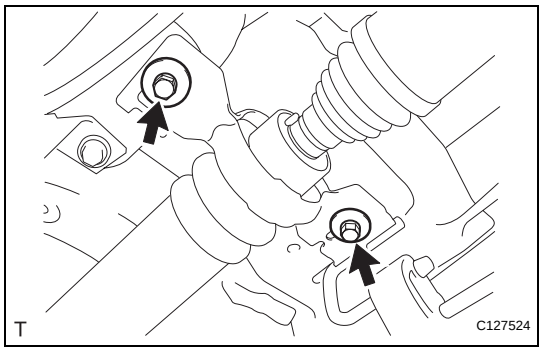


(a) Tighten the 4 nuts of the propeller shaft and transfer to the torque specification.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)
(b) Tighten the 4 nuts of the propeller shaft and differential carrier to the torque specification.
Torque: 35 N*m (357 kgf*cm, 26 ft.*lbf)
(c) Check that the center line of the center support bearing housing is perpendicular to the axis of the propeller shaft.
(d) Tighten the 2 bolts of the center support bearing to the torque specification.
Torque: 36.8 N*m (375 kgf*cm, 27 ft.*lbf)

3. INSPECT JOINT ANGLE (See page PR-4)

PROPELLER SHAFT ASSEMBLY

COMPONENTS

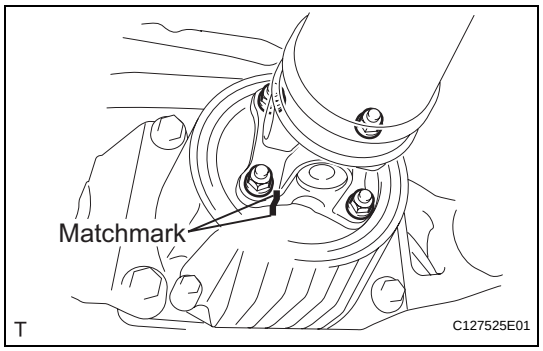


PR

N*m (kgf*cm, ft.*lbf) : Specified torque

T

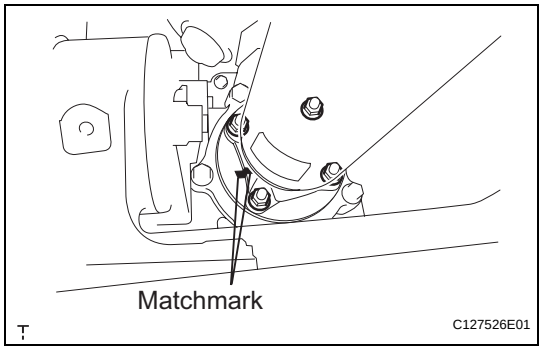
C129508E01



REMOVAL

1. REMOVE PROPELLER SHAFT WITH CENTER BEARING SHAFT ASSEMBLY

(a) Remove the 2 bolts and 2 adjusting washers, and disconnect the propeller with center bearing shaft.



NOTICE:

- **During the removal, do not exert excessive force on the universal joint.**
- **When removing, transporting or storing the propeller with center bearing shaft assembly, do not allow the No. 2 joint angle to exceed 20°.**

(b) Place matchmarks on the differential carrier and propeller shaft.

(c) Remove the 4 nuts and 4 washers, and disconnect the propeller shaft and differential carrier.

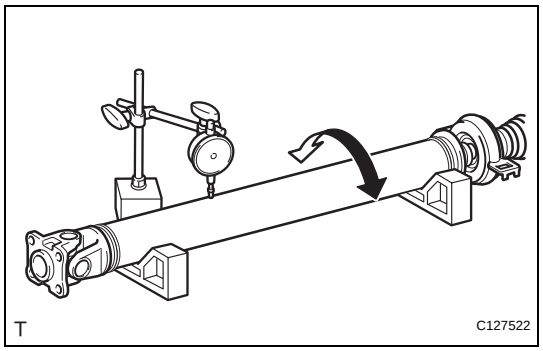
(d) Place matchmarks on the transfer and propeller shaft.

(e) Remove the 4 nuts and 4 washers, and disconnect the propeller shaft from the transfer.

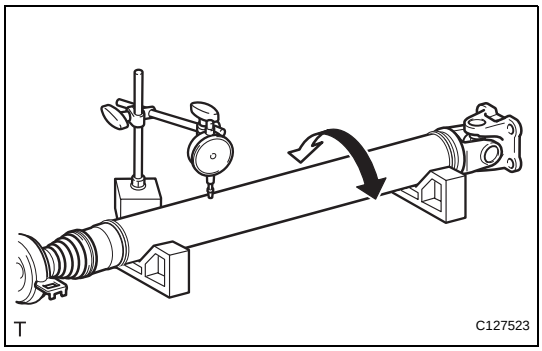
INSPECTION

1. INSPECT PROPELLER SHAFT WITH CENTER BEARING SHAFT ASSEMBLY

(a) Using a dial indicator, measure the propeller shaft runout for front side.



Maximum runout:



0.4 mm (0.02 in.)

If the shaft runout is greater than the maximum, replace the propeller shaft.

NOTICE:

Place the dial indicator on the center of the shaft, and perpendicular to the shaft.

(b) Using a dial indicator, measure the propeller shaft runout for rear side.
Maximum runout:
0.4 mm (0.02 in.)
If the shaft runout is greater than the maximum, replace the propeller shaft.
NOTICE:
Place the dial indicator on the center of the shaft, and perpendicular to the shaft.

2. INSPECT JOINT ANGLE

(a) Before the angle measurement, use procedures like the examples below to stabilize each part.
(1) Rotate the propeller shaft several times by hand.
(2) Set the jack to the differential, and raise and lower it.
NOTICE:
Perform the measurement with a 4 post lift or pit so that the vehicle condition is as close to a standard ground condition as possible.

(b) Using SST, measure the installation angle of the propeller shaft for front side (A in illustration).
SST 09370-50010
Standard angle A:
-2°49'
-3°01' for w/ 3rd seat

(c) Using SST, measure the installation angle of the propeller shaft for front side (A in illustration) and propeller shaft for rear side (B in illustration).
SST 09370-50010
Standard angle A-B:
1°35'

(d) Using SST, measure the installation angle of the propeller shaft for rear side (B in illustration) and differential carrier rear side (C in illustration).
SST 09370-50010
Standard angle B-C:
2°04'

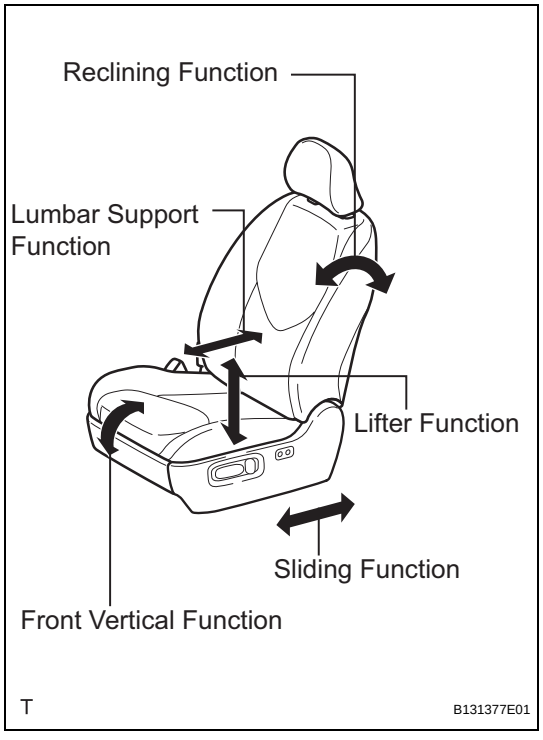
PR

PROPELLER SHAFT SYSTEM

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Propeller shaft system



Symptom	Suspected area	See page
Noise or Vibration	1. Center bearing (worn)	PR-3
	2. Propeller shaft (runout)	PR-3

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Front power seat control system

Symptom	Suspected area	See page
All functions do not operate (except lumbar support)	1. P/SEAT fuse	SE-1
	2. Front power seat switch	SE-124
	3. Wire harness	-
Only slide operation function does not operate	1. Front power seat switch	SE-124
	2. Front seat frame with adjuster (slide motor)	SE-125
	3. Wire harness	-
Only front vertical operation function does not operate	1. Front power seat switch	SE-124
	2. Front seat frame with adjuster (front vertical motor)	SE-125
	3. Wire harness	-
Only lifter operation function does not operate	1. Front power seat switch	SE-124
	2. Front seat frame with adjuster (lifter motor)	SE-125
	3. Wire harness	-
Only reclining operation function does not operate	1. Front power seat switch	SE-124
	2. Front seat frame with adjuster (reclining motor)	SE-125
	3. Wire harness	-
Only lumbar support operation function does not operate	1. Front power seat lumbar switch	SE-127
	2. Lumbar support adjuster (lumbar support motor)	SE-127
	3. Wire harness	-

ON-VEHICLE INSPECTION

1. CHECK POWER SEAT FUNCTION

(a) Check the basic functions.

(1) Operate the power seat switches and check to make sure each seat function works:

- Sliding
- Front vertical
- Lifter
- Reclining
- Lumbar support

2. CHECK FRONT SEAT FRAME WITH ADJUSTER (SLIDING, FRONT VERTICAL, LIFTER AND RECLINING FUNCTIONS)

(a) Check the PTC operation inside the power seat motor.

HINT:
The PTC thermistor's resistance increases when the power seat switch is held down even after the power seat has been moved to the maximum in one direction. If the resistance increases beyond a specified level, current is cut to prevent a short circuit.

NOTICE:

- **The inspection should be performed with the seat installed in the vehicle.**
- **Perform the 4 steps below for the full range of motion for each power seat function.**

(1) Choose a power seat function. Operate the power seat switch and move the seat as much as possible in one direction. Keep the seat in that position for approximately 60 seconds.

(2) Operate the power seat switch again and continue to try to move the seat in the same direction as in the previous step. Measure the amount of time elapsed before current is automatically cut (the sound of the motor has stopped).

Standard:

4 to 90 seconds

(3) After current has been cut, release the power seat switch and wait for approximately 60 seconds.

(4) Operate the same power seat switch and move the seat in the opposite direction. Check that the motor operates.

3. CHECK LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Check the PTC operation inside the power seat motor.

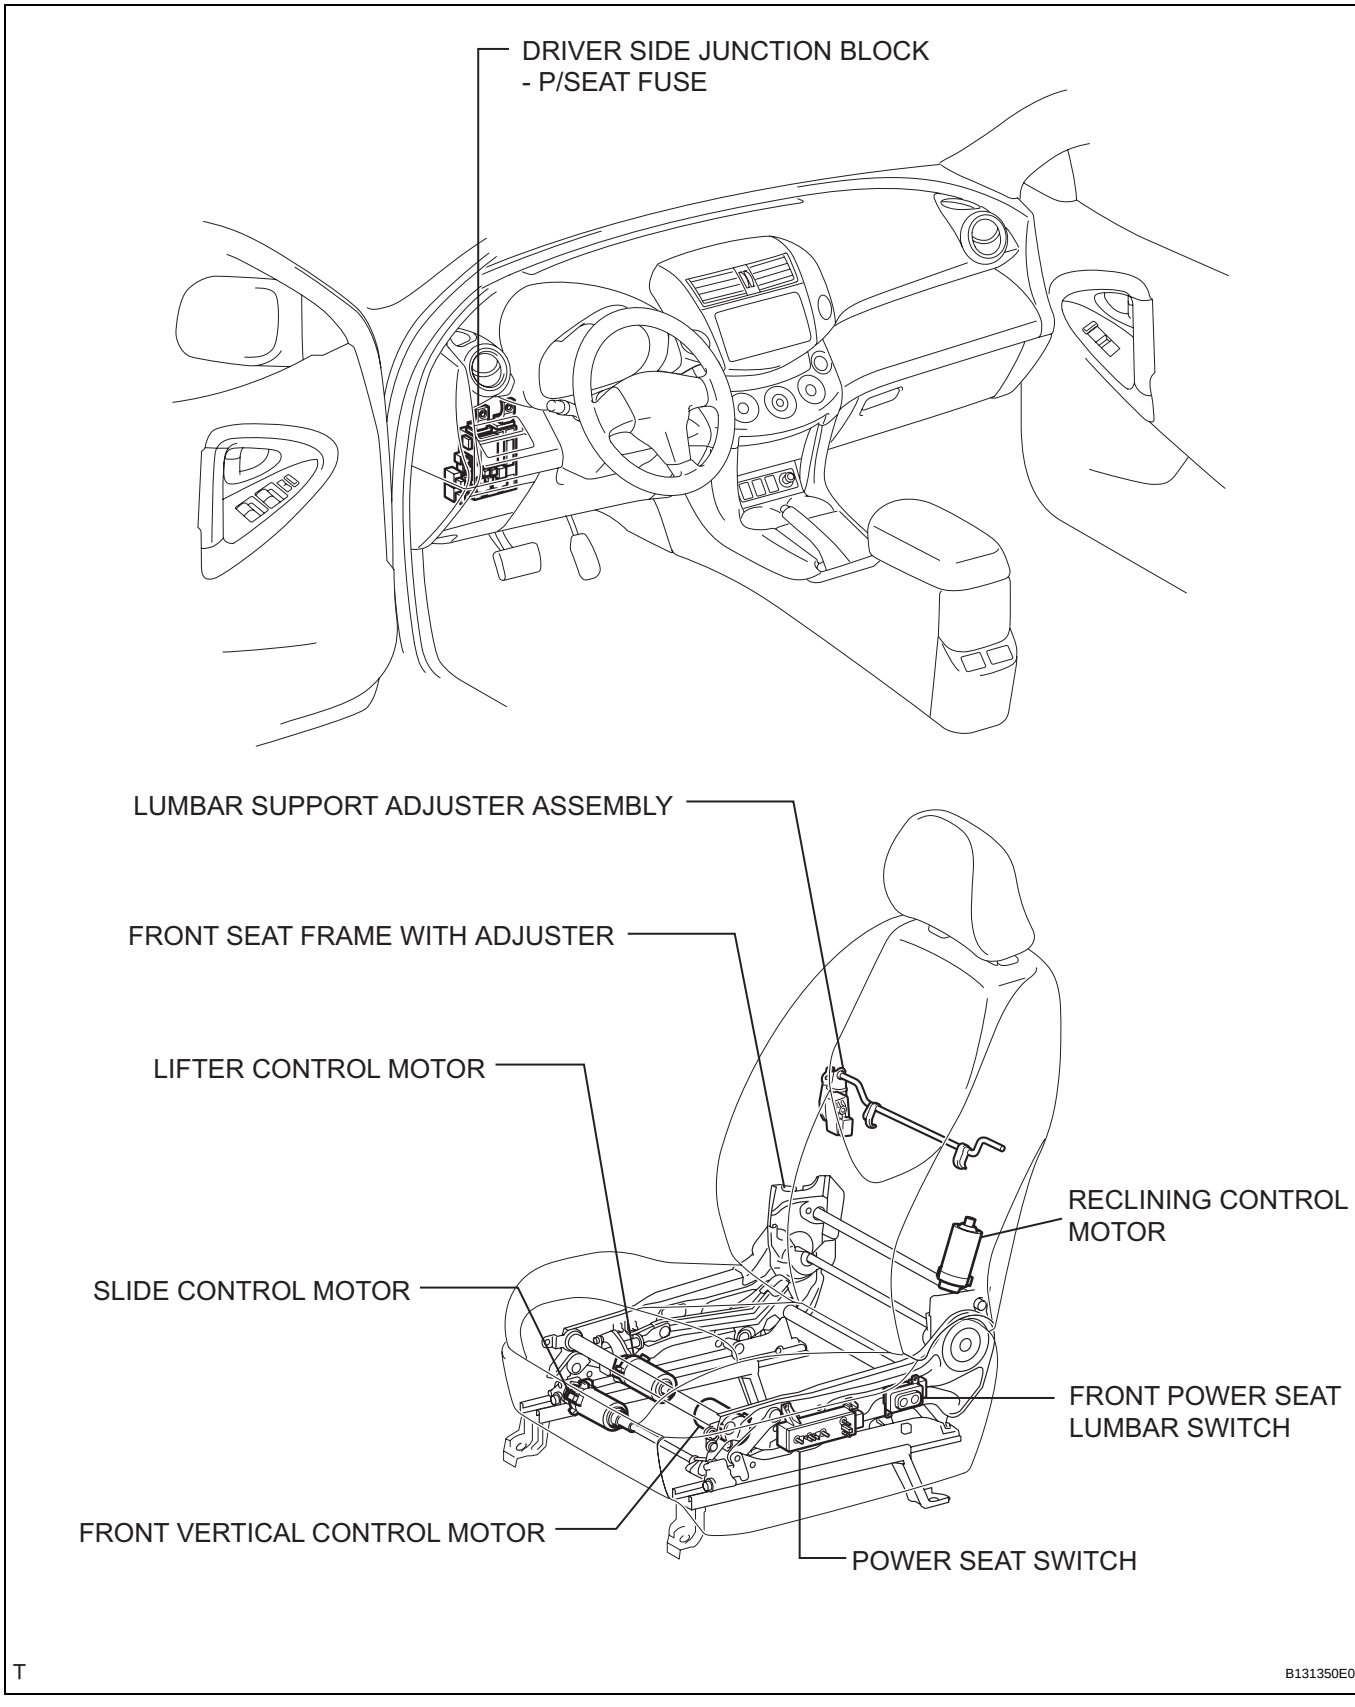
NOTICE:

The inspection should be performed with the seat installed in the vehicle.

(1) Operate the lumbar support switch and move the lumbar support to either the foremost or rearmost position. Keep the seat in that position for approximately 60 seconds.

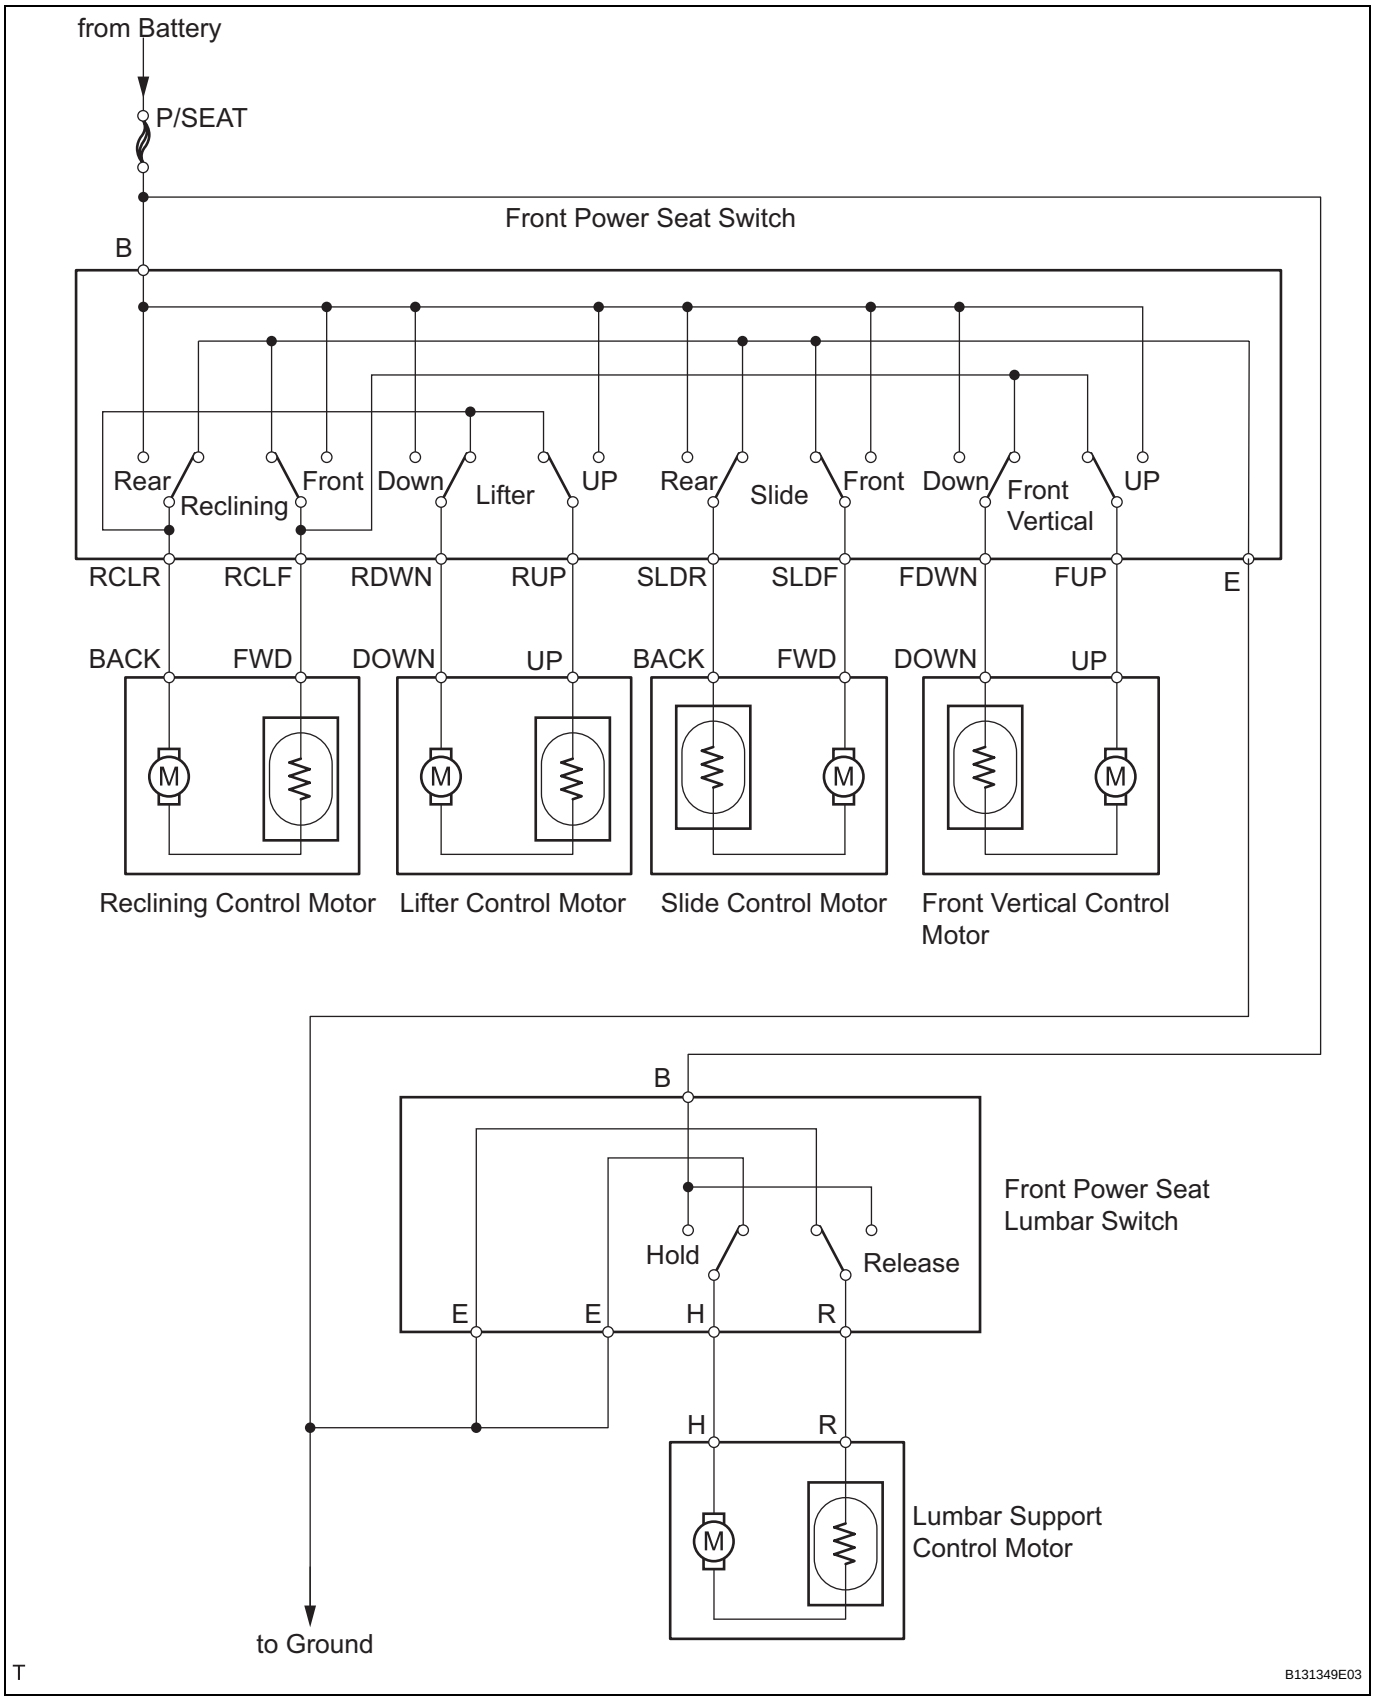
(2) Operate the lumbar support switch again and continue to try to move the lumbar support in the same direction as in the previous step. Measure the amount of time elapsed before current is automatically cut (the sound of the motor has stopped).

Standard:



4 to 90 seconds

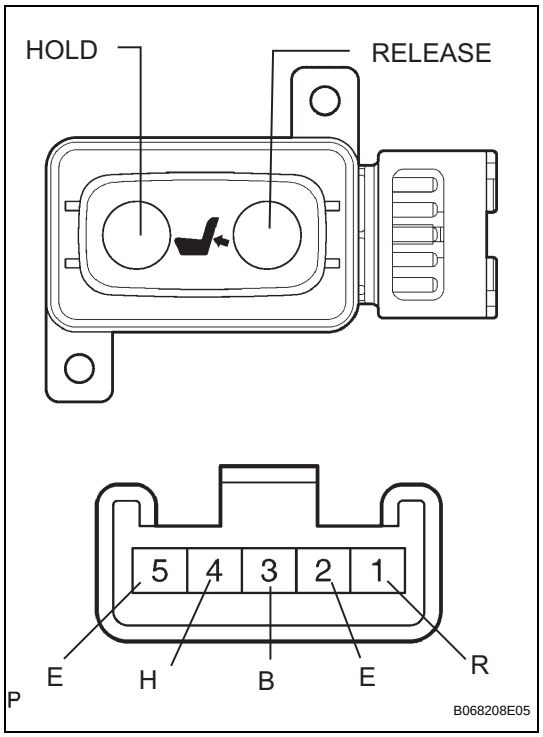
(3) After current has been cut, release the lumbar support switch and wait for approximately 60 seconds.



(4) Operate the lumbar support switch and move the seat in the opposite direction. Check that the motor operates.

FRONT POWER SEAT CONTROL SYSTEM

PARTS LOCATION



SYSTEM DIAGRAM

T

B131349E03

FRONT POWER SEAT LUMBAR SWITCH

INSPECTION

1. INSPECT FRONT POWER SEAT LUMBAR SWITCH LH

(a) Measure the resistance between the terminals when the switch is operated.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
3 (B) - 4 (H)	HOLD	Below 1 Ω
1 (R) - 2 (E)	HOLD	Below 1 Ω
1 (R) - 2 (E)	OFF	Below 1 Ω
4 (H) - 5 (E)	OFF	Below 1 Ω
1 (R) - 3 (B)	RELEASE	Below 1 Ω
4 (H) - 5 (E)	RELEASE	Below 1 Ω

If the result is not as specified, replace the switch.

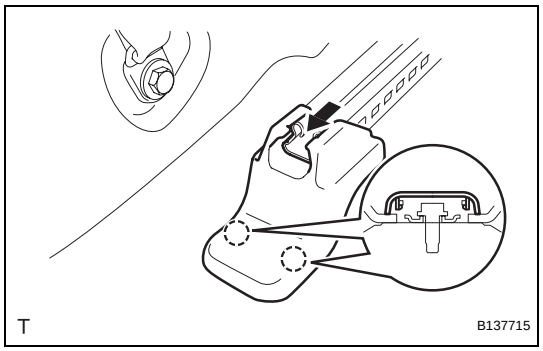
SE

REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

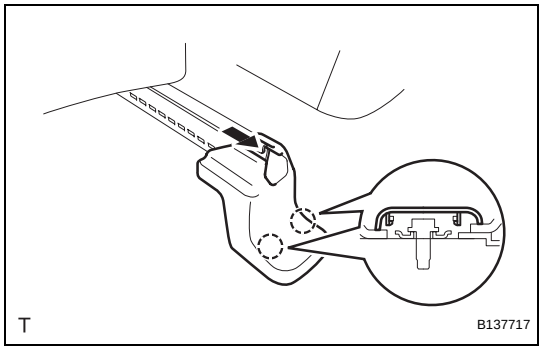


2. REMOVE FRONT SEAT HEADREST ASSEMBLY

3. REMOVE FRONT SEAT TRACK BRACKET OUTER COVER LH

(a) Lift up the seat track adjusting handle and move the seat to the foremost position.

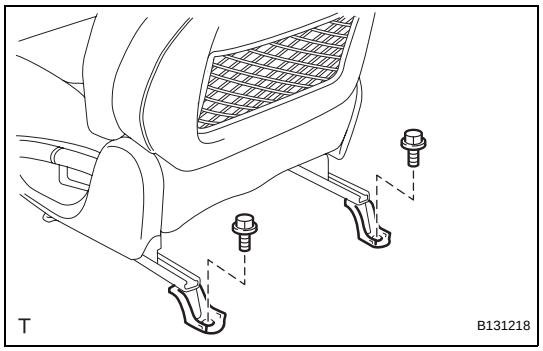
(b) Using a screwdriver, detach the 4 claws.
HINT:
Tape the screwdriver tip before use.



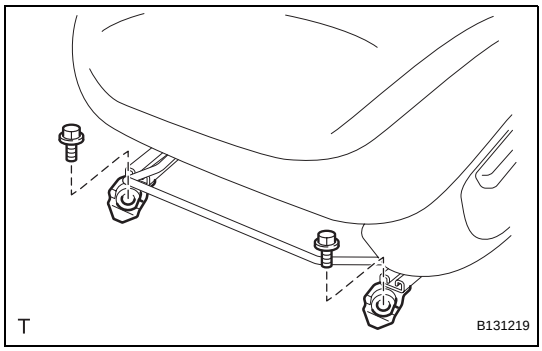
(c) Remove the outer cover in the direction indicated by the arrow in the illustration.

4. REMOVE FRONT SEAT TRACK BRACKET INNER COVER LH

(a) Using a screwdriver, detach the 2 claws.
HINT:
Tape the screwdriver tip before use.



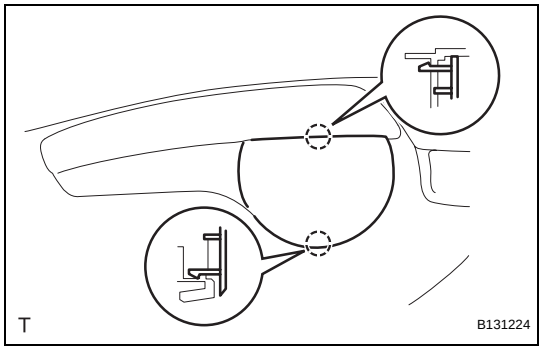
(b) Remove the inner cover in the direction indicated by the arrow in the illustration.



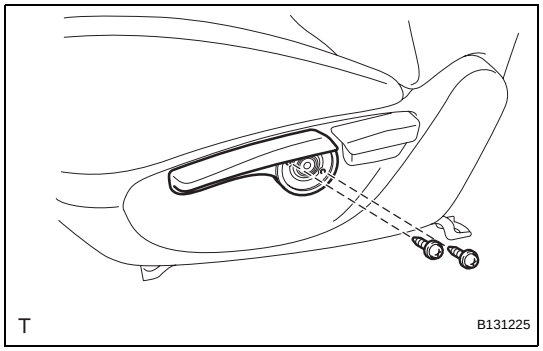
5. REMOVE FRONT SEAT ASSEMBLY

(a) Remove the 2 bolts on the rear side of the seat.

(b) Lift up the seat track adjusting handle and move the seat to the rearmost position.

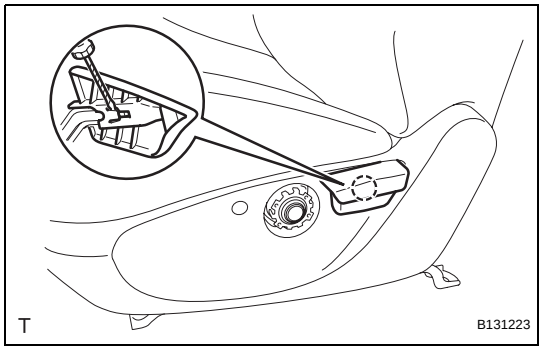


(c) Remove the 2 bolts on the front side of the seat.
(d) Lift up the seat track adjusting handle and move the seat to the center position. Also, operate the reclining adjuster release handle and move the seatback to the upright position.
(e) Disconnect the connector under the seat.
(f) Remove the seat.



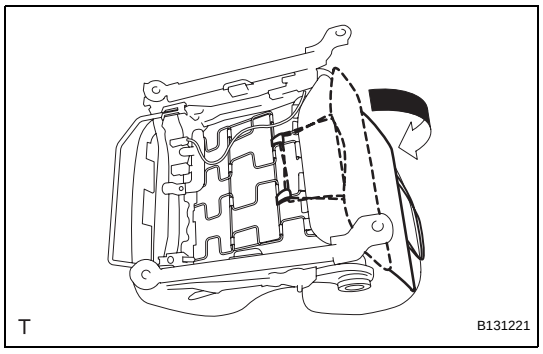
NOTICE:
Be careful not to damage the vehicle body.

DISASSEMBLY

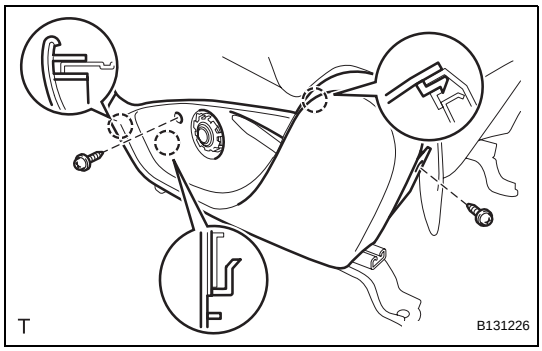


CAUTION:
Wear protective gloves. Sharp areas on the seat frame (with adjuster) may injure your hands.
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

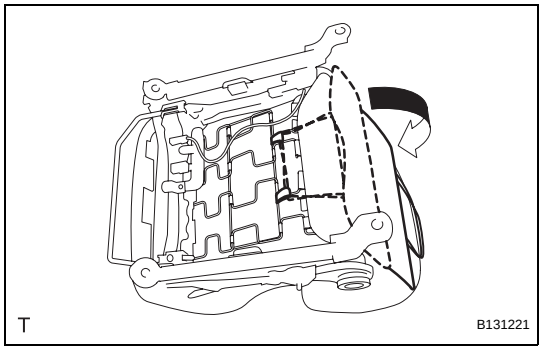
1. REMOVE VERTICAL ADJUSTER COVER LH (for Driver Side)
(a) Using a screwdriver, detach the 2 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.



2. REMOVE VERTICAL ADJUSTING HANDLE LH (for Driver Side)
(a) Remove the 2 screws and handle.

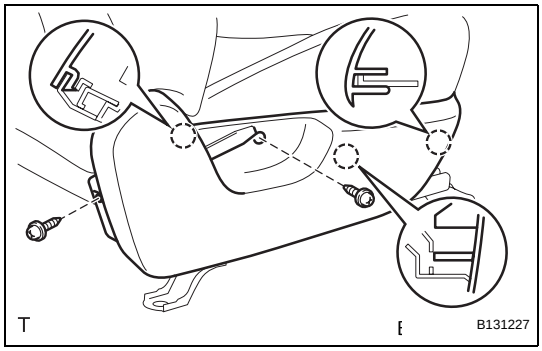


3. REMOVE RECLINING ADJUSTER RELEASE HANDLE LH (for Driver Side)
(a) Raise the reclining adjuster release handle to reveal the claw. Using a screwdriver, detach the claw and remove the release handle.
HINT:
Tape the screwdriver tip before use.

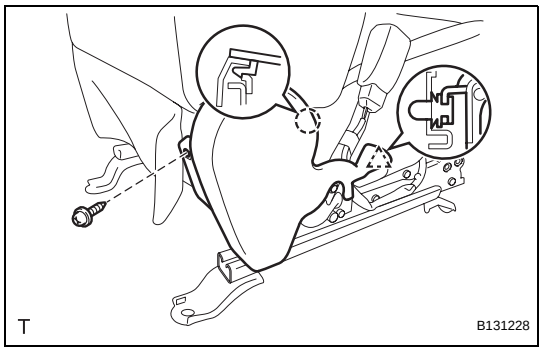


4. REMOVE RECLINING ADJUSTER RELEASE HANDLE RH (for Front Passenger Side)
HINT:
Use the same procedures described for the driver side.

5. REMOVE FRONT SEAT CUSHION SHIELD LH (for Driver Side)
(a) Disconnect the 2 rubber bands of the front seatback board or front seatback cover from the front seat frame (with adjuster).



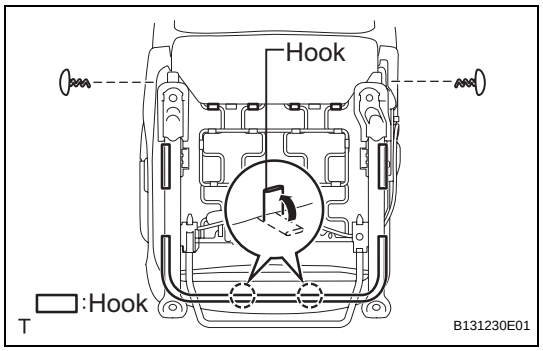
(b) Remove the 2 screws.
(c) Using a screwdriver, detach the 3 claws and remove the cushion shield.
HINT:
Tape the screwdriver tip before use.



6. REMOVE FRONT SEAT CUSHION SHIELD RH (for Front Passenger Side)

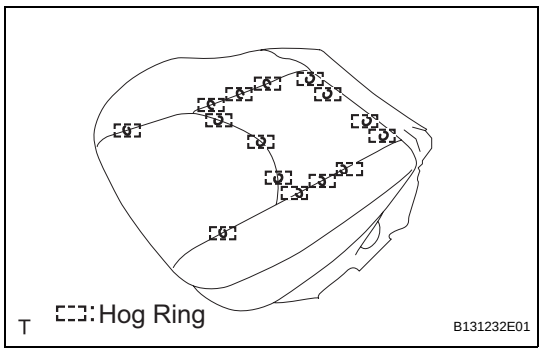
(a) Disconnect the 2 rubber bands of the front seatback board or front seatback cover from the front seat frame (with adjuster).

(b) Remove the 2 screws.
(c) Using a screwdriver, detach the 3 claws and remove the cushion shield.
HINT:
Tape the screwdriver tip before use.



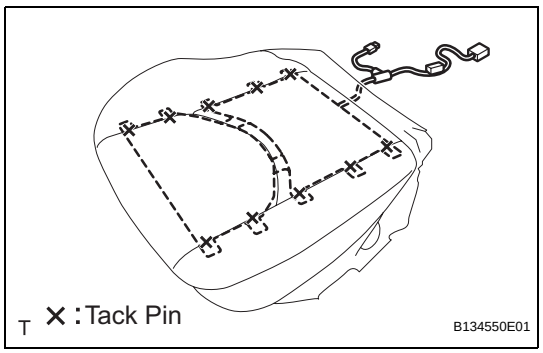
7. REMOVE FRONT SEAT CUSHION INNER SHIELD LH

(a) Remove the screw.
(b) Using a screwdriver, detach the claw and clip. Then remove the inner shield.
HINT:
Tape the screwdriver tip before use.



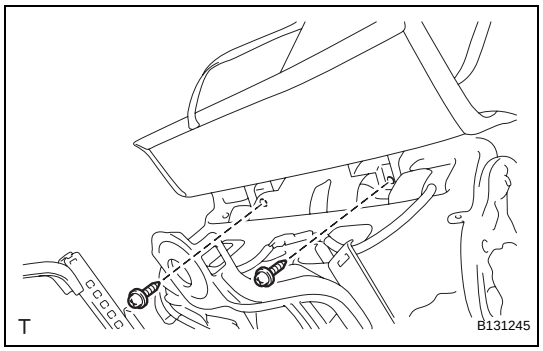
8. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH (See page SB-22)

9. REMOVE FRONT SEAT CUSHION COVER

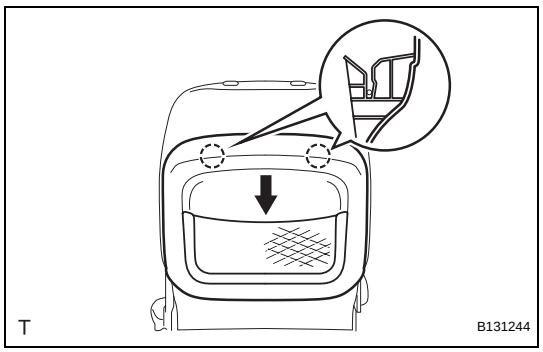


(a) w/ Seat Heater System:
Disconnect the connector.

(b) Using a clip remover, remove the 2 clips.
(c) Detach the 2 hooks on the seat cushion front side.
(d) Using a screwdriver, detach the hooks and remove the seat cushion cover (with pad).
HINT:
Tape the screwdriver tip before use.

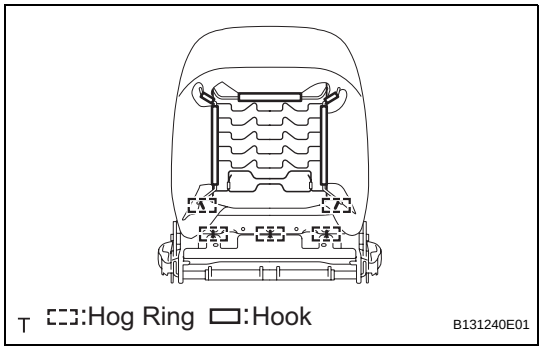


(e) Remove the 15 hog rings and seat cushion cover from the seat cushion pad.



10. REMOVE FRONT SEAT CUSHION HEATER (w/ Seat Heater System)

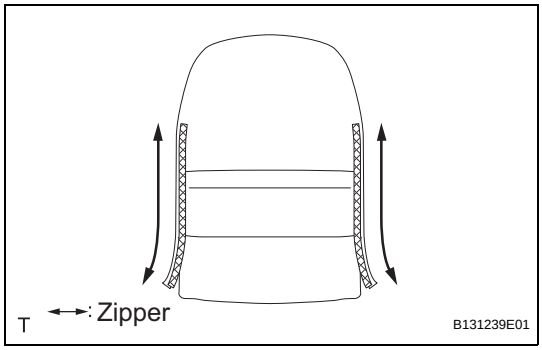
(a) Cut off the 10 tack pins which fasten the seat heater, and then remove the seat cushion heater from the seat cushion cover.
NOTICE:
Be careful not to damage the seat cushion cover and seat heater.



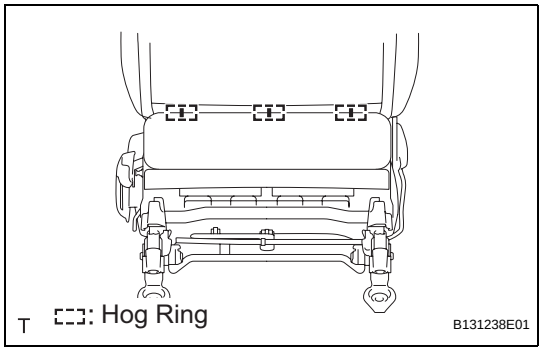
11. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY LH (w/ Seatback Board)

(a) Open the lower part of the seatback board. Then remove the 2 screws.

(b) Pull the seatback board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the seatback board.

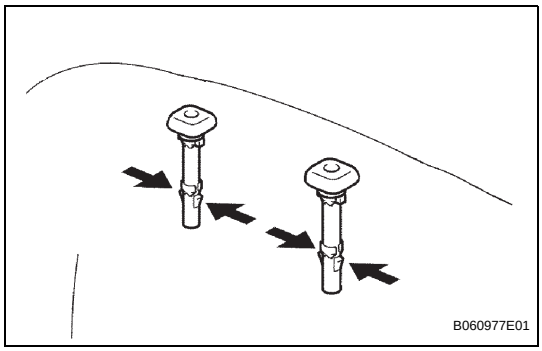


SE

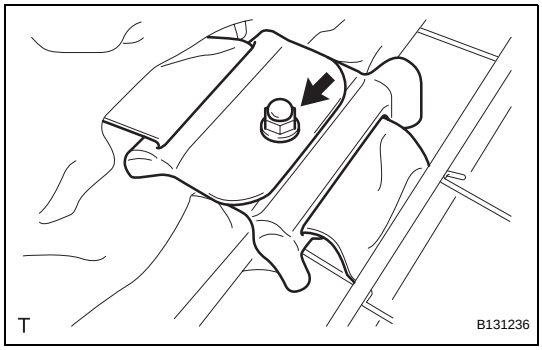


12. REMOVE FRONT SEATBACK COVER

(a) w/ Seatback Board:
Remove the 5 hog rings

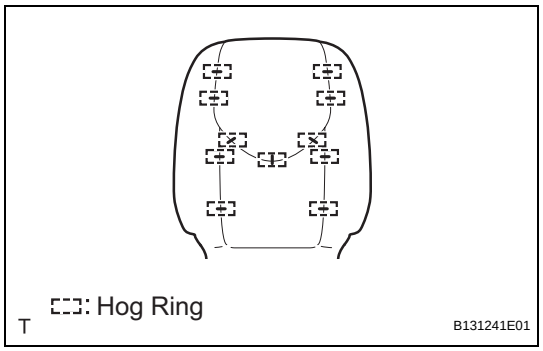


(b) w/ Seatback Board:
Using a screwdriver, detach the hooks.
HINT:
Tape the screwdriver tip before use.

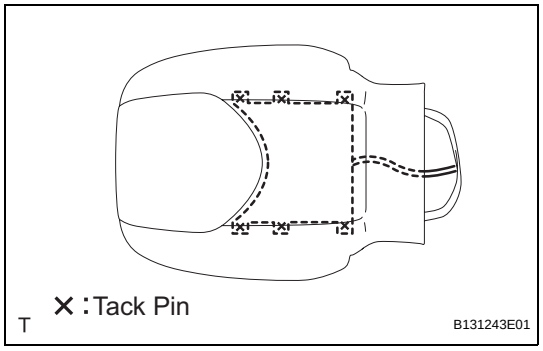


(c) w/o Seatback Board:
Open the 2 zippers.

(d) w/o Seatback Board:
Lift up the seatback cover and remove the 3 hog rings.



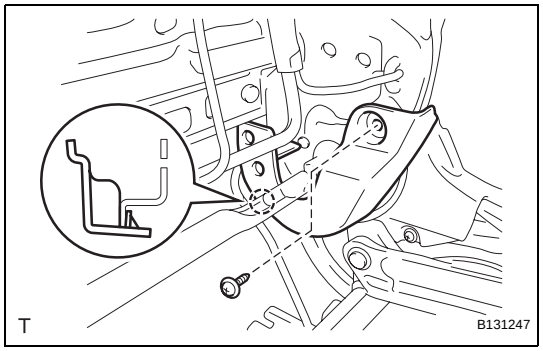
(e) Detach the 4 claws and remove the 2 headrest supports.



(f) w/ Front Seat Side Airbag:
Remove the nut and move the 2 seatback cover brackets.

(g) Remove the seatback cover (with pad) from the seat frame (with adjuster).

(h) Remove the 11 hog rings and seatback cover from the seatback pad.



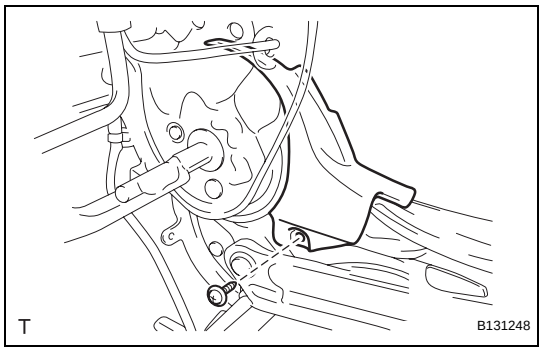
13. REMOVE FRONT SEATBACK HEATER (w/ Seat Heater System)

(a) Cut off the 6 tack pins which fasten the seat heater, and then remove the seat cushion heater from the seat cushion cover.

NOTICE:

Be careful not to damage the seat cushion cover and seat heater.

14. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER LH



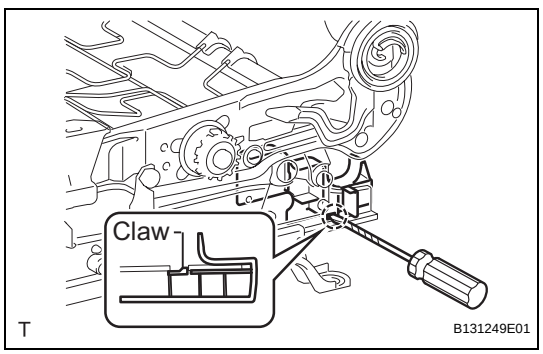
(a) Remove the screw.

(b) Detach the claw and remove the inside cover.

15. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER RH

HINT:

Use the same procedures described for the LH side.



16. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER LH

(a) Remove the screw and inside cover.

17. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER RH

(a) Remove the screw and inside cover.

18. REMOVE FRONT SEAT CUSHION LOWER SHIELD LH

(a) Using a screwdriver, detach the claw and remove the lower shield.

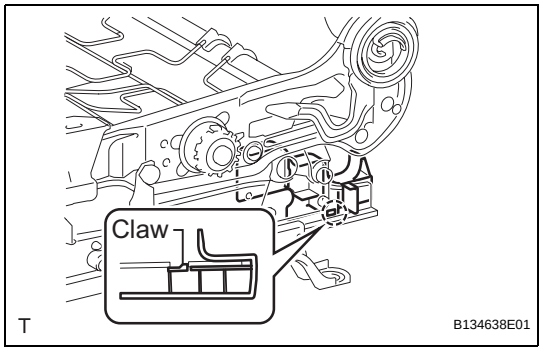
HINT:

Tape the screwdriver tip before use.

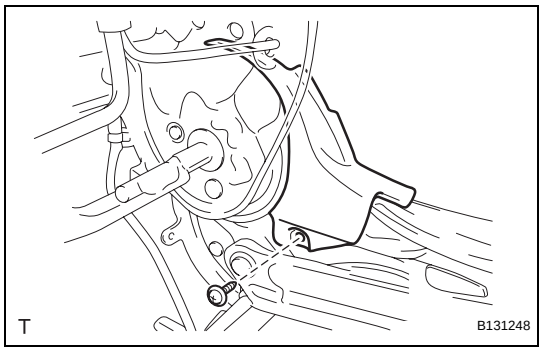
19. REMOVE FRONT SEAT CUSHION LOWER SHIELD RH

HINT:

Use the same procedures described for the LH side.

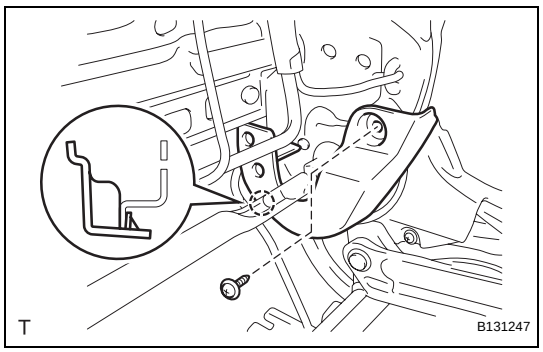


20. REMOVE SEAT POSITION AIRBAG SENSOR (for Driver Side) (See page RS-390)



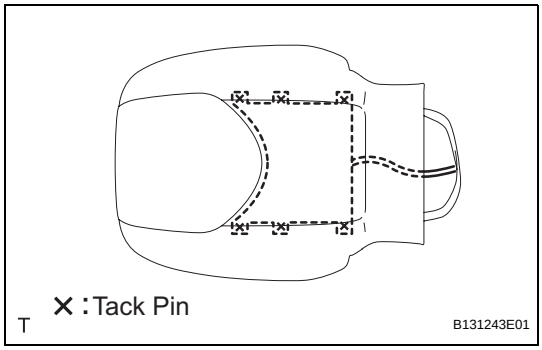
21. REMOVE OCCUPANT CLASSIFICATION ECU (for Front Passenger Side) (See page RS-393)

REASSEMBLY

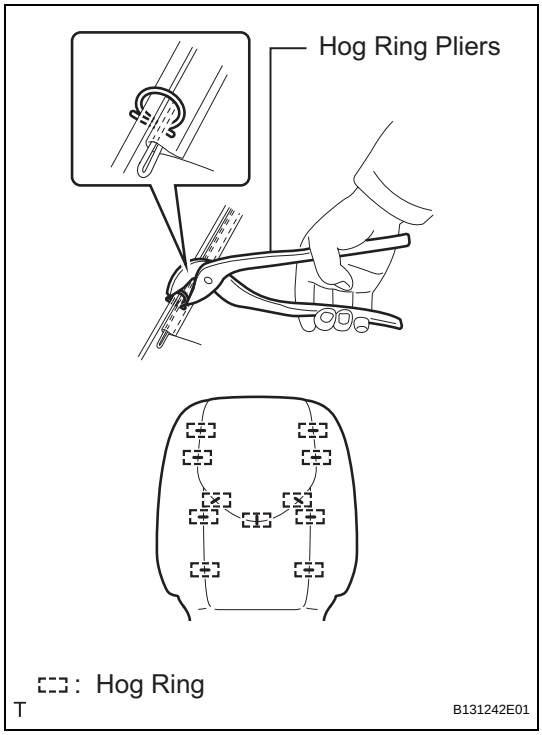


CAUTION:
Wear protective gloves. Sharp areas on the seat frame (with adjuster) may injure your hands.
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL OCCUPANT CLASSIFICATION ECU (for Driver Side) (See page RS-394)**
2. **INSTALL SEAT POSITION AIRBAG SENSOR (for Driver Side) (See page RS-390)**
3. **INSTALL FRONT SEAT CUSHION LOWER SHIELD LH**
   (a) Attach the claw to install the lower shield.
4. **INSTALL FRONT SEAT CUSHION LOWER SHIELD RH**
   HINT:
   Use the same procedures described for the LH side.

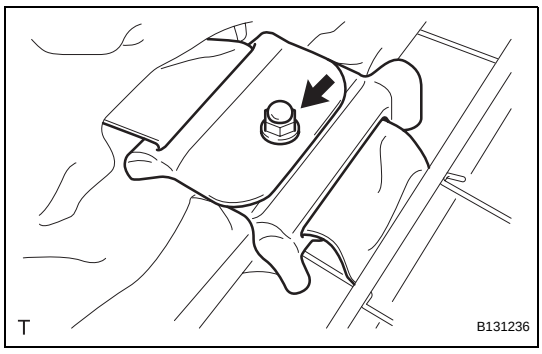


5. **INSTALL RECLINING ADJUSTER UPPER INSIDE COVER LH**
   (a) Install the inside cover with the screw.
6. **INSTALL RECLINING ADJUSTER UPPER INSIDE COVER RH**
   (a) Install the inside cover with the screw.

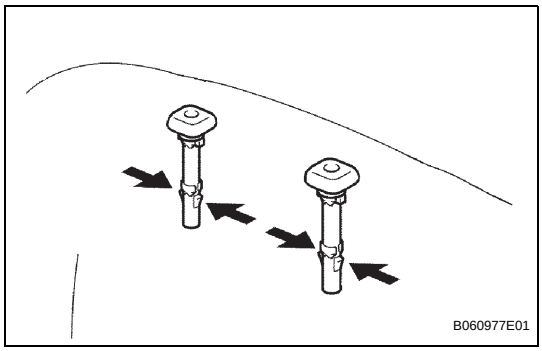


7. **INSTALL RECLINING ADJUSTER LOWER INSIDE COVER LH**
   (a) Attach the claw to install the inside cover.
   (b) Install the screw.
8. **INSTALL RECLINING ADJUSTER LOWER INSIDE COVER RH**
   HINT:
   Use the same procedures described for the LH side.

9. INSTALL FRONT SEATBACK HEATER (w/ Seat Heater System)

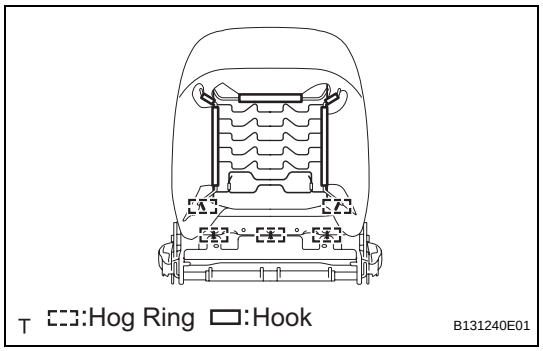


(a) Using a tacker, install the seatback heater to the end of the seat cover with 6 new tack pins.
NOTICE:
Do not substitute other metal parts for tack pins.



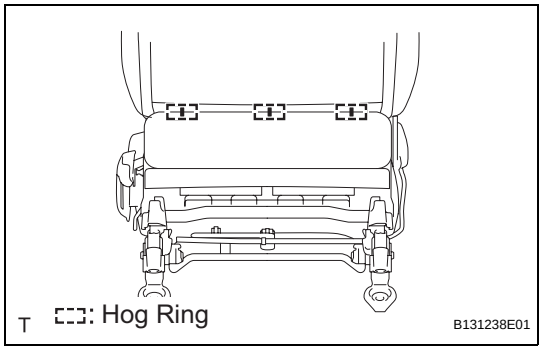
10. INSTALL FRONT SEATBACK COVER
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

(a) Using hog ring pliers, install the seatback cover to the seatback pad with 11 new hog rings.

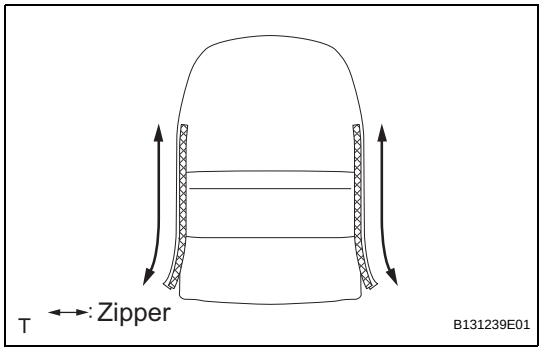


(b) Install the seatback cover (with pad) to the seat frame (with adjuster).

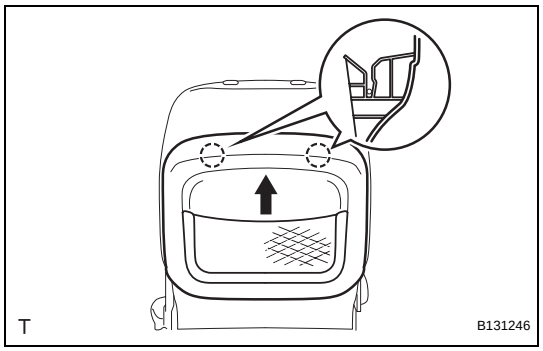
(c) w/ Front Seat Side Airbag:
Fully cover the airbag with the 2 seatback cover brackets and install the nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
CAUTION:
- **For vehicles with side airbags, the seatback cover must be securely installed. Otherwise, the side airbags may not deploy properly.**
- **Make sure that the strap is not twisted after installing the bracket.**
- **Install the bracket securely.**



(d) Attach the 4 claws to install the 2 headrest supports.

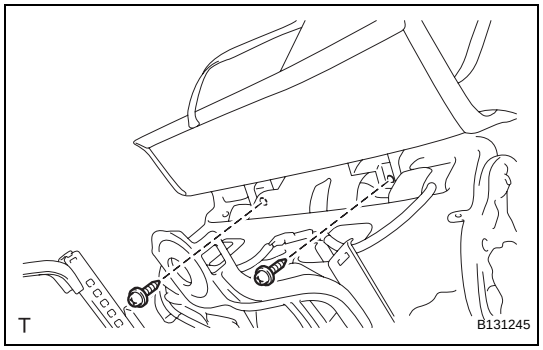


(e) w/ Seatback Board:
Attach the hooks.

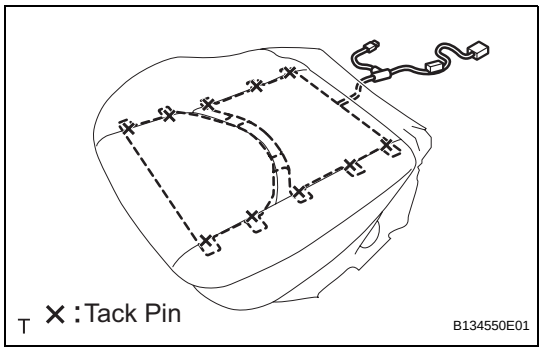


(f) w/ Seatback Board:
Using hog ring pliers, install 5 new hog rings.

(g) w/o Seatback Board:
Using hog ring pliers, install 3 new hog rings.

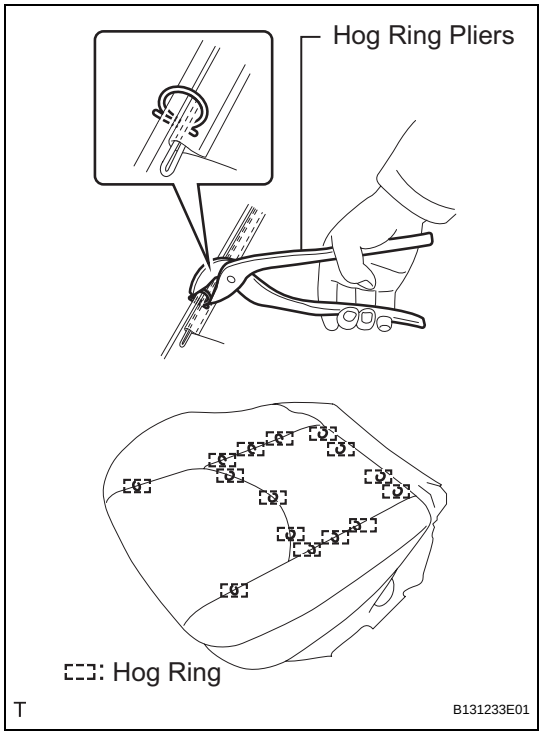


(h) w/o Seatback Board:
Close the 2 zippers.



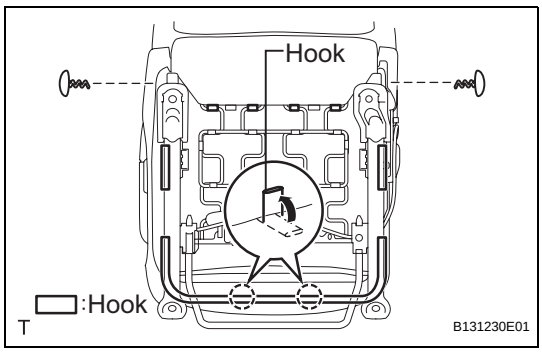
11. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY LH (w/ Seatback Board)

(a) Push the seatback board in the direction indicated by the arrow in the illustration to attach the 2 claws.



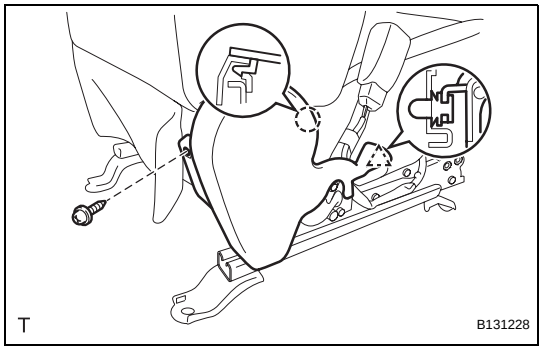
(b) Open the lower part of the seatback board. Then install the seatback board with the 2 screws.

12. INSTALL FRONT SEAT CUSHION HEATER (w/ Seat Heater System)



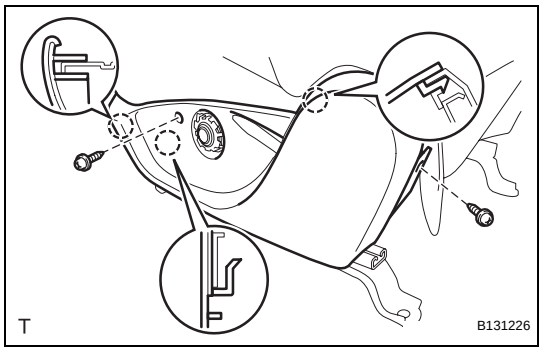
(a) Using a tacker, install the seat cushion heater to the end of the seat cover with 10 new tack pins.
NOTICE:
Do not substitute other metal parts for tack pins.

13. INSTALL FRONT SEAT CUSHION COVER



(a) Using hog ring pliers, install the seat cushion cover to the seat cushion pad with 15 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

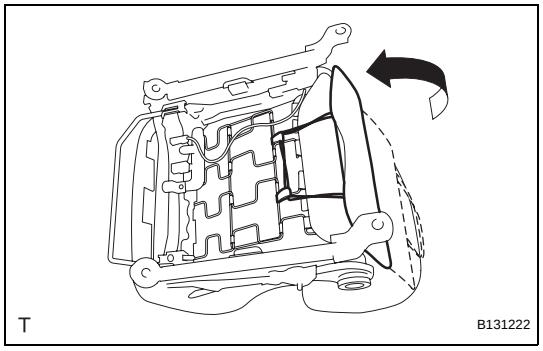
(b) Install the seat cushion cover (with pad) to the seat frame (with adjuster).



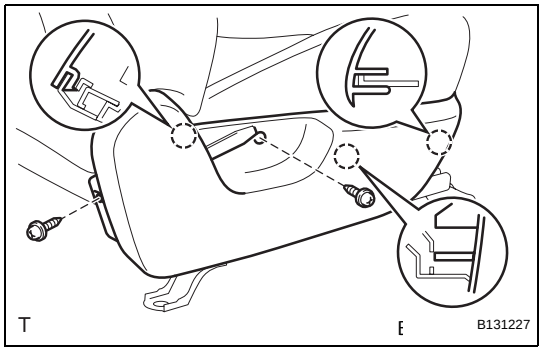
(c) Attach the hooks and install the 2 clips.
(d) w/ Seat Heater System:
Connect the connector.

14. INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-23)

15. INSTALL FRONT SEAT CUSHION INNER SHIELD LH



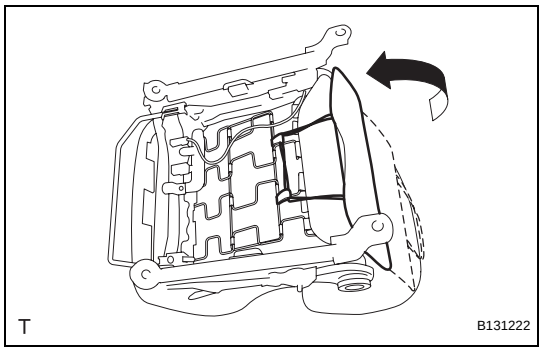
(a) Attach the clip and claw to install the inner shield.
(b) Install the screw.



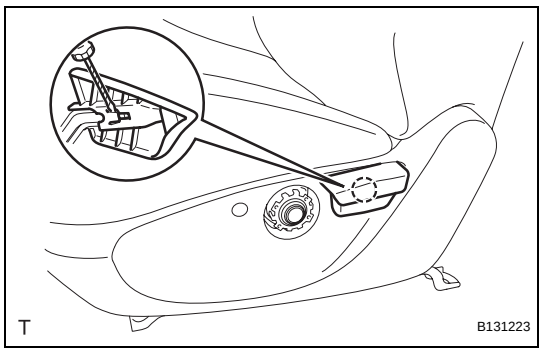
16. INSTALL FRONT SEAT CUSHION SHIELD LH (for Driver Side)

(a) Attach the 3 claws to install the cushion shield.

(b) Install the 2 screws.



(c) Connect the 2 rubber bands of the front seatback board or front seatback cover to the seat frame (with adjuster).

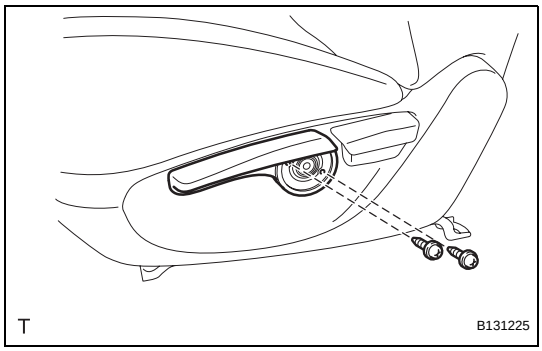


17. INSTALL FRONT SEAT CUSHION SHIELD RH (for Front Passenger Side)

(a) Attach the 3 claws to install the cushion shield.

(b) Install the 2 screws.

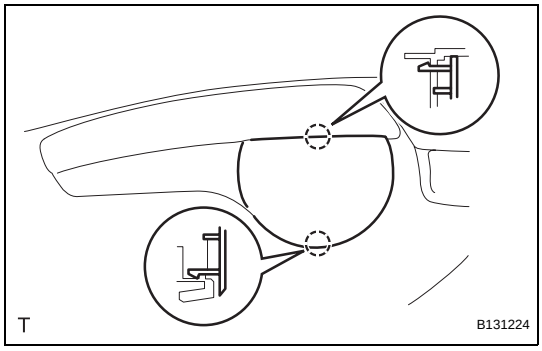
(c) Connect the 2 rubber bands of the front seatback board or front seatback cover to the seat frame (with adjuster).



18. INSTALL RECLINING ADJUSTER RELEASE HANDLE LH (for Driver Side)

(a) Attach the claw to install the release handle.

19. INSTALL RECLINING ADJUSTER RELEASE HANDLE RH (for Front Passenger Side)



HINT:

Use the same procedures described for the driver side.

20. INSTALL VERTICAL ADJUSTING HANDLE (for Driver Side)

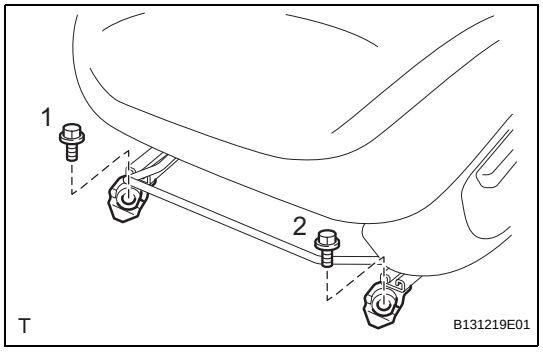
(a) Install the handle with the 2 screws.

21. INSTALL VERTICAL ADJUSTER COVER LH (for Driver Side)

(a) Attach the 2 claws to install the cover.

INSTALLATION

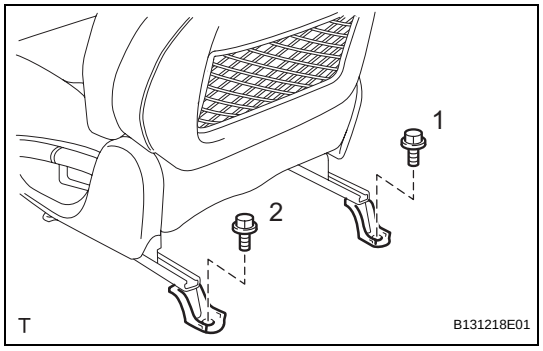
HINT:



- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the RH side.

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the seat in the cabin.
NOTICE:
Be careful not to damage the vehicle body.

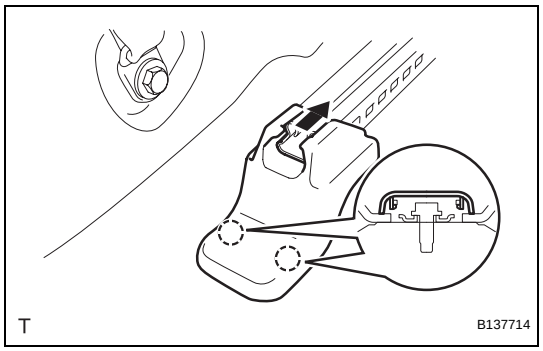


(b) Connect the connector under the seat.

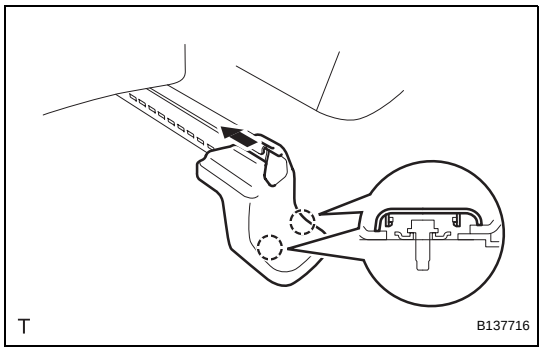
(c) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(d) Tighten the 2 bolts on the front side of the seat.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

(e) Lift up the seat track adjusting handle and move the seat to the foremost position.



(f) Tighten the 2 bolts on the rear side of the seat.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

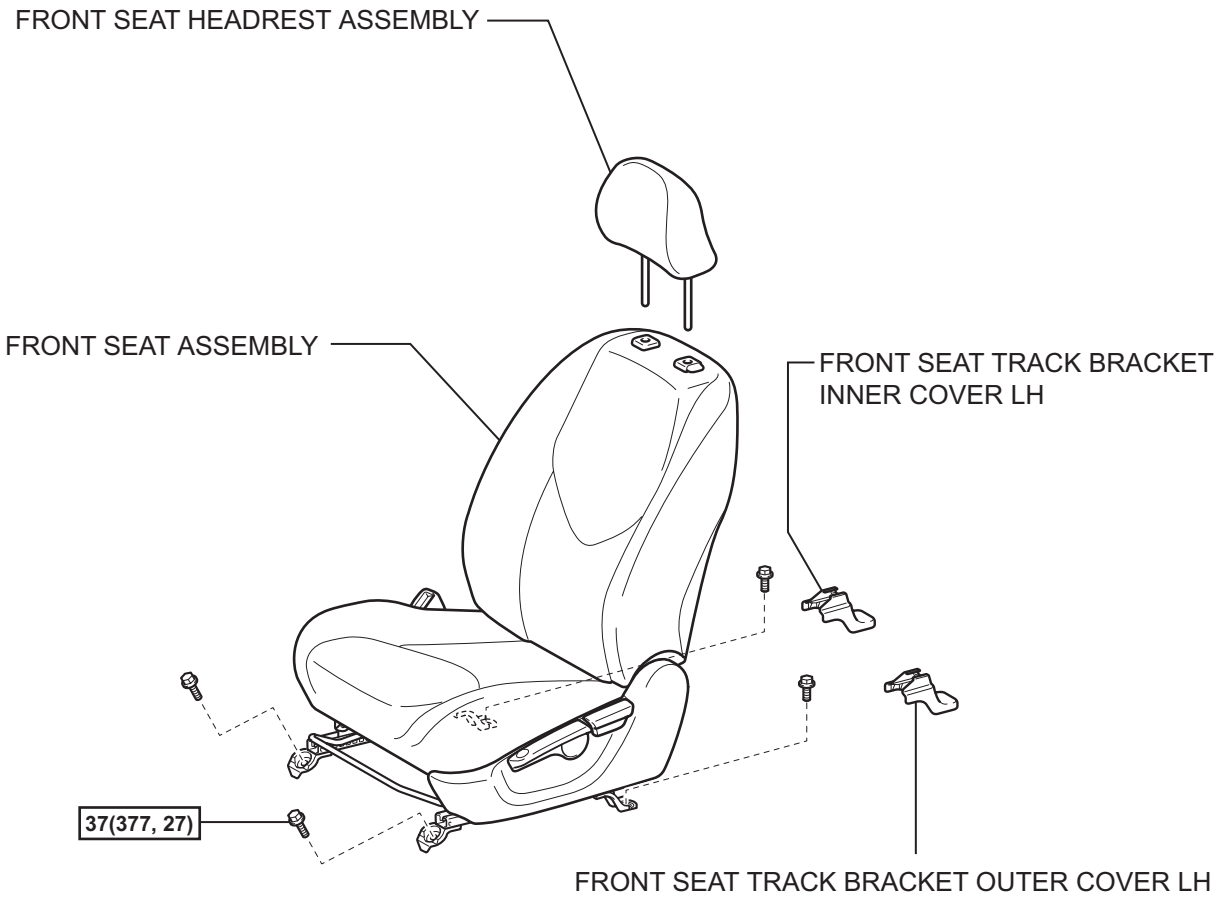


2. INSPECT AND ADJUST SEAT SLIDE ADJUSTER LOCKS

(a) During sliding operation of the front seat, check that the left and right adjusters move together smoothly and lock simultaneously.
If the seat adjusters do not lock simultaneously, loosen the seat fixation bolts to adjust the adjuster's position.

3. INSTALL FRONT SEAT TRACK BRACKET OUTER COVER LH

(a) Install the outer cover in the direction indicated by the arrow in the illustration and attach the 2 claws.



SE

4. **INSTALL FRONT SEAT TRACK BRACKET INNER COVER LH**
   (a) Install the inner cover in the direction indicated by the arrow in the illustration and attach the 2 claws.
5. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
7. **CHECK SRS WARNING LIGHT (w/ Front Seat Side Airbag)**
   (a) Check the SRS warning light (see page RS-37).
8. **INSPECT FRONT SEAT ASSEMBLY**
   (a) for Passenger Side:
   Perform the zero point calibration and sensitivity check (see page RS-241).
   (b) w/ Seat Heater System:
   Check the seat heater operation.
   (1) Turn the ignition switch on (IG).
   (2) Push the seat heater switch ON.
   (3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

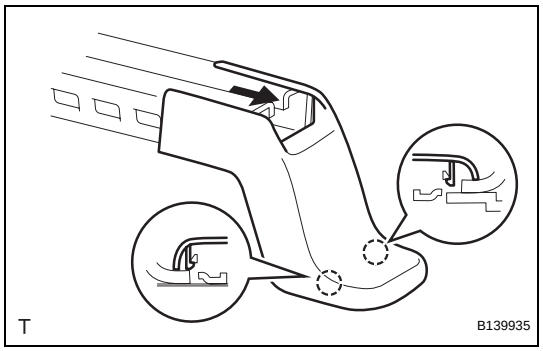
REMOVAL

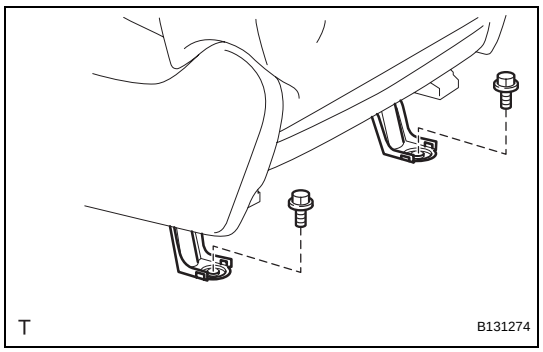
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the RH side.

1. REMOVE FRONT SEAT HEADREST ASSEMBLY



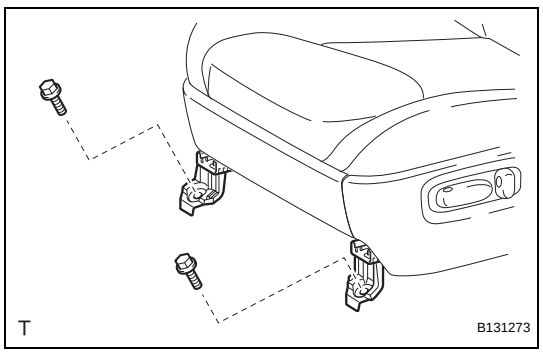
2. REMOVE FRONT SEAT ASSEMBLY

(a) Operate the power seat switch knob and move the seat to the foremost position.



(b) Using a screwdriver, detach the 2 claws.
HINT:
Tape the screwdriver tip before use.

(c) Remove the front seat track bracket outer cover in the direction indicated by the arrow in the illustration.



(d) Using a screwdriver, detach the 2 claws.
HINT:
Tape the screwdriver tip before use.

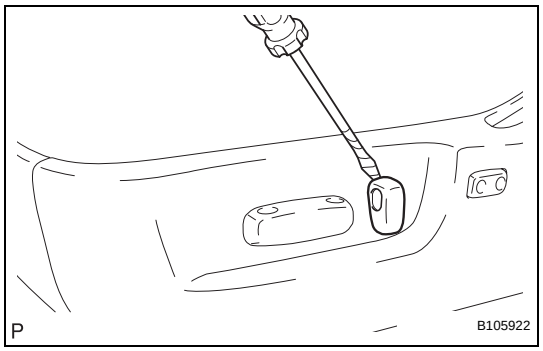
(e) Remove the front seat track bracket inner cover in the direction indicated by the arrow in the illustration.

(f) Remove the 2 bolts on the rear side of the seat.

(g) Operate the power seat switch knob and move the seat to the rearmost position.

(h) Remove the 2 bolts on the front side of the seat.

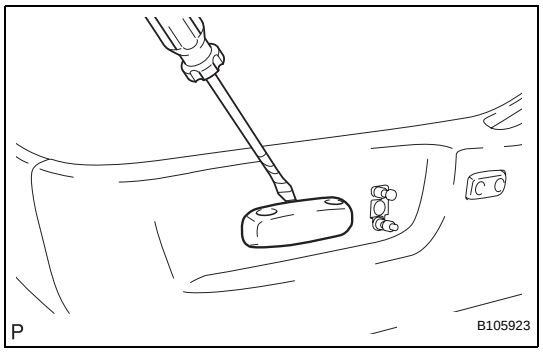
(i) Operate the power seat switch knob and move the seat to the center position. Then, operate the power seat switch knob and move the seatback to the upright position.



SE

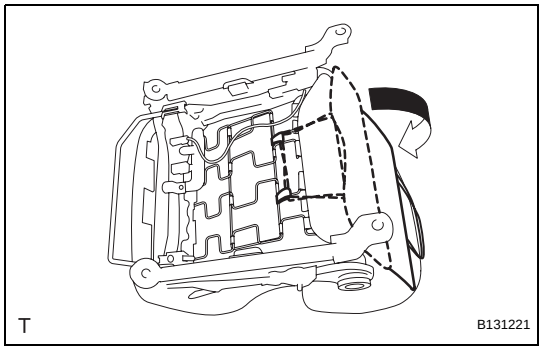
(j) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

(k) Disconnect the connectors under the seat. Then remove the seat.



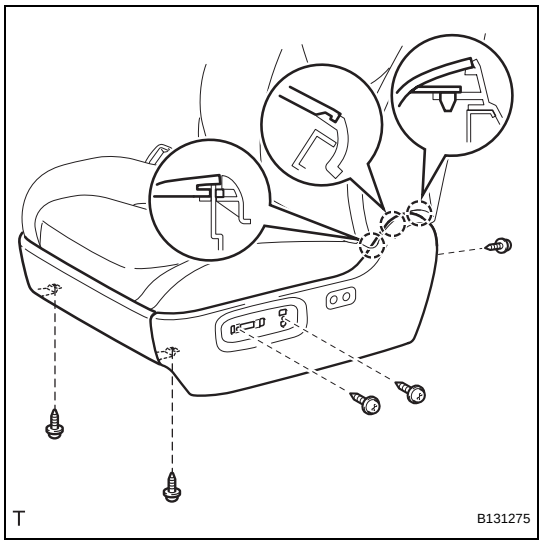
DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seat frame (with adjuster) may injure your hands.



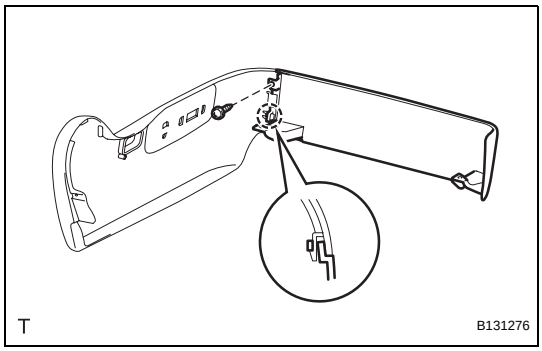
1. REMOVE RECLINING POWER SEAT SWITCH KNOB

(a) Using a screwdriver, detach the knob.
HINT:
Tape the screwdriver tip before use.

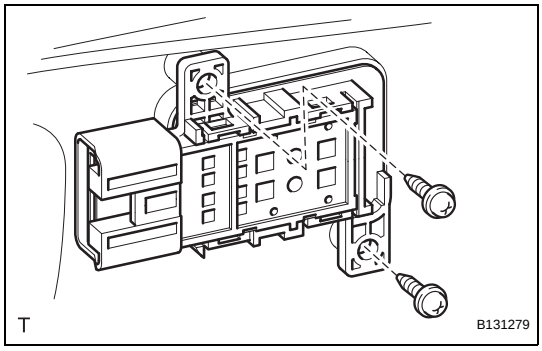


2. REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

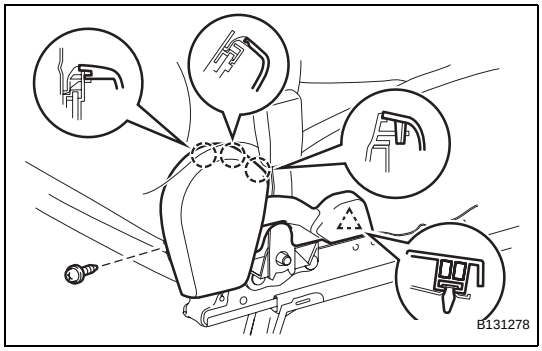
(a) Using a screwdriver, detach the knob.
HINT:
Tape the screwdriver tip before use.



3. REMOVE FRONT SEAT CUSHION SHIELD LH

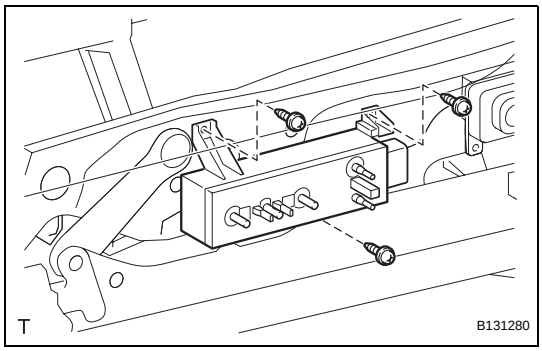


(a) Disconnect the 2 rubber bands of the front seatback board from the front seat frame (with adjuster).

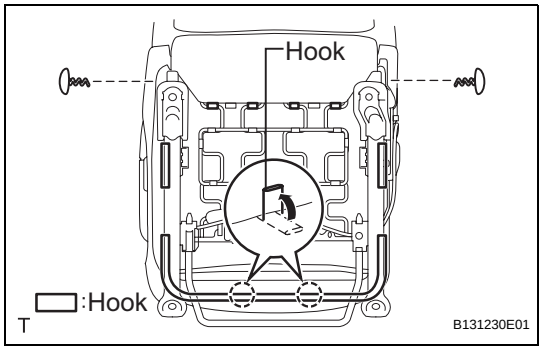


(b) Remove the 5 screws.
(c) Using a screwdriver, detach the 3 claws and remove the cushion shield (with front No. 1 seat cushion inner shield).
HINT:
Tape the screwdriver tip before use.
(d) Disconnect the connector from the front power seat lumbar switch.

(e) Remove the front No. 1 seat cushion inner shield from the cushion shield.
  (1) Remove the screw.
  (2) Using a screwdriver, detach the claw and remove the inner shield.
  HINT:
  Tape the screwdriver tip before use.

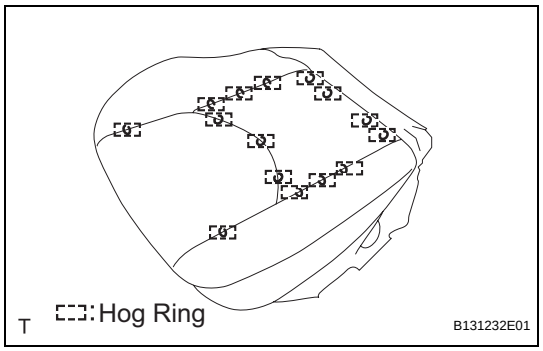


4. REMOVE FRONT POWER SEAT LUMBAR SWITCH
(a) Remove the 2 screws and switch.

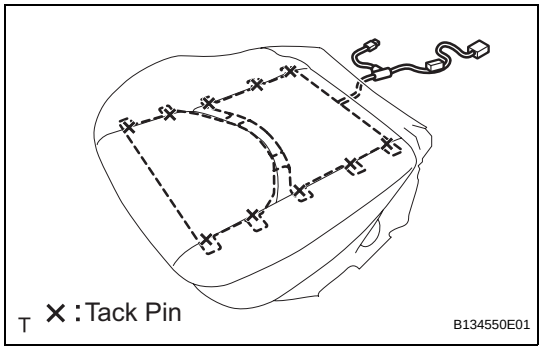


5. REMOVE FRONT SEAT CUSHION INNER SHIELD LH
(a) Remove the screw.
(b) Using a screwdriver, detach the 3 claws.
  HINT:
  Tape the screwdriver tip before use.
(c) Using a clip remover, detach the clip and remove the inner shield.

6. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH
(See page SB-22)



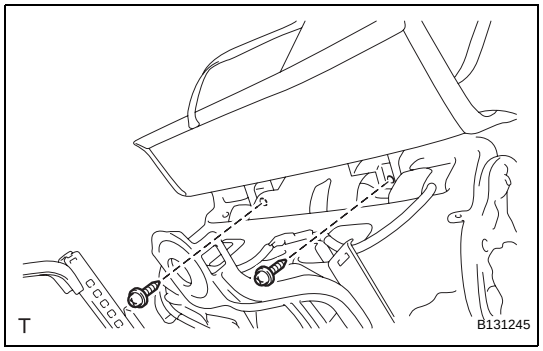
7. REMOVE FRONT POWER SEAT SWITCH
(a) Remove the 3 screws.
(b) Disconnect the connector and remove the switch.



8. REMOVE FRONT SEAT CUSHION COVER
(a) w/ Seat Heater System:
  Disconnect the connector.

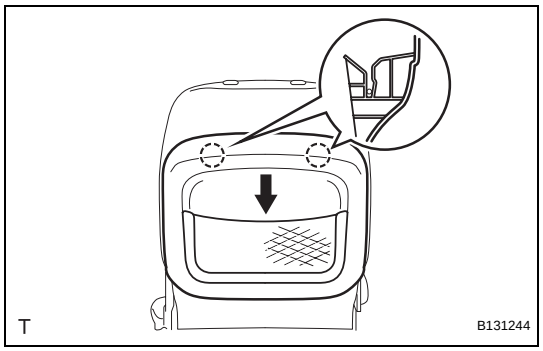
(b) Using a clip remover, remove the 2 clips.
(c) Detach the 2 hooks on the seat cushion front side.
(d) Using a screwdriver, detach the hooks and remove the seat cushion cover (with pad).
  HINT:
  Tape the screwdriver tip before use.

(e) Remove the 15 hog rings and seat cushion cover from the seat cushion pad.



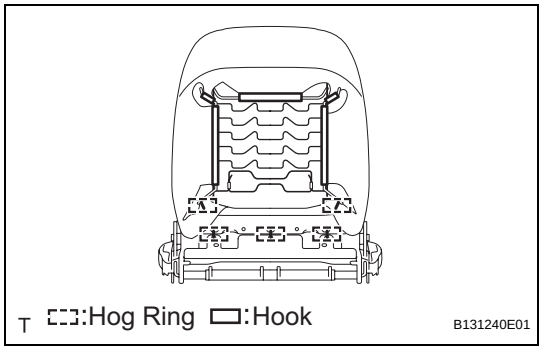
9. REMOVE FRONT SEAT CUSHION HEATER (w/ Seat Heater System)

(a) Cut off the 10 tack pins which fasten the seat heater, and then remove the seat cushion heater from the seat cushion cover.



NOTICE:

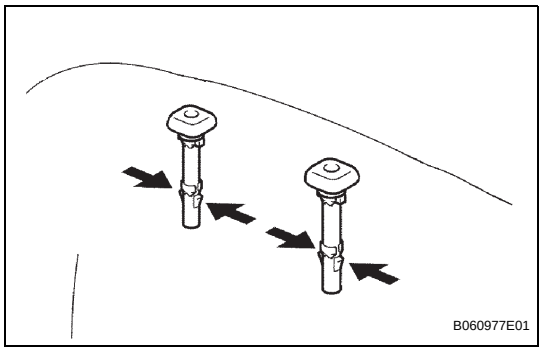
Be careful not to damage the seat cushion cover and seat heater.



10. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY LH

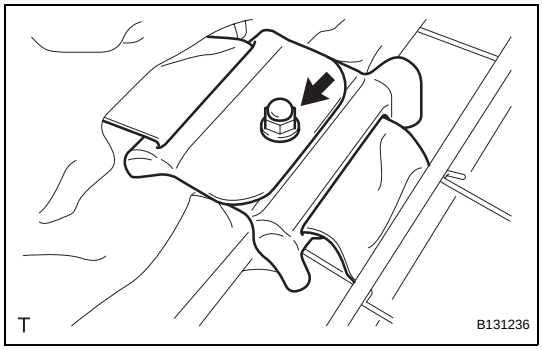
(a) Open the lower part of the seatback board. Then remove the 2 screws.

(b) Pull the seatback board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the seatback board.



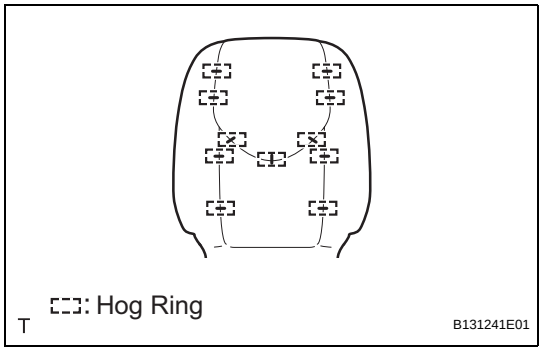
11. REMOVE FRONT SEATBACK COVER

(a) Remove the 5 hog rings.

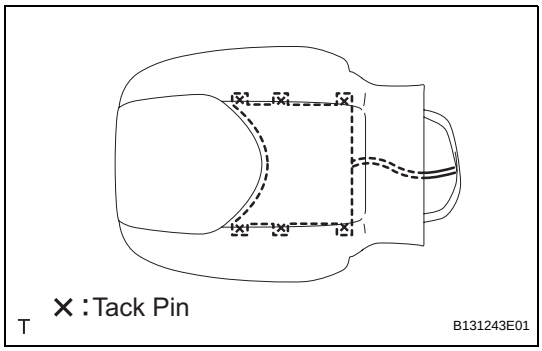


(b) Using a screwdriver, detach the hooks.

HINT:

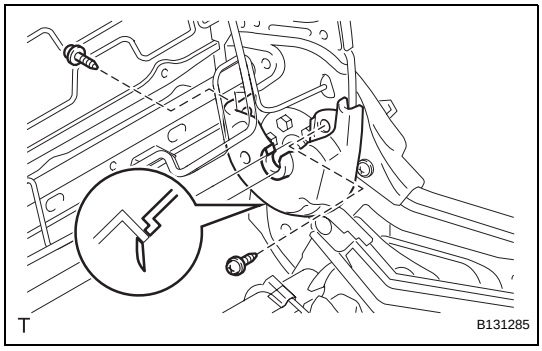


Tape the screwdriver tip before use.



(c) Detach the 4 claws and remove the 2 headrest supports.

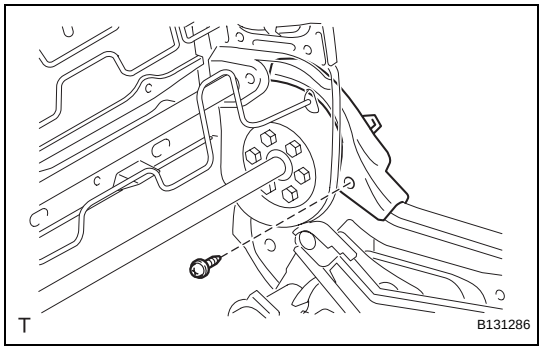
(d) w/ Front Seat Side Airbag:
Remove the nut and move the 2 seatback cover brackets.
(e) Remove the seatback cover (with pad) from the seat frame (with adjuster).



(f) Remove the 11 hog rings and seatback cover from the seatback pad.

12. REMOVE FRONT SEATBACK HEATER (w/ Seat Heater System)

(a) Cut off the 6 tack pins which fasten the seat heater, and then remove the seat cushion heater from the seat cushion cover.
NOTICE:
Be careful not to damage the seat cushion cover and seat heater.

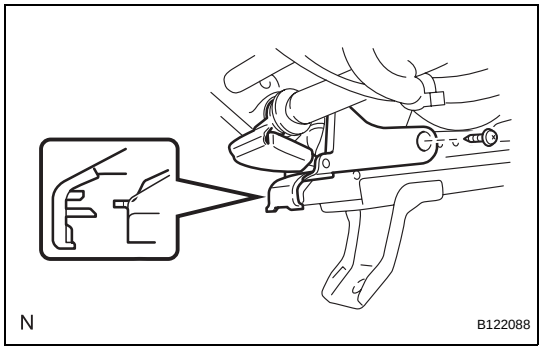


13. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER LH

(a) Remove the 2 screws.
(b) Detach the claw and remove the inside cover.

14. REMOVE RECLINING ADJUSTER LOWER INSIDE COVER RH

HINT:
Use the same procedures described for the LH side.



15. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER LH

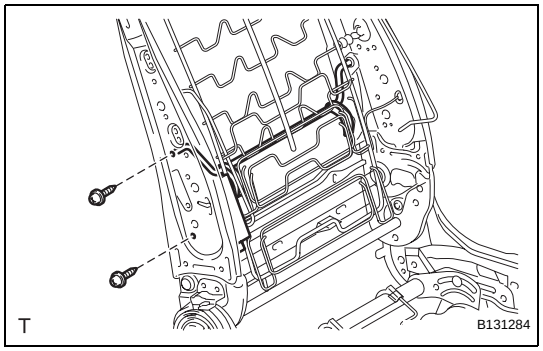
(a) Remove the screw and inside cover.

16. REMOVE RECLINING ADJUSTER UPPER INSIDE COVER RH

(a) Remove the screw and inside cover.

SE

17. REMOVE FRONT SEAT CUSHION LOWER SHIELD LH



(a) Remove the screw.

(b) Detach the hook of the lower shield and remove the lower shield.

18. REMOVE FRONT SEAT CUSHION LOWER SHIELD RH

HINT:

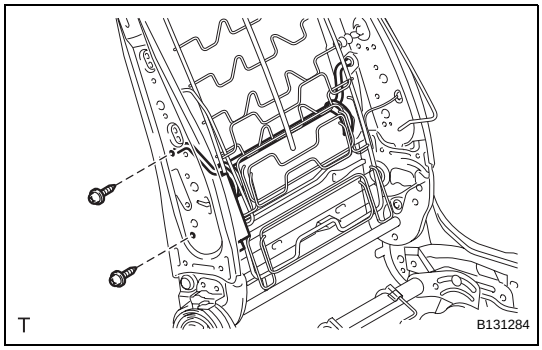
Use the same procedures described for the LH side.

19. REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY

(a) Disconnect the connector.

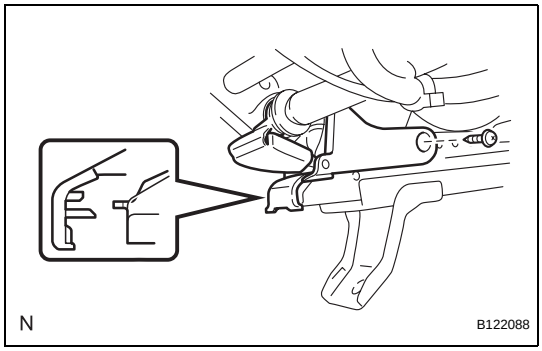
(b) Remove the 2 screws and lumbar support adjuster.

20. REMOVE SEAT POSITION AIRBAG SENSOR (See page RS-390)



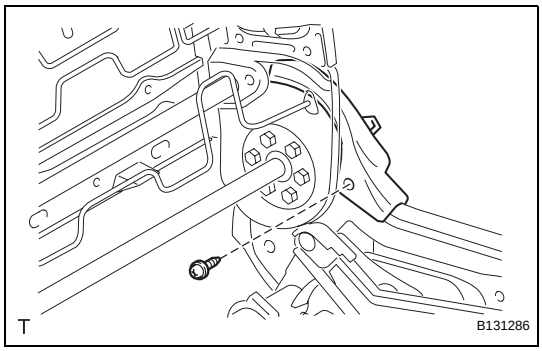
21. REMOVE FRONT SEAT WIRE

SE

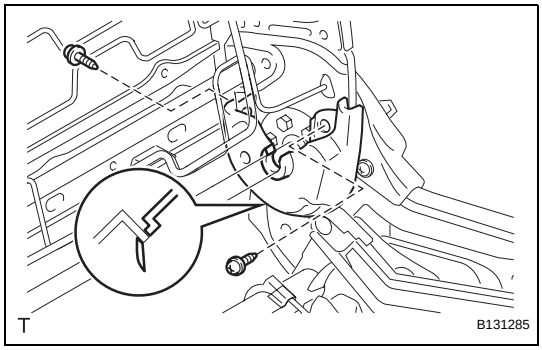


REASSEMBLY

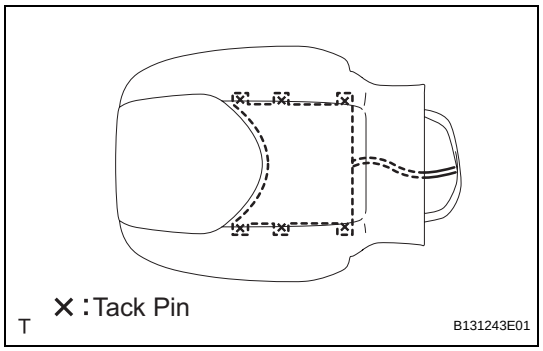
CAUTION:
Wear protective gloves. Sharp areas on the seat frame (with adjuster) may injure your hands.



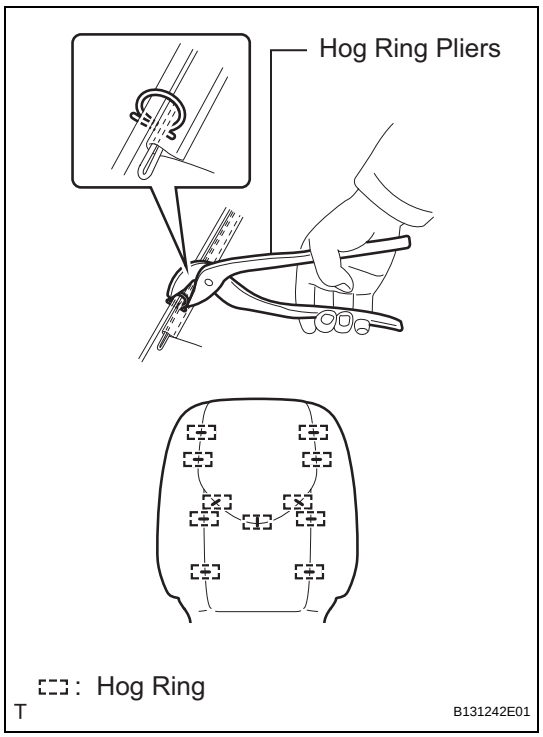
1. **INSTALL FRONT SEAT WIRE**
2. **INSTALL SEAT POSITION AIRBAG SENSOR (See page RS-390)**
3. **INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY**
   (a) Install the lumbar support adjuster with the 2 screws.
   (b) Connect the connector.



4. **INSTALL FRONT SEAT CUSHION LOWER SHIELD LH**
   (a) Attach the hook of the lower shield.
   (b) Install the lower shield with the screw.
5. **INSTALL FRONT SEAT CUSHION LOWER SHIELD RH**
   HINT:
   Use the same procedures described for the LH side.

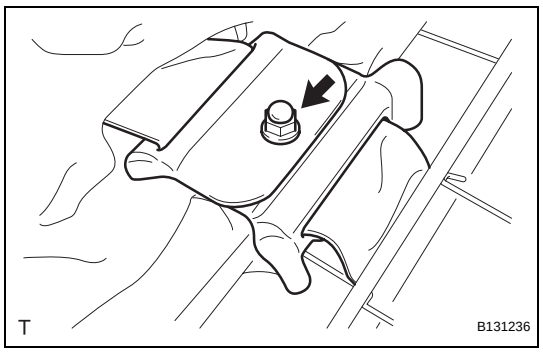


6. **INSTALL RECLINING ADJUSTER UPPER INSIDE COVER LH**
   (a) Install the inside cover with the screw.
7. **INSTALL RECLINING ADJUSTER UPPER INSIDE COVER RH**
   (a) Install the inside cover with the screw.

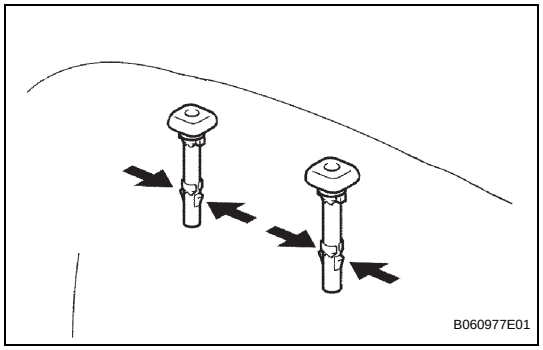


8. **INSTALL RECLINING ADJUSTER LOWER INSIDE COVER LH**
   (a) Attach the claw to install the inside cover.
   (b) Install the 2 screws.
9. **INSTALL RECLINING ADJUSTER LOWER INSIDE COVER RH**
   HINT:
   Use the same procedures described for the LH side.

10. INSTALL FRONT SEATBACK HEATER (w/ Seat Heater System)

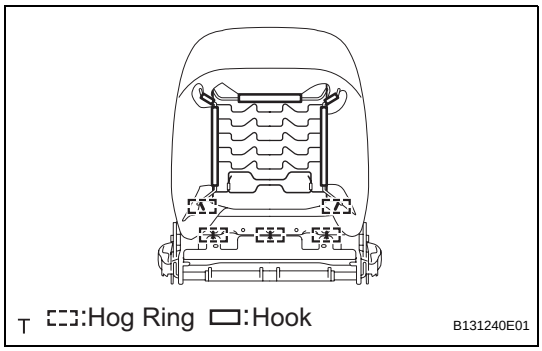


(a) Using a tacker, install the seatback heater to the end of the seat cover with 6 new tack pins.
NOTICE:
Do not substitute other metal parts for tack pins.



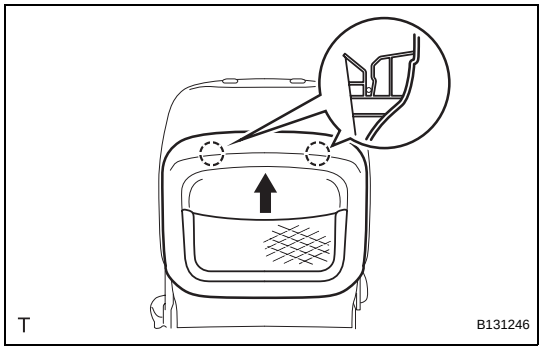
11. INSTALL FRONT SEATBACK COVER
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

(a) Using hog ring pliers, install the seatback cover to the seatback pad with 11 new hog rings.

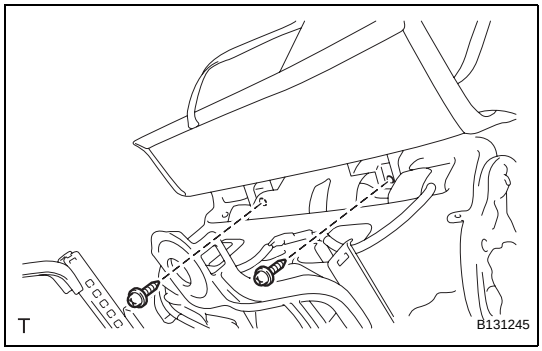


(b) Install the seatback cover (with pad) to the seat frame (with adjuster).

(c) w/ Front Seat Side Airbag:
Fully cover the airbag with the 2 seatback cover brackets and install the nut.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
CAUTION:
- **For vehicles with side airbags, the seatback cover must be securely installed. Otherwise, the side airbags may not deploy properly.**
- **Make sure that the strap is not twisted after installing the bracket.**
- **Install the bracket securely.**

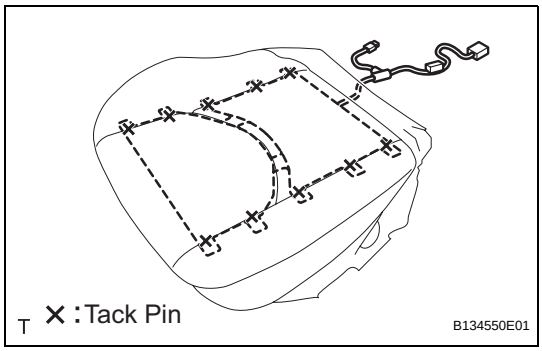


(d) Attach the 4 claws to install the 2 headrest supports.



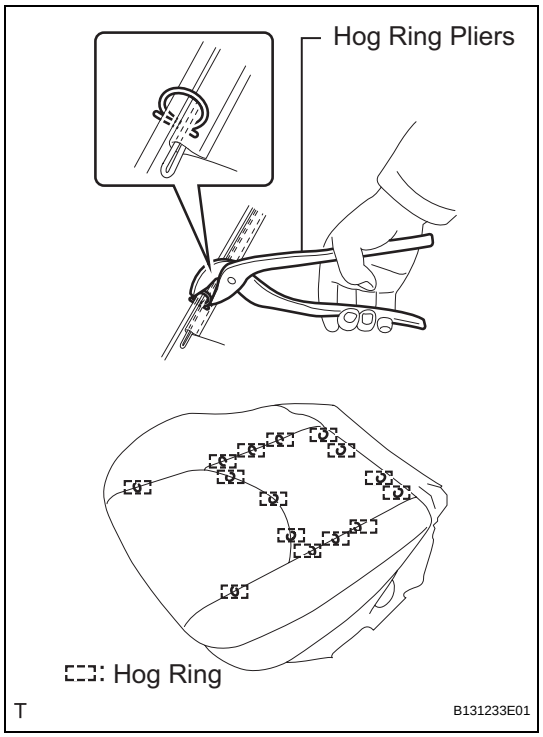
(e) Attach the hooks.
(f) Using hog ring pliers, install the seatback cover (with pad) with 5 new hog rings.

SE



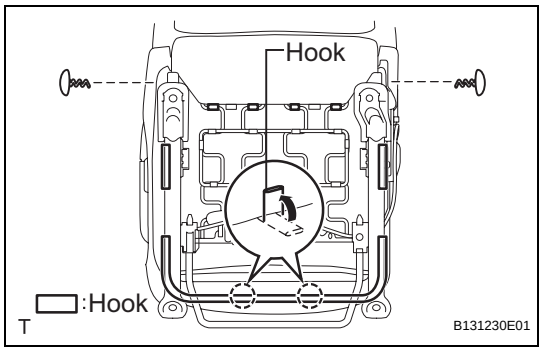
12. INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY LH

(a) Push the seatback board in the direction indicated by the arrow in the illustration to attach the 2 claws.



(b) Open the lower part of the seatback board. Then install the seatback board with the 2 screws.

13. INSTALL FRONT SEAT CUSHION HEATER (w/ Seat Heater System)

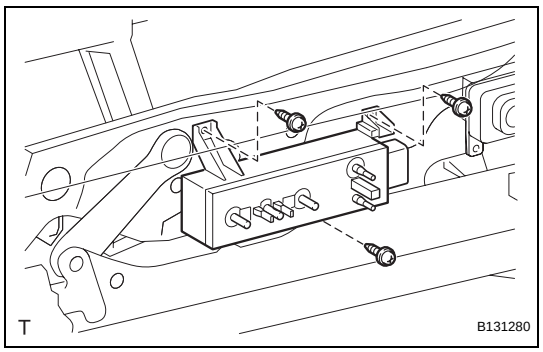


(a) Using a tacker, install the seat cushion heater to the end of the seat cover with 10 new tack pins.
NOTICE:
Do not substitute other metal parts for tack pins.

14. INSTALL FRONT SEAT CUSHION COVER

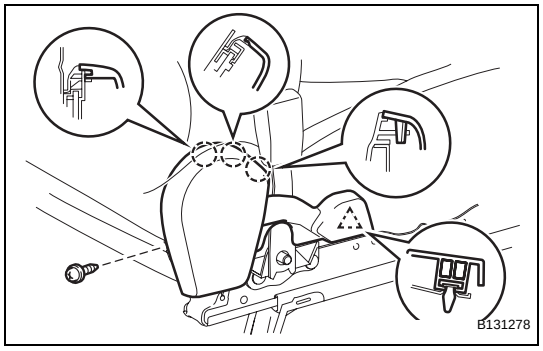
(a) Using hog ring pliers, install the seat cushion cover to the seat cushion pad with 15 new hog rings.
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

(b) Install the seat cushion cover (with pad) to the seat frame (with adjuster).



(c) Attach the hooks and install the 2 clips.

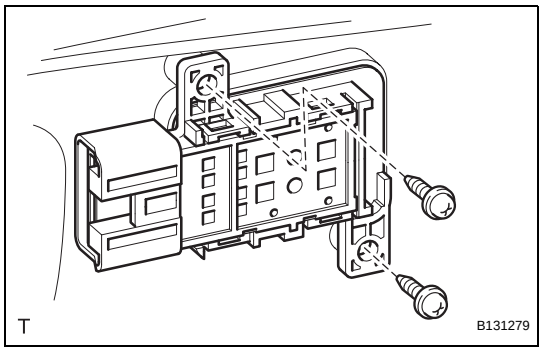
(d) w/ Seat Heater System:
Connect the connector.



15. INSTALL FRONT POWER SEAT SWITCH

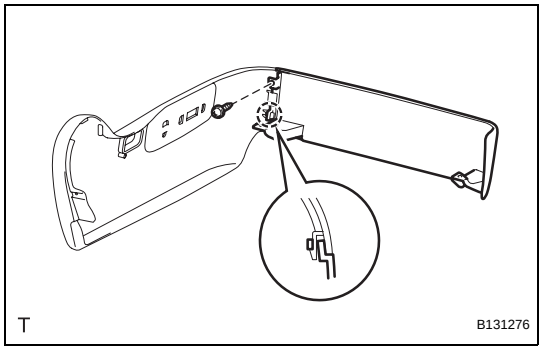
(a) Connect the connector.

(b) Install the switch with the 3 screws.



16. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH (See page SB-23)

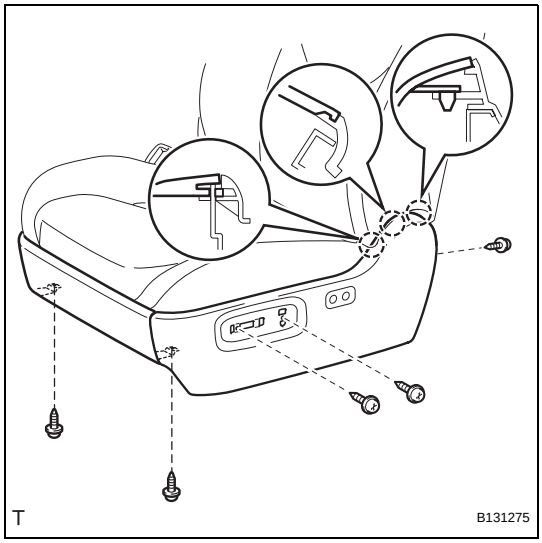
17. INSTALL FRONT SEAT CUSHION INNER SHIELD LH



(a) Attach the clip and 3 claws to install the inner shield.

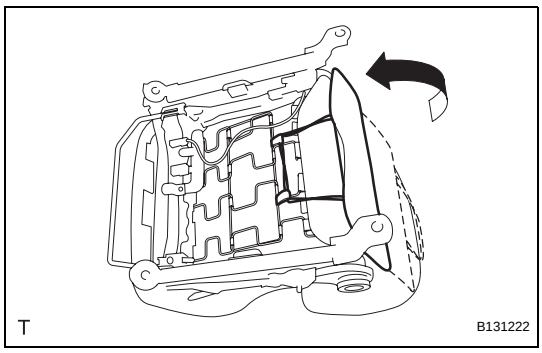
(b) Install the screw.

18. INSTALL FRONT POWER SEAT LUMBAR SWITCH



(a) Install the switch to the cushion shield with the 2 screws.

19. INSTALL FRONT SEAT CUSHION SHIELD LH



(a) Install the front No. 1 seat cushion inner shield to the cushion shield.
  (1) Attach the claw to install the front No. 1 seat cushion inner shield.
  (2) Install the screw.

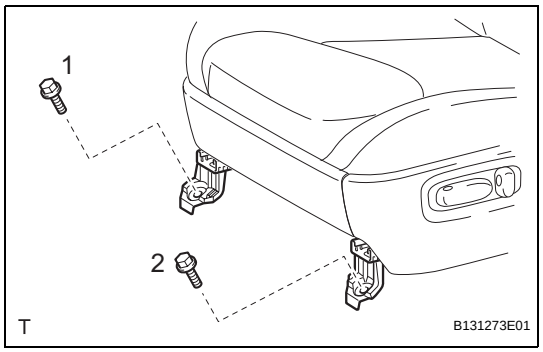
(b) Connect the connector to the front power seat lumbar switch.

(c) Attach the 3 claws and install the cushion shield (with front No. 1 seat cushion inner shield) to the seat frame (with adjuster).

(d) Install the 5 screws.

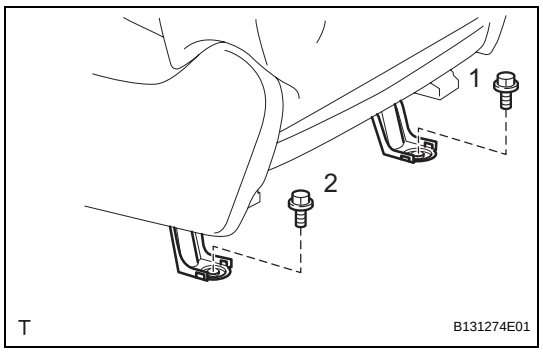
(e) Connect the 2 rubber bands of the front seatback board to the seat frame (with adjuster).

20. INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB



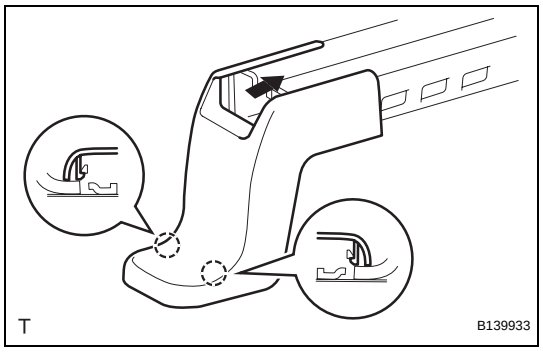
21. INSTALL RECLINING POWER SEAT SWITCH KNOB

INSTALLATION

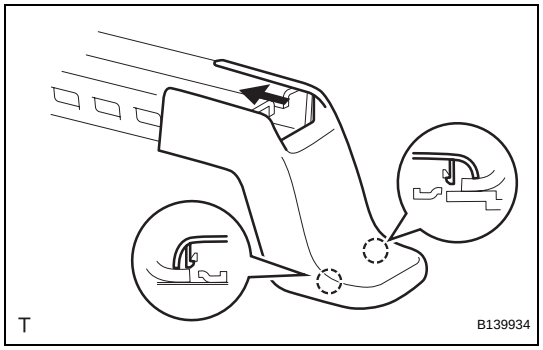


HINT:
Use the same procedures for the LH and RH side.

1. INSTALL FRONT SEAT ASSEMBLY



(a) Place the seat in the cabin.
(b) Connect the connectors under the seat.
(c) Connect the cable to the negative (-) battery terminal.



(d) Operate the power seat switch knob and move the seat to the rearmost position.
(e) Tighten the 2 bolts on the front side of the seat.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
HINT:
Tighten the 2 bolts in the order indicated in the illustration.

(f) Operate the power seat switch knob and move the seat to the foremost position.
(g) Tighten the 2 bolts on the rear side of the seat.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)
HINT:
Tighten the 2 bolts in the order indicated in the illustration.

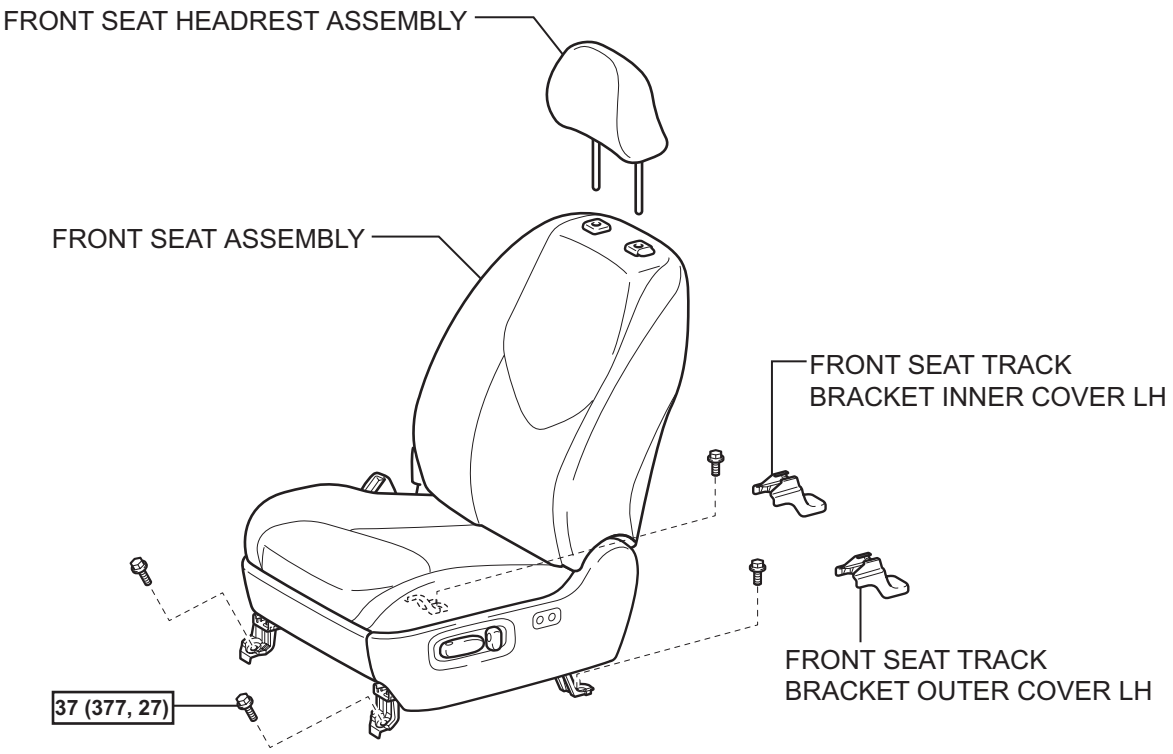
(h) Install the front seat track bracket outer cover in the direction indicated by the arrow in the illustration and attach the 2 claws.

(i) Install the front seat track bracket inner cover in the direction indicated by the arrow in the illustration and attach the 2 claws.

2. INSTALL FRONT SEAT HEADREST ASSEMBLY

3. CHECK SRS WARNING LIGHT (w/ Front Seat Side Airbag)
Check the SRS warning light (see page RS-37).

4. INSPECT FRONT SEAT ASSEMBLY



(a) Check the power seat operation.
(b) w/ Seat Heater System:
Check the seat heater operation.

(1) Turn the ignition switch on (IG).
(2) Push the seat heater switch ON.
(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

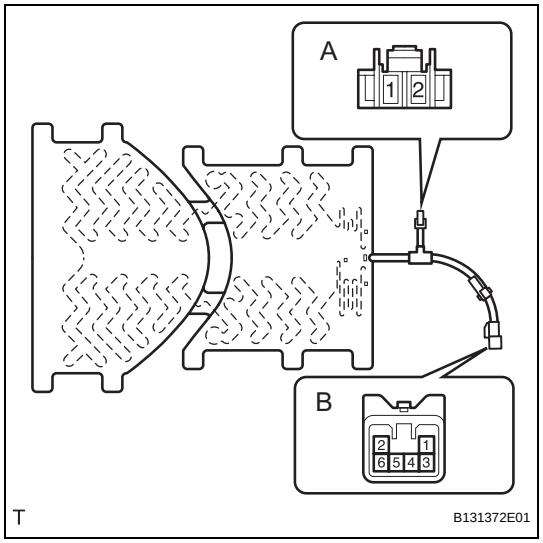
FRONT SEATBACK HEATER

INSPECTION

1. INSPECT FRONT SEATBACK HEATER ASSEMBLY LH



(a) Measure the resistance of the seatback heater.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Seatback heater temperature 20°C (68°F)	Approx. 6.21 Ω

If the result is not as specified, replace the seatback heater assembly.

2. INSPECT FRONT SEATBACK HEATER ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

FRONT SEAT CUSHION HEATER

INSPECTION

1. INSPECT FRONT SEAT CUSHION HEATER ASSEMBLY LH

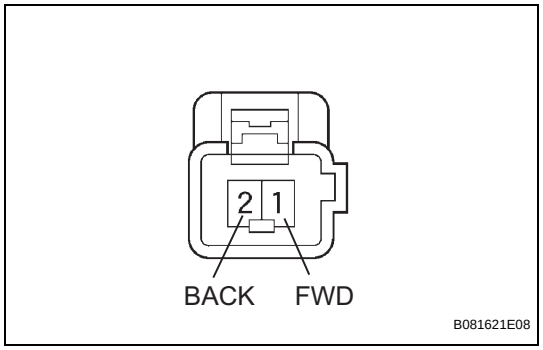
(a) Measure the resistance of the seat cushion heater.
Standard resistance

Tester Connection	Condition	Specified Condition
A1 - B6	Seat cushion heater temperature 20°C (68°F)	Below 1 Ω
A1 - A2	Seat cushion heater temperature 20°C (68°F)	Approx. 5.20 Ω

If the result is not as specified, replace the seat cushion heater assembly.

(b) Heat the thermostat with a light.

(c) Measure the resistance of the seat cushion heater.
Standard resistance



Tester Connection	Condition	Specified Condition
B4 - B6	Seat heater temperature 20°C (68°F)	Approx. 4.85 Ω
B4 - B6	Seat heater temperature 30°C (86°F)	Approx. 5.00 Ω
B4 - B6	Seat heater temperature 30°C (86°F)	Approx. 5.15 Ω

If the result is not as specified, replace the seat cushion heater assembly.

2. INSPECT FRONT SEAT CUSHION HEATER ASSEMBLY RH

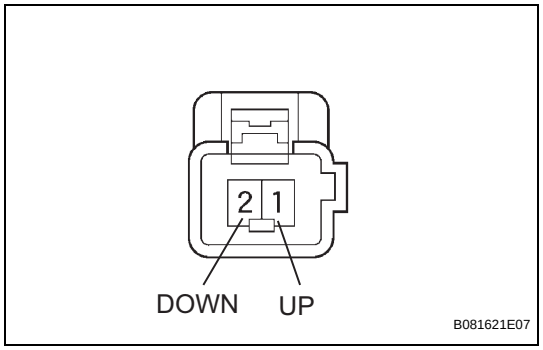
HINT:
Use the same procedures described for the LH side.

SE

FRONT SEAT FRAME WITH ADJUSTER

INSPECTION

1. INSPECT FRONT SEAT FRAME WITH ADJUSTER



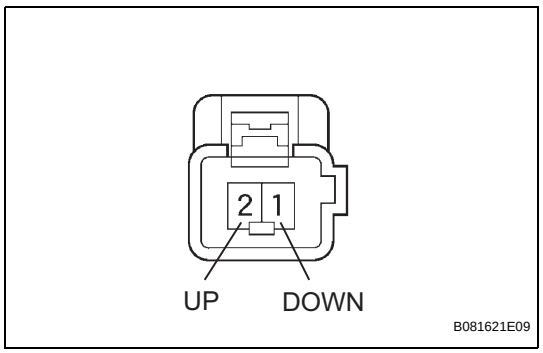
(a) Check operation of the seat frame (slide motor).

(1) Check if the seat frame moves smoothly when the battery is connected to the slide motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → 1 (FWD) Battery negative (-) → 2 (BACK)	Forward
Battery positive (+) → 2 (BACK) Battery negative (-) → 1 (FWD)	Backward

If the result is not as specified, replace the seat frame with adjuster.



(b) Check operation of the seat frame (front vertical motor).

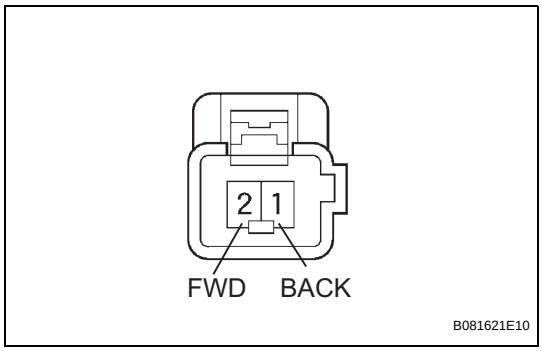
(1) Check if the seat frame moves smoothly when the battery is connected to the front vertical motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → 1 (UP) Battery negative (-) → 2 (DOWN)	Upward
Battery positive (+) → 2 (DOWN) Battery negative (-) → 1 (UP)	Downward

If the result is not as specified, replace the seat frame with adjuster.

(c) Check operation of the seat frame (lifter motor).



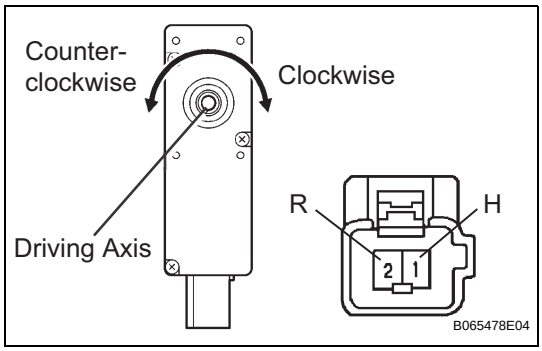
(1) Check if the seat frame moves smoothly when the battery is connected to the lifter motor connector terminals.

OK

Measurement Condition	Operational Direction
Battery positive (+) → 2 (UP) Battery negative (-) → 1 (DOWN)	Upward
Battery positive (+) → 1 (DOWN) Battery negative (-) → 2 (UP)	Downward

If the result is not as specified, replace the seat frame with adjuster.

SE



(d) Check operation of the seat frame (reclining motor).
(1) Check if the seat frame moves smoothly when the battery is connected to the reclining motor connector terminals.
OK

Measurement Condition	Operational Direction
Battery positive (+) → 2 (FWD) **Battery negative (-) → 1 (BACK)**	**Forward**
Battery positive (+) → 1 (BACK) **Battery negative (-) → 2 (FWD)**	**Backward**

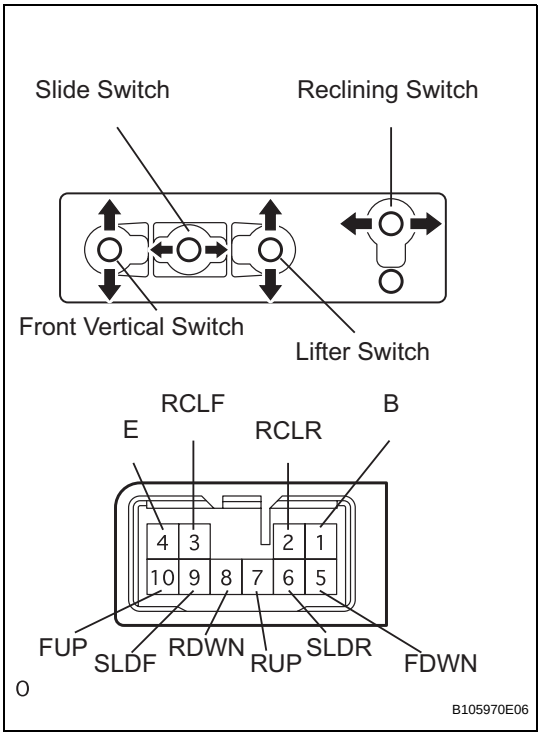
If the result is not as specified, replace the seat frame with adjuster.

SE

LUMBAR SUPPORT ADJUSTER ASSEMBLY

INSPECTION

1. INSPECT LUMBAR SUPPORT ADJUSTER ASSEMBLY



(a) Check operation of the lumbar support adjuster.

(1) Check if the lumbar support adjuster moves smoothly when the battery is connected to the lumbar support adjuster motor connector terminals.

OK

Measurement Condition	Operation Direction
Battery positive (+) → 1 (H) Battery negative (-) → 2 (R)	Clockwise
Battery positive (+) → 2 (R) Battery negative (-) → 1 (H)	Counterclockwise

If the result is not as specified, replace the lumbar support adjuster assembly.

POWER SEAT SWITCH

INSPECTION

1. INSPECT FRONT POWER SEAT SWITCH

(a) Measure the resistance between the terminals when each switch is operated.

Standard resistance

Slide switch

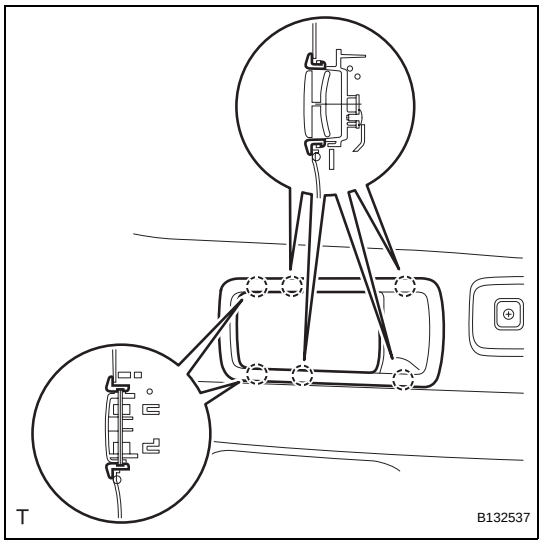
Tester Connection	Switch Condition	Specified Condition
1 (B) - 9 (SLDF)	FRONT	Below 1 Ω
4 (E) - 6 (SLDR)	FRONT	Below 1 Ω
4 (E) - 6 (SLDR)	OFF	Below 1 Ω
4 (E) - 9 (SLDF)	OFF	Below 1 Ω
1 (B) - 6 (SLDR)	REAR	Below 1 Ω
4 (E) - 9 (SLDF)	REAR	Below 1 Ω

Front vertical switch

Tester Connection	Switch Condition	Specified Condition
1 (B) - 10 (FUP)	UP	Below 1 Ω
4 (E) - 5 (FDWN)	UP	Below 1 Ω
4 (E) - 5 (FDWN)	OFF	Below 1 Ω
4 (E) - 10 (FUP)	OFF	Below 1 Ω
1 (B) - 5 (FDWN)	DOWN	Below 1 Ω
4 (E) - 10 (FUP)	DOWN	Below 1 Ω

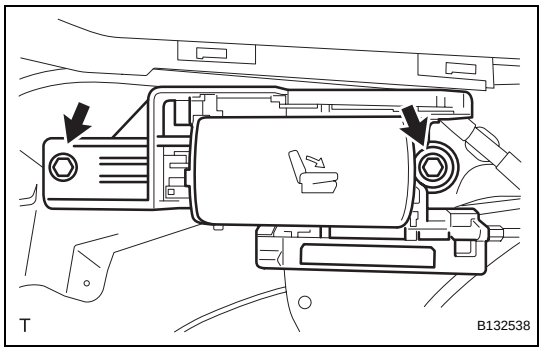
Lifter switch

Tester Connection	Switch Condition	Specified Condition
1 (B) - 7 (RUP)	UP	Below 1 Ω
4 (E) - 8 (RDWN)	UP	Below 1 Ω
4 (E) - 7 (RUP)	OFF	Below 1 Ω
4 (E) - 8 (RDWN)	OFF	Below 1 Ω
1 (B) - 8 (RDWN)	DOWN	Below 1 Ω
4 (E) - 7 (RUP)	DOWN	Below 1 Ω

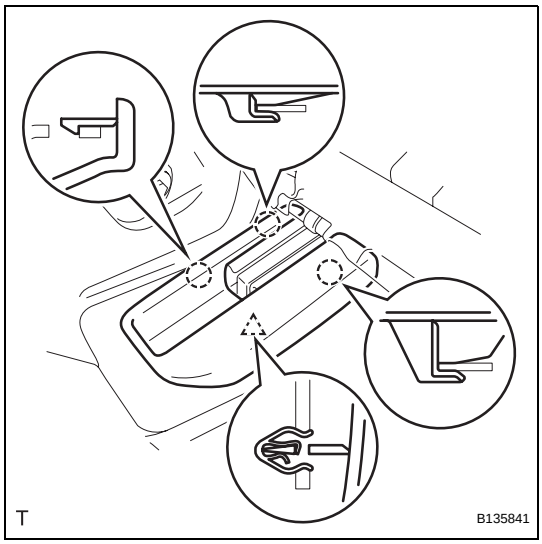


Reclining switch

Tester Connection	Switch Condition	Specified Condition
1 (B) - 3 (RCLF)	FRONT	Below 1 Ω
2 (RCLR) - 4 (E)	FRONT	Below 1 Ω
2 (RCLR) - 4 (E)	OFF	Below 1 Ω
3 (RCLF) - 4 (E)	OFF	Below 1 Ω
1 (B) - 2 (RCLR)	REAR	Below 1 Ω
3 (RCLF) - 4 (E)	REAR	Below 1 Ω

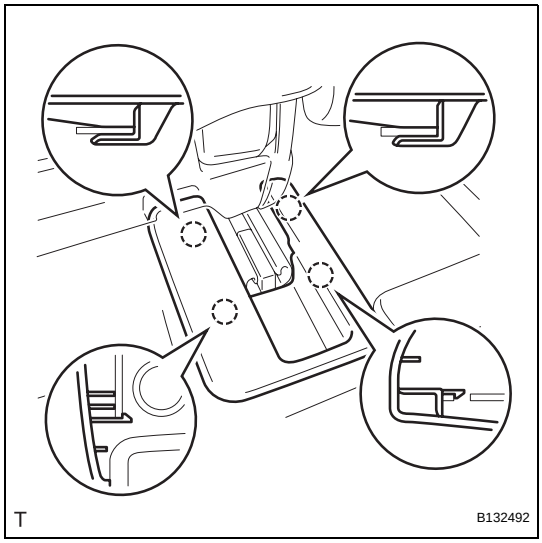


If the result is not as specified, replace the switch.

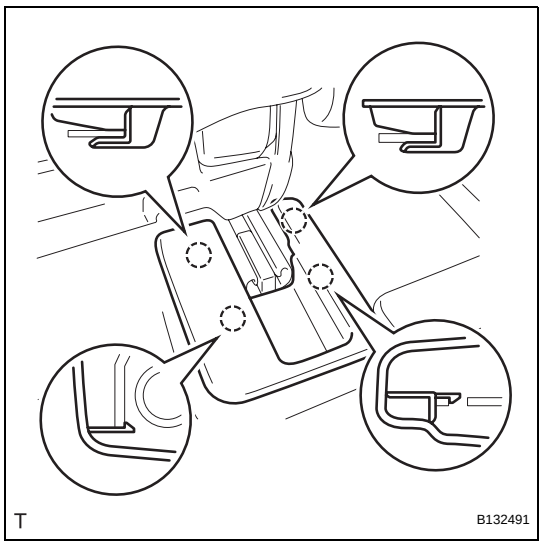


REMOVAL

1. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
2. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
3. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
4. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE REAR FLOOR NO. 3 BOARD (w/o Rear No. 2 Seat)**
6. **REMOVE REAR FLOOR NO. 2 BOARD (w/o Rear No. 2 Seat)**
7. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (w/o Rear No. 2 Seat) (See page IR-31)**
8. **REMOVE BACK DOOR WEATHERSTRIP (w/o Rear No. 2 Seat)**
9. **REMOVE REAR FLOOR FINISH PLATE (w/o Rear No. 2 Seat) (See page IR-31)**
10. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)**
    (a) Using a screwdriver, detach the 6 claws and remove the bezel.
    HINT:
    Tape the screwdriver tip before use.

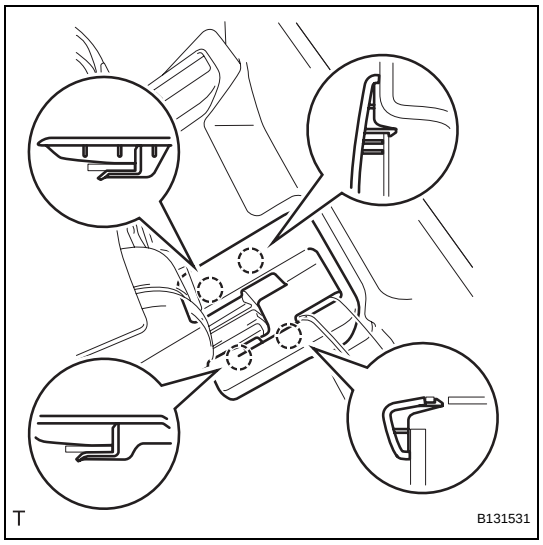


11. **REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-32)**
12. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-32)**
13. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (w/o Rear No. 2 Seat)**
    (a) Remove the 2 bolts and lever.
    (b) Disconnect the rear No. 1 seat lock cable from the lever.



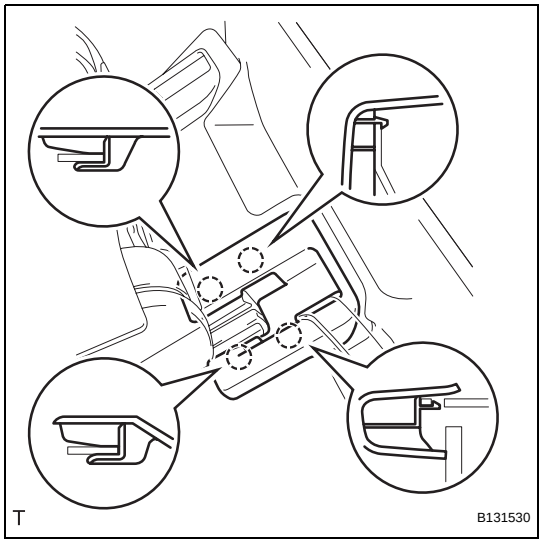
14. REMOVE REAR NO. 5 SEAT LEG SIDE COVER

(a) Using a screwdriver, detach the 3 claws and clip, and remove the side cover.
HINT:
Tape the screwdriver tip before use.



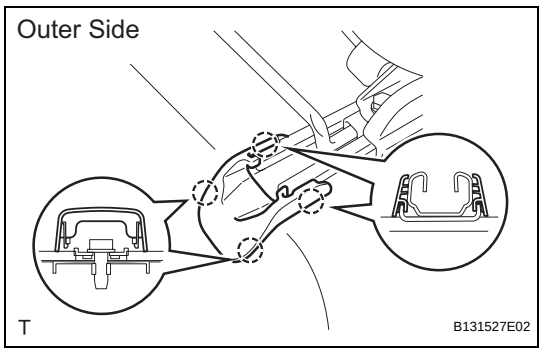
15. REMOVE REAR NO. 4 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.



16. REMOVE REAR NO. 4 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.



17. REMOVE REAR NO. 3 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

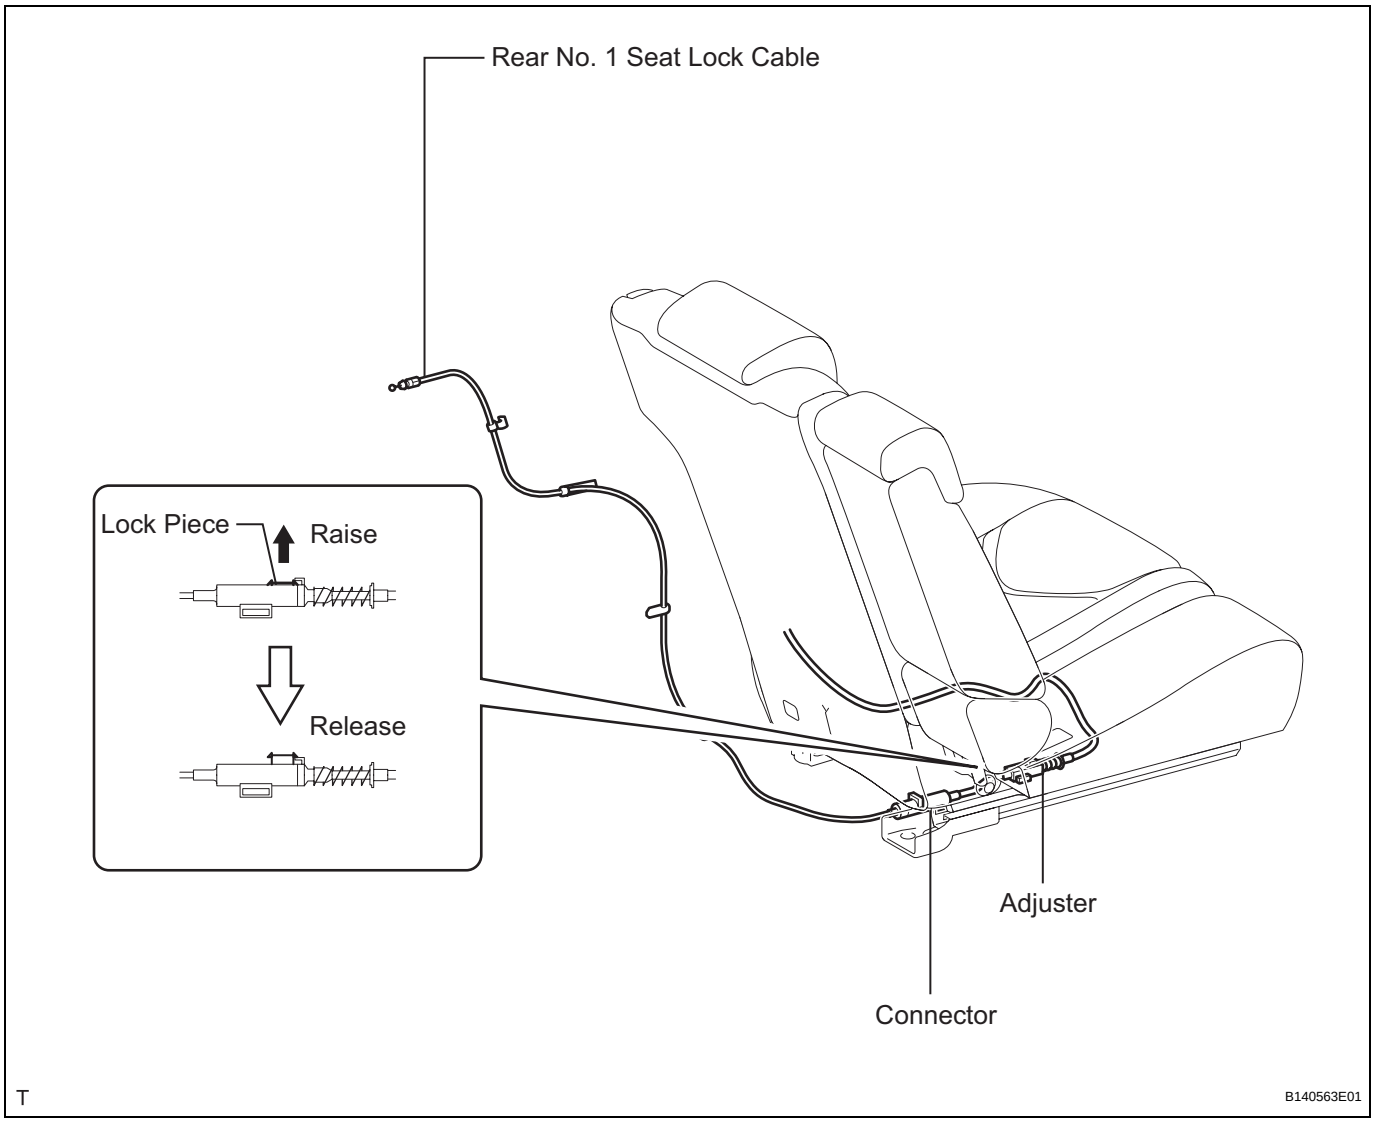
(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.

18. REMOVE REAR NO. 3 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.

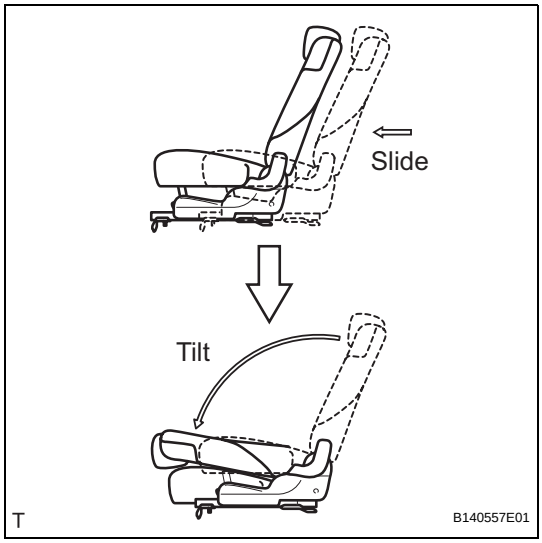
19. REMOVE REAR SEAT LEG COVER

(a) Using a screwdriver, detach the 8 claws and remove the 2 leg covers.
HINT:
Tape the screwdriver tip before use.

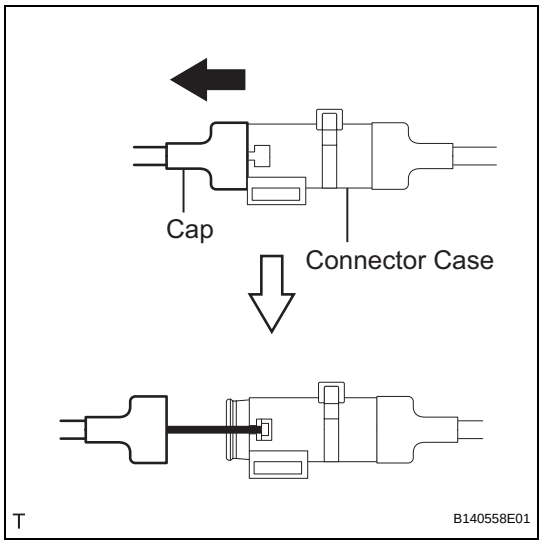


20. REMOVE REAR SEAT LAP TYPE BELT ASSEMBLY CENTER RH (w/ Rear No. 2 Seat) (See page SB-39)

21. REMOVE REAR SEAT LAP TYPE BELT ASSEMBLY CENTER RH (w/o Rear No. 2 Seat) (See page SB-39)

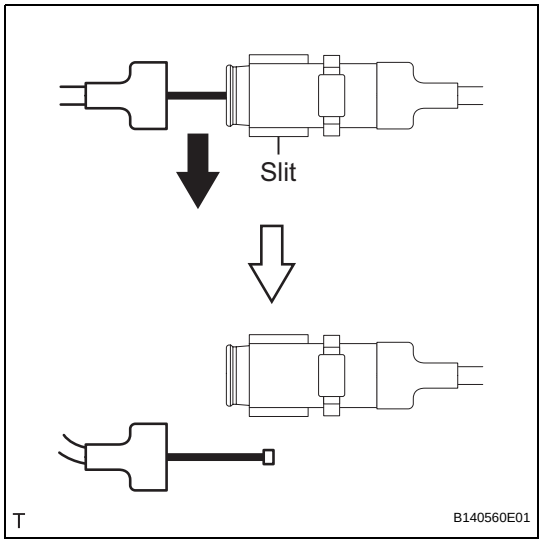


22. REMOVE REAR NO. 1 SEAT LOCK CABLE ASSEMBLY (w/o Rear No. 2 Seat)

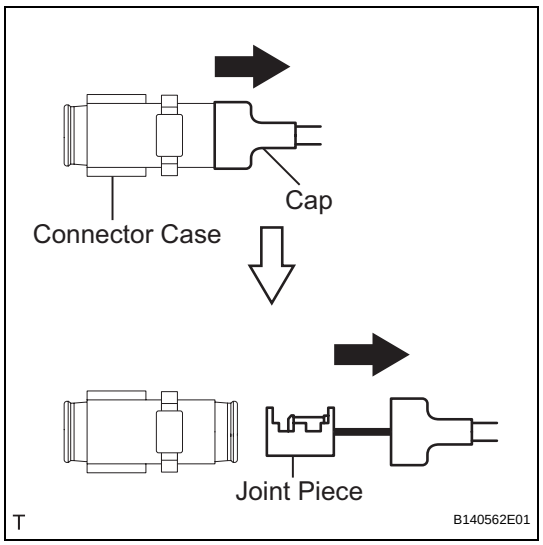


(a) Disconnect the lock cable from the seat.

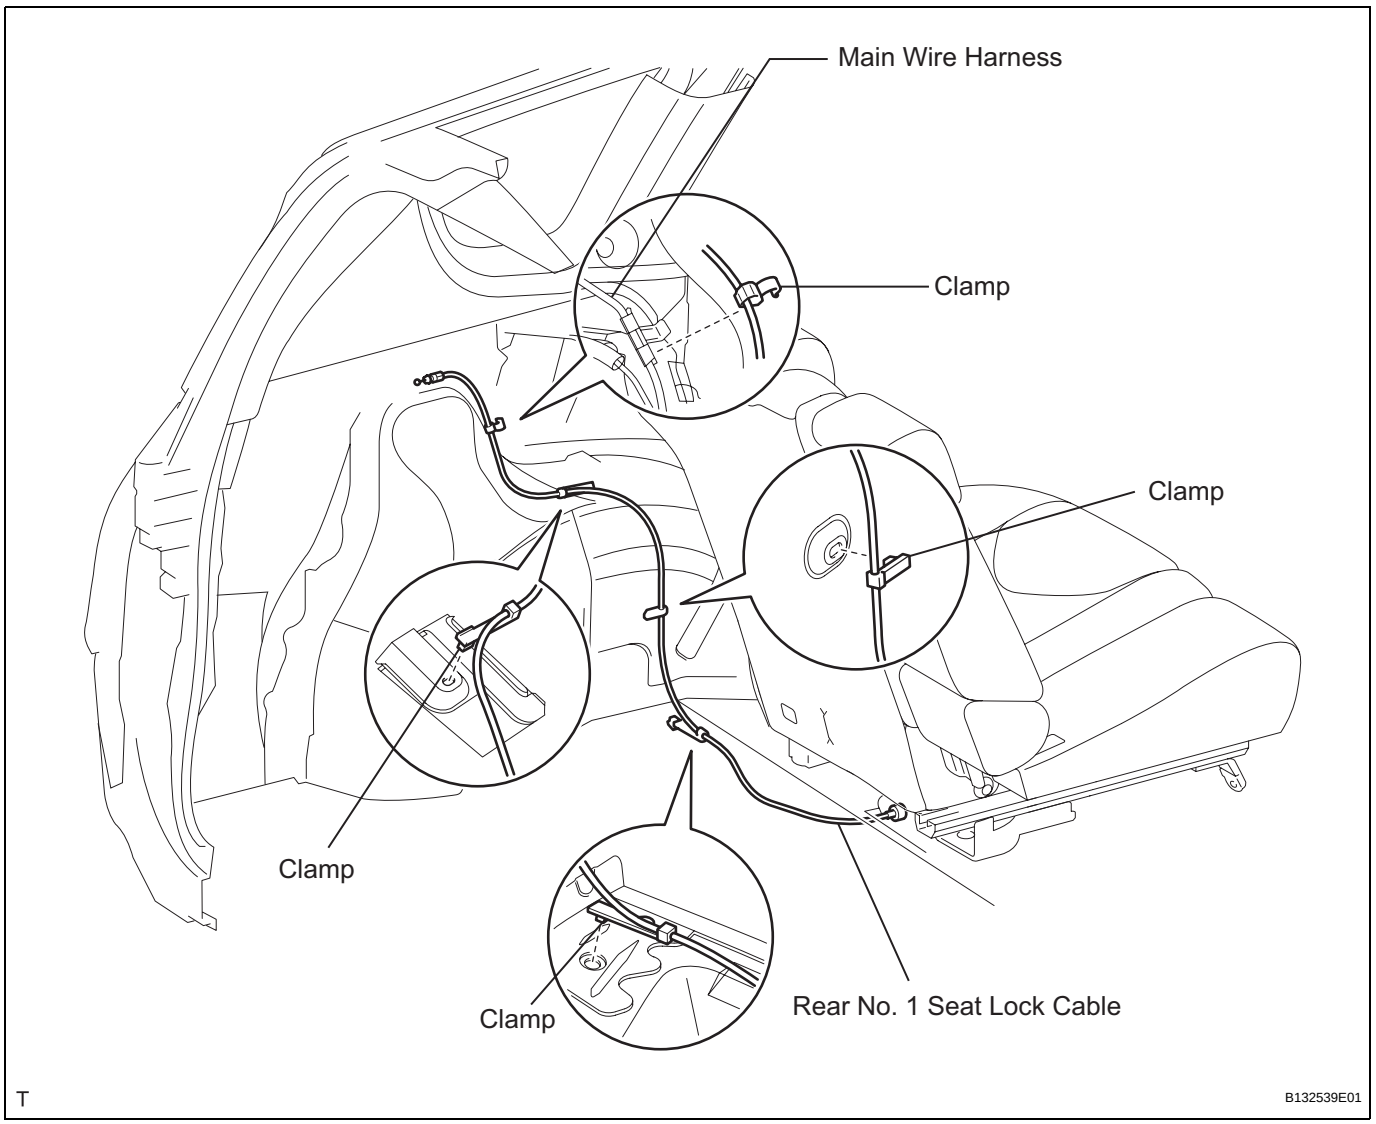
(1) Raise the adjuster's lock piece to release the lock.



(2) Slide the seat forward and tilt the seatback forward.



(3) Remove the seat's cap from the connector case.

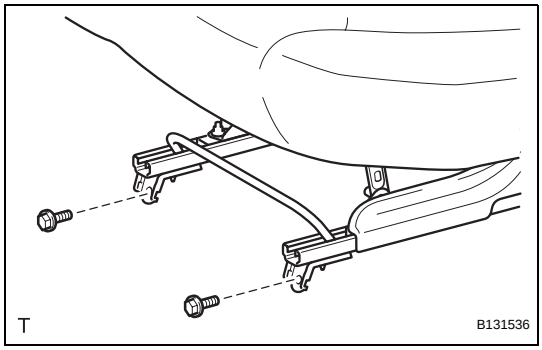


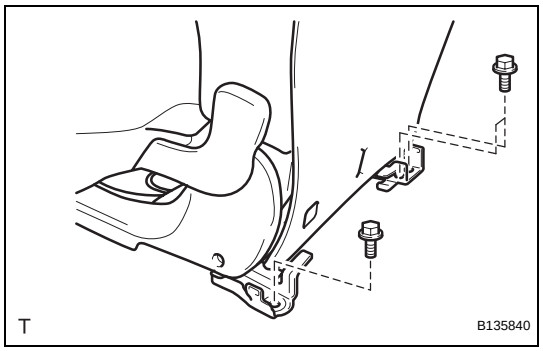
(4) Pull the seat's cap toward the outside of the vehicle. Then remove the cable from the connector case's slit.

(5) Remove the body's cap from the connector case.

SE

(b) Detach the clamps and remove the lock cable.





23. REMOVE REAR NO. 1 SEAT ASSEMBLY LH

(a) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(b) Remove the 2 bolts on the front side of the seat.

(c) Lift up the seat track adjusting handle and move the seat to the foremost position.

(d) Remove the 3 bolts on the rear side of the seat.
(e) Fully tilt the seatback forward. Then remove the seat.

NOTICE:
Be careful not to damage the vehicle body,

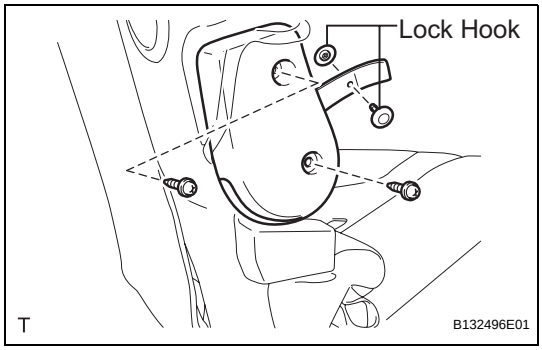
SE

DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seatback frame, seat cushion frame and reclining adjuster may injure your hands.

1. REMOVE REAR SEAT HEADREST ASSEMBLY

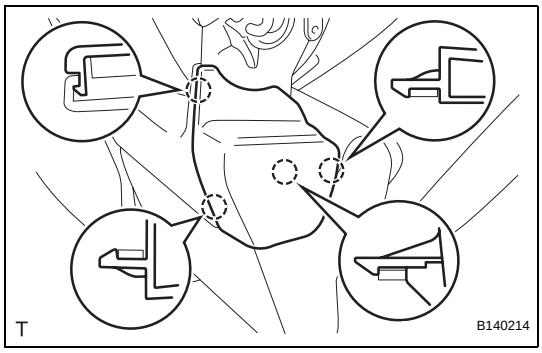
2. REMOVE REAR SEAT CENTER HEADREST ASSEMBLY



3. REMOVE CENTER ARMREST HINGE COVER RH

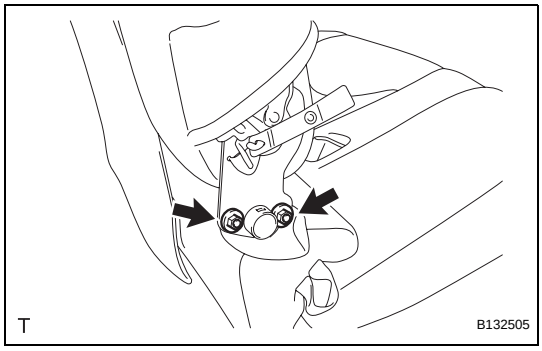
(a) Return the seatback to the upright position.

(b) Remove the 2 rear seatback lock hooks.

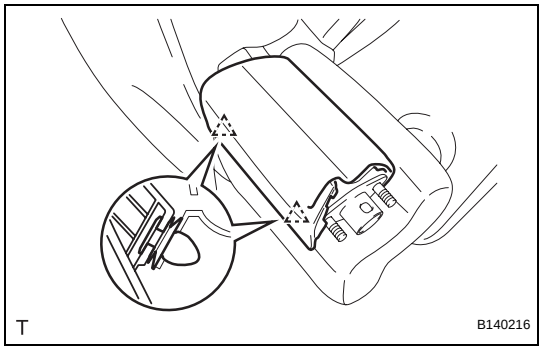


(c) Fold back the seatback cover until the screws are visible, and remove the 2 screws.

(d) Detach the claw and remove the hinge cover.

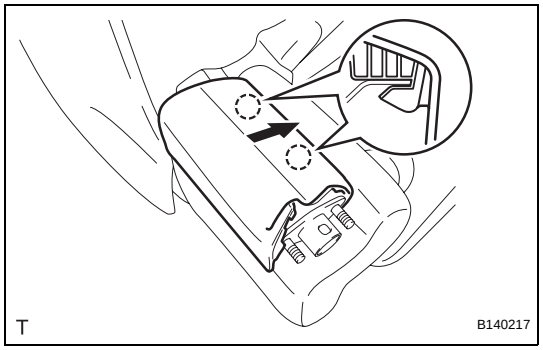


4. REMOVE CENTER ARMREST HINGE COVER LH

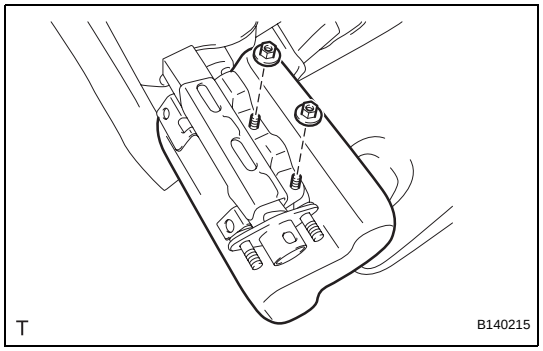


(a) Using a screwdriver, detach the 4 claws and remove the hinge cover.
HINT:
Tape the screwdriver tip before use.

5. REMOVE REAR SEAT CENTER ARMREST ASSEMBLY

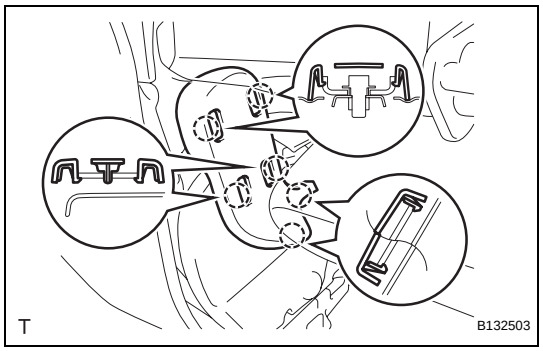


(a) Remove the 2 nuts and armrest.

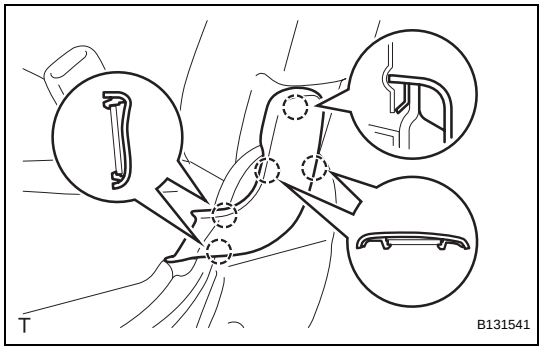


6. REMOVE REAR SEAT CENTER ARMREST COVER

(a) Detach the 2 clips.



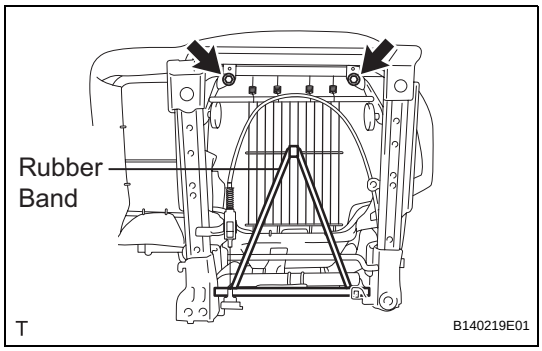
(b) Pull the armrest cover in the direction indicated by the arrow in the illustration to detach the 2 claws. Then remove the armrest cover.



7. REMOVE REAR NO. 1 SEAT ARMREST ASSEMBLY LH

(a) Remove the 2 nuts and armrest.

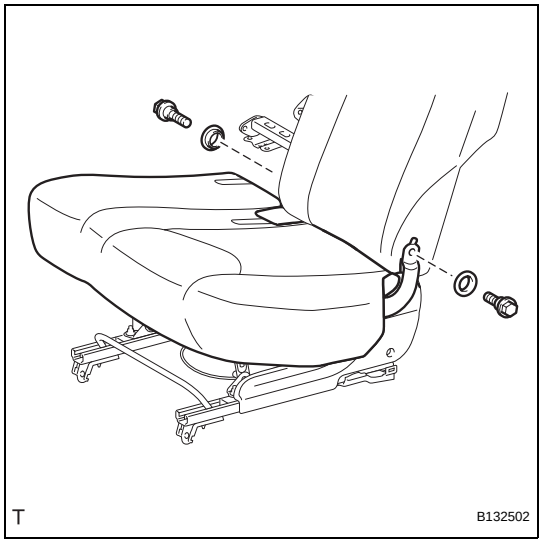
8. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER



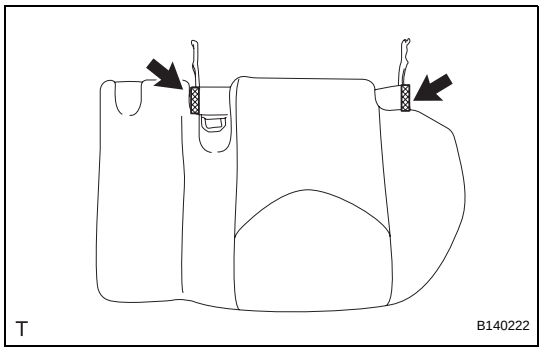
(a) Using a screwdriver, detach the 6 claws and remove the hinge cover.
HINT:
Tape the screwdriver tip before use.

9. REMOVE REAR SEAT CUSHION LOWER HINGE COVER LH

(a) Using a screwdriver, detach the 5 claws and remove the hinge cover.
HINT:
Tape the screwdriver tip before use.



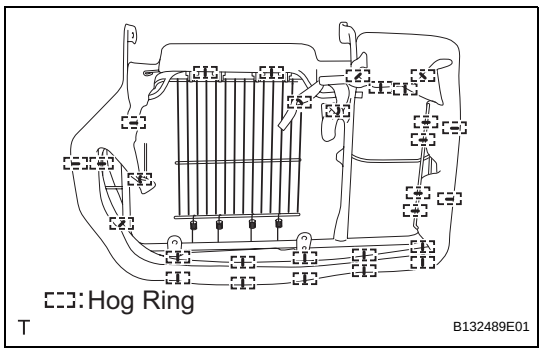
10. REMOVE REAR SEAT INNER BELT ASSEMBLY RH (See page SB-40)



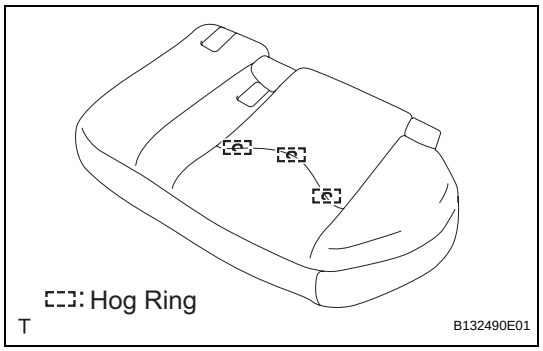
11. REMOVE REAR NO. 1 SEAT CUSHION ASSEMBLY LH

(a) Disconnect the rubber band of the seatback cover from the seat cushion frame.

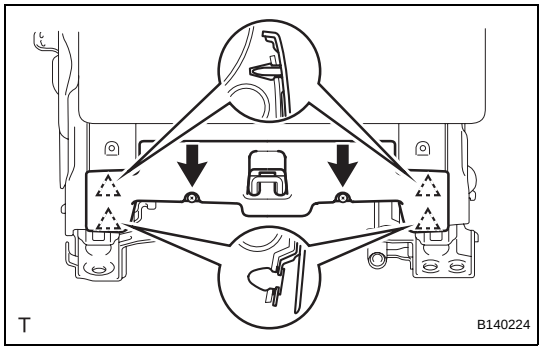
(b) Remove the 2 bolts



(c) Remove the 2 bolts, 2 bushes and cushion.

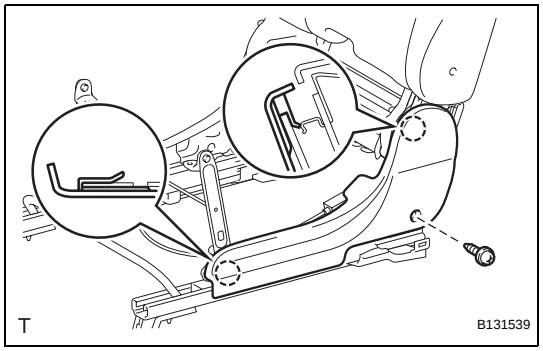


12. REMOVE REAR NO. 1 SEAT CUSHION COVER



(a) Detach the 2 hooks.

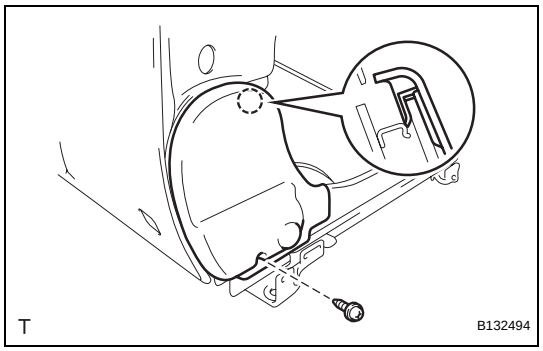
(b) Remove the 29 hog rings and seat cushion cover (with pad) from the seat cushion frame.



(c) Remove the 3 hog rings and seat cushion cover from the seat cushion pad.

13. REMOVE REAR SEAT REAR BRACKET COVER LH

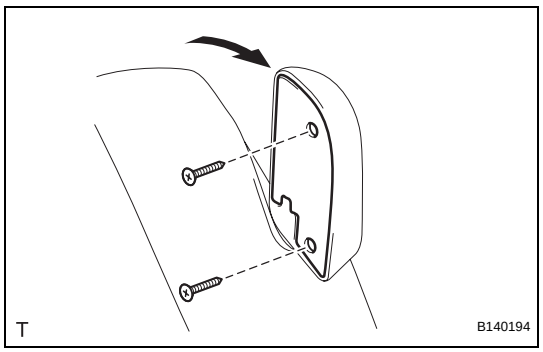
(a) Open the lower part of the seatback cover. Then remove the 2 screws.



(b) Using a screwdriver, detach the 4 clips and remove the bracket cover.
HINT:
Tape the screwdriver tip before use.

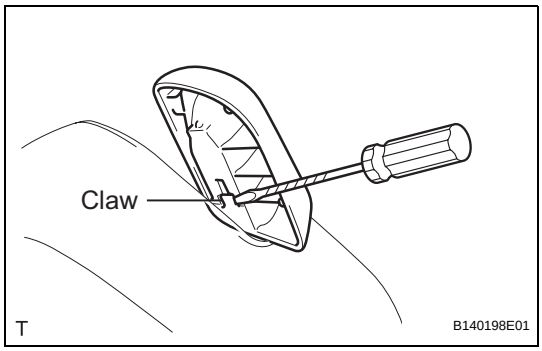
14. REMOVE REAR SEAT CUSHION MOULDING LH

(a) Remove the screw.



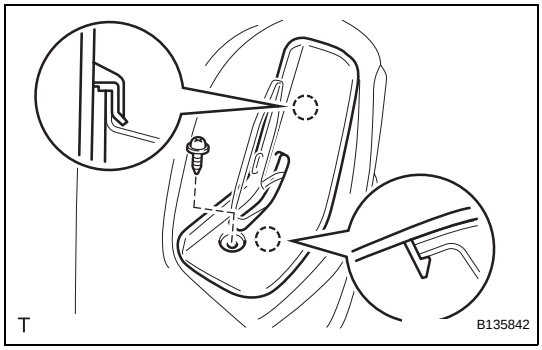
(b) Detach the 2 claws and remove the moulding.

15. REMOVE REAR SEAT CUSHION REAR MOULDING LH



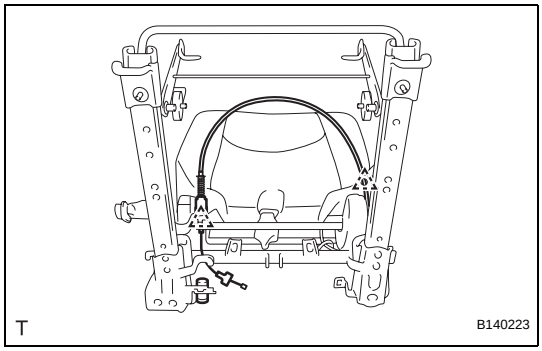
(a) Remove the screw.

(b) Detach the claw and remove the moulding.



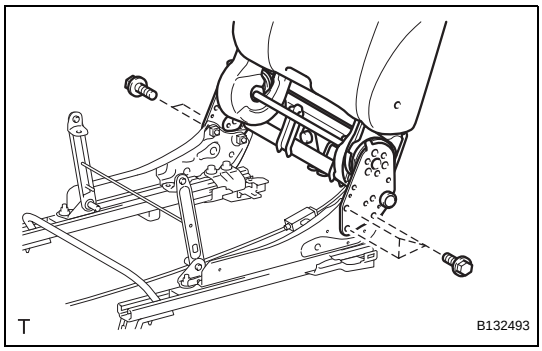
16. REMOVE REAR SEAT RECLINING RELEASE LEVER

(a) Pull the reclining control lever to reveal the 2 screws. Then remove the 2 screws and cover.



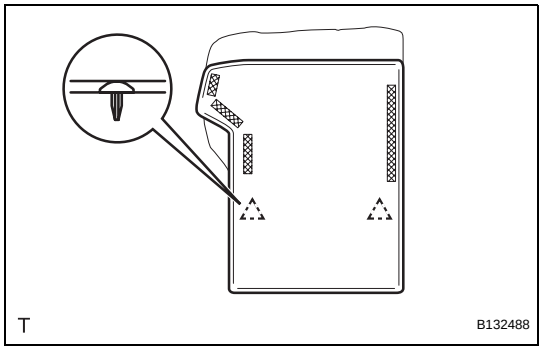
(b) Using a screwdriver, detach the claw and remove the release lever.
HINT:
Tape the screwdriver tip before use.

17. REMOVE REAR SEATBACK LOCK CONTROL LEVER BASE LH



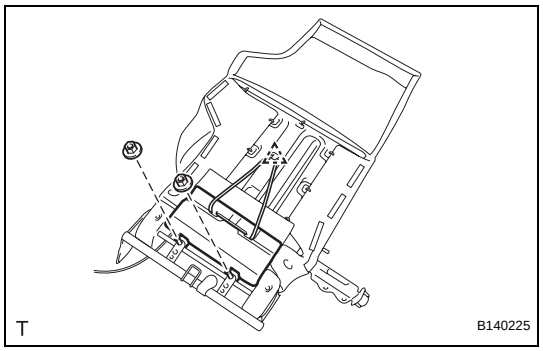
(a) Remove the screw.

(b) Using a screwdriver, detach the 2 claws and remove the lever base.
HINT:
Tape the screwdriver tip before use.



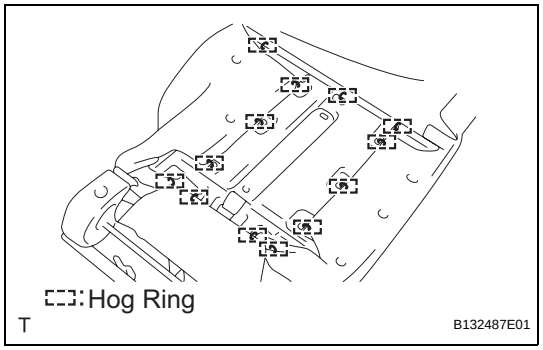
18. REMOVE REAR NO. 1 SEATBACK ASSEMBLY LH

(a) w/o Rear No. 2 Seat:
Detach the 2 clamps and disconnect the cable from the reclining adjuster.



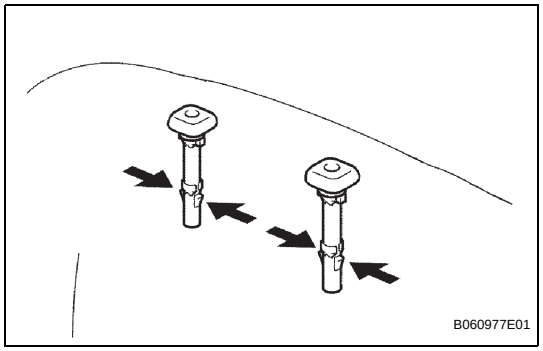
(b) Remove the 5 bolts and seatback.

19. REMOVE REAR SEAT LAP TYPE BELT ASSEMBLY CENTER LH (See page SB-39)

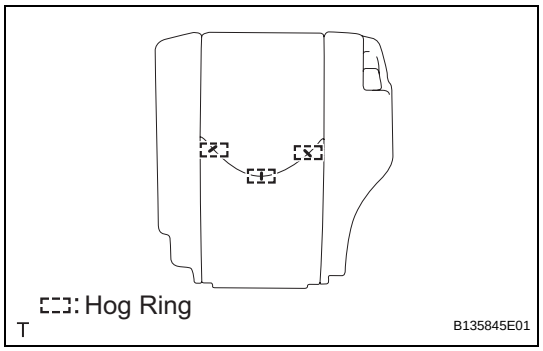


20. REMOVE REAR SEATBACK PROTECTOR

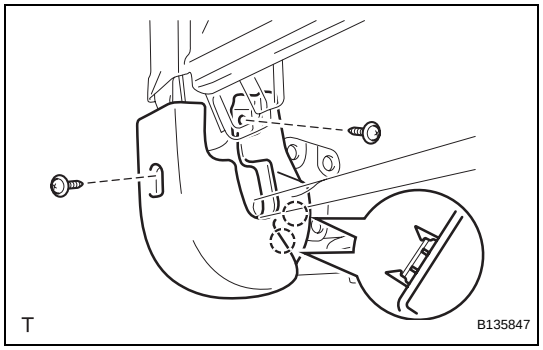
(a) Using a clip remover, detach the 2 clips and open the fastening tape.
NOTICE:
If clips are damaged during removal, replace them.



(b) Detach the clip.
(c) Remove the 2 nuts and protector.

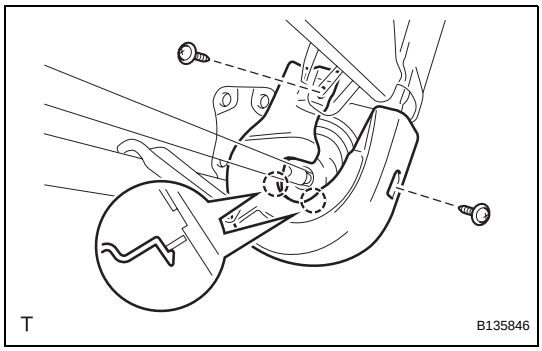


21. REMOVE REAR NO. 1 SEATBACK COVER



(a) Lift up the seatback cover and remove the 13 hog rings.

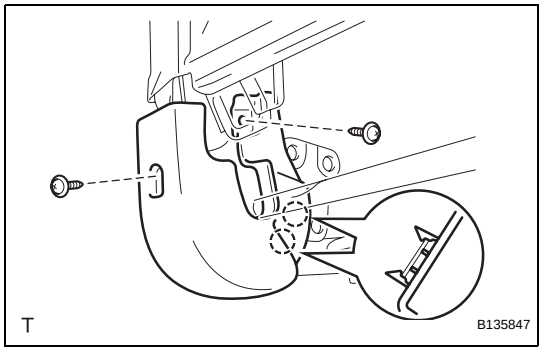
(b) Detach the 4 claws and remove the 2 headrest supports.
(c) Remove the seatback cover (with pad) from the seatback frame.



(d) Remove the 3 hog rings and seatback cover from the seatback pad.

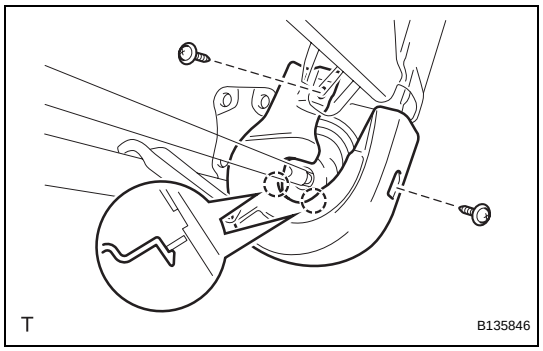
22. REMOVE REAR SEAT COVER LH

(a) Remove the 2 screws.
(b) Using a screwdriver, detach the 2 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.



23. REMOVE REAR SEATBACK COVER LH

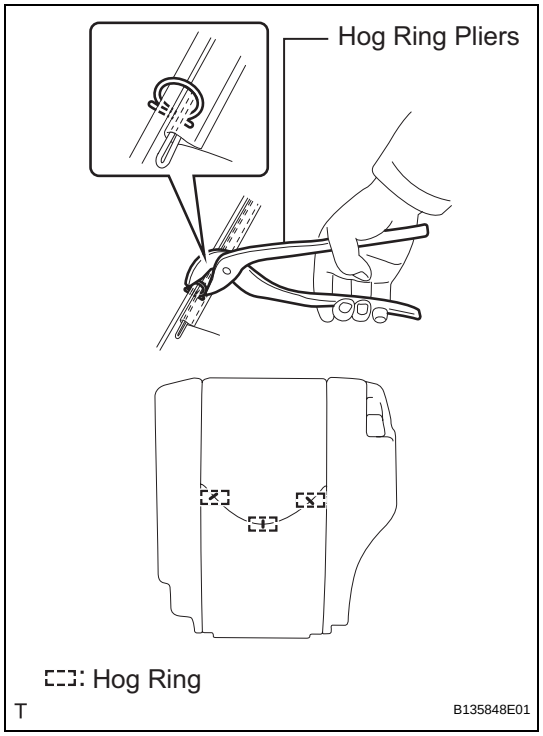
(a) Remove the 2 screws.



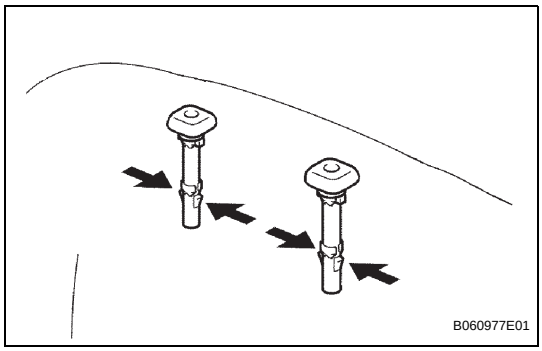
(b) Using a screwdriver, detach the 2 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

REASSEMBLY

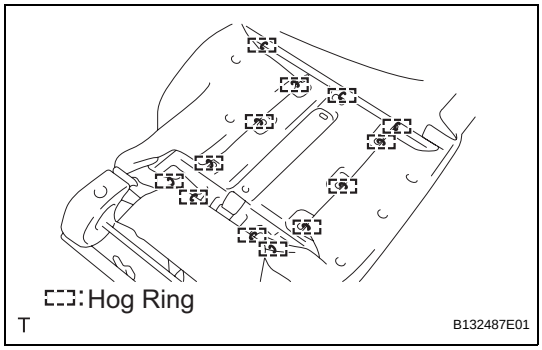
CAUTION:
Wear protective gloves. Sharp areas on the seatback frame, seat cushion frame and reclining adjuster may injure your hands.
HINT:
A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).



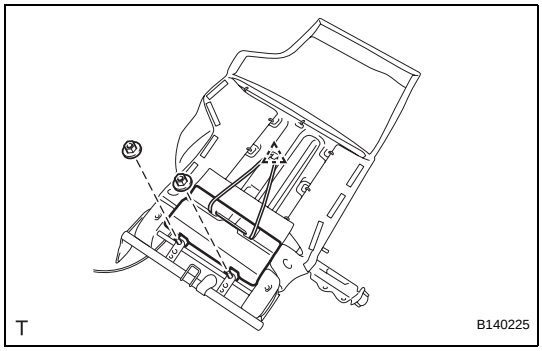
1. INSTALL REAR SEAT COVER LH
(a) Attach the 2 claws to install the cover.
(b) Install the 2 screws.



2. INSTALL REAR SEATBACK COVER LH
(a) Attach the 2 claws to install the cover.
(b) Install the 2 screws.

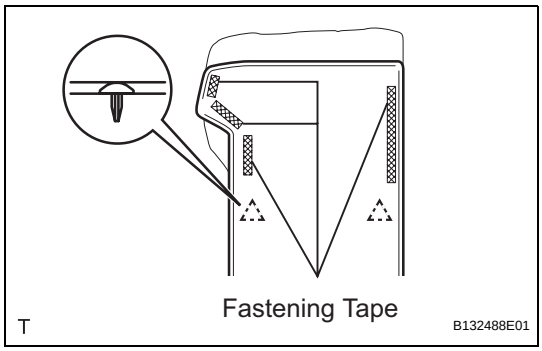


3. INSTALL REAR NO. 1 SEATBACK COVER
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**



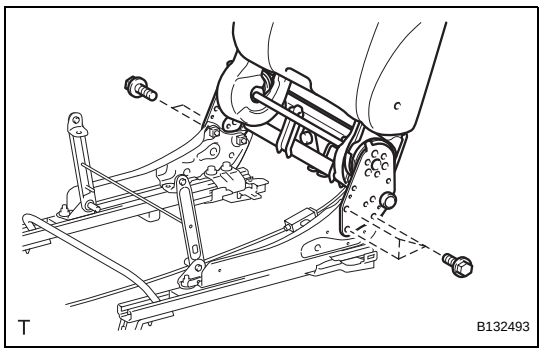
(a) Using hog ring pliers, install the seatback cover to the seatback pad with 3 new hog rings.
(b) Install the seatback cover (with pad) to the seatback frame.

(c) Attach the 4 claws to install the 2 headrest supports.



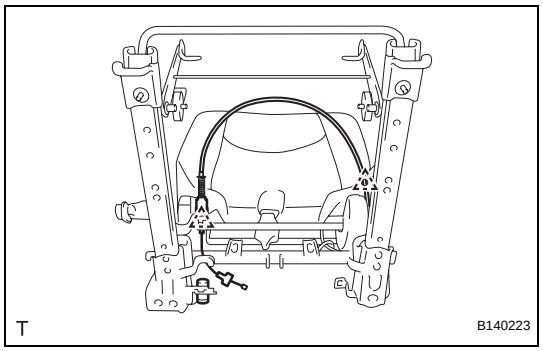
(d) Lift up the seatback cover and install the 13 hog rings.

4. INSTALL REAR SEATBACK PROTECTOR



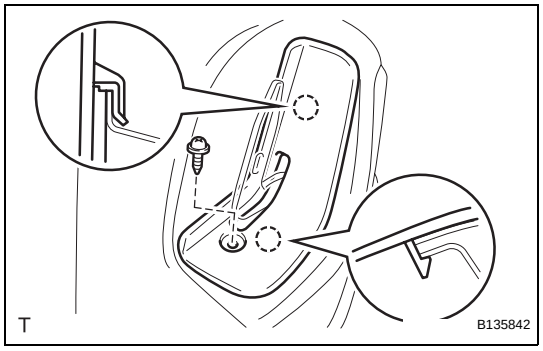
(a) Install the protector with the 2 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(b) Attach the clip.



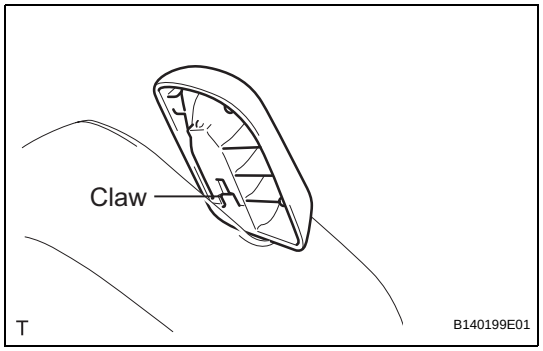
(c) Attach the clips and close the fastening tape.

5. INSTALL REAR SEAT LAP TYPE CENTER BELT ASSEMBLY LH (See page SB-41)

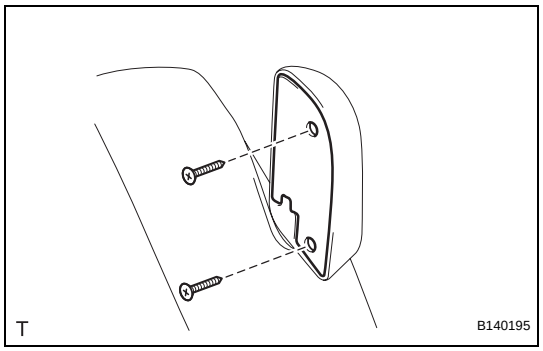


6. INSTALL REAR NO. 1 SEATBACK ASSEMBLY LH

(a) Install the seatback with the 5 bolts.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

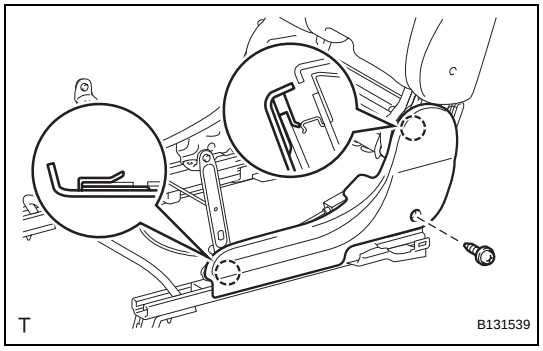


(b) w/o Rear No. 2 Seat:
Attach the 2 clamps and connect the cable to the reclining adjuster.



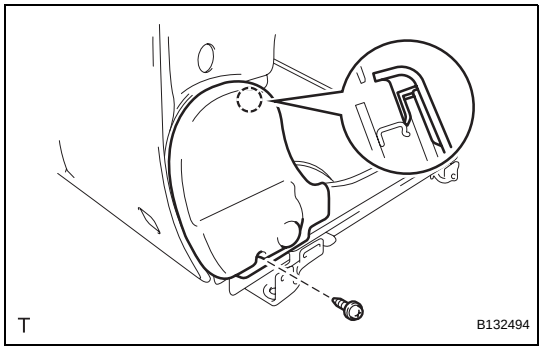
7. INSTALL REAR SEATBACK LOCK CONTROL LEVER BASE LH

(a) Attach the 2 claws to install the lever base.
(b) Install the screw.



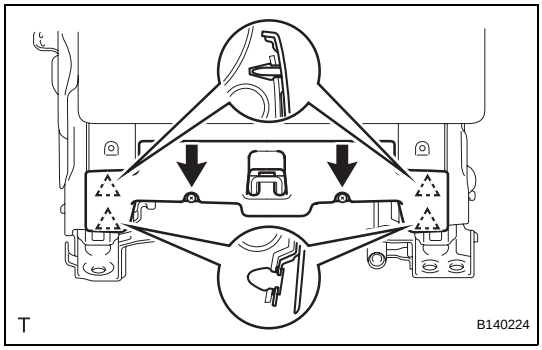
8. INSTALL REAR SEAT RECLINING RELEASE LEVER

(a) Attach the claw to install the release lever.



(b) Install the cover with the 2 screws.

9. INSTALL REAR SEAT CUSHION MOULDING LH



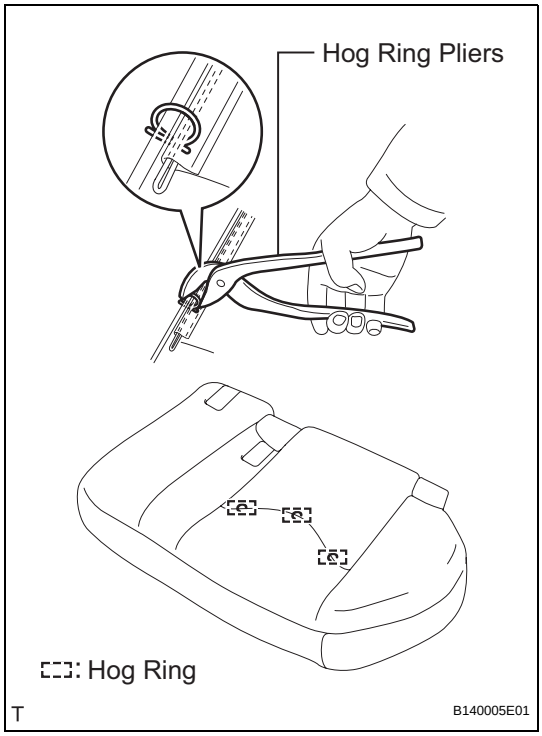
(a) Attach the 2 claws to install the moulding.
(b) Install the screw.

10. INSTALL REAR SEAT CUSHION REAR MOULDING LH

(a) Attach the claw to install the moulding.

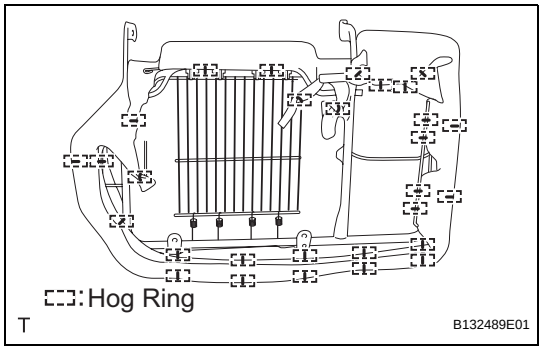
(b) Install the screw.

11. INSTALL REAR SEAT REAR BRACKET COVER LH



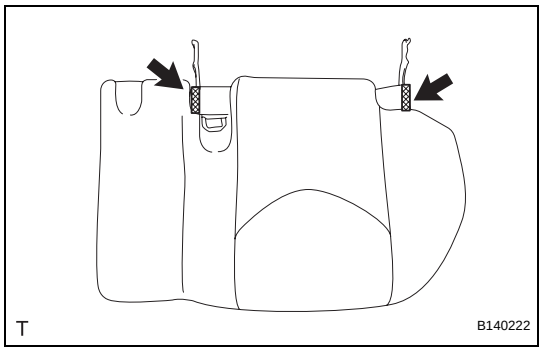
(a) Open the lower part of the seatback cover. Then attach the 4 clips to install the bracket cover.

(b) Install the 2 screws.

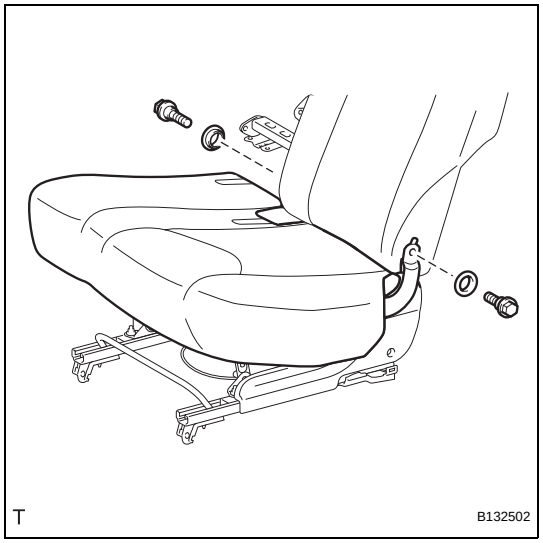


12. INSTALL REAR NO. 1 SEAT CUSHION COVER

NOTICE:

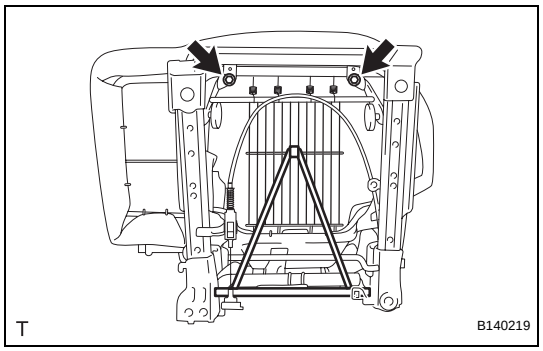


- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**



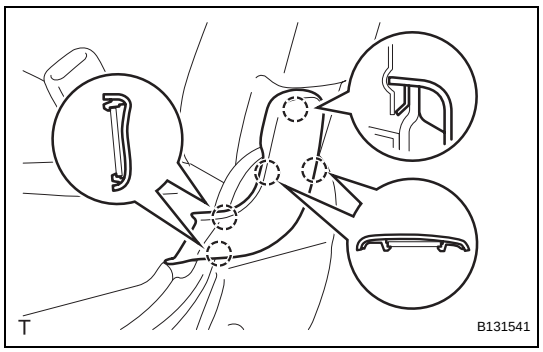
(a) Using hog ring pliers, install the seat cushion cover to the seat cushion pad with 3 new hog rings.

(b) Using hog ring pliers, install the seat cushion cover (with pad) to the seat cushion frame with 29 new hog rings.



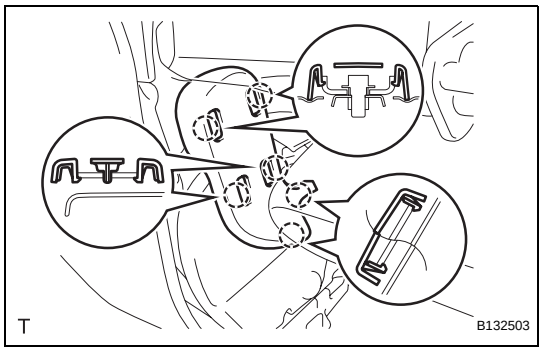
(c) Attach the 2 hooks.

13. INSTALL REAR NO. 1 SEAT CUSHION ASSEMBLY LH



(a) Install the cushion with the 2 bushes and 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

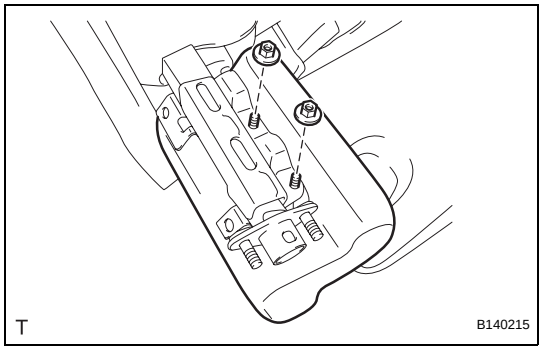
(b) Install the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)



(c) Connect the rubber band of the seatback cover to the seat cushion frame.

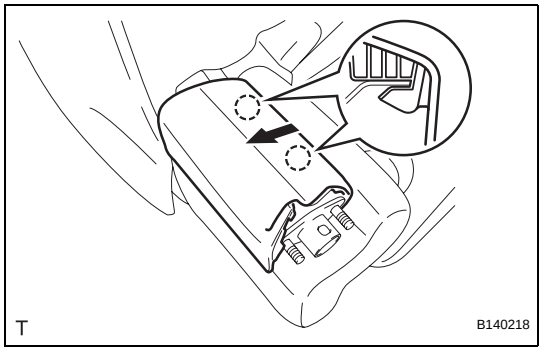
14. INSTALL REAR SEAT INNER BELT ASSEMBLY RH (See page SB-41)

15. INSTALL REAR SEAT CUSHION LOWER HINGE COVER LH



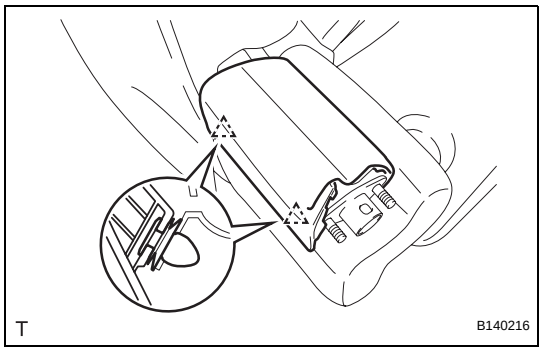
(a) Attach the 5 claws to install the hinge cover.

16. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER



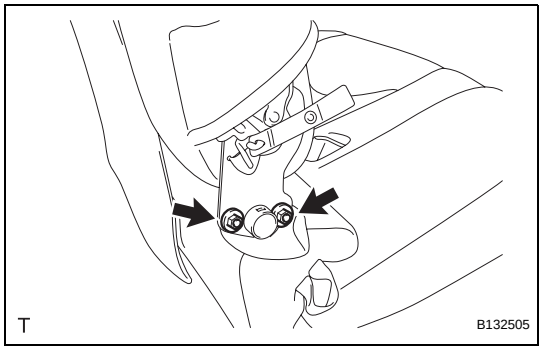
(a) Attach the 6 claws to install the hinge cover.

SE



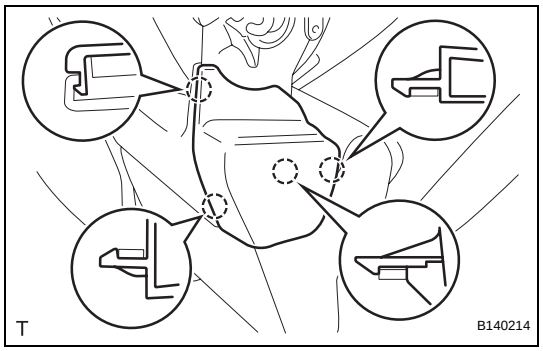
17. INSTALL REAR NO. 1 SEAT ARMREST ASSEMBLY LH

(a) Install the armrest with the 2 nuts.
Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf)



18. INSTALL REAR SEAT CENTER ARMREST COVER

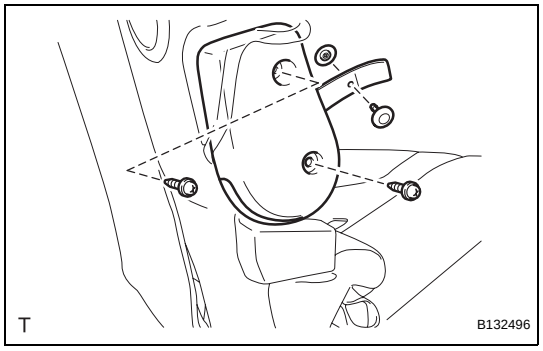
(a) Push the armrest cover in the direction indicated by the arrow in the illustration to attach the 2 claws.



(b) Attach the 2 clips to install the armrest cover.

19. INSTALL REAR SEAT CENTER ARMREST ASSEMBLY

(a) Install the armrest with the 2 nuts.
Torque: 32 N*m (326 kgf*cm, 24 ft.*lbf)



20. INSTALL CENTER ARMREST HINGE COVER LH

(a) Attach the 4 claws to install the hinge cover.

21. INSTALL CENTER ARMREST HINGE COVER RH

(a) Pass the seat lock release strap through the hole in the hinge cover.

(b) Attach the claw to install the hinge cover.

(c) Install the 2 screws and 2 rear seatback lock hooks.

22. INSTALL REAR SEAT CENTER HEADREST ASSEMBLY

23. INSTALL REAR SEAT HEADREST ASSEMBLY

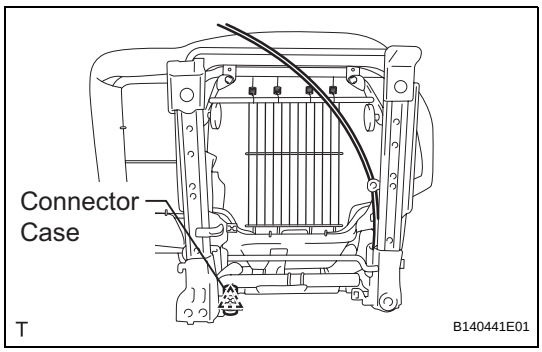
INSTALLATION

1. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (w/o Rear No. 2 Seat)

(a) Fully tilt the seatback forward.

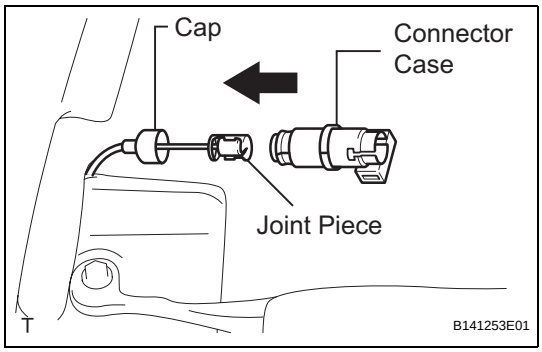
(b) Place the seat in the cabin.

NOTICE:



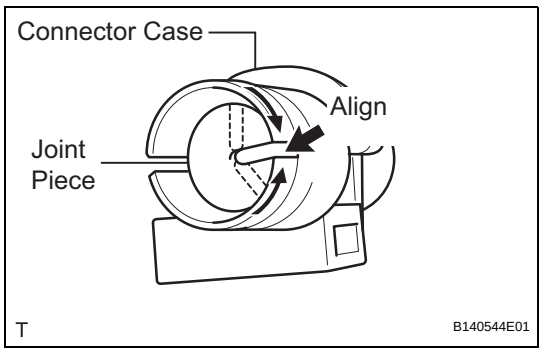
Be careful not to damage the vehicle body.

(c) Connection procedures of seat to lock cable when reusing seat:

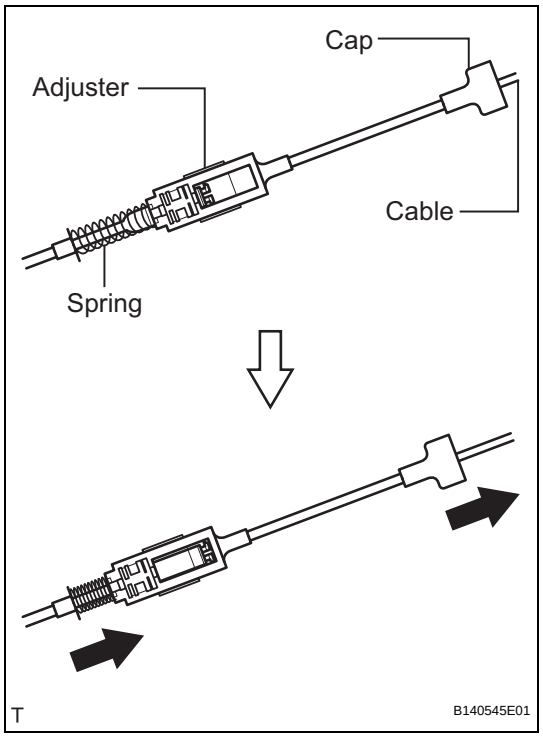


(1) Using a screwdriver, detach the claw and remove the connector case from the seat.

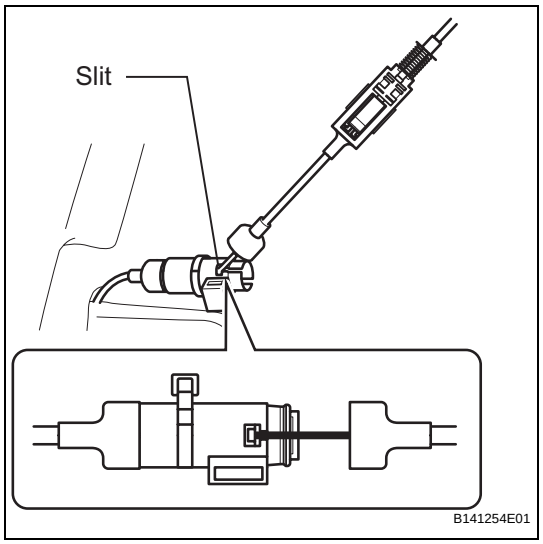
HINT:



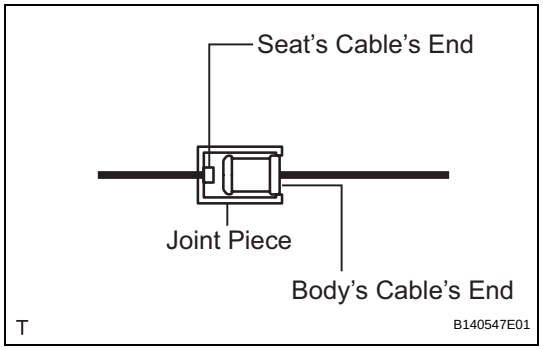
Tape the screwdriver tip before use.

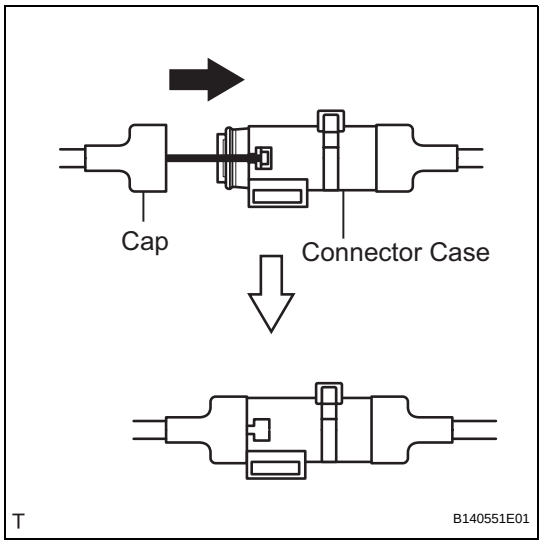


(2) Install the connector case to the body's cap.

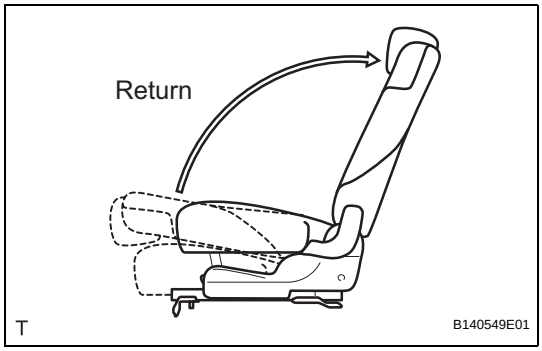


(3) Pull out the joint piece. Align the slits of the joint piece and connector case.

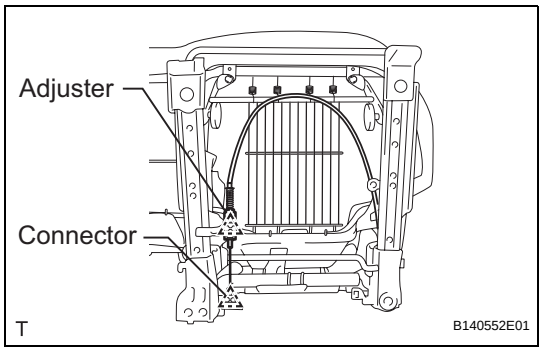




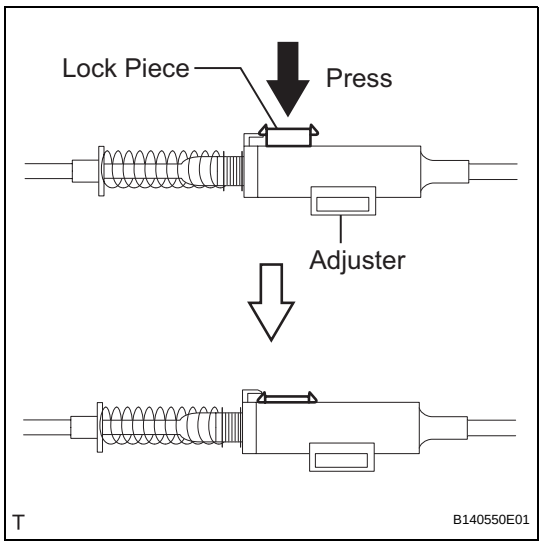
(4) Compress the spring of the adjuster, and pull out the cable from the seat's cap.
HINT:
Perform this procedure with the lock of the adjuster released.



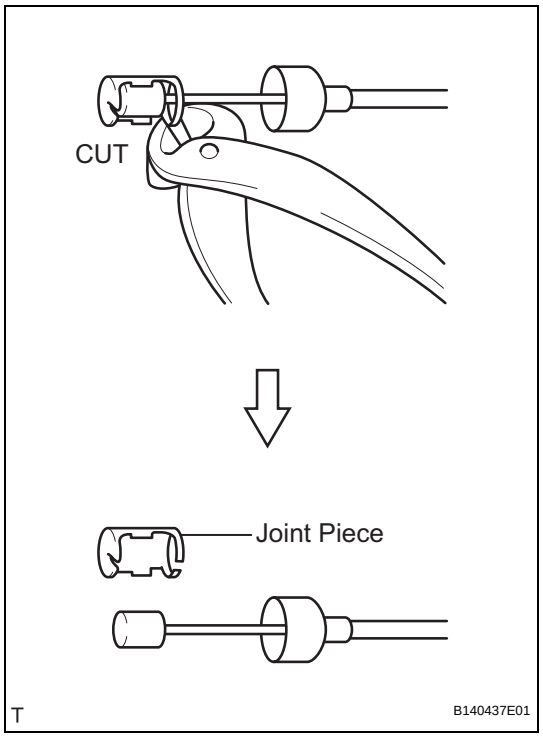
(5) Install the seat cable's end part to the connector case's slit.



HINT:
Position the joint piece cable's end part as shown in the illustration.

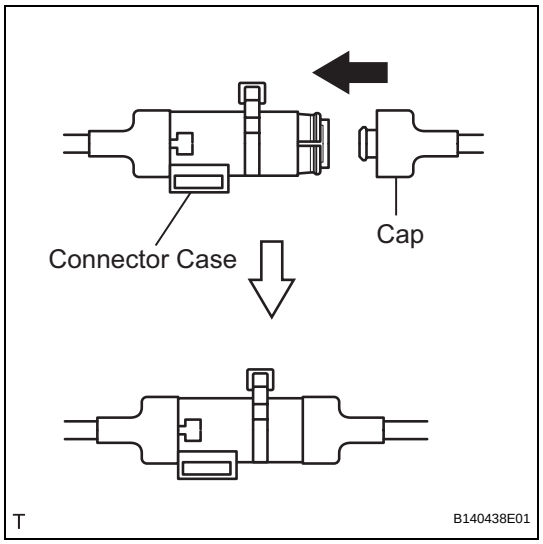


(6) Install the seat's cap to the connector case.
(7) Temporarily place the seat into the vehicle where it will be installed.

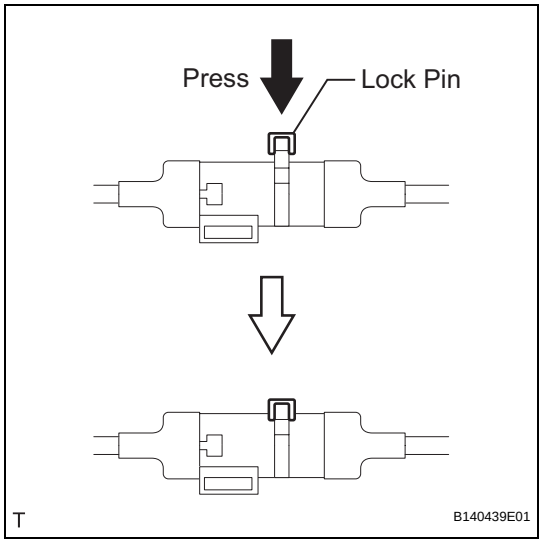


(8) Return the seatback to the upright position.

(9) Attach the claws of the connector and adjuster, and install them to the seat.

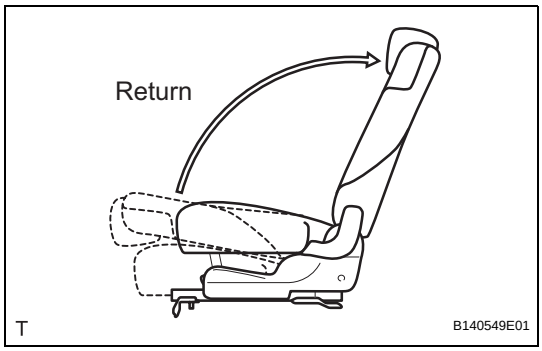


(10) Press the adjuster's lock piece to lock it.
NOTICE:
When pressing the lock piece, make sure the adjuster's spring is not compress.

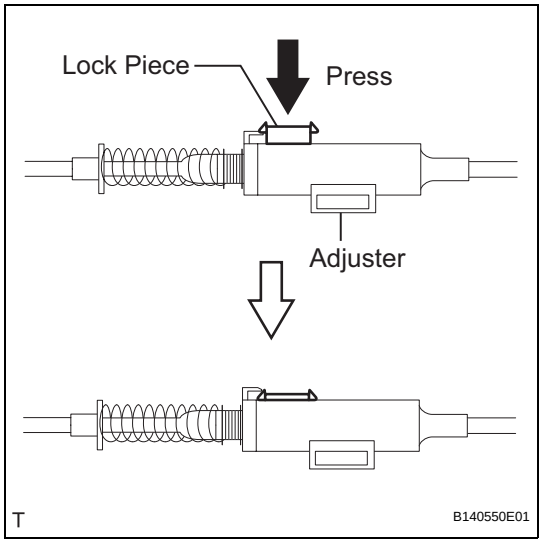


(d) Connection procedures of seat to lock cable when replacing seat:

(1) Cut the joint piece on the lock cable, and remove it.
HINT:
- A joint piece is included with new seats.
- This procedure is not necessary when the lock cable is replaced with a new one.

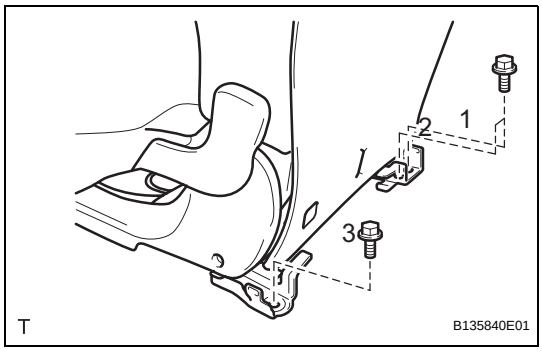


(2) Temporarily place the seat into the vehicle where it will be installed.

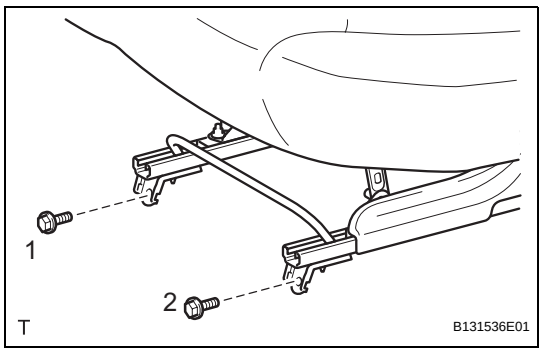


(3) Install the body's cap to the connector case.

(4) Press the adjuster's lock pin.



(5) Return the seatback to the upright position.

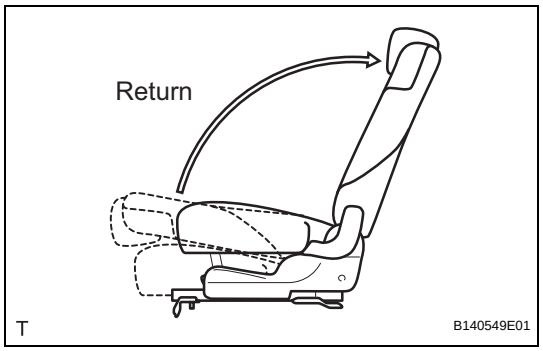


(6) Press the adjuster's lock piece to lock it.
NOTICE:
When pressing the lock piece, make sure the adjuster's spring is not compress.

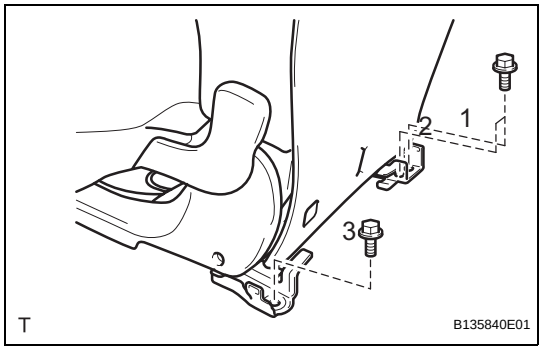
(e) Lift up the seat track adjusting handle and move the seat to the foremost position.

(f) Tighten the 3 bolts on the rear side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

(g) Lift up the seat track adjusting handle and move the seat to the rearmost position.

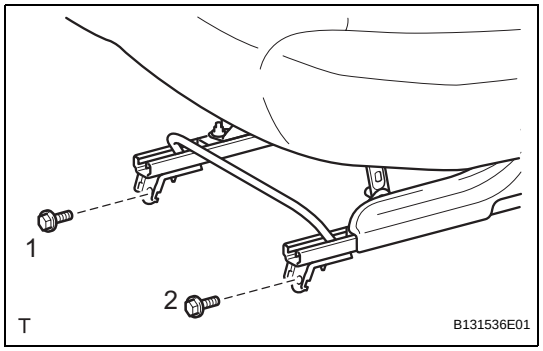


(h) Tighten the 2 bolts on the front side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.



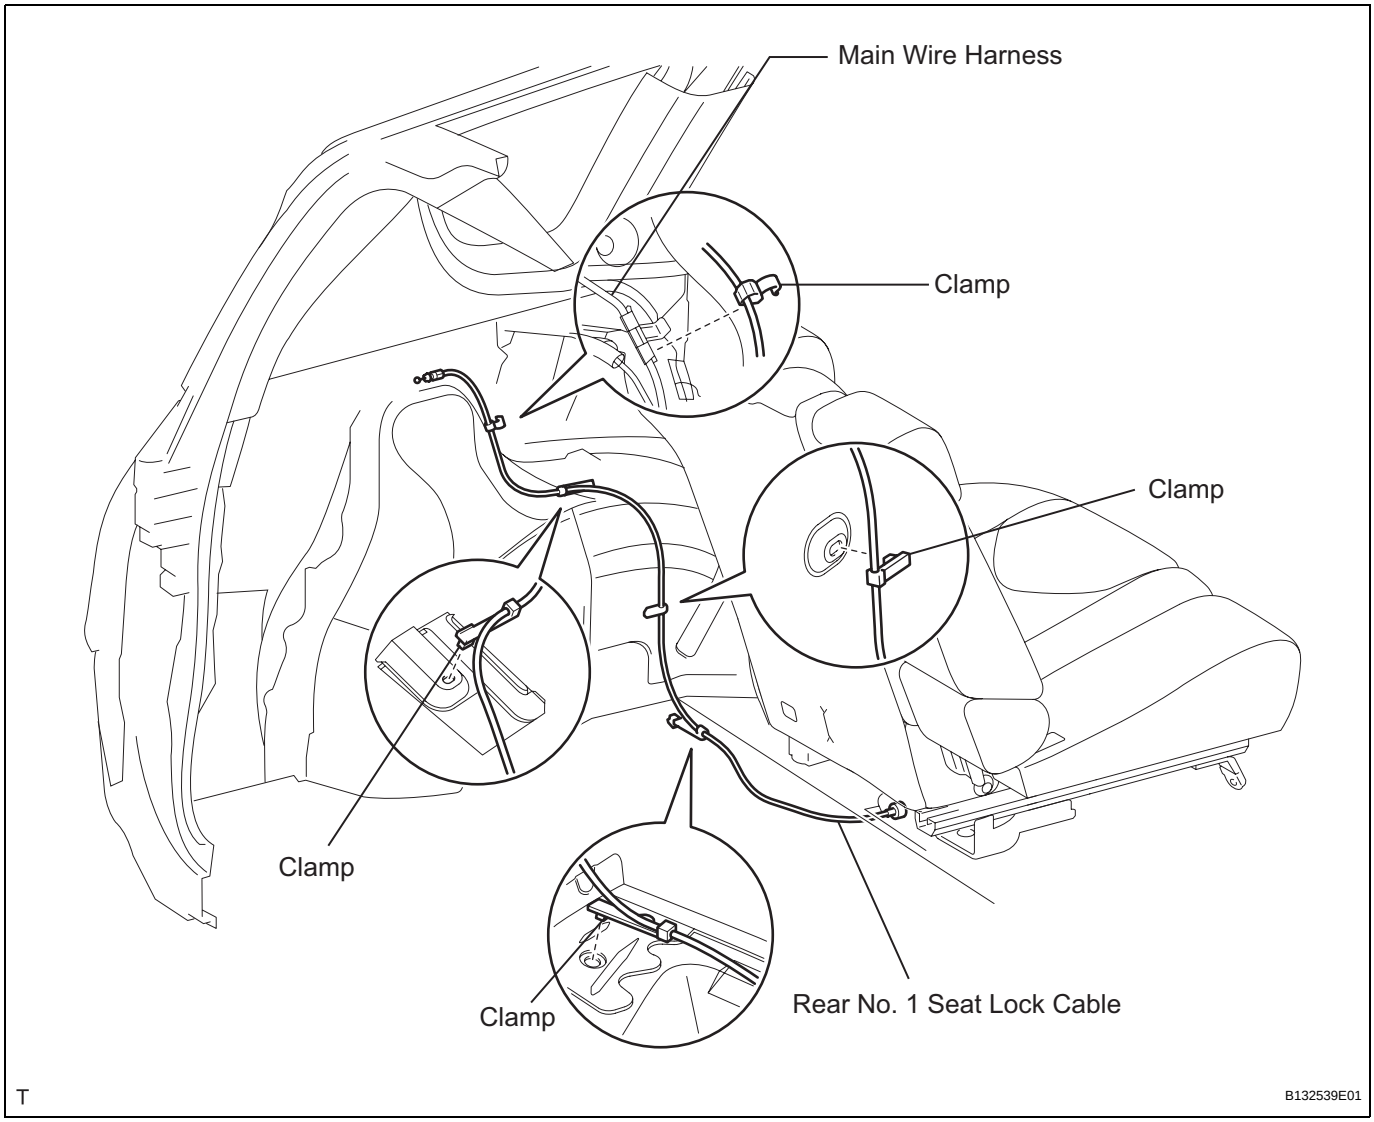
2. INSTALL REAR NO. 1 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat)

(a) Fully tilt the seatback forward.



(b) Place the seat in the cabin.
NOTICE:
Be careful not to damage the vehicle body.

(c) Return the seatback to the upright position.
(d) Lift up the seat track adjusting handle and move the seat to the foremost position.

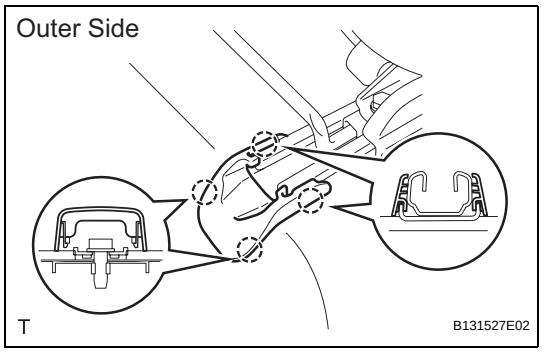


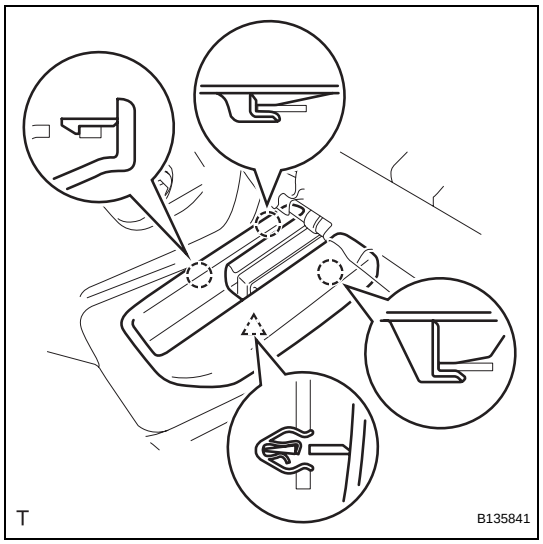
(e) Tighten the 3 bolts on the rear side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.
(f) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(g) Tighten the 2 bolts on the front side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

3. INSTALL REAR NO. 1 SEAT LOCK CABLE ASSEMBLY (w/o Rear No. 2 Seat)

(a) Attach the clamps and install the cable to the vehicle body.

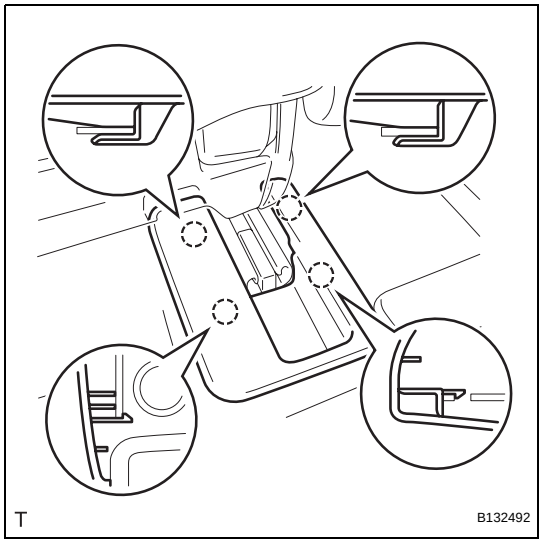




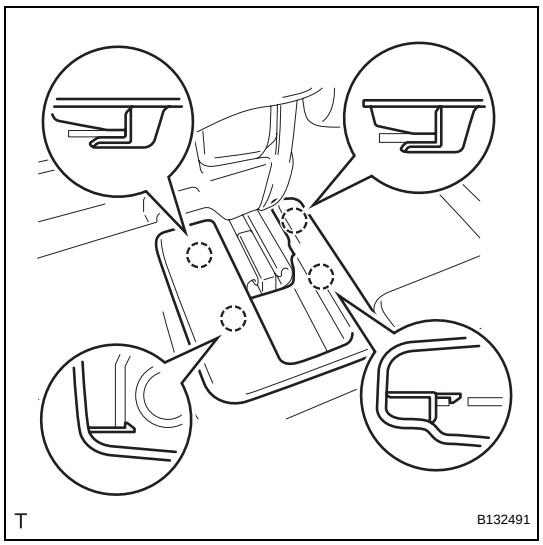
4. INSTALL REAR SEAT LAP TYPE BELT ASSEMBLY CENTER RH (w/ Rear No. 2 Seat) (See page SB-42)

5. INSTALL REAR SEAT LAP TYPE BELT CENTER ASSEMBLY RH (w/o Rear No. 2 Seat) (See page SB-42)

6. INSTALL REAR SEAT LEG COVER

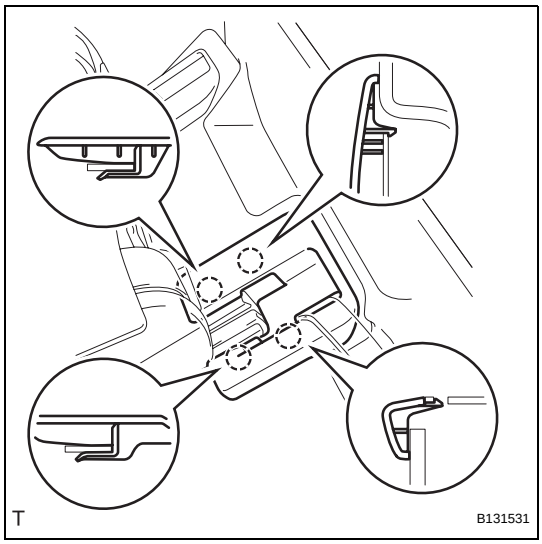


(a) Attach the 8 claws to install the 2 leg covers.



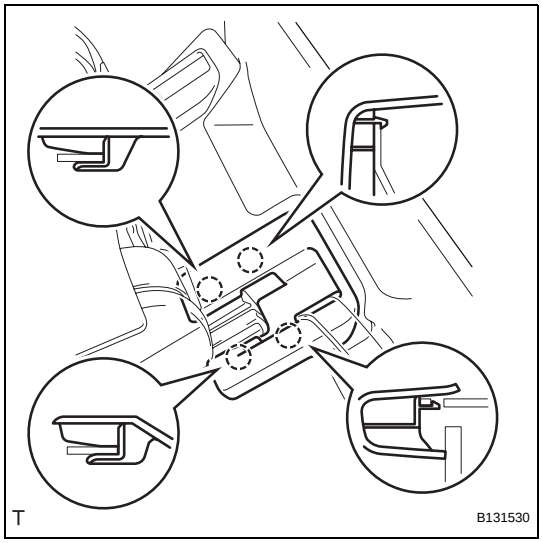
7. INSTALL REAR NO. 5 SEAT LEG SIDE COVER

(a) Attach the 3 claws and clip to install the side cover.



8. INSTALL REAR NO. 4 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

(a) Attach the 4 claws to install the side cover.

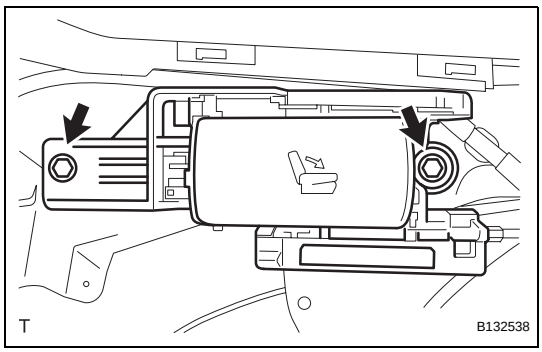


9. INSTALL REAR NO. 4 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Attach the 4 claws to install the rear No. 4 seat leg side cover.

10. INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

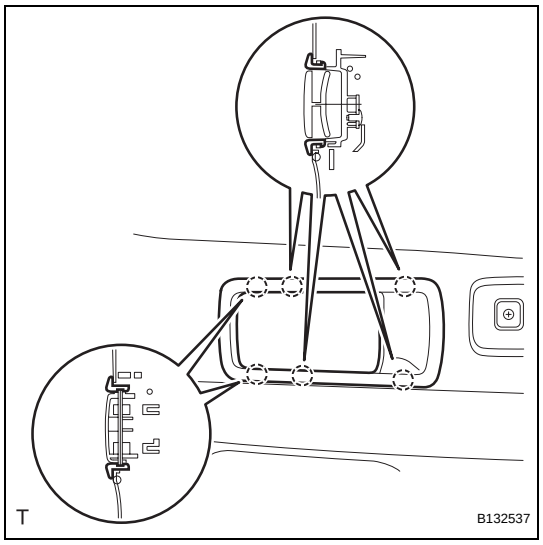
(a) Attach the 4 claws to install the side cover.



11. INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Attach the 4 claws to install the side cover.

12. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY LH (w/o Rear No. 2 Seat)

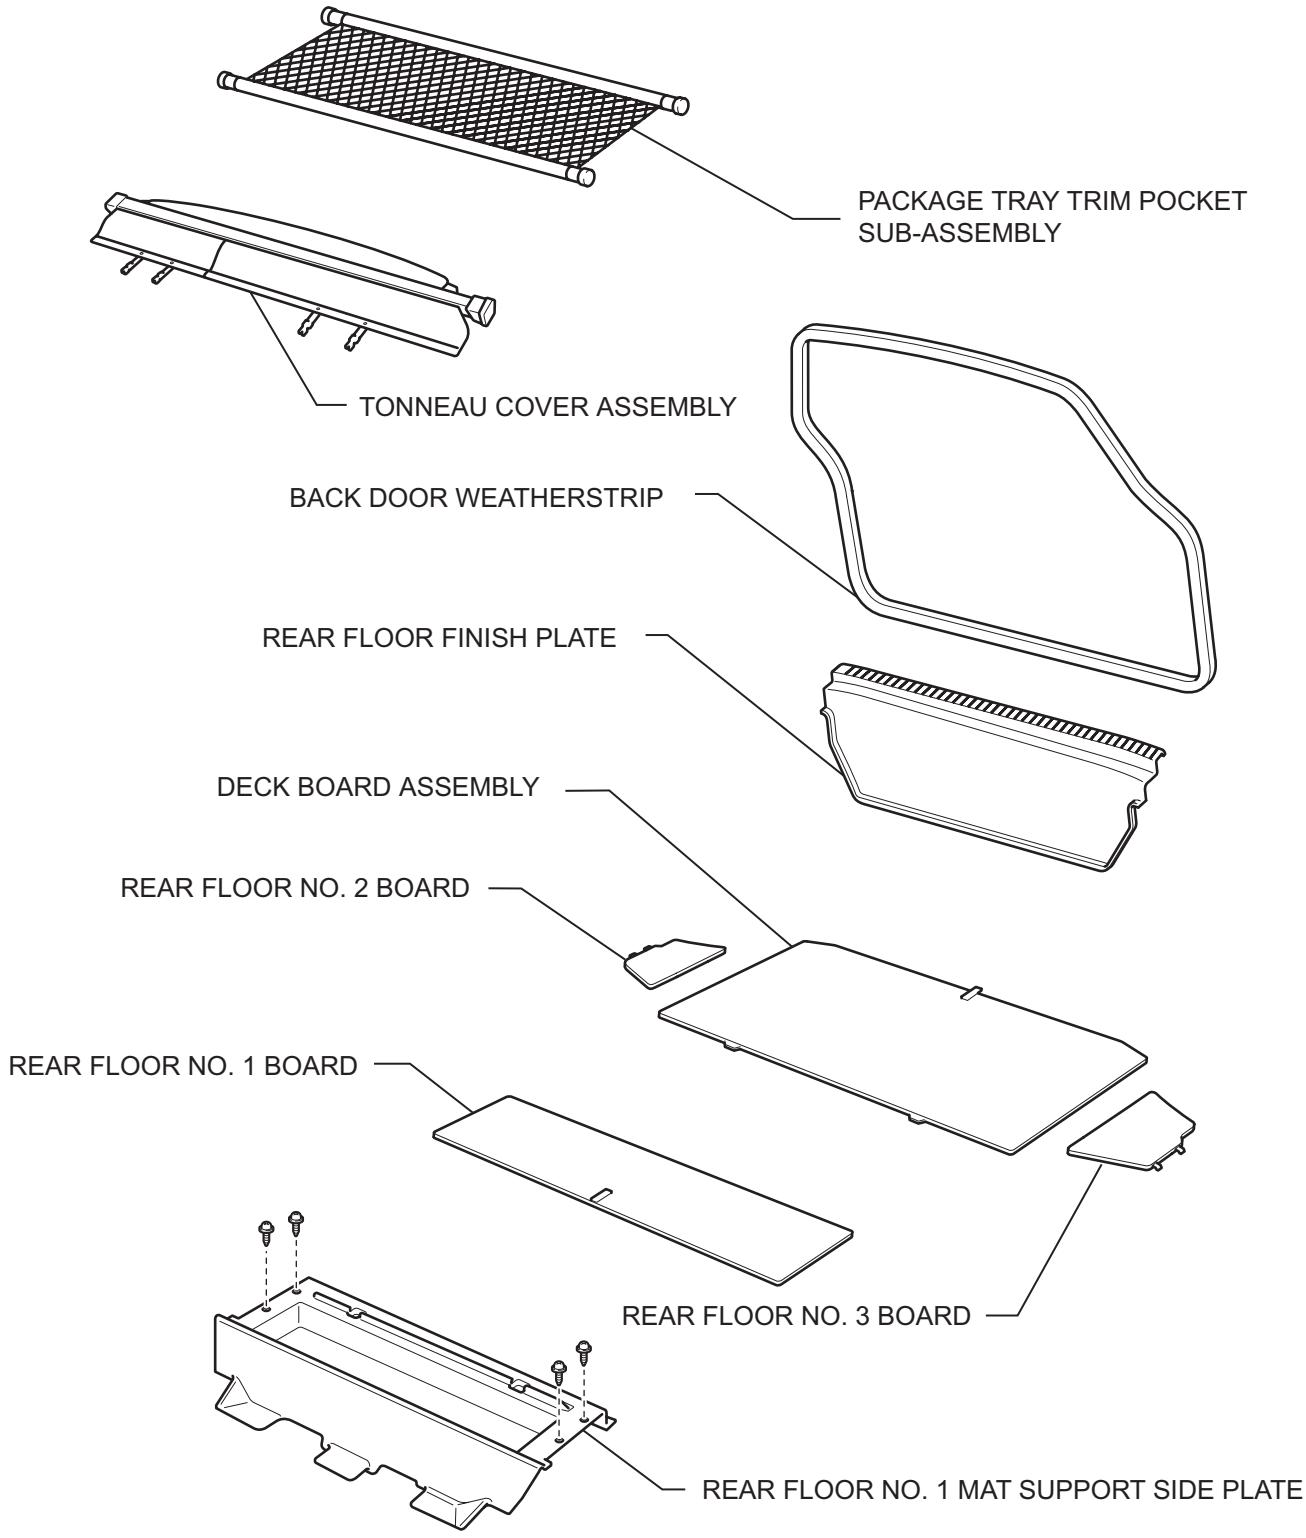


(a) Connect the rear No. 1 seat lock cable to the lever.

(b) Install the lever with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

13. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat) (See page IR-52)

14. INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-54)



15. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)**
    (a) Attach the 6 claws to install the bezel.
16. **INSTALL REAR FLOOR FINISH PLATE (w/o Rear No. 2 Seat) (See page IR-55)**
17. **INSTALL BACK DOOR WEATHERSTRIP (w/o Rear No. 2 Seat)**
18. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (w/o Rear No. 2 Seat) (See page IR-55)**
19. **INSTALL REAR FLOOR NO. 3 BOARD (w/o Rear No. 2 Seat)**
20. **INSTALL REAR FLOOR NO. 2 BOARD (w/o Rear No. 2 Seat)**
21. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
22. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
23. **INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
24. **INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**

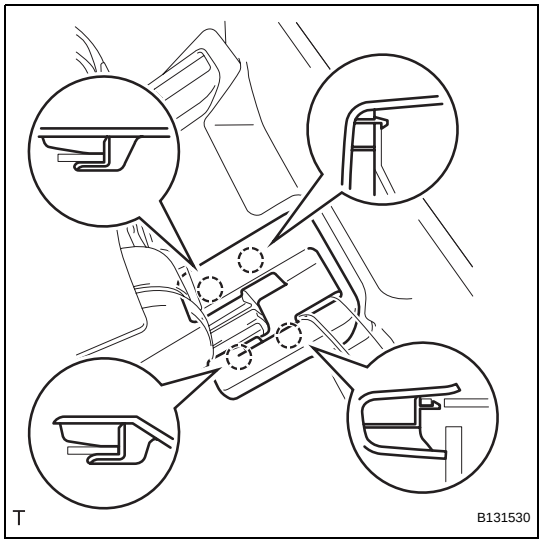
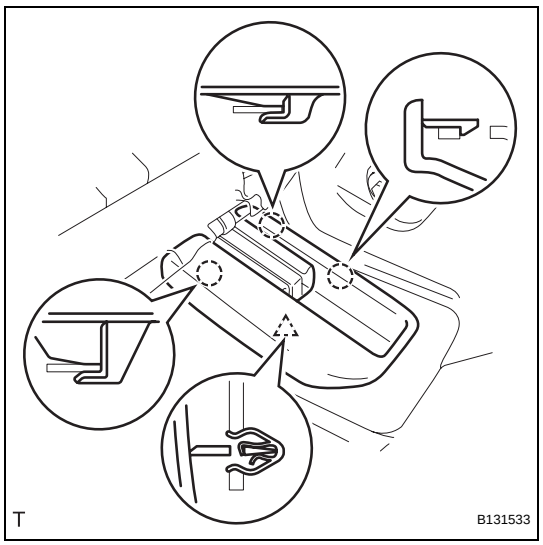
REMOVAL

1. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
2. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
3. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
4. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE REAR FLOOR NO. 3 BOARD (w/o Rear No. 2 Seat)**
6. **REMOVE REAR FLOOR NO. 2 BOARD (w/o Rear No. 2 Seat)**
7. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (w/o Rear No. 2 Seat) (See page IR-31)**
8. **REMOVE BACK DOOR WEATHERSTRIP (w/o Rear No. 2 Seat)**
9. **REMOVE REAR FLOOR FINISH PLATE (w/o Rear No. 2 Seat) (See page IR-31)**
10. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat)**
    (a) Using a screwdriver, detach the 6 claws and remove the bezel.
    HINT:
    Tape the screwdriver tip before use.

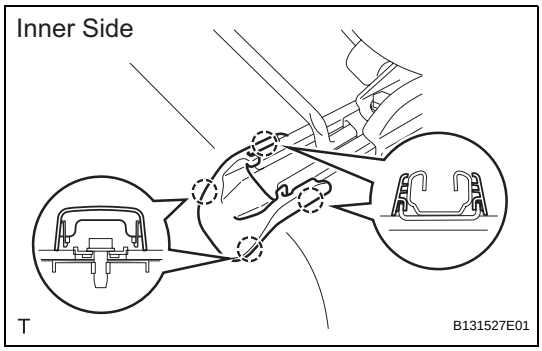


11. **REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-32)**
12. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-33)**
13. **REMOVE RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (w/o Rear No. 2 Seat)**
    (a) Remove the 2 bolts and lever.
    (b) Disconnect the rear No. 1 seat lock cable from the lever.



14. REMOVE REAR NO. 3 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.

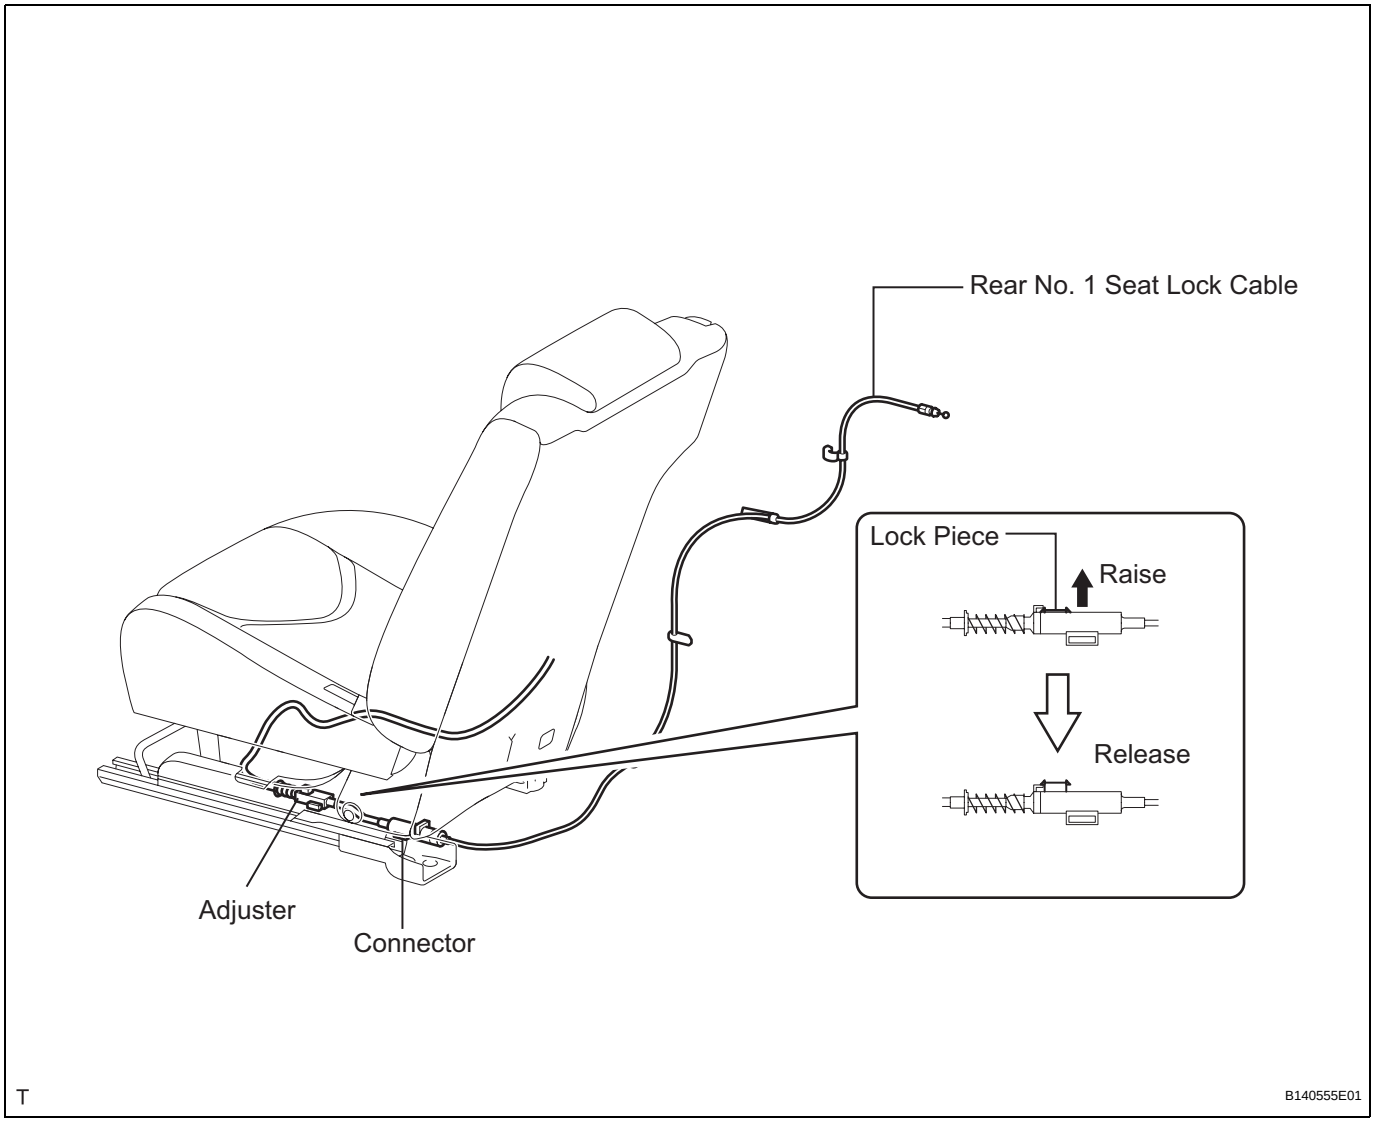


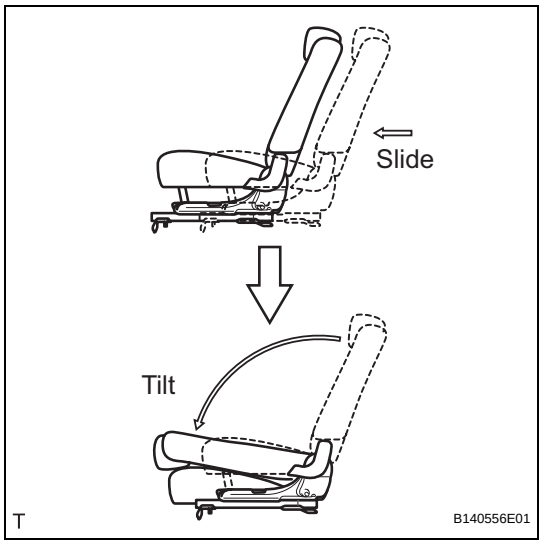
15. REMOVE REAR NO. 3 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Using a screwdriver, detach the 4 claws and remove the side cover.
HINT:
Tape the screwdriver tip before use.

16. REMOVE REAR NO. 2 SEAT LEG SIDE COVER

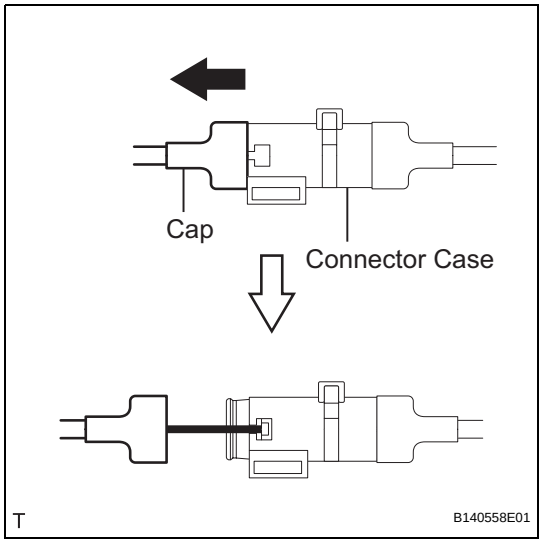
(a) Using a screwdriver, detach the 3 claws and clip, and remove the side cover.
HINT:
Tape the screwdriver tip before use.





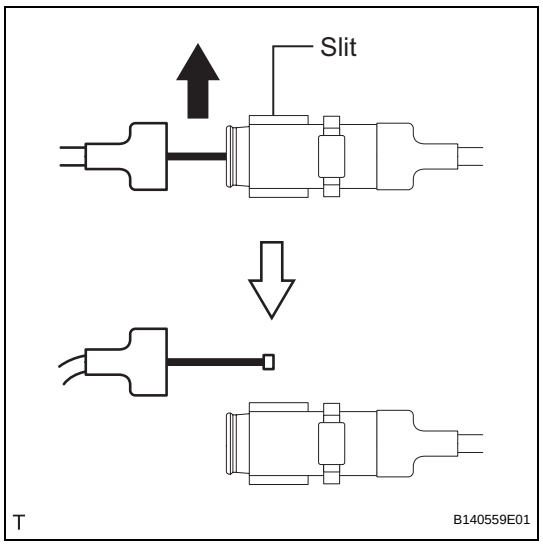
17. REMOVE REAR SEAT LEG COVER

(a) Using a screwdriver, detach the 8 claws and remove the 2 leg covers.
HINT:
Tape the screwdriver tip before use.

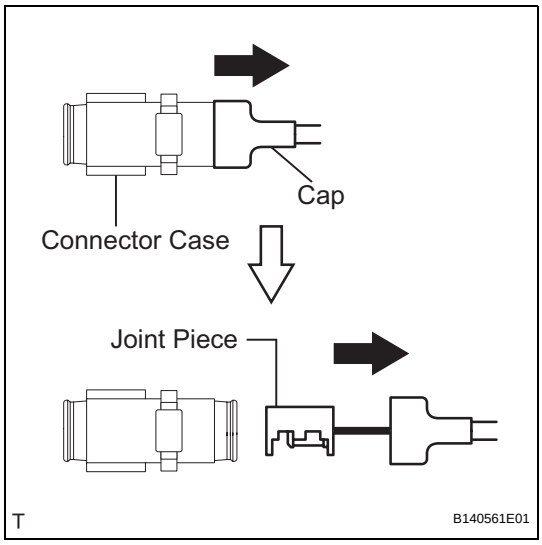


18. REMOVE REAR NO. 1 SEAT LOCK CABLE ASSEMBLY (w/o Rear No. 2 Seat)

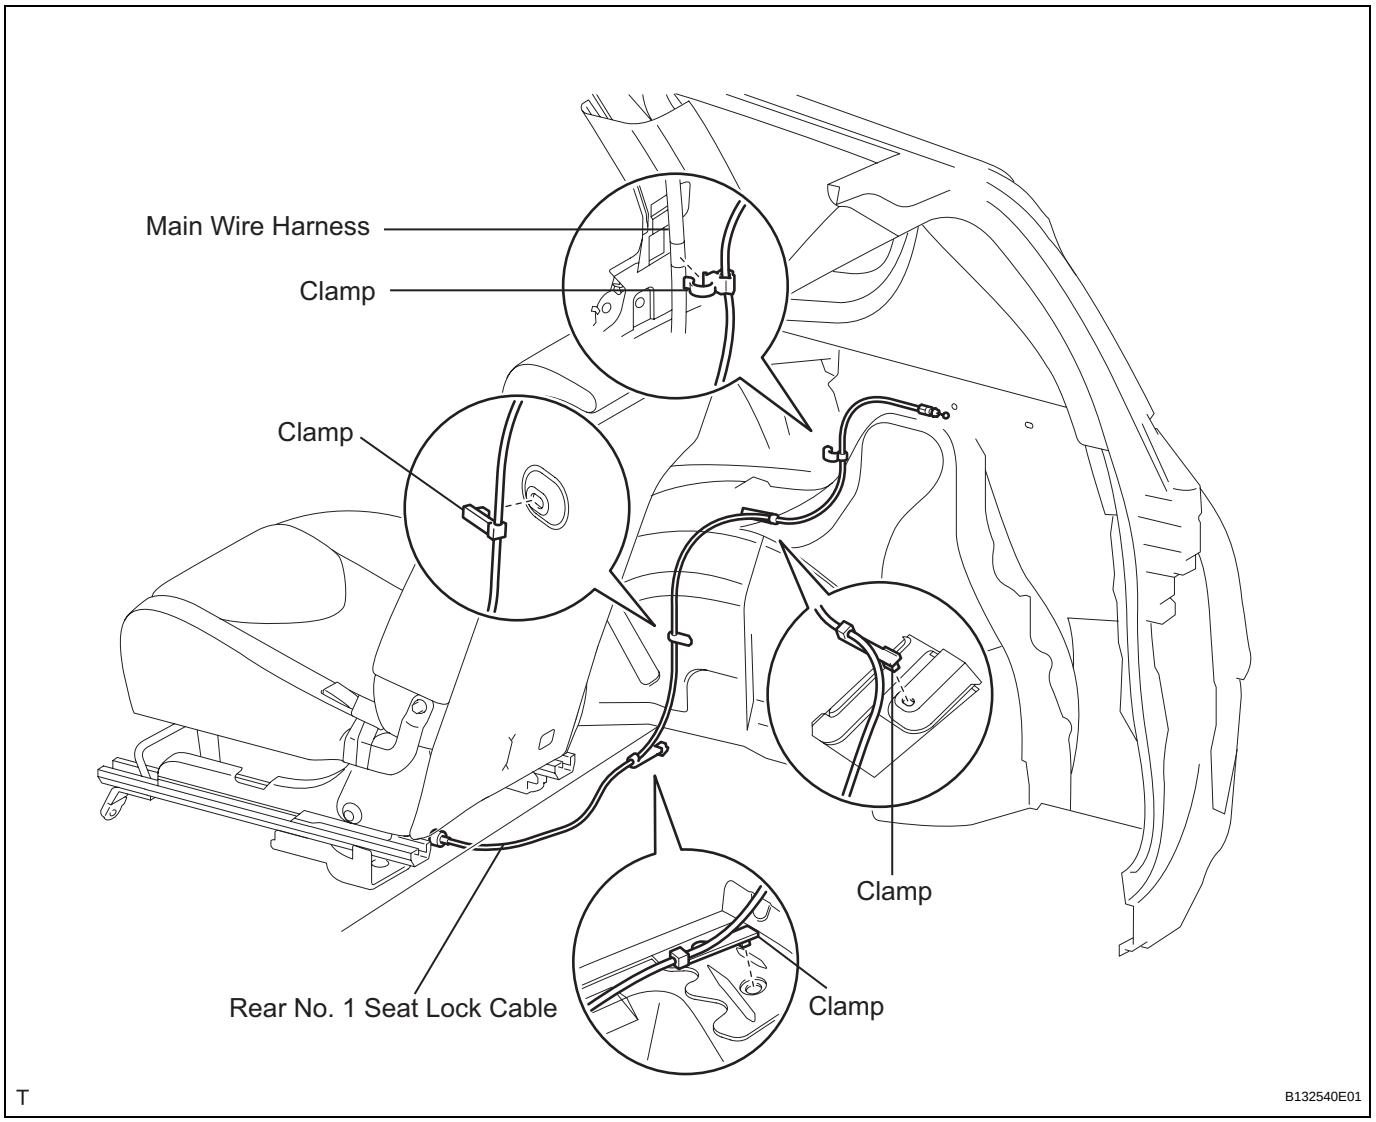
(a) Disconnect the lock cable from the seat.
(1) Raise the adjuster's lock piece to release the lock.



(2) Slide the seat forward and tilt the seatback forward.

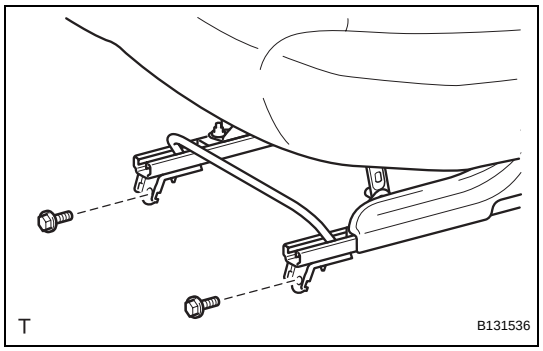


(3) Remove the seat's cap from the connector case.



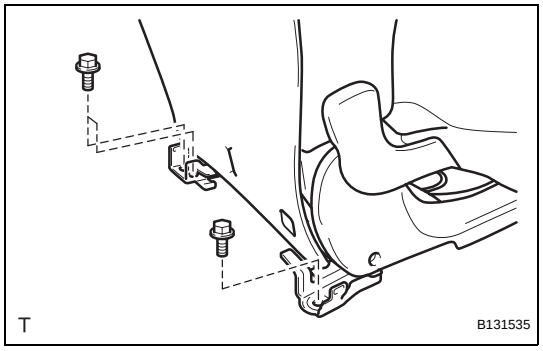
(4) Pull the seat's cap toward the outside of the vehicle. Then remove the cable from the connector case's slit.

SE



(5) Remove the body's cap from the connector case.

(b) Detach the clamps and remove the lock cable.

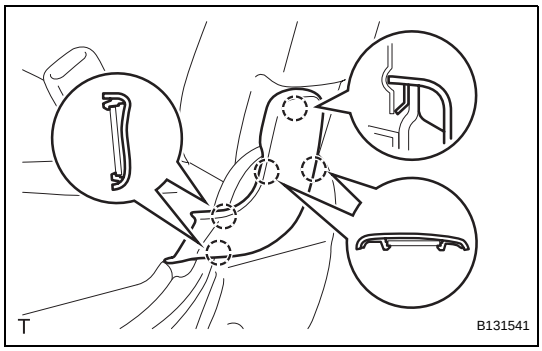


19. REMOVE REAR NO. 1 SEAT ASSEMBLY RH

(a) Lift up the seat track adjusting handle and move the seat to the rearmost position.

(b) Remove the 2 bolts on the front side of the seat.
(c) Lift up the seat track adjusting handle and move the seat to the foremost position.

(d) Remove the 3 bolts on the rear side of the seat.
(e) Lift up the seat track adjusting handle and move the seat to the center position. Then remove the seat.
NOTICE:
Be careful not to damage the vehicle body,

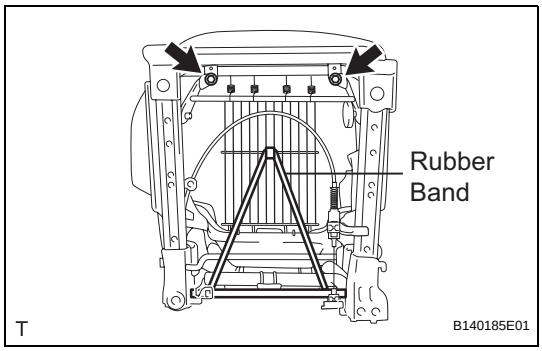


SE

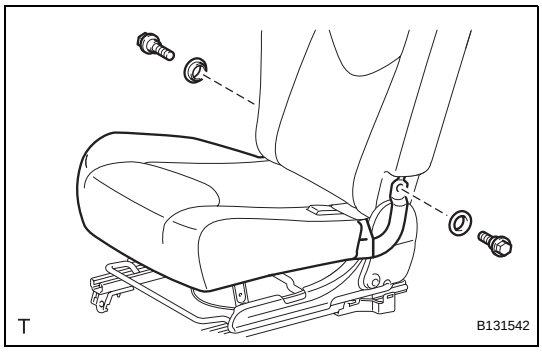
DISASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seatback frame, seat cushion frame and reclining adjuster may injure your hands.

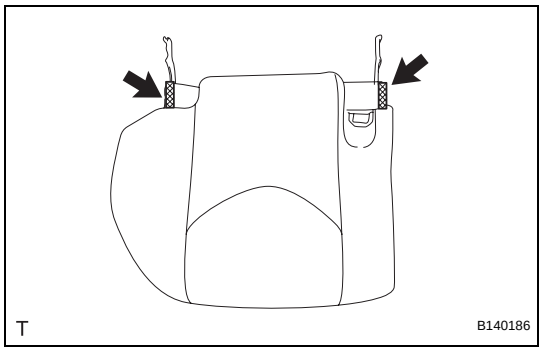
1. **REMOVE REAR SEAT HEADREST ASSEMBLY**



2. **REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER**
   (a) Return the seatback to the upright position.
   (b) Using a screwdriver, detach the 5 claws and remove the hinge cover.
   HINT:
   Tape the screwdriver tip before use.



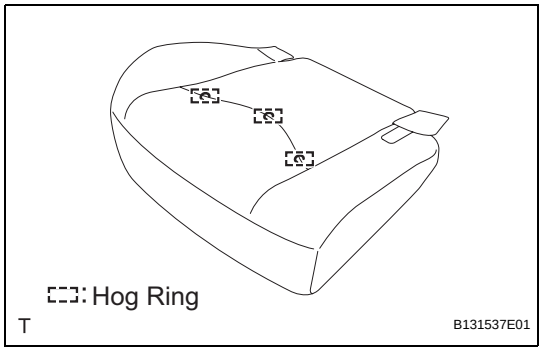
3. **REMOVE REAR NO. 1 SEAT CUSHION HINGE COVER**
   HINT:
   Use the same procedures described for the rear No. 2 seat cushion hinge cover.



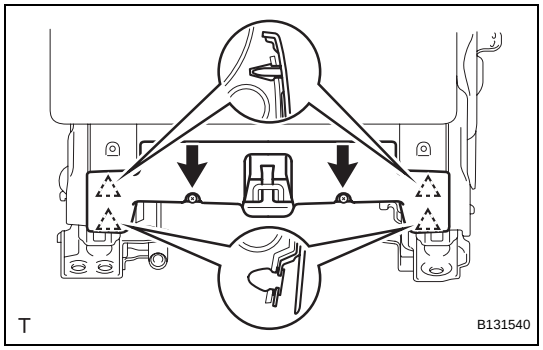
4. **REMOVE REAR SEAT INNER BELT ASSEMBLY RH (See page SB-40)**

5. **REMOVE REAR NO. 1 SEAT CUSHION ASSEMBLY RH**
   (a) Disconnect the rubber band of the seatback cover from the seat cushion frame.
   (b) Remove the 2 bolts.

   (c) Remove the 2 bolts, 2 bushes and cushion.

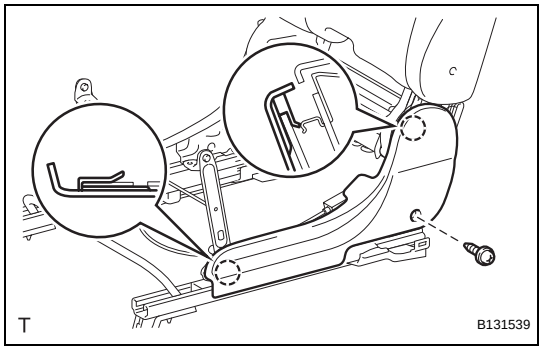


6. REMOVE REAR NO. 1 SEAT CUSHION COVER



(a) Detach the 2 hooks.

(b) Remove the 18 hog rings and seat cushion cover (with pad) from the seat cushion frame.



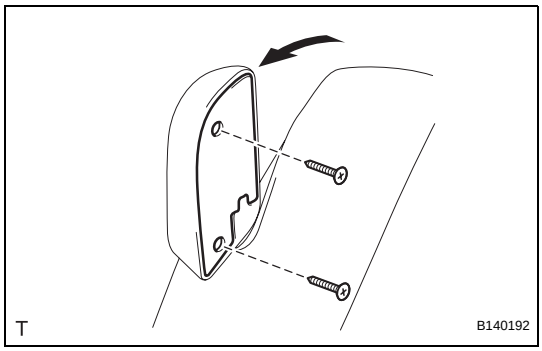
(c) Remove the 3 hog rings and seat cushion cover from the seat cushion pad.

7. REMOVE REAR SEAT REAR BRACKET COVER RH

(a) Open the lower part of the seatback cover. Then remove the 2 screws.

(b) Using a screwdriver, detach the 4 clips and remove the bracket cover.
HINT:
Tape the screwdriver tip before use.

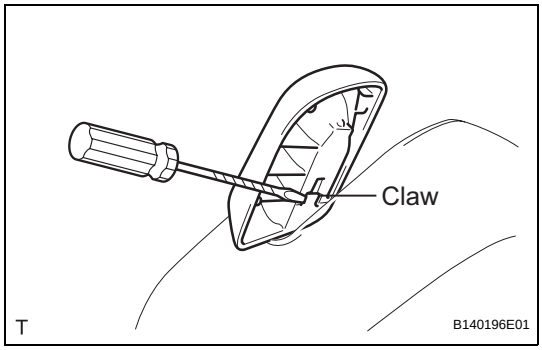
8. REMOVE REAR SEAT CUSHION REAR MOULDING RH



(a) Remove the screw.

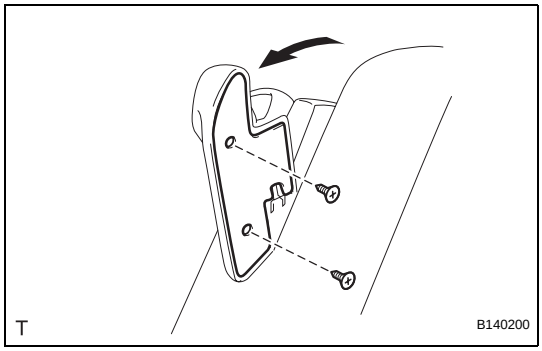
(b) Detach the 2 claws and remove the moulding.

9. REMOVE REAR SEAT CUSHION MOULDING RH



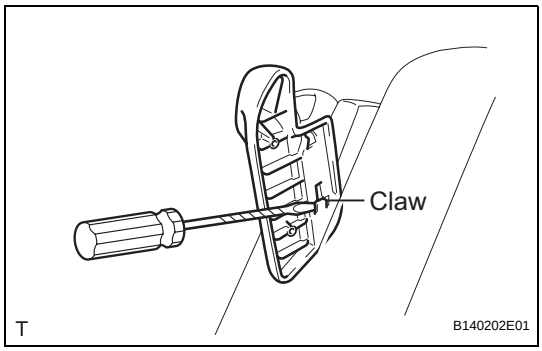
HINT:
Use the same procedures described for the rear seat cushion rear moulding RH.

SE

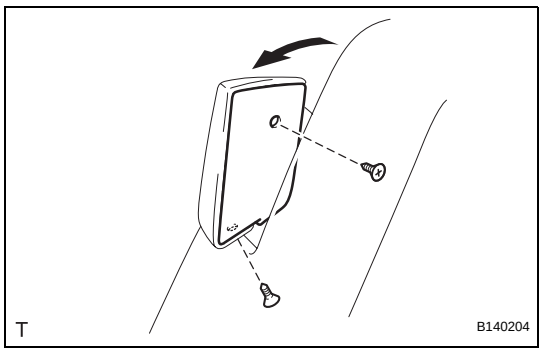


10. REMOVE REAR SEAT RECLINING RELEASE LEVER (w/o Rear No. 2 Seat)

(a) Pull the reclining control lever to reveal the 2 screws. Then remove the 2 screw and cover.

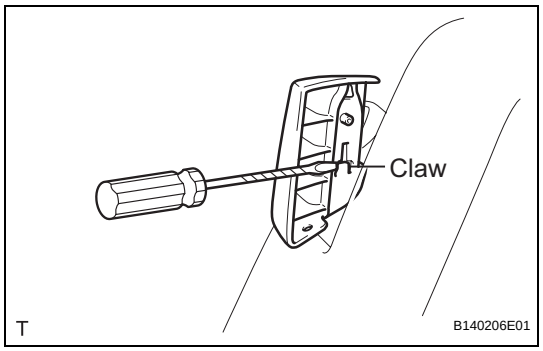


(b) Using a screwdriver, detach the claw and remove the release lever.
HINT:
Tape the screwdriver tip before use.

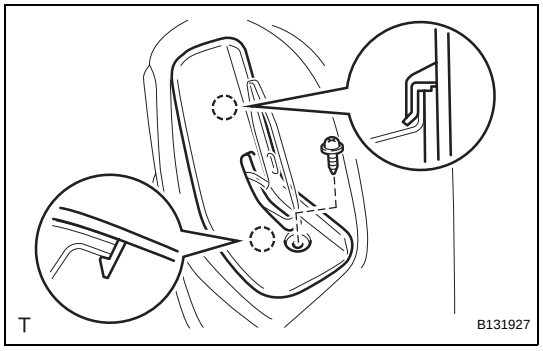


11. REMOVE REAR SEAT RECLINING RELEASE LEVER (w/ Rear No. 2 Seat)

(a) Pull the reclining control lever to reveal the 2 screws. Then remove the 2 screw and cover.

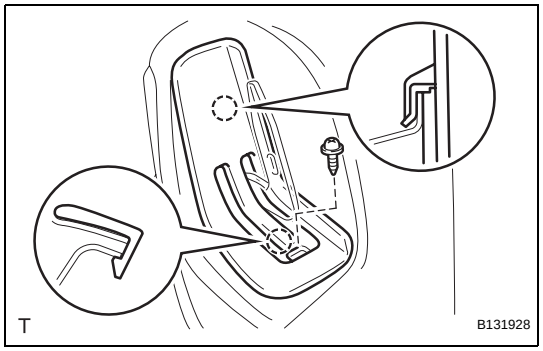


(b) Using a screwdriver, detach the claw and remove the release lever.
HINT:
Tape the screwdriver tip before use.

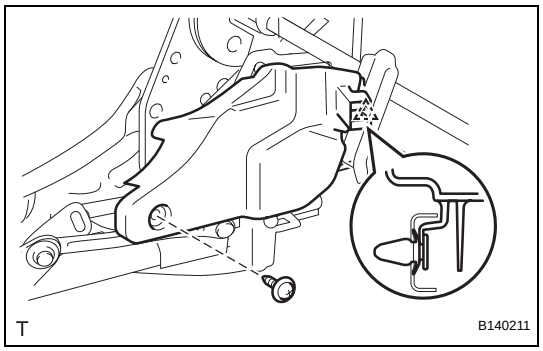


12. REMOVE REAR SEAT RECLINING CONTROL LEVER (w/ Rear No. 2 Seat)

(a) Pull the reclining control lever to reveal the 2 screws. Then remove the 2 screw and cover.

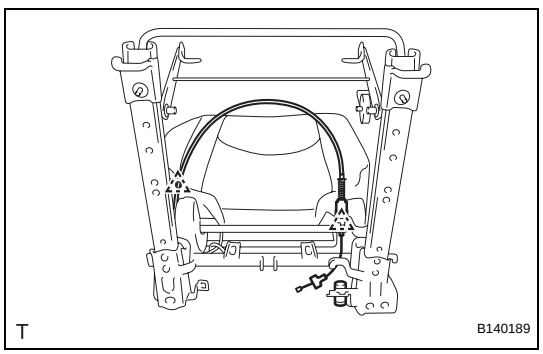


(b) Using a screwdriver, detach the claw and remove the control lever.
HINT:
Tape the screwdriver tip before use.



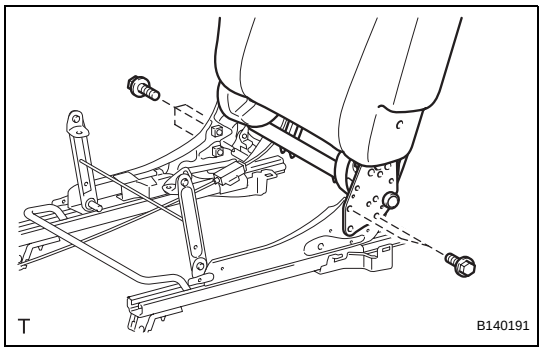
13. REMOVE REAR SEATBACK LOCK CONTROL LEVER BASE RH (w/o Rear No. 2 Seat)

(a) Remove the screw.
(b) Using a screwdriver, detach the 2 claws and remove the lever base.
HINT:
Tape the screwdriver tip before use.



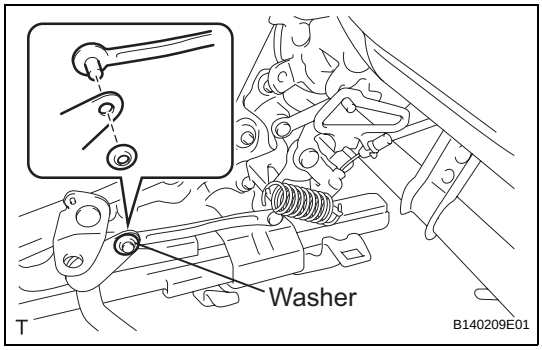
14. REMOVE REAR SEATBACK LOCK CONTROL LEVER BASE RH (w/ Rear No. 2 Seat)

(a) Remove the screw.
(b) Using a screwdriver, detach the 2 claws and remove the lever base.
HINT:
Tape the screwdriver tip before use.



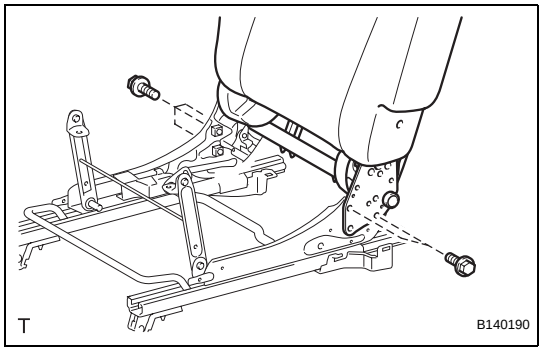
15. REMOVE REAR SEAT RECLINING INNER PROTECTOR RH (w/ Rear No. 2 Seat)

(a) Remove the screw.
(b) Detach the clip and remove the inner protector.



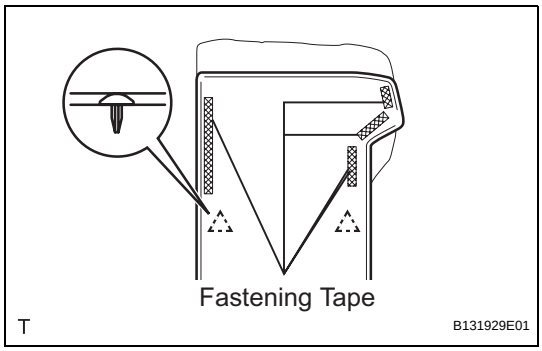
16. REMOVE REAR NO. 1 SEATBACK ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Detach the 2 clamps and disconnect the cable from the reclining adjuster.



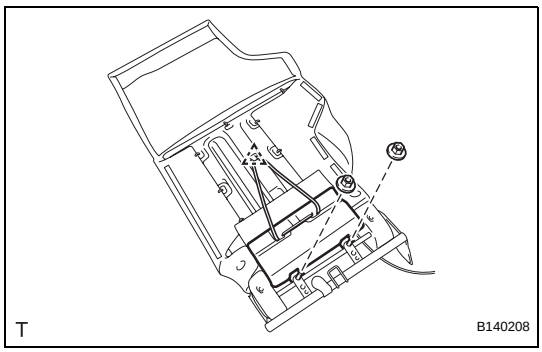
(b) Remove the 5 bolts and the seatback.

SE

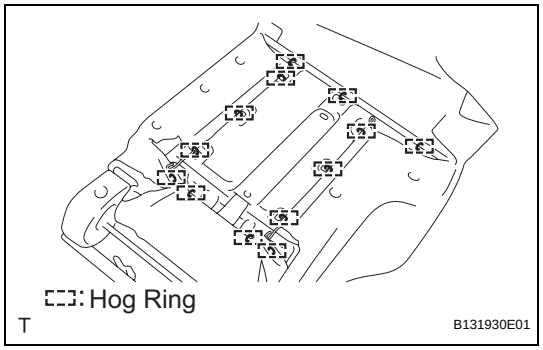


17. REMOVE REAR NO. 1 SEATBACK ASSEMBLY RH (w/ Rear No. 2 Seat)

(a) Using a screwdriver, remove the washer and disconnect the W/I unit from the reclining adjuster.



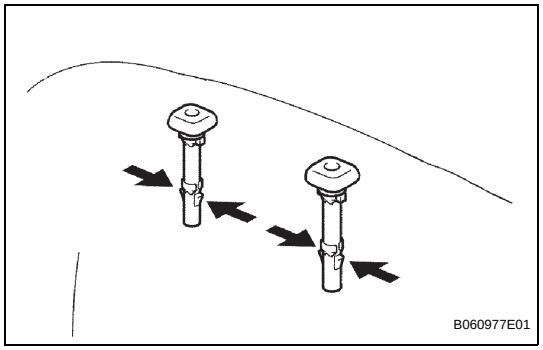
(b) Remove the 5 bolts and the seatback.



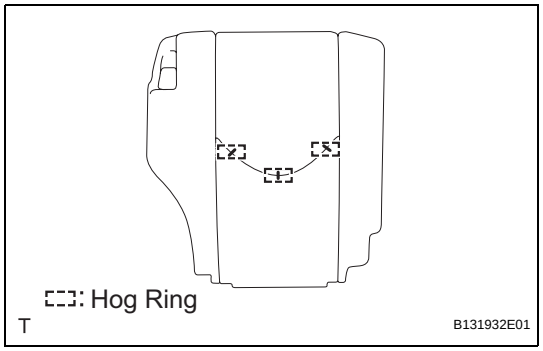
18. REMOVE REAR SEATBACK PROTECTOR

(a) Using a clip remover, detach the 5 clips and open the fastening tape.

NOTICE:
If clips are damaged during removal, replace them.

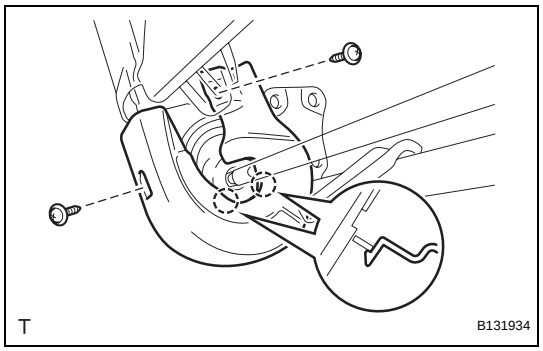


(b) Detach the clip.
(c) Remove the 2 nuts and protector.



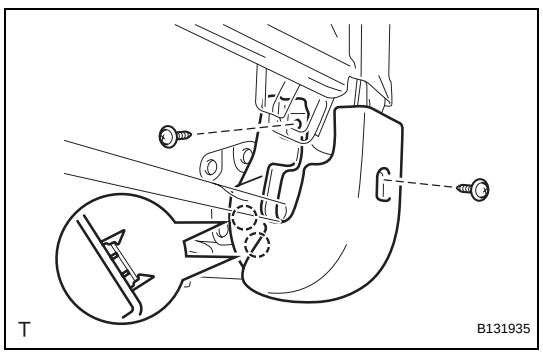
19. REMOVE REAR NO. 1 SEATBACK COVER

(a) Remove the 13 hog rings.



(b) Detach the 4 claws and remove the 2 headrest supports.

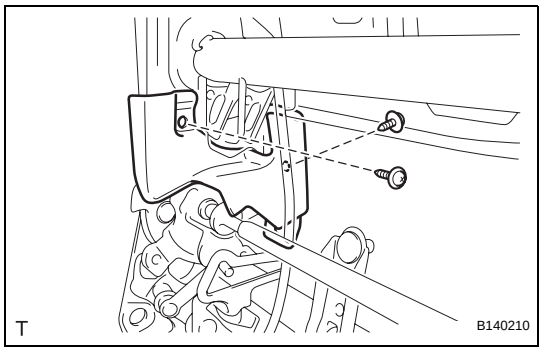
(c) Remove the seatback cover (with pad) from the seatback frame.



(d) Remove the 3 hog rings and seatback cover from the seatback pad.

20. REMOVE REAR SEATBACK COVER RH

(a) Remove the 2 screws.

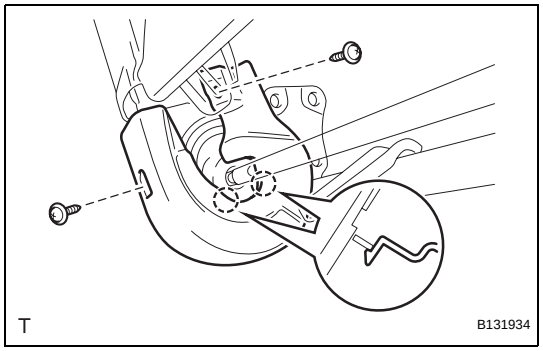


(b) Using a screwdriver, detach the 2 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

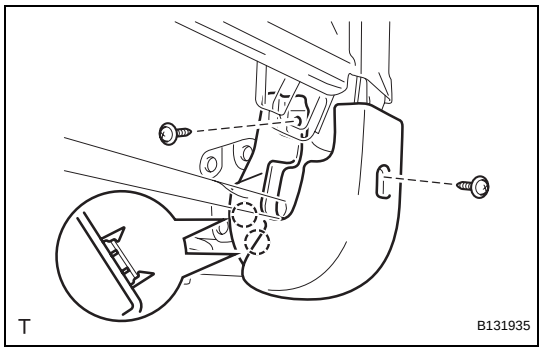
21. REMOVE REAR SEAT COVER (w/o Rear No. 2 Seat)

(a) Remove the 2 screws.

(b) Using a screwdriver, detach the 2 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

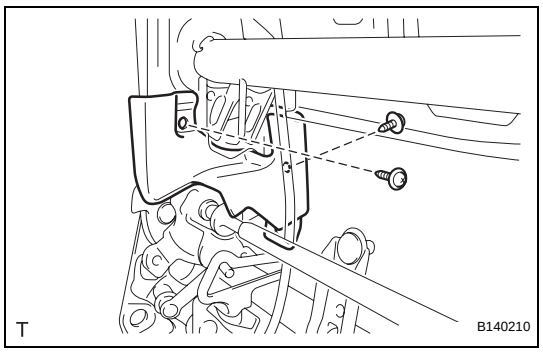


22. REMOVE REAR SEAT COVER (w/ Rear No. 2 Seat)



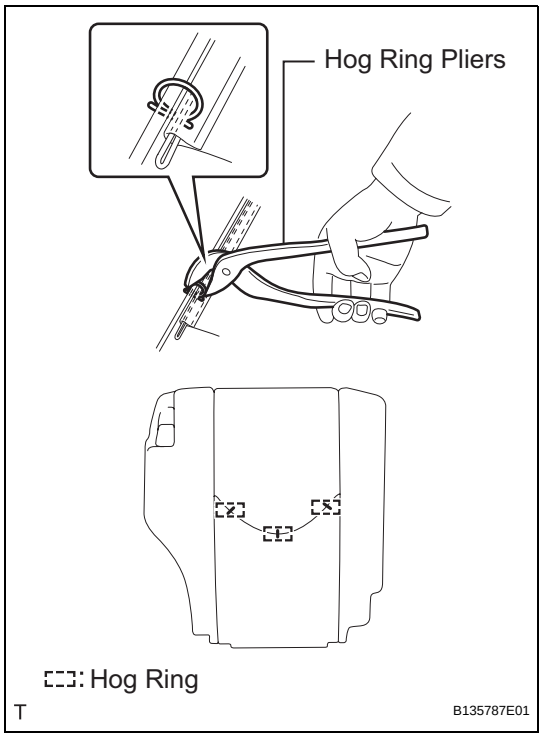
(a) Remove the 2 screws and cover.

REASSEMBLY

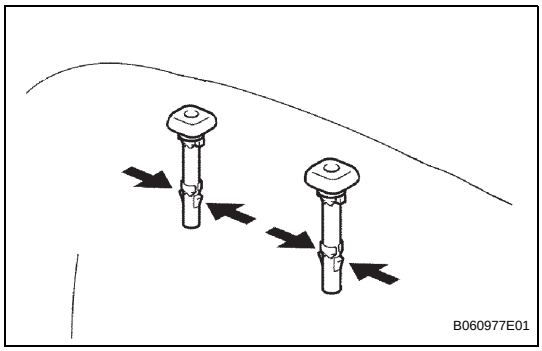


CAUTION:
Wear protective gloves. Sharp areas on the seatback frame, seat cushion frame and reclining adjuster may injure your hands.
HINT:
A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL REAR SEATBACK COVER RH
(a) Attach the 2 claws to install the cover.
(b) Install the 2 screws.

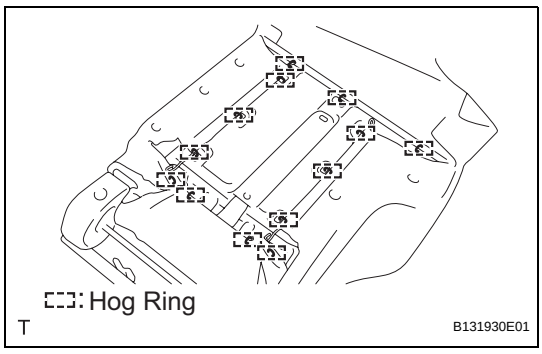


2. INSTALL REAR SEAT COVER (w/o Rear No. 2 Seat)
(a) Attach the 2 claws to install the cover.
(b) Install the 2 screws.

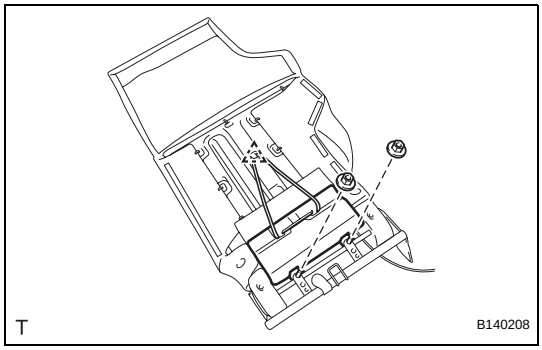


3. INSTALL REAR SEAT COVER (w/ Rear No. 2 Seat)
(a) Install the cover with the 2 screws.

4. INSTALL REAR NO. 1 SEATBACK COVER
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

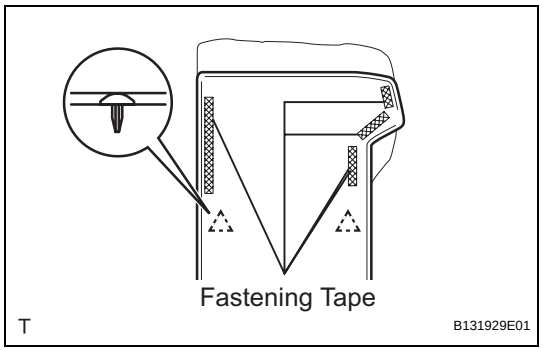


SE

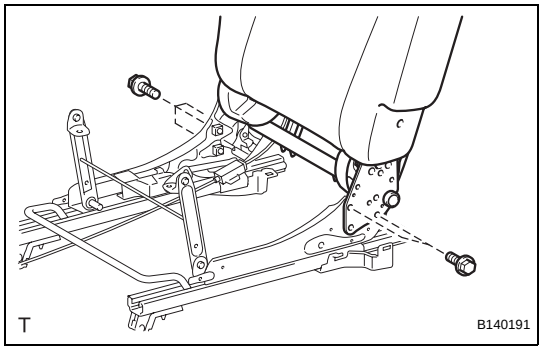


(a) Using hog ring pliers, install the seatback cover to the seatback pad with 3 new hog rings.
(b) Install the seatback cover (with pad) to the seatback frame.

(c) Attach the 4 claws to install the 2 headrest supports.

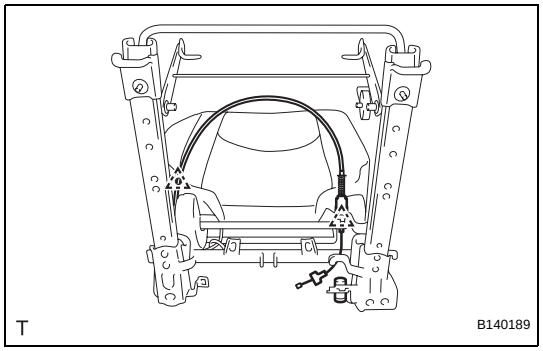


(d) Lift up the seatback cover and install the 13 hog rings.

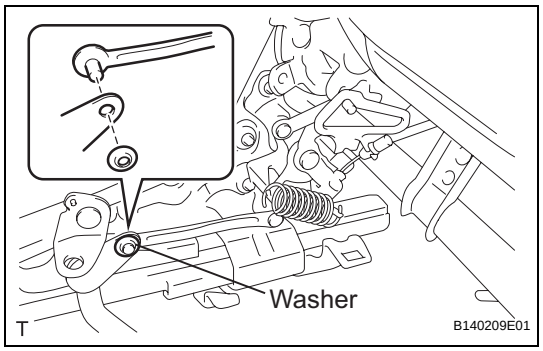


5. INSTALL REAR SEATBACK PROTECTOR

(a) Install the protector with the 2 nuts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
(b) Attach the clip.

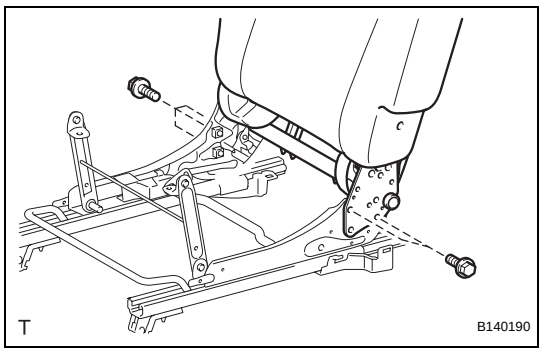


(c) Attach the 2 clips and close the fastening tape.

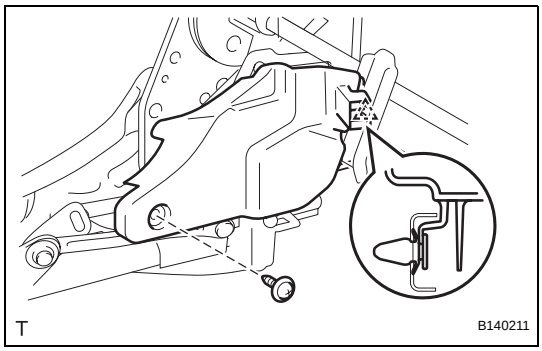


6. INSTALL REAR NO. 1 SEATBACK ASSEMBLY RH (w/ o Rear No. 2 Seat)

(a) Install the seatback with the 5 bolts.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

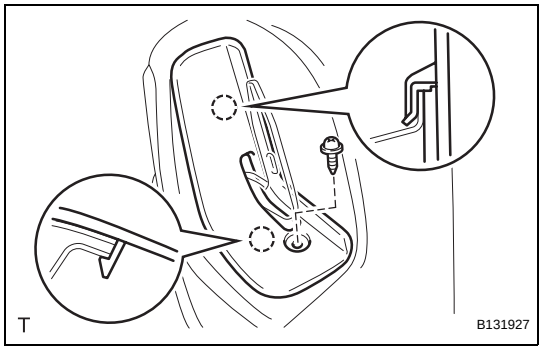


(b) Attach the 2 clamps and connect the cable to the reclining adjuster.



7. INSTALL REAR NO. 1 SEATBACK ASSEMBLY RH (w/ Rear No. 2 Seat)

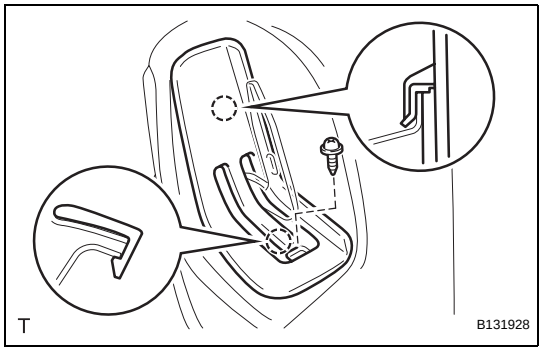
(a) Connect the W/I unit to the reclining adjuster with the washer.



(b) Install the seatback with the 5 bolts.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

8. INSTALL REAR SEAT RECLINING INNER PROTECTOR RH (w/ Rear No. 2 Seat)

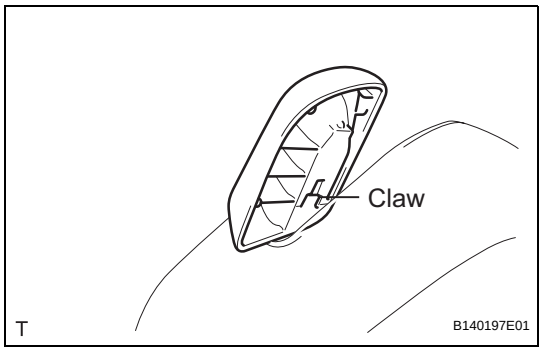
(a) Attach the clip to install the inner protector.



(b) Install the screw.

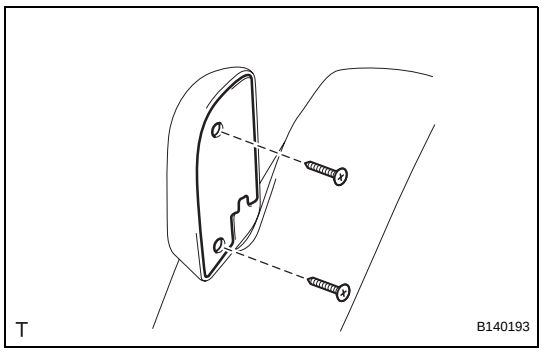
9. INSTALL REAR SEATBACK LOCK CONTROL LEVER BASE RH (w/o Rear No. 2 Seat)

(a) Attach the 2 claws to install the lever base.



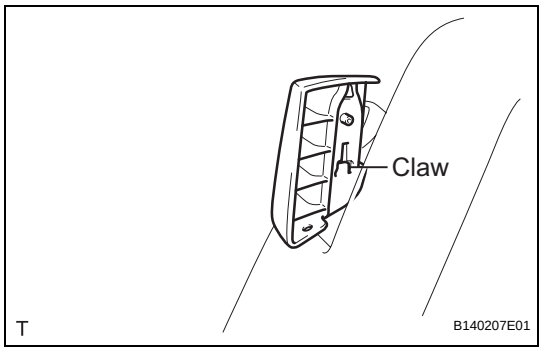
(b) Install the screw.

10. INSTALL REAR SEATBACK LOCK CONTROL LEVER BASE RH (w/ Rear No. 2 Seat)



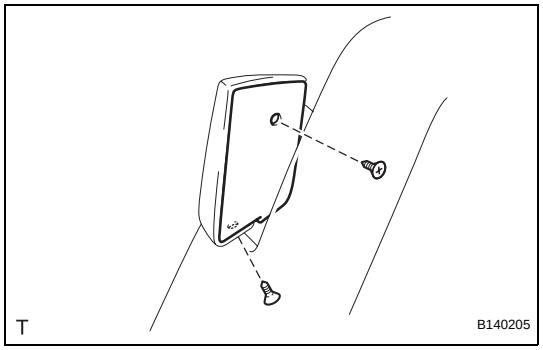
(a) Attach the 2 claws to install the lever base.

(b) Install the screw.

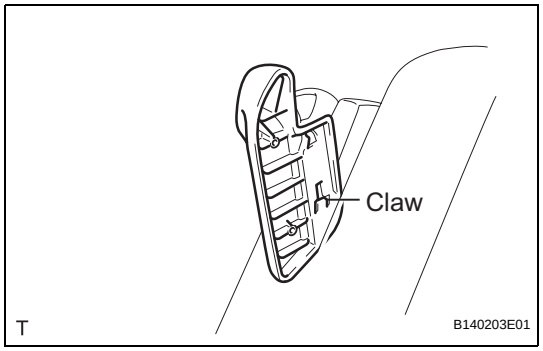


11. INSTALL REAR SEAT RECLINING RELEASE LEVER (w/o Rear No. 2 Seat)

(a) Attach the claw to install the release lever.

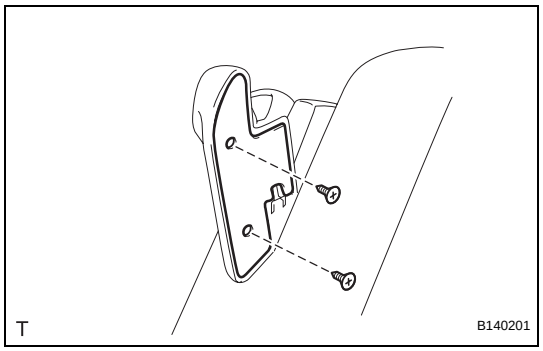


(b) Install the cover with the 2 screws.

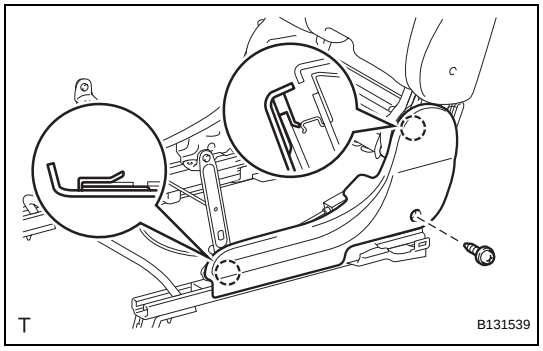


12. INSTALL REAR SEAT RECLINING CONTROL LEVER (w/ Rear No. 2 Seat)

(a) Attach the claw to install the control lever.



(b) Install the cover with the 2 screws.

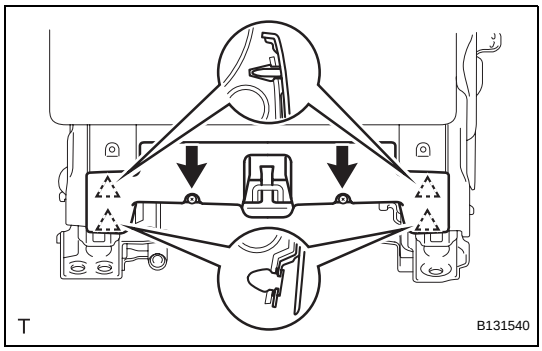


13. INSTALL REAR SEAT RECLINING RELEASE LEVER (w/ Rear No. 2 Seat)

(a) Attach the claw to install the release lever.

(b) Install the cover with the 2 screws.

14. INSTALL REAR SEAT CUSHION REAR MOULDING RH



(a) Attach the 2 claws to install the moulding.

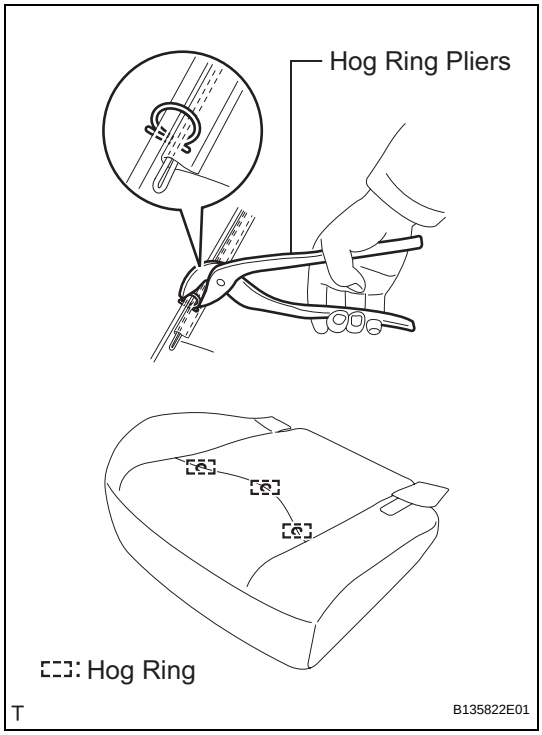
(b) Install the screw.

15. INSTALL REAR SEAT CUSHION MOULDING RH

HINT:

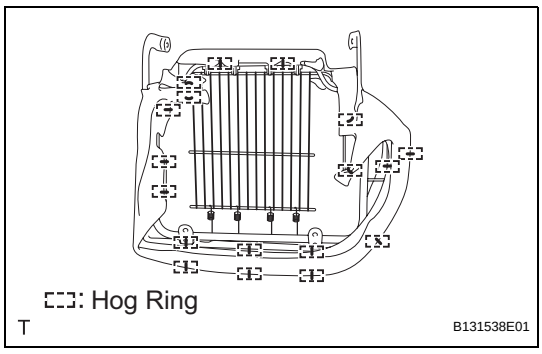
Use the same procedures described for the rear seat cushion rear moulding RH.

16. INSTALL REAR SEAT REAR BRACKET COVER RH



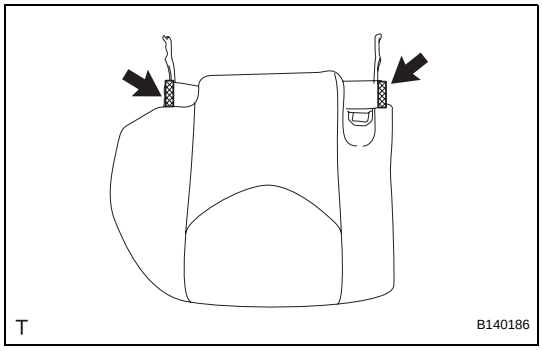
(a) Open the lower part of the seatback cover. Then attach the 4 clips to install the bracket cover.

(b) Install the 2 screws.

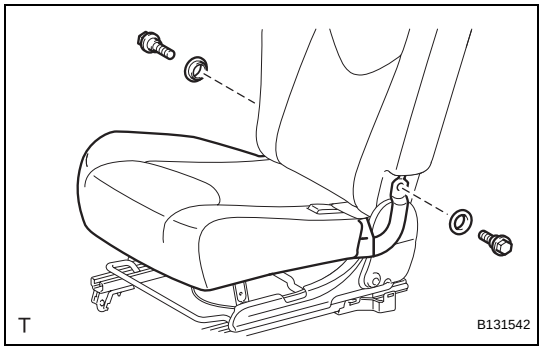


17. INSTALL REAR NO. 1 SEAT CUSHION COVER

NOTICE:

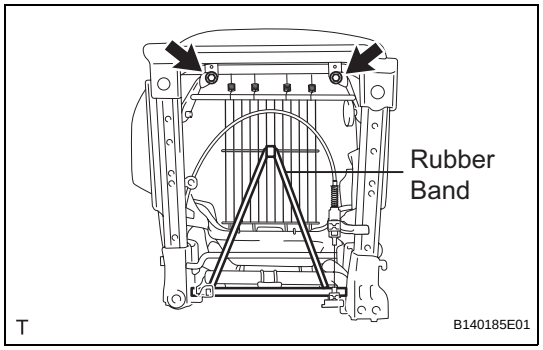


- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**



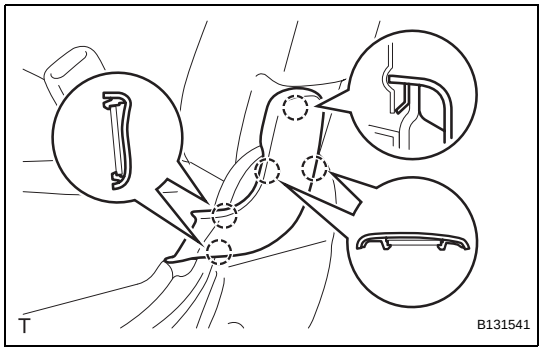
(a) Using hog ring pliers, install the seat cushion cover to the seat cushion pad with 3 new hog rings.

(b) Using hog ring pliers, install the seat cushion cover (with pad) to the seat cushion frame with 18 new hog rings.



(c) Attach the 2 hooks.

18. INSTALL REAR NO. 1 SEAT CUSHION ASSEMBLY RH



(a) Install the cushion with the 2 bushes and 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(b) Install the 2 bolts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

(c) Connect the rubber band of the seatback cover to the seat cushion frame.

19. INSTALL REAR SEAT INNER BELT ASSEMBLY RH (See page SB-41)

20. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER

(a) Attach the 5 claws to install the hinge cover.

21. INSTALL REAR NO. 1 SEAT CUSHION HINGE COVER

HINT:
Use the same procedures described for the rear No. 2 seat cushion hinge cover.

22. INSTALL REAR SEAT HEADREST ASSEMBLY

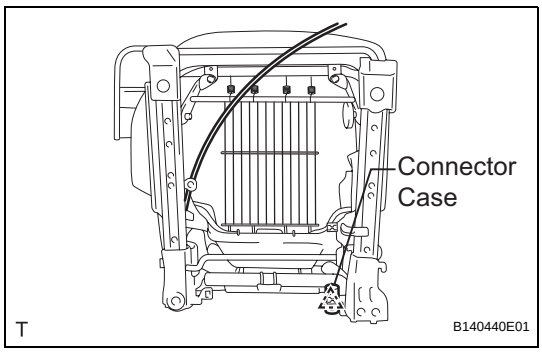
INSTALLATION

1. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Fully tilt the seatback forward.

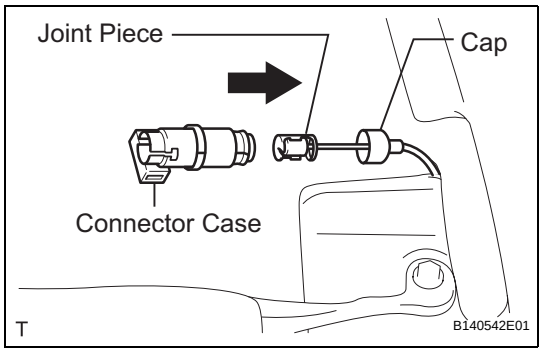
(b) Place the seat in the cabin.

NOTICE:



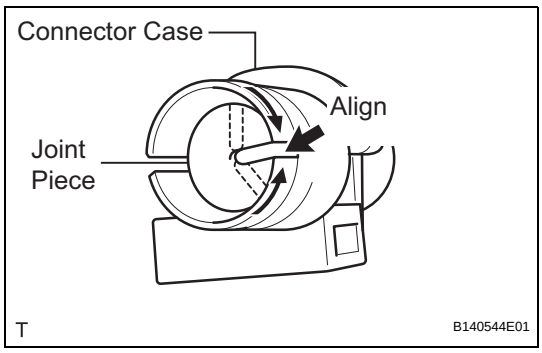
Be careful not to damage the vehicle body.

(c) Connection procedures of seat to lock cable when reusing seat:

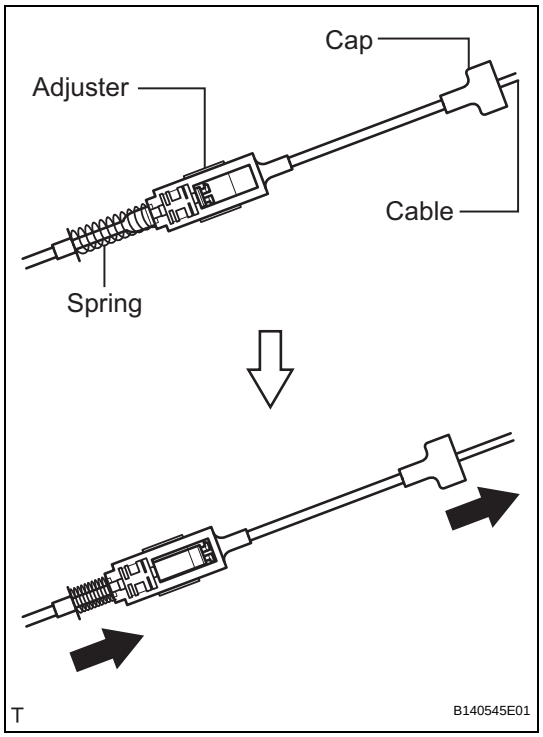


(1) Using a screwdriver, detach the claw and remove the connector case from the seat.

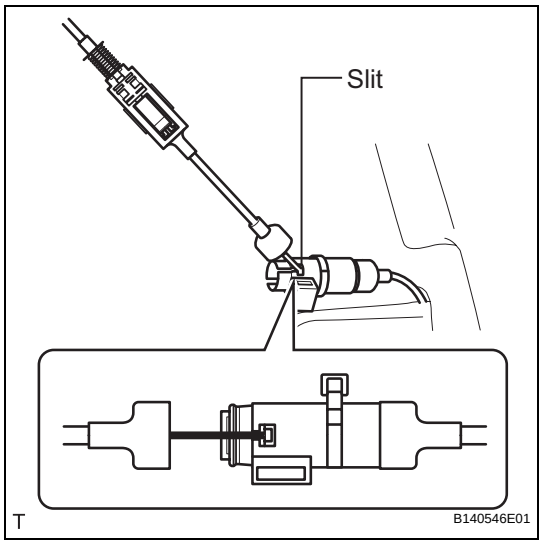
HINT:



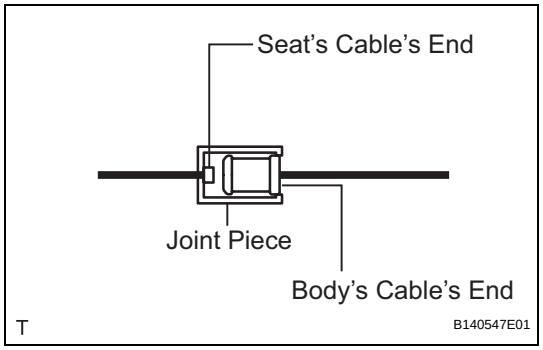
Tape the screwdriver tip before use.

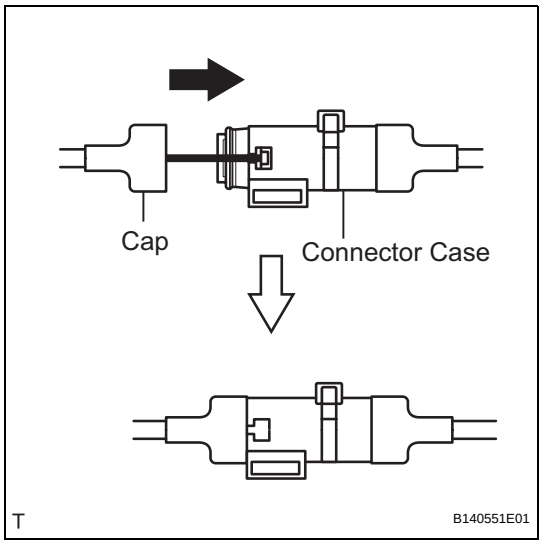


(2) Install the connector case to the body's cap.

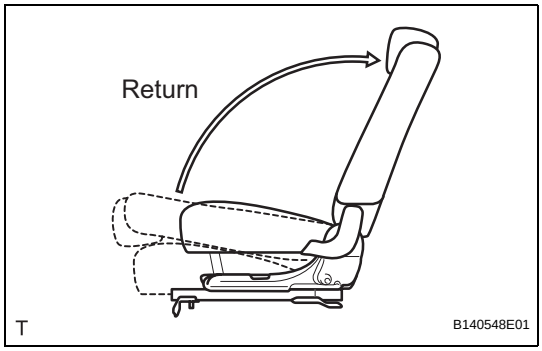


(3) Pull out the joint piece. Align the slits of the joint piece and connector case.

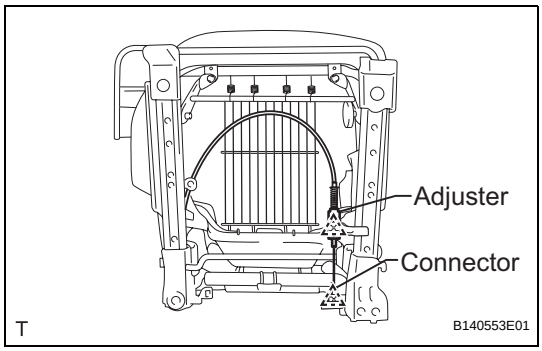




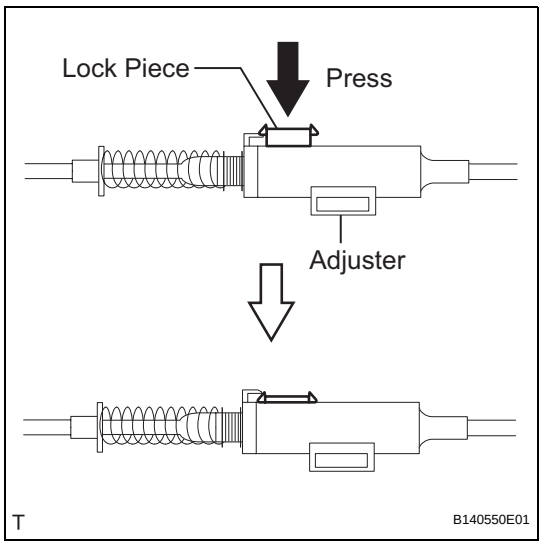
(4) Compress the spring of the adjuster, and pull out the cable from the seat's cap.
HINT:
Perform this procedure with the lock of the adjuster released.



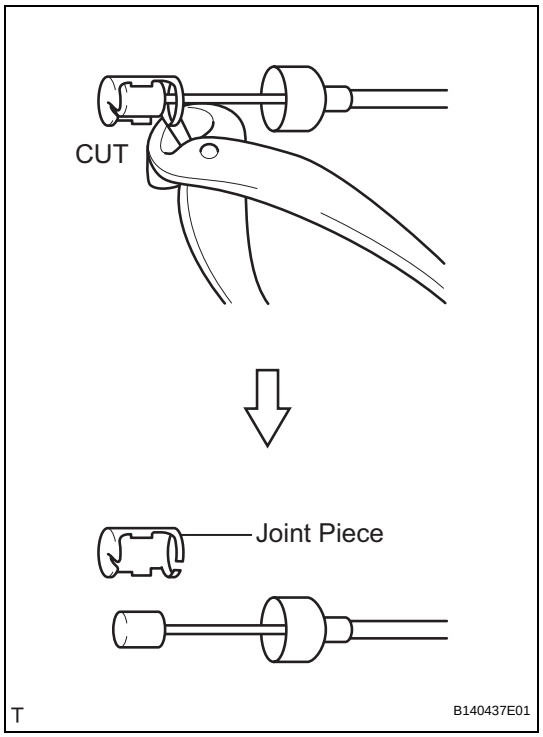
(5) Install the seat cable's end part to the connector case's slit.



HINT:
Position the joint piece cable's end part as shown in the illustration.



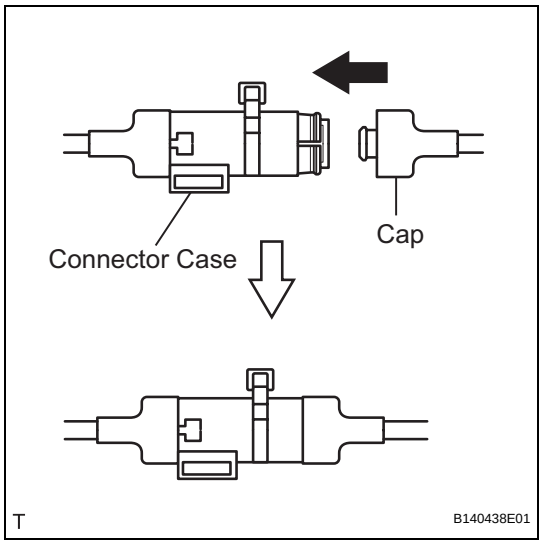
(6) Install the seat's cap to the connector case.
(7) Temporarily place the seat into the vehicle where it will be installed.



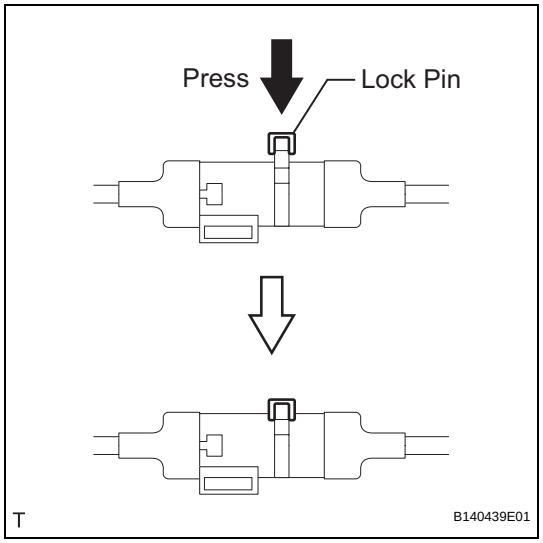
(8) Return the seatback to the upright position.

(9) Attach the claws of the connector and adjuster, and install them to the seat.

(10) Press the adjuster's lock piece to lock it.
NOTICE:
When pressing the lock piece, make sure the adjuster's spring is not compress.

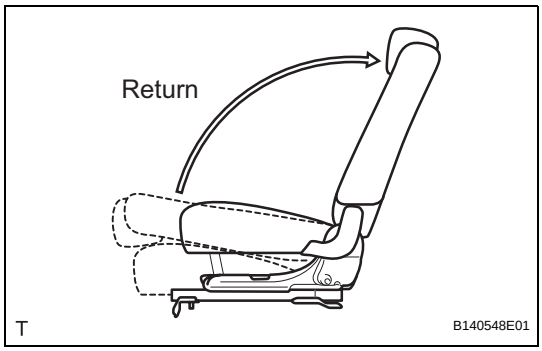


(d) Connection procedures of seat to lock cable when replacing seat:

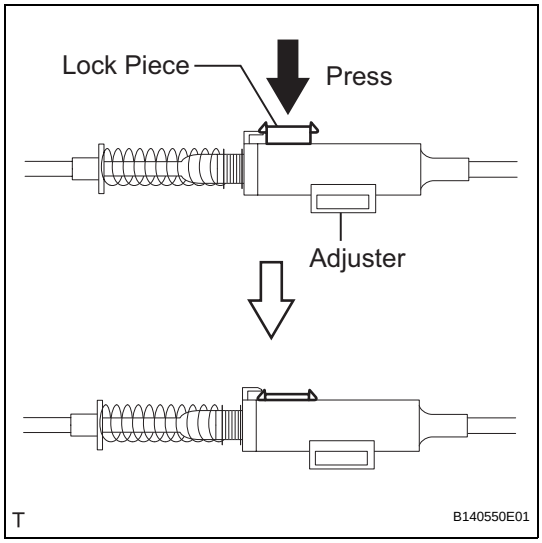


(1) Cut the joint piece on the lock cable, and remove it.
HINT:
- A joint piece is included with new seats.
- This procedure is not necessary when the lock cable is replaced with a new one.

(2) Temporarily place the seat into the vehicle where it will be installed.

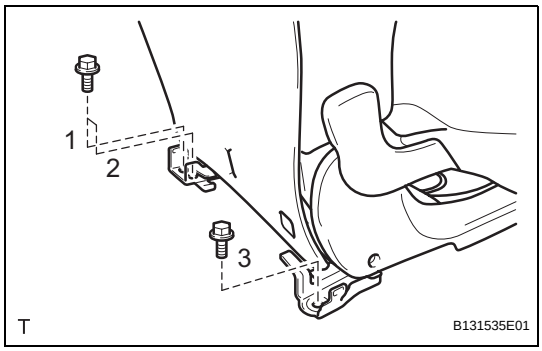


SE

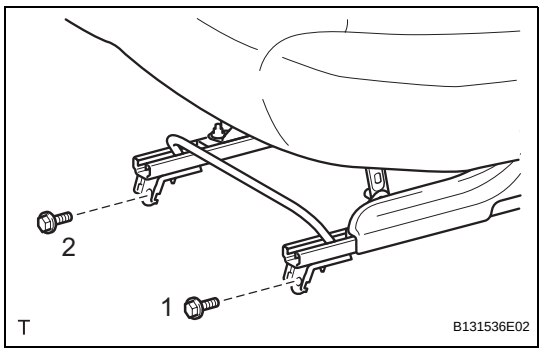


(3) Install the body's cap to the connector case.

(4) Press the adjuster's lock pin.



(5) Return the seatback to the upright position.

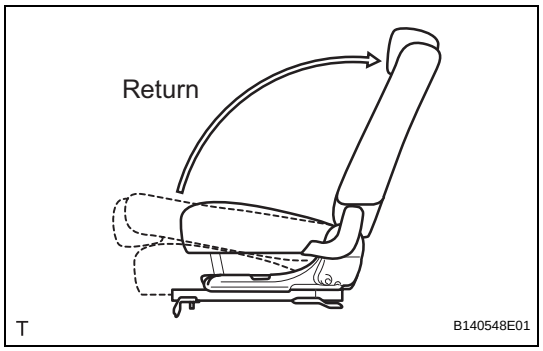


(6) Press the adjuster's lock piece to lock it.
NOTICE:
When pressing the lock piece, make sure the adjuster's spring is not compressed.

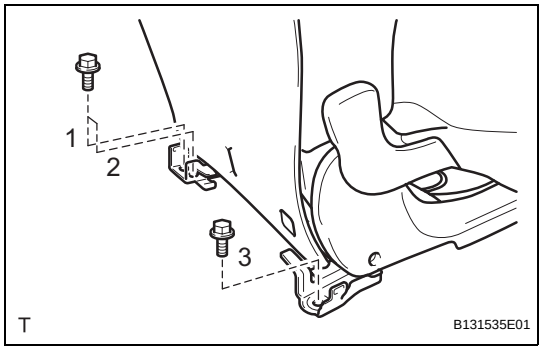
(e) Lift up the seat track adjusting handle and move the seat to the foremost position.

(f) Tighten the 2 bolts on the rear side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

(g) Lift up the seat track adjusting handle and move the seat to the rearmost position.

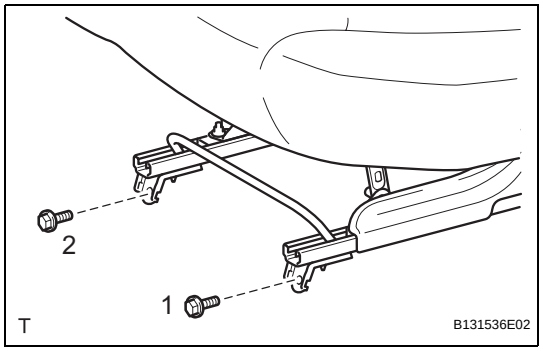


(h) Tighten the 2 bolts on the front side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.



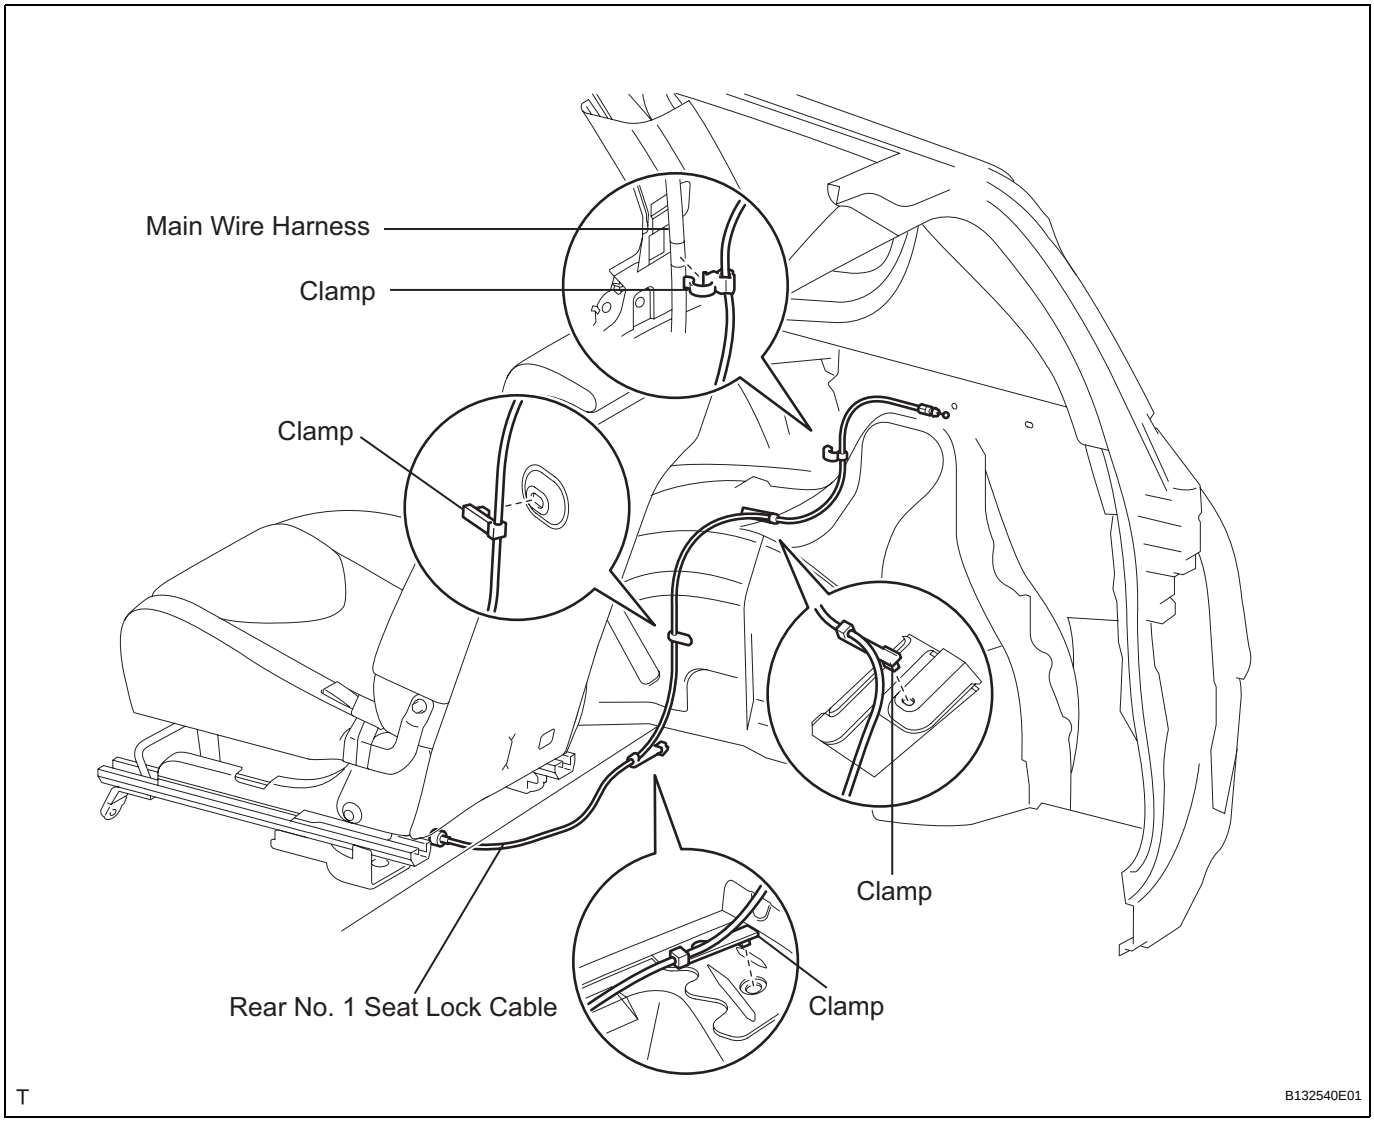
2. INSTALL REAR NO. 1 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat)

(a) Fully tilt the seatback forward.

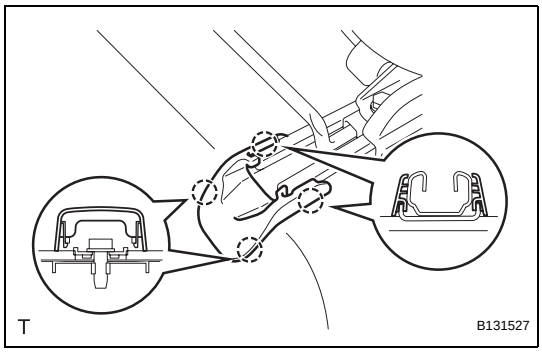


(b) Place the seat in the cabin.
NOTICE:
Be careful not to damage the vehicle body.

(c) Return the seatback to the upright position.
(d) Lift up the seat track adjusting handle and move the seat to the foremost position.

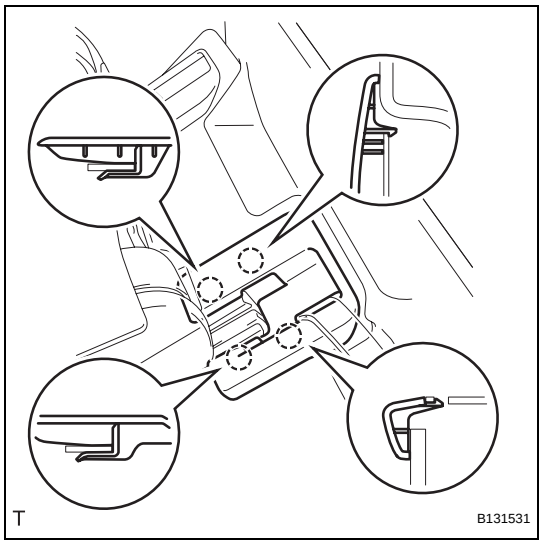


(e) Tighten the 2 bolts on the rear side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.
(f) Lift up the seat track adjusting handle and move the seat to the rearmost position.

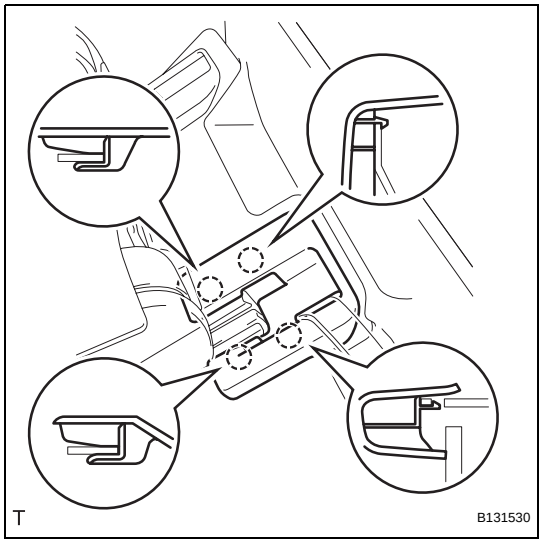


(g) Tighten the 2 bolts on the front side of the seat.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
HINT:
Tighten the bolts in the order indicated in the illustration.

3. INSTALL REAR NO. 1 SEAT LOCK CABLE ASSEMBLY (w/o Rear No. 2 Seat)

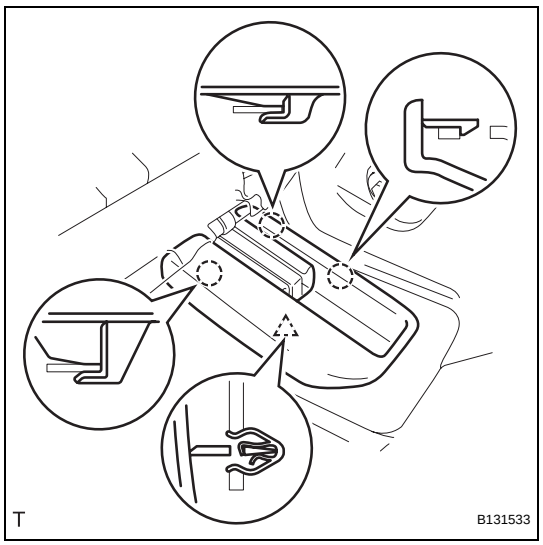


(a) Attach the clamps and install the cable to the vehicle body.



4. INSTALL REAR SEAT LEG COVER

(a) Attach the 8 claws to install the 2 leg covers.

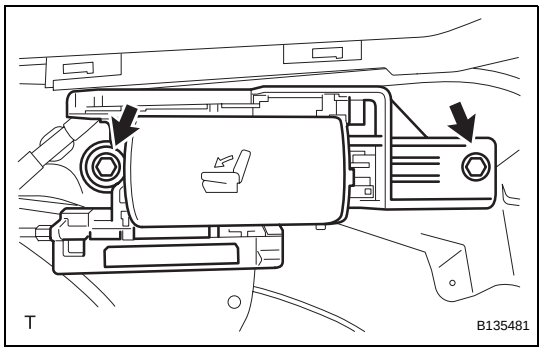


5. INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat)

(a) Attach the 4 claws to install the rear No. 3 seat leg side cover.

6. INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat)

(a) Attach the 4 claws to install the No. 3 rear seat leg side cover.



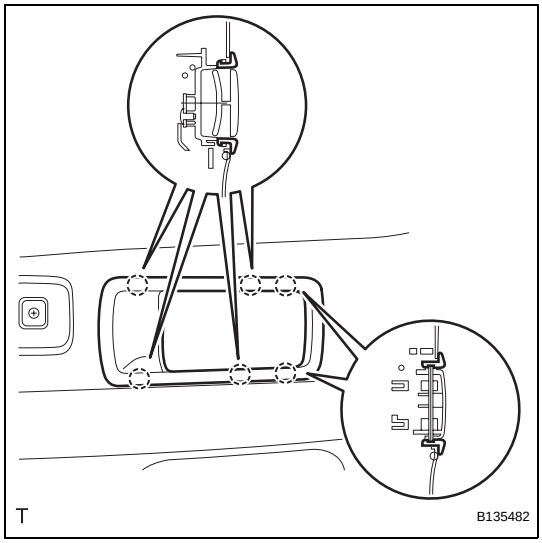
7. INSTALL REAR NO. 2 SEAT LEG SIDE COVER

(a) Attach the 3 claws and clip to install the rear No. 2 seat leg side cover.

8. INSTALL RECLINING REMOTE CONTROL LEVER SUB-ASSEMBLY RH (w/o Rear No. 2 Seat)

(a) Connect the rear No. 1 seat lock cable to the lever.

SE



(b) Install the lever with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

9. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-53)**

10. **INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-54)**

SE

11. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat)**
(a) Attach the 6 claws to install the bezel.

12. **INSTALL REAR FLOOR FINISH PLATE (w/o Rear No. 2 Seat) (See page IR-55)**

13. **INSTALL BACK DOOR WEATHERSTRIP (w/o Rear No. 2 Seat)**

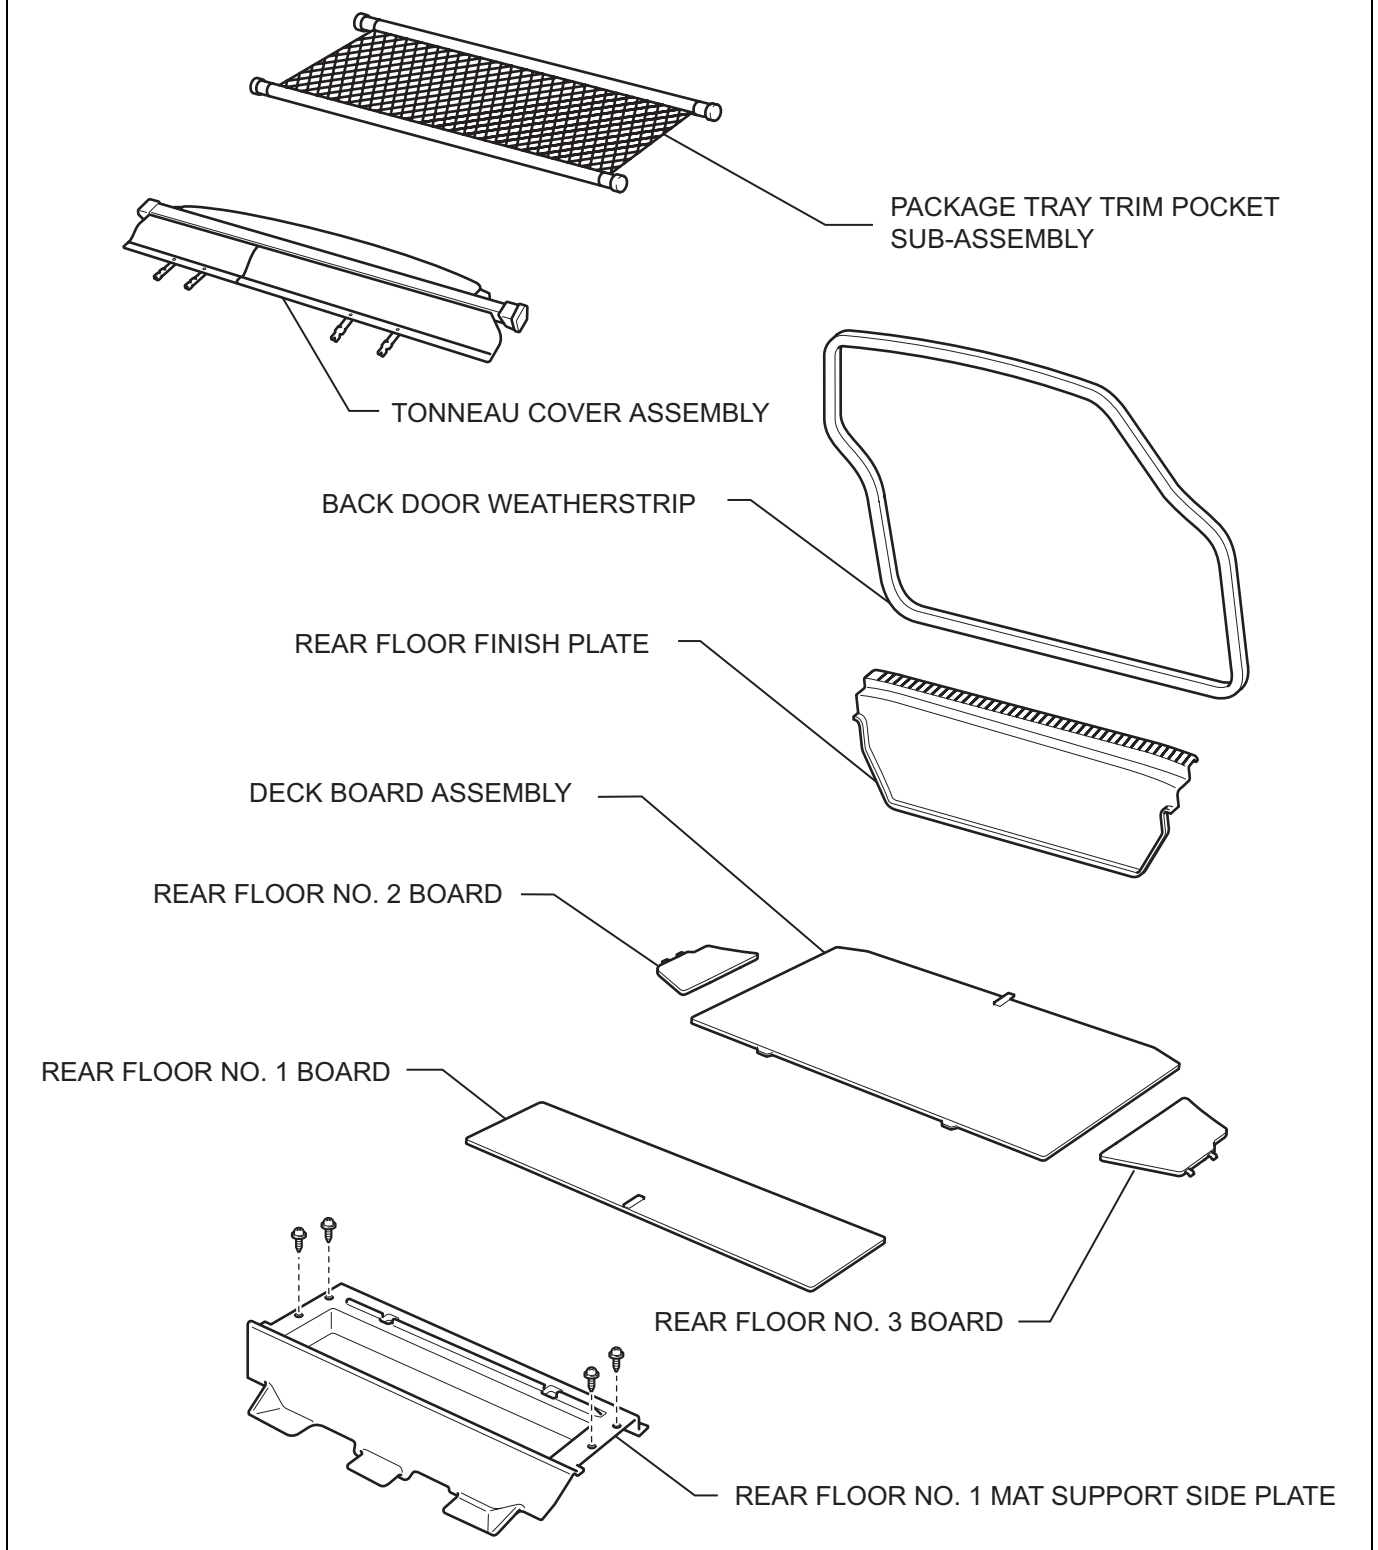
14. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (w/o Rear No. 2 Seat) (See page IR-55)**

15. **INSTALL REAR FLOOR NO. 3 BOARD (w/o Rear No. 2 Seat)**

16. **INSTALL REAR FLOOR NO. 2 BOARD (w/o Rear No. 2 Seat)**

17. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**

18. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**



19. **INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**

20. **INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**

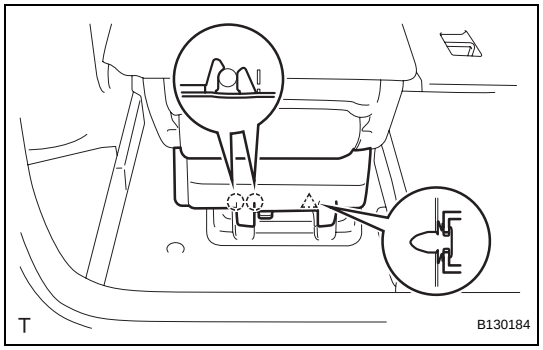
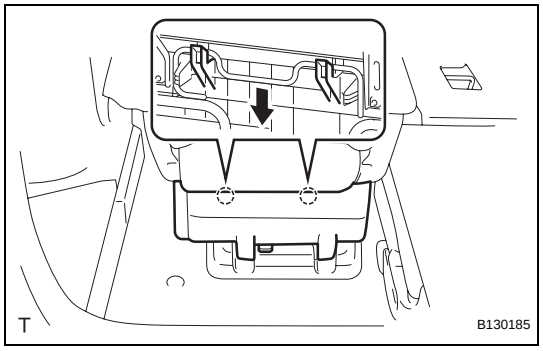
REMOVAL



HINT:

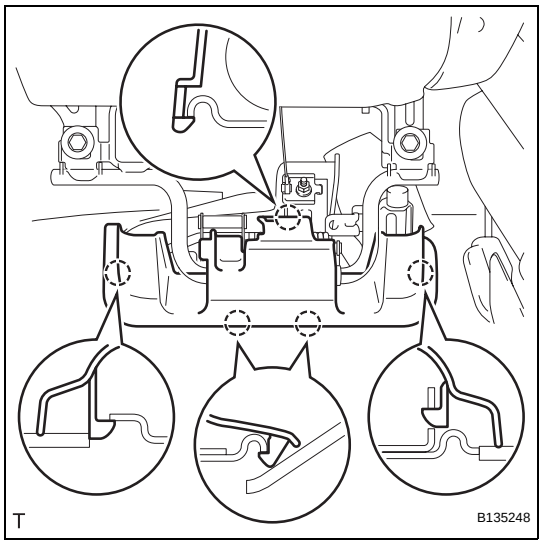
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the RH side.

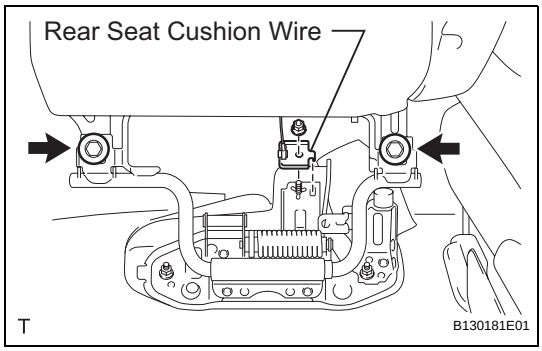


1. REMOVE NO. 2 SEAT HINGE COVER LH

(a) Fully tilt the seatback forward.

(b) Attach the 2 claws and clip.

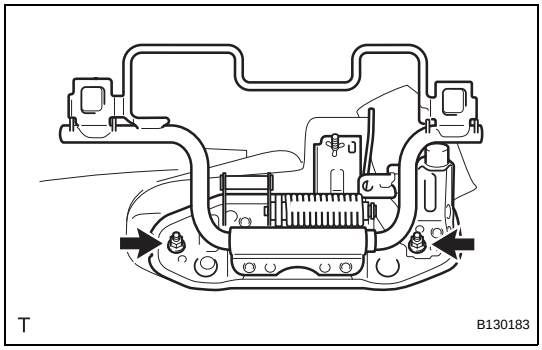


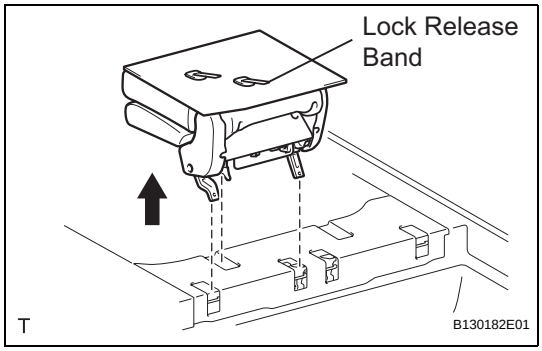


(c) Pull the hinge cover in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the hinge cover.

2. REMOVE NO. 2 SEAT LEG COVER LH

(a) Using a screwdriver, detach the 5 claws and remove the leg cover.
HINT:
Tape the screwdriver tip before use.



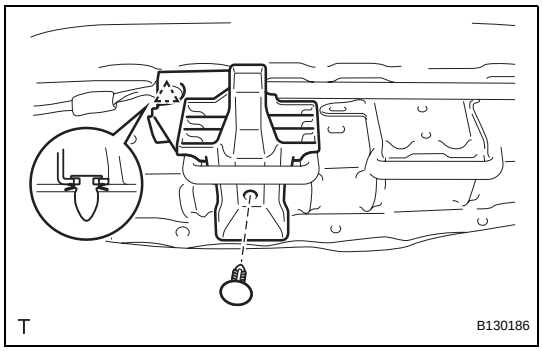


3. REMOVE REAR NO. 2 SEAT ASSEMBLY

(a) Remove the nut and rear seat cushion wire.

(b) Remove the 2 bolts. Then disconnect the seat from the rear No. 2 seat link.

(c) Remove the 2 nuts and the rear No. 2 seat link.



(d) Pull the lock release band backward and release the 3 seat cushion locks from the lock strikers.

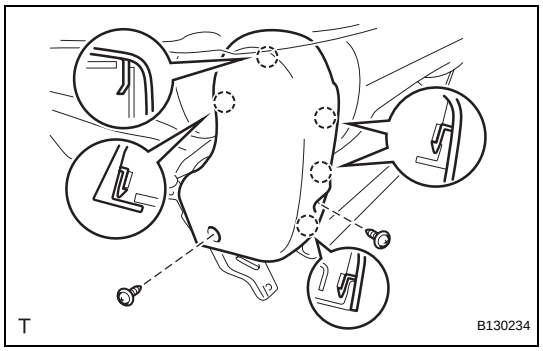
(e) Lift up and remove the seat.

NOTICE:

Be careful not to damage the vehicle body,

4. REMOVE REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE

5. REMOVE NO. 2 SEAT LEG BOX PROTECTOR.



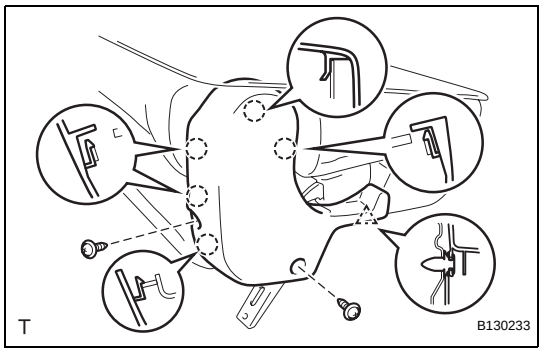
(a) Using a clip remover, remove the clip.

(b) Detach the clip. Then remove the protector.

DISASSEMBLY

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



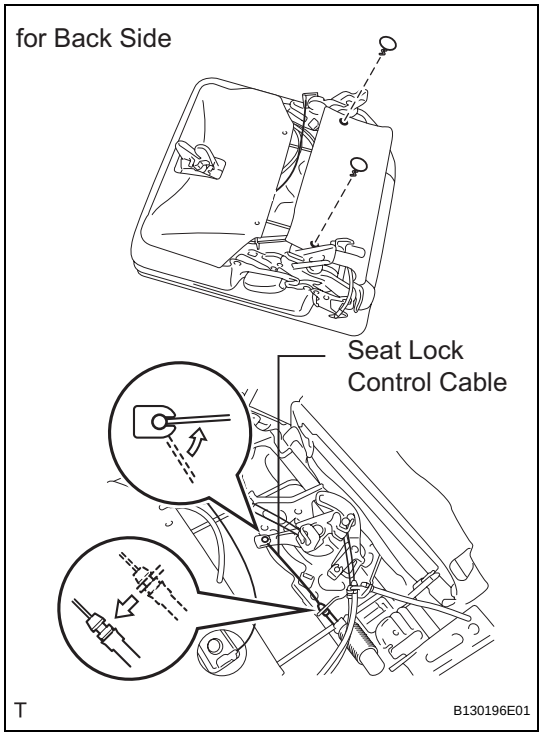
1. REMOVE NO. 1 REAR SEAT RECLINING COVER LH

(a) Remove the 2 screws.

(b) Using a screwdriver, detach the 5 claws and remove the cover.

HINT:

Tape the screwdriver tip before use.



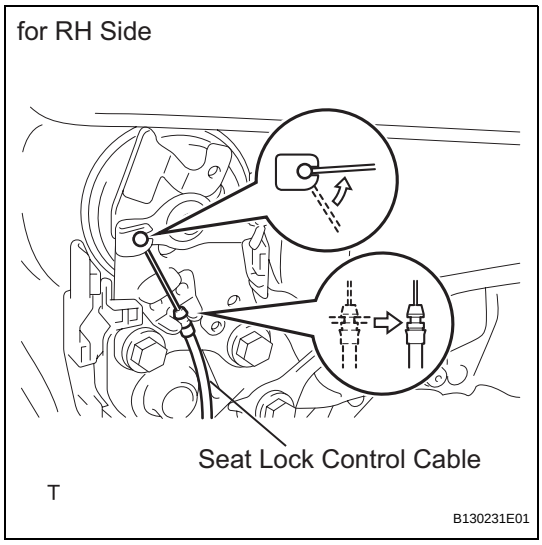
2. REMOVE NO. 2 REAR SEAT RECLINING COVER LH

(a) Remove the 2 screws.

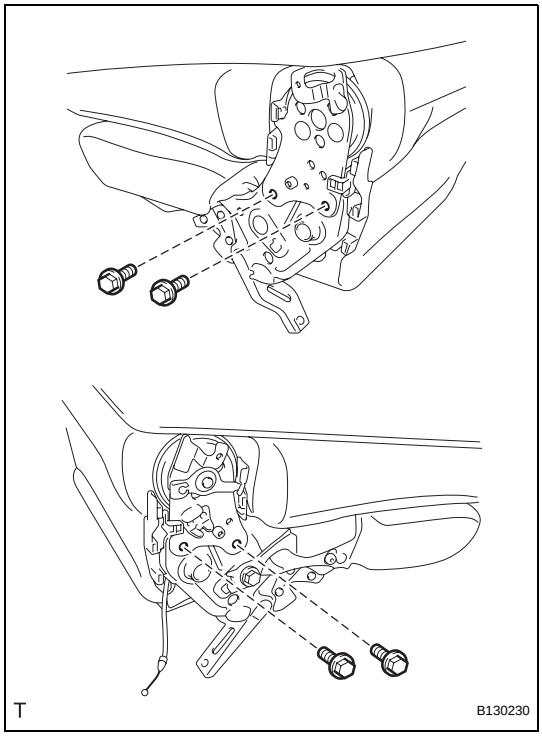
(b) Using a screwdriver, detach the 5 claws and clip, and remove the cover.

HINT:

Tape the screwdriver tip before use.



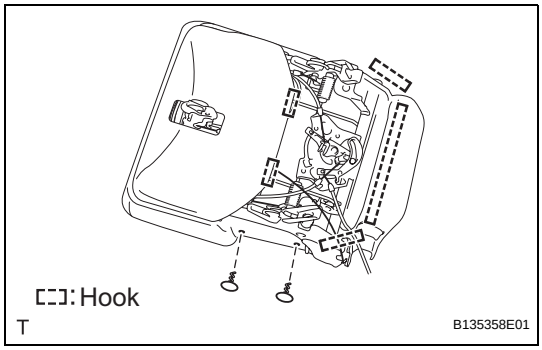
3. REMOVE REAR NO. 2 SEAT CUSHION ASSEMBLY



(a) Using a clip remover, remove the 2 clips of the seat cushion back side. Then open the seat cushion cover.

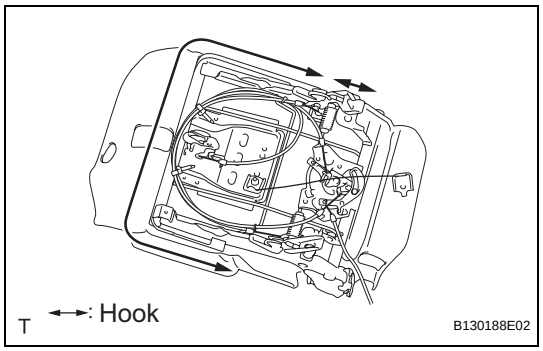
(b) Disconnect the seat lock control cable on the back side from the seat cushion as shown in the illustration.

SE

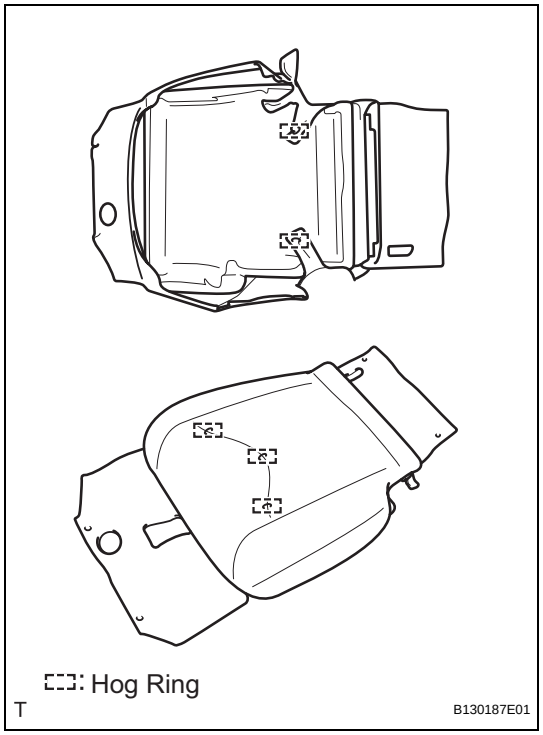


(c) Disconnect the seat lock control cable on the RH side from the seatback as shown in the illustration.

(d) Remove the 4 bolts and seat cushion.

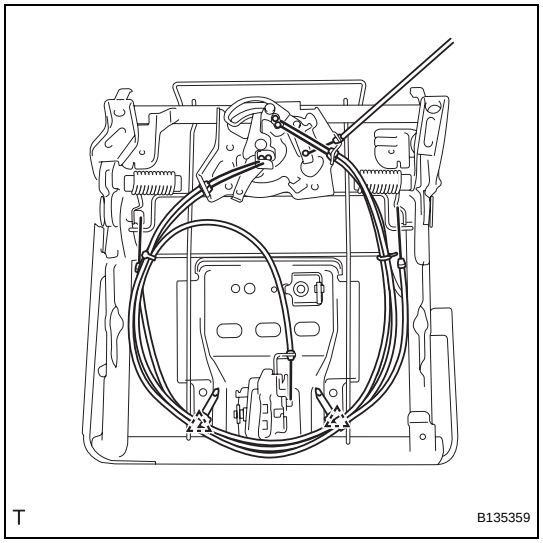


4. REMOVE REAR NO. 2 SEAT INNER BELT ASSEMBLY LH (See page SE-110)



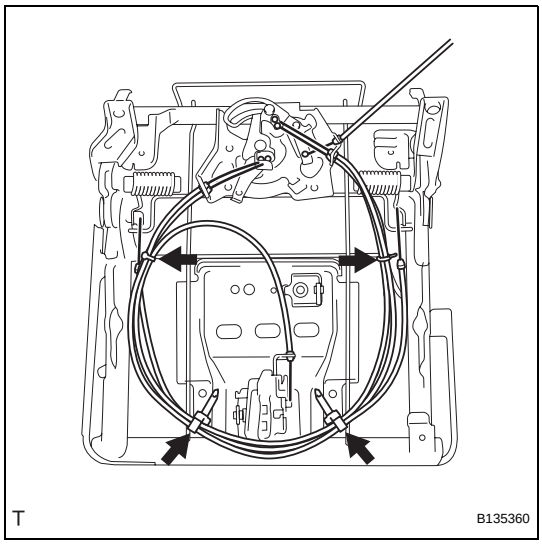
5. REMOVE REAR NO. 2 SEAT CUSHION COVER LH

(a) Using a clip remover, remove the 2 clips.



(b) Using a screwdriver, detach the 5 hooks.
HINT:
Tape the screwdriver tip before use.

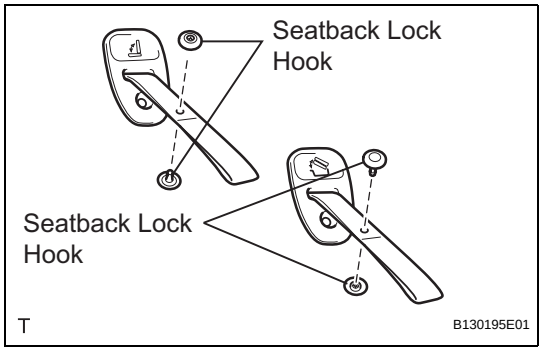
(c) Using a screwdriver, detach the hooks and remove the seat cushion cover (with pad) from the seat cushion spring.



(d) Remove the 5 hog rings and seat cushion cover from the seat cushion pad.

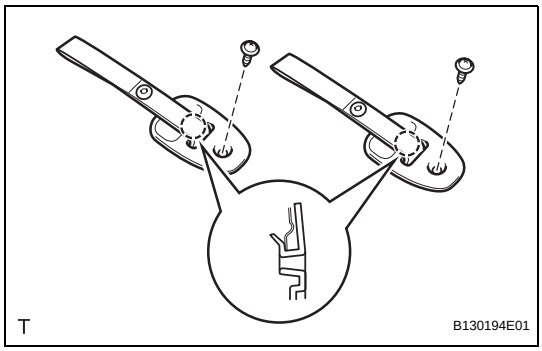
6. REMOVE SEAT LOCK CONTROL CABLE ASSEMBLY

(a) Using a screwdriver, detach the 2 clamps of the cable tie.



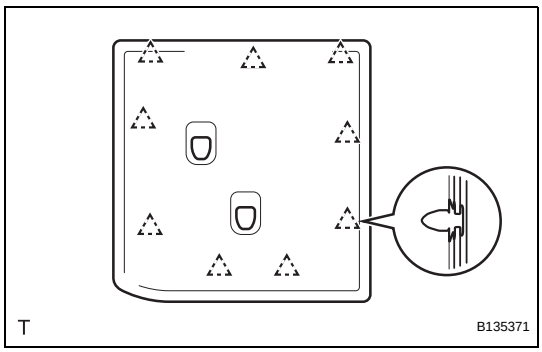
(b) Cut the 4 cable ties.
(c) Remove the 5 cables from the seat cushion spring.

7. REMOVE REAR SEAT CUSHION WIRE SUB-ASSEMBLY



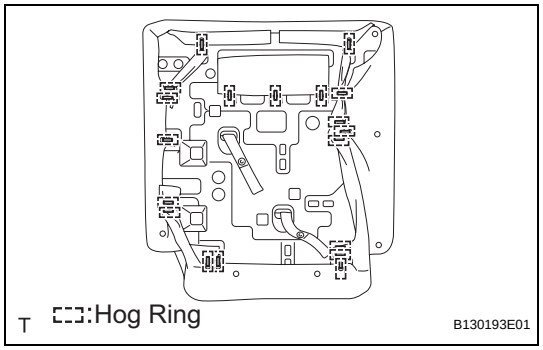
(a) Remove the nut and wire.

8. REMOVE REAR NO. 2 SEAT HEADREST ASSEMBLY

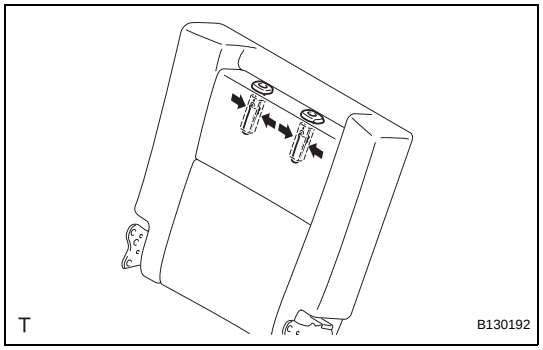


9. REMOVE REAR SEATBACK LOCK CONTROL BEZEL

(a) Remove the 4 seatback lock hooks.

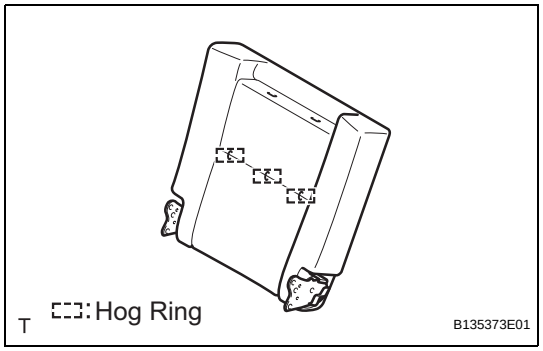


(b) Remove the 2 screws.
(c) Detach the 2 claws and remove the bezel.



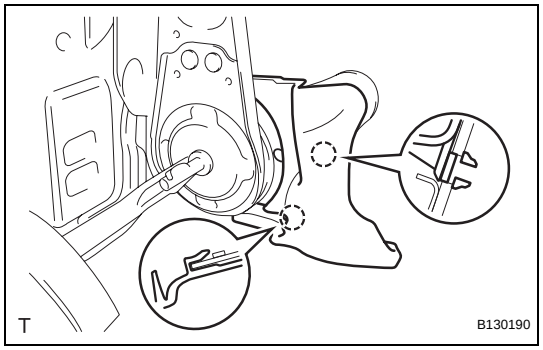
10. REMOVE REAR SEATBACK BOARD CARPET ASSEMBLY LH

(a) Using a clip remover, detach the 9 clips and remove the seatback board carpet.
NOTICE:
Be careful not to damage the seatback board carpet.



11. REMOVE REAR NO. 2 SEATBACK COVER

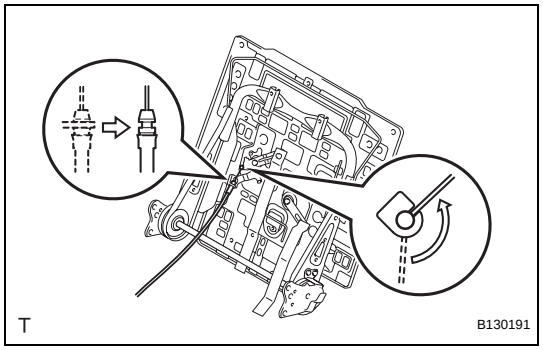
(a) Remove the 19 hog rings.



(b) Detach the 4 claws and remove the 2 headrest supports.

(c) Remove the seatback cover (with pad) from the seatback frame.

(d) Remove the 3 hog rings and seatback cover from the seatback pad.



12. REMOVE REAR SEAT RECLINING INNER COVER LH

(a) Using a screwdriver, detach the 2 claws and remove the inner cover.
HINT:
Tape the screwdriver tip before use.

13. REMOVE REAR SEAT RECLINING INNER COVER RH

HINT:
Use the same procedures described for the LH side.

14. REMOVE SEATBACK LOCK CONTROL CABLE ASSEMBLY

(a) Remove the cable from the seatback frame as shown in the illustration.

15. REMOVE RECLINING LOCK RELEASE BAND

(a) Remove the nut and band.

16. REMOVE SEAT LOCK RELEASE BAND

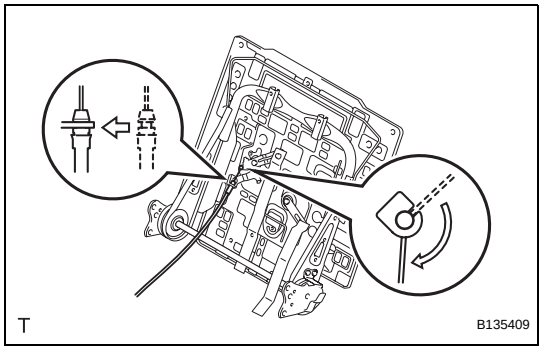
(a) Remove the nut and band.

SE

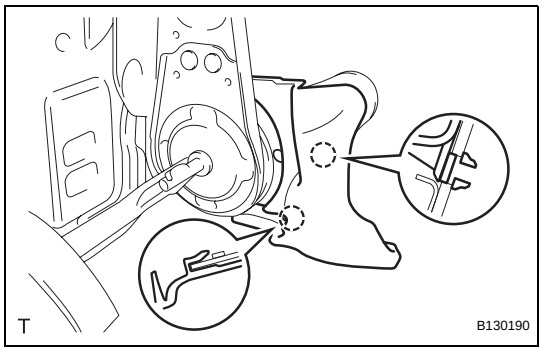
REASSEMBLY

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL SEAT LOCK RELEASE BAND



(a) Install the band with nut.
HINT:
After installing the band, feed it through the seatback frame hole towards the rear of the vehicle.



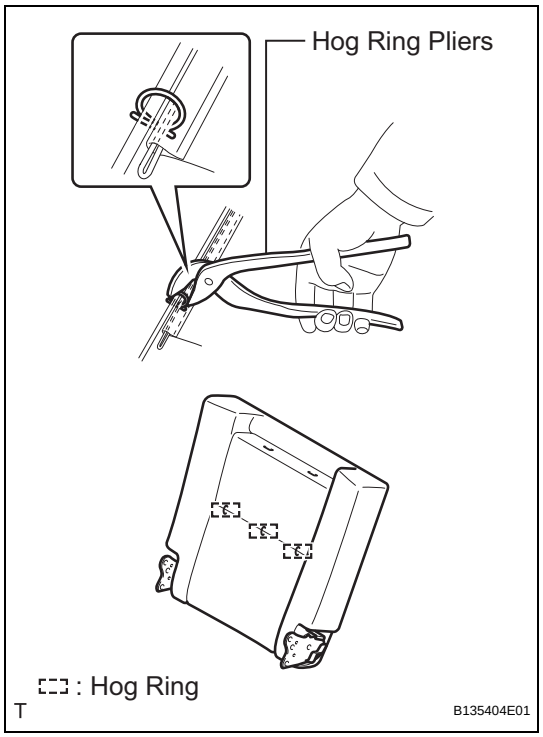
2. INSTALL RECLINING LOCK RELEASE BAND

HINT:
Use the same procedures described for the LH side.

3. INSTALL SEATBACK LOCK CONTROL CABLE ASSEMBLY

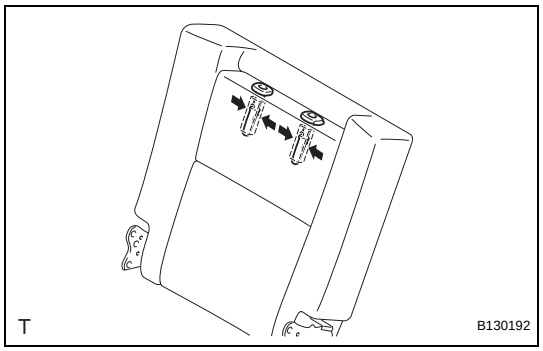
(a) Install the cable to the seatback frame as shown in the illustration.

4. INSTALL REAR SEAT RECLINING INNER COVER LH



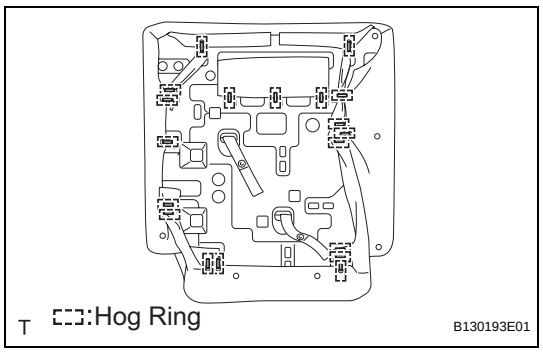
(a) Attach the 2 claws to install the inner cover.

5. INSTALL REAR SEAT RECLINING INNER COVER RH



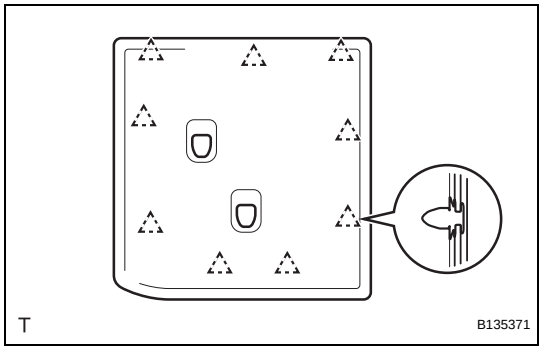
HINT:
Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEATBACK COVER



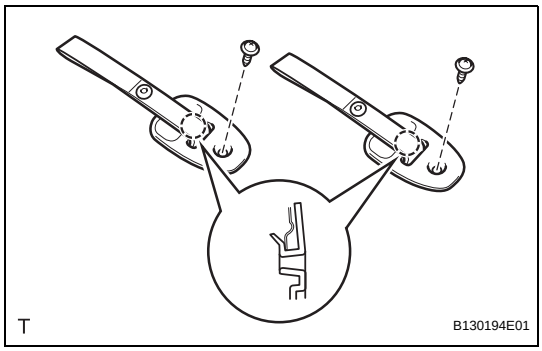
NOTICE:
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

(a) Using hog ring pliers, install the seatback cover to the seatback pad with 3 new hog rings.
(b) Install the seatback cover (with pad) to the seatback frame.



(c) Attach the 4 claws to install the 2 headrest supports.

(d) Using hog ring pliers, install 19 new hog rings.

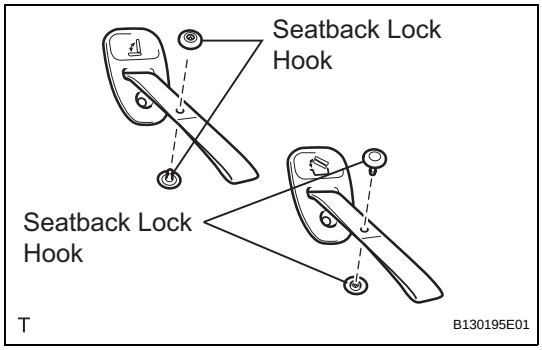


7. INSTALL REAR SEATBACK BOARD CARPET ASSEMBLY LH

(a) Pass the 2 release bands through the 2 holes in the seatback board carpet.

(b) Attach the 9 clips to install the carpet.
HINT:
Make sure that the release band is not inside the seatback board carpet.

SE

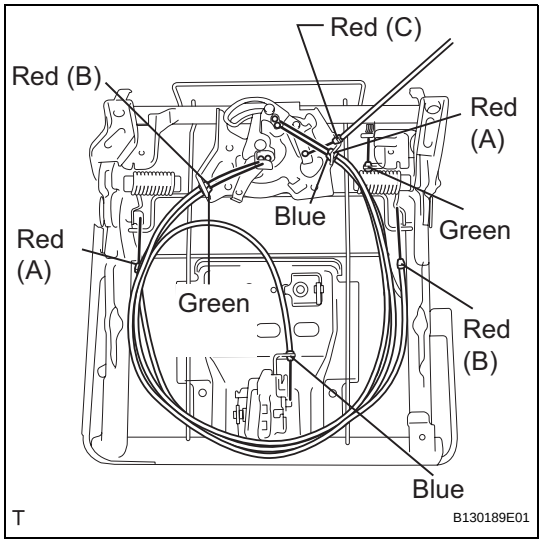


8. INSTALL REAR SEATBACK LOCK CONTROL BEZEL

(a) Pass the 2 release bands through the 2 holes in the 2 bezels.

(b) Attach the 2 claws to install the 2 bezels.

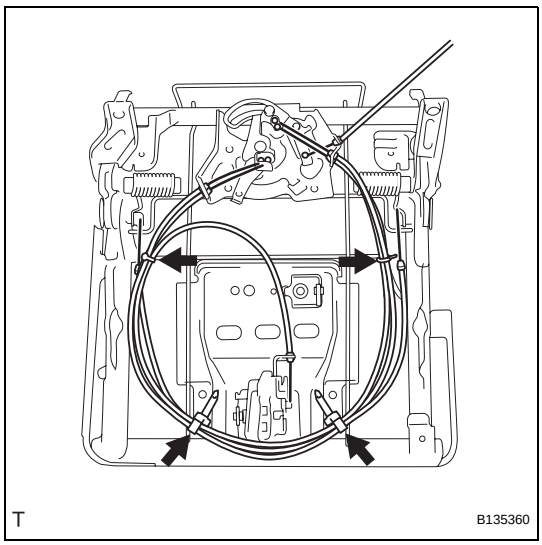
(c) Install the 2 screws.



(d) Install the 4 seatback lock hooks.

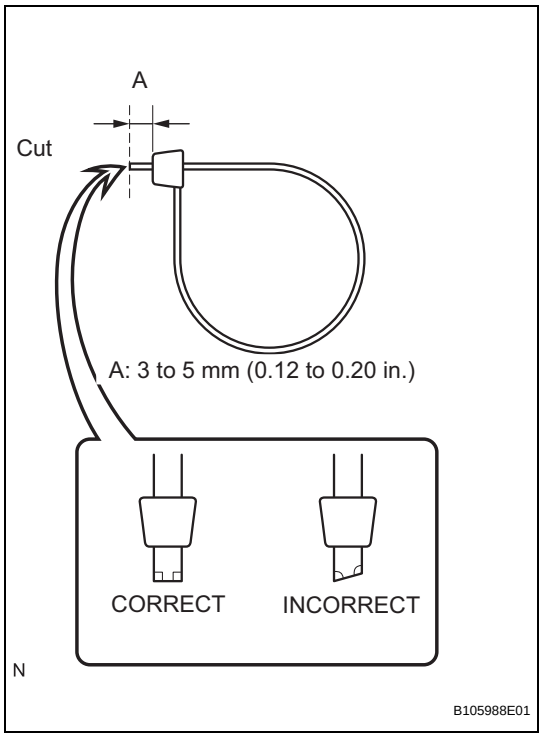
9. INSTALL REAR NO. 2 SEAT HEADREST ASSEMBLY

10. INSTALL REAR SEAT CUSHION WIRE SUB-ASSEMBLY

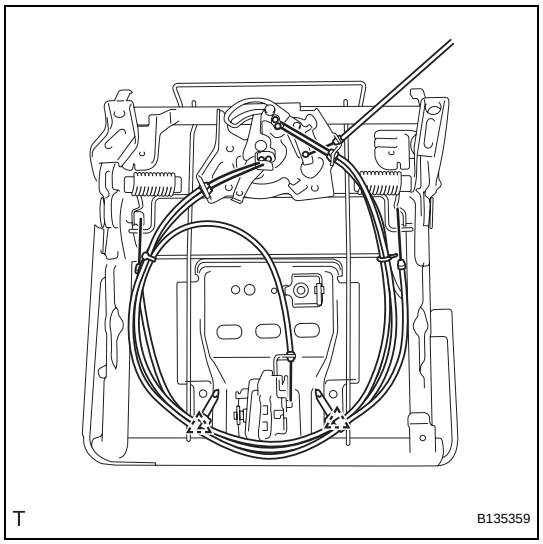


(a) Install the wire with the nut.

Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



11. INSTALL SEAT LOCK CONTROL CABLE ASSEMBLY

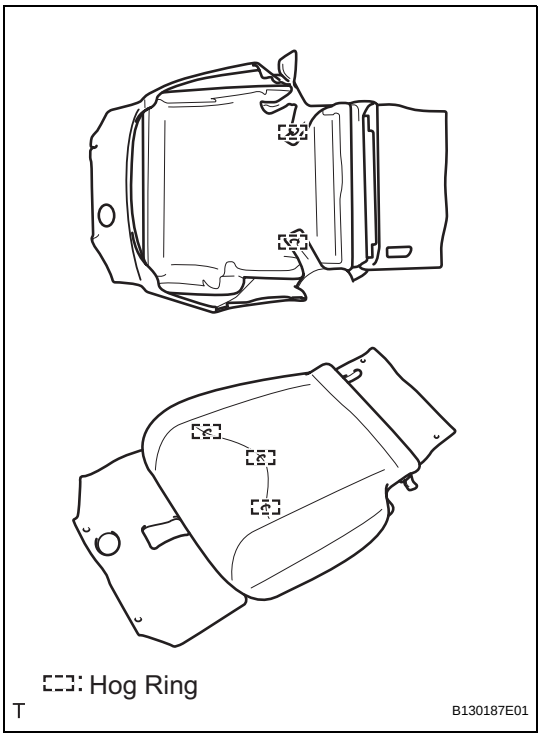


(a) Install the 5 cables to the seat cushion spring as shown in the illustration.

(b) Clamp the cables to the seat cushion spring with 4 new cable ties as shown in the illustration.

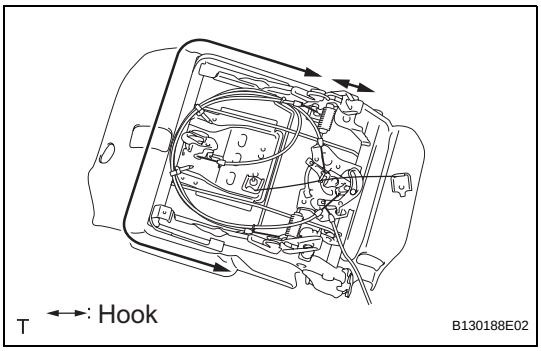
(c) Cut off the 2 cable ties, as shown in the illustration.

(d) Attach the 2 clamps of the cable tie to the seat cushion spring.



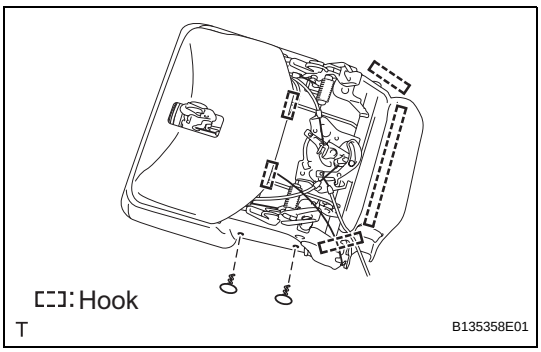
12. INSTALL REAR NO. 2 SEAT CUSHION COVER LH

NOTICE:



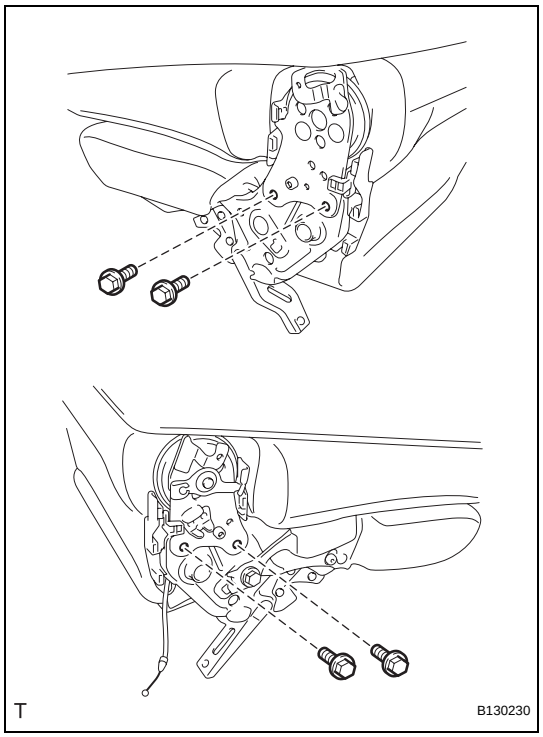
- **Be careful not to damage the cover.**
- **When installing the hog rings, avoid wrinkling the cover.**

SE

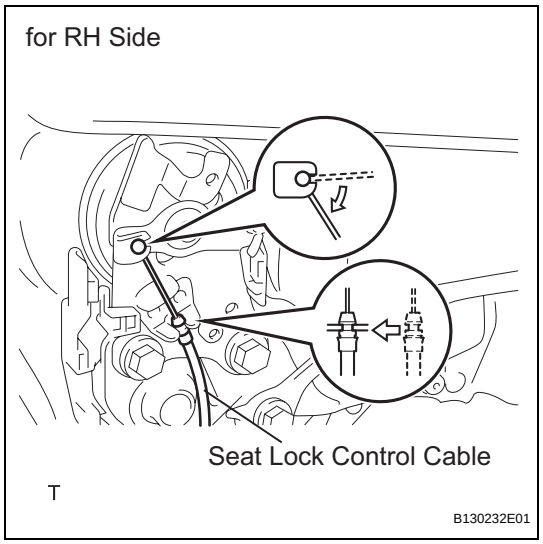


SE

(a) Using hog ring pliers, install the seat cushion cover to the seat cushion pad with 5 new hog rings.

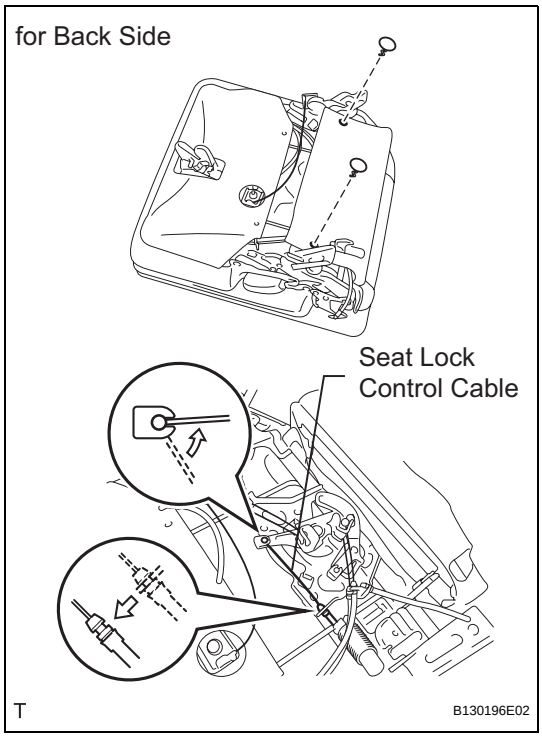


(b) Attach the hooks and install the seat cushion cover (with pad) to the seat cushion spring.

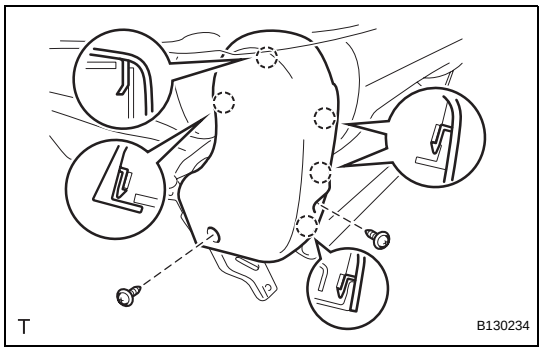


(c) Attach the 5 hooks.
(d) Install the 2 clips.

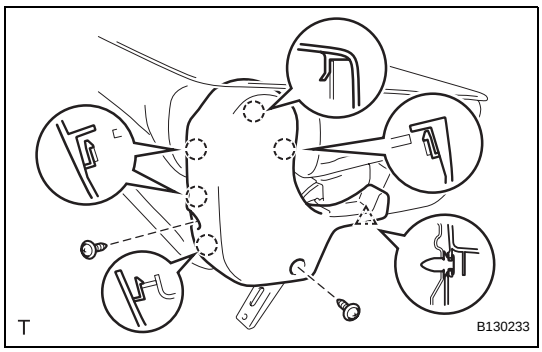
13. INSTALL REAR NO. 2 SEAT INNER BELT ASSEMBLY LH (See page SB-40)



14. REMOVE REAR NO. 2 SEAT CUSHION ASSEMBLY

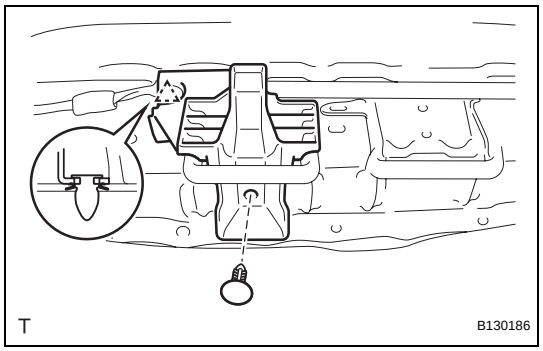


(a) Install the seat cushion to the seatback with the 4 bolts.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



(b) Connect the seat lock control cable of the RH side to the seatback as shown in the illustration.

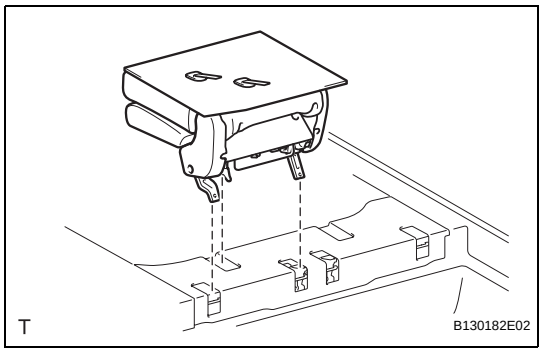
(c) Connect the seat lock control cable of the back side to the seat cushion as shown in the illustration.
(d) Close the seat cushion cover and install the 2 clips.



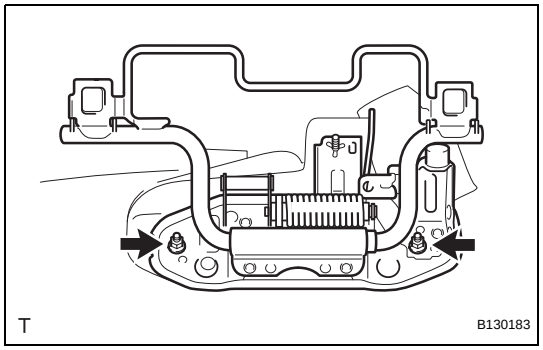
15. INSTALL NO. 1 REAR SEAT RECLINING COVER LH
(a) Attach the 5 claws to install the cover.
(b) Install the 2 screws.

16. INSTALL NO. 2 REAR SEAT RECLINING COVER LH
(a) Attach the clip and 5 claws to install the cover.
(b) Install the 2 screws.

INSTALLATION

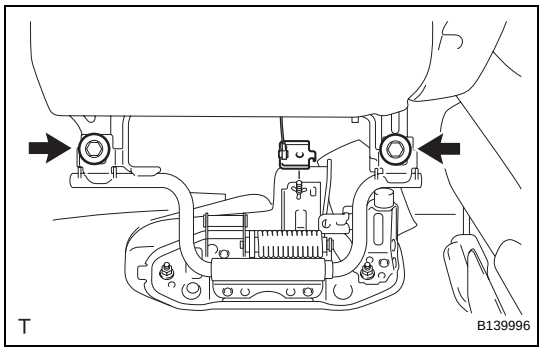


HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



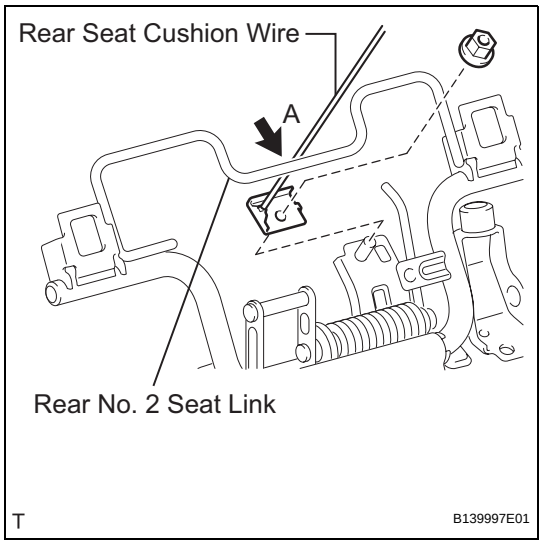
1. INSTALL NO. 2 SEAT LEG BOX PROTECTOR
(a) Attach the clip to install the protector.
(b) Install the clip.

2. INSTALL REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE

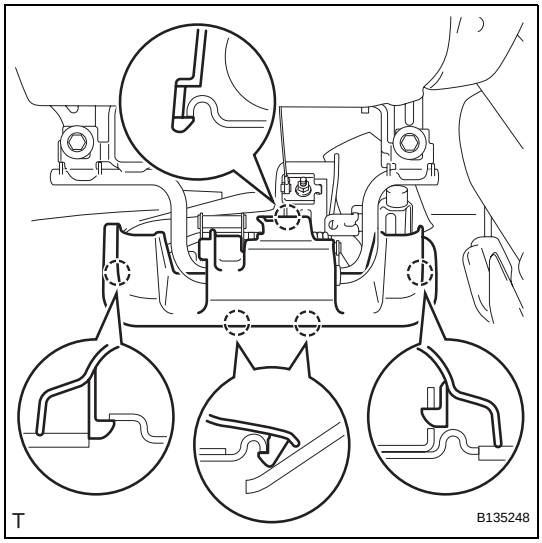


3. INSTALL REAR NO. 2 SEAT ASSEMBLY
(a) Fully tilt the seatback forward.

(b) Place the seat onto the lock striker.
(c) Fully lock the seat to the lock striker.
HINT:
- Lock the rear side, then lock the front side.
- Confirm that the seat is firmly locked to the lock striker.

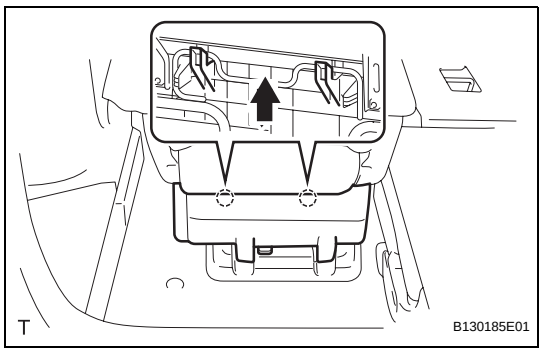


(d) Install the rear No. 2 seat link with the 2 nuts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)



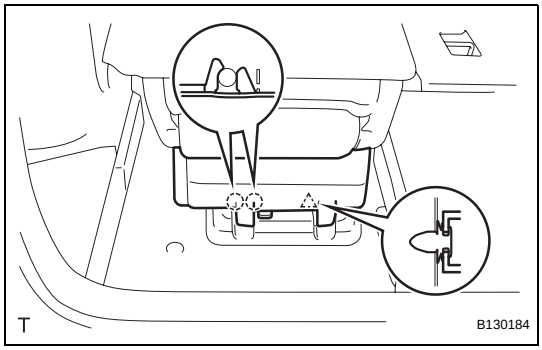
(e) Install the seat to the rear No. 2 seat link with the 2 bolts.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

SE



(f) Pass the rear seat cushion wire underneath the rear No. 2 seat link part labeled A.
NOTICE:
If the wire is not installed as described, the seat will not move properly.

(g) Install the rear seat cushion wire to the rear No. 2 seat link with the nut.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)

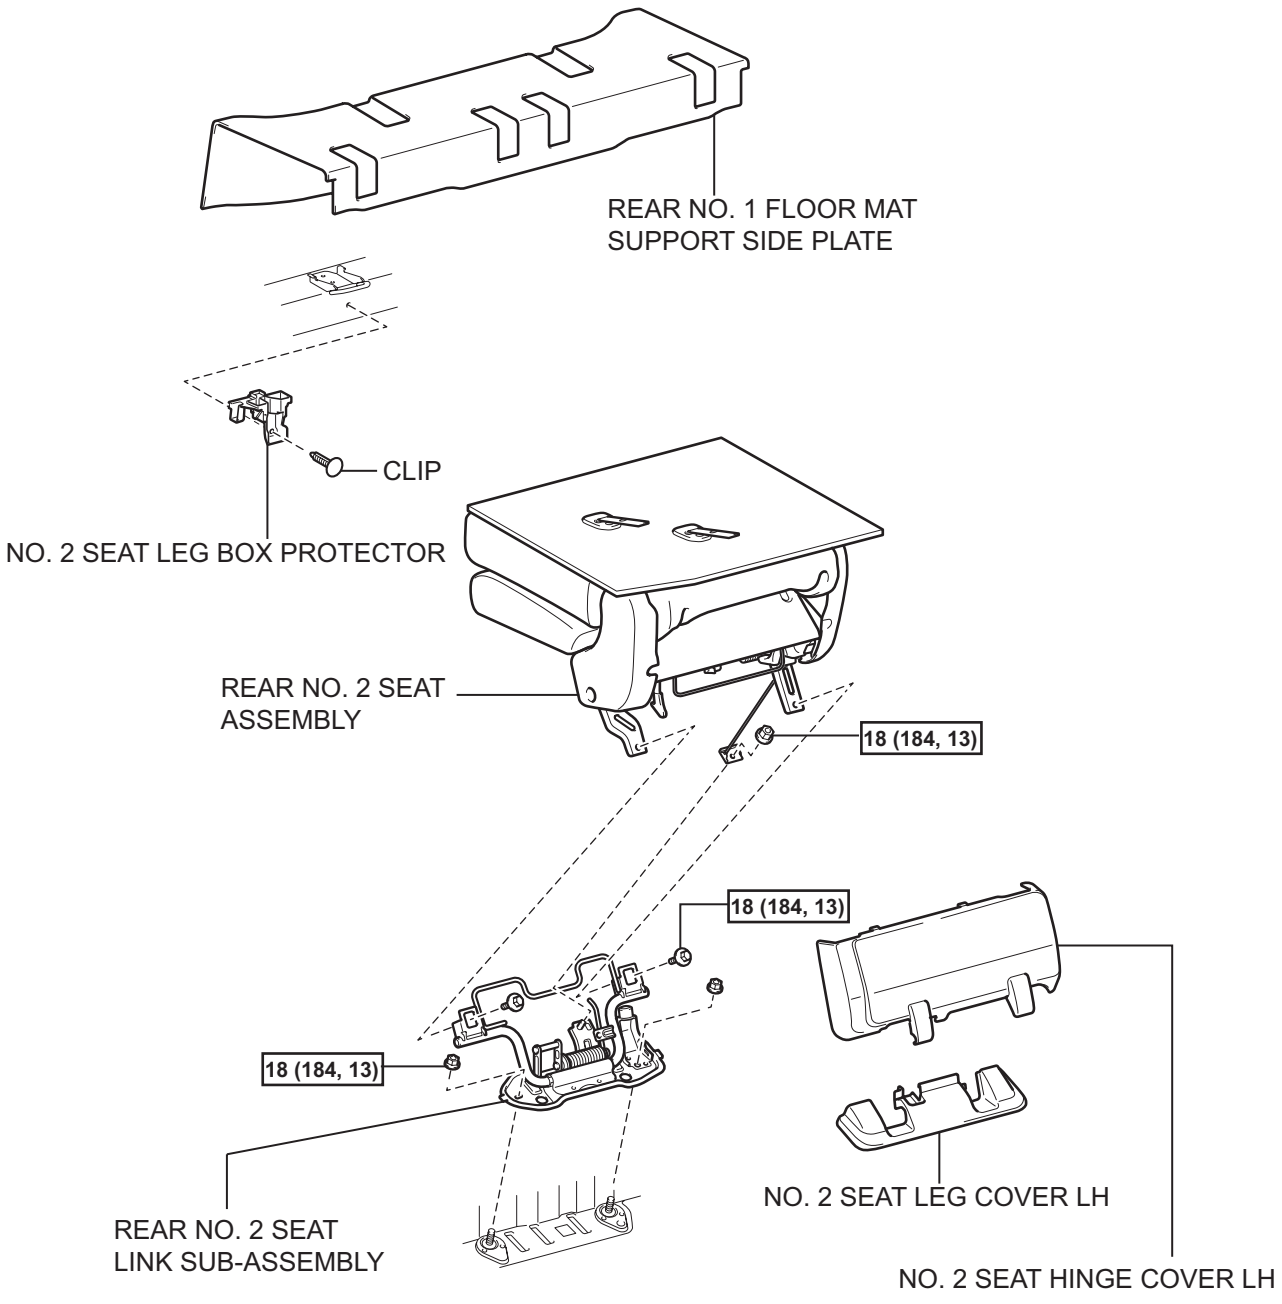


4. INSTALL NO. 2 SEAT LEG COVER LH

(a) Attach the 5 claws to install the leg cover.

5. INSTALL NO. 2 SEAT HINGE COVER LH

(a) Push the hinge cover in the direction indicated by the arrow in the illustration to attach the 2 claws.



(b) Attach the 2 claws and clip to install the hinge cover.

(c) Return the seatback to the upright position.

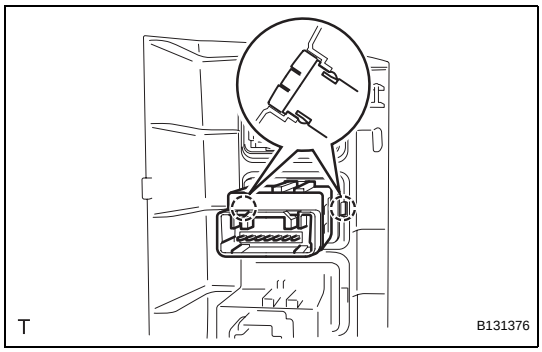
SEAT HEATER SWITCH

COMPONENTS

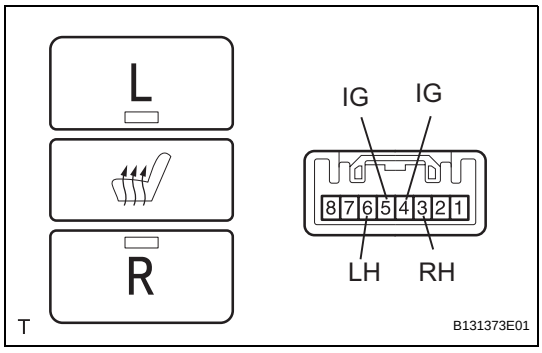


T

B131351E02

SE

REMOVAL

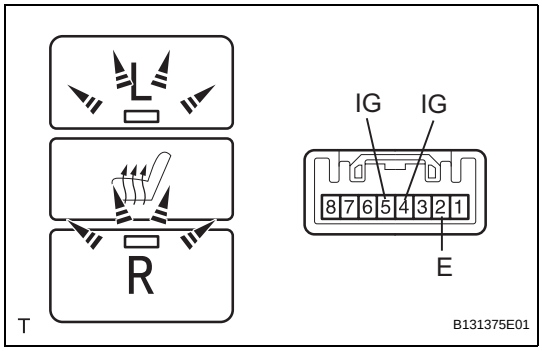


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE SWITCH BASE (See page IP-18)**
3. **REMOVE SEAT HEATER SWITCH**
   (a) Using a screwdriver, detach the 2 claws and remove the switch.
   HINT:
   Tape the screwdriver tip before use.

INSPECTION

1. **INSPECT SEAT HEATER SWITCH**
   (a) Measure the resistance of the seat heater switch when the switch is operated.
   Standard resistance
   for LH

Tester Connection	Switch Condition	Specified Condition
5 (IG) - 6 (LH)	ON	Below 1 Ω
5 (IG) - 6 (LH)	OFF	10 kΩ or higher

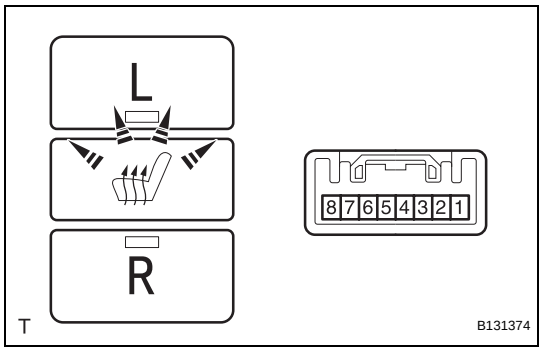


for RH

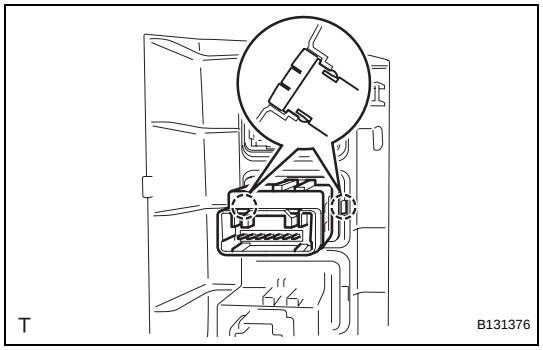
Tester Connection	Switch Condition	Specified Condition
4 (IG) - 3 (RH)	ON	Below 1 Ω
4 (IG) - 3 (RH)	OFF	10 kΩ or higher

If the result is not as specified, replace the switch.

(b) Check that the seat heater switch indicator light illuminates when the switch is operated.
OK
for LH



Measurement Connection	Switch Condition	Specified Condition
Battery positive (+) → 5 (IG) Battery negative (-) → 2 (E)	ON	Illuminates



for RH

Measurement Connection	Switch Condition	Specified Condition
Battery positive (+) → 4 (IG) Battery negative (-) → 2 (E)	ON	Illuminates

If the result is not as specified, replace the switch.

(c) Check that the seat heater switch illuminates.
OK

Measurement Connection	Switch Condition	Specified Condition
Battery positive (+) → 7 Battery negative (-) → 8	Always	Illuminates

If the result is not as specified, replace the switch.

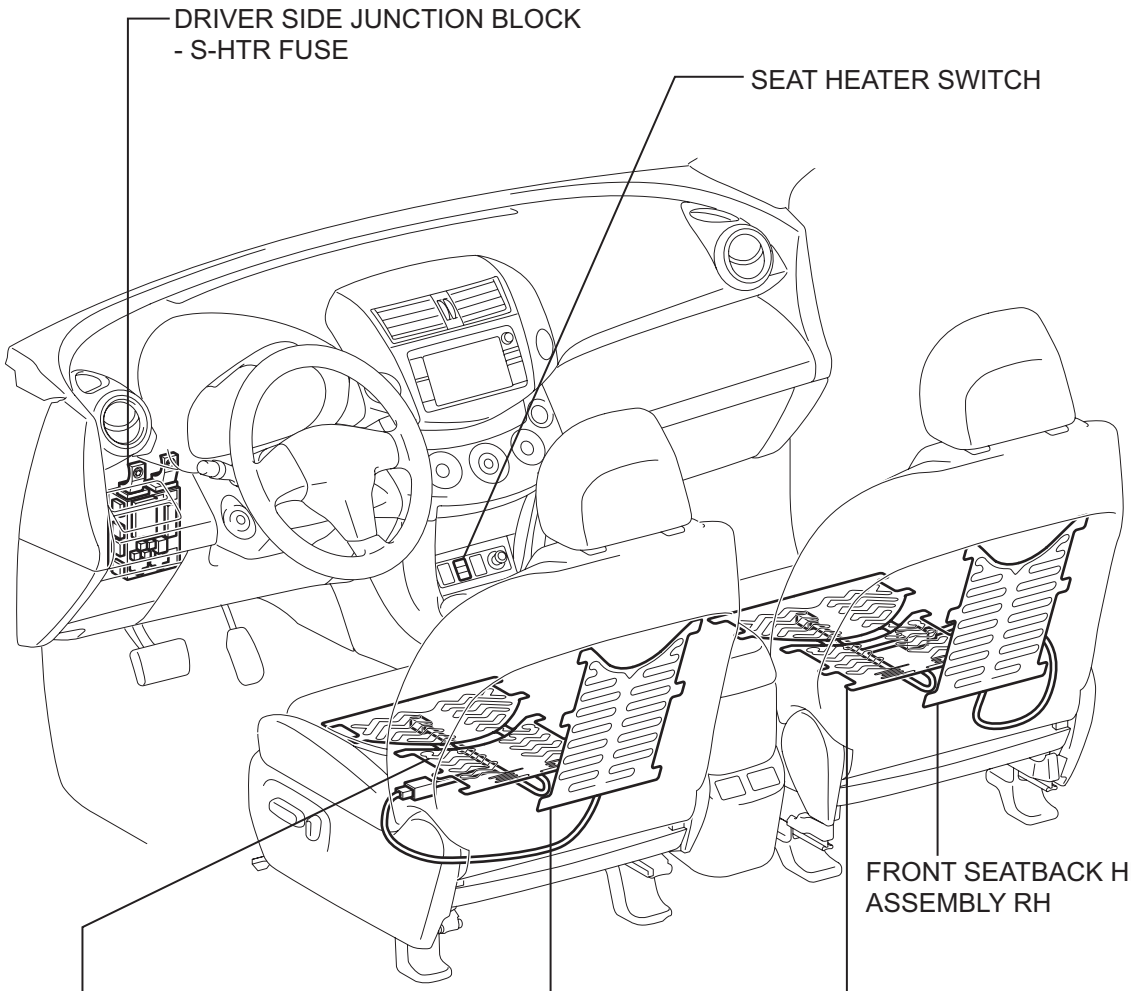
SE

INSTALLATION

1. **INSTALL SEAT HEATER SWITCH**
   (a) Attach the 2 claws to install the switch.
2. **INSTALL SWITCH BASE (See page IP-27)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.



Seat heater system

Symptom	Suspected area	See page
Driver's and passenger's seat heaters do not warm up	1. S-HTR fuse	SE-5

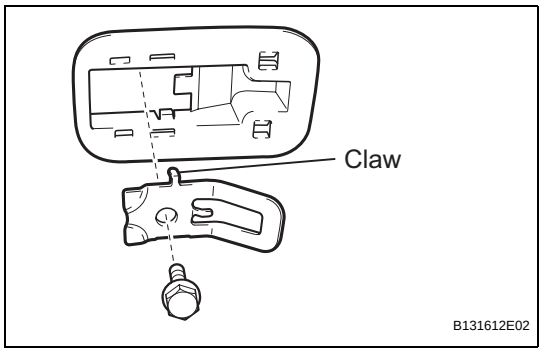
SYSTEM DIAGRAM

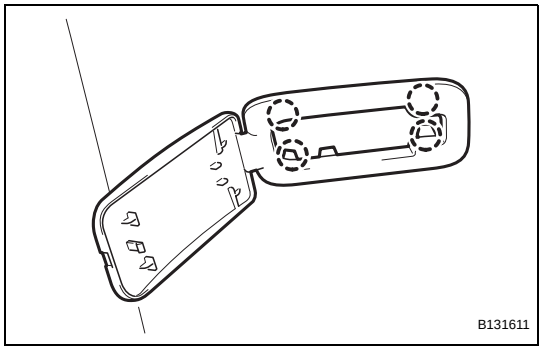


INSTALLATION

1. INSTALL CHILD RESTRAINT SEAT PROTECTOR

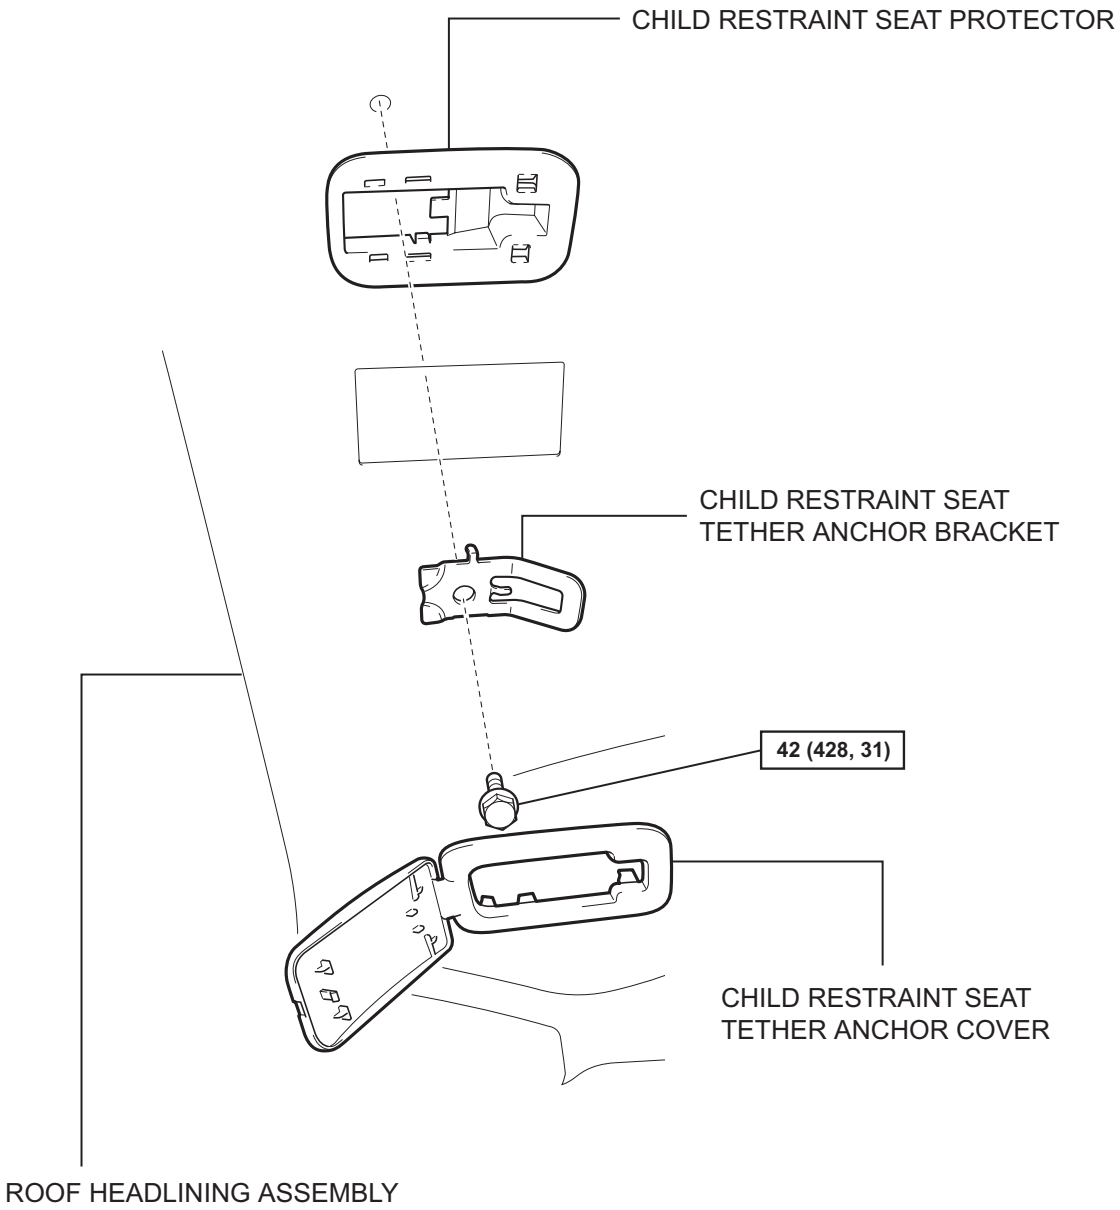
2. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

(a) Align the claws with the positioning holes, and install the bracket with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



3. INSTALL ROOF HEADLINING ASSEMBLY

(a) Install the roof headlining (see page IR-49).



4. INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR COVER

(a) Install the cover with the 4 claws.

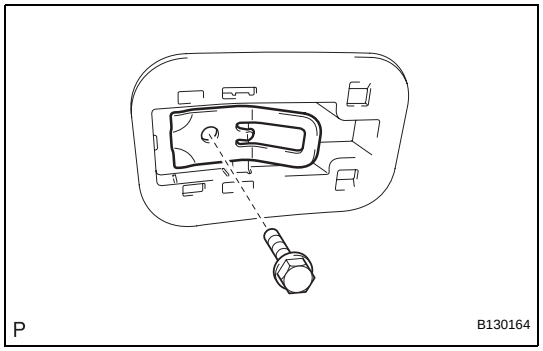
REMOVAL



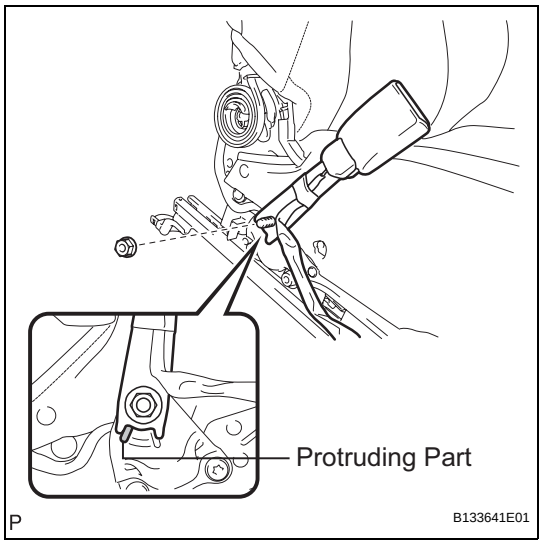
1. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR COVER

(a) Using a screwdriver, detach the 4 claws and remove the cover.
HINT:
Tape the screwdriver tip before use.

2. REMOVE ROOF HEADLINING ASSEMBLY

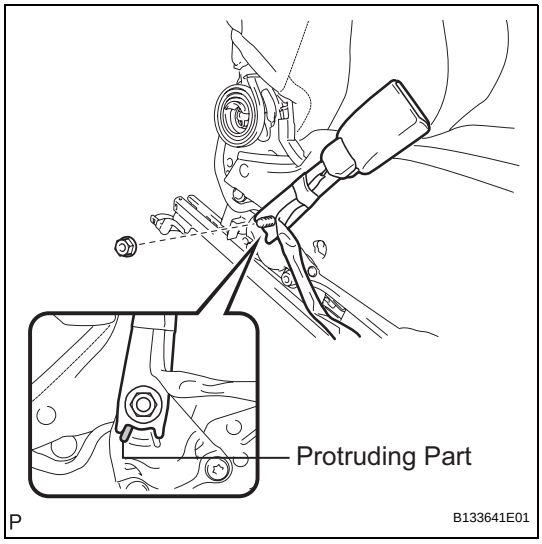
HINT:
It is not necessary to completely remove the roof headlining. Slightly lower the rear section of the roof headlining.

(a) Partially remove the roof headlining (see page IR-26).



3. REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET

(a) Remove the bolt and bracket.



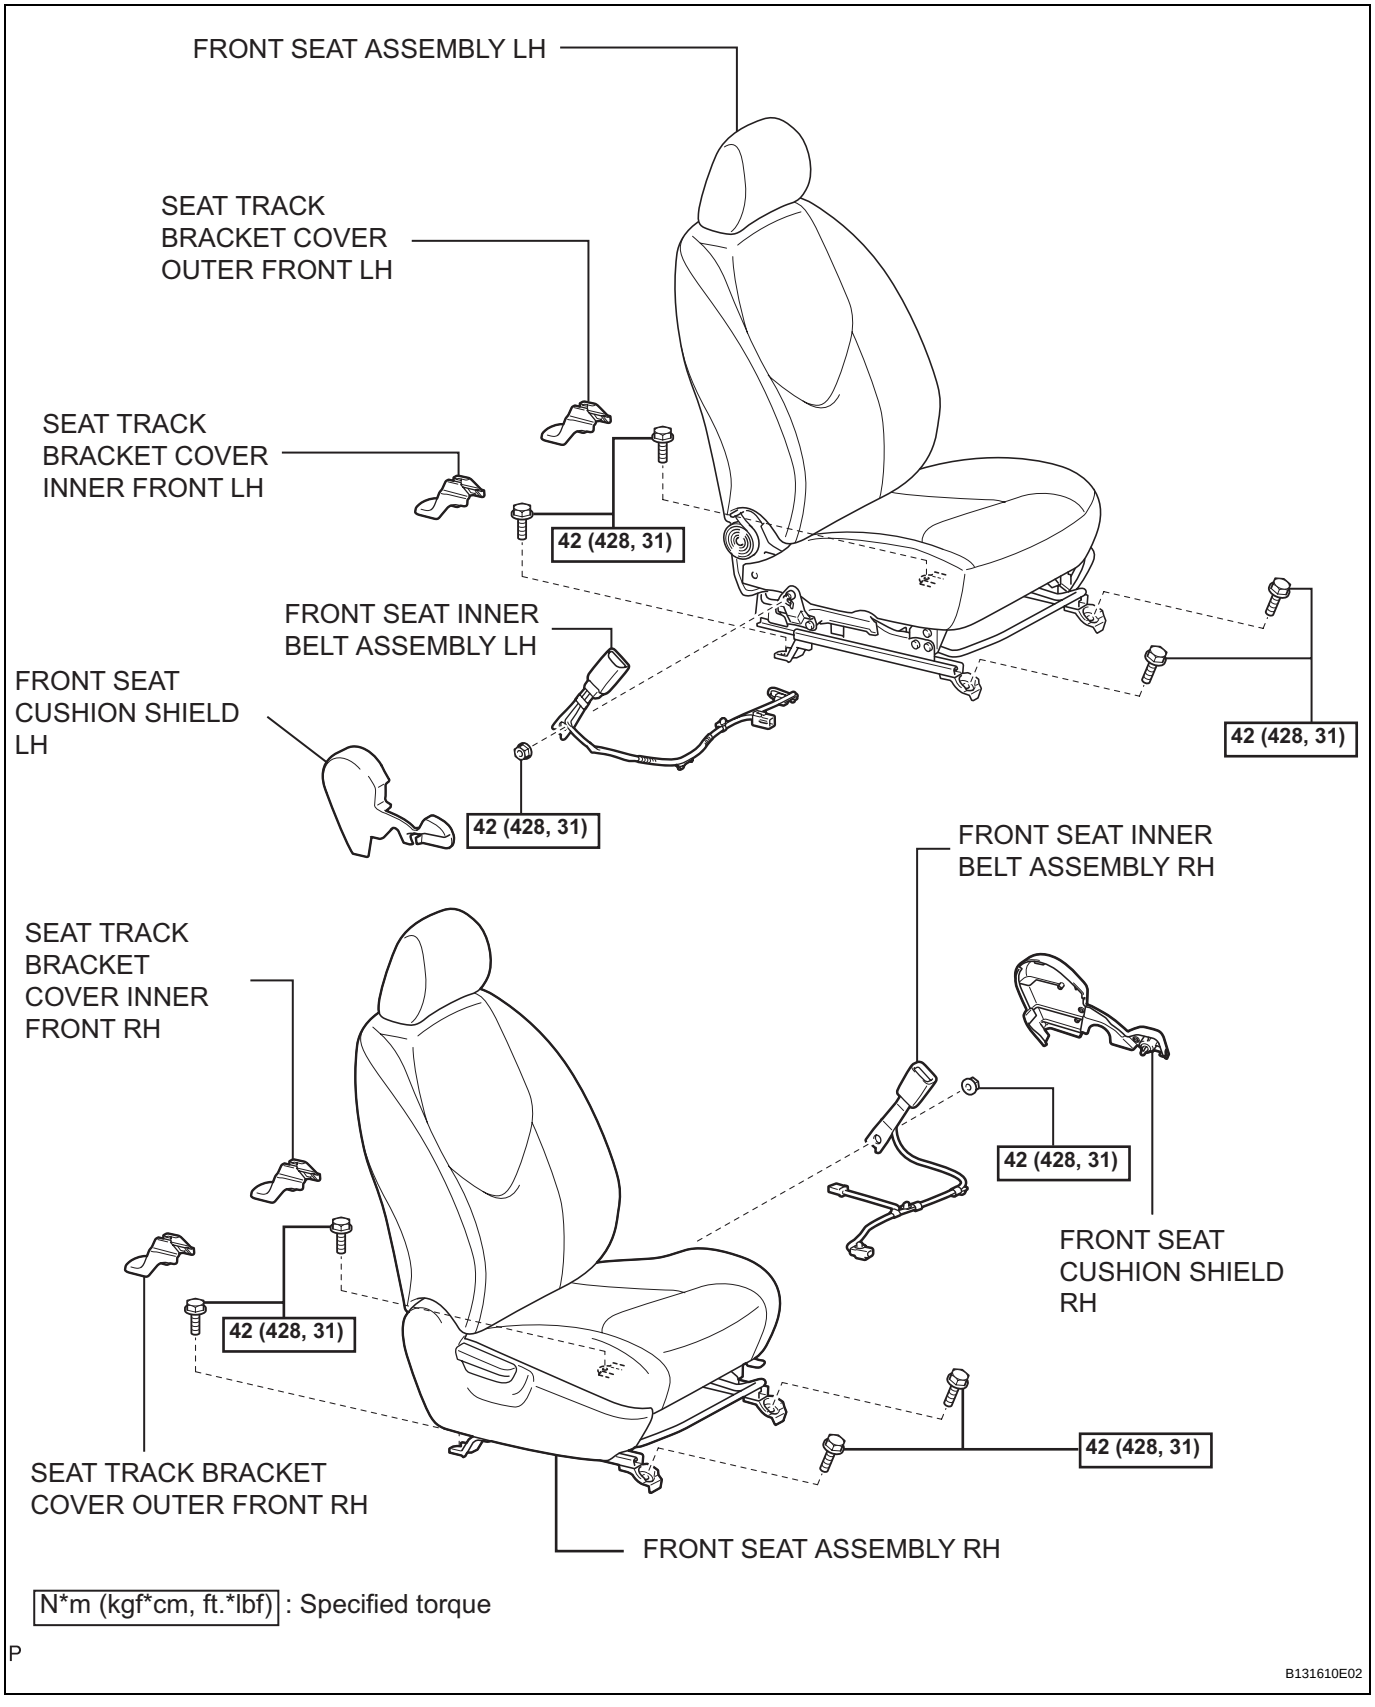
4. REMOVE CHILD RESTRAINT SEAT PROTECTOR

INSTALLATION

HINT:
A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Power Seat)**
   (a) Install the front seat inner belt assembly with the nut.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   NOTICE:
   Do not overlap the anchor part of the seat belt and protruding part of the seat adjuster.
   (b) for driver seat:
   Attach the 2 clamps and connect the 2 connector.
   (c) for Passenger Seat:
   Attach the clamp and connect the 2 connector.

2. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (for Manual Seat)**
   (a) Install the front seat inner belt assembly with the nut.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   NOTICE:
   Do not overlap the anchor part of the seat belt and protruding part of the seat adjuster.
   (b) for driver seat:
   Attach the 3 clamps and connect the 2 connector.
   (c) for Passenger Seat:
   Attach the 2 clamps and connect the connector.
3. **INSTALL FRONT SEAT CUSHION INNER SHIELD LH (See page SE-21)**
4. **INSTALL FRONT SEAT CUSHION INNER SHIELD RH (See page SE-21)**
5. **INSTALL FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-27)**
6. **INSTALL FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-11)**
7. **INSTALL FRONT SEAT TRACK BRACKET OUTER COVER LH (See page SE-23)**
8. **INSTALL FRONT SEAT TRACK BRACKET INNER COVER LH (See page SE-23)**
9. **INSTALL FRONT SEAT TRACK BRACKET INNER COVER RH**
   (a) Use the same procedures described for the LH side.

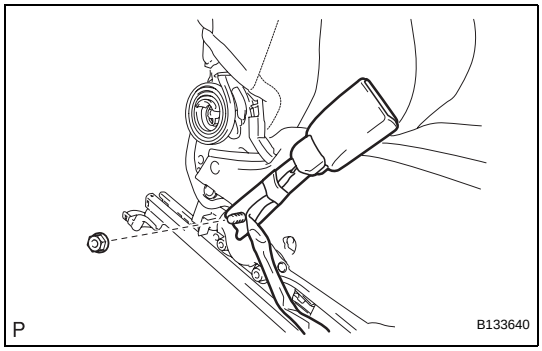


10. INSTALL FRONT SEAT TRACK BRACKET OUTER COVER RH

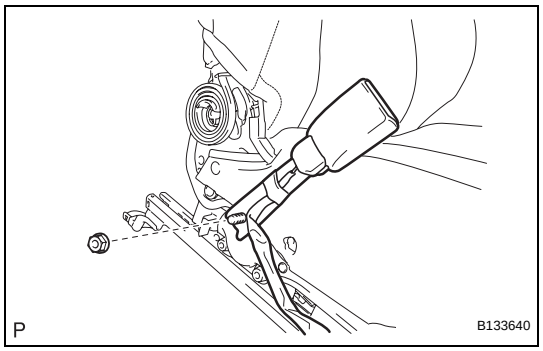
(a) Use the same procedures described for the LH side.

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

FRONT SEAT INNER BELT ASSEMBLY



COMPONENTS

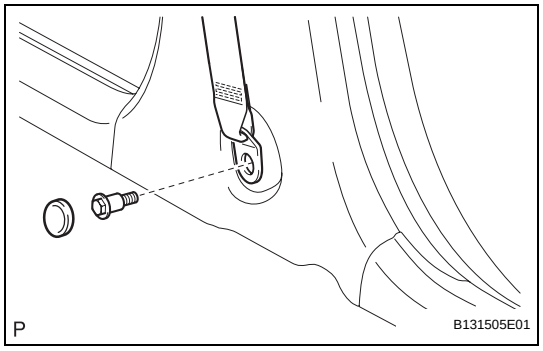


SB

REMOVAL

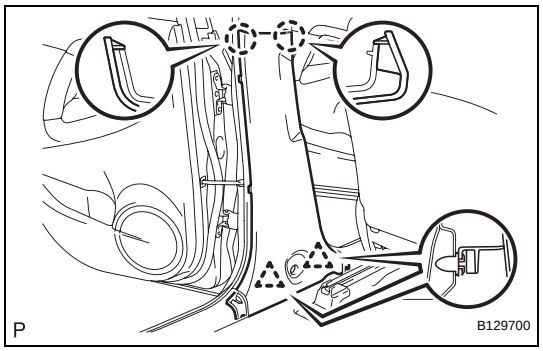
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT SEAT TRACK BRACKET OUTER COVER LH (See page SE-11)**
3. **REMOVE FRONT SEAT TRACK BRACKET INNER COVER LH (See page SE-11)**
4. **REMOVE SEAT TRACK BRACKET COVER OUTER FRONT RH**
   (a) Use the same procedures described for the LH side.
5. **REMOVE SEAT TRACK BRACKET COVER INNER FRONT RH**
   (a) Use the same procedures described for the LH side.
6. **REMOVE FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-27)**
7. **REMOVE FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-11)**
8. **REMOVE FRONT SEAT CUSHION SHIELD RH (for Power Seat) (See page SE-29)**
9. **REMOVE FRONT SEAT CUSHION INNER SHIELD LH (for Manual Seat) (See page SE-13)**
10. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Power Seat)**
    (a) for Driver Seat:
    Disconnect the 2 connectors and detach the 2 clamps.
    (b) for Passenger Seat:
    Disconnect the connector and detach the 2 clamps.
    (c) Remove the nut and seat belt.
11. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (for Manual Seat)**
    (a) for Driver Seat:
    Disconnect the 2 connectors and detach the 3 clamps.
    (b) for Passenger Seat:
    Disconnect the connector and detach the 2 clamps.

SB



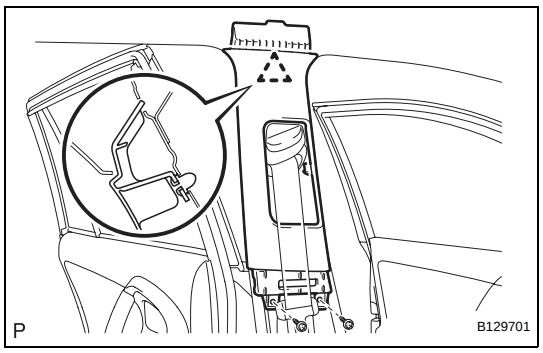
(c) Remove the nut and seat belt.

REMOVAL



HINT:

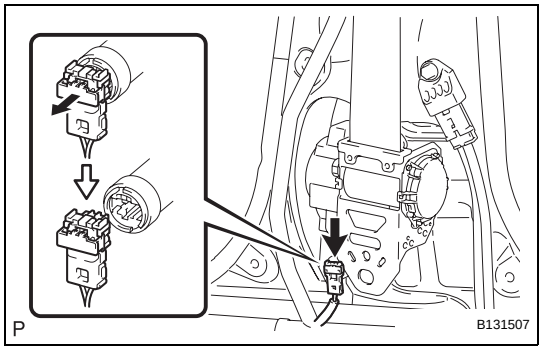
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.



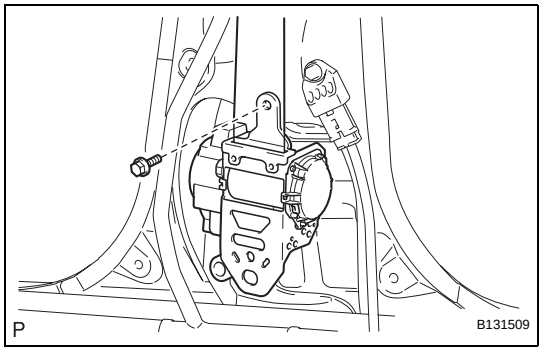
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-26)**
3. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
4. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-29)**
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
6. **REMOVE CENTER PILLAR GARNISH LOWER LH**
   (a) Remove the lap belt anchor cover.
   (b) Remove the anchor's built-in bolt from the pillar and disconnect the outer belt.

   (c) Using a screwdriver, detach the 2 claws.
   HINT:
   Tape the screwdriver tip before use.
   (d) Using a clip remover, detach the 2 clips and remove the garnish.

7. **REMOVE CENTER PILLAR GARNISH LH**
   (a) Using a screwdriver, remove the 2 screws.
   (b) Using a clip remover, detach the clip then remove the garnish.
   (c) Pull out the outer belt anchor from the center pillar garnish.

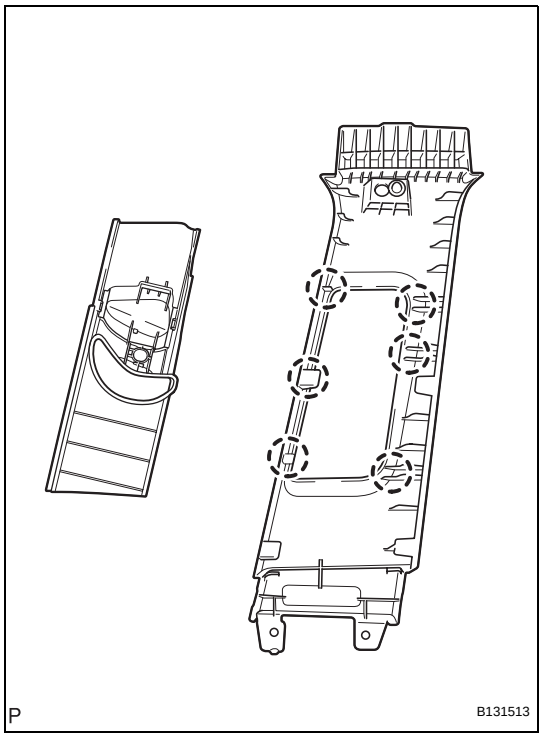


SB



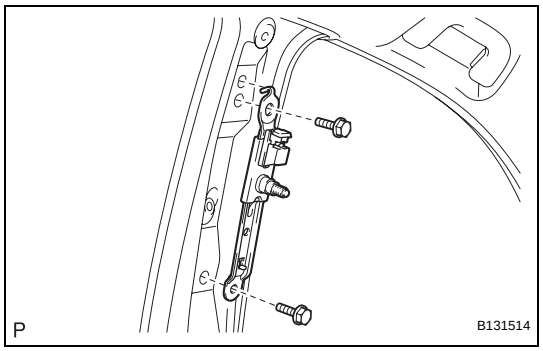
8. REMOVE FRONT SEAT OUTER BELT ASSEMBLY LH

(a) Remove the nut and disconnect the shoulder anchor.



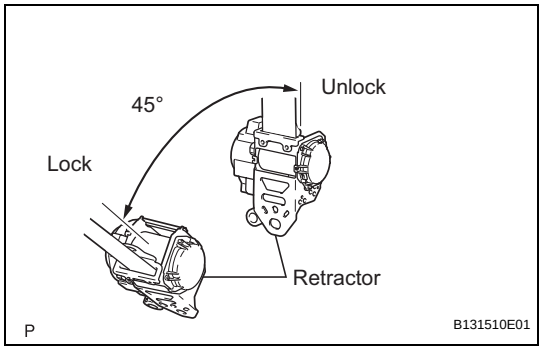
(b) Disconnect the pretensioner connector as shown in the illustration.

(c) Remove the bolt and outer belt.



SB

9. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH



(a) Using a screwdriver, detach the 6 claws.

(b) Remove the anchor plate from the garnish.
HINT:
Tape the screwdriver tip before use.

10. REMOVE FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY

(a) Remove the 2 bolts and anchor.

INSPECTION

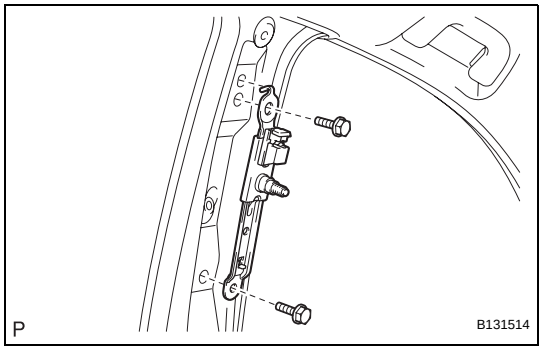
1. INSPECT FRONT SEAT OUTER BELT ASSEMBLY

NOTICE:

Do not disassemble the retractor.

(a) Before installing the outer belt, check the ELR.

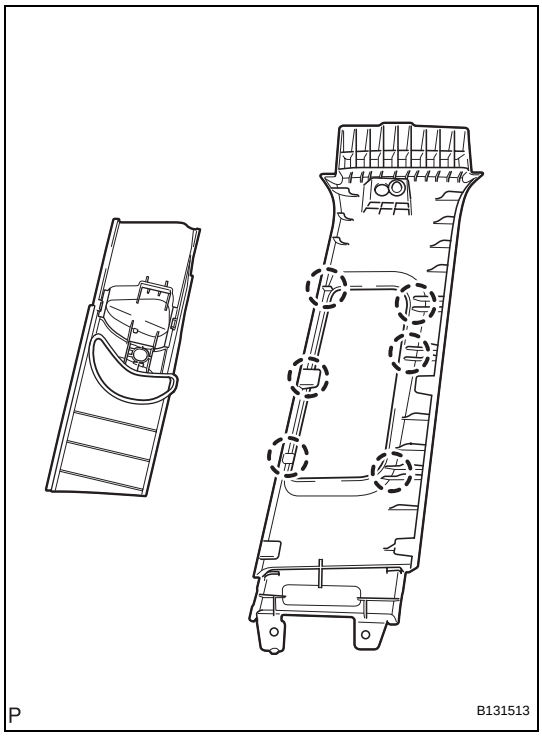
(1) When the inclination of the retractor is 15° or less, check that the belt can be pulled from the retractor. When the inclination of the retractor is over 45°, check that the belt locks.



If the result is not as specified, replace the outer belt assembly.

SB

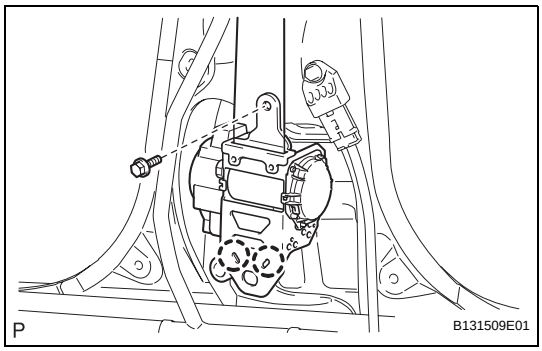
INSTALLATION



HINT:

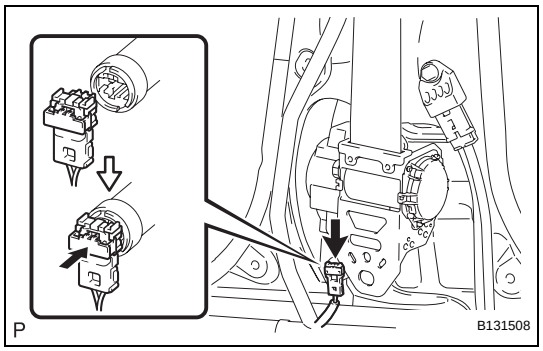
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.
- A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL FRONT SHOULDER BELT ANCHOR ADJUSTER ASSEMBLY



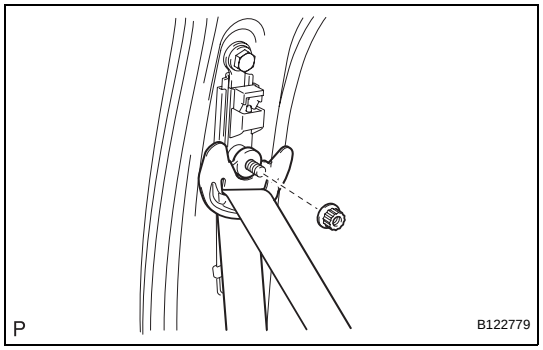
(a) Align the adjuster positioning hole with the claw, and install the adjuster with the 2 bolts as shown in the illustration.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

2. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

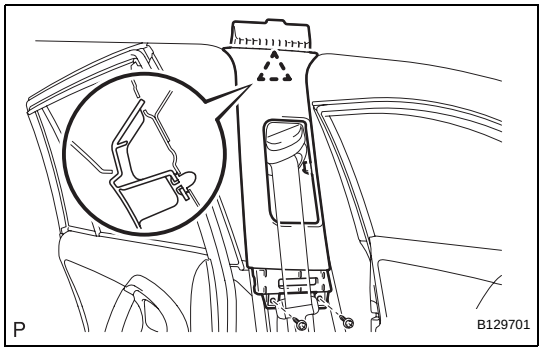


(a) Install the plate as shown in the illustration.
HINT:
Make sure the plate is firmly set into the garnish's claws.

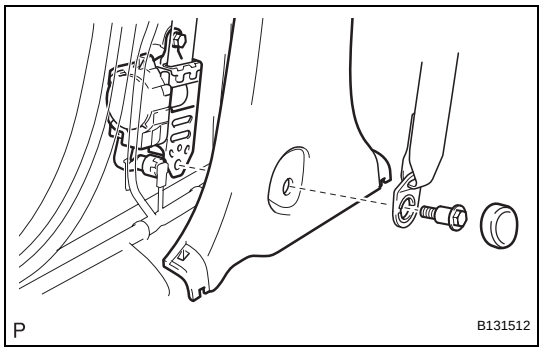
3. INSTALL FRONT SEAT OUTER BELT ASSEMBLY LH
NOTICE:
Do not disassemble the retractor.



(a) Align the 2 claws with the seat belt positioning holes, and install the retractor of the outer belt with the bolt as shown in the illustration.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



SB



(b) Connect the pretensioner connector as shown in the illustration.

(c) Connect the outer belt with the shoulder anchor's bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

4. INSTALL CENTER PILLAR GARNISH LH
(a) Pass the outer belt anchor through the center pillar garnish.
(b) Attach the clip.
(c) Install the garnish with the 2 screws.

5. INSTALL CENTER PILLAR GARNISH LOWER LH
(a) Attach the 2 claws and 2 clips to install the garnish.
(b) Connect the floor anchor with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
(c) Attach the lap belt outer anchor cover.

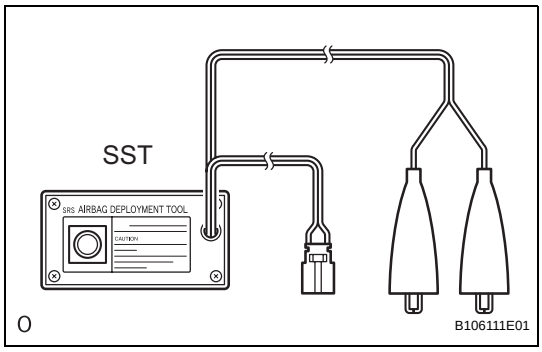
6. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

7. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-57)

8. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-59)

9. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

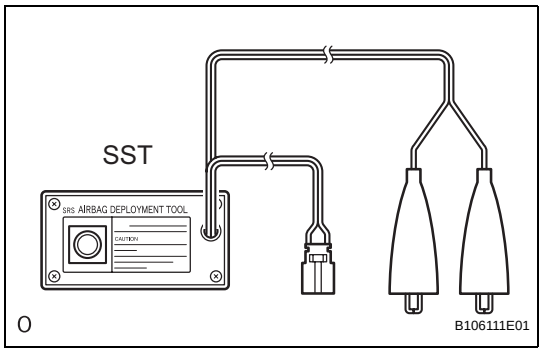


SB

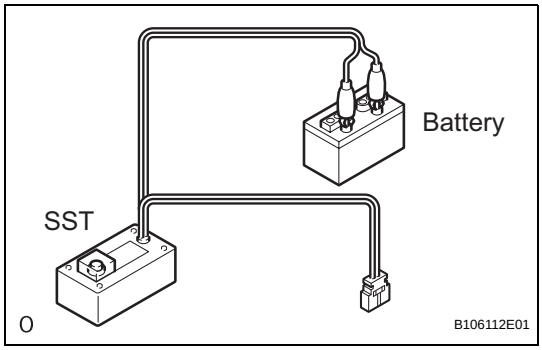
DISPOSAL

HINT:
When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt (with seat belt pretensioner), always first activate the seat belt pretensioner in accordance with the procedures described below. If any abnormality occurs during activation of the seat belt pretensioner, contact the SERVICE DEPARTMENT of TOYOTA MOTOR SALES, U.S.A., INC.

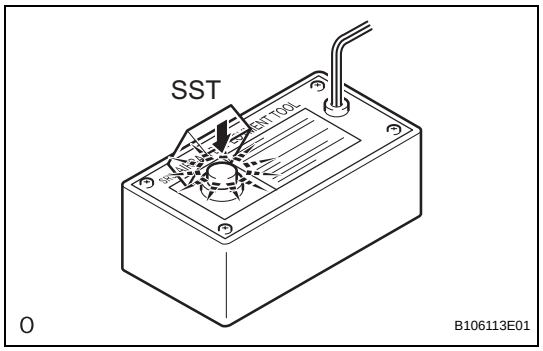
CAUTION:



- **Never dispose of a front seat outer belt that has a non-activated pretensioner.**
- **The seat belt pretensioner produces a loud, exploding sound when it activates. Perform the operation where it will not be a nuisance to nearby people.**
- **When activating a front seat outer belt (with seat belt pretensioner), stand at least 10 m (33 ft.) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat outer belt with an activated pretensioner.**
- **Always wash your hands with water after completing the disposal.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**
- **Perform procedures in a place away from electrical interference.**
- **When activating the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool).**

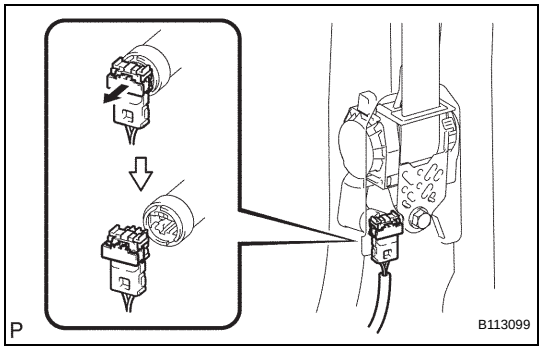


1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY RH (WHEN INSTALLED IN VEHICLE)



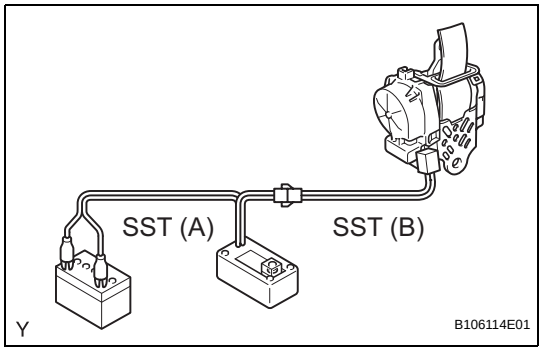
HINT:
Prepare a battery to activate the seat belt pretensioner.

(a) Check if SST is functioning properly.
SST 09082-00700
CAUTION:
When activating the seat belt pretensioner, always use the specified SST.



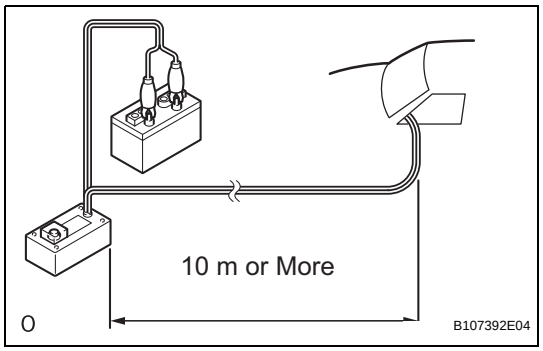
(1) Connect SST's red clip to the battery's positive (+) terminal and the black clip to the battery's negative (-) terminal.
HINT:
Do not connect the yellow connector. The yellow connector is used to connect to the seat belt pretensioner.

(2) Press the SST activation switch and check that the LED of the SST activation switch illuminates.
CAUTION:
If the LED illuminates when the activation switch is not being pressed, SST may be malfunctioning. Replace SST with a new one.



(b) Disconnect SST from the battery.

(c) Disconnect the pretensioner connector.
(1) Disconnect the cable from the negative (-) battery terminal.
(2) Remove the front door scuff plate (see page IR-26).
(3) Remove the rear door scuff plate (see page IR-29).
(4) Remove the lower center pillar garnish (see page IR-29).



(5) Disconnect the pretensioner connector as shown in the illustration.

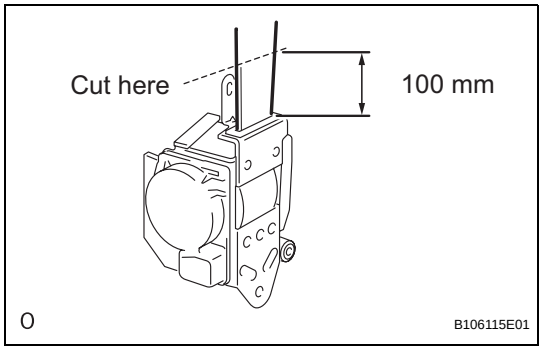
(d) Prepare SST for activation of the seat belt pretensioner.
(1) Install the floor anchor of the seat belt.

(2) Connect SST (A) to SST (B). Then connect SST (B)'s connector to the seat belt pretensioner.
SST 09082-00700, 09082-00770
NOTICE:
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the front of the vehicle.
(4) Close all the doors and windows of the vehicle.
HINT:
Leave a gap in one of the windows for inserting SST wire harness.
NOTICE:
Take care not to damage SST wire harness.
(5) Connect SST's red clip to the battery's positive (+) terminal and the black clip to the negative (-) terminal.

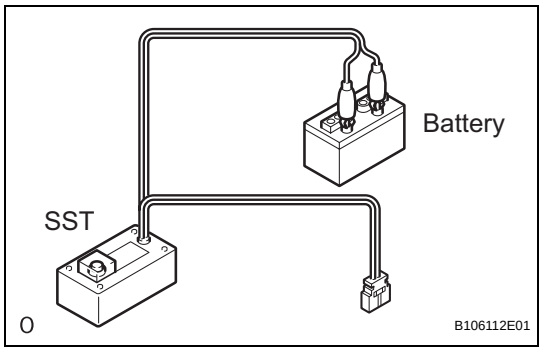
(e) Activate the seat belt pretensioner.
(1) Confirm that no one is inside the vehicle or within 10 m (33 ft.) of the vehicle.

SB



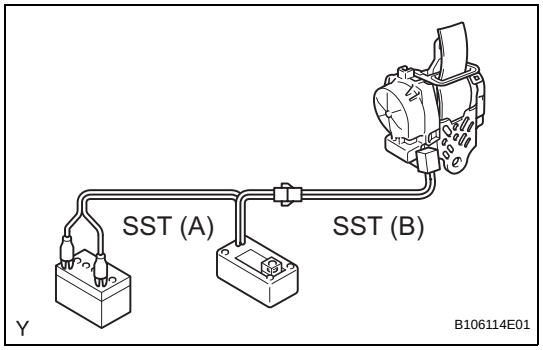
(2) Press the SST activation switch to activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates at the same time the SST activation switch's LED illuminates.

(f) Dispose of the front seat outer belt (with the seat belt pretensioner).
CAUTION:
- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt whose pretensioner has been activated.**
- **Always wash your hands with water after completing the disposal.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

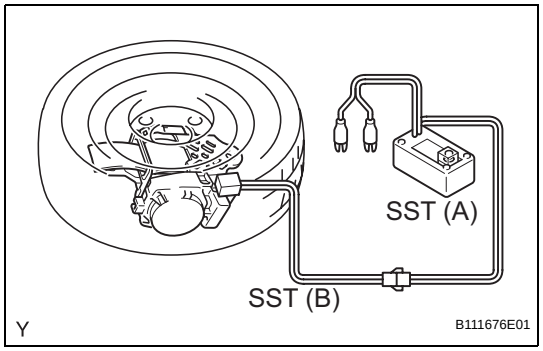


HINT:
When scrapping a vehicle, activate the seat belt pretensioner, and then scrap the vehicle with the activated front seat outer belt installed.

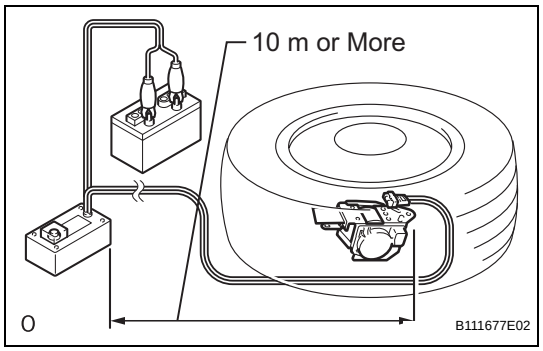
2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)
NOTICE:
- **When only disposing of the front seat outer belt (with the seat belt pretensioner), never use the customer's vehicle to activate the seat belt pretensioner.**
- **Be sure to follow the procedures listed below when activating the seat belt pretensioner.**



SB



(a) Remove the front seat outer belt.
(1) Wind the seat belt with the retractor.
(2) When the seat belt is sufficiently wound, cut the seat belt approximately 100 mm (0.39 in.) from the retractor, as shown in the illustration.
HINT:
The seat belt is designed so that winding the seat belt before pretensioner activation will decrease the pulling power of the seat belt during pretensioner activation.



(b) Check if SST is functioning properly.
SST 09082-00700, 09082-00770
CAUTION:
When activating a seat belt pretensioner, always use the specified SST.

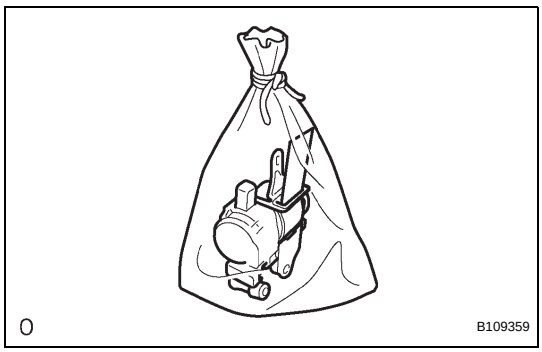
(c) Prepare SST for activation of the seat belt pretensioner.
(1) Connect SST (A) to SST (B). Then connect SST (B)'s connector to the seat belt pretensioner.
NOTICE:
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Place the front seat outer belt on the ground and cover it with a tire (with wheel).
NOTICE:
Set up the front seat outer belt as shown in the illustration.

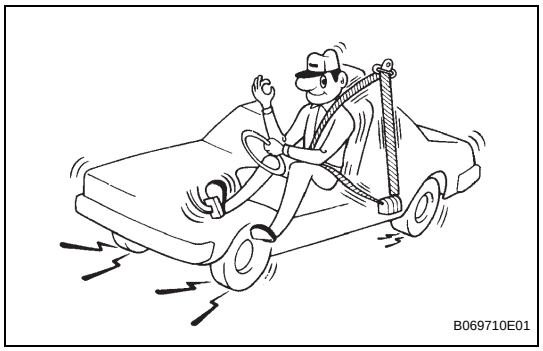
(3) Move SST at least 10 m (33 ft.) away from the wheel.
NOTICE:
Take care not to damage the SST wire harness.

(d) Activate the seat belt pretensioner.
(1) Connect SST's red clip to the battery's positive (+) terminal and the black clip to the battery's negative (-) terminal.
(2) Check that no one is within 10 m (33 ft) of the wheel.
(3) Press the SST activation switch to activate the seat belt pretensioner.
HINT:
The seat belt pretensioner operates at the same time the SST activation switch's LED illuminates.

SB



(e) Dispose of the front seat outer belt (with the seat belt pretensioner).

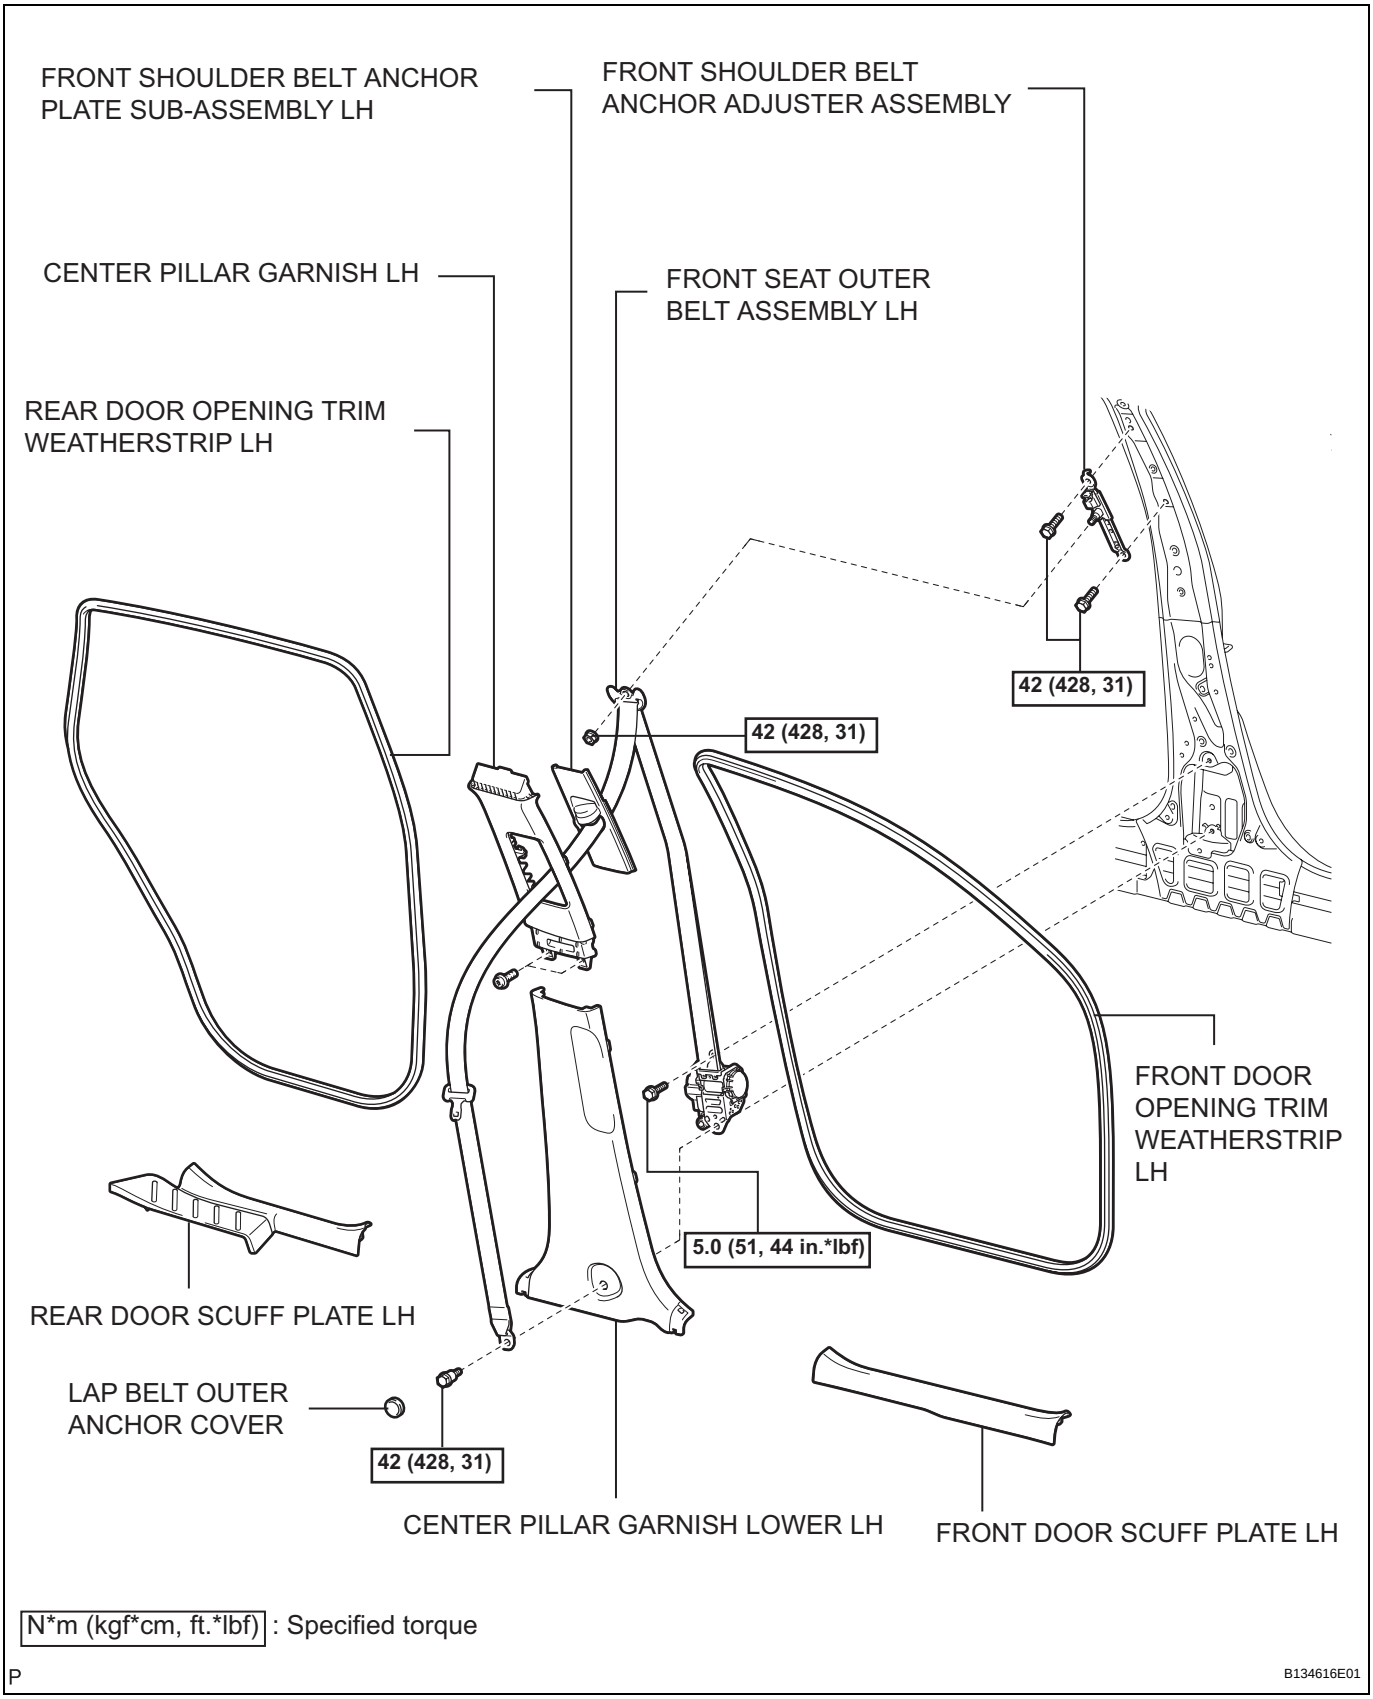


CAUTION:

- **Do not touch the front seat outer belt for at least 30 minutes after the seat belt pretensioner has been activated. It is very hot.**
- **Use gloves and safety glasses when handling a front seat outer belt whose pretensioner has been activated.**
- **Always wash your hands with water after completing the disposal.**
- **Do not apply water to a front seat outer belt that has an activated pretensioner.**

(1) Remove the tire (with wheel) and SST.

(2) Place the front seat outer belt in a plastic bag, tie the end tightly and dispose of it in the same way as other general parts.



FRONT SEAT OUTER BELT ASSEMBLY

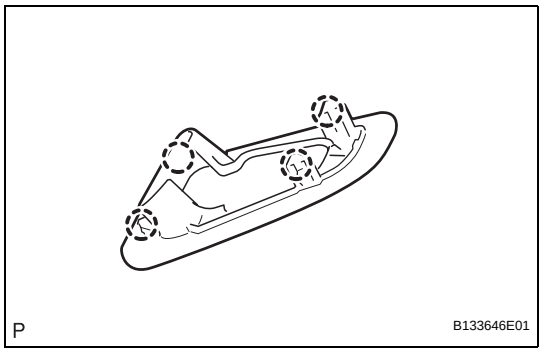
PRECAUTION

CAUTION:
Replace the faulty parts of the seat belt systems (outer belt, inner belt, bolts, nuts, adjustable shoulder anchor, tether anchor hardware and other related parts). When inspecting a vehicle that was in a collision, be sure to check all of the seat belt systems regardless of whether or not the system was activated in the collision. Replace any damaged or malfunctioning systems.

1. **RUNNING TEST (IN SAFE AREA)**
   CAUTION:
   Conduct this test in a safe area.
   (a) Fasten the front seat belt.
   (b) Drive the vehicle at 16 km/h (10 mph) and firmly depress the brakes. Check that the belts lock and cannot be extended at this time.
   If a belt does not lock, replace the seat belt assembly (see page SB-27).
   HINT:
   Inspect a seat belt assembly before installing it (see page SB-29).

COMPONENTS

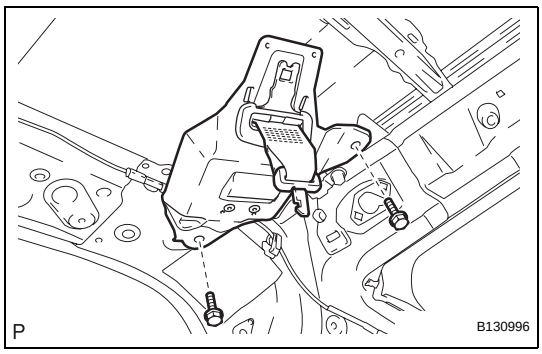
N*m (kgf*cm, ft.*lbf) : Specified torque



P

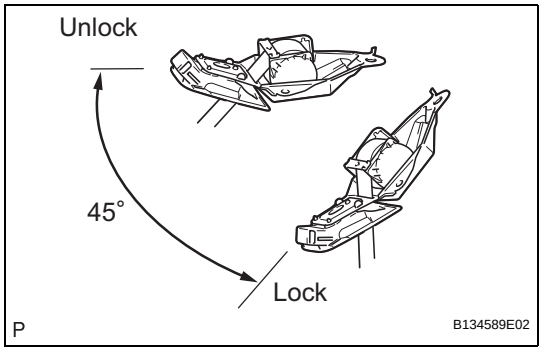
B134616E01

SB



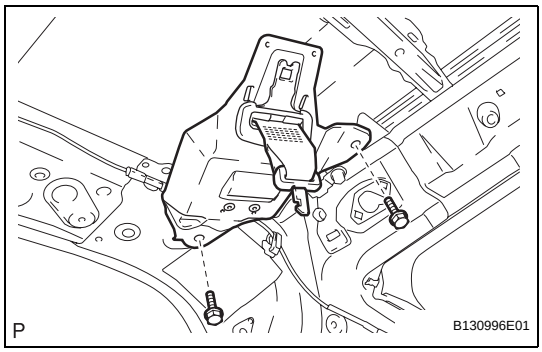
REMOVAL

CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



1. **REMOVE SHOULDER BELT ANCHOR COVER RH**
   (a) Using a screwdriver, remove the 4 claws and cover.
   HINT:
   Tape the screwdriver tip before use.

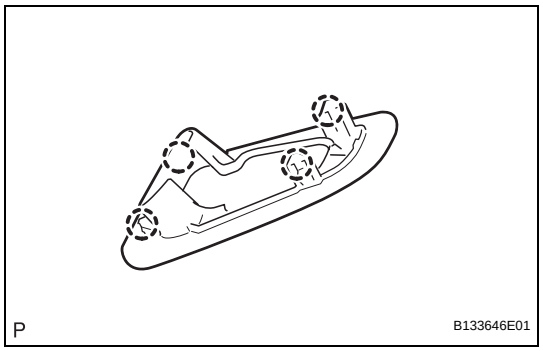
2. **REMOVE ROOF HEADLINING ASSEMBLY**
   HINT:
   It is not necessary to completely remove the roof headlining. Slightly lower the rear section of the roof headlining.
   (a) Partially remove the roof headlining (see page IR-26).



3. **REMOVE REAR CENTER SEAT OUTER BELT ASSEMBLY**
   (a) Remove the 2 bolts and seat belt.

INSPECTION

1. **INSPECT REAR CENTER SEAT OUTER BELT ASSEMBLY**
   NOTICE:
   Do not disassemble the retractor.
   (a) When the inclination of the retractor is 15° or less, check that the belt can be pulled from the retractor. When the inclination of the retractor is over 45°, check that the belt locks.
   If the operation is not as specified, replace the belt.

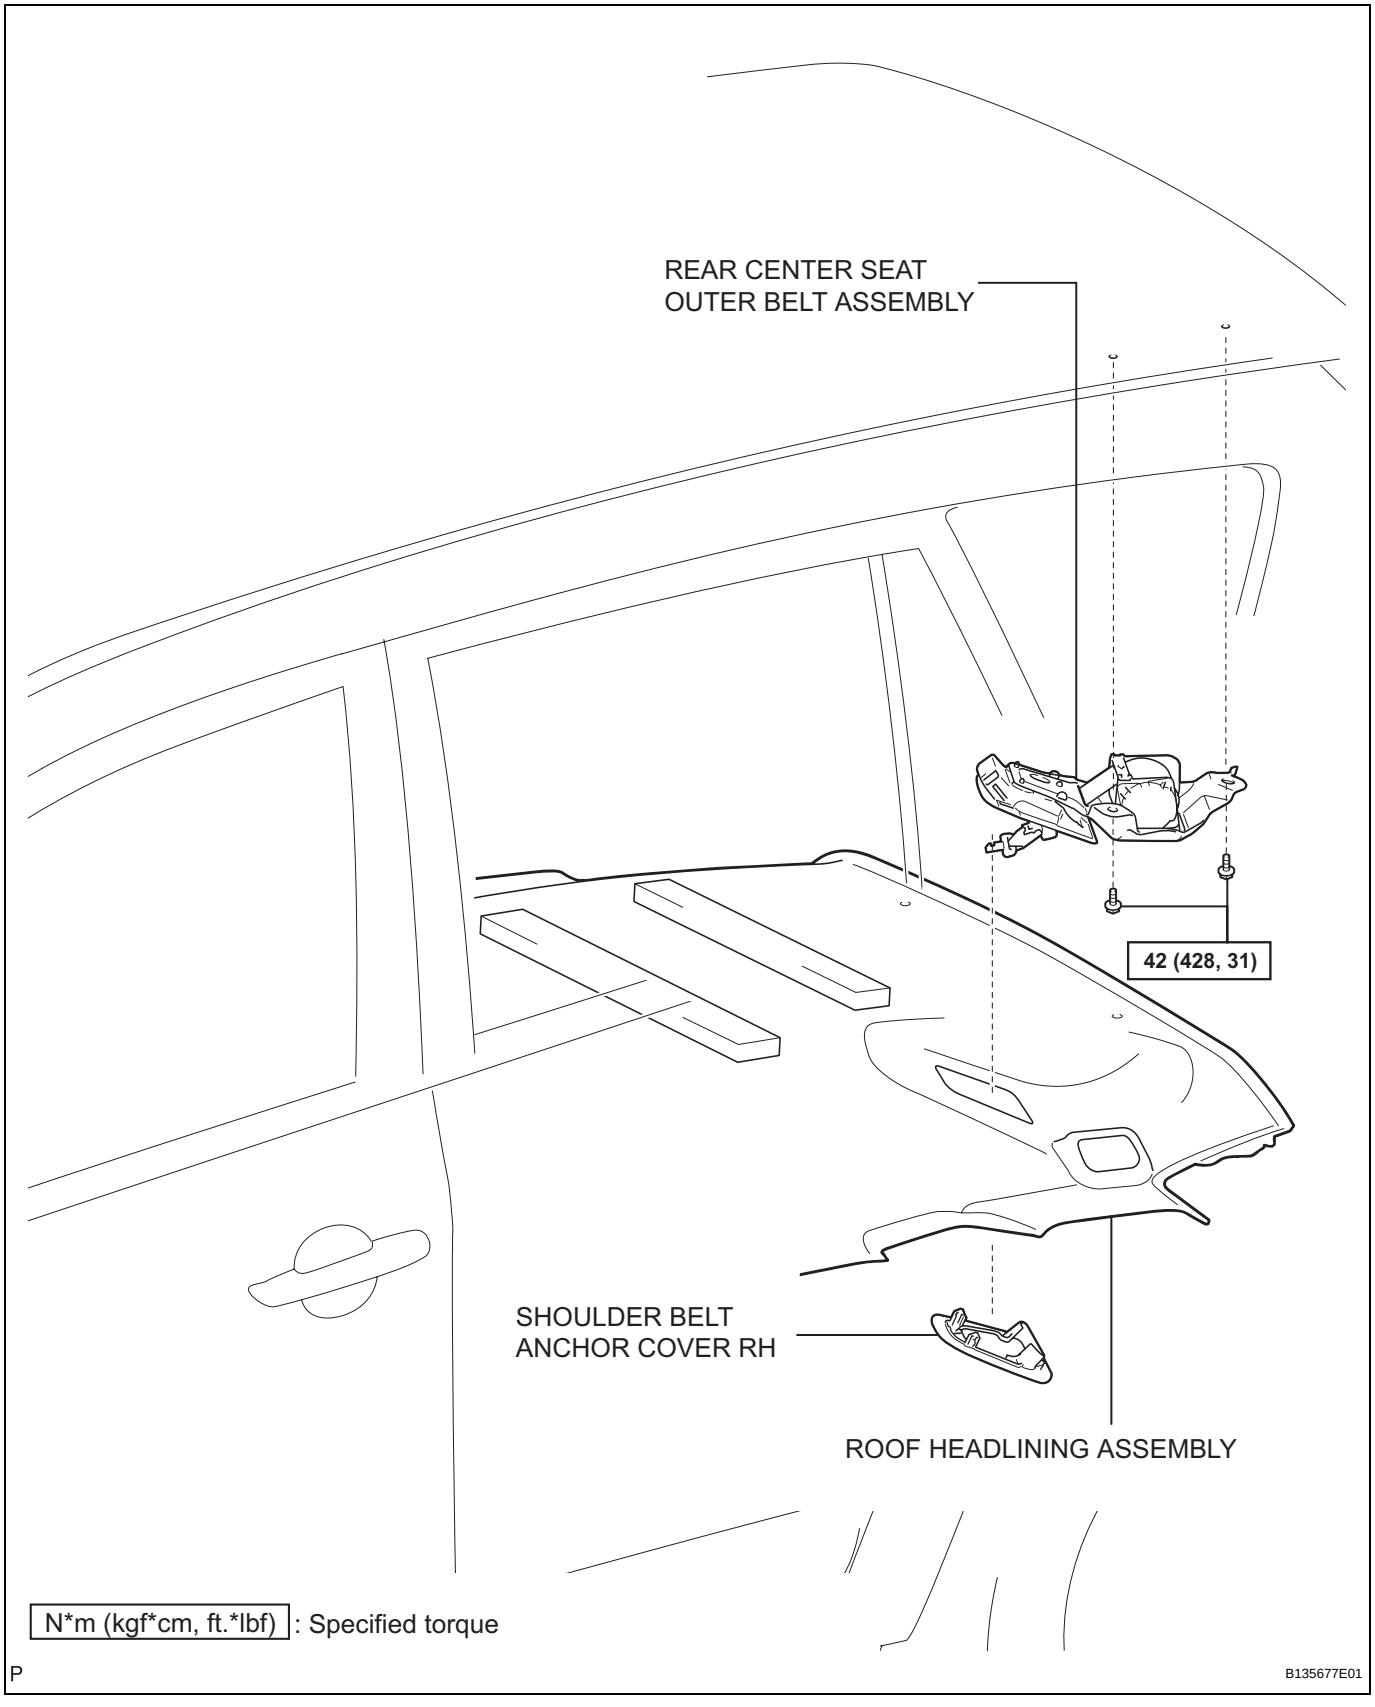


INSTALLATION

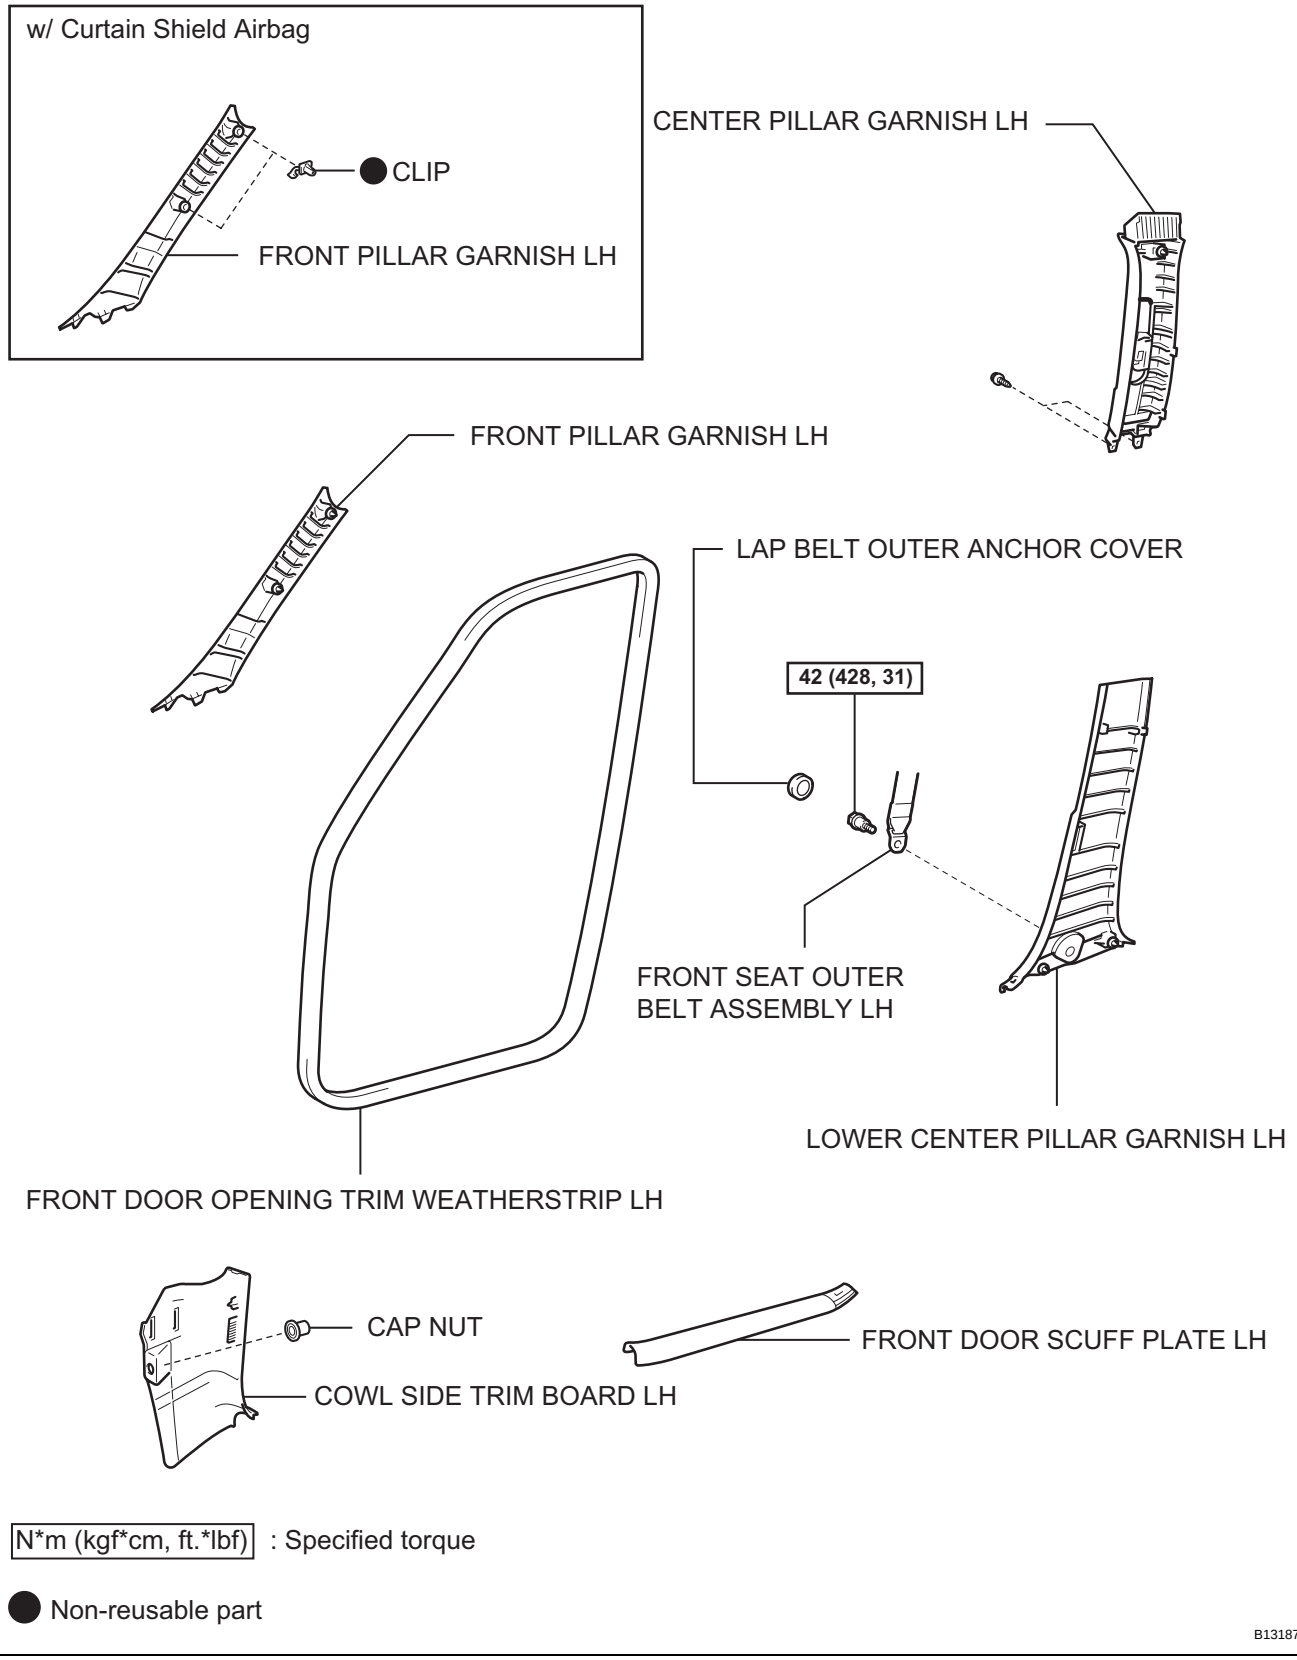
1. **INSTALL REAR CENTER SEAT OUTER BELT ASSEMBLY**
   (a) Install the seat belt with the 2 bolts.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

2. **INSTALL ROOF HEADLINING ASSEMBLY**
   (a) Install the roof headlining (see page IR-49).

SB



3. INSTALL SHOULDER BELT ANCHOR COVER RH



(a) Install the cover with the 4 claws.

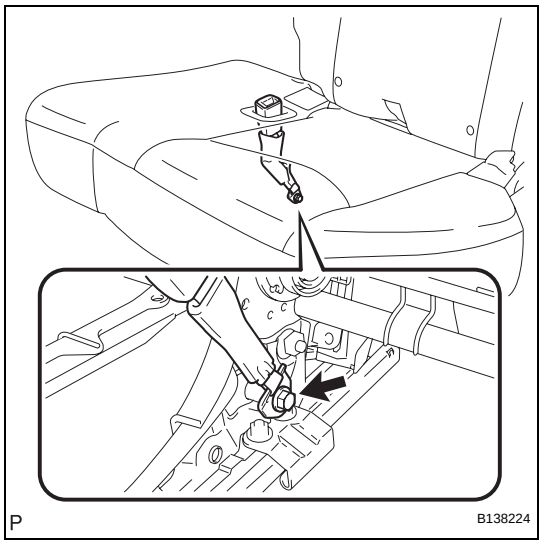
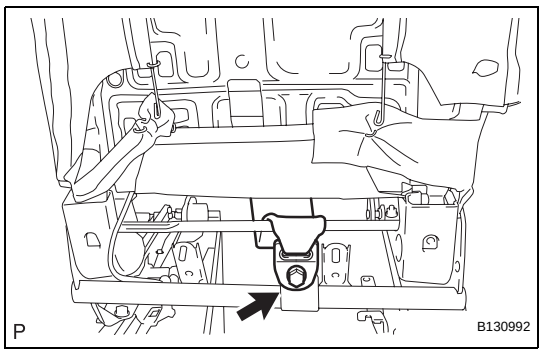
INSTALLATION

1. **INSTALL REAR NO. 2 SEAT INNER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)**
    (a) Install the seat belt with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
2. **INSTALL REAR NO. 2 SEAT RECLINING COVER LH (w/ Rear No. 2 Seat) (See page SE-121)**
3. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)**



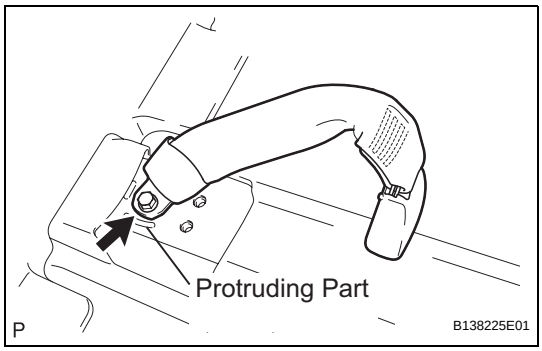
4. **INSTALL NO. 2 SEAT LEG COVER (w/ Rear No. 2 Seat) (See page SE-123)**

5. **INSTALL NO. 2 SEAT HINGE COVER (w/ Rear No. 2 Seat) (See page SE-123)**

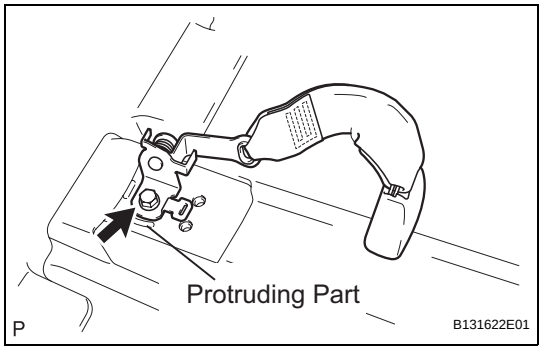


6. **INSTALL REAR SEAT INNER BELT ASSEMBLY RH (for 60/40 Split Seat Type RH Side)**
   (a) Install the belt with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

7. **INSTALL REAR NO. 1 SEAT ASSEMBLY RH (See page SE-97)**



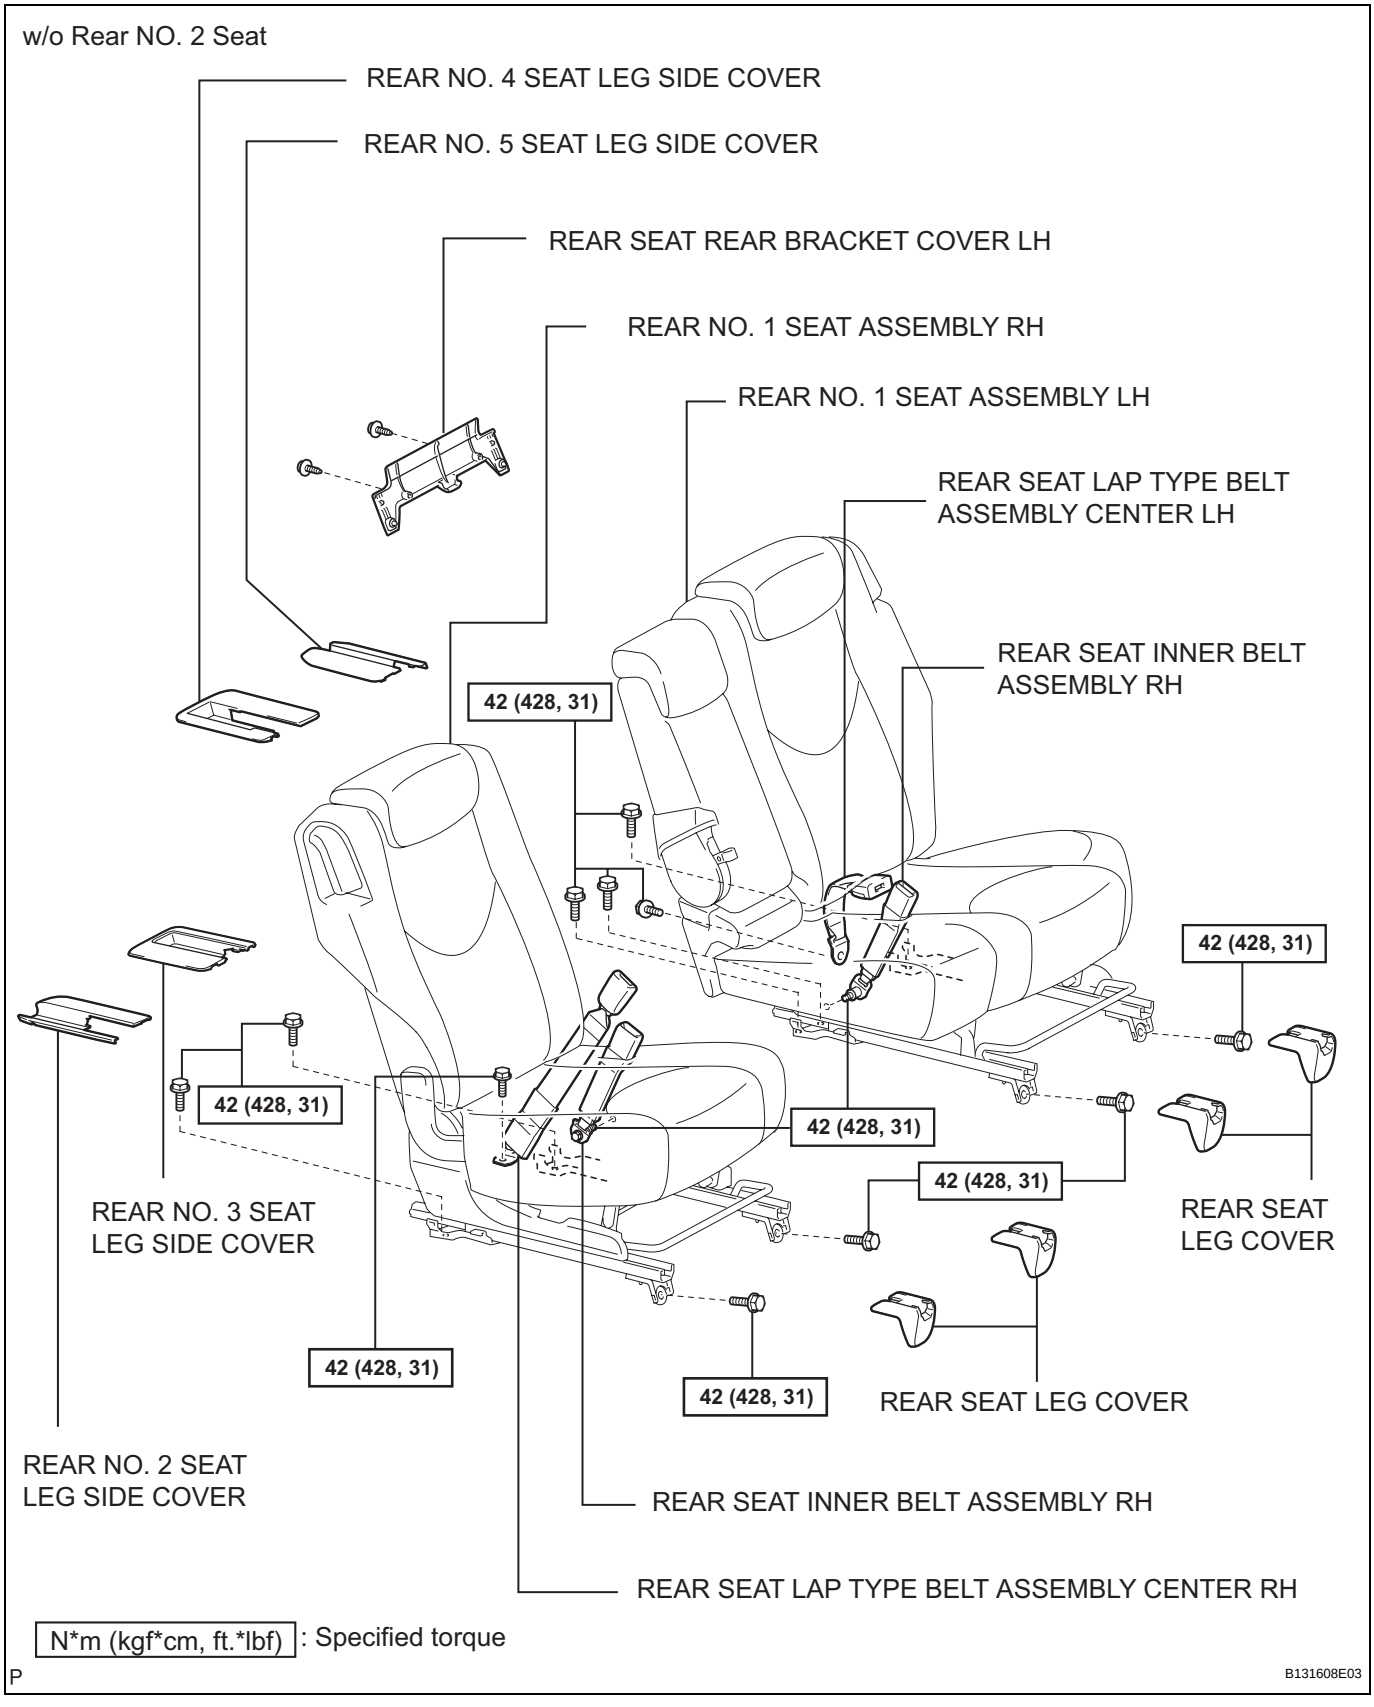
8. **INSTALL REAR SEAT INNER BELT ASSEMBLY RH (for 60/40 Split Seat Type LH Side)**
   (a) Install the belt with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



9. **INSTALL REAR SEAT LAP TYPE BELT ASSEMBLY CENTER LH**
   (a) Install the belt with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

10. **INSTALL REAR SEAT REAR BRACKET COVER LH (See page SE-60)**

11. **INSTALL REAR NO. 1 SEAT ASSEMBLY LH (See page SE-64)**



12. **INSTALL REAR SEAT LAP TYPE BELT ASSEMBLY CENTER RH (w/o Rear No. 2 Seat)**
    (a) Install the belt with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
    NOTICE:
    The anchor part of the seat belt must not overlap the protruding part.

13. **INSTALL REAR SEAT LAP TYPE BELT ASSEMBLY CENTER RH (w/ Rear No. 2 Seat)**
    (a) Install the belt with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
    NOTICE:
    The anchor part of the seat belt must not overlap the protruding part.
14. **INSTALL REAR NO. 5 SEAT LEG SIDE COVER**
15. **INSTALL REAR NO. 4 SEAT LEG SIDE COVER**
16. **INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/ Rear No. 2 Seat) (See page SE-72)**
17. **INSTALL REAR NO. 3 SEAT LEG SIDE COVER (w/o Rear No. 2 Seat) (See page SE-72)**
18. **INSTALL REAR NO. 2 SEAT LEG SIDE COVER**
19. **INSTALL REAR SEAT LEG COVER**

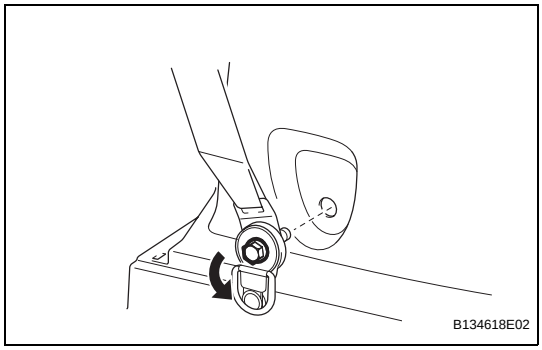
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



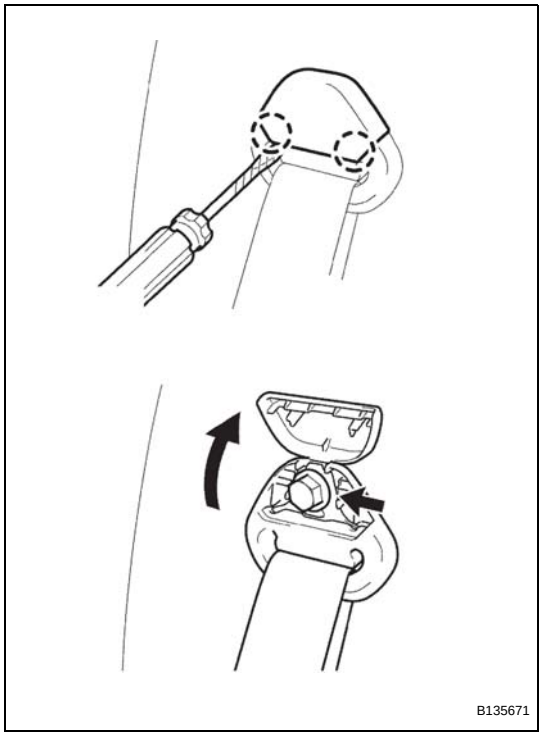
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-26)**
3. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
4. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
6. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
7. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
8. **REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
9. **REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
10. **REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
11. **REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
12. **REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)**
13. **REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page SE-110)**
14. **REMOVE REAR FLOOR NO. 2 BOARD**
15. **REMOVE REAR FLOOR NO. 3 BOARD**
16. **REMOVE REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE (See page IR-31)**
17. **REMOVE BACK DOOR WEATHERSTRIP**
18. **REMOVE REAR FLOOR FINISH PLATE (See page IR-31)**
19. **REMOVE REAR DECK TRIM COVER (w/ Rear No. 2 Seat)**
20. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)**

21. DISCONNECT REAR NO. 1 SEAT OUTER BELT ASSEMBLY RH

(a) Remove the lap belt outer anchor cover.

(b) Remove the bolt and disconnect the floor anchor.

22. DISCONNECT REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)



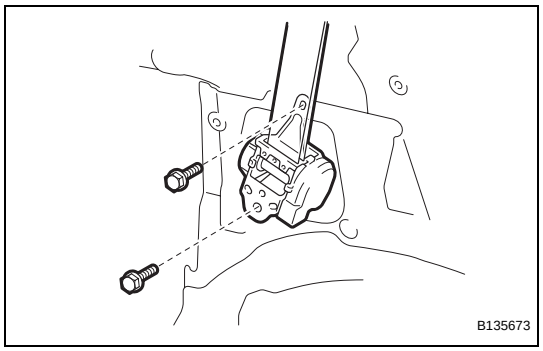
(a) Open the cover.

(b) Remove the bolt and disconnect the floor anchor.

23. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-32)

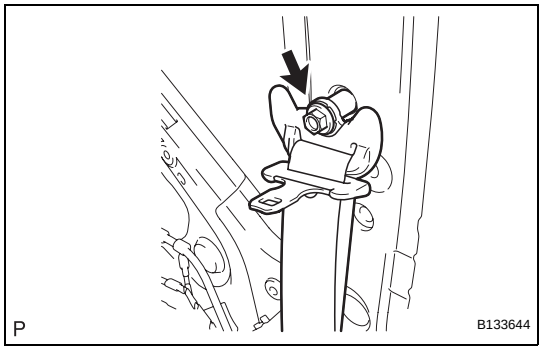
24. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-32)

25. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-34)



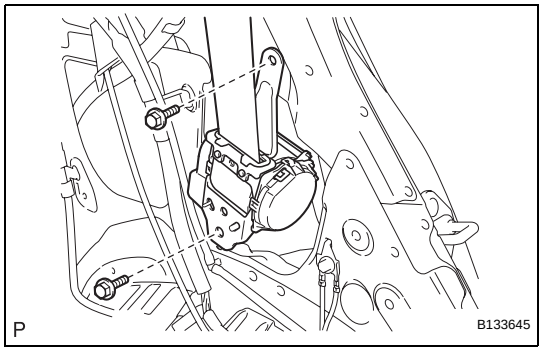
26. REMOVE REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)

(a) Using a screwdriver, detach the 2 claws and open the seat belt anchor cover as shown in the illustration.
HINT:
Tape the screwdriver tip before use.



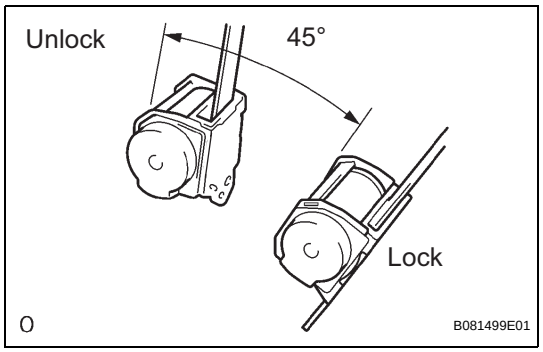
(b) Remove the bolt and disconnect the seat belt's shoulder anchor.

SB



(c) Remove the 2 bolts and seat belt.

27. REMOVE INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-35)

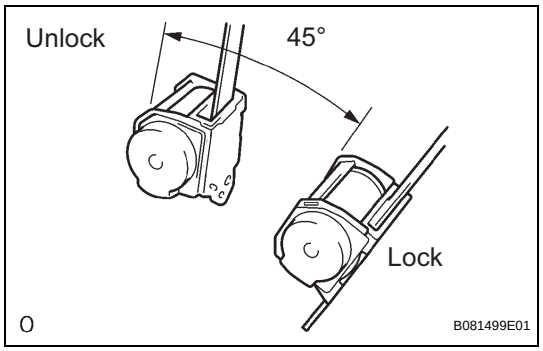


28. REMOVE REAR NO. 1 SEAT OUTER BELT ASSEMBLY LH

(a) Remove the bolt and disconnect the seat belt's shoulder anchor.

(b) Remove the 2 bolts and seat belt.

INSPECTION



1. INSPECT REAR NO. 1 SEAT BELT ASSEMBLY OUTER

NOTICE:

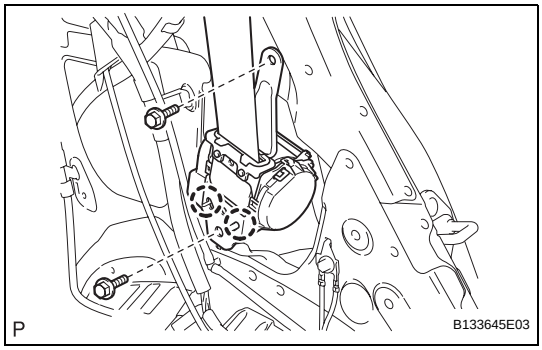
Do not disassemble the retractor.

(a) When the inclination of the retractor is 15° or less, check that the belt can be pulled from the retractor.
When the inclination of the retractor is over 45°, check that the belt locks.
If the operation is not as specified, replace the belt.

2. INSPECT REAR NO. 2 SEAT BELT ASSEMBLY OUTER

NOTICE:

Do not disassemble the retractor.

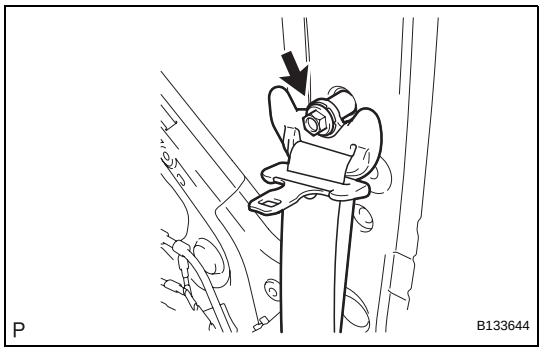


(a) When the inclination of the retractor is 15° or less, check that the belt can be pulled from the retractor.
When the inclination of the retractor is over 45°, check that the belt locks.
If the operation is not as specified, replace the belt.

SB

INSTALLATION

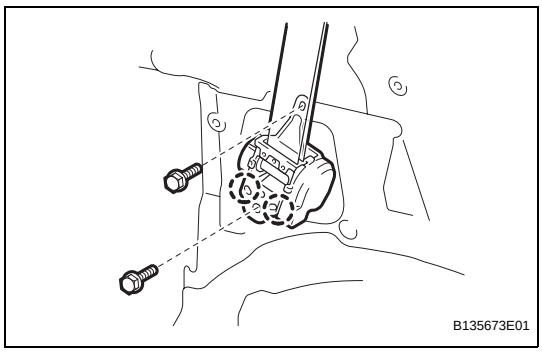
HINT:



- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.
- A bolt without a torque specification is shown in the standard bolt chart (see page SS-2).

1. INSTALL REAR NO. 1 SEAT OUTER BELT ASSEMBLY LH

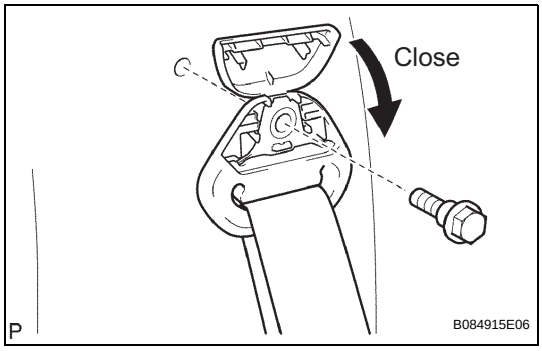
(a) Align the claws with the seat belt positioning holes, and install the retractor of the seat belt with the 2 bolts as shown in the illustration.



Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf) for upper bolt
42 N*m (428 kgf*cm, 31 ft.*lbf) for lower bolt

(b) Connect the shoulder anchor with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



2. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-52)

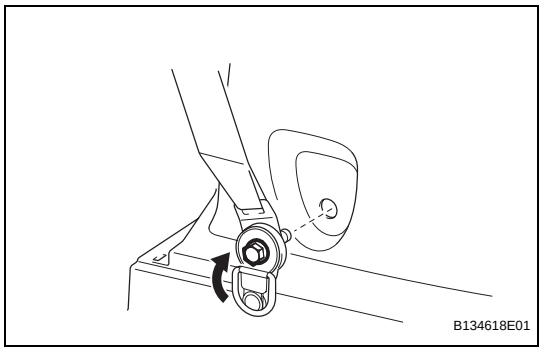
3. INSTALL REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)

(a) Align the claws with the seat belt positioning holes and install the retractor of the seat belt with the 2 bolts as shown in the illustration.

Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf) for upper bolt
42 N*m (428 kgf*cm, 31 ft.*lbf) for lower bolt

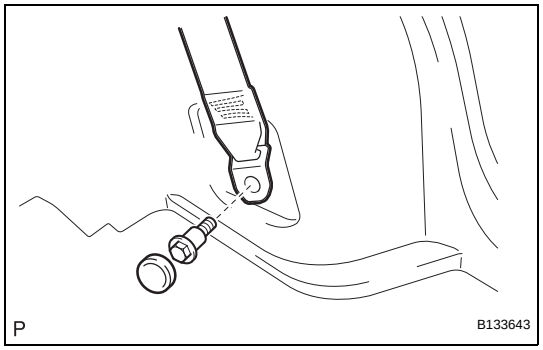
(b) Connect the shoulder anchor with the bolt.

Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



(c) Close the cover cap.

4. INSTALL INNER ROOF SIDE GARNISH ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-51)

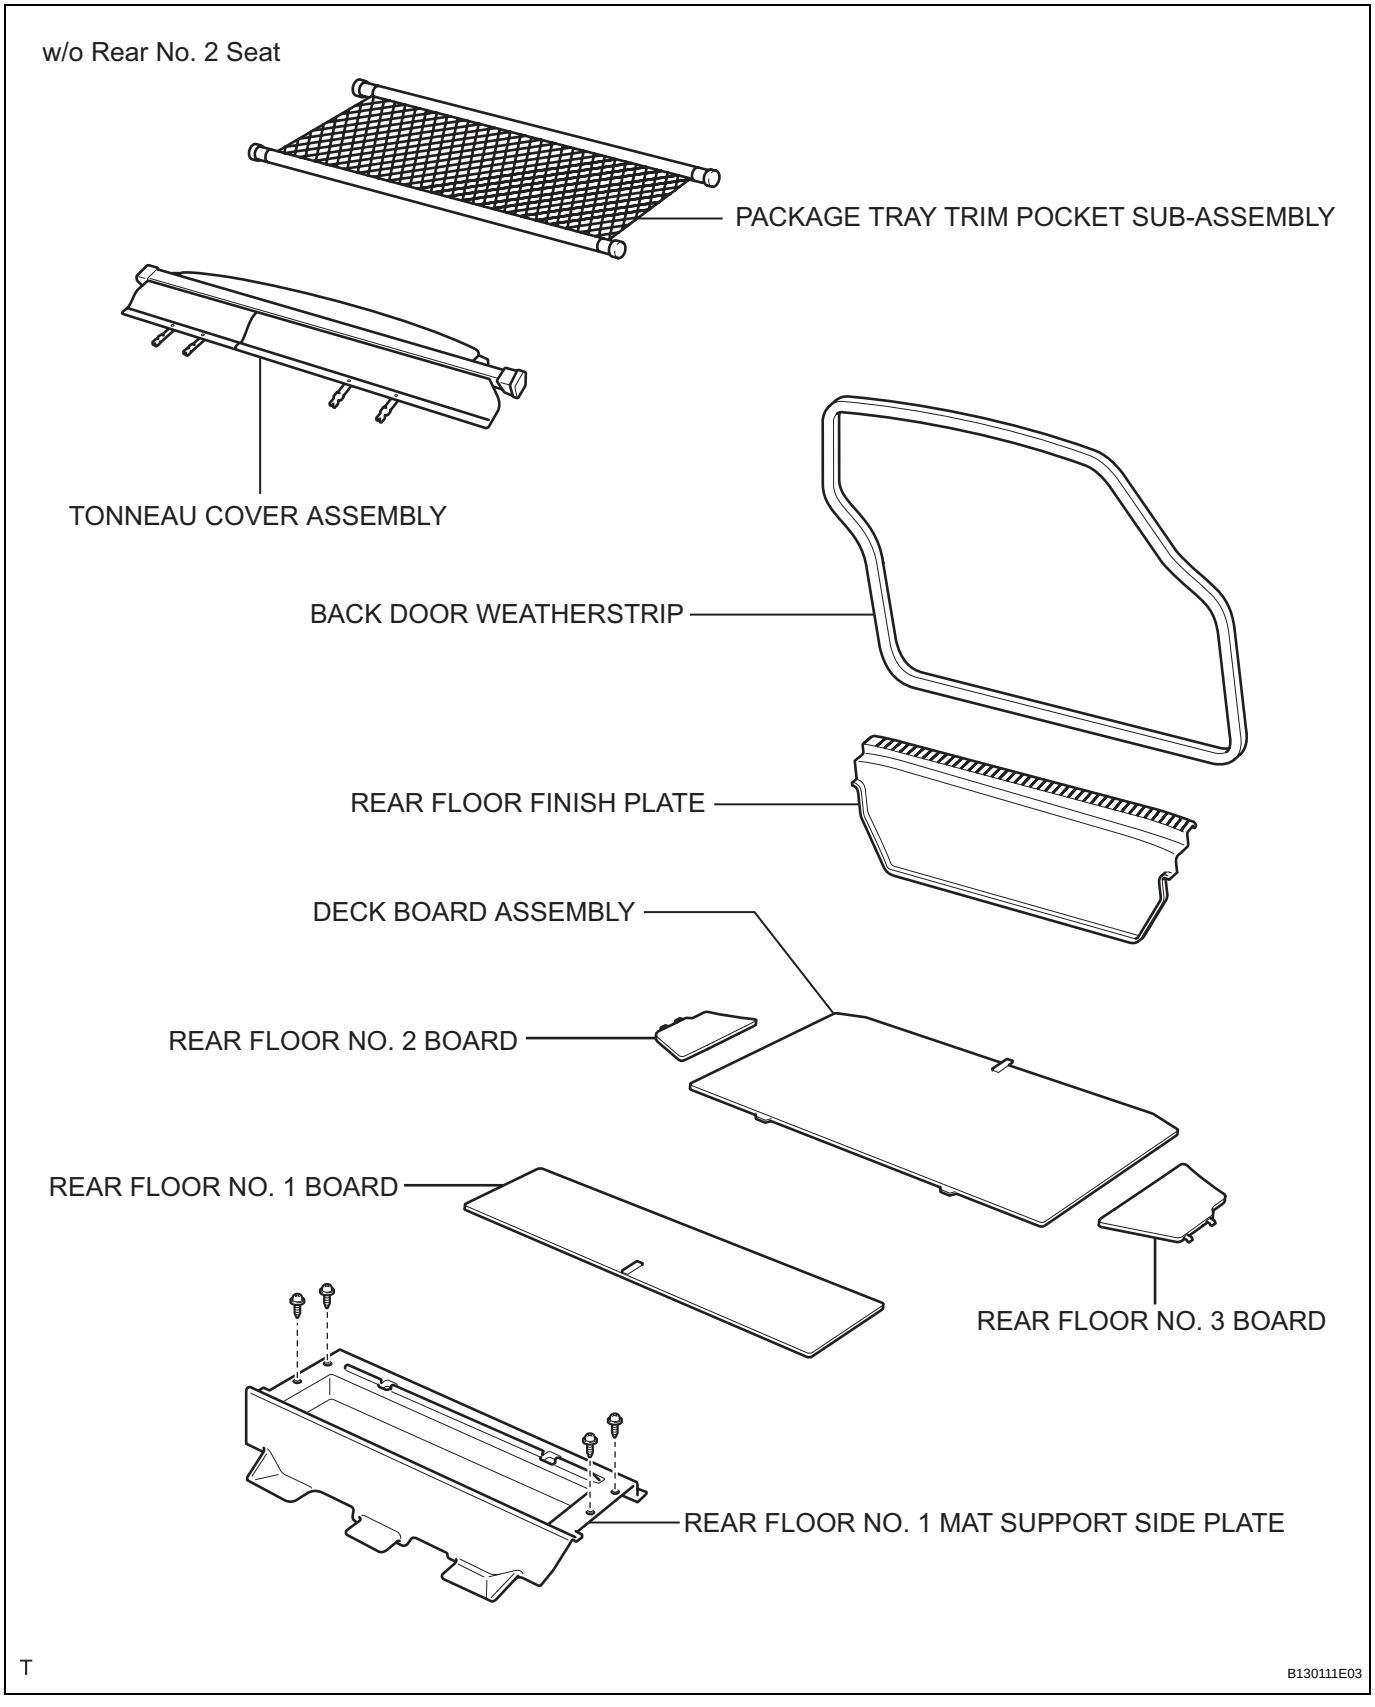


5. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-53)

6. INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat) (See page IR-52)

SB

7. **CONNECT REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)**
   (a) Connect the seat belt's floor anchor with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   (b) Close the cover.



8. **CONNECT REAR NO. 1 SEAT OUTER BELT ASSEMBLY LH**
   (a) Connect the seat belt's floor anchor with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   (b) Attach the lap belt outer anchor cover.
9. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)**
10. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**
11. **INSTALL REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE (See page IR-55)**
12. **INSTALL REAR FLOOR NO. 3 BOARD**
13. **INSTALL REAR FLOOR NO. 2 BOARD**
14. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)**
15. **INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-55)**
16. **INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
17. **INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-56)**
18. **INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
19. **REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-56)**
20. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
21. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
22. **INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
23. **INSTALL PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
24. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**

25. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-57)**

26. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

SYSTEM DESCRIPTION

1. DRIVER SEAT BELT WARNING LIGHT

(a) When the driver seat belt is not fastened with the ignition switch ON, the driver seat belt warning light on the combination meter comes on to inform the driver. The center airbag sensor detects the driver seat belt status and sends signals to the combination meter through the CAN bus line.

2. PASSENGER SEAT BELT WARNING LIGHT

(a) for Automatic air conditioning system:
When the passenger seat belt is not fastened with the ignition switch ON and the passenger seat occupied, check that the passenger seat belt warning light on the heater control panel display blinks. The combination meter detects the passenger seat belt status and whether the passenger seat is occupied.

(b) for Manual air conditioning system:
When the passenger seat belt is not fastened with the ignition switch ON and the passenger seat occupied, check that the passenger seat belt warning light on the clock panel blinks. The combination meter detects the passenger seat belt status and whether the passenger seat is occupied.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the seat belt warning system.
- *: Use the intelligent tester.

1 **VEHICLE BROUGHT TO WORKSHOP**

NEXT

2 **INSPECT BATTERY VOLTAGE**

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 **CHECK FUNCTION OF AIRBAG SYSTEM***

(a) Use the intelligent tester to check if the airbag system is functioning normally.

OPERATION CHECK

1. INSPECT DRIVER SIDE SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the driver seat belt is not fastened, check that the driver seat belt warning light on the combination meter blinks.

(c) When the driver seat belt is fastened, check that the driver seat belt warning light on the combination meter is off.

2. INSPECT PASSENGER SIDE SEAT BELT WARNING LIGHT (For Automatic Air Conditioning System)

(a) Turn the ignition switch ON.

(b) When the front passenger seat belt is not fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the heater control panel display blinks.

(c) When the front passenger seat belt is fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the heater control panel display is off.

3. REMOVE PASSENGER SIDE SEAT BELT WARNING LIGHT (For Manual Air Conditioning System)

(a) Turn the ignition switch ON.

(b) When the front passenger seat belt is not fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock panel blinks.

(c) When the front passenger seat belt is fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock panel is off.

4. INSPECT SEAT BELT WARNING BUZZER

HINT:

If the buzzer does not sound, the buzzer cancel setting may be set to ON.

(a) Turn the ignition switch ON.

(b) When the vehicle is driven at approximately 20 km/h (12.4 mph) or more while the driver or front passenger seat belt is not fastened, check that the buzzer in the combination meter sounds at 1.2 second intervals for 30 seconds.

(c) 30 seconds after the buzzer has first sounded, check that the buzzer sounds at 0.4 second intervals for 90 seconds.

(d) 120 seconds after the buzzer has first sounded, check that the buzzer stops.

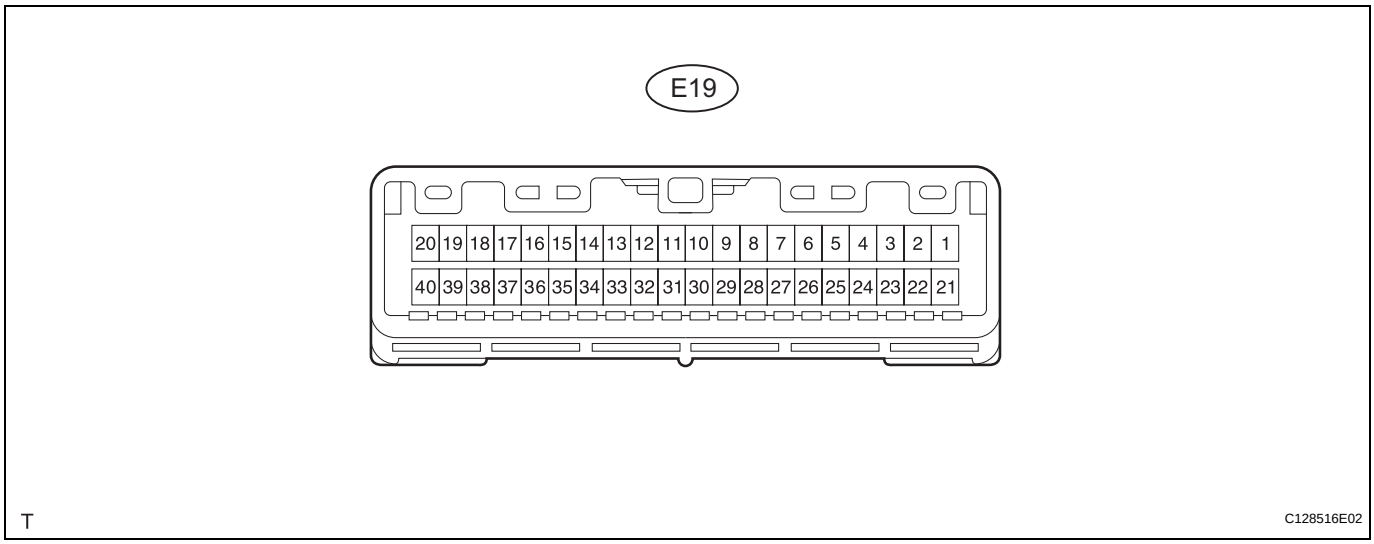
(e) After the buzzer has stopped, turn the ignition switch off and then start the engine again. Drive the vehicle at approximately 25 km/h (16 mph) or more while the driver or front passenger seat belt is not fastened, and then check that the buzzer sounds again.

(f) After the buzzer has stopped, fasten the driver and front passenger seat belts. Drive the vehicle at approximately 25 km/h (16 mph) or more and unfasten the driver or front passenger seat belt, and then check that the buzzer sounds again.

(g) After the buzzer has stopped, move the shift lever to the R position, and then move it to the D position. Drive the vehicle at approximately 25 km/h (16 mph) or more, and then check that the buzzer sounds again.

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.



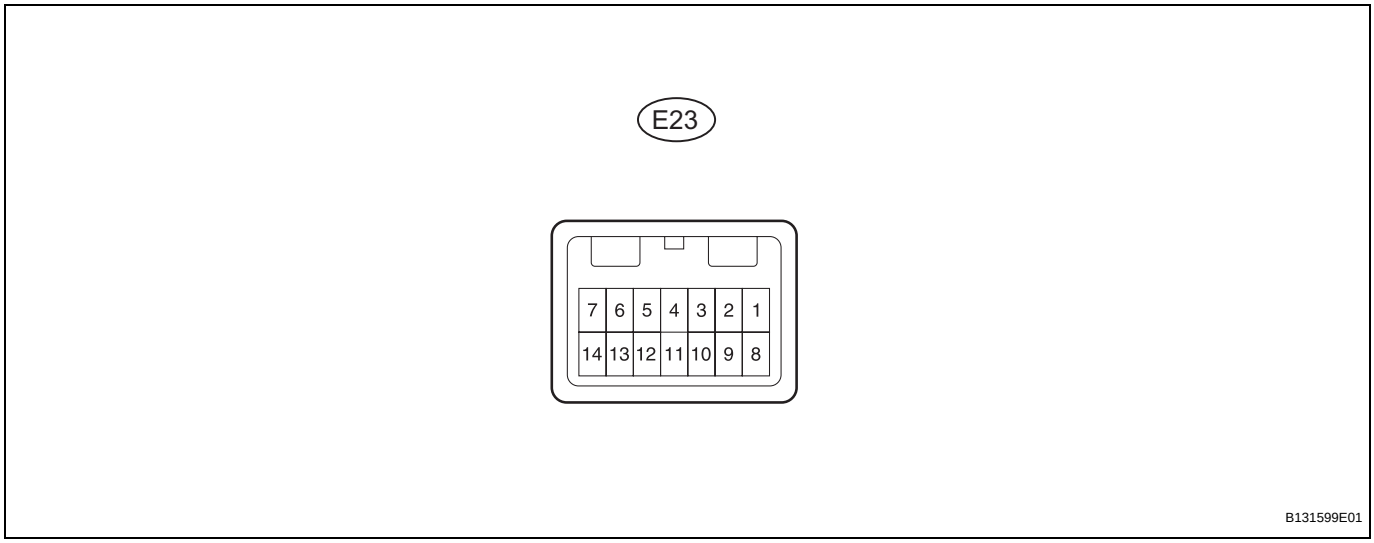
Seat belt warning system

Symptom	Suspected area	See page
Diver side seat belt warning light does not operate	1. Front seat inner belt LH	SB-12
	2. Center airbag sensor assembly	SB-12
	3. Combination meter	SB-12
	4. Wire harness	SB-12
Front passenger side seat belt warning light does not operate	1. Front seat inner belt RH	SB-15
	2. Combination meter	SB-15
	3. Occupant detection sensor	SB-15
	4. Heater control panel	SB-15
	5. Wire harness	SB-15

TERMINALS OF ECU

1. CHECK COMBINATION METER ASSEMBLY

(a) Disconnect the E19 meter connector.



(b) Measure the voltage and resistance of the wire harness side connector.

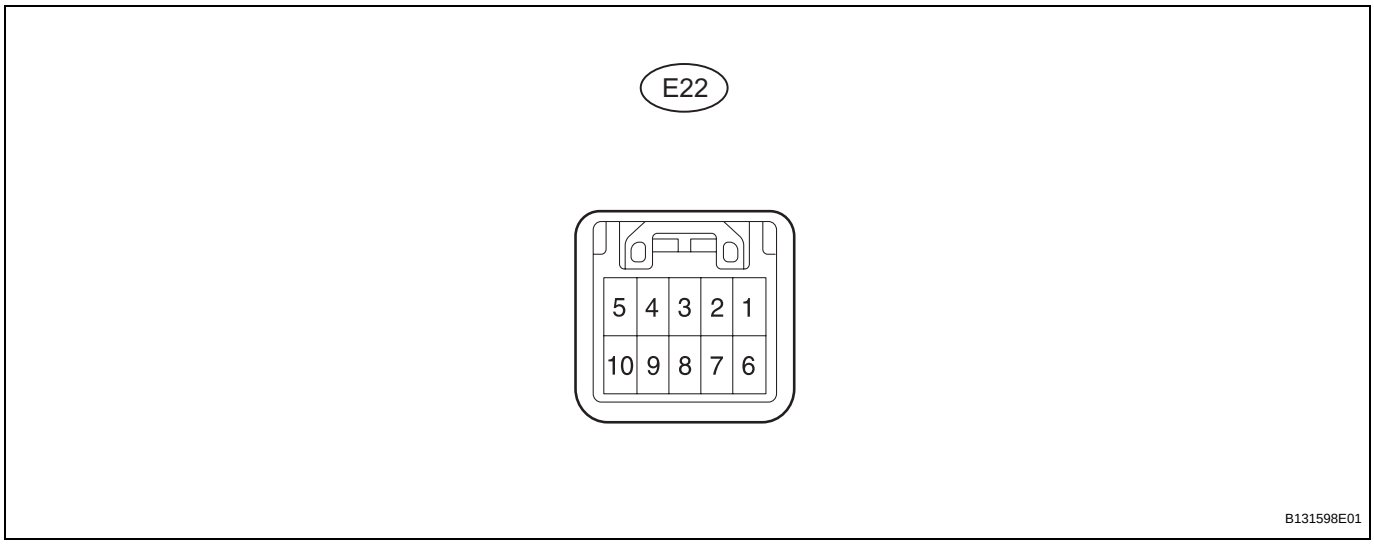
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E19-22) - Body ground	R - Body Ground	Power supply	Always	10 to 14 V
IG+ (E19-21) - Body ground	B - Body Ground	Power supply	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V
PBLT (E19-1) - Body ground	LG - Body Ground	Passenger seat belt signal	Sit on passenger seat, seat belt is fastened	Below 1 Ω
			Sit on passenger seat, seat belt is unfastened	10 kΩ or higher
ET (E19-33) - Body ground	W-B - Body Ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

2. CHECK HEATER CONTROL PANEL (for Automatic Air Conditioning System)

(a) Disconnect the E23 panel connector.

SB



(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E23-1) - Body ground	R - Body Ground	Power supply	Always	10 to 14 V
IG+ (E23-2) - Body ground	L - Body Ground	Power supply	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V
PBEW (E23-4) - Body ground	LG - Body Ground	Passenger seat belt signal	Sit on passenger seat, seat belt is fastened	Below 1 Ω
			Sit on passenger seat, seat belt is unfastened	10 kΩ or higher
GND (E23-7) - Body ground	W-B - Body Ground	Ground	Always	Below 1 Ω

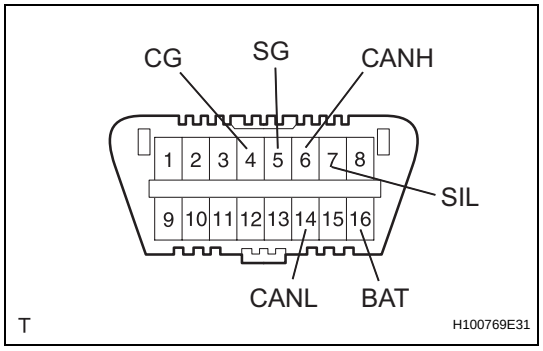
If the result is not as specified, there may be a malfunction on the wire harness side.

3. CHECK CLOCK ASSEMBLY (for Manual Air Conditioning System)

(a) Disconnect the E22 clock connector.

(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E22-1) - Body ground	R - Body ground	Power supply	Always	10 to 14 V
IG+ (E22-2) - Body ground	L - Body ground	Power supply	Ignition switch OFF	Below 1 V
			Ignition switch ON	10 to 14 V
PBEW (E22-3) - Body ground	LG - Body ground	Passenger seat belt signal	Sit on passenger seat, seat belt is fastened	Below 1 Ω
			Sit on passenger seat, seat belt is unfastened	10 kΩ or higher
GND (E22-5) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω



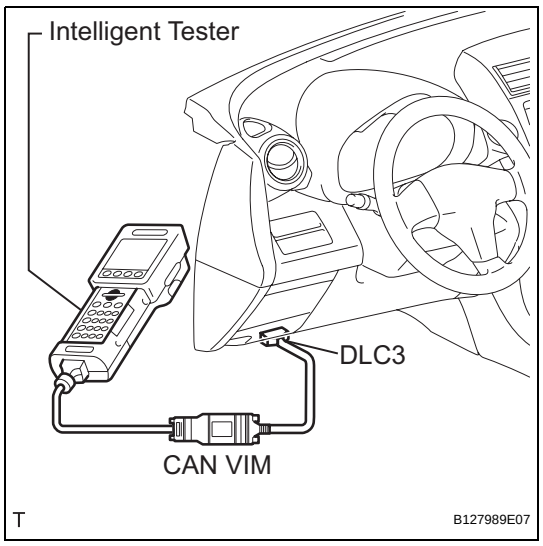
If the result is not as specified, there may be a malfunction on the wire harness side.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Data of the system can be read through the Data Link Connector 3 (DLC3) of the vehicle. Therefore, when the system seems to be malfunctioning, use the intelligent tester to check for a malfunction and repair it.

2. CHECK DLC3



(a) The vehicle's ECM uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF	1 kΩ or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF	1 kΩ or higher

SB

DATA LIST / ACTIVE TEST

1. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Perform the ACTIVE TEST according to the display on the tester.

Center airbag sensor:

Item	Test Details	Diagnostic Note
D-BELT REMIND	D-SEAT BELT warning light (OFF / ON)	Confirm that the vehicle is stopped, engine idling
P-BELT REMIND	P-SEAT BELT warning light (OFF / ON)	Confirm that the vehicle is stopped, engine idling

ON-VEHICLE INSPECTION

1. CHECK DRIVER SIDE SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the driver side seat belt is not fastened, check that the combination meter's driver side seat belt warning light starts blinking.

(c) When the seat belt is fastened, check that the combination meter's driver side seat belt warning light turns off.

2. CHECK PASSENGER SIDE SEAT BELT WARNING LIGHT

(a) Turn the ignition switch ON.

(b) When the front passenger seat belt is not fastened, check that the heater control panel's front passenger side seat belt warning light starts blinking.

(c) When the front passenger seat belt is fastened, check that the heater control panel's front passenger side seat belt warning light turns off.

3. CHECK SEAT BELT WARNING BUZZER

(a) Turn the ignition switch ON.

(b) After turning the ignition switch ON, if the vehicle is driven at 20 km/h (12.4 mph) or more and the driver side or front passenger side seat belt is not fastened, check that the combination meter's buzzer sounds at 1.2 second intervals for 30 seconds.

(c) 30 seconds after the buzzer first sounds, check that the buzzer sounds at 0.4 second intervals for 90 seconds.

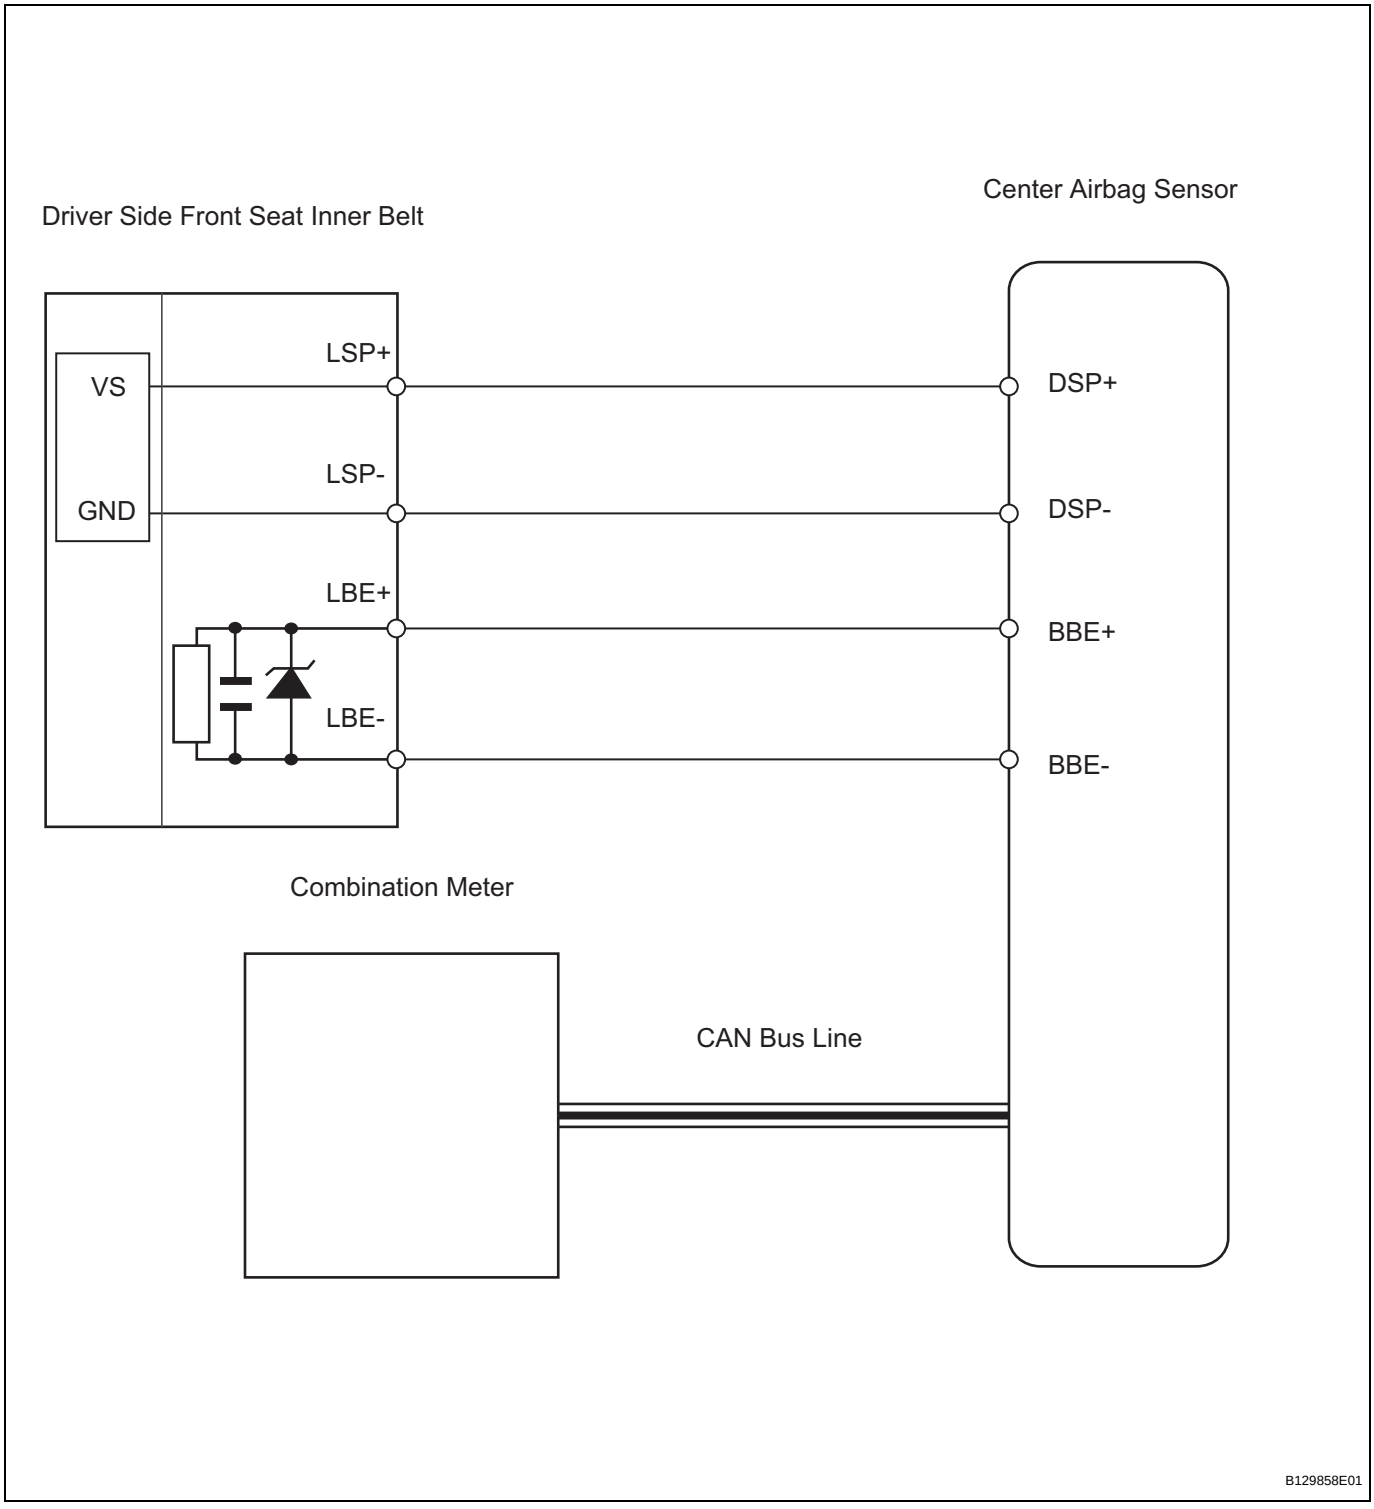
(d) 120 seconds after the buzzer has first sounded, check that the buzzer stops.

(e) After the buzzer has stopped, turn the ignition switch OFF and then start the engine again. With the driver side or front passenger side seat belt unfastened, drive the vehicle at 20 km/h (12.4 mph) or more. Check that the buzzer sounds.

(f) After the buzzer has stopped, fasten the driver side or front passenger side seat belt, drive the vehicle at 20 km/h (12.4 mph) or more, and then unfasten the seat belt. Check that the buzzer sounds.

(g) After the buzzer has stopped, move the shift lever to R. Then move the shift lever to D and with the driver side or front passenger side seat belt unfastened, drive the vehicle at 20 km/h (12.4 mph) or more. Check that the buzzer sounds.

Driver Side Seat Belt Warning Light does not Operate



DESCRIPTION

When the ignition switch is ON, the center airbag sensor transmits front seat inner belt status signals to the combination meter through the CAN bus line. If the driver seat belt is not fastened, the combination meter blinks the driver side seat belt warning light. If the seat belt is fastened, the warning light goes off.

NOTICE:

The seat belt warning system uses the CAN bus line. Before troubleshooting the seat belt warning system, perform "COMMUNICATION FUNCTION CHECK" by following "HOW TO PROCEED WITH TROUBLESHOOTING" to confirm that the communication systems are normal.

WIRING DIAGRAM

SB

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER

(a) Select the Active Test, use the intelligent tester to generate a control command, and then check that the seat belt warning light operates.

Center airbag sensor:

Item	Test Details	Diagnosis Note
D-BELT REMIND	D-SEAT BELT warning light (OFF/ON)	-

OK:

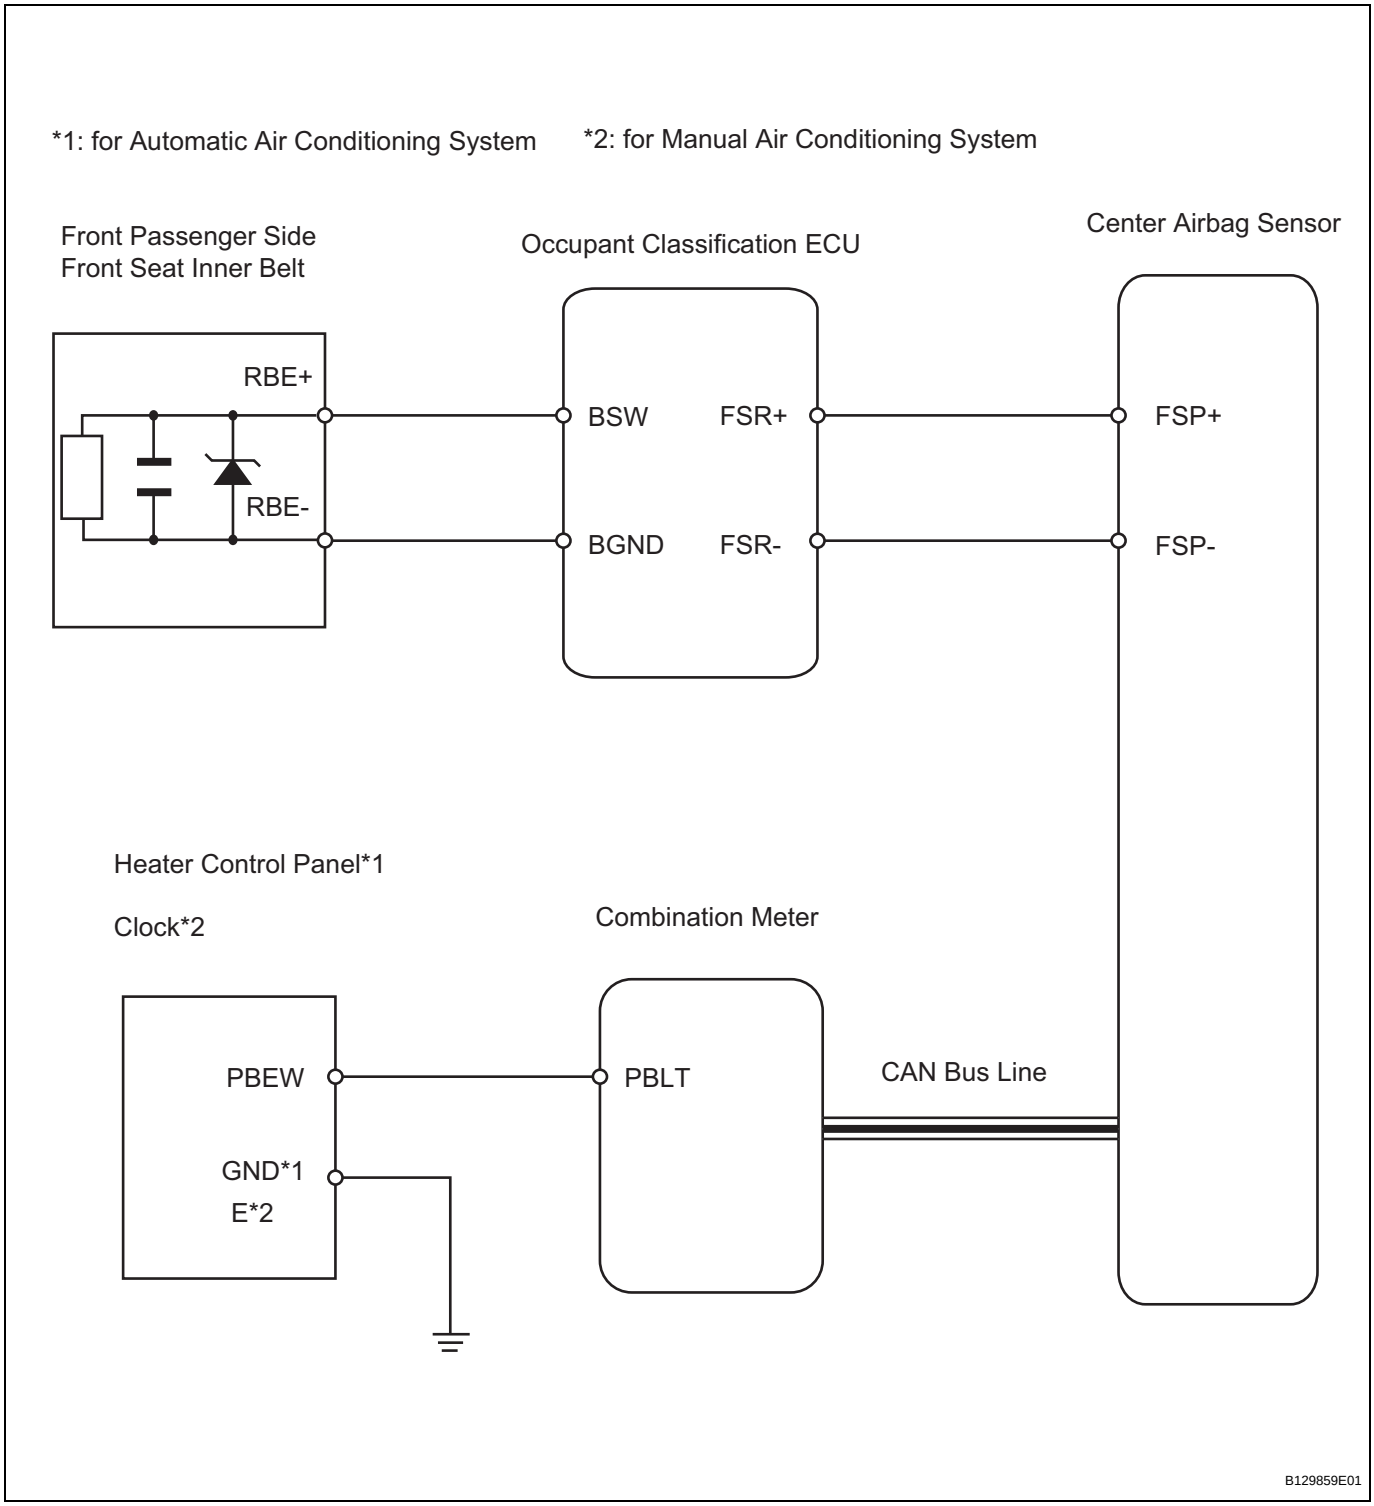
Driver side seat belt warning light operates normally.

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY

Front Passenger Side Seat Belt Warning Light Malfunction



DESCRIPTION

When the ignition switch is ON, the center airbag sensor transmits front seat inner belt status signals to the combination meter through the CAN bus line. If the front passenger seat belt is not fastened, the heater control panel (automatic A/C) or clock (manual A/C) blinks the front passenger seat belt warning light. If the seat belt is fastened, the warning light goes off.

NOTICE:

The seat belt warning system uses the CAN bus line. Before troubleshooting the seat belt warning system, perform "COMMUNICATION FUNCTION CHECK" by following "HOW TO PROCEED WITH TROUBLESHOOTING" to confirm that the communication systems are normal.

WIRING DIAGRAM

SB

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Select the Active Test, use the intelligent tester to generate a control command, and then check that the seat belt warning light operates.

Center airbag sensor:

Item	Test Details	Diagnostic Note
P-BELT REMIND	P-SEAT BELT warning light (OFF/ON)	Confirm that the vehicle is stopped, engine idling

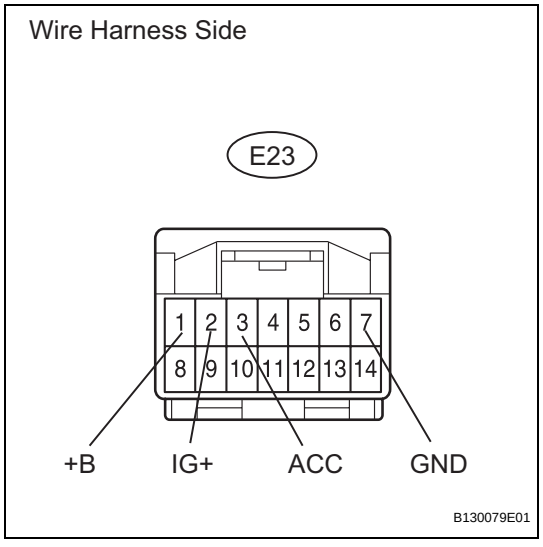
OK:

Passenger side seat belt warning light operates normally.

OK → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

NG

2	CHECK A/C TYPE



(a) Check system.

A/C type	Proceed to
for Automatic air conditioning system	A
for Manual air conditioning system	B

B → **Go to step 6**

A

3	CHECK HEATER CONTROL PANEL (POWER SOURCE CIRCUIT)

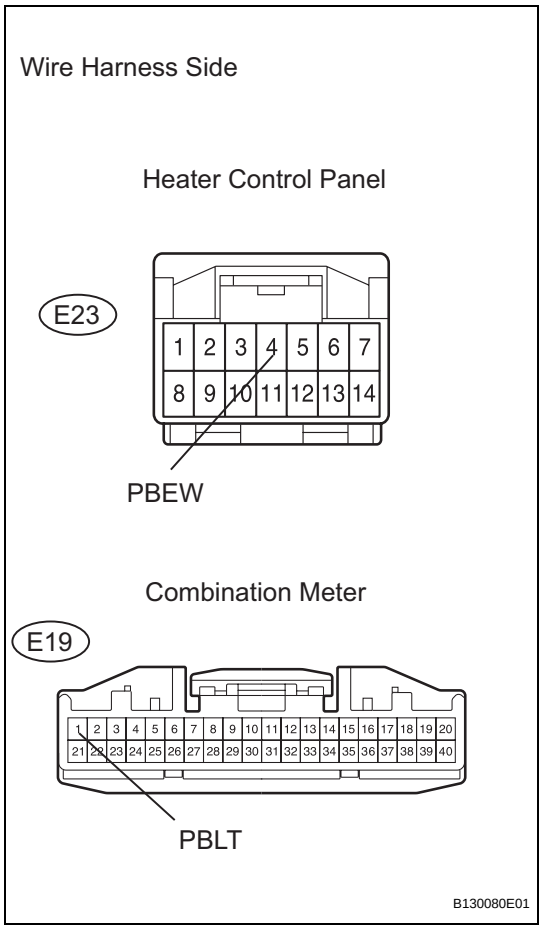
(a) Disconnect the E23 panel connector.

(b) Measure the voltage and resistance of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
E23-1 (+B) - Body ground	Always	10 to 14 V
E23-2 (IG+) - Body ground	Ignition switch ON	10 to 14 V
E23-3 (ACC) - Body ground	Ignition switch ON (ACC)	10 to 14 V

Standard resistance



Tester Connection	Specified Condition
E23-7 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

SB

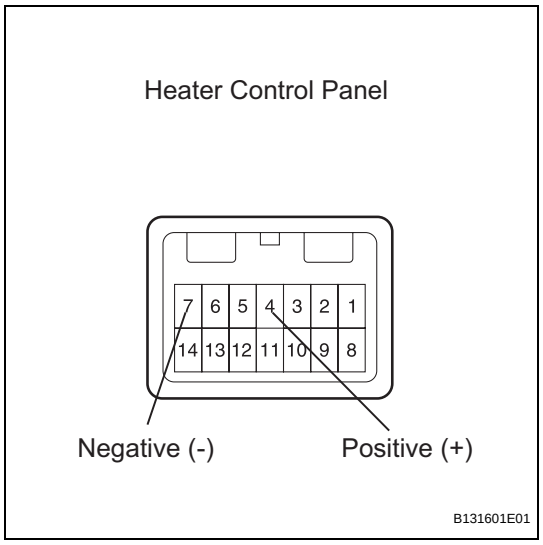
OK

4	CHECK WIRE HARNESS (HEATER CONTROL PANEL - COMBINATION METER ASSEMBLY)

(a) Disconnect the E23 panel connector.
(b) Disconnect the E19 meter connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E19-1 (PBLT) - E23-4 (PBEW)	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

SB

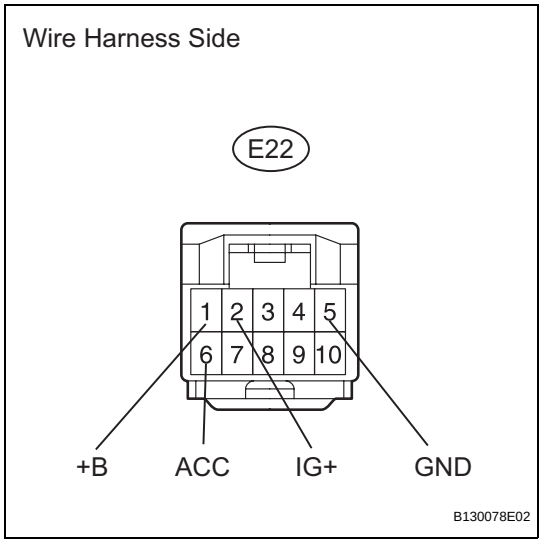
OK

5	INSPECT HEATER CONTROL PANEL

(a) Remove the heater control panel.

(b) Apply battery voltage and check that the front passenger side seat belt warning light illuminates.
OK

Measurement Condition	Specified Condition
Battery positive (+) - Terminal 4 Battery negative (-) - Terminal 7	Front passenger side seat belt warning light illuminates



HINT:
When the battery's negative (-) lead is applied to terminal 4 and the positive (+) lead is applied to terminal 7, the seat belt warning light does not illuminate.

NG → **REPLACE HEATER CONTROL PANEL**

OK

REPLACE COMBINATION METER ASSEMBLY

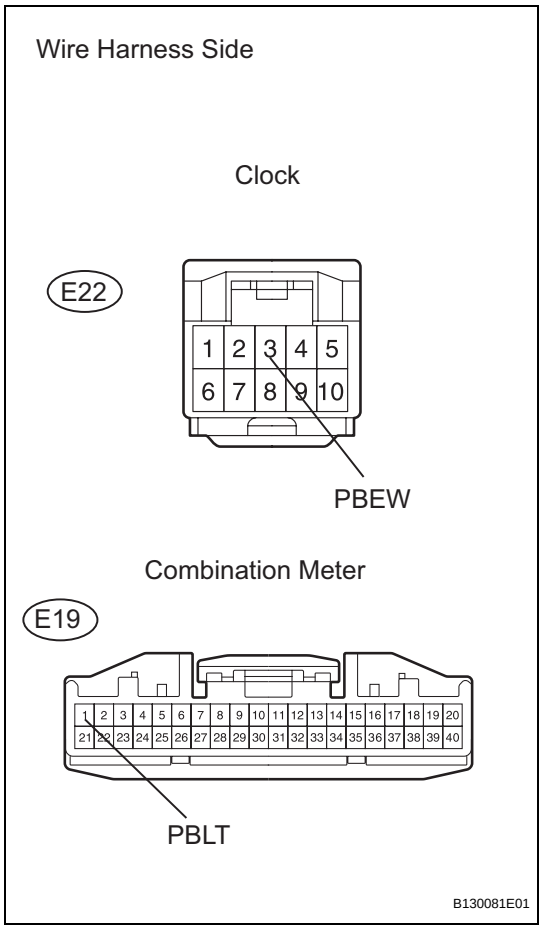
6 CHECK CLOCK SUB-ASSEMBLY (POWER SOURCE CIRCUIT)

(a) Disconnect the E22 clock connector.
(b) Measure the voltage and resistance of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E22-1 (+B) - Body ground	Always	10 to 14 V
B22-6 (ACC) - Body ground	Ignition switch ACC	10 to 14 V
E22-2 (IG+) - Body ground	Ignition switch ON	10 to 14 V

Standard resistance

Tester Connection	Specified Condition
E22-5 - Body ground	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

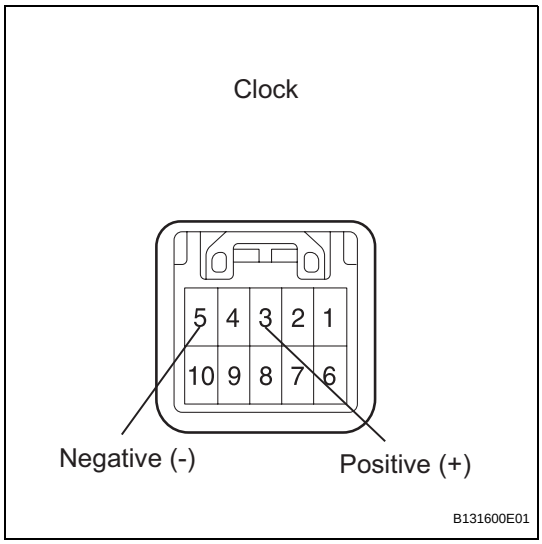
OK

7 CHECK WIRE HARNESS (CLOCK - COMBINATION METER)

(a) Disconnect the E22 clock connector.

SB

(b) Disconnect the E19 meter connector.
(c) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
E22-3 (PBEW) - E19-1 (PBLT)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

8 INSPECT CLOCK SUB-ASSEMBLY

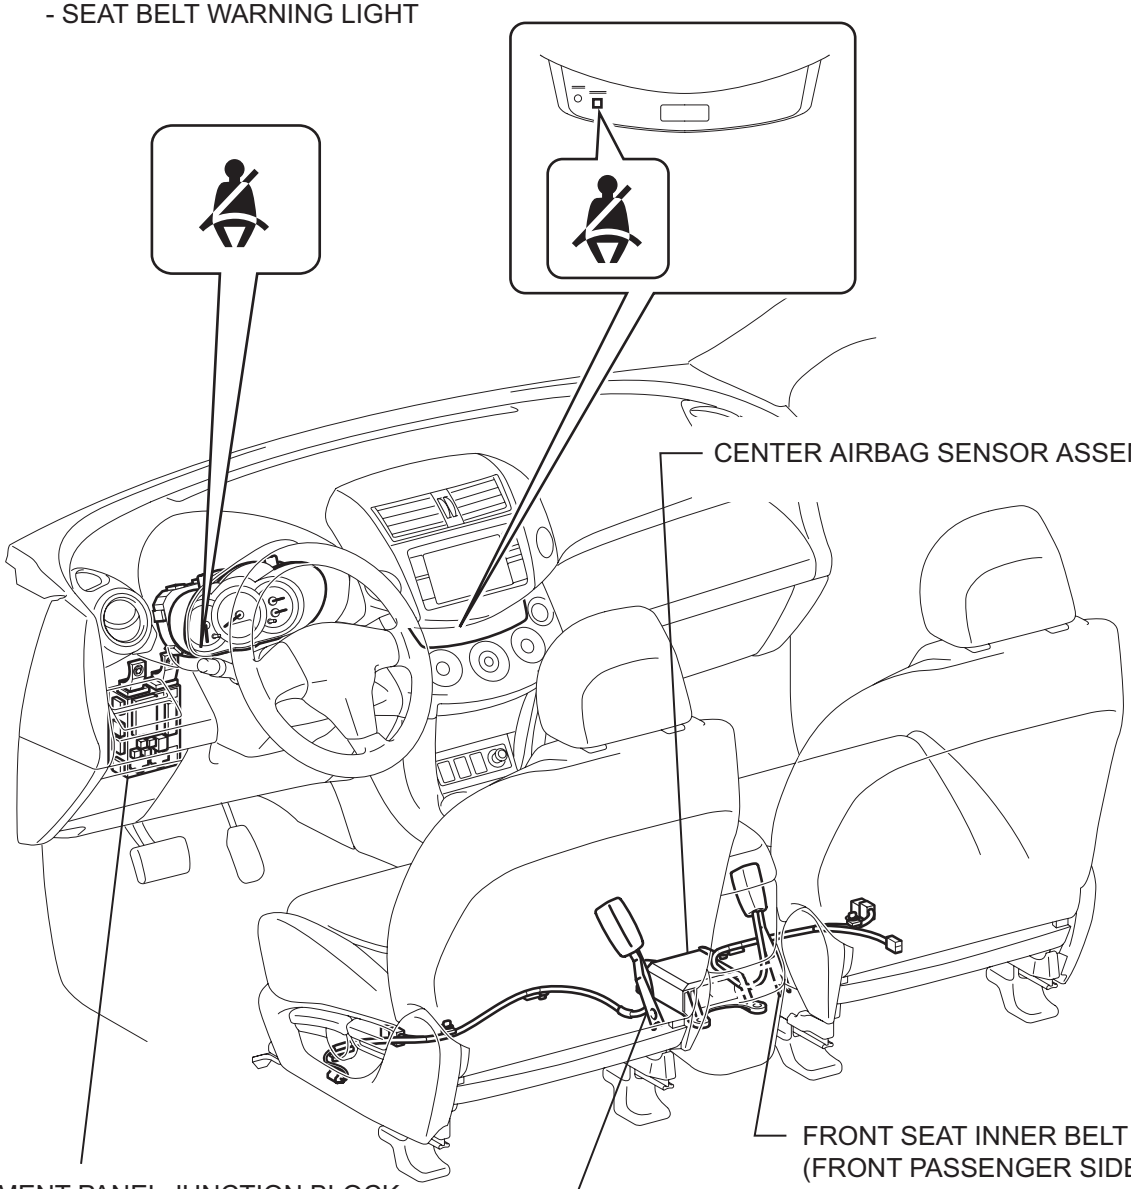
(a) Remove the clock.
(b) Apply battery voltage and check that the front passenger side seat belt warning light illuminates.

OK

Measurement Condition	Specified Condition
Battery positive (+) - Terminal 3 Battery negative (-) - Terminal 5	Front passenger side seat belt warning light illuminates

HINT:
When the battery's negative (-) lead is applied to terminal 3 and the positive (+) lead is applied to terminal 5, the seat belt warning light does not illuminate.

NG → **REPLACE CLOCK SUB-ASSEMBLY**



OK

REPLACE COMBINATION METER ASSEMBLY

2AZ-FE CHARGING

SERVICE DATA

Battery	Standard voltage		12.5 to 12.9 V at 20°C (68°F)
Charging circuit with load	Standard amperage		30 A or more
Generator brush holder assembly	Brush length	Standard length	9.5 to 11.5 mm (0.374 to 0.453 in.)
		Minimum length	4.5 mm (0.177 in.)
Generator rotor assembly	Standard resistance	Slip ring	2.1 to 2.5 Ω at 20°C (68°F)
		Slip ring - Rotor core	10 kΩ or higher
	Slip ring diameter	Standard diameter	14.2 to 14.4 mm (0.559 to 0.567 in.)
		Minimum diameter	12.8 mm (0.504 in.)

TORQUE SPECIFICATIONS

Part Tightened		N*m	kgf*cm	ft.*lbf
Generator assembly x Cylinder block	bolt A	21	215	16
	bolt B	52	530	38
Generator wire harness bracket x Generator assembly		8.4	85	74 in.*lbf

Generator rear end cover x Generator rectifier end frame		4.6	47	41 in.*lbf

2AZ-FE COOLING

SERVICE DATA

THERMOSTAT

Condition	Specified Condition
Standard valve opening temperature	80 to 84 °C (176 to 183 °F)
Standard valve lift	10 mm (0.39 in.) or more at 95 °C (203 °F)

COOLING FAN MOTOR

Item	Indication Mark	Motor Type	Condition	Specified Condition
No. 1 cooling fan motor	B, C	160 W	at 20°C (68 °F)	11.7 to 14.7 A
No. 2 cooling fan motor	B	120 W	at 20°C (68 °F)	8.4 to 10.4 A
	C	160 W	at 20°C (68 °F)	11.7 to 14.7 A

COOLING FAN RELAY

Item	Tester Connection	Specified Condition
No. 1 fan relay	3 - 5	10 Ωor higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
No. 2 fan relay	3 - 4	Below 1 Ω
	3 - 5	10 Ωor higher
	3 - 4	10 Ωor higher (when battery voltage is applied to terminals 1 and 2)
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
No. 3 fan relay	3 - 5	10 Ωor higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

RADIATOR

Item	Condition	Specified Condition
Radiator reservoir cap	For brand-new cap	93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)
	After using cap	78.5 kPa (0.8 kgf/cm^2, 11.4 psi)

2AZ-FE ENGINE MECHANICAL

SERVICE DATA

ENGINE

Item	Condition	Specified Condition
Standard ignition timing	When using intelligent tester	5 to 15° BTDC @ idle
Standard ignition timing	When not using intelligent tester (Connect SST)	8 to 12° BTDC @ idle
Standard ignition timing	When not using intelligent tester (Disconnect SST)	5 to 15° BTDC @ idle
Standard idle speed	-	600 to 700 rpm
Compression	Standard pressure	1,300 kPa (13.8 kgf/cm^2, 196 psi)
	Minimum pressure	1,000 kPa (10 kgf/cm^2, 142 psi)
	Difference between each cylinder	100 kPa (1.0 kgf/cm^2, 14 psi)

VALVE CLEARANCE

Item	Condition	Specified Condition
Intake	Cold	0.19 to 0.29 mm (0.0075 to 0.0114 in.)
Exhaust	Cold	0.38 to 0.48 mm (0.0150 to 0.0189 in.)

TIMING CHAIN

Item	Condition	Specified Condition
Chain sub-assembly	Maximum wear	122.6 mm (4.827 in.)
Chain tensioner slipper	Maximum wear	1.0 mm (0.039 in.)
No. 1 chain vibration damper	Maximum wear	1.0 mm (0.039 in.)
Crankshaft timing sprocket	Minimum gear diameter (with chain)	51.6 mm (2.031 in.)
Oil pump drive sprocket	Minimum gear diameter (with chain)	48.2 mm (1.898 in.)
Oil pump drive shaft sprocket	Minimum gear diameter (with chain)	48.2 mm (1.898 in.)

CYLINDER HEAD

Item	Condition	Position	Specified Condition
Cylinder head	Maximum warpage	-	0.08 mm (0.0032 in.)
Camshaft (Intake)	Maximum circle runout	-	0.03 mm (0.0012 in.)
	Standard cam lobe height	-	47.306 to 47.406 mm (1.8624 to 1.8664 in.)
	Minimum cam lobe height	-	47.196 mm (1.8581 in.)
	Standard journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Standard journal diameter	Other journal	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Standard oil clearance	No. 1 journal	0.007 to 0.038 mm (0.0003 to 0.0015 in.)
	Maximum oil clearance		0.07 mm (0.0028 in.)
	Standard oil clearance	Other journal	0.025 to 0.062 mm (0.0010 to 0.062 in.)
	Maximum oil clearance		0.10 mm (0.0039 in.)
	Standard thrust clearance	-	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
	Maximum thrust clearance	-	0.11 mm (0.0043 in.)

Item	Condition	Position	Specified Condition
No. 2 camshaft (Exhaust)	Maximum circle runout	-	0.03 mm (0.0012 in.)
	Standard cam lobe height	-	45.983 to 46.083 mm (1.8104 to 1.8143 in.)
	Minimum cam lobe height	-	45.873 mm (1.8060 in.)
	Standard journal diameter	No. 1 journal	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Standard journal diameter	Other journal	22.959 to 22.975 mm (0.9039 to 0.9045 in.)
	Standard oil clearance	No. 1 journal	0.040 to 0.079 mm (0.0016 to 0.0031 in.)
	Maximum oil clearance		0.10 mm (0.0039 in.)
	Standard oil clearance	Other journal	0.025 to 0.062 mm (0.0010 to 0.062 in.)
	Maximum oil clearance		0.10 mm (0.0039 in.)
	Standard thrust clearance	-	0.080 to 0.135 mm (0.0032 to 0.0053 in.)
	Maximum thrust clearance	-	0.15 mm (0.0059 in.)
Valve lifter	Standard lifter diameter	-	30.966 to 30.976 mm (1.2191 to 1.2195 in.)
	Standard lifer bore diameter	-	31.009 to 31.025 mm (1.2208 to 1.2215 in.)
	Standard oil clearance	-	0.033 to 0.059 mm (0.0013 to 0.0023 in.)
	Maximum oil clearance	-	0.079 mm (0.0031 in.)
Inner compression spring	Standard free length	-	47.43 mm (1.8673 in.)
	Maximum deviation	-	1.6 mm (0.063 in.)
	Maximum angle (Reference)	-	2°
Intake valve	Standard overall length	-	101.71 mm (4.0043 in.)
	Minimum overall length	-	101.21 mm (3.9846 in.)
	Standard valve stem diameter	-	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
	Standard valve head margin thickness	-	1.25 mm (0.0492 in.)
	Minimum valve head margin thickness	-	1.05 mm (0.0413 in.)
Exhaust valve	Standard overall length	-	101.15 mm (3.9823 in.)
	Minimum overall length	-	100.70 mm (3.9646 in.)
	Standard valve stem diameter	-	5.465 to 5.480 mm (0.2152 to 0.2158 in.)
	Standard valve head margin thickness	-	1.40 mm (0.0551 in.)
	Minimum valve head margin thickness	-	1.20 mm (0.0472 in.)

Item	Condition	Position	Specified Condition
Intake valve guide bush	Standard bush bore diameter (For cylinder head)	-	10.285 to 10.306 mm (0.4049 to 0.4058 in.)
	Standard valve guide bush diameter	STD	10.333 to 10.344 mm (0.4068 to0.4072 in.)
		O/S (0.05 mm)	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

	Standard oil clearance	-	0.024 to 0.048 mm (0.0009 to 0.0019 in.)
	Maximum oil clearance	-	0.08 mm (0.0032 in.)
	Standard large end bore diameter	Mark 1	51.000 to 51.007 mm (2.0079 to 2.0082 in.)
		Mark 2	51.008 to 51.013 mm (2.0082 to 2.0084 in.)
		Mark 3	51.014 to 51.020 mm (2.0084 to 2.0087 in.)
	Standard bearing thickness	Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
		Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
		Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)
	Standard crankshaft pin diameter	-	47.990 to 48.000 mm (1.8894 to 1.8898 in.)
Crankshaft	Standard thrust clearance	-	0.04 to 0.24 mm (0.0016 to 0.0095 in.)
	Maximum thrust clearance	-	0.30 mm (0.0118 in.)
	Standard oil clearance	-	0.008 to 0.024 mm (0.0003 to 0.0010 in.)
	Maximum oil clearance	-	0.050 mm (0.0020 in.)
Crankshaft	Standard cylinder block journal bore diameter	Mark 0	59.000 to 59.002 mm (2.3228 to 2.3229 in.)
		Mark 1	59.003 to 59.004 mm (2.3230 to 2.3230 in.)
		Mark 2	59.005 to 59.006 mm(2.3230 to 2.3231 in.)
		Mark 3	59.007 to 59.009 mm (2.3231 to 2.3232 in.)
		Mark 4	59.010 to 59.011 mm(2.3232 to 2.3233 in.)
		Mark 5	59.012 to 59.013 mm (2.3233 to 2.3234 in.)
		Mark 6	59.014 to 59.016 mm (2.3234 to 2.3235 in.)
Crankshaft	Standard crankshaft journal diameter	Mark 0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
		Mark 1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
		Mark 2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
		Mark 3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
		Mark 4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
		Mark 5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

Item	Condition	Mark	Specified Condition
Crankshaft	Standard bearing center wall thickness	Mark 1	1.993 to 1.996 mm (0.0785 to 0.0786 in.)
		Mark 2	1.997 to 1.999 mm (0.0786 to 0.0787 in.)
		Mark 3	2.000 to 2.002 mm (0.0787 to 0.0788 in.)
		Mark 4	2.003 to 2.005 mm (0.0789 to 0.0789 in.)
Crankshaft	Standard main journal diameter	-	54.988 to 55.000 mm (2.1830 to 2.1654 in.)
	Standard main journal diameter (Reference)	Mark 0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
		Mark 1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
		Mark 2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
		Mark 3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
		Mark 4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
		Mark 5	54.998 to 54.990 mm (2.1649 to 2.1650 in.)
Crankshaft	Maximum taper and distortion (Main journal)	-	0.003 mm (0.0001 in.)
	Standard crank pin diameter	-	47.990 to 48.000 mm (1.8894 to 1.8898 in.)
	Maximum taper and distortion (Crank pin)	-	0.003 mm (0.0001 in.)
Cylinder block	Maximum warpage (Measure the warpage of the surface that is in contact with the cylinder head gasket.)	-	0.05 mm (0.0020 in.)
	Standard cylinder bore diameter	-	88.500 to 88.513 mm (3.4843 to 3.4847 in.)
	Maximum cylinder bore diameter	-	88.633 mm (3.4849 in.)
Piston	Standard diameter (Measure the position diameter at right angles to the piston pin hole, and at the piston 44.3 mm (1.7587 in.) from the piston head.)	-	88.477 to 88.487 mm (3.5125 to 3.5129 in.)
	Standard oil clearance	-	0.021 to 0.044 mm (0.0008 to 0.0017 in.)
	Maximum oil clearance	-	0.10 mm (0.0039 in.)
	Standard piston pin bore diameter	-	22.001 to 22.010 mm (0.8662 to 0.8665 in.)
	-	Mark A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
		Mark B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
		Mark C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)
	Standard piston pin bore oil clearance	-	0.001 to 0.007 mm (0.00004 to 0.0003 in.)
	Maximum piston pin bore oil clearance	-	0.013 mm (0.0005 in.)

Item	Condition	Mark	Specified Condition
Piston ring	Standard ring groove clearance	No. 1 ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
		No. 2 ring	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
		Oil ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	Standard end gap (Measure the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.)	No. 1 ring	0.24 to 0.31 mm (0.0094 to 0.0122 in.)
		No. 2 ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)
		Oil ring	0.10 to 0.30 mm (0.0040 to 0.0119 in.)
	Maximum end gap	No. 1 ring	0.89 mm (0.0350 in.)
		No. 2 ring	1.37 mm (0.0539 in.)
		Oil ring	0.73 mm (0.0287 in.)
Piston pin	Standard piston pin diameter	-	21.997 to 22.006 mm (0.8660 to 0.8664 in.)
	-	Mark A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
		Mark B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
		Mark C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)
Connecting rod	Standard small end bore diameter	-	22.005 to 22.014 mm (0.8663 to 0.8667 in.)
	-	Mark A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
		Mark B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
		Mark C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)
	Standard small end bore oil clearance	-	0.005 to 0.011 mm (0.0002 to 0.0004 in.)
	Maximum small end bore oil clearance	-	0.017 mm (0.0007 in.)
	Maximum misalignment	-	0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
	Maximum twist	-	0.15 mm (0.0059 in.) per 100 mm (3.94 in.)
Connecting rod bolt	Standard diameter (Measure the tension portion diameter of the bolt.)	-	7.2 to 7.3 mm (0.283 to 0.287 in.)
	Minimum diameter	-	7.0 mm (0.276 in.)

2AZ-FE EXHAUST

SERVICE DATA

Compression spring (Front exhaust pipe assembly x Exhaust manifold)	Minimum length: 41.5 mm (1.634 in)
Compression spring (Center exhaust pipe assembly x Tailpipe assembly)	Minimum length: 38.5 mm (1.515 in.)

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Front exhaust pipe assembly x Exhaust manifold	43	440	32
Center exhaust pipe assembly x Front exhaust pipe assembly	43	440	32
Tailpipe assembly x Center exhaust pipe assembly	43	440	32
Heated oxygen sensor (for bank1 sensor 2)	44	449	33

2AZ-FE FUEL

SERVICE DATA

Fuel pressure			304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44 to 50 psi)
Fuel injector	Resistance	at 20°C (68°F)	11.6 to 12.4 Ω
	Injection volume		76 to 92 cm^3 (4.6 to 5.6 cu in.) per 15 seconds
	Difference between each cylinder		16 cm^3 (1.0 cu in.) or less
	Fuel leakage		1 drop or less per 12 minutes
Fuel pump	Resistance	at 20°C (68°F)	0.2 to 3.0 Ω

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Fuel delivery pipe x Cylinder head	20	204	15
Fuel tank vent tube set plate x Fuel tank	4.0	41	35 in.*lbf
No. 1 engine cover x Cylinder head cover sub-assembly	7.0	70	62 in.*lbf
Fuel pressure pulsation damper x Fuel delivery pipe	9.0	90	80 in.*lbf
Fuel tank filler pipe x Body	23.5	240	17
Filler pipe protector x Body	5.4	55	48 in.*lbf
Fuel tank band x Body	40	408	30
Fuel sender gauge assembly x Fuel tank	1.5	15	13 in.*lbf

2AZ-FE IGNITION

SERVICE DATA

Spark Plug	Standard electrode gap	1.0 to 1.1 mm (0.039 to 0.043 in.) for new spark plug
	Maximum electrode gap	1.3 mm (0.051 in.) for used spark plug

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Spark plug x Cylinder head sub-assembly	25	254	18
Ignition coil assembly x Cylinder head cover	9.0	92	80 in.*lbf

2AZ-FE LUBRICATION

SERVICE DATA

OIL PRESSURE

Condition	Specified Condition
Idle	29 kPa (0.3 kgf/cm^2, 4.3 psi) or more
3,000 rpm	160 to 539 kPa (1.6 to 5.5 kgf/cm^2, 23 to 78 psi)

OIL PUMP

Item	Condition	Specified Condition
Oil pump rotor	Standard side clearance	0.100 to 0.170 mm (0.0039 to 0.0067 in.)
	Maximum side clearance	0.325 mm (0.0128 in.)
	Standard tip clearance	0.080 to 0.160 mm (0.0031 to 0.0063 in.)
	Maximum tip clearance	0.35 mm (0.0138 in.)
	Standard body clearance	0.100 to 0.170 mm (0.0039 to 0.0067 in.)
	Maximum body clearance	0.325 mm (0.01128 in.)
Oil pump drive chain	Maximum chain elongation	52.4 mm (2.063 in.)
Oil pump sprocket	Minimum crankshaft sprocket diameter (with chain)	48.2 mm (1.898 in.)
	Minimum oil pump drive shaft sprocket	48.2 mm (1.898 in.)
Chain tensioner plate	Maximum wear	0.5 mm (0.020 in.)

TORQUE SPECIFICATIONS

OIL FILTER

Part Tightened	N*m	kgf*cm	ft.*lbf
Oil filter x Stiffening crankcase	17.2	175	13
Oil drain plug x Oil pan	40	408	30

OIL PUMP

Part Tightened	N*m	kgf*cm	ft.*lbf
Oil pump cover x Oil pump	8.8	90	78 in.*lbf
Oil pump relief valve x Oil pump	49	500	36
Oil pump strainer x Oil pump	8.8	90	78 in.*lbf
Oil pump X Cylinder block	19	194	14

2AZ-FE STARTING

SERVICE DATA

Starter assembly	Standard current: 90 A or less at 11.5 V
Starter magnetic switch assembly	Standard resistance 50 - C: Below 1 Ω 50 - Body: Below 2 Ω
Starter armature assembly	Standard resistance Segment: Below 1 Ω Segment - Coil core: 10 kΩ or higher
	Standard length: 3.1 to 3.8 mm (0.122 to 0.150 in.)
Starter commutator end frame	Standard length: 4.0 to 9.0 mm (0.158 to 0.359 in.)
	Standard resistance Positive (+) - Negative (-): 10 kΩ or higher
Snap ring	Maximum length: 5.0 mm (0.197 in.)
Starter relay	3 - 5: 10 kΩ or higher 3 - 5: Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
Ignition switch	LOCK: Between all terminals 10 kΩ or higher ACC: 2 (AM1) - 3 (ACC) Below 1 Ω ON: 2 (AM1) - 3 (ACC) Below 1 Ω ON: 2 (AM1) - 4 (IG1) Below 1 Ω ON: 6 (IG2) - 7 (AM2) Below 1 Ω START: 1 (ST1) - 2 (AM1) Below 1 Ω START: 1 (ST1) - 4 (IG1) Below 1 Ω START: 6 (IG2) - 7 (AM2) Below 1 Ω START: 6 (IG2) - 8 (ST2) Below 1 Ω

2GR-FE COOLING

SERVICE DATA

THERMOSTAT

Condition	Specified Condition
Standard valve opening temperature	80 to 84°C (176 to 183°F)
Standard valve lift	10 mm (0.39 in.) or more at 95°C (203°F)

COOLING FAN MOTOR

Item	Indication Mark	Motor Type	Condition	Specified Condition
No. 1 cooling fan motor (w/o Trailer towing system)	E	160 W	at 20°C (68°F)	11.8 to 14.8 A
No. 1 cooling fan motor (w/ Trailer towing system)	H	240 W	at 20°C (68°F)	18.0 to 22.0 A
No. 2 cooling fan motor (w/o Trailer towing system)	E	160 W	at 20°C (68°F)	11.8 to 14.8 A
No. 2 cooling fan motor (w/ Trailer towing system)	H	240 W	at 20°C (68°F)	18.0 to 22.0 A

COOLING FAN ECU

Item	Tester Connection	Condition	Specified Condition
Cooling fan ECU (w/o Trailer towing system)	B12-3 - Body ground	Ignition switch ON	9 to 14 V
	B12-1 - Body ground	Always	Below 1 Ω
Cooling fan ECU (w/ Trailer towing system)	B10-1 - Body ground	Ignition switch ON	9 to 14 V
	B11-1 - Body ground	Ignition switch ON	9 to 14 V
	B10-3 - Body ground	Always	Below 1 Ω
	B11-3 - Body ground	Always	Below 1 Ω

COOLING FAN RELAY

Item	Tester Connection	Specified Condition
No. 1 fan relay	3 - 5	10 Ω or higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
No. 2 fan relay	3 - 5	10 Ω or higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

RADIATOR

Item	Tester Connection	Specified Condition
Radiator reservoir cap	For brand-new cap	93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)
	After using cap	78.5 kPa (0.8 kgf/cm^2, 11.4 psi)

TORQUE SPECIFICATIONS

	with SST	40	408	30

2GR-FE ENGINE CONTROL SYSTEM

SERVICE DATA

Camshaft timing oil control valve : Standard resistance (1 (+B) - 2 (GND))	6.9 to 7.9 kΩ at 20 °C (68°F)
Camshaft position sensor : Standard resistance (1 (G+) - 2 (G-))	835 to 1,400 Ω at cold 1,060 to 1,645 Ω at hot
Crankshaft position sensor : Standard resistance (1 (Ne+) - 2 (Ne-))	1,630 to 2,740 Ω at cold 2,065 to 3,225 Ω at hot
Engine coolant temperature sensor : Standard resistance (1 (E2) - 2 (THW))	2.32 to 2.59 kΩ at 20 °C (68°F) 0.310 to 0.326 kΩ at 80°C (176°F)
Throttle body : Standard resistance (1 (M-) - 2 (M+)	0.3 to 100 kΩ at 20 °C (68°F)
Knock sensor : Standard resistance (1 (Ground) - 2 (Output)	120 to 280 kΩ at 20 °C (68°F)
Accelerator pedal (ACCEL POS #1) : Standard voltage	0.5 to 1.1 V (accelerator pedal released) 2.5 to 4.5 V (accelerator pedal depressed)
Accelerator pedal (ACCEL POS #2) : Standard voltage	1.2 to 2.0 V (accelerator pedal released) 3.4 to 5.0 V (accelerator pedal depressed)

SERVICE DATA

Engine	Ignition timing	When using the intelligent tester		8 to 12° BTDC @ idle
		When not using the intelligent tester	Connect SST	8 to 12° BTDC @ idle
			Disconnect SST	5 to 15° BTDC @ idle
	Idle speed	When using the intelligent tester		600 to 700 rpm
		When not using the intelligent tester		600 to 700 rpm
	Compression	Compression pressure		1,400 kPa (14 kgf/cm^2, 199 psi) or more
		Minimum pressure		980 kPa (10.0 kgf/cm^2, 142 psi)
		Difference between each cylinder		100 kPa (1.0 kgf/cm^2, 15 psi) or less
Intake manifold	Warpage	Maximum	Intake manifold side	0.8 mm (0.031 in.)
			Cylinder head side	0.2 mm (0.008 in.)
Exhaust manifold	Warpage	Maximum		0.70 mm (0.0028 in.)
Connecting rod	Thrust clearance	Standard		0.15 to 0.40 mm (0.0059 to 0.0157 in.)
		Maximum		0.50 mm (0.0197 in.)
	Oil clearance	Standard		0.045 to 0.067 mm (0.0018 to 0.0026 in.)
		Maximum		0.070 mm (0.0028 in.)
	Big end inside diameter	Mark 1		56.000 to 56.006 mm (2.2047 to 2.2050 in.)
		Mark 2		56.007 to 56.012 mm (2.2050 to 2.2052 in.)
		Mark 3		56.013 to 56.018 mm (2.2052 to 2.2054 in.)
		Mark 4		56.019 to 56.024 mm (2.2055 to 2.2057 in.)
	Standard sized bearing center wall thickness	Mark 1		1.481 to 1.484 mm (0.0583 to 0.0584 in.)
		Mark 2		1.484 to 1.497 mm (0.0584 to 0.0585 in.)
		Mark 3		1.487 to 1.490 mm (0.0585 to 0.0587 in.)
		Mark 4		1.490 to 1.493 mm (0.0587 to 0.0588 in.)
	Bend	Maximum		0.05 mm (0.0020 in.) per 100 mm (3.94 in.)
	Twist	Maximum		0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

Oil pressure switch x Oil pan		15	153	11
Oil filter cap x Oil pan		25	255	18
Oil filter drain plug x Oil filter cap		12.5	127	9
Oil pan drain plug x No. 2 oil pan		40	408	30
Oil pump cover x Timing chain cover		9.0	92	80 in.*lbf
Plug x Oil pump cover		49	500	36
Timing chain cover x Cylinder block	Area 1, 2 bolt	21	214	15
	Area 3 bolt, nut	21	214	15
	Area 4 bolt A	43	438	32
	Area 4 except bolt A	21	214	15
Oil pan x Cylinder block	Bolt A	10	102	7
	Except bolt A, nut	21	214	15
Oil strainer x Cylinder block		10	102	7
No. 2 oil pan x Oil pan		10	102	7
Oil dipstick guide x Cylinder block		21	214	15
No. 2 oil dipstick guide x Cylinder head		21	214	15

2GR-FE STARTING

SERVICE DATA

Starter assembly	Standard current		90 A or less at 11.5 V
Starter relay	Standard resistance	3 - 5	10 kΩ or higher
		3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
Ignition switch	Standard resistance	-	10 kΩ or higher at LOCK
		2 (AM1) - 3 (ACC)	Below 1 Ω at ACC
		2 (AM1) - 3 (ACC)	Below 1 Ω at ON
		3 (ACC) - 4 (IG1)	Below 1 Ω at ON
		6 (IG2) - 7 (AM2)	Below 1 Ω at ON
		1 (ST1) - 2 (AM1)	Below 1 Ω at START
		1 (ST1) - 4 (IG1)	Below 1 Ω at START
		6 (IG2) - 7 (AM2)	Below 1 Ω at START
		6 (IG2) - 8 (ST2)	Below 1 Ω at START
Starter magnetic switch assembly	Standard resistance	50 - C	1 Ω or lower
		50 - Body	2 Ω or lower
Starter armature assembly	Standard resistance	Segment	1 Ω or lower
		Segment - Coil core	10 kΩ or higher
Starter armature assembly	Commutator depth	Standard	3.1 mm (0.122 in.)
		Maximum	3.8 mm (0.150 in.)
Starter commutator end frame	Brush length	Standard length	9.0 mm (0.354 in.)
		Minimum length	4.0 mm (0.158 in.)
	Standard resistance	Positive (+) - Negative (-)	10 kΩ or higher
Snap ring	Maximum length		5.0 mm (0.197 in.)

TORQUE SPECIFICATIONS

Part Tightened	N*m	kgf*cm	ft.*lbf
Lead wire x Terminal C	10	102	7
Starter assembly x Cylinder block sub-assembly	37	377	27
Starter wire x Starter assembly	9.8	100	88 in.*lbf
Starter commutator end frame x Starter drive housing assembly	6.0	61	53 in.*lbf
Starter magnetic switch assembly x Starter drive housing assembly	7.5	76	66 in.*lbf

AIR CONDITIONING

SERVICE DATA

Refrigerant charge volume	Standard: 430 +- 30 g (15.2 +- 1.1 oz.)

TORQUE SPECIFICATIONS

REFRIGERANT LINE

Part Tightened	N*m	kgf*cm	ft.*lbf
Discharge hose sub-assembly x Cooler compressor assembly	9.8	100	7
Suction hose sub-assembly x Cooler compressor assembly	9.8	100	7
Discharge hose sub-assembly x Cooler condenser assembly	9.8	100	7
Suction hose sub-assembly x Cooler condenser assembly	9.8	100	7
Suction tube sub-assembly x Suction hose sub-assembly	9.8	100	7
Plate x Body	9.8	100	7

AIR CONDITIONING UNIT

Part Tightened	N*m	kgf*cm	ft.*lbf
Instrument panel reinforcement assembly x Body	20	204	15
No. 2 instrument panel brace sub-assembly x Instrument panel reinforcement	9.8	100	7
No. 2 instrument panel brace sub-assembly x Body	9.8	100	7
Air conditioning unit assembly x Instrument panel reinforcement	9.8	100	7
Air conditioning unit assembly x Body	9.8	100	7
Cooler expansion valve x No. 1cooler evaporator sub-assembly	3.5	35	30 in.*lbf

COMPRESSOR AND PULLEY

Part Tightened	N*m	kgf*cm	ft.*lbf
No. 1 cooler refrigerant suction hose x Cooler compressor assembly	9.8	100	7
No. 1 cooler refrigerant discharge hose x Cooler compressor assembly	9.8	100	7
Cooler compressor assembly x Engine	24.5	250	18

CONDENSER

Part Tightened	N*m	kgf*cm	ft.*lbf
No. 1 cooler refrigerant discharge hose x Cooler condenser assembly	9.8	100	7
Cooler refrigerant liquid pipe x Cooler condenser assembly	9.8	100	7
Cap x Cooler condenser assembly	5.4	55	48 in.*lbf
No. 2 fan shroud x Cooler condenser	10.5	107	8
Upper radiator support bracket x Upper radiator support	45	459	33

AXLE

SERVICE DATA

Axle

Front axle hub backlash	Maximum: 0.05 mm (0.0020 in.)
Front axle hub deviation	Maximum: 0.05 mm (0.0020 in.)
Rear axle hub backlash	Maximum: 0.05 mm (0.0020 in.)
Rear axle hub deviation	Maximum for 2WD: 0.08 mm (0.0031 in.) Maximum for 4WD: 0.06 mm (0.0024 in.)

Yaw Rate Sensor

Part tightened	N*m	kgf*cm	ft.*lbf
Yaw rate sensor assembly x Body	14.5	148	11
Yaw rate sensor bracket x Body	14.5	148	11

BRAKE

SERVICE DATA

(2005/11-2006/01)

Stop Light Switch

Stop light switch BR-13	Resistance 1 - 2	Switch pin released	Below 1 Ω
	Resistance 1 - 2	Switch pin pushed in	10 kΩ or higher

Brake Pedal Load Sensing Switch

Brake pedal load sensing switch BC-216	Resistance 1 - 2	Brake pedal depressed	Approx. 1 kΩ
	Resistance 1 - 2	Brake pedal released	Approx. 213 Ω

Brake Pedal

Brake pedal height from dash panel BR-13	184.2 to 194.2 mm (7.252 to 7.646 in.)
Stop light switch clearance BR-13	1.5 to 2.5 mm (0.059 to 0.098 in.)
Brake pedal free play BR-14	1.0 to 6.0 mm (0.039 to 0.236 in.)
Brake pedal reserve distance from dash panel BR-14	See the table below.

Brake Pedal Reserve Distance from Dash Panel

Engine	Seat Type	Specified Condition
2AZ-FE	w/o 3rd seat	More than 95 mm (3.74 in.)
	w/ 3rd seat	More than 120 mm (4.72 in.)

Brake Fluid Level Warning Switch

Brake fluid level warning switch BR-20	Resistance 1 - 2	Float up (Switch OFF)	10 kΩ or higher
	Resistance 1 - 2	Float down (Switch ON)	Below 1 Ω

Brake Booster

Booster push rod and pin head (SST) clearance BR-24	-0.21 to 0 mm (-0.0083 to 0 in.)

Front Brake

Pad lining thickness BR-42		Standard	12.0 mm (0.472 in.)
		Minimum	1.0 mm (0.039 in.)
Disc thickness BR-43	15-inch disc	Standard	25.0 mm (0.984 in.)
		Minimum	22.0 mm (0.866 in.)
	16-inch disc	Standard	28.0 mm (1.102 in.)
		Minimum	25.0 mm (0.984 in.)
Disc runout BR-43		Maximum	0.05 mm (0.0020 in.)

Rear Brake

Pad lining thickness BR-57	Standard	10.5 mm (0.413 in.)
	Minimum	1.0 mm (0.039 in.)
Disc thickness BR-58	Standard	12.0 mm (0.472 in.)
	Minimum	10.5 mm (0.413 in.)
Disc runout BR-58	Maximum	0.15 mm (0.0059 in.)

SERVICE DATA

(2006/01-)

Stop Light Switch

Stop light switch BR-13	Resistance 1 - 2	Switch pin released	Below 1 Ω
	Resistance 1 - 2	Switch pin pushed in	10 kΩ or higher

Brake Pedal Load Sensing Switch

Brake pedal load sensing switch BC-216	Resistance 1 - 2	Brake pedal depressed	Approx. 1 kΩ
	Resistance 1 - 2	Brake pedal released	Approx. 213 Ω

Brake Pedal

Brake pedal height from dash panel BR-15	184.2 to 194.2 mm (7.252 to 7.646 in.)
Stop light switch clearance BR-15	1.5 to 2.5 mm (0.059 to 0.098 in.)
Brake pedal free play BR-15	1.0 to 6.0 mm (0.039 to 0.236 in.)
Brake pedal reserve distance from dash panel BR-16	See the table below.

Brake Pedal Reserve Distance from Dash Panel

Engine	Specified Condition
2AZ-FE (w/o 3rd seat)	More than 95 mm (3.74 in.)
2AZ-FE (w/ 3rd seat)	More than 120 mm (4.72 in.)
2GR-FE	More than 120 mm (4.72 in.)

Brake Fluid Level Warning Switch

Brake fluid level warning switch BR-20	Resistance 1 - 2	Float up (Switch OFF)	10 kΩ or higher
	Resistance 1 - 2	Float down (Switch ON)	Below 1 Ω

Brake Booster

Booster push rod and pin head (SST) clearance BR-24	-0.21 to 0 mm (-0.0083 to 0 in.)

Front Brake

Pad lining thickness BR-42		Standard	12.0 mm (0.472 in.)
		Minimum	1.0 mm (0.039 in.)
Disc thickness BR-43	15-inch disc	Standard	25.0 mm (0.984 in.)
		Minimum	22.0 mm (0.866 in.)
	16-inch disc	Standard	28.0 mm (1.102 in.)
		Minimum	25.0 mm (0.984 in.)
Disc runout BR-43		Maximum	0.05 mm (0.0020 in.)

Rear Brake

Pad lining thickness BR-57	Standard	10.5 mm (0.413 in.)
	Minimum	1.0 mm (0.039 in.)
Disc thickness BR-58	Standard	12.0 mm (0.472 in.)
	Minimum	10.5 mm (0.413 in.)
Disc runout BR-58	Maximum	0.15 mm (0.0059 in.)

PARKING BRAKE

SERVICE DATA

Parking brake lever travel PB-2	Pull the lever upward with a force of approximately 200 N (20 kgf, 44 lbf) and count the number of clicks.		7 to 9 clicks (without rear brake dragging)
Parking brake switch PB-4	Resistance 1 - Body ground	Parking brake switch ON (Switch pin released)	Below 1 Ω
	Resistance 1 - Body ground	Parking brake switch OFF (Switch pin pushed in))	10 kΩ or higher
Brake disc inside diameter PB-14		Standard	172 mm (6.77 in.)
		Maximum	173 mm (6.81 in.)
Parking brake shoe lining thickness PB-14		Standard	3.5 mm (0.138 in.)
		Minimum	1.0 mm (0.039 in.)
Parking brake shoe clearance adjustment PB-17	Standard shoe adjuster return notch		8 notches

TORQUE SPECIFICATIONS

Parking Brake Lever

Part tightened	N*m	kgf*cm	ft.*lbf
Parking brake switch mounting screw	0.88	9.0	7.8 in.*lbf
Parking brake lever x Body	14.5	148	11
No. 1 parking brake cable lock nut	6.0	61	53 in.*lbf

Parking Brake Cable

Part tightened	N*m	kgf*cm	ft.*lbf
Parking brake cable x Backing plate	8.0	82	71 in.*lbf
Parking brake cable clamp bolt	6.0	61	53 in.*lbf

MIRROR

Part Tightened	N*m	kgf*cm	ft.*lbf
Inner rear view mirror assembly (w/EC Mirror) x Body	1.8	18	16 in.*lbf
Outer rear view mirror assembly x Door panel	9.0	92	80 in.*lbf

PARKING BRAKE

SERVICE DATA

Parking brake lever travel PB-2	Pull the lever upward with a force of approximately 200 N (20 kgf, 44 lbf) and count the number of clicks.		7 to 9 clicks (without rear brake dragging)
Parking brake switch PB-4	Resistance 1 - Body ground	Parking brake switch ON (Switch pin released)	Below 1 Ω
	Resistance 1 - Body ground	Parking brake switch OFF (Switch pin pushed in))	10 kΩ or higher
Brake disc inside diameter PB-14		Standard	172 mm (6.77 in.)
		Maximum	173 mm (6.81 in.)
Parking brake shoe lining thickness PB-14		Standard	3.5 mm (0.138 in.)
		Minimum	1.0 mm (0.039 in.)
Parking brake shoe clearance adjustment PB-17	Standard shoe adjuster return notch		8 notches

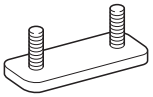
HOW TO DETERMINE NUT STRENGTH

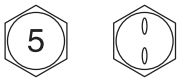
Nut Type

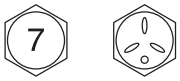
Present Standard Hexagon Nut	Old Standard Hexagon Nut		Class
	Cold Forging Nut	Cutting Processed Nut	
No Mark 			4N
No Mark (w/ Washer) 	No Mark (w/ Washer) 	No Mark 	5N (4T)
			6N
			7N (5T)
			8N
		No Mark 	10N (7T)
			11N
			12N

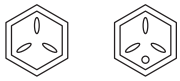
HINT:

- *: Nut with 1 or more marks on one side surface of the nut.
- Use a nut with the same nut strength classification number (or greater) as the bolt strength classification number when tightening parts with a bolt and nut.









Example:

- Bolt = 4T
- Nut = 4N or more

STANDARD BOLT

Line pressure (Wheel locked) AT stall (Throttle valve fully opened)	D position	931 to 1,031 kPa (9.1 to 10.5 kgf*cm^2, 129 to 149 psi)
	R position	1,768 to 1,968 kPa (18.0 to 20.0 kgf/cm^2, 284 to 256 psi)
Engine stall revolution	D positions	2,400 to 2,700 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.2 seconds
Engine idle speed (A/C OFF)	N position	610 to 710 rpm
Drive plate runout	Maximum.	0.20 mm (0.0079 in.)
Differential oil seal drive in depth	LH side	5.4 to 6.4 mm (0.213 to 0.252 in.)
	RH side	1.5 to 2.5 mm (0.059 to 0.098 in.)
Shift point		
D position (Throttle valve fully opened)	1 → 2	55 to 63 km/h (34 to 39 mph)
	2 → 3	102 to 112 km/h (63 to 70 mph)
	3 → 4	156 to 171 km/h (97 to 106 mph)
	4 → 3	148 to 163 km/h (92 to 101 mph)
	3 → 2	94 to 104 km/h (58 to 65 mph)
	2 → 1	44 to 51 km/h (27 to 32 mph)
D position (Throttle valve fully closed)	3 → 4	40 to 47 km/h (25 to 29 mph)
	4 → 3	16 to 22 km/h (10 to 14 mph)
2 position (Throttle valve fully opened)	1 → 2	55 to 63 km/h (34 to 39 mph)
	3 → 2	102 to 112 km/h (63 to 70 mph)
	2 → 1	32 to 39 km/h (20 to 24 mph)
L position (Throttle valve fully opened)	3 → 2	102 to 112 km/h (63 to 70 mph)
	2 → 1	48 to 55 km/h (30 to 34 mph)
Lock-up point		
D position (Throttle valve opening 5 %)	Lock-up ON 4 → 4L	53 to 60 km/h (33 to 37 mph)
	Lock-up OFF 4L → 4	51 to 58 km/h (32 to 36 mph)
Input shaft		
End play	0.262 to 1.249 mm (0.0103 to 0.0492 in.)	
Multiple disc clutch clutch hub		
Inside diameter	STD	23.025 to 23.045 mm (0.9065 to 0.9073 in.)
	Max.	23.09 mm (0.9091 in.)
Underdrive brake		
Return spring free length	14.04 mm (0.5528 in.)

SERVICE DATA

Automatic Transaxle Assembly

Line pressure (Wheel locked) AT stall (Throttle valve fully opened)	D position	931 to 1,031 kPa (9.1 to 10.5 kgf*cm^2, 129 to 149 psi)
	R position	1,768 to 1,968 kPa (18.0 to 20.0 kgf/cm^2, 284 to 256 psi)
Engine stall revolution	D positions	2,030 to 2,330 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.5 seconds
Engine idle speed (A/C OFF)	N position	600 to 700 rpm
Drive plate runout	Maximum.	0.20 mm (0.0079 in.)
Differential side oil seal depth		0 +-0.5 mm (0 +-0.020 in.)
Shift point		
D position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	2 → 3	99 to 108 km/h (62 to 67 mph)
	3 → 4	161 to 176 km/h (100 to 109 mph)
	4 → 5	239 to 257 km/h (149 to 160 mph)
	5 → 4	230 to 247 km/h (143 to 153 mph)
	4 → 3	154 to 169 km/h (96 to 105 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
D position (Throttle valve fully closed)	4 → 5	68 to 75 km/h (42 to 47 mph)
	5 → 4	40 to 47 km/h (25 to 29 mph)
3 position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	2 → 3	99 to 108 km/h (62 to 67 mph)
	4 → 3	154 to 169 km/h (96 to 105 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
2 position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
L position (Throttle valve fully opened)	2 → 1	35 to 42 km/h (22 to 26 mph)
Lock-up point		
D position (Throttle valve opening 5 %)	Lock-up ON 5 → 5L	66 to 74 km/h (41 to 46 mph)
	Lock-up OFF 5L → 5	64 to 72 km/h (40 to 45 mph)
	Lock-up ON 4 → 4L	106 to 116 km/h (66 to 72 mph)
	Lock-up OFF 4L → 4	103 to 112 km/h (64 to 70 mph)
	Lock-up ON 3 → 3L	64 to 73 km/h (40 to 45 mph)
	Lock-up OFF 3L → 3	62 to 70 km/h (39 to 43 mph)
Input shaft		
End play	0.262 to 1.244 mm (0.0103 to 0.0490 in.)	

SS

Multiple disc clutch clutch hub		
Inside diameter	STD	23.03 to 23.05 mm (0.9067 to 0.9075 in.)
	Max.	23.09 mm (0.9091 in.)
Underdrive brake

	Mark D	11.721 to 11.730 mm (0.4615 to 0.4618 in.)
	Mark E	11.731 to 11.740 mm (0.4619 to 0.4622 in.)
Pump body bushing inside diameter	STD	38.113 to 38.138 mm (1.5005 to 1.5015 in.)
	Max.	38.188 mm (1.5035 in.)
Stator shaft bushing inside diameter	STD	21.500 to 21.526 mm (0.8465 to 0.8475 in.)
	Max	21.57 mm (0.8492 in.)

SECOND BRAKE PISTON

Piston return spring free length	16.61 mm (0.6539 in.)

FORWARD CLUTCH

Pack clearance		1.00 to 1.25 mm (0.0394 to 0.4921 in.)
Piston return spring free length		26.74 mm (1.0528 in.)
Flange thickness	No. 1	3.00 mm (0.1181 in.)
	No. 2	3.15 mm (0.1240 in.)
	No. 3	3.30 mm (0.1299 in.)
	No. 4	3.45 mm (0.1358 in.)
	No. 5	3.60 mm (0.1417 in.)

DIRECT CLUTCH

Pack clearance		0.61 to 0.83 mm (0.0240 to 0.0327 in.)
Piston return spring free length		25.91 mm (1.0201 in.)
Flange thickness (Direct clutch)	Mark 1	3.0 mm (0.118 in.)
	Mark 2	3.1 mm (0.122 in.)
	Mark 3	3.2 mm (0.126 in.)
	Mark 4	3.3 mm (0.130 in.)
	Mark 5	3.4 mm (0.134 in.)
	Mark 6	3.5 mm (0.138 in.)
	Mark 7	3.6 mm (0.142 in.)

UNDERDRIVE PLANETARY GEAR

Turning torque (at 60 rpm)	0.50 to 1.42 N*m (5.1 to 14.5 kgf*cm, 4.4 to 12.6 in.*lbf)

UNDERDRIVE CLUTCH

Pack clearance		1.51 to 1.71 mm (0.0594 to 0.0673 in.)
Piston return spring free length		17.14 mm (0.6752 in.)
Flange thickness (Underdrive clutch))	Mark 1	3.0 mm (0.118 in.)
	Mark 2	3.2 mm (0.126 in.)
	Mark 3	3.4 mm (0.134 in.)
	Mark 3	3.6 mm (0.122 in.)
	Mark 3	3.8 mm (0.130 in.)
Underdrive clutch drum bushing inside diameter	STD	37.06 to 37.08 mm (1.4591 to 1.4598 in.)
	Max.	37.13 mm (1.4618 in.)

TRANSMISSION VALVE BODY ASSEMBLY

Valve body assembly installation bolt length	25 mm (0.984 in.) for bolt A
	57.0 mm (2.244 in.) for bolt B
	41 mm (1.614 in.) for bolt C
Detente spring installation bolt length	27 mm (1.063 in.) for bolt A
	16 mm (0.630 in.) for bolt B

DIFFERENTIAL

Side gear backlash		0.05 to 0.20 mm (0.0020 to 0.0079 in.)

SERVICE DATA

Automatic Transaxle Assembly

Line pressure (Wheel locked) AT stall (Throttle valve fully opened)	D position	931 to 1,031 kPa (9.1 to 10.5 kgf*cm^2, 129 to 149 psi)
	R position	1,768 to 1,968 kPa (18.0 to 20.0 kgf/cm^2, 284 to 256 psi)
Engine stall revolution	D positions	2,030 to 2,330 rpm
Time lag	N → D position	Less than 1.2 seconds
	N → R position	Less than 1.5 seconds
Engine idle speed (A/C OFF)	N position	600 to 700 rpm
Drive plate runout	Maximum.	0.20 mm (0.0079 in.)
Differential side oil seal depth		0 +-0.5 mm (0 +-0.020 in.)
Shift point		
D position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	2 → 3	99 to 108 km/h (62 to 67 mph)
	3 → 4	161 to 176 km/h (100 to 109 mph)
	4 → 5	239 to 257 km/h (149 to 160 mph)
	5 → 4	230 to 247 km/h (143 to 153 mph)
	4 → 3	154 to 169 km/h (96 to 105 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
D position (Throttle valve fully closed)	4 → 5	68 to 75 km/h (42 to 47 mph)
	5 → 4	40 to 47 km/h (25 to 29 mph)
3 position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	2 → 3	99 to 108 km/h (62 to 67 mph)
	4 → 3	154 to 169 km/h (96 to 105 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
2 position (Throttle valve fully opened)	1 → 2	50 to 58 km/h (31 to 36 mph)
	3 → 2	94 to 102 km/h (58 to 63 mph)
	2 → 1	35 to 42 km/h (22 to 26 mph)
L position (Throttle valve fully opened)	2 → 1	35 to 42 km/h (22 to 26 mph)
Lock-up point		
D position (Throttle valve opening 5 %)	Lock-up ON 5 → 5L	66 to 74 km/h (41 to 46 mph)
	Lock-up OFF 5L → 5	64 to 72 km/h (40 to 45 mph)
	Lock-up ON 4 → 4L	106 to 116 km/h (66 to 72 mph)
	Lock-up OFF 4L → 4	103 to 112 km/h (64 to 70 mph)
	Lock-up ON 3 → 3L	64 to 73 km/h (40 to 45 mph)
	Lock-up OFF 3L → 3	62 to 70 km/h (39 to 43 mph)

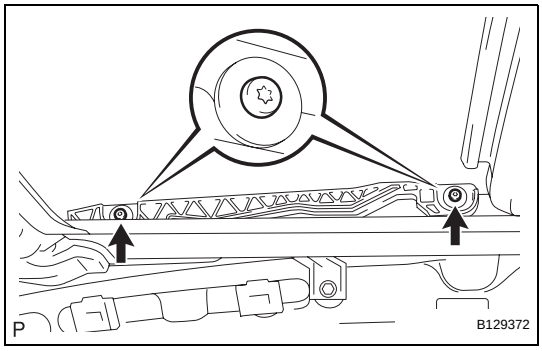
REMOVAL

(2005/11-2006/01)

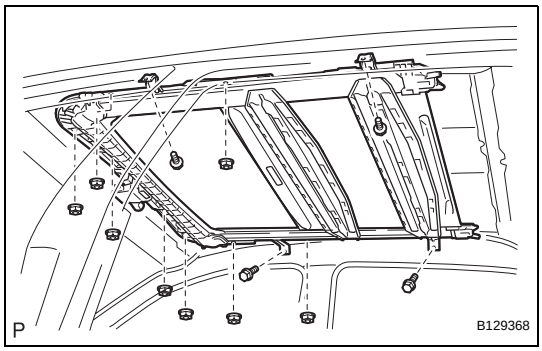
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



2. **REMOVE ROOF HEADLINING ASSEMBLY**
   (a) Remove the roof headlining (see page IR-26).

3. **REMOVE SLIDING ROOF SIDE GARNISH LH**
   (a) Using a screwdriver, detach the claws and remove the garnish.
   HINT:
   Tape the screwdriver tip before use.

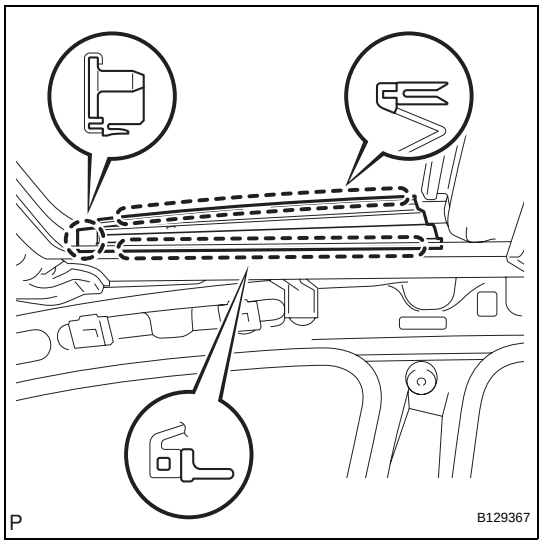
4. **REMOVE SLIDING ROOF SIDE GARNISH RH**
   HINT:
   Use the same procedures described for the LH side.



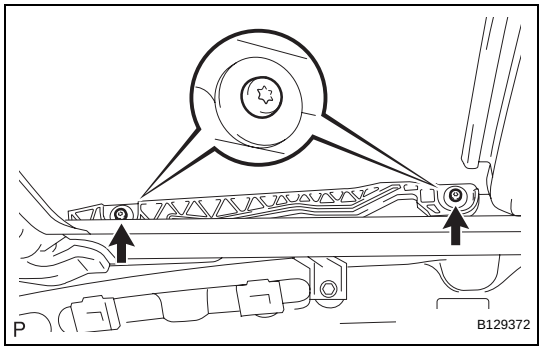
5. **REMOVE SLIDING ROOF GLASS SUB-ASSEMBLY**
   (a) Using a T25 "torx" driver, remove the 4 screws and glass.
   (b) Pull the glass upward to remove it.

6. **REMOVE SLIDING ROOF WEATHERSTRIP**

7. **DISCONNECT SLIDING ROOF DRAIN HOSE**
   (a) Disconnect the 4 drain hoses.

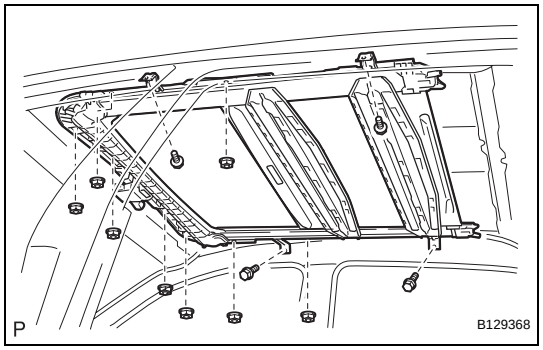


8. **REMOVE SLIDING ROOF HOUSING ASSEMBLY**
   (a) Remove the 4 bolts, 8 nuts and housing.
   NOTICE:
   Be careful not to damage the curtain shield airbag when removing the housing.

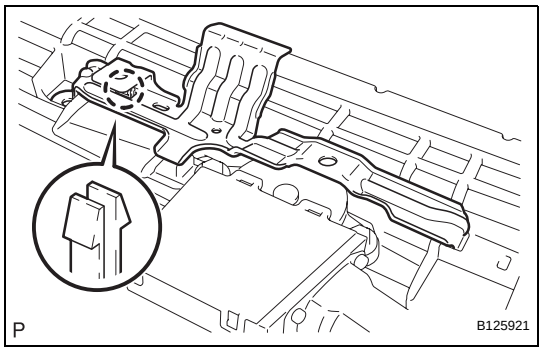


REMOVAL

(2006/01-)

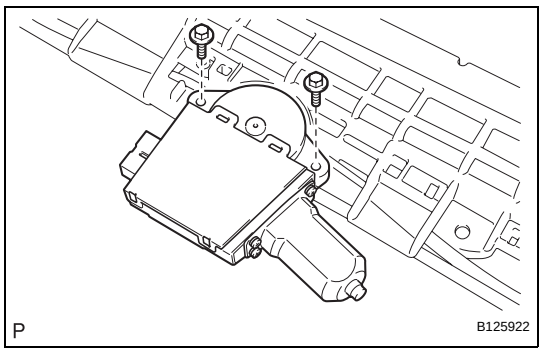


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE ROOF HEADLINING ASSEMBLY**
   (a) Remove the roof headlining (see page IR-37).
3. **REMOVE SLIDING ROOF SIDE GARNISH LH**
   (a) Using a screwdriver, detach the claws and remove the garnish.
   HINT:
   Tape the screwdriver tip before use.
4. **REMOVE SLIDING ROOF SIDE GARNISH RH**
   HINT:
   Use the same procedures described for the LH side.

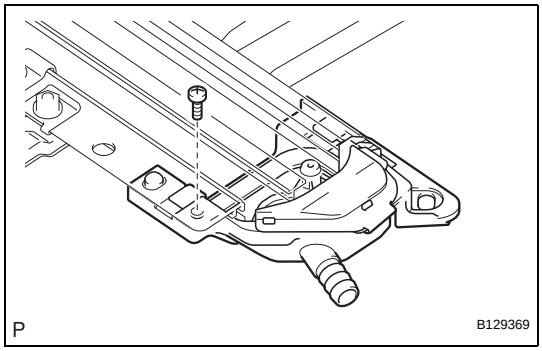


5. **REMOVE SLIDING ROOF GLASS SUB-ASSEMBLY**
   (a) Using a T25 "torx" driver, remove the 4 screws and glass.
   (b) Pull the glass upward to remove it.
6. **REMOVE SLIDING ROOF WEATHERSTRIP**
7. **DISCONNECT SLIDING ROOF DRAIN HOSE**
   (a) Disconnect the 4 drain hoses.

8. **REMOVE SLIDING ROOF HOUSING ASSEMBLY**
   (a) Remove the 4 bolts, 8 nuts and housing.
   NOTICE:
   Be careful not to damage the curtain shield airbag when removing the housing.



RF

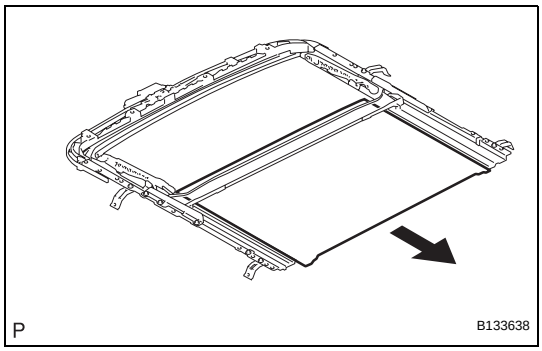


DISASSEMBLY

1. REMOVE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

(a) Remove the claw and room light bracket.

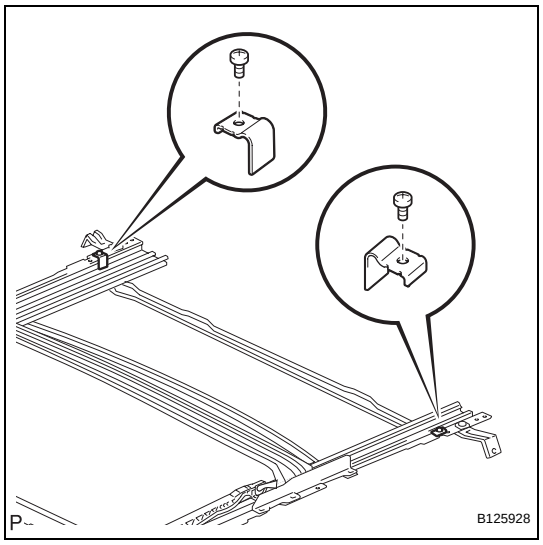
(b) Remove the 2 bolts and drive gear.



2. REMOVE SLIDING ROOF DRAIN HOSE JOINT LH

(a) Remove the screw and joint.

3. REMOVE SLIDING ROOF DRAIN HOSE JOINT RH

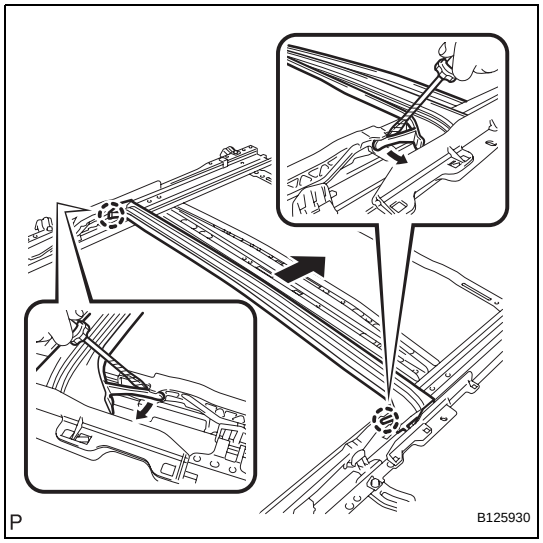


HINT:

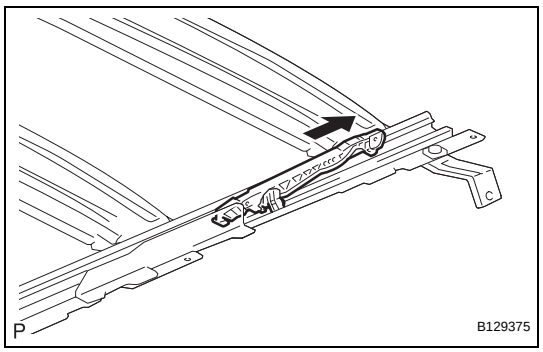
Use the same procedures described for the LH side.

4. REMOVE SUNSHADE TRIM SUB-ASSEMBLY

(a) Slide and remove the sunshade trim sub-assembly.



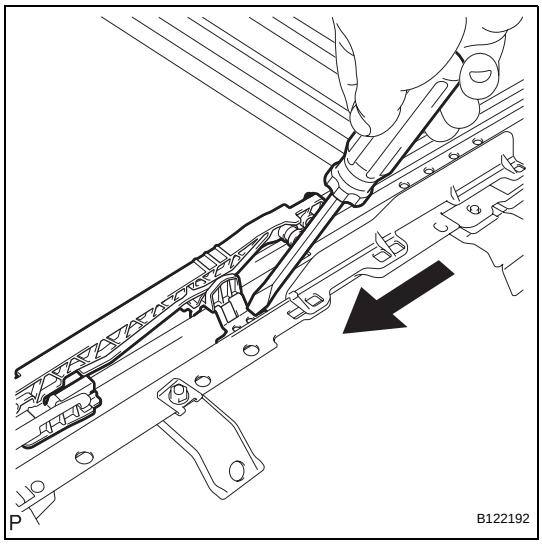
5. REMOVE SLIDING ROOF DRIVE CABLE



NOTICE:

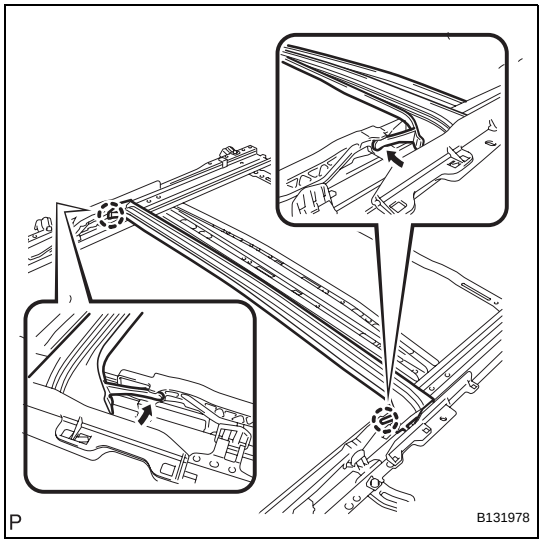
Do not disassemble the sliding roof drive cable sub-assembly except when replacing it.

(a) Remove the 2 screws and 2 sliding roof side stoppers.

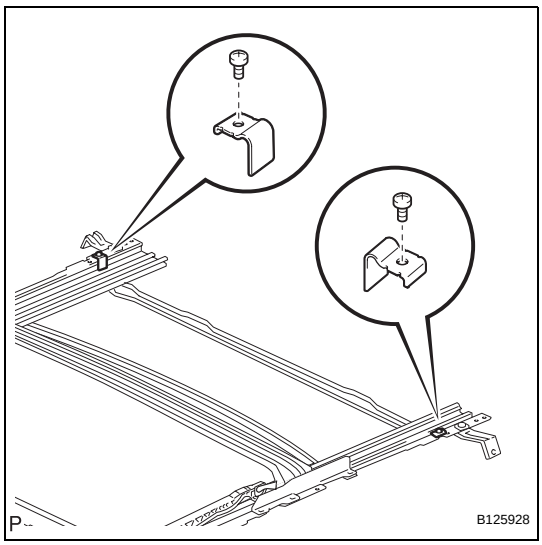


(b) Using a screwdriver, detach the 2 claws. Then slide the drip channel rearward to remove it.
HINT:
Tape the screwdriver tip before use.

(c) Using a screwdriver, slide the drive cables backward and remove them.
HINT:
- Tape the screwdriver tip before use.

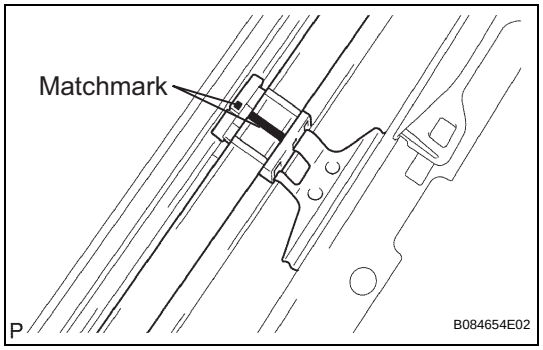


RF



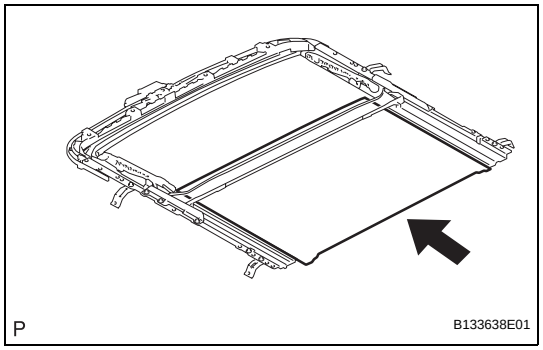
REASSEMBLY

1. INSTALL SLIDING ROOF DRIVE CABLE

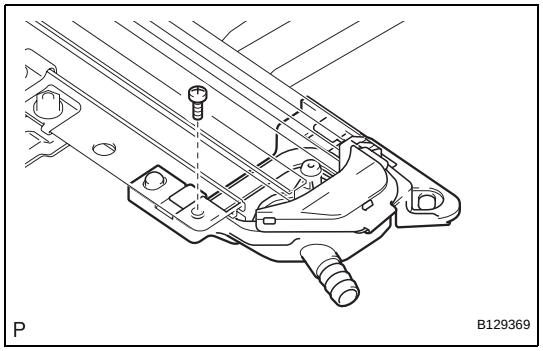


(a) Using a screwdriver, slide the sliding roof drive cable sub-assemblies in the direction indicated by the arrow in the illustration to install them.
HINT:
Tape the screwdriver tip before use.

(b) Engage the 2 claws and install the sliding roof drip channel.



(c) Install the 2 sliding roof side stoppers with the 2 screws.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

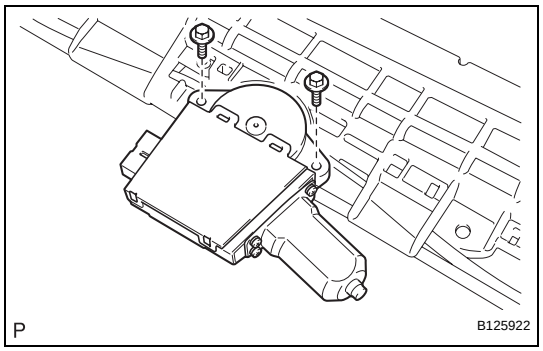


2. ADJUST FULLY CLOSED POSITION

(a) Using a screwdriver, slide the sliding roof drive cable LH and RH to align the matchmarks.
HINT:
Tape the screwdriver tip before use.

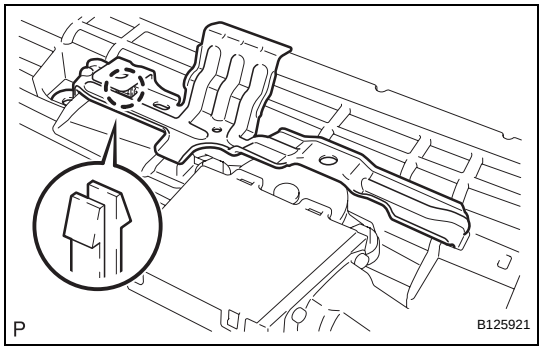
3. INSTALL SUNSHADE TRIM SUB-ASSEMBLY

(a) Insert the sunshade trim into the sliding roof housing.



4. INSTALL SLIDING ROOF DRAIN HOSE JOINT LH

(a) Install the joint with the screw.
Torque: 2.0 N*m (20 kgf*cm, 18 in.*lbf)

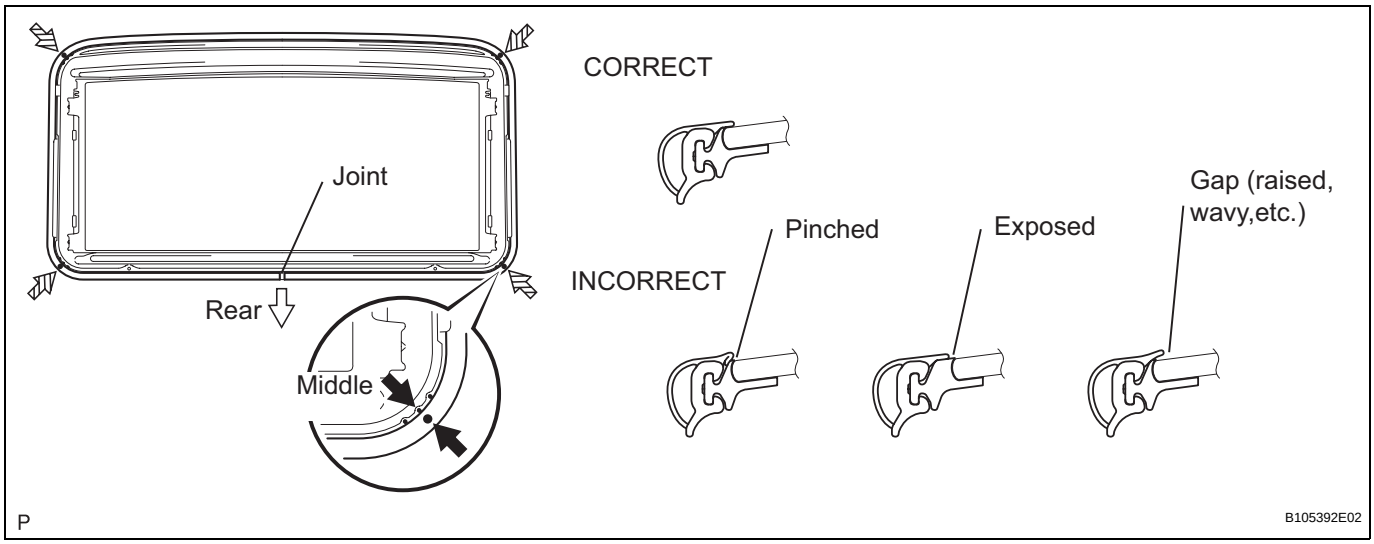


5. INSTALL SLIDING ROOF DRAIN HOSE JOINT RH

HINT:
Use the same procedures described for the LH side.

6. INSTALL SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

(a) Install the drive gear with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



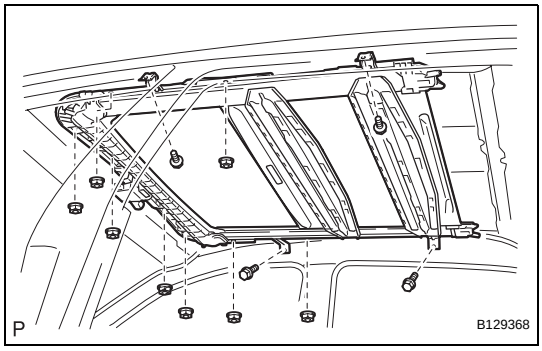
(b) Attach the claw and install the sliding roof drive gear bracket.

INSTALLATION

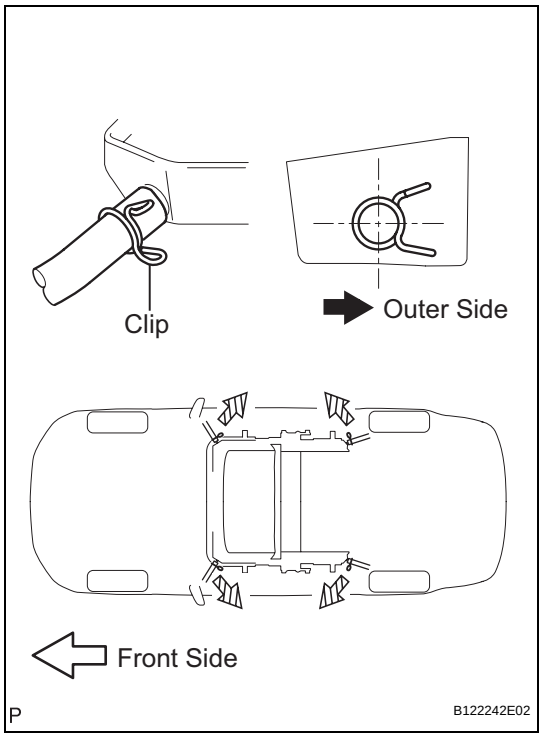
(2005/11-2006/01)

1. INSTALL SLIDING ROOF WEATHERSTRIP

(a) Install the sliding roof weatherstrip.



(1) Position the joint of the weatherstrip at the rear center.

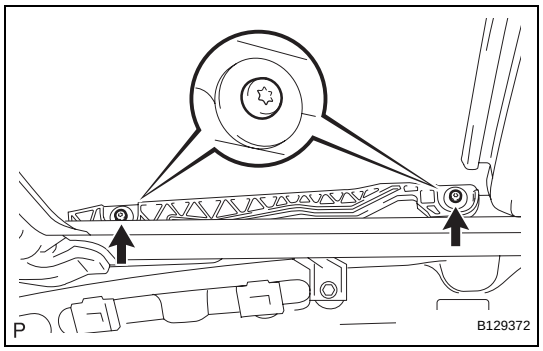


(2) Align the marks on the weatherstrip with the middle marks at the corners of the plastic on the edge of the sliding roof panel and install the weatherstrip. Make sure that the marks on the weatherstrip are positioned within the area indicated by the marks at the corners of the plastic on the edge of the sliding roof panel.

(3) Install the lip of the weatherstrip firmly.

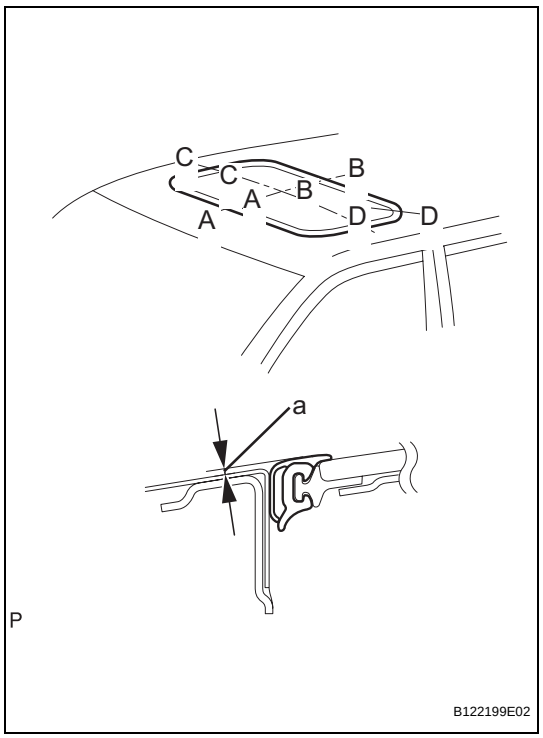
2. INSTALL SLIDING ROOF HOUSING ASSEMBLY

(a) Install the housing with the 4 bolts and 8 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



3. CONNECT SLIDING ROOF DRAIN HOSE

(a) Connect the 4 drain hoses.



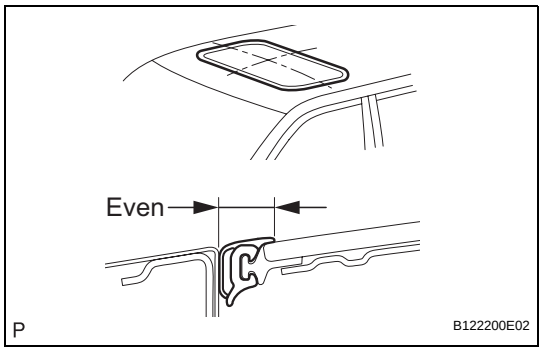
NOTICE:

The clip must face toward the outside of the vehicle and also be above the lower surface of the sliding roof housing when installing the drain hoses.

4. INSTALL SLIDING ROOF GLASS SUB-ASSEMBLY

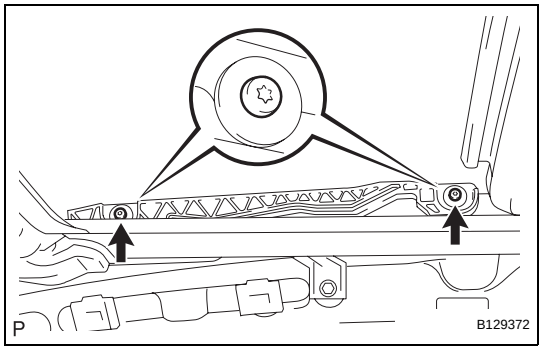
(a) Using a T25 "torx" driver, temporarily install the sliding roof glass sub-assembly with the 4 screws.

(b) Perform a level check.



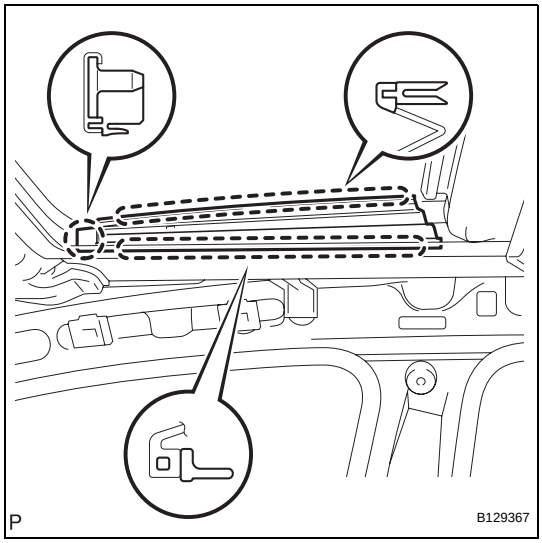
(1) Check the difference in level for "a" between the roof panel and the upper surface of the weatherstrip when the sliding roof glass is fully closed.

Standard measurement



Area	Specified Condition
A - A	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
B - B	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
C - C	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
D - D	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.0 mm (0 - 0.039 in.)

HINT:



"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.

(c) Perform a gap check.
(1) Check the gap between the roof panel and roof glass.
NOTICE:
The gap must be even all around.

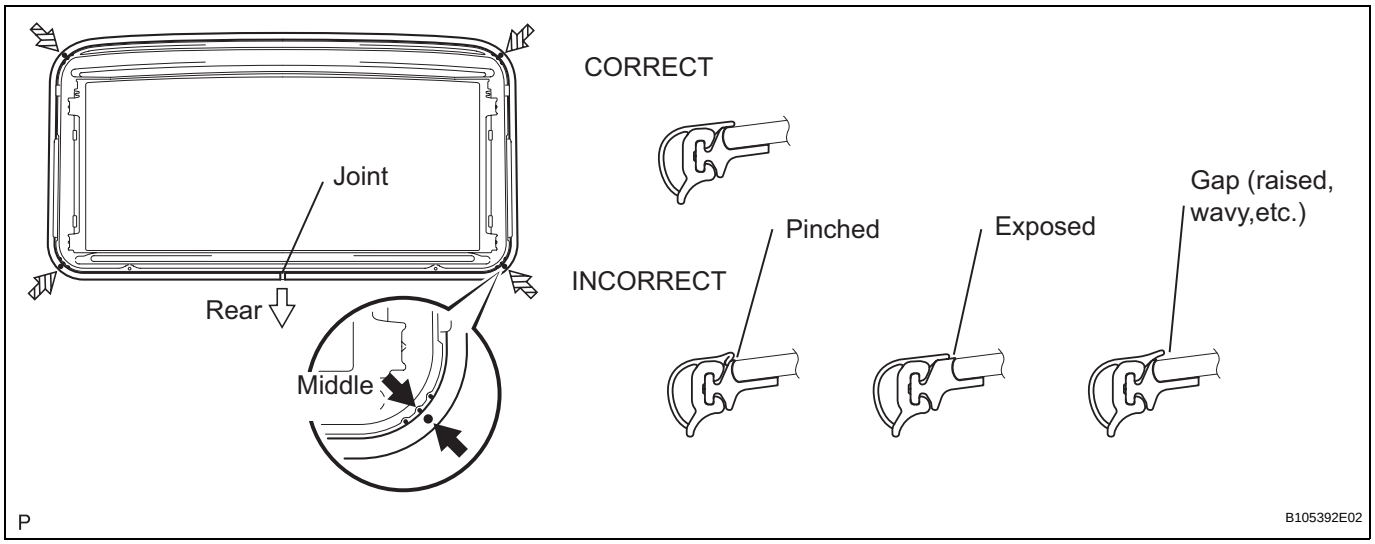
(d) Using a T25 "torx" driver, install the sliding roof glass with the 4 screws.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

5. INSTALL SLIDING ROOF SIDE GARNISH LH
(a) Attach the claws to install the garnish.

6. INSTALL SLIDING ROOF SIDE GARNISH RH
HINT:
Use the same procedures described for the LH side.

7. CHECK FOR WATER LEAKS
(a) Adjust the sliding roof glass sub-assembly, and check for water leaks.
(b) If there are any leaks, readjust the sliding roof glass sub-assembly.

8. INSTALL ROOF HEADLINING ASSEMBLY
(a) Install the roof headlining (see page IR-49).



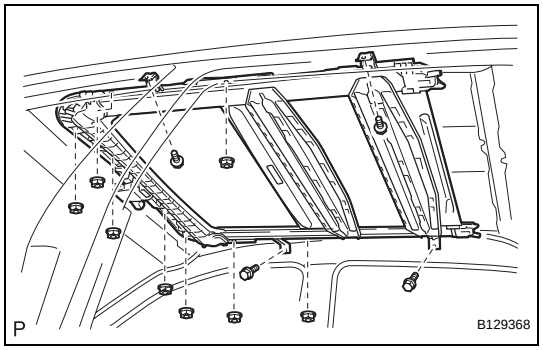
9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

INSTALLATION

(2006/01-)

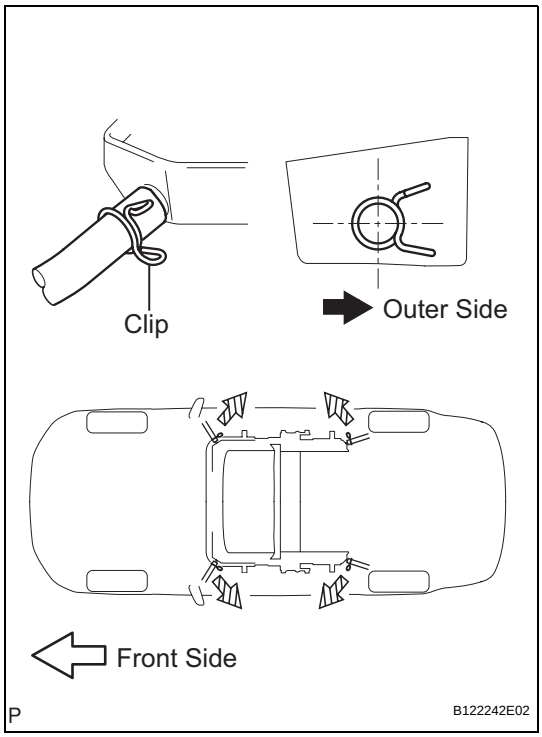
1. INSTALL SLIDING ROOF WEATHERSTRIP

(a) Install the sliding roof weatherstrip.



(1) Position the joint of the weatherstrip at the rear center.

(2) Align the marks on the weatherstrip with the middle marks at the corners of the plastic on the edge of the sliding roof panel and install the weatherstrip. Make sure that the marks on the weatherstrip are positioned within the area indicated by the marks at the corners of the plastic on the edge of the sliding roof panel.

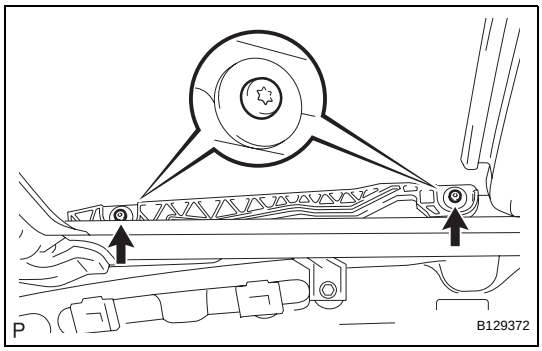


(3) Install the lip of the weatherstrip firmly.

2. INSTALL SLIDING ROOF HOUSING ASSEMBLY

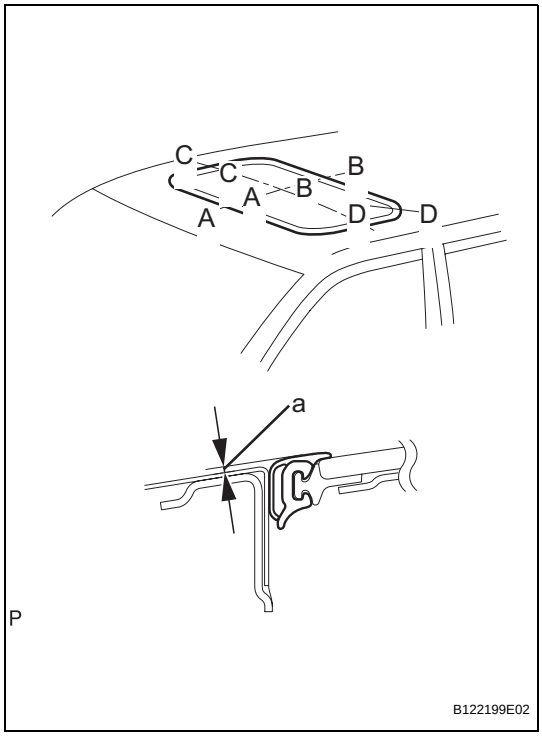
(a) Install the housing with the 4 bolts and 8 nuts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

RF



3. CONNECT SLIDING ROOF DRAIN HOSE

(a) Connect the 4 drain hoses.



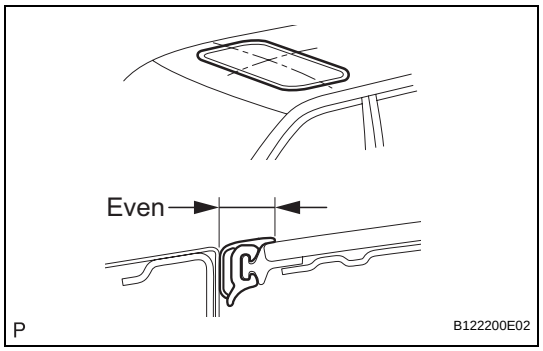
NOTICE:

The clip must face toward the outside of the vehicle and also be above the lower surface of the sliding roof housing when installing the drain hoses.

4. INSTALL SLIDING ROOF GLASS SUB-ASSEMBLY

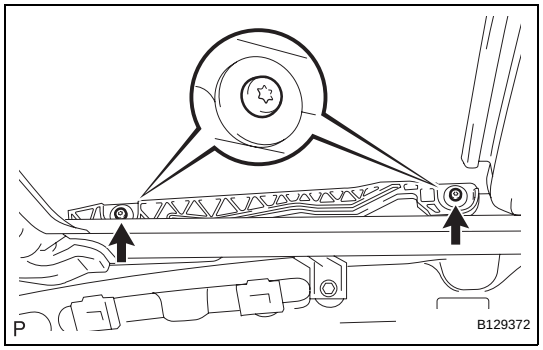
(a) Using a T25 "torx" driver, temporarily install the sliding roof glass sub-assembly with the 4 screws.

(b) Perform a level check.



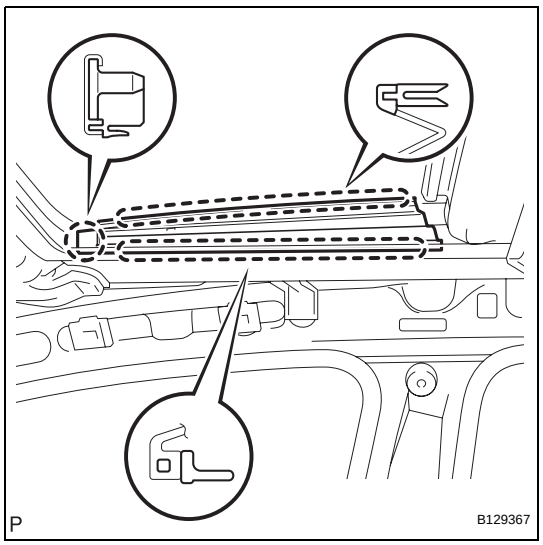
(1) Check the difference in level for "a" between the roof panel and the upper surface of the weatherstrip when the sliding roof glass is fully closed.

Standard measurement



Area	Specified Condition
A - A	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
B - B	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
C - C	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.5 mm (0 - 0.059 in.)
D - D	0 + 1.5 mm (0 + 0.059 in.) 0 - 1.0 mm (0 - 0.039 in.)

HINT:



"+" represents the condition that the glass is above the panel level. "-" represents the condition that the glass is below the panel level.

(c) Perform a gap check.
(1) Check the gap between the roof panel and roof glass.
NOTICE:
The gap must be even all around.

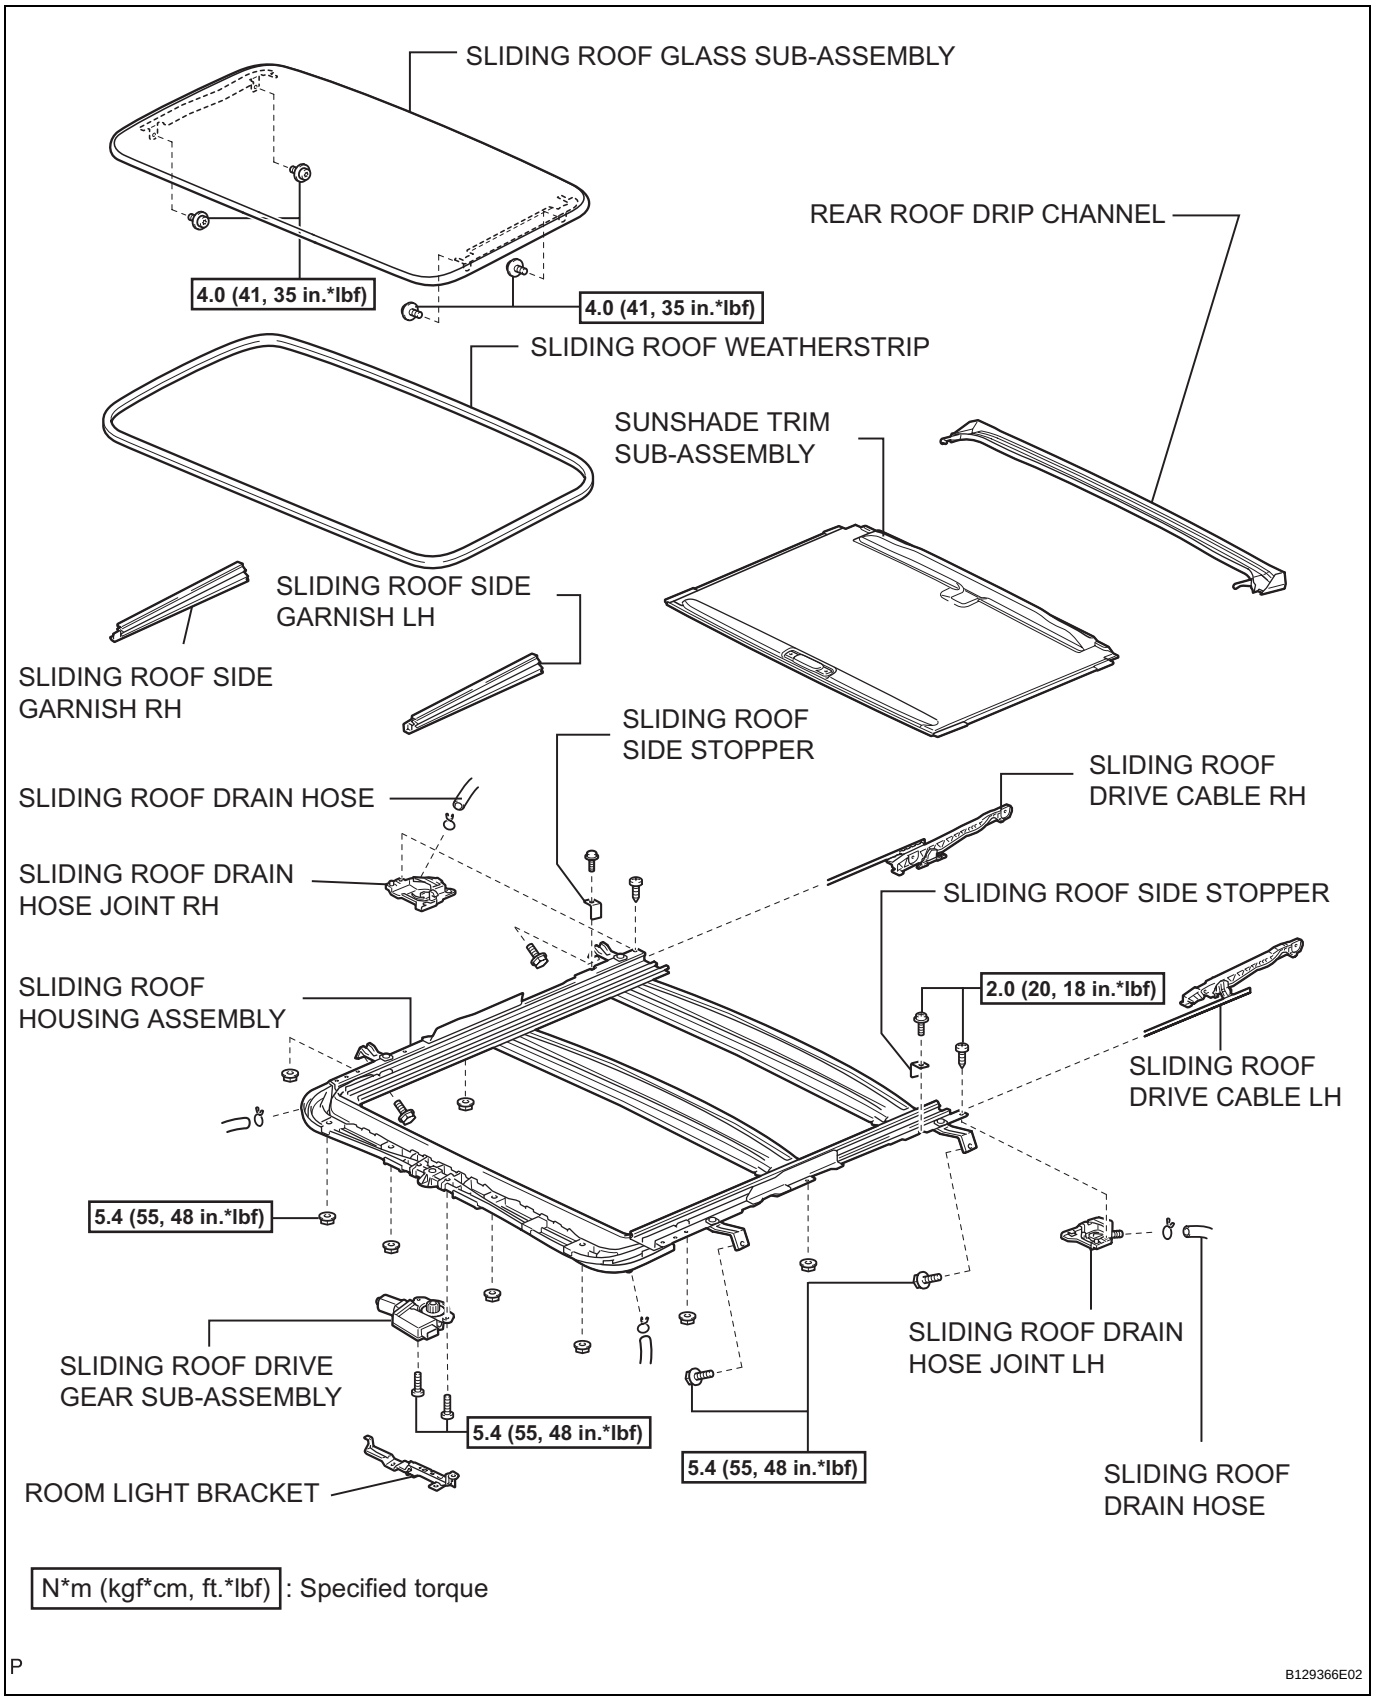
(d) Using a T25 "torx" driver, install the sliding roof glass with the 4 screws.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

5. INSTALL SLIDING ROOF SIDE GARNISH LH
(a) Attach the claws to install the garnish.

6. INSTALL SLIDING ROOF SIDE GARNISH RH
HINT:
Use the same procedures described for the LH side.

7. CHECK FOR WATER LEAKS
(a) Adjust the sliding roof glass sub-assembly, and check for water leaks.
(b) If there are any leaks, readjust the sliding roof glass sub-assembly.

8. INSTALL ROOF HEADLINING ASSEMBLY
(a) Install the roof headlining (see page IR-59).



9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

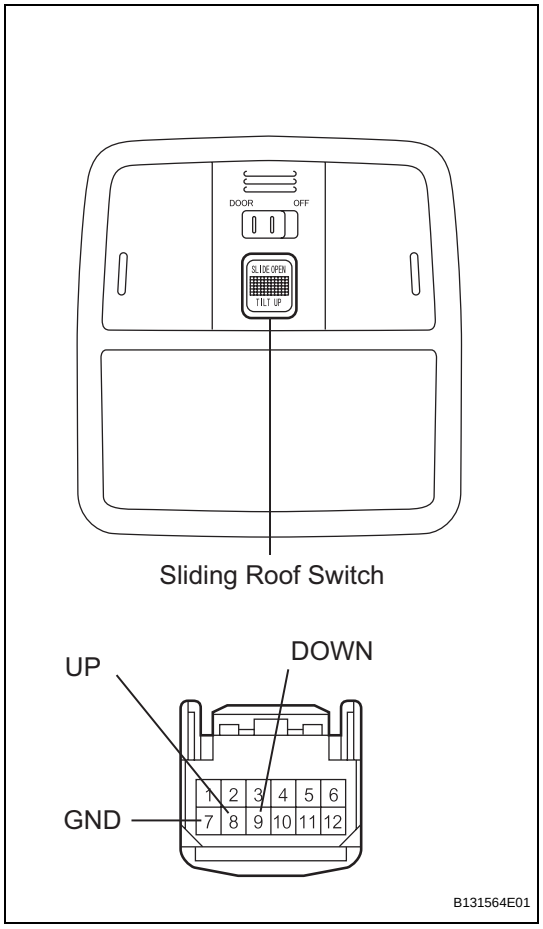
SLIDING ROOF SWITCH ASSEMBLY

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



2. REMOVE MAP LIGHT ASSEMBLY

(a) Using a clip remover, detach the 4 clips and remove the light.

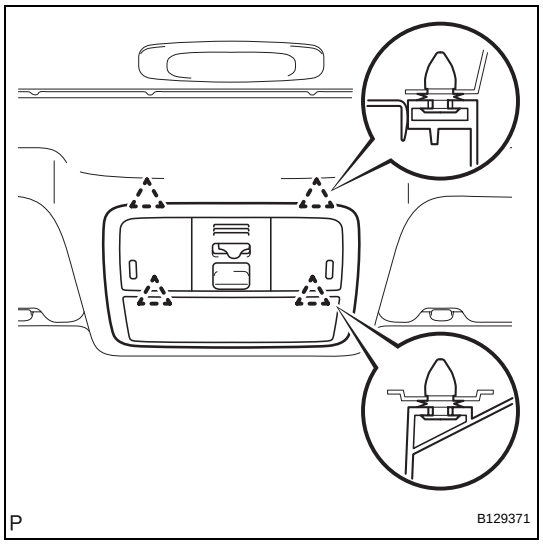
HINT:

Tape the clip remover tip before use.

(b) Disconnect the map light connector.

INSPECTION

1. INSPECT MAP LIGHT ASSEMBLY



(a) Measure the resistance of the switch.

Standard resistance

Switch Condition	Tester Connection	Specified Condition
TILT UP	8 (UP) - 7 (GND)	Below 1 Ω
TILT DOWN	9 (DOWN) - 7 (GND)	Below 1 Ω
SLIDE CLOSE	8 (UP) - 7 (GND)	Below 1 Ω
SLIDE OPEN	9 (DOWN) - 7 (GND)	Below 1 Ω

If the result is not as specified, replace the map light assembly.

RF

INSTALLATION

1. INSTALL MAP LIGHT ASSEMBLY

(a) Connect the map light connector.

(b) Attach the 4 clips to install the map light.

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

SYSTEM DESCRIPTION

1. GENERAL

This system has the following functions: manual slide open and close; auto slide open and close; manual tilt up and down; auto tilt up and down; jam protection; and key off operation.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Sliding roof drive gear sub-assembly (Sliding roof ECU)	Sliding roof ECU controls sliding roof motor to rotate forward and backward, which tilts or slides sliding roof glass
Overhead junction block	Output of operation signals from built-in sliding roof switch to sliding roof ECU are handled by overhead junction block

3. SYSTEM OPERATION

The sliding roof has the following features.

Function	Outline
Manual slide open and close	This function causes sliding roof to open (or close) when SLIDE OPEN switch (or TILT UP switch) is pressed for a maximum of 0.3 seconds. Sliding roof stops as soon as switch is released.
Auto slide open and close	This function causes sliding roof to be fully opened (or closed) when SLIDE OPEN switch (or TILT UP switch) is pressed for a minimum of 0.3 seconds
Manual tilt up and down	This function causes sliding roof to tilt up (or tilt down) when TILT UP switch (or SLIDE OPEN switch) is pressed for a maximum of 0.3 seconds
Auto tilt up and down	This function enables sliding roof to tilt up (or down) when TILT UP switch (or SLIDE OPEN switch) is pressed for a minimum of 0.3 seconds.
Jam protection function	The jam protection function automatically stops sliding roof, or stops sliding roof and makes it open halfway (or fully tilts it upward) if a foreign object gets jammed in sliding roof during auto close operation (or auto tilt down operation).
Key off operation	Key off operation function makes it possible to operate sliding roof for approximately 45 seconds after ignition switch is turned off if front doors are not opened

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the sliding roof system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

RF

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	INSPECT COMMUNICATION FUNCTION OF MULTIPLEX COMMUNICATION SYSTEM (CAN)*

(a) Using the intelligent tester, check if the Multiplex Communication System (CAN) is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

6	**ADJUST, REPAIR OR REPLACE**

NEXT

7	**CONFIRMATION TEST**

NEXT

END

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

When replacing the sliding roof drive gear, the sliding roof drive gear requires initialization. If a reset is not executed, the following functions do not operate: auto operation and key off operation.

(a) Turn the ignition switch ON.

(b) If the sliding roof is open, close it fully.

(c) By pushing the slide open switch of the slide switch or the up switch of the tilt switch on the personal light, make the sliding roof operate as follows: Tilt up → approximately 1 second → tilt down → slide open → slide closed.

(d) Check that the sliding roof stops at the fully closed position.

(e) Finish the initialization.

(f) Check that the AUTO operation works normally.

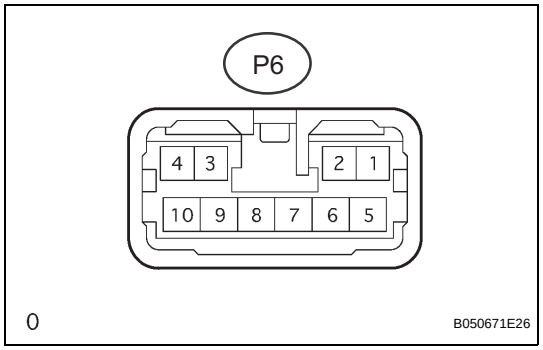
NOTICE:

If the following conditions occur while operating, initialization will fail.

- **Ignition switch is turned OFF.**
- **Pushed sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**

HINT:

- If the sliding roof cannot fully close or its position has become misaligned, perform the initialization again.
- If the sliding roof TILT UP switch or SLIDE CLOSE switch is pressed and held until the roof glass has either stopped moving or started moving in the opposite direction, and then the switch is held for another 10 seconds or more, perform the initialization again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).



RF

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System

Symptom	Suspected area	See page
Sliding function and tilt function do not operate	Sliding roof ECU power source circuit	RF-25
Either sliding function or tilt function does not operate	Sliding roof control switch circuit	RF-22

TERMINALS OF ECU

1. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

(a) Disconnect the P6 ECU connector.
(b) Measure the resistance and voltage of the wire harness side connector.

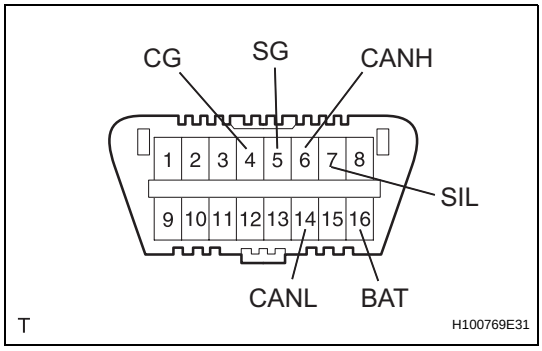
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (P6-1) - GND (P6-2)	L - W-B	+B power supply	Always	10 to 14 V
IG (P6-5) - GND (P6-2)	V - W-B	Power supply	Ignition switch OFF	Below 1 V
IG (P6-5) - GND (P6-2)	V - W-B	Power supply	Ignition switch ON	10 to 14 V
DWN (P6-7) - GND (P6-2)	R - W-B	Sliding roof motor open	SLIDE OPEN switch OFF	10 kΩ or higher
DWN (P6-7) - GND (P6-2)	R - W-B	Sliding roof motor open	SLIDE OPEN switch ON	Below 1 Ω
UP (P6-9) - GND (P6-2)	Y - W-B	Sliding roof motor close	TILT UP switch OFF	10 kΩ or higher
UP (P6-9) - GND (P6-2)	Y - W-B	Sliding roof motor close	TILT UP switch ON	Below 1 Ω
GND (P6-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

(c) Reconnect the P6 ECU connector.
(d) Measure the voltage of the connector.

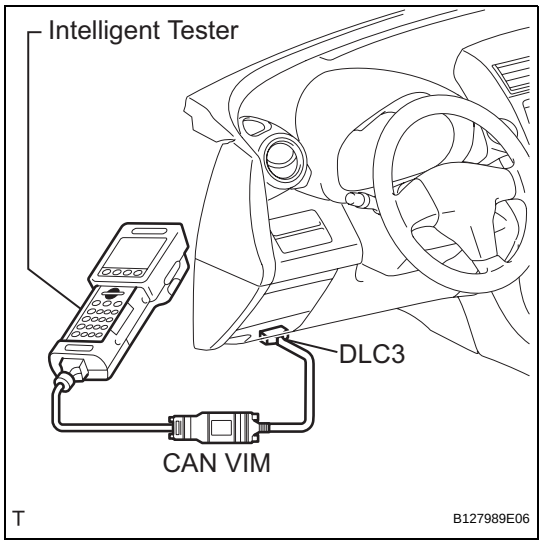
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DWN (P6-7) - GND (P6-2)	R - W-B	Sliding roof motor open	Ignition switch ON, sliding roof closed, SLIDE OPEN switch OFF	Below 1 V
DWN (P6-7) - GND (P6-2)	R - W-B	Sliding roof motor open	Ignition switch ON, sliding roof closed, SLIDE OPEN switch ON	10 to 14 V
UP (P6-9) - GND (P6-2)	Y - W-B	Sliding roof motor close	Ignition switch on, sliding roof open, TILT UP switch OFF	Below 1 V
UP (P6-9) - GND (P6-2)	Y - W-B	Sliding roof motor close	Ignition switch on, sliding roof open, TILT UP switch ON	10 to 14 V

If the result is not as specified, the ECU may have a malfunction.

RF



DIAGNOSIS SYSTEM

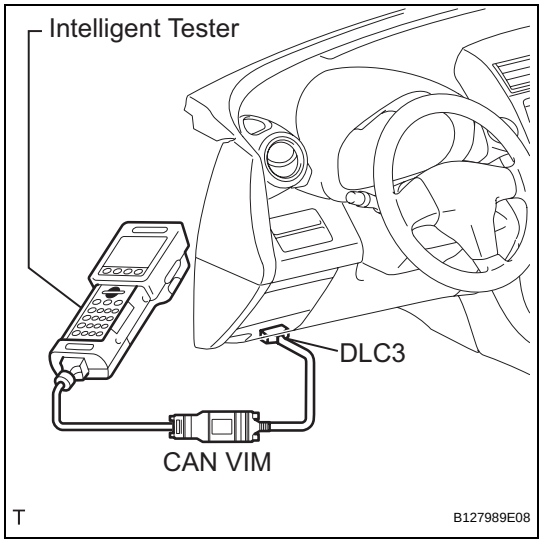


1. DESCRIPTION

(a) Sliding roof system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

The vehicle uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031-03 and matches the ISO 15765-4 format.



HINT:

Connect the cable of the intelligent tester to the DLC3, turn the ignition switch on and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF	54 to 69 Ω
CANH (6) - Body ground	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANL (14) - Body ground	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the following menu item: Body / Sliding Roof / DTC.
(d) Check the DTC(s).

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the following menu item: Body / Sliding Roof / DTC / Clear.
(d) Press the YES button.
(e) Check that the DTCs are cleared.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's Data List allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the Data List according to the display on the tester.

Sliding roof:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
CLOSE SW	Slide switch close signal / ON or OFF	ON: TILT UP switch is pressed OFF: TILT UP switch is not pressed	-
OPEN SW	Slide switch open signal / ON or OFF	ON: SLIDE OPEN switch is pressed OFF: SLIDE OPEN switch is not pressed	-
IG (MPX)	Ignition switch signal (MPX signal) / ON or OFF	ON: Ignition switch is ON OFF: Ignition switch is OFF	-
IG (DIRCT SIG)	Ignition switch signal (Direct signal) / ON or OFF	ON: Ignition switch is ON OFF: Ignition switch is OFF	-
KEY OFF PERMS	Key off permission / ON or OFF	ON: Ignition switch is ON OFF: Ignition switch is OFF	-
HALL IC1 STATUS	Sliding roof operating signal / NORMAL or LOCK	NORMAL: Sliding roof motor is operating LOCK: Sliding roof motor is not operating	-
HALL IC1 PULSE	Sliding roof operating signal / LO or HI	LO: Sliding roof motor is not operating HI: Sliding roof motor is operating	-
HALL IC2 STATUS	Sliding roof operating signal / NORMAL or LOCK	NORMAL: Sliding roof motor is operating LOCK: Sliding roof motor is not operating	-
HALL IC2 PULSE	Sliding roof operating signal / LO or HI	LO: Sliding roof motor is not operating HI: Sliding roof motor is operating	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's Active Test allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the ignition switch ON.

(c) Perform the Active Test according to the display on the tester.

Sliding roof ECU:

Item	Test Details	Diagnostic Note
SLIDE ROOF	Operate sliding roof CLS / UP CLS / UP: Sliding roof CLOSE or UP operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof OPN / DWN OPN / DWN: Sliding roof OPEN or DOWN operation occurs OFF: Sliding roof is not operating	-

DIAGNOSTIC TROUBLE CODE CHART

Sliding Roof System

DTC No.	Detection Item	Trouble Area	See page
B2341	Sensor (Motor) Failure	1. Sliding Roof Drive Gear Sub-assembly (sliding roof ECU) 2. Overhead Junction Block (sliding roof control switch) 3. Wire Harness	RF-11
B2342	Switch Failure	1. Sliding Roof Drive Gear Sub-assembly (sliding roof ECU) 2. Overhead Junction Block (sliding roof control switch) 3. Wire Harness	RF-15
B2343	Position Initialization Incomplete	1. Sliding Roof Drive Gear Sub-assembly (sliding roof ECU) 2. Overhead Junction Block (sliding roof control switch) 3. Wire Harness	RF-19
B2344	Position Failure	1. Sliding Roof Drive Gear Sub-assembly (sliding roof ECU) 2. Overhead Junction Block (sliding roof control switch) 3. Wire Harness	RF-11

ON-VEHICLE INSPECTION

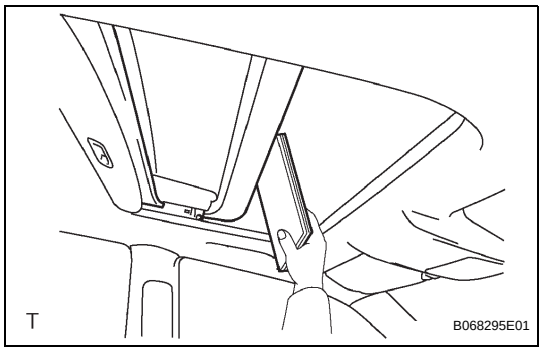
HINT:
When pressing the switch for 0.3 seconds or less, the roof glass moves but auto operation does not operate.

1. CHECK AUTO OPERATION

(a) Turn the ignition switch ON.
(b) When the roof glass is fully closed, press the SLIDE OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully opened.
(c) When the roof glass is fully tilted up, press the SLIDE OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully tilted down.
(d) When the roof glass is fully open, press the TILT UP switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully closed.
(e) When the roof glass is fully closed, press the TILT UP switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully tilted up.
(f) When the auto operation is operating, check that pressing any sliding roof control switch stops the roof glass operation.

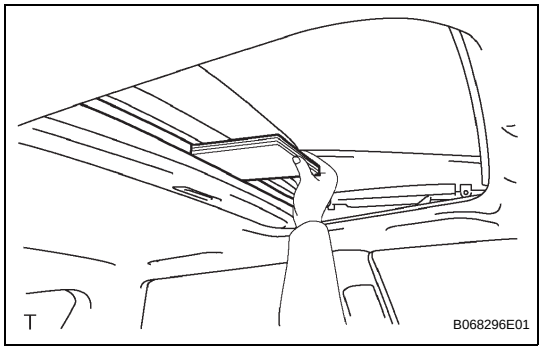
2. CHECK SLIDING ROOF OPERATION AFTER IGNITION SWITCH IS TURNED OFF

(a) Turn the ignition switch from ON to OFF, and check that the sliding roof operates. Then open the driver side door once, and check that the sliding roof does not operate.
(b) Turn the ignition switch from ON to OFF and wait for approximately 45 seconds. Check that the sliding roof does not operate.
(c) Operate the auto (SLIDE OPEN or TILT UP) operation. While the roof glass is in motion, turn the ignition switch from ON to OFF. Check that the auto operation continues until the roof glass opens or closes fully.



3. CHECK JAM PROTECTION FUNCTION

CAUTION:



- **Do not use a part of your body, for example, your hand, to check the jam protection.**
- **Do not allow anything to become caught in the sliding roof by accident in this procedure.**
- **Perform the inspection from the inside of the vehicle.**

NOTICE:

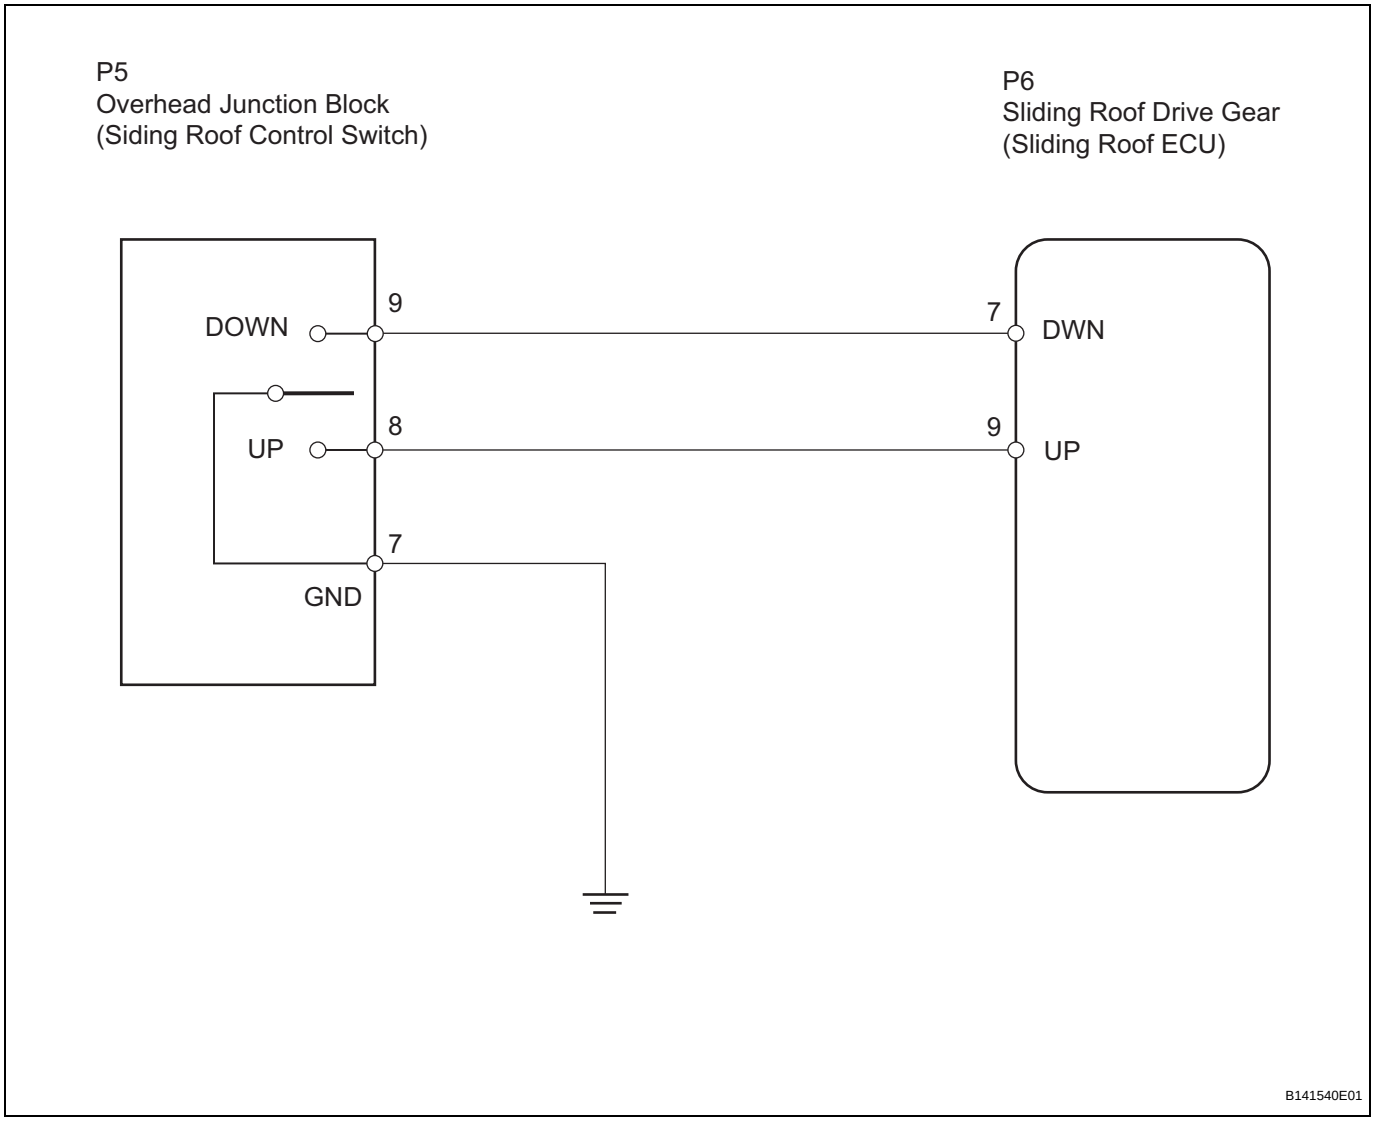
- **Do not use hard objects, such as a hammer, to avoid damage to the roof.**
- **If the jam protection does not operate, reset the sliding roof drive gear (motor).**

(a) When the sliding roof auto operation is operating and an object is caught between the vehicle body and glass, check that the roof glass opens a distance of 218 mm (8.58 in.) from the point of contact with the object, or opens fully if an opening distance of 218 mm (8.58 in.) is not available.

(b) When the TILT UP / DOWN function is operating, and an object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

DTC	B2341	Sensor (Motor) Failure

DTC	B2344	Position Failure



DESCRIPTION

When the sliding roof drive gear (sliding roof ECU) detects the motor's malfunction, and the sliding roof operation is stopped, DTC B2341 is output. When the sliding roof drive gear (sliding roof ECU) detects the gear's malfunction, and the sliding roof operation is stopped, DTC B2344 is output.

DTC No.	DTC Detection Condition	Trouble Area
B2341	Sensor (motor) Failure	• Sliding roof drive gear sub-assembly (sliding roof ECU) • Overhead junction block (sliding roof control switch) • Wire harness
B2344	Position Failure	• Sliding roof drive gear sub-assembly (sliding roof ECU) • Overhead junction block (sliding roof control switch) • Wire harness

RF

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the SLIDE OPEN and TILT UP switch (see page RF-9).
OK:
Auto operation operates normally with SLIDE OPEN and TILT UP switch.

NG → **Go to step 3**

OK

2	DELETE DTC

(a) Delete the DTC (see page RF-7).

NEXT

END

3	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

(a) Check that the sliding roof drive gear can be initialized (see page RF-4).
OK:
Sliding roof drive gear can be initialized.

NG → **Go to step 6**

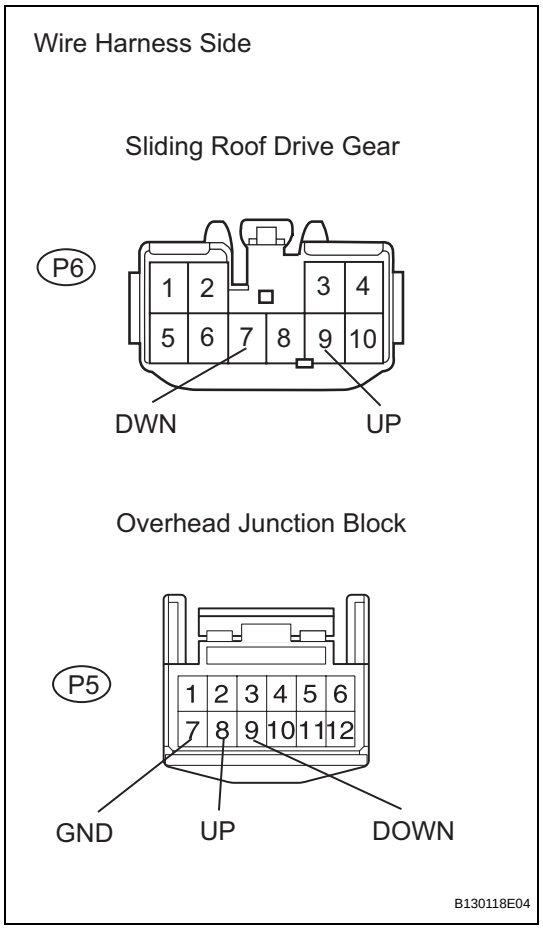
OK

4	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the SLIDE OPEN and TILT UP switch (see page RF-9).
OK:
Auto operation operates normally with SLIDE OPEN and TILT UP switch.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)**

OK



5	DELETE DTC

(a) Delete the DTC (see page RF-7).

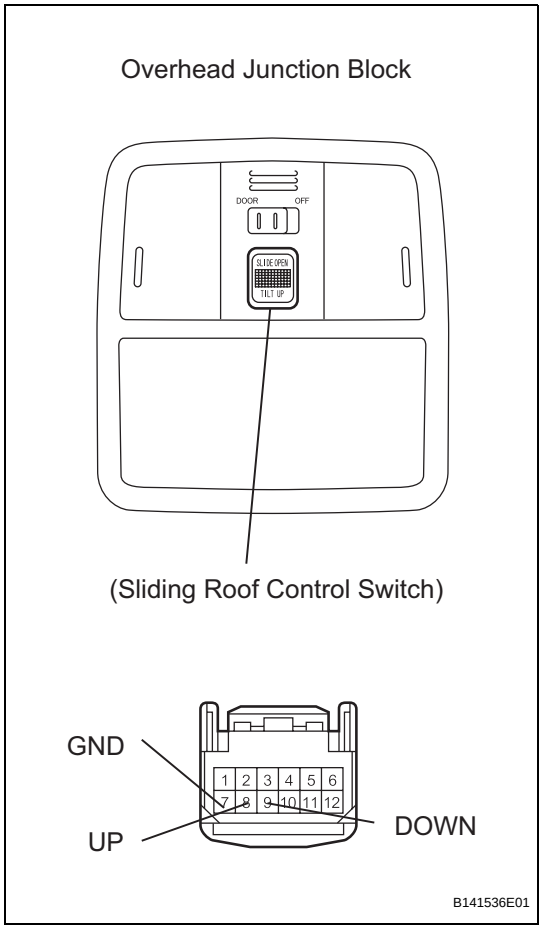
NEXT

END

6 CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - OVERHEAD JUNCTION BLOCK)

(a) Disconnect the P6 ECU connector.
(b) Disconnect the P5 junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
P6-7 (DWN) - P5-9 (DOWN)	Below 1 Ω
P6-9 (UP) - P5-8 (UP)	Below 1 Ω
P6-7 (GND) - body ground	Below 1 Ω
P6-7 (DWN) - Body ground	10 kΩ or higher
P6-9 (UP) - body ground	10 kΩ or higher

RF

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

7	**INSPECT OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)**

(a) Remove the overhead junction block.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
8 (UP) - 7 (GND)	TILT UP switch pushed	Below 1 Ω
8 (UP) - 7 (GND)	TILT UP switch not pushed	10 kΩ or higher
9 (DOWN) - 7 (GND)	SLIDE OPEN switch pushed	Below 1 Ω
9 (DOWN) - 7 (GND)	SLIDE OPEN switch not pushed	10 kΩ or higher

NG → **REPLACE OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

RF

DTC	B2342	Switch Failure

DESCRIPTION

This DTC is output when the sliding roof drive gear (sliding roof ECU) detects that the SLIDE OPEN or TILT UP switch in the overhead junction block is stuck for 30 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B2342	Sliding roof drive gear (sliding roof ECU) detects SLIDE OPEN or TILT UP switch in overhead junction block is stuck for 30 seconds or more	• Sliding roof drive gear sub-assembly (sliding roof ECU) • Overhead junction block (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (see page RF-11).

INSPECTION PROCEDURE

RF

1	READ VALUE OF INTELLIGENT TESTER (SLIDE OPEN AND TILT UP SWITCH)

(a) Use the Data List to check if the sliding roof control switch is functioning properly.

Sliding roof drive gear

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
Open Switch Failure (Current)	SLIDE OPEN switch condition (current) / Fail or Not Fail	Fail: SLIDE OPEN switch is stuck Not Fail: SLIDE OPEN switch is not stuck	-
Close Switch Failure (Current)	TILT UP switch condition (current) / Fail or Not Fail	Fail: TILT UP switch is stuck Not Fail: SLIDE OPEN switch is not stuck	-
Open Switch Failure (Past)	SLIDE OPEN switch condition (past) / Fail or Not Fail	Fail: SLIDE OPEN switch was stuck in past Not Fail: SLIDE OPEN switch was not stuck in past	-
Close Switch Failure (past)	TILT UP switch condition (past) / Fail or Not Fail	Fail: TILT UP switch was stuck in past Not Fail: TILT UP switch was not stuck in past	-

OK:
"Not Fail" appears on tester screen.

NG → **Go to step 4**

OK

2	CHECK SLIDING ROOF FUNCTION

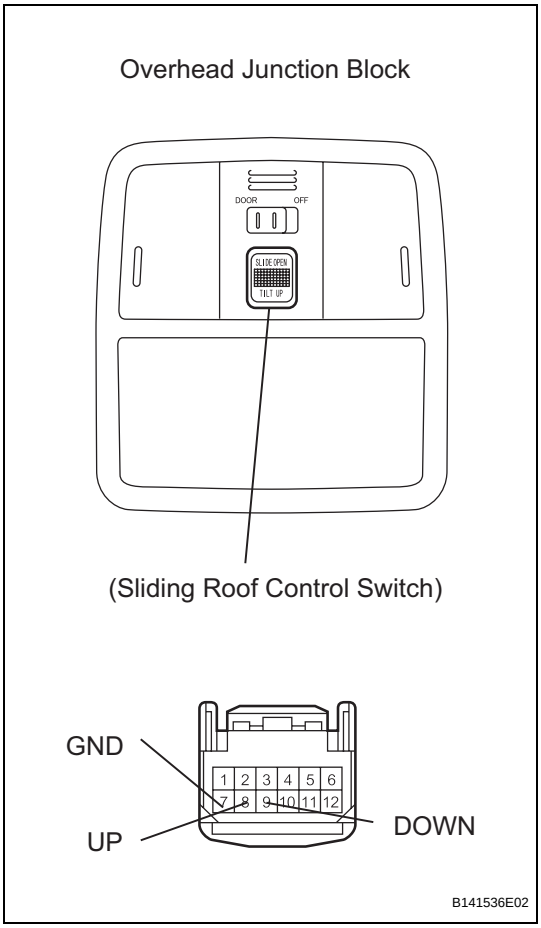
(a) Check the auto operation with the SLIDE OPEN and TILT UP switch (see page RF-9).

OK:
Auto operation operates normally with SLIDE OPEN and TILT UP switch.

NG → Go to step 7

OK

3	DELETE DTC



(a) Delete the DTC (see page RF-7).

NEXT

END

4	INSPECT OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)

RF

(a) Remove the overhead junction block.
(b) Measure the resistance of the switch.

Standard resistance

Tenter Connection	Condition	Specified Condition
8 (UP) - 7 (GND)	TILT UP switch pushed	Below 1 Ω
8 (UP) - 7 (GND)	TILT UP switch not pushed	10 kΩ or higher
9 (DOWN) - 7 (GND)	SLIDE OPEN switch pushed	Below 1 Ω
9 (DOWN) - 7 (GND)	SLIDE OPEN switch not pushed	10 kΩ or higher

OK → Go to step 10

NG

5	REPLACE OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)

(a) Temporarily replace the overhead junction block (sliding roof control switch) with a new or normally functioning one (see page RF-9).

NEXT

6	DELETE DTC

(a) Delete the DTC (see page RF-7).

NEXT

END

7	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

(a) Check that the sliding roof drive gear can be initialized (see page RF-4).
OK:
Sliding roof drive gear can be initialized.

NG → **Go to step 10**

OK

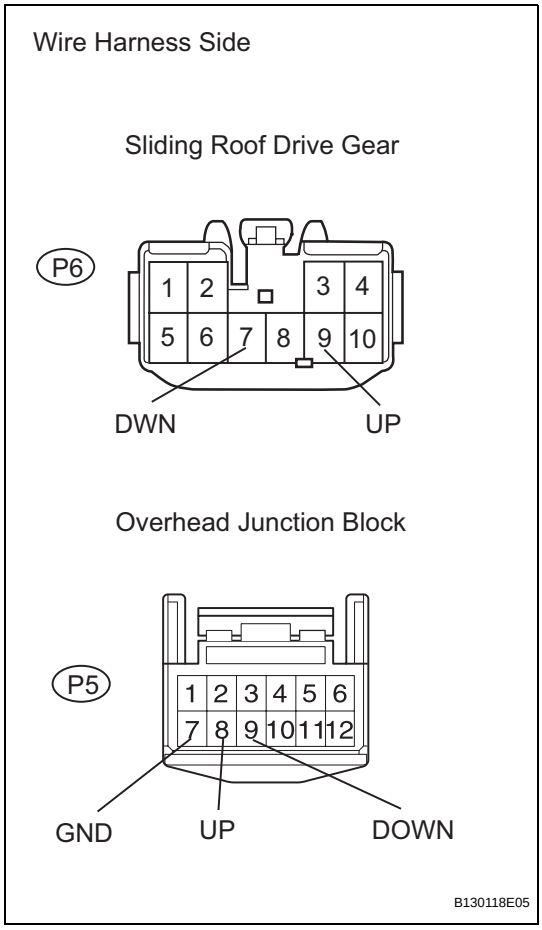
8	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the SLIDE OPEN and TILT OPEN switch (see page RF-9).
OK:
Auto operation operates normally with SLIDE OPEN and TILT UP switch.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)**

OK

9	DELETE DTC



(a) Delete the DTC (see page RF-7).

NEXT

END

RF

10	CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - OVERHEAD JUNCTION BLOCK)

(a) Disconnect the P6 ECU connector.
(b) Disconnect the P5 junction block connector.
(c) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
P6-7 (DWN) - P5-9 (DOWN)	Below 1 Ω
P6-9 (UP) - P5-8 (UP)	Below 1 Ω
P5-7 (GND) - Body ground	Below 1 Ω
P5-9 (DOWN) - Body ground	10 kΩ or higher
P5-8 (UP) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

RF

DTC	B2343	Position Initialization Incomplete

DESCRIPTION

This DTC is output when the sliding roof drive gear (sliding roof ECU) has not been initialized.

DTC No.	DTC Detection Condition	Trouble Area
B2343	Sliding roof drive gear (sliding roof ECU) has not been initialized	• Sliding roof drive gear sub-assembly (sliding roof ECU) • Overhead junction block (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (see page RF-11).

INSPECTION PROCEDURE

1	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)

(a) Check that the sliding roof drive gear can be initialized (see page RF-4).

OK:

Sliding roof drive gear can be initialized.

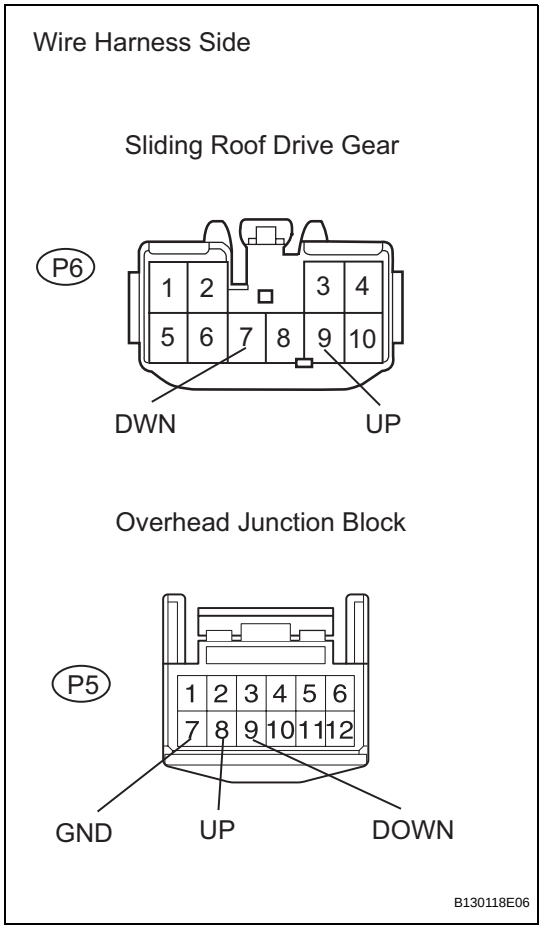
NG → **Go to step 3**

OK

2	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the SLIDE OPEN and TILT UP switch (see page RF-9).

OK:



Auto operation operates normally with SLIDE OPEN and TILT UP switch.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)**

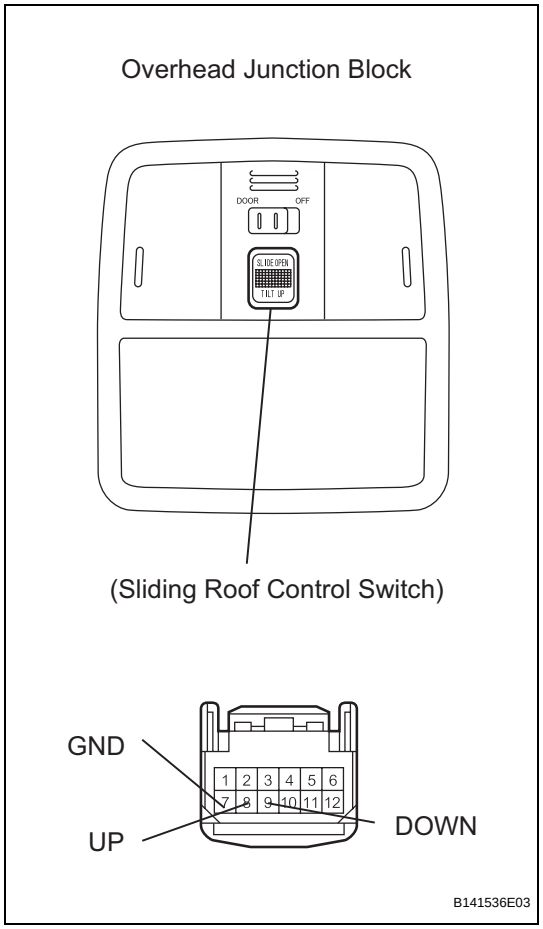
OK

END

3	CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - OVERHEAD JUNCTION BLOCK)

(a) Disconnect the P6 ECU connector.
(b) Disconnect the P5 junction block connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
P6-7 (DWN) - P5-9 (DOWN)	Below 1 Ω
P6-9 (UP) - P5-8 (UP)	Below 1 Ω
P5-7 (GND) - Body ground	Below 1 Ω
P5-9 (DOWN) - Body ground	10 kΩ or higher
P5-8 (UP) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

RF

4	INSPECT OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)

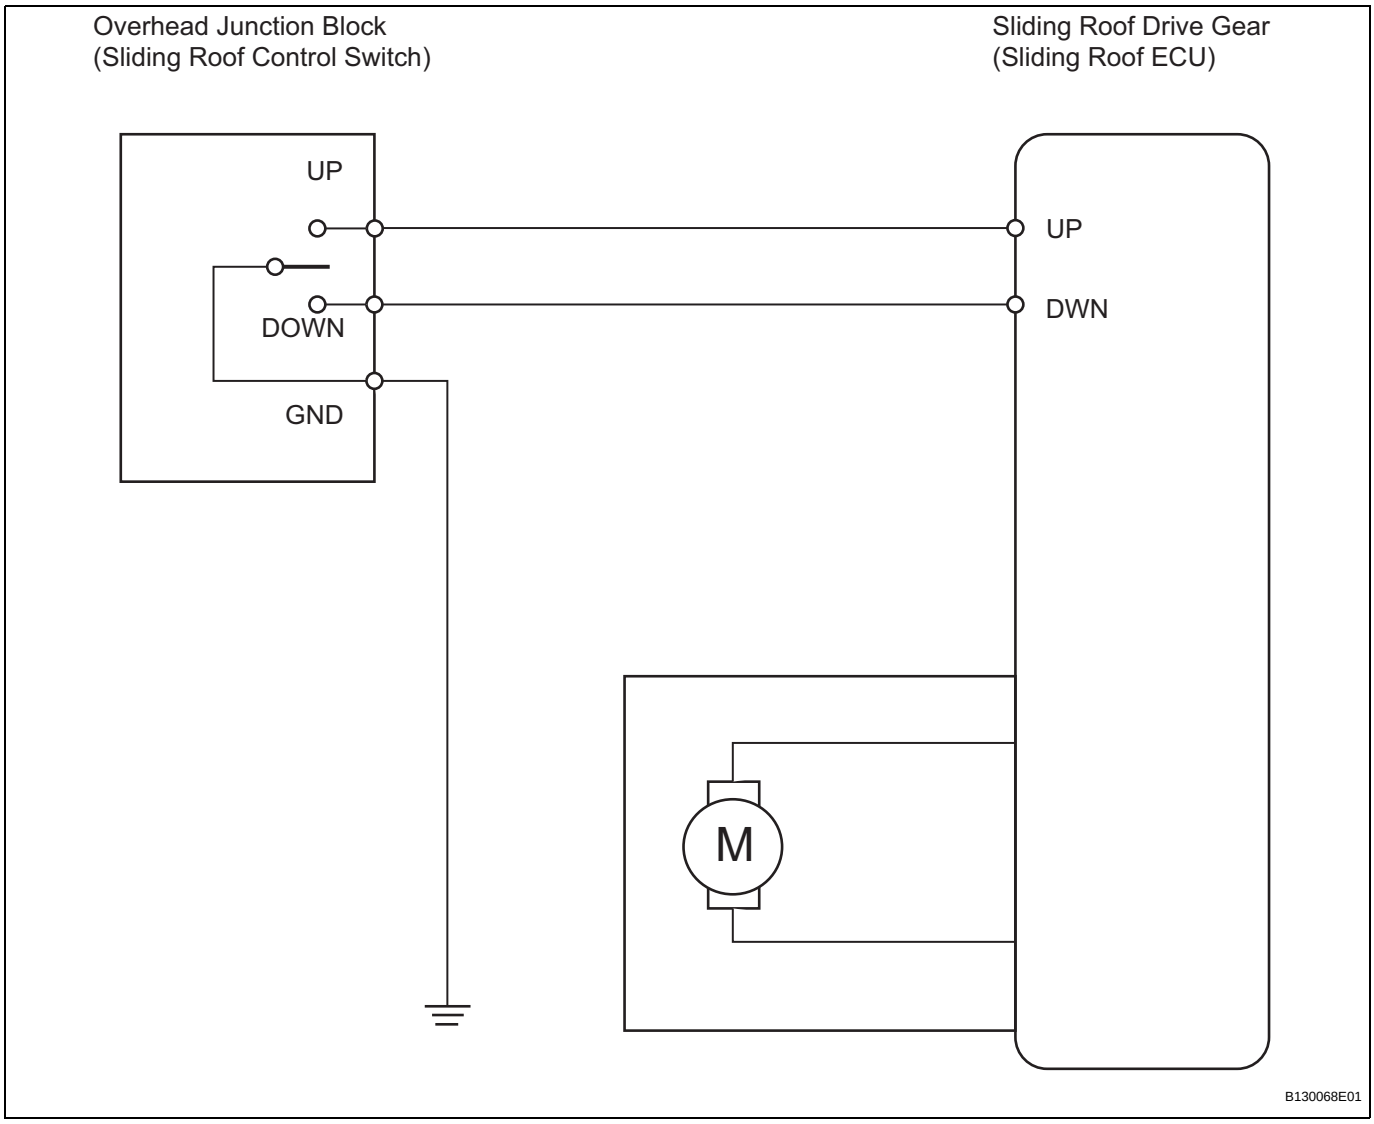
(a) Remove the overhead junction block.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
8 (UP) - 7 (GND)	TILT UP switch pushed	Below 1 Ω
8 (UP) - 7 (GND)	TILT UP switch not pushed	10 kΩ or higher
9 (DOWN) - 7 (GND)	SLIDE OPEN switch pushed	Below 1 Ω
9 (DOWN) - 7 (GND)	SLIDE OPEN switch not pushed	10 kΩ or higher

NG → **REPLACE OVERHEAD JUNCTION BLOCK (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF ECU)



RF

Sliding Roof Control Switch Circuit

DESCRIPTION

If either the sliding function or tilt function does not operate, there may be a malfunction in the sliding roof control switch circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the Active Test, use the intelligent tester to generate a control command, and then check that the sliding roof operates normally.

Sliding roof ECU

Item	Test Details	Diagnostic Note
SLIDE ROOF	Operate sliding roof OPN / DWN OPN / DWN: Sliding roof OPEN / DOWN operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof CLS / UP CLS / UP: Sliding roof CLOSE / UP operation occurs OFF: Sliding roof is not operating	-

OK:

Sliding roof operates normally.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY**

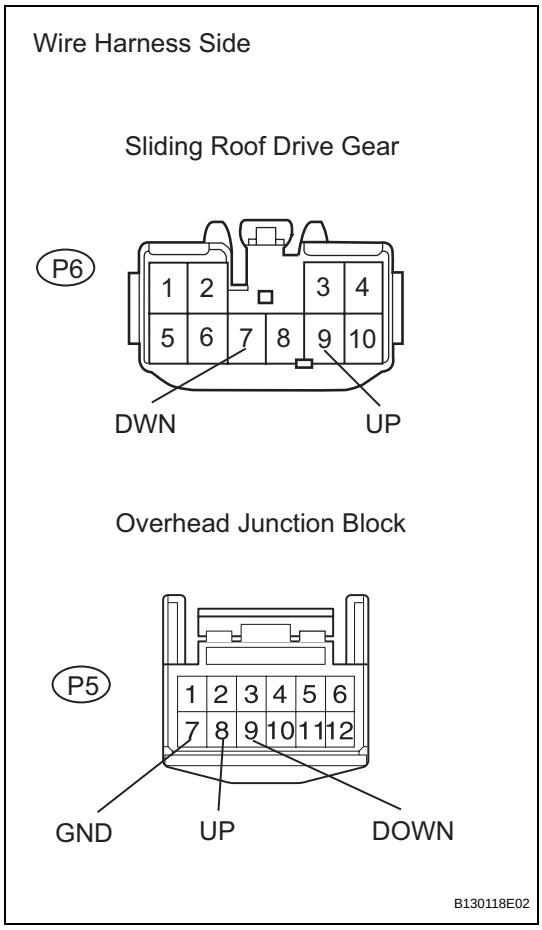
OK

2	READ VALUE OF INTELLIGENT TESTER (SLIDING ROOF CONTROL SWITCH)

(a) Use the Data List to check if the sliding roof switch is functioning properly.

Sliding roof ECU

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
CLOSE SW	Slide switch close signal / ON or OFF	ON: TILT UP switch is pressed OFF: TILT UP switch is not pressed	-
OPEN SW	Slide switch open signal / ON or OFF	ON: SLIDE OPEN switch is pressed OFF: SLIDE OPEN switch is not pressed	-



OK:

When the switch is operating, the intelligent tester should display as shown in the table.

OK → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY**

NG

3	CHECK WIRE HARNESS (OVERHEAD JUNCTION BLOCK - DRIVE GEAR AND BODY GROUND)

(a) Disconnect the P5 junction block connector.
(b) Disconnect the P6 drive gear connector.
(c) Measure the resistance of the wire harness side connectors.

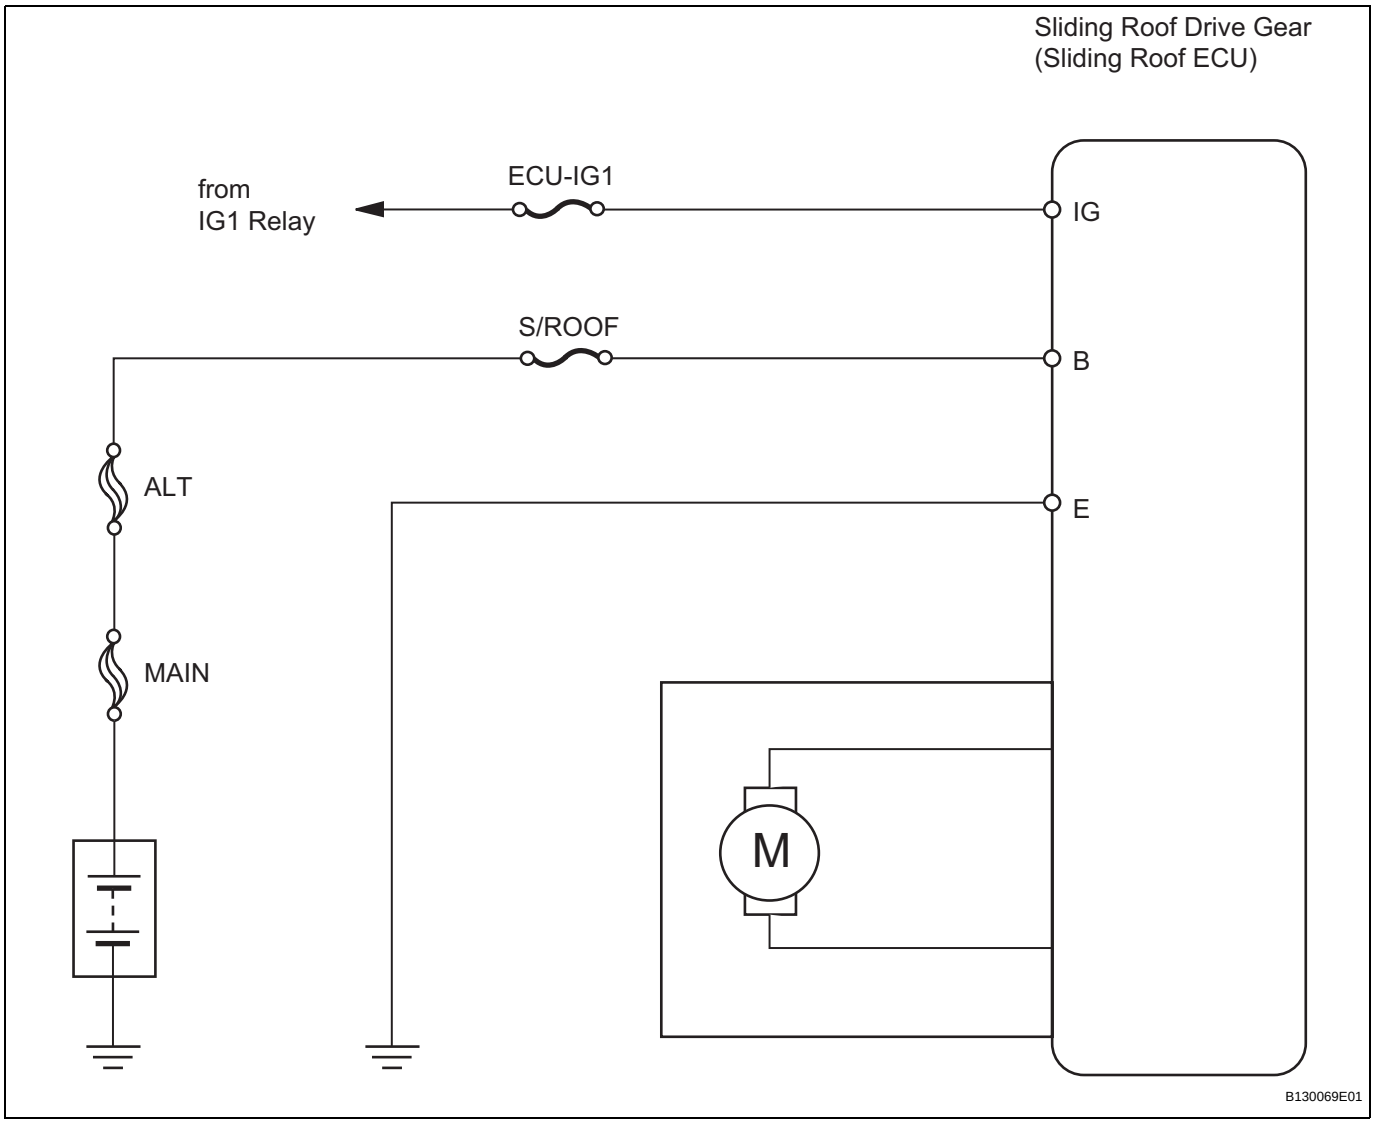
Standard resistance

Tester Connection	Specified Condition
P6-7 (DWN) - P5-9 (DOWN)	Below 1 Ω
P6-9 (UP) - P5-8 (UP)	Below 1 Ω
P5-7 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE OVERHEAD JUNCTION BLOCK



RF

Sliding Roof ECU Power Source Circuit

DESCRIPTION

If the sliding function and tilt function do not operate, there may be a malfunction in the sliding roof ECU power source circuit.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)

(a) Select the Active Test, use the intelligent tester to generate a control command, and then check that the sliding roof operates normally.

Sliding roof ECU

Item	Test Details	Diagnostic Note
SLIDE ROOF	Operate sliding roof OPN / DWN OPN / DWN: Sliding roof OPEN / DOWN operation occurs OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof CLS / UP CLS / UP: Sliding roof CLOSE / UP operation occurs OFF: Sliding roof is not operating	-

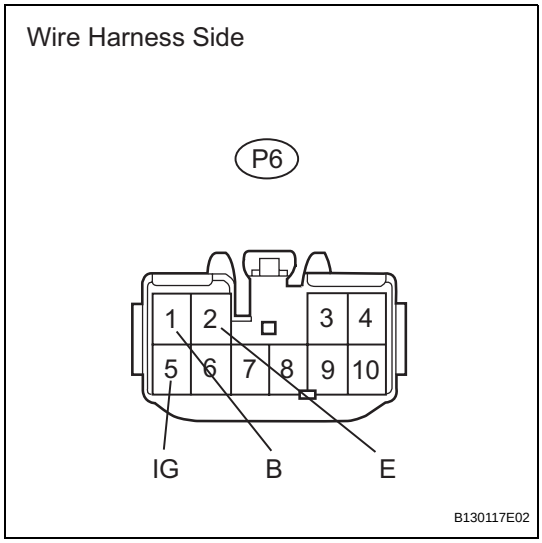
OK:
Sliding roof operates normally.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY**

OK

RF

2 INSPECT FUSE (S/ROOF, ECU-IG1)



(a) Remove the S/ROOF and ECU-IG1 fuses from the instrument panel junction block.
(b) Measure the resistance of the fuses.

Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - BODY GROUND)

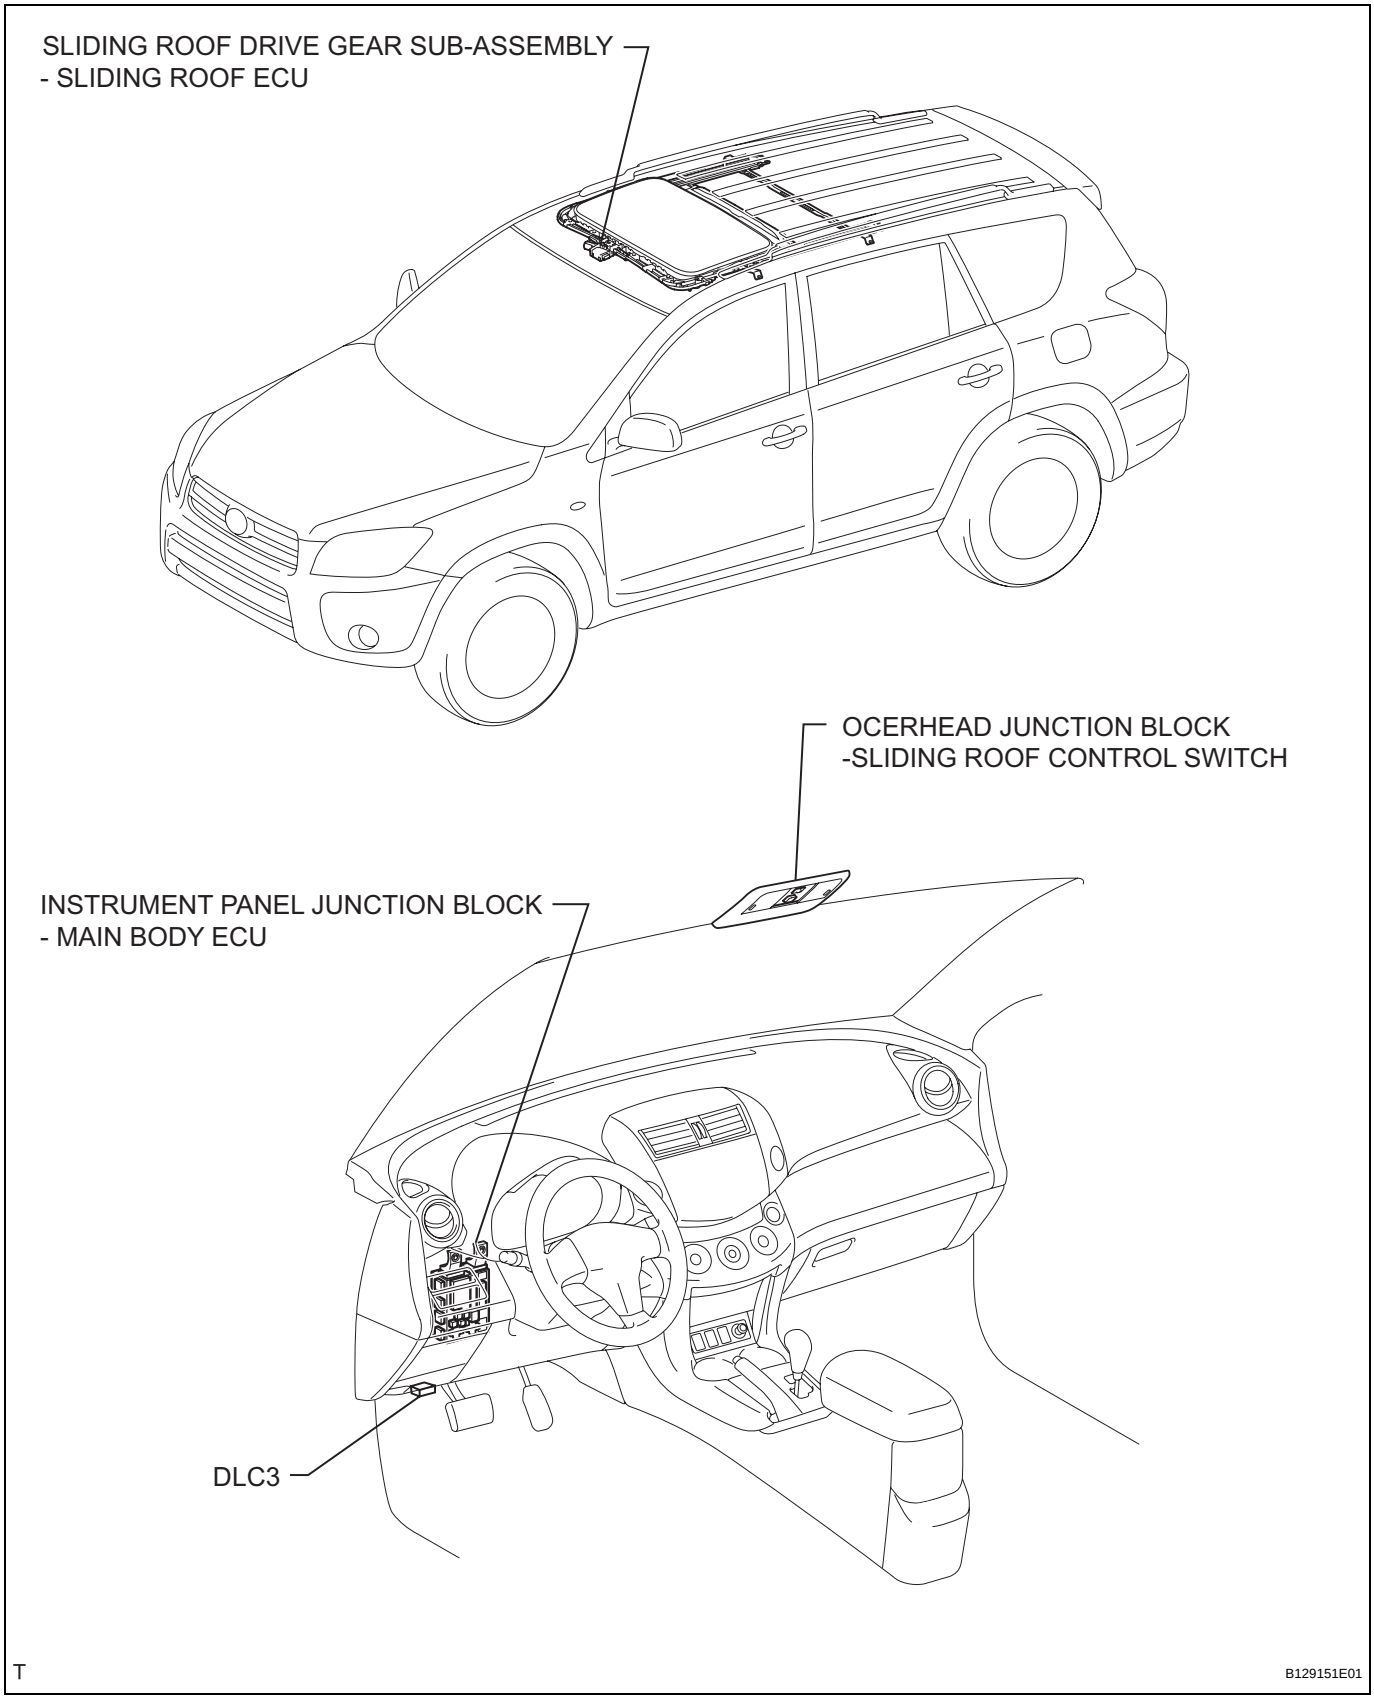
(a) Disconnect the P6 drive gear connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard voltage

Tester Connection	Condition	Specified Condition
P6-1 (B) - Body ground	Always	10 to 14 V
P6-5 (IG) - Body ground	Ignition switch OFF	Below 1 V
P6-5 (IG) - Body ground	Ignition switch ON	10 to 14 V

Standard resistance

Tester Connection	Specified Condition
P6-2 (E) - Body ground	Below 1 Ω



NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

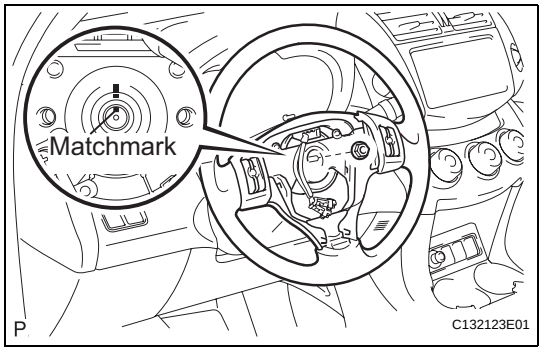
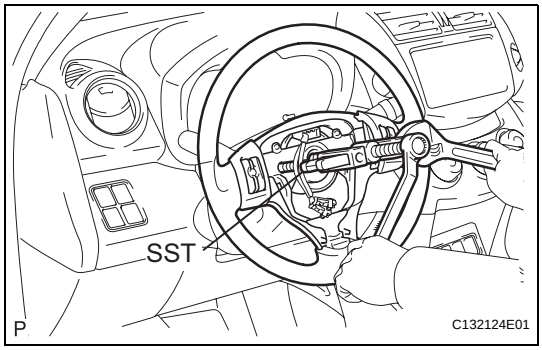
REMOVAL



CAUTION:
Some of these service operations affect the SRS airbag system. Read the precautionary notices concerning the SRS airbag system before servicing the steering column (see page RS-1).

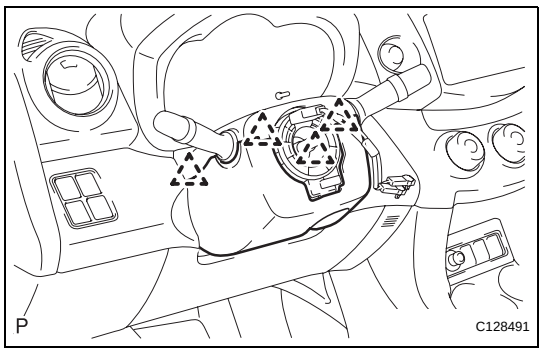
1. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**

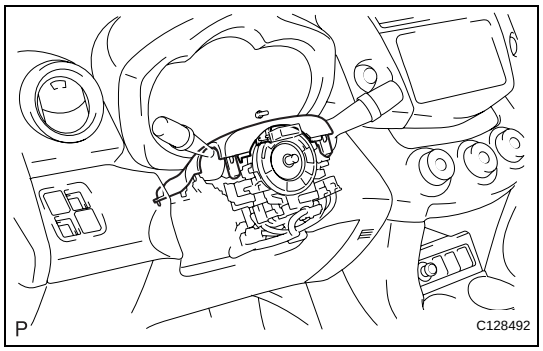
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.



3. **REMOVE STEERING PAD (See page RS-336)**

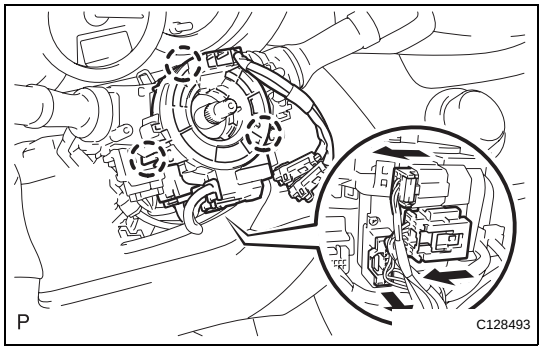
4. **REMOVE STEERING WHEEL ASSEMBLY**
   (a) Remove the nut and place matchmarks on the steering wheel and steering column.



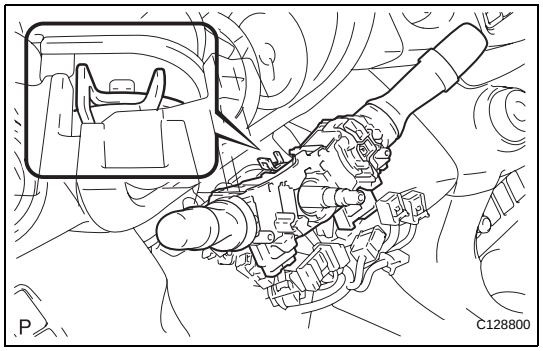


SR

   (b) Using SST, remove the steering wheel.
   SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)
   NOTICE:
   Apply a small amount of grease to the threads and tip of SST (center bolt) before use.



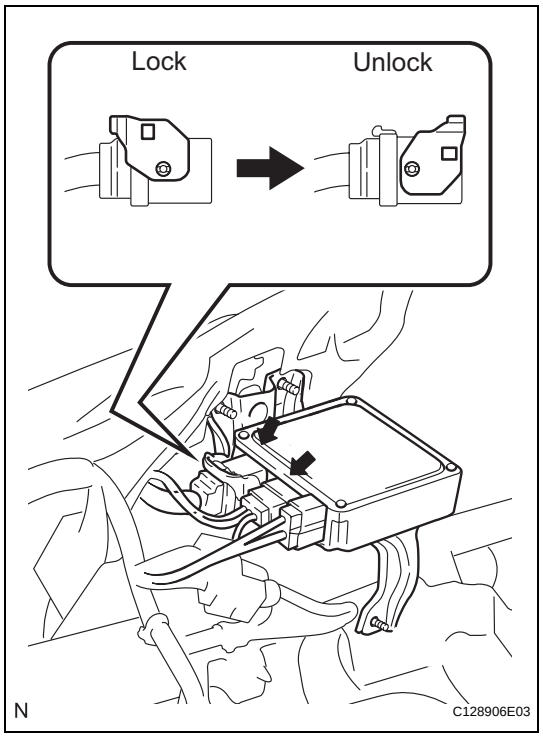
5. **REMOVE STEERING COLUMN COVER**
   (a) Detach the 4 claws, release the tilt lever and remove the lower steering column cover.



(b) Detach the claw and remove the upper steering column cover.

6. REMOVE SPIRAL CABLE SUB-ASSEMBLY

(a) Disconnect all connectors from the turn signal switch with spiral cable.

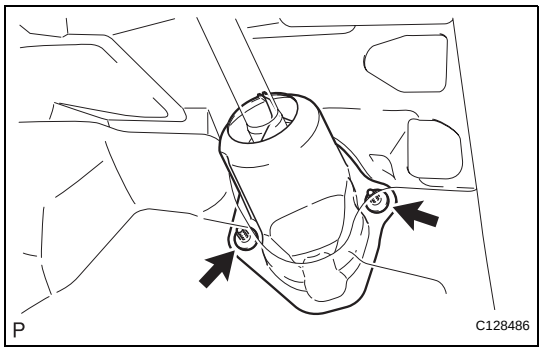


7. REMOVE COMBINATION SWITCH ASSEMBLY

(a) Detach the clamp shown in the illustration and remove the combination switch from the steering column.

8. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

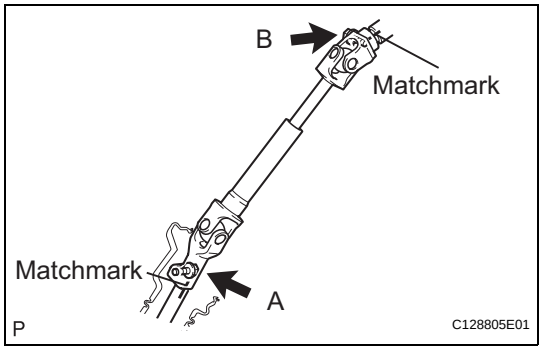
(a) Remove the instrument panel (see page IP-4).



9. DISCONNECT POWER STEERING ECU

(a) Detach the power steering motor wire harness and torque sensor wire harness clamps from the power steering ECU side.

(b) Disconnect the 2 steering column connectors from the power steering ECU.



10. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-20)

SR

11. REMOVE COLUMN HOLE COVER SILENCER SHEET

(a) Turn back the floor carpet, remove the 2 clips and remove the column hole cover silencer sheet.

12. REMOVE NO. 2 STEERING INTERMEDIATE SHAFT ASSEMBLY

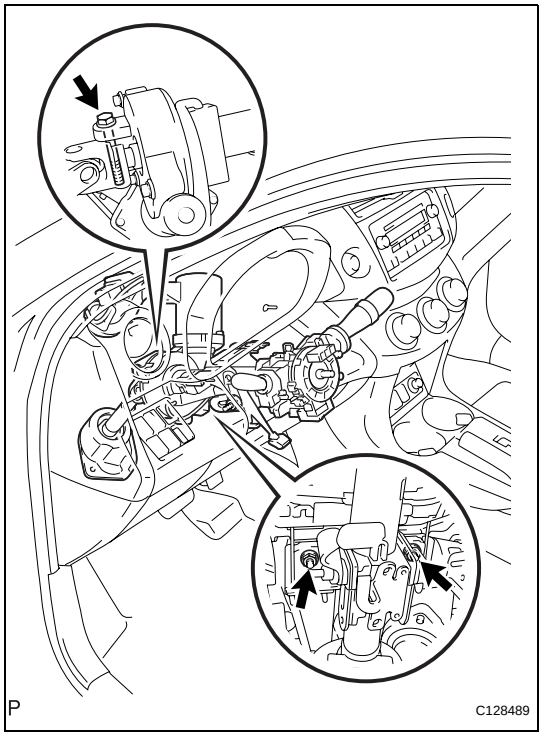
(a) Place matchmarks on the steering intermediate shaft and steering gear.

(b) Remove bolt A and detach the steering assembly from the steering gear.

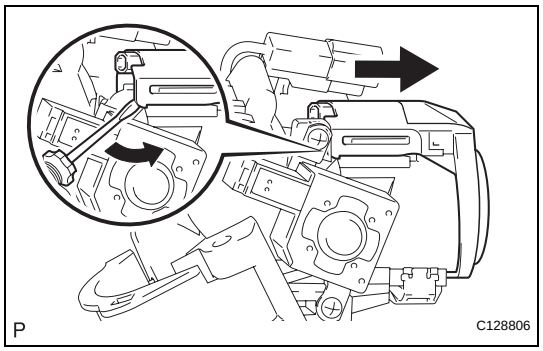
(c) Place matchmarks on the steering intermediate shaft and steering column.

(d) Remove bolt B and detach the steering intermediate shaft shaft from the steering column.

13. REMOVE BRAKE PEDAL SUPPORT ASSEMBLY



(a) Remove the brake pedal support (see page BR-12).



14. REMOVE STEERING COLUMN ASSEMBLY

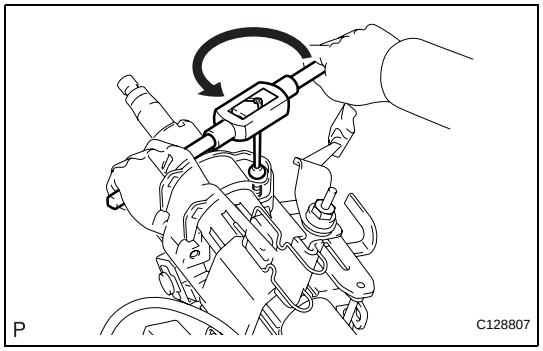
(a) Disconnect all connectors and detach all wire harness clamps from the steering column.

(b) Remove the bolt and 2 nuts and remove the steering column from the instrument panel reinforcement.

SR

DISASSEMBLY

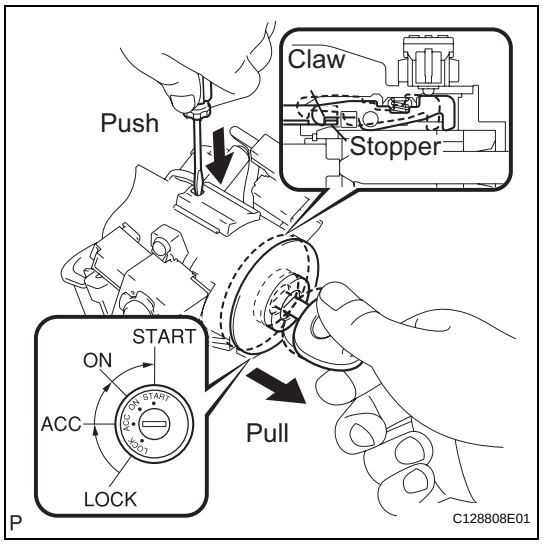
1. REMOVE TRANSPONDER KEY AMPLIFIER



(a) Detach the 2 claws and slide the transponder key amplifier in the direction shown in the illustration, to detach it from the steering column upper with switch bracket.

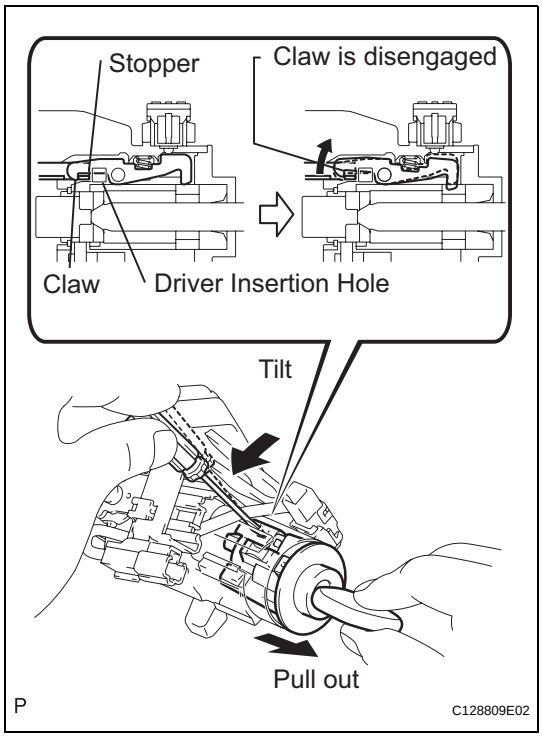
2. REMOVE STEERING COLUMN UPPER WITH SWITCH BRACKET ASSEMBLY

(a) Fix the steering post in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.



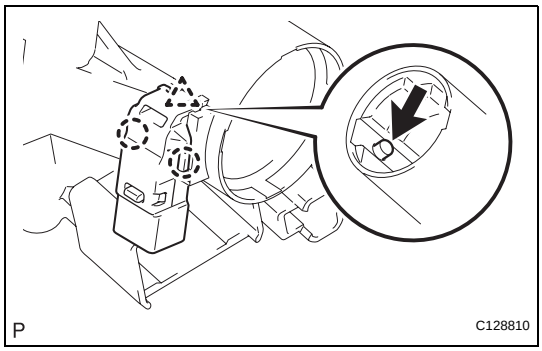
(b) Using a drill, drill a hole in each of the steering lock set bolt to insert a screw extractor.

(c) Using a screw extractor, remove the steering lock set bolt and remove the steering column upper with switch bracket and steering column clamp upper.



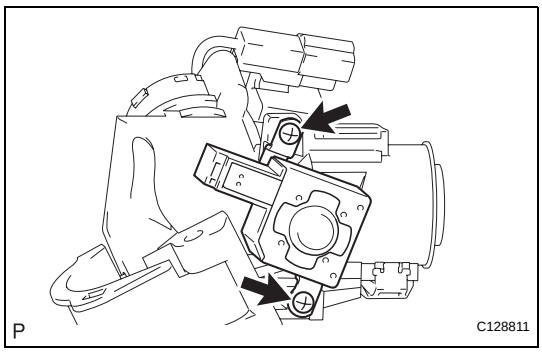
3. REMOVE IGNITION SWITCH LOCK CYLINDER ASSEMBLY

(a) Turn the ignition switch to ON (ACC).

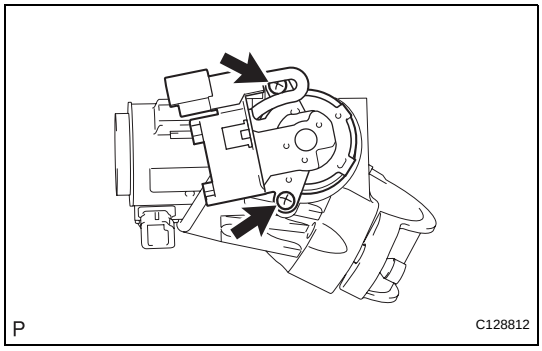


(b) Insert the tip of a screwdriver into the hole in the steering column bracket upper, as shown in the illustration, and pull the ignition switch lock cylinder out until its claw comes into contact with the stopper of the steering column bracket upper.
NOTICE:
Pull the ignition switch lock cylinder assembly out until its claw comes into contact with the stopper of the steering column bracket assembly upper. Otherwise, the following procedure cannot be conducted properly.

SR



(c) Insert the tip of a screwdriver into the hole in the steering column bracket and tilt it downward, as shown in the illustration, to disengage the claw of the ignition switch lock cylinder. Then pull out the ignition switch lock cylinder.

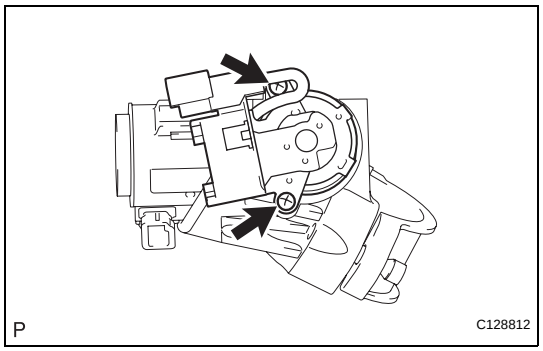


4. REMOVE UNLOCK WARNING SWITCH ASSEMBLY

(a) Push up the unlock warning switch center portion to disengage the 2 claws.
HINT:
Slide the unlock warning switch in the direction shown by the arrow in the illustration to remove it.

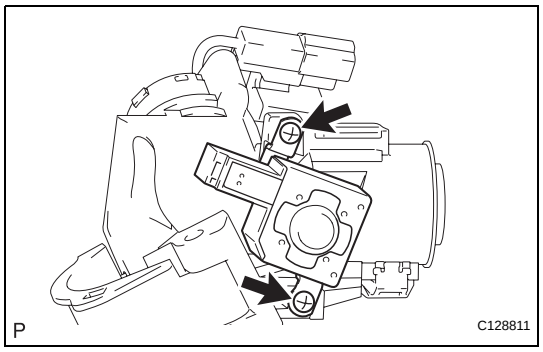
5. REMOVE KEY INTERLOCK SOLENOID

(a) for Automatic Transaxle:
(1) Remove the 2 screws and remove the key interlock solenoid from the steering column bracket upper.



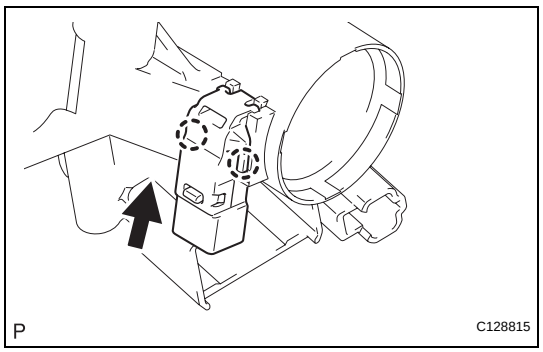
6. REMOVE IGNITION OR STARTER SWITCH ASSEMBLY

(a) Detach the 2 claws and remove the ignition (starter) switch from the steering column bracket upper.

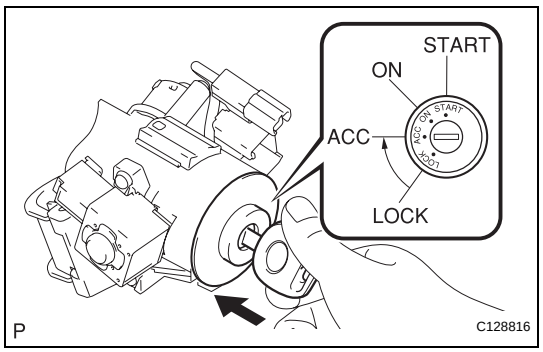


INSPECTION

1. **CHECK TORQUE SENSOR**
   (a) Check the torque sensor (see page PS-19).
2. **CHECK POWER STEERING MOTOR**
   (a) Check the power steering motor (see page PS-22).
3. **CHECK MOTOR ROTATION ANGLE SENSOR**
   (a) Check the motor rotation angle sensor (see page PS-25).

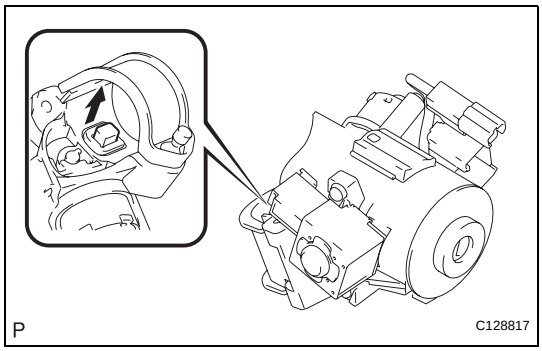


REASSEMBLY



1. **INSTALL IGNITION OR STARTER SWITCH ASSEMBLY**
   (a) Attach the 2 claws to install the ignition switch onto the steering column bracket upper.

2. **INSTALL KEY INTERLOCK SOLENOID**
   (a) for Automatic Transaxle:
      (1) Install the key interlock solenoid onto the steering column bracket upper with the 2 screws.



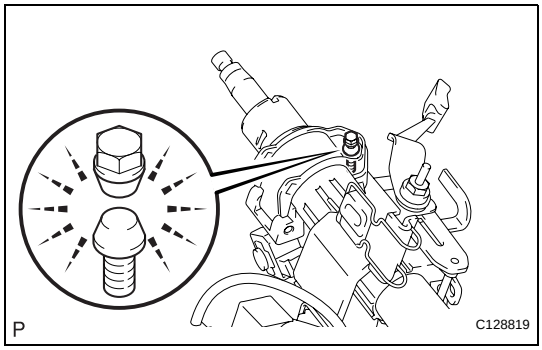
3. **INSTALL UNLOCK WARNING SWITCH ASSEMBLY**
   (a) Attach the 2 claws to install the unlock warning switch onto the steering column bracket upper.
   HINT:
   Slide the unlock warning switch in the direction shown by the arrow in the illustration to install it.
4. **INSTALL IGNITION SWITCH LOCK CYLINDER ASSEMBLY**
   (a) Turn the ignition switch to ON (ACC).

   (b) Install the ignition switch lock cylinder into the steering column bracket upper.
   (c) Make sure that the ignition switch lock cylinder is securely fixed onto the ignition switch lock cylinder.

SR

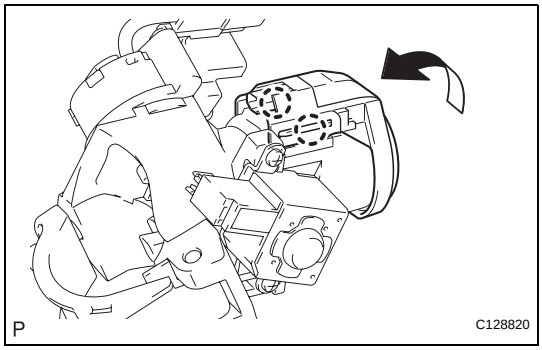
5. INSPECT STEERING LOCK OPERATION

(a) Remove the key and check that the steering lock function is activated.



(b) Insert the key, turn the ignition switch ON (ACC) and check that the steering lock function is deactivated.

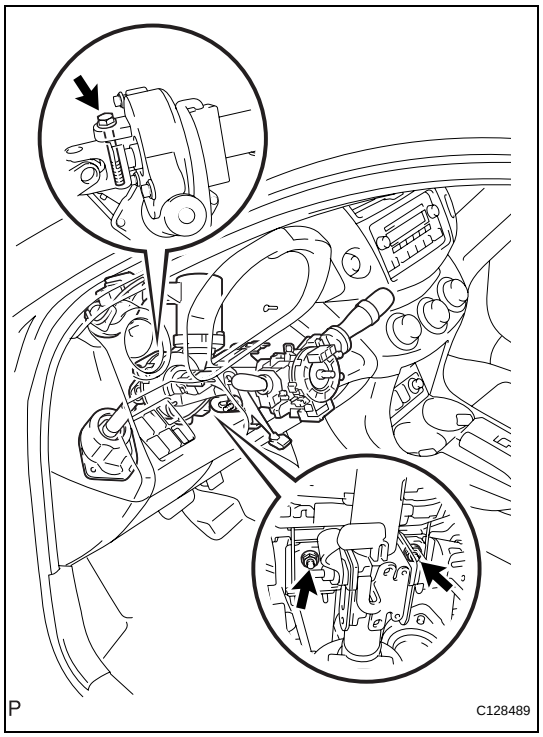
6. INSTALL STEERING COLUMN UPPER W/ SWITCH BRACKET ASSEMBLY



(a) Fix the steering column assembly in a vise between aluminum plates.

NOTICE:
Do not overtighten the vise.

SR

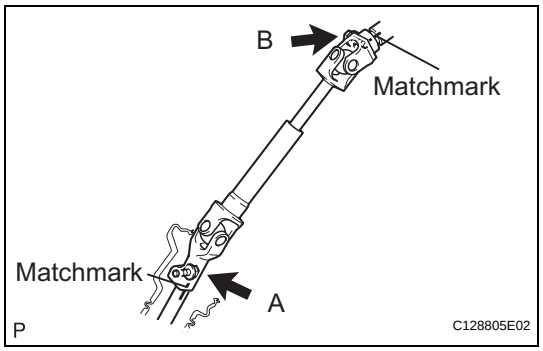


(b) Install the steering column upper with switch bracket and steering column clamp upper with new steering lock set bolt, and then tighten the bolts until their heads come off.

7. INSTALL TRANSPONDER KEY AMPLIFIER

(a) Attach the 2 claws and install the transponder key amplifier onto the steering column upper with the switch bracket.

INSTALLATION

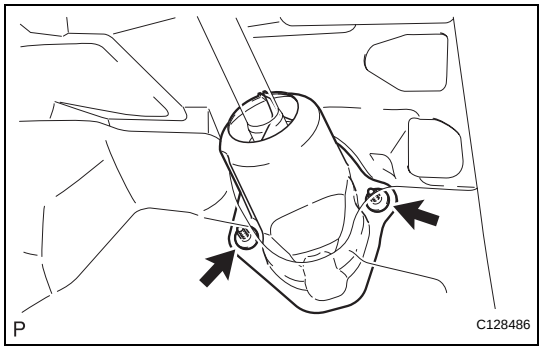


1. INSTALL STEERING COLUMN ASSEMBLY

(a) Install the steering column onto the instrument panel reinforcement with the 3 bolts.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

(b) Connect all the connectors and clamp the wire harnesses onto the steering column bracket.

2. INSTALL BRAKE PEDAL SUPPORT ASSEMBLY

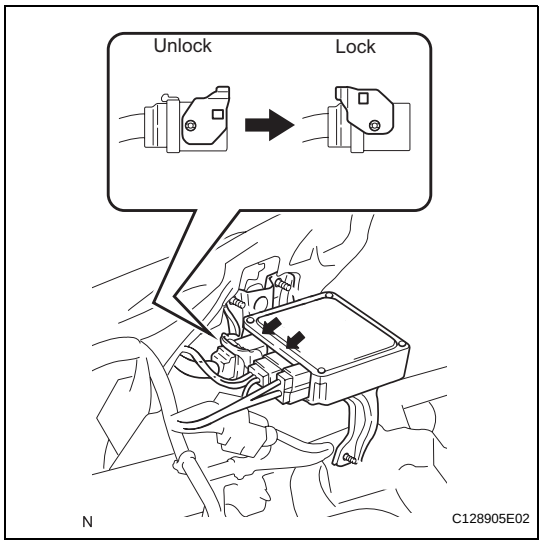


(a) Install the brake pedal support (see page BR-16).

3. INSTALL NO.2 STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Align the matchmarks on steering intermediate shaft and the steering sliding yoke and temporarily install them with bolt B.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

(b) Align the matchmarks on the steering sliding yoke and steering gear and install them with bolt A.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)



4. INSTALL COLUMN HOLE COVER SILENCER SHEET

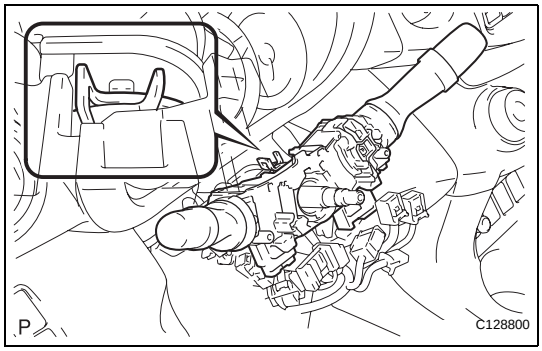
(a) Install the column hole cover plate with the 2 clips.

(b) Install the floor carpet.

5. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-25)

SR

6. CONNECT POWER STEERING ECU



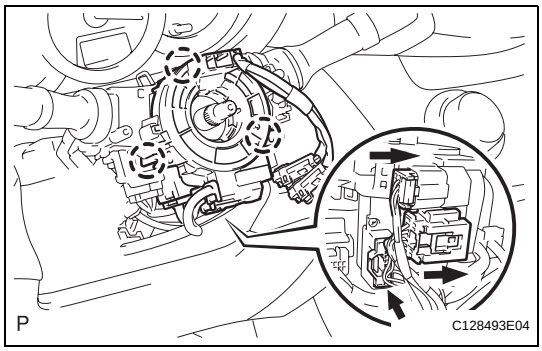
(a) Connect the 2 steering column connectors to the power steering ECU.

(b) Install the power steering motor wire harness and torque sensor wire harness clamps onto the side of the power steering ECU.

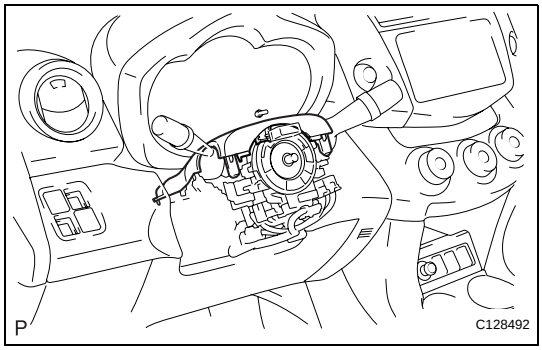
(c) Tilt the steering column assembly up and down to make sure that the power steering motor wire harness and torque sensor wire harness do not interfere with any components.

7. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

(a) Install the instrument panel (see page IP-9).



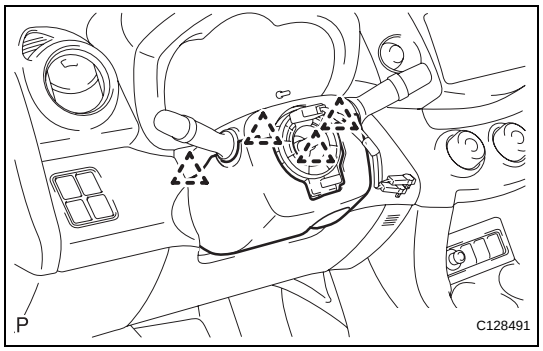
8. INSTALL COMBINATION SWITCH ASSEMBLY



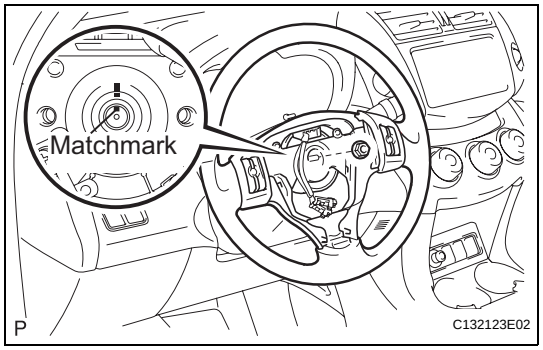
(a) Install the turn signal switch onto the steering column with the clamp.

9. INSTALL SPIRAL CABLE SUB-ASSEMBLY

(a) Install the spiral cable onto the turn signal switch.



(b) Connect all the connectors to the turn signal switch with spiral cable.



10. INSTALL STEERING COLUMN COVER

(a) Attach the claw to install the upper steering column cover.

SR

(b) Attach the 4 claws to install the lower steering column cover.

11. INSTALL STEERING WHEEL ASSEMBLY

(a) Align the matchmarks and install the steering wheel onto the steering column.

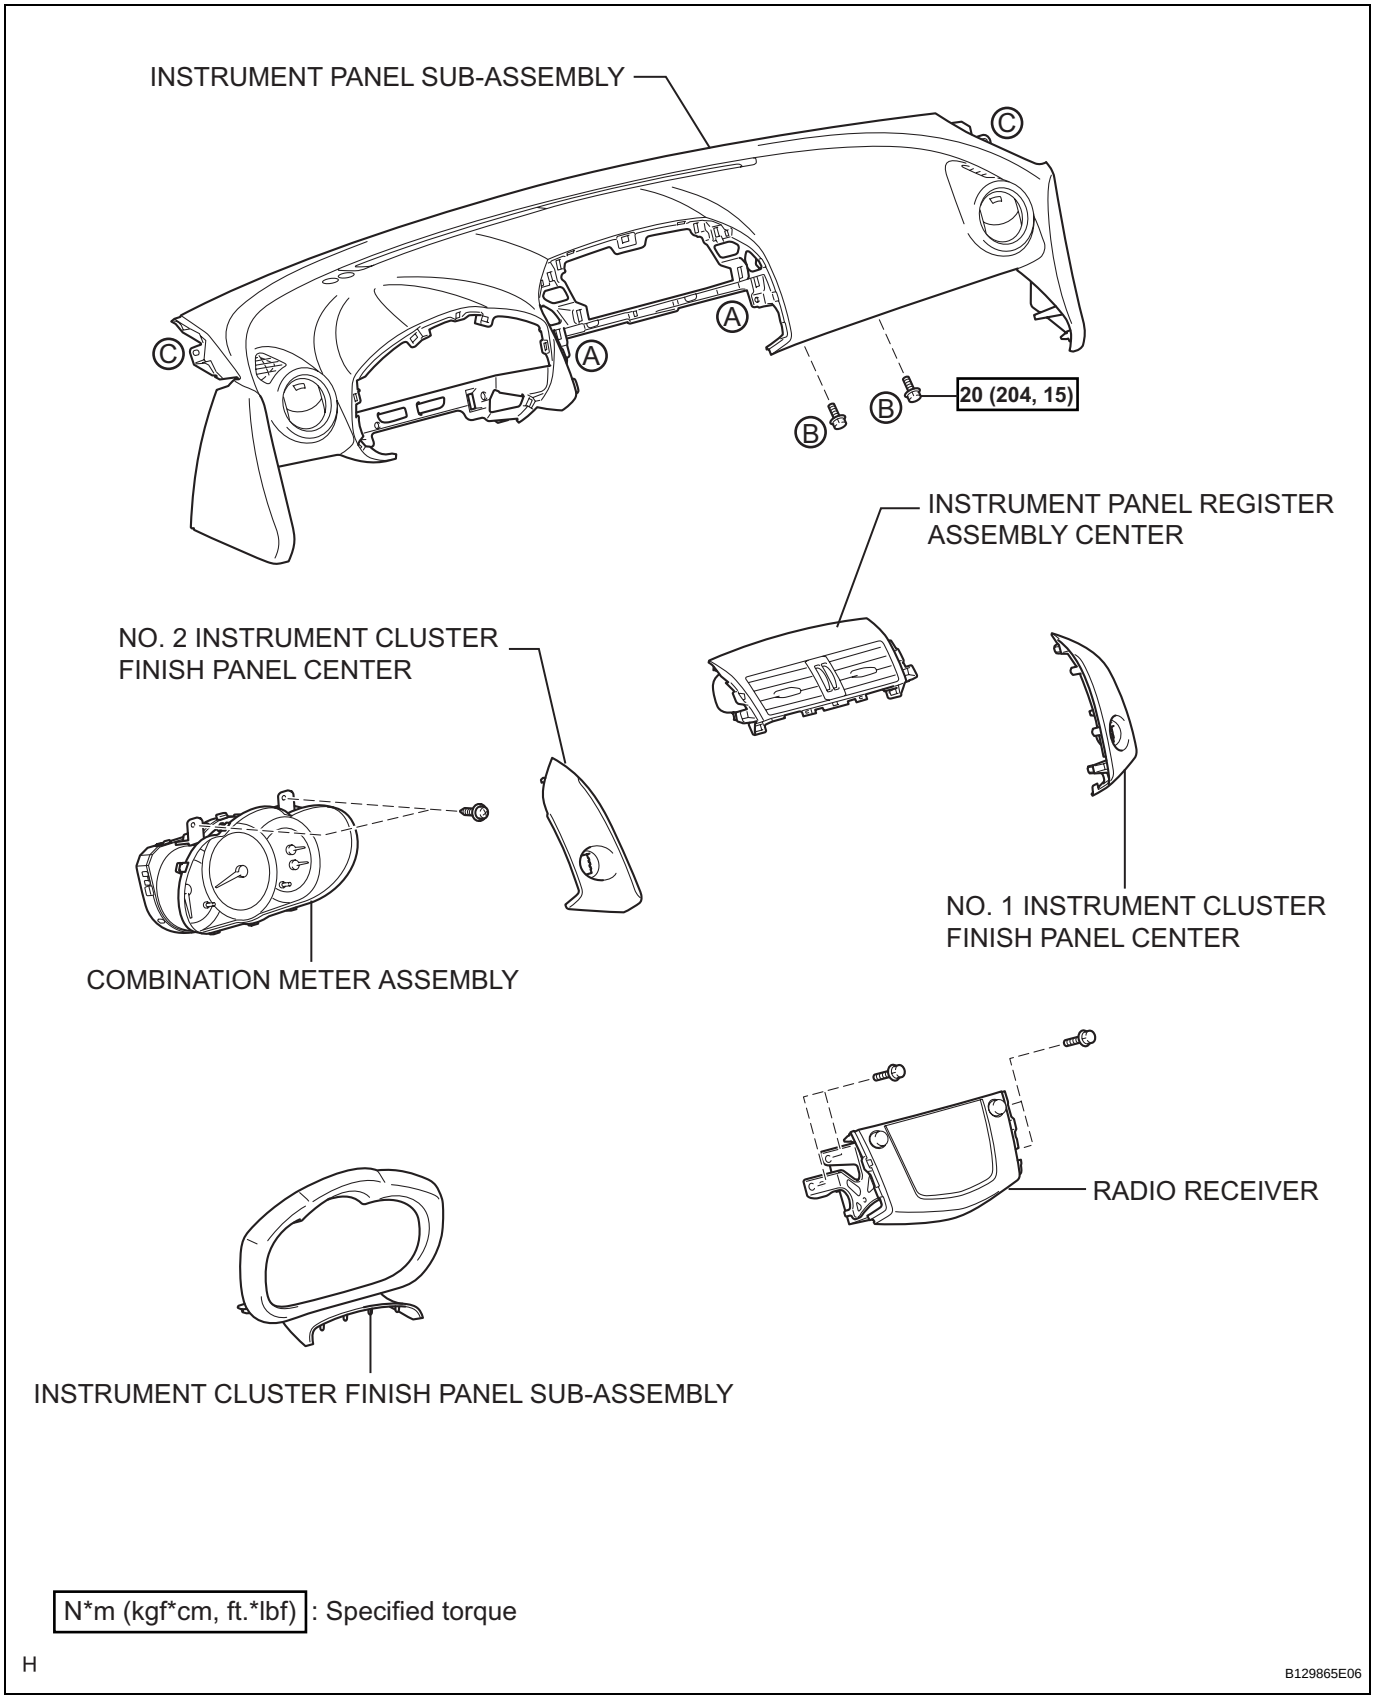
(b) Install the nut.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(c) Connect all the connectors to the spiral cable.

12. INSTALL STEERING PAD (See page RS-336)

13. POSITION FRONT WHEELS FACING STRAIGHT AHEAD

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



15. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (see page RS-52).

PROBLEM SYMPTOMS TABLE

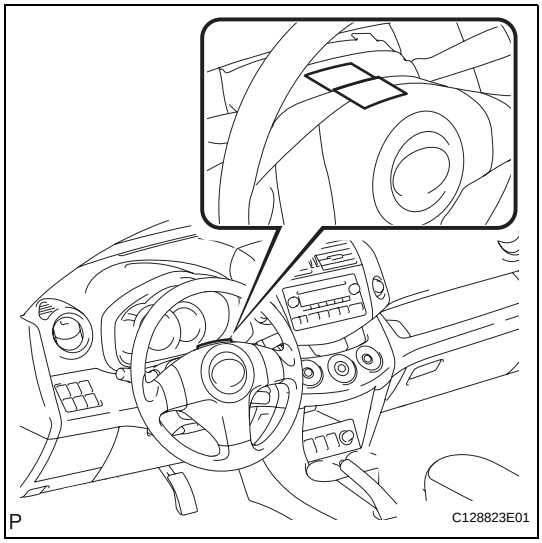
(2006/01-)
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Steering system

Symptom	Suspected Area	See page
Hard steering	1. Front tires (Improperly inflated or unevenly worn)	TW-1
	2. Front wheel alignment (Incorrect)	SP-3
	3. Front suspension (Lower ball joint)	SP-27
	4. Steering intermediate shaft	SR-11
	5. Steering column	SR-11
	6. Steering gear	PS-42
	7. Power steering ECU	PS-46
Poor return	1. Front tires (Improperly inflated or unevenly worn)	TW-1
	2. Front wheel alignment (Incorrect)	SP-3
	3. Steering column	SR-11
	4. Steering gear	PS-42
	5. Power steering ECU	PS-46
No free play or excessive play	1. Steering intermediate shaft	SR-11
	2. Steering gear	PS-42
Knocking (or clunking) sound occurs when steering wheel turned while power steering in operation	1. Steering intermediate shaft	SR-11
	2. Front suspension (Lower ball joint)	SP-27
	3. Front axle hub (Hub bearing)	AH-7
	4. Steering gear	PS-42
Friction sound occurs when steering wheel turned during low speed driving	1. Power steering motor	SR-11
	2. Steering column	SR-11
High-pitched sound (squealing sound) occurs when steering wheel turned slowly with vehicle stopped	1. Power steering motor	SR-11
Steering wheel vibrates and noise occurs when steering wheel turned while vehicle stopped	1. Power steering motor	SR-11
	2. Steering column	SR-11

ON-VEHICLE INSPECTION

1. CHECK STEERING WHEEL FREE PLAY



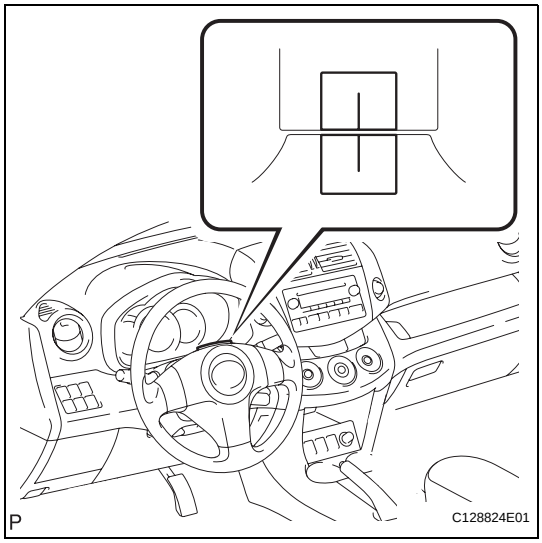
(a) Stop the vehicle and align the tires facing straight ahead.

(b) Turn the steering wheel gently right and left, and check the steering wheel free play.

Maximum free play:
30 mm (1.18 in.)

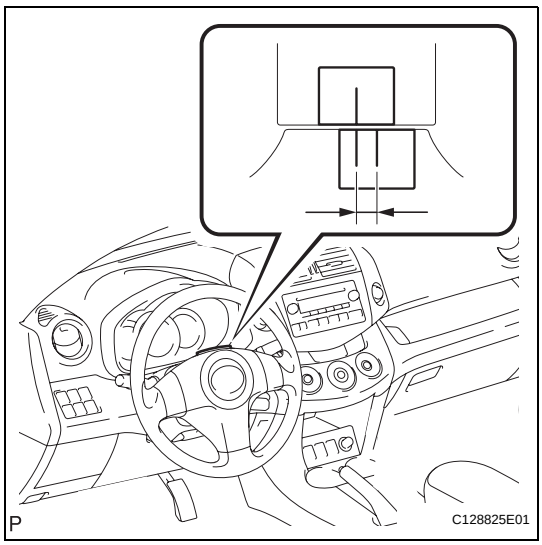
If the free play exceeds the maximum, replace the steering intermediate shaft sub-assembly or steering gear.

SR



REPAIR

1. CORRECT STEERING OFF CENTER



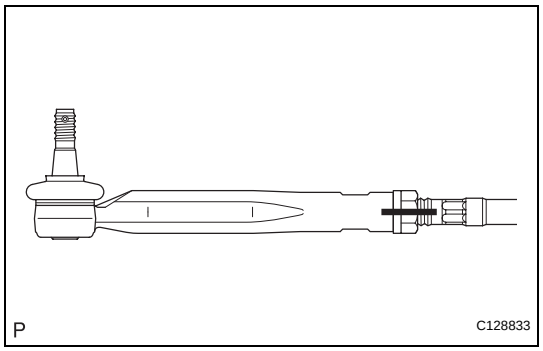
(a) Check whether the steering wheel is off-center.

(1) Apply masking tape to the top center of the steering wheel and the upper steering column cover.

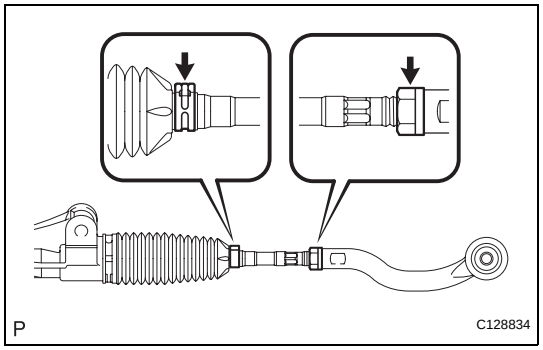
(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 56 km/h (35 mph), holding the steering wheel to maintain the course.

(3) Draw a line on the masking tape, as shown in the illustration.

(4) Turn the steering wheel to the center position.
HINT:
Look at the upper surface of the steering wheel, the steering spokes and the SRS airbag line to determine the center position.



(5) Draw another line on the masking tape on the steering wheel, as shown in the illustration.



(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.

(7) Convert the measured distance to the steering angle.
HINT:
- Measured distance of 1 mm (0.04 in.) = Approximately 1 degree steering angle.
- Make a note of the steering angle.

(b) Adjust the steering angle.

SR

(c) For the following 2steps, carry out the RH and LH procedures separately.
  (1) Draw a line on the tie rod and rack end where it can easily be seen.
  (2) Using a paper gauge, measure the distance between the tie rod end and the rack end screw.
  (3) Remove the RH and LH boot clips from the rack boots.
  (4) Loosen the RH and LH lock nuts.
  (5) Turn the RH and LH rack ends by the same amount (but in opposite directions) in accordance with the steering angle.
  HINT:
  Electronic power steering: 1 turn (360°) of rack end (1.5 mm (0.059 in.) horizontal movement) - 10.8° of steering angle.
  (6) Tighten the RH and LH lock nuts.
  Torque: 88 N*m (897 kgf*cm, 65 ft.*lbf)
  NOTICE:
  Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is less than 1.5 mm (0.059 in.).
  (7) Install the RH and LH boot clips.

STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM

(a) Handling precautions for SRS airbag system (see page RS-1).

2. HANDLING PRECAUTIONS FOR STEERING COLUMN

(a) When handling the steering column assembly.

(1) Avoid any impact to the steering column assembly, especially to the motor or the torque sensor. Replace it with a new one if it is dropped or subjected to any severe impacts.

(2) Do not pull the wire harness when moving the steering column assembly.

(3) When the steering column assembly or other steering-related parts have been removed and either reinstalled or replaced, perform steering center point adjustment (zero point calibration).

(b) When disconnecting or reconnecting the connectors.

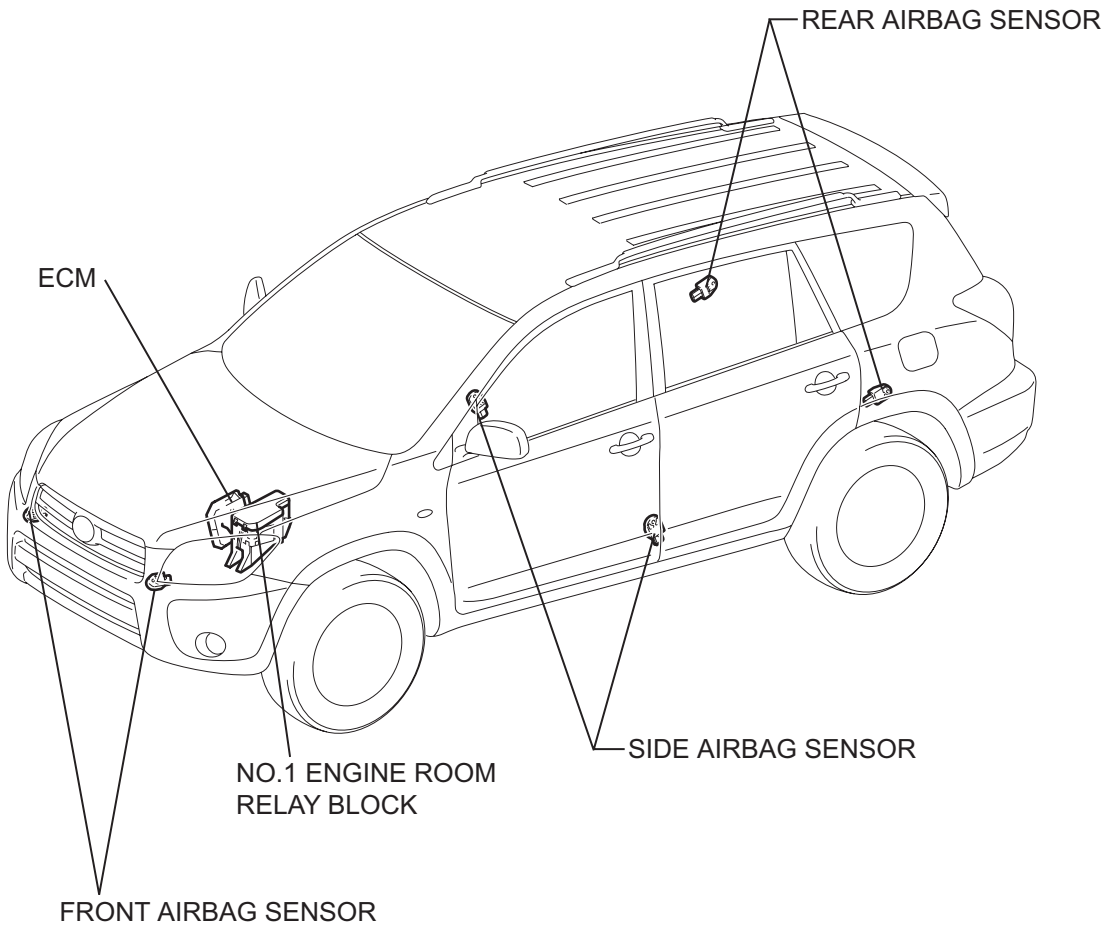
(1) When disconnecting connectors related to the electronic motor power steering system, turn the ignition switch on (IG) (the engine is stopped), center the steering wheel, turn the ignition switch off, and then disconnect the connectors.

(2) When reconnecting connectors related to the electronic motor power steering system, make sure that the ignition switch is turned off, center the steering wheel and then turn the ignition switch on (IG) (the engine is stopped).

NOTICE:

Do not turn the push start switch on (IG) without the steering wheel being centered.

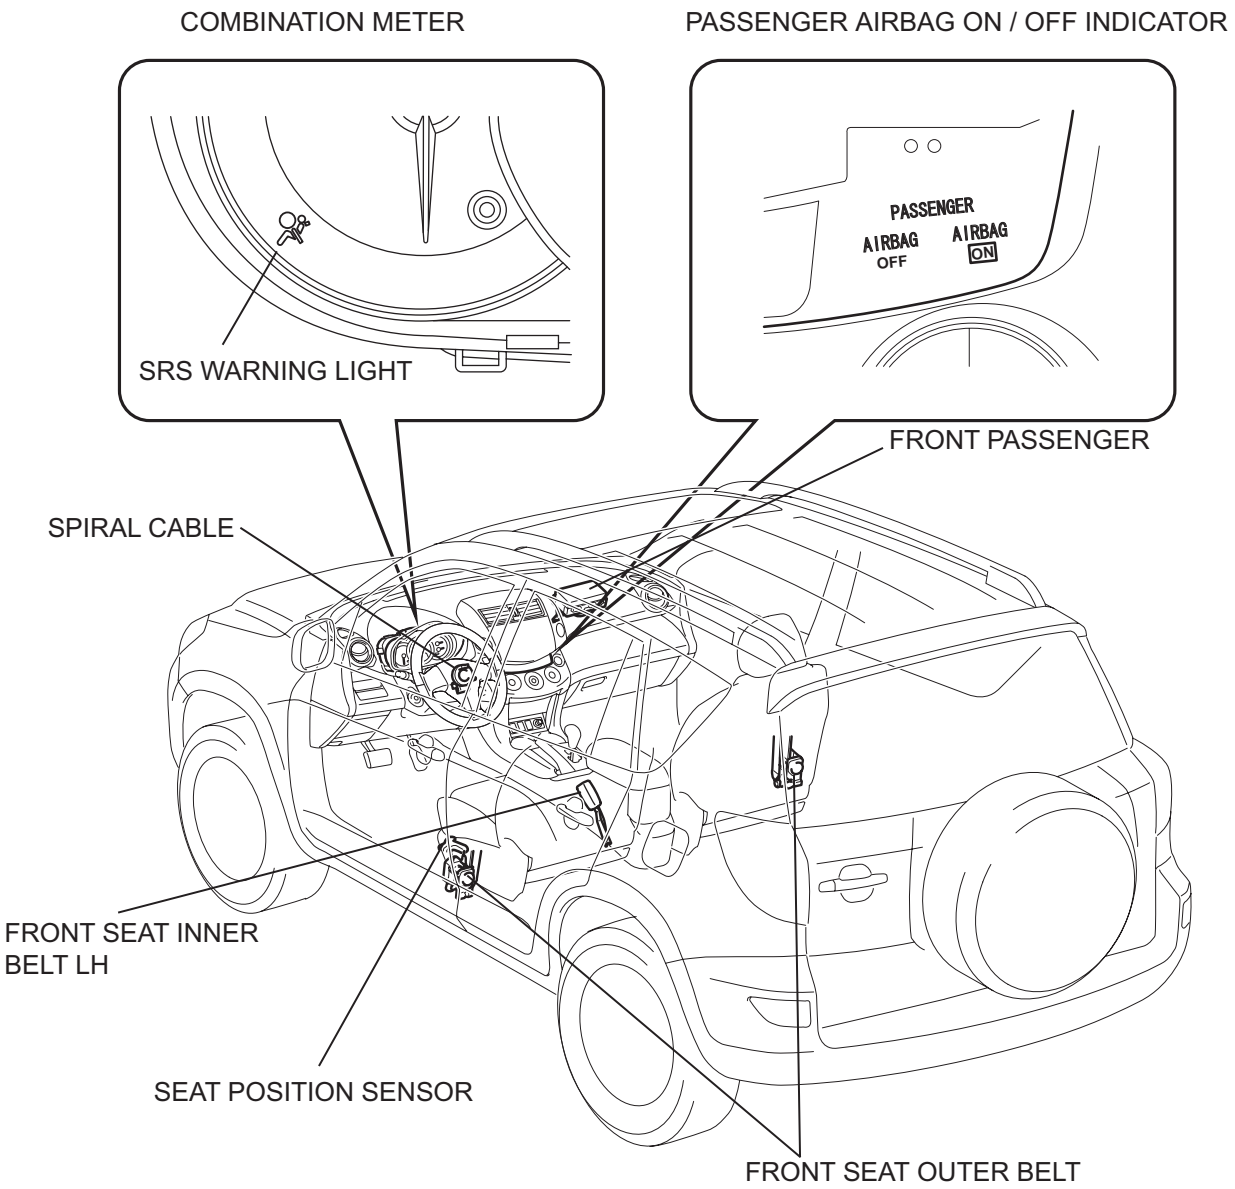
(3) If the above operations are not carried out correctly, the steering center point (zero point) will deviate, causing a difference in steering effort between right and left turns. If there is a difference in the steering effort between right and left turns, perform the steering center point adjustment (zero point calibration).



PROBLEM SYMPTOMS TABLE

(2005/11-2006/01)
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Steering system



Symptom	Suspected Area	See page

SYSTEM DIAGRAM

RS

SYSTEM DESCRIPTION

1. GENERAL

(a) In conjunction with an impact absorbing structure for a frontal collision, the SRS (Supplemental Restraint System) driver airbag, front passenger airbag and driver side knee airbag were designed to supplement seat belts in the event of a frontal collision in order to help reduce shock to the head, chest and knee of the driver and front passenger. This system is a 3-sensor type airbag system to detect the impact during a frontal collision using the center airbag sensor and front airbag sensors. It also operates the airbag system and seat belt pretensioner.

(b) In order to detect the extent of the collision during the initial stages of the collision in further detail, the front airbag sensors have been changed from mechanical type to electrical type deceleration sensors. Accordingly, the deployment of the driver airbag and front passenger airbag is controlled in two stages according to the severity of the impact.

(c) In conjunction with an impact absorbing structure for a side collision, the side airbag and curtain shield airbag were designed to help reduce shock to the driver and front passenger in the event of a side collision.

(d) A curtain shield airbag that helps reduce shock to the front and rear seat occupants with a single curtain shield airbag has been adopted. In conjunction with this system, the side airbag sensors have been installed at the bottom of the center pillars and rear airbag sensors have been installed at the bottom of the rear pillars.

(e) In this system, a front side collision is detected by the side airbag sensor in order to simultaneously deploy the side airbag. A rear side collision is detected by the rear airbag sensor and the center airbag sensor in order to deploy the side airbag and curtain shield airbag.

(f) The center airbag sensor sends the airbag deployment signal to the ECM through the CAN (Controller Area Network) to operate the fuel pump control.

2. CONSTRUCTION AND OPERATION

(a) FRONT AIRBAG SENSOR

(1) The front airbag sensors are installed on the right and left radiator supports.

(2) The front airbag sensor consists of the deceleration sensor.

(3) The deceleration sensor is built into the front airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a frontal collision. Accordingly, the extent of the initial collision can be detected in detail.

(b) SIDE AIRBAG SENSOR

(1) The side airbag sensors are installed on the bottom of the right and left center pillars.

(2) The side airbag sensor consists of the deceleration sensor and ignition control circuit.

(3) The deceleration sensor is built into the side airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front side collision. Accordingly, the extent of the initial collision can be detected in detail.

(c) REAR AIRBAG SENSOR

(1) The rear airbag sensors are installed on the right and left rear pillars.

(2) The rear airbag sensor consists of the deceleration sensor and ignition control circuit.

(3) The deceleration sensor is built into the rear airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision. Accordingly, the extent of the initial collision can be detected in detail.

(d) CENTER AIRBAG SENSOR

(1) General

- The center airbag sensor is installed on the center floor under the console box.
- The center airbag sensor consists of the deceleration sensor, safing sensor, electronic safing sensor, ignition control circuit and diagnostic circuit.
- The center airbag sensor receives signals from the deceleration sensor and safing sensor built into the center airbag sensor and front airbag sensor. Then the center airbag sensor determines whether or not the driver airbag, front passenger airbag, driver side knee airbag and seat belt pretensioner should be activated, and diagnoses system malfunctions.
- The center airbag sensor causes the side airbag and the curtain shield airbag to deploy when receiving signals from the side and rear airbag sensor.

- The center airbag sensor receives signals from the deceleration sensor and the electronic safing sensor built into the center airbag sensor and the rear airbag sensor, and determines whether or not the side airbag and curtain shield airbag should be activated, and diagnoses system malfunctions.
- The center airbag sensor sends the airbag deployment signal to ECM through the CAN to operate the fuel pump control.

(2) Deceleration sensor and ignition control circuit
- The deceleration sensor is built into the center airbag sensor.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor and front airbag sensor. If the calculated values are greater than the specified values, it activates the deployment operation.

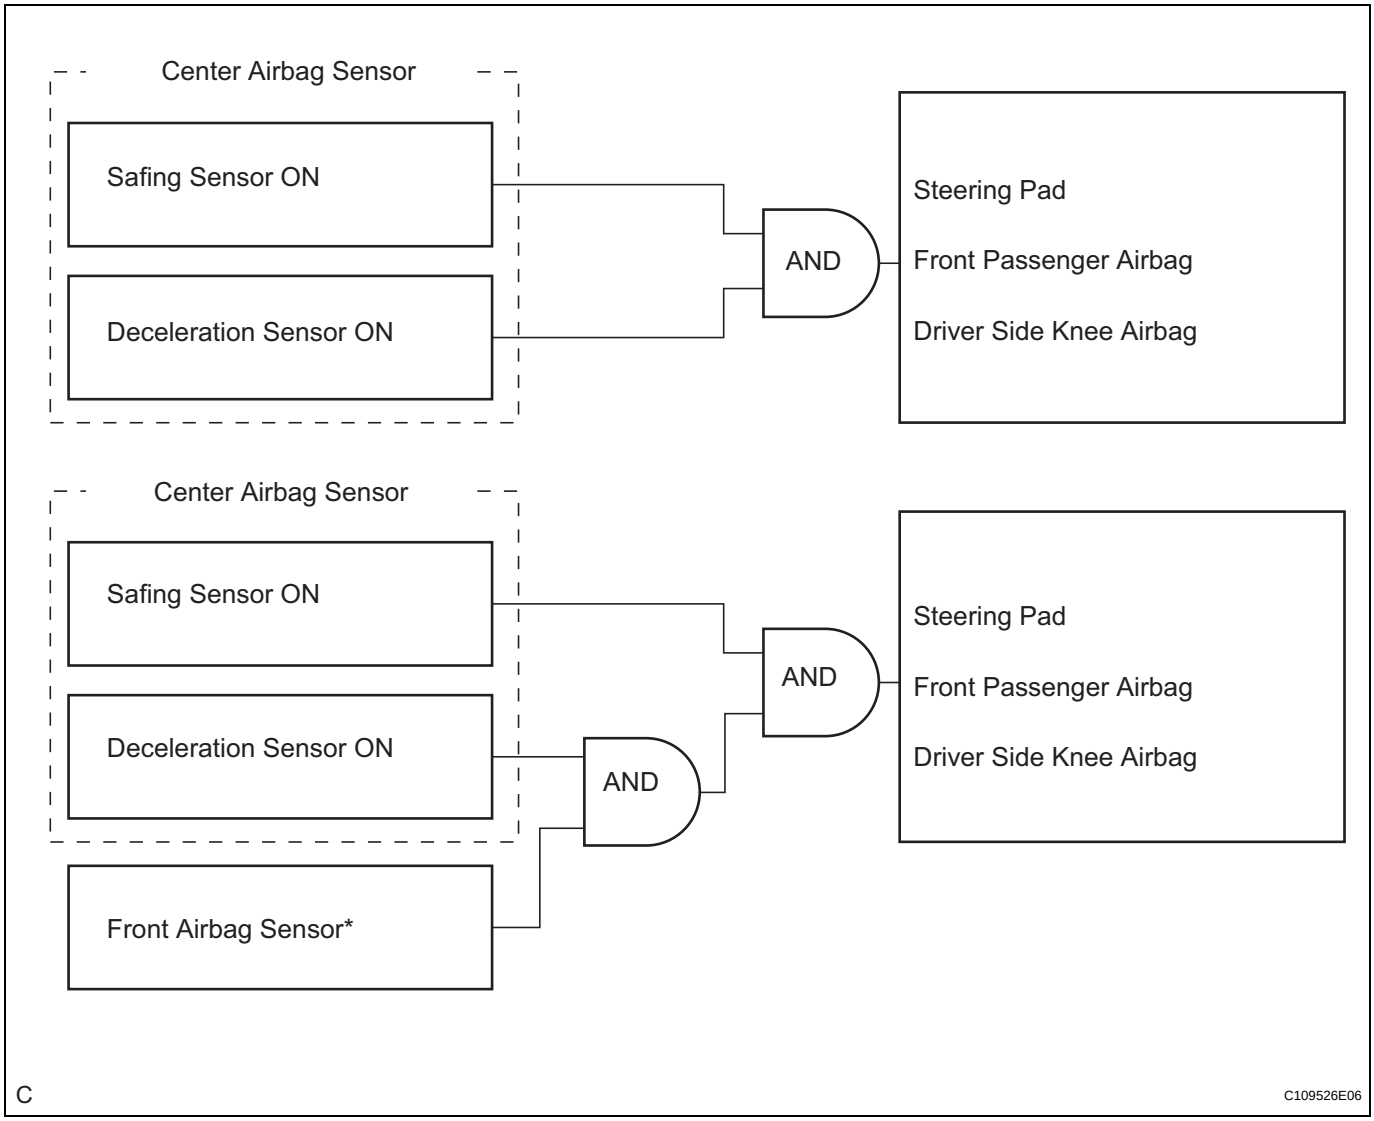
(3) Safing sensor
The safing sensor is built into the center airbag sensor. During a frontal collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate greater than the specified value is applied to the safing sensor.

(4) Electronic safing sensor
The electronic safing sensor is built into the center airbag sensor. During a side collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate greater than the specified value is applied to the electronic safing sensor.

(5) Back-up power source
The back-up power source consists of a power supply capacitor and a DC-DC converter. When the power system does not function during a collision, the power supply capacitor discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

(6) Diagnostic circuit
This circuit constantly diagnoses system malfunctions. When a malfunction is detected, it lights up the SRS warning light on the telltale light to inform the driver.

(7) Memory circuit
When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

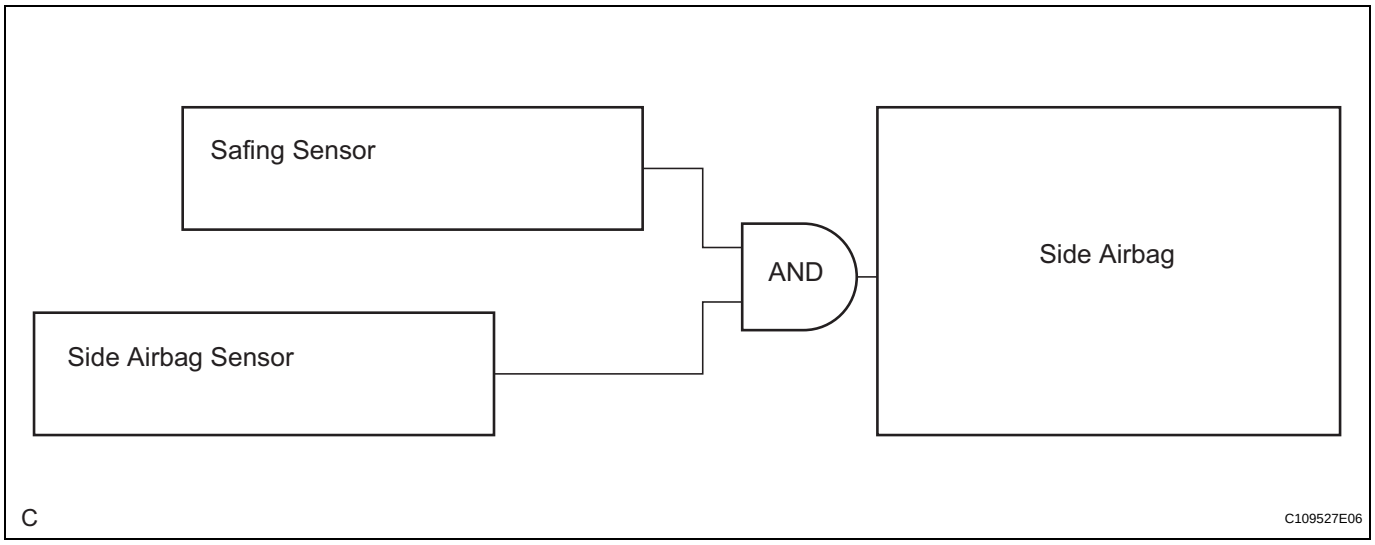


(e) SRS WARNING LIGHT

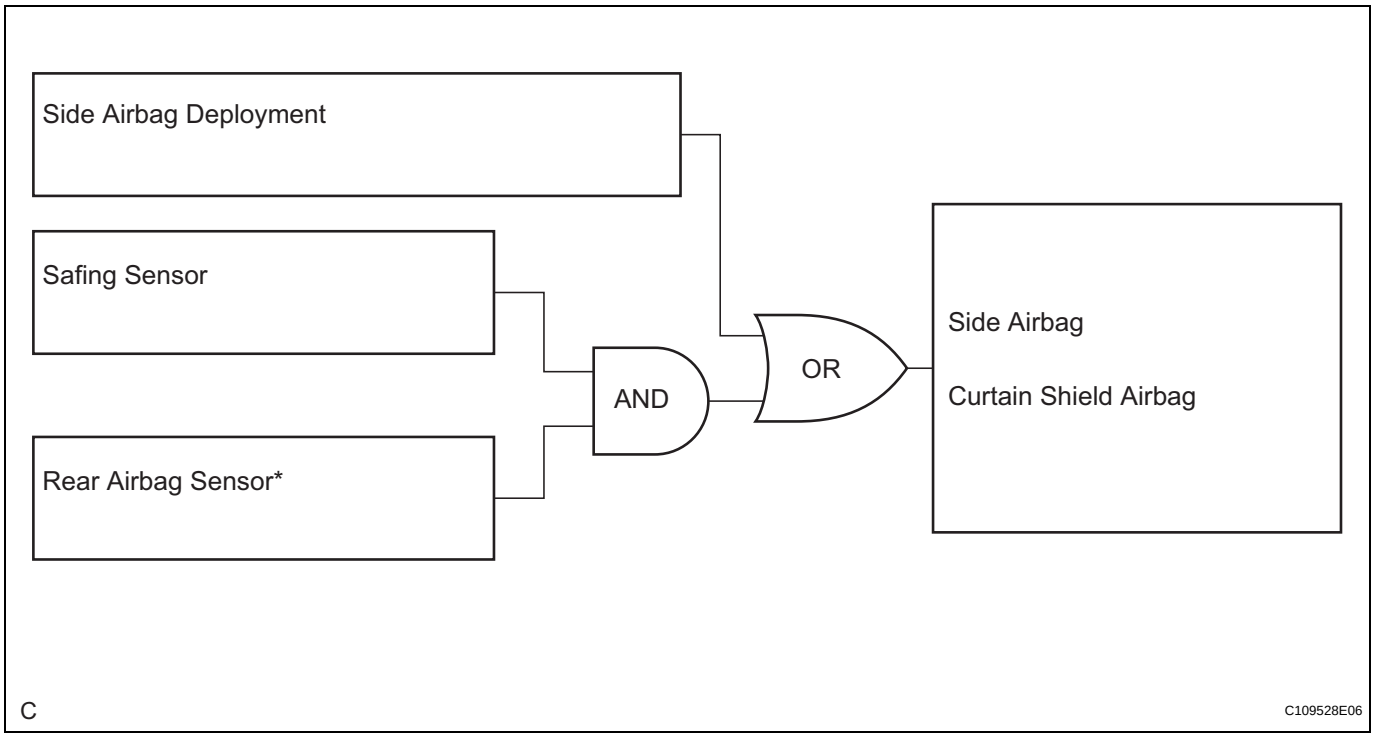
(1) The SRS warning light is located on the telltale light. It comes on to inform the driver of system trouble when a malfunction is detected in the self-diagnosis of the center airbag sensor. Under normal operating conditions when the ignition switch is turned on, it comes on for approximately 6 seconds and then goes off.

3. DEPLOYMENT CONDITION

When the vehicle collides and the shock is greater than the specified value, the SRS is activated automatically. The center airbag sensor includes the safing sensor and deceleration sensor. The safing sensor was designed to be turned on at a smaller deceleration rate than the deceleration sensor.



(a) The center airbag sensor determines whether or not deployment is necessary based on signals from the deceleration sensor and the front airbag sensor*. If the safing sensor turns on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.

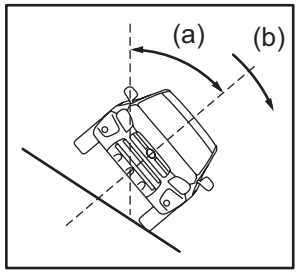


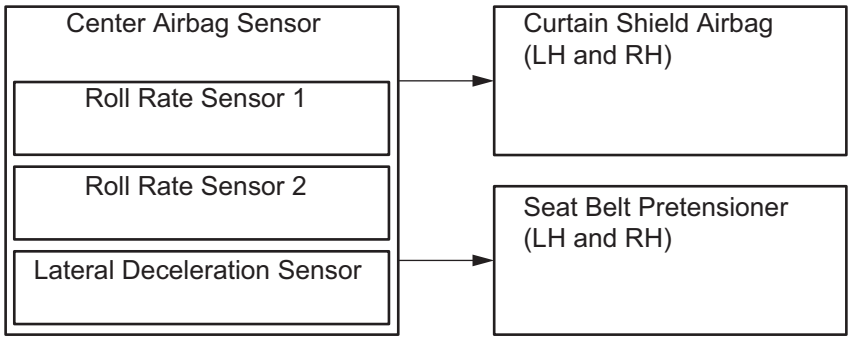
RS

HINT:
* : In case of a frontal collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.

(b) The center airbag sensor determines whether or not deployment is necessary based on signals from the side airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

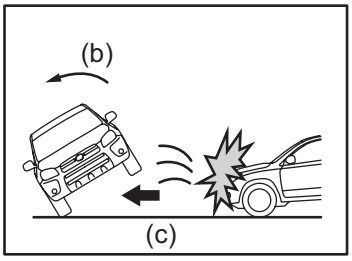
(c) The center airbag sensor determines whether or not deployment is necessary based on signals from the rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below*.





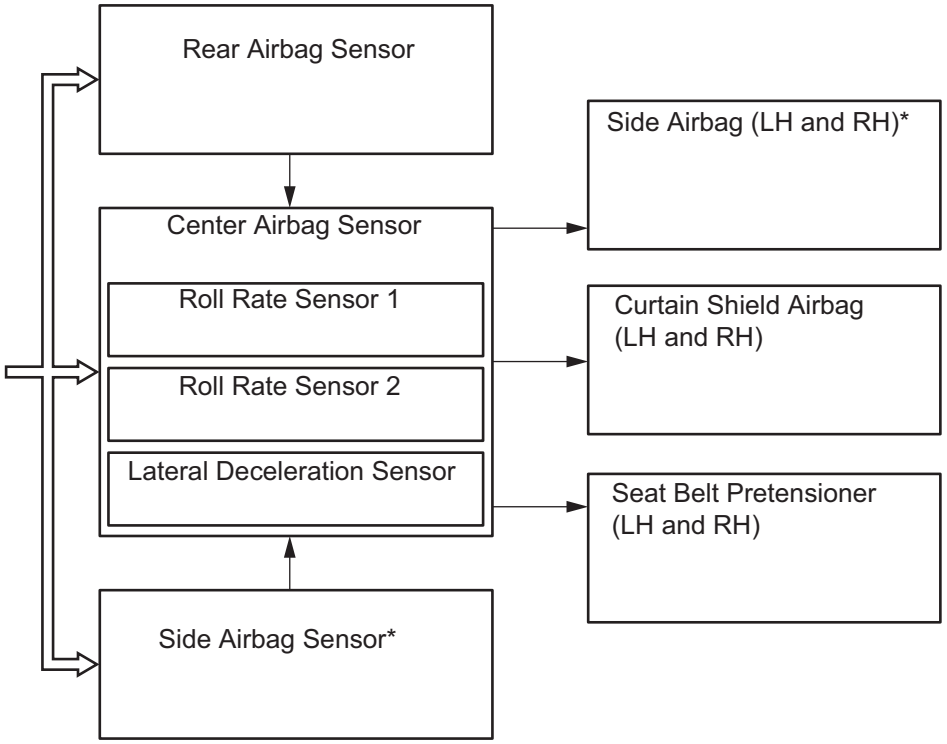
RS

HINT:
*: If the side airbag deploys, the curtain shield airbag will also deploy, regardless of whether the signal is output from the rear airbag sensor.



(d) The center airbag sensor contains a roll rate sensor and roll rate sensor (that determine the inclination angle the vehicle) and a lateral deceleration sensor (that determine the lateral force that is applied to the vehicle). These sensors detect the vehicle's roll angle (a), rotational speed (b), and lateral acceleration speed (c). Based on the information obtained from sensors, the airbag sensor makes an overall judgment of the vehicle's roll angle (a), rotational speed (b), and lateral acceleration speed (c). If the airbag sensor determines that the vehicle has rolled over due to cause other than the side collision, it deploys the right and left curtain shield airbag and the front right and left seat belt pretensioner.

Roll Over Detection



Side Collision and Rollover Detection

* Activate depending on the condition of the collision.

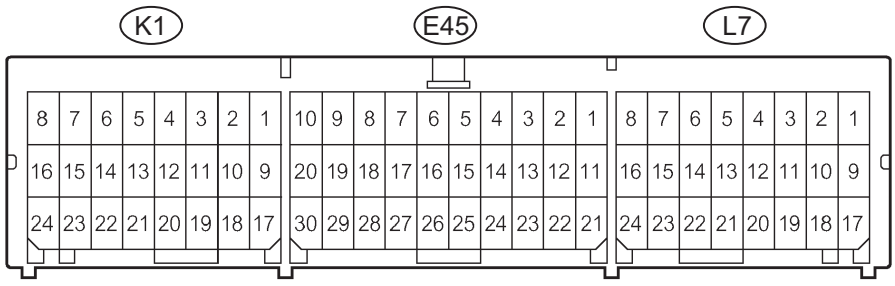
PROBLEM SYMPTOMS TABLE

HINT:



- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Proceed to the troubleshooting procedures for each circuit in the table below.

Airbag system

Symptom	Suspected area	See page
1. The SRS warning light goes off after the primary check, but comes back on.	SRS Warning Light Remains ON	RS-226
2. With the ignition switch ON, the SRS warning light sometimes comes back on.	SRS Warning Light Remains ON	RS-226
3. The SRS warning light always comes on even when DTC is not output.	SRS Warning Light Remains ON	RS-226
1. With the ignition switch ON, the SRS warning light does not come on.	SRS Warning Light does not Come On	RS-230
1. Although an SRS warning light operates normally, DTC is output.	TC and CG Terminal Circuit	RS-233
2. Although terminals TC and CG of DLC3 are not connected, DTC is output.	TC and CG Terminal Circuit	RS-233

DIAGNOSIS SYSTEM

1. DESCRIPTION

The center airbag sensor controls the functions of the Supplemental Restraint System (SRS) on the vehicle. Data of the SRS can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for a malfunction and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with ISO 15031-3 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

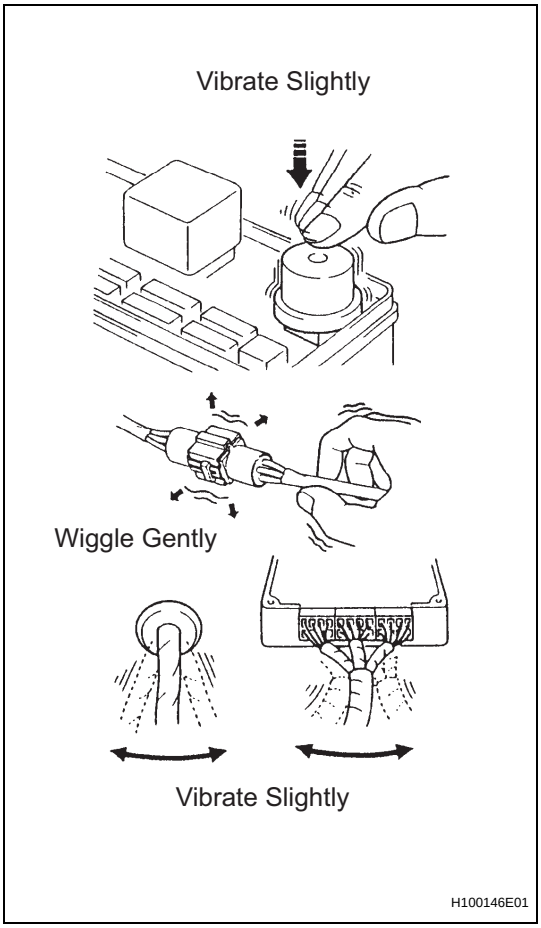
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.



- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a through problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

This leads to a standstill in troubleshooting.

(a) Simulation method: When vibration seems to be the major cause

HINT:

Perform this method only during the primary check period (for approximately 6 seconds after the ignition switch is turned ON).

(1) Use your finger to slightly vibrate the part of the sensor considered to be the problem cause, and check whether the malfunction recurs.

HINT:

Wiggling the relays too strongly may result in open relays.

(2) Gently wiggle the connector.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

4. FUNCTION OF SRS WARNING LIGHT

(a) Primary check

(1) Turn the ignition switch off. Wait for at least 2 seconds, then turn the ignition switch ON. The SRS warning light comes on for approximately 6 seconds and the SRS airbag system diagnosis (including the seat belt pretensioner) is performed.

HINT:

If any malfunctions are detected during the primary check, the SRS warning light remains on even after the primary check period has elapsed.

(b) Constant check

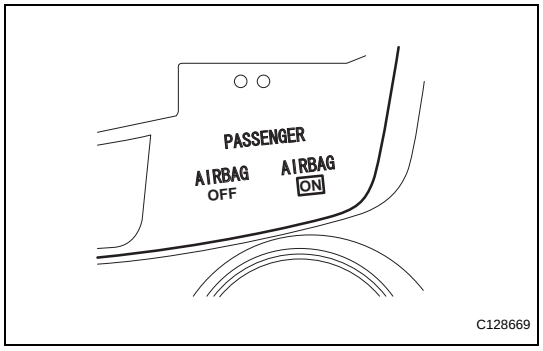
(1) After the primary check, the center airbag sensor constantly monitors the SRS airbag system for trouble.

HINT:

If any malfunctions are detected during the constant check, the center airbag sensor functions as follows:

- The SRS warning light comes on.

RS



- The SRS warning light goes off, and then comes on again. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review

(1) When the airbag system is normal:
The SRS warning light comes on only during the primary check period (for approximately 6 seconds after the ignition switch is turned ON).

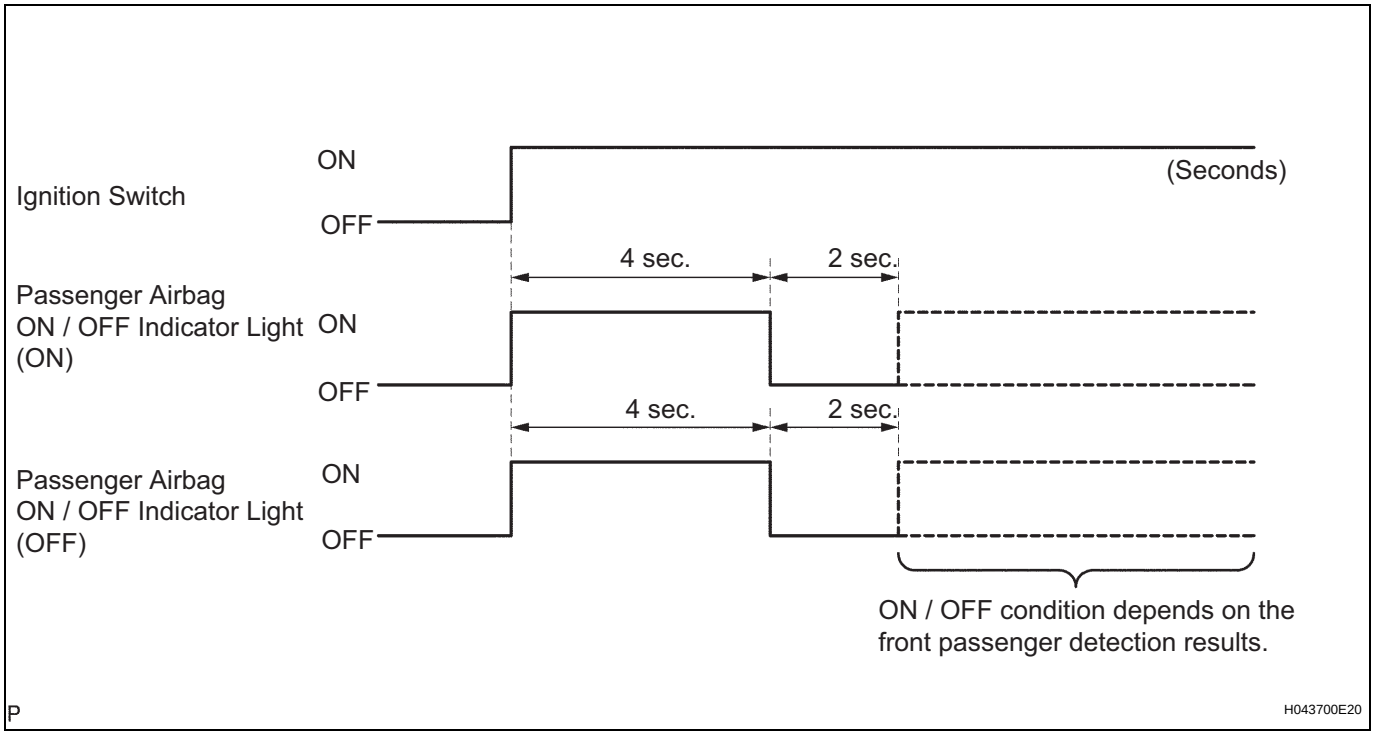
(2) When the airbag system malfunctions:
- The SRS warning light blinks after the primary check period has elapsed.
- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light remains off even after the ignition switch is turned from LOCK to ON. However, if malfunctions such as an open circuit have occurred in the wire harness between the meter and ECU, the warning light comes on 10 seconds after the ignition switch is turned ON.

HINT:
The center airbag sensor keeps the SRS warning light on if any malfunctions have been detected in the airbag system.

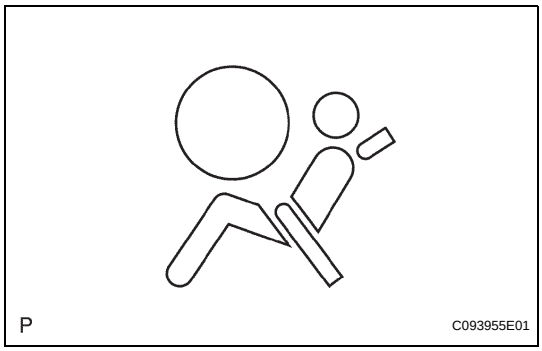
5. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

(1) Turn the ignition switch ON.



(2) The passenger airbag ON / OFF indicator comes on for approximately 4 seconds, then goes off for approximately 2 seconds.



(3) Approximately 6 seconds after the ignition switch is turned ON, the passenger airbag ON / OFF indicator operates in accordance with the conditions listed below.

RS

Condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated	ON	OFF
Child is seated	OFF	ON
Child restraint system is set	OFF	ON
Front passenger occupant classification system failure	OFF	ON

HINT:
The passenger airbag ON / OFF indicator operates as shown in the timing chart below in order to check the indicator light circuit.

RS

6. SRS WARNING LIGHT CHECK

(a) Turn the ignition switch ON, and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the ignition switch is turned ON (constant check).

HINT:

When any of the following symptoms occur, refer to the Problem Symptoms Table (see page RS-34).

- The SRS warning light comes on occasionally after the primary check period has elapsed.
- Even when the SRS warning light comes on, no DTCs are set.
- Even when the ignition switch is turned from OFF to ON, the SRS warning light remains off.

7. ACTIVATION PREVENTION MECHANISM

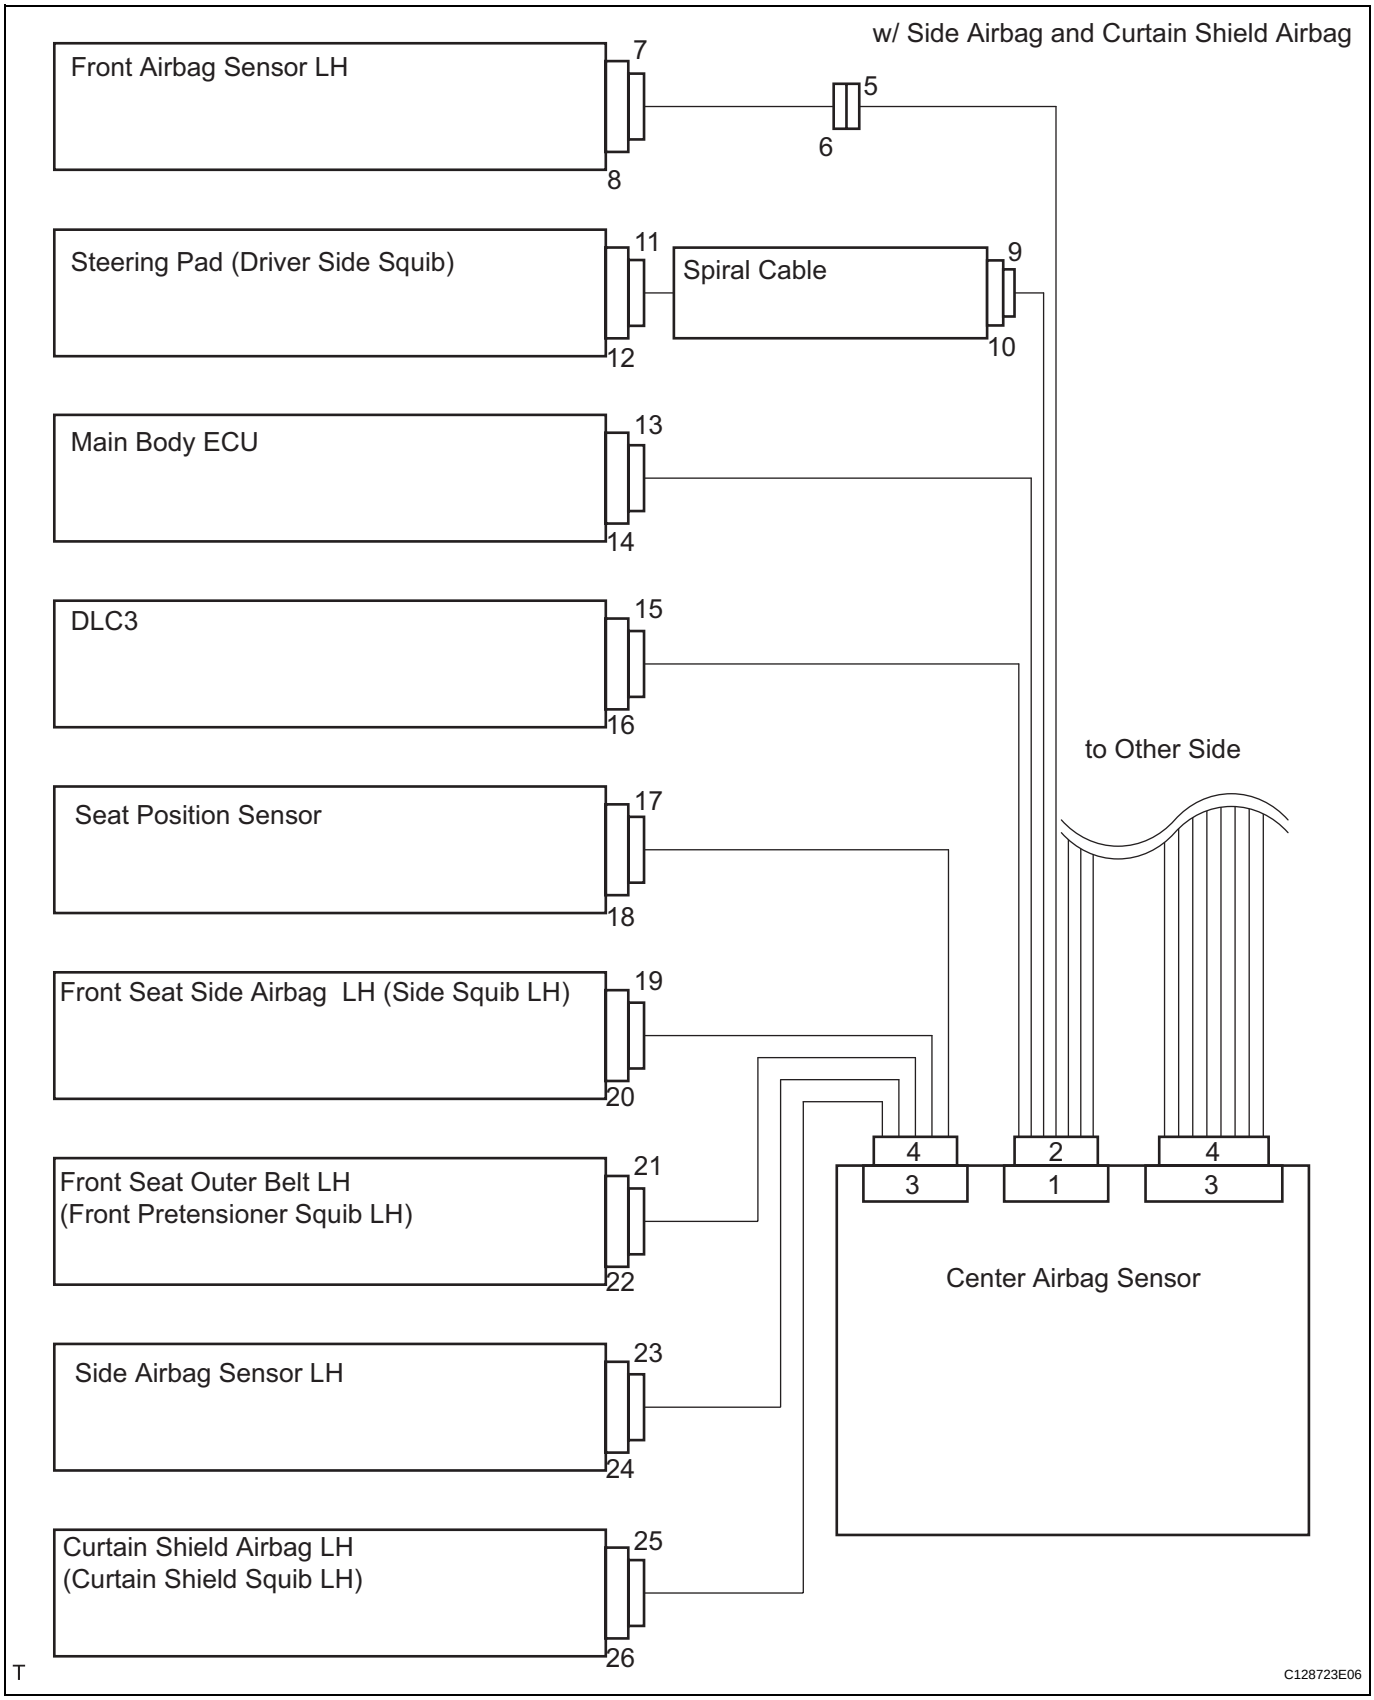
(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

(1) An activation prevention mechanism is built into the connector (on the center airbag sensor a side) of the airbag system squib circuit to prevent accidental airbag activation.

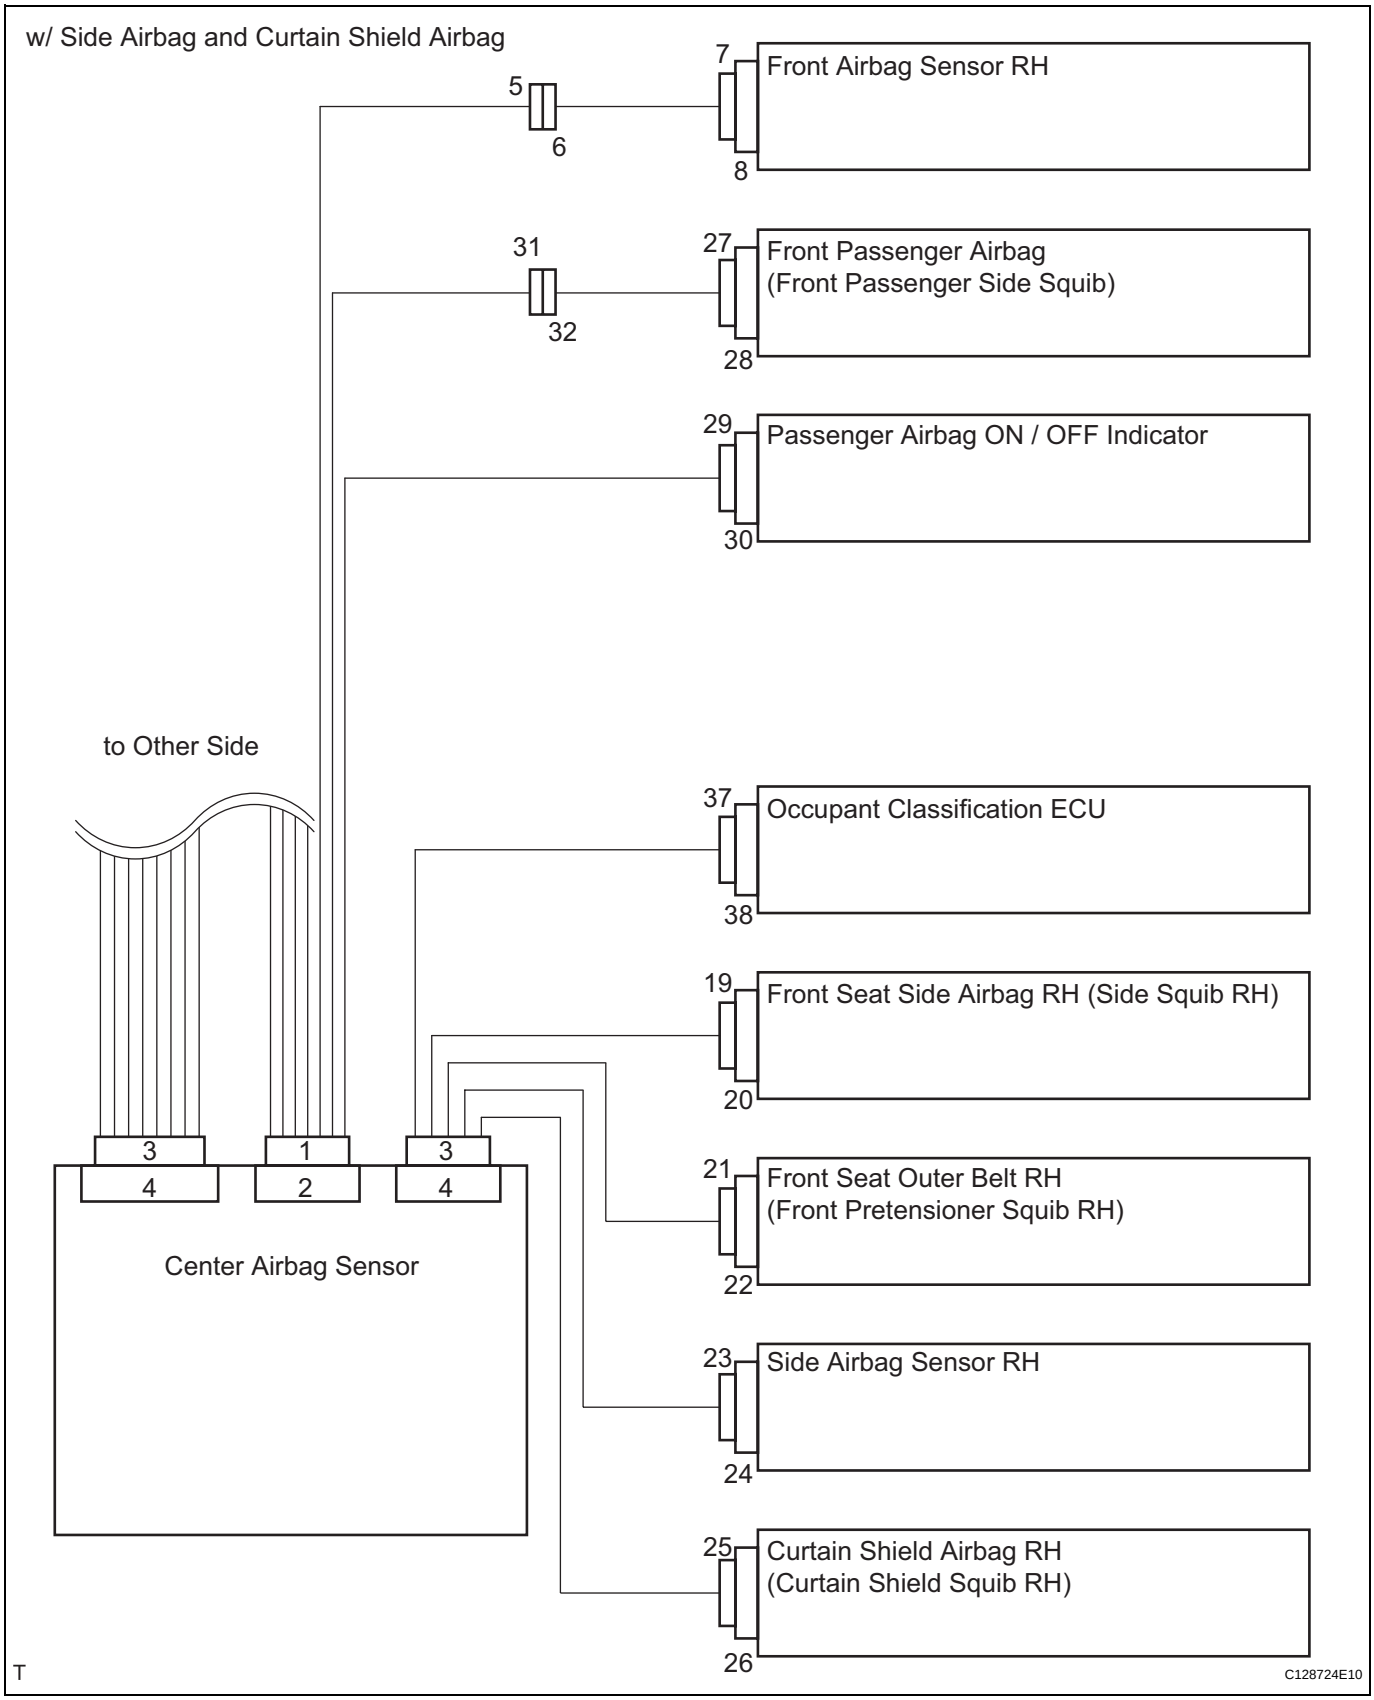
(2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off external electricity to prevent accidental airbag activation.

(b) RELEASE METHOD OF ACTIVATION PREVENTION MECHANISM

(1) To release the activation prevention mechanism, insert a piece of paper, with the same thickness as the male terminal (approximately 0.5 mm [0.020 in.]), between the terminals and the short spring to break the connection.



(2) Refer to the illustrations below concerning connectors to utilize the activation prevention mechanism and its release method.



CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- **Do not release the activation prevention mechanism unless specifically directed to do so by the troubleshooting procedure.**
- **To prevent the terminal and the short spring from being damaged, always use a piece of paper that is the same thickness as the male terminal.**

DTC CHECK / CLEAR

1. CHECK DTC (USING SST (CHECK WIRE))

(a) Check the DTCs (Present trouble code).

(1) Turn the ignition switch ON, and wait for approximately 60 seconds.

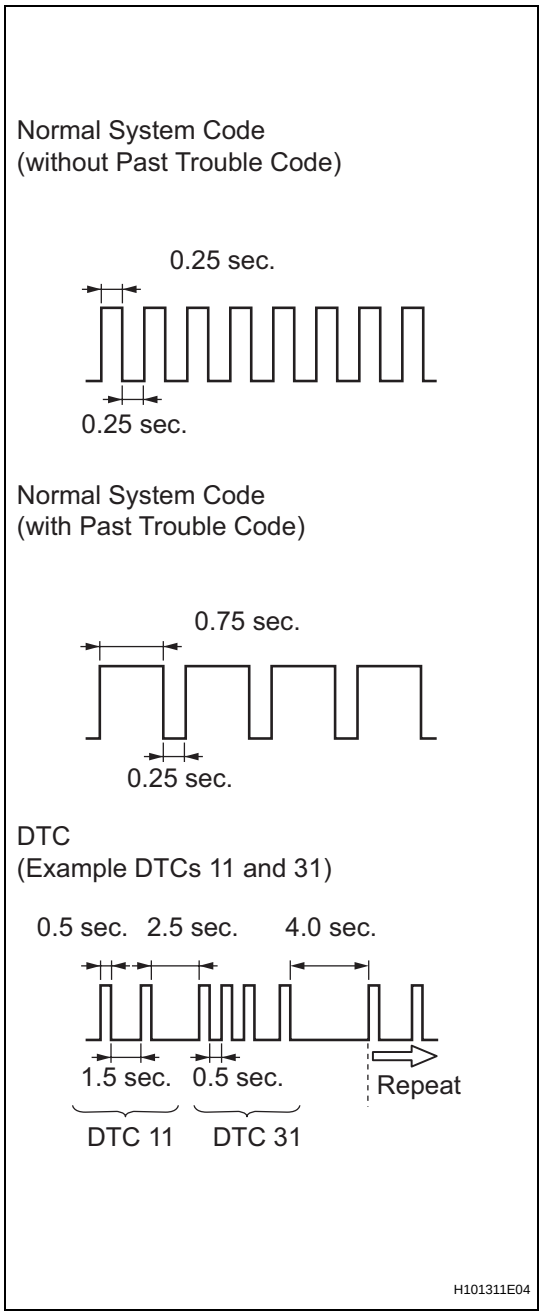
(2) Using SST, connect terminals 13(TC) and 4(CG) of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check the DTCs (Past trouble code)



(1) Using SST, connect terminals TC and 4(CG) of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the ignition switch ON, and wait for approximately 60 seconds.

(c) Read the DTCs.

(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and DTCs 11 and 31 are shown in the illustration to the left.

- Normal system code indication (without past trouble code):
  The light blinks twice per second.
- Normal system code indication (with past trouble code):
  When the past trouble code is stored in the center airbag sensor, the light blinks only once per second.
- Trouble code indication:
  The first blinking indicates the first DTC. The second blinking occurs after a 1.5 second pause.

If there is more than 1 code, there will be a 2.5 second pause between each code. After all codes are shown, there will be a 4.0 second pause, and then they all will be repeated.

HINT:

- If 2 or more malfunctions are found, the indication begins with the smaller numbered code.
- If DTCs are indicated without connecting the terminals, proceed to the "TC and CG Terminal Circuit" procedures (see page RS-233).

2. CLEAR DTC (USING SST (CHECK WIRE))

(a) Clear the DTCs.

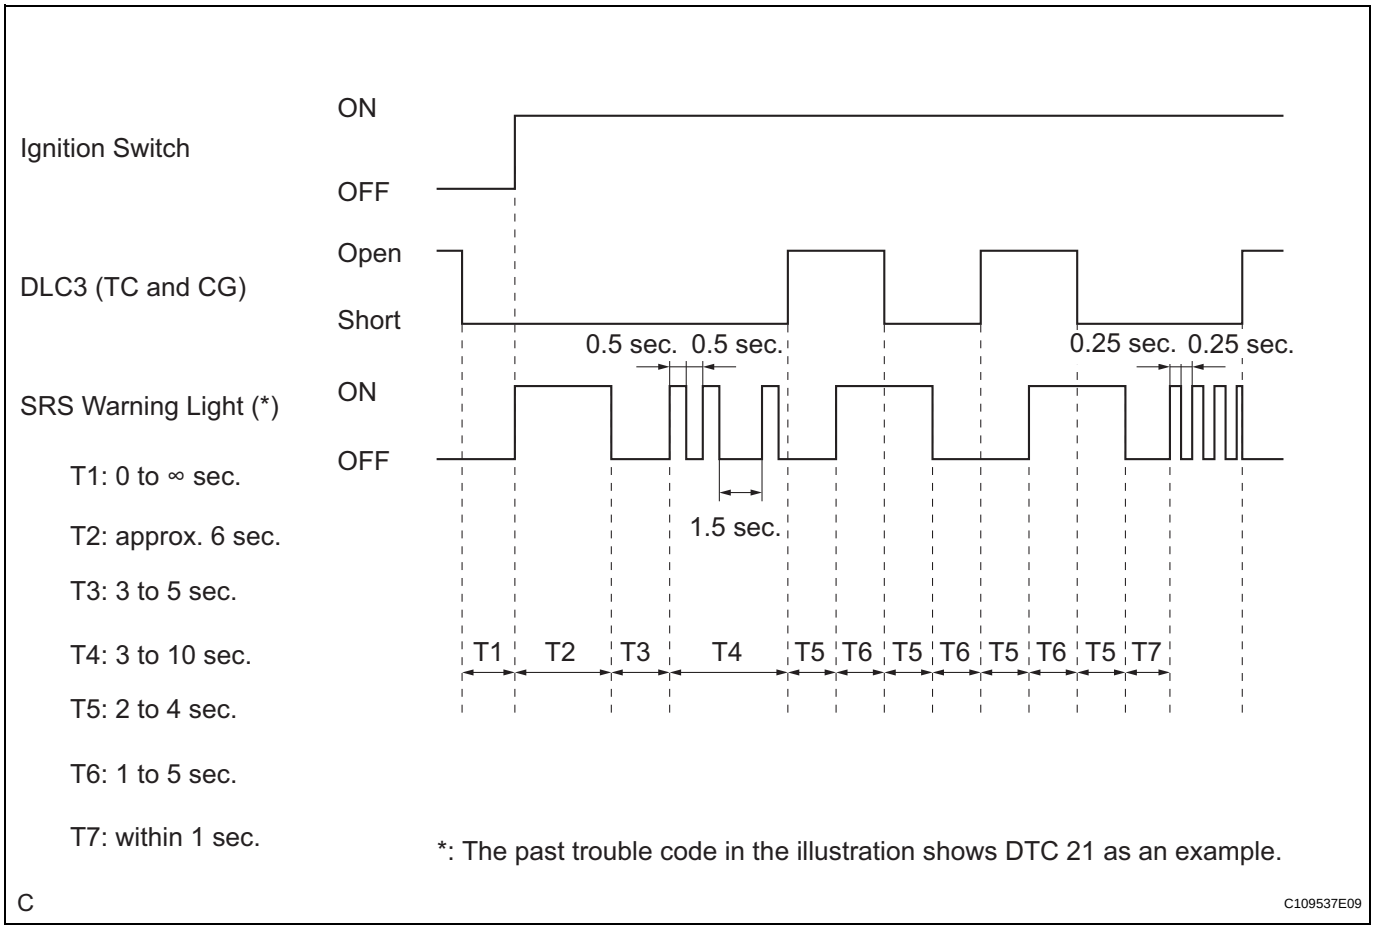
(1) When the ignition switch is turned OFF, the DTCs are cleared.

HINT:

Depending on the DTC, the code may not be cleared by turning off the ignition switch. In this case, proceed to the next procedure.

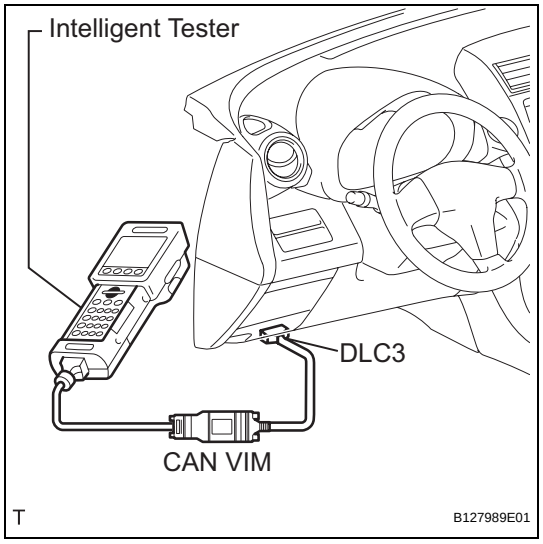
(2) Using SST, connect terminals 13(13(TC)) and 4(CG) of the DLC3, and then turn the ignition switch ON.

SST 09843-18040



(3) Disconnect terminal 13(TC) of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.

(4) Within 2 to 4 seconds after the SRS warning light comes on, connect terminals 13(TC) and 4(CG) of the DLC3.

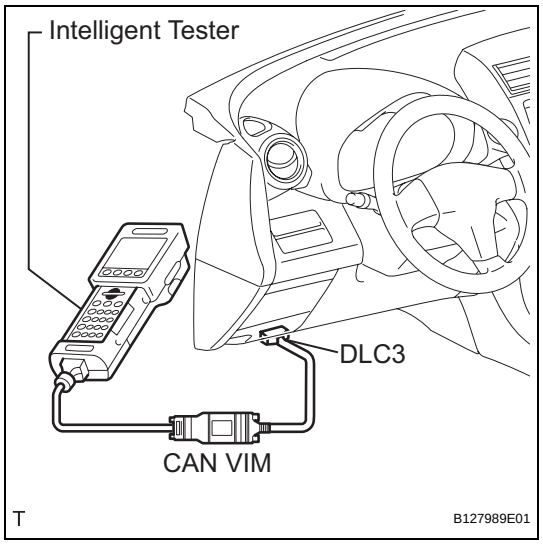


(5) The SRS warning light should go off within 2 to 4 seconds after connecting terminals 13(TC) and 4(CG) of the DLC3. Then, disconnect terminal 13(TC) within 2 to 4 seconds after the SRS warning light goes off.

RS

(6) The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal 13(TC). Then, reconnect terminals 13(TC) and 4(CG) within 2 to 4 seconds after the SRS warning light comes on.
(7) Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals 13(TC) and 4(CG) of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.
If DTCs are not cleared, repeat this procedure until the codes are cleared.

RS



3. CHECK DTC (USING INTELLIGENT TESTER)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Check the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

4. CLEAR DTC (USING INTELLIGENT TESTER)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Select the "SIGNAL CHECK", and continue checking with the intelligent tester.
NOTICE:
Select the "SIGNAL CHECK" from the "DTC CHECK" screen displayed on the intelligent tester to clear the output DTCs (both present and past).
HINT:
- Check mode is more sensitive to malfunctions than normal mode.
- If the normal system code is output in normal mode even when a sensor signal malfunction is suspected, perform the inspection in check mode.

RS

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's Data List allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting in one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the Data List according to the display on the tester.

Center airbag sensor

Item	Measure Item / Range (Display)	Normal Condition	Diagnostic Note

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed for the DTC in the table below (refer to the appropriate page).

HINT:

- When the SRS warning light remains on and the normal system code is output, a decrease in the source voltage is likely to occur. This malfunction is not stored in the memory of the center airbag sensor. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more DTCs are indicated, the DTC with the lowest number appears first.
- If a DTC is not listed on the DTC chart, the center airbag sensor may have malfunctioned.
- In the case of any malfunctions concerning open circuits, shorts to ground, or shorts to B+ due to squibs, other DTCs may not be set. In this case, repair the malfunction currently indicated and then perform a malfunction diagnosis again.
- Mark in the check mode column:
  -: DTC does not correspond to check mode.
  ○: DTC corresponds to check mode.
- When DTC B1650/32 is set as a result of troubleshooting the Supplemental Restraint System (SRS), perform troubleshooting for the occupant classification system.

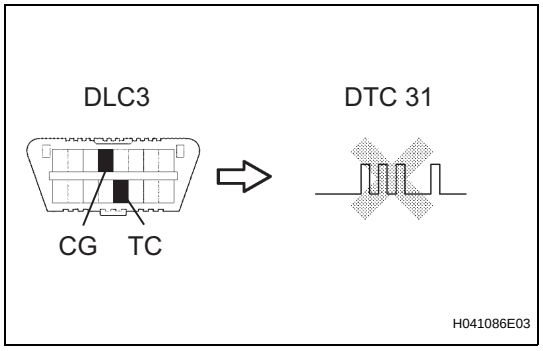
DTC	B1000/31	Center Airbag Sensor Assembly Malfunction

DESCRIPTION



The center airbag sensor consists of the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit and the ignition control.
If the center airbag sensor receives signals from the airbag sensor, it determines whether or not the SRS should be activated.
DTC B1000/31 is recorded when a malfunction is detected in the center airbag sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1000/31	Center airbag sensor malfunction	Center airbag sensor assembly

HINT:
When a malfunction code is displayed simultaneously with DTC B1000/31, repair the malfunction indicated by this code (except DTC B1000/31) first.

INSPECTION PROCEDURE

1	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

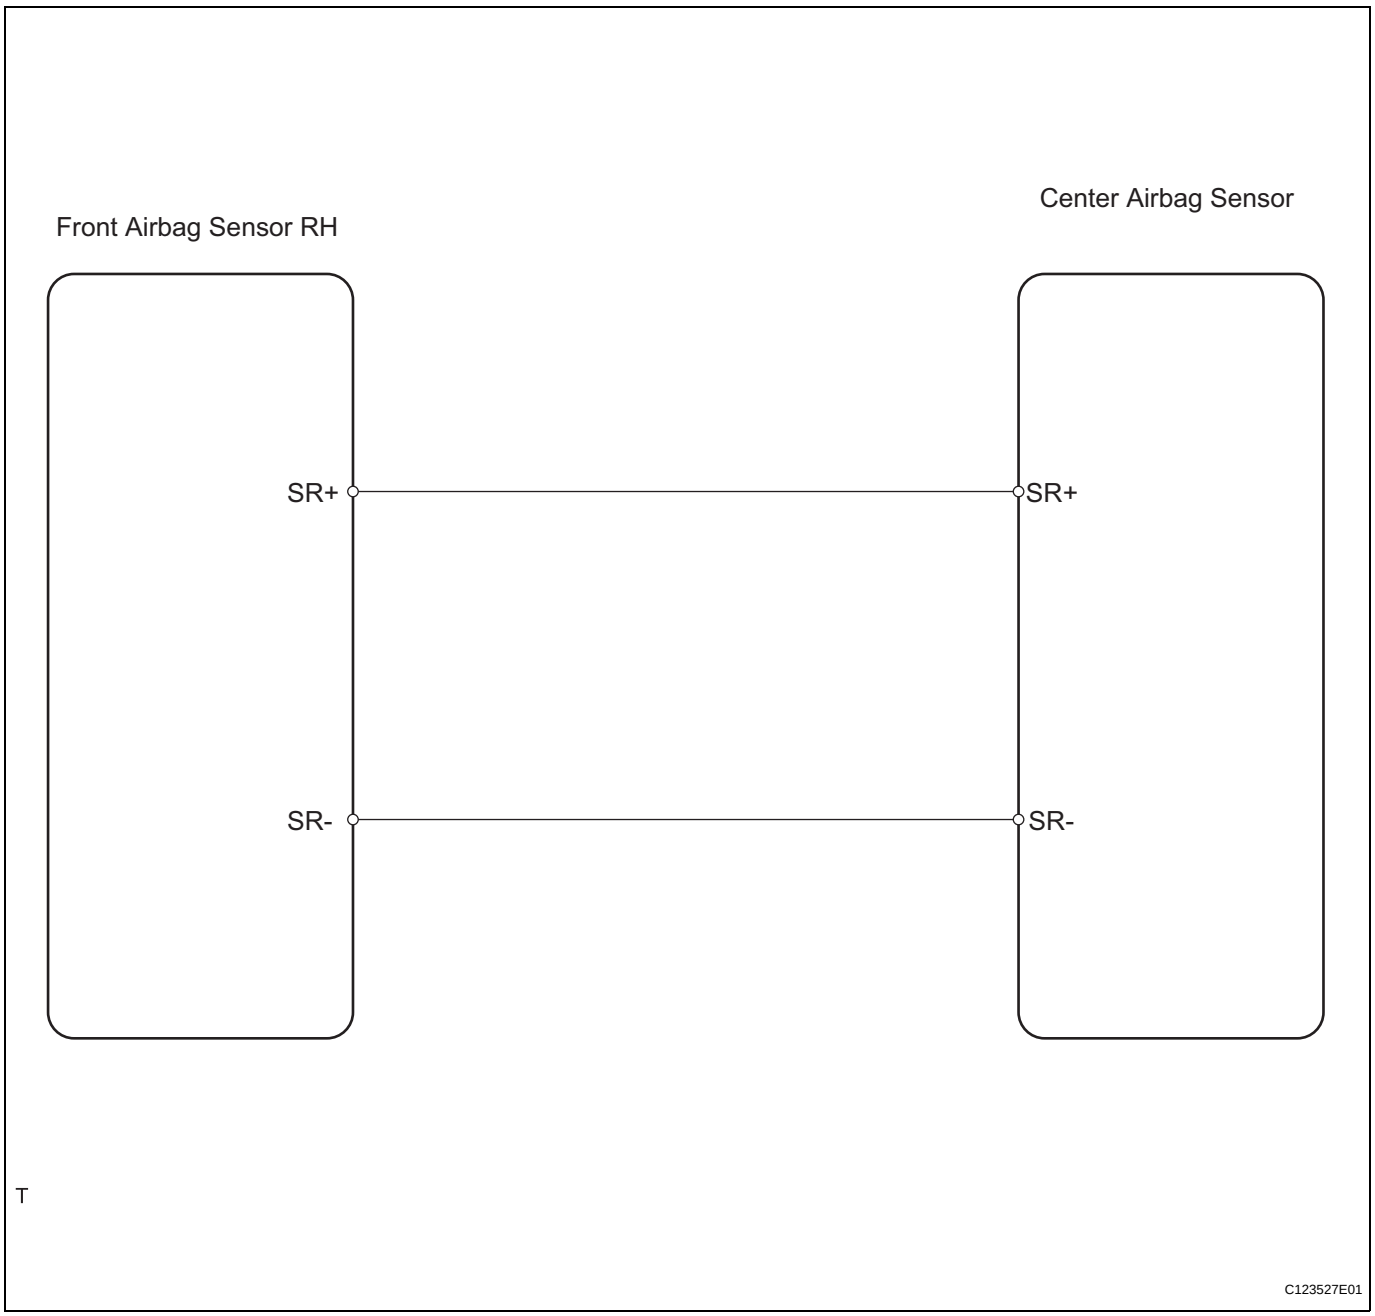
DTC	**B1602/83**	**Lost Communication with Front Satellite Sensor Bus RH**

DTC	**B1603/83**	**Front Satellite Sensor Bus RH Initialization Incomplete**

DTC	**B1612/83**	**Lost Communication with Front Airbag Sensor RH**



DTC	**B1613/83**	**Front Airbag Sensor RH Initialization Incomplete**

DESCRIPTION

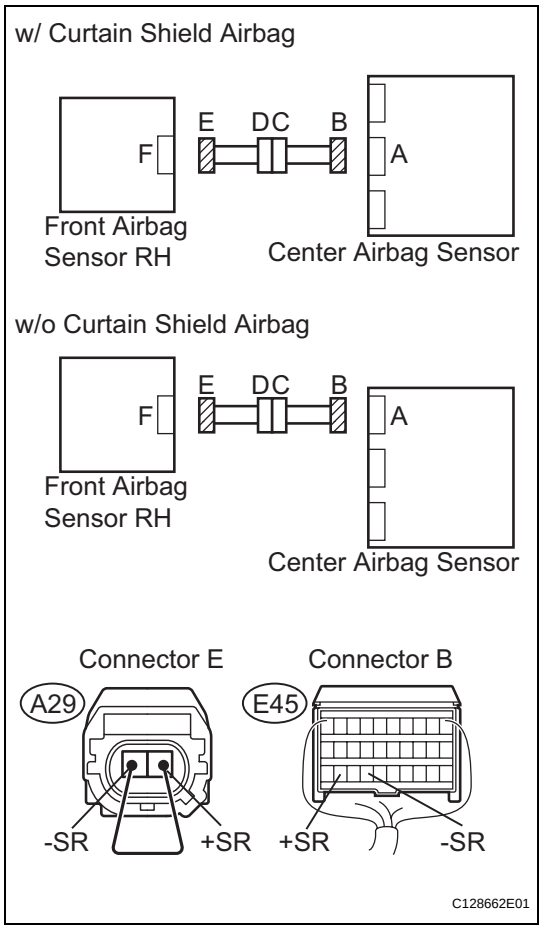
The front airbag sensor RH consists of the diagnostic circuit and the frontal deceleration sensor.
If the center airbag sensor receives signals from the frontal deceleration sensor, it determines whether or not the SRS should be activated.
DTC B1602/83, B1603/83, B1612/83 or B1613/83 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1602/83 B1603/83 B1612/83 B1613/83	When one of following conditions is met: • Center airbag sensor detects line short signal, open signal, short to ground signal or short to B+ signal in the front airbag sensor RH circuit for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor

WIRING DIAGRAM

RS

INSPECTION PROCEDURE



1	CHECK CONNECTION OF CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.
OK:
The connectors are connected.

NG	CONNECT CONNECTOR

OK

2	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)

(a) Disconnect the connectors from the center airbag sensor and the front airbag sensor RH.

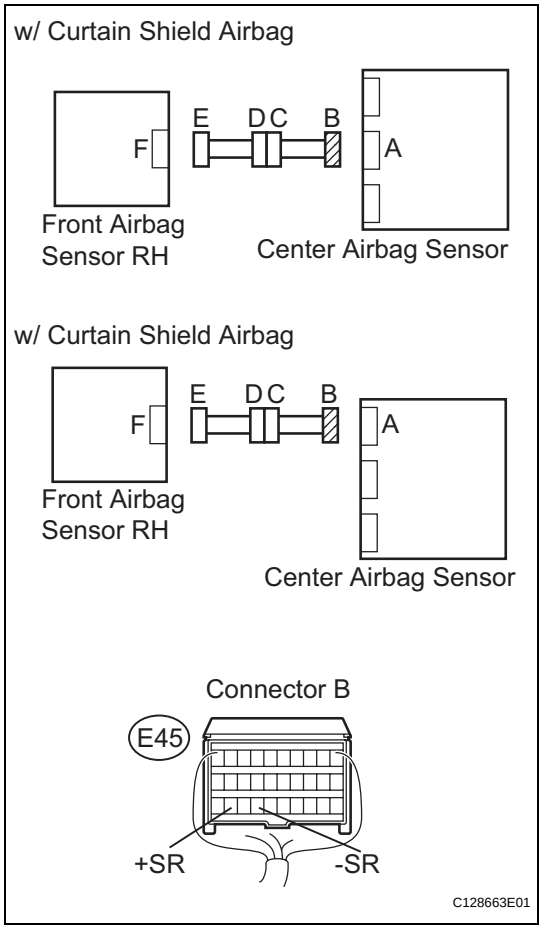
(b) Using a service wire, connect A29-2 (+SR) and A29-1 (-SR) of connector E.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(c) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
E45-29 (+SR) - E45-27 (-SR)	Below 1 Ω

NG → **Go to step 7**

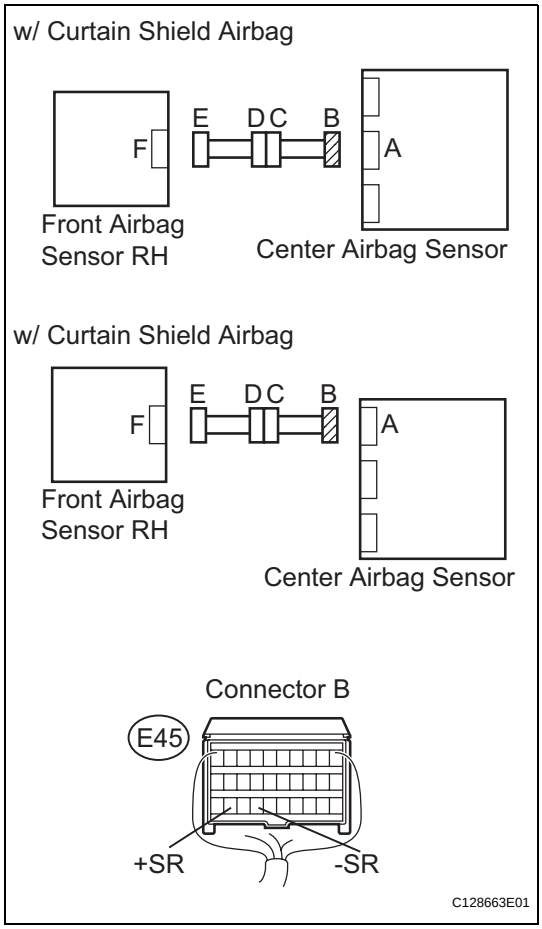
OK

RS

3	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT)

(a) Disconnect the service wire from connector E.
(b) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
E45-29 (+SR) - E45-27 (-SR)	1 MΩ or higher

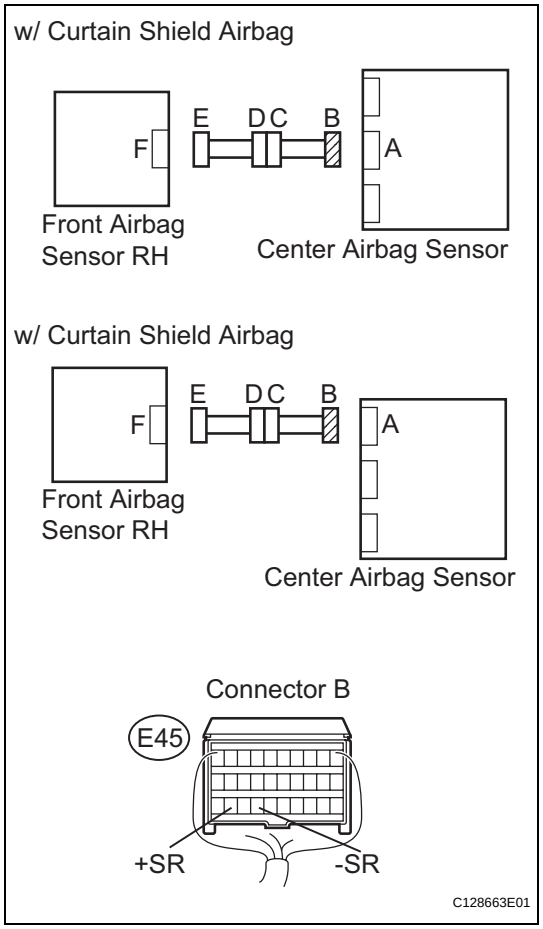
NG → **Go to step 8**

OK

RS

4	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Specified Condition
E45-29 (+SR) -Body ground	Below 1 V
E45-27 (-SR) - Body ground	Below 1 V

NG → **Go to step 9**

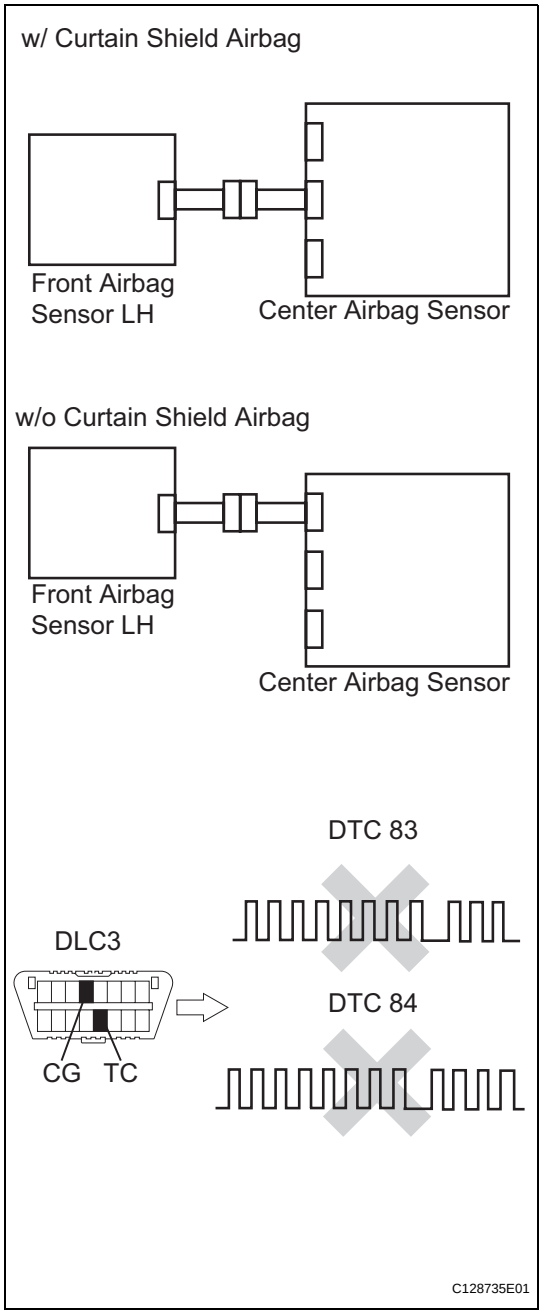
OK

RS

5	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
E45-29 (+SR) - Body ground	1 MΩ or higher
E45-27 (-SR) - Body ground	1 MΩ or higher

NG → **Go to step 10**

OK

RS

6 CHECK FRONT AIRBAG SENSOR RH

(a) Connect the connectors to the center airbag sensor .
(b) Interchange the front airbag sensor RH and LH, and connect the connectors to them.
(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Clear the DTCs (see page RS-49).
(f) Turn the ignition switch OFF.
(g) Turn the ignition switch ON, and wait for at least 60 seconds.
(h) Check the DTCs (see page RS-49).

DESCRIPTION

The side airbag sensor RH consists of parts including the diagnostic circuit and the lateral deceleration sensor.
When the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether or not the SRS should be activated.
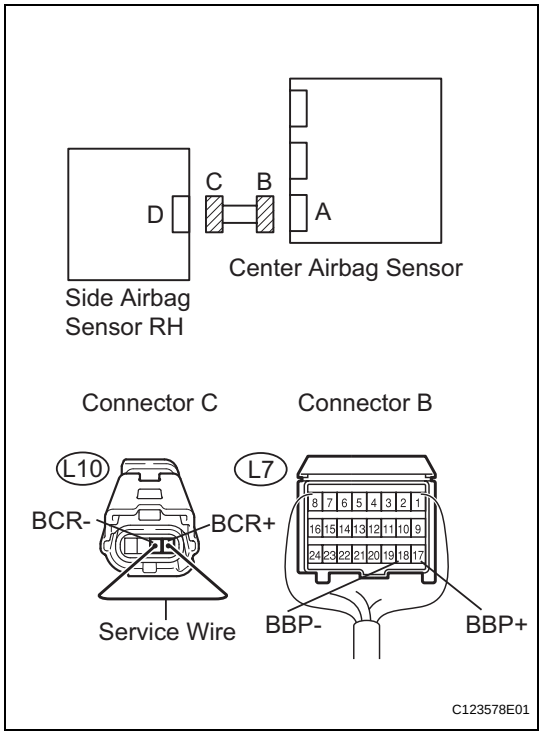
DTC B1627/82 is set when a malfunction is detected in the side airbag sensor RH circuit.

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

1	CHECK CONNECTION OF CONNECTOR



(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

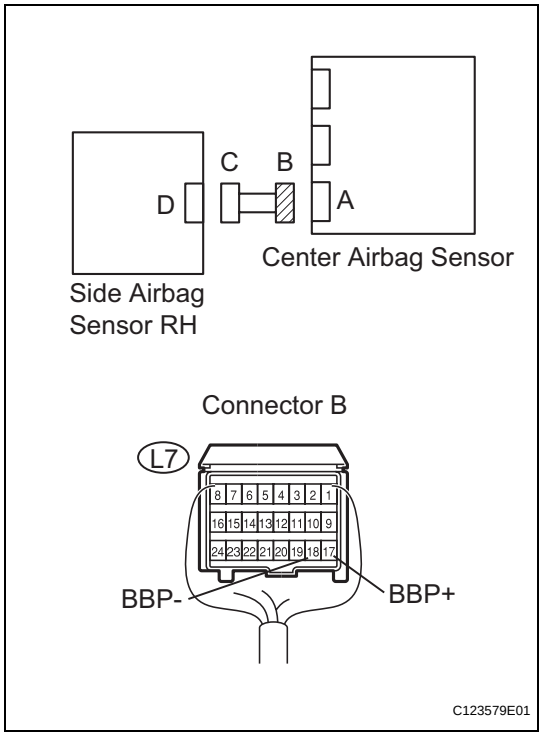
(c) Check that the connectors are properly connected to the center airbag sensor, rear airbag sensor RH and the side airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

2 CHECK FLOOR WIRE (OPEN)

(a) Disconnect the connectors from the center airbag sensor and the side airbag sensor RH.
(b) Using a service wire, connect L10-4 (BBR+) and L10-3 (BBR-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance



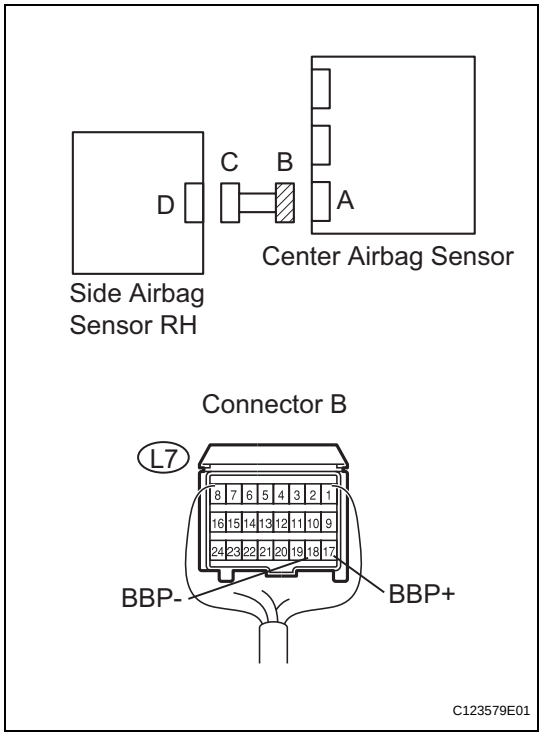
Tester Connection	Specified Condition
L7-17 (BBP+) - L7-18 (BBP-)	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

3 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

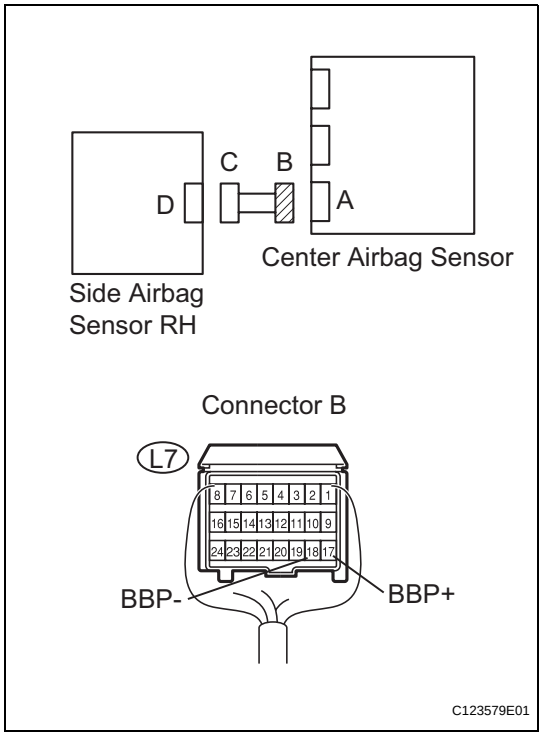
Tester Connection	Specified Condition
L7-17 (BBP+) - L7-18(BBP-)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage



Tester Connection	Specified Condition
L7-17 (BBP+) - Body ground	Below 1 V
L7-18 (BBP-) - Body ground	Below 1 V

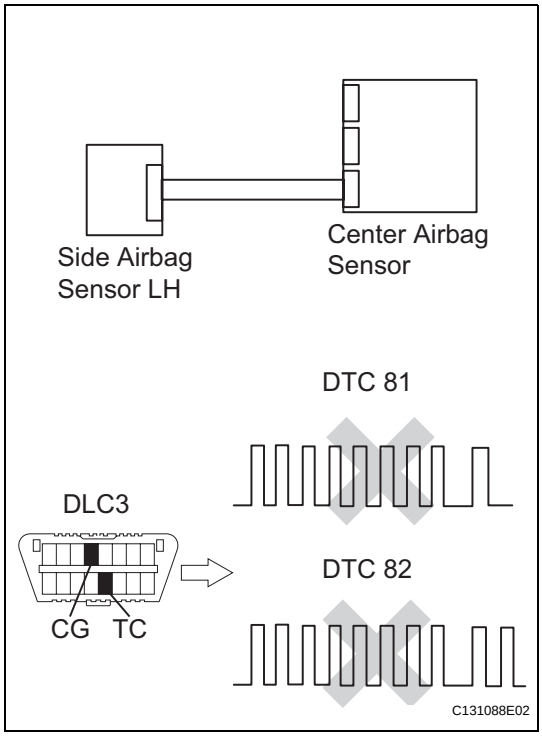
NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
L7-17 (BBP+) - Body ground	1 MΩ or higher
L7-18 (BBP-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK SIDE AIRBAG SENSOR RH

(a) Connect the connectors to the center airbag sensor.
(b) Interchange the side airbag sensor RH with the side airbag sensor LH and connect the connectors to them.
(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Clear the DTCs (see page RS-49).
(f) Turn the ignition switch OFF.
(g) Turn the ignition switch ON, and wait for at least 60 seconds.
(h) Check for DTCs (see page RS-49).

1	CHECK FOR DTC

(a) Turn the ignition switch ON, and wait for at least 60 seconds.
(b) Clear the DTCs (see page RS-49).
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Check the DTCs (see page RS-49).
OK:
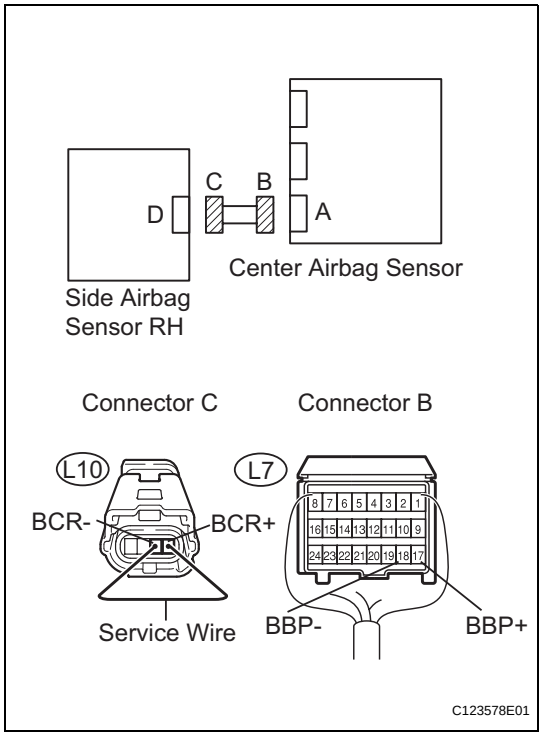
DTC B1627/82 is not output.
DTC B1637/82 is not output.
HINT:
DTCs other than DTC B1627/82 and B1637/82 may be output at this time, but they are not related to this check.

NG → **GO TO DTC OUTPUT**

OK

2	CHECK CONNECTION OF CONNECTOR



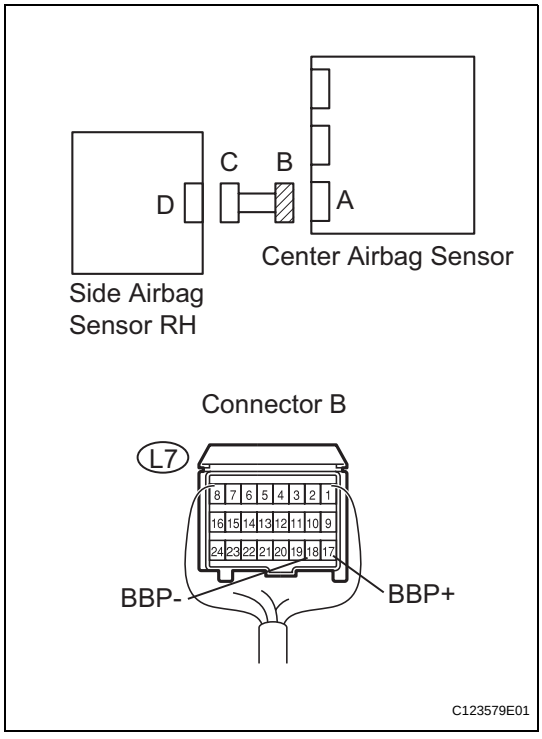
(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor, rear airbag sensor RH and the side airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

RS

3 CHECK FLOOR WIRE (OPEN)



(a) Disconnect the connectors from the center airbag sensor and the side airbag sensor RH.
(b) Using a service wire, connect L10-4 (BBR+) and L10-3 (BBR-) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance of the wire harness side connector.
Standard resistance

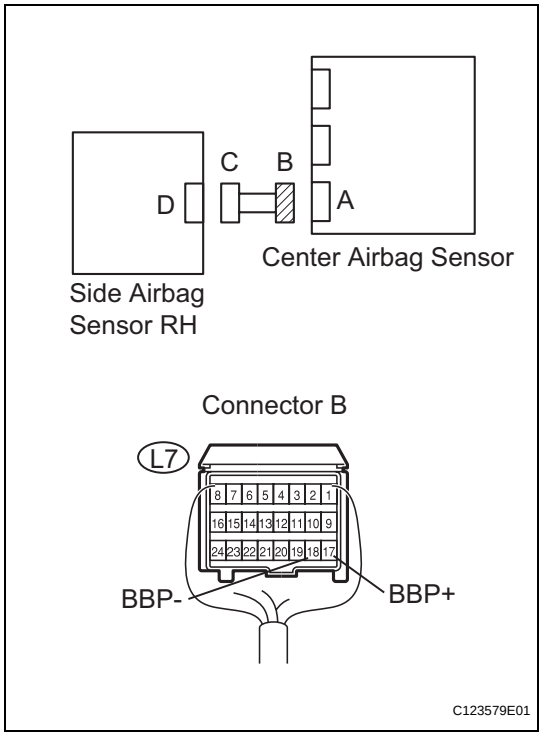
Tester Connection	Specified Condition
L7-17 (BBP+) - L7-18 (BBP-)	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



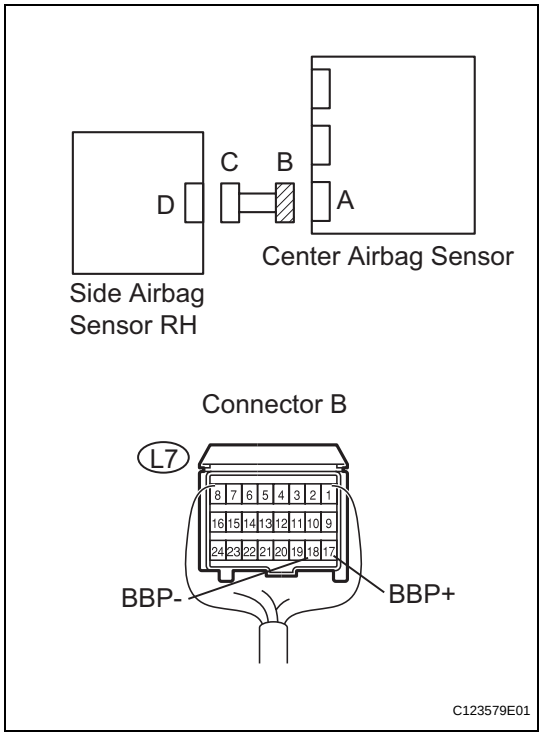
Tester Connection	Specified Condition
L7-17 (BBP+) - L7-18(BBP-)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (TO B+)



(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

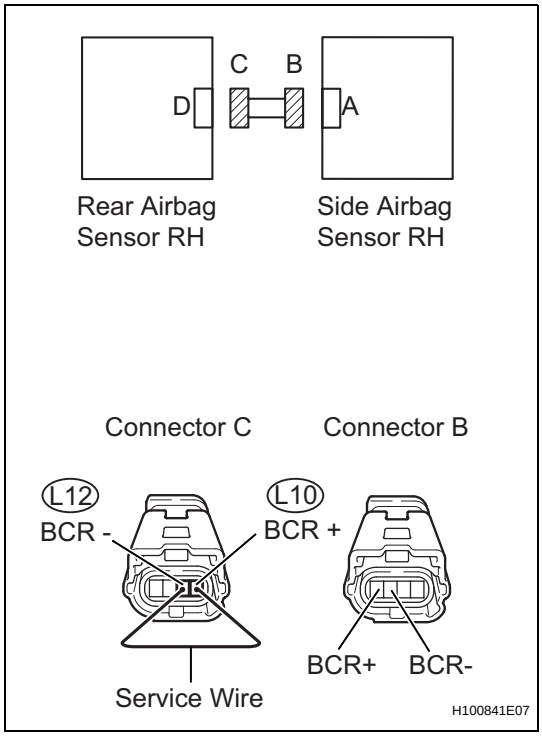
Tester Connection	Specified Condition
L7-17 (BBP+) - Body ground	Below 1 V
L7-18 (BBP-) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.
Standard resistance



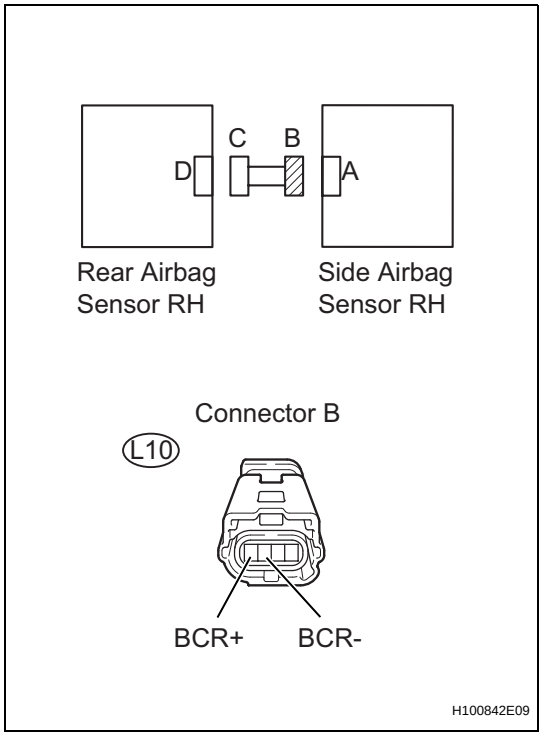
Tester Connection	Specified Condition
L7-17 (BBP+) - Body ground	1 MΩ or higher
L7-18 (BBP-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

7 CHECK FLOOR WIRE (OPEN)



(a) Disconnect the connectors from the side airbag sensor RH and the rear airbag sensor RH.
(b) Using a service wire, connect L12-1 (BCR-) and L12-2 (BCR+) of connector C.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.
(c) Measure the resistance of the wire harness side connector.
Standard resistance

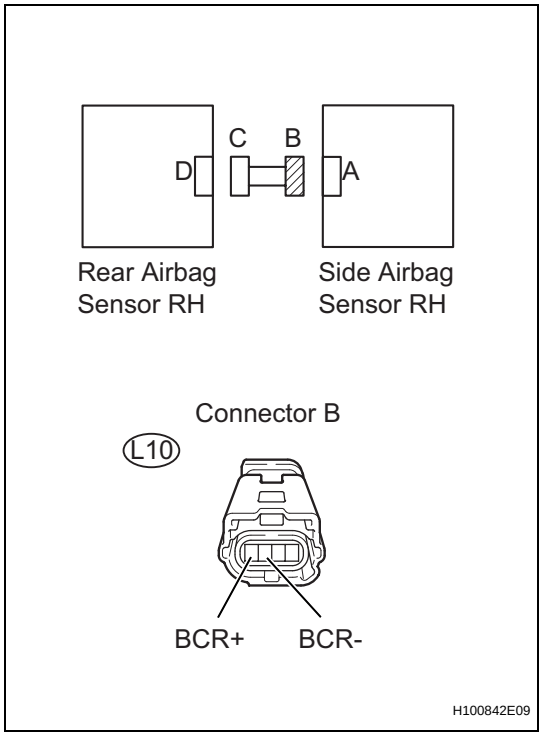
Tester Connection	Specified Condition
L10-1 (BCR+) - L10-2 (BCR-)	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

8 CHECK FLOOR WIRE (SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



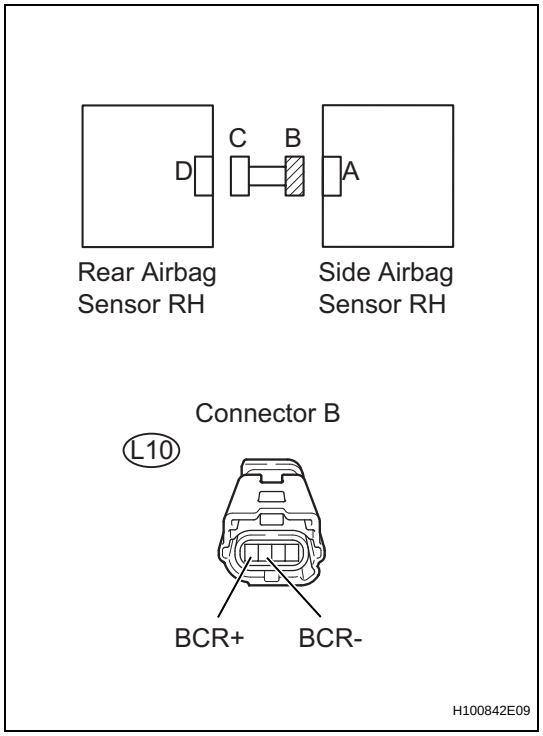
Tester Connection	Specified Condition
L10-1 (BCR+) - L10-2 (BCR-)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

9 CHECK FLOOR WIRE (TO B+)



(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

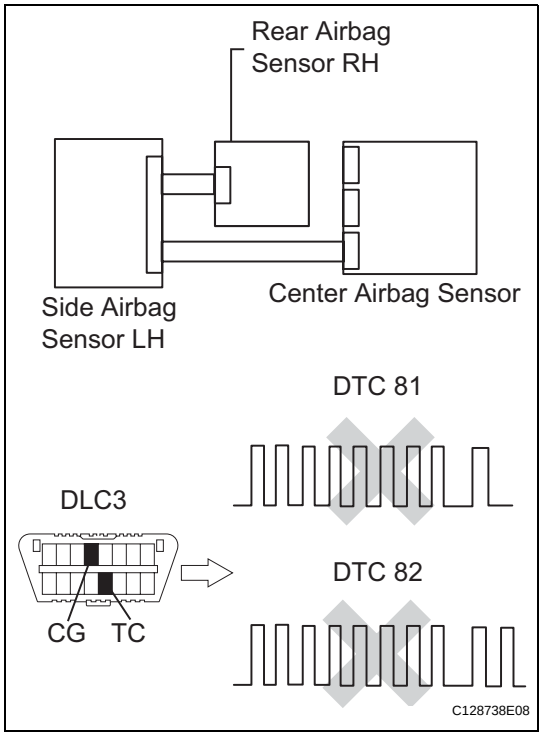
Tester Connection	Specified Condition
L10-1 (BCR+) - Body ground	Below 1 V
L10-2 (BCR-) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

10 CHECK FLOOR WIRE (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Specified Condition
L10-1 (BCR+) - Body ground	1 MΩ or higher
L10-2 (BCR-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

11	CHECK SIDE AIRBAG SENSOR RH

(a) Connect the connectors to the center airbag sensor.
(b) Interchange the side airbag sensor RH with the side airbag sensor LH and connect the connectors to them.
(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Clear the DTCs (see page RS-49).
(f) Turn the ignition switch OFF.
(g) Turn the ignition switch ON, and wait for at least 60 seconds.
(h) Check for DTCs (see page RS-49).

Result

Result	Proceed to
DTC B1643/81 and B1648/82 are not output	A

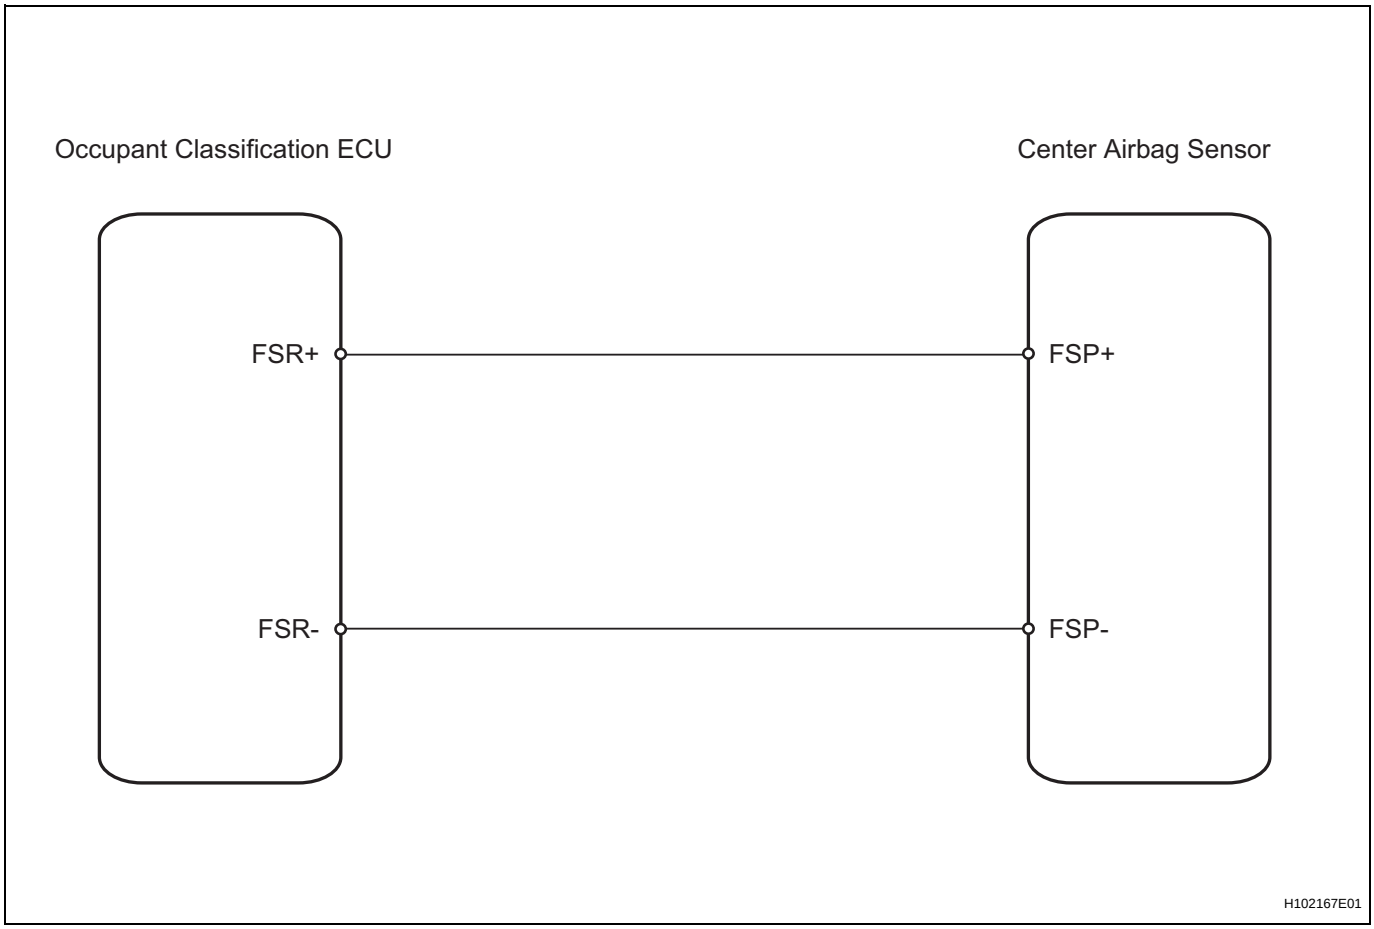
USE SIMULATION METHOD TO CHECK

RS

DTC	B1650/32	Occupant Classification System Malfunction

DESCRIPTION

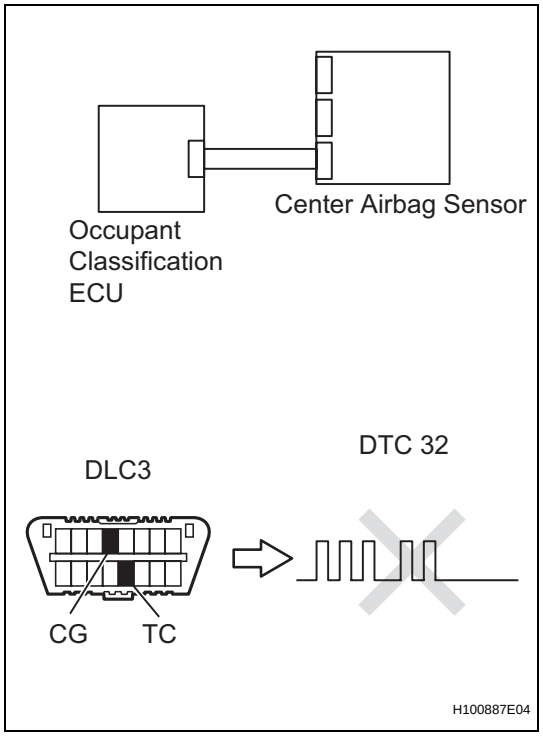


The occupant classification system circuit consists of the center airbag sensor and the occupant classification system.

When the center airbag sensor receives signals from the occupant classification ECU, it determines whether or not the front passenger airbag, front seat side airbag RH and seat belt pretensioner RH should be operated.

DTC B1650/32 is set when a malfunction is detected in the occupant classification system circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1650/32	When one of following conditions is met: • Occupant classification system malfunction • Center airbag sensor detects line short signal, open signal, short to ground signal or short to B+ signal in occupant classification system circuit for 2 seconds • Center airbag sensor malfunction	• Floor wire • Occupant classification system • Center airbag sensor



WIRING DIAGRAM

RS

INSPECTION PROCEDURE

1 CHECK FOR DTC (CENTER AIRBAG SENSOR)

(a) Turn the ignition switch ON, and wait for at least 60 seconds.
(b) Clear the DTCs (see page RS-49).
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Check for DTCs (see page RS-49).

OK:

DTC B1650/32 is not output.

HINT:
DTCs other than B1650/32 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 CHECK FOR DTC (OCCUPANT CLASSIFICATION ECU)

(a) Turn the ignition switch ON, and wait for at least 10 seconds.
(b) Using the intelligent tester (with CAN VIM), check for DTCs of the occupant classification ECU (see page RS-249).

OK:

DTC is not output.

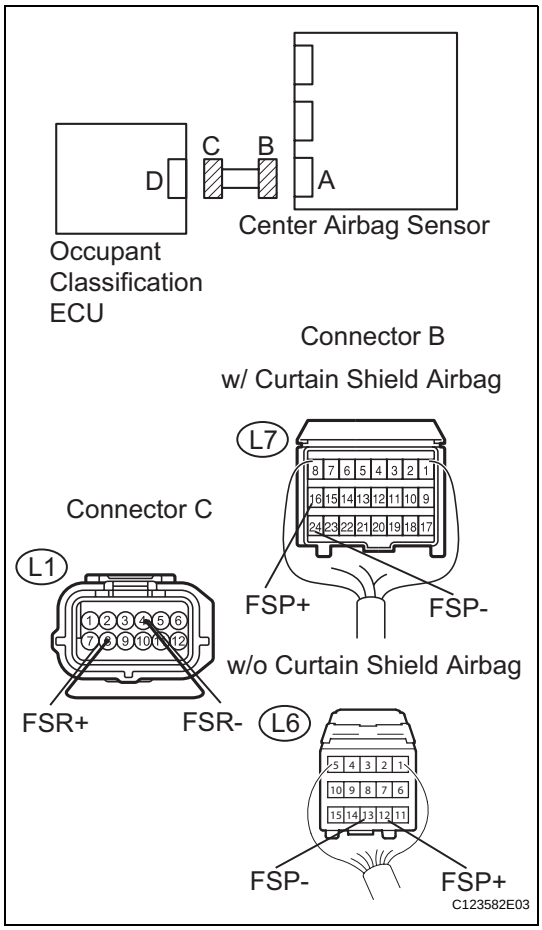
NG → **GO TO DTC CHART**

OK

3 CHECK CONNECTION OF CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor and the occupant classification ECU.

OK:



The connectors are properly connected.

RS

NG → CONNECT CONNECTOR

OK

4	CHECK FLOOR WIRE (OPEN)

(a) Disconnect the connectors from the center airbag sensor and occupant classification ECU.

(b) Using a service wire, connect L1-8 (FSR+) and L1-4 (FSR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting.

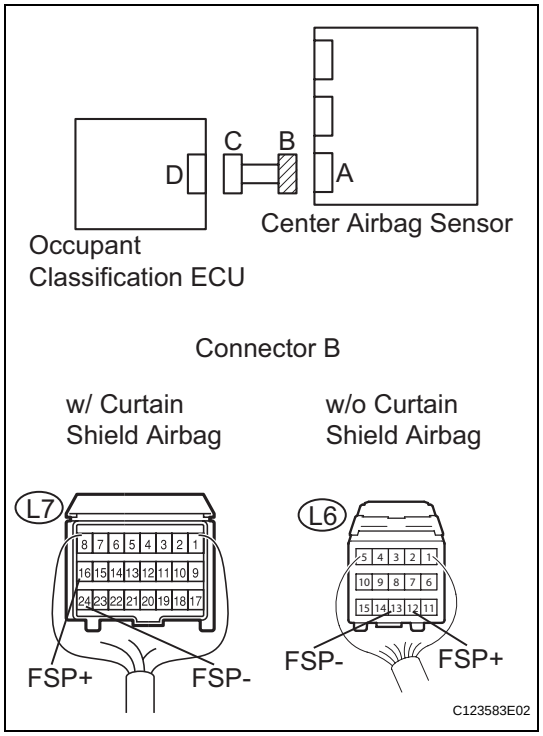
(c) Measure the resistance of the wire harness side connector.

Standard resistance:

w/ Curtain shield airbag

Tester Connection	Specified Condition
L7-16 (FSP+) - L7-24 (FSP-)	Below 1 Ω

w/o Curtain shield airbag



Tester Connection	Specified Condition
L6-12 (FSP+) - L6-13 (FSP-)	Below 1 Ω

NG → REPAIR OR REPLACE FLOOR WIRE

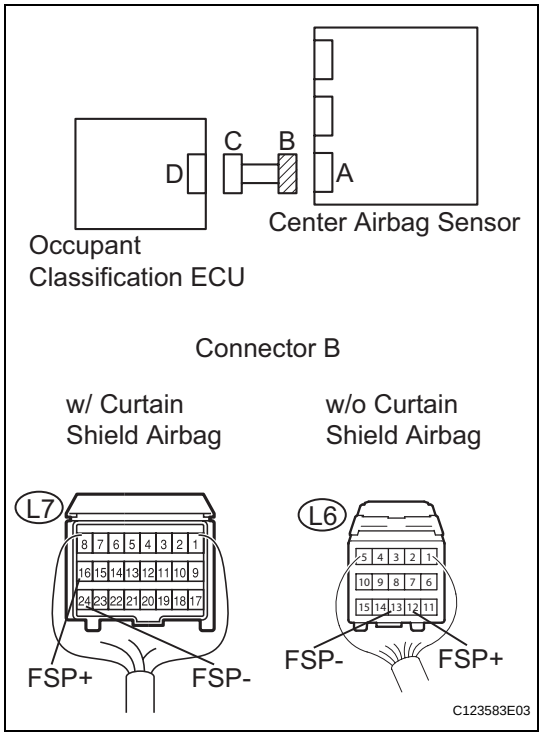
OK

RS

5 CHECK FLOOR WIRE (SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.
Standard resistance:
w/ Curtain shield airbag

Tester Connection	Specified Condition
L7-16 (FSP+) - L7-24 (FSP-)	1 MΩ or higher



w/o Curtain shield airbag

Tester Connection	Specified Condition
L6-12 (FSP+) - L6-13 (FSP-)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

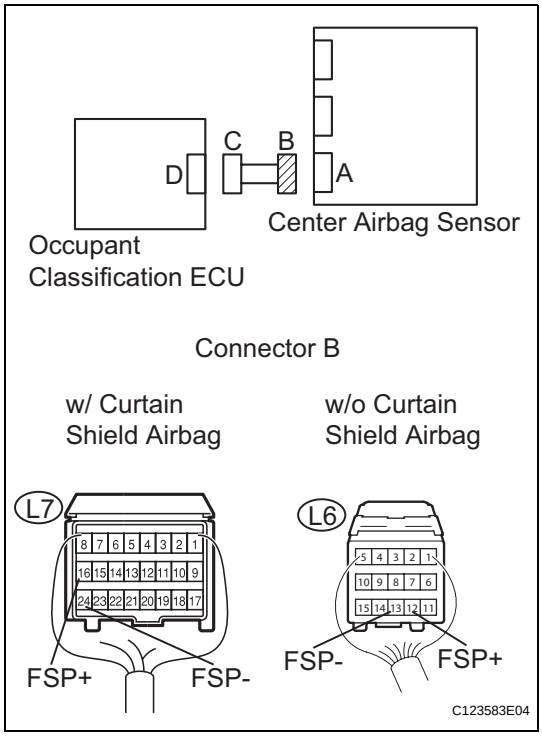
OK

6 CHECK FLOOR WIRE (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.
Standard voltage:
w/ Curtain shield airbag

Tester Connection	Specified Condition
L7-16 (FSP+) - Body ground	Below 1 V
L7-24 (FSP-) - Body ground	Below 1 V

w/o Curtain shield airbag



Tester Connection	Specified Condition
L6-12 (FSP+) - Body ground	Below 1 V
L6-13 (FSP-) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

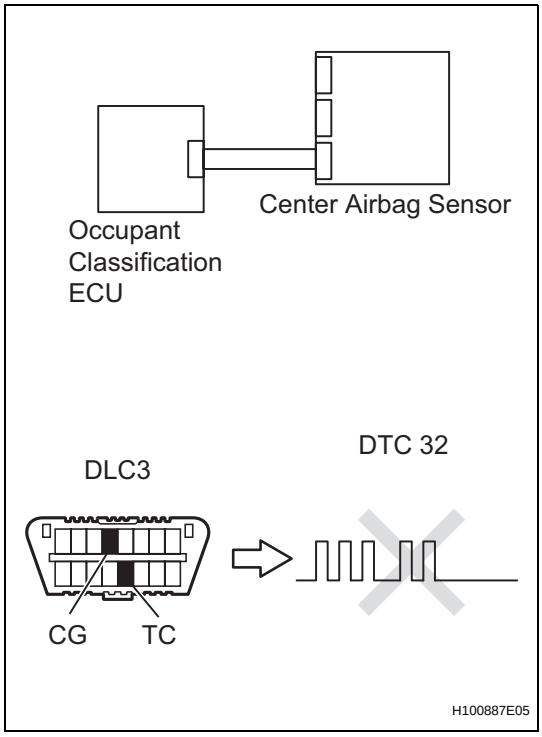
OK

RS

7 CHECK FLOOR WIRE (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.
Standard resistance:
w/ Curtain shield airbag

Tester Connection	Specified Condition
L7-16 (FSP+) - Body ground	1 MΩ or higher
L7-24 (FSP-) - Body ground	1 MΩ or higher



w/o Curtain shield airbag

Tester Connection	Specified Condition
L6-12 (FSP+) - Body ground	1 MΩ or higher
L6-13 (FSP-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

8 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Replace the center airbag sensor (see page RS-374).
HINT:
Perform the inspection using parts from a normal vehicle when possible.
(b) Connect the connectors to the center airbag sensor.
(c) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Clear the DTCs (see page RS-49).
(f) Turn the ignition switch OFF.
(g) Turn the ignition switch ON, and wait for at least 60 seconds.
(h) Check for DTCs (see page RS-49).
OK:
DTC B1650/32 is not output.
HINT:
DTCs other than B1650/32 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

RS

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed on the tester.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

INSPECTION PROCEDURE

1	CHECK FOR DTC

(a) Turn the ignition switch ON, and wait for at least 60 seconds.
(b) Clear the DTCs (see page RS-49).
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON, and wait for at least 60 seconds.
(e) Check the DTCs (see page RS-49).

OK:

DTC B1653/35 is not output.

HINT:

DTCs other than DTC B1653/35 may be output at this time, but they are not related to this check.

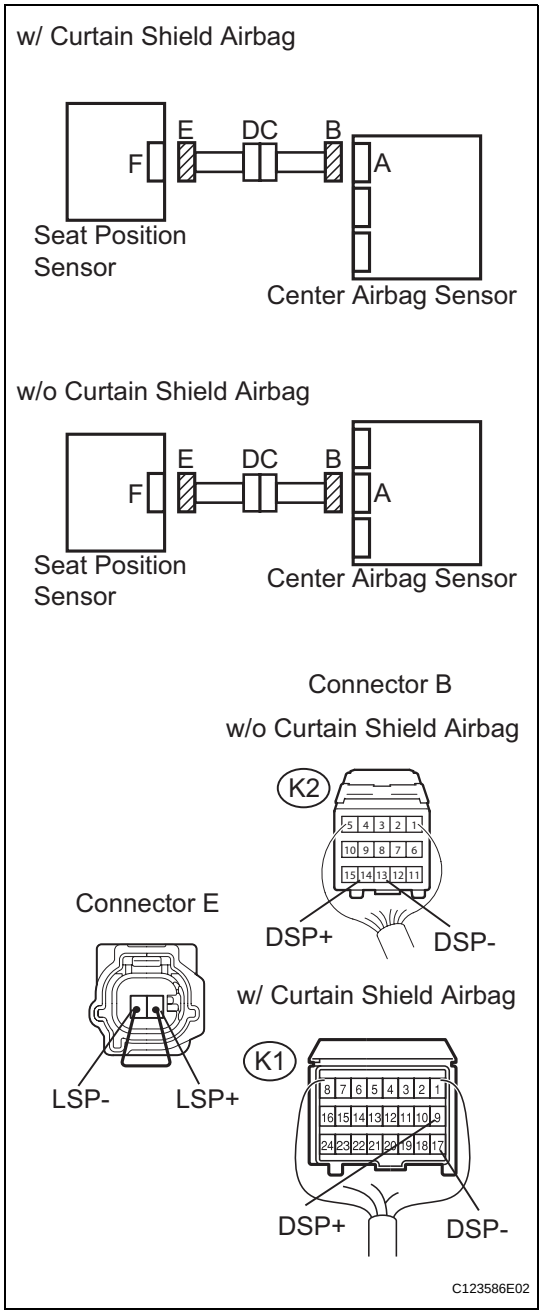
OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor and the seat position sensor.

OK:



The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

RS

3	CHECK SEAT POSITION SENSOR CIRCUIT (OPEN)

(a) Disconnect the connectors from the center airbag sensor and the seat position sensor.

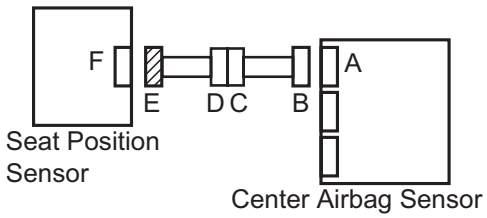
(b) Using a service wire, connect 2 and 1 of connector E.
NOTICE:
Do not forcibly insert the service wire into the terminals of the connector when connecting.

(c) Measure the resistance of the wire harness side connector.
Standard resistance:
w/o Curtain shield airbag

Tester Connection	Specified Condition
K2-14 (DSP+) - K2-13 (DSP-)	Below 1 Ω

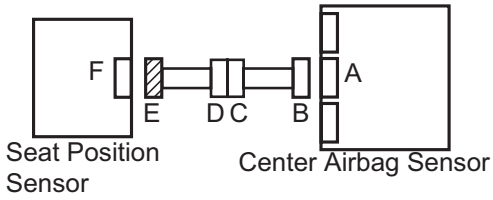
w/ Curtain shield airbag

Tester Connection	Specified Condition
K1-9 (DSP+) - K1-17 (LSP-)	Below 1 Ω



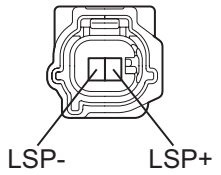
NG → **Go to step 10**

OK



RS

4	CHECK SEAT POSITION SENSOR CIRCUIT (SHORT)



w/ Curtain Shield Airbag

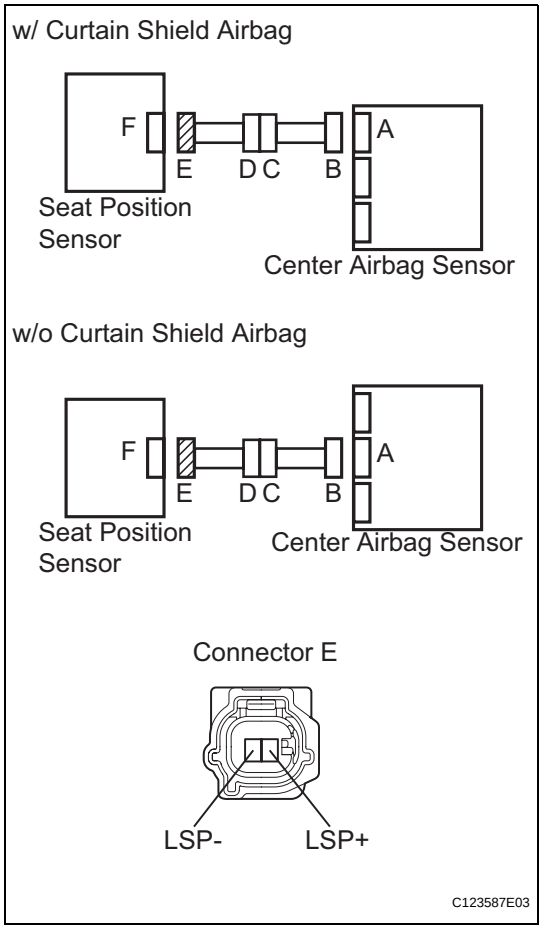
w/o Curtain Shield Airbag

Connector E

C123587E03

(a) Disconnect the service wire from connector E.
(b) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
2 (LSP+) - 1 (LSP-)	1 MΩ or higher

NG → **Go to step 11**

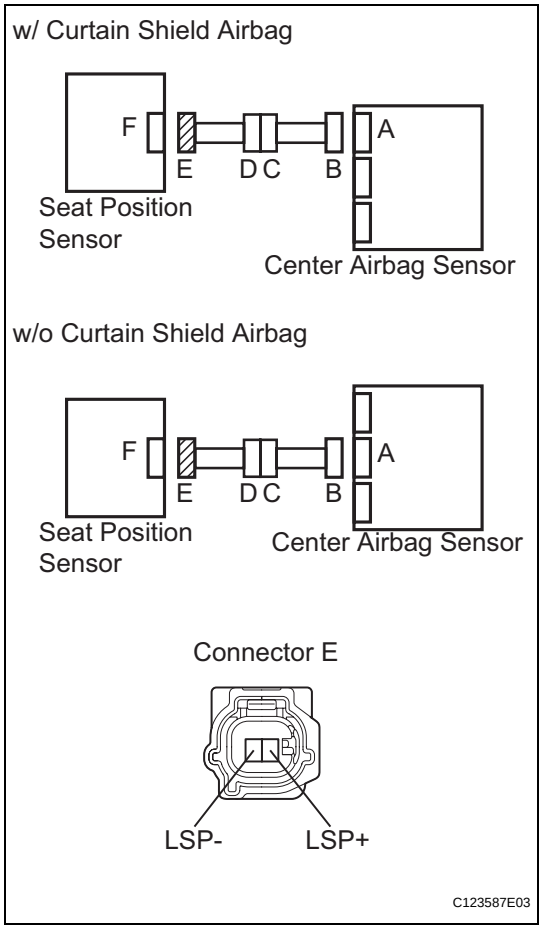
OK

RS

5	CHECK SEAT POSITION SENSOR CIRCUIT (TO B+)

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.

Standard voltage



Tester Connection	Specified Condition
2 (LSP+) - Body ground	Below 1 V
1 (LSP-) - Body ground	Below 1 V

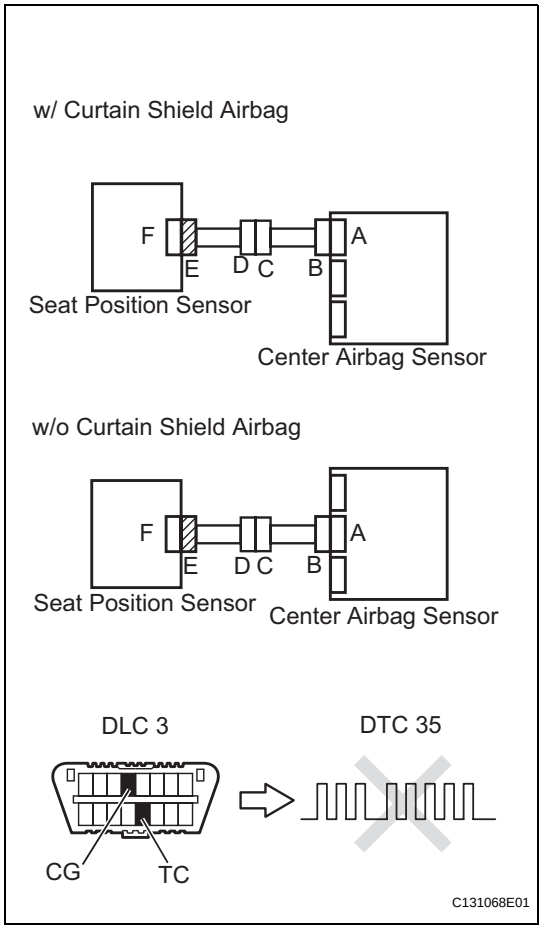
NG → **Go to step 12**

OK

RS

6	CHECK SEAT POSITION SENSOR CIRCUIT (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the voltage of the wire harness side connector.
Standard resistance



Tester Connection	Specified Condition
2 (LSP+) - Body ground	1 MΩ or higher
1 (LSP-) - Body ground	1 MΩ or higher

NG → **Go to step 13**

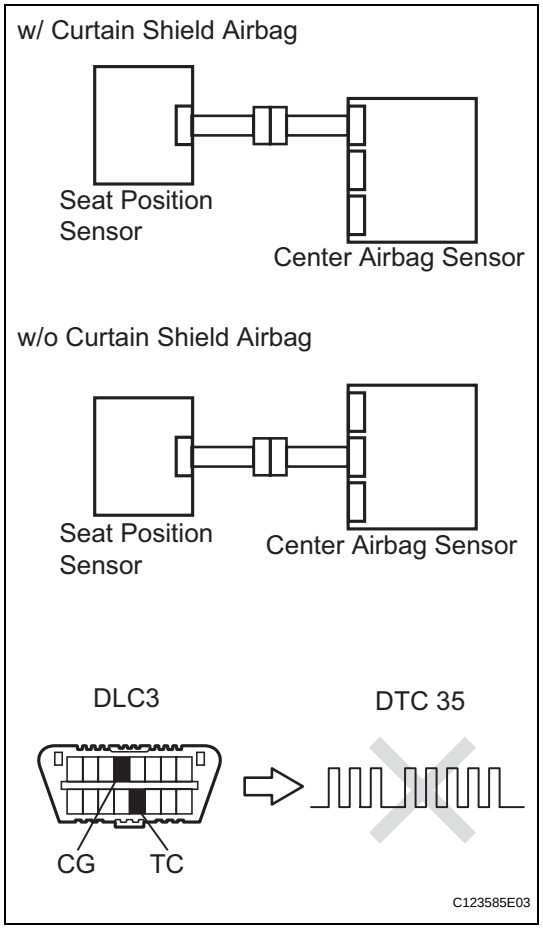
OK

RS

7	CHECK SEAT POSITION SENSOR

(a) Connect the connectors to the center airbag sensor and the seat position sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON, and wait for at least 60 seconds.
(d) Clear the DTCs (see page RS-49).
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON, and wait for at least 60 seconds.
(g) Check the DTCs (see page RS-49).
OK:
DTC B1653/35 is not output.
HINT:
DTCs other than DTC B1653/35 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**



NG

8	REPLACE SEAT POSITION SENSOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the seat position sensor (see page RS-389).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	CHECK CENTER AIRBAG SENSOR ASSEMBLY

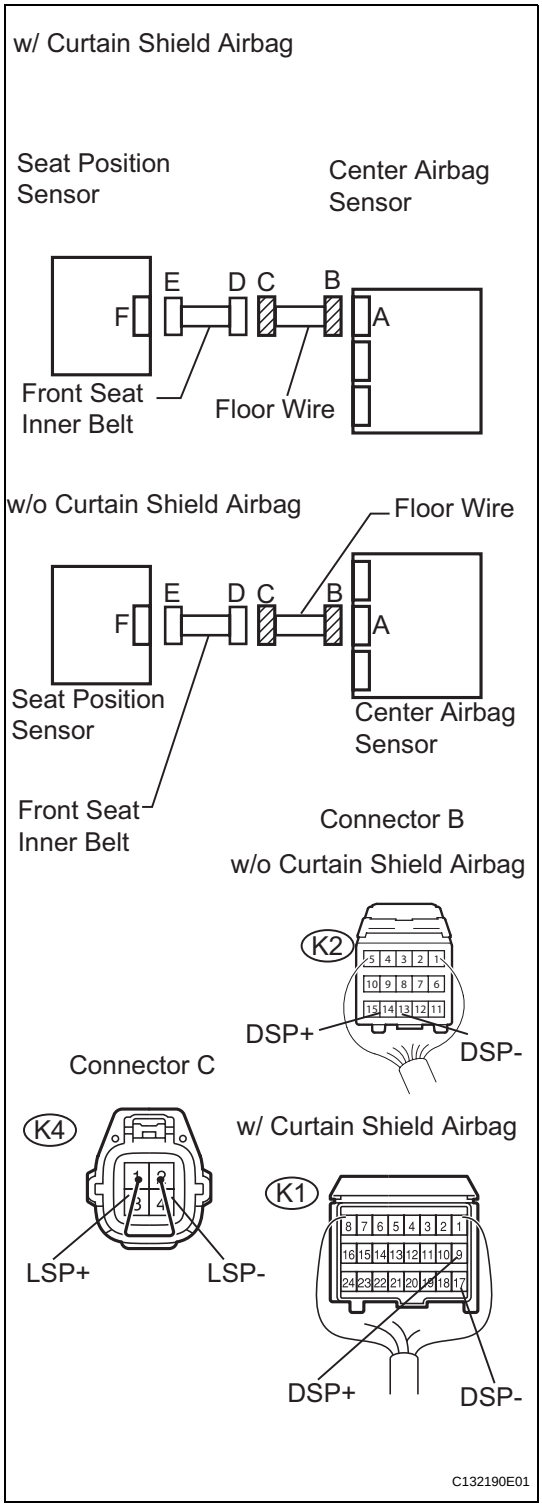
(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON, and wait for at least 60 seconds.
(c) Clear the DTCs (see page RS-49).
(d) Turn the ignition switch OFF.
(e) Turn the ignition switch ON, and wait for at least 60 seconds.
(f) Check the DTCs (see page RS-49).

OK:

DTC B1653/35 is not output.

HINT:

DTCs other than DTC B1653/35 may be output at this time, but they are not related to this check.



NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

END

RS

10	CHECK FLOOR WIRE (OPEN)

(a) Disconnect the front seat inner belt connector from the flow wire.

(b) Using a service wire, connect K4-1 (LSP+) and K4-2 (LSP-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting.

(c) Measure the resistance of the wire harness side connectors.

Standard resistance:

w/o Curtain shield airbag

Tester Connection	Specified Condition
K2-14 (DSP+) - K2-13 (DSP-)	Below 1 Ω

w/ Curtain shield airbag

Tester Connection	Specified Condition
K1-9 (DSP+) - K1-17 (DSP-)	Below 1 Ω

USE SIMULATION METHOD TO CHECK

RS

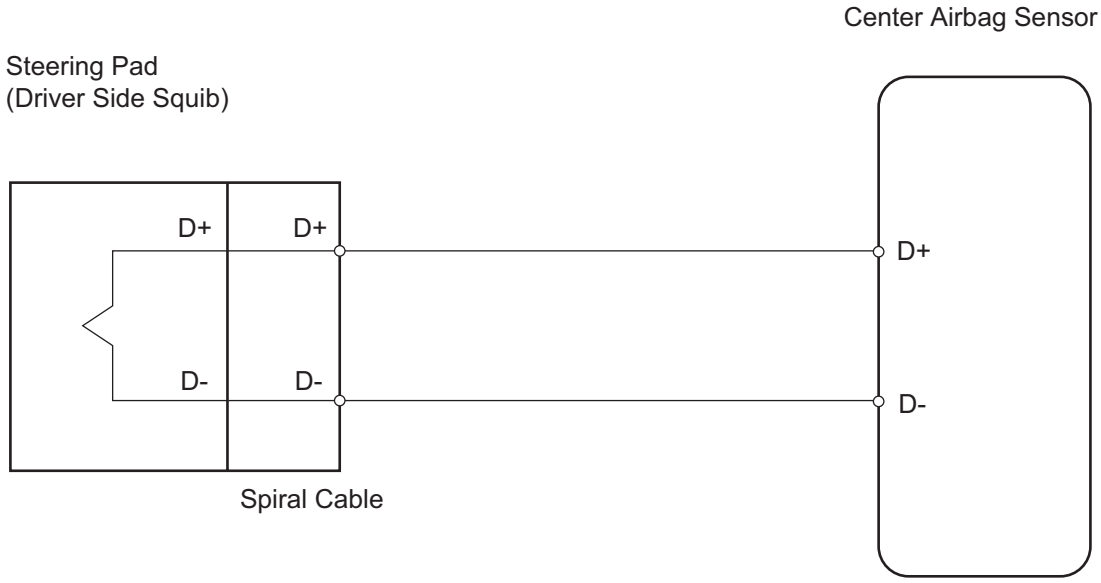
DTC	B1800/51	Short in Driver Side Squib Circuit

DTC	B1801/51	Open in Driver Side Squib Circuit

DTC	B1802/51	Short to GND in Driver Side Squib Circuit



DTC	B1803/51	Short to B+ in Driver Side Squib Circuit

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor, the spiral cable and the steering pad. The circuit instructs the SRS to deploy when the deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1800/51	Center airbag sensor receives a line short signal 5 times in the driver side squib circuit during primary check.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1801/51	Center airbag sensor receives an open signal in the driver side squib circuit for 2 seconds.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1802/51	Center airbag sensor receives a short to ground signal in the driver side squib circuit for 0.5 seconds.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor
B1803/51	Center airbag sensor receives a short to B+ signal in the driver side squib circuit for 0.5 seconds.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "CHECK MODE" (signal check) with the intelligent tester (see page RS-52).
- After selecting the "CHECK MODE" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (see page RS-52).

1	CHECK STEERING PAD (DRIVER SIDE SQUIB)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E.
CAUTION:
Never connect a tester to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert SST into the terminals of the connector when connecting.**
- **Insert SST straight into the terminals of the connector.**

SST 09843-18060

(e) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(f) Turn the ignition switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs (see page RS-49).
(h) Turn the ignition switch OFF.
(i) Turn the ignition switch ON, and wait for at least 60 seconds.
(j) Check the DTCs (see page RS-49).
OK:
DTC B1800, B1801, B1802, B1803 or 51 is not output.
HINT:
DTCs other than DTC B1800, B1801, B1802, B1803 or 51 may be output at this time, but they are not related to this check.

2	CHECK CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect SST from the spiral cable.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.
OK:
Lock button is not disengaged, and claw of lock is not deformed or damaged.

NG → **REPLACE SPIRAL CABLE**

OK

3	CHECK DRIVER SIDE SQUIB CIRCUIT

(a) Disconnect the connectors from the center airbag sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
D+ - Body ground	Below 1 V
D- - Body ground	Below 1 V

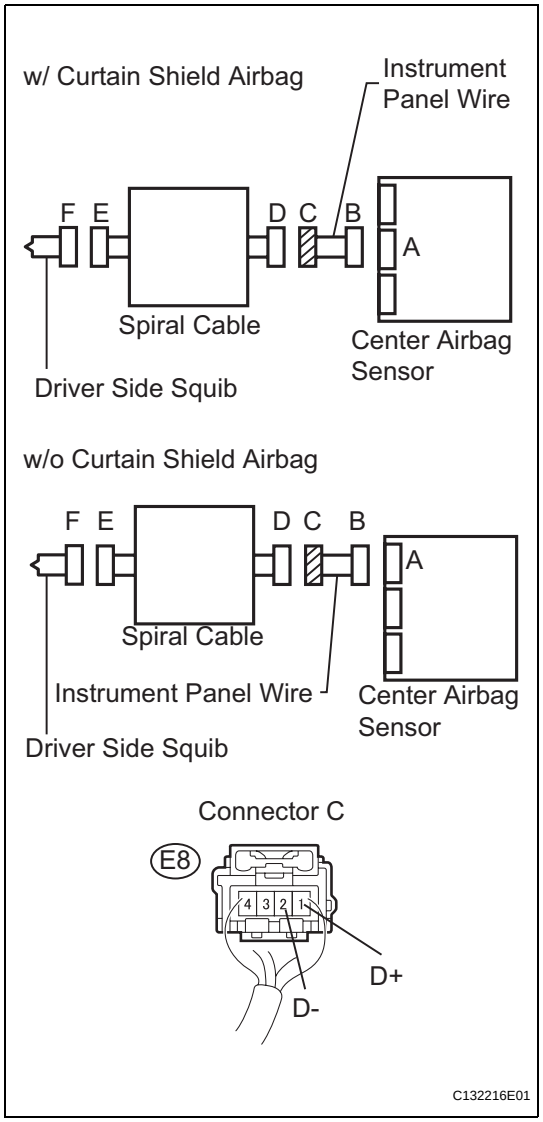
(e) Turn the ignition switch OFF.
(f) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(g) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
D+ - D-	Below 1 Ω
D+ - Body ground	1 MΩ or higher
D- - Body ground	1 MΩ or higher

(h) Release the activation prevention mechanism built into connector B (see page RS-37).
(i) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
D+ - D-	1 MΩ or higher

OK → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

NG

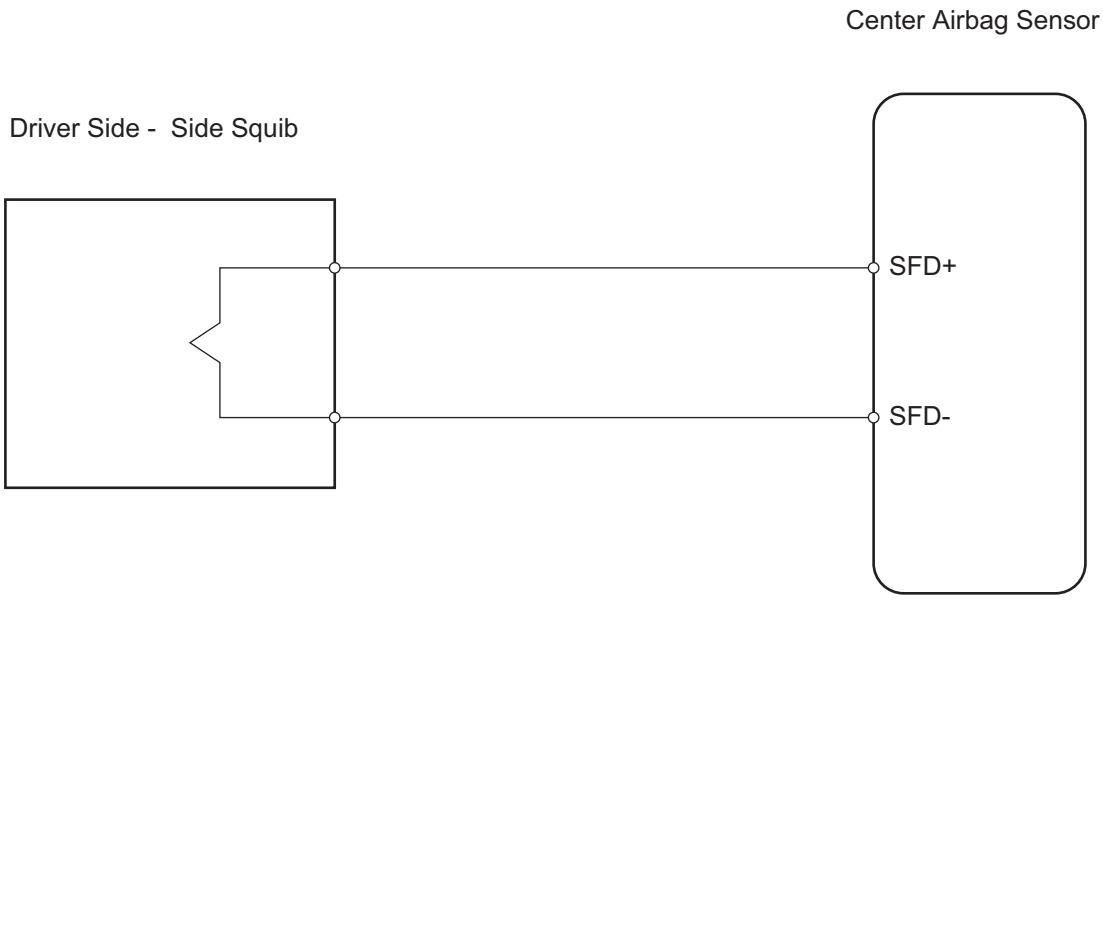
DTC	B1820/55	Short in Front Driver Side - Side Squib Circuit

DTC	B1821/55	Open in Front Driver Side - Side Squib Circuit

DTC	B1822/55	Short to GND in Front Driver Side - Side Squib Circuit



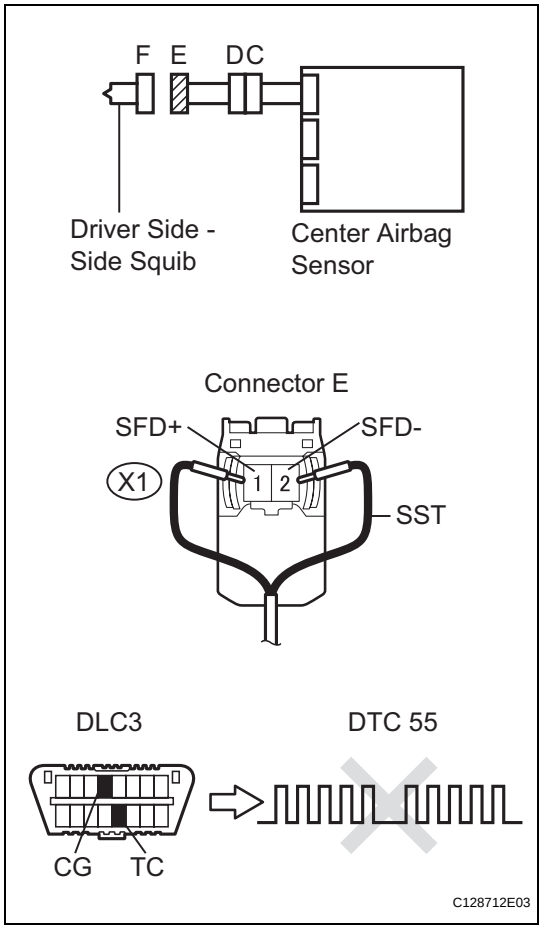
DTC	B1823/55	Short to B+ in Front Driver Side - Side Squib Circuit

DESCRIPTION

The driver side - side squib circuit consists of the center airbag sensor and the front seat side airbag LH. This circuit instructs the SRS to deploy when the deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side - side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1820/55	Center airbag sensor receives a line short signal 5 times in the driver side - side squib circuit during primary check.	• Floor wire • No. 1 seat airbag wire • Front seat side airbag LH (Driver side - side squib) • Center airbag sensor
B1821/55	Center airbag sensor receives an open signal in the driver side - side squib circuit for 2 seconds.	• Floor wire • No. 1 seat airbag wire • Front seat side airbag LH (Driver side - side squib) • Center airbag sensor
B1822/55	Center airbag sensor receives a short to ground signal in the driver side - side squib circuit for 0.5 seconds.	• Floor wire • No. 1 seat airbag wire • Front seat side airbag LH (Driver side - side squib) • Center airbag sensor
B1823/55	Center airbag sensor receives a short to B+ signal in the driver side - side squib circuit for 0.5 seconds.	• Floor wire • No. 1 seat airbag wire • Front seat side airbag LH (Driver side - side squib) • Center airbag sensor

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "CHECK MODE" (signal check) with the intelligent tester (see page RS-52).
- After selecting the "CHECK MODE" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (see page RS-52).

1	CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY LH (DRIVER SIDE - SIDE SQUIB)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect the connector from the front seat side airbag LH.
(d) Connect the black wire side of SST to connector E.
CAUTION:
Never connect a tester to the front seat side airbag LH (driver side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert SST into the terminals of the connector when connecting.**
- **Insert SST straight into the terminals of the connector.**

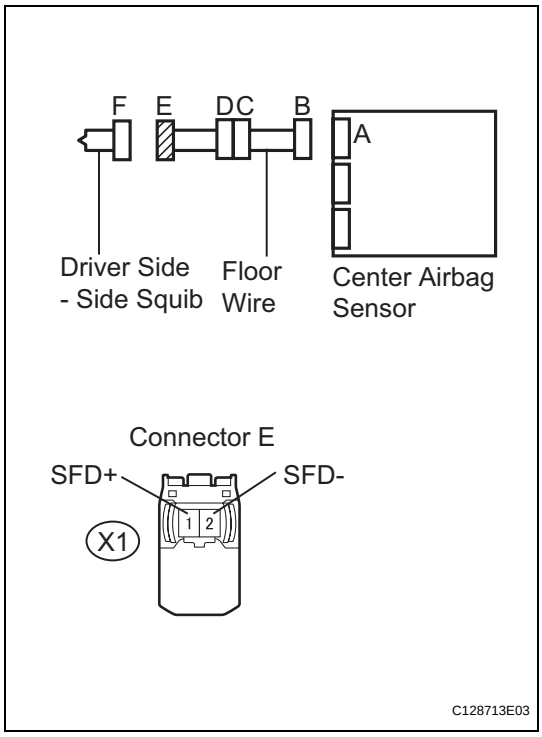
SST 09843-18060

(e) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(f) Turn the ignition switch ON, and wait for at least 60 seconds.
(g) Clear the DTCs (see page RS-49).
(h) Turn the ignition switch OFF.
(i) Turn the ignition switch ON, and wait for at least 60 seconds.
(j) Check the DTCs (see page RS-49).
OK:
DTC B1820, B1821, B1822, B1823 or 55 is not output.
HINT:
DTCs other than DTC B1820, B1821, B1822, B1823 or 55 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT ASSEMBLY LH**

NG

2	CHECK CONNECTOR



(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect SST from the No. 1 seat airbag wire.
(d) Check that the floor wire connectors (on the driver side - side squib) are not damaged.
OK:
Lock button is not disengaged, and claw of lock is not deformed or damaged.

NG → **REPLACE FLOOR WIRE**

RS

OK

3	CHECK FLOOR WIRE (DRIVER SIDE - SIDE SQUIB CIRCUIT)

(a) Disconnect the connector from the center airbag sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
X1-1 (SFD-) - Body ground	Below 1 V
X1-2 (SFD+) - Body ground	Below 1 V

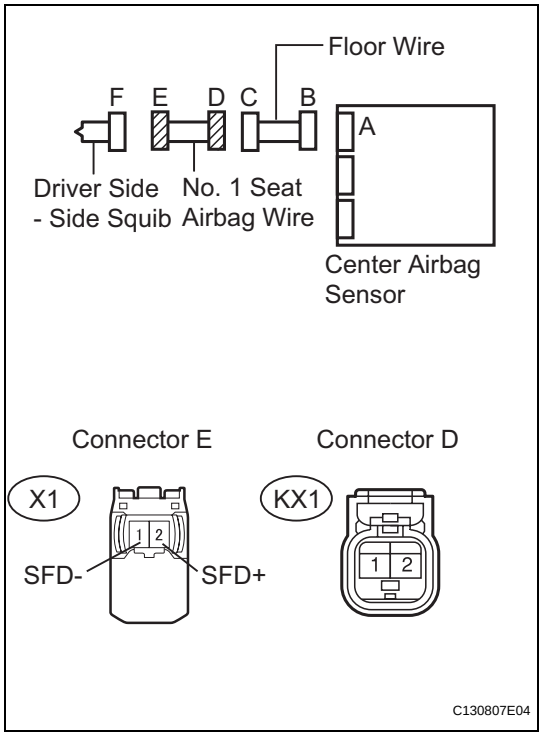
(e) Turn the ignition switch OFF.
(f) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(g) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
X1-1 (SFD-) - X1-2 (SFD+)	Below 1 Ω
X1-1 (SFL-) - Body ground	1 MΩ or higher
X1-2 (SFL+) - Body ground	1 MΩ or higher

(h) Release the activation prevention mechanism built into connector B (see page RS-37).
(i) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
X1-1 (SFD-) - X1-2 (SFD+)	1 MΩ or higher

RS

OK → REPLACE CENTER AIRBAG SENSOR ASSEMBLY

NG

4	CHECK NO. 1 SEAT AIRBAG WIRE

(a) Disconnect the No. 1 seat airbag wire connector from the floor wire.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Specified Condition
X1-1 (SFD-) - Body ground	Below 1 V
X1-2 (SFD+) - Body ground	Below 1 V

(e) Turn the ignition switch OFF.
(f) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(g) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
X1-2 (SFD+) - KX1-2	Below 1 Ω
X1-1 (SFD-) - KX1-1	Below 1 Ω
X1-2 (SFD+) - X1-1 (SFD-)	1 MΩ or higher
X1-2 (SFD+) - Body ground	1 MΩ or higher

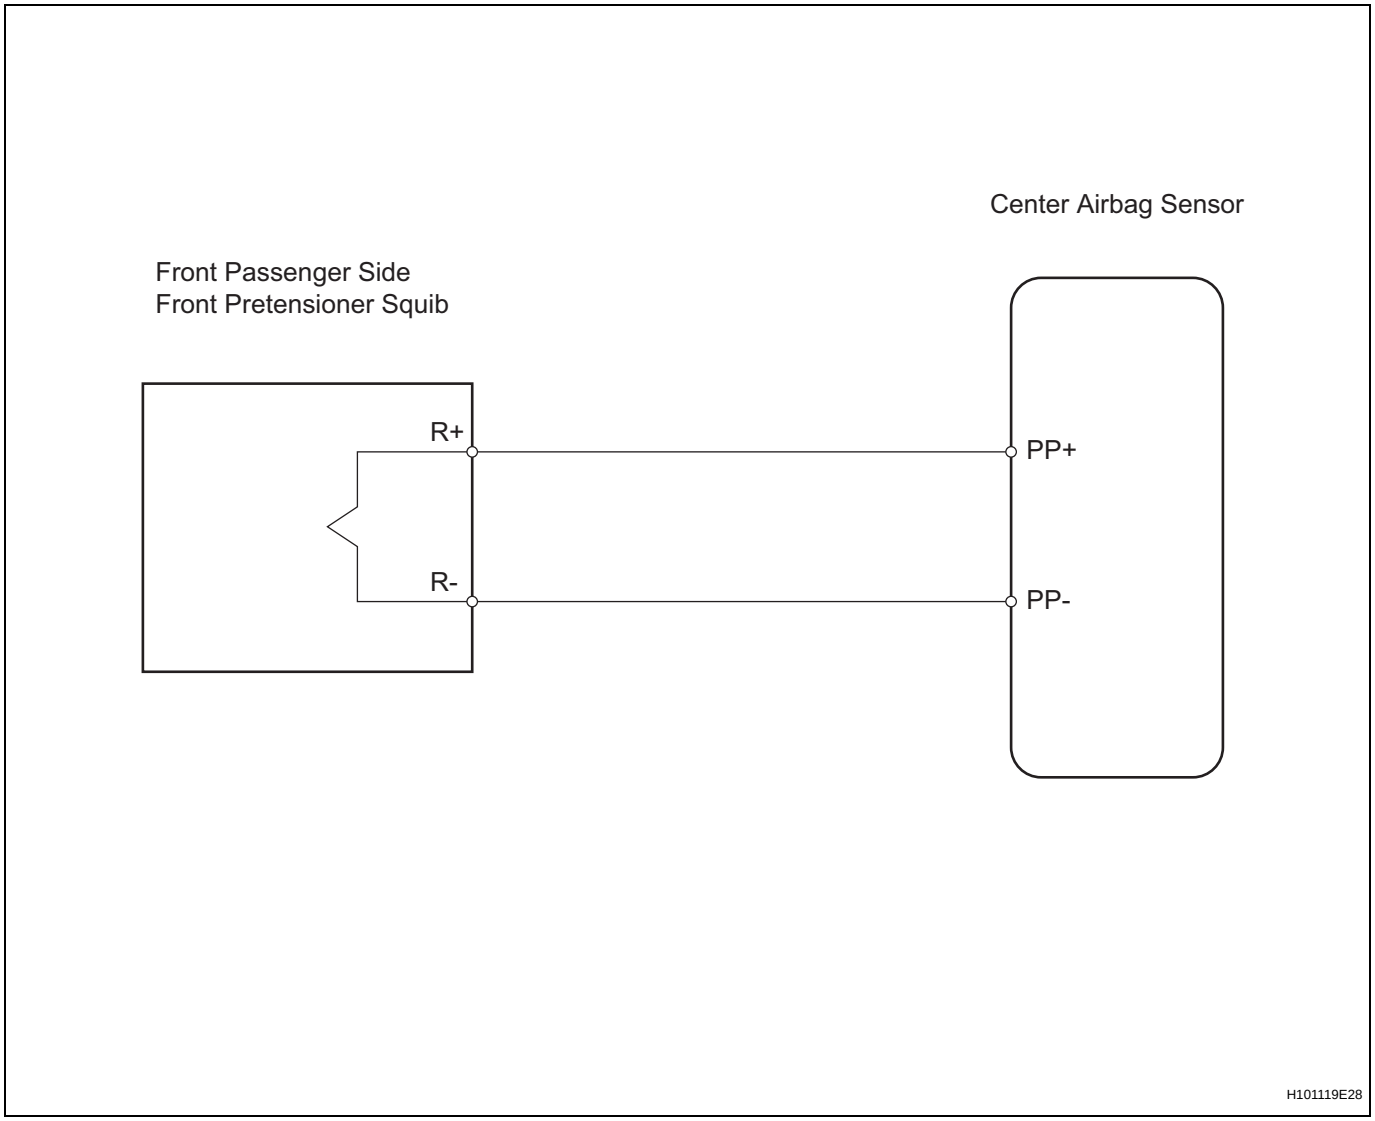
DTC	B1905/74	Short in Front Passenger Side Pretensioner Squib Circuit

DTC	B1906/74	Open in Front Passenger Side Pretensioner Squib Circuit

DTC	B1907/74	Short to GND in Front Passenger Side Pretensioner Squib Circuit

DTC	B1908/74	Short to B+ in Front Passenger Side Front Pretensioner Squib Circuit

DESCRIPTION



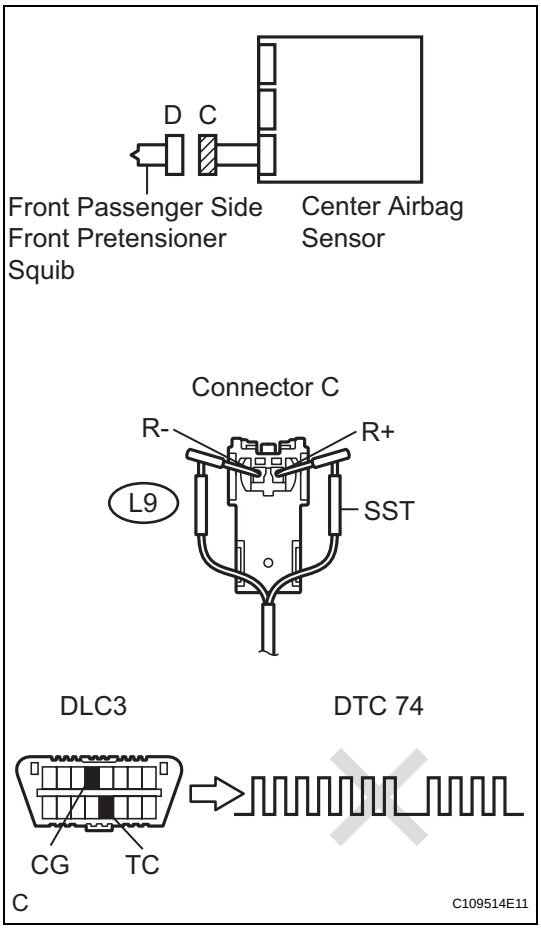
The front passenger side front pretensioner squib circuit consists of the center airbag sensor and the front seat outer belt RH.

This circuit instructs the SRS to deploy when the deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side front pretensioner squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1905/74	Center airbag sensor receives a line short signal 5 times in the front passenger side front pretensioner squib circuit during primary check.	• No. 2 floor wire • Front seat outer belt RH (Front passenger side front pretensioner squib) • Center airbag sensor
B1906/74	Center airbag sensor receives an open signal in the front passenger side front pretensioner squib circuit for 2 seconds.	• No. 2 floor wire • Front seat outer belt RH (Front passenger side front pretensioner squib) • Center airbag sensor
B1907/74	Center airbag sensor receives a short to ground signal in the front passenger side front pretensioner squib circuit for 0.5 seconds.	• No. 2 floor wire • Front seat outer belt RH (Front passenger side front pretensioner squib) • Center airbag sensor
B1908/74	Center airbag sensor receives a short to B+ signal in the front passenger side front pretensioner squib circuit for 0.5 seconds.	• No. 2 floor wire • Front seat outer belt RH (Front passenger side front pretensioner squib) • Center airbag sensor

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "CHECK MODE" (signal check) with the intelligent tester (see page RS-52).
- After selecting the "CHECK MODE" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (see page RS-52).

1	CHECK FRONT SEAT OUTER BELT ASSEMBLY RH (FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front seat outer belt RH.
(d) Connect the white wire side of SST to connector C.
CAUTION:
Never connect a tester to the front seat outer belt RH (front passenger side front pretensioner squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert SST into the terminals of the connector when connecting.**
- **Insert SST straight into the terminals of the connector.**

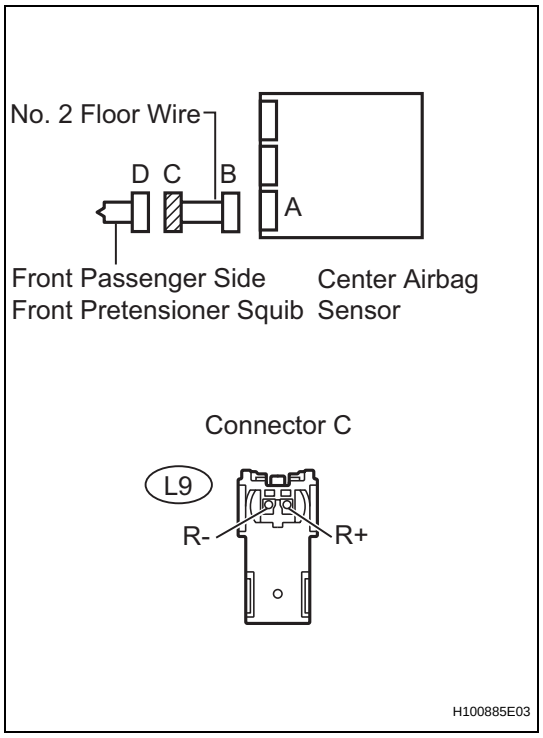
SST 09843-18060

(e) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(f) Turn the ignition switch ON, and wait for at least 60 seconds.
(g) Clear the DTCs (see page RS-49).
(h) Turn the ignition switch OFF.
(i) Turn the ignition switch ON, and wait for at least 60 seconds.
(j) Check the DTCs (see page RS-49).
OK:
DTC B1905, B1906, B1907, B1908 or 74 is not output.
HINT:
DTCs other than DTC B1905, B1906, B1907, B1908 or 74 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH**

NG

2	CHECK CONNECTOR



(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect SST from connector C.
(d) Check that the floor wire connector (on the front seat outer belt RH side) is not damaged.
OK:
Lock button is not disengaged, or the claw of the lock is not deformed or damaged.

RS

NG → REPAIR OR REPLACE NO. 2 FLOOR WIRE

OK

3	CHECK FLOOR WIRE (FRONT PASSENGER SIDE FRONT PRETENSIONER SQUIB CIRCUIT)

(a) Disconnect the connectors from the center airbag sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
L9-1 (R+) - Body ground	Below 1 V
L9-2 (R-) - Body ground	Below 1 V

(d) Turn the ignition switch OFF.
(e) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(f) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
L9-1 (R+) - L9-2 (R-)	Below 1 Ω
L9-1 (R+) - Body ground	1 MΩ or higher
L9-2 (R-) - Body ground	1 MΩ or higher

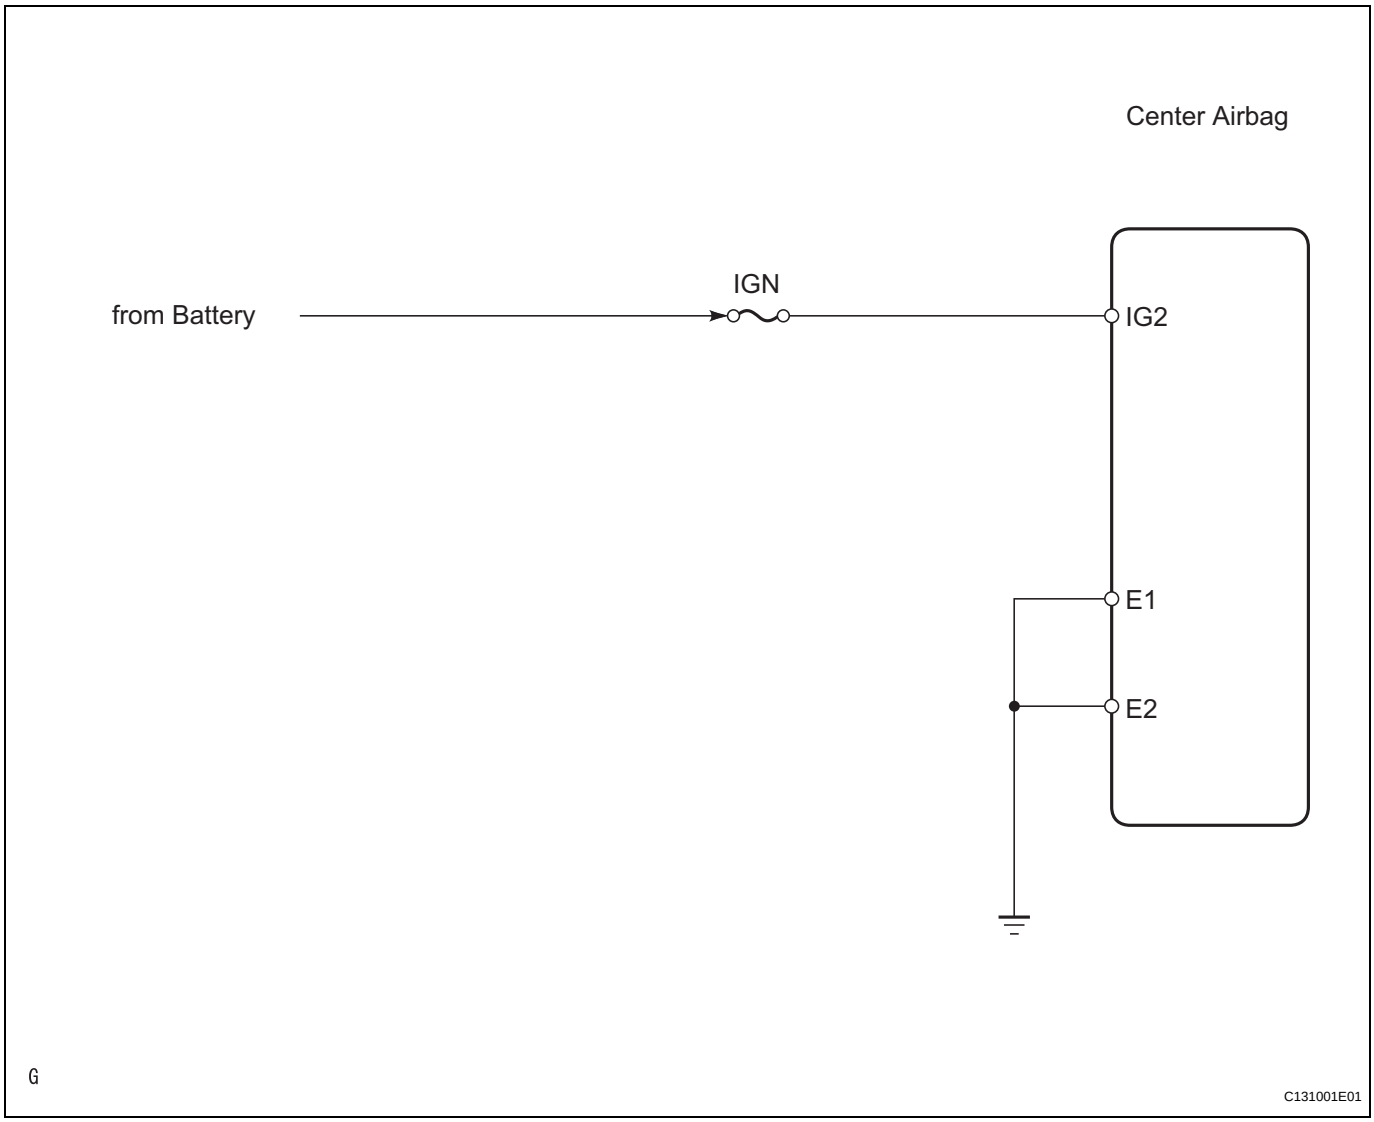
(g) Release the activation prevention mechanism built into connector B (see page RS-37).
(h) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
L9-1 (R+) - L9-2 (R-)	1 MΩ or higher

NG → REPAIR OR REPLACE NO. 2 FLOOR WIRE

OK

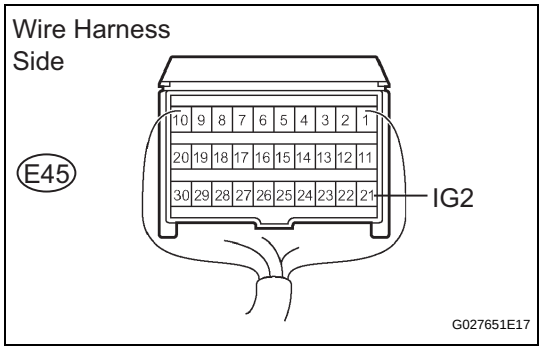
REPLACE CENTER AIRBAG SENSOR ASSEMBLY



RS

Source Voltage Drop

DESCRIPTION



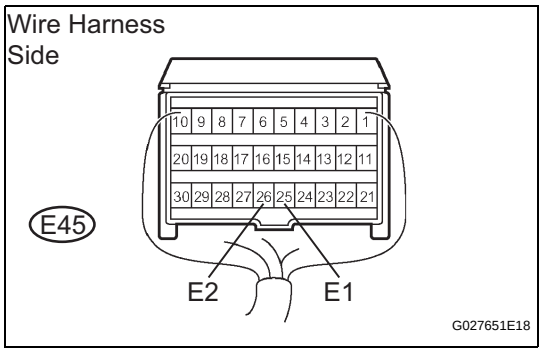
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor in case the source voltage drops.
When the source voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to a normal working level.
A malfunction in this circuit is displayed differently from other codes, in the fact that no DTCs are recorded. With a normal system code present, the source voltage drop is indicated when the SRS warning light comes on.
A malfunction in this circuit is not recorded in the center airbag sensor .
The SRS warning light automatically goes off when the source voltage returns to normal.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BATTERY)

(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the E45 connector from the center airbag sensor .
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Measure the voltage of the wire harness side connectors.



Standard voltage

Tester Connection	Specified Condition
E45-21 (IG2) - Body ground	11 to 14 V

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR, CHARGING SYSTEM AND BATTERY**

OK

2 CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BODY GROUND)

(a) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E45-25 (E1) - Body ground	Below 1 Ω
E45-26 (E2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

3 CHECK SRS WARNING LIGHT

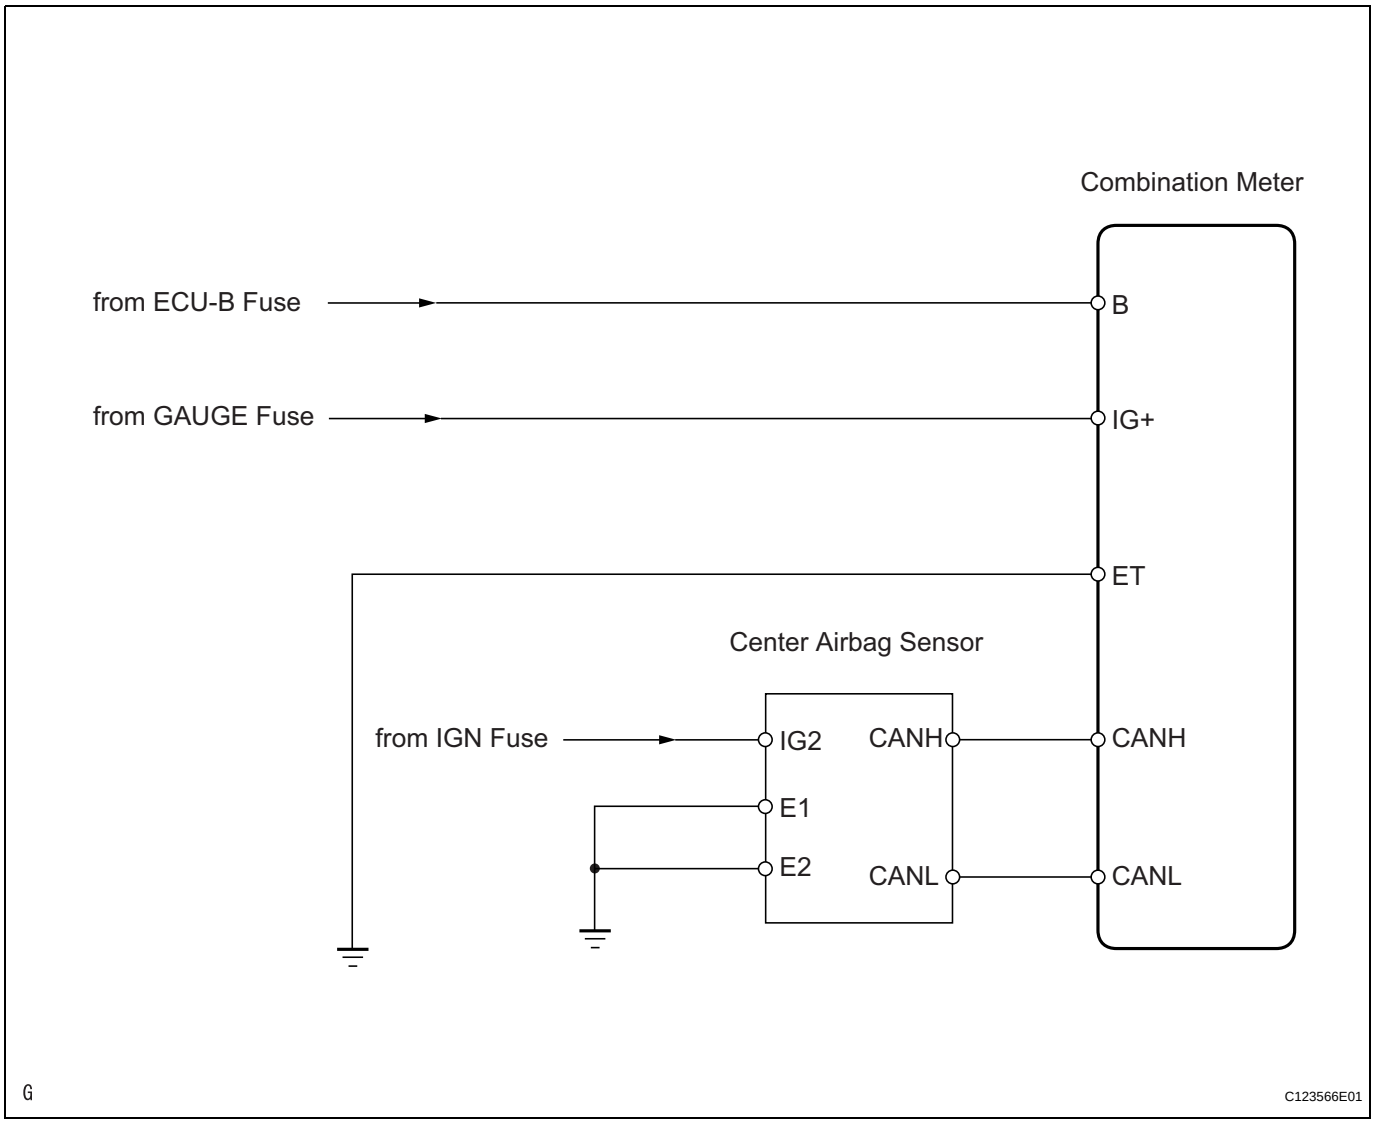
(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the E45 center airbag sensor connector.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch ON, and wait for at least 6 seconds.
(f) Operate all components of the electrical system (defogger, wiper, headlight, heater, blower, etc.) and check that the SRS warning light does not come on.

RS

OK:
SRS warning light does not come on.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK



END

SRS Warning Light Remains ON

DESCRIPTION

The SRS warning light is located on the combination meter.
When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from OFF to ON, and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.
When terminals TC and CG of the DLC3 are connected, the DTC is displayed by blinking the SRS warning light.
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor in case the source voltage drops.
When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.
A malfunction in this circuit is not recorded in the center airbag sensor . The SRS warning light automatically goes off when the source voltage returns to normal.
The signal to illuminate the SRS warning light is transmitted from the center airbag sensor to the combination meter through the multiplex communication system.

WIRING DIAGRAM

RS

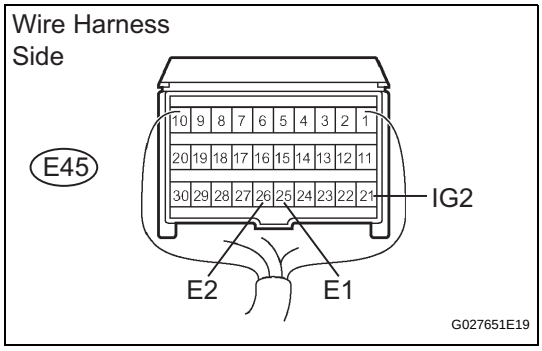
INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK



2	CHECK CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor and combination meter.
OK:
The connectors are properly connected.

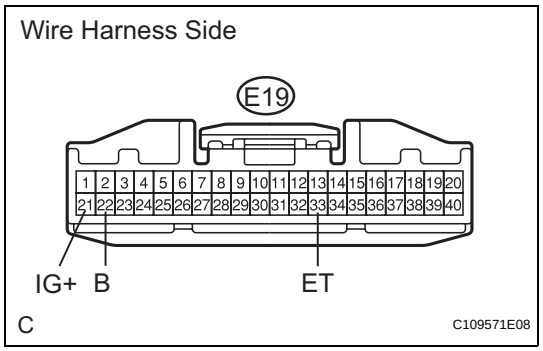
NG → **CONNECT CONNECTOR**

OK

3	CHECK WIRE HARNESS (SOURCE VOLTAGE OF CENTER AIRBAG SENSOR ASSEMBLY)

(a) Disconnect the E45 connector from the center airbag sensor .
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Operate all components of the electrical system (defogger, wipers, headlight, heater blower, etc.).
(e) Measure the voltage of the wire harness side connectors.
Standard voltage

Tester Connection	Specified Condition
E45-21 (IG2) - Body ground	10 to 14 V



(f) Turn the ignition switch OFF.
(g) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
E45-25 (E1) - Body ground	Below 1 Ω
E45-26 (E2) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK WIRE HARNESS (SOURCE VOLTAGE OF COMBINATION METER)

(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Disconnect the E19 connector from the combination meter.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the ignition switch ON.
(e) Measure the voltage of the wire harness side connectors.

Standard voltage

Tester Connection	Condition	Specified Condition
E19-21 (IG+) - Body ground	Ignition switch ON	10 to 14 V
E19-22 (B) - Body ground	Always	10 to 14 V

(f) Turn the ignition switch OFF.
(g) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E19-33 (ET) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

5	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the E19 connector to the combination meter.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch ON.
(f) Check the SRS warning light condition.

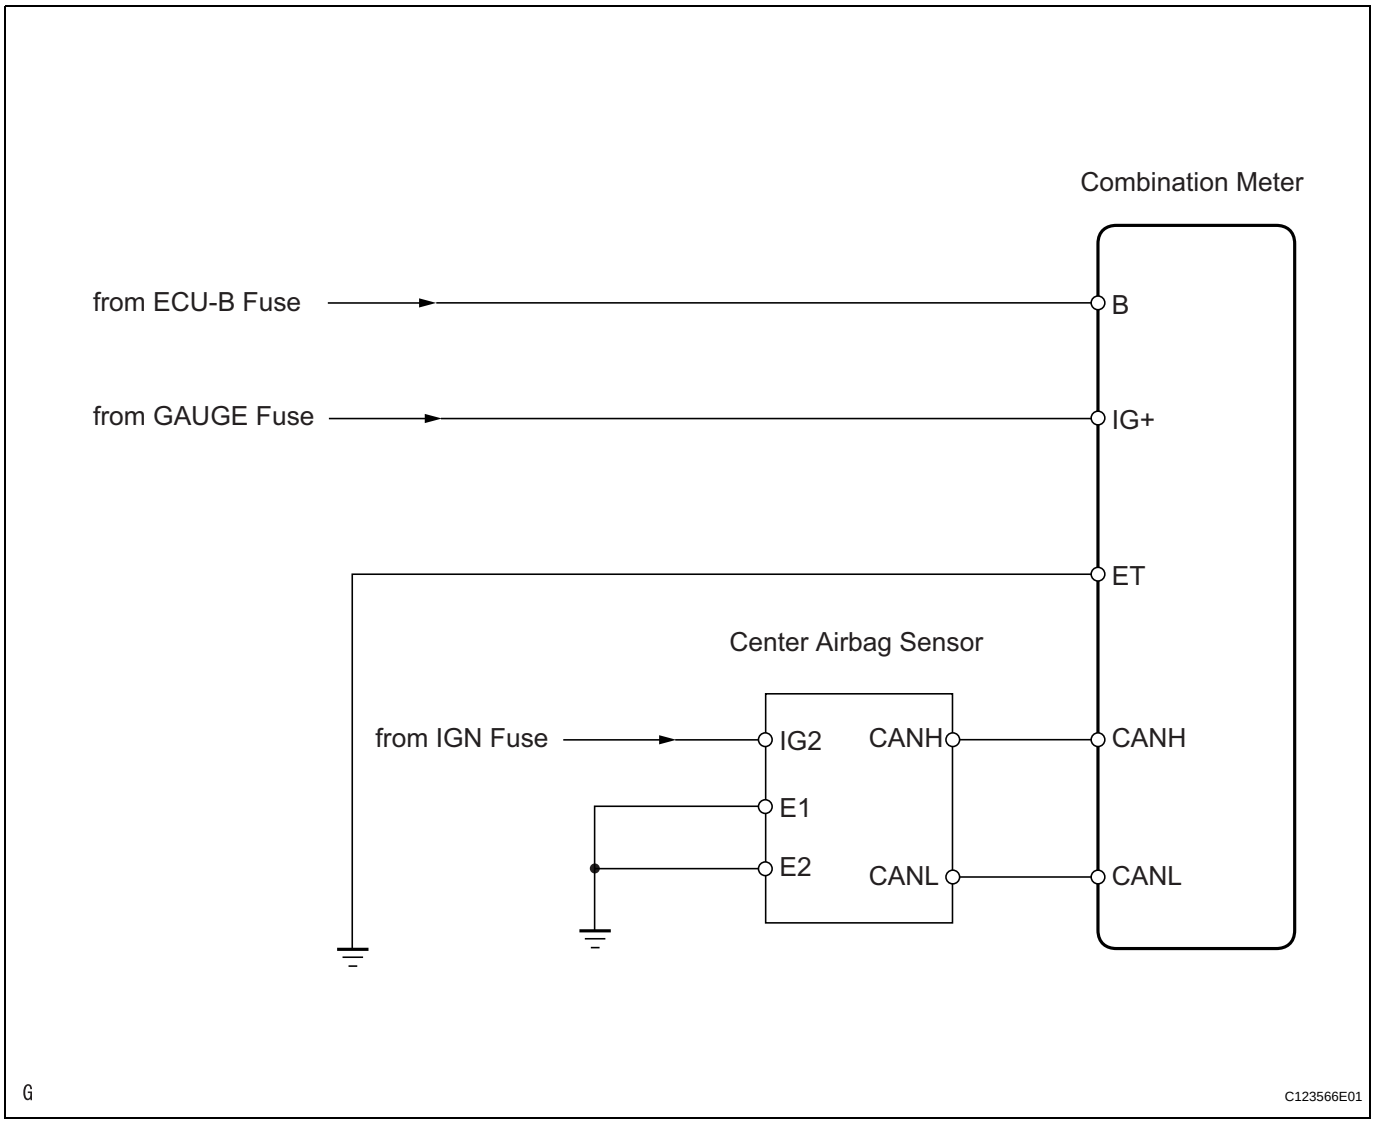
OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds, and turning it on is continued.

HINT:
The primary check period shows approximately 6 seconds after the ignition switch is ON.

NG → **GO TO COMBINATION METER SYSTEM**

OK



REPLACE CENTER AIRBAG SENSOR ASSEMBLY

SRS Warning Light does not Come ON

DESCRIPTION

The SRS warning light is located on the combination meter.
When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the ignition switch is turned from OFF to ON, and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.
When terminals TC and CG of the DLC3 are connected, the DTC is displayed by blinking the SRS warning light.
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor in case the source voltage drops.
When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.
A malfunction in this circuit is not recorded in the center airbag sensor . The SRS warning light automatically goes off when the source voltage returns to normal.
The signal to illuminate the SRS warning light is transmitted from the center airbag sensor to the combination meter through the multiplex communication system.

RS

INSPECTION PROCEDURE

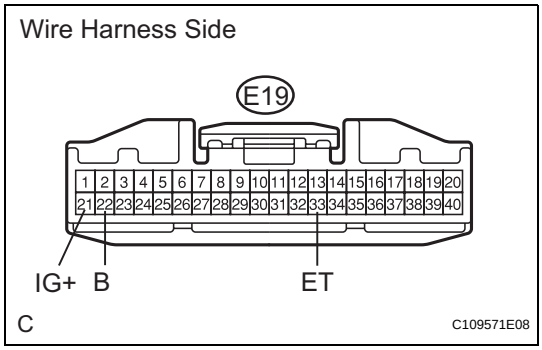
1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

2	CHECK CONNECTORS



(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the E19 connectors are properly connected to the center airbag sensor and the combination meter.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS, THEN GO TO STEP 1**

OK

3	CHECK WIRE HARNESS (SOURCE VOLTAGE OF COMBINATION METER)

RS

(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the combination meter.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch ON.
(f) Measure the voltage of the wire harness side connectors.
Standard voltage

Tester Connection	Condition	Specified Condition
E19-21 (IG+) - Body ground	Ignition switch ON	10 to 14 V
E19-22 (B) - Body ground	Always	10 to 14 V

(g) Turn the ignition switch OFF.
(h) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
E19-33 (ES) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

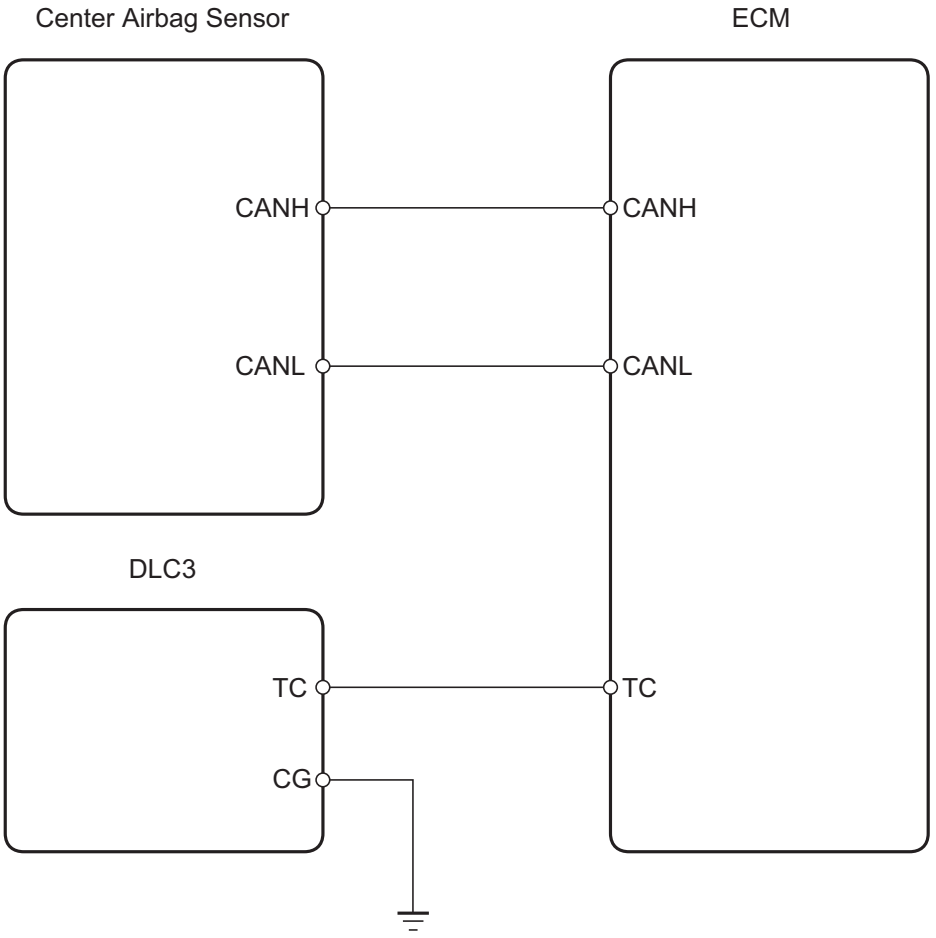
4	CHECK SRS WARNING LIGHT

(a) Turn the ignition switch OFF.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the E19 connector to the combination meter.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the ignition switch ON.
(f) Check the SRS warning light condition.
OK:
The SRS warning light does not come on.

NG → GO TO COMBINATION METER SYSTEM

OK

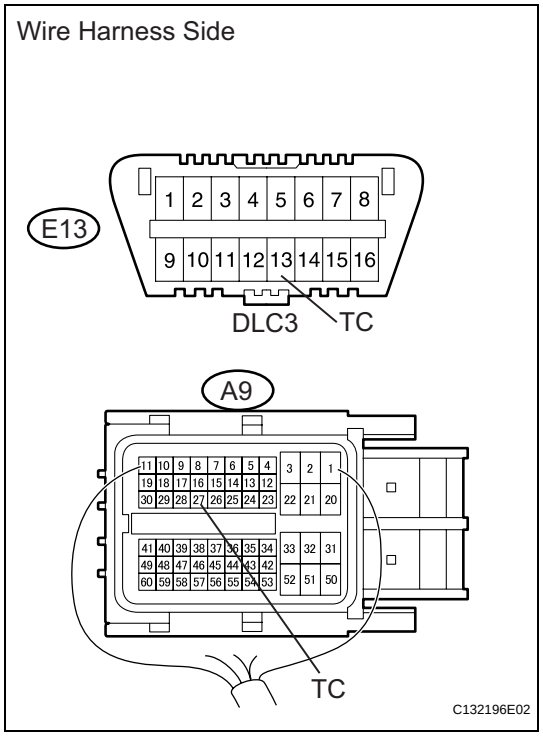
REPLACE CENTER AIRBAG SENSOR ASSEMBLY



TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
The DTCs are displayed by blinking the SRS warning light.
HINT:

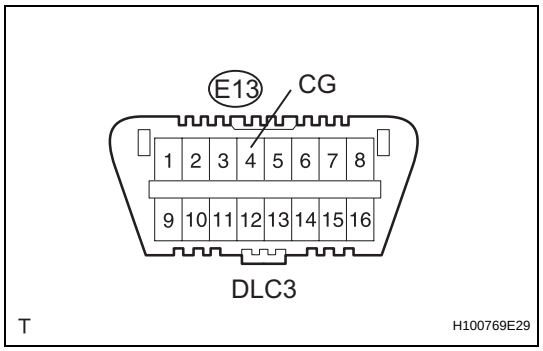


- Make sure that DTC B1281 has not been output. If DTC B1281 has been output, refer to the multiplex communication system.
- When each warning light keeps blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU is suspected.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 CHECK WIRE HARNESS (DLC3 - ECM)



(a) Turn the ignition switch OFF.
(b) Disconnect the A9 connectors from the center airbag sensor .
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

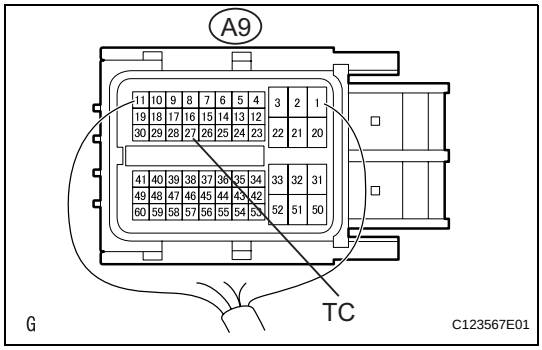
Tester Connection	Specified Condition
E13-13 (TC) - A9-27 (TC)	Below 1 Ω

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

2 CHECK WIRE HARNESS (CG OF DLC3 - BODY GROUND)

(a) Measure the resistance of the wire harness side connectors.
Standard resistance



Tester connection	Specified condition
E13-4 (CG) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

RS

3	CHECK WIRE HARNESS (TC OF ECM)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
A9-3 (TC) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	REPLACE ECM

(a) Replace the ECM.
(b) Check the DTC of the ECM (see page ES-35).

Result

Result	Proceed to
DTC output mode is set (except center airbag sensor).	A

REPAIR OR REPLACE WIRE HARNESS OR EACH ECU

RS

AIRBAG SYSTEM

PRECAUTION

CAUTION:

- **The vehicle is equipped with a Supplemental Restraint System (SRS), which consists of a steering pad, front passenger airbag, curtain shield airbag, front seat side airbag, seat belt pretensioner, center airbag sensor, front airbag sensor, side airbag sensor, rear airbag sensor, occupant classification ECU and seat position airbag sensor. Failure to carry out service procedures in the correct sequence could cause SRS parts to unexpectedly deploy and possibly lead to serious injuries. Furthermore, if a mistake is made when servicing SRS parts, they may fail to operate when required. Before performing servicing (including installation/removal, inspection and replacement of parts), be sure to read the following precautions.**
- **Before starting work, wait at least 90 seconds after the ignition switch is turned OFF and after the cable of the negative (-) battery terminal is disconnected. (SRS parts are equipped with a backup power source. If work is started within 90 seconds of turning the ignition switch OFF and disconnecting the cable from the negative (-) battery terminal, SRS parts may deploy.)**
  (The SRS is equipped with a back-up power source, so if work is started within 90 seconds of disconnecting the negative (-) terminal cable of the battery, the SRS may be deployed).
- **Do not expose SRS parts directly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of SRS parts are difficult to confirm. DTCs are the most important source of information when troubleshooting. During troubleshooting, always confirm DTCs before disconnecting the cable from the negative (-) battery terminal.**
- **For minor collisions where SRS parts do not deploy, always inspect the SRS parts.**
- **Before repair work, remove airbag sensors as necessary if any kind of impact is likely to occur to an airbag sensor during the operation.**
- **Never use SRS parts from another vehicle. When replacing SRS parts, replace them with new ones.**
- **Never disassemble or attempt to repair SRS parts.**
- **If an SRS part has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace the SRS part with a new one.**
- **Use an ohmmeter/voltmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**

- **Information labels are attached to the periphery of SRS parts. Follow the cautions and instructions on the labels.**
- **After work on SRS parts is completed, perform the SRS warning light check (see page RS-37).**
- **When the cable is disconnected from the negative (-) battery terminal, the memory settings of each system will be cleared. Because of this, be sure to write down the settings of each system before starting work. When work is finished, reset the settings of each system as before. Never use a backup power supply from outside the vehicle to avoid erasing the memory in a system.**
- **If the vehicle is equipped with a mobile communication system, refer to the precautions in the INTRODUCTION section (see page IN-5).**

HINT:

In the airbag system, the center airbag sensor, front airbag sensor LH and RH, side airbag sensor LH and RH, and rear airbag sensor LH and RH are collectively referred to as the airbag sensors.

1. HANDLING PRECAUTIONS FOR AIRBAG SENSORS

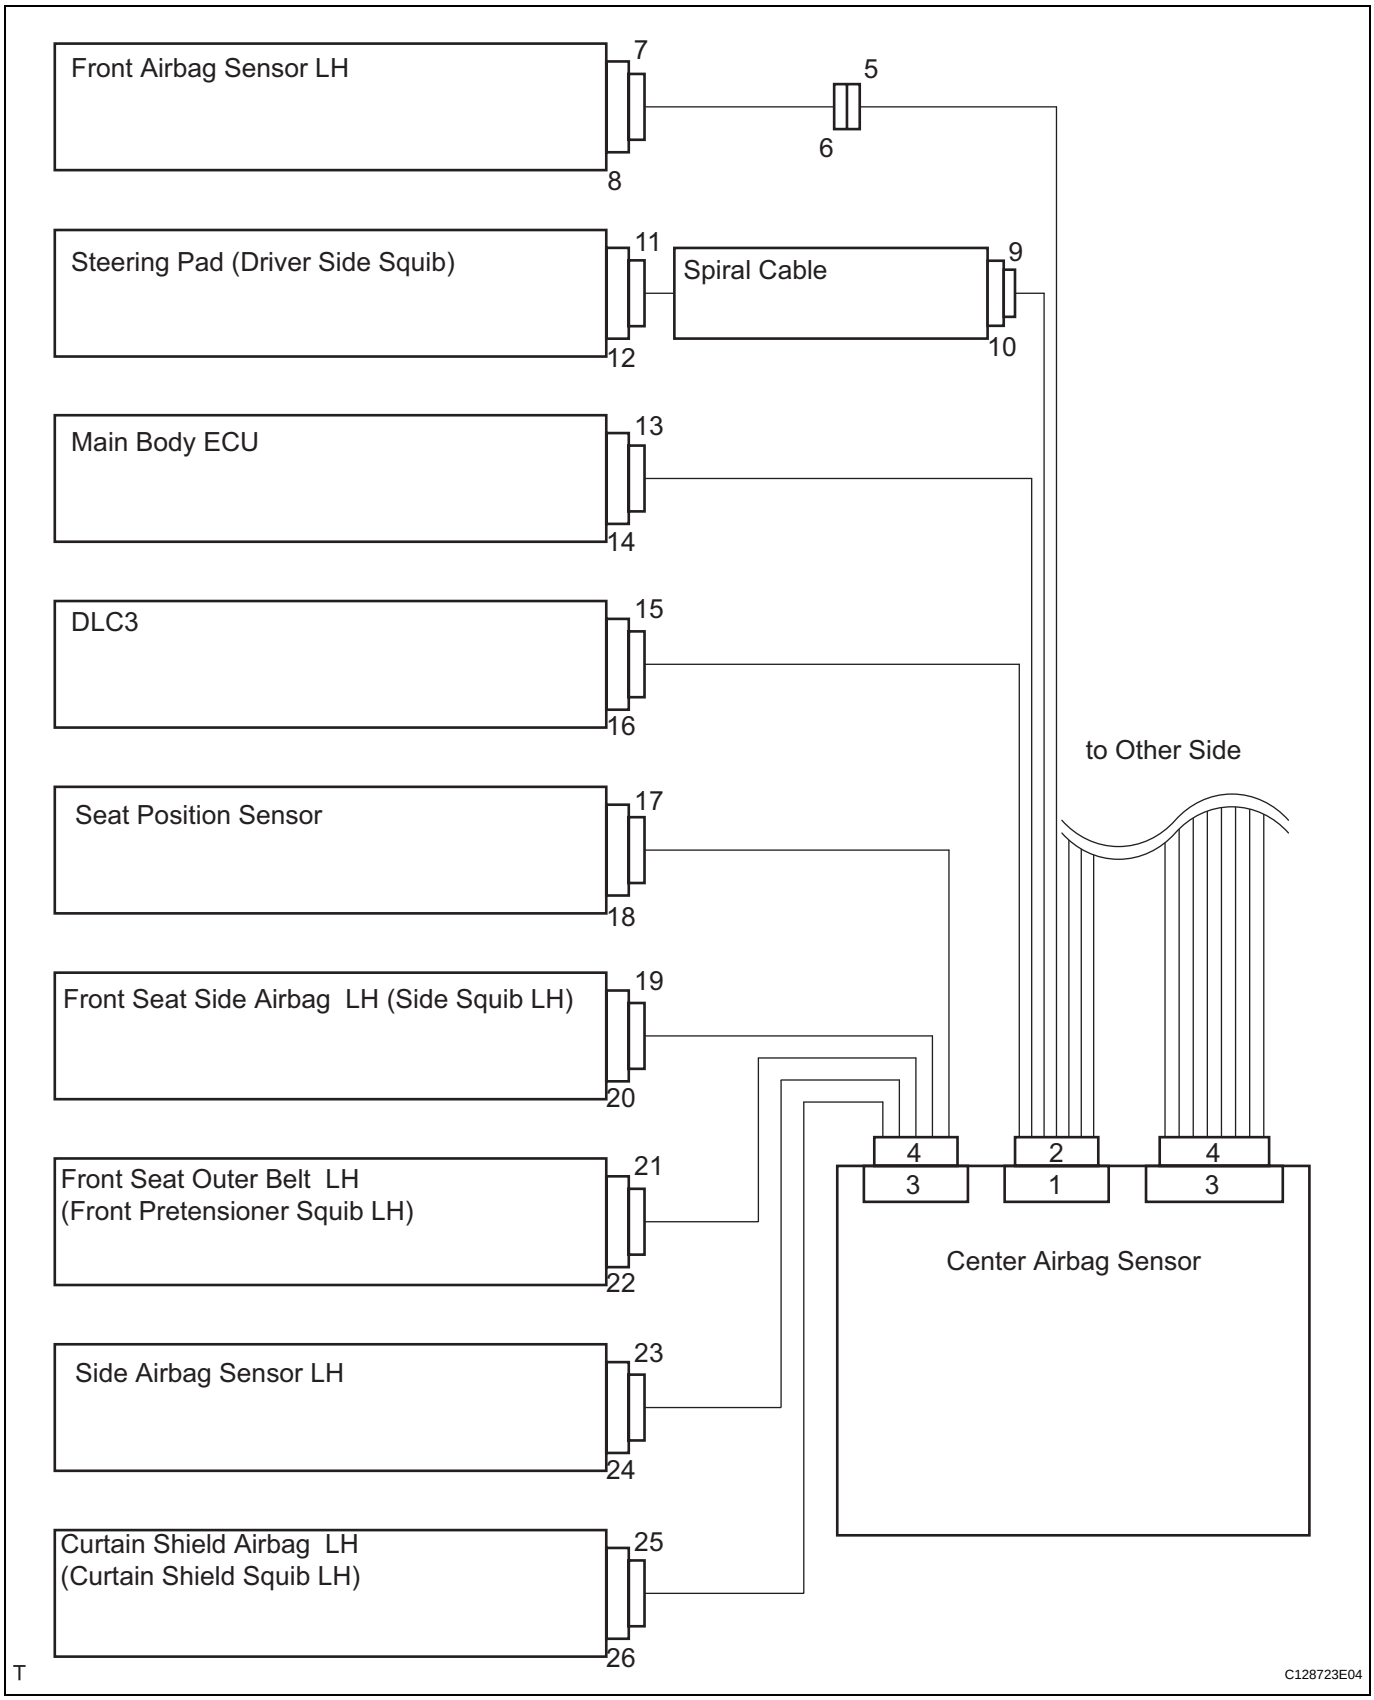
(a) Before starting the following operations, wait for at least 90 seconds after disconnecting the negative (-) terminal cable from the battery:
  (1) Replacement of the airbag sensors
  (2) Adjustment of the front/rear doors of the vehicle equipped with the side airbags and curtain shield airbags (fitting adjustment)

(b) When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.

(c) Do not use airbag sensors which have been dropped during the operation or transportation.

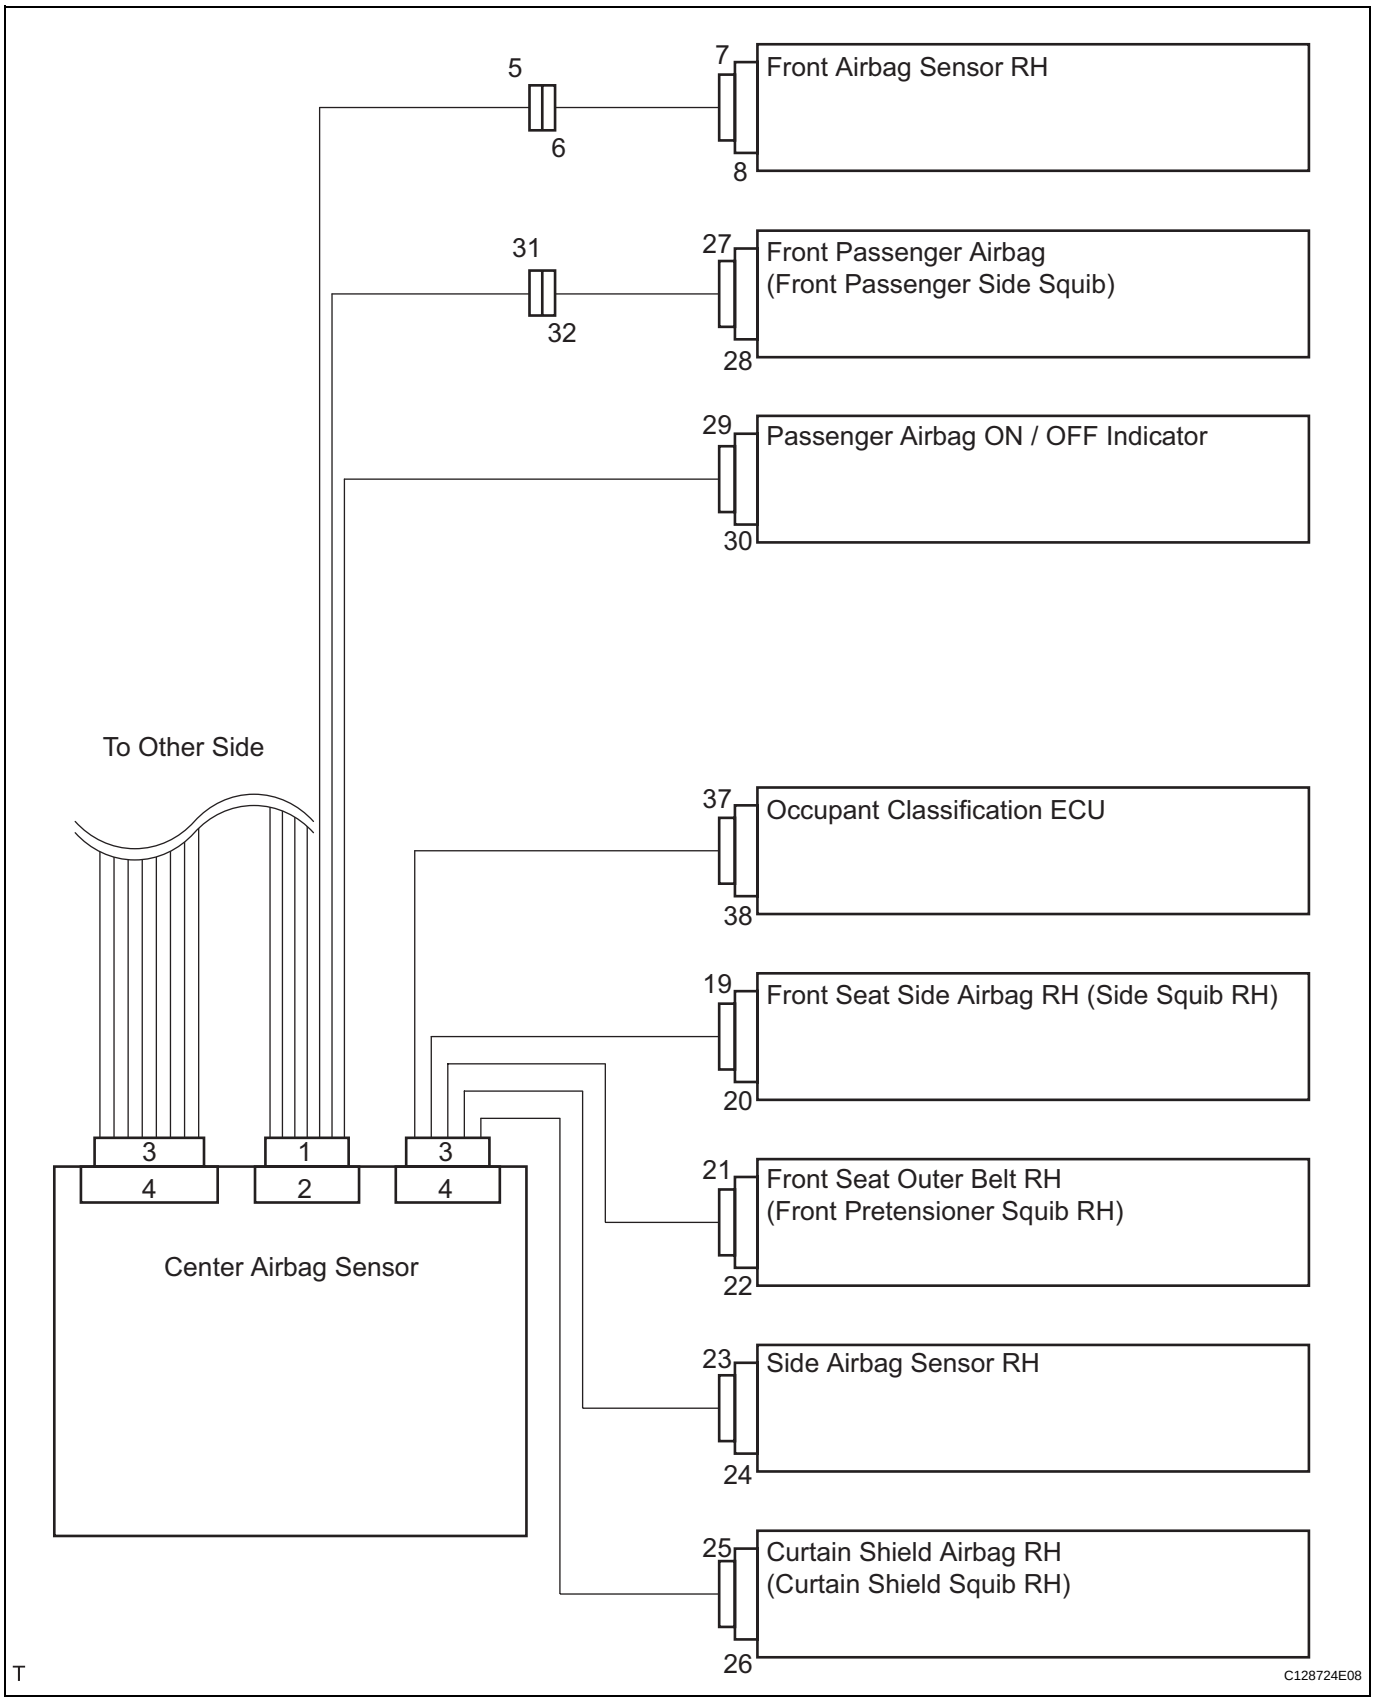
(d) Do not disassemble the airbag sensors.

2. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT



(a) When the airbag has not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.

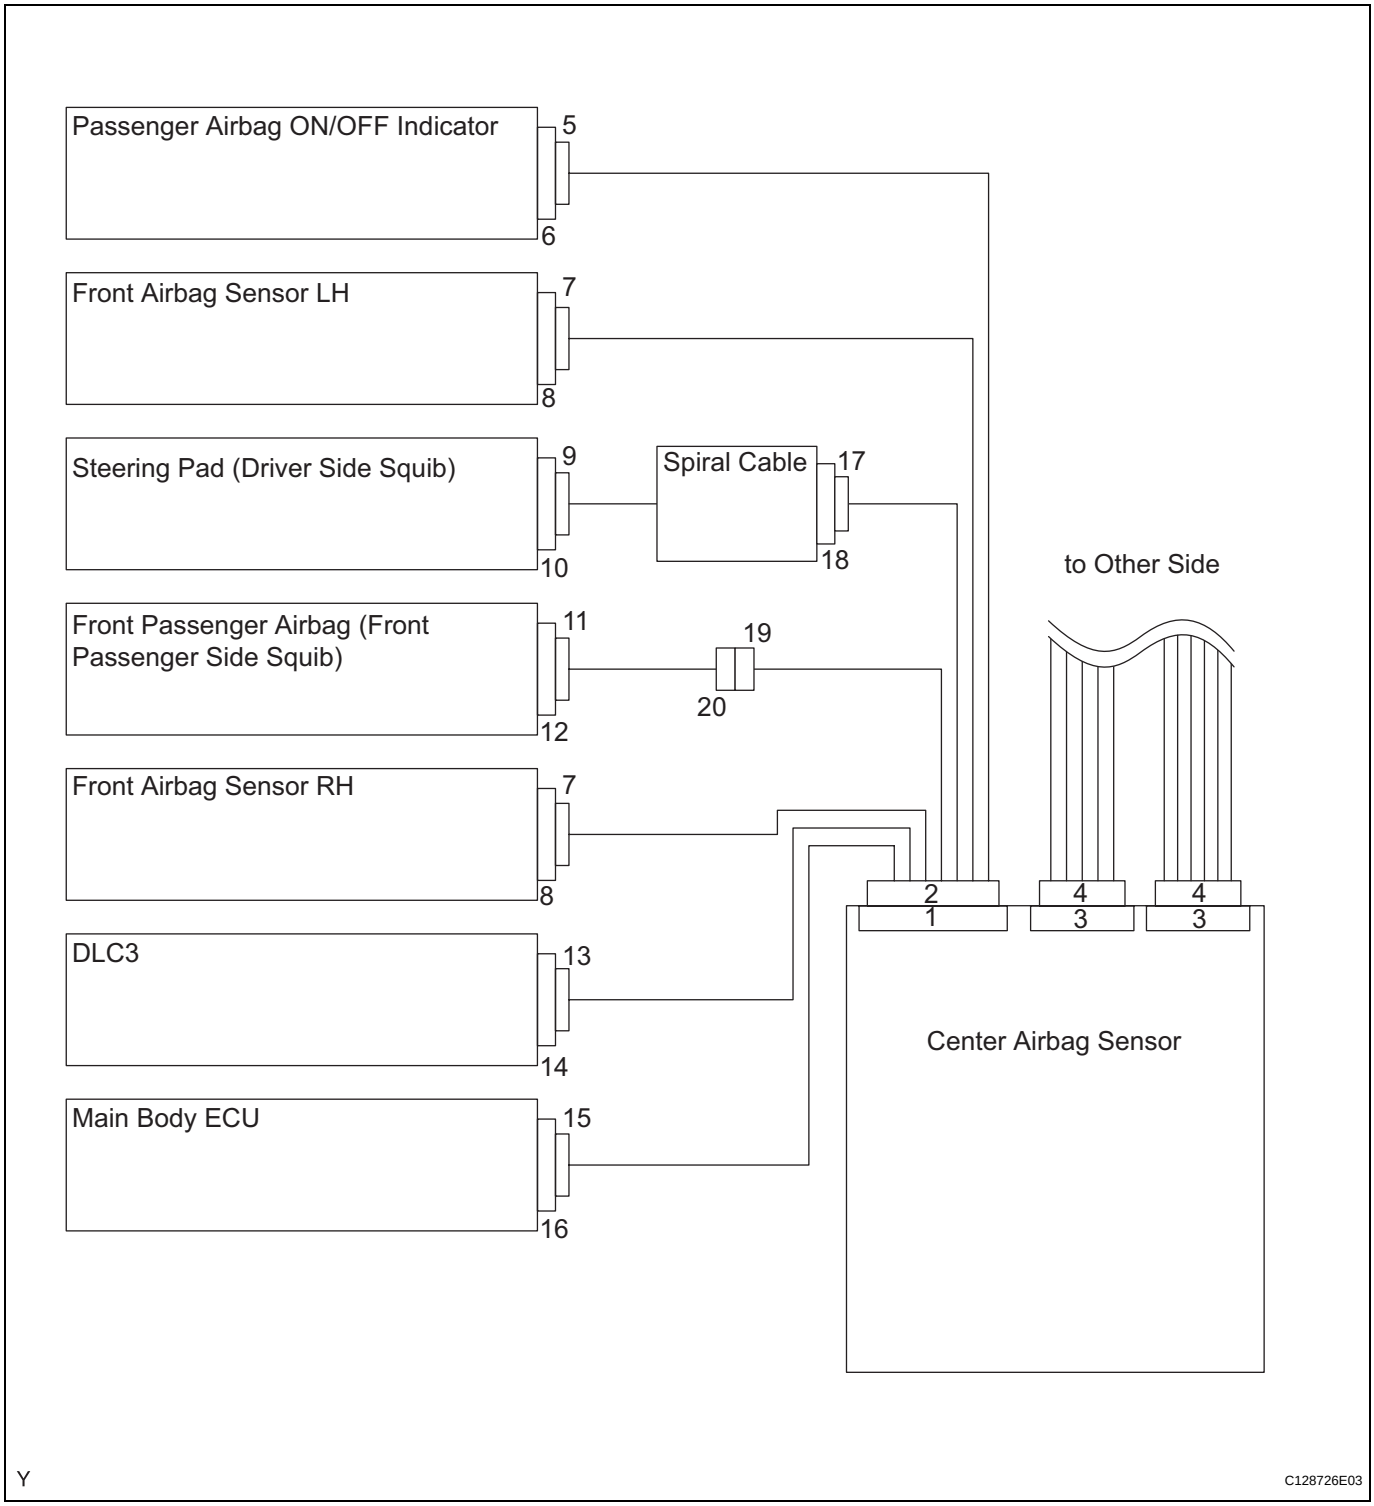
(b) When any of the airbags have deployed, replace the airbag sensors and check the installation condition.



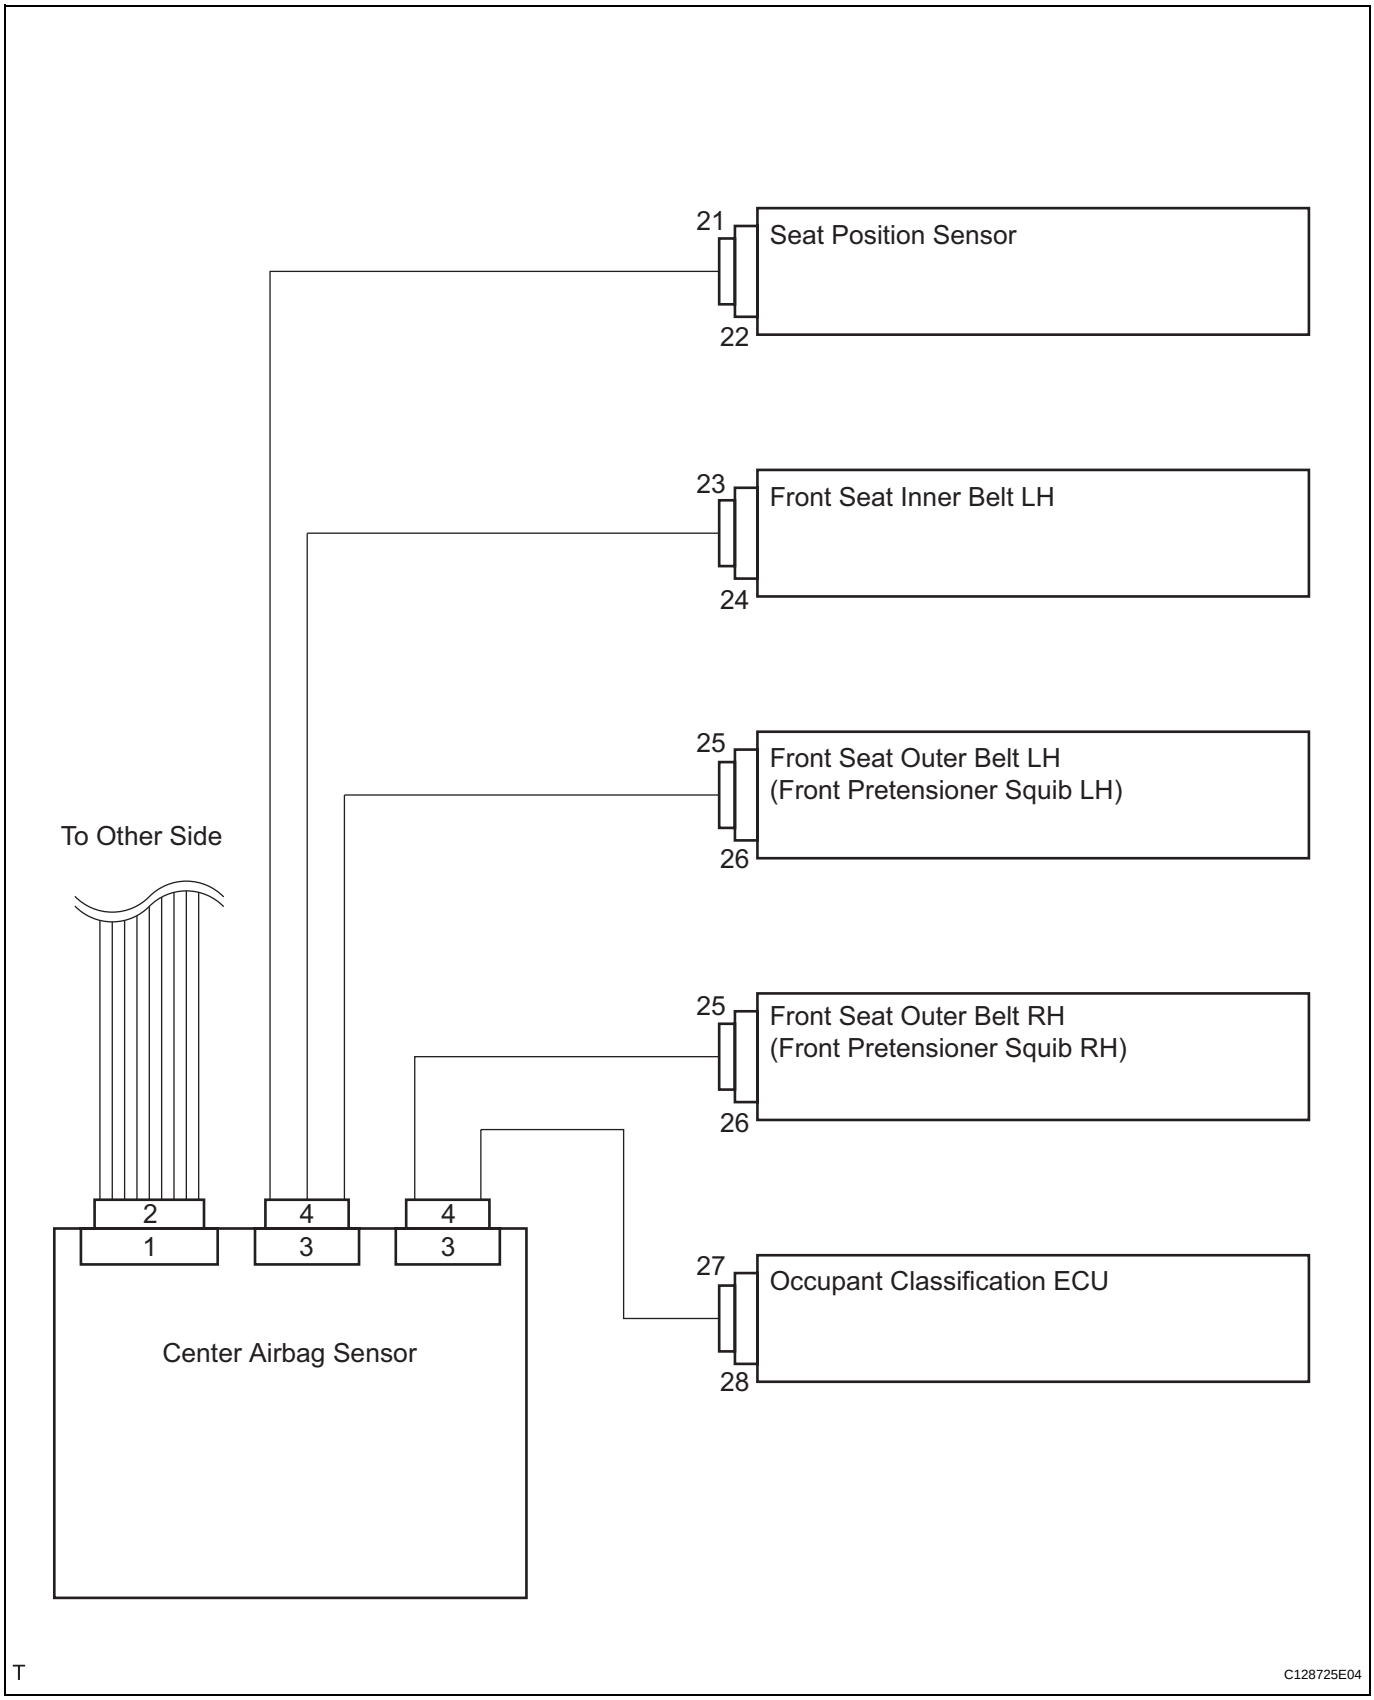
3. SRS CONNECTOR

(a) SRS connectors are located as shown in the following illustration.

(1) w/ Front seat side airbag and curtain shield airbag



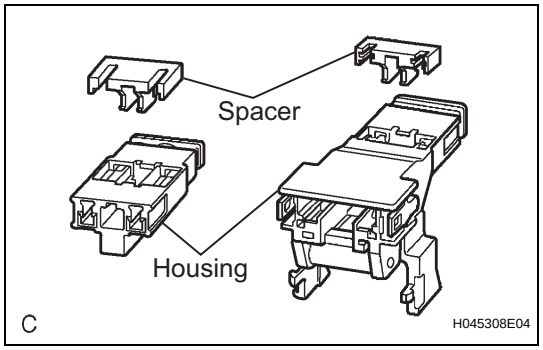
RS



No.	Item	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 1, 3, 5, 7, 9, 13, 23, 31, 37
(2)	Activation Prevention Mechanism	Connectors 1, 3, 8, 12, 22, 26, 28
(3)	Half Connection Prevention Mechanism	Connectors 6, 7, 9, 23, 32

No.	Item	Application
(4)	Connector Position Assurance Mechanism	Connector 6, 23
(5)	Connector Lock Mechanism (1)	Connectors 11, 21, 25, 27
(6)	Connector Lock Mechanism (2)	Connectors 1, 3
(7)	Improper Connection Prevention Lock Mechanism	Connectors 2, 4

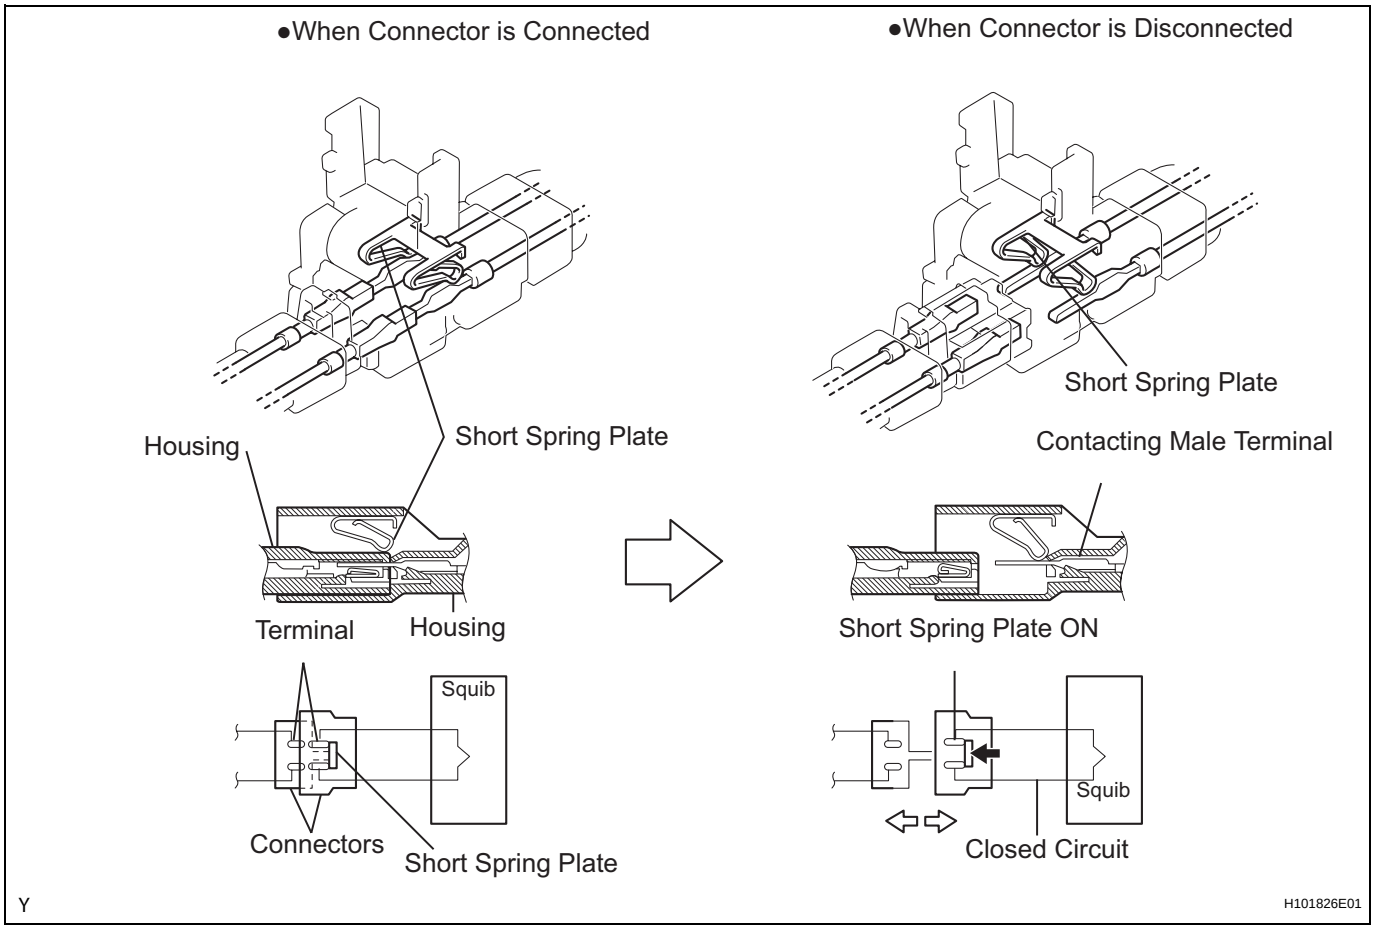
(2) w/o Front seat side airbag and curtain shield airbag



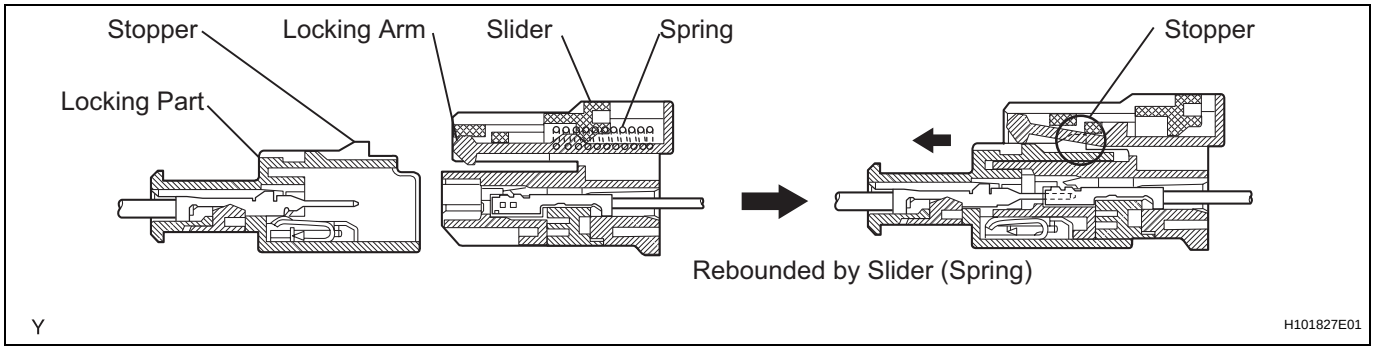
RS

RS

No.	Item	Application
(1)	Terminal Twin-Lock Mechanism	Connectors 2, 4, 7, 15, 17, 19, 27
(2)	Activation Prevention Mechanism	Connectors 2, 4, 8, 10, 12, 26
(3)	Half Connection Prevention Mechanism	Connectors 7, 17



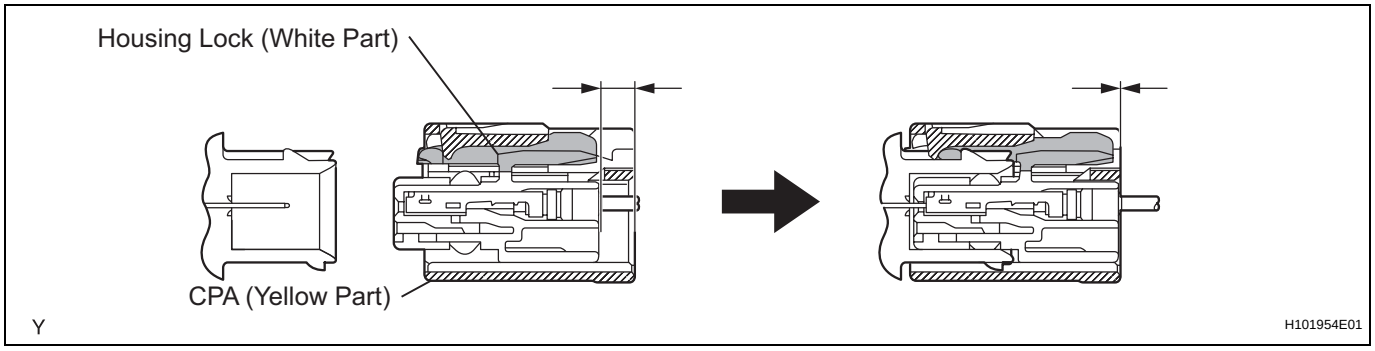
No.	Item	Application
(4)	Connector Position Assurance Mechanism	Connector 7
(5)	Connector Lock Mechanism (1)	Connectors 9, 11, 25
(6)	Connector Lock Mechanism (2)	Connectors 1, 3
(7)	Improper Connection Prevention Lock Mechanism	Connectors 2, 4



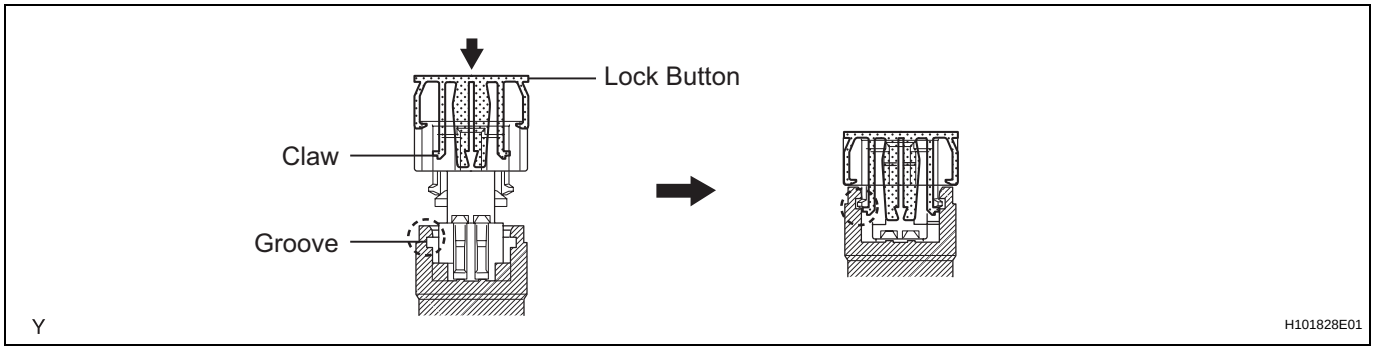
(b) All connectors in the SRS except the seat position sensor connector and the occupant classification ECU connector are colored yellow to distinguish them from other connectors. Some connectors have special functions, and are specially designed for the SRS. These connectors use durable gold-plated terminals, and are placed in the locations shown above to ensure high reliability.

(1) Terminal twin-lock mechanism:
Each connector is a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent the terminals from becoming disconnected.

(2) Activation prevention mechanism:
Each connector contains a short spring plate. When the connector is disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.

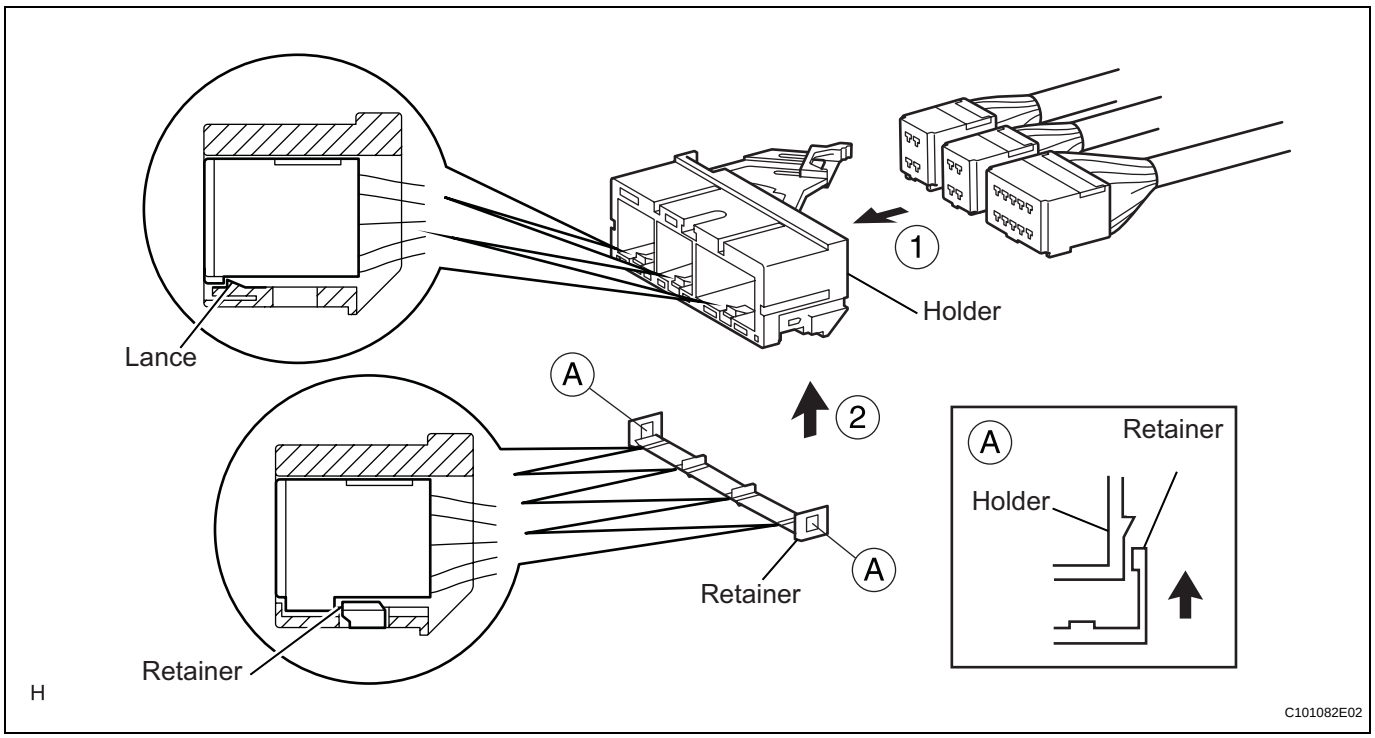


(3) Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected by the spring operation so that no continuity exists.

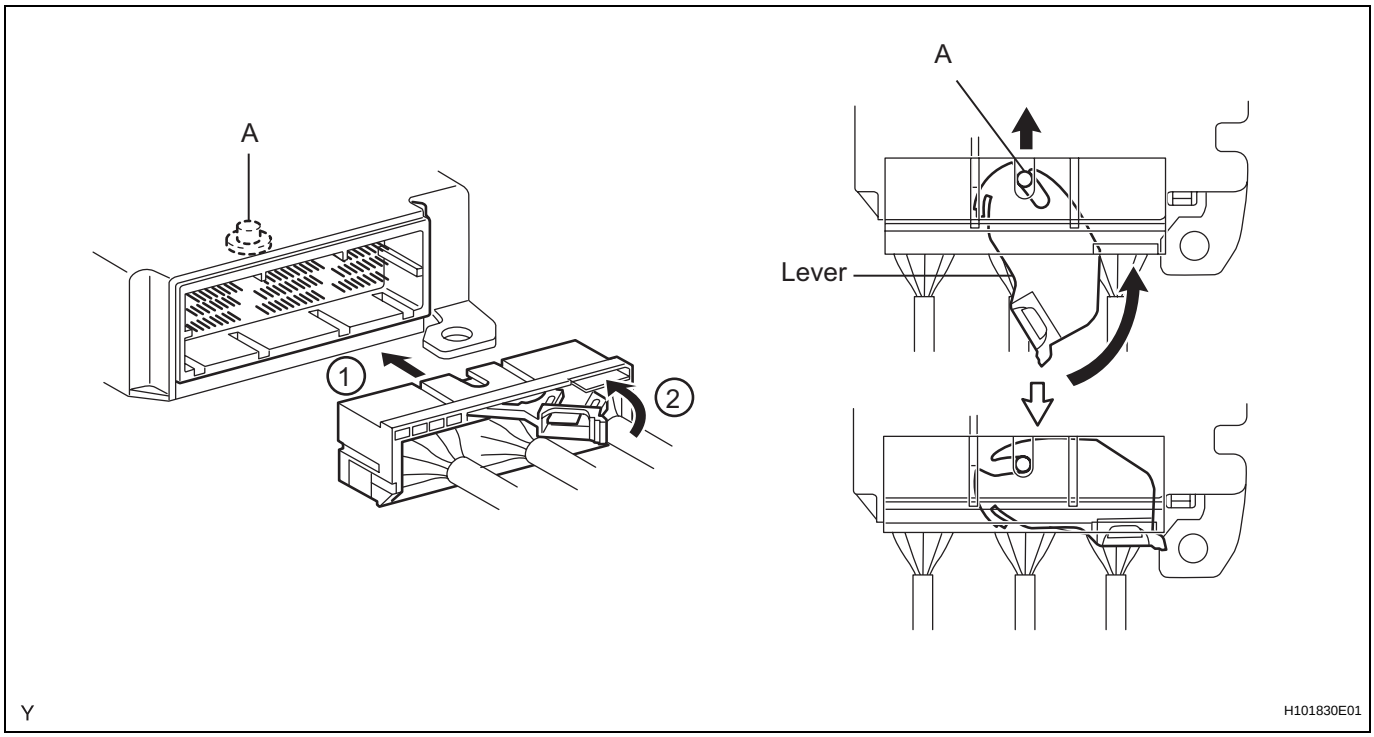


RS

(4) Connector position assurance mechanism:
The CPA (yellow part) slides, which completes the connector engagement, only when the housing lock (white part) is completely engaged.



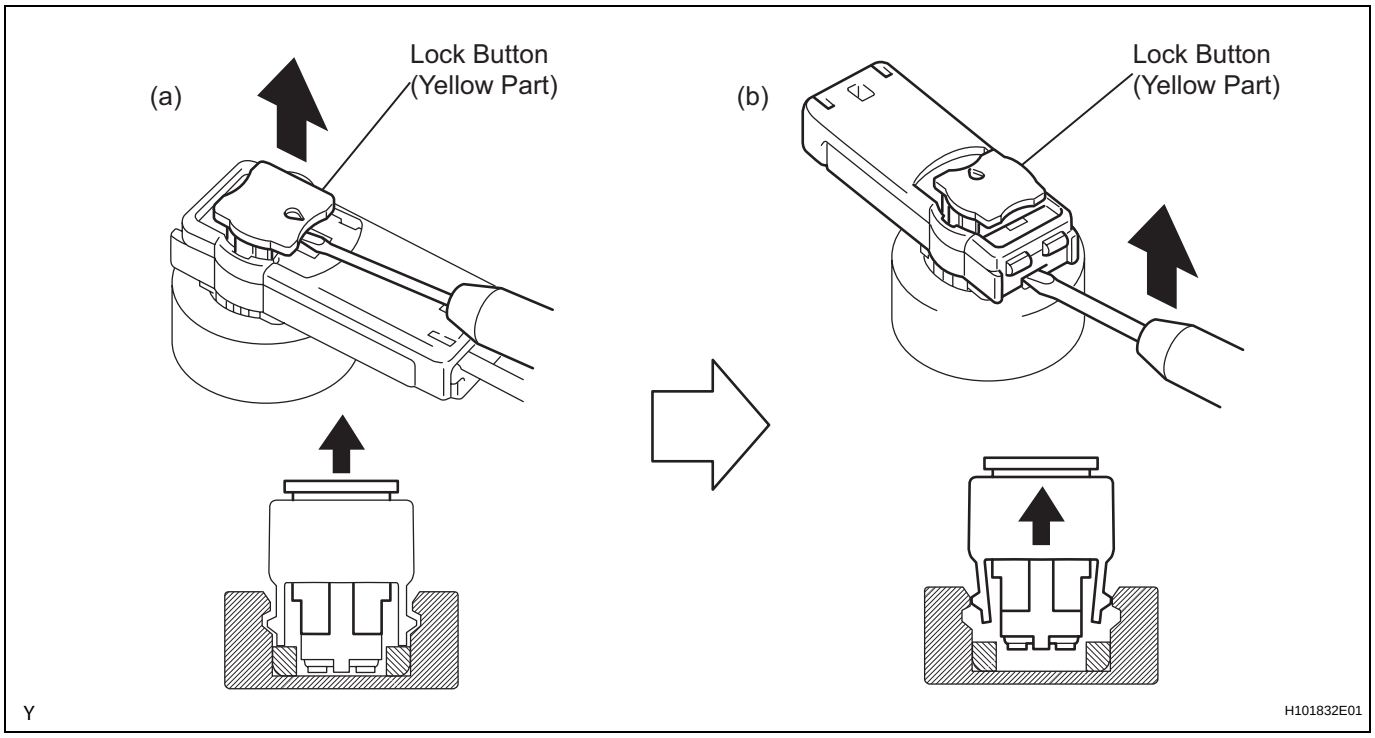
(5) Connector lock mechanism (1):
Locking the connector lock button connects the connector.



(6) Connector lock mechanism (2):
Both the primary lock with holder lances and the secondary lock with a retainer prevent the connectors from becoming disconnected.

RS

(7) Improper connection prevention lock mechanism:
When connecting the holder, the lever is pushed into the end by rotating around the A axis to lock the holder securely.



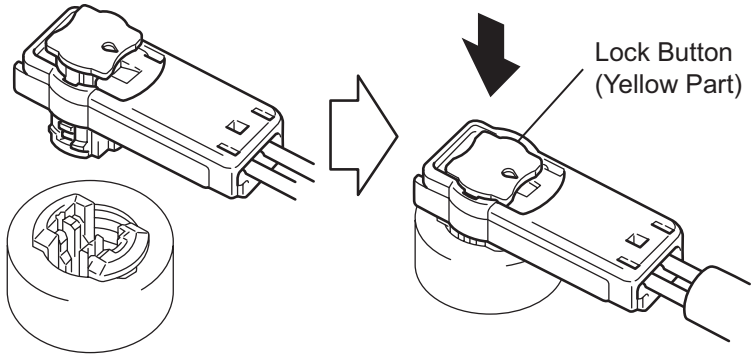
4. DISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY AND FRONT SEAT OUTER BELT ASSEMBLY

HINT:
Tape the screwdriver tip before use.

(a) Release the lock button (yellow part) of the connector using a screwdriver.

RS

(b) Insert the screwdriver tip between the connector and the base, and then raise the connector.

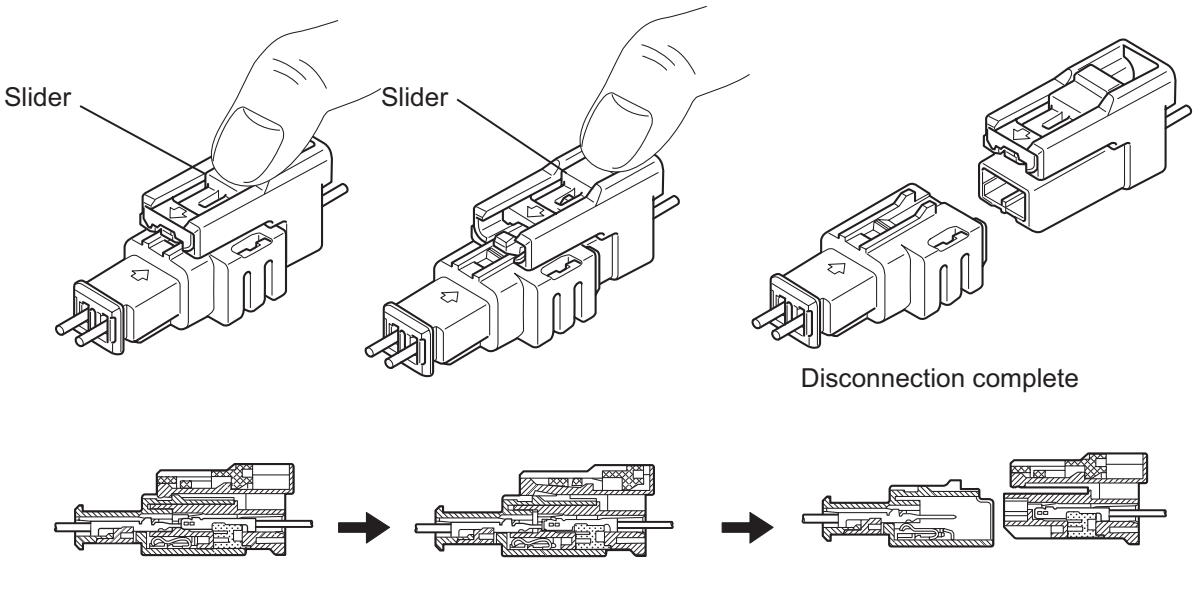


5. CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG ASSEMBLY (SQUIB SIDE), CURTAIN SHIELD AIRBAG ASSEMBLY AND FRONT SEAT OUTER BELT ASSEMBLY

(a) Connect the connector.

RS

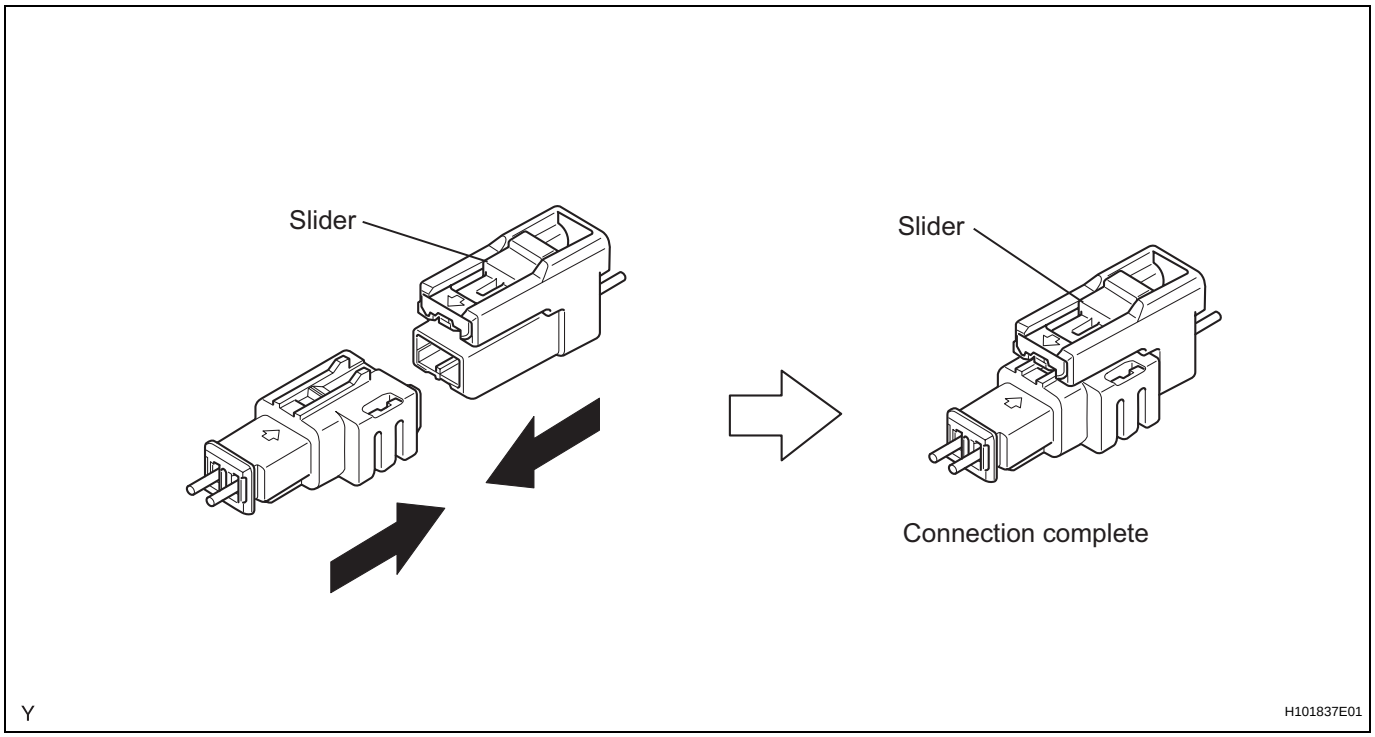
(b) Push the lock button (yellow part) of the connector down securely. (When locking, a click sound can be heard.)



Y H101833E01

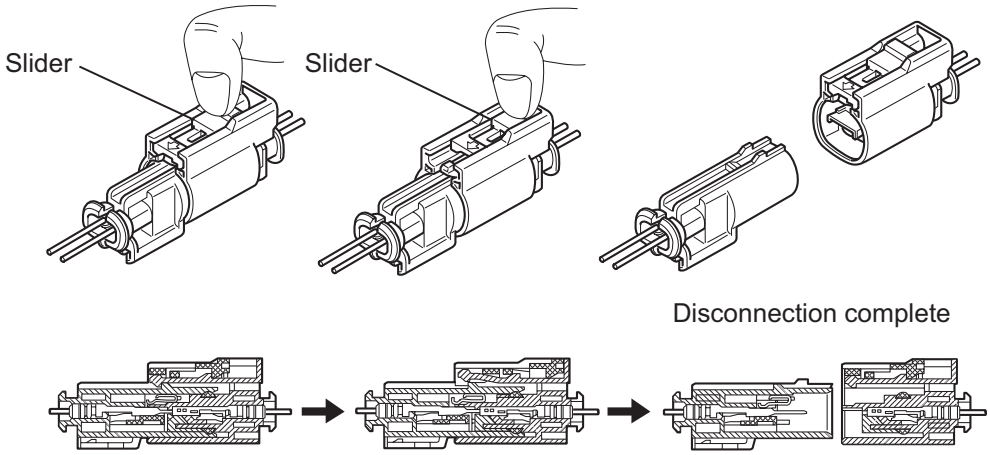
6. DISCONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



RS

Y H101836E01

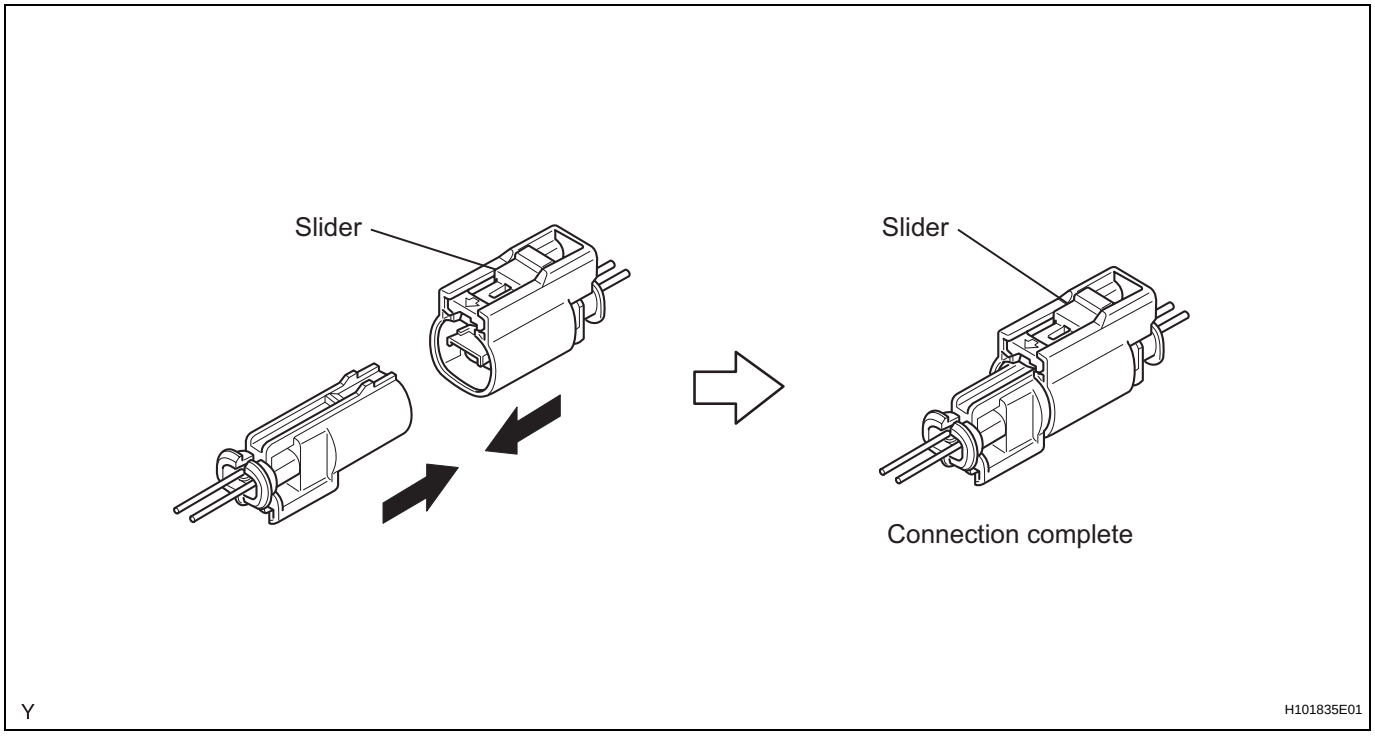


7. CONNECTION OF CONNECTORS FOR FRONT PASSENGER AIRBAG ASSEMBLY (INSTRUMENT PANEL WIRE SIDE)

(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider slides. Do not touch the slider while connecting, as this may result in an insecure fit.

8. DISCONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY

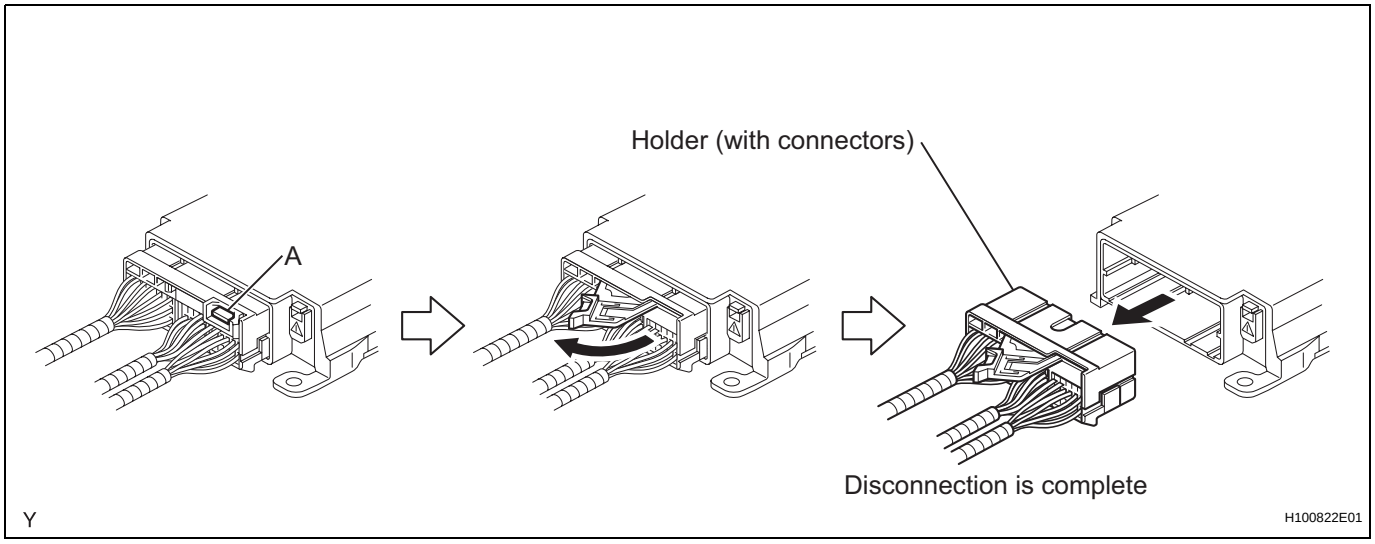
(a) Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



Y

H101834E01

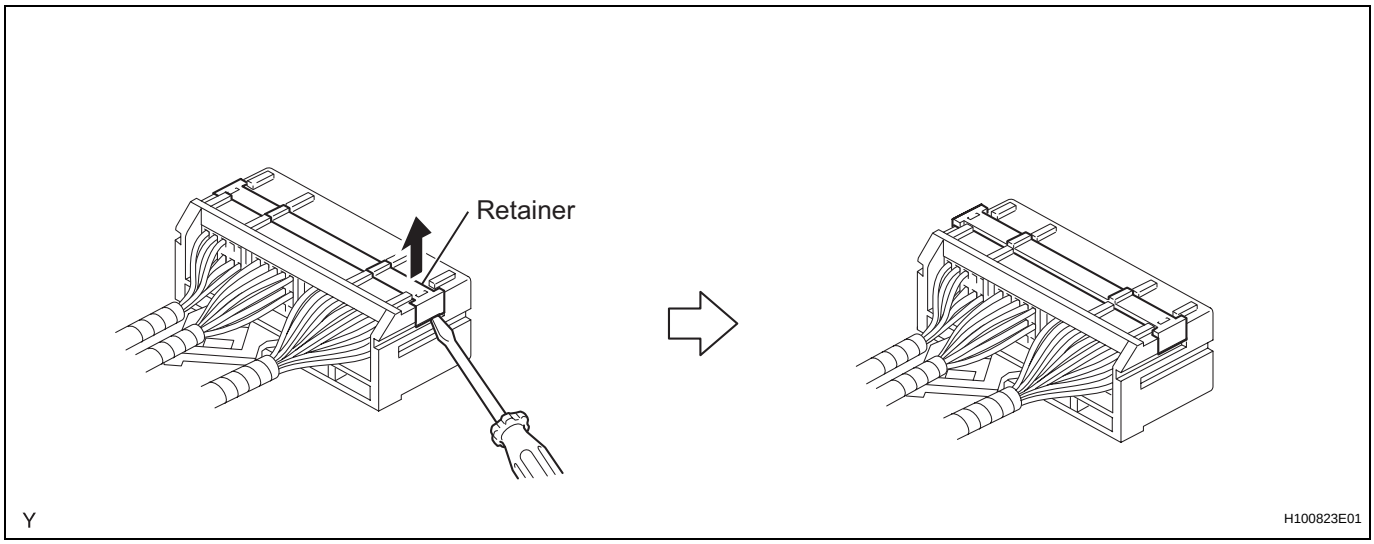
9. CONNECTION OF CONNECTORS FOR FRONT SEAT SIDE AIRBAG ASSEMBLY



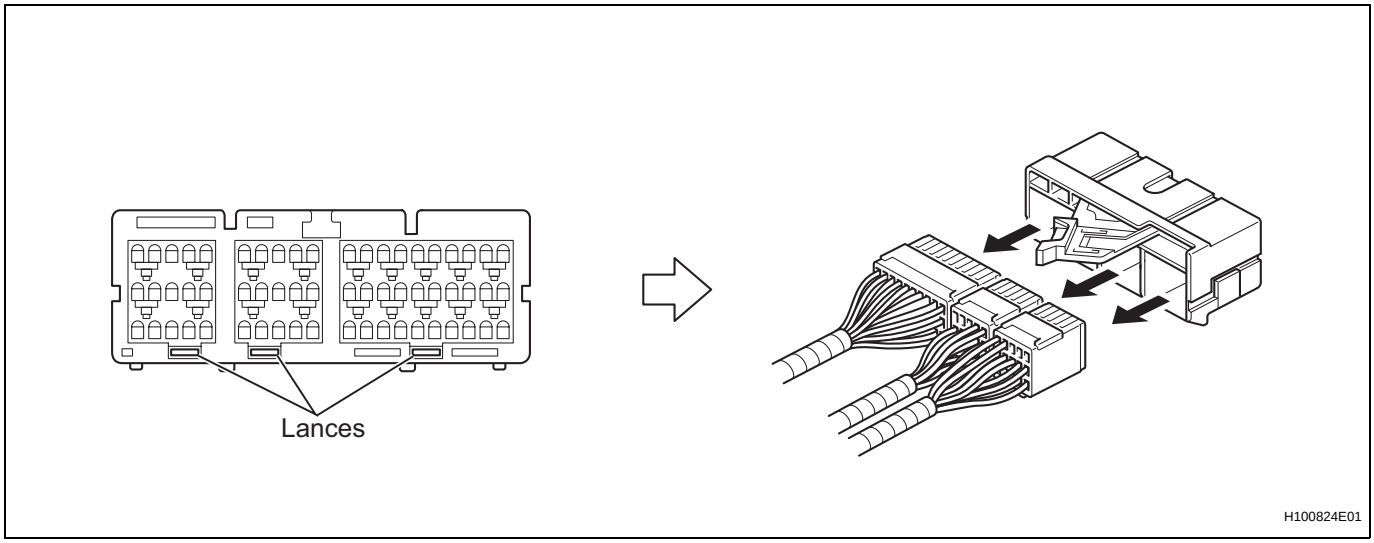
(a) Connect the connector as shown in the illustration. (When locking, make sure that the slider returns to its original position and a click sound can be heard.)
HINT:
When connecting, the slider slides. Do not touch the slider while connecting, as this may result in an insecure fit.

RS

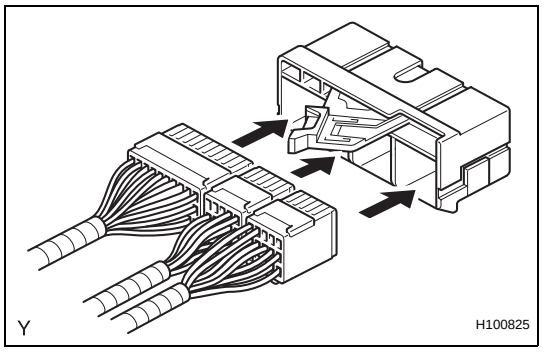
10. DISCONNECTION OF CONNECTORS FOR CENTER AIRBAG SENSOR ASSEMBLY



(a) Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).



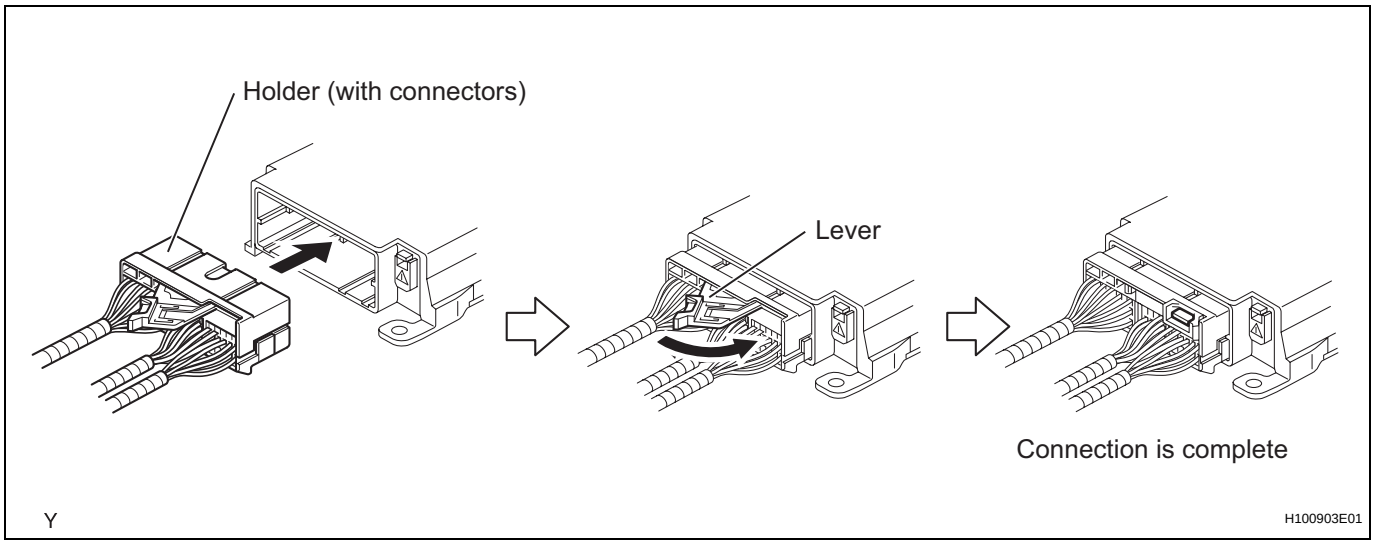
HINT:
Perform the following procedures when replacing the holder.



RS

(b) Remove the holder.
(1) Using a screwdriver, unlock the retainer.

(2) Release the fitting lances and remove the holder.

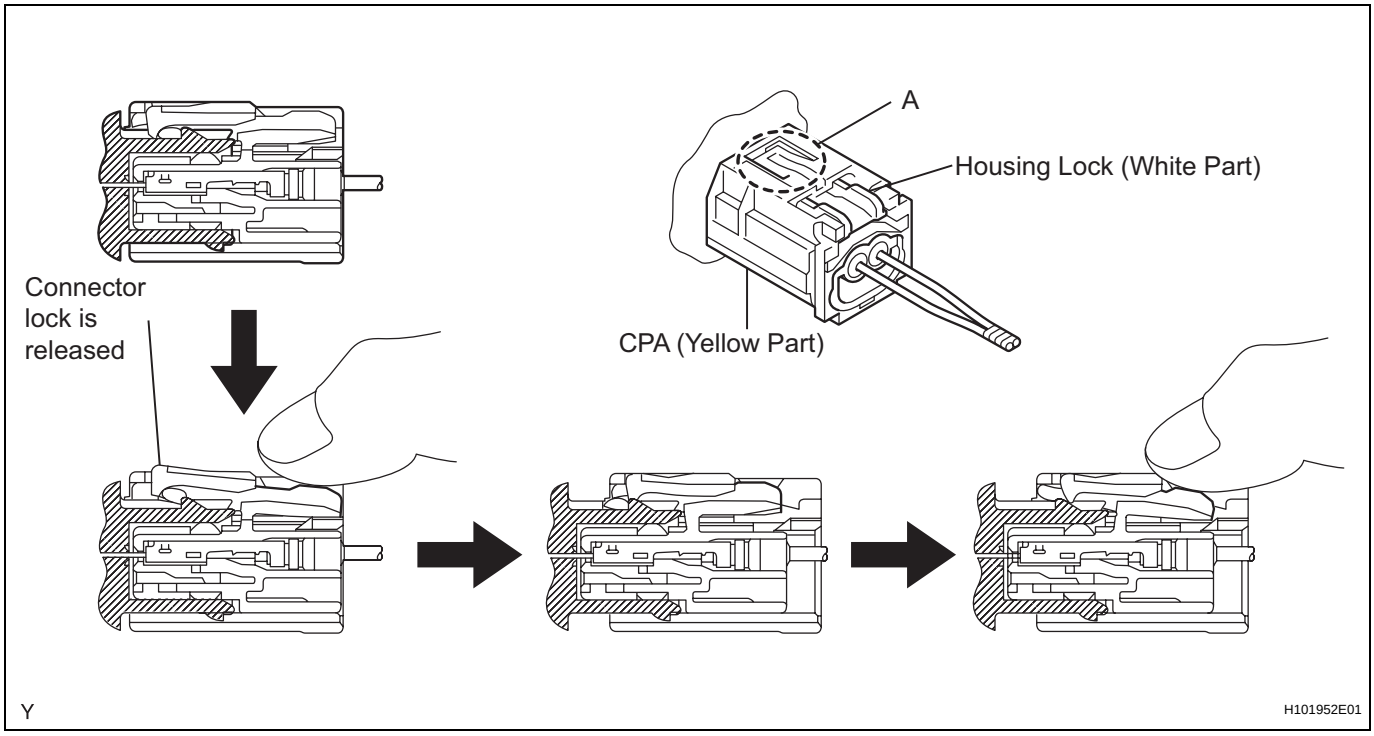


(c) Install the holder.
(1) Install the connectors into the holder. (When locking, a click sound can be heard.)
HINT:
The retainer is locked when the holder is connected.

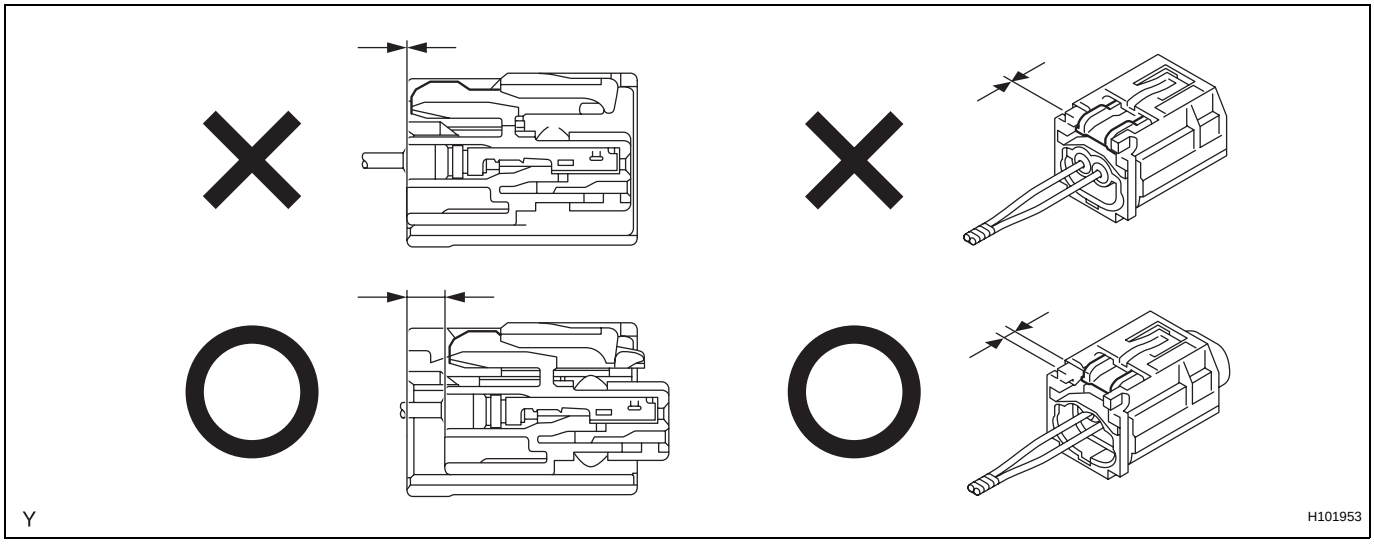
11. CONNECTION OF CONNECTORS FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Firmly insert the holder (with connectors) into the center airbag sensor until it cannot be pushed any further.

RS



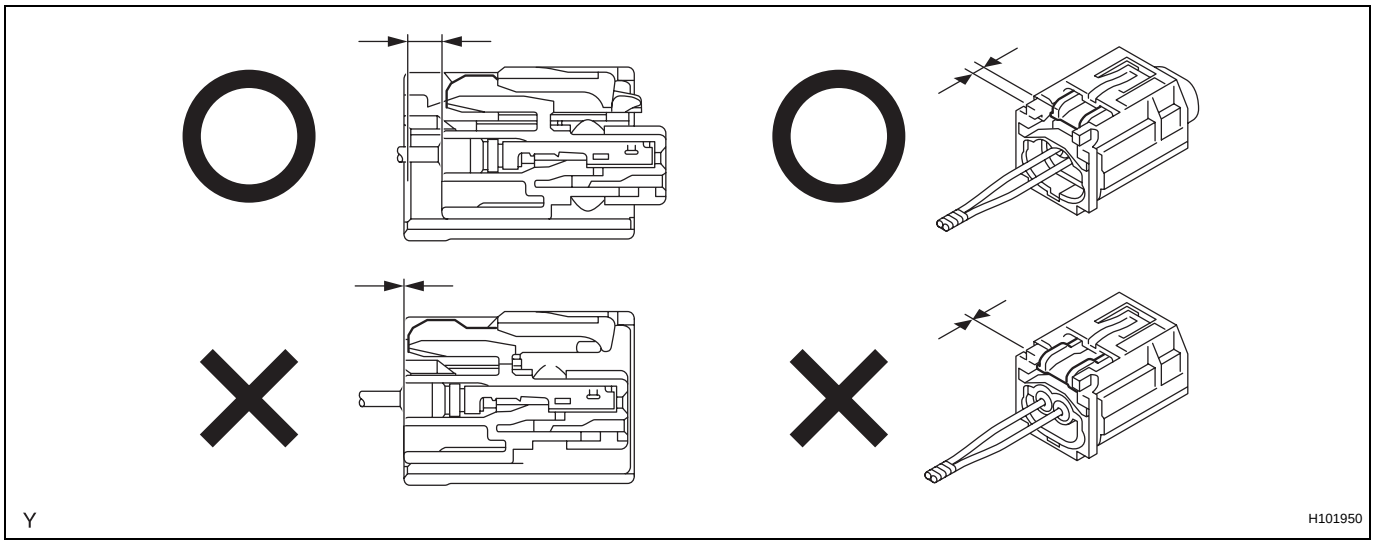
(b) Push the lever to connect the holder (with connectors). (When locking, a click sound can be heard.)
HINT:
The holder slides into the center airbag sensor when it is being connected. Do not hold the holder while connecting, as it may result in an insecure fit.



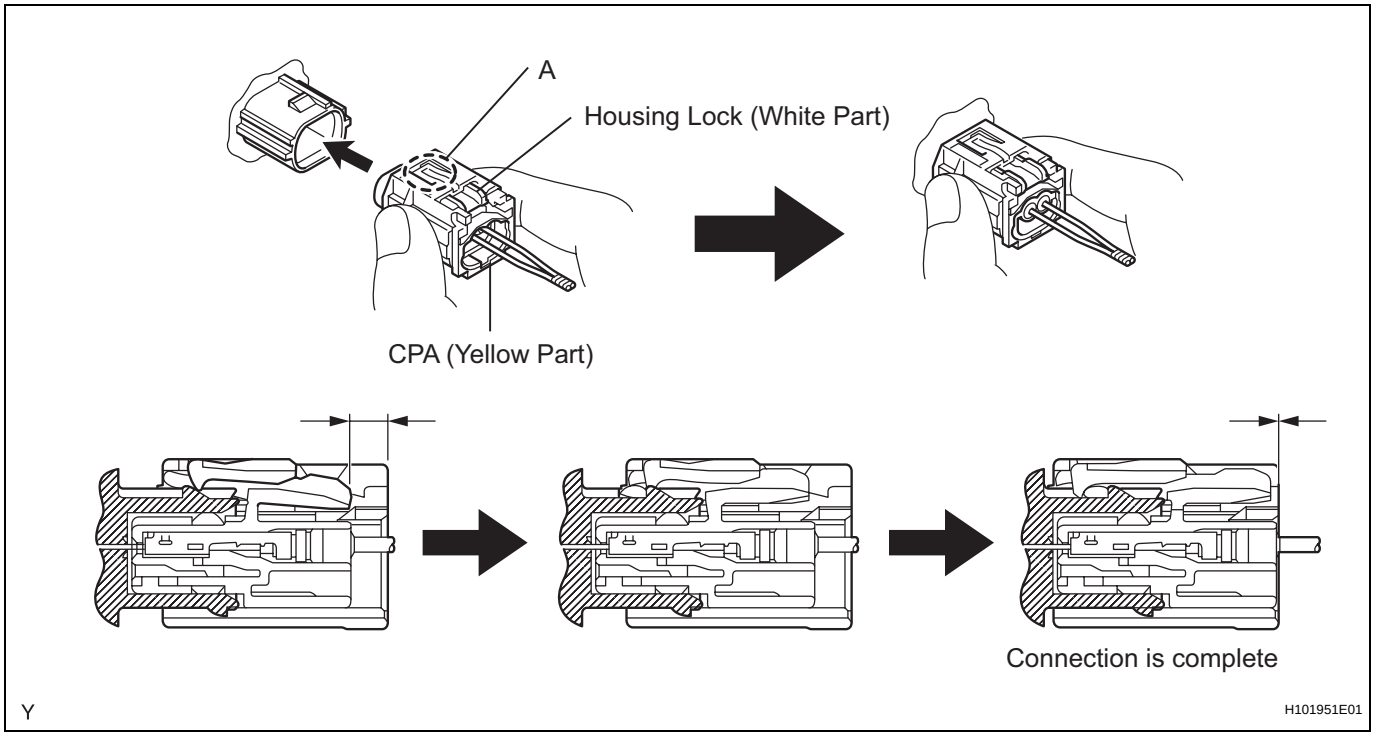
12. DISCONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR

(a) Push down the housing lock (white part) and slide the CPA (yellow part). (At this time, the connector cannot be disconnected.)

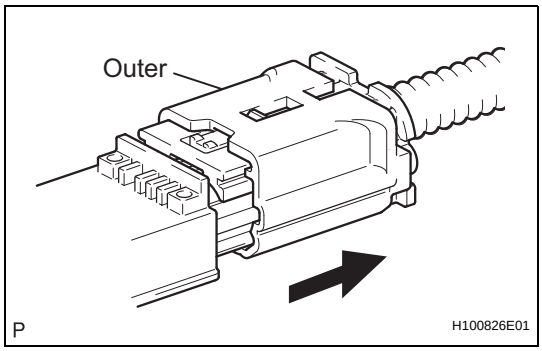
(b) Push down the housing lock (white part) again and disconnect the connector.
HINT:
Do not push down part A shown in the illustration when disconnecting.



(c) After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

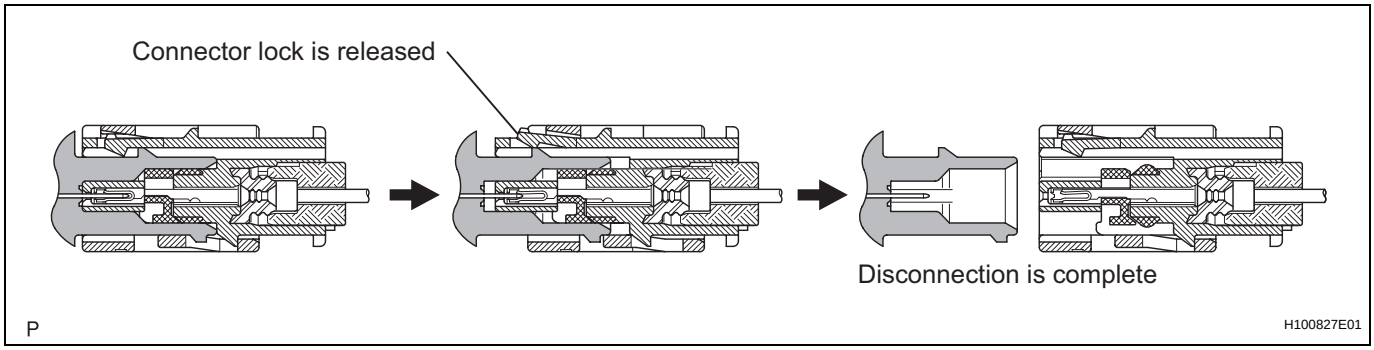


13. CONNECTION OF CONNECTORS FOR FRONT AIRBAG SENSOR



(a) Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

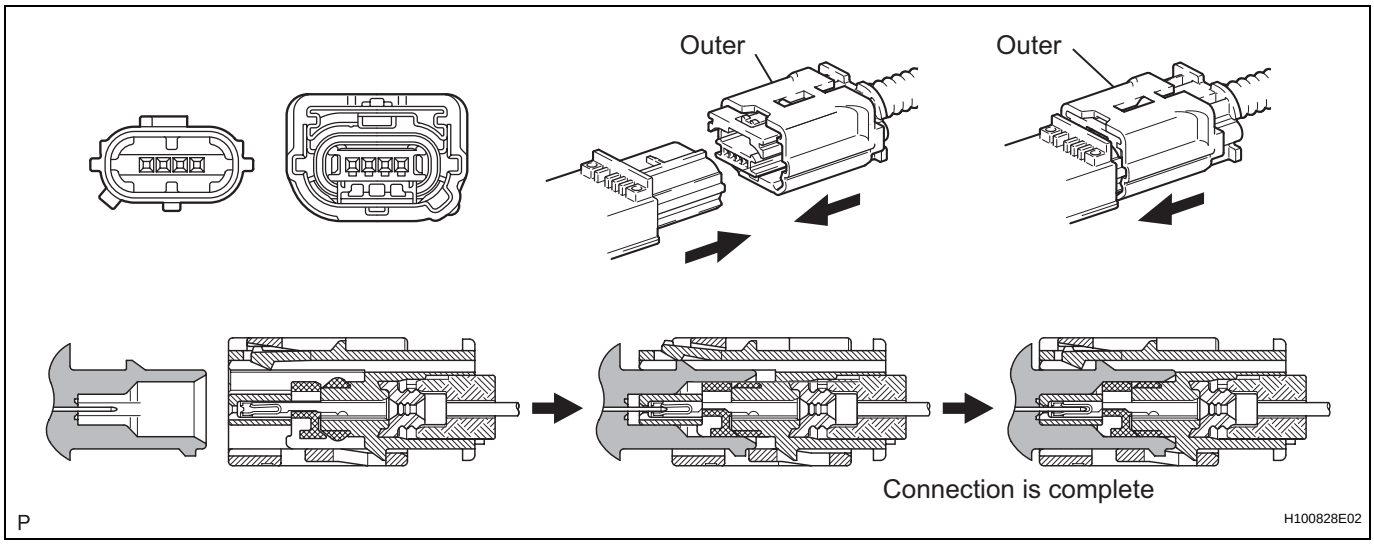
(b) Be sure to engage the connectors until they are locked. (When locking, make sure that a click sound can be heard.)
HINT:
When connecting them, the housing lock (white part) slides. Do not hold the housing lock (white part) and part A, as it may result in an insecure fit.



RS

14. DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

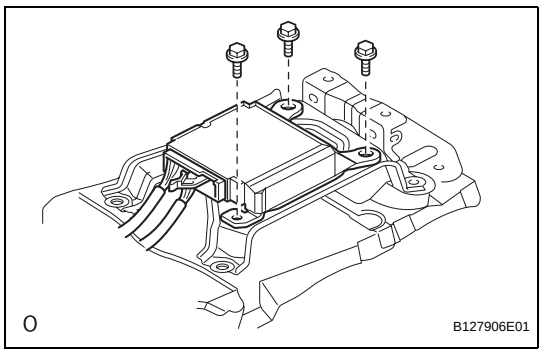
(a) While holding both sides of the outer connector locking sleeve, slide the outer in the direction shown by the arrow.



(b) When the connector lock is released, the connectors are disconnected.
HINT:
Be sure to hold both outer flanks. Holding the top and bottom sides will make disconnection difficult.

15. CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR

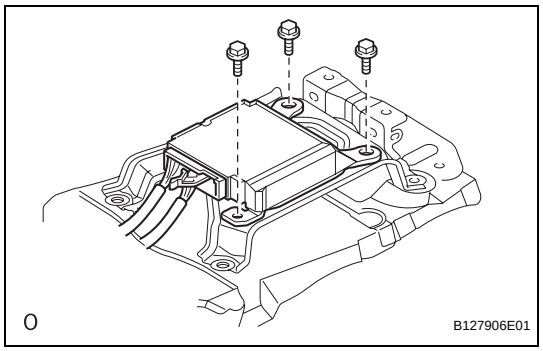
(a) Connect the connector as shown in the illustration (When locking, make sure that the outer returns to its original position and a click sound can be heard).
HINT:
When connecting, the outer slides. Do not hold the outer while connecting, as it may result in an insecure fit.



RS

REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

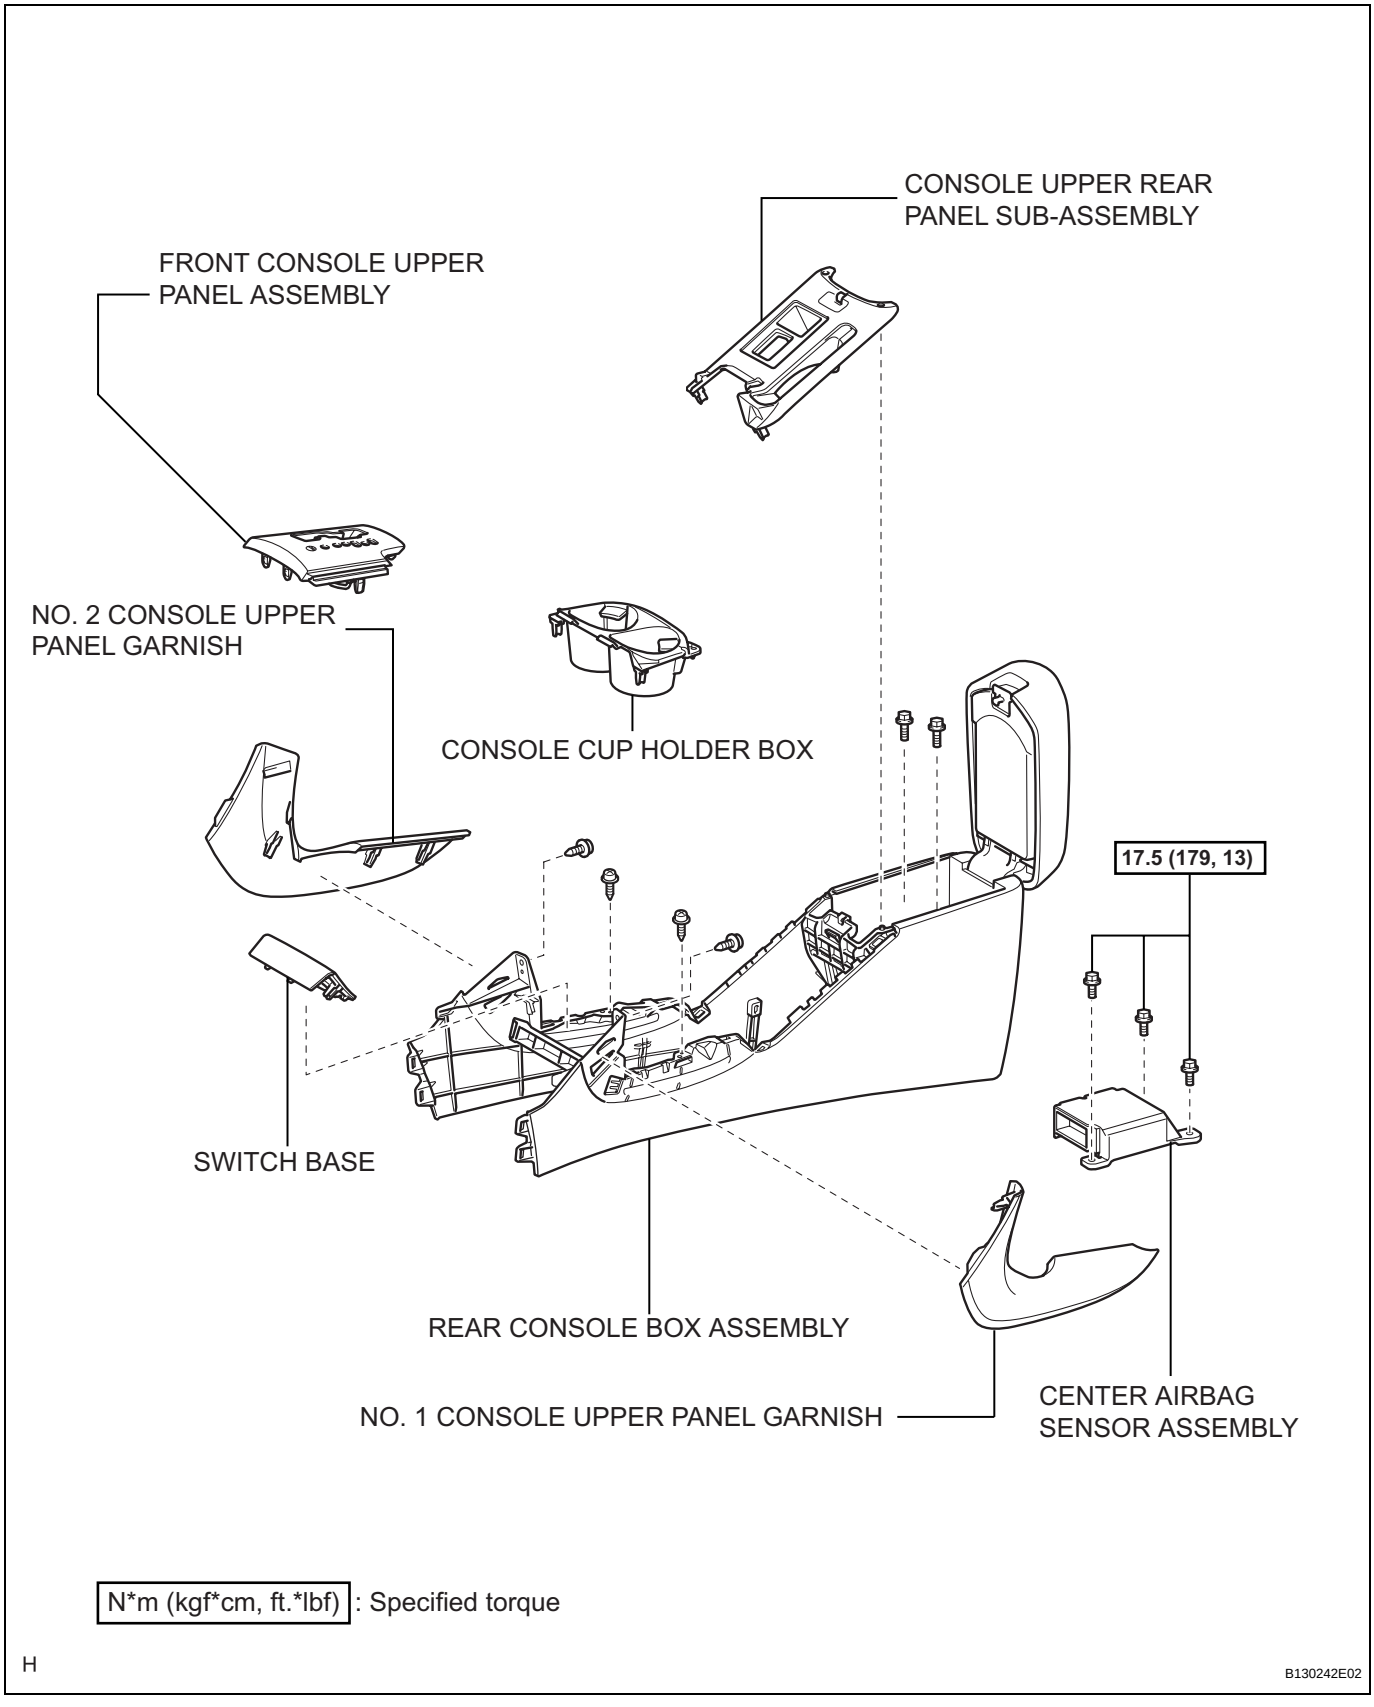


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-17)**
3. **REMOVE NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-18)**
4. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-18)**
5. **REMOVE SWITCH BASE (See page IP-18)**
6. **REMOVE CONSOLE CUP HOLDER BOX (See page IP-18)**
7. **REMOVE UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-19)**
8. **REMOVE CONSOLE REAR END PANEL (See page IP-19)**
9. **REMOVE NO. 1 INSTRUMENT PANEL BRACKET COVER INNER LH (See page IP-19)**
10. **REMOVE NO. 1 INSTRUMENT PANEL BRACKET COVER INNER RH (See page IP-19)**
11. **REMOVE REAR CONSOLE BOX ASSEMBLY (See page IP-20)**
12. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY**
    (a) Disconnect the airbag sensor connectors.
    (b) Remove the 3 bolts and airbag sensor.

RS

INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).



1. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY**
   (a) Install the airbag sensor with the 3 bolts.
   Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
   NOTICE:
   - **If the airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

   (b) Connect the airbag sensor connectors.
2. **INSTALL REAR CONSOLE BOX ASSEMBLY (See page IP-26)**
3. **INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER LH (See page IP-26)**
4. **INSTALL NO. 1 INSTRUMENT PANEL BRACKET COVER INNER RH (See page IP-26)**
5. **INSTALL CONSOLE REAR END PANEL (See page IP-26)**
6. **INSTALL UPPER REAR CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
7. **INSTALL CONSOLE CUP HOLDER BOX (See page IP-27)**
8. **INSTALL SWITCH BASE (See page IP-27)**
9. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-27)**
10. **INSTALL NO. 2 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
11. **INSTALL NO. 1 CONSOLE UPPER PANEL GARNISH (See page IP-28)**
12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
13. **CHECK SRS WARNING LIGHT**
    (a) Check the SRS warning light (see page RS-34).

CENTER AIRBAG SENSOR ASSEMBLY

COMPONENTS

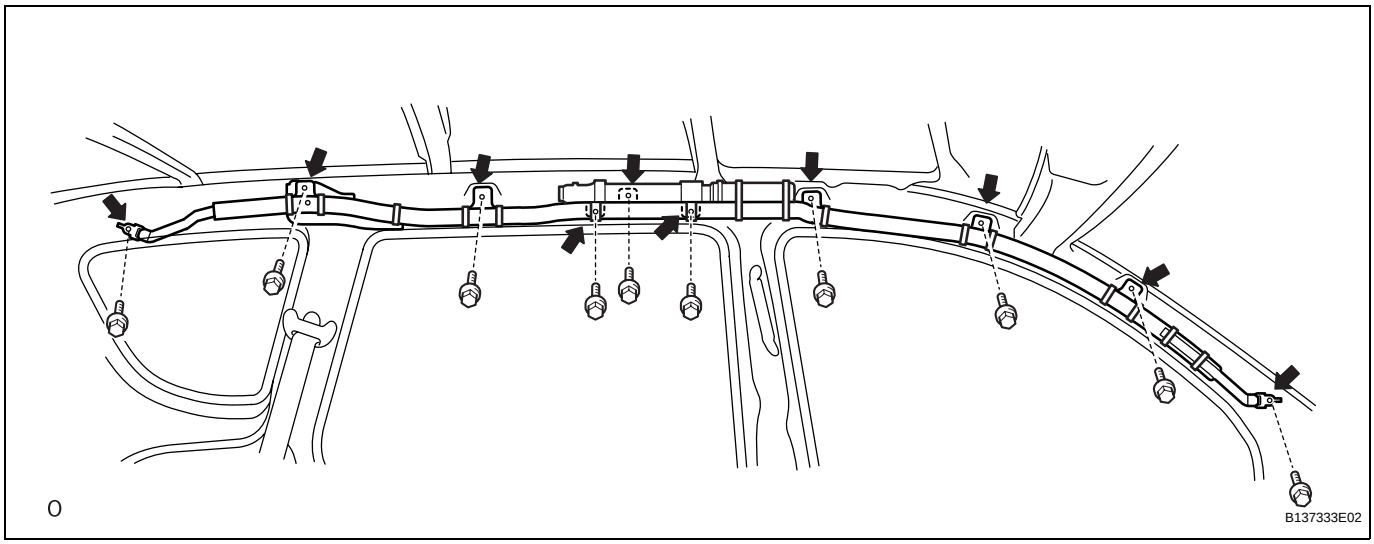
RS

ON-VEHICLE INSPECTION

1. **CHECK CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).

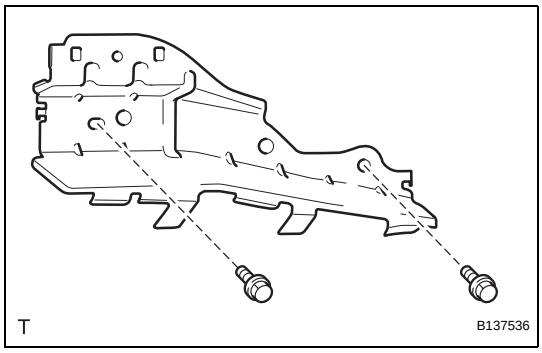
2. **CHECK CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).

3. **CHECK CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG DEPLOYED)**
   (a) Replace the center airbag sensor.
   CAUTION:
   For removal and installation of the center airbag sensor, be sure to follow the correct procedures.



REMOVAL

HINT:

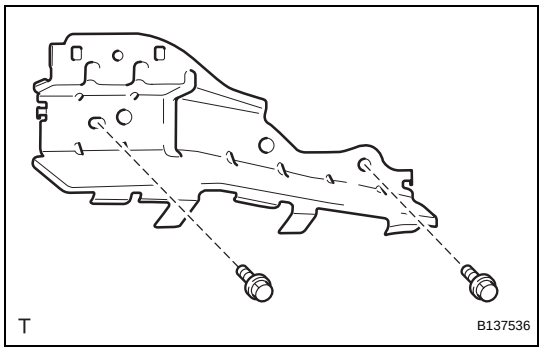


- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

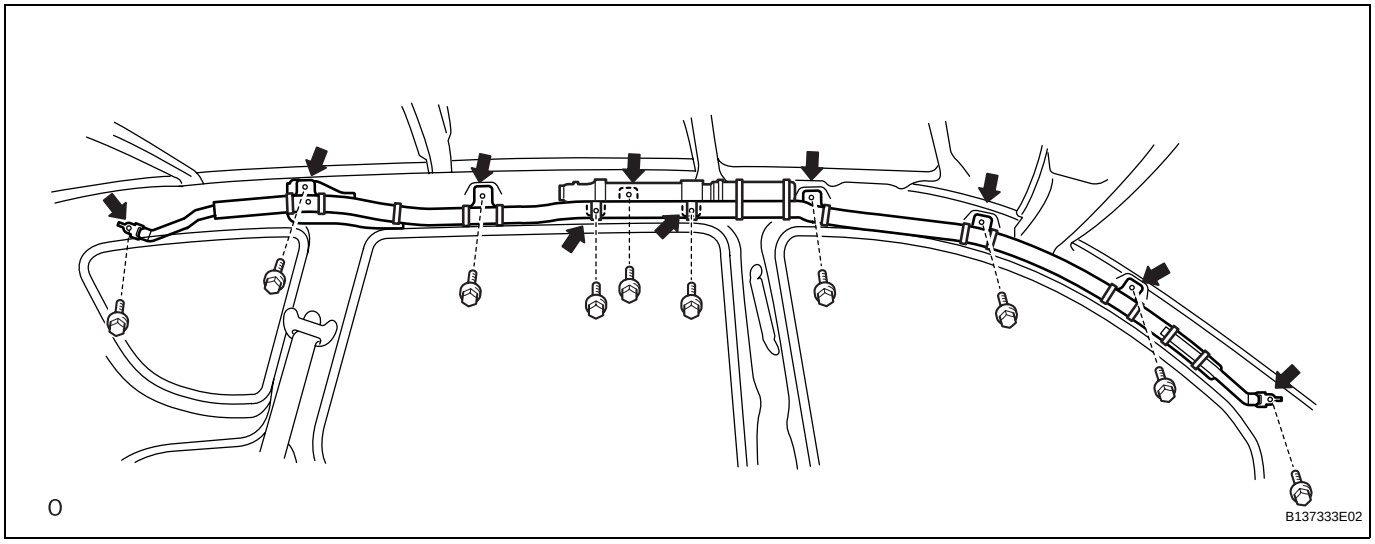
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE ROOF HEADLINING ASSEMBLY (See page IR-37)**
3. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY LH**

(a) Disconnect the connector.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.
(b) Remove the 10 bolts and curtain shield airbag.



4. **REMOVE ROOF SIDE RAIL BRACKET LH**
   (a) Remove the 2 bolts and bracket.

RS



INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **INSTALL ROOF SIDE RAIL BRACKET LH**
   (a) Install the bracket with the 2 bolts.
   Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)

2. **INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY LH**

   (a) Install the curtain shield airbag with the 10 bolts.
   Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)
   NOTICE:
   Do not twist the curtain shield airbag when installing it.
   (b) Connect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.

3. **INSTALL ROOF HEADLINING ASSEMBLY (See page IR-50)**

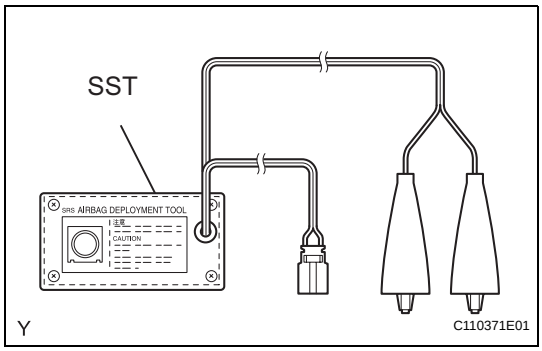
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-34).

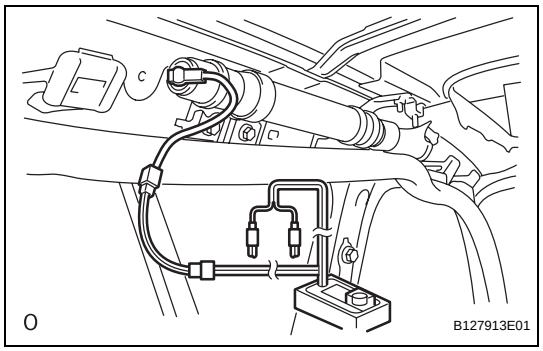
RS

DISPOSAL

HINT:
When scrapping a vehicle equipped with an SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

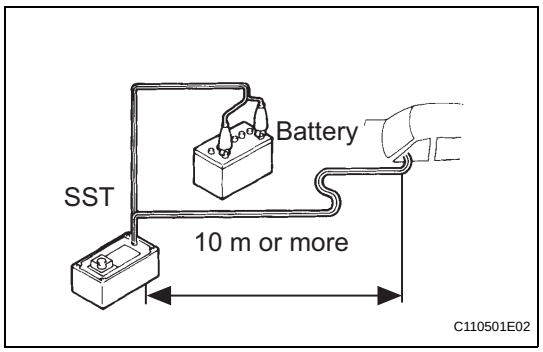


CAUTION:



- **Never dispose of a curtain shield airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the curtain shield airbag assembly.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

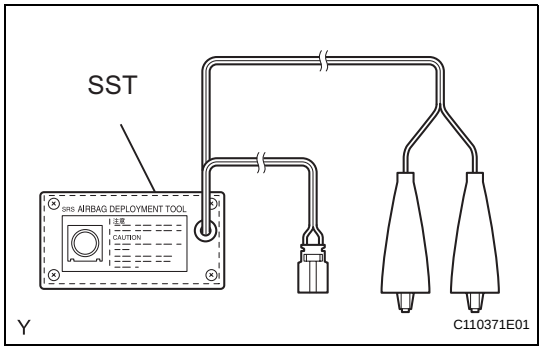


HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check if SST is functioning properly.
(b) Follow the "Precaution" (see page RS-1).
(c) Disconnect the cable from the negative battery terminal. Wait for 90 seconds after disconnecting the cable to prevent the airbag from deploying.
(d) Remove the roof headlining assembly (see page IR-37).
(e) Install SST.
(1) Disconnect the connector from the curtain shield airbag assembly.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

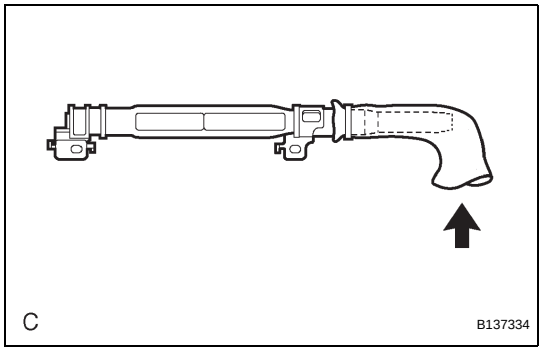
(2) After connecting SST to each other, connect them to the curtain shield airbag assembly.
SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move the SST at least 10 m (33 ft.) away from the vehicle rear side window.
(4) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(5) Connect the SST's red clip to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.



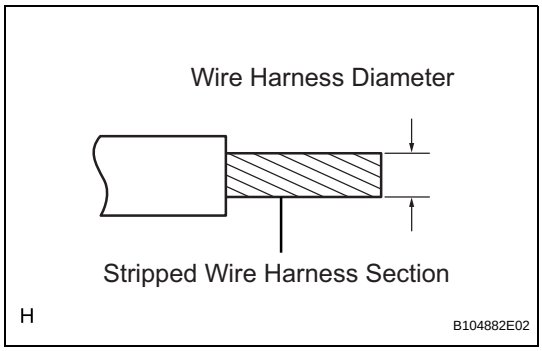
(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag with a deployed airbag.**
- **Do not apply water to a curtain shield airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

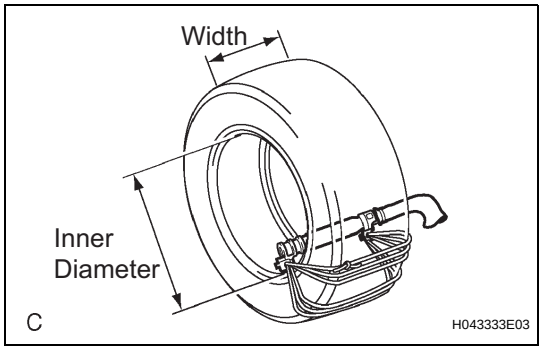


2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)
NOTICE:
- **When disposing of the curtain shield airbag, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

RS

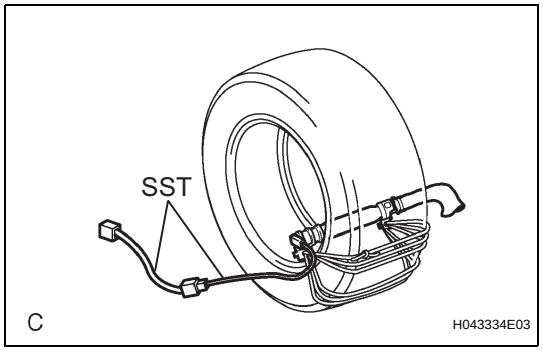


HINT:
Prepare a battery as the power source to deploy the airbag.



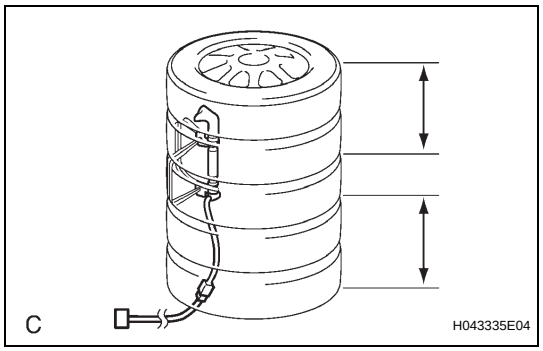
(a) Check if SST is functioning properly.
(b) Remove the curtain shield airbag (see page RS-360).
CAUTION:
When removing the curtain shield airbag, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.

(c) Cut off the deployment section of the curtain shield airbag.



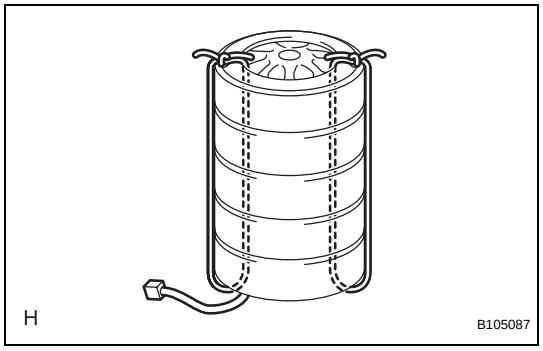
(d) Using a service-purpose wire harness for the vehicle, tie down the curtain shield airbag to the tire.
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)
CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag, it may be snapped due to the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x $(Diameter)^2/4$

(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.
Tire size:
Width minimum:
185 mm (7.28 in.)
Inner diameter minimum:
360 mm (14.17 in.)
CAUTION:
Make sure that the wire harness is tight. If there is slack in the wire harness, the curtain shield airbag may become loose due to the shock when the airbag is deployed.



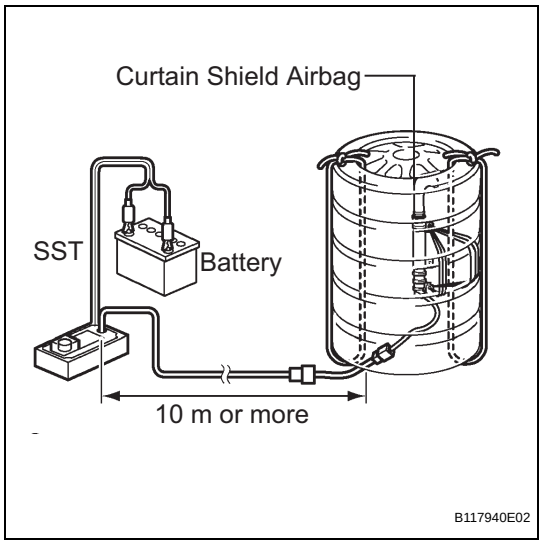
RS

NOTICE:
Use a disc wheel (with tire) that you are planning to throw away, as the airbag deployment will damage the disc wheel.



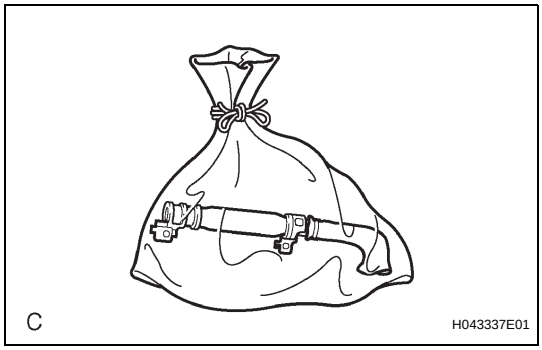
(e) Install SST.
(1) After connecting SST to each other, connect them to the curtain shield airbag.
SST 09082-00802 (09082-10801, 09082-20801)

(f) Place the tires.
CAUTION:
Do not place the deployment direction of the curtain shield airbag assembly facing toward the ground.



(1) Place at least 2 tires under the tire to which the curtain shield airbag assembly is tied.
(2) Place at least 2 tires over the tire to which the curtain shield airbag is tied. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.

(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harnesses are tight. Looseness in the wire harness may result in the tires coming free due to the shock when the airbag is deployed.

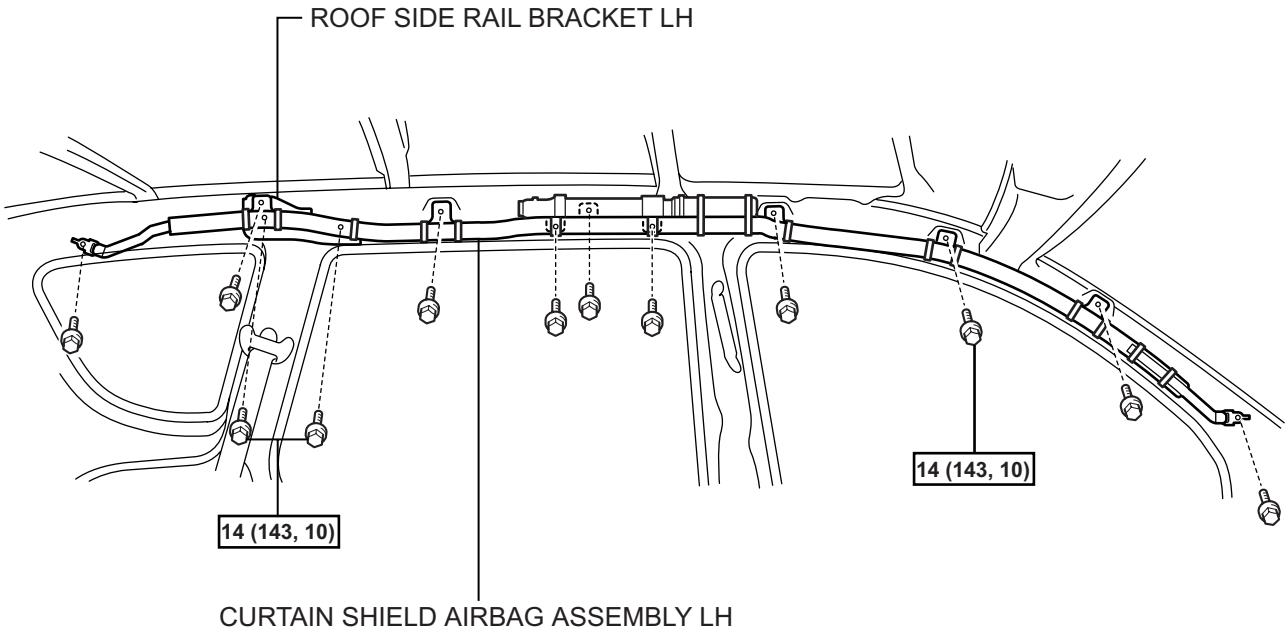


RS

(g) Install SST.
(1) Connect the SST connector.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(h) Deploy the airbag.
(1) Connect the SST's red clip to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire to which the curtain shield airbag is tied.

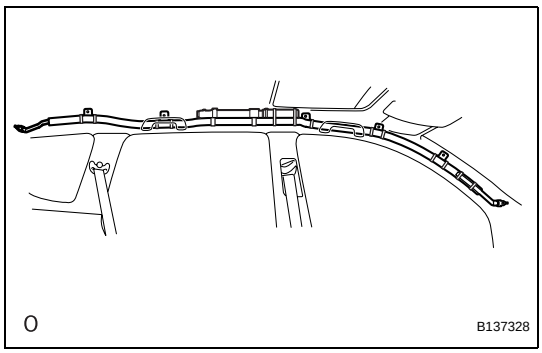
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.



(i) Dispose of the curtain shield airbag.
CAUTION:
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag with a deployed airbag.**
- **Do not apply water to a curtain shield airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the curtain shield airbag from the tire.
(2) Place the curtain shield airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

CURTAIN SHIELD AIRBAG ASSEMBLY



COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

O

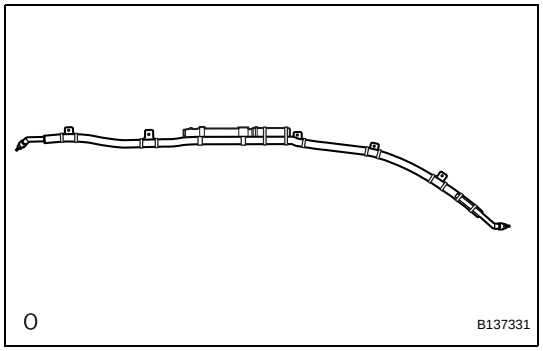
B137327E01

O

B137328

ON-VEHICLE INSPECTION

1. **CHECK CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (see page RS-49).
   (b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If any of the defects mentioned below are present, replace the curtain shield airbag with a new one:
   Cuts, minute cracks or marked discoloration on the curtain shield airbag assembly.



If any of the defects mentioned above are present, replace the curtain shield airbag with a new one.

CAUTION:

For removal and installation of the curtain shield airbag, be sure to follow the correct procedure.

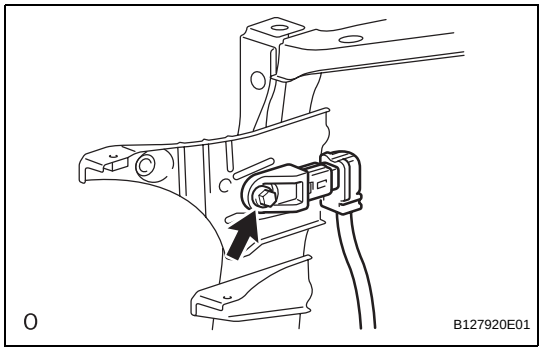
2. CHECK CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (see page RS-49).

(b) With the curtain shield airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag with a new one:

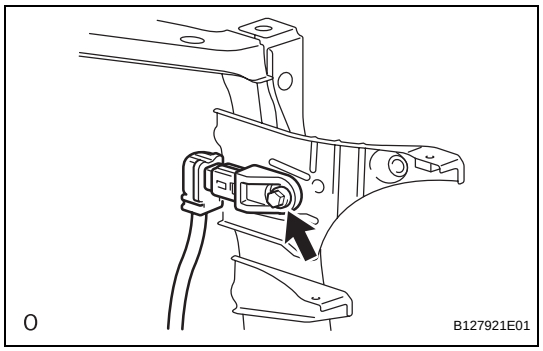
- Cuts, minute cracks or marked discoloration on the curtain shield airbag.
- Cracks or other damage to the connectors.

CAUTION:



For removal and installation procedures of the curtain shield airbag, be sure to follow the correct procedure.

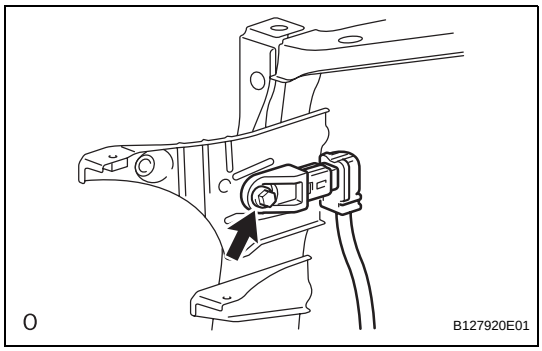
RS



REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE RADIATOR SUPPORT OPENING COVER**
3. **REMOVE FRONT AIRBAG SENSOR LH**
   (a) Disconnect the sensor connector.
   (b) Remove the bolt and sensor.

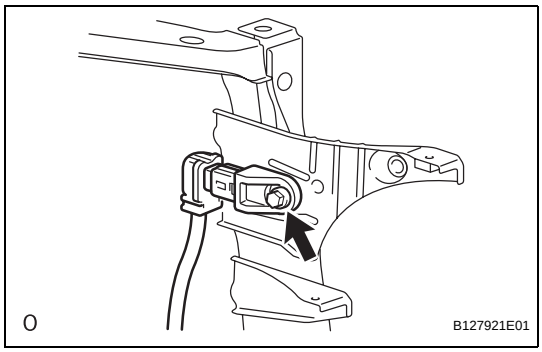


4. **REMOVE FRONT AIRBAG SENSOR RH**
   (a) Disconnect the sensor connector.
   (b) Remove the bolt and sensor.

RS

INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).



1. INSTALL FRONT AIRBAG SENSOR LH

(a) Install the sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
NOTICE:
- **If the airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.**
- **When installing the airbag sensor, make sure that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(b) Check that there is no free play in the installation parts of the sensor.

(c) Connect the sensor connector.

2. INSTALL FRONT AIRBAG SENSOR RH

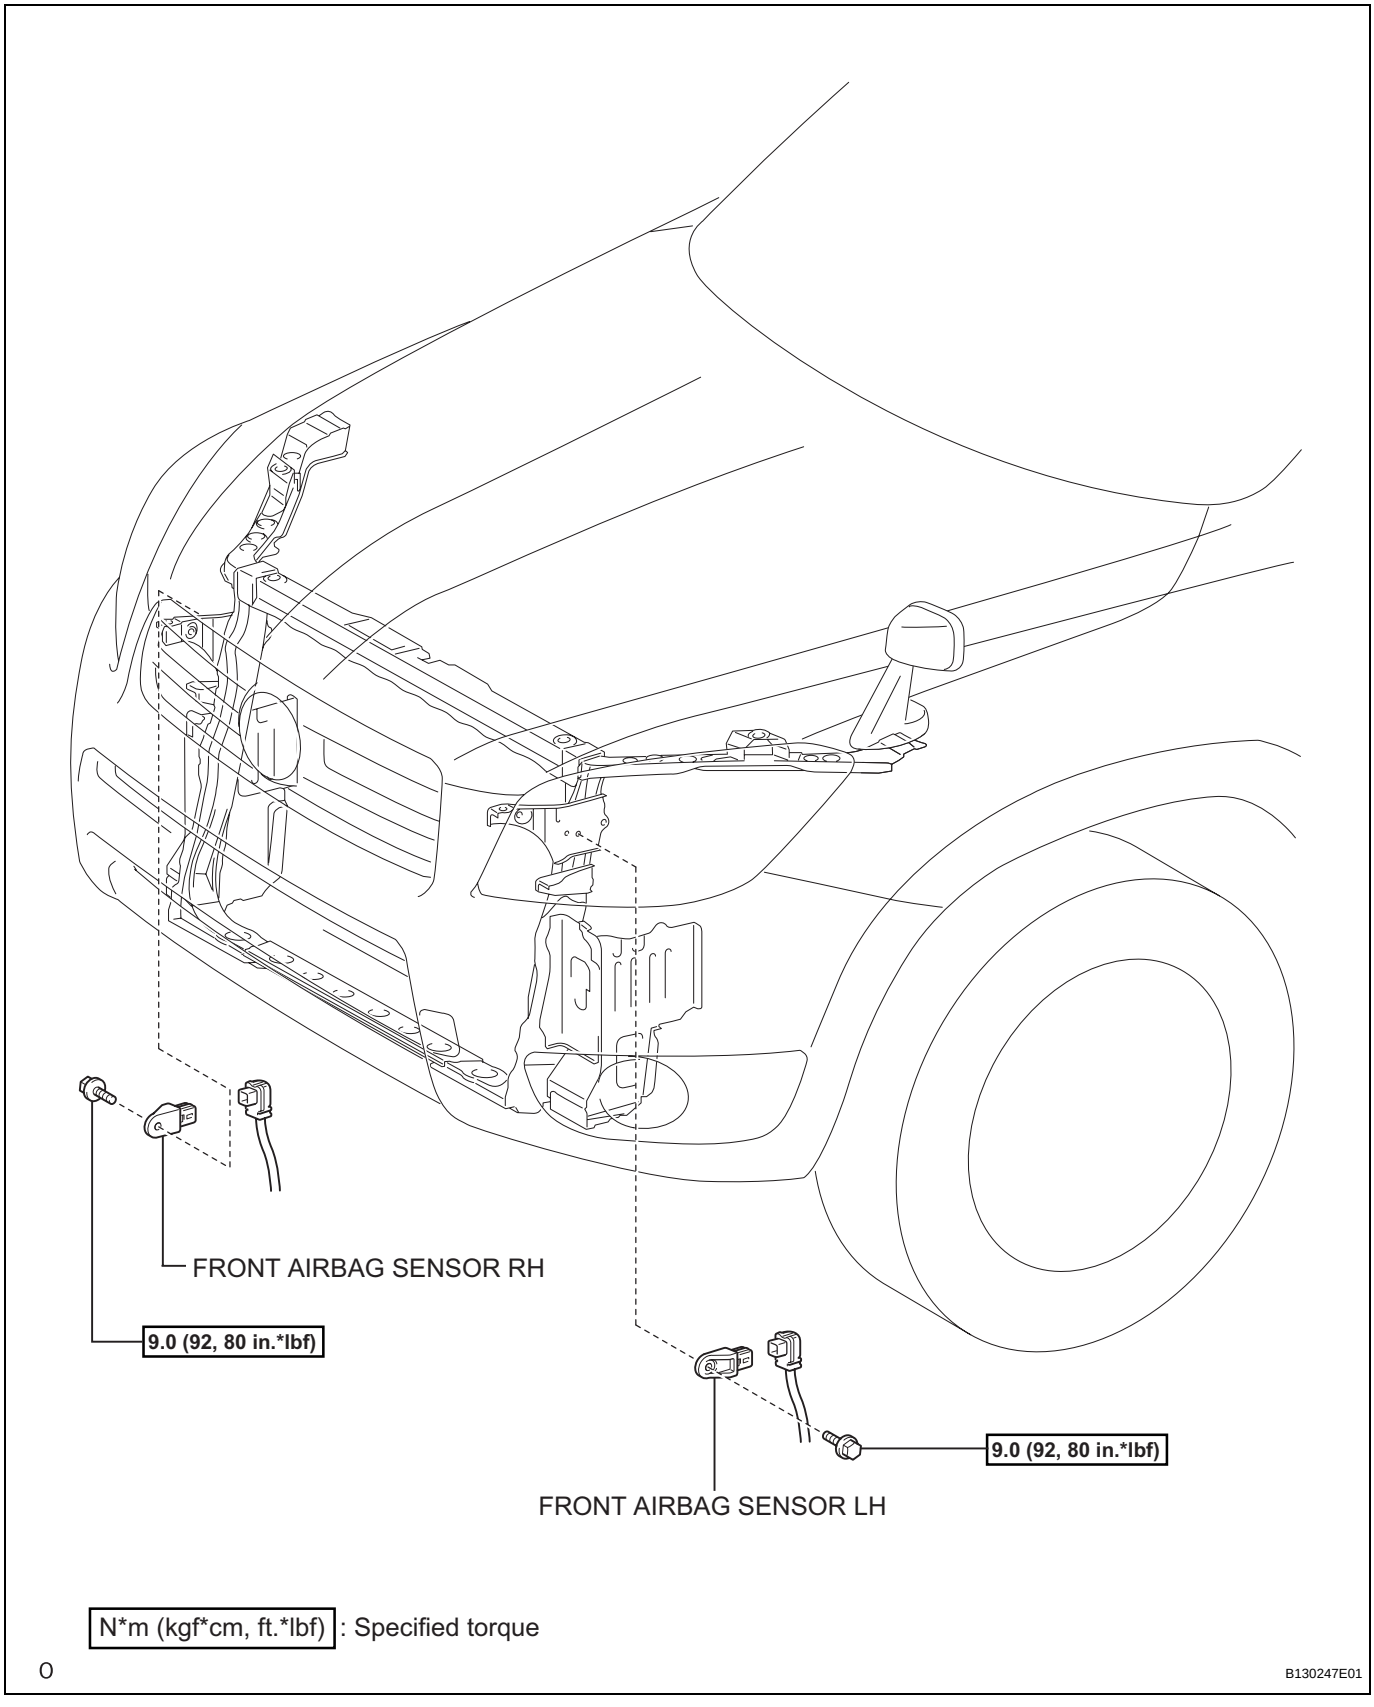
(a) Install the sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
NOTICE:
- **If the airbag sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.**
- **When installing the airbag sensor, make sure that the SRS wiring does not interfere with other parts and is not pinched between other parts.**

(b) Check that there is no free play in the installation parts of the sensor.

(c) Connect the sensor connector.

3. INSTALL RADIATOR SUPPORT OPENING COVER

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



5. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-34).

RS

FRONT AIRBAG SENSOR

COMPONENTS

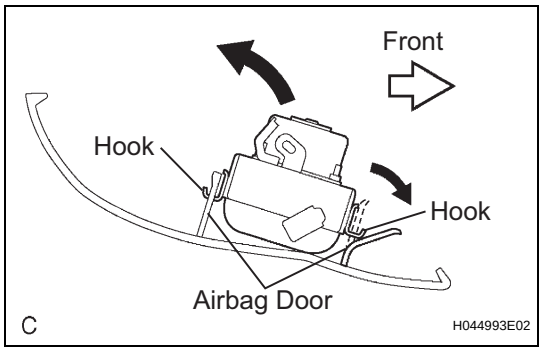
RS

ON-VEHICLE INSPECTION

1. **CHECK FRONT AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).

2. **CHECK FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).
   (b) If the front fender of the vehicle or its periphery are damaged, perform a visual check:
   - Check for cracks, dents or chips in the case.
   - Check for cracks, dents, chips and scratches in the connector.
   - Check for peeling off of the label or damage to the serial number.

   If any of the defects mentioned above are present, replace the front airbag sensor with a new one.



3. **CHECK FRONT AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS DEPLOYED)**
   (a) Replace the front airbag sensor.
   CAUTION:
   For removal and installation of the front airbag sensor, be sure to follow the correct procedures.
   HINT:
   If the airbags have deployed, replace the front airbag sensor on the side in which the collision occurred. Replace both if necessary.

REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

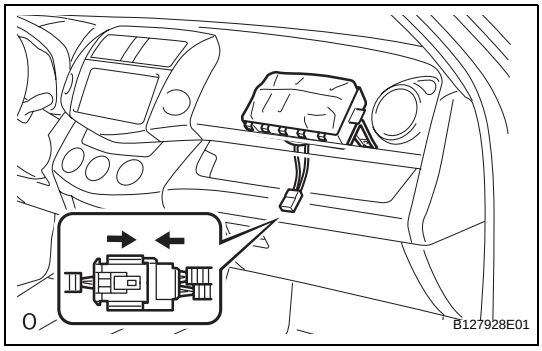
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
3. **REMOVE FRONT PASSENGER AIRBAG ASSEMBLY**
   (a) Detach the wire harness clamp from bracket.
   (b) Disconnect the connector from the airbag.
   NOTICE:
   When handling the airbag connector, do not damage the airbag wire harness.
   (c) Remove the 2 bolts from the reinforcement.
   (d) Remove the instrument panel upper (see page IP-6).

   (e) Release the front side airbag door from the front side hook by slightly bending it and lift out the front passenger airbag rearward.
   (f) Release the rear side airbag door from the other hook and remove the front passenger airbag.

RS

INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).



1. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY

(a) Attach the rear side hook of the front passenger airbag to the rear side airbag door.

(b) Bend the front side hook so that it attaches to the front side airbag door.

(c) Install the instrument panel upper (see page IP-9).

(d) Install the 2 bolts to the reinforcement.
Torque: 20 N*m (203 kgf*cm, 14 ft.*lbf)

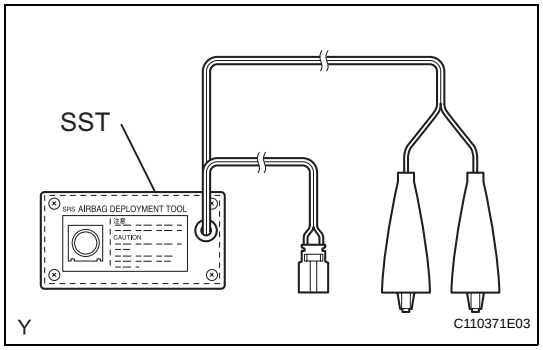
(e) Connect the connector to the airbag.
NOTICE:
When handling the airbag connector, do not damage the airbag wire harness.

(f) Attach the wire harness clamp to the bracket.

2. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-9)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

4. CHECK SRS WARNING LIGHT



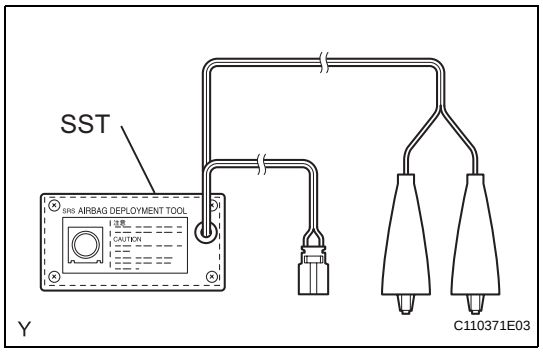
(a) Check the SRS warning light (see page RS-34).

DISPOSAL

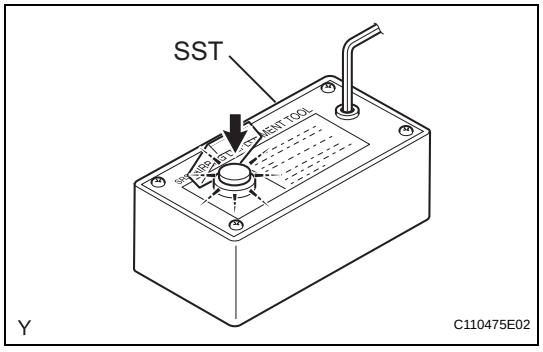
HINT:
When scrapping a vehicle equipped with an SRS or disposing of the front passenger side knee airbag, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of a front passenger airbag with an unactivated airbag.**
- **The airbag produces a loud, exploding sound when it activates. Perform the operation where it will not be a nuisance to people nearby.**
- **When activating the airbag, always use the specified SST (SRS airbag deployment tool).**
- **Perform procedures in a place away from electrical interference.**
- **When activating the airbag, stand at least 10 m (33 ft.) away from the airbag.**
- **The airbag becomes very hot when it is deployed. Do not touch it for at least 30 minutes after activation.**
- **Use gloves and safety glasses when handling a deployed airbag.**
- **Do not apply water to a deployed airbag.**
- **Always wash your hands with water after completing the operation.**



1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY TOGETHER WITH VEHICLE



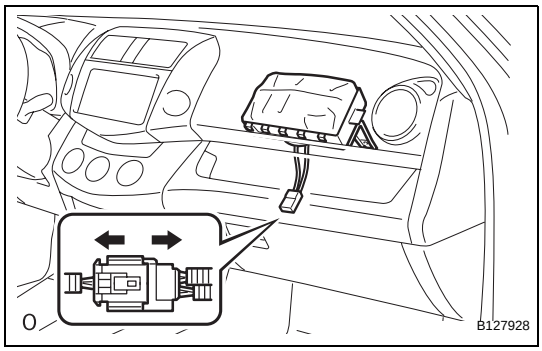
HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check if SST is functioning properly.
SST 09082-00700

(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
HINT:
The yellow connector will be used to connect to another SST in a later step.

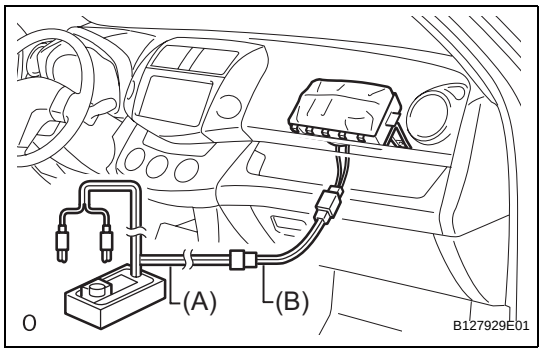
(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
If the LED illuminates when the activation switch is not pressed, SST may have a malfunction, in which case that SST should not be used.

(3) Disconnect SST from the battery.



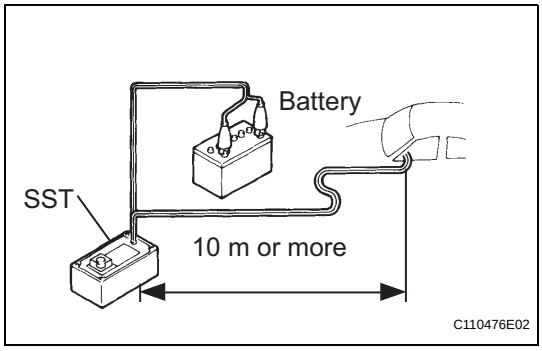
(b) Follow the "Precaution" (see page RS-1).

RS



(c) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

(d) Remove the glove compartment door (see page IP-6).



(e) Install SST.

(1) Disconnect the front passenger airbag connector.
NOTICE:
When handling the airbag connector, do not damage the airbag wire harness.

(2) Connect SST (A) to SST (B). Then connect SST (B)'s connector to the cable.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the front side window.

(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.

(5) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

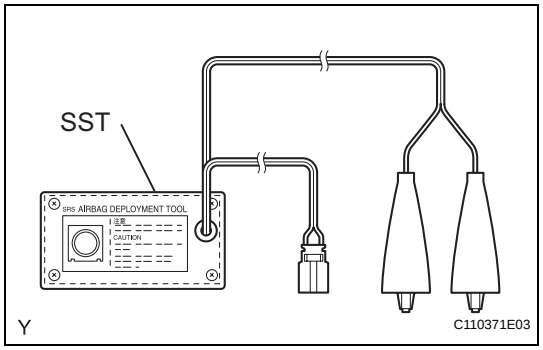
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The airbag becomes extremely hot when it is deployed. Do not touch it for at least 30 minutes after deployment.**

RS

- **Use gloves and safety glasses when handling a deployed airbag.**
- **Do not apply water to a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

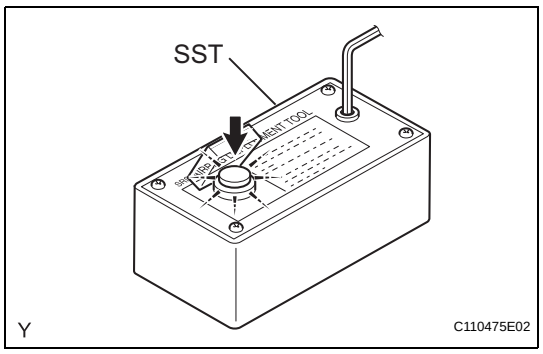
HINT:
The airbag is deployed as the SST activation switch LED illuminates.

2. DISPOSE OF ONLY FRONT PASSENGER AIRBAG ASSEMBLY



NOTICE:

- **When disposing of the airbag, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

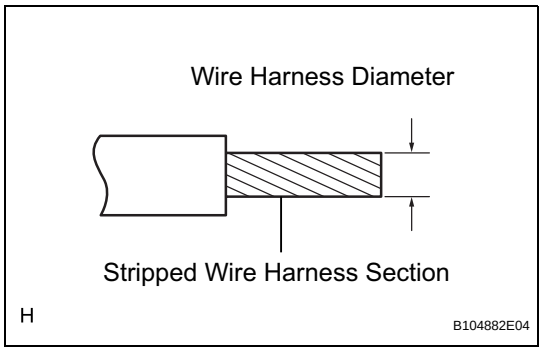


HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check if SST is functioning properly.
SST 09082-00700

(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
HINT:
The yellow connector will be used to connect to another SST in a later step.

(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
If the LED illuminates when the activation switch is not pressed, SST may have a malfunction, in which case that SST should not be used.



(3) Disconnect SST from the battery.

(b) Remove the front passenger airbag (see page RS-350).
CAUTION:

- **When removing the airbag, work must be started 90 seconds after the ignition switch is turned OFF and after the cable is disconnected from the negative (-) battery terminal.**
- **When storing the airbag, keep the airbag deployment side facing upward.**

RS

(c) Using service wire harnesses for the vehicle, tie down the airbag to a tire.

Wire harness:

Stripped wire harness section

1.25 mm^2 or more (0.0019 in.^{2} or more)

NOTICE:

Use a tire that you are planning to throw away, as the airbag deployment may damage the tire.

CAUTION:

Do not use wire harnesses that are too thin or any other substitute items to tie down the front passenger airbag. They may snap when the airbag deploys. Always use vehicle wire harnesses that have an area of at least 1.25 mm^2 (0.0019 in.^{2}).

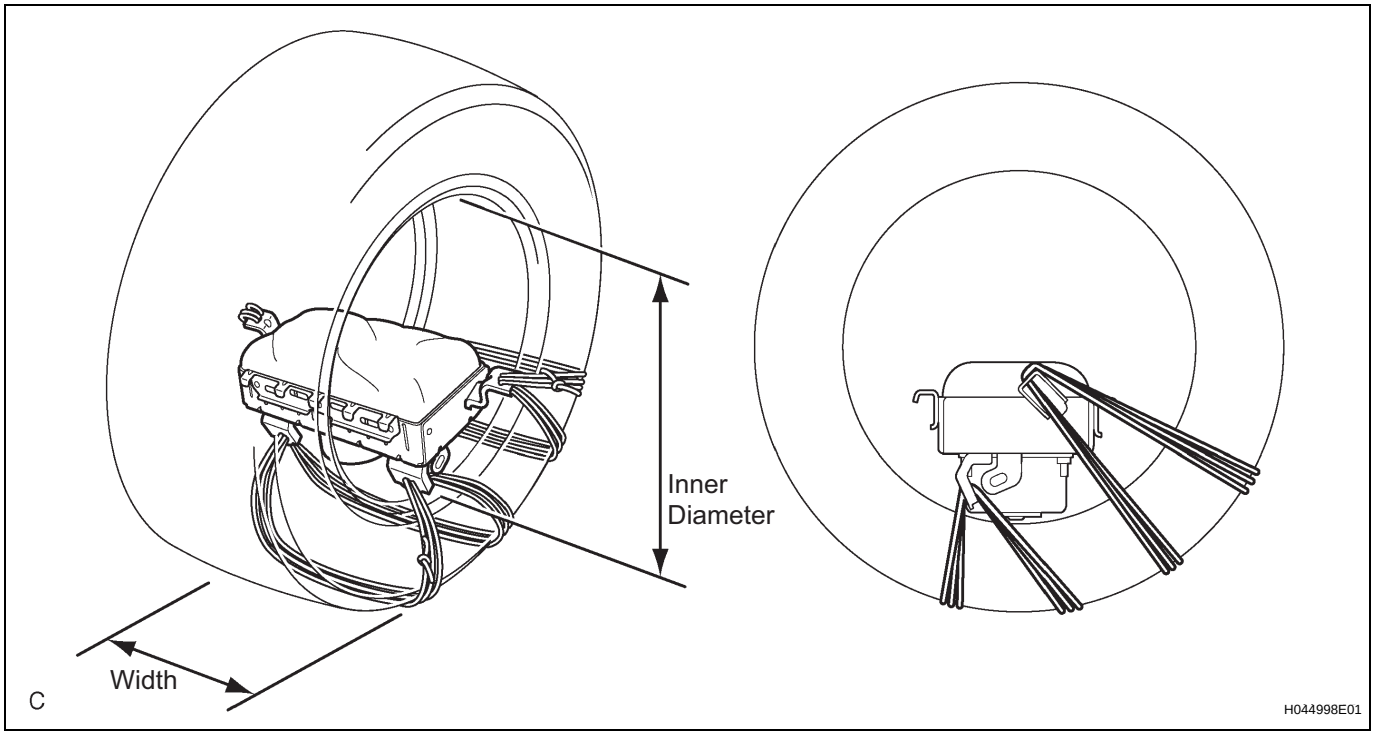
HINT:

To calculate the area of the stripped wire harness section:

Area = 3.14 x Diameter^2 /4

(1) Position the airbag inside the tire so that the brackets contact the tire.

Tire size:



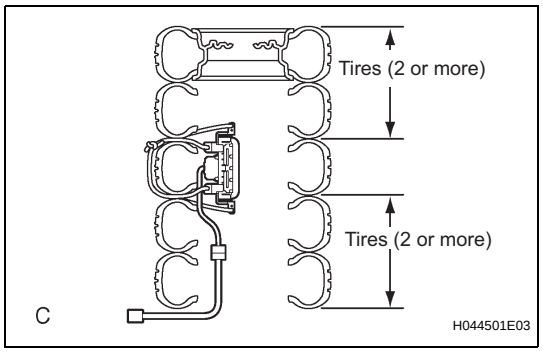
Width minimum:

185 mm (7.28 in.)

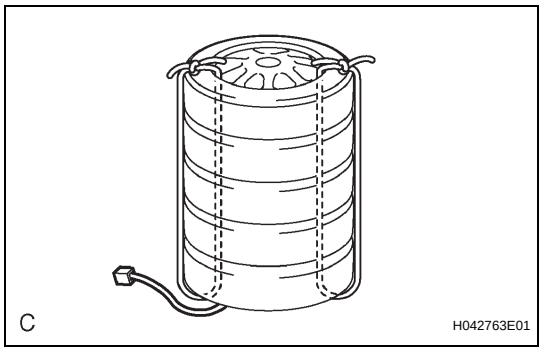
Inner diameter minimum:

360 mm (14.17 in.)

(2) Wind 3 wire harnesses at least twice around the airbag brackets and tire.



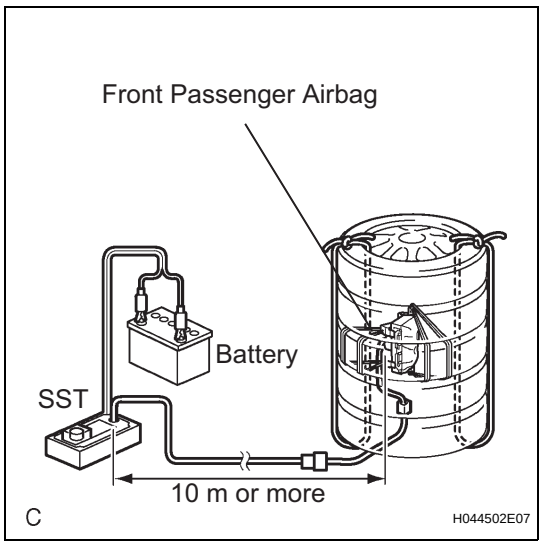
CAUTION:



- **Tightly wind the wire harnesses around the brackets so that there is no slack.**

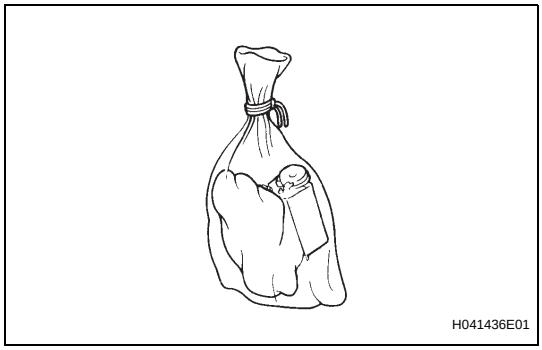
- **Make sure that the wire harnesses are tight. If there is slack in a wire harness, the airbag may come loose when it is deployed.**
- **Always tie down the airbag with the airbag deployment side facing inside the tire.**

(d) Install SST.
(1) Connect the SST connector to the airbag.
SST 09082-00780



(e) Place the tires.
(1) Place at least 2 tires under the tire to which the airbag is tied.
(2) Place at least 2 tires on top of the tire to which the airbag is tied. The top tire should have a disc wheel installed.
NOTICE:
- **Do not place the SST connector under the tire as the connector may be damaged.**
- **Use a disc wheel that you are planning to throw away, as the airbag deployment will damage the disc wheel.**
- **Use tires that you are planning to throw away, as the airbag deployment may damage the tires.**

(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harnesses are tight. If there is slack in a wire harness, the tires may come loose when the airbag is deployed.

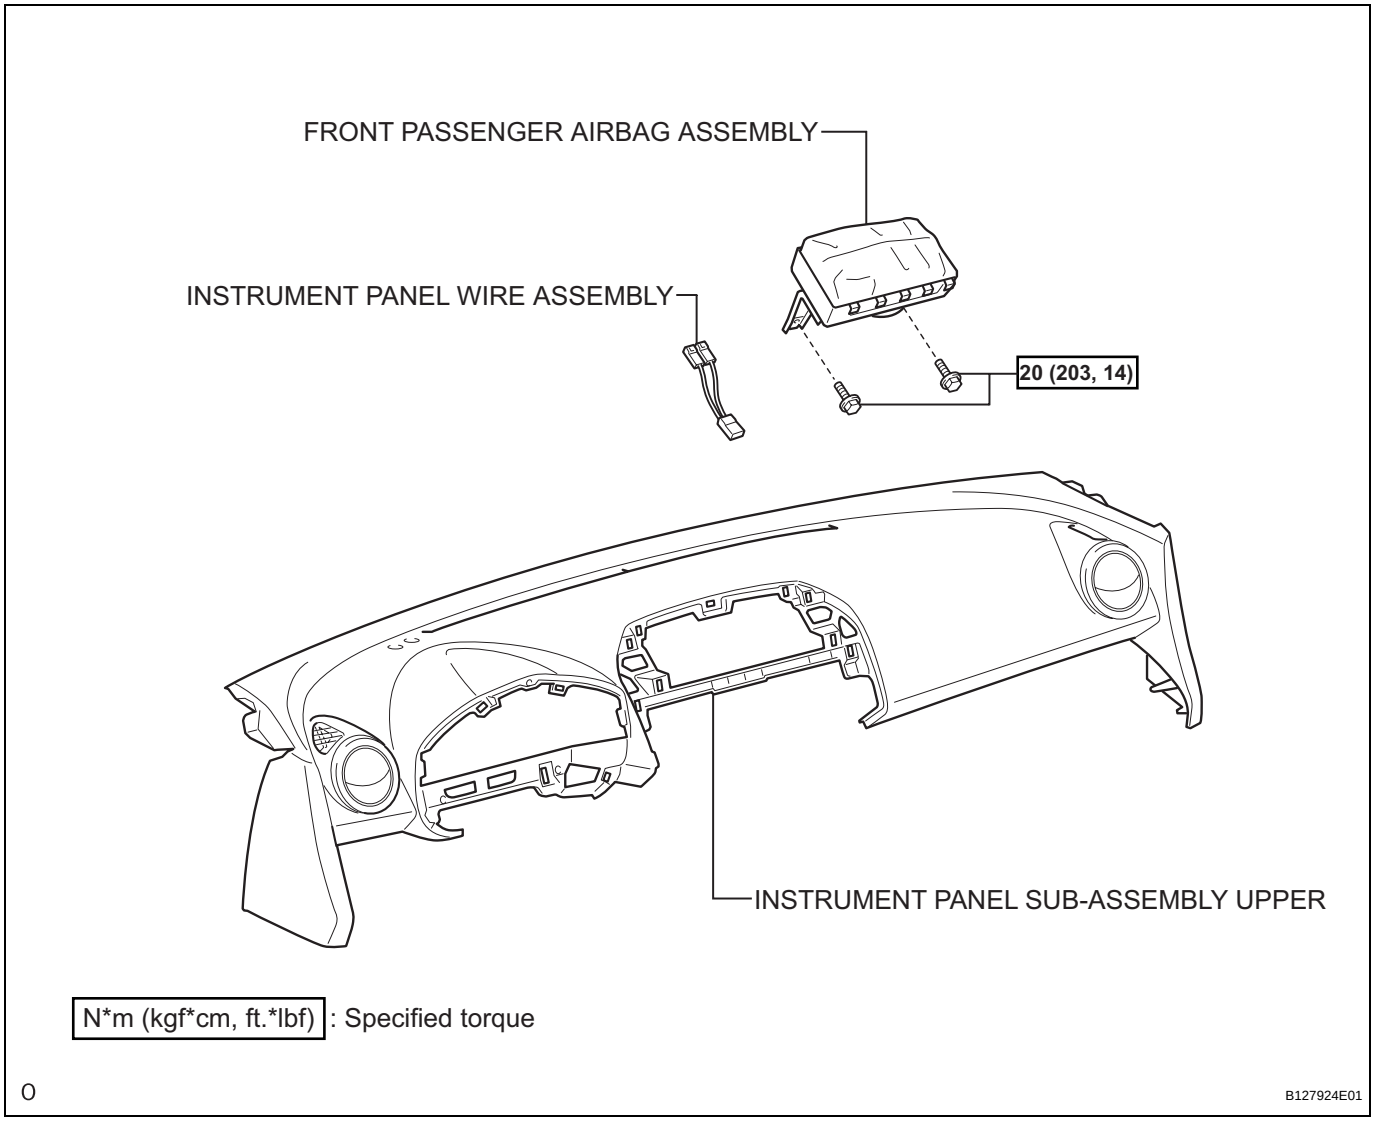


RS

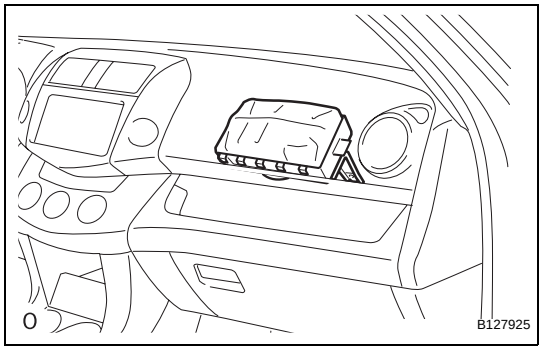
(f) Install SST.
(1) Connect the SST connector.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.

(g) Deploy the airbag.
(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
(2) Check that no one is within a 10 m (33 ft.) radius of the airbag.

(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tires.
HINT:
The airbag is deployed as the SST activation switch LED illuminates.



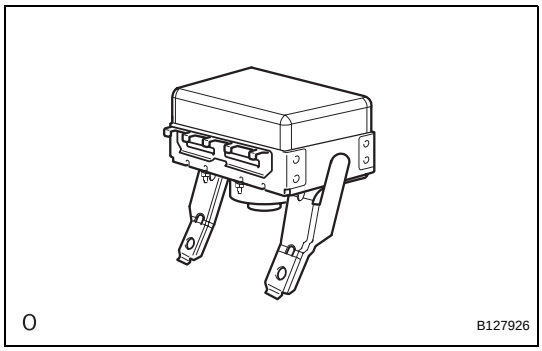
H041436E01



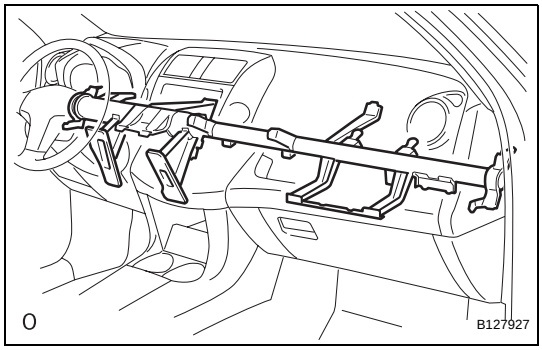
(h) Dispose of the airbag.
CAUTION:
- **The airbag becomes extremely hot when it is deployed. Do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a deployed airbag.**
- **Do not apply water to a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the airbag from the tire.
(2) Place the airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

FRONT PASSENGER AIRBAG ASSEMBLY



COMPONENTS

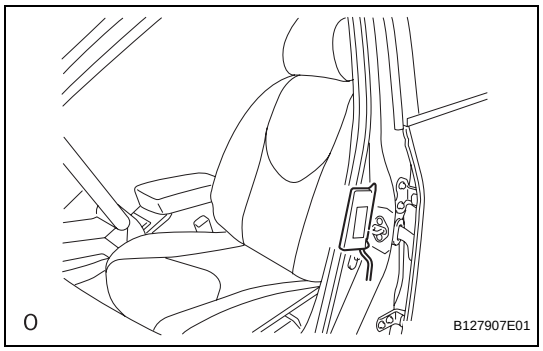


ON-VEHICLE INSPECTION

1. **CHECK FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).
   (b) With the front passenger airbag installed on the vehicle, perform a visual check:
   Check for cuts, cracks or discoloration on the front passenger airbag surface and in the grooved portion.
   If any of the defects mentioned above are present, replace the front passenger airbag with a new one.
   CAUTION:
   For removal and installation of the front passenger airbag, be sure to follow the correct procedures.

2. CHECK FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)

(a) Perform a diagnostic system check (see page RS-49).



(b) With the front passenger airbag removed from the vehicle, perform a visual check:

- Check for cuts, cracks or discoloration on the front passenger airbag.
- Check for cracks or other damage on the connectors.
- Check for deformation or cracks on the instrument panel and instrument panel reinforcement.

If any of the defects mentioned above are present, replace the front passenger airbag with a new one.

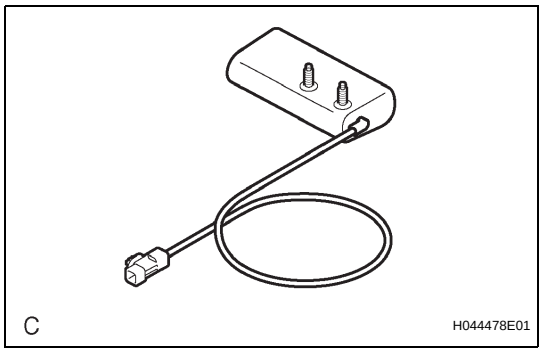
CAUTION:

For removal and installation of the front passenger airbag, be sure to follow the correct procedures.

FRONT SEAT SIDE AIRBAG ASSEMBLY

ON-VEHICLE INSPECTION

1. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)



(a) Perform a diagnostic system check (see page RS-49).

(b) With the front seat side airbag installed on the vehicle, perform a visual check. If any of the defects mentioned below are present, replace the front seat with a new one:

Cuts, minute cracks or marked discoloration on the front seat side airbag or around the front seat side airbag.

2. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (see page RS-49).

(b) With the front seat side airbag removed from the vehicle, perform a visual check.

- Cuts, minute cracks or marked discoloration on the front seat side airbag.
- Cracks or other damage to the wire harness or connector.

If any of the defects mentioned above are present, replace the front seat with a new one.

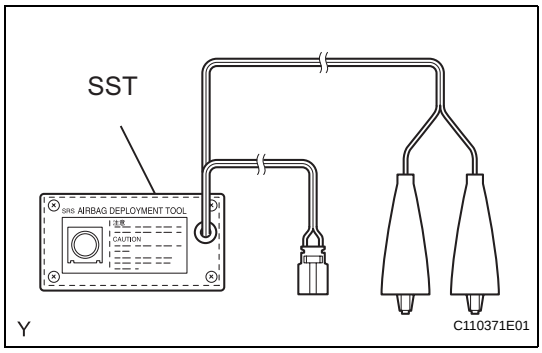
CAUTION:

For removal and installation procedures of the front seat side airbag, be sure to follow the correct procedure.

RS

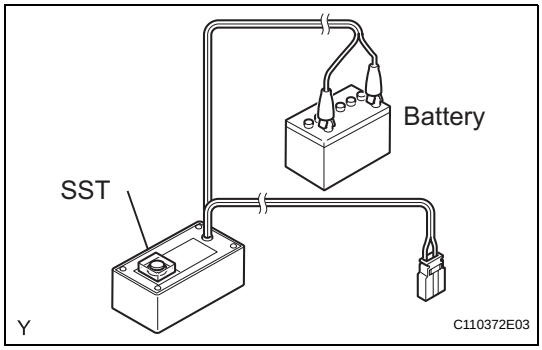
DISPOSAL

HINT:
When scrapping a vehicle equipped with SRS or disposing of the front seat side airbag, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

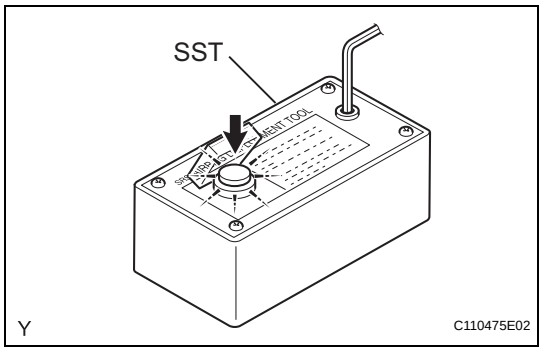


CAUTION:

- **Never dispose of a front seat side airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft.) away from the airbag.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
- **Do not apply water to a front seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**



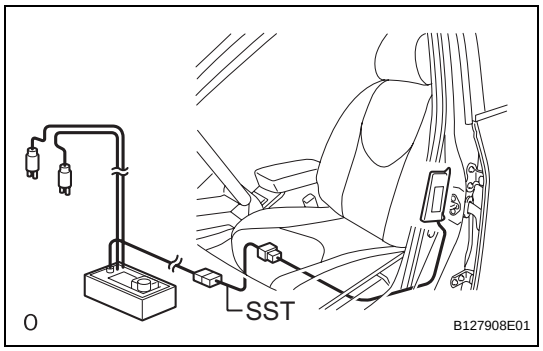
1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)



HINT:
Prepare a battery as the power source to deploy the airbag.

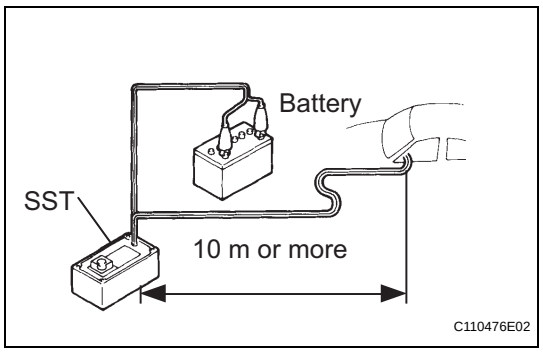
(a) Check if SST is functioning properly.
SST 09082-00700, 09082-00750

(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
HINT:
The yellow connector will be used to connect to another SST in a later step.



(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
If the LED illuminates when the activation switch is not pressed, SST may have a malfunction, in which case that SST should not be used.
(3) Disconnect SST from the battery.

(b) Follow the "Precaution" (see page RS-1).



(c) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

(d) Manual seat:
Remove the front seat (see page SE-11).
Power seat:
Remove the front seat (see page SE-27).
HINT:
Keep the front seat in the cabin.

(e) Install SST.
(1) Disconnect the connector (yellow colored one) from the front seat side airbag.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

(2) Connect the SST connector to the front seat side airbag connector.
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.
(3) Manual seat:
Install the front seat (see page SE-22).
Power seat:
Install the front seat (see page SE-37).

(4) Move the SST at least 10 m (33 ft.) away from the vehicle front side window.
(5) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(6) Connect the SST's red clip to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.

(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

RS

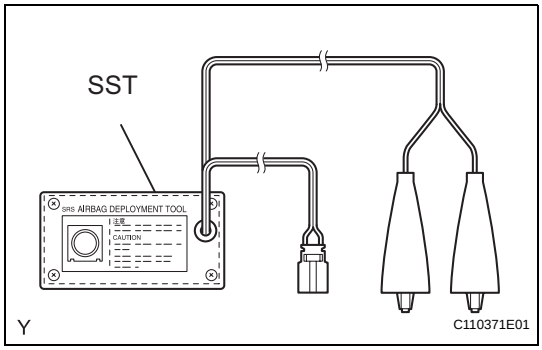
(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
- **Do not apply water to a front seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of the SST activation switch comes on.



2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the front seat side airbag, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:

Prepare a battery as the power source to deploy the airbag.

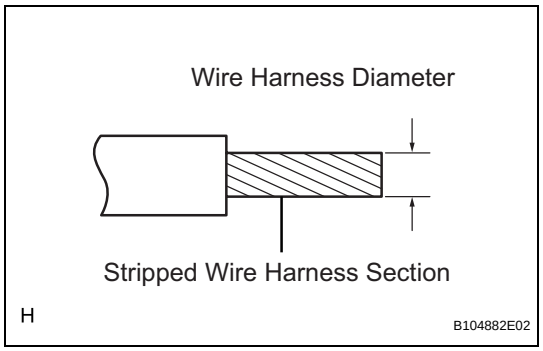
(a) Check if SST is functioning properly.

(b) Remove the front seat side airbag.

(1) Manual seat:

Remove the front seat (see page SE-11).

Power seat:



Remove the front seat (see page SE-27).

(2) Remove the 2 nuts and front seat side airbag from the seatback.

CAUTION:

- **When removing the front seat side airbag, work must be started 90 seconds after the ignition switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the front seat side airbag, keep the airbag deployment side facing upward.**

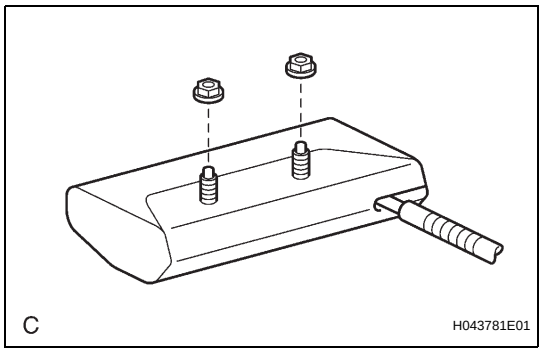
RS

(c) Using a service-purpose wire harness for the vehicle, tie down the front seat side airbag to the tire.

Wire harness:

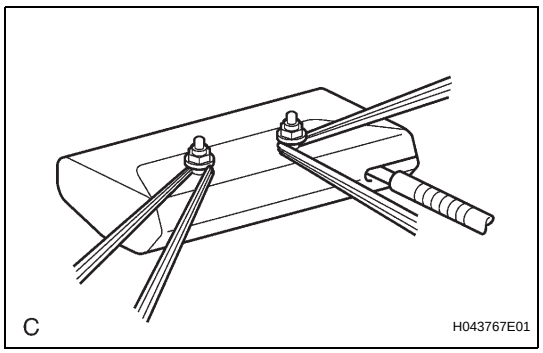
Stripped wire harness section

1.25 mm^2 or more (0.0019 in.^{2} or more)



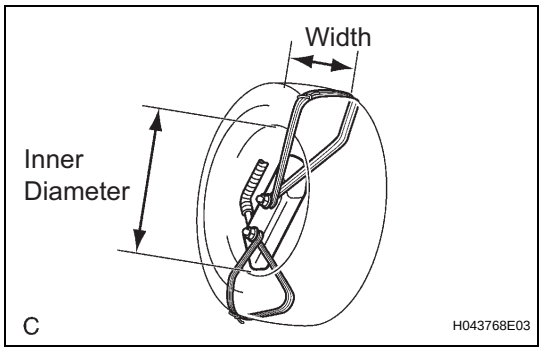
HINT:

To calculate the area of the stripped wire harness section:



Area = 3.14 x (Diameter)^2/4

CAUTION:



If the wire harness is too thin or an alternative object is used to tie down the front seat side airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 in.^{2}).

(1) Install the 2 nuts to the front seat side airbag assembly.

(2) Wind the wire harness around the stud bolts of the front seat side airbag as shown in the illustration.

(3) Position the front seat side airbag inside the tire.

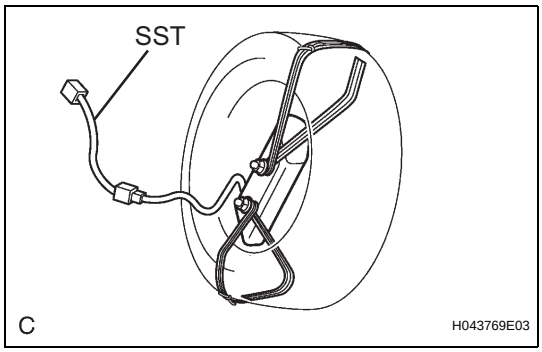
Tire size:

Width minimum:

185 mm (7.28 in.)

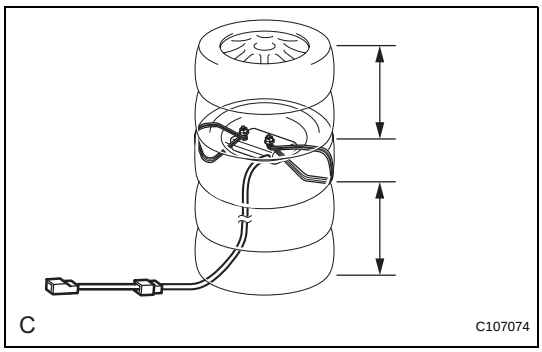
Inner diameter minimum:

360 mm (14.17 in.)



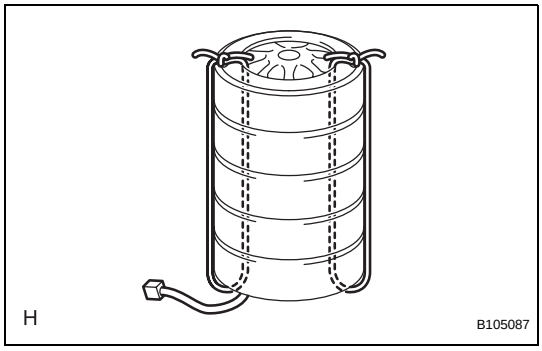
CAUTION:

- **Make sure that the wire harness is tight. If there is slack in a wire harness, the front seat side airbag may become loose due to the shock when the airbag is deployed.**



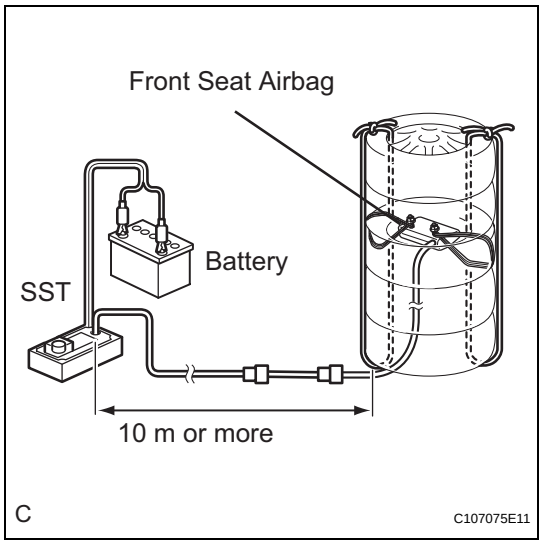
RS

- **Always tie down the front seat side airbag with the airbag deployment direction facing inside the tire.**

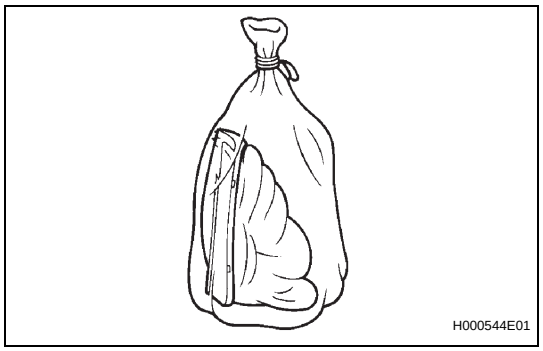


NOTICE:
Use a disc wheel (with tire) that you are planning to throw away, as the airbag deployment will damage the disc wheel.

(d) Install SST.
(1) Connect the SST connector to the front seat side airbag connector.
SST 09082-00750



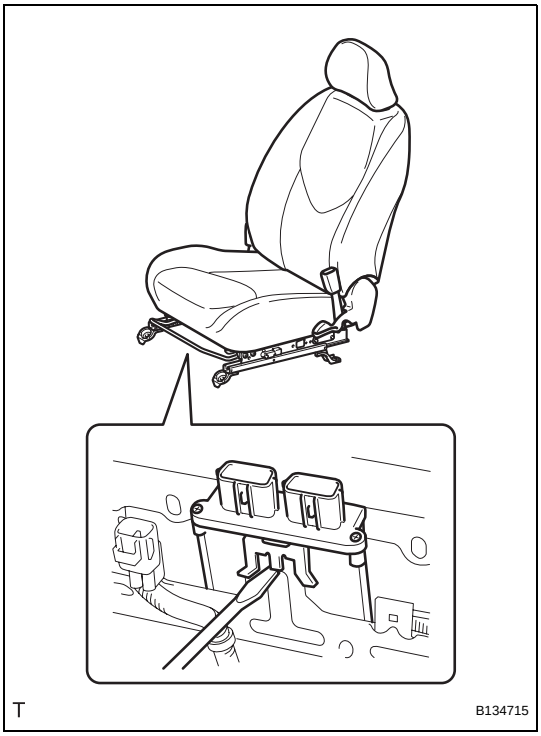
(e) Place the tires.
(1) Place at least 2 tires under the tire to which the front seat side airbag is tied.
(2) Place at least 2 tires over the tire to which the front seat side airbag is tied. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.



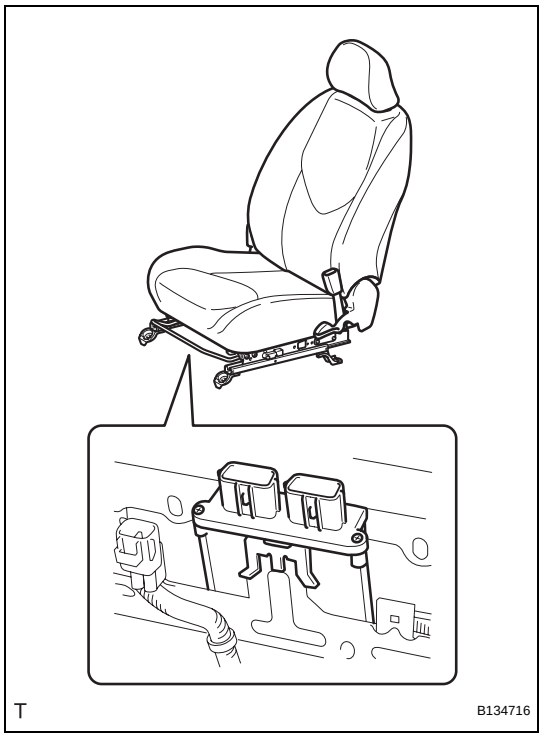
(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harnesses are tight. Looseness in the wire harness may result in the tires coming free due to the shock when the airbag is deployed.

RS

(f) Install SST.
  (1) Connect the SST connector.
  SST 09082-00700
  NOTICE:
  To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.



(g) Deploy the airbag.
  (1) Connect the SST's red clip to the battery positive (+) terminal and the black clip to the battery negative (-) terminal.
  (2) Check that no one is within a 10 m (33 ft.) radius of the tire to which the front seat side airbag is tied.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  When deploying the airbag, make sure that no one is near the tire.
  HINT:
  The airbag is deployed as the LED of the SST activation switch comes on.



(h) Dispose of the front seat side airbag.
  CAUTION:
  - **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
  - **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
  - **Do not apply water to a front seat side airbag assembly with a deployed airbag.**
  - **Always wash your hands with water after completing the operation.**
  (1) Remove the front seat side airbag from the tire.
  (2) Place the front seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-11)**
3. **REMOVE OCCUPANT CLASSIFICATION ECU**
   (a) Disconnect the 2 connectors from the occupant classification ECU.
   (b) Using a screwdriver, remove the occupant classification ECU.

INSTALLATION

1. INSTALL OCCUPANT CLASSIFICATION ECU

(a) Check that the ignition switch is off.

(b) Check that the negative battery (-) terminal is disconnected.

CAUTION:

After disconnecting the negative battery terminal, wait for at least 90 seconds before starting the operation.

(c) Install the occupant classification ECU.

(d) Connect the 2 connectors to the occupant classification ECU.

NOTICE:

- **If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case or connector, replace it with a new one.**
- **When installing the occupant classification ECU, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

2. INSTALL FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-23)

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

4. INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)

5. INSPECT SEAT HEATER OPERATION (w/ Seat Heater System)

6. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (see page RS-245).

OCCUPANT CLASSIFICATION ECU

COMPONENTS

RS

T

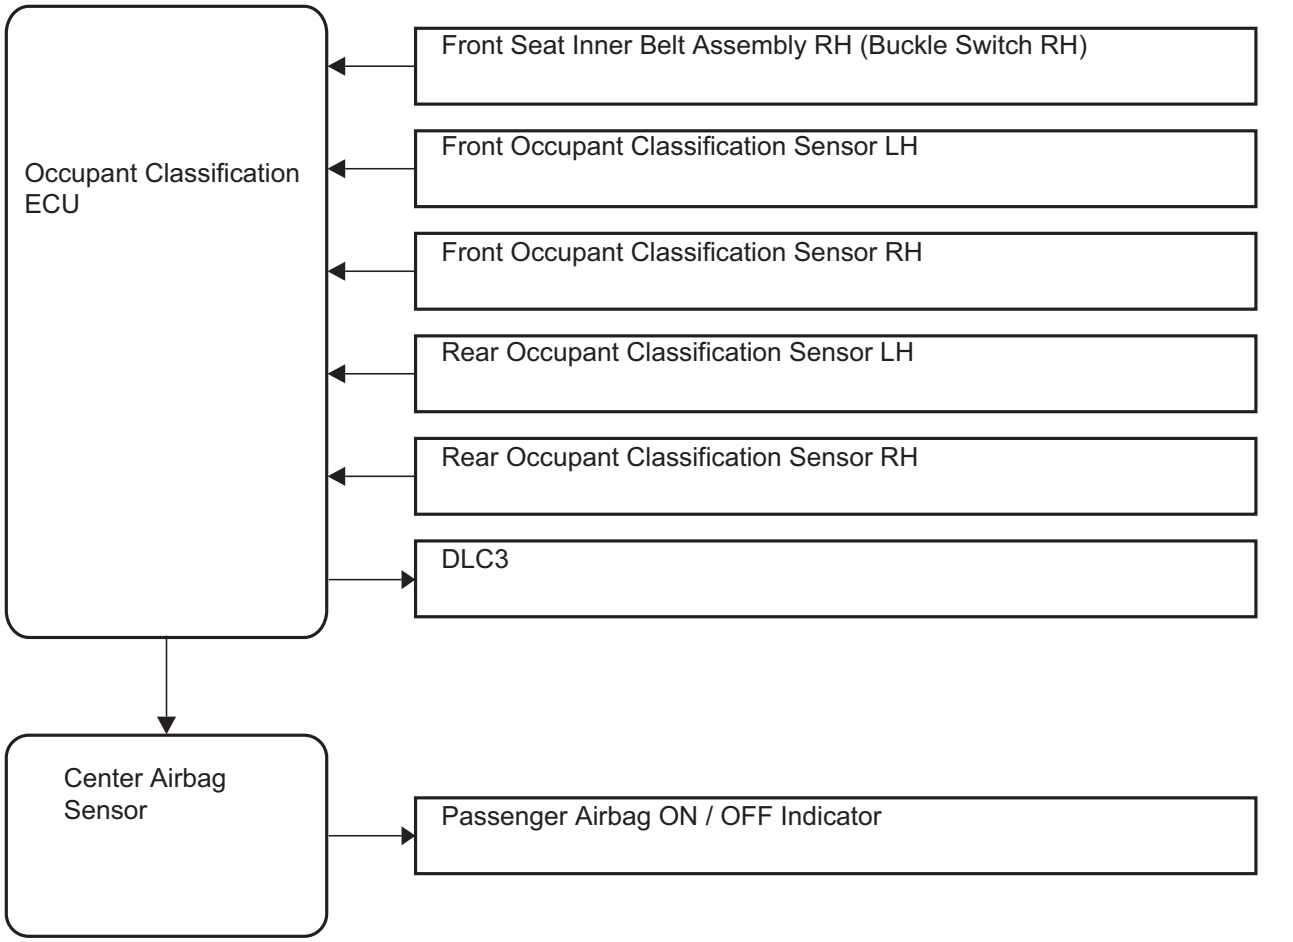
B134714E01

ON-VEHICLE INSPECTION

1. INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (see page RS-236).

2. INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE INVOLVED IN COLLISION)

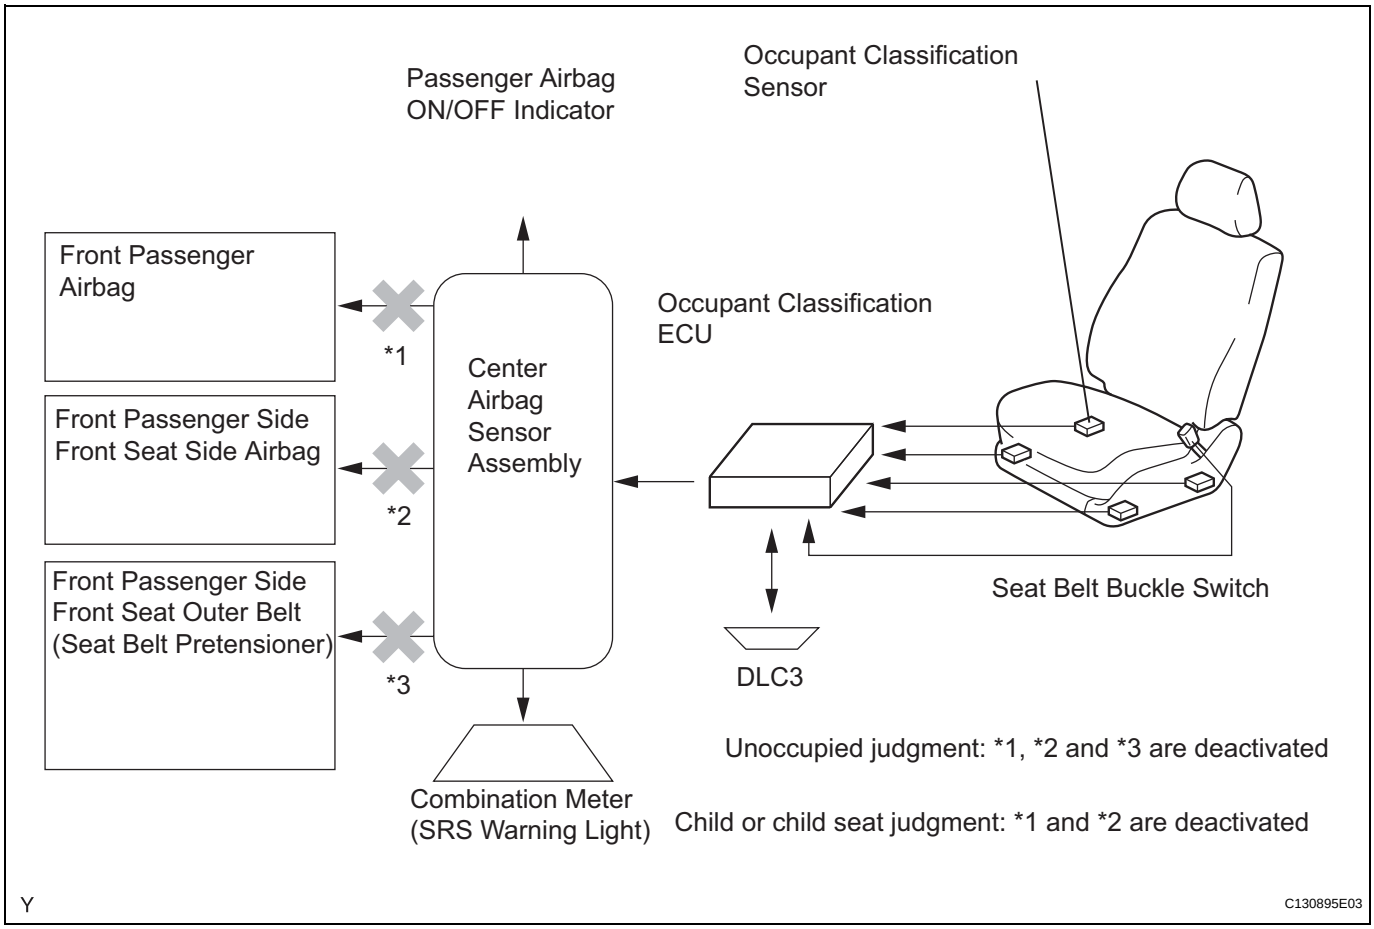


(a) Perform a diagnostic system check (see page RS-236).

(b) Even if the airbag was not deployed, check if there is any damage to the occupant classification ECU. If there are any defects as mentioned below, replace the occupant classification ECU with a new one:

- Cracks, dents or chips on the case.
- Cracks or other damage to the connector.

CAUTION:
Be sure to follow the correct removal and installation procedures.



SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. GENERAL

(a) The front passenger occupant classification system judges whether the front passenger seat is occupied or not in accordance with the seat belt buckle status; and whether the seat is occupied by an adult or child (with child seat) in accordance with the load that is applied to the front passenger seat. Thus, when appropriate, it restricts the deployment of the front passenger airbag, front passenger side airbag, and the front passenger seat belt pretensioner. In addition, the system informs the driver of the result of the judgment through the use of the airbag ON/OFF indicator.

2. MAIN COMPONENTS

Component	Description
Occupant Classification Sensor	Outputs voltages to occupant classification ECU in accordance with load applied to sensor
Occupant Classification ECU	Constantly monitors weight of front passenger seat load, and judges occupancy condition in accordance with signals from occupant classification sensors and seat belt buckle switch
Passenger Airbag ON/OFF Indicator	Passenger airbag ON indicator illuminates when front passenger and front passenger side airbags activated. Airbag OFF indicator illuminates when front passenger and front passenger side airbags deactivated.
Seat Belt Buckle Switch	Detects whether seat belt is fastened and outputs appropriate signals to occupant classification ECU

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the occupant classification system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	PASSENGER AIRBAG ON/OFF INDICATOR CHECK

NEXT

3	DTC CHECK (Present and Past DTC)*

(a) Check for DTCs (see page RS-249).

Result

Result	Proceed to
DTC is output.	A
DTC is not output.	B

B → GO TO PROBLEM SYMPTOMS TABLE

A

RS

4	DTC CHART

NEXT

5	REPAIR OR REPLACEMENT

NEXT

6	DTC CLEARANCE (Present and Past DTCs)*

(a) Clear the DTCs (see page RS-249).

NEXT

7	DTC CHECK (Present and Past DTCs)*

(a) Check for DTCs (see page RS-249).

Result

Result	Proceed to
DTC is not output.	A
DTC is output.	B

B → Go to step 5

A

8 PROBLEM SYMPTOMS SIMULATION

(a) Check the passenger airbag ON/OFF indicator condition (see page RS-246).

Result

Result	Proceed to
Passenger airbag ON/OFF indicator is operating normally.	A
Passenger airbag ON/OFF indicator (OFF) is not operating normally.	B

NEXT

END

INITIALIZATION

1. ZERO POINT CALIBRATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation.

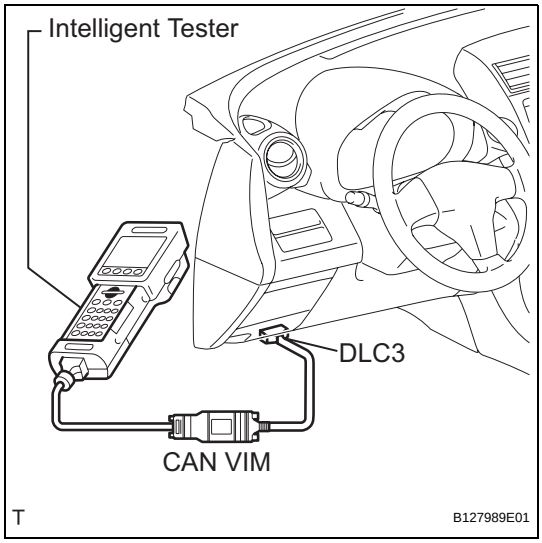
HINT:

Perform the zero point calibration and sensitivity check if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seat cover etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

(a) Zero point calibration and sensitivity check procedures:

HINT:



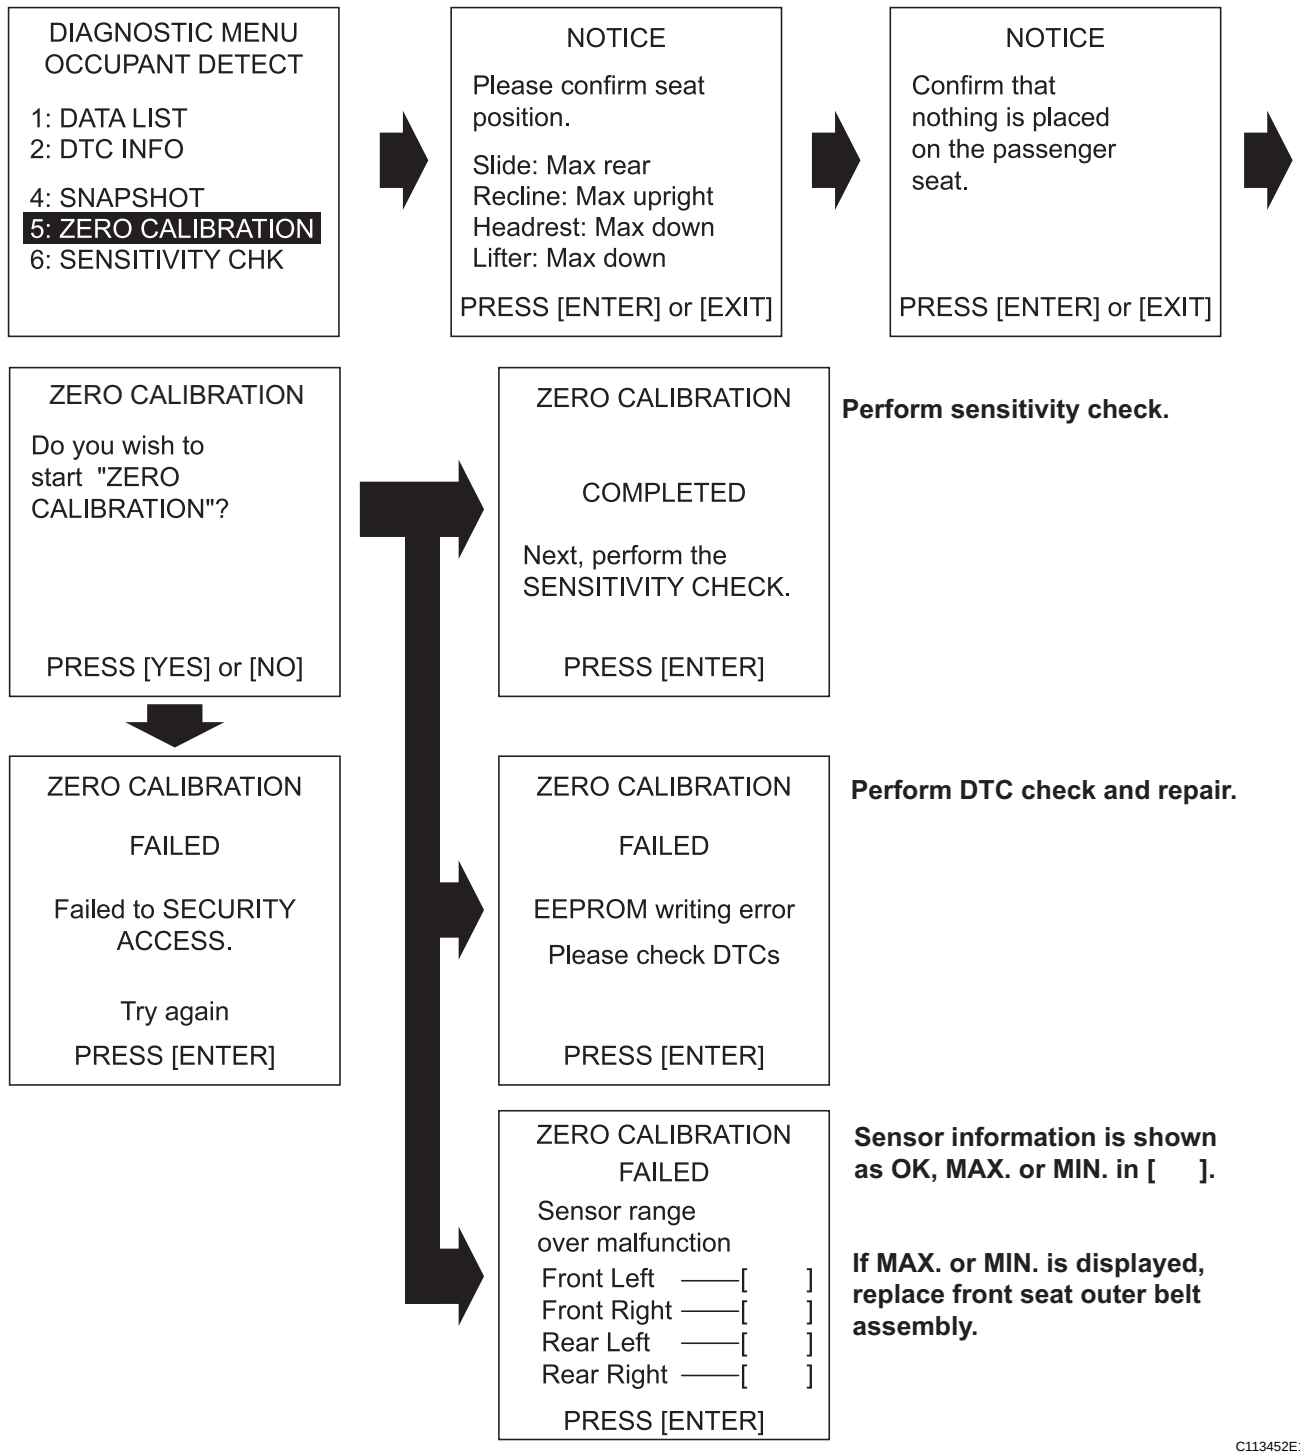
Make sure that the zero point calibration has finished normally, and then perform the sensitivity check.

(1) Adjust the seat position in accordance with the table below.

Adjustment Item	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

(2) Connect the intelligent tester (with CAN VIM) to the DLC3.

(3) Turn the ignition switch ON.

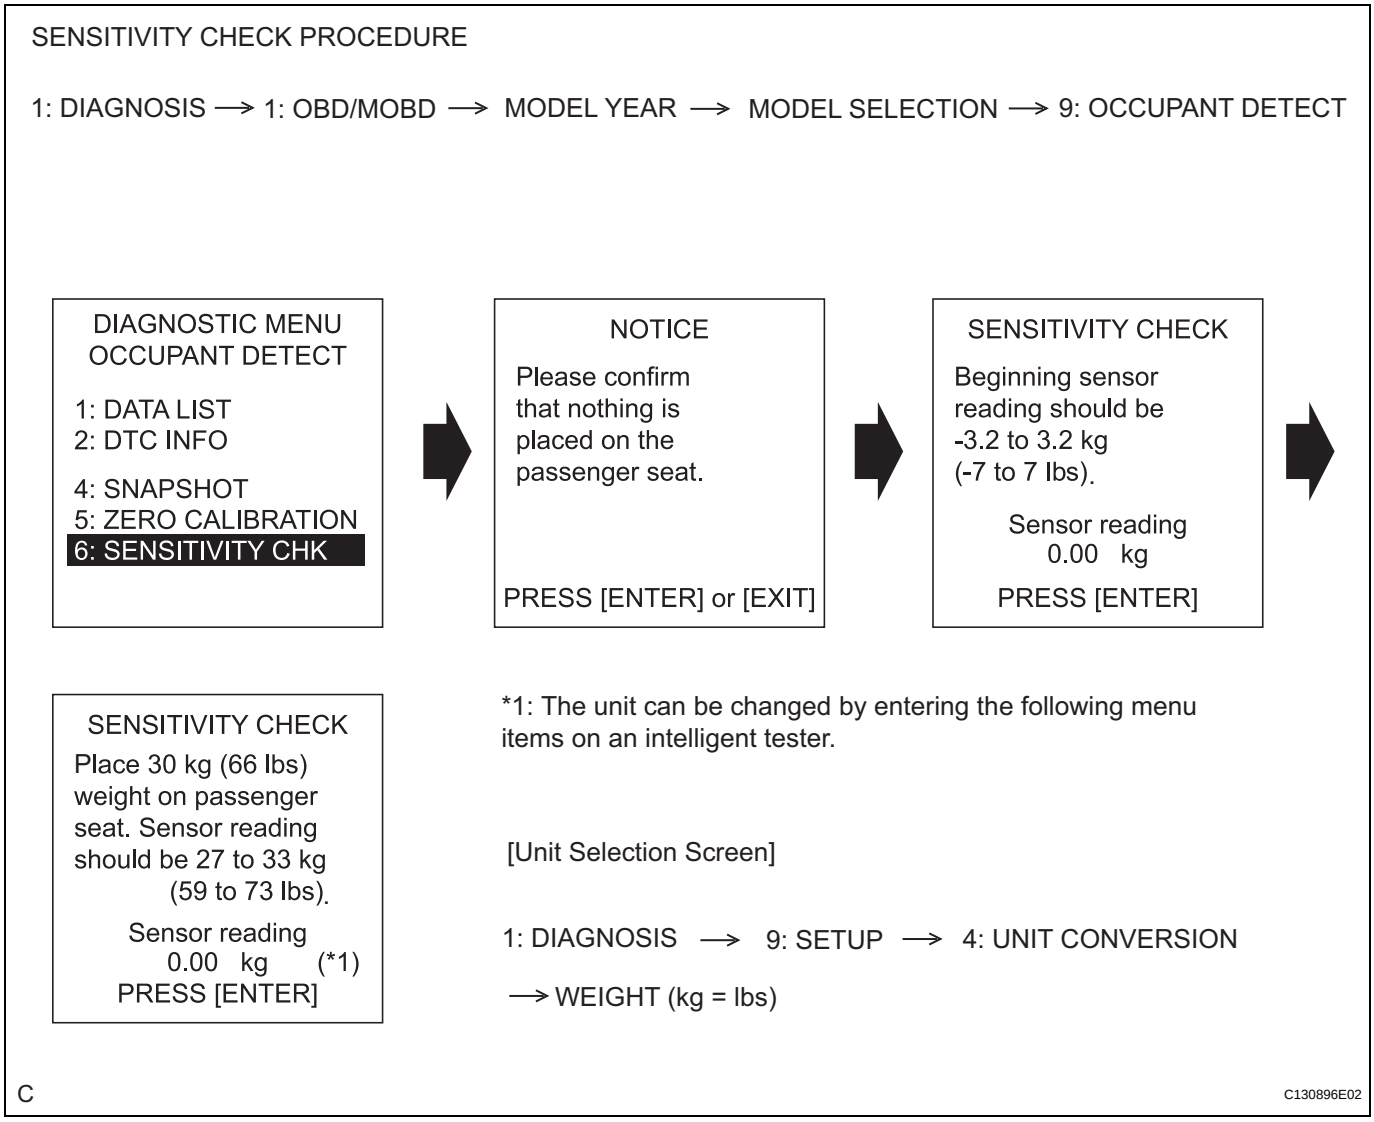


RS

(4) Perform the zero point calibration by following the prompts on the tester screen.

ZERO POINT CALIBRATION PROCEDURE

1: DIAGNOSIS - 1: OBD/MOBD - MODEL YEAR - MODEL SELECTION - 9: OCCUPANT DETECT
Refer to the following screen flowchart.



HINT:
Refer to the intelligent tester operator's manual for further details.

RS

OK:
COMPLETED is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading is within the standard range.
Standard range:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard range.

Standard range:
27 to 33 kg (59.52 to 72.75 lb)

HINT:

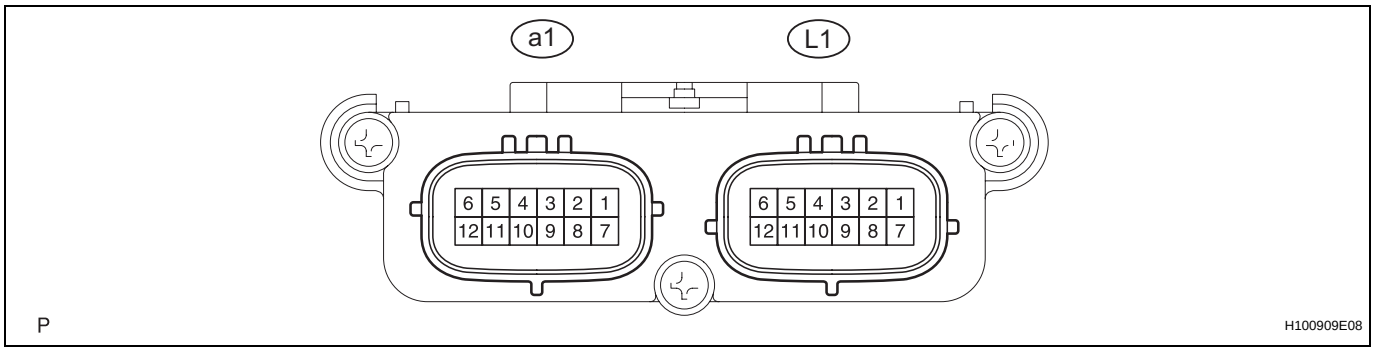
- When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

- If the sensitivity deviates from the standard range, retighten the bolts of the front passenger seat taking care not to deform the seat rail. After performing this procedure, if the sensitivity is not within the standard range, replace the front seat assembly RH.
- If the zero point calibration has not finished normally, replace the front seat assembly RH.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Proceed to the troubleshooting procedures for each circuit in the table below.



Occupant classification ECU

Symptom	Suspected area	See page
The front passenger seat condition differs from the indication of the passenger airbag ON/OFF indicator (DTC is not output).	Trouble in Passenger Airbag ON/OFF Indicator	RS-328

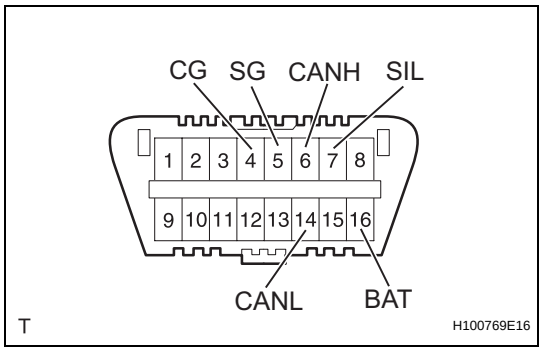
TERMINALS OF ECU

1. CHECK OCCUPANT CLASSIFICATION ECU

(a) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (L1-1) - GND (L1-3)	R - W - B	+B power source	Always	10 to 14 V
DIA (L1-2) - GND (L1-3)	W - W - B	Diagnosis (DLC3)	Ignition switch ON	Pulse generation
GND (L1-3) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
FSR- (L1-4) - GND (L1-3)	O - W - B	Center airbag sensor communication line	Always	Below 1 Ω
BGND (L1-5) - GND (L1-3)	BR - W - B	Passenger side buckle switch ground line	Always	Below 1 Ω
IG (L1-7) - GND (L1-3)	B - W - B	IG power source	Ignition switch ON	10 to 14 V
FSR+ (L1-8) - FSR- (L1-4)	V - O	Center airbag sensor communication line	Ignition switch ON	Pulse generation
BSW (L1-9) - BGND (L1-5)	GR - BR	Passenger side buckle switch line	Buckle switch ON Buckle switch OFF	Pulse generation
SGD1 (a1-1) - GND (L1-3)	G - W-B	Front occupant classification sensor LH ground line	Always	Below 1 Ω
SGD2 (a1-2) - GND (L1-3)	O - W-B	Front occupant classification sensor RH ground line	Always	Below 1 Ω
SGD3 (a1-3) - GND (L1-3)	W - W-B	Rear occupant classification sensor LH ground line	Always	Below 1 Ω
SGD4 (a1-4) - GND (L1-3)	BR - W-B	Rear occupant classification sensor RH ground line	Always	Below 1 Ω
SVC1 (a1-11) - SGD1 (a1-1)	R - G	Front occupant classification sensor LH power supply line	Ignition switch ON, a load is applied to front occupant classification sensor LH	4.5 to 5.1 V
SVC2 (a1-12) - SGD2 (a1-2)	W - O	Front occupant classification sensor RH power supply line	Ignition switch ON, a load is applied to front occupant classification sensor RH	4.5 to 5.1 V
SVC3 (a1-5) - SGD3 (a1-3)	GR - W	Rear occupant classification sensor LH power supply line	Ignition switch ON, a load is applied to rear occupant classification sensor LH	4.5 to 5.1 V
SVC4 (a1-6) - SGD4 (a1-4)	V - BR	Rear occupant classification sensor RH power supply line	Ignition switch ON, a load is applied to rear occupant classification sensor RH	4.5 to 5.1 V
SIG1 (a1-7) - SGD1 (a1-1)	SB - G	Front occupant classification sensor LH signal line	Ignition switch ON, a load is applied to front occupant classification sensor LH	0.2 to 4.7 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SIG2 (a1-8) - SGD2 (a1-2)	L - O	Front occupant classification sensor RH signal line	Ignition switch ON, a load is applied to front occupant classification sensor RH	0.2 to 4.7 V
SIG3 (a1-9) - SGD3 (a1-3)	Y - W	Rear occupant classification sensor LH signal line	Ignition switch ON, a load is applied to rear occupant classification sensor LH	0.2 to 4.7 V
SIG4 (a1-10) - SGD4 (a1-4)	R - BR	Rear occupant classification sensor RH signal line	Ignition switch ON, a load is applied to rear occupant classification sensor RH	0.2 to 4.7 V



DIAGNOSIS SYSTEM

1. DESCRIPTION

The occupant classification ECU controls the functions of the occupant classification system on the vehicle. Data of the occupant classification system can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for a malfunction and perform repairs.

2. CHECK DLC3

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with ISO 15031-3 and matches the ISO 15765-4 format.

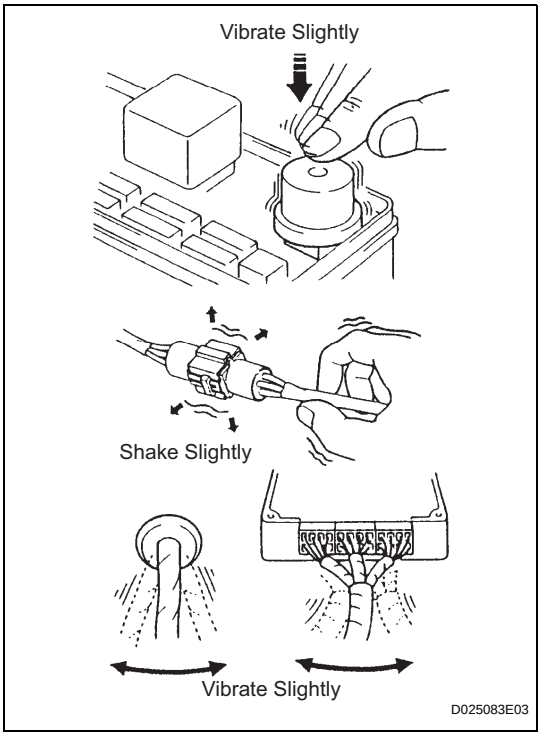
Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus + line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF*	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF*	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF*	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF*	200 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:



Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

(a) Vibration method:

When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the ignition switch is turned ON).

(1) Slightly vibrate the part of the sensor considered to be the cause of the problem with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

(2) Slightly shake the connector vertically and horizontally.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

(b) Simulation method for DTC B1795:

Turn the ignition switch from the LOCK to the ON position, hold the position for 10 seconds, and then turn it back to the LOCK position again 50 times in a row.

HINT:

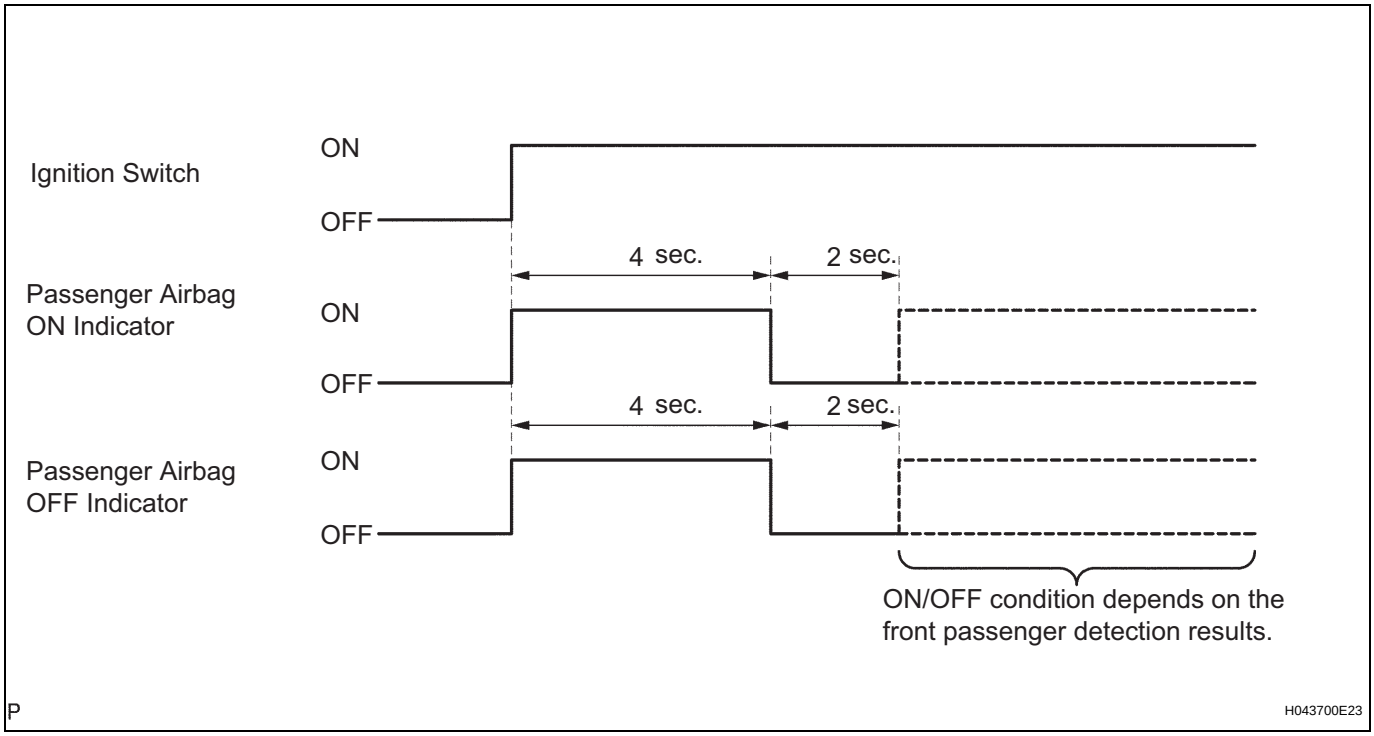
DTC B1795 is output if the occupant classification ECU receives the ignition switch LOCK-ON-LOCK signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system.

4. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

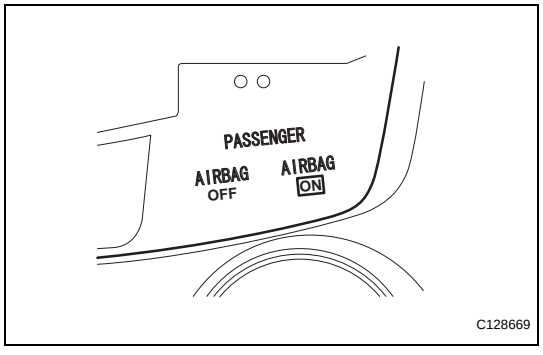
(1) Turn the ignition switch ON.

(2) The passenger airbag ON/OFF indicator (ON and OFF) comes on for approximately 4 seconds, then goes off for approximately 2 seconds.



RS

(3) Approximately 6 seconds after the ignition switch is turned to the ON position, the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.



Condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated	ON	OFF
Child is seated	OFF	ON
Child restraint system is set	OFF	ON
Front passenger occupant classification system failure	OFF	ON

HINT:

- The passenger airbag ON/OFF indicator operates based on the timing chart below in order to check the indicator light circuit.

- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag OFF indicator (OFF) come on. In this case, check the DTCs in the airbag system first.

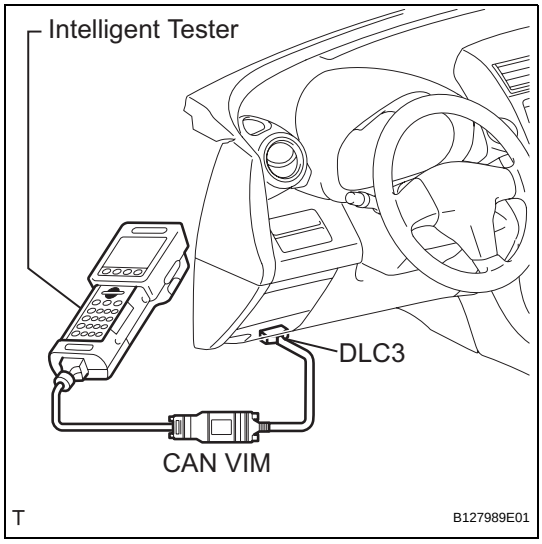
5. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Turn the ignition switch ON.

(b) Check that the passenger airbag ON/OFF indicators come on for approximately 4 seconds, then go off for approximately 2 seconds.

HINT:

Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when approximately 6 seconds have elapsed after the ignition switch is turned to the ON position.



RS

DTC CHECK / CLEAR

1. CHECK DTC

HINT:

- When DTC B1650/23 is detected as a result of troubleshooting for the airbag system, troubleshoot the occupant classification system.
- Use the intelligent tester (with CAN VIM) to read and clear DTCs, otherwise the DTCs cannot be read and cleared.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Check for DTCs by following the prompts on the tester screen.

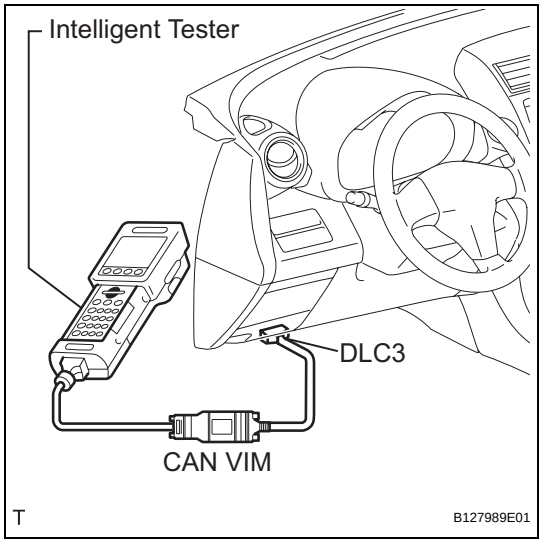
HINT:

Refer to the intelligent tester operator's manual for further details.

2. Clear DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.



(c) Clear the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DATA LIST on the tester's screen.

Occupant classification ECU

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
IG SW	Ignition switch condition/ ON: Ignition switch ON OFF: Ignition switch OFF	ON/OFF	-

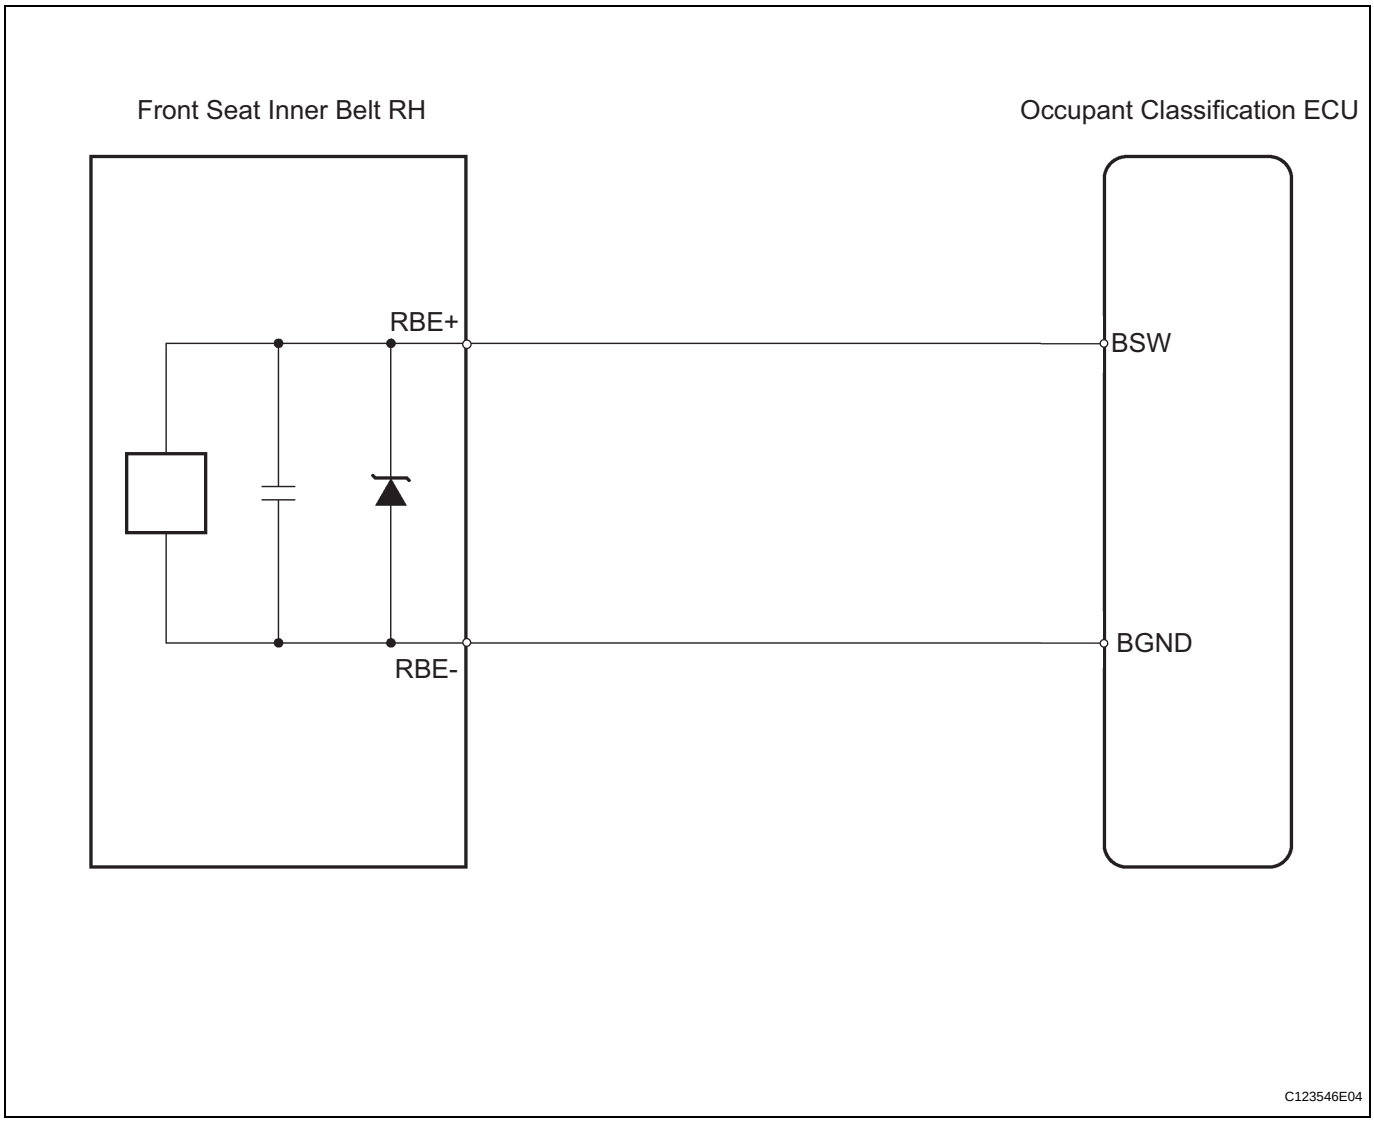
DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION



The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt RH.

DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.

Troubleshoot DTC B1771 first when DTCs B1771 and B1795 are output simultaneously.

DTC No.	DTC Detection Condition	Trouble Area
B1771	When one of following conditions is met: • Occupant classification ECU detects line short signal, open signal, short to ground signal or short to B+ signal in the passenger side buckle switch circuit for 2 seconds • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• Floor wire • Front seat inner belt RH (Buckle switch RH) • Occupant classification ECU

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the undersurface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

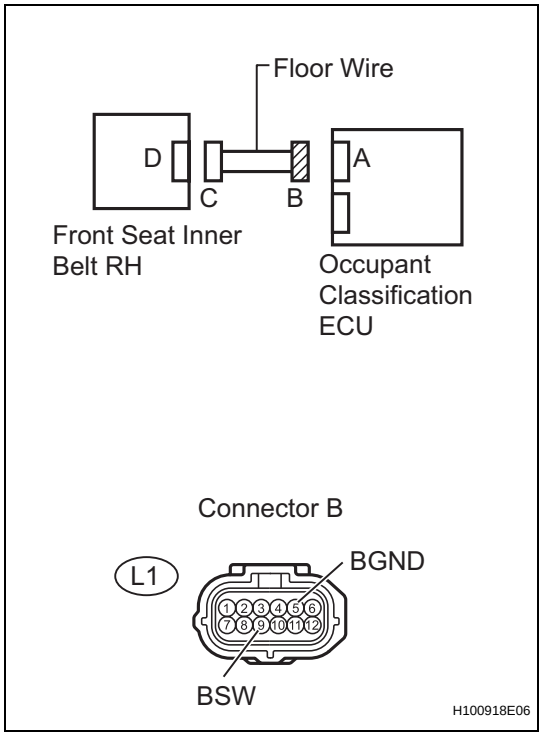
1	CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1771 is not output.
HINT:
DTCs other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTOR



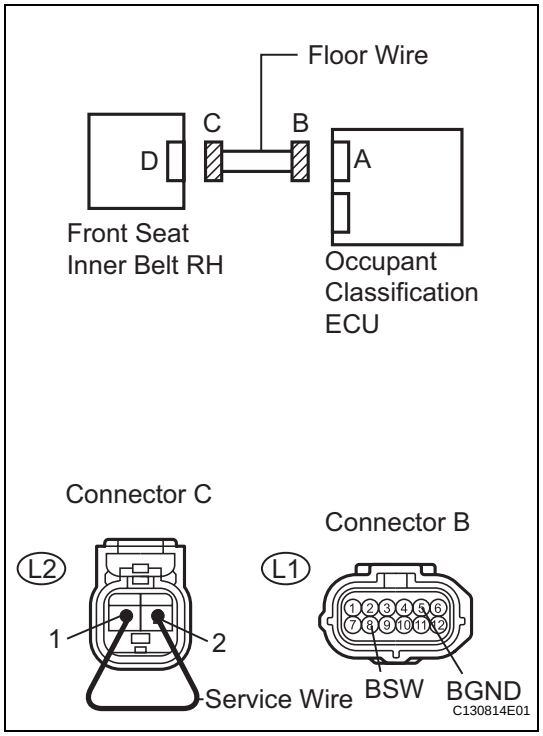
(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

RS

3 CHECK FLOOR WIRE (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt RH.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.
Standard voltage

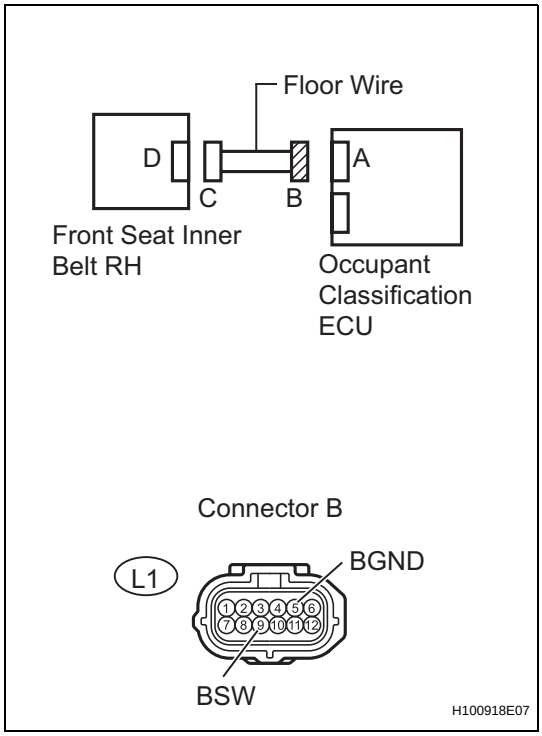
Tester Connection	Specified Condition
L1-9 (BSW) - Body ground	Below 1 V
L1-5 (BGND) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (FOR OPEN)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Using a service wire, connect terminals L2-2 and L2-1 of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting them.
(d) Measure the resistance of the wire harness side connectors.
Standard resistance



Tester Connection	Specified Condition
L1-9 (BSW) - L1-5 (BGND)	Below 1 Ω

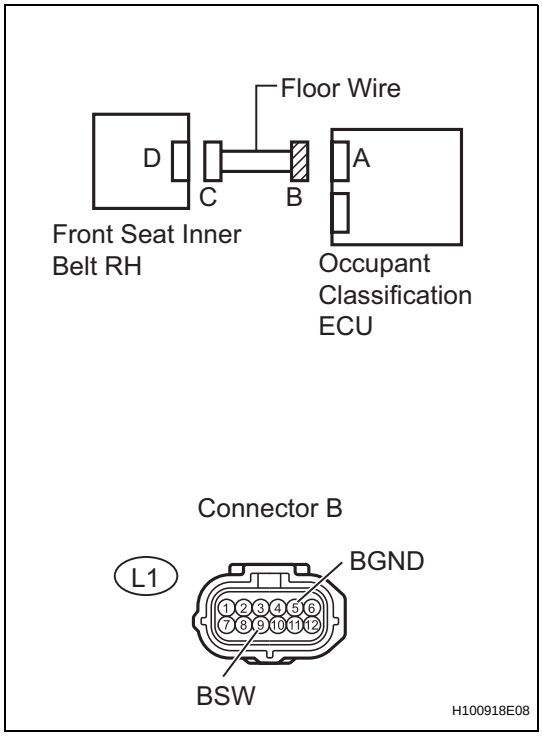
NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (FOR SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
L1-9 (BSW) - L1-5 (BGND)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
L1-9 (BSW) - Body ground	1 MΩ or higher
L1-5 (BGND) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

7	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt RH.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON.
(g) Check the DTCs (see page RS-249).
OK:
DTC B1771 is not output.
HINT:
DTCs other than DTC B1771 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the front seat inner belt RH (see page SB-21).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(e) Turn the ignition switch ON.
(f) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(g) Turn the ignition switch OFF.
(h) Turn the ignition switch ON.
(i) Check the DTCs (see page RS-249).
OK:
DTC B1771 is not output.
HINT:
DTCs other than DTC B1771 may be output at this time, but they are not related to this check.

OK	END

NG

RS

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

DTC	B1780	Front Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The front occupant classification sensor LH circuit consists of the occupant classification ECU and the front occupant classification sensor LH.
DTC B1780 is recorded when a malfunction is detected in the front occupant classification sensor LH circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1780	When one of following conditions is met: • Occupant classification ECU detects line short signal, open signal, short to ground signal or short to B+ signal in the front occupant classification sensor LH circuit for 2 seconds • Front occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat wire RH • Front seat RH (Front occupant classification sensor LH) • Occupant classification ECU

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the undersurface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

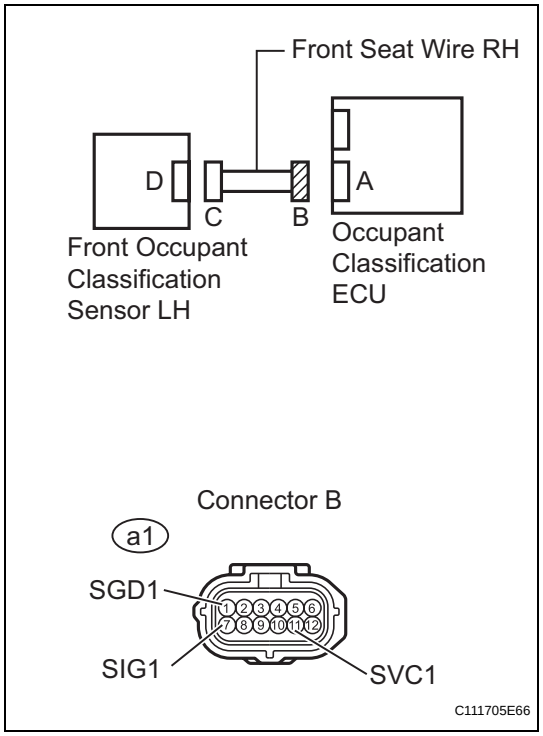
1	CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1780 is not output.
HINT:
DTCs other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTOR



(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor LH.
OK:
The connectors are properly connected.

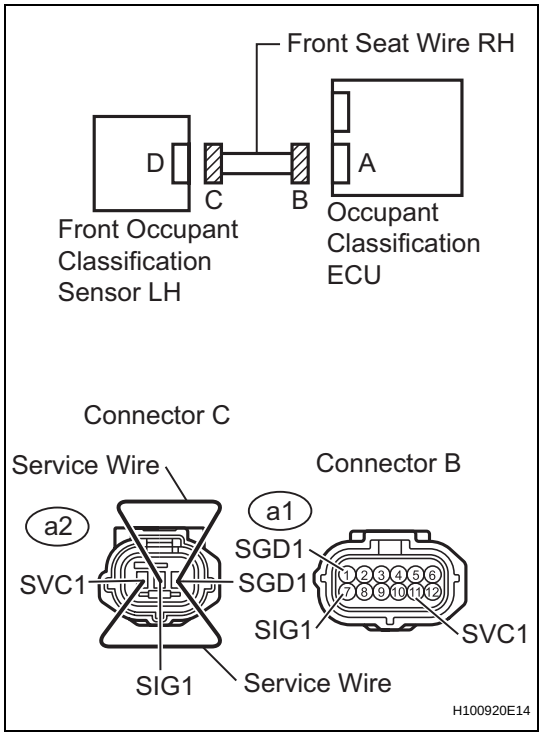
NG → **CONNECT CONNECTOR**

OK

RS

3 CHECK FRONT SEAT WIRE RH (TO B+)

(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.



Standard voltage

Tester Connection	Specified Condition
a1-1 (SGD1) - Body ground	Below 1 V
a1-7 (SIG1) - Body ground	Below 1 V
a1-11 (SVC1) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

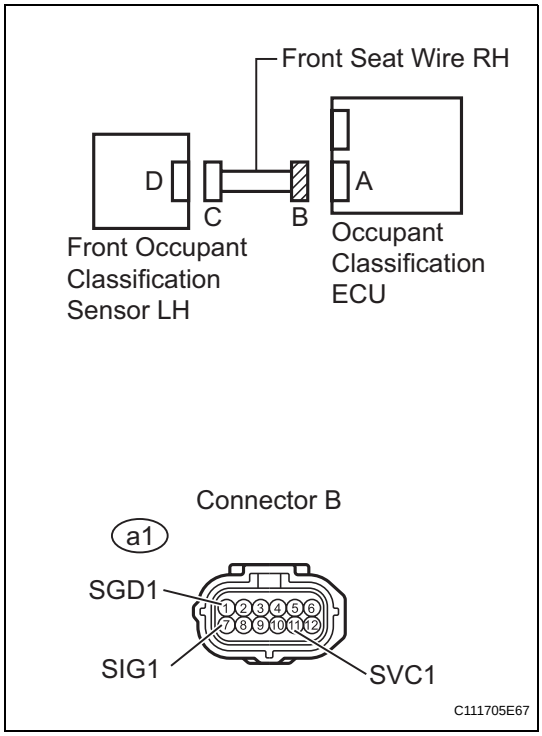
4 CHECK FRONT SEAT WIRE RH (FOR OPEN)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Using a service wire, connect terminals a2-1 (SVC1) and a2-3 (SGD1), and connect terminals a2-2 (SIG1) and a2-3 (SGD1) of connector C.

NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting them.

(d) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
a1-7 (SIG1) - a1-1 (SGD1)	Below 1 Ω
a1-11 (SVC1) - a1-1 (SGD1)	Below 1 Ω

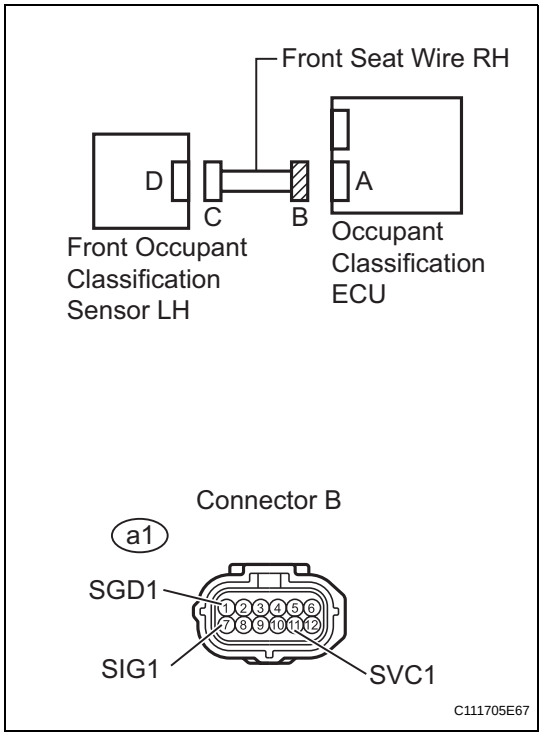
NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
a1-7 (SIG1) - a1-1 (SGD1)	1 MΩ or higher
a1-11 (SVC1) - a1-1 (SGD1)	1 MΩ or higher
a1-7 (SIG1) - a1-11 (SVC1)	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
a1-1 (SGD1) - Body ground	1 MΩ or higher
a1-7 (SIG1) - Body ground	1 MΩ or higher
a1-11 (SVC1) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

7	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON.
(g) Check the DTCs (see page RS-249).
OK:
DTC B1780 is not output.
HINT:
DTCs other than DTC B1780 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

RS

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard values:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK FOR DTC

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(d) Turn the ignition switch OFF.
(e) Turn the ignition switch ON.
(f) Check the DTCs (see page RS-249).
OK:
DTC B1780 is not output.
HINT:
Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **END**

RS

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

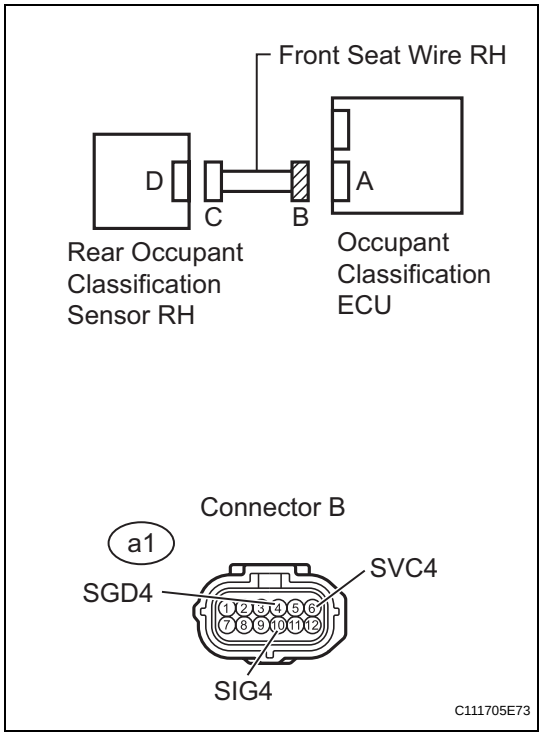
(c) Using a service wire, connect terminals a5-1 (SVC4) and a5-3 (SGD4), and connect terminals a5-2 (SIG4) and a5-3 (SGD4) of connector C.

NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting them.

(d) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
a1-6 (SVC4) - a1-4 (SGD4)	Below 1 Ω
a1-10 (SIG4) - a1-4 (SGD4)	Below 1 Ω

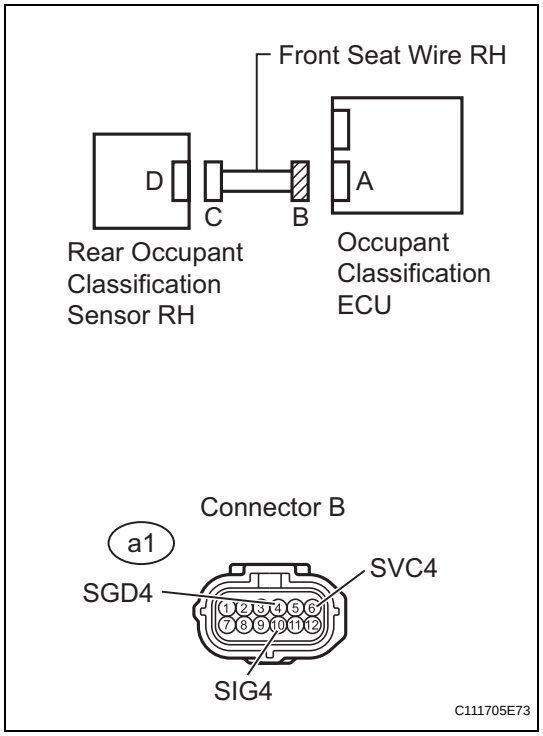
NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (FOR SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
a1-6 (SVC4) - a1-4 (SGD4)	1 MΩ or higher
a1-10 (SIG4) - a1-4 (SGD4)	1 MΩ or higher
a1-6 (SVC4) - a1-10 (SIG4)	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (TO GROUND)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
a1-4 (SGD4) - Body ground	1 MΩ or higher
a1-6 (SVC4) - Body ground	1 MΩ or higher
a1-10 (SIG4) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

7	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON.
(g) Check the DTCs (see page RS-249).
OK:
DTC B1783 is not output.
HINT:
DTCs other than DTC B1783 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG	Go to step 12

OK

RS

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK FOR DTC

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(d) Turn the ignition switch OFF.
(e) Turn the ignition switch ON.
(f) Check the DTCs (see page RS-249).
OK:
DTC B1783 is not output.
HINT:
DTCs other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the front seat RH (see page SE-8).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

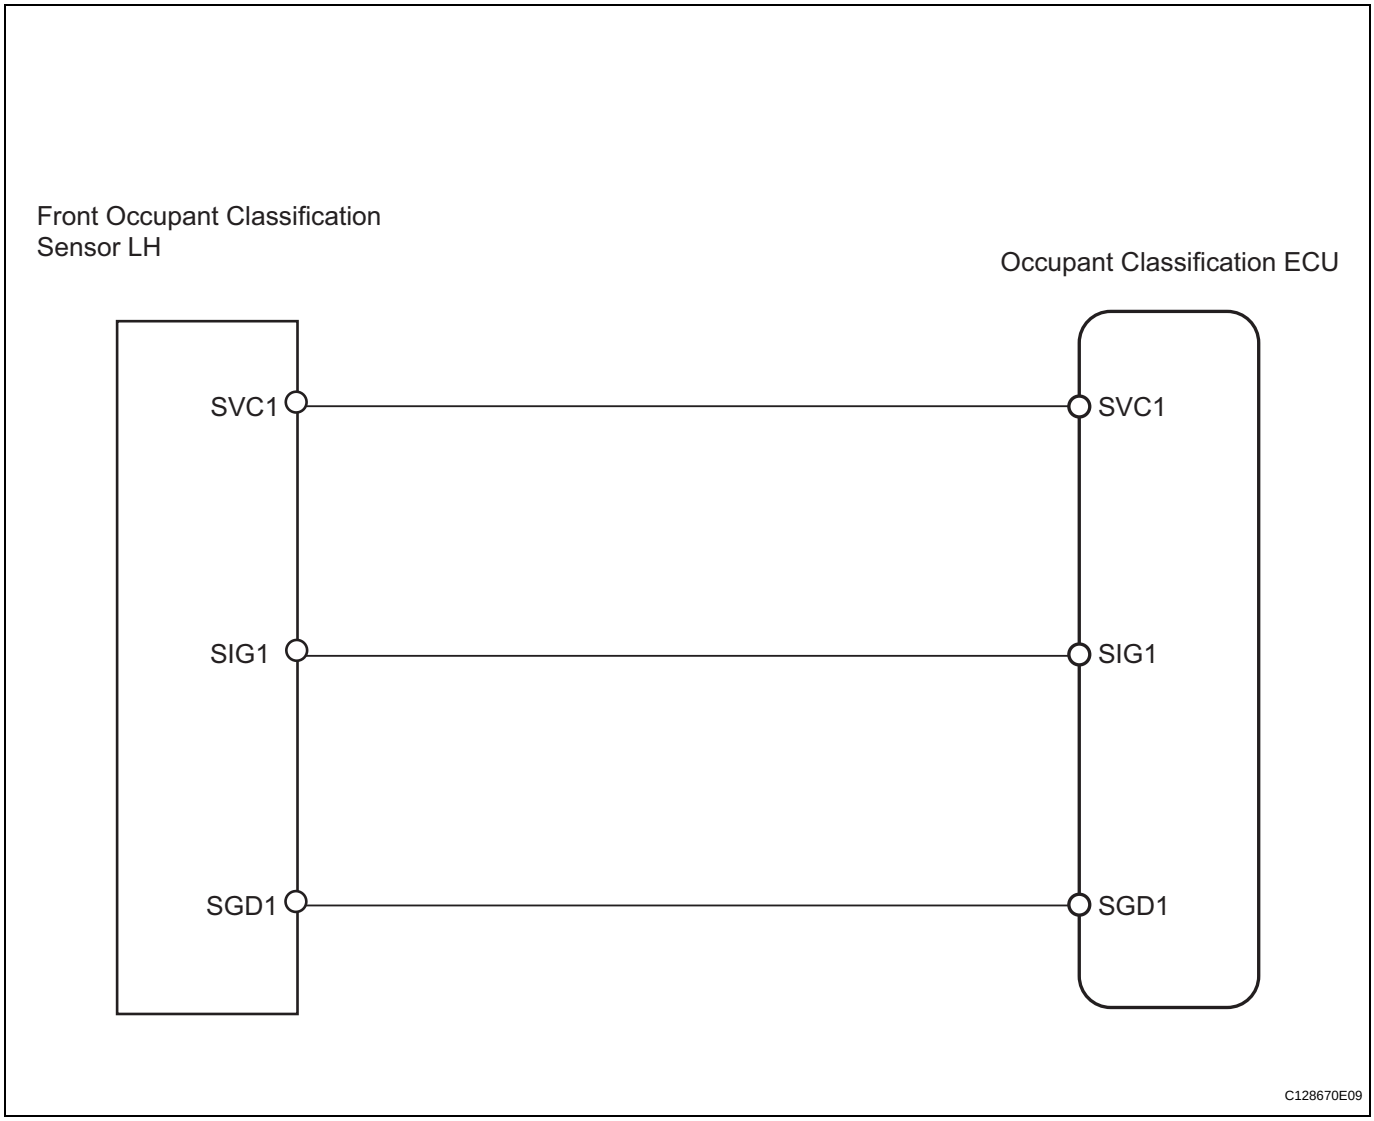
NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END



DTC	B1785	Front Occupant Classification Sensor LH Collision Detection

DESCRIPTION

DTC B1785 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor LH when an accident occurs.
DTC B1785 is also output when the front seat RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1785 can be cleared by performing the zero point calibration and sensitivity check.
Therefore, when DTC B1785 is output, first perform the zero point calibration and sensitivity check.

DTC No.	DTC Detection Condition	Trouble Area
B1785	When one of following conditions is met: • Front seat RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor LH detects large load	• Occupant classification ECU • Front seat RH (Front occupant classification sensor LH)

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1785 is not output.
HINT:
DTCs other than DTC B1785 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

4 REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

RS

(c) Replace the front seat RH (see page SE-8).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG → **Go to step 8**

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 8**

OK

RS

7	CHECK FOR DTC

(a) Turn the ignition switch ON.

DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

The center airbag sensor communication circuit consists of the occupant classification ECU and the center airbag sensor.
DTC B1790 is recorded when a malfunction is detected in the center airbag sensor communication circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1790	When one of following conditions is met: • Occupant classification ECU detects line short circuit signal, open circuit signal, short circuit to ground signal or short circuit to B+ signal in the center airbag sensor assembly communication circuit for 2 seconds • Center airbag sensor malfunction • Occupant classification ECU malfunction	• Floor wire • Occupant classification ECU • Center airbag sensor

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the undersurface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

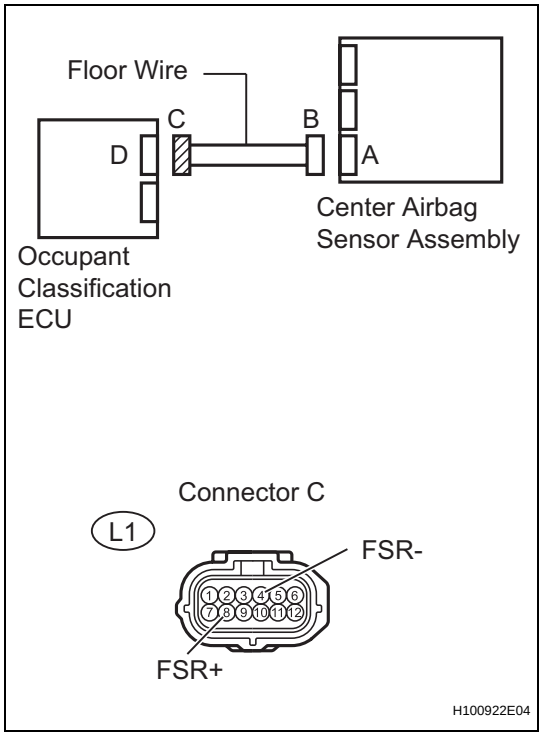
1	CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1790 is not output.
HINT:
DTCs other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2	CHECK CONNECTION OF CONNECTOR



(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

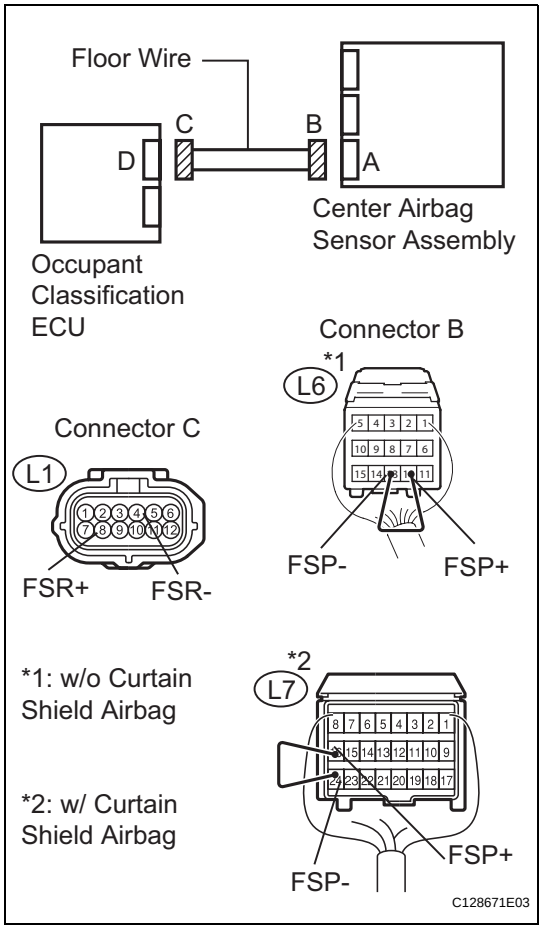
OK

RS

3	CHECK FLOOR WIRE (TO B+)

(a) Disconnect the connectors from the occupant classification ECU and the center airbag sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.

Standard voltage



Tester Connection	Specified Condition
L1-8 (FSR+) - Body ground	Below 1 V
L1-4 (FSR-) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

4	CHECK FLOOR WIRE (FOR OPEN)

(a) Turn the ignition switch OFF.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Using a service wire, connect terminals L6-12 (FSP+) *1 and L6-13 (FSP-) *1 or L7-16 (FSP+) *2 and L7-24 (FSP-) *2 of connector B.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting them.

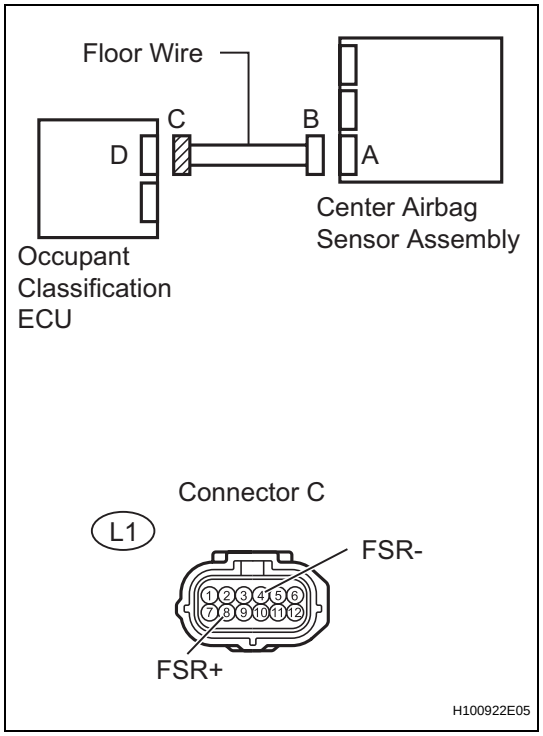
(d) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
L1-8 (FSR+) - L1-4 (FSR-)	Below 1 Ω

HINT:

*1: w/o Curtain shield airbag



*2: w/ Curtain shield airbag

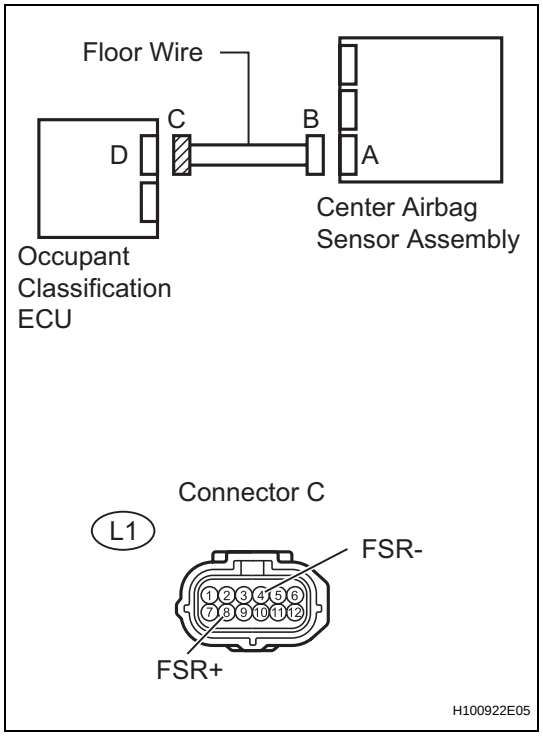
NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

5 CHECK FLOOR WIRE (FOR SHORT)

(a) Disconnect the service wire from connector B.
(b) Measure the resistance of the wire harness side connector.



Standard resistance

Tester Connection	Specified Condition
L1-8 (FSR+) - L1-4 (FSR-)	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (TO GROUND)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
L1-8 (FSR+) - Body ground	1 MΩ or higher
L1-4 (FSR-) - Body ground	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

7	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON.
(g) Check the DTCs (see page RS-249).
OK:
DTC B1790 is not output.
HINT:
DTCs other than DTC B1790 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the undersurface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

1	**CHECK FOR DTC**

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).

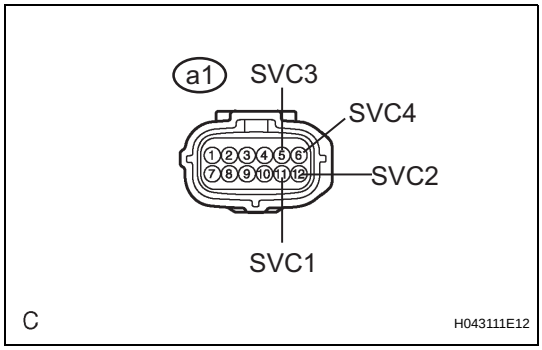
RS

HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.

(c) Turn the ignition switch OFF.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1793 is not output.
HINT:
DTCs other than DTC B1793 may be output at this time, but they are not related to this check.

OK	**USE SIMULATION METHOD TO CHECK**

NG



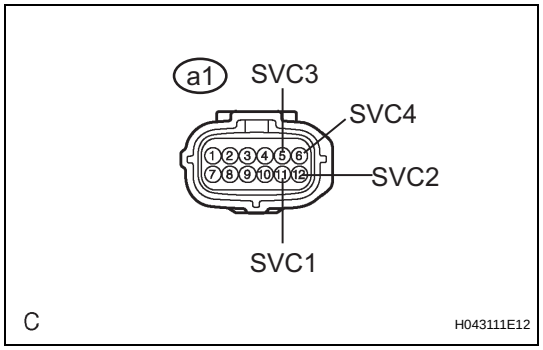
2 CHECK CONNECTION OF CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensors.
OK:
The connectors are properly connected.

NG	**CONNECT CONNECTOR**

OK

3 CHECK FRONT SEAT WIRE RH (TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
a1-11 (SVC1) - Body ground	Below 1 V
a1-12 (SVC2) - Body ground	Below 1 V
a1-5 (SVC3) - Body ground	Below 1 V
a1-6 (SVC4) - Body ground	Below 1 V

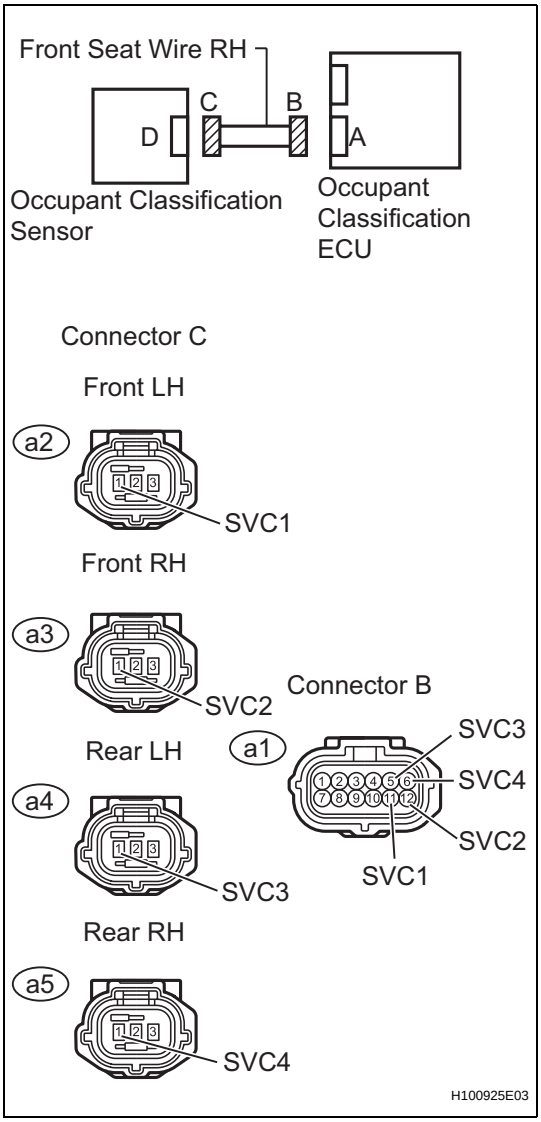
NG	**REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (TO GROUND)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Measure the resistance of the wire harness side connector.

Standard resistance



Tester Connection	Specified Condition
a1-11 (SVC1) - Body ground	1 MΩ or higher
a1-12 (SVC2) - Body ground	1 MΩ or higher
a1-5 (SVC3) - Body ground	1 MΩ or higher
a1-6 (SVC4) - Body ground	1 MΩ or higher

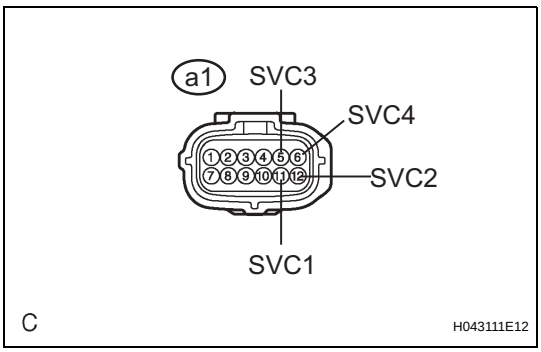
NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

RS

5 CHECK FRONT SEAT WIRE RH (FOR OPEN)

(a) Measure the resistance of the wire harness side connectors.



Standard resistance

Tester Connection	Specified Condition
a1-11 (SVC1) - a2-1 (SVC1)	Below 1 Ω
a1-12 (SVC2) - a3-1 (SVC2)	Below 1 Ω
a1-5 (SVC3) - a4-1 (SVC3)	Below 1 Ω
a1-6 (SVC4) - a5-1 (SVC4)	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (FOR SHORT)

(a) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
a1-5 (SVC3) - a1-6 (SVC4)	1 MΩ or higher
a1-6 (SVC4) - a1-11 (SVC1)	1 MΩ or higher
a1-11 (SVC1) - a1-12 (SVC2)	1 MΩ or higher
a1-12 (SVC2) - a1-5 (SVC3)	1 MΩ or higher
a1-12 (SVC2) - a1-6 (SVC4)	1 MΩ or higher
a1-11 (SVC1) - a1-5 (SVC3)	1 MΩ or higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(c) Turn the ignition switch ON.
(d) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(e) Turn the ignition switch OFF.
(f) Turn the ignition switch ON.
(g) Check the DTCs (see page RS-249).
OK:
DTC B1793 is not output.
HINT:
DTCs other than DTC B1793 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG → Go to step 12

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → Go to step 12

OK

11	CHECK FOR DTC

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the ignition switch ON.
(c) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(d) Turn the ignition switch OFF.
(e) Turn the ignition switch ON.
(f) Check the DTCs (see page RS-249).
OK:
DTC B1793 is not output.
HINT:
DTCs other than DTC B1793 may be output at this time, but they are related to this check.

OK → END

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the front seat RH (see page SE-8).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch ON.

RS

(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

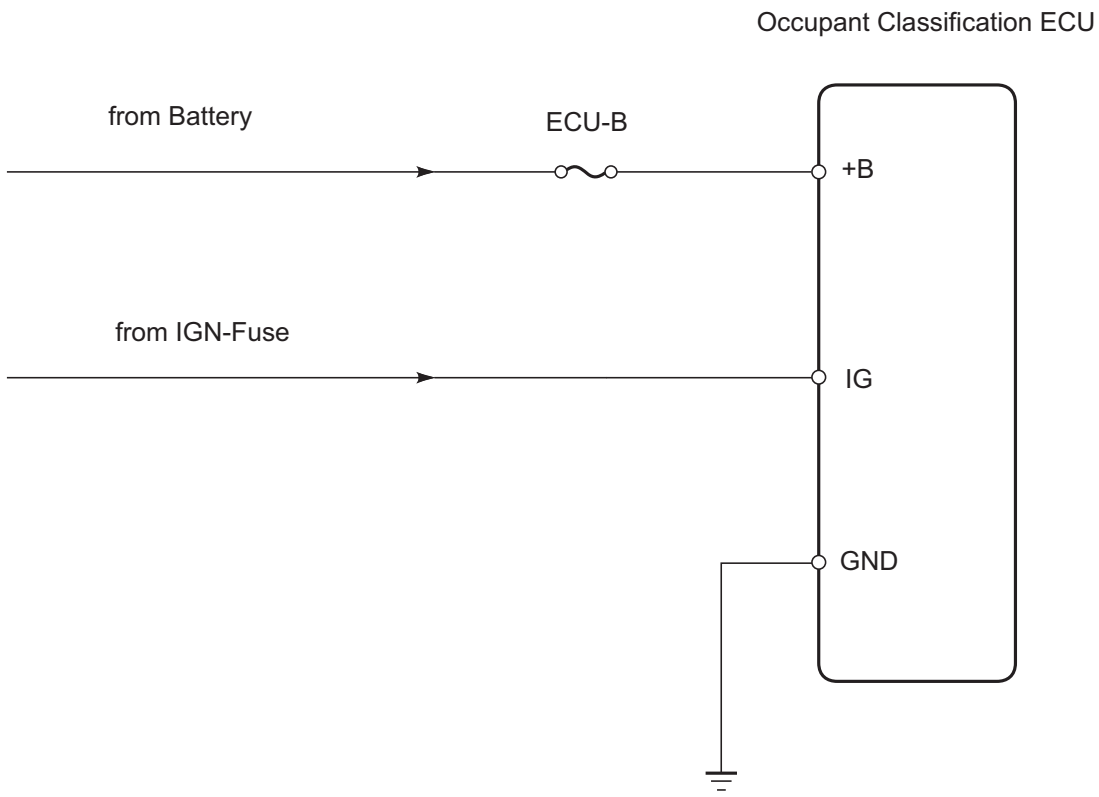
NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END



DTC	B1794	Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

DTC B1794 is set when a malfunction is detected in the occupant classification ECU battery positive line.

DTC No.	DTC Detection Condition	Trouble Area
B1794	When one of following conditions is met: • Occupant classification ECU circuit malfunction • Occupant classification ECU malfunction • Occupant classification ECU detects short circuit to ground signal in passenger side buckle switch circuit for 2 seconds	• Wire harness • Occupant classification ECU

WIRING DIAGRAM

T

C128674E05

RS

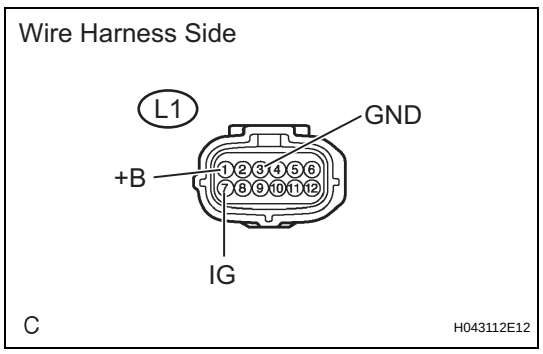
INSPECTION PROCEDURE

1	CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(c) Turn the ignition switch OFF, and wait for at least 10 seconds.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1794 is not output.
HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG



2	CHECK CONNECTION OF CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTOR**

OK

3	CHECK WIRE HARNESS (SOURCE VOLTAGE)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect the L1 connector from the occupant classification ECU.
(d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(e) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
L1-1 (+B) - Body ground	Always	10 to 14 V
L1-7 (IG) - Body ground	Ignition switch ON	10 to 14 V

RS

(f) Measure the resistance of the wire harness side connector.

Standard resistance

Tester Connection	Specified Condition
L1-3 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR (BATTERY - OCCUPANT CLASSIFICATION ECU)**

OK

4	CHECK FOR DTC

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Connect the connectors to the occupant classification ECU.
(d) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(e) Turn the ignition switch ON.
(f) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor.
(g) Turn the ignition switch OFF, and wait for at least 10 seconds.
(h) Turn the ignition switch ON.
(i) Using the intelligent tester, check for DTCs of the occupant classification ECU (see page RS-249).
OK:
DTC B1794 is not output.
HINT:
DTCs other than B1794 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

5	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle when possible.

NEXT

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

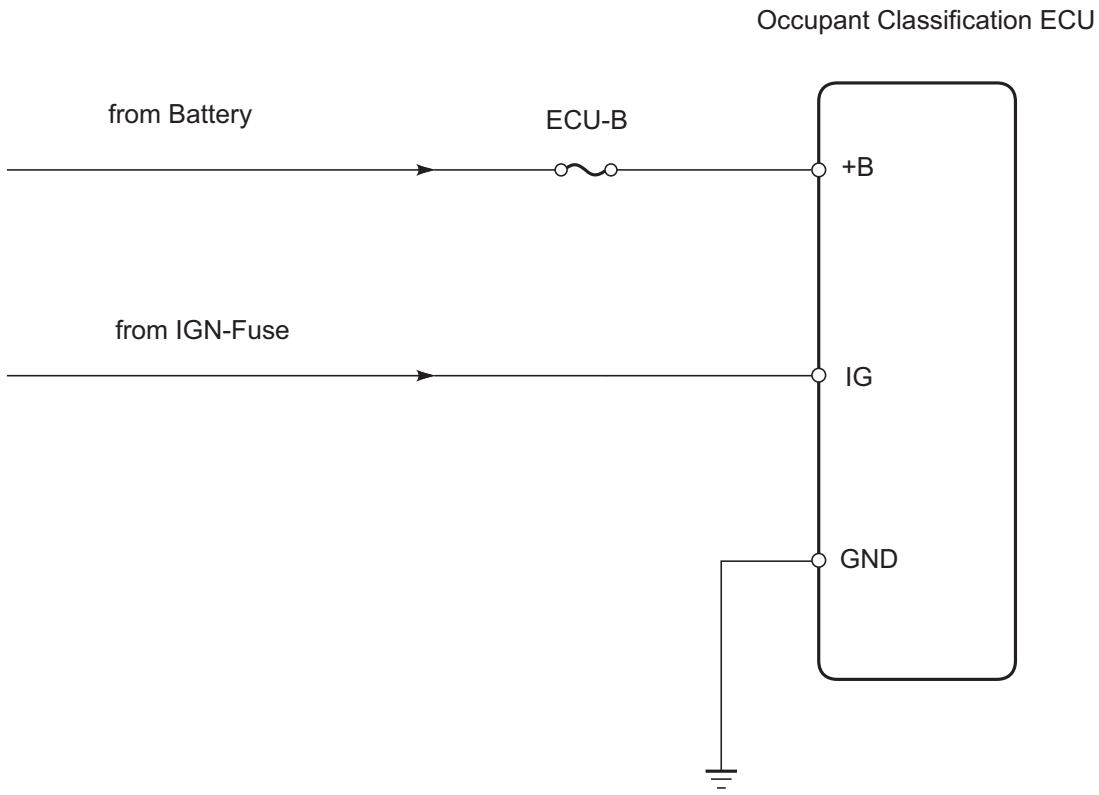
NEXT

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END



DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is recorded when a malfunction is detected in the occupant classification ECU.
Troubleshoot DTC B1771 first when DTC B1771 and B1795 are output simultaneously.

DTC No.	DTC Detection Condition	Trouble Area
B1795	When one of following conditions is met: • The occupant classification ECU receives the ignition switch OFF to ON signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification ECU (OFF to ON to OFF should be counted as 1 time). • Occupant classification ECU circuit malfunction • The occupant classification ECU receives a short circuit to ground signal in the passenger side buckle switch circuit for 2 seconds. • Occupant classification ECU malfunction	• Battery • ECU-B fuse • Floor wire No.2 • Front seat inner belt RH • Occupant classification ECU

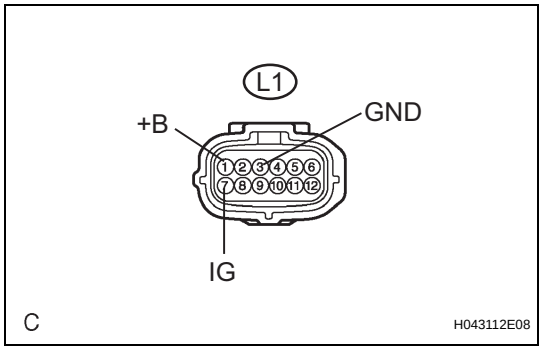
DTC B1795 is output.	A
DTC B1771 and B1795 are output.	B

HINT:
DTCs other than DTC B1771 and B1795 may be output at this time, but they are not related to this check.

B → **GO TO DTC B1771**

A

2 CHECK FUSE (ECU-B)



(a) Check the ECU-B fuse from the instrument panel junction block.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

RS

3 CHECK WIRE HARNESS (SOURCE VOLTAGE)

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Disconnect the No. 2 floor wire connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Condition	Specified Condition
L1-1 (+B) - Body ground	Always	10 to 14 V
L1-7 (IG) - Body ground	Ignition switch ON	10 to 14 V

(f) Turn the ignition switch OFF.
(g) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
L1-3 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NEXT

RS

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

DTC	B1796	Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

During sleep mode, the occupant classification ECU reads the condition of each sensor while the ignition switch is OFF.
In this mode, if the occupant classification ECU detects an internal malfunction, DTC B1796 is output.

DTC No.	DTC Detection Condition	Trouble Area
B1796	Occupant classification ECU malfunction	Occupant classification ECU

INSPECTION PROCEDURE

1 CHECK FOR DTC

(a) Turn the ignition switch ON.
(b) Clear the DTCs (see page RS-249).
HINT:
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(c) Turn the ignition switch OFF, and wait for at least 2 seconds.
(d) Turn the ignition switch ON.
(e) Check the DTCs (see page RS-249).
OK:
DTC B1796 is not output.
HINT:
DTCs other than DTC B1796 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK**

NG

2 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (see page RS-392).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

3 PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.
(b) Connect the intelligent tester to the DLC3.

(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NEXT

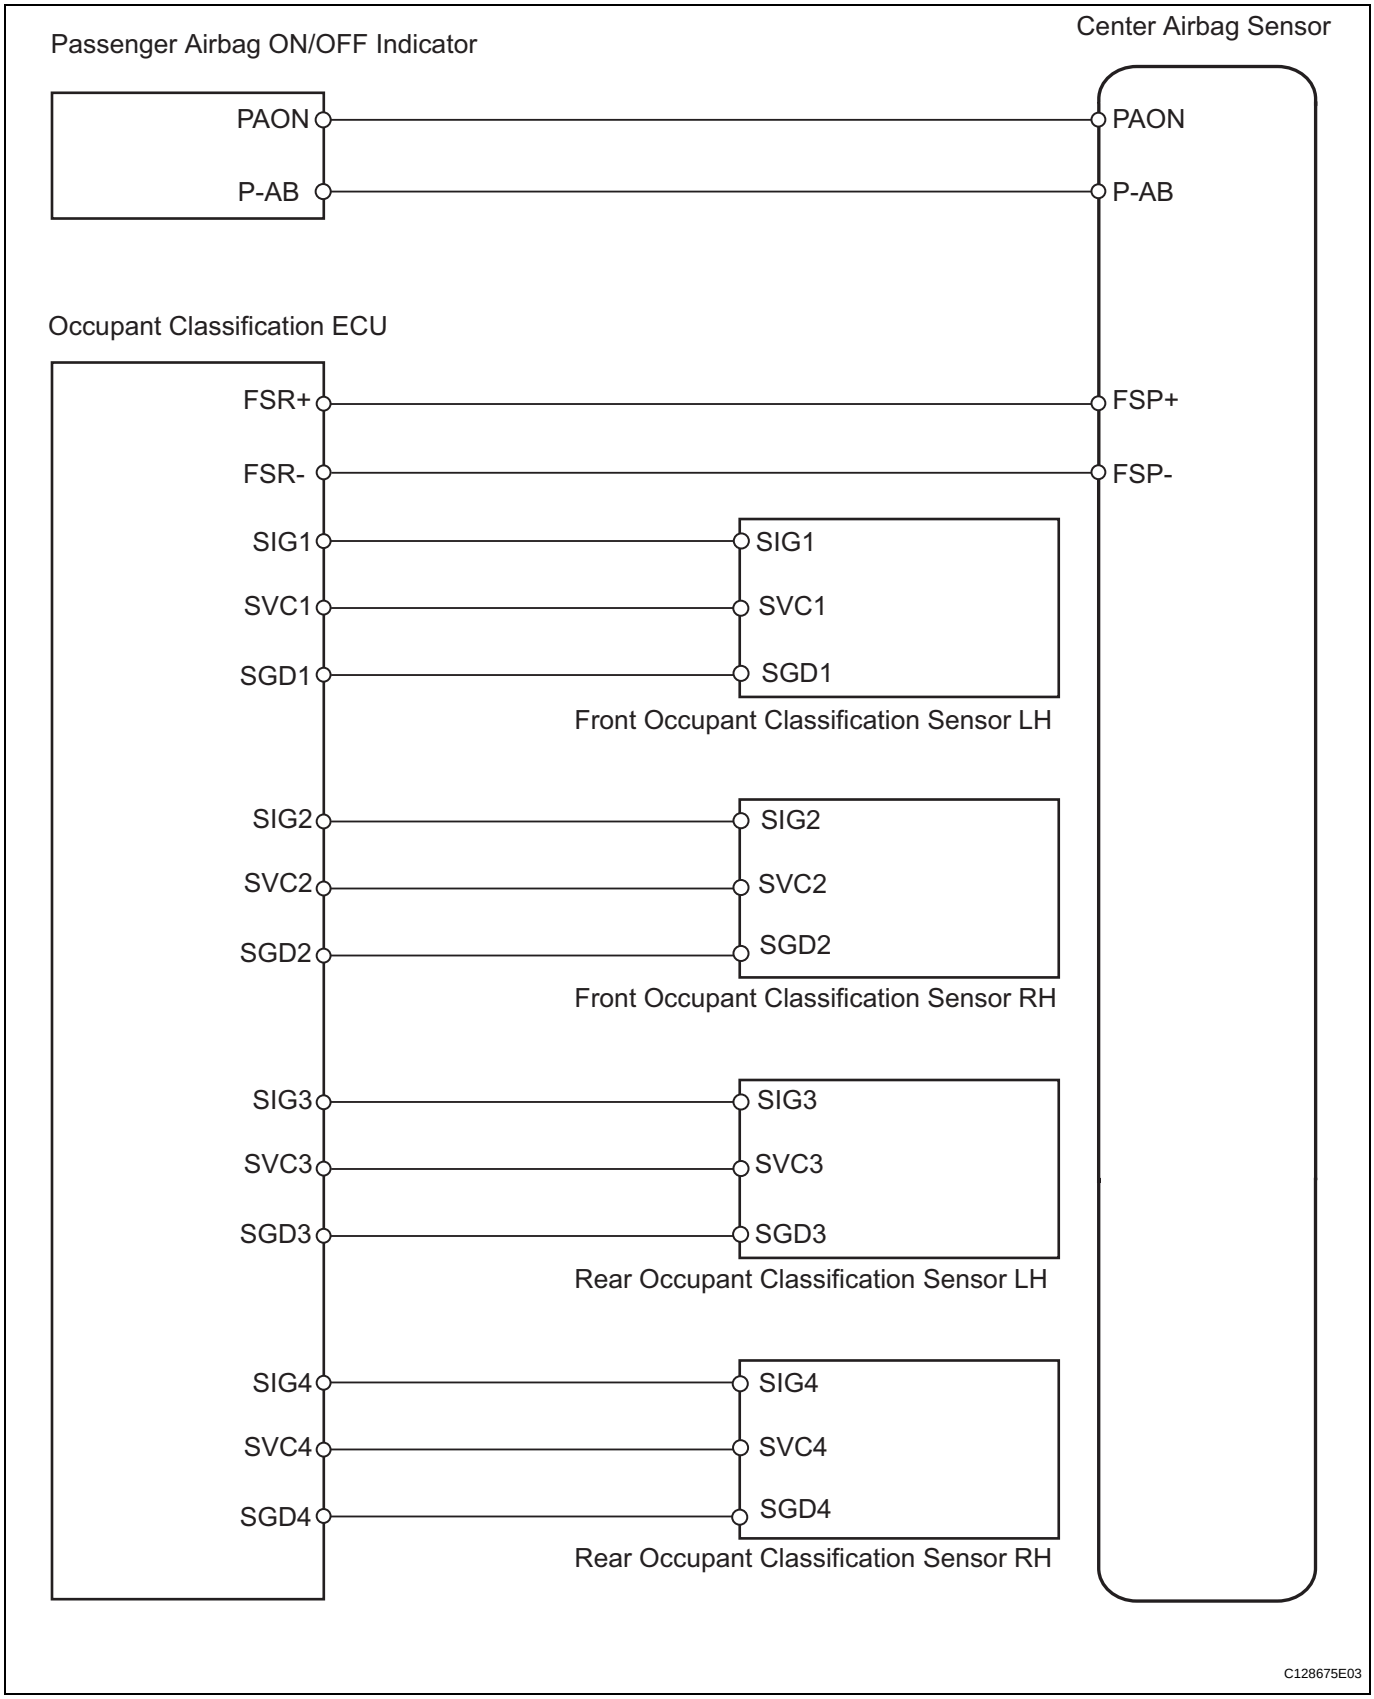
4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

Trouble in Passenger Airbag ON / OFF Indicator



DESCRIPTION

The occupant classification system detects the front passenger seat condition and then indicates whether the front passenger airbag is activated or not through the passenger airbag ON / OFF indicator illumination.

The passenger airbag ON / OFF indicator illumination changes depending on the front passenger seat condition as shown in the table below.

Front Passenger Seat Condition	ON Indicator	OFF Indicator
Adult is seated	ON	OFF
Child is seated	OFF	ON
Vacant	OFF	OFF
Occupant classification system failure	OFF	ON

WIRING DIAGRAM

RS

INSPECTION PROCEDURE

1 CHECK SRS WARNING LIGHT

(a) Turn the ignition switch ON, and check the SRS warning light condition.
OK:
The SRS warning light does not come on.

NG → **Go to step 9**

OK

2 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

(a) Turn the ignition switch ON.
(b) Check if the passenger airbag ON / OFF indicator correctly indicates the front passenger seat condition.

OK

Front Passenger Seat Condition	ON Indicator	OFF Indicator
Adult is seated	ON	OFF
Child is seated	OFF	ON
Vacant	OFF	OFF
Occupant classification system failure	OFF	ON

OK → **END**

NG

3 PERFORM ZERO POINT CALIBRATION

(a) Turn the ignition switch OFF.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG → **Go to step 5**

OK

4 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 5**

RS

OK

END

5	RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT

(a) Turn the ignition switch OFF.
(b) Loosen the 4 installation bolts of the front seat RH.
(c) Tighten the 4 installation bolts of the front seat RH to the specified torque (see page SE-22).
Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

NG → **Go to step 8**

OK

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the ignition switch ON.
(c) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NG → **Go to step 8**

OK

RS

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 8**

OK

8	CHECK CONNECTOR

(a) Turn the ignition switch OFF.
(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the 4 occupant classification sensors.

OK:

The connectors are connected.

(d) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.

(e) Check that the connectors are not damaged or deformed.

OK:

The connectors are normal.

NG → **REPAIR OR REPLACE WIRE HARNESS AND CONNECTOR**

OK

9	CHECK FOR DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.

(b) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

(c) Turn the ignition switch ON, and wait for at least 60 seconds.

(d) Turn the ignition switch OFF.

(e) Clear the DTCs (see page RS-249).

(f) Turn the ignition switch ON, and wait for at least 60 seconds.

(g) Check the DTCs (see page RS-249).

OK:

DTC is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY**

OK

10	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch OFF.

(b) Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

(c) Replace the occupant classification ECU (see page RS-392).

HINT:

Perform the inspection using parts from a normal vehicle if possible.

NEXT

11	PERFORM ZERO POINT CALIBRATION

(a) Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Using the intelligent tester, perform the zero point calibration (see page RS-241).
OK:
COMPLETED is displayed.

NEXT

12	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (see page RS-241).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

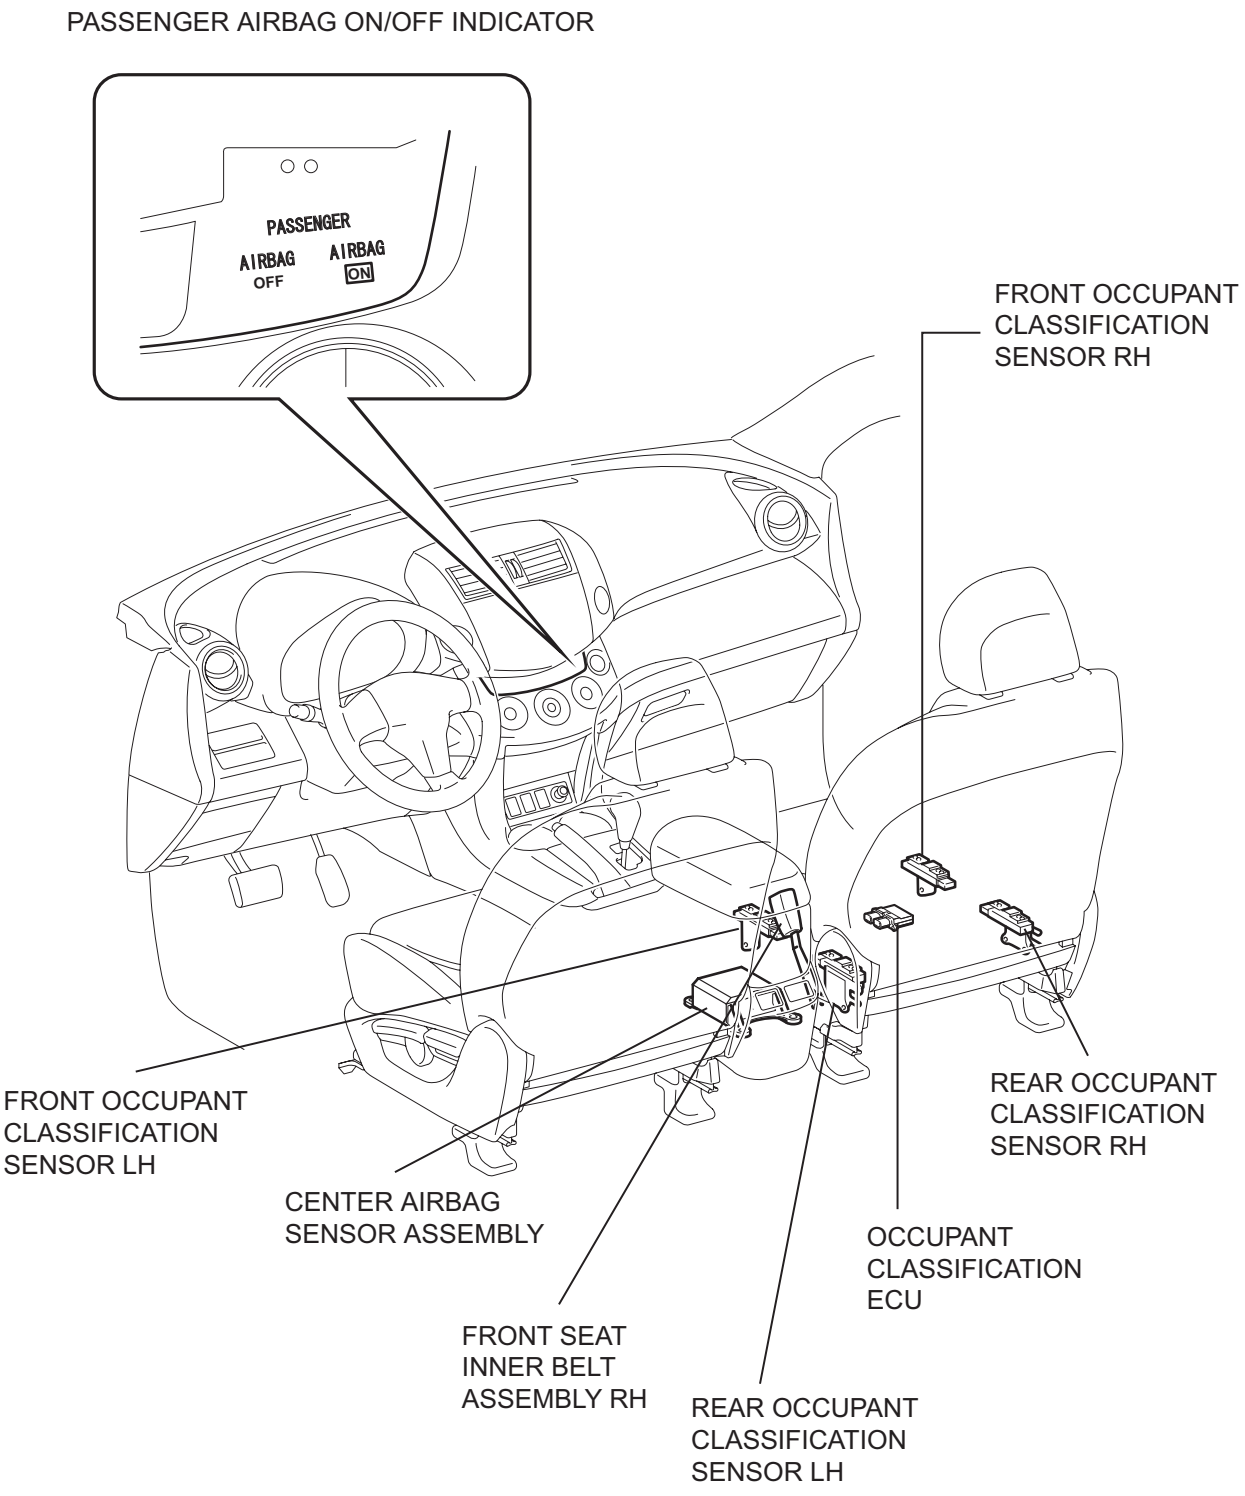
NEXT

END

OCCUPANT CLASSIFICATION SYSTEM

PRECAUTION

1. INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT



(a) Perform the zero point calibration and sensitivity check if any of the following conditions apply.

- The occupant classification ECU is replaced.
- Accessories (seat cover etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator (OFF) comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

NOTICE:

When a vehicle involved in an accident is brought into the workshop for repair, check the flatness of the floor where the front passenger seat is mounted. If the flatness is not within +-3.0 mm (+-0.118 in.), adjust it to the specified range.

REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

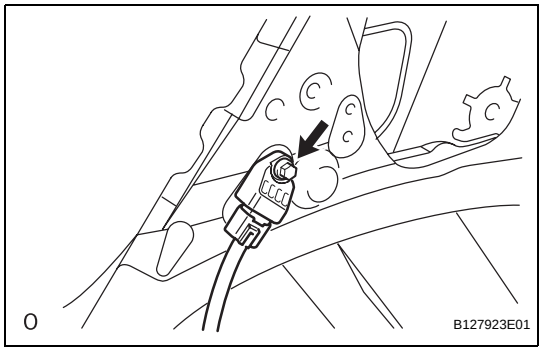
CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-26)**
3. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
4. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
6. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
7. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
8. **REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
9. **REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
10. **REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
11. **REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
12. **REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)**
13. **REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page SE-110)**
14. **REMOVE REAR FLOOR NO. 2 BOARD**
15. **REMOVE REAR FLOOR NO. 3 BOARD**
16. **REMOVE REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE (See page IR-31)**
17. **REMOVE BACK DOOR WEATHERSTRIP**
18. **REMOVE REAR FLOOR FINISH PLATE**
19. **REMOVE REAR DECK TRIM COVER (w/ Rear No. 2 Seat)**

20. REMOVE RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)

21. DISCONNECT REAR NO. 1 SEAT OUTER BELT ASSEMBLY LH (See page SB-48)

22. DISCONNECT REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SB-48)



23. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/o Rear No. 2 Seat) (See page IR-32)

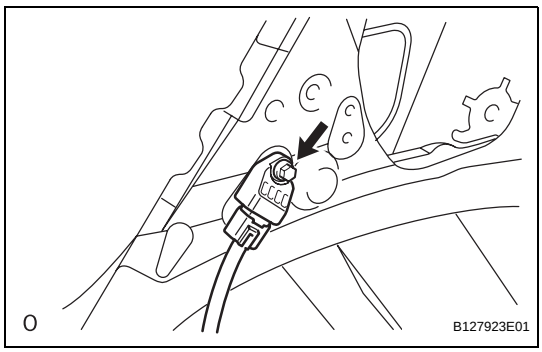
24. REMOVE DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-32)

25. REMOVE AIRBAG SENSOR REAR LH

(a) Disconnect the connector.

(b) Remove the bolt and airbag sensor.

RS



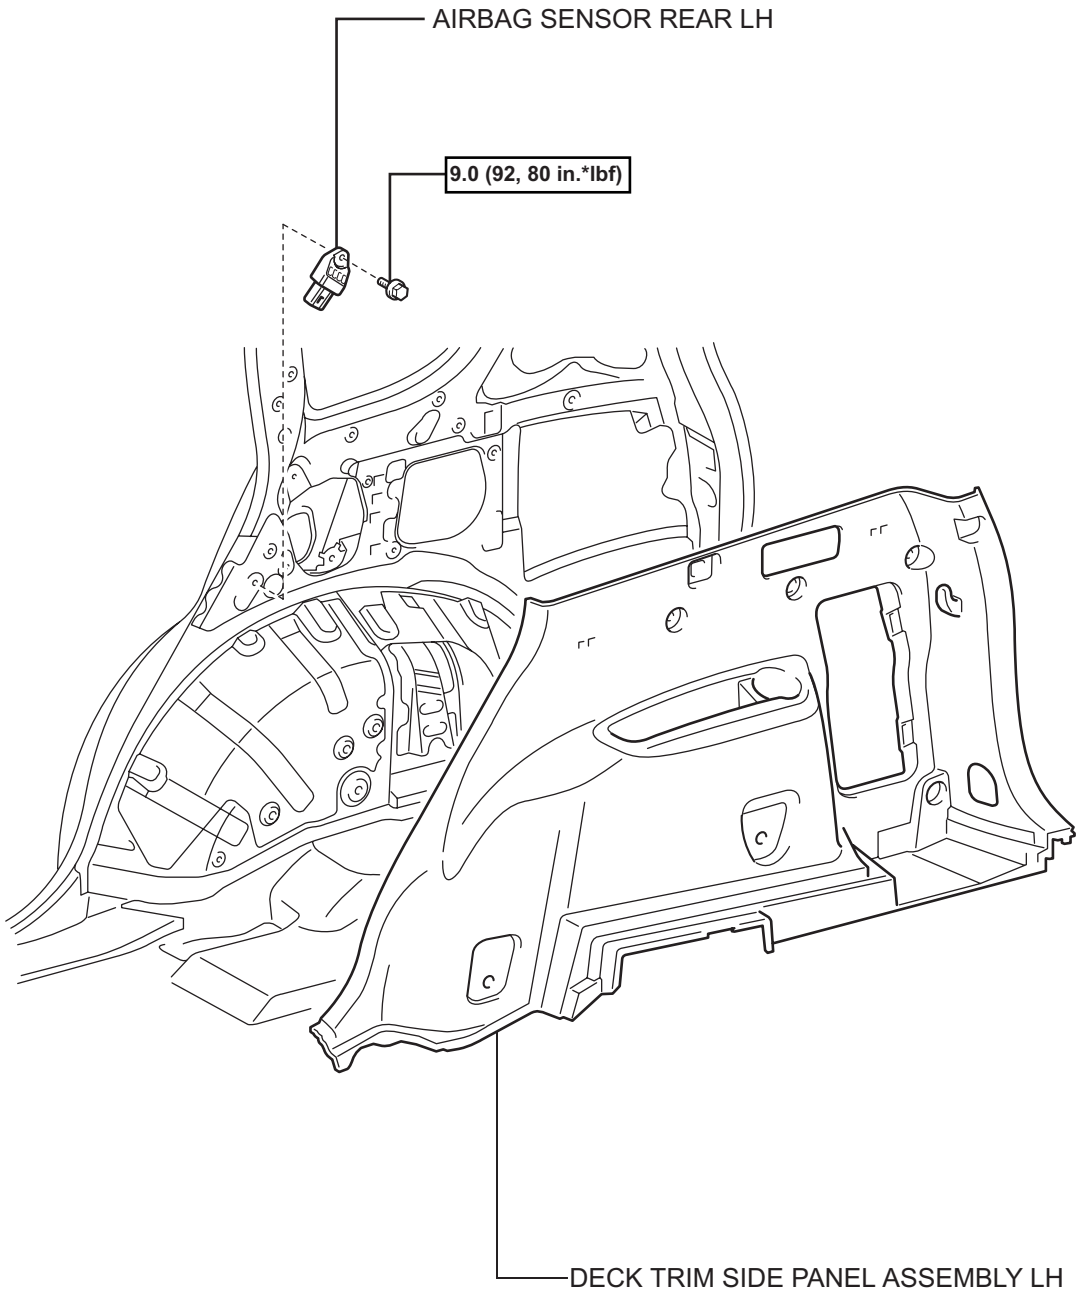
INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

CAUTION:

Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).



1. **INSTALL AIRBAG SENSOR REAR LH**
   (a) Install the airbag sensor with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **If the airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
2. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ Rear No. 2 Seat) (See page IR-53)**
3. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY LH (w/ o Rear No. 2 Seat) (See page IR-52)**
4. **CONNECT REAR NO. 2 SEAT OUTER BELT ASSEMBLY LH (w/ Rear No. 2 Seat)**
5. **CONNECT REAR NO. 1 SEAT OUTER BELT ASSEMBLY LH (See page SB-51)**
6. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL LH (w/o Rear No. 2 Seat)**
7. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**
8. **INSTALL REAR NO. 1 FLOOR MAT SUPPORT SIDE PLATE (See page IR-55)**
9. **INSTALL REAR FLOOR NO. 3 BOARD**
10. **INSTALL REAR FLOOR NO. 2 BOARD**
11. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)**
12. **INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-55)**
13. **INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
14. **INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-56)**
15. **INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**
16. **INSTALL NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-56)**

17. **INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
18. **INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
19. **INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
20. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
21. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
22. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-57)**
23. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
24. **CHECK SRS WARNING LIGHT**
    (a) Check the SRS warning light (see page RS-34).

REAR AIRBAG SENSOR

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

B127922E01

ON-VEHICLE INSPECTION

1. **CHECK REAR AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (see page RS-49).

2. **CHECK REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).
   (b) When the quarter panel of the vehicle or its periphery is damaged, check if there is any damage to the rear airbag sensor. If there are any defects as mentioned below, replace the rear airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   For removal and installation procedures of the rear airbag sensor, be sure to following the correct procedure.

3. **CHECK REAR AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS DEPLOYED)**
   (a) Replace the rear airbag sensor.
   CAUTION:
   - **For removal and installation procedures of the rear airbag sensor, be sure to follow the correct procedure.**
   - **If the airbags have deployed, replace the side airbag sensor on the side in which the collision occurred. Replace both if necessary.**

REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-11)**
3. **REMOVE FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-27)**
4. **REMOVE SEAT POSITION AIRBAG SENSOR**
   (a) Remove the seat slide position sensor protector from the seat position sensor.
   (b) Using a T30 "torx" socket, remove the "torx" screw and seat position sensor.
   (c) Disconnect the connector.

RS

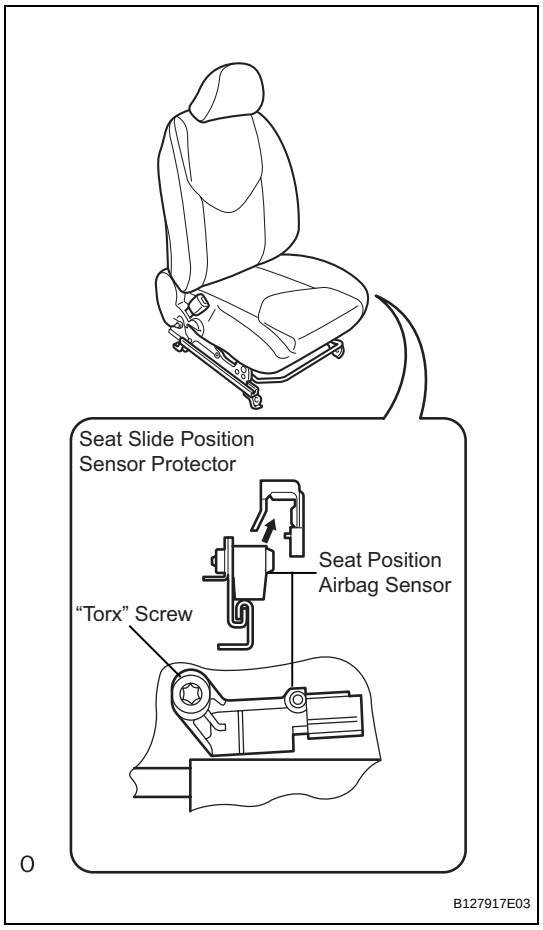
INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. INSTALL SEAT POSITION AIRBAG SENSOR

(a) Using a 1 mm (0.039 in.) feeler gauge, install the seat position sensor.

NOTICE:



- **If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.**
- **When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

HINT:
Be sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm to 1.4 mm (0.023 to 0.055 in.).

(b) Using a T30 "torx" socket, tighten the "torx" screw to install the seat position sensor.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

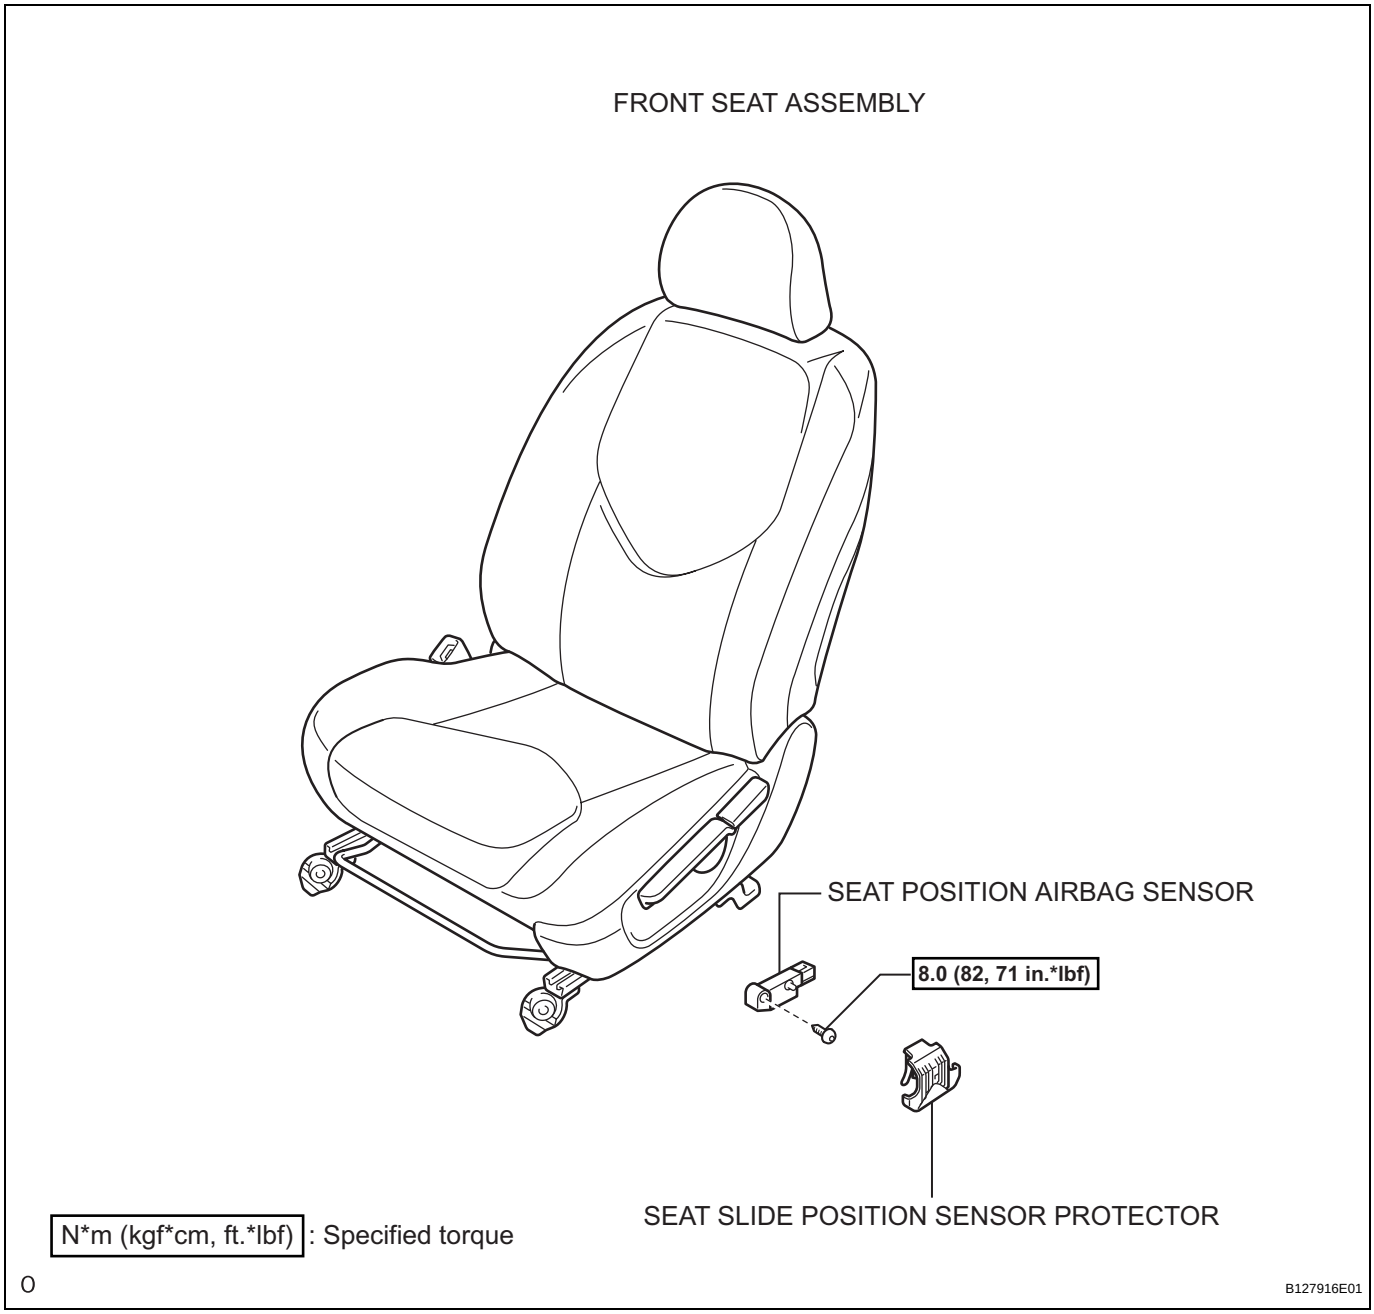
(c) Make sure that the clearance between the seat position sensor and the seat rail is within 0.6 mm to 1.4 mm (0.023 to 0.055 in.).

(d) Connect the connector.

(e) Install the seat slide position sensor protector to the seat position sensor.

2. **INSTALL FRONT SEAT ASSEMBLY (for Manual Seat) (See page SE-22)**

3. **INSTALL FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-37)**



4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CHECK SRS WARNING LIGHT**
   (a) Check the SRS warning light (see page RS-34).

RS

SEAT POSITION SENSOR

COMPONENTS

RS

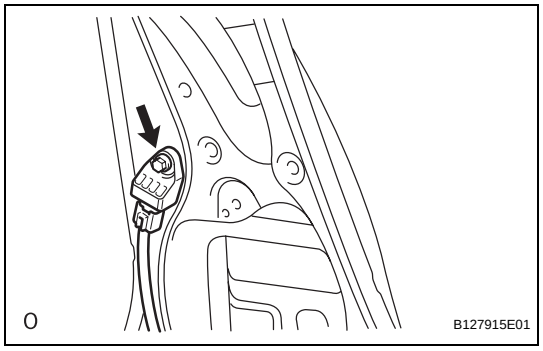
ON-VEHICLE INSPECTION

1. CHECK SEAT POSITION SENSOR (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (see page RS-49).

2. CHECK SEAT POSITION SENSOR (VEHICLE INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (see page RS-49).



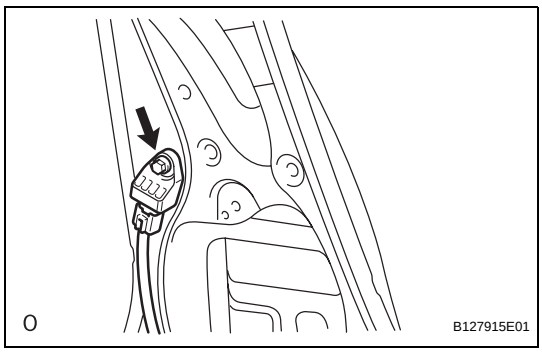
(b) Even if the airbag was not deployed, check if there is any damage to the seat position sensor.
If there are any defects as mentioned below, replace the seat position sensor with a new one:
- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.

CAUTION:
For removal and installation procedures of the seat position sensor, be sure to follow the correct procedure.

REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-26)**
3. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-57)**
4. **REMOVE CENTER PILLAR GARNISH LOWER LH (See page SB-27)**
5. **REMOVE SIDE AIRBAG SENSOR ASSEMBLY LH**
   (a) Disconnect the connector.
   (b) Remove the bolt and sensor.



RS

INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. INSTALL SIDE AIRBAG SENSOR ASSEMBLY LH

(a) Install the sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 82 in.*lbf)
NOTICE:
- **If the airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **When installing the airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

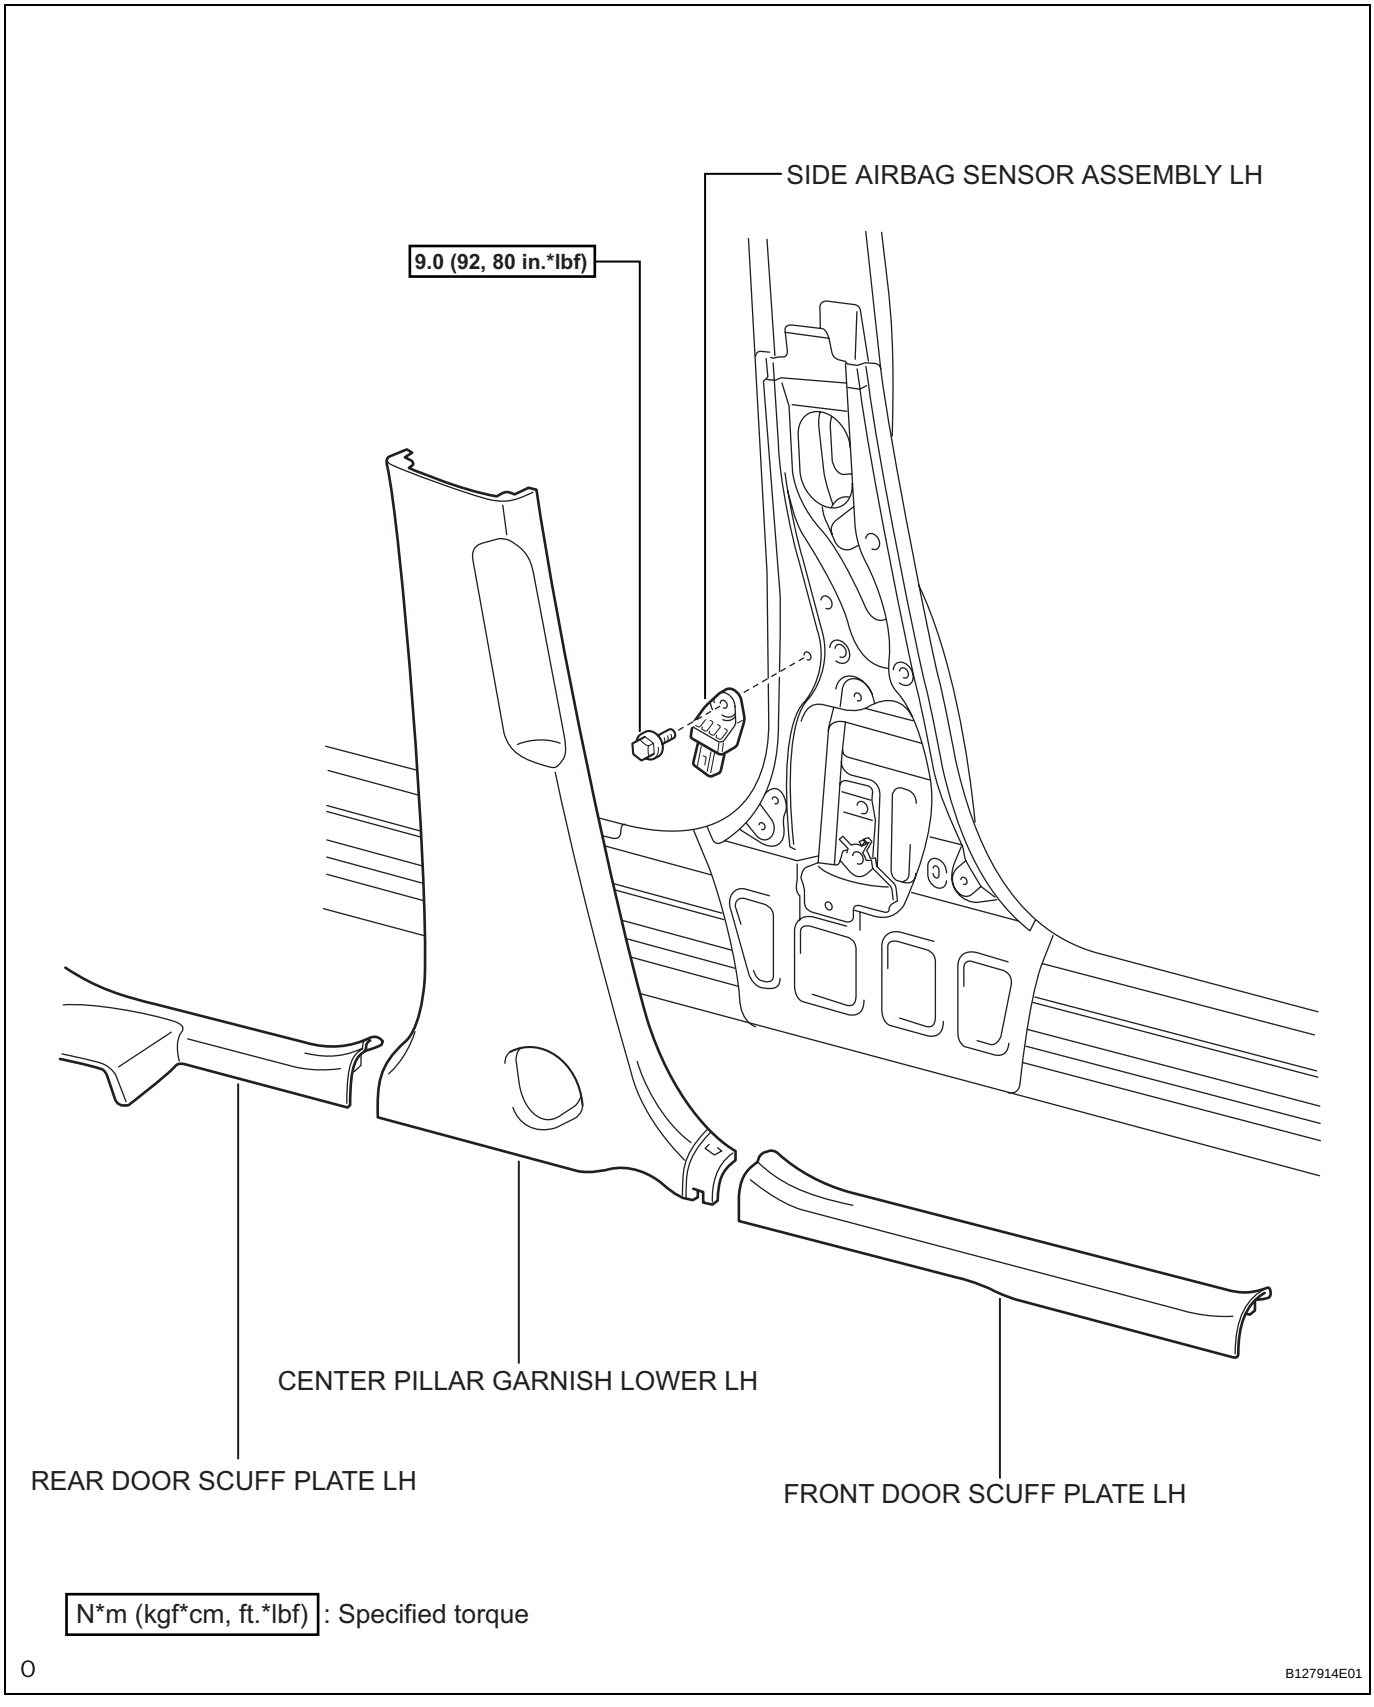
(b) Check that there is no looseness in the installation parts of the sensor.

(c) Connect the connector.

2. INSTALL CENTER PILLAR GARNISH LOWER LH (See page SB-31)

3. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-57)

4. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-59)



5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-34).

SIDE AIRBAG SENSOR

COMPONENTS

RS

ON-VEHICLE INSPECTION

1. **CHECK SIDE AIRBAG SENSOR (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (see page RS-49).

2. **CHECK SIDE AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (see page RS-49).
   (b) When the center pillar of the vehicle or its area is damaged, check if there is any damage to the side airbag sensor. If there are any defects as mentioned below, replace the side airbag sensor with a new one:
   - Cracks, dents or chips on the sensor housing.
   - Cracks or other damage to the connector.
   - Peeling off of the label or damage to the serial number.

   CAUTION:
   For removal and installation procedures of the side airbag sensor, be sure to follow the correct procedure.

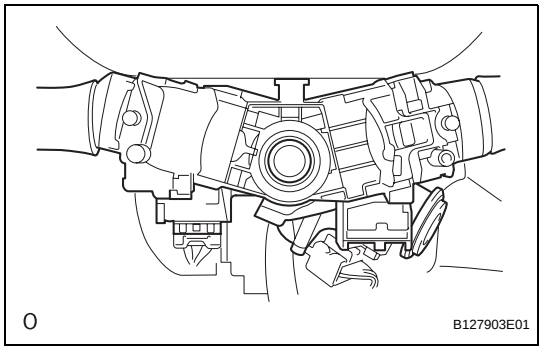
3. **CHECK SIDE AIRBAG SENSOR (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS DEPLOYED)**
   (a) Replace the side airbag sensor.
   CAUTION:
   - **For removal and installation procedures of the side airbag sensor, be sure to follow the correct procedure.**
   - **If the airbags have deployed, replace the side airbag sensor on the side in which the collision occurred. Replace both if necessary.**

INSPECTION

1. INSPECT SPIRAL CABLE SUB-ASSEMBLY

(a) Check that there are no scratches or cracks on its connector, and/or that the cable does not have cracks, dents or chipping.

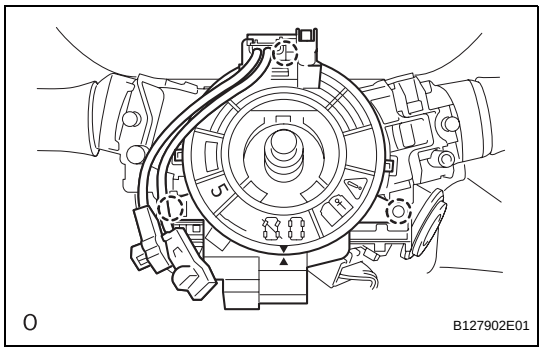
INSTALLATION



CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

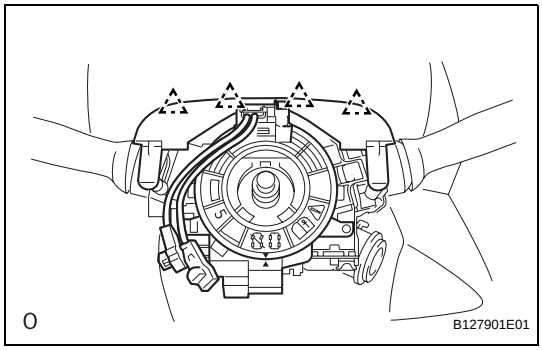
1. INSTALL SPIRAL CABLE SUB-ASSEMBLY

(a) Check that the front wheels are facing straight ahead.

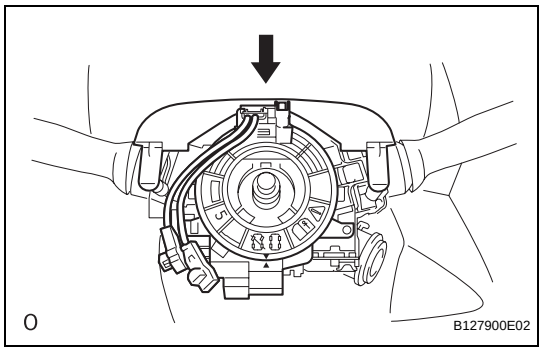


(b) Set the turn signal switch to the neutral position.
NOTICE:
Make sure that the turn signal switch is in the neutral position, as the pin of the turn signal switch may be snapped.

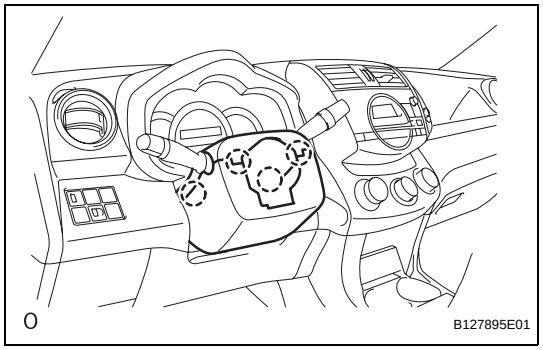
(c) Install the spiral cable.



NOTICE:
When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel.

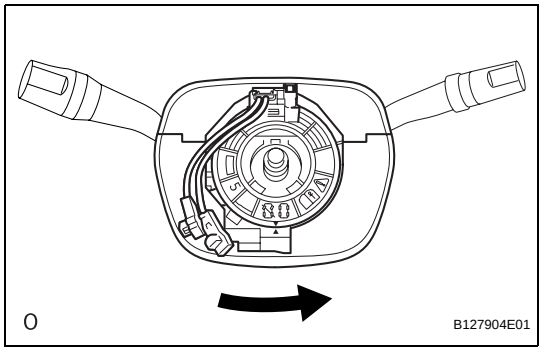


(d) Connect the connectors to the spiral cable.
NOTICE:
When handling the airbag connector, do not damage the airbag wire harness.



(e) Attach the 4 clips to the column cover (upper).

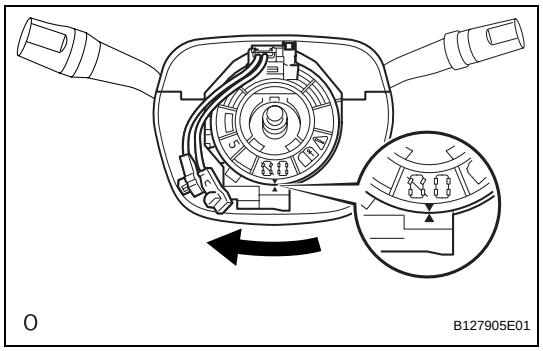
RS



(f) Install the steering column cover (upper).

2. INSTALL STEERING COLUMN COVER (LOWER)

(a) Attach the 4 claws.



3. POSITION SPIRAL CABLE

(a) Slowly rotate the spiral cable counterclockwise by hand until it feels firm.

NOTICE:

Do not use the airbag wire harness to turn the spiral cable.

(b) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.

NOTICE:

Do not use the airbag wire harness to turn the spiral cable.

HINT:

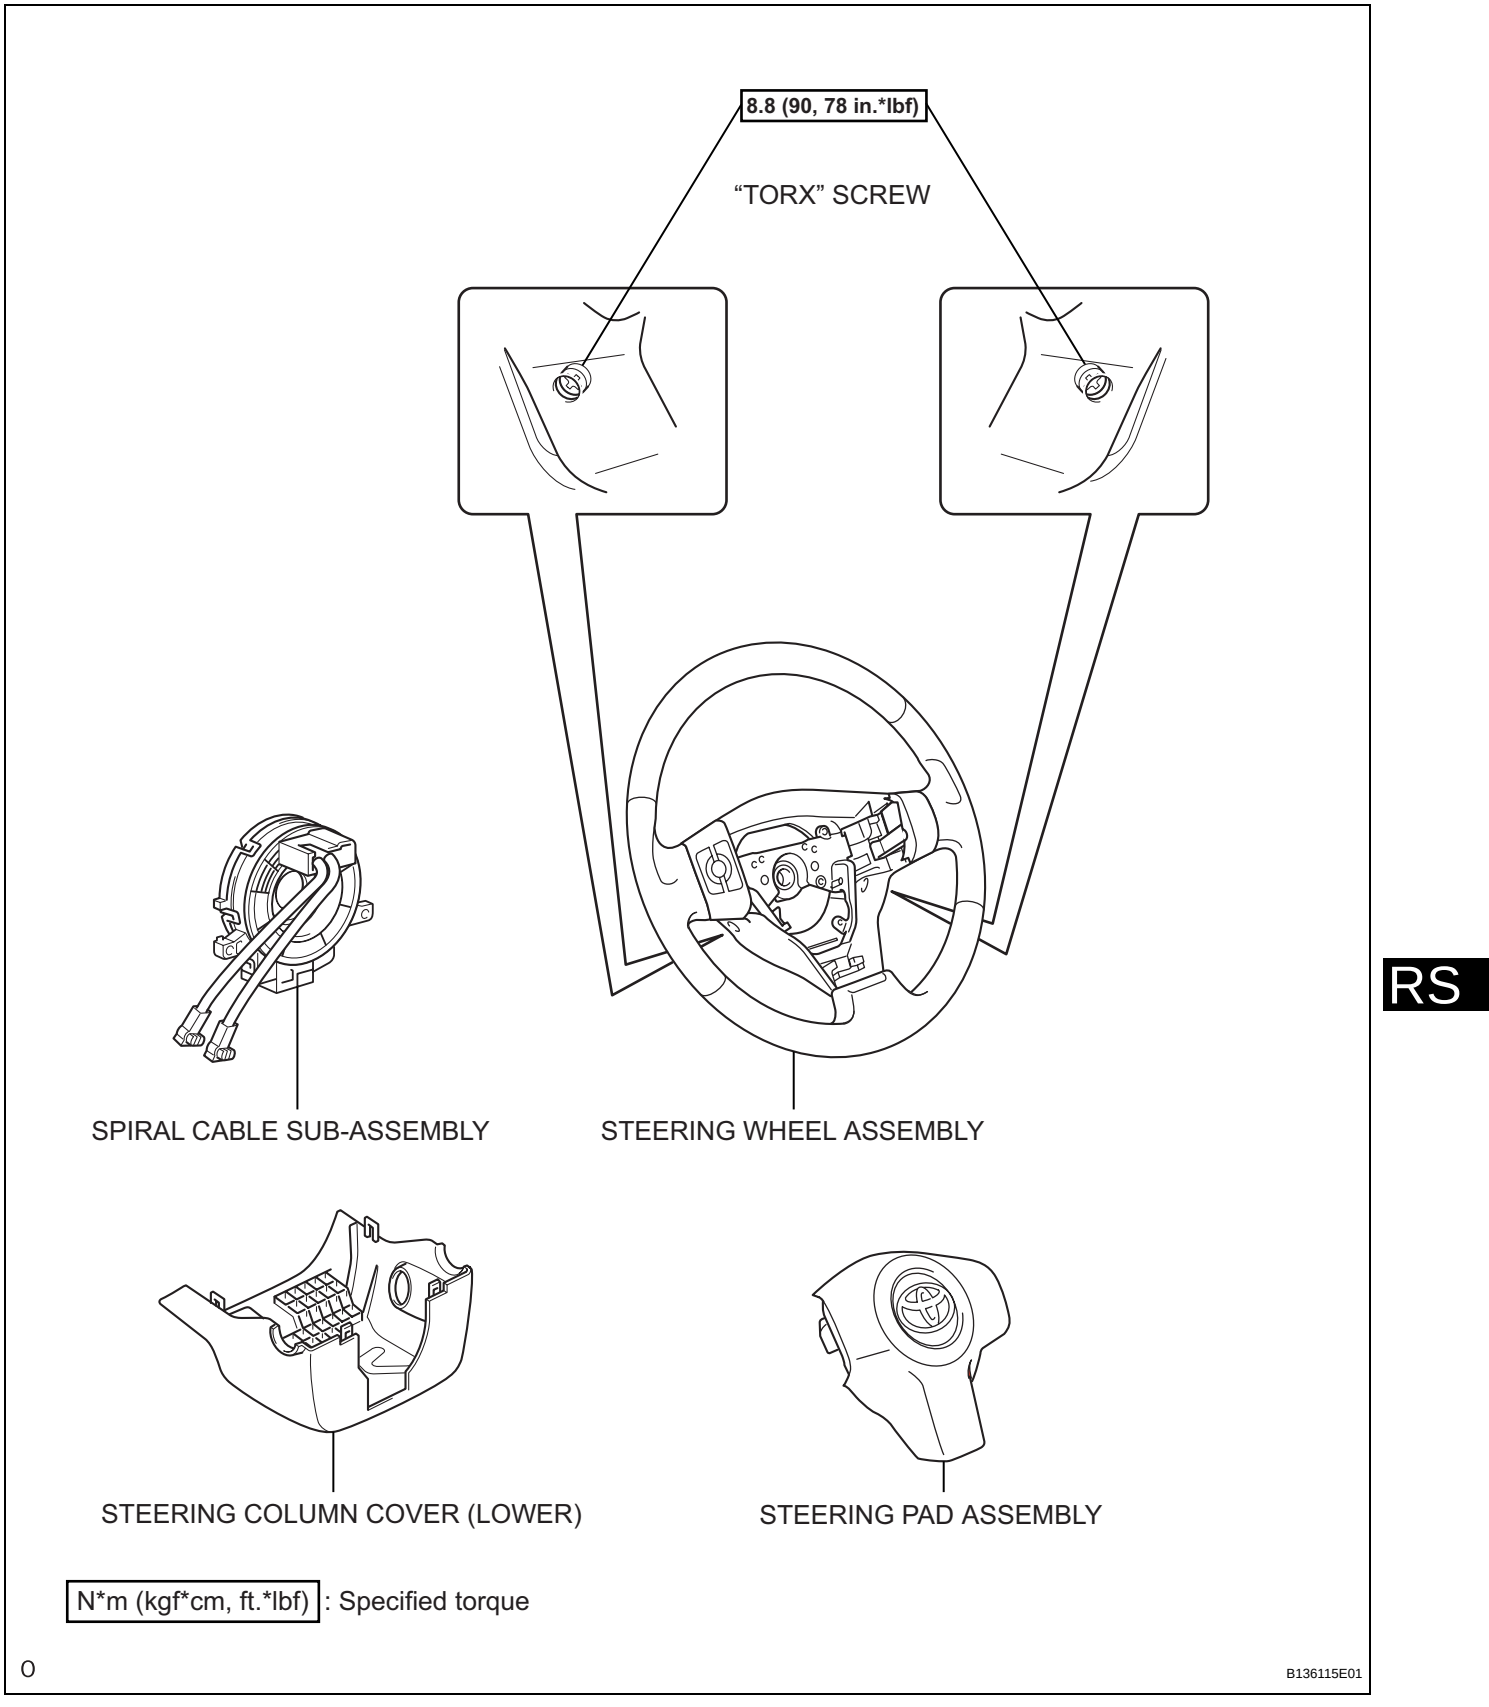
The spiral cable will rotate approximately 2.5 turns to the left and right from the center.

4. INSTALL STEERING WHEEL ASSEMBLY (See page SR-21)

5. INSTALL STEERING PAD ASSEMBLY (See page RS-336)

6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

7. INSPECT STEERING PAD ASSEMBLY (See page RS-337)



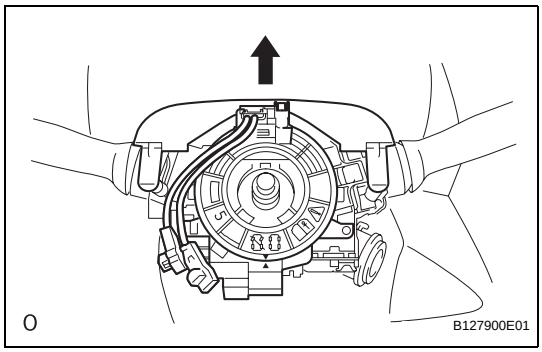
8. CHECK SRS WARNING LIGHT

(a) Check the SRS warning light (see page RS-34).

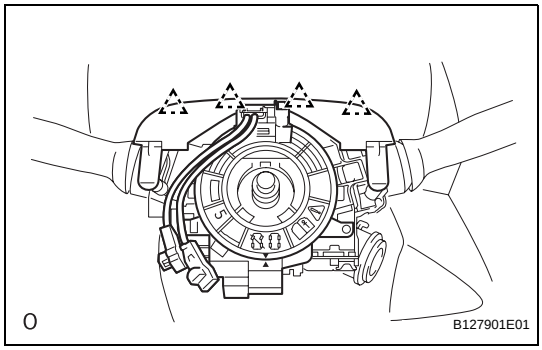
9. INSPECT STEERING WHEEL POSITION

SPIRAL CABLE

COMPONENTS

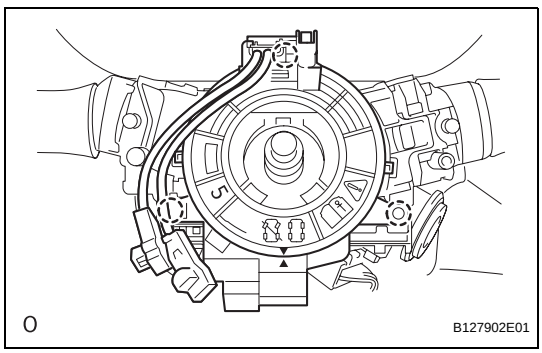


RS



REMOVAL

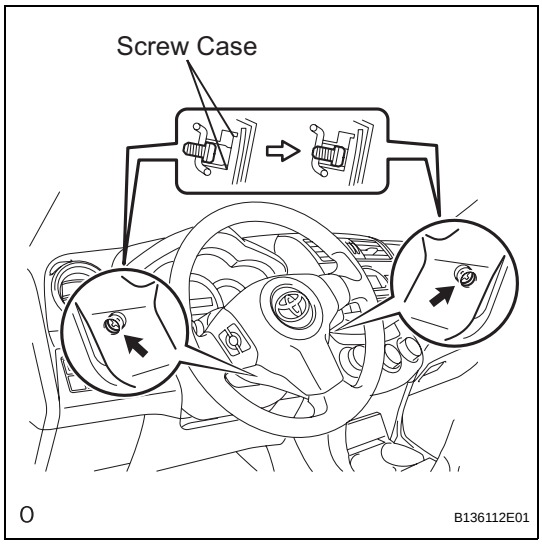
CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).



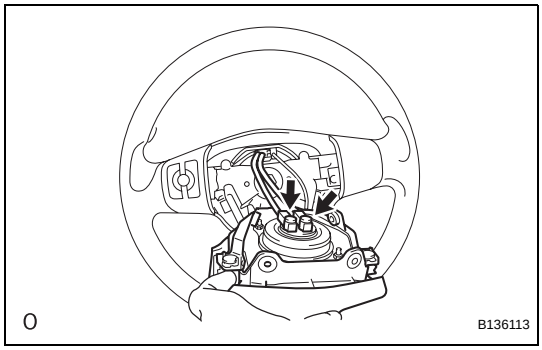
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE STEERING PAD ASSEMBLY (See page RS-336)**
3. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
4. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-12)**
5. **REMOVE STEERING COLUMN COVER (LOWER) (See page SR-12)**
6. **REMOVE SPIRAL CABLE SUB-ASSEMBLY**
   (a) Rise the steering column cover (upper).
   NOTICE:
   When handling the airbag connector, do not damage the airbag wire harness.

(b) Detach the 4 clips and remove the column cover (upper).

(c) Detach the 3 claws and remove the spiral cable.



RS



REMOVAL

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. **REMOVE STEERING PAD ASSEMBLY**
   (a) Straighten the front wheels.
   (b) Using a T30 "torx" driver, loosen the 2 screws until the groove along each screw circumference catches on the screw case.

   (c) Pull out the steering pad from the steering wheel and support the steering pad with one hand as shown in the illustration.
   NOTICE:
   When removing the steering pad, do not pull the airbag wire harness.
   (d) Using a screwdriver, disconnect the 2 airbag connectors.
   CAUTION:
   When handling the airbag connector, do not damage the airbag wire harness.
   (e) Disconnect the horn connector and remove the steering pad.

RS

INSTALLATION

CAUTION:
Be sure to read the precautionary notices concerning the SRS airbag system before servicing it (see page RS-1).

1. INSTALL STEERING PAD ASSEMBLY

(a) Support the steering pad with one hand as shown in the illustration.

(b) Connect the 2 airbag connectors.
NOTICE:
When handling the airbag connector, do not damage the airbag wire harness.

(c) Connect the horn connector.

(d) Install the steering pad after confirming that the circumference grooves of the screws are caught on the screw case.

(e) Using a T30 "torx" driver, install the 2 screws.
Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

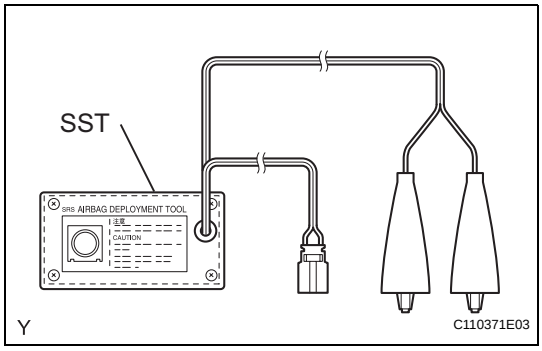
2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

3. INSPECT STEERING PAD ASSEMBLY

(a) Check for cuts, cracks or discoloration on the steering pad outer surface and in the grooved portion.

(b) Check that the horn sounds.

4. CHECK SRS WARNING LIGHT



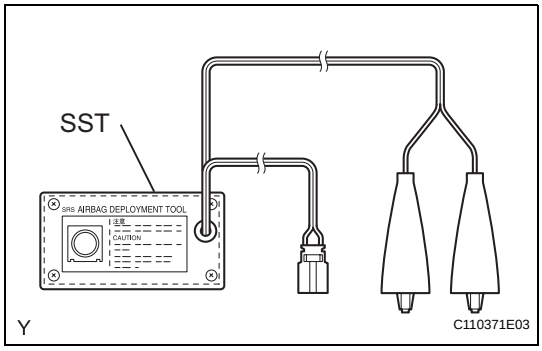
(a) Check the SRS warning light (see page RS-34).

DISPOSAL

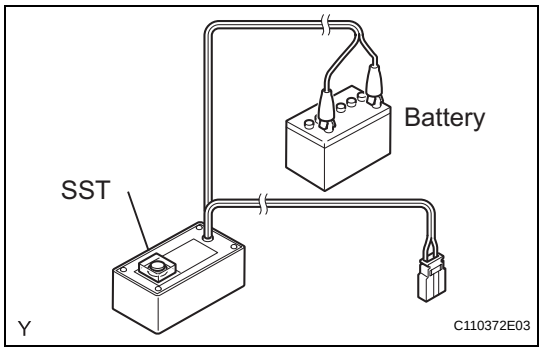
HINT:
When scrapping a vehicle equipped with an SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of a steering pad with an unactivated airbag.**
- **The airbag produces a loud, exploding sound when it activates. Perform the operation where it will not be a nuisance to people nearby.**
- **When activating the airbag, always use the specified SST (SRS airbag deployment tool).**
- **Perform procedures in a place away from electrical interference.**
- **When activating the airbag, stand at least 10 m (33 ft.) away from the steering pad.**
- **The steering pad becomes very hot when the airbag is deployed. Do not touch it for at least 30 minutes after activation.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

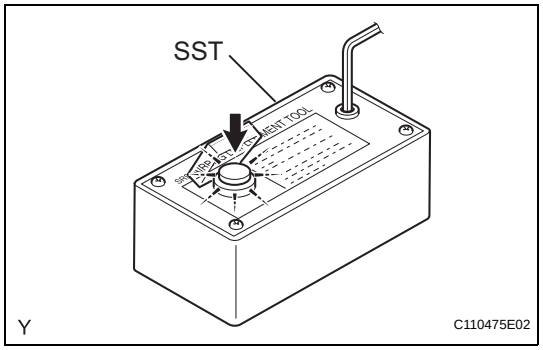


1. DISPOSE OF STEERING PAD ASSEMBLY TOGETHER WITH VEHICLE



SST 09082-00700, 09082-00780, 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

HINT:
Prepare a battery as the power source to deploy the airbag.



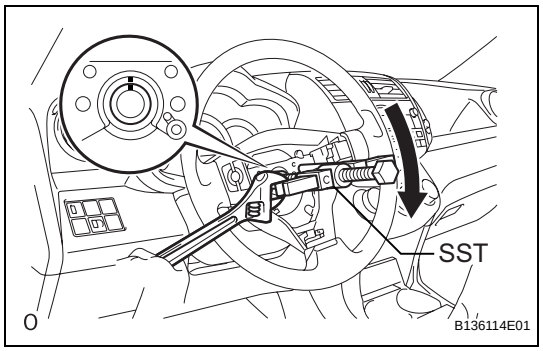
(a) Check if SST is functioning properly.
SST 09082-00700

RS

(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
HINT:
The yellow connector will be used to connect to another SST in a later step.

(2) Press the SST activation switch, and check that the LED of the SST activation switch illuminates.
CAUTION:
If the LED illuminates when the activation switch is not pressed, SST may have a malfunction, in which case that SST should not be used.

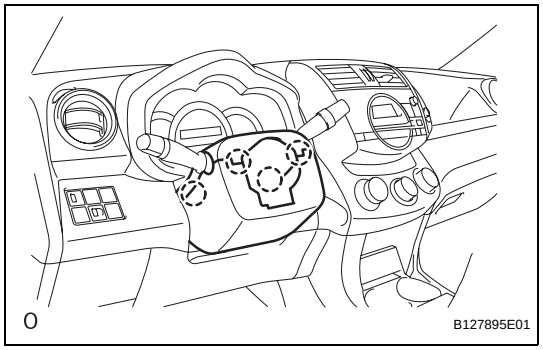
(3) Disconnect SST from the battery.



(b) Follow the "Precaution" (see page RS-1).

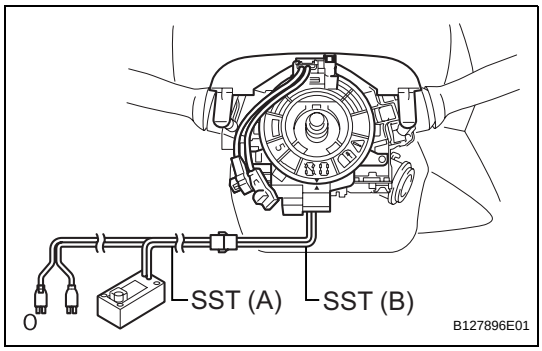
(c) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

(d) Remove the steering column cover (lower).

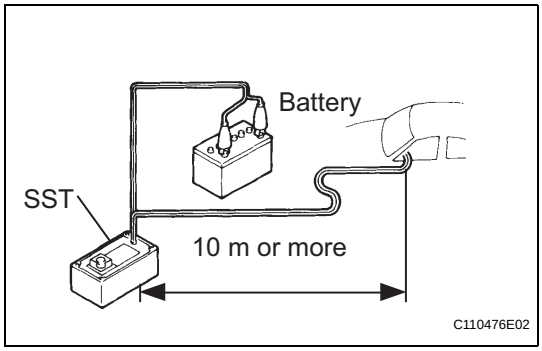


(1) Remove the steering pad (see page RS-336).

(2) Remove the steering wheel set nut.



(3) Put matchmarks on the steering wheel and main shaft.



(4) Using SST, remove the steering wheel.
SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05021)

(5) Detach the 4 claws.

RS

(e) Install SST.

CAUTION:

Check that there is no free play in the steering wheel and steering pad.

(1) Disconnect the yellow airbag connector from the spiral cable.

NOTICE:

When handling the airbag connector, do not damage the airbag wire harness.

(2) Connect SST (A) to SST (B). Then connect SST (B)'s connector to the spiral cable.

SST 09082-00700, 09082-00780

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(3) Move SST at least 10 m (33 ft.) away from the front side window.

(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not do damage the SST wire harness.

(5) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.

(f) Deploy the airbag.

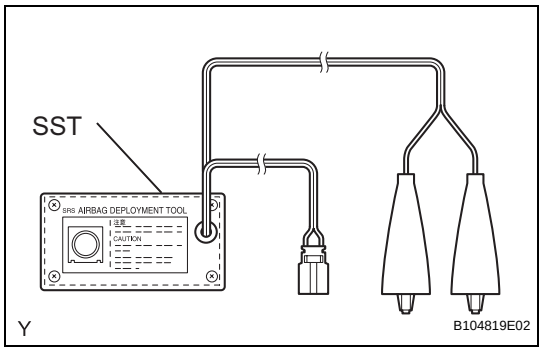
(1) Check that no one is inside the vehicle or within a 10 m (33 ft.) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The steering pad becomes extremely hot when the airbag is deployed. Do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:



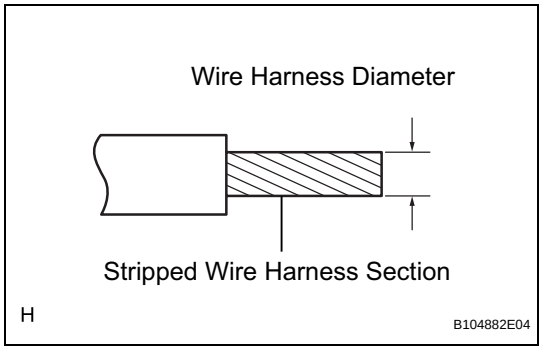
The airbag is deployed as the SST activation switch LED illuminates.

2. DISPOSE OF ONLY STEERING PAD ASSEMBLY

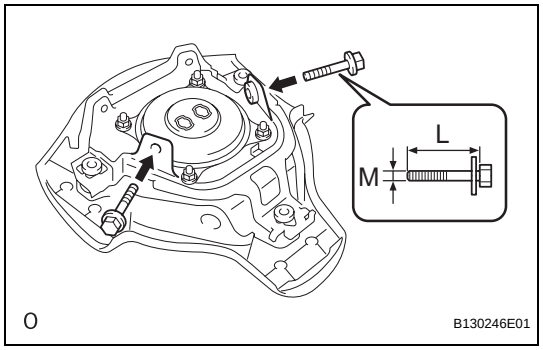
NOTICE:

- **When disposing of the steering pad, never use the customer's vehicle to deploy the airbag.**

RS



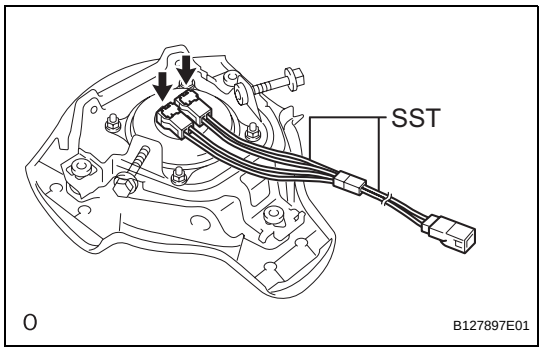
- **Be sure to follow the procedure detailed below when deploying the airbag.**



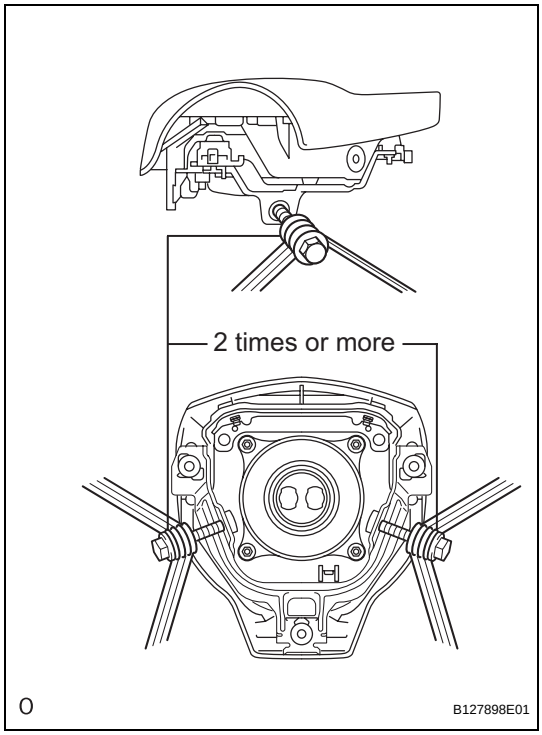
HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check if SST is functioning properly (see previous step).

(b) Remove the steering pad (see page RS-336).
CAUTION:
- **When removing the steering pad, work must be started 90 seconds after the ignition switch is turned OFF and after the cable is disconnected from the negative (-) battery terminal.**
- **When storing the steering pad, keep the airbag deployment side facing upward.**

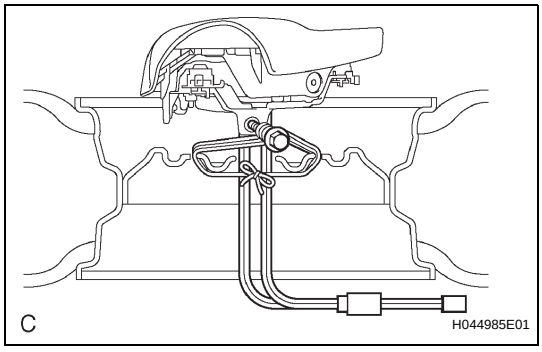


(c) Using service wire harnesses for the vehicle, tie down the steering pad to a disc wheel (with tire).
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 in.^{2} or more)
NOTICE:
Use a disc wheel (with tire) that you are planning to throw away, as the airbag deployment will damage the disc wheel.
CAUTION:
Do not use wire harnesses that are too thin or any other substitute items to tie down the steering pad. They may snap when the airbag deploys. Always use vehicle wire harnesses that have an area of at least 1.25 mm^2 or more (0.0019 in.^{2}).
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x Diameter^2/4

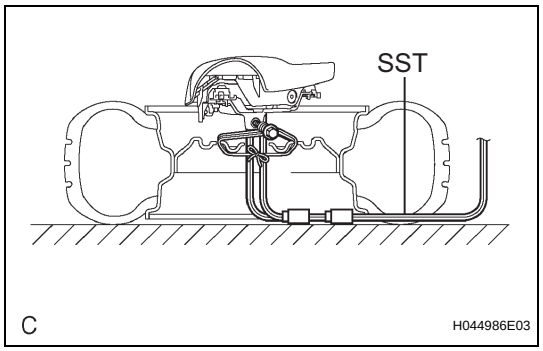


(1) Install the 2 bolts with washers into the 2 bolt holes of the steering pad.
Bolt:
L:
35.0 mm (1.378 in.)
M:
6.0 mm (0.236 in.)
Pitch:
1.0 mm (0.039 in.)
NOTICE:
- **Tighten the bolts by hand until they become difficult to turn.**
- **Do not tighten the bolts excessively.**

RS



(2) After connecting SST to each other, connect them to the steering pad.
SST 09082-00802 (09082-10801, 09082-30801)



(3) Wind 3 wire harnesses at least twice around the bolts installed on the left and right sides of the steering pad.
CAUTION:
- **Tightly wind the wire harnesses around the bolts so that there is no slack.**
- **Make sure that the wire harnesses are tight. If there is slack in a wire harness, the steering pad may come loose when the airbag is deployed.**

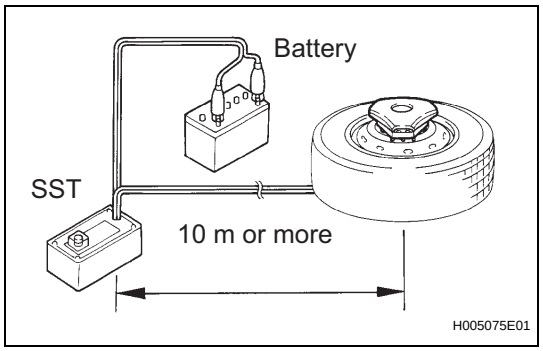
RS

(4) Face the airbag deployment side of the steering pad upward. Separately tie the left and right sides of the steering pad to a disc wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole in the disc wheel.
CAUTION:
- **Make sure that the wire harnesses are tight. If there is slack in a wire harness, the steering pad may come loose when the airbag is deployed.**
- **Always tie down the steering pad with the airbag deployment side facing upward.**

(d) Install SST.

CAUTION:

Place the tire with disc wheel and steering pad on a level surface.



(1) Connect the connector of SST.

SST 09082-00700

NOTICE:

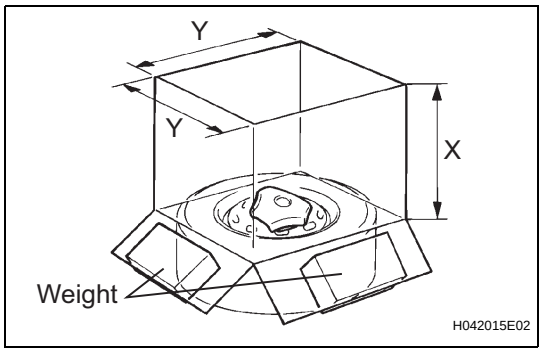
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.

(2) Move SST at least 10 m (33 ft.) away from the steering pad.

(e) Cover the steering pad with a cardboard box or tires.

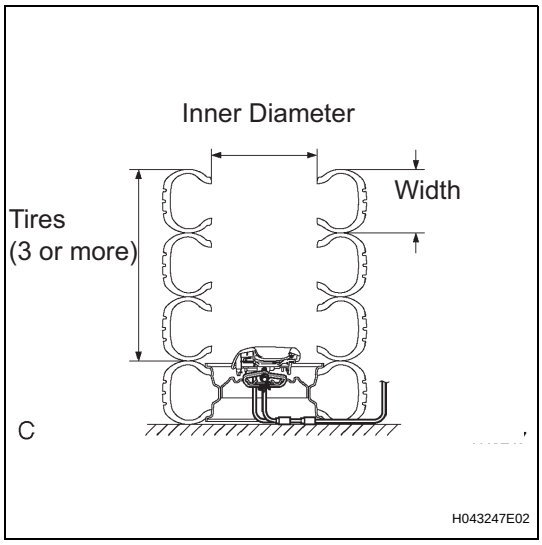
(1) Covering method using a cardboard box:
Cover the steering pad with the cardboard box and place weights of at least 19 kg (43 lb) on the cardboard box in 4 places.

Cardboard box size:



X minimum = 460 mm (18.11 in.)

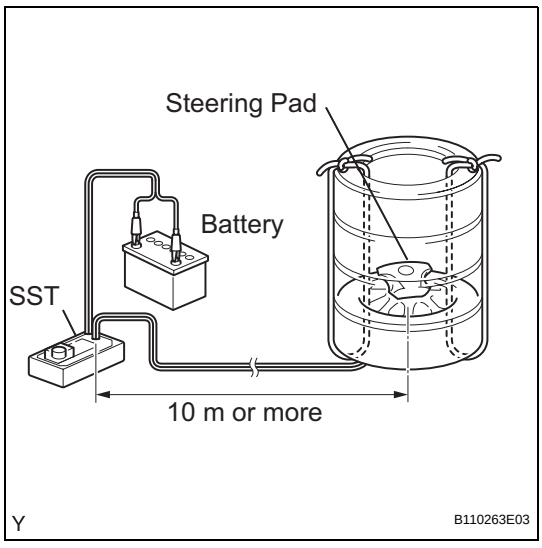
Y minimum = 650 mm (25.59 in.)



NOTICE:

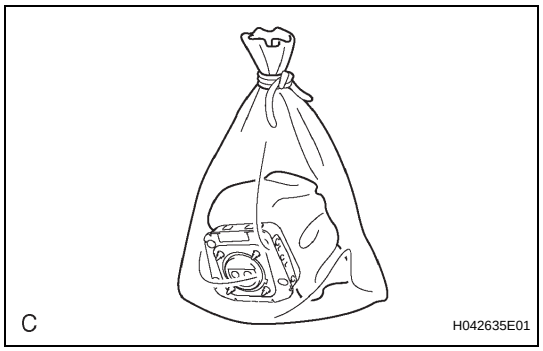
- **When dimension Y of the cardboard box exceeds the tire dimension, X should be the following size.**

  X minimum = 460 mm (18.11 in.) + width of tire
- **If using a cardboard box which is smaller than the specified size, the cardboard box will break during airbag deployment.**



RS

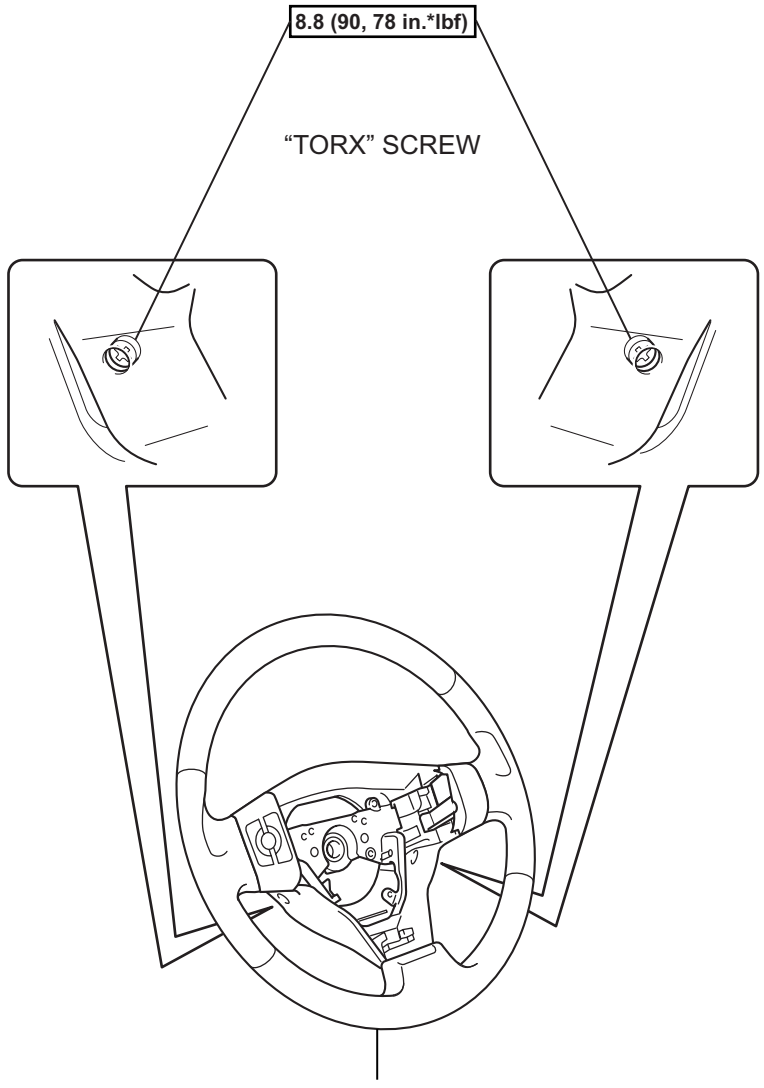
(2) Covering method using tires:
Place at least 3 tires (without disc wheels) on top of the tire (with disc wheel and steering pad).
Tire size:
Width minimum:
185 mm (7.28 in.)
Inner diameter minimum:
360 mm (14.17 in.)
CAUTION:
Do not use tires with disc wheels to cover the tire (with disc wheel and steering pad).
NOTICE:
- **Use tires that you are planning to throw away, as the airbag deployment may damage the tires.**
- **Do not place the SST connector under the tire as the connector may be damaged.**



(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harnesses are tight. If there is slack in a wire harness, the tires may come loose when the airbag is deployed.

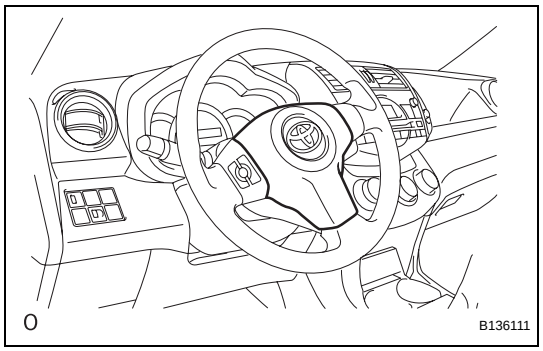
(f) Deploy the airbag.
(1) Connect the SST's red clip to the positive (+) battery terminal and the black clip to the negative (-) battery terminal.
(2) Check that no one is within a 10 m (33 ft.) radius of the steering pad.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tires.
HINT:
The airbag is deployed as the SST activation switch LED illuminates.

RS



(g) Dispose of the steering pad.
CAUTION:
- **The steering pad becomes extremely hot when the airbag is deployed. Do not touch it for at least 30 minutes after deployment.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the steering pad from the disc wheel.
(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

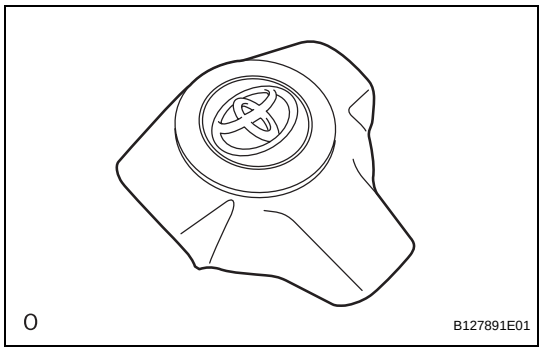


STEERING PAD

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

B136110E01

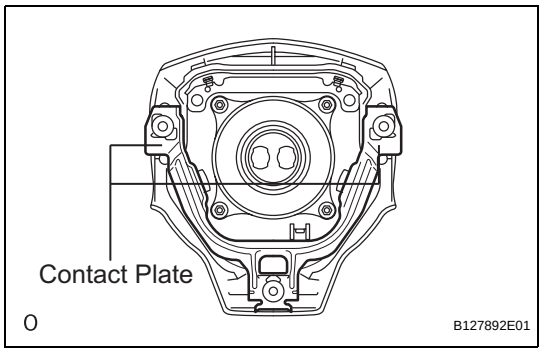


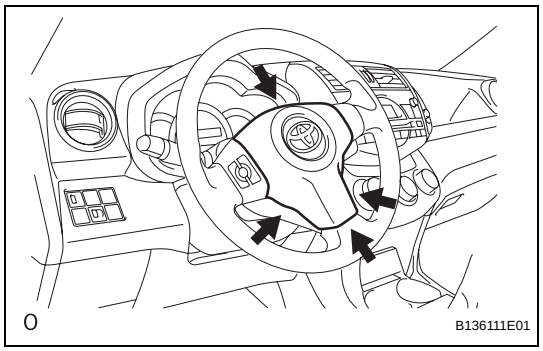
ON-VEHICLE INSPECTION

1. CHECK STEERING PAD ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)

(a) Perform a diagnostic system check (see page RS-49).

(b) With the steering pad (with airbag) installed on the vehicle, perform a visual check:
Check for cuts, cracks or discoloration on the steering pad outer surface and in the grooved portion.
If any of the defects mentioned above are present, replace the steering pad with a new one.
CAUTION:
For removal and installation of the steering pad, be sure to follow the correct procedure.





2. CHECK STEERING PAD ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG NOT DEPLOYED)

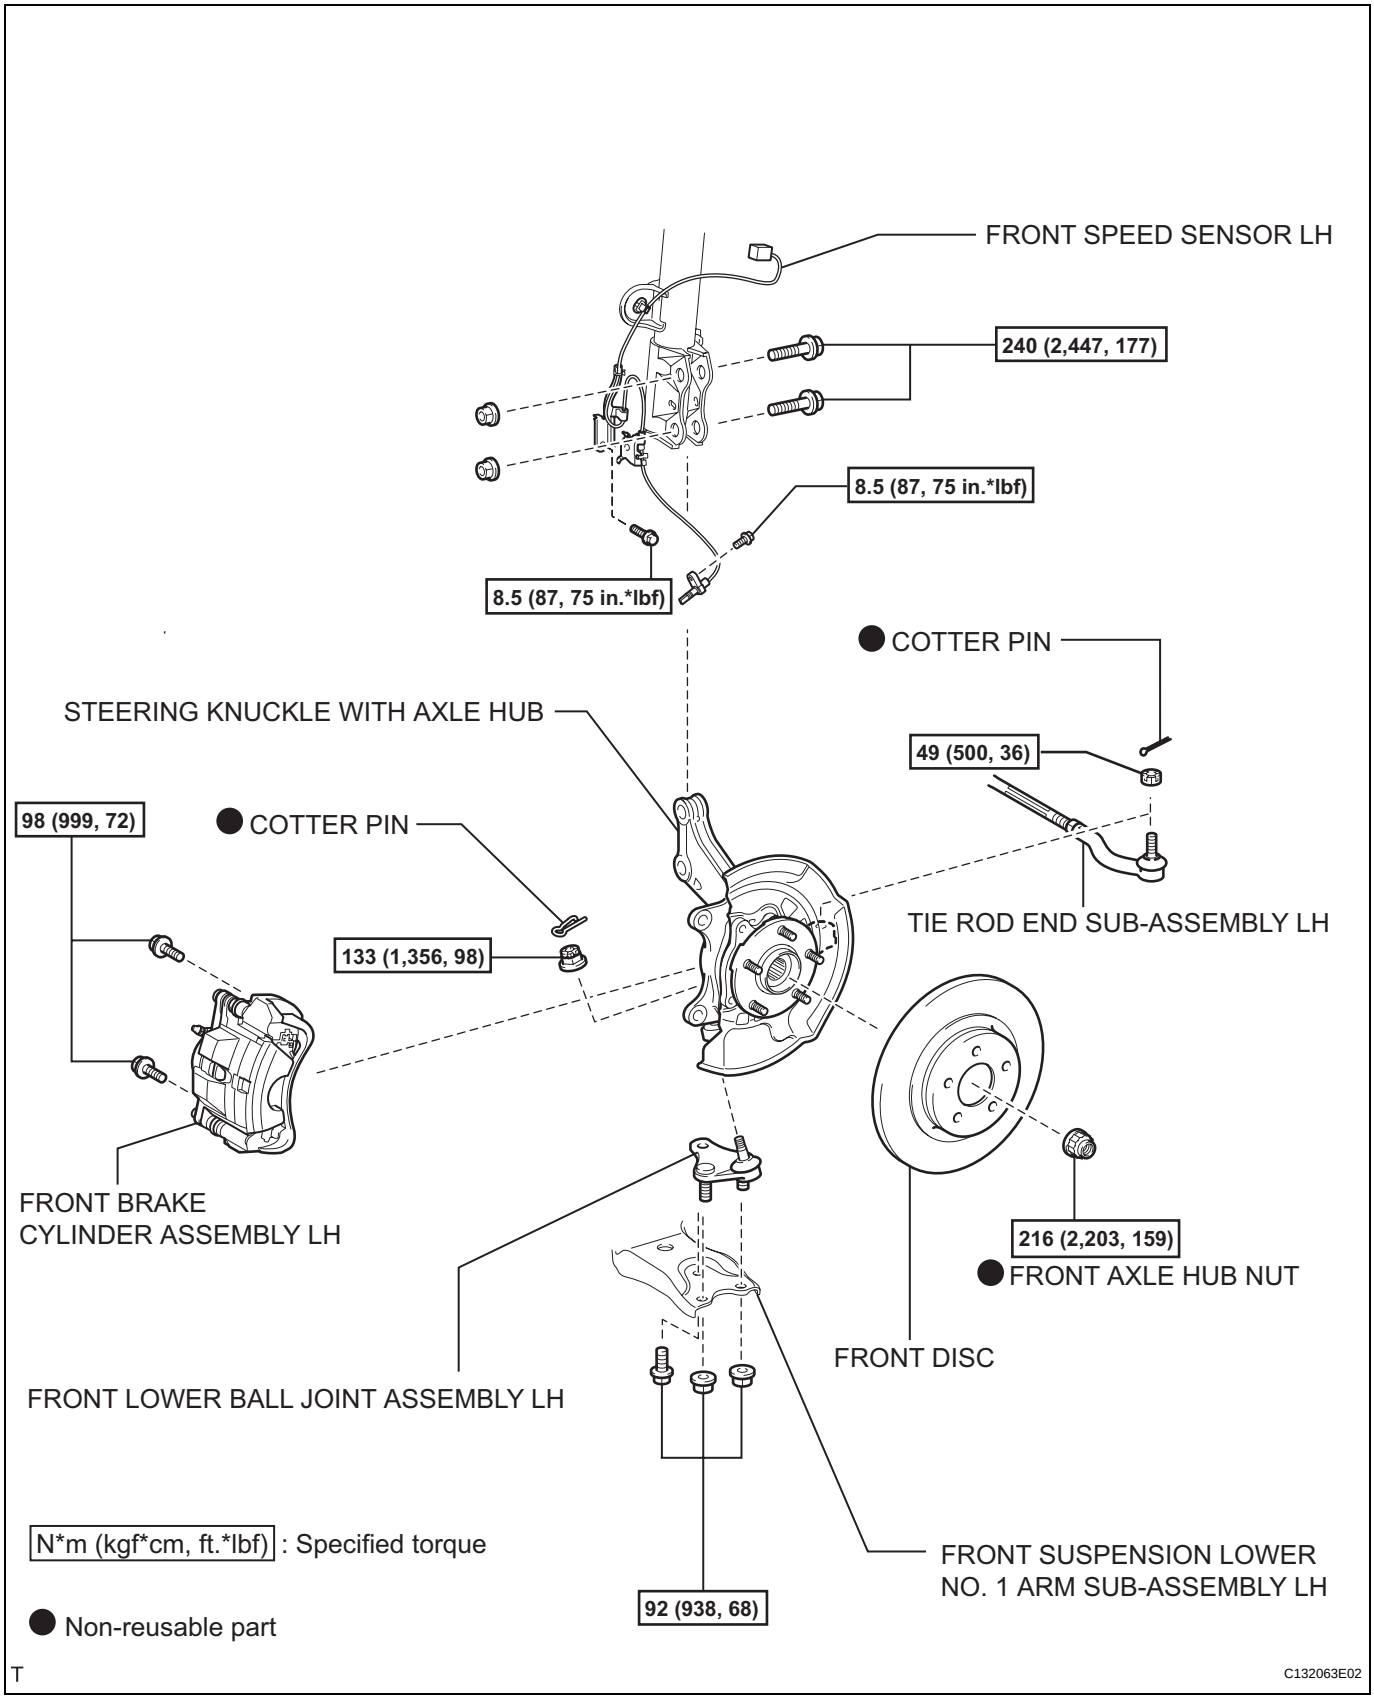
(a) Perform a diagnostic system check (see page RS-49).

(b) With the steering pad (with airbag) removed from the vehicle, perform a visual check:
- Check for cuts, cracks or discoloration on the steering pad outer surface and in the grooved portion.
- Check for cuts and cracks in the wire harness, and chipping on the connectors.
- Check for deformation on the steering wheel.
- Check for deformation of the steering pad contact plates.

If any of the defects mentioned above are present, replace the steering pad with a new one.
CAUTION:
For removal and installation of the steering pad, be sure to follow the correct procedure.
HINT:
- If the steering pad contact plates are deformed, never repair them. Always replace the steering pad with a new one.
- There should be no interference between the steering pad and steering wheel, and the clearance should be uniform all the way around when the new steering pad is installed on the steering wheel.

RS

INSTALLATION



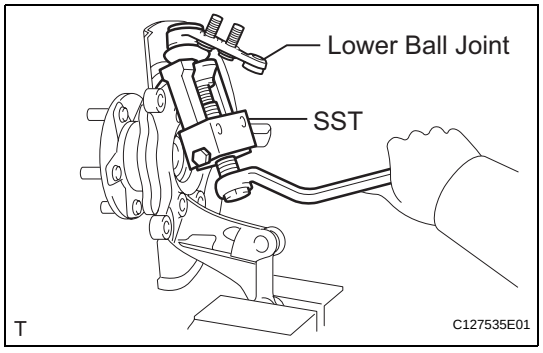
HINT:

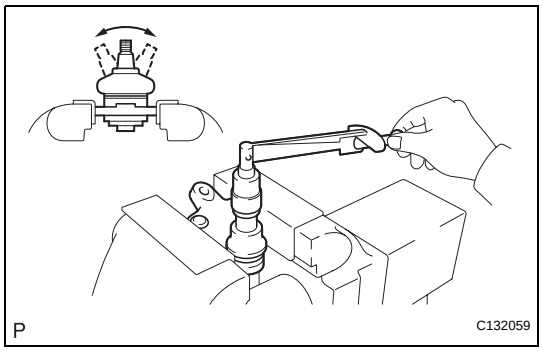
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL FRONT LOWER BALL JOINT ASSEMBLY LH**
   (a) Install the ball joint with the 2 bolts and nut to the lower arm.
   Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)
   (b) Install the lower ball joint with the nut to the steering knuckle.
   Torque: 133 N*m (1,360 kgf*cm, 98 ft.*lbf)
   (c) Install a new cotter pin.
   If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.
2. **INSTALL STEERING KNUCKLE WITH AXLE HUB (See page AH-9)**
3. **CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page AH-10)**
4. **CONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-45)**
5. **INSTALL FRONT DISC (See page BR-43)**
6. **INSTALL FRONT DISC BRAKE CYLINDER ASSEMBLY LH (See page BR-46)**
7. **INSTALL FRONT AXLE HUB NUT (See page AH-10)**
8. **INSTALL FRONT SPEED SENSOR LH (See page BC-193)**
9. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
10. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (a) Inspect and adjust the front wheel alignment (see page SP-3).

FRONT LOWER BALL JOINT

COMPONENTS





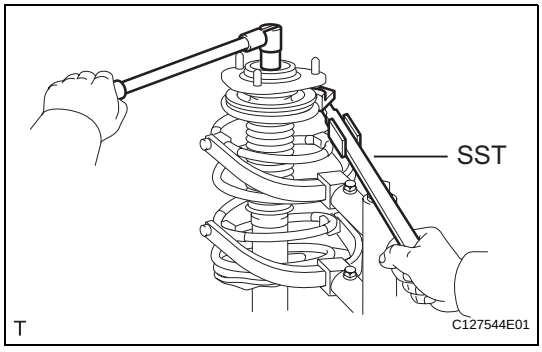
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

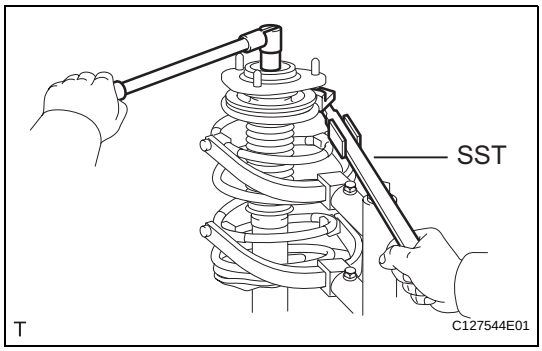
1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT SPEED SENSOR LH (for 2WD) (See page BC-191)**
3. **REMOVE FRONT BRAKE CYLINDER ASSEMBLY LH (See page BR-40)**
4. **REMOVE FRONT DISC (See page BR-42)**
5. **REMOVE FRONT AXLE HUB NUT (See page AH-6)**
6. **DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH (See page AH-7)**
7. **DISCONNECT TIE ROD END SUB-ASSEMBLY LH (See page PS-42)**
8. **REMOVE STEERING KNUCKLE WITH AXLE HUB (See page AH-7)**
9. **REMOVE FRONT LOWER BALL JOINT ASSEMBLY LH**
   (a) Remove the cotter pin and nut.
   (b) Using SST, remove the lower ball joint.
   SST 09628-62011

INSPECTION



1. **INSPECT FRONT LOWER BALL JOINT ASSEMBLY LH**
   (a) As shown in the illustration, move the ball joint stud back and forth 5 times before installing the nut.
   (b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the fifth turn.
   Standard turning torque:
   0.98 to 3.43 N*m (10 to 35 kgf*cm, 9 to 30 in.*lbf) or less
   (c) Check for any cracks and grease leaks on the ball joint dust cover.

DISASSEMBLY



HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT SUSPENSION SUPPORT PLATE LH
(a) Remove the plate from the shock absorber.

2. REMOVE FRONT SUSPENSION SUPPORT DUST COVER LH
(a) Using a screwdriver, remove the dust cover from the suspension support.
HINT:
Tape the screwdriver tip before use.

3. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Install 2 nuts and 2 bolts to the bracket at the lower portion of the shock absorber and secure it with a vise.
(b) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape on the coil spring.
NOTICE:
- **When holding the shock absorber with the coil spring removed, do not hold it by the spring lower seat. Also, do not knock the spring lower seat.**
- **Do not use an impact wrench which will damage SST.**

(c) Using SST to hold the spring upper seat, remove the nut.
SST 09729-22031

4. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Remove the suspension support from the shock absorber.

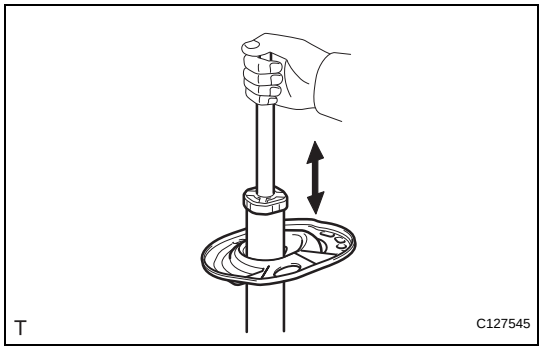
5. REMOVE FRONT SUSPENSION SUPPORT LH DUST SEAL
(a) Remove the dust seal from the shock absorber.

6. REMOVE FRONT COIL SPRING SEAT UPPER LH
(a) Remove the seat upper from the shock absorber.

7. REMOVE FRONT COIL SPRING INSULATOR UPPER LH
(a) Remove the insulator upper from the shock absorber.

8. REMOVE FRONT SPRING BUMPER LH
(a) Disengage the spring bumper from the spring seat.

9. REMOVE FRONT COIL SPRING LH



(a) Remove the coil spring from the shock absorber.

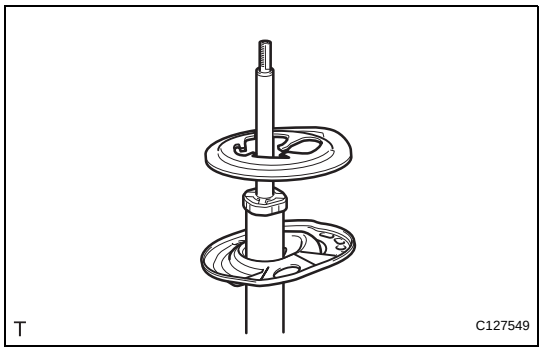
(b) Remove SST from the coil spring.

10. REMOVE FRONT COIL SPRING INSULATOR LOWER LH

(a) Remove the insulator lower from the shock absorber.

INSPECTION

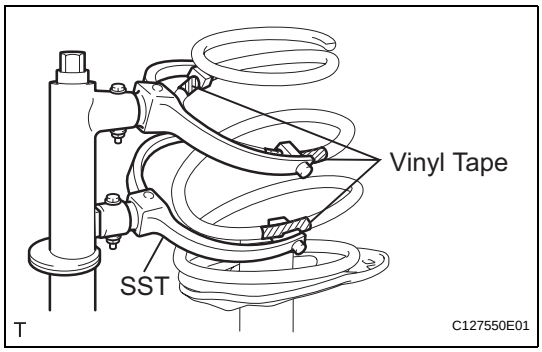
1. INSPECT FRONT SHOCK ABSORBER ASSEMBLY LH



(a) Compress and extend the shock absorber rod 4 times or more. Check that there is no abnormal resistance or unusual sound during the operation. If there is any abnormality, replace the shock absorber assembly with a new one.

NOTICE:

When disposing of the shock absorber, see DISPOSAL (see page SP-13).

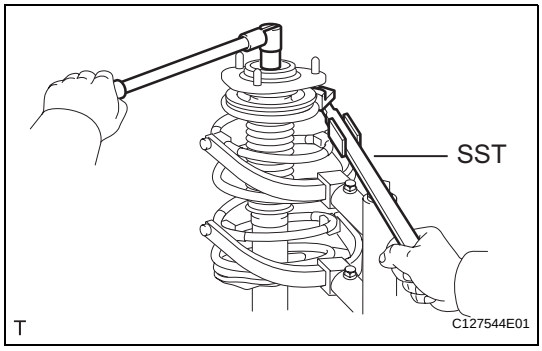


REASSEMBLY

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

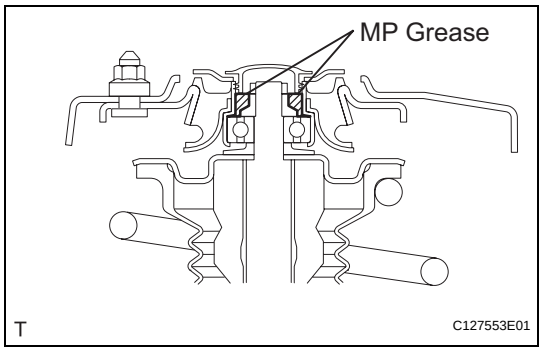
1. INSTALL FRONT COIL SPRING INSULATOR LOWER LH
(a) Install the insulator lower to the shock absorber.

2. INSTALL FRONT SPRING BUMPER LH
(a) Engage the spring bumper to the spring seat.



3. INSTALL FRONT COIL SPRING LH
(a) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape around the coil spring.
NOTICE:
Do not use an impact wrench which will damage SST.
(b) Install the coil spring to the shock absorber.
HINT:
Fit the lower end of the coil spring to the gap of the lower spring seat.

4. INSTALL FRONT COIL SPRING INSULATOR UPPER LH
(a) Install the insulator upper to the shock absorber.



5. INSTALL FRONT COIL SPRING SEAT UPPER LH
(a) Install the seat upper to the shock absorber.

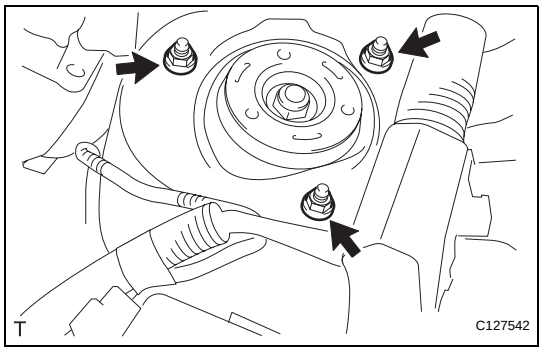
6. INSTALL FRONT SUSPENSION SUPPORT LH DUST SEAL
(a) Install the dust seal to the shock absorber.

7. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Install the suspension support to the shock absorber.

8. INSTALL FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Using SST to hold the spring upper seat, install a new nut.
SST 09729-22031
Torque: 47 N*m (475 kgf*cm, 34 ft.*lbf)
(b) Remove SST.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

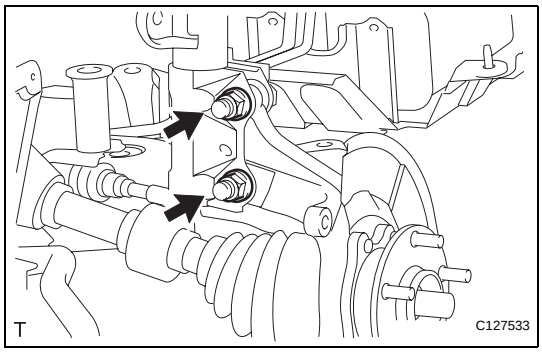
(c) Pack the suspension support with MP grease.

9. INSTALL FRONT SUSPENSION SUPPORT DUST COVER LH



(a) Install the dust cover to the shock absorber.

10. INSTALL FRONT SUSPENSION SUPPORT PLATE LH



(a) Install the support plate to the shock absorber with coil spring.

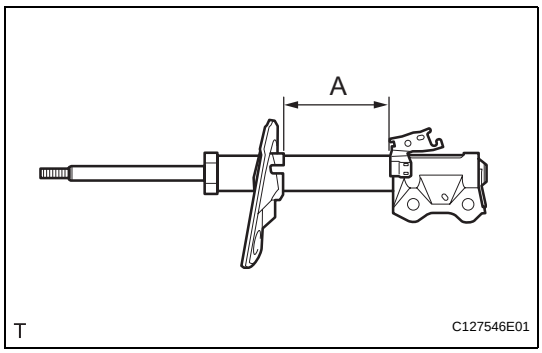
INSTALLATION

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING LH**
   (a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.
   Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

   (b) Install the front shock absorber with coil spring to the steering knuckle with the 2 bolt and 2 nuts.
   Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)
   NOTICE:
   Do not tighten the bolts.

2. **CONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)**



3. **CONNECT FRONT SPEED SENSOR LH (See page BC-193)**

4. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

5. **STABILIZE SUSPENSION**
   (a) Lower the vehicle.
   (b) Press down on the vehicle several times to stabilize the suspension.

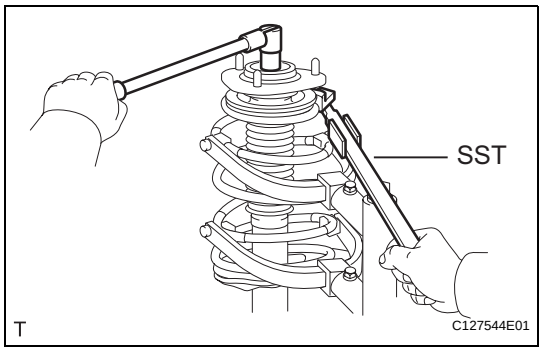
6. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
   (a) Inspect and adjust the front wheel alignment (see page SP-3).

DISPOSAL

1. **DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY LH**
   (a) Fully extend the shock absorber piston rod, and clamp it in a vise at an angle.
   (b) Using a drill or similar tool, gradually make a hole in area A to discharge the gas inside of the absorber.
   CAUTION:
   As metal debris may be blown outward by the gas, you must
   - Wear protective glasses.
   - Cover the area being cut.

   NOTICE:
   The gas is colorless and harmless.

DISASSEMBLY



HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT SUSPENSION SUPPORT PLATE LH
(a) Remove the plate from the shock absorber.

2. REMOVE FRONT SUSPENSION SUPPORT DUST COVER LH
(a) Using a screwdriver, remove the dust cover from the suspension support.
HINT:
Tape the screwdriver tip before use.

3. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Install 2 nuts and 2 bolts to the bracket at the lower portion of the shock absorber and secure it with a vise.
(b) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape on the coil spring.
NOTICE:
- **When holding the shock absorber with the coil spring removed, do not hold it by the spring lower seat. Also, do not knock the spring lower seat.**
- **Do not use an impact wrench which will damage SST.**

(c) Using SST to hold the suspension support, remove the nut.
SST 09729-22031

4. REMOVE COLLAR
(a) Remove the collar from the suspension support.

5. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Remove the suspension support from the shock absorber.

6. REMOVE STRUT MOUNTING BEARING LH
(a) Remove the mounting bearing from the suspension support.
NOTICE:
- **When removing the bearing, the suspension support may become stuck. Use a screwdriver or equivalent to remove the bearing.**
- **Make sure not to use excessive force when removing the bearing as it may come apart.**

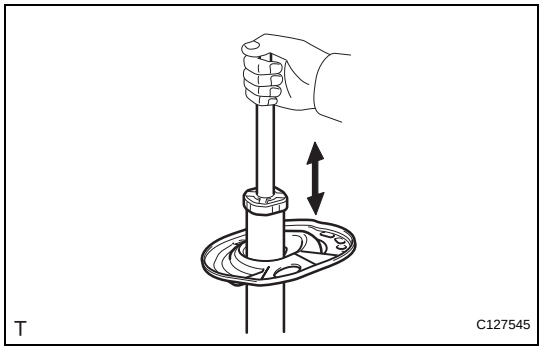
7. REMOVE FRONT COIL SPRING INSULATOR UPPER LH

(a) Remove the insulator upper from the shock absorber.

8. REMOVE FRONT SPRING BUMPER LH

(a) Remove the spring bumper from the shock absorber.

9. REMOVE FRONT COIL SPRING LH



(a) Remove the coil spring from the shock absorber.

(b) Remove SST from the coil spring.

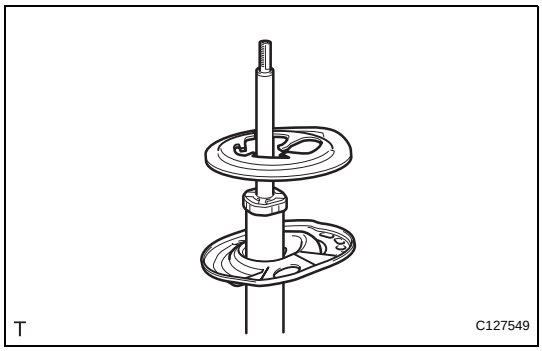
10. REMOVE FRONT COIL SPRING INSULATOR LOWER LH

(a) Remove the insulator lower from the shock absorber.

INSPECTION

1. INSPECT FRONT SHOCK ABSORBER ASSEMBLY LH

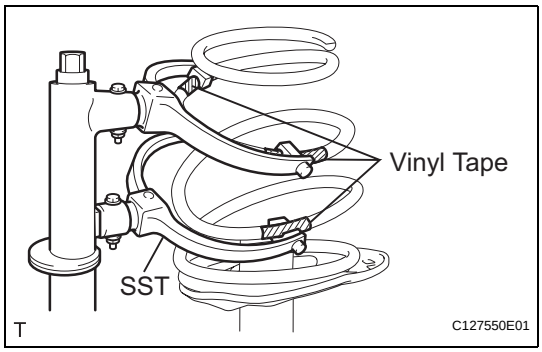
(a) Compress and extend the shock absorber rod 4 times or more. Check that there is no abnormal resistance or unusual sound during the operation. If there is any abnormality, replace the shock absorber assembly with a new one.



NOTICE:

When disposing of the shock absorber, see DISPOSAL (see page SP-19).

SP

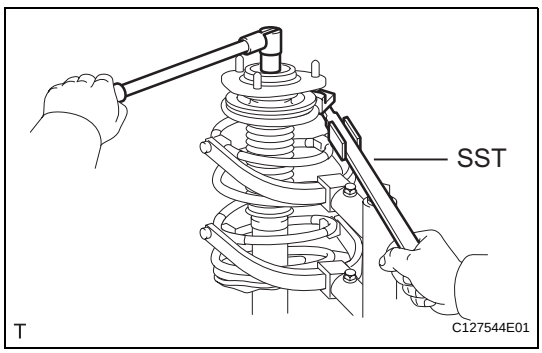


REASSEMBLY

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT COIL SPRING INSULATOR LOWER LH
(a) Install the insulator lower to the shock absorber.

2. INSTALL FRONT SPRING BUMPER LH
(a) Install the spring bumper to the shock absorber.



3. INSTALL FRONT COIL SPRING LH
(a) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape around the coil spring.
NOTICE:
Do not use an impact wrench which will damage SST.
(b) Install the coil spring to the shock absorber.
HINT:
Fit the lower end of the coil spring to the gap of the lower spring seat.

4. INSTALL FRONT COIL SPRING INSULATOR UPPER LH
(a) Install the insulator upper to the shock absorber.

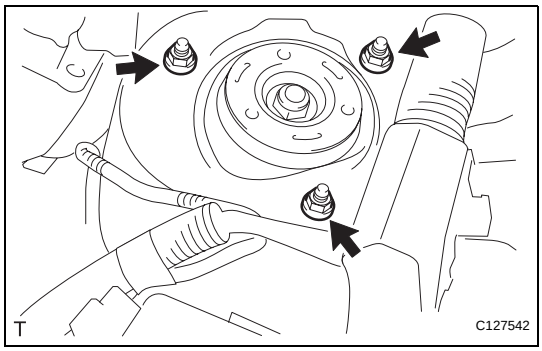
5. INSTALL STRUT MOUNTING BEARING LH
(a) Install the mounting bearing to the insulator upper.

6. INSTALL COLLAR
(a) Install the collar to the suspension support side.

7. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Install the suspension support to the shock absorber.

8. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Using SST to hold the spring upper seat, install a new nut.
SST 09729-22031
(b) Remove SST.
SST 09727-30021 (09727-00021, 09727-00031)
NOTICE:
When removing SST, make sure that the suspension support is not in an inclined position, as the bearing may come apart.

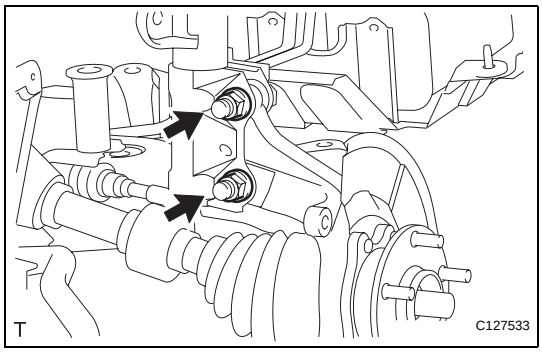
9. INSTALL FRONT SUSPENSION SUPPORT DUST COVER LH



(a) Install the dust cover to the shock absorber.

10. INSTALL FRONT SUSPENSION SUPPORT PLATE LH

(a) Install the support plate to the shock absorber with coil spring.



INSTALLATION

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

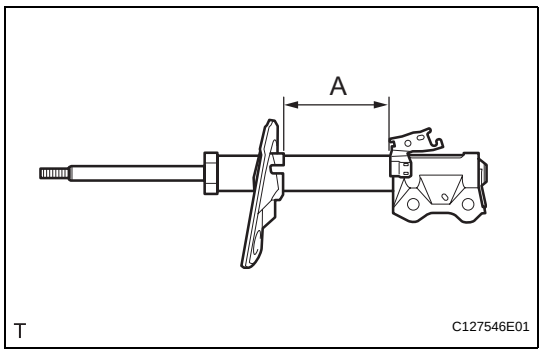
(a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(b) Install the front shock absorber with coil spring to the steering knuckle with the 2 bolt and 2 nuts.
Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)
NOTICE:
Do not tighten the bolts.

2. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)

3. INSTALL FRONT SPEED SENSOR LH (See page BC-193)

4. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



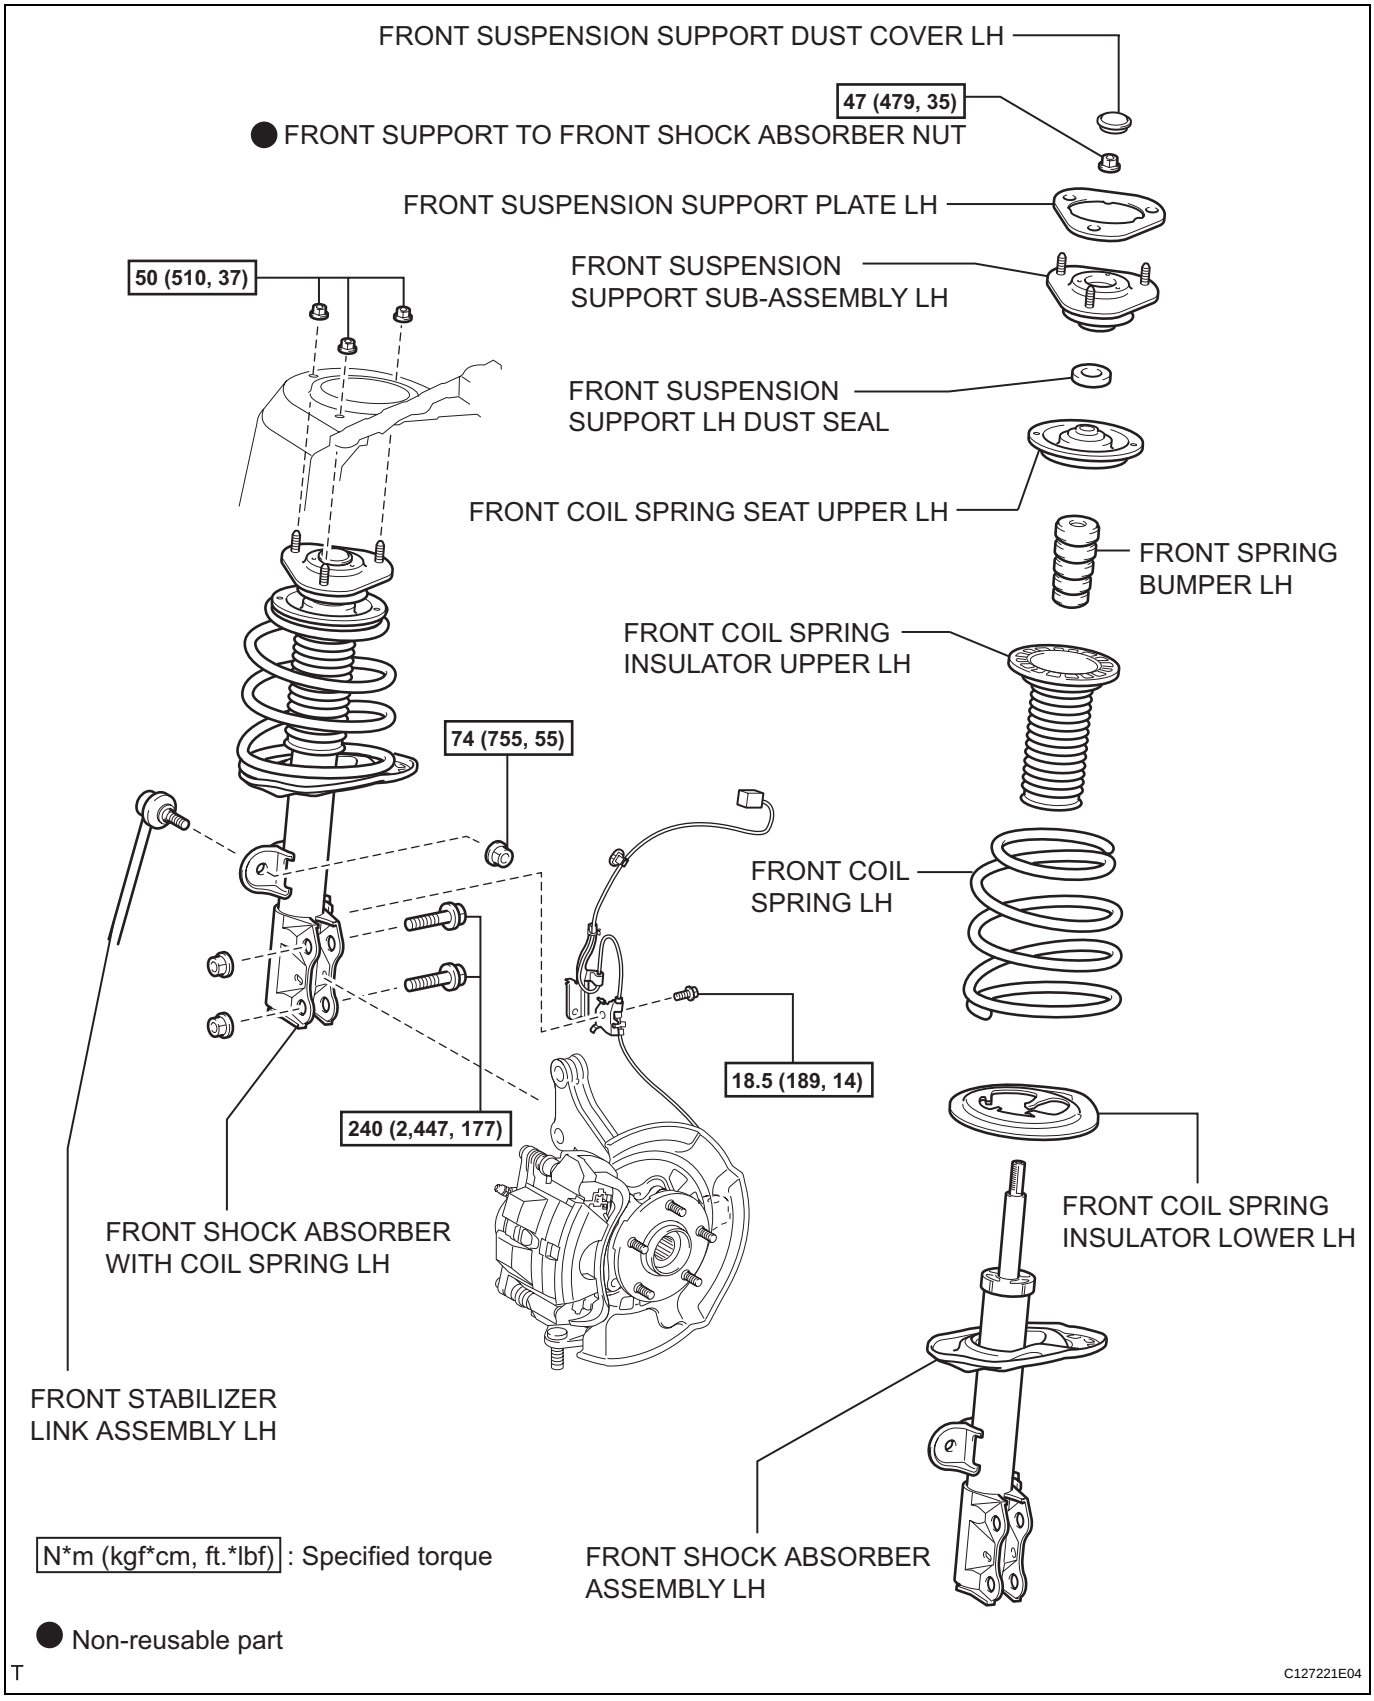
5. STABILIZE SUSPENSION

(a) Lower the vehicle.
(b) Press down on the vehicle several times to stabilize the suspension.

6. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

(a) Inspect and adjust the front wheel alignment (see page SP-3).

DISPOSAL



1. DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY LH

(a) Fully extend the shock absorber piston rod, and clamp it in a vise at an angle.
(b) Using a drill or similar tool, gradually make a hole in area A to discharge the gas inside of the absorber.
CAUTION:
As metal debris may be blown outward by the gas, you must.
- Wear protective glasses.
- Cover the area being cut.

NOTICE:
The gas is colorless and harmless.

FRONT SHOCK ABSORBER WITH COIL SPRING

COMPONENTS

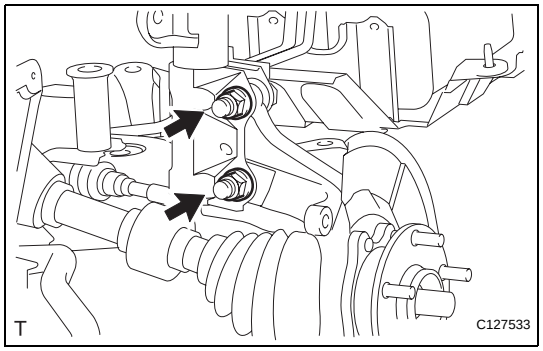
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

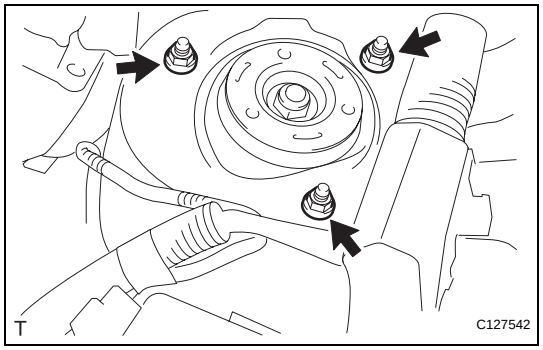
1. REMOVE FRONT WHEEL

2. DISCONNECT FRONT SPEED SENSOR LH



3. DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH

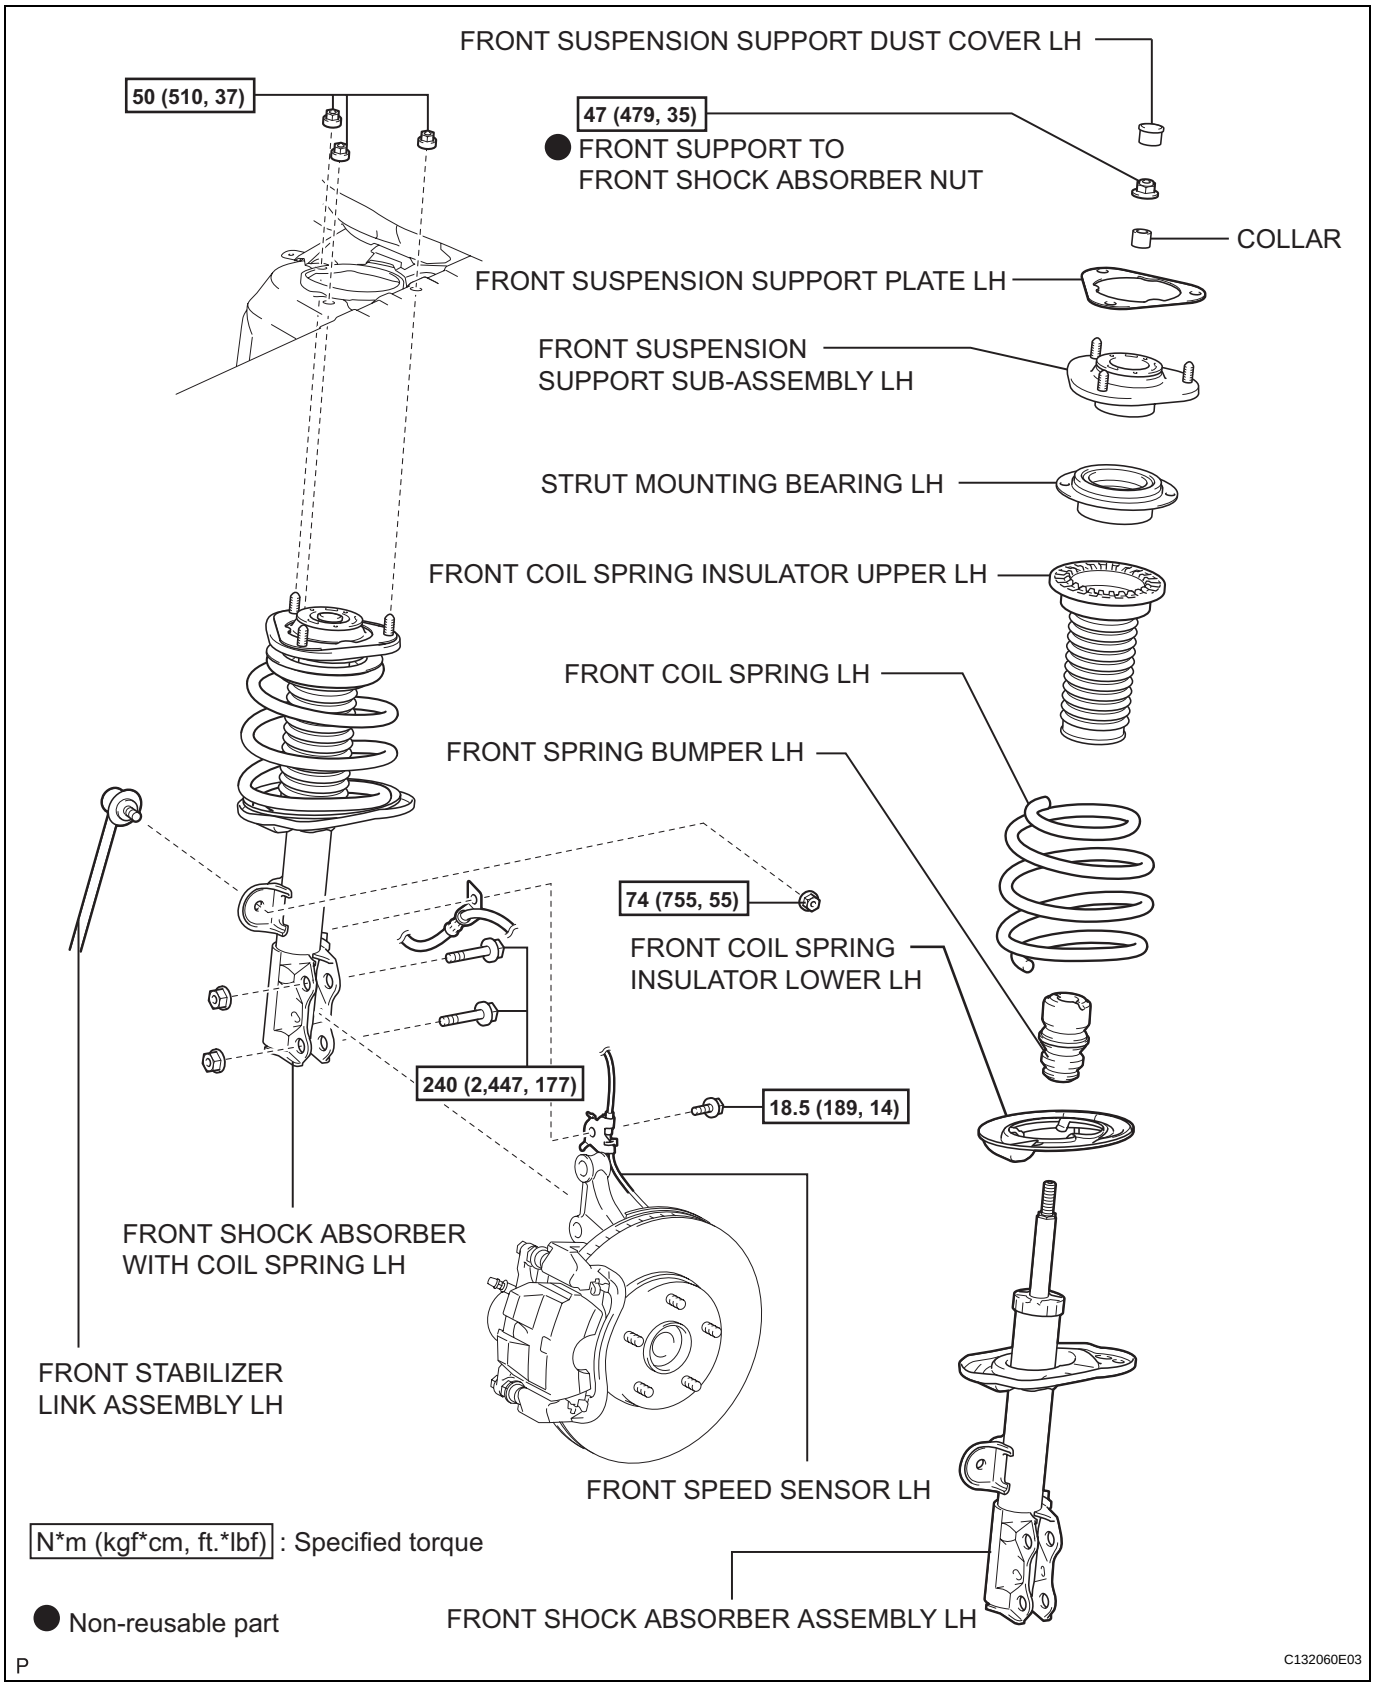
4. REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING LH



(a) Remove the 2 bolts and 2 nuts, and disconnect the shock absorber from the steering knuckle.

HINT:

While fixing the nuts in place, loosen and remove the bolts.

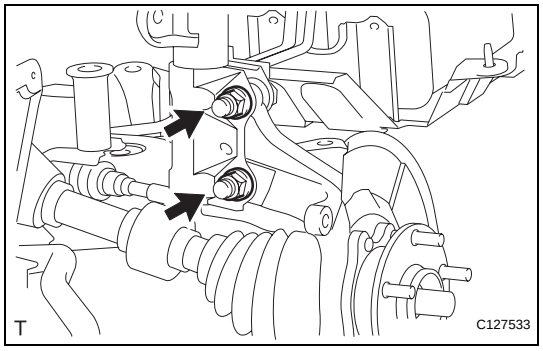


(b) Remove the 3 nuts and shock absorber with coil spring.

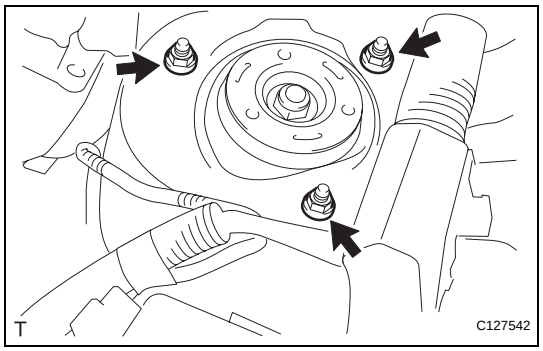
SP

FRONT SHOCK ABSORBER WITH COIL SPRING (for Sport Package)

COMPONENTS



REMOVAL

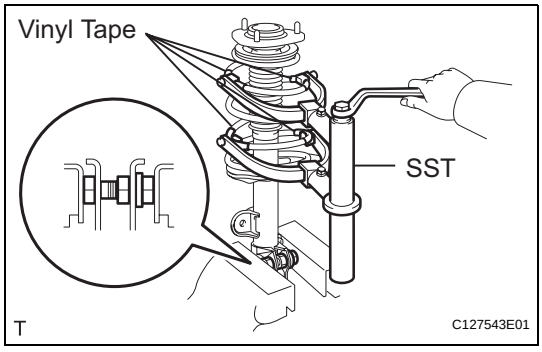


HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

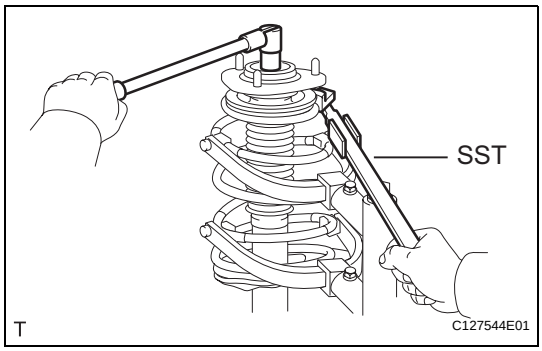
1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT SPEED SENSOR LH (See page BC-191)**
3. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)**
4. **REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING LH**
   (a) Remove the 2 bolts and 2 nuts, and disconnect the shock absorber from the steering knuckle.
   HINT:
   While fixing the nuts in place, loosen and remove the bolts.

   (b) Remove the 3 nuts and shock absorber with coil spring.



SP

DISASSEMBLY



HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT SUSPENSION SUPPORT PLATE LH
(a) Remove the plate from the shock absorber.

2. REMOVE FRONT SUSPENSION SUPPORT DUST COVER LH
(a) Using a screwdriver, remove the dust cover from the suspension support.
HINT:
Tape the screwdriver tip before use.

3. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Install 2 nuts and 2 bolts to the bracket at the lower portion of the shock absorber and secure it with a vise.
(b) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape on the coil spring.
NOTICE:
- **When holding the shock absorber with the coil spring removed, do not hold it by the spring lower seat. Also, do not knock the spring lower seat.**
- **Do not use an impact wrench which will damage SST.**

(c) Using SST to hold the suspension support, remove the nut.
SST 09729-22031

4. REMOVE COLLAR
(a) Remove the collar from the suspension support.

5. REMOVE FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Remove the suspension support from the shock absorber.

6. REMOVE STRUT MOUNTING BEARING LH
(a) Remove the mounting bearing from the suspension support.
NOTICE:
- **When removing the bearing, the suspension support may become stuck. Use a screwdriver or equivalent to remove the bearing.**
- **Make sure not to use excessive force when removing the bearing as it may come apart.**

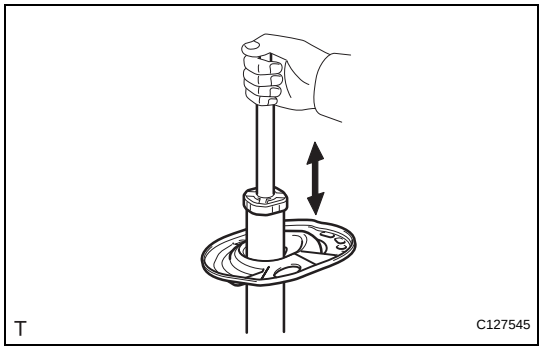
7. REMOVE FRONT COIL SPRING INSULATOR UPPER LH

(a) Remove the insulator upper from the shock absorber.

8. REMOVE FRONT SPRING BUMPER LH

(a) Remove the spring bumper from the shock absorber.

9. REMOVE FRONT COIL SPRING LH



(a) Remove the coil spring from the shock absorber.

(b) Remove SST from the coil spring.

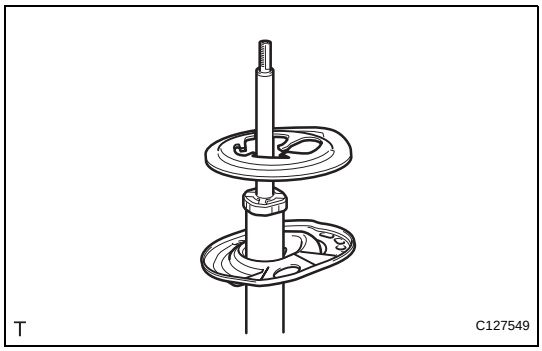
10. REMOVE FRONT COIL SPRING INSULATOR LOWER LH

(a) Remove the insulator lower from the shock absorber.

INSPECTION

1. INSPECT FRONT SHOCK ABSORBER ASSEMBLY LH

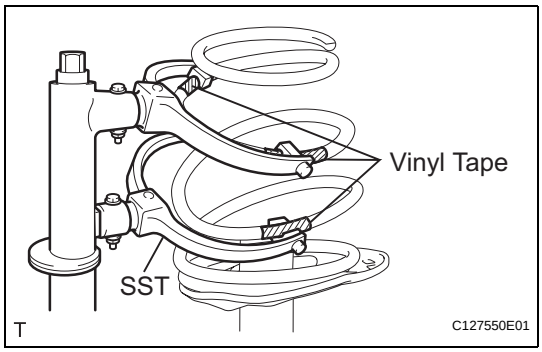
(a) Compress and extend the shock absorber rod 4 times or more. Check that there is no abnormal resistance or unusual sound during the operation. If there is any abnormality, replace the shock absorber assembly with a new one.



NOTICE:

When disposing of the shock absorber, see DISPOSAL (see page SP-19).

SP

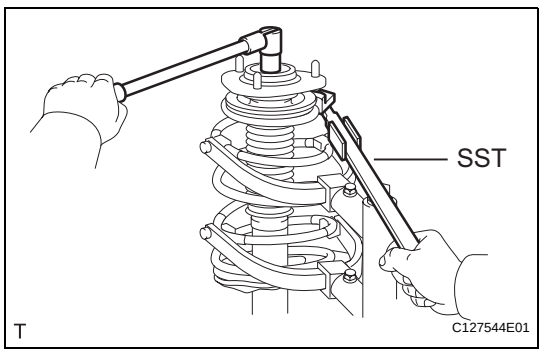


REASSEMBLY

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT COIL SPRING INSULATOR LOWER LH
(a) Install the insulator lower to the shock absorber.

2. INSTALL FRONT SPRING BUMPER LH
(a) Install the spring bumper to the shock absorber.



3. INSTALL FRONT COIL SPRING LH
(a) Using SST, compress the coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
HINT:
To prevent the coil spring from being damaged, wind vinyl tape around the coil spring.
NOTICE:
Do not use an impact wrench which will damage SST.
(b) Install the coil spring to the shock absorber.
HINT:
Fit the lower end of the coil spring to the gap of the lower spring seat.

4. INSTALL FRONT COIL SPRING INSULATOR UPPER LH
(a) Install the insulator upper to the shock absorber.

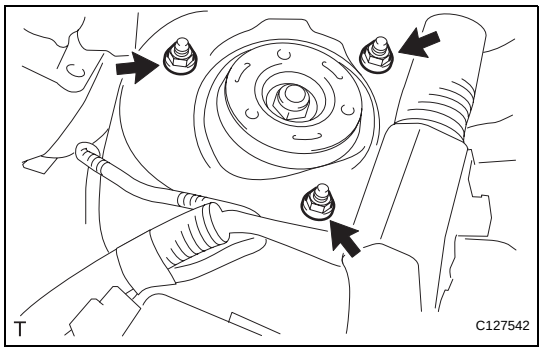
5. INSTALL STRUT MOUNTING BEARING LH
(a) Install the mounting bearing to the insulator upper.

6. INSTALL COLLAR
(a) Install the collar to the suspension support side.

7. INSTALL FRONT SUSPENSION SUPPORT SUB-ASSEMBLY LH
(a) Install the suspension support to the shock absorber.

8. REMOVE FRONT SUPPORT TO FRONT SHOCK ABSORBER NUT
(a) Using SST to hold the spring upper seat, install a new nut.
SST 09729-22031
(b) Remove SST.
SST 09727-30021 (09727-00021, 09727-00031)
NOTICE:
When removing SST, make sure that the suspension support is not in an inclined position, as the bearing may come apart.

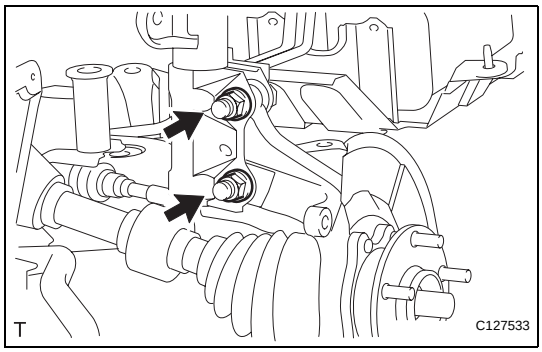
9. INSTALL FRONT SUSPENSION SUPPORT DUST COVER LH



(a) Install the dust cover to the shock absorber.

10. INSTALL FRONT SUSPENSION SUPPORT PLATE LH

(a) Install the support plate to the shock absorber with coil spring.



INSTALLATION

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

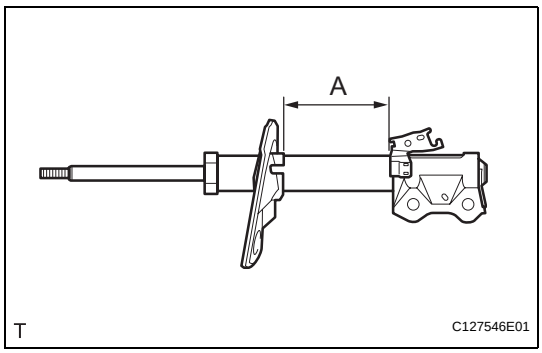
(a) Install the front shock absorber with coil spring (upper side) with the 3 nuts.
Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(b) Install the front shock absorber with coil spring to the steering knuckle with the 2 bolt and 2 nuts.
Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)
NOTICE:
Do not tighten the bolts.

2. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-31)

3. INSTALL FRONT SPEED SENSOR LH (See page BC-193)

4. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



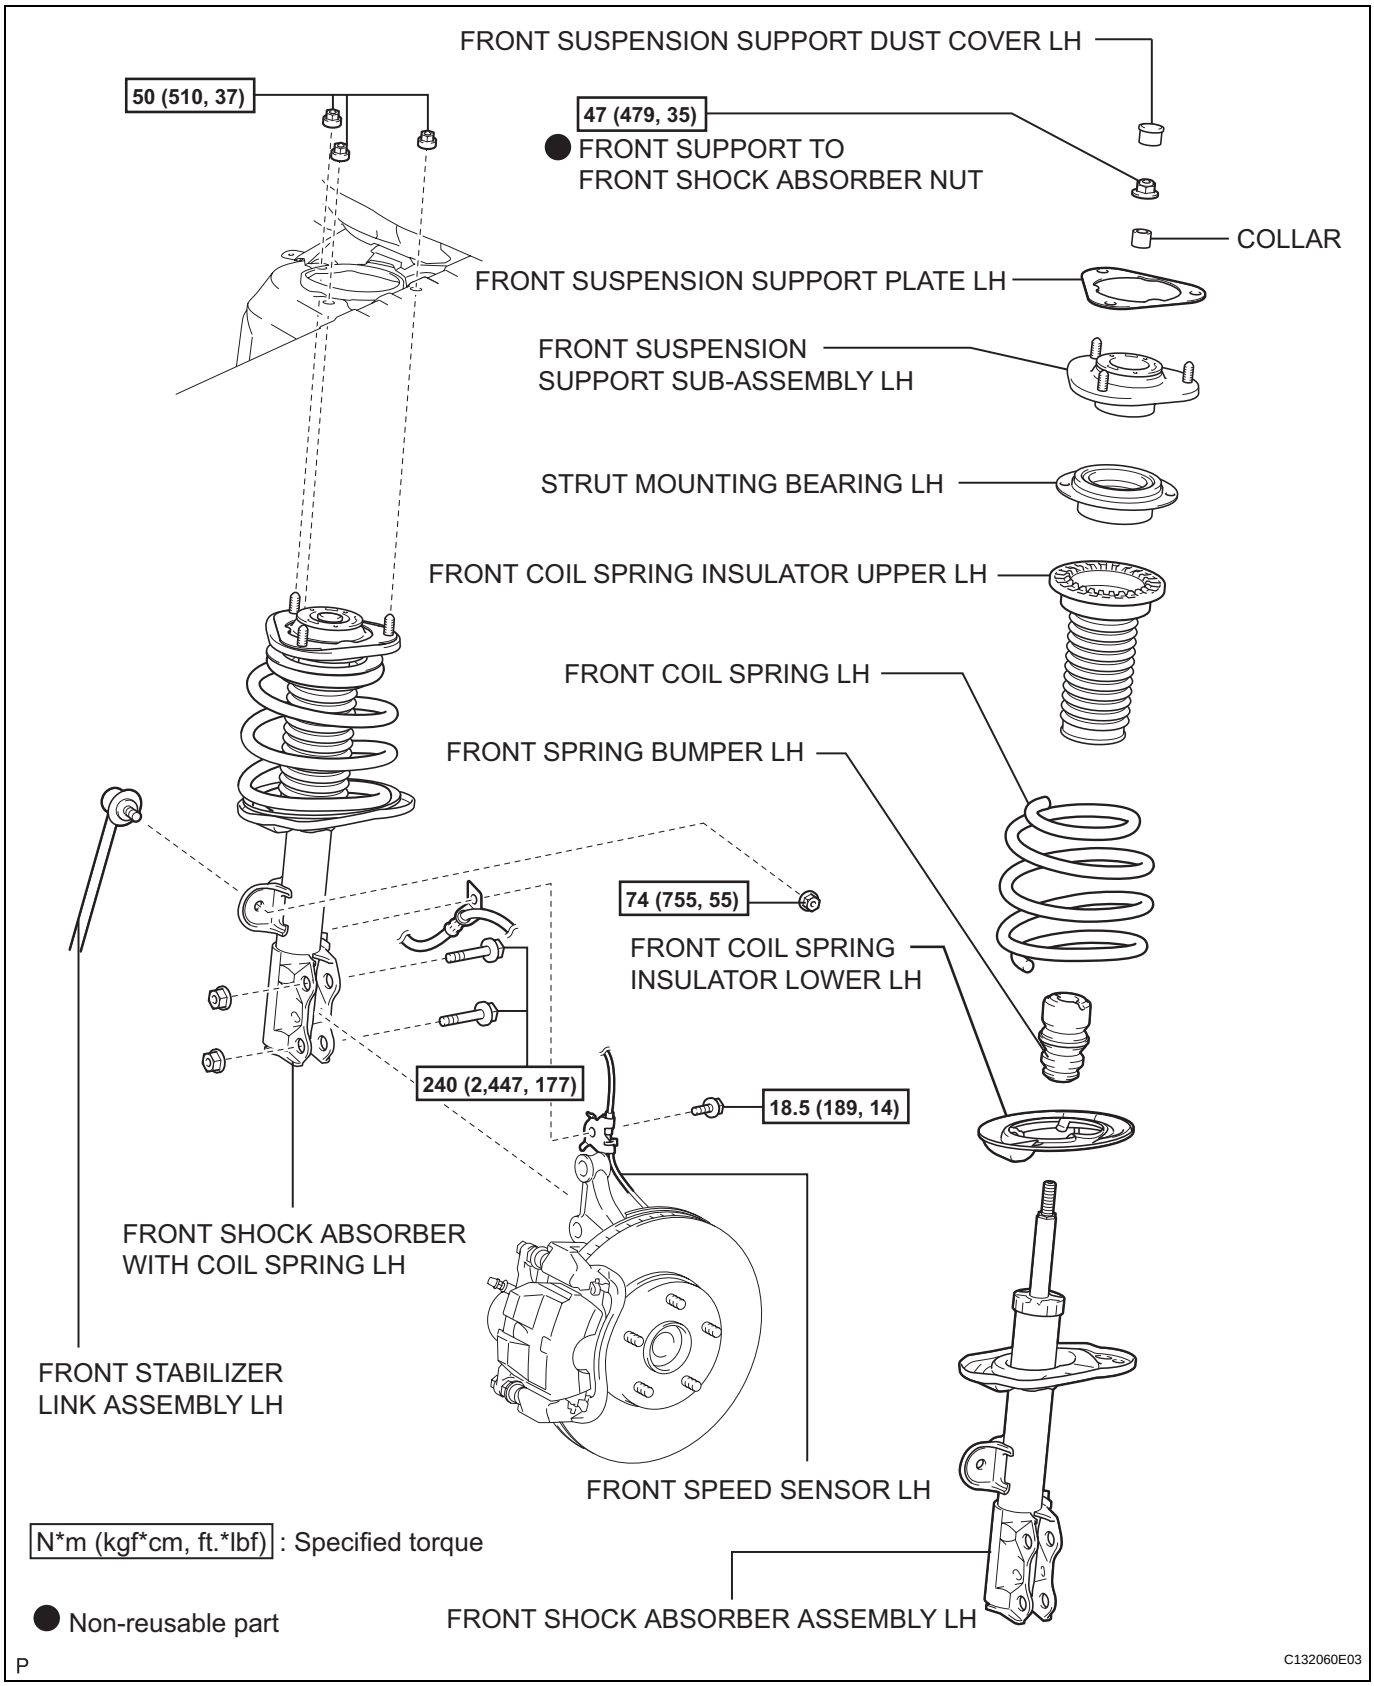
5. STABILIZE SUSPENSION

(a) Lower the vehicle.
(b) Press down on the vehicle several times to stabilize the suspension.

6. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

(a) Inspect and adjust the front wheel alignment (see page SP-3).

DISPOSAL



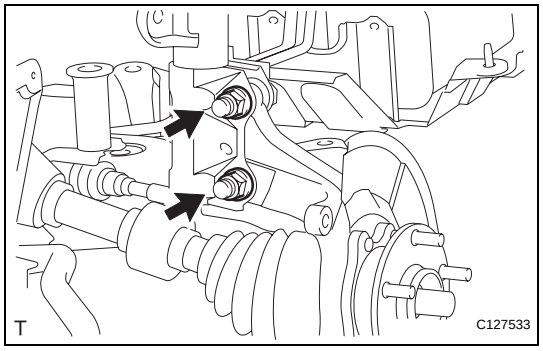
1. DISPOSE OF FRONT SHOCK ABSORBER ASSEMBLY LH

(a) Fully extend the shock absorber piston rod, and clamp it in a vise at an angle.
(b) Using a drill or similar tool, gradually make a hole in area A to discharge the gas inside of the absorber.
CAUTION:
As metal debris may be blown outward by the gas, you must.
- Wear protective glasses.
- Cover the area being cut.

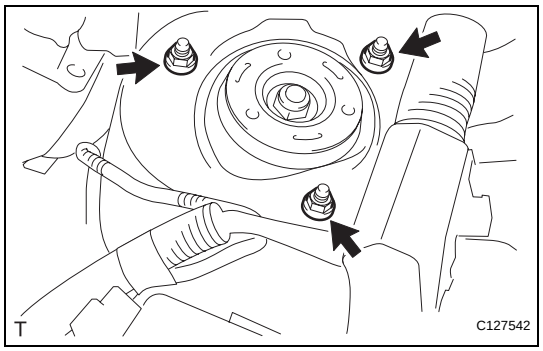
NOTICE:
The gas is colorless and harmless.

FRONT SHOCK ABSORBER WITH COIL SPRING (for Sport Package)

COMPONENTS



REMOVAL



HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

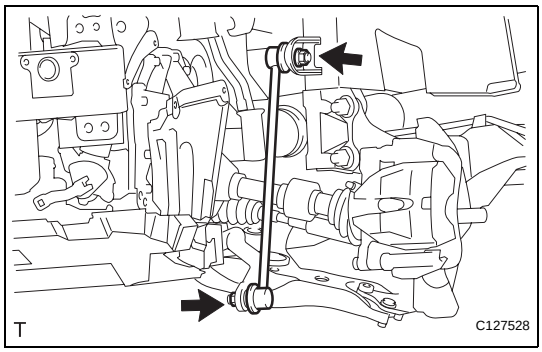
1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT SPEED SENSOR LH (See page BC-191)**
3. **REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)**
4. **REMOVE FRONT SHOCK ABSORBER WITH COIL SPRING LH**
   (a) Remove the 2 bolts and 2 nuts, and disconnect the shock absorber from the steering knuckle.
   HINT:
   While fixing the nuts in place, loosen and remove the bolts.

   (b) Remove the 3 nuts and shock absorber with coil spring.

SP

FRONT STABILIZER BAR

COMPONENTS



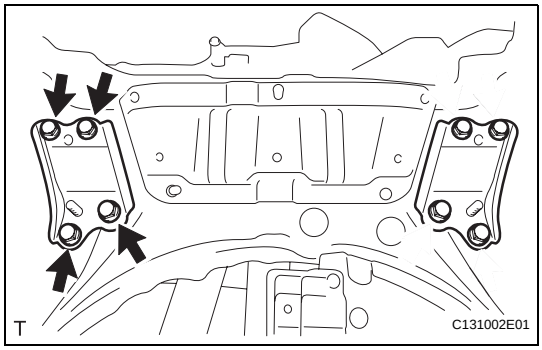
SP

REMOVAL

1. REMOVE FRONT WHEEL

2. REMOVE FRONT STABILIZER LINK ASSEMBLY LH

(a) Remove the 2 nuts and stabilizer link.



3. REMOVE FRONT STABILIZER LINK ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

4. REMOVE FRONT SUSPENSION MEMBER BRACE FRONT LH

(a) Remove the 4 bolts and member brace from the corssmember.

5. REMOVE FRONT SUSPENSION MEMBER BRACE FRONT RH

HINT:

Use the same procedures described for the LH side.

6. REMOVE FRONT STABILIZER BAR

(a) Remove the stabilizer bar from the crossmember.

7. REMOVE FRONT NO. 1 STABILIZER BAR BUSH LH

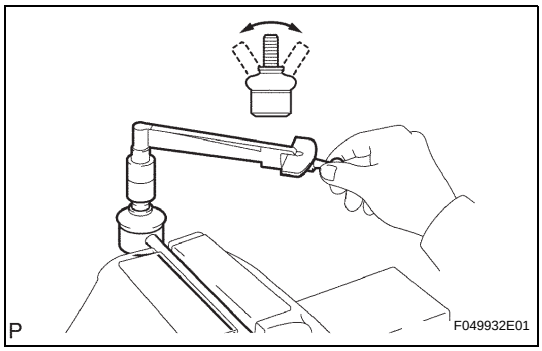
(a) Remove the bush from the stabilizer bar.

8. REMOVE FRONT NO. 1 STABILIZER BAR BUSH RH

HINT:

Use the same procedures described for the LH side.

INSPECTION



1. INSPECT FRONT STABILIZER LINK ASSEMBLY LH

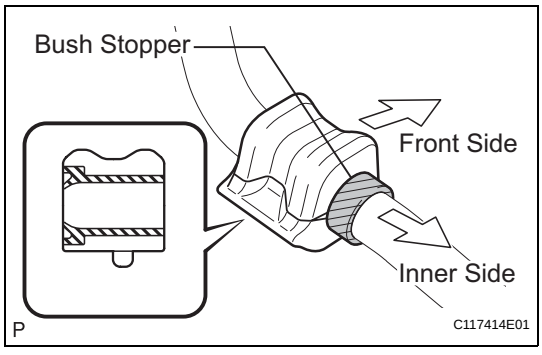
(a) As shown in the illustration, move the ball joint stud back and forth 5 times before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the fifth turn.

Turning torque:

0.05 to 1.96 N*m, (0.5 to 20 kgf*cm, 0.4 to 17 in.*lbf) or less

(c) Check for any cracks and grease leaks on the ball joint dust cover.



INSTALLATION

1. INSTALL FRONT NO. 1 STABILIZER BAR BUSH LH

(a) Install the bush.

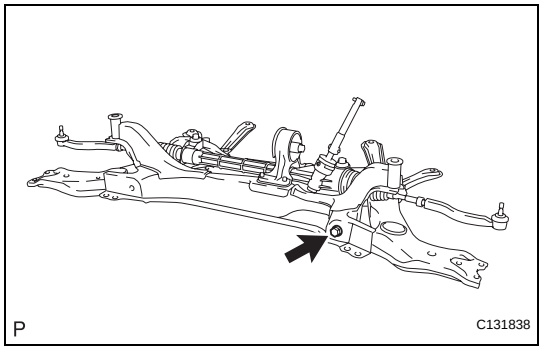
HINT:

- Install each bush to the inner side of each bush stopper on the stabilizer bar.
- Install each bush with its slit facing the vehicle rear side.

2. **REMOVE FRONT NO. 1 STABILIZER BAR BUSH RH**
   HINT:
   Use the same procedures described for the LH side.

3. **INSTALL FRONT STABILIZER BAR**
   (a) Install the stabilizer bar to the crossmember.

4. **INSTALL FRONT SUSPENSION MEMBER BRACE FRONT LH**
   (a) Install the member brace with the 4 bolt to the suspension member.
   Torque: 87 N*m (887 kgf*cm, 64 ft.*lbf)

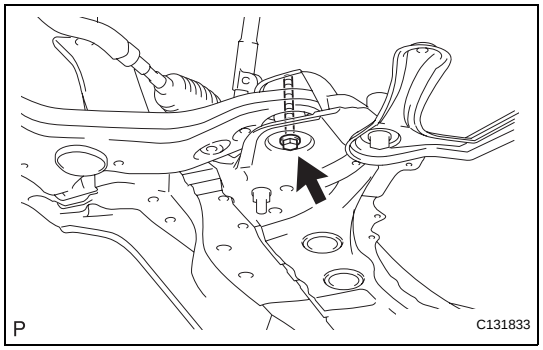


5. **INSTALL FRONT SUSPENSION MEMBER BRACE FRONT RH**
   HINT:
   Use the same procedures described for the LH side.

6. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Install the link with the 2 nut.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side.

8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



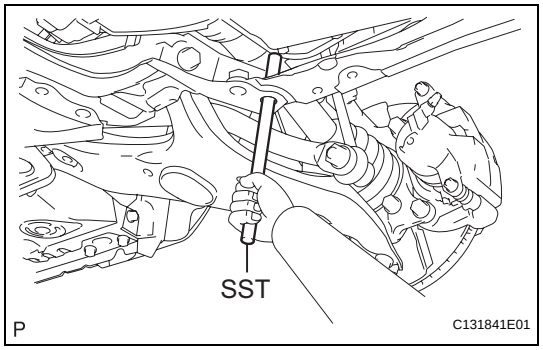
9. **STABILIZE SUSPENSION (See page SP-12)**

INSTALLATION

1. TEMPORARILY INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH

(a) Temporarily install the lower arm with the bolt and nut to the front side.

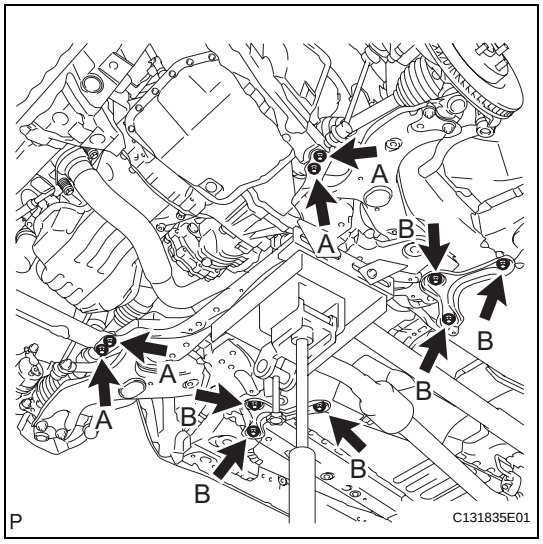
(b) Temporarily install the lower arm with the bolt and nut to the rear side.



2. TEMPORARILY INSTALL FRONT SUSPENSION NO. 1 LOWER ARM SUB-ASSEMBLY RH

HINT:

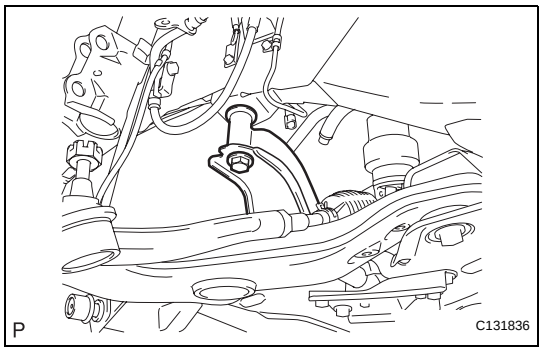
Use the same procedures described for the LH side.



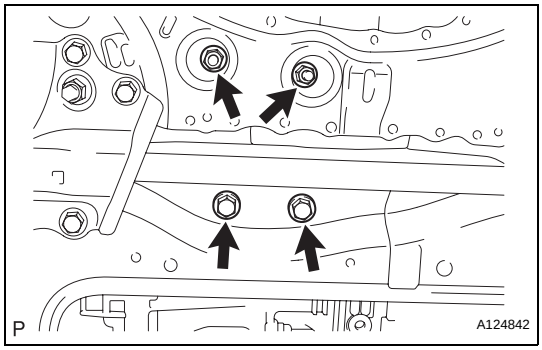
3. CONNECT FRONT CROSSMEMBER SUB-ASSEMBLY

(a) Slowly raise the crossmember jack, and connect the crossmember to the body.

(b) Using SST, align the holes of the suspension member and body.
SST 09670-00020



(c) Perform the procedure above on the other side.



(d) Install the member reinforcement with the 4 bolts labeled A.

(e) Install the suspension member brace with the 6 bolts labeled B.

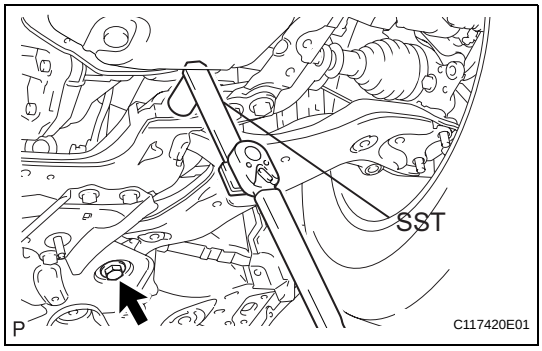
SP

(f) Install the suspension member with the bolt to the body.
(g) Perform the procedure above on the other side.

(h) Install the engine mounting insulator rear with the 2 nuts and 2 bolts.

4. INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)

5. CONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH



(a) Connect the lower arm with the 2 bolts and nut to the ball joint.
Torque: 92 N*m (938 kgf*cm, 68 ft.*lbf)

6. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

7. STABILIZE SUSPENSION (See page SP-12)

8. TIGHTEN FRONT CROSS MEMBER SUB-ASSEMBLY

(a) Tighten the bolts and nuts.
Torque: 87 N*m (887 kgf*cm, 64 ft.*lbf) for bolt A
93 N*m (948 kgf*cm, 69 ft.*lbf) for bolt B
145 N*m (1,479 kgf*cm, 107 ft.*lbf) for body
95 N*m (969 kgf*cm, 70 ft.*lbf) for engine mounting insulator

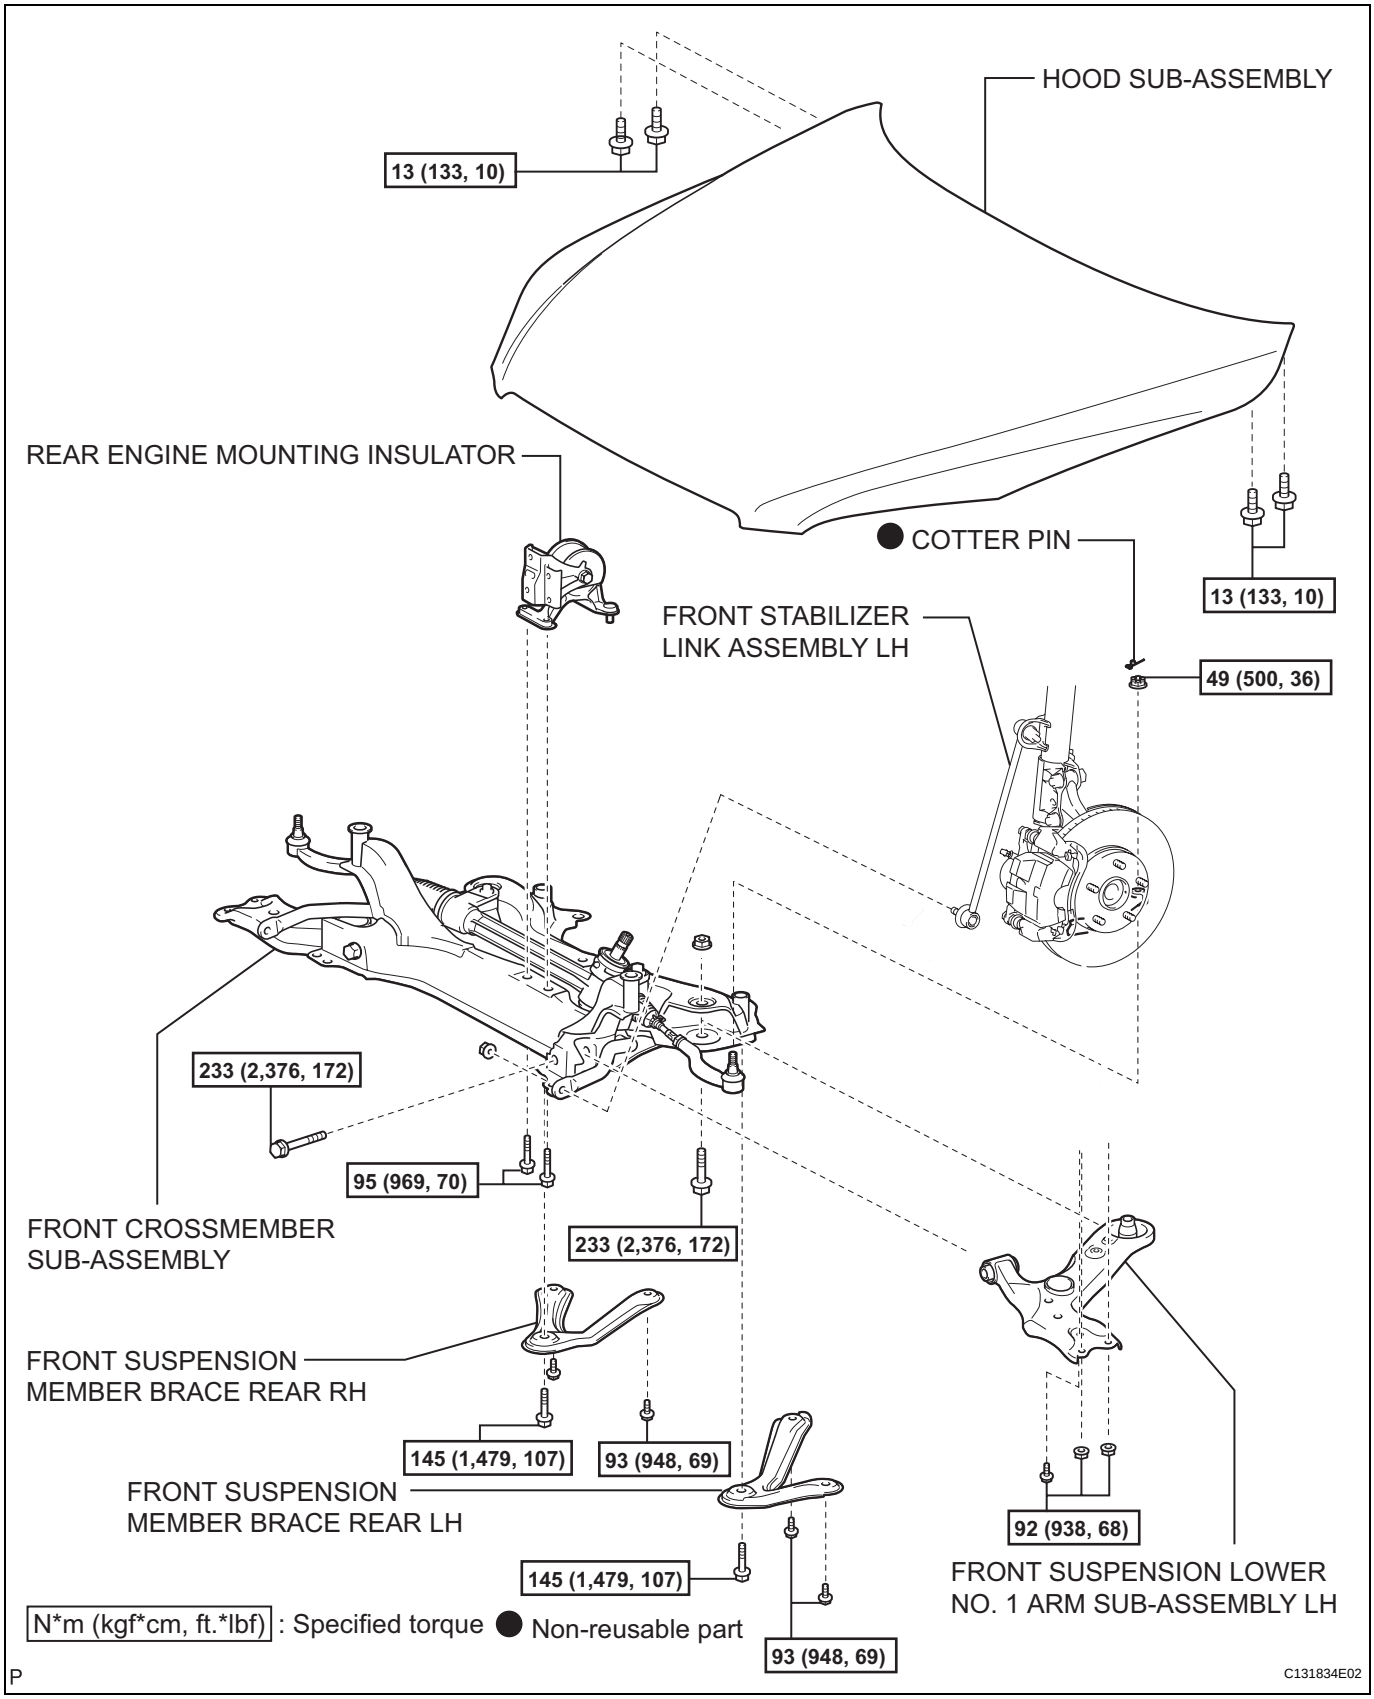
9. TIGHTEN FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH

(a) Using SST, and tighten the bolt on the front side.
SST 09961-01270
Torque: 223 N*m (2,376 kgf*cm, 172 ft.*lbf) for use without SST
175 N*m (1,785 kgf*cm, 129 ft.*lbf) for use with SST
NOTICE:
Do not tighten the nut.
(b) Fix the nut in place and tighten the bolt on the rear side.
Torque: 223 N*m (2,376 kgf*cm, 172 ft.*lbf)
NOTICE:
Do not tighten the nut.

10. TIGHTEN FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

11. INSTALL HOOD SUB-ASSEMBLY (See page ED-7)

12. INSPECT AND ADJUST HOOD SUB-ASSEMBLY



(a) Inspect and adjust the hood (see page ED-5).

13. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT

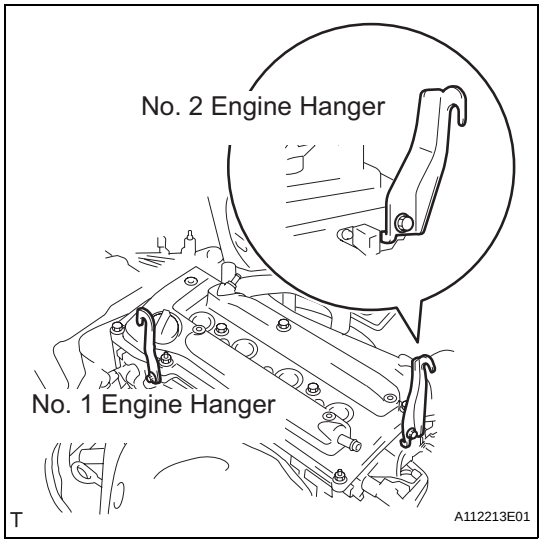
(a) Inspect and adjust the front wheel alignment (see page SP-3).

FRONT SUSPENSION LOWER NO. 1 ARM

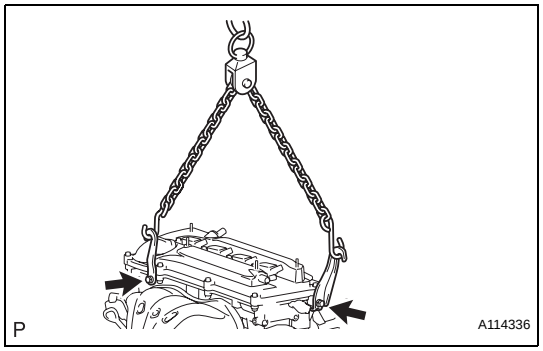
COMPONENTS

REMOVAL

1. REMOVE FRONT WHEEL



2. REMOVE HOOD SUB-ASSEMBLY

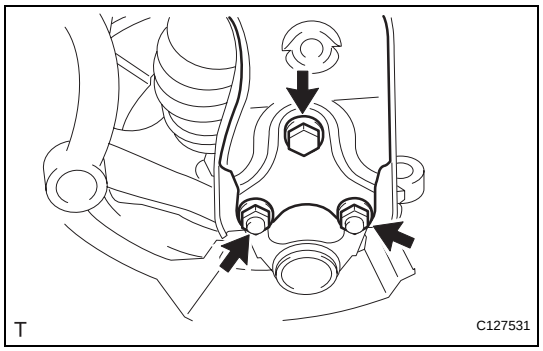


(a) Remove the hood (see page ED-4).

3. SUSPEND ENGINE ASSEMBLY

(a) Install the No. 1 and No. 2 engine hangers with the bolts as shown in the illustration.
Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)
Parts No.

Item	Part No.
No. 1 Engine hanger	12281-28010
No. 2 Engine hanger	12282-28010
Bolt	91512-61020

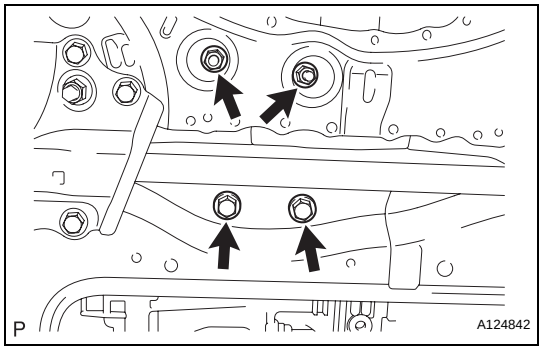


(b) Attach the sling device and the engine with the chain block.

4. DISCONNECT FRONT STABILIZER LINK ASSEMBLY LH (See page SP-30)

5. DISCONNECT FRONT STABILIZER LINK ASSEMBLY RH

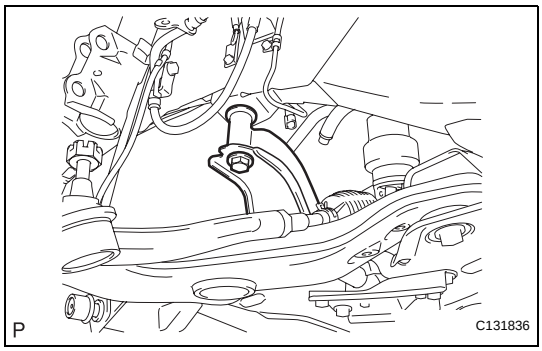
(a) Use the same procedure described for the LH side.



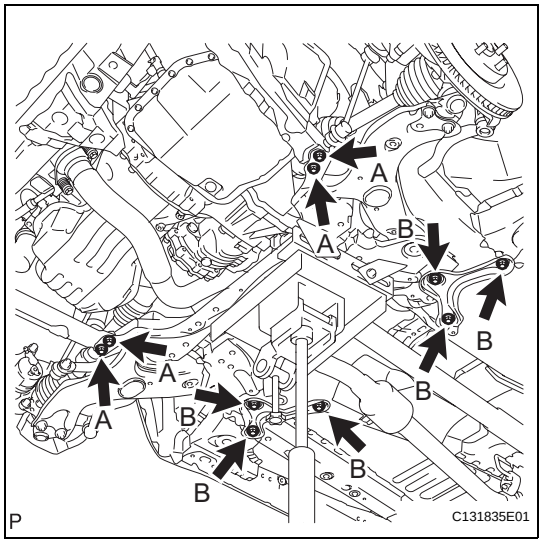
6. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH

(a) Remove the 2 nuts and bolt, and disconnect the lower arm from the ball joint.

7. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH

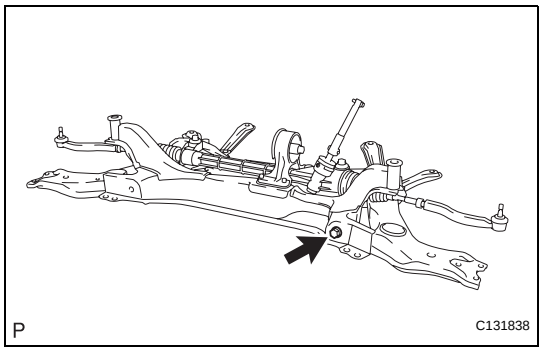


HINT:
Use the same procedures described for the LH side.



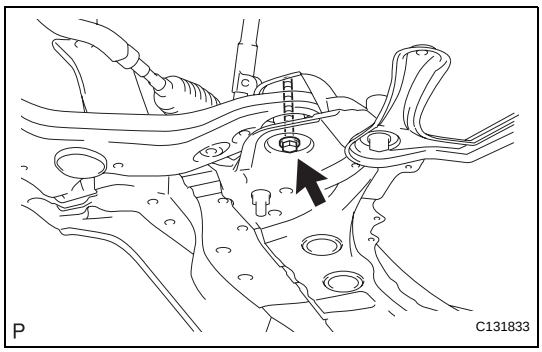
8. DISCONNECT FRONT CROSSMEMBER SUB-ASSEMBLY

(a) Remove the 2 nuts, 2 bolts and engine mounting insulator rear.



SP

(b) Remove the bolt from the suspension member.



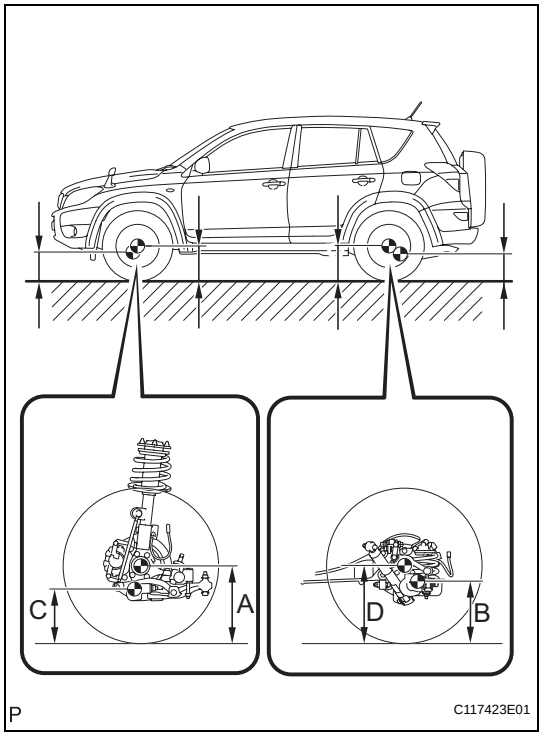
(c) Support the crossmember with the jack.
(d) Remove the bolts labeled A.
  (1) Remove the 4 bolts from the member reinforcement.
(e) Remove the bolts labeled B.
  (1) Remove the 6 bolts from the member brace.
(f) Slowly lower the jack, and disconnect the crossmember from the vehicle.

9. REMOVE FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY LH

(a) Remove the bolt and nut from the suspension member (front side).

(b) Remove the bolt and nut from the suspension member (rear side). Then remove the lower arm.

10. REMOVE FRONT SUSPENSION LOWER NO. 1 ARM SUB-ASSEMBLY RH



HINT:
Use the same procedures described for the LH side.

FRONT WHEEL ALIGNMENT

ADJUSTMENT

1. INSPECT TIRES

(a) Inspect the tires (see page TW-1).

2. MEASURE VEHICLE HEIGHT

NOTICE:

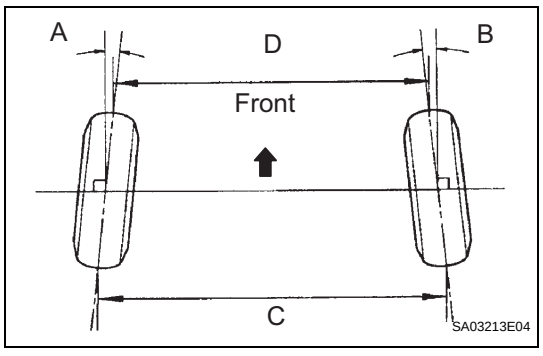
Before inspecting the wheel alignment, adjust the vehicle height to the specification.

(a) Press down on the vehicle several times to stabilize the suspension, and measure the vehicle height.

(b) Measure the front vehicle height.

(1) Measure the distance from the ground to the center of the lower suspension arm front mounting bolt.

(c) Measure the rear vehicle height.



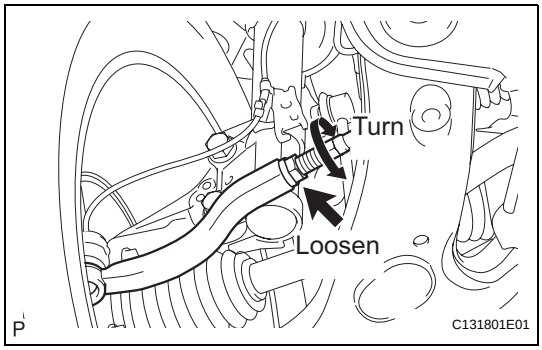
(1) Rear Measure the distance from the ground to the center of the body side No. 2 suspension arm mounting bolt.

Standard vehicle height (unloaded vehicle)

Tire Size	Front C - A	Rear D - B
215/70R16	89 mm (3.50 in.)	57 mm (2.24 in.)
225/65R17 235/55R18	97 mm (3.82 in.)	65 mm (2.56 in.)
225/65R17*	97 mm (3.82 in.)	54 mm (2.13 in.)

HINT:

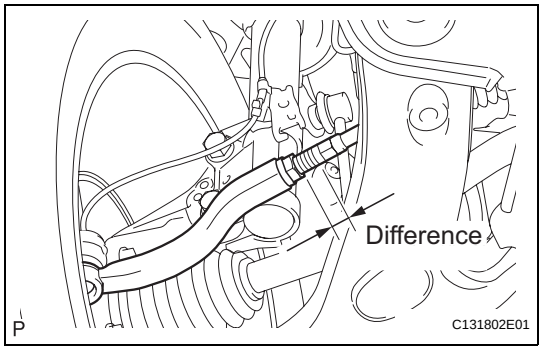
- *: w/ 3rd seat.
- If the vehicle height is not as specified, press down on the vehicle several times to stabilize the suspension. Then measure the vehicle height again.



3. INSPECT TOE-IN

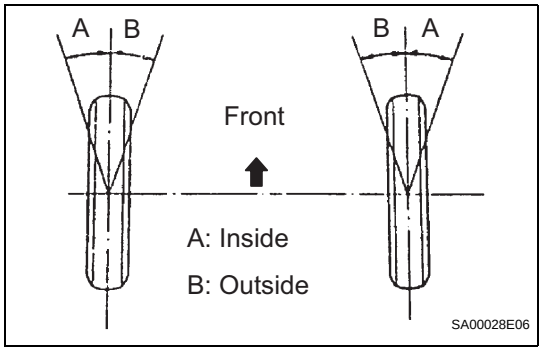
Standard toe-in (unloaded vehicle)

Tire Size	Front A + B Rear C - D
215/70R16 225/65R17 235/55R18	A + B: 0°05' +-10' (0.08°+-0.16°) C - D: 1.0 +-2.0 mm (0.04 +-0.08 in.)



If the toe-in is not as specified, adjust it at the rack ends.

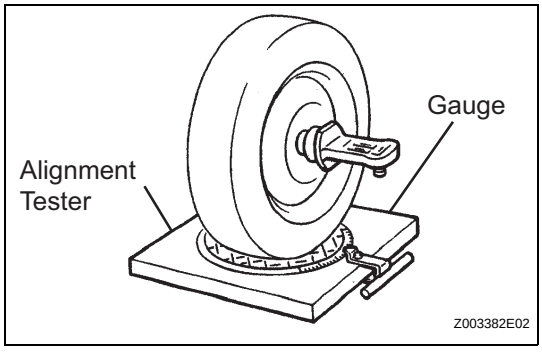
SP



4. ADJUST TOE-IN

(a) Remove the boot clips.
(b) Loosen the tie rod end lock nuts.
(c) Turn the right and left rack ends by an equal amount to adjust the toe-in to the center value.

(d) Make sure that the length of the right and left rack ends are approximately the same.
Standard difference:
1.5 mm (0.059 in.) or less
(e) Tighten the tie rod end lock nuts.
Torque: 55.5 N*m (566 kgf*cm, 41 ft.*lbf)
(f) Place the boots on the seats and install the clips.
HINT:
Make sure that the boots are not twisted.



5. INSPECT WHEEL ANGLE

(a) Turn the steering wheel to the left and right full lock positions, and measure the turning angle.
Standard wheel angle (unloaded vehicle)

Tire Size	Inside Wheel Angle	Outside Wheel Angle (Reference)
215/70R16	38°55' (36°55' to 40°55') (38.9°{36.9° to 40.9°})	32°20' (32.3°)
225/65R17 235/55R18	35°50' (33°55' to 37°55') (35.8°{33.8° to 37.9°})	30°29' (30.5°)

If the angles are not as specified, check and adjust the right and left rack end lengths.

6. INSPECT CAMBER, CASTER AND STEERING AXIS INCLINATION

(a) Install the camber-caster-kingpin gauge or place the front wheels on the center of the wheel alignment tester.
(b) Inspect the camber, caster and steering axis inclination.
Standard camber inclination (unloaded vehicle)

Tire Size	Camber Inclination
215/70R16	-0°08' +-45' (-0.13°+-0.75°)
225/65R17 235/55R18	-0°11' +-45' (-0.18°+-0.75°)

Standard caster inclination (unloaded vehicle)

Tire Size	Caster Inclination
215/70R16	5°43' +-45' (5.72°+-0.75°)
225/65R17 235/55R18	5°50' +-45' (5.83°+-0.75°)
225/65R17*	5°37' +-45' (5.62°+-0.75°)

SP

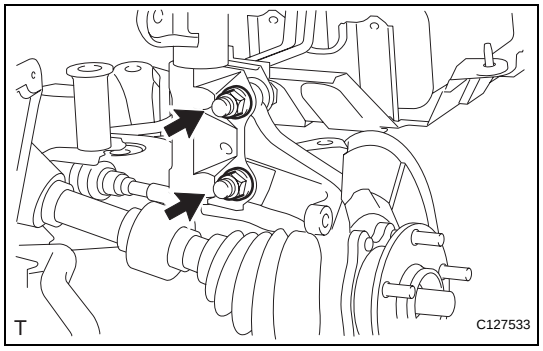
HINT:
*: w/ 3rd seat

Standard steering axis inclination (unloaded vehicle)

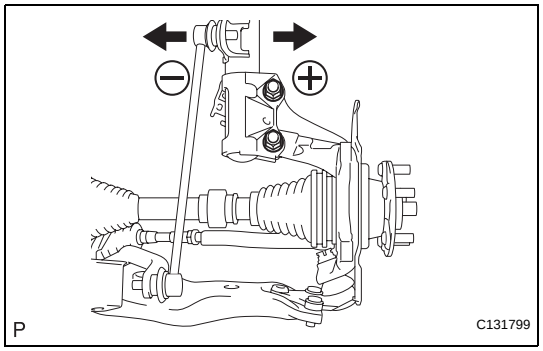
Tire Size	Steering Axis Inclination
215/70R16	11°16' +-30' (11.27°+-0.50°)
225/65R17 235/55R18	11°26' +-30' (11.43°+-0.50°)

7. ADJUST CAMBER AND CASTER

NOTICE:



After the camber has been adjusted, inspect the toe-in.

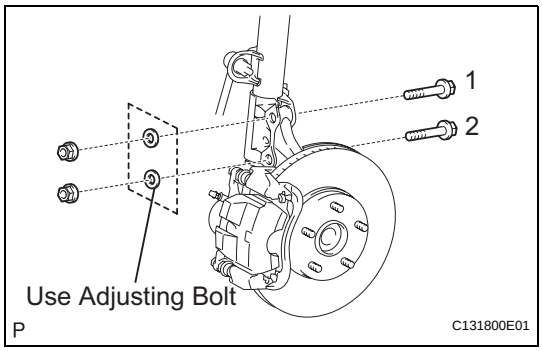


(a) Remove the front wheel.

(b) Remove the 2 nuts on the lower side of the shock absorber.

(c) Coat the threads of the nuts with engine oil.

(d) Temporarily install the 2 nuts.



(e) Adjust the camber by pushing or pulling the lower side of the shock absorber in the direction where the camber adjustment is required.

(f) Tighten the 2 nuts.
Torque: 240 N*m (2,447 kgf*cm, 177 ft.*lbf)

(g) Install the front wheel.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

(h) Check the camber.
If the measured value is not within the specified range, calculate the required adjustment amount using the formula below.

SP

If the camber is not within the specification, estimate how much additional camber adjustment will be required and select the camber adjusting bolt using the following table.

Bolt / Adjusting Value	Set Bolt		Adjusting Bolt					
	90105-17008		90105-17009		90105-17010		90105-17011	
			1 Dot		2 Dots		3 Dots

P
C131803E01

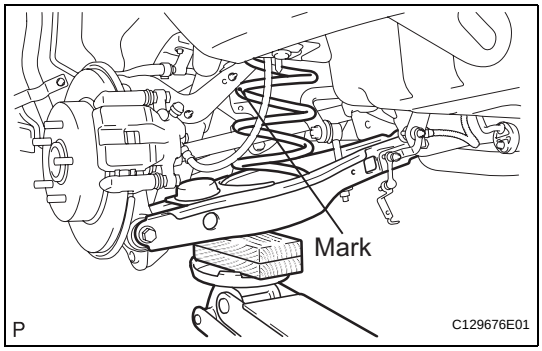
(i) Repeat the steps mentioned above. When temporarily installing the 2 nuts, replace 1 or 2 selected bolts.
HINT:
Replace 1 bolt at a time when replacing 2 bolts.

INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. INSTALL REAR COIL SPRING INSULATOR LOWER LH



(a) Install the insulator lower to the suspension No. 2 arm.

2. REMOVE REAR COIL SPRING LH

(a) Install the coil spring to the suspension No. 2 arm.

3. INSTALL REAR COIL SPRING INSULATOR UPPER LH

(a) Align the stopper part of the insulator upper with the coil spring tip, and install the insulator upper.

4. TEMPORARILY INSTALL REAR SUSPENSION NO. 2 ARM ASSEMBLY LH

(a) Slowly raise the suspension No. 2 arm with a jack, and connect the suspension No. 2 arm to the axle carrier.

(b) Install the bolt and nut.

NOTICE:
Install the arm so that the coil spring's distinguishing mark is on the outer side of the vehicle.

5. INSTALL REAR STABILIZER LINK ASSEMBLY LH (See page SP-50)

6. CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-9)

7. INSTALL SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-201)

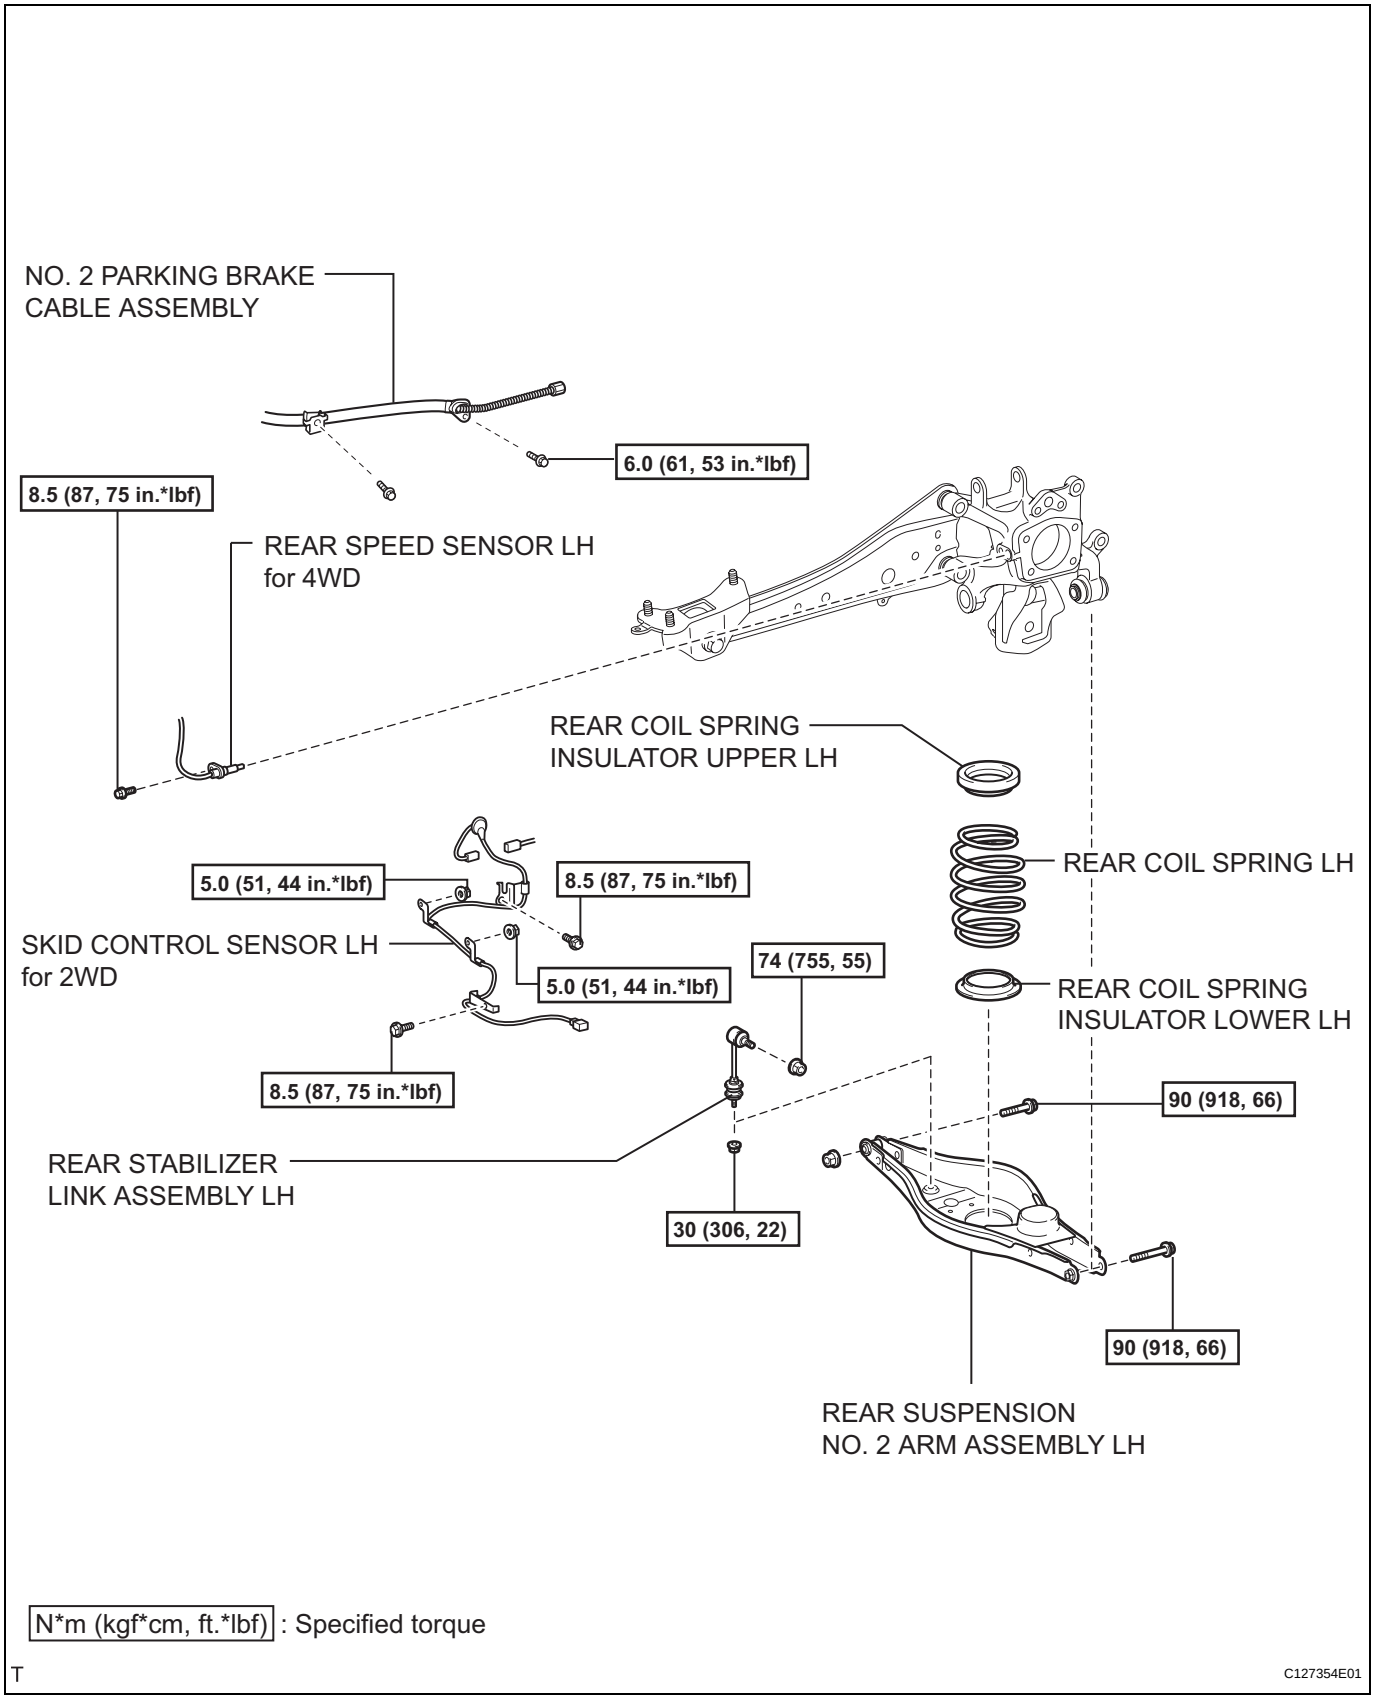
8. INSTALL REAR SPEED SENSOR LH (for 4WD) (See page BC-206)

9. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

10. STABILIZE SUSPENSION (See page SP-37)

11. TIGHTEN REAR SUSPENSION NO. 2 ARM ASSEMBLY LH (See page SP-46)

12. CHECK SPEED SENSOR SIGNAL



(a) Check the speed sensor signal (see page BC-44).

13. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

(a) Inspect and adjust the rear wheel alignment (see page SP-7).

REAR COIL SPRING

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque

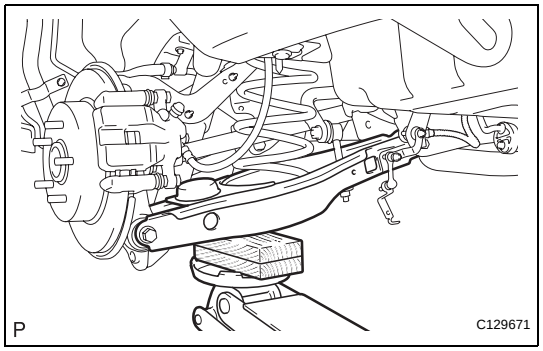
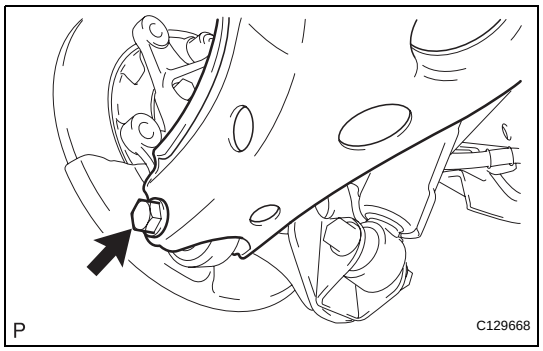
C127354E01

REMOVAL



HINT:

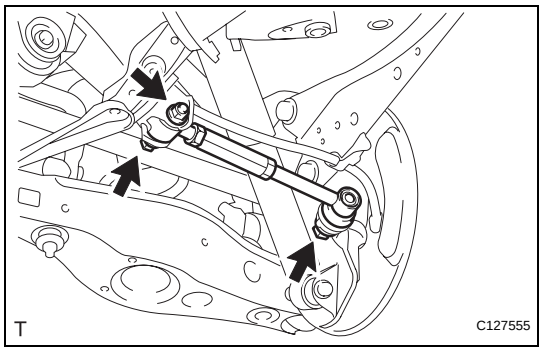
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



1. **REMOVE REAR WHEEL**
2. **REMOVE SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)**
3. **REMOVE REAR SPEED SENSOR LH (for 4WD) (See page BC-205)**
4. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-8)**
5. **DISCONNECT REAR STABILIZER LINK ASSEMBLY LH (See page SP-50)**
6. **DISCONNECT REAR SUSPENSION NO. 2 ARM SUB-ASSEMBLY LH**
   (a) Loosen the bolt from the suspension member side.
   NOTICE:
   Do not remove the bolt and nut. Only loosen them.

   (b) Support the No. 2 suspension arm LH with a jack.
   NOTICE:
   Place a wooden or rubber block between the jack and arm.

   (c) Remove the bolt and nut from the axle carrier side.
   (d) Slowly lower the jack, and disconnect the No. 2 suspension arm from the axle carrier.



7. **REMOVE REAR COIL SPRING INSULATOR UPPER LH**
   (a) Remove the insulator upper from the coil spring.
8. **REMOVE REAR COIL SPRING LH**
   (a) Remove the coil spring from the suspension No. 2 arm
9. **REMOVE REAR COIL SPRING INSULATOR LOWER LH**
   (a) Remove the insulator lower from the suspension No. 2 arm.

SP

INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

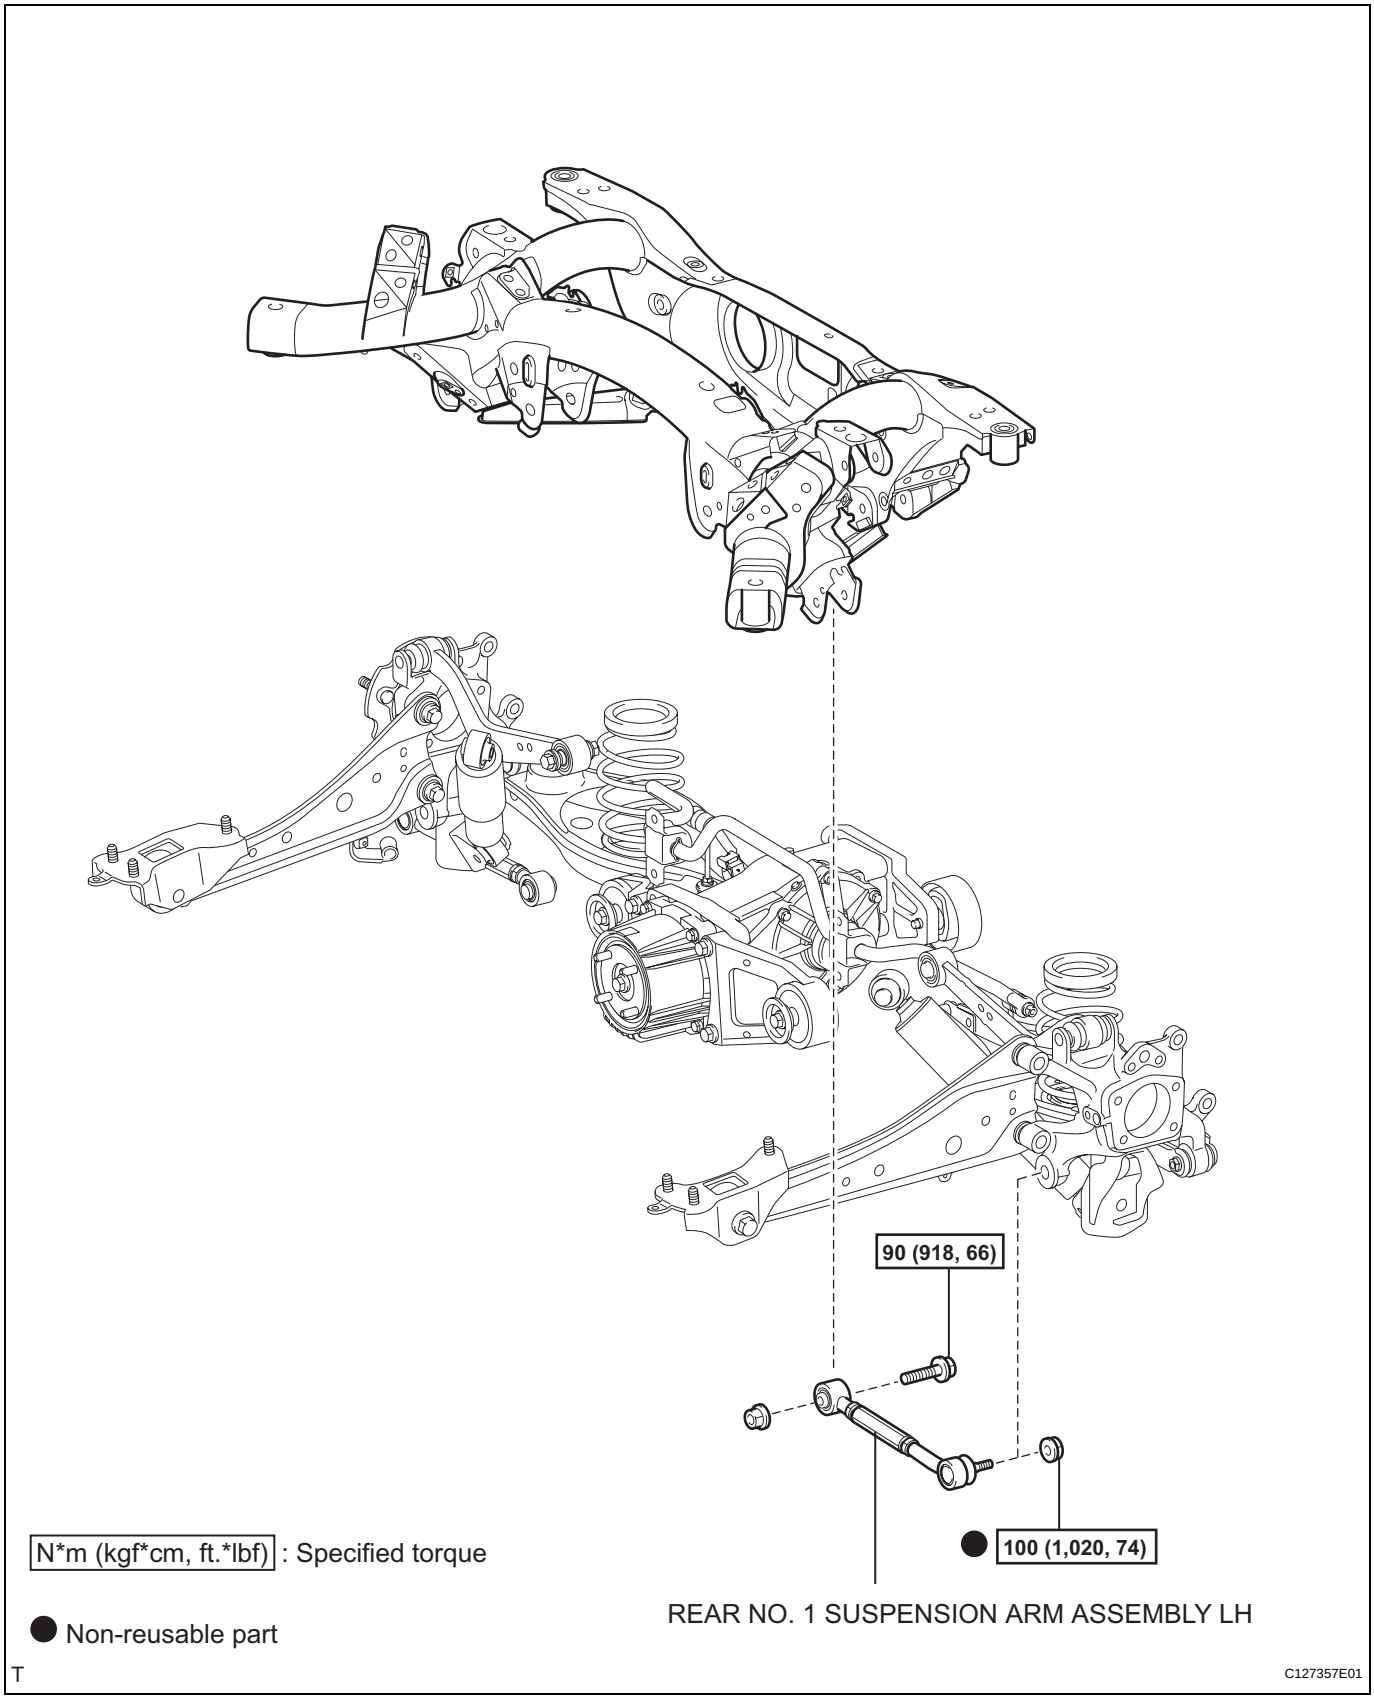
(a) Temporarily install the suspension arm with the bolt and 2 nuts to the suspension member and axle carrier.

2. INSTALL REAR WHEEL

(a) Install the wheel.
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

3. TIGHTEN REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

(a) Install the nut and 2 bolts.
Torque: 90 N*m (918 kgf*cm, 66 ft.*lbf) for bolt
100 N*m (1,020 kgf*cm, 74 ft.*lbf) for nut
NOTICE:
For the nut on the rear suspension member side, do not tighten the nut.



4. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

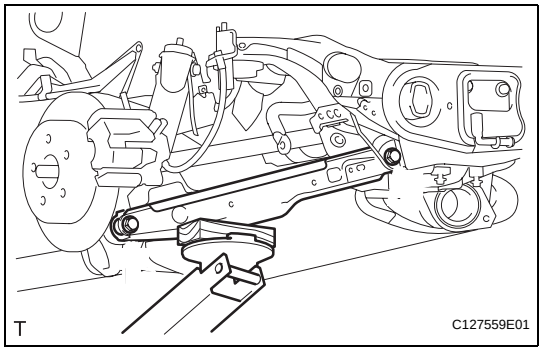
(a) Inspect and adjust the rear wheel alignment (see page SP-7).

SP

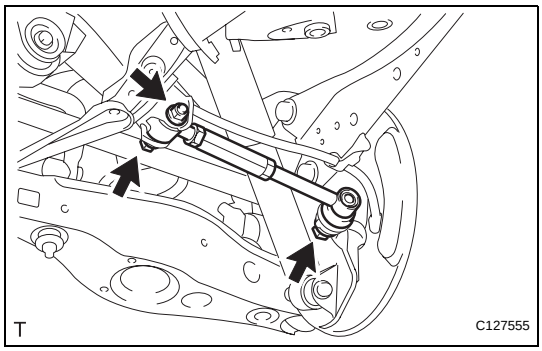
REAR NO. 1 SUSPENSION ARM

COMPONENTS

SP



REMOVAL



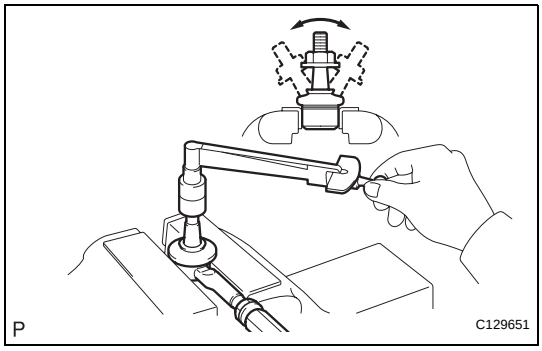
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

2. REMOVE REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

(a) Support the No. 2 suspension arm LH.

(b) Remove the bolt and 2 nuts from the suspension member and axle carrier.
HINT:
While fixing the nut in place, loosen and remove the bolt from the suspension member side.



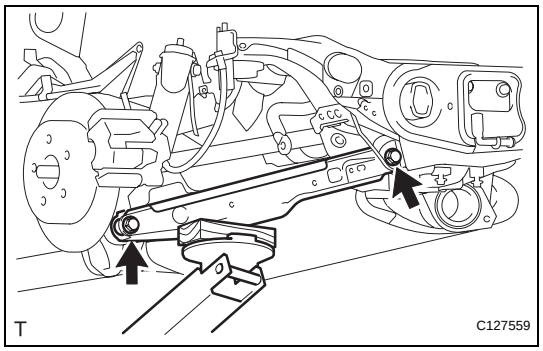
(c) Using SST, disconnect the suspension arm from the axle carrier.
SST 09610-20012
NOTICE:
Do not damage the dust cover.

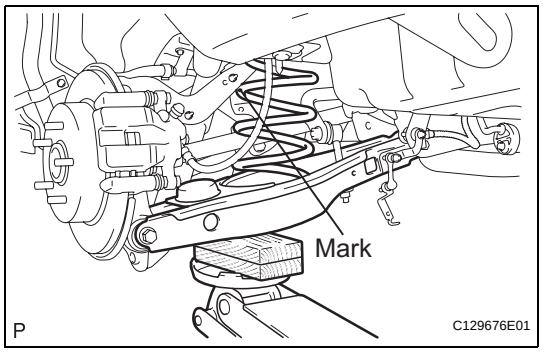
INSPECTION

1. INSPECT REAR NO. 1 SUSPENSION ARM ASSEMBLY LH

(a) As shown in the illustration, move the ball joint stud back and forth 5 times before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 2 to 4 seconds per turn and take the torque reading on the fifth turn.
Standard turning torque:
3.4 N*m (35 kgf*cm, 30 in.*lbf)



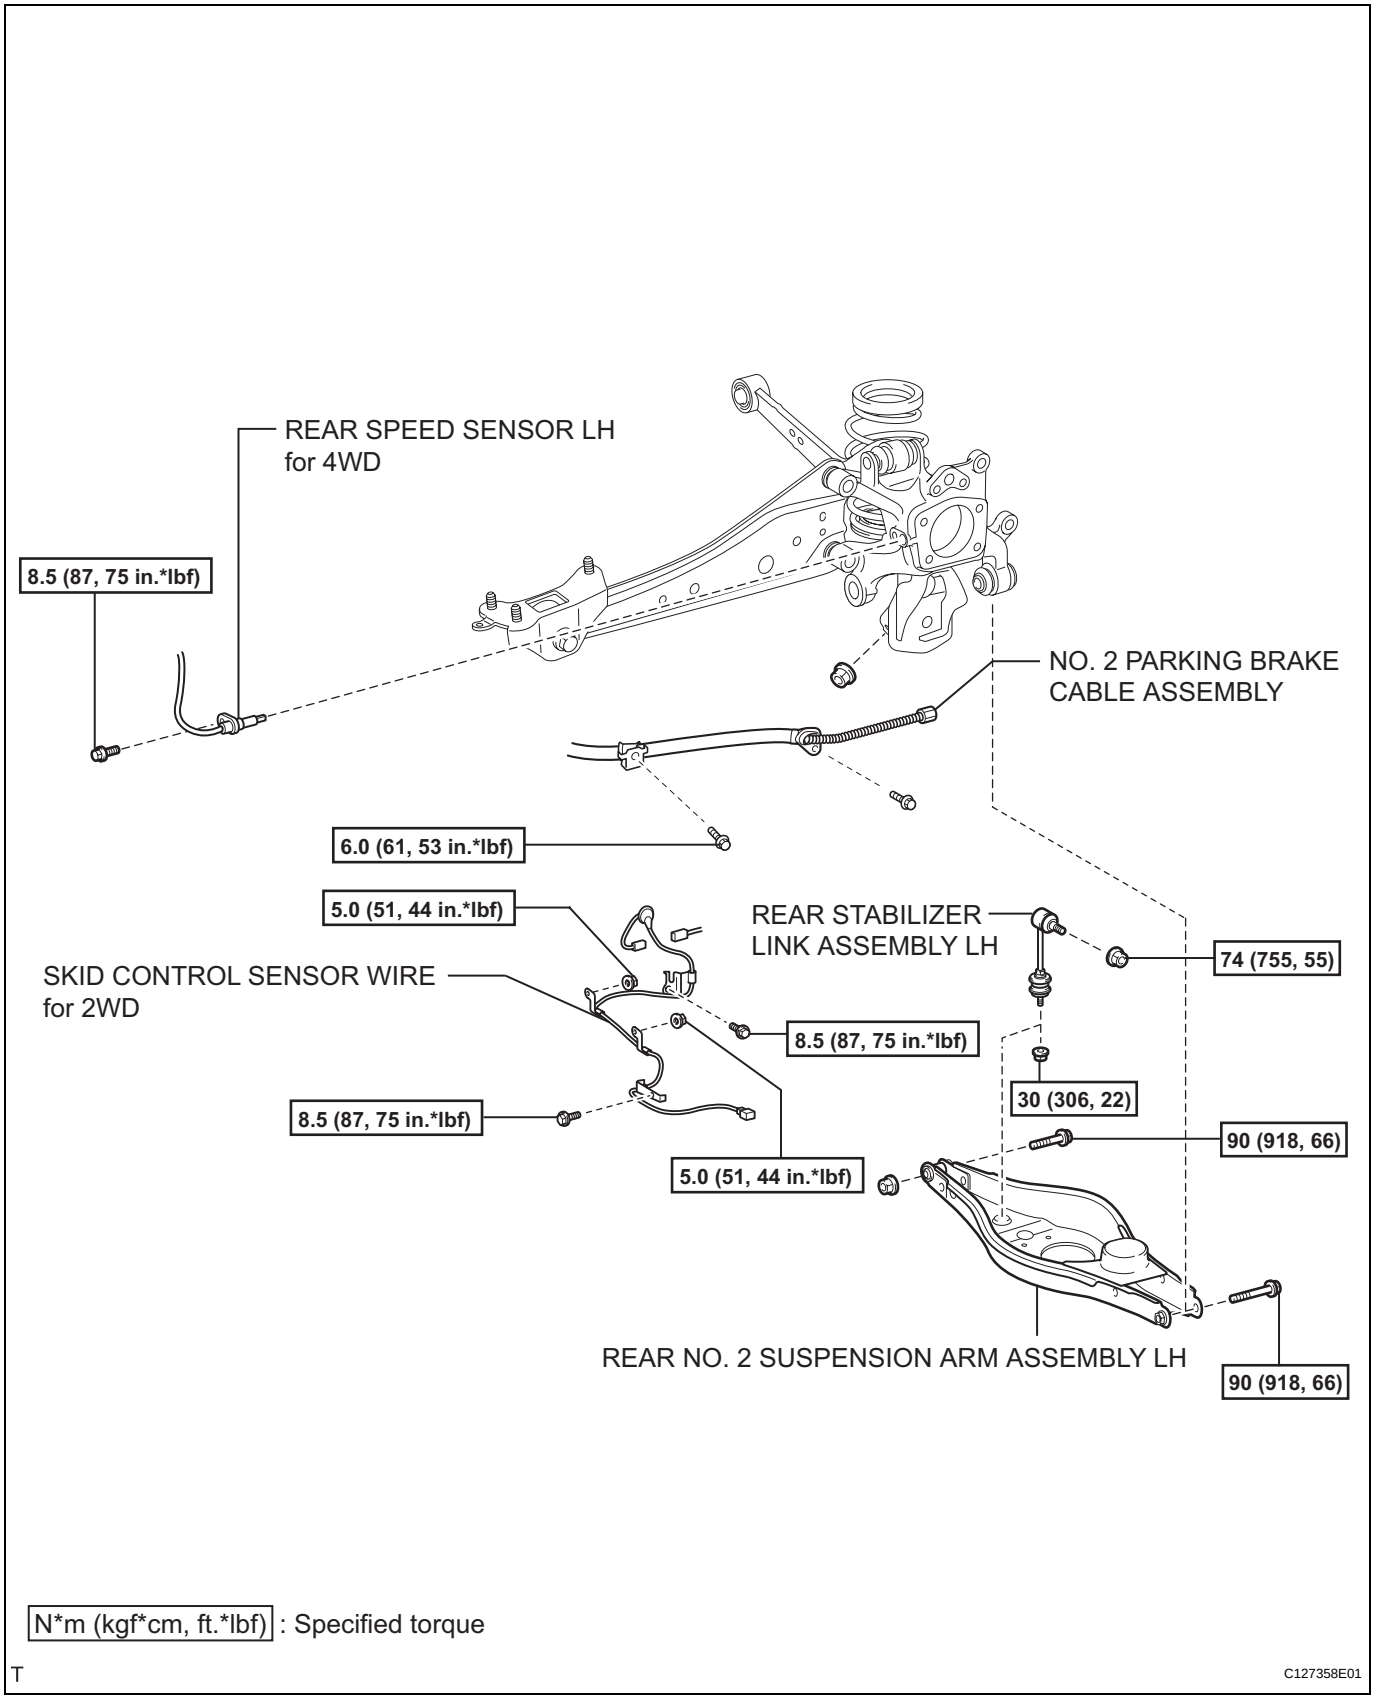


(c) Check for any cracks and grease leaks on the ball joint dust cover.

INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



1. **TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY LH**
   (a) Temporarily install the No. 2 suspension arm with the bolt and nut to the suspension member.
2. **INSTALL REAR COIL SPRING INSULATOR LOWER LH (See page SP-34)**
3. **INSTALL REAR COIL SPRING LH (See page SP-34)**
4. **INSTALL REAR COIL SPRING INSULATOR UPPER LH (See page SP-34)**
5. **INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY LH**
   (a) Slowly raise the jack, and install the No. 2 suspension arm to the axle carrier.
   NOTICE:
   Install the arm so that the coil spring's distinguishing mark is on the outer side of the vehicle.
6. **INSTALL REAR STABILIZER LINK ASSEMBLY LH (See page SP-52)**
7. **CONNECT SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)**
8. **CONNECT REAR SPEED SENSOR LH (for 4WD) (See page BC-205)**
9. **CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-8)**
10. **INSTALL REAR WHEEL**
    (a) Install the wheel.
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
11. **STABILIZE SUSPENSION (See page SP-37)**
12. **TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY LH**
    (a) Install the 2 nuts and 2 bolts.
    Torque: 90 N*m (918 kgf*cm, 66 ft.*lbf)
    NOTICE:
    Do not tighten the nuts.
13. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
    (a) Inspect and adjust the rear wheel alignment (see page SP-7).

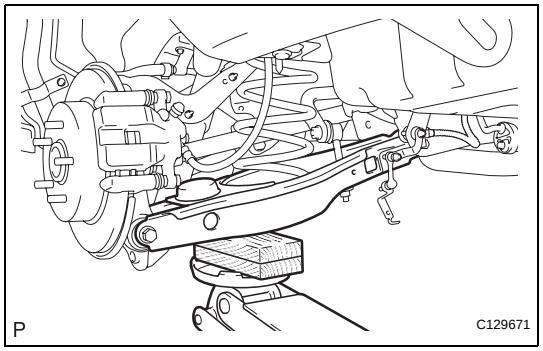
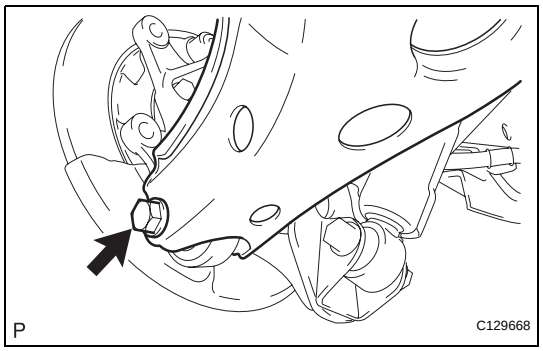
REMOVAL



HINT:

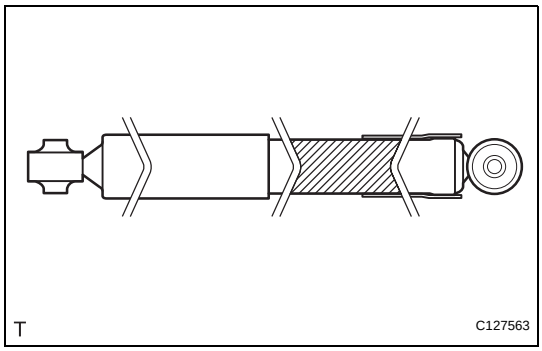
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.



1. **REMOVE REAR WHEEL**
2. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-8)**
3. **DISCONNECT SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)**
4. **DISCONNECT REAR SPEED SENSOR LH (for 4WD) (See page BC-205)**
5. **DISCONNECT REAR STABILIZER LINK ASSEMBLY LH (See page SP-50)**
6. **DISCONNECT REAR NO. 2 SUSPENSION ARM ASSEMBLY LH**
   (a) Loosen the bolt from the suspension member side.
   NOTICE:
   Do not remove the bolt and nut. Only loosen them.

   (b) Support the No. 2 suspension arm LH with a jack.
   NOTICE:
   Place a wooden or rubber block between the jack and the arm.

   (c) Remove the bolt and nut from the axle carrier side.
   (d) Slowly lower the jack, and disconnect the No. 2 suspension arm from the axle carrier.



7. **REMOVE REAR COIL SPRING INSULATOR UPPER LH (See page SP-33)**
8. **REMOVE REAR COIL SPRING LH (See page SP-33)**
9. **REMOVE REAR COIL SPRING INSULATOR LOWER LH (See page SP-33)**

SP

10. REMOVE REAR NO. 2 SUSPENSION ARM ASSEMBLY LH

(a) Remove the bolt, nut and suspension arm from the suspension member.

DISPOSAL

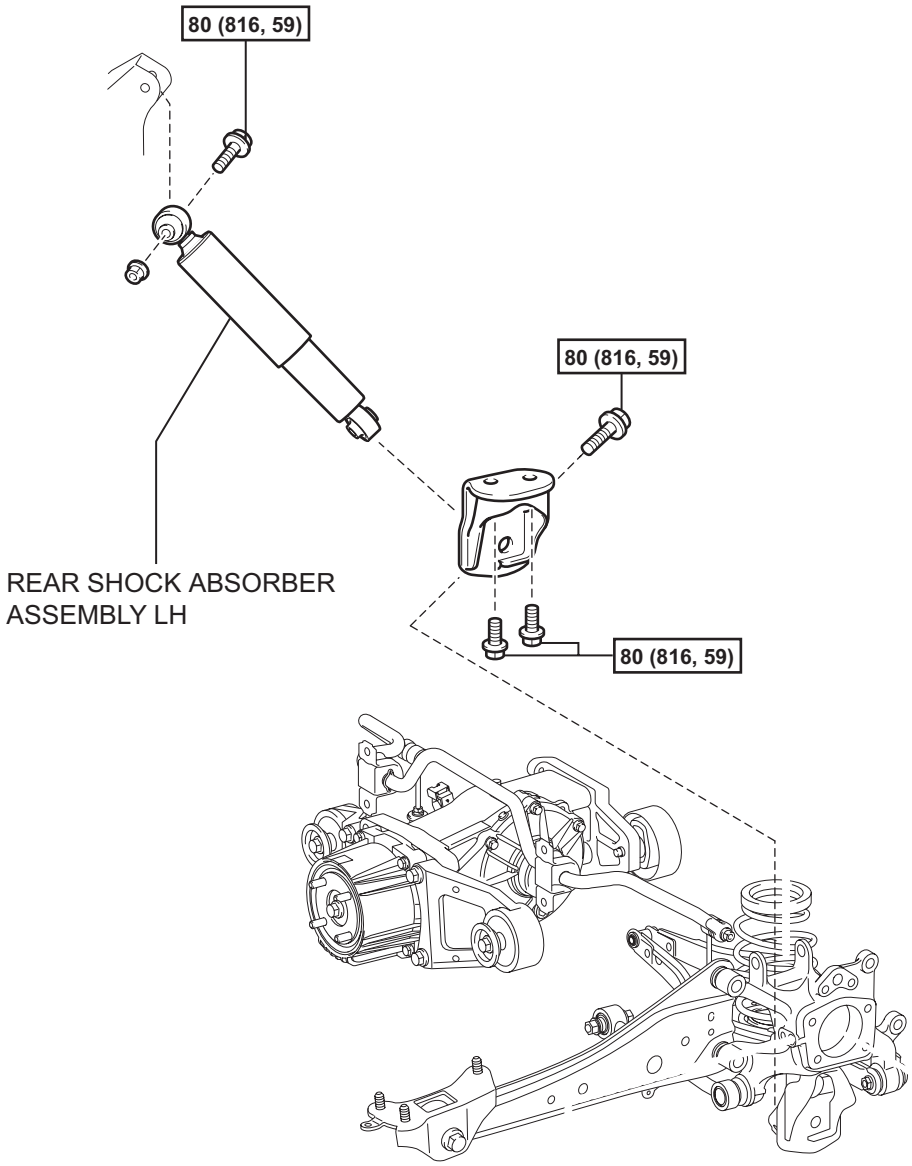
1. DISPOSE OF REAR SHOCK ABSORBER ASSEMBLY LH

(a) Fully extend the shock absorber rod, and clamp it in a vise at an angle.

(b) Using a drill, make a hole near the center of the cylinder in the hatched area shown in the illustration to discharge the gas inside.

CAUTION:

As metal debris may be blown outward by the gas, you must:



- **Wear protective glasses.**
- **Cover the area being cut.**

NOTICE:

The gas is colorless, odorless and harmless.

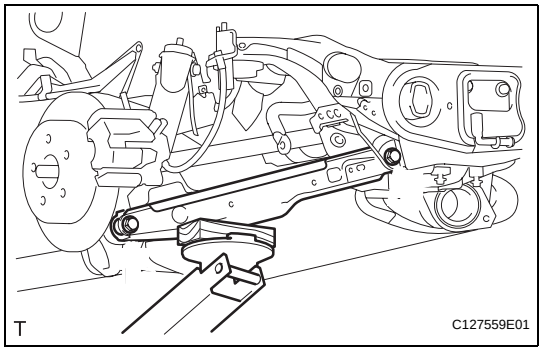
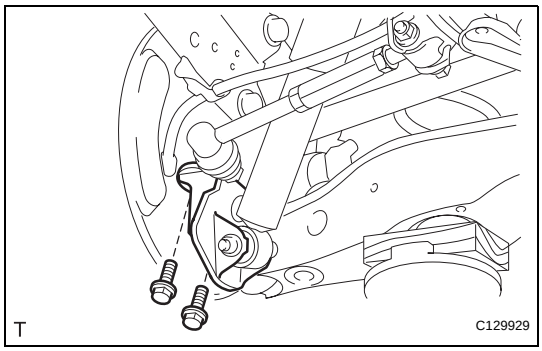
SP

REMOVAL



HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

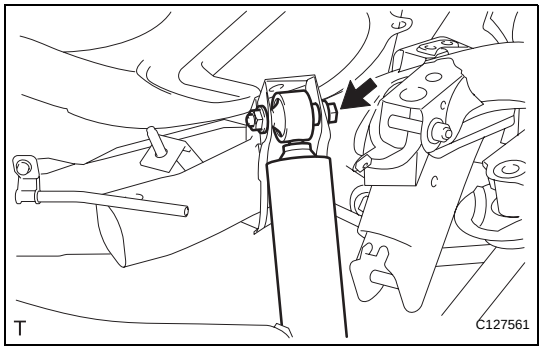
1. REMOVE REAR WHEEL



2. REMOVE REAR SHOCK ABSORBER ASSEMBLY LH

(a) Support the No. 2 suspension arm LH with a jack.
NOTICE:
Place a wooden or rubber block between the jack and arm.

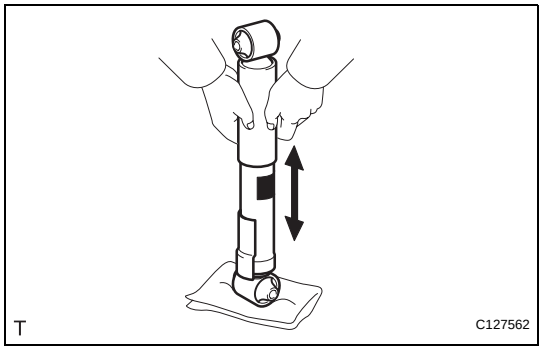
(b) Remove the bolt and 2 nuts from the suspension member and axle carrier.



(c) Remove the 2 bolts and disconnect the shock absorber with the bracket.

(d) Remove the nut and bolt from the shock absorber upper side.

(e) Remove the shock absorber from the vehicle.

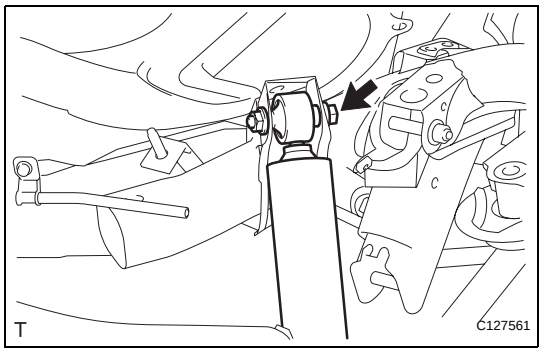


(f) Remove the nut and bolt from the bracket.
HINT:
While fixing the nut in place, loosen and remove the bolt.

INSPECTION

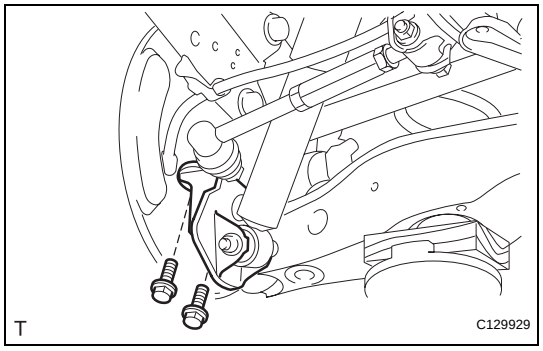
1. INSPECT REAR SHOCK ABSORBER ASSEMBLY LH

(a) Compress and extend the shock absorber rod, and check that there is no abnormal resistance or unusual sound during operation.
If there is any abnormality, replace the shock absorber with a new one.
NOTICE:
When disposing of the shock absorber, see DISPOSAL (see page SP-37).



INSTALLATION

HINT:



- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. TEMPORARILY INSTALL REAR SHOCK ABSORBER ASSEMBLY LH

(a) Temporarily install the bracket to the shock absorber with the bolt and nut.
NOTICE:
Fix the nut in place and temporarily install the bolt.

(b) Temporarily install the shock absorber upper side to the suspension member with the bolt and nut.
NOTICE:
Fix the nut in place and temporarily install the bolt.

(c) Install the shock absorber with the 2 bolts to the axle carrier.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

(d) Temporarily install the suspension arm with the bolt and 2 nuts to the suspension member and axle carrier.

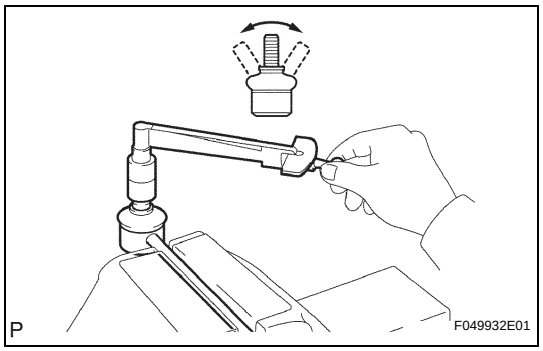
2. TEMPORARILY INSTALL REAR UPPER CONTROL ARM ASSEMBLY LH (See page SP-40)

3. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. STABILIZE SUSPENSION

(a) Lower the vehicle.

(b) Press down on the vehicle several times to stabilize the suspension.



5. TIGHTEN REAR SHOCK ABSORBER ASSEMBLY LH

(a) Fix the nut in place and tighten the bolt.
Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

6. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

(a) Inspect and adjust the rear wheel alignment (see page SP-7).

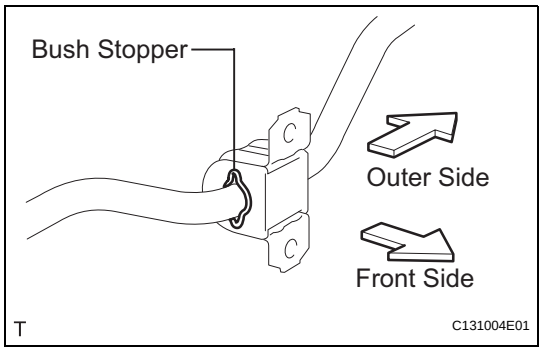
SP

INSPECTION

1. INSPECT REAR STABILIZER LINK ASSEMBLY LH

(a) As shown in the illustration, move the ball joint stud back and forth 5 times before installing the nut.

(b) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the fifth turn.



Turning torque:

0.05 to 1.96 N*m, (0.5 to 20 kgf*cm, 0.4 to 17 in.*lbf) or less

(c) Check for any cracks and grease leaks on the ball joint dust cover.

INSTALLATION

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **INSTALL REAR STABILIZER BUSH**
   (a) Install the 2 bushes.
   HINT:
   - Install each bush to the outer side of the bush stopper on each stabilizer bar.
   - Install each bush with its slit facing the vehicle front side.

2. **INSTALL REAR STABILIZER BAR**
   (a) Install the stabilizer bar to the vehicle.
   NOTICE:
   When installing the stabilizer bar, make sure not to damage the sensor wires, brake hoses, etc.

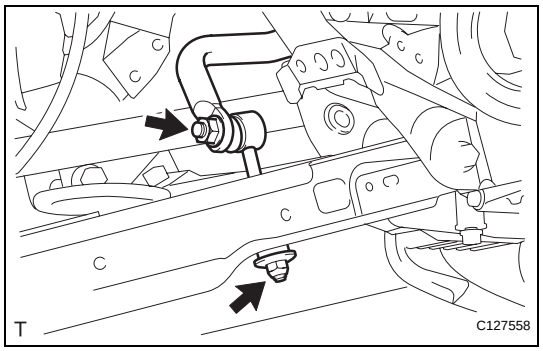
3. **INSTALL REAR NO. 1 STABILIZER BAR BRACKET**
   (a) Install the bracket with the 2 nuts.
   Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)

4. **INSTALL REAR COIL SPRING INSULATOR LOWER LH (See page SP-34)**

5. **INSTALL REAR COIL SPRING LH (See page SP-34)**

6. **INSTALL REAR COIL SPRING INSULATOR UPPER LH (See page SP-34)**

7. **INSTALL REAR COIL SPRING INSULATOR LOWER RH**
   HINT:
   Use the same procedures described for the LH side.



8. **INSTALL REAR COIL SPRING RH**
   HINT:
   Use the same procedures described for the LH side.

9. **INSTALL REAR COIL SPRING INSULATOR UPPER RH**
   HINT:
   Use the same procedures described for the LH side.

10. **TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY LH (See page SP-46)**

11. **TEMPORARILY INSTALL REAR NO. 2 SUSPENSION ARM ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

SP

12. INSTALL REAR STABILIZER LINK ASSEMBLY LH

(a) Install the stabilizer link with the 2 nuts.

Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf) for stabilizer bar
30 N*m (306 kgf*cm, 22 ft.*lbf) for suspension No. 2 arm

13. INSTALL REAR STABILIZER LINK ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

14. INSTALL REAR WHEEL

Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

15. STABILIZE SUSPENSION (See page SP-37)

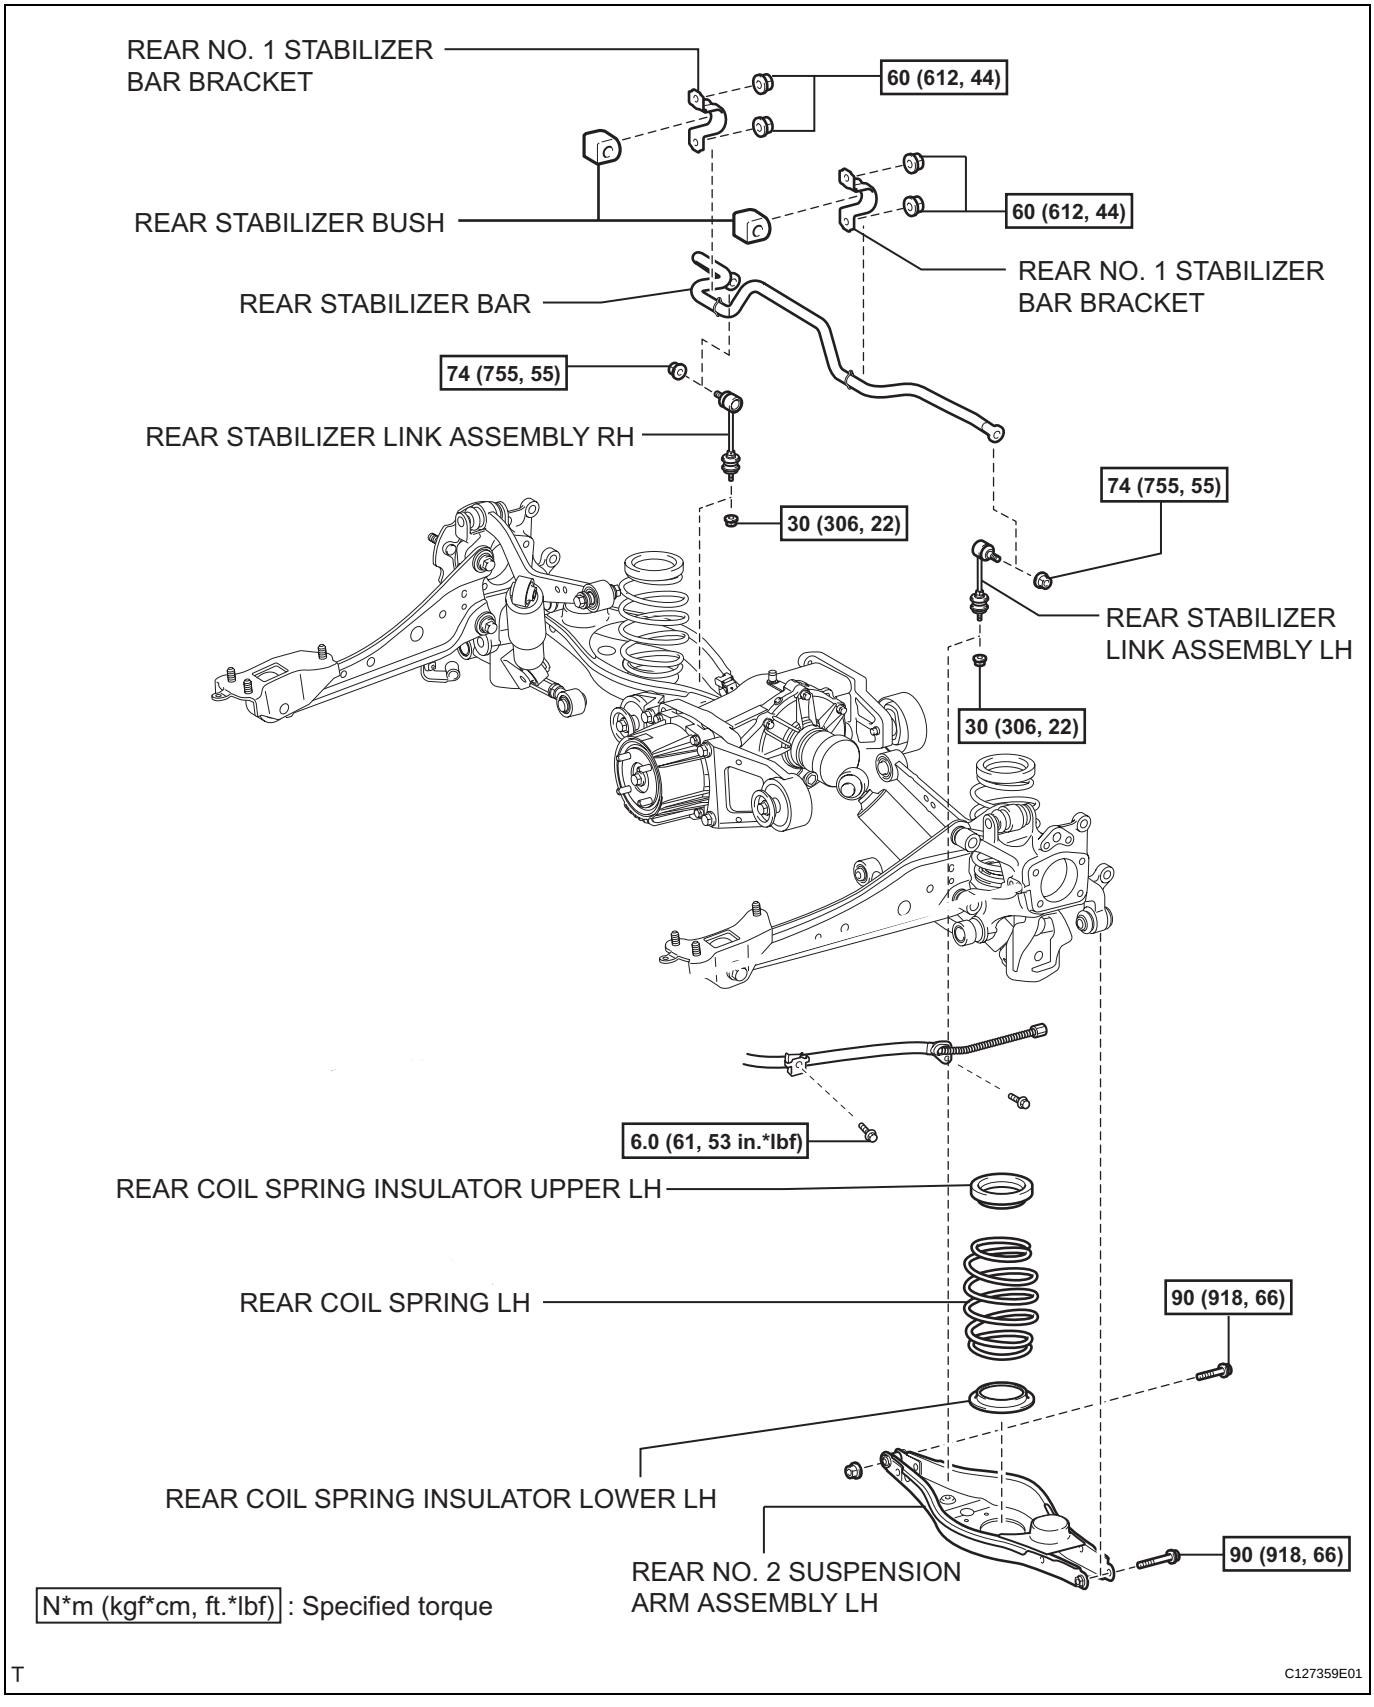
16. TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY LH (See page SP-46)

17. TIGHTEN REAR NO. 2 SUSPENSION ARM ASSEMBLY RH

HINT:
Use the same procedures described for the LH side.

18. INSPECT AND ADJUST REAR WHEEL ALIGNMENT

(a) Inspect and adjust the rear wheel alignment (see page SP-7).

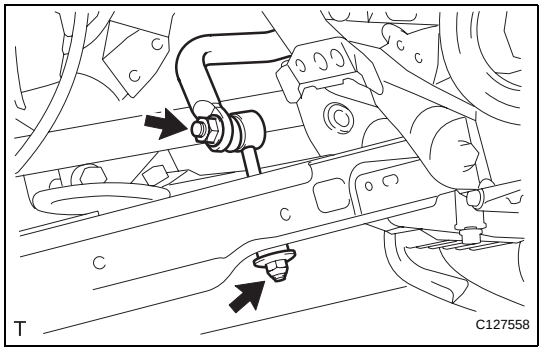


19. CHECK SPEED SENSOR SIGNAL

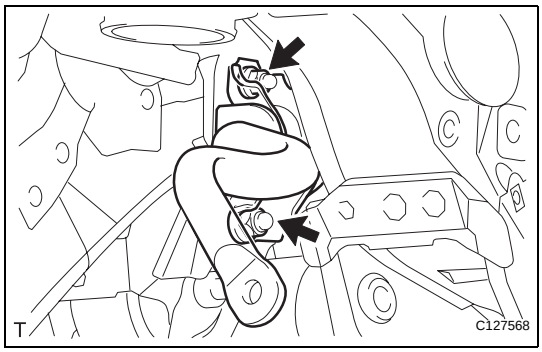
(a) Check the speed sensor signal (see page BC-44).

SP

REAR STABILIZER BAR



COMPONENTS

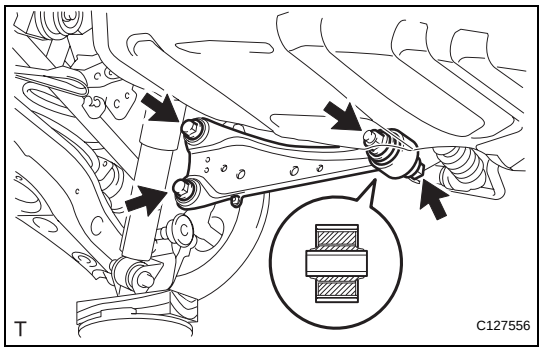


SP

REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE REAR WHEEL**
2. **REMOVE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the nut and disconnect the link from the suspension No. 2 arm.
   (b) Remove the nut and link from the stabilizer bar.
3. **REMOVE REAR STABILIZER LINK ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side
4. **REMOVE REAR NO. 2 SUSPENSION ARM ASSEMBLY LH (See page SP-45)**
5. **REMOVE REAR NO. 2 SUSPENSION ARM ASSEMBLY RH**
   HINT:
   Use the same procedures described for the LH side
6. **REMOVE REAR COIL SPRING INSULATOR UPPER LH (See page SP-33)**
7. **REMOVE REAR COIL SPRING LH (See page SP-33)**
8. **REMOVE REAR COIL SPRING INSULATOR LOWER LH (See page SP-33)**
9. **REMOVE REAR COIL SPRING INSULATOR UPPER RH**
   HINT:
   Use the same procedures described for the LH side
10. **REMOVE REAR COIL SPRING RH**
    HINT:
    Use the same procedures described for the LH side
11. **REMOVE REAR COIL SPRING INSULATOR LOWER RH**
    HINT:
    Use the same procedures described for the LH side



12. **REMOVE REAR NO. 1 STABILIZER BAR BRACKET**
    (a) Remove the 2 nuts and bracket.
    HINT:
    Use the same procedures for the other side.
13. **REMOVE REAR STABILIZER BAR**
    (a) Remove the stabilizer bar from the vehicle.
    NOTICE:
    When removing the stabilizer bar from the vehicle, make sure not to damage the sensor wire, brake hose, etc.
14. **REMOVE REAR STABILIZER BUSH**
    (a) Remove the 2 stabilizer bushes from the stabilizer bar.

INSTALLATION

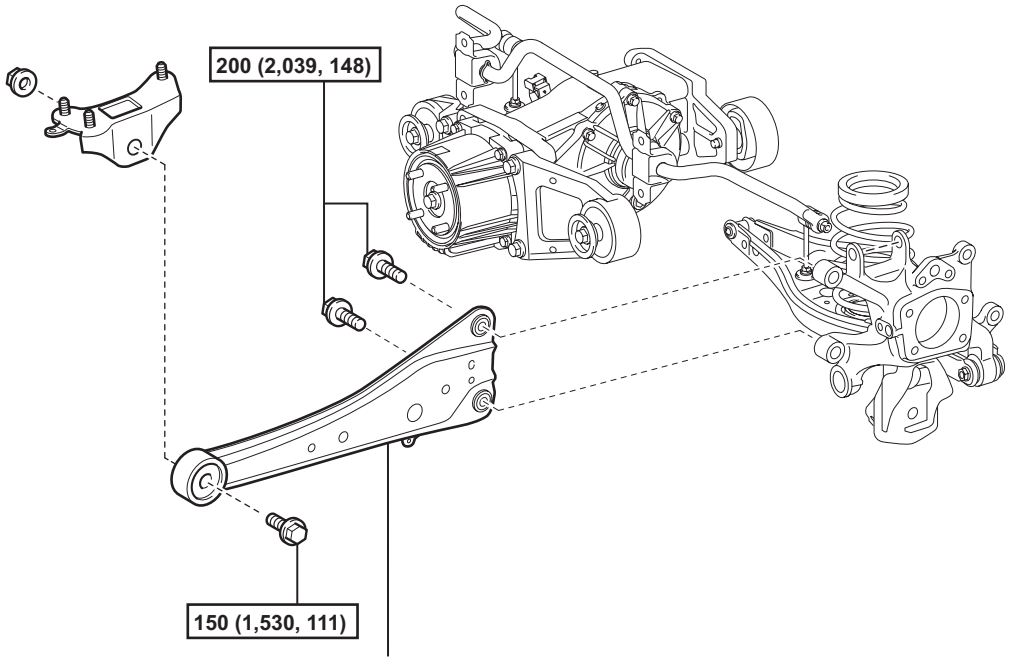
HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **TEMPORARILY TIGHTEN REAR TRAILING ARM ASSEMBLY LH**
   (a) Temporarily install the trailing arm with the 3 bolts and nut to the axle carrier and suspension arm bracket.
   HINT:
   While fixing the nut in place, tighten the bolt.

2. **INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-9)**

3. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)



4. **TIGHTEN REAR TRAILING ARM ASSEMBLY LH**
   (a) Tighten the 3 bolts and nut.
   Torque: 200 N*m (2,039 kgf*cm, 148 ft.*lbf) for axle carrier
   150 N*m (1,530 kgf*cm, 111 ft.*lbf) for suspension arm bracket

5. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
   (a) Inspect and adjust the rear wheel alignment (see page SP-7).

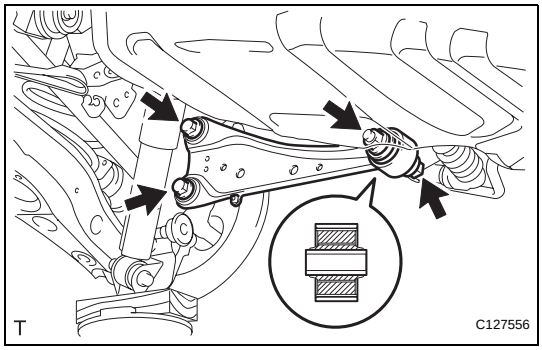
REMOVAL

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

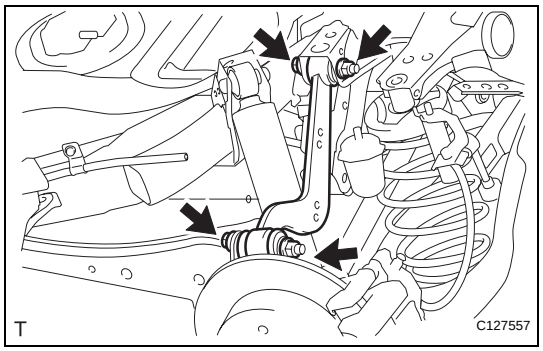


2. DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY (See page PB-8)

3. REMOVE REAR TRAILING ARM ASSEMBLY LH

(a) Remove the 3 bolts, nut and trailing arm from the axle carrier and suspension arm bracket.

HINT:



While fixing the nut in place, loosen and remove the bolt.

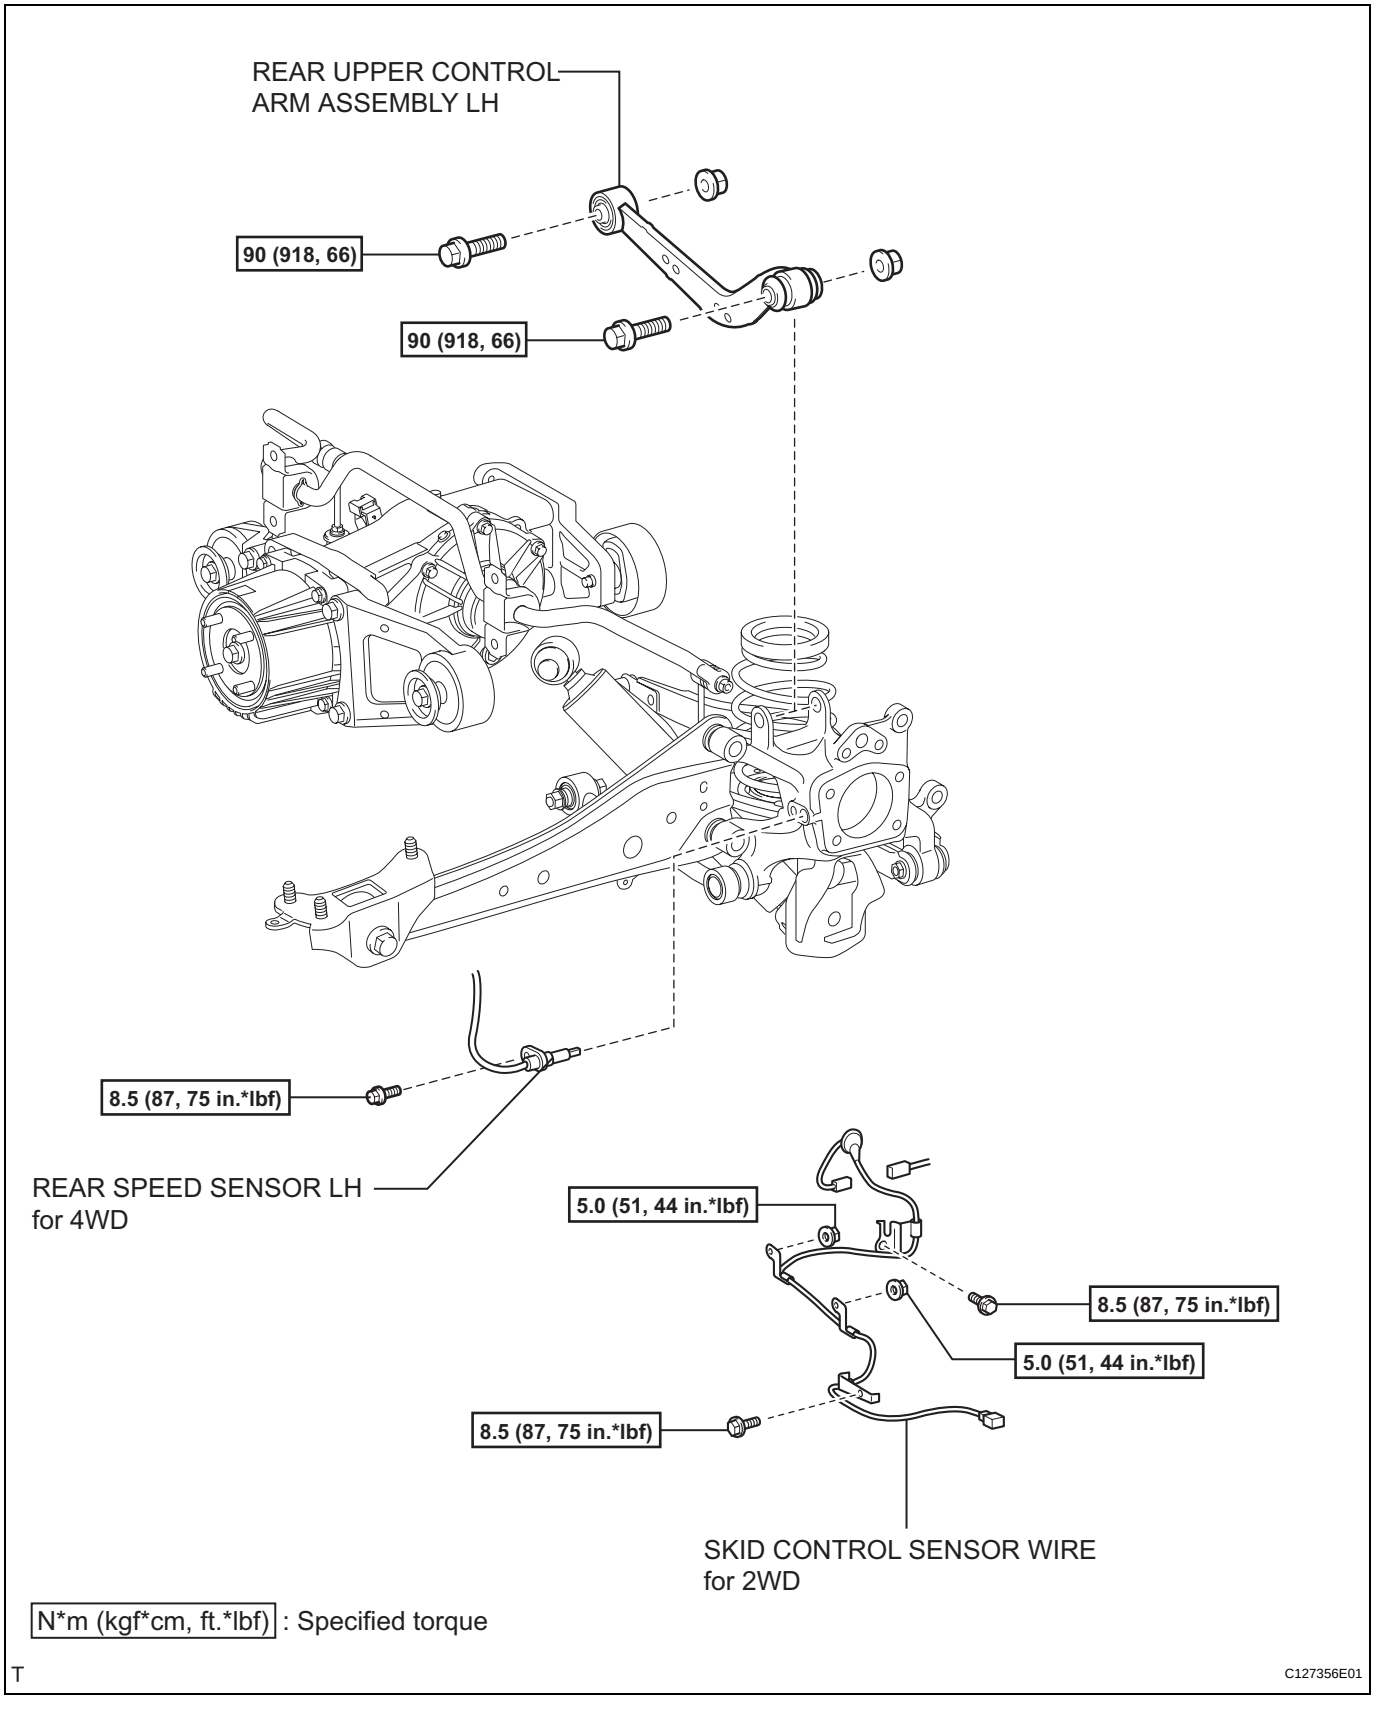
INSTALLATION

HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **TEMPORARILY INSTALL REAR UPPER CONTROL ARM LH**
   (a) Temporarily install the control arm with the 2 bolts and 2 nut.
   HINT:
   Fix the nuts in place and temporarily tighten the bolts.

2. **CONNECT SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-201)**



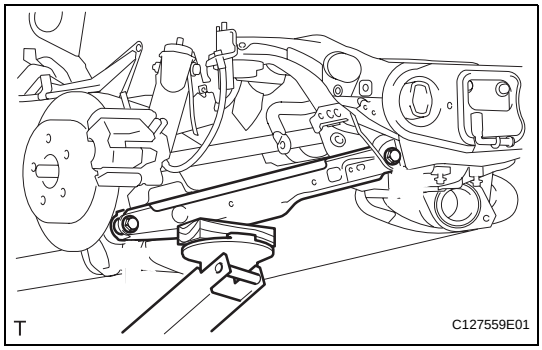
3. **CONNECT REAR SPEED SENSOR LH (for 4WD) (See page BC-206)**

4. **INSTALL REAR WHEEL**
   (a) Install the wheel.
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

5. **TIGHTEN REAR UPPER CONTROL ARM ASSEMBLY LH**
   (a) Fix the 2 nuts in place and tighten the 2 bolts.
   Torque: 90 N*m (918 kgf*cm, 66 ft.*lbf)

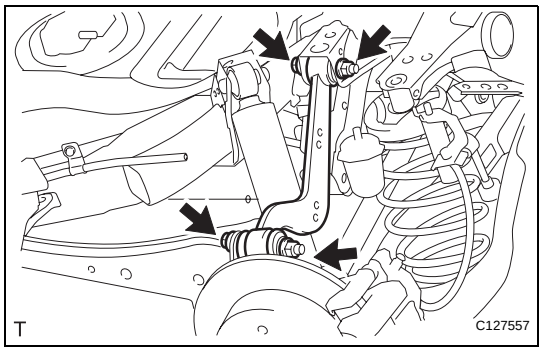
REAR UPPER CONTROL ARM

COMPONENTS



SP

REMOVAL



HINT:

- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE REAR WHEEL**
2. **DISCONNECT SKID CONTROL SENSOR WIRE (for 2WD) (See page BC-198)**
3. **DISCONNECT REAR SPEED SENSOR LH (for 4WD) (See page BC-205)**
4. **REMOVE REAR UPPER CONTROL ARM ASSEMBLY LH**

(a) Support the No. 2 suspension arm.

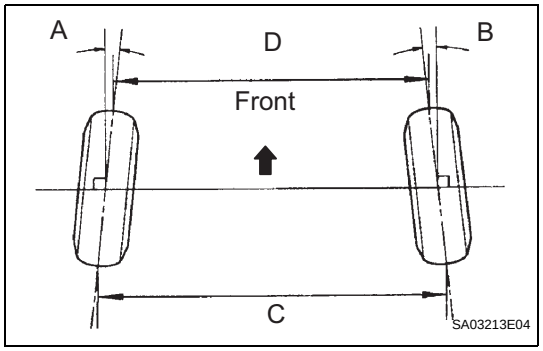
(b) Remove the 2 bolts and 2 nuts, and disconnect the upper control arm.

NOTICE:
When removing the bolts, hold the nuts in place.

REAR WHEEL ALIGNMENT

ADJUSTMENT

1. INSPECT TIRE



(a) Inspect the tire (see page TW-1).

2. MEASURE VEHICLE HEIGHT

(a) Measure the vehicle height (see page SP-3).

3. INSPECT TOE-IN

Standard toe-in

Item	Specified Condition
Toe-in (total)	A + B: 0°11' +-10' (0.18° +-0.17°) C - D: 2.3 +-1 mm (0.09 +-0.04 in.)

If the toe-in is not within the specified range, inspect the suspension parts and replace them if necessary.

4. INSPECT CAMBER

(a) Install the camber-caster-kingpin gauge or set the vehicle on the wheel alignment tester.

(b) Inspect the camber.

Standard camber

Item		Specified Condition
Camber Right-left error	Tire Size: 215/70R16	-0°55' +-45' (-0.92 +-0.75°) 30' (0.5°) or less
	Tire Size: 225/65R17 Tire Size: 235/55R18	-1°04' +-45' (-1.07 +-0.75°) 30' (0.5°) or less
	Tire Size: 225/65R17*	-0°52' +-45' (-0.87 +-0.75°) 30' (0.5°) or less

HINT:

- *: w/ 3rd seat
- Camber is not adjustable. If the measurement is not within the specified range, inspect the suspension parts for damage and/or wear, and replace them if necessary.

SP

SUSPENSION SYSTEM

PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

Suspension system

Symptom	Suspected area	See page
Vehicle/pulls	1. Tire (worn or improperly inflated)	TW-1
	2. Front wheel alignment (incorrect)	SP-3

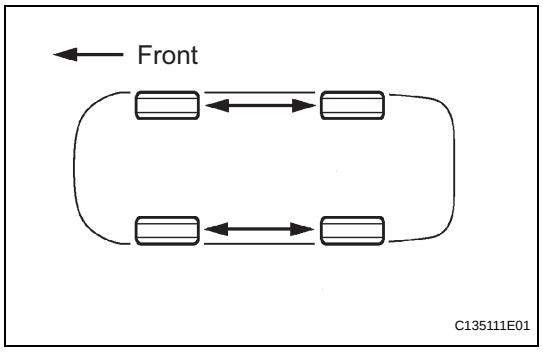
TIRE AND WHEEL SYSTEM



INSPECTION

1. INSPECT TIRE

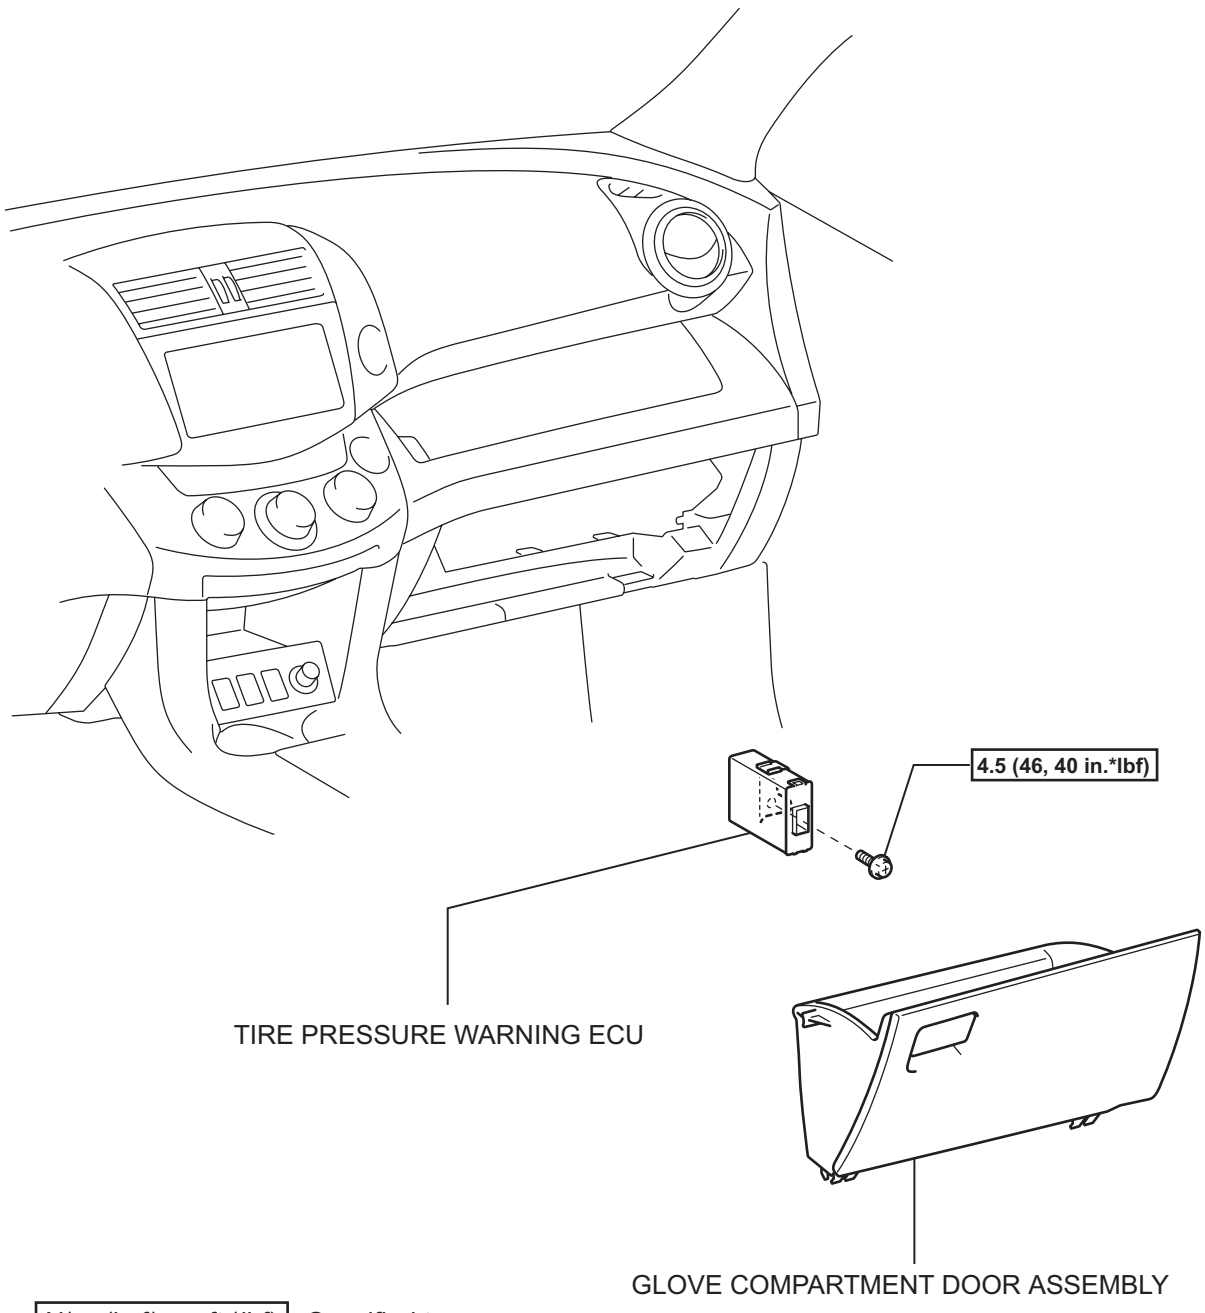
(a) Check the tires for wear and proper inflation pressure.
Standard cold tire inflation pressure:
220 kPa (2.2 kgf/cm^2, 32 psi)

(b) Using a dial indicator, check the runout of the tires.
Standard tire runout:
1.0 mm (0.039 in.) or less

2. ROTATE TIRE

HINT:
See the illustration for tire rotation.

3. INSPECT WHEEL BALANCE



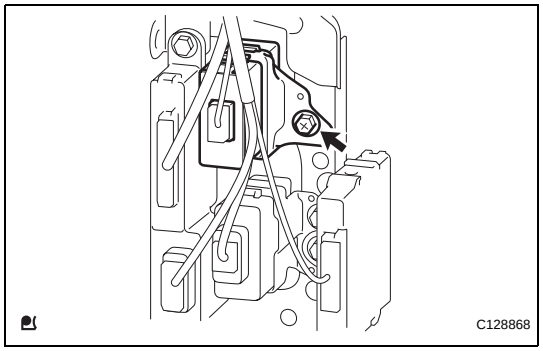
(a) Check and adjust the off-the-car balance.
Standard imbalance after adjustment:
8.0 g (0.018 lb) or less

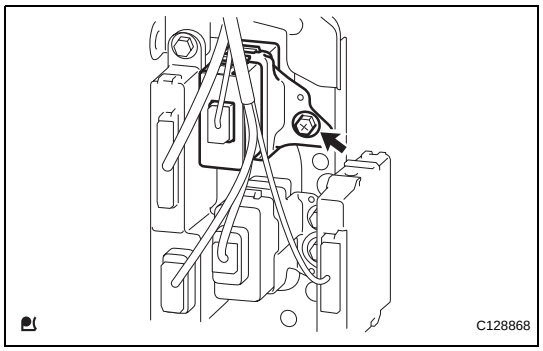
4. CHECK FRONT AXLE HUB BEARING (See page AH-6)

5. CHECK BEARING BACKLASH AND AXLE HUB DEVIATION (See page AH-16)

TIRE PRESSURE WARNING ECU

COMPONENTS





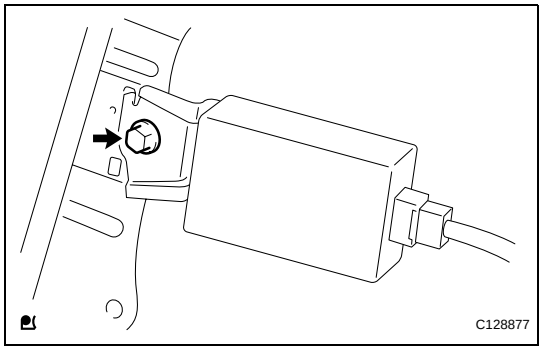
N*m (kgf*cm, ft.*lbf) : Specified torque

C128866E01

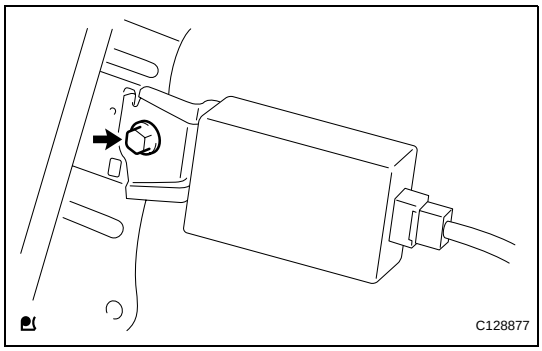
REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-20)**
3. **REMOVE TIRE PRESSURE WARNING ECU**
   (a) Disconnect the connector.
   (b) Remove the bolt and ECU.

INSTALLATION



1. **INSTALL TIRE PRESSURE WARNING ECU**
   (a) Install the ECU with the bolt.
   Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)
   (b) Connect the connector.
2. **INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-25)**
3. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
4. **REGISTER TRANSMITTER ID (See page TW-10)**
5. **INSPECT TIRE PRESSURE WARNING SYSTEM**



REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
2. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-29)**
3. **REMOVE PACKAGE TRAY TRIM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)**
4. **REMOVE TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)**
5. **REMOVE REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)**
6. **REMOVE DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)**
7. **REMOVE NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
8. **REMOVE NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
9. **REMOVE NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-109)**
10. **REMOVE NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-30)**
11. **REMOVE REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-110)**
12. **REMOVE REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-30)**
13. **REMOVE REAR FLOOR NO. 3 BOARD**
14. **REMOVE REAR FLOOR NO. 2 BOARD**
15. **REMOVE REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-31)**
16. **REMOVE REAR FLOOR FINISH PLATE (See page IR-31)**
17. **REMOVE REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat) (See page IR-31)**
18. **REMOVE RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-80)**
19. **REMOVE TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-32)**
20. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-33)**
21. **REMOVE DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-34)**

22. **REMOVE INNER ROOF SIDE GARNISH ASSEMBLY RH (See page IR-35)**

23. **REMOVE TIRE PRESSURE WARNING ANTENNA AND RECEIVER**
    (a) Disconnect the connector.
    (b) Remove the bolt and receiver.

INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING ANTENNA AND RECEIVER**
    (a) Install the receiver with the bolt.
    Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)
    (b) Connect the connector.

2. **INSTALL INNER ROOF SIDE GARNISH ASSEMBLY RH (See page IR-52)**

3. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/o Rear No. 2 Seat) (See page IR-53)**

4. **INSTALL DECK TRIM SIDE PANEL ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-54)**

5. **INSTALL TETHER ANCHOR BRACKET SUB-ASSEMBLY (w/o Rear No. 2 Seat) (See page IR-54)**

6. **INSTALL RECLINING REMOTE CONTROL LEVER BEZEL RH (w/o Rear No. 2 Seat) (See page SE-105)**

7. **INSTALL REAR DECK TRIM COVER RH (w/ Rear No. 2 Seat) (See page IR-55)**

8. **INSTALL REAR FLOOR FINISH PLATE (See page IR-55)**

9. **INSTALL REAR FLOOR NO. 1 MAT SUPPORT SIDE PLATE (See page IR-55)**

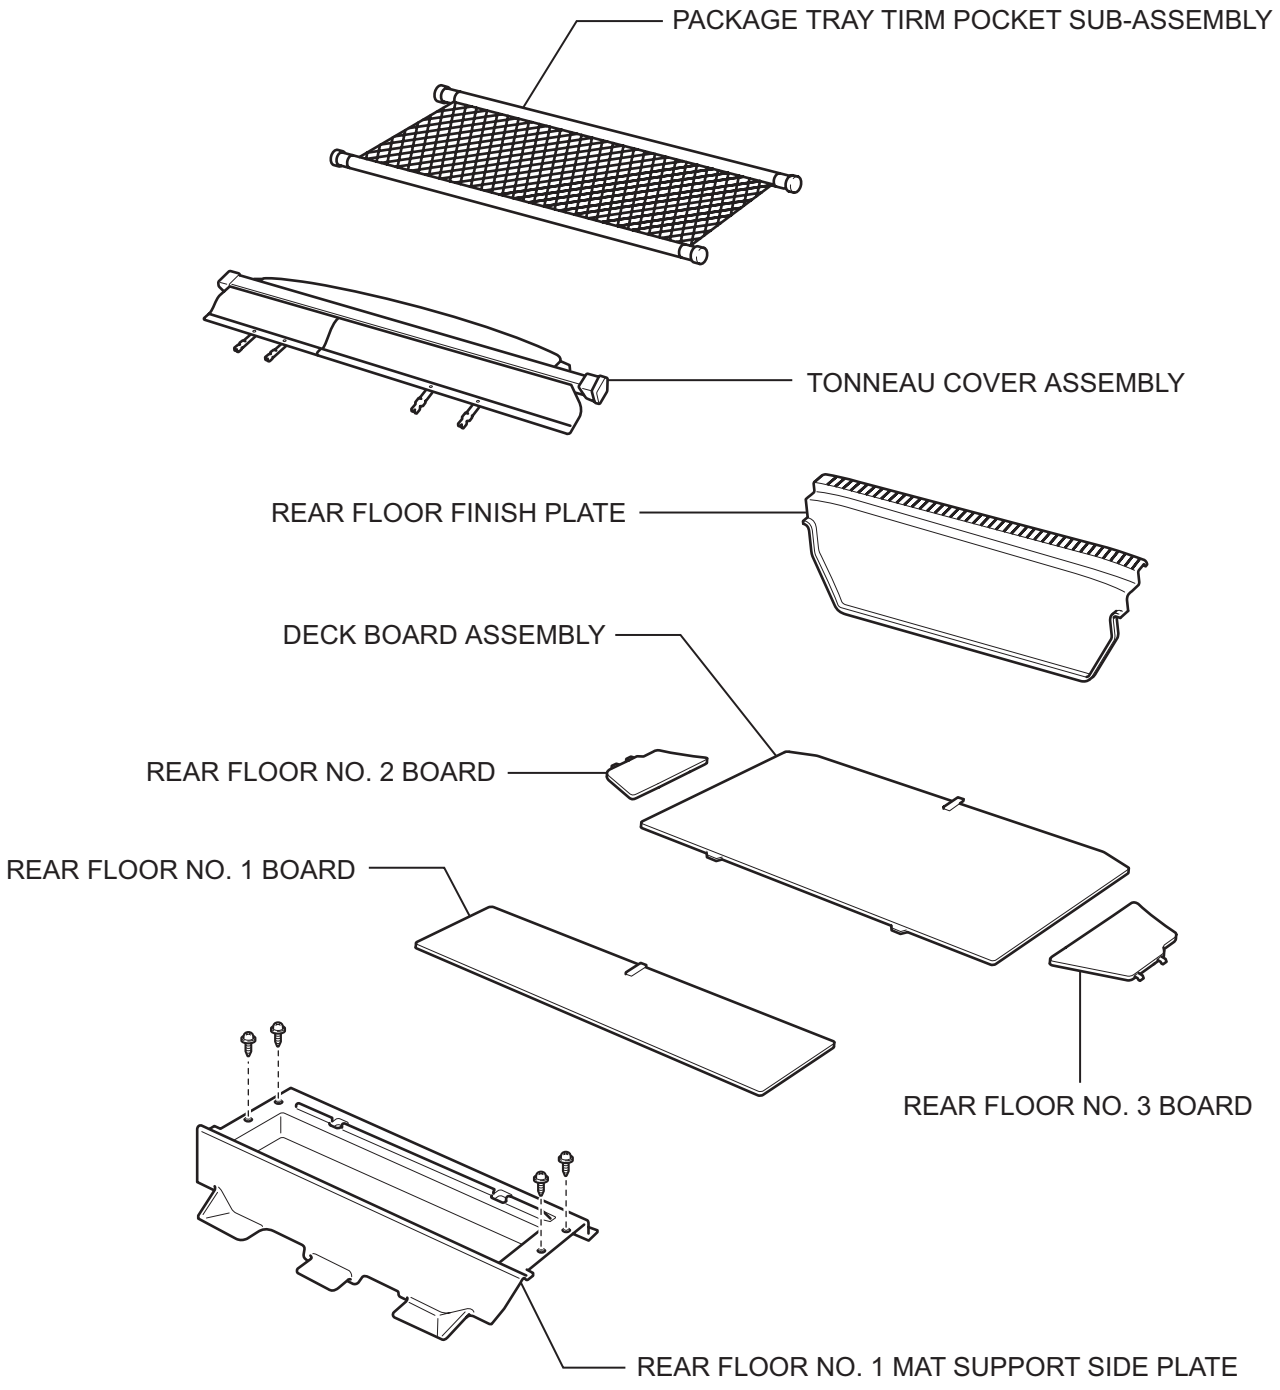
10. **INSTALL REAR FLOOR NO. 2 BOARD**

11. **INSTALL REAR FLOOR NO. 3 BOARD**

12. **INSTALL REAR NO. 2 SEAT ASSEMBLY LH (w/ Rear No. 2 Seat) (See page SE-121)**

13. **INSTALL REAR NO. 2 SEAT ASSEMBLY RH (w/ Rear No. 2 Seat) (See page IR-55)**

14. **INSTALL NO. 2 SEAT LEG COVER LH (w/ Rear No. 2 Seat) (See page SE-123)**



TW

15. INSTALL NO. 2 SEAT LEG COVER RH (w/ Rear No. 2 Seat) (See page IR-56)
16. INSTALL NO. 2 SEAT HINGE COVER LH (w/ Rear No. 2 Seat) (See page SE-123)
17. INSTALL NO. 2 SEAT HINGE COVER RH (w/ Rear No. 2 Seat) (See page IR-56)
18. INSTALL DECK BOARD ASSEMBLY (w/o Rear No. 2 Seat)
19. INSTALL REAR FLOOR NO. 1 BOARD (w/o Rear No. 2 Seat)
20. INSTALL TONNEAU COVER ASSEMBLY (w/o Rear No. 2 Seat)
21. INSTALL PACKAGE TRAY TIRM POCKET SUB-ASSEMBLY (w/o Rear No. 2 Seat)
22. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-57)
23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
24. REGISTER TRANSMITTER ID (See page TW-10)
25. INSPECT TIRE PRESSURE WARNING SYSTEM

SYSTEM DESCRIPTION

1. DESCRIPTION OF SYSTEM

(a) A tire pressure warning antenna and receiver is equipped with a tire pressure sensor and a transmitter and is installed in each tire wheel. The sensor measures the tire pressure and internal temperature of the tire. Then the measured value and transmitter ID are transmitted to the tire pressure monitor receiver on the body as radio waves, which are sent to the tire pressure warning ECU. If the transmitter ID has already been registered, the ECU compares the measured air pressure value with the standard value. When the value is less than the standard value registered in the tire pressure warning ECU, the warning light in the combination meter turns on.

2. WHEN TIRE PRESSURE WARNING LIGHT IS LIT

(a) When the tire pressure warning light does not turn off, or when it turns on during driving, check the tire pressure. If the tire pressure warning light turns on within several hours after adjusting the tire pressure, the tire may have a slow air leak.

(b) Under the following conditions, the system may not function properly;
- Areas, facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.
- Large amounts of snow or ice are stuck to the vehicle, especially on the wheels and around the wheel houses.
- The battery of the transmitter is depleted.
- Tires and wheels without tire pressure warning valves and transmitters are used.
- Snow tires and tire chains are used.
- If wheels other than the specified ones are used, the system may not function properly because different radio waves are transmitted from the tire pressure warning valve and transmitter.
- Depending on the tire type, the tire pressure warning valve and transmitter may not function properly even though the specified wheels are used.
- The system may not function properly if it is initialized with tire pressures which are not the specified values.

(c) The average life of the grommet of the tire pressure warning antenna and receiver is approximately 5 years, at which time it must be replaced. Retighten the valve nut if the valve is leaking air, if it is less than 5 years old, and there is no problem with the grommets.

(d) After removing and installing the ECU or a sensor, output a diagnosis code and check that it is a normal code.

3. FUNCTION OF COMPONENTS

Components	Function
Tire pressure warning antenna and receiver	• Combined as a single unit with a disc wheel air valve, it measures tire pressure and temperature, and transmits an ID number for measurement value and identification • Battery is built into valve
Tire pressure warning antenna and receiver	Receives necessary signals from tire pressure warning antenna and receiver and transmits them to tire pressure warning ECU
Tire pressure warning ECU	• Receives signal from receiver and identifies it as vehicle's own signal. • If measurement value is equal to or lower than specified value, it transmits a signal so that the air pressure warning light on combination meter turns on.
Tire pressure warning light	Located in the combination meter, it informs driver of lowered tire air pressure and system failure

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use these procedures to troubleshoot the tire pressure warning system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3	CHECK INDICATOR LIGHT

(a) Check the indicator light (see page TW-17).

NEXT

4	CHECK DTC*

(a) Check for DTC (see page TW-20).
(b) Clear the DTC (see page TW-20).
(c) Recheck for DTC (see page TW-20).

Result

Result	Proceed to
DTC reoccurs	A
DTC does not reoccur	B

B → **Go to step 6**

A

5	DTC CHART

(a) Check for tire pressure warning system DTC output (see page TW-22).

NEXT

6 **PROBLEM SYMPTOM CONFIRMATION**

NEXT

7 **PROBLEM SYMPTOMS TABLE**

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → **Go to step 9**

A

8 **OVERALL ANALYSIS AND TROUBLESHOOTING***

(a) Terminals of ECU (see page TW-16).
(b) DATA LIST/ACTIVE TEST (see page TW-21).

NEXT

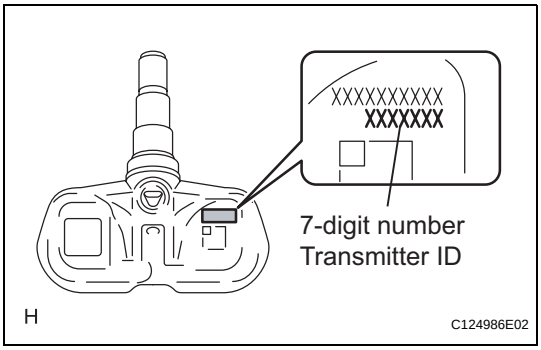
9 **REPAIR OR REPLACE**

NEXT

10 **CONFIRMATION TEST**

NEXT

END



REGISTRATION

1. IN CASE OF TIRE PRESSURE WARNING ECU REPLACEMENT

(a) Read ID stored in the old ECU using the intelligent tester.

2. IN CASE OF TIRE PRESSURE WARNING VALVE AND TRANSMITTER AND/OR TIRE PRESSURE WARNING ECU REPLACEMENT

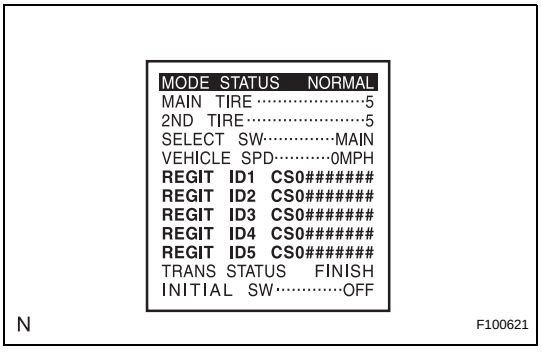
(a) Read the ID written on the tire pressure monitor valve.

3. REGISTER TRANSMITTER ID

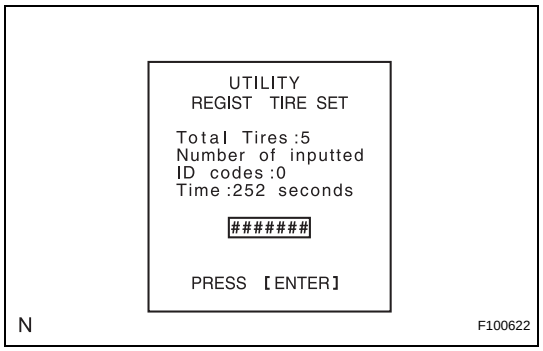
NOTICE:

It is necessary to register the transmitter ID in the tire pressure warning ECU when replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU.

(a) Prepare all of the transmitter ID data before starting registration.



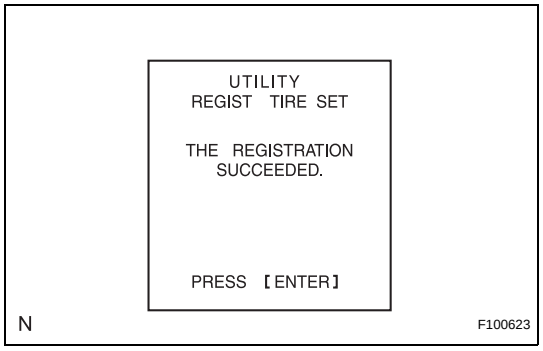
HINT:



- Read the registered transmitter IDs that are stored in the ECU using the intelligent tester and make a note of them.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valves and transmitters (see page TW-60).
- When replacing the tire pressure warning valves and transmitters, make a note of the IDs written on the tire pressure warning valves and transmitters.

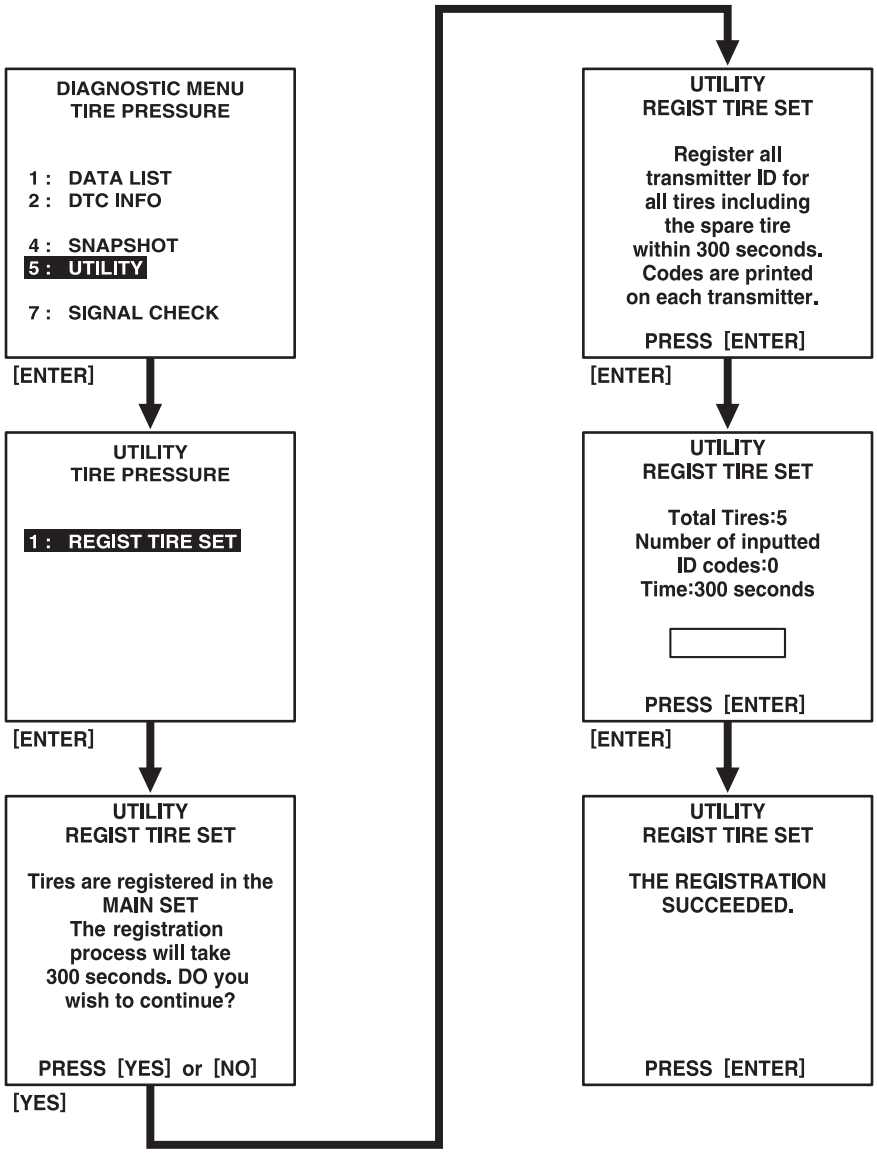
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.

(c) Turn the ignition switch ON.



(d) *1: Read and write down the ID (ID1 to ID5) by using the DATA LIST.

(e) *2: Select REGIST TIRE SET following the intelligent tester screen (UTILITY - REGIST TIRE SET).



(f) *3: Select the registration mode "MAIN".

(g) Input the ID (ID1 to ID5) using the intelligent tester and transmit it to the tire pressure warning ECU.

(h) Set the ID transmission condition to "ID Registration is complete".

Registration Procedure

F101083E01

HINT:

- The previously registered IDs will be deleted from the memory when the registration is completed.
- If the operations of *1 to *3 are not completed within 5 minutes, the mode will return to normal operation mode.

4. CONFIRMATION OF TRANSMITTER ID REGISTRATION

(a) Set the tire pressure of all wheels (including the spare tire) to the specified value.

Standard pressure:

220 kPa (2.2 kgf/cm^2, 32 psi)

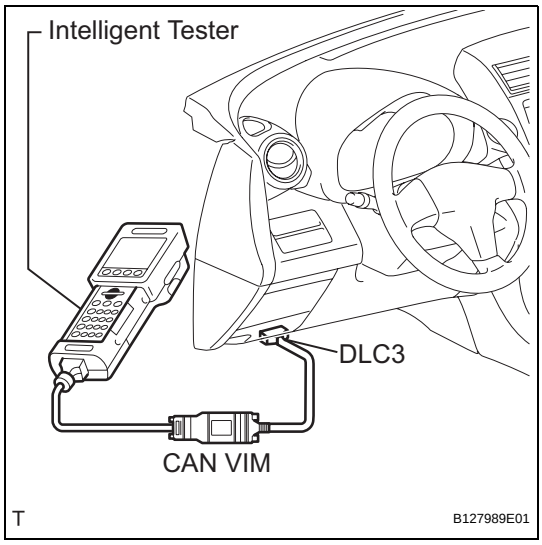
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Select "SIGNAL CHECK" mode on the intelligent tester (with CAN VIM) (see page TW-12).
(e) Confirm that the transmitter IDs and tire pressure data for all the tires are displayed on the intelligent tester screen.

NOTICE:

- **It may take up to 1 minute to update the tire pressure data.**
- **If the IDs have not been registered, DTC C2171/71 is set in the tire pressure warning ECU after approximately 60 minutes.**

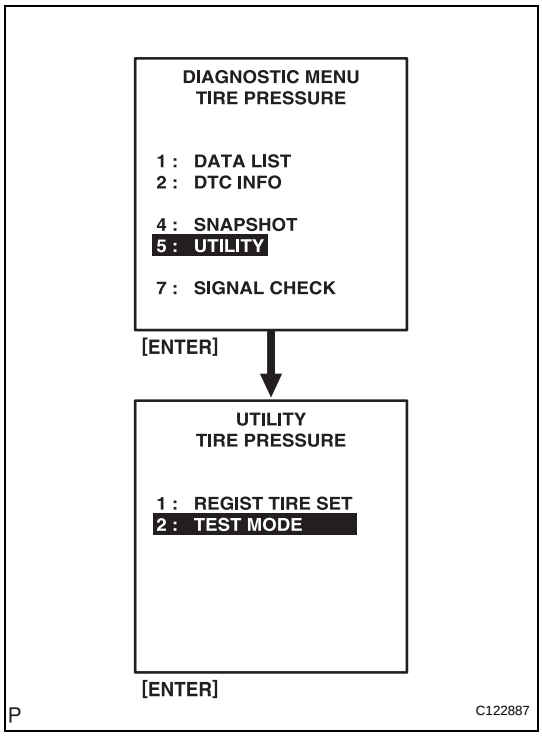
TEST MODE PROCEDURE

1. TEST MODE CHECK

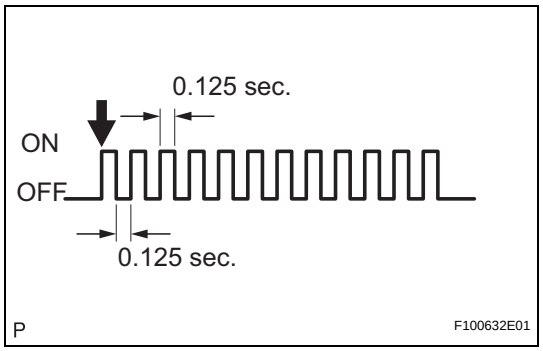


HINT:

- When entering the TEST MODE, the tire pressure warning ECU sets all the test DTCs first. After completing the test mode for each inspection item, the DTCs that are determined normal by the tire pressure warning ECU will be erased.
  The DTCs for other inspection items may not be erased when only a certain signal is inspected.
- When the test mode returns back to the normal mode, all the test DTCs will be erased.

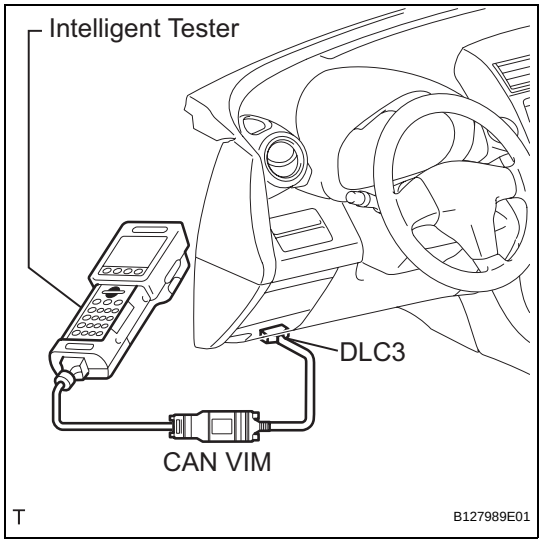


(a) Make sure that the ignition switch is OFF.



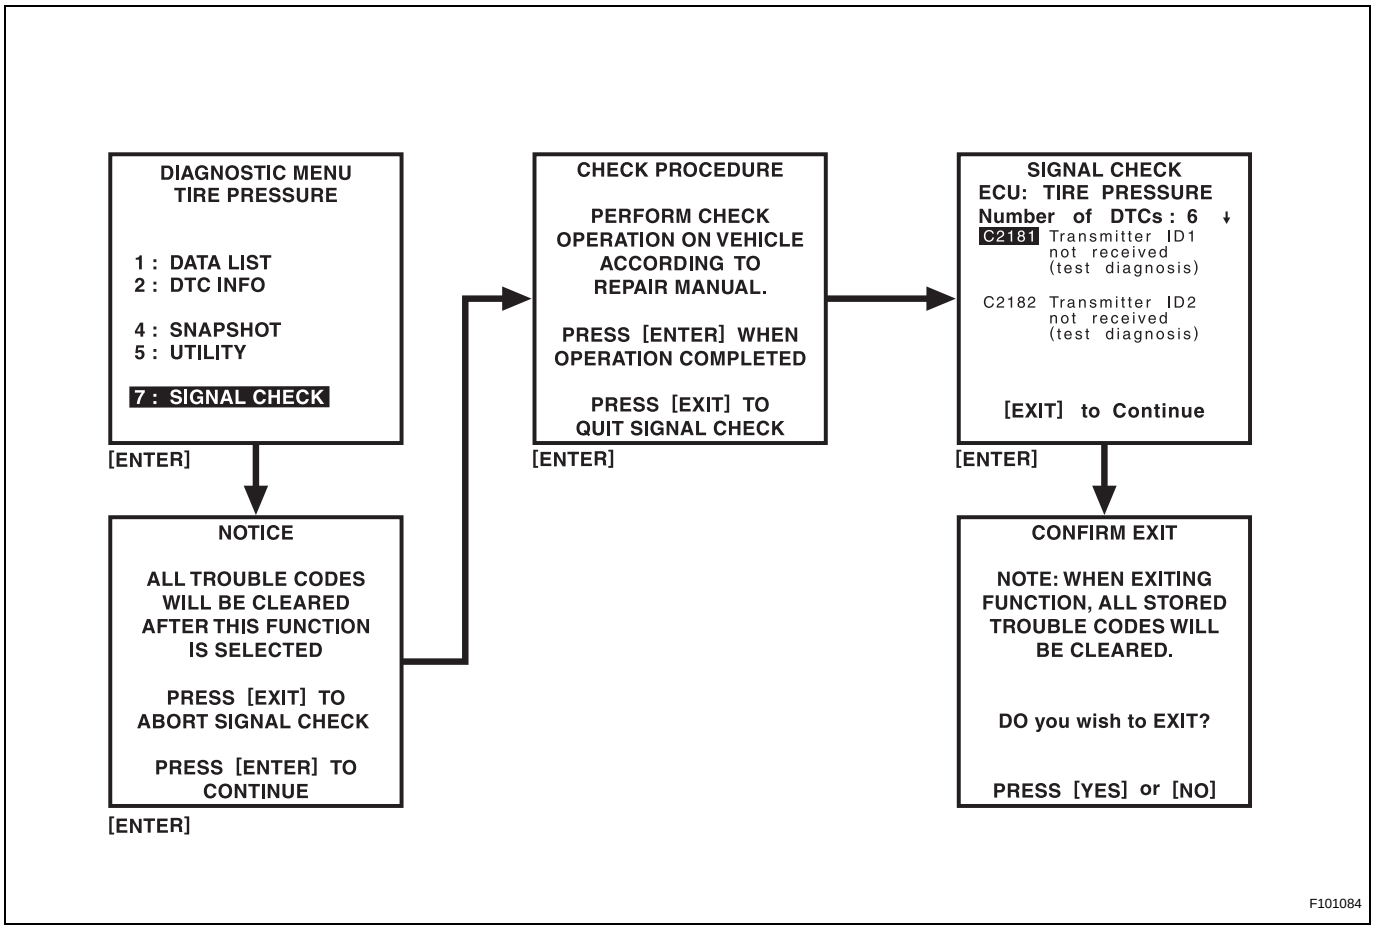
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.

(c) Turn the ignition switch ON.



(d) Select TEST MODE on the intelligent tester.

(e) Confirm that the tire pressure warning light in the combination meter blinks at 0.125 second intervals.



2. PERFORM SIGNAL CHECK

HINT:

- When entering the signal check, the tire pressure warning ECU sets all the signal check DTCs first. After completing the signal check for each inspection item, the DTCs that are determined normal by the tire pressure warning ECU will be erased. The DTCs for other inspection items may not be erased when only a certain signal is inspected.
- When the signal check returns back to normal mode, all the signal check DTCs will be erased.

(a) Make sure that the ignition switch is OFF.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Select SIGNAL CHECK on the intelligent tester.
(e) Drive the vehicle at 12 mph (20 km/h) or more for 10 seconds or more .

(f) Loosen the valve core and rapidly reduce the pressure (above 40 kPa / 30 seconds or more).

HINT:
The transmitter ID can be transmitted by rapidly reducing the tire pressure.

(g) Result

HINT:
After the signal check is completed, check for a DTC and signal check DTC to confirm the system status.

Condition	Procedure
SIGNAL CHECK DTC is output	Repair faulty part and enter SIGNAL CHECK again
SIGNAL CHECK DTCs are cleared	No problem

(h) End of SIGNAL CHECK

After completing test mode (SIGNAL CHECK), turn the ignition switch OFF and disconnect the tester.

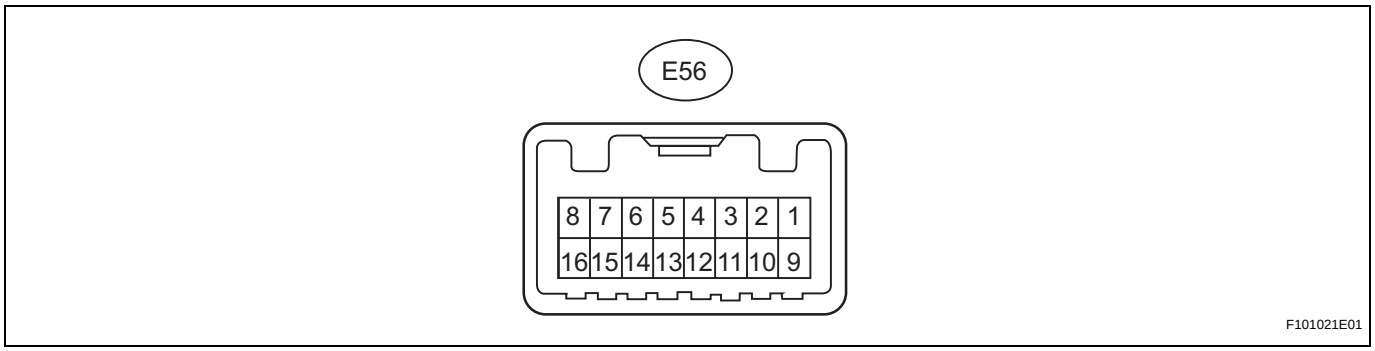
DTC of SIGNAL CHECK (TEST DIAGNOSIS) function:

If a malfunction code is displayed during the test mode DTC check, check the circuit listed for that code. For details of each code, refer to the "see page" of the "DTC No." in the chart.

DTC No.	Detection Item	Trouble Area	See page
C2181/81	Transmitter ID1 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness	TW-28
C2182/82	Transmitter ID2 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness	TW-28
C2183/83	Transmitter ID3 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness	TW-28
C2184/84	Transmitter ID4 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness	TW-28
C2185/85	Transmitter ID5 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness	TW-28
C2191/91	Vehicle speed signal error	• Vehicle speed sensor • Tire pressure warning ECU • Combination meter • Wire harness	TW-44

PROBLEM SYMPTOMS TABLE

HINT:



- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Tire pressure warning system

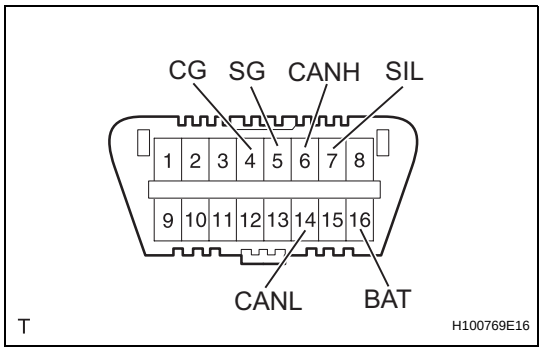
Symptom	Suspected area	See page
Tire pressure warning system does not operate	1. ECU power source circuit	TW-49
	2. TC and CG terminal circuit	TW-51
	3. Tire pressure warning valve and transmitter	TW-60
	4. Combination meter	ME-52
	5. Tire pressure warning antenna and receiver	TW-53
	6. Tire pressure warning ECU	TW-64
DTC check cannot be completed	1. ECU Power source circuit	TW-49
	2. TC and CG terminal circuit	TW-51
	3. Tire pressure warning ECU	TW-64
Tire pressure warning light malfunctions (Does not turn on)	1. ECU Power source circuit	TW-49
	2. Tire pressure warning light circuit	TW-47
	3. Combination meter	ME-52
	4. Tire pressure warning ECU	TW-64
Tire pressure warning light malfunctions (Remains on)	1. Tire pressure check	TW-2
	2. Tire pressure warning ECU connector poorly connected	-
	3. Tire pressure warning light circuit	TW-47
	4. Combination meter	ME-52
	5. Tire pressure warning ECU	TW-64
Tire pressure warning light malfunctions (Blinking)	1. Check DTC	TW-20
	2. TC and CG terminal circuit	TW-51
	3. Test mode (SIGNAL CHECK)	TW-12
	4. Tire pressure warning ECU	TW-64

TERMINALS OF ECU

1. CHECK TIRE PRESSURE WARNING ECU

(a) Disconnect the E56 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (E56-2) - GND (E56-11)	L - W-B	IG power source	Ignition switch ON	10 to 14 V
			Ignition switch OFF	Below 1 V
GND (E56-11) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω



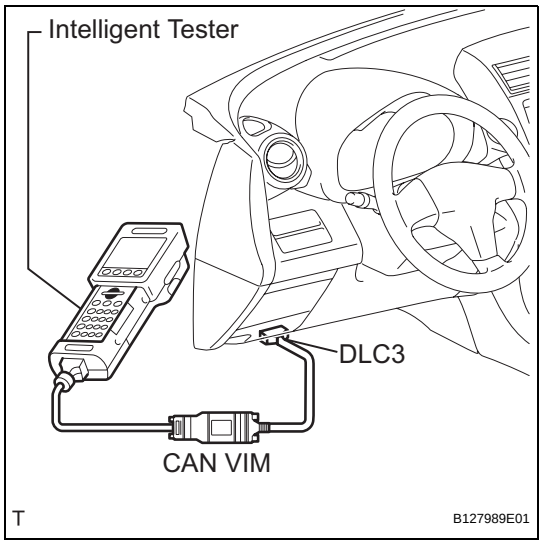
If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E56 ECU connector.
(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SPD (E56-3) - GND (E56-11)	V - W-B	Vehicle speed signal	Vehicle is running	Pulse generation
SIL (E56-4) - GND (E56-11)	W - W-B	Diagnosis tester communication line	Ignition switch ON, when communication is not performed with a tester	8 to 15 V
IND (E56-6) - GND (E56-11)	P - W-B	Tire pressure warning light output signal	Ignition switch ON, tire pressure warning light ON	Below 1 V
RDA (E56-7) - GND (E56-11)	G - W-B	Tire pressure monitor receiver signal	Ignition switch ON, tire pressure monitor receiver is not connected	9 to 16 V
RFSV (E56-8) - GND (E56-11)	R - W-B	Tire pressure monitor receiver power source	Ignition switch ON	4.5 to 5.5 V
TC (E56-12) - GND (E56-11)	G - W-B	TC terminal	When terminal TC is not connected	8 to 15 V
GND2 (E56-16) - Body ground	Y - Body ground	Tire pressure monitor receiver ground	Always	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

TW

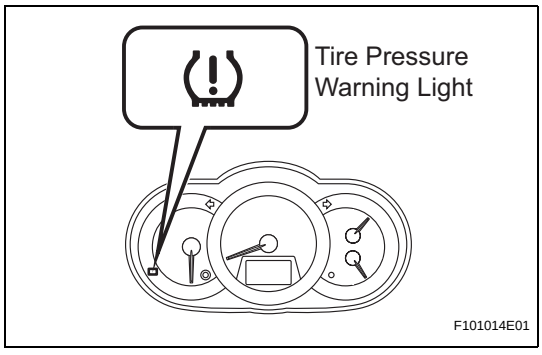


DIAGNOSIS SYSTEM

1. CHECK DLC3

The ECM uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus '+' line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery ground	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF	54 to 69 Ω
CANH (6) - Body ground	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANL (14) - Body ground	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANH (6) - CG (4)	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher



If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

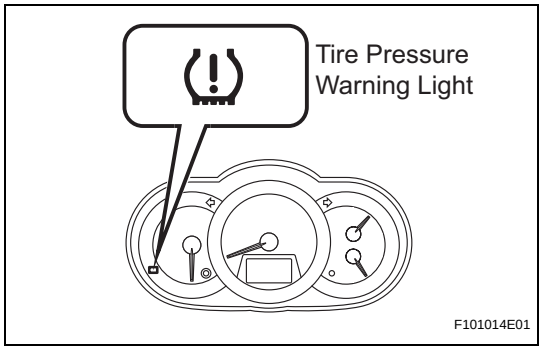
Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the ignition switch ON and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem wither with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tool is connected to another vehicle, the problem is probably in the tester itself. So consult the Service Department listed in the tester's instruction manual.

2. DIAGNOSIS SYSTEM

(a) Warning light

(1) The tire pressure warning light blinks when there is a malfunction in the tire pressure warning system.



NOTICE:

When the malfunction has been corrected, the tire pressure warning light does not turn on.

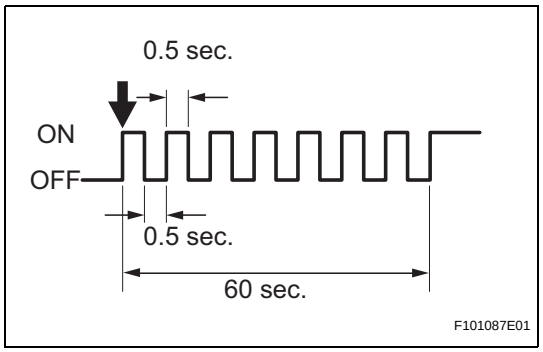
(b) DTCs (Normal mode)

(1) DTCs are memorized in the tire pressure warning ECU. These DTCs can be read by checking the blinks of the tire pressure warning light or by using the intelligent tester (see page TW-20).

(c) Test mode
(1) By switching from normal mode to test mode (input signal check), you can inspect the tire pressure monitor receiver, each tire pressure warning valve and transmitter and vehicle speed sensor (see page TW-12).

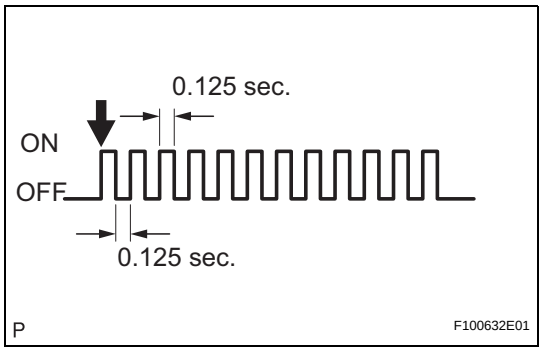
3. CHECK TIRE PRESSURE WARNING LIGHT

(a) Turn the ignition switch ON.
(b) Check that the tire pressure warning light turns on for 3 seconds.
If the warning check result is not normal, proceed to the troubleshooting for the tire pressure warning light circuit.



Trouble Area	See page
Tire pressure warning light circuit	TW-47

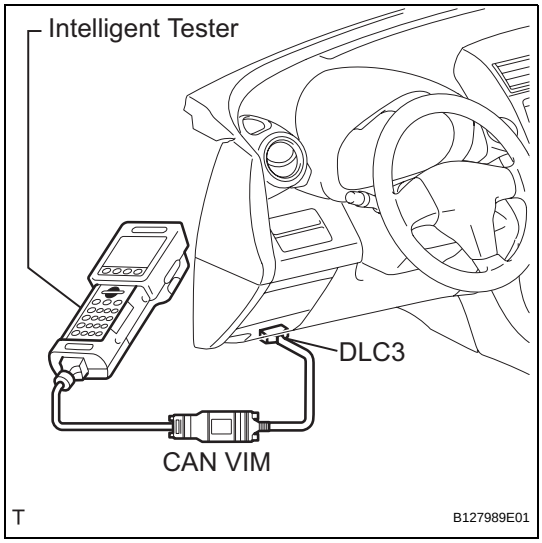
4. TIRE PRESSURE WARNING LIGHT CHART



HINT:
The table below indicates the state of the tire pressure warning light after the ignition switch is turned ON.

TW

	Immediately after turning the ignition switch ON	Always					
	Warning light output pattern						
	Turns on for 3 seconds	Turns off	Turns on	Flashes for 1 minute and then illuminates (*1)	Blinks (*2)	Blinks (*3)	Output DTC
Normal	○	○					
Low tire pressure	○		○				
System fail	○			○			
Test mode	○				○		
ECU connector poorly connected	○			○			
TC ground (DTC is output)	○						○
TC ground (DTC is not output)	○		○				



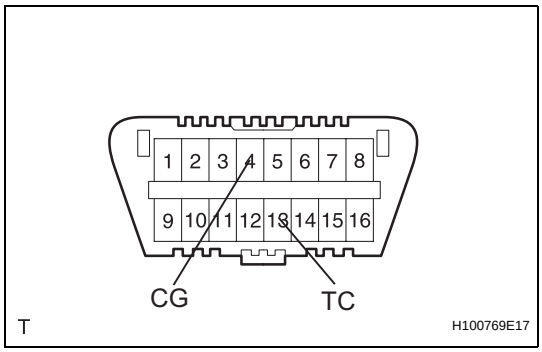
*1: Turns on and turns off repeatedly at 0.5 second intervals.

*2: Turns on and turns off repeatedly at 0.125 second intervals.

*3: Turns on and turns off repeatedly at 0.25 second intervals.

DTC CHECK / CLEAR

1. DTC CHECK (USING INTELLIGENT TESTER)



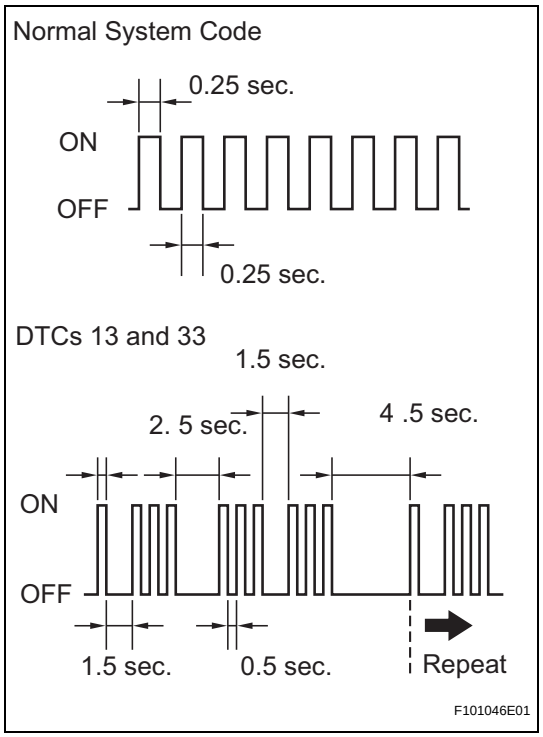
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

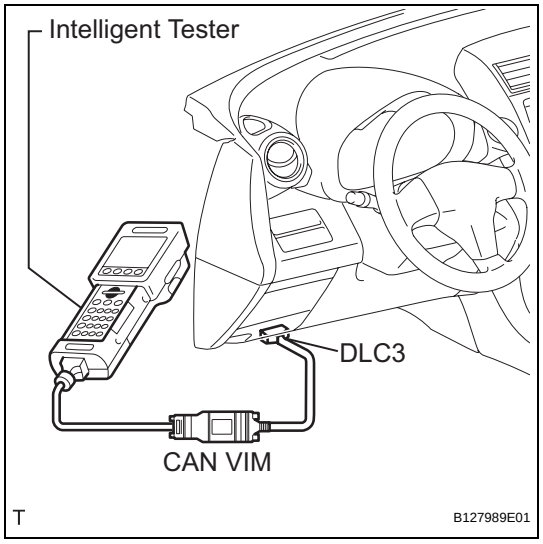
(b) Turn the ignition switch ON.

(c) Read the DTCs following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.





2. CHECK DTC (USING SST CHECK WIRE)

(a) Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST 09843-18040

(b) Turn the ignition switch ON.

(c) Read and record any DTCs from the tire pressure warning light on the combination meter. Refer to the illustration for examples of a normal system code and DTCs 13 and 33.
HINT:
- If the tire pressure warning light does not blink to indicate any DTCs or the normal system code, inspect the tire pressure warning light circuit or 13 (TC) and 4 (CG) terminal circuits.

Trouble Area	See procedure
Tire pressure warning light circuit	TW-47
TC and CG terminal circuit	TW-51

- If 2 or more malfunctions are indicated at the same time, the lowest numbered DTC is displayed first.

(d) Refer to the Diagnostic Trouble Code Chart for DTC information (see page TW-22).

(e) After completing the check, turn the ignition switch OFF and remove SST from the DLC3.

3. CLEAR DTC (USING INTELLIGENT TESTER)

HINT:
After repairing the malfunctions, clear the DTCs.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Erase the DTCs following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

TW

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting is one way to save time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the ignition switch ON.

(c) Read the DATA LIST according to the display on the tester.

Tire pressure warning ECU

Item	Measurement item/ Range (Display)	Normal Condition	Diagnostic Note
MODE STATUS	Tire pressure warning system mode / NORMAL or REG 2nd or REG M or TEST	NORMAL: Normal mode TEST: Test mode REG 2nd: 2nd registration REG M: Main registration TEST: Test mode	-

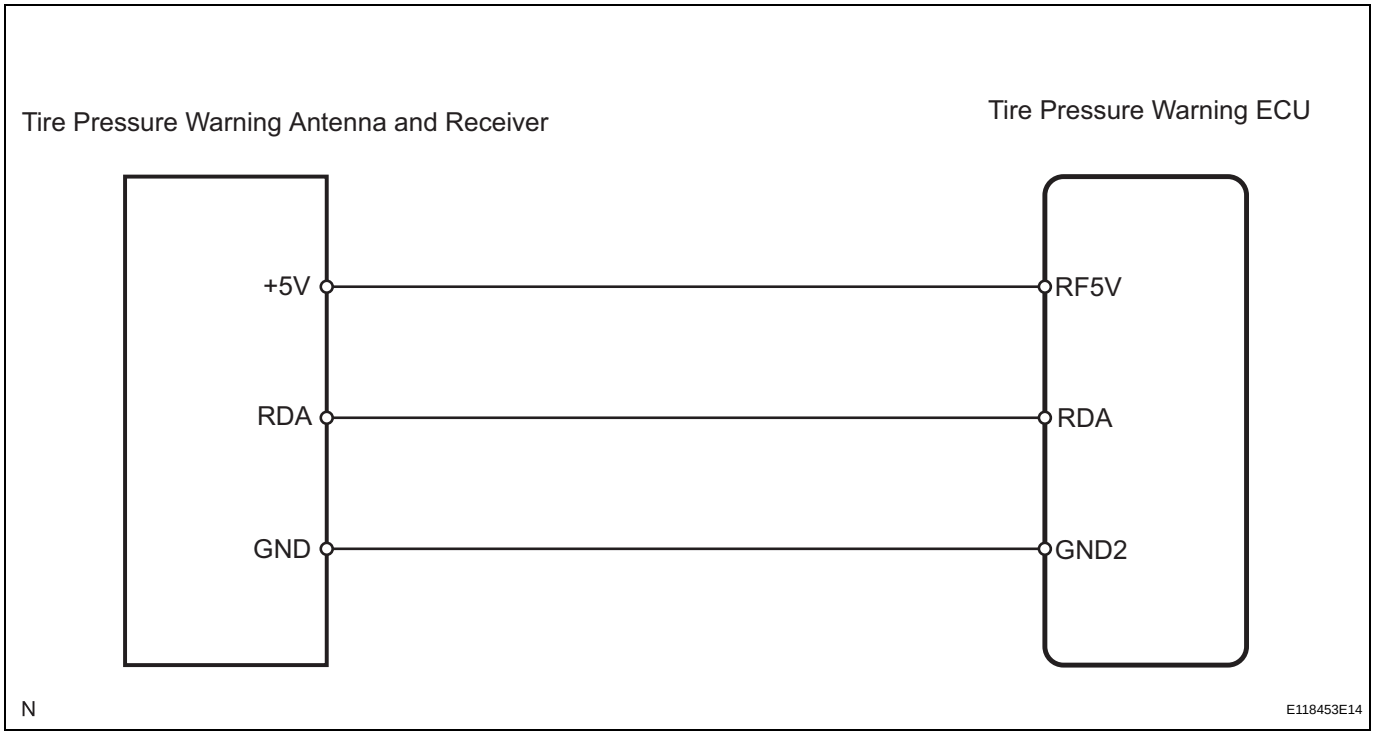
DTC	C2114/14	Transmitter ID4 Operation Stop

DTC	C2115/15	Transmitter ID5 Operation Stop

DESCRIPTION

The tire pressure warning valve and transmitter that is installed in the tires and wheels measures the air pressure of the tires. The measured values are transmitted to the tire pressure warning receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure values are less than this threshold, the warning light in the combination meter turns on.



The tire pressure warning ECU stores a DTC when the tire pressure monitor valve stops transmitting signals. At this time, forcibly transmit the signals by releasing the tire pressure rapidly. The stored DTC is cleared when the signal transmission is resumed.

DTC No	DTC Detection Condition	Trouble Area
C2111/11 C2112/12 C2113/13 C2114/14 C2115/15	Tire pressure monitor valve stops transmitting signals	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:

It is necessary to perform the procedure to identify the tire pressure monitor valve that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

It is necessary to register an ID code after replacing the tire pressure warning antenna and receiver and/or the tire pressure warning ECU (see page TW-9).

1	PERFORM FORCED TRANSMISSION OF TRANSMITTER ID OF ALL WHEELS

(a) Set the pressure of each tire to the specified value.
Standard pressure:
220 kPa (2.2 kgf/cm^2, 32 psi)
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Tire pressure warning ECU

Item	Measurement item / Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire pressure / min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire pressure	-
TIREPRESS2	ID2 tire pressure / min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire pressure	-
TIREPRESS3	ID3 tire pressure / min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire pressure	-

Item	Measurement item / Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS4	ID4 tire pressure / min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire pressure	-
TIREPRESS5	ID5 tire pressure / min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire pressure	-

(e) Rapidly release the pressure from each wheel by approximately 40 kPa (0.4 kgf/cm^2, 5.8 psi) for 30 seconds or more.

(1) Check that each tire pressure data displayed on the intelligent tester screen changes.

OK:

The tire pressure data displayed on the intelligent tester screen changes with the value of the tire pressure.

NOTICE:

- **It may take up to 1 minute to display the updated tire pressure data.**
- **When the TIREPRESS data (IDs 1 to 5) changes, reset the tire pressure of the tires to the specified value, rotate the tires 90 to 270° and recheck.**

(2) After confirming that the tire pressure data displayed on the intelligent tester screen has changed, set the pressure of each tire to the specified value.

Standard pressure:

220 kPa (2.2 kgf/cm^2, 32 psi)

HINT:

If the tire pressure data displayed on the intelligent tester screen has not changed after rechecking, go to the troubleshooting procedures of DTCs C2121/21 to C2125/25 which indicate transmission or reception malfunctions (see page TW-28).

NG → **CHECK OTHER PROBLEM (MALFUNCTION IN TRANSMISSION OR RECEPTION FUNCTION)**

OK

END

DTC	C2121/21	No Signal from Transmitter ID1 in Main Mode
DTC	C2122/22	No Signal from Transmitter ID2 in Main Mode
DTC	C2123/23	No Signal from Transmitter ID3 in Main Mode

DTC	C2182/82	Transmitter ID2 not Received (Test Mode DTC)
DTC	C2183/83	Transmitter ID3 not Received (Test Mode DTC)
DTC	C2184/84	Transmitter ID4 not Received (Test Mode DTC)
DTC	C2185/85	Transmitter ID5 not Received (Test Mode DTC)

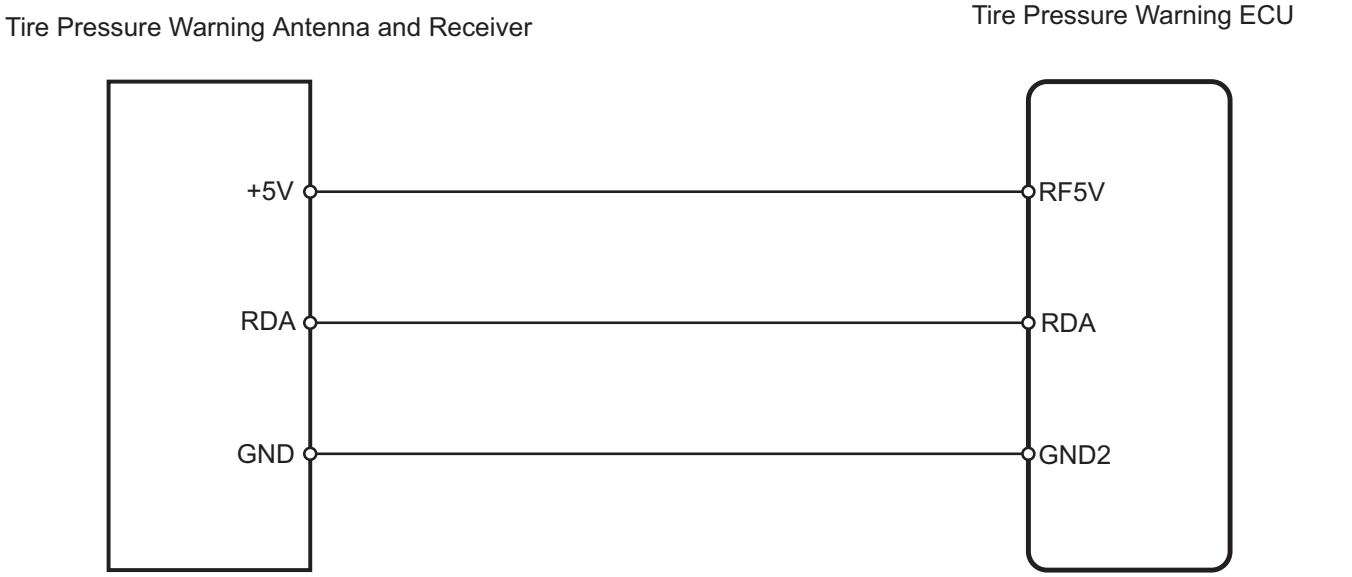
DESCRIPTION

The tire pressure warning valve and transmitter constantly sends radio waves to the tire pressure warning ECU.

Under the following conditions, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valve and transmitter, and a DTC is output.

- Areas, facilities, or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.

DTCs C2121/21 to C2125/25 can only be deleted by the tester. DTCs C2181/81 to C2185/85 can be deleted when the transmitter sends a forced transmission signal or the test mode ends. DTCs C2181/81 to C2185/85 are output only in the test mode.



DTC No.	DTC Detection Condition	Trouble Area
C2121/21 C2122/22 C2123/23 C2124/24 C2125/25	These DTCs are detected when no signals are received for 51 minutes or more, after a vehicle speed of 5 mph (8 km/h) or more is detected and no signals are received for 12 minutes or more	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness
C2181/81 C2182/82 C2183/83 C2184/84 C2185/85	Malfunction in transmission / reception circuit	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness

HINT:

When no signals are received for 60 minutes or more, a DTC is output.

It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM

TW

INSPECTION PROCEDURE

NOTICE:

It is necessary to register an ID code after replacing the tire pressure warning valve and transmitter and/or the tire pressure warning ECU (see page TW-9).

1	IDENTIFY TRANSMITTER (CORRESPONDING TO DTC)

(a) Set the pressure of each tire to the specified value.
Standard pressure:
220 kPa (2.2 kgf/cm^2, 32 psi)
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the ignition switch ON.
(d) Select TIREPRESS by following the prompts displayed on the intelligent tester.

Tire pressure warning ECU

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS2	ID2 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS3	ID3 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS4	ID4 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS5	ID5 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/ cm^2, 92.5 psi)	Actual tire pressure	-

(e) Rapidly release the tire pressure from any tire by 40 kPa (0.4 kgf/cm^2, 5.8 psi) for 30 seconds or more.
HINT:
- Identify the malfunctioning tire pressure warning valve and transmitter by rapidly releasing the tire pressures from each tire.
- Record which TIREPRESS data (ID1 to ID5) corresponds to each tire.

(f) Check the DATA LIST.

Result

Condition	Detection Condition
One of TIREPRESS data (ID1 to ID5) changed	Normal
No TIREPRESS data changed	Transmitter corresponding to DTC

TW

NOTICE:
- **It may take up to 1 minute to display the updated tire pressure data.**
- **When the TIREPRESS data (IDs 1 to 5) changes, reset the tire pressure of the tires to the specified value, rotate the tires 90 to 270° and recheck.**
- **When the transmitter is normal, record the tire location and the transmitter ID.**

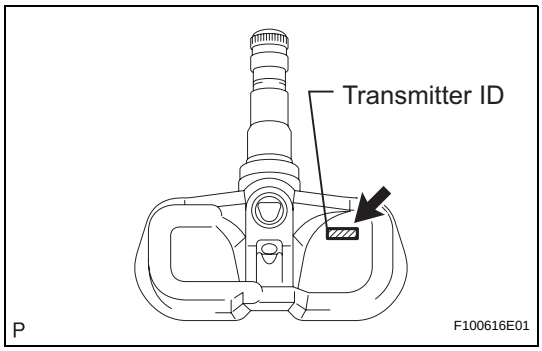
(g) When the TIREPRESS data (IDs 1 to 5) changes, repeat the same procedure on the rest of the tires (one by one) to identify which tire pressure warning valve and transmitter the DTC corresponds to.

(h) Set the pressure of each tire to the specified value.
Standard pressure:
220 kPa (2.2 kgf/cm^2, 32 psi)

(i) Check all transmitters of the tires.
Result

Result	Detection Condition
One or more of transmitters abnormal	A
All abnormal	B
All normal	C

B	Go to step 3
C	END



A

2	CHECK TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Select REGIT ID CODE by following the prompts displayed on the intelligent tester.

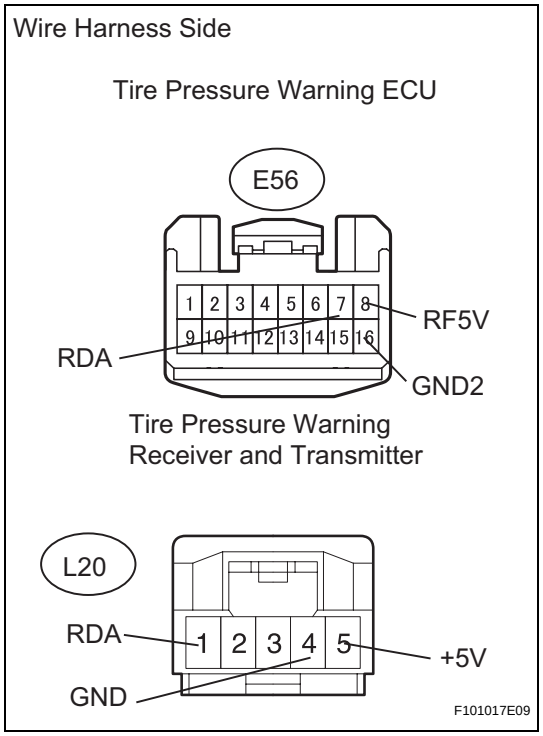
Tire pressure warning ECU

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
REGIT ID1 CODE	Registered ID1 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID1 is display	-
REGIT ID2 CODE	Registered ID2 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID2 is display	-
REGIT ID3 CODE	Registered ID3 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID3 is display	-
REGIT ID4 CODE	Registered ID4 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID4 is display	-
REGIT ID5 CODE	Registered ID5 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID5 is display	-

(b) Remove the tire pressure warning valve and transmitter and check its ID number (see page TW-61).

(c) Check whether the recorded transmitter ID and the actual transmitter ID match.

Result



Result	Detection Condition
Unmatched	A
Matched	B

B → REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

A

PERFORM REGISTRATION (TRANSMITTER ID)

3 CHECK WIRE HARNESS (ECU - RECEIVER)

(a) Disconnect the E56 ECU connector.
(b) Disconnect the L20 receiver connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E56-8 (RF5V) - L20-5 (+5V)	Below 1 Ω
E56-7 (RDA) - L20-1 (RDA)	
E56-16 (GND2) - L20-4 (GND)	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 READ VALUE OF INTELLIGENT TESTER (TIRE PRESSURE)

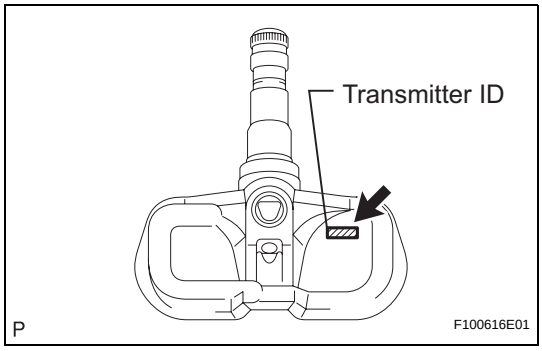
(a) Check the DATA LIST tire pressure valve.

Tire pressure warning ECU

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS2	ID2 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS3	ID3 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS4	ID4 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-
TIREPRESS5	ID5 tire pressure/ minimum: 0 kPa (0 kgf/cm^2, 0 psi) maximum: 637.5 kPa (6.5 kgf/cm^2, 92.5 psi)	Actual tire pressure	-

OK:
All tire pressure readings are equal to the actual tire pressure.
NOTICE:
It may take up to 1 minute to display the updated tire pressure data.

OK → **END**



NG

5 CHECK ID CODE (TIRE PRESSURE WARNING VALVE AND TRANSMITTER)

(a) Select REGIT ID CODE by following the prompts displayed on the intelligent tester.

Tire pressure warning ECU

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
REGIT ID1 CODE	Registered ID1 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID1 is display	-
REGIT ID2 CODE	Registered ID2 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID2 is display	-
REGIT ID3 CODE	Registered ID3 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID3 is display	-
REGIT ID4 CODE	Registered ID4 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID4 is display	-
REGIT ID5 CODE	Registered ID5 code/ minimum: 0 maximum: FFFFFFF	The ID No. registered in transmitter ID5 is display	-

(b) Remove the tire pressure monitor valve and transmitter check its ID number (see page TW-61).
(c) Check whether the recorded transmitter ID and the actual transmitter ID match.
Result

Result	Detection Condition
Unmatched	A
Matched	B

B → **REPLACE TIRE PRESSUREWARNING RECEIVER AND TRANSMITTER**

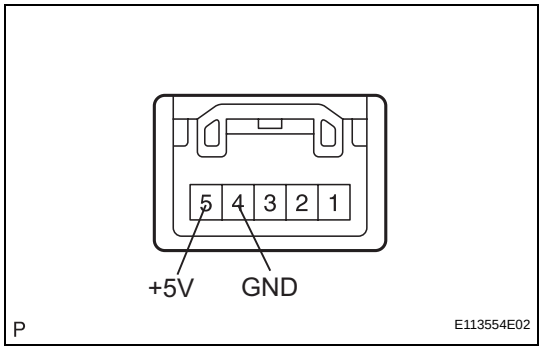
C2176/76	DTC is stored when either of following is detected: • Malfunction in tire pressure warning ECU internal circuit. • Terminal RF5V is shorted to ground.	• Tire pressure warning antenna and receiver • Tire pressure warning ECU • Wire harness

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

It is necessary to register an ID code after replacing the tire pressure warning valve abd transmitter and/or the tire pressure warning ECU (see page TW-9).



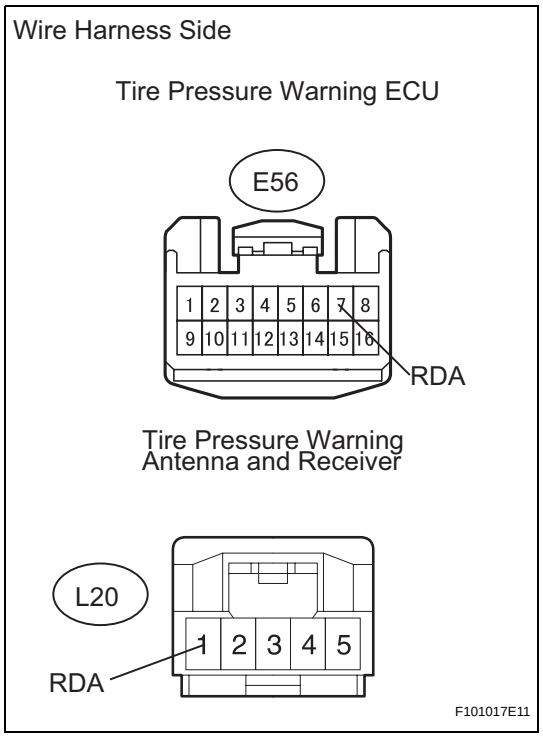
HINT:

Set the tire pressure to the specified value.

Standard pressure:

220 kPa (2.2 kgf/cm^2, 32 psi)

1 CHECK TIRE PRESSURE WARNING ECU



(a) Measure the voltage of the connector.
Standard voltage

Tester Connection	Switch Condition	Specified Condition
L20-5 (+5V) - L20-4 (GND)	Ignition switch ON	4.5 to 5.5 V

NG → **Go to step 5**

OK

2 CHECK WIRE HARNESS (ECU - RECEIVER)

(a) Disconnect the E56 ECU connector.
(b) Disconnect the L20 receiver connector.
(c) Measure the resistance of the wire harness side connectors.
Standard resistance

Tester Connection	Specified Condition
E56-7 (RDA) - L20-1 (RDA)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

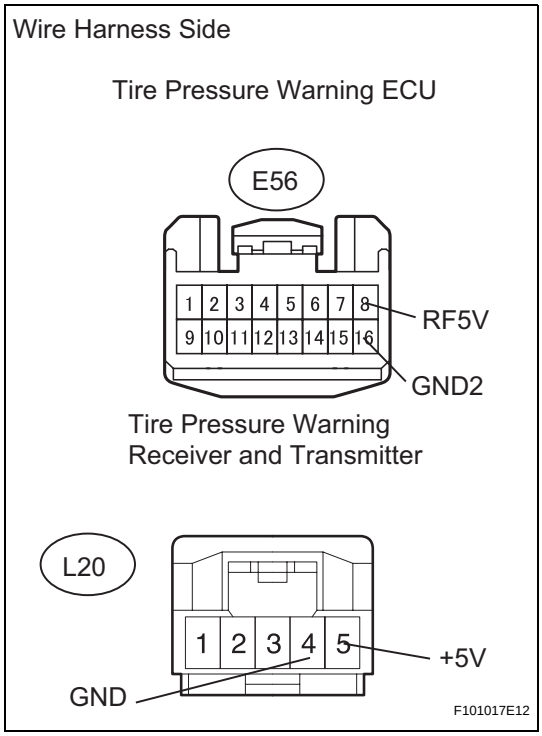
3 REPLACE TIRE PRESSURE WARNING ANTENNA AND RECEIVER

NEXT

4 CHECK DTC

(a) Check for DTC (see page TW-20).
OK:
DTC is not output.

TW



HINT:
- It is necessary to register an ID when replacing the tire pressure warning ECU (see page TW-9).
- Read ID on the DATA LIST before removing the tire pressure warning ECU. Register the ID in the new tire pressure warning ECU.

NG → **REPLACE TIRE PRESSURE WARNING ECU**

OK

END

5 CHECK WIRE HARNESS (ECU - RECEIVER)

(a) Disconnect the E56 ECU connector.
(b) Disconnect the L22 receiver connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance

Tester Connection	Specified Condition
E56-8 (GND2) - L20-4 (GND)	Below 1 Ω
E56-8 (RF5V) - L20-5 (+5V)	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE TIRE PRESSURE WARNING ECU

DTC	C2191/91	Vehicle Speed Signal Error (Test Mode DTC)

DESCRIPTION

The tire pressure warning ECU receives a speed signal from the combination meter. This DTC is stored upon entering test mode, and cleared when a vehicle speed signal of 12 mph (20 km/h) is detected for 3 seconds or more. The DTC is output only in test mode.

DTC No.	DTC Detection Condition	Trouble Area
C2191/91	Speed sensor circuit malfunction	• Vehicle speed sensor • Tire pressure warning ECU • Combination meter • Wire harness

WIRING DIAGRAM

TW

INSPECTION PROCEDURE

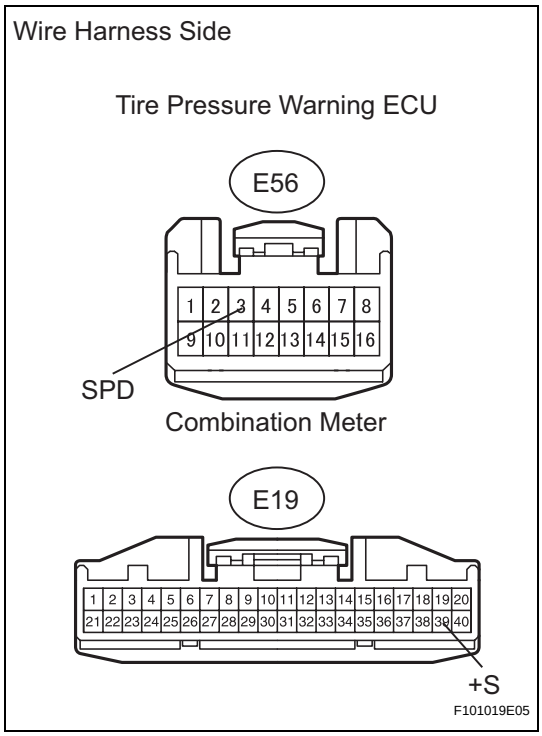
NOTICE:

It is necessary to register an ID code after replacing the tire pressure warning valve and transmitter and/or the tire pressure warning ECU (see page TW-9).

1	READ VALUE OF INTELLIGENT TESTER (VEHICLE SPEED)

(a) Check the DATA LIST for proper functioning of the vehicle speed signal.

Tire pressure warning ECU



Item	Measurement item / Range(Display)	Normal Condition	Diagnostic Note
VEHICLE SPEED	Vehicle speed reading / Min.: 0 km/h (0 mph) Max.: 255 km/h (158 mph)	Actual vehicle speed	Speed indicated on the combination meter

OK:
Indicates actual speed.

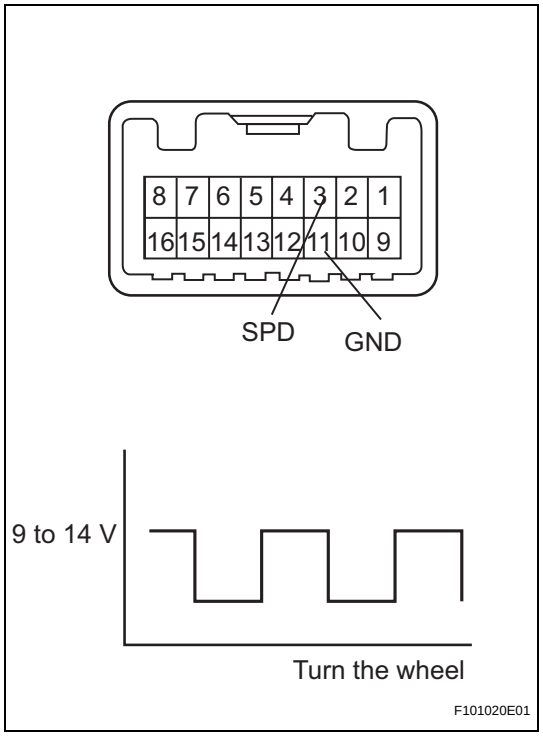
OK → **REPLACE TIRE PRESSURE WARNING ECU**

NG

2 CHECK WIRE HARNESS (ECU - METER)

(a) Disconnect the E56 ECU connector.
(b) Disconnect the E19 meter connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
E56-3 (SPD) - E19-39 (+S)	Below 1 Ω
E56-3 (SPD) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

TW

3	CHECK TIRE PRESSURE WARNING ECU

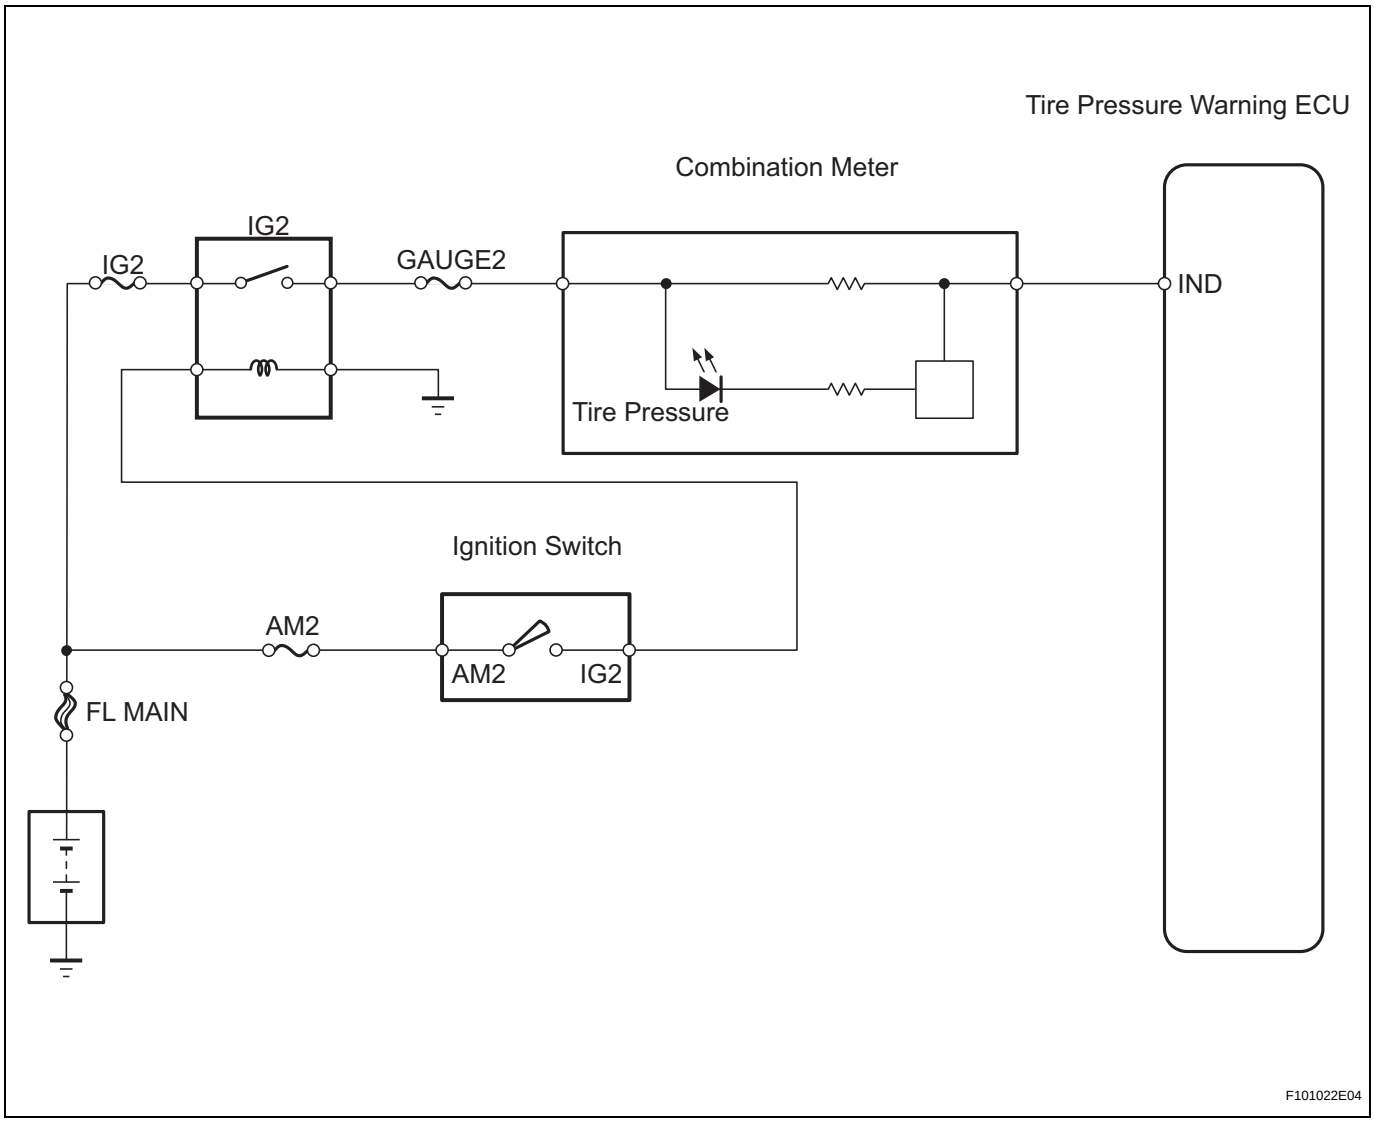
(a) Measure the voltage of the connector.
Standard voltage

Tester Connection	Condition	Specified Condition
E56-3 (SPD) - E56-11 (GND)	While driving vehicle	Pulse generation

HINT:
As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows.

NG → **GO TO METER / GAUGE SYSTEM**

OK



REPLACE TIRE PRESSURE WARNING ECU

Tire Pressure Warning Light Circuit

DESCRIPTION

If the tire pressure warning ECU detects trouble, the tire pressure warning light turns on and tire pressure monitor is canceled at the same time. At this time, the ECU records a DTC in memory.
Connect terminals TC and CG of the DLC3 to make the tire pressure warning light blink and output the DTC.

WIRING DIAGRAM

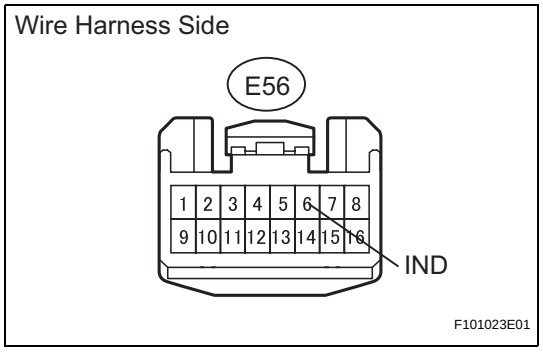
INSPECTION PROCEDURE

NOTICE:
It is necessary to register an ID code after replacing the tire pressure monitor valve and/or the tire pressure warning ECU (see page TW-9).

1	**INSPECT FUSE (GAUGE)**

(a) Remove the GAUGE fuse from the instrument panel junction block.

(b) Measure the resistance of the fuse.



Standard resistance:

Below 1 Ω

NG → **REPLACE FUSE**

OK

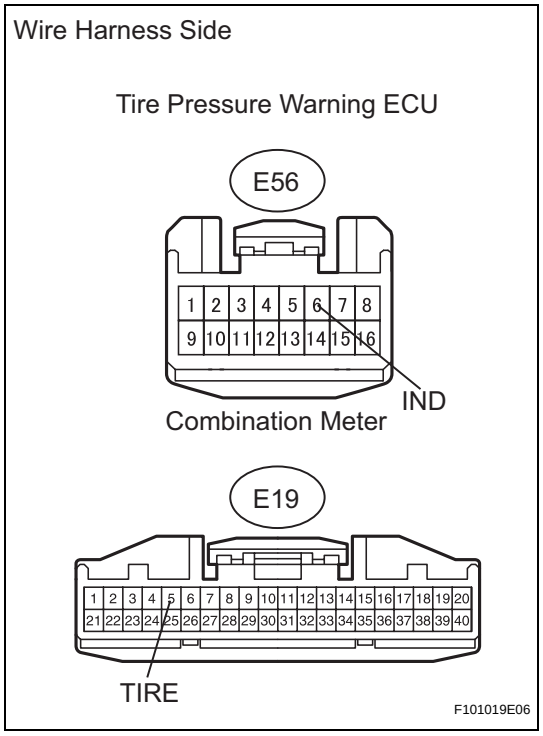
2 CHECK TIRE PRESSURE WARNING LIGHT CIRCUIT

(a) Disconnect the E56 ECU connector.

(b) Using a service wire, connect E56-6 (IND) on the wire harness side and body ground.

(c) Turn the ignition switch ON.

(d) Check that the tire pressure warning light turns on.



OK:

Tire pressure warning light turns on.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

3 CHECK WIRE HARNESS (ECU - METER)

(a) Disconnect the E56 ECU connector.

(b) Disconnect the E19 meter connector.

(c) Measure the resistance of the wire harness side connectors.

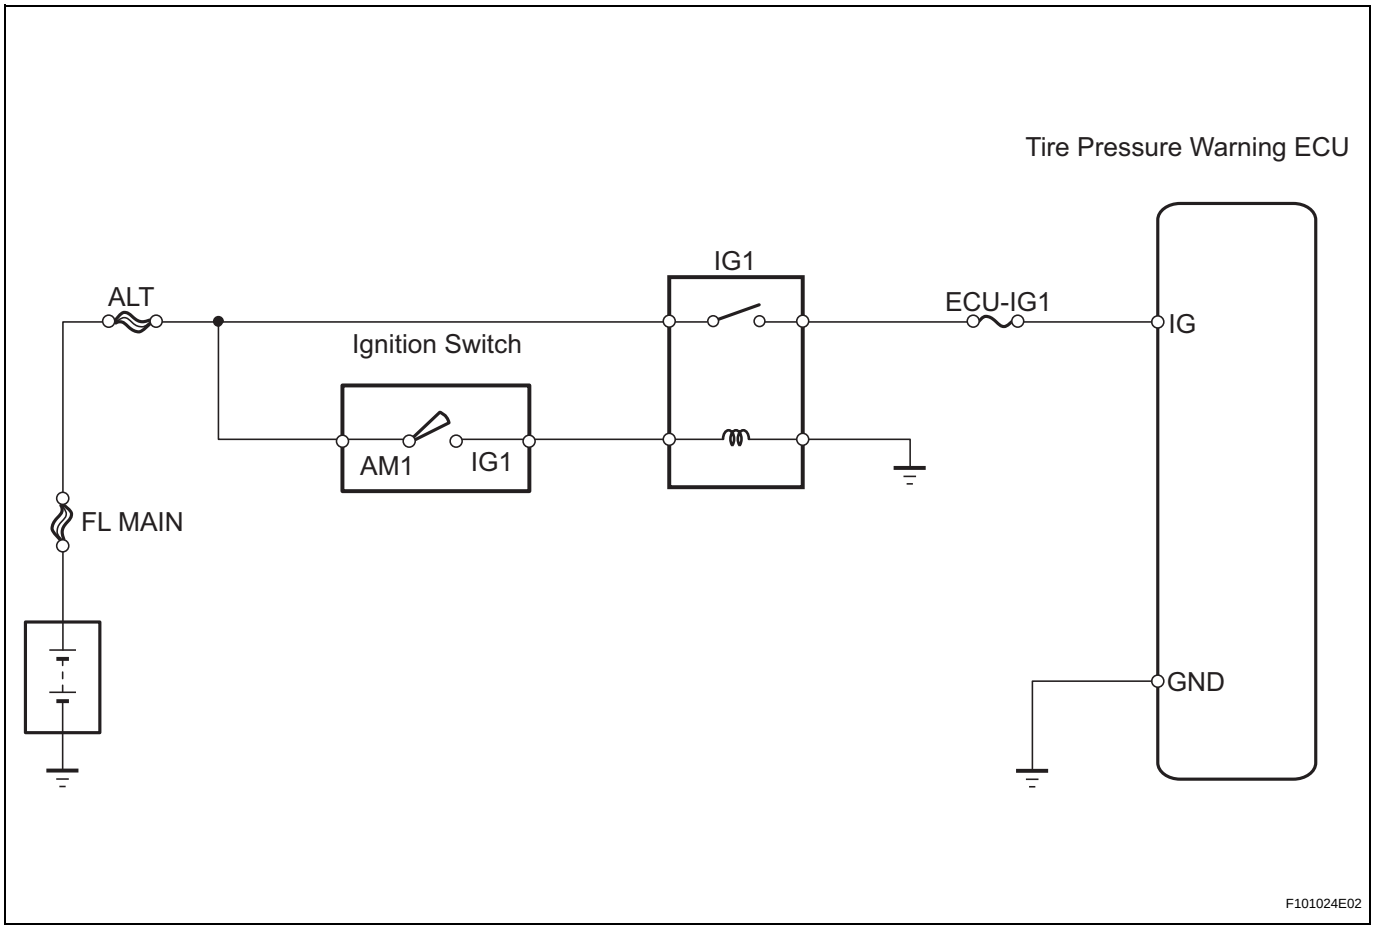
Standard resistance

Tester Connection	Specified Condition
E56-6 (IND) - E19-5 (TIRE)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



TW

ECU Power Source Circuit

DESCRIPTION

This is the power source for the tire pressure warning ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

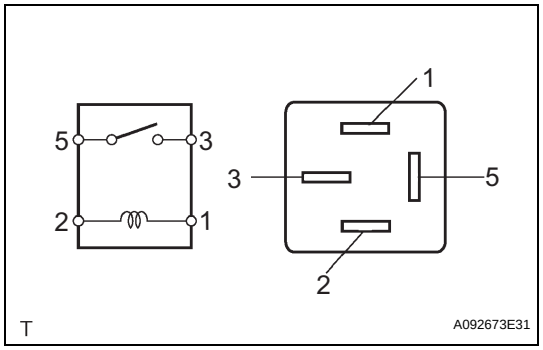
NOTICE:

It is necessary to register an ID code after replacing the tire pressure monitor valve and/or the tire pressure warning ECU (see page TW-9).

1	INSPECT FUSE (ECU-IG1)

(a) Remove the ECU-IG1 fuse from the instrument panel junction block.

(b) Measure the resistance of the fuse.



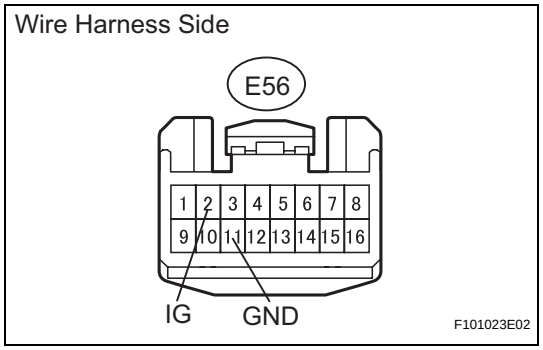
Standard resistance:

Below 1 Ω

NG → **REPLACE FUSE**

OK

2 INSPECT IG1 RELAY



(a) Remove the IG1 relay from the instrument panel junction block.
(b) Measure the resistance of the relay.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE IG1 RELAY**

OK

3 INSPECT WIRE HARNESS (ECU - BATTERY AND BODY GROUND)

(a) Disconnect the E56 ECU connector.
(b) Measure the voltage of the wire harness side connector.
Standard voltage

Tester Connection	Switch Condition	Specified Condition
E56-2 (IG) - Body ground	Ignition switch ON	10 to 14 V
	Ignition switch OFF	Below 1 V

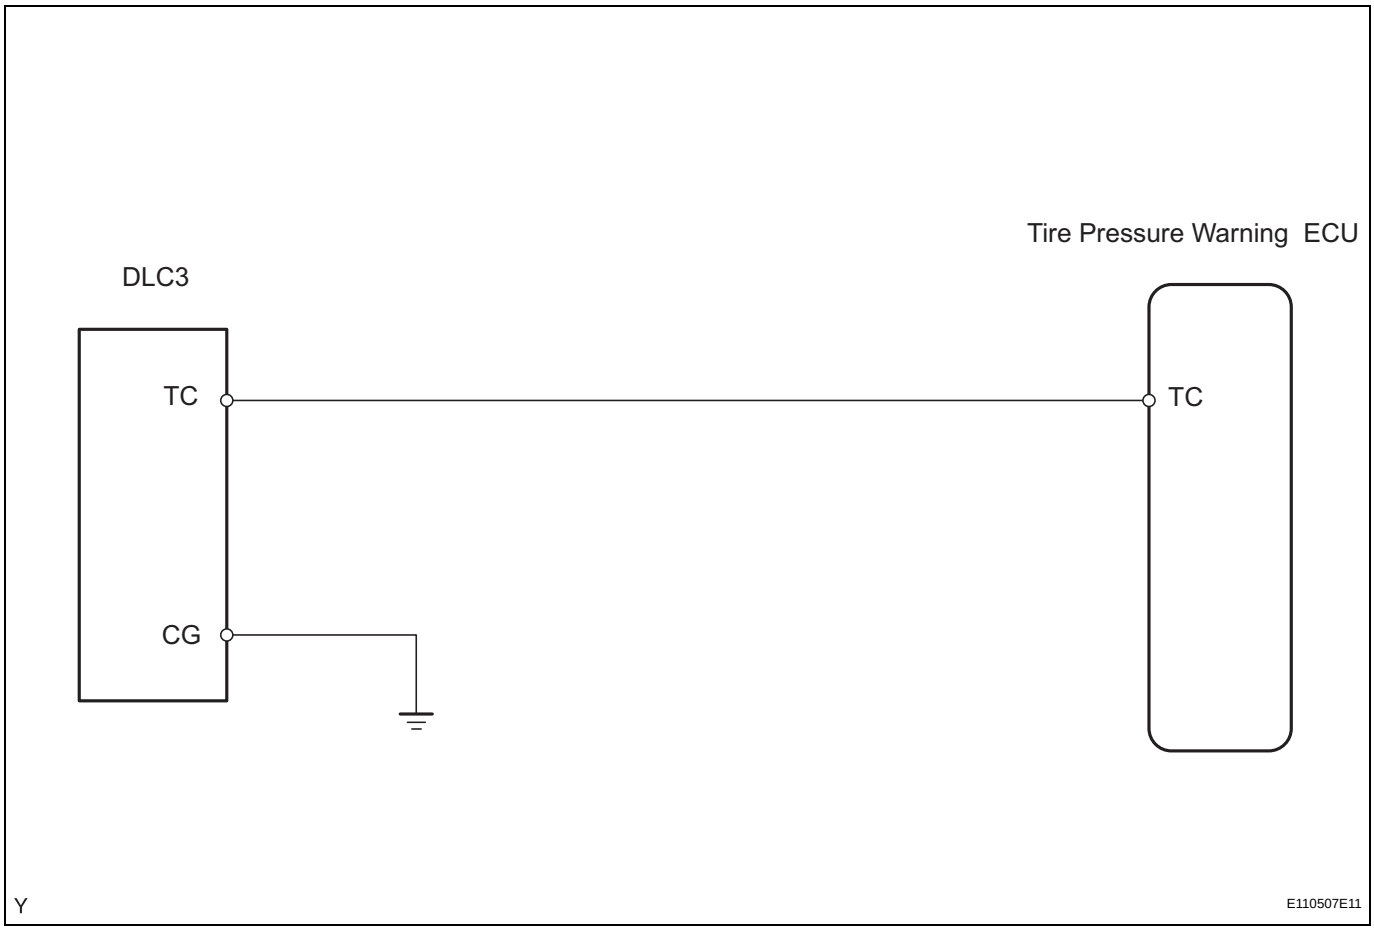
(c) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
E56-11 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE



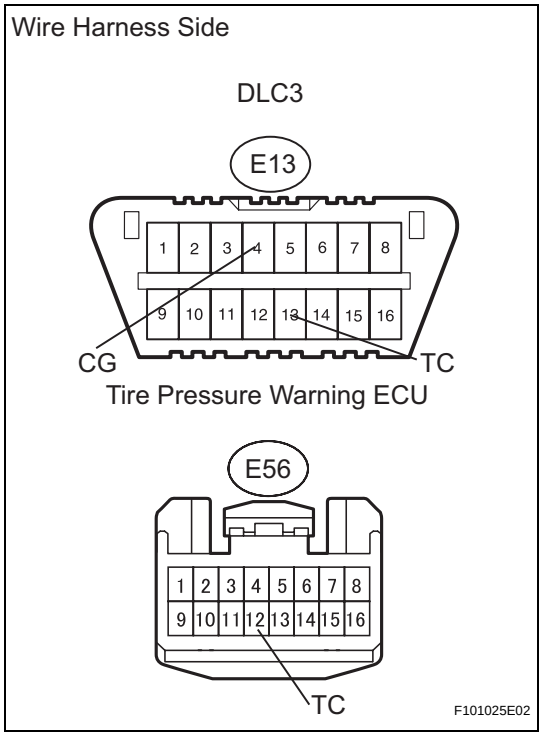
TW

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals 13 (TC) and 4 (CG) of the DLC3. The DTCs are indicated by the blinking of the tire pressure warning light.

WIRING DIAGRAM



HINT:
When each warning light continues blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU may have occurred.

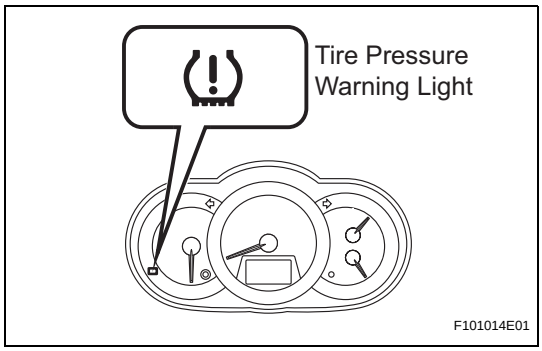
INSPECTION PROCEDURE

NOTICE:
It is necessary to register an ID code after replacing the tire pressure monitor valve and/or the tire pressure warning ECU (see page TW-9).

1	CHECK WIRE HARNESS (DLC3 - ECU)

(a) Disconnect the E13 DLC3 connector.
(b) Disconnect the E56 ECU connector.
(c) Measure the resistance of the wire harness side connectors.

Standard resistance



Tester Connection	Specified Condition
E56-12 (TC) - E13-13 (TC)	Below 1 Ω
E13-4 (CG) - Body ground	

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TW

TIRE PRESSURE WARNING SYSTEM

PRECAUTION

1. TIRE PRESSURE WARNING SYSTEM PRECAUTION

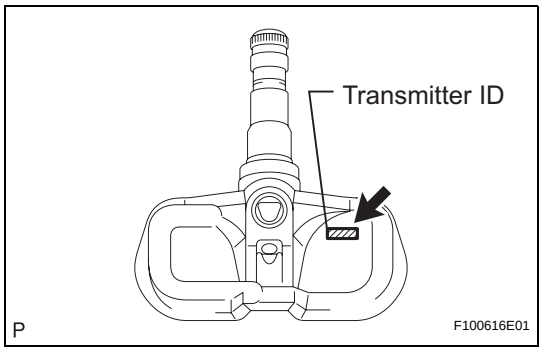
(a) When the tire pressure warning light turns on, immediately check the tire pressure of the tire and adjust it to the specified value. (When the tire pressure warning light circuit is open, the tire pressure warning light flashes for 1 minute and then illuminates.)

NOTICE:

Check the spare tire as well since this system monitors the pressure of all tires.

Standard pressure:

220 kPa (2.2 kgf/cm^2, 32 psi)



(b) When the tire pressure warning light blinks, there is a malfunction in the system. Check for DTCs.

(c) It is necessary to register the transmitter ID in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU (see page TW-9).

(d) When replacing the tire pressure warning ECU:

(1) Using the DATA LIST, read the transmitter IDs registered in the ECU and make a note of them before removing the tire pressure warning ECU.

(2) Register the transmitter IDs after installing a new tire pressure warning ECU.

(e) When replacing the tire pressure warning valve and transmitter:

(1) Take a note of the 7 digit number (transmitter ID) written on the tire pressure warning valve and transmitter when replacing it. Register the transmitter IDs in the tire pressure warning ECU after replacing the tire pressure warning valve and transmitter and installing the tires and wheels on the vehicle.

NOTICE:

The transmitter ID written on the tire pressure warning valve and transmitter will be unable to be read after installing it on the tire and wheel.

2. IN CASE OF TIRE AND WHEEL REPLACEMENT

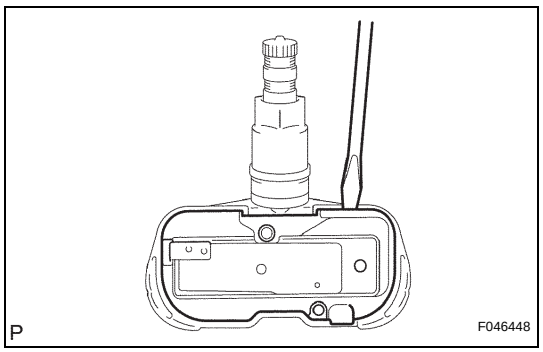
(a) When tires and wheels are replaced, always be sure to register the transmitter ID correctly.

3. FAIL-SAFE FUNCTION

(a) When a system malfunction occurs in the tire pressure warning system, the tire pressure warning light blinks and informs the driver of the system failure.

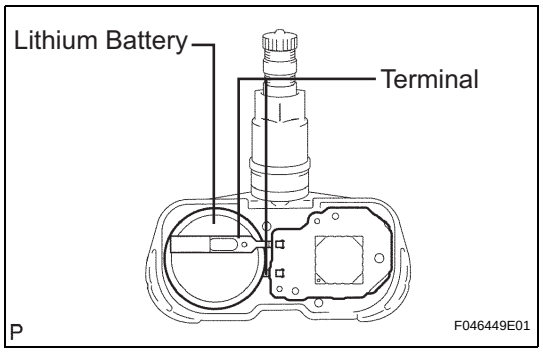
(b) The result of this diagnosis is stored in the tire pressure warning ECU.

TW



(c) Precautions about the tire pressure:
- The tire pressure decreases naturally.
- In winter, tire pressure may decrease due to low ambient temperature (tire pressure decreases by approximately 10 kPa (0.2 kgf/cm^2, 1.45 psi) for every 10°C (50°F) drop in the ambient temperature).
  Therefore, the tire pressure warning is more likely to operate if the tire pressure are not adjusted appropriately.
  If the daily temperature variation is large, adjust the tires to a higher pressure suitable to cold conditions.
  This will reduce the likelihood of an incorrect tire pressure warning operation.

DISPOSAL

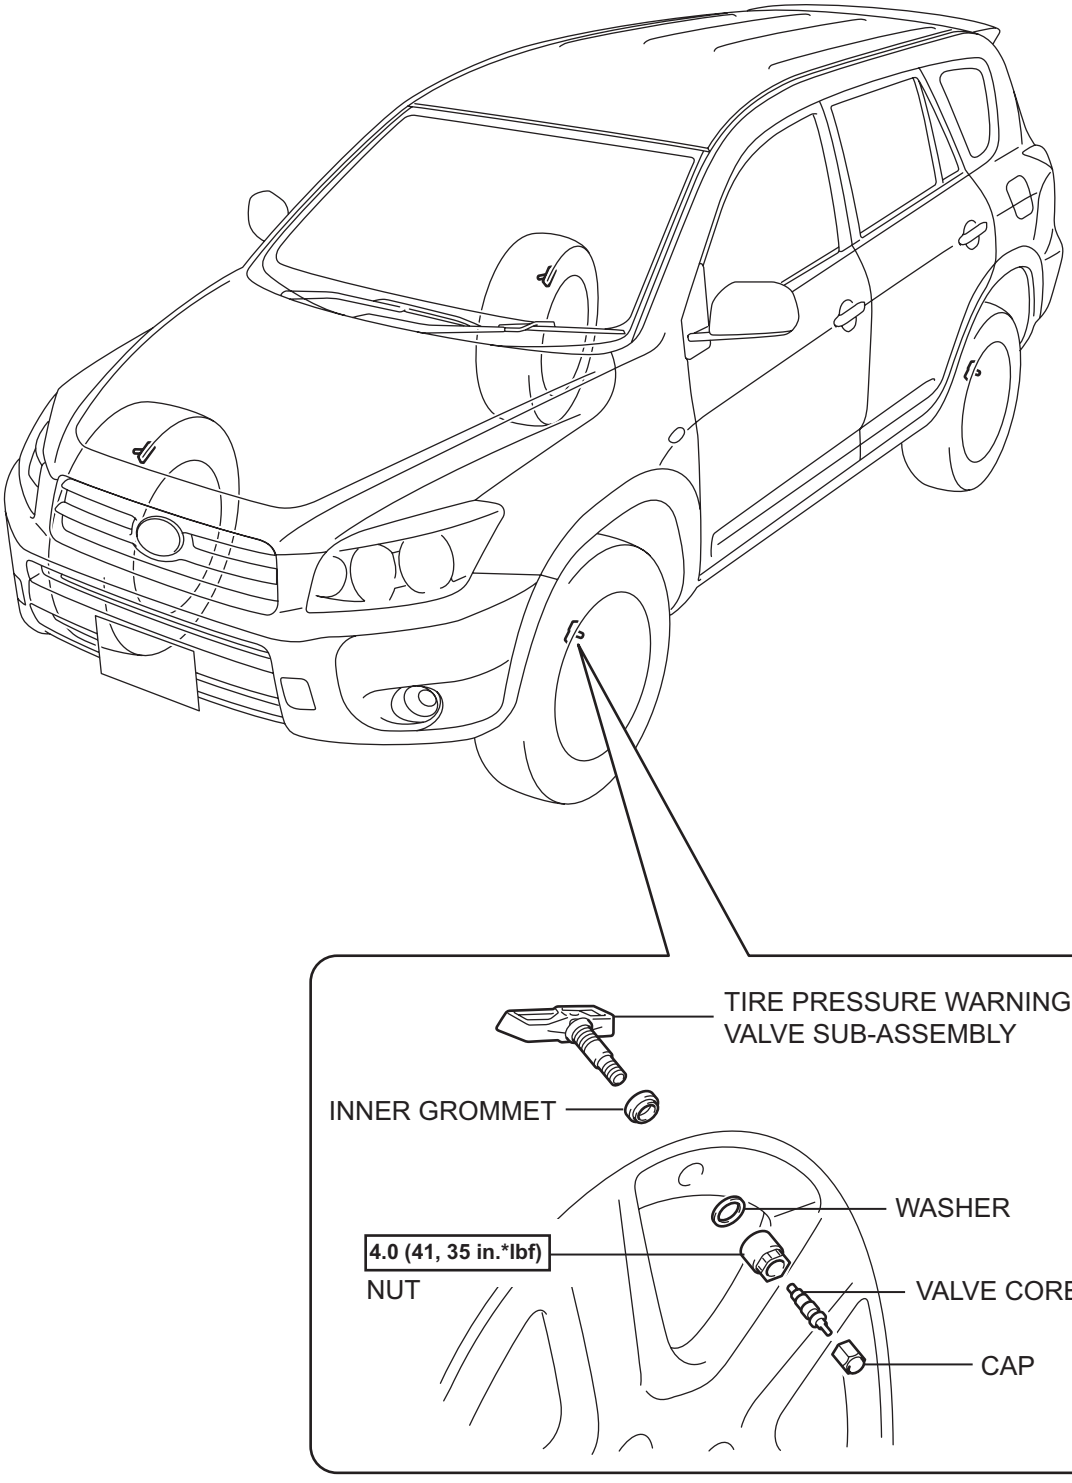


1. DISPOSE OF TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY

HINT:

The tire pressure warning valve is powered by a lithium battery. When disposing of the tire pressure sensor, remove the battery and dispose of it properly.

(a) Use the tip of a screwdriver to pry off the back cover.

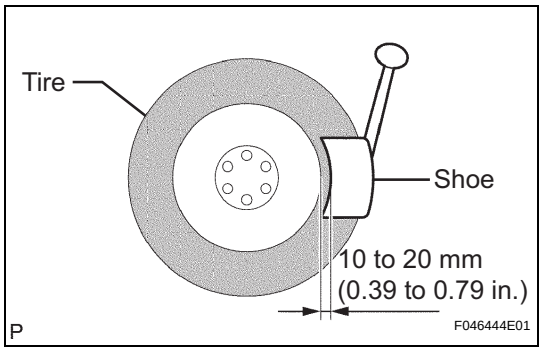


(b) The battery and base board covered with silicone resin are exposed. While taking out the battery, cut the 2 terminals that connect the battery and the base board.

TW

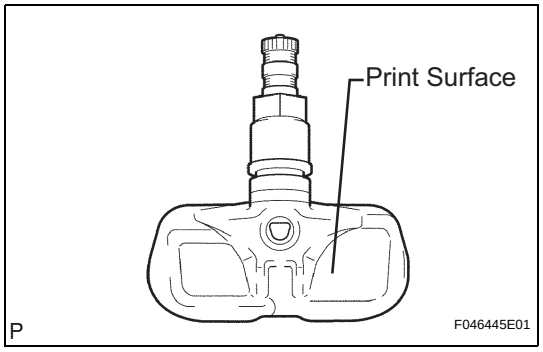
TIRE PRESSURE WARNING VALVE AND TRANSMITTER

COMPONENTS



N*m (kgf*cm, ft.*lbf) : Specified torque

C128862E02

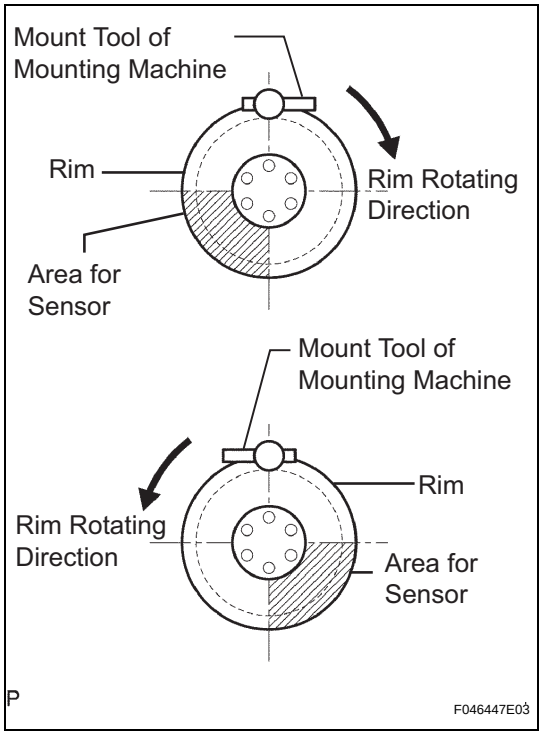


REMOVAL

1. **REMOVE FRONT TIRE**
2. **REMOVE REAR TIRE**
3. **REMOVE TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY**
   (a) Remove the valve core and cap, and release air from the tire.
   (b) After ensuring that air is sufficiently released, remove the nut and washer that are used to fix the tire pressure warning valve and drop the valve sensor inside the tire.
   HINT:
   Keep the removed cap, valve core, nut and washer.

   (c) After dropping the tire pressure warning valve into the tire, disengage the tire bead using the shoe of the tire remover.
   NOTICE:
   Be careful not to damage the tire pressure warning valve because of interference between the sensor and tire bead.
   (d) Remove the bead on the upper side.
   (e) Take out the sensor from the tire and remove the bead on the lower side.
   (f) Remove the inner grommet from the tire pressure warning valve.
   HINT:
   Check that there are no cracks or damage on the grommet. If necessary, replace the grommet, the washer and the nut.

INSTALLATION



1. **INSTALL TIRE PRESSURE WARNING VALVE SUB-ASSEMBLY**
   (a) Insert the tire pressure warning valve into the valve installation hole. Insert it from the inside of the rim so that the print surface can be seen.
   NOTICE:
   - **Check that there is no visible deformation, damage or other abnormalities on the transmitter.**
   - **Check that there is no foreign matter on the inner grommet and around the rim hole.**
   - **If the tire pressure warning valve is installed in the reverse direction, it may be damaged or fail to transmit signals when the vehicle is driven at high speeds.**
   (b) Install the washer on the tire pressure warning valve from the rim side and tighten it with the nut.
   Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
   NOTICE:
   - **Make sure that there is no foreign matter on the washer and nut.**

TW

- **If the tire and tire pressure warning valve have been removed, check that there is no damage or cuts visible, and no foreign matter, such as mud, dirt or sand attached to the grommet. Replace the grommet with a new one if any of the defects mentioned above are found.**
- **Make sure that there is no oil, water or lubricant around the rim hole, tire pressure warning valve, washer and nut. Failing to do so may result in improper installation.**

(c) After the tire is inflated, the valve nut may be loose. Retighten the nut to the specified torque and then check for air leaks with soapy water.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

(d) Set the wheel disc to the mounting machine and install the lower tire bead. Position the main body of the valve sensor in the shaded area shown in the illustration.
NOTICE:
If the valve sensor is positioned outside this area, it will interfere with the tire bead and may be damaged.

(e) Install the upper bead.
NOTICE:
- **Make sure that the tire bead and tool do not interfere with the main body of the sensor and that the sensor is not clamped by the bead.**
- **Check that there is no water or other liquid around the tire pressure warning valve.**

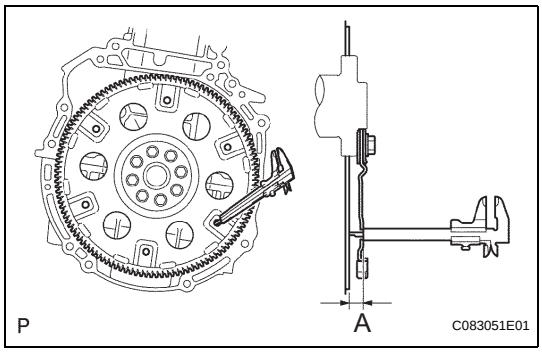
2. INSTALL FRONT TIRE
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

3. INSTALL REAR TIRE
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. REGISTER TRANSMITTER ID
HINT:
If the tire pressure warning ECU is replaced with a new one or with an ECU from another vehicle, register the transmitter ID codes.

5. INSPECT TIRE PRESSURE WARNING SYSTEM

INSTALLATION

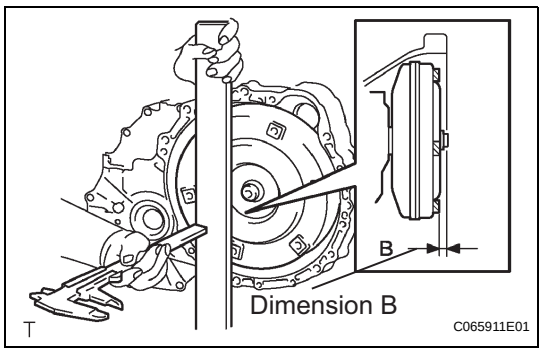


1. INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Inspect the torque converter (see page AX-153).

2. INSTALL TORQUE CONVERTER CLUTCH ASSEMBLY

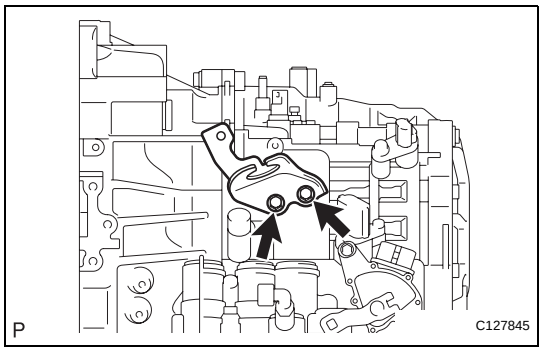
(a) Install the torque converter clutch to the automatic transaxle.



(b) Using a vernier caliper, measure dimension A between the transaxle and the end surface of the drive plate.

(c) Using a vernier caliper and straightedge, measure the dimension B shown in the illustration and check that B is greater than A.

Standard dimension:

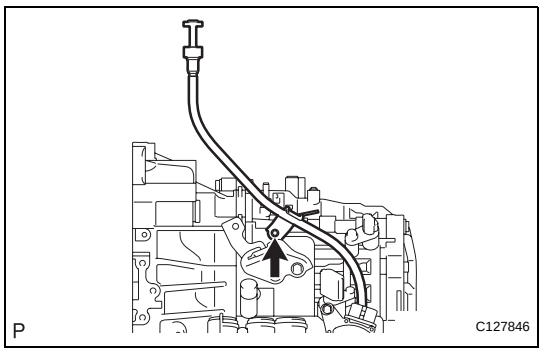


A + 1.0 mm (0.039 in.) or more

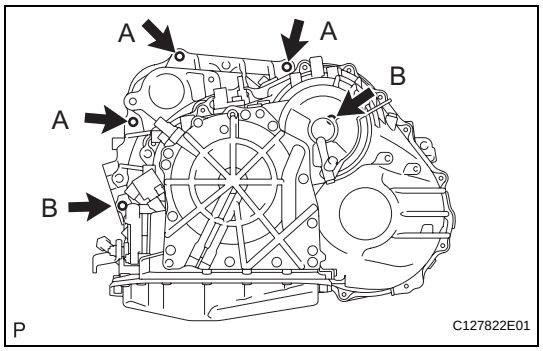
3. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the cable bracket with the 2 bolts.

Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



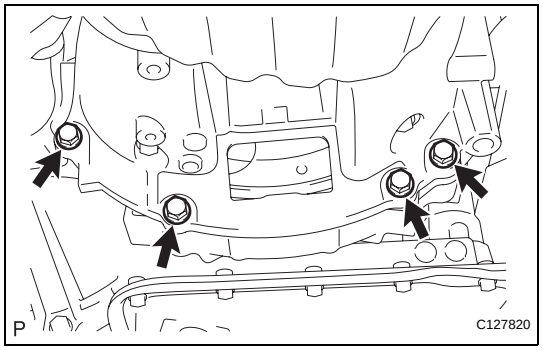
4. INSTALL TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY



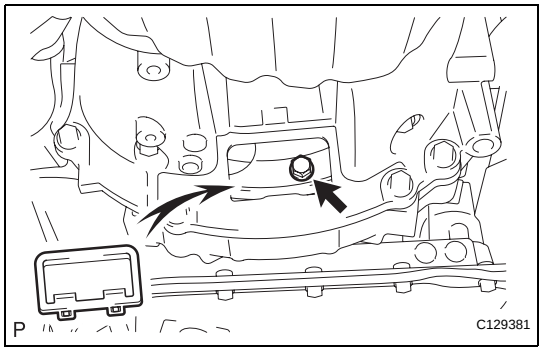
(a) Install the filler tube with the bolt.

(b) Install the filler tube with the bolt.

Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)



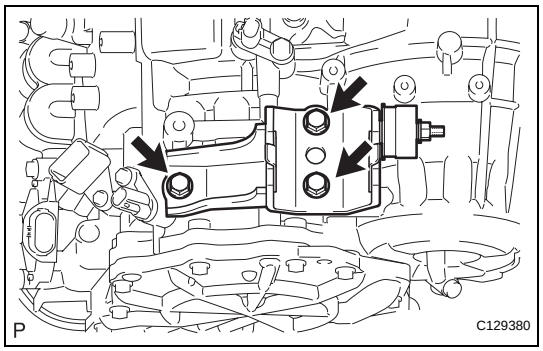
(c) Install the ATF dipstick.



5. INSTALL AUTOMATIC TRANSAXLE ASSEMBLY

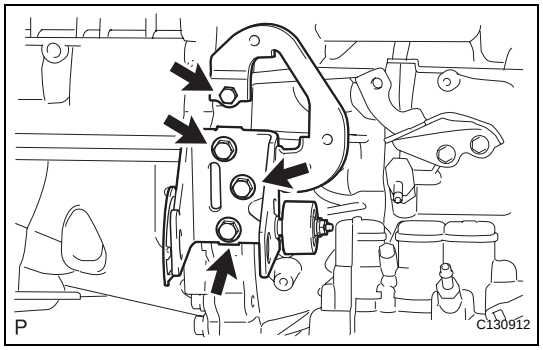
(a) Install the automatic transaxle with the 5 upper side mounting bolts to the engine.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf) for bolt A
46 N*m (469 kgf*cm, 34 ft.*lbf) for bolt B

(b) Install the 4 lower side mounting bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



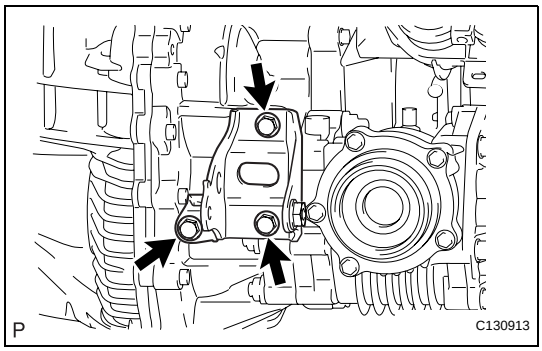
(c) Install the 6 torque converter clutch mounting bolts.
Torque: 41 N*m (418 kgf*cm, 30 ft.*lbf)
HINT:
First install the green colored bolt and then the 5 bolts.

(d) Install the flywheel housing under cover.



6. INSTALL TRANSFER ASSEMBLY

(a) Install the transfer (see page TF-75).

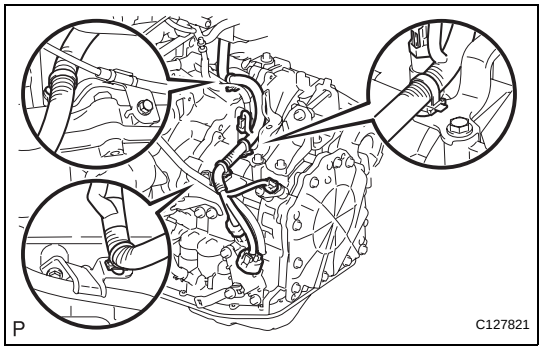


7. INSTALL ENGINE MOUNTING BRACKET LH

(a) Install the mounting bracket with the 3 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

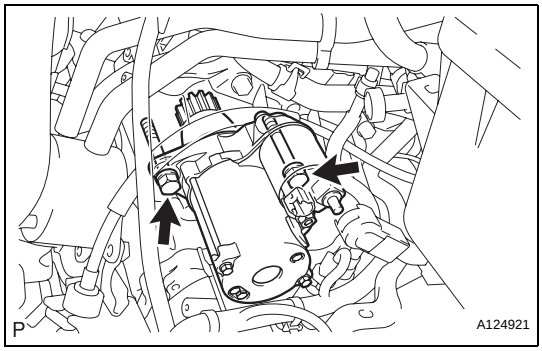
8. INSTALL ENGINE MOUNTING BRACKET FR

(a) Install the mounting bracket with the 4 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf) for 14 mm head bolt
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf) for 12 mm head bolt



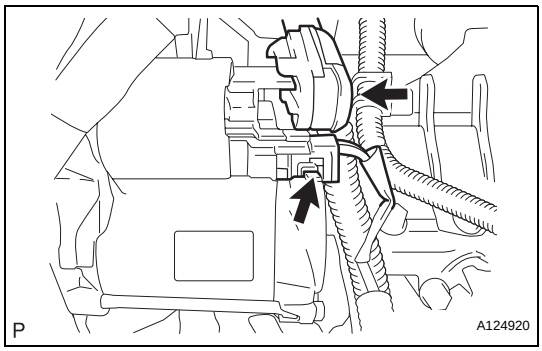
9. INSTALL ENGINE MOUNTING BRACKET RR

(a) Install the mounting bracket with the 3 bolts.
Torque: 45 N*m (459 kgf*cm, 33 ft.*lbf)



10. INSTALL TRANSMISSION OIL COOLER

(a) Install the oil cooler (see page AX-127).



11. CONNECT WIRE HARNESS

(a) Connect the wire harness clamps.
(b) Connect the 2 speed sensor connectors.
(c) Connect the transaxle wire connector.
(d) Connect the park/neutral position switch connector.

12. INSTALL STARTER ASSEMBLY

(a) Install the starter with the 2 bolts.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

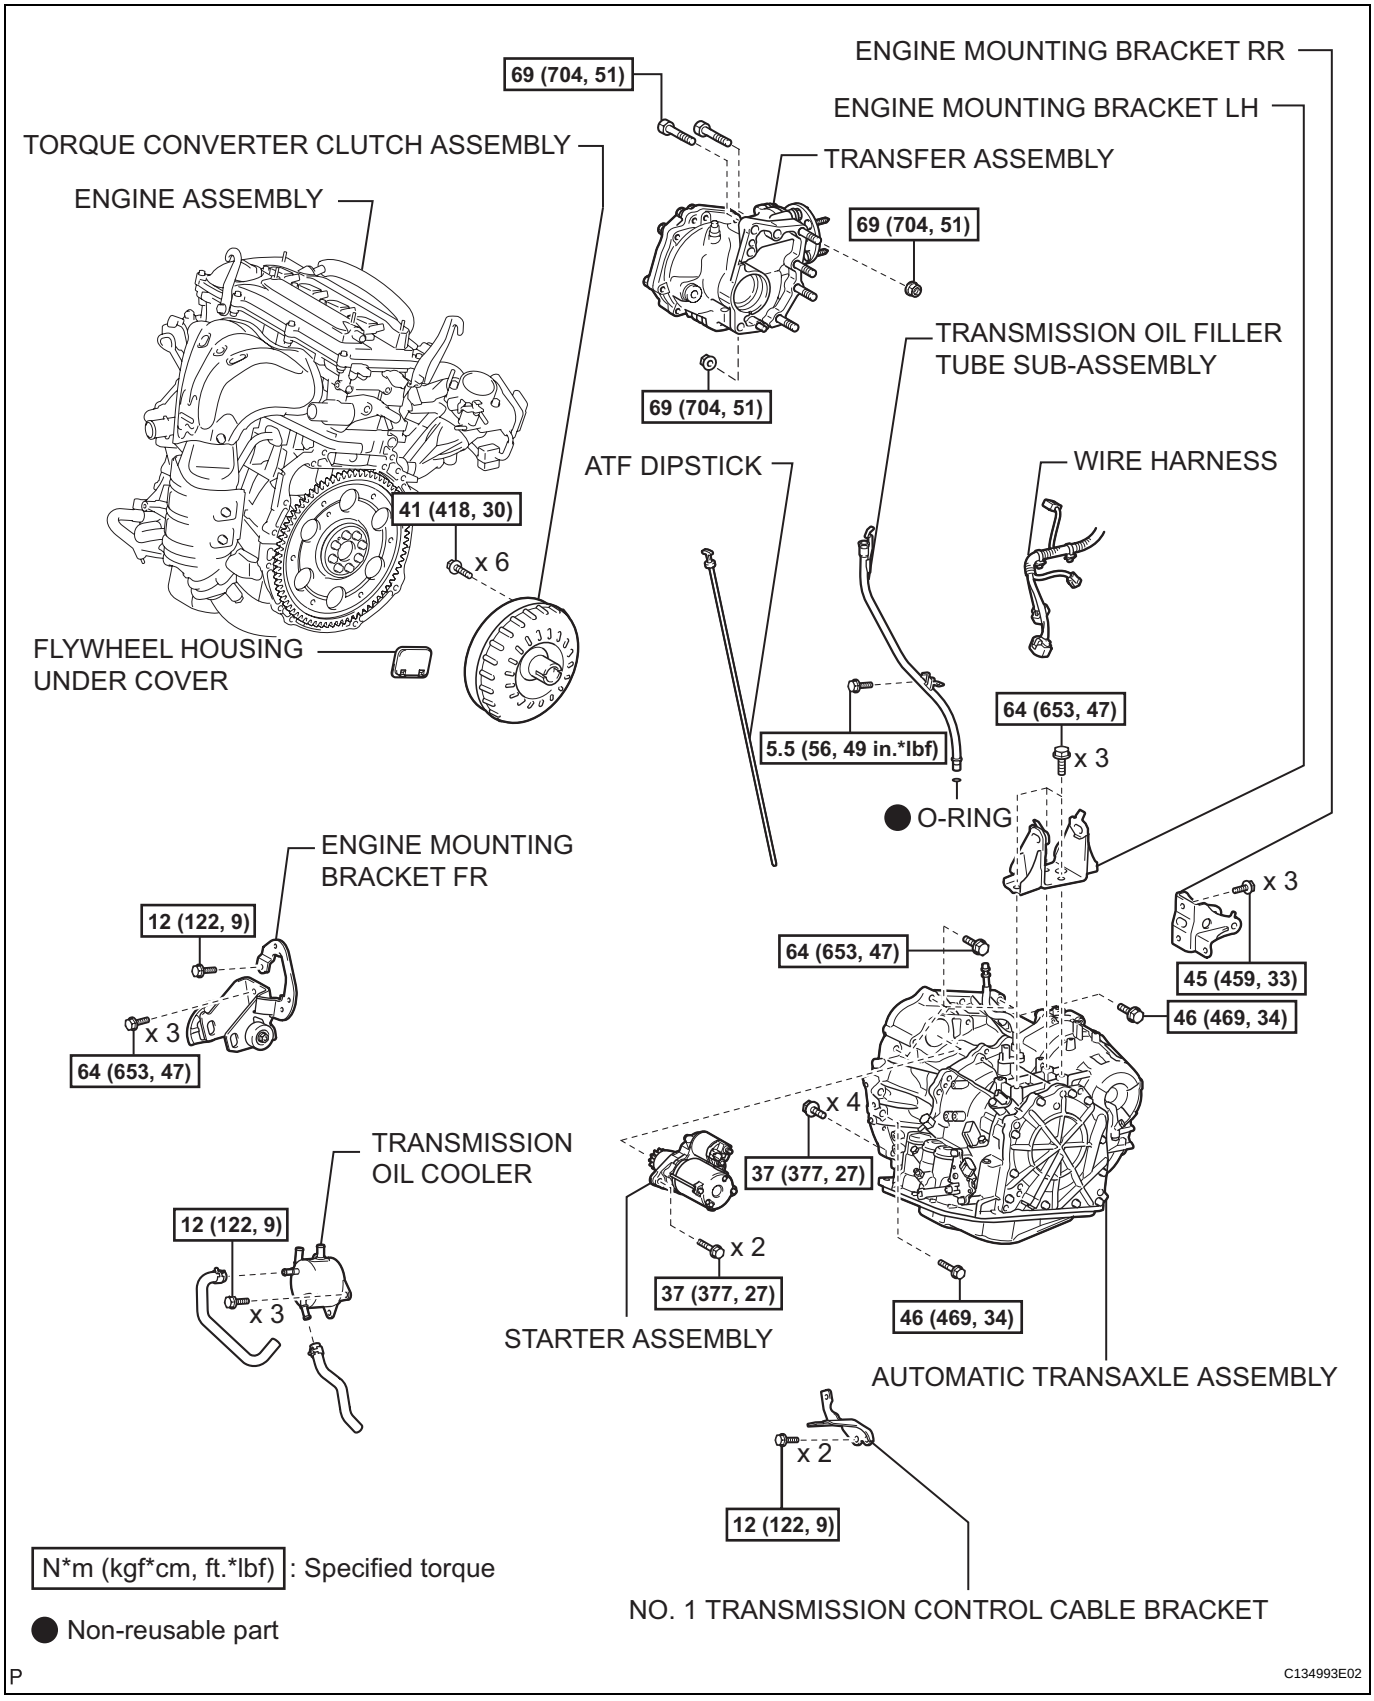
(b) Connect the starter wire with the nut.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
(c) Connect the starter connector.
(d) Install the terminal nut and cover the nut with the cap.
Torque: 9.8 N*m (100 kgf*cm, 7 in.*lbf)

13. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

(a) Install the engine with transaxle. (see page EM-105).

14. ADD AUTOMATIC TRANSAXLE FLUID
Fluid type:
Toyota Genuine ATF WS

15. INSPECT AUTOMATIC TRANSAXLE FLUID



(a) Inspect the automatic transaxle fluid (see page AX-102).

16. PERFORM RESET MEMORY

(a) Perform the RESET MEMORY procedures (A/T initialization) (see page AX-18).

AUTOMATIC TRANSAXLE ASSEMBLY

COMPONENTS

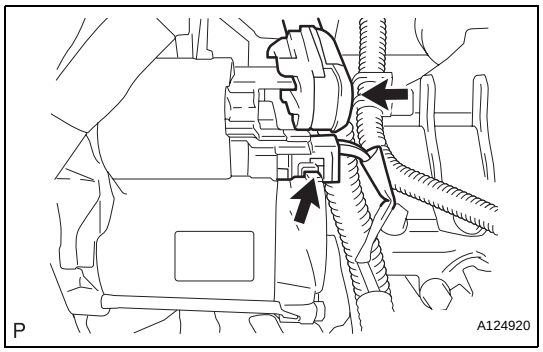
AX

REMOVAL

1. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE

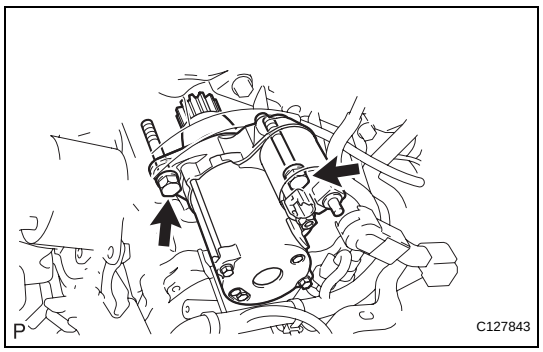
(a) Remove the engine with transaxle (see page EM-98).

2. DRAIN AUTOMATIC TRANSAXLE FLUID



(a) Remove the drain plug and gasket, and drain ATF.

(b) Install a new gasket and the drain plug.
Torque: 47 N*m (479 kgf*cm, 35 ft.*lbf)

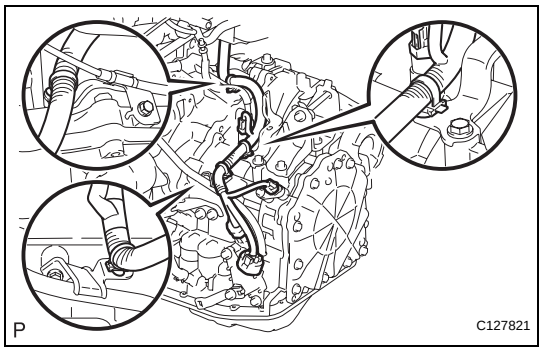


3. REMOVE STARTER ASSEMBLY

(a) Disconnect the starter connector.

(b) Open the terminal cap, and remove the nut and disconnect the starter wire.

(c) Remove the 2 bolts and starter.



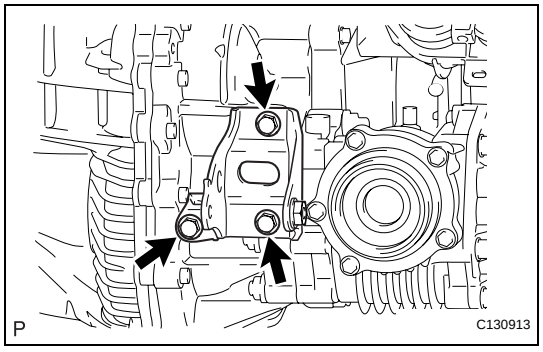
4. DISCONNECT WIRE HARNESS

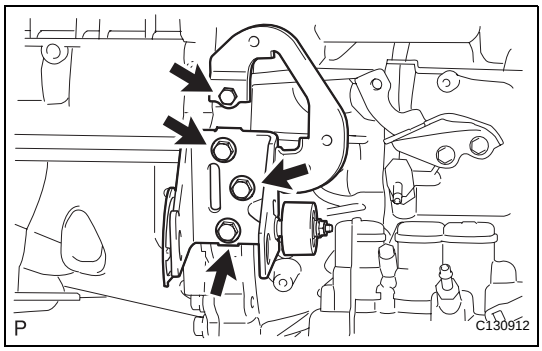
(a) Disconnect the park/neutral position switch connector.

(b) Disconnect the transaxle wire connector.

(c) Disconnect the 2 speed sensor connectors.

(d) Disconnect the wire harness clamps.

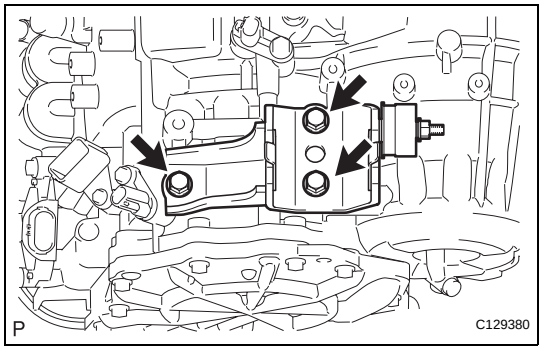




5. REMOVE TRANSMISSION OIL COOLER

(a) Remove the oil cooler (see page AX-127).

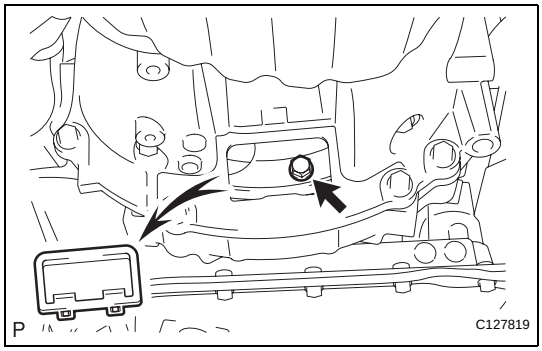
6. REMOVE ENGINE MOUNTING BRACKET RR



(a) Remove the 3 bolts and mounting bracket.

7. REMOVE ENGINE MOUNTING BRACKET FR

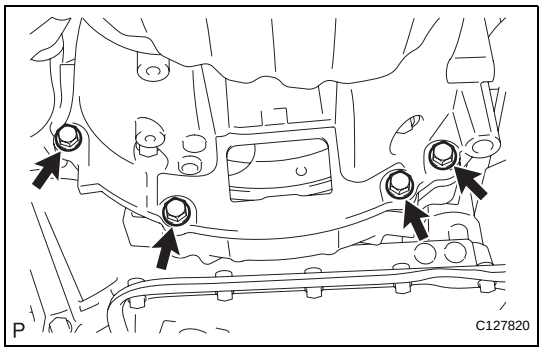
(a) Remove the 4 bolts and mounting bracket.



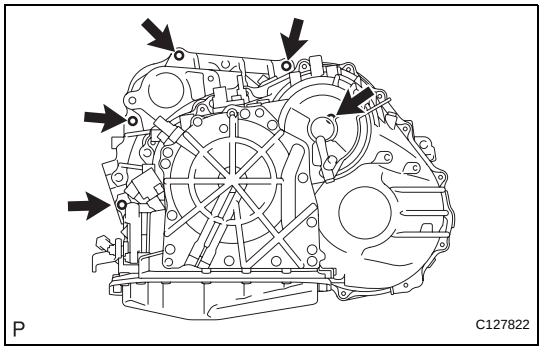
8. REMOVE ENGINE MOUNTING BRACKET LH

(a) Remove the 3 bolts and mounting bracket.

9. REMOVE TRANSFER ASSEMBLY



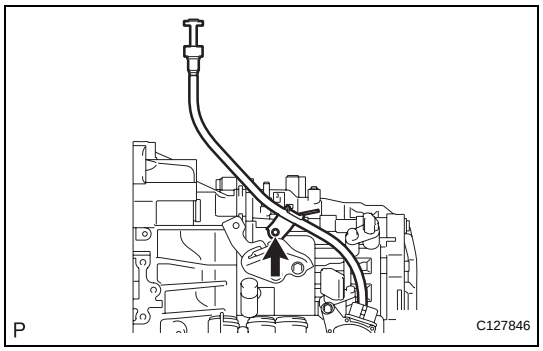
(a) Remove the transfer (see page TF-59).



10. REMOVE AUTOMATIC TRANSAXLE ASSEMBLY

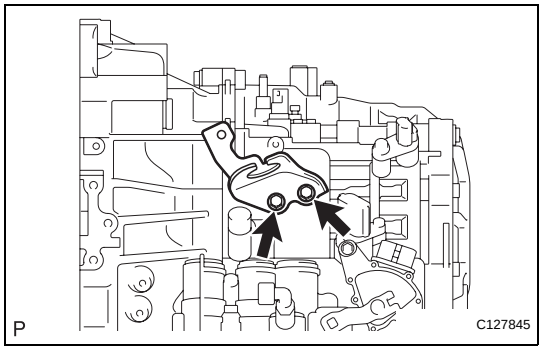
(a) Remove the flywheel housing under cover.

(b) Turn the crankshaft to gain access and remove the 6 bolts while holding the crankshaft pulley bolt with a wrench.



(c) Remove the 4 lower side mounting bolts.

(d) Remove the 5 upper side mounting bolts.



(e) Separate and remove the automatic transaxle.

11. REMOVE TRANSMISSION OIL FILLER TUBE SUB-ASSEMBLY

(a) Remove the ATF dipstick.

(b) Remove the bolt and oil filler tube.

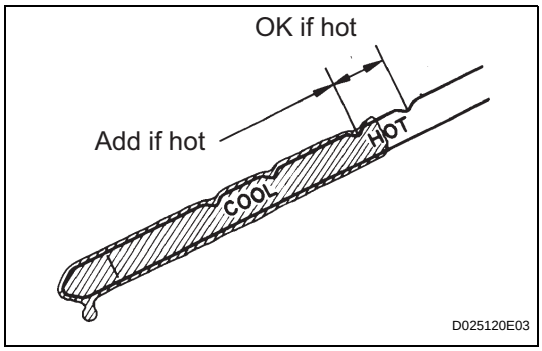
12. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and cable bracket.

13. REMOVE TORQUE CONVERTER CLUTCH ASSEMBLY

AUTOMATIC TRANSAXLE FLUID

ON-VEHICLE INSPECTION



1. CHECK TRANSAXLE FLUID LEVEL

HINT:

Drive the vehicle so that the engine and transaxle are at normal operating temperature.

Fluid temperature:

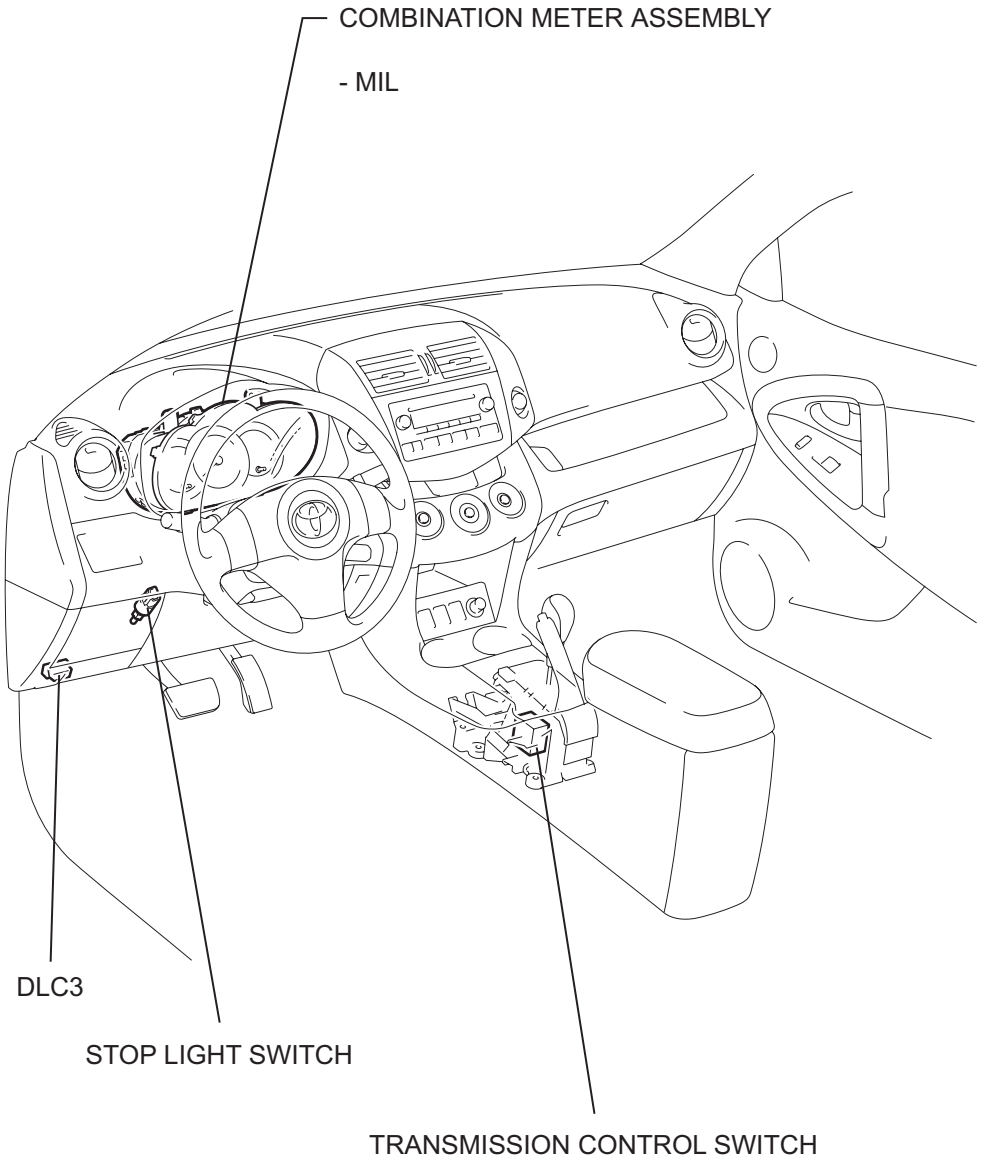
70 to 80°C (158 to 176°F)

(a) Park the vehicle on a level surface and set the parking brake.

(b) With the engine idling and the brake pedal depressed, move the shift lever to each position from P to L position, and return it to the P position.

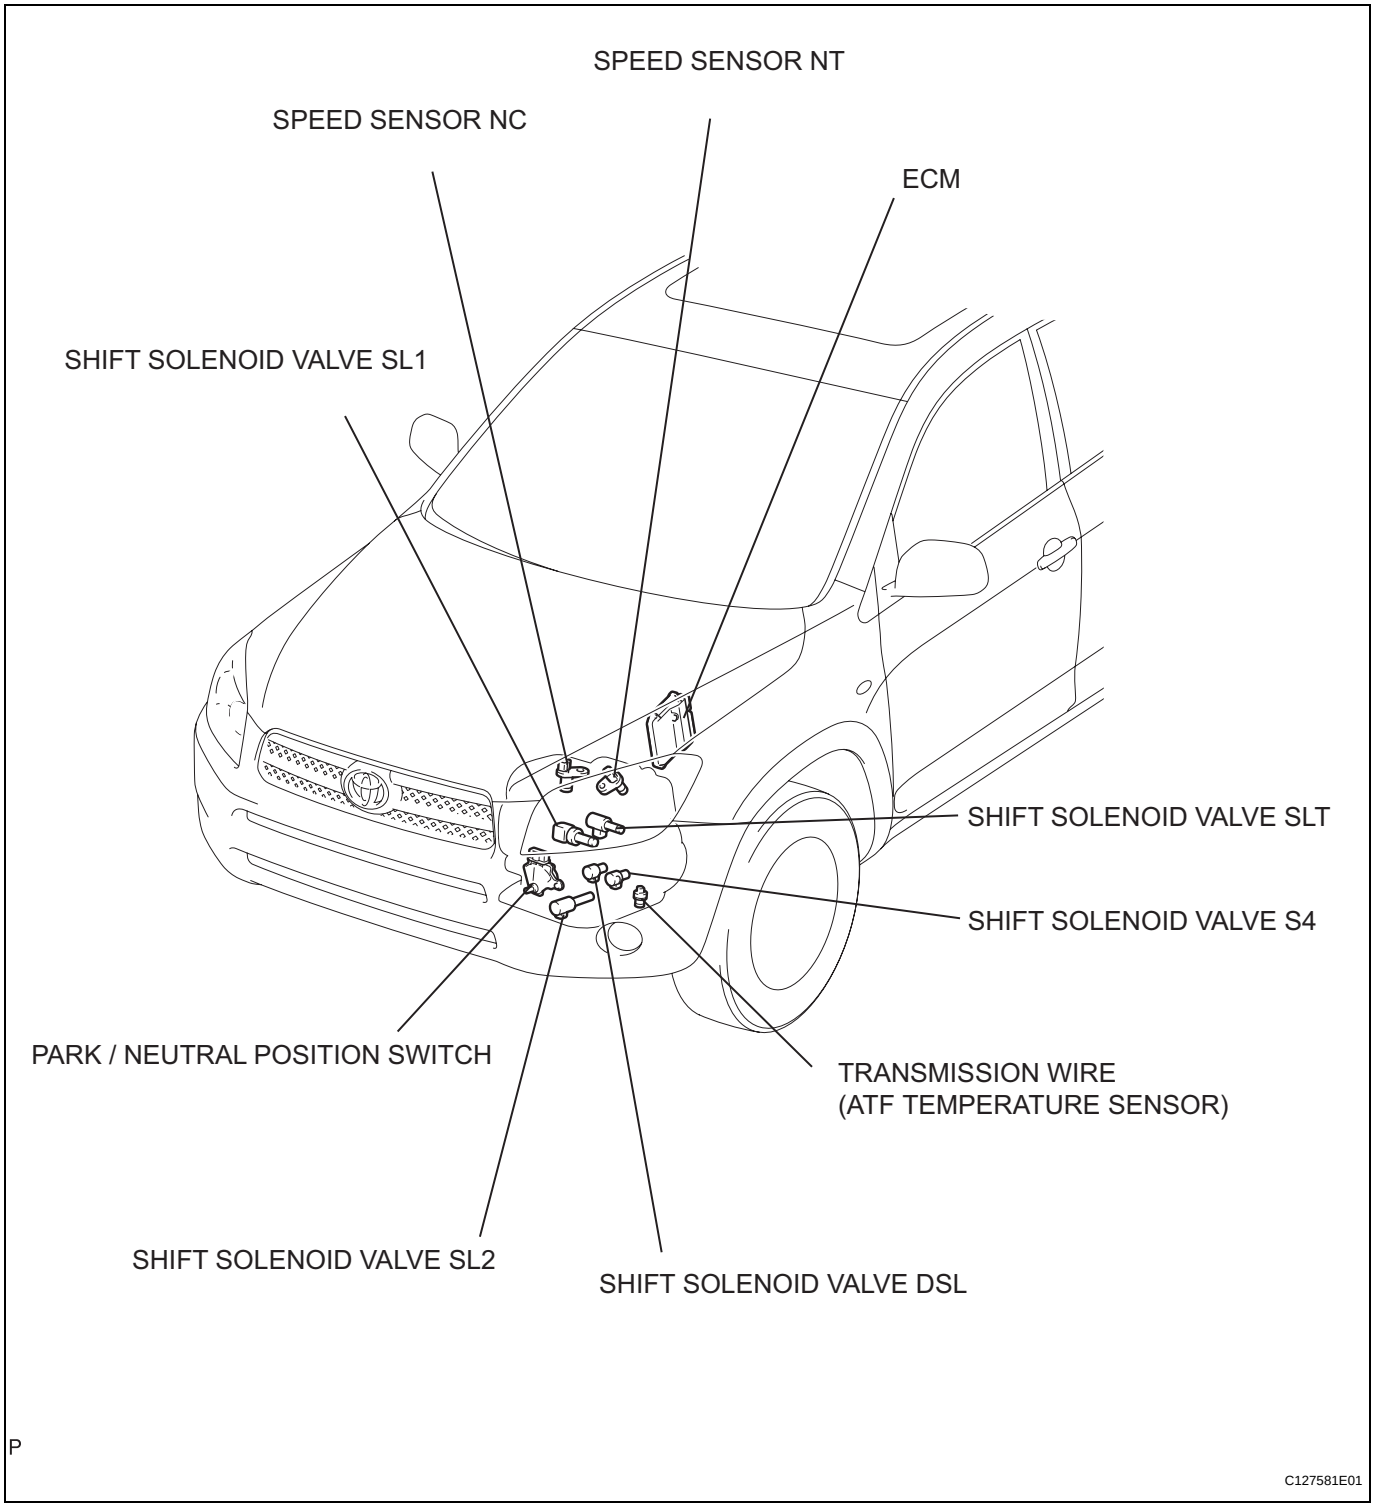
(c) Take out the ATF dipstick and wipe it clean.

(d) Fully push the dipstick back into the pipe.



(e) Take it out and check that the fluid level is at the HOT position.

If there are leaks, it is necessary to repair or replace O-rings, FIPGs, oil seals, plugs and/or other parts.



DEFINITION OF TERMS

Term	Definition
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	Diagnostic code.
Typical enabling condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets the DTC when the monitored value(s) exceeds the malfunction threshold(s).
Sequence of operation	The priority order that is applied to monitoring, if multiple sensors and components are used to detect the malfunction. While another sensor is being monitored, the next sensor or component will not be monitored.
Required sensor/Components	The sensors and components that are used by the ECM to detect malfunctions.
Frequency of operation	The number of times that the ECM checks for malfunctions per driving cycle. "Once per driving cycle" means that the ECM detects malfunction only 1 time during a single driving cycle. "Continuous" means that the ECM detects a malfunction every time the enabling condition is met.
Duration	The minimum time that the ECM must sense a continuous deviation in the monitored value(s) before setting a DTC. This timing begins after the "typical enabling conditions" are met.
Malfunction thresholds	Beyond this value, the ECM will conclude that there is a malfunction and set a DTC.
MIL operation	MIL illumination timing after a defect is detected. "Immediate" means that the ECM illuminates the MIL the instant the ECM determines that there is a malfunction. "2 driving cycle" means that the ECM illuminates the MIL if the same malfunction is detected again in the 2nd driving cycle.
Component operating range	Normal operation range of sensors and solenoids under normal driving conditions. Use these ranges as a reference. They cannot be used to judge if a sensor or solenoid is defective or not.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION

(a) The Electronic Controlled Automatic Transaxle (ECT) is an automatic transaxle that electronically controls shift timing using the Engine Control Module (ECM). The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point based on driver habits and road conditions. As a result, fuel efficiency and power transaxle performance are improved.
Shift shock is reduced by controlling the engine and transaxle simultaneously.
In addition, the ECT has the following features:

- Diagnostic function.
- Fail-safe function when a malfunction occurs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- The ECM of this system is connected to the CAN and multiplex communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN and multiplex communication systems.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

ROAD TEST

1. PROBLEM SYMPTOM CONFIRMATION

(a) Based on the result of the customer problem analysis, try to reproduce the symptoms. If the problem is that the transaxle does not shift up, shift down, or the shift point is too high or too low, conduct the following road test referring to the automatic shift schedule and simulate the problem symptoms.

2. ROAD TEST

NOTICE:

Perform the test at the normal operating ATF temperature of 50 to 80°C (122 to 176°F).

(a) D position test

Move the shift lever to D and fully depress the accelerator pedal. Check the following:

(1) Check up-shift operation.

Check that the 1 → 2, 2 → 3 and 3 → O/D up-shifts take place at the shift point shown in the automatic shift schedule (see page SS-55).

HINT:

O/D Gear Up-shift Prohibition Control

- Engine coolant temperature is 55°C (131°F) or less and vehicle speed is at 70 km/h (43 mph) or less.
- ATF temperature is 5°C (41°F) or less.

O/D Gear Lock-up Prohibition Control

- Brake pedal is depressed.
- Accelerator pedal is released.
- Engine coolant temperature is 60°C (140°F) or less.

(2) Check for shift shock and slip.

Check for shock and slip at the 1 → 2, 2 → 3 and 3 → O/D up-shifts.

(3) Check for abnormal noise and vibration.

Check for abnormal noise and vibration when up-shifting from 1 → 2, 2 → 3 and 3 → O/D while driving with the shift lever on D, and check while driving in the lock-up condition.

HINT:

The check for the cause of abnormal noise and vibration must be done thoroughly as it could also be due to loss of balance in the differential, torque converter clutch, etc.

(4) Check kick-down operation.

While driving the vehicle in the 2nd, 3rd and O/D gears with the shift lever on D, check that the possible kick-down vehicle speed limits for 2 → 1, 3 → 2 and O/D → 3 kick-downs conform to those indicated in the automatic shift schedule (see page SS-55).

(5) Check for abnormal shock and slip at kick-down.

(6) Check the lock-up mechanism.
- Drive the vehicle in the O/D gear with the shift lever on D. Maintain a steady speed (lock-up ON).
- Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.

HINT:
- There is no lock-up function in the 1st and 2nd gear.
- If there is a sudden increase in engine speed, there is no lock-up.

(b) 3 position test

Move the shift lever to 3 and fully depress the accelerator pedal. Check the following:

(1) Check up-shift operation.
Check that the 1 → 2 and 2 → 3 up-shifts take place and that the shift point conforms to the automatic shift schedule (see page SS-55).

(2) Check engine braking.
While driving the vehicle in the 3rd gear with the shift lever on 3, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(c) 2 position test

Move the shift lever to 2 and fully depress the accelerator pedal. Check the following:

(1) Check up-shift operation.
Check that the 1 → 2 up-shift takes place and that the shift point conforms to the automatic shift schedule (see page SS-55).
HINT:
There is no O/D up-shift and lock-up when the shift lever is on 2.

(2) Check engine braking.
While driving the vehicle in the 2nd gear with the shift lever on 2, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration, and for shock at up-shift and down-shift.

(d) L position test

Move the shift lever to L and fully depress the accelerator pedal. Check the following:

(1) Check that there is no up-shift.
While driving the vehicle with the shift lever on L, check that there is no up-shift to 2nd gear.
HINT:
There is no lock-up in L.

(2) Check engine braking.
While driving the vehicle with the shift lever on L, release the accelerator pedal and check the engine braking effect.

(3) Check for abnormal noises during acceleration and deceleration.

(e) R position test
Move the shift lever to R and lightly depress the accelerator pedal. Check that the vehicle moves backward without any abnormal noise or vibration.
CAUTION:
Before conducting this test, ensure that no people or obstacles are in the test area.

(f) P position test
Stop the vehicle on an incline (more than 5°). Then move the shift lever to P and release the parking brake. Check that the parking lock pawl holds the vehicle in place.

MECHANICAL SYSTEM TESTS

1. STALL SPEED TEST

HINT:

This test is to check the overall performance of the engine and transaxle.

NOTICE:

- **Do not perform the stall speed test longer than 5 seconds.**
- **To ensure safety, perform this test in an open and level area that provides good traction.**
- **The stall speed test should always be performed with at least 2 people. One person should observe the condition of the wheels and wheel chocks while the other is performing the test.**

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Chock all 4 wheels.

(e) Set the parking brake and keep the brake pedal depressed firmly with your left foot.

(f) Move the shift lever to the D position.

(g) Depress the accelerator pedal as much as possible with your right foot.

(h) Read the engine rpm (stall speed) and release the accelerator pedal immediately.

Standard value:

2,150 to 2,450 rpm

Evaluation:

Test Result	Possible Cause
Stall speed is lower than standard value	• Stator one-way clutch is not operating properly • Torque converter is faulty (stall speed is less than standard value by 600 rpm or more) • Engine power may be insufficient
Stall speed is higher than standard value	• Line pressure is low • C1 clutch slipping • F3 one-way clutch is not operating properly • F4 one-way clutch is not operating properly

NOTICE:

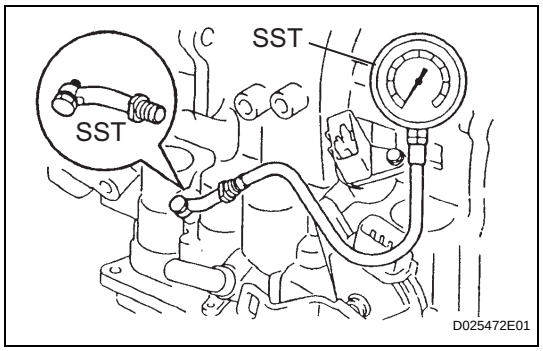
Perform the test at the normal operating ATF temperature of 50 to 80°C (122 to 176°F).

2. SHIFT TIME LAG TEST

HINT:

This test is to check the condition of the direct clutch, forward clutch, 1st brake and reverse brake.

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.



(b) Run the vehicle until the transmission fluid temperature has reached 50 to 80°C (122 to 176°F).

(c) Allow the engine to idle with the air conditioning OFF.

(d) Set the parking brake and keep the brake pedal depressed firmly.
(e) Check the D range time lag.
  (1) Move the shift lever to N and wait for 1 minute.
  (2) Move the shift lever to D and measure the time until the shock is felt.
  (3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.
(f) Check the R range time lag.
  (1) Move the shift lever to N and wait for 1 minute.
  (2) Move the shift lever to R and measure the time until the shock is felt.
  (3) Repeat the 2 procedures above 3 times, and calculate the average time of the 3 tests.
  Standard value:
  D range time lag is less than 1.2 seconds
  R range time lag is less than 1.5 seconds

Evaluation:

Test Result	Possible Cause
D range time lag exceeds standard value	• Line pressure is low • C1 clutch is worn • F3 one-way clutch is not operating properly • F4 one-way clutch is not operating properly
R range time lag exceeds standard value	• Line pressure is low • C3 clutch is worn • B4 brake is worn • F1 one-way clutch is not operating properly

HYDRAULIC TEST

1. MEASURE LINE PRESSURE

NOTICE:

- **Perform the test at the normal operating ATF temperature: 50 to 80°C (122 to 176°F).**
- **The line pressure test should always be performed with at least 2 people. One person should observe the condition of the wheels or wheel chocks while the other is performing the test.**
- **Be careful to prevent SST's hose from interfering with the exhaust pipe.**
- **This test must be performed after checking and adjusting the engine.**
- **Perform the test with the A/C OFF.**
- **When conducting the stall test, do not continue for more than 10 seconds.**

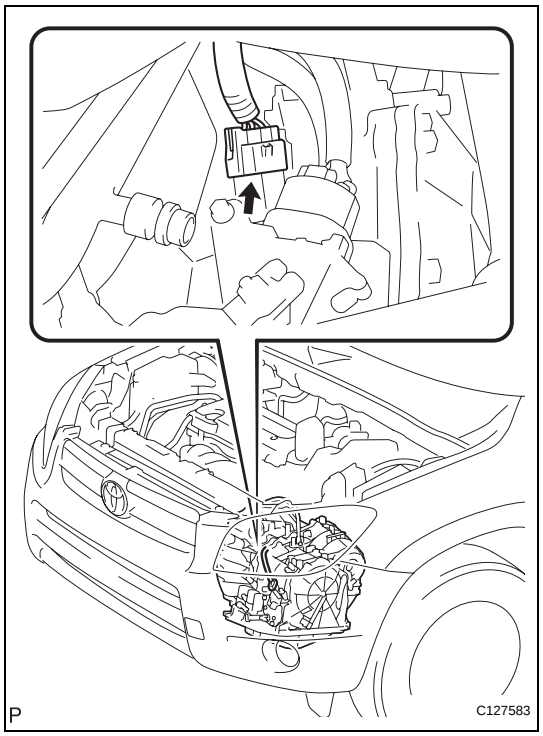
(a) Warm up the ATF.
(b) Remove the test plug on the transaxle case center right side and connect SST.
  SST 09992-00095 (09992-00231, 09992-00271)
(c) Fully apply the parking brake and chock the 4 wheels.
(d) Start the engine and check the idling speed.
(e) Keep your left foot firmly on the brake pedal and move the shift lever to D.
(f) Measure the line pressure when the engine is idling.

(g) Depress the accelerator pedal as much as possible with your right foot. Quickly read the highest line pressure reading when the engine speed reaches stall speed.
(h) Perform the measure line pressure test again with the shift lever on R.

Specified line pressure:

Condition	Shift Lever on D	Shift Lever on R
Idling	372 to 412 kPa (3.8 to 4.2 kgf/cm^2, 54 to 60 psi)	672 to 742 kPa (6.9 to 7.6 kgf/cm^2, 97 to 108 psi)
Stall	931 to 1,031 kPa (9.5 to 10.5 kgf/cm^2, 135 to 150 psi)	1,768 to 1,968 kPa (18.0 to 20.0 kgf/cm^2, 256 to 285 psi)

Evaluation:



Problem	Possible Cause
Measured values at all positions are higher than specified	• Shift solenoid valve SLT defective • Regulator valve defective
Measured values at all positions are lower than specified	• Shift solenoid valve SLT defective • Regulator valve defective • Oil pump defective • U/D (underdrive) direct clutch defective
Pressure is low when shift lever is on D only	• D position circuit fluid leak • Forward clutch defective
Pressure is low when shift lever is on R only	• R position circuit fluid leak • Direct clutch defective • 1st and reverse brake defective

MANUAL SHIFTING TEST

1. MANUAL SHIFTING TEST

HINT:

- Through this test, it can be determined whether the trouble occurs in the electrical circuit or if it is a mechanical problem in the transaxle.
- If any abnormalities are found in the following test, the problem is in the transaxle itself.

(a) Disconnect the connector of the transmission wire.
HINT:
It is possible to deactivate the electrical shift control by disconnecting the transmission wire. The gear positions can then be changed mechanically with the shift lever.

(b) Drive with the transmission wire disconnected. Move the shift lever to each position to check whether the gear position changes as shown in the table below.

Shift Lever Position	Gear Position
D	3rd
2	3rd
L	3rd
R	R
P	P

(c) Connect the connector of the transmission wire.

(d) Clear the DTC (see page AX-29).

INITIALIZATION

1. RESET MEMORY

NOTICE:

- **Perform the RESET MEMORY procedures (A/T initialization) when replacing the automatic transaxle assembly, engine assembly or ECM.**
- **RESET MEMORY can be performed only with the intelligent tester.**

HINT:

The ECM memorizes the vehicle conditions when the ECT controls the automatic transaxle assembly and engine assembly. Therefore, when the automatic transaxle assembly, engine assembly, or ECM has been replaced, it is necessary to reset the memory so that the ECM can memorize the new information.

The reset procedures are as follows.

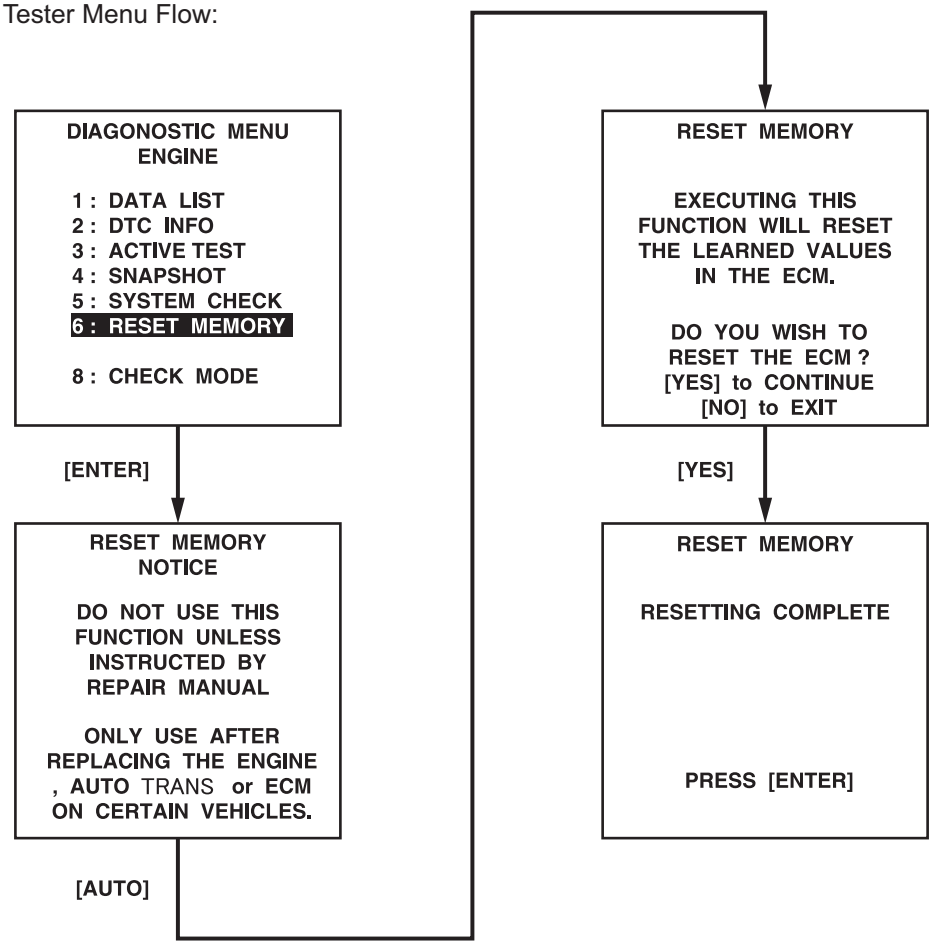
(a) Turn the ignition switch OFF.

(b) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(c) Turn the ignition switch ON and turn the tester ON.

(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II.

(e) Perform the reset memory procedures from the Engine menu.



CAUTION:

After performing the RESET MEMORY procedures, be sure to perform the ROAD TEST (see page AX-12) as described earlier.

HINT:

The ECM learns through the ROAD TEST.

Tester Menu Flow:

P

C115865E02

MONITOR DRIVE PATTERN

1. TEST MONITOR DRIVE PATTERN FOR ECT

CAUTION:

Perform this drive pattern on a level surface and strictly observe the posted speed limits and traffic laws while driving.

HINT:

Performing this drive pattern is one method to simulate the ECT's malfunction detection conditions.

The DTCs may not be detected through ordinary, everyday driving. Also, DTCs may not be detected through this drive pattern.

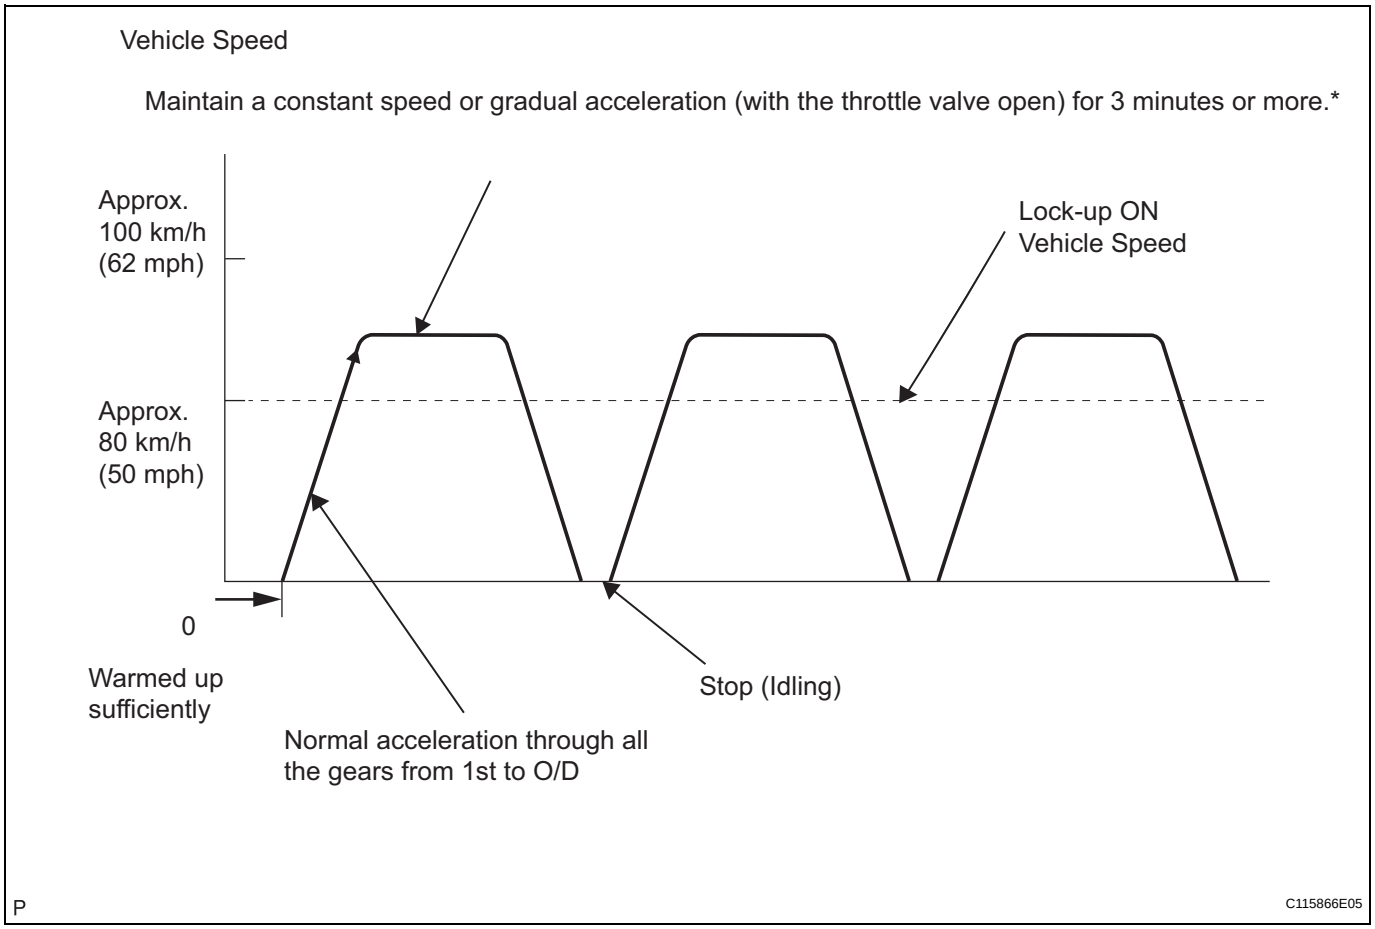
(a) Preparation for driving

(1) Warm up the engine sufficiently (engine coolant temperature is 60°C (140°F) or higher).

(2) Drive the vehicle when the atmospheric temperature is -10°C (14°F) or higher. Malfunction is not detected when the atmospheric temperature is less than -10°C (14°F).

(b) Drive pattern

(1) Drive the vehicle through all the gears. Stop → 1st → 2nd → 3rd → O/D → O/D (lock-up ON).



(2) Repeat the above drive pattern 3 times or more.

NOTICE:

- **When using the intelligent tester, the monitor status can be found in "ENHANCED OBD II / DATA LIST" or under "CARB OBD II".**
- **In the event that the drive pattern must be interrupted (due to traffic conditions or other factors), the drive pattern can be resumed and, in most cases, the monitor can be completed.**

CAUTION:

Perform this drive pattern on a level road as much as possible and strictly observe the posted speed limits and traffic laws while driving.

HINT:
*: Drive at such a speed in the uppermost gear to engage lock-up. The vehicle can be driven at a speed lower than the speed shown in the above diagram under the lock-up condition.

NOTICE:

It is necessary to drive the vehicle for approximately 30 minutes to detect DTC P0711 (Transmission fluid temperature sensor "A" performance).

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- The Matrix Chart is divided into 2 chapters. When troubleshooting, check Chapter 1 first. If instructions are given in Chapter 1 to proceed to 2, proceed as instructed.
- If the instruction "Proceed to next circuit inspection shown in problem symptoms table" is given in the flowchart for each circuit, proceed to the next suspected area in the table.
- If the problem still occurs even though there are no malfunctions in any of the circuits, check the ECM and replace it if necessary.

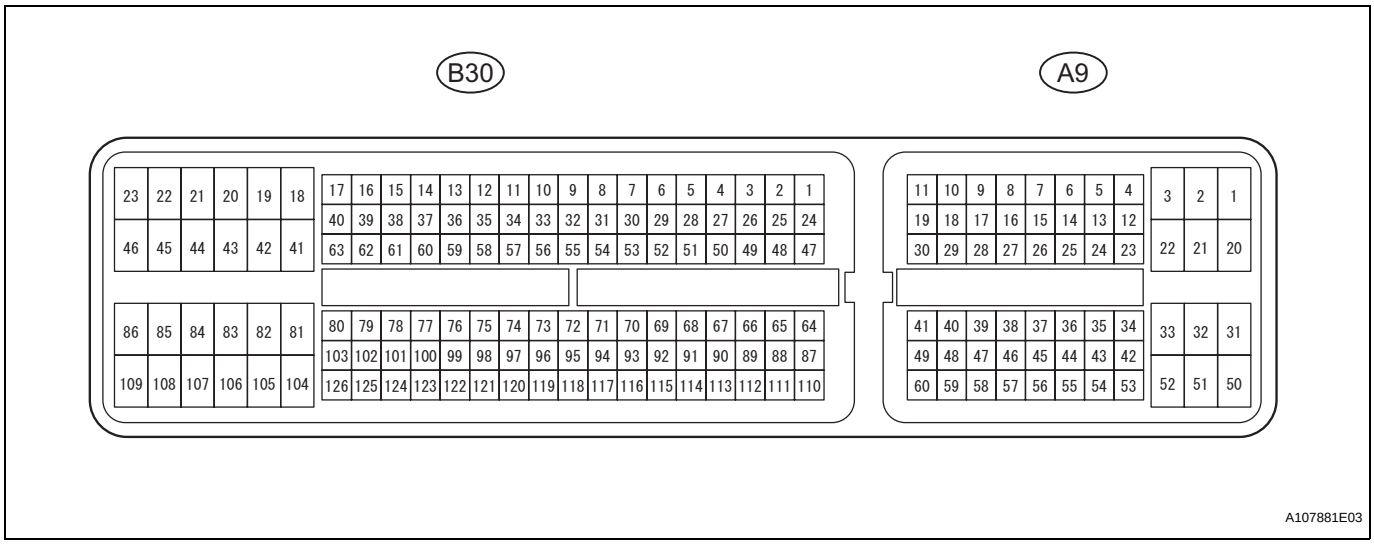
CHAPTER 1: ELECTRICAL CIRCUIT MATRIX CHART

Symptom	Suspected area	See page
No up-shift (1st -> 2nd)	ECM	IN-37
No up-shift (2nd -> 3rd)	ECM	IN-37
No up-shift (3rd -> O/D)	1. Park/Neutral position switch circuit*	AX-39
	2. ECM	IN-37
No down-shift (O/D -> 3rd)	ECM	IN-37
No down-shift (3rd -> 2nd)	ECM	IN-37
No down-shift (2nd -> 1st)	ECM	IN-37
No lock-up or no lock-up off	ECM	IN-37
Shift point too high or too low	ECM	IN-37
Up-shift to O/D from 3rd while shift lever is on 3	1. Park/Neutral position switch circuit*	AX-39
	2. ECM	IN-37
Up-shift to O/D from 3rd while engine is cold	1. Engine coolant temp. sensor circuit*	ES-51
	2. ECM	IN-37
Harsh engagement (N -> D)	ECM	IN-37
Harsh engagement (lock-up)	ECM	IN-37
Harsh engagement (any driving position)	ECM	IN-37
Poor acceleration	ECM	IN-37
Engine stalls when starting off or stopping	ECM	IN-37
Malfunction in shifting	1. Park/Neutral position switch circuit*	AX-39
	2. ECM	IN-37

HINT:

*: When the circuit is defective, a DTC may be output.

CHAPTER 2: ON-VEHICLE REPAIR AND OFF-VEHICLE REPAIR

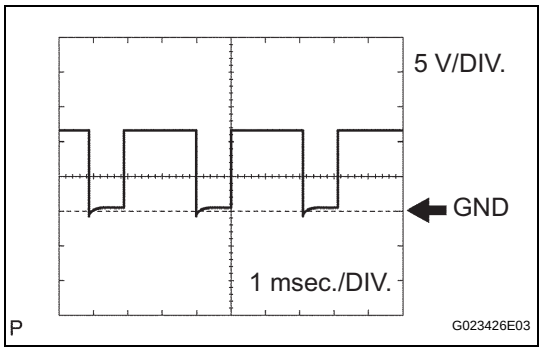


Symptom	Suspected area	See page
Vehicle does not move in all positions other than P and N	1. Manual valve	AX-155
	2. Primary regulator valve	AX-155
	3. Front and rear planetary gear	AX-155
	4. U/D planetary gear	AX-155
	5. F2 U/D one-way clutch	AX-155
	6. C1 forward clutch	AX-155
	7. B3 U/D brake	AX-155

Symptom	Suspected area	See page
Vehicle does not move with shift lever on R	1. Front and rear planetary gear	AX-155
	2. U/D planetary gear	AX-155
	3. C2 direct clutch	AX-155
	4. C3 U/D brake	AX-155
	5. B2 1st and reverse brake	AX-155
No up-shift (1st -> 2nd)	1. Valve body assembly	AX-118
	2. F1 No. 1 one-way clutch	AX-155
	3. B1 2nd brake	AX-155
No up-shift (2nd -> 3rd)	1. Valve body assembly	AX-118
	2. C2 direct clutch	AX-155
No up-shift (3rd -> O/D)	1. 3-4 shift valve	AX-155
	2. C3 U/D clutch	AX-155
No down-shift (O/D -> 3rd)	3-4 shift valve	AX-155
No down-shift (3rd -> 2nd)	Valve body assembly	AX-118
No down-shift (2nd -> 1st)	Valve body assembly	AX-118
No lock-up or no lock-up off	1. Lock-up relay valve	AX-155
	2. Torque converter clutch	AX-153
Harsh engagement (N -> D)	1. C1 accumulator	AX-155
	2. Valve body assembly	AX-118
	3. C1 forward clutch	AX-155
	4. F2 U/D one-way clutch	AX-155
	5. F1 No. 1 one-way clutch	AX-155
Harsh engagement (N -> R)	1. Valve body assembly	AX-118
	2. C2 direct clutch	AX-155
	3. B2 1st and reverse brake	AX-155
Harsh engagement (Lock-up)	1. Lock-up relay valve	AX-155
	2. Torque converter clutch	AX-153
Harsh engagement (2nd -> 3rd)	Valve body assembly	AX-118
Harsh engagement (3rd -> O/D)	Valve body assembly	AX-118
Harsh engagement (O/D -> 3rd)	Valve body assembly	AX-118
Slip or shudder (forward position, after warm-up)	1. Oil strainer	AX-118
	2. Torque converter clutch	AX-153
	3. C1 forward clutch	AX-155
	4. C2 direct clutch	AX-155
	5. C3 U/D brake	AX-155
	6. F1 No. 1 one-way clutch	AX-155
	7. F2 U/D one-way clutch	AX-155
Slip or shudder (shift lever on R)	1. Oil strainer	AX-118
	2. C2 direct clutch	AX-155
	3. B2 1st and reverse brake	AX-155
Slip or shudder (1st)	F1 No. 1 one-way clutch	AX-155
Slip or shudder (2nd)	1. F2 U/D one-way clutch	AX-155
	2. B1 2nd brake	AX-155
Slip or shudder (3rd)	C2 direct clutch	AX-155
Slip or shudder (O/D)	C3 U/D clutch	AX-155
No engine braking (1st to 3rd/shift lever on D)	B3 U/D brake	AX-155
No engine braking (1st/shift lever on L)	B2 1st and reverse brake	AX-155
No engine braking (2nd/shift lever on 2)	B1 2nd brake	AX-155

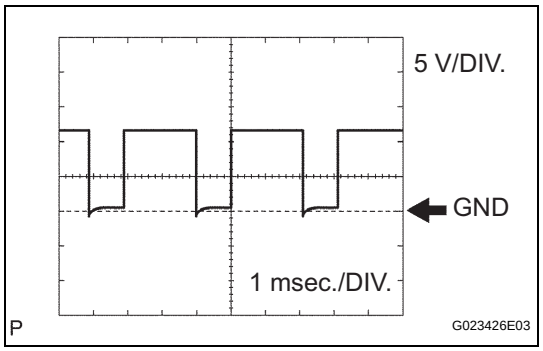
Symptom	Suspected area	See page
Poor acceleration (all positions)	1. Torque converter clutch	AX-153
	2. U/D planetary gear	AX-155
Poor acceleration (O/D)	1. C3 U/D clutch	AX-155
	2. U/D planetary gear	AX-155
Large shift shock or engine stalls when starting off or stopping	Torque converter clutch	AX-153
No kick-down	Valve body assembly	AX-118

TERMINALS OF ECM



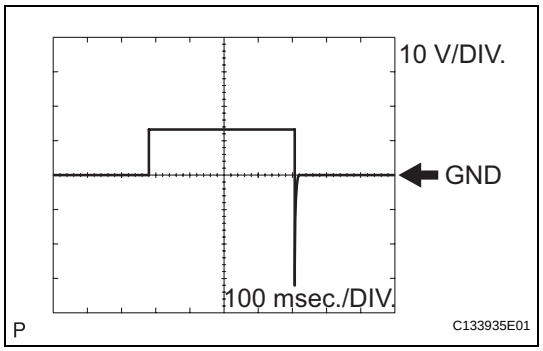
1. CHECK ECM

(a) Measure the voltage of the ECM connector.
HINT:
Each ECM terminal's standard voltage is shown in the table below.
In the table, first follow the information under "Condition". Look under "Symbols (Terminal No.)" for the terminals to be inspected. The standard voltage between the terminals is shown under "Specified Condition".
Use the illustration above as a reference for the ECM terminals.



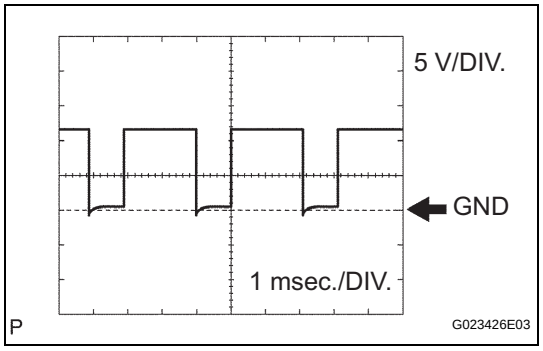
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
STAR (B30-52) - E1 (B30-104)	W - BR	Park/Neutral position switch signal	Ignition switch ON and shift lever on P or N	Below 2 V
STAR (B30-52) - E1 (B30-104)	W - BR	Park/Neutral position switch signal	Ignition switch ON and shift lever not on P or N	10 to 14 V
P (B30-73) - E1 (B30-104)	L - BR	P shift position switch signal	Ignition switch ON and transfer shift lever on P	10 to 14 V
P (B30-73) - E1 (B30-104)	L - BR	P shift position switch signal	Ignition switch ON and transfer shift lever not on P	Below 1 V
R (B30-53) - E1 (B30-104)	R - BR	R shift position switch signal	Ignition switch ON and transfer shift lever on R	10 to 14 V
R (B30-53) - E1 (B30-104)	R - BR	R shift position switch signal	Ignition switch ON and transfer shift lever not on R	Below 1 V
N (B30-54) - E1 (B30-104)	Y - BR	N shift position switch signal	Ignition switch ON and transfer shift lever on N	10 to 14 V
N (B30-54) - E1 (B30-104)	Y - BR	N shift position switch signal	Ignition switch ON and transfer shift lever not on N	Below 1 V
D (B30-56) - E1 (B30-104)	B - BR	D shift position switch signal	Ignition switch ON and transfer shift lever on D or 3	10 to 14 V
D (B30-56) - E1 (B30-104)	B - BR	D shift position switch signal	Ignition switch ON and transfer shift lever not on D or 3	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
3 (A9-26) - E1 (B30-104)	P - BR	3 shift position switch signal	Ignition switch ON and transfer shift lever on 3	10 to 14 V
3 (A9-26) - E1 (B30-104)	P - BR	3 shift position switch signal	Ignition switch ON and transfer shift lever not on 3	Below 1 V
2 (B30-55) - E1 (B30-104)	P - BR	2 shift position switch signal	Ignition switch ON and transfer shift lever on 2 and L	10 to 14 V
2 (B30-55) - E1 (B30-104)	P - BR	2 shift position switch signal	Ignition switch ON and transfer shift lever not on 2 and L	Below 1 V
L (B30-74) - E1 (B30-104)	LG - BR	L shift position switch signal	Ignition switch ON and transfer shift lever on L	10 to 14 V
L (B30-74) - E1 (B30-104)	LG - BR	L shift position switch signal	Ignition switch ON and transfer shift lever not on L	Below 1 V
STP (A9-36) - E1 (B30-104)	L - BR	Stop light switch signal	Brake pedal is depressed	Between 10 V and 14 V
STP (A9-36) - E1 (B30-104)	L - BR	Stop light switch signal	Brake pedal is released	Below 1 V
SL1+ (B30-57) - SL1- (B30-77)	V - P	SL1 solenoid signal	Engine idle speed	Pulse generation (see waveform 1)
SL1+ (B30-57) - SL1- (B30-77)	V - P	SL1 solenoid signal	Ignition switch ON	Pulse generation (see waveform 1)
SL1+ (B30-57) - SL1- (B30-77)	V - P	SL1 solenoid signal	1st gear	Pulse generation (see waveform 1)
SL1+ (B30-57) - SL1- (B30-77)	V - P	SL1 solenoid signal	Not on 1st gear	Below 1 V
SL2+ (B30-58) - SL2- (B30-59)	Y - L	SL2 solenoid signal	Engine idle speed	Pulse generation (see waveform 2)
SL2+ (B30-58) - SL2- (B30-59)	Y - L	SL2 solenoid signal	Ignition switch ON	Pulse generation (see waveform 2)
SL2+ (B30-58) - SL2- (B30-59)	Y - L	SL2 solenoid signal	1st or 2nd gear	Pulse generation (see waveform 2)
SL2+ (B30-58) - SL2- (B30-59)	Y - L	SL2 solenoid signal	3rd or O/D gear	Below 1 V
DSL (B30-79) - E01 (B30-45)	G - BR	DSL solenoid signal	Vehicle speed 65 km/h (40 mph), lock-up (ON to OFF)	Below 1 V
DSL (B30-79) - E01 (B30-45)	G - BR	DSL solenoid signal	Vehicle driving under lock-up position	Pulse generation (see waveform 3)
SLT+ (B30-76) - SLT- (B30-75)	R - GR	SLT solenoid signal	Engine idle speed	Pulse generation (see waveform 4)
S4 (B30-78) - E01 (B30-45)	W - BR	S4 solenoid signal	Ignition switch ON	Below 1 V
S4 (B30-78) - E01 (B30-45)	W - BR	S4 solenoid signal	O/D gear	10 to 14 V
S4 (B30-78) - E01 (B30-45)	W - BR	S4 solenoid signal	Not on O/D gear	Below 1 V
THO1 (B30-72) - ETHO (B30-95)	LG- BR	ATF temperature sensor signal	ATF temperature: 115°C (239°F) or more	Below 1.5 V
NT+ (B30-125) - NT- (B30-124)	W - R	Speed sensor (NT) signal	Vehicle speed 20 km/h (12 mph)	Pulse generation (see waveform 5)
NC+ (B30-101) - NC- (B30-102)	R - W	Speed sensor (NC) signal	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm	Pulse generation (see waveform 6)



(b) Using an oscilloscope, check the waveform 1.
Waveform 1 (Reference)

Item	Content
Symbols (Terminal No.)	SL1+ (B30-57) - SL1- (B30-77)
Tool Setting	5 V/DIV., 1 msec./DIV.
Condition	Engine idle speed



(c) Using an oscilloscope, check the waveform 2.
Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	SL2+ (B30-58) - SL2- (B30-59)
Tool Setting	5 V/DIV., 1 msec./DIV.
Condition	Engine idle speed

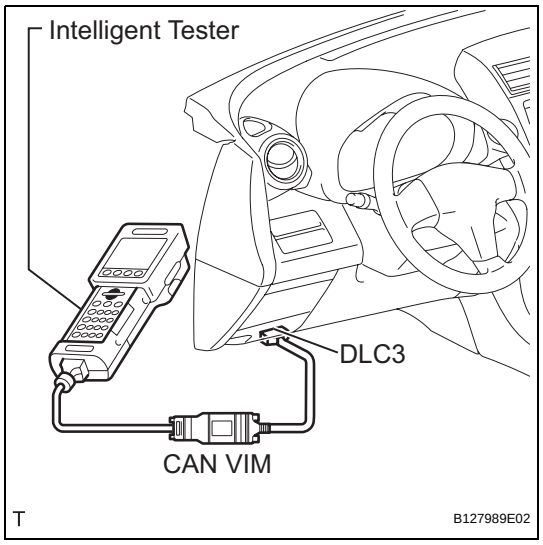
(g) Using an oscilloscope, check the waveform 6.
Waveform 6 (Reference)

Item	Content
Symbols (Terminal No.)	NC+ (B30-101) - NC- (B30-102)
Tool Setting	1 V/DIV., 1 msec./DIV.
Condition	Vehicle speed 30 km/h (19 mph): (3rd gear) Engine speed 1,400 rpm



DIAGNOSIS SYSTEM

1. DESCRIPTION

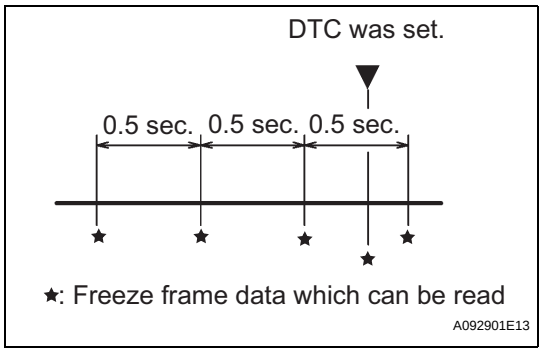
(a) When troubleshooting On-Board Diagnostic (OBD II) vehicles, the vehicle must be connected to the OBD II scan tool (complying with SAE J1987). Various data output from the vehicle's ECM can then be read.

(b) OBD II regulations require that the vehicle's on-board computer illuminates the Malfunction Indicator Lamp (MIL) on the instrument panel when the computer detects a malfunction in:
(1) The emission control system/components
(2) The powertrain control components (which affect vehicle emissions)
(3) The computer
In addition, the applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the ECM memory.
When the malfunction does not reoccur, the MIL stays illuminated until the ignition switch is turned OFF, and the MIL turns OFF when the engine is started. However, the DTCs remain recorded in the ECM memory.

(c) To check DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) of the vehicle. The tester displays DTCs, the freeze frame data and a variety of the engine data.
The DTCs and freeze frame data can be erased with the tester (see page AX-29).

2. NORMAL MODE AND CHECK MODE

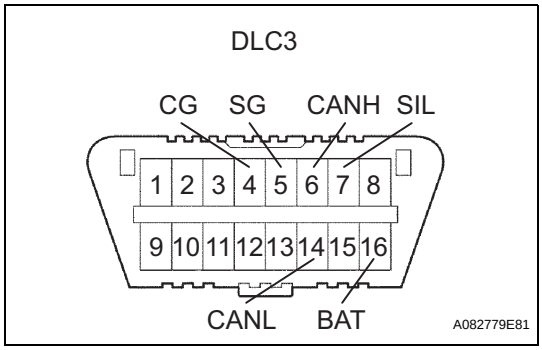
(a) The diagnosis system operates in "normal mode" during normal vehicle use. In normal mode, "2 trip detection logic" is used to ensure accurate detection of malfunctions. "Check mode" is also available to technicians as an option. In check mode, "1 trip detection logic" is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent malfunctions.



3. 2 TRIP DETECTION LOGIC

(a) When a malfunction is first detected, the malfunction is temporarily stored in the ECM memory (1st trip). If the same malfunction is detected during the next drive cycle, the MIL is illuminated (2nd trip).

4. FREEZE FRAME DATA



(a) Freeze frame data records the engine conditions (fuel system, calculated load, engine coolant temperature, fuel trim, engine speed, vehicle speed, etc.) when a malfunction is detected. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

(b) The intelligent tester records freeze frame data in 5 different instances: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. These data can be used to simulate the vehicle's condition around the time when the malfunction occurred. The data may help find the cause of the malfunction, or judge if the DTC is being caused by a temporary malfunction or not.

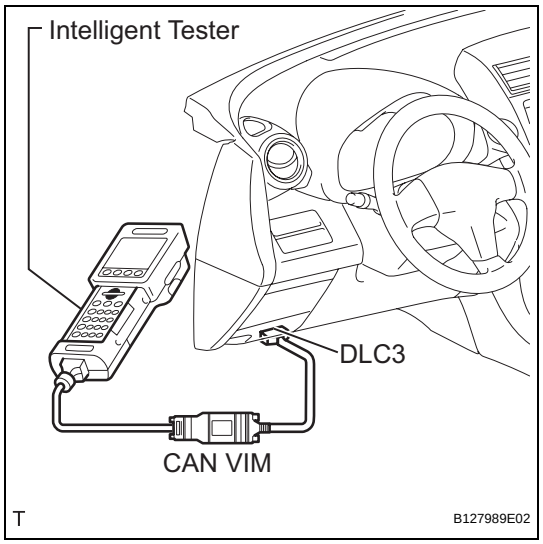
5. DATA LINK CONNECTOR 3 (DLC3)

(a) The vehicle's ECM uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	9 to 14 V
CANH (6) - CANL (14)	HIGH-level CAN bus line	Ignition switch OFF	54 to 69 Ω
CANH (6) - Battery positive	HIGH-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Ignition switch OFF	200 Ω or higher
CANL (14) - Battery positive	LOW-level CAN bus line	Ignition switch OFF	1 MΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Ignition switch OFF	200 Ω or higher

HINT:
*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or doors.
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.
HINT:
Connect the cable of the intelligent tester to the DLC3, turn the ignition switch ON and attempt to use the tester. If the screen displays UNABLE TO CONNECT TO VEHICLE, a problem exists in the vehicle side or the tester side.

If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.



6. CHECK MIL

(a) Check that the MIL illuminates when turning the ignition switch ON.
If the MIL does not illuminate, there is a problem in the MIL circuit (see page ES-386).

(b) When the engine is started, the MIL should turn off.

7. ALL READINESS

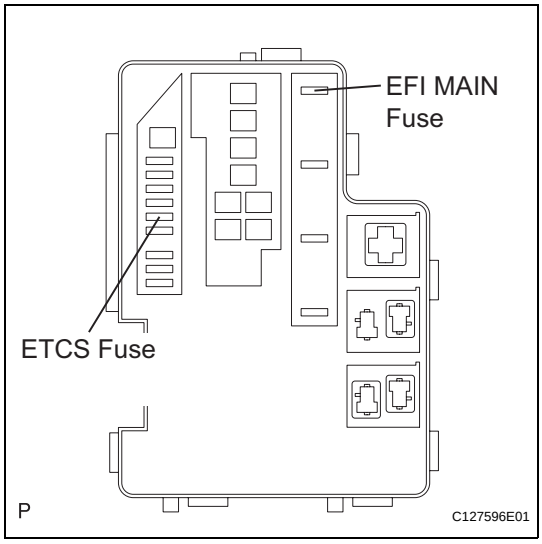
(a) For this vehicle, using the intelligent tester allows readiness codes corresponding to all DTCs to be read. When the diagnosis (normal or malfunctioning) has been completed, readiness codes are set. Enter the following menus: ENHANCED OBD II / MONITOR STATUS.

DTC CHECK / CLEAR

1. CHECK DTC

(a) DTCs which are stored in the ECM can be displayed with the intelligent tester.
The intelligent tester can display pending DTCs and current DTCs. Some DTCs are not stored unless a malfunction is detected in consecutive driving cycles. When a malfunction is detected in only one driving cycle, it is stored as a pending DTC.

(1) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.



(2) Turn the ignition switch ON and turn the tester ON.

(3) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES (or PENDING CODE).

(4) Confirm the DTCs and freeze frame data and then write them down.

(5) Confirm the details of the DTCs (see page AX-35).

NOTICE:
When simulating a symptom with the scan tool to check for DTCs, use normal mode. For codes on the DIAGNOSTIC TROUBLE CODE CHART subject to "2 trip detection logic", perform the following actions.
Turn the ignition switch OFF after the symptom is simulated once. Then repeat the simulation process again. When the symptom has been simulated twice, the MIL illuminates and the DTCs are recorded in the ECM.

2. CLEAR DTC

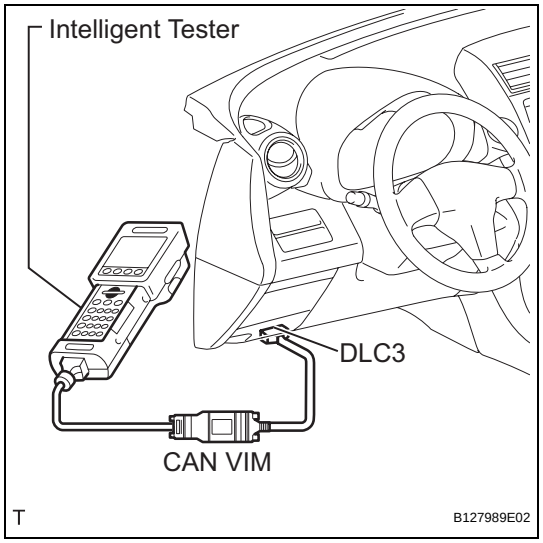
(a) When using the intelligent tester:

(1) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(2) Turn the ignition switch ON and turn the tester ON.

(3) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES. Then and press YES.
HINT:
When operating the tester to erase the codes, the DTCs and freeze frame data will be erased.

(b) When not using the intelligent tester:



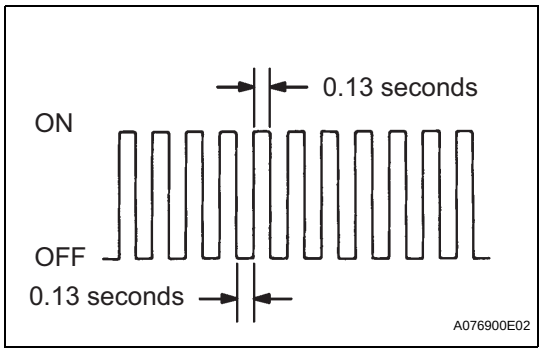
(1) Disconnect the battery terminal or remove the EFI MAIN and ETCS fuses from the engine room No. 1 relay block and engine room No. 1 junction block for 60 seconds or more. However, if you disconnect the battery terminal, perform the "INITIALIZATION" procedure (see page AX-18).

CHECK MODE PROCEDURE

1. DESCRIPTION

(a) Check mode has a higher sensitivity to malfunctions and can detect malfunctions that normal mode cannot detect. Check mode can also detect all the malfunctions that normal mode can detect. In check mode, DTCs are detected with 1 trip detection logic.

2. CHECK MODE PROCEDURE



(a) Make sure that the following conditions below are met:
  (1) Battery positive voltage 11 V or more
  (2) Throttle valve fully closed
  (3) Transaxle in the P or N position
  (4) A/C OFF

(b) Turn the ignition switch OFF.

(c) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(d) Turn the ignition switch ON and turn the tester ON.

(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.

(f) Change the ECM to check mode. Make sure the MIL flashes as shown in the illustration.

NOTICE:

All DTCs and freeze frame data recorded will be erased if: 1) the intelligent tester is used to change the ECM from normal mode to check mode or vice versa; or 2) during check mode, the ignition switch is turned from ON to ACC or OFF.

Before check mode, make notes of the DTCs and freeze frame data.

(g) Start the engine. The MIL should turn off after the engine starts.

(h) Perform "MONITOR DRIVE PATTERN" for the ECT test (see page AX-19).
(Or, simulate the conditions of the malfunction described by the customer.)

(i) After simulating the malfunction conditions, use the tester to check the DTC and freeze frame data.

FAIL-SAFE CHART

1. FAIL-SAFE CHART

This function minimizes the loss of the ECT functions when a malfunction occurs in a sensor or solenoid.

(a) Automatic Transmission Fluid (ATF) temperature sensor:
When the ATF temperature sensor has a malfunction, O/D up-shift is prohibited.

(b) Counter gear speed sensor NC (Speed sensor NC):
When the counter gear speed sensor has a malfunction, O/D up-shift is prohibited.

(c) Shift solenoid valve DSL:
When the solenoid valve DSL has a malfunction, the current to the solenoid valve is stopped.
This stops lock-up control, then fuel economy decreases.

(d) Shift solenoid valve SL1, SL2 and S4:
If any of the shift solenoid valve circuits develops an open or short, the ECM turns the other shift solenoid "ON" and "OFF" in order to shift into the gear positions shown in the table below.
Manual shifting as shown in the following table must be done. In case of a short circuit, the ECM stops sending the current to the short circuited solenoid.
Even if starting the engine in the fail-safe mode, the gear position remains in the same position.

Normal				Shift Solenoid Valve SL1				Shift Solenoid Valve SL2				Shift Solenoid Valve S4			
Gear	Solenoid Valve			Gear	Solenoid Valve			Gear	Solenoid Valve			Gear	Solenoid Valve		
	SL1	SL2	S4		SL1	SL2	S4		SL1	SL2	S4		SL1	SL2	S4
1st	ON	ON	OFF	2nd	X	ON	OFF	3rd	ON ↓ OFF	X	OFF	1st	ON	ON	X
2nd	OFF	ON	OFF	2nd	X	ON	OFF	3rd	OFF	X	OFF	2nd	OFF	ON	X
3rd	OFF	OFF	OFF	3rd	X	OFF ↓ ON	OFF ↓ ON	3rd	OFF	X	OFF	3rd	OFF	OFF	X
O/D	OFF	OFF	ON	3rd	X	OFF ↓ ON	ON	O/D	OFF	X	ON	3rd	OFF	OFF	X

Shift Solenoid Valve SL1 and SL2				Shift Solenoid Valve SL1 and S4				Shift Solenoid Valve SL2 and S4				Shift Solenoid Valve SL1, SL2 and S4			
Gear	Solenoid Valve			Gear	Solenoid Valve			Gear	Solenoid Valve			Gear	Solenoid Valve		
	SL1	SL2	S4		SL1	SL2	S4		SL1	SL2	S4		SL1	SL2	S4
3rd	X	X	OFF	2nd	X	ON	X	3rd	ON ↓ OFF	X	X	3rd	X	X	X
3rd	X	X	OFF	2nd	X	ON	X	3rd	OFF	X	X	3rd	X	X	X
3rd	X	X	OFF	2nd	X	OFF ↓ ON	X	3rd	OFF	X	X	3rd	X	X	X
O/D	X	X	ON	2nd	X	OFF ↓ ON	X	3rd	OFF	X	X	3rd	X	X	X

HINT:

- ↓: Condition in the normal operation is shown above the "↓".
- ↓: Condition in the fail-safe mode is shown beneath the "↓".
- E/B: Engine brake.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

(a) Warm up the engine.

(b) Turn the ignition switch OFF.

(c) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.

(d) Turn the ignition switch ON and turn the tester ON.

(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(f) Follow the instructions on the tester and read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
SPD (NC)	Counter gear speed/ Min.: 0 rpm Max.: 12,750 rpm	4th (O/D) when shift lever is on D (after warming up the engine); Intermediate shaft speed (NC) becomes close to the engine speed	Data is displayed in increments of 50 rpm
SPD (NT)	Input turbine speed/ Min.: 0 rpm Max.: 12,750 rpm	• Lock-up ON (after warming up engine): Input turbine speed (NT) equal to engine speed. • Lock-up OFF (idling with shift lever on N): Input turbine speed (NT) is nearly equal to engine speed.	Data is displayed in increments of 50 rpm
PNP SW (NSW)	PNP switch status/ ON or OFF	Shift lever is: On P or N: ON Not on P or N: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
STOP LIGHT SW	Stop light switch status/ ON or OFF	• Brake pedal is depressed: ON • Brake pedal is released: OFF	-
SHIFT	ECM gear shift command/ 1st, 2nd, 3rd or 4th	Shift lever position is: • On L: 1st • On 2: 1st or 2nd • On 3: 1st, 2nd or 3rd • On D: 1st, 2nd, 3rd or 4th	-

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
REVERSE	PNP switch status/ ON or OFF	Shift lever is: On R: ON Not on R: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
PARKING	PNP switch status/ ON or OFF	Shift lever is: On P: ON Not on P: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
NEUTRAL	PNP switch status/ ON or OFF	Shift lever is: On N: ON Not on N: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
DRIVE	PNP switch status/ ON or OFF	Shift lever is: On D: ON Not on D: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
3RD	PNP switch status/ ON or OFF	Shift lever is: On 3: ON Not on 3: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
2ND	PNP switch status/ ON or OFF	Shift lever is: On 2: ON Not on 2: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39
LOW	PNP switch status/ ON or OFF	Shift lever is: On L: ON Not on L: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect HINT: When failure still occurs even after adjusting these parts, see page AX-39

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
A/T OIL TEMP1	ATF temperature sensor value/ Min.: -40°C (-40°F) Max.: 215°C (419°F)	• After stall test: Approximately 80°C (176°F) • Equal to ambient temperature while engine is cold	If value is -40°C (-40°F) or "150°C (302°F) or more", ATF temperature sensor circuit is open or short circuited
LOCK UP SOL	Lock-up solenoid status/ ON or OFF	• Lock-up: ON • Not on lock-up: OFF	-
SOLENOID (SLT)	Shift solenoid SLT status/ ON or OFF	• Accelerator pedal is depressed: OFF • Accelerator pedal is released: ON	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Warm up the engine.
(b) Turn the ignition switch OFF.
(c) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(d) Turn the ignition switch ON and turn the tester ON.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(f) Perform the ACTIVE TEST.

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate shift solenoid valve and set each shift lever position by yourself [Vehicle Condition] • IDL: ON • 50 km/h (31 mph) or less [Other information] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check operation of shift solenoid valves
SOLENOID (S4)	[Test Details] Operate the shift solenoid S4 [Vehicle Condition] • Vehicle stopped • Shift lever P or N position	-
SOLENOID (SL1)	[Test Details] Operate the shift solenoid SL1 [Vehicle Condition] • Vehicle stopped • Shift lever P or N position	-
SOLENOID (SL2)	[Test Details] Operate the shift solenoid SL2 [Vehicle Condition] • Vehicle stopped • Shift lever P or N position	-
LOCK UP	[Test Details] Control shift solenoid DSL to set automatic transaxle to the lock-up condition [Vehicle Condition] • Throttle valve opening angle: Less than 35% • Vehicle speed: 60 km/h (36 mph) or more	Possible to check shift solenoid valve DSL operation

Item	Test Details	Diagnostic Note
SOLENOID (DSL)	[Test Details] Operate the shift solenoid DSL [Vehicle Condition] • Vehicle stopped • Shift lever P or N position	-
SOLENOID (SLT)*	[Test Details] Operate shift solenoid SLT and raise line pressure [Vehicle Condition] • Vehicle stopped • IDL: ON HINT: OFF: Line pressure up (when Active Test "SOLENOID (SLT)" is performed, ECM commands SLT solenoid to turn OFF) ON: No action (normal operation)	-

HINT:
*: "SOLENOID (SLT)" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transaxle, which is used in the HYDRAULIC TEST (see page AX-16) as well. Please note that the pressure values in the ACTIVE TEST and HYDRAULIC TEST are different.

DIAGNOSTIC TROUBLE CODE CHART

If a DTC is displayed during the DTC check, check the circuit listed in the table below and proceed to the page given.
HINT:

- *1: "Comes on" means the Malfunction Indicator Lamp (MIL) illuminates.
- *2: "DTC stored" means the ECM memorizes the malfunction code if the ECM detects the DTC detection condition.
- These DTCs may be output when the clutch, brake, gear components, etc., inside the automatic transaxle are damaged.

DTC No.	Detection Item	Trouble Area	MIL*1	Memory*2	See page
P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)	- Open or short in park/neutral position switch circuit - Park/Neutral position switch - ECM	Comes on	DTC stored	AX-39
P0710	Transmission Fluid Temperature Sensor "A" Circuit	- Open or short in ATF temperature sensor circuit - ATF temperature sensor - ECM	Comes on	DTC stored	AX-46
P0711	Transmission Fluid Temperature Sensor "A" Performance	- Open or short in No. 1 ATF temperature sensor circuit - No. 1 ATF temperature sensor - ECM	Comes on	DTC stored	AX-50
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input	- Short in ATF temperature sensor circuit - ATF temperature sensor - ECM	Comes on	DTC stored	AX-46
P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input	- Open in ATF temperature sensor circuit - ATF temperature sensor - ECM	Comes on	DTC stored	AX-46
P0717	Input Speed Sensor Circuit No Signal	- Open or short in speed sensor NT circuit - Speed sensor NT - ECM	Comes on	DTC stored	AX-53
P0724	Brake Switch "B" Circuit High	- Short in stop light switch circuit - Stop light switch - ECM	Comes on	DTC stored	AX-57

DTC No.	Detection Item	Trouble Area	MIL*1	Memory*2	See page
P0741	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)	- Shift solenoid valve DSL remains open or closed - Valve body is blocked - Shift solenoid valve DSL - Torque converter clutch - Automatic transaxle (clutch, brake, gear, etc.) - Line pressure is too low - ECM	Comes on	DTC stored	AX-60
P0746	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)	- Shift solenoid valve SL1 remains open or closed - Valve body is blocked - Shift solenoid valve SL1 - Automatic transaxle (clutch, brake, gear, etc.) - ECM	Comes on	DTC stored	AX-66
P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)	- Open or short in shift solenoid valve SL1 circuit - Shift solenoid valve SL1 - ECM	Comes on	DTC stored	AX-70
P0766	Shift Solenoid "D" Performance (Shift Solenoid Valve S4)	- Shift solenoid valve S4 remains open or closed - Valve body is blocked - Shift solenoid valve S4 - Automatic transaxle (clutch, brake, gear, etc.) - ECM	Comes on	DTC stored	AX-73
P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)	- Shift solenoid valve SL2 remains open or closed - Valve body is blocked - Shift solenoid valve SL2 - Automatic transaxle (clutch, brake, gear, etc.) - ECM	Comes on	DTC stored	AX-77
P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)	- Open or short in shift solenoid valve SL2 circuit - Shift solenoid valve SL2 - ECM	Comes on	DTC stored	AX-81
P0793	Intermediate Shaft Speed Sensor "A"	- Open or short in speed sensor NC circuit - Speed sensor NC - ECM	Comes on	DTC stored	AX-84

DTC No.	Detection Item	Trouble Area	MIL*1	Memory*2	See page
P0982	Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)	- Short in shift solenoid valve S4 circuit - Shift solenoid valve S4 - ECM	Comes on	DTC stored	AX-88
P0983	Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)	- Open in shift solenoid valve S4 circuit - Shift solenoid valve S4 - ECM	Comes on	DTC stored	AX-88
P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)	- Shift solenoid valve SLT remains open or closed - Valve body is blocked - Torque converter clutch - Automatic transaxle (clutch, brake, gear, etc.) - ECM	Comes on	DTC stored	AX-91
P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)	- Open or short in shift solenoid valve SLT circuit - Shift solenoid valve SLT - ECM	Comes on	DTC stored	AX-96
P2769	Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL)	- Short in shift solenoid valve DSL circuit - Shift solenoid valve DSL - ECM	Comes on	DTC stored	AX-99
P2770	Torque Converter Clutch Solenoid Circuit High (Shift Solenoid Valve DSL)	- Open in shift solenoid valve DSL circuit - Shift solenoid valve DSL - ECM	Comes on	DTC stored	AX-99

DTC	P0705	Transmission Range Sensor Circuit Malfunction (PRNDL Input)

DESCRIPTION

The Park/Neutral Position (PNP) switch detects the shift lever position and sends signals to the ECM.

DTC No.	DTC Detection Condition	Trouble Area
P0705	When one of following conditions is met: (A) Any 2 or more of the following signals are ON simultaneously (2 trip detection logic) • P input signal is ON • N input signal is ON • R input signal is ON • D input signal is ON • 2 input signal is ON • L input signal is ON (B) Any 2 or more of the following signals are ON simultaneously (2 trip detection logic) • NSW input signal is ON • R input signal is ON • D input signal is ON • 2 input signal is ON • L input signal is ON (C) All of the signals are OFF simultaneously (2 trip detection logic) • P input signal is OFF • N input signal is OFF • NSW input signal is OFF • R input signal is OFF • D input signal is OFF • 2 input signal is OFF • L input signal is OFF (D) Both 1 and 2 are met (2 trip detection logic) 1. Either of the following is met (a) NSW input signal is ON (b) P input signal is ON (c) N input signal is ON (d) R input signal is ON 2. Either of the following is met (a) 3 input signal is ON (b) L input signal is ON	• Open or short in park/neutral position switch circuit • Park/Neutral position switch • ECM

MONITOR DESCRIPTION

These DTCs indicate a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
The park/neutral position switch detects the shift lever position and sends a signal to the ECM.
For security, the park/neutral position switch detects the shift lever position so that the engine can be started only when the shift lever is on P or N.
The park/neutral position switch sends a signal to the ECM according to the shift lever position (R, D, 3, 2 or L).
The ECM determines that there is a problem with the switch or related parts if it receives more than 1 position signal simultaneously. The ECM will illuminate the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P0705: Park/Neutral position switch/Verify switch input
Required sensors/Components	Park/Neutral position switch
Frequency of operation	Continuous
Duration	2 seconds or 60 seconds
MIL operation	2 driving cycles

Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Ignition switch	ON
Battery voltage	10.5 V or more

TYPICAL MALFUNCTION THRESHOLDS

Condition (A)

Number of the following signal input at the same time	2 or more
P switch	ON
N switch	ON
R switch	ON
D switch	ON
2 switch	ON
L switch	ON

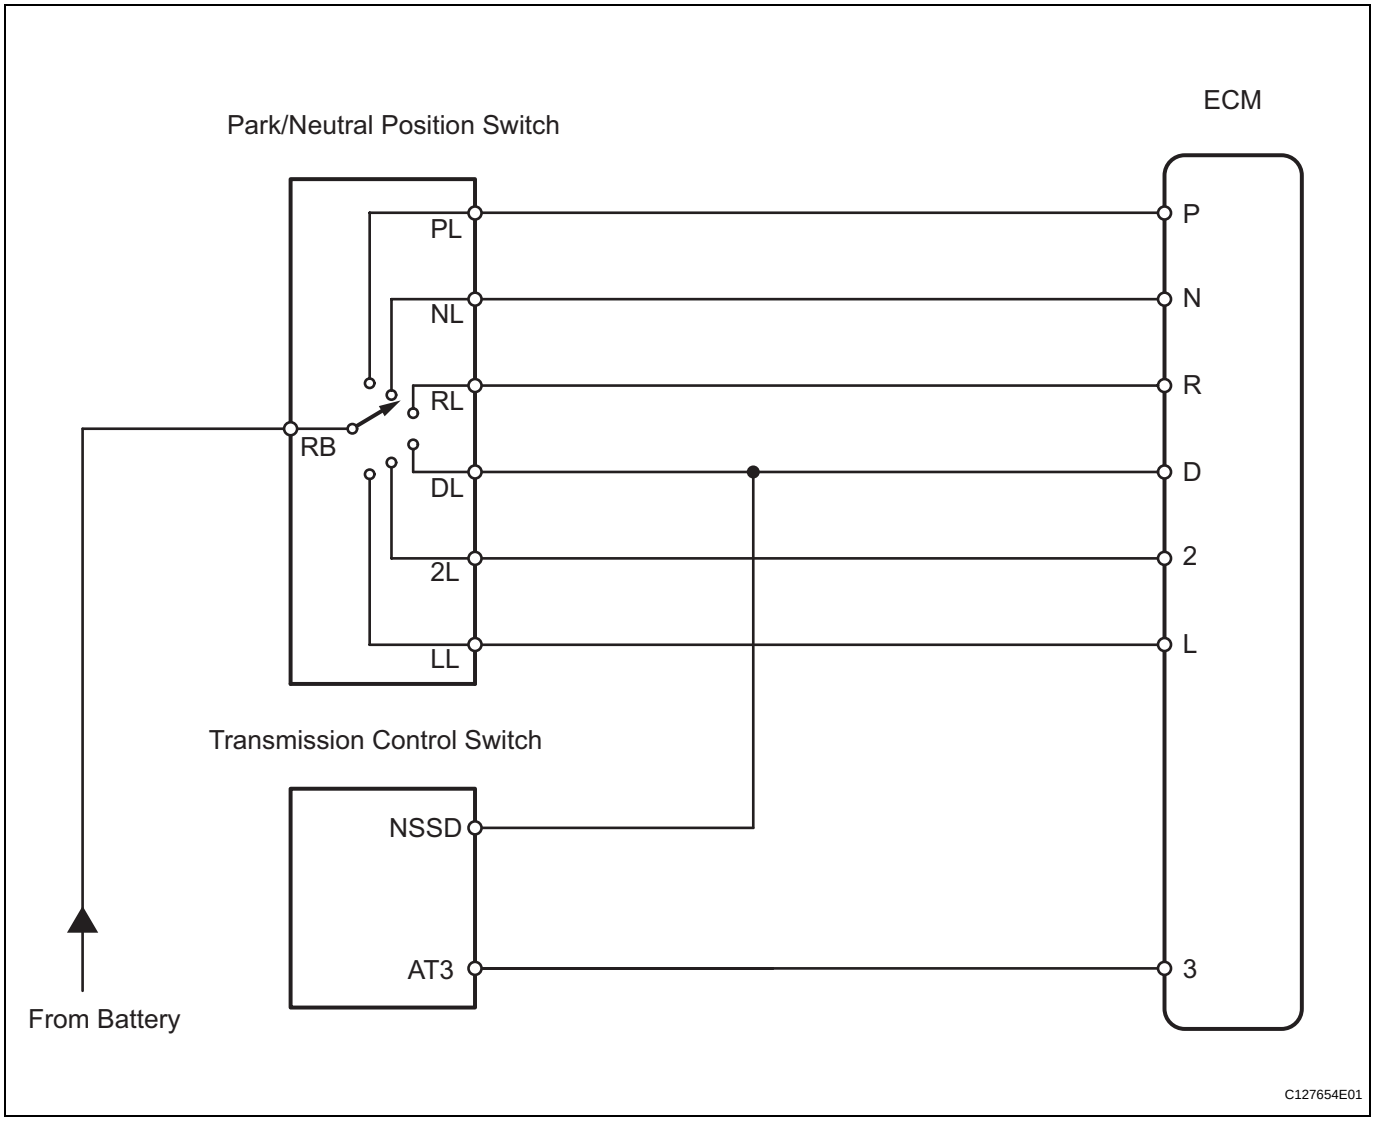
Condition (B)

Number of the following signal input at the same time	2 or more
NSW switch	ON
R switch	ON
D switch	ON
2 switch	ON
L switch	ON

Condition (C)

When all of the following conditions are met	-
P switch	OFF
N switch	OFF
NSW switch	OFF
R switch	OFF
D switch	OFF
2 switch	OFF
L switch	OFF

Condition (D)



When both conditions (a) and (b) are met	-
(a) When one of following condition is met	-
NSW switch	ON
P switch	ON
N switch	ON
R switch	ON
(b) When one of following condition is met	-
3 switch	ON
L switch	ON

AX

COMPONENT OPERATING RANGE

Park/Neutral position switch	Park/Neutral position switch sends only one signal to ECM.

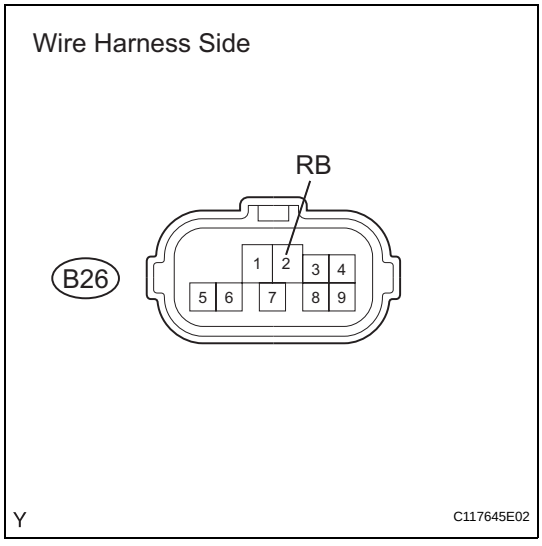
WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

NOTICE:



In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
6. Follow the instructions on the tester and read the DATA LIST.

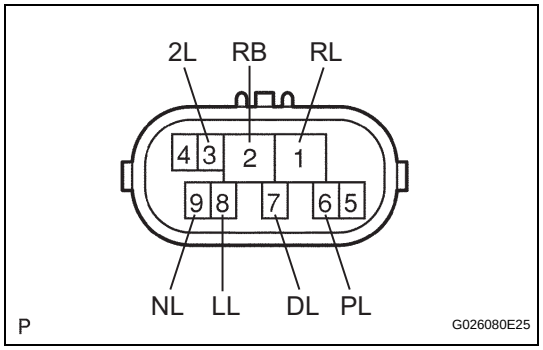
Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
PNP SW (NSW)	PNP switch status/ ON or OFF	Shift lever is: On P or N: ON Not on P or N: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
REVERSE	PNP switch status/ ON or OFF	Shift lever is: On R: ON Not on R: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
PARKING	PNP switch status/ ON or OFF	Shift lever is: On P: ON Not on P: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
NEUTRAL	PNP switch status/ ON or OFF	Shift lever is: On N: ON Not on N: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
DRIVE	PNP switch status/ ON or OFF	Shift lever is: On D: ON Not on D: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
3RD	PNP switch status/ ON or OFF	Shift lever is: On 3: ON Not on 3: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
2ND	PNP switch status/ ON or OFF	Shift lever is: On 2: ON Not on 2: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect
LOW	PNP switch status/ ON or OFF	Shift lever is: On L: ON Not on L: OFF	When shift lever position displayed on intelligent tester differs from actual position, adjustment of PNP switch or shift cable may be incorrect

1 **CHECK WIRE HARNESS (PARK/NEUTRAL POSITION SWITCH - BATTERY)**

(a) Disconnect the B26 park/neutral position switch connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage.

Standard voltage



Tester Connection	Specified Condition
2 (RB) - Body ground	10 to 14 V

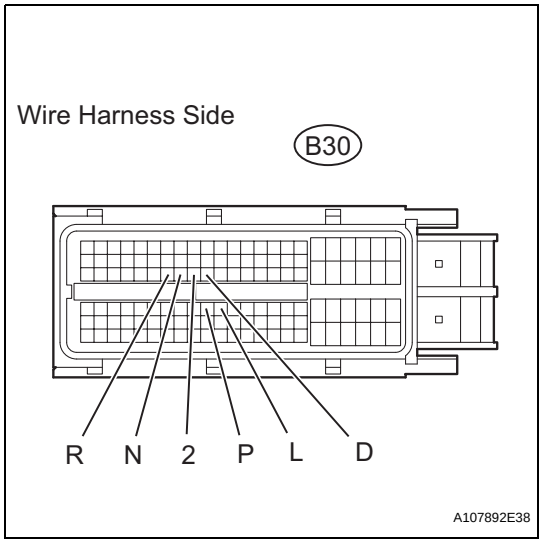
NG → **CHECK POWER SOURCE OF ECM**

OK

AX

2 INSPECT PARK/NEUTRAL POSITION SWITCH

(a) Disconnect the B26 park/neutral position switch connector.
(b) Measure the resistance of the park/neutral position switch when the shift lever is moved to each position.



Standard resistance

Tester Connection	Shift Lever Position	Specified Condition
6 (PL) - 2 (RB)	P	Below 1 Ω
6 (PL) - 2 (RB)	Not on P	10 kΩ or higher
1 (RL) - 2 (RB)	R	Below 1 Ω
1 (RL) - 2 (RB)	Not on R	10 kΩ or higher
9 (NL) - 2 (RB)	N	Below 1 Ω
9 (NL) - 2 (RB)	Not on N	10 kΩ or higher
7 (DL) - 2 (RB)	D	Below 1 Ω
7 (DL) - 2 (RB)	Not on D	10 kΩ or higher
3 (2L) - 2 (RB)	2	Below 1 Ω
3 (2L) - 2 (RB)	Not on 2	10 kΩ or higher
8 (LL) - 2 (RB)	L	Below 1 Ω
8 (LL) - 2 (RB)	Not on L	10 kΩ or higher

NG → **REPLACE PARK/NEUTRAL POSITION SWITCH**

OK

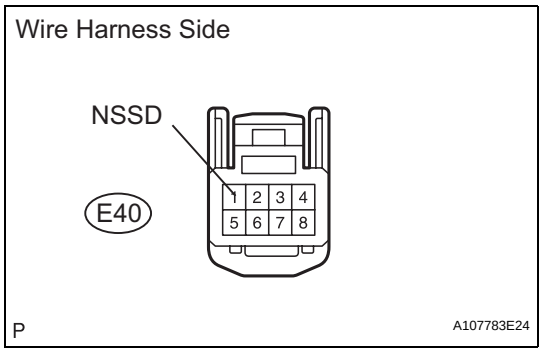
3 CHECK WIRE HARNESS (ECM - BATTERY AND BODY GROUND)

(a) Disconnect the B30 ECM connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Shift Lever Position	Specified Condition
B30-73 (P) - Body ground	P	10 to 14 V
B30-73 (P) - Body ground	Not on P	Below 1 V
B30-53 (R) - Body ground	R	10 to 14 V*
B30-53 (R) - Body ground	Not on R	Below 1 V
B30-54 (N) - Body ground	N	10 to 14 V
B30-54 (N) - Body ground	Not on N	Below 1 V
B30-56 (D) - Body ground	D or 3	10 to 14 V
B30-56 (D) - Body ground	Not on D or 3	Below 1 V
B30-55 (2) - Body ground	2	10 to 14 V

AX



Tester Connection	Shift Lever Position	Specified Condition
B30-55 (2) - Body ground	Not on 2	Below 1 V
B30-74 (L) - Body ground	L	10 to 14 V
B30-74 (L) - Body ground	Not on L	Below 1 V

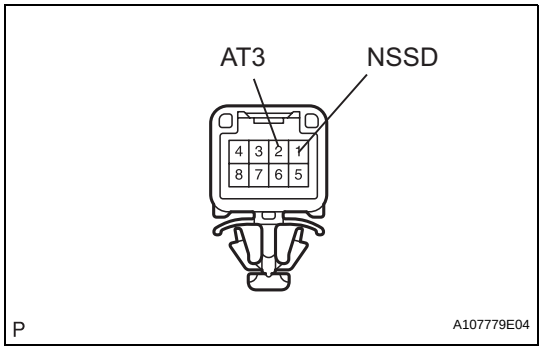
HINT:
*: The voltage will drop slightly due to the illumination of the back-up light.

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

4 CHECK WIRE HARNESS (PARK/NEUTRAL POSITION SWITCH - TRANSMISSION CONTROL SWITCH)

(a) Disconnect the E40 switch connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage when the shift lever is moved to each position.



Standard voltage

Tester Connection	Shift Lever Position	Specified Condition
1 (NSSD) - Body ground	D and 3	10 to 14 V
1 (NSSD) - Body ground	Not on D and 3	Below 1 V

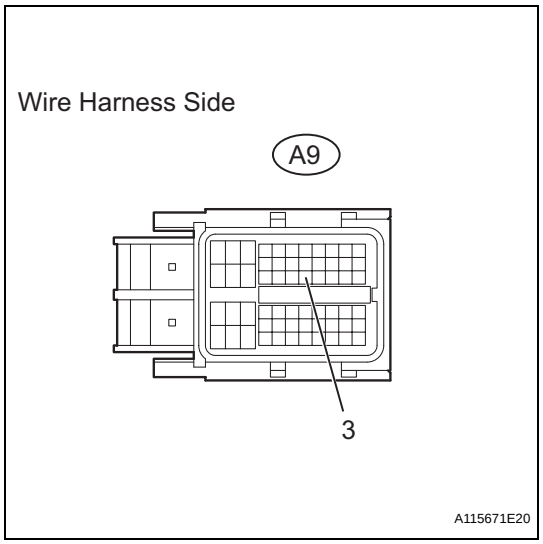
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

5 INSPECT TRANSMISSION CONTROL SWITCH

(a) Disconnect the E40 switch connector.
(b) Measure the resistance of the switch when the shift lever is moved to each position.

Standard resistance



Tester Connection	Shift Lever Position	Specified Condition
1 (NSSD) - 2 (AT3)	D	10 kΩ or higher
1 (NSSD) - 2 (AT3)	3	Below 1 Ω

NG → **REPLACE TRANSMISSION CONTROL SWITCH**

OK

AX

6	CHECK WIRE HARNESS (TRANSMISSION CONTROL SWITCH - BATTERY AND BODY GROUND)

(a) Disconnect the A9 ECM connector.
(b) Turn the ignition switch ON.
(c) Measure the voltage of the wire harness side connector.

Standard voltage

Tester Connection	Shift Lever Position	Specified Condition
A9-26 (3) - Body ground	3	10 to 14 V

DTC	P0710	Transmission Fluid Temperature Sensor "A" Circuit

DTC	P0712	Transmission Fluid Temperature Sensor "A" Circuit Low Input

DTC	P0713	Transmission Fluid Temperature Sensor "A" Circuit High Input

DESCRIPTION

The Automatic Transmission Fluid (ATF) temperature sensor converts the ATF temperature into a resistance value which is input into the ECM.
The ECM applies a voltage to the temperature sensor through ECM terminal THO1.
The sensor resistance changes with the ATF temperature.
One terminal of the sensor is grounded so that the sensor resistance and voltage decrease as the temperature becomes higher.
The ECM calculates the ATF based on the voltage signal.

DTC No.	DTC Detection Condition	Trouble Area
P0710	ATF temperature sensor resistance changes from (a) to (b) or from (b) to (a) in less than 0.5 sec., and P0712 and P0713 are not detected (1 trip detection logic): (a) ATF temperature sensor resistance is less than 79 Ω (b) ATF temperature sensor resistance is more than 156 kΩ	• Open or short in ATF temperature sensor circuit • ATF temperature sensor • ECM
P0712	ATF temperature sensor resistance is less than 79 Ω for 0.5 sec. or more (1 trip detection logic)	• Short in ATF temperature sensor circuit • ATF temperature sensor • ECM
P0713	15 minutes or more after the engine start, ATF temperature sensor resistance is more than 156 kΩ for 0.5 sec. or more (1 trip detection logic)	• Open in ATF temperature sensor circuit • ATF temperature sensor • ECM

MONITOR DESCRIPTION

ATF temperature sensor converts ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, and the ECM detects an open or short in the ATF temperature circuit. If the resistance value of the ATF temperature is less than 79 Ω*1 or more than 156 kΩ*2, the ECM interprets this as a fault in the ATF sensor or wiring. The ECM will illuminate the MIL and store the DTC.
HINT:

- *1: 150°C (302°F) or more is indicated regardless of the actual ATF temperature.
- *2: -40°C (-40°F) is indicated regardless of the actual ATF temperature.
- The ATF temperature can be checked on the intelligent tester display.

MONITOR STRATEGY

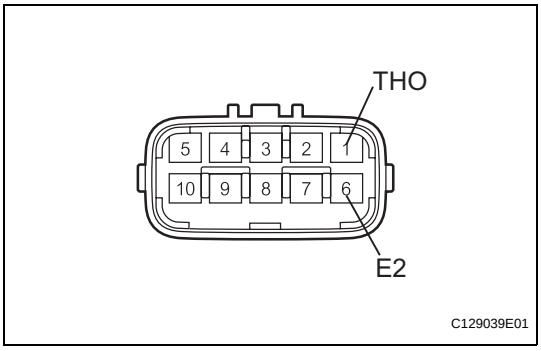
INSPECTION PROCEDURE

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
NOTICE:
In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
6. Follow the instructions on the tester and read the DATA LIST.



Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
A/T OIL TEMP1	ATF temperature sensor value/ Min.: -40°C (-40°F) Max.: 215°C (419°F)	• After stall test: Approximately 80°C (176°F) • Equal to ambient temperature while engine is cold	If value is -40°C (-40°F) or "150°C (302°F) or more", ATF temperature sensor circuit is open or short circuited

HINT:
- When DTC P0712 is output and the tester output is 150°C (302°F) or more, there is a short circuit.
- When DTC P0713 is output and the tester output is -40°C (-40°F), there is an open circuit. Measure the resistance between terminal THO1 (THO) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

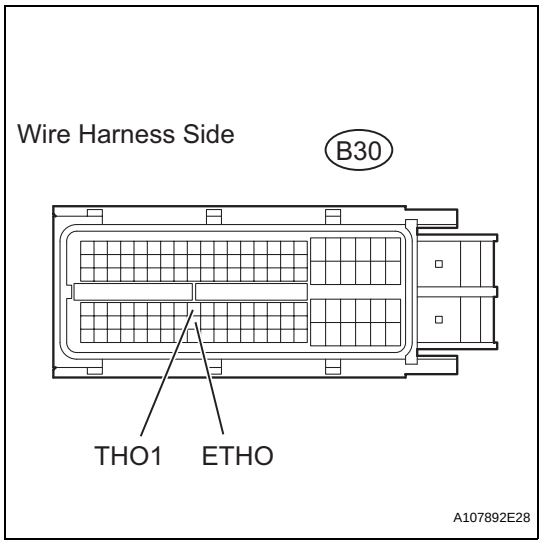
HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is set in approximately 0.5 seconds. It is not necessary to inspect the circuit when P0711 is set.

1	INSPECT TRANSMISSION WIRE (ATF TEMPERATURE SENSOR)

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.
Standard resistance

Tester Connection	Specified Condition
1 (THO) - 6 (E2)	90 Ω to 156 kΩ
1 (THO) - Body ground	1 MΩ or higher
6 (E2) - Body ground	1 MΩ or higher

HINT:
If the resistance is out of the specified range of either of the ATF temperatures shown in the table below, the driveability of the vehicle may decrease.
Standard resistance



ATF Temperature	Specified Condition
10°C (68°F)	6.4 kΩ
110°C (230°F)	0.2 kΩ

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

DTC	P0711	Transmission Fluid Temperature Sensor "A" Performance

DESCRIPTION

Refer to DTC P0710 (see page AX-46).

DTC No.	DTC Detection Condition	Trouble Area
P0711	Case 1 (2 trip detection logic): First, ECM checks for following conditions: (a) 17 minutes or more after engine is started and after 9 km (5.6 miles) or more of driving, ECT is -15°C (5°F) or more (b) After starting engine and certain period of time has elapsed, ECT and IAT are -10°C (14°F) or more If conditions are met, ECM then checks if ATF temperature is less than 20°C (68°F). If so, ECM interprets this as fault and illuminates MIL. Case 2 (2 trip detection logic): First, ECM checks for following conditions: (a) ECT is 60°C (140°F) or more (b) After starting engine and certain period of time has elapsed, ECT is less than 35°C (95°F) If conditions are met, ECM then checks if ATF temperature is 100°C (212°F) or more. If so, ECM interprets this as fault and illuminates MIL.	• Open or short in No. 1 ATF temperature sensor circuit • No. 1 ATF temperature sensor • ECM

MONITOR DESCRIPTION

This DTC indicates that there is a problem with output from the ATF temperature sensor and that the sensor itself is defective. The ATF temperature sensor converts the ATF temperature to an electrical resistance value. Based on the resistance, the ECM determines the ATF temperature, detects open or short circuits of the ATF temperature circuit, and detects faults in the ATF temperature sensor.
Case 1 (2 trip detection logic):
First, the ECM checks for the following conditions:
(a) 17 minutes or more after the engine is started and after 9 km (5.6 miles) or more of driving, the ECT is -15°C (5°F) or more.
(b) After starting the engine and a certain period of time has elapsed, the ECT and IAT are -10°C (14°F) or more.
If the conditions are met, the ECM then checks if the ATF temperature is less than 20°C (68°F). If so, the ECM interprets this as a fault and illuminates the MIL.
Case 2 (2 trip detection logic):
First, the ECM checks for the following conditions:
(a) ECT is 60°C (140°F) or more.
(b) After starting the engine and a certain period of time has elapsed, the ECT is less than 35°C (95°F).
If the conditions are met, the ECM then checks if the ATF temperature is 100°C (212°F) or more. If so, the ECM interprets this as a fault and illuminates the MIL.

MONITOR STRATEGY

Related DTCs	P0711: ATF temperature sensor/Rationality check

ATF temperature	Atmospheric temperature - approximately 130°C (266°F)

WIRING DIAGRAM

Refer to DTC P0710 (see page AX-47).

INSPECTION PROCEDURE

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
6. Follow the instructions on the tester and read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
A/T OIL TEMP1	ATF temperature sensor value/ Min.: -40°C (-40°F) Max.: 215°C (419°F)	• After stall test: Approximately 80°C (176°F) • Equal to ambient temperature while engine is cold	If value is -40°C (-40°F) or "150°C (302°F) or more", ATF temperature sensor circuit is open or short circuited

HINT:
- When DTC P0712 is output and the tester output is 150°C (302°F) or more, there is a short circuit.
- When DTC P0713 is output and the tester output is -40°C (-40°F), there is an open circuit.
  Measure the resistance between terminal THO1 (THO) and the body ground.

Temperature Displayed	Malfunction
-40°C (-40°F)	Open circuit
150°C (302°F) or more	Short circuit

HINT:
If a circuit related to the ATF temperature sensor becomes open, P0713 is set in approximately 0.5 seconds.
It is not necessary to inspect the circuit when P0711 is set.

1 CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0711)

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the tester.

Result

Display (DTC output)	Proceed to
Only P0711 is output	A
P0711 and other DTCs are output	B

HINT:
If any other codes besides P0711 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC OUTPUT**

A

2 CHECK TRANSAXLE FLUID LEVEL

OK:
Automatic transaxle fluid level is correct.

NG → **ADD FLUID**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P0717	Input Speed Sensor Circuit No Signal

DESCRIPTION

This sensor detects the rotation speed of the turbine, which shows the input revolution of the transaxle. By comparing the input speed signal (NT) with the counter gear speed sensor signal (NC), the ECM detects the shift timing of the gears and controls the engine torque and hydraulic pressure according to various conditions. As a result, smooth gear shifting is achieved.

DTC No.	DTC Detection Condition	Trouble Area
P0717	ECM detects conditions (a), (b) and (c) continuously for 5 sec. or more (1 trip detection logic): (a) Vehicle speed: 50 km/h (31 mph) or more (b) Park/Neutral position switch (NSW, R and L) is OFF (c) Speed sensor NT: Less than 300 rpm	• Open or short in speed sensor NT circuit • Speed sensor NT • ECM

MONITOR DESCRIPTION

This DTC indicates that a pulse is not output from the speed sensor NT (input speed sensor) or is output only a little. The NT terminal of the ECM detects the revolving signal from the speed sensor (NT) (input RPM). The ECM outputs a gear shift signal comparing the input speed sensor (NT) with the output speed sensor (NC).

While the vehicle is operating in the 2nd, 3rd or O/D gear position with the shift lever on D, if the input shaft revolution is less than 300 rpm*1 and the output shaft revolution is 1,000 rpm or more*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.

HINT:

*1: Pulse is not output or is irregularly output.

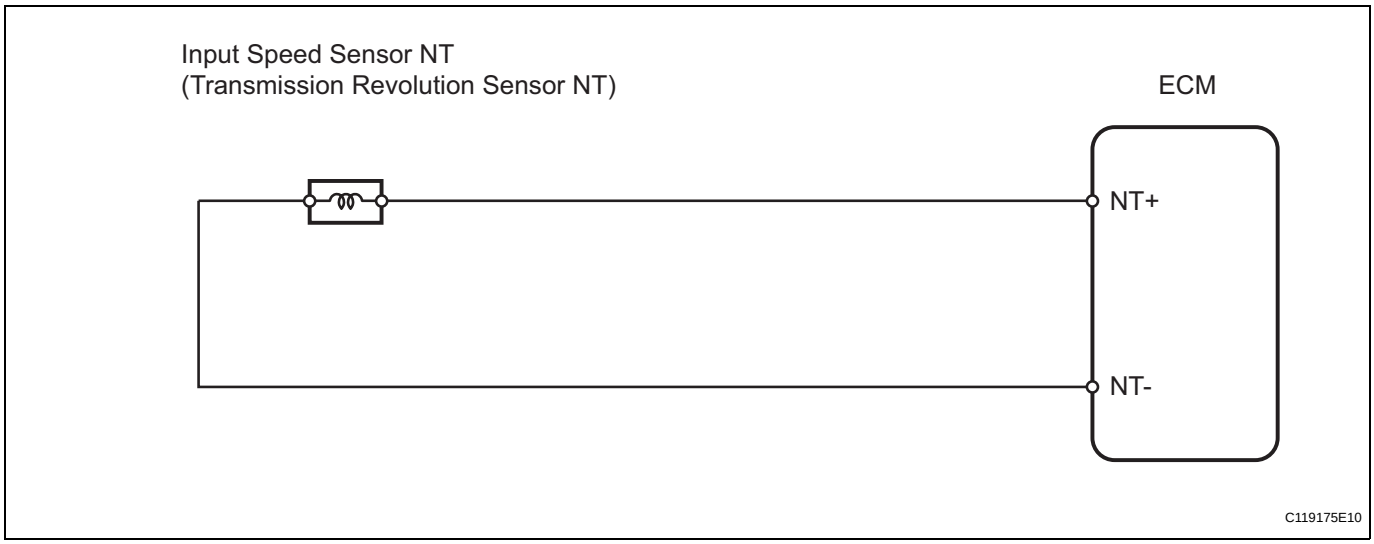
*2: The vehicle speed is approximately 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0717: Speed sensor (NT)/Verify pulse input
Required sensors/Components	Speed sensor (NT), Speed sensor (NC)
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748: Shift solenoid SL1 P0778: Shift solenoid SL2 P0982, P0983: Shift solenoid S4
Shift change	Shift change is completed before starting next shift change operation
ECM selected gear	2nd, 3rd or 4th
Output shaft rpm	1,000 rpm or more
NSW switch	OFF
R switch	OFF
L switch	OFF
Engine	Running
Ignition switch	ON
Starter	OFF



TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

COMPONENT OPERATING RANGE

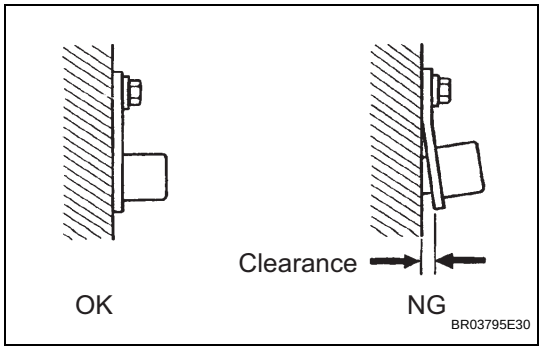
Speed sensor (NT)	Input speed is equal to engine speed when lock-up ON.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
NOTICE:
In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
6. Follow the instructions on the tester and read the DATA LIST.



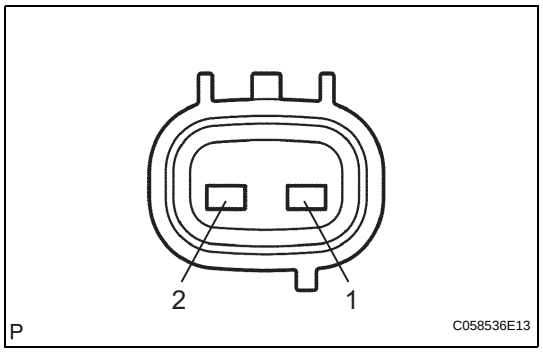
Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
SPD (NT)	Input turbine speed/ Min.: 0 rpm Max.: 12,750 rpm	• Lock-up ON (after warming up engine): Input turbine speed (NT) equal to engine speed. • Lock-up OFF (idling with shift lever on N): Input turbine speed (NT) is nearly equal to engine speed.	Data is displayed in increments of 50 rpm

AX

HINT:
- SPD (NT) is always 0 rpm while driving:
  Open or short in the sensor or circuit.

- SPD (NT) is always more than 0 rpm and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR (INSTALLATION)

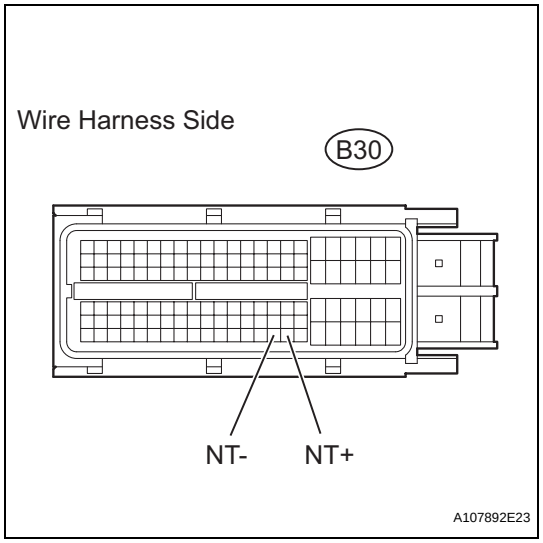


(a) Check the speed sensor NT installation.
OK:
Installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG → **SECURELY INSTALL SENSOR OR REPLACE SPEED SENSOR**

OK

2 INSPECT SPEED SENSOR NT



(a) Disconnect the B28 sensor connector from the transaxle.
(b) Measure the resistance of the sensor.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	560 to 680 Ω

NG → **REPLACE SPEED SENSOR NT**

OK

3 CHECK WIRE HARNESS (SPEED SENSOR - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Condition	Specified Condition
B30-125 (NT+) - B30-124 (NT-)	20°C (68°F)	560 to 680 Ω
B30-125 (NT+) - Body ground	20°C (68°F)	10 kΩ or higher
B30-124 (NT-) - Body ground	20°C (68°F)	10 kΩ or higher

AX

OK

REPLACE ECM

DTC	P0724	Brake Switch "B" Circuit High

DESCRIPTION

The purpose of this circuit is to prevent the engine from stalling while driving in the lock-up condition when the brakes are suddenly applied.
When the brake pedal is depressed, this switch sends a signal to the ECM. Then the ECM cancels the operation of the lock-up clutch while braking is in progress.

DTC No.	DTC Detection Condition	Trouble Area
P0724	Stop light switch remains ON even when vehicle is driven in GO (30 km/h (18.63 mph) or more) and STOP (less than 3 km/h (1.86 mph)) pattern 5 times (2 trip detection logic)	• Short in stop light switch signal circuit • Stop light switch • ECM

MONITOR DESCRIPTION

This DTC indicates that the stop light switch remains ON. When the stop light switch remains ON during GO and STOP driving, the ECM interprets this as a fault in the stop light switch. Then the MIL illuminates and the ECM stores the DTC. The vehicle must GO (30 km/h (18.63 mph) or more) and STOP (less than 3 km/h (1.86 mph)) 5 times for 2 driving cycles in order for the DTC to be output.

MONITOR STRATEGY

Related DTCs	P0724: Stop light switch/Range check/Rationality
Required sensors/Components	Stop light switch, Vehicle speed sensor
Frequency of operation	Continuous
Duration	GO and STOP 5 times
MIL operation	2 driving cycles
Sequence of operation	None

REPLACE ECM

DTC	P0741	Torque Converter Clutch Solenoid Performance (Shift Solenoid Valve DSL)

DESCRIPTION

The ECM uses the signals from the throttle position sensor, air-flow meter, turbine (input) speed sensor, intermediate (counter) shaft speed sensor and crankshaft position sensor to monitor the engagement condition of the lock-up clutch.
Then the ECM compares the engagement conditions of the lock-up clutch with the lock-up schedule in the ECM memory to detect mechanical problems of the shift solenoid valve DSL, valve body and torque converter clutch.

DTC No.	DTC Detection Condition	Trouble Area
P0741	Lock-up does not occur when driving in lock-up range Lock-up remains ON in lock-up OFF range (2 trip detection logic)	• Shift solenoid valve DSL remains open or closed • Valve body is blocked • Shift solenoid valve DSL • Torque converter clutch • Automatic transaxle (clutch, brake, gear, etc.) • Line pressure is too low • ECM

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on the speed sensor (NT), speed sensor (NC), engine rpm, engine load, engine temperature, vehicle speed, transmission temperature and gear selection.
The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input turbine rpm (NT). The ECM calculates the actual transmission gear by comparing input turbine rpm control voltage to counter gear rpm (NC). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid valve DSL. When the DSL is turned on, it applies pressure to the lock-up relay valve and locks the torque converter clutch.
If the ECM detects no lock-up after lock-up has been requested or if it detects lock-up when it is not requested, the ECM interprets this as a fault in the shift solenoid valve DSL or lock-up system performance.
The ECM will illuminate the MIL and store the DTC.
Example:
When any of the following is met, the system judges it as a malfunction.

1. There is a difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up.
   (Engine speed is at least 100 rpm greater than input turbine speed.)
2. There is no difference in rotation between the input side (engine speed) and output side (input turbine speed) of the torque converter when the ECM commands lock-up OFF.
   (The difference between engine speed and input turbine speed is less than 35 rpm.)

MONITOR STRATEGY

Related DTCs	P0741: Shift solenoid valve DSL/OFF malfunction Shift solenoid valve DSL/ON malfunction
Required sensors/Components	Shift solenoid valve DSL, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE), Throttle position sensor (VPA1), Mass air flow sensor (MAF), Transmission temperature sensor (THO1), Engine coolant temperature sensor (ECT)

Shift solenoid valve DSL circuit	Not circuit malfunction
Electronic throttle system	Not circuit malfunction

OFF malfunction

ECM lock-up command	ON
ECM selected gear	3rd or 4th
Vehicle speed	25 km/h (15.5 mph) or more

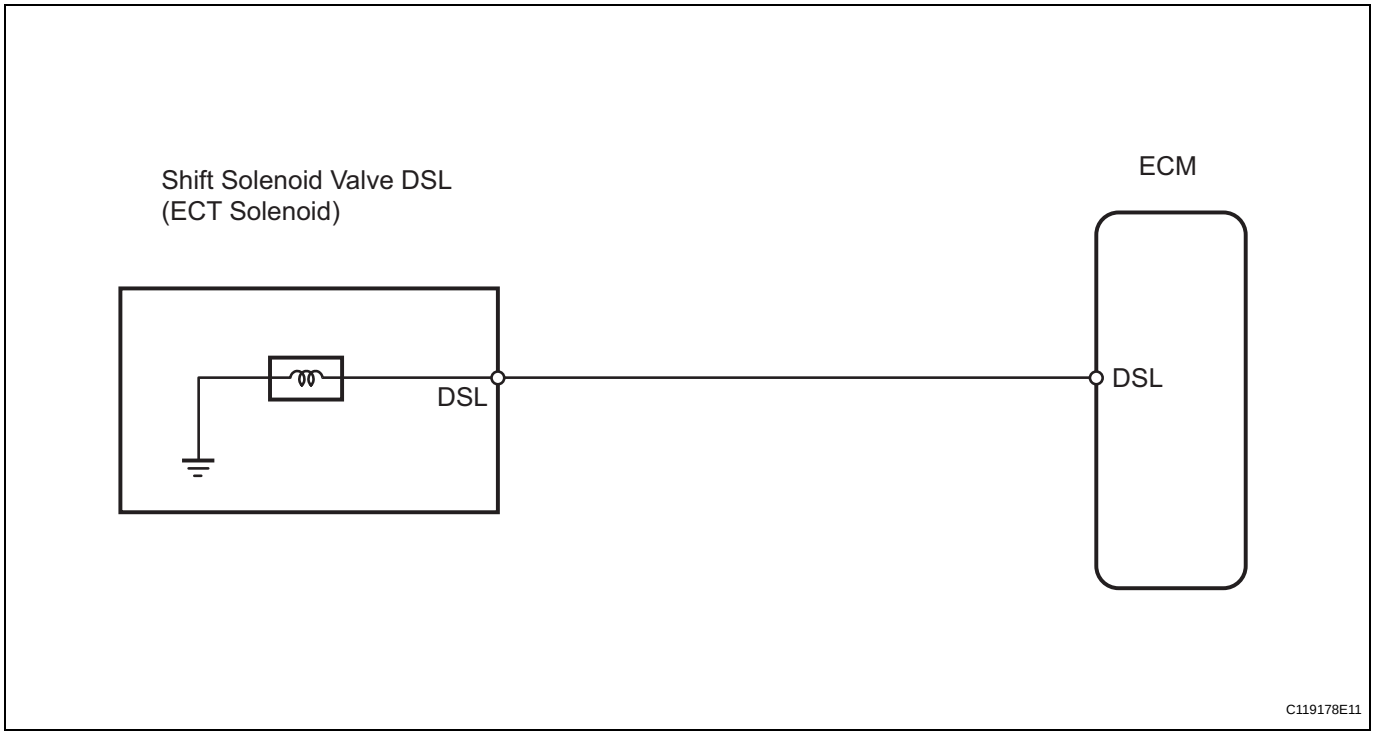
ON malfunction

ECM lock-up command	OFF
ECM selected gear	3rd or 4th
Vehicle speed	25 to 60 km/h (15.5 to 37.2 mph)
Throttle valve opening angle	8% or more

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met: OFF malfunction or ON malfunction

OFF malfunction



Engine speed - input (turbine) speed	100 rpm or more

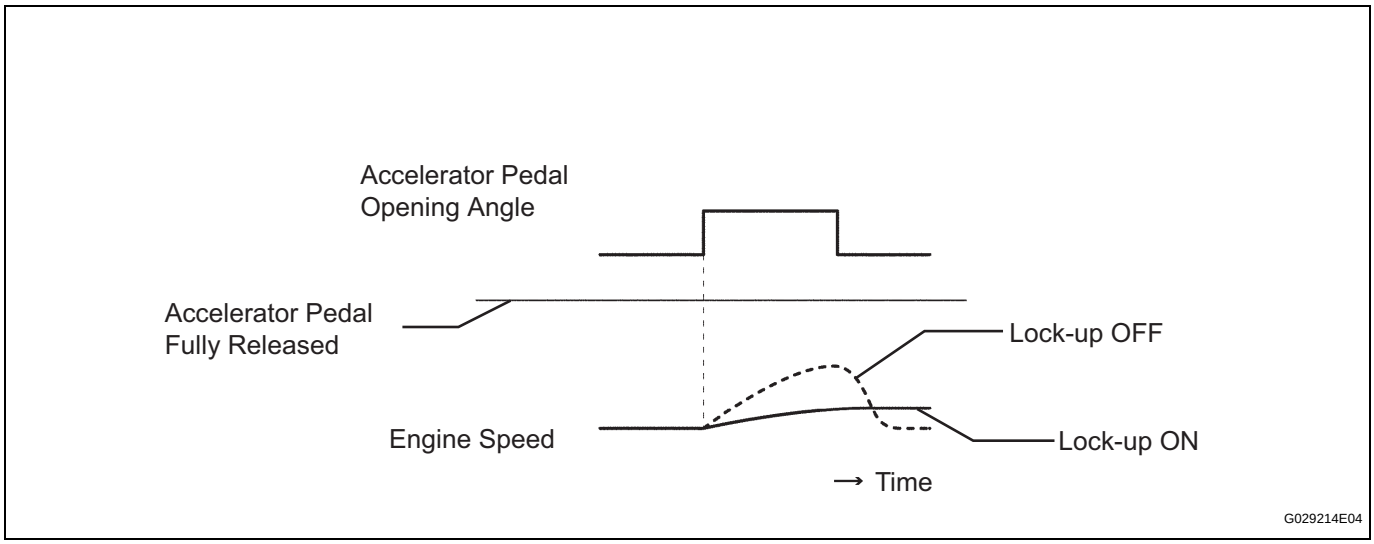
ON malfunction

2 detections are necessary per driving cycle:
1st detection: temporary flag ON
2nd detection: pending fault code ON
Vehicle speed must be under 10 km/h (6.2 mph) once before 2nd detection

Difference between engine speed and input (turbine) speed	Less than 35 rpm

WIRING DIAGRAM

INSPECTION PROCEDURE



HINT:
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.
The DATA LIST can be displayed during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
6. Follow the instructions on the tester and read the ACTIVE TEST.

Item	Test Detail	Diagnostic Note
LOCK UP	[Test Details] Control shift solenoid DSL to set automatic transaxle to the lock-up condition [Vehicle Condition] • Throttle valve opening angle: Less than 35% • Vehicle speed: 60 km/h (36 mph) or more	Possible to check shift solenoid valve DSL operation

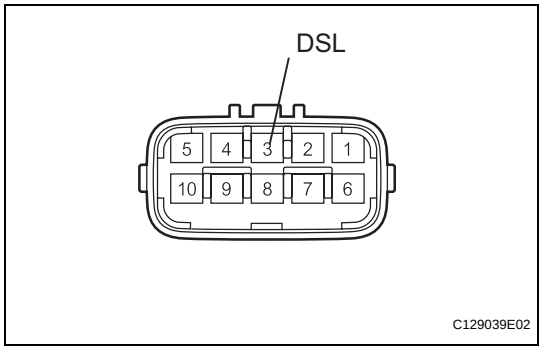
HINT:
- This test can be conducted when the vehicle speed is 60 km/h (36 mph) or more.
- This test can be conducted in the 3rd or O/D gear.

7. Lightly depress the accelerator pedal and check that the engine speed does not change abruptly.
HINT:
- When changing the accelerator pedal opening angle while driving, if the engine speed does not change, lock-up is ON.
- Slowly release the accelerator pedal in order to decelerate. (Do not fully release the pedal as that will close the throttle valve and lock-up may be turned OFF.)

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0741)

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the tester.

Result



Display (DTC output)	Proceed to
Only P0741 is output	A
P0741 and other DTCs are output	B

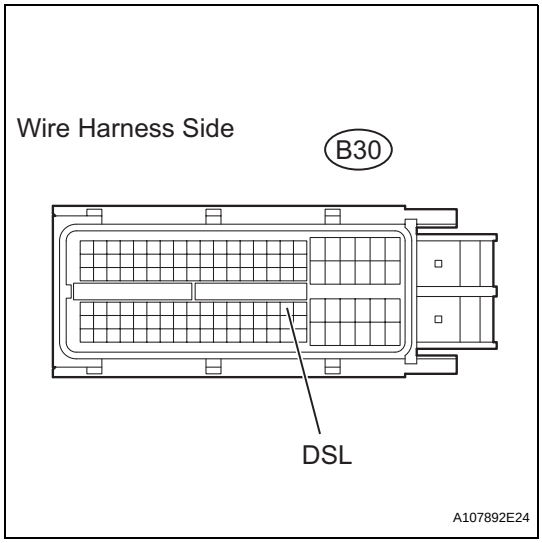
HINT:
If any other codes besides P0741 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2	INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE DSL)

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.



Standard resistance

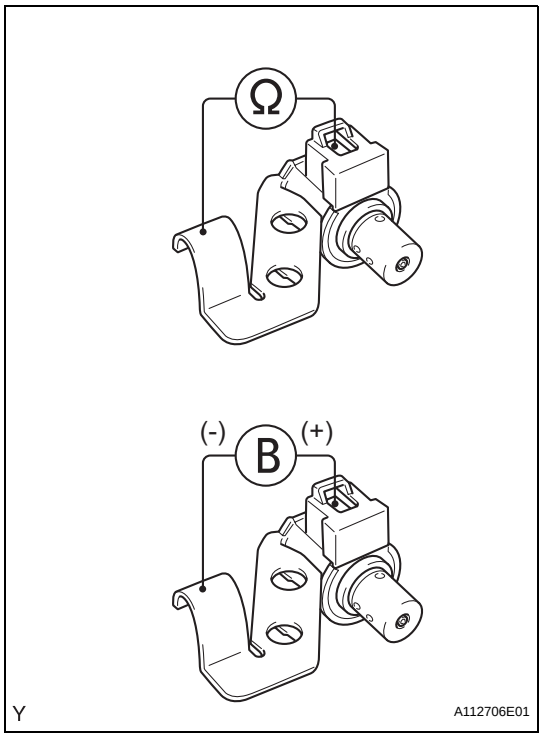
Tester Connection	Condition	Specified Condition
3 (DSL) - Body ground	20°C (68°F)	11 to 13 Ω

NG → **Go to step 4**

OK

3	CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-79 (DSL) - Body ground	20°C (68°F)	11 to 13 Ω

OK

5	CHECK TRANSMISSION WIRE

OK:
The connectors and pins are securely installed.
There is no open or short on the wire harness.

NG → **REPAIR OR REPLACE TRANSMISSION WIRE**

OK ↓

6	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the transmission valve body assembly.
OK:
There are no foreign objects on each valve.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK ↓

7	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (see page AX-153).
OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK ↓

REPAIR AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0746	Pressure Control Solenoid "A" Performance (Shift Solenoid Valve SL1)

DESCRIPTION

The ECM uses signals from the vehicle speed sensor to detect the actual gear position (1st, 2nd, 3rd or O/D gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake, gear, etc.).

DTC No.	DTC Detection Condition	Trouble Area
P0746	Gear required by the ECM does not match the actual gear when driving (2 trip detection logic)	• Shift solenoid valve SL1 remains open or closed • Valve body is blocked • Shift solenoid valve SL1 • Automatic transaxle (clutch, brake, gear, etc.) • ECM

MONITOR DESCRIPTION

The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. According to the input shaft revolution, intermediate (counter) shaft revolution and output shaft revolution, the ECM detects the actual gear position (1st, 2nd, 3rd or O/D gear position). When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL.
Example:
When either condition (a) or (b) is met, the ECM detects a malfunction.
(a) The ECM commands the 1st gear, but the actual gear is 2nd.
(b) The ECM commands the 2nd gear, but the actual gear is 1st.

MONITOR STRATEGY

Related DTCs	P0746: Shift solenoid valve SL1/OFF malfunction Shift solenoid valve SL1/ON malfunction
Required sensors/Components	Shift solenoid valve SL1, Speed sensor (NT), Speed sensor (NC), Crankshaft position sensor (NE)
Frequency of operation	Continuous
Duration	OFF malfunction, ON malfunction (A) 0.8 sec. ON malfunction (B) 1 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

All

Transmission range	"D"
ECT (Engine coolant temperature)	60°C (140°F) or more
ATF temperature	-20°C (-4°F) or more
ATF temperature sensor circuit	Not circuit malfunction
ECT sensor circuit	Not circuit malfunction
Turbine speed sensor circuit	Not circuit malfunction
Intermediate shaft speed sensor circuit	Not circuit malfunction
Output speed sensor circuit	Not circuit malfunction
Shift solenoid valve SL1 circuit	Not circuit malfunction

Shift solenoid valve SL2 circuit	Not circuit malfunction
Shift solenoid valve S4 circuit	Not circuit malfunction
Electronic throttle system	Not circuit malfunction

OFF malfunction

ECM selected gear	1st
Vehicle speed	10 to 40 km/h (6.2 to 24.9 mph)
Throttle valve opening angle	4.5% or more (varies with engine speed)

ON malfunction (A)

ECM selected gear	2nd
Vehicle speed	10 km/h (6.2 mph) or more
Throttle valve opening angle	4.5% or more (varies with engine speed)

ON malfunction (B)

ECM lock-up command	OFF
ECM selected gear	3rd or 4th

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met:
OFF malfunction, or ON malfunction (A) and (B)
2 detections are necessary per driving cycle:
1st detection: temporary flag ON
2nd detection: pending fault code ON

OFF malfunction

Input (turbine) speed/Intermediated shaft speed	1.49 to 1.63

ON malfunction (A)

Input (turbine) speed/Intermediated shaft speed	2.72 to 2.86

ON malfunction (B)

Engine speed - Input (turbine) speed	250 rpm or more

INSPECTION PROCEDURE

HINT:
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.
The DATA LIST can be displayed during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
6. Follow the instructions on the tester and read the ACTIVE TEST.
   HINT:
   While driving, the shift position can be forcibly changed with the tester. Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page AX-31).

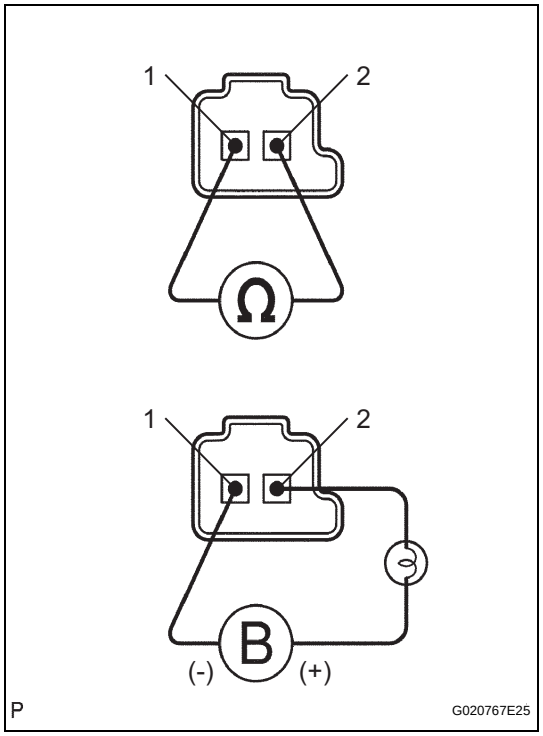
Item	Test Detail	Diagnostic Note
SHIFT	[Test Details] Operate shift solenoid valve and set each shift lever position by yourself [Vehicle Condition] • IDL: ON • 50 km/h (31 mph) or less [Other information] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check operation of shift solenoid valves

HINT:
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or more.
- This shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the tester.

1 CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0746)

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the tester.

Result



Display (DTC output)	Proceed to
Only P0746 is output	A
P0746 and other DTCs are output	B

HINT:
If any other codes besides P0746 are output, perform the troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2	INSPECT SHIFT SOLENOID VALVE SL1

(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
5.0 to 5.6 Ωat 20°C (68°F)
(c) Connect the battery's positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL1**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the transmission valve body assembly.
OK:
There are no foreign objects on each valve.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (see page AX-153).
OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0748	Pressure Control Solenoid "A" Electrical (Shift Solenoid Valve SL1)

DESCRIPTION

Shifting from 1st to O/D is performed in combination with the ON and OFF operation of the shift solenoid valves SL1 and SL2, which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated safely (see page AX-31).

DTC No.	DTC Detection Condition	Trouble Area
P0748	Duty cycle to shift solenoid valve SL1 is 100% (1 trip detection logic)	• Open or short in shift solenoid valve SL1 circuit • Shift solenoid valve SL1 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL1 circuit. The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. Also, the ECM performs the fail-safe function and turns the other normal shift solenoid valves ON/OFF. In case of an open or short circuit, the ECM stops sending current to the circuit (see page AX-31).

MONITOR STRATEGY

Related DTCs	P0748: Shift solenoid valve SL1/Range check
Required sensors/Components	Shift solenoid valve SL1
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

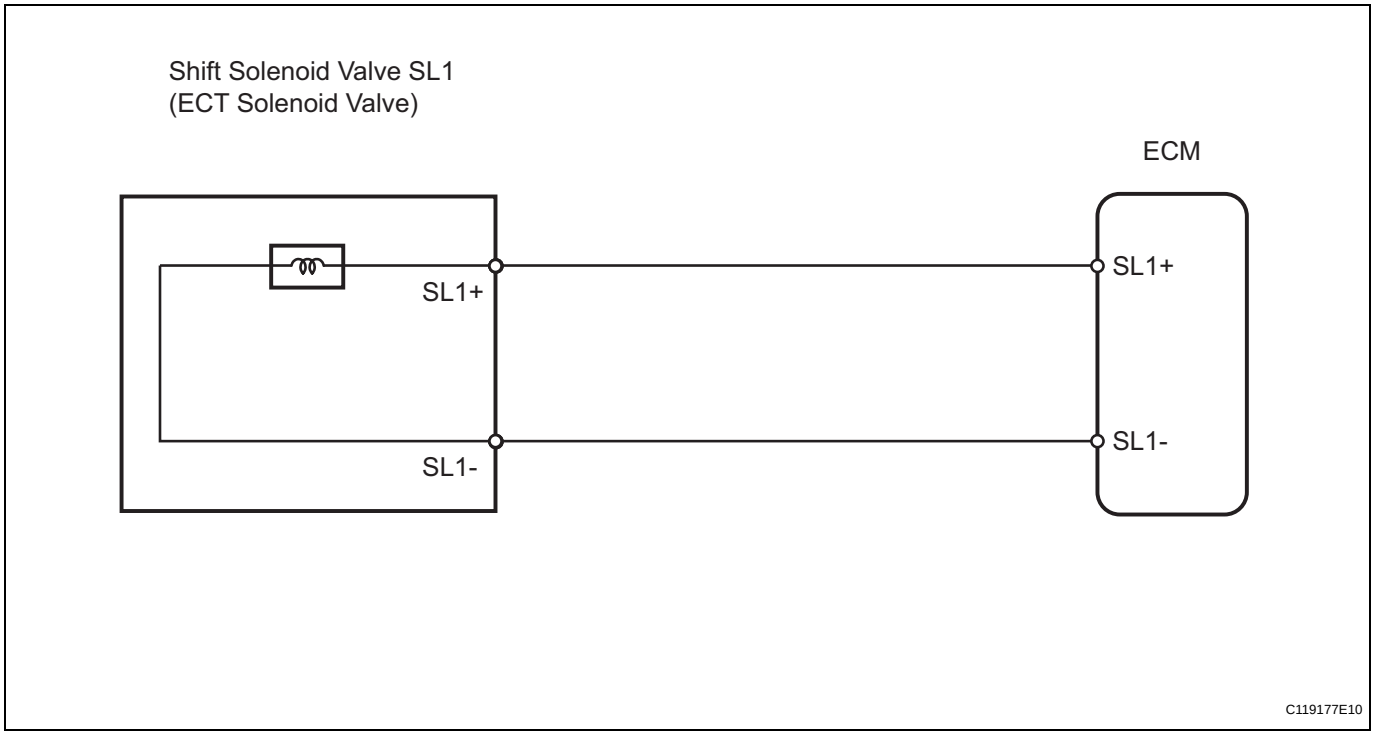
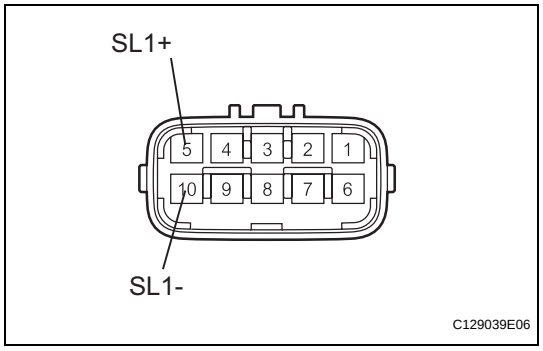
The monitor will run whenever this DTC is not present.	None
Battery voltage	11 V or more
Starter	OFF
Ignition switch	ON



TYPICAL MALFUNCTION THRESHOLDS

Solenoid status	Fail

COMPONENT OPERATING RANGE



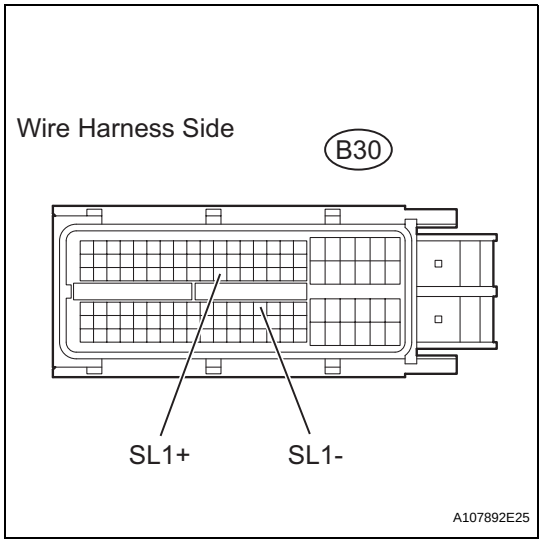
Output signal duty	Less than 100%

WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE SL1)

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.



Standard resistance

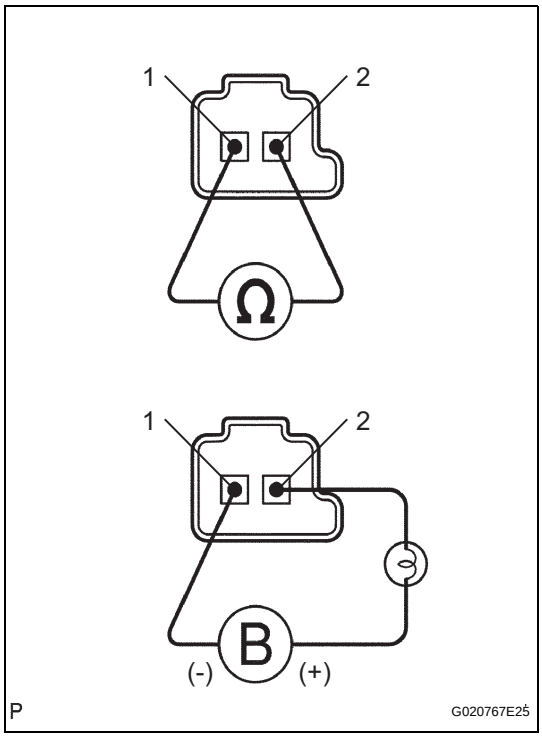
Tester Connection	Condition	Specified Condition
5 (SL1+) - 10 (SL1-)	20°C (68°F)	5.0 to 5.6 Ω
5 (SL1+) - Body ground	20°C (68°F)	1 MΩ or higher
10 (SL1-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **Go to step 3**

OK

2	CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-57 (SL1+) - B30-77 (SL1-)	20°C (68°F)	5.0 to 5.6 Ω
B30-57 (SL1+) - Body ground	20°C (68°F)	1 MΩ or higher
B30-77 (SL1-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SL1

(a) Remove the shift solenoid valve SL1.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
5.0 to 5.6 Ωat 20°C (68°F)
(c) Connect the battery's positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL1**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX

DTC	P0766	Shift Solenoid "D" Performance (Shift Solenoid Valve S4)

SYSTEM DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd or O/D gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake, gear, etc.).

DTC No.	DTC Detection Condition	Trouble Area
P0766	Gear required by the ECM does not match the actual gear when driving (2 trip detection logic)	• Shift solenoid valve S4 remains open or closed • Valve body is blocked • Shift solenoid valve S4 • Automatic transaxle (clutch, brake, gear, etc.) • ECM

MONITOR DESCRIPTION

This DTC indicates a stuck OFF malfunction of the shift solenoid valve S4, stuck ON malfunction of the shift solenoid valve SL2, or brake control valve malfunction. The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

Related DTCs	P0766: Shift solenoid valve S4/ON malfunction Shift solenoid valve S4/OFF malfunction

Throttle valve opening angle	5% or more

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met:
OFF malfunction or ON malfunction
2 detections are necessary per driving cycle:
1st detection: temporary flag ON
2nd detection: pending fault code ON

OFF malfunction

Intermediate shaft speed/Output speed	1.34 to 1.48

ON malfunction

Intermediate shaft speed/Output speed	0.95 to 1.09

INSPECTION PROCEDURE

HINT:
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.
The DATA LIST can be displayed during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
6. Follow the instructions on the tester and perform the ACTIVE TEST.

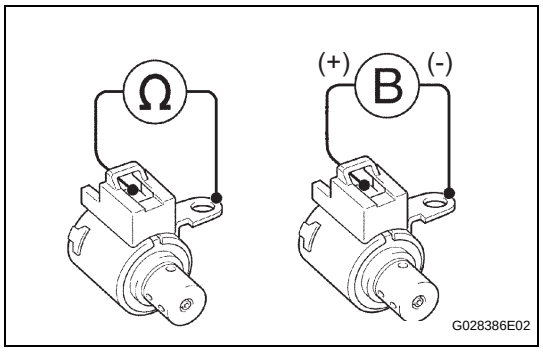
HINT:
While driving, the shift position can be forcibly changed with the tester.
Comparing the shift position commanded by the ACTIVE TEST with the actual shift position enables you to confirm the problem (see page AX-31).

Item	Test Details	Diagnostic Note
SHIFT	[Test Details] Operate the shift solenoid valve and set each shift lever position by yourself [Vehicle Condition] • IDL: ON • 50 km/h (31 mph) or less [Other information] • Press "→" button: Shift up • Press "←" button: Shift down	Possible to check the operation of the shift solenoid valves

HINT:
- This test can be conducted when the vehicle speed is 50 km/h (31 mph) or less.
- The shift position commanded by the ECM is shown in the DATA LIST/SHIFT display on the tester.

1 CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0766)

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the tester.
Result



Display (DTC output)	Proceed to
Only P0766 is output	A
P0766 and other DTCs are output	B

HINT:
If any other codes besides P0766 are output, perform troubleshooting for those DTCs first.

B → **GO TO DTC CHART**

A

2 INSPECT SHIFT SOLENOID VALVE S4

(a) Remove the shift solenoid valve S4.
(b) Measure the resistance between the solenoid valve terminal and solenoid valve body.
Standard resistance:
11 to 15 Ω at 20°C (68°F)
(c) Connect the battery's positive (+) lead to the terminal of the solenoid valve connector, and the negative (-) lead to the solenoid body. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE S4**

OK

3 INSPECT TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the transmission valve body assembly.
OK:
There are no foreign objects on each valve.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (see page AX-153).

OK:

The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0776	Pressure Control Solenoid "B" Performance (Shift Solenoid Valve SL2)

DESCRIPTION

The ECM uses signals from the output shaft speed sensor and input speed sensor to detect the actual gear position (1st, 2nd, 3rd or O/D gear).
Then the ECM compares the actual gear with the shift schedule in the ECM memory to detect mechanical problems of the shift solenoid valves, valve body or automatic transaxle (clutch, brake, gear, etc.).

DTC No.	DTC Detection Condition	Trouble Area
P0776	Gear required by the ECM does not match the actual gear when driving (2 trip detection logic)	• Shift solenoid valve SL2 remains open • Valve body is blocked • Automatic transaxle (clutch, brake, gear, etc.) • ECM

MONITOR DESCRIPTION

This DTC indicates a stuck ON malfunction or stuck OFF malfunction of the shift solenoid valve SL2.
The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. When the gear position commanded by the ECM and the actual gear position are not the same, the ECM illuminates the MIL and stores the DTC.

MONITOR STRATEGY

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P0778	Pressure Control Solenoid "B" Electrical (Shift Solenoid Valve SL2)

DESCRIPTION

Shifting from 1st to O/D is performed in combination with the ON and OFF operation of the shift solenoid valves SL1 and SL2, which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated safely (see page AX-31).

DTC No.	DTC Detection Condition	Trouble Area
P0778	Duty cycle to shift solenoid valve SL2 is 100% (1 trip detection logic)	• Open or short in shift solenoid valve SL2 circuit • Shift solenoid valve SL2 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve SL2 circuit. The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. Also, the ECM performs the fail-safe function and turns the other normal shift solenoid valves ON/OFF. In case of an open or short circuit, the ECM stops sending current to the circuit (see page AX-31).

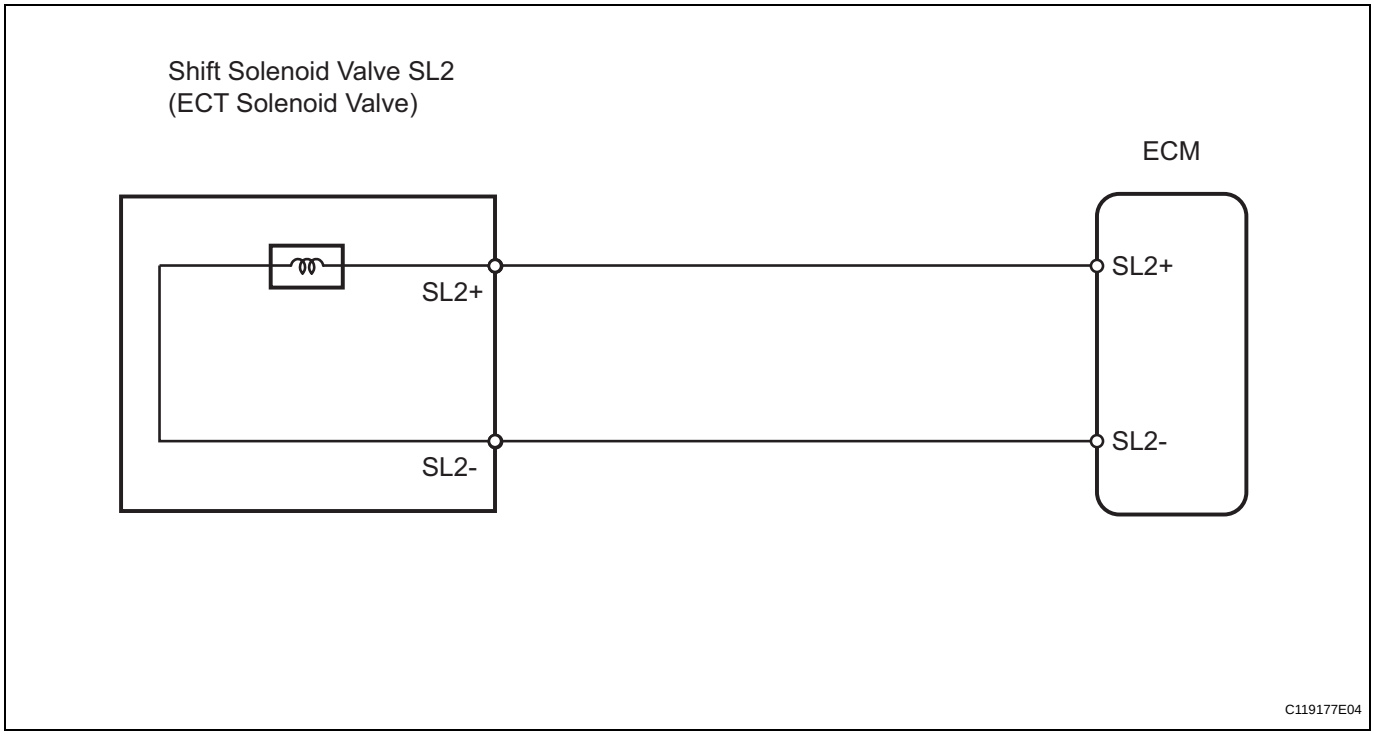
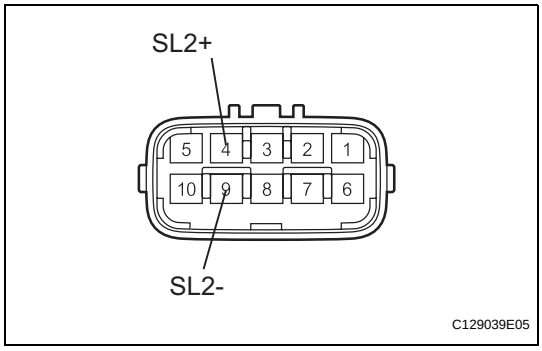
The monitor will run whenever this DTC is not present.	None
Battery voltage	11 V or more
Starter	OFF
Ignition switch	ON



TYPICAL MALFUNCTION THRESHOLDS

Solenoid status	Fail

COMPONENT OPERATING RANGE



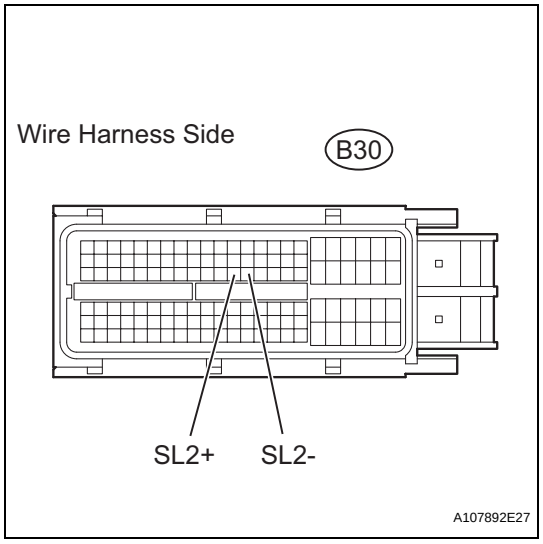
Output signal duty	Less than 100%

WIRING DIAGRAM

INSPECTION PROCEDURE

1 **INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE SL2)**

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.



Standard resistance

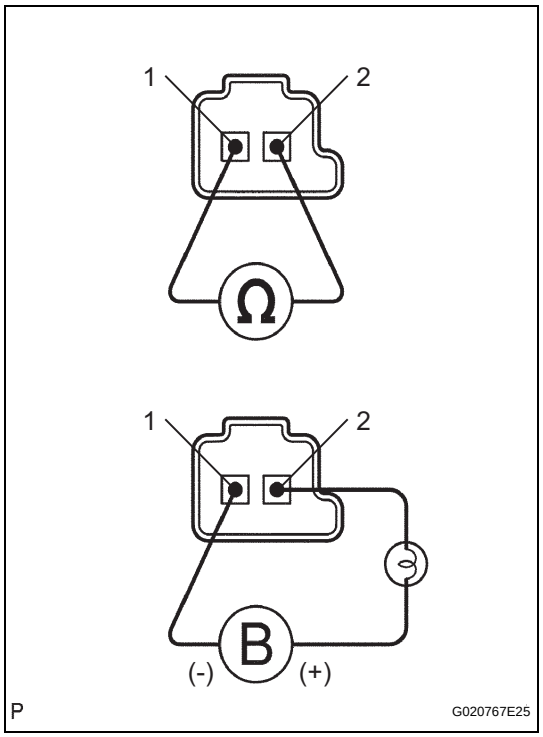
Tester Connection	Condition	Specified Condition
4 (SL2+) - 9 (SL2-)	20°C (68°F)	5.0 to 5.6 Ω
4 (SL2+) - Body ground	20°C (68°F)	1 MΩ or higher
9 (SL2-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **Go to step 3**

OK

2 CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-58 (SL2+) - B30-59 (SL2-)	20°C (68°F)	5.0 to 5.6 Ω
B30-58 (SL2+) - Body ground	20°C (68°F)	1 MΩ or higher
B30-59 (SL2-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE SL2

(a) Remove the shift solenoid valve SL2.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
5.0 to 5.6 Ωat 20°C (68°F)
(c) Connect the battery's positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SL2**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX

DTC	P0793	Intermediate Shaft Speed Sensor "A"

DESCRIPTION

This sensor detects the rotation speed of the counter gear. By comparing the counter gear speed signal (NC) with the direct clutch speed sensor signal (NT), the ECM detects the shift timing of the gears and approximately controls the engine torque and hydraulic pressure according to various conditions. Thus smooth gear shifting is performed.

DTC No.	DTC Detection Condition	Trouble Area
P0793	ECM detects conditions (a) and (b) continuously for 5 sec. or more (1 trip detection logic): (a) Park/Neutral position switch (NSW) is OFF (b) Speed sensor NC: Less than 300 rpm	• Open or short in speed sensor NC circuit • Speed sensor NC • ECM

MONITOR DESCRIPTION

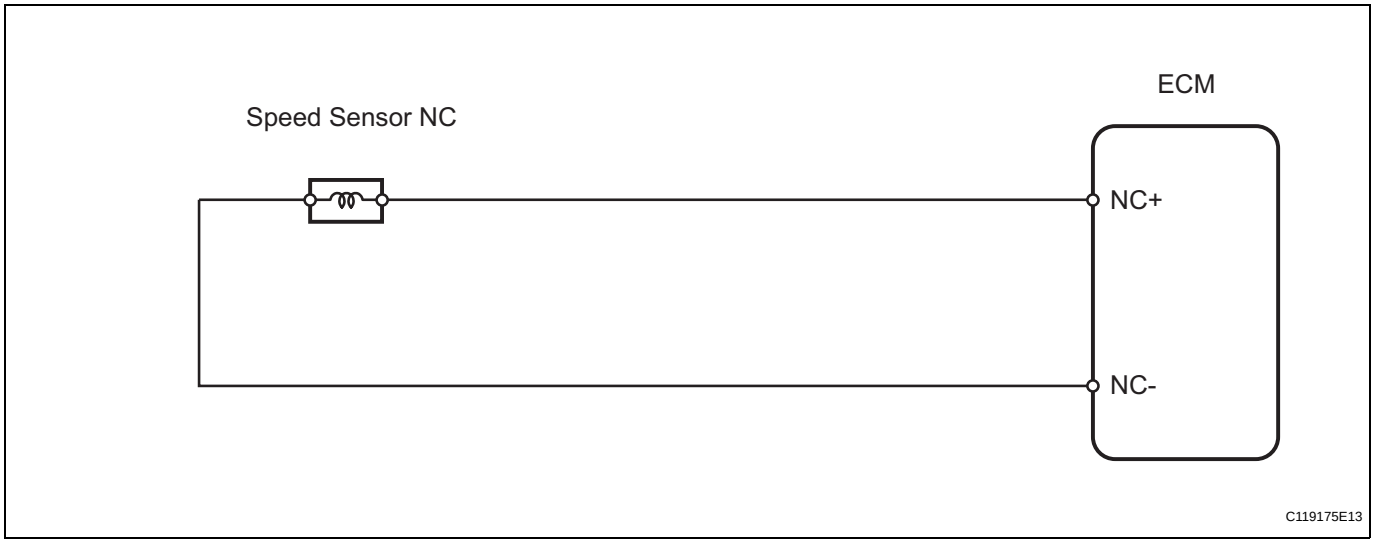
The NC terminal of the ECM detects revolution signals from speed sensor NC (counter gear rpm). The ECM calculates gear shifts by comparing speed sensor NT with speed sensor NC.
While the vehicle is operating in the 2nd, 3rd or O/D gear position with the shift lever on D, if the counter gear revolution is less than 300 rpm*1 and the output shaft revolution is more than 1,000 rpm*2, the ECM detects the trouble, illuminates the MIL and stores the DTC.
*1: Pulse is not output or is irregularly output.
*2: The vehicle speed is 50 km/h (31 mph) or more.

MONITOR STRATEGY

Related DTCs	P0793: Speed sensor (NC)/Verify pulse input
Required sensors/Components	Speed sensor (NC), Speed sensor (NT), NSW switch
Frequency of operation	Continuous
Duration	5 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present.	P0500: VSS P0748: Shift solenoid SL1 P0778: Shift solenoid SL2 P0982, P0983: Shift solenoid S4
Engine	Running
NSW switch	OFF
Output shaft rpm	1,000 rpm or more



TYPICAL MALFUNCTION THRESHOLDS

Sensor signal rpm	Less than 300 rpm

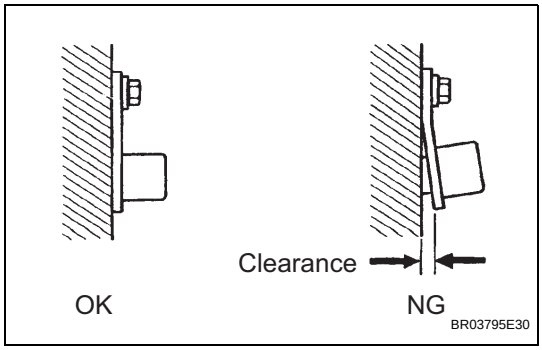
COMPONENT OPERATING RANGE

Counter gear speed sensor (NC)	4th (O/D) when shift lever is on D (after warming up the engine); Intermediate shaft speed (NC) becomes close to the engine speed

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
NOTICE:
In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.



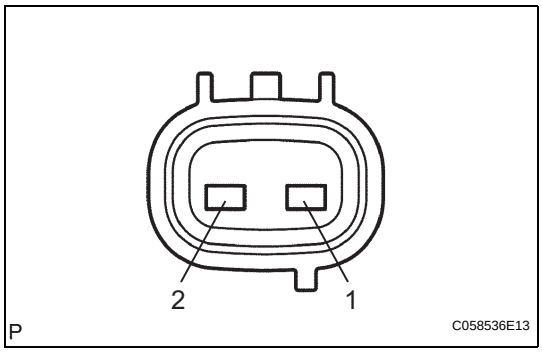
1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
6. Follow the instructions on the tester and read the DATA LIST.

Item	Measurement Item/ Range (Display)	Normal Condition	Diagnostic Note
SPD (NC)	Counter gear speed/ Min.: 0 rpm Max.: 12,750 rpm	4th (O/D) when shift lever is on D (after warming up the engine); Intermediate shaft speed (NC) becomes close to the engine speed	Data is displayed in increments of 50 rpm

HINT:

- SPD (NC) is always 0 rpm while driving:
  Open or short in the sensor or circuit.
- SPD (NC) is always more than 0 and less than 300 rpm while driving the vehicle at 50 km/h (31 mph) or more:
  Sensor trouble, improper installation, or intermittent connection trouble of the circuit.

1 INSPECT SPEED SENSOR (INSTALLATION)

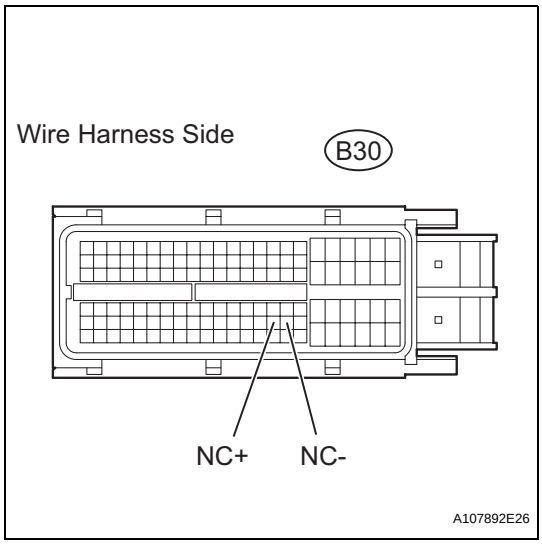


(a) Check the speed sensor NC installation.
OK:
Installation bolt is tightened properly and there is no clearance between the sensor and transaxle case.

NG → **REPLACE SPEED SENSOR NC**

OK

2 INSPECT SPEED SENSOR NC



(a) Disconnect the B24 sensor connector from the transaxle.
(b) Measure the resistance of the sensor.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	560 to 680 Ω

NG → **REPLACE SPEED SENSOR NC**

OK

3 CHECK WIRE HARNESS (SPEED SENSOR - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance

Tester Connection	Specified Condition
B30-101 (NC+) - B30-102 (NC-)	560 to 680 Ω
B30-101 (NC+) - Body ground	10 kΩ or higher
B30-102 (NC-) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

DTC	P0982	Shift Solenoid "D" Control Circuit Low (Shift Solenoid Valve S4)

DTC	P0983	Shift Solenoid "D" Control Circuit High (Shift Solenoid Valve S4)

DESCRIPTION

Shifting from 1st to O/D is performed in combination with the ON and OFF operation of the shift solenoid valves SL1 and SL2, which are controlled by the ECM. If an open or short circuit occurs in any of the shift solenoid valves, the ECM controls the remaining normal shift solenoid valves to allow the vehicle to be operated safely (see page AX-31).

DTC No.	DTC Detection Condition	Trouble Area
P0982	ECM detects short in solenoid valve S4 circuit 2 times when solenoid valve S4 is operated (1 trip detection logic)	• Short in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM
P0983	ECM detects open in solenoid valve S4 circuit 2 times when solenoid valve S4 is not operated (1 trip detection logic)	• Open in shift solenoid valve S4 circuit • Shift solenoid valve S4 • ECM

MONITOR DESCRIPTION

This DTC indicates an open or short in the shift solenoid valve S4 circuit. The ECM commands gear shifts by turning the shift solenoid valves ON/OFF. When there is an open or short circuit in any shift solenoid valve circuit, the ECM detects the problem, illuminates the MIL and stores the DTC. Also, the ECM performs the fail-safe function and turns the other normal shift solenoid valves ON/OFF. In case of an open or short circuit, the ECM stops sending current to the circuit (see page AX-31).

MONITOR STRATEGY

Related DTCs	P0982: Shift solenoid valve S4/Range check (Low resistance) P0983: Shift solenoid valve S4/Range check (High resistance)
Required sensors/Components	Shift solenoid valve S4
Frequency of operation	Continuous
Duration	0.128 sec.
MIL operation	Immediate
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P0982: Range check (Low resistance)

The monitor will run whenever this DTC is not present.	None
Shift solenoid valve S4	ON
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

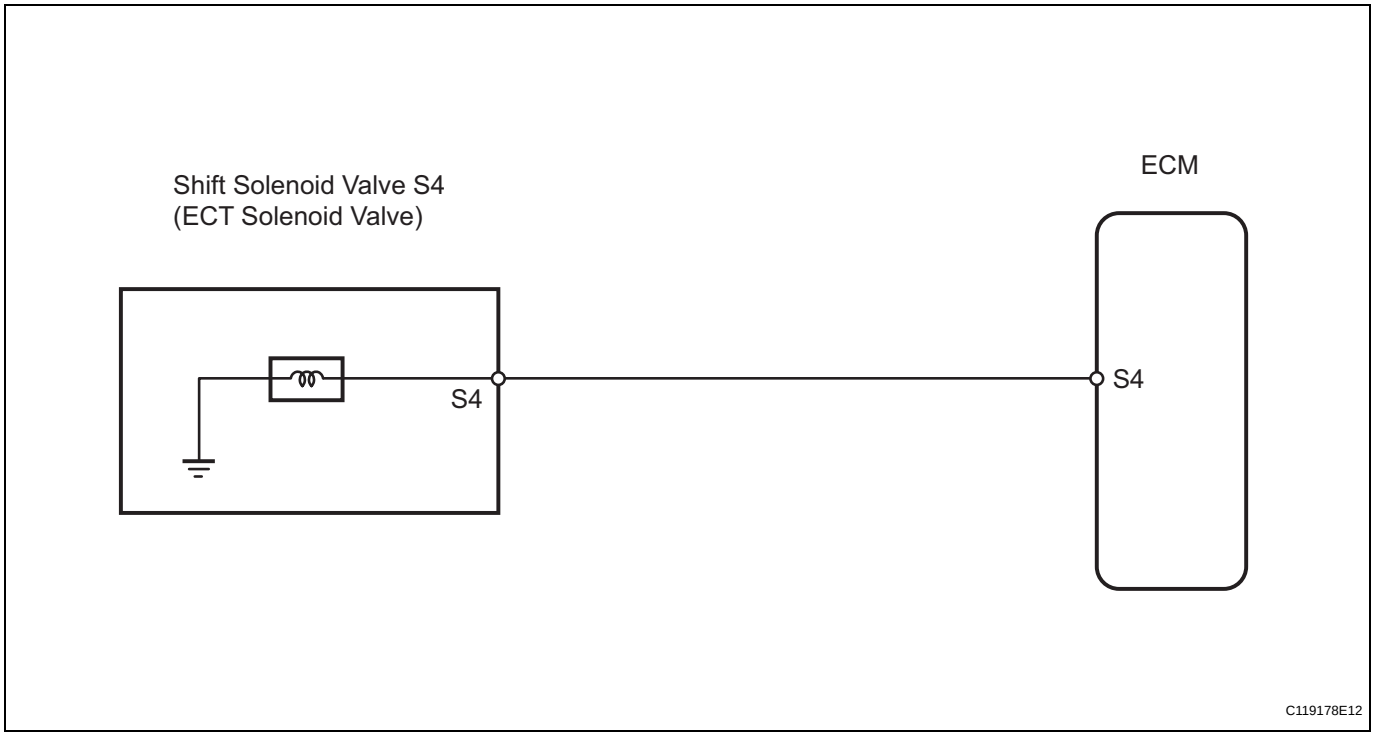
P0983: Range check (High resistance)

The monitor will run whenever this DTC is not present	None
Shift solenoid valve S4	OFF
Battery voltage	8 V or more
Ignition switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P0982: Range check (Low resistance)

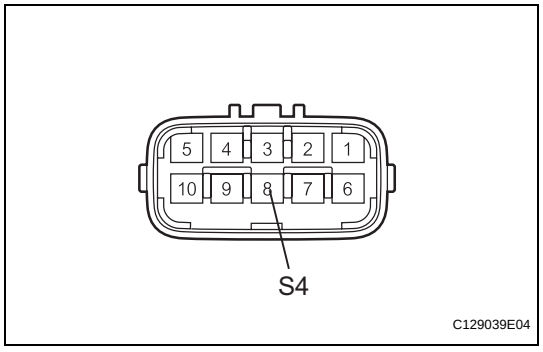
Shift solenoid valve S4 resistance	8 Ω or less



P0983: Range check (High resistance)

Shift solenoid valve S4 resistance	100 kΩ or more

COMPONENT OPERATING RANGE



Shift solenoid valve S4	Resistance: 11 to 15 Ω at 20°C (68°F)

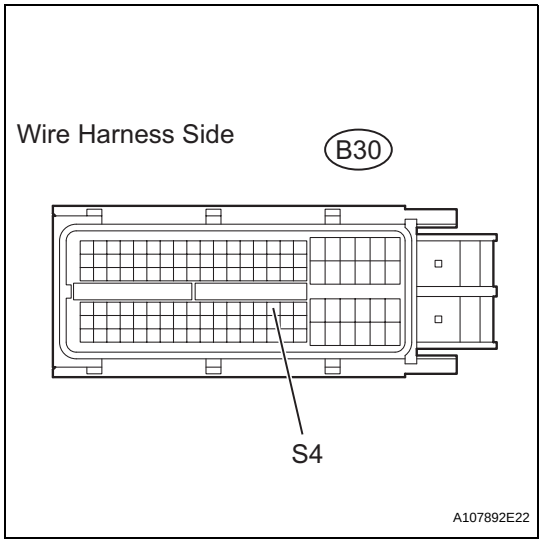
WIRING DIAGRAM

INSPECTION PROCEDURE

1	INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE S4)

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.

Standard resistance



Tester Connection	Condition	Specified Condition
8 (S4) - Body ground	20°C (68°F)	11 to 15 Ω

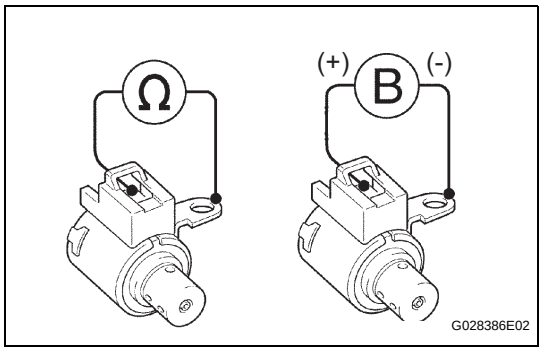
NG → **Go to step 3**

OK

AX

2	CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-78 (S4) - Body ground	20°C (68°F)	11 to 15 Ω

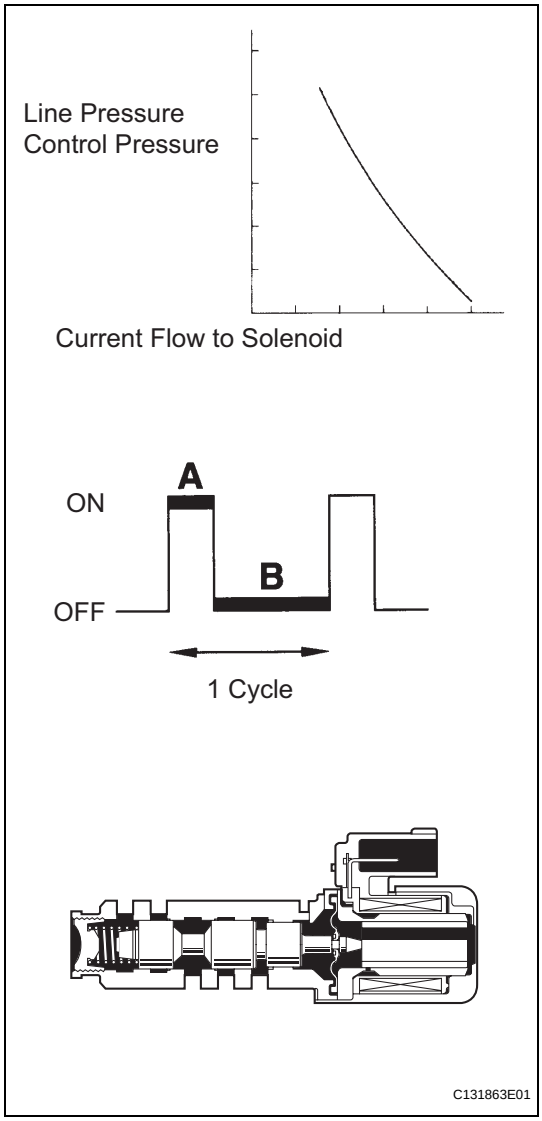
NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE S4

(a) Remove the shift solenoid valve S4.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
11 to 15 Ω at 20°C (68°F)
(c) Connect the battery's positive (+) lead to the terminal of the solenoid valve connector, and the negative (-) lead to the solenoid body. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.



NG → **REPLACE SHIFT SOLENOID VALVE S4**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2714	Pressure Control Solenoid "D" Performance (Shift Solenoid Valve SLT)

DESCRIPTION

The throttle pressure that is applied to the primary regulator valve (which modulates the line pressure) causes the solenoid valve SLT, under electronic control, to precisely modulate and generate the line pressure according to the extent that the accelerator pedal is depressed or the output of engine power. This controls the line pressure and provides smooth shifting characteristics.
Upon receiving a signal of the throttle valve opening angle, the ECM controls the line pressure by sending a predetermined duty ratio* to the solenoid valve, modulating the line pressure and generating throttle pressure.
HINT:
*: The duty ratio is the ratio of the current ON time (A) to the total of the current ON and OFF time (A + B).
Duty Ratio (%) = A / (A + B) x 100

DTC No.	DTC Detection Condition	Trouble Area
P2714	ECM detects malfunction on SLT (ON side) according to difference in revolutions of turbine (input) and output shaft (2 trip detection logic)	• Shift solenoid valve SLT remains open or closed • Valve body is blocked • Torque converter clutch • Automatic transaxle (clutch, brake or gear etc.) • ECM

MONITOR DESCRIPTION

In any forward position, when the difference between the revolutions of the turbine and output shaft exceeds the specified value (varies with output speed) determined by the ECM, the ECM illuminates the MIL and outputs the DTC. When shift solenoid valve SLT remains on, the oil pressure goes down and the clutch engagement force decreases.

MONITOR STRATEGY

Related DTCs	P2714: Shift solenoid valve SLT/ON malfunction
Required sensors/Components	Shift solenoid valve SLT, Speed sensor (NT), Speed sensor (SPD)
Frequency of operation	Continuous
Duration	1 second
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The following conditions are common to ON malfunctions (a), (b), (c) and (d).

The monitor runs whenever the following DTCs are not present	None
Transmission shift position	D
Time after shifting N to D	4.5 seconds or more
ATF (Automatic Transmission Fluid) temperature	-10°C (14°F) or more
ATF temperature sensor (TFT sensor) circuit	No circuit malfunction
Electronic Throttle Control System (if applicable)	No circuit malfunction
Shift solenoid valve S1 circuit	No circuit malfunction
Shift solenoid valve S2 circuit	No circuit malfunction
Shift solenoid valve SLU circuit	No circuit malfunction
Shift solenoid valve SLT circuit	No circuit malfunction
Speed sensor (NT) circuit	No circuit malfunction
Speed sensor (SPD) circuit	No circuit malfunction

ON malfunction (a):

ECM gearshift command	1st
Input (turbine) speed	300 rpm or more
Output speed	300 rpm or more

ON malfunction (b):

ECM gearshift command	2nd
Input (turbine) speed	300 rpm or more
Output speed	300 rpm or more

ON malfunction (c):

ECM gearshift command	3rd
Input (turbine) speed	300 rpm or more
Output speed	300 rpm or more

ON malfunction (d):

ECM gearshift command	4th
Input (turbine) speed	300 rpm or more
Output speed	300 rpm or more

TYPICAL MALFUNCTION THRESHOLDS

[ON malfunction]

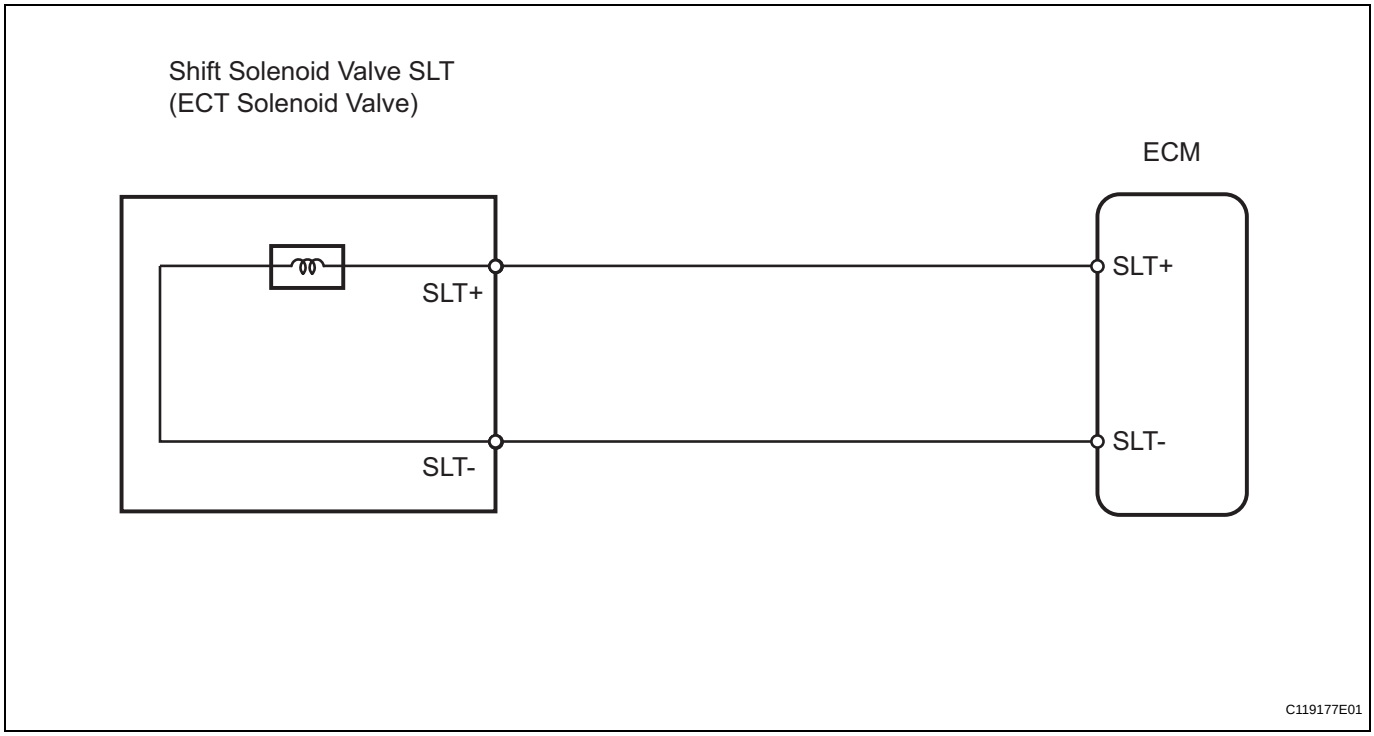
Detection condition: Total accumulated time of ON malfunctions (a), (b), (c) and (d) is 1 second or more

ON malfunction (a):

NT - NC x 1st gear ratio (without counter gear and under drive gear) NT: Input (turbine) speed NC: Counter gear speed	More than 300 rpm at counter gear speed of 1,000 rpm (Conditions vary with counter gear speed)
Duration	0.85 seconds or more

ON malfunction (b):

NT - NC x 2nd gear ratio (without counter gear and under drive gear)	More than 300 rpm at counter gear speed of 1,000 rpm (Conditions vary with counter gear speed)
Duration	0.85 seconds or more



ON malfunction (c):

NT - NC x 3rd gear ratio (without counter gear and under drive gear)	More than 300 rpm at counter gear speed of 1,000 rpm (Conditions vary with counter gear speed)
Duration	0.85 seconds or more

ON malfunction (d):

NC - NO x Counter gear ratio x under drive gear ratio (Low or High)	More than 300 rpm at output speed of 1,000 rpm (Conditions vary with output speed)
Duration	0.85 seconds or more

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time.
The DATA LIST can be displayed during the ACTIVE TEST.

1. Warm up the engine.
2. Turn the ignition switch OFF.
3. Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
4. Turn the ignition switch ON and turn the tester ON.
5. Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
6. Perform the ACTIVE TEST.

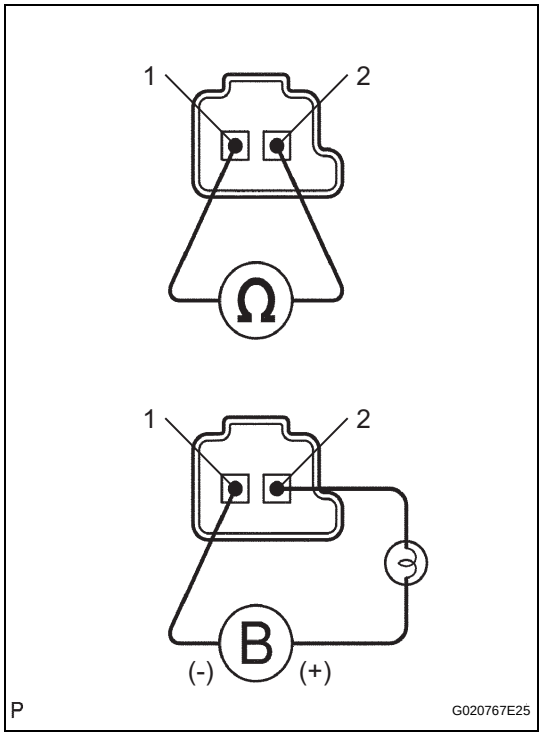
Item	Test Details	Diagnostic Note
SOLENOID (SLT)*	[Test Details] Operate shift solenoid SLT and raise line pressure [Vehicle Condition] • Vehicle stopped • IDL: ON HINT: OFF: Line pressure up (when Active Test "SOLENOID (SLT)" is performed, ECM commands SLT solenoid to turn OFF) ON: No action (normal operation)	-

HINT:
*: "SOLENOID (SLT)" in the ACTIVE TEST is performed to check the line pressure changes by connecting SST to the automatic transaxle, which is used in the HYDRAULIC TEST (see page AX-16) as well. Please note that the pressure values in the ACTIVE TEST and HYDRAULIC TEST are different.

1 CHECK OTHER DTCS OUTPUT (IN ADDITION TO DTC P2714)

(a) Connect the intelligent tester to the CAN VIM. Then connect the CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs using the tester.

Result



Display (DTC output)	Proceed to
Only P2714 is output	A
P2714 and other DTCs are output	B

HINT:
If any other codes besides P2714 are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT SHIFT SOLENOID VALVE SLT

(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
5.0 to 5.6 Ωat 20°C (68°F)
(c) Connect the battery's positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

3	INSPECT TRANSMISSION VALVE BODY ASSEMBLY

(a) Check the transmission valve body assembly.
OK:
There are no foreign objects on each valve.

NG → **REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY**

OK

4	INSPECT TORQUE CONVERTER CLUTCH ASSEMBLY

(a) Check the torque converter clutch assembly (see page AX-153).
OK:
The torque converter clutch operates normally.

NG → **REPLACE TORQUE CONVERTER CLUTCH ASSEMBLY**

OK

REPAIR OR REPLACE AUTOMATIC TRANSAXLE ASSEMBLY

DTC	P2716	Pressure Control Solenoid "D" Electrical (Shift Solenoid Valve SLT)

DESCRIPTION

Refer to DTC P2714 (see page AX-91).

DTC No.	DTC Detection Condition	Trouble Area
P2716	Condition (a) and (b) below is detected for 1 sec. or more (1 trip detection logic): (a) SLT - terminal: 0 V (b) SLT - terminal: 12 V	• Open or short in shift solenoid valve SLT circuit • Shift solenoid valve SLT • ECM

MONITOR DESCRIPTION

When an open or short in the shift solenoid valve SLT circuit is detected, the ECM interprets this as a fault. The ECM will illuminate the MIL and store the DTC.

MONITOR STRATEGY

Related DTCs	P2716: Shift solenoid valve SLT/Range check
Required sensors/Components	Shift solenoid valve SLT
Frequency of operation	Continuous
Duration	1 sec.
MIL operation	Immediate
Sequence of operation	None

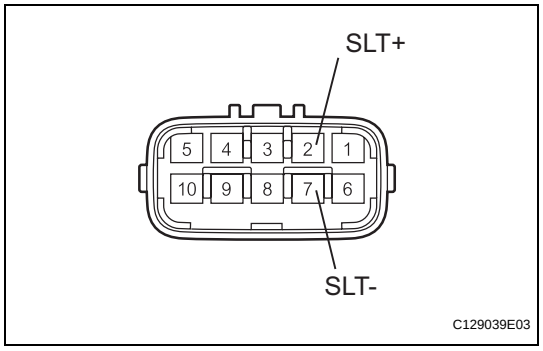
TYPICAL ENABLING CONDITIONS

The monitor will run whenever this DTC is not present.	None
Battery voltage	11 V or more
Solenoid current cut status	Not cut
CPU command duty ratio to SLT	19% or more
Starter	OFF
Ignition switch	ON

TYPICAL MALFUNCTION THRESHOLDS

Solenoid status from IC	Fail (open or short)

COMPONENT OPERATING RANGE



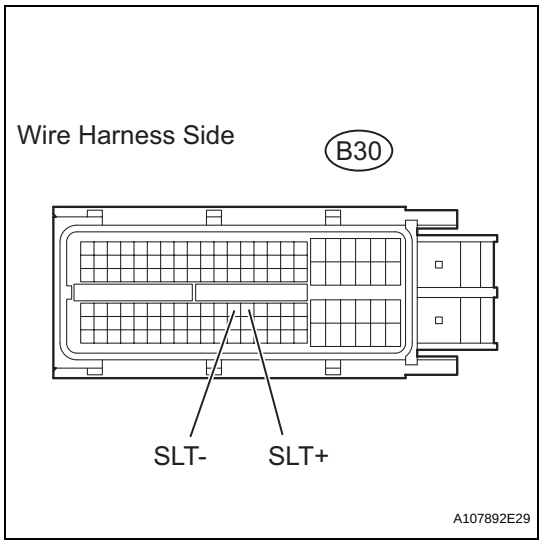
Shift solenoid valve SLT	Resistance: 5.0 to 5.6 Ω at 20°C (68°F)

WIRING DIAGRAM

Refer to DTC P2714 (see page AX-91).

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE SLT)



(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.
Standard resistance

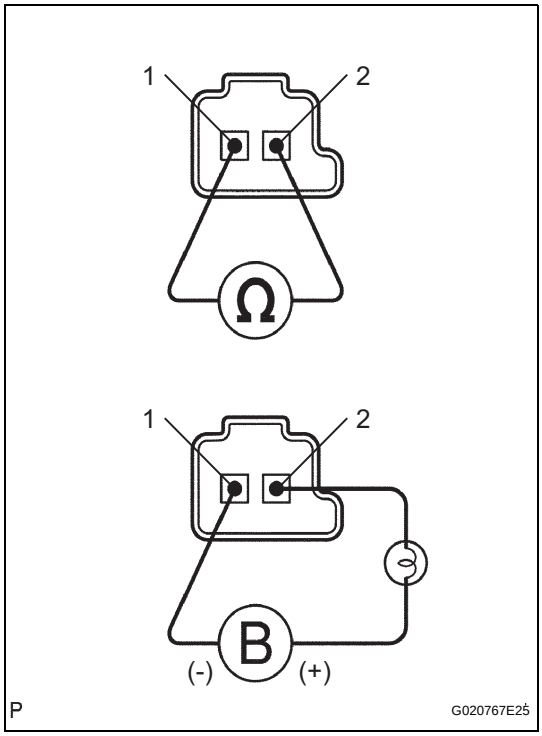
Tester Connection	Condition	Specified Condition
2 (SLT+) - 7 (SLT-)	20°C (68°F)	5.0 to 5.6 Ω
2 (SLT+) - Body ground	20°C (68°F)	1 MΩ or higher
7 (SLT-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **Go to step 3**

OK

2 CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-76 (SLT+) - B30-75 (SLT-)	20°C (68°F)	5.0 to 5.6 Ω
B30-76 (SLT+) - Body ground	20°C (68°F)	1 MΩ or higher
B30-75 (SLT-) - Body ground	20°C (68°F)	1 MΩ or higher

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

3	INSPECT SHIFT SOLENOID VALVE SLT

(a) Remove the shift solenoid valve SLT.
(b) Measure the resistance of the solenoid valve.
Standard resistance:
5.0 to 5.6 Ωat 20°C (68°F)
(c) Connect the battery's positive (+) lead with a 21 W bulb to terminal 2 and the negative (-) lead to terminal 1 of the solenoid valve connector. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE SLT**

OK

REPAIR OR REPLACE TRANSMISSION WIRE

DTC	P2769	Torque Converter Clutch Solenoid Circuit Low (Shift Solenoid Valve DSL)

DTC	P2770	Torque Converter Clutch Solenoid Circuit High (Shift Solenoid Valve DSL)

DESCRIPTION

The shift solenoid valve DSL is turned ON and OFF by signals from the ECM to control the hydraulic pressure acting on the lock-up relay valve, which then controls operation of the lock-up clutch.

DTC No.	DTC Detection Condition	Trouble Area
P2769	ECM detects short in shift solenoid valve DSL circuit when shift solenoid valve DSL is operated (2 trip detection logic)	• Short in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM
P2770	ECM detects open in shift solenoid valve DSL circuit when shift solenoid valve DSL is not operated (2 trip detection logic)	• Open in shift solenoid valve DSL circuit • Shift solenoid valve DSL • ECM

Fail-safe function:
If the ECM detects a malfunction, it turns the shift solenoid valve DSL OFF.

MONITOR DESCRIPTION

Torque converter lock-up is controlled by the ECM based on engine rpm, engine load, engine temperature, vehicle speed, transmission temperature, and shift position selection. The ECM determines the lock-up status of the torque converter by comparing the engine rpm (NE) to the input rpm (NT). The ECM calculates the actual transmission gear by comparing the input rpm (NT) to the output rpm (SP2). When conditions are appropriate, the ECM requests "lock-up" by applying control voltage to the shift solenoid valve DSL. When the shift solenoid valve DSL is opened, the shift solenoid valve DSL applies pressure to the lock-up relay valve and locks the torque converter clutch. If the ECM detects an open or short in the shift solenoid valve DSL circuit, the ECM interprets this as a fault in the shift solenoid valve DSL or its circuit. The ECM will illuminate the MIL and store a DTC.

MONITOR STRATEGY

Related DTCs	P2769: Shift solenoid valve DSL/Range check (Low resistance) P2770: Shift solenoid valve DSL/Range check (High resistance)
Requires sensors/Components	Shift solenoid valve DSL
Frequency of operation	Continuous
Duration	0.064 sec.
MIL operation	2 driving cycles
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

P2769: Range check (Low resistance)

The monitor will run whenever this DTC is not present	None
Shift solenoid valve DSL	ON
Solenoid current cut status	Not cut
Battery voltage	8 V or more
Starter	OFF
Ignition switch	ON

P2770: Range check (High resistance)

The monitor will run whenever this DTC is not present	None

Shift solenoid valve DSL	ON
Battery voltage	8 V or more
Starter	OFF
Ignition switch	ON

TYPICAL MALFUNCTION THRESHOLDS

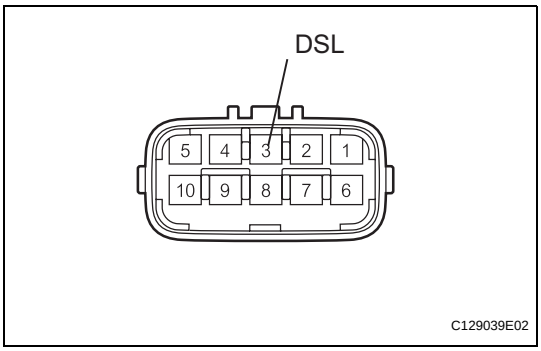
P2769: Range check (Low resistance)

Shift solenoid valve DSL resistance	8 Ω or less

P2770: Range check (High resistance)

Shift solenoid valve DSL resistance	100 kΩ or more

COMPONENT OPERATING RANGE



Shift solenoid valve DSL	Resistance: 11 to 13 Ω at 20°C (68°F)

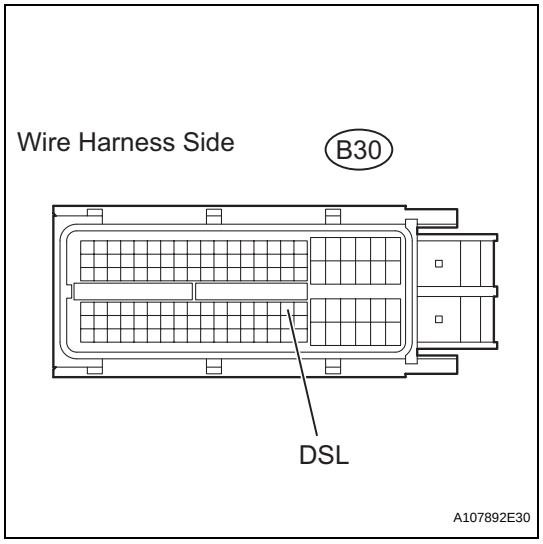
WIRING DIAGRAM

Refer to DTC P0741 (see page AX-62).

INSPECTION PROCEDURE

1 INSPECT TRANSMISSION WIRE (SHIFT SOLENOID VALVE DSL)

(a) Disconnect the B27 wire connector.
(b) Measure the resistance of the transmission wire.



Standard resistance

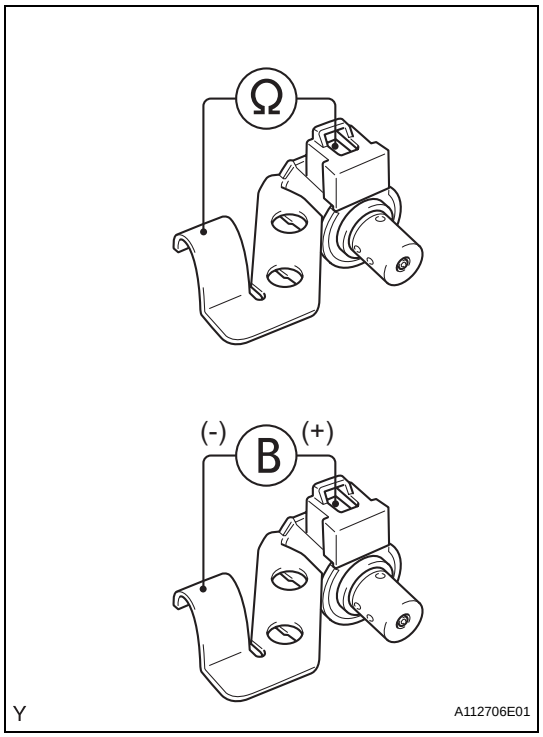
Tester Connection	Condition	Specified Condition
3 (DSL) - Body ground	20°C (68°F)	11 to 13 Ω

NG → **Go to step 3**

OK

2 CHECK WIRE HARNESS (TRANSMISSION WIRE - ECM)

(a) Disconnect the B30 ECM connector.
(b) Measure the resistance of the wire harness side connector.
Standard resistance



Tester Connection	Condition	Specified Condition
B30-79 (DSL) - Body ground	20°C (68°F)	11 to 13 Ω

NG → **REPAIR OR REPLACE HARNESS AND CONNECTOR**

OK

REPLACE ECM

3 INSPECT SHIFT SOLENOID VALVE DSL

(a) Remove the shift solenoid valve DSL.
(b) Measure the resistance between the solenoid valve terminal and solenoid valve body.
Standard resistance:
11 to 13 Ω at 20°C (68°F)
(c) Connect the battery's positive (+) lead to the terminal of the solenoid valve connector, and the negative (-) lead to the solenoid body. Then check that the valve moves and makes an operating noise.
OK:
Valve moves and makes operating noise.

NG → **REPLACE SHIFT SOLENOID VALVE DSL**

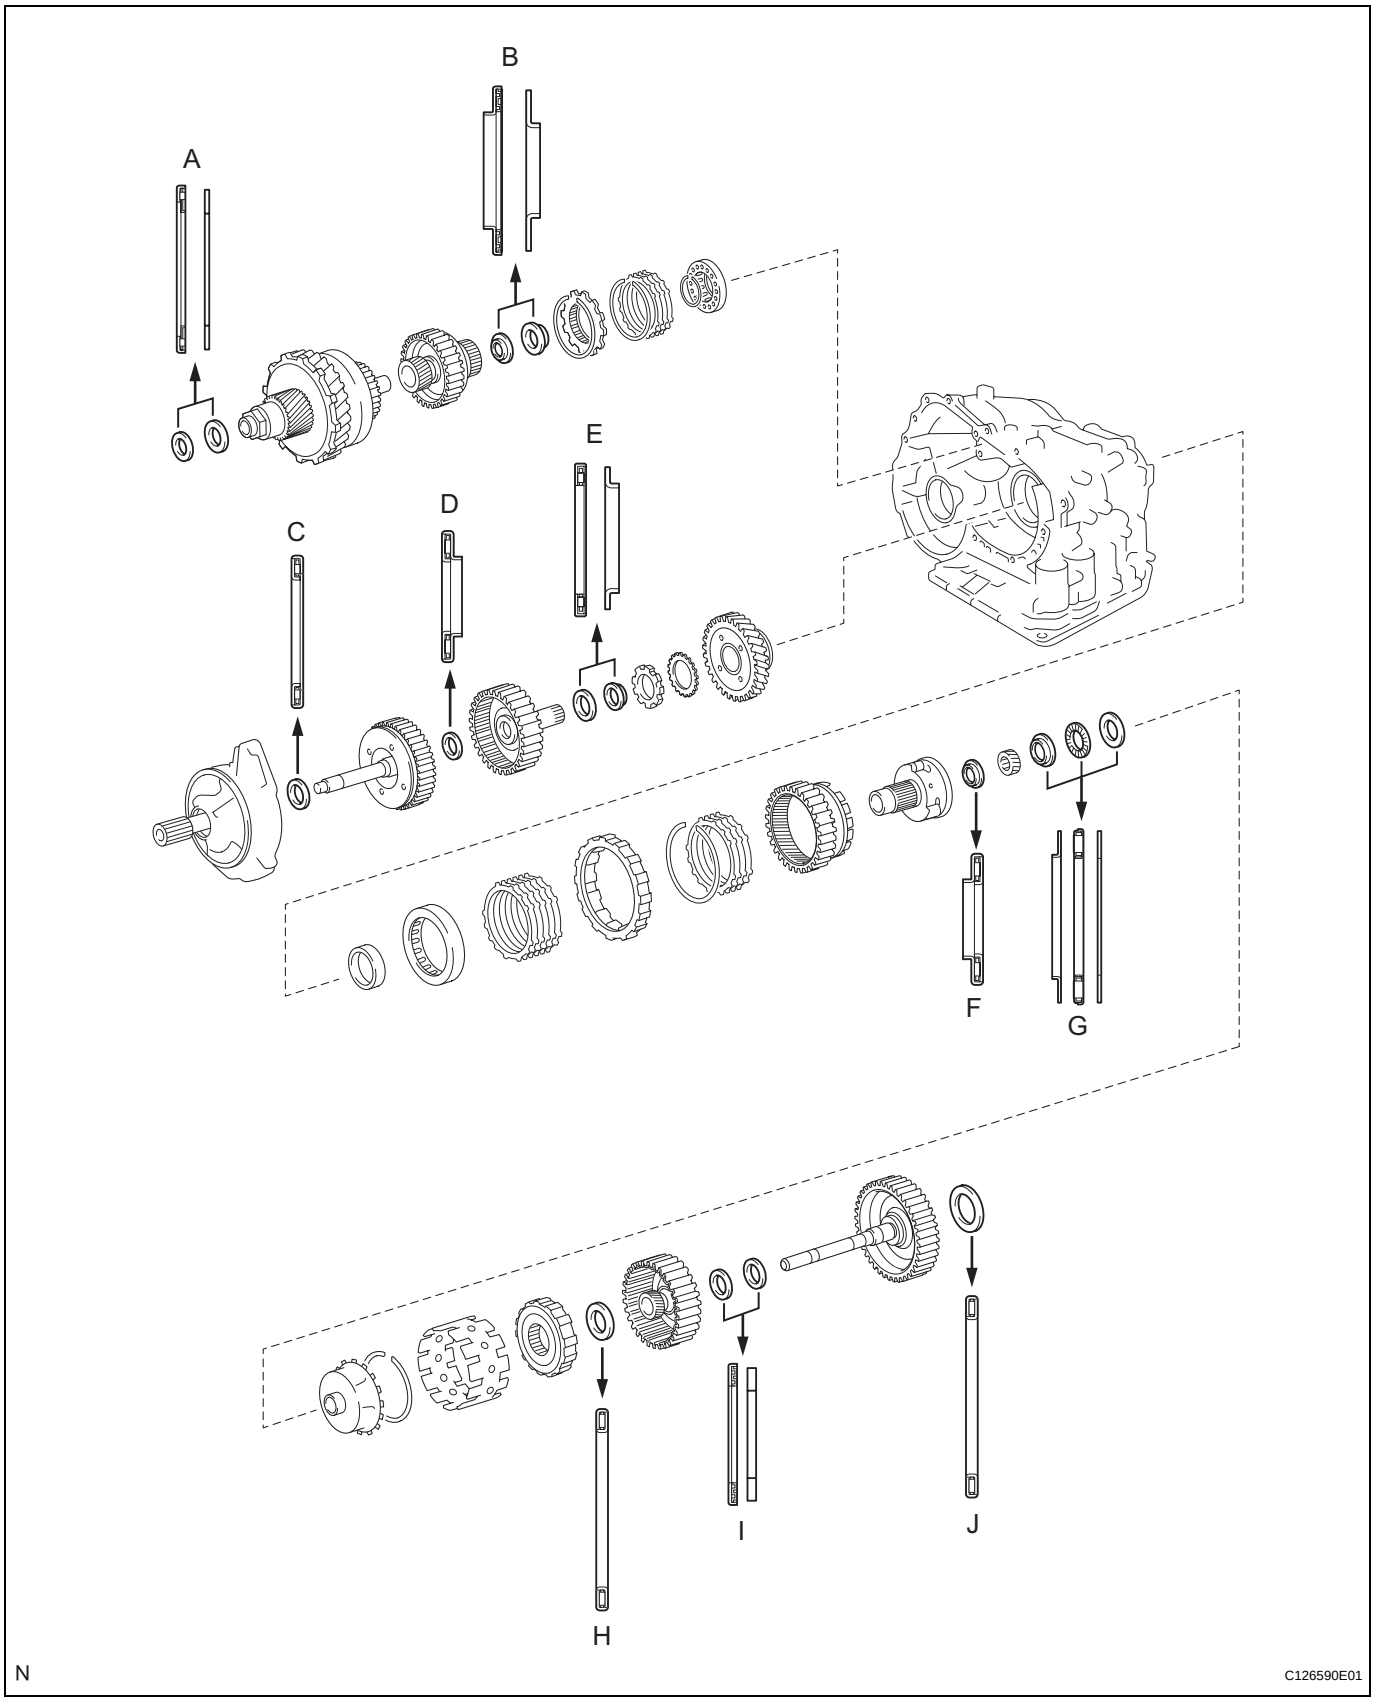
OK

REPAIR OR REPLACE TRANSMISSION WIRE

AX

AUTOMATIC TRANSAXLE SYSTEM

PRECAUTION



NOTICE:
Perform the RESET MEMORY procedures (A/T initialization) when replacing the automatic transaxle assembly, engine assembly or ECM (see page AX-18).
HINT:
RESET MEMORY cannot be completed by only reconnecting the cable to the negative (-) battery terminal.
CAUTION:
When using compressed air, always aim away from yourself to prevent Automatic Transmission Fluid (ATF) or kerosene from spraying on your face.
NOTICE:

- **The automatic transaxle is composed of precision-made parts, necessitating careful inspection before reassembly because even a small nick could cause fluid leakage or affect performance.**
- **The procedures are organized so that you work on only one component group at a time. This will help avoid confusion with similar-looking parts of different sub-assemblies being on your workbench at the same time.**
- **The component groups are inspected and repaired from the converter housing side.**
- **Whenever possible, complete the inspection, repair and reassembly before proceeding to the next component group. If a defect is found in a certain component group during reassembly, inspect and repair this group immediately. If a component group cannot be assembled because parts are being ordered, be sure to keep all parts of the group in a separate container while proceeding with disassembly, inspection, repair and reassembly of other component groups.**
- **Use of Toyota Genuine ATF WS is recommended.**
- **All disassembled parts should be washed clean, and compressed air should be blown through any fluid passages and holes.**
- **Dry all parts with compressed air. Never use cloth.**
- **The recommended ATF or kerosene should be used for cleaning.**
- **After cleaning, the parts should be arranged in the order they were removed for efficient inspection, repairs, and reassembly.**
- **When disassembling a valve body, be sure to match each valve with its corresponding spring.**
- **New discs for the brakes and clutches that will be used for replacement must be soaked in ATF for at least 15 minutes before reassembly.**

- **All oil seal rings, clutch discs, clutch plates, rotating parts, and sliding surfaces should be coated with ATF prior to reassembly.**
- **All old gaskets and rubber O-rings must be replaced.**
- **Do not apply adhesive cement to gaskets and similar parts.**
- **Make sure that the ends of the snap rings are not aligned with any cutouts. Also make sure that snap rings are correctly installed into the grooves.**
- **If a worn bushing is to be replaced, the sub-assembly containing the bushing must also be replaced.**
- **Check the thrust bearings and races for wear or damage. Replace them if necessary.**
- **Use petroleum jelly to keep parts in place.**
- **When working with FIPG material, perform the following:**
  Using a razor blade and gasket scraper, remove all old FIPG material from the gasket surface.
  Clean all components thoroughly to remove all foreign matter.
  Clean both sealing surfaces with a non-residue solvent.
  Apply FIPG material in a continuous line approximately 1 mm (0.04 in.) in diameter on the sealing surface.
  Reassemble parts within 10 minutes of applying FIPG material. Failing to do so will require the FIPG material to be removed and reapplied.

REASSEMBLY

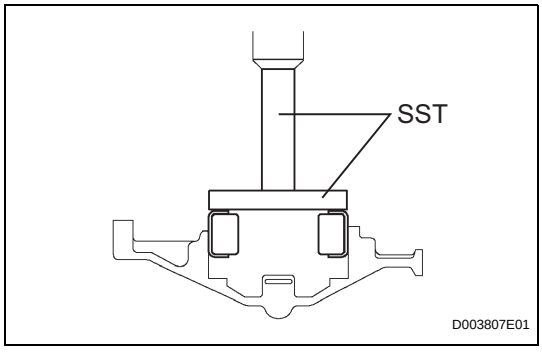
2. INSTALL DIFFERENTIAL GEAR LUBE APPLY TUBE

(a) Install the apply tube and clamp to the transaxle housing with the bolt.

Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

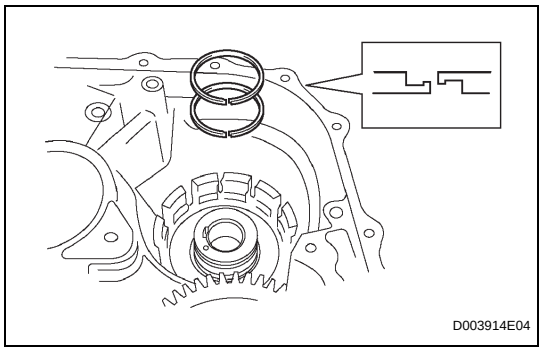


NOTICE:

Make sure to insert the pipe to the stopper.

3. INSTALL UNDERDRIVE OUTPUT SHAFT OIL SEAL RING

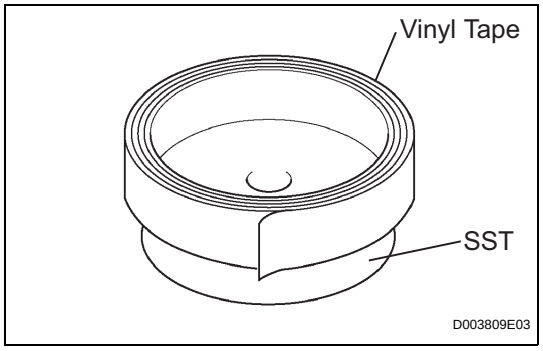
(a) Install a new oil seal ring to the transaxle housing.



4. INSTALL UNDERDRIVE CYLINDRICAL ROLLER BEARING

(a) Using SST and a press, press in the underdrive cylindrical roller bearing.

SST 09950-60020 (09951-00810), 09950-70010 (09951-07100)

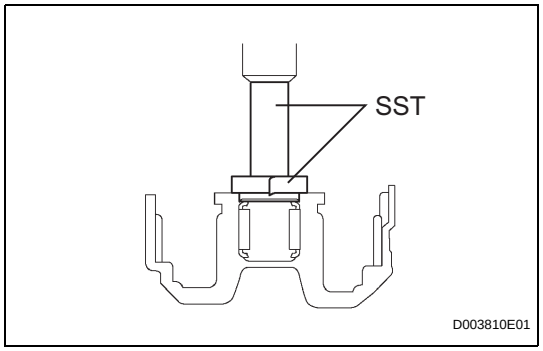


NOTICE:

Do not apply excessive pressure.

5. INSTALL UNDERDRIVE CLUTCH DRUM OIL SEAL RING

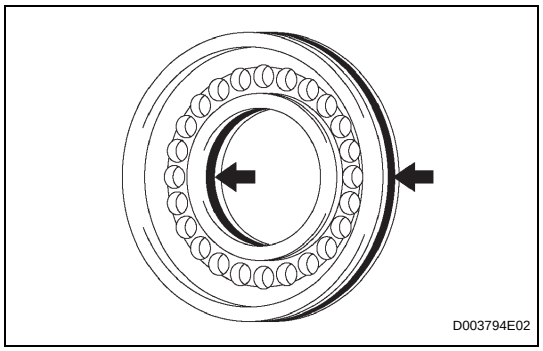
(a) Install 2 new oil seal rings to the transaxle.



6. INSTALL UNDERDRIVE BRAKE PISTON

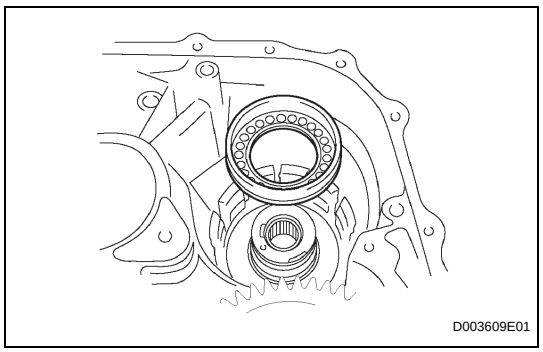
(a) Wind a vinyl tape around SST at the place 4.0 mm (0.157 in.) above from the bottom end until the thickness of the wound tape is about 5.0 mm (0.197 in.)

SST 09950-60010 (09951-00320)

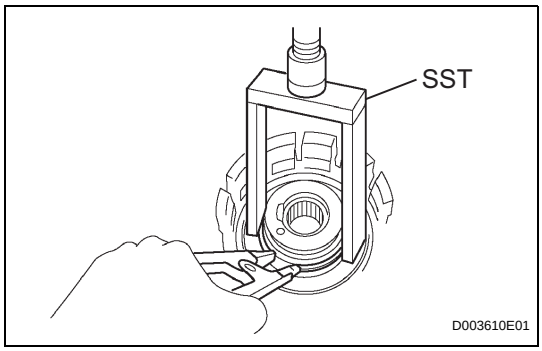


NOTICE:

Clean SST to remove deposited oil before winding a vinyl tape.

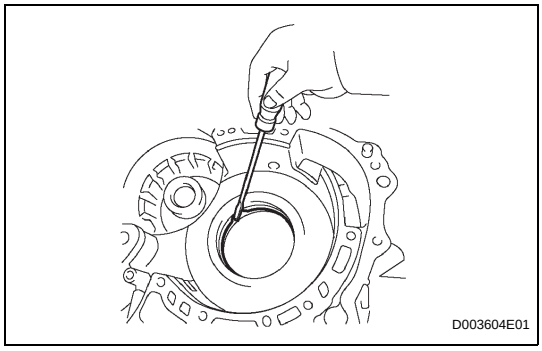


(b) Using SST and a press, press in the needle-roller bearing to the transaxle until the wound vinyl tape contacts the transaxle case.

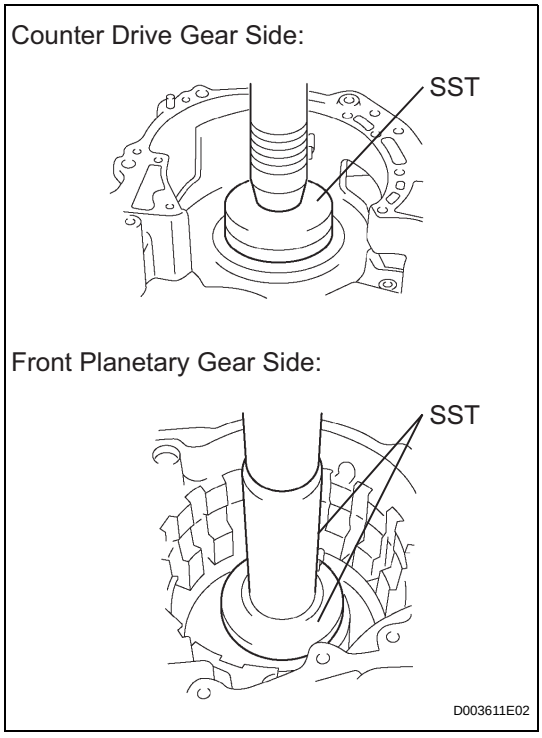


SST 09950-60010 (09951-00320), 09950-70010 (09951-07100)

(c) Coat 2 new O-rings with ATF, and install them to the underdrive brake piston.

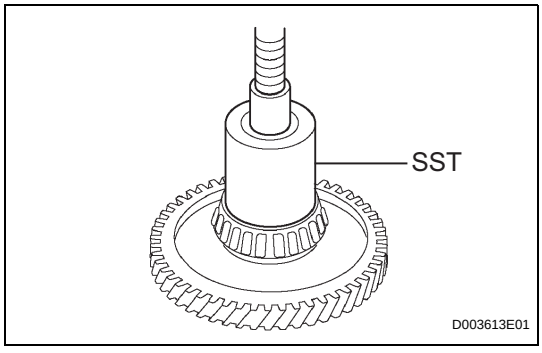


(d) Install the underdrive brake piston to the transaxle.



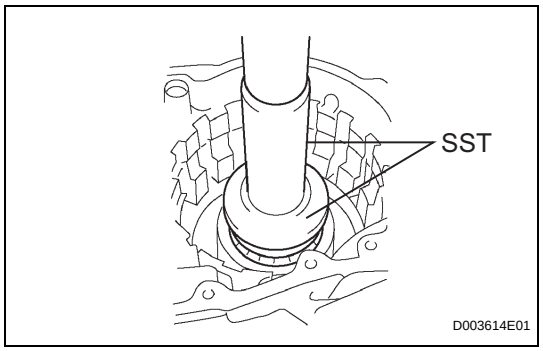
(e) Using SST, a snap ring expander and press, press in the piston return spring and snap ring to the transaxle.
SST 09387-00020
NOTICE:
Do not apply excessive pressure.

7. INSTALL NO. 2 BREATHER PLUG

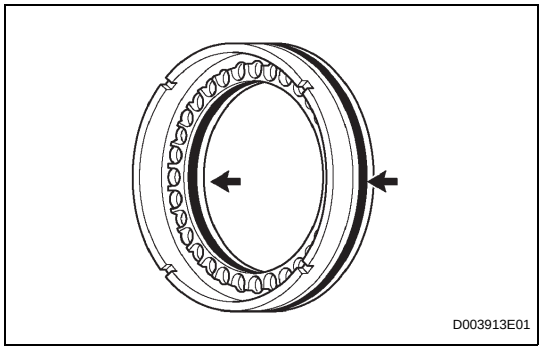


8. INSTALL COUNTER DRIVE GEAR HOLE SNAP RING

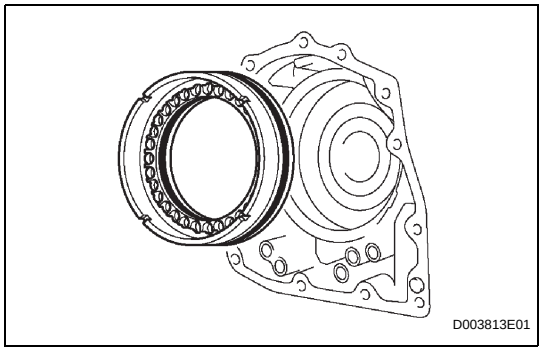
(a) Using a screwdriver, press in the snap ring to the transaxle.



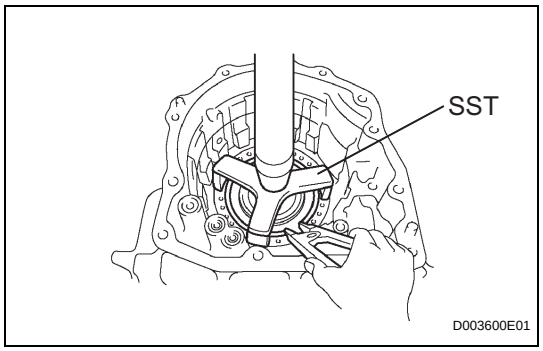
9. INSTALL COUNTER DRIVE GEAR



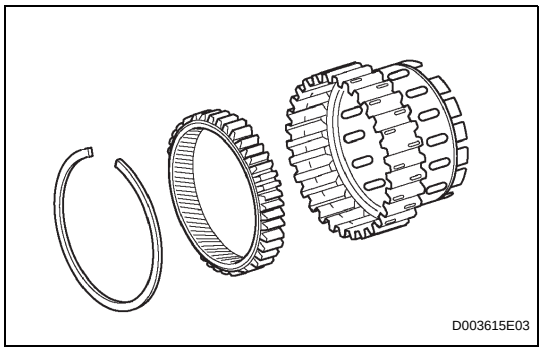
(a) Using SST and a press, press in the 2 bearings outer races to the transaxle.
SST 09950-60020 (09951-00890), 09950-70010 (09951-07150)



(b) Using SST and a press, press in the tapered roller bearing to the counter drive gear until the bearing race contacts with the snap ring.
NOTICE:
Do not apply excessive pressure.
SST 09649-17010

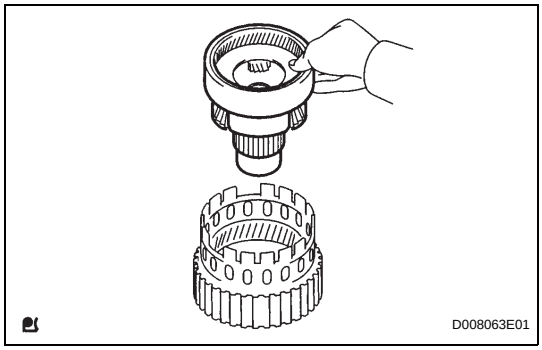


(c) Using SST and a press, install the counter drive gear and bearing to the transaxle.
SST 09950-70010 (09951-07150), 09950-60020 (09951-00750)
NOTICE:
Do not apply excessive pressure.

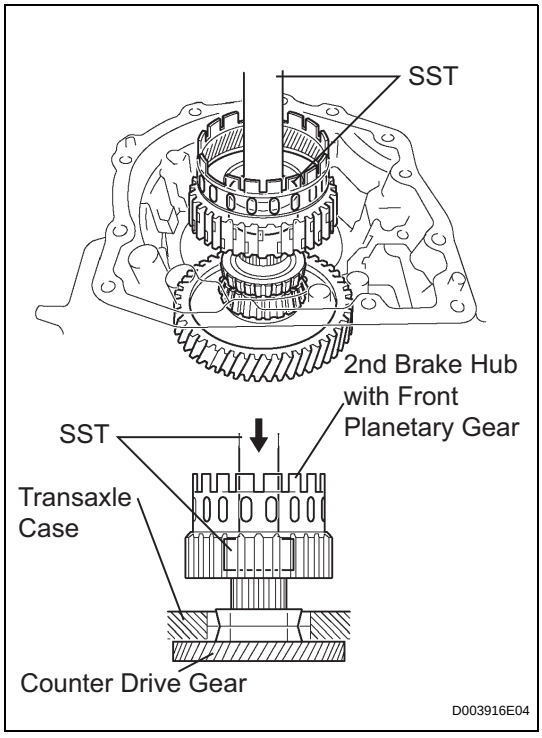


10. INSTALL 1ST AND REVERSE BRAKE PISTON
(a) Coat 2 new O-rings with ATF.
(b) Install the 2 O-ring to the 1st and reverse brake piston.

(c) Coat the 1st and reverse brake piston with ATF, and install it to the transaxle.



11. INSTALL 1ST AND REVERSE BRAKE RETURN SPRING SUB-ASSEMBLY
(a) Using SST, a press and snap ring expander, press the piston return spring and snap ring to the transaxle.
SST 09387-00070
NOTICE:
- **Stop the press when the spring sheet is lowered to the place 1 to 2 mm (0.039 to 0.078 in.) from the snap ring groove, preventing the spring sheet from being deform.**
- **Do not expand the snap ring excessively.**

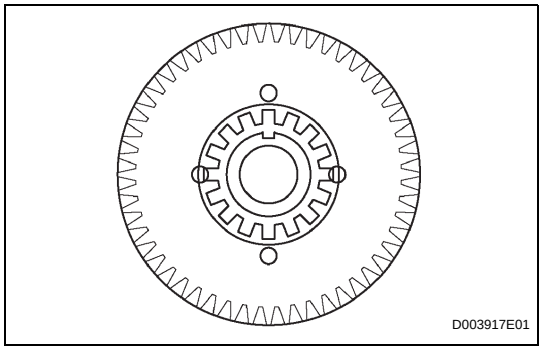


12. INSTALL FRONT PLANETARY RING GEAR

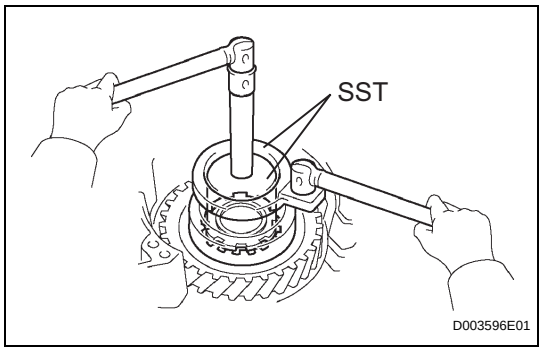
(a) Using a screwdriver, install the front planetary ring gear and snap ring to the brake hub.

13. INSTALL FRONT PLANETARY GEAR ASSEMBLY

(a) Install the front planetary gear assembly to the brake hub.

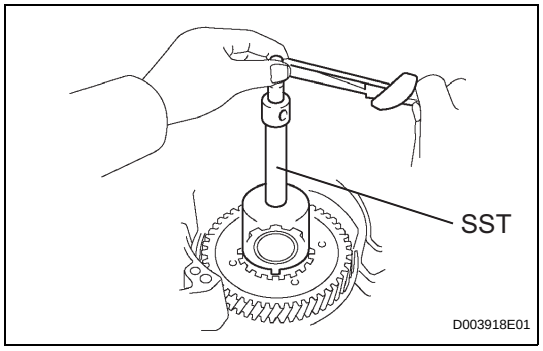


(b) Using SST and a press, press-fit the front planetary gear.

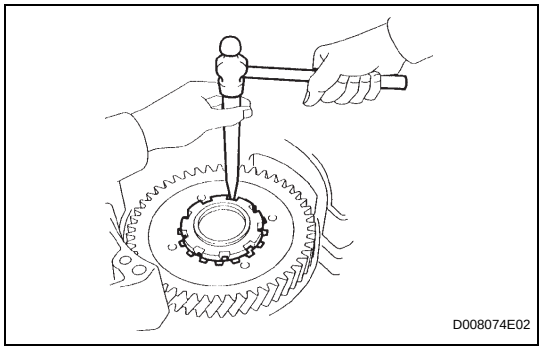


SST 09950-60010 (09951-00500), 09950-70010 (09951-07100)

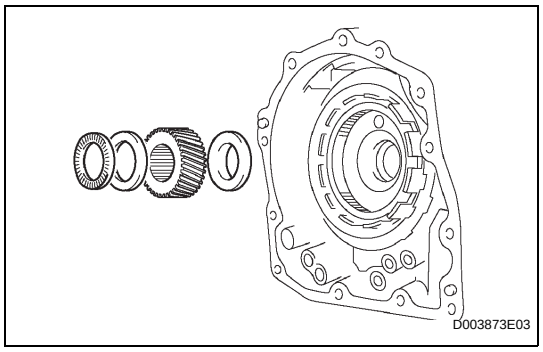
NOTICE:



Do not apply excessive pressure.

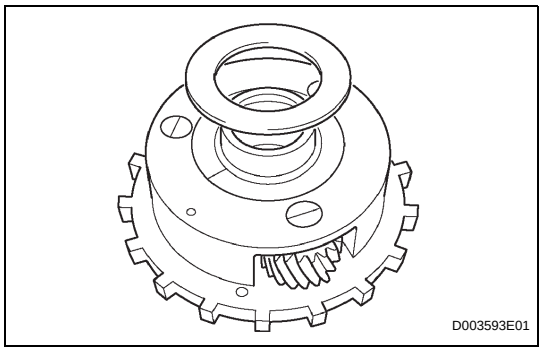


(c) Install the washer, as shown in the illustration.



(d) Using SST, install the nut.
SST 09387-00030, 09387-00080
Torque: 280 N*m (2,855 kgf*cm, 206 ft.*lbf)

(e) Using SST and a torque wrench, measure the turning torque of the bearing while rotating SST at 60 rpm. When the measured value is not within the specified value, gradually tighten the nut until it reaches the specified value.
SST 09387-00080
Torque: Turning torque at 60 rpm
0.51 to 1.02 N*m (5.1 to 10.0 kgf*cm, 4.4 to 8.7 in.*lbf) for new
0.3 to 0.5 N*m (3.1 to 5.1 kgf*cm, 27 to 4.4 in.*lbf) for used
HINT:
Use a torque wrench with a fulcrum length of 160 mm (6.3 in.).

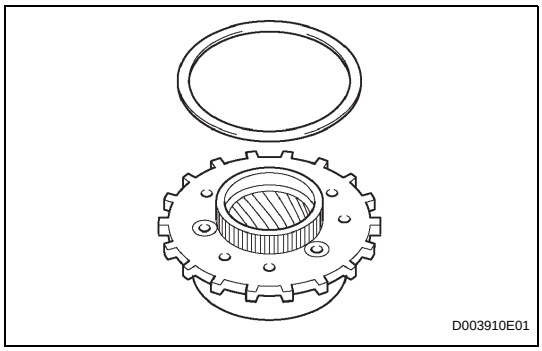


(f) Using a chisel and hammer, stake the front planetary gear washer.

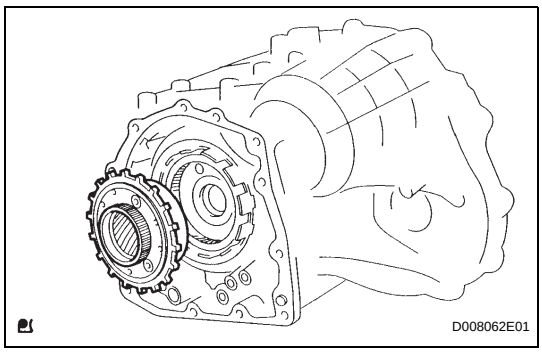
14. INSTALL INPUT SUN GEAR

(a) Install the 2 thrust bearings, bearing race and front planetary sun gear to the front planetary gear.
Standard bearing and race diameter

Item	Inside	Outside
Bearing	34.6 mm (1.362 in.)	52.2 mm (2.055 in.)
Race	40.3 mm (1.587 in.)	58.0 mm (2.283 in.)
Bearing	38.6 mm (1.52 in.)	60.0 mm (2.362 in.)

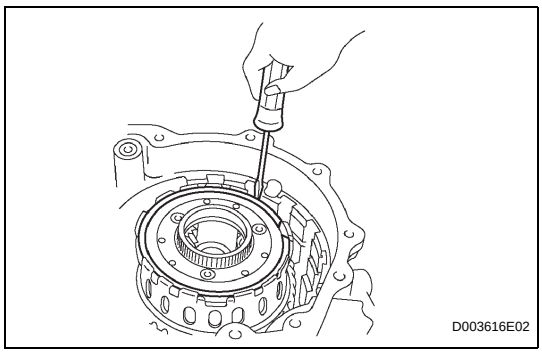


15. INSTALL REAR PLANETARY GEAR ASSEMBLY

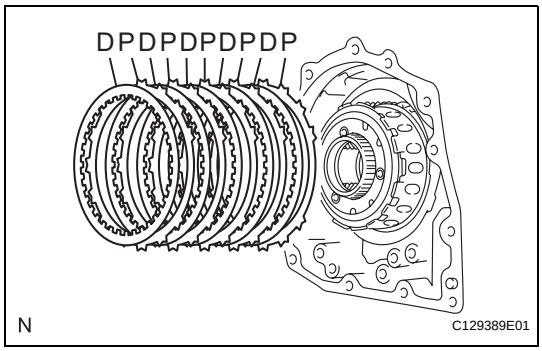


(a) Coat the bearing race with ATF, and install it to the rear planetary gear assembly.

Standard bearing race diameter



Item	Inside	Outside
Race	38.6 mm (1.520 in.)	58.0 mm (2.83 in.)



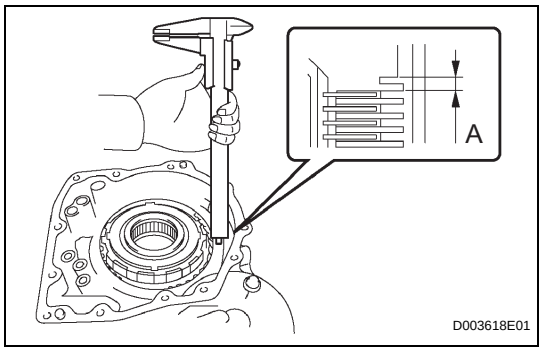
(b) Install the No. 2 thrust washer.

(c) Install the rear planetary gear to the rear planetary ring gear.

(d) Using a screwdriver, install the snap ring.

16. INSTALL 1ST AND REVERSE BRAKE CLUTCH DISC

(a) Install the 5 plates and 5 discs.



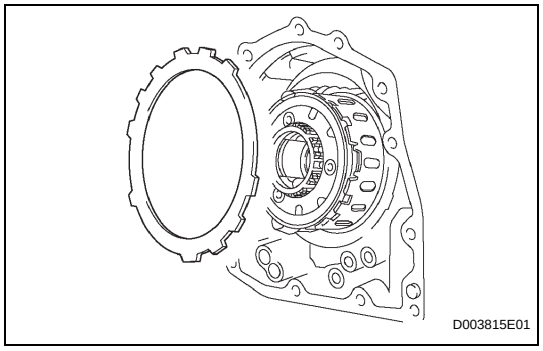
Install in order:

P - D - P - D - P - D - P - D - P - D

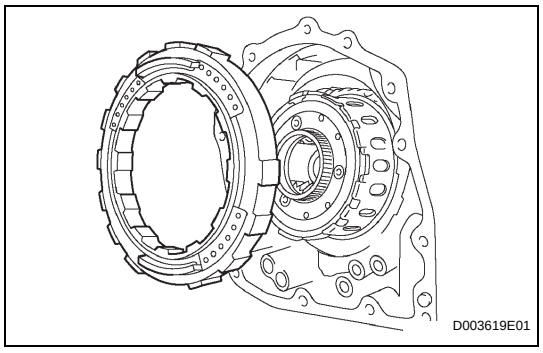
HINT:

P = Plate

D = Disc



(b) Using a vernier caliper, measure the distance between the disc surface and the contact surface of the 2nd brake cylinder and transaxle (Dimension A).



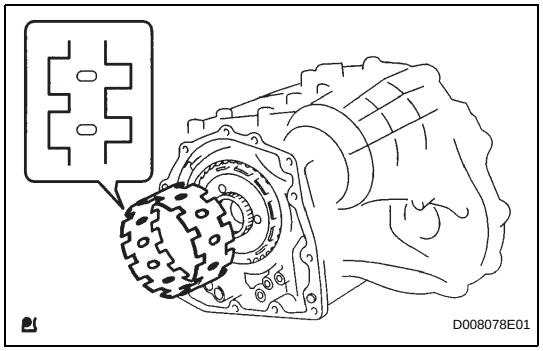
(c) Select an appropriate flange so that the pack clearance will meet the specified value.
0.745 to 1.21 mm (0.0293 to 0.0476 in.)
HINT:
Piston stroke = Dimension A - Flange thickness

Standard flange thickness

Mark	Thickness	Mark	Thickness
1	1.8 mm (0.071in.)	5	2.2 mm (0.087 in.)
2	1.9 mm (0.075 in.)	6	2.3 mm (0.091 in.)
3	2.0 mm (0.079 in.)	7	2.4 mm (0.094 in.)
4	2.1 mm (0.083 in.)	8	2.5 mm (0.098 in.)

(d) Install the flange.

17. INSTALL 2ND BRAKE PISTON ASSEMBLY

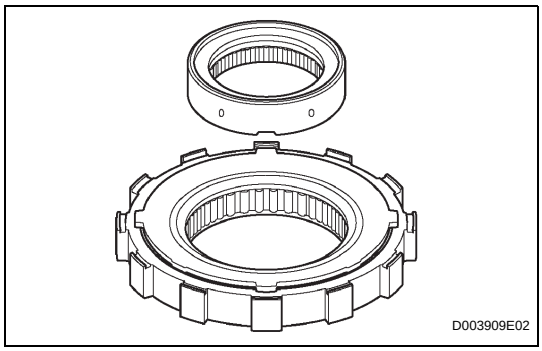


(a) Install the 2nd brake piston to the transaxle.

(b) Install the snap ring and measure the inside diameter.

Standard inside diameter:
More than 167 mm (6.57 in.)

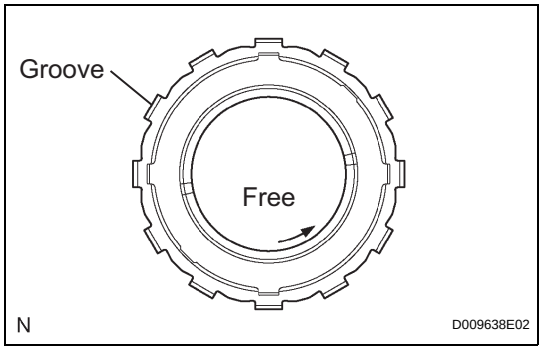
NOTICE:



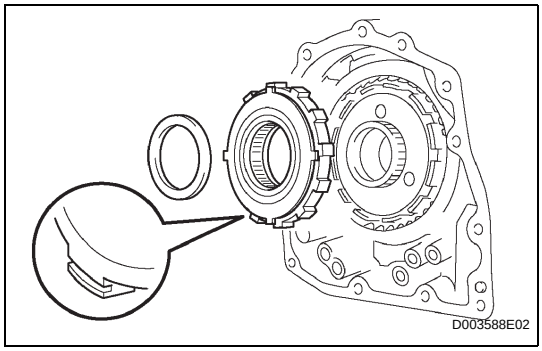
- **Because the taper snap ring has the positioning direction, check it when installing.**
- **When the diameter does not satisfy the specified value, replace the snap ring with a new one.**

18. INSTALL 1-WAY CLUTCH SLEEVE OUTER

(a) Install the 1-way clutch outer sleeve to the 2nd brake cylinder.



NOTICE:
Check the positioning direction of the outer sleeve.

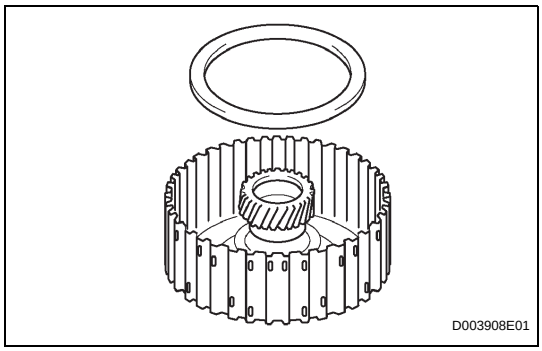


19. INSTALL 1-WAY CLUTCH ASSEMBLY

(a) Install the inner race to the 1-way clutch.

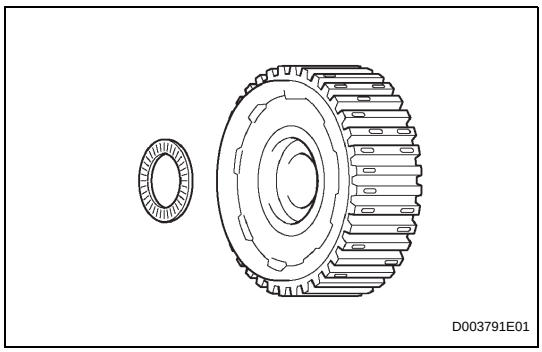
NOTICE:
Check the direction of the inner race.

(b) Check the rotating direction of the 1-way clutch for the lock or free operation, as shown in illustration.



(c) Install the 1-way clutch and bearing to the 1-way clutch sleeve outer.

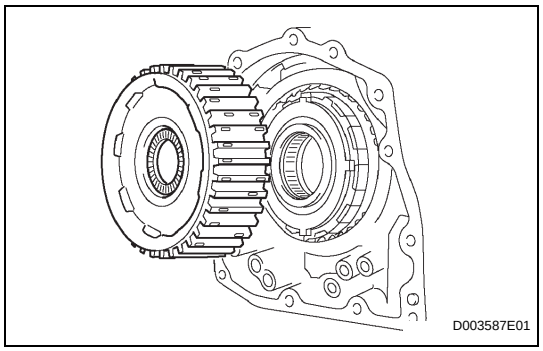
Standard bearing diameter



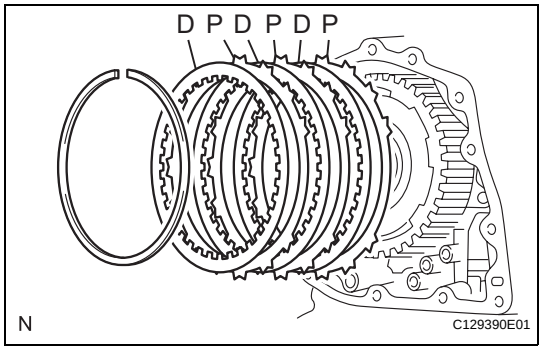
Item	Inside	Outside
Bearing	53.6 mm (2.110 in.)	69.6 mm (2.740 in.)

NOTICE:
Install the thrust bearing properly so that no-colored race will be visible.

20. INSTALL REAR PLANETARY SUN GEAR ASSEMBLY



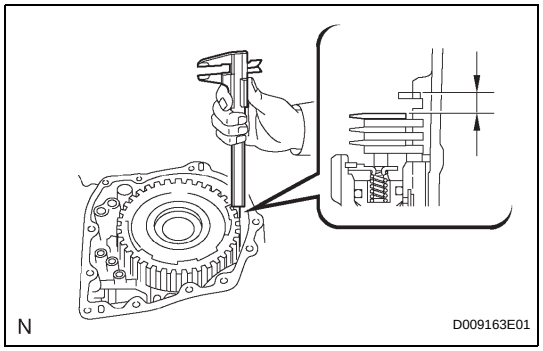
(a) Coat the No. 1 thrust washer with petroleum jelly, and install it onto the rear planetary sun gear.



(b) Coat the bearing with petroleum jelly, and install it onto the rear planetary sun gear.

Standard bearing diameter

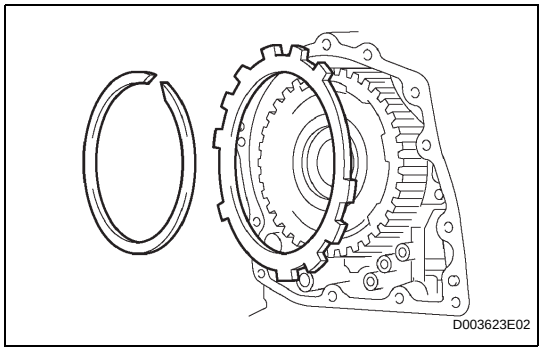
Item	Inside	Outside
Bearing	33.8 mm (1.331 in)	48.2 mm (1.898 in.)



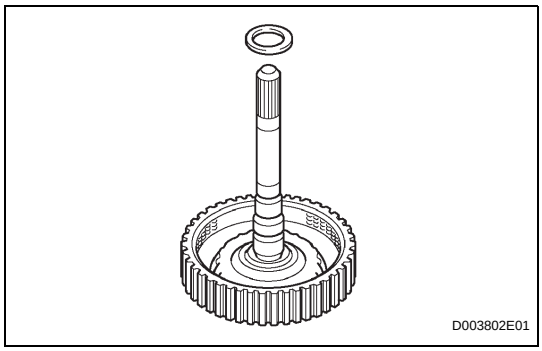
(c) Install the rear planetary sun gear to the rear planetary gear.

21. INSTALL 2ND BRAKE CLUTCH DISC

(a) Install the 3 discs and 3 plates to the transaxle.
Standard install in order:
P - D - P - D - P - D
HINT:
P = Plate
D = Disc



(b) Temporarily install the snap ring.

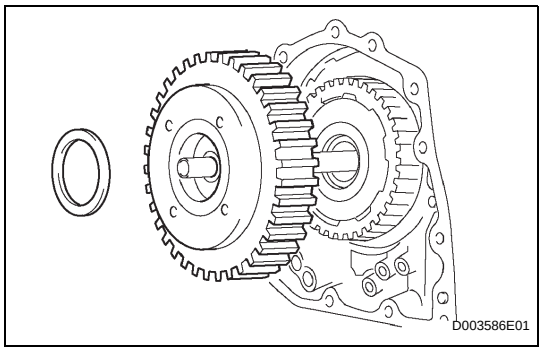


(c) Using a vernier caliper, measure the distance between the disc surface and snap ring surface.

(d) Select an appropriate flange so that the pack clearance will meet the specified value.
Standard pack clearance:
0.50 to 0.91 mm (0.0197 to 0.0358 in.)
HINT:
Piston stroke = Clearance - Flange thickness - Snap ring thickness 1.6 mm (0.063 in.)
Standard flange thickness

Mark	Thickness	Mark	Thickness
1	3.0 mm (0.118 in.)	5	3.4 mm (0.134 in.)
2	3.1 mm (0.122 in.)	6	3.5 mm (0.138 in.)
3	3.2 mm (0.126 in.)	7	3.6 mm (0.142 in.)
4	3.3 mm (0.130 in)	8	-

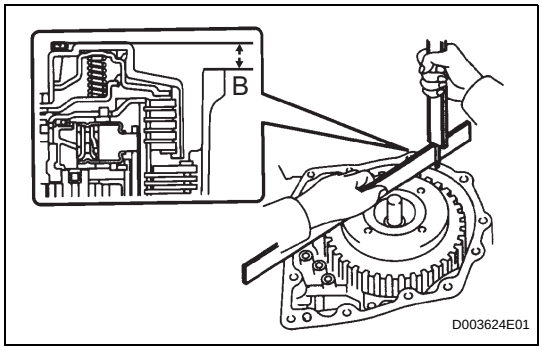
(e) Temporarily remove the snap ring, attach the selected flange and restore the snap ring.
NOTICE:
Secure the snap ring so that its gap is visible through the groove of the transaxle case.



22. INSTALL DIRECT CLUTCH

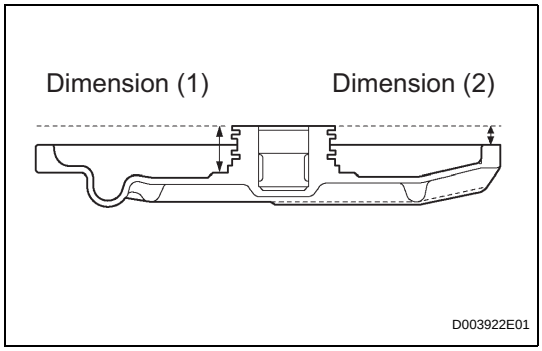
(a) Install the bearing race to the direct clutch.

Standard bearing race diameter



Item	Inside	Outside
Bearing race	30.3 mm (1.193 in.)	46.0 mm (1.811 in.)

(b) Install the direct clutch and thrust bearing to the rear planetary sun gear.



NOTICE:

The disc in the direct clutch should completely mate with the hub attached outside the rear planetary sun gear. Otherwise, the rear cover cannot be installed.

(c) Clean the connector part of the transaxle case and rear cover.

(d) As shown in the illustration, place a straightedge on the direct clutch drum and measure the distance between the transaxle case and the straightedge using a vernier caliper (Dimension B).

(e) Measure the 2 places of the rear cover as shown in the illustration. Calculate a dimension C using the following formula.

HINT:

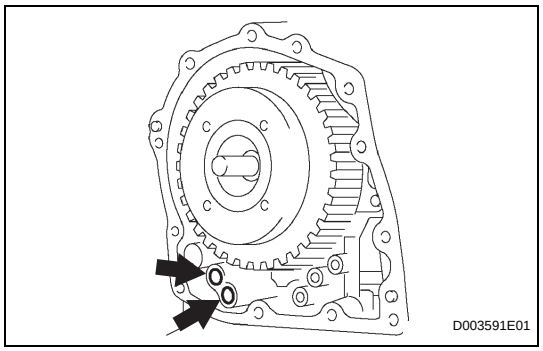
Dimension C = Dimension (1) - Dimension (2)

(f) Calculate the end play value using the following formula. Select a thrust bearing which satisfies the end play value and install it.

End play:

0.198 to 0.936 mm (0.00780 to 0.03685 in.)

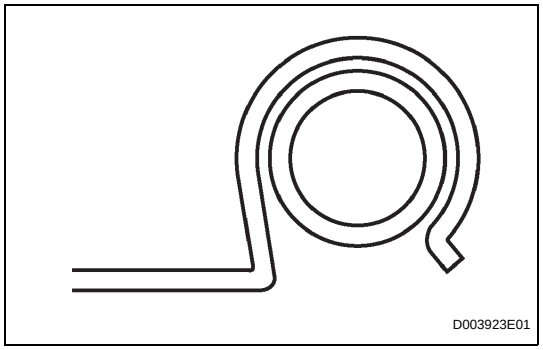
NOTICE:



Make sure that the colored race side is facing the direct clutch assembly.

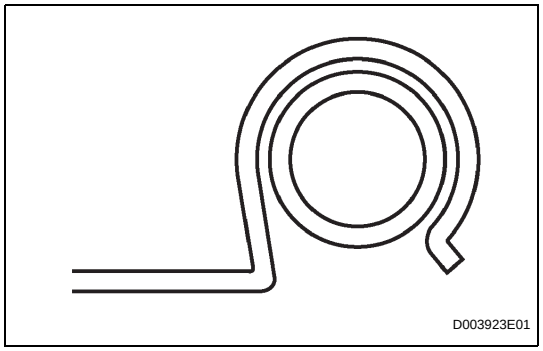
HINT:

End play = Dimension C - Dimension B



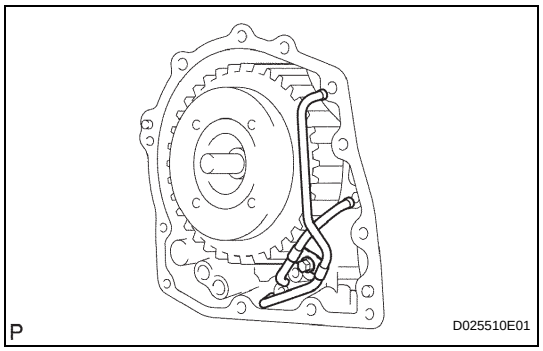
Standard bearing thickness and diameter

Thickness	Inside	Outside
3.58 mm (0.1409 in.)	53.6 mm (2.110 in.)	69.6 mm (2.740 in.)
3.88 mm (0.1528 in.)	53.6 mm (2.110 in.)	70.18 mm (2.768 in.)



23. INSTALL NO. 1 GOVERNOR APPLY GASKET

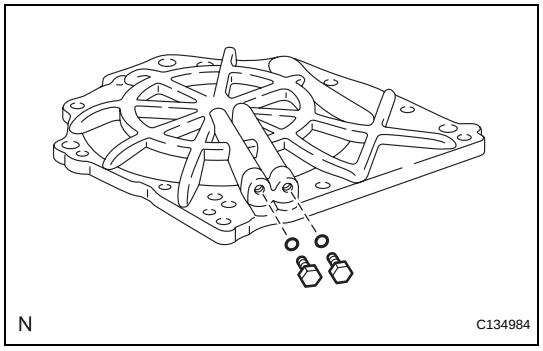
(a) Install 2 new governor apply gaskets.



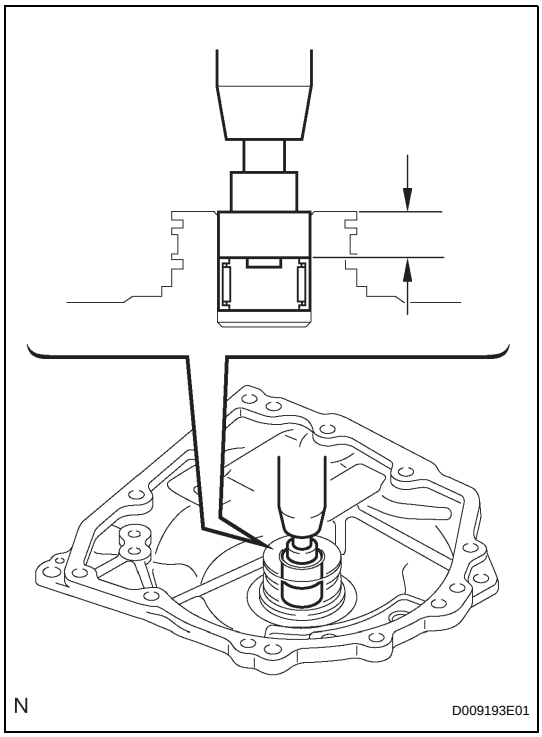
24. INSTALL FRONT CLUTCH APPLY TUBE

(a) Install the clamp to the front clutch apply tube.
NOTICE:
Make sure to install the clamp to the apply pipe before installing the apply pipe to the transaxle case. This prevents the apply pipe from being deformed or damaged.

25. INSTALL BRAKE APPLY TUBE



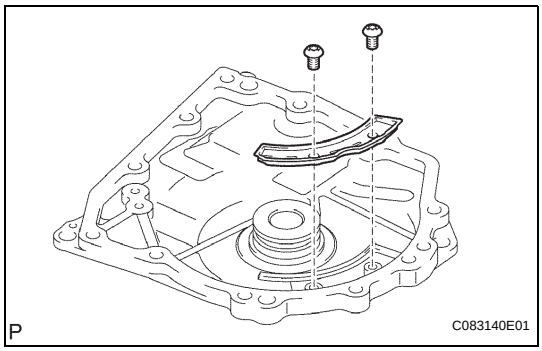
(a) Install the clamp to the brake apply tube.
NOTICE:
Make sure to install the clamp to the apply pipe before installing the apply pipe to the transaxle case. This prevents the apply pipe from being deformed or damaged.

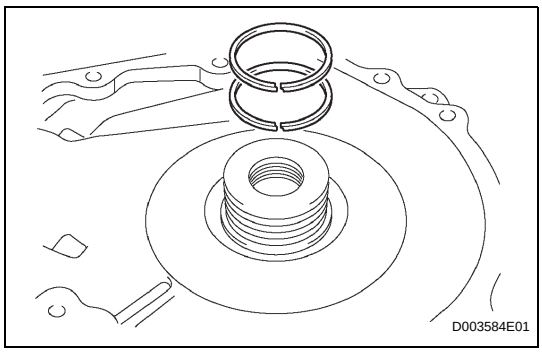


(b) Install the 2 apply tubes and to the transaxle with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
NOTICE:
Each pipe should be securely inserted until it reaches the stopper.

26. INSTALL NO. 1 TRANSAXLE CASE PLUG

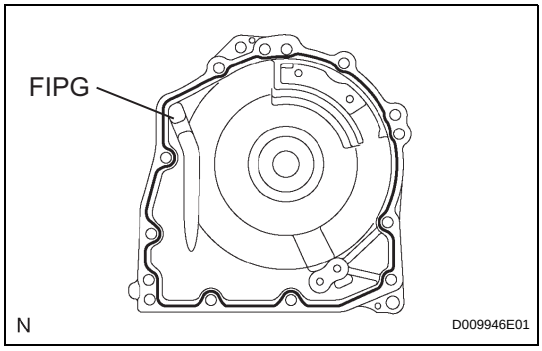
(a) Install 2 new O-rings to the 2 plugs.
(b) Install the 2 plugs to the transaxle rear cover.
Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)





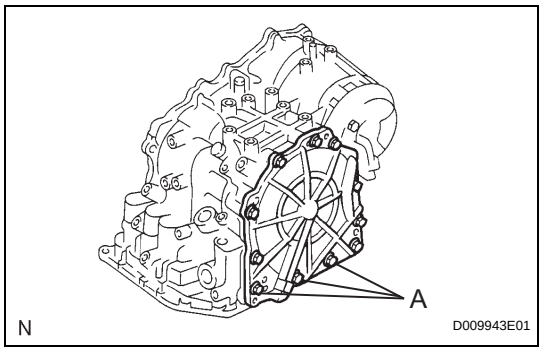
27. INSTALL TRANSAXLE REAR COVER SUB-ASSEMBLY

(a) Using SST and a press, press in the bearing.
SST 09950-60010 (09951-00230, 09952-06010)
Standard depth:
12.05 to 12.75 mm (0.4744 to 0.5020 in.)
NOTICE:
- **Face the inscribed mark side of the bearing race up.**
- **Repeat the press-fit until the specified value is obtained.**



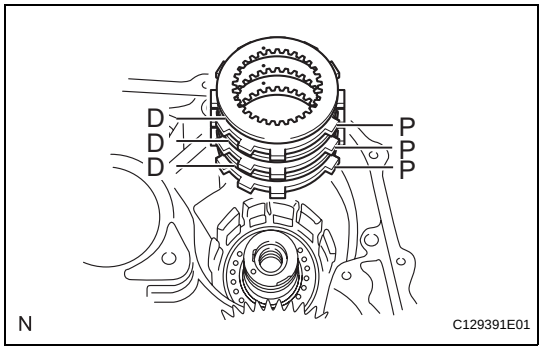
(b) Apply adhesive to the 2 screws.
Adhesive:
Toyota Genuine Adhesive 1344,
Three Bond 1344 or Equivalent

(c) Using a T30 "torx" socket wrench, install the transaxle rear cover plate with the 2 screws.
Torque: 7.5 N*m (76 kgf*cm, 66 in.*lbf)



(d) Coat 2 new oil seal rings with ATF, and install them to the transaxle rear cover.

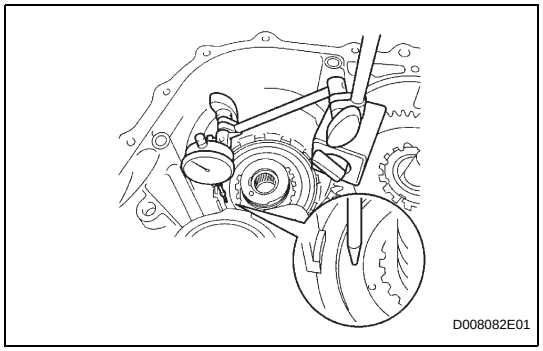
(e) Remove any packing material and be careful not to get oil on the contacting surfaces of the transaxle rear cover or the transaxle.



(f) Apply FIPG to the cover.
Seal packing:
Toyota Genuine Seal Packing 1281,
Three Bond 1281 or Equivalent

(g) Coat the needle roller bearing with ATF.

(h) Apply adhesive to the threads of the bolts labeled A.
Adhesive:
Toyota Genuine Adhesive 1344,
Three Bond 1344 or Equivalent



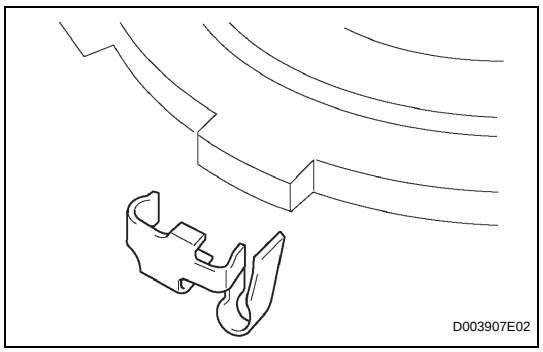
(i) Install the 11 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf) for bolt A.
25 N*m (255 kgf*cm, 18 ft.*lbf) for other bolt
SST 09950-60010 (09951-00230, 09952-06010)

28. INSTALL NO. 2 UNDERDRIVE CLUTCH DISC

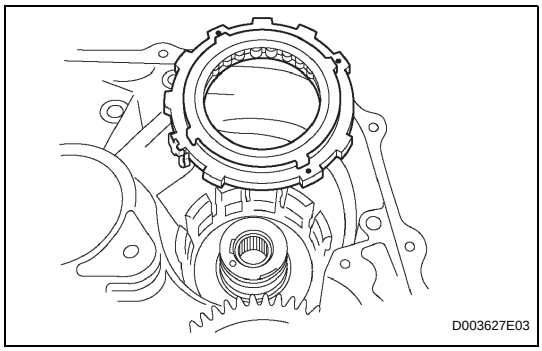
(a) Install the 3 discs and 3 plates to the transaxle.
Install in order:
P - D - P - D - P - D
HINT:
D = Disc
P = Plate

(b) Using a screwdriver, install the snap ring.

(c) Using a dial indicator, measure the underdrive brake pack clearance while applying and releasing compressed air (392kPa, 4.0 kgf/cm^2, 57 psi).
Standard pack clearance:
1.59 to 2.20 mm (0.0626 to 0.0866 in.)
HINT:
Select an appropriate flange from the table below so that it will meet the specified value.
Standard flange thickness



Mark	Thickness	Mark	Thickness
1	3.0 mm (0.118 in.)	3	3.4 mm (0.134 in.)
2	3.2 (0.126 in.)	-	-



(d) Temporarily remove the snap ring and attach the flange. Restore the snap ring.

29. INSPECT UNDERDRIVE 1-WAY CLUTCH ASSEMBLY (See page AX-186)
